Food Price Policy

THE great expectations that were aroused by the calling of the Chief Ministers' Conference, and the speeches made by the Prime Minister and by Mr C. Subramaniam on the opening day, have been almost completely deflated by the anti-climatic conclusions announced at the end of the Conference. Reading the report of Mr Subramaniam's speech one got the impression that food price policy which had got stuck up for years was really on the move and that some constructive initiatives would emerge. But it seems that the impetus that Mr Subramaniam tried to give was lost between the first and last day of the Conference. Some commentators have drawn attention to the intervening meeting of the Congress Working Committee and drawn cynical conclusions which are less than just to all concerned. But it cannot be denied that the conclusions, to judge by published reports, do leave an impression of half-hearted tinkering which, is most dispiriting. The Conference as a whole has not been able to rise to the opportunity of framing a national food policy. Removal of movement restrictions on coarse grains, and of rice in the Southern Zone is about all that has survived of the short term measures; that is, apart from the programme for larger imports, but we cannot be sure whether this is short-term or long-term expedient. Nevertheless, it would not be fair to write off the Conference as a complete flop. The short-term measures that have been approved by the Conference indicate a pragmatic approach to a very complicated situation.

The proposal to set up a high level technical agency for determining, on a scientific basis, fair and economic prices for the producer and the consumer may be regarded as the first step to the implementation of the long-term policy. Until the prices are fixed, regulation of prices through the enforcement of licensing regulations, or other means, will not be a practical proposition. At the same time the implications, both in the short-term and in the long run, of fixing maximum prices, at a time when prices are ruling abnormally high, have to be taken into account. A maximum price usually tends to become the minimum.

An attempt to lower prices through price fixation will create difficulties of supplies and Government does not now have the machinery to deal with this problem in an effective manner. On the other hand, if prices are fixed with reference to the levels at which they are ruling at present, it will mean official endorsement of these abnormally high levels

and create difficulties, for the future. Mr Subramaniam has referred to 'stabilisation' of prices as the first step, but we believe that what he actually means by stabilisation is arresting the uptrend, for, if prices are 'stabilised', there will be no prospect of bringing them down in the future.

The very intricate problems involved in fixing foodgrain prices—some of which have been referred to by the Minister himself—make it advisable that this task should be taken out of the realm of day-to-day administration. The need for setting up an independent price fixing authority was stressed early last year by Mr S. K. Patil who was then in command of the Ministry of Food and Agriculture. Addressing a Technical Meeting on the Marketing Aspects of Food Price Policies, which was held under the auspices of the FAO and ECAFE, Mr Patil emphasised that a price determining authority would command public confidence, only if its decisions were based on hard real facts and not on assumed conditions of the market. That is why, he added, farmers' eyes generally turn to the type of apparatus, which is available for determination of fair wages of industrial workers or fair prices of industrial goods, such as a Wage Board or a Tariff Commission. He felt that producer price guarantees determined through some such judicious body would go a long way in laying at rest the controversies and doubts which any other device of agricultural price fixation often leads to. The Chief Ministers have apparently endorsed Mr Subramaniam's proposal to set up a technical agency for determination of prices. It remains to be seen whether the body when set up would measure up to the requirements indicated by the former Minister of Food and Agriculture.

The setting up of the price fixing authority is only the first step towards the implementation of an effective foodgrains price policy. It is even more important, as Mr Patil had then indicated, to formulate a sound programme of action and have the requisite machinery to ensure that such price levels are actually realised. In this connexion, he had referred to administration of buffer stock, cooperatives and state marketing Boards as the agencies which could be employed for the purpose. We have referred at length to the remarks made by Mr Patil, to underline the fact that the proposal for setting up a Food Trading Corporation, which was placed by Mr Subramaniam before the Chief Ministers' Conference,

does not constitute a radical or revolutionary departure from the policies advocated by his predecessor, or a concession to people who advocate State Trading in season and out, without realising its practical implications to the general population of consumers.

It is necessary to distinguish this proposal from State Trading by which what is usually meant is nationalisation of wholesale trade in foodgrains and distribution through ration shops which is sure to follow on monopoly procurement. The scheme put forward by Mr Subramaniam is an ingenious attempt to avoid, on the one hand, the pitfalls of State Trading and, on the other to safeguard against the risks of unrestricted freedom to the trade in conditions of shortage of supplies. The Conference, apparently, talked round and about the proposal, but carefully avoided expressing any firm conclusion. This is most disappointing, for even a formal approval in principle of the proposal would have determined the contours of the long-term food policy, which now remain vague and unsatisfactory.

The point that has to be emphasised about the Food Trading Corporation is that it would help realise all the advantages hoped for from State Trading by its advocates, without its well known disadvantages. It will act as a regulatory mechanism which will save the trade from the vicious circle in which it tends to be caught in times of shortage of marketable supplies. We are not among those who consider that the charges that are so frequently levelled against the traders, of hoarding and profiteering, are justified and, for that reason, we do not find it possible to agree that ruthless, punitive action against "black sheep" is the answer to the problem of rising prices. But, at the same time, it is necessary to realise that every trader is subject to the dynamics of the market. And the market consists of interlocking chains of intermediaries from the producer to the consumer. When prices are on the up-trend, no dealer, whatever his position in the set-up will be able by voluntary restraint to sell at lower prices for any length of time, unless he is prepared to go out of business. That is why high-minded appeals to the traders to 'behave', whether from politicians, or from business leaders, prove so futile in practice.

What is required in such circumstances is an organisation which will save the traders against themselves, by opposing a countervailing force to the pressures of the market. The existence of such an organisation, which will maintain stability of prices, will be helpful to all concerned, to the producers, the consumers and, not the least, to the traders. If its objectives are properly presented, the proposal of the Food Trading Corporation should command support from all quarters, not excepting the foodgrains trade.

The proposal for setting up the Food Trade Corporation is included in the series of long-term measures proposed by Mr C. Subramaniam. But a long-term programme only means that its results can be realised only in the long run, not that action could be postponed indefinitely. And, if the Government is to get on the top of the price situation, the organisation must be in place before the next harvest. The earnestness with which Government sets about the task of controlling prices will be judged by the action taken by it in the next two months for setting up the Foodgrains Trading Corporation.

Unit Trust

The inauguration of the sale of units by the Unit Trust of India from 1 July augurs well for the capital market. In other countries, Unit Trusts are playing useful role by mobilising the savings of the community and channeling them into productive enterprises. The main attraction of the Unit Trust lies in the fact that even investors with modest means can acquire a share in the industrial prosperity of the country with almost no risk in the bargain. Since the Unit Trust invests the savings pooled from unit holders in various types of securities keeping always in view the safety of capital as well as a reasonable return, the risk of investment is either entirely eliminated or greatly reduced. While the investor is protected against erosion of his capital, he can also be sure of a fair return because the Trust aims at building up a balanced portfolio.

Another significant advantage for the investor in participating in the unit scheme of the Unit Trust of India is the attractive tax concessions available to him on his investments in the Units. Incomes received from the Trust by the unit holders if they are individuals is exempted from income-tax if such income does not exceed Rs 1000. Also such income is exempted from super-tax but for the inclusion of this income in his total income. The Trust will distribute income to individuals without making any deduction of income-tax at source. A factor that plays a large part in an investment decision is the liquidity of the moneys deployed. In the case of the units in the Unit Trust, the investment may be considered as equivalent to cash because the Trust is always ready to buy its units at stated prices. An additional advantage is that holders can also borrow against their units.

The Trust's initial capital of Rs 5 crores has been contributed jointly by the Reserve Bank of India, the Life Insurance Corporation, the State Bank and its subsidiaries, scheduled banks and other specified financial institutions. The present portfolio of securities represents this initial capital and the proceeds of the sales of units will provide the Unit capital. Efficient and expert management of the portfolio of investment is ensured by the vesting of the management of the Trust in a Board of Trustees comprising persons having special knowledge and experience in commerce, industry, banking, finance and investment. It has been emphasised that the Board will give due regard to the interests of the unit holders and the Trust will be run on business principles. For the success of the scheme, it is essential that in its day to day dealings with the public the Trust ensures quick disposal of work. Inordinate delay in getting things done with it, will be a source of discouragement and will stand in the way of its speedy expansion.

The good response to the scheme noticeable since the inauguration of the sale of the units is a happy augury and goes to indicate that the scheme has already attracted the attention of the small investor. Besides its unique advantages, the Unit scheme's attraction is further enhanced by the prospect of its being closely associated with the unit holders. While inaugurating the scheme in Delhi, Mr T. T. Krishnamachari has revealed that after repaying the initial capital provided by the financial institutions, and after the resources of the Trust have grown, cooperation of a widening circle of persons from the public will be sought in the matter of deciding the pattern of investment of its funds.

Social Security

By D. Sanjivayya

SOCIAL security is much talked about currently and its frequent mention in the Parliament and elsewhere has raised hopes particularly among those who need it most. And their number is not small. Provision of medical care, old age benefits, etc., to the weaker sections of the community is a stupendous task. No doubt some relief has already been given particularly for industrial workers and civil servants under the Employees' State Insurance Scheme, Employees' Provident Fund Scheme etc., for the former and through pensions and gratuity, etc., for the latter. Even so the overall needs to be met are still large and varied. The vital needs of large numbers of human beings have their own ways of making themselves felt and have an impact on purely economic factors. It is in this context that one has to consider the question of social security.

IMPACT OF INDUSTRIALISATION

Industrialisation has brought in its wake a number of problems in all countries. The quicker the pace of industrialisation, the more numerous and complicated are the problems. The more important of these are those concerning geographical and social 'relocation' of human beings.

Almost the first effect of industrialisation, is the 'uprooting' of large masses of people from a static and rural environment and almost 'transplanting' and 'exposing' them to a dynamic and urban environment. The worker loses his mooring, all the security that it gives and gets lost in a community, alien to him and his ways of life. The joint family of the village, which afforded a measure of security and solace, in times of need, is no longer there to render assistance for those in distress. The new community where he comes to work has not yet, by and large, developed enough facilities. The facts of being 'anonymous', isolated and uncared for, by themselves generate some restlessness and have an unsettling effect on human mind. Besides the almost totally alien environment, the worker is exposed to several new hazards—of unemployment, of sickness, of industrial injuries. It is difficult to measure precisely the cumulative effect of these on human beings and their impact on the community over a period of time.

PRIORITIES

While all these are not disputed, the practical problem of providing relief is beset with a number of difficulties. The economic conditions have to be taken note of. The requisite resources, whether economic or institutional, may not be there in ample measure; whatever are there may be needed for other more urgent purposes. Such limitations have been there and are likely to be there for quite some more time. One has, therefore, to strike a balance between the needs of various groups, keeping in view all the time that the larger perspective is the stability and progress of the community and all the values it stands for. May be, at times, social security schemes have been evolved for communities, not necessarily the weakest. These may also be somewhat haphazard, particularly in terms of priorities. In the context of overall needs, the existing social security programmes may even look like meandering rivulets. But it is these that ultimately make the majestic river.

ESI SCHEME

Though the beginnings of social security for industrial workers can be traced back to 1923 when the Workmen's Compensation Act was

enacted, it was not until 1948 that a regular scheme was brought into force. This is the Employees' State Insurance Scheme, which now covers about 2.4 million workers and 2.1 million family units. The total number of beneficiaries is of the order of 8.4 millions.

This scheme provides for payment of cash benefits in the event of sickness, maternity, industrial injuries and also medical care. Dependents of victims of fatal accidents also get cash benefits. The members of the family, however, get only limited medical care at present.

EPF SCHEME

The Employees' State Insurance Scheme was followed by the Employees' Provident Fund Scheme in 1952; it now covers 82 industries, etc and provides old age benefit to about 3.9 millions.

Workers in coal mines are covered by the Coal Mines Provident Fund and Bonus Schemes Act of 1948.

Besides these, there are the medical care, sickness allowance and maternity benefits provided for the workers in plantations (under the Plantations Labour Act of 1951) and the medical care provided by the Coal, Mica and Iron Ore Mines Labour Welfare Funds.

MATERNITY BENEFITS

Maternity benefits to women workers hitherto available under the different Central and State enactments are now being progressively regulated by the Central Maternity Act of 1961.

The 'white collar' workers, whether in Government and semi-Government agencies and under local authorities already enjoy certain retirement benefits, in the shape of pensions, gratuity, provident fund, etc.

The Central Government employees in Delhi are also entitled to medical care under the Contributory Health Service Scheme; elsewhere, medical expenses are reimbursed. The larger and better-organised private undertakings generally have benefits of contributory provident fund and gratuity.

The real quantum of benefits, in terms of purchasing power of the rupee, has dwindled—and it applies equally both to industrial and white collar workers.

Efforts are now being made to raise the quantum of benefits, liberalise the conditions of eligibility, etc. This is apart from the wider coverage of the existing schemes and introductions of some new ones. A passing reference to the salient feature of the new areas of activities in the sphere of social security would be of some interest.

FUTURE OF ESI SCHEME

It is intended to cover during the Fourth Plan period, all employees and their families in areas with an insurable population of 500 and above and also to provide full medical care, including hospitalisation to workers' families.

Proposals are under consideration to extend the scheme to factories employing 10 or more persons using power or 20 persons without power and to shops and commercial establishments including transport companies employing 20 or more persons.

PROPOSED AMENDMENTS

Besides these, several amendments to the Employees' State Insurance Act itself are being thought of with a view to giving greater benefits and to more and more persons. These include raising the present income limit for coverage from Rs 400 to Rs 500 per month, adopting a wider definition of the term family,

raising the exemption limit for employees' contribution from Re 1 to Rs 1.50 per day (thus providing relief for employees whose daily wages are less than Rs 1.50), grant of funeral benefit, simplification of qualifying conditions for sickness benefit and maternity benefit.

REVIEW COMMITTEE

Some of these and certain other proposals are now being reviewed by a tripartite committee, that is, the Employees' State Insurance Scheme Review Committee.

PROPOSED CHANGES IN EPF SCHEME

The wage limit of workers covered has been raised, from time to time, from the initial of Rs 300 to the present Rs 1,000 per month. The rate of contribution has already been raised from 6 1/4 per cent to 8 per cent in 24 industries, etc.

A Death Relief Fund has been set up for giving financial assistance to the nominees of deceased members so that a minimum of Rs 500 is assured to the nominee of every deceased member. It is also proposed to give a minimum family pension of Rs 25 per month to the widow/minor children of subscribers who die prematurely.

COAL MINES PROVIDENT FUND SCHEME

The rate of contribution has already been raised from 6 1/4 per cent to 8 per cent per month from October, 1962. A proposal to give a minimum family pension, as envisaged under the Employees' Provident Fund Scheme, is being considered.

A proposal to grant a retirement pension to worker/members of the Funds, by setting apart the employers' share of the contribution is also under examination.

WORKMEN'S COMPENSATION

The wage limit for coverage was raised from Rs 400 to Rs 500 per month in February, 1963; simultaneously, the rates of compensation for death and disablement were also doubled.

Nearly five million workers are protected under the Act.

MATERNITY BENEFIT

A central act, recently enacted, ensures uniformity in the duration of benefit, that is, 12 weeks and a minimum standard of cash benefit equivalent to the average daily wage or one rupee per day whichever is higher.

COMPENSATION FOR LAY-OFF

It was agreed at the last meeting of Standing Labour Committee to amend the relevant legislation so as to provide compensation for lay-off for periods less than a week, after the expiry of the existing limit of forty-five days.

CIVIL SERVANTS

The question of providing social security to weaker sections of the population is also under consideration of the Government of India.

While these considerations are still in progress the Central Government have made a beginning for their own employees and have decided to revise very substantially the present Family Pension Scheme so as to provide for grant of a pension for life to the widow of every employee who has put in even one year's service. The new scheme provides for a minimum pension to the widow varying from Rs 25 per month to a maximum pension of Rs 150 adjusted for different slabs of pay. The scheme also provides for payment of allowances to minor children.

The Central Government have also been granting ad hoc increases in the amount of pensions, from time to time, to mitigate the hardships caused on account of increasing prices. Only in October last the Government increased pensions by amounts varying from Rs 5 to Rs 10 depending on the amount of pension drawn.

RELIEF FOR AGED PERSONS

Besides these social security programmes for industrial workers and civil servants some efforts are being made to provide relief to deserving persons amongst the general population. These are the schemes of old age pension introduced by some State Governments (Andhra Pradesh, Kerala, Madras, Punjab and Uttar Pradesh) and a centrally sponsored scheme for relief and assistance to aged persons, the physically handicapped and women and children without any means of livelihood. Such schemes which apply to specified categories of the general population will have to be implemented through adequate and efficient administrative machinery with well-trained staff throughout the country. It may not only be necessary, but also of positive advantage to enlist the support of existing social welfare/service agencies. Ultimately the success of such schemes greatly depends on leadership, quality of staff and our organisational capacity.

All these efforts might look rather desperate and also perhaps, unbalanced and lacking a sense of priorities. But these are largely the results of several economic, social and other forces. One cannot entirely rule out the possibility of such forces operating in future also. Nevertheless it should be our endeavour to evolve a coordinated plan of action.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

NEW LOAN

Rs 150 crores sought

THE second tranche of the new loan has made its appearance, and subscription lists are to be open from 13 July to 15 July for Rs 150 crores' worth. As we had suggested, it is a two-tier loan: the shorter dated, intended for the banking system, has a maturity of six years as against the five years that we had advanced as our recommendation; and the long-dated is a very long-dated one indeed, a twenty-five year loan carrying an interest coupon of 4 3/4 per cent.

The success of the new loan can be taken for granted: and indeed it is such an expectation on the part of the monetary authorities that accounts for the fact that the subscription lists are to be kept open only for three days—if that. The banking system is suffering from surfeit of funds, and it has lately taken to massive purchases of the Intermediate Treasury Bills. We may be sure that its available resources will be utilised in investment in the 4 per cent 1970—which is being issued at the extremely attractive price of Rs 99.

The long-dated of course is meant primarily for the Life Insurance Corporation: it is this loan the subscriptions to which may fall short of expectations. The 4 3/4 per cent 1989 may have to be taken up in bulk by the Reserve Bank.

We think it possible that the Reserve Bank may be able to close the lists well before the appointed day of 15 July; banks would therefore be well advised to put in their money on the very first day that the lists are open.

✚

BANK RETURNS

Rs 50 Crores Rise in Bank Resources

The latest banking returns show that there has been a tremendous increase in banks' resources, as a result equally of the inflow of new Deposits and of the contraction in Advances. Thus, the new loan announcement is made at a most propitious moment, in that banks are now possessed of the resources to lend it their best support.

The return of the Reserve Bank for 26 June records a contraction in Active Note Circulation amounting to Rs 33.15 crores. Also, there has been inflow of Rupee Coin to the tune of Rs 2.56 crores. With Active Note Circulation shown lower at Rs 2,484.12 crores, currency has been contracted both against Foreign Securities and Rupee Securities. The former, for purposes of buttressing our fast-disappearing foreign balances, is marked lower by Rs 4 crores at Rs 89.46 crores; and the latter has been contracted against by Rs 6.16 crores, in being placed at Rs 2,226.04 crores. So, the Reserve Bank's cash in the till has just about

doubled, in being shown higher by Rs 25.54 crores at Rs 51.94 crores.

Investments, in the Banking Department, are also lower by Rs 10.12 crores at Rs 273.90 crores. The clear inference is that the Reserve Bank has been able to put through tap sales for about Rs 15 crores; and the State Bank's purchases alone may have exceeded Rs 7 crores. Secondly, despite the transfer from the Issue Department, Balances Held Abroad have fallen by Rs 0.24 crore to Rs 7.15 crores; and so the import surplus can be put at Rs 4.24 crores for the week. The foreign assets held by the Reserve Bank have now fallen below the Rs 100 crore mark—and though it is a mitigating factor that currency has been repurchased from the International Monetary Fund during the week under review for \$25 million, the fact remains that we shall soon have to arrange for free or untied foreign aid—or for further assistance from the IMF.

The Centre's balances are sharply better by Rs 14.31 crores at Rs 79.71 crores. On the other hand, the States report a small fall of Rs 0.80 crore to Rs 14.05 crores in their Deposits as well as an increase of Rs 3.65 crores to Rs 53.34 crores in their ways and means borrowings.

The progress of the slack season has now completely relieved the banking system. The Reserve Balances of Scheduled Banks are substantially higher by Rs 8.46 crores at Rs 97.67 crores, with the share ascribable to the State Bank being no more than Rs 2 crores odd; and moreover debt to the Reserve Bank has been cut by Rs 2.88 crores to a nominal Rs 1.14 crores. It is therefore little wonder that banks should be purchasers of gilt-edged from the Reserve Bank tap; and the release of resources to the banking system by the current slack season bodes well for the new (cash) loan just announced by Government.

Strangely, the return of the State Bank for 26 June records an increase of Rs 1.08 crores to Rs 360.45 crores in the total of Advances. We may be sure that other Scheduled Banks would not have similarly experienced an increase in the demand upon them for accommodation. For the rest, the latest figures relating to the State Bank are predictably true to the slack season pattern. Deposits are up by Rs 3.19 crores at Rs 625.50 crores; borrowings are fractionally lower at Rs 0.62 crore; gilt-edged has been added to by Rs 7.15 crores to be placed at Rs 237.79 crores; and cash balances, including money at call and short notice have improved by Rs 2.04 crores to Rs 30.73 crores.

The resources of Scheduled Banks, as shown in their statutory statement for 19 June, improved by well over Rs 50 crores. On the one hand, net Deposits registered a rise of something exceeding Rs 25 crores; and, on the other hand, the total of Advances contacted by like figure. Net Demand Deposits are shown to be marked up by Rs 11.63 crores at Rs 1,218.15 crores, and net Time Deposits by Rs 15.19 crores at Rs 1,318.16 crores; and the State Bank's share of the new accrual to Deposits in the relevant week was placed at a little less than Rs 6 crores. The total of Advances is shown to be lower by Rs 25.38 crores

to go below the Rs 1,800 crore mark in being placed at Rs 1,796.11 crores; the State Bank's share in this respect was somewhat better at Rs 7.27 crores. In the face of such addition to resources, the Scheduled Banks had no recourse other than purchase of gilt-edged, a portfolio which has been marked up by Rs 13.61 crores at Rs 633.46 crores. It may be noted, in this respect, firstly that the State Bank accounted only for Rs 1.71 crores of this increase, and secondly that the bulk of the purchases was constituted by Intermediate Treasury Bills. Debt to the State Bank has been cut by Rs 0.97 crore to Rs 20.55 crores; and indebtedness to the Reserve Bank is marked lower by Rs 13.78 crores at Rs 4.58 crores—and about Rs 8 crores of the decline is attributable to the State Bank. The net result is that cash balances, including money at call and short notice, are a shade lower by Rs 1.19 crores at Rs 228.63 crores.

✚

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 day's Government of India Treasury Bills were opened on Monday, 29 June, 1964. Total amount offered was Rs 4,50,00,000. Tenders at Rs 99.256 per cent were accepted in full and those at Rs 99.250 per cent were allotted 38 per cent approximately. Total amount of accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.994 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 6 July 1964. Successful tenderers should make payment on Friday, 10 July, 1964 at all centres. Other conditions are as usual.

During the week ended 26 June, 1964, Government of India Treasury Bills for Rs 229,77,00,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills sold from 1 July, 1964 to 4 July, 1964 at Rs 99.286 per cent. Sales can be stopped at any time without notice if Government think it necessary.

✚

BANK NATIONALISATION

Will the Public Benefit?

Prof. Amul Desai

IN SPITE of assertions made by the Union Finance Minister that there is no prima facie case for taking over existing commercial banks by the State, the controversy on their nationalisation still persists. An assessment of the various grounds which would justify such a step would make the whole issue clear.

Frequent bank failures on a large scale, by creating a panic in the minds of the depositors, might result in a sharp fall in total deposits and thereby affect adversely the functioning of the money market as also the saving effort of the community. In such an eventuality, State intervention or nationalisation may be justified to a certain extent. No such weakness in our

banking system exists. Closure of a couple of banks is no indication of an unsound banking system. Moreover, so far small depositors are concerned, the Deposit Insurance Scheme protects them. About 80 per cent of depositors are covered by the deposit insurance. And if the State wants to protect the rest of the depositors, the best way would be to extend the scope of the scheme rather than to nationalise the banks. The very fact that the deposits of the scheduled banks increased from Rs 792 crores in 1952 to Rs 2,212 crores in 1963, i.e., an increase of 179 per cent, clearly indicates the confidence which the depositors have in the commercial banks of the country. The rate of increase in Deposits, which was 30 per cent per annum during the First Plan, rose to 13 per cent per year during the Third Plan.

This rise in deposits is shared by banks in the private sector along with the State, although the former do not enjoy the privileged position of the State Bank. Moreover, under the present competitive system, a depositor enjoys a freedom of choice, which would be lost to him if banking becomes a monopoly. This competition keeps the banks on their guard so far as depositors' goodwill is concerned. Nationalisation would eliminate this competitive spirit and though the deposits may remain safe, the quality of service rendered to the depositors is likely to deteriorate in the absence of competition.

With the power of deciding liquidity ratio, of giving directives on loans and investments and of even nominating directors on the Boards of commercial banks, the Reserve Bank is today in a position to prevent bank failures and safeguard depositors and national economic interests even without nationalising the banking system.

So far as employees are concerned, bank nationalisation is not likely to make significant change in their pay scales or working conditions. When the banks are in the private sector, profit maximization is the only objective criterion before the banks. When the state will take them over, profit making as an objective will be relegated to the background and if bank profits dwindle, banks' capacity to pay better salaries will also be reduced. Moreover, bargaining power of employees is much greater when they have to deal with a competitive private sector, for they can always appeal to the State for redressing their grievances. But when the State itself becomes an employer, the employees do not have any powerful outside agency to back them up. Actually, as things exist, today, pay scales in some of the private banks compare more favourably with those in the State Bank of India and if the motive behind nationalisation is to improve the conditions of the employees, this can be achieved by legislative enactment or by instituting a wage and salary fixation machinery for bank employees, without going into the actual takeover of banks.

Need for more resources to finance the Five-Year Plan as an argument for nationalisation of banks does not seem to be convincing. As it is, the banks handle over 54 per cent of their profits as tax payments to various layers of Government. In 1953, the percentage was 31. With increase in the rates of Corporation Tax, the share of the Government in bank profits has gone up, if more revenue is required for the Plan, all that is required is to raise the rates rather than to nationalise the banks, in which case the burden of compensation to shareholders will be heavy. Bank investments in Government Securities also help financing of the Plan. As against investment of Rs 301

crores of such investments in gilt-edged securities in 1951, in 1963 these investments amounted to Rs 710 crores. This implies that 18 per cent of Government borrowings is financed by banks. In terms of deposits, these investments constitute about 1/3 of the total deposits. If the Government wants to divert still more funds to itself, the Reserve Bank with the help of a simple directive is empowered to ask the banks to raise their ratio of investment in Government securities to deposits. Such a diversion may, of course, create difficulties by way of shortage of funds to finance the private sector as also bring down the profit ratio of banks because investments in Government Securities is less profitable than in other assets. The point is that it is not necessary to nationalise the banks in order to mobilise more funds for the public sector. The objective can be achieved by other means.

There are allegations that directors misuse bank funds, that they finance speculative activity, that they have a bias towards financing trade at the cost of financing industry, that agricultural sector hardly benefits from bank money and that bank directors are able to borrow on a large scale because of their influence on the banks. Each one of these charges is hardly based on facts. Application of selective credit control by the Reserve Bank has made it impossible for banks to finance speculation. Over the last decade, there has been a continuous shift in advancing loans to industry rather than trade. Whereas in 1951, 34 per cent of advances were given to industry, the corresponding percentage for the year 1963 is 57 per cent. Moreover, there is nothing wrong in providing financial facilities to traders, for movement of goods. In a developing economy, any bias against financing trade itself is misleading. Industry and trade are complementary to each other. One cannot exist without the other.

So far as agriculture is concerned, the very nature of banking business calls for caution on part of banks in advancing loans to agriculture. Banks lend out funds out of the deposits placed with them in good faith. Most of these are short-term deposits out of which long-term loans to agriculture cannot be advanced. Even the granting of short-term loans would depend upon the credit-worthiness and nature and amount of security which farmers are able to offer. So long as these do not come up to the standards acceptable to prudent bankers, financing agriculture will have to be a state responsibility. A reckless loan policy followed by banks will shatter the confidence of the depositors and bring a run on the banks. It is for this reason that even the State and Cooperative Banks have been conservative in this regard.

So far as misuse of funds by banks directors is concerned, under the existing law, no bank director can be given a clean advance without adequate security and the Reserve Bank is empowered to go into the merits or put a ceiling on such loans. It is significant to note that whereas in case of all scheduled banks put together such loans formed 11 per cent of their advances, in the case of State Bank of India 27 per cent of advances were given to its directors! It should also be realised that if directors are forbidden to borrow from their banks, they would prefer not to be bank directors, if that comes in their way of being bank borrowers. The Banks would be deprived of the managerial and executive skill of these people. The existing law safeguards bank funds from being misused. There is no need to prohibit directors from borrowing from their banks, if adequate security is offered and loan is used for productive purposes.

Similarly, the contention that bank nationalisation is an answer to the evil of concentration of economic power is besides the point. No reliable data is available on the distribution of ownership of bank shares. But even if we take it for granted that few big shareholders own large blocks of shares, we must not overlook the fact that the return on these shares is hardly excessive. As against a payment of Rs 44 crores to depositors as interest and Rs 15.6 crores to Government, as taxes, the banks paid just Rs 4.9 crores to shareholders as dividend. Ownership of shares does not result in drain of bank profits to shareholders on a large scale.

From another point of view, with nationalisation, concentration of economic power would be completely in the hands of the State. As stated earlier, competition among the banks is a safeguard to the interests of the community. The community would be deprived of this safeguard with complete concentration of banking business in the hands of the State. In the field of banking, what is more urgently required today is creation of more banking facilities all round in order to mobilise savings of the people and in order to develop banking habit in the rural areas. Commercial banks' branch expansion programme over the last decade compares favourably with that of the State Bank.

Any further loose talk about nationalisation of banks retards the pace of such a programme by creating uncertainty. If the State intends to step into banking business on a large scale let its own banks start and develop more branches. A healthy competition between the banks in the public sector and those in the private sector will be more beneficial to the State, the employees and depositors and the public rather than the nationalisation of existing banks on doctrinaire grounds.

RICE MILLS

Intriguing Proposal

An interesting, and intriguing, proposal for setting up modern rice processing units in the public sector has emerged out of the recently concluded Chief Ministers' Conference in Delhi. It is claimed for these units that they would straightaway increase the availability of rice for the same quantity of paddy and effect substantial savings in the amount of foreign exchange currently spent on rice imports. According to the Union Minister of Food and Agriculture, who announced Government's decision to implement this programme in a 'big way', a unit capable of processing 20,000 tonnes of paddy in a year will yield an additional 1,600 tonnes of rice as compared with existing rice mills and this will mean a net saving of over nine lakhs of rupees in foreign exchange, after allowing for cost of imported equipment.

It may be worthwhile, however, to look into the details of how the

additional yield will be achieved, whether it is through reduction of wastage in storage and in processing, or by what is called under-milling. If the latter, it will only mean that the additional yield consists, not of rice, but only of an additional percentage of bran and husk and the saving may turn out to be illusory. Nonetheless, the picture presented by the Minister for Food and Agriculture is so attractive, that it raises the question why this simple expedient of increasing the availability of rice was not thought of much earlier and existing rice mills, which the Minister condemned as primitive, were not allowed to modernise their equipment.

The decision to set up modern rice processing units in the public sector marks a break with the ideologies which stood in the way of a realistic approach to the needs of the rice milling industry. It is, indeed, a far cry from steel mills to rice mills; but experience of running rice mills in the public sector may, as in the case of the steel industry, induce Government to look kindly on proposals for expansion and/or modernisation of the existing plants.

The economics of the rice milling project would be definitely improved if scientific processing of by products like bran and husk is also undertaken by the new units.

RICE BRAN OIL Little Progress

It is now some years since rice bran was identified as an important source of edible oil, of which total production is very much short of requirements. The present production of vegetable oils, including all the five major vegetable oils, coconut oil, cotton seed oil and solvent extracted oil, is only of the order of 18 lakh tons against the demand which is expected to be over 29 lakh tons by 1965-66. Programmes have been included in the Third Five Year Plan for development of the production of rice bran oil, but so far not much progress has been reported in the implementation of these programmes. Against the estimated potential of 1,25,000 tonnes of oil from bran, and the Third Plan target of 20,000 tonnes,

production is only of the order of 3000 tonnes.

A committee which was set up up two years ago to examine the problems of rice bran oil industry had found that the growth of the industry was hampered by the difficulty of collecting the right type of bran for extraction of oil. The modern rice processing units proposed to be set up in the public sector will not be handicapped by this difficulty, provided that the increased output of rice is not achieved through undermilling. But even if enough bran is not available, there should be scope for economic utilisation of rice husk.

The Tropical Products Institute in London is reported to have developed a process for making floor and roofing tiles from rice husk. Another new product developed by the Institute is high quality building board from groundnut shells. These are developments which should attract the attention of the rice milling and oil crushing industries in this country.

HIRE PURCHASE Problems and Prospects

The growth of hire purchase system in the country has been haphazard and there is an urgency for properly regimenting it for fulfilling the desired objectives. Not that efforts are lacking in this direction but they are not adequate enough to cover the entire country and extend the facilities to the people belonging to different classes. There are at present a few associations and there is a move to form an all India Federation to safeguard the interests of those companies engaged in hire purchasing and also to protect the interests of hirers. The value, variety and bulk of hire purchase transactions are accepted as a barometer for measuring the economic advancement of any country. In affluent countries such as the USA and the UK a substantial portion of consumption is routed through this system but its potential has not been sufficiently appreciated in our country. But

there is considerable scope for the hire purchase institutions to expand and develop and push up the standard of living of the people.

Addressing the annual meeting of the Hire Purchase Association in Calcutta last week Mr R. P. Patodia catalogued the difficulties the hire purchasing institutions have to encounter in their business transactions. Credit facilities available in the country are scanty and the restrictive policy of the Reserve Bank is a serious impediment. Some banking institutions are even alleged to be reluctant to entertain proposals for advances against hire purchase documents. A lenient policy in this regard will be of enormous assistance to encourage hire purchase transactions in the country. Some of the legal restraints are found to be unpropitious which more often than not lead to abuses and frustrations.

Speaking at the occasion Mr A. K. Sen, the Union Minister for Law and Security rightly pointed out the need for setting up a country-wide institution for providing agriculturists with power tillers and other modern gadgets for boosting agricultural output instead of supplying them luxury items like washing machines. This will, as Mr Sen said, in the long run, enhance the purchasing power of the tillers of the soil which is currently at a deplorably low level. The Union Minister asserted that if the association makes a concerted endeavour to explore this horizon and set up an ethical standard the Reserve Bank and State Bank will naturally meet the financial requirements of the association.

CAUSTIC SODA Demand Outstrips Output

The progress of the caustic soda industry has indeed been impressive but it is still some way before it can be in a position to meet domestic demand in full. The installed capacity of the industry has shown a phenomenal increase from only 33,317 tonnes in 1954 to 209,185 tonnes now. Capacity will increase further by an aggregate

of 153,968 tonnes when the already licenced expansion of existing units and the installation of 14 new units are completed. The additional capacity that may be put up in the next two years may help reduce imports which last year amounted to Rs 344 lakhs but even so there will be a gap left between domestic supply and demand. Opening the public enquiry into the question of the continuance of protection to the caustic soda industry early this week in Bombay, Dr Balakrishna, member of the Tariff Commission, pointed out that in view of the fast growing demand for caustic soda by industrial users, demand before long would far outstrip domestic production. Therefore, there is a clear case for further expansion of capacity and there is a consensus that till adequate capacity is established tariff protection should continue.

Referring to the demand that future licensing in the industry should take care of economies of scale, Dr Balakrishna was of the view that there could not be a hard and fast rule on the concept of an optimum unit. This is because the question of an optimum unit needs to be viewed from many angles. While a 100 tonnes unit will be advisable for exclusive caustic soda units, there is nothing wrong to allow units with only 10 tonnes capacity in industries which manufacture caustic soda for their own use. As a matter of fact such small units have been found to be as efficient as the larger units. The fact that there is general satisfaction over the quality of indigenous caustic soda should not lead to complacency among the producers because consumers cannot be expected to go on paying the present high price especially when imported caustic soda is much cheaper. As has been pointed out by Dr Balakrishna, now that the price control on caustic soda has been removed, it is up to the manufacturers to take active measures designed to bring down their cost of production and reduce the price of their product. It is however to be noted that in the matter of cost reduction, Government should also lend a helping hand. For instance, units located in the interior have now to bear extra rail freight for the transport of the supply of salt. By effecting a reduction in the freight, the units will be enabled to bring about some useful reduction in the cost of production. Again, mercury which is an essential requirement for units adopting the electrolytic process is in short supply. The present arrangement of allowing import of mercury both for original equipment and for maintenance only through the State Trading Corporation, it is pointed out, entail avoidable delays. The solution suggested is that while the STC can continue to be responsible for

the import of mercury, the manufacturers should be permitted to import it direct for use in original equipment.

ROAD TRANSPORT Slow Development

Speaking at the annual general meeting of the Indian Roads and Transport Development Association in Bombay Mr Asoka Mehta, Deputy Chairman of the Planning Commission, spelt out in detail the future pattern of road development in the country. Mr Mehta was only stressing the obvious when he stated that road development should be carried out in a scientific manner to catch up with the economic advancement of the country and to reduce cost of road construction and maintenance. Equally significant is his suggestion for the co-ordination of road development and economic activities in the country to serve the less developed regions. It is also encouraging to hear from the Deputy Chairman of Planning Com-

mission that there need not be any competition between rail and road and other means of transport.

The primary factor that has impeded the growth of road transport in the country is the inadequate capacity of the automobile industry to meet the growing requirements. As against the initial target of 60,000 commercial vehicles envisaged in the current Plan, production at the end of 1965-66 is estimated to approximate 42,000. Apart from the foreign exchange difficulties, the lag in production in indigenous contents has considerably slackened the production of automobile industry.

As Dr F. P. Antia pointed out in his presidential address the burden of taxation on the industry is of a crippling nature. It works out to nearly 55 per cent of the cost of operation of commercial vehicles. It needs special mention that it does not include the incidence of octroi, terminal tax, etc; which seriously hamper inter-State operations. It is heartening that the Committee on

Transport Policy and Co-ordination has been conducting regional surveys and if the findings prove useful for eliminating the host of restrictions placed on road transport, it will be of enormous significance to the industry. There is, therefore, an urgency for rationalising road taxation and also for reducing the industry's burden. As Mr Mehta aptly remarked the interests of small units should be safeguarded in the interest of the industry and for enhancing the quality of service. But the successful implementation of the a co-ordinated transport plan would largely hinge on the enthusiasm and co-operation of the interested parties.

The great leeway the country has to make in road development can easily be gauged from the fact that the Fourth Plan outlay under this head will be approximately Rs 4,000 crores. It is, however, incumbent to develop a connected network of national highways, district roads and village roads for ensuring better transport facilities.

VIKRAM JAYANTI 54,350 TON SUPER OIL TANKER JOINS JAYANTI FLEET

VIKRAM JAYANTI, Jayanti Shipping Company's 54,350 Ton Super Oil Tanker, now joins Jayanti's fast growing fleet.

The vessel, built by Mitsubishi Shipbuilding & Engineering Co. Ltd., was delivered to Dr. J. Dharma Teja, Chairman, Jayanti Shipping Co. Ltd., in Japan.

VIKRAM JAYANTI, with its overall length of 754 feet and its breadth of more than 107 feet, will be the largest vessel on Indian Registry. It has a capacity of carrying more than 52,000 tons of oil when fully loaded and requires a 36 feet draft.

VIKRAM JAYANTI will start earning valuable foreign exchange for India the moment it leaves the Shipyard as the vessel has already been Time Chartered for a period of 12 years by ESSO Standard Eastern Tankers Ltd.

With the addition of VIKRAM JAYANTI to Jayanti's fast growing fleet, the Company's tonnage touches the high mark of 4,50,000 DWT. The Company now owns, besides the new Super Tanker, twelve 10,000/11,000 DWT cargo vessels, seven Bulk Carriers, totalling 2,31,000 DWT, and the Oil Tanker Adi Jayanti.

COAL

Need for a Policy

Speaking at the annual meeting of the Selected Satgram Collieries Limited, Mr S. D. Shethia, the chairman, has called for the setting up of a high level body to enquire into the causes of present chaotic state of the coal industry. Impelled by the exhortations from Authority and in response to the national emergency, the private sector collieries had put in hard work only to find that they were left to carry large stocks of coal which nobody seemed to be in need of. The riddle is not yet completely solved but some of the contributory factors which have brought about this unenviable position the industry finds itself in today have been identified. According to Mr Shethia, they are overestimation of demand, slow industrial growth, Government policy of subsidising furnace oil thereby encouraging the establishment in parts of the country of several industries based on oil instead of coal, improvement in coal transport etc. One thing is however clear, and that is, that unless remedial measure or measures are found and that too quickly implemented our future planned growth will be in jeopardy because coal is basic to the plans. While the present problem confronting the coal industry will require expert handling, it is possible to indicate what the remedy should seek to achieve. Above all it was time we had a consistent and steady coal policy, a policy which at once ensures the supply of proper quality coal in sufficient quantities to the various consumers and the conservation of those grades of coal which are not in plentiful supply. While it is gratifying to note that a welcome change is noticeable in Government's handling of the coal industry's many problems, as witness the bold measures taken by the Government in increasing the prices of selective grades of coking and non coking coal, decontrol of the movement of lower grades of coal, pegging the output of metallurgical coal and the inclusion of coal industry in the list of essential industries in order to lessen the burden of tax on it, the good work needs to be continued so that the remaining handicaps are also eliminated without much loss of time.

*

PAPER INDUSTRY
Rising Costs and
Dwindling Profits

With the accelerated tempo of the economic development of the country and the increase in the standard of the people, demand for paper and paper products has gone up to a considerable extent. But indigenous production has not been stepped up to the requisite

extent and if the current trend of production is any guide there is bound to be a substantial shortfall. As against the Third Plan target of 700,000 tonnes, paper output is estimated to be in the environs of 600,000 tonnes, leaving a gap of 100,000 tonnes. With a view to meeting this shortfall Government has recently invited programmes from all the manufacturing units for stimulating production by adjustments and modifications of equipment and an additional capacity of about 120,000 tonnes is expected to materialise therefrom. Even then the possibility of reaching the current Plan target seems to be far remote as a part of the installed capacity may not become productive in time.

As Mr N. D. Bangur, the Chairman of the Bengal Paper Mills Company Limited, stated at the annual general meeting held in Calcutta, the shortfall in production can be attributed to a host of reasons, the most important among them being the inadequate availability of raw materials and the difficulty in finding finances on account of the industry's low profitability. With the rapid growth of the industry the problem of raw material supply has assumed considerable importance and complexity to warrant an expeditious and thorough examination into the issues involved. It is well a known fact that known resources of bamboo are already licensed for the industry which necessitates large scale plantation in selected areas. But forest being a state subject, development of forests will depend on the State Governments. It has been found that generally government policy leads to irregular supply of bamboo to the paper mills and many of the states are reluctant to continue supplies to industries located in other states for encouraging local manufacturing units. The urgency for leasing forest areas to paper mills on a long-term basis has been repeatedly brought to the notice of the Government by the industry and Paper Panel, the Development Council for Paper, Pulp and Allied Industries, the Tariff Commission and other ad hoc committees set up from time to time to probe into the question of raw material supplies to the industry but the Centre has not so far taken any action thereon. As Mr Bangur pointed out the Centre should immediately formulate a policy which will ensure regular supply of raw materials to the industry in adequate quantum. It is encouraging that recent researches have found that hardwood could be utilised as a substitute raw material by mixing it with bamboo and other conventional raw materials.

Another disturbing factor as far as the paper industry is concerned is the progressive rise in manufacturing cost. The general trend

in paper industry is rising costs and declining profits. It is evident from the fact that though the Bengal Paper Mills' production and profits in the year advanced to 22,567 tonnes and Rs 6,475,025 respectively from 21,583 tonnes and Rs 6,002,630 respectively, the net profit dwindled to Rs 352,339 from Rs 1,518,412 in the preceding year. This is partly due to the fixed selling prices which do not take into account the increase in production cost. Cost inflation being a permanent feature of our economy, the industry should be allowed to earn adequate profit for completing expansion and modernisation programme in order to enhance production both qualitatively and quantitatively.

*

MM & GI
Forging Ahead

Though the Madras Motor & General Insurance Company Limited is one of the youngest general insurance companies in the country, it has made remarkable progress since its inception in 1950. For the first nine years or so, the company's business was confined to the underwriting of Motor insurance only. Thereafter it expanded its activities to include Fire, Marine and other classes of Miscellaneous business. And today it is one of the most successful General Insurance companies in the country and this is borne out by the fact that from the point of view of gross premiums, net premiums and total assets, MM & GI ranks twelfth in the whole of the country, amongst the Indian insurers, and from the standpoint of net profits it occupies the fifth rank. How a comparatively new comer in the field such as the Madras Motor and General Insurance Company Limited has been able to achieve such commendable record in a short span of time? The answer is efficient management and prudent underwriting. The excellence of the performance of MM & GI is further enhanced by the fact that it has to work in an atmosphere of insecurity as it were. For, in the past few years, general insurance industry is being plagued by the spectre of nationalisation and with the entry of the Life Insurance Corporation, it has also to meet the competition from the biggest insurer in the country.

The year ended 31 December 1963, the balance sheet for which period has just been published, has been an eventful year in that the gross premium underwritten has crossed Rs 1 crore. The progress of fire business continues to be encouraging with the gross premium increasing to Rs 14.64 lakhs as against Rs 9.12 lakhs in the previous year. It is significant that in addition to the motor business the company has been

underwriting miscellaneous business of all types. With the improvement in the standard of living of the people consequent upon the economic development of the country as a whole, miscellaneous business is bound to grow. The vast potential in this field has already been recognised by the company's management and the Directors have noted in their report that efforts have already been initiated toward building up this portfolio. The company proposes to pay a dividend of 21 per cent on the increased capital as against 18.5 cent paid in 1962.

*

WHOLESALES PRICES

The official wholesale prices index (with the year ended March 1953 as 100) witnessed a further rise of 0.8 per cent to 145.4 during the week ended 6 June, 1964 as compared with 144.3 (revised) for the earlier week. The index was higher by 1.7 and 9.0 per cent respectively when compared with the corresponding week of the previous month and that of a year ago.

Higher prices of Fish (+15%), Onions (+8%), Potatoes (+7%), Barley at Jaipur and Arhar (+6% each), Groundnut oil (+5%), Jowar (+4%), Oranges, Gingelly oil, Gur and Cardamoms (+3% each), Bajra (+2%) and Rice, Wheat, Maize, Ragi, Gram, Milk, Eggs and Meat (+1% each) raised the index for 'Food Articles' by 1.3 per cent to 151.9 as compared with 150.0 (revised) for the earlier week. The prices of Coconut oil and Betelnuts (-3% each), Bananas and Coffee (-2% each) and Cashewnuts (-1%), however, exhibited declines.

As a result of a rise in the prices of Tobacco raw (+1%) the index for 'Tobacco' moved up by 1.0 per cent to 116.8.

The index for the 'Fuel, Power, Light & Lubricants' group worked out to 141.6 as against 141.7 for the previous week.

The index for 'Industrial Raw Materials' advanced by 0.7 per cent to 151.3 owing to an increase in the prices of Lac (+3%), Silk raw, Groundnuts, Castorseed, Rapeseed and Cotton seed (+2% each) and Linseed and Gingelly seed (+1% each). The prices of Jute raw and wool raw (-1% each), however moved down.

Lower prices of Tin (-7%), Rayon yarn, zinc and Lead (-2% each) and Cotton yarn (-1%) brought down the index for 'Intermediate Products' by 0.3 per cent to 146.7 as against 147.2 (revised) for the earlier week, although the prices of semis (+3% and Linseed oil, Brass and Copper (+1% each) witnessed advance during the week under review.

The index for 'Finished Products' stood at 131.0 as compared with 131. (revised) for the previous week. Items which showed variations during the week were: Jute manufacture and Silk & Rayon manufacture (-1% each) and Handloom cloth (+1%).

Clive Street Gossip

"I must have liberty
Withal, as large a charter as
the wind
To blow on whom I please"
—As You Like It

THE decision had to be taken, that Mr Shastri would have to cancel his first important appointment abroad. There are they who have already begun to whisper about that the load of responsibility on the new Prime Minister is beyond his capacity to bear. Now, indisposition can and does take people unawares; and I suggest that it is mischievous to construe an unfortunate coincidence as indicating that Mr Shastri is not up to the strenuous tasks that India's Prime Minister has to tackle. Indeed, the real lesson to be learnt, from the fact of Mr Shastri having cancelled his trip to the UK, appears to be overlooked. Smoothly and without fuss, Mr T. T. Krishnamachari and Mrs Indira Gandhi have been nominated to depute. The first inference, as regards T.T.K. is that it is collective leadership which is in power in New Delhi. The second reference, as regards Mrs Indira Gandhi, is that she is earmarked to take up the external affairs portfolio. Mr Shastri, it is clear, will be a Prime Minister who will co-ordinate the activities of the Cabinet—and not one who will assume particular responsibility for specific portfolios. So, even as we were able to welcome the unperturbed manner of the choice of a successor to Mr Nehru, we can now draw inspiration from the dispassionate and unhurried way in which certain responsibilities have been delegated.

*

I am heartened to find, meantime, that the London press feels regret that the first "encounter" with Mr Shastri has in this wise got postponed. There is an eagerness, even an anxiety, on the part of the outside world to know what manner of man has been chosen to control (perhaps nominally) the destinies of this country. This is despite asseverations on every side that, after Nehru, India can quite give up all aspirations of giving a kind of leadership to the underdeveloped world. For, the fact is that the West has still, or perhaps now more vital, an interest in India's future. Nehru alive, India could be confidently expected to keep together. But what now? I think that question, too, has begun to be answered. There is, sense, a feeling of unity in Delhi; the apprehended scramble for power failed to materialise. I read somewhere the view-point that Mr Shastri's India will be isolationist; and I presume that means we shall, in the political world, be

self-effacing. However, I don't see how this is possible. We shall naturally have to press forward the pace of progress, as we do not have a Nehru to keep the people in check; and we shall need foreign aid. We cannot be a showpiece, of what can democratically be achieved, if at the same time we shrink from our duties as a non-aligned nation. So, with Mrs Indira Gandhi very likely soon to assume responsibility for external affairs, I think we may also safely predict that India's role in world affairs will not diminish but grow.

*

Thus, I am reasonably satisfied that India as a nation has the stuff that can carry on. But I admit to being rather concerned about the price situation. The increase in the index of wholesale prices is relentless. I know, that it is foodgrains prices in the main which, as a result of the very high weightage given, are mainly responsible. Nevertheless, I am more than somewhat uneasy about the trends. On certain grounds, Mr Subramaniam proposed a line of action: on certain other grounds, it now appears that the Finance Minister does not quite approve. It is of course true that whatever the sphere of the economy supplies adequate to demand is the only real answer to inflationary tendencies. But, in respect of foodgrains, it has been equally clear that the distribution system has been at fault. So, I had been hoping that the Food Minister would take the necessary steps to ensure that upward spirals to prices would not find their cause in an inadequate distributional system. I am afraid that the Finance Minister appears to think that production is the only answer to inflation. I would like to suggest that, if we are to have an improvement in the standard of living of the masses, an increase in the prices of agricultural crops is inevitable; for there is a limit to what productivity can do to increase earnings as far as the agriculturist is concerned. Thus, what is to be faulted is not the rising trend in foodgrains prices as such; reprehensible though it may be, there can be a correction through the medium of an increase in the wages of the fixed salary group. What I would ask for is a whole-sale revision of the indices both for production and for prices. Both indices at the moment are heavily weighted in favour of agriculture. In light of the tremendous diversification in the

ranges of production in the country, such weightage is just no longer tenable. I therefore ask for new indices; which will not serve, as they do at the present moment, to exaggerate the impact of prices in the agricultural sphere. Little account has as yet been taken of the wide range of new manufactures that India is capable of; no account has been taken of the steadily diminishing importance of agriculture in the national income. It is all very well to say that India will not be an industrialised nation, ready for the take-off, until such time as its labour force considerably exceeds its agricultural population; but the censuses of India are not sufficiently taking account of changes in this regard. India, let it be recognised, is no longer an underdeveloped country; it is a developing country, in which admittedly the weak spot is in agriculture.

*

The big controversy today is, whether India in its planning should divert emphasis from industry on to agriculture. There are they, who would wish that we should consolidate at the present. For such persons, the fourth steel plant at Bokaro means nothing—whether built by the Americans or by the Russians. They would point to the rising prices of foodgrains—and charge that all of India's planning has been on wrong premises, because without a suffi-

Olympus - A Letter from Delhi

Economy in Expenditure

The relevance of Governmental expenditure to the problem of rising prices was stressed by the Finance Minister when he addressed the concluding session of the Chief Minister's Conference. Drawing attention to the high level of Government expenditure, both at the Centre and in the States, he told the Chief Ministers that, at the present stage of the economy, the country could not afford to take any additional expenditure by Government. It was essential to create an atmosphere in which inflation could be controlled. The economy would also have to be controlled in the key sectors. While it was difficult to cut down expenditure on development, expenditure which did not contribute to economic growth might be looked into and curtailed. Non-plan expenditure should be cut down to the extent possible.

At the Centre he hoped to achieve reduction in expenditure of the order of Rs 70 crores. He suggested that State Governments should also explore the possibility of curtailing expenditure. In this connection he also observed that the States should help in economising expenditure on relief and rehabilitation. "We cannot avoid expenditure. Yet we cannot afford to be very generous," he said.

The importance of economy in Government expenditure, for the successful implementation of the programme to hold down prices, was also stressed in the concluding address of the Prime Minister. He gave the assurance that in the next two months there will be absolutely no difficulty in the supply of food grains, both wheat and rice, to different States. The quantity of food grains offered by the Centre to the States had been generally found acceptable by the State Chief Ministers.

Cochin Shipyard

While discussions in Tokyo between an Indian Official Delegation and the Executives of the Mitsubishi Heavy Industries, regarding technical and financial collaboration in the construction of the Cochin Shipyard, had led to agreement on all major points,

it will take another month before the agreement is ready for signature. Some details require further discussion. Mr Raj Bahadur, Minister for Transport, who was in Japan during the discussions, told a press conference that Mr Matsushita, Managing Director of the Mitsubishi Heavy Industries, will be visiting India in the near future to help in the settlement of the remaining details and to conclude and sign the formal agreement.

Though the negotiations have been prolonged, Mr Raj Bahadur was confident that, once the agreement was concluded, implementation of the project would proceed at a remarkably rapid pace. He expected work on the shipyard would be started this year. According to programme drawn up, the first ship would be launched in 1967 and the ship-yard would attain its targeted capacity, to construct four ships aggregating 93,600 dwt per annum by 1971. The shipyard, he said, would be equipped to construct tankers and bulk carriers of up to 75,000 dwt. The total cost of the project was estimated at Rs 8.67 crores with a foreign exchange component of Rs 2.67 crores.

Mr Raj Bahadur said that Japanese assistance had also been promised for stepping up the capacity of Hindustan Shipyard from three to six vessels per annum, as well as in the setting up of a number of engineering industries for manufacturing the ancillary equipment required by the ship building industry.

Joint Programme of Tourist Promotion

Mr Raj Bahadur, Minister for Transport, had taken the opportunity of his recent visit to Japan to discuss with the Japanese Minister for Transport, a programme for joint promotion of tourist traffic. It was agreed that there was considerable scope for promoting tourism between the two countries, not only by encouraging the residents of one country to visit the other, but also by inducing tourists who visit one country to include the other also in their itinerary.

It was agreed, in principle, to promote, jointly, tourist program-

mes by which tourists visiting either country will be encouraged to visit the other. The details of the programme which has been approved in principle by the Ministers of the two countries, have to be worked out at the official level. It is expected that a team of Japanese tourist officials and representatives of the tourist industry would come to India to have further discussions.

A joint promotional programme between India and Japan and some other countries in the region—it is expected that Thailand and Hongkong may join at a later stage—could mean pooling of the resources of these countries and putting out joint advertisements in the USA, Europe and, later, Australia. These countries could cooperate in organising package tours. Adequate information on tourist centres and facilities of the countries participating in the programme would be available in the tourist offices of all the countries. Each country would not only disseminate tourist information about itself, but about other countries joining in this cooperative effort.

The pattern of tourist traffic in India and in Japan indicates that such joint effort to promote tourist traffic would be to mutual advantage. While Japan has in 1962, 108,400 American tourists as against 30,000 tourists from Europe, India had about 39,000 American tourists and 47,000 from Europe. There is good scope for inducing American tourists visiting Japan to continue their journey to India and Europeans coming to India to go on to Tokyo, Hongkong and Thailand which lie on the tourist route between India and Japan could benefit by joining this joint promotional campaign.

An effort could also be made to promote tourist traffic between India and Japan. Japan has, for the first time, lifted travel restrictions on its nationals and a large number are going out as tourists. The numerous Buddhist shrines in India should be a powerful draw. A large number of Japanese would like to visit places like Bodhi Gaya, Rajgir, Nalanda, Sarnath, Sanchi, and Lumbini, the birthplace of the Buddha.

India, unfortunately, is not in a position to exchange tourists on

the same scale for obvious economic reasons. But according to tourist department officials, there is considerable scope for exchange visits in certain fields. The lead should be taken by the travel agents in the two countries and followed by exchange of visits by writers, artists etc.

According to the statistics of the tourist department, there has been an impressive increase of 16.7 per cent in the number of tourists visiting India from Japan, in 1963, though the figure for the entire East Asia region shows a fall of 6.2 per cent. There was also spectacular increase of 49.9 per cent, in tourist traffic from Australasia (Australia, New Zealand and Fiji) in 1963.

Bokaro Time Schedule

The time schedule for construction of the Bokaro Steel Plant is expected to be drawn up, after discussions with the Soviet authorities by an Indian official delegation which is leaving for Moscow, in about a fortnight, to finalise the details of Soviet assistance for the project. Once the schedule is settled, it should be possible to start work on the site immediately.

The assistance which the Soviet Government has offered is for building the first stage of Bokaro up to 1.5 million tonnes of ingots. It will, however, have a built-in provision for expansion to produce four million tonnes ultimately. The pattern of expansion of the steel plant from its initial capacity will be one of the major topics for discussion. The delegation will also decide the consultancy arrangements to be made for setting up the plant.

The delegation which, will be led by Mr N. N. Wanchao, Secretary, Ministry of Steel and Mines, will include Mr K. M. George, Managing Director, Bokaro Steel Limited. Mr M. N. Dastur is expected to join the delegation in Moscow.

Coal Targets

Total requirements of coal for various uses by the end of the Fourth Plan have been tentatively estimated at 136 million tonnes. This means that production by 1970-71 would have to increase by 80 million tonnes over the anticipated production of 76.32 million tonnes at the end of the current Plan.

Of the total requirement of 136 million tonnes, the demand for coking coal is expected to be 46 million tonnes, for blendable coal 6.68 million tonnes and for non-coking coal 80.74 million tonnes. The financial outlay required for reaching this level of output is estimated at over Rs 500 crores, of which expenditure in foreign currency would amount to Rs 168 crores. The figure of Rs 500 crores includes the outlays on Coal Mines, Washeries, Low Temperature Carbonisation and Hard Coke plants, Sand Stowing, Prospecting and Training.

Code of Fair Trading

Practices

While signifying their acceptance of the Draft Code of Fair Trading Practices for Internal Trade prepared by the Ministry of International Trade, the Committee of the Federation of Indian Chambers of Commerce and Industry have observed, in a communication to the Government, that it may not be practicable for all traders and manufacturers to comply with all the provisions of the Code and that, therefore, the adoption of the code should be on a voluntary basis. In this connexion attention has been drawn to the provision regarding display of comprehensive price lists by retail traders and requirements which enjoin price stamping, marking or tagging of all articles by traders and manufacturers and declaration of price in advertisements etc.

The Code, based on the report of the Committee on Fair Trading Practices which was set up by the Board of Trade in 1962, was circulated by the Ministry of International Trade among Chambers of Commerce and Trade Associations, to enable them to formulate a universally accepted code of Fair Trading Practices for adoption by their members. The Draft of the Model Code, to which all manufacturers (ie. producers and processors) and traders (ie. wholesalers, retailers and merchants), who have registered themselves with the various Chambers of Commerce, Manufacturers' Associations, Trade Associations and Commodity Boards, are expected to adhere, lays down the following principles:

1. It shall be the duty of every manufacturer to develop and promote the industry on a well-organised basis, so as to make it a source of strength to the country's economy.
2. It shall be the endeavour of every manufacturer or trader to ensure purity of quality of the articles manufactured, processed or sold.
3. Every manufacturer and trader shall maintain accuracy in quality in terms of weights and measures.
4. Every retail trader in all urban areas covering a population of over one lakh, shall maintain, at all times, a list indicating, in the local language, the prices of the various articles available with him for sale, and he shall, while selling these articles, strictly adhere to the price so indicated.

5. Besides the price list, every manufacturer and trader shall resort to price stamping, price marking or price tagging, whichever is best suited, in respect of all articles manufactured or sold by him.
6. Manufacturers shall, either jointly or individually, advertise or re-fashion their existing advertising campaigns, to declare the ex-factory price of the articles manufactured, wherever possible.

7. No manufacturer or trader shall hoard goods with a view to profit by creating artificial scarcity, nor shall he resort to unfair means to eliminate free and healthy competition in the market.
8. It shall be the endeavour of manufacturer and trader scrupulously to maintain business integrity of the highest order in his dealings with customers so as to inspire confidence in their minds.

Fourteen Years of Colombo Plan

The Colombo Plan has just completed fourteen years. During these years, quietly and unostentatiously, it has made a notable contribution to the economic betterment of the member-countries in South and South-East Asia. Thousands of people from the region have been trained in growing better crops, using modern machinery and running the administration more efficiently. These are skills that go to establish the foundations for a better and fuller life.

Furthermore, the Plan has helped bring about changes, together in the technology and genius of man, on the face of Asia. Huge hydro-electric dams and miles and miles of irrigation canals run through regions which were once barren. The surge of development is so compulsive and fast that within a generation, people who once knew only the narrow horizons of paddy fields and grass huts are now familiar with the smoke of new factories and the benefits which such factories can give them and their posterity.

Last year the rate of economic growth of the Colombo Plan region has been varied and changes in the gross national product increased upto 8 per cent. Industrial production rose beyond expectations. It is only in the agricultural field has production not kept pace in order to meet the demands of the tremendous growth of population; this agricultural lag has created a severe problem to which the members of the Colombo Plan are addressing themselves. At the next Meeting of the Consultative Committee of the Colombo Plan in London this November, rural development and agricultural production form a special theme of discussion.

External economic assistance has always been a major prop to the development schemes of countries in South and South-East Asia. Aid in 1962-63 from Australia, Britain, Canada, Japan, New Zealand and the United States amounted to \$1,820 million, (Rs 866.66 crores) making a total of \$13,820 million (Rs 6,589.95 crores) since the inception of the Colombo Plan.

Equally important is the Colombo Plan's Technical Co-operation Programme which is com-

posed of the services of experts, training facilities for scholars in the region and the supply of equipment. Since 1950 more than £145 million (Rs 193.33 crores) has been spent on this programme and over 30,000 trainees have gone to the member countries for specialized courses.

A shortage of technically trained personnel particularly in the middle level in South and South-East Asia hampers faster development in the industrial sector. During the last 14 years there has been a steady growth of technical schools in the region and an interchange of trainees has been going on steadily within the framework of Colombo Plan Technical Co-operation. The appointment of an Adviser on Intra-Regional Training will facilitate the promotion of intra-regional technician training and thereby help to close the gap in manpower which exists between the professional engineer and the skilled craftsman. It has been observed that in spite of language barriers and the absence of uniform standards, in the long run, it will be of greater advantage for the industrial progress of South and South-East Asia if middle level technicians are trained in the region itself.

At the inception of the Plan in 1950, it was obvious that assistance to the region would come primarily from donor countries. The distinction between recipient and donor has become indistinct for today many of the countries in South and South-East Asia are themselves donors particularly in the sharing of training facilities.

Burma, Ceylon, India, Indonesia, Malaysia, Pakistan, the Philippines and Thailand now appear as donors. India remains the largest donor of aid in the region not only in the dispensing of training facilities but also of capital assistance, it has spent millions of rupees for the development of Nepal in particular and some of the neighbouring countries. India has, upto the end of March 1964, given training places to 2575 personnel from different countries of the region and offered the services of 64 experts. India's economic assistance to Nepal till the end of March 1964 was of the order of Rs 13.8 crores.

The Colombo Plan is not as well knit or hierarchical as other international organisations devoted to the development of South and South-East Asia. It is primarily a flexible fraternity of all the member countries. All assistance is the responsibility of those countries themselves. In all its deliberations and programmes, however, the Colombo Plan emphasises the need for mutual aid and self-help for in the long run the countries of South and South-East Asia can only rise from the miasma of poverty through their own efforts.

Two significant approaches to economic development have been broadened by the Plan. It has (1) promoted national planning as a way by which economic development can be assured and wastage of aid can be minimised and (2) it has also promoted in a much deeper sense a regional outlook, for the Colombo Plan itself provides not only a forum for discussions of economic problems but has initiated fruitful contact between member countries, particularly those in the region themselves.

It is not difficult to trace the spirit which animates the plan or rationalises the continued support which the donor countries have contributed to the economic programmes of the countries in South and South-East Asia. It is universally recognized to-day that poverty, like peace, is indivisible and it is the enlightened view of the more advanced countries that they have a stake in making the countries of South and South-East Asia socially and politically more stable, thereby rendering the world more peaceful.

Small Industries

The National Small Industries Corporation, since its inception has secured 11,806 contracts worth about Rs 71 crores from the Directorate General of Supplies and Disposals for the small industrial units till end of May 1964. During the month of May 1964 alone, orders placed with the DGS&D totalled over at Rs 1.46 crores. Besides, orders from the Railways amounted to Rs 4.70 lakhs during the month. In the same month the Corporation issued 95 competency certificates to small industries for enabling them to submit tenders with the D.G.S. & D.

Under the hire-purchase scheme, the Corporation supplied 154 machines worth Rs 20,29,862 to small scale industrial units in various States during May 1964.

So far 12,951 industrial units have been enlisted with the Small Scale Industries Services Institute for availing such facilities as providing technical advice and demonstration, preparing drawings for various types of improved tools and machines, imparting training in handling of modern tools and equipments.

Special Fund Projects in Developing Countries

With an increasing number of projects aided by the United Nations Special Fund reaching completion or advanced stages of operation, their impact can be seen both in local communities and in national economies of low-income countries. Managing Director Paul Hoffman states in a report.

The impact is visible, the report indicates, in "the quickening tempo" of programmes to train manpower for industry and agriculture; in the growing interest of domestic and foreign investors in opportunities revealed by surveys of natural resources; and in the priority being given in national budgets to development of basic economic tools such as power, transport and communications.

The report shows, for example:

—Some 45,000 nationals had completed or were taking courses in 78 Special Fund-assisted training institutions by 31 December 1963. Among them were engineers in Pakistan, draftsman in Uganda, agricultural specialists in Liberia, vocational instructors in India, supervisors in Israel, and management personnel in the Republic of Korea.

—Project equipment worth \$29.8 million had been purchased by the Special Fund, and two-thirds of it delivered by the end of 1963, for projects ranging from an engineering research centre and telecommunications training institute to an aerial search for new minerals and production of livestock vaccine.

—Special Fund aid has been approved to date for 374 pre-investment projects in 121 low-income countries and territories. Of the total, 148 are resource surveys and feasibility studies, 140 are for technical education and training institutions, and 77 are for applied research institutes.

—By the end of March 1964, 24 projects had been completed. One was a training project which set up a complex of permanent centres for industrial instructors. The other 23 were pre-investment surveys and feasibility studies, of which 11 had already generated \$475 million of local and external investment. In addition, 234 projects were under field execution and 116 projects were being readied for field work.

—So far, 1,840 international experts have served in Special Fund projects, of which 1,300 were in the field as of 31 March 1964. Working with them, at that time, were 12,000 nationals of the assisted countries, of whom some 5,000 were senior and intermediate personnel.

—By the end of 1963, \$199 million has been spent on the execution of projects; 125 million by recipient Governments and \$74 million by the Special Fund.

To illustrate the impact of Special Fund activities on the economies of the assisted countries, the report reviews progress in 53 selected projects designed to increase

agricultural productivity, seek out new mineral reserves, train specialists needed for industrialization programmes, expand power supplies, and build up services essential to national development.

INDUSTRIAL DEVELOPMENT

Of all funds approved to date by the Governing Council 63 per cent has gone to support governmental efforts to speed up their industrialization, the report shows. There are 222 projects in the industrial field in 75 countries and territories. A few examples of the types of work follow.

Industrial raw materials: "Excellent prospects" for lead and zinc mining in Burma and coal and iron-ore mining in Pakistan are indicated in interim reports on projects in those countries. They are among 28 projects in which the Special Fund is helping Governments find new mineral reserves.

Manpower training: A large part of Special Fund aid has stressed training for instructors, managers, supervisors and foremen who would in turn, pass on their skills to industrial works and thus achieve a "multiplier" effect. In India, for example, Special Fund and the International Labour Organisation are helping five Instructor Training Institutes which will turn out 2,000 graduates a year. So far, three of them have produced 1,500 trained instructors, who will teach industrial craftsmen.

Applying research: Modernization of industry requires continuing technological research, the report notes, applied research centres in 19 countries are being strengthened or established with Special Fund aid. One such centre, in Colombia, is benefiting chiefly small and medium-sized industries such as bakeries, leather producers, food manufacturers and chemical plants. Another provides mechanical engineering specialists with equipment for applying latest scientific discoveries to the design of tools, machines and instruments.

Power: The special Fund is helping nine countries investigate resources that could lead to greater production of cheap power needed for agricultural and industrial development. In Guatemala; a project completed in 1963 showed that power needs anticipated for the next 15 years could be met by a planned programme of hydro-electric development, and that at least 12 sites were suitable for production of low-cost power. The Guatemalan Government is now taking action on the recommendations and has obtained a loan from a regional financing facility for the next stage of work.

Basic services and facilities such as communications and transport systems are vital for economic growth, the report notes, and Governments are making strenuous efforts to provide the necessary framework. At the request of six

Central American Republics, the Special Fund and the International Bank surveyed telecommunications requirements of each country and then proposed a programme to expand national networks and link them to each other and to the rest of the world. The Governments are now studying the proposed establishment of an independent authority which would be responsible for the construction and operation of the regional network.

In Malaysia, the Special Fund and the International Telecommunication Union are helping to equip and staff a centre for training telecommunications personnel. In a number of other countries, many of which lack the surface transport required for economic development, the Special Fund and the International Civil Aviation Organization are helping to train flight and ground personnel for air operations.

AGRICULTURAL AID

"For many, if not most, low-income countries, improvement in the productivity of agriculture is an essential first step towards economic progress", the report comments. The Special Fund is helping 59 countries with 115 pre-investment projects in the agricultural field.

For some countries, one basic need is for more information about water resources, and the type of crops which might be introduced under certain circumstances. In Afghanistan, a survey made by Government with aid from the Special Fund and the Food and Agriculture Organization has indicated favourable conditions for large-scale development of river basins, which could lead to irrigated farming and an additional water supply for Kabul. In Somalia, information gained through aerial photographs and soil studies has indicated that rice could be grown, and trials are planned.

Other Special Fund projects are helping a number of countries put additional land into use. In El Salvador, an underground reservoir of water found during a survey will permit the Government to cultivate new areas and ease the pressure on existing resources. In the Republic of Korea, experiments with new forms of terracing are expected to increase plantings on mountain slopes and reclamation of tidal lands is being studied. In Yugoslavia, saline land and peat bogs may be converted into areas for intensive cultivation of fruits and vegetables following an investigation aided by the Special Fund and FAO.

In other agricultural projects the value of various types of fertilizers has been demonstrated in experimental plantings in Iran; the United Arab Republic is being helped with problems of soil and irrigation in the Nile Valley; experiments in Ecuador are helping plants increase income from shrimp exports; and 25 countries are being aided in exploiting forest resources.

In the field of pest control, the Special Fund and FAO are helping

to protect rice crops in Asia, eradicate the rhinoceros beetle which attacks coconut palms on Pacific islands, combat the desert locust, and to produce livestock vaccine in the Middle East.

As an example of agricultural improvements resulting from Special Fund aid, the report recalls that methods demonstrated in pilot areas of Tunisia were soon adopted by local farmers. After a period of free distribution of silage for cattle feeding, cow owners reported a doubling in milk production and agreed to pay monthly fee for continued supplies.

Because of the need for agricultural personnel, the Special Fund is aiding 11 projects for specialized training at various levels.

PROGRESS AND OBSTACLES ANALYZED

In a final section, the report analyzes progress on Special Fund projects, as well as problems encountered. It states, in conclusion, that, where seeking further improvements, "the Managing Director is much encouraged" by the reduction of time required to put projects into actual operation and in the overall performance of most of the current projects.

Annexes list expenditures by Governments, the Special Fund and its executing agencies, the nationality of experts who have served; the cost of project equipment and the amounts spent for its procurement in more than 70 countries; and all projects by countries.

The overall cost of projects approved to date is \$837,251,000 of which Governments are responsible for \$969,000 and the Special Fund for \$335,282,000.

Paise Coins from 1 July 1964

The Government of India has announced that with effect from 1 June, 1964 the prefix 'naya' in the designation, 'naya paisa' or 'naye paise' which appears on the reverse of the decimal coins will be deleted. The coin in the denominations of 50.25, 10.5, 2 and 1 to be minted as from 1 June will be termed 'paisa' or 'paise' coins as the case may be. The paisa/paise coins will be issued from 1 July, 1964 by the offices of the Reserve Bank of India at Bombay and Calcutta in the first instance. They will be supplemented gradually after sufficient stocks have been produced, by issue from other offices of the RBI, the State Bank of India and its agency banks, Government Treasuries and sub-treasuries.

The design, shape, weight, composition, etc., of the paisa/paise coins will be the same as those of the existing naya paisa or The paisa/paise coins and the existing naya paise coins will both be tender and have the same value. Only difference will be that on reverse of the coins the words 'paisa' or 'naye paise' will be replaced by the face value of the coins in Hindi.

Market NEWS and Trends

JUTE Prospects for New Crop

A feature of trading in the jute markets during the past several weeks is that even when the goods section has been firm, raw jute prices have continued to show a declining trend. Up to a point, this was not surprising because all indications favoured a slow absorption of fresh supplies. In the first place, thanks to the compulsory purchase quota issued to them from the very commencement of the last season, mills have come to be in possession of rather heavy stocks, and there is no special incentive to buy more. Secondly, as the new season drew nearer and nearer, it became clear that the industry was going to have another season in which jute would be in plentiful supply. A possible third factor is the growing belief that the new jute crop will reach the markets unusually early this season. According to the latest issue of the Jute Bulletin of the Indian Central

Jute Committee, a number of other factors are also seen to operate behind the present sluggishness of the fibre markets. The bulk of the balance of the old crop jute that is on offer now is of inferior qualities and grades and naturally mills who have already a surfeit of these grades are reluctant to take further quantities. Overseas business over the past many weeks being what it is, revival of interest in raw jute is also untenable. The Bulletin, however, has pointed out that there is another very important factor that has been largely responsible for the present state of the jute market. This "is the casual whim of a group of influential operators to ignore the effect on the crop of the last month-long drought in Murshidabad, Nadia, 24-Parganas, Hooghly and Howrah districts of West Bengal." In explanation of this view, the Bulletin says that the total acreage in the above mentioned West Bengal districts is around last year's level. In this connection it refers to reports to the effect that "the seeds did not germinate in some places and in many others where they did, the crop has been patchy

with a stunted growth followed by considerable wilting due to dry heat." An additional factor, according to the Bulletin, which may count in the estimate of the new crop is the fact that this year relatively small quantities of white jute have been planted and the late rains have made tossa sowing impracticable in low lands.

Pak Jute Policy for 1964-65

Further evidence of the determination of the Pakistan Government to maximise the export of jute in the current season is to be found in the jute policy for 1964-65 just announced. With effect from Monday this week, the minimum export price for jute has been abolished. It may be recalled that already a 50 per cent reduction in export duty on jute has been effected. In announcing the abolition of minimum export price, the Pakistan Government, however, has made it clear that it will not hesitate to reimpose the minimum price if such a reversal is found necessary. The check on export prices will continue. The policy statement further states that the quota system will be maintained and linked with phased purchases in internal market by shippers. Phased purchases will be enforced in case of jute mills also. Export of mesta as at present will continue. The new internal prices have been fixed for loose jute on the basis of lowest or the bottom grade at the following rates (per maund) Northern Rs 20; district Rs 22 and jat Rs 23.

★

A mixed trend prevailed in the jute goods market during last week. Of the two principal sections, hessian continued to be subdued in the absence of sustained overseas buying interest. The only business reported done was for small quantities with the buyers being the US and Argentina. Although expectations are that revival of buying interest especially from US will ensue before long as the second half of the year is usually good for burlap consumption, the absence of any indication yet as to the business supposed to be in the offing has not been conducive to an expansion of speculative activity. As for sacking, the recent improvement in sentiment continues unabated as once again there have been reports this week of further Government of India tenders. Although the latest expectation in this regard has proved somewhat disappointing, recent gains have been well held. It is, however, generally realised that such temporary

steadiness in heavy goods prices should not be allowed to hide the really bad position to which these goods have been reduced in the export field in recent years as a result of the growing competition from Pakistan. Referring to the gloomy prospects of sacking exports, Mr R. P. Goenka, President of the East India Jute and Hessian Exchange Ltd, urged necessary incentives for heavy goods exports so as to enable it to cope with the competition from Pakistan. There is need for some form of Government assistance as otherwise it will be impossible for the Indian industry to compete on equal terms with the Pakistan industry which enjoys special advantages from cheaper raw jute and the export bonus scheme.

The raw jute market has generally been rather subdued with mills showing little interest in the proceedings most of the time. Even the revival of buying noticeable toward close on reports of damage to the crop from floods, did not persist long as later reports had it that the conditions of the crop continued to be good in most growing areas.

★ TEA Buyers Follow Quality

IN the Export Sale held in Calcutta this week, offerings consisted of 25,004 packages of Leaf grades. There was a good general demand with buyers following quality closely. Plain orthodox descriptions met with fair support and sold at around last levels. Dooars and medium Assams were lower although the brighter liquoring sorts came to a dearer market.

Good and medium CTCs with brighter liquors were keenly competed for at fully firm to dearer rates with buyers' emphasis on the Fannings grades. The remaining CTCs where quality was unchanged were generally sold at irregular and lower levels. Flavoury Darjeelings came in for good support and were dearer; but the lesser kinds generally tended easier.

Whole Leaf grades were sold well and the few Tippy teas, on offer, were readily absorbed. Following rates (per kilo) were quoted: Clean Plain Pekoe Rs 5.20 to Rs 5.40; Plain BP Rs 4.50 to Rs

4.70; Plain Fannings Rs 4.30 to Rs 4.50; Medium Assam CTC BP Rs 3.60 to Rs 6.60; Medium Assam CTC Fannings Rs 5.30 to Rs 6.50; Best Assam CTC BP Rs 7.40 to Rs 8.40 and Best Assam CTC Fannings Rs 7.50 to Rs 8.50.

In the Internal Sale, offerings consisted of 8,011 packages of Luts. There was a very strong general demand for all teas except for early first flush Assam CTCs and plainest orthodox types, which were a little easier. The remaining offerings were generally sold well, especially the best Assam CTCs which registered a considerable advance. Owing to the restricted quantity of teas on offer, no rates were given.

In the Cochin market, a quality of 7,79,000 kg of leaf tea was offered for export. The quality of teas was generally maintained. The market met with strong general demand and the buyers showed interest for all types of teas on offer. Highgrowns were a little irregular, but sold well. Prices were more often fully firm following the quality of the offerings. Good mediums were well supported although somewhat irregular. The prices for these were on the whole fully firm.

Medium brokens were about steady, while similar fannings showed a slightly easier tendency. Low mediums met with keen competition and were fully firm to dearer. Plainest descriptions followed the firm tendency of the market. Black leaf descriptions were in good demand at fully firm rates.

Whole Leaf grades were the strongest feature of the sale particularly Orange Pekoes. Unorthodox teas met with stronger demand and were dearer. A small section of Tippy teas on offer met with improved demand. Low Medium was Quoted at Rs 4.10 to Rs 4.60; Medium at Rs 4.30 to Rs 4.60; Good Medium at Rs 4.60 to Rs 5.10 and Nilgiri BOP at Rs 4.40 to Rs 5.85.

In the sale held this week, offerings were 579,000 kg of leaf grades. The quality of teas from the Nilgiris showed improvement, and, with a few exceptions, all others were maintained. Against a good general demand, the prices were somewhat irregular, particularly for plainer sorts. Limited selection of best highgrowns were fully firm, while others were dearer where quality of the tea showed improvement. Good mediums were generally firm.

Medium sorts were irregular and about steady with occasional easiness. Cleaner fannings in this category were firm, while other types were inclined to be easier. Low Mediums were irregular and even tended lower. There was, however, better enquiry for similar fannings which were occasionally slightly dearer. Plainest descriptions were about steady, while black leaf descriptions were sold

well at around last week's rates. Unorthodox teas were barely steady while Whole Leaf grades were a strong feature of the sale and were dearer, particularly Orange Pekoes. Low Medium was quoted at Rs 4.10 to Rs 4.40; Medium at Rs 4.30 to Rs 4.60; Good Mediums at Rs 4.60 to Rs 5.10 and Nilgiri BOP at Rs 4.40 to Rs 6.50.

During the past few years, tea exports have shown a definite rising trend. Since 1961, they have gone up by nearly 20 million pounds a year. This is regarded as a good performance, because due to bad weather conditions, production in 1962 and 1963 was rather static. Foreign exchange earnings have correspondingly gone up. In 1963, they amounted to Rs 133 crores as compared with Rs 125 crores in 1962.

In the sale held at Coonoor, offerings consisted of 89,052 kg. Quality was generally maintained and the market was strong and active, which continued throughout the sale. Prices went up by 10 to 15 nP. Good Nilgiri dusts were fully supported with buyers closely following quality. Nilgiri Brokens were well competed for and were sold 10 nP dearer. Nilgiri Wyannads and CTCs maintained their value and sold well. Whole Leaf grades were sold readily at firm to dearer rates. Good Nilgiri Dust was quoted at Rs 4.05 to Rs 5.95; other Nilgiri Dusts at Rs 3.80 to Rs 4.05; Nilgiri Brokens at Rs 3.95 to Rs 4.30; Whole Leaf grades at Rs 3.90 to Rs 4.50 and Plainest types at Rs 3.00 to Rs 3.70.

In the auction held at London this week, offerings were 14,314 packages including 633 packages from Northern India. African teas met with a good demand at steady rates, any change being in seller's favour. The one invoice of new season's Assam teas was withdrawn at bids below brokers' valuation. Doars teas fared a little better and were sold at a penny to two pence per pound below valuation. The next sale will be held on 6 July.

Tea stocks in London, as on 19 June, were lower at 126.05 million pounds as against 128.95 million pounds in the previous week. The total quality to be landed on the same date was 13.15 million pounds. Total afloat was 18.51 million pounds including from Calcutta 225,040 pounds; from Chittagong nil; from Cochin 2,178,940 pounds; from Ceylon 11,370,450 pounds and from other Ports 4,730,860 pounds. The average price realised at the auction was 45.62d per pound as compared with 45.04d in the previous week and 43.41d a year ago.

An estimated world tea production of 2,326 million pounds in the current year would be two per cent above last year's record yield, the US Agriculture Department says.

Asia's harvest of some 2,154 million pounds would be 33 million above last year; Africa's crop of 130.5 million pounds would be five per cent higher; South American production of 41.3 million would continue a rising trend.

Agriculture Department figures show these estimated crops for Asian countries this year: India, 776 million pounds; Ceylon, 509 million pounds; Pakistan, 55 million pounds. Iranian production is estimated at 30 million pounds and Turkish output at 25 million pounds.

All above estimates would be up from last year's figures except for Pakistan which remains the same.

Agriculture Department statistics show that India and Ceylon supplied three-fourths of an estimated 1,250 million pounds of tea exports last year while the United Kingdom and the United States jointly accounted for over one-half of world imports. American tea imports of 126 million pounds were down nearly four million from 1962 while United Kingdom purchases of 563 million pounds were nearly six million pounds above the 1962 level.

United Kingdom per capita consumption of tea of nearly eleven pounds remained the world's highest. American consumption was less than one pound per capita.

COTTON Steady Trend

THE cotton futures market in Bombay depicted steady conditions during the past week thanks mainly to speculative buying and bear covering. The Jarilla August contract which commenced the week on a subdued note slipped down to Rs 731.00 from the previous week's closing of Rs 734.50 in the initial deals on account of bull liquidation consequent upon the reports of beneficial rains in some of the cotton growing tracts in the country. As the week progressed, however, the contract staged a smart recovery and finished the week with a net gain of Rs 7.75. The upswing was attributed to speculative buying and short covering which pushed the prices up to Rs 742.75 before finally closing slightly lower at Rs 742.25 per three quintals.

The spot market at Sewri presented moderate mill enquiry. Spinner interest was confined mostly to selected growths such as L 147, CO 2, Laxmi and Digvijay, though there was nothing to be enthused over the turnover.

There was a broadening of interest in the Egyptian cotton in the import section, but business was restricted on account of the non-finalisation of the Indo-Egyptian trade agreement.

In the export section, purchasers from Japan preferred to watch and

wait for Government's action in response to the trade plan for reducing the export duty on Bengal Deshi in order to enhance its competitive ability.

The meeting of the Cotton Textile Consultative Board scheduled to be held in Bombay on 7 July has created considerable interest among the cotton textile circles. The spokesmen of the industry pointed out that the damage to the cloth price structure is nothing new as it had been there for the past couple of years. The trade feels that the voluntary price regulation scheme should be replaced by a suitable scheme which would be beneficial to both the consumers and the manufacturers. Owing to the increase in the production cost and the Government's apathy to act upon the recommendations of the Tariff Commission's report there was widespread discontent among the textile mills which finally led to the price rise announced by a few leading mills in the country. The meeting is expected to take prompt action to deal with the situation.

World production of extra-long staple cotton is expected to go up approximately to 3 million bales by the end of 1970 from the average of 2.4 million bales in 1960-62. According to the International Cotton Advisory Committee cultivation of this growth will be concentrated in UAR, the US, Peru and Sudan which are currently the leading producers. Total acreage under this variety (excluding the USSR) is expected to be 13 per cent larger than the 1960-62 average and the average per acre yield is estimated to approximate 505 lbs compared with an average of 450 lbs in 1960-62.

According to ICAC, world apparel fibre consumption is likely to move up to 21 million metric tonnes, an increase of nearly 34 per cent. Cotton consumption in 1970 is expected to be in the environs of 21.9 million tons or about 24 per cent over 1961. The rate of increase in cotton consumption will be about the rate of increase in world population.

Importers of Egyptian cotton are perturbed over the recent developments pertaining to that growth in Egypt. It is reported that some of the prominent shippers in Egypt have informed their counterparts in Bombay to make advance bids to cover their requirements before the Egyptian Cotton Commission announces export selling rates for new crop as there would be difficulty in securing menoufi and giza 45 in adequate quantities. Obviously on account of the tight statistical position in their own country and the scarcity of extra long staple cotton all over the world, the shippers are actually trying to

exploit the situation. It is also apprehended that the Commission is deliberately delaying the announcement of the export selling prices. It has also been reported that some of the spinners have either made higher offers or given a carte blanche to the shippers there for acceptance of the bids at the time of the opening bids. There has been a good deal of criticism about the manner in which offers were given by the spinners. First, the allocations against the latest global quota have not reached the spinners so far. Secondly, Egyptian cotton is not allowed for import either against the global quota or otherwise unless payment is made in rupees. The Egyptian Government is said to be still pressing on payment in sterling and it is evident that until this issue is settled the possibility of getting cotton from Egypt will be anybody's guess.

A certain section of the trade wants the Government to intervene and stop mills from offering fantastic bids before the obstacles are overcome. In the meanwhile, Government can permit some sort of registration of offers against allocations to be made to the mills. Such a procedure is expected to regularise future purchases and eliminate the prevailing practice of making higher bids.

PIECEGOODS

A mood of murkiness prevailed in the cotton piecegoods market at Bombay during the week under review obviously on account of the uncertainty enveloping the future pattern of cloth prices. Naturally enough, the turnover was a mere trickle and little change in the prices was reported. On account of the higher prices charged by the mills domestic and overseas purchasers and dealers did not enter into any commitment.

The mill made fabrics were almost deserted as the higher rates scared away the buyers from the market. Most of them were satisfied with meeting their immediate requirements. At the same time stockists and dealers are worried over the accumulation of stocks with them. Mills were, however, adamant in their stand and some of them are reported to have revised the prices upward. Demand for seasonal goods were at a low ebb.

Only scattered business was reported in the powerloom section. On account of the unsatisfactory offtake prices of grey uncalendared and proceeds goods declined to some extent.

The only bright patch in the otherwise gloomy picture was the encouraging activity in the export section. The UK continued to be prominent buyer accounting for a good quantum of sheetings and furnishings and a moderate quantum of processed goods. East Africa bought a good quantity of process-

ed and grey goods. It appears that the recent revision in the import levy had little impact on imports. West European countries focussed their attention on selected varieties but the turnover was limited. Australia accounted for a restricted quantum of usual items. Fair enquiry was reported from Canada for flannelettes. Other destinations remained inactive during the week under review.

Boom in Oilseeds

CONDITIONS akin to a boom were witnessed in the Bombay Oilseeds market where prices touched fresh higher levels due to aggressive buying and acute shortage. The only weak spot was cottonseed.

In the Groundnut section, arrivals of seed and groundnut oil remained very meagre, while the demand was insistent as crushers and vanaspati manufacturers vied with each other in acquiring supplies. The reported sales of about 2,000 tonnes of groundnut oil to Burma during the past fortnight imparted further strength to the section. Groundnut Bold ready was quoted at Rs 61.25 and Groundnut Oil at Rs 24.25.

Early in the week, trading in the Castorseed section reflected a tight grip inspired by the reported sales of a substantial quantity of business done with the UK in commercial oil at £107. Some of the East European countries were also stated to have made moderate purchases. The spot section also registered a significant rise in prices following reports of inadequate arrivals from the major producing areas. Shippers were also keen to secure stocks against their export commitments. Consequently, ready castor was pushed up to Rs 36 and commercial Castor Oil up to Rs 14.70.

Trading, however, came to a standstill towards the close of the week, as the September contract touched Rs 181.50, the permissible upper limit. Despite the warnings given by the Board of the Bombay Oilseeds and Oils Exchange, bulls were reported to have vied with each other to tighten their grip on the September contract.

Meanwhile, reports are coming in to the effect that there is acute shortage of supplies. Even Andhra is running short of the supply and has to turn to Bihar for its normal requirements. Arrivals from Gujarat, another major producing State, are negligible. Thus, there is a feeling that there will be no changes for the market to respond to the measures like fixation of weekly range of fluctuation and lowering of the price ceiling.

Because of an export business for 1,000 tons of castor oil with the Communist countries, the price has recorded a sizable rise in the Bombay market. The price for Bihar bold variety, for instance, has

risen from Rs 35.12 last week-end to Rs 36.25 per 50 kg. Commercial oil has also gone up from Rs 14.19 to Rs 14.65 and BSS variety from Rs 14.70 to Rs 15.25 per 10 kg.

In sympathy with groundnut and castorseed, prices in the Linseed section also displayed a firmer tendency, not to speak of higher advices from Northern India with regard to rapeseed. Prices in the spot section also responded markedly to the changed outlook. Linseed ready bold was quoted at Rs 47 and Linseed Oil at Rs 19.25.

In the Madras market, too, there was a further handsome rise in the prices of oils and seeds. With no change in the power supply position and the small arrivals of seeds coupled with very poor offerings of oil, rates advanced even with a small demand. Arrivals were reported to have dwindled to 20 tons a day, which were mostly in the form of summer peanuts. Local crushers took up the entire quantity. The rate for the summer peanut improved by Rs 3 to Rs 98 per bag of 80 kg.

In the Oil section, offerings were small due to restricted working of bigger crushing units. Local bazar interests were the main buyers for the small quantities offered. The rate improved further to Rs 237 from Rs 230 per quintal.

SUGAR Need to Boost Output

With the production figures released for May, the total output in the first seven months works out to 24.93 lakh metric tons as against 20.84 lakh metric tons in the same period of the 1962-63 season. The cautious policy adopted in regard to exports and releases for internal consumption has been responsible for the reduced offtake of 15.45 lakh metric tons as against 18.79 lakhs metric tons in the same period of 1962-63.

Stocks at the end of May at 10.88 lakh metric tons are to be considered satisfactory against 11.99 lakhs metric tons. Even assuming that there will be an output of over one lakh metric tons in the next five months, it will be difficult to have any sizable carryover into the next season. Exports will naturally have to be suspended for some time.

There is general feeling that the total output for the current season may not be very much more than 26 lakh metric tons against 21.35 lakh metric tons. The latest estimate confirms only the earlier apprehension that, on account of non-availability of cane particularly in Uttar Pradesh and Bihar, the target for production of 30 lakh metric tons could not be reached. The availability of this essential commodity would have

been on a much smaller scale, but for the increase in output recorded by units in the Southern States. Even now, efforts are being made by many mills in Madras and Andhra Pradesh to crush larger quantities of cane, though it is considered in some cases that operations during the current season have not been quite remunerative.

DYES AND CHEMICALS Firmer Tendency

In the Bombay market for Dyes and Chemicals, prices continued to display a firmer tendency, thanks to sustained demand from the upcountry centres.

In the Chemicals section, Soda Ash was firm due to restricted arrivals and the fears of a fall in production, because of the heavy monsoon upsetting salt output. Bleaching Powder improved on fair enquiries and limited offerings. Rumours that the import quota under the export promotion scheme would be reduced, pushed the price of Hydrosulphite.

Among Dyes, Naphthols were firm due to poor supplies. Vats remained unchanged, while Base colours were steady to firm with a fair turnover, on revival of demand during the past few days.

NON-FERROUS METALS Zinc Hits 12-Year Peak

According to reports released from London, the shortage of nearby supplies has pushed the price of Zinc to a 12-year peak. At one time last week, the rate was pushed up to £140 per ton, quoting presently at £135 as against only £76 5sh quoted a year ago.

The present price is the highest touched so far on the London Metal Exchange. There is a growing feeling that, though profit-taking may bring down a fall in prices, the present strength of the market may continue for some weeks.

Tin is now quoted around £1,225 per ton. An easing of the current world squeeze in this metal is now expected to deflate the price boom within the next few months. But before this happens, traders see prices climbing back to the region of the 13-year high touched earlier this month and expect values to remain fairly firm for some long time.

Currently, trading in the metal appears to be swinging between speculative interest and subsequent profit-taking although accompanying both is good consumer participation. Meanwhile, the improved Bolivian labour situation is expected to ease the present shortage of the metal which, in addition to this factor, is also caused by Nigerian labour trouble preventing shipments from that quarter. Finally, the start of consumption by a new Thailand smelter

has also contributed to the squeeze in metal supplies in the Far East, a major producer area.

In the Bombay market, with the exception of Zinc, trading in other sections remained generally dull. Zinc, after touching a high of Rs 322 in the absence of offerings and limited stock position, eased off towards the close to Rs 302 on profit-taking. Tin remained stagnant at Rs 296, while Copper Conductor was quoted at Rs 420 to Rs 435.

HIDES AND SKINS Dull Trading

In the Madras market, arrivals of tanned sheep skins continued to be moderate and there was a steady clearance with prices ruling unchanged.

In the export section, enquiry for Goat skins were again poor and the restricted interest, shown by overseas buyers, was mostly for selected types, in sheep skins, primes and semi-primes were ruling steady. In middle class sheep, overseas enquiry was confined to fifths and inferior fifths. The market for Hides was ruling steady.

In the export section, business in Hips was slow. In the Calf section,

Cow Calf continued to be difficult to sell and it was stated that some tanners were willing to cut prices further to induce sales; but it was difficult to find enquiry for 2 lbs and 1½ lbs runs. Buff Calf was quoted on a steady basis.

In the Raw Skins section, Goats were ruling steady to Rs 10 per 100 lower, while Sheep skins remained unchanged.

CASHEW Export Earnings Up

According to the announcement made by the Cashew Export Promotion Council, exports of cashew kernels, during the first five months of the current year, amounted to 870,000 cases (a case of 50 lbs), valued at Rs 921 lakhs as compared with 976,000 cases worth Rs 883 lakhs exported in the corresponding period last year.

India's export earnings on cashew had increased by Rs 38 lakhs due to the higher price for cashew realised this year. Exports of cashewnut shell liquid, during January-May this year had increased both in quality and value.

Commodity Prices Review for 1963-64

The official index of wholesale prices (with the year ended March 1953 as 100) which stood at 129.8 in April, 1963 exhibited a continuous rise till September when it touched the level of 136.7. In the succeeding two months it showed a fall and stood at 134.7 in November, 1963. Thereafter the index again rose steadily to reach the peak level of 139.3 in March, 1964. The average index for the fiscal year 1963-64 worked out to 135.3 showing a rise of 5.8 per cent over the average of 127.9 for the year 1962-63. This rise in the 'All Commodities' index was brought about by an increase in all the constituent groups: 'Food Articles', advanced by 8.5 per cent to 136.8, 'Tobacco' by 19.9 per cent to 116.8, 'Fuel, Power, Light & Lubricants' by 12.1 per cent to 139.5, 'Industrial Raw Materials' by 2.2 per cent to 139.5 and 'Manufactures' by 1.8 per cent to 131.1.

FOOD ARTICLES

The increase in prices over the year was most marked for 'Food Articles'; the monthly index advanced from 127.7 in April, 1963 to 139.2 in October, 1963. Thereafter it fell to 136.2 in December, 1963 only to increase again to 142.1 in March, 1964. The sub-groups which exhibited variations during the year were: 'Cereals' (+110.1%), 'Pulses' (+9.7%), 'Fruits and Vegetables' (+3.7%), 'Milk & Ghee' (+3.1%), 'Fish, Eggs & Meat' (+4.3%), 'Sugar & Gur' (+30.2%), 'Other Food Articles' (+4.4%) and 'Edible Oils' (-0.8%).

The monthly index for 'Cereals' moved up substantially from 106.7 in April, 1963 to 118.7 in October, 1963. In the next two months it exhibited a fall and stood at 117.4 in December, 1963. Thereafter it showed a continuous improvement and stood at 123.6 at the close of the year under

review. The monthly index for rice advanced from 116.5 in April, 1963 to 132.3 in October. Thereafter the index showed a seasonal fall and reached the level of 119.9 in January, 1964. However it witnessed a rise during the next two months and was at 122.1 at the end of the year. The average index of rice for 1963-64 worked out to 124.5 as against 111.0 for the year 1962-63, exhibiting a rise of 12.2 per cent. The index for wheat which was at 87.6 in April, 1963 witnessed a continuous rise during the year. The increase became sharp after November and the index reached 121.1 in March, 1964. The annual average index for wheat in 1963-64 stood at 98.9 as compared with 89.8 for the earlier year, showing a rise of 10.1 per cent. The yearly average index for jowar for the period under review registered a fall of 110.9 per cent to 115.5 over the earlier year's average of 129.6. Bajra rose by 6.4 per cent to 132.3 as against 124.4 for the previous year. Barley moved up by 20.3 per cent to 108.5 as compared with 90.2 for the earlier year. Maize rose by 7.9 per cent to 109.1 as against 101.1 for the last year. Ragi also registered a rise of 5.5 per cent to 112.9 over the preceding year. Gram went up by 12.8 per cent to 100.3 as compared with 88.9 for the previous year. Among 'Other Pulses' arhar rose by 17.5 per cent to 137.3, Mung by 10.2 per cent to 111.7 and masur by 8.7 per cent to 118.7 while urad receded by 1.7 per cent to 127.2. In the case of 'Fruits and Vegetables', oranges advanced by 18.1 per cent to 234.9 cashewnuts by 7.3 per cent to 73.9 and bananas by 1.8 per cent to 132.5 while potatoes declined by 5.5 per cent to 120.0. 'Milk & Ghee' witnessed divergent trends. Milk showed a rise of 7.7 per cent to 132.8 while ghee receded by 2.4 per cent to 122.7

during the year under review. A fall of 0.8 per cent to 151.1 in the sub group index for 'Edible Oils' was caused by lower prices of gingelly oil (-5.5% to 126.1), and mustard oil (-2.5% to 179.0) although the price of groundnut oil moved up by 1.7% to 131.0. A rise in the case of 'Fish, Eggs & Meat' was due to an advance in the prices of fish by 10.7 per cent to 161.1, in eggs by 3.4 per cent to 153.1 and in meat by 1.2 per cent to 147.4. Sugar increased by 6.4 per cent to 139.4 and gur went up sharply by 41.9 per cent to 217.6. The fiscal year average for tea worked out to 195.8 as against 174.9 for the earlier year, registering a rise of 11.9 per cent to 99.1 per cent, as compared with 92.4 for the previous year. Among 'Other Food Articles' the commodities which showed noticeable variations during the year were: cummin (Jira) (+22.2% to 187.8), black pepper (+1.2% to 32.8), Clove (+1.0% to 253.6), salt (-6.6% to 140.9), Chillies (-4.8% to 200.9) and turmeric (-4.6% to 202.4).

'TOBACCO'

The annual average index of 'Tobacco' for the year under review advanced to 116.8 as compared with 97.4 for 1962-63 due to a rise of 20.0 per cent to 112.3 in raw tobacco and 19.4 per cent to 135.4 in tobacco manufactured following the increase in the excise duty in the Budget for 1963-64.

FUEL, POWER, LIGHT AND LUBRICANTS

The average index of this group for the fiscal year 1963-64 stood at 139.5 which was higher by 12.1 per cent when compared with 124.4 for 1962-63. As a result of an enhancement in the excise duty in the budget for 1963-64 the prices of kerosene oil, petrol, aviation spirit and diesel oil moved up by 33.4, 18.0, 14.9 and 26.2 per cent to 136.2, 136.5, 113.4 and 158.8 respectively. The prices of coal were raised by the Government during the year under review. Lubricating oil and castor oil, however, declined by 2.9 and 1.6 per cent to 108.4 and 95.1 respectively.

INDUSTRIAL RAW MATERIALS

The index for 'Industrial Raw Materials' which stood at 136.2 in April, 1963 witnessed a rising tendency till September, 1963, when it reached the level of 141.2. During the next two months it showed a decline and moved down to 137.0 by November, 1963. Thereafter, the index again showed a rise and touched the level of 144.9 at the close of the year under review. The average index for raw cotton for 1963-64 stood at 118.6 showing a rise of 5.2 per cent over the earlier year's average of 112.7. The annual average index for raw jute worked out to 147.5 as against 146.7 for the previous year. The fiscal year average for raw hemp exhibited a fall of 5.0 per cent to 119.0 whereas the annual indices of raw wool and raw silk recorded a rise of 6.0 and 20.0 per cent to 153.4 and 198.2 respectively. The fiscal year average for groundnuts at 144.1 was higher by 2.7 per cent, than that of the preceding year. The monthly index for groundnuts which stood at 136.4 in April, 1963

recorded a rise till September when it touched the peak level of 158.5. It witnessed a fall in the next two months reaching 135.5 in November, 1963. A rising trend was noticed again thereafter and the index moved up to 152.6 at the close of the year. The annual average indices for linseed and cottonseed advanced by 1.9 and 8.4 per cent to 141.7 and 180.2 respectively whereas castorseed declined by 1.9 per cent to 123.4 and gingelly seed by 4.2 per cent to 131.9. A fall of 0.9 per cent to 92.8 in the sub-group index for 'Minerals' was caused by lower prices of Manganese ore (-9.4%). Among other commodities the following exhibited noticeable variations during the year under review, hides raw (+4.3%), sugarcane (+6.9%), bamboos (+17.1%), skins raw (+3.9%) and lac (-14.3%).

INTERMEDIATE PRODUCTS

The index for this group showed a rising tendency during the first four months of the year. It went up from 137.8 in April, 1963 to 140.1 in July, 1963. It moved in an irregular manner during the next four months and was at 138.2 in November, 1963. Thereafter the index witnessed a continuous rise and touched the level of 144.7 at the close of the year. Prices of cotton yarn (+2.2%), pig iron (+3.3%), semis (+7.0%), zinc (+2.0%), brass (+8.3%), copper (+7.2%), tin (+41.6%) and lead (+42.5%) exhibited a rise while linseed oil (-5.5%), rayon yarn (-14.3%) and aluminium (-6.6%) moved down.

FINISHED PRODUCTS

The index for 'Finished Products' advanced from 128.6 in April, 1963 to 130.8 in March, 1964. The average index for 1963-64 for cotton cloth (mill) worked out to 132.1 as against 131.9 for the earlier year. The fiscal year average for handloom cloth was 143.8 as compared with 127.8 in the previous year showing an increase of 16.4 per cent. The monthly index for jute manufactures declined from 99.6 in April, 1963 to 98.7 in March, 1964. The fiscal year average of jute manufactures for 1963-64 worked out to 100.2 as against 110.19 for 1963-63. The index for woollen manufactures which stood at 147.7 in April, 1963, remained at that level in December also. In January 1964 it again went up to 162.4 and remained unchanged till the close of the year. The average index for the year under review for woollen manufactures stood at 155.3 as against 140.4 for the previous year, showing a rise of 10.6 per cent. The average index for the sub-group, 'Silk and Rayon Manufactures' for 1963-64 worked out to 139.8 as against 131.8 for the previous year, registering a rise of 6.1 per cent. The fiscal year average for iron and steel manufactures witnessed a rise of 1.9 per cent to 162.9 as against 159.9 for 1962-63. The annual average for aluminium utensils was also higher by 1.5 per cent to 165.8. Other commodities which exhibited significant variations during the year were: paints (+13.4%), soap (+4.1%), drugs and medicines (+1.7%), machinery (+5.4%), leather belting (+10.2%), vehicles (+8.8%), rubber tyres and tubes (+14.6%), paper and newsprint (+1.8%), cement (+5.2%), bricks and tiles (+5.3%), glass (-3.0%) and lime (-1.8%).

THE METAL BOX COMPANY OF INDIA LTD.

REVIEW BY THE CHAIRMAN, Mr M. K. VELLODI

The Thirty-first Annual General Meeting of The Metal Box Company of India Ltd. will be held on Wednesday, the 22nd July 1964 at 59C, Chowringhee, Calcutta.

The following is a copy of the Review by the Chairman, Mr M. K. Vellodi, which has already been circulated to members.

SALES

I am glad to be able to report another year of fruitful endeavour particularly as, in my review last year, I struck a somewhat pessimistic note based on the assumption that the greatly increased taxation, both direct and indirect, including such impositions as the compulsory deposit in the last year's budget was bound to curb the purchasing power of the consumer. Happily this assumption proved incorrect, and our Product Sales in the year ended 31st March 1964 increased by 17% to Rs 13.85 crores.

Sales in all significant product groups increased, and during the second half of the year the new Paper Group commenced production. The encouraging volume of our order book for paper products at the year end is an indication that this addition to our packaging service will be widely welcomed.

Throughout the year and especially during the second half, the irregularity in the supply of raw material and, with certain products such as tubes, capacity considerations affected the service we were able to give our customers. In spite of these difficulties, idleness and good planning by the Company's managers again resulted in increased productivity, and generous long-term credit arrangements with our associates in England are now enabling us to undertake long overdue modernisation programmes. The sales of non-tinplate products will be promoted vigorously during the coming year and with Calcutta No.2's difficulties in tooling up for Defence work largely overcome, the sale of industrial components should be particularly strong. However the availability of raw materials, especially tinplate and polythylene, also capacity to produce certain products will continue to determine the extent to which we can meet this year's strong demand.

Of late, Government has become increasingly aware of the important function of scientific packaging in the preservation of goods packed and the protection of the consumer. This is reflected in current plans for new manufacturing capacity for such essential packaging materials as tinplate, aluminium and polyethylene.

A time lag is, however, inevitable before new capacity can be brought on stream. In this interim period the packaging needs of the Third Plan must be serviced without interruption. Failure to do so will have an immediate and severe inflationary effect. In the case of tinplate, for example, Rs 1 lakh spent on imports generates the distribution of over Rs 22 lakhs of essential consumer goods. In this connection, it is worth while considering the growth of all packaging, over the years of the Third Plan. We reckon that in 1960/61 the production of consumer packages valued at Rs 107 crores, and employing 100,000 men enabled the distribution of Rs 2,870 crores of consumer products. This amounts to 12% of the aggregate value of the country's supplies in that year. By 1965/66 it is estimated that the planned growth in production of essential consumer commodities will require packaging materials valued at Rs 213 crores and made by 150,000 men for the distribution of goods worth Rs 6,620 crores.

If these statistics have been seldom considered in past Plans, it is perhaps because packaging as a service industry must of necessity operate behind the scenes. Our contact with the public is indirect. It is therefore all too easy for the proper consideration of our contribution and our problems to go by default. The consequence of apathy can be serious. It is, for example, essential that the country maintains an international standard of packaging and presentation if its consumer products are to succeed in world markets. Every well-packaged item of consumer goods may be a potential export; already some Rs 28 crores of packaged consumer goods are exported annually from India to almost 60 countries all over the globe. The packaging service essential to the effort to diversify India's exports is a specialised one, requiring technology of a very high order. Fortunately, both Government and Industry recognise this need. We therefore welcome Government's move to establish an institute of packaging in the country to assist Indian exporters with packaging and marketing know-how.

Package manufacture the world over is located substantially in the organised section of industry requiring at it does precision mass-production methods; investment in complex machinery; long-term research and development; and close scientific collaboration both with packers and the suppliers of raw material. Export requirements demand that India must have access to the mainstream of world packaging technology. Your Company serves this role and, by maintaining laboratories and development facilities in Calcutta and Bombay, makes sure that new techniques and product improvements are developed in consonance with India's own particular requirements and material availability.

In view of the current interest in the scale of industrial operations, it is relevant to mention that as in the case of your Company, far from being prejudicial to the development of the small-scale sector, large-scale enterprise can be of vital assistance to its development. Metal Box, for example establishes research facilities and develops new packages and packaging systems, builds up markets for them establishes raw material supplies available to all, trains technicians and supplies for unrestricted sale previously imported packing machinery. Whether we like it or not we have in a most effective way brought up competition in our wake. In addition, we provide a direct stimulus to small industry from which our purchases each year exceed Rs 63 lakhs. More important, the majority of our 1,500 customers belong to the small-scale sector. All of our customers, large and small, have access to our research and technical resources and a fund of technological and marketing know-how particularly valuable to the small packer. To take one example, our precision packages and advisory services have helped enterprising prawn canners on the West Coast—all of them relatively small-scale in comparison with their competitors overseas—to export over Rs 73 lakhs worth of canned fish last year to markets as competitive as the U.S.A. Our Cochin Factory was established particularly to provide these canners with on-the-spot can service. We also evolved a 'flattened' system of can despatch to reduce the freight cost factor for canners all over the country. For small canners in North and South India, we have set up reforming installations at Delhi and Madras which assemble, at cost price only, flattened Open Top cans made on high-speed lines in Calcutta and

Bombay. We have supplied similar equipment to the Uttar Pradesh Government to serve the needs of small-scale canners in the rural areas of the U.P.

DEFENCE

Sales of ordnance supplies were below forecast during the year, owing to unexpected problems in equipping ourselves and in meeting the standards required by the ordnance inspection authorities. Your Company has so far invested more than Rs 6 lakhs in plant, equipment, tools and dies for Defence work. As our difficulties appear largely to have been resolved, we anticipate a substantial increase in sales during the year ahead.

EXPORTS

After the previous year's setback, export sales went ahead again, increasing by 33% to a new level of Rs 28 lakhs. Extensive overseas touring by senior sales staff to reinforce the work of our agents secured notable gains in Burma, Ceylon and East Africa in particular. Our exports of domestic hardware and publicity materials increased by approximately 55% and, to our great satisfaction, machinery sales again rose by more than 100%.

Experience last year has made it abundantly clear that in the face of intense international competition it is far from easy to achieve and maintain the extremely high quality standards, required in markets abroad. Your Company's efforts will be further intensified during 1964-65 although we anticipate problems arising out of political developments in Burma and in Ceylon.

I have already referred to our main contribution to the country's foreign exchange earning: the provision of packages made to international standards. In the past year our customers have earned more than Rs 8 crores in foreign exchange through the export of goods packed in our containers.

To stimulate the growing awareness of scientific packaging, both for home and export markets, we organised over the year a series of seminars on consumer packaging for senior executives from amongst our customers, advertising agencies and Government. The seminars aimed at providing a comprehensive background on the subject of packaging to those concerned with the distribution and marketing of consumer products. This effort has been very well received.

RAW MATERIALS

Throughout the past year, and especially during the last four months, the procurement of raw materials presented difficulties. Owing to delays in licensing procedures and the failure of the Russian authorities to fulfil commitments and a disappointing performance by Rourkela, tinplate stocks were very low during the last quarter.

The unfortunate communal disturbances at both Rourkela and Jamshedpur further reduced your Company's tinplate stocks and although the authorities were reasonably appreciative of our difficulties, arrivals against import licences cannot be expected in time to prevent further difficulty in meeting our customers' requirements. Increasingly we are being directed to import tinplate from sources which involve AID or Government-to-Government trading. While the need for this is accepted, the result for your Company is a loss of control over specifications and unsatisfactory timing of deliveries through repeated procedural delays; also a general increase in tinplate prices.

The strongest possible representations have been made to persuade Government that India requires a minimum importation of 75,000 tons of tinplate during 1964-65. The demand for tinplate is now rising sharply and to the extent that it is not met a broad range of essential consumer products will not reach the markets. Every effort is being made, and must continue to be made, to develop substitute packs, but the climatic conditions, the rough handling and extended shelf-life to be expected in our country set a severe limit to the use of substitutes. For a long time to come therefore tinplate alone, for a majority of packs, will be able to meet these exacting requirements.

The foreign exchange bill for 75,000 tons of tinplate would be a little more than Rs 8.60 crores; while the problems of financing importation at this level are not underrated, it is a relatively small price to pay in terms of the health of the consumer economy when set against the fact that this tonnage means the marketing of consumer goods including foodstuffs and many household necessities worth more than Rs 190 crores at retail prices. Failure to import at this level must mean shortages which can only have a highly inflationary impact on retail prices.

Aluminium supply scarcely balanced demand through the past year but availability in 1964-65 is likely to improve and advantage will be taken of this to push sales of non-tinplate products.

Polyethylene supply virtually dried up during the second half of 1963; the national sugar shortage led to an inadequate supply of industrial alcohol to the two

polyethylene producers and the situation is not expected to improve much during 1964. Bearing in mind that to an extent polyethylene, either alone or when laminated with other materials, can for certain packs be a substitute for tinplate, it is regrettable that this shortage has been allowed to develop when adequate capacity for indigenous polyethylene production is either available or about to be commissioned.

With the starting of your Company's new Paper Group, we became for the first time buyers of board and paper on a substantial scale. It is clear that the quality of indigenous board leaves a great deal to be desired. However, our buyers, technical staff and research people are co-operating with suppliers in endeavouring to improve the quality available to us.

RESEARCH, DESIGN AND DEVELOPMENT

Paper Group: Modern high speed equipment has been installed at Worli in Bombay for the manufacture to international standards of paper packages treated and laminated paper and boards, cartons made there from, wrap-around labels, labels for cans and punched labels for bottles. The low quality of boards at present available will continue to give rise to scientific and mechanical problems, but they have not stood in the way of a successful start. We already have a nucleus of highly skilled personnel and the training of staff has continued throughout the year.

Bombay No. 2: The new factory at Deonar was completed on schedule and the entire Open Top operation was transferred from Worli to these new premises. The transfer of tin printing has been slightly delayed due to the late arrival of imported balancing equipment. Deonar has been built to allow room for Paper Group at Worli and to enable the re-laying of our can-making equipment. When the transfer is completed the congestion at Worli will be considerably eased, resulting in the more efficient utilisation of plant and machinery.

Flexible Packaging: During the year under review the Government sanctioned the expansion of our manufacture of Flexible Packages. Currently new equipment is being specified which will permit the expansion of our product range. A new laminate has been developed as a tamperproof diaphragm for tinplate containers combining the protective properties of foil, polyethylene and paper. This material has already been introduced for some packs and its functional properties are being examined for a wide range of other products.

Calcutta No. 2: Throughout the year Industrial Components section has been heavily engaged with ordnance supplies; technical resources have been fully stretched

and the Technical Development Division played a major role in the design and manufacture of press tools required for this work. Several heavy presses have been installed and the Factory now has a balanced press shop for a wide range of components for the electrical and automotive industries and components for munitions.

Machinery Building: Our plans for developing the Machinery Building Section of your Company have been affected by the defence requirements. Nevertheless the supply of closing machinery to customers has continued undisturbed. A valuable export order for production equipment was received from our overseas associates and here again the resources of the Technical Development Division were used to complete the project on time. Further export orders for similar equipment are currently under manufacture.

Research Division: A Customer Research Canning Laboratory is being established at Research Division to augment our advisory services to the industry. In this laboratory we will be able to reproduce canner conditions and experiment directly with the canning of new products. Throughout the year the Research Laboratories in conjunction with suppliers have continued to develop wholly indigenous materials. Their field of operation has extended to cover the new Paper Group.

VISIT FROM ASSOCIATES

During the year we had the pleasure of welcoming Mr C. E. Sutton and Mr A. L. Stuchbery, Directors of The Metal Box Company Limited. Mr Sutton, who is in charge of the Home Company's Administrative Services, was able to apply to your Company's problems his very considerable experience, particularly that in the field of raw material procurement. Mr Stuchbery, heading Research and Technical Engineering, apart from being one of the world's leading can-makers, is Chairman both of the Council of the Institution of Production Engineers in the U. K. and the Production Engineering Research Association. He was therefore in an unrivalled position to give us help in the planning of our defence production and the development of our Machinery Building and Industrial Component operations. Needless to say we welcome such visits which are both pleasant and useful.

EMPLOYEE RELATIONS

During the year under review, labour relations in the country deteriorated and the cordial atmosphere generated by the Emergency and the Industrial Truce Resolution unhappily began to disappear. This was most evident in the engineering industry of which we are a part; it particu-

larly affected our employee relations in Bombay and North India.

If, as we are asked to believe, we are living in a state of emergency, and if the country's paramount needs are increased productivity to strengthen its defence and its export trade and at the same time raising the living standards of the people, then it is essential that there should be on the part of labour an adequate realisation of its responsibilities in this matter and on the part of the Government a determination to ensure that unreasonable demands and indifference to the common weal either by employers or by labour are not given any encouragement.

In Bombay, where over the last 10 years we had successfully negotiated with representative committees elected by our employees, a concerted attempt was made by an outside trade union to create unrest and disturbance. As a consequence our relationship with our employees there during the last few months of the year was under considerable strain. Characters of demands were presented to the Company by three separate unions all pressing for formal recognition by the Company. Acting in accordance with the Code of Discipline, we have not recognised any union so far. We have, however, concluded an agreement on dearness allowances and gratuity with a union which represents a majority of the monthly-rated staff as certified by the Maharashtra State Labour Commissioner. The demands made by the other two unions were taken to conciliation which was infructuous. However, a bipartite agreement was reached with one of the units representing the daily-rated employees.

Signs of tension were noticed in Faridabad throughout the year, which culminated in a four-day strike in March. This strike was entirely unjustified since the issue on which it was called was already under investigation by the Conciliation Officer of the Punjab Government. The issue has now been referred to the Labour Tribunal.

After protracted negotiations, a comprehensive agreement covering terms and conditions of service was concluded with the daily-rated employees at Calcutta No. 1, Calcutta No. 2 and Technical Development Division. I am happy to report that with the signing of this agreement (operative till December 31, 1967) the restlessness which I mentioned amongst our daily-rated employees in the Calcutta establishments last year and in 1962 has largely disappeared.

Your Company continued to emphasise training at all levels within the organisation. Five officers and one Research Associate underwent training by Metal Box in the U. K. One senior

managerial staff attended the Administrative Staff College at Henley-on-Thames and another attended the Advanced Management Programme organised by the All India Management Association at Bombay. We sponsored a candidate to the nine-month Junior Management Development Course of the Indian Institute of Management, Calcutta. A further thirty-seven managers have undergone the Company's residential Management Course in Calcutta at which we continue to welcome the participation by managers from our Malaysian and Pakistani associates.

Courses for supervisors were organised in the units in man management, safety and work study. Forty-one apprentices were recruited under the Apprentices Act, in addition to seventy-three currently receiving training under the Company's apprenticeship schemes.

It is a pleasure for me to record the valuable cooperation of the Company's employees in our widespread activities and I thank them and the Management for yet another year's splendid performance.

BOARD CHANGES

It was only last year that I paid tribute to the services of Mr K. C. Mahindra who served as Chairman of our Company for five eventful years. Unhappily he was not destined to enjoy for long the rest from all his labours in the interest of industry in general and our own Company in particular. His death on 31st October

1963 was deeply mourned by all of us in Metal Box and to his family who survive him, we sent our sympathy in their bereavement.

It was with real regret that your Board agreed to release Mr John Cochrane-Barnett from the Board. His services to the Company during the last seventeen years and more—the last three as Deputy Managing Director—have been most valuable. His drive and determination, backed by his intimate knowledge of production and marketing in India have contributed in a substantial way to the continued growth of your Company's sales. His tactful and painstaking advocacy of our own and the packaging industry's needs for raw materials have been as much respected and appreciated by officials in the Government as have his loyalty and breadth of vision by his colleagues on the Board. We shall miss him; and I should like on your behalf and also mine to convey our thanks and good wishes to him.

We have lost another valuable colleague by the resignation of Sardar H. S. Malik from the Board. After a very distinguished career in the Indian Civil Service, Sardar Malik joined our Board as a Director in 1957. During the last seven years he has, by his wide experience of men and affairs, and by his ability in presenting our problems to the Government, been of the greatest assistance to the Company. On your behalf and also on mine I

should like to convey our thanks and good wishes to him.

CONCLUSION

As a comparatively new-comer to your Company, I have been using a certain amount of research into its fortunes. The graphs reproduced at the beginning of this report bear eloquent testimony to the Company's growth and prosperity which have been attained by hard work and by the application of progressive methods of production and management.

The smooth and effective manner in which the Company was able successfully to float in March 1964 a Rights Issue of over two crores of rupees is proof of both the soundness of your Company and the confidence that it enjoys in the country.

The speech of the Chairman at the Annual General Meeting of a company has become an occasion in this country and elsewhere for a review of the important events of the year or for the exposition of one facet or another of industrial philosophy. Sometimes these speeches include criticism—mild or otherwise—of the policy of the Government, and in particular of its Finance Minister. The temptation to join this chorus is great for the simple reason that I find myself in agreement with most of what has been said, and will continue to be said by others in the same position as myself. But I have often wondered what one would do if one were to find oneself in the unenviable position of the Finance Minister of the Go-

vernment of India. Given the conditions that exist in our country today, namely the need to finance successive five year Plans of increasing dimensions and defence budgets of staggering proportions, has a Finance Minister an alternative? His duty is to raise the necessary finance. He cannot do so without hurting someone. All taxes, by whatever name they are called, an abomination of the Lord; no one likes to pay taxes; but taxation of some kind or another in a civilised and democratic country is the most approved and legitimate means of raising money. All this does not mean that I do not share the views of my more experienced Chairmen of Companies than myself on the Budget and all that it implies; but it is just as well to remind ourselves that all of us—Parliament, Government and Industry—are labourers in the same vineyard; as we sow, so shall we reap.

I cannot conclude this report without referring to the untimely death of our beloved Prime Minister on 27th May 1964. All our units closed on the afternoon of that day and all the following day in token of our grief. Our management and staff met together to mourn their and the country's loss. We "shall not look upon his jibe again."

Note. This does not purport to be a record of the proceedings of the Annual General Meeting.

Sri N. D. Bangur, the Chairman, on Raw Material Problems

Following is the text of the speech by the Chairman, Sri N. D. Bangur, delivered at the Annual General Meeting of the company held on the 29th June 1964:

Gentlemen:

I have great pleasure to welcome you to this Annual General Meeting of your Company. The Directors' Report and Audited Statement of Accounts for the year have been in your hands and, with your permission, I take the same as read.

Before anything, it is my painful duty to refer to the sad and sudden passing away of our beloved leader and Prime Minister Shri Jawaharlal Nehru on 27th May, 1964. Shri Nehru, the architect of modern India, was a source of strength and security to the teeming millions of the country. He was acclaimed a world statesman and his name became almost a legend in his own life time. There would be no better tribute to the memory of the great champion of liberty and peace than our determined efforts towards fulfilment of his dream of a peaceful, prosperous and united India.

On this occasion I offer my respectful congratulations and best wishes to our new Prime Minister. His unanimous election has been universally acclaimed and I have no doubt that under his wise guidance our country will swiftly march forward to prosperity.

ECONOMIC SITUATION

The signs of vigorous growth which ought to be there in a planned economy are not visible. I would particularly like to invite the kind attention of the Government to the conditions in the Capital Market. Only two years ago the climate for investment was so healthy that the public, belonging to every level of income group showed tremendous interest in investing in industrial shares. The new issues were heavily oversubscribed. But the steep increase in taxation has dampened the enthusiasm of the investing public. Little savings are left in the hands of the public and consequently entrepreneurs are finding it increasingly difficult to raise funds barring the financial institutions. Friendly foreign countries have been generous in giving us assistance in various ways but unless the climate for investment in India is made attractive it will not be

possible to take full advantage of the foreign aid.

Immediate attention therefore has to be given to measures for reviving the climate for investment so that once again the capital market can become active and investors and entrepreneurs may vie with one another in their efforts to develop the economy. I have no doubt that the Government will give serious thought to the present situation and adopt appropriate measures to give a big push to our economic progress so that the much needed production targets may be achieved. It is therefore essential that a growth oriented fiscal policy should be followed.

So far efforts made by the Government through L.I.C. Unit Trust and establishment of Development Bank towards reviving the confidence in Capital market are appreciated, yet it would have been much better had a liberal atmosphere been created by reviewing personal tax structure which is complicated and high at all levels of income group. I may mention that all personal taxes taken together at a stage even accounts more than total earning of an individual which amounts to expropriation of capital. A liberal revision of personal tax structure will open way for wider investment out of personal savings from all classes of people throughout the country which, in turn, will give birth to new enterprises in different lines, solve unemployment problem and boost up production leading to prosperity in the country. Time has come for mass education through publicity drive by institution and Stock Exchanges to educate the urban and rural population to bring home the benefits of more and more investment.

THIRD FIVE YEAR PLAN & PRICE POLICY

In the Third Five Year Plan, the Planning Commission has fixed a target of 7,00,000 tonnes of actual production of paper. At the end of 1963, the production of paper and Board was 4,65,000 tonnes with an installed capacity of 5,50,000 tonnes. Taking into account the increased capacity, production in 1965-66 is estimated to be 6,00,000 tonnes leaving a gap of 1 lac tonnes between the estimated demand of 7 lac tonnes and the actual production. To meet this shortfall, the Government

recently have invited schemes from all the existing units for increasing production by adjustments and modifications of their machines and installing balancing equipments with the least foreign exchange expenditure and in quickest possible time. Additional installed capacity of 1,20,000 tonnes is expected to materialise by these schemes. If all these schemes are put in commission by 1966, the Third Plan target's capacity may be achieved. But, it is doubtful whether the production of 7 lac tonnes will be achieved, because a part of the installed capacity may not become productive and may be delayed.

The Industry has submitted a detailed representation for an upward revision of the prices. The cost of production has gone up due to various reasons beyond the control of the Industry. The prices are governed by the provisions of Tariff Commission allowing a meagre 12% return on Capital including interest charges etc. Even this small 12% return on capital employed is not available now due to the continuous rise in costs. In this situation, if the question of price is not given due consideration, the effect will be a retarded growth of the Industry. It is not a happy feature that an increase in the selling prices of end products should become possible only after a long drawn process. I am of the view that price increase should be automatic and it should not be difficult to evolve a formula in terms of which paper prices could be revised as soon as costs of production tend to vary beyond agreed limits. As matters stand, the representations now pending before the Government for price increase have already become out-dated because there have since been further substantial increases and it is hoped that Government will give due consideration to the matter of price increase at an early date.

RAW MATERIALS

There has been no improvement in the difficult situation faced by the Industry in respect of its requirements of raw materials. It is being found that some of the States favour local development of industries and are reluctant to continue giving raw materials to industries situated in other States. When industries have been set up banking on the availability of raw

materials from neighbouring States, the above trend is causing serious anxiety in the minds of entrepreneurs. The Central Government should immediately consider this matter and formulate a policy by which traditional sources of raw materials to the industries are not disturbed.

By recent research it has been found that hardwood could also be utilized as a substitute raw material in India and I am glad to inform you that your Mill is using a considerable quantity of hardwood by mixing with bamboo and other conventional raw materials. In this view, so far as your Company is concerned, the raw material position is assured.

In my last year's speech I had referred to the necessity on the part of the Government of West Bengal to allocate sufficient waste lands to the paper industry for development of plantation. We have found that eucalyptus can be grown in the district of Midnapore and if proper arrangements for supply of manure and nurseries are made, eucalyptus can be grown in a shorter time than what bamboo normally takes and it will be another raw material for the industry. I will therefore again appeal to the West Bengal Government to take an early decision.

Some time ago the Development Council for Paper, Pulp and Allied Industries recommended to the State Governments to grant long term leases of forests to the paper mills and a specific basis for determination of royalty was suggested. I am not aware of any State having considered and adopted this basis.

The present allotment of foreign exchange for import of wires, felts and spares hardly makes it possible for the Mills to meet emergencies and quite often mills have to resort to air-freighting. If the paper Industry has to produce to the maximum extent installed capacity, it is of utmost importance that the mills are allowed to build buffer stock of consumable stores. I would therefore urge that a liberal policy is followed in the matter of releasing foreign exchange to the mills for import of these materials.

Considerable difficulties are still being experienced by the Industry in getting at reasonable prices its full requirement of chemicals. The prices of chemicals have gone up and the Paper Industry finds it

difficult to meet with the fixed selling prices of paper.

SALES

Since the commissioning of the multi-stage Bleaching plant, the shade of our paper has improved and is being liked by the consumers. It is the constant endeavour of the Mill to improve the quality of the paper and also to go in for manufacture of special qualities such as, the paper for Formia and Malamines, wrapping paper for Photo Films, etc. for industrial use, the demands of which in the country are being met by imports. We urge the Government to gradually restrict the import of these qualities to provide an incentive to indigenous industry and save foreign exchange most needed by the country.

We have supplied to one of our customers Cable Insulating paper manufactured from imported pulp and thus have seen that we can produce this quality provided the import of the required type of wood pulp is allowed. We feel it will be in the interest of the country if import of pulp is allowed to us for manufacture of such qualities of paper rather than to allow their import. The Government have been approached for this purpose and we hope they will take a realistic view of the position. We do not feel any justification of the installation of new units to produce such qualities when the existing units have adequate equip-

ment and experience for their production.

I welcome the concession granted in the excise duty to the new units as well as to the mills which have expanded their existing capacities by installing new machines since 1st March, 1964. The Joint Committee of the Paper Industry immediately represented the case to the Government that other new units and expanded units which have already come into production before 1st March 1964 should also be entitled to such concession. On this representation, the Government has agreed to grant the concession on excise duty to the new units which came into production between 1.4.61 and 1.3.64. The Government has not considered the case of those units which have expanded their capacities during this period and a further representation has already been made to clarify this position and I hope the Government will take due cognizance and allow the same concession to those units. After all they have also incurred heavy expenditure on installation of new machines like the new units and there seems to be no justification to deny this concession to the units expanded after 1st April 1961.

OPERATION

The production and the gross profit during the year were 22,567 tonnes and Rs. 64,75,025 compared to 21,588 tonnes and Rs. 60,02,630 during the previous year. The nett profit, however, declined to

Rs. 3,52,330 during the year compared to Rs. 15,18,412 during the previous year. The decline in the nett profit has been due to increased provision for depreciation and development rebate. In view of the increasing cost of production and fixed selling prices, the above profit should be considered satisfactory. After considering the various aspects, your Directors have recommended the same dividend of 20% on Equity Shares for the year under review.

EXPANSION & MODERNISATION

The Shareholders will be pleased to know that the Company has been able to complete the first phase of the expansion and modernisation programme. The new Paper Machine No. 6 was commissioned on the 13th November 1963 as per schedule. This is the machine having the highest running speed of all the machines so far installed in this country. Along with this machine your Mill is able to produce 100 tons of paper a day.

The Stock Preparation Plant, Multi-stage Bleaching Plant and Coal Fired Boiler were commissioned during the year according to schedule, as indicated by me last year. The new Turbo Generator was commissioned in January, 1964 and the Recovery Boiler in May, 1964. There were however teething troubles, and especially a serious interruption took place in the power generating unit which

was recommissioned at reduced speed by the help of foreign Technicians. Additional arrangements have also been made with the power supply companies by which the Mill would be able to keep up the production programme. The full utility of the Company's power plant will be available as soon as the delivery of the turbine shaft is received from U.S.A. The Government of India invited the Paper Industry to submit such schemes which by modification, adjustment and by adding balancing equipment, would increase the paper production in the country within a short time and involving a minimum foreign exchange. Your Company also submitted a scheme to increase the capacity by another 21,000 tonnes at an approximate cost of Rs. 1.5 crores. I am glad to inform you that our scheme was approved by the Government and we have been granted an Industrial Licence for this increase in the capacity. Necessary steps for implementation of the same will be taken in due course.

The relation with staff and workers continues to be cordial and I would, on your and on my behalf, like to express our appreciation of their sincere services rendered to the Company.

Note: This does not purport to be the proceedings of the Annual General Meeting of the Company.

Selected Satgram Collieries Limited

Increase in Production and Sales

Dividend Maintained

Mr S. D. Shethia, the Chairman, on Problems Facing Coal Industry

The Following is an extract from the speech by Mr. S. D. Shethia, Chairman of Selected Satgram Collieries Limited at the Nineteenth Annual General Meeting held on 29th June, 1964:

Ladies & Gentlemen,

With sad heart, I must refer to the calamity that has befallen our country. In losing our late beloved Prime Minister, Pandit Jawaharlal Nehru, we have not only suffered an irreparable loss, but have also seen the change of an era under the dynamic leadership of such a great man whose sincere and devoted missionary service to all of us, his countrymen, has immortalised him in our minds as well as in the eyes of the citizens of the World. May I urge you kindly to stand in silence for two minutes as a mark of respect towards him and pray for Eternal Peace for the Departed Soul.

It is now mete and proper that we all resolve to stand together in response to the timely call of our

President and the new Prime Minister, Mr Lal Bahadurji who shoulder very great responsibilities of building our country at such a difficult time.

I have great pleasure in welcoming you all to the nineteenth general meeting of the company and address you after a lapse of nearly two years. Last year, as you will remember, we were prevented from meeting in this manner by Rule No. 52 of the Defence of India Rules which were promulgated in the wake of national emergency arising out of naked and unprovoked aggression from the Red China.

I have the pleasure in welcoming two new members to your board of directors. Mr Prabhakar L. Kirloskar, who belongs to the well known firm of Kirloskars, a progressive industrial group of western India and Mr Bharat S. Shethia, ex-officio director from the managing agents, who has, after joining in 1956 and having been assigned the responsibilities

of our producing units, now gained necessary experience. While recording with regret the resignation of one of your directors, Mr C. M. Dave, on eve of his retirement, as he desired, I take this opportunity in appreciating on your behalf his services to the company.

With your permission, I am taking as read the audited statement of accounts and the directors' report for the year ended December 31, 1963 which have been with you for quite some time. The accounts for the year ended December 31, 1962 were circulated to you upon removal of the restrictions of the Defence of India Rules.

PERFORMANCE

Raisings during 1962 increased by 181,986 tonnes over the figure of 1961 and during 1963 by 98,100 tonnes over 1962; despatches have also shown improvement specially in 1963 and our collieries are holding a stock of 10,459 tonnes against 20,046 tonnes at the end of 1962.

This has been mainly due to the efficient sales organization of the managing agents and their associates who have helped us in the disposal without charging us anything in this respect despite the present market conditions.

Our turnover has increased by Rs 22,68,322 to Rs 86,97,953 or 35% excluding Rs 27,38,654 of New Majri Colliery which was worked by us until beginning of the last year as raising contractor and had earned the net remuneration from the raising contract of South Joyramdanga Colliery came down by Rs 1,88,784 to Rs 1,15,556 on account of unforeseen circumstances. The operating profit of your concern has increased from Rs 10,22,449 to Rs 16,41,804 despite the increase in cost of production. The profits also include Rs 1,17,449 received from the managing agents and their associates.

You will have noticed that despite the increase in the profits, the provision for taxation has not

increased proportionately. This is on account of applicability of Section 84 of Income Tax Act of 1961 to the unit. New Majri Colliery. Thus after provision of various statutory and necessary reserves amounting to nearly Rs 9,02,600 your directors have recommended maintenance of dividend at the same rate as that of the last year, viz. Rs to per share. Considering the tax holiday, this share gives in your hands a net yield of Rs 7.02% on the existing prices as against Rs 5.66% last year. This year we would distribute the dividend after getting necessary exemption from the tax authorities to whom we have applied earlier.

The reserves of your company have increased from Rs 8,70,685 to Rs 16,17,485 which is about 40% of the capital. The policy of husbanding a bigger proportion to the reserves has been on various matured considerations, principal amongst them is consideration of the effect of new "Sur" tax upon your company when the substantial medium term loan would be paid off. Today the net worth of your shares is Rs 140 as compared to its latest market value of Rs 114 as against Rs 121 and about Rs 125 (on an average) last year.

PROGRESS

The construction and development of housing and dispensary facilities at all of your collieries have maintained a satisfactory trend. At New Satgram Colliery, the central hospital provides for the extra medical facilities in the shape of twelve beds unit with an air-conditioned operation theatre. The progress of the labour housing at New Majri Colliery has been little or none owing to the fact that according to the housing board regulations this facility is available to the units which can demise their land for forty years. The reserves of New Majri Colliery are adequate, the lease of the colliery would expire in 1973 and application, however, has been earlier made to the Government of Maharashtra, who had been realistic and encouraging in the past, for remedial measure by renewing the leases of this unit for a further period of thirty years as available under Mineral Concession Rules 1960.

Recreational facilities in the form of games, sports, cinema show have been available to all the staff and workers. The co-operative societies are functioning satisfactorily as lending institutions.

During the safety week celebration, the programme which has been rightly sponsored with great emphasis by the Chief Inspector of Mines for successful measure for increasing safety consciousness amongst the workers, you will be pleased to know that your New Majri Colliery stood first in the Chand Coalfield and New Satgram Colliery has ranked amongst the top ones.

Though progress in other spheres have been at a satisfactory level there has been little or no progress in acquisition of the surface land through the Government though a provision has been inserted by

the Central Land Acquisition Act for easier acquisition of the necessary land for the industries for the public purpose and belonging to the limited corporation.

Labour Management relation has continued at the same satisfactory level as before.

QUO VADIS COAL INDUSTRY

Never before has the coal industry passed through such an utter chaotic state. Only in my last address to you, I had mentioned about exhorting urgent call of Honourable Union Minister, then in charge of Mines & Fuel, to increase the production and meet the ever increasing demand for the coal in the country. The industry in response geared all its energies and resources and put them to realization of the objective with the help of the Central Government including getting of Rs 16.7 crores of foreign exchange from the World Bank for the import of necessary machineries. As a result of allround efforts accelerated by the urgency stressed during national emergency, the production of this vital commodity of fuel came up. In the normal circumstances, such strenuous efforts, so much of risk taken, such a lot of huge investment put and the resulting increase would at least warrant a pat on the back. In this particular case, however, a very queer phenomenon was observed when for the year ended 31st March, 1963 the output of coal was about 61 million tonnes, the demand all of a sudden slumped. The present chaotic state of affairs in coal industry has perhaps aptly been described as follows:

"That over every corner of the coal economy overshadows the dismal cloud of confusion and doubt and that every solution of our difficulty turn sour in the end and that our remedies themselves require a cure."

For this quandary, who is to be blamed? This is a very difficult question to answer. There have been several factors which have contributed to it. To mention a few, over-estimation of demands, slow speed of industrial growth created amongst others by the Chinese aggression the Government policy in subsidizing the furnace oil and thus encouraging several industries in western and southern India to use oil instead of coal, improvement in coal transport etc.

It would not be easy to offer a ready-made solution for this is a very complex problem. One thing, however, is very necessary and that is a careful searching and realistic inquiry at a very high level to determine the root cause of the present state. Then the short-term, the medium-term and the long-term remedial measures would have to be found out so that a consistent and steady policy could be adopted; not only for proper and continued development of the industry which is in core of our Plans, but also of supply of proper quality coal that the consuming industries require. This would need careful striking of the balance

between two, so as to avoid shortage of this essential raw materials in future.

While on this, I cannot but mention a few bold measures taken by the Honourable Mr. Subramaniam, the Union Minister. In Charge of this portfolio till recently. Increase of selective grade of coking and non-coking coal, decontrol of the movement of the lower grades of coal, pegging of the output of some of the metallurgical coal which would be badly required for our future progress and whose reserves are very meagre and persuading the Finance Minister to include coal in the list of essential industries, as a result of which the companies mining coal would have to bear lesser tax incidence and would be able to plough back more to their resources. What results these measures would bring is very difficult to say at this premature stage. Two points in my opinion need immediate attention.

The neutralization of the higher cost of non-coking coal of Grade I variety in Bengal and Bihar area and of Grades I & II in the outlying coalfields, on the same basis as other selective coals is not only in the interests of equity and justice but also a definite must, to maintain the tempo and effectively use our valuable foreign exchange. The production of these coals was thoroughly scrutinized by the high level technical and finance sub-committees constituted by the representatives of the World Bank, the Government and the industry. Secondly the granting to coal industry depletion allowance in respect of its wasting assets. This point has been raised from time to time with great emphasis, having got the precedent in case of oil industry and it is high time this realistic help is given to the industry.

REPORT OF THE BONUS COMMISSION

The report submitted by the Bonus Commission, it has been strongly felt by the coal industry, would only tend to bring about the state of industrial unrest and utter confusion in this labour-intensive and more difficult industry where the absenteeism is more than anywhere else. All I can say is that present attendance bonus is more than adequate in this primary industry. From my recent experience in Japan, I can reiterate this with more emphasis, having heard the Japanese Prime Minister strongly objecting on the incidence of increasing labour bills on prices.

DEVELOPMENT THROUGH DIVERSIFICATION

In the present stage of coal industry the old adage "not putting all the eggs in one basket" is realized more than ever before and I feel that your directors' recent decision to develop your company by diversification is perhaps the correct answer to the primary call of the present time.

Your directors have decided to intensify the activities of the com-

pany in the direction of setting up engineering works with proper foreign collaboration and I hope that this change in the viewpoint and the company's decision would not only stabilize the company but also maintain the adequate return on capital for future use.

The question has frequently been posed before us: what all these expansion means to a shareholder? I shall endeavour to answer this question in the context of present stage of development of socio-political economy of ours. You will have seen that intrinsic value of your share has been increasing. A cursory glance at your balance sheet would convince you of this prima facie position. When your directors made the valuation of the properties belonging to your company at New Satgram Colliery, an increase of about 29% was observed. Therefore, there can be no doubt that with the development of our economy your company's keeping pace will not only have stability that we expect, fair return for future, but also the satisfaction of having contributed our mite to the growth of the country.

To keep pace with in developing nature of your collieries' activities, we have sent our senior and junior staff to the courses, seminars and lectures from time to time which impart necessary training in the field of finances, administration, sales, safety and human development.

ACKNOWLEDGEMENT

Before I conclude, it would not be out of place for me to place on record our sincere appreciation to workers and staff of your company headed by Mr. J. Singh, general manager of the collieries and his team, other senior officers, for their making sincere endeavours to keep pace with the ever increasing needs of our growing concern in exercising various controls. The efforts of your managing agents not only in helping proper and timely disposal of your product at such a critical time but also meeting vital financial needs of your company from time to time needs a laudable mention. In return of their singular service, I do take it, I have your approval in congratulating them as a member of Shethia Group for having completed fifty years of their satisfactory and dependable service to customers.

In conclusion, on your behalf and mine, I express our sincere gratitude to members of the board of directors who have continued to give their able and mature guidance so spontaneously; we do count a lot upon their continued cooperation in future.

With your permission now I propose that the report of the directors and the audited statement of accounts for the year ended 31st December, 1963 be hereby approved and adopted.

NOTE: This does not purport to be a record of the proceedings of the annual general meeting.

Sweden's Foreign Trade

Sweden's foreign trade in the first quarter of this year resulted in a slightly larger deficit than in the same period of 1963, Kr 666 million (€45,000,000) as against Kr 610 million. Imports were up 21 per cent to Kr 4,867 million and exports 23 per cent to Kr 4,190 million.

Of the Kr 832 million increase in imports, approximately one-third is accounted for by larger purchases of machinery, apparatus and means of transport. The number of imported cars rose from 30,503 units in January-March, 1963 to 39,537 in the same period of this year. Higher figures were also noted for imports of mineral oils, iron and steel, chemicals and foodstuffs.

On the export side, showing a rise of Kr 776 million, sizable increases were noted for shipments of timber, pulp and paper, iron ore and metal and steel. Larger figures were also registered for machinery, apparatus and cars, while exports of ships were smaller.

Road Tankers with Pure Nickel Tanks

The first road tankers to be built in France with tanks, made of pure nickel, designed for the transportation of concentrated caustic soda, are now in regular service. These vehicles can carry 23 metric tons of 73 per cent caustic soda solution at a temperature of 110°C. Pure nickel for the tanks was supplied by the International Nickel Company (Mond) Limited.

This material was chosen because it has a very high order of corrosion resistance to caustic solutions over a wide range of temperatures. Other reasons for the choice of pure nickel are because it is chemically inert to caustic and hence reduces contamination to negligible proportions, it has good mechanical properties and is readily available with the smooth surface finish necessary to facilitate complete emptying and easy cleaning of the container.

The vehicles make use of the ANOBLOC system of construction, exclusive to Ets. Bignier Schmid-Laurent, which has the big advantage that the wall thickness of the tank can be reduced below that customary with carbon steel tanks. This cuts costs significantly when relatively expensive special materials are required for the tanks.

capital of Rs 30 lakhs, divided into 20,000 equity shares of Rs 100 each and 10,000 cumulative redeemable preference shares of Rs 100 each (carrying a dividend of 9.3 per cent). All the shares are to be issued for cash at par. This is in supersession of an earlier consent for the issue of capital of Rs 25 lakhs.

INVESTMENT NOTES IISCO

The production figures, released by the Indian Iron & Steel Company Limited, show an all-round decline in June as compared to the previous month. The output of Pig Iron is lower at 99,003 metric tons against 108,073 metric tons; Steel Ingots at 79,845 metric tons against 81,394

metric tons and Saleable Steel at 52,274 metric tons against 61,337 metric tons. Despatches have also declined to 54,791 metric tons from 59,630 metric tons.

BONUS ISSUE NOTES TOMCO

The directors of the Tata Oil Mills Company Limited have recommended a dividend of 12 per cent on the Ordinary shares for the year ended 31 March 1964 on the increased capital of Rs 1.05 crores. This represents a drastic cut from 22 per cent paid for the previous year with the new shares also ranking for proportionate distribution.

The cut in dividend is, however, being compensated by the proposed

bonus issue. Subject to the consent of the Controller of Capital Issues, the directors of the company have proposed to issue 1,40,150 ordinary shares of Rs 25 each as bonus shares in the proportion of one new share for every three ordinary shares held by capitalising Rs 35.04 lakhs out of the Share Premium Account.

Deccan Sugar

The directors of the Deccan Sugar and Abkhari Company Limited have decided to issue bonus shares to the existing shareholders in the ratio of one share for every six shares held by capitalising the amount to the credit of the Share Premium Reserve, subject to the consent of the Controller of Capital Issues.

Bank of India

According to a notification issued by the bank, the Controller of Capital Issues has declined to give his consent to the proposed issue by the Bank of India Limited of 40,500 "A" shares of Rs 50 each as fully-paid bonus shares by capitalising a sum of Rs 20.25 lakhs out of the Share Premium Account.

Travancore Sugars

Travancore Sugars & Chemicals Limited has made an application to the Controller of Capital Issues for making a bonus issue in the proportion of one share for every five shares held by capitalising Rs 6 lakhs standing to the credit of the Share Premium Account.

BALANCE-SHEET BRIEFS Kishore Trading

According to the preliminary report released by the Company, the Kishore Trading Company Limited has reported a higher net profit of Rs 1,82,114 for the year ended 31st December 1963 as against Rs 77,231 for the preceding year. Estimated tax liability is shown at Rs 5,000 (nil). The directors have proposed a taxable dividend of Rs 3.80 per share.

BALANCE-SHEET REVIEWS Metal Box Does Well

THE Metal Box Company of India Limited has produced encouraging working results for the year ended 31 March 1964. While sales have increased by Rs 200.04 lakhs to Rs 14.08 crores, the net profit, after providing for depreciation but before taxation, works out to as much as Rs 154.10 lakhs as against Rs 123.60 lakhs for the preceding year. Depreciation is raised to Rs 20.04 lakhs from Rs 16.86 lakhs and Taxation to Rs 92.50 lakhs (including Rs 18.50 lakhs for surtax and dividend tax) from Rs 79.00 lakhs. The net profit, after tax, amounts to Rs 61.60 lakhs against Rs 44.60 lakhs. After adding Rs 50,914 (Rs 4,757) being profit on the disposal of fixed assets and adding the balance brought forward from previous year of Rs 38,785 (Rs

29.83 lakhs), there is an available sum of Rs 62.49 lakhs (Rs 74.48 lakhs). From this, a sum of Rs 9.00 lakhs (Rs 39.50 lakhs) is set apart for General Reserve and Rs 8.50 lakhs (Rs 2.50 lakhs) for Development Rebate Reserve.

In this connection, it would be recalled, that, in March 1964, the capital was increased to Rs 322 lakhs by the issue of 16,10,000 equity shares of Rs 10 each, which were issued at a premium of Rs 2.50 per share in the proportion of

THE METAL BOX COMPANY OF INDIA LIMITED

NOTICE OF ANNUAL GENERAL MEETING

NOTICE is hereby given that the Thirty-first Annual General Meeting of the Company will be held at the Registered Office, 59C, Chowringhee, Calcutta, on Wednesday, the 22nd day of July 1964 at 12.30 p.m. for the following purposes:

1. To receive and consider the Statement of Accounts for the year ended 31st March 1964 and the Reports of the Directors and Auditors thereon.
2. To declare a Dividend.
3. To elect Directors.
4. To re-appoint and fix the remuneration of the Auditors.
5. To transact any other ordinary business of the Company.

Special Business

The consideration of the following Resolution which will be proposed as a Special Resolution:

"That the consent of the Company be accorded by this Special Resolution to the holding by Mr. T. M. Rama Aiyangar, who is an Alternate Director of the Company, of the office or place of profit of General Commercial Manager".

Explanatory Statement and Note

The consent of the Company by Special Resolution is requisite to the holding of his office or place of profit by an Alternate Director of the Company.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member. Proxies, in order to be effective, must be received by the Company not less than 48 hours before the Meeting.

NOTICE is hereby given that the Ordinary Share Register of the Company will be closed from 6th to 22nd July 1964, both days inclusive.

By Order of the Board

B. BARKER,
Secretary.

59C Chowringhee, Calcutta,
27th June, 1964.

one for one held. An interim dividend of 90 nP per share was paid in January 1964 on the oil equity January 1964 on the old equity capital. The directors now recommend a final dividend of 90 nP on the increased equity capital, subject to tax. Annual meeting takes place on the 22 July.

Bharat Nidhi Repeats

Thanks to better profits earned by the jute, engineering and cement industries, earnings of the Bharat Nidhi Limited are nearly maintained in the year ended 31 December 1963. The net profit, after providing for depreciation and taxation, amounts to Rs 13.28 lakhs as against Rs 13.49 lakhs for the previous year.

In respect of allocations, Depreciation is raised to Rs 1,285 from Rs 914 and Taxation to Rs 4.03 lakhs (including Rs 28,200 being additional provision) from Rs 2.90 lakhs, while General Reserve is lowered to Rs 2.00 lakhs from Rs 13.00 lakhs. The dividend on the Ordinary shares is repeated at 6%, subject to tax.

Parasea Collieries Earn More

Parasea Collieries Limited has reported a rise in earnings for the year ended 31st December 1963, thanks to the increase in raisings from 130,139 tonnes to 225,795 tonnes as well as in despatches from 122,541 tonnes to 211,304 tonnes. Sales are shown higher at Rs 47.48 lakhs against Rs 25.79 lakhs, while the net profit, after depreciation, amounts to Rs 3.23 lakhs against Rs 53,657 for the previous year.

Depreciation is raised to Rs 2.60 lakhs from Rs 1.92 lakhs. After making various adjustments, a sum of Rs 19,335 (Rs 40,747—including for earlier years) is provided for taxation and Rs 2.12 lakhs (Rs 52,460) for Development Rebate Reserve. No provision is made for General Reserve against Rs 20,000. The directors proposed a taxable dividend of 0.12 nP per share for the year.

Bararee Coke Pays More

The Bararee Coke Company Limited (Jardine Henderson group) has, according to the preliminary report, made a higher net profit of Rs 14,18,987 for the year ended 31st March 1964 as against Rs 10,64,446 for the preceding year. Estimated tax liability is shown at Rs 9.23 lakhs. The dividend on the Ordinary shares is raised by 50 nP to Rs 2.00 per share, taxable. Annual general meeting will be held on the 28th August. The dividend is payable on or after 7th September.

Duncan Brothers Tea Group

Out of the seventeen tea companies in the managing agency of Duncan Brothers, only three have reported encouraging working results for 1963. Dauracherra has earned as much as Rs 2.38 lakhs as against only Rs 1,813; Patrakola Rs 20.54 lakhs against a loss of Rs 8.59 lakhs and Teliapara Rs 3.01 lakhs against a loss of Rs 2.34 lakhs. In all the cases, however, the dividends have been passed over as against 20 per cent, 15 per cent and 10 per cent respec-

tively paid in the preceding year. In the case of Teliapara, the directors state their inability to recommend any dividend due to non-availability of funds in India. Rungamattie has reported a higher net profit of Rs 43,219 against Rs 24,083; but the dividend is at least maintained at 5 per cent.

Gungaram has earned only Rs 2.55 lakhs against Rs 3.35 lakhs (10% against 12½%); Hantapara Rs 3.65 lakhs against Rs 5.50 lakhs (7½% against 10%); Killcott Rs 1.85 lakhs against Rs 3.98 lakhs (10% against 15%); Kotamullai Rs 35,587 against Rs 97,490 (nil nil); Ledo Rs 28,762 against Rs 53,354 (nil nil); New Cinnatollah Rs 68,821 against Rs 2.47 lakhs (5% against same); Poobong Rs 36,775 against Rs 1.04 lakhs (nil against 5%); Runglee Rungliot Rs 8,122 against Rs 8,123 (5% against 7½%) and Marybong & Kyel Rs 14,456 against Rs 1.48 lakhs (nil against 2½%).

Caron has incurred a loss of Rs 34,414 against a profit of Rs 1.31 lakhs (nil against 7½%); Nagasore loss of Rs 12,429 against Rs 3.09 lakhs (5% paid out of investment reserve against 15%) and Phaskowa loss of Rs 2,850 against a profit of Rs 17,963 (nil nil).

McLeod Tea Group

Four Tea Companies in McLeod group have produced discouraging working results for the year 1963. Amluckie has reported a decline in the net profit, after providing for depreciation and taxation, from Rs 1.37 lakhs to Rs 40,167. The dividend is reduced from 7½ to 5 per cent, subject to tax. Ranicherra has also shown a lower net profit of Rs 53,430 against Rs 92,446. The dividend is reduced from 7½ to 5 per cent. Baghmari has, however, incurred a loss of Rs 27,404 against a net profit of Rs 81,082. The dividend is skipped against 7½ per cent, taxable, paid previously. Margaret's Hope Tea Company, Limited has earned only Rs 24,749 against Rs 1.10 lakhs. The dividend is reduced from 15 per cent to 6 per cent. Bormah Jan Tea Company Limited has shown a net profit of Rs 1.73 lakhs against Rs 1.87 lakhs. The dividend on the ordinary shares is reduced from 15 per cent to 12½ per cent. Teloljan has earned only Rs 1.12 lakhs against Rs 2.37 lakhs. The dividend is reduced from 25 per cent to 17½ per cent.

STOCK EXCHANGES Lively Trading Conditions

THANKS to some favourable developments, buoyancy in stock markets continues to persist. While the volume of business shows a considerable expansion, the tempo has increased following further encouraging corporate news.

Cheerful conditions continued to prevail on Lyons Range where prices, despite profit-taking, recorded fresh higher levels.

Dalal Street showed fresh evidence of improving psychology and, with the return of buyers, prices forged ahead.

Selective buying continued to be in evidence on the Madras Stock Exchange.

On the Ahmedabad Stock Exchange, the recovery trend was extended further.

Higher Calcutta advices were responsible for a fresh spurt in equity values on the Delhi Stock Exchange.

It had been the best week on the London Stock Exchange where investment buying was on an increased scale and the institutions were said to have been showing greater interest.

CALCUTTA

DESPITE profit-taking at bulges, Lyons Range continued to present a cheerful appearance during the week, being influenced by some favourable factors. Buying spread from the clearing to the cash group, resulting in a marked expansion in turnover. The market finished around the highest levels for the week.

On the whole, the outlook for the market was considered to have improved considerably. The inspiration came mainly from the long-awaited announcement of the relaxation of the margin system although there was some disappointment over the continuance of the present 2 per cent margin on carry-over business. Operators were also optimistic about the forthcoming dividends of the steel companies, likely to be announced shortly.

There were also other factors contributing to the sustained buoyancy in the market. The Government decision to repay the compulsory deposits collected from small-income groups had a good effect on sentiment. Another factor was the announcement of the sale of units by the Unit Trust. It was thought that the Trust would invest substantial funds in industrial equities.

Above all, reports from New York indicating that the USA was inclined to give more loans for India's economic developments in the coming three years proved a great fillip to the market. India's improved balance of payments position in 1963 was also taken bullishly.

Operators were, therefore, inclined to lend sustained support to the market; but they preferred to proceed with caution as the investing public was still reluctant to move back into the market despite the continuous flow of encouraging corporate news. The apathy of the investors was aggravated by the unrealistic price fixed for cement. Although they welcomed the present increase, they felt that the increase by only Rs 2 was unlikely to compensate the producers adequately. It was, however, encouraging to note that all profit-taking operations were easily absorbed.

The Gilt-edged securities section continued to rue steady. The support for short-dated issues remained strong and their prices increased further from last levels. Medium-dated issues were steady. 3 per cent 1986 Conversion Loan hardened further to Rs 63.85 from Rs 63.75.

Bank shares ruled generally quiet. Jute shares continued to meet with selective support, reflecting the strong statistical position of the industry and the various measures taken by the Government to modernize the mills. Birlas were keenly sought after upto Rs 33.75 from Rs 31.87, while India were well maintained at Rs 15.12. New Central were rather quiet at Rs 11.56 against Rs 11.75 and so also Howras at Rs 15.50 against Rs 15.75.

Coal shares were practically neglected. Central India moved narrowly between Rs 8.62 and Rs 8.75.

Meanwhile, the decision of the Reserve Bank to suspend the open

market operations, for the time being, was interpreted as a prelude to the flotation of new Government loans, especially when money conditions had become very easy due to the advent of the slack season. In the 'Tea' section, dealings continued to be few and far between. Bishnauth forged ahead to Rs 13.87 from Rs 13.44, while Hasimara came in for offer at Rs 12 against Rs 12.31.

Sugar shares continued to be a neglected counter.

Expectation of an early increase in the price of cloth induced a hardening tendency in the prices of Textile shares although support was selective. Bharat Commerce were enquired upto Rs 20.62 from Rs 19.75 and Elgins upto Rs 19.25 from Rs 18.12. J. K. Cotton were, however, quiet at Rs 10.94 against Rs 11.

The present rally in the market was led by Indian Irons in which there was a good deal of speculative activity, especially after the announcement of closing of Transfer Books. There was a growing feeling that, on

the basis of the production figures for the past year, the working results would be very encouraging and the company might be in a position to raise the distribution.

After opening steady at Rs 25.20 and touching at one time a low of Rs 25.12, Indian Irons improved steadily to Rs 25.74 towards the close. G. K. Williams changed hands at Rs 24.06 to Rs 24.37; TEXMACO at Rs 27.10 to Rs 27.25; Jessop at Rs 21.25 to Rs 21.50; Braithwaite at Rs 32.62 to Rs 33; Kumardhubi at Rs 5.31 to Rs 5.44 and Marshalls at Rs 3.00 to Rs 3.12. Burn were well held at Rs 273.

Miscellaneous issues moved in sympathy with the general trend of the market. Even cash shares, which were long neglected, participated in the general rise in prices. Dunlop Rubber forged ahead to Rs 34.50 from Rs 34.06; Hindustan Motor to Rs 18.72 from Rs 18.41; Indian Aluminium to Rs 31.50 from Rs 31; Indian Cable to Rs 35.75 from Rs 35; Indian Copper to Rs 3.44 from Rs 3.38; Jaipur Udyog to

Rs 11.37 from Rs 11.25; Kesoram to Rs 27.44 from Rs 26.62; Orient Paper to Rs 36 from Rs 35.70; Rohtas to Rs 11.78 from Rs 11.56 and Shree Gopal to Rs 26.19 from Rs 26.00. The closing rates were slightly lower due to modest profit-taking.

In the cash group, Alkali Chemicals met with business at Rs 29 to Rs 29.31; Associated Battery at Rs 22.94 to Rs 23.50; Sirpur Paper at Rs 11.81 to Rs 12.03; Titagur Paper at Rs 14.06 to Rs 14.25; Hindustan Aluminium at Rs 12.69 to Rs 12.94; Chemical & Fibre at Rs 12.37 to Rs 12.56; India Steamship at Rs 6.37 to Rs 6.50; J. K. Synthetics at Rs 12.06 to Rs 12.31; NICCO at Rs 22.87 to Rs 23.31; Union Carbide at Rs 31.50 to Rs 31.75; English Electric at Rs 13.37 to Rs 13.62 and East Anglia Plastics at Rs 8.12 to Rs 8.50.

IN BRIEFS

The Titagur Paper Mills Company Limited has announced that some of the "A" Ordinary shares of Rs 10 each (Rs 2.50 paid-up) in the issued

capital of the company are liable to forfeiture, unless payment is made on or before the 31st July, of the second instalment amount due in respect thereof, i.e. Rs 7.50 per share, together with interest thereon at the rate of 9% per annum, calculated from the 6th April 1963 until the date of the actual payment.

Premier Mills Limited has maintained the dividend at 20 per cent, taxable, for the year ended 31 March 1964.

EID Parry Limited has proposed an interim dividend of 7 per cent for the year ended 30 September 1964.

Wartyhully Estates Limited has maintained the dividend at 12 per cent, taxable for the year 1963-64.

Cowcoody Estates Limited has declared an interim dividend of 7½ per cent (same) for the year ended 30 June 1964.

Deva-shola (Nilgiri) Tea Estates Limited has proposed a final dividend of 7½ per cent, making a total of 15 per cent, taxable, for the year 1963, same as previously.

Facts & Figures

UN Conference on Trade and Development

The five main Committees of the United Nations Conference on Trade and Development put finishing touches recently to their reports to the Conference. Developing countries have steered through the Committee stage proposals for the establishment of a new world trade organization.

The First Committee (Commodity problems) considered its draft report to the Conference on 4 June.

It has adopted a programme of work for international commodity arrangements aimed at providing developing countries with the means for economic and social development. The programme calls for the study of action which will ensure that developing countries will at all times be able to market their produce at remunerative prices.

The Committee has also adopted a programme of measures and actions for the removal of obstacles and expansion of market opportunities for exports primary commodities from developing to developed countries.

The Second Committee (Trade in manufactures and semi-manufactures), on 4 June, recommended measures for increasing markets in the developed countries for exports of manufactured and semi-manufactured goods of developing countries.

Under the plan, proposed by 64 developing countries, developed nations with market economies would be asked to adopt a preferential tariff scheme in favour of imports from developing countries.

Subjects dealt with in resolutions adopted by the Third Committee (Invisible trade and financing for trade expansion) included:

(1) Regional development through or in association with regional bodies such as the Inter-American Development Bank and the African Development Bank;

(2) Growth and aid targets;

(3) A plan relating to the supply to developing countries by developed countries of financial resources of a minimum net amount approaching as nearly as possible one per cent of the national income of the contributors; and

(4) Consolidation of the external debt of developing countries.

The Fourth Committee (Institutional arrangements), on 2 June, adopted by a roll-call vote of 83 in favour to 20 against with 3 abstentions, a resolution sponsored by 72 developing countries that would have the General Assembly establish an organization universal

in character to act as a central stimulus for all work relating to international trade and development.

The proposal envisages the continuation of the Conference as an organ of the United Nations, meeting every two or three years. It would have a 52-member executive council which would study the establishment of a new organization. The council's membership would consist of 23 seats for African-Asian countries and Yugoslavia, 14 seats for countries of the West, nine for Latin America and six for Eastern Europe.

The resolution was supported by developing countries and by Eastern European countries. Opposing the resolution were the major Western countries and Japan. Both the Eastern European group of countries and a group of 15 Western countries and Japan had submitted draft proposals on the question of continuing machinery for international trade, but neither of these proposals was voted upon.

Pakistan, in a statement on behalf of the sponsors, noted that the main difference between the proposal of the 72 developing countries and that submitted by the seven Eastern European countries lay in the emphasis given to the future international trade organization.

While the developing countries recommended the establishment of a comprehensive international trade organization within the United Nations system, the draft resolution of the Western developed countries and Japan was silent on this issue.

The latter draft resolution would establish a periodic conference as an organ of the General Assembly.

The developing countries, on the other hand, believed that there should be no provision which would restrict the autonomy of the continuing trade institutions or subordinate them in any manner to the Economic and Social Council.

The "most crucial" difference between the two drafts, according to Pakistan, related to the composition of the executive council and the voting procedure in the Conference and the council.

The developing countries believed that the allocation of 14 out of 40 seats to Western developed countries, as proposed by the latter, would be contrary to the principle of equitable geographic distribution and would give undue weight to the Western industrialized group countries.

The voting formula, also proposed by the same group, requir-

ing a two-thirds majority in the Conference and a simple majority in the council, but in both cases requiring the inclusion of a majority of the principal trading States, was "utterly unacceptable." It gave a virtual veto to six out of the 12 principal trading States over all important decisions of the Conference and its executive council.

Norway, speaking on behalf of the participating western developed countries, said they all felt that institutional machinery should be established to continue consideration of the urgent question of relationship between trade and development. But their view was that to be effective, this machinery should be based on certain principles acceptable to the different groups of countries represented at this Conference, Norway said.

A recommendation made by the Committee would request the United Nations Secretary-General to take appropriate measures, including the necessary financial provisions, in order to start without delay the work required for the implementation of the recommendations of the Conference during the period between its conclusion and action by the General Assembly.

The vote on this recommendation was 60 in favour to 19 against, with 2 abstentions.

The Fifth Committee (Expansion of international trade and regional economic groupings) has adopted five of 15 principles intended to govern international trade and trade relations. These are:

Economic relations between countries shall be based on respect for the principle of sovereign equality of States;

There shall be no discrimination on the basis of differences in socio-economic systems;

Every country has the sovereign right to trade freely and to dispose freely of its natural resources;

Economic and social progress should be the concern of the international community and should help strengthen peaceful relations and co-operation among nations; and

National and international economic policies should be directed towards the attainment of an international division of labour.

The Committee has also adopted resolutions on: economic and social surveys of depressed areas; long-term trade agreements; trade problems between countries at similar levels of development, with different economic systems, and at different stages of development; and on the recognition of Government participation in foreign trade.

Quality Control of Goods Needed for Armed Forces

Every item issued to the Armed Forces whether manufactured in Ordnance Factories or purchased from the open market has to undergo rigid tests for quality before it is accepted. This is essential because a soldier in a forward post may be several days march from anywhere and may be put to endless difficulty if any item supplied to him is defective. A defect in his arms and ammunition may have serious repercussions not only for him but for the entire country.

Every item purchased or manufactured for the Defence Forces is subjected to rigid inspection before it is accepted. Textiles, boots, tyres, chemicals, drugs, surgical instruments, glassware, timber goods, general appliances, oils and fats, lubricants, gasoline, paints and varnishes, leather goods, hand tools, heating and lighting equipment, containers of various sorts, soaps, metal stores are few of the thousands of items tested in specially equipped laboratories. Each item has a test prescribed for it. Nothing which is below standard is allowed to slip in.

The list is formidable indeed. An idea of the task can be held from the fact that the list of general stores alone covers 35,000 items and there is a test prescribed for everyone of these weapons and ammunition come in a separate class.

The control on quality starts right from the beginning. Before any item is ordered for manufacture or purchase, careful consideration is given to the type of material, design and construction, which will meet the requirements. Detailed specifications and drawings are issued to the manufacturer. He is further guided and advised in the solution of technical and manufacturing difficulties to ensure that his production is of the required standard. Before a new manufacturer starts large-scale manufacture of new items, advance samples are usually prepared. After bulk manufacture has commenced, each lot is examined separately to see that it is of the prescribed quality.

A wide range of textiles are needed for tentage, uniform special clothing for high altitude, parachutes and a thousand other things. Textiles used for different purposes have each their own

specifications. The common requirement is that the textile should be strong, durable, but not expensive. The strength of the fabric is tested by stretching and loading it on a special machine till it breaks. Other machines test the resistance of the fabric to abrasion, flexing and so on.

Garment for use in extreme cold come in a class by themselves. The common conception, that the heavier the garment the warmer it is, is not correct. For use in the Armed Forces the garment has to be so made that it gives maximum weight. Special windproof fabrics which are now being produced in India are light. These provide a wind barrier but permit breathing action of the human skin. The garments supplied to our troops for use at high altitudes, it may be mentioned, compare favourably with those manufactured in even some of the most advanced countries.

It is important while selecting cloth for uniforms to see that all the lots are exactly of the same colour and shade. Two uniforms must look exactly alike. The tint and shade are, therefore, carefully matched at the time of production and purchase. It is also necessary to see that the dye used is of the requisite standard, so that uniforms will not lose their colour in repeated washing or by exposure to the sun. Special machines are used to test how different textiles behave after repeated washing or after exposure to the sun. Another machine is used for testing water-proof items. Yet another tests parachute cloth for its porousness.

Boots are an important item in a Jawan's equipment. These must be sturdy and comfortable. Merely by looking at a boot one cannot satisfy oneself that the metal wire and nails used for stitching the soles, have penetrated properly. The X-ray is therefore used to determine this as also if the fitting of a boot is satisfactory.

It might appear as if too much is made of inspection and quality control. One should however remember that the Defence Forces need goods worth hundreds of crores of rupees every year. A rigid control has, therefore, to be exercised so that the funds voted by Parliament are properly spent and there is no wastage and defective stores are not purchased. Quality control has had a beneficial effect on indigenous production. Over the years, indigenous production of articles required by the Defence Forces has increased. Almost all the "general stores" required are now manufactured within the country.

Durgapur Steel

In May there was an all round high level of production at the Durgapur Steel Plant. Most outstanding were the new record ton-

nages of 93,000 of steel ingot; corresponding with 110 per cent of the rated capacity and the big jump in the Merchant Mill to 28,743 tonnes constituting 141 per cent of the rated production. There was also a new monthly record in the wheel and Axle Plant where 2176 sets were despatched.

In a number of other departments there were excellent performances—in some cases only just short of previous records. Outstanding were the output of pig iron from blast furnaces and the pig casting machine. In the Section Mill and the Blooming Mill also the rated capacity was exceeded. Total despatches were also high and came near to the record figure.

	Tonnages	% Rated Capacity

New Record for Steel

Output

Durgapur Steel Plant set up a new production record of ingot steel on 24 June, 1964. On one single day, the output at the Steel Melting Shop was 3,973 tonnes, which is about 142 per cent of the daily rated capacity of the Plant. The previous best record in the Steel Melting Shop was 3,730 tonnes on 19 March, 1963.

New Indian Standards Published

Indian Standards Institution has recently published eight new Indian Standards are prepared twentyone draft Indian Standards on different subjects of interest to industry, trade and commerce.

The published Indian Standards relate to different subjects such as pipe washing and sterilizing chest; hand-operated cheese press (vertical); carbon chromium molybdenum steel forgings for high temperature service; generators (dynamos) for automobiles; integral cement water-proofing compounds; code of practice for the use of electronic valves, part I commercial receiving valves; code of practice for bending and fixing of bars for concrete rein-

forcement and notation for toothed gearing.

The twentyone draft Indian Standards cover disodium phosphate, dodecahydrate, pharmaceutical and analytical reagent and specification for disodium phosphate, dodecahydrate; potassium chloride, pure; nomenclature of fresh fruits; coorg mandarins, fresh; apples, fresh; guava, fresh, V-grooved pulleys for V-belts; cotton ropes for power transmission; limestone for chemical industries; lap rods, mineral gypsum, canvas shoes, rubber; canvas boots, rubber sole; rubber knee boots; rings for spinning frames, vulcanized fibre cylindrical silver cans for cotton mills, methods of chemical analysis of cryolite, methods of chemical analysis of ilmenite and rutile, methods of chemical analysis of copper-nickel-zinc-alloys, naphthalene and glossary of terms for secondary cells and batteries.

These draft standards have been put into wide circulation to all interests concerned, both in India and abroad, for eliciting technical comments.

Research in Indigenous Drugs

An estimated expenditure of Rs 12 lakhs is to be incurred on the composite scheme of research in indigenous drugs. A Seminar on the project ended in New Delhi on 25 June after finalizing the programme of work and selection of drugs. The 58 drugs selected for investigation were distributed among the various circuits being set up under the scheme. Research on these drugs will be conducted along the lines of modern science. Each circuit will have units for Chemistry, Pharmacology, Pharmacognosy and clinical screening. It was stated that in Ayurveda the results are sometimes arrived at in a roundabout way. There was need for complete investigation of a drug by modern methods, so that the factors responsible for its action may come to light. The results of the investigations, it was decided, would be published later in a comprehensive report. Animals are to be used for these experiments.

The scope of clinical screening was thoroughly discussed at the Seminar. It was decided that a single drug should be tried on selected disease or selected clinical conditions. These cases would be studied separately by Ayurvedic teams and teams of Allopathic doctors.

An important matter considered at the Seminar was the survey of medical plants, their identification and cultivation. It was decided that individual units should make their own efforts for procuring genuine material for study. Also, authentic samples from different regions should be collected by the

Central Council of Ayurvedic Research which should make arrangements for their cultivation at the Drug Farms at its disposal.

Two drug depots are to be established at Hardwar and Ranikhet. Each depot will undertake survey of collection of herbs from the Forest Divisions around it. It is estimated that the cost of cultivation of each drug per acre will come to about Rs 1,500 per year.

High Speed Nickel Plating

A new high speed nickel plating solution, designated "NI-SPEED", has been developed by The International Nickel Company (Mond) Limited. This revolutionary electroplating process has been evolved as a result of intensive work in the company's research laboratory in Birmingham. By its use, nickel can be deposited many times more rapidly than from conventional solutions.

The physical properties of the deposit can be varied from hard, but ductile, to soft, and from compressively-stressed through stress-free to stressed-in-tension. This can be achieved by varying the current density and without the use of additional agents. The "NI-SPEED" solution is, therefore, eminently suitable for the production of electro-forms such as gramophone record stampers and moulds and dies for the plastics industry. It also lends itself to the much greater development of electro-forming as a manufacturing process.

Sweden's Industrial Output

Sweden's industrial output in March was 12 per cent larger than in the same month of last year. The production index of the Central Bureau of Statistics was registered at 351 points (1935=100) as against 313 in March 1963.

The seasonally adjusted index for March was 323 points compared with 307 in February and 317 in January this year.

Compared with March last year output in the capital goods industry was up 7 per cent. This figure includes a rise in iron-ore mining of 12 per cent, steel and metal production of 14 per cent and timber output of 11 per cent. Employment in the engineering industry was one per cent higher than in the same month of last year.

The output of the consumer goods industry showed an overall increase of 12 per cent over March 1963. Thus, production in the food industry was up 17 per cent, pulp and paper 16 per cent and the leather and footwear industry 8 per cent. Preliminary figures for the textile industry indicate a rise of 3 per cent.

INVESTOR'S SUPPLEMENT

Improved Sentiment in June

EARLIER hesitancy yielded place to a steady trend on the stock market during June. The improvement in sentiment was due to a number of favourable factors. While fresh incentives were not wanting, there was the expectation that the Government would before long initiate measures to help capital formation. Some of the important developments in the investment situation that appeared to be conducive to a revival of activity may be briefly mentioned here. In the first place, for some time now corporate news has been of a variety that in other more propitious times would have had a sustained effect on the upward movement of equity prices. One of the militating factors which have impaired investors' confidence is the large unutilised capacity in industry on account of the shortage of imported raw materials and essential components. As our resources of foreign exchange are not adequate, no sizeable improvement in the position can be expected till such time sufficient foreign exchange becomes available for maintenance imports. The heartening trend in export earnings last year has aroused the expectation that rising exports will in the long run look after maintenance imports. But in the meantime there appeared to be no escape from a continued shortage of even essential imports. It

is in this context, the announcement that the Aid India Consortium will make available nearly half of its assistance for the fourth year of the Third Plan for maintenance imports gains special importance. The hope has now revived that in the coming one or two years the increased availability of untied foreign aid will go a long way toward reducing considerably the idle capacity in industry thereby enabling industrial production record some improvement. The efforts of the Government at persuading other aid giving international institutions to make their aid untied have also not gone in vain. For toward the middle of the month came the encouraging news that the international Development Association has decided to extend a line of credit equivalent to \$90 million to India for the purpose of expanding production in selected lines of capital goods manufacturing. The IDA credit, together with similar assistance from other members of the Indian Consortium, will make possible the first substantial increase in three years in the allocations of foreign exchange for imports of industrial materials and components. The prospect of the Unit Trust of India coming into operation from the beginning of July was generally considered to be significant for the stock market.

As the Unit Trust was designed especially to mobilise savings of the investor with modest means, the response was expected to be good as the unit holder would be given attractive tax concessions. However, there were some who while conceding that the Unit Trust would be successful, were apprehensive that as a result of the siphoning of substantial funds from the public, there would be marked diminution in the flow of funds to the stock market. The proximity of dividend of the two private sector steel companies was also responsible for the improved tone because there was a belief that in view of their satisfactory working both TISCO and IISCO would be declaring higher dividends. This expectation revived speculative interest in these two pivotal scrip and consequently helped the general tenor of the market as a whole. Perhaps the main reason why there had been sustained speculative support to the market throughout the second half of the month was the growing belief that Government might relax the margin system. The stock exchanges have represented to the Company Law Board that the stringency of the margin system was a serious impediment in the way of expansion of activity.

It was also believed that the new Central Cabinet when it had sufficient time to settle down would devote their attention to the need for expeditiously reviving the capital market. In this view the expectation was that some worthwhile measure was in the offing. It was believed that a beginning would be made in this regard by sanctioning tax holiday to new industries for five years beginning from the first year of profitable working instead of the first five years of their working as at present.

Sectionwise, jute shares were selectively better indicating the revival of confidence in the jute industry. The performance of the industry in the past two years has been quite encouraging. As a matter of fact it continues to retain the position as the largest earner of foreign exchange.

Though the new season auctions have begun well, tea shares received little support and this is attributable to the disappointing performance of most tea companies in 1963. Both coal and sugar shares were neglected counters in the absence of incentives while textiles were depressed reflecting the uncertainty over cloth prices. Under the leadership of Indian Irons selected engineering were in request while a similar trend prevailed in the miscellaneous section with buyers in evidence for blue chips.

(a12) After transferring Rs 475,000 from Staff-welfare Reserve and writing back Rs 48,212 being over provision for taxation.

(a13) After transferring Rs 375,000 from Deferred Taxation Reserve.

(a15) After transferring Rs 250,000 from deferred taxation Reserve and Rs 282,434 from tax provision.

(a16) After transferring Rs 359,000 being surplus in Reserve for Bad and Doubtful Debts.

(a17) After transferring Rs 12,000 from General Reserve.

(a18) After writing back Rs 430,000 from Contingency Reserve.

(a19) After transferring Rs 1,000,000 from General Reserve and Rs 131,100 from Rehabilitation and Development Reserve.

(a20) After transferring Rs 700,000 from General Reserve; Rs 250,000 from Dividend Equalisation Reserve; Rs 1,100,000 from Reserve for Development of Stock; Rs 700,000 from Reserve for New Mill Project and Rs 3,641,000 from Reserve for Taxation contingencies and including Rs 383,792 refund of E.P.T.

(a21) After transferring Rs 45,000 from General Reserve and writing back Rs 45,000 being excess provision for taxation.

(a22) After transferring Rs 75,000 from Reserve for repair and writing back Rs 272,156 being depreciation over provided.

(a23) After transferring Rs 725,000 from General Reserve.

(a24) After transferring Rs 509,328 from General Reserve No. 2 writing back Rs 157,633 being excess provision for taxation.

(a25) After transferring Rs 230,000 from Reserve for Rehabilitation and Rs 155,832 from provision for Gratuity.

(a26) After transferring Rs 300,000 from General Reserve No. 1.

(a27) After transferring Rs 2,610,000 from Deferred Taxation Reserve.

(a28) After transferring Rs 500,000 from General Fund.

(a29) After writing back Rs 159,530 being excess provision towards power charges.

(a30) After transferring Rs 162,500 from Dividend Equalisation Fund and writing back Rs 1,400,000 from Development Rebate Reserve.

(a31) Includes Rs 105,403 being excess provision written back and Rs 76,246 being Refund of Taxation.

(a32) After writing back Rs 235,503 being taxation over provided in previous year.

(a33) After writing back Rs 322,964 being excess provision in previous years.

(a34) After transferring Rs 300,000 from Contingency Reserve and Rs 330,000 from provision for taxation.

(a36) Includes Rs 641,260 excess provision written back.

(a37) After transferring Rs 200,000 from Reserve.

(a39) After writing back Rs 139,449 being Delopment Rebate and Rs 41,789 being depreciation in respect of previous years.

(a40) After transferring Rs 662,120 from General Reserve.

(a41) After writing back Rs 246,263 being excess provision for wealth-tax.

(a42) After transferring Rs 295,102 from Quarry over hang expenses.

(a43) After transferring Rs 500,000 from General Reserve.

(a44) After transferring Rs 200,000 from Bad and Doubtful debts reserve and Rs 708,595 from provision for taxation.

(a45) After transferring Rs 300,000 from provision for taxation.

(a46) After writing back Rs 235,503 being over provision for taxation.

(a47) After transferring Rs 700,000 from General Reserve; Rs 250,000 from Dividend Equalisation Reserve; Rs 1,100,000 from Revaluation of Stocks Reserve; Rs 700,000 from Development Rebate Reserve; Rs 6,600,000 from Reserve for new mill-project; Rs 3,641,000 from Tax Contingency.

(a) After transferring Rs 204,000 from General Reserve.

(b) After transferring Rs 80,000 from provision for contingencies.

(c) It is proposed to capitalise Rs 2,125,300 from General Reserve and issue Bonus shares.

(d) After transferring Rs 50,000 from General Reserve.

(e) It is proposed to capitalise a sum of Rs 585,000 in equity shares of Rs 10 and issue one bonus shares for every ten shares held.

(f) After transferring Rs 665,000 from General Reserve Rs 235,000 from Cotton Fluctuation Reserve, writing back Rs 11,686 being sundry credit balances and including premium on surrender of Cotton Import quote.

(g) After writing back Rs 645,151 being excess provision in previous years.

(h) After transferring Rs 500,000 from Rehabilitation Reserve; Rs 281,943 being excess provision for depreciation; Rs 41,942 being excess provision for bonus and including Rs 18,428 being refund of income-tax.

(i) After transferring Rs 250,491 from General Reserve.

(j) After transferring Rs 450,000 from Dividend Equalisation Reserve.

(k) After transferring Rs 200,000 from Dividend Equalisation Reserve.

(l) After transferring Rs 300,000 from General Reserve.

(m) After transferring Rs 1,425,000 from General Reserve.

(n) After writing back Rs 750,000 from Reserve for Rehabilitation and writing back Rs 7,927 being excess of Excise Duty and Rs 6,946 being excess provision for rates and taxes.

(o) After transferring Rs 2,509,800 from Dividend Equalisation Reserve.

(p) After transferring Rs 425,000 from General Reserve and writing back Rs 790,235 being provision for Bonus for 1958.

(q) After transferring Rs 500,000 from Reserve for taxation and Rs 201,988 from General Reserve.

(r) After transferring Rs 1,279,165 from General Reserve and Rs 646,019 from Renewal Reserve.

(s) Includes Rs 947,178 being depreciation adjustment in respect of additional depreciation provided in previous years and Rs 3,100 being excess of Secretaries Remuneration.

(t) After transferring Rs 783,834 Rebate Reserve and Rs 650,000 from General Reserve.

(u) After transferring Rs 200,000 from General Reserve.

(v) After transferring Rs 306,835 from Development Rebate Reserve.

(w) After transferring Rs 1,734,803 from Development Rebate Reserve.

(x) After transferring Rs 113,089 from General Reserve.

(y) After transferring Rs 300,000 from General Reserve.

(z) After transferring Rs 450,000 from Dividend Equalisation Reserve.

IT looks as if the Central Government, in its Budget for 1964-65, had over-estimated what it would receive from the Reserve Bank as the institution's surplus profit. The explanatory memorandum clarified that the surplus profit payable by the Reserve Bank to the Centre would, for the Budget year, be Rs 4½ crores lower at Rs 40 crores mainly because of the decision to set up the National Industrial Credit (Long Term Operations) Fund. As we shall see, this figure is apparently wrong.

In the latest Reserve Bank returns, the accrued profit of the institution, which had accumulated under the head of Other Liabilities, has been transferred to other heads; the profit to be paid to the Centre is being kept in suspense, pending the completion of audit, under the head of Other Deposits; and the transfers to funds have been effected.

Other Liabilities, thus, are shown Rs 54.44 crores lower at Rs 19.24 crores. The Agricultural Long Term Operations Fund receives a transfer of Rs 13 crores (or Rs 1 crore more than last year), and is now placed at Rs 86 crores. The Agricultural Stabilisation Fund has gone up to Rs 9 crores with the current transfer of Rs 1 crore (maintained.) The Industrial Long Term Operations Fund has been created with an allocation of Rs 10 crores. These three add up to Rs 24 crores as the appropriations from the Reserve Bank profits for 1963-64. Last year, such transfers amounted to Rs 13 crores.

Then, Other Deposits, last year, rose by Rs 50.53 crores, reflecting the profit of Rs 44.50 crores which had been transferred to that head. The conundrum last year was that the transfers plus surplus profit added up to Rs 57.50 crores, whereas Other Liabilities had fallen by Rs 68.22 crores. In other words, it appeared as if the Reserve Bank surplus profit was higher than had been taken credit for in the Budget. In the event, the revised figure of profit was unchanged, and so we were forced to conclude that other transactions were responsible for the balance of decline under Other Liabilities adding up to about Rs 10 crores.

This year, the position is the reverse. The transfers add up to Rs 24 crores—as noted. Other Deposits are higher only by Rs 27.17 crores, reflecting a probable transfer of Rs 30 crores from Other Liabilities. And the decline of Rs 54.44 crores in Other Liabilities tallies with the transfers to Funds and to Other Deposits. But, in that case, the RBI surplus profit could not have been more than

Rs 30 crores, whereas the Centre had taken credit for Rs 40 crores. Nor is it possible to hold the view that a remnant profit still figures under Other Liabilities, for, its being placed at Rs 19.24 crores is normal. So, all that it is possible to suggest is that transfers to funds are higher than had earlier been budgeted for. Surely, however, the transfer to the Industrial Long Term Operations Fund could not initially have been less than Rs 5 crores; and the transfer to the Agricultural Long Term Operations Fund would at the least have been maintained, and so the extra appropriation in this behalf could have been no more than Rs 1 crore. Thus, it would appear that the Reserve Bank gross profit was over-estimated at the least by Rs 4 crores—and the magnitude of over-estimation could have amounted to as much as Rs 10 crores.

There are, it appears to us, two possible reasons which could account for the Reserve Bank's gross earnings having been adversely affected. On the one hand Government may have found that it could make do with less of deficit financing than it had originally planned on; on the other hand the Reserve Bank's tightening up credit to the Scheduled Banks will undoubtedly have resulted in a reduction in the Bank's earnings in this respect.

We suggest that the monetary authorities should have known, by the time the Budget estimates were handed in, of the likely operation of both such factors; and so it should have been possible to give a closer approximation of the surplus profit that would be paid over to the Central Government.

For the future, with revenues tending to be buoyant, and with Government anxious to keep a check over price behaviour, it is almost certain that we shall not have again a massive dose of deficit financing. Then, because credit control is thought to be an instrument whereby some element of pressure upon prices can be effected, it is also likely that central banking credit will not be available in generous proportions to the banking system. The implication of these two factors must be that, in the foreseeable future, we cannot expect any sharp increase in the Reserve Bank's earnings; and, in the meantime, the Reserve Bank's responsibility for feeding the Agricultural and Industrial Funds will increase. Thus, it is likely to happen that the surplus profit payable to the Centre will at best keep steady—though chances are it should in fact show some decline.

STOCK EXCHANGES—
HALF-YEARLY REVIEWPartial Recovery
in Closing Weeks

EXCEPT for the glimmerings of revival of activity in the few weeks prior to the presentation of the Central Budget for 1964-65 and in the second half of June, losses varying in extent were recorded in almost all sections during the half-year just ended. Apart from a few selected shares—notably Indian Irons, Indian Aluminium, Shree Gopal Paper and TEXMACO—which fared comparatively well for special reasons, all other shares were badly mauled. A relieving feature of trading was the welcome change in sentiment noticed during the closing weeks of the period when it looked as if the market was really in a mood to make a determined bid for a rally. This was regarded as a reflection of a more hopeful view of trading prospects arising out of the expectations that the Government might adopt a helpful attitude and that there might also be a relaxation of the margin regulations.

The decisions at the recent conference of the Chief Ministers were also taken as being indicative of the Government's anxiety to adopt a practical and constructive approach to economic problems. Again, the inauguration of the sale of units by the Unit Trust of India from 1 July was bullishly interpreted in the sense that the Trust might invest substantial funds in industrial equities. Operators were also optimistic about the size of the forthcoming dividends of the two main steel companies. The proposal made by the Government to repay the compulsory deposits, collected from small-income groups, had a favourable effect on sentiment. Reports from New York indicating that the USA was inclined to lend more funds for India's economic development in the coming three years provided a further fillip to the market.

Above all, the concern expressed by the Finance Minister over the rather depressed state of the capital market gave rise to a feeling that the Government might be inclined to abolish the Dividend Tax and remove bonus shares from the purview of the Capital Gains Tax with a view to quickening the flow of funds to the capital market. Rumours also had it that the Government was likely to sanction tax-holiday to new industries for five years beginning from the year of operation instead of the present first five years of operation.

In fact, at the beginning of the year, it was thought that, while it would be prudent to expect additional taxation in view of the continued large outlay on defence and development, effective measures might be taken to revitalize the capital market. The investing public, too, was hopeful that the Finance Minister might seek to abolish the super-profits tax or alternatively soften it to the extent of making its burden purely nominal. But, the pre-Budget optimism yielded place to disappointment. Doubts were expressed whether the Budget proposals would be conducive to the growth of capital. The Committees of the various stock exchanges, therefore, urged the need for a revision of the Budget proposals, as otherwise they apprehended that there would be a financial crisis which would seriously affect the country's economy.

TABLE I		Issue Price	Details of Issue
Company	Type of Issue		
1. American Universal Electric (India) Limited, Punjab.	Private	Rs 100 each, at par.	Issued Rs 20 lakhs divided into 20,000 equity shares. Of this, 50 per cent will be subscribed by foreign collaborators, their friends and associates. The balance was subscribed privately.
2. Structural Ceramics Ltd., Bombay.	Public	Rs 10 each at par	Issued Rs 20 lakhs.
3. Punjab Export Corporation.	—do—	Rs 100 each, at par	Issued Rs 25 lakhs. Eighty per cent of the shares was subscribed by the Punjab State Government and 20 per cent by the public.
4. Metal Box Company of India Ltd., Calcutta.	Rights	Rs 10 each at a premium of Rs 2.50 per share	Issued 16,10,000 equity shares in the ratio of one for one held.

47. Gujarat Machinery Manufacturers Ltd.	—do—	Equity Rs 100 each.	Issued Rs 30 lakhs.
47. Andhra Pradesh Industrial Development Corporation Ltd.	—do—	Debenture Bonds	Issued capital of Rs 1 crore in Debenture Bonds carrying at 4.75 per cent interest, payable half-yearly.

It was actually pointed out that most of the new issues had failed to evoke public response and had to be heavily supported by underwriters. In contrast to the spate of new floatations just before the Budget proposals were announced, the capital market had been inactive latterly and the promoters of many new companies did not choose to issue capital on account of fears that the response from the investing public would not be satisfactory (Table I).

At the beginning of the second quarter, however, there was a slight improvement in sentiment, being influenced by the hope that the Finance Minister might yet do something to mitigate the rigours of his taxation proposals, particularly with reference to the Dividend Tax and the treatment of bonus shares as capital gains. But the charm of entertaining hopes of relief had gone with the announcement, in the middle of April, of only small concessions and changes in the taxation structure. It was thought that the modifications in respect of Capital Gains Tax on bonus shares and other changes in Wealth Tax would not materially alter the objective to the principle behind these levies. The expectation with regard to the relief in Dividend Tax was also belied.

Even the flow of good corporate news failed to impress the investors who were of the view that, with the prospects of growth and higher dividends being gloomy, the outlook for equities was unlikely to take a turn for the better. The uncertainty regarding the outcome of talks on the Kashmir issue and the report of the Mahalanobis Committee also created hesitant feeling among them. Moreover, investors had the feeling that, with money getting costlier, ideas about dividend yields would have to be revised upward and that the Budget, even after all the modifications it had undergone, did not ensure them an equitable return. Professional bears, therefore, exploited the weak sentiment in the market by pressing sales.

As a matter of fact, towards the end of May, there was a sudden collapse in equity prices following the news of the serious illness of Mr Jawaharlal Nehru and the subsequent report of his death. Naturally, the national calamity left its impress on the stock markets and there was an atmosphere of gloom everywhere. With the passing away of Mr Nehru, apprehensions were entertained with regard to the shape of things to come of Government policies.

Weak holders were at a loss to decide whether they should stick on to their holdings or unload them even at the record low level of prices prevailing then. They seemed to have been posed with the following questions:

Will there be a change in the fiscal policy? Can it be possible for the Congress party to elect a leader unanimously without any group rivalry? Will there be a cleavage between the Right and the Left within the Congress party? Will it be easy for the nation to complete the Third Plan or implement the Fourth Plan? Can the market lift itself out of the present rut? Can the investor go ahead with a confident heart?

All eyes were, therefore, fixed on New Delhi where the Congress party was engaged in the task of selecting the successor, not to speak of a general disposition to await further developments in the political and economic situation.

Although the reaction of the market to the unanimous election of Mr Lal Bahadur Shastri as the successor to Mr Nehru was favourable, the maiden speech by the new Prime Minister, that socialism would remain the objective, could not be viewed with equanimity. Again, the uncertainty regarding the choice of members for the Central Cabinet and the allocation of portfolios restrained undue optimism. In fact, the market did not react favourably to the news of the formation of the new Cabinet which, by itself, was considered as confirmation of the status quo. There was some disappointment in certain circles over the non-inclusion of Mr Morarji Desai in the Cabinet. It was felt that, whatever the ideas might have been in the inclusion of particular leaders, the continuance of the present policies was taken for granted. There was an anxiety to know how the new Cabinet would react to the continued depression in the capital market, which had been almost lifeless with hardly any business. In this respect, the disappointing response to many new issues was considered a restraining factor.

There were also other factors which discouraged the professional bulls. Mainly amongst these were the growing shortage of funds, renewed talks of State Trading, the directive from the Reserve Bank to non-banking companies accepting deposits to furnish relevant data for effective supervision and the anxiety to await the likely impact of the Unit Trust operations. Although the trend of corporate news continued to be encouraging, confidence had been so severely shaken that the investing public was not inclined to come back into the market.

The market was, however, in good form from the middle of June when buying enquiry spread from the clearing to the cash group of shares, resulting in a marked expansion in turnover, thanks to sustained short-covering and replacement purchases. The inspiration came mainly from the announcement relating to the revision of margin regulations although some disappointment was expressed over the continuance of the present 2 per cent margin on carry-over business. Again, the last minute announcement of the concession in Surtax had a favourable effect on sentiment. The widening of the capital base for the calculation of surtax to include Government borrowings as well as medium-term loans taken for the purpose of purchasing capital assets was viewed with satisfaction by the market circles. It

Company	Type of Issue	Issue Price	Details of Issue.
49. Madras Alloy and Stainless Steels Ltd., Madras.	—do—	Equity Rs. 10 each.	Raised Rs 300 lakhs in equity shares. Of this, shares for Rs 16 lakhs were offered to the UK collaborators.

was thought that this concession would be beneficial to the steel and shipping companies, which had taken large loans from the Government. It was, therefore, not surprising that the market witnessed a sharp recovery during the closing weeks of the period under review. There was, however, a general disposition on the part of the operators to follow the rise cautiously by booking profits at bulges.

Section-wise, Engineering shares were generally subdued during most part of the period. The partial decontrol of steel gave rise to a feeling that the companies concerned might not benefit to any great extent. It was thought that the increase in the average retention price of controlled items by Rs 30 per tonne would not compensate for the increase in production costs, which were already inflated by the latest rise in railway freight and the increase in the prices of good grade coals. Even the tax concessions given to the steel companies were overlooked.

But the smart recovery, noticed from the middle of June, was influenced by the price movements in Indian Irons in which there was a good deal of speculative buying and covering purchases by operators, especially after the announcement of the closing of transfer books from 1 to 22nd August. There was a growing feeling that, on the basis of the production figures for the past year and the prices obtained for its products, the Indian Iron and Steel Company might be in a position to raise the distribution by up to 4 per cent for 1963-64, especially when the tax changes in the last Budget were considered to be more favourable as far as the steel companies were concerned.

Jute shares remained generally depressed as the profits, as revealed by the working results released so far, generally tended to shrink further owing to rising production costs and the declining trend of prices obtained for jute goods in the absence of sustained enquiries from overseas buyers.

There were only few dealings in the Coal section, reflecting the obscure outlook for the industry. It was felt that the industry was at present riddled with various problems—accumulation of stocks at various pit-heads, the decline in demand for the commodity and the discriminative price policy adopted by the Government—the solution of which was not yet in sight. Another adverse factor was the Government's proposal to restrain the output of coking coal and adjust its production for meeting the requirements of only essential consumers. It was feared that this move would seriously imperil the current development programmes and the collieries had to be closed down if they were not allowed to sell their coal to non-essential consumers. Even the subsequent news of the decision by the Government to decontrol soft coke and non-coking coal had no effect on sentiment.

Interest in Tea shares was generally negligible. Apart from the fact that investors were disappointed over the Budget which failed to reduce the burdens on the industry in any appreciable measure, the flow of disappointing results and dividends by a number of companies had an adverse effect on sentiment. There was a feeling that, unless loan facilities were supplemented by tax reliefs and subsidies, the confidence on the part of the producers might not be restored for expanding the output of quality teas. It was also feared that the price trends in the auctions were unlikely to show much improvement. Doubts were also expressed whether the average prices, that would be realised, would be any better than those

for the previous season. Above all, the new marketing season—1964-65—had not begun on a steady tone as was originally expected.

Sugar shares remained depressed with more sellers than buyers in evidence. Apart from the poor performance given by the industry during the past few years, the slow progress of output during the 1963-64 season gave rise to a fear that the target, set for the 1964-65 season, might not be achieved in view of the persisting reports about large-scale diversion of cane for conversion into gur and khandasari. Moreover, operators seemed to have been disturbed by the Government decision to set up a Marketing Board. It was thought that the setting up of this body implied that controls on sugar would be perpetuated. Even the Government proposal to raise the price of the commodity in certain areas was ignored.

Textile shares were traded cautiously. It was felt that the impact of increased excise duties on cotton yarn and rayon would be difficult to pass on to the consumers. Although the mills were reported to have done better in 1963, the outlook for the current year was assessed cautiously in view of the fact that the competition in foreign markets had been intensified and the cost of production had risen considerably. It was, therefore, stated that there would be an urgent need for adjustments in selling prices of cloth.

In the Miscellaneous section, attention was mostly confined to the cleared shares although prices suffered a setback on lack of sustained support. This section would have finished at the lowest levels for the half-year, but for the emergence of strong support during the closing weeks of the period. Even cash shares, which were long neglected in the absence of any interest from investors, participated in the general recovery in prices.

Although business in gilt-edged securities remained restricted, a steady tone was maintained throughout. Whatever buying there was, was confined to the short and medium-dated issues. Long-dated loans were practically neglected.

Company	Type of Issue	Issue Price	Details of Issue
97. Hada Textile Industries Ltd., Calcutta.	Public Issue	Equity Rs. 10 Pref. Rs. 100.	Issued Rs 36 lakhs—Rs 24 lakhs in equity and Rs 12 lakhs in Cumulative Redeemable Preference shares.

130. Ramakrishna Steel Industries Ltd., Madras.	-do-	Equity shares.	Will be raising Rs 24.50 lakhs. The public issue will be underwritten.

Despite the excellent performance given in 1963, Bank shares did not attract much interest on account of persistent talks from some of the prominent political leaders about the urgent need for nationalisation.

It may be added, in conclusion, that the recovery in share values toward the end of the half-year owed its origin to anticipations of better profits being made by the private sector steel companies; this factor also meant an increase in dividends was expected. A higher dividend has in fact materialised from TISCO, though its profit has not risen as much as had been hoped for. The implication is that, with the prospect of corporate news generally tending to be more encouraging, price behaviour on the stock exchanges during the next half-year is likely to be steady and perhaps even firm. Flowing from this possibility of a favourable stock exchange climate is a rather better receptivity by investors to new issues. We dare say that, with the inroads into the savings of the shareholding public as a result of this year's taxes on the individual, we are unlikely in the near future to witness the recurrence of spectacular over-subscriptions. However, the saving grace may well be that underwriters will be left to take up rather smaller parcels of their obligations.

The trend of prices in the stock exchanges is, for another reason, likely to be steady. We refer to the fact of the creation of the Unit Trust. If the Finance Minister's expectation, of a sum of Rs 100 crores being attracted to this form of investment, is not belied, then the stock exchanges will benefit by purchase orders of corresponding magnitude. All in all, therefore, the second half-year should witness a reversal of the stresses and strains that were witnessed in the stock exchanges in January/June 1964.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

BANK RETURNS

Industrial Fund Set up

The latest banking returns continue to reflect the gathering momentum of the 1964 slack season.

The returns of the Reserve Bank for 3 July disclose the changes attendant on the transfer of its accrued profit for the year to 30 June 1964 to various accounts; for the rest, they also indicate that beginning of the month disbursements served somewhat to interrupt the progress of the slack season.

Active Note Circulation has been marked up by Rs 17.42 crores to Rs 2,501.54 crores, and there has been outflow of Rupee Coin for Rs 1.55 crores. There has been a transfer of Rs 15 crores from Rupee Securities to the Banking Department. Thus, with Foreign Securities unchanged at Rs 89.46 crores, the Reserve Bank's cash in the till has been steeply drawn down by Rs 33.99 crores to Rs 17.95 crores.

The return for the Banking Department reveals a fall of Rs 34.44 crores to Rs 19.24 crores under the head of Other Liabilities; and so it would appear that the accrued gross profit of the Reserve Bank for 1963-64 amounted to such a figure. The Agricultural Long Term Operations Fund and Stabilisation Fund have received transfers of Rs 13 crores and Rs 1 crore respectively, and are now shown at Rs 86 crores and Rs 9 crores respectively. The Industrial Long Term Operations Fund has been constituted with a transfer of Rs 10 crores. The balance of the decline in Other Liabilities, representing the surplus profit payable to the Centre, is apparently Rs 30 crores and now figures under the head of Other Deposits, which as a result have improved by Rs 27.17 crores to Rs 189.36 crores. The surplus profit will be made over to the Centre in the third week of August, when upon completion of the audit the accounts will be approved by the Central Board of Directors.

The Centre has apparently made payments to the States; for, its balances are substantially lower by Rs 19.15 crores at Rs 60.55 crores; the States, on the other hand, have reduced debt to the Reserve Bank by Rs 17.65 crores to Rs 36.29

crores, though their Deposits are also somewhat lower by Rs 1.25 crores at Rs 12.80 crores.

Month-end disbursements have not had much impact upon Scheduled Banks. The fall of Rs 5.60 crores to Rs 92.07 crores in Reserve Balances of member banks is wholly to be attributed to the State Bank; borrowings are a shade less by Rs 0.84 crore at a nominal Rs 0.30 crore; and with Investments up by Rs 1.45 crores only. Despite the transfer of Rs 15 crores from the Issue Department, it is obvious that Scheduled Banks have been substantial purchasers of gilt-edged through the tap; the State Bank alone figures as having bought about Rs 9 crores worth (though this probably includes some acquisitions of Intermediate Treasury Bills), and other Scheduled Banks may have purchased in similar magnitude.

Lastly, Balances Held Abroad are down a fraction, by Rs 0.09 crore, at Rs 7.06 crores; when the recourse to the IMF?

The statement of the State Bank for 3 July records a welcome improvement of Rs 10.57 crores to Rs 63.07 crores in Deposits. But beginning of the month demand for funds would appear to have been responsible for the rise of Rs 0.88 crore to Rs 361.33 crores in the total of Advances. Gilt-edged has been acquired for Rs 9 crores, raising holdings to Rs 246.84 crores. The end result is that cash balances, including money at call and short notice, have been marked down by Rs 9.15 crores to Rs 21.58 crores.

The embarrassments flowing from too substantial an accrual of slack season release of funds are evident in the return of Scheduled Banks for 26 June. Net Demand Deposits have risen by Rs 9.25 crores to Rs 1,227.40 crores, and net Time Deposits have shot up by Rs 17.87 crores to Rs 1,336.03 crores. Incidentally, the benefit has gone mainly to the Scheduled Banks other than the State Bank, whose Deposits went up only by Rs 3.19 crores against the total of Rs 27.12 crores increase for all banks in that week. Simultaneously, the total of Advances has again receded by Rs 11.12 crores to Rs 1,784.99 crores; and again the State Bank in that week reported an increase of Rs 1.08 crores in its Advances. The tremendous two-way increase in resources has been utilised by the banks to add Rs 21½ crores to their gilt-edged holdings, now placed at Rs 655.03 crores; the State Bank's share of the increase in investments was Rs 7 crores. Debt to the State Bank is practically unchanged at

Rs 20.53 crores, and indebtedness to the Reserve Bank has been further reduced by Rs 3.36 crores to Rs 1.22 crores. Thus, there has, as a result, been a sharp increase of Rs 24.22 crores to Rs 252.85 crores in cash balances, including money at call and short notice; and the State Bank's share, in this respect also, was small at Rs 2.04 crores.

DENA BANK

Higher Profit in First Half-Year

Devkaran Nanjee Banking Company Limited is again the first among the major banks to publish its results, this time in respect of the first half-year in 1964. These disclose that the profit for January-June 1964 is, at Rs 16.58 lakhs, better than the relative figure for the corresponding period of last year by Rs 2.43 lakhs. An ad interim dividend of Rs 2 per share, or 8 per cent per annum, has been proposed to be paid; the distribution is unchanged from last year, and absorbs Rs 4 lakhs. The very sharp expansion in bank credit, in the early part of 1964, obviously made possible a most profitable utilisation of banks' resources; and as such, we may expect that other banks will also report improvement in their earnings.

RBI

Selective Controls Again Imposed

The Reserve Bank of India issued on 7 July two directives regulating Scheduled Banks' advances against the security of "vegetable oil" and "other oilseeds" (i.e., those excluding groundnuts and cottonseeds).

In view of the considerable rise in the prices of these commodities prevailing at present compared to a year ago, it is considered necessary to impose margin restrictions on advances by scheduled banks against the security of vegetable oils (including Vanaspathi) and to raise the present margin on bank advances against "other oilseeds". Accordingly, the directive relating to vegetable oils stipulates that scheduled banks shall maintain a minimum margin on advances against the security of vegetable oils (including Vanaspathi) which shall not be less than 50 per cent of the value of the relative stock.

Under another directive, amending the provisions of the earlier directive dated 11 March, 1964, on advances against oilseeds, the margins required to be maintained on advances by scheduled banks against the security of "other oilseeds" (i.e., those excluding groundnuts and cotton seeds) have been raised from 40 per cent to 50 per cent.

Tenders for Rs 2,00,00,000 of 91 day's Government of India Treasury Bills were opened on Tuesday 7 July, 1964. Total amount offered was Rs 4,50,00,000. Tenders as Rs 99,375 per cent were accepted in full. Lower tenders were rejected. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2,500 per cent per annum.

FOOD

Who are the Profiteers?

Is there any justification for the charges of profiteering which are so lightly, and so frequently, levelled against traders as a class? Have those who do so anything more substantial than stray impressions, reinforced by entrenched prejudice, to back their allegations? If so, the evidence has yet to be presented in public.

It is natural that the consumers, hard hit by rising prices, should blame the retailer, with whom they come directly into contact. But the retailer is only the last in the chain of intermediaries from the producer to the consumer, and prices can be pushed up at every stage in between. It matters little to the consumer whether it is the producers, the wholesalers, or the retailers who put up prices. In any case he will have to pay a higher price. But the stage at which prices are marked up is of crucial importance for the formulation of a practicable price policy and its implementation.

Strong punitive action against traders, which is so often advocated and acted upon, will be of little avail if it is the producer who is holding out for higher prices, as there is reason to think is actually the case now in many parts of the country. The expansion of co-operative credit and the activities of the Warehousing Corporation in recent years have improved the holding power of the producers to a substantial extent. They are no longer under compulsion to sell their surplus at throw away prices immediately after the harvest. The rural areas are not as isolated from the markets as they used to be. Price trends in the consuming centres are immediately reflected in the prices demanded by the cultivators in their villages.

The anatomy of prices cannot be properly understood, unless the producers' prices are also taken into consideration. But, in this respect, there is a total absence of authoritative data. The confusing variety of agricultural statistics, with which the public is

deluged by the Ministry of Food & Agriculture, does not include any indication of the level of the producers' prices for major food grains. The problem of collection and publication of information on this subject is beset with various complications and publication may lead to undesirable consequences. It is, therefore, not difficult to understand why the authorities of the Food Ministry are reluctant to stick out their necks. But it should be possible to utilise the services of other agencies, governmental and non-governmental, to collect representative samples in order to guide the formulation of policy and its intelligent presentation. The information moreover, will be invaluable to the proposed technical agency for fixing prices.

MAN-MADE FIBRES

Tremendous Scope

The current shift in the consumer interest on to man-made fibres all over the world augurs well for the rapid expansion of the man-made fibre industry in future. The qualities of man-made fibre such as crease resistance, wash and wear, etc; have endeared it tremendously to the consumers abroad. But consumption of artificial fibres in India is placed around 3 per cent against 30 per cent in the industrially advanced countries of the world. Though India is a late entrant in this line of production, the indigenous industry has in a short time made remarkable progress. Production of viscose rayon yarn has expanded smartly to 68.57 million pounds in 1963 from 4.5 million pounds in 1951 and manufacture of staple fibre to 71.24 million pounds from 6.80 million in 1954. Besides, throughput of acetate rayon almost doubled to 4.30 million lbs in 1963 from 2.30 million pounds in 1955.

There is considerable scope for expanding the industry at a rapid pace. As Mr Babubhai M Chinal has pointed out in his presidential address at the annual general meeting of the Association of Man-made Fibre Industry held in Bombay last week, on account of the inadequate contri-

bution of natural fibre to meet the clothing requirements of the country and huge drain of foreign exchange on imports of cotton the industry's development should be encouraged expeditiously. Obviously with this end in view, the Association has recommended to the Government a capacity target of 324 million kgs in the Fourth Plan. It should be remembered in this context that there has recently been a proposal to blend viscose staple fibre with cotton for producing blended fabrics. However, the sub-committee appointed by the Indian Cotton Mills Federation to examine this question has dismissed this as worthless, though this opinion has not been accepted as the final verdict. Further, there is a scarcity of raw materials and technical man-power and even the burden of taxation on the industry is exorbitant. In view of the growing popularity of man-made fibres in the international markets and the insufficient production of natural fibre in the country, fostering the growth of domestic man-made fibre industry will be a rewarding exercise from the point of view of saving foreign exchange and its employment potential.

SFC

Assam

Although the Assam Financial Corporation has been making steady progress in aiding the industrial development of the regions served by it, financial stringency continues to limit its activities. The position now is that even after raising a total of 1.8 crores during the last few years by the issue of bonds and augmenting its resources by fully tapping all other sources open to it, it is left with no other alternative but to raise further sums by yet another issue of bonds in order to meet the ever rising demand for development finance. Considering that the area served by it is industrially backward, it is not surprising that the demand for assistance from it is heavy. It is evident that entrepreneurs and especially those with modest means are now increasingly attracted by the facilities made avail-

able by the corporation to venture into the establishment of industries.

Last year has been quite significant for the Corporation in that by virtue of the higher earnings, it has been able to meet the statutory dividend commitment from its own funds without asking for any subvention from the State Government. It earned a profit of Rs 9.34 lakhs as against Rs 7.47 lakhs in the previous year. After making all provisions, the remaining balance of Rs 3.5 lakhs has been just sufficient to pay the dividend. The applications sanctioned during the year were higher at 47 as against 44 in the previous years.

A disturbing feature of the Corporation's working is the large arrears both in respect of repayment of principal and interest shown as outstanding from the borrowing concerns. Referring to this aspect, Mr K. D. N. Singh has pointed out in the course of his speech at the annual meeting of the Corporation, that such a state of affairs is inevitable in view of

the underdeveloped conditions prevailing in the State. Since it is one of the main objectives of the Corporation to foster entrepreneurship, it cannot follow a strict loan policy because of the lack of experience in operating industrial concerns on the part new entrants. This is not the only reason. For new industrial concerns putting up factories in the region are continuously hampered by various difficulties such as shortage of building materials, power as well as transport bottleneck. Although the outstanding are heavy, there is no danger of the Corporation's loans involving it in loss because it has been pointed out by Mr. Singh that "these loans are fully secured against tangible assets and fully recoverable at any stage."

Madhya Pradesh

The activities of the Madhya Pradesh Financial Corporation during the year, ended March 1964 have been greatly hampered by financial stringency, mainly brought about by its failing to get the required guarantee for the issue of bonds for Rs 1 crore. The fact that it has not been exempted by the State Government from the payment of stamp duty on the issue of bonds has further added to its financial difficulties. Even so, the net profit for the year at Rs 4.79 lakhs is higher than in the previous year though the loan disbursements have been lower at Rs 52.79 lakhs as against Rs 81.77 lakhs. The Corporation, however, has to earn a much higher profit to break even because the guaranteed dividend on its paid up capital at 3½ per cent alone will require Rs 3,50,000. For the year ended March 1964 therefore a request has had to be made to the State Government for a subvention of Rs 2,23,000 since the MPFC could make a provision of only Rs 1,27,000 from out of the profits, in this regard.

The paucity of funds has directly affected the rate of sanction and early disbursement of sanctioned loans. Thus during the past year only 28 applications for loans amounting to Rs 47,00,700 could be sanctioned as against 77 for Rs 2,75,49,000 during the previous year. These setbacks underline the urgent need for augmenting the resources of the Corporation so that it can continue to play an important role in the industrial development of the State.

The useful part that is being played by the Corporation in fostering the industrial growth of the State will be evident from the large number of enterprises which have been put up during the past few years with its financial assistance. It has so far granted loans to a wide range of industries including steel foundries, textile mills, paper mills, glass factories, sugar industry, paints and varnish, automobile ancillary indus-

try etc. Assistance from it is now made available to hotel and transport industries as well. A significant feature of the assistance in recent years is that the emphasis is increasingly shifting to new industries. Last year out of the 28 concerns receiving loans, 15 were new industries and only 13 were existing industries. Since the national emergency, the MPFC is giving top priority to defence oriented industries. That the Corporation is not merely catering to regional needs but is mindful at the same time of the larger national interest also is borne out by the order of priorities followed by it in sanctioning loans. After defence oriented industries, assistance is given to industries which have minimum foreign exchange requirements, industries with export potential and those which will be able to work with locally available raw materials.

NEW COMPANIES Higher in 2nd Half of 1963-64

A decided improvement, both in respect of new companies registered as well in their total authorised capital, during the second half of 1963-64 as compared with the first six months of the year, is shown by the statistics of company registrations during the year ended March 1964. The change is not without some significance, for it reversed a trend which had been in evidence for some time and synchronised with the statements made by the Finance Minister last year, assuring a positive policy to revitalise the capital market.

As compared with 577 new companies with total authorised capital of Rs 113 crores registered during April to September 1963, the number of companies registered during the second half year was 670 and total authorised capital Rs 227 crores. It is also interesting to note in this connexion that the Budget for the current year has not been followed by any adverse reaction, at least in regard to the number of new company registrations in the month of March 1964, which shows an increase of 37 as compared with the previous month. The number of companies registered in March, 1964 was 120, which is the third highest for the year, higher figures being shown only by November and December 1963, with 121 and 125 registrations respectively.

While the improvement in company registrations noticed in the second half year may be matter for satisfaction as evidence of revival of confidence among entrepreneurs, the figures for the year as a whole, show substantial decrease as compared with the previous year. The number of new registrations has dropped from 1497 in 1962-63 to 1227 in 1963-64. The figure for authorised capital shows an increase from Rs 257.55 crores to Rs 340.4 crores, to which Government companies have made a

hefty contribution, notably, Bokaro Steel Limited which was registered during the year with a capital of Rs 100 crores. Nineteen Government companies, with aggregate authorised capital of Rs 169 crores, were registered during the year, as compared with only eight Government companies with total authorised capital of Rs 20.5 crores in 1962-63. The share of Government companies in the total authorised capital of all the 1227 companies registered during the year works out to 49 per cent.

For a correct appreciation of the tempo of economic activity and the climate for new enterprises, it will be useful to examine the figures of new registrations after excluding new government companies registered during the respective years. As against 1489 private sector companies with total authorised capital of Rs 237.05 crores registered in 1962-63, 1208 companies with authorised capital of Rs 170.84 crores were registered during 1963-64. The figures show substantial decline both in terms of number as well as of the total capital of new companies registered.

In fact, the decline in company registrations has been in evidence since the beginning of the Third Plan. There was a sharp fall in new company registrations immediately after the coming into force of the Company Law Act of 1956. The number of registrations in 1956-57 was only 848. But there was a steady improvement during the Second Plan period and the number rose to 1683 by 1960-61. Subsequently, the number of new registrations declined to 1614 in 1961-62, 1497 in 1962-63 and 1227 in 1963-64. It appears that the mid-term appraisal of the Third Plan has acted as an effective damper on entrepreneurial activity. The amendments of the Company Law have also had their impact. The number of new companies registered during the years from 1960-61 and the respective figures of authorised capital are shown in the table below, separately for Government and non-government companies.

Government Companies			
	No. of new Registrations	Authorised Capital Rs Crores	
1960-61	17	31.39	
1961-62	18	122.71	
1962-63	8	20.50	
1963-64	19	189.65	
Private Sector Companies			
	No. of new Registrations	Authorised Capital Rs Crores	
1960-61	1666	255.66	
1961-62	1596	202.16	
1962-63	1489	237.05	
1963-64	1208	170.84	
Total			
	No. of new Registrations	Authorised Capital Rs Crores	
1960-61	1683	287.05	
1961-62	1614	324.87	
1962-63	1497	257.55	
1963-64	1227	340.49	

It appears from the above table that the decline in the number of new companies formed in the private sector has been masked by developments in the public sector.

Regionwise analysis of registrations shows that the Western and Northern regions have forged ahead of the Eastern and Southern regions. The Eastern region, which ranked first in earlier years, has been relegated to the third place, while the Southern regions which topped the list last year now comes last with the lowest number of registrations during the year under review.

The general management pattern of the companies registered during the year does not show any notable change as compared with earlier years. The majority of the companies (877) have preferred the system of management of Board of Directors, while twenty companies have opted for the managing agency. It is interesting to note that out of this twenty, as many as seventeen are in the States comprising the Southern region.

WHOLESALE PRICES Further Rise

The official wholesale price index (with the year ended March 1953=100) registered a further rise of 0.7 per cent to 147.3 during the week ended June 20, 1964 as compared with 146.3 (revised) for the earlier week. The index was higher by 2.4 and 0.4 per cent respectively when compared with the corresponding week of the earlier month and that of a year ago.

Increased prices of Masur, Coconut oil and Betelnuts (+5% each) Jowar Gram and Mustard Oil (+4% each, Barley, Groundnut oil and Gingelly oil (+3% each), Wheat, Bajra, Ragi Eggs, Black Pepper and Cardamoms (+2% each) and Rice, Maize, Arhar, Mung, Urad and Gur (+1% each) raised the index for 'Food Articles' by 1.0 per cent to 154.7 as against 153.2 (revised) for the previous week. The prices of Turmeric (—1%), Potatoes, Bananas and Chillies (—3% each), Oranges and Salt (—1% each), however, moved down.

A rise of 0.9 per cent to 119.3 in the index for 'Tobacco' was brought down by an increase of one per cent in the price of Tobacco raw.

The index for the 'Fuel, Power, Light and Lubricants' group worked out to 141.8 is against 141.7 for the earlier week. The prices of Castor oil moved up by one per cent.

As a result of an advance in the prices of Copra (+3%), Groundnuts, Linseed, Cottonseed and Lac (+2% each) and Rapeseed (+1%) the index for 'Industrial Raw Materials' moved up by 0.7 per cent to 154.0 when compared with 153.0 (revised) for the previous week although the prices of wool raw (—3%), Skins raw (—2%) and Silk raw and Hides raw (—1% each) witnessed declines.

Higher prices of Linseed oil (+3%) and Aluminium (+1%) raised the index for 'Intermediate Products' by 0.5 per cent to 147.7 notwithstanding a fall in the prices of Lead (—3%) and Brass (—1%).

Clive Street Gossip

"I must have liberty
Withal, as large a charter as
the wind
To blow on whom I please"
—As You Like It

THE Finance Minister would not be budged from his conviction that, upon capitalisation of reserves and the issue of bonus shares, an element of capital gains accrued to the shareholder. Possibly, his reasoning was that reserves are built up out of the undistributed profits of a company, and that when there is such distribution the shareholder should pay his due share of tax. However, on representations being made to him, he conceded that there cannot possibly be an accrual of capital gains when there is capitalisation from the share premium account; and hence his specific relief, that any bonus issues made out of share premium account in the future would not be held to be capital gains in the hands of the shareholder. So far, so good, and for that much relief, much thanks. But now we have a tragic-comical state of affairs. The Controller of Capital Issues, in the recent past, has found himself unable to acquiesce in the applications of the Bank of India and the United Commercial Bank for capitalisation from share premium reserve. To me, this is shocking: what is the use of a specific relief given by the Finance Minister, if the Controller of Capital Issues is blandly to reject all applications for bonus issues out of share premium?

I do not pretend to understand the Reserve Bank's attitude toward the banking system. On the one hand, banks are not merely urged but directed to work to the achievement of a capital ratio of 6 per cent. There is obviously a limit to the reserves that can be built up; perforce, banks have also to rely upon rights issues for increasing their capital. Rights issues would go well with shareholders, only when the dividends are attractive, when the return is satisfactory. But indirectly the Reserve Bank appears to insist that banks curb their dividend payments. The strengthening of the banking system depends as much upon banks' ability to put through successfully new rights issues; and the central banking authority—or for that matter the Controller of Capital Issues—should clearly enough do nothing that would inhibit such raising of capital by banks. Lastly, why should the banks be discriminated against? Application for capitalisation from share premium account must be no more than a formality. If, however, it is the Finance Minister's intention that the relief he has given in this respect is to be a dead letter, let him say so. I call upon the monetary authorities, and the Controller of Capital Issues, to reverse their decision in the matter of the applications from Bank of India and United Commercial Bank.

For stray indications of foreign aid to come, it has not been a bad week. The automobile industry, for one, appears to have struck it rich; and it also looks as if we are going to get non-project aid aplenty. Meantime, we have honoured one commitment for the repurchase of rupees from the International Monetary Fund; and as a token gesture we have given \$100,000 for the library that will bear John F. Kennedy's name. Meanwhile also, President Johnson has proved wonderfully adept at getting all that he wanted from Congress by way of appropriations for foreign aid in the fiscal year that has just started. News is to hand that the resources of the International Development Association, whose terms for foreign exchange loans are much softer than those laid down by the World Bank, have been greatly increased. Dare we hope, I wonder, that the industrial countries, which incidentally include Japan, will from now on more readily and more generously come to the aid of the developing nations? Normally, it is the period between September and March, when our exports touch their peak; the other half of the year is a period when the import gap widens ominously. The foreign exchange assets in the possession of the Reserve Bank have gone below the Rs 100 crore mark, and hence this journal has been anticipating that further negotiations with the International Monetary Fund are unavoidable. I now think it is just possible that, should the untied loans come in soon enough, we shall be able to make do without knocking at the doors of the IMF. Both Britain and the USA have been categorical about their intention of providing us with assistance for maintenance imports. So, what has now assumed importance is timing.

Mr T. T. Krishnamachari, we may be sure, will be having fruitful talks in London—and not politically speaking, at that. (Why is Mrs Indira Gandhi keeping very much to the background?) TTK appears to be cultivating the shadow cabinet, of the Labour Party, even more than the Gov-

ernment in power itself. It seems to me that one of the implications of Labour returning to power could well be a more humane interest in assisting the developing countries. Life under the Tories (rumours to the contrary, Christine Keeler has written no such book) has witnessed a preoccupation with Britain's own affairs. It is hard to read between the lines of despatches from London, but with the way in which TTK is setting about meeting people, I think the inference is permissible that his will have been an eminently successful trip. We can't expect much from his talks with Ayub Khan, but the ice at least will have been broken.

A healthy capital market emphatically does not need "a herd of bulls in pursuit of bears"; the happy phrase is TTK's, and the occasion he had to use it was the inauguration of the Development Bank in Bombay last week. Have industrialists really been crying wolf? For, that is what TTK seems to imply. In one sense, he is undoubtedly correct: here is the private sector, often bemoaning the lack of opportunity for it; but every time capital has to be raised, it is the governmental agencies that have to be tapped. The Development Bank is one more such institution that has been set up by Government in its recognition of its own responsibilities and duties toward the fostering of

industrial growth; and I am glad to note that it is the intrinsic worth of projects, rather than the "big-name" attributes of promoters, foreign or indigenous, which will be a valid consideration for assistance from the Development Bank. I am afraid, however, I cannot quite agree with the Finance Minister when he refuses to believe that the increases in Estate Duty and Gifts Tax are dampers to investment. How can we consider incentive for industry in isolation? Who is the owner of industry, if not the shareholder? The shareholder as an individual loses interest in investment, if a variety of taxes at every point is so severe as to leave him precious little by the time the senior partner (Government) takes his cut. I find a glimmer of hope in TTK's assertion that Government must think of ways "of encouraging even people of limited means to become holders of equity stock." I would repeat here the Indian Finance suggestion, that special reliefs be provided, from the various personal taxes, on holdings of equity shares. If, for example, stated percentages of wealth (or estate or gifts) in the form of shares could qualify for a rebate of tax, then the individual would have an incentive to add to his investments; and which, may I suggest, is what really the Government should desire.

Olympus - A Letter from Delhi

Employment in Fourth Plan

A preliminary study of Employment Prospects in the Fourth Plan, undertaken in the Planning Commission, indicates that a plan of the size now being discussed should be able to take care of the increase in the labour force during the plan period, estimated at 23 millions. It will however be necessary to plan for creation of another two million jobs, merely to keep the proportion of the unemployed at the present level.

These tentative estimates are based on certain assumptions regarding the magnitudes of investment in different sectors, investment-employment norms, the magnitudes of the backlog of unemployment at the beginning and end of the Third Plan etc. In arriving at estimates of the backlog of unemployment, the estimate of nine million, which was assumed in the Third Plan, has been revised downwards to 6.5 million which is more in accord with the findings of the 16th Round of the

National Sample Survey. The change is attributed mainly to generation of employment in the agricultural sector which, apparently, was larger than the original estimates. But it has been pointed out in this context that there is no reliable method of estimating employment in the agricultural sector.

It is expected that ninety per cent of the Third Plan employment target of 14 million would be realised. This will leave a shortfall of about 1.5 million. Since the target itself is short of requirements estimated at 17 million, residual unemployment arising during the Third Plan will be of the order of 4.5 million. Adding backlog of 6.5 millions, unemployment at the beginning of the Fourth Plan, as at present estimated, may be of the order of ten to eleven million.

Increase in the labour force during the Fourth Plan period has been estimated at 23 million. The Fourth Plan should aim to create employment opportunities of the order of 25 million in order to provide employment to the new

entrants to the labour force, as well as to make a small dent in the backlog, so as to keep the percentage of unemployment from rising above the present level.

Overall employment opportunities likely to arise during the Fourth Plan have been worked out on the basis of the reports of the different working groups engaged in preparing the sectoral plans. It has been estimated that job opportunities of the order of 19 millions are likely to be generated in sectors other than Agriculture. In addition, roughly about four million employment opportunities are expected to be generated in the agricultural sector. The corresponding levels of outlay from which these estimates are derived add up to Rs 24,000 crores as shown in the following table which also gives the comparative figures for the Third Plan.

Sector	Total Outlay (Rs Crores)	
	Fourth Plan	Third Plan
Agriculture and Community Development ...	4428	1868
Major and Medium Irrigation ...	1150	650
Power ...	2550	1062
Village and Small Industries ...	755	539
Industry ...	5100	2570
Mining ...	1100	—
Transport and Communications ...	4015	1736
Social Services ...	3576	2375
Inventories ...	1400	800
Total ...	24074	11600

The employment expected to be generated in the different sectors for the outlays indicated above are shown in the table given below. Separate estimates have been worked out for the employment potential of the construction components of the investments which have been given for all the sectors taken together. The figures of continuing employment likely to be generated are shown against each sector.

Indirect employment likely to be generated during the Fourth Plan (shown against 'others') has been taken as 50 per cent of employment generated in other sectors, as com-

	Fourth Plan lakhs	Third Plan lakhs
Irrigation & Power	1.79	1.00
Transport & Communications ...	22.85	10.20
Industry & Mining ...	11.20	7.50
Village & Small Industries ...	10.89	9.00
Social Services, etc.	13.84	9.40
Forestry, fishing etc.	17.37	7.20
Construction ...	49.28	23.00
Others (trade and commerce) ...	63.61	27.80
Total employment in sectors other than agriculture ...	190.83	105.10
Additional employment in Agriculture ...	40.00	—
Total ...	230.03	—

pared with the ratio of 56 per cent adopted in the Third Plan. For a total outlay of 24,000 crores, the employment potential of the Fourth Plan has been estimated at 19 millions in sectors other than agriculture, as compared with the corresponding Third Plan estimate of 10.5 million for less than half the outlay. The difference is due to the adoption of different investment employment norms which accord with actual experience during the Third Plan and allowances made for likely increases in productivity.

Scope for Larger Exports

Reviewing the achievements of the World Trade Conference, Mr Manubhai Shah, Minister of Commerce, told a press conference last week that developing countries might not have got all they wanted, but a solid foundation had been laid for the expansion of world trade for assuring markets to the products of developing countries. For the first time an international organisation, affiliated with the United Nations, has come into being which will serve as a forum for the discussion of their trade problems.

Mr Manubhai Shah described the decision of the Conference to set up three Commissions to deal with Commodities, Manufactures, and Invisibles and Shipping as a great step forward. He also referred to the resolution calling upon developed countries to earmark one per cent of their gross national product, net of repayments for developmental assistance

The Conference, Mr Manubhai Shah said, had adopted the fourteen general principles of International trade by large majorities. These will go to a committee which will endeavour to reconcile the different points of view and evolve a set of principles which will serve as the Charter of Economic Rights.

Mr Shah corrected the impression created by reports of the speeches of US delegates at the Conference and the position taken by them in the voting, that the United States was opposed to a system of preferences for the products of developing countries. 'The United States would be willing, he felt, to consider a system of preferences which was universal in its application. Progress in this direction will become possible if the Committee on Preferences which is proposed to be set up could evolve a universal system of preferences for products of developing countries.'

Describing the procedure for the implementation of the resolutions adopted at the Conference, Mr Shah said that the first step would be the appointment of the Committee for Conciliation by the U. N. Secretary General. The Committee on Preferences will be appointed by the Secretary General of UNCTAD. The mode of implementation of the resolutions will be evolved by the conciliation committee.

During his visit to the United States, which he undertook after the conclusion of the UN Trade Conference, Mr Shah had discussions with US officials and representatives of importers regarding the expansion of trade in a variety of Indian commodities ranging from spices to sardines. He was in the happy position to give a cheerful estimate of prospects of increasing trade and indicated a number of measures which are proposed to be taken for that purpose.

In the course of the discussions it was agreed that trade promotion campaigns should be launched for Mica, Spices and Cashew kernels, which would be jointly financed by Indian exporters and the importers in the United States. The Rs 34 lakh Mica-project is expected to develop new uses for this commodity. Of the total cost, ten lakhs would be shared by US importers, and Indian exporters, and the balance will be provided by the US Agency for International Development.

Indian marine products, said Mr Shah, had been able to gain a foothold in the US market, and the system of quality control was working satisfactorily. He said that it should be possible to push up exports to 20 million lbs, provided quality was maintained and packing improved.

Indian light engineering products that were on display at the New York Fair had attracted a good deal of notice. 'The Engineering Export Promotion Council, said Mr Shah, would be shortly opening a branch in New York to deal with the large number of enquiries that were coming in. In this connexion the Minister paid a glowing tribute to "the marvellous job" done by those in charge of the Indian pavilion which was rated among the top ten.

though it had been put up at much less cost than the others. Both attendance and sales were very satisfactory, he said.

Mr Shah had discussed the recent textile agreement with the US Officials. India was not satisfied with the terms of the agreement, but he added that Indian exporters might explore the scope for increased exports of 'unrestricted categories' of textiles. He had also discussed possibilities of increase in the sugar quota for India as well as agreements for import of cotton, soya bean oil and tallow under PL-480. The finalisa-

tion of these agreements, however, will be subject to approval by the United States Congress of Public Law 480.

Finance for Road Transport

The Working Group on finance for road transport services which was set up by the Reserve Bank of India, has advised the State Finance Corporations to finance road transport at a rate not exceeding that of the Reserve Bank by more than 4.5 per cent. Mr Raj Bahadur, Minister for Trans-

port, who stated that at the meeting of the Road and Inland Water Transport Advisory Committee last Monday, however, stressed the need for a thorough study of the existing system of hire purchase financing with reference to the requirements of the Fourth Plan.

Regarding rationalisation of taxation policies and licensing procedures, Mr Raj Bahadur indicated that this will have to wait on the report of the Study Group consisting of officials from the Central and State Governments which had been set up to examine these problems.

MARTIN BURN LOOK BACK TO OVER 180 YEARS OF SERVICE TO INDIA

...to be able to compute this service by decades, not by years alone...to recall that our creed has consistently been the development of our country's resources through engineering and allied enterprises...to take pride in planning that makes the many units in our organization fall into a rational and complementary group and each one a leader in its particular field, a position which some of them, early pioneers in India, held even in the last century. For us looking back is a worthwhile proposition—an incentive to move forward.

AMONG THE COMPANIES IN THE MARTIN BURN GROUP ARE:

THE INDIAN IRON & STEEL CO. LTD.: With a million ton integrated steel plant at Burnpur, the largest foundry in the Commonwealth at Kulti and its own collieries and iron ore mines, IISCO has an enviable record in production efficiency.

BURN & CO. LTD., HOWRAH WORKS: Pioneers in foundry practice in India, in structural steelwork fabrication and the manufacture of rolling stock—the origins of the Company go back to the year 1781.

BURN & CO. LTD., REFRACTORY & CERAMIC GROUP: Apart from stoneware pipes and chemical stoneware, the works of this group—eight in number and located in four states—manufacture nearly all types of refractories to meet the requirements of India's steel industry, power undertakings, railways, ordnance factories—in fact, any industry requiring refractory material for the maintenance of furnaces.

THE INDIAN STANDARD WAGON CO. LTD., SANTA: The oldest Indian unit started for the specific purpose of manufacturing railway rolling stock—has been mainly responsible for building up the wagon building industry. Also manufactures springs, forgings, pressings and stampings for heavy industry as well as automotive components.

THE HOOGHLY DOCKING & ENGINEERING CO. LTD.: Established in 1819, the Company has a shipbuilding yard, a dry dock and extensive workshops at Salkia.

ROBERT HUDSON (INDIA) LTD.: A premier concern in its own field, the Company devotes itself to all types of light railway engineering—has important connections with the mining industries.

RAILWAY COMPANIES: Some of the first feeder railways in India, with six systems in four states.

ELECTRIC SUPPLY COMPANIES: Pioneers again in the generation and distribution of domestic power in India—serve 45 towns in Uttar Pradesh and Madhya Pradesh.

THE VAUGHANBURN CRANE COMPANY LTD.: A collaboration with The Vaughan Crane Company Ltd. of Manchester... Hand operated and electric overhead travelling cranes and chain pulley blocks.

MARTIN BURN LIMITED Calcutta New Delhi Bombay Kanpur Patna MBGC-22A

GOVERNMENT OF INDIA

4 Per Cent. Loan 1970—Issue Price Rs. 99.00 Per Rs. 100 (Nominal)—Repayable on 15th April 1970.

4½ Per Cent. Loan 1989—Issue Price Rs. 100 Per Rs. 100 (Nominal)—Repayable on 15th April 1989.

Subscriptions to further tranches of the above loans will be received in the form of cash/cheque from 13th of July 1964 to 15th of July 1964 but the subscription list may be closed earlier without notice as soon as the total subscriptions amount to Rs. 150 crores.

2. Interest on the new loans, which will be subject to tax under the Income-tax Act, 1961, will accrue from 13th July 1964. Interest will be paid on 15th October 1964 for the period 13th July to 14th October 1964 inclusive and there-after payments will be made half-yearly on 15th April and 15th October.

3. Applications for the loans will be received at:—

- Offices of the Reserve Bank of India at Bangalore, Bombay, (Fort and Byculla), Calcutta, Madras, Nagpur and New Delhi;
- Branches of the subsidiary banks of the State Bank of India conducting Government treasury work; and
- Branches of the State Bank of India at other places in India.

For full particulars apply to any of these offices or branches.

Increased Flow of Capital to Developing Areas

The flow of international capital to the world's developing countries increased in the three-year period 1960-62, but at a slackening pace and without a uniform pattern for the various geographic regions, a new United Nations study indicates.

The report, "International Flow of Long-Term Capital and Official Donations, 1960-62", examines the amounts and types of funds provided by the developed market-economy countries; the official and private capital and grants received by developing countries; and the international economic assistance by countries with centrally planned economies. It is the third in a series of annual reviews. Among the points reported are these:

—For 1960-62 the annual net flow of funds from the developing countries to the rest of the world averaged about \$6,300 million, or almost 14 per cent above the \$5,500 million averaged in the 1955-59 period. "By far the largest proportion" of the flow went to the developing countries. Much of the

remainder went to international institutions, which in turn contributed to the developing countries, and a smaller portion went to the centrally planned economies.

—Information from nations with centrally planned economies "indicates a considerable shift in the allocation of economic assistance in favour of the developing countries" in recent years. Commitments rose from \$893 million in 1960 to \$1,168 million in 1961, and the total commitments between 1959 and 1962 "exceeded substantially the total granted by the centrally planned economies to the developing countries from 1954 to 1958".

—The flow of capital and official donations to the developing countries for which information is available rose by about 10 per cent between 1960 and 1961, but by less than 4 per cent between 1961 and 1962.

—The international flow of funds "has tended to concentrate on a relatively small number of countries". Of the 52 deve-

loping countries and areas considered in the report, 15 received about two-thirds of the long-term capital and official donations in 1960-62.

—In the total of international funds received by the developing countries, the share of official loans and grants increased, and the proportion of private capital decreased, in the 1960-62 period.

FUNDS FROM DEVELOPED COUNTRIES

In the developed countries, expansion of economic activity in 1960-62 was accompanied by a high-level flow of long-term capital and official donations, the opening chapter of the report states. Funds from the developed countries to the rest of the world rose from approximately \$6,000 million in 1960 to \$6,500 million in 1961 and then declined to \$6,300 million in 1962.

The United States accounted for three-fifths of the total net flow from the developed nations to the developing countries. It was followed by France, with 18 per cent of the total, and the United Kingdom, 10 per cent.

As to the type of funds provided, the report states that a decline in private capital was more than offset by increases in official loans and grants.

Private capital amounted to 22 per cent of the total flow of funds from the developed countries, to the rest of the world in the report shows. In transactions among the individual developed countries, on the other hand, private capital was dominant.

Contributions from developed capital-exporting countries to international institutions rose by about 21 per cent between 1960 and 1961, and by about 42 per cent the following year. The aid provided by those institutions, in turn, has often been on terms "relatively favourable" to the developing countries, the report states.

The increase in the flow of long-term capital and official donations from the developed capital exporting countries was at approximately the same rate as the rise in their combined gross domestic product, the report finds. In the three-year period the net flow to developing countries was roughly two-thirds of 1 per cent of the combined gross domestic product.

The flow of funds from developed capital-exporting countries as a group to the centrally planned economies increased during the 1960-62 period, averaging about 2.3 per cent of the total, the report shows.

DEVELOPING COUNTRIES' RECEIPTS ANALYSED

In the developing countries on which information is available, the net inflow of long-term capital and official donations increased from about \$5,200 million in 1960 to more than \$5,700 million in 1961 and then to about \$5,900 million in 1962, the second chapter of the report estimates. Thus, the pace of increase slowed down.

By regions, developing countries of the Far East received the largest share, followed by Africa, Latin America and West Asia.

In describing the concentration of funds in certain areas, the report shows that more than one-third of the total net inflow of capital and official donations went to five recipients: India, Argentina, Puerto Rico, Brazil and Indonesia.

Private capital went largely to Latin America, whereas more than 70 per cent of the total official funds received by developing countries in 1960-62 went to the Far East and Africa. During this period, the report comments, "the official sector has become increasingly more important than the private sector as the recipient of long-term foreign capital".

Analysing the types of official funds provided to developing countries, the report cites a shift towards loans rather than grants, accompanied by an easing of loan terms.

The report stresses the need of developing countries for international funds as one source of foreign exchange needed to pay for imports of equipment and machinery for development programmes. Rising prices of manufactured goods imported by the developing countries have reduced the real aid provided by international funds, the report observes. Thus, the 10 per cent rise in capital and official donations in 1961, and the 4 per cent rise in 1962, amounted, in actual effect, to a 9 per cent and 3 per cent increase in capacity to finance imports.

In some countries, and in some years, interest and dividends paid out by developing countries offset the funds they received, the report shows. However, for the period 1956-62, the cumulative total of funds from abroad exceeded the interest and dividend payments in all regions except West Asia.

AID BY CENTRALLY PLANNED ECONOMIES

The share of the developing countries in the total commitments of the centrally planned economies "increased rapidly" in the years after 1954, the third section of the report states.

In 1959, "over three-fourths of total commitments of the centrally planned economies went to

*Because of incomplete information, figures on the flow of funds from developed countries do not necessarily match those on receipts of developing countries, the report states.

the developing countries and during the three following years their corresponding shares amounted to 56, 62, and 59 per cent of the total, respectively". Credit commitments reached a peak of about \$1,168 million in 1961. (Information for 1962 is not complete.)

The Soviet Union continued in 1960-62 to provide the major part of the credits granted by the centrally planned economies, the report states. Its share in the overall total declined, however, "largely because of the substantial credits granted to the developing countries by Czechoslovakia, Hungary and Poland".

By regions, Africa received the largest share of the credits in 1961. The Far East's share was largest in 1960 and 1962.

As in former years, the economic aid of the centrally planned economies to the developing countries "consisted almost entirely of credits", which the receiving country was normally entitled to repay by means of shipments of its export products, the report states. Credits were granted "almost exclusively in the form of shipments of equipment and materials needed for the construction of specific projects".

In reviewing trade among countries with centrally planned economies, the report finds that mainland China "has, in recent times, become a net lender".

The report describes "increasing inter-country cooperation in investment financing" and cites a number of arrangements among eastern European countries for erection of chemical plants and development of mining resources. Under such plans, prospective importing countries participate in the construction of new capacities in the producing countries by providing credits which will be repaid by shipments of goods.

GROWING STEADILY EVERY YEAR—

THE BANK OF BARODA

Established as a local bank with about 20 employees, the Bank of Baroda is now one of the leading banks in the country, with 205 branches. These are spread all over India and abroad and collectively employ over 5,000 people. Deposits total more than Rs. 140 crores. This dramatic and dynamic growth has been the result of meticulous planning and courteous service. Moreover, the Bank of Baroda has on its Board of Directors, men who are eminent in the industrial and financial world—thereby enhancing the bank's stability and prestige.

THE BANK OF BARODA LIMITED

(Estd. 1908) Head Office: Baroda
Write in for our free booklet entitled 'May We Help You?' which gives details of all our services.

RESERVE BANK OF INDIA

Applications are invited for the posts of Junior Officers Grade II (on probation) in the Bank in the scale of Rs. 375-20-535-25-560-EB-25-660-30-720.

Note: Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scale.

In addition to pay, the selected candidates will be eligible to draw local pay at 10% of the pay rounded off to the next higher complete rupee when stationed at Bombay, Calcutta, Madras, New Delhi, Kanpur, Ahmedabad, Bangalore and Hyderabad and dearness allowance at prescribed rates. The present rate is 20% of pay with a maximum of Rs. 100/- per mensem. In addition they will be eligible for house rent allowance at 15% of pay with a minimum of Rs. 60/- per mensem.

QUALIFICATIONS:

Applicants should have a good academic record and possess a first or high second class Bachelor's or Master's degree in Science, Arts or Commerce of a recognised Indian or Foreign University. Practical banking experience in a commercial bank will be considered as an additional qualification. Preference will be given to those who have passed the Institute of Bankers' Examination.

THE SELECTION BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POSTS AND ONLY THOSE CANDIDATES WHO POSSESS HIGH ACA-

DEMIC QUALIFICATIONS AND/OR ADEQUATE EXPERIENCE OF THE TYPE SPECIFIED ARE ADVISED TO APPLY.

AGE LIMIT AS ON 1ST AUGUST 1964:

Between 21 and 25 years. The maximum age limit is relaxable but not beyond 30 years in the case of:—

- candidates possessing special qualifications and experience of value to the Bank;
- ex-employees of banking institutions whose services had to be terminated for reasons of economy or as a result of the banks going into liquidation;
- personnel retrenched from Government offices after at least one year's service applying through Employment Exchanges; and
- candidates belonging to the Scheduled Castes or Scheduled Tribes.

2. Applicants for the above post must remit with their application a fee of Rs. 7.50 by cheque or bank draft on a Scheduled Bank payable at Bombay or by Postal Order. The application fee is in no case refundable. In the case of candidates belonging to Scheduled Castes/Tribes, the fee will be reduced to one-fourth.

3. Applications in the candidate's own handwriting in the prescribed forms obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore, Hyderabad, Trivandrum, Lucknow, Patna and Jaipur accompanied by copies (originals should not be sent) of certificates regarding age and educational qualifications,

statements of marks secured in the Graduate and Post-Graduate degree examinations and copies of two testimonials should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1 so as to reach him on or before the 1st August 1964.

4. Candidates already in service will be required to produce a proper discharge certificate from their employers in the event of their being selected at the time of their appointment in the Bank's service.

5. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of a certificate to that effect from a competent authority.

6. Candidates must be prepared to serve in any office of the Bank in India or group of departments to which they are posted, and to undertake tours when required.

7. Selected candidates will have to appear for interview/s before the Selection Board at any of the Bank's Offices.

8. Appointments will be subject to candidates being found medically fit for services in the Bank by the Bank's Medical Officer.

9. If any candidate desires to have his application acknowledged, he should send it by "Registered Post—Acknowledgement Due". Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

10. Canvassing in any form will be regarded as disqualification.

Market NEWS and Trends

JUTE

Export Trends

JUTE year 1963-64, like its predecessor, will be another good year for export of jute goods. For, in the first ten months ended April 1964, total exports of all manufactures stood at 782,600 tonnes as compared with 748,700 tonnes in the corresponding period of the previous year. A closer look at the figures, category wise as well as regionwise reveals some interesting indications. In the first place, it is clear that sacking continues to lose ground in the world export market. There has been a decline during the 10 months under review to 216,400 tonnes while during the corresponding period of last year total export of this category of goods were placed at 233,400 tonnes. Among the countries which have been taking diminished quantities of sacking, first stands Africa which has taken only 41,600 tonnes as against 73,600 tonnes. The offtake of West European countries has also dropped sizably from 20,500 tonnes to only 9,200 tonnes. Exports to Australia, once Indian sacking's biggest market, are again on the downtrend though the loss is not much at 26,300 tonnes. It is evident that wherever our sacking is losing, there has been a gain and needless to say it is Pakistan. How fast our exports of sacking are deteriorating will be evident from the trend of exports over the past three or four years. In 1960-61 (jute year) a total of 313,400 tonnes of sacking were exported. The quantity declined next year to 288,600 tonnes and again to 277,000 tonnes in 1962-63. In the first ten months of 1963-64 exports amounted to only 216,400 tonnes. The trend is unmistakable and the reason for such continuous setback is also wellknown. It is strange that Government of India is taking little notice of this disturbing trend in sacking exports. Failure to take effective remedial measures without further delay, will before long result in the total loss of the export market for sacking.

The improvement in the overall export performance of jute goods has therefore been brought about in a large measure by hessian, the export of which in the ten months ended April 1964 totalled 494,400 tonnes as compared with 463,400 tonnes in the corresponding period of the previous year. It is here that we find some interesting features. The improvement is not

because of the increased offtake by our principal consumer of hessian, the USA. As a matter of fact the offtake by US has slightly declined to 212,700 tonnes from 213,700 tonnes in the corresponding 10 month period of last year. The USSR has more than doubled its offtake to 53,300 tonnes while Argentina has already surpassed its rate of offtake during the last three years. This country has imported 51,600 tonnes as against only 39,100 tonnes in the corresponding period of the previous year. Canada seems to be emerging as an important buyer of Indian hessian. Over the last three years, its offtake had been steadily increasing from 37,200 tonnes in 1960-61 to 47,500 tonnes in 1962-63. Upto April 1963-64, it has imported 45,500 tonnes as against 39,400 tonnes in the corresponding period of 1962-63.

Conditions in the jute goods market were steady most of the time last week mainly on account of the sustained speculative inter-

est noticeable in heavy goods. Over the past couple of weeks or so, there has been substantial buying on account of the Government of India. Last week, business on this account was reported to have amounted to over 20,000 bales of B Twills July-August delivery. Further enquiries have been received from this quarter again this week and as is to be expected prices in the sacking section were pushed up to new high levels with B Twills ready at one time done upto Rs 117. With the publication of the figures for stocks of jute goods with mills as at the end of June, however, sentiment received a setback as total stocks were placed at 126,100 tonnes, 1,900 tonnes higher than as at the end of May. Stocks of sacking have risen sizably by 4,700 tonnes to 45,100 tonnes but those of hessian are down by 1,900 tonnes to 45,100 tonnes. Among other categories, stocks of carpet backing are higher by 200 tonnes to stand at 21,400 tonnes while other varieties are

lower by 1,100 tonnes at 14,500 tonnes. Unless production of sacking has increased sizably during June, which is very unlikely, the only reason for the rise in stocks of heavy goods despite the considerable business done during the month on Government account, must have been a sharp decline in exports. The news of an increase in sacking stocks has brought about a reactionary trend and B Twills Ready promptly declined during the last two days to be finally placed on Wednesday at Rs 115.65. Hessian, however, continued to be sluggish throughout the week with narrow fluctuations reflecting the disappointment over the continued absence of sustained overseas interest in this construction.

Fairly steady conditions prevailed in the raw jute market and this is mainly due to absence of selling pressure from holders. There is some doubt about the early availability of new crop jute as earlier anticipated in view of the wide-spread floods in the growing regions in Assam and elsewhere. For a time, operators took a cautious view of the size of the new crop as reports had it that the crop had suffered considerable damage due to floods and pests. But it is now generally believed that whatever loss has occurred should have been little because latest reports go to show that the conditions of the standing crop in most regions is quite good.

Development of Jute: Central Committee Constituted

The Government of India have set up a Central Committee for Jute Development. The Committee replaces the Central Supervisory Body for Jute which stands dissolved.

The Committee will scrutinise the development programmes formulated by the State Governments in respect of jute and allied fibres, review progress of jute development in the context of targets laid down and recommend measures for accelerating the tempo of development programmes. It will suggest special schemes for improving the quality of jute and other allied fibres. Appraisal of prices for jute and allied fibres in the producing States, recommendation of mea-

asures to stabilise them and facilitating movement of the produce to the marketing centres are among the other functions of the Committee.

The Special Secretary in the Ministry of Food and Agriculture and Vice-President of the ICAR is Chairman of the 25-Member Committee. Among its members are the Agriculture Secretaries of the Producing States of West Bengal, Bihar, Assam, Orissa, Uttar Pradesh and Andhra Pradesh and of the Tripura Administration, two representatives of jute growers and a representative of the Indian Jute Mills Association. The Planning Commission, the State Trading Corporation and the National Agricultural Cooperative Marketing Federation are also represented on the Committee. The Chief Jute Development Officer, Indian Central Jute Committee, Calcutta, is its Member-Secretary.

TEA Fall in Exports

ACCORDING to the official figures released this week, exports of North-East Indian tea have shown a fall to 354.39 million pounds in the year ended 30 June 1964 from 364.91 million pounds in the corresponding period of the previous year. The five most important buyers were the UK, UAR, Russia, the USA and the Irish Republic.

Compared to the figures for the year ended 30 June 1963, supplies to the UK, the largest buyer of North-East Indian tea, fell by 9.59 million pounds to 217.63 million pounds in the year under review as did exports to the USA and Irish Republic by 1.64 million pounds and 933,000 pounds to 15.4 million and 14.09 million pounds respectively. On the other hand, exports to the UAR and Russia during the year under review, at 31.76 million pounds and 21.6 million pounds, registered increases of 2.36 million and 597,000 pounds respectively.

Meanwhile, a report, released from Brussels, states that an agreement has been reached in principle between the Indian and Ceylon Tea Boards and represen-

tatives of the tea trade in France to set up a Tea Council in Paris next month to work out the detail of the projected council, which will undertake promotional work along the lines of the Tea Councils established elsewhere in Western Europe.

In the Export Sale held in Calcutta this week, offerings consisted of 33,598 packages. There was a fair general demand. Attractive Darjeeling teas with favour were keenly competed for and some very useful prices were realised. The others continued to sell well with buyers following quality. There was less demand for CTC teas, which came to an irregular and easier market. The few selected brightest liquoring lines, however, received good support.

Plain orthodox descriptions were sold well at irregular and slightly easier rates with "teas for price" selling at around last levels. Doars and Assam orthodox teas shared in the general decline and

were some sometimes difficult of sale.

Whole Leaf grades were well absorbed with the few tippy teas on offer receiving better support than last week. Clean Plain Pekoe Rs 5.20 to Rs 5.40; Plain BP Rs 4.40 to 4.60; Plain Fannings Rs 4.30 to Rs 4.40; Medium Assam CTC BP Rs 5.50 to Rs 6.50; Medium Assam CTC Fannings Rs 5.60 to Rs 6.50; Best Assam CTC BP Rs 7.20 to Rs 8.20 and Best Assam CTC Fannings Rs 7.20 to Rs 8.20.

In the Internal Sale, offerings consisted of 13,947 packages of Dusts of which 45 packages were of old season's manufacture. There was a strong general demand for all bright and powdery teas. CTC descriptions came to a very strong market and continued to realise useful prices. Plain orthodox teas were sold at around last levels, while Assam sorts, particularly the bright ones, were again well received at considerably dearer rates. Legg-cuts were a shade easier than in the previous

week except for the small powdery sorts which were more popular. Following rates were quoted (per kg): Plain Orthodox Dust Rs 4.20 to Rs 4.50; Medium Assam Dust Rs 5.20 to Rs 6.00. Legg-cut Dust Rs 4.90 to Rs 5.30; Medium Assam CTC Dust Rs 5.80 to Rs 6.50 and Good Assam CTC Dust Rs 6.90.

According to a report issued from Cochin, the fall in the crop in South India has been greater this year than the rise achieved in the three years since 1961. This shortfall has not had any influence on the market and the prices realised are in keeping with the general trend induced by the higher crop expectation from North India and the rest of the producing territories.

There is a growing fear that the precarious balance between supply and demand, maintained in the last three years, may be upset this year and the worst sufferer of the lot will be South India because a falling price coincides

J. Ritchie
General Manager

with a smaller crop. The South Indian crop is now estimated to be about 17 million pounds less. In the absence of any improvement in the weather conditions, it seems hardly likely that the shortfall will be made good during the rest of the year.

A quantity of 8.45 lakh kilograms of Leaf tea was offered for export at the auction held in Cochin this week. Quality was generally well-maintained with some of the Nilgiri teas showing a further slight improvement. The market met with good general demand. Low Mediums were quoted at Rs 4.30 to Rs 4.60; Good Mediums at Rs 4.55 to Rs 5.20 and Nilgiri BOPs at Rs 4.60 to Rs 6.10. The rates relate to the average minimum and maximum prices for the different grades of tea offered in the sale.

COTTON Comfortable Supply Position?

AS the current cotton season draws toward its close a clear picture of the supply and consumption of cotton in India is emerging. The season's cotton crop is estimated to be in the environs of 60 lakh bales. With the carry-over of 22.38 lakh bales comprising 20.25 lakh bales of domestic crop and 2.13 lakh bales of imported growth at the commencement of the season, indigenous output of 60 lakh bales and actual arrivals of foreign cotton of 8 lakh bales, the aggregate supply position would be a shade over 90 lakh bales. Total consumption by the cotton textile industry is expected to approximate 63.25 lakh bales and exports are estimated at 3 lakh bales. It is thus evident that at the end of this season there would be a carry-over of nearly 24 lakh bales made up of 21 lakh bales of Indian cotton and 3 lakh bales of imported growth. Though this augurs well for giving the new season a flying start it is a matter for conjecture weather it would be sufficient to meet the industry's requirements till the new crop cotton becomes available to them. Another factor that is disturbing the spinners is that out of this quantum nearly 5 lakh bales will be unsuitable for the domestic textile industry. Naturally enough, the prices of quality cotton will tend to rule around the prevailing high levels.

Trading conditions in the Bombay cotton futures market showed a marked departure from those witnessed in the recent weeks as the firm trend yielded place to an easy trend. Barring the occasional bull thrusts the general trend was distinctly subdued mainly due to congenial rains in many cotton growing tracts and fears that the ruling contract, Jarilla August,

would attract large tenders if the prices continue their uptrend. The sentiment was also affected by the lack of support from upcountry centres and spot houses. Jarilla August, which commenced the week on a firm trend, fluctuated narrowly between Rs 73.25 and Rs 73.00 per three quintals on account of alternate bouts of selling and buying before finishing the week at Rs 73.75, registering a net loss of Rs 5.50 over the week.

The spot market at Sewri was bereft of any fresh development. Scattered mill enquiry for selected growths such as CO2, L147 Digvijay was reported during the week.

In the export section traders were awaiting the outcome of the Cotton Textile Consultative Board's meeting when a broad pattern about Government's policy about the abolition of export duty on Bengal Deshi is expected to emerge. Meanwhile this growth met with spasmodic enquiry.

In the import section, the uncertainty that betrays the fixation of the export prices of Egyptian cotton by the Government diverted spinner attention on Sudan cotton.

The all-India fourth estimate of cotton for 1963-64 season puts the area under cotton cultivation at 19.75 million acres against 19.01 million acres in the previous year. The increase of 3.9 per cent has been shared mainly by Gujarat, Maharashtra, Punjab, UP and Rajasthan and can be ascribed to the congenial weather conditions which prevailed at the sowing season. But in some tracts, particularly in Punjab, the expansion of acreage was attributed to the attractive cotton prices.

Cloth production by the textile industry in May is provisionally placed at 352 million metres and yarn production at 72 million kgs. Stocks of cloth with the composite mills of the industry at the end of the month under review are estimated at 0.81 lakh metric bales as unsold and 1.37 lakh metric bales as sold but unfitted.

PIECEGOODS

Sluggish conditions prevailed in the cotton piecegoods market in Bombay during the week under review. Demand from uncountrv dealers was conspicuously lacking and business with overseas countries was limited.

The mill made section was almost deserted but the mills were adamant in maintaining the high price level obviously on account of their depleted stocks. Powerloom goods met with scattered interest but dhobies and saris ruled firm.

On the export front brisk trading with East Africa in gadelap, drill, and sheetings was reported while the UK was satisfied with a moderate quantum of furnishings and grey sheetings. Continental countries such as Italy and Belgium focussed their attention

on sheetings and soft-wet cloth. Limited enquiry from Sudan for voiles and sheetings was reported. Ethiopia evinced keen interest in gadlapat and chaddar. Singapore was contented with a moderate quantity of bleached longcloth, mulls and gadlapat.

Mercury Soars

IN the Bombay market, the price of Mercury has touched a new high level of Rs 2,250 for a flask of 34 kg. In the course of the past two months, it has firmed up by Rs 125. Scarcity of floating stocks is stated to be the main reason for the persistent rise in prices, not to speak of the increase in offtake by industries consuming the commodity.

It would be recalled that the import of mercury had been canalised through the State Trading Corporation. The imports, effected by the STC, are to cater to the requirements of the actual users. Owing to the large difference between the landed cost and the open market price, many consumers are also said to offer their quota in the market without absorbing it for their own purpose. It is stated that even the intermittent supplies received by the market through these sources are insufficient to meet the existing demand.

Among other chemicals, Menthol also displayed a firmer tendency on speculative support based on scarcity of stocks. Prices of Caustic Soda and Camphor, however, showed a slightly easier tendency following good supplies and lower demand at the higher levels.

In the Dyes section, there was not much trading owing to the continued apathy on the part of the consumers. Naphthols, on the other hand, continued to maintain considerable strength owing to an acute scarcity and keen demand.

SUGAR Fall in General Demand

The general demand for Sugar has shrunk considerably. With the end of summer, the demand from the cool drink manufacturers has registered a sharp fall, while the seasonal demand for marriage feasting, etc., has also declined. In Bombay, prices in the open market have shown a fall of Rs 75 per quintal within the last few days. Now the commodity is reported to be available at Rs 200 without any difficulty. In the Hapur market, however, the position of sugar continues to be tight and prices have recorded further gains due to the non-availability of khandsari.

A United States Department of Agriculture forecast that the 1963-64 world sugar crop will be second largest on record has so far made

little impact on an already depressed world trade. USA expects the new crop to be 59.5 million short tons as against 60.1 million in 1960-61 and 54.9 million in 1962-63. The current forecast compares with 59.4 million tons predicted in March and 58.7 million tons in the first official United States estimate last November.

The present low spot price for the year at £46 per ton, which has declined steadily from a 1964 high of £91 10s, has little chance of coming up to the boom peaks of May and November last year. These were £101 and £105 per ton respectively on an underlying tight statistical position through Cuban cane and European beet shortfalls and high demand.

It is estimated that Cuban's crop will be 211,000 tons lower at 4 million tons and might have exceeded 1962-63 but for last autumn's hurricane. Brazilian output is seen little changed at 3.5 million tons, while Argentina with probable improved production substantially to 1.1 million tons. Indonesian production of Molasses was actually below the forecast which was itself lowered from the April output at 491,600 tons.

PEPPER Weakness Persists

The market for Black Pepper has developed a distinct weakness with a sizable fall in prices—spot and forward—in the London and Bombay markets. When bulk of the crop has already been marketed and the season is approaching its end, the present decline in prices is considered to be unusual.

The weakness of the market is attributed, among others, to the widening disparity between Indian and International prices for black pepper, which has made the export of this commodity rather difficult. As against the spot price of 31.50 cents and the forward rate of 30.50 cents for July shipment in America, the Indian shippers are not in a position to offer at less than 38.50 cents a pound. It is stated that, despite the political tension in the Far East, American buyers have managed to secure pepper from that region. Doubts are even expressed in some circles that, in the light of the past experience, whether American will turn to India for its requirements.

No doubt, America is still short of stocks. But, so far as US buyers have continued to get supplies from Singapore and Indonesia at cheaper prices, the chance of American entry into the Indian market are not promising. Other factors contributing to the present weakness are mainly of a technical nature. Those bulls, who had extended their holdings in anticipation of the revival of an export demand, have started to unload their stocks to avoid further

losses, resulting in a steady fall in prices.

OILS AND OILSEEDS Rising Trend Halted

The rising trend in Groundnut and Groundnut Oil, seen in the Bombay market for some time, seems to have been halted at least for the time being. In fact, there has been a small fall in the prices of both the commodities although it will be difficult to say whether this fall will be extended further or it will prove a temporary affair.

The present setback in prices is attributed to the fact that buyers, including vanaspathi manufacturers, are reported to have stopped fresh purchases as there was a fear that something might emerge to curb the price rise. Meanwhile, favourable weather reports from the major producing areas are received with satisfaction.

With the forward prices grinding around the official ceiling, the centre of interest in Castorseed shifted to the ready section. The tendency was clearly bullish, partly in sympathy with groundnut and partly because of the encouraging export outlook for castor oil.

The Linseed section displayed a firmer tendency, thanks to the strong support given by the paint manufacturers for linseed oil.

In the Madras market, a further steep rise in the quotations for groundnut and oil was witnessed during the week. Arrivals of seeds were reported to be poor, around 25 tonnes a day. This was not sufficient to meet even the meagre requirements of local small crushers. The rate for summer peanuts has reached a record level of Rs 103 from Rs 99 quoted in the previous week. In the oil section, only small quantities were offered by a few local units and crushers of the South Arcot district. The rate for ready oil improved further from Rs 240 to Rs 250 per quintal.

RICE Output at a New High

World production of rice outside China has reached record levels in the 1963-64 season and is believed to have totalled some 159 million tons paddy, 6 million tons more than that harvested in the previous season. However, the Indian crop, though a new high of 53 million tons, has been less favourable than expected, because of a lower than anticipated output in West Bengal.

The Commonwealth Economic Committee's latest rice supplement notes that the latest esti-

mate of the Pakistan rice harvest puts output at 16.7 million tons, showing an increase of 2.5 million tons over that of the previous season. Pakistan is likely to be a net exporter this year. Other countries, which have reported record levels of production, included Thailand, South Korea, Egypt and the USA. There has been, however, some decline in Japan, Indonesia and Brazil.

RUBBER Firmness in Prices

Following the breakdown of the Indonesia-Malaysia talks in Tokyo earlier this month, spot prices on the London market have started looking up. Values are currently within 1d per pound of the 1964 high of 21½d. A year ago, the rate was quoted at 22 3/16d and this year's low is 19d. In the above connection, Lon-

don traders have pointed out that the latest period of tension in the Far East, lasting for some ten months, had until lately made little impact on natural rubber prices, while Malaysian labour difficulties confused rather than strengthened the London market. Now, however, they think that the breakdown of the Tokyo talk and the deadlock in Malaysian rubber wage negotiations, may on balance sustain the new price firmness.

Moreover, the London trade's optimistic view on prospects of natural rubber, at least in the medium term, includes a reminder that a sudden resumption of Russian buying cannot be ruled out. As for the threat from synthetics, this danger to the natural commodity remains somewhat modified through the fact that the man-made rubbers are still generally costlier and not so fixable in application as plantation supplies.

The figures, released by the Rubber Board from Kottayam, reveal an opening stock of 16,092 metric tons, production of 2,837 metric tons and import of 2,202 metric tons, making a total supply of 21,131 metric tons natural rubber in the country in April as compared to 21,301 metric tons in the preceding month. On the other hand, the consumption of natural rubber, at 5,002 metric tons, is lower than the offtake in March by 207 metric tons.

As the shortfall in demand was greater than the contraction in the total supply, stocks of natural rubber, with the estates, dealers and manufacturers rose to 16,129 metric tons at the end of April 1964 from 16,092 metric tons at the close of the previous month. Besides, synthetic rubber stocks, at the end of April, amounted to 2,832 metric tons against 3,012 metric tons at the close of preceding month.

PARTICULAR SERVICING FOR PARTICULAR PEOPLE

It means more life, more mileage if your Jeep is serviced by Jeep Dealers. It is oiled, cleaned, tuned and adjusted by people who know each nut and bolt of the Jeep. They have been trained to give you factory specialised servicing. There are over a 100 dealers spread throughout the country with a complete range of equipment. Trust your Jeep to a JEEP DEALER for reliable, efficient servicing.

NOTICE

is hereby given that the Board of Directors of the Company have decided to implement the Scheme for Conversion of the Deferred shares into Ordinaries in the ratio of 4:1, which has already been approved by the shareholders and Madras High Court, with effect from 1st July, 1964. For this purpose, the Registers of Members and Share Transfers of the Company will remain closed from 28th July to 8th August, 1964, both days inclusive. Ordinary shares in lieu of the Deferred shares of this Company will be issued in accordance with the provisions of the Scheme to the registered holders of the Deferred shares as on 8th August, 1964.

By Order of the Board;

S. C. Aggarwal
SECRETARY

Dated: 1st July 1964.

For the INVESTOR

INVESTMENT GOSSIP Investment Climate

The present subdued trend of the stock market is generally attributed to the disappointment over the TISCO results. Expectations with regard to a higher dividend have no doubt materialised but the lack of enthusiasm stems from the fact that the company's profits have only shown a modest increase over the previous year's level. However, it would appear that both operators and investors are in no mood to extend commitments especially since Mr T. T. Krishnamachari's analysis of the investment climate prevailing in the country. The Finance Minister has pointed out in unambiguous terms that all arguments about the need for "a reduction of taxation, greater incentives to the private sector, or Government giving up its determination to pursue socialist objectives" will be futile. And, he is firmly of the view that the last Budget has made large concessions to the private sector.

Calling for a deeper study of the situation, he has offered the following list of factors for consideration.

"It might well be that there is no money or perhaps not enough available for investment. It might even be that the money that is available would not come out for the reason that it might then be taxed. It might also be that the Managing Agencies are no longer able to inspire confidence and attract capital as they once did. And again, the present phase might be the inevitable counterpart of the scramble for new issues which developed in 1960 and 1961".

While all the above factors may be said to have contributed in varying degrees to the stagnation in the capital market, the one factor that has had a bigger share than the others is the first-mentioned one, viz., insufficient money for investment. The last two budgets, between them, have so thoroughly squeezed the individual that he is left with little or no saving that can be invested in industrial equities. Since it is the totality of individual investors that will determine the health of the stock market, it is not surprising that equity values have remained depressed after the Budget. There will be general agreement with the Finance Minister's emphasis on the need for

genuine investors being constituents of the capital market as opposed to the speculator in search of quick gains. In recent years, the number of genuine investors has been steadily increasing and it cannot be claimed that they have been treated with much consideration so far by Government.

NEW ISSUE NOTES

Sri Ramnarayan Mills

Sri Ramnarayan Mills Limited has proposed to issue 10,000 equity shares of Rs 100 each to the existing shareholders in the proportion of one share for every share held. The shares are ranking for proportionate dividend.

BONUS ISSUE NOTES

UCO Bank

As in the case of the Bank of India, the Controller of Capital Issues have advised the United Commercial Bank Limited that the Central Government is unable to give its consent to the proposed issue of 40,000 "A" shares of Rs 50 each as fully-paid bonus shares by capitalising a sum of Rs 20 lakhs out of the sum of Rs 40 lakhs standing to the credit of the Share Premium Account.

INVESTMENT NOTES

TISCO

The Tata Iron & Steel Company Limited has announced an increase in the dividend from Rs 11 to Rs 12 per share, subject to

tax, for the year ended 31 March 1964. According to the preliminary statement of financial results for 1963-64, the company's gross profit for the year is put at Rs 24.44 crores as against Rs 22.21

company will be closed from 28 July to 8 August.

Metal Distributors

The shareholders of the Metal Distributors Limited have unanimously resolved to pay the dividend at Re 1 per share on 3,40,884 fully-paid shares and 50 nP per share on 4,59,016 shares which were partly paid-up as on 31st December 1963. The dividends will be paid within 42 days from the date of the annual meeting.

★

IN BRIEFS

Nenmeny Rubber & Produce Company Limited has reduced the dividend from 15 to 10 per cent, taxable, for the year ended 31 December 1963.

Puthuthotam Estates Limited has proposed an ordinary dividend of 7½ per cent (nil) for the year ended 31 March, 1964.

Bhagalkot Cement Company has declared a dividend of 7½ per cent (nil) for the year 1963.

South Madras Electric Supply Corporation Limited has proposed a final dividend of 6 per cent, making a total of 11 per cent for the year ended 31 March 1964. This compares with a taxable dividend of 10½ per cent paid for the preceding year.

Tirrihannah Tea Company Limited (McLeod group) has reported a higher net profit, after providing for depreciation and taxation, of Rs 2.74 lakhs for the year 1963 as against Rs 2.25 lakhs for the previous year. The directors have proposed a final dividend of fiftyfive per cent, making a total of seventyfive per cent, taxable, as against sixty per cent, taxable, paid previously. Perhaps, out of the results released so far by McLeod group, this is the first company to raise the dividend at all.

★

BALANCE-SHEET REVIEWS TELCO's Impressive Performance

THE Tata Engineering and Locomotive Company Limited has produced excellent working results for the year ended 31 March 1964. Both sales and earnings have constituted a new record in the history of the company. Despite various difficulties and unsettled conditions in the early months of the year, sales have risen strikingly to Rs 51.51 crores from Rs 43.74 crores. The net profit, before providing for depreciation and taxation, amounts to as much as Rs 664.78 lakhs from Rs 550.03 lakhs.

In respect of allocations, Depreciation is raised to Rs 260.53 lakhs from Rs 222.53 lakhs; Development Rebate Reserve to Rs 68.10 lakhs from Rs 27.47 lakhs and Taxation (including surtax) to Rs 200 lakhs from Rs 184.50

lakhs. The transfer from General Reserve No. I is Rs 8 lakhs (Rs 6 lakhs). The dividend on the equity capital is maintained at Rs 14.50 per share, subject to tax.

It may be added that the present dividend is payable on the capital increased by the issue of new shares and the amount required for paying the dividend is much larger at Rs 135.32 lakhs against Rs 116 lakhs. The shareholders will also get the benefit of exemption from income-tax to some extent, as Rs 31.67 lakhs of the dividend amount relate to profits coming under the scope of Section 84 of the Income-Tax Act. This will mean, that nearly 25 per cent of the gross dividend will not be liable for deduction of tax at source. In respect of 1961-62, the shareholders got a net dividend of Rs 11.05 per share.

During the current year, there will probably be a further increase in turnover, as the output of trucks can be increased appreciably. As funds are required for competing the expansion plans, the directors have announced that additional capital will be raised by the issue of 2,00,000 equity shares of Rs 100 each, at a premium not exceeding Rs 50 per share as the Controller of Capital Issues and the directors may agree. The hope has also been expressed that it will be possible to maintain the current dividend on the increased capital.

STOCK EXCHANGES Widespread Losses on Balance

A HALT has been cried to the steady rise in equity prices noticed till the close on Tuesday this week. Although stock markets have resumed trading on a firm note and recorded fresh higher levels early in the week, sustained profit-taking and selling by professional interests have resulted in the markets closing with widespread losses on balance. The news of a higher dividend, announced by the TISCO, has had little or no effect on sentiment.

After initial firmness, equity prices on Lyons Range developed a reactionary tendency owing to renewed offerings.

Dalal Street presented a subdued appearance. The results of the TISCO had not made any impression on the market.

Activity on the Madras Stock Exchange was confined to only a few selected shares.

On the Ahmedabad Stock Exchange, equities reacted sharply after an initial rally.

Selling pressure was responsible for a sharp marking down of prices on the Delhi Stock Exchange.

Although conditions on the London Stock Exchange showed some improvement, the general performance was disappointing after a promising start.

CALCUTTA

THE local stock market started the week on a more confident note and, on firmer advices from Bombay, prices made further headway to record fresh higher levels. Later on, however, there was a reactionary tendency due to sustained selling pressure resulting in the market closing around the lowest levels for the week.

Although the initial support from the professional operators proved to be selective and there was a general disposition to book profits at bulges, the market continued to remain in a cheerful mood till Tuesday when the recent rally made further progress.

The Finance Minister's statement at the inauguration of the Industrial Development Bank that the flow of savings into equities would increase and every effort would be made to sustain such an increase and the hope of higher dividends from the two private sector steel companies were the main stimulating factors.

Although the news of the increase in dividend by Re 1 per share by the TISCO was up to market expectations, the profit figures failed to create much impression, not to speak of the subsequent rumours of a possible right issue. Moreover, the implication of the price and distribution control on 40 per cent of the textile output and the decontrol of the rest were not clear.

Again, the news of the Reserve Bank having imposed margin restrictions on advances by scheduled banks in respect of oils and vegetable oils was interpreted bearishly. Above all, technical consideration following recent sharp and successive rise was also responsible for some liquidation, which developed during the closing days of the week.

Giltedged securities continued to rule steady. The attention of the market was diverted to the new loans. 3 per cent 1986 Conversion Loan hardened further to Rs 64 from Rs 63.90.

Bank shares remained generally quiet.

Although the turnover continued to be limited, Jute shares met with selective support; but higher levels could not be retained till the close due to the emergence of selling pressure. Birlas were at one time pushed up to Rs 34.25 from Rs 33.50, to react at the close to Rs 33.19. Howrah changed hands at Rs 15.87 to Rs 16.44, while New Central were back to Rs 11.12 from Rs 11.56 touched early in the week. Ganges were rather cheap at Rs 13.81 against Rs 13.94. The news of the dividend being maintained at Rs 12 per share was responsible for some enquiry in Anglo-India up to Rs 160.

Coal shares continued to rule dull in the absence of any incentive. Burrakur were nominally quoted at Rs 15.81, while both Central India and Western Bengal hovered narrowly around Rs 8.91.

In the Tea section, only scattered business was possible. Activity in Patrakola was very prominent and

the scrip was pushed up gradually to Rs 225 from Rs 204 due to some speculative buying, while Hasimara were done up to Rs 12.50 from Rs 12.31. Bishnauth had some support up to Rs 15 from Rs 13.87 with Teliapara ruling very steady at Rs 157.

Sugar shares were a neglected counter.

The recommendation made by the Textile Consultative Board to decontrol cloth partially had a favourable effect on the Textiles section, where Cawtex were enquired up to Rs 6.56 and Elgins up to Rs 20. Jaya Shree changed hands on the ex-rights basis at Rs 13.19 to Rs 13.37. J. K. Cotton were, however, dull at Rs 10.75 against Rs 10.94.

The initial rally in the market was led by Indian Irons in which there was a good deal of speculative activity on expectation of a higher dividend. After opening at Rs 25.70, the scrip improved gradually to Rs 25.96. At this level, there was considerable profit-taking due to lower advices from Bombay, resulting in the scrip slipping down to Rs 25.34 before finishing the week at Rs 25.60. In sympathy, TEXMACO moved down to Rs 25.50 from a high of Rs 26.80 and G. K. Williams to Rs 23.56 from Rs 24.37, to close finally at Rs 26.50 and Rs 23.62 respectively. Braithwaite were, however, supported up to Rs 33.69 from Rs 33.25; Britannia up to Rs 10 from Rs 9.87 and Burn up to 275 from Rs 273. Jay Engineering, after a long interval, came in for business at Rs 17.50. Jessop were, however, marked back to Rs 21.12 from Rs 21.50; J. K. Steel to Rs 15.69 from Rs 15.81 and Kumardhubi to Rs 5.00 from Rs 5.37.

Miscellaneous issues moved in sympathy with the general trend of the market. Following were the price trends of a few selected shares.

As on Week's Week's
4 July High Closing

A question of safety

Q How do you ensure there is no child or obstruction behind your vehicle before reversing?

A Before you enter it, walk round from the rear, NOT from the front.

It is dangerous to reverse from a side road or garage into a main road. If your garage opens on to a main road, reverse into it, so that you enter the road driving forward.

If your view to the rear is restricted, get help when reversing.

Road Safety is a matter of life...and death

Land Reform in India—By Prof. M. L. Dantwala	

The second tranche, of the Central Government's borrowing programme for 1964-65, is over; and we shall be considering whether there is prospect of a third tranche to follow, perhaps in September. Because the loans falling due for repayment this year matured early on, it inescapably became necessary for Government to fashion the first tranche as a purely conversion loan; and in April holders of about Rs 141½ crores of the 3-3/4 per cent 1964 and of the 3 per cent 1964 did choose to convert into the two new loans, the 4 per cent 1970 and the 4-3/4 per cent 1989; and this left about Rs 35 crores of the maturing loan that had to be repaid in cash to such holders as had not opted to convert. Since the Budget assumed that gross collections from new loans would be Rs 295 crores, a target of Rs 150 crores (in cash subscriptions) seemed all that was called for in the second tranche of the borrowing programme; for, the right to retain over-subscriptions to the extent of 10 per cent would cover the small short-fall.

In the event Government has been somewhat disappointed: the cash loans fetched only Rs 151 crores, and thus the net new cash brought in so far this year barely exceeds Rs 105 crores. However, the question whether a third tranche will be issued depends upon a number of factors. Firstly, the State borrowing programmes have to be got out of the way: after last year's experiment, when the Centre persuaded the States to desist from the market, on the plea that the Centre itself would borrow on their behalf, did not altogether prove a success, it was decided that, in 1964-65, the States could fend for themselves. They may need to come on the market in an aggregate of something like Rs 100 crores. Will gilt-edged subscriptions of this order, superimposed as they would be on top of the Centre's own cash realisations, quite dry up the resources that normally find sanctuary in Government securities? Our own feeling is that the clientele for the Central and State loans are not precisely one and the same. Except for parcels of State loans that banks take up, because they are under obligation so to do, the main customers for this category of government borrowings are to be found from the provident funds, etc. Naturally, the Life Insurance Corporation also lends a helping hand. But, by and large, the absorption by the States of Rs 100 crores through their own borrowing programmes should not seriously

affect the market for Central Government loans.

Secondly, it remains to be seen whether the 1964 slack season, which so far has witnessed both sharp credit contraction and steep mobilisation of new Deposits, will continue in similar vein. At the moment, there does not appear to be any prospect of new circumstances so interpolating themselves, that the smooth progress of the slack season gets to be disturbed. Hence, we believe that from the point of view of resources accrual with the banking system, conditions would indeed be propitious, in the autumn, for the issue of a third tranche of Central Government borrowing.

Thirdly, there is the fact of the Centre's own need of money. With the price situation not satisfactory, Government will naturally try to minimise the recourse to deficit financing as also to mop up as much as possible of the new Deposits accruing with the banking system. For this reason, too, it seems reasonable to expect that Government will be persuaded to issue a third tranche in, say, September.

Lastly, there is the fact of the new liquidity requirements that the banking system will soon have to conform to. This will naturally entail purchases of gilt-edged by the banks. What we now have to decide is whether the subscriptions last week to the cash loan will for this purpose prove to suffice. It is known that that it is the shorter-dated loan, the 4 per cent 1970, that was the more popular: it attracted Rs 106 crores as compared with the Rs 45 crores that went into the 4-3/4 per cent 1989. However, we should be clear in our minds that the figure of Rs 106 crores by no means represents the magnitude of purchases by the banking system. We would place support from the State Bank at Rs 30 crores to Rs 40 crores; and a similar element from other Scheduled Banks. The Life Insurance Corporation, it is true, would have subscribed another Rs 30 crores or so, but the LIC's money would have been intended for the higher interest-bearing 4-3/4 per cent 1989. So, we would be left to conclude that the Reserve Bank's purchase in cash of the short-dated alone could have amounted to about Rs 30 crores. Its holdings in this respect, as also its holdings additionally representing conversions earlier this year, will be available for sale through the tap to the banking sys-

tem during the remainder of the slack season. Thus, it would seem possible that, in view of such considerable holdings of the 4 per cent 1970 with the Reserve Bank, there is little call for a third borrowing effort. However, other factors—Government's need to keep deficit financing to a minimum—could very well dictate the creation of a special issue for, say, Rs 30 crores around the end of September. Such loan would in the first instance be sold to the Reserve Bank, which in turn would make it available for its banking customers in the weeks following.

To sum up, the first tranche of borrowings was an inevitable success, because the bulk of the maturing loans was with the Reserve Bank; the second tranche was a moderate success, but if Scheduled Banks were to make further purchases from the Reserve Bank tap, it would amount to more than that; and the whole borrowing effort for 1964-65 would be describable as triumphant if Government were to succeed in putting through a third tranche later in the year.

Indian Investment Centre

With the growing emphasis on industrialisation in the Five-Year Plans, the need for foreign exchange has gone up considerably and consequently the role of foreign capital has also gained special significance. With a view to attracting a larger flow of foreign capital, Government has not only made it clear that it will welcome such capital but has also offered several concessions to foreign entrepreneurs who may choose to deploy their capital in India. But foreign capital will naturally like to study the prospects for investment and kindred matters before actually flowing into what to it is a new territory. It will be evident therefore that the capital-needing country should take steps to supply the foreign entrepreneurs with all the information they require. It is here that the Indian Investment Centre has come to play a very useful part indeed since its inception three years ago. The IIC has been doing yeoman service in bringing foreign and Indian businessmen together so as to enable them to set up joint ventures. During the past three years it has assisted 66 joint ventures with a capital cost of the order of Rs 55.6 crores and foreign equity participation of Rs 6.5 crores.

During the year ended 31 March 1964, the total number of enquiries of all kinds received from Indian and foreign entrepreneurs was 750 against 1,050 during 1963-63 and 1,272 during 1961-62. Of these 750 enquiries about 310 were from Indian and foreign entrepreneurs for establishing joint ventures in India. During 1963-64 eight proposals resulted in technical collaboration agreements, while 22 proposals matured into joint venture agreements involving a total capital cost of Rs 3.05 crores. The rather sharp fall in the number of enquiries received by the IIC is, of course, to be attributed to the slowing down of the tempo of economic activity in the country over the past two or three years as a result of various adverse developments, chief of which is the Chinese aggression. The devastating nature of the 1963-64 Budget with its high levels of taxation and the innovations such as the Super profit-tax had also been a big militating influence. Speaking at the annual general meeting of the IIC last week, Mr G. L. Mehta, the Chairman, has however pointed out that the decline in the number of enquiries received by the Centre and the slow tempo of economic activities during the last 3

years, are only temporary phenomena and that once again the flow of foreign capital will pick up before long now that remedial measures are being taken in the country to revitalise the economy.

For a correct appreciation of the role of the Centre, however, one has to take into account the various activities of the Centre, and not only the number of joint ventures that have so far matured as a result of its effort. For if its performance is to be measured by the 66 ventures it has assisted to be established involving Rs 55.6 crores, it cannot be said to have achieved much. But this is to ignore the fact that the main function of the Centre is to explain India's industrial and developmental climate to capital-exporting countries as also to help Indian entrepreneurs to find suitable partners from abroad. In other words, it is laying the foundation, so to say, of a closer relationship between entrepreneurs in the developed countries and their counterparts in our country by acting as a clearing house of all needed information. The activities of the Centre in this regard have considerably expanded during the last three years. It now provides among other things information on various aspects of investments in India including Government policies and regulation. Its monthly news letters have been found to be of great value both by Indian and foreign entrepreneurs and the fact that its fact sheets and brochures are in great demand is an indication of the useful work that is being done by the Centre.

While the Centre can take justifiable credit for its role in attracting foreign capital into the country during the last three years, it has a big task awaiting it in the years to come. For, the tentative Fourth Plan investment targets that are under discussion indicate that foreign exchange requirements of the Plan will be much higher than for the current Plan. This will mean that the inflow of foreign capital during the Fourth Plan period should be very large indeed. Consequently, the IIC will be expected to play an increasingly important role. It is gratifying therefore that the Centre is already engaged in planning its activities on a long-term basis within the country and abroad. Its New York office is functioning for some time now and shortly its European office will be opened at Dusseldorf. Other foreign offices will perhaps be found necessary because the climate in several industrialised countries is becoming increasingly favourable for export of their surplus capital. Mr Mehta has rightly emphasised the need for setting up a technical wing in the Centre with a view to advising Indian and foreign entrepreneurs on suitable projects as also to assist them in framing them.

WORLD SURVEY

Gains in Output and Trade

THE United Nations, after its annual review of the world's economic health, has reported widespread expansion of production in the past year, almost universal gains in world trade, and a rise in commodity prices that increased the earning power of many of the developing countries.

The evaluation appears in the "World Economic Survey, 1963", Part II, entitled "Current Economic Developments".

On the bright side, the Survey cites for example, findings such as these:

Value of world trade: Up 9 per cent between 1962 and 1963.

Gross product or national income: Up 4 to 5 per cent in the various groups of countries (industrialized, primary ex-

porting, or with centrally planned economies).

Price index for primary products (such as foods, fibres, fuels and minerals): Average restored to its 1958 level after a downward trend since 1957.

Developing countries as a group: A trade deficit "smaller in 1963 than in any year since 1953".

Industrial countries: A "continuing upswing".

Countries with centrally planned economies: Accounted for "the most dynamic element" in the trade of the developing countries, with exports to the latter up almost 75 per cent between 1960 and 1963.

On the other hand, there were a number of "sources of imbalance" that showed little tendency to lessen in 1963. They included inflationary pressures in several industrial nations and continued unemployment in one of the others; "disappointing returns from agriculture" in some of the centrally planned economies; and upsurging living costs in a number of developing countries.

Further, despite a "vigorous expansion" in exports of the developing countries, their rate of growth in 1960-63 continued to lag behind the rates achieved in industrial and centrally planned economies, and there "has been an even slower growth" in the imports required for development programmes.

Part II of the Survey consists of an Introduction which reviews over all trends; three chapters, giving details on the industrial countries, the primary exporting countries, and countries with centrally planned economies; and an annex on the primary commodity situation in 1962-63 and 1963-64.

The expansion of production between 1962 and 1963 was "probably more widespread among countries and more uniform among the major regions than in previous years", the Introduction states.

In the industrialised market economy countries, gross national product rose an average of 4 per cent. The average increase in gross domestic product in the primary exporting countries, and in national income in the centrally planned economies, was "probably nearer 5 per cent". These rates of growth represent a slight acceleration over the 1961-62 rates for the first group, a continuation of the previous rate in the second, and a slight deceleration for the third.

In general, the principal factor in the production increase was a rise in output of manufacturing goods—by 5 to 6 per cent in the industrial countries and the primary exporting group (measured by the so-called "value-added index") and by about 7 per cent in the centrally planned economies (measured by gross output).

In contrast, production of primary products tended to lag. Preliminary estimates suggest that, outside mainland China, world output of the major primary commodities entering international trade was only about 2 per cent above the 1962 level—a rate of increase about half of that registered between 1961 and 1962. Partly because of unfavourable weather, world production of basic foods was no greater in 1963 than in 1962.

The poor crops in many countries, along with other factors such as widespread increases in income, stimulated demands on the world market and led to continued expansion of international trade.

The demand for exports contributed to "one of the most notable features" of 1963—a "sharp reversal" in the price index of primary commodities moving in international trade. After a downward trend since 1957, the average of the index for 1963 was 6 per cent above the 1962 figure and thus was restored to the 1958 level.

The price increases had a significant effect on the foreign exchange earnings of a great majority of the less developed countries as well as the exporting nations of North America and Oceania.

The purchasing power of the shipments from the primary exporting countries rose by about 4 per cent in the course of 1963. As a result, their combined national income probably increased somewhat more than the 4 to 5 per cent by which the volume of their gross product expanded.

The rise in prices of primary commodities resulted not only from the effect of bad weather but also from "a more significant improvement in the balance between production and consumption".

"The vigorous growth in international trade which has characterized most of the post-war period continued in 1963", the Survey states. The value of world trade in 1963 was about \$153 billion—an increase of \$12 billion, or almost 9 per cent, from the 1962 figures. "All regions participated in this expansion, but almost two-thirds of it was accounted for by the industrial countries of North America, Western Europe and Japan."

Exports from the centrally planned countries of Eastern Europe, the Soviet Union and mainland China rose by almost \$1.4 billion or 7 to 8 per cent above the 1962 level. Shipments from the primary exporting countries rose by about \$2.9 billion, an increase of between 8 and 9 per cent.

The expansion in the exports of the developing countries in 1963 helped to raise the rate of growth in their export earnings to an average of between 4 and 5 per cent a year for the 1960-63 period. However, this rate was "well below" those attained the other regions. The comparable rate of growth in export earnings of the industrial market economies was between 6 and 7 per cent a year, and for the centrally planned economies was between 7 and 8 per cent a year.

In tracing patterns of commerce, "the most dynamic" element in the trade of the developing countries was the flow of goods from countries with centrally planned economies. This increased relatively little between 1962 and 1963, but in 1963 it was 75 per cent—\$1 billion greater than in 1960. On an overall basis, however, the countries with centrally planned economies provided the developing countries with only 5 per cent of their imports in 1963.

In contrast, trade among the developing countries themselves rose by little more than 3 per cent a year in the 1960-63 period. Shipments from the industrial countries to the developing countries were actually lower in 1963 than in 1960, even though they had increased between 1962 and 1963.

The "most dramatic expansion" in trade during the early years of the Development Decade has been among the industrial market-economy countries. It rose by \$6 billion (10 per cent) between 1962 and 1963, and by more than 8 per cent a year in 1960-63, for a gain of \$14.5 billion in three years. More than three-fourths of the expansion occurred

within Western Europe, and almost 40 per cent of it within the European Economic Community.

Between 1962 and 1963 exports to the EEC rose by almost 9 per cent from North America, about 11 per cent from the European Free Trade Association, more than 17 per cent from within the Community, and more than 20 per cent from Japan. In addition, exports from the less developed countries to the Community "increased sharply" a by about 11 per cent.

In a year of general trade expansion, a "relatively small" number of inter-regional flows contracted. They included a decline in the movement of goods to Latin America and a decline in exports from Latin America to countries with centrally planned economies, "reflecting in part a reduction in sugar shipments from Cuba".

Countries of the European Free Trade Association imported less from Asia than in 1962 (from mainland China and Japan as well as from southern and south-eastern Asia, the Survey states. There was also a decline in the trade of mainland China with the other region with centrally planned economies, as well as with North America.

Trade between North America and Western Asia was below the 1962 level. Western Asia received less from Eastern Europe and the Soviet Union, and Western Europe exported less to the Soviet Union.

"For the rest, expansion was almost universal and the gain was "particularly notable among the primary exporting regions which had not shared fully in the growth of trade in the previous years".

In some regions, such as Africa, southern and south-eastern Asia and Oceania, the increase in export proceeds between 1962 and 1963 exceeded the increase in the two preceding years, largely because of rising prices.

As a result of the sharp increase in exports, there was a significant improvement in the balance of payments of Canada and, to a less extent, the United States.

The combined trade deficit of the developing countries was "smaller in 1963 than in any year since 1954", the report states, since the rise in their spending for imports "lagged well behind the upswing in export earnings".

World exports to the developing countries rose at a rate of only 2 to 3 per cent a year in 1960-63, compared with growth rates of 6 per cent yearly in exports to the countries with centrally planned economies and almost 8 per cent a year in exports to the industrial countries.

"For economic growth to continue at a satisfactory rate, imports will have to be increased", the Survey states. "Such an increase got under way in the course of 1963 in many of the developing countries; for it to be sustained, world demand for their export products will have to rise at an adequate pace. The margin of safety achieved under the generally favourable market conditions of 1963 is a small one in relation to the longer-term growth needs."

Despite the gains registered in 1963, a number of different types of problems continued to exist, or were intensified, in various regions.

In some countries of Western Europe, for example, the rise in commodity prices tended to exacerbate existing inflationary pressures. In the United States, industrial capacity was not fully utilized, and "the continued growth

of the economy had very little impact on the level of unemployment".

In the countries with centrally planned economies, "imbalances have resulted in surpluses of some consumer items and shortages of others". Efforts to raise the productivity of agriculture were "greatly intensified" in several of the countries in that group. "The process of adapting methods of planning and management to the more intricate requirements implicit in economic diversification and growth" also continued in all centrally planned economies", the Survey adds. There was "a distinct tendency to increase the degree of individual economic enterprises.

Weakness in agriculture was also evident in a number of the primary exporting countries. In some of the developing countries, production was no higher in 1963 than in 1962, or was actually lower, and in a number of others "the growth of agriculture is barely keeping pace, with the expansion in population".

A widespread acceleration in the wage-price spiral occurred in several of the developing countries, and the number of countries where cost of living rose by a fourth or more was "significantly greater" than in 1962.

In addition, some of the primary exporting countries lost foreign exchange reserves in 1963—reflecting acute internal disequilibrium—and some sought adjustment by devaluing their currencies. Others were able to maintain external equilibrium by holding down imports, although some were aided by the favourable turn in prices of many primary products.

The Survey was prepared in the United Nations Department of Economic and Social Affairs by the Bureau of General Economic Research and Policies.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

BANK RETURNS

Another Sharp Rise in Deposits

ONCE again, the latest monetary indicators testify to large inflow of new resources to the banking system.

According to the returns of the Reserve Bank, spillover of beginning of the month disbursements is responsible for a small increase of Rs 6.44 crores to Rs 2,507.98 crores in Active Note circulation, as also for an outflow of Rs 0.20 crore in Rupee Coin. Foreign Securities are unchanged at Rs 89.46 crores, and a minor upward adjustment places Rupee Securities at Rs 2,211.23 crores. As a result, the Reserve Bank's cash in the till has been drawn down by Rs 6.43 crores to Rs 11.52 crores.

That Scheduled Banks are very comfortably off is suggested by the substantial increase of Rs 14.71 crores to Rs 106.77 crores in their Reserve Balances; and about half of this rise may be ascribable to the State Bank. Their borrowings show a fractional rise of Rs 0.17 crore to a still very nominal level of Rs 0.48 crore. Again, though the State Bank in the same week has disinvested in gilt-edged for about Rs 4 crores, it may be presumed that other Scheduled Banks did make some purchases from the Reserve Bank tap.

What the magnitude of such purchases could have been, we have till the next week to wait to know; but the increase of Rs 27 crores to Rs 302.30 crores in Investments would suggest that the Centre has instituted deficit financing for about Rs 30 crores, since there was no transfer from Rupee Securities in the Issue Department. Such replenishment of resources was found necessary, because the Centre had to make some payments to the States. Deposits of State Governments have improved by Rs 6.99 crores to Rs 19.79 crores, and additionally their borrowings, by way of ways and means advances, have been cut by Rs 10.43 crores to Rs 25.86 crores. Despite the

proceeds of recourse to created money, the Centre's balances, after meeting the payment to the States and other disbursements, show a fall of Rs 7.13 crores to Rs 53.42 crores.

Lastly, Balances Held Abroad, after week by week declines, have improved modestly by Rs 0.93 crore to Rs 7.99 crores.

The State Bank has now begun to participate in the inflow of fresh resources that the banking system has been experiencing for some time. For the second week in succession, it has reported, in its return for 10 July, there has been an increase in Deposits, which have been marked up by Rs 7.47 crores to Rs 643.51 crores. There has also simultaneously been a contraction of Rs 4.34 crores to Rs 356.99 crores in the total of Advances. However, this two-way improvement in resources notwithstanding, the State Bank shows a fall of Rs 4 crores to Rs 242.84 crores in its gilt-edged investments. This decline would probably relate to the bank's holdings of Treasury Bills which, upon maturity, it did not convert. One implication is that, in this wise, the State Bank has been building up the free resources for subscribing in cash to the new loan. Thus, Other Assets have been marked up by Rs 9 crores to an unusually high level of Rs 31.51 crores, and cash balances are also marked up by Rs 8.61 crores to Rs 30.19 crores. Beginning of the month demand for funds has clearly had but little impact upon the State Bank; but it could now be in a position to subscribe not less than Rs 30 crores—and the figure could be as high as Rs 40 crores—to the new loan.

Deposits of Scheduled Banks, as recorded in their statutory statement for 3 July, have shot up again by Rs 23.91 crores—the State Bank's share of the improvement being placed at Rs 10.57 crores. The gain is mainly under the head of net Time Deposits, which are higher by Rs 16.77 crores at Rs 1,352.80 crores, with net Demand Deposits showing a smaller increase of Rs 7.14 crores to Rs 1,234.54 crores. The fact that the total of Advances has crept up by Rs 5.02 crores to a shade over Rs 1,700

crores can be put down to the demand for funds occasioned by monthly early disbursements. The new resources could scarcely be used for reducing debt; borrowings from the State Bank, in being lower by Rs 0.17 crore, are at their normal minimum level of Rs 20.06 crores; and debt to the Reserve Bank has been further cut by Rs 1 crore to a nominal Rs 0.22 crore. Thus, banks have added to their gilt-edged holdings by Rs 19.41 crores to Rs 674.17 crores, with the State Bank's new purchases being placed at around Rs 9 crores; and cash balances have also gone up by Rs 2.05 crores to Rs 254.90 crores—despite the State Bank in that week reporting a fall in cash of over Rs 9 crores.

BANK PROFITS

PNB Makes More in 1st Half Year

Punjab National Bank Ltd has, following the pattern set by Dena Bank, reported a substantial increase in its profit for the first half-year in 1964, as compared with the relative figure for the corresponding period of the previous year. Subject to audit, and after providing for taxes, the profit has risen by Rs 19.11 lakhs to Rs 69.26 lakhs. The ad-interim dividend proposed is to be maintained at Re 1 per share, absorbing Rs 20 lakhs.

UTI

Clarification

From the applications for the purchase of units received so far, it would appear that some points relating to the sale of units need clarification. For the information of the public, the points are clarified below.

There is no fixed amount of units for sale. Units are freely available and any investor can purchase as many units as he wishes, subject to the units purchased being ten or multiples of ten.

There seems to be an impression among the investors that there should be one certificate for every ten units. This is not so. A certificate can cover any number of units and it would be convenient and from the point of view of safe custody in the interests of the unit holder to obtain minimum number of certificates for the units purchased by him. For instance, a person buying 100 units can ask for one certificate of hundred units or two certificates of fifty each as he wishes. He may, of course, desire for and have ten certificates of ten units each, but this may be inconvenient to him and is not absolutely necessary. At the time of sale of part of the unit holdings, the Unit Trust will issue a new certificate for the balance of the holding free of charge.

In the column "denomination" of the application form, the number of units and not the amount proposed to be invested should be entered. The number as entered in this column multiplied by the number of certificates desired should correspond with the number of units proposed to be purchased.

Concern at Price Spiral

The prevailing high prices of essential commodities such as food-grains have been viewed with concern by the authorities, producers and consumers alike. In his address to the first quarterly meeting of the Central Committee of the All India Manufacturers' Organisation held in Hyderabad Mr Hansraj Gupta spotlighted the adverse impact of price spiral on the consumers and its dampening effect on the country's economic development. It is a tragic commentary on our planning that the authorities have failed to bring the problem under control. Government efforts so far have been at best in the nature of ad hoc coping rather than tackling the problem on a long term basis. Indiscriminate control, inadequate production, import restrictions and the faulty distribution system are attributed to be major factors which allowed the situation to slip out of control. It is common knowledge that agriculture is a weak segment in our economy and unless the farm output is stepped up to the required level price inflation will continue to be acute.

While agricultural sector remains a drag on the country's economy, there is nothing to gloat over the performance of the industrial sector. It is true that industrial production went up by 9.3 per cent in 1963-64 against 6.5 per cent in 1962-63 and 8 per cent in 1961-62. But the rate is still below the targeted average annual growth of 11 per cent and the outlook for the future does not appear to be bright on account of the present stagnant investment market. Investment in industrial undertakings is not forthcoming as it takes time to be before and even good issues which used to be oversubscribed earlier, are quoted at a discount as the morale of investing public has been rudely shaken by the Government policy. In the circumstances relaxation of the tax structure, particularly on company profits and on individual income becomes inescapable. As Mr Gupta suggested the Govern-

ment should at least lessen the tax burden with a view to providing immediate relief to the individuals and the corporate sector. Mr Gupta also urged for the modification of Government policy of immobilisation of savings in the hands of people for the benefit of the public exchequer. What the country requires to-day is higher production to solve many of the complex problems bedeviling it. Will the authorities oblige by providing the requisite fiscal incentives, eliminating the multiplicity of regulations and releasing adequate foreign exchange for imports to keep the country's economy moving?

OIL

Change in Policy?

Consumption of petroleum products has considerably increased in the past few years and the trend should be expected to get further pronounced in the coming years. A recent estimate puts the level of demand by 1970-71 at 25 million tons. Self-sufficiency in petroleum products in the full sense of the term is however not easy to attain for the simple reason that domestic crude oil production can be expected to meet only a part of our growing requirements unless hitherto unsuspected rich sources of oil are discovered within the country in the near future. As at present situated, therefore, it will only be prudent to plan on the assumption that imports will have to continue for a considerable time to come. Our oil policy should aim at obtaining our requirements of petroleum products as economically as possible. In the first place, it will be obvious that our deficiency in crude oil does not necessarily mean that we must be dependent on imports for our oil products. For while we import crude oil, the further processes can very well be undertaken by our refineries. The policy regarding setting up of refineries has undergone frequent change with the result that now we have three distinct categories of refineries in the country: public sector, private sector and a refinery to be built in collaboration with an international oil company. The Coch-

refinery agreement has shown that there are amongst well known oil companies some who are prepared to undertake the expansion of our oil industry on our own terms. The fact that since the finalisation of the Cochin agreement, estimates of refineries have steeply come down is an indication that conditions in the international oil business are conducive to bargaining. The apparent vacillation on the part of Government in arriving at a firm decision in respect of further expansion of the refinery industry may well be due to a desire to take time to study latest trends in refinery economy. As a matter of fact it is reported that Government has now under active consideration a suggestion as to the advisability of setting up a network of small refineries near consumption centres. Similarly, in respect of the import of crude oil also, the international oil market is such that deep and careful study of the market before entering into commitments is most likely to pay rich dividends in the shape of a favourable price. Moreover, the possibility of collaboration with the National Iranian Oil Company in oil production both in India and Iran is an important development that may have far-reaching effect on our future oil policy. With a growing crude oil surplus all over the world, it will be folly not to take advantage of such a favourable position especially when we are a big consumer. Expert opinion is also in favour of India avoiding long term commitments with major oil companies for the purchase of crude if the benefit of the present glut is to accrue to it in full measure.

COTTON TEXTILES

Partial Control

The Cotton Textile Consultative Board has recommended the replacement of the prevailing voluntary price regulation by a scheme which envisages the enforcement of statutory control on popular varieties up to 40 per cent of the total mill production (excluding those meant for export and defence purposes). As the imple-

mentation of the statutory control will take at least three months, it has been agreed that the working of the voluntary price regulation scheme should continue during the interim period. It has also been suggested that during this period the prices of some of the pre-1962 varieties will be fixed by the Textile Commissioner after consulting the trade. Manufacture of new varieties of cloth during the interim period has been prohibited which may otherwise scotch the smooth switch-over to the new arrangement. The selection of varieties that will be brought under the statutory control will be made by an Advisory Committee comprising official and industrial representatives. The controlled varieties will be distributed through fair price shops and vigilance committees will be constituted to check any sort of malpractices. It is expected that under the new system a reasonable proportion of cloth requirements of common use may become available at controlled prices.

The cotton textile industry has welcomed it owing to the ele-

ment of freedom it gets in production and price fixation. But the system is not free of snags. It is a matter for conjecture whether the details which will be worked out within the prescribed period will be realistic to accommodate the increase in manufacturing cost. Even the enforcement of the system will be difficult because of the absence of proper administrative machinery competent to handle the intricate task. The failure to prevent the repudiation by some of the mills of the voluntary regulation of cloth prices is a grim reminder of the inefficiency or ineptitude of such official machineries.

It should not, however, be forgotten that for a long term solution of cloth supply at reasonable prices expansion of cloth output is imperative. The recommendation of the Planning Group on cotton textile industry not to increase the cloth export target in the fourth Plan is an indirect admission of the possibility of a lag in cloth production in the country. Expansion of production capacity of the industry and the rapid modernisation and rehabilitation of the existing outworn machinery will go a long way in boosting cloth output at reduced prices.

COAL Demand & Supply

The continued slump in coal offtake has already led to a downward revision of the Third Plan target and it is not unlikely, considering there is no indication of an improvement in demand, that the target will be further brought down. A possible risk in this process of frequent downward revision of targets of production is the emergence of shortage as suddenly as the present surplus made itself felt. For, the tilting of the balance heavily on the side of production has been brought about by a combination of a number of factors such as overestimate of demand, the slow pace of industrial development in the first two or three years of the current plan, the hasty switching over to furnace oil from coal by industries situated far away from the main colliery regions and a marked improvement in the transport position. The remedial measures that are in train for some time now to quicken industrial development may lead to an improvement in demand for coal before long. Moreover, the expansion of the steel plants with Bokaro project having been taken up in right earnest and the setting up of new power projects will further sizably increase coal offtake. Be that as it may, it will be folly to allow the present pessimism unduly to colour our assessment of the demand for coal in the Fourth Plan, the various targets in respect of which are now on the anvil. What is much

more important than the setting up a target is the devising of ways and means of hitting the target so set up. Another point that will require careful thought is the determination of the quanta of the principal grades of coal. One of the serious defects of the current Plan's coal target is the confusion that has been allowed to prevail for a long time in this regard. Though producers point out that they cannot be held responsible for what is called unplanned production of lower grade coal, the fact remains that while there is a surplus of low grades, there is not enough good quality coal.

* ENGINEERING GOODS Rising Exports

While it cannot be gainsaid that the bulk of India's export earnings has perforce to accrue from traditional items such jute goods, tea etc., a heartening feature of our exports in recent years is the steadily increasing share of industrial products and that too from the highly competitive field of engineering. There has been a sizable improvement in the exports of engineering goods during 1963 to Rs 13.45 crores as against Rs 9.37 crores in the previous year. The trend in the current year is quite promising as will be evident from the fact that exports during the first five months of the current year totalled Rs 5.41 crores as compared to Rs 3.97 crores during the corresponding period of 1963. A particularly encouraging development of exports of engineering goods this year is the addition of new products to the list. Thus, for the first time India has exported railway track materials to New Zealand. Another engineering export first is the sale of pipes, tubes and fittings worth about Rs 4 lakhs to the highly sophisticated market such as the US. Other achievements of the engineering industry are the setting up of a bicycle factory for the manufacture of bicycles in Ceylon in collaboration with an Indian firm, export of storage batteries to East Germany and the continued export of razor blades to Russia. As a matter of fact the demand for Indian razor blades from this country is such that our manufacturers are not able to meet the demand in time owing to shortage of raw materials.

Addressing a press conference last week in Calcutta, Mr S. L. Kirloskar, Chairman of the Engineering Export Promotion Council, has pointed out that though the exports show an encouraging upward trend, the Council is not satisfied with the progress and is taking more vigorous steps to maximise exports. For a survey of the world markets has shown that there is ample scope for increasing exports of simple manufactures or semi processed goods even to highly developed coun-

tries of the West in view of the comparative advantage in raw material and labour costs. The new foreign offices that have already been set up or in the process of being established will certainly be helpful, as are the delegations that visit potential overseas markets. But for the development of export on sound lines much more than these are needed. A large part of this task of bringing about conditions conducive to an orderly expansion of exports is perforce to be undertaken by Government. For only when Government policies remain stable over a reasonable period will the exporter-manufacturer be enabled to put in sustained effort at fostering the exports of our goods. Mr Kirloskar has rightly pointed out that the frequent changes in government policies constitute a big handicap for our exporters. Export promotion is not a simple sale that can be put through over the counter as it were. It is an arduous task requiring among other things well conducted propaganda, active agents abroad, and servicing arrangements. All these can be undertaken only if the exporter is assured that the price he will quote for his products will not involve him in serious loss by an ever changing Government policy at home.

* FERTILISERS Low Offtake

The set-back in agricultural production, which has considerably slackened the pace of the country's economic growth in the current Plan, highlighted the urgency for stimulating farm output to the requisite extent. One of the means adopted to reverse this trend is the stepping up of fertiliser consumption as chemical fertilisers have proved to be one of the quickest and best methods for raising productivity, a sphere in which we have to make much leeway. As the Chairman of the Premier Fertilisers Limited has pointed out at the company's fourth annual general meeting held in Madras, low fertiliser consumption in the country can be ascribed primarily to the meagre finances at the disposal of the farmers and the inadequate attention paid to educate the farmers for utilising more and more fertilisers for bringing about a break through on the agricultural front. This necessitates a speedy launching of an intensive campaign for educating the farmers for promoting the use of chemical fertilisers and extending them credit facilities.

There are other factors to which the authorities will have to bestow special attention. As the Chairman indicated the manufacturing cost of fertilisers can be minimised if the Government lessens the industry's tax burden. The inadequacy of wagon supplies for the transport of fertilisers is another element that

needs expeditious tackling. Storage facilities at important areas should be made available for facilitating the regular and timely supply of fertilisers to the farmers. The State Warehousing Corporation can assist the industry by constructing warehouses at strategic places.

The danger of applying fertilisers without conducting soil research to ascertain the needs of a particular region should not be ignored. Soil research is essential not only for ensuring the utilisation of proper fertilisers but also for avoiding wastage by eliminating the indiscriminate application of fertilisers. It is to this aspect that our research efforts will have to be directed.

* INSURANCE Indian Mercantile Does Well in 1963

There is little need to peer in detail into the balance-sheet and profit and loss account of the Indian Mercantile Insurance Co Ltd; for, all the information that a share-holder may require is clearly and conveniently set out in the Directors' Report; and the Report confirms that 1963 has been a very good year indeed for the company. In the Fire Department, for example, despite a somewhat higher claims ratio, a reduction in commission and expenses of management enabled an increase in the profit transferred from Rs 4.20 lakhs in 1962 to Rs 5.88 lakhs. Similarly, the Miscellaneous Department has, thanks to a reduction in expenses of management from 46.5 per cent of net premium to 42.3 per cent, produced a profit of Rs 1.62 lakhs against Rs 94,015. Finally, the Marine Department experienced a smaller profit of Rs 30,115 against Rs 58,773. Taking all the Departments together, net premium income improved by Rs 2,337 lakhs to Rs 48.90 lakhs, and claims ratio fell from 43.2 per cent to 42.7 per cent. Expenses of management, in being shown Rs 0.68 lakh lower at Rs 19.31 lakhs, now account for 39.5 per cent of premium income against 43.0 per cent in 1962. Thus, the departmental profits rose sharply by Rs 2.07 lakhs to Rs 7.80 lakhs. Including other receipts, the disposable balance shows an improvement of Rs 3.08 lakhs to Rs 11.13 lakhs. Taxation reserve gets Rs 5.75 lakhs against Rs 4.25 lakhs, and the transfer to Dividend Equalisation Reserve has been stepped up from Rs 3.51 lakhs to Rs 5.00 lakhs. The dividend for 1963 is at Rs 8 per share (or at 16 per cent per annum) as compared with a distribution at Rs 6 per share for 1962. The balance-sheet as at 31 December 1963 discloses that, against the paid up capital of Rs 21.15 lakhs, the Reserves and Surplus add up to Rs 28.52 lakhs; and the departmental funds are moreover placed at Rs 27.94 lakhs.

"I must have liberty
Withal, as large a charter as
the wind
To blow on whom I please"
—As You Like It

THE immediate reaction, to Senator Goldwater's commanding triumph at the Republican convention, must be that power over party machine has resulted in a choice which is against that of the rank and file of the party. There was indeed never a time when the American polls held the Senator to be better esteemed than any of the other probable Republican candidates. So, the cynic might be led to think that control of the party were enough to ensure nomination—as it veritably has for Senator Goldwater. But are our memories so short, that we can forget what happened a brief four years ago? Then, it was John Fitzgerald Kennedy who, against immeasureable odds, had the task of trying to secure the Democratic nomination. It was, frankly, a superb understanding of politics which enabled Kennedy to have pledged for him the delegate strength that assured for him the nomination. At that time, too, I dare say that a majority of American opinion would have been found to be against, not just Kennedy, but any Catholic candidate. Senator Goldwater's tactics have not much differed; I fancy he that Kennedy did not believe he had as much a chance of being elected President; and it is a known fact that his, from the viewpoint of the popular vote, was a hairs-breadth victory. Now, here the analogous set of conditions between the two ends. President Johnson is virtually certain of re-election; and it could very well have been this certainty, which prevented other Republican seekers after office to show their hand in 1964. Why, then, should Senator Goldwater have persisted with efforts which had as their end result—apparently—a breaking up of the Republican party itself? The answer, I think, is to be found from an agonising appraisal of the GOP's performance during these many past elections. The party only winning candidate the party has had has been, in the person of Mr Eisenhower, a non-party man; there had been, it may be recalled, attempts to have the war hero run as a Democrat in 1952. And if Mr Eisenhower did defeat Mr Stevenson, it was because he was able to attract to himself a fair number of non-Republican votes. The blunt truth is that the Republicans are today outnumbered.

Meantime, the Democrats also have been having their troubles.

The solid South has been solid enough, but has quite often banded itself in opposition to the Democratic Administration. The 'Dixiecrats', representing the hard-core segregationists, have found common cause with the extremist wing of the Republican party. And so it has happened, in the past, that even a Democratic President has been compelled to rely upon the liberal Republicans to put through his programmes. Logically, then, the Dixiecrats were Democrats no more than in name; and by inference it would appear that the liberals in the Republican party are also outsiders. What, therefore, Senator Goldwater seems to have succeeded in doing is to isolate the outlaws in both parties; he can charge that it is he who is in the mainstream of Republican thought, and that it is the Scrantons and the Rockefellers who are the interlopers. In other words, what Senator Goldwater may have wanted to do may have been to realign the parties in American politics, the one conservative and the other progressive and liberal. Let's face it, America has not really had a two-party system for a long time now: the shade of difference between a Republican and a Democrat has been razor-thin. In such circumstances, people such as Goldwater may have been led to believe that a resurgence of the Republican party had necessarily to be preceded by a purge of those elements which were foreign to it. In November 1964, Senator Goldwater as the new Republican party's candidate will not be a winning candidate; but it is possible that he will have fashioned a more recognisable and forthright opposition. Quite another question is whether such a realignment was necessary. Walter Lippmann, writing in the latest issue of Newsweek, is emphatically against any such realignment: he says, what has made possible "democratic freedom with domestic tranquility" is the fact that, so far, there has not been any "sharp ideological difference between the parties".

It is high time we learn to wait before passing judgement on what our members of Government are often reported to have said when they are abroad. A few weeks ago, for example, it was Mr Manubhai Shah who had to point out that whole sentences of what he had said, about an India without Nehru, had been torn out of con-

text. This week, the communique on the proceedings at the London Prime Ministers' Conference has prompted a quick and unjustified salvo of criticism at Mr T. T. Krishnamachari. The fact of the matter is that with firmness TTK was able to prevent not merely a reference to Kashmir in the communique, but also a discussion at the Conference itself. Misguided fervour, in being one up in the propaganda war, persuaded Mr Bhutto of Pakistan to give a wholly misleading indication to reporters. Sir Alec Douglas Home was sharp in his rebuttal, but the trouble is that the damage had already been done; and India is blamed, in the British press, for not being prompt with its denial; and TTK, in India, for something that he was completely blameless for.

As for the Conference itself: it seems to me that a sullen mood is in process of getting strengthened, that the Commonwealth is ceasing to have any meaning, that it is a liability so far as the United Kingdom is concerned, that it were better that the "undivided family" got partitioned. The industrial members, or the rich relatives, find themselves with quite a few dependents who are importunate poor relations. The misgivings, on the economic side, are buttressed by the vociferousness, politically speaking, of the new

members. Thus, the "whites" are outnumbered, and there is a growing feeling that they will soon get outvoted, too. What benefit, it is asked, is there for the rich relatives? The answer is, by putting the poor relations on their feet, they will be able to ensure that a vast potential market is opened up for them. If I may give just one non-Commonwealth instance: I find that Pocket Books (of America) are publishing a special edition of Erle Stanley Gardner's books for sale in India. It's not just books, but a thousand other commodities for the consumer which in due course will, with Commonwealth preference, be increasingly bought by the poor relations. Had Nehru been alive, today, he would have quickly stopped all such talk of the beginning of the end of the Commonwealth.

By way of postscript, it may be pointed out that TTK has deputised very well indeed in behalf of India's collective leadership. Though other members of the Commonwealth were anxious to meet Mr Shastri, he may not have been able to discuss economic matters of urgent significance. Reports have it, for example, that India may be trying to float a sterling loan in London: clearly, if it goes through, an achievement for TTK.

Olympus - A Letter from Delhi

FICCI on Mahalanobis Report

IN a well prepared brochure, which was released last Monday, the Federation of Indian Chambers of Commerce and Industry have indicated the perspective in which the findings, such as they are, of the Mahalanobis Committee should be viewed for a proper appreciation of the issues involved. The Federation have not undertaken a detailed examination of the data on which the Committee has based its findings, nor have they joined issue on specific conclusions, except the Committee's view on concentration of economic power in the hands of business houses. On this question, the Federation feel that the Mahalanobis Committee's conclusions are based on a study which is vitiated to some extent by subjected valuations. For the rest, they have drawn liberally on the wealth of data presented in the report, to provide the setting in which the dimensions of the problem of inequalities of incomes and wealth could be viewed in relation to the imperatives of economic growth. The brochure affords a timely corrective to the sort of hasty conclusions, based on the still incomplete report of the Mahalanobis Committee, which may lead to wrong decisions in the realm of policy-making.

The Mahalanobis Committee was set up in October 1960 to find out who were the beneficiaries of a decade of planned efforts and how the additional national income generated during the first two five year plans had been distributed among the different sectors of the population. The Committee was given the following terms of reference:

- (i) to review the changes in levels of living during the First and Second Five Year Plans;
- (ii) to study recent trends in the distribution of income and wealth; and in particular,
- (iii) to ascertain the extent to which the operation of the economic system has resulted in concentration of wealth and means of production.

In the first part of the report, which was released in February last, the Committee did not deal with the first item above, namely, changes in the levels of living during the two plan periods, as it was felt that there was need for further processing of the data in the light of the queries raised during the Committee's discussions. Examination of the trends in the distribution of national income led the Committee to the conclusion that the data required for drawing valid conclusions was lacking. However, they have

pointed out that the available estimates and data relating to size distribution of income seem to suggest that the degree of inequality of income distribution is not higher in India than in some other developed or under developed countries; the distribution of income in the urban sector is more unequal, as in other countries, than that in the rural sector. Trends in wages and salaries received by selected occupation groups over the decade 1950-51 to 1960-61 indicate that, with the notable exception of agricultural labourers, the growth in income of employees has generally kept pace with the growth in average income per employed person for the country as a whole. In particular, there is evidence that the growth in incomes of the mining and the factory workers has kept ahead of the growth in average income per employed person. Agricultural labourers as a group do not seem to have shared in the increase of income. The Committee, however, did not find any clear indication of a significant change in income distribution over the plan decade.

It is in regard to concentration of economic power that the findings of the Committee have overtones of controversy. The Committee had assembled data of different types to indicate the presence in the economy of concentration of economic power in terms of income, property and especially of control over the non-Governmental corporate sector. The Committee had also expressed its conviction that in part at least, the working of the planned economy had encouraged this process of concentration by facilitating and aiding the growth of big business in India. The Committee had further observed that, despite all the countervailing measures taken by the Government, concentration of economic power in the private sector was more than what could be justified as necessary on functional grounds, and that it existed both in generalised and in the specific forms.

In conclusion, the Committee recommended that Government should set up the necessary machinery endowed with adequate powers for the collection, examination and analysis of all relevant data on the subject, in order to facilitate the formulation of policy that would combine industrialisation with social justice and economic development with dispersal of economic power. Acting on this

recommendation, Government has set up the Monopolies Commission with a wider range of powers and functions than suggested by the Committee.

While the Committee had chosen to remain non-committal on the question of income distribution, the Federation have assembled data relating to production of commodities consumed by the less well-to-do classes, trends in money wages and profit rates and the impact of taxation on income and wealth, to drive home the point that inequalities of incomes have, in fact, been reduced and that the development of the economy in the first ten years of planning has been consistent with the socio-economic objectives. What hurts is not the distribution, but the general poverty which is the result of inadequate production. Even an equal distribution of the national income would not improve per capita income to any significant extent. The real problem is not one of improving distribution but removing the general poverty. It follows, therefore, that an attempt has to be made to provide greater opportunities for the people to invest, innovate and create employment, improve productivity, and increase production. The scale of industrial enterprises should be considered in relation to the over-riding importance of increased production.

After drawing attention to the rapid growth of the small scale sector of industry which has served to disperse economic power, the brochure argues that the growth of the small scale sector cannot be considered an alternative to large scale enterprise. In the present conditions of technology, some of the goods can be produced only by large industries, and their growth, therefore, becomes a pre-condition to industrial progress. The size of productive units is to be related to the needs of national production. The fulfilment of the targets indicated in the Plan necessitates a rapid expansion of basic industries, the development of which will lay the permanent basis for self sustaining growth. This presupposes large investment, involves foreign collaboration-technical and financial—and entrepreneurial efficiency, and, therefore, requires the establishment of large enterprises. The brochure underlines the very important consideration that to collaborate on equal status and to bargain from strength, domestic enterprise must be sufficiently large with wide experience of business

in diverse fields, ability to take right decisions and to implement them with ability and expedition.

Without the establishment of large industrial units, it is pointed out, production, in many fields would have cost more to the general public. The finances of joint stock companies reveal that the rate of profitability of large enterprises is not different from that of smaller units. The large scale sector, it is argued, promotes social objectives by securing the maximum benefit of technology, management and economy of indivisible factors.

The indispensability of large enterprises implies the leadership of big business houses which have to pioneer development in many new fields of industry. Still there is a vast field for new entrepreneurs. During the three years ending 31 March, 1963, the brochure points out, out of the total number of 4211 industrial licences issued, the number of licences that have gone to leading industrial houses in the country was only 182. In the light of these facts, the Federation feel, that the conclusion of the Mahalanobis Committee that big business complexes have grown more rapidly and control a substantial portion of industrial activity, is based on a study which implies subjective valuations. The Committee has not defined its concept of controlling authority which is basic for a valid assessment on the existence of concentration. If the concept is defined broadly, the degree of concentration would appear large. On the other hand, if the concept is defined with precision, concentration would not appear to pose a social problem.

The Committee has examined the question of interlocking directorships at some length. While recognising that there are some factors which necessitate a certain degree of interlocking of directorships, the brochure points out that, in spite of the general dearth of entrepreneurial talent, directorships in India are shared by the largest possible number of industrialists and businessmen.

The Federation have pointed out that situations leading to the emergence of monopoly in the form of cartels and mergers have not arisen in India, partly because the forces of competition are strong enough to counteract any control of supply by any individual producer. Even in fields in which competition was not pervasive (for instance, matches, metal containers) the natural pressures of growth and free play of individual initiative have created conditions of competition. The Federation have predicted that the Monopolies Commission will find very little that is fundamentally wrong in the private industrial organisation and very much that is exaggerated on account of emotive definition of words and unstudied description of situations.

The brochure draws attention to the decline in the ratio of retained profits to profits before tax, from 29 per cent in 1951 to 21 per cent in 1961, which has made it difficult for industry to finance investment out of profits. For the same reason industrial units have been obliged to resort to loans to an increasing extent,

from official as well as private sources. The continuous diversion of resources to the Exchequer through increase in the rate of taxes, from 6 per cent of national income in 1950-51 to 14 per cent in 1963-64, has left smaller funds for private investment and distorted the pattern of financing of private industry. There are limits to the proportion of loan finance to total capital, and, therefore, if the tax policy is pursued with the same rigour, it would be difficult for industry to secure adequate finance for future development, even from institutional sources. The national effort, it is emphasised, must be directed towards achieving the highest production from the available resources. The Federation are firmly convinced that other objectives are incidental and would be secured without adopting any deliberate means.

Advance Action

The Central Government is reported to have asked State Governments to take advance action on the programmes which are under consideration for inclusion in the Fourth Plan for Agriculture. This indicates a

proper concern for creating the conditions for effective implementation of the programmes. The record of the Third Plan would, perhaps, have been less dismal, if sufficient attention had been given to this aspect of the problem of implementation while the programmes were being formulated.

Apart from lack of adequate preparation of the ground, the large number of programmes that are included in the Plan for one reason or another, without any relation to capacity of the machinery available for implementation in the field, has been responsible for the poor showing of many Third Plan programmes which are admirable on paper. There are highly qualified specialists at the Centre who formulate the programmes with the help of foreign experts. Possibly, there are also competent authorities at the State headquarters to pass them on to the implementing agencies. But the actual burden of implementation in the field falls on the Village Level Worker who is expected to be a prodigy of technical knowledge and organising ability.

The VLW, as this functionary is called in officialese, has been described as the cutting edge of the C.D. programme. The annual conference on Community Development meeting next week in Delhi, is expected to devise measures to sharpen the cutting edge. While training programmes will not doubt be useful, chances of effective implementation of agricultural development programmes will be definitely improved if a selective approach is adopted in regard to their inclusion in the Fourth Plan.

The Government efforts to resuscitate the agricultural sector at least in the coming Plan are laudable and the advance action will necessarily help avoiding many of the mistakes that have been committed during these years. But one should not be complacent of the outcome as though the authorities generally proceed with such programmes with gusto, lamentably enough, lethargy and inertia set in either at the Central or State levels with the result that several targets remain unfulfilled. It is to this aspect that Government has to pay special attention.

Market NEWS and Trends

WIDE fluctuations in the price of heavy goods continue to characterise trading in the jute goods market. While hessian is subdued, heavy goods are an active market. B Twills Ready commenced the week at Rs 116.20 and after being done down to Rs 115.45 have again regained lost ground to close higher on balance on Wednesday at Rs 116.35. The earlier reactionary tendency in sacking stemmed from the belief that availability of this category of goods will increase following the publication of figures for production of jute goods in June. The increase in total production to 107,000 tonnes from 101,460 tonnes in May is due to the fact that mills have worked longer in the former month for 200 hours as compared to 192 hours in the

previous month. An interesting feature of the production statistics for last month is the sizable increase in the output by mills of sacking from 38,500 tonnes to 41,200 tonnes. It is evident that mills have been placing the emphasis on sacking production in view of the good demand for it as compared with hessian. The biggest buyer of sacking has been the Government of India and it is expected that considerable further offtake from this source is in the offing. Indications are that internal offtake generally will be well maintained for some months to come. The hardening tendency toward the close of the week is attributed to the belief that since production in Pakistani mills is adversely affected owing to a strike of workers, overseas demand for sacking may also show some improvement. As for hessian, the market is still awaiting

revival of interest from the US and other big buyers. But it would appear that even if these consumers want substantial quantities, they are unlikely to be in great haste over augmenting their inventories. This is because foreign buyers are now confident that they will be able to satisfy their requirements as and when they need them and at a reasonable price. There is no working time agreement in operation now to restrict output and considerable attention is being paid by the authorities to ensure that there is no runaway rise in prices as a result of unhealthy speculation.

In the meantime, the raw jute market is steady mainly because arrivals of new crop jute still continue to be meagre. The fact that so far no compulsory quota has been issued to the mills during the corresponding period last year is considered significant. In this regard it may be noted that the ideas about the availability of jute this season has undergone some change. Earlier it is said that the total world availability may show a diminution as compared with last year as indications are jute production elsewhere including Pakistan has suffered a setback. As far as Indian production is concerned the belief still seems to be that a large crop, as large as last year's, if not larger, will be harvested. But there are people who believe that the setback to the crop in the Daisee districts of West Bengal due to draught and excessive rains in Assam are factors that require to be taken into consideration in any estimate of the total crop this season.

IN the Export Sale held in Calcutta this week, offerings consisted of 25,796 packages of Leaf grades. There was a fair general demand with buyers following quality closely. Plain liquoring orthodox teas received less support and came to an irregular and easier markets with Fannings a weak feature. Medium Assam and Doora teas were irregularly easier. The bright liquoring teas were, however, sold well and were sometimes dearer with Orange Fannings a strong feature.

Best Assam CTC teas came to a lower market although a few selected lines realised higher rates. Medium CTC with improved liquors were dealer. The remainder were, however, sold at irregular rates. Flavoury Darjeelings continued to be well competed for with some useful prices being realised. Others were irregular and were sold well following quality.

Whole Leaf grades, although well absorbed, were slightly easier with tippy tea selling well. Following rates were quoted: Clean Plain Pekoe Rs 5.10 to Rs 5.30; Plain BP Rs 4.30 to Rs 4.50; Plain Fannings Rs 4.00 to Rs 4.20; Medium Assam CTC BP Rs 6.00 to Rs 6.80; Medium Assam CTC Fannings Rs 6.00 to Rs 6.80; Best Assam CTC BP Rs 7.00 to Rs 8.20 and Best Assam CTC Fannings Rs 7.00 to Rs 8.20.

In the internal sale, offerings consisted of 14,265 packages of Dusts. Demand, though good, was less general and a little weaker than in the previous week and teas were consequently sold at lower levels. C1C descriptions continued to sell well, although at a discount. The brighter Assam orthodox teas met with good demand; but the balance continued to receive support and were slightly easier.

Legg cuts were readily taken up, although the leafier kinds registered a slight decline. Following rates were quoted:—Plain Orthodox Dust Rs 4.10 to Rs 4.50; Medium Assam Dust Rs 5.00 to Rs 5.80 (nominal); Legg cut Dust Rs 4.90 to Rs 5.30; Medium Assam CTC Dust Rs 5.80 to Rs 6.40 and Good Assam CTC Dust Rs 6.80 to Rs 7.20.

A quantity of 7.10 lakh kilogrammes of Leaf was offered in the

Cochin market. The quality of teas from Nilgiris showed improvement, while teas from other districts were irregular. The market opened with general demand, which lessened in the latter part of the sale. There was good support for the low mediums and mediums although prices for these were irregular and often easier. Good mediums met with a strong support and were sold at firm rates.

Improved highgrowns met with a good enquiry and were dearer. Others in this category were irregularly lower following the quality of offerings. Clean Black Leaf types were steady, while plainer descriptions came to an easier market. Teas of unorthodox manufacture were well supported at irregularly dearer rates. Orange Pekoes met with a keen competition and were dearer, these being the strongest feature of the sale. Pekoes, however, came to a lower market. Tippy sorts were sold at around last week's prices.

In the Coonoor market, offerings were 107,294 kgs. The quantity generally was similar to the last sale. Some highgrowns slightly improved. The market opened quiet and was steady throughout the sale. Prices in general were competitive at about last rates. Nilgiri Brokens were sold at about last level with good Nilgiri dusts occasionally dearer. CTC met with usual enquiry although at lower rates. Whole Leaf grades were sold easier. Nilgiri Wynaads met with good support at about steady rates. Good Nilgiri Dusts Rs 3.85 to Rs 6.00; other Nilgiri Dusts Rs 3.75 to Rs 4.10; Nilgiri Brokens Rs 3.60 to Rs 4.15; Nilgiri Wynaad Rs 4.00 to Rs 5.00 and CTC Rs 3.80 to Rs 3.95.

Production of tea in Ceylon in May 1964 declined to 51.62 million pounds from 57.38 million pounds in the corresponding month of last year. Despite the shortfall, however, the total Ceylonese outturn of tea, in the first five months of this year, at 225.71 million pounds has exceeded the production in January/May 1963 by 4.78 million pounds.

A quantity of 8,683,479 pounds were offered in the Colombo market. A larger selection of high-grown BOPs from western districts met with rather less demand and prices eased, while light liquoring descriptions and inferior leaf broken were irregular. Medium broken were irregular, but generally eased. Uva, teas, which continued to improve in quality, met with good demand at irregularly dearer rates. Low-grown teas realised fairly firm rates, while BOPs tended a little dearer. Apart from improved Uvas and plain medium descriptions, BOP Fannings were in less demand at irregularly lower rates.

According to a report released from Dacca, a record production of 60 million pounds of tea crop is expected in Pakistan this year. This shows a rise of 2.85 million pounds over last year's production, which probably will be the high-

est ever achieved since independence. The clear picture of the crop will be known by the end of August next when half of the annual production is usually obtained and then the question of export will be considered.

The new area brought under tea, during the last four years, is 10,579 acres, which has raised the total acreage under tea to about 87,000 as on 31 March 1964. In addition, about 25,000 acres have been rehabilitated by infilling and replanting. In the proposed tea extension programme under the Third Five-year Plan about 28,500 acres of land will be brought under tea cultivation, thus bringing the total area expected to be under tea by the end of the Third Plan to 118,000 acres.

The London auction held this week, offerings were 19,189 packages including 2,154 packages from Northern India. There was again a strong demand for new season's Assam teas; but Dooras showed some irregularity. Medium Africans were fully firm to dearer; but the poorest sorts remained steady on last week.

The cotton futures market in Bombay displayed generally a firm trend thanks mainly to the fresh wave of buying of speculative nature. Surprisingly enough, the futures market has apparently ignored the reports about congenial weather conditions and lack of support from spot houses and during the week's dealing the ruling contract Jarilla August registered a net gain of Rs 6.00. But the turnover did not measure up to the expectations.

The ruling contract which opened the week on a steady note turned easy in the initial deals but later staged a smart recovery to Rs 744.25 before finally closing at Rs 742.75. The set-back in the mid-week was attributed to selling pressure spawned by the apprehension that there would be heavy tenders against the contract. But this phase was of a short duration and the contract tended to move upward, thanks to the good bull support and absence of selling.

Sluggish conditions prevailed in the spot market at Sewri during the week under review. Demand from upcountry centres was at a low ebb and only scattered buying in selected varieties such as Laxmi L 147, CO 2, Digvijay and Kalyan was reported. The trade circles have become restive on account of the delay in taking action by the Textile Commissioner on the abolition of export duty on Bengal Deshi and other allied matters.

In the import section the announcement of export selling prices of Egyptian cotton was welcomed by the trade. The export section

was devoid of any development and the possibility of a revival of business is remote if the Government fails to accede to the trade's legitimate demand.

Consumption of cotton by the domestic textile mills from 1 September 1963 to 31 March 1964 smartly moved up to 3,561,965 bales from 3,265,941 bales in the relevant period in 1962-63.

Description	1 Sept. '62	1 Sept. '63

Other Countries ...	873	1,684
Total ...	257,203	208,293

It is disturbing that India is not rising to the occasion to take advantage of expanding exports of cotton piecegoods to Mauritius which has a good potential for cotton textiles.

India is enjoying a vantage position thanks to the preferential tariffs with other members of the Commonwealth and if it allows this situation to slip Japan is likely to emerge as a serious competitor to price India out of this market. It is disconcerting that Indian exporters are paying only scant attention to the suggestions and complaints of the buyers with the result that our exports hardly come to 30 per cent through it and can easily be pushed up to 50 per cent of the Island's cloth imports. Demand for better processed textiles more often than not goes

unheeded and little action is taken to improve the standard of packing despite the common complaint thereon. Cases containing cloth very often are broken in transit and the contents are stained either by tar oozing from kraft paper packing or otherwise. Will the authorities look into this matter and apply remedial measures promptly for enhancing foreign exchange earnings of the country?

The Egyptian Cotton Commission's announcement of export prices of new crop cotton is to be acclaimed as it puts an end to the longish period of suspense and sets at rest all needless speculations about the country's policy. Though delayed, the announcement is surprising in that the prices notified for Giza 45 and Me-noufi have been found to be lower than the offers which importers in India were reported to have been submitted to shippers in Egypt on behalf of their clients. Offers received from Alexandria which are approximately Rs 75 to Rs 100 lower are permitted to be transferred in rupees after the finalisation of the special rupee agreement between India and Egypt. Offers for Giza 45 are reported to be comparatively small on account of a poor crop and encouraging world demand. The early finalisation of the rupee agreement between the two countries will facilitate the expeditious import of such growths.

Exports of raw cotton from India from 1 September and 27 June declined to 219,739 bales from 269,419 bales in the relevant period last season. As usual Japan figured as the prominent buyer of Indian cotton though its offtake during the period under review was marked steeply down to 160,902 bales from 217,605 bales. Shipments to the continental countries were slightly higher at 25,827 bales. There has been a smart increase in the offtake by the United States to 17,000 bales from 12,700 bales. Exports to the United Kingdom moved up to 5,277 bales from 4,366 bales.

The cotton piecegoods market in Bombay presented sluggish conditions. Demand from buyers was practically nil while offtake was only a trickle. The new scheme for cotton price control failed to have little impact on the market. Prices, however, continued to ride at the prevailing high levels.

The mill made sector was almost neglected. Upcountry buyers were conspicuously absent but the trade is optimistic of their return within a week or so on account of the remote possibility of a price reduction. Small business was reported with Kerala on account of the proximity of the Onam celebrations.

Seasonal goods, managed to attract only spasmodic interest. Inferior coatings, flannelette and

longcloth met with encouraging demand. Superior varieties were in short supply.

The export section also remained lethargic and business was small owing to the comparatively high prices in the market. Only stray business was done with the UK. Sudan was satisfied with a small quantum of sheetings and voiles. Australia was active in usual qualities while East Africa exhibited enthusiasm in dyed drills and sheetings. Other destinations were dormant during the week under review.

Spices—Rise in Export Earnings

THE Spices Export Promotion Council has announced that India has earned Rs 15.3 crores from exports of spices during 1963-64 as against Rs 13.4 crores during 1962-63. While chillies, cardamom, ginger, tumeric, celery seed, etc., have contributed to increased earnings of Rs 2.88 crores over that of 1962-63, there has been a decline of Rs 89 lakhs in the earnings from black pepper, coriander and garlic during the same period.

The Council attributed the declining trend in the international prices of black pepper to the cheaper price at which the commodity from Singapore and Indonesia is sold to the USA, as the possible reasons for the smaller earnings from pepper during the last financial year. In the case of coriander, the Council states that the decline is due to lower production and higher internal prices as compared to world prices.

In the Cochin market, the rate for ready pepper is quoted around Rs 353 per quintal. There is a growing feeling that the prospects have improved for exports to America, which had earlier withdrawn from the Indian market on account of the high prices ruling in India. Now the news, that the Indonesian Government has revised the export price for pepper from 30 cents to 38 cents, has revived the hopes. Because of the upward revision by Indonesia, the pepper price in America has improved by about 3 cents to 34.5 cents. The Indian price is still higher by about 4 cents; but shippers hope that America will again turn to India. It is felt that American buyers will prefer to pay 39 cents for Indian black pepper rather than paying 38 cents for Indonesian goods.

In the case of Cashew kernels, exports have shown a further rise in terms of value in May, at 2.15 lakh cases of 50 lbs each, valued at Rs 233 lakhs as compared with 2.43 lakh cases worth Rs 223 cases in May 1963. Over the five months from January to May this year, 8.79 lakh cases of cashew kernels valued at Rs 921 lakhs were exported as against 9.76 lakh cases worth Rs 883 lakhs during the corresponding period of last year. The higher export earnings,

despite a reduction in the total quantity shipped, have been due to a rise in the prices fetched abroad.

During the same period, exports of cashewnut shell liquid has also increased both in quality and value, from 2,351 tonnes valued at Rs 28 lakhs to 5,400 tonnes of the value of Rs 76 lakhs. Exports of cashew kernels to East European countries, under the trade agreements in force with the USSR, East Germany, Czechoslovakia, Poland, Bulgaria, Yugoslavia and others, have been on the increase in recent years. India had shipped over 14,000 tonnes to these countries in 1963 as against 10,300 tonnes in 1962.

The Spices Export Promotion Council has stated that the recovery staged in the exports of chillies to Ceylon and a check to the declining trend in cardamom prices were due mainly to the measures initiated by the Government of India and the Government sponsored organisations. In the case of Ginger, there has been a slight decline quantitatively by about 279 tonnes. But, owing to higher prices for Indian ginger, the earnings rose to Rs 63 lakhs in January/March 1964 from Rs 45 lakhs in the corresponding period of 1963.

RUBBER Outlook

In the latest annual report, released by the Malayan Planting Industries Employers' Association it is stated that natural rubber will eventually lose out to synthetic unless its cost of production is appreciably and progressively reduced. It is also added that competition from synthetic is becoming progressively more severe and the growing surplus of both synthetic production and capacity must inevitably continue to have a severely depressing effect on the price of natural rubber.

Despite the vast strides made by the natural rubber industry in increasing yields and rejuvenation, its share of world consumption of new rubber has fallen steadily over the past few years. It is now estimated that it will fall further in 1964 to 47 per cent of the total.

The report adds that continuation of the natural rubber industry as a viable and vigorous industry can nevertheless be assured provided excessive and unreasonable demands are not made of it. Appreciable and continuing increases in productivity will, however, be necessary for the progressive reduction in production costs, which is essential for the industry's survival.

In the USA, consumption of synthetic rubber continued at a high rate during May and at a greater rate than total consumption. There was a small drop in the use of natural rubber and also of reclaimed rubber. During May, 119,517 long tons of synthetic rubber were consumed as com-

pared with 114,078 long tons during the same month last year. The consumption of natural rubber dropped to 39,520 long tons from 39,812 long tons recorded in May 1963.

CHEMICALS AND DYES

Support from Stockists

In the Bombay market for Dyes and Chemicals, prices recorded a sizable improvement, thanks to the shortage of goods and support from stockists. Sodium Nitrite, Rongalite and Ultramarine blue in the chemicals section and Naphthols and brown dyes among dyes were prominent with impressive gains.

The rise in sodium nitrite was due to poor supplies. Ultra-marine blue was pushed up to Rs 400 per 50 kg from Rs 360 quoted about two months ago. Such a steady rise in prices is attributed to acute shortage of the material in the market. The depleted stocks are quite inadequate to meet the demand, while fresh supplies are slow in arriving, not to speak of the fact that imports have declined of late. The indigenous goods are quoted at Rs 260. A sharp fall in the price of Camphor is, however, pronounced due to persistent arrivals and low demand.

In the Dyes section, prices of Naphthols are forging ahead on reports that the manufacturers of ASG have stepped up the prices from Rs 44 to Rs 51 per kg. It is stated that the stockists and dealers are not inclined to offer the article even at the current high levels, while the consumers are forced to cover their requirements at rising prices. The large disparity between the supply and demand in respect of naphthols is reflected in the difference between the list price and the open market price, viz., Rs 31 in the case of ASG and of Rs 22 for ASW.

NON-FERROUS METALS Divergent Trends

In the Bombay market, prices of Non-Ferrous metals have shown a mixed trend. As the selling pressure seems to have subsided, the downward tendency in Tin prices has been halted. Moreover, stocks are said to have gone down due to the absence of fresh supplies against offtake. The rate for the metal remains steady at Rs 295 per 10 kg.

In the Copper section, Conductors continued to be well maintained on account of steady enquiry. Zinc has recovered from the recent low levels owing to speculative purchases, induced by the poor stock position. Lead has lost some ground.

On the London Metal Exchange, continued brisk industrial demand

is keeping the prices of the non-ferrous metals high in combination with factors of labour unrest and political uncertainty casting doubt on the size of future supplies. On the whole, the trend has, over the past twelve months, been consistently on balance upwards.

OILS AND OILSEEDS Slump in Groundnut Prices

A sharp decline in the prices of groundnut and groundnut oil was the main feature of trading in the Bombay Oilseeds market. Linseed prices have also recorded a decline, while Castorseed ruled comparatively steady.

Favourable weather reports, the weakening of speculative support and the decision of the Reserve Bank to increase the margin on bank advances against groundnut oil and vanaspati were the main bearish influences. In fact, the Government had already decided, in principle, to stop fresh exports of groundnut oil for the season although shipments against previous business would be permitted.

Certain circles feel that the acute shortage of groundnut and groundnut oil may ease considerably and the prices may decline substantially in the near future provided the reported decision of the Government is implemented soon.

The landslide in the groundnut section had a bearish impact on the Linseed section. Partly because of the withdrawal of speculative support and partly owing to lower North Indian advices in respect of rapeseed, ready linseed moved down from Rs 48.50 to Rs 47.25 and Linseed oil from Rs 20 to Rs 19.60.

In the castorseed section, trading was mostly of a squaring-up nature. Some of the prominent operators were stated to be unloading their purchases gradually at higher levels. Prices of ready castorseed eased by 12 nP and castor oil by 25 to 30 nP.

In the Madras market, an easier tendency in prices was noted in groundnut and groundnut oil markets. Apart from the directive by the Reserve Bank to the scheduled banks to maintain a minimum margin of 50 per cent in respect of advances, the removal of the powercut and possibility of larger supplies were helpful in bringing down the prices. Arrivals of seeds were 25 to 30 tons a day, while local small crushers were buying these stocks. The standing crop in the Pollachi/Coimbatore area is reported to be well and, according to market expectations, the yield will be 70 per cent of the normal.

In the oil section, the rate for the ready position has declined to Rs 233 from Rs 245 per quintal. Local vanaspati interests and Calcutta operators are reported to be active, while holders of stocks are reported to unloading in small quantities.

For the INVESTOR

INVESTMENT GOSSIP Uncertainties Galore

THE present cautious undertone in the stock market is generally attributed to renewed apprehension about the size of the IISCO dividend and the disappointment over the lower-than-expected profits of TISCO, but a close examination of the investment climate in the country will show that in any event an upsurge in equity values is a remote possibility, unless some of the major adverse influences are mitigated. As has been repeatedly emphasised in this column, the last budget having taken away his savings in diverse ways, the individual is in no position to think of large investments in the stock market. In the meantime, even the little investment that may percolate despite all the obstacles in the way is being sacred away by new restraining influences. In the first place, the decision of the commercial banks to raise their average lending rate from 7½ per cent to 8½ per cent will further increase the industrial costs and since selling prices of most commodities are controlled the ultimate loser may well be the shareholder. Investors are also naturally worried over the persistent demand from labour for the early implementation of the Bonus Commission Award. Press reports to the effect that some of the Central Ministries themselves are of the view that the Award if implemented without modifications would have serious repercussion on the economy as a whole have not been able to allay the apprehension of operators presumably because of the obvious difficulty in satisfying labour.

With the advent of the Unit Trust, the small investors, whose number has been steadily increasing in recent years, have presumably decided to buy Units rather than industrial equities directly on the stock market. Information so far available indicates that the Unit Scheme is gaining in popularity and that buying will considerably increase in the second half of the month since there is no guarantee that the Units will be available at par after 31 July.

Usha Hunger

Usha Hunger Hydraulics Limited, Calcutta, a new company, is to issue capital of Rs 28 lakhs, consisting of Rs 20 lakhs in equity shares of Rs 10 each and Rs 8 lakhs in 9.5 per cent cumulative redeemable preference shares of Rs 100 each. Out of these, equity shares of the value of Rs 5.2 lakhs—Rs 1.2 lakhs against technical know-how and Rs 4 lakhs against supply of machines, hooks, jigs, fixtures etc—will be offered for subscription to Walter Hunger International, West Germany. The

at par, consisting of Rs 17.61,250 in equity shares of Rs 10 each and Rs 25 lakhs in 25,000-9.3 per cent cumulative redeemable preference shares of Rs 100 each. The money will be utilised for financing the expansion involved in the manufacture of virgin aluminium ingots, circles, etc.

Indodan Milk

Indodan Milk Products Limited, Calcutta, a public limited company, engaged in processing milk food and other allied products, is to issue capital of Rs 34.93 lakhs, divided into equity shares of Rs 100 each for cash, at par. Out of the issue, such number of shares as would enable the company's scrip being listed on recognised stock exchanges will be offered to the public by a prospectus. The capital will be utilised for financing the existing activities of the company.

Food Specialities

Food Specialities Limited, Delhi engaged in the manufacture of sweetened milk, baby foods, etc., is to issue further capital of Rs 120 lakhs, divided into 1,20,000 equity shares of Rs 100 each. Of this, shares of the value not exceeding Rs 84 lakhs—Rs 72 lakhs for consideration other than cash against the import of plant and equipment and Rs 12 lakhs for cash—will be offered to Nestle Holdings Limited, Nassau, Bahama Islands, and the balance of Rs 36 lakhs to the existing Indian shareholders for cash, at par. The money will be utilised for financing the setting up of a plant for the manufacture of a new item, viz., instant soluble tea direct from green leaves.

capital will be utilised for the manufacture of hydraulic and mechanical tipping gears of automobiles.

Republic Forge

Republic Forge Company Limited, Hyderabad, is to issue capital for cash, at par, of Rs 1,47,60,000 consisting of equity shares of Rs 100 each of the total value of Rs 112.60 lakhs and 35,000 cumulative redeemable preference shares of Rs 100 each carrying dividend at 9.3 per cent. The money will be used for the establishment of a forge plant in collaboration with Renault Engineering Company of Paris.

Asian Electronics

Asian Electronics Limited, Bombay, a public company registered on 21 January 1964 for the manufacture of carbon resistors, is to issue capital of Rs 35 lakhs (including Rs 7,38,500 already issued privately) in equity shares of Rs 100 each for cash, at par.

Shamsher Sterling Cable

Shamsher Sterling Cable Corporation Limited, Bombay, engaged in the manufacture of rubber insulated wires and cables, is to issue further capital of Rs 35 lakhs divided into 50,000 equity and 20,000-9.5 per cent cumulative redeemable preference shares of Rs 50 each, for cash at par, of which equity shares of the value of Rs 12.5 lakhs will be allotted as to Rs 3.5 lakhs to Showa Electric Wire and Cable Company Limited, Japan, and Rs 9.00 lakhs to Mitsui and Company Limited, Japan. The capital will be utilised for financing the expansion of the existing activities of the company.

Central Pulp Mills

Central Pulp Mills Limited, Poona, who was accorded consent on 8 April 1964 to issue capital of Rs 245 lakhs, has not been allowed to increase the said amount to Rs 257.50 lakhs, divided into 1,76,250 equity and 81,250 cumulative redeemable preference shares of Rs 100 each carrying dividend at 9.3 per cent per annum for cash at par. Out of the issue, such number of each kind of shares, as would qualify the

scrip to be listed on recognised stock exchanges, will be offered to the public by prospectus.

BONUS ISSUE NOTES

India Paper Pulp

India Paper Pulp Company Limited, Calcutta, is to issue bonus shares of the value of Rs 35.28 lakhs, divided into 3,52,800 equity shares of Rs 10 each, on capitalisation of the share premium account to a like extent. The bonus shares will be offered at the ratio of two shares for every five shares held. The company is engaged on the business of paper and paper board manufacture.

INVESTMENT NOTES

Seshasayee Paper

An interim report on the development and progress of Seshasayee Paper and Boards Limited, during the year ended 31 March 1964, indicates clearly that the initial teething troubles have been got over and the newly-installed plant and machinery have been operating efficiently since August last year when the unit was taken over after fulfilment of the performance guarantee. During the current year, an increase in output to over 20,000 tonnes is expected, as some balancing equipment is proposed to be installed in the pulp plant.

TELCO

Telco is now engaged in implementing a plan for raising the output of trucks to 18,000 units from 12,000 units. The newly-installed plant and machinery may be in operation before the end of this year. This part of the programme has been financed by an earlier loan from USAID for \$13.7 million. The second loan is for \$11.8 million and it is expected that foundry and forge machinery, production tools and attachments will be secured in such a way that effective use can be made of available facilities and the capacity increased to 24,000 units. The indigenous content in trucks is expected to be over 90 per cent.

Hindustan Motor

Hindustan Motors will be getting two loans for \$23 million and \$3 million for raising the output

of trucks to 15,000 units from 10,500 units and that of power shovels to 36 units from 12 units annually. The plan for raising output to 10,500 units from 6,000 units is progressing, an earlier loan \$15.8 million being given for this purpose. The company has also a programme for manufacturing high power diesel engines for being fitted in its trucks. The engines are now being secured from an important manufacturing firm in Madras.

Shree Gopal Paper

According to a notification issued by Shree Gopal Paper Mills Limited, 62.18 per cent of the gross dividend, declared on the 26 June 1964 for the year 1963, has been determined as exempt from tax under Sections 85 and 101 in the hands of the shareholders. This is subject to any revision that might be considered necessary on completion of the regular assessment of the company. For example, for hundred equity shares, the gross dividend declared was Rs 180. Tax payable is only Rs 13.62. Thus, the net dividend payable is Rs 166.38.

Fibreglass Pilkington

Fibreglass Pilkington Limited, whose public issue in November 1963 was one and a half times over-subscribed, has just announced their first and final call of Rs 2.50 per share on 10,49,994 equity shares of Rs 10 each, making them fully paid-up. This will provide

the necessary finance for the continuing programme of capital expenditure.

The construction of the company's first factory at Thana, which began in February 1964, has been progressing to schedule. The purchase of machinery and equipment is under way and the first consignment of imported items is en route to Bombay. Commercial production is expected to begin in 12 to 15 months when a full range of glass fibre products will be manufactured in India for the first time. The Thana unit will be manufacturing three main types of product, viz., glass wool insulation, glass staple tissue and glass textile yarns, fabrics and mats.

TI Diamond Chain

T I Diamond Chain Limited, Madras, the largest producers of Roller Chains in India, are manufacturing industrial and bicycle chains, which are used both as original equipment and for replacements. The chains are made in technical collaboration with the Diamond Chain Company, Inc., of the USA. Till recently, the manufacture of roller chains was the monopoly of a few industrially-advanced countries. It has now been possible to produce chains in India conforming to the highest international standards. The demand is so large that, within a few years of commencing production, the two millionth T I Cycle chain has rolled out of the assembly line.

Atherton West

According to Gazette notification, Atherton West and Company Limited, Kanpur, has been taken over by the Authorised Controller for a period of five years from 4 July 1959. The Central Government is of opinion that it is expedient in the public interest that the management of the said industrial undertaking by the Authorised Controller should continue for a further period of one year from 4 July 1964.

★

IN BRIEFS

Peninsular Plantations Limited, Madras, has maintained the dividend at 20 per cent, taxable, for the year ended 28 February, 1963.

Balanoor Tea and Rubber Company Limited has repeated the dividend at 10 per cent, taxable, for the year 1963-64.

Nagapatnam Electric Supply Company Limited has proposed a taxable dividend of 10 per cent for 1963-64, same as in the previous year.

Kumbakonam Electric Supply Corporation Limited has maintained the dividend at 10 per cent for the year ended 31 March 1964.

Bank of India Limited has announced that the transfer books of the bank will remain closed from the 28 July to 14 August. The dividend, when sanctioned, will be payable on and from the 25 August, 1964.

BALANCE-SHEET REVIEWS

TISCO Results

ACCORDING to the preliminary figures released by the company, the Tata Iron and Steel Company Limited has shown an increase in turnover from Rs 99.53 crores to Rs 110.44 crores for the year ended 31 March 1964, thanks to higher retention prices and a larger output. The profit, before providing for depreciation and taxation, has risen to Rs 24.44 lakhs (including Rs 80.58 lakhs being earnings arising out of the previous year's operation) from Rs 22.21 crores in the preceding year.

The company has not, however, benefitted fully by the higher level of earnings as it has become necessary to provide a large sum towards taxation. There was a reduced provision in respect of depreciation. There was also no large claim towards Development Rebate. The charge on account of Depreciation is Rs 7.97 crores against Rs 7.70 crores. There was additional allocation of Rs 3.95 crores under this head on the previous occasion. The transfer to Development Rebate Reserve is only Rs 1 crore (Rs 8.70 crores). The provision for Taxation is Rs 4.75 crores against Rs 80 lakhs. The Deferred Taxation Reserve gets Rs 2.70 crores (nil).

The disposable profits are, however, much higher on account of

the reduced allocations towards depreciation and development rebate. There can, therefore, be a transfer of Rs 2.75 crores (nil) to General Reserve. Besides, the dividends on the ordinary and preference shares are payable out of current earnings, the Dividend Reserve being credited with a sum of Rs 5.25 crores (Rs 4.90 crores). The gross dividend on the equity shares is raised from Rs 11 to Rs 12 per share, payable out of the Dividend Reserve. In the preceding year, it was necessary to transfer Rs 2.58 crores from General Reserve No. 1 and Rs 1.26 crores from General Reserve No. 2 for distributing the dividends.

Striking Progress of Larsen & Toubro

Larsen and Toubro Limited has shown excellent results with new records in respect of sales and earnings being established for the year ended 31st March 1964. The output from the company's workshops at Powai has shown a steep rise of 62 per cent. With this rise, the company's production has more than trebled in the last three years. All the units at Powai either reached or exceeded their production targets. There is also a reduction in the cost of production in spite of a rise in the cost of labour, raw materials, power, etc.

Sales have jumped to Rs 820.74 lakhs from Rs 582.38 lakhs. Other incomes have also increased from Rs 70.73 lakhs to Rs 87.74 lakhs. There is naturally a big improvement in the gross profit, which has crossed the one-crore mark to Rs 117.52 lakhs. The net profit, before providing for depreciation and taxation, amounts to Rs 111.27 lakhs against Rs 66.17 lakhs in the previous year.

All allocations have been raised:—Depreciation from Rs 14.64 lakhs to Rs 18.46 lakhs; Taxation from Rs 24.40 lakhs to Rs 50.50 lakhs; Reserves from Rs 5.06 lakhs to Rs 12.98 lakhs and Development Rebate Reserve to Rs 4.46 lakhs from Rs 3.23 lakhs. Even after these increased allocations, the directors have found it possible to raise the dividend from 14 to 15 per cent on the capital increased by the issue of 5,50,000 right shares. The total equity dividend distribution amounts to Rs 24.75 lakhs against Rs 19.25 lakhs.

Encouraged by the rapid growth, the company has embarked upon a three-year expansion programme to increase its production. The proposed rights of Rs 79.20 lakhs in 6,60,000 equity shares of Rs 10 each, at a premium of Rs 2 per share, will partly finance the expansion programme. The company has also obtained additional cash credit facilities from its bankers and intends to make arrangements for medium and long-term loans later in the year or early next years.

Zenith Steel Pipes—Jump in Profits

Thanks to the company's output being sharply higher at 32,000 tonnes as against only 12,000 tonnes, the working of Zenith Steel Pipes Limited has resulted in a jump in the net profit, before providing for depreciation and taxation, from Rs 34.78 lakhs to Rs 52.76 lakhs for the year ended 30 April 1964. The increase in production was made possible by the availability of regular and adequate supplies of steel strips. It was, however, necessary to effect a slight reduction in selling prices in order to meet increasing competition. It is felt that it may be, however, necessary to effect a necessary to reduce prices further during the current year. The company has, however, ample orders on hand, which will enable the absorption of the whole output for 1964-65.

In respect of allocations, the provision for Depreciation is higher at Rs 7.87 lakhs against Rs 4.86 lakhs, while Development Rebate Reserve is reduced to Rs 44,138 from Rs 4,19 lakhs and Statutory Development Rebate to Rs 1.32 lakhs from Rs 12.58 lakhs. With a higher level of profits and a reduced claim towards development rebate, the provision for Taxation is as much as Rs 13.85 lakhs against Rs 27,000. There is also a transfer of Rs 29.50 lakhs (nil) to General Reserve. The dividend on the equity shares is raised from 6 to 8 per cent, subject to tax. There will be no deduction of tax at source, as the dividend will be distributed out of tax-exempted profits.

Bagalkot Cement Resumes Distribution

As a result of an increase in output of cement to a little over rated capacity—2.01 lakh tonnes against 1.78 lakh tonnes—it is possible for the Bagalkot Cement Company Limited to report an increase in the net profit, before depreciation, from Rs 22.52 lakhs to Rs 24.62 lakhs for the year 1963. But for an increase in working expenses, the profit would have been still higher.

A sum of Rs 10.46 lakhs (Rs 20.96 lakhs) is provided for Depreciation and Rs 1.20 lakhs (Rs 1.50 lakhs) for Development Rebate Reserve. After providing Rs 7 lakhs (nil) for General Reserve, the directors have proposed a taxable dividend of 75 nP per share as against nil previously. It is stated that the company was able to achieve capacity production for the first time since the plant was installed.

Britannia Engineering Pays Less

Despite a rise in sales from Rs 351.79 lakhs to Rs 371.61 lakhs, the Britannia Engineering Com-

pany Limited has reported a slight decline in the net profit, after providing for depreciation and taxation, from Rs 15.07 lakhs to Rs 13.10 lakhs for the year ended 31 December 1963.

Depreciation is raised to Rs 15.65 lakhs from Rs 12.19 lakhs and Taxation to Rs 10.00 lakhs from Rs 9.10 lakhs, while Development Rebate Reserve is lowered to Rs 3.26 lakhs from Rs 3.79 lakhs. No provision is made for General Reserve against Rs 1.69 lakhs. The dividend on the ordinary shares is reduced from Re 1 to 90 nP per share, subject to tax.

The directors state that the Tita-gur Works operated satisfactorily. In respect of the Wagon division, it is hoped that working for the current year will be satisfactory. The construction of the Steel Foundry division has been in progress. Although the current demand for jute mill and tea-processing machinery is not so good, the directors are hopeful that the overall working will be satisfactory. Annual general meeting will be held on the 31st July.

More from Kesoram

Kesoram Industries & Cotton Cotton Mills Limited has produced excellent working results for the year ended 31st March 1964. According to the preliminary report, the gross profit for the year has risen to as much as Rs 269.99 lakhs from Rs 201.01 lakhs for the preceding year. After deducting a total amount of Rs 12.48 lakhs Rs 2.71 lakhs) being charity and donations and debenture issue expenses, there remains a balance of Rs 257.51 lakhs (Rs 198.30 lakhs).

The following provisions and/or allocations have been made:—Managing Agents' commission Rs 11.81 lakhs (Rs 8.39 lakhs); Depreciation Rs 95.28 lakhs (Rs 82.49 lakhs); Tax liability against earlier years Rs 27,610 (Rs 29,676); provision for Taxation Rs 53.00 lakhs, (Rs 8.00 lakhs) and Development Rebate Reserve Rs 4.78 lakhs (Rs 39.21 lakhs), leaving a net profit of Rs 92.38 lakhs (Rs 59.91 lakhs). After adding the amount brought forward from previous year of Rs 26,969 (Rs 43,454) and directors commission provided in the past, now written back, nil (Rs 1.92 lakhs), there is an available sum of Rs 92.65 lakhs (62.27 lakhs).

From the above, a sum of Rs 55.00 lakhs (Rs 22.00 lakhs) is transferred to General Reserve and Rs 37.50 lakhs (Rs 41.00 lakhs) to Dividend Reserve. The directors have proposed a taxable dividend of fifteen per cent as against thirteen per cent previously. The company will be making an application to the income-tax department to determine the quantum of the profit of the year, which is exempt under sections 85 and 101 (2) of the Income-tax Act, 1961. The dividend is payable to those

shareholders registered as on 31 August, 1964.

Escorts—Higher Sales and Profits

Escorts Limited has produced encouraging working results for the year ended 31 December 1963. Sales have recorded an increase from Rs 345 lakhs to Rs 451 lakhs. Sales of products manufactured by the company and by its subsidiaries (included in the sale figure) show an increase from Rs 129 lakhs to Rs 264 lakhs.

The net profit, after providing for depreciation but before taxation, is only slightly higher at Rs 37.99 lakhs as against Rs 37.29 lakhs for the previous year. Depreciation is raised to Rs 15.30 lakhs from Rs 10.01 lakhs. As the provision for Taxation is lower at Rs 13.00 lakhs against Rs 18.31 lakhs, the net profit, after tax, is substantially higher at Rs 24.99 lakhs against Rs 18.98 lakhs.

After adding the balance brought forward from the previous year of Rs 9,707 (Rs 11,961), Rs 2.50 lakhs (nil) being excess provision for SPT no longer required and the Income-Tax refund of Rs 8,785 (Rs 12,801), there is an available sum of Rs 27.67 lakhs against Rs 19.23 lakhs. From this, the following appropriations have been made:—short provision for taxation Rs 1.52 lakhs (Rs 69,766); Tax on dividends for 1962 Rs 60,060 (nil); Statutory Development Rebate Reserve Rs 2.34 lakhs (Rs 5.86 lakhs); General Reserve Rs 20 lakhs (Rs 1.60 lakhs) and proposed dividends on the preference shares Rs 3.06 lakhs (Rs 10.97 lakhs).

The directors have decided not to recommend any dividend on the equity shares (11 per cent paid previously) in view of the need for investments to finance the schemes in hand and expansion of the existing plants. They, however, state that the Government has sanctioned the issue of bonus shares to the equity shareholders in the ratio of one fully share for every five fully paid shares held. This issue will be made wholly out of the Share Premium Account. Under the Finance Bill, these bonus shares are not taxable in the hands of the shareholders.

The company's new industrial unit at Faridabad continues to make progress. The plants at Bahadurgarh (Patiala) for manufacturing pistons, piston rings and cylinder liners have recorded further progress.

Lower Profits for Bengal Nagpur Coal

The decline in sales from Rs 8.44 lakhs to Rs 4.41 lakhs is reflected in the working results of the Bengal Nagpur Coal Company Limited for the year 1963. The net profit, after providing for depreciation, amounts to only Rs 15,297

Gopal is a small industrialist. He needs money for new machinery but he cannot afford high interest and has little security to offer. Who will help him?

THE STATE BANK HELPS

For the biggest bank—no client is too small.

Through their 1600 offices all over the country, the State Bank and its subsidiaries give the following financial facilities to small-scale industries.

Advance against security of raw materials and finished goods.

Factory type advances where security cannot be kept under the Bank's lock and key. Borrowers have free access to raw materials.

Clean credit facilities where no securities are obtainable.

Medium-term loans for modernisation and expansion.

Instalment credit for purchase of machinery.

Interest is as low as 6%. In special cases the outer limit is 7% inclusive of incidental charges.

THE STATE BANK OF INDIA
Big scale help for small scale industry.

as against Rs 80,777 for the previous year. Depreciation is raised to Rs 46,444 from Rs 37,984. After making some transfers from various reserves, a sum of Rs 9,000 (Rs 28,000) is provided for Taxation and Rs 11,110 (Rs 15,100) for Development Rebate Reserve. No provision is made for General Reserve against Rs 1.25 lakhs. The directors have proposed a taxable dividend of 5 per cent. Annual general meeting will be held on the 23 July.

Tea Results

Some more results of the tea companies have been released. Dehra Dun Tea has reported a net profit, after providing for depreciation, taxation and development rebate reserve, of Rs 19,722 for 1963 as against a loss of Rs 1.01 lakhs for the preceding year. The dividend is maintained at Rs 5 per share, taxable. Maud Tea has earned a profit, after depreciation and taxation, of only Rs

9,325 as against as much as Rs 67,817. The directors have proposed a dividend of five per cent. Jaybirpara (Dooars) Tea has however, incurred a loss of Rs 1.73 lakhs as against a loss of only Rs 61,500. The dividend is shipped again.

STOCK EXCHANGES

Lull

AFTER initial steadiness, stock markets have turned subdued this week. Equity prices have given way owing to the uncertainty about the HISCO dividend, although some resistance is in evidence at lower levels.

The week's trading on Lyons Range was marked by an all-round profit-taking and a fair dip in values.

Dull and listless trading conditions prevailed on Dalal Street. Activity on the Madras Stock Exchange was confined to selected shares.

On the Ahmedabad Stock Exchange, operators showed a marked hesitancy to enlarge their commitments.

In the absence of professional support, equities on the Delhi Stock Exchange moved narrowly. The London Stock Exchange, however, maintained a firm tone even if the earlier gains were not fully held.

Consolidation forces held control and kept Wall Street largely in a fractional range.

CALCUTTA

THE week's trading on the local stock exchange remained generally dull. The tendency for prices was to sag slowly due to tired liquidation in the absence of any incentive-bearing news, not to speak of the uncertainty with regard to the size of the HISCO dividend. The market finished around the lowest levels for the week.

In general, the buoyancy in shares, witnessed during the past fortnight, appeared to have abated. Although corporate news was encouraging, the market lacked follow-up support and refused to look up further. With major operators generally keeping on the sidelines, the market was dominated by small speculators seeking quick profits.

Support from investors, too, remained shy despite the persistent flow of corporate news. The apathetic attitude on their part was influenced by certain adverse factors. First was the decision of banks to raise the lending rates which, it was feared, would tend to inflate production costs and, in turn, might cause some of India's major export commodities being steadily priced out of the foreign markets.

Secondly, concern was expressed over the increasing labour unrest and the demand for higher wages due to soaring prices for various

commodities. Finally, anxiety was expressed over the depressed state of the capital market in spite of the various measures taken by the Government in recent months.

Meanwhile, an appreciable part of the investible funds had begun to flow into the Unit Trust, while the New Loans of the Central Government also mopped up considerable funds. It was, therefore, feared that the flow of funds into markets would be poor. With the result, professional bears exploited the weakness of the market by pressing sales in certain vulnerable counters, resulting in a further drop in equity prices.

Gilt-edged securities continued to rule steady although turnover was limited. Short-dated issues met with good support from banks,

HISCO Results

At a meeting held on Friday, the Board of Directors of the Indian Iron & Steel Company decided to pay a dividend of Rs 1.60 per share on the ordinary capital together with a cash bonus of 10 paise per share, making a total distribution of Rs 1.70 per share for the year ended 31 March, 1964 (Rs 1.60 per share for 1962-63), subject to tax. This dividend awaits the sanction by the shareholders at the annual general meeting to be held on 8 September, 1964. The dividend and cash bonus, if sanctioned, will be paid on or after 9 September, to those shareholders registered as on 22 August, 1964.

Meanwhile, the company has made a higher net profit of Rs 229.04 lakhs (Rs 191.88 lakhs), after providing Rs 440.25 lakhs (Rs 340.18 lakhs) for Depreciation; Rs 387.00 lakhs (Rs 356.00 lakhs) for Taxation and Rs 535.18 lakhs (Rs 364.01 lakhs) for Appropriation Reserves.

while some of the long-dated issues were on offer, 3 per cent 1986 Conversion Loan was quoted around Rs 64.15.

With the release of working results for the half-year just ended, P. N. Bank was enquired up to 19.50 from 19.37, while United Commercial fluctuated narrowly between Rs 69.25 and Rs 69.50.

Turnover in the Jute section, continued to be limited, being influenced by two main factors—lack of enquiry for jute goods from overseas buyers and the anxiety over the possibility of exports being hindered by the present congestion in the Calcutta Port. Birlas were the only exception to the general trend, thanks to the diversification of the company's activities. After being pushed up to Rs 33.75 from Rs 32.62, the scrip closed finally at Rs 33.25. Howrah moved idly around Rs 16, while Champdany were quiet at Rs 20.75 against Rs 20.87 and New Central at Rs 11.00 against Rs 11.12.

Only stray business was possible in the Coal section, where Burrakur came in for offer at Rs 15.81 against Rs 16.06 with Western Bengal well maintained at Rs 8.75. New Beerboom lost 25 pP at Rs 15.25, while Central India moved narrowly around Rs 8.69.

Little or no interest was shown in the Tea section. Apart from disappointment over the declaration of dividends by various companies for 1963, investors seemed to be worried over the lower prices still obtained at the auctions especially when the second flush teas had begun to arrive. The decision of the Wage Board to recommend the second interim increase in wages to tea workers also caused a great deal of concern. On the whole, the outlook for the current year was considered to be far from encouraging. The only scrip, which met with heavy speculative buying and cornering operations, was Patrakola. From a low of Rs 213, the scrip was gradually pushed up to Rs 250. Baghmari were quoted around Rs 11.12.

Textile shares ruled fairly steady, although there was a general disposition to await the Government decision with regard to cloth prices. Elgins changed hands at Rs 19 to Rs 13.25; Cavtex at Rs 6.44 to Rs 6.85 and Bowtresh at Rs 23 to Rs 23.25. J. K. Cotton were, however, quiet at Rs 10.62 against Rs 10.75.

The market for Sugar shares continued to remain depressed. Carew came in for offer at Rs 12.12 against Rs 12.31, while Ramnugger Cane and Raza Buland were enquired at Rs 24.06 and Rs 10.12 respectively.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons in which speculation was rife with regard to the size of the forthcoming dividend. After opening the week at Rs 25.48, the scrip moved down at one time to Rs 25.34 before recovering again towards the close to Rs 25.52. TEXMACO fluctuated irregularly between Rs 26.15 and Rs 26.40 and Guest, Keen, Williams between Rs 23 and Rs 23.25. Braithwaite were supported up to Rs 33.62 from Rs 33.50 and Burn up to Rs 280 from Rs 277. Calcutta Steel changed hands at Rs 13.62 to Rs 13.75; Jessop at Rs 20.75 to Rs 21.00 and Binani Metal at Rs 11.69 to Rs 11.75.

Miscellaneous issues moved in sympathy with the general trend of the market. Following were the price trends of a few selected shares:

News from Industry

Union Carbide Development

The carbon arc became even more firmly established as an energy source for solar simulation by the announcement of a non-consumable negative electrode. A development of Union Carbide Corporation, the tungsten cathode operates in an inert atmosphere of argon, and has an estimated life of 1,000 hours.

The breakthrough was revealed at the Institute of Environmental Sciences 1964 Technical Meeting and Equipment Exposition whose theme this year is "Reliability versus Reality." This new non-consumable negative makes reliability indeed a reality as far as continuous solar simulation with the carbon arc is concerned. The carbon arc has been found to be ideal for solar simulation because it duplicates the radiation of the sun outside the earth's atmosphere more closely than does any other artificial light source. The spectral distribution curves all but

lie on top of each other over the entire range of solar radiation involved.

Continuous reliable operation of the special lamps that have been designed for solar simulation has been made possible by the development of joinable positive carbons.

Previously, the use of lengths of consumable negative carbons permitted uninterrupted operation for as long as 20 to 24 hours. Now, with the new tungsten negative, continuous solar simulation for periods up to 1,000 hours is possible. The light-emitting positive carbon has a diameter smaller than a dime, and yet produces a light output equal to some 3200 100-watt bulbs.

As far back as 1961, scientists at Union Carbide's research laboratories were investigating the feasibility of a non-consumable negative, and this early work led to a co-operative development programme culminating in the tungsten cathode whose tip operates in an inert atmosphere of

argon. The negative is approximately 3/16 inch (4.76 mm.) in diameter.

In addition to its use for solar simulation, the continuous carbon arc using the negative opens new applications in which a high-brilliance, continuously-operating light source is required, including airport beacons and military searchlights.

The non-consumable negative was demonstrated last week for several solar simulation lamp manufacturers at a Union Carbide development laboratory and is expected to be in actual use shortly.

For further information, write to Union Carbide International Company, Division of Union Carbide Corporation, 270, Park Avenue, New York, N. Y., U.S.A., 10017.

Indian Statistical Institute

With the recent arrival of new Electronic Data Processing Machines from the United States (the IBM 1401 system) at its headquarters in Baranagar, the Indian Statistical Institute now has one of the largest installations of electronic calculating machines in India. The Institute

was one of the pioneers in the use of electronic computers in India. The British made computer HEC2M was installed in the Institute in 1956 and a bigger computer named URAL was received as a gift from the USSR in 1959. Both these machines are used for scientific computation and development studies. But the limited capacities of the input-output and auxiliary storage devices in these computers make them rather unsuitable for large-scale data processing.

As the total volume of survey and scientific data dealt with by the Institute has grown considerably during recent years, the IBM 1401 EDPM—with its modern transistorised high-speed system has been acquired to cope with the problem. The new machine is now being installed in the Research and Training School of the Indian Statistical Institute.

The IBM 1401 EDPM will be used by the Institute for computer oriented training and research, processing of large-scale survey data, analysis of scientific experimental data, promoting operational research and other management techniques for increasing productivity by industries in private and public sectors, and also for econometric studies relating to planning for national development.

BICC Gets 3 Contracts

A British firm has been given the task of electrifying another 164 miles of Calcutta's suburban railway.

Three contracts, totalling over £1,000,000, have been awarded to British Insulated Callender's Cables Ltd (BICC) by the Indian Railway Board, says a London announcement. They cover the supply and installation of 25-kilovolt AC overhead equipment for 164 miles of track, of 14 complete switching stations, and of 26 booster transformer stations.

The award to one contractor of three such types of contract for a single scheme is considered to be unique in the history of 25-kv railway electrification in India.

This is the second stage of Calcutta's high-voltage suburban electrification. Earlier this year, BICC completed the overhead equipment for the first stage, which involved the lines running northward from Sealdah station.

The lines now to be electrified run southward from Sealdah. They form an important part of the Eastern Railway system and include a major link with the Calcutta docks.

Most of the staff required for the work will be recruited locally. Indian field and design engineers will supervise the operations.

BICC policy, says the London announcement, has also fostered indigenous manufacture of numerous items and fittings both ferrous and non-ferrous, by providing local manufacturers with technical assistance.

Since the inception of the AC railway electrification programme in India in 1958, BICC has been awarded 13 contracts valued at over £9,000,000 and covering 1,600 track miles.

AUTOS

Ashok Leyland's
£4 Million Expansion

Projects costing over £4,000,000 which will increase the size of Leyland's vehicle-producing factories and foundries in Madras, nearly double the number of employees and bring new and more powerful Leyland trucks and buses to Indian operators were announced last week by Leyland.

The news was given jointly by Sir A. Ramaswami Mudaliar, chairman of Ashok Leyland Ltd, and Mr Donald G. Stokes, managing director of the Leyland Motor Corporation. It followed a meeting of directors and executives at Leyland's London office and confirmed that Leyland's investment in the new projects would amount to £2,500,000 in addition to the £3,000,000 already invested. With Indian participation, this brings the total value of new investments to over £4,000,000.

Leyland's new investment will take the form of £2,500,000 worth of special plant and machinery of a type which is not yet available from Indian manufacturers. The £1,500,000 worth of Indian capital will finance new factory buildings, bringing the total factory space to over 800,000 sq ft, and increase the already large quantity of Indian-made multi-purpose machinery in the factories.

Work is to start almost immediately on constructing the new buildings, and on completion another 2,500 employees will be needed to swell the present labour force to nearly 8,000.

Perhaps the most valuable news is the announcement of new and more powerful vehicles. Fast-expanding industrial and agricultural projects all over India have resulted in increased demands for transport to cover larger distances with larger and heavier loads. Under Ashok Leyland's new manufacturing programme, two and three-axled vehicles

will be produced with gross ratings of up to 107,520 lb (compared with the present Comet tractor-trailer maximum of 40,320 lb) and with 185 h.p. Leyland power-plus 0.680 Diesel engines.

Some £750,000 worth of vehicle components have already been ordered from Leyland Motors Ltd for the construction of the first of the new vehicles.

Two-axle Leyland Beaver models and three-axle Leyland Hippo models are to be built, using six-ton front axles and nine-ton rear axles. Ashok Leyland has also undertaken to produce military versions, and there will be goods and passenger vehicles in both ranges.

Beaver models will comprise haulage, tipper and dumper models with a gross rating of 35,009 lb and a tractor which, as an articulated outfit, will have a gross train weight of 53,760 lb. The Hippo three-axle range will also have haulage, tipper and dumper models, having a gross rating of 44,800 lb, while the Hippo tractor will be available for a gross train weight of no less than 107,520 lb.

Highlight of the new models is the 200 h.p. 0.680 Diesel from Leyland's power-plus range. This range of direct-injection, six-cylinder, four-stroke Diesels has placed the naturally aspirated engine on an entirely new plane of efficiency in relation to both power output and fuel economy. The power-plus range achieves a 33 per cent increase in power over previous engines of a similar size, and offers a fuel consumption from 4 to 10 per cent lower than the previous range of Leyland Diesels.

Extensive development and proving trials with power-plus engines have shown outstanding reliability, simple maintenance, and a life often reaching 12,000 running hours between major overhauls.

Manufacture of Leyland's power-plus 0.680 Diesels in quantity for the

new trucks will also aid another facet of Ashok Leyland's work—the production of industrial Diesel engines for Indian manufacturers of specialized equipment. At present the company is supplying 100 h.p. Diesel engines for such diverse machinery as air compressors, water pumps, electricity generating sets, earth-moving machines, pile drivers, and stone crushers.

Ashok Leyland and its sister company, Ennore Foundries Ltd, have factories on a 150-acre site near Madras which rank closely in size after the British plants of Leyland Motors and Standard-Triumph International within the Corporation.

With over 500,000 sq ft of production

Industrial Miscellany

International Meet Next Year

The Second International Conference on Lead is being organised by the Lead Development Committee and will be held in Holland in October 1965.

The Conference will last for five days and will have a programme comprising technical sessions and works visits in Holland, Belgium and Germany. The technical sessions and works visits will be divided into three separate groups dealing with cable sheathing batteries, and general applications of lead. The following aspects will be covered in the technical sessions:

Production and performance of lead and lead alloy cable sheaths; plant and equipment; recent research and development; testing, quality control, standardisation, etc.

Fabrication and properties of grid alloys; development and performance of batteries for specific uses (e.g. aircraft, traction, etc.); recent developments in commercial applications.

Recent developments, special products, established and new uses, e.g., dispersion strengthened lead, lead for sound attenuation, fibre reinforced lead, continuously cast and reinforced lead sheet, water thinnable paints, organo-lead compounds, lead coated steel, etc.

Papers are invited on any of the above or related subjects and authors should submit brief outlines before the end of October 1964 to the Lead Development Association, 34, Berkeley Square, London, W. 1 or the Indian Lead Zinc Information Centre, 5A Lord Sinha Road, Calcutta-16, from whom further information can also be obtained.

ESTATE DUTY Rules Amended

In exercise of the powers conferred by sub-section (1) of section 85 of the Estate Duty Act, 1953, (34 of 1953), the Central Board of Direct Taxes hereby makes the following amendments in the Estate Duty Rules, 1953, the same having been previously published as required by the said sub-section, namely:—

- These rules may be called the Estate Duty (Second Amendment) Rules, 1964.
- In the Estate Duty Rules, 1953 (a) rule 23 shall be omitted; (b) in Form ED 1-A, in Annexure Form I-E, after item No. (8) in Note '(N)' the following item shall be inserted, namely:—“(9) In case the deceased died on or after the 1st April,

1964, the value of one house or part thereof exclusively used by him for his residence, limited to the extent of rupees one lakh of the principal value thereof, if such house is situate in a place having a population exceeding ten thousand, and the full principal value thereof in any other case.”.

- (c) in Form ED 5-A, after item 6 under the head “OBSERVATION”, the following item shall be inserted, namely:—

6A. Residential house.—In case the deceased died on or after the 1st April, 1964,

the value of one house or part thereof exclusively used by him for his residence is exempt from duty subject to certain limits. If exemption is claimed under this head, please state—

- (a) the value of the house or part thereof on which exemption is claimed; and (b) if the value exceeds Rs 1,00,000, what is the name of the place where it is situated and what is the population of the said place.

Note.—The exemption shall be available on the excess value of the house over Rs 1,00,000 only if the population of the place does not exceed 10,000.

EXPLANATORY NOTE

[This note is not part of the notification but is intended to be merely clarificatory.]

Amendment 2(a)

Rule 23 of the Estate Duty Rules, 1953, requiring an Estate Duty Account to be delivered in duplicate is omitted for the convenience of the accountable persons.

Amendments 2(b) and (c)

Amendments to Form ED 1-A and ED 5A prescribed by rule 20A of the Estate Duty Rules, 1953, are intended to explain the exemption of the value of a residential house under sections 33 and 34 of the Estate Duty Act as amended by section 49 of the Finance Act, 1964.

workers as compared to 1.33, 0.71 and 0.51 respectively for February, 1964.

The percentage of absenteeism was of the order of 13.11 as against 13.01 (revised) in the preceding month.

The overall cash earnings of the workers per week for the whole country was Rs 26.73, the corresponding figures for Jharia and Raniganj fields being Rs 26.35 and Rs 26.90 respectively.

The number of hours worked in a week in the whole country, Jharia and Raniganj fields are 48. 47 and 48 respectively as against 48. 48 and 48 in the preceding month.

Machine Tools Output

Indian Machine Tool Manufacturers' Association reports that the total approximate production of various machine tools by its 33 leading member-firms during the month May, 1964, was as under:—

	Qty.	Value
	No.	(Rs 000)
Lathes ...	417	5,997
Milling Machines ...	61	2,997
Radial Drills ...	28	946
Portable Elec. Tools	2,800	797
Pneumatic Power		
Hammers ...	4	464
Grinding Machines ...	13	415
Drilling Machines ...	71	365
Capstan Lathes ...	8	333
Boring Machines ...	3	318
Shaping Machines ...	42	305
Blowpipes ...	1,978	278
Vertical Turret Lathe	1	261
Planing Machines ...	16	251
Turret Lathes ...	3	238
Welding Machines ...	40	233
Lathe Chucks ...	793	189
Regulators ...	835	186
Presses ...	7	174
Furnaces ...	2	149
Surface Grinders ...	7	135
Hacksaw Machines ...	20	105
Press Brakes ...	2	94
Eccentric Presses ...	3	77
Cutting Machines ...	18	42
Drill Chucks ...	656	16
Moulding Machines ...	2	7
Sand Mill ...	—	—
Miscellaneous ...	976	186
Total ...	8,806	15,558

Industrial Production

STEEL

Bhilai Production During June, 1964

The Bhilai Steel Plant produced 99,039 tonnes of hot metal (pig iron) during June, 1964, thereby exceeding its monthly rated capacity by more than eight per cent. The production of ingot steel during the month totalled 78,000 tonnes. The Rolling Mills of the Steel Plant rolled 85,345 tonnes of ingots during the month. The Blooming Mill produced 74,450 tonnes of blooms and slabs, while the Billet Mill rolled 41,716 tonnes of billets, which was 11 per cent more than the monthly rated capacity of the Mill. The Rail and Structural Mill rolled 33,458 tonnes of rails and structurals during the month, thereby exceeding its monthly rated capacity by about 6 per cent.

The Merchant Mill produced 22,886 tonnes of merchant products, thereby recording 3 per cent more production than its monthly rated capacity.

The production of Blast Furnance coke during the month under review totalled 89,065 tonnes.

Two new records in daily production were established in the Steel Plant during June 1964. On 13 June, 1964, Rail and Structural Mill rolled 1,601 tonnes of Crossing Sleepers, which was a new record in daily production. The Merchant Mill of the Steel Plant produced 1,238 tonnes of 50x12 mm Flats on 22 June 1964, which was also the highest production recorded for a single day so far.

Good Half-Year for Durgapur Steel

At the close of the half-year, Durgapur Steel Plant's Production of pig iron and steel ingots shows a healthy picture. The measure of the

good progress made at the plant can be seen from the comparative figures for the last two and a half-years.

	Pig Iron Tons	Steel Ingots Tons
First half 1962 ...	404,078	289,574
Second half 1962 ...	553,602	338,251
First half 1963 ...	668,840	481,872
Second half 1963 ...	634,910	484,049
First half 1964 ...	684,619	518,049

The figures for the first half of 1964 correspond to 106 per cent of rating of pig iron and 102 per cent of rating for steel ingots.

The very high pig iron production has not only satisfied the needs of the melting shop for operation at the 1 million tonnes per annum rate, but has also made available for the foundry market a substantially higher tonnage of pig iron than was expected when the plant was designed.

The first half of 1964 has also seen good progress in the Rolling Mills where rated capacity has been achieved in each case.

Production of coke, pig iron and steel ingots was maintained at a good level in June 1964, the figures being:

Coke ...	121,678 tonnes
Pig Iron ...	109,466 tonnes
Steel Ingots ...	80,272 tonnes

Two outstanding day performances were the production of 3,945 tonnes of steel ingots on 24 June, and the pouring of 2,252 tonnes of iron at the pig casting machine on 19 June.

Working of Collieries

According to official statistics released by the Chief Inspector of Mines, 814 collieries were reported to have been working during March 1964 with an average daily employment of 426,518 workers, the corresponding figures for the previous month being 808 and 437,010 (revised) respectively.

Output of coal per man-shift was estimated at 1.35 tonnes for miners and loaders, 0.72 tonne for all workers below-ground and in opencast workings and at 0.52 tonne for all persons employed including above-ground

TEXTILE MACHINES

FC Loan for Lakshmi

The International Finance Corporation, an affiliate of the World Bank, has agreed to join with Indian and Swiss interests in providing loan and shares capital to Lakshmi Machine Works Limited, a new Indian company which will build and operate a cotton-textile machinery plant at Coimbatore in South India, at an estimated cost of nearly Rs 60 million (the equivalent of \$12.5 million).

IFC's loan and share investment commitment in the new company amounts to \$1,380,000. Continental International Finance Corporation, a subsidiary of Continental Illinois National Bank and Trust Company of Chicago, is participating in IFC's loan and share investment.

Lakshmi Machine Works Limited is being established with an issued capital of Rs 25 million, all in equity shares. Its share capital will include subscriptions of Rs 8.75 million by a sponsoring group of Indian industrialists, Rs 3 million by Rieter Machine Works Limited of Switzerland, Rs 2 million (the equivalent of \$4,20,000) by IFC and Rs 1.25 million by another Indian company, Voltas Limited.

The remainder of the stock issue, amounting to Rs 10 million, was offered to the public in February and fully subscribed by the public and the underwriters. The group of underwriters included the Life Insurance Corporation of India, the Industrial Finance Corporation of India, the Industrial and Credit and Investment Corporation of India and a number of local banks and stock brokerage firms.

Loan capital is being made available to the new company by IFC and three privately owned financial institutions in India. IFC is lending \$960,000 repayable in 16 semi-annual instalments, beginning 1967; the Bank of Baroda and the Indian Bank are each lending Rs 3.25 million; and the Industrial Credit and Investment Corporation of India is providing the equivalent of \$840,000 in foreign exchange and an additional loan of Rs 1.5 million. Short-term borrowings, advances from customers and the company's cash generation, amounting to a total of Rs 18.3 million, will provide the remainder of the financing required for the project.

The Indian sponsors are a group of industrialists, headed by Mr G. K. Devarajulu. In addition to its equity participation, the group will bring to the new enterprise an intimate knowledge of the local cotton-textile industry.

The Swiss sponsor and technical collaborator in the project, Rieter Machine Works Limited, is a leading manufacturer of high quality cotton-textile machinery for the

international market and is an important overseas supplier of machinery to the cotton-textile industry in India. As well as participating in the equity of the new company, Rieter will provide technical assistance for the planning and construction of the plant, draw up the designs for the machinery to be produced, furnish technical advice on the methods of manufacture and, in the initial years of the plant's operation, supply key technical personnel for the plant, as well as training facilities for Indian staff.

The new plant at Coimbatore will eventually produce the entire range of cotton-textile machinery now manufactured by Rieter in Switzerland. Production is planned in two phases. The first phase expected to be in operation by 1966 and in full production by 1967, will include the manufacture of high-speed draw frames, speed frames and ring spinning frames. In the second phase, for which financing will be arranged at a later date, production will be extended to cover the manufacture of blow room lines and combers with their associated sliver and ribbon lap machines. It will be the only plant in India to manufacture a complete line of cotton-spinning equipment.

The completion of the Coimbatore project will provide India with an important economic asset. By making modern equipment available in the domestic market, the new plant will enable the cotton-textile industry to expand more freely, will aid the re-equipment of the industry and will help to establish it on a more competitive basis. At the same time, by supplying the domestic market with equipment of kinds that up to now have been largely imported, the new plant will accomplish a substantial saving of foreign exchange.

IDA \$750 Million in New Resources

The International Development Association (IDA), an affiliate of the World Bank, permits a replenishing and enlargement of its lending funds.

IDA announced last week that conditions for bringing the plan into effect were met on 29 June when 12 Governments whose pledges total more than \$600 million formally notified the Association that they will make their planned contributions.

Under the plan approved by the IDA Board of Governors last year contributions and new subscriptions would total \$750 million from 67

P & T

\$33 Million Loan from IDA

The International Development Association (IDA), an affiliate of the World Bank, has extended a development credit of \$33 million to help India expand its telephone network to serve about 75 per cent more subscribers and carry out other urgently needed improvements in its telecommunications system. This brings the total of IDA funds made available for this purpose to \$75 million including a credit of \$42 million in 1962.

As in the case of the first credit, the proceeds will be made available to the Indian Posts and Telegraphs Department (P&T) as part of the Government's capital investment in that organization. The foreign exchange from the credit will cover imports of raw materials and components by the three principal Indian manufacturers of telecommunications equipment and by P&T's own workshops, thus enabling full use to be made of indigenous manufacturing capacity in supplying the needs of the P&T programme.

Despite improvements already achieved, India is in urgent need of more and better telephone and other communications facilities to meet the requirements of its developing economy. For example, there are now only about 1.3 telephones per 1,000 inhabitants, compared with 6 for all of Asia, 50 for the world as a whole and between 300 and 400 for the developed countries. Most of the existing telephones are concentrated in a few densely populated areas. Long distance calls often are delayed for hours. Telegraph service is slow and uncertain because of an extreme shortage of modern teleprinter sets and circuits.

The backlog of applications for telephone service on which deposits have been paid equals about 50 per cent of the present number of subscribers and non-priority applicants

countries. Payments will be spread out over three annual instalments, starting in November 1965.

These annual additions to the Association's resources will be larger than the annual contributions paid in since the Association was formed in 1960.

IDA's loans carry much easier credit terms than those offered by the World Bank. Thus far, the Association has loaned \$778 million for economic development projects in 22 countries. The loan terms allow repayment in 50 years with no interest. There is only a three-fourths of one per cent per year service charge.

Belgium and Luxembourg, as new IDA members, are also paying in subscriptions of \$8,250,000 and \$375,000, respectively.

Canada, Finland, the Netherlands and South Africa are moving toward contributions totaling \$84,488,000.

have to wait five years or more. Since, in these circumstances, many would-be subscribers do not apply, the actual demand is much larger than the numbers on the waiting list.

The P&T's expansion programme under India's Third Five-Year Plan now contemplates the expenditure of about \$350 million through March 1966, the target having been raised from an original figure of \$282.5 million. The number of telephone subscriber sets is to be increased from 460,000 to 810,000. About 3,700 miles of coaxial cable will be added to the 295 miles that existed when the programme began three years ago. In addition, 1,400 miles of microwave radio links will be installed. Nearly 1,700 miles of open telephone lines along railways that are being electrified will be replaced by shielded underground cables. Teleprinters are being installed to step up the speed of telegraph transmission on trunk lines to the international rate of 66 words per minute rather than 25 words with existing manual Morse code equipment. Many other improvements are being carried out, affecting public telephone and telegraph facilities and railway communications, which also are a responsibility of the P&T.

The expansion programme is being executed by the Telecommunications Branch of the P&T. The Branch has considerable earnings and expects to provide from its own funds a major portion of the estimated \$237 million equivalent required in local currency.

The credit is for a term of 50 years. Repayment of the principal will begin on 15 January 1975 after a 10-year period of grace. Thereafter 1 per cent will be repayable annually for 10 years and 3 per cent will be repayable annually for the final 30 years. The credit is free of interest, but a service charge of 1/4 of 1 per cent per cent per annum on the amount withdrawn and outstanding will be made to meet IDA's administrative costs.

Kuwait, which did not figure in the original replenishment plan has decided to contribute \$3,360,000. Its contribution was not included in the \$750 million target figure.

Including Belgium—which gave notification on 2 July—the countries that have thus far formally offered contributions are:

	(In dollars)
United States	312,000,000
Australia	19,800,000
Austria	5,040,000
Belgium	8,250,000
Denmark	7,500,000
France	61,872,000
Federal Republic of Germany	72,600,000
Italy	30,000,000
Japan	41,250,000
Luxembourg	375,000
Norway	6,600,000
Sweden	15,000,000
United Kingdom	96,600,000

Oil in the Public Sector

All over the world, the search for oil has been a risky and expensive venture although, with recent advances in technology, the element of risk in oil exploration has been considerably reduced. India is comparatively a new-comer in the field of petroleum. Even the private sector refineries began production less than ten years ago and the first public sector refinery, established in 1962, came into full production in November 1963 only.

Consumption of all petroleum products has, however, increased from about 6 million tonnes in 1957 to about 10 million tonnes in 1963. With increased tempo of industrialisation, mechanisation and the growing defence needs, this rate will go up steadily in the years to come.

While one of India's major endeavours is to discover and produce crude oil, expanding refinery capacity within the country is equally important to meet the demand for petroleum products. India aims at self-sufficiency in petroleum products in the shortest possible time. This aspect of oil exploration, setting up of refineries and distribution machinery is covered by the Industrial Policy Resolution passed in 1956.

In pursuance of this Resolution the Union Government entered the petroleum field in a big way. In August 1956, the Government of India set up the Oil and Natural Gas Commission (ONGC) for exploration of oil resources of the country. The Commission has since built itself into a commendable organisation of technical personnel, supported with good laboratories and workshops.

An idea of the increase in the tempo of activity of ONGC may be had from the increase in the number of wells that have been drilled. Up to the end of 1963-64, it drilled 215 wells. The target for 1964-65 is 151. Production has also increased substantially. Crude oil produced by ONGC in '62-63 was about 450,000 tonnes. In 1963-64 the production went up to nearly 700,000 tonnes, valued at about Rs 6 crores.

ONGC is now thinking of operating outside the country. Friendly, hopeful discussions have been held with Kuwait and Iran which may result in concrete proposals. Apart from the expansion and scope of work of ONGC, steps are being taken to rationalise the structure of public sector oil industries by bringing together the agencies which have till now worked separately for refining and distribution of petroleum products. It is expected that in about three months the Indian Oil Company and the Indian Oil Refineries will be united into one organisation.

In distribution of petroleum products the Indian Oil Company (in the public sector) has already done commendable work. Incorporated in June 1959, it entered the field of distribution against severe competition from some of the richest and most resourceful and well-organised private companies in the world. Only in 1962-63, it showed a profit of about Rs 60 lakhs. It is already handling about a third of the total requirements of the Government; very soon

it will be able to handle a substantial share of the total business in the distribution of all types of petroleum products within the country.

REFINERIES

The total capacity of the four private sector refineries was only about 4 million tonnes in 1957. The expansion of capacity in the private sector refineries between 1958 and early 1963 raised this to over 7 million tonnes. In addition, output of refined products in the public sector began on a small scale in 1962 at Gauhati Refinery. Since November 1963, the refinery is working to full capacity. The capacity of the refinery will be increased from the present capacity of 0.75 million tonnes per annum to 1.00 million tonnes shortly.

Another public sector refinery at Barauni with 2 million tonnes capacity will be in operation within a month or so. There is a proposal to raise its capacity to 3 million tonnes.

The third public sector refinery at Koyali (3 million tonnes capacity) near Baroda will be on stream by the end of 1964, and once the Cochin Refinery (capacity 2.5 million tonnes) comes into operation—it is hoped within the Third Plan—the public sector will achieve a position when it will be the dominant partner in relation to private sector so far as petroleum products are concerned.

The current planning is that targets for production should be somewhat in excess of the anticipated demand. Accordingly, the Government has decided to take in hand, immediately, schemes for establishing refineries in Madras and Calcutta regions with a capacity of 2.5 million tonnes each.

In view of the increase in demand for petroleum products during the Fourth Plan period, additional refinery capacity of about 11 million tonnes (including Madras and Calcutta refineries) will be justified.

In certain fields where future development, according to the Industrial Policy Resolution, is reserved for the public sector, expansion in existing units in the private sector may be allowed if this proves in the national interest.

It was in pursuance of this policy that the three private sector refineries, which in 1956 had a capacity of less than 4 million tonnes were allowed to develop over 4 million tonnes in 1957, 5 million tonnes in 1959 and over 7 million tonnes in 1963.

Nor is the participation of foreign capital, as in the case of Cochin Refinery scheme, any new feature. India has had foreign collaboration in all significant sectors of industrial development and this policy will be pursued, except in respect of railways, air transport, arms and ammunition and atomic energy. In exploration, production and refining of crude oil India has a number of collaborators from friendly countries such as Soviet Union, Yugoslavia, France, Britain, Italy, Rumania, Germany and United States.

Wherever, however, co-operation of private enterprise is secured, it will be on conditions where the State will have majority participation and also the powers otherwise necessary to guide the policy and control the operations of the undertaking.

PETROCHEMICALS

Mafatal Undertakes NOCIL Project

National Organic Chemical Industries Ltd (NOCIL) has announced its role in the establishment of a large petrochemicals complex in the Bombay area, the first of its kind in India. The technical and engineering contracts and financial proposals are now before Government for early approval.

The NOCIL project is being undertaken by the Mafatal Group in collaboration with Shell International Chemical Company Ltd, UK, and its affiliates at a cost of some Rs 30 crores. It is proposed to raise Rs 10 crores as equity capital, the Mafatal Group subscribing Rs 3.33 crores, Shell Petroleum Company Ltd, Rs 3.33 crores the balance of Rs 3.33 crores to be offered to the public. The foreign exchange requirements for the project will be Rs 14.5 crores. Excluding Rs 3.33 crores available as equity participation, all the necessary foreign exchange will be provided as a long-term loan by Shell Petroleum Company Ltd, from sources outside the Aid India Club. The rupee requirements will be borrowed from local banks.

When completed, the NOCIL project will be capable of processing 225,000 tonnes of naphtha per annum from the Burmah-Shell Refinery. Naphtha cracking will yield ethylene, propylene, benzene, butadiene, etc., for the manufacture of chemicals and plastics on a scale hitherto not undertaken by any other chemicals company in India. A wide range of these chemicals and plastics will be manufactured by NOCIL itself, with a total value at full output of the order of Rs 20 crores. The products will be used in such diverse industries as plastics, paints, lacquers, plasticizers, brakefluid, anti-freeze, detergents, explosives, synthetic fibre, synthetic rubber, pharmaceuticals and antibiotics. Furthermore the export of some of NOCIL's products will contribute materially to foreign exchange earnings for the country.

The engineering and construction of the NOCIL project will be carried out by Stone & Webster Engineering Corporation, USA. Bataafse Internationale Chemie Maatschappij NV, Holland, associates of Shell International Chemical Company Ltd, will supervise the establishment of the plant.

NOCIL will occupy 300 acres of land in a 500 acre site near Bombay, off the Thana-Belapur road. Also operating on the same site will be Hoechst Dyes & Chemicals Ltd (HDC), Indian Dyestuff Industries Ltd., (IDI), and Polyolefins Industries Ltd (PIL).

In this integrated petrochemicals complex NOCIL will provide uti-

lities to HDC and PIL. HDC will use ethylene to make vinyl acetate monomer and expand its present polyvinyl acetate production. PIL will make Ziegler high density polyethylene and catalysts. The latter is a new company with a paid-up capital of Rs 3.6 crores, which is to be equally subscribed by NOCIL, Farbwerke Hoechst of West Germany, and the Indian public. IDI's electrolysis plant is to be located in the same area to produce chlorine which will be used by NOCIL for PVC manufacture. Construction work is to commence at the site after the 1964 monsoons, and the Bombay complex is scheduled to be in operation by mid-1966.

REFINERIES

ESSO's First Decade

The first modern oil refinery built in India during the early 'fifties completes a decade of successful operation this month.

Meeting approximately one-fourth of the country's petroleum needs, the Esso Refinery has in recent years doubled the range of products manufactured initially at the time of start-up. Two of the important additional products are Asphalt and Solvents. The Asphalt Plant constructed in 1959 has not only helped to meet locally the increased demand for this product for the roads and highways construction programme but also to export surplus quantities. The solvent unit which was entirely designed by Indian Engineers and built by local contractors in 1962 now supplies products used by textile, rubber, and vegetable oil extraction industries.

When the Refinery started operation it had 66 Americans on its staff. By sending Indian personnel overseas to receive training in higher skills, the number of American engineers and technicians has been reduced to five. Besides creating new job positions and assisting in the development of advanced skills, the refinery has also helped to save and earn Rs 46 crores in foreign exchange for India over the last decade.

The emergence of the Esso Refinery at Trombay—15 miles from Bombay city—has helped to transform an area once largely desolate into a thriving industrial township. Apart from several chemical plants, a thermal power generating station and a Government sponsored fertilizer unit, the area has attracted hundreds of smaller entrepreneurs.

Chief Minister of Maharashtra State, Mr V. V. Naik, will be the guest of honour at a celebration function to be held by Esso in Bombay on 29 July 1964 to mark the tenth anniversary of the refinery.

Land Reform in India

By Prof. M. L. Dantwala

Reform of the agrarian structure and agrarian relationship has been a major item in the agricultural policy of the Government since Independence. It would be no exaggeration to say that never before in the world history of land tenure reform has so much legislative action with such wide social and economic ramifications, been undertaken as was done in India, within a time span of one decade.

India's land reform legislation and policy comprise the following major aspects of the problem:

(1) abolition of Intermediary Tenures,

(2) reform of the tenancy system and its gradual abolition, and

(3) imposition of ceiling on individual land ownership. Besides these, measures ancillary to land reform—such as extension of rural credit, community development, agricultural extension services and democratic decentralisation of rural administration—have been undertaken on an extensive and comprehensive scale.

One of the earliest land reform measures adopted in India after Independence was the abolition of Zamindari, Jagirdari, Malguzari and similar intermediary tenures known under a dozen different names; and acquisition of the rights of the intermediaries by the State. This type of tenure extended over an area of about 172 million acres of land, constituting nearly 40 per cent of the total area. As a result of this legislation the entire estate of the intermediary (subject to certain specified exemptions) was vested in the Government. The comprehensiveness of this acquisition by the State would be evident from the fact that the estate taken over included besides tenant cultivated land, all waste land, porambokes, communal lands, forests, mines, minerals, wells, tanks, ponds, water channels and fisheries. By any token, whether judged by the sheer magnitude of the area involved or by the radical character of the legislation, this is no small accomplishment. It is perhaps the peaceful character of the change which has deprived it of publicity, if not notoriety, associated with such revolutionary changes. It would, however, be mistaken to believe that the change was accomplished without stiff resistance by the vested interests. Since the country and the Government are committed to a policy of adhering to democratic methods and due process of law, the legislation was repeatedly challenged in the courts of law. But when the Parliament of the country realised that its attempts at eliminating the feudal character of the land tenure system were being frustrated, it did not hesitate to amend the Constitution of the country to facilitate the speedy implementation of its land reform policy.

An erroneous impression prevails in the minds of several persons that the abolition of the intermediary rights, entailed huge cost, in the form of compensation

payments to the divested owners. The total compensation, including the rehabilitation grant paid to small landlords amounted to Rs 5.14 crores. This comes on an average to less than Rs 30 per acre, which would constitute only a fraction of the market value of the land.

Another noteworthy feature of compensation payment is the adoption of the principal of the sliding scale, under which the compensation rate varied inversely with the size of the estate. Thus in several States, the biggest landlords will be paid as compensation only three times the net annual income from their estates. In most cases, compensation is paid through bonds redeemable in equated annual instalments over a period varying from 20 to 40 years.

It is sometimes alleged that the tenants have not demonstrably benefited by the removal of the intermediaries, inasmuch as they now pay as land revenue to the State the same amount as they paid to the Zamindar as rent. It is forgotten that when this is the case, the tenants have not to pay any purchase price for the superior tenure status they acquire. The price or compensation is paid by the Government to the divested owners. If, however, as in Uttar Pradesh, the tenant chooses to acquire full ownership rights, he has to pay a purchase price—equal to ten times the annual rent—to the Government. And when he does so, the land revenue payable by him is reduced by 50 per cent. This arrangement is perfectly fair to the tenant as well as to the Government and the general taxpayer—who, in equity, cannot be asked to bear the burden of compensation payments.

Two other aspects of this question may be noted. Under the erstwhile Zamindari tenure, rents of statutory tenants were controlled and compared favourably with rents paid by the tenants in the Ryotwari tenure. Considered as land tax after the abolition of the Zamindari tenure, its incidence is fairly small. There was, therefore, no case for its reduction when the State acquired the Estates. The really obnoxious element of the old Zamindari-tenant system was the illegal multiplicity of exactions—Nazrana, Abwabs, etc.—by the Zamindar. These have now been completely eliminated.

The main ingredients of the tenancy legislation are:

- (1) reduction in rent,
- (2) prevention of evictions and security of tenure, and
- (3) compulsory transfer of ownership to tenants.

The conventional pre-reform rent paid by the tenants was half the gross produce. In several cases it was even larger. The tenancy laws slashed it down to one-third or one-fourth of the gross produce. While in one or two States the upper limit has not been observed, in a few others, the reduction is much more drastic. Thus, in the

States of Maharashtra and Gujarat, the rent payable cannot exceed one-sixth of the gross produce. This is perhaps the lowest level prevailing in any part of the world. It should however be conceded that this provision of law is not always effectively implemented. Several cases of evasion have been noted; but there is no doubt whatsoever that a large number of tenants have benefited from this reduction and the pre-reform exploitative character of rent has been considerably mitigated, if not completely eliminated.

The tenancy laws have not only prohibited evictions but also severely curtailed the land-owners' right to resume the tenanted land for personal cultivation. In spite of the legislation, in the early stages, a large number of tenants were evicted unlawfully or by taking advantage of certain loopholes in the legislation; but by now, many loopholes have been plugged and the situation has become more stable. Tenants have also become more conscious of their rights and unlawful evictions are now a rarity.

Not content with reduction in rent and providing security of tenure to the tenants the tenancy legislation in several States enjoins compulsory transfer of land ownership to the tenants. Thus the Bombay Tenancy Legislation lays down that on 1 April 1957—called the Tillers' Day—all tenants were deemed to have purchased the leased land from their respective landowners. Fair purchase prices were to be determined by land tribunals and payment was to be spread over several instalments. The implementation of this legislation has encountered several obstacles including resistance by the landlords, but it is an established fact that several tenants acquired ownership rights under this provision of law. Partly as a result of resumption of leased land by the land-owners and partly through acquisition of ownership rights, the percentage of leased-in area to the total operated area in the rural sector has been reduced from 20 per cent in 1953-54 to 12.5 per cent in 1959-60, as revealed by the 8th and the 16th Round of the National Sample Survey.

Imposition of an upper limit of individual ownership of land constitutes another major piece of land reform. If it is remembered that the avowed purpose of this legislation is not so much the acquisition of land from big owners in quantities which would be adequate for providing a minimum holding to all landless labourers and uneconomic farmers, as to do away with 'excessive' ownership particularly by 'absentee' land-owners, the level of ceiling imposed by this legislation cannot be considered as unduly high. As recommended in the Second Five-Year Plan, the level of ceiling generally has been placed at about 3 family holdings. Family holding being defined as an area equivalent, according to local conditions, to a plough unit or a work unit of a family of an average size, working with such assistance as is customary in agricultural

operations. Thus in the State of Maharashtra, the ceiling has been placed at 18 acres of perennially irrigated land by flow irrigation. In West Bengal the ceiling is placed at 25 acres. It is generally estimated that the net income which will accrue to the cultivator from the 'ceiling' holdings would not normally exceed Rs 6,000, which cannot be considered as excessive by any token. As a matter of fact, this legislation has been attacked as highly discriminatory against the farming community, inasmuch as no similar limit on the ownership of instruments of production in urban area has been imposed. This criticism, however, can be countered by the argument that several other more appropriate measures have been devised to bring about equality in urban incomes. It may be noted that the Constitution has been once again amended to ensure the legality of this legislation.

An important supporting reform measure is the organization of a system of agricultural credit to take the place of money-lenders. No one would claim that the moneylender has been eliminated from the rural economy. But the progress achieved by institutional credit in displacing the money-lender is notable. A few facts regarding this remarkable progress in the provision of cooperative credit achieved during the last decade would be sufficient to demonstrate that determined effort is being made to cover the whole countryside with the cooperative credit societies.

Between 1949-50 and 1959-60, the number of primary agricultural cooperative societies increased from 134,000 to 214,000; the membership increased from 6.56 million to 15 million; their share capital from Rs 283 million to Rs 1,251 million; the working capital from Rs 1,987 million to Rs 7,391 million and loans advanced from Rs 251 million to Rs 2,203 million.

By June 1961, the primary agricultural societies were functioning in 423,000 villages (out of 563,000) having a population of 200 million. The number of members of the cooperative per 100 rural families was 29. It is admitted that the progress is not uniform in all States, but keeping in view the magnitude of the area and population to be covered, the expansion of cooperative credit and the consequential relaxation of the hold of the money-lender on India's rural economy deserves appreciation.

Hereafter, the major task in the sphere of land reforms is to devise machinery for the effective implementation of the legislation which has already been enacted. This implementation will have a greater chance of success if the feeling of uncertainty about the future pattern of agrarian structure is removed. The Government should, therefore, define its present policy as unambiguously and unequivocally as possible and give a solemn promise that there would be no major departure from the same.

UNICEF Over \$5 Million for 11 Indian Projects

THE 30-nation Executive Board of the United Nations Children's Fund (UNICEF) on 24 June approved over \$5.2 million for eleven UNICEF-assisted projects in India. All these programmes are of a long range character in the categories of health services, social welfare, nutrition and milk conservation. The newly voted assistance brings UNICEF's total aid to India from inception to \$49.8 million.

The Executive Board concluded its deliberations in New York on 24 June 1964 after allocating for 208 projects in 79 countries and territories. The global programme assistance voted at this session totals approximately \$34.6 million in commitments for a period of several years, and \$30.3 million in allocations for specific periods.

The following are the brief details of the projects in India for which new allocations have been voted:

RURAL HEALTH SERVICES

The amount voted by the Board for continued assistance to this programme is \$1,892,000. The Indian Government is establishing a comprehensive network of rural health services and associated facilities within its national community development programme. The amount of previous assistance rendered by UNICEF totals \$8,134,300. Under the present allocation, UNICEF would provide continuing assistance in the form of equipment for 400 new primary health centres and 2,400 sub-centres, and for the health education and sanitation aspects of the programme; stipends and equipment for the various training courses; transport; and drugs and diet supplements.

UPGRADING OF MEDICAL EDUCATION

An additional sum of \$200,000 has been voted by the Board for this project. The Board has previously approved assistance totalling \$177,000 to upgrade the departments of preventive and social medicine in twenty Indian medical colleges with the object of improving the teaching, both theoretical and practical, of public health and preventive medicine in order to provide qualified medical staff for the Government's large-scale development of rural health services.

GOITRE CONTROL

A large area of India comprising the northern parts of the States of Jammu-Kashmir, Punjab, UP, Bihar, W. Bengal and Assam constitutes the world's largest endemic goitre belt. Of a population of 40 million, 15 million are known to be affected. The estimated total requirement of iodized salt for these is 200,000 metric

tons a year. UNICEF has previously voted \$40,000 and equipment has been provided for the salt iodization plant at Sambhar Lake (Rajasthan), which is producing approximately 1,600 tons per month. It is now proposed to expand the programme for salt iodization to a level of 100,000 tons per year for which the Board has now allocated an additional sum of \$100,000 to provide 10 sets of spray type equipment.

The Board has approved an additional commitment of \$180,600 for this project, out of which \$116,000 have been voted to cover the first year's requirements. UNICEF first approved aid for this project in 1961. UNICEF provides drugs, training equipment and microscopes, transport and stipends for trainees.

TUBERCULOSIS CONTROL

The Board has approved an additional allocation of \$851,000 for both these programmes, and the previous assistance totals \$3.6 million. For the expansion of the programme during 1964-65, UNICEF would provide field supplies, equipment, transport and vehicle spare parts to the value of \$100,000. In the Tuberculosis field, UNICEF is assisting the National Tuberculosis Control Project with the provision of equipment and vehicles for the National Training Institute, and for a number of diagnostic and treatment centres.

As part of a comprehensive national programme for the rehabilitation of the physically handicapped, it is proposed that the four most advanced rehabilitation centres in India (Bombay, New Delhi, Nagpur and Madras) be upgraded through the provision of equipment to strengthen the physiotherapy and occupational therapy units, establish workshops for the manufacture of prosthetic appliances and train personnel in the field of vocational training. The programme would give major attention to the needs of children. UNICEF has previously allocated a sum of \$11,000 for this project. Under the new allocation now voted by Board, viz. \$65,000, UNICEF would provide equipment for the four selected rehabilitation centres for the purpose mentioned above.

UNICEF has committed to provide assistance to the value of \$64,000 to this project covering the three-year period 1963-66. The aims of the project are to be determined whether (a) the introduction of pre-vocational training in the school system is feasible and is acceptable to the rural, semi-urban and urban population; (b) the introduction of such training for children aged 11 to 14 years is a practical contribution to the growing need for industrial workers in the country; and (c) the introduction of such training would help to overcome the re-

luctance of parents to send their children to school beyond the period of primary education, after which children are generally expected to contribute to the family income.

The Board approved an additional commitment of \$3,700,000 for this programme for the period 1964-1967. The programme is directed primarily to the needs of the rural family, with particular attention to young children. Efforts to stimulate local production of protective foods are combined with education in better eating habits. The objective is to achieve better nutrition through self-help and community efforts. The programme also includes nutrition education carried out through such organisations as rural youth groups, women's groups, young farmers' groups and schools.

AGRICULTURE 8-Point Programme for Advance Action

The Centre has requested the State Governments to take advance action during the remaining period of the Third Five-Year Plan on some of the proposals which are under consideration for inclusion in the Fourth Plan. By such advance action, adequate preparation would have been made from now on to create conditions conducive to initiation of schemes from the first year of the Fourth Plan and for the achievement of the objectives and targets envisaged in it.

The proposals, drawn up by the working groups set up for the formulation of proposals for agricultural development under the Fourth Five-Year Plan, are now being considered in the Union Ministry of Food and Agriculture in consultation with the Planning Commission. When finalised, these proposals will be forwarded to the State Governments for their consideration and comments. They will also be included in the paper on the Fourth Plan to be prepared by the Planning Commission for consideration at the next meeting of the National Development Council.

It is felt that most of these proposals are of such an important nature that they should be taken up immediately irrespective of the consideration and final decisions regarding the shape and size of the Fourth Plan. For example, surveys for minor irrigation needs and potential are necessary irrespective of the size of the minor irrigation programmes. The proposals include items on which advance action is to be taken by the State Governments and those in respect of which action is necessary by the Central Government.

Advance action, which is necessary, falls broadly under the following categories:

UNICEF aid has been approved for milk processing plants at Ahmedabad, Anand, Baroda, Bangalore, Calcutta, Hyderabad, Vijayawada, Kanpur, Madurai, Raikot, Worli Dairy. Five of these plants are in operation with notable achievements towards their scheduled targets.

The Board at its June 1964 meeting has allocated an additional amount of \$170,000 for the Belgachia Dairy at Calcutta making available a total of \$260,000 for the rural milk development scheme in the Calcutta milk shed in order to bring the dairy upto maximum first-phase capacity as soon as possible.

The Board has also voted a second allocation of \$200,000 for the milk conservation project in Ludhiana (Punjab State).

1. Strengthening the arrangements for technical surveys and investigations for ground-water resources and other minor irrigation programmes, soil and water conservation, land use planning programmes, etc.;
2. Building up and strengthening technical organisations at the block, district, regional, State and Central levels for undertaking planning and implementation of accelerated programmes and providing competent guidance and supervision;
3. Expansion of training facilities to meet the requirements for additional staff of different categories for various programmes;
4. Settling selection and location of places for establishment of farms, research institutes and stations, etc.;
5. Preparation of layout plans and estimates in respect of buildings and drawing up of lists of equipment and placing indents for them so that they are received in the first year of the Fourth Plan;
6. Launching pilot projects to test new programmes and new ideas;
7. Enactment of suitable legislation for improved seeds, plant protection, soil conservation for improved seeds, plant protection, soil conservation (in some States) and minor irrigation;
8. Building up indigenous manufacturing capacity for various material inputs particularly in respect of fertilizers, pesticides and equipment. (Necessary action should be initiated in the industrial sector for this purpose).

State Governments have been requested to keep the Centre informed periodically of the progress, both financial and physical, in respect of the different proposals.

WHAT is the basis of Mr Nanda's confidence that he can redeem in six months his promise to eradicate corruption from our public life? If it is the atmosphere that prevailed in the recent joint conference of the two voluntary organisations in Delhi, the public will find it hard to share that confidence. For it is easy to recall former occasions when equal, if not more ebullient, enthusiasm for the cause led to no appreciable results. The present occasion is not far different. On the other hand, the task is more difficult now since the purification of the country's public life impinges on the laws relating to the conduct of elections, besides calling for high principles and standards from people who are engaged in the intrinsically sordid task of pulling strings and manipulating things for the benefit of their respective parties. The lofty professions of our political leaders are often dragged down when party managers get to their job of maximising the electoral support for their candidates. And in this country, the totally unrealistic laws about electoral expenses tend to deepen cynicism and set in motion a new set of unhealthy forces. The task that Mr Nanda has set himself in this regard has so wide an orbit that the enthusiasm of his followers, however numerous they may be, will avail them little against the practical requirements of electoral contests in mammoth constituencies.

The eradication of corruption from the services and the public administration is a comparatively simpler task, if only because of the restricted sphere, the existence of definite laws of a helpful kind and the existence of sound traditions which even today have not been forgotten. There is definitely a firm basis to build on. However much we may dislike it, the fact is that some of these traditions have weakened in recent years and the measures that have been adopted to combat the consequent increase in corruption have in some respects at least tended to worsen matters. The beneficial effects of inadequate action or misguided puritanical zeal are such that the efficiency and devotion of upright officials have been adversely affected, while the corrupt ones meet with no insuperable obstacles in their path. Corruption in the administration is often linked up with politicians who attain power or influence as a result of the corruption in public life, so that the purification of the administration may even be said to require as a necessary preliminary the accomplishment of the much more difficult task of purifying the nation's public life.

The situation has thus an unusually large number of regrettable features which are not inseparable, though they are no doubt more or less closely linked.

Despite its well known defects, the public administration under British rule was to a very large extent free from corruption. Petty officials and some departments which abound in opportunities for illegitimate gratification were not as pure as one might wish. But in the middle and higher rungs, a high standard of integrity was maintained almost effortlessly. An implicit understanding about the standard of conduct which was expected, and which varied within a narrow range between, say, the judiciary and the excise or the PWD or the police, helped to keep officials on the correct path and deviations were brought to light and dealt with in ways which normally were silent and effective. It must be said that opportunities for large scale or serious corruption in the old days were few, owing to the small scale of public expenditure and the few points of contact between officials and the business world and the public at large and the tightness of financial procedures and audit. The war changed these basic factors radically. Public expenditure was on a colossal scale. Supplies, disposals and controls brought officials into close contact with businessmen and the public and the general atmosphere of rising prices, rapid accumulation of wealth and big deals of a commercial nature deadened the moral conscience of those who had not been brought up in the old tradition. The attainment of independence worsened the situation in so far as it brought to seats of power some who had had no chance previously to test their powers of resistance to temptation. Experience of the impracticability of the austere ideals loudly professed in the past was even conducive to silent cynicism in some cases. At the same time, the scale of public expenditure and the temptations to lower standards soon became comparable to those of the war period. Licences, controls, tenders and contracts meant that the signature of an official meant a virtual gift of large amounts which were a strong temptation to offer or to take.

It is a unique combination of circumstances, and not a historical accident of sudden slump in moral standards, that has caused the growth of corruption. A drive against corruption can succeed only to the extent that the authorities carry out a patient and careful analysis of the various forces and try to offset each of them with appropriate action. First

and foremost is the need to maintain the dignity and self-respect of the permanent services. They must have every assurance that, so long as they are honest and straightforward, they will enjoy the same trust and prestige which were enjoyed by the services when, collectively, they constituted the ruling class in this country. But in point of fact, the first result of representative government has been that the services have come to be regarded as mere subordinates obliged to carry out without question the behests of the ministers without any rights of their own. Their prestige with the public has suffered. And the frequent talk of corruption and the kind of enquiry and action instituted against some have created a feeling of diffidence and insecurity, a reluctance to assume responsibility, and a tendency to carry out the day-to-day work only with an eye to shutting out the possibility of suspicion and embarrassing enquiry.

This evil cannot be removed by any single act. The restoration of confidence and the readiness for courageous assumption and exercise of responsibility depend upon improvement in many spheres. But the evil can be worsened by the institution of private associations which will act as spies on officials and some of whose members may not be above abuse of their access to ministerial ears. Nothing is more derogatory to one's self-respect than constant subjection to this kind of espionage. The possibility of unfounded suspicion, demands for explanation and harassment from high and low in a climate akin to that of witch-hunting in the old days in the west would deter officials from making important decisions and induce them to shove responsibility on to others. Such an attitude would delay and impede the working of many a project of vital importance.

The problem of corruption in the services ought to be attacked in what may be called the periphery of the area of trouble and not what is wrongly supposed to be its centre. Officials of every cadre will be able, once they are assured of a proper approach to the trouble on the part of the powers that be, to revive and strengthen the old tradition and create an environment in which corruption will have no chance to revive and spread itself. By the same token, so long as the fear is kept alive of somebody prying unobserved into their doings and carrying distorted tales to those above, the evil has the most favourable soil for its growth. The present attitude of eradicating corruption by suspicion, spying and harassment has already worked havoc with the morale of the services. It is possible that the harm could have been reduced somewhat if the threats of penalties against the erring members had been accompanied by the promise of rewards for those who keep to the narrow path. The latter is no doubt unjustified on principle, since there can be no reward for merely refraining from wrong-doing. But penalties and incentives generally go together for ensuring correct conduct and in the peculiar conditions of today, rewards for the up-right need not be altogether discounted.

Certain investigations into the possessions of the people concerned and their rate of growth can be gone through as a matter of routine. But corruption in the services must de facto power, the large-scale material values not due to a sudden increase in original sin but must be attributed to the changes in de facto power, the large-scale material values which attach in these days to most official orders and to the loose standards that have been

allowed to prevail. One cannot help reflecting in this context that it is difficult to avoid an attack of cynicism if the public mind is made to sway violently between the impractical austerity preached in the old days and the cynical, sordid ways that are known to be adopted by numbers of popular politicians in all tiers of leadership.

COOPERATIVES

A Case for Industrial Banks

By Dr M. D. Sharma

THE need for setting up separate Industrial Cooperative Banks has, from time to time, been stressed by planners and cooperators. In 1946, the Saraiya Committee (All India Planning Committee) mooted the idea of separate Industrial Cooperative Banks. Since then, various committees, conferences, seminars and state cooperative councils—especially of the old Bombay State—have recommended organisation of separate industrial cooperative banks. The Japanese Team on Small Scale Industries also recommended in 1959, the formation of an industrial bank at the national level to finance industrial cooperatives while in 1961, the Jay Prakash Narayan Group on the Welfare of the Weaker Sections of the village community recommended setting up of a hierarchy of industrial cooperative banks.

Recently, it has become an important controversial issue whether under the present set up and growth of the Cooperative movement in India, there is any need of establishing separate Industrial Cooperative Banks.

Office-bearers, the official and non-official staff of industrial cooperatives and the organisations and departments responsible for promotion and development of industrial cooperatives, have almost invariably been of the opinion that "separate industrial cooperative banks should be established for financing of industrial cooperatives."

In support of this view, it can be stressed that separate industrial cooperative banks would relieve the central cooperative banks of their present undischarged responsibility of financing industrial cooperatives. The cooperative banking structure would be the richer by their organisation, both because they would serve as specialized agencies for a highly important sector of the cooperative movement and add variety and strength to the structure.

Contrary to this view, the Reserve Bank of India and some of the economists, cooperatives and State Governments have felt that separate industrial cooperative banks should not be organized. They feel that "the existing central financing agencies have large resources and management experience. It is their duty to finance all types of cooperatives including industrial cooperatives and if they have not discharged their duty properly in the past, the remedy does not lie in organisation of separate industrial cooperative banks but in persuading and strengthening the existing central financing agencies to perform their duty to industrial cooperatives better. It is argued that efforts made in this direction would yield better results than what can be expected of new, inexperienced and financially weak industrial cooperative banks".

The question whether separate industrial cooperative banks are necessary should, therefore, be viewed from the point of view of the effectiveness of such institutions in augmenting the credit supply over and above the existing central cooperative banks and other financial intermediaries, keeping in view the future projections of industrial cooperatives' financial requirements.

I

Industrial cooperatives have a highly important place in the national economy as next to agricultural credit cooperatives, they form the largest single group in the Indian Cooperative movement. Recent trends in national planning visualizing greater emphasis on additional and fuller employment, raising of the standard of living, especially of the weaker sections and creation of agro-industrial economy in rural areas invests industrial cooperatives with a significance surpassed only by that of the cooperatives concerned with agricultural production. At present their number is estimated to have exceeded 40,000 societies. The Second Working Group on industrial cooperatives (1963) has emphasized that in the Fourth Plan attention needs to be directed to strengthening the Industrial Cooperatives and putting them on a sounder footing whereby they could provide better service and better employment to their members. It has estimated 68,000 industrial cooperatives at the end of the Fourth Plan with a membership of 6.5 million and working capital of Rs 250 crores.

II

The financial requirements of Industrial Cooperatives are not at present being adequately met by the existing financial agencies like the cooperative banks. The first working group on industrial cooperatives reported in 1958 that central cooperative banks had not been sufficiently sympathetic towards or understanding the problems of industrial cooperatives. While appreciating the needs of the changing Indian Economy and also the needs of industrial cooperatives which is an integral part of the cooperative-sector the Working Group suggested an increasingly active role on the part of the Central Cooperative Banks in meeting the credit requirements of industrial cooperatives. Five important measures were suggested by it to achieve this end.

If the central banks had implemented these five measures, they would have been able to make a satisfactory contribution to the financing and development of industrial cooperatives. But during the period of about six years since the recommendation was made, not a single central bank is known to have implemented all the five measures and very few have begun to implement some of them. This is so in spite of the Central Government's sanction for guaranteeing the Banks' losses to the extent of 90% and subsidising Deputy Managers' and Supervisory Staffs' appointments, etc.

The Second Working Group on Industrial Cooperatives has also observed in 1963 that during the period of five years that had elapsed since the First Working Group Report, the overall attitude of central financing agencies was halting and the quantum of their loans to industrial cooperatives too small as compared to their resources.

An analysis of the latest available data would enable us to ascertain the extent to

which apex and central cooperative banks have made their resources and services available to industrial cooperatives. Statistics show that only 13 out of 21 apex cooperative banks availed themselves of the Reserve Bank Scheme of financing Handloom Industrial Cooperatives in 1961-62 and even this number dropped to 11 in 1962-63. The performance of central cooperative banks was still more unsatisfactory as only 117 out of 372 took advantage of the scheme.

The total outstandings of central financing agencies from weavers' societies and spinning mills amounted to Rs 7.16 crores on 30.6.61 and from other industrial cooperatives to Rs 2.48 crores. Of the latter, a few industrial cooperative banks accounted for less than Rs 1 crore.

In the case of industrial cooperatives other than handloom, the borrowings from Government and Government-sponsored Agencies were ten times the borrowings from central financial agencies other than industrial cooperative banks.

Though the essential basic requirement of all cooperatives is that they should be financed by central financing agencies at least for their short term and medium term credit requirement, and it has been argued since long that no other agency can take their place and do the working well, yet it is an unfortunate fact that central financing agencies have, on the whole, failed industrial cooperatives badly.

Some of the basic reasons responsible for the unwillingness on the part of ordinary financial agencies to make adequate funds available to industrial cooperatives have been brought out as given below:—

Firstly, they have been used to agricultural finance the basis of which has almost always been immovable assets even when productivity was taken into account. They have, therefore, been reluctant to sanction adequate loans or credits to industrial cooperatives whose members hardly possess any immovable assets.

Secondly, their staff is not conversant with the techniques or economics of the industries covered by industrial cooperatives and are not in a position to examine their schemes, assess their financial requirements, and make definite recommendations to the Board of directors.

Thirdly, most of the central financing agencies are already overburdened with heavy responsibility imposed by steadily increasing agricultural finance with the help of the funds made available by the Reserve Bank of India.

Fourthly, their Boards of directors consist mostly of agricultural societies' representatives and have negligible experience or knowledge of industrial finance.

III

We have already noted the important role played by Government Departments and Government sponsored boards, commissions, etc. in the financing of industrial cooperatives (particularly handloom) as compared with the role played by central cooperative banks. Further, we in India have been used to Government financial assistance and share capital participation, which is not the ideal solution. Cooperators all over the world believe in self-help which aspect should not be forgotten. And it should be clear in every one's mind that they (Government Departments etc.) are not specialised agencies for finance.

They cannot give revolving credit which may increase with lapse of time as a cooperative's business develops. Rather, they give loans which are repayable in certain fixed instalments with the result that they go on reducing when the business of the borrowing cooperative should go on increasing and its financial needs become greater. Regarding supervision over utilisation and recoveries, Government Departments and Government sponsored organisations stand nowhere to the standard of an efficient industrial cooperative bank.

IV

The Second Working Group on Industrial Cooperatives reported in 1963 that "the problem of financing industrial cooperative societies brooks no delay. A theoretically correct approach alone is not sufficient. There should be a sizeable impact within a measurable time." It emphasized the urgent need of mobilising fully the central financing agencies for this purpose. It has suggested that 20 per cent of central financing agencies should be persuaded to adopt all the measures suggested by the First Working Group on Industrial Cooperatives every year and has suggested a target of Rs 15 crores as additional credit to be provided by central financing agencies in the last year of the Third Plan.

The Second Group has further suggested that "simultaneously in our opinion, new district cooperative banks may be organised where (i) there is fair concentration of small industrial units organised cooperatively or otherwise, (ii) there are fair prospects of their ability to raise deposits and (iii) the credit needs of industrial cooperatives cannot be met adequately by the existing central financial agencies."

The Second Group has, thus, recommended on the one hand the need for central financing agencies to meet the financial needs of industrial cooperatives, while on the other, has stressed on practical plane the need for establishing new district Industrial Cooperative Banks. Would it not give a chance for proliferation of institutions on the one hand while possibilities of competition and then efforts for their coordination, over and above the high cost of service and finance on the other?

We have already noted that central financing Institutions have failed to serve the needs of industrial cooperatives, in spite of First Working Group's recommendations and efforts of the Government to enable them to expand and improve their operations in that direction. The existing industrial cooperative banks have done better and theirs are more useful and productive efforts. The Second Working Group has also recognised that "district Industrial cooperative banks, by and large, continued to serve both industrial cooperatives and individual small industrialists with varying degrees of success."

Experience reveals that all the five district industrial banks and one regional bank have shown steady and substantial progress in all important respects—membership, share capital, borrowings, advances and the reserve funds etc.

V

The average district or regional industrial bank has with its limited resources, served industrial cooperatives better than a good central cooperative bank. The contribution in financing industrial cooperatives and their significance has been recognised by the Second Working Group which has recommended, as

already mentioned, the organization of district industrial banks. No industrial cooperative bank has failed as yet and it is yet to be proved if any such bank would fail in future when organised and managed properly according to normal procedures and working.

A number of industrial cooperative banks have worked for several years. It has not been pointed out what harm these banks have done to the cooperative banking structure of the states concerned or of the country as a whole. Contrary to it, district central cooperative banks have welcomed separate industrial cooperative banks.

The immediate need of the industrial cooperative movement is that of an agency which would at least efficiently channel Government Funds to industrial cooperatives and make it its business to get the best result therefrom. Even if industrial cooperative banks could fulfill this purpose, for the present, they would be rendering highly important services both to Government and industrial cooperatives. Like good Industrial Banks, with lapse of time, they can build up their own resources, arrange for institutional finance, get more deposits and reduce their dependence for funds on Government as compared to their needs.

The Reserve Bank of India and others opposing the existence of separate industrial cooperative banks at the district level should revise their opinion in view of the needs of the situation. With lapse of time, their resources and capacity for service have been and will go on increasing. Efforts should be made to impress on apex district central banks that industrial cooperative banks are not their competitors but their complements and both should work in union and help another.

TELCO

The Step-child

TIME was, not long ago, when transport bottlenecks were the order of the day. The position has considerably changed during the past few months and most carriers are now only too ready to take additional tonnage. The present easy transport situation is not, however, the outcome of an around expansion in transport facilities. It is due to the stagnation that has set in in the national economy over the past two or three years. The fact of the matter is that the rate of growth of the economy has lagged far behind the targeted level and consequently there has been a reduction in freight seeking movement. It will therefore be imprudent to assume that transport bottlenecks are things of the past. For, the effort that is currently in train to accelerate the rate of growth of the economy will before long result in an increasingly heavier demand being made on transport facilities and once this comes to pass, the transport situation may cease to be regarded as satisfactory as it is now. In this view, it will do us a lot of good to take a look at the transport situation as it obtains today with a view to finding out whether all that needs to be done in the different sectors of transport is being done. Such an examination will reveal that so far during the three plan periods transport development has largely been railway biased. In other words, the emphasis has been on the expansion of railways with the bulk of the outlay on transport going to them. It is accepted on all hands, that expand as much as they can, the railways cannot hope to carry all the

traffic. The question arises whether other modes of transport are adequately developed to take care of the balance of tonnage that will either be beyond the ken or capacity of the railways. The answer can only be in the negative because the only other mode of transport, road transport, which is capable of shouldering the burden has all along been receiving a stepmotherly treatment. Moreover, for reasons best known to itself, Government has so far done everything to discourage its development.

It is gratifying therefore to find that there are now good indications that a radical departure may be in the offing in the country's transport policy during the coming plan period. For, the Transport Development Council at its session this week in Srinagar has taken a number of significant decisions which if implemented will result in the emphasis being correctly placed on the various sectors of transport. Indicative of the changed outlook is the Council's recommendation that the Fourth Plan should provide Rs 1,150 crores for road development or a little less than four times the Third Plan allocation. Current official thinking on the subject seems to favour a firm transport policy which gives due recognition to the role of road transport.

The need for a reorientation of the transport policy has also been emphasised by Mr J. R. D. Tata, Chairman of the Tata Engineering and Locomotive Company Limited in a statement circulated to the shareholders along with the accounts of the company for the year 1963-64. Calling for a comprehensive impartial study of the economics of transportation by an independent body, he has pointed out that hitherto transport policies have been invariably based on what he calls "railway thinking". The over importance given to railways has been responsible for the comparative neglect of road transport which finds itself in an unenviable position today. As a result of the restrictive legislation imposed by State Governments, inter-State road transport is made extremely difficult while long distance trucking is made virtually impossible. The result is that the Railways have come to have a virtual monopoly of inter-State traffic, and nobody seems to realise that road transport has some distinct advantages over the railway in the movement of certain types of goods.

The sooner such a discrimination is done away with, the better for transportation in general. The remedy indicated by Mr Tata includes the evolving of a system under which inter-State permits are issued freely for operating through any State by a Central authority. He is also confident that an explicit analysis of the benefits and costs of the two principal modes of transport in the country will "reveal that greater investment in highways and some relief to the road transport industry are not only fully justified but urgently needed".

One of the serious obstacles in the way of a rapid expansion of the road transport industry is the crushing burden of taxation that is imposed on it. In the first place, the operator has to bear a very heavy initial burden in the shape of the cost of the vehicle as the price includes the cost of various imposts made by the Government on the manufacturing industry. Then there are the other levies imposed both by the Central and State Governments that the road transport operator has to pay if he wants to remain in business. According to Mr Tata, every commercial

vehicle in regular use pays every four years in taxes alone a sum in excess of its original cost. The crippling effect of the tax burden on the road transport industry will be evident if it is noted that the incidence of taxes and duties alone in every ton-mile of road transport equals the total amount charged by the railways for a ton-mile by rail.

It is, however, heartening to find that Telco is playing a useful role in the development of the road transport industry by keeping the price of its products as low as possible. As a matter of fact, in the case of the most popular model of the well known Tata-Mercedes-Benz range of vehicles, if the increase in the tax and the price of imported components that has taken place over the past five years or so is left out of account, it will be found that the price of this vehicle is actually lower than in 1959. Fortunately for the operator in whose scale of preference the Telco vehicles have a high ranking, there has been no serious obstacle in the way of the successive expansion of its productive facilities and as a consequence the company has been enabled to pass on the benefits of large-scale production to the consumers. During the past year the company's production has shown an upward trend and the first stage of expansion to 18,000 vehicles is now virtually complete. Work has already started on the second stage which envisages a production of 24,000 vehicles per annum. The fact that the Agency for International Development has approved of a further loan of Rs 5.62 crores to finance the foreign exchange element of the project augurs well for the early completion of the expansion programme.

South Indian Notes

The meeting of the Madras Legislative Assembly, the tangled state of the issues connected with the supply and distribution of foodgrains and the beginning of the preparations for the Fourth Plan have combined to push to the fore problems which would not otherwise have hit the headlines just at present. The meeting of the Assembly at this time of the year usually occurs so soon after the power cut and the restoration of power that members' minds are understandably exercised over the basic position of power supply and ancillary issues like the administration of the State Electricity Board. The questions range over a wide field, from the revision of rates for power to the establishment of new thermal and hydel units and even an atomic power station. Mr R. Venkataraman, the Minister concerned, is now a seasoned Parliamentarian; and his answers are not only pointed but also anticipate the issues that might be raised in supplementaries.

It is fortunate that the power cut of June, though no doubt a hardy annual, was of short duration and occasioned no fraying of tempers. Mr Venkataraman was quite convincing in his contention that, once a power cut became inevitable, it was far better to give a big cut in a comparatively short period, so that what was lost in actual working and output could be made up to a great extent in repair and overhaul and in refreshing the staff by grant of leave to those who are eligible for it. The old grouse about the

Government turning down the proposal of private industrialists to set up a new thermal unit at Ennore is now being met by the Minister's statement that the Government is now going to establish one. Even more encouraging is that in regard to an atomic station in the South. Considering the humming and hawing that one hears so often from so many different quarters about the economic character of atomic power, it is good to be told that the atomic power project is sure not only of inclusion in the Fourth Plan but also of completion before its end. Meanwhile, there is the prospect of the Government taking up even small Hydel projects like the Hogenekal for which the consent of the Mysore Government is necessary. But Mr Venkataraman is inclined to think that, if Mysore is recalcitrant, the Centre may well work it as a Central project.

While industry in Madras has this fairly cheerful picture of the future of power supply, the average man is faced with rising prices of rice and more or less poor prospects of Government bringing the position under control. One must say "poor prospects", because the present spurt comes in the wake of the sudden drop which followed the decision of the recent Food Conference in Delhi to adopt freedom of movement within each zone. At that time, the decision seemed like the cutting of the Gordian knot, because in the light of the drop of Rs 10 in the price of Nellore rice, it looked like an act which was an obvious course for the authorities to adopt, but which called for extraordinary courage in place of the Hamlet-like ratiocination and wavering which people had hitherto been giving to its consideration. But the drop in price not only seemed too good to last, but it was said even at that time to have been purely nominal. It was said that there were no sales at that price and newspaper quotations surely don't fill the consumers' stomach.

Now that the rebound has come, the Madras Government has nothing to offer except the promise of an increase in the number of Fair price shops. Now, fair price shops, like so many other beneficent gifts of a benign Government, do not take us far. For comfort, the people must turn to the report that the State Government is planning for an increase of 30 per cent in the output of rice. This is not perhaps a mere sop, considering the Government's record in the execution of most plan projects, particularly the increase in the output of rice in previous plans. The idea would seem to be a more energetic exploration of the possibilities of increase in areas other than Tanjore, where the package plan is being tried out with great vigour.

But then, one may reflect, the price of rice is not dependent on the output of rice in Madras State. While a shortage is sure to send prices up, it is by no means certain that a surplus over local consumption will bring them down. An increase in output would only mean an increase in what is aptly termed the marginal surplus, of which Kerala is the certain beneficiary. Kerala gets 300,000 tons from Madras, which in its turn buys 200,000 tons from Andhra. The Southern Zone could be self sufficient on a higher level of per capita consumption after some time.

Meantime, the consumer must continue to lose sleep over the price he may have to pay for the necessities of life. For, on the question of price fixing not only is the expert

finding as to costs of production far away, but the Governments concerned are thinking on different lines. Andhra Pradesh Government would not have a price fixed at current levels, which to it seems like the minimum rather than the maximum prices. The Madras Government expects price fixing at harvest time to yield some gains to the consumer. What the upshot will be, it is pointless to speculate.

The arrival of 1,500 Indians from Burma will stir the hearts of all people in South India and set them thinking as to what is precisely the cause of their helplessness against the Governments of neighbouring countries who till yesterday were supposed to have the same feelings as we about freedom for individuals as well as nations. These Indians have been sent back from Burma, not bag and baggage, but without them to throw themselves on the charity of the Government in India and of relatives whom they have not seen for decades. The officials have a hard job putting them up and persuading such of them as can recall the names of friends or relatives to move to those places. But the impact of this "repatriation" on the economy of South India will be felt as more and more people "return" to India. Ceylon is poised for sending the stateless persons to India, forcing them by every device known to them—the denial of food cards is perhaps one of them. India's foreign policy has in the past failed to take into account the interests of people of Indian origin in the neighbouring countries, a large proportion of whom are South Indians.

Problem of Productivity

THE crucial importance of the concept of productivity, not for more prosperity or industrial progress, but for very survival, has been described in eloquent terms by Mr Asoka Mehta in his inaugural address to the recent Conference of Productivity personnel organised by the NPC. One may presume that the audience he addressed, consisting mostly of productivity personnel, did not need much convincing on this point. They might also have been suitably flattered by the role of harbingers of the socio-economic transformation, in which they were cast by the Deputy Chairman of the

Planning Commission. But it is possible to have doubts about their enthusiasm for the concrete task he assigned them, namely, to help the Planning Commission, in drawing up investment priorities and in the choice of technologies, by indicating the optimum size of industrial units from the point of view of productivity of capital.

The problem of attributing specific increases in productivity to individual factors of production is complicated by conceptual difficulties. Few productivity experts would care to stick out their necks by expressing a categorical view which could spark off a controversy and turn the tripartite movement, as Dr Lokanathan described it, into a triangular scuffle. As it is, they can look with some measure of satisfaction on the progress so far achieved by the movement which has brought productivity techniques to the attention of all sections of industry, and increased the number and range of its training programmes. But the nagging doubt remains whether the promotional efforts have yet achieved significant results in terms of increased productivity. Dr Lokanathan, perhaps, had this in mind when he questioned the validity of methods of evaluation of the work done by the Productivity Councils in terms of seminars and training programmes and stressed the need for guarding against the tendency to mistake techniques and methods for the goals which the movement should set before itself.

Though training programmes and seminars have evoked a good deal of interest and active participation at all levels, not many businesses have been prepared to adopt the techniques recommended for increasing productivity. The training of workers and executives in these techniques is the essential first step. But the factor determining the adoption of these techniques is the response of the top management. While business leaders frequently complain about the negative attitude of workers, productivity experts have been increasingly drawing attention to the attitude of management as the basic factor determining productivity, the inference being that managements in India have not shown adequate awareness of its importance. If that is really the case, it will be necessary to examine the factors that inhibit a positive response.

One reason may be that, in the socio-economic framework in which industrialists have to operate in India, increased productivity means more problems than profits. First and foremost is the problem of redundant labour. Any hint of retrenchment will be a signal for protracted industrial disputes with their trail of frustration and bitterness. Whatever the method adopted, whether it is improved machinery, rationalisation of layout or working methods, increased productivity means that the same level of output could be obtained with a smaller number of workers. Large organisations may be able to absorb the surplus hands in other units under the same management. Or the same unit could maintain the same level of employment, if it were in a position to expand production or branch out into new fields. Sale of the additional output may not present any difficulty. But under the conditions prevailing in India, where scope for expansion is severely limited by shortages of essential materials and diversification is also hedged in by various difficulties, most industrial units which embark on productivity schemes will have the problem of surplus labour on their hands.

Since shortage of materials, even more than shortage of capital, appears to be the limiting factor to industrial expansion, the response of business managements to suggestions to adopt productivity techniques may be expected to be more favourable than is apparently the case at present, if the productivity personnel concentrated attention on 'Materials Management' and presented their programmes from that point of view. Techniques which would help to maximise production for a particular level of material consumption, in terms of quantity and value, should form the basic element of the productivity programmes offered to industries. Other items could be added as subsidiary elements of the main programme. Such an approach will help to bypass the problem of redundant labour and change the attitude of both labour and management to the adoption of productivity programmes.

Apart from this consideration, a material-oriented approach to productivity is of basic importance for maintaining the tempo of development in a country like India with its large and growing population. Such an approach will also help to clarify the issues involved in the choice of alternative technologies. In the context of a large workforce and meagre capital resource, labour intensive industries will continue to occupy an important place in the economic structure, but not if the processes involve wasteful use of materials. The extent of support for cottage and village industries will have to be examined from this angle and constant efforts made to improve their techniques of material utilisation.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

NEW LOAN

Further Indications

THE latest banking returns contain more clues about where the money came from for the Centre's second tranche of its borrowing programme.

The returns of the Reserve Bank for the week ended 24 July are replete with slack season influences. Active Note Circulation has contracted sharply by Rs 35.11 crores to Rs 2,443.77 crores, and inflow of Rupee Coin is in the rather considerable amount of Rs 2.58 crores. Currency has been contracted against Foreign Securities for Rs 4 crores, reducing the level to Rs 85.46 crores, and against Rupee Securities for Rs 31 crores, bringing down the relative figure to Rs 2,155.68 crores. As a result, the Reserve Bank's cash in the till has moved up slightly by Rs 2.83 crores to Rs 20.90 crores.

There is a substantial rise of Rs 23.14 crores to Rs 76.87 crores in the Centre's balances; and this fact is to be coupled with the information that, in the week ended 27 July, cancellation of ad hoc Treasury Bills did not amount to Rs 150 crores, as we have surmised, but to something of the order of Rs 125 crores. It seems to us likely that the Centre received, only during the week under review, new loan subscriptions amounting to roughly Rs 25 crores; and this could account both for the relatively smaller quantum of reverse ad hocs in the week ended 17 July and for the increase in the Centre's balances in the latest week.

Investments in the Banking Department are higher by Rs 24 crores at Rs 283.09 crores, against which, it may be noted, the transfer from the Issue Department was Rs 31 crores. The inference is clear, that Scheduled Banks have been further purchasers of gilt-edged through the Reserve Bank tap.

State Governments report little movement in their figures: their Deposits are a shade lower by Rs 0.52 crore at Rs 17.93 crores, and their indebtedness to the Reserve Bank up by Rs 1.82 crores at Rs 22.94 crores.

Scheduled Banks continue to be comfortably placed: their Reserve Balances are, it is true, lower by Rs 4.21 crores at Rs 95.96 crores; but their borrowings continue to be nominally placed at Rs 0.45 crore, or Rs 0.40 crore less than in the previous week.

Balances Held Abroad, despite the transfer from the Issue Department of Rs 4 crores, are higher only by Rs 1.36 crores at Rs 7.37 crores. The inference of course is that the import surplus during the week amounted very nearly to Rs 3 crores.

The return of the State Bank for 24 July records an increase of Rs 38 crores to Rs 263.25 crores in gilt-edged investments, therefore more or less confirming our estimate in this behalf. Additionally, it is to be noted that the fall in Other Assets amounts only to Rs 26 crores, to a level of Rs 28.93 crores—which is still

unusually high. The implication is that more purchases of gilt-edged are in the offing. The rest of the "purchase" of gilt-edged was "financed" by an increase of Rs 6.17 crores to Rs 467.40 crores in Deposits and by a fall of Rs 3.95 crores to Rs 344.99 crores in the total of Advances. The result is a small rise of Rs 0.60 crore to Rs 28.84 crores in the State Bank's cash balances, including money at call and short notice.

The return of the Scheduled Banks for 17 July records the fact that the gilt-edged portfolio is marked up by Rs 3½ crores at Rs 679.02 crores; if regard is had for the State Bank having sold Rs 11½ crores of securities in the same week, it would be clear that acquisitions of other Scheduled Banks were placed at Rs 15 crores; and this is precisely the figure at which we had estimated the new loan subscriptions of Scheduled Banks other than the State Bank. As anticipated, moreover, the impact of the LIC's drawal on Deposits for acquisition of the new loan has been fully masked by the continuing accrual to the resources of the banking system. In fact, thus, net Demand Deposits are up by Rs 6.03 crores at Rs 1,240.42 crores, and net Time Deposits by Rs 6.78 crores at Rs 1,370.90 crores. The total of Advances has dipped steeply by Rs 25.83 crores to Rs 1,750.27 crores. Borrowings from the Reserve Bank are more or less unchanged at Rs 0.42 crore, but indebtedness to the State Bank has risen by Rs 2.65 crores to Rs 23.84 crores. The net result is a decline of Rs 5.64 crores to Rs 249.91 crores in cash balances, including money at call and short notice.

BANK OF ENGLAND

Britain's Oversea Aid

Increased expenditure by the British Government on overseas aid—including that to India—and the rapid development of the British economy coupled with expanding markets abroad for British products are two points brought out in the annual report of the Bank of England published in London last week.

In the section on finance for the developing countries, the report points out that, in general, emphasis is being placed on the contribution that technical assistance can make, and shows that Britain's expenditure under this heading amounted to £29,000,000 in 1963-64—more than six times as much as in 1957-58.

Altogether, says the report, expenditure by the British Government on overseas aid in 1963-64 amounted to £175,000,000—more than twice the amount in 1957-58.

During the period covered by the report, Britain has also taken part in a number of consortia and consultative group arrangements dealing with the problems of particular countries or areas. Notable among these are the consortia organized by the International Bank

for Reconstruction and Development for co-ordinating international aid for India and Pakistan.

Turning to the home front, the report says that the year under review was a period of rapid development in the domestic economy and of expanding markets abroad for British products.

When the year opened, the main problem was to judge when recent measures to expand demand would begin to show effect, and whether further stimulus might be necessary. At its close, the emphasis had changed completely. The problems then were to ensure that demand would not expand faster than output, and that costs and prices did not rise unduly.

+

The last date for submitting the first set of returns by non-banking companies and financial institutions, viz. 31 July 1964, has been extended to 31 August 1964, and necessary Orders amending the original Orders to this effect are being published in the Gazette of India. The following returns* may now be submitted not later than 31 August 1964, (instead of 31 July 1964).

1. The returns in so far as they relate to the position as on 31 March and 30 September for the years 1962 and 1963 and as on 31 March, 1964, under Order No ED/DME.1062/MRC.95-64 dated 14 May, 1964.
2. The returns in so far as they relate to the position as on 31 March and 30 September for the years 1962 and 1963 and as on 31 March, 1964 in respect of Form D-2 and to the position for the years ended 31 March, 1962, 31 March, 1963 and 31 March, 1964, in respect of Form HF, under Order No ED. DME. 1063/MRC. 95-64 dated 14 May, 1964.
3. The returns in so far as they relate to the position as on 31 March and 30 Sept. for the years 1962 and 1963 and as on 31 March, 1964 in respect of Form D-3 and to the position for the years ended 31 March, 1962, 31 March, 1963 and 31 March, 1964 in respect of Form IC, under Order No ED/DME. 1064/MRC. 95-64, dated 14 May, 1964.

+

Treasury Bills

TENDERS for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 28 July 1964. Total amount offered was Rs 4,05,00,000. Tenders at Rs 99.400 per cent were allotted 49 per cent approximately. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.399 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 3 August 1964. Successful tenderers should make payment on Friday, 7 August 1964 at all centres. Other conditions are as usual.

GLEANINGS

Changing Pattern of Bank Deposits

[The following is reprinted from Bank of Baroda's weekly review for 17 July 1964.]

During the period of planning (1951-63) significant changes have taken place in the volume and composition of bank deposits. Scheduled banks aggregate deposits (excluding P.L. 480 and 665 funds) rose uninterruptedly from Rs 822 crores in 1951-52 to Rs 2,285 crores at the end of March 1964. During the First Plan scheduled banks added to their deposits Rs 130 crores, during the Second Plan Rs 552 crores and during the Third Plan they are expected to add Rs 1,200 crores. The annual rate of growth of deposits was only 3 per cent during the First Plan, but 13 per cent during the Second Plan and varied between 14 and 15 per cent during the first three years of the Third Plan. In 1963, scheduled banks' deposits rose by Rs 283 crores as compared to Rs 233 crores in 1962. It is very likely that the target of adding Rs 1,200 crores to deposits by the end of the Third Plan would be fulfilled.

The analysis of the composition of aggregate deposits shows a marked increase in time deposits. In 1951-52 time deposits formed 34.2 per cent of the aggregate. But since then they went on rising and overtook demand deposits in 1958-59. It was only in 1963 that there was a sharper increase in demand deposits. Last year demand deposits are reported to have increased by Rs 186 crores and time deposits by Rs 103 crores. The share of time deposits in the total which stood at 56.7 per cent in 1962 declined to 54.9 per cent in 1963. Correspondingly the share of demand deposits which was 42.3 per cent in 1962 rose to 45.1 per cent. Part of the shift from time to demand deposits was 'statistical' and was occasioned by the inclusion under demand deposits by some of the larger banks of deposits by savings deposits hitherto forming a part of time deposits. It is estimated that such a transfer of time liabilities to demand liabilities was not less than Rs 50 crores in 1963. Making adjustments for this transfer, time deposits seem to have increased by not less than Rs 150 crores and demand deposits by not more than Rs 130 crores in 1963. Thus the rising trend of time deposits is not sagging as assumed by some.

Following the competitive liberalization of the rules governing the withdrawals of deposits in savings bank accounts, the entire amount of savings deposits assume the character of demand deposits. Many of the scheduled banks justifiably thought that they are only complying with the spirit of the concept of demand deposits if they include the entire amount of savings deposits under the demand category. This change might have been facilitated by the introduction of statutory reserve requirements on a uniform basis of 3 per cent of deposits instead of the earlier requirements of a higher rate of 5 per cent for demand liabilities and 2 per cent for time liabilities. In increasing demand deposits in 1963 the role of other factors such as the state of uncertainty, deposits of industrial houses and the public contribution in money to the defence effort, seems to have been exaggerated. The main significance of time deposits lies in the fact that as they do not form a part of the money

supply, their faster rate of growth helps to restrain monetary demand for consumer goods and thus to counteract inflationary pressures.

In recent years growth in savings deposits with the scheduled banks has been showing a sharp rising trend, judged by both the number of accounts and the magnitude of such deposits. The number of accounts increased from 27 lakhs in 1957 to 41 lakhs in 1961. Although we do not have data for 1962, in 1963 alone there was a further increase of about 10.33 lakhs out of the increase of 14.66 lakhs in the total number of accounts. Savings deposits which stood at Rs 202 crores in 1957 more than doubled to Rs 489 crores by the end of April 1964. It is significant to note that deposits of post-office savings banks outstanding at the end of March 1964 were of the order of Rs 380 crores. The rate of growth of savings deposits of banks has been rising rapidly. It was 20.7 per cent in 1963 as against 19.6 per cent in 1962 and only 10 per cent in 1961.

POPULATION-WISE ANALYSIS

The population-wise analysis shows that during the period 1957-61, a higher rate of growth was witnessed in centres with a population below 1 lakh than in centres with a population of 1 lakh and above. The growth was not uniform in all the States. The existence of a large number of big industrial and commercial towns and cities in Maharashtra, Gujarat, West Bengal, Madhya Pradesh and Kerala where the size of the middle class and wage-earning population is considerably large might be one of the important reasons for a relatively high order of growth in savings deposits in these States. A continual rise over a period in the average savings deposits per office in a State indicates both the growing responsiveness of such deposits to the banking system and the high potentiality of the State for the growth of savings deposits. For the country as a whole the average savings deposits per office increased from Rs 5,98,000 in 1957 to Rs 7,18,000 in 1961. Maharashtra, West Bengal, Gujarat, Assam and Uttar Pradesh recorded a rising trend throughout the period and the States which can be placed as having low order of growth in savings deposits were Jammu and Kashmir, Orissa, Madras, Mysore, Punjab and Rajasthan.

MANY REASONS

There are many reasons which explain the rapid growth of savings deposits. In recent years personal savings have been showing a rising trend. For instance, between 1950-51 and 1958-59 personal savings rose from Rs 510 crores to Rs 938 crores, that is by 12 per cent every year. The traditional habit of hoarding

gold is gradually disappearing and savings are finding their way into financial institutions. Banks have been building up rapidly a wide network of branches throughout the length and breadth of the country. In order to develop banking habit in people, banks are undertaking an extensive campaign of advertisement and publicity. They offer more and better services and bank failures have become a matter of the past. Deposits are now partially insured. Savings bank accounts are virtually current deposit accounts and over and above they earn interest and have no service charges.

The analysis of interest rates on deposits during the period between 1951 and 1963 highlights certain significant facts. Before the Inter-Bank Agreement on deposit rates in 1958, the rates varied widely from region to region and from year to year. Another curious phenomenon was that for short-term deposits rates were higher than those on long-term. For one or two years preceding the Agreement, there was an intense competition for attracting deposits. But the Agreement has succeeded in removing these anomalies. Large banks which are parties to the Inter-Bank Agreement now pay 3 per cent on savings deposits and a maximum of 5 per cent on fixed deposits. Small banks, on the other hand, often pay 1 per cent on current deposits, 3 to 3.25 per cent on savings deposits and upto 5.75 per cent on fixed deposits. However, a perceptible gap exists between the nominal and the effective rates of interest paid on deposits. According to the Reserve Bank of India, average rates of interest paid on deposits in 1961 were estimated at 0.12 per cent on current accounts, 3.17 per cent on fixed, 2.15 per cent on savings, 3.22 per cent on 'others' and 2.12 per cent for all the categories.

POSITIVE EVIDENCE

The rapid growth of deposits, particularly from the beginning of the Second Plan, provides positive evidence of dynamism of the banking sector. In spite of the recent proliferation of financial institutions, banks will continue to play the most important role in mobilizing savings of the community. The change in the composition of deposits which displays a marked growth of time deposits has at least two important implications. First, by withdrawing part of the purchasing power from the consumer, banks help to contain inflation. Secondly, the preponderance of time deposits may induce the banking sector to enter into the field of term finance for which the demand will go on rising sharply. With the change that is gradually coming over in savings habit of the people, savings accounts will assume much greater importance in the years to come.

Notes of the week

INDIAN ECONOMY

Bright Outlook?

At a time when everything in the country's economy is going awry, only incurable optimists can feel elated at the bright picture of Indian economy given out by Dr K. S. Krishnaswamy, Economic Adviser to Planning Commission, in his paper "Outlook up to 1967-68". In bringing home his pet notion Dr Krishnaswamy has taken great labour in gathering some facts and a plethora of statistics. Understandably enough, Dr Krishnaswamy expects satisfactory progress in the agricultural sector, though past performance rules out such an eventuality. The gradual elimination of the numerous bottlenecks which have been throttling the progress of the country's economy is considered to be a happy augury for its rapid expansion. Power generation is expected to be sufficient to meet the requirements of the country, though power scarcity in some pockets is apprehended. Better transport facilities are envisaged and movement of men and material is expected to proceed on planned lines. Dr Krishnaswamy also looks

forward for the requisite thrust in industrial production.

Dr Krishnaswamy could not be accused of trying to hoodwink the public or living in a world of make-believe. As the Economic Adviser to the Planning Commission, he is, by force of habit and occupational exigencies, supposed to paint a better picture even in the midst of unpalatable truths and has creditably discharged his task. He is to be justified in thinking that public investment will flow on the desired lines as despite the slow rate of increase in national income in the early years of the current Plan, there has been a welcome improvement in the level of investment in subsequent years. With the acceleration now required in respect of investment in the Third Plan schemes accompanied by advance action in several sectors, the trend in public investment will be one of larger increase than in the past. Dr Krishnaswamy is hopeful of an upswing in private investment, which sustained a setback in the latter half of 1962, obviously owing to the incentives provided for its greater performance in future. If the current deliberations of the Planning Commission are any guide, the Fourth Plan is bound to be an ambitious one. But to detach oneself completely from past performance and display undue optimism will be a dubious exercise.

Third Plan. The result has been that the replanting and fresh planting that have been undertaken during the current plan period will be largely unavailing as far as increasing production during the period is concerned. This is not the only adverse factor in the situation. Thanks to the heavy tax imposts on the industry, there is understandably little enthusiasm among producers to embark upon expansion programmes for the simple reason that the requisite funds for the costly operations such as replanting and new planting are not there. The belated attempt on the part of the Government to give financial assistance to the industry through the medium of the Tea Board and banks has produced precious little because here again the producers lack the confidence to take upon the responsibility of incurring financial liability at the heavy cost it is offered.

There is therefore need for concerted measures to increase production and at the same time it should be ensured that the cost of production is reduced with an improvement in quality. For the main aim in increasing production is higher exports. Two essential prerequisites for making headway in exports are competitive price and comparable quality. For a reduction in price, there should be a comparative reduction in the cost of production. Besides the ever increasing labour costs, the cost of production of tea estates is also increased by the multiplicity of taxes levied by various authorities and at various stages. There is certainly need for tax relief and it is equally important that the whole tax structure as affecting the industry is rationalised so that tax payments do not entail time consuming and wasteful labour.

during July will hardly amount to one-fourth of that figure. The performance is undoubtedly disappointing and the Council's efforts to administer remedial measures to reverse the trend are timely. The high prices of Indian rayon fabrics will certainly cloud export prospects. The import incentive of 70 per cent of the f.o.b. value of the international prices as maintained by the Textile Commissioner is not adequate enough to compensate the losses incurred in exports of rayon textiles. The minimum loss approximates to 150 per cent and is sought to be recovered from the premium realised by the import licence permitted under the special export promotion scheme. Disconcertingly enough, the premium commanded by the import licence has during the past few weeks slipped down to 170 per cent from nearly 200 per cent.

Though some members of the Council consider this downturn in export as a passing phase, the Council has shown greater appreciation for getting into grips with the problem. Exports of rayon fabrics are alleged to be handled in a lackadaisical manner and incentives for the exporters are found to be inadequate to invite the best efforts toward this direction. The alleged anomalies in official schedule need immediate rectification with a view to terminating the losses incurred therefrom. It would, however, be foolish to think that the Council will be able to arrive at decisions which would work miracles on the export front. As long as the prices of our rayon fabrics rule at the current levels, which are considerably higher than the international quotations, export promotion campaign will meet with little success. Performance on the export front will largely depend on our success in minimising the manufacturing cost and enhancing quality of production.

RAYON EXPORTS

Best Effort Needed

The deliberations of the Silk and Rayon Textiles Export Promotion Council to find out ways and means for stimulating exports of rayon fabrics from India will be viewed with interest as of late exports of rayon textiles have developed a downswing which is apprehended to accelerate further in the course of the next few months. For, as against the target of export fixed by the Council at about Rs 1 crore per month, exports

RUBBER

No Rivalry

With the establishment of a synthetic rubber industry within the country, producers of natural rubber in India have come to entertain the apprehension that before long their product will lose its importance. Such fears are exaggerated for even in world markets, where competition from synthetic

Exports Better in April-May, 1964

Exports during the first two months of 1964-65 have registered an improvement of nearly Rs 10 crores as compared with the relative figure for the corresponding period of the previous year. The performance has been better almost in every Section of exports, with the sole exception of Animal and Vegetable oils and fats, which are marked down by Rs 2.19 crores at Rs 1.96 crores.

Prominent increases are shown by the following:

Beverages and Tobacco, up by Rs 2.10 crores at Rs 8.96 crores, owing to higher exports of unmanufactured tobacco which accounted for earning of Rs 8.08 crores against Rs 6.02 crores in the first two months of 1963-64.

Crude Materials inedible, except fuels, higher by Rs 1.62 crores at Rs 23.17 crores; responsible for this improvement is a rise of Rs 1.30 crores to Rs 6.83 crores in earnings from iron ore and concentrates.

Manufactured Goods classified chiefly by material, marked higher by Rs 6.32 crores at Rs 56.03 crores; and the increase here is equally contributed by textile yarn and made-up articles.

Finally, Miscellaneous Manufactured articles, though they indicate a rise of just Rs 0.12 crore, benefited by an increase of Rs 1.61 crores to Rs 1.74 crores from iron and steel.

We had noted last week (see page 151) that imports in the first two months of 1964-65 were sharply lower, as compared with the previous year, by Rs 24.44 crores at Rs 190.49 crores against Rs 214.93 crores. With the improvement in exports besides, the balance of trade deficit in April-May 1964 stands substantially reduced at Rs 57.75 crores as contrasted with the gap of Rs 92.16 crores for the corresponding period of the previous year.

	(In Rs Crores)		
	April 1964	May 1963	Change
Section 0—Food	34.93	34.07	+0.86
Section 1—Beverages and Tobacco	8.36	6.26	+2.10
Section 2—Crude Materials inedible, except fuels	23.17	21.55	+1.62

Section 8—Miscellaneous Manufactured articles	2.72	2.60	+0.12
Section 9—Miscellaneous Transactions and Commodities, NES	0.80	0.75	+0.05
Total ALL SECTIONS	132.74	122.77	+9.97

rubber has considerably increased over the past few years, the demand for natural rubber does not seem to have suffered any marked setback. As far as our country is concerned, the position is quite different. For while the production of both natural and synthetic rubber has gone up sizably in the past few years, there is still a huge gap between demand and supply with the result that large imports continue to be necessary. At present there is a shortfall of as much as 35,000 tonnes in natural rubber production and it has been estimated that the gap may further widen by 1970 because by that time demand will increase to 167,000 tonnes while domestic production of natural rubber even with all the development programmes envisaged may not reach a level of over 70,000 tonnes at the most. A part of the gap, however, may be filled by the production from the 30,000 tonne capacity synthetic rubber plant that has already been established. The second synthetic plant with a capacity of 25,000 tonnes for which a licence has been granted is not expected to be commissioned before 1968. Referring to the rubber pro-

Therefore, the target capacities for duction trends in the country, Dr Ram Varma, the outgoing Chairman of the Rubber Board said recently that even after the two synthetic plants are in full production there will still be a big gap between demand and supply. For by 1968 demand will go up to 148,000 tonnes while the combined production of both natural and synthetic rubber will not be more than about 112,000 tonnes.

Therefore instead of being apprehensive about the continuing demand for their product natural rubber producers in India would do well to concentrate their attention on increasing production. But a mere increase in production without an increase in productivity will however be of no avail. For one of the main handicaps of the producers of natural rubber in India is the high cost of their product. As compared with Malaysian rubber, Indian natural rubber is 50 to 60 per cent costlier. The fact that owing to certain handicaps of its own, synthetic rubber in our country is even costlier should not lull the producers of natural rubber into complacency. As has been pointed out by Dr Varma, there are

great advantages to the synthetic rubber industry which in course of time may place it in a dominating position such as its close connection with powerful fabricators, research backing etc. Though there is no likelihood of a serious threat developing in our country to natural rubber from synthetic rubber in the near future primarily because its capacity is as yet small, it is nevertheless imperative for natural rubber to strengthen its position by the only sure way of effecting a reduction of its cost of production by means of higher productivity and better cultural practices. In this view, the most important step that requires to be taken is the acceleration of the replanting programme together with the development of high yielding rubber plants. At present the yield is very poor and Dr Varma has pointed out that it should not be difficult for an estate to reach an average of 1,500 lbs per acre. Such an increase in yield alone will put natural rubber in an unassailable position as with an increased yield natural rubber price can be reduced by more than a rupee from the current price of Rs. 3.24 per kg, a level which cannot be reached by synthetic rubber in the foreseeable future.

PAPER

Focus on Raw Material

Like most third plan targets that for the production of paper is also unlikely to be hit. As against a target of 70,000 tons, paper production by the end of the plan at the present rate of output will only reach a level of 58,000 tons. Thanks, however, to fresh thinking on the matter and the recommendation of the Development Council, there is every possibility that the gap will be considerably narrowed down. The Development Council's suggestions envisage the stepping up of production in existing plants by enabling them to import balancing equipment and to modify existing machinery wherever necessary. It has been estimated that by effecting this change, it will be possible for existing paper units to produce an additional quantity of 87,480 tons in the remaining period of the current plan period. The disappointing performance of the paper industry during the current plan is largely due to the cancellation of licences granted earlier to small units who had failed to put up their plants. Moreover, entrepreneurs are not evincing much interest in the paper industry because of its poor return. With selling prices of paper fixed at the present uneconomic levels, profits of paper companies have been squeezed with the result dividends are not attractive.

It is reported that the Fourth Plan targets for the production of paper and newsprint will aim at self-sufficiency. On the assumption that demand for paper and board will increase by 12½ per cent per annum during the Fourth Plan period, a production of 1.2 million tons should be achieved by 1970-71. paper and paper boards, pulp and

newsprint have been tentatively fixed at 1.5 million tons, 220,000 tons and 330,000 tons respectively. An important point to be noted is that the realisation of the Fourth Plan targets will depend largely on the availability of raw materials. For a production of 1.2 million tons of paper and paper boards and the targeted output of newsprint a total of 4.2 million tons of cellulosic raw material will be needed per annum. Even now with production much below the Third Plan target of 700,000 tons, raw material supply to the industry is by no means plentiful. It will therefore be clear that measures have to be initiated right from now for developing plantations so that the expansion programme of the paper industry is not hampered for want of sufficient raw material.

OIL INDIA

Good Progress

With the progress of industrialisation, the demand for petroleum products in the country has considerably increased. As the other sources of energy such as coal, hydroelectric power and nuclear energy will be either inadequate or take a long time to become available, there is bound to be increasingly large demand for petroleum products. As a matter of fact in recent years, the demand for petroleum products in India has been increasing at the rate of nearly 10 per cent per annum and it is estimated that during the Fourth Plan, the demand will go up by 2 to 3 million tonnes annually. One estimate places the likely demand by the end of the Fourth Plan period at between 28 and 30 million tonnes. As against this rising trend of demand, domestic production of crude oil is expected to reach a level of 6 million tonnes by the end of the Third Plan. It will therefore be evident that there is need for stepping up the indigenous production of crude to the maximum extent possible. This vital task is now being efficiently handled by Oil India which has already in the brief span of its existence made valuable contribution toward increasing the production of crude oil. Of the 6 million tonnes crude that will be produced in the country by 1966, more than half will come from the oil fields in Assam. Oil India is now in a position to meet the requirements of the public sector refineries at Gauhati and Barauni to the extent of its commitments. Its drilling operations are up to scheduled and what is more significant is that it has successfully completed some very difficult jobs such as the dual completion wells and devotional wells. Oil India can also take justifiable credit for the completion of its pipeline system in North East India which is the second longest crude oil pipeline in the East and one of the most modern and automatic of its kind in the whole world. Oil India's crude conditioning plants at Nahorkata and Moran which are in full operation now are the first of their kind in the world.

Cottage Industries of West Bengal

By S. K. Sengupta*

Bengal has always been famous for her cottage industries. Her handloom textiles—the fabulous Jamdani and Kashida Muslins of Dacca, gorgeous Baluchar Silks of Murshidabad, the exquisite ivory carvings of Murshidabad, the beautiful clay models of Krishnagar, the brass and bell metal wares of Murshidabad and Bankura with elaborate techniques and designs, the scroll paintings of the 'Fatuas', all these have earned fame for centuries. With the acceptance of the goal of planned economic development of the country through rapid industrialisation there has been a re-appraisal and reassessment of the importance which our cottage industries occupy in the industrial complex of the country.

For an underdeveloped country with a large population to support and agriculture still constituting the principal occupation, the problem of drawing off surplus labour from agriculture and finding employment opportunities for them poses the biggest single problem. It is here that cottage and small industries can come to our rescue with a larger employment potential for each unit of capital employed. Again, because of much lesser dependence on machines, electricity and other facilities required by large industries, cottage industries may be dispersed more widely in the remotest rural areas and carry work to the home of the artisans without necessitating any large scale migration to urban areas. This is, of course, not to belittle the importance of the large and heavy industries which alone can lay the foundation for a self-sustaining economy. Here also cottage industries may help a lot by conserving the much needed capital resources, both domestic and foreign exchange, for the capital intensive large industries by meeting a sizeable portion of the demand for consumers' goods.

If the above analysis of our economic perspective holds good for the country as a whole, it is more so in respect of the truncated State of West Bengal which has to support a population of 34.9 million in an area of 33,929 sq. miles, the average density working out at 1032 persons per sq.

*Text of talk broadcast over AIR. Mr Sengupta is Deputy Secretary, Cottage and Small Scale Industries Department, Government of West Bengal.

mile as against the all India average of 373. It is no wonder, therefore, that for boosting up of our cottage and small industries positive programmes of assistance in the form of granting of loans and subsidies, reservation of sectors of production as in the case of handloom textiles, supply of raw materials, marketing assistance training of our artisans and craftsmen particularly to equip them to cater to the modern tastes etc. were implemented out of the State Plan Budgets within the overall policy decisions and guidelines formulated by the Planning Commission.

Two Five Year Plans are over, and we have now embarked on the fourth year of the 3rd Plan period. On an evaluation of the impact of all such assistance programmes on the cottage industries of our State, we find no reason to be pessimistic. Take, for instance, the handloom textile industry of West Bengal—which is the biggest and the most important of her cottage industries. To assess the phenomenal progress of our handloom textile industry in the post-independence era you have not to quote statistics of production and employment. Just look at the delicate weave, dainty designs and delightful colour schemes of the handloom sarees woven by the weavers of West Bengal—which adorn our women folk today—and the tasteful handloom furnishings which decorate our homes, and you will be convinced of the big leap forward which our handloom industry has taken. Our handloom textiles not only cater to the big internal demand but also earn valuable foreign exchange by exporting some of the finest fabrics and dress materials, particularly silk and tassar fabrics.

The story of our handloom in the post-independence era is the story of steady progress all through. The total number of registered looms at the end of 1963 stood at 153,000 as against 124,000 at the end of the 1st Plan period, providing employment to more than 338,000 at the end of the 1st Plan period. The production of handloom textiles at the end of 1963 has reached 190 million yards per annum as against 12.50 million yards at the end of the 1st Plan period.

Next to cotton handloom sericulture and silk industry of West Bengal can also boast of an ancient tradition. Silk has been

since ages ruling as the queen of all textiles. It has not yielded its place to man-made fibres, which lacks that very silk feel to be found only in the natural resin so much valued by the connoisseurs throughout the world. It is a cottage industry hundred per cent. Its home is in the distant villages, in the modest rearing sheds of silkworm rearers. Life in a sericulture village in the district of Malda or Murshidabad—the two principal sericulture zones in the State of West Bengal—spins round the cultivation of mulberry, which is the food for silkworms, rearing of silkworms which produce the silk cocoons, and the reeling of silk yarn from the cocoons either in the traditional 'charkhas' or in the improved domestic reeling machines.

In the hey day of sericulture in Bengal i.e. about the 60's or 70's of the 19th century the production of raw silk reached a stage when even after meeting the demand for the large scale weaving industry located in Murshidabad Bankura and other areas, we could afford to export our silk to the extent of 25 lakh lbs. in a peak year. Various factors, amongst the principal of which may be listed the incidence of diseases of silkworms, inferiority of Bengal silkworm breeds and, above all, a stiff competition from a well organised Japanese silk industry, led to a decline of our sericulture and silk. Reasonably, therefore, all our efforts in regaining the lost ground in sericulture and silk in our development plans have been concentrated to achieve the objective of improving the quality of our raw silk, increasing the production and at the same time reducing the cost thereof through the introduction of desirable technological changes in the pattern of the industry and application of scientific methods at every stage of production. Apart from mulberry silk, West Bengal also produces Tassar and Eri silk, in the production of which our tribals take a predominant part. Of late, our Tassar fabrics have found a ready market in America.

The total value of export of silk fabrics and silk waste of West Bengal in the year 1960 came to Rs 93.02 lakhs. As many as 19,000 families are engaged in sericulture in our State, of whom 17,000 families are in Malda District alone. Approximately 4,700 handlooms are engaged exclusively in silk weaving. While the district of Malda accounts for about 80% of the total raw silk production in the State, silk weavers are mostly concentrated in the district of Murshidabad.

Any account of the cottage industries of West Bengal would be incomplete without the mention of a variety of other handicrafts in the pursuit of which a large number of our craftsmen derive their sustenance, and at the same

time to the rich treasures of the arts and crafts of West Bengal. The 'Bhaskars'—the traditional ivory workers of Murshidabad, engage in their age-old home industry of ivory carvings, the exquisite beauty of which has earned world-wide reputation, the clay-modellers of Krishnagar whose reputation travelled far beyond the borders of India, and dates back to a century and half or more, the mat artisans of West Bengal numbering about 50,000 whose origin dates back to Mahammedan era and whose products range from the fine quality mat known as muslam to ordinary mats of common man's use, the traditional brass and bell metal artisans numbering about 30,000 who are now required to adapt themselves to new types of products, faced with a keen competition from other cheaper variety of utensils and wares, the conchshell and sea shell carvers of West Bengal numbering more than 12,000 engaged in the production of traditional 'chank' bangles and many other artistic shell products of recent origin, ancient craft of making of dolls and toys where the old style of line, colour and form persists as in the traditional wooden toys, side by side with the latest additions of highly artistic sholapith dolls and toys, cane and bamboo craft of the State which has now reached a new phase of development receiving the unstinted admiration of all lovers of crafts and providing partial employment to about 30,000 artisans mainly in rural areas, the artistic leather work, which is of comparatively recent origin, and whose attractive products like suit-cases, brief-cases, wallets, ladies hand-bags, book-covers, batik work with different colour combinations have found market not only throughout India, but also abroad, the 'Dokra' metal craft deriving its name from the particular tribal sect engaged in this craft, the artistic beauty of whose products made out of metal casting have, of late, excited the admiration of foreign tourists and have for the first time found their way into the fabulous American market, the highly artistic horn products made by the trained artisans of Baishnabchari in Midnapore district which have earned valuable foreign exchange—all these fine craftsmen have earned the admiration of the lovers of arts and crafts.

In his advocacy of the cause for a self-sufficient village economy derived mainly from his anxiety to do away with the enforced idleness of a vast number of rural population resulting in widespread human suffering, Gandhiji once wanted to assign to Khadi the role of the very sun in the industrial solar system. In formulating the plans for rapid industrial growth of the country, our planners have appropriately assigned to cottage and small industries a very important role to play. We have no doubts in our mind that the cottage industries of West Bengal with a rich heritage, a proud present and a bright future will continue to have the pride of place in the industrial complex of the State and, if not as the sun, will illuminate the industrial firmament of the State as a shining star.

"I must have liberty
Withal, as large a charter as
the wind
To blow on whom I please"
—As You Like It

America once more to the rescue: when, just before the Third Plan began, Mr S. K. Patil as the then Food Minister concluded an unprecedented agreement with the USA for the import of, I think it was 17 million tons, foodgrains under Public Law 480, few could have anticipated that we would still run woefully short. In the event, this last year has been an eye-opener: True, we have not been capable of the record production that we notched up three years ago; but still and all output has not been so horrendously short, as to have provided the impetus to the shocking price rise that we have witnessed in recent months. Why, then, have we had almost the spectre of famine to haunt us? A rather interesting hypothesis was in this regard suggested to me some weeks ago. A friend puts forward the notion that it is the controls over gold which are responsible for the price rise in foodgrains. Time was, when the agriculturist, if he did possess some surplus cash, immediately invested it in gold. Today, with possibly a fair measure of reduction in rural debt and with gold being hard to lay one's hands on, the agriculturist finds it well worth while to hold on to his produce itself. Furthermore, with such cash lying about the mofussil, there are more resources available for the speculative withholding of stocks from the market. This leads me to the suggestion that should the banks set about enticing the new class of cash-owners—who now are deprived of the outlet of gold—then there is the fair possibility of their being able to mobilise substantial new resources. After all, to the rural dweller, unit trusts mean very little, and for him cash in the bank might perhaps seem an attractive proposition. Be that as it may, to return to American generosity, the four million tons of wheat that we shall be getting (and besides some rice as well) should be sufficient for Government once more to have a grip on the foodgrains as well as the price situation. Let us hope that the last one and a half years of the Third Plan period will prove to witness, in contrast to the experience of the first three and half

years, a declining tendency in price behaviour.

Did you know that all that Churchill had to offer, in 1940, were "blood and eye-water and face-water"? That's the trouble about basic English (in which, I need hardly point out, Churchill's famous rallying cry has been rendered): it so often makes a mockery of the flow of language itself. By the same token, the new translation (not so new, when you come to think of it) of the Bible just does not appeal. Well, more than 24 years have elapsed since Churchill by sheer oratory turned the tide of World War II. And now, he has slowly shuffled out of the House of Commons for the last time. It is true, for some years he has already been in retirement; still there was emotion last week, because there was a finality about it, when Sir Winston Churchill more or less officially ceased to be a politician. Never have the so many of Britain owed so much to one single man.

The stock exchanges, I see, are at last taking concerted action: with facts and figures they are now confronting Mr T. T. Krishnamachari, about the erosion of share values that has taken place during the course of the last eighteen months or so, even if we were to disregard the half-year between the autumn of 1962, when Chinese aggression began, and February 1963, when Mr Morarji Desai inflicted his spectacular Budget proposals upon the country. Unfortunately, it is going to be a rather difficult matter to convince TTK that the stock exchanges are in fact a true barometer of the investment climate in the country. I dare say that the Finance Minister will receive the representation with equanimity; but we can hardly expect him to do anything by way of reliefs for the time being. We can only hope that, next February, we shall be able to get from him a Budget which will, by providing fair incentive for the individual, get the country moving again, industrially speaking.

There is one point which, I should point out, is going to argue the case against the stock exchanges: and that is the fact that, though the response to new issues may be far from satisfactory, their flow has once again

commenced. That is to say, the industrialists do not appear to be desisting from going ahead with the programmes of setting up new enterprises. Time was, when the new issue boom was on, when the entrepreneur did not even have to lift his little finger, to get his money from the investors—provided his credentials were good, the project was sound and the foreign collaborators well known. Today, the entrepreneur has to persuade and even convince the underwriters that his is a good proposition: otherwise, no dough. Incidentally, the Finance Minister could very well turn round and say, after all, there must be a time when underwriters should shoulder part of the burden—so far (or at least until the autumn of 1962) they made easy money on commissions and brokerage.

I am extremely satisfied with the response to the sale of Units which have been on offer from 1 July, 1964. Over 40,000 applications have been received up to 22 July, 1964 and there is a regular flow of applications from all over the country. It is very encouraging that the majority of applications are for amounts ranging from Rs 100 to Rs 1,000 reflecting the subscriptions from small and medium income groups. I understand that there have been numerous requests however, to extend the initial sale

period beyond 31 July. Accordingly with a view to providing fuller opportunity, particularly, to persons in the remoter parts of the country to take advantage of the initial offer of the units, the Board of Trustees have decided to extend the initial sale period, during which the Units are available at the par value due to end on 31 July, 1964 up to 14 August, 1964. Sale of units will, therefore, continue at par value, namely, Rs 10 per unit, up to 14 August. The scheme at present provides for the holding of units by two or more individuals on a joint and survivor/survivors basis only. Suggestions have been received from a large number of intending applicants to provide for the holding of units by joint applicants on "either or survivor/anyone or survivors" basis. The Unit Scheme 1964 has accordingly been amended to provide for this facility. Under the amended Scheme, if the joint applicants, none of them being a minor so desire, they can hold the Unit Certificates in a manner as will enable either or survivor/anyone or survivors to deal with the units. With the Scheme showing flexibility from the very start, I should say there is more than just mere fair prospect of Mr Krishnamachari's hopes of mobilising some Rs 100 crores from the small investors; and the considerable advertising programme should help toward this end.

Olympus - A Letter from Delhi

Food Policy On the Anvil

The series of announcements made by the Union Minister for Food and Agriculture last Monday, should dispel the impression which had been gaining ground, that the impetus generated by the Chief Ministers' Conference was petering out in the sands of routine administration. Early action for the implementation of the long-term programme, which looked so promising when it was first outlined by Mr C. Subramaniam at the Chief Ministers' Conference, has been indicated in confident and categorical terms. The details of the scheme for setting up the Food Grains Trading Corporation have been finalised and the Corporation is expected to be in a position to commence operations after the next harvest, that is, from January 1965. The high level technical agency, which has to provide guidance regarding the prices at which food grains should be purchased from the producers and the prices at which they should be sold to the consumers, is also expected to be set up at a very early date. In the meantime, the Centre is maintaining pressure on the State Governments to take appropriate action to hold the price line.

Mr Subramaniam gave statistics of production of major food grains, as well as of the distribution of imported food grains, to show that availability of food grains this year should be three or four tons higher than what it was last year. He repudiated the allegation made in some quarters that the Centre was unwilling to release food grains from its strategic stocks. As a matter of fact, more imported wheat was distributed during the first six months of the current year than during the whole of last year. The quantity of imported wheat distributed in previous years has ranged from 2.5 to three million tons. This year, during the first six months, 3.2 million tons have been released for distribution and programmes have been drawn up for distribution of 3.5 million tonnes during the second half year. Government has also arranged to import more rice this year. To

go by the figures of production and imports, the position regarding prices and supplies should not be more difficult than it was last year. Nevertheless, prices continue to be refractory, and market arrivals are below last year's levels. Why should it be so?

The Minister thought that stocks were hoarded by the producers or traders—he declined to express a definite view as who was actually responsible for the hoarding—in expectation of higher prices during the lean season before the next harvest comes in. It has, therefore, become necessary said Mr Subramaniam to create a situation in which they (the hoarders) will be convinced that there was no possibility of further rise in prices. To ensure such a state of affairs, it would be necessary to fix maximum prices for consumers, take effective action to uncover hoarded stocks and to extend the system of fair price shops to all urban areas. West Bengal is the only State which has taken action on these lines. Mr Subramaniam paid a tribute to the "heroic manner" in which West Bengal was enforcing maximum prices which should be an example to other states.

Mr Subramaniam hoped that it would be possible to announce the price structure for the Southern Zone before August 1. In regard to other States there were complications as each State was a Zone by itself and there were also wide variations in the pattern of prices. He, however, made it clear that maximum prices will have to be announced without delay and effectively enforced. While he was not prepared to commit himself to any firm date, he hoped it would be possible to fix the prices within a fortnight.

These prices, Mr Subramaniam explained, will remain in force for the duration of the current season. The technical agency for fixing prices for the producers, consumers and the margins for traders, taking into account cost of cultivation transport, storage, spoilage and other relevant factors, is expected to be set up very soon. But it will take time to complete its complicated assignment. The recommendations are not expected to be available before the end of 1965, and, therefore, could

serve as basis for fixing price only from 1966 onwards. But it will be necessary to fix prices during the interval. Government had, therefore, decided to set up an ad hoc committee, with Mr L. K. Jha as Chairman, to work out the prices for the producers and consumers, which will come into force after the next harvest and continue till the end of the year.

Fixation of prices, it is recognised, will have to be backed up by effective action to bring out hoarded stocks. So far only Maharashtra and Andhra Pradesh have issued notifications under the DIR calling for declaration of stocks by all categories of persons—producers, traders and consumers—holding stocks above the prescribed level. Similar action will have to be taken by other States also. The machinery for administration of controls will also have to be built up. The Centre had agreed to bear 50 per cent of the cost of setting up the enforcement machinery.

Regarding extension of informal rationing, the Minister explained that it was necessary to avoid indiscriminate distribution of Government stocks through fair price shops. Supplies will have to be made on the basis of household cards, in order to prevent abuse of the facility of supplies at fair prices.

The Minister also gave some details about the Food Grains Trading Corporation and the manner of its working. The Corporation will be registered as a Centrally owned company under the Company Law, for dealing in rice and wheat. It is not proposed to have more than one corporation which will serve the entire country, but it may set up branches at different regional centres as may be considered necessary. The Corporation is expected to work on commercial lines in competition with the trade, purchasing from the producers and distributing through fair price shops, co-operatives, as well as through trade channels, according to circumstances. The Corporation might use the agency of co-operatives for effecting purchases, and may also employ private traders as agents for the purpose.

In relation to the trade, it is clear from what the Minister said,

that the Corporation will be operating from a position of strength. In addition to purchases from producers, the Corporation will also get supplies from wholesalers under Government directives, at prices fixed beforehand. As prices at different stages will be fixed, the dealers who are asked to surrender stocks cannot complain that they have been put to loss. To make such a complaint would be a confession that their intention was to sell the stocks at black market prices. The Corporation, the Minister said, will also have the monopoly of movement of food grains by rail. That means that the bulk of interstate transactions and long hauls within the same State will be handled by the Corporation. The Corporation will thus be the principal agency for the deployment of food grains from surplus to deficit regions. The operations of the trade will be practically confined within State borders. In course of time the Corporation will also handle imports of food grains.

With these special advantages, the Corporation, if it is allowed to come into existence, should be able to establish a commanding position for itself in the food grains trade, from which it could effectively regulate the prices of supplies through private trade channels, even if it does not have the monopoly of procurement. The Corporation will not displace the trade except to a very limited extent, but should be able to ensure that the traders serve the public interest. Monopoly procurement, on the other hand, apart from the disruptive effect on trade, will dull the incentives to increased production.

The appointment of a Commission, to study and report on the problems of sugar industry concerning production, distribution and prices, was also announced by the Minister for Food and Agriculture, last Monday. The first task of the Committee, he said, would be to suggest a suitable pattern of prices and distribution for the coming season.

Cushion for Shortfalls

The latest thinking in the Planning Commission, regarding the Fourth Plan industrial program-

mes, is in favour of providing a cushion in the allocations for the public sector which will take care of inevitable escalations in costs, and also enable the public sector to act in time to implement essential projects which the private sector is inclined to drop midway, for one reason or another. The failure of the projects, which were licensed in the private sector in the beginning of the Third Plan, to come up according to schedule, it is pointed out, has been the principal reason for the failure to reach the production targets of essential commodities like pig iron or fertiliser.

The revision of industrial licensing procedures, which has been recently carried out in pursuance of the recommendations of the Swaminathan Committee, has reduced the time lag in dealing with infructuous licences. The letter of intent which will be issued in the first instance, will stand automatically revoked if the party is unable to take effective action to implement the project. But, even so, the delay involved in issue of finance to a new party could make deep dents in the planned production programme. It is not also possible for the public sector to step in immediately a licence has been revoked. The public sector works to a tight budget, and additional funds have to be allocated at a later stage in the plan period and this may not always be possible. Therefore, the suggestion has been made that the allocation for the public sector should provide for a margin to accommodate the projects which are given up by the original licencees.

It would also be desirable to establish machinery to keep track of the licencees; so that remedial action could be taken in time to forestall shortfalls. It is recognised that the failure to implement licencees is not the result of sheer cussedness on the part of the licencees. There are real difficulties which stand in the way. A special machinery to watch the progress of the projects would enable these difficulties to be identified and eliminated, so that the project comes up according to schedule. The public sector, will also be saved from the real danger of breaking its milk teeth on refractory projects.

In drawing up the programmes for the public sector, it is considered necessary for the Planning Commission to express a view as to the extent to which the public sector should enter the field of consumer goods manufacture, particularly in areas where critical shortages are anticipated. It is felt that by engaging in manufacture of consumer goods which bring in quick returns, public sector investment may be able to make a better showing than if the entire investment were locked up in undertakings which take a long time to show results.

4th Plan Steel Programme

While endorsing the steel target of 17.3 million tonnes of ingots recommended by the Working Group, the Planning Commission is understood to have indicated that the programme of expansion should be viewed in the perspective of the requirements of the next twenty years. It has been noted that there are very few sites in the country which are suitable for steel manufacture from the point of view of availability of raw material and ancillary facilities. Therefore, it has been suggested that, in undertaking the feasibility studies for the location of new plants, the availability of raw materials and facilities should be examined, keeping in view the possibilities of expansion in future. The trend in steel manufacture is towards plants of large capacity, and it would not be economic to locate plants in areas where scope for expansion is limited to one or two million tons. This consideration

is relevant to the choice of site for the new steel plant which will have to be set up in the Fourth Plan to reach the capacity target of 17.3 million tons which has been approved by the Planning Commission.

According to the programme that has been drawn up expansion of existing plants will step up total capacity to 14 million tonnes by 1970-71. The capacities envisaged for the individual plants at the end of the Fourth Plan are under:

	Million Tonnes
TISCO ...	3
HISCO ...	2
Bhilai ...	3.5
Durgapur ...	3
Rourkela ...	2.5
Total ...	14

Assuming that Bokaro reaches a capacity of two million tonnes by that time it will be necessary to create additional capacity of 1.3 million tonnes to reach the target.

Power Generation in Fourth Plan

The Planning Commission, it is learnt, is strongly in favour of the Centre assuming greater responsibility in the generation of power in the Fourth Plan. At a meeting held here on Wednesday, the Commission is said to have favoured the need for the standardisation of machinery and equipment and designing which would facilitate economy in power production. The Commission is reported to have discussed the establishment of an all-India grid ultimately. It also considered whether the Union Government should establish extra high voltage lines for the transmission of bulk power in a region and inter-link regional grid with a national grid. Power stations of a region should be operated in an integrated way by setting up regional grids. Efforts would be made in the next Plan to remove the imbalances in per capita power output and utilisation.

Market NEWS and Trends

JUTE Fibre Supplies

A rather unexpected development this week in the jute markets is the sharp rise in raw jute prices. Over the past few weeks, new crop jute, basis Assam Bottoms, was quoted unchanged around Rs 32 per maund, but during the past few days prices firmed up to be quoted at the time of writing at Rs 34 per maund. The spurt is attributed to a growing belief that contrary to earlier expectations, the 1964-65 jute crop in India will be smaller than last year's. It would appear that those who are expecting a still further rise in prices of the fibre are pinning their faith on the possibility of a sizable reduction in the total availability of raw jute this season. Increased consumption during last year and a decline in production as compared with the previous year have combined to leave a reduced quantity of jute to be brought forward to the current season. As the 1964-65 crop is not expected to

be very big, and as the scope for unauthorised jute entering the country has also disappeared in view of the reported decline in Pakistani jute production coupled with the strict vigilance kept in the border areas. It is, however, not improbable that total availability will not be as large as in the last season. But from available reports the outlook for raw jute supply does not appear to be as bleak as to justify any runaway rise in prices. It is to be noted in this connection that the Governing Body of the East India Jute and Hessian Exchange Ltd, is reported to have taken serious view of the unusual rise in prices in the futures market as the spurt appears to be largely due to speculative transactions. Referring to the supply prospects in raw jute, the Jute Bulletin in its July issue has this to say:

On the raw material front the jute industry has little to worry about. New crop is coming up satisfactorily under generally favourable conditions. Some har-

vesting has already taken place, and the quality of the fibre is well reported upon. The quality improvement is expected to be general this year, while the yield per acre should also be better in view of the intensive development efforts on the one hand and the relatively low incidence of insect pests and diseases on the other. An additional seasonal factor favouring excellent crop growth in many districts is that the cultivators have had ample time for proper inter-culture of their jute fields. The last two weeks' heavy monsoon showers will ensure sufficient water for the retting of the low-land jute now being harvested. The total area sown to jute and the ultimate production this year are not expected to be less than last year's, although lately there were reports of some damage to the standing crop by floods in parts of Assam.

If the present firm trend cannot justifiably be attributed to actual decline in production, it should have stemmed from some extraneous causes. It is quite possible that the farmer this year is in no hurry to dispose of his produce because he is now confident that he will get an equitable price. Moreover, he is sure to have heard that production in Pakistan has been adversely affected and as a consequence the demand for his jute will be well maintained. A possible third reason is that his staying power has considerably increased over the past year or so as he has enlarged facilities to sell his produce at a price most advantageous to him. With the progress of Warehousing and co-operative credit, the farmer is steadily gaining in financial strength and he may no longer be obliged to make distress sales as in the past.

While an equitable price and a small rise in prices of raw jute may be welcome, any unwarranted spurt in price will only harm the industry as a whole. For even when prices of jute goods were low, overseas buyers did not evince keen interest in replenishing their stocks. But over the past couple of weeks or so, prices of sacking have risen by more than five points and it will be idle to expect that at this level any large overseas buying will be attracted.

The jute goods market ruled fully firm last week largely because of speculative support from the futures market. Though no business of importance either from overseas or local interests materialised, the undertone continued to be firm except for a

brief spell toward the close of the week following reports of the calling off of jute mills' strike in Pakistan. Earlier enthusiasm stemmed from the belief that since Pakistani mills were reportedly booked upto to October and in view of the loss of production for about a fortnight on account of the mill strike, larger overseas orders will be placed with Indian mills. With continued bear covering despite the report that the East India Jute and Hessian Exchange has taken a serious view of the abnormal rise in prices of both raw jute and jute goods, the firm trend reasserted itself by close with B Twills Ready moving up further to be quoted at Rs 120.45. Hessian also rose in sympathy with Hessian 40" x 10 oz closing firm at Rs 45.55.

As a matter of fact the present spell of firmness actually began in the raw jute market where aided by a psychology of shortage, holders began to ask for steadily increasing prices and up to a point got what they wanted. By this time, the goods market began to harden and as the result of the interaction between the goods and fibre markets, the uptrend continued. By close of the week raw jute basis Assam Bottoms showed a gain of Rs 2 to be placed at Rs 34 per maund.

TEA Assistance to Industry

EVEN though its importance is generally recognised, the Tea industry's problems have not, so far, received such attention and sympathy as they should. India is still the world's largest exporter of tea; but over the years the pressure of heavy taxes and rising production costs has obviously reduced the industry's competitive strength in the world market.

It is now learnt that the Government has appointed a Committee to examine the needs of the industry and the assistance that should be given. The Committee will go into the question of strengthening the financial base of the industry in view of the importance of tea in India's exports. The Committee will, therefore, not only study the financial position of the industry with reference to the need to increase production and exports of tea, but also suggest what tax relief can be given to it.

The Committee will also review the financial assistance given to the industry by the Tea Board and banking institutions and suggest how procedures relating to this may be simplified. Among the members of the Committee are representatives of the Tea Board, the Indian Tea Association, Planters' Associations, tea companies and the Governments of Assam, West Bengal, Madras and Kerala.

Meanwhile, in the Export Sale held in Calcutta this week, offerings consisted of 41,219 packages of Leaf grades. There was a strong and general demand especially for liquoring teas which slackened somewhat toward the close. Bright Assam orthodox teas were the strongest feature and were readily absorbed at dearer rates with selected BOPs selling at levels appreciably higher than those prevailing in the last sale. Plain orthodox teas were sold at irregular rates and, while the broken were about firm, their Fannings generally eased in value.

Assam CTCs with useful liquors were well sought after at fully firm to dearer levels, while the remainder were irregular and were sold well at slightly higher prices. A good demand prevailed for Darjeeling teas, particularly for those with flavour and satisfactory prices were realised.

Whole Leaf grades received good support and were fully firm, while Tippy sorts came to a slightly easier market. Following rates (per kilo) were quoted:—Clean Plain Pekoe Rs 5.10 to Rs 5.40; Plain BP Rs 4.40 to Rs 4.60; Plain Fannings Rs 4.00 to Rs 4.30; Medium Assam CTC BP Rs 6.00 to Rs 7.00; Medium Assam CTC Fannings Rs 6.00 to Rs 7.00; Best Assam CTC BP Rs 7.20 to Rs 8.00 and Best Assam CTC Fannings Rs 7.20 to Rs 8.00.

In the Internal sale, offerings consisted of 20,731 packages of Dusts. Demand was good and general although at lower levels. Assam CTC descriptions declined irregularly by up to 30 paise per kilo although the smaller lines received better support. Plain orthodox descriptions were sold at last rates; but Assam sorts, though selling well, were a little easier. Legg-cuts came to a good market at around last prices. Following rates (per kilo) was quoted:—Plain Orthodox Dust Rs 4.10 to Rs 4.50; Medium Assam Dust Rs 4.90 to Rs 5.70; Legg-cut Dust Rs 4.80 to Rs 5.30; Medium Assam CTC Dust Rs 5.80 to Rs 6.30 and Good Assam CTC Dust Rs 6.70 to Rs 7.10.

With sales amounting to 113,095 packages in June 1964, the total quantity of tea sold in the auctions and private sales in Calcutta, during the current season up to June 1964, rose to 143,621 packages from 96,126 packages in the corresponding period of last season. Of the total tea sale up to June

1964, Leaf teas accounted for 111,538 packages and Dust teas for 32,083 packages against 76,875 packages and 19,251 packages respectively up to June last year. The average prices for Leaf and Dust teas, during the period under review, were Rs 5.87 and Rs 4.83 per kg against Rs 6.12 and Rs 5.14 respectively last season up to June 1963.

In the Cochin market, a quantity of 602,000 kg of leaf tea was offered for export. The quality of teas generally showed improvement and this was noticeable particularly among Nilgiri teas; but prices were irregular with plainer sorts tending easier. Low Medium was quoted at Rs 4.00 to Rs 4.25 (Rs 4.10 to Rs 4.35); Medium at Rs 4.20 to Rs 4.50 (Rs 4.35 to Rs 4.60); Good Medium at Rs 4.55 to Rs 5.20 (Rs 4.65 to Rs 5.30) and Nilgiri BOP at Rs 4.50 to Rs 7.00. Figures shown within brackets were the rates quoted for the corresponding period of 1963.

In the auction held at Coonoor, offerings were 102,465 kgs. Teas in general met with restricted enquiry and prices declined by 10 to 15 paise per kilo. However, there was the usual demand for a few invoices of good Nilgiri dusts. Other Nilgiri dusts were fairly supported with buyers closely following quality.

Nilgiri Broken shared in the easier trend of the market, while Nilgiri Wynaad had the usual demand and were sold at firm rates. Whole Leaf grades like CTC met with less support and were easier. Plainest types were sold at last rates. Good Nilgiri Dust was quoted at Rs 5.15 to Rs 6.05; other Nilgiri Dusts at Rs 3.60 to Rs 4.90; Nilgiri Broken at Rs 3.55 to Rs 5.00; Whole Leaf grades at Rs 4.20 to Rs 4.70 and Plainest types at Rs 3.15 to Rs 3.60.

According to the figures released from Cochin, production of tea in South India, in the first six months of this year, has declined sharply by 9.5 million kg as compared to the production in the corresponding period of last year. South India produced an estimated 37.1 million kilogrammes of tea during January/June 1964 as against 46.6 million kilograms in January/June 1963.

COTTON Wide Fluctuations in Futures

Irregular trading conditions prevailed in the cotton futures market at Bombay last week. The ruling Jarilla August contract after commencing the week on a firm trend moved both ways owing to alternate bouts of selling and buying before winding up the week with a net gain of Rs 13.00 per three quintals in contrast to the loss of Rs 7.25 in the preceding week. On the opening day the contract improved to

Rs 737.75 from the previous week's closing of Rs 735.50 because of bear covering. But the uptrend did not last long and the contract slipped down to Rs 734.75 because of bull liquidation. At this low level, however, the contract met with replacement support and recovered to Rs 743.25. Toward the mid-week a mild reaction set in and pushed down the contract to Rs 736.75. In subsequent dealings the contract smartly rose to Rs 749.25 before finally closing at Rs 748.50 per three quintals on account of the re-emergence of bull grip on tender considerations.

The Board of the East India Cotton Association has decided to incorporate some alterations in the terms and conditions of the hedge contract for the coming season. These modifications are found necessary for arresting any unwarranted speculative activity particularly by outside interests. A press note released by the East India Cotton Association states that the Board has decided to revise the arbitration procedure in by-law 38 with a view to making it more equitable and speedy. Trading in the new contract is expected to start early next month.

The spot market at Sewri continued to be listless. Popular growths met with scattered spinner enquiry. In the export section demand for Bengal Deshi from overseas countries was practically nil. Sales of this growth for export as on 22 July aggregated 226,484 bales.

The delay in arriving at a trade agreement between India and the UAR has generated a good deal of speculation about the availability of cotton from the UAR. Importers in Bombay are perturbed over the new stipulations which will be imposed by the UAR Government before supplying cotton to India. The inordinate delay on the part of Government of India to finalise the agreement is unaccountable.

Consumption of cotton by the domestic mills from 1 September 1963 to 30 April 1964 has smartly improved to 4,082,600 bales from 3,739,794 bales in the relevant period in the previous year. Description-wise break-up reveals that barring Indian and Egyptian growths all others showed declines. Consumption of Indian cotton spurted to 3,667,963 bales from 3,072,047 bales and Egyptian growth to 102,622 bales from 76,292 bales.

WORLD COTTON PRODUCTION

The uptrend in world cotton output continued unabated for the sixth year in succession and crop in the 1963-64 season (excluding the communist countries) moved up by 87 million pounds to 17,648 million pounds despite a slight fall in acreage. The United States continues to dominate the trade with a crop 2.5 per cent above the preceding season and the largest for the past decade.

PIECEGOODS

The Bombay cotton futures market failed to register any symptom of activity during the past week also owing to a combination of different factors such as inadequacy of funds, the uncertainty that is befogging the future pattern of cloth prices and uptrend in prices in the food-grains market. Though these factors had a limiting influence on the volume of transactions, the undertone ruled somewhat firm.

Demand from upcountry centres was at a low ebb. Even the seasonal goods failed to attract good buyer attention during the week under review. Scattered trading was reported in coatings and flannels. Gadlapat was in short supply. Bleached longcloth, grey dhoties and saris were offered at slightly reduced prices. The only upcountry centres which showed a semblance of interest were Andhra, Kerala and Bihar but the offtake did not measure up to the expectations.

On the contrary, the powerloom section exhibited better trading conditions, thanks mainly to low

Tata Engineering & Locomotive Co. Ltd.

Statement of the Chairman Shri J. R. D. Tata

The following is the statement of Shri J. R. D. Tata, Chairman of the Tata Engineering & Locomotive Co. Ltd., for the year 1963-64.

Before I review the Company's operations during the past year, I must give expression to our profound sorrow at the passing away of our late Prime Minister. Although his failing health during the last year had given rise to some anxiety, his sudden death at the end of May stunned the people of India and, indeed the whole world, for Jawaharlal Nehru's status as a statesman and as a man transcended political and geographical frontiers. His fame, his writings, his struggles and sacrifices in the cause of freedom and peace were known in every country of the world and it is probably true to say that more people mourned his passing than that of any other man in modern history, with the exception perhaps of Mahatma Gandhi. It was possible to disagree with some of his and his Government's policies and decisions on political, international or economic issues, but it was impossible not to be deeply affected and influenced by his intellectual brilliance, his single-minded devotion to the causes he espoused, his courage, his innate goodness, the depth and tenderness of his solicitude for the afflicted, the oppressed and the poor and the love which he inspired amongst the people. Jawaharlal played a dynamic role in shaping world history during these two decades, but it is as the Maker of Modern India that he will be remembered and his memory forever enshrined in the hearts and minds of the people of India.

2. I am glad to report that the Company made good progress in its operations, profits and expansion during the past year which, however, was also marked by certain unhealthy developments culminating in the tragic events of March, 1964, to which I shall revert later in this review.

3. Output rose appreciably, the first stage of expansion to 18,000 vehicles is now virtually complete and work has started on the second stage intended to bring production up to 24,000 vehicles per annum. I am glad to report that the Agency for International Development has just approved of a further loan of \$ 11.80 million (Rs. 5.62 crores) to finance the foreign exchange element of the second stage of the expansion programme. Orders for imported machine tools and equipment will be released shortly.

4. Operating profits for the year were Rs. 114.75 lakhs higher than in the previous year, but most of the excess was absorbed by increased allocations to depreciation, Development Reserve and taxation, so that the net

increase in disposable profit was only Rs. 20.62 lakhs. The total amount available for distribution was thus Rs. 196.15 lakhs, which is some Rs. 8 lakhs short of the amount required to maintain the current dividend of 14½% on our enlarged capital. Your Directors have therefore, transferred Rs. 8 lakhs from the General Reserve and recommended the same dividend as last year. A total of Rs. 14 lakhs will thus have been drawn from reserves over the last two years towards the payment of dividends. This will have been fully justified as, barring some totally unforeseen set-back, the increased profit resulting from our expanding output should enable us without difficulty to continue paying the same dividend on ordinary shares in future. In fact, there are, in my view, good prospects of the Company being able to maintain the same rate of dividend even after the additional issue of 200,000 ordinary shares in the ratio of one new share for every five shares held, which is being recommended to you at such premium, not exceeding Rs. 50 per share, as the Controller of Capital Issues may prescribe and as may be agreed to by the Director.

5. In view of the issue for the same amount made as recently as 1963, your Directors would have normally preferred to postpone the present recommendation for a year or so, but the extraordinarily large and rapid expansion of the Company and the growing imbalance in the Company's capital structure make a further issue imperative and urgent.

6. In relation to total funds employed of about Rs. 14 crores (including Rs. 25 crores of debt), which are expected to rise to about Rs. 60 crores by 1966, our present share capital of Rs. 12 crores is clearly disproportionately small, while our debt-equity ratio will be unacceptably large if the share capital is not increased and the amount is borrowed instead. An issue of shares is therefore required not only to provide urgently needed funds but also to improve the debt-equity ratio to which the A.I.D., like the World Bank attaches considerable importance.

7. Your Directors realise that these are difficult times for shareholders to find additional funds to invest, in view, however, of the special and urgent requirements of the Company, the recent indications of a revival in the state of the market and the fact that the new shares may be expected to earn a dividend of 14½% from the date of issue, equivalent to 9.7% on capital plus premium. I am sure shareholders will approve the recommendation which is also subject to the approval of the Controller of Capital Issues.

8. Although about half of the capital of the Company is institutionally held and only one and a

half crores Rupees or so will therefore be obtained from individual subscribers, the Directors have recommended, in order to lighten the burden on shareholders, payment of the amount for the new issue in two instalments, one in November this year and the other in May, six months later.

9. The demand for Tata Mercedes-Benz vehicles continues unabated and in spite of the steady increase in our output, we have so far failed to catch up with it. Ever since we commenced production of these vehicles, they have been the first choice of the transport operator because of the quality, performance and ruggedness built into them. There are today more Tata Mercedes-Benz vehicles on the road than any other make.

10. There are misguided people who assume that bigness in Private Sector enterprises, particularly those which supply a significant proportion of the total market for any product, results in the exploitation of the consumer and is therefore against the public interest. The manner in which your Company has used its pre-eminent position in the field of commercial vehicles should provide a telling answer to such a belief.

11. Between October 1959, when the Company completed the initial phase of its truck manufacturing programme, and today, the price to a customer in Bombay of the TMB 312/42 model—the most popular model in our range—increased from Rs. 30,155 to Rs. 37,619, i.e., by Rs. 7,464. During the same period, the sales, excise and other taxes charged on this vehicle by the Central and State Governments increased by Rs. 6,780, while the cost of imported materials and components rose by Rs. 739, a total of Rs. 7,519. Therefore, over the last five years which witnessed a disturbing and continuous rise in the price of practically every product, commodity or service in the country, the price of the TMB vehicle excluding the above two items has actually fallen in spite of the continuous incorporation of a number of major improvements to the vehicle, the cost of which was absorbed by the Company, and in spite also of the fact that the price of locally made ancillary items invariably exceeded the price of the imported ones which they replaced.

12. The point to be noted in this context is that the Company could not have fulfilled its desire to keep its prices low in the interests of the consumer and the country if it did not have the benefits of large-scale production.

13. If Government had not sanctioned the successive expansion schemes of Telco, as they wisely did, there is no doubt that the user of Tata Mercedes-Benz vehicles would be paying a substantially higher price than he is paying

today, while the country would have been deprived of the full benefits of a powerful, versatile and highly productive engineering unit, geared to meet both civilian and military requirements, and also of most of the substantial contributions which have accrued to the public exchequer as a result of the Company's operations. It is noteworthy that during the year under review, public revenues were enriched, as a result of Telco's operations, by as much as Rs. 16 crores, in import and excise duties, sales taxes and taxes on profits.

14. But this is by no means the full measure of our Company's contribution to the Indian economy. The Company has created direct employment for over 16,000 men, whom it has, over the years, trained to a high degree of skill. The importance of this contribution should not be underestimated, for the economic growth of a country depends just as much on the specialised skills of its workers, technicians and managers as on machines, raw materials and finance.

15. Finally, the large-scale development of Tata Mercedes-Benz vehicles has helped to establish a number of ancillary industries in the country, the lack of insufficiency of which in the past has been one of the main obstacles to the rapid development of the automobile industry. All in all, we can be justly proud of our performance during the last decade which, in terms of growth and service to the country is probably unsurpassed by any other company in the country.

16. I have referred earlier to the large revenues accruing to the National Exchequer as a result of our operations. As the cost of Government's various imposts is largely included in the price of our vehicles. It is the user who ultimately bears this heavy initial burden; but that is only the beginning so far as he is concerned. On an average, every commercial vehicle in regular use for highway transport pays every four years in taxes alone a sum in excess of its original cost. Of all economic activities in the country, none to my knowledge bears such a crushing burden of tax as the road transport industry. It is, I believe, a fact that the incidence of taxes and duties alone in every ton-mile of road transport equals the total amount charged by the Railways for a ton-mile by rail. In addition to crippling taxation, the road transport industry suffers in a number of ways from Government policies and is burdened with such a maze of outmoded restrictions as to prevent it from playing in full the role it would in the country's economic development. That in spite of these conditions, road transport in India has grown to such an extent that it is now esti-

mated to carry half the country's passenger traffic and over a fifth of its freight, reflects the road transport industry's technological advantages as well as the initiative, perseverance and resiliency of its operators.

17. India has one of the world's largest railway systems born long before motor vehicles came into existence. As a result, the transport policies of successive administrations have invariably been based on "railway thinking" with little consideration given to alternative forms of transport. This thinking has dominated official attitude to transport problems to a degree which is probably unique in the world. India must surely be one of the few countries where such numerous and oppressive barriers continue to be placed in the way of the development of road transport while railway mileage continues to be expanded at tremendous cost. How else can one explain the restrictive regulations that are imposed by the numerous State Governments which make inter-State trucking a nightmare for operators and long-distance trucking virtually impossible? These restrictions include difficulties and long delays in obtaining permits for inter-State operations, limitations on the number of permits issued for some routes and the temporary nature of permits that make long-term investment in motor transport hazardous. Multiple taxation of vehicles and sometimes taxation of the cargo add to the difficulties. The result is that inter-State traffic is reserved to the Railway to a degree which fails to take into adequate account that for some goods the speed and other advantages of highway transport are very important. What is needed is a system where inter-State trucking permits for operating through any

State should be issued by a central authority. The permits should carry a fee sufficient to absorb all the State and local vehicle taxes at present levied. The permits should be given for one year and automatically renewed unless the holder has his permit revoked for some violation. These should not be limited in number for the trucking business attracts thousands of small operators who should be permitted to develop the traffic.

18. It is unfortunately apparent, from a recent announcement of the Railway's share of about 70% of the total proposed investment in surface transport in the Fourth Five Year Plan, that Government's thinking on the subject is as Railway-dominated as ever and that the prospects of some relief to the road transport industry and of an improvement in the operating conditions are dim indeed. I feel that the time has come when a comprehensive and impartial study of the economics of transportation in India needs to be undertaken by an independent body. An explicit analysis of benefits and costs will, I am sure, reveal that greater investments in highways and some relief to the road transport industry are not only fully justified but urgently needed.

19. I have kept to the last a reference to the unhealthy developments mentioned in my opening paragraph which marred an otherwise satisfying year of progress. I am referring to the labour situation as it developed at Tatanagar during the past twelve months and to the shocking events which brought such misery and shame to Jamshedpur during the month of March last.

20. The labour situation at the Telco Works has been increasingly unsatisfactory during the last year

and particularly since the beginning of 1964. Internal rivalries between two groups within the recognised Telco Workers' Union have been mainly responsible for the deteriorating situation and the blame must squarely attach to the dissident group which, notwithstanding the fact that its claim for control of the Union was, and still is, the subject of proceedings before the Patna High Court, carried an intensive agitation which far exceeded the bounds of legitimate trade union activities. In its attempt to force its demand for recognition, this group resorted to widespread intimidation not only of workers but also of supervisory personnel. Indiscipline, defiance of constituted authority and unpunished intimidation, threats of violence and actual violence create an atmosphere where crime and lawlessness find it easy and profitable to rear their ugly heads.

21. We have constantly sought the assistance of the Central and State Governments, in addition to doing everything possible ourselves, to restore normalcy and are grateful to them for their assistance. I earnestly hope that stern action will be taken against those who, under the guise of trade unionism, deliberately create problems of law and order and prevent the full utilisation of industrial capacity urgently needed by the country. The recent communal disturbances have shown how easy it is for a handful of mischievous and antisocial persons to lead masses of people to planned acts of violence.

22. With its thousands of tough and hardy men drawn from all parts of the country, a large industrial centre like Jamshedpur-Tatanagar obviously contains explosive possibilities of trouble and therefore requires the maximum

of alertness coupled with firm and timely action on the part of the management of factories and those charged with the maintenance of law and order. The scope for Management to maintain discipline and prevent acts of violence and intimidation is largely limited to the shop floor whereas in this case, agitation and violence grew and flourished largely outside the Works.

23. Perhaps one of the reasons for the inadequacy of law and order enforcement in the area, is the fact that although the city of Jamshedpur-Tatanagar is the second largest in the State of Bihar and one of the largest and most vital industrial centres in the whole country, it is still constitutionally treated for administrative purposes as a sub-division of a district, the headquarters of which are not even Jamshedpur but Chaibassa which is a minor town in the area. We have urged that consideration should be given to up-grading Jamshedpur to an administrative status within Bihar commensurate with its importance and the magnitude of the task and problems of administering it.

24. While looking forward to another year of progress, I wish to acknowledge the diligent efforts of our employees, suppliers and dealers which have made possible the good results before you in spite of the many difficulties and obstacles which faced them. In particular, our officers at Tatanagar, Indian and German, deserve our gratitude for the hard work they put in and the fortitude with which they faced difficult and harassing situations.

J. R. D. TATA

Chairman.

Bombay, 9th July, 1964.

prices in varieties such as dhories and saries which lured upcountry dealers to make some purchases.

Even the export front was devoid of any significant development. Limited business with the UK in usual varieties was reported. Sudan was satisfied with a small quantum of sheeting and voiles. East Africa evinced some interest in selected items but the offtake was meagre. Australian attention centred on coatings and sheetings while New Zealand accounted for a moderate quantity of furnishings. Encouraging enquiry from Europe was reported in grey sheetings but high prices restrained the offtake. Other destinations were dormant during the week under review.

★ Outlook for Rubber

AN uncertain future seems to threaten producers of both synthetic and natural rubber. While planters fear a setback in demand and competition from synthetics, synthetic rubber manufacturers cannot reach full capacity because of stock accumulation arising from high prices. In common,

they are confronted with large imports.

In some quarters it has been complained that scarce foreign exchange has been used for the import of rubber, which was not immediately needed and that large stocks also resulted in inadequate utilisation of the capacity of the single large producer of synthetic rubber. Even in respect of natural rubber, there was a disposition on the part of some consumers to utilise stocks of rubber imported on a cheaper basis before securing fresh supplies from indigenous sources.

According to the recent statement made by the retiring Chairman of the Rubber Board, the gap between demand and domestic production of natural rubber is at present about 35,000 tonnes. By 1970, the demand is estimated to increase to 167,000 tonnes, while the domestic production of natural rubber may reach 62,000 tonnes. It is stated that even allowing for the growth in output of the plantation industry, it may be necessary to erect another plant for producing synthetic rubber in the petro-chemical complex.

No doubt, the replanting programme, after a hesitant phase during the last few years, is happily gaining momentum now. But, unless the price of natural rubber is brought down to a reasonable level, the Indian commodity may not be able to withstand competition, especially when the Indian prices are 50 to 60 per cent higher than those of Malaysia and Ceylon. Likewise, despite a large domestic market, synthetic rubber has made little headway because of high costs and also poor quality. For instance, the price of Indian SBR is stated to be Rs. 4 per kg, while that of Indian natural rubber is Rs. 3.24 per kg and SBR in Europe sells at Rs. 2.25 per kg.

The producers of the synthetic product are aware of the resistance from consumers. It is only to be hoped that the Government will help the company to secure the raw materials at cheaper rates from indigenous and foreign sources.

In the case of natural rubber, the yield per acre has to be raised with an active replantation programme. Only then, the cost of

cultivation can be reduced significantly. The Chairman of the Rubber Board is naturally anxious that the uncertainty regarding the immediate outlook for natural rubber should be removed.

In order to put the natural as well as synthetic rubber industry on a sound footing, the Government ought to hasten replanting, extend financial relief, find out new uses for the domestic production of synthetics and then limit the increase in rubber imports. In that event, the rubber outlook, though far from rosy just now, should materially brighten.

★ COFFEE Crop Prospects

According to a report released from Cochin, the failure of the monsoon has completely upset coffee prospects for the next season, which looked better last March. The Coffee Board has received in all about 68,000 tonnes of coffee and the total may touch 70,000 tonnes. Assuming that there is some leakage, the total crop may really have exceeded 75,000 tonnes this year. Given

favourable conditions, it does not seem unlikely that the coffee industry can produce about 80,000 tonnes by 1956-66. However, next year's crop about which an estimate is shortly due from Board is likely to be much lower than the average of the past four years.

Meanwhile, the international coffee situation has undergone some marked change since March, when the consuming countries were alarmed at the steady rise in prices. Much of this was due to the fear that there might be a coffee shortage since Brazil and Columbia—the two giants in the coffee-producing world—had suffered serious damage and their crop prospects were greatly reduced.

It now appears that the damage was not as serious as was originally feared and the recovery is not far away as was expected. Brazil and Columbia reported to be holding substantial stocks of exportable coffee. They were, therefore, able to make up their quota, if not exceed it, in spite of the fall in current crops.

Although India had been pleading for a substantially larger quota, it has been given only a token increase although the International Coffee Agreement Council has been making a larger distribution to certain African and Latin American countries. While the consuming countries want adequate supply at lower prices,

the producing countries try to maintain an attractive return by curtailing supplies. Caught between these two powerful blocs, the Council has not been in a position to take any clear line of action.

CASHEW Shortage?

According to processing circles in Quilon, Cashew kernel production this year is not likely to exceed 21 lakh cases of 50 lbs each. This will be 2 lakh cases down as compared with the 1963 output. The reason given for the anticipated shortage is that the raw nuts imported from Africa this season were inferior in quality. It is probably the fear that supply will be smaller this year has caused kernel prices to rise sharply.

Exporters claim that there is keen demand from abroad, particularly from the USA, which is the largest buyer even at the ruling high levels. But, shippers appear to be reluctant to enter into substantial commitments although the present prices are really attractive.

Exports during the first five months of this year, are placed at 8.79 lakh cases, valued at Rs 921 lakhs. Although quantitatively this is about a lakh of cases less

than the exports during the same period in 1963, in terms of money, there is a gain of Rs 38 lakhs.

Import of raw nut from Africa so far this season is placed at 130,000 tons. Availability from that source between now and the beginning of the next season around November may not exceed 15,000 tons, in the opinion of the importers. Although this amounts to more or less the quantity obtained from Africa last season, inferior quality of the nuts got this year will result in a fall in kernel output.

MERCURY Keen Demand

In the Bombay market, Mercury prices have shot up to Rs 2,450/2,500 per flask of 34.5 kg. Since the beginning of this year, it has gained about Rs 400, although the actual spurt has come about this month during which period it has jumped by about Rs 350.

The sharp advance in the price has been attributed to the sustained demand from the consumers, while the dealers and stockists are reported to be holding fast to their inventories which are not at all sufficient to meet the enquiries.

It is stated that, since the canalisation of mercury imports through the State Trading Corporation, the supply has been very irregular and inadequate. Moreover, the enlargement of the local stocks through unauthorised avenues has been marginal only. Marketmen, therefore, do not expect a reversal in the price trend in the foreseeable future.

OILS AND OILSEEDS Castor in Limelight

Despite profit-taking at bulges, prices in the Bombay Oilseeds market have continued to display a firmer tendency. The Castor-seed section has been in the limelight throughout the week. Although forward trading remains suspended with the September contract surpassing the official ceiling, prices in the ready section have shot up due to brisk demand generated by Russia's entry into the market.

The upward trend in prices is initiated by shippers, who are rushing to cover ready supplies of castor oil against their previous commitments. The total business in castor oil of commercial quality, during the past week, was of the quantity representing purchases against previous commitments. Russia was, however, stated to have made fresh purchases of more than 2,500 tons on the basis of shipments in the next few months.

Against this background, the market has experienced an usual

scramble for supplies, which have pushed up commercial oil from Rs 15.50 to Rs 18.20 per 10 kg. Ready castorseed has jumped up from Rs 37.37 to Rs 41 before being placed at Rs 39.75.

In the Groundnut section, trading has continued to reflect a growing shortage of supply. Ready groundnut has moved up, on balance, by Rs 1.50 per 50 kg.

In the Linseed section, too, prices have continued to display a firmer tendency, especially when the supply position continues to remain tight in view of inadequate arrivals. The demand for both linseed and linseed oil is fairly brisk. In the circumstances, ready linseed has moved up from Rs 47.50 to Rs 49.50 and linseed oil from Rs 19.85 to Rs 21.00 per 10 kg.

In the Madras market, prices have shown a good improvement over the last week's levels. Arrivals of seeds were small at 20 to 25 tons a day and these were taken up by local small crushers. The rate for the summer crop is now quoted around Rs 105 per bag of 86 kgs. Arrivals in the North and South Arcot districts are also reported to be small, averaging about 300 tons a day.

In the Groundnut Oil section, the rate for ready position is quoted at Rs 255 per quintal. Buyers have been evincing interest in picking up all that is offered and sellers, finding the market in their favour, have started quoting higher levels.

HIDES AND SKINS

In the Madras Tanned Skins market, arrivals of sheep skins continued to be moderate, while a few attractive lots were reported to have been cleared at prices which showed some advance especially when the commission agents were resisting the decline in prices. Common quality Goat skins showed no change.

In the Export section, enquiries for prime class goat skins were selective. In sheep skins, primes and semi-primes were unchanged. The market for middle class remained practically unchanged.

In the Hides section, arrivals of Cow are moderate and the market was steady. Prices of Buff hides and Calf skins showed no change.

On the export front, enquiries for Kips were on the same basis as in the previous week. Many sellers were reporting an over-sold position especially in "fifths". Some buyers in the UK were expressing the view that it would be good for Madras to produce more or lower grades, which went in for the lining trade.

The market for Raw Skins ruled steady although that for sheep skins was reported to be comparatively weak due to the deterioration in quality.

Hamycin Granted Patent in UK

Antibiotic research at Hindustan Antibiotics Ltd. Pimpri, has yielded many fruitful results. Hamycin is one—a product of the continued search for new Antibiotics—a new antibiotic discovered and clinically established at the HA Research Laboratories manned by internationally recognized Indian Scientists.

HAMYCIN, the new antifungal antibiotic and the process for its manufacture had been patented in India by HA Ltd. as early as July 1961. Hamycin and its manufacturing process have now been granted a patent in United Kingdom. The patent No is 950351. Hamycin is a patent Antifungal and anti protozoal antibiotic obtained from broth cultures of *Streptomyces pimprina* isolated from Pimpri Soil by our scientists.

Hamycin is golden yellow in colour and belongs to the heptene group among the polyene antibiotics. Hamycin is active against a large number of fungi particularly *Candida albicans*, and the protozoan *Trichomonas vaginalis*. Unlike other polyenes, it is absorbed through the gastrointestinal tract giving effective blood levels and cure of deepmycosis (fungal diseases) of inter-

For the INVESTOR

INVESTMENT GOSSIP
Uncertain Outlook

What is surprising in the behaviour of the stock market this week is not that it is sluggish but that it has displayed a semblance of steadiness at all. For, there has been no fresh incentives to whip up the enthusiasm of both operators and investors. On the contrary, the militating influences, if anything, have become well pronounced now. Although the Government has announced some quick moves to bring the food situation, that has assumed alarming proportions recently, under control, the actual outcome has so far been not very encouraging.

Along with the food problem, the Government has to initiate measures to bring quick relief to the population smarting under the abnormal rise in the prices of other essential commodities. Failure to arrest the rising trend of prices will have serious repercussions on the economy as a whole. It will not be possible for the authorities to hold labour demands for higher wages in check for long if prices go on rising. The two day labour conference just concluded at Bangalore has amply demonstrated the uncompromising attitude of labour on the Bonus issue. And the Union Labour Minister has given an assurance to the conference that he will take a quick decision in this regard. Besides the looming threat of cost inflation, investors are being constantly reminded of the continuing threat from both Pakistan and China. The good response to the Unit Scheme is also having its repercussion on trading in the stock market. The Trust has decided to extend the initial sale period during which units are available at par which was due to close on 31 July, to 14 August. In a communique the Trust has pointed out that the extension of the time limit has been made with a view to giving an opportunity to a large number of potential investors in far away places in the country. According to the communique, over 40,000 applications have been received upto 22 July from all over the country. According to indications available further steps will be taken at the appropriate time to make the Unit Trust

quite attractive even to those whose savings will be small. Mr R. S. Bhatt, Chairman of the UTI, said in Bombay recently that the Trust proposed to devise thrift plans to suit the needs of small investors, mainly belonging to the salaried class.

NEW ISSUE NOTES
Bally Jute

As the present paid-up capital does not bear a correct relation to the activities and assets of the company, the directors of the Bally Jute Company Limited have proposed to offer, at par, ordinary capital of Rs 20 lakhs as right shares to the existing shareholders on the basis of one new share for every existing share.

Meanwhile, the working of the company has resulted in a lower net profit, before providing for depreciation and taxation, of Rs 26.28 lakhs for the year ended 31 March 1964 as against Rs 38.19 lakhs for the previous year. From the profit, a sum of Rs 10.48 lakhs (Rs 6.39 lakhs) is set apart for Depreciation; Rs 4.00 lakhs (Rs 19.70 lakhs) for Taxation and Rs 6.95 lakhs (Rs 80.409) for Development Reserve, leaving a balance of Rs 4.85 lakhs against Rs 11.29 lakhs.

Adding the brought forward from last year of Rs 39,338 (Rs 60, 074) and transferring Rs 1.00 lakh (nil) from General Reserve, there is an available sum of Rs 6.24 lakhs (Rs 11.89 lakhs). From this, dividends on the ordinary and preference shares absorb Rs 6.00 lakhs (Rs 7.00 lakhs), leaving Rs 24.424 (Rs 39,338) to be carried forward. In the preceding year, a sum of Rs 4.50 lakhs was provided for General Reserve. The dividend on the Ordinary shares is reduced from twentyfive to twenty percent, subject to tax, payable to those shareholders registered as on the 28 September, 1964.

Struther Wells

Struther Wells (India) Limited, a new company recently incorporated in the Maharashtra State for the manufacture of chemical plants and equipments, such as heat exchangers, fired heaters, evaporators, etc., is expected to enter the capital market shortly.

The authorised capital of the company is Rs 1.50 crores, divided into 33,000-9.3 per cent preference shares and 1.17 lakhs equity shares, both of Rs 100 each. The issued and paid-up capital will be Rs 1.40 crores of which

Rs 33 lakhs will be in preference and Rs 1.07 lakhs in equity shares.

Out of the issued capital, promoters and their associates will take up equity capital of Rs 25 lakhs; foreign collaborators will subscribe shares worth Rs 40 lakhs and the International Finance Corporation (Washington) will take up Rs 17 lakhs. The balance of equity capital of Rs 25 lakhs and the enter preference capital of Rs 33 lakhs will be offered to the public. The company is expected to enter the capital market in October/November next.

Batala Engineering

The Batala Engineering Company Limited, a subsidiary of Mukand Iron and Steel Works Limited, will enter the capital market shortly to raise Rs 7.36 lakhs to finance its expansion schemes at an estimated investment of Rs 120 lakhs. The company proposes to set up a factory at Ballabgarh to manufacture lathes and open-side hydraulic planing machines. The proposed public issue of Rs 7.36 lakhs in 73,636 equity shares of Rs 10 each, at par, is the unsubscribed capital of the three-for-five right issue of Rs 8.25 lakhs made in last January.

*

BONUS ISSUE NOTES

Polychem

Polychem Limited has recommended the issue of bonus shares by capitalising the amount to the credit of the Share Premium Account to the extent of Rs 24 lakhs. The existing shareholders will be eligible for the issue of these bonus shares in the proportion three shares for every seven equity shares held, subject to the consent of the Controller of Capital Issues. It is also announced that a dividend of 15 per cent, taxable, will be payable for the year ended 31 March 1964, same as previously. The net dividend on the equity shares will work out to 12 per cent.

*

INVESTMENT NOTES

Tata-Robins-Fraser

Tata-Robins-Fraser Limited, Jamshedpur, will commence initial production of processing equipment in early 1965. A joint enterprise of the TISCO and the ACC in collaboration with Hewitt-Robins Inc. (USA) and Fraser-Chalmers Engineering Works of the General Electric Company of England. Tata-Robins-Fraser has a representative Board of Directors with Mr Jehangir Ghandy as Chair-

man. TISCO and ACC together hold 51 per cent of the capital, while the two foreign collaborating firms have 49 per cent—divided equally between them. Of the authorised capital of Rs 1 crore, the initial capital of Rs 60 lakhs (in 60,000 ordinary shares of Rs 100 each) has already been issued and paid-up. Apart from financial resources, the company is well-backed by the technical know-how and experience of the foreign collaboration.

Textile Merger

The management of the Commercial Ahmedabad Mills Company Limited has decided to take over the Ahmedabad Cotton Manufacturing Company Limited as a subsidiary and part of its plans of expansion. The manage-

with Abbey Etna Machine Company of the USA has been arranged. Import licences for bringing foreign equipment worth Rs 1.41 crores have been obtained. The first lot of capital equipment is expected to arrive soon and trial production may begin this year. Meanwhile, the company has incurred a loss of Rs 1,649 for the year 1963 since it has been engaged in only construction work.

Indian Aluminium

The Indian Aluminium Company Limited has submitted an application to the Government of India for a licence to build the first stage of a large integrated aluminium industry, starting with a 30,000-tonne per annum smelter together with related alumina and bauxite facilities. The proposed smelter will draw power from the Sharavathi project in the Mysore State and is expected to be located as close to the source of power as possible. A separate application has been submitted for establishing a rolling mill in the Maharashtra State.

When these industrial undertakings have been completed, a large integrated aluminium industry will have been established by the company with its principal units in the Mysore State. In the circumstance, and as the construction and operation of the above-mentioned projects will, in the directors' opinion, be facilitated if the registered office of the company is transferred from Calcutta to a suitable place in the Mysore State. The directors have, in this connection, convened an extraordinary general meeting on the 28 August to pass a resolution to such effect.

★

BALANCE-SHEET REVIEWS

Howrah Jute Pays 12½% Against 10%

Despite a rise in sales from Rs 350.74 lakhs to Rs 396.82 lakhs, the Howrah Mills Company Limited has made a net profit, after providing for depreciation but before taxation, of only Rs 40.60 lakhs for the year ended 31 March 1964 as against Rs 57.34 lakhs for the preceding year, mainly due to the rise in manufacturing expenses from Rs 301.96 lakhs to Rs 358.20 lakhs.

After transferring Rs 2.00 lakh (nil) from the Debenture Stock Sinking Fund and Rs 1.00 lakh (nil) from Labour Superannuation and Welfare Reserve and adding Rs 51,174 (Rs 1.01 lakhs) being provision for Doubtful Debts no longer required, there is an available sum of Rs 44.11 lakhs (Rs 44.73 lakhs). From this, a sum of Rs 1.00 lakh (Rs 2.00 lakhs) is provided for Debenture Stock Sinking Fund; Rs 24.62 lakhs (Rs 30 lakhs) for Taxation; Rs 57,263 (Rs 54,953) for Development Rebate Reserve and Rs 7.33 lakhs (Rs 84,335) for General Reserve. The directors have

proposed to pay a final dividend of 75 paise, making a total of Rs 1.25 per share as against Rs 1.00 per share paid previously.

Excellent Results of Indian Cable

Indian Cable Company Limited has produced excellent working results for the year ended 31 March 1964. According to the preliminary figures, the profit, after charging depreciation, amounts to as much as Rs 189.87 lakhs as against Rs 156.55 lakhs for the preceding year. Despite a higher provision of Rs 163.49 lakhs (Rs 93 lakhs) for Taxation, the profit after Taxation is still higher at Rs 86.47 lakhs against Rs 63.85 lakhs.

After adding Rs 10.35 lakhs (Rs 29.56 lakhs) being provision no longer required and the balance brought forward from previous year of Rs 21,521 (Rs 50.15 lakhs), there is an available sum of Rs 97.04 lakhs (Rs 143.56 lakhs). From this, a sum of Rs 34.77 lakhs (Rs 87.40 lakhs) is transferred to Reserves.

The directors have proposed a taxable dividend of Rs 2.50 per share as against Rs 2.25 per share, taxable, previously. The dividend is payable on or after 9 October to those shareholders registered as on 25 September 1964. The amount carried forward to next year is lower at Rs 9,790 against Rs 21,521 brought in.

Dhrangadhra Chemical Earns More

Thanks to the increase in the output of Caustic Soda by 27.7 per cent, the Dhrangadhra Chemical Works Limited has been able to report a rise in sales from Rs 4.34 crores to Rs 4.94 crores for the year ended 31 March 1964. The rise in production has been brought about by the expansion of the capacity in caustic soda to 140 tons daily from 80 tons. The quantum of output would have been still higher, but for the difficulties relating to the availability of power and some teething troubles.

The net profit for the year, before providing for depreciation and taxation, is appreciably higher at Rs 131.3 lakhs as against Rs 90.3 lakhs for the preceding year. In respect of allocations, Depreciation is raised to Rs 54.61 lakhs from Rs 34.70 lakhs and Development Rebate Reserve to Rs 40 lakhs from only Rs 1.06 lakhs, while the provision for General Reserve is lower at Rs 23 lakhs against Rs 46 lakhs. The dividend on the equity shares is raised from 8 to 10 per cent, subject to tax.

The programme for putting up the liquid chlorine plant is expected to be completed some time early in 1966. The required plant and machinery are expected

to be imported from Japan. It has been announced that the company has also a proposal for raising further the capacity for manufacturing casting soda to 300 tons daily. The cost of this project is estimated at Rs 10 crores and application has been made to the Government for an industrial licence.

Meanwhile, it is expected that the output in the current year will be significantly higher. In fact, a scheme is being implemented for raising the capacity further to 180 tons.

Bengal Chemical Repeats

Thanks to the rise in sales from Rs 228.11 lakhs to Rs 234.95 lakhs, the Bengal Chemical & Pharmaceutical Works Limited has reported a higher net profit, after providing for depreciation and taxation, of Rs 8.81 lakhs for the year ended 31 March 1964 as against Rs 7.05 lakhs for the previous year.

In respect of allocations, Depreciation is increased to Rs 5.93 lakhs from Rs 5.48 lakhs and Taxation to Rs 10.00 lakhs from Rs 7.25 lakhs, apart from providing Rs 1.00 (nil) for General Reserve No. 1. The provision for Development Rebate Reserve is, however, lower at Rs 30.645 against Rs 1.06 lakhs. The dividend on the Ordinary shares is repeated at 10 per cent, subject to tax.

The directors have, in this report, stated that the expansion schemes at Panihati factory are in progress, while the trial run of Alum plant in parts has already been undertaken and the plant will commence production within a month or two. Transfer books will remain will remain closed from the 1 to 14 August, 1964.

General Industrial Society—Higher Profits

A substantial rise in sales from Rs 296.26 lakhs to Rs 403.48 lakhs is reflected in the working results of the General Industrial Society Limited for the year ended 31 December 1963. The net profit, after providing for depreciation and taxation amounts to as much as Rs 14.55 lakhs as against only Rs 9.55 lakhs for the preceding year.

With regard to allocations, Depreciation is raised to Rs 20.80 lakhs from Rs 9.86 lakhs and Development Rebate Reserve to Rs 6.97 lakhs from Rs 3.35 lakhs, while Taxation is reduced to Rs 6.50 lakhs from Rs 10.00 lakhs and General Reserve to Rs 1.60 lakhs from Rs 2.30 lakhs. The directors have proposed to raise the dividend from Rs 1.30 to Rs 1.40 per share, subject to tax.

The directors have stated that the company has, by now, installed 63 Broad Looms and proposed to instal another 27 Broad looms during the current year. As there has been a severe decline

in the prices for Carpet Backing Cloth largely due to increase in supply, the company is taking suitable steps to push up the sale of the cloth; and the decision for further expansion will be taken in the light of the conditions that will be obtained from time to time.

The working of the Cast Iron Foundry remains satisfactory. There is some increase in the production at this unit although the position of supply of the principal raw material continues to remain difficult.

The company has completed the modernisation of the Cotton Mill as well as expansion programmes. This unit is now working on 18,000 new spindles along with other up-to-date ancillary machinery. It is expected that every impediment to production will be resolved soon and the unit will reap the benefit of capacity production.

The company has also been granted licence for further installation of 7,000 spindles and 100 looms. The directors have proposed to undertake the installation of the new spindles in the course of the current year. As for the installation of the looms, the economic feasibility of the scheme is being examined.

The company also holds an industrial licence to manufacture 1,200 tons of Aluminium Foils per annum. Factory for this purpose is proposed to be put up near the site of The Hindustan Aluminium Corporation Limited. The Government has, however, made a stipulation in the industrial licence regarding the manner of procurement of foreign exchange components of the project, which has rendered arrangement of foreign exchange quite difficult. Negotiations for the same are being conducted with foreign parties and the implementation of the project will naturally depend upon the outcome of such negotiations.

The company has received approval for the issue of further capital to meet the rupee finance requirement of the project; but no action is considered necessary in this regard for the time being.

It is understood that the Board of Directors have decided to issue 12,500 Cumulative Redeemable Preference shares, carrying 9.3 per cent interest, free of company's income-tax only.

Machinery Manufacturers Do Well

Machinery Manufacturers Corporation Limited has reported higher sales of Rs 253.64 lakhs (Rs 203.64 lakhs) for the year ended 31 March 1964, reflecting a further increase in output of different products. The net profit, before depreciation and taxation, has, therefore, risen to Rs 66.68 lakhs from Rs 55.43 lakhs in the previous year.

The provision for Depreciation is higher at Rs 13.34 lakhs against

Rs 10.27 lakhs; Development Rebate Reserve at Rs 2.12 lakhs against Rs 1.91 lakhs and Taxation at Rs 31 lakhs against Rs 17 lakhs. The transfer to Gratuity Fund is, however, lower at Rs 1.50 lakhs against Rs 3.50 lakhs and General Reserve at Rs 12 lakhs against Rs 17.30 lakhs. The dividend on the equity shares is maintained at Rs 1.50 per share.

The company has a programme for diversifying its output of textile machinery.

Same from

Sri Balasubramania Mills

The working of Sri Balasubramania Mills Limited has resulted in a slightly higher net profit of Rs 8.77 lakhs for the year 1963 as against Rs 8.67 lakhs for the preceding year. Sales are shown at Rs 70.40 lakhs against Rs 63.27 lakhs.

As there is an increase in working expenses, the amount set aside to Depreciation is lower at Rs 2.90 lakhs against Rs 3.07 lakhs and Development Rebate Reserve at Rs 45,164 against Rs 50,015. The provision for taxation is shown at Rs 2.75 lakhs against Rs 3.16 lakhs, while the transfer to General Reserve is higher at Rs 1.25 lakhs against Rs 75,000. The dividend on the equity shares is maintained at 12 per cent, subject to tax.

The directors state that the working results for the current year may be adversely affected by the labour strike that lasted for 28 days and the subsequent lock-out for 20 days since the close of the financial year.

Bararee Coke Pays More

Thanks to the rise in sales from Rs 53.72 lakhs to Rs 63.12 lakhs, the Bararee Coke Company Limited (Jardine Henderson group) has been able to report a net profit, after providing for depreciation but before taxation, of as much as Rs 14.19 lakhs for the year ended 31 March 1964 as against Rs 10.64 lakhs for the preceding year.

Apart from maintaining Deferred Repairs Reserve at Rs 1.50 lakhs, all other allocations have been increased: — Depreciation from Rs 69,757 to Rs 1.18 lakhs; Taxation from Rs 7.00 lakhs to Rs 9.23 lakhs; Development Rebate Reserve from Rs 120 to Rs 891 and General Reserve from Rs 80,889 to Rs 1.05 lakhs. Even after these allocations, the directors have found it possible to raise the dividend from 15 to 20 per cent, subject to tax.

The directors have, under investigation, plans for diversification and expansion of the company's operations; but they add that not very satisfactory results can be expected due to the complex nature of these experiments and investigations. Annual general meeting will be held on the 28 August.

IN BRIEFS

Biria Jute Manufacturing Company Limited has maintained the dividend at 15 per cent, subject to tax, for the year ended 31 March 1964.

Aluminium Industries Limited has proposed a final dividend of 9 per cent, taxable, for the year ended 31 March 1964. This compares with a taxable dividend of only 15 per cent paid for the preceding year.

Indian Steel Rolling Mills Limited has maintained the dividend at 9 per cent, subject to tax, for the year ended 31 March 1964.

Gwalior Rayon Silk Manufacturing (Weaving) Company Limited has raised the dividend from Rs 2.50 to Rs 2.75 per share, taxable, for the year ended 31 March 1964.

It is learnt that the recent right issue by National Rubber Manufacturers Limited has been over-subscribed. The basis of allotment of additional shares is being worked out in consultation with the Calcutta Stock Exchange.

Chembra Peak Estates Limited has raised the dividend from 20 to 25 per cent, taxable, for the year ended 31 March 1964.

Pullangode Rubber & Produce Company Limited has reduced the dividend from 10 to 8 per cent for the year ended 31 March 1964.

Kailas Rubber Company Limited has proposed a final dividend of 1½ per cent, making a total of 3½ per cent, taxable, for the year ended 29 February, 1964, same as previously.

Tirupati Cotton Mills Company Limited has reduced the dividend from 10 to 7½ per cent, taxable, for the year ended 31 March 1964.

The working of the Mysore Paper Mills Limited has resulted in a slight decline in the net profit, before taxation and after depreciation, to Rs 9.92 lakhs for the year ended 31 March 1964 from Rs 12.37 lakhs for 1962-63. The dividend is reduced from 12 to 9 per cent, subject to tax.

Mysore Coffee Estates Limited has proposed a taxable dividend of 6 per cent for the year ended 31 March 1964 as against nil previously.

★

STOCK EXCHANGES Indecisive Pattern of Trading

STOCK markets have generally relapsed into a dull phase during this week. In the absence of any incentive, there is a marked hesitancy to go in for big commitments. Operators seem to be worried over the disturbances in labour relations in banks, the rise in the cost of essential commodities and the shortage of grains and edible oils. Even the good corporate news has failed to impress the market.

Lyons Range witnessed another dull session and prices showed a

tendency to sag slowly in the absence of any support.

Dalal Street disclosed no perceptible change in the pattern of trading, which remained indecisive.

Although the Madras Stock Exchange maintained a steady trend, activity continued to be restricted. The Ahmedabad Stock Exchange appeared to have adopted a cautious attitude in view of economic and political uncertainties.

Price movements on the Delhi Stock Exchange were confined to a narrow range.

Moderate business was transacted on the Bangalore Stock Exchange.

Wall Street continued to be plagued by a number of uncertainties, which were curbing broader investor participation.

★

CALCUTTA

AFTER initial steadiness, equity prices on the local stock exchange developed a slightly reactionary tendency towards the close owing to lack of incentives together with some profit-taking. Whatever activity there was was mainly confined to the cleared shares, while the cash section was practically neglected.

On the whole, the pattern of the week's trading indicated that the operators were not able to take a definite view of the present situation. In spite of the encouraging corporate news, buying support remained at a low ebb. This was mainly due to the fact that the professional operators had chosen to remain in the background, while support from genuine investors was not forthcoming even at the lower levels.

Perhaps, market circles were right in pursuing a cautious approach in the light of the prevailing conditions. Greater anxiety was shown over the price spiral in various commodities. It was feared that this would lead to unrest among industrial workers. It was also thought that, as the burden of taxation was unusually heavy, any increase in production cost might dim the prospect of dividends.

Again, the shortage of funds and the higher interest pattern rendered stock market operations unprofitable on borrowed funds. The proposal made the Unit Trust to continue selling units as long as possible also gave rise to a feeling that this move might help mobilise a considerable part of the savings of the middle and low-income groups. With the result, there was a general disposition on the part of the professional operators to lighten commitments.

Gilt-edged securities were rather dull and turnover was limited. Support was forthcoming particularly for short-dated issues; but sellers were generally reserved. Investors seemed to be awaiting the announcement of the forthcoming State Government Loans, which were likely to

be issued within the next few days. Meanwhile, 3 per cent 1986 Conversion Loan changed hands at Rs 63.70 to Rs 63.80.

Activity in the Jute section continued to be restricted following the cautious policy adopted by the operators in view of the hardening tendency in fibre prices. There was also a growing fear that the profits of the mills were likely to be smaller than they were for 1963/64. The dis-appointment over the maintenance of the dividend caused Birias to slip down at one time to Rs 33.31 from a high of Rs 34.12 before finishing the week at Rs 33.37. Howrah changed hands at Rs 15.37 to Rs 15.50 x.d.; New Central at Rs 10.62 to Rs 10.94 and Ganges at Rs 13.56 to Rs 13.69. Anglo-India were a steady feature at Rs 160.

Textile shares met with only limited support. This was mainly due to the fact that operators were unable to take a clear view of the outlook until further information relating to the proposed control on cloth was published. J. K. Cotton were neglected at Rs 10.25, while Bharat Commerce changed hands at Rs 20.31 to Rs 20.69; Elgins at Rs 19.12 to Rs 19.37 and Jaya Shree at Rs 13 to Rs 13.37.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons dealings in which were started on ex-dividend basis with effect from Thursday. After being done at Rs 25.25 to Rs 25.64 on cum-dividend basis, the scrip turned ex-dividend at Rs 24.36, to finish the week at Rs 24.26. G. K. Williams moved narrowly between Rs 22.94 and Rs 23.16, while TEXMACO closed better at Rs 25.90 after touching a low of Rs 25.70 from the opening level of Rs 26.25. Indian Standard Wagon was marked down to Rs 35.50 from Rs 36.25 with Jessop improving to Rs 21.25 from the opening level of Rs 20.62. Kumardhubi, Marshalls and National Irons were almost unchanged.

Despite the shrinkage of turnover in the Miscellaneous section, a few selected shares were in good favour following the proposals for diversification and expansion of their activities. Following were the price trends of a few selected shares:

	Week's High	Week's Low	Week's Closing

EUROPE

Economic Growth in 1950s

The Economic Commission for Europe has just issued a study entitled "Some Factors in Economic Growth in Europe During the 1950s".* The decision to undertake this study was based on the assumption that the promotion of economic growth will remain a major objective of economic policy in all countries—or at least the great majority of them—for many years to come.

The comparison of rates of economic expansion has been made primarily in terms of the most generally accepted measures of economic growth in the two main groups of countries under study—the rise in real gross domestic product in the market economies of western Europe and North America and in real net material product in the centrally planned economies of Eastern Europe and the Soviet Union. In neither case is the rise in the volume of this aggregate, either in total or per capita, an adequate measure of the increase of national welfare or of average living standards. But even if the growth of national income (on either of the definitions used) is not a sufficient indicator of changes in welfare or living standards, it can be argued, states the study, that a rising national product—even in the richest countries—is still today a pre-condition for further social advance or, at the very least, that most of the measures of policy necessary for such advance can be implemented more readily in an expanding than in a stagnant economy. Thus, it is national product as an appropriate measure of the productive capacity of an economy that is of main interest in the context of this study; and, particularly, the factors explaining differences in rates of growth of national product from one country to another.

The explanation of differences between national growth rates of output or productive capacity has here been sought primarily by examining the relationship of rates of growth of output to inputs of labour and fixed capital in the countries under study. Differing overall pressures and patterns of demand are later considered among the influences affecting returns to these inputs.

*Part II of the "Economic Survey of Europe in 1961", prepared by the Secretariat of the United Nations Economic Commission for Europe, Geneva, 1964. Approximately 275 pages. Available in English (the French and Russian editions will follow later), from Sales Section, European Office of the United Nations, Geneva, or may be ordered through Sales agents for United Nations publications (in United Kingdom: H. M. Stationery Office, PO Box 569, London, SE-1; Ireland: Stationery Office, Dublin; United States of America: Sales Section, United Nations, New York). Price: \$4.00.

Attention is drawn in the study to the limitations of the data on which it has been based.

The first question which the analysis is intended to answer is whether any close association can be observed between the rates of growth of output during the 1950s in the countries under review and their rates of growth of labour force and rates of fixed capital formation.

The first stage of the analysis reveals a fairly strong association between high (or low) rates of growth of domestic product and high (or low) rates of growth of labour force. Moreover, there was a tendency for relatively high rates of growth of output to be associated not only with relatively high rates of growth of labour force but also with relatively high rates of growth of labour productivity. However, virtually no correlation between growth rates of output and investment ratios was apparent for the 22 countries.

Experiments relating the growth rate of output to inputs of labour and capital included the calculation of various coefficients representing "factor productivity" in some sense. For the countries for which data on the growth of capital stock were available, these data and those on growth of production and labour force were also tested for consistency with a Cobb-Douglas production function. They too showed no very close relationship between growth rates of output and of inputs among the countries under study.

Differences in Rates of Economic Growth

The study shows that, among the economies of western Europe and North America, average rates of growth of national product were, without exception, as high during the 1950s as over the whole period since 1913 (or over these periods since 1913 for which data are available—the only countries for which no comparison was possible were Iceland and Luxembourg) and for most countries they have been significantly higher. In some countries rates were somewhat higher in the period of rapid expansion after recovery from the First World War (1923 to 1929); those showing such differences were Belgium, Canada, France, Sweden, the United Kingdom and Ireland, but, in general, the 1950s can be designated a decade of relatively rapid growth.

The differences in annual rates of growth among these countries were, however, much greater in the 1950s than during the longer period. For the period 1913 to 1956, the range is from 1.3 per cent to 3.2 per cent; for the 1950s it is from 1.3 per cent to 7.4 per cent. Among

the industrialized countries alone (in descending order of rates of annual percentage rates of growth during the decade), western Germany (7.4), Austria and Italy (both 6) head the list during the 1950s; they are followed by Switzerland, the Netherlands, France and Canada with rates from 4.25 per cent to 5.25 per cent; by Luxembourg, Norway, Sweden, the United States, Denmark and Belgium (3–3.75); and then by the United Kingdom (2.4). Among the less industrialized countries, Greece, Turkey, Yugoslavia, Iceland and Spain all show relatively high annual rates of growth (between 5 and 6 per cent), Finland and Portugal moderate rates (around 4 per cent) and Ireland a low rate (1.3 per cent). These orders are not greatly affected if rates of growth are measured in per capita terms, except that the growth rates of the United States and Canada then fall below that of Ireland. The exact placing of the border lines (in terms of growth rates) between groups of countries must, of course, be to some extent a matter of choice.

Among the planned economies of eastern Europe and the Soviet Union, relative growth rates of net material product are noticeably affected by the choice of base year for the constant-price calculation, particularly in the first quinquennium. For the decade as a whole, Albania, Bulgaria, Romania, and the Soviet Union recorded the highest rates (10–10.5 per cent); Czechoslovakia, Hungary and Poland all registered 7–8 per cent; for eastern Germany, data in constant prices are not available.

The figures for the planned economies are all well above those registered for increases in gross domestic product in most of the market economies; but the differences narrow as attempts are made to render the coverage of the data more comparable. A rough adjustment of the Bulgarian, Hungarian and Polish data to gross domestic (service inclusive) product (GDP) at something like factor cost brings down the growth rates for the first two countries, but leaves that of Poland virtually unchanged. An adjustment of the data for six western countries to a "gross material product" concept slightly raises the growth rates of all except the United States. The adjustment to net material product (NMP) possible for four of them—western Germany, Italy, Netherlands and the United States—again raises the growth rate for all except the last. Briefly, on a GDP basis of comparison the Hungarian growth rate is no higher than that of western Germany.

On a NMP basis of comparison the same is true and the western German growth rate is equal to that of Poland, while Italy is in the same class as Hungary. Per-

haps surprisingly, it seems that a comparison of growth rates based on NMP aggregates may be less favourable to the planned economies than one based on GDP data.

However, although the gaps narrow with improvements in statistical comparability, it remains true that growth rates in the planned economies in the 1950s were above those in all but a few market economies.

Differences in Returns to Factor Inputs in the Economy as a Whole

The mere facts of differences in national rates of expansion of output are of little interest in themselves; and the results of the search for an explanation in terms of differences in rates of increase in the labour force and in rates of input of fixed capital in the economy as a whole are given in Chapter II of the study.

It is there shown first, that among the market economies rates of growth of GDP were rather closely associated with rates of growth of the active labour force, and that relatively high rates of growth of output and labour force were also associated with relatively rapid growth of labour productivity. However, not only did western Germany, Austria, Greece and Italy—the countries at the top of the ladder of GDP growth—show particularly large increase in labour productivity, but France also joined their company—with only a moderate rate of growth of output but a virtually stationary labour force and a rapid rise of labour productivity. The United Kingdom showed an exceptionally low rate of productivity growth, as did the United States, Canada and Denmark.

In the planned economies, the active labour force everywhere rose relatively fast in comparison with rates registered in the market economies, as did output per man. The effect of considering the data for these countries together with those for the market economies is to strengthen the association between rates of growth of output, labour force and labour productivity.

Differences among countries in rates of growth of labour productivity reflect differences in the contributions to output of all influences other than the increment of labour supply (including the input of capital). In examining returns, in terms of growth of gross domestic product, to inputs of fixed capital in the market economies, it was necessary—for lack of adequate data on changes in capital stock—to measure the input of fixed capital by means of the fixed investment ratio (gross fixed investment as a percentage of gross domestic product during the decade) and the rate of growth of capital productivity by means of the incremental capital/output ratio (the ICOR). The study examines the limitations of

this approach but concludes that, subject to certain qualifications, differences between national ICORs may be regarded as a parallel to differences in rates of growth of labour productivity—reflecting differences in the contribution to output of all influences other than inputs of capital.

Fixed investment ratios during the 1950s differed widely among the industrialized market economies—from 16–17 per cent in the United Kingdom, Belgium and Denmark to 24–25 per cent in western Germany, the Netherlands and Canada and over 30 per cent in Norway. Ratios in the less-industrialized countries also varied widely—from 15–16 per cent in Turkey and Spain to 30–31 per cent in Finland and Iceland.

As mentioned above, there was virtually no correlation between investment ratios and growth-rates of GDP among the whole group of 22 western countries or among the smaller group of industrialized countries. If returns to additional capital inputs are measured by means of the incremental capital/output ratio (ICOR), appear as a group with particularly low ICORs i.e., high returns to capital inputs: Ireland, Norway, Finland, the United Kingdom, Sweden, Luxembourg and Canada show particularly high incremental capital/output ratios (ICORs).

The authors observe that the ICOR, regarded as an indicator of the relative productivity of capital inputs, or as an indicator of relative "total productivity" of factor inputs—in the sense of the effect of all influences determining the return to inputs of additional labour and capital—is biased, other things being equal, in favour of countries with a relatively high rate of growth of labour force; to regard differences in national ICORs as indicators of relative capital productivities implies that the true marginal productivity of labour unequipped with capital is zero. It was therefore decided to calculate another coefficient—the ratio of the gross investment ratio to the growth rate of labour productivity [the ICOR(L)]—with the opposite bias: the ICOR(L) can be regarded as a means of measuring relative capital productivities only on the assumption that the "true" marginal productivity of labour is equal to its average productivity.

The result of this latter calculation was to show that the same seven countries as had particularly low ICORs had low ICOR(L)s also; but France also joined this group on the basis of its ICOR(L). More or less the same countries as had relatively high ICORs also had relatively high ICOR(L)s. Moderate to high growth rates of GDP are characteristic of the first

group: moderate to low growth rates of the second. In both groups the rates of increase of the labour force vary considerably.

The study notes that such comparisons are undoubtedly affected by the differences between national price structures; and comparisons between the planned and market economies are even more affected. The statistical basis for such comparisons is very shaky and all that can be said with reasonable certainty is that returns to investment in the market economies were not higher than in the planned economies.

Broadly speaking, therefore, this part of the analysis indicates somewhat higher growth rates and a higher productivity of factor inputs in the planned economies than in most of the market economies. Among the market economies, the less industrialized countries of southern Europe together with western Germany, Austria, Italy and (on the basis of the ICOR(L) and similar coefficients) France showed the highest returns to factor inputs: Canada, Norway, Sweden, Ireland, Iceland, Finland, Luxembourg, the United States, Denmark and the United Kingdom all had relatively high ICORs and ICOR(L)s. Not only as between these two groups but also among the intermediate countries there is a tendency for relatively high rates of growth to be associated with relatively high returns to factor inputs, and vice versa; but France is something of an exception, with a particularly high efficiency of use of inputs and a moderate rate of economic growth.

The Significance of Differences and Changes in Economic Structure

In Chapter III, developments in individual sectors in those western economies for which data were available are examined to see whether differences of economic structure or structural changes during the decade helped to explain differences in the rates of return, in terms of economic growth, to factor inputs.

Although the sector-by-sector analysis permits identification of a number of special features of the development of particular countries, it does not suggest that differences in structure or special factors affecting a particular country's development within one or a few sectors, go far to explain the overall differences. The net effect of differences in economic structure on relative growth-rates of overall labour productivity and on relative ICORs in the industrialized western countries seems to have been very slight.

However, changes in the structure of employment within individual countries during the decade contributed significantly to the rise of labour productivity in western Germany, Austria and Canada; they contributed relatively still

more in Norway and less in France and Italy—thus tending to make even greater the differences between Norway and the other members of the group which require some other explanation. They had a very slightly unfavourable effect on overall productivity growth in the United States, entirely as a consequence of an increasing share of employment in services. On the other hand, changes in the employment structure contributed even more to overall productivity growth in Yugoslavia and in the centrally planned economies than in those first mentioned; and it seems highly probable that they were important in all the less-industrialized countries of western Europe, though the necessary data for calculating their significance are not available.

Technical Progress, Skills and Management

Although "technical progress" is a term that can be—and frequently is—loosely used as shorthand for "all factors influencing economic growth other than inputs of labour and capital" in its narrow sense of the introduction of new or improved production processes and of new or improved products, it is clearly an identifiable—though not easily measurable—factor in economic growth. To a large extent it is linked with the installation of new or improved capital equipment. It also requires a certain level and assortment of scientific and skilled manpower and managerial ability. The attempt made in Chapter V to examine indicators of resources devoted to scientific research in various countries in relation to those countries' relative rates of economic growth shows—as might be expected—no correlation between the two for the economy as a whole. But there is some association in individual branches of industry, and the science-based industries have been the most expansionary in the economies there examined. Since most technical innovations arise out of research, it may be assumed that, other things being equal, a large research effort, and particularly one devoted to applied—rather than basic—research, is likely to yield considerable returns in terms of output. Thus it has been shown that the association between rates of economic growth and the increase in the supply of academically-trained engineers—required both to undertake research and to ensure the practical application of its results—is remarkably close, and remains so when centrally planned and market economies are examined in one group. Differences in the shares of national expenditure devoted to education in the countries reviewed in Chapter V were too small to appear significant in relation to differences in rates of economic growth; and no corre-

lation of the latter with other indicators of relative education facilities was observable either. Again this is hardly surprising over a period as short as a decade.

Determinants of Differences in Labour and Capital Productivity

Consideration of structural differences between countries and of changes in economic structure within countries over the decade, together with such evidence as could be examined on elements in technical progress in the narrow sense, still seems to leave room for other influences to provide part of the explanation of observed differences in national returns to factor inputs during the 1950s. Four industrialized western countries were therefore selected for closer examination to see whether explanations of their rather extreme positions in this respect could be found: western Germany, with relatively high inputs and high returns to them in terms of the rate of economic growth; Norway, with relatively high inputs and relatively low returns; France with relatively low inputs and relatively high returns; the United Kingdom with relatively low inputs and relatively low returns. In addition, it seemed that a more detailed examination of the pattern of economic growth in Hungary—the one eastern European country for which the necessary data could be assembled—could also be of interest.

These country studies, which constitute Chapter VI, provide some additional explanations of differences in returns to factor inputs in the countries considered.

The examination of the four special cases among the western economies tends to modify the earlier impression that differences in factor inputs—and in rates of capital formation in particular—might be of little significance as explanations of differences in rates of economic growth by indicating that in some cases, at least, unavoidable special circumstances have affected the productivity of inputs. First, geographical, climatic or demographic factors seem to have raised average and incremental capital output ratios in some countries above those in others, and thus affected the need for capital inputs to sustain a given rate of economic expansion, other things being equal. Secondly, the phasing of growth has also affected relative returns to capital inputs over a period as short as a decade; and the possibility available to some countries at the start of the 1950s of raising the productivity of the whole capital stock substantially by replacing outdated capacities with new equipment incorporating accumulated past technological advance, or by means of small "bottleneck widening" investments, seems to have been particularly important. The identification of such special influences on returns to factor in-

puts in different countries tends to strengthen, rather than to weaken, the case for believing that within any country the rate of growth of the labour force and the rate of capital formation are significant determinants of the rate of economic expansion.

Nevertheless, the tendency of the whole of this analysis, including the country studies, is to suggest that other factors, more subject to influence or control by government policy, may also have a considerable impact on the rate of economic growth achieved with any given input of labour and capital. In particular, the analysis tends to confirm the common-sense view that a sustained strong growth of demand may itself encourage continuing rapid growth, not only by encouraging a high rate of investment but also by establishing a "climate" favourable to enterprise, factor mobility and, in general, an efficient use of the inputs available. Similarly, a high rate of factor inputs may itself be conducive to high returns in terms of growth per unit of input.

In the final chapter of the study, the ECE Secretariat observes that any discussion of the relevance of the experience of the 1950s to consideration of future prospects for economic growth in European countries needs to take into account, first, conditions affecting the supply of inputs during the decade and any likely future changes; secondly, any special conditions affecting returns to inputs during the fifties which are not likely to be present in the future; and thirdly, the effects of government policies in the past, and of those likely or possible in the future, on the supply of inputs and the efficiency with which they are used. After examining the expansion and flexibility of the supply of labour, where it is stated that increasing labour mobility within western Europe is a significant feature of recent experience, tending to reduce the dependence of national labour supplies on national population trends, at least for so long as significant differences in national employment opportunities and living standards persist, the authors consider the prospects for the supply and utilization of fixed capital. It is argued that, in general, factors affecting investment demand seem to have been of greater importance than supply limitations as influences on the rates of fixed capital formation in western Europe during the decade. The authors also call attention to the importance of the structure of investment outlays—i.e. the distribution between productivity-raising and employment—creating investment in the light of the labour-supply situation. The adaptability of the pattern of investment to a situation of more slowly rising labour supplies will be an important determinant of

future investment productivity in a number of countries in which the rate of increase in the numbers available for employment has fallen in the later years of the fifties or can be expected to fall in the future. These include not only countries such as western Germany and Austria, but also most of the countries of eastern Europe. The apparent importance of adequate demand pressures as a further factor encouraging high returns to capital and other inputs has already been noted.

Any consideration of prospects for future economic growth in the western industrialized countries must, the ECE secretariat believes, give considerable attention to these two points. In most of these countries governmental techniques of economic management have been improved in recent years; on the other hand, some of the problems which have to be solved if effective policies to encourage steady and rapid economic expansion are to be pursued still appear intractable. Basically, the problem is to minimize the need for periodically restricting economic expansion in one country or another to a rate involving underemployment of labour and capacity, in order to correct an adverse tendency in the balance of payments. Reserves of international credit large

enough and accessible enough to permit countries to face with equanimity fairly large and prolonged swings in their balances of payments could ease the problem; but persistently adverse balances of payments eventually have to be corrected. The increasing interdependence of the western European economies, and the formal commitments to virtual renunciation of the flexible use of direct trade controls by most of them, have made it increasingly difficult to contemplate the use of such means of correction, or the use of exchange-rate changes, except in dire emergency. Thus the burden of adjustment now tends to fall almost entirely on domestic policy measures—which must be directed, in a deficit country, either towards increasing international competitiveness by reducing the relative costs and prices of national production or towards restricting demand for imports and stimulating exports by lowering the rate of expansion of domestic demand and output. Thus the problem of "incomes policy" has come to be seen as one of the main keys to a solution of the industrialized countries.

In the planned economies of eastern Europe and the Soviet Union, the problem of "demand planning" is different from that in the market economies but—at

least in the more highly industrialized members of the group—no longer unimportant. Since the analysis in Chapters II and III of the study was completed, rates of growth of national material product have slackened in most of these countries, continuing the tendency already observed in comparisons of the first and second quinquennia of the fifties, and relatively low rates of expansion have been experienced or are planned in the years 1962 to 1964 in several of them—notably in Czechoslovakia and Poland. In both these countries the cutting back of rates of overall growth has been brought about in part by the need to adjust the pattern of "demand" to resources available in the investment sector and to adjust the planned pattern of output to the more spontaneous pattern of growth of demand both for domestic consumption and for exports.

The study ends with a brief account of developments in western Europe since the end of the fifties, indicating a continuation of considerable differences among countries in the returns received to inputs of labour and capital though also some confirmation of earlier indications that purely temporary factors accounted for part of such differences in the earlier period.

ENGINEERING

Association's Views on Monopolies . . .

The Engineering Association of India in a memorandum submitted to the Monopolies Enquiry Commission has pointed out that there is no monopoly in Engineering Industries except in case of items like telephones, coaches, locomotives, railways etc. which are manufactured by public undertakings. The Association has expressed the view that although normally the term Monopoly denotes a single unit operating in the market the terms for purposes of measuring the effects of restrictive trade practices will have to adopt standards which may differ from industry to industry depending on the level of achievement of the industry and the number of units operating in relation to their production and demand ratio. Mere existence of only one unit does not amount to monopoly as to begin with there would be only one unit in each industry and an under-developed country like India which is aiming to have all round development, though such scenes may be visible, these cannot be called monopolies as even in such cases imports do take place and gradually, as the demand builds up more units come into production.

The Association has cautioned the Commission of the likely confusion in distinguishing between a monopoly and a dominant enter-

prise need for which arises in case of specialised industries which have limited market and the economy of the industry necessitates the existence of only a few enterprises. Quoting the instances of the automobile industry and the antimony industries, the Association has emphasized that besides the number of units operating, the factors governing the demand and the modern economic system which tend to reduce the number of units should not be lost sight of.

The Association has also tried to prove by its own survey of about 120 engineering industries that in most of the industries the number of units are far too many to allow monopolies to operate e.g. in the case of the steel industry there are five big units and the State itself is a dominant producer. Similarly, in the case of aluminium industry the number of producers is about four. In the case of the processing industries there are more than 100 such units operating. In the case of the older established industries, for instance, electric fans, there are 24 large-scale units; in the case of bicycles, there are 21 large-scale units and 51 manufacturers of spare parts and accessories. Likewise there are about 41 units engaged in the manufacture of various types of machine tools.

In the opinion of the Association, concentration of economic power may be regarded to exist in a case where a person or a group of persons with closely allied interests may be having so much economic power as to conduct themselves in a manner that their activities become prejudicial to the national interest. In the case of the engineering industries, the question of concentration of economic power does not arise.

The Association is of the view that for a number of considerations concentration of economic power is difficult to exist under the present-day conditions. In support of this argument the attention of the Commission has been drawn to the following factors:—

Industrial Policy of the Government:

According to the industrial policy of the Government of India as enunciated in its resolution of 30 April, 1956, all industries have been divided into three groups. Schedule (a) contains basic industries which are the exclusive responsibility of the State. Schedule (b) enumerates which will be progressively State-owned but where private enterprise will also be expected to supplement the efforts of the State. In regard to indus-

tries falling outside these schedules, their future development will, in general, be left to the initiative and enterprise of the private sector. Notwithstanding these demarcations it is always open to the State to undertake any type of industrial production. Besides the industries listed in Schedules (a) and (b) cover almost all important engineering industries which are to be developed by State.

Industries (Development & Regulation) Act:

Besides the Industrial Policy Resolution, the Industries (Development Regulation) Act has given to the Government enormous powers of regulating the operation of industries in the private sector. Government has, without doubt, exercised these powers in opening up less developed areas and in ensuring that concentration of economic power is not allowed. Government may refuse licensing of any industrial undertaking to any one or a group of entrepreneurs.

Company Law:

Most of the important and large-scale industries are operated by joint stock enterprises. Under the Indian Company Law no appointment of Managing Agents, Secretaries and Treasurers, Managers or Managing Director could be made without the consent of the Central Government which fixes their remuneration and their terms of office. Even the powers exercisable by them are regulated by law. A person so appointed could be removed by the shareholders or by the Central Government at any time. Under the existing legislation the powers of the shareholders are so wide that company management may be changed at their will.

Ownership of Company Share Holdings:

Today Joint Stock Companies are owned by a large number of shareholders in whom ultimately the entire power rests.

Fiscal & Economic Policies of the Government:

In dealing with the question of concentration of economic power due note has to be taken of the fiscal policy pursued by the Government. Income-tax, for instance, takes away 88% or even more of personal incomes. Then there is the Wealth Tax. Income-tax and Wealth Tax together in some cases take away as much as 120 to 140% of personal income. Besides, there is the Expenditure Tax, Gift Tax and the Estate Duty. With such a tax structure obtaining in the country, it is impossible to think that there could be concentration of economic power in private hands.

There are certain industries where economics of large-scale production would dictate the

need for the existence of only a few units. This is most important in a poor country where the resources are scarce and have to be put to the best possible use. The history of development of some of the important industries during the last fifteen years would indicate that a number of them have been started with foreign collaboration either in equity capital or technical know-how. Only firms of status and standing can be relied upon by foreign entrepreneurs for collaboration. The development that has taken place would not have been possible otherwise. Under such circumstances to discriminate against such business houses would be harmful to the interest of industrial development of the country.

Restrictive Trade Practices:

Restrictive trade practices could arise by a firm or a group of firms acting in a manner as to control prices to the detriment of the consumer or to under-cut new producers or to restrict production so as to keep up prices. So far as India is concerned the circumstances do not warrant adoption of any such practice. There is a growing internal market for almost anything that is produced. Industry is unable to increase production on account of shortage of raw materials and many of the Government policies that hinder production. In the case of the basic industries like

steel, the prices are fixed subject to the approval of the Government. In the case of other industries as has been mentioned earlier, a number of units are operating in each industry which would make it impossible for any single unit to dictate its own price. India does not have a free economy as is obtaining in the West, and therefore, there is no scope for restrictive practices to come in.

The Association has firmly emphasized that there is no monopoly or concentration of economic power in the private sector which may be regarded as prejudicial to public interest. The need in India today is for utilisation of resources to the fullest possible extent. In this process, large-scale operation is essential as modern technology and need for competition in export markets are paramount. The present nascent stage of economic development necessitates that new entrepreneurs should be created. Entrepreneurial ability should have command over large financial and managerial resources. Engineering industries particularly in the field of heavy engineering are capital intensive industries and, therefore, they cannot be developed by entrepreneurs of small means. The Government has already adequate powers to curb abuse of power in any section of the community. No further legislation is called for in the present circumstances of the country.

. . . and on Social Security

IN its replies to the Questionnaire issued by the ESIS Review Committee set up by the Government of India under the Chairmanship of Mr C. R. Pattabhiraman to review the working of the Employees' State Insurance Scheme, the Engineering Association of India has emphasised the need for immediate integration of social security programmes and codification and administration by a single Agency or Organisation of the existing enactments providing for some form of social security or social insurance (including compensation for retrenchment and lay-off) as recommended by the Study Group on Social Security.

With a view to eliminating conflict regarding coverage of 'employee', the Association has suggested that the definition of the term 'employee' should be in conformity with the provisions of the Employees' Provident Funds Act which lays down that any person who is employed for wages in any kind of work manual or otherwise, in or in connection with the work of an establishment including any person employed by or through a contractor and who has completed one year's continuous service or has actually worked for not less than 240 days during a period of 12 consecutive months in the factory or establish-

ment should be eligible for coverage. The Association is in agreement with the proposal for enhancing the wage limit for coverage from Rs 400/- to Rs 500/-. One of the most important suggestions which the Association has made relates to the simplification of the procedure for contributions both of the employers and of the employees. Instead of the present system of dividing employees in a dozen wage groups, the Association has suggested that a contribution at the rate of 2-1/2 per cent of the wage bill to the Employees' State Insurance Fund would be simple and straightforward and is likely to bring in more revenues as the wage bill goes on increasing.

Due to lacuna in the procedure for payment of cash benefits, it sometimes happens that the insured persons receive wages from the employers as well as cash benefits from the ESI Corporation for the same period and, therefore, the Association is of the opinion that drawing of double benefit for the same period should be legally prohibited. The Association do not consider the present hospitalisation and other medical facilities available to the insured persons as adequate and, therefore, have suggested for switching over to Service System

throughout the country for medical treatment and stressed for increasing the number of hospitals and beds and other medical benefits at an early date. Apart from taking preventive measures in addition to providing curative facilities, the Association has pointed out that there should be a provision for a periodical check up, preferably once a year on a national basis. In this connection, introduction of a National Health Scheme covering the entire population has been suggested. The medical benefit admissible under the Scheme should be administered under the overall control of the ESI Corporation and the State Government should continue payment of its share towards medical benefits to the Corporation. The Association has emphasised on the quality of medicines which can be prescribed under the Scheme and has subscribed to the view that a specialists' list is not necessary and the specialists should be free to prescribe whatever medicines they consider necessary for the patient for immediate recovery from illness.

In cases where the insured person is reported to be engaged in any other occupation while absenting from his work place on grounds of illness, the Association has pointed out the real remedy would be to prosecute the panel doctor concerned and declare the certificate of illness issued by him as null and void. The employer should also be at liberty to take disciplinary action against the insured person concerned in accordance with the provisions of the Standing Orders.

Regarding the organisational set up of the administrative machinery of the Corporation, the Association is of the opinion that it should be remodelled having regard to the urgent need of quick payment of cash benefits and convenience of the insured persons even if it involves some extra cost. Since social insurance is a compulsory scheme and the State is only interested in the health and welfare of the insured persons even though they form a small section of the production, the Association has recommended that the contributions from employers, employees and of the Government should be equal i.e. at the rate of 1/3rd each.

As regards protection to an insured person against discharge, dismissal or any other punishment during the period in which he is in receipt of sickness benefit, etc. or under medical treatment, etc. the Association has pointed out that he may be given protection if he complies with the requirements of Standing Orders and applies to the employer well in advance. If the employer has reasons to disbelieve the genuineness of medical certificates, he should not be debarred from dismissing or discharging him as a mea-

sure of disciplinary action and there should be no legal bar for the employer to take action as a result of departmental proceedings. The protection granted to the insured persons should not extend to alternative evidence which the Corporation may require for their own purposes e.g. payment of cash benefit.

The Association has recommended 'good health bonus' to the insured persons who do not claim benefit for a period of one complete year and also do not avail of medical treatment facilities and the quantum of such bonus should be 25 per cent of his own contribution.

In conclusion, the Association have made the following important suggestions to the Committee for its consideration.

- (1) The capital expenditure should be spread over a number of years. The reserves should not be frittered away but the savings should be utilised for extending the benefits to the insured persons.

Industrial Licensing

With a view to offering guidance to intending applicants for industrial licences, and reducing the load of innumerable applications, Government has been publishing, from time to time, what is usually described as the "banned list", that is, the list of industries in respect of which applications for licences under the Industries Act will ordinarily be rejected without reference to the Licensing Committee.

The Industries Development Procedures Committee had recommended that, in addition to the "banned list," Government should consider the feasibility of publishing a list of other industries which would be licensed on merits. It was felt that intending applicants would find this helpful. They could ascertain whether their applications had a chance of getting consideration, without the chilling experience of going through the "banned list." In any case, a positive approach would help to strengthen entrepreneurial morale, as the Swaminathan Committee had recognised.

In pursuance of the Committee's recommendation, the latest notification on industrial licensing contains, in addition to the usual "banned list," another list of 149 industries (consisting of 79 engineering industries and 70 non-engineering industries), in respect of which applications for licences under the Industries (Development and Regulation) Act, will be considered on merits. Such a list cannot be exhaustive. But it gives a definite indication of the fields in which, apart from the limited category of "key industries," Government would like to see new units coming up. This list will also have to be revised from time to time, like the banned list.

The two lists, which will be valid up to the end of 1964, are given below:

An Illustrative List of Industries in respect of which applications for

- (2) An all-out attempt should be made to broad-base the benefits under the ESI Scheme.
- (3) The integration of various social security schemes e.g. Employees' Provident Funds Scheme, Employees' State Insurance Scheme, Workers' Compensation Scheme, etc. is to be brought about through one single Agency as suggested by the Study Group on Social Security.
- (4) The procedure for deduction and deposit of contributions and disbursement of cash benefits should be simplified so as to ensure more quick and more effective service to the insured persons.
- (5) The administration of the Scheme should be simplified by delegation of financial and administrative powers to the Regional Boards and Regional Directors.
- (6) As the benefits under the Scheme are meagre, these need to be augmented substantially if integration is likely to be delayed.

licences under Industries (Development and Regulation) Act, 1951 will be considered on merits till 31 December, 1964.

ENGINEERING INDUSTRIES

Agricultural Machinery
Air Rifles
Aluminium Ingots
Biscuits and Bread Making Machinery
Boats and Crafts
Boilers
Calculating Machines
Cast Iron Castings
Cement Machinery
Centrifuges
Ceramic Machinery
Chemical and Pharmaceutical Machinery
Chip Board and Fibre Board Plants
Cigarette Making and Tobacco Machinery
Coal Mining and Washing Machinery
Coated Abrasives
Construction Machinery
Conveyors
Dairy Machinery
Drilling Equipment
Dry Cells
Electric Furnaces
Electric Lamps
Electric Motors (above 10 H.P.)
Electrical Measuring Instruments
Electronic Components
Electronic Measuring and Testing Equipment
Fractional Horse Power Motors
Grinding Media Balls and Cylpebs
Grinding Wheels
Hacksaw Blades
H.T. Bolts and Nuts
Hand Tools (Hammers, Screw Drivers, etc.)
Heavy Earth Moving Equipment (except shovels):
(i) Motorised Dumpers
(ii) Motorised Scrapers
(iii) Motorised Graders
Industrial Gas Plants
Industrial Sewing Machines and Sewing Machine Parts

Jute Machinery:

- (i) Carding Engines
- (ii) Drawing Frames
- (iii) H.S. Centrifugal Spinning Frames
- (iv) H.S. High Draft First Drawing Frames
- (v) H.S. High Draft Second Drawing Frames
- (vi) Jute Machinery and Parts (including 10 Jute Sliver Spinning Frames)
- (vii) Self Doffing Sliver Spinning Frames
- (viii) Spinning Frames

Lifts
Light House Equipment
Machine Screws (Socket head, allen and other specialised types)
Machine Tools
Malleable Cast Iron Castings
Malleable Pipes Fittings
Medical/Surgical Instruments equipment and appliances
Metallurgical Machinery
Oil Firing Equipment
Oil Mill Machinery
Oil Separators
Paper and Pulp Making Plant (above 25 tons capacity)
Picking Bands
Plastic Industrial Machinery
Power Factor correction capacitor
Power Rectifiers

Pumps
Rayon Plants
Refrigeration Plants for Industrial use
Rice, Dals, Wheat Flour Mill Machinery
Small Tools (Threading Tools, Milling Cutters and Reamers)
Soap and Cosmetics Machinery
Speed Reduction Units
Steel Castings
Steam Engines and Turbines
Steel Files
Steel Forgings
Steel Pipes and Tubes (Seamless and expansions in welded to make existing units economic)
Steel Structures
Steel Wire Mesh (other than welded Wire Mesh)
Storage Batteries
Strips Cold Rolled (M.S. Alloy Steel and Box Strappings)

Switchgear and Controlgear (below 33 K.V.):
(i) H.T. Switchgear (below 33 K.V.)
(ii) Iron Clad Switches and Switchfuse Units
(iii) L.T. Switchgear
(iv) Motor Controlgear
Textile Machinery
Tin Plates
Tool Bits (Lathe Tools)
Tractors, Harvesters and the like
Transformers
Typewriters
Weighing Machines
Weights and Measures
X-Ray Equipment

NON-ENGINEERING INDUSTRIES

Acetyl Chloride
Activated Carbon (only superior grade)
Aerated Waters
Alcohol—Industrial and Power
Amyl Acetate

Antimony (expansion cases only)
Asbestos Cement Sheets and Pipes
Bronzine
Canned Fruits and Fruit Products
Caustic Soda and Chlorine
Cement
Chip Board (Particle Board)
Chlorinated Paraffin
Chloro Sulphonic Acid
Chocolate
Citric Acid
Cocoa Powder
Copper Salts (excepting Copper Sulphate)

Cotton Seed Oil (Organised Sector)
Dextrose Powder
Essential Drugs and Pharmaceuticals
Ethyl Acetate
Ethylene Dibromide and Ethylene Dichloride
Fatty Acids
Ferrie Chloride
Fibre Board/Hard Board (including Insulation Board)
Fuller's Earth
Fuming Sulphuric Acid
Gypsum Board
Glass Shells for Tubes and Lamps
Glazed Tiles
Glue
Glycerene
Grease

High Temperature Voltage Refractories excepting Insulators
Industrial Explosives
Laboratory Glass Ware (Borosilicate type only)
Leather Belting
Liquid Glucose
Liquid Sulphur Dioxide
Man-made Fibres except Viscose Tyre yarn and viscose filament yarn

Marine Paints
Metallic Stearates
Milk Powder
Mixed Fertilizers
Mono Chloro Acetic Acid
Nitrogenous Fertilizers
P.V.C. Resins/compositions (expansion schemes only)
Paints, Enamels and Varnishes
Penicillin and Neutral Glass Vials
Plasticisers
Polythene Films and Layflat Tubing and Pipes
Potassium Chloride
Potassium and Sodium Ferrocyanide and Sodium Cyanide (by producers of Acrylic Plastics only)
Resins and Turpentine
Soda Ash
Sodium Silico Fineride
Solvent Extraction of Oil Cakes/rice bran

Superphosphates
Synthetic Detergents
Synthetic Resins
Tartaric Acid
Tetra Chloro Ethane
Textile Auxiliaries
Urea (Technical Grade)
Urea Formaldehyde Moulding Powder
Urea Formaldehyde Resins (for Plywoods)
Wall Boards
Yeast
Zinc Sulphate

*

BANNED LIST

List of Industries in respect of which applications for licences under the Industries (Development and Regulation) Act, 1951, may ordinarily

be REJECTED without reference to the Licensing Committee till 31 December, 1964.

ENGINEERING INDUSTRIES

Agricultural Implements (excluding Tractor drawn)
Air Compressors (Expansion of the existing units for compressors upto 700 cfm. will be permitted)
Aluminium Strips/Sheets/Circles/Foils/Extruded Rods and Sections
Antimony (except for expansion schemes)
Automobile Ancillaries:

(only expansion or diversification in the range of the same products of the existing units will be considered)
Axles
Brake Assembly
Brake Drums
Brake Linings
Carburettors
Clutch plates and Clutch assemblies
Distributors
Dynamos
Electric Horns
Filters
Fuel Injection Equipment
Gaskets
Gasolene Tanks
Gears and Shafts
Head/Tail and Side lamp fittings
Ignition Coil
Inlet and Exhaust Valves
Jacks (hydraulic, mechanical and manually operated) upto 100 tons capacity
King Pins
Oil Seals
Panel Instruments
Piston Assembly including piston rings and piston pins
Push Rods
Radiators
Regulators
Rocker Arms
Shackle pins
Shock absorbers
Silencers, Muffler Pipes, etc.
Spark Plugs
Starter Motors
Tappets
Thin Walled bearings
Tie Rod ends
Tipping gears
Tyre Inflators
Valves for tyres and tubes
Wheels for Motor vehicles and Agricultural Tractors

Ball and Roller Bearings (except when the expansion is desirable for making the unit an economic one)

Barbed Wire
Bare copper conductors
Bare Copper Strips

Bicycles and Bicycle Parts (except when expansion of bicycle tube valves is desirable for making the unit an economic one)

Bifurcated rivets
Bolts, nuts and rivets
Brass/copper extruded pipes and tubes/extruded rods and sections and sheets/circles/straps

Car Lifts
Cast Iron Pipes including spun pipes
Chaff Cutter Blades

Cinema Arc Carbons
Circles, Sheets, Rods and Utensils of stainless steel
Collapsible Tubes & Rigid Containers

Commercial Vehicles (except expansion schemes)
Conductors (A.C.S.R./A.A.)
Conduit Pipes
Conveyor Belting
Copper Virgin
Copper wire for non-electrical purposes
Cotton and Hair Belting
Crawler Tractors
Domestic Utensils
Domestic Refrigerators
Drawing of wire mild as well as special steel
Drop Forged Tools
Drums and barrels and tin containers excepting those for manufacturers' own requirements
Electric Fans
Expanded Metal
Ferro-manganese
Ferro-silicon
Flash Light and Torch Containers
Fork Lift Trucks and the like
Heavy Earth Moving Equipment (only shovels)
Household appliances such as electric irons, heaters and the like
Hurricane Lanterns
H.T. Switchgears 33 K.V. and above
Industrial Fans and Blowers
Internal Combustion Engines including Petrol/Kerosene and Marine Engines (except expansion schemes)
Jeep type vehicles and station wagons
Kerbside petrol pumps
Lead-virgin
Meters—Single and Polyphase
Miniature Lamps (except automobile headlight lamps)
Motor Vehicles and Scooters, auto-cycles, mopeds and three wheelers
Non-ferrous Alloys
Non-ferrous Castings (including pressure die castings)
Paper and Pulp Making Plants upto 25 tons per day capacity including wire-cloth for paper machinery
Passenger Cars
Photoflash Lamps
Plates and Sheets (M.S.)—(except for main producers)
Railway Wagons (except when the expansion is desirable for making the unit an economic one)
Razor Blades
Road Rollers (expansion and diversification of the existing units will be considered)
Rolling Shuttles
Room Air-conditioners
Rubber ply transmission belting
Solvent Extraction Plant
Saws of all types (excluding Hacksaw blades)
Steel Pipes and Tubes (welded) (except when the expansion is desirable for making the unit an economic one)
Steel Doors and Windows
Steel Sheets (Black)—galvanising and corrugation of (except for main producers)
Steels—Re-rolled products including wire rods
Stranded Wire
Sugar Mill Machinery (except milling plant and centrifugals)
Tea Processing Machinery
Trailers (except expansion of existing units)
Tungsten carbide tips and intermediates thereof
Twist Drills
Vacuum Cleaners
V.I.R. and P.V.C. Cables (except Power Cables)

Washing Machines (except industrial washing and dry cleaning machines)
Water Coolers and Ice Plants
Water Meters
Welding Electrodes (except when the expansion is desirable for making the unit an economic one)
Welded Wire Mesh
Winding Wires
Wire—M.S. Med/H.C. and Special Wire
Wire Nails
Wire Ropes (except when the expansion is desirable for making the unit an economic one)
Wood Screws
Zinc Virgin
Zinc Sheets/strips

NON-ENGINEERING INDUSTRIES

Abrasive Grains including silicon carbide
Acetic Acid
Activated Bleaching Earth
Art Silk Weaving, hosiery, twisting, doubling and Synthetic yarn crimping/stretching by other than primary yarn manufacturers
Azo Dyes
Barium Carbonate
Barium Chloride
Barium Nitrate
Barium Sulphate
Basic Dyes
Beer
Beta Naphthylamine
Bichromates
Bianc Fixe
Bleaching Powder
Borax and Boric Acid
Bottles and Vials (excluding Penicillin Vials)
Brake Fluid
Calcined Petroleum Coke
Calcium Carbide
Calcium Carbonate (precipitated and activated)
Camel Back
Camphor
Carbon Black
Carbon Dioxide Gas (other than by-product carbon dioxide)
Carboxy Methyl Cellulose
Cashew Kernels (applications from new areas to be considered on merits)
Cellulose Acetate flakes for moulding powder
Cellulose Film (Cellophane)
Copper Sulphate
Cosmetics and Toiletries
Cotton Mesh Fabrics
D.D.T. (excepting for expansion)
Dissolved Acetylene Gas
Drugs and Pharmaceuticals:
Antibiotic—Penicillin, Streptomycin and Tetracycline
Antidysentery drugs which are Quinoline derivatives
Bismuth Salts
Chloral Hydrate
Empty Hard Gelatine Capsules
P.A.S. Acid and Salts
Salicylic Acid—Sodium Salicylate, Acetylsalicylic Acid
Sulpha Drugs
Surgical Adhesive Tapes
Vitamin 'A'
Vitamin 'C'
East Indian Tanned (Semi-tanned) Kips and Skins
Fast Colour Bases
Fire Works and Paper Caps
Gelatine (Edible, Photographic and Technical, except Pharmaceutical)
Glass, Mineral wool and allied products

Glass fibre and products thereof
Glass—Hollow-ware (semi-automatic)
Glass—Table and Pressed-ware
Glass Tubes and Rods (Hand-made), Sheet-glass, Glass-bottles, wired, figured and rolled glass
Graphite Electrodes
H.T./L.T. Insulators
Hoses (Vacuum Brake)
Hoses—other types
Hydrogen Peroxide
Laminates (Industrial and Decorative including Melamine Laminates)
Lead Oxides
Manganese Metal and Manganese Dioxide
Marsh
Menthol
Methanol
Microban Extract
Naphthols
Newsprint*
Nitric Acid
Organic Pigments
Oxygen Gas (as applied for cutting and welding of steel only)
Paper and Paper Board*
Pesticidal Formulations (except formulations based on B.H.C., Melanion and Dithic Carbamate)
P. F. Moulding Powder
Phenol
Photographic raw film and paper
Phthalic Anhydride
Polystyrene
Polyethylene
Polyvinyl Acetate
Potassium Chlorate
Potassium Permanganate
Processing (excluding printing) of Cotton Textiles
P.V.C. Resins/compositions (except expansion schemes)
Pulp (Paper & Rayon Grade)
Rayon Tyre Cord Yarn
Reclaimed Rubber
Refractories
Refrigeration Gases
Rubber Accelerators and Antioxidants
Sanitary Ware
Soap
Sodium Aluminate
Sodium Bicarbonate
Sodium Hydrosulphite and derivatives
Sodium Sulphite, bi-sulphite and sulphide
Sodium Thio Sulphate
Sulphuric Acid (except when it is required for captive consumption)
Sulphur Black
Sulphur Dyes—others
Synthetic Rubber (SBR type)
Synthetic Tops
Textiles made of art silk
Tyres—Automobile
Tyres and Tubes (Bicycle)
Vacuum Flasks
Vanaspatti (except expansions of small and medium size units to achieve economic capacity)
Vat Dyes
Vegetable Oil other than Cotton Seed Oil
Viscose Filament Yarn
Wool Tops
Woollen and Shoddy Yarn (except expansion schemes)
Woollen/Worsted Cloth
Worsted Yarn
Zinc Oxide

*Applications for substantial expansion from existing units as well as applications for setting up of new units in areas, where raw material resources have remained untapped, would be considered on merits.

FOREIGN AID

£ 10 Million from Britain

An agreement for a loan of £10 million to the Government of India from the British Government was signed in New Delhi on 28 July, 1964 by Mr Govindan Nair, Additional Secretary, Ministry of Finance, and His Excellency Sir Paul Gore-Booth, the British High Commissioner in India.

This loan is part of the offer of further aid amounting to £30 million made by the British Government at the meeting of the Aid-India Consortium held in Washington on 26 May. The whole sum of £30 million is to be committed in 1964-65 as part of the British construction towards the Foreign Exchange costs of economic development under India's Third Five-Year Plan.

The Government of India will use the loan to provide exchange for the purchase of a wide range of goods from Britain.

The loan is not tied to any development project and can be used for current import requirements. Consequently it is an especially welcome form of aid to India.

Speaking at the signing ceremony, Sir Paul Gore-Booth said:

Immediately before I left Delhi for Britain in March, we signed together the last three loan agreements covering the £30 million (equivalent to Rs 40 crores) of aid to India which had been pledged by my Government for the past financial year 1963-64. Now, on my return, I am delighted that my first official appearance is to join with you again on a similar occasion, and my first duty to conclude an agreement for a loan from this year's (1964-65) British pledge of the same amount of £30 million.

Today's loan is of a familiar type between us. It provides £1 million (Rs 13.3 crores) of what we call General Purpose Aid. This description may sound drab and unspectacular. In fact this is, I understand, the most valuable form of aid we can give. At the meetings of the Aid India Consortium earlier this year in Paris and Washington, great stress was laid by the Indian representative on the need for more aid in forms which would enable the funds provided to be easily and speedily used. This, it was pointed out, would enable fuller use to be made of the very considerable productive capacity built up in India by large investments in the past. The members of the Consortium were entirely in sympathy with the Indian view. The British Government accordingly propose again this year, as we have done in the past, to place the emphasis of our aid on non-project use.

The pounds sterling in today's loan can be spent on almost any of the large quantity and variety of British goods which are being imported into India, whether by Government purchase or in the ordinary course of private trade. Thus, the loan can be easily and speedily used for the benefit of the Indian economy and the development plan, and it will add

immediate strength to your balance of payments.

This loan of £10 million brings the total of British financial assistance in the Third Plan to £135 million (Rs 180 crores). The remaining £20 million of our pledge for the current year will bring that total to £155 million (Rs 206 crores). Discussions are proceeding between us, and indeed are far advanced, on the purposes to which we should devote this £20 million. I think therefore that we shall soon be ready to sign the further loan agreements.

I wish to convey with this present loan the good wishes of the British Government and people for further progress and success in India's development plan.

Replying, Mr Govindan Nair said:

Thank you, Mr High Commissioner. You have referred to the loan agreements we signed together the day before you left Delhi. You will recall that I had warned you that that when you return from leave, there will be more loan agreements on your desk awaiting your approval. But even I did not know at that time that we would be able to manage things with such precision as to be able to sign one of the loan agreements on the very day after your return. I am sure you will agree that the timing is rather good.

The timing is good for another reason too. If I am not mistaken, this is not merely the first loan agreement against the British pledge at the Consortium meeting on 26 May this year, but also the first of any of this year's Consortium pledge to be converted into an agreement. It is a matter of congratulation that within two months from the announcement at the Consortium we should be signing the first of the loan agreements and also be in a position to say that the rest would follow in a matter of weeks.

Public Sector as Model Employer

Presiding over the meeting of heads of public sector undertaking, Mr D. Sanjivayya, Union Minister of Labour and Employment, said that the public sector had to conduct itself as a progressive employer serving as a model for the private sector in the matter of application of labour laws.

The public sector managements, therefore, should discharge their responsibility better than what was expected of the employers in the private sector.

He added that it was necessary to ensure that workers' grievances were attended and redressed promptly. There was no point in permitting tensions to poison the atmosphere which often affected production adversely. Managements in the public sector undertakings, Mr Sanjivayya went on, should set up a suitable procedure for dealing with workers' organisations. To assist them, the Union Ministry of Labour and Employment had circulated a model procedure some time back.

I am glad to note from your statement that you will once again place the emphasis on non-project aid. This particular form of non-project aid, viz. a general purpose loan, is even more welcome than the rest. It is in a form which enables us to use it almost immediately. This fact, coupled with the fact that the loan is being made at a time when there is the usual seasonal decline in our reserves, adds special significance to it. I entirely agree with you that this is the most valuable form of aid you can give. That is the reason why we have been laying stress at the Consortium meetings on this kind of aid. The British Government was, of course, amongst the earliest to recognize our need for non-project aid and to give concrete shape to this recognition by making available a considerable part of their aid in the non-project form. I think we should also recognise another advantage of non-project assistance which lies in fact that it enables a very large range of Indian importers to come into contact with a very large number of British suppliers. This not only spreads the economic benefit of such assistance over a very large number of people on both sides, but also generates an immense amount of goodwill and understanding on either side.

I thank you, Mr High Commissioner, for your good wishes for our development plans and request you to convey our gratefulness to the British Government and people.

The signature of this agreement brings the sum which the British Government has so far made available towards India's Third Five-Year Plan to a total of £135 million. Over £72 million of this has already been disbursed. Discussions are proceeding between the two Governments for the allocation of the balance of £20 million from the 1964-65 pledge of £30 million.

NOTE:

The signature of this agreement brings the sum which the British Government has so far made available towards India's Third Five-Year Plan to a total of £135 million. Over £72 million of this has already been disbursed. Discussions are proceeding between the two Governments for the allocation of the balance of £20 million from the 1964-65 pledge of £30 million.

RISING PRICES

The Union Minister said that the question of rising prices had been causing the Government some anxiety in recent months. There was bound to be a demand for a wage rise, though the working class had shown forbearance in this regard so far. This, if conceded without discrimination, might have certain adverse consequences. It might result in inflation and defeat its very purpose. However, Government had to see that the workers did not remain unprotected. Government was fully seized of this problem and was devising measures to meet the situation. Meanwhile our efforts should be to ensure that workers were assured the supply of at least essential commodities at reasonable prices.

CONSUMERS' STORES

Referring to the scheme of consumers' stores launched by the Union Ministry of Labour and Employment, Mr Sanjivayya said that the progress

made in the public sector undertakings in this regard had not been quite satisfactory. There was already a persistent demand from the workers' side to make the setting up of such stores a statutory obligation on the part of employers and managements.

INDUSTRIAL POLICY

The industrial policy of the country had been designed to give content to the concept of a welfare State envisaged in the Constitution and its Directive Principles, said Mr Sanjivayya. These principles were given a more precise direction when Parliament adopted the socialistic pattern of society as the objective of social and economic policy. The public sector had thus come to be an instrument of policy for realising the new social order. It was, therefore, not surprising that the performance of enterprises in the public sector should be watched with interest and expectation.

PROPER AMENITIES

One important aspect of the performance of public sector undertakings related to the maintenance of high labour standards. The Industrial Policy Resolution had laid down that proper amenities should be provided to all those engaged in industry and their living and working conditions should be improved, stated the Union Minister. The Five Year Plans, too, emphasised that conditions of work in the public undertakings should set the pace for the private sector. These were the basic considerations that should guide the public sector undertakings in their efforts to promote the well-being of their workers.

OBSERVANCE OF LABOUR LAWS

Mr Sanjivayya said that criticism had often been vocal about the public sector undertakings in respect of labour relations and the observance of labour standards generally. There was an impression that the public sector lagged behind the private sector in the implementation of labour laws or in its earnestness in the maintenance of good labour relations. This, of course, was far from the truth. He was glad that in recent months there had been greater earnestness on the part of public sector to improve the standards of compliance with labour laws and the requirements of Government's labour policy.

Record Steel Output at Durgapur

The Durgapur Steel Plant of the Hindustan Steel, Ltd, set up a new record in steel-making on 26 July, 1964.

During the 24 hours ending 27 July, the fourth furnace of the steel-melting shop produced 881 tonnes. This figure is an improvement over the previous record of 822 tonnes achieved by the fifth furnace on 17 October, 1963.

The Steel Plant has eight open-hearth furnaces, seven of which are 200 tonnes each per charge and one 100-tonnes.

Aviation

CONCORD

Engine Tests Ahead of Schedule

Training of pilots for the 1,500-mph Concord airliner has been started by the British Overseas Airways Corporation at London Airport.

A group of pilots are using a ground training system—an aircraft simulator—in which they can "fly" at the speed of the Concord at a "height" of 63,000 feet. The system is a standard type which has been adjusted to simulate Concord performance.

The crew sit in a mock-up of an aircraft flight deck with the windows blacked out. Outside an operator gives the same instructions as from an airport control tower and the pilots go through the whole process of flying. Instruments show what is happening and even the flight deck tilts when the pilot goes into a climb.

Some of the problems of high-speed flying have been introduced into the training system, and pilots have to deal with weather difficulties, air traffic delays and diversions.

BOAC is to have eight of the 43 118-seat Anglo-French Concorde now on order by world airlines.

Tests on the jet engines for the Concord are running three months ahead of schedule, it has just been announced in London. The Bristol Siddeley Engine Company says a test-bench version of an Olympus 593-D engine has been run, taken apart for inspection and is now being reassembled for further tests.

If all goes well, writes a London correspondent, it means that flying tests of the Olympus unit can start in about one year. For these tests it will be mounted beneath the belly of a Vulcan bomber.

Four of the giant engines—they will be 11 ft 7½ in long and just under 4 ft in diameter—will power the supersonic Concord. While tests are going on in Britain, the French are carrying out tests for certain parts of the engine under the joint development programme. When the final engine for the Concord is ready it will have a thrust of well over 30,000 lb.

The airliner is expected to make its first flight late in 1967.

BOAC Introduces VC-10

British Overseas Airways Corporation on 21 July, introduced the VC-10 jet airliner on the London-Johannesburg route.

The new jet replaces Comets, and will cut the flying time to South Africa by up to three hours. The VC-10 will operate six times a week, leaving London in the evening and arriving in Johannesburg the following afternoon, with intermediate stops at Frankfurt, Rome, Nairobi and Salisbury.

The first VC-10 service—to West Africa—was started by BOAC on 29 April. This was followed by services to East Africa on 3 June and to the Middle East on 22 June. BOAC is to

introduce the VC-10 on its service to India later this year.

A total of 12 standard VC-10s are being delivered to BOAC. In addition, the airline will take delivery of 17 Super VC-10s.

17 Super VC-10s for BOAC

Britain's Minister of Aviation, Mr Julian Amery, told the House of Commons on 20 July that after several talks with the Chairman of British Overseas Airways Corporation, Sir Giles Guthrie, it had been agreed that BOAC would for the present take 17 of the 30 Super VC-10 airliners ordered originally. Three Super VC-10s would be taken by the Royal Air Force.

Mr Amery said that the order for the remaining 10 aircraft would not be cancelled. Work on them would remain in suspense.

The Minister said: "It could well be that, in the light of operating experience, BOAC may wish to replace the Boeing 707s as they age with Super VC-10s. It may be that some new features can with advantage be incorporated in the Super VC-10s, and it may be that BOAC's requirements after 1968 will exceed present forecasts".

Mr Amery said he did not think it would be right to allow BOAC to cancel its order for the Super VC-10s, as to do so would "inflict extensive injury on the British aircraft industry and those who work in it".

He said that interest had been shown in the VC-10 by a number of airlines, and many foreign enquiries had been made.

Referring to the performance of the VC-10, now in service, Mr Amery said: "I would confirm that it is an extremely popular aeroplane with both passengers and pilots. I believe it is capable of very substantial stretch both in passenger accommodation and in engine power."

"The utilization rate of the standard VC-10 now in service with BOAC something like eight out of 24 hours, has been sensationally high—I believe which in a new aeroplane is very unusual".

BOAC had originally ordered 30 Super VC-10s. These aircraft together with the 12 standard VC-10s now being delivered and the 20 Boeing 707s now in service would have made a total fleet of 62.

Mr Amery said he had asked the Chairman of BOAC to prepare a plan for putting the Corporation on its feet financially. Although Sir Giles had not yet completed work on the plan, he concluded from a detailed study he had made of the Corporation's route pattern that BOAC would, in fact, need a fleet of about 39 passenger aircraft in 1967 instead of 62. Accordingly he had asked for permission to cancel the order for the 30 Super VC-10s and instead buy six more Boeing 707s.

The Super VC-10 is rated by many as one of the exceptional airliners of the jet age, writes a London correspondent. Five major features dis-

tinguish it from comparable jet aircraft.

It can operate from airports all over the world, needs remarkably short take-off and landing runs, can carry a maximum of 180 passengers over a 4,000-mile route, has a low noise level in cabins, and is fitted for automatic landings.

In performance, it will be similar to the standard VC-10, of which 12 will be in BOAC service in a few months' time. Four Rolls Royce engines are mounted at the rear, and this makes for more passenger comfort by reducing noise levels.

Long before the standard version went into regular service, I went on its first international flight. With 90 passengers on board—about 60 per cent of the BOAC payload—it was airborne in about half its normal take-off run and climbed in stages of 3,000 to 4,000 ft a minute. This was an outstanding performance, according to aviation experts on board.

A safety feature in the VC-10 will be the provision of two separate systems for automatic landing. The aircraft will land with the aid of special instruments receiving a signal from the ground—a system known as autoflare which positions a plane correctly over the runway for landing.

In a few weeks' time, British United Airways start crew training on the first of their two standard VC-10s—a passenger cargo version which is being looked upon with interest by the aviation industry. They will operate between London and East Africa. Another airline with standard VC-10s on order is Ghana Airways, which will take three of the plane.

KLM Increase of Traffic at Amsterdam

Traffic at Schiphol Airport, much of which is accounted for by KLM, has continued to show a favourable development in comparison with the corresponding period of the previous year.

In the first three months the number of passengers rose from 304,945 in 1963 to 339,913 in 1964, representing a growth of 11.5 per cent, while the air freight traffic figures showed a rise of 4.5 per cent from 14,544,913 kilos in the same period of last year to 15,202,357 kilos this year. Important factors of influence on this cargo expansion include KLM's new freight sorting centre as well as the all-cargo scheduled services which KLM operates with DC-7F freighters.

Air mail traffic during this quarter showed a slight increase of 1.5 per cent from 1,443,260 kilos in 1963 to 1,464,930 kilos in 1964. International newspapers and weekly and monthly magazines, which are distributed by a special department of KLM, occupy a prominent place in this mail traffic.

The number of commercial aircraft movements in the first quarter (12,006) was 4 per cent higher than in the same period of 1963. Of these movements, 10,805 involved scheduled flights and the remaining 1,201 charter flights. The total number of aircraft movements (both commercial and non-commercial) in the first three months of 1964 was 18,315.

TELEPHONES

Mechanised Billing

The Calcutta Telephones have for the first time, started a mechanised system for preparing bills. Introduced from this month, the system will enable the authorities to prepare nearly 80,000 bills in three days, instead of several weeks as at present. The telephone subscribers in the city will receive neatly printed bills from 14 July.

Over 100,000 telephones are served by the Calcutta Telephone system, which is the largest network for any city in India. Its rapid expansion in recent years has made the manual system of billing and accounting a distinct disadvantage. Mechanisation will ensure prompt issue of bills and a proper check on arrears in the collection of payments. Moreover, it will help obtain readily any statistical data relating to the revenues. To start with, the system will be given a trial for six months.

For mechanised billing, different types of charges for rental, toll, accessories and directory will be given separate code numbers in the relevant columns of the bill. For the convenience of subscribers, details of the codes will be given on the bill.

Another modification to be introduced relates to trunk and miscellaneous charges. Instead of giving them separately, charges for these for the preceding month will be included in the quarterly bill.

The trunk and phonogram charges for the other two months of the quarter will be issued separately, as at present.

Working of ESIS in West Bengal

Under the Employees' State Insurance Scheme, sickness benefit amounting to Rs 4,68,500 was paid in 27,780 cases in West Bengal in the month of June, 1964. The scheme is now in operation in Howrah, 24 Parganas and Calcutta.

During the month, 4,851 accident reports were received against 4,181 of the previous month. The insured persons whose cases were admitted were paid Rs 1,00,287 as temporary disablement benefit. A sum of Rs 88,078 was paid as permanent disablement benefit to 533 insured persons.

Altogether, 453 dependents of the insured persons who died due to employment injury are getting dependents' benefit from the local offices of this region. In June, 180 such payments totalling Rs 7,067 were made.

During the month under review, 1,10,208 medical certificates were received, out of which 23,964 were from 24 Parganas District. Only 19 fresh maternity cases were reported, while payment amounting to Rs 4,091 were made in June in 60 cases.

SCHEDULED BANKS IN INDIA (In 000's of Rupees)

Prakash is a small industrialist who needs money badly for purchasing raw materials. But he cannot afford high interest and has little security to offer. Who will help him?

THE STATE BANK HELPS
For the biggest bank—no client is too small.

Through their 1600 offices all over the country, the State Bank and its subsidiaries give the following financial facilities to small-scale industries.

Advance against security of raw materials and finished goods.

Factory type advances where security cannot be kept under the Bank's lock and key. Borrowers have free access to raw materials.

Clean credit facilities where no securities are obtainable.

Medium-term loans for modernisation and expansion.

Instalment credit for purchase of machinery.

Interest is as low as 6%. In special cases the outer limit is 7% inclusive of incidental charges.

THE STATE BANK OF INDIA
Big scale help for small scale industry.

Equities in the Doldrums in July

Although stock markets resumed the month's trading on a firm note recording fresh gains on a wide front, the improved trend fizzled out in later dealings with equity prices closing the month with widespread losses. The Finance Minister's analysis of the investment climate while inaugurating the Industrial Development Bank in Bombay failed to impress mainly because he has totally ignored the fact that the last two central budgets between them have left the individual with little or no saving in his hands. It is not to be denied that the last budget has given significant concessions to the corporate sector and as a consequence the difficulties that were facing the industries in their expansion programmes will be reduced considerably. But this does not mean that the investment climate as a whole has improved because the investor being hemmed in on all sides by high personal taxation, taxes on dividend and bonus shares and the like is in no mood to put his money, if he has any, in equities for the simple reason that he has little hope of getting an equitable return within a reasonable time. In the meantime, the adverse factors in the investment situation in the country have been relentlessly gathering momentum. Although the two steel companies in the private sector have increased their

dividends, operators could not feel enthusiastic over the increased distribution because profits have not risen as they should. The fact that the authorities have rejected the demand for the abolition of the two per cent margin on carryover business has been a source of disappointment to the operators who expected that the margin would be abolished. Here at least Government cannot be blamed for its unyielding attitude. For there is no consensus even among marketmen that the abolition of the margin will mean an automatic revival of investment interest in the stock market. There are quite a few who believe that the absence of a margin will only be an open invitation to unbridled speculation. But the Banks' decision to step up their lending rate to 8½ per cent from 7½ per cent has been a real damper because this will result in cost inflation with repercussions felt far and wide. A serious consequence will be a setback to our export promotion as our major commodities are likely to be priced out of foreign markets.

The threat of cost inflation flowing from the increase in Banks' lending rates paled into insignificance in the face of the soaring prices of a number of essential

commodities of daily use. In the first place, the food position has gone from bad to worse in too many parts of the country despite official assurance that adequate stocks will be found to feed the entire population without difficulty. If the assurances from the high and low have failed to carry conviction it is because the upward movement of prices has been going on unabated. As is to be expected in such a situation, labour has become restive and understandably been asking for a suitable increase in wages to cover the additional cost of living that has become manifest over the past few months. There have already been unmistakable indications during the month that Government's failure to hold the price line will have soon serious repercussions for the entire economy. With wages going up without an increase in productivity profits will be squeezed further and the one certain loser will be the investor. In this context, it is pertinent to note that industry is faced with another big threat in the shape of the Bonus Commission Award. Some time back it was reported that Government itself fully appreciated that the implementation of the Award would be a serious blow to industry. But the hope of a well con-

sidered decision on the Award has steadily ebbed in recent weeks because of the insistent demand of labour for the early implementation of the Award. It is also significant to note that the Union Minister of Labour has told the labour conference held recently at Bangalore that Government's decision will not be delayed long. A possible reason why industry fears that Government will fail to take into consideration all the pros and cons is the growing unrest among labour over the abnormal rise in prices. Be that as it may, while the shape of things to come as regards the Bonus Commission Award is obscure, the investor is unlikely to make big commitments on the stock market, even if he is in a position to do so. The advent of the Unit Trust has been yet another factor in the investment situation which has been responsible, though in a small measure so far, for the slowing down of the tempo in the stock market. The Trust is mainly intended to give an opportunity to the small investor to take part in the industrial development of the country. Here it is necessary to point out that in recent years the small investor has been taking keen interest in equities. It is quite on the cards therefore that the Unit Trust with its attractive features will be quite popular with the small investor.

(a) After transferring Rs 204,000 from General Reserve.

(b) After transferring Rs 80,000 from provision for contingencies.

(c) It is proposed to capitalise Rs 2,125,300 from General Reserve and issue Bonus shares.

(d) After transferring Rs 50,000 from General Reserve.

(e) It is proposed to capitalise a sum of Rs 585,000 in equity shares of Rs 10 and issue one bonus shares for every ten shares held.

(f) After transferring Rs 665,000 from General Reserve Rs 235,000 from Cotton Fluctuation Reserve, writing back Rs 11,686 being sundry credit balances and including premium on surrender of Cotton Import quote.

(g) After writing back Rs 645,151 being excess provision in previous years.

(h) After transferring Rs 500,000 from Rehabilitation Reserve; Rs 281,943 being excess provision for depreciation; Rs 41,942 being excess provision for bonus and including Rs 18,428 being refund of income-tax.

(i) After transferring Rs 250,491 from General Reserve.

(j) After transferring Rs 450,000 from Dividend Equalisation Reserve.

(k) After transferring Rs 200,000 from Dividend Equalisation Reserve.

(l) After transferring Rs 300,000 from General Reserve.

(m) After transferring Rs 1,425,000 from General Reserve.

(n) After writing back Rs 750,000 from Reserve for Rehabilitation and writing back Rs 7,927 being excess of Excise Duty and Rs 6,946 being excess provision for rates and taxes.

(o) After transferring Rs 2,509,800 from Dividend Equalisation Reserve.

(p) After transferring Rs 425,000 from General Reserve and writing back Rs 790,235 being provision for Bonus for 1958.

(q) After transferring Rs 500,000 from Reserve for taxation and Rs 201,988 from General Reserve.

(r) After transferring Rs 1,279,165 from General Reserve and Rs 648,019 from Renewal Reserve.

(s) Includes Rs 947,178 being depreciation adjustment in respect of additional depreciation provided in previous years and Rs 3,100 being excess of Secretaries Remuneration.

(t) After transferring Rs 783,834 Rebate Reserve and Rs 650,000 from General Reserve.

(u) After transferring Rs 200,000 from General Reserve.

(v) After transferring Rs 306,835 from Development Rebate Reserve.

(w) After transferring Rs 1,734,803 from Development Rebate Reserve.

(x) After transferring Rs 113,089 from General Reserve.

(y) After transferring Rs 300,000 from General Reserve.

(z) After transferring Rs 450,000 from Dividend Equalisation Reserve.

IT is time the Government and the public took heed of the warning recently uttered by the Presidents of the Stock Exchanges and repeated last week-end by the President of the Calcutta Stock Exchange against ignoring the present state of the stock markets as a matter of little moment to the industrial and economic development of the country. It is a truism that national welfare and progress depend on larger industrial output, which in turn depends on larger investments. But it is not perhaps as obvious that, except in a total and centrally directed collectivist economy, new investment cannot be adequate, unless it is a smooth flow of individual and institutional savings in increasing measure and that there can be no such flow, unless there are certain basic conditions which not only sustain the confidence of investors, but also raise their legitimate expectations to higher and higher levels. These conditions need not necessarily suffer from the stigma of making the rich richer and the poor poorer. Though they are not a means of producing a flat economic equality, they are by no means inconsistent with broadly socialistic ideals. They certainly do not run counter to the immediate aims of the Government in this country and can be positively helpful to the realisation of the immediate objectives of our planned development.

But popular prejudice against stock exchanges and official antagonism to the dominant interests therein date back to the pre-planning period and derive their strength from the experience of evils which were rampant in the old days and which the Government of that time did not feel impelled to curb. This indifference to known evils has led to a strong reaction which of its very nature tended to be uncritical. Ardent reformers are never noted for their readiness to tolerate evil even to the extent that it is part of the price to pay for any other means. Even in the pre-Independence days, the increase in the representative popular element in the Government only led to measures which in the name of reform only reduced the stock exchanges to a moribund condition. With freedom came the commitment of the party in power to socialist ideals, and antagonism to the stock exchanges hardened a great deal. While this was only to be expected, one must express surprise at the absence of any attempt at revision of old ideas about the stock exchanges following the recognition in Government circles of the inevitability and indispensability of a mixed economy and a strong and flourishing private

sector at this stage of our economic development.

While the ministers often talked of the importance of increasing the rate of investment, public and private, they did not recognise that only the stock exchanges could provide a sound and effective link between new ventures and the large mass of individual savers, big and small, who are spread all over the country. Some new investment could always be secured by perspicacious big businessmen acting in concert or otherwise. But the process by which they could in course of time lighten their holdings in established concerns and get ready for new ventures can hardly be worked out except through the stock exchanges which function smoothly. While the new hopes kindled by the five year plans neutralised in part the harm done to the stock markets in the years immediately preceding the attainment of Independence, the course of fiscal policy in recent years has not only reduced the stock markets to a state of atrophy, but also persuaded the small savers all over the country that there is little to be gained, and perhaps much to be lost, by interesting themselves in shares old or new. It may be that at the present stage the depressed state of the stock exchanges has not been directly aimed at, but is more or less the unintended effect of tax policies which the Government has felt obliged to follow.

But the relation in the mind of Government ceases to have any importance the moment it is realised that the present tax policies have to be modified for other reasons as well, and the revival in a healthy form of the activity of the stock exchanges is worth having even at some sacrifice of current revenues. This realisation must be forced on the Government because of the effects of the indiscriminate increases in taxation on prices and savings, on productive activity and the distributive system. The Government must also be aware of the paramount need to step up the rate of investment by creating the conditions in which entrepreneurs in the private sector will find no difficulty in finding investment support for their ventures.

The Finance Minister showed himself aware of these circumstances in the speech with which he recently inaugurated the Development Bank in Bombay. But he appeared at the same time to have overlooked the fact that the ordinary investor with a small amount of savings to rely on for the future can hardly be expected to take risks in the same spirit in

which larger investors, who have a fair holding of blue chips, would be prepared to participate in the fortunes of new ventures. Enterprises which have made good and have established themselves must inevitably be preferred by small investors to those which are untried. New investment is helped forward by the facility with which holdings in the former are passed on, in part and by stages, to the cautious and the timid. But there is no reason why even such shares should not yield to the new holders some capital appreciation in accordance with the progress which they are able to make. While there should be no scope for the rigging up or the hammering down of prices by mere speculative operations, sound equities should always hold for the genuine investor the prospects of higher yields and appreciation of capital.

It is the destruction of these prospects by the tax policies of recent times that have turned the stock exchanges into ghost towns and scared small scale savings from investment in shares. Even as late as 1960-61, the protagonists of new enterprises found it easy to find financial support from the investing public. The Second Plan had opened up new avenues and businessmen were ready and even eager to explore the possibilities, and cases of over-subscription were not few and far between. Share prices were well maintained even when there were no strikingly upward trends. But the 1963-64 Budget changed these conditions radically. The imposition of the Super Profit Tax inaugurated a downward trend and the consequent decline in share values has taken the heart out of investment. Enthusiasm for new investment has evaporated and subscriptions to new issues were so low as to leave a large part of the burden on the backs of the underwriters. The hopes that were raised on the eve of the Budget for the current year have not been fulfilled. The Sur Tax would be as harmful by whatever name it may be called. The capital gains tax is a deterrent on investment in equities. Though the increase in the Wealth Tax and the Estate Duty may seem to be justified in a land of appalling inequalities, it is a damper on just those classes whom we have to look to in the next stage of development.

In spite of the indications of a change of approach contained in the Finance Minister's speech at Bombay, there seems to be little prospect of the Government deciding to do all that may be necessary to tone up the stock markets. Back of all the vacillations and inconsistencies of official pronouncements and policies is the unwillingness to do aught that may be of advantage only to private capitalists and that may, for that reason, be represented as antagonistic to the interests of the nation as a whole. The result of this reluctance has been a certain readiness to harm the upper classes even at the expense of a greater harm to the common people, in order to be above all suspicion of partiality to the rich.

This attitude has already impeded the progress of planned development. But it is incontrovertible that a democratic and popular ministry with an absolute majority in the Legislature can at any time reduce the inequalities occasioned by policies inspired by greater regard for the requirements of the increased productive activity. The Government must shake off its diffidence in this respect and must distinguish between policies which will only put more money into the pockets of the rich and policies which, while benefiting the well to do, will enrich the country even more.

South Indian Notes

WHATEVER the Governments may or may not do to fulfil the aspirations of the people of South India in regard to the industrialisation of this part of the country, there is no lack of pompous announcements about their intentions about this project or that. The people too, the generality of them, are prepared to lap these words from the lips of high placed officials and continue in their wishful longing for translation in due course of words into deeds. In fairness to the officials, it must be said that the projects which are the lodestars, so to say, of South Indian hopes of industrialisation are not such one can reasonably demand immediate inclusion in the Plan and implementation with the same expedition as the steel plants or the big irrigation projects. The technoeconomic survey of Madras State which was carried out by Dr P. S. Lokanathan and his organisation taught us to look for industrial progress in and around Tuticorin, Mettur, Salem and Madras, the industries being related to the special resources or already achieved development of the centres concerned. There is a certain variety in the industrial complexes of these areas to which we might add the petrochemical industries which might develop if a refinery is established in the South and if oil prospecting in the Cauvery basin should meet with a degree of success which few people now dare to hope for.

If all these wishes were horses, no beggar need wear out the soles of his feet. But there is nothing intrinsically impossible about such schemes as an atomic power station, an oil refinery, a steel plant at Salem, the development of Tuticorin Port and the cutting of a canal to enable ocean going ships to avoid the circling of Ceylon and sail through the Gulf of Mannar to the Bay of Bengal. There is one distinguishing factor of the projects in South India and that is the enormous amount of exploratory work done in regard to them and the mass of data gathered about it. Strictly speaking, even the Neyveli Lignite Project, which is going through its different stages of development, was as forbidding as any of these projects because of the uncertain nature of many of its aspects. If the experience of Neyveli is relevant to the schemes referred to above, there ought to be much more of caution and little of precipitateness in taking them up. And some of them, like the steel unit in Salem, are linked with Neyveli in so far as the lignite is to be the fuel. Here it is pertinent that some experts are of the opinion that the economic character of Neyveli would be dubious so long as lignite is burnt as a fuel, instead of being used for gasification and the extraction of valuable by-products.

However, the week has seen assurances from ministers of high rank about the location of one refinery in the South, the setting up of a steel unit in or near Salem, the development of Tuticorin Port and even the taking up of the Sivasamudram Canal project along with the Tuticorin deep sea harbour project as part of an integrated scheme. Incredulity about the announcements from the Centre, which is based on the extreme tardiness with which the electrification of the Tambaram-Villupuram line was proceeded with, may be tempered, by the fact that by some coincidence the ministers who have given the assurances

are both from the South, Mr T. T. Krishnamachari and Mr C. Subramaniam. Both have good reason to know that the industrialisation of the South can be given a fair start only by locating as many of the centrally sponsored projects in the South, as possible consistently, of course, with economic considerations. Once this start is given, the initial handicap of not being a coal and iron belt like Bihar and Bengal would be got over and the momentum would be sufficient to take the State through to higher and higher levels of achievement in industry. It is too soon of course to ask for more definite indication of early implementation. But the scepticism of earlier times may be more subdued now.

While the big projects are far more important in the long view, public interest for the present centres almost exclusively on the fixation of maximum wholesale and retail prices of coarse rice in the Southern Zone. Under the new orders, the retail prices in Madras will be 67 to 73 paise per kilogram for Andhra rice which in Andhra will be 60 to 67 paise per kilogram, in Mysore 65 to 72 paise and in Kerala 68 to 75 paise. In Kerala people will, however, pay 71 to 75 paise per kilogram for Madras rice. The four Southern States have been asked to fix maximum prices for fine and super fine varieties of rice with suitable differentials. It would appear that the prices so far announced represent a gain compared to the rates now prevailing in the market. Consumers of fine and super fine varieties may not expect the same concern on the part of the Government for their interests. On the other hand, agricultural interests may be sought to be pacified by the grant of higher prices at the expense of those who are supposed to be better off than those who consume coarse grains.

Whatever the official rates may be, their practical value will depend on the energy and effectiveness of the Government's attempts to enforce them. In Madras, the official view seems to be that there is not much hoarding in the State. The Chief Minister has been careful to add that this does not denote complicity. It is, however, the position in Andhra Pradesh (which is the chief source of supply for Madras and Kerala alike) that would determine the future of prices in the Southern States. The recent debate in the Andhra Pradesh Assembly on the food position points to widely different views in the different sections of the House. Mr Sundarayya for instance would fly in the face of facts which are within the every day experience of the common man and deny altogether that Andhra Pradesh has a normal rice surplus. That of course is an extreme view formed to accord with the communist contention of under-consumption of rice among the masses.

Apart from this, opinion in Andhra Pradesh, inclusive of the Government, is opposed to the current trends of official policy at the Centre. Free movement of rice in the southern zone, it is believed, will lead to a depletion of stocks while it is confidently asserted in knowledgeable circles that the surplus has overflowed into all the neighbouring States, and not alone the other Southern States. Andhra Pradesh would prefer to sell a stipulated amount of rice to the Centre rather than have free purchases by its neighbours. It is a mentality which is not difficult to understand, so long as Andhra has a surplus which is big enough to give it a hold over others but not too big to raise any real problem of disposal. Andhra will have a surplus to worry about, when the

completion of the Nagarjunasagar project gives it a far bigger surplus. The country as a whole and the southern zone in particular will be very much better placed in regard to rice; and it is rather perplexing that the Union Government, which must set a high value on any reduction in the perplexities of the food problem, should be so indifferent to the progress of the Nagarjunasagar project. The amount involved is not much, though some recent calculations of costs and yields may have forced the Centre back on second thoughts.

Background to Neyveli

(The 250 MW thermal power station at Neyveli has been completed, and Mr N. Sanjiva Reddy, Union Minister of Steel and Mines, Presided over a special function on 5 August to mark the occasion. The following article gives a brief description of the Neyveli Lignite Project.)

For a balanced industrial development of the States in South India, particularly of Madras, it was essential to ensure additional supplies of electric power and to firm up existing hydel power which was subject to the vagaries of the monsoon. In view of the difficulty and the cost involved in transporting coal from West Bengal and Bihar to Madras, sources of alternate fuel had to be established.

The presence of large lignite reserves in and around Neyveli—about 130 miles south of Madras—had been known for several years. Mining of this lignite was not taken up for a long time because it was feared that the water which existed at tremendous pressure below the lignite, would flood the mine on removal of overburden and lignite.

After independence the Madras Government decided that exploitation of this potential source of energy could not be delayed and took up the necessary investigations. The Central Government arranged in 1953-54, under the Colombo Plan, the preparation of a Project Report. The consultants submitted a report in 1954 proposing a number of schemes for the mining and utilisation of lignite.

UNDERGROUND WATER

The Government of India selected the most suitable of these schemes and arranged for further investigations pertaining mainly to control of the ground water pressure by continuous pumping. Large scale pumping tests were conducted, which proved that the pressure surface of artesian water could be reduced to safe level by pumping continuously from a carefully designed pattern of wells, most of them around the mine and some within it.

The Union Government took over the financial responsibility for this project on January 1, 1955, and the administrative responsibility from September 15, 1955. After the investigations were over, they approved the execution of an integrated project for the mining of lignite and for the utilisation of the mined lignite at site in the following units:—

- A thermal power station for the generation of 250,000 KW of power;
- A fertilizer plant for the production of 156,000 tonnes of fertiliser in the form of urea; and

- A briquetting and carbonisation plant for the manufacture of 386,000 tonnes of carbonised briquettes for use as domestic and industrial fuel.

The cost of the integrated complex is expected to be Rs 117 crores inclusive of the residential colony.

LIGNITE DEPOSITS

The lignite deposits which occur in and around Neyveli are spread over an area of 100 sq. miles and the total reserves are of the order of 2,000 million tonnes. The existing scheme is designed to extract 3.56 million tonnes annually. The mining at present is being done in a selected area of 5½ sq. miles where the lignite-overburden ratio is most favourable and where the reserves to the extent of 200 million tonnes are available for exploitation. The lignite in this area is found at a depth of 180, below the ground level, with an average thickness of about 56'. The method followed is opencast mining, as practised in Germany, using bucket wheel excavators for excavation, belt conveyor system for the transport of the spoil and of lignite and slewable spreaders for throwing back the spoil into the area already worked. The lignite seam was first exposed on 24 August, 1961. Up to the end of March, 1964, a quantity of 1.56 million tonnes of lignite had been extracted. Production at the targeted rate will be achieved when all the consuming units are commissioned in 1955.

The mine capacity is proposed to be increased from 3.56 to 6.3 million tonnes during the Third Five Year Plan period in order to facilitate the expansion of the thermal capacity from 250 MW to 400 MW and subsequently to 600 MW.

THERMAL POWER STATION

A 250 MW thermal power station has been set up under the Indo-Soviet 112.5 million rouble credit agreement of 9 November, 1957. This station consists of 5 generating sets of 50 MW each. Up to 24 June, 1964, a total of 1706 million units of electricity was generated, of which, after meeting the local consumption of the project, about 1344 million units were fed into the Madras grid.

During the Third Five Year Plan, as the first phase of expansion of the existing power station, it is proposed to increase the capacity from 250 MW to 400 MW. This will be achieved by the addition of one more 50 MW and one 100 MW units. Contracts were concluded with the Soviet Organisation for the supply of steel and preparation of detailed project report, in February, 1963, and for the supply of machinery and equipment in March, 1964. Under the latter contract, equipment worth Rs 7.75 crores would be received from Russia. The expansion is expected to be completed by early 1966.

It is proposed to increase the capacity further to 600 MW in the second phase of expansion.

FERTILISER PLANT

Though primarily the Project was intended to produce thermal power in order to firm up hydel power, advantage has been taken of the marginal excess of lignite over the quantities required for generating electricity, to establish a complex consisting of a fertiliser plant and a briquetting and carbonisation plant. Both these plants are under erection. The fertiliser scheme is designed to produce about 154,000

tonnes of urea per annum. Equipment for this plant is being supplied partly by a West German firm and partly by an Italian firm, and it is expected to go into production during 1966. A consortium of German firms and the State Electricity Commission, Victoria, Australia, are putting up the briquetting and carbonisation plant, which is expected to go into production in December, 1965. About 386,000 tonnes of carbonised briquettes would be produced which could be used for both domestic and industrial purposes.

CLAY WASHING

In the course of removal of overburden, excellent China clay which is found close to the lignite also becomes available. A clay washing plant has been set up which is capable of producing 6,000 tonnes of washed clay per annum. It is already in regular production. This clay can be used for the production of high tension and low tension insulators, sanitary ware, crockery and ceramics of various descriptions. Up to the end of March, 1964, it has produced about 6,030 tonnes of washed clay.

Apart from the main products which will increase the power, fuel and fertilizer resources of the country, there will be a number of useful by-products, such as carbolic acid, cresols, fuel oils and char dust from the briquetting and carbonisation scheme, based on which further subsidiary industries could be set up. A steel plant based on Salem iron ore and Neyveli lignite is also a possibility. The integrated Neyveli Lignite Project will thus play a vitally important part in fostering the industrial development of the Southern region.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

STATE LOANS

Fending for Themselves

After last year's abstention from open market loans—an abstention that was worth slightly more than Rs 100 crores by way of loans from the Centre—the State Governments last week announced that this year they are on their own. That policy had once again been changed, with the States having to fend for themselves, was known at Budget-time itself. What is interesting is the fact that the distinction between the so-called "stronger" and the "weaker" States has become even more blurred. Time was, when Bombay and West Bengal were the only two States which could, almost contemptuously, dictate a maturity length that was two years more than that of any other States; and, of course, these were the two States which also issued their loans at par, as against varying discounts for the others. This year, the thirteen States which have come on the market (Punjab, surprisingly, is not out with its begging bowl) have uniformly announced 4½ per cent loans redeemable in 1976. West Bengal has disappeared from the prestigious position of borrowing at par, and it is only Gujarat and Maharashtra that thus hold their credit high. In respect of six of the States, maturing loans of the value of Rs 21 crores will be eligible for subscription to the new loan; thus, the new cash sought by the States—outside of the usual 10 per cent over-subscription that by right the States hold on to—is just on Rs 79 crores.

In view of the easy money market conditions, there may be some who would believe that banks will be eager customers. Not so, we fear; what subscriptions there are from this particular clientele will be, we may be sure, the result of persuasive tactics. While banks may want to utilise their extra resources in the acquisition of gilt-edged, they would much rather go in for a six-year loan than for one which takes double that time to mature. Yet, it would be wrong to believe that consequently the State loans are bound to be greeted no more than lukewarmly. For, with the attractive interest available thereon, the State loans will more than ever before induce subscriptions from the Provident funds and the Life Insurance Corporation. Incidentally, the

LIC is likely, since it supported the Central loan, but sparingly, to have a fair quantum of cash kept apart for the State loans. We shall next week study some of the State loans in detail.

BANK RETURNS

Vast Purchase of Gilt-edged

Over and above their support to the new loan, the Scheduled Banks appear to have such plethora of resources with them, that they are considerable purchasers of gilt-edged through the Reserve Bank tap.

There has, in the week ended 31 July, been another sharp contraction in currency circulation, as disclosed in the latest returns of the Reserve Bank. Active Note circulation is marked down by Rs 24.35 crores at Rs 2,419.41 crores, and there has been inflow of Rupee Coin in an amount of Rs 1.76 crores. Foreign Securities are unchanged at Rs 85.46 crores, and currency has been contracted for Rs 10 crores against Rupee Securities by transfer to the Banking Department. As such, the Reserve Bank's cash in the till, with the return of currency from circulation, has shot up sharply by Rs 16.23 crores to Rs 37.03 crores.

Investments, in the Banking Department, are marked up by Rs 7 crores at Rs 290.04 crores in reflecting the transfer from the Issue Department. But regard must be had for the fact that the State Bank has added to gilt-edged holdings by about Rs 19 crores in the week under review; and also for the fact that other Scheduled Banks most likely were also purchasers through the tap. It would thus appear that the Centre has probably—for what reason, it is impossible to divine—Instituted deficit financing for upwards of Rs 30 crores. This would explain the sharp increase of Rs 37.76 crores to Rs 114.63 crores in the Centre's balances. The State Governments report a small rise of Rs 1.25 crores to Rs 19.18 crores in their Deposits, almost corresponding to the increase of Rs 1.52 crores to Rs 24.46 crores in their ways and means borrowings from the Reserve Bank.

Scheduled Banks have added Rs 4.58 crores to their Reserve Balances, now shown at Rs 100.55 crores; but their substantial purchase of gilt-edged has meant that some at least of the banks have

had to borrow more from the Reserve Bank. Although Scheduled Banks' borrowings are higher by Rs 3.20 crores, they continue to be more or less nominally placed, at Rs 3.66 crores.

Balances Held Abroad have thankfully improved by Rs 1.16 crores to Rs 8.53 crores; no doubt, some receipt of untied foreign aid was responsible.

As we had anticipated, the high level of the Other Assets of the State Bank did presage impending purchase of gilt-edged. The return of the institution for 31 July shows that gilts acquired during the week amounted to Rs 19 crores, and the portfolio is now placed at Rs 288.23 crores. This was "financed" by drawing down Other Assets by Rs 7½ crores and secondly—and rather strangely—as a result of an increase of Rs 16 crores to Rs 31.26 crores in Other Liabilities. For the rest, the State Bank figures are uninteresting: a small rise of Rs 0.35 crore to Rs 647.75 crores in Deposits; as small a fall of Rs 0.34 crore to Rs 314.65 crores in Advances; and a rise of Rs 5.56 crores to Rs 34.40 crores in cash balances, including money at call and short notice.

The gilt-edged investments of Scheduled Banks went up by the colossal amount of Rs 58 crores to Rs 737.44 crores in the week ended 24 July. Since the State Bank figured as accounting for Rs 38 crores of this, the inference seems to be that subscriptions of other Scheduled Banks to the new loan and consolidated in the return only in the week ended 24 July represent the balance of Rs 20 crores. But we must remember that Intermediate Treasury Bills sold by the Reserve Banks from 22 July to 25 July amounted to Rs 19 crores; and so we would suggest that other Scheduled Banks have also been keen buyers of Treasury Bills. That they are keen bidders at the Auctions is clearly enough shown by the steady decline in the Treasury Bill discount. Meantime, the increasing "affluence" of Scheduled Banks goes unabated. Net Demand Deposits, in the week under review, went up by Rs 6.89 crores to Rs 1,247.31 crores, and Net Time Deposits by Rs 11 crores to Rs 1,381.90 crores. The State Bank accounted for slightly over one-third of such increase in Deposit resources. The total of Advances also came down, by Rs 8.94 crores to Rs 1,741.33 crores. In the light of such two-way improvement in resources, we must expect Scheduled Banks to continue to purchase gilt-edged during the rest of the 1964 slack season. It remains to add that debt to the State Bank is lower by Rs 1 crore at Rs 22.84 crores; that indebtedness to the Reserve Bank is lower by Rs 0.12 crore at a nominal Rs 0.30 crore; and that cash balances, including money at call and short notice, are marked down by Rs 6.59 crores at Rs 243.32 crores.

Treasury Bills

TENDERS for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 4 August 1964. Total amount offered was Rs 4,25,00,000. Tenders at Rs 99.415 per cent were accepted in full and those at Rs 99.400 per cent were allotted 44 per cent approximately. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.393 per cent per annum.

SUGAR Ever Changing Pattern

IT is a measure of the confused thinking that has been characterising our sugar policy for a long time now, that it is undergoing frequent changes. It was only in July that Mr Swaran Singh, the former Food Minister, thought it fit to impose a ban on the inter-State movement of gur in a bid to arrest the abnormal upturn in the prices of the commodity. Some sort of control on the gur industry is generally considered essential if the sugar industry, especially in the Uttar Pradesh and Bihar regions, is to play a useful part in raising the sugar production of the country as a whole. For, manufacturers of gur and khandari are in a dominating position by virtue of the fact that as compared to the organised sector of the sugar industry, their tax liability is much less. The result has been that they are enabled to pay higher prices for cane than the sugar mills who are again not free to pay according to prevailing market conditions. It is however to be noted that a sudden reduction in the production of gur and khandari is neither feasible nor desirable. In the first place, taking only Uttar Pradesh and Bihar, in normal years production of cane in these States is too large to be accounted for only by the sugar mills. Secondly, the gur and khandari industry is a labour intensive industry and any serious setback to it will render large numbers of people unemployed. These are considerations that cannot be treated lightly either by the State Governments concerned or the Centre. But this does not mean that the gur industry should be encouraged to expand. For, despite its potentialities for the absorption of a large labour force, the gur and khandari industry is essentially uneconomic in the sense that its sugar recovery from cane is much less than in the case of the organised sugar factories.

Along with his announcement of the withdrawal of the ban on the inter-State movement of gur, Mr C. Subramaniam, the Union Food Minister, has ordered a quick examination of the price-distribution-production pattern of the sugar industry by a Committee headed by Dr Sen, member of the Planning Commission. It is indi-

cated that the new pattern will come into vogue from the next crushing season commencing from November. It is evident that Government has its own reason for wanting to have the assistance of a committee to make a fresh study of the problem before framing the policy for the coming season. But it is not difficult to state what the new pattern should aim at. It should primarily ensure that sugar factories are supplied with adequate cane so that they are able to utilise their capacity in full unlike last season.

POWER Nuclear Energy to the Fore

According to present indications, the Fourth Plan power target is likely to be fixed at 25 million kw. While this level itself will necessitate the establishment of a large number of coal based power stations and the fullest exploitation of all available hydroelectric power potential, it can be easily imagined what will be the magnitude of the resources that will be needed to meet the power requirements in the subsequent Plan periods. Even assuming that the demand for power will grow at the rate assumed for the Fourth Plan, power requirements at the end of the Fifth Plan will be in the neighbourhood of 45 million kw. Our hydel power resources have already been almost fully tapped and the maximum additional power from these sources that can be safely assumed is about 12 million kw. Therefore, it looks as though the bulk of the additional power has necessarily to come from thermal power stations. But the question arises whether coal production will keep pace with the rapid growth of the demand for power. From what Dr H. J. Bhabha, Chairman of the Atomic Energy Commission, has to say of the outlook for power from nuclear energy, it appears that questions like adequacy of coal will resolve themselves. For much headway has been made elsewhere in the world and in India too in harnessing atomic energy for peaceful purposes. In our own country, three power stations are in the process of being set up, at Tarapur, Rana Pratap Sagar in Rajasthan and Madras. By the end of the Fourth Plan, about 1.2 million kw of electricity is expected to be generated in the country from

atomic power. A fourth atomic power station with a capacity of 1.8 million kw is proposed to be set up in the Fifth Plan. According to Dr Bhabha in another forty years or so, a substantial part of the power generated in the country will be from atomic power stations. Thereafter all additions to power generation will come from atomic energy. The reasons he gives for the gradual dominance of atomic power in the generation of electricity are quite convincing. In the development of power, cost is an important factor and in this regard too nuclear energy will score decisively over the conventional methods in the long run. Dr Bhabha has pointed out that even now electricity from atomic power stations will be cheaper than from thermal stations in areas where coal will have to be brought over long distances. Since it is to be expected that with further advances in nuclear technology the time will not be far off when the cost of production of electricity from atomic energy will be considerably reduced, it is quite on the cards that the emphasis in future power development in our country will be increasingly on nuclear energy.

COAL Impact of the Slump

The decision of the Union Ministry of Steel and Mines to invite fresh applications from the coal industry for financial assistance out of the World Bank Funds is an indication of the unenviable position in which this basic industry finds itself today. It may be recalled that some two years ago, the World Bank had sanctioned a loan of Rs 16.67 crores earmarked for the private sector coal industry with a view to enabling it to modernise its mining equipment as well as to open up new mines. The response to the offer of such valuable assistance however has been rather disappointing mainly because most collieries who were desirous of taking advantage of the loan could not find the required rupee finance which alone would make them eligible for applying for the assistance. Even so, quite a few collieries, especially the bigger ones with comparatively stronger financial positions were able to utilise the loan to good purpose. But with the slump in

coal demand during the past one year or so, enthusiasm for modernisation and expansion reached a low ebb.

Despite this setback, the private sector collieries have been able to record remarkable progress during the past few years as will be evident from the fact their total production in 1963-64 reached a level of 54 million tonnes. The present position is that they can easily step up their production by about 5 to 6 million tonnes in the remaining two years of the current Plan. In the meantime, as a result of the persistent slump in the demand for coal, the original Third Plan coal production target has now been revised downward. It is not surprising therefore that collieries are in no mood to embark upon further expansion or modernisation.

The collieries cannot however be blamed for their pessimism since the slump in coal demand has imposed a severe strain on their financial resources. But there is reason to believe that the present slump may prove to be a passing phase as efforts are now being intensified to quicken the pace of industrialisation. The Fourth Plan which is almost certain to have a much bigger outlay than its prede-

cessor will stimulate the demand for coal still further. According to a latest assessment, during the Fourth Plan, the private sector collieries may be called upon to contribute about 15 to 18 million tonnes of additional production. Unless the private sector prepares the base for the required tempo of production sufficiently in advance, it will not be able to shoulder the additional responsibility at the appropriate time. The revival of the offer of financial assistance of the balance left of the Rs 16.67 crores from the World Bank offers a fresh opportunity for the industry to get itself prepared for the big task that is awaiting it during the Fourth Plan period.

PLYWOOD

Raw Material Problem

The main difficulty facing the plywood industry in the country is the scarcity of the right type of raw material. This is not surprising because the per capita forest area in India is low and till recently there has been no constructive forest policy for the country as a whole. The result is that when under the impetus imparted by the Five Year Plans, wood-based industries are making remarkable headway in building up capacity, their working is being impeded by a growing shortage of the suitable types of wood. For instance, the plywood industry whose annual production capacity has more than doubled to 371 million sq. ft. during the last seven or eight years, is unable to utilise its capacity in full. As a matter of fact, the raw material supply is so acute that it is estimated that the industry is presently having an idle capacity of as much as 160 million sq. ft. Apart from the high prices of the raw material and its poor quality, the cost of production of the Indian plywood industry is inflated by such factors as the irregularity in the supply of timber, the high cost of glue etc. The magnitude of the impact of rising overheads will be evident from the fact that the price of Indian plywood is about 10 to 50 per cent higher than that in the overseas market.

It stands to reason that since a number of wood based industries such as paper and plywood, to mention only two important industries, have taken big strides, the Central Government should shoulder the responsibility of ensuring an adequate supply of essential raw materials to them. Speaking at the annual meeting of the Federation of Plywood Industry Mr Shah Nawaz Khan Union Deputy Minister of Agriculture, has made a very good suggestion which if implemented will go a long way toward increasing the supply of timber for the various woodbased industries. This is the replacement of natural forests by plantation of species of trees which will yield more. Similar operations have been carried out with success in a number of foreign countries and there is no reason why it cannot be undertaken in our country also.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as
the wind
To blow on whom I please"
—As You Like It

Now, why couldn't we have thought of it, in 1947? "Aggression unchallenged is aggression unleashed"; if President Johnson's words, in reference to the provocative attacks by North Vietnam, are in justification of the retaliatory efforts instituted through US air-raids, how much more were we justified in merely defending a Kashmir that legally acceded to India? "... firmness in the right is indispensable today for peace". It was, I would suggest, as indispensable a little over sixteen years ago. No, I am afraid our public relations work has just failed to measure up to the needs of explaining to the world the rightness of our actions and attitudes. And yet, I am going to be interested in seeing the reaction to America's latest "adventure" in South-east Asia. The immediate response appears to be one of benumbed shock; comment is reluctant, for, who would judge America? Slowly, however, I expect the world press to take note of a few intriguing facts, or rather factors. There is, I would think, little doubt that the slightly stepped up belligerency that President Johnson is displaying owes its genesis to the nomination by the Republican Party of Senator Goldwater as its candidate; and the Senator, it may be recalled, has long held the view that "nukes" should be used in such limited wars against the enemy. Anything he would do, I can do better, President Johnson seems to be claiming. The second factor we must bear in mind is that Mr Johnson is no mean politician; to the world at large the runaway character of Senator Goldwater's triumph at the Republican convention came as a surprise; and Mr Johnson has taken note of the underlying current of support for what I might label extreme conservatism; and hence, therefore, a get tough policy, an approach to Dulles' brinkmanship. Kennedy could have a confrontation with Mr Khrushchev over Cuba, and get away with it; will Mr Johnson similarly succeed in standing fast against the Communist China that is at the back of North Vietnam? This presumably is a calculated risk that President Johnson has taken: that in

the light of the disenchantment as between Soviet Russia and Red China, the one will not rush to the support of the other. But this is to reckon without China's own amour propre: will its self-respect allow it to swallow tamely the humiliation implicit in American retaliation? We can only hope that, in manner similar to events in Korea some fourteen years ago, China is only "testing" American firmness; for then alone can we be sure that the trouble and the flare-up in Vietnam will be kept localised.

Trouble nearer home, too. Working to rule apparently means that you do not work at all. At the banks, arrears of ledger postings are piling up; in some places, deposits are permitted, but withdrawals are another matter altogether; and everywhere the "labour" is doing splendidly, if its objective was to arouse public favour and sympathy against it. Even as banking operations were being disrupted in this wise, Mr D. Sanjivayya, the Union Minister of Labour and Employment, was uttering, at Bangalore, words of wisdom that were going unheeded. Direct action, which has the effect of "stopping the wheels of production", merely causes great hardship all round; and Nehru's last message to labour, three days before he passed away, is quoted: "A merely agitational approach is not helpful in the circumstances". As Mr Sanjivayya has remarked, the answer to a price problem is always increased production: "the pouring in of more money" as a remedy "might prove worse than the disease" since it "might very well accelerate the spiral of rising prices." (Incidentally, Mr Sanjivayya's speech is reproduced elsewhere in this issue of Indian Finance and fascinating reading it makes). I am reminded of the experience of one of the West European countries some many years ago. A labour union pressed its claim for an increase in wages owing to the inflationary conditions that then obtained: its claim was successful. Whereupon, the union immediately sought another wage increase, on the plea that the increase already obtained would lead to further rise in pri-

ces, for which compensation was obviously wanted. The surprising thing about the story (a true one, I might add) is that the second demand was also held to be just. We in India face a price situation that has in it all the potential of a calamity. We must learn to curb consumption to such effect that some part at least of the excessive demand vis-a-vis supplies or production is thus eliminated. Wage increases are not going to add to output by one jot or tittle: wage spirals can merely pave the way for disastrous, galloping inflation.

The memorandum or call it joint representation if you will, addressed by the Presidents of the recognised Stock Exchanges to the Finance Minister was patently got ready in a hurry. The totals, in respect of the erosion of share values, do not add up correctly in two of the Statements; and grammar gets short shrift. That's a pity, because the case that has been made for adequate and apposite fiscal reliefs, is sound and cast-iron. As I said last week, however, the concessions cannot be expected before the next Budget: can we hope, then, for the tax on dividends and the tax on bonus

shares in the hands of the shareholder both to be removed from the statute books next February?

When, in 1956, there was trouble brewing at the Calcutta office of D. J. Keymers, the first apprehensions were about the many talented personnel in that advertising agency, who inescapably would add to the ranks of the educated unemployed. The forgotten factor was the employees' own determination. As a sort of co-operative venture, Clarion (I think it was originally sought to name it Creative) Advertising Services was born. Within the eight years since, it has grown to the stature of the largest of the Indian owned and managed agencies. The latest feather in its cap is that Clarion is becoming international: the world renowned McCann-Erickson Corporation (which itself is part of the Interpublic group) is to be associated in a company, soon to come into existence, styled Clarion-McCann. What emerges clear is that the new agency will, by being able to draw on the resources of and work with the world-wide branches of McCann, be in an admirable position to foster Indian exports in our markets abroad.

Olympus - A Letter from Delhi

Fourth Plan Discussions

Discussions in the Planning Commission on the different aspect of the Fourth Plan are likely to be extended beyond the original schedule according to which they should have concluded by the first week of August. The progress of the discussions with the various ministries concerned will indicate how soon it will be possible to prepare the draft memorandum on the Fourth Plan for the consideration of the National Development Council. According to present indications the meeting is not likely to be called before the first week of September. This will be preceded by briefing session with the offi-

cials of the State Governments who will thus be in a position to apprise the Chief Ministers of the topics coming up before the Council which will require their special attention.

One of the last items which will be considered by the Planning Commission before it gets down to brass tacks, that is consideration of the resources available for the Fourth Plan, will be the Railways' programme. The Railway Minister's visit to the United States is not the only reason for holding over consideration of the Railway Plan to the very end of the current series of discussions, though it is clear that no fruitful discussion will be possible in his absence. By its very nature the plan for transport, of which the principal element is the Railway Plan,

cannot be drawn up until the outlines of other sectoral plans, especially in the field of Industry and Minerals, are clearly discernible.

The formulation of a rail transport plan is dependent on an assessment of the probable demand for rail capacity by various sectors of the economy. The latter depends on the developments which may reasonably be expected to take place in these sectors, particularly, steel, iron ore, and industries like cement, fertilisers, etc. Apart from the production targets for these various items, particulars of location of the new plants, their sources of raw material and the areas of distribution of finished products are also relevant to the assessment of the demand for railway transport. The relevant particulars will not be available until the programmes for industries and minerals are finalised. In the meantime, certain tentative estimates of the magnitudes of the Railways' Fourth Plan programmes have been indicated in preliminary discussions with the Planning Commission, subject to the very clear proviso that these will have to be revised in the light of the programmes approved for other sectors. Railways, it is understood, have proposed a step-up in the level of outlay by fifty per cent as compared with the Third Plan allocations as revised up to date.

Traffic Estimates

One of the main factors determining the level of investment is the estimate of the traffic the Railways will be called upon to cope with in the Fourth Plan period. The projections included in the Third Plan placed the figure of originating freight traffic by 1970-71 at between 386 to 426 million tonnes. The trend indicated by the growth of traffic, so far, suggests that these estimates are no longer valid. At the time of the formulation of the Third Plan, originating traffic at the end of the final year of the Plan was estimated at about 250 million tonnes. This was later increased to 265 million tonnes at the instance of the Ministry of Steel and Mines on the assumption that production of coal in the last year of the Plan would be of the order of 98 mil-

lion tonnes. It has been clear for some time that this expectation will not be realised. Targets have been scaled down to about 85 million tonnes, and actual production may well be lower than this figure.

One result of the cut-back in the coal production programme is that Railways have a large number of idle wagons. Statistics of the Eastern Railway, which carries the bulk of the coal, show that this Railway hauled 2651 empty wagons from the loading points in the coal fields area during last May.

The surplus in wagons has, however, enabled the Railways to liberalise the free time allowed for unloading, thus meeting a long standing demand of railway users who found the present limits entirely inadequate. It has been announced that, as against the free time of five working hours for ordinary type wagons and nine working hours for BFR type of wagons, 24 working hours will be allowed for all types of wagons at stations where there are no crane facilities for unloading. The Railway Board has also recently enhanced the free time allowed for dealing with BOX wagons in rake formation. For every rake of 20 wagons or more placed at one loading point for one party, the free time allowed is ten hours. For 11 to 19 wagons the free time allowed is seven working hours. The normal free time of five working hours will continue to apply to placements of less than 11 wagons.

To judge by present trends, Railways do not expect that originating traffic at the end of the Third Plan will rise above 249 million tonnes. Apart from the delays in the steel programme, the reduction of the coal target, and shortfalls in important industries like cement and fertiliser which make heavy demands on rail capacity, the restrictions on the movement of food grains consequent on the formation of wheat zones has also to be taken into account in estimating the likely level of traffic. Railways, it is understood, are now inclined to place their estimate of originating traffic in the last year of the Fourth Plan at about 365 to 370 million tonnes. If, however plans for setting up three new steel plants are vigorously pursued, this

estimate will have to be revised upward.

Financial Requirements

Including successive additions, the Third Plan allocation for the Railways now stands at Rs 1580 crores. The financial requirements of the Railways' Fourth Plan are tentatively estimated at Rs 2581 crores. In this connexion it may be pointed out that a substantial portion of the Third Plan allocation for Railways came out of the Railways' own resources, including depreciation funds. The same pattern will continue in the Fourth Plan. Railways can also claim a notable degree of success in developing indigenous sources of supplies of equipment, with consequent saving in foreign exchange requirements of their expansion programme. The foreign exchange expenditure on the Railways programme during the Third Plan is estimated at about Rs 283 crores for a total outlay of Rs 1580 crores. While precise estimates of Fourth Plan requirements have yet to be worked out, the Railway Board is confident that the requirements will be proportionately less than in the Third Plan.

It is understood that the emphasis in the Railways' Fourth Plan will be on improvement of operational efficiency, better utilisation of existing mileage and the creation of the necessary facilities for the purpose, than on construction of new lines. The provision for new lines in the Fourth Plan is not likely to be more than nominal. The Railway Minister has already indicated his preference for consolidation and efficiency than on expansion of railway mileage.

Better Deal for Railway Passengers

Now that the Railways are ahead of traffic demand in the principal sectors such as steel, coal, cement etc, it should be possible to give more attention to passenger amenities than was practicable in the past on account of the prior claims of freight traffic. It is not unlikely that Railway passengers will get a better deal in the Fourth Plan. An annual rate of three per cent increase in passenger traffic, which was used as a basis for allocations in the second and third plans, has proved totally inadequate in view of the actual increase in traffic that has occurred. Railways, it is understood, have provided for an increase of four per cent per annum in the number of passengers. This should help to stabilise the degree of overcrowding at about the present level, even if it does not lead to more comfortable rail travel. From what Mr Patil is reported to have expressed, passengers can also look forward to faster trains that run to schedule.

The recent announcement that a new train, the "Taj Express"

will be introduced between Delhi and Agra from October next, gives a hint of new thinking in Rail Bhavan. Intended mainly for tourists, the train will enable persons in Delhi to visit the Taj Mahal and places of tourist interest and return to Delhi in the course of a single day. Fully vested, the train will be composed of specially designed coaches providing comfortable sitting accommodation. A smokers' wing will be provided in the air-conditioned coach. The dining car, it is said, will be equipped to serve hot meals even to those who prefer to have their meals in their coaches. While they were about it, it is not clear why the Railway authorities did not choose to provide for air conditioning the entire train, instead of attaching a single air-conditioned coach. The bi-weekly air conditioned trains are having successful runs and there is no reason to think that air conditioning of all coaches

would adversely affect the sale of tickets for higher classes.

Rationalisation of Steel Sections

The question of rationalisation of steel sections was raised at the meeting of the Advisory Committee for Iron and Steel which was called by Mr C. Subramaniam soon after the declaration of emergency. This, it was stressed would make for more economic utilisation of rolling capacity, as well as for increased availability of finished steel. The number of sections at present rolled by main producers is about 300. An ad hoc committee was constituted in August last year for selection of rationalised sections to which rolling would be restricted. The Committee submitted recommendations in May 1964, after taking into consideration an independent report of the Indian Engineering Association.

Government of India have an-

nounced their decision to accept the Committee's selection of 153 rationalised sections, and indicated that the change-over would take place from January 1, 1965. This will give time for existing rolls to wear out and for designs utilising sections which will not be rolled in future, to be changed. All consumers are expected to place their orders from January 1, 1965 on the basis of rationalised sections. It has also been made clear that import of steel sections not included in the rationalised scheme will not be allowed on the sole ground that the structures were designed to utilise those other sections.

The future patterns of production of structural sections by the Main producers will be restricted to the rationalised sections. Special sections such as crossing sleepers, bearing plate bars, telegraph channels sheet piling sections, etc, will, however, continue to be rolled to meet specific important needs.

4 PER CENT WEST BENGAL LOAN, 1976

Issue Price Rs. 99.75

Opens on August 24, 1964

The loan will be closed without notice as soon as total subscriptions amount approximately to Rs. 7 crores and in any case not later than the close of business on the 29th August, 1964.

The loan will be issued in the form of—

- (1) Stock, the applicants for which will be given Stock Certificates, or
- (2) Promissory Notes, which will be issued in denominations of Rs. 100, Rs. 500, Rs. 1,000 Rs. 5,000, Rs. 10,000, Rs. 25,000, Rs. 50,000 and Rs. 1,00,000.

Applications for the loan must be for Rs. 100 or for a multiple of that sum.

Subscriptions may be in the form of cash/cheque or Securities of 4% West Bengal Loan, 1964.

Securities of the 4 per cent West Bengal Loan, 1964 will be accepted at par in payment of subscription to the 4½ per cent West Bengal Loan, 1976.

Applications will be received at—

- (a) The offices of the Reserve Bank of India, Bangalore, Bombay, (Fort and Byculla), Calcutta, Madras, Nagpur and New Delhi;
- (b) The branch of the State Bank of India at Patna;
- (c) The branch of the State Bank of Hyderabad at Hyderabad; and
- (d) The branches of the State Bank of India within the State of West Bengal except in Calcutta.

Full particulars and application forms are available from any of the offices mentioned above.

The Tata Iron and Steel Company Limited

STATEMENT OF THE CHAIRMAN

The following statement by Mr. J. R. D. Tata, Chairman of the Tata Iron and Steel Company Limited, dealing with the Company's working for the year ended March 31, 1964, has been issued to the shareholders. The Annual General Meeting of the Company will be held on Thursday, September 3, 1964 at 4-30 p.m. at the Birla Matushri Sabhagar, 19, Marine Lines, Bombay 1.

To the Members,

As this review comes to you only a bare two months after the death of Jawaharlal Nehru, it is fitting that it should begin with a tribute to his memory and an expression of our grief at his passing. In every age, a few men are born destined to shape the course of history and it was fortunate for our country that at one of the most critical turning points of its history, one of his heroic stature was there to lead it.

2. After Gandhiji led us to freedom, Jawaharlal undertook the prodigious task of changing the outlook, beliefs and way of life of hundreds of millions of people steeped in ignorance, poverty and despair; giving them faith in themselves and showing them that with education, hard work, modern ideas and methods and the application of science and industry, they could build a new and better life for themselves and their children. Many years must still pass before Jawaharlal Nehru's dream of a modern industrialised India comes true, but he lived to see the success of the greatest and boldest experiment in parliamentary democracy the world has ever known. If through all the emergencies and crises, which it had to face and surmount over these seventeen years, India has clung so tenaciously to the democratic way of life and remains today a nation of free people, we owe it mainly to him.

3. The Steel Works and the city of Jamshedpur held a special place in the thoughts of Jawaharlal Nehru for, long before other steel plants were built in the country, they were to him the symbol and the promise of a new India. In 1958, on the occasion of our Golden Jubilee while dedicating the Jubilee Park, which the Company presented to the citizens of Jamshedpur, he said "I have come here because this great Steel Works and the city of Jamshedpur have become symbolic of the growth of Indian industry...but the biggest reason of all is to pay homage to the memory of Jamsetji Tata." It is appropriate to recall these words today since this year marks the 125th anniversary of the birth of Jamsetji Tata and the 60th anniversary of his death. Referring to Jamsetji's courage and vision, he said "it is right that we should honour his memory and remember him as one of the big founders of modern India." The great heart that paid this gracious tribute is now stilled, but, as his biographer

has said, "India will remember Jawaharlal as the man who saw the vision big and tried, with all his faith and will, to make it great."

4. As we mourn the passing of Jawaharlal, our thoughts, sympathy and good wishes turn to the dedicated man who has taken on the heavy burden of leading the country. The unanimous choice of Lal Bahadur Shastri as Prime Minister and the smooth transition to the new regime have given proof of the maturity and soundness of our parliamentary democracy. I am sure that shareholders will join me in assuring Prime Minister Shastri of the full support and co-operation of the Company in whatever way it may be called upon to help in the further development of India's steel industry.

THE YEAR'S RESULTS

5. The Company made satisfactory progress during the year under review and reached the production target of 1.5 million tons of finished steel while the output of steel ingots fell short of the 2 million ton target by only 5%.

6. On the financial side, however, the results of the year's operations were somewhat disappointing. Although the profit before taxes was nearly Rs. 2 crores higher than in the previous year, much of the excess was due to the fortuitous addition to revenues of Rs. 85 lakhs written back from excess provisions made in previous years. Discounting this item, the profit was only marginally higher than in the previous year in spite of the substantial increase in sales and the ratio of profit before taxes to sales was 14.2% as against 15.4% in the previous year. The slight deterioration in profit per ton was due, as stated in the Directors' Report, to a rise in costs uncompensated by a corresponding increase in retention prices. Increases in prices were sanctioned by Government only from March 1964, although the increases in costs beyond the Company's control which such escalation in prices is intended to cover had taken place much earlier. The delay caused the Company the loss of a substantial amount of revenue and therefore of profit during the year. Furthermore, as stated in the Directors' Report, the price increases from March 1964 in categories of steel over which price control has been retained after partial decontrol, were substantially less than expected on the basis of an announcement made by the Minister of Steel in that month.

7. Shareholders will have noticed the six-fold increase in taxes this year. Whereas in the previous year the bulk of the profit was absorbed, for tax purposes, by arrears of development rebate, there was no similar set-off this year as all such arrears have been fully made up. The provision for taxes would, in fact, have been Rs. 2.70 crores larger but for the higher depreciation allowed under the reducing balance method of calculation adopted by the tax authorities than under the straight line method followed by us. I am sure, you will approve of the Directors' decision to set aside this saving in tax to a deferred taxation reserve for the reasons explained in the Directors' Report.

8. As against the increase of Rs. 6.65 crores in the provisions for taxes, including deferred taxation, as compared to last year, the allocation to the development rebate reserve is as much as Rs. 7.70 crores less than in the previous year. Taking into account all the variations between the two years' allocations and provisions and last year's transfers of Rs. 3.84 crores from reserves, the final balance available for disposal was larger this year by Rs. 3.12 crores.

9. As you are aware, our general reserves were heavily depleted by transfers to profit during the last few years to compensate for the exceptionally large amounts set aside for special reasons towards additional depreciation and arrears of development rebate. In the interests of the shareholders, it is necessary that we should build up these general reserves again when ever possible after paying reasonable dividends. Your Directors have, therefore, set aside Rs. 2.75 crores to General Reserve No. 1 this year and at the same time were able to recommend an increase of Re. 1 in the dividend on Ordinary shares.

IMPACT OF INFLATION

10. A matter of much concern to us as to all engaged in industry has been the continuous increase in costs, year after year, not only in steel but in almost every single product made or grown in India. Although the accelerating rise in the cost of living index during the last year has been principally due to soaring food prices, themselves due to insufficient production combined with a greatly increased purchasing power, the cost of all industrial products, including those which, like steel, do not depend on agricultural raw materials, has continued to rise relentlessly with no sign of abatement in sight.

11. Steel provides a striking example of the marked deterioration in the country's cost/price structure. Whereas until 1955 Indian steel was amongst the cheapest in the world, it has become one of the costliest although the basic elements which make up the

total manufacturing costs have not materially changed in relation to those of other countries. At the end of 1963, the average price of the common categories of steel in India was more than two and a quarter times the 1958 price, one of the largest single elements of increase being in respect of excise duty which increased no less than fifteen times from Rs. 5 to Rs. 75 per ton. Actually the full incidence of excise duties and other taxes on the final price of steel is much greater than that as practically every item which goes into the making of steel, including fuel, power, raw materials and stores, is itself subject at one or more stages of production to its own excise duties and other taxes. In addition to the growing burden of direct taxes of one sort or another, freight rates charged by the Indian Railways are today four to five times what they were fifteen years ago.

12. The damage caused by rising costs to the economy and to the country's long term plans of development cannot be exaggerated. Not only does the resulting decline in the purchasing power of the rupee cause severe hardship to every family in the country, but increases in costs have a number of other dire consequences. For instance, they have already rendered uncompetitive in world markets almost every exportable Indian product other than tea and jute, thus severely restricting our earnings in foreign exchange; they have inflated expenditure under the country's development plans and this, in turn, has necessitated, apart from further additions to our already crushing burden of taxation, a further rise in deficit financing, aggravating inflationary pressures and leading to still higher costs and prices, a vicious circle indeed.

13. While appreciating the magnitude and complexity of the problems involved and the grievous burden of additional Defence expenditure since last year, I venture to suggest that the deterioration in our price structure is largely due to our forcing the pace of economic development beyond the country's capacity in physical and financial resources. The inflationary effect of spending too much too quickly has been aggravated in our case by the fact that so much of the total expenditure has been incurred on unproductive civil administration and on costly long-term projects which can add to the national income only after long gestation periods and which, even when completed, produce little for the consumer.

14. Unfortunately, there seems to be no recognition as yet of the need for a reappraisal of resources and priorities in our planning. From the tentative figures recently announced for the Fourth Plan period it would seem that the remedies for our present ills are thought to lie in still larger plans

involving still heavier doses of taxation, deficit financing and foreign borrowings.

SPECIAL ADVANCE

15. You will, no doubt, expect me to make some reference in this Statement to the recent amendment to the Companies Act empowering Government unilaterally to convert into shares loans advanced by them to joint stock companies, and to the discussions which we and the Indian Iron and Steel Company have been having with Government in regard to the repayment of our respective special advances.

16. We have viewed the passing of the above amendment with deep concern, not only because of its potentially grave impact on the Company and its shareholders, but also because of the arbitrary and unfair nature of the measure and of its disregard of past undertakings in so far as the two Steel Companies are concerned. The scheme for the special advances of Rs. 10 crores made by Government to each of the two main producers towards the cost of their modernization and expansion programmes was formulated in consultation with a World Bank Mission in 1952 and, as memories on the subject seem to be short, I feel it necessary to review once again the genesis and history of these advances.

17. From the end of the war until the mid-fifties, the retention prices allowed by the Government to the steel producers were fixed at levels far below import prices, on the unrealistic basis of a gross return of 8% on block, from which had to be provided profit sharing bonus Managing Agents' commission and taxes, leaving only about 3½% for dividends and reserves. This price scheme had disastrous consequences for it left virtually nothing in the hands of the industry for rehabilitation and modernisation, leave alone expansion, and made it impossible to attract any fresh capital. As a result, the country had to spend immense amounts in foreign exchange every year on imported steel, which could have been saved if Government had followed a more realistic price policy.

18. When the Government finally accepted the need for modernising and expanding the country's steel industry, we urged that car prices should be raised by Rs. 100 per ton which we undertook to apply exclusively, after taxes, to the modernisation and expansion of the plant. Even with this increase, our average retention price would at that time have been about half the price of imported steel. This modest and perfectly sound proposal was turned down by the Government who, instead, decided to increase selling prices without raising retention prices. The funds generated by this increase to the consumer, which would normally and legitimately have accrued to the producers, was taken to an equalisation fund, from which the special advances were made to the two Companies. As I pointed out at that time, this amounted to lending to us our own money. This was, in fact, recognised, at least by implication, in the terms of the special

advances which made it clear that they were no loans in the ordinary sense, for the advances were to have no fixed maturity date and were to be repaid with interest only if and when a special element was added to the normal retention prices specifically for that purpose. In their 1962 inquiry into the steel industry, the Tariff Commission were specifically asked by Government to recommend a special element in the retention prices towards the future repayment of the advances and interest thereon from July 1958. The Commission recommended Rs. 8 per ton. The Government, for reasons of its own which I have not been able to understand to this day, changed their mind and announced in Parliament and elsewhere that they were considering other means of recovering these advances, including their conversion into shares. It was presumably in pursuit of this objective that the extra-ordinary amendment to the Companies Act mentioned earlier was passed in December 1963. Whether the real purpose was actually to convert the advances into shares of merely to induce the Companies, under the threat of such conversion, to repay them in abrogation of the terms of the agreements between the Government and the Companies, has never been made clear to us. We naturally made strong representations to Government with whom I am glad to say, discussions have been held and are still continuing towards what I hope will be an equitable and mutually satisfactory solution.

19. While not relevant to this particular issue, I may mention that we have protested with equal earnestness against another amendment of the Companies Act recently introduced by the Government, which is in breach of the spirit if not the letter of the Constitution. Under this amendment, the voting rights attached to shares of joint stock companies held in trust are to pass to a Public Trustee, who incidentally, has still to be appointed by Government. This measure, which has at one stroke disenfranchised every trustee shareholder in the country, except in the case of trusts of less than Rs. 5 lakhs, is an extra-ordinary piece of legislation which illustrates the present tendency to disregard the rights of individual citizens and a growing readiness to rely on compulsion in enforcing Government's will on the people. Although it is now part of the law of the land, it has not yet been put into actual operation as the appointment of the Public Trustee has still to be notified. I hope, even at this late stage, that some convention or "modus vivendi" will be established whereby, in practice, the voting rights of trustee shareholders will be left undisturbed except when they are abused or where the Public Trustee has grounds to apprehend the misuse of such rights by the trustees.

FURTHER EXPANSION

20. In my Statement last year, I mentioned the possibility that our Company might be called upon to undertake a further large-scale expansion of capacity at Jamshed-

pur during the Fourth Five-Year Plan. Government have, indeed, requested us to undertake such expansion and further progress has been made in the examination of the project. The scheme, as it has now emerged from such a study and from discussions with Government, contemplates the installation of the necessary facilities for making, in the first instance, an additional million tons of ingot steel to be rolled into sheets and strip in a continuous or semi-continuous strip mill.

21. We expect to appoint a firm of consulting engineers shortly to prepare a detailed project report which should be received in about eight months after their appointment. While only preliminary estimates have been made, the indications are that the cost of this further expansion would be of the order of Rs. 170 crores of which probably a little more than half would be in foreign exchange.

22. As I hinted last year, the most difficult problem will be that of finance, particularly as this project will be super-imposed on a programme already in hand for expanding and modernising our ore mines, building a battery of coke ovens, adding some equipment to SMS 3 and doing a few other things, at a cost of about Rs. 25 crores and on the project for increasing the output of our Jharia Collieries by a million tons of washed coal at an estimated cost of about Rs. 30 crores.

23. There is no need for alarm at the prospect of such large commitments. The recently completed Two Million Ton Programme and the results before you in the form of increased dividends and reserves are an indication of the benefits and added strength which accrue to the Company and its shareholders from expansion resulting in lower costs, better utilisation of total assets and increased productivity. At this early stage, I can only repeat that your Directors will sanction a further expansion only if they are thoroughly satisfied that the project is technically and economically sound and that it can be undertaken on terms wholly fair to the shareholders.

COMMUNAL DISTURBANCES

24. The Directors' Report contains a brief factual reference to the tragic events which overtook Jamshedpur in March this year and which, in addition to the loss of valuable life, brought great misery and hardship to thousands of innocent men, women and children. This explosion of communal violence was all the more shocking for having occurred at Jamshedpur which, for over a half century, had established an exemplary record of peace and harmony, maintained unsullied even in the darkest days of 1947.

25. It is poor consolation to know that the troubles were least pronounced in the Steel Plant and in the areas inhabited by the Steel Company's employees. This was to be expected as a large proportion of our present employees consists of second and third generation citizens of all communities who

were born in Jamshedpur, went to school together and form a mature and stable cosmopolitan community. These elements conducive to happy relations between communities are lacking among the newer industries of Jamshedpur, most of whose employees have come from outside the city and, being younger, are more easily swayed by trouble-makers.

26. The lesson to be learnt from this tragic episode is the need for continuous vigilance and sustained action in the promotion and maintenance of good relations amongst the various communities as well as for a strong civil administration endowed with the necessary authority and the will to take firm and instant action in emergencies. Although the local Government authorities, including the Police, no doubt did their best to bring the situation under control, they were at first overwhelmed by the suddenness and magnitude of the events which offered evidence of having been deliberately planned.

27. One of the possible causes for the situation having gone out of hand for a while is the fact that Jamshedpur, although the second largest city in the State of Bihar and perhaps the most vital industrial centre in the whole country, is still administratively treated as a sub-division of a district, the headquarters of which are in a small neighbouring town. As a result, the law enforcement machinery is inadequate for dealing with serious emergencies. We have, therefore, urged that early consideration be given to the possibility of upgrading Jamshedpur to an administrative status commensurate with its importance to the State and to the country and with the magnitude of the problems and the task of administering it.

28. As stated in the Directors' Report, the Company, along with sister concerns at Jamshedpur, took quick and effective steps to provide relief and rehabilitation to the families of the affected communities. Although not relevant to this review, I think, shareholders may be interested to know that, recognising the similar misery and hardship suffered by thousands of refugee families from across the country's borders, the Steel Company, along with Telco and the Tata Trusts, are planning to undertake a programme of relief a tone or more refugee camps in Bihar.

SIR JEHANGIR GHANDY

29. It is customary for me to end my annual statement to the shareholders with an expression of thanks to the officers, supervisory staff and workers at Jamshedpur and elsewhere for their contribution during the year to the further progress made by the Company. Now that I am no longer inhibited by his membership of the Managing Agents' Firm, I should like to pay a special tribute to my old friend and colleague, Sir Jehangir Ghandy, who retired as Director-in-Charge of the Steel Company at the end of the year under review. "Joe" Ghandy, as he has always been known to those who have worked with him, joined the Steel

Company as a trainee in 1917, nearly 17 years ago, and left for the U.S.A. eighteen months later for advanced post-graduate studies. He returned to Jamshedpur in 1921, and has been there ever since. From the start, he showed such exceptional ability and drive that it took him only nine years to be put in charge of the whole plant as General Superintendent and another eight years to become the first, as well as the youngest, Indian General Manager. Since 1946, he was in charge of the Company's affairs at Jamshedpur, first as Resident Director of the Managing Agents, and then as Director-in-Charge. To him goes a major share of the credit for the progress and growth of the Company over the last thirty years.

30. Sir Jehangir Ghandy achieved prominence and countrywide recognition in various fields of national endeavour and was closely associated with many of the country's leading technical institutions; but it is as an outstanding Engineer-Administrator and for his unparalleled services to this Company, and to the Indian steel industry as a whole that he will be remembered, and for which we all owe him a deep debt of gratitude.

31. Although no longer concerned with the day-to-day conduct of the Company's affairs, Sir Jehangir, happily, continues his connection with the Company as a member of its Board, as a Director of Tata Sons and as Chairman

of three important enterprises associated with the Steel Company at Jamshedpur. I am sure shareholders will wish to join me in thanking him for all he has done for the Company over these four decades and more, and in wishing him many years of good health and happiness.

32. The work and responsibilities of Sir Jehangir at Jamshedpur are now shared by two Resident Directors of the Managing Agents, Mr. S. K. Nanavati, in charge of Operations, and Mr. R. S. Pande, in charge of Administration. Mr. Nanavati retired as General Manager of the Company in September last year on his joining the Board of the Managing Agents' Firm after a brilliant career with the Steel Company covering a period of over 20 years, and was succeeded as General Manager by Mr. G. Kumar.

33. Mr. Pande had a distinguished record of service with Government prior to joining the Steel Company in 1958 as Director of Personnel. He was appointed Agent in April 1959 and retired from the Company's service on 1st April this year when he joined the Board of Tata Industries.

34. The Company's operations are safe in the hands of this strong and experienced team backed by a group of able and devoted officers.

J. R. D. TATA
Chairman.

Bombay, 27th July, 1964.

EXIMBANK \$11 Million Loan to HINDALCO

The US Export-Import Bank of Washington has approved a third loan application from Hindustan Aluminium Corporation Limited (HINDALCO) of Bombay, India. The \$11,000,000 (Rs 5.2 crores) loan is repayable over ten years beginning in 1968.

Hindustan Aluminium was incorporated in 1958. EXIMBANK helped in its initial financing by two loans totalling \$18.7 million (Rs 8.9 crores). The company is partly owned by Henry J. Kaiser interests in the United States and the Birla family interests in India. Approximately half of the outstanding stock is held by individual Indian investors.

Hindustan Aluminium's factory is located at Renukoot in south-eastern Uttar Pradesh. Initial production commenced in 1962. The plant consumes a substantial part of the power generated by the nearby Rihand Hydroelectric Project, another US-assisted undertaking.

The new EXIMBANK loan will be utilized in financing the US dollar equipment and engineering costs of additional alumina reduction and fabricating plants to be built by HINDALCO.

Upon completion of the expansion programme, Hindustan Aluminium expects to have an annual production capacity of 48,000 metric tons of aluminium compared with an original capacity of 20,000 tons.

Hindustan Aluminium, in addition to the new EXIMBANK loan will use its own earnings to finance the new expansion programme. Total cost of the projected new facilities will be some \$30 million (Rs 14.3 crores).

The Export-Import Bank undertakes long term financing of this kind when commercial credit is not available, provided there is a reasonable prospect of repayment.

UK Textile Machinery for India

An agreement for the supply of worsted machinery worth £1,50,000 has been signed by the State Trading Corporation of India and Prince-Smith & Stells Ltd, of Keighley, Yorkshire, a member of the Stone-Platt Industries Group, it was announced in London last week. This is additional to the recent agreement signed in London on 3 July by the State Trading Corporation for the supply of textile machinery by the same group.

Coal Production in April

Coal production in April amounted to 5.4 million tonnes as against 5.6 million tonnes in the previous month. Of this, non-coking was 4 million tonnes.

In May, 4.8 million tonnes of coal were despatched, the daily average loading being 5,234 wagons. The pithead stocks at the collieries at the end of April were 5.2 million tonnes.

4½ Per Cent State Government Loans, 1976

STATE	AMOUNT (In crores of Rs)	ISSUE PRICE Per cent Rs.
1. Andhra Pradesh	11	99.50
2. Assam	3	99.50
3. Bihar	4	99.50
4. Gujarat	7	100.00
5. Kerala	4	99.50
6. Madhya Pradesh	5	99.50
7. Madras	14	99.75
8. Maharashtra	15	100.00
9. Mysore	7	99.50
10. Orissa	8	99.50
11. Rajasthan	5	99.75
12. Uttar Pradesh	10	99.75
13. West Bengal	7	99.75

All loans, except Kerala Government's loan, will open for subscription on Monday, 24th August, 1964 and close on Saturday, 29th August, 1964 or earlier without notice as soon as subscriptions approximate to the amount of each issue. The Kerala Government's loan will open for subscription on Tuesday, 25th August, 1964 and close on Monday, 31st August, 1964 or earlier without notice as soon as subscriptions approximate to the notified amount. All the State Governments reserve their right to retain subscriptions upto ten per cent in excess of the notified amounts.

The loans will be redeemable at par after 12 years, i.e. 24th*/25th@ August, 1976 and interest will be paid half-yearly on 24th*/25th@ February and 24th*/25th@ August, each year.

Subscriptions may be in the form of CASH/CHEQUE in respect of all the loans.

Securities of 4% Bombay State Development Loan 1964 and 4% Saurashtra State (Local Bodies Development) Loan, 1964 will be accepted AT PAR for conversion into the new loan of the Government of Maharashtra. Securities of 3% Madhya Pradesh Loan 1964, Madras Government 4% Loan 1964, 4% Uttar Pradesh Loan 1964 and 4% West Bengal Loan 1964 will also be accepted AT PAR for conversion into the new loans of the respective State Governments.

Interest on the securities of 4% Bombay State Development Loan 1964, Madras Government 4% Loan 1964, 4% Uttar Pradesh Loan, 1964 and 4% West Bengal Loan, 1964 tendered for conversion will be paid at the rate of 4% per annum upto 31st July, 1964 inclusive and at 4½% per annum for the period 1st to 23rd August, 1964 inclusive. Interest on the securities of 4% Saurashtra State (Local Bodies Development) Loan, 1964 and 3% Madhya Pradesh Loan, 1964 tendered for conversion will be paid at the rate of 4% and 3% upto and inclusive of 23rd August, 1964 and 31st August, 1964 respectively.

Applications for all the loans will be received at the office of the Reserve Bank of India at Bangalore, Bombay (Fort and Byculla), Calcutta, Madras, Nagpur and New Delhi, the branch of the State Bank of India at Patna and the branch of the State Bank of Hyderabad at Hyderabad.

Applications will also be received at other places within the respective States as follows:—

- Branches of the Subsidiary Banks of the State Bank of India conducting Government treasury work.
- Branches of the State Bank of India at places where there is no branch of its Subsidiary Banks conducting Government treasury work.
- Treasuries and Sub-Treasuries (except in the States of Assam and West Bengal) at places not served by the aforesaid branches.

Copies of the Notifications and Application Forms may be obtained at any Receiving Office.

Applicants tendering applications at the offices of the Reserve Bank of India at Bangalore, Bombay (Fort and Byculla), Calcutta, Madras, Nagpur and New Delhi will, in the event of oversubscription to the loan applied for, be given the option of transferring their cash refunds to any of the other State Government loans which may still be open for subscription. To avail themselves of this facility, the applicants should complete the "Special Option Form" copies of which can be obtained at any of the foregoing offices of the Reserve Bank of India and tender the form along with their applications.

Market NEWS and Trends

JUTE

Sharp Rise in Prices

Hectic activity characterised trading in the jute markets most of the time during the past week largely because of speculative interest. Despite the fact the authorities of the East India Jute and Hessian Exchange had expressed concern over the sharp rise in prices, there was no arresting the bullish fervour because most operators seemed to believe that, in view of the lower arrivals of jute in the Calcutta and the up-country markets coupled with indications of a hardening tendency in the price of jute in Pakistan, prices in India were bound to go up. There was a belief among a section of the marketmen that jute production would be smaller than last year not only in Pa-

kistan but in India also and consequently a stiffening of raw jute prices was inevitable if Indian mills were to continue to work to their full capacity. The fact that an assessment based on reliable reports from the growing regions indicates that there is no justification for concluding that the Indian crop too will be smaller than last year's has been ignored. Those who were responsible for pushing up the prices of raw jute were only concerned with the present fall in arrivals which can only be temporary. If arrivals have been poor it is mainly because communications between the markets and the growing regions especially in Assam have been seriously disrupted by the recent heavy rains. At the time of writing however prices have moderately recovered but this is largely because of the prompt measures taken by

the East India Jute and Hessian Exchange. Finding that speculative trading continued unabated, the EIJHE ordered on last Saturday the suspension of forward trading in jute and jute goods. In a press note issued on that day, the Exchange said that the measure, which followed a sharp rise in prices in the past few days, had been taken because in the opinion of the president of the Board of Directors of the Exchange, it is expedient to do so in the interests of the trade. The Exchange also announced certain restrictions in respect of trading. Under these, trading is prohibited on any day in hessian cloth and sacking bags hedge contracts for August and November deliveries and in raw jute contract for September delivery whenever their prices rule at or above Rs 47.50 per 100 yards, Rs 123.00 per 100 bags and Rs 34.35 per maund respectively. It was also announced that trading would be resumed on 3 August. Trading however could be resumed only on the afternoon of Tuesday and that too

after the Exchange had taken further regulatory measures to curb speculation. The measures included imposition of special margins on buyers for trading in hessian cloth and sacking bags contracts for August and November delivery and in raw jute contract for September delivery. According to a notification issued by the Exchange to the ring members, the margins would be Rs 24 per 100 yards for hessian cloth contract whenever the price ruled at or above Rs 47.50 per 100 yards, Rs 62.00 per 100 bags for sacking bags contract whenever the price ruled at or above Rs 123.70 per 100 bags and Rs 17.00 per maund for raw jute contract whenever the price ruled at or above Rs 34.75 per maund. The heavy margins imposed had the desired effect for in Wednesday's trading prices developed a sagging trend following selling pressure.

In the spot goods market prices were pushed up continuously till Wednesday when in sympathy with the futures market the trend became somewhat easier. In earlier dealings the uptrend continued unchecked aided by a number of bullish influences. Of these the firmness of the raw jute market was an important one.

TEA

Better Demand

IN the Export Sale held in Calcutta this week, offerings were 48,031 packages. There was a good demand which was more general than in the previous week. Plain orthodox teas received fair enquiry and were sold at around last levels. Eight Assam orthodox teas were a strong feature and were well sought after at a premium especially improved EOPs and OFs. Medium Assam and Dooars orthodox teas continued to sell well; but prices were sometimes slightly easier.

There was a good demand for the best Assam CTC teas, which realised useful prices and were sometimes dearer. Medium CTC descriptions, although readily absorbed, were irregular and easier with the brokers receiving better support than their Fannings. Leg-cut teas came to an easier market. Darjeeling teas continued to sell well; but prices were easier with quality.

There was an improved demand for Whole Leaf grades at higher levels, while Tippy teas were sold well. Following rates (per kilo) were quoted:—Clean Plain Fekoe Rs 5.20 to 5.60; Plain BP Rs 4.40 to Rs 4.70; Plain Fannings Rs 4.10 to Rs 4.30; Medium Assam CTC BP Rs 6.20 to Rs 6.60; Medium Assam CTC Fannings Rs 6.20 to Rs 6.70; East Assam CTC BP Rs 7.20 to Rs 8.00 and Best Assam CTC Fannings Rs 7.20 to Rs 7.80.

Mr A. S. Bam, the Chairman of the Tea Board, has stated that the demand for Indian Tea in the USA is showing considerable improvement. In spite of sales difficulties owing to competition from other beverages Indian tea is finding some inlet in view of the efforts of the Tea Council of United States and the Indian Tea Board. He says that a special blend of Indian tea has been put on sale by blender in the US market.

Mr Bam says that the USA used to import 22 million pounds of tea annually from India, which recently improved considerably. India's share of tea in the US market amounted to only 22 to 23 per cent. Fortunately, the per capita consumption of tea in the USA has gone up by 2 per cent, while

that of coffee declined by 2 per cent. It will be wise to have an intensive propaganda in collaboration with the US Tea Council to dispel an erroneous notion about tea that it was not a beverage. As a first step towards this end, Mr Bam says that football coaches are propagating about the utility of Indian tea in building up stamina.

In the internal sale held this week, offerings were 27,636 packages of Dusts. Demand, though good, was weaker than in the previous week. CTC descriptions opened up to 30 paise below last

levels and, towards the close, were frequently selling at rates easier by 50 paise. The smallest and brightest sorts, however, received better support.

Plain orthodox teas were readily absorbed at firm to dearer rates, while Assam varieties were taken up at about last levels. Legg-cuts, when possessing bright liquors, were fully firm but other sorts were often a little easier. Following rates were quoted:—Plan Orthodox Dust Rs 4.20 to Rs 4.50; Medium Assam Dust Rs 4.90 to Rs 5.70; Legg-cut Dust Rs 4.80 to Rs 5.30; Medium Assam CTC Dust Rs

5.70 to Rs 6.10 and Good Assam CTC Dust Rs 6.50 to Rs 7.00.

In the Cochin market, offerings were 2.61 lakh kgs of tea dusts. The market met with only a fair general demand at lower rates. Prices of low mediums and mediums, which met with a fair support, were generally irregular and quoted up to 20 paise a kilo easier. A few selected coloury mediums were, however, firm on last week's rates. The best high-growns were fully firm, while other types were easier. Although the residuals shared in the general trend of the market, they were

quoted at lower rates. Unorthodox dusts were sold well, while other kinds declined in prices.

In the sale held this week, a quantity of 576,000 kg of Leaf grades was offered. Quality in general was well maintained from all districts. Teas from the Nilgiris again showed a slight improvement. Following rates were quoted:—Low Mediums Rs 4.00 to Rs 4.25 (Rs 4.10 to Rs 4.35); Mediums Rs 4.25 to Rs 4.60 (Rs 4.30 to Rs 4.60); Good Mediums Rs 4.55 to Rs 5.30 (Rs 4.65 to Rs 5.30) and Nilgiri BOP Rs 4.50 to Rs 6.75 (Rs 5.00 to Rs 7.80). Figures shown within brackets were the rates quoted for the corresponding week of last year.

In the Colombo market, offerings consisted of 7,974,787 pounds. Highgrown Broken from western districts met with less demand and prices declined by 5 to 15 cents per pound except for best invoices. Uvas and Udupusellawa BOPs were, however, generally dearer following quality. Better medium broken orange pekoes were slightly dearer. Low medium sorts were often substantially dearer except for the poorer leaf descriptions. Leafy low-grown teas met with more restricted demand at a drop of 50 to 10 cents per pound.

COTTON Reaction After Initial Firmness

AFTER initial firmness, prices in the Bombay Cotton futures market developed a slightly reactionary tendency at the close under the lead of August delivery. A significant development in the market was the imposition of margins on outstanding positions in the current August contract. The rate of the margin is Rs 7,500 per 100 bales on outstanding positions and will be payable by bears if the contract declines below Rs 725 and by bulls if it rises above Rs 750. The object of the imposition of margins is to restrict fluctuations and to check particularly the upward movement.

As prices at one stage reached the marginal level, bulls came out to liquidate on fears of withdrawal of exemption limit for margins. August delivery closed at Rs 745.75. Jharilla March opened steady at Rs 727.25 and, after improving to Rs 728.25, declined to Rs 726.50 under liquidation, to close finally at Rs 727.

In the Spot section, sporadic enquiries for quality cotton were noticed. Mill buying was confined to Laxmi, CO2, L/147 and 197/3.

In the Export section, activity was generally restricted. Bengal Deshi was quoted at Rs 191 to Rs 219.

In the import section, brisk demand was noticed for Egyptian Giza 45 and Menoufi. Following the difficulties in obtaining these varieties, some mills were reported to have switched over to Pima cotton and Sudan higher grades. Good demand was also reported for the new East African crop at lower prices.

Following the decision made by the Egyptian Government not to change its foreign exchange policy, the Textile Commissioner decided to issue forthwith import licences for Egyptian cotton against payment in sterling. This was received by trade circles as a welcome relief.

CLOTH & PIECEGOODS

Although activity in the Piecegoods market continued to remain restricted, prices remained firm, thanks to the improvement in off-take despite resistance to bulk buying. Dealers refrained from buying in sizable quantities, because of the high prices and the uncertainty about the Government policy. Fair enquiries were, however, noted from Assam and Bengal, while South India was comparatively quiet. Mysore and Madhya Pradesh showed some interest in seasonal varieties.

Quality-wise, some business was reported done in inferior coatings at higher prices. Prices of Gadlapat showed an upward trend, while supplies of superior long-cloth continued to be tight.

On the export front, USA was reported to have bought a substantial quantity of grey medium and coarse sheetings. Slight improvement was also seen in the off-take by the UK. Moderately good business was done with Australia in wider width sheetings, bleached longcloth and printed furnishing fabrics.

Restricted bookings were made by East Africa in grey coarse sheetings and grey drills. Trading with Sudan was comparatively slack though stray business was reported in medium and superior voiles and dhoties.

Sugar Prices Steady

SUGAR prices in the open market have continued to remain steady, as supplies are restricted. In the Hapur market, rates are moving between Rs 175 and Rs 180 per bag as against the controlled prices of Rs 135 to Rs 140 quintal. In order to regulate the supply and distribution of sugarcane among the factories, crushers and khandasari units, the Uttar Pradesh Government had announced its new khandasari and crushers' licensing policy.

The new Union Food and Agricultural Minister has already announced that a Committee will soon be appointed to go into the problems of the industry in relation to production, distribution and prices. Although full de-

tails are not given, it is indicated that the Committee will investigate the causes that hinder production, the cost factors, existing distribution pattern and prices. It will formulate long-term recommendations on these aspects in due course; but its immediate task will be to suggest a suitable pattern for distribution and prices for the coming season.

With the increasing internal demand and also favourable export opportunities, the need for maximising production is obvious. Even though the next season's target

has again been fixed at 33 lakh tons, the Government may still be not so sure if it will be achieved. It remains to be seen how the Committee will help find a way out; but with experts and representatives of the industry on it, the Committee will be in a better position to take a practical view.

Meanwhile, the behaviour of the world sugar market during the past few weeks indicates that the problem is now again one of potential over-production and no longer one of shortage. According to a report from London, the

tightness in supplies which some dealers had been forecasting for this time of the year has not materialised. On the one hand, consumers been satisfied with waiting for the new crop either living on a hand to mouth basis or drawing on their already low stocks. On the other, unexpected supplies have appeared on the market, particularly from Japan which, having over-bought, is reselling several cargoes and from Brazil.

Returns from the 1963-64 crop are higher than at first expected. A

GROWING STEADILY EVERY YEAR—

THE BANK OF BARODA

Established as a local bank with about 20 employees, the Bank of Baroda is now one of the leading banks in the country, with 205 branches. These are spread all over India and abroad and collectively employ over 5,000 people. Deposits total more than Rs. 140 crores. This dramatic and dynamic growth has been the result of meticulous planning and courteous service. Moreover, the Bank of Baroda has on its Board of Directors, men who are eminent in the industrial and financial world—thereby enhancing the bank's stability and prestige.

JWT/BC-00-2042

leading London firm recently estimated it at 53.4 million tons—3.5 million tons more than in the previous campaign. Now reports from all parts of the world indicate that there is increased acreage, as producers have been encouraged by last year's high prices to boost their output. The total European crop has already been estimated at some 23.9 million tons against only 19.3 million in the last campaign.

export price policy, they can ill afford to make sizable deals. Meanwhile, the prices continue to remain fairly steady, sentiment being mainly influenced by the fear of a cut in the new season's crop. It is now expected that only about 2,700 tons of cardamom will be harvested against 3,600 to 3,700 tons picked last season. At the present moment, the export demand is not at all encouraging, especially from Jeddah.

Mercury Prices—10-year High

In the London market, Mercury prices have reached their highest level for 10 years. A tight supply position, through a combination of heavy industrial demand and lack of new output, is thought unlikely to ease in the near future.

London spot prices have risen to £100 from £95 per flask of 96 pounds in weight. At the beginning of the year, mercury was fetching only £77 and, in September last year, the price was quoted at only £58.

Among the two major producers, the market looks to Italy to expand output by 25 per cent this year over her 1963 production of 60,000 flasks and Spain should exceed her last year's level of 70,000 flasks. Both countries are reported to have been well sold into 1965 and there is little mercury available from other sources.

Russia has exported hardly any supplies since 1962, while Chinese shipments are a mere trickle. The consistently high prices may be regarded as an encouragement to a search for substitute materials which, in turn, can undermine the trade if mercury prices go any higher.

Much of the present rise in mercury consumption is due to its increased usage by developing countries in fungicide manufacture and expansion of the plastics industry's chlorine-caustic soda plants which use it as a basic element.

CARDAMOM Export Prospects

Exporters of Cardamom have yet to receive a clarification from the Government of India that its decision to maintain the export prices will be applicable for the whole year. Pending a clear statement, shippers fear that no big export business, particularly with the Continental countries, will materialise.

Export deals in cardamom with some of the European countries are committed in advance for a period of three to six months. If the shippers are not sure whether there will be a continuity in the

Rice—Record World Crop

According to a world survey by the US Agriculture Department, unusually high yields in non-Communist Asian countries pushed this season's world rice production to an estimated new record of 160.7 million metric tons of rough rice. Non-communist countries of Asia accounted for about 89 per cent of this year's world record crop, which compared with the previous record of 153.4 million metric tons in 1961-62 and a poor crop of 152 million metric tons in 1962-63.

The world survey does not include the Soviet Union, Communist China or other Communist-dominated parts of Asia; because they did not provide meaningful statistics. American production of 3.1 million tons was 6 per cent above last season despite a decline in acreage. African production of 5.2 million tons—2 per cent lower than last season despite a record 9 million acres planted—was adversely affected by lower yields in the UAR. Western European production of 1.3 million tons was 9 per cent below last season. Despite low yields per acre, Australian production was expected to achieve a new high.

OILS AND OILSEEDS Modest Decline in Prices

The Bombay Oilseeds market displayed relatively sober conditions during the week under review. Activity in the futures section was virtually at a standstill. The trade was anxiously awaiting Government action on its plea for the restoration of hedge trading in groundnut and groundnut oil. Most of the operators felt that the timely announcement of this facility might help in bringing down prices.

Some indication of the Government's approach to the problem was expected to be available in the near future. The question of new crop contracts for castor seeds and linseed also continued to engage the operators' attention although a section of the trade was

doubtful about the imminent start of the business in view of the substantial difference between the prevailing ready prices and the existing official ceiling.

In the ready groundnut section, trading disclosed a firm trend, as the receipt remained smaller than the current offtake. Coromandel quality was done up to Rs 67.25 before there was a slight reaction at the close. Groundnut Oil was, however, marked down to Rs 25.40 from a high of Rs 26.20. Crushers and vanaspati manufacturers were adopting a cautious attitude, pending further information about the new crop.

In the Linseed section, prices suffered a substantial setback with the ready rate being marked down to Rs 42.25 from a high of Rs 50. Similarly, Linseed Oil closed at Rs 26.90 after touching a high of Rs 21.30.

In the Castorseed section, the tendency for ready prices was to move upward in view of the periodic demand from shippers and crushers against their pending commitments. Commercial quality was quoted at Rs 17.65.

In the Madras market, arrivals of seeds were 25 to 30 tons a day and were mostly summer peanuts. Small crushers were absorbing these stocks. The rate improved to Rs 106 from Rs 103. Arrivals in the North and South Arcot districts continued to be around 300 tons a day. The Pollachi crop is expected towards the end of this month.

While the groundnut section was firm with a smart rise in prices, the Oil section showed a tendency to decline. The rate for the ready position, after ruling firm at Rs 256 per quintal, declined to Rs 250 at the close. It is stated that vanaspati interests, in order to keep the market lower and check price levels, have agreed among themselves to operate within a ceiling. It is mentioned that for the Madras Zone, they have fixed Rs 255 per quintal, while higher prices are reported for Bombay, Calcutta and Delhi zones. Bazar wholesalers may also follow the lines of vanaspati interests. With this news, weak holders turned sellers and the rates declined.

YARN Staple-Fibre Hardens

After a protracted dull spell, Staple-fibre yarn has developed a firm trend with the prices recording an alround rise ranging from 25 to 37 paise per pound in respect of different varieties. The rise is attributed to a reduction in supply and the prospects of an early commencement of the hedge trading in the commodity.

It is stated that, as some leading spinners of staple-fibre yarn have switched over to the manufacture of polyester-viscose blended yarn, the production of staple-fibre yarn has tended to decline. Kohinoor 2/40 staple-fibre yarn, which was on offer at around Rs 4.31 a few days ago, has spurted to Rs 4.62 with buyers at this level. It is stated that offerings in this variety have dried up. The firmer tendency in prices is also aided by the hope that the hedge trading will be commenced shortly.

SILK Steady Trend

Prices of the Government filatures in the Mysore State maintained a steady trend. Kisan silk had shown a downward trend to rule at Rs 107.00 per kg. Cottage basin silk had a steady market.

A mixed trend was observed in the prices of Charka raw silk. There was no market for superfine. 1st quality had a rise only in the maximum to rule between Rs 80.47 and Rs 84.32 per kg. 2nd quality had a fall only in the maximum to range between Rs 77.16 and Rs 80.47 per kg. 3rd quality had a rise only in the minimum and was quoted between Rs 73.85 and Rs 77.16 per kg. Dupion (Charka) was in demand between Rs 27.55 and Rs 39.69 per kg.

The prices of the Spun silk yarn remained unchanged.

As regards the reeling cocoons the Sidlaghatta market had a fall both in the minimum and maximum to rule between Rs 5.00 and Rs 6.50 per kg; whereas the Mugan market had a rise both in the minimum and maximum to range between Rs 4.50 and Rs 5.25 per kg. The Channapattana variety had no market.

In the case of seed cocoons, the Foreign variety had a rise only in the minimum to rule between Rs 3.00 and Rs 12.00 per thousand; whereas the Mysore variety had a steady market.

Prices at the Bhagalpur silk market remained stationary at the previous week's level.

Cottage basin silk (White) and Charka raw silk had a steady market. There was no market for reeling cocoons. Pierced cocoons, silk waste and Matka yarn were in demand between Rs 12.00 and Rs 14.00, Rs 1.00 and Rs 1.62 and between Rs 27.00 and Rs 38.00 per kg., respectively.

Prices in the Assam silk market remained steady during the week.

The f.o.b. prices and landed cost of Japanese raw silk of 20/22 denier '2A' were Rs 57.45 and Rs 92.13 per kg., respectively during the month of March, 1964.

NCDC Production in June

The collieries of the National Coal Development Corporation produced 6,64,802 tonnes of coal during the month of June, 1964, as against 6,50,046 tonnes in the preceding month. The pit-head stocks amounted to 6,92,042 tonnes at the end of the month under review.

Of the total production, Bihar accounted for 4,80,082 tonnes of coal, followed by Madhya Pradesh and Orissa producing 1,27,521 and 57,199 tonnes respectively.

For the INVESTOR

INVESTMENT GOSSIP Need for Reliefs

After an attempt at rally noticeable earlier in the week, the stock market is again in a depressed mood. The return of the reactionary trend is attributed to the deterioration in the world political situation following the war like conditions that have come to prevail in South East Asia as a consequence of the retaliatory measures taken by the US in North Vietnam. Within the country too, disquieting trends have come to manifest themselves as witness the serious disturbances in Ahmedabad. It is however clear that although the stock market may display slightly improved sentiment now and then, as it did earlier in the week on reports of the purchase of selected equities by the Unit Trust, the possibility of a revival of sustained buying interest seems to be still remote. The continued slump in the investment market has been viewed with concern and there is a large body of opinion in the country which thinks that unless remedial measures are taken expeditiously, the very cause of industrialisation will get a serious setback before long. In a joint memorandum to the Union Finance Minister, the presidents of the recognised stock exchanges have recently pinpointed the urgency of effecting an immediate revival of the capital market. Refuting the charge that the stock market is not a true barometer of the state of the economy, the memorandum has averred that the stock market merely reflects the dismal economic, corporate, fiscal and political trends of the time. The main reason for the slump in share prices especially after the last budget is the loss of confidence of investors in the future of equities. The steep fall in the prices of new issues has unnerved operators and investors alike. Furthermore, the disastrous taxation imposed in the last two budgets has reduced the savings in the hands of individuals almost to the vanishing point. It will be evident therefore that unless some of the taxation measures which either drastically reduce the savings or make investment in equities unattractive are revised, it will be idle to expect a revival of activity in the stock market.

INVESTMENT SPECIAL

That fiscal policy has eroded crores from the value of equity shares, particularly on the Calcutta Stock Exchange, is the burden of a memorandum presented by the Presidents of the recognised Stock Exchanges to the Finance Minister. The memorandum backs its case for appropriate reliefs with a mass of facts and figures. It is thus of interest to the investor, and is hereunder reproduced in full.

"We Submit . . ."

The following is the text of the Joint Representation to the Finance Minister from the recognised Stock Exchanges:

Sri T. T. Krishnamachari,
 Minister of Finance,
 Government of India,
 NEW DELHI.

Dear Sir,

On behalf of the Stock Exchanges in India, we make this submission to say that we have been greatly distressed by your recent comments on the Stock Exchanges, both inside of Parliament and out of it. Your pronouncements lead us to believe that you are under misapprehensions:—

- (1) that the Stock Exchange presents a "distorted" picture of, and is "no real indicator of the economic trends";
- (2) that it has no logical link with the facts of corporate history and developments;
- (3) that "prices have been hammered down on the Stock Exchange"; and
- (4) that its affairs are manipulated by a set of rich men.

These are serious misapprehensions, and as such we feel it necessary to place before you the facts of the situation to dispel all possible mis-conceptions from your mind.

In the first place, Sir, it is not correct that prices on the Stock Exchanges are capable of being constantly manipulated by a set of persons. Though it is not quite outside the realm of possibility that a set of persons may influence the trend on the Stock Exchange for a moment, yet the same cannot have more than an ephemeral

duration; because the operation of the law of supply and demand under which the Stock Market works would quickly correct the distortion so produced. For the Stock Market is after all a free market where prices are neither dictated nor fixed by the authorities or by any set of persons, but are determined by a process of two-way bids. Prices on the Stock Exchange reflect the inexorable operation of the basic law of supply and demand. In truth, they represent the hopes and anguish of hundreds and thousands of investors scattered all over the country. Nobody has any hidden hand behind this process.

We should add, Sir, the Stock Exchange merely acts as a mechanism for execution of orders for purchase and sale of securities, originating from individual investors who in their own ways make an estimation, correct or otherwise, of the surrounding course of events. If in this process of execution of orders, the Stock Exchange records the quotations of the day, in so doing it merely plays the same role as that of a seismograph which records the tremors of the earth. It is obvious that the fault is not that of the instrument that faithfully records the tremors, but that of the causes which produce the tremors.

Sir, when you said that in the post-budget period "prices have been hammered down on the Stock Exchange", you failed to take into consideration the trail of events that served as a trend. It will be against evidence of fact to say that the current trend in the stock market is fortuitous one suddenly emerging out of your Finance Bill. As a matter of fact the current trend is merely a continuation of the debacle that overtook the stock market since the price crash in Wall Street early in 1962, which like a seismic wave convulsed the Stock Exchanges all over the world. And barely had the market recovered from the shocks of same, the Chinese aggression on the borders of India in the autumn of 1962 again unnerved it. Thereafter a succession of emergency measures beginning with the suspension of forward trading and ending with the levy of SPT in February 1963 gave it repeated coups. By the spring of 1963 the market had become, greatly crippled. Crores of rupees of value was eroded from the prices of shares. Investors got unnerved and left the market. It was withdrawal of the ban on forward trading early in the last half

of 1963 which for the first time infused it with some flicker of life. Thereafter assumption by your goodself of the portfolio of finance in August last led people to believe that you would sooner or later adopt measures for revival of the capital market and bring about an invigoration of the economy of the country. Very soon this optimistic feeling of theirs was reinforced by the bold steps you took in abolishing price control over many commodities, relaxation of credit and so forth. Repeatedly you also expressed your anxiety and determination to revive the investment market and accelerate the economic growth of the country. All this helped the Stock Market to recover to some extent, and when the budget days drew near, the market went forward further under the hope that your goodself will not only undo the great harm that had been done to the economy by excessive taxation of the preceding year, but will also give fresh fillip to savings and investment. When the budget proposals belied these hopes, prices naturally went back to the previous levels.

To be frank about it, Sir, the Stock Market at the moment merely reflects the dismal economic, corporate, fiscal and political trends of the time. The country's national income is not moving apace; agricultural production has almost come to stay static; industrial production has also a sluggish progress; taxation is eating into the savings of individuals and corporate concerns; and on the residual income that remains the last havoc is being wrought by acute inflation which now infests the country. Evidently, these are not the conditions conducive to generation of savings and growth of investment. Yet the importance of generation of savings in a growing economy goes without saying. In your budget speech you yourself had said: "One of the prime objectives of our economic and fiscal policy must be to generate savings both in the hands of individuals and in the hands of corporate sector." But with the present rates of taxation, the annuity deposit scheme, and the surtax on companies, how can the individuals and corporate bodies be enabled to generate more savings to meet the ever-increasing demand for funds needed on account of development?

If indeed savings are to be generated and the proper climate for investment is to be built up, then it is not merely the industry which is to be given incentives; incentives need to be given also to individuals.

duals. An investment market can effectively function only on the willing support of individual investors. The present uninspiring climate of the investment market fails to stimulate the investors to act in keeping with the needs of the occasion. The frustrated fate of the new issues floated recently speak much in this regard. This there was not only a sharp decline in the amount of capital issue from Rs 73.8 crores in 1962 to Rs 54.6 crores in 1963, but the disturbing aspect of it was that heavy portions of the new issues fell as onerous burdens on the shoulders of the underwriters. This is something deplorably different from the conditions of 1960-61 when new issues used to be oversubscribed as much as 70 to 80 times. Individual investors went ahead in those days to lend their support to the new issues simply because of a healthy stock exchange with steadily appreciating values of the shares dealt thereon. They ignored the 'yield' element and turned to the potential growth of companies. But the heavier rate of company taxation (from 15 to 50 per cent) and the SPT (now its successor the Surtax) inhibited the potentialities of corporate growth. Further the tax on notional gains from bonus shares and the new impost of 7½ per cent on corporate dividends, have disturbed the psychology of the investors in regard to the making of any gains from the purchase of equity shares.

In the circumstance you will agree with us, Sir, that if savings are to be generated in the hands of individuals and also in the hands of corporate bodies, and the climate for investment is to be also tuned up to the desired pitch, then the fiscal policy of the country needs to be properly reviewed in consonance with social and other aims. A 7½ per cent impost on dividend and the new tax on notional gains from bonus shares will not fetch the Government much revenue. On the other hand their repercussions on the confidence of the investors have been tremendous. Particularly disastrous has been the effect of this lack of confidence of the investors on the new issue market of the country. Not only the volume of new issues has become smaller (it has dropped from Rs 73.8 crores in 1962 to Rs 54.6 crores in 1963) but investors are loth to take them up as avidly as before. The investors have particularly been unnerved by the violent fall in the prices of the new issues floated during the past few years. To what extent they have fallen will be evident from the following table:

Scripts	Pre-slump Highest Price		Current Price	
	Rs		Rs	
Associated Battery	41.75		22.12	
Phillips Carbon	24.62		11.25	
Isaac Holdens	16.69		12.00	
British Paints	28.62		20.50	
Indian Tack & Nail	20.12		9.81	
Synthetics and Chemicals	169.00		80.50	
Baroda Rayon	166.00		80.50	
Hindusthan				
Twyford	16.69		13.00	

Sir, this serious fall in the prices of the new issues and the consequential repercussions thereof, on the minds of the investors is giving us a great deal of anxieties. For, we realise that the future of India's industrial development rests on the proper and active functioning of the new issue market, which, we needlessly point out, serves as a vehicle through which forces affecting employment and real income make themselves felt.

All this would pinpoint the tremendous urgency of effecting an immediate revival of the capital market. The investors need to be spurred up. This can come only through an active state of the stock market and an appreciable rise in the prices of shares. We believe, Sir, your aim is also to bring this about.

Sir, if you are in a mood of anxiety about the current depressed condition of the stock market, we assure you that we too are a co-sharer in same. You must not have the slightest notion lurking in your mind that the authorities of the Stock Market are in any way hesitant or reluctant to co-operate with the Government in its aim to reviving the investment market of the country. Now we have Government nominees on the Committees of the Stock Exchanges, and they know that we are ever anxious to lend our helping hands to the Government in pulling up the market from its present rut of depression. The matter is indeed of great concern to us because with the fortune of the Stock Exchange is bound up inextricably the very existence of the members of the Stock Exchange. But the atmosphere in which we may be able to work effectively requires to be transformed for the purpose. To bring about this transformation, we have the following suggestions to make:—

- (1) The new 7½ per cent impost on dividend and the levy of the tax on notional gains from bonus shares need to be reviewed, because they are likely to discourage the provision of risk capital by investors;
- (2) The non-stop inflation which has overtaken the country has brought about a depreciation in the value of the rupee, thereby reducing the real income of the investors from dividends. To do justice to the investors in their plight the companies should be encouraged to pay larger dividends to the shareholders so that in these hard days they may recoup their original real income;
- (3) Investors should be given an incentive by elimination of the existing invidious treatment of income from dividends as 'unearned income';
- (4) The multifarious margin system that the Government foisted upon the Stock Exchange when it permitted it to resume forward trading last year has fettered the business of stock trading so much that it has stood in the way of early revival of

the market. This, therefore, needs to be reviewed and rationalized.

- (5) And lastly, the Reserve Bank should by gesture or other wise urge the country's banking system to liberalize its policy of lending against stocks and shares.

We trust, Sir, that these suggestions of ours would receive your earnest and favourable consideration.

Yours faithfully,

Sd. C. L. Jhunjhunwala
K. R. P. Shroff

NEW ISSUE NOTES

Remington Rand

REMINGTON Rand of India Limited has announced that it will be converted into a public limited company with Indian participation in its equity shares. Discussions are now being held with the Central Government and it is expected that a prospectus will be issued in six months.

The factory has an installed capacity for manufacturing 30,000 typewriters a year and the present rate of production is 27,000 a year. According to a spokesman of the company, the factory has attained an indigenous content of 95.89 per cent, while its ultimate target is 99.5 per cent.

The company produces nine Indian language keyboards. New testing and production equipment has been imported. This will enable the company to increase the production of typewriters with improved quality standards.

National Rubber

National Rubber Manufacturers Limited is successful in raising Rs 50,00,000 through a rights issue of 5,00,000 Ordinary shares of Rs 10/- each, at par, in the ratio of one new share for every existing ordinary share. Not only the bulk of the existing rights was exercised, but also there were applications for substantial number of additional shares making the issue over-subscribed in spite of the prevailing depressed conditions of the capital market. The allotment of additional shares has been made on a graduated scale according to the basis determined in consultation with the Calcutta Stock Exchange. Share certificates for both rights and additional shares will be despatched to the Shareholders and/or allottees by registered post on or before 30 September, 1964.

Nimar Textiles

Nimar Textiles Limited will shortly enter the capital market with a public issue of Rs 42 lakhs in both equity and preference shares. The company will set up a mill at Khandwa in Madhya Pradesh. The authorised capital is Rs 3 crores, divided into 2,50,000 equity shares and 50,000 cumulative redeemable preference shares, both of Rs 100 each. The issued and paid-up capital is Rs 70 lakhs of which Rs 56 lakhs is in equities and the balance in preference shares. Of this, promoters and friends will take up Rs 28 lakhs in equity shares. The balance of Rs 28 lakhs in preference shares will be offered to the public. The entire public issue is underwritten. The capital outlay on the project is estimated at Rs 197.49 lakhs. Production is expected to commence by July 1965.

★

INVESTMENT NOTES

TISCO

Production at the Jamshedpur Works of the Tata Iron and Steel Company Limited has shown a notable improvement in July as compared to June. The production of Saleable Steel is higher at 130,000 metric tons as against 120,100 metric tons, while that of Pig Iron has risen to 162,500 metric tons from 152,700 metric tons and Steel Ingots to 161,800 metric tons from 158,400 metric tons.

HISCO

According to the figures released by the Indian Iron & Steel Company Limited, the output of Pig Iron has shown a sharp decline to 74,440 metric tons in July from 99,003 metric tons in the preceding month. In this connection, it stated that the production is lower due to fracture of the large Bell Rod No. 3 Furnace on 26 June resulting in no production from that furnace. It is also added that continuous efforts are being made to bring the furnace back to normal working.

The output of Steel Ingots is lower at 67,295 metric tons against 79,845 metric tons, while that of Saleable Steel has improved to 63,222 metric tons from 52,274 metric tons. Despatches of saleable steel are shown higher at 58,947 metric tons against 64,791 metric tons.

Private Collieries—Amalgamation

It is learnt that compulsory amalgamation of private collieries has again been put off. Legislation on compulsory amalgamation has been delayed and it is not likely to be introduced in the next session of Parliament. The Government policy to persuade colliery-owners to amalgamate their mines voluntarily has not proved to be successful according to official circles in New Delhi.

Ion Exchange

Ion Exchange (India) Limited, a subsidiary of the world famous permittit Company Limited of London, will shortly produce in India a comprehensive range of modern polystyrene ion exchange resins of both cationic and anionic types. In addition, the company will design all types of Permuitit plant to serve the growing demands of the Indian industry. Permuitit plant and ion exchange resins are also used extensively in the chemical and metallurgical fields for purposes other than water treatment. Permuitit plant is employed, for example, in the extraction of uranium from its ore.

Imperial Tobacco

Imperial Tobacco Company of India Limited has recorded a sharp decline in the net profit, before taxation and after depreciation, for the year ended 31 March 1964 to Rs 286.71 lakhs from Rs 442.61 lakhs in 1962-63. The directors have indicated that the working results have been affected by the imposition of heavy taxes. The provision for taxation is Rs 187.46 lakhs against Rs 262.37 lakhs. The directors have proposed a final dividend of 2½ per cent, making a total of 6½ per cent for the year as against 8 per cent previously. The prospects for the current year are considered to be more encouraging. Accordingly, a higher interim dividend of 2½ per cent, taxable, is recommended for the current year.

Hindustan Wires

Hindustan Wires Limited has proposed a dividend of 60 paise per share on 5,00,000 equity shares of Rs 10 each to those shareholders registered as on the 29th September. This dividend is covered under Section 84 of the Income-Tax Act according to the calculation made by the company and no tax will be deducted therefrom. Again, on this dividend, no income-tax and super-profits tax will be payable by the shareholders under Sections 85 and 110 of the Income-Tax Act. Transfer books will remain closed from the 16 to 29 September, 1964.

★

INVESTMENT BRIEFS

United Nilgiri Tea Estates Company Limited has proposed a final dividend of 11 per cent, making a total of 18½ per cent, taxable, for the year ended 31 March 1964 (22 per cent, taxable previously).

Phoenix Mills Limited has maintained the dividend on the ordinary shares at Rs 20 per share for the year ended 31 March 1964. Ahmedabad Electricity Company Limited has recommended a final dividend of Rs 5 per share, making a total of Rs 8 per share for year ended 31 March 1964, same as previously.

Fertilizers and Chemicals (Trawancore) Limited has also skip-

ped the dividend for the year ended 31 March 1964.

Malabar Industrial Company Limited has also skipped the dividend for the year 1963-64.

Velimalai Rubber Company Limited has repeated the dividend at 7 per cent for the year 1963-64.

Mysore Coffee Estates Limited has proposed a taxable dividend of 6 per cent for the year ended 31 March 1964 as against nil previously.

Indian Wood Products Company Limited has proposed an interim dividend of Re 1 per share, taxable for the year ended 30 September 1964.

Mysore Stoneware Pipes & Potteries Limited has maintained the dividend at 12½ per cent, taxable, for the year ended 31 March, 1964.

Sandvik Asia Limited has proposed a maiden dividend of Rs 6 per share, taxable, for the year ended 31 March, 1964.

★

BALANCE-SHEET REVIEWS

ALIND's Excellent Performance

THE working results of Aluminium Industries Limited for the year ended 31 March 1964 are very encouraging. While sales have risen to Rs 662.42 lakhs from Rs 573.89 lakhs, the net profit, before providing for depreciation and Taxation, amounts to as much as Rs 80.09 lakhs as against Rs 70.27 lakhs for the previous year.

In respect of allocations, Depreciation is raised to Rs 20.24 lakhs from Rs 14.88 lakhs; Development Rebate Reserve to Rs 4.91 lakhs from Rs 69.250 and General Reserve to Rs 2.00 lakhs from Rs 1.00 lakh. As the company is eligible for the rebate in respect of taxes, as belonging to the special group of industries listed for this purpose and there is also a reduced liability because of the abolition of the SPT and its substitution by the Surtax, the allocation towards Taxation is significantly lower at Rs 30 lakhs against Rs 39.50 lakhs. In the preceding year, Dividend Equalisation Reserve got Rs 2 lakhs.

Despite increased allocations, the directors have proposed to raise the dividend from 15 per cent to 18 per cent, subject to tax, on the equity capital increased by the issue of new shares. The amount required for this purpose is much larger at Rs 22.73 lakhs against Rs 15 lakhs. The new shares are now fully paid-up and will get the full final dividend of 9 per cent, taxable.

Mukand Iron—Jump in Profits

The Mukand Iron and Steel Company Limited has reported a substantial rise in profits for the year ended 31 March 1964. The net profit, before depreciation and taxation, has jumped from Rs 67 lakhs to Rs 92.26 lakhs.

In respect of allocations, Depreciation is raised to Rs 21.46 lakhs from Rs 15.25 lakhs; Taxation to Rs 38.50 lakhs from Rs 29.75 lakhs

and General Reserve to Rs 30.44 lakhs from Rs 15.30 lakhs. The provision for Development Rebate Reserve is, however, lower at Rs 2.55 lakhs against Rs 4.25 lakhs. There is no allocation to Dividend Reserve against Rs 15 lakhs previously. The appropriation in the preceding year were helped by a transfer from reserves amounting to Rs 12.81 lakhs.

The directors have decided to recommend Rs 1.20 per share on old equity shares. Deferred shares will get Rs 37.43 per share against Rs 29.91 per share, taxable. The new ordinary shares will get a proportionate dividend of 24 paise per share. A larger amount will, of course, be needed for paying these dividends.

Gwalior Rayon Does Well

Gwalior Rayon Silk Manufacturing (Weaving) Company Limited has made further progress in the year ended 31 March 1964. As a result of the functioning of the pulp plant throughout the accounting period, the huge factory at Calicut produced 7,500 tons of rayon grade pulp all of which was consumed in the staple-fibre unit of the company. Besides, about 24,400 tons of paper pulp were also produced. These were sold to the paper mills.

It is expected that, in the current year, the output of rayon grade pulp will increase considerably though the improvement under both heads will depend on the availability of suitable bamboos for each quality. In the weaving division, there was a larger output besides diversification of the lines of production. In the Engineering department, no appreciable progress could be recorded owing to the delay in the grant of import licence for essential workshop machinery and equipment.

A cotton textile mill at Bhiwani with an installed capacity of 18,000 spindles and 286 looms has been acquired. Besides, this unit has obtained a licence for further 9,200 spindles. The working of this mill has been satisfactory. The company has applied for an industrial licence for the establishment of a polysynthetic staple-fibre plant with a capacity of 50 tons daily and for PVA fibre plant with a capacity of 10 tons daily.

Meanwhile, the net profit for the year, before providing for depreciation and taxation, has jumped to Rs 433.85 lakhs from Rs 390.10 lakhs previously. The provision for Depreciation is very much higher at Rs 163.36 lakhs against Rs 83.89 lakhs, while Development Rebate Reserve is lowered to Rs 7.98 lakhs from Rs 112.96 lakhs. There is no provision for Taxation against Rs 1.30 lakhs in respect of Wealth Tax for earlier years.

It has, however, been indicated that the Supreme Court has decided the case for tax exemption against the company and the tax liability relating to the past years up to 31 March 1964 will be about Rs 6.71 crores, which will be appropriated out of General Reserve in the current year. The amount to the credit of this reserve, including the latest allocation, will be Rs 10.56 crores. The transfer to

General Reserve is Rs 233.57 lakhs (Rs 172 lakhs).

As a result of a higher level of earnings, the directors have proposed to raise the dividend on the equity capital from Rs 2.50 to Rs 2.75 per share, subject to tax, payable from the General Reserve.

Progress of Kirloskar Pneumatic

Kirloskar Pneumatic Company Limited has reported an increase in the output of all kinds of its products. New types of compressors are being manufactured in collaboration with American interests. Efforts are being made to diversify the range of production. A fresh licence has been obtained from the Government and a technical assistance agreement has been signed with an English firm for the manufacture of air brake compressors for use by the railways. There is also a scheme for producing power transmission equipment. Negotiations are being completed for this purpose with a well-known manufacturer in the USA.

For the year ended 31 March 1964, the company has reported a jump in sales from Rs 1.67 crores to Rs 2.88 crores, resulting in the net profit rising from Rs 25.56 lakhs to Rs 45.18 lakhs. The charge in respect of Depreciation is Rs 7.77 lakhs (Rs 4.60 lakhs) and Development Rebate Reserve Rs 2.25 lakhs (Rs 1.86 lakhs). The provision for taxation is as much as Rs 23.50 lakhs (Rs 10.23 lakhs). All the same, large transfers to reserves have been made. Machinery Replacement Reserve is maintained at Rs 2 lakhs and Depreciation Reserve at Rs 3.5 lakhs, while General Reserve is raised to Rs 2.00 lakhs from Rs 50,000.

The dividend on the equity shares is raised from 10 to 12½ per cent, subject to tax. Out of the Convertible preference shares, 9,107 preference shares have so far been converted into equity shares. The last date for exercising the option to convert the remaining preference shares into equity shares is 31 December 1964.

In May this year, 15,090 equity shares of Rs 100 each were offered to the existing shareholders at par and the issue has been fully subscribed. The issued capital of the company has, therefore, risen to Rs 50 lakhs. As a consequence, it has become necessary to increase the authorised capital from Rs 50 lakhs to Rs 3.00 crores. It will then be possible to issue additional capital as and when necessary.

Kirloskar Oil Engines—Higher Dividend

Kirloskar Oil Engines Limited has proposed to raise the dividend from 12 per cent to 16 per cent for the year ended 31 March 1964 despite a decline in earnings. As there is reduced liability in respect of taxation, the disposal profits have increased. It has, therefore, been possible for the company to recommend a higher dividend even after making large transfers to reserves.

The net profit for the year, before providing for depreciation and taxation, amounts to only Rs 98.06 lakhs as against Rs 103.35 lakhs. The charge on account of Depreciation is Rs 16.17 lakhs (Rs 13.50 lakhs) and Development Rebate Reserve Rs 3.79 lakhs (Rs 3.86 lakhs). The liability towards taxation is, however, very much lower at Rs 16 lakhs against Rs 61 lakhs. The transfer to Rehabilitation Reserve is Rs 1.00 lakhs (nil); General Reserve Rs 9.21 lakhs (Rs 10 lakhs) and Capital Redemption Reserve Rs 5 lakhs (nil). There is also a provision of Rs 50,000 (nil) for Bad and Doubtful Debts.

The expansion programme is being satisfactorily implemented. Arrangements are being made to secure a loan of Rs 99 lakhs from the IFC to fund part of the funds required for this programme.

Bajaj Electricals—New Schemes

Bajaj Electricals Limited has been steadily increasing its sales during the past few years by diversifying the lines of production. The increase in turnover is mainly due to the higher output of lamps and lighting equipment and appliances.

The unit for manufacturing instruments has been shifted to Poona from Bombay. There is, therefore, an interruption to production, while the output of fans by Matchwell Electricals (India) Limited was affected because of the non-availability of electrical stampings due to the prolonged strike in the works of the suppliers. The trend of production in the past few weeks has, however, been satisfactory and the prospects for the current year are more promising. Export sales are on a large scale.

In the meanwhile, the company has made a net profit, before providing for depreciation and taxation of Rs 28.25 lakhs for the year ended 31 March 1964 as against Rs 27.20 lakhs for 1962-63. Depreciation is raised to Rs 2.42 lakhs from Rs 2.17 lakhs; Development Rebate Reserve to Rs 32,000 from Rs 13,000 and General Reserve to Rs 10.58 lakhs from Rs 4.05 lakhs, while the provision for Taxation is slightly lower at Rs 13.75 lakhs against Rs 14.00 lakhs. There is no transfer to Dividend Reserve against Rs 6.00 lakhs previously.

The dividend on the equity shares is, however, maintained on the old shares at Rs 10 per share, taxable, while the new equity shares will get Rs 1.25 per share. The deferred shareholders will be paid Rs 4.53 per share against Rs 4.27 per share, taxable. The distribution to the shareholders is to be made out of General Reserve.

ISRM Repeats

The Indian Steel Rolling Mills Limited has been able to report a slight increase in the net profit, before depreciation and taxation, from Rs 13.46 lakhs to Rs 14.08 lakhs for the year ended 31 March 1964.

Depreciation is raised to Re 3.02 lakhs from Rs 2.61 lakhs and

Development Rebate Reserve to Rs 1.50 lakhs from Rs 1.00, while the fee for technical assistance is unchanged at Rs 1.00 lakh. The provision for Taxation is lower at Rs 1.26 lakhs against Rs 1.50 lakhs. The dividend on the equity shares is repeated at 9 per cent, subject to tax. There is a transfer of Rs 1.03 lakhs (nil) to General Reserve. The appropriations were helped by a transfer of Rs 1.55 lakhs from Repairs and Renewals Reserve.

Further Progress by WIP

Western India Plywoods Limited has made further progress during the year ended 31 March 1964. The net profit, after depreciation and Development Rebate, has risen to Rs 23.27 lakhs from Rs 20.91 lakhs.

The provision for Taxation is lower at Rs 12 lakhs against Rs 12.52 lakhs, presumably due to the relief secured on account of the replacement of the SPT by Surtax. The transfer to IFC Loan Redemption Fund is Rs 2.50 lakhs (same); General Reserve Rs 30,000 (Rs 50,000) and Dividend Equalisation Reserve Rs 3.00 lakhs (nil). The directors have proposed to raise the dividend by 1 per cent to 16 per cent, subject to tax.

More from Chembra Peak

The working of Chembra Peak Estates Limited has resulted in an increase in the net profit, after depreciation but before taxation, from Rs 6.06 lakhs to Rs 10.11 lakhs for the year ended 31 March 1964.

Apart from providing Rs 1.00 lakh for General Reserve; Rs 25,000 for Contingency Reserve and Rs 75,000 for Dividend Equalisation Reserve, the provision for Taxation is raised to Rs 4.50 lakhs from Rs 3.15 lakhs and Development Rebate Reserve to Rs 82,300 from Rs 14,000. Even after these increased allocations, the directors have found it possible to raise the dividend from 20 to 25 per cent, subject to tax.

Birla Jute Earns More

According to the preliminary report, the Birla Jute Manufacturing Company Limited has made a net profit, for the year ended 31 March 1964, before providing for depreciation and taxation, of Rs 212.25 lakhs as against Rs 207.29 lakhs for the previous year.

In respect of allocations, Depreciation is raised to as much as Rs 101.24 lakhs from only Rs 67.43 lakhs and Development Rebate Reserve to Rs 35.56 lakhs from Rs 14.11 lakhs, while Taxation provision is lower at Rs 36.00 lakhs against Rs 60 lakhs and Development and Rehabilitation Reserve (Satna Cement Works) at Rs 2.24 lakhs against Rs 3.10 lakhs, leaving a balance of Rs 37.21 lakhs (Rs 62.65 lakhs).

After paying the dividends on the ordinary and preference shares and reducing General Reserve to Rs 4.00 lakhs from Rs 30.00 lakhs, there is a balance of Rs 40,062 (Rs 46,410) which is carried forward to next year. The directors

have, due to a larger provision for depreciation, decided to maintain the dividend on the ordinary shares at 15 per cent, subject to tax, payable to those shareholders registered as on 28 September 1964.

Anglo-India Jute Earns Less

The decline in sales from Rs 862.56 lakhs to Rs 776.91 lakhs is reflected in the working results of the Anglo India Jute Mills Company Limited for the year ended 31 March 1964. The net profit, after providing for depreciation but before taxation, amounts to Rs 35.63 lakhs as against as much as Rs 73.54 lakhs for the previous year.

Depreciation is raised to Rs 23.17 lakhs from Rs 15.13 lakhs, while Development Rebate Reserve is reduced to Rs 3.05 lakhs from Rs 6.30 lakhs and General Reserve to Rs 1.50 lakhs from Rs 9.81 lakhs. No provisions are possible for Taxation (Rs 17.10 lakhs); Taxation Reserve (Rs 38.10 lakhs); Dividend Reserve (Rs 9.54 lakhs); Investment Reserve (Rs 5.50 lakhs); Contingency Reserve (Rs 3.00 lakhs) and Dividend equalisation Reserve (Rs 3.00 lakhs). The directors have, however, proposed to repeat the ordinary dividend at 12 per cent, subject to tax. Transfer books will remain closed from 11 to 28 August, 1964.

Rameshwara Jute Skips Again

The working of the Rameshwara Jute Mills Limited has resulted in a lower net profit, before providing for depreciation and taxation, of Rs 13.73 lakhs for the year ended 31 March 1964 as against Rs 20.68 lakhs for the previous year.

All allocations have been reduced: Depreciation from Rs 10.64 lakhs to Rs 7.12 lakhs; Taxation from Rs 3.90 lakhs to Rs 3.31 lakhs and Development Rebate Reserve from Rs 2.28 lakhs to Rs 39.373. With the available balance of Rs 2.91 lakhs (Rs 3.86 lakhs) is added the amount brought forward from previous year of Rs 25.500 (debit Rs 3.61 lakhs), leaving a sum for disposal of 3.17 lakhs (Rs 25.500). The directors have proposed to pay the arrears of dividends on the preference shares for five years ended 31 March 1961. The dividend on the ordinary shares is skipped again. Transfer books of the company will remain closed from 10 to 28 September, 1964.

Universal Cables Incur Loss

Universal Cables Limited, in Birla group, has reported a loss of Rs 8.27 lakhs for the year ended 31 March 1964. To this is added the provision for Depreciation of Rs 21.79 lakhs, making a total loss of Rs 30.05 lakhs. This is set off against the amount brought forward from last year of Rs 25.54 and the amount of Rs 4.00 lakhs transferred from General Reserve, leaving a net debit balance of Rs 25.80 lakhs, which is carried forward to next year.

STOCK EXCHANGES Rally Bid Succeeds

ALTHOUGH stock markets have given a distinctly better appearance early in the week, top levels have attracted considerable profit-taking and liquidation from professionals. Sentiment is upset by the tense situation developing in South-East Asia and the sharp decline in stock prices on Wall Street. Towards the close, however, there is a smart recovery in the absence of fresh developments.

After giving a good performance till mid-week, Lyons Range developed a reactionary tendency towards the close due to nervous liquidation.

Dalal Street ruled weak, reflecting disquieting political news background.

Although an easy tendency prevailed on the Madras Stock Exchange, there was fair activity all around at lower levels.

Activity on the Ahmedabad Stock Exchange was restricted.

CALCUTTA

THE local stock market exhibited a marked improvement in sentiment during the first half of this week. Some of the leading speculative issues recorded sizable gains due to short-covering coupled with some replacement buying, although business passing was not large.

The smart recovery in prices was mostly technical in character. The satisfactory dividends, declared so far by some of the leading companies, gave rise to a feeling that the net burden of corporate taxes had become appreciably lower in respect of selected industries. It was thought that, if a suitable modification could be made in the Dividend Tax, efficient units could be expected to do well and, at the same time, would enable the ploughing back of fairly large sums into business.

Again, it was thought that the LIC, the Unit Trust and other institutions might now enter the market for making purchases in the coming months especially when the Central and State Governments would have completed their borrowing programmes.

Above all, the Presidents of various stock exchanges had already represented to the Central Government urging for the modification of the taxes relating to personal incomes and wealth. There was a feeling that the Finance Minister might review the whole situation and adopt new measures which would improve the climate for new floatations. With the result, offerings remained mild and prices were responsive at places.

But, the sudden turn in market sentiment from Thursday was influenced by the reports of war-like developments in the South-East Asia. The disturbing price situation, fears of labour unrest and the recent agitation by bank employees also restrained any attempt at a recovery in prices. Reports regarding disturbances at Ahmedabad were also responsible for the cautious attitude of the operators. It was, however, encouraging to note that any short-

covering at the declines was comfortably absorbed.

Turnover in the Jute section showed a considerable contraction due to the growing concern about the rising prices of raw jute. There was a fear that the profits of the mills might be squeezed, especially when the overseas demand for jute goods remained poor.

Coal shares were sluggish.

In the Tea section, business continued to be on a small scale. Attention was largely confined to selected shares of the Assam and Dooars gardens. There was a general reluctance to enter into commitments, as the average price realised for the commodity so far during the current season has been smaller than that obtained in the corresponding period of last year.

Textile scrips were generally steady although operators were cautious in commitments.

Sugar shares remained depressed. The Government decision to appoint a Committee for investigating particularly the prices and the distribution system for the coming sugar season created little impression. There was a feeling that the prospects for the next season might not improve unless steps were taken to ensure an adequate supply of cane to the mills.

In the Engineering section, price movements were irregular due to alternate buying and selling; but the undertone at the close was weak on reports of the serious situation developing in the South-East Asia. Indian Irons met with business at Rs 24.48 to Rs 24.78 till the close on Wednesday. However, selling pressure caused the scrip to slip down at one time to Rs 24.26 before finishing the week at Rs 24.52. G. K. Williams changed hands at Rs 23 to Rs 23.44 (Rs 23) and TEXMACO at Rs 25.80 to Rs 26.30 (Rs 25.80). Figures shown within brackets were the closing rates for the week.

Miscellaneous Issues moved in sympathy with the general trend of the market. Following were the price trends of a few selected shares:—

	Week's High	Week's Low	Week's Closing

Dry Cell Battery Industry

Although the dry cell battery industry in the country is now nearly a quarter of a century old, it was only during the last War that it began to make a significant contribution to the national economy. This will be evident from the fact that at the commencement of the War, indigenous production of dry batteries of all types totalled only 18 million per annum. The demand has grown fast since the War and a target of 350 million cells of dry batteries has been indicated for the Third Plan period. With the growth of industrialisation and the steady improvement of the standard of living of the people, the demand for dry batteries of all kinds has gone up by leaps and bounds. The current level of production of dry cell batteries is around 250 million cells per an-

num. In the development of this industry by far the most prominent part is played by the National Carbon Company, a division of Union Carbide India Limited. The company's factory which is located near Calcutta has now an installed capacity of 200 million cells. Apart from its large production capacity, this factory incorporates many latest developments and what is more important is continuously evolving with the aid of research and development facilities made available by its parent company in the United States, improved batteries specially suited to Indian conditions and requirements. A commendable feature of the development activity of the company is that it is being carried out with the maximum use of indigenous material, thereby effecting saving of large amounts of foreign exchange.

 PRAVINCHANDRA V. GANDHI Managing Director

In CALCUTTA our 3 Offices at:
 Bowanipore - Burra Bazar - Brabourne Road

During the course of the last few days, spokesmen of Government have been tending to be outspoken of what they consider the task of Government in rather different spheres to be. We reproduce the full texts of three speeches that illustrate the forceful nature lately observable in the presentation of official views.

Presiding over the 22nd session of the Indian Labour Conference, Mr D. Sanjivayya, Union Minister of Labour and Employment, made no bones about the official antipathy toward an agitational approach by labour:

Mr Sanjivayya on Labour

I welcome you to this 22nd session of the Indian Labour Conference. We are grateful to the Government of Mysore, particularly to the Chief Minister, Shri Nijalingappa and the Labour Minister, Shri Devraj Urs for the kind hospitality extended to us.

Bangalore is known for its scenic beauty and bracing climate. It has also won its pride of place on the industrial map of India. Much that is new and special in our industrial endeavour is taking shape in Bangalore. Let us hope that something of the equability of Bangalore's climate will pass into the deliberations of our conference.

A STUNNING BEREAVEMENT

A year has passed since the last session of the Indian Labour Conference—a year that has brought us many difficulties and a stunning bereavement. The menace of Chinese aggression remains and the double burden of defence and development which we have been bearing has started having its visible impact on the economy. Shortfalls in production have resulted in a disturbing rise in prices. But more than any other misery, the nation has lost the leader who inspired and guided it through all these years. It is impossible to escape a depressing sense of void. But it would be a poor tribute to our great departed leader if in our grief we gave in to despair. His spirit should continue to inspire us and it should be our endeavour to follow the path he has shown to us. We are smaller men, but we have a great inheritance to nurse and a great trust to safeguard. As you all know, to perpetuate the memory of our beloved departed leader a national memorial fund has been opened, and I am sure generous contributions will be made to the fund by one and all.

DISTINCTIVE SYSTEM OF PLANNING

Building up a socialist order of society through planned development of the economy is part of this inheritance. Shri Jawaharlal

Nehru envisaged a society where men were free from want and where there were fair shares for all. He was also keen that the industrial revolution which he had initiated should proceed with the minimum of social dislocation. So, our system of planning evolved under his inspiration is distinctive. It operates on a democratic base. The people, the representatives of industry and labour in particular, participate in the planning process in full measure. The Indian Labour Conference is one of the many forums in which aspects of India's economic development—so far as they affect labour and employers—are freely and frankly discussed.

BASIC FUNCTION OF ILC

It is necessary to remind ourselves of this in order to grasp the significance of the basic function of a body like the Indian Labour Conference. It has never been its tradition to discuss labour questions in isolation. The work of this conference has always been related to the interest of the nation as a whole. The distractions of the moment should not prevent us from seeing problems in context and not merely in terms of immediate gain or loss of one group or the other. It has been the privilege of this conference to do every thing to sustain the nation's efforts towards economic progress. Whatever the difficulties we may be facing today, we should not, in any way, be deflected from this course.

RISE IN PRICES

I am saying all this because the present is a time when some people might be tempted to take a shortsighted view of things. The rising prices are putting everyday life of the worker to a severe strain. In his anxiety he may lend his ears to any advice of despair and there may be people to give such advice. But desperate remedies do not solve a problem. Acting in panic or in anger will certainly not take us out of our troubles. The price situation is undoubtedly exercising the minds of all. It is the one problem on the solution of which the Government is concentrating its efforts. But then, the problem has its many ramifications. It cannot be solved at a stroke or by any single measure.

DEARNESS ALLOWANCE

Some friends have suggested automatic adjustment of dearness allowance with the cost of living index and a hundred per cent neutralisation of rise in the cost of living. I am not an economist; but I feel that unless we have more of the things we need mere pouring in of more money will not help us. In fact such a remedy might prove worse than the disease. It might very well accelerate the spiral of rising prices which it is our purpose to prevent.

There is, of course, every point in suggesting that dearness allowance should be adjusted in a suitable manner to the cost of living index. In fact, this is being done by the industrial tribunals and the wage boards. But to issue a fiat on the subject, I believe, may not take us anywhere.

COST OF LIVING INDICES

Allied to this question of adjustment is the technical one of ensuring the correctness of the cost of living indices. Some defects have been discovered in the old series and the committees appointed by Gujarat and Maharashtra have already made their recommendations. These have also been acted upon. A similar committee is already at work in Rajasthan and one is being set up in Delhi. Meanwhile, every effort is being made to construct and publish the all-India new series of index numbers with 1960 base which will give full satisfaction to everybody.

THREATS OF DIRECT ACTION

Some other friends are coming out with threats of what they call "direct action". I suggest that "direct action" in the sense of stoppage of work is absolutely illogical in the situation in which we are placed. What we need today and now is an ampler flow of goods and I cannot for a moment understand how prices can be brought down by stopping the wheels of production. Direct action, if any, should be action to produce more. Holding up production will not only cause great hardship and suffering to workers but also to all other sections of the community. This is an advice of despair which we should not entertain.

DECLINE IN LOSS OF MAN-DAYS

Our industrial relations system remains based on the Code of Discipline evolved by this conference and the Industrial Truce Resolution which it endorsed. The emphasis in both is on avoidance of work stoppages and mutual settlement of disputes. Where disputes cannot be settled mutually both enjoin recourse to arbitration. The year 1963 witnessed a welcome decline in the number of man-days lost. Against 61 lakhs in 1962 the figure for 1963 was only 32.68 lakhs. About 42 per cent of the disputes in the central sphere were also settled through arbitration since the adoption of the Industrial Truce Resolution in November, 1962 till May, 1964.

A REVERSAL

Unfortunately, however, there has been a reversal of this happy trend. Even the incomplete returns received so far show that during the first five months of 1964 the number of man-days lost was already of the order of 25.91 lakhs. I would plead with my friends

in the labour field that in spite of the stress and strain that labour is passing through along with the rest of the people, resort to work stoppages should be avoided by all means. Trade union leaders showed a commendable sense of responsibility and forbearance during 1963. It will only hurt their own causes well as the community at large if they act differently today. We are undoubtedly passing through difficult times but let us not add to these difficulties by creating situations which can only make them worse. I would plead with equal earnestness with my employer friends to see that they always give a fair deal to labour and always act in the true spirit of the Code of Discipline.

TENDENCY TO HOARD

In the present system of distribution of essential commodities there is certainly a tendency to hoard. The greed of the profiteers is adding to the miseries of the common man. I can assure you that the Government is fully conscious of this problem and will come out with adequate measures so that whatever we have is fairly distributed. But we must remember that the surest way to defeat greed and profit-making is to make hoarding and profiteering pointless. The question of increased production is basic and any action that injures production goes only to add to our misery.

CONSUMERS' CO-OPERATIVES

Even before we were caught in the vicious circles of rising prices, this conference had given its blessings to a scheme for setting up consumers' co-operatives in all sizable industrial undertakings, so that the workers may be assured of the supply of essential goods at reasonable prices. You have before you a separate paper showing the extent to which consumers' co-operative and fair price shops have been set up in industrial undertakings employing 360 or more workers. I would not say that all that was necessary has been done nor that these consumers' co-operatives or fair price shops are always able to cope with the problem of rising prices as effectively as one would wish. But this is one direction in which we have made some headway. It is not claimed that this is the final answer to the problem of rising prices and I said so in my very first speech in Parliament but certainly this is one of the steps in the right direction. As I said then measures of a more fundamental nature are also called for. It is in devising such measures that the Government is currently engaged.

BONUS COMMISSION

There has been a demand that the recommendations of the Bonus Commission should be accepted by Government and immediately acted upon. I fully appreciate the

anxiety on the part of friends on the labour side to see something final about the bonus question. But as this is a matter which affects many aspects of the economy, a decision cannot be taken in a hurry. I can assure you that Government's decision on the recommendations of the Bonus Commission will not be long delayed.

WAGE FIXATION

There has also been a demand for the setting up of wage boards for various industries. The wage board is the chosen instrument for wage fixation evolved by this conference at its 15th session held in 1957. A tentative list of industries for which such boards should be set up was also suggested by the workers' side at that session. But the decision regarding each individual industry was left to the discretion of the Government. During the years that have passed wage boards have been set up for a large number of industries. A new wage board has recently been set up for the working journalists and another for non-journalist employees of newspaper establishments.

MORE WAGE BOARDS

A second wage board for cotton textiles and another for cement are also being set up. We have also decided to set up a wage board for ports and docks and consideration is being given to the setting up of wage boards for the engineering industry and chemicals and fertilizers. In each case the Government has gone into the position in the particular industry and come to a decision. Let us, therefore, not approach the question from an agitational point of view. The Government stands by the wage-board method of settling the wage question in organised industries and will proceed to appoint such boards where necessary after a careful study of each case.

If I have spoken mostly on matters which are not directly on the agenda of the conference, the reason is simple. I know that these are exercising the minds of the workers. The specific items on the agenda are not very controversial and I hope it will not be difficult for you to come to some agreement on most of them.

THE PUNJAB BILL

A proposal before you relates to the legislation for granting of sick leave and casual leave to factory workers. It was one of the decisions of the Indian Labour Conference that important questions of labour policy should be brought up before they are acted upon. It is in pursuance of this decision that the proposal made by the Punjab Government has been placed before you. Sick leave is a matter on which the employers and workers might agree to give a definite direction to Government.

PAY ROLL SAVINGS SCHEME

Another item on your agenda relates to the working of the Pay Roll Savings Scheme. As you will recall this scheme was approved by the conference at its 17th session. The paper before you relates to some problems that have arisen in the actual working of the scheme. I have no doubt that you will give your support to the scheme and ensure its smooth working.

The views expressed in this conference by responsible leaders on both sides have always received the highest consideration. They have influenced Government policy. Let us not speak in anger or despair but suggest practical measures which will see us through these trying and troubled times through which we are passing.

SHRI NEHRU'S LAST MESSAGE

Our late Prime Minister in his last message to labour signed three days before his death said, "India is facing difficult problems today and it is very necessary that the organized labour movement should react to them properly. A merely agitational approach is not helpful in the circumstances. We have to consider every problem in its larger context." I would appeal to labour and to employers to ponder over these words and keep the larger national interest always in mind while discussing the immediate problems before us.

Before I conclude, I would like to thank the Government of Mysore for the excellent arrangements made for holding this conference. Thank you. "Jai Hind".

★

Mr C. Subramaniam, Union Minister for Food and Agriculture, was at pains to explain why he thought science had not yet proved in India to be of practical value to the farmer:

Mr Subramaniam on Agriculture

Friends originally I had agreed to preside over the Symposium on Steel because when that approach was made to me, I happened to hold the portfolio of Steel, Mines and Heavy Engineering. After the change, it was suggested to me that I should rather preside over the Symposium relating to Food and Agriculture. Ministers are supposed to be multipurpose even as civil servants. Therefore, in your judgment I am as competent in the field of Steel, Mines and Heavy Engineering, technology relating to that field, as in the field of Agriculture and Food. But I find there is a good deal of similarity not only with regard to the problems but also with regard to the approach to these problems and also to the solution of these problems.

I have realised not only after taking over my present portfolio

but even before, to a certain extent, that ultimately even as science and technology have brought this revolutionary change in industrial production it is only science and technology which can bring about agricultural development to the extent necessary to meet human needs.

After all, man should have been born with hunger even when he became a human being, a homo sapiens long, long ago, perhaps a million years ago. But at that time perhaps it was no problem for him to meet his needs: the species was limited and therefore nature could provide him with the necessary food to meet his hunger. But later on, he could not merely depend upon that, perhaps there were seasonal factors and other factors. Therefore, more and more he was forced to enter the field of agriculture and even when he entered the field of agriculture he more or less depended upon natural factors for the purpose of giving him the necessary products. But when human population began increasing on a large scale, naturally production also has to increase to that extent. And therefore more and better techniques had to be adopted for the purpose of increasing production.

But today human population is increasing at a very fast rate and our demographers tell us that very soon, unless there is a revolution in techniques of food production, humanity will be facing scarcity with regard to its food requirements. Particularly in India we are very much faced with this problem and therefore we have to bring about an increase in production which will not only be commensurate with the increase in population which is taking place in India but at a much greater pace, if we have to make up the deficit which existed even before this population increase. How are we to bring about this increased production? This is the problem facing the nation and as Minister in charge of Food and Agriculture I am very much concerned with it. Particularly during this year it has caused us a good deal of concern because food is becoming a critical problem in the country. Therefore, I am happy that in this Seminar on Science and the Nation, the problems relating to agriculture and food are being considered. My only grievance is that such a vast subject is being given only a few hours for consideration. But I take it the purpose of this symposium is not the chalking out of a technological programme for agriculture and food but indicating the directions in which we should think if we have to find a solution to the various problems.

As already stated, I find in this task science and technology have to play a great role and a vital role. That role has to played

first of all in producing food and grains and the other food articles required for human consumption in our country. That has necessarily to relate not only to plants and fields but also to cattle. We have to deal with perhaps birds also which provide rich food for human consumption. So we have to tackle all these for the purpose of increasing our food availability, and, therefore, we have to consider all the methods that are available to us for the purpose of improving the position.

I find that in our country we have been utilising science for quite a long time for the purpose of agricultural production, for improving cattle wealth etc. but still that has not percolated to the farm level to a large extent. That is the main problem. I am told—I am not a scientist to make a judgement—but I am told our scientists in the agricultural sector are as good, if not better, as scientists in any other part of the world. The work done by them is as meritorious and as excellent as that done by scientists in any other part of the world. But still our main difficulty has been the percolation of these scientific fruits to the farmers' level, to influence them in improving the production in the field. It may not be entirely the fault of the scientist because our farmers are illiterate, our farmers are generally conservative, they are not ready to adopt new techniques, new methods available. To a certain extent it may be true but still we have to function in the given conditions.

We cannot aspire for ideal conditions. Therefore, taking the conditions as they are we have to evolve methods by which we would be able to influence the illiterate farmer, the conservative farmer or even the superstitious farmer. That is our task. If we are going to apportion blame and say our farmers are not good enough, then we are not good enough to live in this country and we will not be in a position to solve the problem. This is the major problem which faces India today. Therefore, my appeal to this Symposium would be to evolve methods by which various discoveries which are being made, various techniques which are being evolved become capable of being adopted by the farmer on the field. Otherwise the connection between science and those who produce would not be there.

Think of the days when science was not linked to industry, linked to the industrial processes, production processes. Till that link was made, till that marriage was made, the revolution in industry could not be brought about. In the same way, the revolution in agriculture cannot be brought about for increased production unless science and technology percolate to the farmer. I hope and trust we will be given some guid-

ance by this Seminar as to how to approach this problem.

We have organised vast extension service but in spite of that extension service we find ourselves in difficulty in reaching the farmer and influencing the farmer. And therefore, we have to evolve better strains which would produce more. We have to produce various fertilisers which would increase production. We have to produce the various insecticides and pesticides which would protect the plant. We would have to evolve better methods of scientific irrigation, various scientific farm practices which would immediately influence production.

We are thinking in terms of a 5 per cent increase per year. Some people think this is almost an impossible task. But that takes into account the low base from which we have to start, I do agree that if we had already adopted the available scientific methods, then perhaps the level of 5 per cent every year will become an impossibility unless you get some new scientific methods for increased production. Today in India the conditions are such that if only we adopt scientific methods and techniques which are already available to other parts of the world we would be able to make up the leeway. Therefore, it is not a question of discovering new methods, discovering new secrets. It is a question of adopting the various discoveries which have already been made and which are available and perhaps a little extra work will have to be done to suit these methods and techniques to the conditions existing in India. Therefore, while in other countries which have already reached almost the maximum per acre production, where productivity has reached the highest level with reference to the scientific techniques available today, increase of this order may be an impossibility. But my humble view is that because we are yet to adopt these new methods, we are yet at a low level of production, from this base, a 5 per cent increase in production every year should not be an impossibility. On the other hand, if only we are able to adopt these methods, these new discoveries, new techniques and new secrets, we will have been able to have the break-through in the agriculture sector in India.

And it is not merely in the field of production we have to apply science and technology. After production even in the processing of foodgrains science and technology have to come to our aid because we are adopting primitive methods of processing. While we are living in a period of scarcity, conditions of scarcity, in a poor country like ours waste is much more than in countries which are rich. I always say rich countries are rich because they do not waste. The poor countries continue

to be poor because they continue to waste more and more even in the poorer conditions which exist in poor countries. Therefore, in the processing industries also science and technology will have to come to our aid so that wastage does not take place.

Then there is the question of transport. In the process of transport also we waste a good deal today. We do not have the modern methods of transport which are available to the more advanced countries. But here where we cannot afford to waste we find ourselves in difficulties in the methods we adopt for transporting our foodgrains. There is a great deal of wastage. Refrigeration has come in a great way for the purpose not only of storage but even in transport for avoiding wastage. All that is not available to this country. Even in the process of cooking and then serving the food there is greater wastage in a poor country like ours. Therefore I find from the very beginning to the end, till it reaches the mouth, till it reaches the stomach of the human being, science and technology have to come to our aid if we are to solve our problem of food. Therefore, it is appropriate that this seminar should take place here and I am happy many scientists have come from the various parts of the world. I welcome them to our country and I hope they would find their stay here not only useful but also pleasant. I hope and trust that their presence here would give us a new impact. As already stated our scientists are good men, excellent material but still we have to come into contact more with the outside world of science and technology. Our scientists will have to come into contact more and more with scientists abroad. Not only in seminars like this but even in the laboratories and in the work which is being done in various parts of the world, our scientists have to come into intimate contact. Unfortunately in our country even though we have got a few laboratories and to the extent possible we have equipped them well, but still the equipment cannot match the equipment which are available in the more developed countries like America, Russia and other West European countries. Therefore, our scientists should have the opportunity of coming into contact with the scientists and the work which is going on in the various parts of the world.

I do realise that we have to create an atmosphere in our own country for the scientists to work in—an atmosphere which will stimulate them to work more and more. I have gone into the working conditions in our laboratories. I have gone into the facilities which are available. I am dealing with the working facilities which are available to our scientists. I

am sorry to say that perhaps many of them, particularly some of them who have returned from foreign countries, find themselves in a frustrating atmosphere. But apart from that, more than this thing, they find lacking the academic and scientific freedom which is required for any scientist to do the work properly. That atmosphere of freedom will have to be created. I find one of the reasons of backwardness in industry, backwardness in our scientific laboratories, one main cause is the adoption of procedures and rules which are applicable to Government administration. That has been the tragedy of our country because we seem to think administrative rules and procedures are good enough for industry, good enough for science, for agriculture. Unless we break away from the stranglehold of Governmental administrative rules and procedures, we will not be able to make any breakthrough in the industrial field in the education field, the agricultural field and more so in the scientific field. Therefore, I trust this Seminar will impress upon the administrators here, administrators like me, that our first duty is to see that this atmosphere is first provided, this frustration of the scientists is removed as early as possible. If I can contribute something towards that, I will be happy. And apart from achieving other things, if I am able to achieve even this in the field of agricultural science during my tenure, I would consider myself having achieved something great.

I thank you for giving me this opportunity and I look forward to the speeches to be made and the various presentations in the field of agriculture and food.

★

In a sense, Dr Zakir Husain, the Vice-President, appeared to be calling for patience and perseverance in our efforts; the forum was the Conference of State Ministers of Community Development and Panchayati Raj.

Dr Zakir Husain on Patience

I have accepted with great pleasure the invitation of Shri S. K. Dey to inaugurate this Conference of the State Ministers of Community Development and Panchayati Raj. I have been for long, indeed ever since his romantic Nilokheri days, a silent admirer of Shri Dey's great devotion to the service of the common man in India and of the dynamism and the resourcefulness, the self-denial and the single-mindedness that he could harness to the fulfilment of this immense commitment. Much as I usually try to dodge the rather redundant function of inaugurations, it was not easily possible to say 'No' to Shri Dey and so here I am.

Whilst meeting here in the Conference, we are inevitably reminded of the profound interest that our late Prime Minister had in Community Development and Panchayati Raj. He rarely missed an opportunity of meeting the workers engaged in rural development and sharing with them his thoughts and reflections. He gave a new dimension to the movement of Community Development and saw in the establishment of Panchayati Raj the birth of a new ethos. He shared, as was his wont, inspiring thoughts with State Ministers concerned with rural development at these annual meets. It was while inaugurating this Conference last year that he reaffirmed his faith in the capacity of the people to comprehend the problems, formulate their plans, and implement them with vigour and fervour. His words echo in our minds, now that we have met here again. With the lasting impress he has left on the movement, our responsibility is all the greater to strive for the realisation of his vision of a resurgent India such as he dreamt of, lived and died for—a country, as he said, of "happy and prosperous villages" where "every fellow-countryman of ours will be cared for and will add to the wealth of the village and the country", where we shall "preserve our freedom and our People's Raj and make this a large co-operative enterprise".

When we say that the Community Development programme now covers the entire country and that Panchayati Raj is functioning in most of the States, and is on the way in the others, what does that signify? This indicates, in substance, that the people have been provided at once with the means and the opportunity to plan their own future and make what they will of it. In effect, all aspects of democracy are covered—political, economic and social. The democratic process, in the ultimate analysis, has to be pervasive. It should embrace all sections of the people and all facets of the nation's life and provide, in the context of an under-developed country such as ours, articulation of will in particular, to the toiling millions. The end of this process is to realise the basic objectives of an enlightened political community: liberty, equality and welfare. Under the system of Panchayati Raj, these values are sought to be realised for all sections of the rural community, by providing additional and more readily available points of access and control by enabling effective participation of the people's chosen representatives in decision making and by ensuring efficient and effective action all round in the sphere of development.

In the economic sphere, within the broad framework of the country's policies, the public sec-

tor, the private sector and the co-operatives are assuming increasing and varied responsibilities. Because co-operatives combine in themselves opportunity for the small man with benefits of large-scale organisation, they must progressively emerge as the principal base of our organised economic life.

Political and economic democracy by themselves, however, cannot be all. They are good and necessary. But in the end, they must subserve what may be called social democracy. From the processes of political and economic democracy should emanate the sanctions of a new and better social order, transforming outmoded values and liquidating antiquated social habits. By their very nature, these cannot be injected by mere legislative measures or institutional reform. Only the spread of a new yeast, a new spirit, can usher in such social transformations. The institutions of political and economic democracy should pave the way for this; and in the process, every individual connected with or affected by these institutions should play his part. The principle is unexceptionable. But it will not do to enunciate a goal and be satisfied with the ardent hope that 'good shall fall at last far off to all'. We should spell out in practical terms the tasks that the impending future demands to realise the objectives of comprehensive development of the capabilities of the people, development of efficiency in their institutions and development of leadership.

Political advancement presupposes a certain basic competence in the political community. In our present context what is needed foremost is capacity for mobilisation and participation on the part of village communities. Planning for the future entails allocation of scarce resources between competing priorities. There should be full involvement of the people in the formulation and implementation of local plans if the rare resources are to yield to the community the dividends expected from the investment. People must develop a keen sense of their obligations in this behalf and assume progressively greater responsibility for mobilisation of local resources. For without this a nation cannot long sustain the tempo of development that the future beckons. Resource mobilisation is predicated on hard work. There is no short-cut to planned accelerated development.

Alongside of this should develop the people's capability of participation. It is no doubt true that establishment of Panchayati Raj has provided them at various levels with large opportunities for taking a share in the formulation and implementation of plans suited to their local conditions. The

formal legal provisions should be made to become a living reality. As the power, functions and responsibilities of representative bodies increase, the responsibility of the citizen to be vigilant in regard to public activities on his behalf also becomes correspondingly greater. He is in any event morally involved in every act of the body that he was instrumental in electing. It has been aptly said that every citizen in a democracy holds an indefinite office whilst an elected representative's term is limited and defined. Direct democracy, represented by Gram Sabhas, is a challenge to every adult. Citizen's responsibility in that sense acquires an added content. It is the people's capacity to participate effectively and with interest in the affairs of their institutions that is crucial. If they should, in a spirit of indifference or resignation, withdraw from the scene of political and economic activity that would spell the end of democratic functioning.

Thus arises the need for a massive effort at political and social education—education in the wider sense, which is something more than a mere formal understanding of issues debated in representative institutions, something above and beyond the level of immediate needs and current interests. It embraces a new approach to life in the community and a vision of the future and the graduated steps leading the individual and the community towards that future. The process is not without its pitfalls. For obvious reasons, a good majority of the village people tend to lay emphasis on the immediate and the personal. Also, quite a few of them hesitate to come forward. This is understandable, for economic under-privilege is also psychological under-privilege. Any scheme to impart political and social education to the people should reckon with those realities. The only way this could be done effectively would be to base the social organisations in the countryside around economic activities of practical benefit to the villagers. Thus alone can politics, economics and sociology get blended together as the motive force for moving the community forward.

Representative institutions are being set up in all fields. But these would remain but bones, unless a living breath is infused into them. The Panchayati Raj institutions must draw their vitality from increasing devolution of responsibilities and resources from above. It is up to the Government to see that this is secured to them. At the same time, those having charge of the affairs of these institutions, both elected representatives and public servants, should do all they can to increase the functional efficiency of these bodies. It is not always easy, particularly for

those reared in traditional ways to discard old habits, be they officials or non-officials. A rigorous process of training is essential—a training which will bring the officials and non-officials together cutting across all barriers and orient both for the gigantic task that lies ahead. The official functionaries have a special responsibility cast on them in this consummation. They have not only to change themselves but help bring about and that unobtrusively a change in the outlook and perspective of their political masters. They have to acquire besides a professional skill which can enable them to discharge their role as the instruments at the behest of the growing welfare State.

Normally individuals are not given to a Phoenix-like transformation which they can bring about themselves. Particularly in the rural sector, steeped in poverty, disease and ignorance till now, large sections of the people live on the subsistence level. They cannot be expected to comprehend the wider perspective, of the world in which the Indian village is grappling with the problems of its survival for tomorrow. Functional leadership which exceeds in its profession must begin to assert itself if a new leadership is to germinate on the present feudal, caste and faction ridden soil. The leaders must be such as would be naturally acceptable to the village community, would not be alien to the people and would at the same time in a position to interpret to them in their own idiom the aspirations of the people and show them by example how these mute aspirations can be translated into realities. Something within me seems to assure me that we do have such men and women. They should be discovered and identified and enabled to assume their new roles in the new society we are out to build. During the days of alien rule such leadership was not far to seek. It came to the fore out of an inner urge for freedom. Now that we have our own rule, the new leadership should be promoted by our self-governing institutions. The servants of Government have to play a special role in the discovery, nursing and flowering of this new leadership.

A movement must have a philosophy of its own from which it can draw nourishment to sustain the spirit. But no movement can survive for long without a physical programme providing the substance. India can look forward to sound politics only if she builds up a sound economy. Indian economy rests on agriculture which constitutes the primary industry especially of the people who inhabit the rural areas. Community Development movement, Panchayati Raj and Sahakari Samaj can survive and flourish only in

the measure in which they promote the primary industry through a mobilisation of the latent energies in our people. Agriculture in the wider sense must, therefore, constitute the vital key to further growth. In the Third Five Year Plan and more so in the Fourth, Government will provide all the wherewithal it can. The optimum impact from all these can only materialise, if the people, their representatives and the Government servants at local levels, all get together for the sustained, joint effort that the coming years will demand. Without developing the growth potential in agriculture, there can be no sustained future for the expansion of the economy in the other sectors including industries and equally so in the fields of welfare and social services in rural areas which have been conspicuous by their virtual absence.

Friends, all that I have been saying involves great changes and demands tremendous effort. We may do well to convince ourselves that these will not be forthcoming by making speeches and writing notes. Escapist verbalism to which we seem to be getting addicted will not prove of much avail. The task ahead calls for intelligent action and more intelligent action supplemented by a relentless objective criticism as in all fruitful social endeavour, acting and thinking, thinking and acting is the process of worthwhile achievement. I trust we shall shirk neither the one nor the other. The task demands great devotion and a considerable measure of perseverance. Those who look for quick results are likely to be disappointed. Persons who can live only on a fresh headline in the papers every day may well leave this task alone. I hope and trust that enough people will be forthcoming with the requisite qualities and this work of the highest national significance will grow from strength to strength.

I am very happy, the Development Commissioners and other officers responsible for these programmes in the States have grappled with these complex problems for the past few days and that these will now be considered by the State Ministers for final decisions. Shri Dey in the course of his welcome address has posed many a problem and given some indication of the directions in which answers should be sought. This conference is being held at a crucial stage in our development. I wish it Godspeed in its quest for a way out of the problems which have bedevilled efforts till now. May this conference prove a new milestone in the pilgrimage which the beloved late Prime Minister consecrated it to be when he opened this new chapter in the life of our rural people at the first conference of the Development Commissioners in May 1952.

He's just learnt his last lesson

He's not alive to learn any more. You can learn these simple cycling lessons. And live.

- Where there's a cycle track—use it
- Always ride in single file. It is dangerous to carry people or bulky parcels. You'll lose balance
- Keep both hands on the handle bars, except to remove one for signalling clearly
- It is dangerous to hang on to another moving vehicle
- Be specially careful on wet roads

Road Safety is a matter of life...and death

Issued in the interest of Road Safety by Burmah-Shell.

Independence Day

AS India steps into the eighteenth year of its career as a free and independent nation, the thoughts of the people centre more than ever before on the future and how it will be shaped by our successors in solving the problems of the present and meeting the challenges that have yet but half emerged to view. In the years that have now gone by, it was usual to recall with pride the unique features of our struggle for freedom, the phenomenal qualities of the leaders with which the people were fortunately endowed and the strange mixture of confidence and humility with which the Congress ministries set about the problems that harried us as people and nation. The pride was not only natural and pardonable but was also, to some extent, a necessary ingredient of the will to use the freedom in ways and purposes which alone can invest it with a more substantial content than mere sentiment. Without such a pride there could have been no mutual encouragement, no reciprocal exchange of power and trust, between Government and people, such as is necessary if a nation is to function as a forceful and organic entity. It is in such an atmosphere of mutual confidence between the leaders and the common people that the nation pledged itself to the pursuit of ideals from which even mature democracies might have quailed. Adult suffrage, a written constitution with fundamental rights and State autonomy written into it, non-alignment and friendship to all in international affairs, a secular state with equality of status for all its grown ups, a Socialist society with the inequalities of wealth and income reduced to a narrow range, if not altogether eradicated, the abolition of poverty and ignorance within virtually rigorous time limits and planned development as the means of realising these goals—all these are possible only if the nation fancied itself as having been endowed with mental and moral qualities which are by no means common among the world's different races.

This somewhat Narcissistic image of ourselves was not without its use. But its use was limited. It is limits of its utility and the extent of its deviation from reality, as much as the impracticability of some of the ideals for some time to come, that account for some of the graver and more pressing problems of the present and may even cause a degree of concern among the more thoughtful sections

of the public. If in the first flush of freedom, we fancied ourself equal to any situation and no ideal seemed too exacting or beyond our reach, seventeen years of concrete accumulated experience as a free and democratic nation certainly call for a calm appraisal, especially as we have on hand a tangle of problems which arise not only from the wellknown shortages of material resources, but also our shortcomings as a nation. These are not confined to the people or the Government, the shortcomings of the one are in fact a function of the shortcomings of the other. Together, they impinge on our understanding of the problems in terms of immediate practicable tasks and the spirit and the methods by which we tackle them. They thus determine the nature and magnitude of our failures and the consequent aggravation of the difficulties ahead. We shrink from the self introspection which alone can enable us to see how far we measure up to the ideals we have set ourselves for early attainment or the rate at which the requisite changes can be accomplished. It is only such introspection that can narrow the gulf between means and ends and save us from vaulting ambition. The realism that is necessary for the psychological readjustment and the readjustment of aims, means and methods is not to be confused with the crass cynicism that spells the abandonment of all worthwhile ideals.

There is nothing strange in the fact that the more serious obstacles in the pursuit of most of these high-souled aims should have taken a little more than a decade and a half to emerge into view and that the general conditions in the country now wear a distinctly critical look. It is roughly equal to the period which the fathers of the constitution had in mind when they adopted tentative solutions for such problems as the treatment of the scheduled classes, the settlement of the question of official language, the medium of secondary and university education and the associated issues, and financial devolution. Such ideals as non-alignment and, one may even add, adult suffrage, secularism and the pursuit of economic equality without detriment to economic development would also take fifteen years or a little more to reveal such lack of contact with the realities of life as there may be. In all these, there is not so much a disillusionment about their value as a growing consciousness of the need to read-

just our sights and to adapt ourselves to the needs of the objective conditions so as to increase our capacity to reach those ideals.

While the economic situation calls for the greatest effort towards revision of ideas, policies and methods and the widest room for the conflict between preconceived notions and the compulsions of recurring crises in many a sphere of economic endeavour, it is in foreign affairs that the inadequacies of our policies are more in evidence. The policy of non-alignment, rejection of all suspicions of unfriendliness on the part of our neighbours (Pakistan being an exception), a comparative indifference to the requirements of national defence even in the conditions of modern military technique had an extraordinary run of good luck for a little more than a decade. Even now, non-alignment, which was only a corollary of non-violence has as much utility as moral validity. But its limitations as a sophisticated instrument of diplomacy and, in a sense, its risks have become more evident especially in the context of the Chinese aggression and the closer mutual approaches between Pakistan and China. The requirements of a far bigger defence expenditure and preparation, and, even more, their implications for our public finance and outlay on the plan would not have been a sudden, unpleasant surprise for the Government, if in the handling of our external relations, the Government had been a little more wide-eyed and realistic. From the point of view of the development of our foreign policy, we have undoubtedly come to a turning point. The actions of Burma and Ceylon for instance have added to our troubles and diminished our prestige. And China has lost no time in exploiting the situation and might have vastly added to our troubles if, with its newfound friendship with Pakistan, it had also gained entry into the UN. The intriguing international situation which has developed with the rift between Russia and China and no great abatement of the hostility between the US and the USSR must increase the perplexities of our Foreign Office. A great deal of earnest and deep rethinking is called for, which would be impossible, if we do not break the shackles of empty sentiment.

While defence requirements in foreign policy and in military equipment will be met under the compulsions of a developing situation, the economic problems are still in danger of being worsened by hazy thinking and uncircumspect and half-hearted action. It is no compliment to our economic intelligence that, in its distributive as much as its productive aspect, food is still a grave problem, full two decades after the Bengal "famine", that population growth has been higher than the anticipations in the plan, that our exports are grossly inadequate for maintenance imports when the period of repayment of foreign aid is almost on us and that the discussions at the Fourth Plan are so largely centered on its size, without close reference to available resources which have failed to grow in accordance with outlay or with needs.

The features of the economic situation recounted above, together and each by itself, show that planning is not as it should be, that priorities have been disordered, that the subjective preferences of influential politicians have pushed pressing needs of the economy too low in the scale and that means and ends have been allowed too often to drift apart. It is impossible in the conditions of an overpopulated and poverty-stricken country like

ours that the demagogic commitments of popular politicians in a regime of adult suffrage can be faithfully discharged. All that can happen is that the inevitable attempts at make believe will create a short-lived and deceptive sense of well-being, which make it more and not less difficult for the Government to keep faith with the masses. This is precisely what has happened. The complexities of the price situation with the familiar spiralling of wages and costs, the mutual aggravation of shortages and controls, the urgency of increasing production and the growing obstacles in the way, the imperative need for more investment, the dubious scale of savings and the enhanced dread of accentuated inflation, all these flow directly from the manner in which the plans have been formulated and implemented in the past.

But all this is not necessarily a detraction from the vision, the ardour of the energy of the leaders who defined our goals and chalked out the paths leading to those goals. It would be unwise and impracticable to limit the idealistic exuberance of a newly liberated people. It was the glorious achievement of Jawaharlal Nehru that he not only directed the exuberance along fruitful channels but taught the world to respect India for the energetic role it assumed in the modern world as much as for its ancient culture. But even in the last year or two of his historic record, the pressure for adoption of new approaches was steadily increasing. With his passing away and the assumption of office by Mr Lal Bahadur Shastri, there is a welcome readiness on the part of the Government to bring the issues into the open, and to create the conditions in the country as well as the Secretariats necessary to tackle problems in a workmanlike spirit but with undiminished ardour for old ideals.

Sir Biren's Statement

Sir Biren Mookerjee's statement, in respect of the working of the Indian Iron and Steel Company Limited in 1963-64, will be found to be a lucid document by shareholders. He has touched on many an important aspect of the steel industry as such, and indications are clearly given, implicitly if not explicitly, of the impact of recent developments upon the earning capacity of the Company. The first such point dealt with by Sir Biren is the reason why depreciation provided by the company is, for the year under review, about Rs 1 crore higher at Rs 4.40 crores. Two Sections, 205 and 350, of the Companies Act determine the quantum of depreciation which needs to be charged to the profit and loss account before dividends can be paid. In turn, a further reference to the requirements of the Income-tax Act is needed; and this last is a variable, in as much as the depreciation rates fixed hereunder differ from year to year. For the year under review, additional depreciation has to be provided in respect of triple shift allowance; and hence the increase in the Company's provision in this behalf.

Sir Biren goes on to explain why so large a sum as Rs 5.43 crores has been set aside to Reserve. The loan liabilities of the Company, as at 31 March 1964, are at Rs 56.50 crores a little over ten times the transfer to

Reserve. These liabilities cover the loans taken from the World Bank for the 1953 and 1955 extensions; a loan of Rs 4.61 crores from Government; and the cost of two Projects, for Collieries Development and Balancing of Plant, amounting to over Rs 39 crores. The first phase of the Balancing of Plant Project will increase Burnpur's capacity for crude steel by 300,000 tons. After completion, the second phase, raising capacity by another 700,000 tons, would be taken up. Indian Iron has always wherever possible phased its expansion programme because, as Sir Biren puts it, "our policy (is) that no individual expansion project should be of such magnitude as to impose too great an immediate financial burden on the Company or impair the dividend position to the detriment of the interests of the shareholders but rather that expansion should be gradual, each stage being followed by a period of consolidation."

There is, then, very justifiable criticism of the governmental attitude towards bonus issues. A company like Indian Iron has, in order to pay back large loans taken for expansion in the national interest, necessarily to plough back into reserves—thereby, let it be noted, augmenting the magnitude of undistributed profits which otherwise could have gone to the shareholder in the way of dividends; but, under our tax laws, such a company is prevented from the capitalisation of reserves—which, in any case, would merely have transformed one kind of liability into another. We hope that the Finance Minister will relent next February, that he will at that time be disposed to striking out the tax on bonus issues in the hands of the shareholders. Meantime, Sir Biren is considering the possibility of payment of interim dividends as "compensation in some measure".

By far the most fascinating part of his statement relates to his remarks on research and development. Indian Iron was not stampeded into action, did not accept the thesis that sintering was the best process for converting undersize iron ore. Instead, research was undertaken by the Company, and this has now proven that a combination of "direct reduction, magnetic separation and agglomeration" results in product of high purity. Sir Biren has expressed the view that the fruits of the research are "likely to have in the future a great influence on the operation and efficiency of Indian blast furnaces." Interestingly, the Company at its Foundry and Machine Shop at Kulti has been able to manufacture rolls (which formerly had to be imported) resulting in foreign exchange saving of the value of Rs 13 lakhs a year. In other respects also, the Martin Burn Organisation has been able to produce miscellaneous engineering spares: foreign exchange saving in the last nine years is of the order of Rs 50 lakhs.

There are, finally, Sir Biren's observations on decontrol. Although the views of the private sector steel producers were sought and obtained, the decision taken by Government was unilateral. Suggested prices, on the realistic basis of block being estimated at Rs 1,500 per tonne of saleable steel instead of the figure of Rs 1,176 arbitrarily fixed by Government, have been turned down. Because of the new procedure, there is admittedly some gain to the Company, the over-all average increase being about Rs 20 per tonne. But the continuing control over certain varieties "to curb the activities of the black market in the items in short supply."

Mr Tata's Statement

Mr J. R. D. Tata, it would appear, had in mind an audience larger than that merely constituted by the shareholders of the Tata Iron and Steel Co Ltd; for, a good part of his Statement in respect of the Company's working in the year to 31 March 1964, is taken up with matters of general import. He starts off, for example, with a long, sincere and graceful tribute to Jawaharlal Nehru. Inescapably, he referred to Nehru's own tributes to Tata Steel and to Jamsetji Tata; and, to Nehru's successor, all good wishes are extended.

The review of the year's results has as its highlight Mr Tata's words on the Company's tax liability, which has gone up six-fold. This was because, with development rebate fully provided for, there was no "set off" available which would have the effect of reducing the tax liability. The allocation to development rebate reserve is fully Rs 7.70 crores less in 1963-64. Presumably, the tax burden in the years to come—until and unless further expansion is put through—will be heavy. Furthermore, Mr Tata has hinted that reserves, which had been depleted in earlier years, will now be sought to be built up—the current year's appropriation is one of Rs 2.75 crores to General Reserve No. 1. Is there, then, the implication that, for some time to come at least, the dividend will be no more than maintained at the enhanced level for 1963-64? We should think that this would depend upon Government policy as regards the permissible return to the steel companies.

Mr Tata has then turned to the problem of inflation. Indian steel, which once upon a time—and not too long ago at that—was the cheapest in the world, is today, according to Mr Tata, one of the costliest. This unfortunate reversal has taken place despite the fact that "the basic elements which make up the total manufacturing costs have not materially changed in relation to those of other countries." Perhaps the largest single element, in the rise in the price of steel, is constituted by excise duty which, within the last sixteen years, has gone up no less than "fifteen times"—from Rs 5 per ton to Rs 75 per ton. Then again, over a similar period, the cost of railway freight has risen four to five times.

A possible reason for the worsening in the price situation lies, according to Mr Tata, in "our forcing the pace of economic development beyond the country's capacity in physical and financial resources." We should, the inference is clear, be vigilant about civil expenditure—which is unproductive—and about long term projects—which have a long gestation period, and which also release little by way of goods for the consumer. In this context, however, we would point out that multi-purpose river projects are both costly and long-term; they are nevertheless essential in every respect—whether from the standpoint of flood control, or of the irrigational facilities sought to be created, or of the power that would be generated. Presumably Mr Tata has in view the machine-building projects; and if so, the obvious answer is that, as surely as we need to set up more steel capacity, we shall some time or the other—and in Government's view, the sooner the better—have to possess our own basic production capacity. What, therefore, we would suggest is not that such projects should be eliminated; but rather that, simul-

taneously, we should not lag behind in the basic sector of foodgrains and in the output of consumer goods, so that the purchasing power released by the expenditures on the long-term projects gets satisfied, and does not instead tend to chase a static volume of goods.

Nor would Mr Tata deny that certain basic capacities must be built up. Indeed, the Company, upon a request from Government, has in hand a scheme for aising ingot capacity by another million tons. The preliminary estimates show that the project could cost Rs 170 crores. No decision seems to have been taken as yet, for Mr Tata asserts that the Directors "will sanction a further expansion only if they are thoroughly satisfied that the project is technically and economically sound and that it can be undertaken on terms wholly fair to the shareholders."

We shall take up, finally, what Mr Tata has had to say about the special advance. This, it may be recalled, was a loan of Rs 10 crores from Government; and the understanding was that a special element would be provided in the retention price to enable the two steel producers in the private sector to make repayment of the advance. The amendment of the Companies Act, under which the advances could be converted into equity stock, rightly fills Mr Tata with concern. What is ironic is that the special advances could be extended to the two companies, because there were resources enough in the Steel Equalisation Fund—which itself could be built up only because there was so wide a margin between the official selling price and the retention price paid to the producers. If apprehensions about Government's intentions in regard to the special advances, are to be allayed, then an early decision, to give effect to the original assurance of enabling the steel companies to repay the advances, must be taken.

Power Survey

CLOSER estimates of the capacities and peak loads of the different power systems in the country than was attempted in the First Annual Power Survey, but for a shorter period, are presented in the report of the Second Annual Power Survey* which has been recently published by the Central Electricity Authority. While the First Survey covered the period up to the end of the Fourth Plan, the Second Survey is confined to the period up to 1967-68. The report envisages that installed capacity at the end of the Third Plan would be 12.5 million KW and has also suggested that the target of capacity at the end of the Fourth Plan should be placed at 25 million KW. The findings of the Survey show that increase in load as well as in capacity during the 1963-64 has been far below earlier forecasts. The capacity added during 1963-64 was only 394 MW against anticipated addition of 1070 MW. On the other hand, load growth during the year was only 629 MW as against earlier estimates of 1079 MW. But a sharp increase in load of the order of 1500 MW is anticipated during the current year. The increase in capability is placed at about 1750 MW.

The Survey gives room for the hope that power availability will improve in most areas of the country by the end of the Third Plan

*Second Annual Electric Power Survey of India. Published by The Central Electricity Authority. Price Rs 5, \$1.80; 11sh 6d. Copies available from the Manager of Publications, Delhi.

period. But there is also clear indication that more Fourth Plan schemes will have to be taken up for early implementation in order to forestall the possibility of severe shortage of power supplies in the middle of the next Plan. The summary of the basic findings of the Survey indicates that, taking the country as a whole, the aggregate capabilities of the public utility systems would increase from 5380 MW at end of March 1964 to 9434 MW at the end of the Third Plan and to 12764 MW in 1967-68. The actuals of capability, peak loads and gross margins for 1963-64 and the forecasts for the succeeding four years are given in the following table:

	Installed capacity		Peak Load		Gross Margin as %age of Peak
	MW	MW	MW	MW	Load
1963-64	...	6267	5380	4682	15
1964-65	..	8256	7132	6248	14
1965-66	...	10924	9434	8052	17
1966-67	...	13882	11704	9760	20
1967-68	...	15091	12764	11772	8

The Gross Margin, which represents the difference between the capability and the peak load, has to provide for scheduled maintenance, emergency outages, and operating requirements of the system, and may be taken as an index of the adequacy of power generating capacity in relation to potential demand. The requirement of gross margin depends of a number of factors and varies from system to system. The factors involved are the size of the power system, the size of the largest generating set, the availability of the sets, the degree and dependability of interconnections and extent of operational coordination etc. While isolated systems may require Gross Margins as high as 30 to 40 per cent of peak-load, fully integrated and coordinated regional grids may be able to operate with Gross Margins of 15 to 25 per cent.

From the figures shown in the last column of the table given above, it appears that on an all-India basis and assuming that regional grids are established and operated in a coordinated manner, Gross Margin will be barely sufficient during the current year. The position may improve during the next two years, but will become difficult in 1967-68 unless early steps are taken to increase the generating capacity by that date.

The estimates shown above include only the projects which have been authorised so far. In order to meet the demand anticipated in 1967-68, it will be necessary to authorise additional projects without delay so as to widen the Gross Margin. Otherwise, the experience of the Third Plan will be repeated and industrial activity will be severely hampered by power shortage in the middle of the Fourth Plan. The Planning Commission has approved advance action on a number of next Plan schemes totalling 1.44 million KW. It is understood that the Commission has also indicated that advance action on further Fourth Plan schemes for 1.8 million KW would be approved as soon as proposals are ready. It is essential that these schemes should be processed without further delay. Construction of interconnections linking up power systems should also be speeded up for optimum use of generating plants.

The All India figures give only a very broad indication of the outlook for power supplies. The figures for the different States will be a more reliable indication of prospects of availability of power in different regions. The basic data for estimating the general out-

look for the current year (1964-65) in the different States is extracted below:

	Installed capacity	Cap. MW	Peak MW	Gross Margin as % of Peak Load
Andhra Pradesh ...	295	211	333	(—)37

South Indian Notes

THE completion of price fixing for rice by the State Governments' notifying the maximum prices for fine and super-fine varieties has started speculation as to how these ukases of our democratic Governments will fare in the months to come. This period is a lean period, occurring as it does immediately before the harvest in the principal producing areas. Despite that, the relatively high prices now decided on should give the official action a fair chance of success. It was observed in these columns a week ago that, when it comes to fixing the prices of fine and superfine varieties, the Government would try to be generous to the producer and this would look like compensation for the action it had taken in regard to the coarse varieties. This has now come true. Though the price is less than the peak prices, it is more than the rate at which supplies are available, not perhaps to all, but a few. Which shows that the economic price is not the maximum that has now been allowed under the official orders. The authorities could of course point out that the rates they have announced are the permissible maxima and do not preclude sales at lower rates.

This is a contention which is no comfort to the consumer. In all price fixing, maximum rates invariably tend to become the minima and, when minimum rates are announced, they harden into maximum rates. The former are necessary in periods of pronounced shortage when there is incessant pressure of an upward kind on prices. If the Government steps in and declares maximum rates, the trade treats it as the floor and underhand deals are done at higher rates. Similarly, when there is a glut of an agricultural commodity and minimum prices need to be fixed, the price fixing is treated as having furnished the ceiling and not, as was the real intention, the floor price.

One might reasonably expect events to develop in accordance with what appears probable on the basis of experience and of a priori logic. But the fact remains that the harvests are not far off and the flow of American grain which the Government has successfully negotiated is perhaps even nearer. The process of rigging up the market has but short shrift. Though the evil of hoarded stocks is not as great as is generally supposed, there is no serious shortage; and if recent developments have taught the trade a measure

of prudence and a sense of social obligation, it will not allow a critical situation to develop. In fact, it has been said that the trade is not yet fully acquainted with the prices fixed and will discontinue the present practice very soon.

But the Government would be unwise to depend on imported food to ensure good behaviour on the part of the trade, when year after year we have come up against the relative or marginal scarcity, which is all that the selfish or anti-social elements require to send up the price of foodgrains. It is a question whether the Government, even if it had plenty of imported rice in its hands, would use it to ram down prices and lay itself open to the charge of harming the agriculturist. How can it, it may be asked, when it does not know whom such a policy would harm at a given stage, whether the producer or the trade? Or, at what point the decline in prices would hurt the producer? Of course, scientific estimate of costs, if there were such a thing and such a thing were within its reach,—both big 'ifs'—could come to the Government's help. Whatever that may be, the wider and, from all points of view, the more satisfactory course would be to maximise food production instead of fixing "maximum" prices. The public too should learn to fix its eyes on the efforts to increase food production rather than the efforts at fair distribution.

For Madras, the talks about a "crash programme", and the efforts to get Mr T. T. Krishnamachari interested in the programme seem to be more pregnant with possibilities. The programme concerns the plans prepared by the Madras Government for developing agriculture and food output, laying of the eastern coastal road, intensification of poultry and dairy farming, tapping subsoil water for irrigation, loans and manuring. The coastal road leading right up to Kanyakumari is estimated to cost Rs. 10 crores and will, when it is carried out, link all coastal fishing centres to one another and to the national highways and help fishermen to move the catch quickly to consuming centres. The Finance Minister is reported to have advised the State Government to discuss the scheme with the other Union Ministers concerned.

While Madras can hope to increase its output of rice only by giving close attention to every one of the factors which make for higher yields and larger outputs, Andhra Pradesh has the advantage that it is still in a position to add to its rice production by mammoth projects for new irrigation. It was observed last week in these columns that the Nagarjunasagar project when completed will add about 5 million tons of rice to the annual output and that the indifference of the Union Government to this project even in the face of the present food crisis is extremely difficult to understand. Since then there have been reports of the Union Government's decision to treat it as a central project. It is too soon to ask what the consequential financial changes will be. They are important because, according to the estimates of some experts, the revenues that will accrue to the State will not make for an adequate return on the outlay. And there is the added complication that land revenue will go to the State Government. If rice production in this area will have to contain an element of subsidy, who will find it? But whoever does eventually, the addition to food production will be real and most welcome not only to Andhra Pradesh but to the South and the country as a whole.

Meanwhile, the South has been heartened by the spectacle of the completion of the first

stage of power development in Neyveli. With forty per cent of the total power generation in the State independent of the freaky monsoon showers, and with some prospect of Neyveli opening up another mine, the fear of power cuts disrupting production is reduced. Indeed, from last week industry can work on the basis of three full shifts. That is something to set against the uncertainty that so frequently enshrouds the steel plant and other big projects.

STATE UNDERTAKING

Need for Better Management

By Virendra Agarwalla

POLITICAL controversy in India has boiled down to the question of how the State Undertakings are able to develop themselves and to what extent they are able to provide better amenities of life to the people.

It is widely appreciated that the public sector, if managed properly, can help the nation in growthmanship providing basic necessities of life at a low cost. If this purpose is not served then, of course, it should either be scrapped or efforts made to improve it.

The public sector has come under serious criticism in recent times. It has come from two quarters, one from those who do not believe that the public sector can ever show any sign of efficiency which, of course, they judge by profitability and another group which is keen to develop the public sector but only on efficient lines. The latter group is at times misunderstood because it makes a frontal attack on the public sector though, of course, with constructive suggestions to improve its functioning.

A few still feel that planning may destroy democracy but it is universally recognised that trends towards planning are not endangering democracy at all but instead it has given wider scope and deeper roots to democracy in India. Planning has been accepted as the only medium for finding suitable solutions not only in communist countries but in a number of democratic countries including the UK and France. It is equally true that planning would be devoid of any meaning to the common man if basic necessities are not made available at reasonable prices.

The Finance Minister has rightly declared that laissez faire as such is not acceptable even to the US and a mixed economy through planning is being given a fair trial in all democratic countries of the world. But it is widely recognised that if the State undertakings are not able to show profitability, efficiency and higher productivity then planning may prove to be a failure and socialism may become an objective of ridicule by those who believe that it cannot function in any circumstances. Those who are genuine socialists may find themselves in an embarrassing position to defend the corrupt and unproductive State undertakings.

It has been recently emphasised that level of net profits in most of the State Undertakings is on a higher scale. The net profits in 1963-64 after allowing for the depreciation, taxation, interest on loans etc, was substantially higher in the case of most public enterprises. The Finance Minister has declared that all public sector ventures must stand on their own legs

and should make 'good' profits to be ploughed back into further investments. Mr B. R. Bhagat has gone a step further and declared the public sector undertakings will play a more important role in raising the surplus revenue of Rs 300 crores from public undertakings like the Sindri Fertilisers, the Hindustan Machine Tools and such other undertakings. It is true that a few of them have done a good job and are moving forward in the right direction. The steel projects, when they start operating fully, should reasonably fetch an additional revenue. It is interesting to point out that the performance of the public sector concerns on the whole has proved miserable in a sense that on an investment of Rs 1200 crores the net return is not more than one seventh of one per cent. It shows that our politicians have acquired proficiency in boasting of their achievements. We have reached such a crucial stage that we need to be realistic in our analysis whether our actions have brought any relief to the poorest man of our land.

Both profitability and efficient administration of public undertakings are vital for the proper development of a mixed economy in India. But it does not necessarily imply that people want indiscriminate expansion of the public sector. The State should concentrate its limited resources of capital and managerial ability in developing primarily those branches where the people's efforts are lacking. The public sector, unaided by the private sector, will not be able to make full and effective use of the human and material resources of the country which are virtually unlimited. There is ample scope for co-existence of both the sectors.

It may be of interest to go through the Public Accounts Committees report on the accounts of State Undertakings particularly the DVC to support the contention of those who have consistently warned the Government against the policy of rapid expansion of the public sector at the cost of private enterprise. "There has", the committee says "been not only a short-fall in achieving planned target but also failure to utilise built-up targets thus indicating a disregard for the basic principle of planning. It has been made clear that those entrusted with the administration of the State Undertakings have no idea of running a big organisation like the DVC on commercial lines. The way the DVC is functioning is typical of the working of most of the public sector undertakings. An enlargement of the public sector can have some meaning only if we have men to manage public undertakings efficiently and to good purpose. Otherwise, it amounts to trying to run before we are able to walk."

Nearly three years ago a special committee appointed by the Congress party in Parliament which was headed by Mr Krishna Menon, recommended that officials should not be made Chairman of the Board of Directors of State Undertakings and that these position should be reserved for eminent non-officials preferably with business experience. But the Vishnu Sahai Committee's recommendations that there should be no ban on officials were accepted by the Central Government. It was also accepted that the Board of Directors should include a representative of labour and at least two eminent public men. The divergence of opinions between the Krishna Menon and the Vishnu Sahai Committees had created a complex situation in this respect. Whatever the late Prime Minister said at the UN

Seminar on Management of Public Industrial Enterprises in December, 1959, is still largely true: "The normal civil service approach is not quite the same as what might be called the approach for big industry."

Behind a facade of autonomy several public sector organisations are being run as Government Departments. The Sahai Committee finds no objection to appointing officials outside the Controlling Ministry as part-time Directors. To make such officers whole-time Chairman can bring the desired results. But in any case, it would be necessary to fix responsibility for specific results on individual officers who occupy such positions. The Krishna Menon Committee has vehemently expressed itself against the appointment of Parliament Members to these offices. It considers these practices to be altogether an unhealthy one and difficult to justify. Both politicians and civil servants may not do justice to the role entrusted to them and none of them would remain beyond controversy. But one can find little fault with the decision on the appointment of Directors from amongst ranks of the workers of the undertaking themselves. The Government's decision not to appoint whole-time Directors in major public sector undertakings having any connection with private business appears to be an unhealthy practice. It is widely recognised that the utmost care needs to be exercised in the selection of such Directors. The Government has done well in empowering the Chairman of the Board of Directors with ultimate responsibility for the working of the enterprise.

A separate Joint Committee of Parliament is being set up to deal with the reports and affairs of public undertakings. The precise scope and function of the Committee are yet to be disclosed but it has been made clear that with the setting up of this separate Committee the Public Accounts Committee and the Estimates Committee will be diverted of the jurisdiction they now have over the State Undertakings. A similar Committee exists in the UK but still this Committee may not be able to function smoothly because of many day-to-day complicated problems. The function of the Committee may also be to examine the relations between the Ministry and the Board of Directors from time to time. The main work of the Committee will be 'formal' to obtain detailed information about the operations and the problems and to make appropriate recommendations to Parliament. It is hoped that the Government will take into account British experience while formulating the scope and functions of the new Committee.

The question of better administration of State Undertakings has assumed greater importance and it is quite natural for engineers and Civil Servants to emphasise their role as Chairman or Directors of such enterprises. There can hardly be any hard and fast rule about such questions. The people as a whole are interested in the best possible administration of such undertakings and it is for the executive to make such a choice which can give the best results. We may remember what Lord Morrison pointed out, namely, that the choice of men for the top should even go to the people who might not agree with the 'transformation to public ownership' but who would accept the chance and be loyal to it.

To build a central cadre of trained managerial executives to run the country's public sector, the Central Government had decided as early as in 1957 to constitute an Industrial Management Pool. It is reported that against

the initial cadre strength of the Industrial Management Pool fixed at 200 to be augmented by an annual intake of 5 per cent which should have yielded a cadre strength of 270 by now, only about 120 officers have been appointed substantively to the pool who were recruited in the first batch in 1959. More than 200 top managerial posts in the public sector undertakings are even today held by officers of the IAS and other Central Services who could be easily replaced if the recruitment to the pool is rapidly augmented. The Planning Commission appears to be unrealistic when it recommends to make further allocation of Rs 12,000 crores for the expansion of the public sector during Fourth Plan period when the existing State Undertakings are not being managed so properly as to show either profitability or basic items of consumption at reasonable prices. What we need to-day is to make all possible efforts at all levels that the existing structure is so well equipped with managerial experience as well as know-how so that the foundations of democratic socialism are well laid to reshape the destiny of our motherland.

It is widely accepted that the executive must be good administrators be able to take quick decisions, have that political and governmental sense and above all, must have to some marked degree the all-important quality of the man at the top which inspires those below him to give of their best—man who can inculcate in all the various human cogs in the wheel—that sense of belonging and that sense of pride in their endeavour. Such effective leaders because of their human touch to human problems should be capable to take our civilisation forward.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

BANK RETURNS

Banks Acquire More Giltedged

Banks continue to be keen and not inconsiderable purchasers of giltedged—this is the clear indication of the latest statutory returns.

Beginning of the month disbursements have once again had the effect of offering an interruption to the progress of the 1964 slack season. According to the returns of the Reserve Bank for 7 August, Active Note circulation has jumped up sharply by Rs 39.52 crores to Rs 2,458.93 crores, and there has also been outflow of Rupee Coin in the large amount of Rs 2.63 crores. Currency has been expanded for Rs 15 crores against Rupee Securities; the transfer from the Banking Department lifts the relevant figure in the Issue Department to Rs 2,160.80 crores, and Foreign Securities are unchanged at Rs 85.46 crores. In the result, the Reserve Bank's cash in the till has been steeply drawn down by Rs 27.05 crores to Rs 9.99 crores.

Large payments have apparently been made by the Centre to the State Governments. For, the balances of the Centre are substantially lower by Rs 31.59 crores at Rs 83.04 crores; (incidentally, the high level of the Centre's Deposits made it unnecessary for any recourse to deficit financing) and the position of the States has improved in a two-fold manner: on the one hand, their Deposits are better by Rs 7.39 crores at Rs 26.57 crores, and, on the other, their indebtedness to the Reserve Bank for ways and means advances has been reduced by Rs 7.58 crores to Rs 16.88 crores.

The transfer to the Issue Department is reflected in a fall of Rs 14 crores to Rs 275.88 crores in Investments. However, the rise of Rs 12 crores to Rs 111.69 crores in Treasury Bills purchased and discounted by the Reserve Bank could relate to the State Governments in this wise replenishing their balances.

There is little change in the position of Scheduled Banks. The fall of Rs 5.72 crores to Rs 94.83 crores in their Reserve Balances is attributable to the State Bank, and there is a small

decline of Rs 0.25 crore to Rs 3.41 crores in borrowings from the Reserve Bank.

Balances Held Abroad are fractionally lower by Rs 0.33 crore at Rs 8.20 crores.

+

The return of the State Bank for 7 August is largely featureless; and yet it is significant in the sense that it indicates that beginning of the month disbursements did not involve much strain. For Deposits are actually higher by Rs 0.51 crore at Rs 648.26 crores, and there is only a nominal rise of Rs 0.19 crore to Rs 344.84 crores in Advances. Giltedged has been acquired for Rs 2 crores, raising holdings to Rs 290.11 crores. A fall of a little over Rs 6 crores under Other Liabilities is matched by the decline of Rs 6.33 crores to Rs 28.07 crores in the State Bank's cash balances, including money at call and short notice.

+

The statutory statement of Scheduled Banks for 31 August shows that, in the week under review, fresh acquisition of giltedged was in the region of Rs 24 crores, of which Rs 19 crores were on account of the State Bank. Deposits are little changed; net Demand Deposits are a shade better at Rs 1,247.78 crores, and net Time Deposits similarly register a nominal improvement to Rs 1,382.58 crores. The total of Advances has tended to be sticky, being shown lower only by Rs 3.02 crores at Rs 1,738.21 crores. Borrowings both from the State Bank and from the Reserve Bank are shown higher, the former by Rs 0.74 crore at Rs 23.58 crores and the latter by Rs 1.70 crores at a shade under Rs 2 crores. It remains to add that, as an end result, cash balances, including money at call and short notice, have been marked up by Rs 5.16 crores to Rs 248.48 crores—wholly on account of the State Bank.

+

State Loans

That all the State Loans will be fully subscribed, can be taken for granted; but some of the States, being as it were more equal than others, may experience over-subscription. Belonging to this category, as we see it, would be the two loans issued at par, those of Gujarat and

Maharashtra. Similarly, the support for West Bengal is usually strong and considerable. Of the Southern States, we can expect that relatively more successful will be the floatations of Andhra Pradesh and Madras. Uttar Pradesh, to fill out the list, can be counted as another State which may experience over-subscription. The other loans will of course be fully subscribed; but lists will probably be kept open till the last day. On the other hand, some at least of the "stronger" States should be able to close the lists on the very first day, getting in the bargain the extra "bonus" 10 per cent by way of over-subscription which they have the right to retain.

+

Government Securities—Payment of Interest

Government Promissory Notes of the following loans (Central and State Governments) interest on which falls due for payment during the months of September and October, 1964 will be accepted by the Public Debt Office, Reserve Bank of India, Calcutta for preparation of interest warrants from 17 August and 14 September, 1964 respectively.

Interest falling due in September 1964

Holders of the loans are advised to lodge their securities well in advance of the due dates to facilitate delivery of the securities and interest warrants on the due dates. In view of the heavy work involved, the period for delivering securities tendered for Payment of interest has been extended to six clear working days.

Notes of the week

MONDAY

TUESDAY

WEDNESDAY

THURSDAY

FERTILIZER Focus on Distribution

While it is a happy augury that urgent attention is being given to the stepping up of fertilizer production, it would appear that if a break through in agriculture by larger use of fertilizer is to be achieved, the need to ensure its proper distribution and utilization is equally urgent. According to the Chairman of the Fertilizer Corporation of India, a crash programme aimed at increasing the FCI production alone to 60,000 tonnes is to be implemented. The Corporation hopes to step up its production to about 1 million tonnes by the end of the Fourth Plan. If this level of output is achieved, the FCI will emerge as the largest single producer of fertilizers in the country as the Fourth Plan fertilizer target is likely to be fixed around 2.2 million tonnes. It is reported that at a recent meeting between the Planning Commission and the concerned Central Ministries, while a target of 2.2 million tonnes has been agreed upon, it has also been rightly emphasised that unlike in the current plan, every effort should be made to hit the target during the coming plan period according to schedule. The target for the Third Plan had been put at 1 million tonnes but actual performance has so far been disappointing and it is expected that not more than half of the targeted production will be attainable by the end of the Plan period.

But increased production of fertilizers alone will not suffice if agricultural production is to derive the full benefit. For even now when fertilizer availability is much less than demand, stocks remain unlifted in a number of regions. It has been generally accepted that this is due to the defects in the present system of distribution which is mainly entrusted to the co-operatives and authorised dealers. Though belated, the Government decision to ask a technical committee to examine fertilizer distribution system as it obtains now may help in devising a rational system of distribution on which

depends the very success of the fertilizer programme. Some guidelines can be had from the discussions at a recent seminar on the fuller utilisation of fertilizers held in Bombay. Perhaps the most important prerequisite is the creation of conditions among the farming community conducive to the use of fertilizers. The economic condition of the actual tillers of the soil is so precarious that it is not surprising that they show little enthusiasm for new agricultural practices. So it is essential that in the first instance the farmers are made to understand that by proper use of fertilizers agricultural production can be sizably increased. But to create the necessary enthusiasm the tiller should also be assured that he will have a share in the prosperity that will ensue. A point that has been emphasised at the seminar is that in our country there are a number of difficulties to be overcome to ensure efficient use of fertilizers. One of these is the correct determination of the type of fertilizer to be used in relation to climate, crop and soil. In this view Government would do well, along with an examination of the distribution system, to initiate a study with a view to sorting out the difficulties that are now met with in the efficient use of fertilizers and to recommending remedial measures.

★

SMALL UNITS Step-motherly Treatment

It has now become an accepted fact that the small scale industries in the country have not grown in stature to impart the necessary thrust to the industrial upsurge in the country. But to pass the buck entirely on to small entrepreneurs will be erroneous and wide off the mark. As Mr Vadilal M. Panchal, Honorary Secretary of the Bombay Small-scale Industries Association, has stated last week the policy pursued by Government is "gradually crippling" the small scale sector and the small units are chronically confronted with inadequacy of primary raw materials. Owing

to foreign exchange difficulties, it is to be admitted, reduction of imports of essential raw materials and components became inescapable but in doing so Government favoured big and large-scale undertakings at the expense of the small ventures. Consequently, nearly 80 per cent of the requirements of the small scale units are being met from open markets at exorbitant prices while large scale units enter open markets only for 20 per cent of their needs. The glaring inequality in Government policy, therefore, becomes evident and only by suitably revising the present system of allocation can the small industries be enabled to play its pivotal role in the industrial development of the country. This is particularly urgent as the domestic resources do not measure upto the requirements and are found, in some cases, to be of inferior quality which would only inflate the production cost and mar the quality of products.

Speaking at a reception accorded to the Union Minister, Mr A. K. Sen, by the Federation of Small and Medium Industries in West Bengal, Mr G. Basu, President of the Association, drew pointed attention to the discriminating allocation of raw materials to small units, particularly to those located in West Bengal. Mr Basu was critical of raw materials which only aggravated the situation and small units were more often than not deprived of their legitimate share of raw materials. When the official policy is of a throttling nature can we expect the small scale units to rise to the occasion and meet the demands of a developing economy like ours? Even while granting licences for additional capacity to large scale units the authorities often ignore to consider whether the small scale sector is in a position to produce such goods. All these measures will only restrain the growth of the small scale sector in lieu of accelerating the pace of its development. By adopting a liberal policy in raw material allocations resuscitation of the small scale sector will be possible. With the authorities look into these aspects and redress the genuine grievances of this vital segment in our economy?

RAJASTHAN Disgrace Abounding

The audit report on the financial transactions of the Government of Rajasthan presented last week to the State Vidhan Sabha provides a thrilling fare as it is replete with strictures against criminal waste of public money by the various departments. The report abounds in instances of gross irregularities in financial dealings, wanton spending of public money, misappropriation of large sums, rusting of machinery worth several lakhs of rupees owing to their non-utilisation and the indiscriminate disbursements of grants-in-aid and loans to local bodies.

Cases of gross irregularities in Government spending particularly in respect of irrigation projects and the losses thereon are numerous. As the report reveals the working of multi-purpose irrigation projects has entailed a gross loss of Rs 1.22 crores during 1961-62 and Rs 1.69 crores after charging interest. A detailed study of

these projects has brought to the fore the dismal fact that the estimates of the projects have been subjected to upward revision without considering the corresponding gains therefrom. The departmental officials are found guilty of throwing caution and financial discipline overboard even in the disbursements of grants-in-aid. Out of Rs 8.81 crores paid as grants-in-aid in 12,124 cases to local bodies including panchayat samities and similar institutions, departmental officials have not so

far submitted utilisation certificates in 11,420 cases involving Rs 7.52 crores. Cases of flouting elementary principles for keeping proper account books are also not lacking.

Grotesque financial irregularities of this sort in Government spending are not unfamiliar to the country. But the persistence of officials to indulge in such malpractices despite repeated warnings from audit bodies is scandalous and makes a mockery of the prevailing mode of audit-

ing. This is particularly disgraceful and ruinous as the inadequacy of funds is hampering the progress of several planned programmes. Deplorably enough, the tendency shows no sign of abatement, but on the contrary, it is only gathering momentum. No wonder the price spiral is taking a dangerous turn and planned projects are progressing on a sluggish pace. Drastic action to deal with the situation is imperative to put the resources at our disposal to the best use.

FOOTWEAR EXPORTS STC's Programme

The decision of the State Trading Corporation to enter the footwear export trade in a big way is to be welcomed as it has been doing fairly well in this sphere of activity since its inception. According to the present programme, the Corporation will aim at achieving an export target of two million pairs of footwear annually by 1970, earning Rs 4.5 crores of

valuable foreign exchange in that process. It will be recalled in this connection that exports of footwear by the STC have registered a smart improvement to 5.9 lakh pairs in 1963-64 from 1.05 lakh pairs in 1956-57 and they are estimated to aggregate 7 lakh pairs during the current year. Aside from expanding the quantum of exports of footwear, the Corporation has rendered a signal service to the country by developing new markets in countries such as Soviet Union, Hungary, Rumania and Bulgaria for our shoes and chappals. It needs special mention that bulk of the exports consisted of hand-made footwear manufactured by the small scale units.

That the STC means real business is evident from the Chairman's statement that the export promotion campaign will be carried out in a scientific manner. It is, therefore, unsurprising that the Corporation has decided to take over the footwear production and design departments from the National Small Industries Corporation as it would enable it to link the manufacturing programme with export promotion scheme. Mr Patel has, however, made it clear that at present there is no plan to take to the manufacture of footwear for exports and it would continue to purchase them from the existing four manufacturer exporters. But they are required to conform to the STC specifications for enhancing the export prospects of their products.

In view of the considerable export potential, there is immense scope for boosting exports of footwear from India. The Corporation's decision to prescribe certain production specifications will enormously endear our goods to the consumers abroad. While endeavouring to consolidate the present position, the STC should labour to capture new markets which will automatically stimulate our exports. It should not be forgotten, however, that the success of the export promotion campaign will largely hinge on our ability to offer quality goods at competitive prices.

★

MONOPOLIES Where to Find Them

According to the Indian Chamber of Commerce, Calcutta, there is no monopoly in the private sector of the Indian economy. In a well reasoned memorandum submitted to the Monopolies Commission, the Chamber has urged that clear understanding of the concept of monopoly is necessary before examining whether there are monopolistic tendencies in the private sector. A monopoly becomes harmful only when it functions in

a manner prejudicial to public interest. In the industrialised countries such as the UK and US, the criterion applied to determine whether any Government intervention is necessary is that an enterprise should be found to control a sizable portion of the market in the articles it manufactures. In these countries, a monopoly is said to exist only when a company comes to control at least one-third of the market. Applying this yardstick to the private sector industry in India, it will be found that companies falling under this category are almost non-existent. The Chamber has rightly stated that a distinction should also be made between a monopoly and a dominant enterprise. At the present stage of development of the economy, the existence of dominant enterprises can be objected to only at the risk of greatly impeding the industrial progress of the country. For there are certain industries like the automobile industry which by their nature must be large in order that economies of scale and a full utilisation of scarce talent can accrue ultimately to the consumer. Moreover, it is inevitable that in a situation in which many new industries have to be established for the first time in the history of the country there are some big single units. And it is to be noted that the field will steadily get crowded in course of time. It will therefore be wrong to identify a temporary phenomenon as a permanent feature of the economy.

The terms of reference of the Monopolies Commission also include an enquiry into the extent and effect of concentration of economic power in private hands. Here again there is no clear cut definition of "concentration of economic power". Whatever it may denote, it can be safely stated that there is no accumulation of economic power in private enterprise. As noted by the Chamber, in our country, production is regulated by licensing under the Industries (Development and Regulation) Act, investment is regulated by the Capital Issues Control, and management by the Company Law. Above all these, prices in the case of the more important industries are fixed by the Tariff Commission. The contention that large enterprises are controlled by individuals or groups of individuals will not stand close scrutiny. For Government itself has admitted that there is not a single group or industrial house which controls even 3 to 4 per cent of the entire production in major industries. Similarly, there is no scope for the private sector industries to adopt restrictive trade practices for the simple reason that there are regulations and controls at every stage of production and distribution of finished products and raw materials.

The Chamber avers that there is a very considerable degree of monopoly in the public sector in the sense that a manufacturer or trader commands the entire market: the Indian Telephone Industries, the Indian Railways, the Indian Airlines, the Life Insurance Corporation the State Trading Cor-

poration etc. A telling point made by the Chamber is that in the case of the private sector undertakings, all the dangers of monopoly will have full play because these undertakings are expected to contribute increasingly toward augmenting the resources for the five year plans.

Imbued with the Spirit of Independence, the birth right of everyone, our Leaders after a long and continuous struggle achieved the Indian Independence on **15th August 1947.**

Anticipating by forty years the advent of Indian Independence, our Promoters, men of vision and goodwill imbued with the same Spirit of Independence to attain freedom in the world of Banking and Finance made a successful bid and formed the Indian Bank at Madras on **15th August 1907.**

We pay homage to those great men.

CORPORATE MANAGEMENT

Promotion of Research

[The following is the text of the speech made by the Finance Minister, Mr T. T. Krishnamachari, at the closing session of the two-day Conference on Promotion of Research in Corporate Management and Finance].

One is at a disadvantage to have to address a gathering of such distinguished research scholars and men with practical experience and at the tag end of their deliberations.

Dr Nigam's account of summary of what happened in this Conference is almost frightening for a layman like myself. You have undoubtedly, during the few days covered a very wide ground and as Dr Nigam mentioned, hundred speeches were made and 30 Universities participated. To stomach it is rather a tall order. I am accustomed to speeches. I do not mind confessing to you that often times I go to sleep when some of the speeches are long and only wake up just when something important is being said. One of the techniques of

the person, who replies to speeches is to leave the more controversial points and take the less controversial ones. Anyway, I had not had the privilege and pleasure of listening to these speeches so that I am not in a position to comment on them.

The idea of a Conference of this nature is in itself unique. University-men to do research in regard to the doings or the non-doings of the corporate sector of our economy should certainly be interesting. At any rate, some of you having practical experience—and most of you have a large amount of theoretical experience—would have had something new to say and I think from such experience to gather. I am not particularly fit, I think, as a person to do the last speech, the concluding address.

If you do not mind my introducing the personal pronoun, I started in business, when I was round about 20, I did not complete my 21st year then. I got into the business against the

wishes of my people because usually the respectable middle class family composed of lawyers and Government servants did not like being employed in a business house. I had a Manager in the company, who had defalcated some money and I went there more or less as an apprentice and became the Manager of that concern—a small one in that area. My first experience in running a business was to find out how it should be run. I got a book on book keeping to see how accounts were properly kept. I have heard people being taught how to be managers and how to be sales men. I have my own doubts about it. During my experience of about 22 years I have come across some of the most successful businessmen of the world and I felt I was as good as any of them. I am here in politics. If I were a good businessman, I would never have come to politics.

I am mentioning this to you as the background that business in these days had to be learned on the basis of trial and error and it was not something taught in University because no University man came to business. No journalist ever went to University in those days. I also remember, when 10 years thereafter, the firm's Chairman with which I had some connection writing to me apologising for working with me or under me. So that firm employed nobody excepting the Universitymen. That is how business grew; it grew away from University. It grew away from research and depended very largely on what you may call individual experience. Even today, I think any business, as it is being run, whether it is registered under the Company Law or not, depends largely on the initiative of the top people. Of course, you can supplement lack of specialised knowledge or probably brilliance in some top Managers by getting a number of people who stick to method. But that is, of course, as it ought to be. Brilliant people are born very rarely and most of them never get an opportunity to put their brilliance to practical use and we have necessarily to depend upon educating people to stick to some definite methods of work and in order to produce results. That is where the question of research comes in.

How research is to be carried out in regard to the management of the corporate sector? We have never applied that test to Government's working. Little research is done with regard to Government's working. The private sector may very well ask us: why don't you apply these standards to yourselves? The public sector undertakings lag behind very much because it is difficult to get managers, to get people in the middle echelons except the technical ability. I think the public sector undertakings would probably bear a lot of scrutiny. The whole problem is one of management. We have to learn how to do it. There being nothing available to substitute corporate management, we should aim at training people in regard to methods of work. Everything else follows that.

I have a whole lot of papers here which you have read. I have not had time to go through them. I had seen summaries of these papers.

Summaries are invariably not representative.

The question is how to link research to what is happening in the corporate sector, whether it be public sector or private sector, having granted that there is no substitute for corporate type of management for industrial and business enterprises. To run a business is to run it for profit. There is no point in saying that we are running a thing on no profit and no loss basis. Thereby you save some portion of the burden of the tax payers. Not all the Kaldors of the world can help to sustain the demand the public make on the exchequer.

I can realise that many of you people in the Universities do not find data for research. Secondly, if anything is available to you, it is unreal. I would not use the word 'untrue'. This is where the Company Law comes in. I am not a great believer, at that time and even now, in the Company Law organisation being a good policeman. Because, the number of detected offences by the police happens to be microscopically small and if we apply the same standards to the Company Law Administration, it will also be likewise and, therefore, the main thing that the Company Law Board has to do is to see that the largest amount of publicity is given to all transactions of corporate dealings. As a part of your research you have to consider whether we could not restrict the area of the private limited companies. You cannot put a ceiling on the amount of money that it spends. As a matter of fact, it might be worthwhile to have private limited companies whose operations and turnover are Rs 10 lakhs or 15 lakhs or so. A change in the law is necessary to know what the company is doing.

The other factor is this: are you sure that the balance sheets are real? You speak about balance sheets giving more information. The balance sheets are not real. More information of that nature is not going to add to the sum total of your knowledge and therefore not help your research. How to make the balance-sheets real? Then we come to the question: What is this auditor's certificate? The auditor certifies that according to the papers supplied to him, he finds that the balance sheets present a true and fair state of affairs. The papers were not supplied. He gets a voucher or a receipt by somebody. I run a textile mill. The price of cotton was Rs 1,000 a bale on a particular day and I put it in my books as Rs 1,600. I produce a voucher for Rs 1,600 signed and stamped. The auditor cannot ask. He does not even worry about finding out the market quotations on that particular day for that particular type of cotton. Even if he did, may be he will not be able to find out.

The other thing which is very difficult for us is the question of costing. In fact most of the enterprises have no internal costing. No certificate either. Wherever you have a selling agency, it is managed by the Chairman's wife, sister-in-law, daughter-in-law, daughter-in-law's sister, because most of the selling agencies' directors are women. Costing has become an important factor. You

can even suffer a loss, but profits would be made by the selling agency. I do not think if your research has come across these things. I have come across these things in my research. I am telling you the difficulty in regard to basing your research on facts which are fundamentally unsound. What shall we do about it? The thing is that you have to think in terms of research work in respect of the balance-sheets, and whether the certificate by the auditor should not be something far more exhaustive.

'Take inventory control. I do not think there is any business which has a very proper inventory control unless it is the single man's business. He makes the profits himself. Most of these business concerns which have a corporate base are very much like groups. Take Tata's. It is almost a super-Government. Inventory control is thus almost non-existent. One of the common features of most of the public sector undertakings is the very large inventory they carry; because nobody worries about it. Profit is no concern. But even in private enterprises a heavy inventory allows a room for what you may call embezzlement and want of proper check. Can you relate the inventory to the nature of the business? Research in regard to inventories is therefore necessary. Some kind of suggestions can be made about this.

It is a question of management. I was also the Chairman of a Committee for setting up management institutions. Now I find they are legion. We talk so much about productivity in management that there is hardly anything left to talk about.

A small firm is more efficient than the big firms. Small firms will go to evolve much quicker. You find better management and probably better inventory control in the smaller firm than in the bigger firm. I was very happy to learn when I was in UK recently that a young man, rather a group of young men whom I had helped to a very small extent, seven or eight years back coming and telling me that the partner company with whom they were collaborating, had taken selling agency rights of his concern, and they would probably earn a sizeable sum say Rs 50 lakhs or so, by way of exports. I was very proud to hear of that.

I would like some research workers to go into the railway administration, you will find how less efficient it is and still you find how much profits it makes. I do not know if I can take a reference to the Supreme Court for finding out the ineptitude of the law in regard to aid tax collection. I do not think the Supreme Court will entertain any such reference even under the articles of Constitution. So these are the difficulties you have to face assuming that you are permitted to go in for research.

What are the types of balance-sheets that would bring out the real nature of things? I do feel that a considerable amount of research is possible even in typical companies, small ones perhaps. I have been telling my colleague, the Chairman, Company Law Board that we should

in course of time so amend the Company Law as to make it obligatory on the part of the various firms to put everything in the annual statements. It also solves the trouble of sending the returns, etc. often. We could receive it in a bunch. The question is how to frame the requirements of the Company Law Board and the requirements of the research workers.

I saw in the papers a few days back about shareholders being more alive. Formerly I had some interest in being an active shareholder. But I had never had any money to buy shares. The trade union people, I

am told, do it. By having one share, they go and ask questions at the general meeting. The active shareholder is a legal fiction. What he is concerned about is only his return. If the dividend increases by 1/4 per cent, even then he is perfectly content. The shareholders seem to be singularly not interested. I am afraid it is very difficult to make a shareholder take interest in the company's activities. It is where investigation, where research, comes in. It seems inevitable—in this country at any rate—short of nationalising everything, we have to depend on this mechanism of the Company Law

Board to improve the ostensible aspects of company management. I do not think I am in a position to add very much to your knowledge or even give you certain guide-posts which can be followed in respect of your research. It is for the Universities to take interest. Academic life has an interest of its own. I often regret I did not take it up myself. In the early days, I had always wanted to be an educationist.

We end where we begin. I am not in a position to tell you precisely what we should do about it. You tell us how to amend the law to get more information from these people so that

ECONOMIC FREEDOM THROUGH EFFICIENT BANKING SYSTEM

The development and progress of banking in India during post-Independence years is a pointer to the irrefutable fact that an efficient banking system is the sine qua non of economic freedom.

Ever since its inception, Canara Bank has worked silently but ceaselessly by inculcating the banking habit in urban as well as rural areas, meeting the demands for development of trade, commerce and industry and helping people to achieve financial security through better financial management.

The earnestness of Canara Bank to make economic freedom a fait accompli finds expression in the diverse services offered by Canara Bank to promote 'better living through better banking' and to improve the social and economic conditions of the people and the country.

you could legitimately prescribe methods that had to be followed.

I have always believed that a Researcher is a Vedant! He believes in the dictum of the Bhagwat Gita. The fruit is certainly not his. At the most he will get some degrees. It is only the top political people who get Degrees. Not that I am complaining because I have not been given anything. Who knows that calamity may befall on me. It is something like this that one who teaches ultimately becomes an enthusiastic teacher. He is proud of the fact that so many people have passed through his hands, even though they do not keep in touch with him. I think ultimately

research leads to something else. As I said it is a thing in which you do not expect any direct benefit.

It is very good of you people to have come in response to the invitation of the Company Law Board and discussed various aspects of research in the corporate administration. We have a long goal and I do hope we would improve as we go on. One field which would be open to you and which Government should open to you for research would be the public sector, even though they have a lot to hide. I think we can get over that difficulty. The results of your research can be applied to Public Sector. Even to the private sector the

material incentive is available in that they can make their business bigger. You can increasingly look forward to research being utilised in the public sector and in the medium and small-sized private sector. How to go about it; what are the requirements; how these requirements can be met; can we do it by legislation? All this needs to be discussed. I am sure we in the Administration would profit and get them analysed and one of the things that we have done in the past before introducing a legislation has been sometimes a perfunctory committee going through the subject, often times, dealing things on an ad hoc basis and ad hoc solution for

a particular difficulty. I think we have come to the time, when Government responsibility has become bigger. We cannot provide ad hoc solutions. I am sure that in future legislation that is undertaken by the Government would be based on the results of specific research on problems rather than by providing ad hoc solutions. May I express my gratitude to all the participations here. I have never had a collection of research scholars such as this with us.

★

Disclosure in Annual Accounts

At the second session of the two-day Conference on Promotion of Research in corporate management and Finance, views were expressed that the present form of presentation of annual accounts was not sufficiently detailed, especially regarding break up of various items, viz. loans, salaries and wages, production particulars, productwise data regarding distribution of margins, replacement costs, etc. The companies may therefore be asked to reveal more information, if not by legal reform, by persuasion of the various professional bodies. The financial data may be given as an annexure to the annual accounts so that the research worker could benefit by it. Need for greater disclosure in respect of exchange banks was also emphasised. Views were also expressed that the companies were already feeling the pinch of the considerable information that we are calling for at present and howsoever elaborate we may devise the form of accounts, it will not be able to meet the diverse needs of all the research workers. The companies could not be expected to cater to the research workers. It was for the latter to get the information they wanted.

The consensus of opinion on the issue was that while companies in this country were, on the whole, not against disclosure, they were against harassment caused to them by frequent demands by different agencies for more and more information.

Regarding the standard for disclosure, it was suggested that companies in the private sector should not be reluctant to give what they would want to know in respect of companies in the public sector.

About the steps to be taken for greater disclosure, it was felt that the accounting profession in India was following legislation rather than guiding it. Accordingly, the profession found it difficult to set any standards by itself. In this connection, it was mentioned that if companies could be persuaded to see that concrete advantages would result out of the research, they would be more willing to give greater information.

Uniformity of standards in presentation of accounts was also stressed. In this connection, it was suggested that the form of Profit and Loss Account may also be prescribed.

Views were also expressed that the non-corporate sector may be asked to give financial information.

JWT-AI-2732

THE state of the jute, as well as the jute goods, market reminds me, ominously, of similar conditions which obtained about twelve years ago. Unfavourable weather—to put it mildly—has affected the crop in Pakistan, and a friend in the trade tells me that we should not expect a crop of more than 5 million bales. In India, I suppose we shall more or less be able to maintain output around last year's level. As such, despite lower world availability of raw jute, theoretically it should be possible for the Indian jute mills to work unhindered. For, there is the fact also, of the last season's carryover within the country, adding to available supplies. Unfortunately, there usually tends to be a fair margin between actuals and theoretical figures. As such, raw jute, basis Assam bottoms, has in recent days risen steeply in price; and, in sympathy, jute goods, too, have shot up to high levels. The one silver lining is that stocks of jute goods are at the moment quite satisfactory; and so, for some months at least, we need not fear that there will be a squeeze in the jute goods market—as happened in November 1952. Nevertheless, it must be a matter of concern to us all, that there is an untoward rise in the prices of jute manufactures. For, inevitably we shall have repeated the old experience of growing foreign resentment and consumer resistance and even perhaps a fresh search for substitute packing materials. It doesn't matter, that firm conditions in the jute markets have the effect of encouraging sowings, and that therefore, given reasonable weather, the next crop would be bountiful. What matters is that, in fashion akin to 1951, high prices may force out permanently certain marginal consumers of jute goods. What is adding to the pressure is the steadily increasing internal demand and consumption. This friend, I may point out, does not appear to be unduly concerned: the fortunes of the jute goods industry, he said, were always cyclical. The only thing we have to avoid, at this juncture, is the imposition of export duties on jute goods. There is no need for Government to make jute goods even more costly. Well, I suppose we shall have to grin and bear it—and let us hope that there will be no attempted speculative coup.

★

I am frankly amazed at the grass roots support which seems to exist for Senator Goldwater in America. The Gallup polls as yet give him

no chance at all; but we shouldn't forget what happened in 1948, when the polls all but declared Dewey elected President weeks before the election itself. The question is, can Goldwater do a Truman? I suspect there is the possibility, and not too remote one at that. Perhaps President Johnson was right in holding the Senator to be a tough opponent. Perhaps, too, Goldwater was right in holding that what the country needed was a clear-cut choice, and that the alternative did have to steer clear of "me-tooism". The correspondence columns, of both Time and Newsweek, bespeak of quite considerable championing of the ideas that Goldwater stands for. The world at large (saving Free China, perhaps) has not tried to conceal its sense of disquietude ever since the Senator won the Republican nomination. I am not sure, however, that even a Goldwater victory in November could transform American policy. Talk will or could be tougher; brinks might once more be in vogue; the cold war, which for some time has shown signs of thawing, could quickly freeze again. But, whether in the sphere of civil rights or foreign aid, I fancy that a change in Administration would but little change policy itself. Meantime, it could be that Mr Johnson has contributed to affecting his own all but unsalable position. I refer to his categorically ruling out Bobby Kennedy as the running mate on the Democratic ticket. True, Kennedy would have hurt Johnson in the South; but it is precisely in this region alone that Senator Goldwater, according to the polls, holds a lead over Mr Johnson. There is hardly any Democrat—other than a die-hard segregationist—who could help to hold the South firm. It may turn out that the crucial error committed by President Johnson would lie in his shutting the door on Bobby Kennedy.

The bee in TTK's bonnet seems to be that more often than not the businessman is corrupt. I remember, in 1956, when upon assumption of the Finance Ministership the first thing he did was to announce an increase in the excise duties on cotton textiles. At that time of, course, such a step was necessary, because it was essential that consumer demand for textiles be discouraged. In fact, TTK's step did have its desired result. So much so, not much later a repre-

sentation was made to him, complaining about the stocks which were piling up. It is reported that TTK retorted: so what if your companies make losses? Isn't it true that the company managements, through a network of buying and selling agencies, did not lose? That this story might be true is suggested by the speech which rang down the curtain on the two-day Conference on company management last week. He was questioning the correctness of figures as published in balance-sheets. What was there to prevent, he asked, a voucher being passed by company management for cotton in an amount of Rs 1,600, when the real cost was no more than Rs 1,000? Auditors had no way of checking; all they could verify was the correctness of statements on the basis of vouchers submitted to them. I dare say that there are not a few enterprises where such "leakage" of companies' earnings takes place. But, by and large, I should say that the present provisions of the Company Law have minimised the scope for such activities. TTK would now have companies publish their accounts in greater detail; and I presume that he would charge auditors with the responsibility for closer checking of company accounts—as for example, making sure that prices of commodities purchased did in fact rule in levels at which such transactions have been recorded in

vouchers. No, I am all for clean company management; but it seems to me that the more rigid the restrictions, the more the temptation to find a loophole, and the more bogged down does production get by such red tape. I have said it before, and I say it again: surely the time has come when Government should pay more attention to enforcement of laws than to enacting them; there is already a sufficiency of checkpoints upon every kind of enterprise.

A Delhi weekly recently described a calumny campaign that was daily being stepped up in the columns of a Hindi weekly (sic). Which brings to mind the experience of an Advertising Agency friend in Delhi, also. This happened in 1958, when the US Small Industries Exhibit was held. This agency was given a list of papers in which an advertisement was to be published on three consecutive days. The executive sent out the insertion orders; when checking up, he found one of the papers was a weekly; but, before he could issue a cancellation order, he received voucher copies from the weekly, three of them for three consecutive days, with the advertisement duly printed. Afterwards, the weekly that for three days became a daily reverted to its normal schedule of appearing but once a week.

Olympus - A Letter from Delhi

Research in Corporate Management

A TWO-DAY conference on Promotion of Research in Corporate Management and Finance, which was inaugurated last Thursday by the Deputy Chairman of the Planning Commission, concluded with a sparkling and sharply worded address by the Finance Minister. Representatives of thirty Universities and five research institutions participated in the Conference, which was convened by the Company Law Board of the Ministry of Finance. Discussing the problems of corporate enterprises in the public and the private sectors, Mr Asoka Mehta spoke of the need for clarifying ideas about the place of the private corporate sector in a developing economy that is expected to work for socialist objectives. Can one work out a socialist programme with only those curbs on large incomes that one is familiar with in the Western countries, he asked, or will there be need for some kind of ceiling on incomes? If such a ceiling is deemed to be necessary, how does one make it operative in the private corporate sector? Referring to the trend toward concentration of ownership and control, Mr Mehta said that the economy could be greatly stimulated, if large scale corporate enterprises took steps to broaden and diversify the entrepreneurial base of industry by encouraging ancillary undertakings. Such a development, he said, would be both a healthy check on monopolistic tendencies and also provide scope for the many sections of the people, who, for historical or social reasons, have been shut out from industrial entrepreneurship.

With regard to the social reasons which, in the past, limited the scope for entrepreneurial talent, T.T.K. had something to say. When he took to business more than forty years ago, his relatives and

well-wishers thought that it was a come-down for a good middle class family whose other members were engaged in government service or in the professions. The Finance Minister also referred to the lack of training for management which was the rule and the amateur tradition in public administration which he described as the "most undisciplined organisation" in the country.

In a discursive speech full of interesting asides and shrewd hits at the sloppiness of the public sector undertakings and the skulduggery indulged in by some managements in the private sector, Mr Krishnamachari said that the main problem of research workers was how to link research to what was actually happening. There were, for instance, a large number of private companies to which all the provisions of the company law did not apply. It might be necessary to place some restrictions on the size of private companies. But he wondered whether more informative balance sheets would be helpful when one could not be sure that they presented the real state of affairs. He thought that there was need for research in public sector research workers. The results of research could be utilised in working out improved methods of management and these could be adopted by the public sector undertakings. He added that small units in the private sector managed by the new class of entrepreneurs might also be inclined to adopt the methods of working indicated by Research.

One interesting proposal that emerged from the discussions at the business sessions of the Conference concerned the setting up of a Central Library of Balance Sheets which would make arrangements for supplying photostat copies of balance sheets to research workers at cost. It was also suggested that, instead of the three copies of balance sheets that the companies submitted to Government at present, they should be asked to send eight copies, four of which could

be passed on to the four regional offices, so that the research workers could get more ready access to them. It was also pointed out that certain old balance sheets required for research purposes were not available at present and efforts should be made to preserve such records by a separate agency if necessary.

The conference discussed in detail the need for comprehensive balance sheets which would provide detailed information, especially regarding break up of various items such as loans, salaries and wages, production particulars, product-wise data regarding distribution of margins, replacement costs etc. The companies, it was suggested, may be asked to give more information, if not by legal reform, by the persuasion of the various professional bodies. Need for greater disclosure in respect of Exchange Banks was also emphasised. The Conference discussed the need for coordination of the work of various research agencies, and the view was expressed that there should be a permanent organisation for the purpose.

A concise and lucid report of the discussions of the Conference was presented at the concluding session by Mr Raj K. Nigam, Co-ordinator of the Conference and Director of Investigation, Monopolies Inquiry Commission. Mr Nigam paid an ecstatic tribute to the Finance Minister, his "multi-dimensional thinking on economic and social matters and his constructive and purposeful approach to problems of the day." T.T.K.'s view on reform of company management and related matters should soon be available in book form. Mr Nigam indicated that he was currently working on the speeches delivered by T. T.K. on the Companies Amendment Bill in 1953 and, more recently, in Parliament a few months ago, with a view to their early publication.

Rice Mill Machinery

The announcement made by Mr C. Subramaniam, at the Chief Ministers' Conference, regarding the proposal to set up a large number of rice mills in the public sector, and the subsequent despatch of an expert delegation to West Germany and Italy to study techniques and the machinery used for rice milling in those countries, has not surprisingly, caused disquiet among the manufacturers of Rice Mill machinery in this country. In a memorandum submitted to the

Minister, the Rice Mill Machinery Manufacturers' Association of Bombay have pointed out that, if substantial demand were forthcoming, Indian manufacturers, with forty years' experience behind them, could produce machinery of the type which Government had in mind for modernising the rice processing industry.

It is, however, learnt that the Ministry has a fairly correct appreciation of the type of equipment now being manufactured in the country and that what the Minister had in mind, when he decided to send the expert delegation to Europe and Japan, was the type of sophisticated equipment which at present is not being manufactured in India. But that does not rule out arrangements to get them fabricated locally under licence. All these aspects are expected to be studied by the delegation which has returned after visiting West Germany and Italy, where they had discussions with manufacturers, and will be shortly leaving for Japan to study the equipment available in that country. A decision on the choice of equipment will be made on the basis of their report, the main considerations being performance, cost and possibility of their eventual manufacture in India. The delegation is led by Dr P. K. Kymal, Technical Adviser, Ministry of Food, who has specialised in the nutritional aspects of rice. The other members of the delegation are Dr Brown of the Ford Foundation and Mr V.S.T. Mudaliar.

Hullers & Shellers

Two types of rice mills are at present in use in this country, the "huller" type and the "sheller" type. Most of the rice mills, which are small units, have the huller type machines. The shellers, which operate on the principle of the grindstone, cost more, but give greater output per hour.

The types of mills that are proposed to be imported, after the delegation has completed its survey, incorporate many improvements in design and include a variety of ancillary equipment which help increase the output of clean rice of standard quality, eliminate wastage caused by breakage, and have arrangements for efficient recovery and separation of broken rice, bran and husk. One distinctive feature of the type of mills which are being considered is that rollers used for separating

the husk are rubber covered, reducing the incidence of breakage. The increase in output of rice, as compared with the conventional types of mills in India, may be of the order of five to 12 per cent depending on the variety of rice, the types of machinery used etc. It is claimed that the additional expenditure in setting up a unit with imported equipment could be recovered from the additional yield, within one year. The need for import of mill machinery arises from the fact that most of the equipment is not manufactured in India. For instance the following items are not locally available:

- (1) Rubber Roller Hullers.
- (2) Circular sieve and cyclone type separators of husk, rice, paddy and broken rice.
- (3) Specially designed paddy separators.
- (4) Centrifugal Reels, for separating broken rice particles and rice germ from the bran.
- (5) Annular separators to provide cleaned rice.
- (6) Electric temperature control equipment.

Equipment for cleaning the paddy before milling are available in India, but they are not made to precision standards.

The Minister for Food and Agriculture, it is understood, assured the representatives of Rice Mill Manufacturers who met him last week that Government's policy was to give every encouragement to the indigenous industry and they would be given full opportunity to fabricate modern equipment of the required for the rice mills that are proposed to be set up. Government had planned to import only six modern units from abroad. These units would be worked on a pilot basis to see whether the claims in regard to their efficiency were borne out by working in Indian conditions. Government did not intend to import all the machinery that would be required for the rice processing industry. If the efficiency of the new machinery was proved, the first thing Government would do would be to find out how much of that machinery could be fabricated within the country itself and to secure only the remaining part from abroad. These imports would also be progressively reduced. Some manufacturers of equipment abroad, it is learnt, are interested in manufacturing the equipment in India in collaboration with Indian parties.

Bokaro Time Schedule

The plans that are being drawn up for construction of the Steel Plant at Bokaro envisage that the plant for the first one million ton stage should be set up by the middle of 1969 so that production could start from the end of that year. This was indicated by the Steel Team which returned last week after discussions with the Soviet authorities in Moscow. The Team, which was headed by Mr N. N. Wanchoo, Secretary, Ministry of Steel, included Mr K. M. George, Managing Director, Bokaro Steel Limited, and Dr M. N.

Dastur, Managing Director, Dastur and Co.

The purpose of the teams' visit, said Mr Wanchoo, was to impress upon the Soviet Government the importance of completing the project on a priority basis and draw up a time schedule consistent with this objective. A fairly large Team of Soviet specialists, headed by the Director of Giprometz, is expected to arrive this week for further investigations and detailed technical discussions. (Giprometz is the Soviet Central Institute for Metallurgical Plants.)

Mr Wanchoo said that, while agreeing to the general scope of the plant and its product-mix as indicated in the detailed project report prepared by Dasturco, the Soviet side wished to incorporate the latest technological advances made in the Soviet Union. They were also keen to assume responsibility for plant design and supervision of construction. They felt that, even though Bokaro will provide for the fullest utilisation of Indian capacity for the manufacture of equipment, under present

conditions, it has necessarily to be engineered to suit equipment of Soviet design and manufacture. Indian design and engineering capacity will also be associated with the project.

The actual time schedule for finalisation of agreements and start of work on the project will depend on how soon the technical discussions in India regarding the changes suggested by the Soviet side are completed. It is expected that the Inter Government Agreement, indicating the broad outlines of the project and the pattern of aid, will be signed in the middle of October and that the detailed agreement regarding supply of equipment early next year.

The Team also visited Czechoslovakia and had discussions of a general nature regarding possibility of supply of steel plant equipment for other steel plants that are proposed to be set up in the Fourth Plan. The team found that Czechoslovakia manufactures 80 to 90 per cent of steel plant equipment. There is also the possibility that electrical equipment for

steel plants may be available from the units of the Heavy Electricals that are being set up with Czechoslovak assistance.

Fifth Steel Plant

Mr Red Foy, the chairman of the Koppers and Company, is likely to visit India during the middle of September for conducting talks regarding collaboration in the establishment of the fifth steel plant in the public sector. It will be recalled that Koppers, a prominent steel construction and engineering firm, had organised a consortium of American and British firms for the supply of machinery and equipment for Bokaro plant on commercial credit. Since the construction of the first stage of the Bokaro steel plant has been entrusted to the Russians, Koppers has expressed its readiness to provide the requisite machinery for the fifth plant to be set up in the public sector. The locale of this plant is likely to be Goa or Hospet.

The Indian Iron & Steel Company Limited

Capacity Production Again Achieved

Need for Ploughing Back Profits

Sir Biren Mookerjee's Remarks on Decontrol

The following statement by Sir Biren Mookerjee, Chairman of The Indian Iron & Steel Co. Ltd. dealing with the Company's working for the year ended 31st March, 1964, has been issued to shareholders. The Annual General Meeting of the Company will be held on Tuesday, the 8th September, 1964, at 3 p.m. at the Registered Office of the Company, 12, Mission Row, Calcutta-1.

Before dealing with the affairs of the Company, I would refer to the national tragedy we have experienced in the death of our late Prime Minister, Pandit Jawaharlal Nehru on the 27th May 1964 and would give public expression on behalf of the Board of Directors and all members of the Company to our feeling of profound sorrow at the passing of one who played a leading part in the attainment of freedom by our Country and who since the achievement of independence, guided in so able a manner on the home and international fronts the destinies of India through the momentous events of the past seventeen years. His memory will remain with us always.

OPERATIONS

From the figures given in your Directors' Report it will be seen that production of steel during the year under review has again approximated to the rated capacity of the Plant. This position barring untoward events it is hoped to maintain, but having reached the plant capacity as it stands under present working conditions no improvement in production of any magnitude can be looked for except to such extent as the introduction of new techniques may render possible. To this end intensive research continues to be carried out by your Company's technical staff into the beneficiation of raw materials, improvement of blast furnace operational conditions and added use of oxygen in the Melting Shop. I will refer to this matter of research in greater detail at a later stage in this Statement.

ACCOUNTS

Those shareholders who are unfamiliar with the provisions of the Income-tax Act and the Companies Act may find difficulty in fully understanding the reasons which have necessitated the raising of the provision for depreciation from Rs. 3,40,18,269 for the previous year to Rs. 4,40,25,006 for the year under review and I should, therefore, perhaps supplement the

brief technical explanation given in the Report by your Directors.

Section 205 of the Companies Act provides that no dividend shall be paid by a Company for any year except out of the profits for that year arrived at after providing for depreciation. Certain alternative bases are then laid down for computation of the provision for depreciation, that chosen by your Company being stated in Section 205(2)(b) as provision "in respect of each item of depreciable asset, for such an amount as is arrived at by dividing 9% of the original cost thereof to the Company by the specified period in respect of such asset." The term "specified period" is then defined in the following words—"specified period in respect of any depreciable asset shall mean the number of years at the end of which at least 95% of the original cost of that asset to the Company will have been provided for by way of depreciation if depreciation were to be calculated in accordance with the provisions of Section 350." Section 350 then provides that depreciation shall be taken at the rate specified for the assets by the Income-tax Act and the rules made thereunder for the time being in force as normal depreciation "including therein extra and multiple shifts allowance."

Referring back to Section 205 (2)(b), it will now be appreciated that 95% of the original cost of assets is a definite unvariable amount but that the factor by which this amount is to be divided in order to arrive at the amount of depreciation to be provided, namely the "specified period", is by reason of Section 350 dependent upon the Income-tax rates of depreciation applicable from time to time. If these rates are increased then the more quickly will 95% of the original cost of the assets be covered, the shorter will be the "specified period" by which the 95% of the original cost of the assets has to be divided and the greater in consequence the amount of depreciation that has to be provided against profits. This is the

position for the year under review where it has been announced that the income-tax depreciation rates that will be applicable in respect of that year are to be increased by the re-introduction of triple shift allowance with consequent increase in the depreciation provision made in the Profit & Loss Account.

DIVIDEND

In view of the magnitude of the amount, some comment will no doubt be expected from me regarding the sum of Rs. 5.43 crores set aside to General Reserve from the profits of the year in relation to the amount proposed to be distributed as dividend. It is perhaps appropriate that I should therefore list the very heavy loan liabilities outstanding at the 31st March 1964 in respect of the completed Expansion Schemes together with the finance that has to be found for the further Schemes to which reference has been made in your Directors' Report. These are:—

	World Bank Loans:	Crores. Rs.
1953 Extensions	...	7.18
1955 Extensions	...	5.31
Government of India Loan	...	4.61
Collieries Development Project	...	23.19
Balancing of Plant Project	...	16.21
Total	...	56.50

Following upon completion of the Balancing of Plant Project which, as you are aware, will increase the steel-making capacity of the Burnpur Works by some 300,000 tonnes of crude steel per annum, our plans are that implementation of the second phase of further expansion shall be put in hand and preliminary steps towards this end have already been taken with Government and the World Bank. This second phase of expansion would give added capacity of approximately a further 700,000 tonnes per annum, the two projects together, therefore, covering the rising of our present capacity by some 1,000,000 tonnes of crude steel per annum. The phasing of this further 1,000,000 tonne expansion into two parts follows our policy that no individual expansion project should be of such magnitude as to impose too great an immediate financial burden on the Company or impair the dividend position to the detriment of the interests of the shareholders

but rather that expansion should be gradual, each stage being followed by a period of consolidation before the undertaking of the next. No firm estimate of the cost of the second phase of the further expansion can be made until decision is taken as to what form the end products will take, this being dependent upon the future requirement of the country, but the cost will naturally be of very great magnitude and constitutes therefore a major factor in an appreciation of the financial requirements of the Company.

Additionally, finance has to be found for expenditure on capital account in connection with the modification and improvement of the existing plants, the provision of additional housing and amenities for staff and workers together with the large general capital expenditure that must constantly be incurred in every efficient and expanding organisation. Viewed in this light, the necessity for the ploughing back of profits not only for the year under review but also for the future will, I trust, be clearly apparent.

In compensation in some measure for the restriction of dividend so caused it would normally have been the desire of your Directors to capitalise from time to time by the issue of bonus shares a portion of the reserves of the Company which are already out of all proportion to the share capital. It is a matter of regret to them that such a course is however impracticable under present taxation principles involving, as it would, heavy liability for tax both on the Company and on the shareholders and is, in fact, impossible under the current policy of Government which it is understood is to permit bonus issues solely out of any share premium account.

As possibly of some assistance to the shareholders in the spread of their income, I would however say that I am considering recommending to my Board that for the current and future years an on-account distribution of profits should be made by way of declaration of an interim dividend during the course of the year, balance of dividend only then being left for declaration in the normal course at the Annual General Meeting.

RESEARCH AND DEVELOPMENT

The steady deterioration during the last ten years in the quality of the primary raw materials parti-

cularly coking coal and limestone for pig iron production, has presented a serious challenge to the Company's technical staff but thanks to the operational research carried out by them capacity production from our Blast Furnaces has been achieved and is being maintained. As examples of some of the problems with which we are faced, the ash content of our coking coal currently averages about 19% compared with 16% 20 years ago, but what is worse is the wide range between the maximum and minimum ash content at 24% and 14% respectively. Similarly, the effective lime content of the present-day limestone varies between 30% and 45%. The quality of our iron ore too has been adversely affected by increasing demand and mechanisation of the Iron Ore Mines. Nevertheless, these are the raw materials with which our country is endowed and we have to learn, and learn quickly, how to use them to better advantage to enable us to produce iron and steel efficiently, both from a productive and economic point of view.

A large part of the solution lies in raw material preparation which, if we are to avoid merely blindly copying what others have done or are doing, calls for more and more expenditure on operational research. To take a specific case—raw material preparation includes crushing to an optimum maximum size and restricting the minimum size to give an aggregate best acceptable to the process. From this procedure in the case of iron ore, a large quantity of undersize material will accrue to become an expensive discard unless steps are taken to convert it into a useful material.

The most well known, long-standing and orthodox way of doing this is by sintering, a process which has resulted in improved blast furnace practice. We, ourselves, however have never accepted that this expensive process is necessarily the best solution to the problem in relation to Indian iron ore and have consequently refrained from any hasty decision that would commit us to the very heavy capital expenditure involved. That this has been the prudent course is borne out by modern research which has suggested that other forms of agglomeration could be capable of producing better results with Indian iron ore than the sintering process.

Over the past few years your Company has accordingly been carrying out extensive research with its own iron ore in an effort to find the best way of utilising the undersize ore which as a result of crushing and screening is accruing at our Ore Mines. I am happy to say that this research has shown much promise so much so that our own findings involving a combination of direct reduction, magnetic separation and agglomeration have been confirmed on reference by us for test by an independent overseas research organisation. The product obtained in our Pilot Plant is of high purity and is likely to have in the future a great influence on the operation and effi-

ciency of Indian blast furnaces. Sufficient information has now been obtained to enable the engineers to design the appropriate plant.

We have also investigated the questions of humidity control and fuel injection in relation to the operation of the Blast Furnaces, the increased use of oxygen in the steelmaking processes and the possibility of future production of such a standard grade of iron as would enable us eventually to eliminate the rather costly and wasteful intermediate Bessemerising process that under present conditions is necessary for purification of the hot metal before charge to the Melting Shop Furnaces. Suitable inclusion towards this ultimate latter end has in consequence been made in the Collieries Development and Balancing of Plant Schemes.

The utilisation of waste products has also been engaging our attention. For instance, we have been producing for a number of years building bricks and mortar manufactured from waste blast furnace slag.

Import restrictions on engineering spares has forced us into developing manufacturing techniques for which we more often than not are ill-equipped. The recurring expense of importing rolls for our Rolling Mills, for instance, is a serious drain on the country's foreign exchange resources. Here, although not having been granted a licence to manufacture rolls for the purpose of selling, we have as a result of experiments carried out at our Kulti Foundries and with the help of the British Roll makers Corporation, been able successfully to manufacture rolls for our 18" Mill which have proved to be equal to, if not better than, those imported. For this size of roll we can now support ourselves, saving approximately Rs. 13 lakhs per annum in foreign exchange. The factor limiting our ability to produce rolls in greater numbers and in larger sizes is the capacity of our existing Foundry and Machine Shop at Kulti which we hope to enlarge in course of time so that we may be able to cover also the roll requirements of the Merchant Mill and Sheet Bar and Billet Mill.

Miscellaneous engineering spares previously imported are now regularly being produced by our associated Companies within the Martin Burn Organisation for consumption at Burnpur resulting in a considerable and recurring foreign exchange saving. We have also been able within this Organisation to secure the manufacture to our specifications of items of capital plant for which we had previously to look to foreign suppliers. As examples, these cover such diverse items as Hot Metal Ladles, Ingot Casting Cars, Ladle Cranes, Bessemer Converter Shells, Hot Metal Transfer Cars and Boggles, Ground Charges, Stag Ladle Carriages, Special Type Discharge Wagons, Coke Quenching Cars, Acid Tanks and Acid Vats, the total value over the past nine years approximating to some Rs. 50 lakhs.

KULTI FOUNDRIES

Modernisation and expansion has been carried out of the Non-Ferrous Foundry and the Steel Foundry at your Kulti Works and an additional Annealing Furnace for the latter installed. New Machine Shops have been attached to these two foundries and the pressure on the main Machine Shops relieved to this extent.

The order position continues to be satisfactory but output for the current year remains dependent upon adequacy of the supplies of foundry grade pig iron.

During the year loss was suffered by the death of Mr. S. N. Gupta,

the Works Deputy General Manager (Commercial) who had charge of Kulti. Mr. R. G. da Costa, a Mechanical Engineer of wide experience, has since been appointed and has assumed charge as Deputy General Manager (Kulti).

DECONTROL

In my Statement last year I indicated that Government were considering decontrol of the distribution and prices of steel and that it had been arranged that the producers should submit joint concrete proposals for the setting up and operating of a Joint Organisation following upon decontrol and for

4³/₄ PER CENT.

ANDHRA PRADESH STATE DEVELOPMENT LOAN, 1976

Issue Price Rs. 99.50 Per Cent

Open on the 24th August, 1964.

The Loan will be closed without notice as soon as the subscriptions amount to Rs. 11 Crores approximately, and in any case not latter than the close of the business on the 29th August, 1964.

Applications will be received at (a) the offices of the Reserve Bank of India, Bangalore, Bombay (Fort and Byculla), Calcutta, Madras, Nagpur and New Delhi, (b) the branch of the State Bank of India at Patna, (c) the branches of the State Bank of Hyderabad and the State Bank of Mysore conducting Government treasury work in the State of Andhra Pradesh, (b) the branches of the State Bank of India, in the State of Andhra Pradesh at places not covered by item (c), (e) the Government treasuries and sub-treasuries in the State of Andhra Pradesh at places not covered by items (c) and (d).

FULL PARTICULARS CAN BE OBTAINED

at any of the Offices or Branches mentioned above or at any Treasury or Sub-Treasury in the State of Andhra Pradesh.

the prices that should become effective at the date of decontrol. Representatives of the producers met on several occasions at various levels to discuss and work out joint proposals but unanimity was not able to be achieved and ultimately the producers in the private sector were asked to put up their views independently of the public sector. Accordingly, your Company jointly with the Tata Company submitted a memorandum on the 7th November 1963 suggesting the formation of an Iron & Steel Board. The memorandum contained details as to the functions of the proposed Iron & Steel Board together with recommendation regarding the prices to be effective on decontrol. These suggested prices were based on a block of Rs. 1,500/- per tonne of saleable steel as being more truly representative of present-day conditions than the figure of Rs. 1,176/- per tonne adopted by Government in the last fixation of retention prices. The proposed prices on this basis were about Rs. 35/- per tonne higher than the retention prices excluding the assessed increased incidence in respect of freight equalisation.

Matters rested at this stage until unilateral decision was taken by Government regarding the planning of production and control and the pricing and distribution of Iron & Steel, the principles of which were conveyed to the representatives of your Company and those of the Tata Company who were called to meet the Minister for Steel in Delhi on the 26th February 1964. The salient features of Government's decision were as follows:—

(1) Statutory control over the price and distribution of all categories of steel except pig iron, ingot moulds and bottom plates, billets and tin bars, plates, sheets, wide strips, skelp, tin plates, hoops and the irrespctive defectives would be abolished with effect from 1st March 1964.

(2) Indents for categories of iron and steel which continued to be controlled would require to be supported by quota certificates as hitherto.

(3) A Joint Plant Committee would be constituted with an accredited representative from each of the Steel Plants and with the Iron & Steel Controller as its Chairman. A representative of the Railway Board would also be a member of the Joint Plant Committee. This Committee would be entrusted with the task of (a) the planning of production both of controlled and decontrolled categories; (b) the announcement and listing of prices of the decontrolled categories of steel and (c) the administration of the freight equalisation fund for both the controlled and decontrolled categories.

(4) Government would set up a high level steel priority committee which would determine priority ranking in relation to bulk allocations of steel.

(5) Re-rollers would be virtually made free from all control, as also would stockists and retailers in the case of all decontrolled items.

The decision of Government followed the general recommenda-

tion of the committee appointed by Government in September 1962 on decontrol of steel and popularly known as the Raj Committee.

Simultaneously with the decision of partial decontrol of steel, Government announced increases in the Excise Duty mainly to compensate the loss of surcharge with the abolition of the equalisation fund with effect from the 1st March 1964. The average rise in the Excise Duty calculated on your Company's 1963-64 output of steel is about Rs. 18/- per tonne. The selling prices for the decontrolled categories announced by the Joint Plant Committee, and the prices directly notified by Government for the controlled categories, include an element of Rs. 62/- per tonne on account of freight equalisation to cover the distribution of steel to consumers at all rail head stations throughout India at a uniform price. The system of retention prices has been abolished and the new prices to producers have a differential of Rs. 45/- per tonne between the 'tested' and the 'untested' categories, which under the new arrangements is now retained in full by the producers as against Rs. 10/- per tonne only under the old system of retention prices.

Owing to force of circumstances the prices announced by the Joint Plant Committee had of necessity to be based on the previous retention prices adjusted for excise duty and additional freight, the effective increase to the producers arising therefore almost wholly from the additional realisation in respect of tested materials. The prices of the decontrolled categories were later revised from the 13th April 1964 in partial compensation of increases in production costs not reflected in the previous retention prices.

The average increase in the case of your Company on the decontrolled categories of steel forming nearly 60% of the total output is of the order of Rs. 30/- per tonne on the basis of the product mix and the proportion of 'tested' to 'untested' steel achieved in the year 1963-64. In the case of the controlled categories, the effective increase has been of the order of Rs. 4/- per tonne only on account of reduction in the net price of billets and the assumption by Government of an incorrectly high percentage of 'tested' galvanised sheets in working out the prices despite the fact that on protest the price of untested billets was revised upward by Rs. 15/- per tonne from 30th May 1964. On the basis of our production for 1963/64 the over-all average increase in respect of our total output of controlled and decontrolled categories of steel is approximately Rs. 20/- per tonne, effective in successive stages of Rs. 10/-, Rs. 8/- and Rs. 2/- per tonne from the 1st March 1964, the 13th April 1964 and the 1st June 1964 respectively.

It is too early yet to assess the adequacy of the revised planning arrangements under the Joint Plant Committee and I would only say at this juncture that the retention of control by Government over certain categories of

steel, particularly in the case of sheets, has done little to curb the activities of the black market in the items in short supply.

On the financial side, we have grounds for dissatisfaction inasmuch that the cut imposed by Government on the retention prices recommended by the Tariff Commission for the two years ended the 31st March 1962 and continuing up to the date of revision of prices under the above arrangements together with certain interim increases in production costs have remained uncompensated and that funds to this extent have been denied to the Company which would otherwise have been available against the heavy capital expenditure on staff housing, modernisation and expansion with which we are faced. We are also unaware of the reasons for non-acceptance of the prices put forward to Government under the

joint proposals of the Tata Company and ourselves and by reason of the some-what ad-hoc nature of determination of the prices now current are also unaware of any approved basis for future adjustment of these prices in relation to productive capacity, capital block and working costs.

ACKNOWLEDGEMENTS

In conclusion, I would express on behalf of the Board of Directors our appreciation of the services rendered by the General Manager, Mr. J. McCracken, his executive heads and the entire staff and workers of the Company whose efforts have contributed so largely to the results that have been achieved.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

THE INDIAN IRON AND STEEL COMPANY LIMITED

NOTICE

Notice is hereby given that the Annual General Meeting (being the Forty-Seventh Ordinary General Meeting) of the Company will be held at the Registered Office, No. 12 Mission Row, Calcutta, at 3 p.m. on Tuesday, 8th September, 1964, for the following purposes:

1. To receive and adopt the Audited Accounts for the year ended 31st March, 1964, and the Directors' and Auditors' Reports thereon.
2. To declare a dividend for the year ended 31st March, 1964, on the Ordinary Share Capital. The dividend if sanctioned will be paid on or after the 9th September, 1964.
3. To appoint a Director in place of Maharajadhiraja Sir U. C. Mahabir Bahadur of Burdwan, who retires by rotation and is eligible for re-appointment.
4. To appoint a Director in place of Maharaja Sir Pratap Chandra Bhanj Deo of Mayurbhanj who retires by rotation and is eligible for re-appointment.
5. To appoint Auditors and fix their remuneration.
6. To consider and, if thought fit, to pass with or without modification the following Resolution of which Special Notice has been received by the Company and is hereby given to the members:

As Special Business

7. To appoint a Director in place of Mr. John McCracken who retires by rotation and being eligible offers himself for re-appointment and to consider, and if thought fit, to pass the following resolution as a Special Resolution in respect of which a Special Notice as required by Sections 190 and 261 of the Companies Act, 1956, has been received by the Company and is hereby given to the members:

RESOLVED: That the appointment as a Director made by the Managing Agents in terms of Article 108 of the Articles of Association of the Company, of Sir Biren Mookerjee who has since attained the age of 65 years, be and is hereby approved and that the age limit laid down in Section 280 of the Companies Act, 1956, shall not apply to him.

7. To appoint a Director in place of Mr. John McCracken who retires by rotation and being eligible offers himself for re-appointment and to consider, and if thought fit, to pass the following resolution as a Special Resolution in respect of which a Special Notice as required by Sections 190 and 261 of the Companies Act, 1956, has been received by the Company and is hereby given to the members:

RESOLVED: That pursuant to the provisions of Sections 261 and 314 and other relevant provisions of the Companies Act, 1956, Mr. John McCracken, who retires by rotation and who is the General Manager of the Company's Works, be and is hereby re-appointed a Director of the Company and that consent be and is hereby accorded to his continuing to hold an office of profit as General Manager of the Company's Works including the enjoyment by him of all such benefits and perquisites as are or shall be admissible to all other overseas recruited staff of the Company of non-Indian origin.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED
F. G. LIVERSEDGE
Managing Director
Managing Agents

Registered Office,

CALCUTTA-1
12th August, 1964

An Explanatory Statement annexed to the convening notice as required under the Companies Act, 1956, has been forwarded to the members of the Company.

Indian Copper Corporation Limited

Satisfactory Results: Demand Overtakes Supply

Mr S. C. Gladstone, the Chairman, on Expansion Plans

The following is the Address delivered by Mr S. C. Gladstone, Chairman of Indian Copper Corporation Limited, at the Annual General Meeting of the Company for the year ended 31st December 1963 held on the 12th August 1964.

Gentlemen,

The Report of your Directors and the Accounts for the year ended 31st December 1963 have been in your hands for several weeks. Fortunately, the restrictions imposed in 1963 by the Government of India under the Defence of India Rules, which prohibited the publication of the Accounts, have now been relaxed.

This is the first time that I have had the privilege of addressing you, but before I begin my review I should like to pay tribute to the late Prime Minister, Pandit Nehru. After leading the freedom movement for many years, he became the first Prime Minister of independent India in August 1947 and for 17 years he never spared himself in the service of the country. He will undoubtedly go down in history as one of India's greatest men.

Your Chairman last year, Mr. J. W. Eason, who left India on retirement in March this year, has been connected with the Company for 29 years and has been your Chairman for the last two years. I am sure that you would all like to join me in wishing him a happy retirement, which has been so well earned.

I will now give you a general review of the affairs of your Company during 1963.

GENERAL REVIEW

During the first nine months of last year there was ample copper to meet world demands and the price remained steady at about £234 per ton. In the last quarter of that year demand began to overtake supply, but it was not until the New Year that prices began to rise. In spite of increased production and sales the price on the London Metal Exchange, which had been steady since June 1961, rose to around £300 per ton where it has since remained.

At the present time production capacity probably just about balances the world demand and but for industrial disputes the price could be expected to recede to between £240 and £250.

The shortage of copper, especially in the U.S.A., has had a most unfortunate effect on your Company in as much as the new Electrolytic Refinery is based on the import of Blister Copper. It was originally intended to import Blister Copper from Africa, but as a result of the foreign exchange shortage the Government of India

have only been able to allow us a licence to import from the U.S.A. and at the present time Blister Copper is not available from this source.

WORKING REVIEW

The production of copper in 1963 was 9,582 metric tonnes, a small decrease of 199 tonnes compared to the previous year due to a number of factors such as the deterioration in the quality of coal and operating conditions.

In the middle of 1962, as a result of the acute shortage of good quality coal, the Coal Controller reduced our quota of Selected 'A' coal by 50% and substituted coal of inferior quality for the balance of our requirements. Inevitably this has had a significant effect on the efficiency of your smelter.

Your Company's Rolling Mill produced 9,376 tonnes of Brass Sheets and Circles during 1963 and for this imported Zinc is required. Import licences for Zinc are now based on value and are financed by U.S. Aid and thus the high price of this metal in world markets, and particularly in the U.S.A., has resulted in a substantial reduction in the tonnage that can be purchased. The Government of India have also imposed restrictions on the sale of Brass and Copper Sheets to the Utensil Industry, our traditional and principal consumers. The effect of these restrictions began to be felt in the second half of 1963 and the burden this year will be heavier.

Mining exploration at your Surda and Patharghara Mines continued, but a serious breakdown of the main Compressor restricted development work at the main Mine at Mosaboni. In spite of the most energetic efforts, it took eight months to obtain an import licence and procure spare parts for this machine, during which time all available compressed air was used to maintain production and development was at a standstill. In spite of this, our reserves increased by over 2,000 tonnes, which is satisfactory, and I am pleased to say that the Compressor was put back into operation in January 1964.

Electric supplies were adequate throughout the year, but pig iron and coke for the Foundry and cement were in very short supply. Thanks to a better supply of wagons, despatches showed some improvement resulting in a decrease in stock of finished products.

The financial results of your Company for 1963 were satisfactory considering the rise in prices in the wake of the Emergency. Labour costs and the expenses of mining at greater depths continue to mount; nevertheless, the successful results reflect credit on all concerned.

During the year under review labour relations were generally good and a dispute over the payment of profit sharing bonus was settled in Conciliation proceedings. Towards the end of the year, however, the Unions submitted fresh demands for very substantial increases in wages, which cannot be justified. I regret to report that while negotiations were in progress the Works Union recently called a three-day protest strike to bring pressure to bear in support of their demands. Negotiations are still in progress.

KYANITE

Exports of Kyanite fell from 27,686 tonnes in 1962 to 18,797 tonnes due to competition from synthetics and poor market conditions. The recession in the steel industry abroad in 1962 led to a reduced demand for Kyanite in the following year. At the same time there was a big improvement in the supply of railway wagons to carry the ore from your Mines to the docks, which encouraged your customers to reduce their stocks. This has led to a temporary fall in exports, but I am happy to say that up to the end of July over 12,000 tonnes had been exported and by the end of this month the figure will approach 17,000 tonnes.

ELECTROLYTIC PLANT

When your Directors' Report was written in May this year, it was predicted that the new Refinery would be completed in September this year, but I regret to report that there have been further serious delays since that date.

There have been many delays in the construction schedule chiefly due to a shortage of essential materials such as cement, roofing sheets and steel and the failure of most suppliers of indigenous plant to keep to promised delivery dates. Much of this can be traced to the Emergency created by the Chinese invasion in November 1962. There has also been pilferage in the Calcutta Docks. All this is completely outside our control and although everything is being done to speed the work on the final stages of the plant, it is anticipated that production will not commence before the New Year. This will, of course, depend on the supply of Blister Copper to which I have referred earlier.

Your Company has also been licensed to produce 260 tonnes of Nickel Sulphate, which will be a by-product of the Electrolytic Plant. Foreign exchange has been arranged and the final details of technical know-how are now being negotiated. It is hoped to start production in the first quarter of 1966.

EXPANSION PLANS

Your Company has been granted an Industrial Licence to expand

production of copper and to produce Sulphuric Acid as a by-product and negotiations for foreign exchange loans are far advanced. The present Smelter is now over 30 years old and has for some time been operating at well above its designed capacity. No plant can be expected to remain at peak efficiency after so many years service. It will, therefore, be necessary to install a new Smelter of larger capacity and of a type that will allow the recovery of waste gases in the form of Sulphuric Acid.

At Surda new equipment is required to allow for development in depth and also a Concentration Plant. Additional grinding plant is required at your Works and a new Crushing Plant at your Mosaboni Mine to deal with the increased capacity. It is expected that after this new equipment has been installed, production of copper will rise to 12,130 tonnes during the first year of operation of the new Smelter and to 12,950 tonnes during the second year. Sulphuric Acid will be produced at the rate of 100 tonnes a day.

The total cost of this plant will be £2,875,000, which, it is planned, will be financed by Bank overdrafts, foreign loans and a Debenture Issue.

ACCOUNTS

The profit for the year before providing for Taxation, Depreciation and Reserves amounts to £1,381,875, as compared with a profit in 1962 of £1,351,771. Income Tax and Super Tax on profits, however, amounted to no less than £821,855, partly because of the Bonus Issue in 1963 and the new tax on dividends. Your Directors have decided to place £170,000 to Depreciation and £98,600 to General Reserve. £36,597 is allotted to Development Reserve and £21,691 to provision for Kyanite Decontrol Amount.

There is a balance available of £247,299 and your Directors are recommending that the same amount as last year, i.e. £246,834, equivalent to a Dividend of 12%, subject to tax, on the new capital of the Company should be distributed, leaving a balance of £165 to be carried forward.

STAFF

It remains for me to thank the General Manager, Mr. N.A.B. Hill, and the Staff and Workers, both at the Mines and the Works. I am sure that you would all wish me to thank them for their exertions on your behalf which have led to yet another successful year.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

Market NEWS and Trends

JUTE Unwarranted Rise in Prices

Hectic activity with prices scaling new highs characterised trading in the jute markets last week. There have been no new incentives for the buoyant mood except that reports from Pakistan indicate the continuance of a firm trend in the fibre market there. As was noted in this column last week much of the bullish trend is still based on the impression derived from the unusually low arrivals of raw jute into Calcutta and the upcountry markets. Taking advantage of the temporary slowing down of arrivals, the speculative elements have succeeded in creating a psychology of shortage. And to strengthen their case further they have not hesitated to spread the rumour that even the Indian crop is lower than last year's. The charge that the present high prices are the result of speculative

manipulation will of course be denied by pointing out that certain factors such as the low carry-over of raw jute from last season in India, the setback to the Pakistani jute crop on which our industry still depends to some extent for superior grades of jute, etc., anyway are bound to induce an upward push to the fibre prices in India. While it cannot be denied that these factors have some significance it cannot also be maintained that they are so decisive as to cause the spiralling of prices that is noticed now. For, the size of the Pakistani crop has fortunately ceased to influence our jute industry's production for some time now thanks to the splendid progress made in jute production in India over the past few years. What is relevant is the size of the Indian crop which, in the current season, according to all reliable reports, will be as large as last season's, if not larger. The contention that a shortage of jute will make itself felt, if not

now, atleast later in the season, will not stand close scrutiny, because arrivals of raw jute will pick up with an improvement in weather and now that it has been decided to release the buffer stock of 5.6 lakh bales, mills will have no difficulty in continuing to work to the full extent of their capacity.

It will be evident therefore that the rise in prices of both raw jute and jute goods cannot be justified on the plea that there are reasonable grounds to apprehend that fibre supplies to the Indian industry this season will be inadequate. And at the present juncture in which India is straining its utmost to maximise its exports, such unwarranted rise in prices will only cause a serious setback to this effort. Of the factors which have a bearing on the volume of exports, price levels and stability are important. If exports had been quite satisfactory in the past one or two years, it is largely because price movements were confined to comparatively narrow limits. Referring to the importance of these factors to the present endeavour in promoting export of jute goods, Mr D. Duncan-Smith, Chairman of the Calcutta Jute Fabrics Association has made the following points: "The recent mills strike in Pakistan, combined with reports of damage to the jute crop in that country caused an immediate upward reaction in the price of jute goods. This can naturally be detrimental to long-term consumption overseas as these wild price movements do not occur with paper, polythene, other substitutes and bulk handling. It is therefore essential that we achieve some form of stability even if it means control of the maximum price for export."

The Indian Jute Mills Association has also viewed the present trend in the jute markets with the greatest concern and its General committee is of the unanimous view that "as far as it is possible at this juncture to make a competent assessment of the availability of raw jute during the current season, there is nothing in the situation justifying the behaviour witnessed in the markets during these last few days." The Committee has further pointed out that "while it is agreed that with

production continuing at existing levels it is likely that some run-down in the carry forward of jute at the end of the season will take place, it is not felt that this will be of such dimensions as to create an actual shortage". One of the remedial measures suggested by the IJMA has already been implemented and that is the total release of the buffer stocks presently held by the industry and the deferment of the date of their replacement from November to February 1965. The present situation, especially the steep rise in prices

of jute in Pakistan, has placed the Indian industry at some disadvantage. It is of very great importance to our industry that it is enabled to get some supplies of high grades of jute and cuttings from Pakistan. Owing to the failure of the Government to provide the industry with the minimum allocation of foreign exchange at the appropriate time, despite the repeated representations made by the IJMA, the industry has been denied the opportunity to buy its requirements from Pakistan at reasonable prices. Now with Pakistani prices

ruling at the present high levels, it is not in a position to operate in the market. The committee, however, has suggested that Government should allocate the necessary foreign exchange so that it can be utilised by the Jute Commissioner in consultation with the industry. It has further expressed the hope that in case jute purchases have to be made at high prices, Government will agree to subsidise such imports. This will be necessary in order to ensure that Indian jute goods can be made available to foreign customers at reasonable prices.

TEA Fair Support for Selected Grades

IN the Export Sale held in Calcutta this week, offerings consisted of 57,822 packages of Leaf grades. After a hesitant start, a good demand developed; but this was a little less general than last week and showed a slightly easier tendency at the close. CTC teas encountered a fair but selective enquiry with BP's showing more strength than Fannings grades. Some useful prices were forthcoming for the best.

Orthodox descriptions also received fair support; but BOPs and other tippy grades often failed to realise valuations. Selected Fannings grades were often dearer and the plainer varieties were readily absorbed with little change in value.

Whole Leaf grades came in for a good enquiry and were fully firm, while Darjeelings were sold readily especially where flavour was present. Following rates (per kilo) were quoted:—Clean Plain Pekoe Rs 5.20 to Rs 5.60; Plain BP Rs 4.40 to Rs 4.70 to Rs 4.70; Plain Fannings Rs 4.10 to Rs 4.40; Medium Assam CTC BP Rs 6.10 to Rs 6.70; Medium Assam CTC Fannings Rs 6.00 to Rs 6.50; Best Assam CTC BP Rs 7.00 to Rs 8.00 and Best Assam CTC Fannings Rs 7.00 to Rs 7.80.

In the internal sale, offerings were 31,589 packages of Dusts. Demand, though fair, was less general and considerably lower levels were established. Apart from the smaller lines, all CTC teas generally declined by about 40 P. Plain orthodox types met with a satisfactory market. Medium descriptions were irregular. Legg-cuts were well received and were a strong feature of the sale. Following rates were quoted:—Plain Orthodox Dust Rs 4.20 to 4.50; Medium Assam Dust Rs 4.90 to Rs 5.70; Legg-cut Dust Rs 4.90 to Rs 5.30; Medium Assam CTC Dust Rs 5.50 to Rs 5.90 and Good Assam CTC Dust Rs 6.30 to Rs 6.60.

In the Cochin market, a quantity of 656,000 kg of Leaf grades was offered. Teas from the Nilgiris

were quite useful, while the quality of teas from other districts was barely maintained. Against a fair general demand, low mediums and mediums met with a fair demand; but prices for these categories were irregularly easier.

Mr A. S. Bam, Chairman of the Indian Tea Board, has indicated at the recent meeting of the Tea Association of India that the Central Government has suggested to the States that expenditure incurred by estate-owners on the development of tea acreage should be allowed as revenue expenditure for tax purposes. The plantation companies have been representing to the State Governments that the large expenses incurred by them in developing immature acreage should be made eligible for tax purposes. The refusal of the Governments to agree to this request has created difficulties for many companies, particularly the small ones, and large sums have had to be paid by way of agricultural income-tax. If the new proposal is accepted and financial assistance also proves to be effective, the Indian industry can acquire itself even more creditably in the coming years. It is important to remember that, without an increase in internal production, even the present level of exports cannot be sustained.

In the sale held at Coonoor this week, a quantity of 1,28,083 kilogrammes was offered. The general standard of quality was almost the same as that of the last sale. Owing to the adverse weather conditions in the Nilgiris, communications could not freely operate. The demand was, therefore, limited and prices declined by 15 to 20 paise per kilogramme. Good Nilgiri dusts were supported fairly well with buyers closely following quality. Other Nilgiri dusts eased by 10 to 15 paise per kilogramme.

In the Colombo market, prices of low-grown tea dropped by 20 to 25 cents per pound. The fall is attributed to the take-over by the Iraqi Government of tea trade. Iraq is the second largest buyer of Ceylon tea.

The Iraqi Government has restricted the import of tea by its sales department and ordered the seizure of all existing quantities of tea at port and railway warehouses. It is stated that profiteering, hoarding and smuggling of tea into certain countries have led to a rise in tea prices to an unreasonable extent. This, together with the smuggling out of funds by importing tea at more than the actual cost price, has prompted the Government to control the import of tea. Iraq imports about 9,000,000 dinars worth of tea per year.

In London auction held this week, offerings were 15,461 packages including 5,037 packages from Northern India. Demand

was quiet and prices generally were irregular and easier. Only a few Assams were on offer; but the better liquoring of types met with good competition. Doars teas also came to an irregular market at mostly lower prices. African teas were occasionally easier.

COTTON Smart Rise in Jarilla August

The Jarilla August contract staged a smart recovery on Monday thanks to the hectic short covering and pierced the official limit of Rs 750 per three quintals. After opening the week at Rs 751.50 the maturing contract spurred up by ten points. The bulls will be required to pay special margin of Rs 75.00 per bale. It is reported that nearly 25,000 bales were purchased by the bears and the outstanding position of the prominent bulls is placed approximately at 50,000 bales. The total outstanding against the contract is put around 1.85 lakh bales. It may be recalled in this connection, that the market sentiment was largely influenced by the meagre tenders received against the contract on the opening day. The reported rejection of nearly 1,000 bales in the survey and an equal quantum in appeal had also its impact on the pattern of trading in the market.

Trading in the new contract, Jarilla March, was a different kettle of fish as the operators have not yet given any semblance of an indication to support it wholeheartedly. However, toward the end of the week, Jarilla March attracted some attention and closed firmly at Rs 730.50 per three quintals.

The spot market as Sewri presented unsettled conditions. Stray mill enquiry in selected growths, especially popular varieties, was reported during the week under review. Interest in foreign and export varieties remained at a low ebb.

The East India Cotton Association has warned the traders against abusing the allowance of free limit of 1,000 bales over the margin. It is obvious that the Forward Market Commission is endeavouring to avert any hectic improvement by making large scale purchases.

Reports from the different cotton growing tracts are indicative of bright the prospects of the new crop thanks to the congenial showers in those regions.

US CROP ESTIMATE

Cotton output in the United States in the current year is placed at around 14,785,000 bales of 500 lbs each. This is the first estimate by the United States Department of Agriculture of the 1964 American cotton as of 1 August. Production of cotton during last season was 15,327,000 bales.

The total area for harvest in this year is put approximately at 14,000,000 acres against last year's 14,212,000 acres. Per acre yield this year is expected to be in the environs of 500 lbs against 518 lbs in the previous year. According to the Department, 152,000 running bales were ginned prior to 3 August in contrast to 245,000 bales ginned at this time in the preceding year.

There was a notable shrinkage in the area under cotton in Ahmednagar district owing to non-availability of water at the sow-

ing season. The growers, however, have shown a preference to "adruse" variety of cotton. It is encouraging to report that this growth is progressing rapidly. It is stated that from the cultivators' point of view "adruse" cotton is more remunerative than other sorts and naturally we can expect a smart expansion of area under this growth in the immediate future.

The Uganda Lint Marketing Board has stated that it will be the official policy to earmark 40 per cent of the exportable surplus from the 1964-65 crop for direct sales. Sales to traditional markets will be routed through private export trade. The official sources indicate that the first lots of the new crop will be offered to the trade during September and a catalogue of 800,000 bales to be offered at eight auctions will be released before the sales start. The quantity to be released to each auction will be revised according to the actual production during this season.

PIECEGOODS

Sluggish conditions prevailed in the cotton piecegoods market in Bombay during the last week. Demand from upcountry centres was only a mere trickle obviously on account of the restricted bank facilities which are at present available to the trade.

Postal enquiries from dealers from upcountry centres were reported but business transacted was infinitesimal. Seasonal items met with scattered interest from Punjab UP, Delhi and Bihar. South Indian centres were conspicuous by their absence while interest from Calcutta concentrated solely on fancy goods.

Prices of superfine varieties of saris and dhoties showed little variation during the week. Grey markin was almost deserted while dhoties and saris remained subdued. Inferior coatings firmed up during the week on account of the encouraging support from North Indian centres.

The export section was devoid of any fresh development and the volume transacted was restricted. The UK remained quiet. Spasmodic enquiries from Europe flowed grey sheetings while Australia, Canada and New Zealand focussed their attention on sheeting calendar, print furnishings, dyed furnishings and dorio. Sudan accounted for a moderate quantum of superfine voiles of different sorts. Singapore was satisfied with a limited quantity of bleached long-cloth, and Gadlapat and East African enquiry centered on grey calendar and sheeting.

Coffee Export Policy

The Coffee Board has released 1,503 tonnes of coffee for export from the 1963-64 crop, consisting

of the following:—Plantation A 135.6 tonnes; Plantation B 24.9 tonnes; Plantation Triage 39.9 tonnes; Arabica Cherry 358.2 tonnes and Robusta 944.7 tonnes. The open export auction to quota countries will take place at Bangalore on 27 August.

In this connection, the President of the All-India Coffee Merchants' Association, has stated that, though it has been notified that this year's crop will be about 73,000 tonnes, the actual production seems to be about 68,000 tonnes. The Government of India, to earn foreign exchange, has asked the Coffee Board to arrange for export of larger quantities though the price realised for export is Rs 50 to Rs 60 per 50 kgs less than those fetched in the international market. The Association states that the Coffee Board should appraise the Government of the situation, modify the export policy and make available larger stocks for internal consumption. It is also added that a large portion of the stocks, entrusted to agents and depots for distribution, is finding its way into the market at much higher prices than those stipulated for the public. Representations have, therefore, been made to do away with these depots and agencies.

Meanwhile, reports released from London indicate that rows about coffee export quotas broke out towards the end of last week in the International Coffee Conference where the disputes threatened the world coffee agreement. The producer countries were arguing among themselves on an important issue—fixing the amount of coffee the various producer countries could export. The consumer nations, on their part, were determined to keep the quotas high enough to prevent prices from sky rocketing.

The present world coffee quota stand at 45,587,183 bags. This figure was, however, exceeded last year when exports reached 47,897,000 bags. The ICO allowed the increase to prevent prices from spiralling.

While the produceres want a small quota to keep prices high, Brazil proposed 44.0 million bags and the Colombians suggested 45 million. Even the producers do not agree among themselves. The Africans are willing to go to 46 to 47 million bags. But the consumers have their own difficulties. The USA, Britain and West Germany want the quota to be fixed at 49 million bags which, they say, will at least keep prices at the present level.

But, according to the latest report, the International Coffee Organisation Council has set the 1964-65 total world coffee export quota at 47,506,518 bags. This is 2.67 per cent above the coffee agreement's established basis quota of 45,530,183 bags.

The Commerce Department, Washington, has announced that

US coffee roastings, which rose to a record level level of 6,645,000 bags during the first quarter of this year, dropped to 5,016,000 bags during the second quarter, the lowest quarterly roasting since the second quarter of 1949. However, total roastings, during the first half of the current year, totalled 11,661,000 bags—226,000 bags over the 11,435,000 bags roasted in the corresponding period of last year.

PEPPER Outlook

The political tension in South-East Asia has imparted some strength to the Indian Pepper market. Only a few weeks ago, it was felt that, in view of the continued absence of American interest, the export prospects for the commodity, during the current season, would be bleak. As a matter of fact, total exports of black pepper from November 1953 to June 1964 were placed at only 13,459 tonnes as against 14,742 tonnes during the same period in the previous season. Although official figures of export for July are not available, it is estimated that shipments during that month must have been in the neighbourhood of 500 tonnes.

Moreover, the export performance up to the end of October was expected to show a further fall. It was apprehended that the total export of black pepper during the season, would not amount to more than 16,000 tonnes as against 19,400 tonnes during the past season. If account is taken of export at 16,000 tonnes and home consumption at 8,000 tonnes, the carryover at the end of the season will be 2,400 tonnes.

Now the Indian shippers feel that American buyers, who are heavily depending upon Indonesia and Singapore for their requirements, may turn to India in view of the uncertainty of supply from that direction. Although the Indian price for black pepper is about three cents higher as compared to the Indonesian price, in the light of the reaction in American and Singapore markets, following the worsening political situation, this handicap is not likely to persist longer.

India is now in a position to meet the American requirements thanks to the comfortable supplies. Meanwhile, the dealers are watching the developments in South-East Asia. If there is a deterioration in the situation, it is not unlikely that the Indian shippers will be able to make up the shortfall in the export of black pepper to America.

GINGER Prices Harden

Prices of Ginger have developed a hardening tendency, thanks to the revival of demand after a protracted sluggish period. In the

Bombay market, prices have moved up by Rs 4 per 50 kg and the upward trend is likely to continue at least till the end of the current season in October. The shortage of supply is also responsible for the present trend of the market, as the stock in Bombay is considered to be too small to meet the requirements during the rest of the season.

The stock position in Malabar, too, is reported to be unsatisfactory. Although the export demand at present is poor, the stockists expect that the demand will pick up next week. In the Cochin market, the rate for the unbleached variety is quoted around Rs 415 per quintal.

SUGAR

Control over output and Distribution

At the recent meeting of the Deccan Sugar Factories' Association, the Union Minister of Food and Agriculture has stated that it is necessary for the Government to exercise strategic control over the production and distribution of sugar. He has added that the target of 3.3 million tons for the 1963-64 season is not beyond the industry's capacity and will almost certainly be reached if the industry can effectively meet the competition from gur and khand-sari.

He feels certain that the target can be achieved by adopting a policy of progressive decontrol of sugar. Such a step will make available to the consumer some quantity of sugar at controlled price and also help the industry to meet the meet competition from gur and khand-sari.

Meanwhile, production continues to make better progress than earlier expected. By 15 July, the output amounted to some 2,510,000 metric tons, while at the end of July 1963 it had reached only 2,093,658 metric tons out of a final output of 2,157,930 metric tons.

SHELLAC

Spurt in Prices

Shellac prices have been mounting rapidly during the past few weeks. In the Calcutta market, the rate for Pure TN quality is presently quoted around Rs 152 per package as against only Rs 116 a month ago. Reports of a sharp drop in crop are mainly responsible for the upward tendency in prices. Shippers, who had contracted well forward, are finding it difficult to cover their commitments and the pressure of nearby supplies has become acute.

In the London market, too, prices have developed an upward tendency. Even the sale of American stockpiled material by the General Services Administration failed to relieve the situation and the sellers' prices have jumped to 22sh

6d per cwt since the beginning of last week.

Indications from the Indian shellac committee show that the current Baisakhi crop is expected to be less than half the output in 1963—totalling some 13,200 tons as compared with 31,400 tons last year and 30,600 tons in 1962.

NON-FERROUS METALS Boom Conditions

Conditions akin to a boom are being witnessed in the Bombay Non-Ferrous Metal market. Copper coil has moved up to Rs 414 from Rs 409; ingots to Rs 370 from Rs 362 and blister to Rs 360 from Rs 355. Zinc has continued to spurt and shot up to a new peak level of Rs 339 from Rs 328. Even spot lead, which had suffered a decline, has shown a smart recovery.

The rising demand and offtake, extreme paucity of stocks, distant possibilities of receiving fresh supplies from abroad due to the stringency of foreign exchange and the disquieting political situation over South-East Asia are main factors contributing to the upward trend in prices.

Another contributory influence is the remarkable strength of the London Metal Exchange where the prices of all non-ferrous metals have been fluctuating around their highest levels for several years. This is indicative of the pressure of the present high level of industrial activity throughout the world. The pressure on demand is amply illustrated in the volatile behaviour of Tin the rate for which has reached £1,300 per ton. Doubts are even expressed that the rate will even exceed £1,300 in a short time.

Although copper, the traditional market leader, has been a little slow in joining this general upward trend, prices have continued to display a firmer tendency. News of strikes and threatened strikes especially from the American workers have created a scarcity value on available supplies.

Lead has also started its move to higher ground, especially when world demand for the metal is steadily outstripping mine production, resulting in a shrinkage of stocks. With reports from Canada that their output of concentrates is at the present moment below expectations, any short-term relief in the price spiral is not envisaged.

Although the problem of increasing prices has been tackled by zinc producers, the demand for the metal has been such that the General Services Administration has authorised releases from their stockpile; but this has little lasting effect on sentiment.

SILK

In the Bangalore silk market, prices of flature silk maintained a steady tendency during the week under review. Kisan silk

moved up by re. 1/- to rule at Rs 108.00 per kg; whereas Cottage basin silk had shown a decline both in the minimum and maximum to range between Rs 85.93 and Rs 95.90 per kg.

A downward trend was observed in the prices of Charka raw silk. Superfine 1st, 2nd, 3rd qualities and Dupion (Charka) had a fall to rule between Rs 84.87 and Rs 90.39, Rs 79.37 and Rs 83.47, Rs 76.06 and Rs 78.26, Rs 72.75 and Rs 74.96 and between Rs 24.25 and Rs 38.58 per kg., respectively.

The prices of Spun silk yarn remained unchanged.

As regards the reeling cocoons, the Sidlaghatta market had a rise both in the minimum and maximum to range between Rs 5.50 and Rs7.00 per kg; whereas the Mugur market had a fall both in the minimum and maximum to rule between Rs 2.25 and Rs 4.25 per kg.

In the case of seed cocoons, both the varieties had steady trend.

The prices at the Bhagalpur silk market remained stationary at the previous week's levels.

Prices at the Malda silk market remained unchanged except the pierced cocoons which ruled between Rs 11.00 and Rs 13.50 per kg.

Prices in the Assam silk market remained steady during the week. The f.o.b. prices and landed cost of Japanese raw silk of 20/22 Dr. '2A' were Rs 57.45 and Rs 92.13 per kg., respectively during the month of March, 1964.

OILS AND OILSEEDS Slack Demand

Trading in the Bombay Oilseeds market was generally dull and featureless. Turnover was below normal, both in the forward and spot sections.

In spite of the stoppage of arrivals and continued shortage of floating stocks, groundnut oil price has shown an easy trend. The

major factor, contributing to the decline in prices is the reduction in purchases by the vanaspati interests, who are reported to be well-stocked. The agreement among the vanaspati manufacturers to purchase groundnut oil within the fixed price limit, which is well below the market price, has naturally helped the downward trend.

The price decline has also been accentuated by persistently favourable weather reports from the major producing areas. Again, the decision of the mills in Uttar Pradesh not to pay higher than Rs 54 for mustard seed and the possibility of import of soyabean oil from America under PL/480 and mustard oil from West Pakistan have also softened the market sentiment.

The Forward Market Commission has allowed the Bombay Oilseeds and Oil Exchange to commence hedge trading in the cottonseed new crop contract under a maximum price limit of Rs 118.

SMALL SCALE INDUSTRIES

...We shall be happy to consider requests from Small Scale Industries for financial assistance.

For the INVESTOR

INVESTMENT GOSSIP

Promising Undertone

The steadier trend noticeable in the stock market this week has mainly stemmed from the revival of speculative interest in pivotal shares and particularly in Indian Irons. Evidently, the fact that the situation in South East Asia did not show further deterioration has considerably reduced the bear pressure. The Prime Minister's suggestion that stricter standards of priorities should be followed in financial allocation to projects and programmes has been interpreted bullishly especially as he is also reported to have pointed out that so far returns from investments and projects have not been commensurate with the rising tax burden. Presumably, reading between the lines, operators are inclined to hope that the Prime Minister's observations may result in a more realistic tax policy which will also be conducive to a broadening of investment activity. In the meantime, Sir Biren Mookerjee's statement to the shareholders of Indian Iron and Steel Company Limited has been a source of encouragement. The IISCO Chairman has stated that preliminary steps are already in train in respect of the company's expansion programme which when completed will increase the capacity to 2 million tonnes. Currently, production has attained the rated capacity but efforts are being made to maximise output through adoption of new techniques. What is perhaps of immediate interest to the market is the reference to a proposal to declare interim dividend for the current and future years. Another significant point in the statement is the reference to the normal desire of the company to capitalise large reserves and issue bonus shares from time to time. This has however become impracticable owing to the tax on bonus shares once to be paid by the company and again by the shareholder in the form of capital gains tax. It is permissible to hope that when the time becomes propitious bonus shares will be issued. And the general expectation is that tax relief in this regard may come latest by February next year.

INVESTMENT SPECIAL

Indian Copper

Despite a small decrease in production of copper and the difficult operating conditions under which it had to work during last year, the Indian Copper Corporation has recorded satisfactory financial results for the year ended December 1963. Profits before providing for taxation, depreciation and allocation to reserves are higher at ₹1,384,875 as compared with a profit of ₹1,351,771 in 1962. A dividend of 12 per cent subject to tax on the new capital has been recommended. Production of copper was slightly lower at 9,582 metric tonnes and the decline is due to deterioration in the quality of coal supplied as well as in operating conditions. Because of the inferior quality of coal, the efficiency of the smelter was adversely affected. The company's rolling mill section has to work under serious handicaps such as the high price of Zinc and Government's restriction on the sale of brass and copper sheets to the utensil industry, one of the important customers of the company. Mining exploration work has also been impeded by a serious breakdown of the main Compressor. The machine could be brought back into commission only after about eight months on account of the inordinate delay in the issue of import licence for spare parts. The decline in keyanite exports is due to the competition from synthetics and the recession in overseas steel industry. However it is encouraging to find that the demand is again picking up and indications are that by the end of the current month exports will touch a level of 17,000 tonnes.

The company has a bright future as it has been licensed to expand production of copper and to produce sulphuric acid as a by-product. Negotiations for foreign exchange loans have already reached an advanced stage. The company plans to instal a new smelter of larger capacity than the one in use now and of a type that will allow the recovery of waste gases in the form of sulphuric acid. New equipment is also to be installed at Surda, Mosaboni Mine and at the company's works. These development projects when completed will considerably increase

the productive capacity of the company. The cost of the project will be met from bank overdrafts, foreign loans and a debenture issue.

The company's electrolytic plant which was expected to be completed in September this year, as per present indications, will not be ready before the end of the year mainly because of serious delays in the construction schedule on account of a shortage of essential materials. Referring to this setback to the project, Mr S. C. Gladstone, Chairman of the Indian Copper Corporation said at the annual general meeting of the company, that the commissioning of the refinery would depend on the timely availability of imported blister copper. The present supply position is obscure because the company has been given a licence to import blister only from the US in which country it is not available at the present time on account of a shortage of copper.

IISCO Results

The Indian Iron and Steel Company Limited has produced excellent working results for the year ended 31 March 1964. While sales have shown a substantial rise from Rs 63.78 crores to Rs 67.59 crores, the net profit after providing for depreciation but before taxation, amounts to as much as Rs 11.51 crores against Rs 9.12 crores for the previous year. After transferring Rs 13.00 lakhs (Rs 15.00 lakhs) from Taxation Contingency Reserve and writing back Rs 3.32 lakhs (Rs 7.38 lakhs) from General Development Reserve being allocation made in excess of actual tax saving, there is an available sum of Rs 11.68 crores (Rs 9.59 crores).

The directors have allocated Rs 3.87 crores (Rs 3.56 crores) to Taxation and Rs 8.44 lakhs (Rs 22.14 lakhs) to Statutory Development Rebate Reserve. In view of the necessity for conservation of the resources of the company against repayment of the heavy indebtedness on loan account as also against the very large expenditure amounting on current estimates to Rs 24 crores to be incurred on the Collieries Development Project and the balancing of Plant Scheme, a sum of Rs 5.43 crores (Rs 3.64 crores) is set aside for General Reserve. The directors have proposed a dividend

of Rs 1.60 per share plus a cash bonus of ten paise per share, making a total of Rs 1.70 per share subject to tax, on the ordinary shares as compared with Rs 1.60 per share, taxable, paid previously. The dividend is payable on or after 9 September.

PRODUCTION

Production of Ingot Steel for the year was 1,026,786 tonnes, representing an improvement of 24,747 tonnes on the previous year and constituting a fresh record for the Burnpur Works. The output of the Kulti Foundries was, however, adversely affected by restriction of pig iron and, at 215,633 tonnes, showed a reduction of 8,706 tonnes. Despatches of saleable steel are higher at 808,393 tonnes against 797,960 tonnes.

CAPITAL PROJECTS

The subsidiary company under the style of the IISCO-Stanton Pipe and Foundry Company Limited was incorporated on the 18th July, its principal object being the manufacture of Spun Iron Pipes and Ancillaries in collaboration with Messrs Stanton and Stavely Limited of England. In connection with a suitable alternative site in Ujjain, the directors state that notification has been issued by the Madhya Pradesh Government reserving the site for industrial purposes and negotiations for outright purchase are in progress with the various landlords which, it is anticipated, will be finalised in the near future. Meanwhile, licence has been obtained for import of the capital plant and equipment to be purchased and supplied by Messrs Stanton and Stavely Limited. Construction work at site is expected to start within the next three to four months.

NEW ISSUE NOTES

Madras Tube

Madras Tube Company Limited will enter the capital market shortly to raise Rs 95 lakhs from the public to finance its tube-manufacturing project, estimated to cost Rs 398 lakhs. The issued capital will be Rs 140 lakhs of which the promoters, directors and their friends will subscribe equity shares of the

value of Rs 30 lakhs. The foreign collaborators have agreed to subscribe for Rs 15 lakhs. The balance of Rs 95 lakhs—Rs 55 lakhs in equity shares of Rs 10 each and Rs 40 lakhs in preference shares of Rs 100 each—will be offered for public subscription.

The company has been licensed to produce 48,000 ton of welded steel pipes and tubes per year. The company will set up the factory at Pattabhiram near Madras. It has entered into a technical collaboration agreement with a French firm, which will supply technical know-how, design of plant and equipment and help in procuring imported machinery.

Premier Cable

The Premier Cable Company Ltd. is offering a public issue of Rs 52 lakhs, consisting of 3,00,000 equity shares of Rs 10 each and 22,000-9.3 per cent redeemable cumulative preference shares of Rs 100 each. The issued capital is Rs 70 lakhs. A sum of Rs 18 lakhs has already been subscribed by the directors and promoters of the company. The balance is now being offered to the public. The entire public issue is underwritten.

The company has been sanctioned a loan of Rs 50 lakhs from the IFC. The subscription list opens on 18 August and closes on 28 August or earlier, but not before 20 August. The company will manufacture PVC insulated power cables. The factory will be located at Karukutty near Cochin, in Kerala. The company has entered into a technical collaboration agreement with a West German firm. The company shall pay Rs 10.50 lakhs to the collaborators for the supply of technical know-how, training of Indian personnel and advising the company on erection and running of the factory. No royalty is payable to them.

Usha Forgings

Usha Forgings & Stampings Limited—a new company set up for the manufacture of hand tools—will enter the market sometime in October to raise Rs 12.73 lakhs from the public. The issued capital will be Rs 20 lakhs composed of 1,42,500 equity shares of Rs 10 each and 5,750 preference shares of Rs 100 each. Of the present issue, the promoters, directors and their friends have already subscribed for 72,875 equity shares for cash at par. The balance of 69,825 equity shares and 5,750 preference shares will be offered for public subscription.

The company has entered into a technical collaboration agreement with Technoexport, Praha, Czechoslovakia. The company has already acquired the necessary land from

the Indian promoters on Delhi-Mathura Road. The scheme envisages the erection by the company of a plant for the manufacture of double-ended spanners, pliers, machine dies, pipe wrenches, forged nails and spanners of chrome vanadium steel.

Selected Satgram

The directors of Selected Satgram Collieries Limited have decided to issue fresh capital of Rs 30 lakhs—Rs 20 lakhs in equity shares of Rs 100 each and Rs 10 lakhs in 9.5 per cent preference shares of Rs 100 each—to finance the expansion and diversification schemes of the company. The shares will, in the first instance, be offered to the existing shareholders in the ratio of one new ordinary share for every two ordinary shares held and one preference share for every four ordinary shares held. The shares, not subscribed by the existing shareholders, will be later offered to the public through the prospectus. The directors expect that more than half of the issue will be subscribed by the existing shareholders.

A part of the issue has been underwritten. The LIC has underwritten equity shares of Rs 5 lakhs and preference shares of Rs 5 lakhs. Dena Bank has underwritten equity shares of Rs 5 lakhs. Negotiations with financial institutions and stock brokers for underwriting the balance of the issue are going on and underwriting of the issue is expected to be completed shortly. The issue of shares to the public through prospectus is expected to be made in September.

Calicut Modern Spinning

A new spinning mill is to be erected in Calicut, Kerala, by Calicut Modern Spinning & Weaving Mills Limited. This unit will have a capacity of 25,000 spindles and orders have already been placed with indigenous and foreign machinery suppliers for the required equipment. An import licence has been secured for Rs 12.38 lakhs for purchasing equipment, which are not available from internal sources. It is expected that the mill will be completed early next year. The cost of the project is estimated at Rs 64.65 lakhs.

The issued capital of the company will be only Rs 20 lakhs. Equity capital will be for Rs 14 lakhs and preference capital for Rs 6 lakhs. A sum of Rs 22.65 lakhs is being secured as deferred credit, while a loan of Rs 20 lakhs will be obtained from the company's bankers. The directors and their friends have already taken up equity shares for Rs 8.5 lakhs and preference shares for Rs 2 lakhs. The balance of Rs 5.50 lakhs in equity shares and Rs 4 lakhs in

preference shares is being offered for public subscription. This portion of the issue is fully underwritten.

Heavy Electricals

Heavy Electricals (India) Limited, Bhopal, a Government of India undertaking, will be issuing further capital of Rs 9 crores, divided into 90,000 equity shares of Rs 1,000 each for cash, at par. The capital will be utilised for civil engineering works, purchase of machinery and plant, training of engineers etc.

IDP

Indian Drugs & Pharmaceuticals Limited, a Government of India undertaking, is to issue capital of Rs 5.20 crores, divided into 52,000 equity shares of Rs 1,000 each, to be issued for cash, at par. The capital will be utilised for financing the drugs and surgical instruments plants.

Bharat Earth Movers

Bharat Earth Movers Limited, Bangalore, a Government of India undertaking, is to issue capital of Rs 1 crore, divided into 10,000 equity shares of Rs 1,000 each, to be subscribed privately for cash, at par. The money will be utilised for the manufacture of heavy earth-moving equipment and rail coaches.

NBCC

The National Building Construction Corporation Limited, Delhi, a Central Government undertaking, is to issue capital of Rs 28 lakhs, divided into 2,800 equity shares of Rs 1,000 each for cash, at par. The capital will be utilised for the construction of buildings, roads and other civil works throughout India.

Sandur Mangansse

Sandur Manganese & Iron Ores Private Limited, Bangalore, is to issue capital of Rs 68,47,500, consisting of equity capital of Rs 52,47,750 and 9.3 per cent preference capital of Rs 16 lakhs. Equity shares of the value of Rs 17 lakhs (consisting of Rs 2 lakhs for consideration other than cash against technical know-how and Rs 15 lakhs for cash) will be issued to the foreign collaborators. Out of the above, such number of shares of each kind as would qualify the scrips to be listed on the recognised stock exchanges will be issued to the public by prospectus. The money will be utilised for the manufacture of pig-iron.

General Industrial Society

The General Industrial Society Limited is offering 12,500 cumulative redeemable preference shares of Rs 100 each for public subscription.

Scindia's

THE SCINDIA STEAM NAVIGATION CO., LTD.

at par. They carry a fixed dividend of 9.3 per cent. The list opens on 17 August.

The company manufactures jute goods. It has lately started producing cast iron goods and has acquired a cotton spinning mill. The company has completed the modernisation of the cotton mill and installed additional spindles. The funds of the issue will be utilised for financing particularly the project relating to the cotton mill.

★

INVESTMENT NOTES

Orient Paper

According to the preliminary report issued by the company, the Orient Paper Mills Limited has made a slightly lower net profit for the year ended 31 March, 1964 although it is encouraging to note that the directors have proposed to maintain the dividend on the ordinary shares at Rs 2.00 per share, subject to tax.

Subject to audit, the net profit, after providing Rs 50.40 lakhs for Depreciation, Rs 75,000 for Development Rebate Reserve, Rs 47.00 lakhs for Taxation, transferring Rs 25.00 lakhs to General Reserve and taking into account Rs 93,457 being the balance brought forward from the preceding year, amounts to Rs 51.77 lakhs against Rs 51.84 lakhs for 1962-63.

India Steamship

The Board of Directors of the India Steamship Company Limited has not recommended any dividend on the ordinary shares for the fourth year in succession. The last dividend was Re 1.00 per share, which was paid for the year ended 31 March 1960. The directors have, however, recommended Rs 6.50 per share, subject to tax, on the preference shares. Annual general meeting will be held on the 24th September, while transfer books will remain closed from the 9 to the 24 September. The preference dividend, when sanctioned, will be payable on or after 25 September to those shareholders registered as on 9 September.
