A naptha-cracker plant with a capacity of 2,40,000 tonnes will form part of the petrochemical complex proposed to be set up in Koyali area. Prof. Humayun Kabir, Union Minister for Petroleum and Chemicals who is reported to have said this at the meeting of the Informal Consultative Committee of Parliament also explained that, with the setting up of oil refineries in different regions, sufficient quantities of naptha would become available and, for its economical and effective disposal, it would be necessary to develop fertiliser and petrochemical industries.

A number of intermediates and some end products notably plastics, synthetic fibres and synthetic rubbers could be manufactured from the byproducts of petroleum refining. Prof Kabir disclosed that he was thinking of setting up a Udex Aromatic Extraction Plant at Barauni and an ammonia plant at Madras as part of the refinery complexes. Studies about setting up of petrochemical complexes at Haldia and other regions were still going on and he hoped that the picture would be clear in another six months.

The Minister is also understood to have assured the members that selection of sites for refineries and chemical industries would be determined, primarily, by techno-economic considerations. But balanced industrial development of different regions for generating employment opportunities etc. would also be kept in view.

The Fourth Plan programme for petro-chemicals is under consideration of the planning commission. A substantial start has already been made by the issue of industrial licences for the manufacture of intermediates and end-products based on petro-chemicals in the Bombay region and schemes for the Gujarat complex around Koyali were being drawn up.

Amalgamation of Coal Mines

Mr N. Sanjiva Reddy, Minister for Steel and Mines, is understood to have told Parliament's Informal Consultative Committee that vol-

untary amalgamation schemes had not achieved encouraging results, although Government had relaxed conditions about the minimum standard of production of 6000 tonnes per month for an amalgamated unit. Government will, therefore, introduce a Bill in the Budget Session of Parliament to enforce compulsory amalgamation of uneconomic coal mines in accordance with the recommendations of the Balwantray Mehta Committee set up in 1955.

Regarding the pattern of coal production, the Minister is reported to have said that Government had undertaken a number of measures for utilising lower grades of coal for metallurgical purposes. These include setting up of washeries and blending of different grades of coking coal. All future thermal stations were being designed to burn only lower grade coal. Government would also be consulting foreign experts on better utilisation of lower grades of coal. These measures would serve the dual objectives of conservation of limited reserves of superior grades and the fuller utilisation of inferior coals.

Agricultural Research

The present state of agricultural research in the country was recently reviewed by an expert team which has submitted its report to Government. An indication of Government thinking on the proposals for reorganisation of the set-up of research was given by Mr C. Subramaniam, Union Minister for Food and Agriculture, in his speech at the annual meeting of the Governing body of ICAR.

The first major change that is visualised is to make the Indian Council of Agricultural Research a functional, technically competent, and comprehensive organisation. In the new set up, the various research institutes like the IARI, IVRI, RRI (Rice Research Institute) and the NDRI, which were now being run by Government, would come under the Council. At the same time, the more important of these Institutes will be declared to be Institutes of national importance and given substantially more autonomy than they enjoy now.

The reorganised Council will also function as a direct coordinating

agency for the work done by the commodity committees (i.e. the Indian Central Cotton Committee, Jute Committee etc.) The nature of research problems, it was explained, cannot be segregated commoditywise. A whole series of related questions arise for cotton, Oilseeds, and Millets. The present set up and procedures of separate commodity committees leads to considerable wastage of scarce resources of equipment and manpower. Government is, therefore, considering a proposal to bring these institutions under the reorganised Council of Agricultural Research.

Manufacture of Typewriters

Letters of intent have been issued to two typewriter manufacturers for a total additional capacity of 24,000 numbers per annum. A letter of intent is also being issued for setting up a new unit. This information was given in a written answer to a question in Lok Sabha on 25 September.

Five units in the large scale sector have been licensed for the manufacture of standard and portable size typewriters with a total capacity of 91,400 numbers per annum. Out of the five units licensed, four are already in regular production. In the small scale sector, there are two units for portable typewriters with a total installed capacity of 3200 numbers per annum.

The demand for typewriters at the end of the Third Plan is estimated at one lakh numbers and actual production by 1965 at 60,000 numbers. Import of standard and portable typewriters (manually operated) is totally banned and the entire requirement of the country is being met from indigenous production.

Production has increased progressively from 31,101 in 1961 to 36,320 in 1962 and 42,397 in 1963. It was also stated that, since a large number of intricate parts are involved in the manufacture of typewriters, it would take time for the manufacturers to achieve their full capacity and to dispense with the import of components.

Stock Markets

Government is apparently inclined to take a philosophic view of

the behaviour of the stock market. Official circles feel that all feasible steps have been taken to improve the climate for investment. If the market still remains unresponsive, there is nothing to do except to wait for the investors see the light that is wrapped up in the sombre provisions of the last Budget. That about sums up the official attitude. This is the conclusion to which one is driven by what the Finance Minister is understood to have said when he met the Informal Consultative Committee of Parliament a few days ago.

The present state of the market is regarded in official circles as a backlash of the bullish phase that began in 1959 and lasted till 1962 when the trend was reversed by the events following the Chinese aggression. Small investors who were drawn to the market by the prospect of easy pickings have learnt by bitter experience, and are now inclined to look on any issue with a jaundiced eye. Activity has also been restrained because of steps taken to penalise speculation. The character of the market itself has begun to change with the shift of emphasis from speculative to investment business, but stock brokers are taking their own time to reorient their approach.

In this connexion attention has also been drawn to the various steps designed to improve the investment climate that have been taken during the last one year. These include: raising of the exemption limit for industrial licensing and capital issues control to Rs 25 lakhs; lifting of price control of sixteen commodities of industrial importance; suspension of collection of premiums under the Emergency Risks Insurance Scheme; augmentation of the resources of credit institutions like the IFC, the ICIC, and the Refinance Corporation; withdrawal of margin regulations on bank advances against shares; and the relaxation of the debt equity ratio. The institutional base for expanding new investment has also been strengthened with the establishment of the Industrial Development Bank and of the Unit Trust.

Industrial Finance Corporation of India

Significant Contribution to Industrial Development

Need to Strike Balance Between Generosity and Prudence

Chairman Mr A. Baksi's Review

The following is the speech delivered by Mr. A. Baksi, Chairman, Industrial Finance Corporation of India, at the Sixteenth Annual General Meeting of the Corporation held in Bombay on September 29, 1964.

Gentlemen,

I have great pleasure in welcoming you to this Annual General Meeting of the shareholders of the Corporation.

2. We have assembled here only four months after the demise of Prime Minister Jawaharlal Nehru. It is fitting that we should begin by paying our respectful homage to his memory.

3. Printed copies of the Sixteenth Annual Report of the Board of Directors and the Accounts of the Corporation are already in your hands and I shall, with your permission, take them as read.

4. During the year ended the 30th June, 1964 the Corporation sanctioned a total financial assistance of Rs. 38.27 crores made up of rupee and foreign currency loans of Rs. 25.12 crores, underwritings of Rs. 5.41 crores and guarantees of deferred payments and foreign loans of Rs. 7.74 crores. The quantum of assistance disbursed or made available during the year was 21.88 crores out of which the cash outgoings amounted to Rs. 17.09 crores. To meet the immediate needs of our borrower concerns, we disbursed during the year interim loans amounting to Rs. 3.42 crores.

5. The gross income for the year was Rs. 507.28 lakhs. Deducting interest of Rs. 262.04 lakhs on borrowings, and other expenses including establishment of Rs. 18.18 lakhs, the gross profit subject to provision for taxation is Rs. 227.06 lakhs. After setting apart a sum of Rs. 101.62 lakhs towards taxation, the net profit for the year comes to Rs. 125.44 lakhs. These results, I hope you will agree, are satisfactory.

6. As for appropriations out of the profits, a total sum of Rs. 106.19 lakhs has been transferred to Reserves which now total Rs. 409.19 lakhs as against a paid-up capital of Rs. 7 crores on the 30th June, 1964. The balance profit of Rs. 19.25 lakhs is being distributed as dividend.

7. The gross financial assistance sanctioned by the Corporation during the last 16 years upto the 30th June, 1964 aggregated Rs. 240.97 crores. The net figure for this period, after taking into account cancellations and withdra-

wals of Rs. 44.19 crores, totalled Rs. 196.78 crores, made up of rupee loans of Rs. 134.29 crores, foreign currency loans of Rs. 16.89 crores, underwritings and direct subscription to capital of Rs. 14.13 crores and guarantees of Rs. 31.47 crores. Out of the net assistance sanctioned of Rs. 196.78 crores, about Rs. 137.16 crores (70%) was for new projects and Rs. 59.62 crores (30%) for existing concerns for expansion, modernisation and diversification. As against the net assistance sanctioned of Rs. 196.78 crores, Rs. 124.45 crores had been disbursed or made available upto the 30th June 1964. Assistance outstanding on that date, after providing for repayments, aggregated Rs. 94.02 crores.

8. Cash disbursements upto the 30th June, 1964 in respect of loans sanctioned and shares and debentures subscribed to, or taken up by the Corporation as a part of its underwriting commitments, amount to a total of Rs. 105.78 crores. These have been financed to the extent of Rs. 26.87 crores (25%) out of repayment of loans, Rs. 28.24 crores (27%) by borrowings from the market, Rs. 35.60 crores (34%) by borrowings from the Central Government, Rs. 3.98 crores (4%) from foreign credits and the balance of Rs. 11.09 crores (10%) from the paid-up capital and reserves.

9. Projects assisted during the year under review numbered 75, covering a variety of industries such as Textiles (20), Metal Products (15), Electrical and other machinery (14), Glass (7), Basic Industrial Chemicals (5), Paper (4), and Iron and Steel (3). The total number of projects assisted by the Corporation since the beginning upto the 30th June, 1964 was 334 out of which 224 are new undertakings. The total cost of the 334 projects, for which we sanctioned assistance of Rs. 196.78 crores, is estimated at Rs. 558.00 crores. The last figure is significant because an institution like ours is often judged by the extent to which the projects financed by it are able to mobilise resources from other quarters.

10. The Corporation's contribution to industrial development in terms of production is also significant. For example, in the Paper industry the additional capacity created as a result of our assistance is 1,58,000 tonnes per annum as against the total installed capacity of 5,49,000 tonnes per annum. In Basic Industrial Chemicals, the additional capacity set up is 61,800 tonnes of caustic soda, 2,83,000 tonnes of sulphuric acid and 23,100

tonnes of soda ash per annum. In the Cement industry the additional capacity created is 19,20,000 tonnes and in the Refractory industry 2,09,000 tonnes per annum. In Sugar the additional cane-crushing capacity amounts to 67,000 tonnes of sugarcane per day. In Cotton Textiles, the additional capacity installed is 6,44,000 spindles.

11. The Corporation has progressively increased its underwriting activities. During the year, we sanctioned 40 applications for a total amount of Rs. 5.41 crores comprising of equity shares of Rs. 3.86 crores and preference shares of Rs. 1.55 crores. In a number of cases underwriting facilities were sanctioned in addition to loans and other forms of assistance.

12. Upto the 30th June, 1964, the Corporation had sanctioned underwriting facilities in 77 cases for a net aggregate amount of about Rs. 12.31 crores made up of equity shares of about Rs. 6.02 crores, preference shares of about Rs. 3.86 crores and debentures of Rs. 2.43 crores. During this period 52 issues involving an aggregate commitment of over Rs. 9.48 crores were placed in the market and shares and debentures of Rs. 7.55 crores devolved on the Corporation as a result of these operations. The main reason for this was the unsatisfactory condition of the capital market in the last two years.

13. While rupee loans constitute the bulk of our operations, sub-loans in foreign currency have been on the increase. Loans sanctioned during the year under the lines of foreign credit available with us amounted to Rs. 8.03 crores as against Rs. 3.04 crores in the previous year. The net amount of foreign currency loans sanctioned upto the 30th June, 1964 totalled Rs. 16.89 crores. Out of the two loans of \$30 million from the Agency for International Development (AID) of the United States of America, the Corporation had committed itself to a total of \$23.78 million (Rs. 11.32 crores). We have repaid to the AID three half-yearly instalments of principal amounting to \$150,000 (Rs. 7,14,000) upto the 30th June, 1964. Two lines of credit aggregating DM 40 million from the Kreditanstalt Fur Wiederaufbau, Frankfurt have been fully committed and the demand for DM loans continues unabated. The utilisation of the credit of 50 million Francs from the Banque Francaise du Commerce Exterieur (BFCE), Paris has unfortunately

been slow. We have so far sanctioned four sub-loans aggregating 8.59 million Francs out of this credit.

14. The industry-wise pattern of our assistance has been changing. For some years till 1962, the Sugar industry was at the top of the list of our beneficiaries. In 1963 Sugar made way for Non-ferrous Metals. During the year under review Metal Products headed the list with 18.7% of the total assistance, followed by Textiles (16.7%) and Basic Chemicals (15.3%).

15. As regards the State-wise distribution of our assistance, Maharashtra topped the list in the year under review with 15.8%, closely followed by Andhra Pradesh with 14.5% and Madras with 12.5%. A sizable proportion of our assistance was claimed by the less developed areas the industrialisation of which, as you are aware, the Corporation is keen to assist.

16. The net financial assistance sanctioned up to 30th June 1964 to industrial co-operatives amounted to Rs. 37.86 crores representing about 19% of our total net financial commitment. This covered 51 sugar co-operatives three co-operative spinning mills and one unit for extraction of vegetable oil.

17. A review of our loan accounts has shown that no additional provision is necessary towards the Reserve for Bad and Doubtful Debts, the balance in which now stands at Rs. 14.17 lakhs. The existing provision relates to three old accounts, action in regard to which is already being taken.

18. The credit record and the financial position of our borrowers, including industrial co-operatives, continues on the whole to be satisfactory. The percentage of default in respect of instalments of principal and interest as on the 30th June, 1964 was negligible, being 0.88% and 0.66% respectively. Many of the concerns assisted by us have earned sizable profits and 21 concerns have, during the year, declared dividends of 12% or more. The Corporation received during the year a sum of Rs. 77.15 lakhs from borrower concerns on account of premature repayments of principal. The total amount received on account of premature repayments of principal upto the 30th June, 1964 was nearly Rs. 7 crores which included a sum of Rs. 1.12 crores from sugar co-operative. We welcome such premature repayments and do not charge any premium on them.

19. Among events of interest to us during the year, the establish-

ment of the Unit Trust of India was a major one. We welcome this step taken for the mobilisation of the savings of the public for industrial development.

20. Mr. Robert Michel Titus of the Agricultural and Industrial Credit Corporation of Liberia visited the Corporation during the year to study our procedures and working. Dr. G. Varade Gowda, a senior official of the Mysore State Government and two officials from the Indian Overseas Bank Ltd. and the Punjab National Bank Ltd. were also with us.

21. The General Manager of the Corporation participated in the Second Regional Conference of Development Banks in Asia held at Tehran in October, 1963. During the year, one of our senior officers was deputed to the Economic Development Institute of the I.B.R.D., Washington, for a special course in the appraisal of industrial projects. He also studied the organisation and procedures of the International Finance Corporation in Washington and the Commonwealth Development Finance Company Ltd. in London. We thank these institutions for the valuable facilities given.

22. Our relations with various Chambers of Commerce in the country and with our borrower concerns continue to be cordial. We appreciate the constructive suggestions made by them from time to time.

23. Our cordial thanks are due to the U.S.A. Agency for International Development (AID), the Kreditanstalt Fur Wiederaufbau and the Banque Francaise du Commerce Exterieur for the consideration they have shown us. Their assistance has added to the capacity of the Corporation to serve the development of industries in the country.

24. Shri K. P. Mathrani, I.C.S., who held with distinction the Chairmanship of the Corporation from the 1st July, 1961 relinquished his office on the 16th May, 1964 on appointment as Secretary to the Government of India in the Ministry of Rehabilitation. On behalf of the Board of Directors I would like to express our high appreciation of the valuable services rendered by him to the Corporation.

25. During the year Sarvashri C. C. Desai, M.C. Muthiah and V. P. Varde retired from the Board. Their active participation in the affairs of the Corporation was of great value and I thank them on behalf of my colleagues on the Board. I also take this opportunity on behalf of the Board to convey our thanks to the members of the Advisory Committees for the able and objective assistance they gave to the Corporation throughout the year. I would also like to thank the non-officials nominated by us on the boards of our borrower concerns for the interest they have taken in their work.

26. Considering the time which elapses between the end of our financial year and the Annual General Meeting it will not be

out of place for me to refer to a few recent developments without which the picture before you would be left incomplete.

27. The most notable of these has been the setting up of the Industrial Development Bank of India on the 1st July, 1964. The provisions of the I.D.B.I. Act have been commenced upon in the newspapers and journals and the charter of the new body and the role it is expected to play have already received wide notice. Without dilating on these matters I may usefully draw your attention to certain important amendments which the I.D.B.I. Act, 1964 has made to the Industrial Finance Corporation Act, 1948 with effect from the 1st August, 1964. The shares held in the Corporation by the Reserve Bank of India and the Central Government have been transferred at par value to the Industrial Development Bank and the latter has acquired additional shares so as to bring its total holdings up to 50% of the paid-up capital of the Corporation which now stands at Rs. 834.60 lakhs. Certain changes have been made in the provisions relating to the composition of the Board of Directors and the arrangements for the audit of the Corporation. The power of giving policy directives to the Corporation has passed from the Central Government to the IDB. The limit of loan assistance by the Corporation to a single industrial concern has been increased. It has been made possible for the Corporation to have access to financial assistance from the IDB in certain specified ways.

28. I expect that the formation of the IDB and the consequential changes in the IFC Act will enable the Corporation to play a more fruitful role in industrial development. Already, we have done some joint financing with other bodies. Now, co-ordination between sister institutions in the field will grow in depth, lacunae in the requirements of industry will be filled in more easily and very large projects which the Corporation could not handle alone will be assured of comprehensive attention by a consortium of financial institutions.

29. The recent amendments to the IFC Act tend to reduce considerably the Corporation's dependence on the Central Government. It is now incumbent on the Corporation to raise funds for its operations to the maximum extent practicable through its own endeavours assisted, of course, by the provision which remains intact in the law that its bonds will be fully guaranteed by the Central Government. As our requirement of outside funds during the current year will be quite substantial we entered the market a few days ago with bonds of Rs. 6 crores @ 4½% per annum at an issue price of Rs. 99.25% with 12 years maturity. The issue was handsomely over subscribed within a few hours. We thank our shareholders and other investors for the support they gave us. This was our seventh bond issue, the

total raisings by this means from the market upto now being over Rs. 39 crores.

30. It is our duty in the Corporation to review from time to time our own procedures to see if we can relax any of the conditions on which we render assistance to industrial concerns. A recent review has enabled us to take three or four decisions which may be of interest to you and the industrial circles.

31. As you are aware, it has been one of the standard conditions of our loans that borrower companies shall not declare equity dividend at a rate higher than 8% per annum without the prior approval of the Corporation. In view of the prevailing yields on equity and preference shares and the conditions in the capital market, we have decided to raise the limit of equity dividend from 8% to 10% per annum.

32. Loanee concerns so far had to seek the prior approval of the Corporation to the disposal of any item of assets mortgaged to it. It has now been decided to permit assisted concerns to sell or write off specified items of assets of a minor nature within prescribed limits, where they find it necessary to do so, without the prior approval of the Corporation.

33. It has also been decided that the restriction on the disposal and pledge of shareholdings should not apply to all directors or members of the managing agency but should be confined to those who have a real stake in the assisted concern. The Corporation has already decided to liberalise the condition about personal guarantee of directors and/or managing agents in suitable cases.

34. We have also decided that our right to appoint nominee directors on the boards of assisted concerns should be exercised more selectively in future.

35. I trust that these relaxations in the standard terms and conditions will be welcomed by our clients. It will be my endeavour to maintain a flexible attitude in these matters and make, from time to time, such variations as experience may show to be useful so long as these are in accord with the basic principles of sound financing.

36. Thoughts for the future are a natural concomitant of a review of the past. The Corporation has lived through sixteen years of change, has met with new challenges from time to time and has tried to evolve suitable responses. Now, with the progress of sister institutions set up at the all-India and the State levels and with the growth in the demand for long and medium-term financing of industry we shall face new tasks which will need imaginative handling. It is essential that we take stock of the changes in the situation and adapt ourselves increasingly to a versatile approach.

37. For this purpose we shall need a great deal more of foreign credit than has yet come to us. Negotiations for fresh lines of credit have been under way with the Kreditanstalt and the AID. We have just had news that a further line of DM 15 million has been allotted to us. I hope that from the AID, too, we shall get further credit. We must, nevertheless, look for more assistance from institutions abroad to make good our deficiency, particularly in the line of convertible currency. Our record will show that we, as a single institution, have been associated with investment of over Rs. 550 crores in the private sector of industry since 1948. While not oblivious to considerations of profit we have consistently laboured to give help where help is needed most and not where it can be most easily given. We have tried and shall try harder in future to ensure that the foreign lines of credit that we have and that we get are utilised to the best and promptest advantage of industry and that no procedural obstacles stand in the way.

38. As for our rupee resources we have to do our best to add to them by revolving our investment portfolio at every suitable opportunity. In August this year we added Rs. 1 crore to our funds by sale of certain debentures.

39. We have to see that while industrial concerns receiving or seeking our assistance are not subjected to excessive rigours or fruitless inquiries, projects are prepared with circumspection and probity, with full attention to technical, financial and managerial details and are implemented promptly and with vigour. A sensitive balance has to be struck by the Corporation all the time between generosity and prudence. An excess of the latter will retard development; an excess of the former may use up valuable resources without bringing an economic dividend. This balance is now particularly necessary when the Corporation has taken a long stride into the field of underwriting. If industry is to flourish, underwriting must go on. At the same time, if the Corporation, which borrows money at 5% interest and is not, basically, an investor in securities on the stock exchanges, has to subscribe in a large measure to new shares, its underwriting has to be wise. In this context, I feel that the staff of the Corporation for technical and financial scrutiny of projects and for advice to entrepreneurs needs strengthening. I am giving my best attention to this matter.

40. The tasks before the Corporation are not easy. But I am confident that we shall fulfil them and pass on to more difficult ones. To my colleagues on the Board I wish to express my sincere thanks for their valuable co-operation and wise counsel. And to conclude, I record with pleasure the appreciation and thanks of the Board of Directors and my own to the General Manager, the other officers and the entire staff for yet another year of devoted work.

Note: This does not purport to be the proceedings of the Annual General Meeting.

Company Meeting

EAST ANGLIA PLASTICS (India) LIMITED

*
Earns Profit—Assures Accelerated Growth

*
Complex Pattern of Cellulose Acetate Industry

*
Chairman Sir D. N. Mitra on Need for Proper Integration

The following speech was delivered by Sir D. N. Mitra, Chairman of East Anglia Plastics (India) Limited, to the shareholders of the company at its eighth annual general meeting held in Calcutta on 30th September, 1964:—

Friends,

I have much pleasure in extending to you all a warm welcome to this general meeting of the company. Before this review is presented, it is my duty to refer to the calamity that has befallen us at the death of Jawaharlal Nehru. It is also my duty to express our grief at this great national loss and to preface our proceedings with a tribute to his memory by dedicating our endeavour to the fulfilment of his vision of a modernized industrial India. Objective thinking is our inheritance from the great leader, who is no more. But his ideals, I am sure, will always inspire us and help develop a conviction about the great future of India. To do so we must fully comprehend that industrialization is basic to the very life of our country. Without such conviction the creative possibilities of large-scale industries cannot be fully realized to achieve economic freedom.

On this occasion, I propose only to highlight some aspects of our acetate industry which is yet to reach its full growth in our country. This apart, I would like to talk generally on the industrial climate as it is obtaining today in India. So far as the affairs of the company are concerned, I would request you to refer to the audited statement of accounts and the directors' report which together give a fair indication of the achievement of our company over the past years. The performance of your company during the year under review, in particular, is very significant—being the first year of fruitful endeavour by which the company has produced some positive results and a token profit. This year is also significant because now we have come to a turning point, wherefrom the growth of our company will be accelerated. This achievement, however, is to be studied in the context of what remains to be achieved in the years to come. In the annual report there is a brief note titled, "The World of Cellulose Acetate". This defines the framework of the canvas of our acetate project. We have just made a beginning in this field. We are yet to go a long way to reach our goal.

DUM DUM PLANT

Our compounding unit at Dum Dum is now in the swing of volume production. The plasticizer project will soon go into stream. All the ground work for the cellulose acetate flakes project has also been completed. In planning our schemes we have adopted a pragmatic approach, and in programming the cellulose acetate project we have worked out the detailed data on inputs and investment costs. The elaboration of the development plans has been, in general, started with a long-term projection. For operational purposes, it has been necessary to link aggregative planning to that of the individual phases of our project. In our study, major emphasis has been placed on the analysis of the differential of the fixed investment and other major input requirements in the industry between a developed country and a developing country. The course of our activities has been charted out on an aggregative projection which is fundamental for proper development of the cellulose acetate industry.

Looking back, I would recall—and you are perhaps aware—that our original scheme was only to compound cellulose acetate and PVC resins for the plastics industry. Our Government, in sanctioning the scheme, advised us to integrate our project backwardly with the production of cellulose acetate flakes. The Government was very much justified because the modern cellulose acetate industry is one of the most completely integrated industries in the world today.

If you examine the pattern of the cellulose acetate industry all over the world, you will find that only very big corporations are now dominating this field. In all advanced countries, mainly the leaders of chemical or man-made fibre industries are engaged in the production of cellulose acetate.

The economics of the acetate industry are generally based on a pattern of intricate integration. Lack of proper integration often has forced some producers to discontinue production. A very large and reputed chemical company in an advanced country, once an important producer of cellulose acetate flakes, had to shut down their acetate plant as it was not properly integrated for the manufacture of end-products. To make the cellulose acetate industry very stable,

there is no doubt that it has to be properly linked up with end-products industries, such as plastics, yarn, film, etc. In a developing country like India, the question of integration of a cellulose acetate industry is far more involved. To be absolutely sure of supply of raw materials from indigenous sources and to be independent of imports, this industry has also to be integrated backwardly to ensure the availability of the raw materials at an economic price.

The pattern of integration in the acetate industry varies in the advanced countries according to local conditions. Besides having major forward integration for manufacture of end-products and auxiliary integration for marketing, most of them also have facilities of chemical conversion plants. Many of them produce all the basic and intermediate raw materials and chemicals like acetic acid, chemical cotton, acetic anhydride and have facilities for recovery of acetic acid; some producers, however, buy cellulose pulp and acetic acid and only produce cellulose acetate by linking with the production of acetic anhydride and recovery of dilute acid. We also know of cases where even recovery of acetic acid is not undertaken by the acetate producer because they not only buy acetic acid but have also the advantage of returning to the seller the dilute acid for recovery.

But in a developing economy where the chemical industry is still in its infancy, it is to be expected that such facilities will not be available. It is, therefore, incumbent upon your company to integrate the acetate project not only to the limits up to which your company has obtained licences, viz., production of acetic acid, acetic anhydride, etc., but also for producing pulp and other chemicals; and it would also be desirable to go a further step, backwardly, to set up a distillery for regular supply of alcohol and to integrate, forwardly, with a yarn-spinning plant.

In this context, I would also like to refer to the status of the acetate industry in a developing country like South America where we find that the producer of acetates has even gone as far backward as to undertake sugarcane cultivation in order to ensure supplies of alcohol by crushing cane and subsequent fermentation. Some internationally-known firms have also diversified in the field of

forestry development and timber extraction to produce pulp in the process of integration. Such complexity is inherent for a stable cellulose acetate industry in its larger perspective.

DEVELOPMENT PLAN

I am glad to report that your company has made a study of the economics of this industry and the development plan has been based, according, on a long-term projection. This being a resource-rich industry, your company has studied the various problems relating to the availability of raw materials required for the project. It has also taken into consideration the prospects of the development of the petro-chemical industry during the next decade which might provide a ready source of acetaldehyde, etc., which, in turn, will ensure economic production of acetic acid.

I feel proud to report that your company is the pioneer in the field of acetate plastics in India and, therefore, enjoys a happy position. We are now successfully marketing cellulose acetate compounds to meet the requirements of the plastic end-products industry. Now that we have planned for a wide range of products involved in our integrated project, your company will be in a position to take up such production progressively and develop the side-lines of trading for a sustaining growth in course of time. Our activities, however, have to be related to the general industrial programme of our country. We should bear in mind that the Indian economy has undergone a major transformation since independence and we are at the beginning of a new era—one in which big industries can fulfil their promises of benefit.

I would like to observe here that while the country is preparing for a large-scale development, forces are at work to put obstacles to our way of thinking. Despite the fact that big industrial development is an immediate need to generate rapid economic growth, some of us, perhaps a large section of the Indian people, have a deep-rooted fear out of prejudices and emotional repugnance to it. We shall have to surmount this contradiction. This is not a small job. In the present industrial scene in India, suspicion and emotional prejudices have inevitably created a degree of cynical distrust in all business and down-grading

JUTE

Buffer Stock

SPEAKING at the recent annual general meeting of the Buffer Stock Association, Mr R. H. Morrison has pointed out that there is need for building up a really substantial buffer stock of jute. The role of a buffer stock as a stabilising influence in the jute supply situation is now widely recognised. An important part has been played by the Buffer Stock in checking the unwarranted rise in prices some time ago. The whole of the stock held by the Buffer Stock Association (about 8.75 lakh bales) was released and the increased supply had a salutary effect on the price trend which was then influenced by reports of a possible shortage of supply as a consequence of the reported short crops both in India

and Pakistan in the current season. Mr Morrison has noted that the effect would have been much more pronounced had the stocks with the JBSA been bigger. It may be recalled that Pakistan has also commenced buffer stock operations following the example of India. Buffer Stock has now received international recognition at the recent meeting of the Study group on Jute, Kenaf and Allied Fibres in Rome held under the auspices of the FAO. In the course of discussion on fibre supply and price stabilisation, one of the measures considered has been maintenance of buffer stocks. The question of undertaking buffer stock operations on international basis has also been mooted. Mr Morrison however thinks that an International Buffer Stock Agency will be faced with formidable difficulties and may even prove impracticable.

Another point noted by Mr Morrison is that whereas, originally the Buffer Stock Scheme in India had been introduced as a price support measure, it is now becoming equally important as an agency that is capable of restoring price stability in the world jute economy. As a matter of fact it is in this new capacity that the Indian Buffer Stock Association has played its part this year. Mr Morrison has rightly pointed out that the buffer stock will continue to play a major part in any schemes devised to bring about price stability to the jute market. As for the outlook for building up a buffer stock this season, although the date for replacement of the released stocks has been tentatively fixed for February next year, the president of the JBSA has pointed out that with the present level of the industry's consumption, it will take a

considerable period to replenish buffer stocks.

An important prerequisite for successful buffer stock operations is steadily increasing domestic production. But as pointed out by Mr B. P. Kedia, president of the Gunny Trades Association, production of raw jute has not been showing much improvement in the last two or three years. According to one estimate the current year's production is only about 65 lakh bales. There is need therefore for stepping up the output of jute in coming years as the target for the Fourth Plan is placed at 10 million bales. In the opinion of Mr Kedia it will be necessary to achieve a production of 8.5 million bales next year and thereafter an annual increase of half a million. All the additional production however has necessarily to come from increased yield because it will not be

EAST ANGLIA PLASTICS (India) LIMITED—(Contd.)

of a business man's function in society. A time has come for scrutinizing what is good for the society and what is not. The feeling resulting from our prejudices brings in a host of untoward consequences in its wake and such feeling will act as a dead load upon our economy—it will slow down the social and economic progress. It will develop a negative attitude which will ultimately refuse to accord honest recognition to the actual benefit of big corporate business.

BIG AND SMALL INDUSTRIES

The other reason for the negative feeling is the assumption that small-unit business should be the norm. This brings emotional consideration in determining the Government policies towards large industry. To live in the world of big productive machines side by side with handloom and basket-weaving, is perhaps responsible for the two schools of thoughts. It would be unfortunate for us if our industrial policies develop any contradiction in the process of planning. In a developing country like ours, both the streams of economic growth—large and small—have come to stay in our "mixed economy". I am not opposed to small industries. In fact, I am all for small and cottage industries. In India ours is not a case for supporting one or the other—the two should be inter-dependent and inter-related in such a way as to continually add to the wealth of the country as well as to lead to

an equitable distribution of wealth. I can appreciate the emotional feeling leading to the negative attitude on the part of certain section of Indians which is probably due to the possible concentration of economic power. But to avoid such concentration it would not be prudent to throttle the economic growth.

Our economic system calls for re-examination of our thinking as well as of the policy of industrialization. Big industry is inevitable in a big country like ours which is big in every respect—population, external relations as well as natural resources. We should be conscious of the kind of industrial society that our illustrious leaders have planned for India. This calls for an understanding of its fundamental characteristics. We need an enterprising kind of society, an increasingly productive society, an efficient and active society, a realistic and stable society, a forward-looking society that should always be agreed to conserve its resources—a society in which all our institutions, public and private, big and small, are responsible to the interest and the will of the people.

RATIONAL PLANNING

All this thought leads to the conclusion that a rational planning is very significant for the creation of a right economic climate in which proper industrial development might flourish. A change in our feeling is, therefore, funda-

mental and should be the prime concern of every one of us. We need a comprehensive industrial policy, a more cogent public investment policy that could act as a stimulus to private enterprise—and such policies that could help speedier implementation of the various projects and remove the negative climate that prevails today in the industrial and economic scene of our country.

Before I conclude, I would like to point out that in India the chemical industry has just begun. And the vast industries, based on petroleum, are yet to come. To accelerate its growth, emphasis must be given on research and development. It is true that the Government now pays an increasing attention to scientific research but to me it appears that Government alone cannot take these responsibilities. Scientific investigation should not remain within the four walls of laboratories run by the Government or a few individuals. We shall have to translate the technical achievements and discoveries into industrial realities to speed up the development of chemical industries. Significant research and development require large resources and often a long period of waiting during which no result can be forthcoming.

To develop a chemical process, a pilot plant may cost enormous money, may take years to build and even then the results may prove unsatisfactory. It is, therefore, necessary for every enterprise engaged in chemical industry

to sink substantial sums of money required to develop basic process and chemical engineering research. Our Government should come forward and take up the responsibility of introducing such policies and incentives as would encourage large-scale and wide-spread research activities. If proper facilities for such basic research are not developed in our country, there will be a continuous drag on our industrial growth. If we depend only on foreign assistance in these areas, we may not ever base our industries on up-to-date technologies and would always remain behind other industrially advanced countries. Such research activities call for a practical approach. Your company, within its own resources, has realized the need for the development of advanced technology and has, therefore, taken up some research and development work relating to the various phases of our cellulose acetate project.

Finally, I would like to address on your behalf and on my own, our thanks to the staff and all the employees who have worked in the interest of the company during the year. The success of the company's current operation and in the preparatory work in respect of the bigger project is a tribute to the enthusiasm on the part of the company's personnel.

Thank you.

Note. This does not purport to be a record of the proceedings of the annual general meeting.

possible to divert any additional acreage for jute in view of the critical food situation in the country.

★

Prices in the jute goods market especially towards the close of the week firmed up following reports of strike in Pakistani jute mills. There had also earlier been some Government business in B Twills, delivery November-December. However the main incentive for the higher levels seems to have been derived from speculative interest. Presumably the reasoning is that with renewed strikes Pakistani industry's production will be further reduced and consequently foreign enquiries will have to come to India. The improved sentiment in the goods section also had its impact on the raw jute section where after a week-long decline, prices recovered slightly toward close.

★

TEA Better Demand

IN the Export Sale held in Calcutta this week, offerings consisted of 73,981 packages of Leaf grades. There was a better demand. Plain orthodox teas continued to sell well and realised fully firm rates. With buyers following quality closely, prices for the good Assam orthodox teas were lower. Pekoe Fannings in this category were, however, sold well. Doars and medium Assams were well ab-

sorbed at irregular and lower rates.

There was an improved enquiry for the CTC teas and prices were generally firm to dearer with buyers' emphasis on the brighter Fannings. The better liquoring fibrous teas were a strong feature at dearer rates. The plainer Whole Leaf grades received good support at firm prices; but the better kinds generally eased in value.

Darjeeling teas were sold at irregular and lower rates following quality. Following rates (per kg) were quoted:—Clean Plain Pekoe Rs 5.20 to Rs 5.40; Plain Orthodox BP Rs 4.10 to Rs 4.30; Plain Orthodox Fannings Rs 4.30 to Rs 4.50; Plain CTC BP Rs 5.10 to Rs 5.40; Plain CTC Fannings Rs 4.90 to Rs 5.10; Medium CTC BP Rs 5.70 to Rs 6.30; Medium CTC Fannings Rs 5.70 to Rs 6.30; Good Assam CTC BP Rs 6.50 to Rs 6.80 and Good Assam CTC Fannings Rs 6.60 to Rs 7.00.

Meanwhile, arrivals of Tea in the Calcutta Port were lower by 6,747 chests at 712,030 chests in August as compared to the corresponding month of last year. Total arrivals, in the first five months (April to August) of the 1964-65 season were, however, higher at 1,670,030 chests against 1,433,630 chests in the corresponding period of last season.

Arrivals by road rose from 239,694 chests in April/August 1963 to 357,029 chests in the period under review as did those by river from 767,418 chests to 894,710 chests, while arrivals by rail and air fell from 414,368 chests and

32,150 chests to 392,687 chests and 26,404 chests respectively.

In the Cochin market, a quantity of 6.69 lakh kilogrammes of Leaf tea was offered last week for export. Quality in general showed little change. Following rates were quoted:—Low Mediums Rs 4.00 to Rs 4.60 (Rs 4.00 to Rs 4.40); Mediums Rs 4.60 to Rs 5.00 (Rs 4.40 to Rs 4.90); Good Mediums Rs 5.00 to Rs 5.40 (Rs 5.00 to Rs 5.60) and Nilgiri BOP Rs 5.23 to Rs 6.80 (Rs 5.00 to Rs 8.50). Figures shown within brackets are for the previous year. The quotations relate to the average minimum and maximum prices for the different grades of tea offered for sale.

According to a communique issued by the Ministry of Internal and External Trade, Ceylon's tea trade with West Asian countries is stated to be promising. Figures of exports to the London auctions show that, for the first seven months of this year, 35,514,727 pounds of highgrown tea was shipped direct to the auctions. Had the quota scheme, which was suspended by the Ministry, been in operation for this year, the quota for the seven months would have been 40,000,000 pounds.

In regard to the tea trade with West Asia, the UAR has not reduced the volume of her purchases from Ceylon this year. In fact, as compared with 1963, there has been a sharp increase in both the volume of purchases and the quality of tea purchased. As far as Iraq is concerned, there has been uncertainty recently regarding Ceylon's tea trade in view of the Iraq Government's decision to take over the import of tea into that country.

In the auction held at London this week, offerings were 28,748 packages including 23,932 packages of North Indian teas. However, one-third of these were not available and were withdrawn. Buyers were again selective with Assams and only the best showed advances in prices. Doars were the strongest feature, being 1d to 3d per pound dearer.

According to figures released this week, tea imports into the USA, in the first seven months of the year, were higher at 79.42 million pounds as against 76.81 million pounds in January/July 1963. Despite the improvement in the overall imports, tea supplies from India and Indonesia declined from 17.09 million and 8.27 million in January/July 1963 to 14.39 million and 6.87 million pounds respectively during the period under review, whereas imports from Ceylon rose from 29.94 million to 32.15 million pounds as did those from Africa and all other sources from 7.72 million and 13.79 million to 9.33 million and 16.68 million pound respectively.

COTTON

Firm Trend

Steady conditions prevailed in the cotton futures market at Bombay last week. The report of increase in bank rate was practically ignored by the market.

After exhibiting a somewhat erratic trend in the early days, the Jarilla March contract surged to Rs 733.25 because of excessive rainfall in some of the cotton growing areas like Berar, Khandesh and Saurashtra and the encouraging trend in cotton consumption by the mills. The contract, however, closed the week slightly lower at Rs 732.50 against the previous week's closing of Rs 727.25 per three quintals. The market wound up the week on a firm note.

The spot market at Sewri was devoid of any fresh development. Spasmodic interest in the old crop cotton was reported. New crop Digvijay cotton met with moderate spinner enquiry.

In the export section 42,245 bales of Bengal Deshi cotton was registered till 21 September. In the import section mill interest in the African growth was pronounced.

★

PRODUCTION AND PRICE CONTROLS ON CLOTH

With a view to ensuring an adequate supply of good cloth of popular varieties at reasonable prices for common mass consumption, the Government of India has decided to introduce price and production controls over the manufacture and sale of mill-made dhotis, saris, longcloth and shirting, covering about 45 per cent of the total annual mill production excluding sales for exports and defence requirements. These statutory controls will come into effect from 15 October, 1964.

CONTROLS

It is expected that 'controlled cloth' will become available in the market in appreciable quantities in early November. With the introduction of the statutory controls, the existing scheme of voluntary price regulation by the industry will come to an end from 15 October, 1964.

Under the statutory controls scheme, formulae have been prescribed for working out the cost of cotton, the conversion charges for spinning and weaving and the processes such as bleaching, dyeing, mercerising, etc., which have gone into the making of a piece of cloth of the controlled variety. The price so worked out will be stamped on the cloth as ex-mill price. The retail price of the cloth, the excise duty, the category and description of the cloth and the 'text-mark' of the mill will also be stamped on the cloth. In addition, the controlled categories of cloth

will bear on it the words 'controlled'. All these details will be printed on the cloth in red colour, to distinguish the cloth clearly from cloth of the non-controlled varieties. The question of inclusion of drill among the controlled categories is under the active consideration of the Government.

No mills will produce controlled varieties of cloth i.e. dhotis, saris, longcloth and shirting in the non-controlled sector. Also no mills will print these words i.e. dhotis, saris, longcloth and shirting, on any non-controlled varieties. However, the mills will also print the name of the mills; specifications of the cloth; Tex-mark number; brand or popular name, if any, of the variety and month of manufacture on non-controlled varieties of cloth in any other colour than red.

Mill-made cloth of the non-controlled categories will not be subject to price control. But Government trusts that the industry, the trade and the consumer public will exercise the necessary restraints to see that those categories sell at reasonable prices and do not show any undue rise of the price of such cloth.

Mills are being instructed to produce and price stamp from 7 October onwards and complete to the switch-over by 15 October after which date all controlled varieties will be manufactured and price stamped as per control orders. Mills are requested to contact the Textile Commissioner and his officers who have been instructed to resolve any technical and legal difficulties of the Mills concerned regarding modifications in production, construction and specifications that each mill would have to undergo in accordance with control orders. The scheme takes into account the existing nature of machinery and capacity of different mills to produce different varieties of cloth.

In order that exports should not suffer and should continue to increase and also that the mills producing cloth for defence requirements should be enabled to produce such cloth on a priority basis, full consideration has been given under the control orders for sales by each mill for export and defence. On the basis of every 10 per cent of sales made by any mill for defence and export out of their total production, credit will be given at the rate of 2 per cent as if produced as controlled cloth.

PRICES

In calculating the retail price of cloth of the controlled categories, a margin of 18 per cent over the ex-mill price (excluding excise) will be allowed to the trade. The retail price and the excise duty will be printed on the cloth.

It is expected that, as a result of the introduction of the statutory controls, there will be a reduction of about 5 to 8 per cent in the prices of most of the cloth of the controlled categories as compared

with the prices prevailing today under the Voluntary Price Scheme. In a few old varieties of controlled categories (whose prices continue at pre-1961 level, and which constitute less than 5 per cent of the controlled cloth), the new prices may however show an increase by about 7 to 8 per cent.

ENFORCEMENT

"To ensure that the control scheme is effectively implemented, a new wing has been created in the Textile Commissioner's organisation under an Additional Textile Commissioner with adequate enforcement staff in every region of the country, particularly where large textile mills complex exist. Government also proposes to set up a "Textile Control Advisory Committee" under the chairmanship of Mr V. P. Naik, Chief Minister of Maharashtra, to advise the Government on all aspects of the work relating to the administration of the controls. This Committee will consist of 15 members and will include representatives of industry, labour, technologists, wholesale traders, retail traders, fair price shops, consumer co-operative societies, consumers, economists and public workers.

DISTRIBUTION

A 'Central Consumers Vigilance Committee' will also be constituted under the chairmanship of Mr S. V. Ramaswamy, Union Deputy Minister of Commerce, to watch over the working of the distribution of controlled and non-controlled cloth, especially from the point of view of the consumers. The State Governments have been requested to set up local consumer vigilance committees of 10 to 15 members to look after the consumers' interests in all Municipal towns having an urban population of 25,000 and above. These committees will consist of consumers, public workers, traders, representatives of co-operative societies, fair price shops and local officials etc.

The retail trade will continue to distribute all cloth in the normal way. Fair Price shops and consumer co-operatives will be supplied as much cloth (controlled and on-controlled varieties) as they would need. If Fair Price shops or consumer co-operatives experience any hardship, they may contact the regional officers of the Textile Commissioner.

The success of the scheme will depend largely upon the co-operation extended by the industry and the wholesale and retail trade, the assistance given by the State Governments, the watchfulness of the local vigilance committees and, above all, on the determination on the part of the consumers that all concerned should work the scheme properly and that cloth of the controlled varieties should be sold at the controlled prices.

PIECEGOODS

The cloth market in Bombay depicted a mixed trend during the past week. Trading was almost on the pattern of the previous week's; demand in the domestic sector was restricted, while, on the other hand, brisk conditions prevailed in the export sector.

In the initial days the domestic sector exhibited better conditions thanks mainly to the demand from UP for a number of items. Strangely enough, seasonal goods such as flannelettes were deserted. Demand for fancy items was practically infinitesimal primarily on account of the impending announcement of new cloth prices. A slight increase in price of coating was reported due to the depleted stocks with the trade. Prices of dhoties and saris tended to ease during the week under review consequent on the anxiety of the stockists to liquidate their holdings before the new price formula sees day light. The undertone was subdued and turnover was meagre.

The powerloom section continued to be in a sorry mess and there was little evidence of any revival in demand.

On the export front, the Soviet Union emerged as the prominent buyer and accounted for a substantial quantum of printed poplins and furnishings. After a considerably long period of hibernation, Sudan made its entry into the market and bought a sizable quantity of light weight grey sheetings, voiles and bleached mulls. East African enthusiasm for usual varieties was on the uptrend. Obviously due to shortage of free licence, the UK was below its normal self. The US was satisfied with a small quantum of 'categorised' good. Countries from the Continent enquired for a host of varieties but the offtake was negligible. Business with Singapore was restricted to usual items.

★

Bank Rate and Commodity Markets

ONLY a few commodity markets have reacted bearishly to the announcement of the rise in the Bank Rate. Inasmuch as the step will discourage the stockists from either holding on to the existing stocks or in building up fresh supplies, it is felt that the rise in the Bank Rate will eventually lead to a decline in ready prices, particularly in foodgrains to the advantage of the general consumer. As the measure has been taken almost to synchronise with the commencement of the new crop movement, traders in grains and oilseeds markets point out that there will be no dislocation in respect of oilseeds.

The forward markets in both cotton and oilseeds have reacted to the announcement with a distinct

fall in prices. Although the rate for Jharilla March, in the cotton futures market, moved up at one time to Rs 735.50, there was a fall to Rs 733.50 soon after the announcement of the Bank Rate rise. In the spot section, too, activity remained restricted.

Apart from the commencement of the new 'crop arrivals,' sentiment in the Oilseeds market was affected by an increase in the Bank Rate and the permission given by the Forward Markets Commission for trading in groundnut and groundnut oil. Most traders were of the view that prices would come further with the expected increase in the receipt of the new crop in the next few weeks. In addition to this, the reports that the new crop was a much bigger one induced the traders to take a bearish view of the market.

Barring rice and gram which remained firm, prices of Wheat and other grains drifted lower. In the case of rice, prices advanced further by Rs 2.50 to Rs 6.50 per quintal according to quality. Demand was brisk in the face of negligible stocks, while the new crop arrivals did not reach the market yet. Gram prices also improved by Rs 3.50 per quintal on a good demand against paucity of stocks following the Punjab ban on gram exports. Wheat prices, however, displayed a slightly easier tendency owing to poor demand at the higher levels.

There was practically no effect on the Bullion market where the trading activity had been considerably limited since the implementation of the Gold Control Rules. Advances against bullion were already limited and hence marketmen were indifferent to the announcement. As a matter of fact, the Gold section gave an outstanding performance, thanks to the demand for the metal being well maintained. Higher advances from the upcountry centres owing to the seizure of contraband gold in recent weeks provided further encouragement. In the case of silver, demand picked up as arrivals slackened. Consequently, prices have forged ahead to touch new high levels.

★

NON-FERROUS METALS Firm Tone Persists

It was a week of virtually post-Korean war record values for all the base metals, especially for Tin and to a greater extent Copper. On the London Metal Exchange, Tin has touched a new high of £1495 per ton and this compares with only £1271 quoted a month ago. This reflects the continuation of the Far Eastern political uneasiness plus the persistent strong industrial demand and consumer fears that the American stockpile supplies are insufficient to stabilise prices as well as full defence needs.

Copper has also reached an all-time peak of £465 per ton. All available indications go to suggest that the upturn in the world market will continue, because of the imbalance between production and consumption of the metal. The output has not kept pace with the galloping demand and there has been a constant upward thrust on the price levels.

Zinc is quoted around £115 per ton against £120 10sh quoted a month ago and Lead at £115 against £104 2sh. Tending to emphasise high values of these metals lately have been several buying raids from the Soviet bloc countries along with persistently good Continental interest.

Naturally, the rise in the world prices of base metals will have an adverse effect on the import costs of Indian consumers, who mostly depend on imported goods for their requirements. In Bombay, Copper Coil has soared to Rs 445 from Rs 346 and ingots to Rs 394 from Rs 388. Besides the usual stimulating factors of extreme shortage of local stocks, larger demand and offtake, paucity of arrivals from upcountry centres and abroad, another prominent influence for the continuing spurt in the prices has been the sharp rise in prices on the London Metal Exchange.

It is known that indigenous production will not be adequate for India's needs for many years to come and the country will have to resort to imports. With the tight foreign exchange position, it is difficult to see how the imports can be increased to any large extent. Thus, in the light of inadequate domestic production and restricted imports, metal prices in India are poised to pursue a generally upward trend.

GINGER Decline in Prices

The impending arrivals of the new crop have started to influence the price trend in Ginger, both at the producing and receiving centres. In the Cochin market, the price decline is reported to be of the order of Rs 30 per quintal over the fortnight. In Bombay, the price has moved down by Rs 10 to Rs 12 per 50 kgs. The new crop is expected to flow in the market by Diwali. With the commencement of actual arrivals, the price is likely to seek still lower levels.

There are indications that the crop will not be smaller than last year's. It was thought earlier that the crop might turn out smaller, because of the unfavourable weather conditions. The stock position is said to be quite comfortable even though it is the flag-end of the season. In fact, stockists are keen to release their holdings before the new crop enters the market. Moreover, the present demand for the commodity

is confined to internal purchases only. There is no overseas demand and it is not likely to revive in the near future.

DYES AND CHEMICALS Rise in Rongalite

A sharp rise in the price of Rongalite was the main feature of trading in the Bombay market for Dyes and Chemicals. There was a rise of 50 to 75 paise per pound on account of a sudden revival of demand from the consumers and stockists, especially from Ahmedabad.

In the Chemicals section, Bleaching Powder recorded a rise of one rupee due to support at lower levels. Other items developed a slightly downward trend owing to increased supplies and lack of demand.

Among Dyes, the trend of prices was generally steady with the upcountry demand at low ebb. This was attributed to the hesitancy on the part of consumers to commit themselves before the announcement of the new textile policy.

SUGAR Steady

Sugar prices have continued to rule steady. In the Hapur market, prices in unofficial trading ruled between Rs 175 and Rs 177 per quintal as against the controlled prices of Rs 134.54 and Rs 140.19.

The manufacturing season will start early this year in Uttar Pradesh. The State's production target has been fixed at 1,300,000 tons as against 1,120,000 tons produced last year. Whereas the factories in east Uttar Pradesh are likely to start crushing in the third week of October, crushing in West UP may commence in early November.

According to the Indian Sugar Mills Association, the total sugar production in the month of August 1964 was lower at 3,000 metric tons as against 14,000 metric tons in August last year. This brings the total production till 31 August 1964 to 2,515,000 metric tons as against 2,110,000 metric tons during the corresponding period of last season.

The offtake of sugar from factories during August (including 4,367 metric tons despatched for exports) was 192,000 metric tons as against 248,000 metric tons (including 19,493 metric tons despatched for export) in the corresponding period of last year. Total despatches in 1963-64, till 31 August, were lower at 2,165,000 metric tons against 2,602,000 metric tons in the same period of last year. The closing stock of sugar, as on 31 August 1964, was 502,000 metric tons, same as on the corresponding date last year.

CARDAMOM Smaller Crop

According to trade sources, the crop prospects for Cardamom for the 1964-65 season are considered to be bleak. It is feared that it will be only around 2,500 tonnes as against 3,800 tonnes in 1963-64. The shortfall in the Alleppey variety, the major exchange earner, is expected to be around 700 tonnes as against 1,500 tonnes. The lower crop estimate is based on adverse weather conditions that prevailed in February and March last.

Arrivals of the new crop are reported to have started on a moderate scale at the terminal centres in Kerala. The pace of arrivals in Bombay is expected to gather momentum only in October. The present arrivals are confined to Alleppey and Coorg varieties.

In the meantime, Indian shippers have succeeded to effect export deals for 250 parcels of the new crop. The deals are reported to have been effected between Rs 14.50 and Rs 16.50 per kg. The commodity is sold to the Persian Gulf countries. More is expected to be lifted by Jeddah next month.

SILK

The prices of filature raw silk in Government silk filatures at Bangalore were revised downward during the week under review. Rates of filature silk of 20/22 Dr were quoted between Rs 100.32 and Rs 101.42 per kg. Kisan silk had a steady market. Cottage basin silk had a fall in the minimum and rise in the maximum to rule between Rs 79.37 and Rs 99.20 per kg.

A downward trend was observed in the prices of Charka raw silk except for Dupion (Charka). Superfine, 1st, 2nd and 3rd qualities had a fall both in the minimum and maximum to range between Rs 87.08 and Rs 92.59, Rs 70.55 and Rs 78.26, Rs 66.14 and Rs 70.55 and between Rs 61.73 and Rs 66.14 per kg, respectively. The Dupion (Charka) had a steady market.

Prices of the Spun silk yarn remained unchanged.

As regards the reeling cocoons, the Sidlaghatta market had a fall both in the minimum and maximum to rule between Rs 4.3 and Rs 6.50 per kg. The Channapatna market had a fall in the minimum and rise in the maximum to range between Rs 2.75 and Rs 8.00 per kg; whereas the Mugur market had a fall only in the minimum and was quoted between Rs 3.00 and Rs 4.50 per kg.

In the case of seed cocoons, the Foreign variety had a steady market; whereas the Mysore variety had a slight rise only in the minimum to rule between Rs 5.75 and Rs 7.00 per thousand.

Prices of Bhagalpur silk market remained steady.

A mixed trend was observed at Malda silk market. Cottage basin silk (White) and Charka raw silk had a fall both in the minimum and maximum to range between Rs 72.00 and Rs 86.00 per kg, respectively. Reeling cocoons, pierced cocoons, Matka yarn, and silk waste were in demand between Rs 4.31 and Rs 4.64, Rs 10.00 and Rs 12.00, Rs 28 and Rs 38.00 and between Rs 2.00 and Rs 2.50 per kg, respectively.

Prices in the Assam silk market remained steady.

The f.o.b. prices and landed cost of Japanese raw silk of 20/22 Dr. '2A' were Rs 56.96 and Rs 91.43 per kg., respectively during August.

OILS AND OILSEEDS Futures Trading in Groundnut

The news that the Bombay Oilseeds and Oils Exchange Limited fixed 7 October for the commencement of futures trading in new crop groundnut was received favourably. It was felt that the resumption of the futures trading would accelerate the downward trend and bring to an end the current spell of acute shortage and high prices.

In the Castorseed section, prices ruled generally firm and this was attributed to support from upcountry buyers who seemed to feel that the prevailing prices were lower in comparison with those of groundnut. The imminent departure of castor oil consignments to Russia against previous commitments brought forth a sizable support from the shippers too. Though the market suffered a mild setback at the close, the overall trend remained bullish.

In the Linseed section, trading was highlighted by a marked speculative support from upcountry operators, who felt that the shortage in the spot section would continue for several months as the new crop would become available only in March 1965. The receipt of ready linseed and linseed oil remained meagre in relation to the seasonal demand from crushers and paint manufacturers.

In Madras, both the groundnut and oil markets presented a firmer tendency. Arrivals of seeds averaged about 20 tons a day and these were taken up by small crushers. The rate for summer peanuts was quoted at Rs 108 per bag of 80 kg. Pollachi and South Arcot markets are reported to be commanding good arrivals, while there was an improvement in arrivals from Salem.

In the Oil section, decent quantities were reported to have taken up on account of Andhra, Calcutta and Bombay interests. The rate for the ready position is quoted around Rs 269 per quintal.

Company Meeting

Kerala State Industrial Development Corporation Limited

Speech of the Chairman, Shri K. R. K. Menon

Following is the speech delivered by Shri K. R. K. Menon, Chairman at the Third Annual General Meeting on 28th September 1964:

Gentlemen,

I have great pleasure in placing before you the accounts of the Kerala State Industrial Development Corporation Ltd. for the year ending 31st March 1964 and the Report of the Board of Directors of the Corporation on the working of the Corporation during that period. With your permission I shall take the report as read.

It is only less than twelve months since we held our previous annual general meeting, but, during this short period, two events have occurred which have caused us all much sorrow and concern. Firstly, we in Kerala, along with the whole nation, were plunged into grief by the sudden demise of our late beloved Prime Minister, Shri Jawaharlal Nehru, who, by his dynamic leadership and far-sighted policies had striven assiduously to set our country well on the path towards the goal of a properly integrated social and political unit. And, secondly, less than four months after this national calamity overtook us, we have had a major incident in our own State where the mounting political tension of some months' duration, culminated recently in the termination of the Cabinet form of government and its substitution by President's rule. The untimely passing away of our late Prime Minister has, I believe, served as a grim—and none too early—reminder to the entire nation that we cannot afford to rest on our oars and enjoy the luxury of living snugly in the protective shade of a great leader's umbrella for ever. The passing away of our Government's Cabinet of Ministers will, I hope, bring us Keralites—from the lowliest to the highest among us—to the realisation of the fact that sheer political immaturity of the kind that we have witnessed for some time past in our State in all its naked ugliness must inevitably result, sooner than later, in the sacrifice of the economic progress of the State. In my speech last year I had referred to the feeling of uneasiness and insecurity which even the then political instability in our State had engendered in the minds of outsiders, and the baneful consequences that this had entailed so far as our industrial development was concerned. I sincerely hope and trust that, whatever may be the form of Government we have, our Government will pay due attention to the urgent and immediate problem of industrial development on the massive scale and rapid pace that the dire economic

plight of our people today undoubtedly calls for.

The Corporation's work in the year covered by the report placed before you has, on the whole, been rewarding, and financially successful, as the report and accounts placed before you will show. Our gross income rose from Rs. 2.55 lakhs of the previous year to Rs. 6.25 lakhs in the year under report. This has enabled us not only to write off the entire amount of our Preliminary expenses, but also to provide for a Reserve for Depreciation on our investments, and another Special Reserve for general purposes, amounting to a total of Rs. 1,33,000, and also to carry forward a sum of Rs. 90,360 to the following year. Our issued capital on 31st March 1964 stood at Rs. one crore ninety five lakhs, as against Rs. one crore on 31st March 1963.

While we had no lack of funds during the year under report where-with to finance the industrial schemes approved by us, I regret to say that there was a slight fall in the total number of applications received for assistance from us. Ordinarily, there should have been an appreciable increase in this number rather than a fall, even though slight. I must attribute this unsatisfactory feature to the rapidly dwindling number of industrial licences which have been granted for units in this State. This is a matter which I have repeatedly stressed as deserving the urgent attention of both the Central and the State Governments, as nothing less than some kind of special and preferential treatment for us at the hands of the Central Government will help solve this problem satisfactorily. I regret to say there is no sign yet that a solution on these lines will be forthcoming. All that I can do on this occasion, therefore, is to re-stress this point with all emphasis, and to request the Kerala Government to take up the matter with the Centre as one of immediate urgency brooking no further delay.

While we must wait patiently for necessary action in this regard being taken by the two Governments, there is a good deal that can also be done by all of us in the way of paving the way for attracting industrial capital and entrepreneurship into our State. The first and foremost is the achievement of a modicum of political stability; this I have already mentioned, and needs no further expatiation. Secondly, we would do well to try and achieve a greater measure of stability in the labour—employer relations in the industrial units already established in our State. We have in our State special facilities for developing the sagacity and maturity of judgment that this calls for, in view of the

general education and literacy prevalent here; we could profit greatly by capitalising on this. A third thing that our State Government can—and must—do is to take immediate steps to ensure a plentiful and regular supply of electric power for industrial users. We must take note of the hard fact that cheap electricity alone will just not suffice; a regular supply is even more vitally important.

Last, but not least, in drawing up and presenting to the Central Government our State Government's suggestions for the fourth Five Year Plan our Government must keep prominently in mind the primary need for trying to reduce by the maximum possible extent the growing pressure of population on our meagre land resources, and diverting it to industrial enterprise, be it in the public sector or in the private sector.

The question of rising additional financial resources for the Corporation will soon have to engage our serious attention, and I hope that we shall find adequate ways and means of solving this problem. We are at the moment engaged in active negotiations with certain foreign companies for securing their technical collaboration in several worth-while schemes, all of which, I hope, will be found possible to implement in due course with the assistance of Indian industrialist parties, who will be willing to take over the management. I must, in this connection, make special mention of the assistance and co-operation we have received from the concerned officials of the U.S.A. Agency for International Development organisation in New Delhi in regard to industrial schemes in which we have sought American technical and financial collaboration. While expressing my sincere gratitude to the A.I.D. for their invaluable assistance and advice, I should also like to add that a team of experts from that organisation has recently completed an on-the-spot study of Kerala's economic—and particularly industrial—needs and potentialities, following the discussions which took place between the U.S.A. Ambassador, Mr. Chester Bowles, and our then Chief Minister. I am keeping in close touch with the A.I.D. officials in this matter, and I have hopes that appreciable results in the form of substantial aid to Kerala will follow from this in due course.

In conclusion, I should like to express, on behalf of the entire Board of Directors, our heartfelt thanks to all the industrial entrepreneurs, Indian as well as foreign, who have helped us, in the course of the year under review, with their co-operation and assistance, often in the face of heavy goods. Our grateful thanks are also due to the Kerala Government for the assist-

ance and co-operation we have received from them, and in particular to the former Industries Minister of Kerala, Shri K. A. Damodara Menon, whose warm and enthusiastic support of our Corporation's activities had always been a source of inspiration and strength to us all.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

PRICE INDEX

Slight Decline

The official wholesale price index (with the year ended March 1963 as 100) worked out to 156.7 during the week ended September 5, 1964 as against 156.8 (revised) for the earlier week. The index was higher by 1.4 and 14.2 per cent respectively when compared with the corresponding week of the previous month and that of a year ago.

The index for 'Food Articles' advanced by 0.4 per cent to 166.6 as compared with 166.0 (revised) for the previous week due to a rise in the prices of maize at Chandausi (+11%), rice at Varanasi (+11%), at Saharanpur (+7%), and at Kanpur (+6%), fish (+9%), gram (+5%), potatoes (+4%), masur and bananas (+3% each), wheat, barley, ragi, gingelly oil, eggs and gur (+2% each), and jowar, bajra, arhar, ghee, mustard oil, chillies and betelnuts (+1% each) although the prices of oranges (—20%), rice at Maracra (—14%), at Ranchi (—6%) and at Contal (—5%), onions (—7%), milk (—4%), urad and cardamoms —2% each), showed a fall.

The index for 'Tobacco' remained stationary at its earlier week's level of 127.6.

The index for the 'Fuel, Power, Light and Lubricants' groups stood at 143.4 as against 143.5 for the previous week. The price of castor oil (—1%) showed a fall.

Lower prices of raw jute, groundnuts and cottonseed (—4% each) and raw silk and copra (—1% each) brought down the index for 'Industrial Raw Materials' by 1.5 per cent to 168.2. The prices of lac (+3%), raw wool and logs and timber (2% each) and linseed, rapeseed and raw hides (+1% each), however, moved up.

The index for 'Intermediate Products' stood at 150.4 as against 150.2 for the previous week. Items which showed variations during the week were: brass (+6%), copper (+4%), zinc (+3%), tin (—2%) and linseed oil, cotton yarn and lead (—1% each).

The index for 'Finished Products' receded by 0.2 per cent to 134.2 as a result of a decline in the prices of manufactures (—2%). The prices of oil cakes (+1%) were, however, marked up.

For the INVESTOR

INVESTMENT GOSSIP Subdued Sentiment

STOCK market sentiment continues to be subdued as both operators and investors are worried because of fresh uncertainties brought about in the investment situation by the increase in Bank rate and some other developments. As far as the stock market fraternity is concerned, the higher bank rate means increased cost for industry with a consequent reduction in profitability. Moreover, with the increase in interest rates equity dividends should be much higher than now to attract investment in the corporate sector. The statement of Mr N. Sanjeeva Reddy, Minister for Steel and Mines, in the Rajya Sabha early this week on the question of recovery of the loans given to the two private sector steel plants has been bearishly interpreted. According to the Minister, the Government has now decided to refer the question to the Tariff Commission. But Mr Sanjeeva Reddy also made it clear that in case it becomes difficult to recover the loans, Government will not hesitate to convert them into equity shares. It is however significant to note that the Minister has not omitted to mention that while taking steps to recover the loans from the steel companies, Government has perforce to remember that in the future expansion of steel production, the private steel plants have also to play a very important role.

If equity prices have not lost much ground despite the general reluctance to extend commitments, it is largely because there has been further substantial purchases by both the LIC and the Unit Trust. Moreover sectionwise also, after initial adverse reaction, cotton textile shares have been supported on the hope that the new scheme of partial decontrol of cloth may not be detrimental to the mill sector. Electric company shares have attracted attention as the bank rate rise will benefit the Undertakings. But a general upsurge of investment activity will however continue to depend on favourable changes in fiscal policies.

★

NEW ISSUE NOTES Dunlop Rubber

Subject to the consent of the Central Government being received, it was decided by the Directors of the Dunlop Rubber Company (India)

Limited, at the meeting held this week, to issue 15,00,000 ordinary shares of Rs 10 each, at a premium of Rs 10 each, in the ratio of one new ordinary share for every three existing shares held, to those shareholders registered as on 21 October 1964, fractions of a new share being disregarded.

The company's application to the Government for consent to the above issue stated the intention to follow such an issue with a bonus issue out of the share premium account. This matter was also considered at the meeting and it was decided to submit, in due course, an application to the Controller of Capital Issues for consent to make a bonus issue.

Meanwhile, the directors have decided, perhaps for the first time in the history of the company, to recommend an interim dividend of 8½ per cent, subject to tax, for the year ended 31 December 1964, payable on or after 5 November to those shareholders registered as on 21 October. Transfer books of ordinary shares will remain closed from 22 October to 11 November, 1964.

Madras Motor

Madras Motor and General Insurance Company Limited, Madras, is to issue further capital of Rs 10 lakhs, divided into 10,000 equity shares of Rs 100 each for cash, at par, on rights basis to the existing shareholders of the company. The capital will be utilised to strengthen the funds of the company.

Gwalior Rayon

Gwalior Rayon Silk Manufacturing (Wvg) Company Limited is to issue 7 per cent Debentures of the value of Rs 3 crores. The capital is required for several expansion schemes, viz., installation of additional spindles at Bhiwani and looms at Birlanagar textile units and manufacture of pulp and staple fibre at Kozhikode.

Ramon & Demm

Ramon and Demm Limited a new public Limited Company, will soon be formed in Bombay for the purpose of establishing a new automobile gear plant. The company, under the Chairmanship of the Maharaja of Baroda, will have an authorised capital of Rs 2 crores and an issued capital of Rs 60 lakhs, dividend into equity shares of Rs 10 each. The company has entered into collaboration with the prominent Italian and British firms.

The Italian company has undertaken to buy shares worth Rs 9 lakhs

while the London company will take up shares worth Rs 6 lakhs. Shares worth Rs 22.95 lakhs have been reserved for directors and their friends. Shares for Rs 22.05 lakhs will be offered to the public sometime in November or December. The company will start soon the negotiations with the ICICI for foreign exchange of about Rs 38 lakhs. The company has also decided to negotiate with either the Maharashtra State Financial Corporation or the IFC for a rupee loan of Rs 15 lakhs. The company's factory will be established near Thana.

★

BALANCE-SHEET REVIEWS Devidayal Tube Repeats

DESPITE the fact that the factory remained closed in April and May this year in order to carry out extensive repairs, Devidaya! Tube Industrial Limited has reported an increase in output for the year ended 30 June 1964, thanks to existing capacity being scientifically utilised.

The net profit for the year, before providing for depreciation and taxation, is higher at Rs 16.16 lakhs against Rs 13.99 lakhs for the previous year. Depreciation is raised to Rs 5.41 lakhs from Rs 5.14 lakhs and Taxation to Rs 4.16 lakhs from Rs 2.77 lakhs. The transfer to General Reserve is Rs 2.75 lakhs (nil), while an amount of Rs 1.70 lakhs was credited to Development Rebate Reserve on the last occasion. The dividend is maintained at 10 per cent, subject to tax, on the increased ordinary capital.

The directors state that most of the plant and machinery, required for implementing the expansion programme, have arrived at site and work on construction of new buildings and erection of machinery are proceeding side and side. It is expected that, by the middle of next year, the newly-installed machinery will be in operation.

Gammon India Earns More

Thanks to a large volume of work on hand, Gammon India Limited has been able to report a higher level of earnings for the year ended 31 March 1964. The net profit, before providing for depreciation and taxation, has risen sharply to Rs 82.48 lakhs from Rs 52.08 lakhs.

In respect of allocations, Depreciation is raised to Rs 28.32 lakhs

from Rs 17.09 lakhs; Taxation to Rs 20 lakhs from Rs 16 lakhs and Development Rebate Reserve to Rs 16.40 lakhs from Rs 4.39 lakhs. General Reserve is maintained at Rs 5 lakhs. The directors have proposed to increase the dividend from 11 to 12 per cent, taxable. The increased dividend is payable on the old capital. The new shares, recently issued, do not rank for the latest dividend.

Mysore Kirloskar Pays More

Mysore Kirloskar Limited has recorded a jump in sales for the year ended 30 June 1964 to Rs 306.36 lakhs from Rs 223.20 lakhs for the preceding year. The increase in turnover is accounted for by almost the entire range of the company's products. Apart from Capstan lathes and turret lathes, the manufacture of grinders and monomatic lathes has been taken up and it is expected that these new products will be marketed in 1966.

The net profit for the year, before providing for depreciation and taxation, has jumped to Rs 82.92 lakhs from Rs 60.37 lakhs. The charge on account of Depreciation is Rs 18.97 lakhs against Rs 13.86 lakhs and Development Rebate to Reserve Rs 10.56 lakhs against Rs 6.08 lakhs. Taxation claims Rs 31 lakhs against Rs 27.40 lakhs. As on the former occasion, available resources have been conserved. The transfer to General Reserve is as much as Rs 12.22 lakhs (Rs 1.05 lakhs). Debt Redemption Reserve gets Rs 5 lakhs (Rs 1.25 lakhs); Contingency Reserve Rs 1.00 lakh (Rs 2 lakhs) and Replacement and Rehabilitation Reserve Rs 4.40 lakhs (Rs 2 lakhs). The dividend on the equity capital has been raised from 10 to 12½ per cent, subject to tax.

The dividend is to be made out of Dividend Reserve, which is credited with an amount of Rs 9.20 lakhs from Development Rebate Reserve. This amount is considered to be in excess of statutory requirements. As the provision for taxation on the last occasion has been found more than necessary, a sum of Rs 2 lakhs has been taxation to General Reserve.

For obvious reasons, the profit for the year, before providing for depreciation and taxation, has declined to Rs 6.78 lakhs from Rs 8.44 lakhs for the previous year. The provision for Depreciation is

Mysore Chemical Skips

Once again, the Mysore Chemicals & Fertilizers Limited is un-

able to report satisfactory results; because the manufacture of ammonium sulphate could not be carried out profitably on account of heavy electricity charges. Indeed, it has been claimed that the avoidance of a loss through a reduction in the output of ammonium sulphate should be considered an achievement and that the position of the company will improve only after the various expansion plans under way begin to yield results.

The profit for the year, before providing for depreciation, is slightly higher at Rs 1.99 lakhs against Rs 1.55 lakhs for the previous year. The provision for Depreciation is Rs 1.66 lakhs (Rs 2.07 lakhs) and Development Rebate Reserve Rs 1,573 (Rs 25,063). No dividend on the equity capital is recommended.

The sulphuric acid plant, having a capacity of 50 tons daily, was commissioned into production in May this year and has been operating satisfactorily since then. The bagging plant, an auxiliary unit of the mechanised superphosphate plant, has also been commissioned in July last, while the erection of the new superphosphate plant having a capacity of 33,000 tons annually is nearing completion. In order to finance expenditure on these projects, an additional medium-term loan of Rs 5 lakhs, taking the total to Rs 30 lakhs, is being obtained from the State Bank of India.

As regards the caustic soda-chlorine plant, which is estimated to cost Rs 1.75 crores, arrangements are being made to finance the import of plant and machinery under the Fourth Yen Credit.

Meantime, permission has been received from the Controller of Capital Issues to raise capital for Rs 1 crore, while the balance of Rs 75 lakhs is expected to be secured from financial institutions. The directors will decide on the issue of fresh capital at the appropriate stage. The Mysore Government has expressed its willingness to subscribe to this issue to the extent of 10 per cent.

Tirupati Cotton— Profits Lower

The labour strike during the latter half of the period and the consequent loss in production are reflected in the working results of Tirupati Cotton Mills Limited for the year ended 31 March 1964. The waste cotton spinning plant is also reported to have experienced teething troubles due to the non-arrival of certain types of equipment required for proper working of the plant. There is also an increase in working expenses in various directions.

For obvious reasons, the profit for the year, before providing for depreciation and taxation, has declined to Rs 6.78 lakhs from Rs 8.44 lakhs for the previous year. The provision for Depreciation is

raised to Rs 5.43 lakhs from Rs 4.49 lakhs, while Development Rebate Reserve is lowered to Rs 55,489 from Rs 2.32 lakhs. The dividend on the equity shares is reduced from 10 to 7½ per cent, subject to tax.

For financing the expansion plans on hand, the directors have decided to issue 22,630 equity shares and 67,890-9.5 per cent cumulative preference shares, both of Rs 10 each, to the existing shareholders in the proportion of one equity share and three preference shares for every ten equity shares held. Already a medium-term loan for Rs 14.50 lakhs has been obtained from the company's bankers.

The blanket looms for which the company has received a licence arrived along with the preparatory machinery and are now being erected. It is anticipated that these looms will be commissioned into production shortly. The company has also a programme for increasing the spinning capacity by 9,000 spindles. Orders for plant and machinery have been placed with foreign as well as indigenous suppliers. These spindles are expected to go into production before the end of the current financial year.

Marikar (Motors) Satisfactory Working

Despite the fact that sales were adversely affected due to insufficient supplies of motor vehicles, the working of Marikar (Motors) Limited has resulted in only slight decline from Rs 8.79 lakhs to Rs 7.26 lakhs for the year ended 31 March 1964. Sales are shown at Rs 1.47 crores against Rs 2.67 crores.

The provision for Depreciation is Rs 55,052 (Rs 42,641) and Taxation Rs 4.05 lakhs (Rs 5.30 lakhs). General Reserve is lowered to Rs 20,000 from Rs 65,000. There was an allocation of Rs 25,000 to Dividend Equalisation Reserve previously. The dividend on the equity capital is, however maintained at 20 per cent, subject to tax.

Wellman Incandescent

The working of Wellman Incandescent India Limited has resulted in a loss of Rs 6.02 lakhs for the year ended 31 March 1963. The directors have proposed that this loss, together with a loss of Rs 3.84 lakhs brought forward from the preceding year, should be carried forward.

In a statement issued by the company, it is stated that the present loss has arisen due to number of factors over which the company has no control, such as the inordinate delay in the issue of import licences for components and the non-availability of bulk power supply at the factory.

It is also added that the import licence has since been received and orders are being executed on a satisfactory scale. An import licence for the year 1955-56 is

also expected to be issued shortly. The company has a full order book and sales for the current year are expected to be considerably higher.

★

STOCK EXCHANGES Dull and Listless

STOCK markets have continued to present a cautious pattern of trading. Although the initial reaction to the announcement of the increase in the Bank Rate had been bearish, the market displayed a useful recovery on second thoughts, thanks to the announcement of the increase in corporate news.

With activity further restricted, conditions on Lyons Range continued to remain dull. The only bright feature was Dunlop Rubber.

Sentiment on Dalal Street continued to be gloomy and prices dropped down further in the absence of support.

On the Madras Stock Exchange, trading was restricted to only a few selected shares, depicting a mixed trend.

Equity prices on the Ahmedabad Stock Exchange showed an easier tendency due to sustained profit-taking.

On the Delhi Stock Exchange, turnover was moderate and the undertone was quietly steady.

It was a disappointing week on the London Stock Exchange where no definite trend was established.

Although there was a good deal of selling on Wall Street, it was absorbed well in most instances as buyers responded to the continued encouraging business news and prospects.

CALCUTTA

AFTER an initial setback in prices due to selling pressure following the announcement of the increase in the Bank Rate, the local stock market recovered some of the lost ground. Profit-taking was, however, noticed at the higher levels, resulting in a mild reaction in values.

The initial reaction to the news of the rise in the Bank Rate was bearish and the market commenced the week with substantial losses following selling pressure. It was feared that the above decision would make credit costlier and would not help the capital market.

On second thoughts, however, a recovery phase set in as there was a growing feeling that the new mechanism of credit control would not affect genuine requirements of finance for production. Buying pressure was not, however, heavy. But, with offerings remaining mild, prices showed a tendency to improve despite profit-taking, as the corporate news continued to be encouraging.

The Gilt-edged section was dull and quiet in the absence of effective buying and prices tended to sag as the prospect of a further decline was not ruled out. 3 per cent 1986 Conversion Loan eased to Rs 63.10 from Rs 63.35.

Bank shares met with little or no interest as their outlook was

considered to be uncertain by the rise in the Bank Rate. Although the lending rates of banks would increase, doubts were expressed in some quarters whether the rise would be sufficient to absorb the increase in operational costs. Punjab National were on offer at Rs 19.87 against Rs 20.19, while United Commercial were a steady feature at Rs 73.25.

Cautious trading continued to be in evidence in the Jute section. Operators were disinclined to enter into commitments in view of the discouraging outlook for the profits of jute mills during the current year, especially when the demand for jute goods from overseas continued to be poor. Birlas, after being marked up to Rs 36.12 from Rs 35.75, receded again at the close to Rs 35.41, while New Central were quiet at Rs 10.66. Anglo-India were, however, in good favour up to Rs 190.

Tea shares met with more sellers than buyers in view of the poor marketing outlook for the commodity during the current season. There was a growing fear that the profits of the tea companies might not be better than those for 1963 in view of the lower prices obtained at the auctions.

There was virtually no interest in Sugar shares. Although sugar production was expected to increase during the current season, doubts were expressed whether the production costs of factories would be fully covered by their earnings and whether factories would be assured of an adequate supply of cane. The only two bright spots were Carew and SKG, having support up to Rs 12.50 and 8.87 from Rs 12.19 and Rs 8.25 respectively. Dyer Meakins met with business at Rs 25.75 to Rs 26.12.

The announcement about the scheme of statutory control on production and prices of popular varieties of cloth had no effect on the Textiles section, as this was more or less in line with earlier expectations.

In the week's trading, Engineering shares developed further weakness due to sustained selling pressure.

Miscellaneous issues were generally dull. A solitary feature in this section was Dunlop Rubber which, after recovering to Rs 32.75 from a low of Rs 31.56 following the news of an interim dividend and the company's proposal to make right as well as bonus shares, closed at Rs 31.69. Following were the price trends of a few selected shares:

Forward List	Week's Week's		
	Low	High	Closing
Hind Motor	16.75	17.06	16.87
I. Aluminium	31.50	31.87	31.62
I. Copper	3.34	3.38	3.36
Jaipur Udyog	10.56	10.82	10.75
Kesoram	25.50	26.06	25.44
Orient Paper	31.50	32.10	31.90
Orissa Cement	11.31	11.31	11.31
Rohtas	10.25	10.37	10.34
Shree Gopal	25.44	25.81	25.75
Cash List			
Alkali Chemicals	28.87	29.12	28.94
Chemical Fibre	16.69	16.87	16.75
Sirpur Paper	11.78	11.94	11.87
Titaghar	12.25	12.56	12.50

(ii) the Income-tax Officer makes an amended order referred to in sub-section (3) of section 210 on the basis of the total income on which tax has been paid by the assessee under section 140A, or in respect of which a provisional assessment has been made under section 141,

the total income referred to in clause (a) shall be substituted,—

(1) in a case falling under sub-clause (i), by the total income on the basis of which tax has been paid under section 140A or, as the case may be, the provisional assessment has been made under section 141, whichever relates to the latest previous year and where both relate to the same latest previous year, whichever is higher, and

(2) in a case falling under sub-clause (ii), by the total income on the basis of which the amended order under sub-section (3) of section 210 is made."

9. In section 210 of the Income-tax Act, in sub-section (3),—

(i) after the words "of the financial year," the words, figures and letter "tax is paid by the assessee under section 140A, or" shall be inserted;

(ii) for the words "determined for the purposes of the regular assessment or the provisional assessment aforesaid", the following shall be substituted, namely:—

"on which tax has been paid under section 140A or in respect of which the regular assessment or the provisional assessment aforesaid has been made,".

10. After section 230 of the Income-tax Act, the following section shall be inserted, namely:—

"230A. (1) Notwithstanding anything contained in any other law for the time being in force, where any document required to be registered under the provisions of clause (a) to clause (e) of sub-section (1) of section 17 of the Indian Registration Act, 1908, purports to transfer, assign, limit or extinguish the right, title or interest of any person to or in any property (other than agricultural land) valued at more than fifty thousand rupees, no registering officer appointed under that Act shall register any such document, unless the Income-tax Officer certifies that—

(a) such person has either paid or made satisfactory provision for payment of all existing liabilities under this Act, the Excess Profits Tax Act, 1940, the Business Profits Tax Act, 1947, the Indian Income-tax Act, 1922, the Wealth-tax Act, 1957, the Expenditure-tax Act, 1957, and the Gift-tax Act, 1958, or

(b) the registration of the document will not prejudicially affect the recovery of any existing liability under any of the aforesaid Acts.

(2) The application for the certificate required under sub-section (1) shall be made by the person referred to in that sub-section and shall be in such form and shall contain such particulars as may be prescribed."

11. In Chapter XVIII of the Income-tax Act, after section 236, the following section shall be, and shall be deemed to have been, inserted with effect from the 1st day of April, 1964, namely:—

"236A. (1) In the case of an institution or fund referred to in clause (iii) of sub-section (2) of section 104, credit shall be given to the institution or fund against the tax, if any, payable by it, of a sum calculated in accordance with the provisions of sub-section (2), in respect of its income from dividends (other than dividends on preference shares) declared or distributed during the previous year relevant to any assessment year beginning on or after the 1st day of April, 1964, by such a company as is referred to in the said clause, and where the amount of credit so calculated exceeds the tax, if any, payable by the said institution or fund, the excess shall be refunded.

(2) The amount to be given as credit under sub-section (1) shall be a sum which bears to the amount by which the rebate of super-tax admissible to the company under the provisions of the said Act, reduced with reference to any amount of dividends declared or distributed by it during the previous year relevant to any assessment year beginning on or after the 1st day of April, 1964, the same proportion as the amount of the dividends (other than dividends on preference shares) received by the institution or fund from the company bears to the total amount of dividends (other than dividends on preference shares) declared or distributed by the company during the said previous year."

12. In section 253 of the Income-tax Act,

(a) in sub-section (1),—

(i) in clause (a), after the word and figures "section 131," the word and figures "section 154," shall be inserted;

(ii) in clause (b), after the words "Inspecting Assistant Commissioner under", the words and figures "section 154 or" shall be inserted;

(iii) in clause (c), the following shall be inserted at the end, namely:—

"or under section 285A or an order passed by him under section 154 amending his order under section 263";

(b) in sub-section (2), after the words "Appellate Assistant Commissioner under", the words and figures "section 154 or" shall be inserted.

13. In section 280B of the Income-tax Act, in clause (1),—

(i) in sub-clause (b) (iv), the word "and" occurring at the end shall be omitted;

(ii) in sub-clause (b) (v), the word "and" shall be inserted at the end; and

(iii) after sub-clause (b) (v), the following sub-clause shall be inserted, namely:—

"(vi) any annuity due, or commuted value of any annuity paid, under the provisions of section 280D."

14. In section 280E of the Income-tax Act,—

(i) in sub-clause (ii) of clause (a), after the words, brackets, letter and figure "or sub-clause (b) (v)", the words, brackets, letter and figures "or sub-clause (b) (vi)" shall be inserted;

(ii) for clause (c), the following clause shall be substituted, namely:—

"(c) in cases where—

(i) the total income of the latest previous year (being a year later than the previous year referred to in clause (a)) on the basis of which tax has been paid by the depositor under section 140A, or a provisional assessment has been made under section 141, exceeds the total income referred to in clause (a), or

(ii) the Income-tax Officer makes an amended order referred to in sub-section (3) of section 280F on the basis of the total income on which tax has been paid by the depositor under section 140A, or in respect of which a provisional assessment has been made under section 141,

the total income referred to in clause (a) shall be substituted,—

(1) in a case falling under sub-clause (i), by the total income on the basis of which tax has been paid under section 140A or, as the case may be, the provisional assessment has been made under section 141, whichever relates to the latest previous year and where both relate to the same latest previous year, whichever is higher, and

(2) in a case falling under sub-clause (ii), by the total income on the basis of which the amended order under sub-section (3) of section 280F is made."

15. In section 280F of the Income-tax Act, in sub-section (3),—

(i) after the words "of the financial year," the words, figures and letter "tax is paid by the depositor under section 140A, or" shall be inserted;

(ii) for the words "determined under the regular assessment or the provisional assessment aforesaid", the following shall be substituted, namely:—

"on which tax has been paid under section 140A or in respect of which the regular assessment or the provisional assessment aforesaid has been made,".

16. For section 280Q of the Income-tax Act, the following section shall be, and shall be deemed

to have been, substituted, with effect from the 1st day of April, 1964, namely:—

"280Q. The amount of any deposit to be made under this Chapter shall be rounded off to the nearest multiple of ten rupees and where such amount contains a part of ten rupees, then, if such part is five rupees or more, it shall be increased to ten rupees and if such part is less than five rupees, it shall be ignored.

Provided that where the amount so computed is required under any provision of this Chapter to be deposited in two or more equal instalments and the amount of each instalment calculated for this purpose is not a multiple of ten rupees, the amount of each such instalment, other than the last instalment, shall be rounded off to the nearest multiple of ten rupees and the balance shall be the amount of the last instalment."

17. In section 280U of the Income-tax Act, for the words "twenty-five per cent of his adjusted total income", the words "twenty-five per cent of the income from such profession included in his total income" shall be, and shall be deemed to have been, substituted, with effect from the 1st day of April, 1964.

18. After section 285 of the Income-tax Act, the following section shall be inserted, namely:—

"285A. (1) Where any person (hereinafter referred to as the contractor) enters into a contract for the construction of a building for, or the supply of goods or services in connection therewith to, any other person, the value of which exceeds fifty thousand rupees, he shall, within one month of the making of the contract, furnish to the Income-tax Officer having jurisdiction to assess the contractor such particulars relating to the contract and in such form as may be prescribed.

(2) Without prejudice to the provisions of any other law for the time being in force, where any contractor contravenes the provisions of sub-section (1), the Commissioner may impose upon him such fine not exceeding fifty rupees as he thinks fit for every day during which the contravention continues, so however, that the amount of fine so imposed shall not, in the aggregate, exceed twenty-five per cent of the value of the contract.

(3) The Commissioner shall, on making an order under this section imposing a fine, forthwith send a copy of the same to the Income-tax Officer."

19. In the Estate Duty Act, 1953,—

(a) in Part VI, after section 50A, the following section shall be, and shall be deemed to have been, inserted with effect from the 1st day of April, 1964, namely:—

"50B. Where any property on which estate duty is leviable under this Act is transferred

within a period of two years following the death of the deceased and tax under the Income-tax Act, 1961, has been paid in respect of the capital gain arising from such transfer, the estate duty payable shall be reduced by a sum which bears to the total amount of tax so paid the same proportion as the amount paid towards estate duty out of the proceeds of the transfer bears to the gross proceeds of such transfer.

Provided that the Board may, on an application of the accountable person, extend the period of two years aforesaid if it is satisfied that the accountable person had sufficient cause for not effecting the transfer of the property within that period."

(b) for section 52, the following section shall be substituted, namely:—

"52. (1) The Central Government may, on an application of the person accountable for estate duty, accept in satisfaction of the whole or any part of such duty any property passing on the death of the deceased as such price as may be agreed upon between the Central Government and that person, and thereupon such person shall deliver possession of the property to such authority as may be specified by that Government in this behalf.

(2) Notwithstanding anything the time being in force, on the date the possession of the property is delivered to the authority under sub-section (1)—

(i) the property shall vest in the Central Government; and

(ii) the Central Government shall, where necessary, intimate the registering authority concerned accordingly;

and the authority shall administer the property in such manner as the Central Government may direct.

(2) Where the price referred to in sub-section (1) exceeds the aggregate of the amounts due under this Act in respect of the estate of the deceased, the excess shall be applied in the following order to the payment of any tax, penalty, interest or other amount—

(i) which the legal representative of the deceased is liable to pay in respect of the income, expenditure or wealth of, or gift made by, the deceased under any of the Acts referred to in clause (c) of section 2 of the Central Boards of Revenue Act, 1963;

(ii) which the executor is liable to pay under any of the Acts aforesaid in respect of the estate of the deceased for the period of the administration of the estate;

(iii) which the person beneficially entitled to the property in question is liable to pay under any of those Acts;

and the balance, if any, shall be paid to the accountable person."

20. In the Expenditure-tax Act, 1957, in section 5, in the proviso to clause (i), after the words "as the case may be, or", the words, brackets and figures "except where such gift, donation or settlement is not chargeable to gift-tax under sub-section (1) of section 5 of that Act" shall be, and shall be deemed to have been, inserted with effect from the 1st day of April, 1964.

STATEMENT OF OBJECTS AND REASONS

The object of this Bill is to amend the Income-tax Act, 1961, the Estate Duty Act, 1953 and the Expenditure tax Act, 1957 with a view to removing unintended hardship and providing relief to assesses in certain cases. Opportunity is also being taken to make some other amendments which have been found necessary in the light of experience gained in the operation of these Acts. The notes on clauses explain the various provisions of the Bill.

T. T. KRISHNAMACHARI
New Delhi;

The 29th August, 1964.

PRESIDENT'S RECOMMENDATION UNDER ARTICLES 117 AND 274 OF THE CONSTITUTION OF INDIA

(Copy of letter No. (321)64-TPL, dated the 3rd September, 1964 from Shri T. T. Krishnamachari, Minister of Finance to the Secretary, Lok Sabha).

The President having been informed of the subject matter of the proposed Direct Taxes (Amendment) Bill, 1964 has recommended under articles 117(1) and 274(1) of the Constitution the introduction of the Bill in the Lok Sabha, and under article 117(3) of the Constitution, its consideration by the Lok Sabha.

NOTES ON CLAUSES

Clause 2 seeks to amend retrospectively, Explanation 2 to clause (22) of section 2 of the Income-tax Act, 1961. The effect of this amendment will be that where a company goes into liquidation consequent on the compulsory acquisition of its undertaking by Government or any corporation owned or controlled by Government under any law for the time being in force, the distribution made by the liquidator of the company to its shareholders will not be chargeable to tax as 'dividend' to the extent such distribution is attributable to the accumulated profits of the company relating to any period prior to the three successive previous years immediately preceding the previous year in which the undertaking of the company is acquired.

Clause 3 seeks to insert a new clause (13A) in section 10 of the Income-tax Act. It provides for the exclusion from the total income of an assessee of any special allowance specifically granted to him by his employer to meet expenditure incurred on payment of rent for the residential accommodation occupied by the assessee to such extent (not exceeding three hundred rupees per mensem) as may be prescribed by the Central Board of Direct Taxes in the Rules framed under the Income-tax Act. It has also been provided that the limit up to which such allowance may be excluded from the total income of an assessee will be prescribed in the Rules having regard to the area or place in which the residential accommodation is situate and other relevant considerations.

Clause 4 seeks to amend sub-clause (ii) of sub-section (8) of section 17 of the Income-tax Act. The effect of this amendment will be that the payment referred to in clause (13A), sought to be inserted in section 10 of the Income-tax Act by clause 3 of this Bill, will not be treated as "profits in lieu of salary".

Clause 5 seeks to amend section 88 of the Income-tax Act. The effect of this amendment will be that the entire amount paid by an assessee during the previous year as donation to the Jawaharlal Nehru Memorial Fund referred to in the Deed Declaration of Trust adopted by the National Committee on 17th August, 1964 will qualify for rebate of Income-tax under section 88 of the Income-tax Act, without application of the monetary limit laid down in sub-section (3) of section 88 of the Income-tax Act (viz., 10 per cent of the total income of the assessee or two hundred thousand rupees, whichever is less). It has been laid down in this behalf that donations to the aforesaid fund will not be taken into account in calculating the above-mentioned monetary limit.

Clause 6 seeks to amend clause (ii) of sub-section (3) of section 153 of the Income-tax Act. It provides that the period of limitation for making an order of assessment (as laid down in sub-section (1) of the aforesaid section) will not apply in a case where an assessment, re-assessment or recomputation is made in consequence of, or to give effect to any finding or direction contained in an order of any court other than an order on an appeal or reference under the Income-tax Act. The amendment proposed in Explanations 2 and 3 is of a consequential nature.

Clause 7 seeks to amend section 154 of the Income-tax Act. Under this clause, an Appellate Assistant Commissioner and an Inspecting Assistant Commissioner will be enabled to rectify any mistake apparent from the record in an order of imposition of penalty passed by them. Further, the Income-tax Officer, the Appellate Assistant Commissioner, the Inspecting Assistant Commissioner and the Commissioner of Income-tax will be enabled to rectify any mistake

in an order passed by them even where such order has been considered and decided in any proceeding by way of appeal or revision, except where the mistake relates to matters which have been so considered and decided.

Clause 8 seeks to substitute clause (d) of section 209 of the Income-tax Act by a new clause. The effect of this amendment will be that in making the first order for payment of advance tax for a financial year, the Income-tax Officer will be enabled to compute such demand with reference to the total income of the latest previous year on the basis of which the assessee has paid tax on self-assessment under section 140A or has been assessed provisionally under section 141 of the Income-tax Act, if such total income relates to a year later than the latest year for which he has been assessed on regular assessment and is higher than the total income determined on such regular assessment. Where such self-assessment and provisional assessment relate to the same year, the demand of advance tax will be computed on the basis of the total income which is the higher of the two.

It has also been provided that if after making the first order for payment of advance tax for a financial year, the Income-tax Officer seeks to revise the demand with reference to the total income of a later year on the basis of which tax has been paid by the assessee on self-assessment, the revised demand will be computed on the basis of such total income.

Clause 9 seeks to amend sub-section (3) of section 219 of the Income-tax Act. Under this provision, the Income-tax Officer will be enabled to revise the original demand of advance tax made by him with reference to the total income on the basis of which tax has been paid by the assessee on self-assessment under section 140A of the Income-tax Act, if such total income relates to a previous year later than that on the basis of which the original demand was made.

Clause 10 seeks to insert a new section 230A in the Income-tax Act. This prohibits a registering authority appointed under the Indian Registration Act, 1908 from registering any document purporting to transfer, assign, limit or extinguish the right, title or interest of any person to or in any property (other than agricultural land) valued at more than fifty thousand rupees, unless the person concerned produces before such authority a tax clearance certificate from the Income-tax Officer in respect of his liability under the Income-tax Act, 1961, the Excess Profits Tax Act, 1940, the Business Profits Tax Act, 1947, the Indian Income-tax Act, 1922, the Wealth-tax Act, 1957, the Expenditure-tax Act, 1957 and the Gift-tax Act, 1958. This provision applies to documents which are required to be registered under the provisions of clause (a) to clause provisions of sub-section (1) of section 17 (e) of the Indian Registration Act, 1908.

Clause 11 seeks to insert a new section 236A in Chapter XVIII of the Income-tax Act. Under this provision, an institution or fund referred to in clause (iii) of sub-section 101 of the Income-tax Act, being a charitable institution or fund which holds shares in a company referred to in that clause, and receives a dividend on equity shares from such a company, will be entitled to a credit in its assessment for a proportionate amount of the super-tax payable by the company under the annual Finance Act in respect of the dividend on equity capital declared or distributed by it during the previous year for the assessment year 1964-65 or any later year. This provision will have effect from 1st April 1964.

Clause 12 seeks to amend section 253 of the Income-tax Act. It enables assessee to prefer an appeal to the Appellate Tribunal against an order of rectification of a mistake passed by the Appellate Assistant Commissioner, the Inspecting Assistant Commissioner and the Commissioner of Income-tax, and also against an order passed by the Commissioner of Income-tax imposing a fine under the new section 283A, which is sought to be inserted in the Income-tax Act by clause 18 of the Bill.

It also enables the Commissioner of Income-tax to direct the Income-tax Officer to prefer an appeal to the Appellate Tribunal against an order passed by the Appellate Assistant Commissioner rectifying a mistake in his order.

Clause 13 seeks to amend section 280B of the Income-tax Act. It provides that the amount of any annuity due or the commuted value of any annuity paid under the provisions of section 280D of the Income-tax Act (which is chargeable to tax as income) will be excluded from the "adjusted total income" of an assessee for the purpose of computing the amount of annuity deposit required to be made by him under the provisions of Chapter XXIIA of the said Act.

Clause 14 seeks to make two amendments to section 280E of the Income-tax Act relating to computations of advance annuity deposit. Under one of the amendments, the amount of annuity due or the commuted value of any annuity paid under the provisions of section 290D of the Income-tax Act will be excluded from the total income of the assessee on the basis of which the amount of advance annuity deposit required to be made by the assessee is calculated.

The next amendment seeks to bring the provisions relating to the computation of advance annuity deposit in line with the provisions in clause (d) of section 209 of the Income-tax Act relating to the computation of advance tax (as sought to be amended by clause 8 of the Bill).

Clause 15 seeks to amend the provisions in sub-section (3) of section 280F of the Income-tax Act relating to amendment by the Income-tax Officer of the original

order issued by him in regard to demand of advance annuity deposit. By this amendment, the provisions of the aforesaid sub-section will be brought in line with the provisions of sub-section (3) of section 210 of the Income-tax Act (as sought to be amended by clause 9 of the Bill) relating to the amendment of the original order of advance tax.

Clause 16 seeks to amend section 280Q of the Income-tax Act relating to the rounding off of the amount of annuity deposits. The effect of the amendment will be that the amount of any annuity deposit to be made under Chapter XXIIA will be rounded off to the nearest multiple of Rs 10/- instead of Rs 5/- as under the existing provision.

Installments of annuity deposit will also be rounded off in a similar manner.

This amendment will have effect from the 1st April, 1964.

Clause 17 seeks to amend section 280U of the Income-tax Act. The effect of this amendment will be that in the case of authors, playwrights, artists, musicians or actors, who under the existing provisions of the aforesaid section are permitted, at their option, to make an additional annuity deposit up to 25% of the amount of their "adjusted total income", such additional annuity deposit will be allowed to be made only in respect of the income derived from carrying on a profession as an author, playwright, artist, musician or actor, and not in respect of income from any other source.

This amendment will have effect from 1st April, 1964.

Clause 18 seeks to insert a new section 285A in the Income-tax Act. Under this provision, persons securing contracts of a value exceeding Rs 50,000 for the construction of a building or the supply of goods or services in connection therewith, will be required to furnish relevant information relating to such contracts to the Income-tax Officer concerned within one month of making the contract, failing which they will be liable to imposition of a fine by the Commissioner of Income-tax not exceeding Rs 50/- for each day of default, subject to a further limit of 25% of the value of the contract. The particulars to be furnished by such persons will be prescribed by the Central Board of Direct Taxes in the rules framed under the Income-tax Act.

Clause 19 seeks to amend the Estate Duty Act, 1953.

Sub-clause (a) seeks to insert a new section 50B in Part VI of the Estate Duty Act. The effect of this amendment will be that where the accountable person transfers any property comprised in the estate of the deceased and utilises the proceeds for payment of the estate duty, a deduction will be allowed from the estate duty of a proportionate amount of the tax which becomes chargeable under the Income-tax Act on the capital gains arising from the transfer of the property.

This amendment will have effect from 1st April, 1964.

Sub-clause (b) seeks to substitute the provisions of section 52 of the Estate Duty Act by a new provision, enabling the Central Government to accept at an agreed price, the assets comprised in an estate passing on the death of the deceased towards payment of the estate duty, if the accountable person so offers. Provision is also made that any balance of the price left after satisfying the amounts due under the Estate Duty Act will be adjusted against amounts due under the other direct taxes Acts from the deceased, his estate and the accountable person beneficially entitled to the asset in question in that order.

Clause 20 seeks to amend the proviso to clause (j) of section 5 of the Expenditure-tax Act, 1957. The effect of this amendment will be that an assessee will be exempt from expenditure-tax on the expenditure incurred by him on making a gift which is specifically exempt from gift-tax under sub-section (1) of section 5 of the Gift-tax Act, 1958.

This amendment will have effect from 1st April, 1964.

FINANCIAL MEMORANDUM

Under the new provision sought to be introduced in the Estate Duty Act, 1953 by sub-clause (b) of clause 19 of the Bill, the Central Government will appoint an authority to take over and administer the assets comprised in an estate passing on the death of the deceased which are offered by the accountable persons to the Government towards the payment of estate duty. In the initial stages it is the intention to utilise the existing machinery of Government for this purpose and to add to it only by stages as the work expands. The additional expenditure on this account during the current financial year is not likely to exceed Rs 20,000.

MEMORANDUM REGARDING DELEGATED LEGISLATION

Clauses 3, 10 and 18 empower the Central Board of Direct Taxes to make rules in regard to certain matters. These matters include the extent to which any allowance in the nature of a house-rent allowance may be excluded (subject to a ceiling limit of rupees three hundred per month) from the total income of an employee, the form in which an application for the tax clearance certificate may be made by a person seeking to register certain documents relating to transfer of certain properties and the form in which a contractor will be required to furnish particulars regarding house-building contracts of over rupees fifty thousand.

The matters in respect of which such rules may be made are matters of procedure or administrative detail. The delegation of legislative power is thus of a normal character.

S. L. SHAKDHER,
Secretary.

NOTE: Annual figures are averages of months; those of sugar relate to crop years.

†Data of Matches, Hurricane Lanterns, Sewing Machines and Bicycles from January 1963 onwards and those of Footwear (leather) from April 1963 relate to units having fixed assets of Rs 5 lakhs and more.

‡Data in respect of certain units are not included from January to May 1963.

(1) Monthly figures are exclusive of production in Punjab (Kangra) and Himachal Pradesh.

(2) Relating to the production by mills in the membership of Indian Jute Mills' Association and to one non-member mill.

(3) Includes canvas.

(4) Figures relate to stable variety only from June 1962.

(5) Including figures for Jammu and Kashmir.

(6) Figures relate to production of organised factories.

(7) Boxes are of 60 sticks each upto February 1961 and thereafter of 50 sticks each.

(8) Total of viscose yarn, staple fibre, acetate yarn and cellophane.

†From January except in the case of sugar where the figures are progressive from November of the preceding year, the crop year being November—October.

*Provisional.

Impression of factory

USHA MARTIN BLACK

LARGEST MANUFACTURERS OF STEEL WIRE ROPES IN INDIA

Formed as recently as 1961, Usha Martin Black is the first to attain the full rated capacity of 3600 tonnes of Steel Wire Ropes per annum within a year of commencement. Within the same period it embarked on its ambitious expansion programme—Phase II—aimed to raise its annual capacity to 7200 tonnes thereby covering a large variety of special and compound constructions of wire ropes needed for varied and specialised purposes.

The most modern and well laid-out UMB plant is run under the supervision of foreign and foreign trained Indian technicians. Strict quality control measures are enforced at every stage of manufacture and every rope that leaves the factory is assured of the highest standard.

UMB Ropes are the first in India to be granted API certification by the internationally recognised organisation of American Petroleum Institute for ropes for oil-well industry and use of ISF marking by the Indian Standards Institution on their mining, haulage and winding ropes. Lloyd's Register of Shipping has also approved them for use in ships.

UMB Wire Ropes are now available in a wide range of black and galvanized quality for oil drilling, engineering, mining, shipping, railways, earth moving and various other purposes.

INVESTOR'S SUPPLEMENT

Indecisive Trend in September

The pattern of trading in the stock market during September depicted an irregular trend with sentiment markedly deteriorating toward the close. Though selected cash scrip were in request in earlier dealings, there was an undercurrent of hesitancy to extend commitments. Notwithstanding encouraging corporate news, both operators and investors were worried about various uncertainties in the investment situation. The fall of the Congress Ministry in Kerala and the reports of Chinese intrusion into Sikkim had an adverse effect on market sentiment. It was however the threat of more curbs on the stock market that was responsible for the setback during the second week of the month. It was reported that Government was contemplating further regulating the working of the Stock market with a view to putting an effective check on speculation. This would require the taking of more powers by the authorities. The new move had reportedly stemmed from an anxiety to make the stock market safe for the genuine investor. In view of the increasing public stake in industry, it is incumbent on Government to ensure that the investors do not sustain loss through the activities of the speculative fraternity. Moreover, in the quantum of investment in the private sector industries is daily increasing from institutions such as the Industrial Development Bank, the Life Insurance Corporation

and the Unit Trust of India. As the existing Security Control Act does not give the Government adequate powers to exercise effective control over all kinds of speculation in the stock market, the assumption of additional powers is deemed necessary. In this connection, it was also indicated that most stock exchanges in the country were not organised on proper lines. The only stock exchange which, in the opinion of Government, is organised well is the Bombay Stock Exchange. The need to reorganise the stock exchanges was perhaps considered additional reason for thinking of taking up the task of reforming the stock markets.

Another factor that caused concern pertained to the Government decision on the Bonus Commission recommendations. The initial reaction to the announcement appeared to be quite favourable as the market almost ignored the important development. But second thoughts had evidently shown that the implications of the Government decision were far from reassuring. For one thing, there were reports that Government would yield to the pressure brought upon it to modify its own resolution to accommodate labour's demand. Moreover, the linkage of basic wage and dearness allowance in computing the minimum bonus, would, it was generally

considered, result in perpetuating disputes because workers would start demanding a higher dearness allowance so as to jack up the quantum of bonus.

Sentiment however temporarily improved toward the third week of the month on renewed hopes that Government would initiate fresh moves to revitalise the capital market, following the meeting between the Union Finance Minister and a FICCI delegation. It was reported that the delegation had emphasised the need for removing some of the major obstacles in the revival of investment activity. But the recovery proved shortlived as toward the close of the month, there were fresh disturbing developments. The main contributory factor for the renewed weakness was the introduction of a Bill to amend the Companies Act. The amendments envisage increased powers for the Government to probe into the working of the corporate sector and generally to check speculation on the stock market. One of the provisions seeks to restrict validity of the bank transfer form for six months and another makes it an offence to make applications for shares or their allotment in the name of fictitious persons. The two provisions, it was apprehended, would result in a marked diminution of business on the stock market. Besides the above

factors, the proximity of the long Puja vacation in Calcutta and the general price situation in the country effectively prevented an expansion of business.

Sectionwise, jute shares were generally subdued as investors were cautious in extending commitments. Although production and exports of jute goods continued to be at a high level, it was generally believed that the profitability of the industry would not improve in view of the high cost of the fibre. The continued apathy of investors to lend support to coal shares stems from the fact that presently the industry is plagued by lack of demand. In the textile section, sentiment was depressed following the release of the report of the Ashoka Mehta Committee on Powerlooms. The Committee has recommended that the additional production of cloth that will be needed during the next five year plan should be exclusively reserved for the decentralised sector. Trading was cautious in the tea section reflecting the disappointment caused by the drop in the average prices realised during the current season. Selected sugar shares however came in for some enquiry as it was believed that the new sugar policy would be favourable for the organised sector of the sugar industry. Engineering shares were fairly steady in earlier dealings, but by close, the trend was easy on selling pressure.

(a) After transferring Rs 204,000 from General Reserve.

(c) It is proposed to capitalise Rs 2,125,300 from General Reserve and issue Bonus shares.

(d) After transferring Rs 60,000 from General Reserve.

(e) It is proposed to capitalise a sum of Rs 585,000 in equity shares of Rs 10 and issue one bonus shares for every ten shares held.

(f) After transferring Rs 665,000 from General Reserve Rs 235,000 from Cotton Fluctuation Reserve, writing back Rs 11,686 being sundry credit balances and including premium on surrender of Cotton Import quote.

(g) After writing back Rs 645,151 being excess provision in previous years.

(h) After transferring Rs 250,491 from General Reserve.

(j) After transferring Rs 450,000 from Dividend Equalisation Reserve

(l) After transferring Rs 204,000 from General Reserve and Rs 330,129 being excess provision of statutory Development Rebate Reserve.

(m) After transferring Rs 1,425,000 from General Reserve.

(n) After writing back Rs 750,000 from Reserve for Rehabilitation and writing back Rs 7,927 being excess of Excise Duty and Rs 6,946 being excess provision for rates and taxes.

(p) After transferring Rs 425,000 from General Reserve and writing back Rs 790,235 being provision for Bonus for 1958.

(q) After transferring Rs 500,000 from Reserve for taxation and Rs 201,988 from General Reserve.

(r) After transferring Rs 1,279,165 from General Reserve and Rs 646,019 from Renewal Reserve.

(s) Includes Rs 947,178 being depreciation adjustment in respect of additional depreciation provided in previous year's and Rs 3,100 being excess of Secretaries Remuneration.

(t) After transferring Rs 783,834 Rebate Reserve and Rs 650,000 from General Reserve.

(u) After transferring Rs 200,000 from General Reserve.

(v) After transferring Rs 306,835 from Development Rebate Reserve.

(w) After transferring Rs 1,734,803 from Development Rebate Reserve.

(x) After transferring Rs 113,089 from General Reserve.

(y) After transferring Rs 300,000 from General Reserve.

(z) After transferring Rs 450,000 from Dividend Equalisation Reserve.

EDUCATION THROUGH EXHIBITION

Canara Bank believes that one of the important services that a Bank should render is to spread the banking habit in urban as well as rural areas.

This service can be rendered best by mass education. The best means of mass education are exhibitions. People from all walks of life, of all income groups, from big towns and small villages come to see exhibitions. They come to learn from the exhibits and explanations.

And so, Canara Bank started its programme of "education through exhibition" in 1958. So far, it has held over 25 exhibitions in South India.

Lakhs of people who have seen Canara Bank's exhibitions have received banking education. They have been taught to save for their future; to keep their money in banks to earn more money; to use a bank to enjoy better living.

Almost everywhere the exhibition authorities have awarded first prizes to Canara Bank pavilions. V.I.P.s and people from all over India have praised Canara Bank's active efforts to popularise banking by "education through exhibition".

In the years to come, Canara Bank plans to educate more and more people through more and more exhibitions.

Distinguished Public men like Mr. V. V. Giri, Governor of Kerala and Mr. Madhri, former Governor of Madras took keen interest in Canara Bank's Educational Exhibition.

All banks deal in money
We also deal with **PEOPLE**

The Foreign Transactions Officer

There's something quite refreshing about our foreign transaction man. All those strange far-away countries he has to deal with. And yet he's very much with you... for prompt courteous service. Is it an overseas remittance you want? Or a letter of credit? Or just valuable trade information? Just leave it to him. It's his job to solve your problem.

Drop in and see him anytime you want. It's almost as refreshing as a trip abroad.

 **Union Bank**
Helps People

When you order the Union Bank to transact business abroad, they do things in double quick time using Telex. Union Bank's streamlined methods can help you whether you are interested in Import or Export trade, or have business connections abroad. There are branches in all the important centres in India and correspondents in 72 countries with 22,414 offices. You will benefit from the fast, personalised and comprehensive banking service.

THE UNION BANK OF INDIA LTD.
66/80 Apollo Street, Fort, Bombay.
Branches all over India.
Telex contact with countries all over the world.

Statistics	

REPORTS from Delhi indicate that the preparation of the draft framework of the Fourth Plan has entered the crucial stage and that the Planning Commission is now engaged in the Procrustean operation of matching plan outlay with the estimate of available resources. The sectoral programmes recommended by the various working groups, which added up to a formidable total, have been brought down, without lopping off the limbs, to within the limit proposed by the Perspective Planning Division, by merely shaking them down so as to eliminate overlapping. But, still, a large gap remains between the cost of the programmes which have been identified as essential and the estimate of resources after these have been stretched to the maximum extent possible. Reports also refer to the debate going on in the Planning Commission, and with the Finance Ministry, about the feasible levels of outlay. There is, however, an air of unreality about these discussions, for it is clear that the Plan outlay cannot be larger than the resources that could be made available and, in regard to this, the Finance Ministry, which is responsible for raising the resources, has the last say both in regard to the resources in sight and the additional resources which may be expected to arise in the course of the implementation of the Plan. There is no reason to think that the Finance Ministry is not as anxious as others that the Fourth Plan should be of a size which will be adequate to satisfy the expectations that have been aroused by the three preceding plans. The review of the estimates made by the Ministry, which is now under way, may indicate possibility of increasing them, but not to any significant extent. That being the case, the debate about magnitudes of the Plan is not only largely irrelevant, but diverts attention from the important aspects of plan strategy which could be the subject of fruitful discussion.

The task that the Planning Commission should now undertake is to work out the appropriate strategy which will enable the achievement of the major objectives within the limits of outlay indicated by the estimate of resources. There is a gratifyingly large measure of agreement that the maintenance of a rate of growth of national income which will assure minimum levels of living to all sections of the population should have the highest priority among the different objectives. At any rate, nobody has so far expressed dissent though, of course, there may be diffe-

rence of opinion regarding the minimum rate of growth that will serve the purpose. Consensus on this point does not, however, mean that it is always recognised that the distribution of the total outlay over the different sectoral programmes will have to be readjusted for the achievement of this objective, instead of sticking to a pattern which was designed on the assumption that larger outlays would be possible. This may involve a change in the strategy of planning which should be accepted. In this context the proposals that Dr V. K. R. V. Rao is reported to have advocated deserve the dispassionate consideration of all those who are interested in the successful implementation of Plan programmes and are anxious that this should be done without aggravating the feeling of frustration that exists in large sections of the population. The figures indicated in the growth model proposed by him may need alteration, but this does not detract from the validity of the strategy recommended by him.

Dr Rao's proposals have the distinctive merit of including in the reckoning the response of the general mass of the people to their experience of planned development. They are based on the recognition that the prospect of successful implementation of the plan depends, more than ever in the past, on the creation of a favourable attitude among the general public. After submitting to the rigours of planning for fifteen years, they are surely entitled to expect some tangible improvement in living conditions following the much larger effort that they will be called upon to make during the Fourth Plan. Dr Rao is, therefore, on very strong ground in calling for priority for increased production of basic consumer goods, housing, as well as for education, health and other programmes of social welfare which affect the day-to-day life of the people.

The various proposals that have been put forward regarding the Fourth Plan agree that the highest priority should be given to agricultural production so as to ensure an annual rate of growth of five per cent. The implications of a five per cent rise in agricultural output, and the corresponding rise in the incomes of agriculturists, should underline the need for stepping up the production of consumption goods to a level which will be adequate to the changed pattern of demand that may be expected to take place. There may be gaps in the basic data required for planning the production of consumer goods

on these lines, and arrangements should therefore be made for surveys on a continuous basis to fill these gaps. But it should not be necessary to wait for the completion of these surveys to draw up the Fourth Plan programme. The National Sample Surveys and other studies of changes in consumption patterns that have been undertaken by different agencies and, especially, those carried out in connection with the preparation of new cost of living index numbers, could provide the data for the formulation of production programmes.

The programme for industries proposed by Dr Rao, with its emphasis on machine-building and export-oriented industries, is also calculated to develop the potential for future growth, so that the model as a whole is a balanced one. But the question still remains whether the entire programme could be implemented with the resources that would be available. Even making allowance for mobilisation of local resources for rural development programmes—this is a very significant element of Dr Rao's model and provides for feed-back of developmental outlays—it appears that there will still be a gap between the proposed outlays and resources, as in the case of most other plan models under consideration.

The gap between what is feasible and what is desirable could be narrowed if the proposal for implementation of the Plan in two stages, which has been attributed to the Finance Minister, is adopted. According to this scheme, the first phase of the Plan will be based on the level of resources as at present estimated and it is proposed that the level of outlay could be stepped up in the second phase if the mid-term survey of plan performance indicates the possibility of raising more resources. But this scheme will work only if quick-yielding projects, which could be depended upon to make an immediate impact on living conditions, are taken up during the first phase, so that the mid-term appraisal raises more cheers than groans.

Manpower Building

MR SANJEEVAYYA'S address to the Delhi seminar on Employment Information and manpower utilisation is noteworthy for showing the persistence in Government circles of the old attitude of regarding mere numbers as manpower and plunging the problem of development of manpower amidst a haze of pious sentiment. In the context of our ambitions in regard to rapid planned development and against the background of indiscriminate choice of industrial personnel and half-hearted training of technicians in the past, we have to pose our problem of ensuring competent and efficient working of our industries as one of anticipating our needs of the future and making adequate provision for meeting them satisfactorily as they arise in the coming years.

If error is unavoidable, commonsense and prudence suggest that we should err on the side of a slight excess of supply of qualified men rather than run the risk of construction or production being held up for lack of qualified personnel. This is undoubtedly a difficult task calling for close co-operation between various industries and the Government and expertise in compiling and inter-

preparing the available data with a view to facilitating the formulation of different kinds of schemes of recruitment, teaching and training. The examination of the technical aspects of this work is the principal task of those who are participating in the Seminar. But whatever the upshot of these discussions and whatever difficulties the Seminar may have to contend with, it is no help, and not a little of hindrance, to set the problems of building up manpower for our industry in what may in a superficial way be regarded as the wider setting of the general problem of unemployment and under-employment in this country.

This general problem is only an index of the present state of our population and the rate of its growth; and whether we consider this state absolutely or in relation to the possible increase in production and national income, there would be a problem of unemployment before which we should have to remain helpless unless we attack it obliquely from the side of family planning or limitation of numbers. The problem of building up manpower for industry's current and future needs has to be viewed as a problem of ensuring the requisite quality, not less than the quantity, while the general problem of unemployment in the country is overwhelmingly a quantitative problem. There is nothing gained by shutting our eyes to, or glossing over the fact that our so-called manpower is not an asset but a liability, so many more mouths to feed and bodies to clothe and house than we have resources for. The prevailing fashion of referring to the large numbers of inhabitants in the country as manpower, is calculated to confuse the two issues both of building up competent industrial personnel in all grades and of providing the masses with the necessary sustenance either with the aid of a job for each or through the distribution of mere largesse. It is to this confusion that we must in the main attribute the attempts of the Government to increase the volume of employment by limiting the growth of our industries and therefore even the pace of our economic development.

The attitude to the cotton industry is the most revealing instance of the baneful effect of utilising sentimental euphemisms where only non-emotive, objective words are apposite. One result of that attitude is that the Government is more anxious to divide the existent volume of productive activity among the largest number of workers than to increase productivity, output and genuine employment. To regard a job as a bread ticket rather than harnessing of a worker to fruitful and sufficiently rewarding effort is to handicap production and progress alike. And yet such has been the attitude of the Government in this country, and it has been, strangely enough, strengthened by socialists who are actuated, not by their devotion to the standard of living of the masses but by their animus to the owners of cotton textile mills. A vague sense of the shortcomings of this attitude has only prompted a clumsy compromise which makes the powerlooms the favourite of the authorities in preference to the handloom, the whole question of modernisation with automatic looms going overboard.

It is only when the maximisation of the volume of output and economy in production are given unquestioned paramountcy that planning can gain a scientific character. This has nothing to do with employing of manual

labour in a project site instead of buying or hiring expensive mechanical equipment from abroad for doing the same work. Nor need it in any way prejudice the distributive methods of a democratic Welfare State, which will find its task easier and not more difficult with increasing production. It is indeed difficult to say at the present stage how far the errors of the old attitude are being corrected. But it is disquieting to find the Union Minister for Labour talking as if emphasis on manpower planning as the Government views it was lacking at the beginning and the defect is being made good now. His claim that "we are now among the few countries which are giving systematic attention to the building up of manpower at different levels" sounds strange in our ears.

Mr Naval Tata was much nearer the point when he said that manpower planning was of comparatively recent origin in India, that no methods have been worked out for forecasting manpower requirements and that "we have gone on the basis of leaving the workers at the availability of jobs, the goal being employment at all costs." It is these haphazard ways that have got to be changed lest our plans should founder on the rocks of unsuitable or inadequate technical personnel. The Minister for Labour was no doubt right in pointing out that "the link between technical employment and the total employment in the country should also be taken into consideration." But what sort of link between the two can be forged when we have done so little to shape either?

FAO

Agriculture versus Synthetics

IN the latest FAO review of agriculture a full analysis of competition from synthetic materials with agricultural products like cotton and rubber finds a place. Primary producers are affected by the rise of synthetic fibres in the developed countries where technology aids the replacement of imported materials like wool and rubber. The growth of artificial substitutes does not always reduce trade and detergents do not drive out soap, as supposed. The special qualities of synthetic rubber compel countries like India to undertake local manufacture and it is significant that the rising consumption of rubber has absorbed the increased output of synthetic. The durability of manmade fibres among other properties explains the preference for synthetic fibres which are available in many countries today, though the point to note is that in Japan both rayon and cotton goods are made for export along with wool.

There is of late competition with leather from synthetics. The stability of prices discovered in respect of synthetics is a recommendation. Output controlled by a few big firms can be sold to big consumers and this cartelisation of trade inhibits optimism as to jute or rubber exports to developed countries though it is assumed that a rising standard of living at home will ensure a steady offtake. It is only in regard to leather that pessimism is permissible. More meat means naturally a larger output of hides in the USA which sells to Europe and the big packers do not depend on the sale of hides or skins since meat consumption is still rising while the traditional exporters who depend on semi-finished leather exports are badly placed. Vegetable oils

and fats that enter into local consumption are distinguished easily from hides and skins.

In the commodity review FAO points out that the USA leads as a producer of synthetic and the ECM is a long way behind. Like Britain, Russia, Poland and East Germany are also producing synthetic rubber but only the USA is a regular exporter like Holland, while West Germany is an importer like France. The demand for natural rubber has fallen away in the UK as also France and the planting industry must depend largely on the growth of rubber footwear at home and the offtake by the Communist Bloc for making tyres for heavy vehicles. In any event, natural rubber has a dim future but Malaya depends on mineral exports and the high price of tin today affords real advantages.

The surplus of cotton traced to the development of rayon is not a serious problem for exporters like Egypt or manufacturers like Japan. But the demand for cotton fabrics in many countries is highly elastic and synthetic fibres will not hit world competition very much even though Russia is raising the output of rayon instead of relying on Central Asian cotton. Use of fibres in goods other than garments is growing and the competition with wool and silk alike makes it difficult to speak of rayon as a close rival to cotton which has other uses. The concentration of synthetic fibre in big vertically integrated units is not overlooked by the FAO which points out that brand names like Courtelle and Terylene ensure the expanding demand required by the interest developed in fibres by the big chemical combines like ICI. The trend is still towards expansion of rayon output in Asia. Among the new producers will be Iraq and the end of patent protection has encouraged expansion of nylon. In developing countries the vogue of rayon may increase gradually—this will be of value to Indian manufacturers of viscose yarn and a fall in imports of cotton may follow.

Synthetic resins in the paint industry and use of waterbased emulsion paints constitute in a sense a threat to natural oils but the fall in demand for household soap made of fats is the more serious factor. The washing machine calls not for soap but non-foaming cleansing agents and in industry chemical agents are preferred. In the USA the production of synthetic detergents in 1961 exceeded 1.24 million tonnes as against 449,729 tonnes of soap. In Britain too soap powder under many brand names has displaced soap and it is only toilet soaps, made from vegetable oils that retain an appeal. Curiously Russia has not so far started to manufacture detergents though it is the absence of household machines that leads to the use of soap and running water. In the developing countries a wider use of soap is predictable in the development decade. However edible oils will be consumed easily and oilseeds as sources of protein may help better nutrition. In fact the FAO has dealt with protein deficiency as a sign of hunger in many lands. If coconut oil is linked with coronary disease by some experts, it is clear that vegetable fats and oils are assured of a stable market at home and abroad and it is acute scarcity that constitutes now a threat to India, obliged to import soyabean oil of US origin. As an exporter the Philippines or Ceylon is more concerned over the growth of artificial substitutes than India which is confronted with a sharp rise in prices of all vegetable oils in recent months, exposing the vanaspati manufacturer to a grave threat of shortage of raw materials.

The demand for synthetics has grown rapidly and a combination of natural and synthetic fibres has provided a satisfactory feature. The FAO assumes naturally that world trade will be conditioned by the establishment of synthetics and the outlook for rubber must deteriorate in view of the higher output of artificial rubber. A threat to exports of cotton and jute also is seen but no firm conclusions emerge from the analysis of postwar trends. What is stressed is that synthetic fibres are clearly dearer, and rayon cheaper, than cotton—a point made clear by the imposition of excise duties. The poverty of Asia and Africa may compromise the future but textile exporters like Hongkong are preparing for the big change by going in for mixed fabrics.

TRADE

Port-wise Analysis

CHANGES in India's foreign trade in 1963/64 have not obviated the payments difficulty but the recovery in volume and value last year has indicated that the employment of more ships flying the Indian flag depends mainly on a rise in the volume of exports. The value of imports at Rs 1149 crores topped that of exports valued Rs 794 crores and India's share in world trade is put now at 1.5 per cent. Of course, India is a long way behind Australia and Switzerland as regards trade. And Japan is certainly more prosperous than India because shipping receipts help export income. The shipping statistics prove that in Asia only Japan and India are maritime nations but there is a big gap due to differences in industrial progress and possibilities.

Analysis of trade originating from India's ports indicates that most of it flows to the West and Bombay's dominant position in India's imports is thus explained easily. The excess of exports passing through Calcutta may be less significant owing to the difficulties of operation in the Hooghly estuary. The trade figures also prove that Marmagao despite lower imports provides more trade than either Cochin or Madras port though traffic like income latterly has followed the improvements carried out. Curiously Cuddalore shipped more than Tuticorin but this too is traced to iron ore traffic. Recovery in mineral exports have a bearing on shipping prospects and it is plain that the manganese or mica business really depends on world conditions.

The volume of Kandla port has not gone up as expected. The old ports like Bhavnagar do more to keep exports though the fall in oilseeds trade this year will react on the growth of minor ports in Gujarat. A point to note is that a lot of Indian exports is represented by bulky materials including coal and coke valued Rs 2.24 crores only as against Rs 2.8 crores in 1962-63. The import by East Pakistan was affected by the troubled relations between the neighbours. The growing pressure on ports where ships are detained too long has been duly stressed by the Chairman of India Steamship Co Ltd as a major factor in reducing export earnings.

The significant changes in India's trade in 1963-64 can be easily listed. The rise in coffee shipments followed a rise in production and a guaranteed export quota. Shipments of oilseeds exceeded the export of oils and oilseeds. Striking increases under cashew and pepper exports in 1963/64 are attributable to rising demand from new customers while leather exports apparently gained at the expense

of exports of raw hides and skins in 1963/64. Stagnation in respect of jute or cotton goods may be attributed to high prices at this end. But the rise in sugar exports must be viewed as temporary like the rise under tobacco in 1963/64. The keener rivalry in the UK may enlarge the surplus and the problem of getting new markets depends largely on the change-over from cigars to cigarettes in Europe. Fortuitous gains seen under iron and steel scrap, raw wool or engineering items can provide little compensation for any fall under raw jute or cotton. The remarkable stability of the traditional items is bound up always with the prevention of competitive capacity and that is why inflation is now seen as a real threat to export promotion measures. There is of course another threat. India needs base metals and the ascent in London prices not only for tin makes it difficult for the metal trade to think of regulated supplies. The anxiety voiced proves that barter can afford little relief. If the increase is due to industrial growth as measured to India's imports of machinery it is unavoidable, and the case for maintaining essential imports is stronger in view of the fall seen under chemicals, dyes, colours, and even rubber. The domestic production has been expanded as to reduce imports and the real worry in regard to foreign trade arises from the prospective increase in food imports though US aid is still made available on special terms. The import surplus is, of course, a consequence of planning in India and the restrictions placed have not altered the essential fact that external assets are very limited and this country's need for external assistance has not diminished, in spite of efforts to produce machinery and equipment for existing industries.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

INTEREST RATES

New Pattern's Impact on Next Busy Season

ACCRUALS to Deposit resources have, during the week ended 25 September, reached colossal proportions. Thus, from the narrow viewpoint of new money being mobilised by the banking system, the 1964 slack season has proceeded most satisfactorily indeed. At the same time, the contraction in bank credit, by the end of the fifth month of the slack season, has also been not inconsiderable. Nevertheless, the credit ratio of Scheduled Banks continues to be fractionally higher than the relative figure in the corresponding week of last year.

With the higher liquidity requirement and with the raising of bank Rate, an interesting question emerges as to the likely state of affairs in the 1964-65 busy season. Banks, we may be sure, will be most reluctant indeed to borrow from the Reserve Bank beyond what it would be within their capacity to secure at bank Rate itself. This reluctance would have been doubly reinforced by the fact that a maximum has been set upon the rate the banks can charge on their Advances. Hence, to the extent of a bank compelled to borrow at penal interest rates, its Advances there-against will yield a margin of profit which would almost be unremunerative. One bank alone would be in a preeminent position to utilise Reserve Bank credit in large magnitude. We refer, of course, to the State Bank, whose holdings of Government securities form a very high ratio of Deposits. This means that to a corresponding extent the State Bank will be able to obtain loans from the Reserve Bank at bank Rate itself. In turn, the implication is that borrowers who may be turned away from the other Scheduled Banks will nillily have to approach the State Bank. Obviously, therefore, we may be witnessing during the next busy season the beginnings of large-scale diversion of commercial banking business to the State Bank.

Can such a trend be halted? It will be difficult for the other Scheduled Banks to be able to safeguard their position. They could revise downward their Deposit rates—but unfortunately here also the scope for remedial revision has been practically eliminated by the State Bank's announcement regarding the interest rates it will be paying on its Deposits.

Therefore, banks are left with no other recourse than to intensify their efforts at securing new Deposits. This has to be done by opening of new branches by publicity programmes and by a proven record of more efficient and courteous services to constituents.

The Pujas are upon us again; banks will be closed for pretty near a week, and as a consequence there has in Calcutta been quite considerable draws on Deposits. The call money rate here is rather sharply higher than in Bombay; the difference is in fact unconscionably wide. We are pointing out this fact as reinforcing the suggestion that we have time and again advanced in this journal, that while it is Calcutta that has the greater need of seasonal finance, the concentration of money market institutions is in Bombay; the result is that the impact of the seasonal demand for funds poses a grave problem for the Calcutta money market. It is high time that the monetary authorities made a study of Calcutta's needs in respect of call money, with a view to enabling thereafter a sufficiency of floating funds, from the financial institutions, to satisfy such temporary demands.

BANK RETURNS

Further Slack Season Accruals

ACCORDING to the returns of the Reserve Bank for 2 October, beginning of the month disbursements are responsible for a slight rise of Rs 7.02 crores to Rs 2,370.28 crores in Active Note circulation. There has also been outflow of Rupee Coin in an amount of Rs 0.66 crore. Foreign Securities are unchanged at Rs 85.46 crores, and a minor adjustment places Rupee Securities at Rs 2,086.33 crores. Accordingly the Reserve Bank's cash in the till has been drawn down by Rs 7.49 crores to Rs 28.79 crores.

Investments are practically unchanged at Rs 77.69 crores; since we may be sure that there would have been some element—a magnitude which, owing to raising of bank Rate in that week, may be small—of tap sales to Scheduled Banks, it is probable that the Centre had recourse to deficit financing for about Rs 10 crores.

The Centre also apparently was in receipt of repayment of loans and advances by State Governments. For, while the fall in Deposits of State Governments is a minor one of Rs 0.30 crore to Rs 14.78 crores, their borrowings from the Reserve Bank have jumped up by

Rs 9.36 crores to Rs 35.22 crores. At the same time, the Centre's balances have improved by Rs 14.60 crores.

The Reserve Balances of Scheduled Banks, owing largely to the State Bank, are up by Rs 2.59 crores at Rs 103.30 crores; and their borrowings from the Reserve Bank are a shade lower at Rs 0.60 crore.

Balances held abroad have dipped slightly by Rs 1.82 crores to Rs 10.35 crores.

According to the return of the State Bank for 2 October, beginning of the month disbursements have had some impact. Deposits have been drawn down by Rs 4.31 crores to Rs 666.23 crores. The total of Advances, however, has also declined by Rs 1.72 crores to Rs 329.44 crores. Giltedged has been acquired for Rs 4½ crores, raising holdings to Rs 300.60 crores. There is a fall of about Rs 9 crores in Other Assets, and the end result is that cash balances, including money at call and short notice, are better by Rs 3.03 crores at Rs 33.78 crores.

The return of Scheduled Banks for 25 September records a substantial increase of Rs 21.43 crores in net Deposits. Of this rise, an element of just Rs 4.59 crores is attributable to the State Bank. The increase is more marked in respect of net Demand Deposits, which are higher by Rs 12.86 crores at Rs 1,271.77 crores, whereas net Time Deposits are shown to be up by Rs 8.57 crores at Rs 1,432.06 crores. This inflow of new funds has been accompanied by a further contraction in bank credit. The total of Advances is shown lower by Rs 10.91 crores at Rs 1,718.27 crores. There is considerable addition to giltedged holdings, which have moved up by Rs 18½ crores to Rs 914.90 crores; and half of the new acquisitions is in respect of the State Bank. Debt to the State Bank is reduced by Rs 1.81 crores to Rs 30.93 crores. Borrowings from the Reserve Bank are shown at a nominal Rs 0.90 crore. Consequently, cash balances, including money at call and short notice, are better by Rs 10.92 crores at Rs 258.86 crores.

Syndicate Bank

The Directors of the Syndicate Bank have announced that the assets and liabilities of the Kotagiri Bank Ltd, Kotagiri (Nilgiri District) have been taken over by the Syndicate Bank Ltd on 7 October 1964. This take-over represents the seventeenth bank which has been merged with Syndicate Bank. The bank has accordingly acquired another branch in Madras, raising the number of branches in the State to 20. With the opening of a branch at Basava Kalyan, which is an unbanked area, on 7 October, the total number of branches operated by Syndicate Bank goes up to 194.

NOTICE

Owing to the "Puja" holidays, there will be no issue of Indian Finance dated 17 October 1964. Therefore, the next issue will be published on 24 October 1964.

—Editor.

International Liquidity and the Developing Economies

The following is the text of the address by Mr Pierre-Paul Schweitzer, Managing Director of the International Monetary Fund before the University School of Economics, Bombay University, 29 September 1964:

OVER the past year or more, the subject of international liquidity has been a major pre-occupation of all those concerned with international, financial and monetary matters, and it is, therefore, a matter to which the Fund has devoted an important part of its work. As you are all aware, the manner in which international liquidity is provided under the present international payments mechanism has been intensively debated in recent years and a number of plans have been put forward for reform of this mechanism.

A year ago, on the occasion of the 1963 conference of the Board of Governors of the Fund, it was agreed that the Fund should intensify its studies of this question; at the same time, ten major industrial countries who are the participants in the Fund's General Arrangements to Borrow, also announced that they would undertake a thorough examination of the outlook for the functioning of the international monetary system and the probable future needs for liquidity. These two studies were published last August. That of the Fund was contained in two carefully prepared chapters in its Annual Report. The Study of the Ten took the form of a paper setting out the conclusions reached after long deliberations between senior officials of Treasury and Central Banks of the Ten countries which was issued with a brief covering statement.

There was no great difference of view as to the direction in which steps to strengthen the international monetary mechanism should be taken in the near future, but I intend to comment to-day on the Fund report. I would like to review some of the basic considerations, which we in the Fund bore in mind in writing our report, and discuss briefly implications of the decisions taken at the recent meeting of the Board of Governors in Tokyo. In doing so I shall try and frame my remarks so as to concentrate particularly on international liquidity as it affects the position of the developing countries.

The Fund clearly recognizes that the whole problem of international liquidity is of great importance to the developing countries and also that the position of these countries is of relevance to its discussion. The interests and problems of these countries have to be given due weight in the liquidity discussions for the further reason that they hold in their reserves over \$10 million of foreign currencies mainly in the major reserve currencies, the dollar and sterling, and their continued confidence in these currencies is vital to a smooth functioning of the present international monetary system.

Although in the aggregate the reserves of developing countries are a considerable amount, many individual developing countries held relatively small amounts of international liquidity. This, incidentally, makes their potential access to the Fund and its maintenance as an integral part of the international monetary mechanism, of crucial importance to them. The developing countries have need of short-term liquidity just as the developed countries do, although sometimes these needs may not

Mr Pierre-Paul Schweitzer

Mr Pierre-Paul Schweitzer is the fourth Managing Director of the International Monetary Fund succeeding Mr Per Jacobsson, who died in May 1963, on 1st September 1963. Mr Schweitzer is a French national and was Deputy Governor of the Bank of France for three years before taking up his present appointment.

Mr Schweitzer was born on 29th May 1912 in Strasbourg, France, where he spent the early years of his life. He attended the university in Strasbourg and in Paris, studying law, political science, and economics. He joined the staff of the French Treasury in 1936 as "Inspecteur Adjoint des Finances." Promoted to "Inspecteur des Finances" in 1939, he worked on French external finances in the early part of the war. He was active in the French Resistance movement and spent the last part of the war in a German concentration camp. He became Deputy Director of the Department of External Finance in 1946. He came to Washington in 1947 as Alternate Executive Director for France in the International Monetary Fund returned to France in 1948 to become Secretary General of the Inter-Ministerial Committee charged with matters relating to European economic cooperation. He spent four years in Washington from 1949 to 1953 as Financial Counselor at the French Embassy during which period he was closely concerned with the work of the Marshall Plan in France. He returned to the French Treasury as "Directeur du Tresor" in 1953 which post he held until appointed second Deputy Governor of the Bank of France in 1960.

Among many honours, he is a Commander of the Legion of Honor and he holds the Medaille de la Resistance and the Croix de Guerre.

Mr Schweitzer is married to the former Catherine Hatt and has two children, Louis, born in 1942, and Juliette, born in 1954.

appear particularly dramatic in comparison with the importance of their longer term problems. Furthermore, expansion of their export markets is one of their most urgent needs and an adequate supply of international liquidity is necessary to maintain the level of world economic activity, which would permit such an expansion. In this matter, as in others, the Fund strives to take full account of the interests of all its member countries at whatever level of development they may be.

The adequacy or otherwise of international liquidity is an important determinant of the levels of world trade and economic activity. International liquidity should not, of course, be regarded as a sort of money which finances international trade which is financed by normal trade and banking credits granted in national currencies. But, consisting as it does of resources which governments hold or which are available to them to finance payments deficits, it has important implications for countries' domestic financial policies.

In many cases of difficulty, including those caused by short-term capital outflow, much of

the burden of adjustment can properly be allowed to fall on their gold and foreign exchange reserves, i.e., on their immediately available supplies of international liquidity. But, in other cases, it may be that stringent policy measures, both internal and external may have to be taken. In some cases, this second course of action may be forced unnecessarily on authorities who find that, due to an inadequate supply of or inadequate access to international liquidity, they do not have the leeway to permit the reserves to take the strain. Measures unduly restrictive of economic activity may thus have to be adopted. Of course, in other cases, effective policy measures are essential. This excessive availability of liquidity is also to be avoided as it reduces the discipline of the payments position and encourages postponement of necessary corrective action.

Our recent studies have led us to the conclusion that international liquidity is at the present time adequate. World trade has continued to grow at a remarkable rate. The payments position of industrialised countries as a group does not give cause for alarm and, indeed, there has recently been considerable progress toward equilibrium in the payments relations between them. There are pockets of fairly serious unemployment in some parts of the industrial world but excess demand for labor elsewhere. This generally satisfactory picture is not perhaps entirely descriptive of the position of the developing countries, although recently, as a group, their trade and payments position has also improved markedly. But, of course, no one would maintain that the problems which the developing economies face can be solved merely by the provision of additional liquidity.

While the present level of international liquidity is adequate, the rate of increase of reserves over the next ten years or so appears likely to fall short of requirements. The growth of international trade may possibly slacken from the almost 6 per cent rate of the past decade, but it certainly should not be less than 4 per cent per annum. Also, it would not be safe to assume that there would be any reduction in the magnitude of payments disequilibria relative to the volume of trade.

So much for the demand for international liquidity. On the supply side, reserves are unlikely to grow much more rapidly than 2.5 per cent, especially since their generation through increased holdings of dollars as a result of US payments deficits is likely to slow down. When this is set against the fairly conservative estimate of a 4 per cent increase in world trade, it is not difficult to see why the Fund believes that it is necessary to continue and possibly to broaden international action directed toward creating international liquidity.

It seems to us that the task of ensuring an adequate supply of liquidity does not require any drastic overhaul of the present arrangements which are based primarily on the use of gold and reserve currencies, supplemented by drawing rights on the Fund. The smooth working of these arrangements has not been without its problems and difficulties, but, on the whole, in the last twenty years they have served the world well. Also, I believe, the dangers which arise from crises of confidence in the system can be exaggerated; the reserve currencies are generally recognized to be basically strong and the leading industrial coun-

tries have shown great willingness to cooperate in order to overcome severe speculative pressures and have done so most effectively on several occasions in recent years.

But, I would not, of course, claim that all is perfect with the international monetary system as it exists at present. We must constantly work toward a more effective functioning of that system to the benefit of all countries. But, I may perhaps be forgiven for stating that I believe that in any action which may be taken to strengthen the international monetary system, the main emphasis should be placed on multi-lateral action through the Fund. The Fund has played an important role in the provision of international liquidity in the form of credit facilities and its importance to the developing countries in this respect has been particularly great. Our studies have led us to believe that if the necessity should arise for supplementing the world's supply of international liquidity in the form of reserves the Fund could, if members so desired, adapt its policies and practices to make an important contribution towards meeting this need.

The Fund has become an increasingly important source of liquidity for the developing countries because the constant pressure of their demand for imports has induced them to draw down their own foreign exchange reserves during the past decade or so. During the period 1953-63, gross official reserves of the developing countries as a group have remained more or less unchanged. However, if the oil producing countries are left out of consideration, the reserves of the other developing countries taken together show a marked fall over the decade. Even within this group, of course, there are countries which have, in fact, markedly increased their reserves, but the majority of them have been obliged to run down their reserves quite substantially.

At a time when pressures for rapid economic development are intense, it has been considered unnecessarily expensive to hold foreign exchange reserves above a certain minimum and every effort has been made to economize on them. Up to a point, such a policy cannot be considered inappropriate, but it is important for each country to maintain sufficient reserves to meet temporary swings in its balance of payments without unduly upsetting its import programs or disturbing confidence. The amount required varies from one country to another and from one time to another. In some cases, the pressure of development needs has led countries to reduce their reserves below such minimum levels, but it is important that this state of affairs is not allowed to persist. Notwithstanding the availability of a second line of reserves in the form of Fund resources, countries are well advised to maintain their own reserves at adequate levels.

In the Fund, the ability of each country to obtain assistance is generally limited to 125 per cent of its quota. The quotas themselves are determined with reference to the volume and variability of a country's foreign trade, its foreign exchange reserve holdings and a number of other criteria. The availability of tranches of this total amount is subject to certain policies which have been evolved by the Fund over a period of years. For drawings in the gold tranche—that is, in very broad terms correspond to amounts drawn which the amount of gold the member has contributed to the Fund—the member enjoys the overwhelming benefit of any doubt, which means that drawings are virtually automatic.

The procedures for drawings within the gold tranche have recently been further simplified to clarify and emphasize the de facto automaticity of such drawings and thus further to encourage countries to consider their gold tranche positions in the Fund as part of their reserves. Beyond the gold tranche, drawings of up to an additional 25 per cent of quota are granted on liberal terms so long as the country is shown to be making a reasonable effort to solve its payments problems. Drawings beyond this limit, however, require more substantial justification and are granted on the basis of a sound program of action aimed at establishing or maintaining the stability of the currency at a realistic exchange rate.

Over the years the developing countries have made extensive use of the facilities of the Fund. They have quotas totalling about 4.3 billion in addition to their own reserves of about \$12 billion. While these quotas are about 27 per cent of total quotas, the drawings of these countries, since the beginning of Fund operations in March 1947 up to June 1964, were \$2.8 billion, or about 37 per cent of total drawings from the Fund. They have also made extensive use of the Fund's standing arrangements; practically half their drawings since 1952, when these arrangements were introduced, have been under stand-by arrangements. Of the total drawings outstanding at the end of June 1964, amounting to \$1.8 billion, about 70 per cent had been granted to the developing countries.

The Fund has always considered the financing of balance of payments deficits arising from short-term fluctuations in primary product exports to be one of its basic functions and such financing had been possible under its ordinary tranche policies. Recently, however, the Fund has been providing special facilities for such financing. Up to an amount normally equivalent to 25 per cent of quota, assistance may be provided apart from the ordinary tranche policies in cases where the Fund is satisfied that a short-fall in export receipts is of a short-term character and is largely attributable to circumstances beyond the control of the member. It is understood, in these countries that the member will cooperate with the Fund, in an effort to find, where required, appropriate solutions for its payments difficulties.

The utilization of these special arrangements thus far has been limited; only two requests have been received, and the total assistance amounted to about \$90 million. The relatively minor recourse to this facility is attributable chiefly to the favourable turn in commodity prices during the past year and a half. In 1963, export earnings of the developing countries increased by some \$2.5 billion, and most countries in this group shared in this gain. This was reflected in a swing in the basic payments balance of these countries from a deficit of \$650 million in 1962 to a surplus of \$850 million in 1963. The improved level of commodity prices has generally been maintained in 1964.

I hope that what I have said of the financial assistance available and provided to the developing countries through the Fund, indicates the importance to these countries of a strong and active Fund, adequately equipped to carry out its role in a changing world. To be so equipped, the Fund requires particularly to be assured of adequate resources to meet the legitimate needs of all its members. Should additional resources be required, the most

permanent way of securing such an increase is by increasing Fund quotas. Those who framed the Articles of Agreement recognized the possible needs for augmentation of Fund resources as the world economy developed by providing for periodic review of the adequacy of Fund quotas. This periodic review is due to come round again next year. Since the last general increase in quotas took place in 1959, world income and trade have continued to grow and the volatility of capital has increased. Also, countries, particularly developing countries, have sometimes found that the amount of assistance available to them within their Fund quotas at the time of stabilization programs, was inadequate and that supplementary assistance from elsewhere was often not easy to arrange. In view of these considerations, and following the liquidity studies of the past year, the Fund's Governors, in their meeting in Tokyo, have instructed the Executive Board to study the question of increasing quotas in the Fund and to submit an appropriate proposal to them at an early date. This work will be intensively pursued in the coming months. Besides a general quota increase for all members, special increases may have to be considered for these countries, developed or less developed, whose quotas appear to be out of line in the light of their recent economic evolution.

While any increase in quotas would enlarge the drawing facilities of members, they will also be faced with the immediate burden of paying for a part of such an increase in gold. Increases in quotas are normally paid 25 per cent in gold and the rest in the national currency of the member. The gold holding of the Fund is important in ensuring that there is adequate liquidity to meet members' request even when its available holdings of currencies are low. This gold obligation may constitute a burden both on countries with low reserves and on reserve currency centres which may be asked to provide through conversion part of the gold subscribed to the Fund by other countries. The Fund will, therefore, look closely into this problem in the course of its studies of the general question of quotas to see if there are ways in which it could alleviate these difficulties.

If the evolving economic situation seemed to require an increase in the supply of international reserves, there are various possible ways in which the Fund could contribute to such an increase. Let me mention some examples of ideas that could be considered. It would be possible, by allowing members to draw a part of the credit tranches in the same virtually automatic manner as the gold tranche, to increase the supply of this almost unconditional liquidity. A greater use of the power which the Fund possesses to waive the limit on drawings of 125 per cent of a member's quota could increase the supply of conditional liquidity—that is, liquidity available subject to meeting the Fund's conditions as to policy. A more far-reaching innovation would be for the Fund to make investments in member countries so as to create liquidity at its own initiative. I want to emphasize that all these are, at the present stage, merely illustrative of the range of possibilities. Whether it will be advisable at any time to adopt some of them will depend not only on a careful consideration of the many complex issues involved, including the availability to the Fund of adequate resources needed for the purpose, and also on the relative availability of liquidity outside the Fund.

I should like now to illustrate the type of considerations involved by discussing briefly two of the proposals for changes in Fund policies that have been put forward recently by spokesmen of the developing countries. One urges the introduction of greater flexibility in the time limit for repayments. It should be recognized that from the standpoint of the Fund, it is important that there be some reasonable limit on the period for which Fund drawings can be allowed to remain outstanding if the revolving character of its resources is to be preserved. This limit is five years. Any limit materially longer than that goes to the very heart of the Fund's functions and raises the question whether the financing involved is bona fide balance of payments financing rather than long-term development financing. While any extension of the repayment period would increase the leeway available to countries to some extent, it might also weaken any incentive to take corrective actions to reverse adverse swings in the payments position especially where they have arisen out of factors within their control.

The second set of suggestions I should like to discuss relates to the Fund's arrangements for financing fluctuations in the proceeds of primary exports. These suggestions, made particularly at the United Nations Conference on Trade and Development held in Geneva earlier this year, are concerned with the relations of these facilities to the tranche structure, the method of computing shortfalls, and the magnitude and duration of assistance. These matters will all be studied, particularly in the light of further experience of which, as I have said, there has been very little so far. At the same time, it should be noted that the amount of assistance available under the present facility will be augmented by the increase in quotas which is likely to take place in the near future. Of course, arrangements to deal with short-term financing needs do not meet the long-term needs arising from such adverse trends in primary products, but this field is outside the Fund's jurisdiction as set out in its charter.

My observations thus far have been confined to discussing the relevance and the significance of international liquidity to developing economies and the importance of its availability to them. However, any international monetary system based on free exchange systems and stable exchange rates is liable to prove inadequate if certain complementary conditions are not present. Of these, I should like to comment here on three which are of special relevance in the context of economic development.

The first is the provision of an adequate flow of long-term international investment, private and official, to the developing countries. If such investment does not help meet the large long-term capital needs of these countries, the liquid funds available to them are liable to be used for long-term purposes in one way or another. Since the War, many of the developed countries have shown a profound interest in the satisfactory progress of the developing economies and have provided large amounts of real resources to them in the form of loans and grants. For this, they should be commended, for these transfers are a real burden on their people. Nevertheless, I think it will be generally agreed that there is scope, not to mention need, to do more in his field, both quantitatively and by adapting the forms of aid to meet changing requirements.

Considerable adaptation has, of course, already been made. When the debt servicing capacity of several borrowing countries seemed to be approaching its limits, the soft loan was developed and is now growing in importance. The urgent need for greater non project assistance is being increasingly recognized as unfortunate examples come to light of industrial plants set up in the developing countries being operated considerably below optimum capacity because of a lack of foreign exchange to buy raw materials and replacement parts. I am aware that many problems are involved in these matters but hope that further progress can soon be made. Furthermore, it is important to avoid excessive export financing by exporters in the developed countries. These often take the form of liberal extensions of short and medium-term credits which have sometimes led to a disproportionate accumulation of short term indebtedness by the developing countries. This situation has given rise to many difficulties and has become an important problem in many countries and the Fund is exploring possible way of assisting in co-operative action to solve it.

But nobody, least of all the developing countries themselves, wishes to see an indefinite continuation of aid programs. The second of the three conditions I have referred to above is, therefore, a sustained rise in those countries own foreign exchange earnings. Here again the developed countries have a responsibility to remove the impediments in their commercial policies to imports from the developing countries. In several lines of light manufactures those countries can often compete successfully with established industries in the developed countries: the latter would generally gain by transferring their resources to other industries in which they can be more effectively used and it would be in the long run interests of the world economy if such a realignment of the pattern of specialization were to take place. However, the major burden of policies to increase exchange earnings must be on the developing countries themselves and their development programs must put greater stress on promoting exports and also on establishing the conditions of stability and confidence that will attract foreign private investment and discourage capital flight.

The variety of specific measures available for this purpose are well-known, but from the Fund's experience in a number of countries, I should like to emphasize the crucial importance of monetary stability in this context. This is, in fact, the last of my three

conditions. Persistent inflation will make it impossible for a country to achieve and maintain international economic viability. What is more, under such conditions, no amount of international liquidity provided to it will be found adequate. The importance of monetary stability in the development process is, of course, even broader; by itself, it will not bring about development but without it, development will be stunted and distorted and its fruits will be mal-distributed.

In all that I have said, I have only touched in general terms on the Fund's role vis-a-vis the developing countries. Our activities, of course, impinge on only one sector of the problems of the developing countries—problems which are immense and which will require many years of dedicated work and effort both in the developing countries themselves and in the world economic community as a whole. But, I believe the Fund has, nonetheless, an important role to play. We have always regarded the problems of the developing countries as very much our concern and we will continue to pay careful heed to their situation as a crucial element of the world economic and monetary scene over which it is our responsibility to stand watch. I believe that without its specific responsibility and sphere of activity, the Fund has been of great assistance to developing countries and I hope and trust that in the years to come it will be even more so.

+

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 6 October, 1964. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.375 per cent were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.500 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 19 October, 1964. Successful tenderers should make payment on Friday, 23 October, 1964 at all centres. Other conditions are as usual.

During the week ended 2 October, 1964, Government of India Treasury Bills for Rs 146,95,00,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills sold from 30 September, 1964 to 3 October, 1964 amounted to Rs 5,75,00,000.

Notes of the week

TRADE Report on Trends in 1963-64

Trade trends during the year 1963-64, and the main features of the working of the policies in this field, are discussed in the latest annual report of the Import and Export Trade Control Organisation. The export promotion measures which were continued and the policy of linking imports to exports have been justified by results. Exports during the year reached a record level of Rs 794 crores, and there is reasonable ground for expecting that progress will be maintained in the remaining years of the Third Plan.

Imports have also increased by about Rs 13 crores, mainly on account of increase in the imports of machinery, petroleum and fertilisers. On the other hand, many low priority items had been cut out and the pattern of import licensing is reflected in the import statistics which show that consumer goods other than food

grains account for only about seven per cent of the total.

It should be a matter for satisfaction that, despite the tight foreign exchange position which imposed the necessity to continue strict rationing of foreign ex-

change for priority imports, industrial production has increased at a higher rate than in the previous year. The availability of foreign credits has contributed in a large measure to this result, for licensing against free foreign exchange

resources was further restricted during the year. The bulk of the licensing was against foreign aid. Rupee payment arrangements, and Link and Barter deals, also helped to maintain the level of essential imports.

One of the heartening trends in the export trade of the country is the increase in the export of manufactures which increased from Rs 286 crores in 1962-63 to 326 crores in 1963-64 and account for 42.7 per cent of the total. But exports of manufactures formed 43.7 per cent of a smaller total of exports in 1961-62, which means that exports of raw materials had increased at a faster rate during the last two years, and this fact should also be taken into account in assessing the impact of export promotion schemes.

★

EMPLOYMENT Need for Data

The Seminar on Employment Information and Manpower Utilisation, which met in Delhi over the week-end, has focussed attention on the importance of organising collection of data for the effective utilisation of the manpower resources of the country, which Mr D. Sanjivayya, Union Minister for Labour and Employment, has aptly described as the "social infrastructure for development." The discussions should also have thrown light on the difficulties of formulating adequate programmes for the purpose, as well as those which are encountered in working out the programmes that are drawn up.

The most formidable of these is the colossal magnitude of unemployment and under employment, on which the development programmes of three five year plans have not so far made any visible dent. The planners have apparently reconciled themselves to the position that the heavy backlog of unemployment, which would have grown to twelve million by the end of the Third Plan, will continue to be a drag on economic progress during the Fourth Plan period. To prevent it from increasing further, it will be necessary to find new jobs for 23 million persons, which is the esti-

Imports Fall by 12.48 Per Cent in April-July, 1964

Imports during the first four months of 1964-65 have registered a steep decline of about Rs 53 crores as compared with the relative figures for the corresponding period in the previous year. Imports of almost all sections are drawn down except those of Manufactured Goods Classified chiefly by materials which moved up by Rs 4.29 crores to Rs 72.05 crores, Machinery and Transport Equipment which recorded an improvement of Rs 1.50 crores to Rs 152.72 crores, Beverages & Tobacco which inched up by Rs 0.01 crore and Animal and Vegetable oils and fats which edged forward by Rs 0.28 crore to Rs 1.63 crores.

Prominent decreases are shown by the following:

Food, lower by Rs 21.24 crores at Rs 39.45 crores, due mainly to a sharp decline in imports of cereals and cereals preparations to Rs 27.35 crores from Rs 50.02 crores.

Crude Materials, inedible, except fuels, down by Rs 8.82 crores at Rs 35.26 crores on account of a decrease in imports of textile fibres (not manufactured into yarn, thread or fabrics) and waste to Rs 20.47 crores from Rs 25.79 crores.

Mineral Fuels, Lubricants and Related Materials, marked down by Rs 11.19 crores at Rs 29.58 crores: accounted chiefly by a fall in imports of petroleum products to Rs 17.52 crores from Rs 24.40 crores.

Chemicals, drawn down by Rs 5.50 crores at Rs 30.29 crores owing to a decline in imports of fertilisers, manufactured to Rs 7.00 crores from Rs 11.00 crores.

Lastly, Miscellaneous manufactured articles marked down by Rs 10.95 crores at Rs 6.55 crores thanks to a decrease in imports of Miscellaneous Manufactured Articles, NES to Rs 2.11 crores from Rs 13.19 crores.

IMPORTS		(In Rs Crores)		Change
		April to July 1964	1963	
Section 0—Food	...	39.45	60.69	-21.24
Section 1—Beverages and Tobacco	...	0.13	0.12	+ 0.01

mate of the new entrants to the labour force during the next plan period. Dr V. K. R. V. Rao, who addressed the concluding session of the Seminar, has however held out the hope that, by the end of the Fifth Plan or a little later, the backlog of unemployment would have been completely eliminated and, thereafter, the development of the economy could be expected to take care of the additions to the labour force. It should then become possible to direct attention to raising the levels of earnings of the employed rather than to the problem of finding employment for the unemployed.

Provision of employment is not merely a matter of investment of financial or physical resources. The job seekers have to be fitted into the job opportunities that arise in the course of planned development. The particular combination of technologies that is adopted will set the limits to the volume of additional employment that may be expected. The planners have to make an agonising choice and, no doubt, the Planning Commission is devoting much anxious thought to the achievement of a balance between technology and employment which would maximise employment without reducing the rate of growth of the economy. The Seminar, however, has the more limited objective of highlighting the importance of collection and analysis of Employment Market Information which could serve as basis for forecasts of requirements and for the formulation of the necessary training programmes.

The fact that two organisations of Employers—The Employers' Federation of India and the All India Organisation of Industrial Employers—have taken the lead in organising this Seminar should ensure that managements of individual business establishments will extend their unreserved cooperation to the Directorate General of Employment and Training in the implementation of their projects to make the Employment Information collected by them more comprehensive and operationally useful.

COAL Doubts and Debts

Mr D. C. Driver spoke for the users of coal—not the producers—last week in analysing the problems of the coal industry in India. If concern over safety in mines or conservation of coking coal is not acute, Mr Driver indicated that the amalgamation of small, uneconomic collieries must be attempted soon because of price control, transport difficulties and poor quality of low grade coal that is harder to sell of late. The chief issue raised by Mr Driver's speech is not the likely cutback under the Third Plan but the trend in Indian coal prices which

may justify imports from either Australia or Poland. The reversal of role from exporter to importer of coal may be demanded by the change in consumption pattern. The steel makers' requirements may compel soon a change of attitude and the chances of new plants in Goa or Vishakhapatnam may brighten.

The view taken of the need for Coal washeries may also undergo a change in the light of comments on fuel supply and problems of development. The new view is that coal must be converted into gas or electric power before it is used effectively and when the conditions justify it, furnace oil must be preferred, for example by cement manufacturers. The use of fly ash for cement making can scarcely be ignored in any appraisal of possibilities and it is important to take into account the acute need for more cement though that depends on extra coal supply. Power shortage may call

for more thermal stations and in Bihar or Bengal the real problem is to get extra power for the growing industries and it is not only in Madhya Pradesh that the National Coal Development Corporation will loom large. The public sector in coal-mining does not mean the railway collieries as in the past. It is the NCDC which is more important. But the demands of Hindustan Steel call for special plans to raise and wash coal on the part of the iron and steel companies whose expansion requires maximum outlay in collieries even if economies in the use of coal are effected.

What Mr Driver has rightly emphasised is the fact that Indian coal is not superior or consistent in quality and the industrial requirements too have changed in the last decade. That mining is still a depressed industry hampered by rising costs and fixed prices is one reason for the doubts and debts that oppress

coal mining. The planning for the future of coal must be attempted by a reference to the many problems of change and growth, including the fact that more oil may entail recourse to diesel engines on railways, creating in turn the problem of disposing of coal surplus.

KERALA Slow Industrial Growth

In an economically backward state like Kerala, the usefulness of the State Industrial Development Corporation for fostering the rapid growth of industries needs no special emphasis to get recognition. But, strangely enough, there has been a slight fall in the number of applications received by the Corporation for assistance in the year ended 31 March 1964, though the Corporation was

financially better to meet the growing requirements of the industrialists. As Mr. K. R. K. Menon, the Chairman, stated in his speech at the third annual meeting of the Corporation, the slump in the enthusiasm of entrepreneurs can be attributed primarily to the unhelpful licensing policy adopted by the authorities which resulted in the progressive decline in the number of licences granted for industrial units in the state. Despite the repeated requests for some sort of special and preferential treatment for the state, the authorities both at the Centre and the State, have evinced only lukewarm interest.

The reasons for the limping progress of industrial development in the state are not far to seek. Capital and technical know-how available locally are far insufficient for lifting the state from its present backwardness and efforts at attracting outside capital failed to spawn the requisite response from the industrial class. This can be ascribed to a host of factors which include political

instability, the comparatively uncordial labour-management relations, irregular and inadequate supply of electricity and the like. It is, therefore, unsurprising that despite these years of planning, the industrial map of the state does not record any material change. The scope for accelerating the industrial growth of the state even in the Fourth Plan is blurred as it has recently passed under the Central Administration. It will, however, be deleterious to permit the state to remain in the sloughs of stagnation as it will breed only further complications. In the circumstance, as suggested by the Chairman, top priority should be accorded to the rapid industrial growth of the state which alone can solve many of the intricate problems that are currently plaguing the problem state. It is heartening that the study of Kerala's economic needs conducted by a team of experts of the US Agency for International Development will provide useful guide lines on which the industrial edifice of the state can be

built on sound lines. Governmental action in this sphere is a supreme necessity.

PAKISTAN Nuclear Power Plant from France

A report that France means to help the establishment of a nuclear power plant in East Pakistan will excite some notice in India because electricity in East Pakistan has not been developed as on the West which has natural gas and dependence on coal imports has to be reduced steadily. East Pakistan has therefore to build up industry with the help of atomic power and emulation of India is made possible by the offer of assistance by the Schneider group. The offer of course is linked with French ambition in respect of atomic weapons and Pakistan's acceptance of credits may even help to improve the position of France vis-a-vis China. The ties between heavy industry and government in France

may justify the approach made by Schneider which is usually associated with the making of guns. But it is certain that US reluctance to help has induced France to offer a loan that may prove useful during the third Plan to Pakistan. The fact that India has more than one atomic energy project and Pakistan needs more power for running growing industries in the eastern wing is sufficient explanation though political motives cannot be ignored in this connection. The attempt to impress Turkey and Iran with the progress made by Pakistan cannot be overlooked and it is possible that in trying to get ahead Pakistan means to impress China as well. The experience gained over a decade may help to keep down costs but in turning to France instead of other countries Pakistan is trying to prove that it is not a client of the USA as presumed. The question of atomic fuel will arise but there is said to be a surplus of uranium and purchase by Pakistan from Australia or South Africa is likely to remove difficulties.

NORTH RHODESIA BSA Asks for £18 Million

For nearly a month the argument over the royalties due to the British South Africa Co has been conducted by reference to old treaties and the requirements of the future. North Rhodesia is definitely opposed to payment of compensation for Mineral rights taken over by an independent African government in Zambia. The Finance Minister has taken the line that a mining finance house even if it is a chartered company that acquired the rights from African rulers in the 19th century cannot assert any claim to territorial sovereignty but must look to the United Kingdom for a solatium. The BSA has put in a claim for £18 million to cover the potential receipts for 22 years but the African leaders decline to accept liability. The BSA investments in operating mining or copper are relatively safe but the British South Africa Company is looking for compensation and the African leaders do not accept the rule of compensation in the event of nationalisation. It is open to the UK to nationalise the company and pay the BSA but that would lead to trouble, for all companies, threatened by sudden nationalist upsurge in Africa, may ask Whitehall to arbitrate and to provide compensation.

The issue has been joined, more or less, and the Government that takes office next month will have to settle the issue quickly before African bitterness increases. The moderate Mr Kaunda has let his deputy talk in London on the assumption that the BSA has

made a lot of money over 60 years and must soon go the way of the British companies in Burma. The issue is really one for diplomats, not judges. The company cannot ask the Privy Council to put in a word. The Company cannot also argue that it is the heir of Rhodes—like the Rhodes Trust—and the British Government will have to accept responsibility as the Federation has been dissolved. Keeping up trade and investment connections with Rhodesia may appear far more important for the UK but in that case, the BSA will feel let down though it is a company without a future after the eclipse of Colonial rule, from Accra to Zanzibar within a decade.

BRITISH GUIANA Less Sugar, but More Rice

The trade connections of British Guiana explain the export of rice to Cuba as also to Jamaica. A record crop in spite of the troubles has been reported and it looks as if failure in sugar production will be made up by the increase in rice. It may be noted in passing that mechanised cultivation in recent years has enlarged the rice output of British Guiana. A recovery from the decline recorded in 1963 appears natural, though due allowance must be made for the fact that British Guiana by selling its rice to East Germany as well as Trinidad is taking a separate line. In South America Brazil producing over 4.7 million metric tons overshadows Colombia and British Guiana.

The fall in Guba's output of rice explains the need for imports. It is clear that the export of sugar from Cuba is ruled out and British Guiana may have to buy Chinese or Russian goods in return for rice shipped. The complications that may arise from trade with Cuba may not be great in view of Britain's decision to sell buses and trucks to Cuba but the USA will doubtless regard British Guiana as a bad neighbour owing to the maintenance of trade with Cuba in foodstuffs. The chances of a bigger trade in gunnies with British Guiana may call for notice but there may be other sources than Calcutta and it is not impossible for Pakistan to make a bid for British Guiana's custom. The significant development in Guiana's agriculture may be seen in the quick recovery in output of rice grown by the peasants while the cane plantations have been hamstrung by labour troubles due to racial animosity. The FAO in its meeting during May 1964 took note of both the fall in Latin American Rice output and the decision of the ECM to limit imports of rice in order to help rice-growers in Italy and France which can always buy rice from Madagascar whose output in recent

years has been helped by the planning to which France gives steady help.

INDIA STEAMSHIP Handicaps

Speaking at the annual meeting of the shareholders of the India Steamship Company Limited, Sir A. Ramaswami Mudaliar, has pointed out that unless the handicaps that continue to afflict the Indian shipping industry are removed, it will be difficult for it to make a reasonable profit. The inordinate delay in Indian ports is having a serious repercussion on the financial position of shipping companies. Owing to berthing delays and labour troubles of various kinds, ships are held up for a number of days in ports. For example, the days lost by India Steamship Company was over 500 days last year. Only at the port of Madras, there has been some improvement but the situation remains much the same in the other

two major ports of Calcutta and Bombay. There is therefore need for energetic remedial action, especially in Calcutta for the simple reason that more than half the trade of the country moves through this port which also serves a vast hinterland. The delays are caused, apart from inclement weather, by berthing difficulties, the slow arrival of cargoes to some of the ports and by lightning labour strikes. While not minimising the importance of the long-range solutions that are being worked out, Sir Ramaswami has rightly pointed out that the immediate present is of more concern to the shipping lines. The need for cutting down delays in Indian ports has become all the more urgent because in recent months serious delays have been encountered by Indian shipping in Western ports also.

Referring to the constant clamour for a reduction in freight rates, Sir Ramaswami has pointed out that it is unfair to expect the shipping industry to bear the in-

creasing working cost without a compensatory advantage which can only be derived from suitable adjustment of freight rates. This is in marked contrast to the land-based industries which are enabled to cope with their increasing cost of production by an increase in the prices of articles they produce. Yet another factor that goes to reduce profits of Indian shipping is the unsatisfactory dry docking and repair facilities in Indian ports. As against an average of five days that will be required if such facilities in foreign ports are utilised, Indian shipping has to spend on an average 15 days for similar facilities in Indian ports. The extremely unsatisfactory conditions under which Indian shipping is obliged to work will be evident from the large proportion of days spent by ships in ports. For example, during last year, ships of India Steamship Company in the Liner trade and Coastal trade spent 60 per cent and 77 per cent of the days, respectively, in ports.

CUTS COSTS... BOOSTS PRODUCTION!

You get more work from every Carborundum Universal Resin Industrial Cloth Belt. Your output goes up. Your costs come down. You turn out a better product...in shorter time!

Carborundum Universal give you electrocoated belts of greater strength and durability. The Resin bond withstands frictional heat, humidity, high speed and shock. And the sharp aluminium oxide grains on tough cloth backing give maximum and continuous cutting action.

FACT

Forging Ahead

Despite drastic power cut lasting for months, The Fertilizers and Chemicals Travancore Ltd has been able to record a small profit for the year ended March 1964. But the fact remains that without a marked improvement in the power supply position, the company's working will not be able to show much improvement. Speaking at the company's annual general meeting Mr T. A. Joseph, the Chairman, has pointed out that an early solution to the power supply problems has to be found if the company is to work on a satisfactory basis. While the various hydro-electric projects that are under construction in Kerala may be expected considerably to augment power supply in the State, the threat of power cuts cannot be completely eliminated so long as the State con-

tinues to depend on hydro-power for the simple reason that such power will be governed by the vagaries of weather. It is therefore gratifying that Government has accepted FACT's suggestion for putting up a thermal power plant. Other difficulties confronting FACT pertain to water supply and the high sales tax on raw naphtha charged by the Kerala State Government. Mr Joseph has referred to the possibility of a severe shortage of water in the Periyar river when the Iddiki project is completed. If suitable changes are not made in the project, all factories, including FACT situate in the Ernakulam-Alwaye industrial belt will have to be closed down for 3 to 4 months in the year. As for sales tax on naphtha, Mr Joseph has pointed out that if the Kerala Government does not reduce the rate to the original level of 3 per cent, the production costs of the company will become uneconomical.

These difficulties however have not stood in the way of FACT's expansion programmes. The Third Stage of expansion is well under way. As a matter of fact progress has been quite rapid as most of the plants will be ready for commissioning by the end of the current year although the entire project is scheduled to be completed only in 1965-66. Recognition of the efficiency of FACT is evidenced by the fact that it has been directed by the Government of India to plan, design and construct three more major fertilizer plants in South India during the Fourth Plan. The company plans to promote a fabrication shop with foreign collaboration for the manufacture of the special items of equipment required for the fertilizer and chemical industries as also an Engineering and Contracting Organisation. FACT is also taking active part in building up an efficient distribution network and in popularising the use

of fertilizers in South India. The fact that the company has been asked by the Madras Government to assist it in the distribution of nitrogenous fertilizers speaks highly of the efficient manner in which FACT has organised its distribution net-work.

EAST ANGLIA Poised for Rapid Growth

The speech delivered by Sir D. N. Mitra at the annual general meeting of the East Anglia Plastics (India) Limited convened in Calcutta recently provide ample evidence to the fact that the company is poised for accelerated development. The performance of the company during the year that has ended is of especial significance as it has produced some positive results and earned a token profit. This apart, the company is well set for rapid growth. Its compounding unit at Dum Dum has already started production and the plasticiser project will be commissioned within a short period. Furthermore, the ground work for the cellulose acetate flakes project has been completed. It is significant to indicate in this connection that in formulating the schemes for expansion the company has adopted a pragmatic approach which would bring in appreciable rewards.

The Chairman drew special attention to the fact that the economies of the acetate industry are generally based on a pattern of intricate integration, though it varies in the advanced countries according to the conditions existing locally. However in a developing country like India, where chemical industry is still in its infancy, all the facilities available in advanced countries may not be available. Therefore, integration of the company's acetate project will, largely, be governed by limitations imposed by licence and the availability of raw materials.

Being the pioneer in the field of acetate plastics in India, East Anglia Plastics is in an advantageous position at present. It has successfully marketed cellulose acetate compounds to the plastic end-products industry. Obviously spurred by this success, it has formulated a programme for manufacturing a wide range of products for meeting the growing requirements of the country.

It should be remembered in this connection that the domestic chemical industry has to make great leeway to give it any sort of respectability. Besides, there is abundant scope for the setting up of industries based on petroleum. With a view to nurturing the steady development of chemical industry much headway has to be made in the field of scientific research. Government's encouragement to research work is a happy augury.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as
the wind
To blow on whom I please"
—As You Like It

I see that the Presidents of Stock Exchanges in India have now made it a habit to meet periodically, about once every three months. Mr C. L. Jhunjhunwalla was host this time, but, as far as I could gather, Bombay failed to send a representative. This is merely by the way. Naturally, the discussions will have centered round a possible representation to be made to the Finance Minister seeking concessions and reliefs in taxation. On every side, at a dinner hosted by Mr Jhunjhunwalla where you seemed to find the Stock Exchanges and Banks fully represented, you only heard murmurs that any improvement in sentiment could take place only if and when Government's fiscal policy was so revised as to offer incentive for individuals to invest in industry. I made it a point to ask the friends around me what specific measures they had in mind. One said, all we can expect are minor concessions because we realise the goal is a socialist society. Another, at the other extreme, wanted the rate of tax on individual income to be set at the maximum of 45 per cent as postulated by Dr Kaldor. It seems to me that Mr Krishnamachari could ensure the revival of confidence in stock exchanges and elsewhere by including in his proposals next February no more than what are two seeming reliefs.

I have used the word seeming, for the simple reason that in neither concession is there involved for Government a loss in tax revenue. Indeed, as I shall show, it is almost certain that the reliefs will actually result in an increase in the tax revenues of the Government. The first of them would really amount to removal of harassment and elimination of the possibility of assessee being in trouble about securing refund orders at later stages of the game. I refer, of course, to the Annuity Deposits. Blood out of stone, you can get, and possibly even refund from the Tax Department during the special week that, for example, was observed in West Bengal recently. But, by and large, it remains true that one will weep many a tear of frustration before one could succeed in getting a refund order from the tax authorities. It is therefore that I suggest that the Annuity Deposits be scrapped. Now, the effective operation of the Annuity

Deposits is that, to the extent of the deposits made, the assessable income of the individual is correspondingly reduced. There is, thus, in the first few years of operation of the Annuity Deposits, actually a loss in tax revenue. True, the ways and means budget reflects the deposits made, but at the moment we are concerned with the revenue budget of the Government. If the Annuity Deposits are scrapped, it is obvious that the assessable income of individuals correspondingly goes up, and so a direct result of the repeal of the Annuity Deposits would be to bring about an increase in Government tax revenues. Surely, it should not be difficult for the Finance Minister to announce such a seeming concession, which, while reducing the scope for harassment to tax payers, at the same time succeeds in garnering more tax revenues.

The second concession, although also touching the individual, is in reality a source of income from corporate tax as far as the Government is concerned. I would like again to repeat that when there is capitalisation of reserve account and distribution of bonus shares, there is not any real distribution of assets. The fact of bonus shares attracting capital gains tax in the hands of shareholders has acted to stop capitalisation of reserves. At the moment, companies are legion which have built up reserves on a par with their equity capital. As I have remarked on many a previous occasion in this column, in view of the capital gain tax on bonus shares, shareholders are going to reject any scheme for bonus issues—and, what is of more serious import, also possibly going to resist transfers to reserves. On the other hand, let us see what would happen, if Government were to repeal the capital gain tax on bonus shares and simultaneously freely to sanction issues of bonus shares. I dare say that, during the next year alone, companies with equity capital totalling Rs 100 crores would be in a position to offer bonus shares in the ratio of one for two. That is to say, as much as Rs 50 crores worth of bonus shares could be issued to shareholders. Government's direct benefit would be the tax on the issue of bonus shares by companies at 12½%. In this regard, therefore, I also suggest that it would be very easy for the

Finance Minister to announce the relief—the repeal of the tax on bonus shares in the hands of shareholders—when, simultaneously, he would be able to ensure that there was an increase in revenues to Government—from the tax on the issue of bonus shares by companies.

But of course it is to be hoped that the Finance Minister will not content himself with just the two reliefs that I have indicated. For one thing the tax-rate on Section 104 companies is savage, and a downward revision is clearly desirable. For another, despite the recent concession of estate duty plus capital gains tax set at a maximum of 85 per cent, the individual continues to be a very hard hit customer indeed, and I trust it will not be crying for the moon to put in a plea for some mercy. Well, all that we can do is to hope for the best; but surely we are entitled to credit Government of a sufficient awareness of the vital necessity of the next Budget being a reliefs and concessions rather than a tax one, if it desires that the country should get moving again.

I should have thought that by now "Panchsheela" would in the Indian reckoning be a dirty word. After all, the Chinese perfidy in the autumn of 1962 made a

mockery of that phrase and what it stood for. But now, Mr Lal Bahadur Shastri is apparently going to be so true to the Nehru tradition that he might even out-Nehru Nehru. No doubt, Mr Shastri has so far scored a personal triumph in his visit to Cairo. Mr Nasser and the Egyptian people seem to have been favourably impressed by the candour of Mr Shastri's approach. Also incontrovertible is the acclaim with which his address at the Conference of non-aligned nations was received. But, if I may ask, what is going to be the end product? Indonesia has served notice that its non-alignment is not without bias, the African States indulged in some bickering and precipitated drama of a sort in denying the right to attend to Mr Tshombe. Brave words have been spoken about the need for world peace as also the economic advancement of the non-aligned nations. But in the present circumstance of the cold war between the two great powers being almost at a standstill, it seems to me that not much value is going to be attached to the doings and deliberations of this Cairo Conference. The only thing is, even if it proves to be a futile endeavour, India can chalk this up as its gain, that its Prime Minister has proved his mettle.

EAVESDROPPER.

share in nation's growing industrial prosperity

When you buy Units of the Unit Trust of India, you acquire an interest in various types of securities of over 150 industrial enterprises, that is, in the entire portfolio of investments of the Trust. The aim of the Trust is to spread out the investments to minimise risk.

Also Units give a steady income. The dividend to Unit holders will be based on the average income of a well-balanced portfolio consisting of Government securities, industrial debentures, preference shares and equities.

Other Important Advantages

Liquidity of Investment

Investment in Units is liquid because the Unit Trust is ready to sell and buy back its Units at prices determined and announced by it every day. Unit holders can also borrow against Units from banks.

Tax Concessions

The income earned by the Trust is exempt from taxes and income upto Rs. 1,000/- distributed by the Trust to individual Unit holders is excluded in computing their total income for purposes of income-tax.

Each Unit is of the face value of Rs. 10. You can buy ten or a multiple of ten Units. Units are sold at prices determined daily by the Trust on the basis of the current value of its investments and other elements as provided in Clause 8 of the Unit Scheme, 1964. Units can be sold back to the Trust from November 15, 1964 at prices announced daily. A Unit holder can always transfer Units in favour of a bank for purposes of borrowing.

Application forms and details of the Unit Scheme, 1964 are available at any branch of the leading scheduled banks throughout the country. In case of any difficulty, call at or write to the Unit Trust of India direct.

Olympus - A Letter from Delhi

IMF Chief in Delhi

ADDRESSING a press conference, here, toward the end of his week's stay in this country, Mr Pierre-Paul Schweitzer, Managing Director of the International Monetary Fund, said that the Fund was prepared to assist developing countries to the maximum extent within the framework of the purposes for which the Fund had been set up and within the limits of resources available. He conceded that the assistance that the Fund could extend was limited, as these countries required long term assistance. While the Fund could give only short term assistance to overcome temporary balance of payment difficulties. He pointed out that changes in the structure of the Fund to enlarge the range of assistance were not practicable. There was the World Bank to look after other requirements. But the measures which were now under consideration to increase the resources of the Fund would help developing countries. These included increase in general and special quotas of members, and the proposal made by the UN Conference on Trade and Development or raising the ceiling for loans against quotas. Developing countries, he indicated, would also benefit if the Fund were authorised to invest in the Government securities of these countries.

Mr Schweitzer also reiterated the point he had made earlier in his address to the Indian Institute of Public Administration, that monetary stability was a prerequisite of economic growth. In this address he had also made it clear that the maintenance of monetary stability does not by itself ensure economic growth. Besides the purely physical effort of constructing factories and dams or laying down of roads or railways, economic development often requires fundamental changes in peoples' attitudes. Emphasising the important role that Education has to play in this process, Mr Schweitzer said that each country should be prepared to weigh very carefully the balance between the productivity of investment in education with other forms of investment in the more conventional sense.

Investment in Education

The importance of investment in human resources was also emphasised by Mr M. C. Chagla, Union

Minister of Education, in his illuminating address on the occasion of the inauguration of the Education Commission. We are sometimes apt to forget, said Mr Chagla, that the best monument, the most paying investment, even from the financial and economic point of view, is investment in human resources, and, therefore, if we have to eliminate poverty, we can only do so through a vast and extensive scheme of education; but the education, he added, must be oriented to the removal of poverty. This is the sixth Education Commission to be set up in the country and, unlike its predecessors which dealt with particular sectors, such as university or secondary education, its terms of reference are wide enough to cover the entire range of education.

Speaking on the occasion, Mr D. C. Kothari, Chairman of the Commission said that to connect education with life, to link education and productivity, was a problem which each country has to solve, making full use of the experience and development in other countries. This was one of the most important tasks for the Commission. The new thing in the modern world, said Dr Kothari, is Science, and the characteristic of a science-based world is that it is no longer a place of slow and gradual change. In this rapidly changing world, changing almost beyond recognition in a lifetime, the role of education becomes of central importance. Science has emerged as the most powerful instrument to transform societies living at subsistence level into societies which are prosperous and progressive, and within the span of a single generation. It is important to recognise, said Dr Kothari, that we do not have more time than a generation to bring about this change in our country. If we failed to do this, the widening gap between advanced countries and ourselves will become still more wide and the task of reconstruction would become far more difficult than what it is today. The key to bring about this change, is education. No investment, said Dr Kothari, is more important or of greater significance than investment in education. Expansion of education, he pointed out, is necessary to meet the increasing demands of industry as well as the needs of security and defence. In the modern world rich countries are those which are rich in science and poor are those which are poor in science.

Report on CSIR

The Council of Scientific and Industrial Research has played an important role in the organisation of scientific research in this country since it was established in 1942. The activities of this organisation, the lines on which it should function and the problems to the solution of which research can be expected to play a major part are set out in the report of the Third Reviewing Committee of CSIR which was released for publication last week. The main recommendations were explained by Sri A. Ramaswami Mudaliar, Chairman of the Committee, at a press Conference on September 30.

One of the major recommendations of the committee is that the programmes of the laboratories of the CSIR should be mainly concerned with applied research and its related basic research. They should be framed in the context of the country's plans for industrial and economic development. It has been suggested that about 80 per cent of the research effort should go towards applied research and the remainder devoted to 'basic objective research' related to the long-range objectives of industrial research.

The main responsibility for pure fundamental work, it is pointed out, should rest with the universities with which close links should be forged by the CSIR. Considering the importance to research and development of a sound supporting structure of scientific and technological education, CSIR has also been enjoined to take effective steps to give all support to universities in the training of technical personnel and in building up schools of research.

As regards utilisation of the results of research, the Committee has welcomed the setting up of the Central Design and Engineering unit and urged that user participation in research should be encouraged in various forms and links with industry established. Expert panels comprised of scientists from industry and universities, the report has recommended, must be closely associated with programme and control of research in the research divisions in the laboratories. Industry, the report says, should also be given incentives by way of financial support to start research and development organisations or to undertake research on approved

projects with partial or full support from the CSIR.

The Committee has recommended that the following principles should operate in the siting of research institutes: Industry-oriented laboratories should be located in an area containing a concentration of the industry, but should avoid crowded parts of cities. An important consideration should be the availability of sufficient area for its future growth and accommodation of field stations of other laboratories and auxiliary institutes. Out of the way places without social amenities and supporting engineering services should also be avoided. Proximity to a university should play a part in the siting of a discipline-oriented or a regional laboratory. (In this connexion, it may be noted that the Committee has recommended that the Central Electrochemical Research Institute, Karaikudi, should be transferred from its present location to Madras as soon as possible).

While recognising the very good work done by some regional laboratories,—Sir A. Ramaswami Mudaliar referred in this connexion to the regional laboratory at Hyderabad which was headed till recently by Dr S. Husain Zaheer, present Director General of CSIR—the Committee has recommended that a careful analysis of various aspects, including finances and availability of personnel, should precede the setting up of Regional Research Laboratories. Such Laboratories, it is also pointed out, should be multi-purpose in character, but, at the same time, should specialise in one or two fields depending on the nature of the problems in the area of their location.

The Committee has emphasised that population control is as important an aspect of development as the application of science and technology to industry. It has recommended that the CSIR should, in cooperation with the Indian Council of Medical Research, give vigorous support to research on population control and to the communication and application of the results in the widest and most efficient manner.

Manpower Planning

The problem of numbers also cast its gloomy shadow over the deliberations of the Seminar on Employment Information and Manpower Utilisation. One of the Committees set up by the Seminar

has called for "immediate multi-lateral steps" to be taken forthwith and on a massive national scale. The Committee has pointed out in its report that a basic thought underlining the discussions related to the large and increasing number of unemployed and under-employed people in the country. But manpower planning and the formulation of suitable schemes of utilisation of such manpower were bound to run into difficulties on account of sheer numbers involved.

The Seminar, which was jointly organised by the Employers' Federation of India and the All India Organisation of Industrial Employers, was inaugurated by Mr D. Sanjivayya, Union Minister of Labour and Employment, last Saturday. Speaking on this occa-

sion, Mr Naval H. Tata, President of the Employers' Federation of India, said that the problem we were facing today, and which might continue for several years, was the utilisation of massive resources of under-employed and unemployed labour in our country. Our basic handicap, he observed, was the illiteracy of the majority of our population and therefore, the lack of skill which is so essential for progress and prosperity. As a result we are unable to make efficient use of our human resources, or to evolve a general policy of manpower planning and utilisation.

The cardinal importance of linking up our educational system with manpower requirements was underlined by Dr V. K. R. V. Rao who addressed the concluding ses-

sion. Dr Rao said that he yielded to none in his regard for education as a value in itself; but as a planner and as a practical man confronted with the spectacle of shortages of resources and at the same time the imperative demand for acceleration of economic development and as one who knows the importance of trained manpower in economic growth, he was absolutely convinced of the need for placing the employment objective in the forefront of the objectives that should underline the programmes and plans for educational development in this country. All educational programmes, for which resources are required, said Dr Rao, should be subjected to the test of the relevance of the skills and training they impart to the deve-

lopment requirements of the country.

Dr Rao also made an impassioned appeal to the employers to make available the services of their highly qualified technical personnel, on a part-time basis, to strengthen the staff of technological institutes. Dr Rao also appealed to the employers and their representatives to extend their full co-operation to projects of the Directorate of Manpower and Employment for collecting detailed and comprehensive employment information.

Real manpower planning, or manpower planning that could serve as basis for policy for training and educational programmes, Dr Rao explained, has to be based on detailed information.

INDUSTRIAL DEVELOPMENT BANK OF INDIA

Applications are invited for the following posts in the Industrial Development Bank of India:—

(A). POSTS AND SCALES OF PAY:

- (i) Deputy Managers—
Rs. 850-60-1150
- (ii) Officers Grade I—
Rs. 430-430-55-815 EB 55-925-60-1045.
- (iii) Officers Grade II—
Rs. 375-20-535-25-560 EB 25-660-30-720.

Note: Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scales.

In addition to pay, the selected candidates in all categories mentioned above will be eligible to draw local pay, house allowance, dearness allowance and other allowances at rates prescribed by the Bank from time to time. The present rates for local pay and other allowances are:

- (i) Local pay at 10% of pay.
- (ii) House rent allowance at 15% of pay with a minimum of Rs 60 and a maximum of Rs 300/-.
- (iii) Dearness allowance:
 - (a) Deputy Managers: Rs 125/-, provided the pay plus dearness allowance does not exceed Rs 1250/- per mensem.
 - (b) Officers Grade I: 20% of pay upto pay of Rs 500/- and thereafter at 16 2/3% with a maximum of Rs 125/-, with marginal adjustments where necessary.
 - (c) Officers Grade II: 20% of pay with a maximum of Rs 100/-.
 - (iv) an ad hoc allowance of 10% of pay with a maximum of Rs 100/- per month payable upto 31-3-65.

(B) QUALIFICATIONS:

- (i) Deputy Managers and Officers Grade I: Applicants should have high academic qualifications—preferably a first class Master's degree or a Doctorate with proficiency in one or more of the following subjects—or should be members of the Institute of Chartered Accountants of India:

- (a) Investment
- (b) Banking
- (c) Accountancy
- (d) Cost Accounts
- (e) Company Taxation
- (f) Company Law and Management
- (g) Corporate Finance
- (h) Industrial Economics
- (i) Techno-economic Surveys
- (j) Statistics and Econometrics
- (k) Marketing Economics
- (l) Economic Planning

For posts of Deputy Manager preference will be given to applicants who have had practical experience and/or have done research work in the above fields and who have worked in banks or institutions financing industrial units or in industrial units in a responsible position for at least 5 years.

(ii) Officers Grade II:

Applicants should have a good academic record, preferably a first class Master's degree in Economics or Commerce or Statistics; weightage will be given to specialisation in subjects like Banking, Industrial Economics, Industrial Finance, Accountancy, Company taxation, Company Law and Management.

(C) AGE LIMITS AS ON 1st NOVEMBER 1964:

- (i) Deputy Managers: Candidates should be between 30 and 40 years of age but the age limit may be relaxed in the case of candidates possessing exceptional qualifications.
- (ii) Officers Grade I: Candidates should not ordinarily be over 35 years of age but the age limit may be relaxed in the case of candidates with exceptional qualifications.
- (iii) Officers Grade II: Between 21 and 27 years. The maximum age limit is relaxable but not beyond 32 years in the case of:—
 - (a) candidates possessing special qualifications.
 - (b) candidates belonging to the Scheduled Castes or Scheduled Tribes.

- 2. Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate application fees and should clearly indicate the post and the department for which they have applied.

- 3. Applicants for the above posts must remit with their applications a fee of Rs 7-50 for each post by cheque or bank draft on a scheduled Bank payable at Bombay or by Postal Order. The application fee is in no case refundable. In the case of candidates belonging to Scheduled Castes/Tribes, the fee will be Rs 2/- for application for each post.

- 4. Applications in the candidate's own handwriting in the prescribed forms obtainable from the Industrial Development Bank's Office at Bombay, accompanied by copies (originals should not be sent) of certificates regarding age and educational qualifications, statements of marks secured in the graduate and post-graduate degree examinations and copies of two testimonials should be forwarded to the General Manager, Industrial Development Bank of India, Post Bag No. 10042, Bombay-1, so as to reach him on or before the 14th November 1964. Requests for supply of forms through post should be accompanied by a self-addressed and stamped envelope of size 9" x 4".

- 5. Candidates already in service will be required to produce a proper discharge certificate from their employers at the time of their appointment in the Bank's service.

- 6. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of the certificate to that effect from competent authority.

- 7. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

- 8. If any candidate desires to have his application acknowledged, he should send it by "Registered Post—Acknowledgement Due." Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

- 9. Candidates called for interview will be reimbursed single return railway/bus fares by the shortest route from their place of residence to Bombay, applicants for posts of Officers Grade II being paid II Class fares and those for higher posts, I Class fares.

- 10. Canvassing in any form will be regarded as disqualification.

The Fertilisers and Chemicals Travancore Ltd.

Third Stage Expansion Well Under Way

Mr T. A. Joseph, the Chairman on the Problems of Power Supply

Addressing the Twentieth Annual General Meeting held at the Registered Office, Udyogamandal, on 29th September 1964, Mr. T. A. Joseph said:

Gentlemen,

I am glad to welcome you to this the 20th Annual General Meeting of the Company and to present to you the accounts of the Company and the Report of the Directors for the year ended 31st March 1964.

As in the previous year inadequate power supply was the Company's major problem during the year under review. There was a drastic power cut in the first three months of the year. Again power cut was resumed in February 1964 and continued till the end of June. During the periods of power cut there were several occasions when the position became so critical that there was no alternative but to close down the entire plant as it would have otherwise constituted a grave risk to continue to operate it under marginally safe conditions. The total loss in the sale value of production on account of power cut amounted to over Rs. 2.5 crores during the year. Consequently the Company's results have not been as good as one could have expected. In spite of this position it is gratifying to note that the Company has been able to break even and to make a small profit of about Rs. 12 lakhs, after meeting charges on account of depreciation. This has been possible only due to the unstinted efforts of the Executives and the workers and I would like to take this opportunity to record our appreciation of their efforts.

Power supply continues to be our major problem. A solution to this has to be found as early as possible if the Company should work on a satisfactory basis. There are several major hydro-electric projects under various stages of progress in Kerala State now. I am not aware if any of them will be commissioned this year. Even with all the hydro-electric projects coming into operation we will continue to be at the mercy of nature unless adequate insurance against its vagaries is provided in the shape of a reasonably large thermal power station. Your Company has been making representations to the Government of Kerala since 1960 for the installation of such a station. I am glad to say that our request has at last been taken up during this year and I gather that the Government have decided to put up a thermal station with a minimum capacity of 100,000 KW at Cochin. I do hope that the work on that project will be taken up expeditiously.

In the light of what I have stated so far you will appreciate that the Company has not been able to declare a dividend this year. The current year also has started with a drastic power cut that lasted for three months resulting in a loss of production amounting to a sale value of approximately Rs. 1 crore.

The Third Stage of Expansion is well under way. Although scheduled to be completed in 1965-66, it is expected that most of the plants will be ready for commissioning by the end of this year. But we will be requiring another 20,000 KW of power for operating the plants when the expansion is completed. We are hoping that the Kerala State Electricity Board will be able to give us this power; but if they do not, the Company will not be able to take any benefit from the expanded capacity till the required power is made available.

Another factor that has been causing us concern is the possibility of a severe shortage of water in the Periyar river when the Idikki project is designed to generate 800 to 1000 MW of power. It is based on the waters that flow into the Periyar now. When the project is completed, all that water will be diverted to the Moovattupuzha river as the power house will be located on one of its tributaries. Such a situation can have dangerous consequences as the Ernakulam-Alwaye industrial belt is bound to suffer during the summer months on that account. Your Company has represented this matter both to the Government of Kerala and to the Government of India. We had suggested that the Government revise the plans for Idikki in such a manner as to provide at least a part of the water to flow back into the Periyar. If the water in the Periyar turns saline near the industrial area, factories like ours may have to be closed down for about 3 to 4 months in the year. I understand that the seriousness of this situation has been realised by the Government and that they are considering this proposal along with certain other alternatives.

As most of you must be aware, raw naphtha is the feed-stock used in your Company's Oil Gasification Plant for production of Hydrogen, which is one of the constituents of Ammonia. As this is a very important raw material in the manufacture of chemical fertilisers, the Government of India were pleased to exempt it from the excise duty payable on it to the extent of 95%. This position is recognised in States like Madras and Maharashtra where fertilisers are being made out of raw naphtha. In Kerala the situation however is different. Originally raw naphtha

was charged sales tax at 3%. Recently the Government of Kerala seems to have decided to treat it as a petroleum product and charge sales tax at 15%. This will seriously upset the economics of production of your Company. A representation has therefore been made to the Government of Kerala to reconsider the matter and restore the original position. Raw naphtha is the raw material for most petrochemical industries. In Kerala, fertiliser industries can be developed only on the basis of raw naphtha being used as a raw material. If this raw material is charged this high rate of Sales Tax, like a finished product, it will cripple the fertiliser industry in Kerala. I hope the Government will realise the gravity of the situation and revise the sales tax on raw naphtha.

Last year I had informed you of the directions received from the Government of India that your Company should plan, design and construct three more major fertiliser plants in South India during the Fourth Plan period. Your Company has since then been advised by the Government of the location of two of these plants. One of them is proposed to be built at Madras and the other at Cochin, as near to the Refineries as possible. The project reports for these projects have been prepared by the Company and submitted to the Government of India for approval and further directions.

I had mentioned to you last year of the Company's intention to promote a Fabrication Shop in collaboration with the Davy-Ashmore group of the U.K. for the manufacture of specialised items of equipment required for the fertiliser and chemical industries. I am glad to say that a formal agreement has been drawn up between your Company and Messrs. Davy & United Engineering Company of the U.K., one of the units of the Davy-Ashmore group, for the establishment of such a Workshop. As soon as the Government of India's approval to the agreement is obtained, further steps will be taken to organise the new Company.

Your Company has also been able to secure the consent of Messrs. Power-Gas Corporation of the U.K., a member of the Davy-Ashmore group and a well-known engineering and contracting organisation in the field of chemical engineering, to collaborate with your Company for setting up an Engineering & Contracting Organisation. The Heads of Agreement drawn up in this regard are being submitted to the Government of India for their approval. Further steps will be taken on receipt of Government approval.

Most of you must be aware of the steps taken by your Company to promote the use of fertilisers in South India. These measures have been appreciated by the State Governments as well as the Centre. The Fertiliser Festival, a new concept introduced by your Company in the field of fertiliser promotion, has now been accepted as one of the best means of propagating fertiliser use. The Madras Government for example has started organising fertiliser festivals on their own initiative and with the co-operation of suppliers.

The distribution network has also expanded considerably during the year under review. Today, your Company has 53 Central Depots and about 1900 Authorised Agents in Kerala State alone. In Madras, Mysore and Andhra Pradesh, your Company has been spreading its distribution system at a rapid pace. Recognising the efficiency of the methods followed by your Company in fertiliser distribution, the Government of Madras have invited your Company to assist them in the distribution of nitrogenous fertilisers, sales of which were so far confined to co-operatives. Your Company has gladly accepted the invitation and will be starting distribution of nitrogenous fertilisers in Madras State within a few days.

Your Company's agronomists continued to render useful services to the farmers of South India. The nature of services included the maintenance of demonstration plots, supervision of manuring operations, supervision of application of pesticides and speedy analysis of soil samples.

Employee-employer relations continued to be cordial during the year under review. But in July this year a new situation has developed. A member of our Managerial cadre has been elected as the President of the Union. The Union has been insisting on our recognising him as the President of the Union. It is most embarrassing for any Management to recognise one of its own members as an office-bearer of the Union; especially so when he has been the Assistant Personnel Manager of the Company and has conducted negotiations on behalf of the Management with the Union. It will be difficult to find such an instance anywhere else in trade union history. Along with this the Union had also raised an issue relating to the grant of bonus for the year 1963-64. Bonus payment is governed by the long term agreement between the Union and the Management. Any difference of opinion relating to any of the clauses of the agreement has to be referred to the Labour Commis-

sioner for arbitration according to the agreement. The issues were therefore referred to the Labour Commissioner in terms of the agreement for arbitration.

As the Union has refused to accept arbitration, the Government of Kerala have referred the issue relating to Bonus for adjudication. In regard to the other point, namely the anomalous position of a manager holding an office in the

Union, the Union has been conducting an agitation for over a month now. A strike notice was given on the 21st of August. The Union has been extending this on the dates of expiry. So far no strike has taken place. The Management believes that for the efficient running of an industrial unit a healthy and strong trade union is necessary but at the same time no management can afford to

compromise on fundamental principles. The question now posed by the Union has very grave implications and if conceded shall strike at the very roots of management and trade Union relationship. The Management have therefore advised the Union that so long as their President continues to be a member of the Managerial cadre of the Company they will find it difficult to hold any discussions

with him. I do hope that the Union will appreciate the difficulty of the Management and take a realistic view of matters.

I now move that the Directors' Report and the Audited Statement of Accounts for the financial year 1963-64 be adopted.

N.B. This does not purport to be a report of the proceedings of the General Meeting.

RBI

Survey of Small Engineering Units in Howrah

Under the auspices of the Reserve Bank of India, the Jadavpur University undertook a survey of the small engineering establishments situated in the Howrah Municipality of West Bengal. This area contains one of the acutest concentrations of engineering units in the whole of India. The survey was conducted between July 1960 and April 1961 by the Economic Research Unit of the Jadavpur University under the supervision of Dr H. Banerji; a

special feature of the survey was that the Engineering Faculty of the University collaborated in the project in regard to all technical aspects. The survey has covered intensively the operations of 200 units, each employing 20 or more persons, during 1959 besides a 'quick survey' of the operations of 396 out of 943 smaller units, each employing less than 20 persons, during 1960. An intensive idle-time, work-time and machine study was also carried out late in 1961, perhaps for the first time in the field of small-scale industries in India.

The Reserve Bank of India has published the findings of the survey in a Survey Report in which an attempt has been made to present a picture of these small and medium sized engineering units in Howrah on the basis of data collected by the survey. The data cover several important aspects of the working of these units, such as capital, labour, costs and output, net value added and its distribution between labour and capital, finances, personnel and works management, and marketing organisation. An outstanding feature of the engineering industry in Howrah which has been brought out by the survey is the close inter-dependence among units, exhibited in the practice of farming out of orders to neighbours; this seems to explain why despite congested surroundings, new units are constantly springing up there. The survey has revealed that being basically small units, few of them have any internal organisation for production, purchase, sales, accounts etc. and their factory lay-out is often unsatisfactory. Unlike the medium units, the machines used in the smaller units also are largely new. A rather disturbing feature that has been noticed is that most of the units with relatively new machines are working below capacity. The data collected on borrowings indicate that, even in an industry like engineering with adequate growth prospects, financial assistance provided by credit institutions is meagre by almost any standards. On the whole, the survey clearly suggests that with adequate financial and technical assistance a large number of these units could

Central Revenue Collections for July 1964

The revenue realised from item on which duties and taxes are levied and collected by the Central Government in the first four months of the financial year 1964-65 amounted to Rs 441.62 crores. Of this Rs 113.51 crores were collected during July, 1964.

The corresponding figure for the first four months of the financial year 1963-64 and for the month of July 1963 were Rs 408.13 crores and Rs 110.25 crores respectively.

Following are the details of the revenue realised under various heads:

Revenue Head	(In Lakhs of Rupees)			
	July 1964	July 1963	1964-65	1963-64
1. Customs ...	31.08	35.63	129.64	111.57
2. Union Excise Duties (excluding cess on salt, coal and iron ore) ...	62.94	58.66	240.56	219.93
3. Corporation Tax ...	7.70	5.97	33.55	38.55
4. Income Tax ...	11.20	9.32	35.30	34.92
5. Estate Duty ...	25	25	85	1.09
6. Taxes on Wealth ...	9(P)	23	61(P)	98
7. Expenditure Tax ...	...	2	1(P)	3
8. Gift Tax ...	6(P)	5	30(P)	22
9. Opium ...	19	12	80	84
Total ...	113.51(P)	110.25	441.62(P)	408.13

Note:—P=Provisional.

become viable and contribute effectively to the industrial potential of the region.

The survey has broken new ground in the enumeration of the capital goods with the units according to their type, specification and age. This has made possible an estimation of their cost of replacement. It has also revealed certain interesting data regarding capital intensity and labour productivity which seem relevant for policy formulation. As a comprehensive inquiry into the financial, technical, institutional and other aspects of small engineering units in Howrah and on the inter-connections between them, the survey has yielded a wealth of information useful for assessing the nature and magnitude of the problems of small-scale units in general, and engineering units in particular.

The Report is presented in four parts. Part I deals with the operations of 200 medium sized units, employing 20 or more persons. Part II is devoted to a discussion of various aspects of the working of 396 small sized units, employing less than 20 persons each. Part III presents a detailed account of the utilisation of machines and of men working on these machines, based on an intensive time study of sixteen selected units, while Part IV contains an analysis of the production function and the productivity of the factors. These are followed by appendices relating to the various questionnaires used in the survey.

The Report contains also a comprehensive statistical appendix consisting of 184 Statistical Tables and a few charts.

Copies of the publication can be had from the Administrative Officer, Economic Department, Reserve Bank of India, Post Box No. 1036, Bombay-1 at Rs 10/- (postage extra) or 18 s or US \$2.50 (post free). They are also available from the Offices of the Reserve Bank of India at Calcutta, Madras and New Delhi.

THE INDIAN IRON & STEEL COMPANY LTD.

NOTICE is hereby given that the Register of Members and Share Transfer Books for Preference Shares in the Company will remain closed from the 23rd October to the 27th October, 1964 both days inclusive, for the purpose of payment of Preference Dividend for the half-year ended 30th September, 1964, on or after the 1st November, 1964, to those Preference Shareholders whose names appear on the Company's Register of Members on the 27th October, 1964, or to their mandates.

By Order of the Board,
MARTIN BURN LTD.,
F. G. LIVERSEDGE
Managing Director,
Managing Agents.

Registered Office:
12, Mission Row,
Calcutta-1.
3rd October, 1964.

BALMER LAWRIE & CO. LTD.

D. MANSON,
Managing Director
Secretaries.

Calcutta, 1st October, 1964.

Notes:—

(1) A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

(2) An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, has been forwarded to the members of the Company.

Market NEWS and Trends

JUTE Wide Fluctuations

The jute markets have witnessed wide price fluctuations last week following alternate bouts of buying and selling. Most of the time during the first half, the undertone remained quite firm with the rates daily being marked up. The hectic activity had been sparked by reports of renewed strike in Pakistani jute mills. Evidently another interruption to production in Pakistan was interpreted to mean more business for Indian mills. As Pakistani output had already been adversely affected by the strike some time ago, more stoppages will further reduce the quantum of jute goods that Pakistan can sell in overseas markets. What perhaps was mainly responsible for sustaining the up-trend in earlier dealings was the sudden increase in the number of buyers, some of them presumably connected with shippers in Pakistan. It would appear therefore that shippers in Pakistan were

apprehensive that production in their country would not be sufficient to meet commitments already made overseas. In the meantime, the firmness of the goods market had its impact on the raw jute market where prices once again began to move up in sympathy. During this period Assam Bottoms gained two points to be done at Rs 40 per maund. The sudden outbreak of speculative activity threatened to nullify the good impression created in overseas markets by the return of relative stability to the jute markets thanks to the prompt and firm action initiated by the authorities in August. With the speedy restoration of normal conditions, foreign buyers had begun to show increased interest in Indian jute goods and towards the close of last month new enquiries were reported from a number of overseas consumers. Last Week's hectic rise in prices is however a reminder that the danger of unbridled speculation is not completely eliminated.

It is however not surprising that goods prices scaled new highs last

week because the trend seems to have been governed simply by the supply-demand position. Apart from the new overseas enquiries, the Government of India has been a big buyer during the past few months. It is estimated that between August and September alone, Government purchases of B Twills have amounted to over 45,000 bales. As a matter of fact for some time, sustained Government purchases have been the main sustaining factor in the heavy goods section. The continued firmness of sacking is also partly due to the belief that in view of the increased participation of Government in the distribution of foodgrains, Government purchases of sacking will continue. The important role played by these purchases in sustaining the steady trend in the sacking section was revealed during the second half of the week when rumour had it that Government was contemplating the use of second-hand sacking for the packing of foodgrains. On this rumour, prices on Tuesday reacted sharply to be placed at Rs 148.25 as against the week's highest level of Rs 152.75. Hessian also was marked down in sympathy. On Wednesday however, prices again were placed higher on balance on revival of speculative buying. B Twills Ready closed at Rs 149.50 while Hessian 40" x 10 oz regained part of the lost ground to be placed at Rs 50.10. With the publication of the stock figures as at the end of September, prices further firmed up on Thursday. B Twills Ready closed at Rs 152.50 while Hessian 40" x 10 oz gained another 30 p. The biggest drop was in sacking which were lower by 6,200 tonnes, while other goods were down by 2,500 tonnes, stocks of both hessian and carpet backing were higher.

STOCKS OF JUTE GOODS SEPTEMBER, 1964

	(000 Tonnes/Tons)	30 Sept. 1964	31 Aug. 1964	Difference
Hessian Cloth and Bag ...	47.6 (46.9)	45.7 (45.0)	+1.9 (+1.9)

TEA Outlook for Common Sorts

ALTHOUGH there has been fair support for good grades at the auctions every week, Common teas are being bought slowly. As a result, the average price of leaf teas amounts to only Rs 5.84 as against Rs 5.93 per kg in the corresponding period of last year. There is a growing feeling that the prices will tend to be easier during the coming weeks considering that world production during the current season is running at a higher level than that of 1962-63. As there will be an abundant supply, buyers will be inclined to take their requirements at lower prices.

It is true that exports of teas from North India during the current season are running at a higher level than those of the previous season. But doubts are expressed whether foreign exchange earnings will be larger. Considering that "rains" teas will henceforth constitute the bulk of offerings, the price trend at the London auctions is likely to become softer as soon as "rains" teas will be increasingly offered. The present steadiness of tea prices in London is largely due to the fact that the bulk of the offerings consists of "second flush" teas, which are said to be the best grades that North India produces.

In the Export sale held in Calcutta this week, offerings amounted to 68,513 packages of leaf grades. There was a good general demand. Prices for Assam orthodox teas were irregular and generally slightly lower. While the BP's were sold well, fannings were a weak feature and eased in values. There was a useful enquiry for the other orthodox teas, particularly Doars BOP's, and prices realised were generally firm to dearer with the exception of the Fannings which were lower.

CTC teas were well competed for at around last rates and selected bright liquoring teas, following competition, were sold at a premium. Plain CTCs were generally fully firm, with the BPs receiving better support than their corresponding Fannings.

Whole leaf grades were sold readily at firm to dearer prices. Darjeeling teas realised satisfactory prices following quality. Following rates were quoted (per kg):—Clean Plain Pekoe Rs 5.20 to 5.50; Plain Orthodox BP Rs 4.10 to 4.30; Plain Orthodox Fgs. Rs 4.20 to 4.40; Plain CTC BP Rs 5.10 to 5.40; Plain CTC Fannings Rs 4.80 to 5.10; Medium CTC BP Rs 5.70 to 6.30; Medium CTC Fannings Rs 5.70 to 6.30; Good Assam CTC BP Rs 6.60 to 6.90 and Good Assam CTC Fannings Rs 6.60 to 7.00 (Quotations are inclusive of Excise Duty).

A quantity of 176,065 kgs of tea was offered in the Coonoor market. The general standard of quality showed very little change from that of last sale. Good Nilgiri dusts remained firm where quality was preserved. Other Nilgiri dusts eased by 10 to 15 paise per kilo. Nilgiri broken followed the general downward trend of the market. Nilgiri-Wynaad types were sold readily, but at rates below last levels. Whole Leaf grades were sought after at around last levels. Good Nilgiri Dust was quoted at Rs 5.35 to Rs 6.30; other Nilgiri dusts at Rs 3.40 to Rs 4.60; Nilgiri Broken at Rs 3.60 to Rs 4.30; Whole Leaf grades at Rs 3.85 to Rs 4.75; Nilgiri-Wynaads at Rs 3.55 to Rs 4.80 and Plainest types at Rs 3.00 to Rs 3.30.

In the Colombo market, offerings consisted of 7,256,645 pounds. There was a good general demand; but prices for high and medium-grown types tended to move in seller's favour. Useful liquoring BOP Fannings were sold well at firm to dearer rates; but select best were usually lower. Leafy low-grown teas met with a little more buying interest at fully firm to slightly dearer rates; but stalky sorts were again neglected. Small leaf BOPs were about steady with brighter liquoring sorts slightly dearer.

In the sale held at Cochin last week, a quantity of 3.13 lakh kilogrammes of dusts was offered for internal consumption. Against strong demand, high-grown were sold well at dearer rates, while good mediums and mediums were well-supported at fully firm rates. Low mediums were irregular but steady. Black leafy types were again a strong feature and were quoted dearer. Unorthodox types met with good support and were sold at higher rates.

COTTON Dull Spell

Primarily due to the expectation of a bumper new cotton crop and conflicting reports about the weather in the different cotton growing tracts in the country, the cotton futures market in Bombay depicted lethargic conditions. Only in the initial day did the market evince any semblance of brisk

trading. After commencing the week slightly lower at Rs 731.75 the Jarilla March contract edged forward to 734.25 on the opening day on account of sustained short-covering consequent on the reports of unpropitious weather conditions in some of the cotton growing areas. This phase was, however, of a short duration. Following the reports that damage to the crop has been insignificant sellers predominated the futures market. Naturally enough, the contract developed the downswing. Toward the closing stage, however, the contract met with scattered support which enable it to wind up the week on a steady note.

The spot market at Sewri remained dull and drab during the week under review. Spinner interest was restricted to stray lots popular growths of both old and new crop. In the import section African cotton met with some mill enquiry.

According to latest estimates, the new cotton crop in India will be larger than the current season's record crop. The acreage is esti-

mated to have moved up by five to seven per cent and weather conditions are reported to be generally congenial. Contrary to official estimates varying between 5.4 million bales and 5.8 million bales, trade estimates are put around 6.13 million bales. This is a welcome trend as there has been a progressive improvement in consumption of cotton by the domestic mills. There is considerable scope for stepping up domestic production because, as Mr Subramaniam stated out-put on agricultural front can be increased four fold, provided the available resources are put to proper use. There is, however, considerable leeway to be made in educating the farmers to switch on to latest modes of farming. It is particularly to this aspect that greater care has to be bestowed by the authorities.

PIECEGOODS

The cloth market in Bombay swiftly mirrored the impact of

the announcement of the schedule of prices for controlled qualities of mill made fabrics. The immediate reaction was the arresting of the downward drift in prices. A few mills are reported to be hopeful of higher realisation. Though Government's idea is to bring down the prices of cotton textiles, a leading local mill in thinking of increasing the prices by nearly 7 per cent to bring them on a par with other mills.

The recommendations of the expert committee on cotton fabrics have been forwarded to the ministries concerned for such action as might be practicable for the purpose of reducing manufacturing cost. Aside from conducting a probe into the questions pertaining to cotton cloth, the committee had also examined the question of cotton prices. The panel is of opinion that manufacturing cost can be brought down at least by 15 paise per yard of cloth. It also referred to abnormally high prices of Indian cotton

their latest interest is in plastics and paper

"What are Metal Box doing with plastics and paper?" people wonder.

Why, making packages, of course! Blow-moulded plastic containers for chemicals and toiletries, laminated pouches for dehydrated vegetables and other foods, strip packs for pharmaceuticals, polyethylene bags for garments, food, and chemicals...and precision made paper cartons for a wide range of products.

It's news to many that almost 25% of all Metal Box sales comes from non-tinplate products.

This branching out in new directions is not new with Metal Box...in fact, Metal Box started working with plastics a decade ago. But this process has been accelerated by the shortage in tinplate, which many people think is about the only material Metal Box

can turn into a package. Small wonder—with a name like Metal Box.

Actually MB Research set out several years ago to develop substitute packaging materials. And so, today, Metal Box are busy in the exciting world of plastics, paper and foil—materials which have already proved to be right for a wide variety of products. And, with every day, the range continues to grow.

So that, in time to come, flexible and paper packages could well make 'Metal Box' an even bigger misnomer.

Metal Box
protective packaging

which is out of parity with those of foreign cotton. The economies in cloth manufacture should, therefore, be sought in the price and usage of raw cotton and in the level of wages and labour productivity which account for nearly 80 per cent of ex-works costs. Standardisation of production of yarn and fabrics will be of considerable assistance.

The committee also suggested to place upper limit to economic size at about 3,000 to 4,000 spindles and to set up a reconstruction corporation for assisting the mills which are unable to improve their position. It should be mentioned in this context that export promotion incentives for the textile industry have been revised to allow for 25 per cent of the export earnings to be utilised for importing machinery to modernise textile units in the country. This measure is to be welcomed as nearly 70 per cent of the units are yet to be modernised. A rapid completion of the modernisation and rehabilitation programme will afford greater possibility for enhancing quality of cloth and reducing the production cost to the maximum extent. It should be recalled that the textile control order forms the genesis for ensuring quality cloth at reasonable prices to the mass consumers.

Easiness in Non-Ferrous Metals

AFTER their recent gains, non-ferrous metals on the London Metal Exchange seem to have paused and their prices have displayed a slightly easier tendency due to profit-taking. In copper, wirebars have dropped over the week from £471 per ton £465 despite a tight statistical position, influenced by supply threats from mine and railway disputes in Chile.

It is felt in London that action by America's Phelps Dodge Corporation may conceivably herald another increase in the producer price. This supplier has added another 2 cents per pound to its copper price, effective from 22 September, making it 34 cents. Some metal merchants in the United States are reported to be quoting supplies for October delivery even at 53 cents.

On the labour front, Kennecott, the big United States producer lately hit by strikes, is expected to be at full output again shortly, while the pipeline from the Central African copper belt is flowing once more following settlement of the railway strike. The problem on which copper's future, therefore, continues to be based is that facing the producers in their efforts to maintain economic levels of production unhindered by labour shortages. Once the groundwork for stable labour

relations is laid, a reliable output level can be achieved in relation to world consumption.

Tin is quoted around £1497 per ton against £1545 in the previous week. This reflects the CSA denial that American stockpile disposals will necessarily be limited to 20,000 tons per year. Zinc has also declined to £119 from £127. This decline seems to be based on a widespread belief that foreign supplies will be arriving in the British market shortly. Lead is, however, ruling firm and quoted around £118. This firmness is attributed to the strong worldwide demand combined with a tight statistical position for the metal outlook.

In sympathy with the London Metal Exchange, prices of non-ferrous metals are ruling firm in the Bombay market. The price of zinc has shot up to an all-time high of Rs 368 per 100 kg. In fact, this metal has been instrumental in lifting the prices of other metals. For instance, tin has remained strong at Rs 330 per 10 kg; copper wirebar at Rs 433 per 50 kg and lead at Rs 310 per 100 kg.

The main reason for the firmness in prices continues to be the scarcity of these metals. In the context of the fast growing demand, stocks in the country and the prospects of receiving adequate supplies from abroad are meagre. Apart from these factors, intense speculative activity also has been largely responsible for pushing up the levels to higher and higher points.

COFFEE Brazilian Output

According to an official spokesman of the Brazilian Coffee Institute, the US Department of Agriculture's estimate of 11 million bags for Brazil's total 1964-65 coffee production is "very high" in relation to the estimate made by the Institute. It is stated that the overall crop will not exceed 7 million bags and that the exportable crop will be between 4 million and 5 million bags. It is also added that the exportable portion of the running crop plus the remnants from the previous crop is insufficient to supply export needs and the balance must be made up from the IBC stocks of former crops.

Meanwhile, the India Coffee Board will release a total of 1,455 tonnes of coffee of the 1963-64 crop for export by open auctions on 21 October at Mangalore. The coffee is for export to any destination and consists 592.2 tonnes of Arabica Cherry and 862.8 tonnes of Robusta variety.

YARN Futures Trading

According to present indications, futures trading in staple-fibre yarn

will revive in Bombay from 16 October after a lapse of more than 21 months. The Bombay Yarn Merchants Association & Exchange Limited, which will conduct the trading, has already completed the necessary preparations. The authorities and the members of the Exchange are expected to adopt shortly the bye-laws and articles revised to facilitate trading.

The present proposal is to commence business simultaneously in January and March 1965 contracts for staple-fibre yarn. The tendering specifications will be so determined as to permit delivery of yarn manufactured by a large number of mills.

The Exchange, it is stated, will take up the question of viscose yarn futures once the forward trading in staple-fibre yarn gets into swing. The case for its resumption has strengthened recently as a result of a steady accumulation of yarn supplies with the manufactures and the trade.

Meanwhile, almost all popular varieties of viscose yarn have developed a weak trend with prices showing a drop of about 25 paise per pound during the past few days. This setback is attributed to the selling pressure, being influenced by the accumulation of stocks and strong rumours of a relief in excise duty.

SILK Steady

The prices of filature raw silk in Government filatures at Mangalore remained steady during the week ended 25 September. Prices of filature silk of 20/22 dr. for the week under review were quoted between Rs 100.32 and Rs 101.42 per kg. Prices of kisan silk declined to rule at Rs 105.00 to Rs 106.00 per kg. Cottage basin silk had a fall to rule between Rs 77.16 and Rs 94.80 per kg.

A downward trend was observed in the prices of charka raw silk except for Dupion (Charka). Superfine, 1st 2nd and 3rd qualities had a setback and ruled between Rs 85.98 and Rs 90.39; Rs 66.14 and Rs 74.96; Rs 61.73 and Rs 66.14 and between Rs 59.52 and Rs 61.73 per kg. respectively.

The prices of the Spun silk yarn failed to move either way.

As regards the prices of the reeling cocoons, the Sidlaghatta market remained steady for the minimum and had a fall in maximum to be quoted at Rs 4.50-Rs 5.55 per kg. The Channarayana market had declined to quote at Rs 2.50-to Rs 4.50 per kg. The prices at Mugar Market ruled at Rs 3.50 to Rs 4.50 per kg. Prices of seed cocoons of the foreign variety were quoted at Rs 4.00 to Rs 11.00 per thousand while the Mysore variety had a fall both in minimum and maximum to rule at Rs 5.00 to Rs 6.50 per thousand.

In the Bhagalpure silk market, prices of Tasar silk waste and tasar spun silk yarn ruled firm during the week under review. Tasar raw silk had ruled Rs 129.00 to Rs 137.00 per kg.

The F.O.B. prices and landed cost of Japanese raw silk of 20/22 dr. 'A' were Rs 56.96 and Rs 91.43 per kg. respectively during the month of August, 1964.

OILS AND OILSEEDS Price Spurt

A sharp rise in prices characterised trading in the Bombay Oilseeds market. The downward trend in prices, which was noticed in the previous week, was suddenly reversed owing to a break in the flow of arrivals of the new crop from the South. The heavy rainfall in Andhra gave rise to a fear that arrivals might not pick up for some time to come. Sentiment was also aided by the absence of any indication about the removal of the ban on the movement of oil groundnut and groundnut oil by the Gujarat Government. Thus, the shortage of goods persisted.

Karnatak groundnut, the only variety available in the Bombay market, therefore, spurted from Rs 63 to Rs 70 per 50 kg, while groundnut oil improved to Rs 32 from Rs 28 per kg.

Meanwhile, the forward trading in groundnut, which was banned on 1 July with a view to curb the rising prices, will commence in January contract from 7 October. The January contract, in unofficial dealings, is quoted at Rs 234. It is expected that the contract may seek a lower level when the new crop arrivals gather momentum. In fact, in anticipation of such developments, the ready prices of groundnut and its oil have already displayed a downward trend.

In the Castorseed section, price movements were confined to narrow limits.

Trading in the Linseed section was moderate due to lack of support. Ready linseed has lost a rupee at Rs 52 and Linseed Oil 50 paise to Rs 21.50.

In the Madras market, there is a fall in demand. Arrivals averaged 20 tons a day and small crushers were taking up these. Arrivals in South Arcot, Salem and Coimbatore districts are reported to be steady. The crops from Chingleput and North Arcot districts is expected in two to three weeks. The quotation for peanuts has declined to Rs 103 from Rs Rs 108, while the Coromandel variety is quoted around Rs 107 per bag of 80 kgs.

In the Oil section, heavy rains in Andhra and the disruption in communications have resulted in the slowing down of demand from Andhra and Calcutta interests. The price of spot oil has declined to Rs 256 from Rs 265, to quote finally at Rs 259.

For the INVESTOR

INVESTMENT GOSSIP Lack of Support

The stock market has closed this week on a depressed mood and the fact that Lyons Range will remain closed throughout next week and the best part of the week after for the Pujja vacation, is evidently not the only reason for the lack of interest displayed by marketmen. Despite the continued efforts on the part of the authorities to impress on investors that the investment situation is quite favourable for them to extend their support to equities, there has been no expansion of activity. This is largely because investors find that investment in the corporate sector, as matters stand at present, is unlikely to bring them any benefit. Thanks to the last two budgets, they have lost heavily on their investments in equities. Moreover, the effect of the last budget on individuals has been such that savings have almost disappeared. The little surplus that is left will therefore seek the most profitable investment available. With the increase in the Bank rate and the subsequent rise in the interest rates on bank deposits, a diversion of investible funds to the safer bank deposit is likely especially since the quantum of dividend from equity capital has ceased to be attractive after the imposition of the tax on dividends. It has therefore been represented to the Union Finance Minister that a revival of the capital market will ensue only if there are some worthwhile reliefs calculated to reduce the tax burden on the individual. After the recent meeting between a FICCI delegation and the Finance Minister, the hope that some favourable action will ensue has revived. But following the speech of the Managing Director of the International Monetary Fund early this week in New Delhi operators have become nervous. For in the course of his speech, the IMF Managing Director has said that there is great scope for increasing taxation in India. Since he has also warned the country on the dangers of continued deficit financing, it seems to have been assumed that instead of reliefs there is every likelihood of further doses of direct taxation.

NEW ISSUE NOTES Sapoi Tea

The directors of the Sapoi Tea Company Limited have a proposal to issue 45,000 new equity shares of Rs 10 each. These will be offered for subscription to those shareholders registered as on 30 October in the ratio of one new equity share for every three equity shares held. The new shares will rank pari passu with the existing shares in all respects except for the dividend to be declared for the year 1963. An extraordinary general meeting will be held on the 30 October to consider and pass the resolution in the above respect.

Poysa

Poysa Industrial Company

IN BRIEFS

Engel India Machines & Tools Ltd. has made the second and final call of Rs 2.50 per share, making the share fully paid-up. The call money is payable by those shareholders registered as on 1 October, before 16 November 1964.

Rockwell India Limited has received an industrial licence for the manufacture of light weight gasoline engines. Negotiations are in progress with Rockwell International S.A., Switzerland for the necessary technical assistance.

Shree Gopal Industries Limited, a subsidiary of Shreenivas Cotton Mills Limited, has declared a maiden dividend of 10 per cent for the year ended 30 June 1964.

Facit Asia Limited will have a production capacity of 5,200 calculators and 5,200 adding machines when completed.

Following the taking-over of the assets of the Poona Electric Supply Company, the Government of Maharashtra has also decided to take over the assets of the Nasik Deolali Electric Supply Company. As per the terms of the agreement, the company is expected to hand over the assets to the Maharashtra Electricity Board by the end of November.

Cooper Engineering Limited has maintained the ordinary dividend at 8 per cent, taxable, for the year ended 30 June 1964, on the increased capital.

Mysore Spinning & Manufacturing Company Limited has once again skipped the dividend on the equity capital for the year ended 29 February 1964.

Badra Coffee Estates Limited, Madras, has maintained the ordinary dividend at 10 per cent for the year ended 31 May 1964.

National Rolling & Steel Ropes Limited has proposed a taxable dividend of Rs 2 per share for the year ended 30 June 1964. Transfer books will remain closed from 26 November to 10 December 1964.

A communique, issued by Jaipur Udyog Limited, states that the net amount of dividend payable on the ordinary shares of the company to the resident shareholders will be 80 paise per share, for the year ended 31 March 1964. This is payable on and from 10 October.

The New Beerbhoom Coal Company Limited has proposed an interim dividend of 25 paise per share, taxable, for the year ended 31 October 1964, payable to those shareholders registered as on 9 October. Transfer books of the company will be closed from 6 to 9 October.

★

BALANCE-SHEET REVIEWS

Less from Jay Engineering

Jay Engineering Works Limited has produced disappointing results for the year ended 31st March 1964, mainly due to a long-drawn strike causing cessation of production from 17th December 1963 to 29th May 1964. While sales are substantially lower at Rs 10.42 crores against Rs 13.44 crores, the net profit, after providing for de-

preciation but before taxation, works out to only Rs 19.24 lakhs as against Rs 41.25 lakhs for the preceding year. Depreciation is raised to Rs 35.20 lakhs from Rs 32.51 lakhs, while Development Rebate Reserve is reduced to Rs 3.00 lakhs from Rs 5.40 lakhs. After adding the previous year's balance of Rs 4,896 (Rs 9,036), Taxation provision is reduced to Rs 8.60 lakhs from Rs 15.20 lakhs. No provision is made for General Reserve against Rs 50,000. This dividend on the equity shares is reduced from 10 per cent to 8 per cent, subject to tax, payable from General Reserve and subject to the sanction of the Industrial Finance Corporation of India. An application has already been made in this respect. The directors state that the management is now busy rehabilitating the operations of the company and specially the normal relationships with workers. They add that the Ceylonese subsidiary of the company has started having profitable operations although they have not yet turned the corner in Hyderabad operations.

Megna Mills

According to the preliminary report released by the company, the Megna Mills Company Limited has shown a gross profit of Rs 95.89 lakhs for the year ended 31 March 1964 (previous figures not given). Adding the balance brought forward from previous year of Rs 37,681, there is an available sum of Rs 96.27 lakhs. From this is deducted:—Depreciation Rs 27.90 lakhs and income-tax Rs 36.00 lakhs, leaving a sum of Rs 32.27 lakhs. After deducting Rs 3,898 being items relating to preceding year, providing Rs 12.00 lakhs for Development Rebate Reserve and Rs 10.50 lakhs for Contingency Reserve, there is left a balance of Rs 9.83 lakhs.

Out of the above, the directors have proposed to pay a taxable dividend of Rs 1.20 per share on the 8,16,520 ordinary shares. It is added that a sum of Rs 64.31 lakhs was transferred from Contingency Reserve to provide Rs 51.25 lakhs for Taxation for the year ended 31 March 1963 and Rs 13.06 lakhs for the final dividend for the year ended 31 March 1963.

India Jute

In the same managing agency group, India Jute Company Limited has made a gross profit of Rs 46.77 lakhs for the year ended 31 March 1964. Adding Rs 6.09 lakhs being dividends from investments, Rs 2,900 being items relating to previous year and Rs 4,811 being brought forward from 1962-63, there is an available sum of Rs 52.93 lakhs. From this is deducted Rs 24.72 lakhs for depreciation, Rs 8.25 lakhs for Taxation and Rs 1.06 lakhs being loss on forward contracts, leaving a balance of Rs 18.90 lakhs.

After providing Rs 5.54 lakhs for Development Rebate Reserve, Rs 70,000 for Bad Debts Reserve and Rs 2.10 lakhs for Contingency Reserve, there is left a balance of Rs 10.56 lakhs. The directors have proposed to pay a taxable dividend of Rs 1.50 per share on the 6,98,400 ordinary shares. It is added that a sum of Rs 41.47 lakhs was transferred from Contingency Reserve to provide Rs 31.00 lakhs for Taxation for the year ended 31 March 1963 and Rs 10.48 lakhs for the final dividend for the same year.

★

STOCK EXCHANGES

Depressed Conditions

SENTIMENT in stock markets continued to remain depressed. In the absence of any stimulating news, operators are distinctly reluctant to enter into fresh commitments, especially when fresh support is halting due to fading hopes of any suitable change in the Government's fiscal policy and the costlier credit situation has already rendered stock market operations unprofitable. Equity prices on Lyons Range displayed an easier trend due to renewed offerings.

Depressed conditions prevailed on Dalal Street where the final list finished at near the week's low levels. Trading on the Madras Stock Exchange was somewhat restricted on lower advices from other centres.

The Ahmedabad Stock Exchange suffered a further setback on continuous selling pressure from bulls as well bear operators.

On the Delhi Stock Exchange, equity prices showed a further decline from last levels owing to sustained profit-taking.

The London Stock Exchange had another unsettled week and business was largely of a speculative character.

Prices on Wall Street continued to fluctuate within a largely fractional range.

★

CALCUTTA

THE local stock exchange presented again a subdued appearance with prices displaying a sagging tendency on tired liquidation coupled with renewed bear pressure.

Apart from the fact that operators were inclined to square up their outstanding commitments in view of the approaching holidays (beginning from 12 October), sentiment seemed to have been affected by the statement made by the Managing Director of the International Monetary Fund that there was a great scope for increasing taxation in India. This gave rise to a general feeling that the Government might continue the present fiscal policy.

Moreover, it was thought that the upward revision of lending rates by commercial banks might raise the production costs of all industries in case of a credit squeeze. In fact, some circles were of the opinion that the money pinch would become more severe in the next busy season.

As the costlier credit situation had already rendered stock market operations unprofitable on borrowed funds, weak holders were compelled to liquidate their holdings. Thus, in a market bereft of any support, even moderate offerings were sufficient to depress the price levels, while the professional bears exploited the weak sentiment.

Bank shares met with little or no interest, as their outlook was considered to be uncertain by the recent rise in bank rate.

In the Jute section, operators took a cautious view considering that the profits of mills were shrinking owing to the wide disparity between the prices of fibre and that of manufactured goods. Birlas came in for offer at Rs 35.12 after being marked higher at Rs 35.87. Howrah were neglected at Rs 16 with New Central hovering around Rs 10.69.

Coal shares were practically neglected.

Tea shares met with more sellers than buyers in view of the poor marketing outlook for the commodity.

Sugar shares remained quiet.

Despite the Government decision to introduce price and production control over 45 per cent of the cloth manufactured by the textile mills, Mill shares managed to hold their previous levels.

Engineering shares ruled generally quiet under the lead of Indian Irons. Apart from lower advices from Bombay, there was an anxiety to wait until the Government would decide the way in which the advances given to the IISCO would be repaid. The encouraging production released by the company had only a temporary effect on the share price.

Against the previous week-end closing of Rs 25.14, Indian Irons opened better at Rs 25.26 and improved further to Rs 25.26. After reacting at one time to Rs 24.96, the scrip closed finally at Rs 25.12. Jessop, however, continued to be keenly sought after on expectations that the Government might purchase investor's shares at remunerative price. The scrip forged ahead to Rs 26.50 from Rs 24.06.

In the Miscellaneous section, speculative issues remained generally depressed, while the cash section gave a comparative better performance, as will be clear from the price trends:—

Agricultural Research

Mr C. Subramaniam's Speech
at ICAR Meeting

You have a very heavy agenda before you. The review of research activities for 1961-64 is with you and I am sure deliberations here will enable us to correct past errors and ensure future development on the right lines. I would also like to devote some time during the coming two days to a discussion of the new structure of organisation of agricultural research which we have in mind.

To a gathering such as the one assembled here, there is no need for me to expatiate on the importance of research. It is admitted that agricultural research in India can contribute a great deal to our efforts to achieve abundance. What is disconcerting is the fact that the present state organisation seems least fitted to give either encouragement to the research worker or the fruits of research to the farmer. After I took over the portfolio of Food and Agriculture, I set up a Panel of Agricultural Scientists and consulted with them why there were blocks in this transmission of research to the farms. I asked them whether with knowledge in hand and research already done, we can increase production in the coming two years. Our agricultural scientists are also frustrated that their work gets dammed up with no visible results. This gathering may be interested to know that they have advised that based purely on existing knowledge and research tried out in India, it is possible to step up yields of wheat, rice, jowar, bajra and barley in India more than four times their present yields. All that is needed is the application of improved strains already introduced in the country, use of fertilisers in the right quantity and at the right times, proper use of water and the right seeding practices. It will be too hopeful on my part to expect in the immediate future, such large increase all over the country. At best, if some significant percentage of farmers catch the recommendations in the right spirit, we will have been set on the right path out of our present difficulties. I am having the first set of recommendations of this panel circulated to members of the Governing Body in the hope that they may reach farmers in the country quicker thereby.

Interesting discussions have been going on in other countries, especially UK about the place to be given to the scientist in society. If I may venture a generalisation, this argument seems to be characteristic of the Anglo-Saxon countries and those like us who have consciously or unconsciously adopted the Anglo-Saxon practices. Neither West Germany nor France, or for that matter Italy, USSR or Japan have ever considered it even a matter for disputation whether the scientist should be pre-eminent in matters concerning science. These other countries and in considerable part of USA, have given the scientist a pride of place and a free hand. Indeed, recently, P.M.S. Blackett, the physicist in an article in the New Statesman went so far as to say that the relatively higher rate of economic growth of a country like France could even be correlated with the better conditions in which the scientists function in that country. There can be no denying the fact that the changes in agricultural and industrial productivity in recent years in advanced countries of the world have been very much the result of the blossoming of scientific work. This would have been impossible if the general administrator and the politician had continued to apply brakes, as they do in India, to the development of research.

The agricultural scientist in India operates under severe constraints. Recently one of our rice research workers wished to go abroad to collect some wild rice varieties. Some clerical objection was put to it and the trip was stopped even though no costs to Government were involved. Or, take another instance. During the last five years, the research workers of India have evolved as many as eight strains of maize which can increase the yield to nearly 3000 lbs per acre. But, we are today in a position to produce seeds to cover only 75,000 acres as against a total of nearly 10 million acres. Equally depressing is the state of affairs in regard to jowar. Outstanding hybrids which can give yields of over 5000 kgs per hectare have been evolved during the last 2-3 years. But we are today in a position to cover only a few thousand acres out of 43 million acres. No research worker can derive satisfaction merely by looking out at his experimental plot. There can be no greater condemnation of the present state of organisation of research than the frustration and the loss of national wealth that result from administrative failures in the application of the results of research.

Whenever a proposal is made for greater freedom to the research worker, I am told, of course by the administrator, that already the best possible conditions exist and only administrative matters are dealt with by the pure administrator. I wish such a type of differentiation were possible. I believe that the ultimate direction of research in the total sense—both of administration and of technical coordination has to be in technical hands. The differentiation between administrative matters and technical matters is rather tenuous. To permit a research worker to go to a conference to discuss with colleague research workers may look like an administrative task but actually it involves a technical decision. I think we have for too long experimented with gentlemen-administrators at various levels tinkering with agricultural research. It is time that the agricultural scientist gets a free hand in his own domain.

I do not know whether all of you have seen the report of the agricultural research review team. It is a remarkable document which I shall have circulated to you. I would like to draw your attention in particular to the chapter on appraisal of current difficulties in research. Many of these can be remedied by State and Central Governments by relatively minor changes in procedures, especially financial regulation. One of the important aspects of this problem, however, relates to the salary scale offered to the agricultural scientist. Today, the agricultural scientist is not treated on a par with other scientists. His scale of pay is lower and seems almost shrewdly designed to keep away the best talents from agricultural research. Similarly, there is a practice in many States in which the promotions from one category to another are decided on a basis distinct from professional specialisation. Very often, one finds a scientist specialising in one crop or speciality getting due for promotion and being shifted to another crop or speciality where the vacancy exists. This is the shadow of the generalist in administration where one can be a collector today, a Director tomorrow and a Secretary the day after. Unfortunately, such quick change artistry is not possible in science. I think we should evolve new procedures for promotion of scientists which will enable them to continue in their speciality and yet derive the monetary benefits of promotion and preferment. These may look as trivial details but I can assure this meeting of one thing. If we are to draw in future the best of our brains to agriculture and research, we must improve its prospects even now. The Atomic Energy Commission has shown how such a systematic organisation of promotion prospects can draw the best brains to scientific work. We should try the same in agricultural work as well.

To my friends in research, I would like to say this. The country expects them to take a full-blooded part in the national task of development. We recognise that they hold the keys to a future of abundance and prosperity. There is, however, in our minds an impression that very often schemes for research are put forward without a sense of purpose. One hears that a committee is presently engaged in cataloguing the number of schemes, some of them in overlapping areas, undertaken in different parts of the country. A coordinated approach is absolutely essential and can prove very useful as it has done in the case of maize. The research scientists of India should themselves turn the light inwards and see how best they can use our limited resources to the maximum advantage. I hope and trust that in the new structure of organisation of agricultural research, this objective will be kept in mind.

Another objective I would place before our research workers is this. All our research programmes should be so framed that they can solve well-defined problems within specified time limits. One hears these days of scientific projects designed to take Men to the Moon within a particular time limit. I know that plants and trees do not quite lend themselves to such programming. But, we can surely plan on approximate time targets for achieving specific research aims. It should for instance be possible to take on a challenge like the new and largely unknown disease condition in rice, which is threatening rice cultivation in parts of Bihar and UP and study it thoroughly within a span of one or two years and standardise measures. Of course, this is possible only if we give our research workers all the necessary encouragement and resources needed for this purpose. This has to be done.

Equally important, we should give agricultural scientist a higher status and recognition. The resource that we set apart for research work should be commensurate with its tremendous potential. For instance, I heard that in one of our biggest States, we have just one scientist to deal with the problems of breeding in wheat, barley and potato. Out of such miserliness we cannot surely bring about a new scientific era in agriculture.

Then there is the other question whether research workers themselves should do the extension work. While it is important that research workers are aware of the problems faced by the farmers and also orient their work largely towards the solution of the day-to-day problems of the farmers, it is clear from the tempo of modern research activity that it is not possible for one individual to be both a scientist as well as an extension agent. I understand even in one branch of science like agricultural chemistry the number of scientific publications which are coming out

from all over the world is so huge that even if one were to spend all one's time in the library one would still not be able to cover in one year the literature published in the first two months of the year. It is hence essential that the research workers are left completely free to do their job and steps taken to streamline the extension agencies in such a way that they they will be very effective. Extension workers should be naturally well conversant with production techniques. They must be able to demonstrate what they advocate. Otherwise, their advice will not be heeded. There is much scope in this field for effecting improvements. The improvements have to come probably in two directions; first, the extension staff should receive periodic training in our research Institutes so that they get themselves up-to-date with the work being done. Secondly, the standard of education in our agricultural colleges should be considerably improved and procedures such as those in vogue at the Agricultural Universities in some countries in Europe like the Netherlands whereby students in agricultural colleges spend at least six months working with farmers before they become eligible to get their degrees could be introduced. While introducing such measures, it is necessary to ensure that they do not degenerate into merely procedural requirements but serve the purpose for which they are introduced. We can assign a group of 30-40 students to a specific village for an entire crop season during the last year of their formal education and assess their performance on the basis of a specific achievement. It is the view of most of our senior scientists that the standards in our agricultural colleges are declining rapidly. Unless we can improve this situation, I am afraid it will not be possible to get the right type of men both for research and extension. Urgent steps are needed to examine how best and how fast the educational standards in agricultural colleges can be raised to the level needed for the alumni of these institutions to have an impact on agricultural development in the country.

So I come back to where I began. We have to change our attitudes to scientific work in agriculture, give it more resources and translate its results more expeditiously into action at the farm level. It is against this background that we have to consider current proposals to reorganise the Indian Council of Agricultural Research. I have already referred to the expert team which had gone into this problem already and submitted a report.

The first major change we are visualising is to make the Indian Council of Agricultural Research a functional, technically competent, and comprehensive organisation.

In the new set up, the various research Institutes like the I.A.R.I., I.V.R.I. R.R.I. and the N.D.R.I. which are now governmentally run, will come directly under the Council. At the same time, out of these institutes, the more important ones will be declared to be Institutes of national importance and given substantially more autonomy, than they enjoy now. The reorganised council will function as a direct coordinating agency for the work done by the commodity committees. The commodity committees may have performed useful functions in earlier years when the scope of work was smaller. But the nature of research problems cannot always be segregated commodity-wise. A whole series of related questions arise for cotton, oilseeds and millets for instance. The present set up and procedures of separate commodity committee leads to a considerable wastage of scarce equipment and scarce manpower. Therefore, there is a proposal under consideration to bring these institutions under the reorganised Council of Agricultural Research.

In its new responsibilities, it is our desire that the Council should receive the highest technical direction. We have, therefore, proposed that the Chief Executive

of the I.C.A.R. shall be a scientist of repute. He will be designated as the Director General of Agricultural Research. Correspondingly, the Governing Body will also be composed of technically qualified scientists and a few agricultural administrators. In order to preserve the links with States, we propose to have a central advisory council on agricultural research and other allied matters on which all States will be represented. This body will advise Government on general policy regarding agricultural research, development, extension etc.

I have presented a brief picture of the changes which we have under consideration. I welcome the comments of members present here.

In the new set up, it is our hope that Agricultural research will be pervaded by a spirit and dynamism and agricultural scientists will be given a new status and encouragement. Research has ultimately to serve the national purpose of breaking through poverty and achieving abundance. It is the proud privilege of this generation to undertake these challenging tasks and it shall be our endeavour to pass on to the coming generation a strong and overgrowing agricultural economy.

Companies Act Amendment Bill 1964

The following Bills were introduced in Lok Sabha on the 7th September, 1964:—

Bill No. 53 of 1964

A Bill further to amend the Companies Act, 1956.

Be it enacted by Parliament in the Fifteenth Year of the Republic of India as follows:—

1. This Act may be called the Companies (Amendment) Act, 1964.

2. After section 635A of the Companies Act, 1956, the following sub-heading and section shall be inserted, namely:—

“Temporary Protection of Employees

635B. (1) If—

(a) during the course of any investigation of the affairs and other matters of or relating to a company, body or person under section 235, section 237 or section 239 or of the membership and other matters of or relating to a company, or the ownership of shares in or debentures of a company or body corporate, or the affairs and other matters of or relating to a company, body or person, under section 247, section 248 or section 249; or

(b) during the pendency of any proceeding against any per-

son concerned in the conduct and management of the affairs of a company under Chapter IVA of Part VI,

such company, body or person proposes—

(i) to discharge, or

(ii) to punish, whether by dismissal, removal, reduction in rank or otherwise,

any employee, the company, body or person, as the case may be, shall send by post to the Company Law Board previous intimation in writing of the action proposed against the employee and if the Company Law Board has any objection to the action proposed, it shall send by post notice thereof in writing to the company, body or person concerned.

(2) If the company, body or person concerned does not receive within thirty days of the sending of the previous intimation of the action proposed against the employee, any notice of the objection from the Company Law Board, then and only then, the company, body or person concerned may proceed to take against the employee the action proposed.

(3) If the company, body or person concerned is dissatisfied with the objection raised by the

Company Law Board, it may, within thirty days of the receipt of the notice of the objection, prefer an appeal to the Tribunal in the prescribed manner and on payment of the prescribed fee.

(4) The decision of the Tribunal on such appeal shall be final and be binding on the Company Law Board and on the company, body or person concerned.

(5) For the removal of doubt, it is hereby declared that the provisions of this section shall have effect without prejudice to the provisions of any other law for the time being in force.”

3. (1) The Companies (Amendment) Ordinance, 1964 is hereby repealed.

(2) Notwithstanding such repeal, any thing done or any action taken under the said Ordinance shall be deemed to have been done or taken under this Act, as if this Act had commenced on the 5th day of July, 1964.

STATEMENT OF OBJECTS AND REASONS

Investigations of the affairs, true ownership and other related matters, of companies cannot be effectively conducted unless there is full disclosure by their employees of factual information in regard to various matters to be scrutinised by the Inspectors appointed by the Central Government. In order to give to the employees of the affected companies temporary protection against victimisation in such cases it has been considered necessary to make a suitable provision in the Companies Act that no company can discharge or take any other action against any of its employees during the investigation of its affairs and true ownership, etc., by Inspectors or during the pendency of proceedings against any of its managerial personnel before the Tribunal, unless it has given previous intimation to the Company Law Board of the proposed action against the employees and the Company Law Board has not raised any objection to such action.

As it was apprehended that some of the companies whose affairs were under investigation might take action against their employees if they disclosed full information to the Inspectors, the amendment of the Companies Act on the lines indicated above was considered to be a matter of extreme urgency and the Companies (Amendment) Ordinance, 1964 was therefore, promulgated by the President on the 5th July, 1964. The present Bill seeks to replace the said Ordinance without any modification in the provisions thereof.

T. T. KRISHNAMACHARI
New Delhi;
The 13th August, 1964.

NOTE: Annual figures are averages of months; those of sugar relate to crop years.

†Data of Matches, Hurricane Lanterns, Sewing Machines and Bicycles from January 1963 onwards and those of Footwear (leather) from April 1963 relate to units having fixed assets of Rs 5 lakhs and more.

‡Data in respect of certain units are not included from January to May 1963.

(1) Monthly figures are exclusive of production in Punjab (Kangra) and Himachal Pradesh.

(2) Relating to the production by mills in the membership of Indian Jute Mills' Association and to one non-member mill.

(3) Includes canvas.

(4) Figures relate to stable variety only from June 1962.

(5) Including figures for Jammu and Kashmir.

(6) Figures relate to production of organised factories.

(7) Boxes are of 80 sticks each upto February 1961 and thereafter of 50 sticks each.

(8) Total of viscose yarn, staple fibre, acetate yarn and cellophane.

†From January except in the case of sugar where the figures are progressive from November of the preceding year, the crop year being November—October.

*Provisional.

NESTLER 'Package' Boilers ensure continuous supply of steam for industrial uses

Textile, Chemical and Pharmaceutical Industries, laundries and dry cleaners, dairies and food process-
sors, paper and rubber manufacturers have found
that NESTLER 'Package' Boilers provide abundant,
continuous steam at an economical rate.

The NESTLER 'Package' steam boiler integrates
various components—boiler, burner, controls, feed
water pumps, etc.—into one compact, factory-
assembled-and-tested unit. Clean and efficient in
working, every NESTLER Boiler gives outstanding
performance and operating convenience.

The NESTLER 'Package' Boiler is a self-contained
unit mounted on its own base plate and requires no
expensive foundation and pipe work. NESTLER
'Package' Boilers are manufactured to Indian Boiler
Regulations.

NESTLER's Warranty against manufacturing defects
covers a period of one year.

NESTLER 'Package' Boiler range: 1290 to 20,000 lbs.
per hour at 100 to 200 p.s.i. from and at 212°F;
suitable for oil-firing.

Write for illustrated technical literature.

Salem Steel—I

THE recent changes in the prospects of Bokaro Steel project have been sufficiently frequent and striking to monopolise public attention to the exclusion of other schemes, which have in the main been regarded as only supplementary to the big step by which alone the steel requirements of the immediate future in this rapidly developing country can be met. Only on this basis can one understand the general indifference to the Salem steel project which the lay as well as the more informed public has displayed not only in the North but also in the South. Even the entry of Soviet Russia into the picture of the future of Bokaro would be insufficient to explain the tepid interest in Salem steel, since the developments in regard to the latter will be found on a closer view to be, if anything, more sensational than those regarding Bokaro. In the case of the mammoth steel project of the north, the changes have not been of a primarily technical character. On the other hand, interest has centered round the waverings of the foreign nations whose collaboration seemed at one stage or another to be a certainty warranting further thought on the progress of the proposed project on that assumption. Our experience of foreign collaboration in big steel units is wide enough to support the belief that advanced industrial nations, who had not come in the past, would welcome the opportunity to be associated in the new projects as they come up. Likewise, it might not be unreasonable to suppose that no nation which had collaborated in one project in the past would be ready to court further commitments of the same kind in the future. The course of negotiations in regard to Bokaro has belied both these assumptions. And the public is interested in watching how soon the Russians would be able to carry the fresh investigations which they consider it necessary to carry out on top of what has been done by the Indian consultants.

All this is understandable. What is surprising is that those who are so keenly watching the progress of the Bokaro project seem so insensitive to the fact that, ambitious as it is, Bokaro, when it goes into production, will be meeting only about a half of our additional requirements of steel in the fourth plan period. Even more important is the fact that the programme of expanding the capacity of the existing steel units in the public as well as the private sectors is by no means assured of smooth and rapid progress and that this fact alone argues for more attention being paid to the other potential sources of steel supply

within the country. We cannot possibly suffer from a glut of steel for a few decades at least. And, however much we may develop all available sources, we shall not have enough. Which means that no steel project can be too big, and no steel project can be too small, to merit the attention of the Government and the nation as a whole. It also follows from the present position that there can be no conflict between any two steel projects and no question of priority other than what is raised by the work done or neglected and the consequent expectations of relatively early or late returns.

Judged in the light of these simple facts indifference towards Salem steel is, to be charitable towards those concerned, altogether inexplicable. There can be no question about sufficient work having been done on the Salem steel unit to justify its being taken up actively without any reference to the "rival" projects of Vishakapatnam or Hospet. In fact, they are in no sense rivals to Salem. Little preliminary work has been done on these two. Neither of them can have any of the special features with which the Salem project has been invested. The Salem unit can be big or small as we choose. As the project has been worked up, it can have an initial capacity of 500,000 tons and be capable at the same time of expansion to a capacity of 3 million tons. It can be devoted to the manufacture of special steels which have so far been neglected and which are very much needed by the small and medium scale industries for working to their full capacity. Both in initial construction and in subsequent working, the Salem steel unit as conceived now has economics which are not open to others. Our experience of the three public sector units imposing heavy strain on our transport resources, in spite of the special construction of railway lines should make us hail with delight any new project which will neither impose such strain nor call for special new construction of railway lines.

Above all, Salem steel is a necessary complement of the mining of Neyveli Lignite. Together, they hold the sure prospect of rapid industrialisation of an area to which industrialisation would otherwise be an idle dream. Here we have for the first time an opportunity to attempt regional development, without subordinating the ordinary economic considerations, which should weigh with economic policy makers, either to the pressures of parochial interests or to the promptings of mere national sentiment. It is worth

reminding ourselves in this context that Salem steel, like Neyveli lignite, had long remained, despite obvious attractions, projects of but dubious economic character. In both cases, the natural resources had no ingrained economy in them. Commercial exploitation and economic utilisation of the resources depended on technical and other developments such as could create a set-up in which the large scale investments required would in a total view be seen to be fully worth while. A study of the working of the Neyveli Lignite Corporation would show that, but for the large scale on which it is worked, the power it generates, the fertilisers that it will produce and the amenities that it will provide for the people, Neyveli lignite could by no stretch of imagination be classed as a valuable natural resource. Even today when it is the mainstay of the electric grid in Madras State, the economic character of the Neyveli project, according to the strictly orthodox canons, is by no means indisputable. It is only when the fullest and the most scientific utilisation of the lignite resources is effected that the mammoth investment in Neyveli can be regarded as economic.

This line of thinking is essential for adopting a proper attitude to Salem steel. Iron ore in Salem is as old as this sub-continent. In the past, people had been utilising the ore for manufacture of iron and steel on a competitive basis. Salem steel products had been exported and sold abroad till the progress of productive techniques elsewhere had made the crude manufacturing methods of the time altogether uneconomic. But the idea of utilising Salem iron ore for steel manufacture was never abandoned. Entrepreneurs grappled as best as they could with the problem of making iron and steel with charcoal as fuel, and failed to make a success of their venture without feeling obliged to admit that charcoal was unsuitable or that it could not be found in sufficient quantities. Yet fuel is the crux of the problem of steel manufacture in an area so far removed from the coal fields. And only to a less extent was the problem raised by the low iron content of the ore.

These problems had to be considered in the setting of a more modern age. Now the Neyveli mines have been opened up. The techniques of steel production have developed new facets. The demand for steel in the South and generally over the country as a whole has increased, is increasing and will continue to increase. Savings in the matter of transport are very great. The economics of steel production in Salem has already changed beyond recognition. It is this new picture that the public and the Government have to take into account, though ideas imbibed from a dead past are not easily shed. It will be the purpose of the next two articles in this series to set out, in the first instance, the history of Salem steel in the past to the extent it can illuminate the problems of the present, and secondly, to show where and how the new economic advantages emerge.

REGIONAL BALANCE

NDC Must Give A Lead

THE National Development Council will be meeting next week to decide the strategy that should be adopted during the fourth plan period. It was reported last week that the

Cabinet had approved the preliminary memorandum, prepared by the Planning Commission for the consideration of the NDC, which sets out the basic objectives, the possible range of total outlay and the broad sectoral allocations. A total outlay of not less than Rs 21,500 crores, which would involve raising of additional resources to the tune of Rs 3000 crores, has been proposed. It has also been suggested that the outlay may be stepped up by another thousand crores, if the performance of the economy during the first half of the Plan period increases the availability of resources to the extent required. The strategy of planning that is adopted will itself determine whether the additional resources would, in fact, be forthcoming. The expectation that resources above the level at present envisaged would become available, as the Plan is progressively implemented, implies that effort would be concentrated in the initial two years on quick-yielding schemes and on the expeditious completion of projects which had been taken up in the Third Plan and continue into the Fourth. Such a strategy is also indicated by the over-riding necessity to maintain the stability of prices.

Apart from determining the magnitudes of total and sectoral outlays and laying down the broad strategy that should be pursued for attainment of plan objectives including a rate of growth of 6.5%, the NDC will also have to give a clear direction regarding the priority that should be assigned to the achievement of regional balance while drawing up the Fourth Plan programmes. The earlier Plans had placed considerable emphasis on this aspect of planned development, though the gap between the expectations that were raised and actual achievements remains as wide as in the case of other facets of plan implementation. The Second Plan had clearly laid down the principle that, in the location of new projects whether in the public or private sectors, consideration should be given to the need for developing a balanced economy in different parts of the country, and, particularly, when location of an industry was not determined almost entirely by availability of raw materials or other natural resources. The possibilities of regional dispersal were discussed at length in a separate chapter in the Third Plan report. While it was recognised that location of new units or additional capacities in basic industries, as well as in the case of export-oriented industries, has to be governed by technical and economic considerations, the general approach, it was reiterated, should be to avoid further concentration of industrial activity in areas where considerable development had already taken place and that, as far as possible, care should be taken to set up new industries away from large and congested cities. The NDC will have to give a clear lead how far this approach will continue to determine the contours of development during the Fourth Plan.

Recent thinking on this subject at the policy making levels appears to indicate a weakening of the commitment to policy of development which is designed primarily with a view to achievement of regional balance. The importance of what are broadly described as economic considerations is emphasised in different contexts. The problem arises mainly in connexion with the location of large industrial projects, especially in the public sector. While there are instances where the existence of large industries have not enabled the surrounding region to get

out of its traditional depressed status, it cannot be denied that, under an integrated system of planning, large industries can be made to serve as the spearhead of general economic development. It has been realised that, on the national scale, it would not be a practical approach to plan for development of small and medium industry, or of agriculture, without a corresponding development of large and heavy industry. In a country of the dimensions of India, similar considerations are also applicable to the development of different, distinct regions within the country.

The policies that are adopted in order to even out regional disparities in industrial development must be based on appraisal of the actual position in regard to economic trends, rates of growth and industrial patterns in different regions. The Third Plan had stressed the need for continuous study of these aspects for the formulation of relevant programmes. If such studies have in fact been carried out, either in the Planning Commission or by other agencies, it is not clear why the results, which are particularly relevant to the consideration of Fourth Plan programmes, have not been made available for the public's enlightenment. In the meantime, a study carried out by the National Council of Applied Economic Research draws attention to the variations in the industrial patterns that have developed in different regions. The data assembled by the survey present a pretty poser for the National Development Council. The low Output-Employment coefficient in States like Kerala and Andhra Pradesh, where labour-intensive industries make the largest contribution to total manufacturing output, is one of the most significant findings of the survey.

Mr Wilson Presents His Points

APART FROM the Labour Party manifesto, which set out the hope for a new flourishing Britain able to improve its rate of economic growth, there appeared recently a book entitled 'Purpose in Politics'. This contains speeches made by Mr Wilson in the House of Commons and at Labour party gatherings in addition to newspaper articles which conveyed to American readers particularly the specific aims and intentions of the British Socialist party. It is still well to remember that British socialism does not owe much to Marx but a great deal to the Fabian Society whose recommendations have been translated into policy by the Labour party.

Mr Wilson's book (published by Weidenfeld & Nicholson, London at 30sh.) requires careful reading because Mr Wilson has achieved a position that enables him to look before and after. The current socialist aim is fairly simple—to extend opportunities for the under privileged and to give a liberal shape to the programme of aid to backward countries. Mr Wilson's complaint against the Tory Party is that it attempted less than what seemed possible in the Fifties and did not work actively for peace and progress. It toyed with the idea of disarmament and attempted to produce an independent nuclear weapon even though American aid to Europe is assured by treaties and engagements.

Some may even conjecture that Mr Wilson's earlier ideas have undergone a change and he is prepared to accept weapons in place of dollars, just because he feels that the attack

on poverty at home and abroad is more important. To link Mr Lyndon Johnson's campaign against poverty in the USA leading to the persistence of the submerged tenth is perhaps easy but it must be noted that Mr Wilson's ideas are connected with specific problems like the balance of payments, strained by the faltering export trade and the fluctuations in interest rates that seem to handicap essential trades and industry.

Mr Wilson who has visited Moscow several times, is a believer in co-existence. He recognises the value of Russian achievements and accepts the close connection between educational advance and technological achievements.

He is only eager that in England the class structure of education should be modified further and greater opportunities for promising people should be made available. The Robbins Report and other documents have made it clear that intelligence is even more important than affluence and the export of skill is as important as the export of goods for a country in the position of Great Britain. The incentives for a new industrial order so must come from a redistributed tax burden so that the rich are compelled to pay more and the poor enabled to achieve the comfort required for higher efficiency. Mr Wilson's views on the Common Market are not those of Mr Heath or Mr Macmillan. He definitely prefers greater ties with the Commonwealth than with Europe. And he is easily reconciled to the failure recorded at Brussels last year.

He feels that primary producers should get good prices for their exports and that developed countries should import more from developing countries in order to help their new and growing industries. This view too is suggestive of 19th century Radicals upto a point. But distinctive is his plea for restraint of capitalism. The profits derived from speculation and the large gains made before and after company amalgamations seem to escape taxation, and Mr Wilson thinks that capital gains should be taxed heavily. He is also positive that a discriminatory tax on profits above a certain level and distributed to shareholders is justifiable today, on every count. Of course, to help export trade, he is quite prepared to consider exemptions and reliefs, just as in the case of extra depreciation required for new investment warranted by technical progress. But he is certainly not friendly to the rentier and his whole point is that big money has been snatched away by those who have dealt in real property over the recent years. What should have gone to the community at large has been salted away by the fortunate few. About aid to Asia and Africa for the improvement of agriculture and industry Mr Wilson's ideas are clearly those associated with the UK Labour party which believes that helping others is one way of helping oneself.

Mr Wilson has advocated more conscientious and generous actions in the field. In his words, "We are going to establish a full scale Ministry of Overseas Development with a minister of cabinet rank to join with the Ministry of Science in mobilising Britain's scientific wealth for the task of creating not the means of human destruction, but the munitions of peace."

Mr Wilson's plea for essential investment in approved industries implies cheaper credit. But he is also in favour of penal rates of interest for non-essential borrowing. In the debate on the Radcliffe Report he intervened to point out that competition for credit must

be applied along with a system of special deposits so as to offset a rise in bank deposits that might encourage more frequent and eager borrowing. Tight control by the Treasury over the banking system is considered necessary and inevitable, though Mr Wilson is entirely in favour of reducing the difficulties of exporters and encouraging them to enlarge trade with the Communist countries whose requirements of machinery will go up along with the domestic standard of living.

Mr Wilson certainly believes in peace by economics and has been convinced that only by cutting down defence outlays, reducing overseas bases and limiting nuclear ambitions can Britain hope to get up steam for economic expansion. Mr Wilson too believes in growth even for an advanced country and he believes also in planning by a system of regulation—of investment and trade even while facilities for expansion are reinstated. In Mr Wilson's opinion Tory policy marked by fluctuations has failed to restore the impulse for progress and the need for change was only emphasised by the experience of the past year.

Mr Wilson's objections to apartheid are by no means formal. He sees in the new Commonwealth, with its new members ranging from a country like India to an island like Malta, the fulfilment of Britain's manifest destiny. From the speeches can be drawn inferences about the Labour Party's programme-control over road haulage including private carriers in order to restore financial health to British railways, is certainly contemplated. Stiff taxation or acquisition of urban sites in order to keep down land values is within the bounds of possibility. The elimination of restrictive trade practices by putting teeth soon into the Monopolies Act is not ruled out and so far as one can see from Mr Wilson's book his idea of a brave, new Britain is consistent with high taxation of profits and unearned incomes and concentration on essential industries like shipbuilding and chemical engineering rather than the manufacture of television sets and washing machines. That Mr Wilson is anti-capitalist is no accident. His academic connections and experience at Oxford, even more than his experience of office in the post-war cabinet, have made him conscious of stirrings from below. And the need to remove present discontents by a precise exposition of his political and economic faith is recognised by an articulate politician.

South Indian Notes

Scepticism about the practical value of community development schemes may now be tempered by knowledge of what has been set afoot in the Tiruchi district, Madras State. Welfare in rural areas and perhaps to a slightly lesser extent in urban in this country depends to a greater extent than is supposed on the care and diligence with which the villagers can be persuaded and enthused to carry on the production of the ordinary stark necessities of life like vegetables, milk and milk products. Doubtless, it is not as easy as it sounds. A lot of technical advice and assistance will be needed from the departments concerned. But the advice will never be sought so long as the work is not begun under proper auspices. It appears now that in Tiruchi District 'mathar sangams' or women's associations are formed to promote

the production of vegetables by private individuals as well as co-operatives. Such has now been set afoot. Wells have been sunk and manuring carried out in the light of scientific soil analyses. Seeds and pesticides have been supplied. Though it is too early to appraise the result, there is no reason to doubt the success of these efforts. In the suburban areas of Madras city special efforts were made to step up the production of vegetables and they resulted in a remarkable change in the supply position, though the drop in prices was, as may be expected, less pronounced. But even the negative advantage of preventing a continued rise in the high prices was enough for people to feel grateful about. Such schemes can be worked in every nook and corner of the country without any large outlay of public funds or indefinite waiting for returns and with the rare and exceptional advantage of a favourable impact on costs of living.

An event of some importance in the light of the general record of the public sector undertakings is the switching into production of the fourth plant of the Hindustan Machine Tools at the beginning of this month at Kalamassery, six miles off Ernakulam. It is a Rs 7.75 crore unit designed to produce machine tools of the lathe family. The notable feature of it is that it is the second of its kind to be financed entirely from the internal resources of the HMT and it was designed, built, not to speak of working, entirely by Indian personnel without any semblance of foreign collaboration. Besides the watch factory, the HMT can now claim to have three factories in operation. A record that can shine without the foil of other public sector units to set it off!

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

Notes of the week

MONDAY
TUESDAY
WEDNESDAY
THURSDAY

BANK RETURNS

Impact of the Pujas

BEGINNING of the month demand for funds and disbursements connected with the Pujas in West Bengal are seen fully to have made their impress upon the latest banking returns.

According to the returns of the Reserve Bank for 9 October, Active Note circulation rose steeply by Rs 65.08 crores to Rs 2,435.36 crores, and there was also outflow of Rupee Coin in the rather large amount of Rs 3.68 crores. With Foreign Securities unchanged, currency was expanded against Rupee Securities for Rs 50 crores, raising holdings in the Issue Department to a level of Rs 2,136.30 crores. As such, the Reserve Bank's cash in the till was also drawn down by Rs 18.77 crores to Rs 10.02 crores.

In the following week, there was a further but small rise of Rs 2.57 crores to Rs 2,437.93 crores in Active Note circulation, as also a further small outflow of Rupee Coin in an amount of Rs 0.15 crore. Foreign Securities were again unaltered, and Rupee Securities showed a marginal change. In the result, notes held declined by Rs 2.89 crores more to Rs 7.13 crores.

In the week ended 9 October, Investments in the Banking Department rose by Rs 30 crores to Rs 107.53 crores; it would thus appear that the Centre resorted to deficit financing for around Rs 80 crores; and on top of such recourse to created money, the Centre's balances dropped by Rs 24.68 crores to Rs 51.24 crores. That the Centre's need of cash was considerable, there can be no doubt; but there is no evidence of any substantial payments being made to the States. However, it may be noted that the Reserve Bank's portfolio of Treasury Bills purchased and discounted fell by Rs 48 crores, and so the inference is that the bulk of deficit financing incurred was of a countervailing nature to replace maturities of Treasury Bills held by the Reserve Bank. There was little change in the position of State Governments, whose

balances declined slightly by Rs 1.58 crores to Rs 13.20 crores and whose borrowings rose by Rs 2.12 crores to Rs 37.34 crores.

In the next week, Investments were more or less unchanged. The Centre improved its balances by Rs 2.89 crores to Rs 54.13 crores. The States for their part also registered an increase of Rs 2.46 crores to Rs 15.66 crores in their Deposits, though their borrowings again rose by Rs 1.95 crores to Rs 39.29 crores. However, the rise of a little over Rs 25 crores to Rs 194.86 crores in the Reserve Bank's holdings of Treasury Bills purchased and discounted may relate to the States in this wise replenishing their balances.

Reserve Balances of Scheduled Banks fell by Rs 6.52 crores to Rs 96.78 crores before recovering by Rs 12.70 crores to Rs 109.48 crores in the week ended 16 October; their borrowings, however, showed successive rises of Rs 1.36 crores and Rs 2.03 crores to stand at a level of Rs 3.99 crores. Thus, it would appear that banks were able to take well in their stride the pressures they had been subjected to as a result of the coincidence of month-early and Puja disbursements.

It remains to add that Balances Held Abroad, after declining by Rs 1.51 crores, improved fractionally by Rs 0.29 crore to Rs 9.13 crores as at 16 October.

The return of the State Bank for 9 October recorded an improvement of Rs 3.05 crores to Rs 669.28 crores in Deposits, whereas in the following week such accruals were more than lost as Deposits fell by Rs 4.84 crores to Rs 664.34 crores. Similarly, the total of Advances declined by Rs 1.86 crores, but then in the latest week rose by Rs 1.72 crores to be placed at Rs 329.30 crores. Giltedged has been successively sold in amounts of Rs 6 crores and Rs 4 crores, and the portfolio as at 16 October is shown at Rs 290.60 crores. However, the fact that Other Assets have risen by Rs 9 crores, and then again by Rs 13 crores to very nearly Rs 60 crores would suggest that the State Bank will soon be a purchaser of securities through the Reserve Bank

tap. Cash balances, after being more or less unchanged, fell in the latest week by Rs 11.92 crores to Rs 22.18 crores.

The improving trend in Deposits of Scheduled Banks was halted in the first two returns for October, owing no doubt to draws on their balances by constituents for meeting Puja and month-early payments, and such draws have offset any new inflow. It would appear that changes in classification of very short-term Deposits are responsible for a switch-over from Time to Demand Deposits in the weeks ended 2 and 9 October. For net Demand Deposits have shown two increase of Rs 7.38 crores and Rs 14.62 crores to Rs 1,293.77 crores as at 9 October, whereas over the same two weeks net Time Deposits declined by Rs 14.15 crores and Rs 16.01 crores to Rs 1,401.90 crores. It may be added that if the figures of the State Bank are to be taken into account, the other Scheduled Banks suffered a small decline in Deposits during the earlier week, and this was more or less offset by a small net accrual in the latest week. The special demands of the period under review caused expansion of bank credit by Rs 10.35 crores, and then again by Rs 2.11 crores, so that the total of Advances as at 9 October was shown at Rs 1,730.78 crores. Strangely enough, in the week ended 2 October, giltedged was acquired for Rs 15½ crores, the share attributable to the State Bank being Rs 4½ crores; in the following week, however, the portfolio recorded a fall of Rs 2.89 crores (wholly on account of the State Bank) to Rs 827.64 crores. The pressure upon them also induced Scheduled Banks to borrow more from the State Bank, the relative figure rising by Rs 5.61 crores, and then further by Rs 2.18 crores during the week ended 9 October, to stand at a rather high level of Rs 38.72 crores. Indebtedness to the Reserve Bank fell slightly by Rs 0.25 crore before rising by Rs 0.65 crore to Rs 1.91 crores. It remains to add, finally, that cash balances, including money at call and short notice, fell by Rs 11.92 crores to Rs 246.94 crores before recovering by Rs 2.04 crores to Rs 248.98 crores.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 20 October, 1964. Total amount offered was Rs 4,00,00,000. Tenders at Rs 99.375 per cent were allotted 50 per cent. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.500 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 26 October, 1964. Successful tenderers should make payment on Friday, 30 October, 1964 at all centres. Other conditions are as usual.

RAILWAYS

Rationalisation of Traffic Pattern

The need for early steps to rationalize the structure of railway freights is highlighted by the Study of the Transport Requirements of the Iron & Steel Belt which has been carried out by NCAER. Such a rationalisation, the Study indicates, will remove some obstacles in the way of rail-road co-ordination and make for optimum utilization of available transport facilities. Based on original plan projections of railway traffic, "originating tons" in the Iron & Steel Belt are expected to increase from 76 million tons in 1970-71, to 161 million tons in 1965-66 and to 264 million tons in 1970-71, indicating rates of growth of 113 and 64 per cent in two succeeding five year periods. These estimates may have to be scaled down in the light of the level of traffic envisaged after the mid-term appraisal, but the general trend is unmistakable, that the Railways will have to deal with a hefty increase in the volume of traffic originating in this region during the Fourth Five Year Plan.

There is no doubt that the Railways in the past had done a splendid job, though the public naturally are made more keenly aware of the drawbacks, particularly, in regard to passenger traffic. Statistics of 'net tonnes' per 'wagon day' or 'engine day' which attest to a steady improvement in performance, can be assessed only by specialists in railway operations and, according to them, further improvement will depend on the success achieved in eliminating delays caused by slow wagon turn-round, comparatively short leads of goods traffic, low average speed of goods trains, long periods of detentions in marshalling yards which are generally longer than the running times etc. The time lost on each of these counts, and all of them, is determined by the type of goods that are carried. A change in the pattern of railway traffic must, therefore, be brought about if the railways are to make the maximum contribution to economic development.

Operational efficiency could be substantially improved if the railways are mainly utilized for transport of heavy and bulky commodities, in full trainloads, over long leads. The Council has recommended that the system of block rakes which has been adopted with considerable difficulty in respect of coal should be extended to iron and steel as well. It is also suggested that the railways should introduce multiple cars and train load freight rates for the movement of coal, iron and steel and that railway transport should be limited to important distribution centres where warehouses should be built up, and that from these points the road system might take over the further distribution of these products. To facilitate the change the Council has recommended that the railway should take early steps to revise the rates for "smalls," so that a more rational distribution of traffic between railways and road services might be effected. This will release railway capacity for the operational efficiency which will be reflected in railway finances. The diversion of traffic in "smalls," now carried by railways, will however call for radical improvement of roads and road transport which are in a very poor state in this strategic region.

FOODGRAINS

Standard Prices

The official notification regarding standard prices for paddy and rice is not exactly a Puja present though the scheme is meant to favour both producer and consumer. Since bajra and wheat prices are brought within the scope of control it is clear that undue regional disparities will not prevail and the desire to export for profit will be curbed. Since the States permit variations and encourage purchase at the fixed prices the retail prices will be held reasonable though not by the trade which is inclined to recover losses due to pilferage or spoilage.

Detailed inquiries are promised: the cost of production must be ascertained so that farmers are induced to grow more. West Bengal anticipated the Centre's policy for the season and the price fixation has allowed for the rise in the price index. It is recognised that cloth, oil and other essential articles are dearer for grower and paddy prices must be left at a level that ensures a bigger crop and more assiduous cultivation when and where cash rents are paid to absentee landlords. This

implies that producers may be encouraged to hold stocks for some time after the harvest and regulate supplies to the market. Fixation of ceiling prices by reference to quality is familiar enough but one question that arises is whether the State Governments have the power to accept all the grain offered for sale because cash must be paid to millers on the spot. There is no futures trading in foodgrains and wholesalers are in no position to finance stocks found in surplus States like Madhya Pradesh or Orissa. However, the ideal of uniform prices for grain is finally accepted even if Kerala prices will be left higher obviously on account of the prevailing cost of transport to the consuming markets. Transport by rail or sea must be accorded priority as desired and the trade too must see the necessity for the capacity to compete with the official agency as buyer and seller of paddy in the future.

There is no hint of price-support and it is recognised that prices ruling in Burma or Siam mean very little to India at present and alternative grains like wheat or bajra are hard to get and the check on internal consumption will have to be found by the system of price control. Rationing by the purse is not inexpedient and the whole scheme may hinge on the effective repression of purchasing power though it is to be feared that those on the poverty line may fare badly under the scheme, if fair wages are not paid in kind. It is possible that in rural areas the return to the practice of payment of wages in kind may be encouraged and cash wages may be readily replaced by the recourse to the old pattern.

SUGAR

Small Comfort

The latest policy announcement regarding sugar evidences Government's efforts at augmenting sugar production in the country. This is understandable, for, the current season's sugar output at 2.6 million tons is far below the target of 3.3 million tons, which has set the authorities for an urgent re-thinking on this matter. With a view to locating the problems bedeviling the sugar industry, Government has appointed the Sen Commission for making a thorough probe into the affairs of the indus-

try. Naturally enough, the incentives announced last week have sprung from the interim recommendations suggested by the Commission to stimulate sugar manufacture. Though the incentives appear to be attractive, in the ultimate analysis the additional benefits that will accrue to the sugarcane growers and the industry will be infinitesimal. Even though minimum price of cane has been fixed at Rs 5.36 per quintal against the previous price of Rs 4.96, it will have little impact on the cultivators owing to the fact that the recovery level has also been stepped up by 1 per cent to 10.4 per cent. However, the farmers are guaranteed of a premium of 4 paise per quintal of cane for every 0.1 per cent of recovery exceeding the stipulated 10.4 per cent.

The decision to permit a rebate of 50 per cent in the basic excise duty on all such sugar produced during October-November this season which is in excess of sugar manufactured in the relevant period in 1962 is certainly aimed at inducing early crushing of cane by the factories. But, it should be remembered that

only very few factories will be in a position to avail of this benefit as they won't be able to crush sufficient cane to get enough advantage over the production figures in 1962. The press note released in this context states that the other recommendations of the Sen Commission regarding the fixation of ex-factory prices of sugar and the like are being considered by Government and an early announcement on them can be expected.

However, one wonders how long will the Government will indulge in this sort of ad hoc coping in lieu tackling the problem in the

real manner. It is an established fact that the sugar factories are not getting adequate cane for crushing on account of the prevailing high prices of gur. As long as the price of gur rules at the high rate as it is today, large-scale diversion of cane to the gur industry is bound to follow, which means that the flow of cane to the factories will be necessarily restricted. The urgency for ensuring adequate quantities of sugarcane to the factories, therefore, becomes incumbent. Stepping up sugarcane cultivation for catering to the needs of the factories will be of enormous help.

UK New Cabinet

Places in the new British Cabinet found for Lord Gardiner or Mr Frank Cousins indicate that the middle class and the trade union elements are nicely blended or balanced. The lawyers and professors provide ballast. The new statesmen who take office include Mr Denis Healey and others in the Shadow Cabinet. In a sense the Shadow Cabinet has now been made substantial and the Tories in Opposition may find it soon necessary to reconcile

Mr Mcleod and Mr Powell for getting them back with the front opposition bench. The ideas of Mr Callaghan about taxes may not accord with the needs of exporters but the Cabinet will attempt to push its policy through by stages. The first instalment of nationalisation under coal, civil aviation, etc. has created a large public sector already and the problem is really now one of making nationalisation pay for itself, not only under railway transport.

The importance of Labour being in earnest about steel may be a real handicap for investors in steel shares but it is well to note that the advertising directed against nationalisation has failed to get results. The labour situation in Wales may be more favourable but steel must be made cheaper to help motor car exports and machinery exports. Subsidies may be needed for pipes and tubes because integration in Western Europe has made British Steel less competitive. A consequence of the change in government may be that the eagerness of US interests to get into British industry may wane and the essential mistrust of take-over bids may extend to foreign capital also. The Labour party's professions and practice might lead to the tight control of monopoly so that limited scope for the big rayon-makers to expand into cotton may be foreseen. The vertical concentration seen in the textile industry may continue for the sake of exports but the ambition of British firms to expand overseas interests in local manufacturing establishments may also be curbed. The prediction possible from the inclusion of a Crossman and a Cousins in the new Cabinet is that the trade unions may be induced to make sacrifices in the national interest and trouble in the ports or the post office may not recur readily. Legal changes as to the Trade Unions' liability to members may be less likely and one of the consequences may be that the new London paper, *The Sun* may get a head start.

A ministry of more than average talent has been assembled quickly by Mr Harold Wilson. He has secured two scientists to help Mr Cousins in the Government. One was a Civil Service commissioner who knows what modern candidates for jobs are like. Suggestive of a desire to reinforce policy with theory is the choice of Mr Douglas Jay who thinks Socialism in practice must produce results. His own help to the new ministry of overseas development may be indirect, but Mrs Castle has a good grip on the party and the desire to help backward nations may be translated into a broadening of the Colombo Plans that covers Bhutan as well as Cambodia. The overseas civil service will be reshaped.

The selection of Sir Hugh Foot for the Foreign Office proves that his Cyprus record is a recommendation. He too has moved forward from Liberalism like his brother, Mr Dingle Foot Q. C.—well known as a Counsel in Indian Courts. But Mr Michael Foot, the sea-

green incorruptible of the Labour Party, (the original Bevanite) is not in the government because he may yet prefer the *Tribune* weekly to the loaves and fishes. The appointments made suggest that Mr Wilson is hoping for a long stay in 10 Downing Street though his party will need the Liberal votes to help over the stiles set up by the Tories who will perhaps elect a new leader in place of Sir Alec Douglas-Home—who will find a place with Addington and Aberdeen among forgotten Prime Ministers. Mr Wilson, of course, will not be the first middle class Premier but he will be the first to run Britain as a business—not for glory or gain but for putting her soon back among the top three nations in Europe by precise planning for economic stability.

CHINA

Growing Menace

The speculation concerning China's initial success in nuclear weapon output has left it open to India to think less of the early settlement of the frontier dispute than of the danger to Asia. That the Chinese used Sinkiang for the purpose of the explosion proves that Central Asia is the pivot of power—for China, not for Russia. The impression made on Afghanistan or Outer Mongolia may not be great or immediate, but it must be noted that Japan may not be unwilling to make bombs in future on her own account. She may, however, try to reach an early accord with China for the sake of more trade and a pact for sale of fertilizers to China in exchange for coal and iron ore may pave the way for a treaty that takes note of the postwar changes in both countries.

In S. E. Asia Chinese prestige and power may be advanced easily and the upset in the Kremlin may suit Chinese aims. France may press her case for neutralisation in Vietnam and the USA may find that her policy of relying on arms is fated to failure. The Indian Communist Party is split and it is not likely to derive much encouragement, but it is bound to argue that negotiations with China must be undertaken because the loss of Aksai Chin is permanent. Pakistan may feel content with the treaty made with China because the Soviet-Chinese rift is no longer a serious factor. And if the election campaign in Pakistan affects policy F. M. Ayub may find an opportunity to affirm again faith in China's purpose in Asia. The world situation after the new October revolution is calculated to confound guesses about the balance of power in Asia. It is clear that the end of both the British and Japanese empires in Asia has left Russia and China in a position to reconcile their own aims and the US influence in Asia may be confined to the fringe. The effect on Taiwan too can be guessed. The island's reunion with the mainland may be easily achieved after the end of Chiang's rule and the Chinese communists may find it

Exports Increase by 11.24 Per Cent in April-July, 1964

Exports during the first four months of 1964-65 have registered an improvement of over Rs 27 crores as compared with the relative figures for the relevant period of the previous year. The performance has been better almost in every Section of exports, with the sole exception of Animal and Vegetable oils and fats which are drawn down by Rs 4.30 crores at Rs 3.23 crores. Significant improvements are shown by the following:

Food, up by Rs 7.41 crores at Rs 75.54 crores, on account of a rise in exports of fruits and vegetables which accounted for earnings of Rs 12.40 crores against Rs 9.90 crores, higher exports of coffee, tea, cocoa, spices and manufactures thereof to Rs 34.30 from Rs 30.11 crores and an improvement in exports of feeding stuff for animals (not including unmilled cereals) to Rs 12.11 crores from Rs 10.73 crores.

Crude Materials, inedible, ex-

cept fuels, marked higher by Rs 2.46 crores; responsible for this increase is the rise in exports of metalliferous ores and metal scrap to Rs 17.66 crores from Rs 15.01 crores.

Lastly, Manufactured Goods classified chiefly by material, higher by Rs 17.60 crores at Rs 113.99 crores, benefited largely by a smart spurt in exports of textile yarn, fabrics made-up articles and related products to Rs 94.66 crores from Rs 82.17 crores.

We have noted in our issue dated 10 October (see page 702) that imports during the first four months of 1964-65 were drawn down, as compared with the previous year, by Rs 52.63 crores at Rs 369.23 crores against Rs 421.86 crores. With the improvement in exports, besides, the balance of trade deficit in April-July stands substantially reduced at Rs 99.18 crores against the gap of Rs 186.09 crores in the same period in 1963.

EXPORTS	(In Rs Crores)		Change
	April to July 1964	1963	
Section 0—Food	75.54	68.13	+ 7.41
Section 1—Beverages and Tobacco ...	13.07	12.00	+ 1.07
Section 2—Crude Materials inedible, except fuels	44.82	42.36	+ 2.46
Section 3—Mineral Fuels, Lubricants and related materials	4.52	3.69	+ 0.83
Section 4—Animal and Vegetable oils and fats	3.23	7.53	— 4.30
Section 5—Chemicals	2.83	2.23	+ 0.60
Section 6—Manufactured Goods classified chiefly by materials	115.99	98.39	+ 17.60
Section 7—Machinery and Transport equipment	2.63	1.88	+ 0.75
Section 8—Miscellaneous Manufactured articles	5.97	5.40	+ 0.57
Section 9—Miscellaneous Transactions and Commodities, NES	1.45	1.16	+ 0.29
Total ALL SECTIONS	270.05	242.77	+ 27.28

better to wait for getting the island in 1970.

AFRICA

Joint Ventures

A great deal is said about the need for exporting capital to African countries. India's chance may lie in investing in joint ventures according to a trade delegation which sees the promise of Africa not in raw materials like sisal or coffee but in the creation of new industries for making consumer goods. But the customs tariff imposed now for revenue must be adjusted to encourage local ventures for the benefit of Indian capital and it must be noted that industrialisation in East Africa is not easy. Textile units in Uganda did not get going despite the obvious advantages and

the industrial discipline required for factories operating in Africa must be promoted by the Government.

There is no place for easy optimism and the extra risks must be covered by the essential assurance of profits. Export of skills and capital to East Africa must be always distinguished from the export of goods to West Africa which is a more promising region. The FICCI surveyed the area's near-term prospects from the Indian

angle and noted that both Germany and Japan are keen rivals. The really important advantages are not the size of the local market but the promise of a trading connection kept up over many years and it is clear that in regard to sugar, the export of old or surplus machinery will help India to displace South Africa as a source. The fact that European capital so far prefers South Africa must not force India to think that there is a duty to invest freely in East Africa because low wages etc. may not be permanent advantages for joint ventures meant to produce sewing machines, cycles etc. If land reforms encourage primary production under cotton, coffee, tea or fibres it may be necessary for India to ship necessary processing machinery and boilers etc for augmenting the productive capacity. And this is certainly more important than shipping millwork for new establishments that can achieve success only after a long while, because it is easy to say that East Africa has no minerals like Zambia and the whole problem really is one of rapid agricultural development for which India cannot offer much aid, unless it be for new irrigation works. The repatriation of Asian capital to East Africa is also bound up with the success of ventures that must depend on imported fuel.

The bigger adverse balance of trade that will follow for India requires notice because payment in sterling will be prescribed and the Labour Government will have to do a good deal for letting joint development work itself out in Africa. Investing in Africa is not so attractive as presumed and experience in Zanzibar last year contains a warning of sorts to India. It should however be noted that an excess of capacity as is found in jute, cotton or other Industries in India can be worked off by systematic capital investment but the capitalists who venture into East Africa or even Nepal will have to rely on efficiency and integrity—not on the potential political influence that India may command.

FOUNDRY INDUSTRY

Shortage of Pig Iron

The main problem confronting the foundry industry continues to be an acute shortage of pig iron. There are over 2000 units in the country with an annual capacity of 2.5 million tonnes. The available supplies of pig iron is only of the order of 1.2 million tonnes but as the bulk of this quantity is earmarked for specific purposes, the commercial foundries are getting a meagre allotment with the result they are able to utilise

only about 20 to 22 per cent of their installed capacity. The supply position may be expected to improve somewhat now that the Government has decided to import 1,50,000 tonnes of pig iron from the USSR. But as has been pointed out by Mr K. Prosad, President of the Indian Foundry Association recently, the prospect of increased availability of the basic raw material is unlikely to bring much result to the industry because the imported pig iron will be available to the foundries at the landing

cost which be very high as compared to the existing controlled price of pig iron. Apart from the fact that the foundry industry is one of the basic engineering industries, it gains added importance in the present context of the increased efforts that are being made to promote exports by virtue of the considerable achievements already made by it on the export front. The value of exports of foundry products which was only about Rs 12 lakhs in 1959 has increased to nearly Rs 38 lakhs in

1963. Some of the major foundries in the country have been receiving frequent enquiries from even such industrially advanced countries as the US and UK. It stands to reason therefore that this basic industry should be enabled to obtain adequate raw materials so that it can utilise its installed capacity to the maximum extent possible.

While there is thus need for augmenting the supply of foundry grade pig iron in the immediate future, Government should also

initiate early steps for setting up pig iron plants so that foundries have no dearth of supplies during the Fourth Plan. It has been estimated that pig iron requirements by the end of the Fourth Plan will reach a figure of 4 million tonnes. As against this the present production is only 1.2 million tonnes and it is expected that even if all the licenses already granted for new capacity fructify, the total availability is unlikely to be over 2 million tonnes. In this view, there will be a shortfall of 2 million tonnes. There are obvious difficulties in depending on the integrated steel plants for the supply of pig iron because in the first instance, these plants are understandably concerned primarily with maximising the production of steel and secondly the grade of pig iron supplied by them often does not conform to the requirements of the foundries. Mr Prosad's suggestion that Government should set up one or two blast furnaces for the exclusive production of pig iron, therefore, deserves serious consideration.

NCAER

Report on Savings

The latest NCAER report on Urban Income & Savings throws light on attitudes and motivations which should be of help to the authorities in framing effective schemes to step up savings. The Council has already published three reports based on the finding of a sample survey comprising 4650 urban households, which was carried out in 1961. While the earlier reports dealt with the magnitudes of incomes, savings and investments, information regarding the people's opinions and preferences is set out in this report which draws attention to the large areas that could be brought within the coverage of national savings schemes.

The authorities can derive some comfort from the finding that nearly half the householders interviewed expressed disapproval of the practice of buying gold, though it is not clear whether the women of the household were also asked for their views. Of greater significance is the finding that the desire to save is almost universal—only the means are lacking. Over ninety seven per cent of the respondents felt that they should save, but only 36 per cent were able to fulfil this desire.

On the other hand, the Planning Commission need not be perturbed by the revelation that over 55 per cent of the urban households had not even heard of the Five Year Plans. Together with the discovery that 70 per cent of those interviewed had not heard of the National Savings Certificates, this may be regarded as indicating the scope for creating greater awareness of the economic environment and of the prospects of improvement for which a price will have to be paid. The most encouraging pointer to the future is the correlation that is shown to exist in regard to education, incomes and savings.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as
the wind
To blow on whom I please"
—As You Like It

ANOTHER K has quit the scene. The question of course remains whether Mr Khrushchev of his own accord stood down from high office, yielding place to two of his own proteges, or whether his was an ignominious removal from high office because of his failure satisfactorily to come to a modus vivendi with Red China. It is already discernible that the Russian attitude toward Red China is to be more conciliatory than it has been in the recent past. But, for the world at large, the change of leadership in Soviet Russia opens up, at least in the short term, a period of doubt and uncertainty. There can be no questioning the fact that Mr K's regime was notable, particularly during the years of his dialogues with Kennedy, for a thawing of the rigid cold war postures. Thus, it looks as if, if change at all there is going to be in official Russian policy, it would be in the nature of a hardening of attitudes. If such a hypothesis is correct, we have much indeed to feel sorry about the fact of Mr K disappearing from the Russian and world political scene.

Meantime, the general elections in Britain produced their anticipated result of success for the Labour Party. But the mandate that Labour has secured, in respect of the majority it attained, is much too slim to allow the new Labour Government to put through the ambitious programmes it had chalked out for itself. For example, I rather doubt whether there is going to be much if any of nationalisation of industry. Indeed, it seems patently clear that the Government could be defeated on a snap vote, and therefore that this Government will not long be in office. I myself expect a re-election in some time less than a year. Incidentally, Sir Alec Douglas-Home made what appears to me to be a rather ingenuous point, that had the news of Communist China joining the Nuclear Club been known to the world a day or two earlier, the election could easily have gone the other way.

What matters, as far as we in India are concerned, is that China is the first Asian country which has unravelled the mysteries of the atomic bomb. There is small consolation in learning from Dr

H. J. Bhabha that if India so wished it was also in a position to produce an atomic bomb within the next year or two, for we are committed to limit the use of the atom to peaceful and industrial purposes. Thus, the threat from Red China to India has accordingly, even if only potentially, increased. All we can hope is that China will not be so foolish as to call upon itself a deluge of retaliatory bombings from our foreign friends and that, consequently, it will desist from using the atomic bomb for any purpose other than to impress upon South East Asia that militarily it is the strongest country in the region.

The nuclear test by China and Labour's victory at the polls have both some bearing on the US Presidential elections, that are barely two weeks away. Not that, I may hasten to make clear, Mr Johnson's chances of being re-elected have been jeopardised; on the contrary, save an act of God nothing can prevent his re-election. But I fancy that more votes will now be cast for Mr Goldwater than might have been expected, say, two weeks ago. Furthermore, Mr Johnson will presumably lose a little support because of another scandal erupting in Washington, with a rather senior member of the Administration (with access to the topmost secrets of all) arrested for disorderly conduct. Thus, it is possible that the tougher-talking line of Senator Goldwater will secure additional votes for the Republican party though, I repeat, the office of President itself is outside its grasp. This means that a good many races for Congress, that would have been won by the Democrats sweeping in with the help of a Johnson landslide, could now happen to be narrowly decided. For example, Bobby Kennedy's battle against incumbent Senator Keating is now become a more uphill one, despite the magic in the name; and Pierre Salinger would similarly be matched in a hard contest with the Republican candidate for Senator, Mr Murphy. I should think that the results this year will not parallel those that attended Roosevelt's election in 1936; certainly it will be no Democratic landslide. And a little bird keeps whispering to me that the world at large is in for an unpleasant surprise: the share of the popular vote that goes to Senator Gold-

water could, in my estimation, be as high as 40 per cent.

It is paradoxical that, while Mahatma Gandhi in his life-time was not honoured—not that he was a lesser man because he did not receive such an award—in being chosen as the recipient of the Nobel Peace Prize, one who has repeatedly asserted that he is striving to put through and live the Gandhian philosophy should this year have merited such recognition. Dr Martin Luther King Jr is, at 35, the youngest to have been honoured by the Nobel Foundation; and he is, I remember reading somewhere, the 12th American to receive the prize for Peace. While Dr King richly deserves this honour, there can be no doubt at all that a few dissident voice will certainly be heard from the Southern States. For, his has been a voice of moderation in the battle for civil rights at a time when the militant wing of Negroes waging the war has been trying its very best to press its own campaigns, techniques and tactics. It may be recalled that quite possibly Dr King, indirectly, could well have contributed to the defeat of Mr Nixon by President Kennedy in the 1960 Presidential Election. For, while the campaign in that year was in full swing, Dr King was arrested in one of the Southern States and, while Mr Nixon

strangely kept silent over the issue, John F. Kennedy was swift in promising all help he was capable of. That the soft spoken man who preaches non-violence as a way of life should be the recipient of the 1964 Nobel Peace Prize is greatly to be welcomed.

Pearson Surita told me rather more than a month ago that the Calcutta test would be a farce; it was much too early in the year, he said, for cricket to be played. What he did not predict, but what actually proved him right, was the rain we had (thanks to nuclear testing by China?). We were all set for an exciting finale, with both Australia and India having won a test each; and a decision in the third (in our favour) would have earned for us the title of world-beaters. That was not to be; but at any rate the series this time has produced spottily brighter but consistently more interesting cricket than we have known for a long time. I wish I could say the same for the commentary which, except for a saving grace or two, is as pathetic as ever. One question remains: were the cricket authorities morally justified in issuing season tickets for a match which, they could have been virtually certain, would never be played over the five scheduled days?

Food Situation in Madras

The topicality of the food problem, as much as the stark necessity of food for sustenance and survival, has caused a flood of reports from all parts of the South, every statement by every official being seized upon by correspondents as news to be served hot to avid and hungry readers. But put together, they make no clear picture of the situation as it is now in the southern zone. A week ago, the daily experience of the citizens of Madras was confined to a little hardship in getting the week's requirement of rice. But now, even the satisfaction of the day's requirements of rice, particularly broken rice, appears to be in jeopardy. The queues are longer in front of every shop. Men and women spend the night in front of the shops to secure priority. And it is not the tail enders alone who have to return with the empty bag after a long, long wait. But all this appears to be contradicted by the statements of some over zealous and complacent officials here and there. "There is no rice scarcity pocket in N. Arcot," said a District Supply Officer in Vellore, "In Arakonam, boiled rice was available in plenty, but raw rice was scarce. In fact," he claimed, "boiled rice was sold at two or three paise less per litre than the Government price." The explanation for this oasis of plenty being confined to Arakonam is offered when it is added that "the flow of paddy or rice from the district by road has been effectively curbed", three cart loads of rice having been seized only a short while before for lack of necessary documents.

That should set the ordinary man wondering whether the trouble is not about distribution

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED.

(Incorporated in England)

Notice is hereby given that the Board of Directors of this Company have declared payment of an Interim Dividend on the Company's Preference Stock for the year ending 31st March 1965 at the rate of £2-13-0.36/49d. per cent less Income Tax at 7s. 9d. in the pound equal to £1-12-6d. per cent. Payment will be made on 14th November 1964 to those shareholders whose names are registered in the Company's Stock Register on 27th October, 1964.

Applications for transfers received in this Office before 12 O'clock noon on Tuesday, the 27th October, 1964, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above dividend.

By Order of the Board

Actg. Agent.

VICTORIA HOUSE,
Calcutta, the 10th October, 1964.

far more than supply and, again, whether official agencies and the accompanying red tape are not the King Stork to the comparative King Log of private trade. The possibility of finding a comfortable half-way house in the co-operatives has also been brought into doubt by the Chief Minister of Madras who stated some time ago that the co-operatives could not rise to the occasion and handle the complex problem of food distribution. He appeared quite certain that scarcity is not the main difficulty in food distribution, since the rice production in Madras State has not gone down. The ministers in all the Southern States are alike in condemning private trade as non-co-operative, though in Ramanathapuram and Madurai districts, where there is some scarcity, some reliable merchants have been authorised to purchase rice in Tanjore. Though it is more than two months since the Delhi Conference met, there is still no sign of arrangements for satisfactory distribution of rice, the supply of which is admittedly sufficient for immediate needs. It is pertinent in this context that the kuruvai crop is reported by all to be quite satisfactory.

Apart from the aversion for private trade and the official animus to it, the trouble appears now to originate in the inter-statement movement of rice in the southern zone. A. P. is sitting pretty with the other three states before it, each holding what is deemed a begging bowl, despite the purchase money with which the plaintive appeal for food grains is backed. According to A.P.'s Food Minister, Kerala has asked for 20,000 tons this month and 25,000 tons next month and Madras for 20,000 each month. Mysore's application is for much less, only 5,600 tons this month. And the Minister has said that he can provide 5,000 tons of boiled rice for Kerala this month. But the other States apparently have to wait for a full assessment of the surplus to know how much of their needs the A.P. would be able, that is, willing, to spare for them. Kerala in the meanwhile proposes to institute a system of modified rationing, in which the family, rather than the individual, will be taken as the consumer unit. For the first in the living memory, opinion in favour of rationing in peace time is being created in spite of the absence of serious scarcity. This is only because the Government has shown itself thoroughly incapable of evolving a distributive system which will obviate rationing and all the trouble and travail that it inevitably involves. For years, the public had set its face against rationing, because the experiences of the war period did not permit any illusions about its economic character or its benefits to the classes or the masses. And the problem of food distribution was considered all along with an implicit ban on the drastic remedy

of rationing. If, as the Chief Minister of Madras says, the co-operatives have not risen to the occasion and if, as all Governments aver, private trade is unco-operative and obstructive there can be no escape from rationing—fair price shops can only be an inadequate solution touching only the fringe of the problem.

It is in the light of these truths that one must view the decision of the Governments concerned, that inter-state movements of rice in the southern zone must be only on a Government to Government basis. Once the Government acquire the rice, its distribution will perforce have to be on a bureaucratic basis. Is the recent decision quite warranted? Is it not rather the fact that, whatever the faults and crimes of private trade, it has been in the present instance so badly hamstringing that it cannot in fairness be expected to do its work. Is there really no way by which the channels of private trade can be so purified that we can be spared the hardships of rationing no less than of

profiteering through artificial scarcity?

Since the above was written, there have been frantic efforts made by the ministers to rush Tanjore rice to Madras city and to improve the channels of distribution. Newspaper headlines are more heartening and so is the report that TUCS will treat members and non-members alike. The pressure on the shops was a great strain on the police force. And wholesalers and retailers are alike apprehensive of violence from a mob which has no means of identifying the real offenders. Considering the intensity of the trouble—many people did have to go without a rice meal.—Madras city was peaceful enough and if the inflow of supplies and some equity in distribution are ensured, the trouble may for the present pass away like a bad dream. But the realities will soon acquire a distressing similarity to the dream, if the Government do not tackle the problem with foresight, energy and measures decided on with the aid of an open mind.

ENGINEERING GOODS

Marked Rise in Exports

The demand for Indian engineering goods from various parts of the world has been increasing steadily, and if only production can be stepped up substantially, there are encouraging prospects for export, says the World Trade Department of the Indian Chamber of Commerce, Calcutta, in a survey published recently.

The survey says that the export of all types of engineering goods—capital, producer, consumer—has shown a remarkable increase in the last four years. For instance, the export of steel tubes and fittings rose from Rs 15.47 lakhs in 1960-61 to Rs 35.19 lakhs in 1963-64, cast iron pipes and fittings from Rs 17 lakhs to Rs 35 lakhs, finished structural parts of iron and steel from Rs 1 lakh to Rs 60 lakhs, diesel engines from Rs 26 lakhs to Rs 57 lakhs, tea machinery from nearly Rs 7 lakhs to Rs 23 lakhs, and textile machinery and accessories from Rs 18 lakhs to Rs 44 lakhs.

The increase in the export of consumer goods has also been appreciable. The export of household utensils of iron and steel rose from Rs 28 lakhs in 1960-61 to Rs 68 lakhs in 1963-64, utensils of aluminium from Rs 2 lakhs to Rs 40 lakhs and razor blades from about Rs 9 lakhs to Rs 27 lakhs. The export of household sewing machines rose from Rs 22 lakhs in 1960-61 to Rs 44 lakhs in 1962-63 but in the next year there was a fall to Rs 24 lakhs. The export of bicycles has shown a big increase from Rs 4 lakhs to Rs 24 lakhs.

The survey reveals that in 1963, South East Asia took 41.5 per cent of India's export of Indian engineering goods, West Asia 22 per cent, Africa 17.9 per cent, Europe 13.5 per cent, North and Central America 2.8 per cent and Australia and New Zealand 0.6 per cent. The survey gives a detailed account of export of

engineering goods to the various countries during recent years.

The developing countries of West Asia and South East Asia are now engaged in intensive industrialisation and their requirements of machinery of various types, building equipment and other kinds of goods are expanding in a big way. The scope for establishing joint ventures also appears bright. Recently a factory was set up in Ceylon for the manufacture of bicycles in collaboration with a firm in the Punjab and a factory is being established in Libya for the production of hume pipes. Highly developed countries of Europe as well as the USA have also shown interest in importing engineering goods from India.

The survey points out that the availability of raw materials like steel and pig iron for engineering industries, continues to be difficult. The production of engineering goods in India is now valued at about Rs 500 crores per year and about 3 per cent of it is exported. It is suggested that it should be possible for India to export at least 10 per cent of the production so as to earn Rs 40 to Rs 50 crores foreign exchange per year.

The survey says that apart from providing engineering industries with raw materials and other facilities to enable them to utilise their capacity effectively, the Government should also assist exporters by sanctioning them adequate foreign exchange to undertake business tours abroad and to open offices in foreign countries, as well as in other ways. Stability in export policy is also important. Frequent changes in export promotion schemes, or in other matters such as the fixation of steel prices for export, create uncertainty and embarrassment and affect the earnings of foreign exchange.

FERTILISERS Distribution Bottleneck

The responsibilities of the Fertiliser Corporation of India are likely to be enlarged to include marketing arrangements also when the Trombay unit goes on stream. This was indicated by Mr B. C. Mukharji, Chairman of FCI, at the recent annual meeting of the Corporation. The Chairman had also drawn attention to the sound financial position of the Corporation and the satisfactory operational results, despite the shortfall in production at Sindri.

The overall production of fertilisers in the Corporation's two operating units, Sindri and Nangal, was 7,46,596 tonnes against 6,88,791 tonnes during the previous year. The increased production was the contribution of the Nangal Factory which, for the third year in succession, had exceeded its production target, and whose sustained good performance has been recognised by the Presidential Award of a Certificate of Merit. The Corporation's gross profit during the year amounted to Rs 9,28,79,869. After providing Rs 4,94,63,007 for depreciation and Rs 63,71,457 for interest on loans from the Government of India, the net profit at Rs 3,70,45,405 amounted to about 8 per cent of the paid up capital. The most satisfactory feature of the Corporation's record is that it has been possible to finance expansion of the Sindri project and the capital outlay on new projects out of accumulated reserves, which amounted to Rs 47.97 crores as on March 31, 1964, that is, about 120 per cent of the paid up capital of the Corporation's production units.

Views of Fertiliser Association of India

As regards distribution, Mr Mukharji had expressed the view that the best results could be obtained by entrusting the responsibility for marketing the products to the producers themselves. This is also the view that has been put forward by the Fertiliser Association of India in a memorandum to the Planning Commission. The Central Fertiliser Pool,

it has been pointed out, is rapidly becoming obsolete and will shortly outlive its usefulness. The responsibility for marketing should be squarely placed on the manufacturers. The main raison d'être for the Pool is that it equalises the prices of domestic and imported fertilisers, but there are other ways of protecting the domestic manufacturers against the cheaper imported products.

It has also been suggested that fertiliser distribution should be thrown open to anybody who wishes to undertake it in conformity with the rules that may be framed for the purpose. Monopoly distribution by cooperatives, it is emphasised, is not in the interests of developing fertiliser consumption. Cooperatives, no doubt, have a role in fertiliser distribution, but not a monopolistic, non-competitive basis.

The need for bringing about a change in the existing system of fertiliser distribution was also discussed with the Union Minister for Food & Agriculture by a delegation of the Fertiliser Association of India at a meeting which was held early in this month. The Directors of the Association who formed the delegation were: Mr Charat Ram, Chairman, Mr M.K.K. Nayar, Vice-Chairman, Mr John K. John, Mr B. M. Khaitan, Mr A. D. Mango, Mr R. C. Parikh, Mr A. A. Rahimtula, Mr C. T. Shangkvi, Mr K. R. Srivatsa, Mr Sudarshan Lal Mehta and Mr C. R. Ranganathan, Executive Director.

As the time at the disposal of the Minister was limited, the discussions at this meeting, it is learnt, were limited to problems of distribution, though the delegation had gone to the meeting prepared to discuss production aspects also. It is understood that the Minister told the delegation that the expert committee, under the chairmanship of Mr B. Sivaraman, Chief Secretary of Orissa, whose appointment was announced a day before his meeting with the delegation, would go into all aspects of the question. By its terms of reference, the Committee is required to examine the long-term and short term problems connected with the distribution of chemical fertilisers, nitrogenous, phosphatic and potassic and to recom-

mend measures for evolving an effective system of distribution of fertilisers, with a view to bringing about a rapid increase in their use for increased agricultural production. The Committee will also examine the question of pricing of fertilisers, the role of cooperatives in their marketing and the role of Extension Services in the promotion and popularisation of the use of fertilisers.

The delegation, it is understood, had suggested that the monopoly of nitrogenous fertiliser distribution through cooperatives should be given up. They had also suggested that a barter system of fertiliser for food grains would help to overcome many of the difficulties in regard to fertiliser use as well as procurement of foodgrains.

However, it seems that the appointment of the expert committee for study of fertiliser distribution on one hand and the proposals of the Bechtel Corporation to set up largescale fertiliser units on the other, have effectively blocked fruitful discussion relating to consumption and production of fertilisers, at any rate for the time being.

As regards production aspects, the delegation is understood to have impressed on the officials of the Ministry of Food and Agriculture,

the need to place rock phosphate imports on a sound basis and that it would be desirable to import at least 50 per cent of the total quantity against free foreign exchange. If this was agreed to, the rock to be imported, it was suggested, should be of Moroccan origin.

The delegation also emphasised that there should be no rigid attitude as regards the size and location of fertiliser projects or the nature of the feed stock, and that each project should be considered on its merits. Locational advantages, particularly in the cost of distribution, may favour plants based on feedstocks other than naphtha or refinery gases. And in some cases, ammonia may be a co-product along with other petrochemicals and could be utilised for fertiliser manufacture.

Mr C. R. Ranganathan, Executive Director of the Association, said in the course of an interview, that the main difficulty about increasing fertiliser consumption to desired levels was not production which could be stepped up with some effort, as the inadequacy of distribution arrangements. The present arrangements were totally inadequate, especially when considered along with the targets which were envisaged for the Fourth Plan.

Increased consumption of fertilisers depended on effective promotion, and for this purpose, it was desirable that the producers themselves should be in charge of distribution. Availability of short-term credit on reasonable terms is crucial to expansion of fertiliser consumption. The present arrangements under which rural credit is channelled exclusively through cooperatives, he said, leads to high interest rates, delays and uneven distribution. It would be necessary to explore alternative methods. May be, commercial banks will have to play an important role in this respect.

Deferred Payment—in Kind

Mr Ranganathan also said that serious consideration should be given to the proposal for distribution of fertilisers on a barter basis, as this will help to overcome the limitations of the availability of rural credit. A scheme could be worked out under which the fertiliser dealer (cooperative or private) would be enabled to supply fertiliser to a farmer against the latter undertaking repayment of the value of the fertiliser in the form of grain or other produce, immediately after he harvests it. The parity ratio between

the prices of fertilisers and grain could be worked out and these would form the basis for the barter arrangements.

Listing the advantages of such an arrangement, Mr Ranganathan made the following points:

Firstly, it is an arrangement which the farmer understands, as share-cropping and payment of wages in terms of grain are traditional practices.

Secondly, it is a simple method of extending short-term credit in kind on a personal basis and on the security of the crop.

Thirdly, repayment is made out of a part of the additional yield

obtained by using fertiliser.

And fourthly, it is a method of effecting procurement of food grains spontaneously and without the use of pressure.

A similar system, Mr Ranganathan said, is being worked out in Taiwan and Korea and, to some extent, in Japan. In our own country, sugar factories in the South have found it advantageous to supply fertilisers against deliveries of cane after the harvest. Mr Ranganathan thought that the Food Grains Trading Corporation, when it is set up, could play a crucial role in working the barter system of fertiliser distribution.

Market NEWS and Trends

JUTE Outlook for Exports

The jute goods market has been displaying a steady undertone since it reopened after the Puja vacation. As a matter of fact prices were quiet firm even before the holidays commenced following reports of renewed labour unrest in jute mills in Pakistan. An additional helpful influence had been the sizable fall in stocks of jute goods with IJMA mills as at the end of September. Total stocks at 126,300 tonnes showed a decline of 6,100 tonnes from the previous month's level. Hessian stocks were however 1,900 tonnes higher at 47,600 tonnes but those of sacking were 6,200 tonnes lower at 43,700 tonnes. While stocks of carpet backing cloth showed a rise of 700 tonnes at 24,000 tonnes, those of other goods were marked 2,500

tonnes lower at 11,000 tonnes. The sizable decline in sacking stocks stimulated fresh interest in this category for which there were also fresh enquiries in the shape of Government of India tenders. During the past few days some more business has been put through and the expectation is that further tenders are in the offing. The news that labour unrest in Pakistani mills has taken a serious turn has also been partly responsible for the continued steadiness in sacking because of the hope that foreign enquiries will now come to India as Pakistan will be in no position to entertain new orders atleast from some time to come. As far as hessian is concerned, the steadiness in this section is still more in sympathy with any actual expansion in business. It is however expected that before long, hessian will be receiving increased enquiries from its principal customer, the US, in view of the

recent upward trend in burlap consumption in that country.

The outlook for export of jute goods atleast in the next few years would appear to be quite encouraging. According to the FAO's monthly bulletin of agricultural economics and statistics for the month of September, the demand for jute products will continue to rise until 1970 throughout the world more so in the developing countries than in the industrialised nations. It is interesting to note that the postwar trends in the Far Eastern demand for jute goods have been set by India—the world's principal jute manufacturing country and also the foremost consumer of jute products in this region. Consumption in India has been rising at the annual rate of 9 per cent since 1955. The annual rate of consumption in Pakistan however has been almost stagnant around 1.5 per cent because of that country's emphasis on exports. The conclusion to be derived from the FAO study is that exporting countries will have to perforce to rely increasingly on the developing countries for the sale of their jute products. With their growing interest in the development of agriculture and industry, the developing countries will consume larger and larger quantities of jute goods. This is borne out by the rise in internal consumption in India over the past few years. That increased exports to the developing countries will however not ensue without sustained effort at export promotion will be evident from the fact that while more countries are taking up the cultivation of jute, there is also a growing tendency in the developing countries to become self-sufficient in jute products by setting up their own manufacturing units. According to the FAO study, Burma which was not producing any jute in 1949 has now an output of 14,000 tons. Between 1949-63, China's production has gone up from 35,000 tons to 356,000 tons, Brazil's from 18,000 tons to 73,000 tons, Formosa's from 6,000 tons to 10,000 tons and Thailand's from 5,000 tons to 163,000 tons. An interesting feature of the expansion of jute production in the world is the increasing emphasis placed on the growing of mesta by the new entrants. It is estimated that mesta production which constituted only 22 per cent of world's total jute output in 1952-55 has

now risen to 39 per cent. The Study points out that the main reasons for the emphasis on mesta are the anxiety of these countries to become self-sufficient in bagging material and the difficulty in growing quality jute which has so far been successfully cultivated only in Pakistan and India. It will be clear therefore that plans for the long-term development of the jute industry in India, would have to take note of the growing tendency on the part of the developing countries to become self-sufficient in jute products. In view of the fact that India is one of the two countries where quality jute can be produced, the future of the Indian jute industry may well depend on its ability to steadily shift the emphasis to the manufacture of products based on high quality jute.

TEA Bright Prospects

WORLD Tea production in recent years has been setting record after record and this year, with output set at a new high of over 2.3 billion pounds, will be no exception. Thus far, exports and internal consumption have gained sufficiently to absorb the mounting production; but the long-time threat of an oversupply still lingers.

The big question now is, can be the large 1964 harvest and future bumper crops be easily marketed, or will stocks begin to pile up as has been the case with coffee? Countries most concerned with this problem are India and Ceylon—first and second largest tea exporters respectively.

The near-balance in the supply-demand picture can be largely

INDUSTRIAL DEVELOPMENT BANK OF INDIA

Applications are invited for the following posts in the Industrial Development Bank of India:—

(A) POSTS AND SCALES OF PAY:

- Deputy Managers—
Rs. 850-60-1150
- Officers Grade I—
Rs. 430-430-55-815 EB 55-925-60-1045
- Officers Grade II—
Rs. 375-20-535-25-560 EB 25-660-30-720

Note: Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scales.

In addition to pay, the selected candidates in all categories mentioned above will be eligible to draw local pay, house allowance, dearness allowance and other allowances at rates prescribed by the Bank from time to time. The present rates for local pay and other allowances are:

- Local pay at 10% of pay.
- House rent allowance at 15% of pay with a minimum of Rs 60 and a maximum of Rs 300/-.
- Dearness allowance:
 - Deputy Managers: Rs 125/-, provided the pay plus dearness allowance does not exceed Rs 1250/- per mensem.
 - Officers Grade I: 20% of pay upto pay of Rs 500/- and thereafter at 16 2/3% with a maximum of Rs 125/-, with marginal adjustments where necessary.
 - Officers Grade II: 20% of pay with a maximum of Rs 100/-.
- an ad hoc allowance of 10% of pay with a maximum of Rs 100/- per month payable upto 31-3-65.

(B) QUALIFICATIONS:

- Deputy Managers and Officers Grade I: Applicants should have high academic qualifications—preferably a first class Master's degree or a Doctorate with proficiency in one or more of the following subjects—or should be members of the Institute of Chartered Accountants of India:
 - Investment
 - Banking
 - Accountancy
 - Cost Accounts
 - Company Taxation
 - Company Law and Management
 - Corporate Finance
 - Industrial Economics
 - Techno-economic Surveys
 - Statistics and Econometrics
 - Marketing Economics
 - Economic Planning

For posts of Deputy Manager preference will be given to applicants who have had practical experience and/or have done research work in the above fields and who have worked in banks or institutions financing industrial units or in industrial units in a responsible position for at least 5 years.

(ii) Officers Grade II:

Applicants should have a good academic record, preferably a first class Master's degree in Economics or Commerce or Statistics; weightage will be given to specialisation in subjects like Banking, Industrial Economics, Industrial Finance, Accountancy, Company taxation, Company Law and Management.

(C) AGE LIMITS AS ON 1st NOVEMBER 1964:

(i) Deputy Managers: Candidates should be between 30 and 40 years of age but the age limit may be relaxed in the case of candidates possessing exceptional qualifications.

(ii) Officers Grade I: Candidates should not ordinarily be over 35 years of age but the age limit may be relaxed in the case of candidates with exceptional qualifications.

(iii) Officers Grade II: Between 21 and 27 years. The maximum age limit is relaxable but not beyond 32 years in the case of:—

- candidates possessing special qualifications.
- candidates belonging to the Scheduled Castes or Scheduled Tribes.

2. Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate application fees and should clearly indicate the post for which they have applied.

3. Applicants for the above posts must remit with their applications a fee of Rs 7.50

for each post by cheque or bank draft on a scheduled Bank payable at Bombay or by Postal Order. The application fee is in no case refundable. In the case of candidates belonging to Scheduled Castes/Tribes, the fee will be Rs 2/- for application for each post.

4. Applications in the candidate's own handwriting in the prescribed forms obtainable from the Industrial Development Bank's Office at Bombay, accompanied by copies (originals should not be sent) of certificates regarding age and educational qualifications, statements of marks secured in the graduate and post-graduate degree examinations and copies of two testimonials should be forwarded to the General Manager, Industrial Development Bank of India, Post Bag No. 10042, Reserve Bank Building, Mint Road, Fort, Bombay-1, so as to reach him on or before the 14th November 1964. Requests for supply of forms through post should be accompanied by a self-addressed and stamped envelope of size 9" x 4".

5. Candidates already in service will be required to produce a proper discharge certificate from their employers at the time of their appointment in the Bank's service.

6. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of the certificate to that effect from competent authority.

7. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

8. If any candidate desires to have his application acknowledged, he should send it by "Registered Post—Acknowledgement Due." Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

9. Candidates called for interview will be reimbursed single return railway/bus fares by the shortest route from their place of residence to Bombay, applicants for posts of Officers Grade II being paid II Class fares and those for higher posts, I Class fares.

10. Canvassing in any form will be regarded as disqualification.

Note:—The market remained closed from 11 to 18 October owing to Puja holidays.

attributed to intensive tea promotion and market development schemes in various parts of the world. However, the marketing of the record supplies expected this year will be the real test of the trade's ability to find new outlets and to increase consumption.

The annual review, on the performance of the tea industry, released by the Tea Board, states that the prospects for production in 1964 appear to be very bright and the total output may be expected to be around 363 million kgs. Thus, with rise in production by about 40 million pounds as compared to 1963, it can be expected that exports, which have been satisfactory since June 1964, will also be higher than that in 1964 by about 20 million pounds.

The review adds that the year 1964 has the promise of being a very good year for the tea industry from the point of both production and exports. Internal consumption in India had risen

steadily from 82.7 million kgs in 1953-54 to 139.6 million kgs in 1961-62. During 1962 and 1963, however, owing to lower production and higher exports, the growth of domestic consumption of tea appears to have been arrested to some extent. In fact, the estimate for internal consumption during 1962-63 is only 133.1 million kgs against 139.6 million kgs in the previous year, thus showing a decline by 6.5 million kgs.

Dealing with world supply and absorption, the review states that there is no evidence of any excess of tea nor is there any likelihood of an excess arising in the near future. Referring to the prices, the review states that average prices of tea sold particularly at Calcutta and London auctions during the current season showed a downward trend; but the prices realised were not by and large "unfair".

Meanwhile, the Central Government has urged the Government of West Bengal to consider the

abolition of tax on tea in the Calcutta area. The Centre has pointed out that the levy of this tax at the rate of 13.78 paise a kg adds considerably to the cost of tea to foreign buyers. Prices of Indian tea tend to become uncompetitive as a result of this tax. The State Government is understood to have agreed to abolish this tax provided the Centre is prepared to make good the loss in revenue which it would entail. This loss is estimated at about Rs 2.5 crores a year.

Again, it is felt that the payment of minimum bonus will have an adverse effect on the tea industry. The All-India Organisation of Industrial Employers says that nearly 40 to 50 per cent of the plantations may have to close down. The organisation has expressed concern at the proposal of the Union Government to modify their earlier decision to the effect that there would be statutory protection to workers to ensure that they would not get less bonus

than what they were getting in the past.

The organisation has sought clarification from the Government on certain aspects; what is meant by the "past" period to which the bonus payment would relate; whether the quantum to be protected is the total quantum of distributable surplus or the individual share; how the principle of "set-off" and "set-on" would operate with the proposed protection; what would be the manner of comparison in cases where bonus in the past was distributed on ad hoc basis also in the units where there had been a change in the number of shifts. The organisation has also suggested that the introduction of the Bill, incorporating the legislation for enforcing the recommendations of the Bonus Commission, be deferred till the matter is discussed with the parties concerned.

Production of tea in North-East India amounted to 113.63 million pounds in September 1964 as against 96.85 million pounds in the corresponding month of last year, showing an increase of 16.78 million pounds. During the current season, up to the end of September 1964, total production amounts to as much as 441.22 million pounds, showing a rise of 43.58 million pounds over the corresponding period of last year.

In the Cochin market, a quantity of 2.96 lakh kg of dusts was offered in the previous week. Against good demand at slightly lower rates, all mediums met with fair support though the prices for these were irregularly lower by 15 paise per kg. Milled and residual descriptions were quoted lower and were irregularly easier by 20 paise. Highgrowns were a little irregular and a majority of these were sold at prices below last rates. Clean black grainy descriptions met with less demand and were quoted lower as compared to last week's prices. Unorthodox descriptions were irregularly lower, particularly the best types.

In the Colombo market, offerings totalled 6,233,609 pounds. Quality from western districts showed little change; but teas from Uva and Uda Pussellawa were sometimes brighter. Dimbula-Dickoya Brokeners met with a good demand; but prices were very irregular and, on average, easier by 5 to 10 cents per pound. Brighter Uvas were firm and occasionally dearer.

Best medium BOPs from western districts were slightly easier, while plainer descriptions declined by 5 to 15 cents and sometimes more. Here again, bright liquoring Uvas were firm, but plainer sorts were easier. Leafy Middle East type brokeners were about 5 cents easier, while small leaf BOPs were barely steady.

Ceylon will export to the Soviet Union more than double the quan-

tity of tea now exported to that country from next year. This is the result of a new trade agreement signed between the two countries during the visit of a Ceylon trade delegation to Russia.

In the Coonoor market, offerings were 184,695 kgs. Good Nilgiri dusts and Nilgiri-Wynaads had better support than in the last sale. Other Nilgiri dusts were sold at about last rates with a few good invoices occasionally dearer. Nilgiri brokeners received irregular support and were generally easier. Whole Leaf grades were sold readily at firm to dearer rates. Good Nilgiri Dust was quoted at Rs 6.00 to Rs 6.45; other Nilgiri dusts at Rs 3.40 to Rs 4.75; Nilgiri Brokeners at Rs 3.30 to Rs 4.30; Whole Leaf grades at Rs 3.55 to Rs 5.00; Nilgiri-Wynaads at Rs 3.70 to Rs 5.25 and Plainest types at Rs 3.00 to Rs 3.15 (all per kilo).

According to a report released from New York, 11,355,161 pounds of tea have been imported into the United States in the month of September 1964. This compares with 9,587,028 pounds imported last year in the same period. Among the varieties of tea passed for entry, Ceylon ranks for the highest in quantity with 6,585,640 pounds for September 1964 against 4,605,203 pounds in the corresponding month of 1963.

In London auction held this week, offerings were 32,181 packages of North Indian and other miscellaneous teas. Of this, 4,094 packages were withdrawn. There was a good general demand with best Assams fully firm. Others were irregular and lower with quality. Dooars kinds were particularly strong and frequently a penny to two pence per pound dearer. African teas were mainly dearer; but where quality showed a decline, prices were irregular and easier.

Tea stocks in London, as on 9 October, were slightly higher at 99.00 million pounds as against 98.73 million pounds in the previous week. The total amount to be landed on the same date was 25.87 million pounds. Total afloat was 23.21 million pounds including from Calcutta 10.27 million pounds; from Chittagong nil; from Cochin 1.54 million pounds; from Ceylon 8.91 million pounds and from Ports 2.48 million pounds.

★

COTTON Need for Scientific Farming

The urgent need for adopting scientific methods of cultivation for stepping up cotton production in the country was stressed by Mr M. Bhaktavatsalam, Chief Minister of Madras, while inaugurating the Indian Cotton Mills Federation's first of the five projects for assisting in the grow-more-cotton-campaign in Tadiar

near Coimbatore. The Chief Minister highlighted the manifold advantages that will accrue to the cultivators by utilising improved strains of cotton and making use of the maximum advantage of the scientific methods of cotton cultivation. The other four projects of this sort will be located in the States of Rajasthan, Gujarat, Maharashtra and Punjab. It can naturally be anticipated that these efforts will induce the cotton growers to switch on to improved methods of cultivation which will, apart from augmenting their income, reduce the country's reliance on imported cotton.

The cotton futures market in Bombay depicted steady conditions during the past week and the ruling contract Jarilla March closed the week with a net gain of Rs 6.55 per three quintals.

After commencing the week on a firm trend, the contract spurred to Rs 735.50 in the initial deals owing to bear covering and spasm-

dic bull support consequent on the rumours that India would not indent for the balance of the PL 480 cotton in the near future. The upswing in prices was also fanned by the bulk buying by operators belonging to Ahmedabad and North Indian centres. Toward the closing stages the reported damage to crop in Punjab and Khandesh on account of heavy rainfall generated some bear covering and support from the bulls.

The spot market in Sewri presented better trading conditions during the week under review. Activity in the popular growths of new and old cotton crop broadened resulting in good offtake. The spinner interest in domestic cotton was brisk owing to the apprehension that the remaining portion of the PL 480 cotton may not be imported recently. Popular growths such as Digvijay, Kalayan and L 147 firmed up thanks to the encouraging mill support. Varieties like CO 2 and Jayadhar met with stray enquiry.

In the export section brisk trading was reported in Bengal Deshi as a result of which the price of that variety went up by about Rs 15.00.

In the import sector, regular trading was done in East African cotton.

The figures released by the UK Board indicate an improvement in the activity of the domestic cotton industry in the month of August. According to the report, the weekly average output of single yarn production went up to 12.54 million lbs from 10.29 million lbs in July and 12.06 million lbs in the same month in the previous year.

The Indian Cotton Mills' Federation has apprised the Textile Commissioner the urgency for extending the date to 31 December 1965 from 31 December 1964 by which time the mills are to complete arrangements for the installation of spindles with a view to assisting the mills which are currently in difficulties.

It's New

only Firestone could do it!

SUP-R-TUF Miracle Rubber

to give you **EXTRA** mileage with the most advanced tyre ever built!

Firestone research and development engineers have done it again! They have formulated a new miracle rubber—'SUP-R-TUF'—which gives extra mileage...at no extra cost! And at the same time, comes the NEW DeLuxe Champion tyre, with its perfected tread design for safer motoring. Now, every Firestone passenger tyre is built with SUP-R-TUF rubber to give you extra mileage on any road at any speed. And you get greater safety, because SUP-R-TUF is tougher and has more resistance to punctures, bruises and breaks.

NEW DELUXE CHAMPION TYRE

Whatever will Metal Box think of next!

The objective—an all-out drive to save foreign exchange. The means—over 30 years' experience in precision drawing and forming of sheet metal. The result—a national saving of almost Rs 1 crore in foreign exchange with industrial components for the radio, automotive, electrical and ordnance industries...and can-closing and bottle-sealing equipment. All these components and machines were previously imported.

And alongside this effort the Metal Box Research Department is busy developing local substitutes for many imported

packaging materials. Metal Box also earn foreign exchange by exporting annually some Rs 30 lakhs worth of packages and machinery.

Whatever will Metal Box think of next? More ways to earn and conserve foreign exchange, of course!

A particular section of the cotton mill industry has recorded its disappointment at the revised schedule of the realisation multipliers as it is likely to push down the prices of cotton piecegoods to uneconomic levels. In this connection, it has been indicated that while the realisation multipliers for coarse and lower medium cloth, which were too low in the tentative scheme, have been left unaltered, a reduction ranging from 4 to 4½ per cent has been effected in the counts of 30s onward in the new schedule. Another disturbing factor is the restrictions imposed on combing allowance for indigenous growth which will dampen the enthusiasm of the mill industry to upgrade this cotton and seriously affect the quality of cloth manufactured.

PIECEGOODS

The cloth market in Bombay continued to be inactive during the past week obviously on account of low demand. Though the

mills received the new schedule of multipliers toward the mid week, it failed to spark off any revival in demand. However, demand from upcountry centres is expected to flow on an encouraging level within a couple of weeks.

Understandably enough, demand from traders belonging to West Bengal petered off as the Puja festival is over. Restricted business was transacted with Kanpur and New Delhi, while the upcountry dealers preferred to await the emergence of a clear picture about the new price pattern.

Seasonal goods attracted spasmodic enquiry and prices of coatings hardened slightly. On the contrary, prices of saris and dhories exhibited a downswing. Gin was almost deserted while longcloth attracted very little attention. Stray enquiries for printed flannelles were reported.

Even the export front remained sluggish during the week. Trading with the UK was infinitesimal due to the elections. Continental coun-

tries were active in the market though the offtake did not measure up to the expectations. African countries were dormant while Singapore was satisfied with a moderate quantum of usual varieties. Canada and Australia accounted for a limited quantity of sheetings, coatings and furnishings. Other destinations remained inactive during the week.

New Sugar Policy

THE Government of India has decided to allow a rebate of 50 per cent in the basic excise duty on all such sugar produced during the period October/November this year, which is in excess of sugar produced during the same period in 1962. It has also been decided to fix the basic minimum price of sugarcane for the year at Rs 5.36 per quintal, linked to a recovery of 10.4 per cent or below at the factory gate with the provision for an increase of 4 paise per quintal for every 0.1 per cent rise in recovery above 10.4 per cent. This

places the basic minimum price of Rs 4.96 per quintal of sugarcane linked to a recovery of 9.4 per cent announced earlier in March this year.

The above decision is taken by the Government in acceptance of the recommendations of the Sen Commission in order to provide an incentive for early crushing. The other recommendations of the Sen Commission, regarding the fixation of ex-factory prices of sugar and other matters, are being considered by the Government and an announcement on them will be made soon.

Sugar production during the crushing season beginning in November is expected to be of the order of 3 million tons. Production in Bihar is expected to go up by 20 to 30 per cent and in Uttar Pradesh by 40 per cent over that of last year. Sugar industry sources say that they expect a bumper cane crop this year, which will meet the needs of both sugar, gur and khandsari industries fully.

The carry-over stock of sugar this year will be 160,000 tons against 176,000 tons last year. The total quantity of sugar produced in the previous crushing season was 2.6 million tons, which was hardly sufficient to meet even the internal requirements of the country. Official estimates of sugar production are more optimistic. According to these estimates about 3.3 million tons of sugar will be produced in the coming season. The industry feels that this can be achieved only if the Government follows a policy of "selective control" and ensure "equitable distribution of available cane supplies among sugar gur and khandsari industries".

It is clear that, as the higher prices for cane and the rebate in excise duty in the current season have not yielded the desired results, it has been considered advisable to make a change in the method of granting rebate in the excise duty and also in fixing the basic price for cane. Because of the diversion of cane supplies for being converted into gur and khandsari and the fixation of ex-factory prices at unsatisfactory levels, the incentive provided by the rebate was not considered attractive enough. The procedure now adopted is somewhat on the lines pursued in the 1959-60 season when there was a sharp increase in the output by over 500,000 tons with a rebate in excise duty, for two seasons in succession and there was even a problem of disposing of stocks.

There is a general feeling that the mills in areas, where the recovery is higher than 10.4 per cent particularly in the Deccan will not be able to pay higher prices and compete more actively with gur and khandsari producer for available supplies of cane. The problem of cane availability in these areas is not, however, acute.

There is, all the same, a feeling that the industry will be able to acquit itself creditably during the next season, as the standing crop is reported to be very good and there may not be the same competition for available supplies from the unorganised sector.

Meanwhile, in the Hapur market, sugar prices have recorded a steady trend owing to a poor supply position in the face of a good festive demand. Owing to a bumper cane crop, increased output is in sight. In the open market, prices are quoting around Rs 180

per quintal as against the controlled price of Rs 140 per quintal.

The low levels at which values have been ruling for some weeks in the world sugar trade are prompting forecasts that the 1965 price under the Commonwealth Sugar Agreement will be substantially lower than that for this year. Prospects of higher new season output and continued low prices lend support to the forecasts. The 1964 price, which was agreed under the Sugar Pact, was £46.0.10d per long ton. This compares with the current London

daily price—and low for the year—of £32.10sh and the 1964 high of £91.10sh from which latter level the steady decline in price began last January.

YARN Reduced Rayon Duty

The Government has reduced the special duty on viscose rayon filament yarns varying from 50 paise to rupee one per kilogram, depending on the denier of the

yarn. The order came into effect from 16 October. This decision follows representations from the indigenous rayon industry that it was faced with a serious accumulation of stocks and that some reduction in excise duty on these products was essential to ease the situation.

The duty on cellulose staple-fibres is also being reduced; but yarns spun out of such staple-fibres with or without the addition of cotton will now be required to pay duty at the same rates as cotton yarns (other than in strai-

Cashed in a Minute!

And that is precisely what we mean. It takes no longer than a minute to cash your cheque at any PNB office with the Teller System.

The streamlined Teller System eliminates tokens, queues, all tedious and unnecessary waiting and delay.

PNB was the first bank to have introduced the Teller System as far back as 1954. Today, PNB has 90 branches operating this system and plans to introduce this on-the-spot service in 60 more branches throughout the country.

ght hanks) except that such yarns will be exempt from this yarn duty. Yarns spun out of non-cellulose staple-fibres such as "Terylene", nylon, etc., which were hitherto exempt from yarn duty, will also have to bear some duty.

In the face of heavy accumulation of stocks and the steady decline in the net realisation of the industry from yarn sales, it was generally expected that the duty relief would be substantial enough to induce a larger off-take in the minimum possible time. But, in fact, the net realisation at the present obtained by two of the leading units averaged only Rs 12.02, Rs 7.75, Rs 6.58 and Rs 6.03. In some cases, the realisation is lower than this. In the circumstances, it is expected that the industry will reiterate its plea for a more substantial relief in excise duty.

As a matter of fact, the Indian Cotton Mills Federation has represented that mills with existing stocks of staple-fibre will be penalized, because they have already paid the excise duty on these stocks at the old higher rates and they will now also pay excise duty on the yarn made or to be made from these stocks. The Federation has, therefore, suggested that the excise duty should be levied only in respect of yarn manufactured out of new stocks of cellulose and non-cellulosic staple-fibre on which excise duty will be paid at a reduced rate.

NON-FERROUS METALS Tin Hits All-Time Record

Tin has set an all-time official price record on the London Metal Exchange this week. The rate is quoted at as high as £1,652.10 per ton. This is £37.10sh per ton above the previous record, set in February 1951 during the Korean war crisis. Out for the metal, barring a sudden resumption of exports from Communist China, a major source before 1961, is one of spot values ranging at least slightly above the £1,600 mark for the rest of this year, if not making some additional gains above £1,655 per ton.

Behind the record price levels for the metal is the belief in metal marketing circles that no agreement was reached at the London meeting held on 9th October between the International Tin Council and the officials of the General Services Administration. Production has also been interrupted by labour troubles in the two notable producer countries—Bolivia and Nigeria.

Demand, in Malaya, London and New York, has therefore included substantial speculative buying. This has possibly been accentuated by the realisation that the annual

world deficit between production originally stated to be 20,000 tons, is now likely to be over 30,000 tons.

World output of tin-in-concentrates, for the first five months of this year, was estimated at 60,000 tons against 57,000 tons a year ago. But, during the same period, total demand has risen from 67,800 tons to 70,200 tons for January/May 1964.

The surprise increase in US prices of Zinc on 15 October pushed London quotations ahead. It is felt that, until the new mine production in North America makes itself felt, the position of the zinc companies remains uncertain. A speedy reduction in their fixed price from £110 to the declared aim of closer to £90 a ton now seems unlikely.

Lead has also advanced from £119 to £120.7sh per ton. On the whole, the outlook for base metals, over the remainder of this year, barring a respite in demand and shortage factors, is for the current high values to persist.

COFFEE Surplus

With the revised estimates of the world Coffee crop at 52.6 million bags for 1964-65 season and exportable surplus at 38.6 million bags, the world shortage is nearly 10 million bags. If it were not for the larger quantity of stocks held in the consuming countries and the unspecified but apparently huge stock of reserves in Brazil, coffee prices should go up to very high levels. But, from the high price of 50 cents per pound quoted on the New York market in March last, the latest quotation for Santos 4 has fallen to 46 cents per pound.

In the meanwhile, a latest report released from London states that an over-abundance of supplies in the world coffee trade, particularly of the cheaper African grades, is holding prices down. While some traders believe that the values must soon reach rock bottom and then start to rise, while others see no immediate pointer to a revival. Underlining present difficulties is a further delay in United States ratification of the International Coffee Agreement.

The present market sentiment is reflected in London shipment prices which, by the close of the first full trading week in October, were down by 7sh from the previous week-end closing level to 260sh per cwt. This compares with 280s a month earlier; the 1964 low of 257sh 6d and the peak for the year of 336sh.

According to the India Coffee Board, receipts of coffee, up to 30 September into the 1963-64 Pool amounted to 68,450 tonnes (55,336), comprising 28,400 tonnes (24,405) of plantation variety; 10,450 tonnes

(9,199) of Arabica Cherry and 29,600 tonnes (21,732) of Robusta. Figures shown within brackets are for the corresponding period of last year. Out of the 1963-64 crop, 28,623 tonnes have been sold for export till the end of September. A quantity of 1,455 tonnes has been set apart for the export open auction, to be held on the 21 October.

The releases for the internal market, during August 1964, amounted to 3,112 tonnes (2,932), bringing the total for the nine months January to September to 25,454 tonnes against 25,110 tonnes in the corresponding period of last year.

SILK Steady

The prices of filature raw silk in Government filatures at Bangalore remained steady during the week ended 3 October. Prices of filature silk of 20/22 Dr were quoted between Rs 100.32 and Rs 101.42 per kg. Prices of Kisan Silk and Cottage Basin Silk had a fall to rule between Rs 103.00 and Rs 105.00 and Rs 76.06 and Rs 89.83 per kg, respectively.

A downward trend was observed in the prices of charka raw silk. Except for 1st quality prices of which are not available, super-fine, 2nd, 3rd and Dupion qualities had setback and ruled between Rs 85.15 and Rs 88.88; Rs 60.62 & Rs 65.03; Rs 57.32 and Rs 60.62; Rs 22.05 and Rs 32.25 per kg, respectively.

The prices of the spun silk yarn failed to move either way.

As regards the prices of the reeling cocoons, the sidlaghatta market followed an upward trend and were quoted between Rs 4.87 and Rs 6.25 per kg. The Channapattana and Mugur markets had a rise in minimum and fall in the maximum to rule between Rs 3.20 and Rs 4.22 and Rs 3.75 and Rs 4.07 per kg, respectively. Prices of seed cocoons of the foreign variety were quoted at Rs 5.00 and Rs 11.00 per thousand while the Mysore variety had a setback both in minimum and maximum to rule at Rs 4.94 to Rs 6.00 per thousand.

The prices in the Bhagalpur silk market remained steady.

A mixed trend was observed at the Malda silk market. Cottage Basin Silk (white) had a fall in minimum to rule at Rs 95.00 to Rs 110.00 per kg. The prices of charka raw silk (Tana), Charka raw silk (Verna), Reeling Cocoons and pierced Cocoons rose to range between Rs 84.00 and Rs 87.00; Rs 73.00 and Rs 78.00; Rs 4.28 and Rs 4.62; Rs 10.00 and Rs 13.50 per kg, respectively. The prices of Matka yarn had a fall in minimum and rise in maximum to rule between Rs 27.00 and Rs 41.00.

Prices in the Assam silk market ruled firm.

The F.O.B. prices and landed cost of Japanese raw silk of 20/22 Dr 2'A were Rs 56.36 and Rs 91.43 per kg, respectively during the month of August, 1964.

OILS AND OILSEEDS Markets Weak

In the Bombay market, prices of both oils and oilseeds have started to seek lower levels, thanks to the considerable increase in arrivals. The terminal markets in Khandesh, Mysore and Davangere are reported to be receiving new crop groundnut in larger quantities. In Saurashtra, the "mathadi" variety has started to flow into the markets. The other varieties are also expected to come in shortly. Khandesh variety is now available at Rs 126, reflecting a fall of Rs 10 per 100 kg. A similar fall has been noticed in groundnut oil, too, which is now quoted around Rs 27 per 10 kg. A major fall in prices is, however, ruled out at least till 15 November. It is said that a considerable portion of the new crop is likely to be absorbed by the millers and stockists.

In the Castorseed section, prices have developed an easier tendency, being attributed to the slackness on the export front. The overseas demand for castor oil has not revived.

Trading in the Linseed section has been generally dull. The Government of India has, on the recommendation of the Forward Markets Commission, granted recognition to the Kanpur Oils and Oilseeds Exchange Limited, Kanpur, for a period of three years ending 9th October, 1967 in respect of forward trading in linseed.

The months of delivery are January, May and September. The unit of trading will be 5 metric tonnes and unit of price quotation 50 kg. Sellers have option to deliver linseed at 13 other centres in Uttar Pradesh, besides Kanpur. Kanpur is the fourth market for linseed, set up under the Forward Contracts (Regulation) Act 1952, the other three centres being at Bombay, Gwalior and Calcutta.

Conditions in the Madras groundnut market remained dull. Daily arrivals have swelled to 1,000 bags with the pucca price dipping to Rs 99. Small arrivals of new winter peanuts are also reported. With the close-season at hand, summer crop arrivals have been steadily diminishing in the South Arcot centres, averaging 1,000 to 1,500 bags a day. Arrivals at Pollachi average 1,500 bags a day.

With larger arrivals of the new winter crop expected in the coming weeks and a possible break in prices, sellers are pressing offers, while buyers prefer to adopt a wait and see policy. Andhra buyers, who had been supporting the market so far, have also withdrawn. The rate for ready oil was quoted around at Rs 253.

Transactions

CALCUTTA

For the INVESTOR

INVESTMENT GOSSIP

Confidence Impaired

But for some sporadic attempts at rally in Dalal Street, the stock markets have generally continued to depict a subdued trend during the past fortnight. Reopening on Thursday after the long Puja vacation, Lyons Range has not been able to record any improvement in sentiment. This is not surprising because there have been quite a few far-reaching developments in the past few days. The sudden retirement of Khrushchev and the explosion of an atom bomb by China called for caution. Even otherwise, there is little in the investment situation that inspires investor's confidence. Government's approval of a Rs 21,500 crore Fourth Plan has only evoked fresh apprehensions. For it is generally believed that such a large investment target is ambitious from the point of view of implementation. Already the economy is strained to the breaking point by the heavy taxation and it will not be able to bear further burdens. It has been pointed out that instead of aiming at larger outlays, the Fourth Plan should place the emphasis on consolidating the progress made so far. In

BURN AND COMPANY LIMITED.

NOTICE is hereby given that the Registers of Members and Share Transfer Books for 6% and 7% Preference Shares in the Company will remain closed from the 31st October to the 10th November, 1964, both days inclusive for the purpose of payment of Preference Dividends for the half-year ending 31st October, 1964 on or after the 10th November, 1964, to those Preference Shareholders whose names appear on the Company's Registers of Members for 6% and 7% Preference Shares on the 10th November, 1964, or to their mandatees.

By Order of the Board,
MARTIN BURN LTD.,
F. G. Liversedge
Managing Director,
Managing Agents.

Registered Office:
12, Mission Row,
Calcutta-1.
19th October, 1964.

this view it will be only proper to ensure that the industrial capacity already created is utilised in full. The position now is that several industries are having large idle capacity because of shortage of essential raw materials and components.

As far as the investors are concerned, they are unlikely to evince much interest in the stock market so long as the capital market continues to be in the doldrums. Addressing the governing board of the Ahmedabad Stock Exchange, recently, Mr K. P. Goenka, President of the Federation of Indian Chambers of Commerce and Industry has pointed out that the last two budgets have affected the confidence in the capital market. If the economy is to grow rapidly, it is essential, he has averred, that investors' confidence is revived.

NEW ISSUE NOTES

Bayer (India)

Bayer (India) Limited has proposed to enter the capital market by the end of next month with a public issue of Rs 56.27 lakhs. The issue is being made with a view to raising a part of the finances needed by the company to implement its expansion programme, involving a capital outlay of Rs 3.50 crores.

Kalyanpur Lime

Kalyanpur Lime & Cement Works Limited proposes to raise additional capital of Rs 76 lakhs to provide a part of the finance required for its substantial expansion plan. It is proposed to issue a further 30,250-5.5 per cent cumulative redeemable preference shares of Rs 100 each and 4,57,500 equity shares of Rs 100 each at par.

Hindustan Ferodo

Hindustan Ferodo Limited, Bombay, is to issue capital of Rs 2,68,01,330 in equity shares of Rs 10 each. Of this, Rs 145 lakhs will be issued to Asbestos, Magnesia and Friction Materials Limited for taking over their existing assets and Rs 53,33,330 to their parent company of Turner & Newall Limited, UK, for cash at par. The rest of the capital of Rs 69.68 lakhs will be offered to the

Indian public by prospectus, at a premium of Rs 17 per share. The money will be utilised for expansion and manufacture of new articles.

Modi Spinning

Modi Spinning & Weaving Mills Company Limited, Modinagar, is to issue further capital of Rs 86,50,820 in equity shares of Rs 10 each as rights shares for cash, at par. The capital will be utilised for financing the installation of 25,000 spindles for the manufacture of sewing thread, hosiery, etc.

Indian Copper

Indian Copper Corporation Limited will be issuing capital of Rs 125 lakhs in 12,500-7 per cent registered Debentures of Rs 1,000 each for cash, at par. The Debentures will be issued to the Indian public by prospectus. The money will be utilised for financing the expansion of mine ore production and the setting up of a sulphuric acid plant.

BONUS ISSUE NOTES

Travancore Sugars

Travancore Sugars & Chemicals Limited has decided to issue 60,000 equity shares of Rs 10 each as bonus shares to the existing shareholders in the proportion of one share for every five shares held, by capitalising Rs 6 lakhs out of the Share Premium Account. Necessary permission from the Controller of Capital Issues is being obtained. The new shares will not be eligible for any dividend that will be paid in respect of 1963-64.

Ahmedabad Advance Mills

Ahmedabad Advance Mills Limited, Bombay, is to issue capital of Rs 95 lakhs, consisting of (i) Rs 70 lakhs in 7,000-5.5 per cent Mortgage Debentures of Rs 1,000 each for cash at par; (ii) Rs 10 lakhs in ordinary shares of Rs 100 each, to be issued as bonus shares in the ratio of one share for every five shares held on capitalisation of the Share Premium Account and (iii) Rs 15 lakhs in ordinary shares of Rs 100 each for cash at par to the existing shareholders in the ratio of one share for every four shares held. The capital

from the Debentures and rights cash issue will be utilised for modernisation and renovation of the mills engaged in the production of cloth.

Grindwell Abrasives

Grindwell Abrasives Limited, Bombay, will be issuing Rs 6 lakhs bonus capital in shares of Rs 100 each, to be allotted to the existing shareholders.

Ghaziabad Engineering

Ghaziabad Engineering Company Private Limited, Ghaziabad, engaged in the manufacture of harrows and trailers and household electrical implements, will be issuing bonus shares of the value of Rs 1.75 lakhs on capitalisation of reserves.

INVESTMENT NOTES

Third Zinc Smelter

A proposal to set up a third Zinc Smelter, based on imported concentrates, is under consideration of the Government of India. The location of the plant, however, has not yet been decided. The country's first zinc smelter at Udaipur with the capacity of 18,000 tonnes is expected to be completed in 1965. The second smelter at Alwaye (Kerala) is expected to go into production in 1965-66.

Vallabh Glass

There is general feeling that the working of Shree Vallabh Glass Works Limited will be better in 1964-65 than in the preceding year. The company is expected to reach a sales target of Rs 1 crore during the current year as compared to the total sales of Rs 45 lakhs in 1963-64. It is stated that the company's sales for the first half of the current year have amounted to Rs 50 lakhs.

IN BRIEFS

Delhi Cloth & General Mills Company Limited has raised the dividend from 13 to 15 per cent for the year ended 30 June 1964. Besides, there is to be a Diamond Jubilee Bonus of 2 per cent, taking the total distribution to 17 per cent, taxable. It is learnt that the company has done well in the last accounting period.

It is learnt that the civil construction work relating to the second caustic soda factory of Mettur Chemicals, for manufacturing the rayon-grade variety, has made satisfactory progress and arrangements have been completed for erecting plant and machinery as and when received in order that this new unit can be commissioned into production by March next year.

The Morarjee Goudas Spinning & Weaving Company Limited has again suffered a setback with the gross profit declining from Rs 71.17 lakhs for 1962-63 to Rs 51.22 lakhs for 1963-64 in spite of an increase of more than 31 per cent in sales. The directors have, therefore, been obliged to recommend again a lower dividend of 15 per cent for the year against 20 per cent for 1962-63. These compare with a dividend of as much as 24 per cent paid for 1961-62.

Hindustan Lever Limited has decided to maintain the interim dividend for the year 1964 at 6 per cent. The dividend will be paid to those shareholders, who are registered as on 4 November 1964.

Bharat Bijlee Limited has maintained the dividend at 8 per cent for the year ended 30 June 1964.

Hyderabad Allwyn Metal Works Limited has also maintained the dividend at 10 per cent for the year ended 30 April 1964.

Contrary to general expectations, the directors of the Scindia Steam Navigation Company Limited has stepped the dividend from 5 per cent to 6.25 per cent for the year ended 30 June 1964. This is for the second year in succession the dividend has been raised by the company. A dividend of 3 per cent was paid for 1961-62.

Hopes of a higher distribution by Tata Chemicals Limited for the year ended 30 June 1964 have materialised with the directors' recommendation to step up the dividend from 10 to 15 per cent. The increase in distribution includes a bonus element of 1.50 per cent.

BALANCE-SHEET REVIEWS

Sathe Biscuit Repeats

Sathe Biscuit & Chocolate Company Limited has been able to increase its output to some extent as the new oil-fired baking oven has been installed only recently and full benefit will be derived during the current year.

Sales have risen to Rs 64.54 lakhs during the year ended 31 March 1964 from Rs 60.86 lakhs, while the net profit, before providing for depreciation and taxation, has improved from Rs 5.45 lakhs to Rs 7.10 lakhs. In respect of allocations, Depreciation is raised to Rs 2.27 lakhs from Rs 1.52 lakhs and Development Rebate Reserve to Rs 1.44 lakhs from Rs 18,203,

while Taxation provision is lowered to Rs 1.79 lakhs from Rs 2.16 lakhs. The dividend on the equity shares is maintained at 7 per cent, subject to tax, after transferring Rs 25,000 (same) to Preference Shares Redemption Reserve and Rs 5,000 (Rs 10,000) to Contingency Reserve.

Great Eastern Shipping Earns Less

Even with an increase in the cargo handled and in the freight income, the Great Eastern Shipping Company Limited has not been able to earn a higher level of profits on account of an increase in working expenses. The quantity of cargo carried is larger at 11.78 lakhs tonnes against 11.33 lakh tonnes, while the freight income has risen to Rs 5.25 crores from Rs 4.51 crores. The addition of five vessels to the fleet was helpful to a certain extent. It is, however, pointed out that the freight income would have been even higher, but for the fact that the share in imports of foodgrains did not increase to the anticipated extent.

The net profit, before providing for depreciation and taxation, has declined to Rs 119.78 lakhs from Rs 121.34 lakhs. At the same time, it was necessary to set aside as much as Rs 75.32 lakhs (Rs 64.09 lakhs) towards Depreciation, though the provision on account of Development Rebate is lower at Rs 36.30 lakhs (Rs 51.75 lakhs).

Even though there is no liability towards taxation, it has been necessary to provide Rs 13.94 lakhs (nil) towards taxation for 1957-58. A dividend of 5.15 per cent (nil) is to be paid on the old equity shares. The bonus shares will receive a proportionate dividend of 1.9 per cent. It may be recalled there was an issue of bonus shares in 1962-63 in the proportion of one share for every two shares held. It has been possible to make the allocations to various reserves and pay the dividend with a transfer of Rs 13.81 lakhs from reserves.

It is expected that the results for the current year may make better showing as the newly-acquired ships will be in operation throughout 1964-65. Arrangements have also been made for acquiring two bulk carriers from Japan at a cost of Rs 4.12 crores. These ships are expected to be received early in 1966. New proposals have been submitted to the Government for purchasing additionally five ships at a cost of Rs 3 crores. The decision of the Government on this scheme is awaited.

Tube Investments Pay More

The working of Tube Investments of India Limited during the year ended 31 July 1964 has resulted in a net profit, before providing for depreciation and tax-

ation, of as much as Rs 143.43 lakhs as against Rs 128.98 lakhs for the previous year. The increasing activity of the different units in the group has perhaps been responsible for the better working results.

The provision for Depreciation is Rs 43.21 lakhs (Rs 40.43 lakhs) and Development Rebate Reserve Rs 75,795 (Rs 3.23 lakhs). Taxation provision is raised to Rs 51 lakhs from Rs 45.25 lakhs and General Reserve to Rs 22.50 lakhs from Rs 13 lakhs, while Dividend Equalisation Reserve gets only Rs 1.50 lakhs against Rs 2.00 lakhs. The allocations have been possible by a transfer of Rs 3.14 lakhs to the Profit and Loss Account, being provisions for taxation no longer required. The dividend on the equity capital has been raised to 11½ per cent from 10 per cent, subject to tax.

Same From Textool

Despite a shortage of raw materials, a further increase in costs of production and the problems relating to the supply of power, Textool Company Limited has reported an increase in turnover by Rs 50 lakhs for the year ended 30 April 1964. The net profit, before depreciation and taxation, has risen to Rs 33.82 lakhs from Rs 27.34 lakhs in 1962-63.

In respect of allocations, Depreciation is raised to Rs 7.44 lakhs from Rs 5.75 lakhs; Taxation to Rs 11.08 lakhs from Rs 9.20 lakhs and Bonus to employees to Rs 5.85 lakhs from Rs 4.48 lakhs. The transfer to Development Rebate Reserve is, however, lower at Rs 1.59 lakhs against Rs 2.00 lakhs. The dividend on the equity shares is maintained at 12 per cent, subject to tax. The amount required is, however, higher at Rs 7.15 lakhs against Rs 6.24 lakhs, because the increased capital is eligible for the dividend for a whole year.

East Indian Coal Pays Less

The East Indian Coal Company Limited, in Jardine Henderson group, has reported a decline in raisings from 1,545,662 tonnes to 1,429,796 tonnes and in despatches from 1,533,440 tonnes to 1,378,546 tonnes for the year ended 30 April 1964, mainly due to the reduced offtake by the steel plants. The directors state that these resulted in accumulation of stocks of coking coal at pit-heads, which seriously hampered output and greatly increased cost of production.

Meanwhile, the company has reported a net profit, after providing for depreciation and taxation, of £160,962 as against £149,174 for the preceding year. Depreciation is raised to £85,533 from £71,400, while Taxation is lowered to £64,329 from £197,625.

After adding £33,699 (nil) being Development Rebate Reserve written back and provision for taxation no longer required nil (£18,255), General Reserve is raised to £75,896 from £20,015 and Development Rebate Reserve to £57,994 from £52,818. A sum of 3,171 (21,600) is set apart for taxation in respect of previous year. The directors have proposed the first and final dividend of Rs 2.00 per share as against Rs 2.75 per share paid previously. The dividend is payable on or after 30 October to those shareholders registered as on 23 October.

Sutlej Cotton Repeats

Despite a market rise in sales from Rs 263.64 lakhs to Rs 322.08 lakhs, the Sutlej Cotton Mills Limited has reported a slight decline in the net profit, after providing for depreciation but before taxation, from Rs 17.13 lakhs to Rs 15.08 lakhs for the year ended 31 March 1964.

After transferring Rs 17.00 lakhs (Rs 2.20 lakhs) being provision for taxation no longer required, a sum of Rs 7.00 lakhs (nil) is set apart for Taxation and Rs 12.00 lakhs (Rs 6.54 lakhs) for Development Rebate Reserve. The dividend on the ordinary shares is maintained at Rs 8.57 per share, subject to tax.

Although the Rajasthan Textile Mills started production during the year under review, full production could not be achieved due to non-availability of skilled labour. However, the directors state that the position has now improved and the working of the mills in the current year is expected to improve. Steps are also taken to add further spindles, which will bring the total strength of spindles to 20,352. Annual general meeting will be held on the 28 October.

United Nilgiri—Decline in Profits

The working of the United Nilgiri Tea Estates Company Limited has resulted in a decline in the net profit, before providing for depreciation and taxation, from Rs 16.44 lakhs to Rs 12.68 lakhs for the year 31 March 1964, reflecting the fall in output from 8.76 lakh kg to 8.00 lakh kg and the increase in the cost of production from 3.22 per kg to Rs 3.50.

The provision for Depreciation is higher at Rs 2.92 lakhs against Rs 2.64 lakhs, while Taxation is lowered to Rs 4.60 lakhs from Rs 7.06 lakhs; Development Rebate Reserve to Rs 3,806 from Rs 17,000; Development Reserve to Rs 25,000 from Rs 1.50 lakhs and General Reserve to Rs 1.25 lakhs. The directors have proposed a final dividend of 11 per cent, making a total of 18½ per cent, taxable, for the whole year. This compares with 22½ per cent, taxable, paid previously.

Shree Bhawani Cotton Earns More

Thanks to the rise in sales from Rs 163.42 lakhs to Rs 176.99 lakhs, Shree Bhawani Cotton Mills Limited has reported a higher net profit, before providing for depreciation and taxation, of Rs 19.33 lakhs for the year ended 31 March, 1964 as against Rs 17.13 lakhs for the previous year.

After transferring Rs 2.50 lakhs from General Reserve, a sum of Rs 15.26 lakhs (Rs 7.91 lakhs) is set apart for Depreciation; Rs 75,000 (Rs 3.30 lakhs) for Taxation and Rs 4.15 lakhs (Rs 3.30 lakhs) for Development Rebate Reserve. No provision are made for General Reserve and Dividend Reserve against Rs 2.75 lakhs and Rs 1.71 lakhs respectively in 1962-63. The dividend on the ordinary shares is maintained at 50 paise per share, payable to those shareholders registered as on 30 September.

The directors have stated that the installation of No. 2 mill has been completed in all respects; but full efficiency could not be achieved due to several technical reasons. A further licence for the installation of 2,000 spindles has been received by the company and is expected to be implemented towards the end of the current year.

★

STOCK EXCHANGES Lack of Incentives

A modest reaction has been noticed in stock markets with some of the leading speculative issues recording fresh losses on bull liquidation and bear pressure. Although there is good resistance at lower levels, any appreciable move on an overall basis does not seem likely owing to the political uncertainties.

Reopening after the Puja holidays, subdued conditions were in evidence on Lyons Range, in the absence of any support and price movements were mostly influenced by settlement adjustments in the speculative issues.

Political uncertainties kept speculative interest at bay on Dalal Street.

Dull trading continued on the Madras Stock Exchange and business was confined to only a few selected shares.

On the Delhi Stock Exchange, price movements were confined to a narrow range in restricted turnover.

Barring National Rayon, all the speculative shares on the Ahmedabad Stock Exchange yielded further ground.

Profit-taking and other selling held Wall Street in a largely fractional range. Operators were awaiting developments in the continued General Motors' strike.

★

CALCUTTA

THE local market failed to sustain the recovery move, which was noticed in the pre-Puja ses-

sion. In fact, the post-Puja session started on a subdued note. Apart from the fact that price movements were greatly influenced by settlement considerations on the re-opening day of the market after the long holidays, operators were reluctant to enter into fresh commitments in the absence of any incentives.

Barring the relief in excise duty on rayon yarn which itself caused some disappointment as it fell far short of expectations, operators preferred to mark time pending a clear picture of the international developments like the victory of the Labour Party in the British elections, Mr Khrushchev's resignation of the leadership of the Soviet Communist Party and the explosion of the first atom bomb by China. Above all, there was a desire to await the results of the elections in the USA, to be held next month.

Even the favourable developments like the Shastri-Ayub talks to improve the Indo-Pakistani relations and good corporate dividends failed to enthuse the market. The status quo maintained in the import policy for the current half-year had also a depressing effect, as hopes were initially entertained that imports would be somewhat liberalised on account of encouraging export earnings. It was feared that many small-scale industries might continue to face the shortage of imported raw materials.

There was, therefore, no disposition to take a bullish view of the market, especially when interest rates had risen further and many banks had increased their lending rates. The protracted absence of the LIC and the Unit Trust in the market also aided the bearish sentiment. Investors were inclined to keep out of the market unless a reasonable return on their investments could be ensured besides providing scope for capital appreciation.

Listless conditions continued to prevail in the Gilt-edged section. Support was lacking and prices tended to decline. 3 per cent 1986 Conversion Loan eased further to Rs 62.80 from Rs 63.10, the pre-Puja closing.

No interest was shown in the Banking section.

Although turnover was restricted, Jute shares came in for moderate support on the belief that the profit margin of the mills might have improved with the present rise in gunny prices. It was also thought that a number of mills, which were thinking of cutting their production further earlier this month, might be changing their minds in view of the possibility of a diversion of offers from overseas following the disorders in the mill areas in Pakistan.

Coal shares remained inactive.

There was little doing in the Tea section.

Textile issues were marked down following the news that there would be a further reduction in cloth prices. Doubts were also expressed in some quarters whether the introduction of partial control on cloth would improve the profitability of the mills although the price-cut in the controlled varieties was not expected to affect the mills adversely in view of the corresponding increase in the prices of the uncontrolled varieties.

Sugar shares remained generally depressed. It was felt that the piecemeal measures announced by the Government to provide incentives for early crushing and greater production might not help the industry much, not to speak of the disappointment over the reported rejection of the industry's plea for partial decontrol.

Engineering shares were generally quiet under the leadership of Indian Irons which, in turn, were subjected to settlement considerations. Against the Puja closing of Rs 25.12, Indian Irons opened lower at Rs 25. After improving at one time to Rs 25.06, the scrip receded again to Rs 24.96 before finishing the week higher at Rs 25.40. Texmaco moved narrowly around Rs 26.30, while Dalmia Iron closed better at Rs 11.37 against Rs 11.25. Jessop continued to be a favourite, having forged ahead to Rs 27.50 from Rs 26.31.

The Miscellaneous section was demoralised. Most of the new issues lost ground due to selling pressure. However, shares like Chemicals & Fibres, Aluminium Corporation, India Steamship, J.K. Synthetics and Universal Cables met with persistent support at every setback in prices. Following were the price trends of a few selected shares:

	Pre-Puja Closing	As on 23 Oct.

ANTIBIOTICS

Pfizer Drastically Reduces Prices

Major price reductions in life-saving antibiotics have been announced by Pfizer, world's leading manufacturer of antibiotics.

The reductions cover various dosage forms of Pfizer's well-known broad-spectrum antibiotics, viz., TERRAMYCIN (brand of oleandomycin + tetracycline), oxytetracycline; SYNERMYCIN TETRACYCIN (brand of tetracycline), and also CHLORAMEX (brand of chloramphenicol).

These reductions are in pursuance of Pfizer's worldwide policy of making available to the common man new and improved medicines at economical prices. In India itself, Pfizer has gradually reduced the prices of several of its drugs, especially those of life-saving antibiotics.

The present substantial cuts in prices have been made possible by Pfizer's manufacture of oxytetracycline and tetracycline from the basic stage at its fermentation plant in Chandigarh. Pfizer is the first to start manufacturing these drugs basically in India from indigenous materials.

Stainless Steel Beam Developed for Bridge Building

A lightweight stainless beam, designed for use in bridge construction, has been developed by International Nickel.

Although not yet ready for commercial production, experiments conducted with the beam have revealed its great potential for bridge building, particularly those with a 50 to 120 ft. span.

It was the high maintenance costs for present beams and bridges which led International Nickel to explore the possibility of a stainless steel beam. To this end, Dr Giorgio Baroni was commissioned by the company to design a composite bridge using stainless steel for beams.

Dr Baroni developed a new type beam consisting of a web of two concave nickel stainless steel sheets, mounted back-to-back, with top and bottom flanges of A 242 high strength, low-alloy steel protected from corrosive attack by stainless steel.

The "Baroni Beam" offers all the major advantages of conventional fabricated and rolled beams, as well as important advantages of its own-torsional rigidity, resistance to corrosion, substantial reductions in maintenance costs and aesthetic appeal.

It is designed to be a good deal lighter than I-beams of equal outside dimensions - and load carrying ability. A typical beam was subjected to an independent testing programme and carried 240 per cent of its full working load before failure.

Impressive Growth of Small Industries

A comprehensive programme for stimulating the growth and modernisation of small industrial enterprises has been in operation since 1954 as an integral part of the programme of economic development of India. The programme includes technical advice and consultation on improved methods of production, economic guidance and dissemination of information to help the small industrialist to choose promising lines of production and to expand marketing activity in right directions, management consultation and training, financial assistance on reasonable terms and provision of good factory accommodation through Industrial Estates.

The importance given to small industries in the First Industrial Policy Resolution of 1948 has ever since been increasing. The modest allocation of Rs 5.2 crores made by the Central Government during the First Plan period paved the way for programmes of larger dimensions during the following years. During the Second Plan period, Rs 55.6 crores were earmarked for the developmental programmes of small scale industries. An outlay of Rs 114.80 crores, including Rs 30.21 crores for industrial estates, has been earmarked for small industries, during the current Plan period.

There has been an impressive growth in a variety of engineering and non-engineering industries during the last few years including higher technology and skills. Some of the items taken up for production during the Plan by new small scale units include refrigerators, air-conditioners and allied equipments, parts and components of the automobile industries, certain electric instruments, time-pieces, hearing aids and typewriters. There has been phenomenal increases in the production of items like bicycles, scientific instruments, machine tools, expanded metals, automobile accessories and steel furniture. Equally significant progress was achieved in the manufacture of certain chemical and non-engineering products also. Production of pesticides and certain varieties of dyestuffs has also registered a sizeable increase.

NATIONAL EMERGENCY AND SMALL INDUSTRIES

The national emergency which arose towards the closing months of 1962 presented a great opportunity for intelligent and hard-working entrepreneurs to gear up production to meet new demands and requirements. Small units rose to the occasion to play a vital and decisive role to maintain the second line of defence by functioning as ancillaries to the Ordnance and the other factories switching over to the manufac-

ture of a wide variety of items which were required for defence needs. The share of small industries sector in the supply of stores purchased by the Directorate General of Supplies and Disposals steadily increased from Rs 6.2 crores in 1957-58 to Rs 14.51 crores in 1962-63. The D.G.S. & D. purchases from small industries sector accounted for only 1.7 per cent of their total purchases from indigenous sources in 1957-58 and this increased to 9.4 per cent in 1962-63.

INDUSTRIAL EXTENSION SERVICE

The facilities for technical guidance and assistance to small units have been further expanded and streamlined and the quantum of assistance also increased considerably. Besides the 16 small Industries and 5 Branch Institutes (at Rajkot, Hubli, Agra, Allahabad and Goa) there were 61 Extension Centres including Production Centres to render technical guidance to small units in 1962-63. The technical assistance programme includes advice on selection of industries followed by guidance in the planning of production, advice on selection of machinery, factory lay-out, selection of raw materials, designing of tools, jigs and fixtures, and preparation of blue prints. Even after the units have gone into production the field officers have a follow up programme of visits to factories from time to time to help remove manufacturing defects effecting economy in fuel and raw materials. From the start of the Extension Service till the end of March 1963, 1,55,349 parties were given technical advice and 97,705 parties were assisted in setting up of new industries, 2,37,301 visits were paid to small units for solving other technical problems and 1,77,465 parties received other types of assistance. The mobile workshop fleets of the various Institutes continue to tour the countryside to bring the knowledge of better techniques of production to the village artisans.

IMPROVEMENT IN DESIGNS

The Central Industrial Design Cell of the Organisation designs improved product designs and drawings. More than 5,572 blueprints of improved product designs in metalware, hardware furniture etc. were supplied to various small scale units in the units in the country. Of these 195 designs were made use of by the small scale units. 135 Prototypes were also prepared by the Design Cell in 1962-63.

TRAINING BY EXTENSION SERVICE

Training is an integral part of the Extension Service of the Small Industries Organisation. This consists of training in industrial

management for entrepreneurs and their employees, training of Block Level Extension Officers who are required to look after the industrial development programmes in Community Development Blocks; as well as to co-ordinate the programmes and activities of different Boards and Organisations in this behalf. Training programme also includes training of artisans in different trades in India as well as abroad. Training is imparted by the Central Small Industries Organisation through its various small Industries Service Institutes, Branch Institutes and Extension Centres.

1,156 small-scale industrialists and their employees and 45 State Government Officers were given training in industrial management, in 1962-63 bringing the total number so trained to 4,791 till the end of March 1963. 427 Block Level Extension Officers were also trained in the principles and techniques adopted for the development of small scale industries during the year bringing the total number of extension officers so trained to 3,489.

About 2,386 skilled and semi-skilled workers were trained during the year 1962-63 in various trades like blueprint reading, heat treatment, carpentry, machine shop, footwear, foundry, tool room, blacksmithy, thermometers, welding, sheet metal work, tanning, precision instrument making, pattern making etc. The total number so far trained in various trades was 6,881 workers. 224 workers were under-training in March 1963.

CREDIT FACILITIES

Financial assistance is now provided to the small scale industrial units through various agencies namely, State Governments, State Financial Corporations, State Bank of India, Commercial Banks, Co-operative Banks and Life Insurance Corporation of India. Loans disbursed by the State Governments to the small scale industrialists under the State Aid to Industries Act have been progressively on the increase. During the Second Plan period, nearly Rs 30 crores were spent by the State Governments on their small scale industries schemes. Out of this, about Rs 13 crores were given as loans to small units under the State Aid to Industries Act. During the first two years of the Third Plan State Governments advanced nearly Rs 5 crores as loans to small scale industrial units.

The State Bank of India also advanced loans on pledge of raw materials to parties receiving orders from the Directorate General of Supplies and Disposals through the assistance of National Small Industries Corporation.

CREDIT GUARANTEE SCHEME

Another important scheme for helping the small industries finan-

cially is the Credit Guarantee Scheme of the Reserve Bank of India which was introduced on 1 July 1960 on an experimental basis. The Scheme provides for sharing of risks between the guaranteeing organisation (Reserve Bank of India) and the lending institutions. The Scheme has now been placed on a permanent basis and its area of operation has been extended to cover the entire country as against 52 districts covered originally. The Scheme provides guarantee of advances by 93 selected credit institutions comprising 49 Scheduled Banks, 21 State Co-operative Banks, 14 State Financial Corporations, and the Madras Industrial Investment Corporation besides the State Bank of India and its seven subsidiaries.

Life Insurance Corporation of India had also made provisions for a sum of Rs 12 crores to be given as loan to industrial estates to be set up by Industrial Co-operatives and Joint Stock Companies of small industrialists.

Various measures have been taken for promoting the growth of ancillaries. A number of public and private sector projects were approached by the Central Small Industries Organisation for enlisting their co-operation in encouraging the development of small ancillary units for procurement of their requirements of components and parts. Significant progress has been achieved as a result of these efforts. A large number of factories both in the private and public sectors have already taken a lead in sponsoring functional Industrial Estates either on their own or with the co-operation of State Governments to house ancillary units. In some places the entrepreneurs themselves have come forward to form Industrial Co-operative Estates for ancillary industries.

STATE GOVERNMENT SCHEMES AND INDUSTRIAL ESTATES

The Central Government provides financial assistance to State Governments for implementation of their small scale industries schemes and Industrial Estates. More than 700 schemes had been initiated for implementation in 1962-63. These schemes included block loans for disbursement to small scale industrial units under the State Aid to Industries Act, opening of training-cum-production centres, quality marking schemes, commercial schemes, service facility centres and industrial co-operatives.

It is proposed to set up during the Third Plan period about 300 new industrial estates of varying sizes and types. A number of these would be located near small and medium size towns and in rural areas where power, water supply and other essential facilities are available or can be readily available.

Kandla Free Trade Zone

By L. M. Kaul

The concept of a Free Trade Zone can be traced back to the free cities that existed on the Mediterranean coast before Greek and Roman civilisation reached there. Ancient free ports, such as Trieste and Carthage, permitted what may perhaps be called "Free Trade". Such free cities later developed into Free Ports where goods were allowed unrestricted entry without having to pay tolls or other levies. As protectionism or the principle of protecting indigenous industries from foreign competition came to be recognised and accepted, the idea of free trade zones was evolved. To encourage and facilitate international trade not less than 100 Free Ports and Trade Zones are reported to be in operation in 35 countries of the World today. As for instance, in the United States, there are six Foreign Trade Zones in New York, New Orleans, San Francisco, Seattle, Toledo and Mayaguez Puerto Rico. In Europe, there are such Zones in Stockholm, Gothenburg, Copenhagen, Hamburg, Bremen, etc.

As early as in 1957, the Export Promotion Committee examined the usefulness of free ports and free trade zones and recommended the examination of the feasibility of free trade zones as an export promotion measure. A tentative scheme for establishing a Free Trade Zone at Kandla had been under consideration of the Government of India for the last few years and it was finally decided last year to establish such a Zone near the Kandla Port, a new major port which has been developed on the western coast of India.

WORKING OF THE ZONE

A free Trade Zone is a segregated area in or adjacent to a port into which goods may be imported from abroad without being subjected to customs duty. Within the Zone such goods may be stored, exhibited, worked on, mixed with other foreign or domestic merchandise or used in manufacturing operations. The goods become subject to customs duties only when sent out of the zone to other parts of the country but are not liable to pay any duties, if exported out of the country. In India, however, the idea of establishing a Free Trade Zone has been primarily developed as an export promotion measure. For this reason, in the Kandla Port Free Trade Zone, preference will be given to such manufactures or such imports as are primarily meant for export and not for consumption within India. Foreign raw materials and component parts free of customs duty will be allowed to be brought into the Zone for further manu-

facture or processing and subsequent export to foreign countries.

LOCATIONAL ADVANTAGES

The site for the Kandla Free Trade Zone has been selected primarily on the basis of locational advantages. Kandla has already developed into a Major Port. It is equipped with a number of cranes of 3 to 10 tons capacity and has all the facilities of a modern port such as warehouses, transit sheds, mooring berth, oil jetty with pipeline, air, road and rail connections. A township known as Gandhidham has also been developed a few miles inland. The only thing lacking is a broad-gauge rail connection with the rest of India and with the decision recently announced for the construction of a broad gauge link connecting Kandla with Jhund, even this disadvantage will be removed.

INDUSTRIAL UNITS

The Kandla Free Trade Zone has been established on the Kandla-Ahmedabad National Highway at a distance of about 9 kilometres from Kandla Port and 5 kilometres from the township of Gandhidham. The development work such as laying of roads and providing water and electric power has started. The Administrator for the Zone appointed by the Commerce Ministry of the Government of India has already established his office at Gandhidham. In the first phase provision has been made for the establishment of 200 industrial units and warehouses. Plots are being leased out on 30-year lease in the first instance on a nominal ground rent of 50 paise per sq. metre per year only. Applications for setting up of industries have been invited and it is expected that the allotment of plots, for establishing industrial units and warehouses, will commence from October, 1964.

NEW OPPORTUNITIES

A manufacturer in the Free Trade Zone, who needs materials imported from abroad or products which are subjected to a central excise duty in India, has a number of advantages over other manufacturers outside the Zone. The latter can claim and secure refund of duty paid by them on goods which they ultimately export but a large part of their capital inevitably gets tied up in customs and central excise duty. The exporter operating in the Free Trade Zone is free from this. He has also some advantages of customs duty in the matter of wastages in the process of manufacture. Also, he has the additional advantage that he is not subject to restrictions of quotas in importing materials into the Free Trade

Zone. Such Zones are also ideal for the purpose of 'entrepot' trade. Those traders who wish to import articles only for the purpose of re-exporting them to other markets abroad have an excellent opportunity to do so in the Free Trade Zone as by this they are able to avoid payment of customs duty and are saved from bothersome and time-consuming processes involved in establishing identification of goods originally imported and then exported. Thus, a Free Trade Zone eliminates incidence of cost on the merchandise as a result of revenue duties and administrative costs of making payments, claiming refunds, etc. which is of great advantage in making the cost of merchandise more competitive. Procedural delays on account of various formalities are also eliminated in a Free Trade Zone.

The shortage of foreign exchange continues to be a serious bottleneck in the development of the country's economy. The key to the problem lies in boosting our exports. No doubt, foreign assistance does help to cover the gap in foreign exchange to some extent but there are obvious disadvantages in too large a reliance on foreign assistance. If our economy is to develop along independent lines, we shall have to earn our foreign exchange by working for more exports.

The Kandla Free Trade Zone provides the progressive entrepreneurs with an opportunity for sound and profitable investment as well as a means to serve the country's needs by earning foreign exchange for the country. India was one of the earliest trading nations of the world which was exporting goods to the four corners of the world even thousands of years ago. Here is an opportunity for Indian businessmen of follow their heritage and to recapture the spirit and vitality of our ancient traders.

INDO-FRENCH VENTURE

Manufacture of Electrical Equipment

A new factory for the manufacture of electrical switchgear and control-gear is being set up at Thana by TATA-MERLIN & GERIN LIMITED, a new Company which has been promoted by VOLTAS LIMITED jointly with the well-known firm of ETABLISSEMENTS MERLIN AND GERIN OF GRENOBLE, France, and TATA SONS PRIVATE LIMITED.

The factory will manufacture under MERLIN GERIN's licence various types of switchgear and allied power distribution equipment including the SOLENARC High Tension Air-Break Circuit Breakers. Isolators upto 380kV, Interrupters, Current and Potential Transformers, Switchboards and Control Panels and a complete range of LT Air-Break Circuit Breakers. The manufacture of Relays and Measuring Instruments is also planned. Produc-

tion is expected to start at the end of 1965.

Tata-Merlin & Gerin Limited has an authorised capital of Rs 2.5 crores. In the first stage, its issued capital will be Rs 70 lakhs of which about 45 per cent will be issued to the public. The balance will be taken up by the three promoters, MERLIN GERIN capitalising a part of the fees and royalties payable to them.

The Company's foreign collaborators, Messrs Merlin & Gerin S.A. of Grenoble, France are one of the leading manufacturers of electrical equipment worth about Rs 11 crores a year.

The Fourth Plan envisages an increase in the installed electricity generating capacity in the country by approximately 6 million kW by approximately 16 million kW by 1970/71. It is estimated that thereafter the installed capacity will double approximately every five years. The demand for switchgear to be manufactured by the Company is closely interlinked with the development of generating capacity. The new project will, therefore, help the country to save precious foreign exchange and contribute towards meeting the rapidly growing demand for heavy electrical equipment.

Consumer Price Index Numbers for Working Class

The Labour Bureau series of consumer price index numbers for working class (base: shifted to 1949-100 except where otherwise indicated) increased in 10 centres during July, 1964.

The maximum rise of nine points was recorded by the index for Cuttack which stood at 182. The index for Ajmer and Gauhati appreciated by seven points each to 137 and 126 respectively, for Dehri-Sone by four points to 136, for Berhampur and Akola by three points each to 154 and 144 respectively, for Jabalpur by two points to 161 and for Tinsukia, Ludhiana and Kharagpur by one point each to 146, 127 and 137 respectively.

In this group of centres, the food group index numbers appreciated at all the 10 centres, the fuel and lighting group index numbers at four centres, the clothing group index number at one centre and the miscellaneous group index number at three centres.

The index for Silchar declined by two points to 136. The food group and miscellaneous group index numbers also declined in this centre.

The index number for plantation centres (base: January to June, 1949=100) showed only fractional variations and stood at 169 during July, 1964.

The provisional index for Bearwar (base: 1951-52=100) showed a rise of one point and stood at 134 during July, 1964.

The all-India index appreciated by four points and stood at 154 during July, 1964.

NOTE: Annual figures are averages of months; those of sugar relate to crop years.

†Data of Matches, Hurricane Lanterns, Sewing Machines and Bicycles from January 1963 onwards and those of Footwear (leather) from April 1963 relate to units having fixed assets of Rs 5 lakhs and more.

‡Data in respect of certain units are not included from January to May 1963.

(1) Monthly figures are exclusive of production in Punjab (Kangra) and Himachal Pradesh.

(2) Relating to the production by mills in the membership of Indian Jute Mills' Association and to one non-member mill.

(3) Includes canvas.

(4) Figures relate to stable variety only from June 1962.

(5) Including figures for Jammu and Kashmir.

(6) Figures relate to production of organised factories.

(7) Boxes are of 60 sticks each upto February 1961 and thereafter of 50 sticks each.

(8) Total of viscose yarn, staple fibre, acetate yarn and cellophane.

†From January except in the case of sugar where the figures are progressive from November of the preceding year, the crop year being November-October.

*Provisional.

**Why should you fly Lufthansa to these cities
when so many other airlines also go there?**

1. Because German pilots have the most enviable reputation for aviation competence in the world. 2. Because our flight crews are backed by factory-trained German ground engineers who check every inch of the plane at the end of each trip. 3. Because there's no other way you can get good German black bread, fresh sauerkraut, and Westphalian ham without setting a foot out of the Far East.

So why not fly Lufthansa? It's the surest way of getting the best of the West while you travel in the East.

Policy for Industrial Growth

WAYS and means of stepping up the tempo of industrial activity to a level which would be adequate for the achievement of the Fourth Plan targets should be the principal topic for the forthcoming meeting of the Central Advisory Council of Industries. Besides taking stock of the present situation and trends, the Council will also have to suggest appropriate changes in strategy and in the order of relative priorities. In this context the Council will have to give serious consideration to the decline in the rate of growth of industrial production which has been evident during the first half of the current year.

The statistics of industrial output indicated a more satisfactory trend last year when the general index recorded increase of 9.2 per cent as against 8 per cent in 1962. But during the subsequent six months, that is, January-June, 1964, the index shows an increase of only 6.8 per cent as compared with the corresponding period of 1963. The tapering off of the defence demand is one of the reasons adduced for the fall in the rate of increase of industrial production; for instance, the output of woollen and worsted yarn and fabrics shows a substantial decline. It has also been pointed out that industrial output in a developing economy is more likely to grow in spurts, depending on the date of maturation of new projects, than to show a steady rate of increase. A number of new units which came into full operation this year have contributed to the increase of 11.6 per cent in the output of paper and paper boards. Similarly, additions to refining capacity were responsible for substantial increase of five lakh tonnes in the output of petroleum products. But even if we take into account the longer period of eighteen months ending June 1964, so as to even out the differences due to the factors mentioned above, it is clear that the rate of growth of production during the third and fourth years of the Third Plan has been significantly lower than what was originally envisaged when the Plan was drawn up. As a result, the Fourth Plan will have to start from a lower base than was indicated in the targets for several important groups of industries, including metals and metal products, fertilisers, cement, newsprint, etc.

While these shortfalls will no doubt be taken into consideration in framing the Fourth Plan targets, the estimates which are now being considered will cease to have any relation to reality, unless effective steps are taken from

now onwards to accelerate industrial activity in the country. One favourable factor is that shortage of power and transport is not likely to impede production as it did during the early years of the Plan. The rate of growth of output of electric power is ahead of the average growth of industrial production. The output of transport equipment of all categories is also substantially higher than the average.

The spurt in the production of transport equipment, which was facilitated by the availability of foreign exchange to a greater extent than in previous years, highlights the fact that shortage of foreign exchange continues to be the major limiting factor in regard to the development of the industrial sector as a whole. The recent British and West German credits, which include a substantial proportion of non-project aid, and the IDA credit of 90 million dollars should help to increase output by ensuring higher levels of utilisation of capacity in several engineering industries. But for industries which are outside the scope of these credits, the problem of augmenting free foreign resources remains as intractable as ever. The position, it is sometimes argued, would be easier if industries show greater readiness to switch their sources of supply of components and materials according to the available of external aid. This may not be practicable except in the case of a few industries, as the question of specifications is involved, and components manufactured in different countries are not readily interchangeable. The preferences of industrial units to obtain their requirements of components and spares from the same source from which they got their original equipment cannot be put down to lack of enterprise.

With the growth and diversification of industry, the need for imports of this category is more likely to grow than to diminish. A price has to be paid for industrialisation on borrowed techniques on the top of borrowed capital, and the only way in which it can be paid is through increased exports. Even the export target of Rs 5100 crores, which many consider to be rather on the high side and difficult of attainment, falls short of the requirements of maintenance imports of the order of Rs 5500 crores. The scale on which imports will be required for the fuller utilisation of the industrial capacity that has already

been built up, underlines the need for an appropriate industrial policy to back the export drive. And the new policy, as suggested by Dr Lokanathan while releasing the memorandum prepared by the NCAER on the Strategy for the Fourth Plan, should be based on an analysis of the relative value of investment in terms of foreign exchange gains in import-saving industries as compared with export oriented industries.

Salem Steel—II

IT was pointed out in the first article of this series, which appeared last week, that the question of establishing without delay a steel unit in Salem is best viewed against the background of the past history of this proposal, particularly the successive enquiries and the latest technical developments regarding the utilisation of Neyveli Lignite and the iron ore available in that area for manufacturing steel. The history of steel in Salem, in the remote past, in the comparatively recent times of the early years of British rule and since the attainment of Independence is useful for showing that the iron ore in this area had at no time been neglected, but that its utilisation in the manufacture of steel had changed from time to time, both in scale and method, according to the technical and trading conditions.

It is hardly to be supposed that Salem iron ore emerges into prominence all of a sudden like the monazite sands of Kerala which had to await the development of nuclear physics. Whatever the difficulties of a later age in the manufacture of steel from Salem may be, historically, the Steel products of Salem were well-known in the past for their high quality. Foreigners who came in with British rule were so impressed with the quality of the goods that they embarked on relatively ambitious projects, attracted as they were by the abundance and easy accessibility of the ore here and the shortages of steel experienced by the British industry at home. The fact that, in spite of the low priority accorded to the Salem steel project today, Madras had an indigenous iron and steel industry from time immemorial is important for stressing the presence of a useful raw material for industry and the danger of ignoring it through mis-conceived notions of its economic value.

In the last century, Madras had an iron and steel industry run on European lines by the Porto Novo Iron and Steel Company and the East Indian Iron Company. The latter was established by one Mr Josiah Marshall, a civil servant who resigned his office and obtained in 1833 exclusive privileges from the East India Company for working the Iron and Steel industry. He has stated in his letters, "Steel is an essential article for national development; and yet, for the supply of steel, England was wholly dependent on Sweden and Russia. If any chances of war or any other causes were to intercept these supplies, England was bound to suffer incalculable injury. Dannemora iron of Sweden was indeed famous for steel making; but Madras iron ore which had been subjected to chemical analysis had been found as rich as Dannemora ore; in fact, somewhat richer". "I actually", he said, "got the Indian (Madras) ore to England and had it made into pig iron and bar iron with the greatest care. The iron so made has been pronounced excellent and the steel instruments made of this ore have been declared to be in

no way different from those made from the best cast-steel from Dannemora iron. Some have said that the Indian (Madras) steel is decidedly superior to any other description of steel. The 12,000 tons of foreign iron annually imported into England could easily be supplied from Madras and at a cheaper rate. And the iron works established in Madras would not interfere with the produce of England because English bar iron which was normally used in Madras for all purposes except steel making could still be sold here with profit."

Mr Heath started the Porto Novo Company and erected Iron Works at Porto Novo in 1850. He secured the necessary privileges for mining the Salem and other ores and for cutting the fuel required for smelting. There is evidence to show that this new Company succeeded in manufacturing iron of a very superior quality which sold readily in England and India at high prices. Another new company was accordingly formed in London in 1853 with a nominal capital of £400,000 and operations in Madras were carried on with renewed energy and vigour. Two subsidiary works were erected at Poolampattai in the Salem district and at Thiruvannamalai in the North Arcot district (then in the South Arcot district). In the case of this company too, there is clear evidence to show that large quantities of very superior quality of pig iron were manufactured by it and sent to England as ballast in cotton and tea ships. There is also evidence to show that this company for a time made fair profits.

As long as the company could convey the pig iron to England as ballast in cotton and tea ships charged at ballast freight rates, it could make profits. But this mode of conveyance became difficult to procure when considerable quantities of sugar and other dead-weight cargo came to be sent as ballast on those ships. For a time, however, a silver lining appeared on the clouds. The Bessemer method was adopted and the molten crude metal from the blast furnace was, to the surprise of all, converted into ingots of superior steel in a few minutes with only a small expenditure of fuel and labour. Reports of samples of tool and spring steel which were sent to the heads of departments in Madras and Bombay being very satisfactory, orders for supplies soon followed. But the hopes of the Company were again doomed to disappointment. It was found impossible to compete with English manufacture for such class of work, especially when freights from London were then as low as Rs 50 to Rs 30 per ton. The company was eventually wound up. But the rock on which it split was not lack of fuel as may be supposed, but inadequate finance and transport facilities. Then followed a long period in which experts and administrators were found to sway widely between the two extremes of praise for Salem steel as an economic proposition and condemnation as hopelessly unworkable.

But no war ever failed to stimulate Government interest in iron and steel manufacture. When the First World War ended, Mr Innes, the Director of Industries, Madras, submitted a note on the Salem ores on the basis of using electric power from the proposed Hogenkal and Mettur hydro electric schemes. But, the officer of the Geological Survey who was deputed to examine the proposition reported that, because of the low grade of Salem ore, it was necessary to crush the ore, carry out magnetic concentration and briquetting with charcoal and limestone and smelting in an

electric furnace and the "the electric smelting of the Kanjamalai iron ores does not lie within the bounds of commercial possibility."

After the expression of such an opinion, the proposal fell under a cloud which showed no signs of lifting till Dr Dubey of the Benares Hindu University conducted experiments on a small scale with the electro magnetic separator at the University and gave his opinion that there should be no difficulty in concentrating the ore to the requisite purity. The outbreak of the Second World War pushed the project into the back ground for a time, but it was revived in 1941. The Adviser Government deputed Dr M. S. Krishnan and Mr N. K. N. Aiyenger to investigate the Salem-Tiruchi ore deposits. The two experts of the Geological Survey of India expressed the opinion that (1) as coal is not found in S. India and charcoal can not be had in sufficient quantity, alternative ways of smelting the ores have to be found; (2) that the ordinary average ore containing 35-42 per cent iron can be improved in grade to one with about 60 per cent iron and can be briquetted or sintered, that fluxes and refractories are available at economic prices, and that as a preliminary to the working and smelting of ores, it would be necessary to conduct investigations on a fairly large scale on crushing, methods of concentration, sintering or briquetting and smelting, in order to determine the best practice to be followed and to work out the approximate costs. "These" they said, "must be carried out by specialists either in well-equipped laboratories or in works where there are facilities." No sustained action was taken on these findings. It was not till the attainment of Independence that the Government of Madras gave its attention to the question, but then it had to reckon with not a little of apathy and scepticism from the Union Government.

(To be continued)

Indians in Ceylon

[The following despatch was written before the successful conclusion of the New Delhi talks]

THE Indian minority in Ceylon presents a problem for India today. The talks in Delhi over several days turned on the question of those who are de facto citizens of Ceylon but held ineligible for registration as voters. In a sense, the issue has been raised by the independence achieved by Ceylon and the freedom given to legislate on nationality. Whether the Indian minority—described as inassimilable aliens—should be made to return to India is the chief problem.

Nationalism in Ceylon still emphasises the predominance of the Sinhalese and the superior position of Sinhalese against Tamil. The efforts made by Burma to reduce the Indian minority by drastic and sudden steps has perhaps encouraged Ceylon to utilise the occasion to present demands. As another Buddhist country that is anxious to reinstate old traditions and forms, Ceylon has a case of sorts. The rise of Leftist parties that promise a new deal to the poor by elimination of the embattled Indian element has sharpened the edge of policy. If protests, from Madras parti-

cularly, fail to make any impression it is because India has accepted 800,000 refugees from East Pakistan and Ceylon has been encouraged to hope for the removal of an element that encourages separatist sentiment in Jaffna. The Federal Party in Ceylon is still conscious of its rights. That Indians may support that party is the fear behind the moves made by the Ceylon Government. Both adult franchise and parliamentary rule make the majority keen on reducing the minority to a state of subservience and the anxiety to limit the minority vote proves that Ceylon is not anxious to create a plural society.

Policy adopted over a decade proves only that the Indian is being squeezed out by progressive stages and the ties established with China by Ceylon indicates that not India but China is the big neighbour to whom the island will turn. The inquiries of Sir Edward Jackson about the place of Indians who helped the planting industry to grow over a century signify little and the Commonwealth also means less than once presumed. If British Guiana, Trinidad, Fiji or Mauritius do not adopt measures against Indian immigrants settled there, it is because they are not in a position to take steps like Ceylon. The assisted emigrants can only become assisted immigrants into India because Ceylon takes the line that no obligations exist and what is done by Kenya or Zanzibar provides a convenient parallel as regards repatriation.

There is perhaps no point in saying that incentives for return to India are inadequate. The Ceylon government is as embarrassed financially as India and the riots in Jaffna once created an emergency. That too could be used to put the problem of the Stateless before the Indian Government which has to realise that historical ties mean little and economic ties too mean less because Ceylon's attitude to foreign capital today is derived from Burmese example—not Indian example.

Xenophobia is perhaps due to Chinese or Indonesian example but it is quite useless to dwell on the inequity or inexpediency of the policy—refusal to register Indians qualified by residence or employment. The position now is clear. Ceylon is bent on reducing her population not only because food is short but because Indians equipped with voting power may prove a buffer between the UNP and the Leftist parties. It is in the name of socialism that Ceylon, like Burma, seeks to push Indians out and the Congress party here pledged to socialism cannot oppose. At best, it can argue that India has difficulties of her own.

The aberrations of nationalism—or socialism—may invite comment but the opposition parties in India can do little to meet the Ceylonese claim that British rule led to Indian emigration and a free Ceylon has no commitments to honour. The situation is not one relating to cash compensation for assets taken over and it is clear that passages to India for estate workers will not present a problem. What is crucial perhaps now is the addition to the unemployed in South India. The level of wages may be held down—in the plantation industry even if it has scope for further development in Kerala or Mysore and yet the Tamil estate workers coming in droves may not be quite welcome. The Madras Government's rubber plantations afford little chance for the returning workers or shopkeepers. For Ceylon the issue is chiefly political; for India the issue is chiefly

economic, in view of the food crisis. But Ceylon's mind is made up and a hint of what is now in store was given by a trade agreement meant to enlarge Indian exports to Ceylon. Some imports may be stimulated, if India is willing to accept the Ceylonese claim to exclude ineligible Indians—distinguished by lack of birth certificates or residence permits. Whether the UK immigration Act designed to curtail West Indian influx or Pakistani entry is the inspiration for Ceylon policy need not be examined here. There is no question as to colour in Colombo.

What is clear is that Ceylon is not like Malaysia—a multiracial country, and the Ceylonese middle class is extremely anxious to displace the Indian traders affected already by the rise of a State monopoly in the Co-operative Wholesale Establishment. It must be understood that socialism has an isolationist element and Ceylon's non-alignment does not include the open door policy. While the USA and Canada have lowered the barrier and let qualified Indians become citizens in the case of Ceylon the policy of excluding Indians is deliberately chosen. The contrast can be explained by a reference to illegal entry by country craft, the persistence of touts and the prevalence of smuggling. But it seems necessary to point out that if Mexicans can get into California purely for economic reasons and take their chance as second class residents, in Ceylon the Official view is that whoever came in legally or illegally must go out because the aim is to create a tight little island in which a new Puritan way of life can flourish.

South Indian Notes

IT is a matter for gratification, rather than regret, that this journal's editorial observation of last week that not only the North but the South also has displayed a strange indifference to Salem Steel project was belied even before the issue reached its readers. It is true that one or two short editorials appeared in some of the dailies about the altogether new complexion which the report of Messrs Dastur and Co had given to the economics of steel manufacture in Salem and the need for the Government of India to adopt a new approach and attitude to this project. But there was missing what one would naturally expect in the wake of the Dastur report, a new consciousness of the economic potentialities of the South, of a key to progress and prosperity which had suddenly emerged to view and which it was the duty of the people and the Government of the State to see was duly opened with the utmost expedition. The public of Madras was certainly not electrified. But it would not be accurate to say that the significance of the report was overlooked. The members of the Madras Assembly did not omit to put some pointed questions about the prospects of the project being included in the Fourth Plan, the danger of its being shelved by reason of the "partiality", conscious or unconscious, of the Union Ministry concerned and about the expediency or wisdom of the Assembly passing a resolution asking for a high priority for Salem Steel. Answering for the Government, Mr R. Venkataraman, the Minister for Industries, was content with

affirming that the project was sound enough to gain priority on its own merits, that a resolution of the House on the lines suggested would be a bad precedent and protested against insinuations against the Union Ministry. That is all as it should be. It is enough for the present that legislators and the public in Madras, and not alone the Ministers, are aware of what "Indian Finance" was most careful to emphasise, that Hospet and Vishakapatnam are by no means to be compared with Salem, so far as the first new steel plant in the South is concerned. That the Centre has not as clearly accepted this point is indeed regrettable. To accomplish the necessary change is a task to which the South from now must apply itself.

For, the industrialisation of Madras, unlike that of the coal and iron belt in Bengal-Bihar, is not a natural process, in which the impetus of natural resources has gone on despite an unfriendly Government and which can be accelerated by a popular ministry. Nor does it need to be a kind of hot house plant calling for all the elaborate care which science and governmental solicitude can give to it. In the past industries had been confined to those regions for which such advantages as nearness to a major port or a relatively abundant supply of electric power or a raw material like cotton were more or less decisive. In more recent times, the defence industries in Avadi and the cycle and the automobile industries in greater Madras, such Central industries like the Integral Coach factory have pushed the State definitely higher in industrial grading. But the kind of industrialisation that can go forward on its own momentum can come only when Salem ore is wedded to Neyveli lignite to produce steel of good quality and in good quantity, when the refinery is established and if oil is struck in the Cauvery basin and the adjacent coast as a result of the investigations carried on by the Soviet team; then the stage will be set for the high grade industrialisation which is the aspiration of the whole nation. The prospects of the establishment of the refinery and the striking of oil under water are indeed bright.

As if in anticipation of these developments, the Government of Madras has only recently proposed development of four minor ports at Ennore, Vepplodai and Kulasekharapattinam. They have also prepared some new schemes for Cuddalore, Nagapattinam and Tuticorin ports. Considering the cargo which will have to be handled about a decade hence as a result of new industrial units like the fertiliser factory, the 300 MV power station and even 30 million gallon capacity sea water conversion plant, they have decided to turn their attention from the fishing harbour scheme for Royapuram to the idea of a sort of satellite port at Ennore. All these schemes will have to be threshed out at the National Transport Board. But they give a clear indication of the lines on which future development is expected to take place.

The food situation in Madras city is being dealt with from a near as well as a relatively long view. In the near view the rice that the Government can lay its hands on is being given to the cooperatives and some picked retail shops and some attempts are made to see that there is no leakage of grains on the way to meet legitimate consumer demand. The effect, from the consumers' point of view, is not very considerable. But there is no denying the relief to the ordinary working

classes, though it would be wrong to say that their needs are fully met. The principal step now taken in the long view is the census of families carried out by the Home Guards. There is no indication yet of how much rice the cards will procure when they will be issued. The Government itself seems to be in the dark about it. Mean-while, there is the rather depressing exchanges between the State Governments of the zone. The Andhra Pradesh Government is willing to supply rice to Kerala, but not to Madras and Mysore, which, it says are not in deficit. The Madras Government accepts the compliment and contends that its sales to Kerala cause a shortage and must be made up for. There is indeed much of clever manoeuvring, which, to say the least is not seemly where food is concerned.

Economics of Automobile Industry

By Virendra Agarwal

ECONOMIC prosperity is judged in the final analysis by the development of a country's automobile industry. Today there is one car in the US for every three citizens, in France one for nine, in Great Britain one for ten, in India the ratio is one for every 8,000. The targets for commercial vehicles, cars, jeeps, and station wagons and motor cycles have been set at 60,000, 30,000, 10,000 and 50,000 respectively but the achievements are not likely to be more than 42,000, 25,000, 10,000 and 40,000 in 1965-66. The total number of vehicles which was three lakhs in 1951 stood at 8 lakh in 1961. Out of these the number of commercial vehicles was almost 2 lakhs. It is reported that by the end of the Third Plan, almost the entire automobile industry barring one or two manufacturers of vehicles and functional parts is expected to achieve an indigenous content of 90%. Idle capacity in the automobile industry exists because foreign exchange is not given in adequate quantities for the purchase of certain raw materials and components which have got to be imported. These essential imports are called CKD pack and forms about 20% of the total materials used in a car. As a matter of fact in the case of one manufacturer the foreign exchange quota for the CKD pack of imports has been reduced by 40 to 50 per cent to what they were allotted in 1961-62. In the latest consultations between the Planning Commission and the Ministries at which the different forecasts of future growth of demand by 1970-71 were reviewed, the production targets visualised were 100,000, 50,000, 17,500 and 120,000 in respect of commercial vehicles, cars, jeeps for station wagons and motor cycles or scooters respectively. This may be possible only when the potential capacity of the industry is fully utilised.

Of late, the Indian automobile industry has been very much in the news. The Minister of Heavy Industries recently provoked the Lok Sabha when he declared that the private automobile manufacturers in the country were not receptive to the idea of pooling their capacity for bringing down the cost of car while another member pointed out that so long as 'Wretched' cars continued to be sold at Rs 18,000, the manufacturers' response to the suggestions to increase efficiency was

bound to be poor. But facts are exactly contrary to what is stated there. An analysis of the price structure reveals that 30 to 33 per cent viz., a sum of Rs 5,140 represents taxes of various kinds, direct and indirect, levied by Government. Another significant aspect of the problem is that the prices of items/components supplied by the ancillary industry are high, the cost is bound to go up even though the cost of other items produced within an automobile factory itself and the cost of assembling are low. For example, the steel required for a manufacture of a passenger car costs Rs 650 per ton in the UK and Rs 1,260 in India, wheels (per set) cost Rs 48 in the UK and Rs 142 in India. At present, there is hardly any control in respect of price or quality of the indigenous items. The quality of the finished goods cannot be improved so long there is no quality and price control of indigenous components. More than 70 per cent of the materials and parts have to be indigenously obtained. Both the manufacturers' profit and dealers' commission are fixed by the Government and in actual practice constitute only a small percentage of the final price paid by the consumer. It is equally true that the ancillary industry is facing quite a few difficulties like irregular supply of raw materials as alloy steel, non-ferrous metals, rubber, chemicals, etc. It should not also be forgotten that the ancillary industry is of comparatively recent growth and its teething troubles are not yet over. We are still keen to increase the ratio of indigenous components to 95% by the end of the Fourth Plan.

It is often asked whether the manufacturing cost per car cannot be reduced by increasing the output. Here again there is considerable popular misconception. It is claimed that if the present production were, say, doubled, the price per car could have been reduced substantially. Now, in the automobile industry there is a minimum optimum level for each type of production, a small rise or a fall below this level does not lead to any significant variation in the cost per vehicle. The manufacturers have made it clear that even if the output were doubled it will not result in any appreciable reduction in the ultimate price to be paid by the consumer so long as taxes and the cost of raw materials and equipment remain at their present level. The economies of the automobile industry are such that if you increase production from 50,000 units to 100,000 units you save 15% in the cost of manufacture but in India all the three units are hardly producing 20,000 units.

The total taxes to be collected in one form or another from the automobile industry as proposed in the Budget for the year 1964-65 amount to Rs 231.07 crores. It was only Rs 6.40 crores in 1950-51. The Government has set up a study Group to examine the procedure for the assessments and collection of motor vehicles tax, goods tax and passenger tax in respect of vehicles and to recommend a simple and uniform procedure. It would have been appreciated if the Government could have thrown light as to when the tax-relief, much needed in the case of the automobile industry, will be available so that the efficiency of the industry and the quality of the car are further improved. It is obvious that the road transport has been taxed out of existence.

It is widely recognised that the indigenous automobile industry cannot make substantial

progress unless the increase in the number of cars is accompanied by a wholesale modernisation of the road system and by streamlining the road system in our cities and providing better parking facilities. It is reported that the Central and State Governments have begun to realise that political and social pressure for better roads proves irresistible once everyone owns a car or any other roadable conveyance or hopes to own one in the not-so distant future. Those who talk of democratic socialism should consider how such deterrents can be dispensed with which have made the life so expensive that it is practically impossible for the common man to think in terms of any roadable conveyance.

At present the number of customers for passenger cars already on the waiting list is about one lakh. The current demand is for about 5,000 cars per month or 60,000 per annum. The current production is however, about 25,000 cars per annum. To meet the current demand and also to partially offset the backlog, the production target should be substantially increased. With its present installed capacity the automobile industry should be able to manufacture a much larger number of cars provided the Government makes foreign exchange available for purchase of raw materials, components and the ancillary industry supplies component of acceptable specifications and in adequate quantities. But Government's attitude is neither practical nor rational for the development of road transport in India. The need of the hour is to rationalise the tax-structure as well as to provide necessary foreign exchange to utilise in full existing capacity.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

BANK RETURNS

Switch from Time to Demand Deposits

Since raising of bank Rate late last month and the new indicated rates of interest on Deposits, an interesting phenomenon is observable in the behaviour of Deposits of Scheduled Banks. It had been apprehended that the higher interest offered for Deposits of 91 days and over would cause a switch-over of current account money into time money, thereby involving higher expenditure for the banking system. In the event, in the three weeks since for which figures are available, there has been a reduction in Time Deposits more or less matched by corresponding increase in Demand Deposits. The switch-over is particularly steep in the week under review.

According to the returns of the Reserve Bank for 23 October, there has been a fall of Rs 28.65 crores to Rs 2,409.29 crores in Active Note circulation as also inflow of Rupee Coin for Rs 1.04 crores. With Foreign Securities unchanged at Rs 85.46 crores, currency has been contracted against Rupee Securities for Rs 15 crores, and the Reserve Bank's cash in the till has been added to, as a result, by Rs 14.69 crores to Rs 21.82 crores.

The return for the Banking Department discloses that Investments are practically unchanged at Rs 107.01 crores; and so the implication is that the Centre was in a position to cancel ad hoc Treasury Bills before their maturity in an amount of Rs 15 crores. But we must remember that the State Bank figured as purchaser of securities for Rs 10 crores, and so reverse ad hocs could at best have been for Rs 5 crores. The position becomes a bit blurred when we take the fact into account that the Centre's balances are sharply better by Rs 29.32 crores at Rs 83.45 crores. True, a certain element of repayments by the State Governments is involved; but it is also possible that in the anticipation of certain expenses the Centre has actually resorted to deficit financing, which has been obscured by sales of ad hocs to departments which are in a position so to invest their surplus funds. The State Governments have reported a drop of Rs 3.06 crores to Rs 12.59 crores in their Deposits, and a rise of Rs 5.66 crores to Rs 44.96 crores in their ways and means borrowings.

✠

Reserve Balances of Scheduled Banks are lower by Rs 8.56 crores at Rs 100.92 crores. The State Bank, in that week, appears appreciably to have added to its balances with the

Reserve Bank. Thus, the inference is that the other Scheduled Banks sharply drew down their Deposits with the Reserve Bank. At the same time, however, borrowings of Scheduled Banks from the Reserve Bank have been reduced by Rs 3.55 crores to a nominal Rs 0.44 crore.

Balances Held Abroad have dipped slightly by Rs 0.37 crore to Rs 8.76 crores; but with the start of the export season, it is possible that we shall not be seriously embarrassed in this regard for the next six months.

✠

The statement of affairs of the State Bank for 23 October reveals an increase of Rs 6.72 crores to Rs 671.06 crores in Deposits. Large-sized special transactions are also indicated: Other Assets have moved down by Rs 28½ crores and Other Liabilities are higher by Rs 7½ crores at Rs 29.47 crores. Giltedged has been acquired for Rs 10 crores, raising the portfolio to Rs 300.48 crores. The total of Advances is marked up by Rs 1.54 crores to Rs 330.85 crores. The end result is a steep increase of Rs 31.14 crores to an unusually high level of Rs 53.32 crores in cash balances, including money at call and short notice.

The following table brings out changes in the characteristics of net Deposits of Scheduled Banks during the last three weeks:

Week-ended	Change in Deposits Demand Time (In Rs Crores)	
2 October	7.38	—14.15
9 October	14.62	—16.01
16 October	18.34	—19.70

It will be noted that the switch-over to Demand Deposits has, in the three-week period since raising of bank Rate, exceeded Rs 40 crores. It is possible to suggest that, accordingly, the higher cost of time money will be partly neutralised by the increases under or switches to demand money. In the week under review, net Demand Deposits have been marked up by Rs 18.34 crores to Rs 1,312.11 crores, where as net Time Deposits have been marked down by Rs 19.70 crores at Rs 1,382.20 crores. With the State Bank in that week reporting a fall of Rs 5 crores in Deposits, it is clear that other Scheduled Banks added somewhat to their resources. The total of Advances has edged up by Rs 2.66 crores to Rs 1,733.44 crores, mainly ascribable to the State Bank. There has been disinvestment in giltedged for Rs 10 crores, reducing holdings to Rs 817.64 crores, and Rs 4 crores of the decline is traceable to the State Bank. Indebtedness both to the State Bank and to the Reserve Bank has gone up—borrowings from the former being shown higher by Rs 0.90 crore at Rs 40.62 crores and from the latter by Rs 2.27 crores at Rs 4.18 crores. As an end result, cash balances, including money

at call and short notice, are better by Rs 17.06 crores at Rs 266.04 crores; and if regard is had for the State Bank in that week disclosing a fall of Rs 12 crores, it is obvious that the other Scheduled Banks added quite handsomely to their cash resources.

Bank of America

Bank of America, the bank which started for "the little fellow" and grew to be the world's largest non-government banking institution, celebrated its 60th anniversary on Friday, 16 October.

The bank had its origin in a remodelled tavern in San Francisco with the services of three employees in 1904. With its founder, Amadec Peter Giannini, at the helm, it was the first to resume business after the San Francisco earthquake of 1906.

Forty-one years after its founding the bank became the largest commercial bank in the United States. Today, with 868 branches in California and offices in 27 countries around the world, it employs a staff of more than 28,500 people. The bank is known for such banking innovations as instalment credit loans, automated accounting, equipment leasing, payroll processing, and a widely accepted and successful credit card.

Resources of the bank total \$14.8 billion.

GLEANINGS

Bank of India

[The latest of the Indian Banks to start publishing a periodical intended, as Mr A. D. Shroff has stated, to keep "its patrons and public informed of the day-to-day economic developments here and elsewhere" is the Bank of India. The first issue is very impressive indeed, containing as it does, over and above a lengthy assessment of the change in monetary policy inherent in raising of bank Rate, a general news survey of happenings both in India and abroad. We reproduce below the concluding paragraphs from the note entitled "Monetary Policy And Economic Growth"]

Bank Rate is a double-edged weapon which, appearing to act as a palliative, could inhibit economic growth, particularly at a time when the capital market is in the doldrums. It is not clear why the Reserve Bank does not put more faith in its second string to the bow, namely, Open-Market Operations.

The rationalisation of the deposit rates structure by putting more orderliness in it to offset the effects of the rise in the Bank Rate

and for mobilising deposits may not after all achieve the object, particularly in our country where deposits are not always interest-elastic. The none too great success of the attractive Savings and Prize Bonds Schemes of the Government—not to speak of even the Gold Bonds—is a pointer to it. Several other factors, such as security, service, location, convenience, contacts, etc. have a significant role to play in the scheme of things. The fact that, even as they are, the aggregate deposits (excluding P.L. 490 and P.L. 665 deposits) of the scheduled banks have been showing a steady increase from Rs 1,131 crores in 1956-57 to Rs 2,256 crores in 1963-64, is an eloquent testimony to the fact that interest rate is not the only decisive factor. With the ceiling rate on advances and higher deposit rates and increased cost of credit, it is a moot point what effect the change in policy will produce on the economy. It is rather incongruous to encourage commercial banks to resort to term lending on the one hand and, to deny them, on the other, credit at a cheap rate.

The crux of the problem is that, in a less advanced country like India, monetary measures have their limitations. Control of the organised sector within the monetised sector is not everything. One-third of the economy still continues to be the non-monetised sector. Even within the monetised sector, a sizable part is more or less monopolised by the indigenous bankers who do not subject themselves to any great monetary discipline despite the salutary and persistent efforts of the Reserve Bank. Above all is the large volume of unaccounted money circulating in the form of currency, which has become a problem child of the country.

At best, monetary tools are only negative in their effects. "Even the most powerful monetary policies can never be a substitute for the many other economic and political measures necessary for growth. To rely too heavily on monetary policy and to try to substitute it for other measures, is to invite disappointment and failure" (Chandler). Economic imbalances caused by fiscal policies consequent on socialist planning cannot be obliterated by monetary restraints. What is needed is a re-orientation of the basic strategy and character underlying our planning process.

A silver lining to the cloud, however, is the realisation, though belated, that fiscal policy, too, has to be attuned to monetary policy, that deficit finance should be kept to the minimum and that economy in Government expenditure is to be effected. This is good in so far as it goes. But much will depend upon the co-ordination between the policies of the Centre and the States.

COOLEY FUNDS

Rs 2 Crores for 7 Firms

THE United States Government has extended credits totalling nearly Rs 2 crores (\$4.2 million) to seven Indian firms, all of which have American equity participation. These credits will help increase the production of fluorescent and mercury-vapour lights, steel forgings, gears, electric motors, power tools, airblast cleaning equipment, and lifts and escalators.

By manufacturing in India products several of which are currently imported, considerable foreign exchange will be saved. In some instances, part of the output will be exported, earning additional foreign currency.

The firms receiving the loans are Sylvania and Laxman Limited (Rs 50 lakhs), The Shama Forge Co. Ltd (Rs 47.5 lakhs), Napco Bevel Gear of India Ltd (Rs 40 lakhs), American Universal Electric (India) Ltd (Rs 21 lakhs), Rockwell India Ltd (Rs 16.9 lakhs), Indabrador Ltd (Rs 14.3 lakhs), and the Otis Elevator Co (India) Ltd (Rs 10 lakhs).

These loans are being extended to the firms under the Cooley Amendment to United States Public Law 480. Under this law—of which India is the largest beneficiary—a number of developing nations receive US agricultural products and pay for them in their own currencies. A small portion of the proceeds of these sales is reserved for the Cooley loans to private enterprises—primarily indigenous firms affiliated with US firms.

Sylvania and Laxman Ltd is jointly owned by Sylvania International, a subsidiary of General Telephone and Electronics Inc. of US and Indian shareholders. Sylvania and Laxman will set up a factory at Delhi to manufacture annually 12 lakhs of fluorescent tubes, 60,000 mercury-vapour lamps, 1.5 crores of glass shells (used as components for various types of lamps) and 30 lakhs of glass tubes.

Jointly owned by B. K. Khanna Ltd, of New Delhi, and the Kropp Forge Co., Inc., of Chicago, the Shama Forge Co. Ltd. plans to establish a plant at Bhopal, Madhya Pradesh, to manufacture 5,000 tons of steel forgings a year. These will be used by the country's growing automotive, farm-equipment and rail-equipment industries.

Napco Bevel Gear of India Ltd. is a company formed by Napco Industries, of Minneapolis, US, and Indian interests. The present Cooley loan of Rs 40 lakhs is the second that Napco Bevel Gear is receiving to assist this

project for a plant at Faridabad, Punjab, to manufacture gears, universal joints, and axles.

Also at Faridabad, American Universal Electric (India) Ltd. is setting up a plant to manufacture 600,000 fractional-horsepower electric motors a year. These motors are used in small pumps, fans, air conditioners, household appliances, sewing-machines, tape recorders, film projectors, and numerous other products. The company is owned jointly by the Universal Electric Co., of Owosso, Michigan, US, and a group of Indian investors.

With India's rapid industrial progress and growing mechanization, the demand for wood-working and metalworking machinery has increased greatly. Most of such machines are now imported. Rockwell India Ltd. is setting up a plant at Udhna, Gujarat, to manufacture 6,000 wood and metal cutting power tools annually. The firm is owned jointly by Rockwell International S.A., of Geneva, Switzerland, a wholly-owned subsidiary of the Rockwell Manufacturing Co. of Pittsburgh, Pennsylvania, US, and Indian shareholders.

Indabrador Ltd. is to set up a plant at Goregaon, near Bombay, to make shot and air blast cleaning equipment and dust collectors and subsidiary air-pollution control items. It will be the first company in India to manufacture such specialized machines, which are primarily used in foundries and other engineering establishments to clean castings before they are machined, as well as in the clothing, plastic, and rubber industries. The company is jointly owned by the Wheelabrator Corporation, of Mishawaka, Indiana, US, the British firm of Tilghmans Ltd., the New Standard Engineering Co. Ltd., of Bombay and by other Indian shareholders.

The present Cooley loan of Rs 10 lakhs to the Otis Elevator Co. (India) Ltd., for its projected plant to manufacture and repair lifts and escalators at Kaju Tekdi, Bombay, is the second such credit to the firm. The new loan will assist in the expansion of installed capacity from 120 to 240 lifts a year. Common stock in the firm is owned by the Otis Elevator Co., of New Jersey, US, and by Mahindra Ltd and associates, of Bombay.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 27 October, 1964. Total amount offered was Rs 4,70,00,000. Tenders at Rs 99.400 per cent were accepted in full. Lower tenders were rejected. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.400 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 2 November, 1964. Successful tenderers should make payment on Friday, 6 November, 1964 at all centres. Other conditions are as usual.

During the week ended 23 October, 1964, Government of India Treasury Bills for Rs 20,59,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 28 October, 1964 to 31 October, 1964 at Rs 99.416 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 21 October, 1964 to 24 October, 1964, amounted to Rs 27,65,75,000.

NCAER

Dismal Perspective

For some decades, Economics had ceased to be regarded as the dismal science, the deplorable description which it acquired over a century ago when the impact of Malthus was still fresh and overwhelming. The description has little relevance to the science that is now pursued in the affluent societies of the West where the economic problem of scarce resources and competing uses has been turned upside down by the progress of technology, so that a lot of ingenuity and an army of admen are engaged in finding uses for competing and practically unlimited resources. But in India at any rate, the old problem continues to hold sway in all its severity and the pursuit of the science leads to more and more dismal conclusions.

The NCAER, the National Council of Applied Economic Research, to give its full name, has taken a good look ahead, for devising a strategy for the Fourth Plan, and the strategy proposed is calculated to give rise to more gloomy thoughts. The Council has come out with the conclusion that an overall growth rate of 6.5 per cent in national income and a rate of 5 per cent in agricultural output will not be sufficient to ensure a national minimum in regard to all consumption needs. Increase in the rate of growth would postulate raising the outlay to dizzy heights. The country is in for a prolonged period of scarcities which will press most heavily on the poor, unless special measures are taken to ensure the supply of the bare essentials of existence to all sections of the population on an equitable basis. The Council has, therefore, recommended a programme of rationing of scarce consumer goods in urban areas, and implementation of rural works programme on a national scale. The latter is expected to provide the unemployed in the rural areas with the wherewithal to maintain a minimum standard of life where they are. For, if rationing is introduced in towns and conditions in the countryside continue as they are, the influx into urban areas of people in search of em-

ployment will be powerful enough to wreck any conceivable system of rationing.

the commitment to planned development.

✱

MARATHWADA

Claim to Backwardness

In spite of industrial development the State of Maharashtra has a backward region and the area added from Hyderabad State makes Marathwada a vulnerable region. Agriculture is backward and irrigation has not yet helped the peasant to get on. The power development in progress is too small to ensure growth, but as there are no minerals or forests the industrial estates at Jalgaon or other places must be content with developing cottage industries. The manufacture of breads cannot help much, unless there is good export demand. With a population of over 6.2 million, the area of 25,000 square miles is not well equipped with roads though direct links with Poona and Sholapur bring Marathwada within the scope of State transport services.

Backwardness is reflected in the limited progress made under education though a university was set up in 1958. The tourist traffic has not helped Aurangabad much and the blame may be laid at the door of the last Nizam. Dairy development might help and co-operative farming in a dry area may put the peasants in the position to use some machinery on the land. Raw cotton is the most important crop grown in this part of the Deccan and its rural economy can be improved by raising the yield per acre. The regulated markets exist to help growers, but defective communications hamper development of the trade. A co-operative spinning mill at Nanded may not signify much in term of employment but it will help cotton growers. The sale of oilcake by solvent extraction is considered feasible and the rescue of local artisans from misery by industrial co-operatives is the aim of the State development schemes. Since the backwardness of the four districts is now accepted officially the point to note is that the future rests on the success of minor irrigation schemes—not on local self-government.

FOREST PLAN

Bold Policy Wanted

Foresters will be happy to note the enthusiastic plea for a bold forest policy which the Union Minister for Food and Agriculture made on the occasion of the Silver Jubilee Celebrations of the Indian Forest College, Dehradun. They will be even more heartened by his assurance that his colleague the Finance Minister could be persuaded to loosen the purse strings for worthwhile projects. This is a reasoned hope based on the economic aspects of forest development. Forests already contribute substantial amounts to State budgets and no Finance Minister would stand in the way of measures which would augment sources of revenue.

According to a recent estimate, forests yield a net return of Rs 35 crores at the present level of exploitation. The return should become many times larger if development plans are geared to meet the expected requirements. To take one instance; the demand for

industrial timber is expected to increase more than threefold in another decade, from the level of 8 million cubic metres to 26 million cubic metres by 1975. Still, per capita consumption of industrial timber would be less than a tenth of the current world average.

Forest resources, especially of most industrial timbers, require years to develop, so that the forest plans that are now drawn up must have a longer perspective than plans in other sectors. For meeting current requirements, we must look to improved practices to make better use of available supplies by eliminating waste at the source. The scale on which improved tools and equipment would be required—it has been estimated that 100,000 sets of improved tools costing Rs 10 crores would be required during the next two plans—would justify a programme for manufacturing the equipment in the country, and the Technical Development Department should be moved to initiate early action to establish the necessary manufacturing facilities.

★

ROAD SAFETY Need for Effective Measures

At a juncture when the hazards on the roads in the country are on the increase, the deliberations of the First All India Road Safety Congress held in Bombay under the auspices of the Federation of Indian Automobile Associations are of topical interest. The Congress has rightly highlighted the intricate nature of the traffic problems currently prevailing in the country which exposes the inadequacy of measures so far adopted for minimising accidents on roads. In a country like India where the road consciousness of the public remains much to be desired and conditions of the roads are wretched, the necessity for launching an expeditious campaign for popularising, on a country-wide scale, measures for ensuring safety on roads is of a pressing nature. Though the number of automobiles plying on our roads is not big enough, the large number of accidents which very often result in loss to human lives and vehicles is a matter causing serious concern. The explosive population growth in the country has only aggravated the situation with the result that both the public and the authorities are left in a quandary. This is largely owing to the fact that our traffic conditions have failed to look up on a commensurate level to handle the growing pressure on traffic.

Mr Himatlal V. Gandhi, the president of the Congress, in his address to the gathering suggested remedial measures for bringing down the number of road mishaps. These steps should be speedily implemented with a view to creating and promoting a sense of

traffic climate in the country. While stressing the urgency for educating the public on matters related to traffic discipline and road safety, Mr Mehta under scored the imperative significance for paying more attention to the engineering aspect of road development. This is a sphere in which we are lipping far behind. The unimprovable conditions of the roads in major cities only accelerate the frequency of accidents. Pitifully enough, the local bodies and other associations connected with road development and maintenance exhibit a lamentable lack of interest in these matters. Absence of purposeful planning and inadequacy of funds for road construction and improvements are other major inhibiting factors that retard development of roads on the planned lines. Only by enhancing transport facilities and controlling the movement of different sorts of vehicles can the congestion on the roads be reduced. Greater co-operation from the public and the motorists will considerably minimise the incidence of road accidents.

★

HOUSING Large Leeway

Housing is a basic necessity next only to food and clothing, but progress in this regard has been rather disappointing so far. Housing shortage in the urban areas alone is now believed to be over 10 million while about 60 million houses in the rural areas may have to be remodelled or entirely rebuilt. Although housing has been receiving increasing attention since the First Plan, it is admitted that the problem of catching up with the arrears of housing and with the growth of population will continue to present serious difficulty for many years to come. An idea of the enormous leeway that remains to be made up in housing in the country can be had from the latest census statistics pertaining to the State of West Bengal. According to these statistics nearly 50 per cent of houses in this State are kutcha constructions. It is therefore gratifying that Government proposes to allocate about Rs 600 crores—nearly three times the allocation in the current plan—for housing during the Fourth Plan. This is not however to say that the provision is adequate. But even this modest provision can be made to go a long way in tackling the housing problem if emphasis is placed on productivity in the building industry. Dr P. S. Lokanathan, President of the NPC, has pointed out that investment in construction work during the Fourth Plan may amount to Rs 9,000 to Rs 10,000 crores out of the Rs 21,500 crores envisaged for total investment. This is because apart from the amount allocated specifically for housing by Government, 50 to 60 per cent of the capital formation in the country for different sectors is utilised for construction work. According to him, during the next ten years, the amount involved in various construction works may amount to

about Rs 20,000 crores. But the building and construction industry which already accounts for huge expenditure is still carried on with the help of untrained workers, thereby resulting in the wastage of both human and material resources. The Planning Commission has pointed out that the training of different types of construction workers is an important factor in securing a reduction of building costs and improving the quality of construction. The training course recently inaugurated under the joint auspices of the National Building Organisation and the National Productivity Council and NBO's decision announced a few days ago to put up a factory with foreign collaboration for the production of bricks and tiles may well pave the way toward higher productivity in the field of housing.

★

ZAMBIA The Last Republic

The advent of Zambia as an independent republic may be said to complete the emergence of Africa. The hopes of Mr Kenneth Kaunda belie the fears arising from the dissolution of the Central African Federation. Before the war Northern Rhodesia had its grievances but copper mining has transformed the country's economic structure and constitutional progress is the result of both nationalism and improved economic prospects. The constitution ensures orderly progress and the Army too will be under the President's control. The House of Chiefs will be a secondary organ. Since mining is the major industry, and the troubles in the Congo have reduced the importance of the latter, Zambia will be a major source of copper exported since 1931 in increasing volume. British aid has created a factory and tobacco cultivation for export markets has been developed. Teak also is grown in the forests along with pine. American capital in the mining industry has been fairly conspicuous as in Chile but South African interests are fairly substantial. Mergers arranged by the Rhodesian Selection Trust for the more efficient operation of the mines prove that mining must be on a big scale even as in Australia. Secondary industry includes shoe manufacture and soap-making using local groundnut oil. There is a development bank to guide growth. Supply of power from the Kariba project has put Zambia's industries in a strong position but coal has to be got from the Wankle Colliery in South Rhodesia. This is required for the railway system that links Zambia with Angola also. However, Zambia like Nayasaland depends on the seaports in Portuguese East Africa which have been improved after the war to cope with extra demand. There is a central bank but more significant is a land bank to help peasants. There is

no university as yet but local plans for technical education are well advanced and the copper companies have helped to start a technical college at Ndola. A non-racial college at Lusaka has been financed by grants largely given by the mining companies. Planning on a modest scale has been concerned with rural welfare, fertiliser plant construction to improve local food supply, and arrest cattle disease. Mining royalties supplement the income tax and company tax and the public debt is small. Since there is no population problem and tribal rivalries are not dominant the future of Zambia seems assured and the US food surplus may be available for import by Zambia which can develop the fisheries in the great lakes. It may be added that changes in future will not alter the place names like Livingstone—the memory of the great Scotsman is part of African history.

★

MONEY MARKET Undeveloped Still

In the Tata Quarterly for July is found an interesting note on the money market which is now reaching the state of stringency. The seasonal variations in demand are slight and the industrial growth is reflected in the additional demand for bank credit. The analysis does not deal with the nature of the undeveloped money market in India. Prof. Wilson included the Indian market among the new and immature money markets set up by official fiat or agency, and not based on real economic power or possibilities.

If the growth of deposits over recent years has helped, the rise in interest rates is a handicap like the detailed regulation of the entire banking system. What is made clear is that under the Third Plan interest rates are up and the consequences for the share market also cannot be ignored. Stringency is induced also by the limited facilities for borrowing from the Reserve Bank when the demand for money goes up.

The official policy is to restrict borrowing and to discourage lending for long, fixed terms except by the institutions that are able to give extended credits for new enterprises. The nature and functions of the capital market have changed and the fluctuations in the rate for call loans illustrate the strain to which fledgling industries are exposed. There is no indication as to foreign funds except PL 480 funds being available to help the market over difficult periods. The emergency has certainly accentuated stringency but the Tata Quarterly does not mention this new factor nor does it indicate how the balance of payments position could influence the trend of interest rates during

an inflationary spell. The unorganised money market plays a role as usual but the rates ruling therein are not examined to show the interrelations between the moneylender's view and the banker's view. The Treasury Bills rate here remains more or less constant but its isolation from current influences may be taken for granted. The statistical study incidentally shows that India has no merchant banks—public or private—to help in getting loans and the expansion of liquid resources is limited by the consequences or conditions of economic planning.

EXPORTS ★ Uphill Task

While the trend of exports for some time now is quite encouraging it will be idle to expect that the Fourth Plan target of Rs 5,100 crores will be easy to hit. For even with the improvement noticed since last year, the annual rate of increase in exports for the Third Plan as a whole will not be more than Rs 36 crores. But what is envisaged for the Fourth Plan is an annual rate of increase of Rs 50 crores. The filling up of this gap is not going to be easy for the simple reason that our exports are still predominantly based on agriculture which continues to be as uncertain as ever. It will be evident therefore that concerted efforts will be necessary if the enhanced target is to be hit. In a detailed analysis of India's exports during 1963-64 with individual countries, the World Trade Department of the Indian Chamber of Commerce Calcutta, has made a number of useful suggestions to achieve the needed expansion in our exports. According to this study, during 1963-64, about 100 countries imported more goods from India than in the preceding year while 76 countries reduced their offtake. By and large, our export performance during last year has been quite satisfactory. For, exports to the dollar area increased from Rs 143 crores in 1962-63 to Rs 157 crores in 1963-64, to ECM from Rs 48 crores to Rs 57 crores, to East European countries from Rs 92 crores to Rs 109 crores, to the Sterling area from Rs 268 crores to Rs 283 crores, and to other soft currency areas from Rs 170 crores to Rs 188 crores. During 1963-64, India had a deficit in the balance of trade with 28 important countries. A continuance of this encouraging trend however cannot be taken for granted because in respect of some of the major export commodities, competition is increasing. For instance, Indian tea has come to face stiffening competition in the UK its most important market. Kenya has stepped up its tea exports to the UK last year to 21.19 million lbs. from 20.14 million lbs., the Netherlands from 2.34 million lbs to 4.75 million lbs.,

Imports Fall by 11.21 Per Cent in April-August, 1964

Imports during the first five months of 1964-65 have recorded a sharp fall of over Rs 58 crores as contrasted with the relative figures for the corresponding period in the previous year. Imports of almost all sections are marked down except those of Manufactured Goods Classified chiefly by materials which increased by Rs 6.63 crores to Rs 89.74 crores, Machinery and Transport Equipment which moved up by Rs 9.69 crores to Rs 195.59 crores and Beverages and Tobacco which inched forward by Rs 0.01 crore to Rs 0.15 crore.

Significant decreases are shown by the following:

Food, marked down by Rs 26.90 crores at Rs 49.44 crores, thanks to a sharp decline in imports and cereals and cereal preparations to Rs 33.77 crores from Rs 64.22 crores.

Crude Materials, incible, except fuels, lower by Rs 11.37

crores at Rs 42.67 crores because of a decrease in the imports of textile fibres (not manufactured into yarn, thread or fabrics) and waste to Rs 23.82 crores from Rs 32.03 crores.

Mineral Fuels, Lubricants and Related Materials, down by Rs 18.78 crores at Rs 36.60 crores; due mainly to a fall in imports of petroleum products to Rs 20.87 crores from Rs 28.07 crores and petroleum, crude and partly refined, to Rs 15.66 crores from Rs 27.26 crores.

Chemicals, marked down by Rs 5.56 crores at Rs 36.14 crores; accounted chiefly by a decline in imports of fertilisers, manufactured, to Rs 8.12 crores from Rs 12.59 crores.

Finally, Miscellaneous Manufactured Articles, lower by Rs 10.95 crores at Rs 8.61 crores owing to a decrease in imports of Miscellaneous Manufactured Articles, NES, to Rs 2.58 crores from Rs 14.26 crores.

IMPORTS	(In Rs Crores)		Change
	April to August 1964	1963	
Section 0—Food	49.44	76.34	-26.90
Section 1—Beverages and Tobacco ...	0.15	0.14	+ 0.01
Section 2—Crude Materials inedible, except fuels	42.67	54.04	-11.37
Section 3—Mineral Fuels, Lubricants and related materials ...	36.60	55.38	-18.78
Section 4—Animal and Vegetable oils and fats	2.42	2.65	- 0.23
Section 5—Chemicals	36.14	41.70	- 5.56
Section 6—Manufactured Goods classified chiefly by materials ...	89.74	83.11	+ 6.63
Section 7—Machinery and Transport equipment	195.59	185.90	+ 9.69
Section 8—Miscellaneous Manufactured articles	8.61	19.56	-10.95
Section 9—Miscellaneous Transactions and Commodities, NES ...	2.02	3.05	- 1.03
Total ALL SECTIONS	463.38	521.87	-58.49

Indonesia from 7.97 million lbs to 10.89 million lbs., China from 3.53 million lbs. to 5.93 million lbs, Formosa from 0.43 million lbs to 1.11 million lbs and Japan from 0.69 million lbs to 0.77 million lbs. India, however, continues to be one of the two principal suppliers of tea to the UK. But the fact remains that more and more producers are competing for the UK market. India's exports to France, Belgium and West Germany are still limited to traditional items. Exports to East European countries however are quite remarkable both in respect of value and composition. From only Rs 4 crores in 1953, the value of exports to these countries has increased to over Rs 100 crores in 1963, while the commodities exported consist mainly of non-traditional items.

The Survey has rightly pointed out that if the efforts at expanding exports are to bear fruit, there should be considerable and continuous increase in production in agriculture and industry. It is also equally important that the industrial and tax policies are such as to foster the growth of exports. The two essential requirements for increased exports are comparable quality of our commodities and their competitive price. Action has to be initiated in several directions in order to bring down the cost of industrial production and perhaps the most important step in this regard will have to be related to the size of industrial units, which as the Survey has pointed out, is generally small by international standards.

AUTOMOBILES

Bright Outlook

The first issue of HM Topics—the house organ of Hindustan Motors—reveals that there were outstanding orders for motor cars—48,586 for Ambassador cars alone in September 1964. The shortage of motor vehicles is described as a result of taxes, import restrictions and road conditions. It is only lately that efforts are being taken to improve output and foreign currency loans for Indian automobile manufacturers have dispelled the old anxiety about essential imports for raising output. Easier finance for road transport operators and a cut of 20 per cent in the tax on commercial vehicles may improve the offtake. It is presumed that Hindustan Motors car output in 1964/65 will rise to 16,500 cars and the setback in 1963 may prove temporary. Since India has only 595,600 motor vehicles including lorries and buses it may be said that prospects for Indian manufacturers are good but prices are high and operating costs are going up. It has long been recognised that Hindustan Motors have made progress in terms of output and sales, apart from using more and more locally produced components. The production rate of a thousand vehicles a month has been inadequate but difficulties have been created by others. A point to note is that as much as Rs 5,140 represents the tax element in the current price of Rs 15,266 for a car and the maker's profit is paid by heavy taxes. It is computed that the odds are against the maker and user of vehicles. But plans to sell more in coming years are under way. That 20 years after inception Hindustan Motors has developed an engineering branch as well as the Uttarpara car plant proves that the pioneer is not disheartened and investors too have reason to hope that 1964 will prove better because the 11.25 per cent dividend paid for 1963 fell below the market expectations.

★

TOBACCO

Divergent Trends

The tobacco crop forecast for 1963/64 points to a reduction in the Indian acreage due to unfavourable seasonal factors. The export surplus may well be smaller and the increase in export trade recorded in 1963/64 may disappear. Fluctuations in tobacco exports due to foreign competition are common and the degree of resilience developed due to new customers may be retained. The world supply and demand is still governed by the US crop and India producing 9 per cent is not so important a factor in the world trade as South Rhodesia producing only 3

per cent with the crop under the control of the Imperial Tobacco Company.

The wide distribution of the crop and the many varieties grown in India for distinctive purposes make it difficult to guarantee stability but is well to note that in the US and Europe cigars are now displacing cigarettes and the fear of lung cancer is a factor in checking cigarette consumption. Prospects for Indian tobacco are related to the growth of manufacture and not the limit set to imports but the level of excise and sales taxation affects the demand for tobacco in India as elsewhere. The Indian Trade Journal in its recent notice of tobacco refers to plants whose leaves are used for curing and smoking. They are said to contain alkaloids which have admittedly certain therapeutic properties. But it may be said there is no synthetic to challenge tobacco and the fact that cigarette factories' output has in-

creased continuously in recent years proves that rising exports do not lead to a fall in consumption at home though export of beedi tobacco has certainly fallen off. The importance of flue-cured virgin tobacco for the export trade is established by export figures but the wide distribution of cultivation makes it difficult to book for Asian markets at present. Efforts to deal with State monopolies in Italy or France will certainly be limited by the competition forthcoming from African and other producers. Whether export promotion, assisted by quality control of graded types, will yield fresh results is to be seen, since the whole problem is really one of selling manufactures abroad rather than of crude tobacco. The price of tobacco also has risen by about ten per cent during August 1963-August 1964 but this may not really affect the volume or value of Indian tobacco exports in view of the flood

damage noted in Andhra Pradesh last month.

COCOA A Luxury?

It is the affluent countries which can import cocoa for manufacturing chocolate. The tropical producers are only exporters and the peasants hope only for stable prices and rising demand. While West Africa is the chief supplier, many Central American countries grow cocoa for export like the West Indies. Brazil too is a big producer. In Asia a little is grown in Ceylon and Malaysia and there has been a search for suitable areas in India—though not successful so far. Prosperity has raised Western Europe's import of cocoa but UK imports like US imports fell in 1964 with disadvantage to the exporters who have only lately achieved a minimum price for cocoa beans. Integration of the cocoa and chocolate industry after rise in taxation perhaps has limited UK purchases. The FAO bulletin makes it clear that the US demand settles prices for cocoa as for coffee and the increased demand from Australia or Japan helps the US chocolate-maker. The ex-French colonies are less important as suppliers to Europe and world consumption at 1.19 metric tons is slightly below the estimated output of 1.2 million tonnes. Conversion of cocoa beans into powder leads to a large and regular export trade in the case of Holland and Germany though not UK. The highest consumption of cocoa, mainly for export, is still recorded by Switzerland with Nestle always well to the fore in the food-processing industry. The USA does not figure as a big exporter, though Hershey presents a case of a big well-integrated concern that is now a leader in sugar and confectionery trades. The main centres for the cocoa trade are New York, London and Le Havre and prices have tended lower in 1963/64. But German imports have risen lately in the wake of a decline in prices and Swiss imports have advanced. Eastern Europe takes far less than the ECM area and in Asia the only large importer is Japan which has a well-organised confectionery industry. But per capita consumption there is far lower than in Sweden or Israel. Incidentally, the highest per capita consumption is recorded by Switzerland—the home of the chocolate industry though the UK industry fed by Ghana cocoa supplies is a case of concentration with Fry, Rowntree and Cadbury combined in the British Cocoa and Chocolate Co. whose 5 shilling shares are at a high premium. Cocoa from Ceylon goes to Germany and Holland and the curtailment of imports by India has created difficulties for those who make beverages. The most po-

pulous countries, China and India, are not at all in the picture, where poverty precludes the use of cocoa.

COFFEE Problems of Expansion

A record coffee crop of 64,900 tonnes has been harvested during the last season and indications are that by the end of the Third Plan coffee production will touch the level of 75,000 tonnes. This is no doubt quite encouraging but considering the growing internal demand and the efforts that are being made to maximise exports, coffee production has to be increased much more rapidly in the coming years. According to Mr M. M. Appaiya, Chairman of the Mysore Planters' Association, it will be necessary to raise the level of production by about 25,000 tonnes over the Third Plan target. Part of the additional output can be obtained by rapid rehabilitation of old stands of coffee but the bulk of it has necessarily to come from new acreage. It has been estimated that nearly 40 per cent of the existing stands of coffee require replantation. This programme together with new plantings will involve large capital expenditure. To this must also be added the outlay that will become necessary for the modernisation of machinery in the coffee industry. Government spokesmen who, on every available opportunity, exhort the plantation industry to step up production, however conveniently pass over this important problem. Thanks to the high taxation on the plantation industry, this vital sector of the national economy no longer attracts fresh investment. By the same token, the industry is not able to build up the necessary resources from out of its earnings. Mr Appaiya has pointed out that the financial stringency of the industry is further made acute by the ever rising labour cost. Labour wages have a greater impact on the coffee economy than on other industries because it is a labour intensive industry. An important point to note is that unlike other manufacturing industries, coffee industry does not have the advantages of tax reliefs on depreciation and development. It will be obvious therefore that unless it is enabled to keep back a larger quantum of its earnings, it will not be in a position to undertake the necessary replantation and new plantation programmes in an orderly manner. Another problem that has to be successfully tackled is the securing of a higher export quota. While other producing countries are able to get quotas equivalent to 80 per cent of their production, India's quota works out to no more than 33 per cent of its current production.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as
the wind
To blow on whom I please"
—As You Like It

THOSE who have been carping about India having failed to produce a decisive and able successor to Jawaharlal Nehru, I hope, have been disabused of their views by the manner in which Mr Lal Bahadur Shastri has brought to a fruitful end his negotiations with the Ceylonese Prime Minister, Mrs Bandaranaike. Indian, mostly Tamilian, labour had in the early days of this century been indentured for work on Tea Estates in Ceylon. While, so long as both India and Ceylon formed part of the British Empire, there was no ambiguity about the status of such immigrants, the Tamil minority has since independence suffered woeful harassment. Some 800,000 people were in the process rendered stateless in Ceylon. Solution of this problem eluded the grasp of Jawaharlal Nehru as also of the Prime Ministers that Ceylon had prior to Mrs Bandaranaike. Patience and perseverance, and the capacity to negotiate at every turn when impasse was reached, have now enabled India and Ceylon to settle the problem of the Indian expatriates in Ceylon. It has been agreed that India will accept the responsibility for half-a-million of such persons, though the repatriation is to be spread over 15 years. Ceylonese citizenship is to be granted to the other 300,000 in that country. I trust this signal success achieved by Mr Shastri will set to rest any misgivings that may have been nurtured in certain quarters about his capacity adequately to deal with his responsibilities and duties as Prime Minister of India.

A pretty mess I think we have got into, about the Fourth Plan. The last week's deliberations of the National Development Council, one would have hoped, would have served to clarify the situation; but, in the event, we are more confused than ever before about the various aspects of the next plan. Thus, is it really going to happen that an array of consumer goods will be produced in the public sector? I devoutly hope not; but it looks as if official thought is tending to believe that price machinations can be minimised only if State-made goods are competitively in the market. Surely, Government will have its hands full with its basic industry projects; and the Finance Minister has also stated that the social services cannot be neglected. Where, then, is the Government going to find the

men, money and the materials to enter the consumer goods market in a big way? I rather suspect that in due course Government's aspirations in this behalf will be allowed quietly to die away. Meantime, we have had a prompt spate of querulous complaints, from the private sector, that the Government should desist from any such activity. Thus, all that would have been achieved is the upsetting, even if only temporarily, of general morale and confidence. Then, as to resources: Mr Krishnamachari quite frankly admitted that there were "a number of imponderables" in the estimates of resources; worse, apart from the imponderables, Government has "taken that there will be Rs 3,000 crores of additional resources." At the same time, it has been made abundantly clear that deficit financing in any magnitude during the next plan will be calamitous. Are we to infer that once again we shall have to rely upon good old additional taxation? Here, incidentally, was a piquant note: In one of the daily papers, the sentiment was ascribed to the Finance Minister that the higher the rates of tax, the greater the evasion; when I harked back to the full text of his statement, I found that his reference was to excise duties—at least, that was the context; and he concluded in this regard, "Lower rates will in this regard, 'Lower rates will the help.' May I suggest that the axiom holds as true in the sphere of direct taxation? At today's rates of taxation, the incentive for the individual to evade taxes is enormous; lower rates, if I might borrow from TTK, would certainly help."

By the time the next issue of Indian Finance reaches readers, the US Presidential and Congressional elections will have been held. There is, of course, no doubt at all that President Johnson will be re-elected. (I note that a South Indian astrologer, who claims to have predicted President Kennedy's assassination, has prophesied that the Democrats will be victorious, even as to picking up more House and Senate seats). Thus, the question only is if Senator Goldwater will be humiliated or whether, by marshalling a respectable support, he will be able to assume the Republican Party leadership for the next four years as well. Three Senate contests are of more than ordinary significance. If Bobby

Kennedy wins in New York; if Teddy Kennedy is re-elected from Massachusetts; and if Pierre Salinger emerges victorious in California, then groundwork will have been done for Bobby Kennedy contesting the Presidential elections in 1968. I may point out, however, that President Johnson is constitutionally permitted to seek office again in 1968 if he so wished. However, I rather doubt that President Johnson will be so minded. If, as I have already remarked, Senator Goldwater does fairly well, then it is difficult to imagine that there will be another Republican candidate in 1968. But, should the Senator be crushed under a landslide, then it will be Governor Scranton or Governor Rockefeller who will have the best chances. Thus, the 1964 elections themselves have ceased to have any semblance of contest—hence our preoccupation instead with the may-be's of 1968.

I had not realised that in India economic production of, say, a motor car is possible even when the total output is, compared to the experience elsewhere, relatively small. Premier Automobiles have brought out a brochure which seeks to rebut the "misconception that the Indian Automobile Manufacturers are to blame for the apparent high price of cars and the inadequate availability of cars

against a heavy demand". Figures have been adduced to show that it is taxation which accounts for the fact of the Fiat car in India costing the consumer rather more than his counterpart in Italy. Indeed, it would appear that, in Maharashtra, while the price of a Fiat has increased by over Rs 3,000 since 1957, this is due entirely to State and Governmental levies. Hence, if taxation is taken out of the reckoning, the Fiat car costs, at around Rs 7,750, a bare Rs 374 more than it would in Italy. This, as I have already remarked, is despite the fact that really speaking capacity and production in India are relatively uneconomically-sized. A sentence in the brochure in this context is highly significant: "A day's production at Fiat's Plant in Italy equals to 9 months', or at the best, 6 months' of our current production." In one sense, however, it may be noted that Government will seek to justify its high taxes on motor vehicles on the plea that in so doing it has intended to induce consumer resistance. It would follow, I may point out, that, when output of cars in India goes up as a result of better supplies from the ancillary sector, there would be an equal duty on Government to reduce taxes, since production within the country would then nearer approximate demand.

EAVESDROPPER.

"Uneasy lies the head that wears a crown"

No wonder! A crown is the symbol of responsibility. But as an exporter of engineering goods your responsibilities are no less than the wearer of the crown. You are competing with industrially advanced countries in a field where precision and quality are in the greatest demand. The nation is anxious to see that the reputation earned by her products abroad is maintained, if not improved upon, and the flow of foreign exchange to the country is consistently increased.

The nation's anxiety and uneasiness on this score can be overcome only if every manufacturer endeavours to introduce quality control in production and raw material selection, conforms to high standards and specifications, employs modern techniques of manufacture, adheres to promised schedules of delivery and offers after-sales service.

This Council is equipped to render engineering goods manufacturers every help and assistance in promoting their export.

Symposium - A Letter from Delhi

NDC

THE discussions of the two-day meeting of the National Development Council proceeded according to plan and concluded with general endorsement of the broad objectives and strategy of the Fourth Plan as set out in the memorandum prepared by the Planning Commission and further elaborated in the speeches of the Chairman and the Deputy Chairman. The Planning Commission which has taken considerable pains to make the preliminary memorandum on the Plan as precise as practicable, has reason for feeling satisfied at the outcome. For the detailed work of filling in the Plan outline, the Commission will have the assistance of the National Planning Council, an ad hoc body of scientists, engineers, economists and other experts which is proposed to be set up. The Prime Minister, who announced the decision to constitute this body, explained that the intention is not to have another advisory body, nor a body which will meet for a day or two at long intervals, look at some memoranda, offer its comments and disperse, but to get people to work on the Plan, spending a week to a fortnight in Delhi at a stretch and giving their best to the national effort. The Deputy Chairman of the Planning Commission will be the Chairman of the National Planning Council which will consist of fifteen to twenty top level experts.

While the National Development Council has agreed to the magnitudes of total outlay, regarding which the Planning Commission had indicated a range of Rs 21,500 crores to Rs 22,500 crores, the intersectoral allocations will be examined in further detail by the four sub-committees which have been set up to deal respectively with Agriculture; Resources; Irrigation, Power, Transport and Industries; and Social Services. These committees will have to consider how far it would be practicable to accommodate the suggestions made by some Chief Ministers to increase the allocation for Power, Irrigation and Transport, within the proposed overall outlay.

The Chief Minister of Madras, it is learnt, had also asked for larger allocations for Industry in the State sector than had been provided in the Commission's memorandum. The question of allocation of the total outlay between

the Centre and the States and the related question of the respective responsibility for raising resources will be further examined and decisions will be taken at a special session of the Council which will be held shortly. This meeting will also consider the proposal for Central financing of major irrigation and power projects and its implications for resource mobilisation and allocations of the outlays between the Central and State sectors. If the Centre is to take over the responsibility for such projects, the size of the State Plans will not remain at the level indicated at present. The Planning Commission had allocated the proposed public sector outlay of about Rs 14,000 crores equally between the Centre and the States.

Approval of the objectives and the magnitude of outlay may be taken to imply that the Chief Ministers also accept the obligation to raise a substantial part of the additional resources required for implementation of the Plan, though the details have yet to be spelt out. The Union Finance Minister made it clear in his address to the Council that the mobilisation of additional resources of the order of Rs 3,000 crores must be a joint effort and contribution by the States would be essential for the purpose. The Centre cannot be expected to bear the lion's share of the burden as it had been doing in the past. Besides, the Centre has to meet contingencies which may result in unforeseen increase in non-plan expenditure.

Apart from referring to the need for rationalisation of sales tax the Finance Minister also repeated a suggestion he had made earlier, for combining the income-tax and the agricultural income-tax into a single tax, assuring the States the benefit of the increase from agricultural tax. That, in his view, would be a logical way of tapping excess agricultural income, considering the present position in regard to land legislation and the possibility that everybody who has an urban income also has an agricultural income.

Regarding the pattern of Central assistance—the Central contribution to State plans had increased from the average of 30 per cent in the First Plan to fifty per cent in the Second and varies between 65 and 80 per cent in the Third—the Finance Minister indicated that, if the States agreed, the Centre would be willing to take over the respon-

sibility for some major projects in Power, Transport and, may be, Industries, while for others, Central assistance would be on a matching basis. He, therefore, called upon the Chief Ministers to indicate their preferences in the matter. Assumption of responsibility by the Centre for such projects will be advantageous to the States as they will be relieved of the growing burden of interest payments. The total of Central loans on which the States had to pay interest amounted, as at the end of last year, to about Rs 3,000 crores.

These are questions which will be examined in detail in subsequent discussions with State Governments. For this purpose, the Finance Minister made the suggestion that the Planning Commission "should be put on wheels" for some part of the year and should go to the State Capitals for going into these questions with State Governments and their officials.

Discussing the problem of raising resources for the Fourth Plan, the Prime Minister made a special reference to the importance of exports and what the State Governments could do in the export drive. In this connexion he also drew attention in a general way to some of the impediments in the way of exports which fall within the sphere of State administration and suggested that State Governments should have a Special Cell in the appropriate departments to deal with matters connected with export promotion.

Export Credit

Among the handicaps of Indian exporters may be mentioned the comparatively high cost of export finance. The remedies in this respect fall in the field of responsibility of the Centre and of the Reserve Bank. A Working Group with Dr S. P. Chabiani, Managing Director of the Export Credit and Guarantee Corporation, as Convener, was set up in January last to examine the question in all its aspects and to devise ways and means of reducing it in the context of India's export drive and to bring it in alignment with the rates in other countries. It is learnt that the report, which was recently presented to the Government, had drawn attention to the fact that the cost of post-shipment credit in India, whether examined in rela-

tion to the general domestic rates or by comparison with the export credit rates in other countries is, on the whole, relatively high. There are no concessions for pre-shipment finance, and the second line borrower may have to pay as much as 8.5 to 9 per cent. The medium rates, too, are high, except where the banks obtain refinancing from the Industrial Development Bank; but cases of refinancing have been few.

The working group has recommended that it will be necessary to

THE BARNAGORE JUTE FACTORY COMPANY, LIMITED.

(Incorporated in England with Limited Liability).

DIVIDENDS.

The following Dividends have been recommended in respect of the year ended 31st March, 1964 payable on the 9th December, 1964:—

- (1) On the Preference Shares "a" 5% (Five Shillings per Share) less U.K. Income-tax of Seven Shillings and Nine Pence in the £ Sterling.
- (2) On the Ordinary Shares "a" 30% (£1-10s-0d per share) less U.K. Income-tax of Seven Shillings and Nine Pence in the £ Sterling.

Payment of any Dividend declared will be made only to those Members whose names are registered in the Books of the Company on 2nd December, 1964 or to their Mandatees.

Dividend Warrants to Members on the Calcutta Register will be made payable in Calcutta.

No applications for warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

The Share Transfer Books will be closed from 19th November to 2nd December, 1964, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
C. EVANS, Secretary.

4, Clive Row,
Calcutta-1, 19th October, 1964.

prescribe a ceiling on the rates of interest charged by banks to exporters both for pre-shipment as well as post-shipment finance. The report has also underlined the need for: (1) provision of adequate refinancing facilities to banks and (2) maintenance of a reasonable spread between the cost at which a bank raises funds and its lending rates.

The scheme for lowering the cost of export finance, it is proposed, should apply to the entire export sector. If the recommendations of the Committee are implemented, the exporters will have access to export credit at six to six and a half per cent, which compares favourably with rates for agriculturists and other domestic borrowers as well as with the rates prevailing abroad.

POST-SHIPMENT

Among the other important recommendations of the Group are:

- (i) The Rupee Export Bill Scheme should be placed on a permanent footing; and the ceiling rate under the Scheme should apply to all rupee usance export bills, irrespective of whether a bank obtains refinancing from the Reserve Bank or not;
- (ii) The scope of the Rupee Export Bill Scheme should be enlarged to cover—
(a) Sterling, Dollar and other bills;
(b) Export finance found through methods other than purchase or discount of bills;
- (iii) The Working Group has, however, been unable to recommend the extension of the Rupee Export Bill Scheme to Sight Bills, as it would make no dent on the exporters' cost and yet adversely affect the banks' profits.
- (iv) The ceiling for all export bills upto 6 months should be fixed at 1 per cent above the Bank rate in India. (On the basis of the current Bank Rate, the ceiling would be 6 per cent.) This rate should apply irrespective of whether the banks obtain refinancing from the Reserve Bank or not.

PRE-SHIPMENT

The Working Group has also recommended that:

- (i) Pre-shipment export finance too should be brought within the purview of the Reserve Bank's aforesaid concessional scheme for export finance;
- (ii) A scheme analogous to the one in operation in respect of advances to small-scale industries and co-operatives which provided an additional quota at a concessional rate, not on the basis of bank's actual lending but on the basis of the increase in the Bank's lending may be introduced. The Banks should be required to charge the stipulated ceiling rate to all their exporters. The

Reserve Bank may formulate a suitable scheme for this purpose.

- (iii) Having regard to the quantum of pre-shipment credit involved and the wider implications of its cost to the policy of credit control, the Working Party has recommended that the ceiling rate, exclusive of other charges, if any, should be fixed at $1\frac{1}{2}$ per cent above the Bank Rate in India. (On the basis of the current Bank Rate, the ceiling rate on pre-shipment export credit would be 6 $\frac{1}{2}$ per cent); and it would result in a reduction of interest by $\frac{1}{2}$ per cent to the prime or first class borrowers; the gain to the second-line borrowers may be perhaps 2 $\frac{1}{2}$ per cent.

The Working Group also recommends that the Reserve Bank should provide at the Bank rate refinancing against (i) the collateral of usance export bills and (ii) the increase in their pre-shipment export credit.

It is further of the opinion that in view of the provision of refinancing through the Reserve Bank recommended by it, there is no reason to fear that the exporters would suffer from lack of finance.

MEDIUM AND LONG TERM EXPORT CREDIT

It is also considered necessary to fix a ceiling on the rate at which medium-term finance is provided to the exporters, irrespective of whether or not the financial institutions avail of the refinancing facilities. The ceiling rate on post-shipment credit proposed by them is 1 per cent, and for pre-shipment credit $1\frac{1}{2}$ per cent, above the rate at which refinancing is provided by the Industrial Development Bank. The current rate of IDB being 4 $\frac{1}{2}$ per cent, the ceiling rate on post-shipment and pre-shipment export credit would be 5 $\frac{1}{2}$ per cent and 6 per cent respectively.

OTHER RECOMMENDATIONS

- (i) The stamp duty on all usance export bills should be abolished.

(ii) The concessional finance scheme proposed should apply not only to the L.O.B. values but also to the amounts financed against the ECGC guarantee;

(iii) An understanding should be reached between the banks at the Association level to require all exporters, as far as possible, to cover their credit risks under ECGC policies. ECGC too should review its premium rates and see to what extent they could be reduced;

(iv) The Reserve Bank is urged to make it explicit to the banks that their directives pertaining to clean advances do not apply to the extension of credit for exports.

(v) The State Bank's Scheme for small-scale industries should be extended to exporters of small means, whose products enjoy a market abroad.

(vi) The Guarantee Scheme of the Government of India, should be extended to cover credit granted by banks and other lending institutions to the small exporters.

The recommendations of the Working Group will be considered by the Reserve Bank and the Banks Associations.

The Calcutta Electric Supply Corporation

Mr. I. A. Macpherson's Review

The Sixty-Seventh Annual General Meeting of The Calcutta Electric Supply Corporation Ltd, was held on October 23 at Victoria House, Vernon Place, London, W.C., Mr I. A. Macpherson, M.B.E., the Chairman, presiding.

The following is his review which had been circulated with the report and accounts for the year ended March 31, 1964:—

Shortly after our last Annual General Meeting, Sir William Lamond intimated that he wished to vacate the chair and my colleagues did me the honour of electing me in his place. I am sure that stockholders will agree that my first duty in this Review must be to thank Sir William for all he has done for the Company since he became a director in 1949 and particularly since November, 1961 when he agreed to become chairman on the sudden death of Sir Harry Burn. Fortunately for us Sir William remains a director and we still have the benefit of his advice and guidance.

The event which, for us, as for everyone in or connected with India, overshadows all others has been the death, on May 27, of Pandit Nehru. It would be a presumption for me to try to add to the world-wide tribute already paid him, but I may perhaps be permitted to remark that it would be difficult, if not impossible, for a company such as this to operate under any other system than that of the parliamentary democracy of which, in India, Pandit Nehru was the architect and custodian.

At our last meeting stockholders confirmed the election to the board of Sir Walter Michelmore. To our great regret, Sir Walter has recently advised us that for personal reasons he has felt obliged to tender his resignation which the board have, although with great reluctance, accepted. His wide experience of Indian affairs has made him a valued counsellor and, although he was with us for only a short time, he was able to make a valuable contribution to our discussions for which we are indeed grateful to him.

GROWTH OF UNDERTAKING

In his review of our operations for the last few years my predecessor has referred to the power shortage in India in general, and in Calcutta in particular, and to the regulative measures which the Government had to adopt to ensure the optimum utilization of available power resources. These measures were aimed primarily at reducing the peak demand on the Company's system and (as the following table indicates) have had relatively little effect on the number of units sold and consequently on the Company's Revenue Receipts. The commissioning last October of the 50 MW extension to our New Cossipore Generating Station and more recently of our Southern Receiving Station designed to take in power

from the West Bengal State Electricity Board have already allowed several of the restrictions to be relaxed. At present we are importing a permitted maximum of about 110 MW from the Damodar Valley Corporation and 50 MW from the State Board, and there is already a significant increase in our maximum demand which has not, however, been accompanied by a corresponding increase in units sold. Towards the end of this year, when the output of further generating plant will be put at the disposal of the State Board, our off-take at

	Year ended March 31				
	1960	1961	1962	1963	1964
Units sent out from generating stations (millions)	1,663	1,736	1,565	1,730	1,955
Units imported (millions) ...	303	390	665	803	804
Units delivered to the System (millions) ...	1,966	2,126	2,230	2,533	2,759
Units sold (millions) ...	1,817	1,955	2,049	2,328	2,525
Maximum demand in MW sent out ...	370	392	410	416	464
Load factor ...	60%	62%	62%	69%	63%

The year 1961-62 is not typical because the figures were seriously affected by the major plant breakdown which occurred during the first half of that year and which led to the introduction of the restrictions, the effect of which is disclosed in the sharp increase in the local factor after 1962. Over the period as a whole the average rate of growth in terms of units (as opposed to demand) was about 8½ per cent compound and although this rate has not been maintained during the first five months of the current year it is reasonable to expect that as industry in general installs power consuming plant which has been held back pending the full availability of supplies from the State Board, the rate of growth will assume a more buoyant trend.

SALES OF ENERGY

Most of the increase in terms of units sold came from the high tension power consumers. Every large industry on our supply consumed more energy. The most important is the Jute industry which had a record production and the largest export for 15 years. Other industries in order of energy consumed were engineering workshops, cotton mills, steel works, and rolling mills, chemical works, and paper mills.

The low tension power consumers comprise many small scale industries which in total had another buoyant year, consumption again showing an appreciable increase. There was again a marked increase in power consumption for domestic purposes mostly due to the increasing use of air-conditioners.

Southern Receiving Station will be stepped up to 80 MW and the position will be further relieved when, during the first half of next year, we commission our Belur Receiving Station, designed to take in 100 MW of power from the State Board's Bandel Generating Station which is expected to begin generating at about the same time. Provided they are backed by adequate State Board resources, the commissioning of these two Receiving Stations should enable Government to relax the restrictions remaining.

Restrictions notwithstanding our outturn during the year again broke all previous records as the following figures will show.

	Year ended March 31				
	1960	1961	1962	1963	1964
Units sent out from generating stations (millions)	1,663	1,736	1,565	1,730	1,955
Units imported (millions) ...	303	390	665	803	804
Units delivered to the System (millions) ...	1,966	2,126	2,230	2,533	2,759
Units sold (millions) ...	1,817	1,955	2,049	2,328	2,525
Maximum demand in MW sent out ...	370	392	410	416	464
Load factor ...	60%	62%	62%	69%	63%

The larger sales of energy for lights and fans reflect the continued construction of residential accommodation mostly in the outer suburbs of Calcutta, but also in certain of the small municipalities in the Company's Licensed Area.

Nearly 96 per cent of the Bulk Supplies are for the State Board whose consumption increased by more than 28 million units. The Board distributes entirely outside the Company's Licensed Area and will shortly substitute power from their own generating stations for the main bulk supply now being provided by the Company. The increased sales under special contracts came from our special tariff for large buildings, such as blocks of offices and flats, hotels and cinemas.

REVENUE ACCOUNT

Revenue from the sale of electricity and for meter rents at £14.8 million was over £1.7 million (13 per cent) up on last year. This is a much higher rate of increase than is suggested by the increase in units sold. The main reason is that the monetary figure of sales includes coal surcharge revenue which arises by reason of increases in the delivered cost of coal—increases which, of course, are also reflected in additional revenue expenditure. The revenue account shows that revenue expenditure increased by almost £1.2 million; of this £885,000 was due to enhanced generation transmission and distribution costs. During the year our stations, in generating 2,077 million units, burnt 1.49 million tons of coal at a cost of £4.48 million, comparative figures for the previous year having been

1.841 million units, 1.38 million tons and £3.81 million. Quite apart from the 10 per cent increase during the year in the controlled price of coal and freight (which was, of course, recovered through our coal surcharge) this increased expenditure on coal was a natural consequence of increased output and would in fact have been even greater but for the continued success of our new policy for the procurement of coal to which a reference was made last year. Administration and general establishment charges increased by £100,000, of which £40,000 was for additional premium payable to the Government of India for emergency risks insurance, now discontinued. Interest charges increased by £108,000 because we had to make almost the maximum use of our overdraft facility with National & Grindlays Bank to which I refer again later.

INDIAN TAXATION

The net revenue account shows that despite an increase of about £560,000 in the balance brought down from the revenue account for the charge for Indian taxes declined by nearly £150,000. This is, for the most part, due to the fact that our estimated Indian income tax liability on the profits of the year has been greatly reduced by income tax development rebate claimed on new plant commissioned during the year including the New Cossipore extension and the Southern Receiving Station. This saving of Indian tax (not all of which is admitted by the Indian tax authorities) amounts to some £575,000, the equivalent figure for the previous year having been £132,000. It is this saving of tax, stemming from the income tax development rebate, that gives rise to the appropriation in the net revenue account of £201,021 to the development reserve. This is a mandatory appropriation under the Electricity (Supply) Act and has the effect of equating the Company's clear profit with the reasonable return allowed by that Act.

Reference is again made in the notes on the accounts to a contingent liability now estimated at £801,000 in respect of Indian taxes under appeal. As explained last year, this claim concerns the admissibility of development rebate on capital expenditure on mains, service connexions, &c. Although the Company has been successful in the first stage of its appeal against the authorities' ruling in this matter, they will, we understand, take the matter further and in the circumstances we have thought it prudent to build up a taxation contingency reserve with an initial appropriation of £250,000 which is accordingly debited in the net revenue account. As last year, we have again made a special appropriation to plant

expansion and contingencies out of net revenue, although this year it has been increased to £550,000. I would emphasize that this latter appropriation, together with those to the development rebate and to the taxation contingency reserve, remained invested in the undertaking where, in conjunction with the revenue account allocation to depreciation of over £1 million, they played a major part in financing the expansion of the undertaking during the year, a matter to which I refer again in my comments on the balance-sheet.

INCREASE IN RATES

Although the Company's clear profit was for the first time for several years, equal to the reasonable return this was in large measure due to the substantial saving in Indian taxes, to which I have already referred, arising out of development rebate. Had it not been for this, the clear-profit would have been substantially less than the reasonable return. As it was foreseen that we would not again benefit from development rebate on the same scale and that our clear profits would in consequence be less than our reasonable return, we have had no option but to put into effect the further increases in our charges for electricity which were introduced towards the end of the year 1963/64. These increases were designed to enable the Company, in a normal year, to earn its reasonable return which, as was explained last year, is now based on a standard rate of 6½ per cent instead of the former 6 per cent. In the absence of unforeseen circumstances we hope to be able to achieve this result in the current year.

BALANCE-SHEET

I come now to the balance-sheet and, dealing first with the assets side, I refer stockholders to the separate account of capital expenditure and depreciation from which it will be seen that capital expenditure during the year totalled £2.7 million. In addition to normal transmission and distribution expenditure, this figure includes the balance of the cost of the New Cossipore extension and also the cost of the Southern Receiving Station. Among current assets, the large increase in sundry debtors calls for comment. To the extent of about £400,000 it is due to arrears of coal surcharge revenue collected after the end of the year; as to the balance, it reflects the increase in rates, to which I have already referred and normal growth. Stores were down. Our quite large holding of Treasury Bills at the beginning of the year was realized to meet our commitments on capital account. On the liability side, the overdraft at £1½ million is up by £500,000 and the figure of £3.8 million for sundry creditors is still unusually large, although marginally down compared with the previous year. This figure includes about £1 million owed to manufacturers in the United Kingdom who supplied plant for the Cossipore Extension. I shall now briefly recount the

steps we have recently taken to place the financing of this £3½ million project on a more permanent basis.

FINANCE

In ordinary circumstances we should have achieved this by an issue of shares or debentures, or both, as we have done in the past, but we were advised that this would not be practicable in view of the fact that, under its licence, the Company can be taken over by the Government of West Bengal or by the State Electricity Board on January 1, 1970, provided either of those authorities gives one year's notice of its intention. We had, therefore, to explain to the Government of West Bengal that if Government could not tell us now either that we would not be taken over in 1970 (in which case we would have hoped to be able to raise medium term finance), or alternatively, that they would be taking us over in 1970 (in which case a short term loan repayable out of the compensation monies would have been possible) we saw no prospect of being able to raise the money unless Government themselves would guarantee repayment on January 1, 1970. These were the alternatives that Sir Owain Jenkins and I discussed with Government during a visit we made to India in September last year. Government's decision was that they would be prepared to guarantee repayment and on receipt of this assurance we were able to go ahead and arrange a loan from the State Bank of India. The terms of this loan, as finalized by Mr. Hobson, Mr. Gauntlett and myself on a further visit we made early this year, are briefly that it is for a sum of Rs. 4.7 crores (£3½ million) repayable on December 30, 1969, and secured by a floating charge ranking after the charge securing the existing debenture stock, the rate of interest being 1 per cent above the State Bank of India advance rate (at present 6 per cent). This means that we are at present paying 7 per cent for this money and it will strike stockholders that the Company is being penalized by having to pay at this rate on money on which it is allowed by the Electricity (Supply) Act to earn a reasonable return of only 6½ per cent. That Act does, however, make provision for rectifying an anomaly such as this and it is the board's intention to apply to the State Government to put this right.

Our agreement with the Government of West Bengal provides that if the Company is taken over the outstanding balance of the loan will be repaid by Government to the Bank and will be deducted from the compensation monies due to the Company on acquisition. If, on the other hand, by the 1st day of January, 1969, the Company has not received notice that it is to be taken over on January 1, 1970, which will mean that its licence is automatically extended for a further period of 20 years, then it will take immediate steps to raise money on the market, or otherwise so as to be in a position

to repay the Bank in full on December 30, 1969. If the Company is unsuccessful and in consequence Government have to repay the Bank under the terms of the guarantee then the amount so repaid by Government will be refunded by the Company to the Government in three equal annual instalments commencing in January, 1971. The documents incorporating these arrangements were executed early in June and the first tranche of the loan, namely Rs. 325 lakhs, was drawn later that month, whereupon our overdraft with National and Grindlays Bank was repaid as were also certain of the large sums owed to plant manufacturers. The remaining tranche of the loan, namely Rs. 145 lakhs, will be drawn on April 1, 1965. I should like to place on record how greatly we have appreciated the help and co-operation that we have received from Government and from the State Bank of India in making these arrangements. Our sincere thanks are due also to our friends National and Grindlays Bank without whose help the extension at new Cossipore, which has made such a vital contribution towards the relief of the Calcutta power shortage, would not have been possible.

FORWARD CAPITAL EXPENDITURE

Our forward estimates indicate that during the period 1963-64 to 1969-70 capital expenditure will amount to some £18½ million (Rs. 25 crores) inclusive of the unpaid balance of expenditure on April 1, 1963 on the New Cossipore extension. Provided the Company can continue to earn its reasonable return we estimate that we can look to internal sources (mainly depreciation and retained earnings) to provide about £15 million of this sum. The recent loan from the State Bank will bridge the gap which means that, as far as can at present be foreseen, it should provide the balance of the funds we shall need for the development of the undertaking in order to fulfil our statutory obligations until 1970. The overwhelming bulk of this expenditure is, of course, on transmission and distribution and in our estimates provision is made for four 132kV receiving stations at a cost of nearly £5 million to cater for the ever increasing supplies from the State Board. As already mentioned the first of these was commissioned earlier this year and Mr. Hobson and I had the opportunity of inspecting it when the final tests were being made. We were greatly impressed by the high standards of design and construction which had been achieved and which reflect great credit on our own engineers who have not previously been called on to provide 132kV equipment or to lay and joint gas filled cables at that pressure. Mr. Hobson also assures us that the Company's plant in general is being efficiently operated and well maintained. The new machine at New Cossipore first put on the load almost a year ago, is making a significant contribution

to our output and has helped to reduce overall generating costs.

TRAINING

The continuing growth of the undertaking makes it necessary to ensure that adequately qualified men are available for senior appointments in the Company and these are now increasingly being filled by those of our Indian engineers who have received post graduate training in the United Kingdom under the Company's training scheme introduced shortly after the war. This scheme has proved a great success and there are at the present time more of our engineers being trained under this scheme than at any time previously. Our thanks are due to the Electricity Council, the Area Boards and the various manufacturing companies who provide facilities over here for this training.

TRIBUTE TO STAFF

More important than the machines are the men that operate them. A public utility such as this calls for ability, energy and devotion to duty quite out of the ordinary on the part of the men that serve it and our very sincere thanks are due to our officers, staff and workmen who, I am proud to say, are never found wanting. Mr. Kanga has now completed 18 months in the exacting position of Agent and has in full measure justified the board's confidence in him. To him, as to Mr. Gunther, Chief Engineer, and Mr. Sen Gupta, Commercial Manager, our special thanks are due. To Mr. Colley, in London, we are also indebted for his valuable services during the year in his responsible position of Secretary.

The report and accounts were adopted and the other formal business having been transacted the proceedings terminated.

This statement is not a report of the proceedings of the Annual General Meeting referred to above.

COMPANY NOTICE

THE INDO-BURMA PETROLEUM COMPANY LTD.

Regd. Office: Gillander House, Netaji Subhas Road, Calcutta.

NOTICE is hereby given that the Board of Directors have declared an Interim Dividend of Re. 0.50 (Paise Fifty only) per share less tax to be deducted in accordance with the provisions of Section 194 of the Income Tax Act, 1961, on the Ordinary Share Capital of the Company for the year ending 31st December, 1964, payable on the 30th November, 1964.

The Ordinary Register of Members of the Company will be closed from the 13th November, 1964 to 27th November, 1964, both days inclusive.

By Order of the Board
STEEL BROTHERS AND CO. LTD.
Managing Agents.
27th October, 1964.

Market NEWS and Trends

JUTE Statistical Position

CONDITIONS in the jute goods market turned quiet during the past week as mills emerged as sellers for all deliveries. The earlier belief that the sizable decline in stocks of jute goods with IJMA mills as at the end of September 1964 was due to a rise in despatches proved erroneous with the publication of figures pertaining to production of jute goods during last month. Although mills worked 8 hours longer than in August, output in September totalled only 104,000 tonnes—7,500 tonnes lower than in the previous month. Evidently, there has been a cut back in production and it would appear that mills have been obliged to resort to some adjustment due to the paucity of the required quality of jute. While production of hessian has declined by only 400 tonnes to 46,600 tonnes, that of sacking was down by 2,200 tonnes to 42,900 tonnes. There has also been a big drop in the production

of other goods which are lower by 4,200 tonnes at 7,100 tonnes. The output of carpet backing too is lower by 700 tonnes.

If despite the sizable fall in production, stocks are higher it is because despatches have been at a disappointing level. During last month total despatches have been placed at 109,100 tonnes as against 114,900 tonnes in the previous month. The decline is solely to be attributed to lower despatches for exports abroad, for internal consumption has amounted to 34,200 tonnes as against 34,300 tonnes. Despatches for export have declined by 5,700 tonnes to be placed at 74,900 tonnes. All categories have contributed to the decline but despatches of sacking are only 300 tonnes lower at 22,400 tonnes. Hessian despatches on the other hand are as much as 2,400 tonnes lower. While carpet backing shows a small fall of 500 tonnes, other goods are 2,500 tonnes lower at 5,500 tonnes. Internal consumption has remained almost unchanged even categorywise.

In the depressed mood caused by the disappointing export picture during last month, the news of a rise of 0.3 million yards in US burlap consumption during September has failed to enthuse marketmen. Consumption amounted to 81.3 million yards as compared to 81.0 million yards in the previous month. Stocks have moderately declined from 281 million yards to 274.5 million yards. Although in recent months burlap consumption has been running at satisfactory levels, the fact remains that consumption this year is yet to catch up with last year's level. For total consumption in the first nine months of 1964 is placed only at 662.2 million yards whereas in the corresponding period of 1962 consumption totalled 681.6 million yards.

It is evident that the decline in the despatches of goods meant for export has had a sobering effect on operators. For sooner or later it has to be realised that the real strength of the market can be derived only from an active export market. Consumers abroad will be prepared to buy jute goods only if the price is reasonable as compared with substitutes. A point to note in this connection, however, is that the recent rise in the prices of jute goods cannot be wholly attributed to speculation because besides other factors, mills have been obliged to pay a much higher price this year than last year for their raw material supplies. There are indications that in recent months, the high prices of jute goods have already resulted in increased use of substitutes. The quiet trend is also partly due to the surcharge on imports imposed by the new UK Government.

Jute goods prices were sharply marked up on Thursday on various rumours such as a sizable enquiry from Burma and short-covering. Presumably bulls anticipate a squeeze in heavy goods in view of the sustained buying interest evinced by Government in B Twills all through last week. The market however commenced the week on a quite note reflecting the poor shipping instructions and the disappointing level of despatches for export during last month. The reactionary tendency was also partly due to the disappointment caused by the absence of much foreign enquiries though it was earlier believed that on account of the

renewed labour trouble in Pakistani mills more foreign enquiries will come India's way. With mills also keen to sell at prevailing levels, prices steadily declined most of the time last week with B Twills ready at one time placed as low as Rs 148.90 and Hessian 40" X 10 oz at Rs 49.45. On Thursday it was reported that a tender from Burma for the supply of 40,000 bales of heavy goods for November-March delivery had been received. The news led to hectic activity and B Twills was pushed up to Rs 155.00 with Hessian also higher at 50.20. The raw jute market however continued to remain easy with Assam Bottoms quoted at close on Thursday at Rs 37.00 per maund.

TEA Task of Raising Output

THE Indian Tea industry has been allotted the task of raising its output to 1,000 million pounds by the end of the Fourth Plan or an increase of about 25 per cent from the present level of production. But the trend in the last three years has been rather erratic. Unfavourable weather conditions and other factors have been responsible for decline in output in two seasons.

It is explained that the tea bushes need greater attention especially as they have also become considerably old in many cases. Besides, with greater emphasis on finer plucking and on improving quality, the volume of output cannot be increased as before. It has, therefore, been emphasised that the industry should be given the necessary facilities as a large programme of replantation has to be undertaken besides efforts to raise the yield per acre from the existing planted area.

As internal consumption is increasing at a fast rate and larger exports can be effected only with a regular increase in the output of tea in the coming years, careful attention must be given to the various problems confronting the industry. As there has been a demand for some time past that tea estates should be allowed depreciation on estate assets in the same manner as industrial units, it is generally expected that the Union Finance Minister and the State Governments will have something important to say on this subject when the budgets are presented early next year.

Meanwhile, in the Export Sale held in Calcutta this week, offerings consisted of 71,662 packages of Leaf grades. There was a good general demand. Plain orthodox brokens and Dooars BOPs of clean appearance were sold at fully firm rates; but there was less competition for Fannings, which were irregular and easier. Assam orthodox teas were sold at lower levels although the few selected brighter liquoring lines were sold well.

Good CTCs, although well supported, were generally irregular and easier with the selected best lines, especially Fannings, realising fully firm to dearer rates. Plain and medium CTC teas came to an irregular and lower market with brokens receiving better support than their Fannings. Whole Leaf grades were sold well at around last levels, while Darjeelings were readily absorbed at irregular prices. Leggcut teas followed the lower trend of the market.

Following were the rates (per kg) quoted:—Clean Plain Pekoe Rs 5.20 to Rs 5.50; Plain Orthodox BP Rs 4.20 to Rs 4.40; Orthodox Fannings Rs 4.20 to Rs 4.40; Plain CTC BP 5.00 to Rs 5.20; Plain CTC Fannings Rs 4.70 to Rs 5.00; Medium CTC BP Rs 5.60 to Rs 6.00; Medium CTC Fannings Rs 5.60 to Rs 6.10; Good Assam CTC

BP Rs 6.40 to Rs 6.70 and Good Assam CTC Fannings Rs 6.60 to Rs 7.00.

In the internal sale, offerings amounted to 34,590 packages of dusts. Demand was good and general. CTC teas of all descriptions were sold at around last levels with the plain sorts receiving good support. Plain orthodox sorts maintained their value; but medium Assams were a little easier. Leggcuts were about firm. Following rates were quoted:—Plain Orthodox Dust Rs 4.20 to Rs 4.60; Medium Assam Dust Rs 4.70 to Rs 5.10; Plain CTC Dust Rs 4.80 to Rs 5.10; Leggcut Dust Rs 4.80 to Rs 5.10; Medium CTC Dust Rs 5.15 to Rs 5.35 and Good Assam CTC Dust Rs 6.00 to Rs 6.40.

Japan is expected to buy more of South Indian tea which, though similar to the Ceylon black tea, is imported only in small quantity at present. The Japanese, however, consider Darjeeling tea as high quality among Indian teas. Considering the affluence of the Japanese, there is potential market for

Indian teas in Japan. Hopes are entertained that, with proper promotional efforts, exports of Indian tea to Japan can be substantially increased. The Tea Board, in conjunction with the Indian embassy in Tokyo, is now working out a promotional scheme for rushing sales of Indian teas in Japan.

The export of Green Tea from India has been steadily increasing in recent years. Official figures reveal that the quantity of green tea exported from India rose from 1,861,187 kg in 1961 to 1,951,092 kg in 1962 and to 2,110,263 kg in 1963. The value of these exports was Rs 97.02 lakhs, Rs 97.87 lakhs and Rs 98.78 lakhs respectively. Afghanistan is the largest importer, accounting for 2,083,602 kg in 1963. The other main importer was Pakistan.

In the Cochin market, leaf and dust tea auctions for this week have been cancelled by the Tea Trade Association, as tea sample arrivals for the weekly auctions were held up in transshipment due to a tem-

porary local strike. The next sales will be held on 2 and 5 November.

According to crop figures available now, production of tea in South India has registered a decline of 7.8 million kgs during the first nine months of this year. South India has produced an estimated 57.2 million kgs of tea during January-September this year as against 65 million kgs in the corresponding period of last year.

In the Colombo market, offerings consisted of 7,267,919 pounds. There was a strong general demand. Highgrown brokens from western districts were in strong demand with best liquoring sorts irregular, while those below best were generally firm to dearer. Following an improvement in brightness, Uva and Uda Pussellawa brokens were strong and often appreciably dearer.

Good western medium brokens were about firm and all others were irregularly easier. Uvas were strong and dearer. Leafy Middle East type lowgrown brokens were easier but small leafy brighter

liquoring BOPs were firm to dearer. High and medium-grown BOP Fannings were a strong feature of the sale and were sold at dearer rates.

Of the original quantity of Ceylon teas advertised for sale in London this week, 1,170 packages were withdrawn, leaving 14,984 packages for disposal. There was keen competition for teas below best with prices showing substantial advances, particularly for the BOP Fannings. Best liquoring teas, although sometimes irregular, were sold well following quality. There was a strong and active demand at dearer rates for the 6,299 packages of South Indian teas and prices often showed appreciable advances.

COTTON Firm Trend

Thanks mainly to the short covering and fresh bull support the Jarilla March contract continued to exhibit a steady trend during the past week. After fluctuating between Rs 734.25 and Rs 741.00 per three quintals, the contract finished the week at Rs 739.25, recording a net gain of Rs 5.00 over the week. Ahmedabad, UP and Punjab operators are reported to have done moderate business. Disturbing reports which emanated from Khandesh about pest attack on the crop discouraged profit taking. The closing trend was distinctly firm.

Spinner interest was lukewarm in the new cotton crop which has started arriving in terminal markets in the Punjab. The spinners were disinclined to take the view that with the controls imposed on cloth prices, cotton will be available at competitive prices. In the circumstances, cotton prices will more less be guided by the holding capacity of agriculturists and the pace of arrivals.

Better conditions prevailed in the spot market at Sewri during the week under review. Mill enquiry was conspicuous in popular growths such as Laxmi, Kalyan, L147, Digvijay and CO2. Consequently the prices tended to firm up.

In the import section African and American cotton met with good demand, particularly from Ahmedabad mills.

Brisk activity was noticed in Bengal cotton presumably on account of the apprehension of a downward revision in the estimates of the crop. Naturally enough, demand from indigenous mills and foreign traders flowed on an encouraging level which led to the hardening of the price. The price of December delivery contract improved by Rs 12 to Rs 703.00 on Saturday thanks mainly to the tendency of the some mills to sell spot and buy forward in Bombay. The delayed arrivals of Bengal Deshi kapas in the terminal markets also aided the firm trend in this growth.

This apart, considerable quantum of loose cotton was reported to have been lifted on behalf of cottage industry units. It needs special mention, in this connection, that ready Deshi cotton prices have improved by Rs 15 per candy during the course of the last month. Overseas importers continued to be active in the market. As usual, Japan figured as the main consumer of this growth, though restricted business has been transacted with the American and Continental buyers.

Consumption of cotton by mills in India from 1 September 1963 to 30 June 1964 snarled moved up to 5,024,854 bales from 4,674,228 bales in the relevant period of 1962-63. Consumption of indigenous cotton went up by 620,232 bales to 4,520,661 bales. Consequently consumption of foreign cotton by the mills during the period under review stands reduced at 504,790 bales in the same period in 1962-63.

Description	1 Sept '62 30 June '63	1 Sept '63 30 June '64

Total	10,761	16,117

CLOTH PRODUCTION

Production of piecegoods by the mills in India is provisionally put at 441 million yards against 421 million yards in August and 401 million yards in the same month in 1963. The production figure in September takes up the total cloth manufactured by the mills in the first nine months of the current year to 3,794 million yards, an improvement of 183 million yards over the relative figure in the same period in the preceding year. Stocks of cloth with the mills at the end of the month under review is placed at 339,000 bales compared with 50,600 bales in the month of August. The steep increase in stocks is attributed to the poor off-take consequent on the uncertainty about the price pattern.

SYRIAN COTTON

Syria has recently emerged as a prominent cotton exporting country. Shipment of cotton from that country has gone up astoundingly from 5,000 bales in 1949 to 600,000 bales in 1963. This spectacular rise in exports can be ascribed to the country's ability to release a large portion of its produce for exports, though cotton output is less than many of the eastern producing countries like India, Pakistan and Turkey. At present cotton is Syria's leading earner of foreign exchange. Prominent buyers of Syrian cotton are France, Italy, Portugal and West Germany. Offtake by the Far Eastern countries is comparatively meagre. China and Soviet Union are the leading buyers of Syrian cotton in this part of the world accounting for over 77,000 and 62,000 bales respectively in 1962-63. Shipment to Japan is placed around 5,500 bales only. China has already imported about 200,000 bales in the current year. Other communist countries also imported sizable quantities of cotton from Syria.

PIECEGOODS

Sluggish conditions prevailed in the cotton piecegoods market in Bombay during the week. Demand from upcountry centres was at a low ebb. The total turnover was, therefore, a mere trickle. However, the trade circles are optimistic of a sudden revival in demand. Moderate enquiry was noticed in medium coatings but business transacted was restricted owing to paucity of goods. Voiles met with some attention during the week under review.

On the export front, the offtake by the UK was limited because of the disparity in prices. France, Italy and W. Germany evinced keen interest in usual items. Sudan was satisfied with a moderate quantum of voiles, dhories, sheetings and saris. Singapore's fancy focused on coatings and bleached long-cloth.

Prospects for Pepper

CONDITIONS in the Pepper market have remained generally dull in the absence of foreign demand. The uncertain political situation resulting from the strained relations between Indonesia—the major world producer—and Malaysia led the shippers to believe that the exports of black pepper from India would pick up; but these hopes were belied. In Cochin, the rate for the ready position is moving narrowly between Rs 355 and Rs 359 per quintal.

The American buyers have continued to keep off the Indian market in view of the high prices offered by the Indian shippers. Moreover, the recent report of the devaluation of Indonesian currency influenced the Indian market. It was stated that the devaluation would help Indonesian shippers to offer their goods at as

low as 25 cents a pound as against 40 cents at which India can afford to sell.

During the current season, the Indian shippers have managed to sell some quantity to the Communist countries; but it may not be possible to do so when Indonesia sells at such a low rate. According to trade estimate, the country is presently carrying a stock of about 4,000 tonnes, which is considered to be sizable for this time of the season. Besides, the new crop is in the offing. It may start to move in sizable quantities in a few weeks' time.

CARDAMOM

Heavy Demand

In the Cochin market, a quantity of 2,935 kilogrammes of Cardamom was offered for sale in the first auction of the season. Against a strong general demand which continued throughout the sale, all grades on an average, realised Rs 2 to Rs 4 per kilo above last season's prices.

At Sirsi, very little quantity was offered this year. The market here used to pervade with cardamom fragrance; but it was quite

conspicuous by its absence this year and hardly one quintal of turnover was reported. From reports coming from villages, it is gathered that the crop is poor and that only one-third of the average crop may arrive this year for sale. Some merchants have put the estimate of arrivals this year at 100 quintals.

Overseas buyers had earlier refrained from buying from this country, as they anticipated that, with the flowing of the new crop, the price level will seek lower levels in this country. Although the new crop has started to move,

the pace of movement is feeble. The outlook for the export performance of the commodity is therefore, considered to be not bright. Shippers expect that the total exports in 1964-65 will be limited to 1,500 tonnes only. In 1963-64, exports amounted to 2,200 tonnes, while the internal consumption is estimated at 7,000 tonnes.

However, the unexpected delay in harvesting of the new crop in Gautemala has led to heavy demand from overseas buyers for Indian cardamom. More than 1,000 parcels of the new crop are reported to have been lifted and

5 Per Cent Madras State Electricity Board Bonds, 1976

For Rs. 300 Lakhs

(Payment of Interest and Repayment of Principal,
Guaranteed by the Government of Madras)

The Bonds will be trustee securities under the Indian Trusts Act and also approved securities for purposes of the Insurance Act and the Banking Company Act. The Bonds will be treated on par with Government Securities for the purpose of advances under Section 17 (4) (a) of the Reserve Bank of India Act, 1934.

ISSUE PRICE Rs. 99.75 Per Cent

Redeemable at par on the 16th November, 1976

Subscriptions will be received in cash or cheques from the 16th November, 1964. But the lists will be closed without notice as soon as the total subscriptions amount to approximately Rs. 300 lakhs and in any case not later than the close of business on the 21st November, 1964.

Applications will be received at all branches of the State Bank of India within the State of Madras and at the State Bank of India at Madras, Bombay, Hyderabad, Calcutta, Delhi, Bangalore and Bangalore City.

Copies of the Notification announcing terms of issue and application forms are available at all the receiving offices mentioned above, at all treasuries and subtreasuries in the State of Madras and at all offices of the State Electricity Board.

orders for about the same quantity have been placed. Kuwait, Bahrain and Jeddah are the main buyers.

CLOVES Bleak Prospects for Imports

In the Bombay market, Cloves prices have risen owing to the shortage of supply. The rate is quoted at Rs 315 per 10 kg against Rs 295. This is attributed to the report of a possible delay in the import of the commodity from Zanzibar. It is understood that, in spite of the repeated requests made by the State Trading Corporation to conclude deals, the Zanzibar Cloves Growers' Association has evinced no interest to come to any agreement.

The indifference shown by Zanzibar in selling cloves to India has surprised many in this country and this attitude is mainly attributed to the finding of a new buyer in Indonesia, which imports about 4,000 tonnes a year as against the estimated import of 800 tonnes by India.

Zanzibar is stated to be hesitant to send a delegation to India on political considerations. It feels that such a move may displease China and Indonesia with which it has lately developed very friendly relations. The STC, however, expects that about 400 tonnes of cloves can be purchased against the licence already granted.

CASHEWNUT Rise in Exports

An analysis of the country-wise exports of Cashew kernels from India shows that the USA continues to be the largest single importer of this commodity and that its offtake has been steadily rising year by year. From a total of 25,752 tonnes in 1957, the USA purchased as much as 29,319 tonnes from India in 1963. For the period January/August 1964, India's exports to that country have aggregated to 18,192 tonnes.

The USSR is reported to have superseded the UK as the second largest importer of Indian cashew kernels. Britain's purchases in 1957 aggregated to 2,796 tonnes against USSR's total of 2,103 tonnes; but in the year, the Soviet Union purchased from us as much as 5,095 tonnes, while the UK's imports that year were only 2,717 tonnes. In 1963, the Soviet Union's imports had shot up to 8,903 tonnes, whereas the UK's share had remained almost stagnant at 2,441 tonnes.

SUGAR Rise in Ex-Mill Prices?

According to a report released from New Delhi, the Western Uttar Pradesh sugar mills have urged the Government of India to announce the ex-mill price for 1964-65 sea-

son at an early date. Last season, the Government had divided Western Uttar Pradesh into four regions and fixed separate ex-mill prices for each of the regions:— 13 factories received a price of Rs 131 per quintal; 14 factories Rs 120; 6 factories Rs 123 and the rest Rs 113.

Hopes are still entertained that the Government may announce a rise in the ex-factory prices at the time of Diwali. Although the industry's demand for "selective" control for sugar has been rejected by the Sen Commission in its interim report, some sources are of the view that the delay in the announcement of ex-factory rates has largely been due to the fact that officials are divided on this aspect. There is also a feeling that the Government may accept the Sen Commission's recommendations and fix a ceiling price for gur and khandsari with a view to checking a large-scale diversion of cane from sugar to gur manufacture.

According to the latest forecasts released in London, Europe as a whole is expected to have a net raw sugar deficit in 1964-65 of 1.11 million metric tons although imports will readily make up the shortage. Revised estimates, available earlier this month, of the world total of sugar beet and cane production indicate an overall output of 60.3 million tons for 1964-65. This is an increase on a United States Department of Agriculture estimate last June, which put the new crop at 59.5 million tons.

OILS AND OILSEEDS Sharp Fall in Prices

Trading in the Bombay Oilseeds market was marked by a sharp fall in ready groundnut and groundnut oil prices. Increased pressure of supplies and weaker advices from the producing areas were the main contributory factors. Sentiment in the market was also affected by the expected removal of the ban on the movement of the new crop by the Gujarat Government.

The Castorseed section ruled comparatively steady, thanks to an active export section. Russia was reported to have placed an order for a sizable quantity of castor oil. In the spot section, commercial quality oil was quoted at Rs 17.80 per 10 kg.

Trading in the Linseed section was dull and featureless. Linseed oil was quoted at Rs 20.40 per 10 kg.

In the Madras market, arrivals of seeds were heavy and averaged 100 to 125 tons a day and these were taken by local and southern-side crushers. The rate for the new crop was quoted at as low as Rs 90 as against Rs 103 in the previous week.

The rate for Groundnut Oil declined to Rs 207 from Rs 253 per quintal. In view of the larger new crop arrivals, buyers were adopting a go-slow policy in respect of their purchases, anticipating a further decline in prices.

Get local help for your foreign exchange problems

Your State Bank Agent is just a telephone call away!

The State Bank of India and its Subsidiaries have 1700 branches at home and several branches abroad to deal with your problems regarding import and export trade.

Services rendered include

- Exchange Control Formalities
- Foreign Bills • Letters of Credit
- Packing Credit Facilities
- Guarantees and Indemnities
- Forward Exchange • Remittances
- Foreign Travel Regulations and Facilities.

World wide network of Correspondents.

Our special information service deals with all your questions on:

- (a) trading opportunities in other countries and names of likely buyers or suppliers
- (b) reports about the standing and financial status of business people in any part of the world, and their ability to fulfil contractual obligations
- (c) the currency and customs formalities of the country you do business with

In approved cases, we also furnish Letters of Introduction entitling you to the courtesies of our offices and correspondents in all principal centres of the world.

For the INVESTOR

INVESTMENT GOSSIP

Renewed Apprehensions

After earlier steadiness the stock market has developed a reactionary tendency toward the close of the week following renewed apprehensions of additional taxation and generally unfavourable Government policy toward the corporate sector. Earlier cheerfulness however has been attributed to a number of favourable indications such as the reported recommendations of the Advisory Committee on Capital Issues regarding restriction on transfer of shares and margin on carry-over transactions. It was also believed that with a view to revive the capital market, Government was favourably disposed toward the widespread demand for the abolition of taxes on bonus shares and dividends. Rumour also had it that steel prices would be increased and this explains partly the hectic activity in the steel shares. But with the conclusion of the meeting of the National Development Council, operators have suddenly become cautious with the result equities have come to encounter selling pressure during the past two days. While the Prime Minister's speech has generally been welcomed, there has nevertheless been some disappointment also. For Mr Lal Bahadur Shastri has suggested the expansion of the public sector to include certain basic consumer goods industries. These industries include cotton textiles, sugar, cement, drugs and medicines. While thus advocating an enlargement of the public sector, Mr Shastri has however conceded that the private sector will continue to play its role in our economy which is designed to attain socialism. Mr T. T. Krishnamachari, Union Finance Minister, has also made his contribution to the revival of apprehensions. He has suggested to the Company Law Board that it should examine the applications for revival of managing agencies with a view to eliminating them gradually. Another news item which cannot be conducive to an expansion of business on the stock market is that the Congress Party's Socialist Forum headed by Home Minister, Mr Gulzarilal Nanda, has urged the Congress High Command to speed up the nationalisation programme. With their confidence once again impaired, both operators and investors are prone to be easily swayed even by stray observations of Government spokesmen.

NEW ISSUE NOTES

Philips India

Philips India has decided to approach the Controller of Capital Issues for consent to issue 4,00,000 rights shares of Rs 10 each, at a premium of Rs 6 per share. Out of these, the major shareholders, N. V. Philips' Gloeilampenfabrieken, Holland, will subscribe to only 1,00,000 shares although they are entitled to 3,09,030 shares on a rights basis. The remaining 3,00,000 shares will be offered to the existing shareholders in India in the proportion of three new shares for every five shares held.

The issue of this capital was kept in abeyance, pending a more detailed examination of the company's long-term requirements of finance. The new capital issue of 4,00,000 shares for which sanction is now being sought, in place of the earlier sanction, is intended to meet both the long-term and short-term requirements for financing the company's fast-expanding activities in the various manufacturing sectors.

At present, Philips India's shares are held between N. V. Philips' Gloeilampenfabrieken, Holland, and other shareholders in the proportion of 77:23. But, with the issue of the present right shares, the proportion of shares, held by the shareholders in India, will increase to nearly 31 per cent.

Madras State Electricity

The Government of Madras has given its consent to the flotation of 5 per cent Madras State Electricity Board Bonds 1976. The amount of the issue will be Rs 300 lakhs (nominal). The issue price will be Rs 99.75 for every Rs 100 of the bonds applied for. Subscriptions will be received from 16 November to 21 November 1964, both days inclusive; but the lists will be closed without notice as soon as the total subscriptions amount to about Rs 300 lakhs and, in any case not later than 21 November. The Government of Madras has guaranteed fully the repayment of the securities both in respect of principal and interest. The Head Office of the State Bank of India, Madras, will be in charge of the issue.

The Bonds will have a currency of 12 years from 16 November and will be repaid, at par, on 16 November 1976. The bonds will

be issued in denominations of Rs 100, Rs 500, Rs 1,000, Rs 5,000, Rs 10,000, Rs 25,000, Rs 50,000, Rs 1.00 lakh and Rs 5.00 lakhs.

Application for the bonds must be for Rs 100 or for a multiple of that sum. Applications should be accompanied by the necessary payment in the form of cash or cheque, which may be drawn in favour of the State Bank of India branch concerned. The proceeds of the bonds will be used for financing the capital outlay on the electricity schemes in the Madras State.

Goodyear India

Goodyear India Limited, Calcutta, is to issue further capital of Rs 64,00,000, divided into 64,000 equity shares of Rs 10 each for cash, at a premium of Rs 7 per share. The entire issue will be made to the existing Indian shareholders in the ratio of eight shares for every five shares held. The capital will be utilised for financing the expansion scheme involved in the manufacture of rubber tyres and tubes, etc.

The expansion scheme, which has been approved by the Government, envisages increase in the production capacity at its factory at Ballabgarh, near Delhi, from 210,000 to 310,000 tyres per annum before the end of 1965. Simultaneously, the company's overall industrial licence to manufacture 310,000 tyres annually has also been renewed until December 1968.

The directors are contemplating an issue of bonus shares, subject to Government approval, by utilizing the Share Premium Account. According to the latest report of its 1964 results, gross sales during the first nine months (January/September) have been over Rs 9 crores as against Rs 7.2 crores in the corresponding period of last year. The company has made a net profit of Rs 22 lakhs during the same period as against a net loss of Rs 51 lakhs in the same 1963 period.

Simon-Carves

Simon-Carves India Limited is to issue 5,99,993 equity shares of Rs 10 each. Out of this, 3,50,000 equity shares will be issued at par and allotted to Simon-Carves Limited of UK and/or its nominees as fully paid-up for consideration otherwise than in cash. Simon-Carves Limited of UK has agreed to subscribe for 10,000 equity shares for cash, while the direc-

tors, their friends and associates have agreed to subscribe for 19,993 equity shares. The balance of 2,20,000 equity shares will be offered for public subscription, at par. The subscription list will open on 16 November and will close on 18 November or earlier, but not before 14 November 1964.

It is intended that the company will be a subsidiary of Simon-Carves Limited of UK. Since the commencement of business on 21 June 1963, orders valued at about Rs 10.5 crores have been received by the company.

Lucas—TVS

Lucas-TVS Limited, Madras is to issue a further capital of Rs 50 lakhs, divided into 50,000 equity shares of Rs 100 each for cash, at par, to be subscribed privately by the company's foreign collaborators. The money will be utilized to meet the increased capital requirements of the company's project.

ECEC

Electric Construction and Equipment Company Limited, Calcutta, is to issue capital of Rs 81,56,600, divided into equity shares of the value of Rs 59,06,600 and preference shares of the value of Rs 25,50,000. The capital is required for completion of several projects of the company at Hyderabad, Budge-Budge, Bandel and Sonapat, estimated to cost Rs 137 lakhs.

ACC

Associated Cement Companies Limited, Bombay, is to issue capital of Rs 700 lakhs in 7 per cent per annum "D" Debentures of Rs 1,000 each for cash, at par. The Debentures will be offered to the public with the option to the existing shareholders of the company. The money will be used for financing the company's expansion, renovation and new factories.

Benger Laboratories

Benger Laboratories (India) Limited, Bombay, is to issue Rs 50 lakhs in equity shares of Rs 100 each, at par, to be offered to the existing shareholders of Tata-Fison Limited on the amalgamation of the latter with the former as approved under the orders of the Bombay High Court. The shares will be issued in the proportion of 10 shares for one share of Rs 1,000 each (fully paid-up) of Tata-Fison Limited.

Nuboard Manufacturing

Nuboard Manufacturing Company Limited, a new company formed for the manufacture of particle board (popularly known as chip board) will shortly enter the capital market to make its public issue. The authorised capital of the company is Rs 50 lakhs, divided into 5,00,000 equity shares of Rs 10 each. The issued and subscribed capital will be Rs 25 lakhs, out of which shares worth Rs 6.37 lakhs will be taken up by the Indian promoters and their friends, while the foreign collaborators will subscribe for shares worth Rs 12.50 lakhs. The balance of Rs 6.13 lakhs will be offered to the Indian public before the end of the current year. The whole of the public issue will be underwritten.

★

BONUS ISSUE NOTES

Geep Flashlight

Geep Flashlight Industries Limited, Allahabad, will be issuing further capital of Rs 3 lakhs, divided into 3,000 equity shares of Rs 100 each, as bonus shares on capitalisation of the company's reserves to a like extent.

Arlabs

The directors of Arlabs Limited may not decide to issue bonus shares. The Chairman of the company has indicated that it will not be advisable to issue bonus shares without ensuring that the dividend can be maintained on an increased capital. The prospects for the current year are, however, considered to be encouraging, as there has been a sharp increase in sales in the first three months and new products are being placed on the market.

★

INVESTMENT NOTES

Hindustan Wires

Considerable progress has been made by Hindustan Wires Limited in recent months in the installation of additional plant and machinery.

Almost the entire equipment valued at Rs 35 lakhs, covered under the second yen credit, has already been shipped from Japan and equipment valued at about Rs 20 lakhs has arrived. The company hopes to complete the expansion scheme including implementation of the Tyre Bead Wire Project by February/March 1965. Sales during the first 6 months of the current year have been over Rs. 80 lakhs which compares favourably with Rs 48 lakhs during the corresponding period of the previous year. With the installation of new machinery, production is expected to increase.

Since the statutory control on price and distribution of the company's products has been relaxed from March this year, it is expected that the company will be enabled to record more reasonable profits on its finished products in the current year.

Wellman Incandescent

Although the company's working last year had been adversely affected by factors beyond its control, such as the inadequate supply of electric power, the delay in the issue of import licences and shortage of steel plate and sections, the overall supply position of the requisite facilities has since improved considerably. As a consequence, the financial trend has now been reversed and if the operating results for the period up to the end of September 1964 are any guide, the current financial year is bound to show a sizable profit. Indicative of the confidence reposed in the company's products is the substantial order to the tune of about Rs 1.5 crores placed with Wellman Incandescent by the Alloy Steel Plant of Hindustan Steel Limited, Durgapur. Erection and commissioning of the company's products is proceeding in numerous sites throughout the country.

New Asiatic Insurance

It is understood that the New Asiatic Insurance Company Limited will soon undertake industrial and trading activities. It would be recalled that the company stopped insurance business in 1961. Since then, it has been trying to obtain permission from the Controller of Insurance to do other business in order to give better returns to its shareholders.

The Court has now ordered the refund of deposits under the Insurance Act. It is, therefore, now possible for the company to use its funds in trading and industrial ventures. The name of the company will also be changed to "The New Asiatic Industries Limited" or such other name as the Government allows and the directors think fit. In this connection, an extraordinary general meeting will be shortly.

Khatau Makanji

The Chairman of the Khatau Makanji Spinning and Weaving Company Limited has ruled out prospects of a fresh issue of shares for meeting the cost of the expansion programme and also any increase in dividend for a year or two until the expansion is completed. The company's expansion programme has been under way. Necessary orders for the plant and machinery have been placed. The new unit, which will go into commercial production in 1966, is expected to cost Rs 2.25 crores. It is being entirely financed from internal resources and bank borrowings.

Mysore Lamp

Mysore Lamp Works Limited is busily engaged in the implementation of its expansion programme and it has been pointed out by the directors that it will not be possible to earn large profits until the new plant and machinery have been installed and commissioned fully.

into production. A new group of lamp manufacturing equipment has been obtained from the UK and installed and commissioned. But the major part of the expansion scheme relates to the installation of plant for producing glass shells and glass tubes.

★

IN BRIEFS

Parkside Estates Company Limited has proposed a final dividend of 15 per cent, making a total of 22½ per cent for the year ended 30th June 1964. This compares with 25 per cent paid for the preceding year.

A. V. Thomas and Company (India) Limited has proposed a taxable dividend of 7½ per cent for the year ended 30 June 1964 against nil previously.

★

BALANCE-SHEET REVIEWS

Deccan Sugar Does Well

The working of the Deccan Sugar & Abkhari Company Limited during the year ended 31 May 1964 has resulted in a higher net profit, after providing for depreciation but before taxation, of Rs 33.74 lakhs as against Rs 29.01 lakhs for the preceding year, thanks to the satisfactory working of all the units and a larger output of sugar.

The liability for taxation, including surtax, is Rs 19.55 lakhs against Rs 16.83 lakhs; but the net provision, after effecting transfers from Taxation Equalisation Reserve, is Rs 18.55 lakhs (Rs 16.83 lakhs). Development Rebate Reserve is lowered to Rs 1.35 lakhs from Rs 1.80 lakhs, while Rehabilitation Reserve is raised to Rs 5.30 lakhs, from Rs 2.50 lakhs. On the last occasion, General Reserve got Rs 1 lakh.

The directors have proposed to pay a final dividend of 11½ per cent on the equity shares, making a total of 18 per cent, taxable, same as previously. The final dividend is, however, payable on a capital increased by the issue of bonus shares by capitalising part of the amount standing to the credit of the Share Premium Reserve.

Hindustan Electric—Rise in Profits

The Hindustan Electric Company Limited has shown a rise in sales from Rs 2.26 crores to Rs 4.74 crores for the year ended 30 April 1964 following a larger output in conductors and imported materials. The Howrah Works of the company also resumed production in August last year.

As considerable expenditure had to be incurred in building up the marketing organisation and there was also an increase in costs of production, earnings have not risen proportionately. The net profit, before providing for depreciation and taxation has risen, to some extent, to Rs 27.37 lakhs from Rs 22.65 lakhs in the previous year.

Apart from providing Rs 38,275 for General Reserve and Rs 7,500 to write off capital issue expenses, all other allocations have been raised: — Depreciation from Rs 3.18 lakhs to Rs 6.33 lakhs; Taxation from Rs 5.19 lakhs to Rs 9.50 lakhs; Doubtful Debts Reserve from Rs 1.50 lakhs to Rs 2.00 lakhs and Development Rebate Reserve from Rs 17,533 to Rs 1.15 lakhs. The directors have proposed a dividend of 4 per cent (nil) on the equity capital.

As the Howrah works will be operating throughout the year, it is expected that there will be further increase in turnover in the current year, especially as the trend of production at the Baroda and Faridabad units is also satisfactory.

The project for erecting a new factory at Kakrapur, near Baroda, for the manufacture of air blast circuit breakers and other items is progressing well. The orders for machinery to be imported have been already placed in collaboration with the Swiss interests, while the purchases of machine tools, locally available, are being arranged.

The rolling mill and new conductor works at Ghaziabad have gone into regular production and a satisfactory level of output has been maintained. There are sufficient orders on hand. The production of electrical motors and transformers is encouraging and it is confidently expected that the requirements of railways for air circuit breakers can be fully met.

Cooper Engineering Repeats

Although the Cooper Engineering Limited has reported an increase in sales from Rs 2.62 crores to Rs 3.11 crores, it was not possible for the company to report an increase in earnings, because of higher prices for raw materials and a larger wage bill. Even so, it should have been possible to improve efficiency and derive at least some benefit out of a larger turnover. It is expected that the performance, during the current year, may make better showing.

The net profit, before depreciation and taxation, is more or less unchanged at Rs 22.84 lakhs, the actual profit for the previous year being Rs 22.72 lakhs. It was, however, necessary to provide a much larger sum of Rs 22.60 lakhs (Rs 18.69 lakhs) towards Depreciation, as it was thought advisable to take advantage of the concessions provided under the last Finance Act.

A sum of Rs 1.35 lakhs (Rs 3.92 lakhs) is provided for Development Rebate. Additionally, there is a transfer of Rs 8.32 lakhs (Rs 4.40 lakhs) to Development Rebate Reserve, there being similar transfers from the same source probably because earlier provisions were in excess.

With the utilisation of provisions amounting to Rs 3.76 lakhs (Rs 83,065) no longer required, General Reserve No 1 gets Rs 2.65 lakhs (Rs 95,000). The dividend on the equity capital has been maintained at 8 per cent, subject to tax. The amount of Rs 7.91 lakhs, needed for this purpose, is being found out of General Reserve No 2 and to some extent out of General Reserve No 1.

Efforts are being made to get the approval of the Government for a revision of selling prices for diesel engines and shaping machines. The Government has already agreed to raise prices for some items. The project for manufacturing automatic looms is making progress and the first fifty looms are expected to be despatched shortly. With further imports of components and parts, the output is expected to increase in the coming months.

As regards the proposed scheme for manufacturing gear hobbing machines, a technical collaboration agreement has been finalised on the basis of suggestions made by the Government. The ICICI has agreed to give a loan of Rs 18.50 lakhs in foreign currency for implementing the scheme for producing vertical turret lathes.

Same from Hyderabad Allwyn Metal

Hyderabad Allwyn Metal Works Limited has recorded a big increase in sales for the year ended 30 April 1964 to Rs 5.16 crores from Rs 3.26 crores. The output would have been still higher, but for the difficulty in securing raw material supplies.

The net profit, before depreciation and taxation, has jumped to Rs 63.95 lakhs from Rs 40.86 lakhs. In respect of allocations, Depreciation is raised to Rs 21.97 lakhs from Rs 14.63 lakhs; and General Reserve to Rs 4.50 lakhs from Rs 2.65 lakhs, apart from providing a sum of Rs 16.00 lakhs for Taxation. Development Rebate Reserve is lowered to Rs 3.50 lakhs from Rs 9.00 lakhs, while a sum of Rs 6.03 lakhs (nil) is allocated in respect of other items. The dividend on the equity capital is maintained at 10 per cent, subject to tax.

The company has plans for expanding further its production facilities, having received licences for manufacturing hydraulic hoists, tipping gears and heavy-duty trailers and semi-trailers. Collaboration agreements have been concluded with foreign interests.

ICI Pays More

The Investment Corporation of India Limited has decided to raise the dividend on the equity capital from 7.5 to 8.5 per cent, subject to tax, for the year ended 30 June 1964, thanks to an appreciable increase in the net profit, before providing for taxation, to Rs 30.83 lakhs from Rs 21.81 lakhs as a result of a larger dividend income on shares and interest on securities of Rs 29.71 lakhs (Rs 22.69 lakhs).

In respect of allocations, Taxation is raised to Rs 9.00 lakhs from Rs 8.12 lakhs, while General Reserve 'A' gets Rs 2.69 lakhs (nil); Retiring Gratuity Reserve Rs 50,000 (nil) and General Reserve Rs 1.00 lakh (nil). The participating preference shares also benefit by the higher dividend on the equal capital besides the regular preference dividend.

Sitalakshmi Mill Fares Well

The working of the Sitalakshmi Mills Limited has resulted in a higher net profit of Rs 11.13 lakhs for the year ended 30 June 1964 as against Rs 8.06 lakhs for 1962-63. The provision for Depreciation is raised to Rs 4.44 lakhs from Rs 3.36 lakhs, while Development Rebate Reserve is lowered to Rs 1,000 from Rs 90,000.

As the company will not henceforth be entitled for the tax holiday, the provision for Taxation has risen sharply to Rs 3.67 lakhs from Rs 1.20 lakhs. The dividend on the equity shares is repeated at 25 per cent; but there will be a deduction of tax at source to the extent of 20 per cent. On the previous occasion, there was no such deduction.

Bharat Ball Bearing Skips Again

Thanks to a substantial rise in sales from Rs 7.81 lakhs from Rs 28.85 lakhs, the Bharat Ball Bearing Company Limited has been able to report a net profit, before providing for depreciation, of as much as Rs 8.53 lakhs for the year ended 30 June 1964 as against a

loss of Rs 1.32 lakhs incurred in the previous year. Out of the profit, a sum of Rs 8.15 lakhs is provided for Depreciation. The balance is adjusted against the depreciation for last year.

Total loss, after providing Rs 26,819 for liability against income-tax for 1962 and Rs 3.27 lakhs for depreciation for previous years, there is a debit balance of Rs 3.52 lakhs, which is carried forward to next year.

The directors are hopeful that current year's operations will result in surplus after meeting depreciation for the year and providing for losses carried forward, as the rate of production has been higher and is expected to improve further in the course of this year. Steps are being taken to secure an industrial licence for the manufacture of railway journal bearings for Indian Railways.

Barnagore Jute Pays Less

According to a preliminary report released by the company, the Barnagore Jute Factory Limited has shown a lower net profit, after providing for all charges including taxation, of £116,475 for the year ended 31 March 1964 as against £220,306 for the previous year.

All allocations have been reduced—Taxation from £290,000 to £193,000; General Reserve from £132,600 to £56,000 and Development Rebate Reserve from £14,507 to £3,214. The directors have proposed to recommend a taxable dividend of 30 per cent on the ordinary shares as against a taxable dividend of 40 per cent paid previously. The dividend is payable on or after 9 December to those shareholders registered as on 2 December, 1964. The amount carried forward to next is higher at £7,946 as against £1,341.

Basti Sugar Pays 15% Against 6%

Despite an increase in the quantity of cane crushed from 14,16,914 quintals to 17,19,385 quintals, the Basti Sugar Mills Company Limited has reported a decline in sales from Rs 243.19 lakhs to Rs 208.83 lakhs for the year ended 30 April 1964.

However, the net profit, after providing for depreciation and taxation, amounts to as much as Rs 4.06 lakhs against only Rs 54,428 for 1962-63.

All allocations have been raised:—Depreciation from Rs 2.39 lakhs to Rs 2.83 lakhs; Taxation from Rs 50,000 to Rs 4.76 lakhs; Development Rebate Reserve from Rs 18,907 to Rs 65,828 and Charity account from Rs 4,000 to Rs 15,000. Even after these increased allocations, the directors have found it possible to raise the dividend from 6 to 15 per cent, subject to tax.

Hasimara Industries Maintain Distribution

Hasimara Industries Limited has reported a substantial decline in

the net profit, after providing for depreciation and taxation, to Rs 11.95 lakhs for the year ended 31 March 1964 from as much as Rs 30.18 lakhs for the previous year in spite of an increase in the average price realised from Rs 5.77 to Rs 5.97 per kg.

In respect of allocations, Depreciation is slightly lowered to Rs 4.44 lakhs from Rs 4.45 lakhs, while a sum of Rs 13.55 lakhs (nil) is provided for Taxation. Development Reserve is maintained at Rs 11,000. After transferring Rs 25,000 from Contingency Reserve, Rs 14.50 lakhs (nil) is provided for Taxation in respect of previous year and Rs 3.00 lakhs (Rs 6.00 lakhs) for General Reserve. The directors have, however, proposed to repeat the ordinary dividend at 15 per cent, subject to tax. Annual general meeting will be held on the 9 November.

Hasimara Industries Limited is running the Seksaria Cotton Mills at Bombay as a licensee. The licence fee originally agreed was Rs 2 lakhs per month; but the directors have been able to persuade the Seksaria Cotton Mills to reduce the licence fee to Rs 1.86 lakh per month with effect from 1st April 1964.

After necessary negotiations and after examining the legal position, the directors have entered into an agreement with Seksaria Cotton Mills and about eighty per cent of its shareholders, whereby the said shareholders of Seksaria Cotton Mills and Seksaria Cotton Mills Limited have granted to the company a right to control the composition of the board of directors of that company during the continuance of the licence period.

BALANCE SHEET BRIEFS

According to a preliminary report, Smith Stanistreet and Company Limited has reported a higher net profit, before providing for taxation, of Rs 13.73 lakhs for the year ended 30 June 1964 as against Rs 13.17 lakhs for the previous year. The directors have proposed to raise the dividend from 22 2/5 to 25 per cent, subject to tax.

Larsen and Toubro Limited has reported a rise in sales from Rs 275 lakhs to Rs 354 lakhs for the half-year ended 30 September 1964. The value of the output at the company's workshop at Powai has increased by 21 per cent during the same period.

STOCK EXCHANGES A Further Retreat

STOCK markets have staged a further retreat this week. After a sharp recovery in prices on the opening day of the week, they have turned hesitant, resulting in the initial gains being almost wiped out owing to sustained bull liquidation coupled with bear pressure.

Although the improved trend noticed at the week-end gathered further momentum on Lyons Range early this week, nervous bull liquidation

caused a sharp break in values towards the close.

Subdued conditions prevailed on Dalal Street, where most of the shares finished around the lowest levels for the week.

The Ahmedabad Stock Exchange failed to sustain the recovery of the first two days and suffered a sharp setback at the close.

Prices on the Delhi Stock Exchange recorded a sharp fall owing to weaker advices from other centres.

Except Planting issues which maintained support, all forward shares evoked little interest on the Madras Stock Exchange.

It was a quite week on the London Stock Exchange. Again, buyers preferred to hold off while waiting for the Government's next move in improving the economic situation.

Despite the continued cheerful business and economic news, buying enquiry failed to expand on Wall Street.

CALCUTTA

AFTER commencing the week on a cheerful note, the local stock exchange presented a subdued appearance during the remaining part of last week. Renewed offerings in the speculative counters caused a steady and sharp fall in prices at the close.

The initial cheerfulness of the market was influenced by certain favourable factors. A section of the market circles was optimistic that the Government might allow some concession in the fiscal policy, especially in respect of capital gains tax and bonus tax to stimulate the capital market.

Operators seemed to have been impressed also by a report that the Advisory Committee on Capital Issues had made two useful recommendations—the removal of the restriction on the transfer of shares allotted privately by a public limited company and a further relaxation of margin on carry-over transactions. Rumours, that the retention prices of controlled items of steel might be raised, were also a contributory factor. Fresh support was, therefore, forthcoming while offerings remained mild.

But the subsequent reaction of the market was generally expected since prices had been pushed up substantially due to speculative support only, as investors were showing an indifferent attitude. Moreover, sentiment was affected by the decision of the British Government to levy a surcharge of 15 per cent on all imports which it was feared, would affect Indian exports to Britain.

There were also other factors leading to the depressed sentiment in the market, the major factor being the prospect of a stiffer dose of taxation during the next Plan. The Finance Minister's hint of a gradual abolition of the managing agency system in well-established industries was also viewed with some concern. It was also feared that the new credit policy of the Reserve Bank would tend to reduce the flow of funds into the stock markets.

There was, therefore, a general disposition to restrict commitments, especially in view of the approaching

holidays for the "Diwali" festival. Prices also remained vulnerable owing to a tendency to press offerings even on small upturns, although some resistance was offered at the depressed levels.

Gilt-edged securities ruled quiet and turnover was moderate in the absence of institutional support. Almost all the State Loans were available at a slight discount, 3 per cent 1986 Conversion Loan slipped down further to Rs 61.90 from the week-end level of Rs 62.80.

There was no interest in Bank shares.

Jute shares were traded cautiously on fears that exports of jute goods might be affected by the decision of the British Government in levying the surcharge. Birlas came in for offer at the close to Rs 35.37 against the opening rate of Rs 36.69, while Howrah were neglected around Rs 16. New Central moved narrowly between Rs 10.62 and Rs 10.75.

Coal shares remained generally dull in the absence of any improvement in demand for the commodity. C. India fluctuated between Rs 8.44 and Rs 8.56 and Western Bengal between Rs 8.56 and Rs 8.83.

There was little doing in the Tea season owing to lower prices still obtained for the commodity.

Sugar shares were practically neglected.

In the Engineering group, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to heavy selling pressure. After opening higher at Rs 26.30 and advancing further to Rs 26.44, Indian Irons slipped down gradually to Rs 25.60 before finishing the week at Rs 25.72. G. K. Williams moved down at one time to Rs 23.06 from Rs 24.06, to close finally at Rs 23.44. TEXMACO were on offer at Rs 26 against Rs 26.10 and Jessop Rs 24.37 to Rs 24.62 against Rs 26.31. J. K. Steel changed hands at Rs 17.62 to Rs 17.87 and Braithwaite at Rs 32.75 to Rs 33.06.

Miscellaneous issues moved in sympathy with the general trend of the market. Following were the price trends of a few selected shares:—

	High	Low	Closing

Industrial Production

ROURKELA

Further Rise in Production

Production in the Rourkela Steel Plant, which has been maintaining continuous upward trend for the last few months registered a further rise in almost all the units of the Plant during the month of September, 1964 when most of the units exceeded their rated capacity.

Eighty-six thousand six hundred twenty tonnes of pig iron was produced by the blast furnaces, showing an increase of 2,287 tonnes over the last month's production. On 25 September, the blast furnaces produced 3,612 tonnes of pig iron, the highest achieved so far on a single day, 120 per cent of the rated capacity.

Production of ingot steel also went up by 11,437 tonnes over the last month's production, 86,570 tonnes of ingot steel, nearly 104 per cent of the rated capacity of the Steel Melting Shop, was produced during the month.

The Steel Melting Shop also established a new daily record by producing 3,865 tonnes of steel on 24 September. The same day the converters attained a new record of 61 blows and produced 2,916 tonnes of steel, the highest obtained from these converters in a day.

The open hearth furnaces gave a record production of 1,053 tonnes of steel on 29 September, attained through thirteen heats.

A new record was established by the slabbing mill also which rolled 89,716 tonnes of ingot steel, nearly 108 per cent of its rated capacity and 679 tonnes more than the previous best rolled in March, 1963. 74,026 tonnes of slabs were produced during the months under review, showing an increase of 3,171 tonnes over the last month's production. This is also much more than the rated capacity.

The cold rolling mill also established a new record by producing 20,535 tonnes of cold rolled strips, nearly 104 per cent of its rated capacity and 2,014 tonnes more than the previous best attained in March 1963. The plate mill produced 14,461 tonnes against its rated capacity of 14,200 tonnes per month.

Production of hot rolled coils was 50,349 tonnes more than the rated capacity of the mill. Production of tin plates during September was also the highest achieved so far, being 2,388 tonnes, 358 tonnes more than last month's production which was the previous best, 3,713 tonnes of pipes were produced during the month under review.

BHILAI

Output of Merchant Products Touches New High

The Bhilai Steel Plant of the Hindustan Steel Ltd., produced 104,984 tonnes of finished and semi-finished steel products during September 1964. This included 34,030 tonnes of rails and structurals, 43,061

tonnes of billets and 27,893 tonnes of merchant products, all figures being higher than the monthly-rated capacities of the respective shops.

The output of merchant products was a new high for any month so far and was 26 per cent more than the monthly rated capacity of the mill.

The production of pig-iron (hot metal) during the month totalled 166,465 tonnes which was 16 per cent higher than the monthly rated capacity of the shop. The steel-melting shop produced 101,300 tonnes of ingot steel during the month under review, thereby exceeding its monthly rated capacity by 23 per cent.

STEEL

HSL Output in 1963-64

The Minister of Steel and Mines, Mr N. Sanjiva Reddy, stated in the Lok Sabha that the total production of steel in each of the three Steel Plants during 1963-64 in quantity and in value was:

	Quantity (in thousand tonnes)	Value (in million rupees)
Rourkela	528.8	504
Bhilai	882.2	537
Durgapur	724.6	442

He said that 15.9 thousand tonnes were exported to Sudan and South Vietnam.

COAL

NCDC Production in August

Collieries of the National Coal Development Corporation produced 647,517 tonnes of coal during the month of August 1964, as against 631,760 tonnes in the preceding month. The pit-head stocks amounted to 674,621 tonnes at the end of the month under review.

Of the total production, Bihar accounted for 479,391 tonnes, followed by Madhya Pradesh and Orissa, which produced 126,507 and 41,619 tonnes respectively.

Slackening Demand?

The Minister of Steel and Mines, Mr N. Sanjiva Reddy, informed the Lok Sabha that according to a recent assessment, the demand for coal might be about 74.5 million tonnes in 1965-66 and production, which stood at about 65 million tonnes in 1963-64, might be matched accordingly.

There were indications, however, he said, that even this demand might not come up, in which case production also would have to be suitably adjusted. The position was being watched.

Mr Reddy added that the Government had yet to take a decision on the Fourth Plan target for production of coal. A clear picture would emerge only after decisions have been taken about the final targets for consuming sectors, particularly steel and power.

JESSOP & CO. LTD.

Notice is hereby given that in compliance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, the Board of Management has sanctioned the payment of an Interim Dividend on 5% Cumulative Preference Shares for the half year ending 31st October, 1964, at the rate of Rs. 3.25 per share subject to deduction of tax in accordance with the Finance Act currently in force.

The Preference Share Transfer Register will be closed from 16th November, 1964 to 20th November, 1964 both days inclusive.

Dividends will be paid only to the Shareholders whose names are registered in the Books of the Company on the 20th November, 1964, or to their Mandatees.

By Order of the Board,
K. S. BASU,
Secretary.

63, Netaji Subhas Road,
Calcutta, 30th October, 1964.

DURGAPUR STEEL**Merchant Mill Output Rises in September**

During September the performance of Durgapur Steel Plant Merchant Mill was outstanding with a total rolled section of 27,170 tonnes. This figure was only slightly short of the record tonnes produced in May this year. The pig casting plant with a gross tonnes of 43,544 also gave a good performance. The Blast Fur-

nace production of 1,06,120 tonnes was also a satisfactory performance.

The principal statistics for September are as follows:

	tonnes
Coke	1,24,671
Pig Iron	1,06,120
Steel Ingots	75,036
Merchant Mill	27,170
Despatch of saleable iron and steel products	87,829
Total despatch	96,475

News from Industry

Ashok Leyland**Ashok Leyland engine enters generating set field**

A series of meetings and discussions between Parry & Co., Ltd., Madras and Ashok Leyland Ltd. has confirmed the impression that there is a potential market for Ashok Leyland Industrial Engines used as power units for electrical generators.

The first prototype unit using an Ashok Leyland UE 350, direct-injection, four-stroke, six-cylinder, overhead valve industrial engine having a continuous rating of 80 BHP at a governed speed of 2,000 RPM was built by the Engineering Department of Ashok Leyland Ltd. Fitted with Mico Bosch fuel pump with mechanical governor, radiator, fuel tank and exhaust silencer, the prototype was found to satisfy the provisions of BSS 619/1958 regarding governing requirements.

The alternator with control panels was provided by Kirloskar Electric Co., Ltd. through their distributors, Parry & Co. Ltd. It is a 48 KW, 80 KVA, 3 phase, 4 wire, 50 cycles, 1,000 RPM 400 440 volts salient pole revolving field, externally regulated alternator in OTS3 frame. The alternator is of the screen protected and drip proof type with the exciter mounted without bearings on the same shaft and the alternator fitted with two end shield ball/roller bearings and with keywayed bare shaft extension and suitable for horizontal mounting. The alternator conforms generally to BSS 2613.

The "Kirloskar" control panel is of the enclosed sheet metal floor mounting type.

A 2:1 reduction gear box is mounted rigidly on to the engine flywheel housing and this is precession built with maximum efficiency of transmission. The output shaft of the gearbox and the alternator are connected by flexible coupling.

The engine together with the 2:1 reduction gearbox and alternator are all mounted on a rigid fabricated baseplate in order to form a compact arrangement. The radiator is also fitted to the common base plate whereas the alternator

control panel is suitable for separate mounting.

Mr K. R. Ramachandran of Parry & Co. Ltd. who have placed orders and/or taken delivery of 13 UE 350 engines said he was confident that the market for the Ashok Leyland/Kirloskar Parry generating set is extremely bright. It is compact, economical and reliable and built with a background of experience in diesel engine power requirements for industrial application.

Mr Ramachandran who visited the factories of Leyland Motors Ltd. recently also said that demands for heavier generators using for example the Leyland UE 370 and UE 680 power units having a continuous BS rating of 90 BHP at 2,200 RPM and 169 BHP at 2,100 RPM respectively are bound to occur and grow and that his company would be prepared to arrange for the alternators to be so designed as to suit these specifications.

The Ashok Leyland UE 350 Industrial Engines which power the "Kirloskar" generators have been delivered by Parry & Co., Ltd., to a number of Tea and Coffee Estates in the South, to Neyveli Ceramics Ltd. and to their own Sugar Plant at Samalkot.

Increase in Production

An overall increase in vehicle production has been achieved at Ashok Leyland Ltd. for the financial year (October 1963 to September 1964) as compared with the corresponding period of the previous financial year.

Increase in production of Ashok Leyland diesel engines for installation in industrial plant and machinery has also been recorded for the same period.

The Production increase for the period under review has been maintained throughout the period with only slight fluctuations. It has helped to boost overall production at a very satisfactory level.

One of the company's best sellers is the Comet bus chassis powered by the well-known 350 diesel engine. This model accounts for a large proportion of the Ashok Leyland output and is regularly supplied in increasing numbers to all the State Transport Undertakings who have programmes for

extensive bus fleet renewals and replacements.

Repeat orders have been received for the popular 176 in. wheelbase and 163 in. wheelbase track chassis from a number of Projects, while the Comet short wheelbase tractor chassis coupled to Mahindra Owen "Gama" 11-ton payload articulated semi-trailer continues to attract operators both in the Public and Private Sectors with the relaxation of GVW restrictions in a number of States.

An overall increase in deliveries of both Comet bus and truck chassis to dealers for supply to private operators has been recorded by the company.

Tractor-trailer for another Govt. Department

An order has been placed by the Indian Bureau of Mines, Nagpur, for a Comet 118 in. wheelbase tractor chassis and a Mahindra Owen "Gama" 22 ft. long semi-trailer equipped with steel platform and landing gear.

The articulated outfit will be delivered to the Chief Mining Engineer of the Bureau. The Indian Bureau of Mines, besides conducting drilling operations themselves, is the authority to certify essentiality of machinery and equipment required by actual users in their mining and mineral processing activities.

TI Cycles**BSA BICYCLE**

T. I. Cycle of India, Manufacturers of Hercules and Phillips Bicycles, have introduced one more world-famous model BSA Bicycle, Light, Swift, and Strong, this classic beauty of a Bicycle widely acclaimed for its superior quality, is now being manufactured at their ultra-modern Factory at Ambattur, near Madras, to its famed high standards under the expert supervision of foreign technicians and Indian technicians trained abroad.

Commencing production in 1952, T. I. Cycles of India are today the largest manufacturers of Bicycles in India and account for one out of every 5 Bicycles being manufactured in the country.

Tube Investments**TRU-WEL Air Heater Tubes**

Tube Products of India, Avadi, Madras 54, Manufacturer of ERW Steel Tubes have now extended the range of production to manufacturing Air Heater Tubes of 36 feet length.

The latest contract is for over 480 miles of ERW Air Heater Tubes weighing over 2000 long tons ordered by ACC-Vickers-Babcock Ltd., Durgapur, for utilisation in the phased expansion programme of the New Delhi Power Station and also for the entirely new Power Station to be erected in M.P. The Air Heater Tube sizes supplied are 2"

o.d. x 12 G in lengths of 12 ft. and 2" o.d. x 14G in lengths of 36 feet.

It is believed that this is the first time in the history of India that ERW Tubes of this size and quality have been manufactured in this country. The dramatic growth in the acceptance of ERW Air Heater Tubes for these applications is an index of the progress of Tube Products of India which began manufacturing ERW Steel Tubes in 1957.

Tube Products Of India manufacture 'TRU-WEL' ERW Steel Tubes in collaboration with Tube Products Limited, Oldbury, England. 'TRU-WEL' Tubes provide the framework for Cycles, make possible sleek, inexpensive and light tubular furniture for homes and hospitals, provide cooling tubes for transformers and boilers, and serve a bewildering variety of other light engineering needs.

Tube Products of India are also producing cold rolled steel strips. This type of strip can be supplied in heat treated and temper rolled forms to give controlled mechanical properties. Its excellent surface finish is ideal for plating and en-lathes.

National Metallurgists' Day

About 400 leading metallurgists and workers in the metals field will converge at Durgapur on 13 and 14 November to participate in the Second National Metallurgists' Day. This celebration was initiated last year in order to focus attention on the role being played by metallurgists in the defence and development of the country. The 18th Annual Technical Meeting of the Indian Institute of Metals and a symposium on "Reducing Costs in Steelmaking" will also be held simultaneously at Durgapur. Over 65 technical papers on ferrous and non-ferrous metallurgy will be presented. Arrangements are being made jointly by the Indian Institute of Metals and the Durgapur Steel Plant.

The National Metallurgists' Day will be inaugurated at Durgapur by Mr N. Sanjeeva Reddy, Union Minister for Steel & Mines. Mr P. C. Sen, Chief Minister of West Bengal, and various leading industrialists and scientists from all over the country will participate. National Professor Satyen Bose will deliver the Pandya Memorial Lecture and Dr G. P. Chatterjee will present the N. P. Gandhi Memorial Lecture.

An important feature of the celebration is the presentation of National Awards for outstanding work in metallurgy. This year the awards will cover work done in all fields of metallurgical activity—steel plants, non-ferrous installations, research, education, defence, etc. Nominations have been received from all over India and are now being scrutinised.

Concurrently with the celebrations at Durgapur, the Indian Institute of Metals is organising Technical sessions at its various branches in metallurgical centres all over the country.

UK

The New Ministers

By Elisabeth Barker

The new British Government—though formed by a political party which has been out of office for 13 years—has been able to place the responsibility for its foreign policy and its relations with the Commonwealth in the hands of men with wide knowledge and experience. They can therefore grasp the urgent problems waiting for them without groping or hesitation.

The three men in the Labour Government who will be in most constant contact with the outside world will, of course, be Mr Patrick Gordon Walker as Foreign Secretary, Mr Arthur Bottomley as Secretary of State for Commonwealth Relations, and Sir Hugh Foot, who as Minister of State for Foreign Affairs will be the permanent British representative at the United Nations.

All have had careers which have given them special insight into the kind of issues which they will now be handling.

MR GORDON WALKER

Mr Gordon Walker brings to his job great political experience and a historian's broad view and sense of perspective, together with first-hand knowledge of countries and peoples of all continents. He gave up his academic career at Oxford, after the outbreak of the second World War, to organize broadcasts to German workers from the BBC. He already knew Germany well from frequent visits and from his work for refugees from Hitlerism. As time went on, he became responsible for broadcasts to all European workers.

In 1945 Mr Gordon Walker—who had joined the Labour Party before the war—was elected to Parliament. In 1947 he was given a junior ministerial post which was the start of his wide experience of Commonwealth affairs.

He first got to know the newly-independent countries—India, Pakistan and Ceylon—and when India wanted to become a republic within the Commonwealth, he was one of those whom the British Prime Minister sent to other Commonwealth countries to reach agreement on this new form of membership, which has since been adopted by a number of other Commonwealth countries.

After becoming Secretary of State for Commonwealth Relations in 1950, Mr Gordon Walker travelled widely, especially in Africa, so that by the time he left office he had visited every Commonwealth country.

During the Labour Party's period in Opposition, Mr Gordon Walker, as "shadow" Foreign Secretary, kept a close watch both on foreign and Commonwealth affairs. He was a British delegate to the Consultative Assembly of the Council of Europe and of the Western European Union, and

kept in touch with European socialist parties.

As the Labour Party spokesman on foreign affairs, he made clear that he regarded the NATO alliance, linking the United States and Canada with Europe, as the keystone of British political strategy.

VISIT TO WASHINGTON

His first public actions as Foreign Secretary reflect the same sense of priorities. First, he accepted the invitation of the US Secretary of State, Mr Dean Rusk, to visit Washington for an early discussion of all matters of joint concern. These are, above all, the political and strategic problems facing the Western alliance, especially the sharing of nuclear responsibility—problems which now have to be examined in the light of the upheaval in the Soviet leadership.

Next, Mr Gordon Walker sent a message of greetings to the NATO Council, through its Secretary-General. "The North Atlantic Treaty," signed as it was by a British Labour Government, remains a prime factor in our policy," he said.

He also sent a message to the United Nations Secretary-General, U Thant, promising that the British Government would support wholeheartedly all the organization's activities, especially peace-keeping and the great humanitarian work of its Specialized Agencies. Soon after, he arranged to meet U Thant personally.

Relations with the United States, NATO, the United Nations—these have all been given high priority in the new Government's

foreign policy. Moreover, as its permanent representative at the United Nations, Britain will for the first time have a Minister (Sir Hugh Foot) instead of a career diplomat.

Sir Hugh, of course, has experience of the United Nations, where he spent 18 months as British representative on the Trusteeship Council, and is much respected there. His long and distinguished career has been spent in countries as varied as Palestine, Jordan, Nigeria, Jamaica, and Cyprus. Unconventional and informal in his approach, he has an imaginative sympathy with the feelings of newly-emergent nations.

COMMONWEALTH RELATIONS SECRETARY

Mr Arthur Bottomley, the new Secretary of State for Commonwealth Relations, starts his job with the pleasant task of attending the Zambia (Northern Rhodesia) independence celebrations. He has a wide first-hand knowledge of the Commonwealth.

After entering Parliament in 1945, he visited India the following year as a member of the Parliamentary goodwill mission. Later, as a junior Minister, he visited South Africa and Southern Rhodesia to study the living conditions of Africans, and also Pakistan and the West Indies. He was in charge of overseas trade in the Board of Trade from 1947 to 1951, and can be expected to show a ready appreciation of the importance of trade expansion to the many developing countries of the Commonwealth.

To sum up, there is likely to be continuity in British policy on the really great issues of world affairs. But over the next few weeks we can expect to see a difference—if sometimes only a difference of emphasis—in the way Mr Harold Wilson's team tackles some particular issues of importance.

Economic Objectives

It would be one of the major objectives of Britain's new Government to work for practical international action for the benefit of developing countries, the President of the Board of Trade, Mr Douglas Jay, said in London last week (20 October).

He told the British national committee of the International Chamber of Commerce that the best of all ways to help the developing countries was to buy their goods.

In the course of his speech, Mr Jay said:

This country is indeed faced by formidable, but not in my view insuperable, economic problems. The new Government is determined to overcome them.

We are examining the present economic situation exhaustively at the moment—official Whitehall is working, I am told, an 80-hour

week—and we shall take the measures we believe right and necessary as soon as this review is completed.

All I want to say on this subject tonight is that we are also determined not to solve our problems by cutting back production and slowing down the whole economic advance of the nation. I believe that a way can, and will, be found of keeping our overseas spending within the ambit of our earnings, without sacrificing internal expansion.

We have here tonight many distinguished representatives of private industry, trade and commerce. I am glad of this early chance to assure them that the new Government starts with no prejudice or bias whatever against private business and industry.

We believe that this country needs both a public and a private sector, and that it is the job of Parliament to lay down the bound-

dary line between. About the location of that line we can, and no doubt will, have many interesting debates.

But it is emphatically this Government's wish that industry and trade on either side of it should thrive and flourish. Profits, provided they are earned by efficiency and technical progress and not by restrictive practices or abuse of monopoly, are the sign of a healthy economy—and incidentally, they contribute generously to the public revenues, which, by common consent between parties nowadays, have some very heavy bills to meet. We also recognize fully that a very large part of our vital export trade is, and must be, conducted by the private sector of industry.

TRADE AND AID

Your Chamber of Commerce is, of course, particularly concerned with international trade. I have no doubt myself that one of the most essential ways of extricating the peoples of the less-developed countries from their present dire poverty is by expanding the volume of international trade quickly.

Though both are necessary, trade is almost always much better than aid. It is highly encouraging that world trade has grown fast in the past 10 years, and that world exports of manufactures, for instance, have been growing at nearly 9 per cent a year since 1954. Some of the credit for this must surely go to GATT (General Agreement on Tariffs and Trade) and the other international institutions set up since 1945.

What is not so satisfactory is that our trade with the Commonwealth has not been rising at this rate, and that the United Kingdom share of world trade has been so persistently slipping back. For us in Britain, it would, I believe, be as foolish to be complacent or inert about this as to ignore the progress that has been made in the world as a whole.

For these reasons, we in the new Government intend to continue the general support given to GATT by all British Governments since the war. GATT may be imperfect, like other human institutions, and be in need of reform from time to time; but we believe it has proved its value.

And it has shown its readiness to respond to change. We are doing our best to help forward the discussions now going on in Geneva about a new chapter of the General Agreement designed for the needs and conditions of the developing countries.

"KENNEDY ROUND"

I hope that other industrialized countries will do no less. We also intend to work as hard as we can for the early success of the present 'Kennedy round' of tariff negotiations.

Apart from its other obvious advantages, success here should help the developing countries, because tariff cuts will be extended to them without their being asked for similar concessions in return. I am sure the Kennedy round will succeed if every nation has the same will to make it succeed as we have in Britain.

I believe also that the regional groupings such as EFTA (European Free Trade Association) and EEC (European Economic Community) can claim some credit for the growth of world trade in recent years.

EFTA has been an outstanding success; and we shall do all we can to ensure that it goes on from strength to strength. It has the great merit of establishing free trade between its members, without compelling any of them to raise barriers against any outside nation. I can at the same time assure the Dutch Foreign Minister, Dr Luns, that we in this country regret the present division of Europe into EFTA and EEC.

I fully agree, however, that these institutions are not enough, valuable as they are, in the world as it is today.

They are open to the criticism—even though it may not always be fair—that their first concern is to make the prosperous nations even more prosperous, rather than to develop the needier ones. That is why I am sure the Geneva Trade and Development Conference of last spring was of profound importance; and the new Government intends to push forward actively the initiative which Mr Heath took at the conference.

HELPING DEVELOPING NATIONS

The problems on which the Geneva conference has focussed attention must not be left to run into the sands of diplomatic debate, and it will be one of the major objectives of the present Government to work for practical international action for the benefit of the developing countries.

As I said, the best of all ways to help the developing countries is to buy their goods.

Britain here has a far better record than any other country in the world. The solution now, we feel strongly in this country—and Lancashire (centre of the British textile industry) feels it very strongly indeed—is not that we should give up these liberal policies, but that some of the other industrial countries should come rather nearer to our standards and relieve us of a part of the strain we have been carrying.

Some countries are deterred, I know, by fears about their balance of payments; and we know all about this. Certainly, any nation has not merely a right but a duty to keep its balance of payments within bounds; and a persistent and uncontrolled deficit is of

no more advantage to the outside world than to the deficit country.

But what is not legitimate is the exclusion of the products of the developing world purely for the purpose of protecting local vested interests. If there have to be restraints on imports, they should be designed not for protection but for balance-of-payments reasons and should, therefore, be temporary.

IDA

\$62 Million Credit for Railways

The International Development Association (IDA) an affiliate of the World Bank, extended a development credit of \$62 million to India to help the Indian Railways to finance imports of materials and equipment needed in the Railway's development programme.

The present IDA credit will finance the import of steel and components for locomotives, electric multiple units, coaches and wagons, track and signaling equipment and materials for the electrification programme during the period from 1 July, 1964 to 30 September 1965. Orders for imported equipment are placed on the basis of international competitive bidding.

The proceeds of the credit will be made available to the railways by the Government as additional capital-at-charge on which the railways will pay a dividend presently fixed at 5% per cent per annum.

The IDA credit of \$62 million to the Government of India is for a term of 50 years, with repayment of the principal beginning on 15 September 1974. Thereafter, 1 per cent will be repayable annually for the final 30 years. The credit is free of interest, but a service charge of 3/4 of 1 per cent per annum of the amount withdrawn and outstanding will be made to meet IDA's administrative costs.

The credit brings the total of IDA funds made available for the Railways to \$129.5 million, including a credit of \$67.5 million made in March 1963. In addition, the World Bank has made available, over the past 15 years, \$378 million in six loans to help finance the Railways' rehabilitation and development programmes. Thus, in all, the Bank and IDA have provided loans and credits totalling over \$500 million for the Indian Railways—by far the largest amount that these two institutions have lent for any single enterprise anywhere.

The railway investment programme in the Third Plan is now estimated to involve an expenditure of Rs 15,815 million (\$3,321 million), of which Rs 2,740 million (\$575 million) will be in foreign exchange. The programme places

That, as I understand it, is the spirit of GATT; and I think we now have to get that accepted in the world as a code of ethics which will speed up still further the growth of international trade without imposing unbearable strains on individual countries.

This, at any rate, will be the general philosophy of the present Government.

emphasis on equipping the existing system to carry heavier trains on higher speeds. An increasing proportion of the traffic will be hauled by diesel or electric locomotives; some 2,400 route-kilometers of track are being electrified about 2,400 kilometers of new lines are being constructed; and about 102,000 freight wagons are being acquired. In addition, workshops, bridges, yards and signaling works are being improved. The programme is already well advanced.

In order to reduce foreign exchange expenditure, the Railways are extending the manufacture of railway equipment in India to electric locomotives at the Chittaranjan Works and to diesel locomotives at Benares (Varanasi).

With 56,000 route-kilometers, India's railway system is one of the world's largest, and handles the bulk of both freight and passenger long-distance traffic. Demands for transport are rising steadily as a result of the growth of iron and steel production, development of iron ore for export, the growth of coal consumption and of industry generally. A large part of the increased traffic is in bulk commodities, which can be most economically moved by the railways. Under both the Second Five-Year Plan (1956-1961) and the current Third Plan (1961-1966), the Railways are accounting for about one-fifth of all investment in the public sector. This investment, combined with efficient working of the system, permitted an increase of 54 per cent in freight traffic and of 32 per cent in passenger traffic during the past seven years. Railway capacity in India has now managed to catch up with traffic demand, after a long period of transport shortage.

The Railways last year carried 179 million tons of freight and 2.4 billion passengers, and is expected that by 1966 freight traffic will reach some 225 million tons, and passenger traffic will be 15 per cent higher than it was in 1961. Traffic growth at this pace requires a large and continuous programme of investment in the Railways. A World Bank-financed study looking into the problems of transporting coal in India, completed this year, has confirmed that the Rail-

ways will continue to be the chief mode of transport for substantially all of India's coal and other bulk commodities and that India will have to plan and invest accordingly.

Wholesale Prices

The official wholesale price index (with the year ended March 1953 as 100) worked out to 160.4 during the week ended 10 October, 1964 as compared with 160.5 (revised) for the previous week. The index was higher by 1.5 and 17.7 per cent respectively when compared with the corresponding week of the earlier month and that of a year ago.

Lower prices of cummin (Jira) at Calcutta (-18%), rice at Ranchi (-10%) and at Jamshedpur and Imphal (-5% each), jowar at Jhansi (-10%), fish (-7%), maize and belnuts (-4% each), wheat and mung and onions (-2% each) and bajra, groundnut oil and eggs (-1% each) brought down the index for 'Food Articles' by 0.2 per cent to 171.9 as against 172.3 (revised) for the previous week although the prices of rice at kalyan (+1.17%), at Saharanpur (+10%) and at Kanpur (+5%), jowar at Gulbarga (+1.15%) and at Coimbatore (+5%), ragi (+14%), potatoes (+7 per cent), barley at Jaipur (+5%), cardamoms (+2%) and gram, masur, urad, bananas gingelly oil and black pepper (+1% each) witnessed advances.

The index for 'tobacco' remained unchanged at its earlier week's level of 130.8.

Increased prices of castor oil (+1%) raised the index for the 'fuel, power, light and lubricants' group to 144.5 from 144.4 (revised) in the earlier week.

Consumer Price Index

The Labour Bureau series of consumer price index numbers for working class (base: shifted to 1949=100 except where otherwise indicated) increased in eight centres during August, 1964.

The maximum rise of 10 points was recorded each by the indices for Dehri-on-Sone and Berhampur which stood at 146 and 164 respectively.

The index for Jabalpur appreciated by four points to 165, for Tinsukia and Kharagpur by three points each to 149 and 140 respectively, for Gauhati by two points to 128 and for Ajmer and Akola by one point each to 138 and 145 respectively.

In this group of centres the food group index numbers appreciated at seven centres, the fuel and lighting group index numbers at four centres, the clothing group index numbers at three centres and the miscellaneous group index numbers at five centres.

FALL AT THREE CENTRES

The index for Silchar declined by five points to 131. The index for Cuttack receded by three points to 179 and for Ludhiana by one point to 126.

In this group of centres, the food group index numbers declined at all the three centres.

The all-India index appreciated by two points and stood at 156 during August, 1964.

NOTE: Annual figures are averages of months; those of sugar relate to crop years.

*Data of Matches, Hurricane Lanterns, Sewing Machines and Bicycles from January 1963 onwards and those of Footwear (leather) from April 1963 relate to units having fixed assets of Rs 5 lakhs and more.

†Data in respect of certain units are not included from January to May 1963.

(1) Monthly figures are exclusive of production in Punjab (Kangra) and Himachal Pradesh.

(2) Relating to the production by mills in the membership of Indian Jute Mills' Association and to one non-member mill.

(3) Includes canvas.

(4) Figures relate to stable variety only from June 1962.

(5) Including figures for Jammu and Kashmir.

(6) Figures relate to production of organised factories.

(7) Boxes are of 60 sticks each upto February 1961 and thereafter of 50 sticks each.

(8) Total of viscose yarn, staple fibre, acetate yarn and cellophane.

†From January except in the case of sugar where the figures are progressive from November of the preceding year, the crop year being November-October.

*Provisional.

Overtaking needs good judgment too

Overtaking is no gamble. It requires concentration and good judgment of speed and distance.

Never overtake till you're SURE. Then do so quickly, and return (don't cut in sharply) to your appropriate lane.

If someone is overtaking you, don't accelerate. Do not overtake rashly. Misfortune may overtake you.

Exports to Eastern Europe

FOREIGN aid to India has to some extent shaped foreign trade in recent years. And Russian interest in India's development implies more trade plus cereals. The President's visit to Russia has been followed by the visit of a Russian trade delegation to Delhi to examine the opportunities of expansion. A substantial rise is required by the increase in military and economic aid. The regular payment of interest calls for the rapid increase of Indian exports to Russia and Eastern Europe. Adjustment of balances in rupees requires a definite effort on the part of India in raising exports and since no foreign exchange is involved, an expansion in Indian imports is demanded. As a non-aligned country whose foreign trade flows in new channels India still can hope to sell more tea and hessian, traditional items, as well as engineering goods for which more outlets are required, if and when production rises to capacity.

The engineering industry is convinced after a recent tour by a mission that it will pay to cultivate Eastern Europe where the Comecon encourages internal free trade. The absence of import duties in Czechoslovakia and the transformation of the economy in countries like Hungary, Poland and Yugoslavia suggest that it will not be hard to get trade pacts that provide for substantial and early increase in India's own trade. Planning adopted in Eastern Europe requires an adjustment of the exporter's own production and supplies along with reasonable prices and delivery.

Whether Indian goods should or could be re-sold to African or Asian countries is a debatable point. It has been argued that re-exports by Communist countries shut out some Indian goods in natural markets which take Indian exports regularly. But the engineering Export Promotion Council has pointed that when projects are financed by Communist countries they could use structural steel etc., supplied by India provided free currency is paid out on behalf of countries benefited by the aid given for projects. The delegation has also indicated that Indian prices for heavy engineering goods are today competitive and there should be no great prejudice in dealing with State trading monopolies which without reference to the cost of production fix retail prices as desired by Government, or the landed cost of imported goods which only means that the STC policy is adopted by the Communist countries and the Indian exporter must think now only of volume—not the rate of profit.

Participation in exhibitions or trade fairs is logical and Leipzig is a proper showroom for telling Eastern Europe that India makes many things from sewing machines, small tools, typewriters and oil engines to locomotives. Export of more than one manufactured item inspires the belief that India can supply light goods or consumer goods in addition to cotton, coffee, or cashew for which the scope already exists, though limited.

The official view of Eastern Europe's potential as a market has changed with the prospects of more aid for India over a decade. New customers have not been refused and the quiet increase in trade with Russia or Rumania is now connected with the development of India's oil resources. Technical aid has supplemented the trade connection, and it is easy to see that Russian aid for raising the lignite project to the level of power supply has impressed many who see that a political upset in Moscow means little in regard to current trade connections. A new consideration is the import surcharge in the UK that will hit some export goods like hides and cotton manufactures to the extent that alternative markets must be gained soon. In the light of an analysis prepared by the Ministry of International Trade recently, it is possible to project hopes, linked of course with the maintenance of prices and quality by exporters. It is important for jute mills to face Pakistani competition by broadening the base of exports and selling carpet backing, canned goods and spics to countries where the standard of living has risen gradually. Trading with countries which are developing may be more profitable in the long run and it is easy to remember that aluminium, non-ferrous metals or ships can be got from Yugoslavia as well as the USA when the trade boom makes light of export connections.

The pattern of trade emerging since 1958 indicates that Indian exports to Eastern Europe are rising continuously. The ECM is important because India's imports from Germany, Italy and France are increasing steadily but the best market for hides and footwear has been already discovered in Eastern Europe and the gain to the cottage industry in India is clear already. Items that are weakening can be listed. One is shellac—the other is mica. But Eastern Europe accepted more of both in 1963 also from India.

A point to bear in mind is that Eastern Europe has no African associates to whom special consideration must be shown for his

torical or other reasons at present. The trade flowing in new channels may be regulated by not only Russian policy but by the circumstance that India has got much aid for specific industrial projects from the Eastern European countries for whom the establishment of new markets outside Europe remains important. If India cannot buy flax, linseed, soft timber or rye, it can certainly do with extra supplies of newsprint in return for the cotton waste or garments that it can offer. There are depressed export trades like manganese to which foreign markets are vital. The Communist countries' own anxiety to reduce dependence on Russia exclusively is an element in the situation as may be inferred from Rumania's anxiety to revive connections with France and even China.

The industrially mature nations usually seek to set up local assembly plants—not only for tractors or automobiles. But a country like India in dealing with Eastern Europe need not at all aim at the lion's share of the market, except perhaps in jute goods. This too is a point of real interest for those glimpsing the future in the light of new efforts made to enlarge trade between Eastern and Western Europe. New directions in which trade can flow have been made plain by the plans that look only to the replacement by manufactures of raw materials exported by India. More can be got and the trade will balance itself though it savours of barter to which opinion is not always favourable.

Salem Steel—III

The break in the examination of the prospects of Salem Steel caused by the Second World War continued for some time after its end: partly because of the intense preoccupation with the political fortunes of the country and partly because the investigation called by Dr M. S. Krishnan and Mr N.K.N. Aiyengar required some elaborate preparations. A more serious obstacle was the clear declaration by the Government of India that except Bihar and West Bengal there was no part of India which had the necessary resources for the establishment and economic working of a major iron and steel plant. It is fortunate, however, that the Government of Madras never accepted this view, which was by no means new and was not deterred by this expression of opinion by the Steel Panel from continuing its efforts for the utilisation of Salem ore and pressing its plans as they were at each stage on the attention of the Government of India. In the light of the some what revolutionary developments which have taken place since then, and particularly since the preparation of the Dastur report, the optimism and enthusiasm of the State Government seem strange and interesting. Neyveli lignite and the prospects opened up by it and the new complexion which Salem Steel has gained as a consequence of it had not come into the picture. The lignite project belonged at that time to the future and though its progress in recent years seems natural, it was also under a cloud not unlike the one which hangs over Salem Steel today. Nevertheless the Government of Madras wrote to the Government of India on the subject. It pointed out that, notwithstanding the conclusion of the Steel Panel that there can be no steel manufacture outside Bihar and West Bengal, the Government of Madras intended

to proceed with its plan of setting up an iron and steel plant at Salem and wanted to communicate its decision in this regard to the Government of India. The reasons for this decision were the existence of well-nigh inexhaustible stocks of good grade iron ore in Salem and the availability of other facilities. Manganese for the production of ferro-manganese was present in the Sandur area in Belary district, coke could be brought from Singareni or through Mormagoa and electric power could be got from the Jog falls or from the Tungabhadra Dam. Above all there was the very weighty consideration that the location of a steel unit in Salem was highly desirable from a strategic point of view. The Madras Government suggested to the Government of India the location of one of the two steel units then under contemplation in Madras State and the taking of the necessary steps for obtaining technical advice from the United States or from Great Britain. The two American firms who acted as steel consultants to the Government of India in 1948 came to the conclusion that there was little prospect of exploiting the ore in Salem as it contained only about 35 per cent of iron and that magnetic concentration before reduction was an expensive process. In fact, the two consultants even refused to visit Salem, though the Government of Madras pressed them to do so after answering their questionnaire about power supply, the network of electric lines and extent of water resources. A short time afterwards, the Geologist and Officer-in-Charge of the Neyveli Lignite Investigation, wrote to the Government of India laying stress on the fact that Germany like South India is poor in coal and iron resources but has iron ore deposits with a low iron content, and has developed in the inter-war period the processes by which good quality pig iron can be obtained from ores with a high content of silica. South Arcot lignite, though not of the coking kind has reactive properties which make it a suitable shaped metallurgical coke. It is, therefore, advisable, he said, to develop the lignite deposits as early as possible and send samples abroad for examining its suitability in industrial boilers, in pulverised form for mill firings and in compressed air-gas turbines in place of oil, in the manufacture of shaped lignite coke suitable for metallurgical purposes and for metallurgical coking in a briquetted form with crushed Salem ore, benefited and unbene-ficiated. While the reports were being obtained from a Swedish firm in these matters, the Government of India, on the advice of the Technical Co-operation Administration of the US, decided in favour of setting a new steel plant in a place other than Madras. Early in 1954, the Government of Madras again pressed on the attention of the Government of India the basic facts in regard to Salem ore, the importance of the investigations that were being conducted by it and the wisdom of obtaining assistance from the Point Four Authorities for making further progress with their proposal. The Planning Commission, however, reiterated its view that the subject could not be taken up before the possibilities of lignite development had been fully studied, that a good deal of preliminary work had to be done in this regard and that it would be many years before carbonised lignite and electrical energy would become available from the project and that at that time consideration of the Salem Steel proposal would be premature. It, however, added that the appropriate time to investigate would be after the lignite scheme was well under way.

Early in 1955, the Madras Government obtained the reports of US Bureau of Mines and a German firm to whom it had sent samples of Salem ores and South Arcot lignite for tests. Their reports were on the whole favourable though the latter's was somewhat inconclusive. Technical opinion both among Indian and foreign experts tended to harden in favour of the Renn process for treating Salem ore and for large scale experimentation to ascertain the most suitable and the most economical smelting process.

It was in the middle of 1957 that the Government of India had to define its position in relation to Salem Steel because of the impression created by a reported grant of licence to a private concern in Coimbatore that the Government had given up the idea of establishing a State undertaking. The Government stated categorically that a few small pig iron plants in the private sector did not preclude a largescale State undertaking and that in consideration of the lack of coal near Salem and the unsuitability of the conventional blast furnace method, as also the effective adoption of the "low shaft furnace" in Germany for working with low-grade coal or lignite the Government of India had sanctioned the installation of a plant on a pilot scale for the manufacture of iron from low grade ores in the National Metallurgical Laboratory, Jamshedpur. This plant was inaugurated on 5 February 1959 by the then Union Minister for Mines. The successful working of the Neyveli mines and the development of techniques of steel manufacture together with the urgency of increasing our steel production have wrought a change in the outlook for the Salem project.

(To be continued)

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

BANK RETURNS

End of 1964 Slack Season

THE 1964 slack season seems to be ending on a favourable note for the banking system, with considerable accruals to Deposit resources.

The end of the slack season has immediately been followed by a period of extreme stringency in the money market; and those not in the know are likely to conclude that the 1964-65 busy season has already started. But if the pattern of recent years is any guide at all, we may reasonably expect that money market tightness will develop not earlier than late in December. Thus, the fact of the inter-bank call money rate going up to 6 per cent is to be ascribed to the sudden, and rather substantial, demand for funds consequent upon Diwali disbursements being superimposed upon beginning of the month expenditures. As such, there should again be relative easiness noticeable from the middle of November; and the call money rate should again slump to a low level.

However, we cannot discount the possibility of an earlier start to busy season stringency this year. This would be because of the stiffer liquidity requirements, which will involve that banks will have less of "cushion" against which to meet the busy season expansion in Advances.

According to the returns of the Reserve Bank for 30 October, Active Note circulation has, in the last notional week of the current slack season, contracted by Rs 12.01 crores to Rs 2,397.28 crores; and there has also been inflow of Rupee Coin in the small amount of Rs 0.32 crore. Both Foreign Securities and Rupee Securities are unchanged at Rs 85.46 crores and Rs 2,121.17 crores respectively. Thus, the contraction in currency is reflected wholly in an increase in the Reserve Bank's cash in the till, which has improved by Rs 12.33 crores to Rs 34.15 crores.

The return for the Banking Department shows that Investments are marked down by Rs 3 crores at Rs 104.39 crores. Note must be taken of the fact that the State Bank made Rs 20 crores worth of gilt-edged purchases during the week in order to draw the conclusion that the Centre has apparently instituted deficit financing in such an amount; but this has been of a counter-vailing nature, since the Reserve Bank's portfolio of Treasury Bills purchased and discounted is marked down by Rs 17½ crores at Rs 181.85 crores.

The Centre's balances have again risen, by Rs 12.48 crores to be placed at the unusually high level of Rs 95.93 crores. In this improvement, it seems unlikely that repayment of loans from the States had any part, since Deposits of State Governments are lower by Rs 0.87 crore only at Rs 11.73 crores and since

their borrowings are up only by the small amount of Rs 2.31 crores at Rs 47.27 crores.

In the last week of the slack season there was not much significant change in the figures relating to Scheduled Banks vis-a-vis the Reserve Bank. The drop of Rs 11.77 crores to Rs 89.15 crores in their Reserve Balances is wholly due to the State Bank, and borrowings from the central banking institution are up a shade by Rs 1.24 crores at Rs 1.68 crores. In the first week of November, however, with Diwali disbursements added to the monthly demand for money, much greater recourse had to be made to the Reserve Bank.

Balances Held Abroad have dipped slightly by Rs 0.43 crore to Rs 8.33 crores.

The slack season has also ended well for the State Bank which, in its return for 30 October, reports an increase of Rs 4.40 crores to Rs 675.45 crores in its Deposits. At the same time, however, its total of Advances has expanded by Rs 5.57 crores to Rs 336.41 crores. The very high level of cash balances obtaining at the end of the previous week has been drawn down, in order to add Rs 20 crores to the State Bank's gilt-edged portfolio. But holdings of Government securities, at Rs 320.80 crores, have this year failed to overtake the level of Advances, a phenomenon normally to be noticed before the end of the slack season. We would suggest that the State Bank failed in this regard, because of both operating reasons: firstly, the contraction in Advances, as compared to the expansion in the busy season, has not been large enough; and, secondly, the State Bank did not pick up sufficiently of new Deposit resources. However, the institution's gilt-edged investments are sufficiently high to allow of rather considerable recourse to the Reserve Bank at bank Rate itself. Thus, with this "cushion", the State Bank should have little difficulty in managing to accommodate the expansion in Advances to be expected in the busy season that is just starting.

The return of Scheduled Banks for 23 October records some small element of switch-over from Time to Demand Deposits as well as

considerable new accretion to resources. Net Time Deposits have declined by Rs 5.51 crores to Rs 1,376.69 crores, whereas net Demand Deposits are marked up by Rs 24.68 crores at Rs 1,336.79 crores. Thus, the fresh accruals during the week just exceed Rs 19 crores, and around one-third of this increase is the share of the State Bank. Secondly, the total of Advances has declined by Rs 11.52 crores to Rs 1,721.93 crores; and the State Bank in the relevant week had actually reported a small rise of Rs 1½ crores. Indebtedness to the State Bank is nominally down by Rs 0.13 crore at Rs 40.49 crores, and borrowings from the Reserve Bank are lower by Rs 3.58 crores at Rs 0.60 crore. There is a hefty addition of Rs 22 crores to the gilt-edged portfolio, about half of the increase being attributable to the State Bank. As a result, cash balances, including money at call and short notice, have improved by Rs 17.86 crores to Rs 283.90 crores; but with the State Bank in the relevant week having reported an increase of about Rs 31 crores in cash, it is obvious that other Scheduled Banks suffered a drain on their balances.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 3 November, 1964. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.375 per cent were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.500 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 9 November, 1964. Successful tenderers should make payment on Friday, 12 November, 1964 at all centres. Other conditions are as usual.

During the week ended 30 October, 1964 Government of India Treasury Bills for Rs 46,89,25,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills sold from 28 October, 1964 to 31 October, 1964, amounted to Rs 7,01,50,000.

CONSUMER GOODS Public Sector to Compete

The proposals for establishment of public sector undertakings for the manufacture of a wide range of consumer goods, now under serious consideration, mark a significant shift in the Government's industrial policy, whose justification is by no means self-evident. The Industrial Policy Resolution itself is framed in elastic and comprehensive terms which allow extension of the public sector to areas earmarked for private enterprise and vice versa. The public sector is already engaged to a substantial extent in the manufacture of drugs, and the volume of manufacture will be further increased when the new anti-biotic unit at Rishikesh goes into production. But it has been generally assumed by the public, on the basis of authoritative expositions of industrial policy, that intervention of the State would be restricted to industries listed in Schedule A of the Industrial Policy Resolution.

The Bhubaneswar Congress gave the first indication of a change in the offing, but it was not immediately followed up. The memoranda prepared by the Planning Commission for the last meeting of the NDC apparently did not make any significant provision for expansion of the activities of the public sector in this field. The suggestion for re-examination has come from the Prime Minister himself, who frequently expressed concern at the rising prices of consumer goods and stressed need to make larger supplies available in order to enable the common man to derive some benefit of the investments made in economic development.

The proposals, it has been reported, will be processed by the Planning Commission and the Ministries concerned, and considered by the National Development Council before being incorporated in the Fourth Plan. The inclusion of these projects in the Plan would call for a substantial alteration in the allocations proposed for industries in the public and in the private sectors.

The need to increase production of consumer goods like cement, sugar, textiles etc has been emphasised in this context. There is also expectation that the profits in this field of manufacture would enable the public sector undertakings as a whole to show a better performance. It remains to be seen how far this expectation of larger profits from public sector investment would be fulfilled or how far manufacture of consumer goods would enable the State to mobilise resources for further investment in plan projects. Certainly, it cannot be argued that the private sector is unequal to the task of increasing production or is unwilling to undertake it. The public sector will be confronted by the same difficulties caused by shortage of materials which hamper expansion in the private sector, though the former can afford to go ahead without being inhibited by considerations of cost. The costs of production in the public sector may be expected to set the norms for "fair prices" of which the principal beneficiaries will be the establishments in the private sector. But the expectation of larger production, lower prices and higher profits for the public sector involves a basic contradiction which cannot be resolved by wishful thinking.

EDUCATION Expansion

The importance of dovetailing programmes of educational expansion with the requirements of the economy has been emphasised by Dr V. K. R. V. Rao in his address to the fifteenth convocation of the Karnatak University. Reorientation of the educational system to meet the needs of development would call for changes of policy in regard to admissions, framing of syllabus and courses of studies, organisation of research etc., so that the academic training imparted to the students has some relevance to the present and prospective employment opportunities that will be open to them after graduation. Dr Rao himself feels that Indian Universities are not performing this "utilitarian function" to an adequate extent.

An analysis of the faculty-wise distribution of enrollment clearly demonstrates that not sufficient attention has been devoted to the functional aspects of education. Enrollment in Humanities account for over fifty per cent of the total, whereas Engineering, Education, Agriculture and Medicine account for less than five per cent each in striking contrast to the position in countries like Russia and Japan which have achieved rapid economic progress. The relevance of the educational pattern to economic growth is underlined by the different paths by which these countries reached a high level of development, one by socialist planning and the other by capitalist and state-aided development. Without minimising the value of the pursuit of Humanities and Pure Sciences, it is possible to argue that greater attention should be devoted to the expansion of facilities of training in Agriculture, Education, Engineering and Medicine.

Reorganisation of education at university level cannot go very far without upgrading of standards of secondary education. The existing pattern of enrollment in colleges is to a large extent determined by the fact that the university has to make up for the deficiencies of secondary schools in providing a sound basis of general education. The improvement of secondary education will also enable the universities to adopt a selective policy regarding admissions in

order to ensure quality, another point which was developed by Dr Rao. While urging the need for restricting admissions to universities, Dr Rao has also made it clear that adoption of this policy should be accompanied by provision of facilities for non-formal education in addition to expansion of vocational and training facilities and opportunities of immediate employment to school graduates.

CONGRESS Inner Cleanliness

The conspicuous case of Sardar Pratap Singh Kairon can be linked readily with the subsequent evolution of rules of conduct for Ministers. That India is forced to lay down formal rules may readily suggest that democracy requires underpinning but the USA too has known big scale graft in this century also and the august Senate has been smirched by the employment given to Bobby Baker. In essence, the new code for Ministers is a list of don'ts for prominent people. It is derived as much from the Santhanam Committee's inquiry as the later investigation into Mr Biren Mitra's business connections and the Serajuddin & Co. case still before the Courts. Evil communications corrupt good manners—that maxim acquires new importance and an easy conscience is enjoined latterly for Ministers, because of the Congress party's troubled, if impersonal, conscience.

The self-purification calls for a statement of assets. Big money cannot be made in politics and stifling of some political ambitions may follow. Party tickets will have less value, if contributions cannot be levied as a matter of course. Donations cannot be taken offhand or promises given readily for contributions. Non-officials are now called upon to accept the standards laid down for officials whose behaviour is regulated by tradition as much as formal rules. The avoidance of conflict of interests for those holding posts as Ministers is made easy in some respects. Divestment of business interests is required, but it is not impossible for ex-Ministers or ex-Governors to become company directors after retirement if their own circumstances permit acceptance of employment.

The first families in politics will continue to have advantages from family associations though the distribution of favours will have to be guided by circumspection. A point to note is that chief Ministers and the Prime Ministers acquire greater importance as monitors of the private conduct of public men. Statements regarding assets etc. have to be given regularly and the loyalty pledge may be sharpened by private disclosures. But it is all to the good that public life ceases to be a short cut to affluence and public office does not lead to the abuse of power exercised by connections with the ruling party. What the Government has done is to deal with a class of economic crimes because the opportunities have been widened greatly by the creation of the public sector. That new vigilance departments will not have to examine the Ministers' affairs on complaints from malcontents may be an advantage to the Vigilance Commissions. If the new code is applied, the change for muckraking on a big scale will disappear and the Opposition parties will have less material to exploit. The results of self-examination may not be obvious in the code, but it is certainly to Mr Shastri's credit that he sees the need for purity in public life in a country where custom has staled virtue.

ORISSA Distressing Situation

The unhappy events in many towns in Orissa are the subject of an investigation. It may be rash to conclude that the Congress Ministry's exit is the only available remedy for a distressing situation. That the riots in places like Bolangir, Keonjhar or Bardi-pada followed the troubles in the capital may suggest that the old princely states have not been fully integrated with the coastal districts and the local politicians have their own aims and methods. The riots are not merely a commentary on the backwardness of Orissa or the deviations of local politicians. They suggest that Delhi's grip on the Congress party in Utkal is not secure and the local bosses are still able to disregard directions. The intervention of the army for quelling civil commotion may be logical but the restoration of discipline in the ruling party must be undertaken—if need be without kid gloves.

That not only Leftists but Congressmen are now ranged in opposition may be a sign of the deterioration seen after Mr Patnaik resigned office. But the local domination of Mr Patnaik is still a key factor and the Congress Working Committee must be ready to deal with Orissa as it did with the Punjab. The political atmosphere has long been murky in Orissa and the stability of the Congress was shaken not by a temporary coalition arrangement but by the persistence of groups. Why Mr Biswanath Das was not brought to set the house in order

is not the only question raised by the events which indicate that the younger generation is clamouring for new men and new measures in Orissa. The growing industrial importance of Orissa which can also supply rice to deficit areas like Bengal makes a firm policy on the part of Delhi both just and expedient. Unfortunately, the Congress has no strong men to deal with restive or recalcitrant politicians, as Mr Kasuraj will perhaps realise. What is obvious is that the Bhubaneswar Congress made no real impact on Orissa politics.

BRITAIN Export Drive

Mr Douglas Jay's visit to Peking suggests that the British export drive is now eastwards mainly and the economic prospects for China have probably improved since UK exporters of machinery eye the market eagerly. The enhanced prestige of China in international affairs may be less of a factor than the prospective sales of aircraft and shipping, because both happen to be industries placed in a difficult

position. Mr Jay carefully explained that Mr Erroll's promise to visit China must be kept. Chinese delegates have visited London in hopes of credits for machinery and strained relations with Russia were regarded as creating an opening for France and Britain. What is clear is that sales of consumer goods have become unimportant when Japan and China have both acquired a dominant position in Asia and the Australian market too is more closely linked with Japan.

The British mission to Peking is correct as diplomatic relations are maintained and objections from the Commonwealth or the USA are less important than restoring the UK balance of payments or trade. If China's trade in raw materials like oilseeds, oils or minerals increases at reduced prices, suppliers like India will be at a disadvantage necessarily but that too will be less important in the long range view than expanding British trade from a base like Hongkong. China may buy ships too and the hostility to the USA may help Britain to some extent.

Restoring Britain's industrial importance may be regarded by the Labour party as enough reason for new contacts and after the successful atom-bomb test Labour politicians will say little about the existence of two Chinas, for clearly Peking is the centre of Asia and staging the Olympic games could not have enhanced the importance of Tokyo, chiefly because Mr Ikeda's recent retirement has raised some doubts about Japan's political future. The flux in Asia may lead to a talk about the Open Door in China being restored soon for European nations that can choose to treat China's present exclusion from the UN as an inadequate reason for a state of quarantine.

The assertion of a pragmatic view by the new UK Cabinet is not unexpected, and it is well to note here that the memory of expropriation in Mexico has not stopped the Duke of Edinburgh from visiting Mexico as a State guest, chiefly because Mexico is now a promising market for manufactured goods that Britain could supply. Economic aims or interests

SERVICE TO THE NATION FOR ALMOST A CENTURY

1865

1964

For 99 years Allahabad Bank has consistently rendered service to the nation, and participated in the phenomenal growth of industry and commerce.

Constituents of the Bank are provided with all types of modern banking service through its 162 offices. Safe deposit lockers are now available even in some of the smaller branches of the Bank.

most override prejudices, and if the Indian Government has any doubts about British goodwill after the increase in import duties, it has been pointed out that the British import surplus is a compelling reason for a retreat from free trade—qualified by the experience since 1932, the year of the Ottawa Pact. India's own efforts to increase its trade with many Communist countries are probably a good reason for taking notice of the British efforts to improve trade with Red China whose agricultural crisis has been apparently overcome. Strategic goods of US origin may not be available but Mr Gordon Walker would have explained British policy or purpose in Washington.

MANGANESE Export Trends

After iron ore, manganese is the important mineral export for India today. The vicissitudes of the export trade in recent years have been connected by some critics with the State Trading Corporation monopoly. A new agency has been set up to deal with ores. But competition from Ghana, Brazil and other countries must be reckoned with. Japan's purchase of manganese from South Africa has increased since the Union feels it necessary to rely on the Far East for imports as well as exports. The fall in production since 1957 is reflected in the trade. That many mines are small units is one reason for the adverse trend though cheaper supplies from Africa to Western Europe are responsible for the decline.

The use of ferromanganese, produced for export also, may be a factor but the State is now prominent in manganese as in coal and the Government has acquired a large interest in the CP Manganese Ore Co.—an old and prosperous British concern whose lease was renewed after it ran out a few years ago. Though Orissa is the major producer, the companies connected with manganese extraction like Orissa Minerals or Karanpura Development have not fared very well and as for Shivrajpur Syndicate, the last is enveloped in a depression. But Jeyvora Sugar Co. has certainly gained from manganese interest. Exports from Mysore via Goa may improve in future but much depends on the barter arrangements made with the USA. There was a small recovery in exports during 1963-64 valued at Rs 8.3 crores but much depends on the success of upgrading ore destined for export markets. Since battery manufacture requires a better grade, India figures as an importer to the extent of buying for Rs 61.3 lakhs in 1963-64. The notice of the trade in the Indian Trade Journal recently calls attention to the fall in exports since 1960-61. It also indicates that export restrictions operative for some years influenced the shipments for Vizag, Calcutta and Bombay. The state of the steel industry at home and abroad has a bearing on manganese but the trend in the mining

industry and trade has been influenced by the growth of manganese output in Brazil with which US interests are associated. It is clear that exports to Eastern Europe have to be developed carefully, in case the US demand falls away. The mine-owners and exporters have explained their impaired position with reference to the State export monopoly and the rail wagon requirements. What is clear is that the manganese industry is under pressure and the recovery prospects are uncertain.

WOOLLEN INDUSTRY Some Relief

What is significant in the decision to impose a 10 per cent levy on the f.o.b. value of the actual user imports of wool in the first instance and to utilise the proceeds therefrom for promoting exports of woollen goods is that it denotes the recognition for the first time by Government of the need for some sort of assistance to the woollen industry if it has to fulfill its export targets. From the point of view of the industry this arrangement may not be quite satisfactory for even under the new dispensation the loss has to be borne by itself, if only collectively. What has been urged is the enhancement of import entitlements from the present 85 per cent to 100 per cent on the value of woollen exports. This plea is reinforced by the fact that a sizable increase in exports had been achieved when the incentive was raised to 100 per cent in October 1962. But Mr Manubhai Shah, Union Minister of Commerce, has pointed out that in view of the continued crisis in foreign exchange, any enhancement of the import entitlements is out of the question. Under the new innovation the Export Promotion Council for Wool and Woollens will be able to start with a sum of Rs 50 lakhs as the present level of import allotment to the industry is Rs 5 crores. The manner in which the fund is to be utilised has been left to the discretion of the Council. The agreement just finalised with Russia for the import of machinery to the value of Rs 1 crore may not go far in quickening the progress of modernisation which has not made much progress so far on account of the stringent foreign exchange position. But modernisation is essential if the export promotion programme is to make any headway at all. Thanks to the unsympathetic policy of the powers that be before Independence, the industry has been obliged to carry with outmoded machinery and the position has not improved much since despite the protection given to it. Even now in some units the machinery is said to be more than 100 years old. In the world market, Indian goods have perforce to compete with goods from such countries as West Germany, Japan, the US who have the advantage of the most modern machinery, and hence modernisation of our industry is an essential prerequisite to

an expansion of exports. As for availability of raw materials, the agreement with Australia for the supply of Rs 3 crores worth of wool for stock-pile is a happy augury. For an adequate supply of imported wool is at the present juncture very important for the simple reason that indigenous wool is mostly unsuitable for the production of fabrics. Although about 72 million lbs. wool are produced within the country, only about 5 million lbs. out of this quantity can be used in the mills. This is mainly the reason why only 40 per cent of the installed capacity is being utilised for some time now as imports have been cut down drastically from about Rs 15 crores in 1957 to only Rs 5 crores in 1963.

CATTLE FEED A Unit at Kanjari

The inauguration by Prime Minister Lal Bahadur Shastri of the Rs 45 lakh cattle feed compounding factory of the Kaira District Co-operative Milk Producers' Union at Kanjari last week is a significant milestone in the annals of dairying in the country. The unit, which forms part of the Kaira Union's seven year programme for augmenting its milk production two-fold, possesses an annual capacity of 60,000 tons. The entire plant and machinery worth nearly Rs 14 lakhs have been donated by the Oxford Famine Relief Fund and the Freedom-From-Hunger Campaign Committee of the FAO. The distribution of the nutritionally balanced cattle feed manufactured by the Kanjari unit will be undertaken by the co-operatives affiliated to the Kaira Union. Apart from providing a well balanced food for cattle, the products of this plant will go a long way in reducing the dependence on conventional fodder which more often than not becomes scarce owing to floods or draughts.

In a country like India, which presents a paradox of having larger number of cattle and lags behind other countries in milk yield, the advantages which will accrue from the adequate availability of balanced cattle feed are obvious. Viewed in this light, the newly opened factory assumes special significance. But it should not lull us into a state of complacency as it will touch only a fringe of the problem. Owing to a host of factors like lack of initiative on the part of the authorities, very little progress was registered in this direction during the first two Five Year Plans. The insignificant position attached by the different state governments to this aspect can be easily gauged from the fact that out of Rs 78 crores earmarked during the first decade of planning for animal husbandry and dairying programme only Rs 49 crores was utilised. In the circumstances expeditious efforts are required to make up the time lost and enhance manufacture of cattle feed to meet the internal requirements.

ENGINEERING GOODS Focus on Export Promotion

The three-day seminar on export of engineering goods held in Calcutta under the joint auspices of the Indian Institute of Foreign Trade and the Engineering Export Promotion Council has focused attention on the urgency for stimulating exports of engineering goods to a considerable level. It is to be noted that during the past few years there has been a progressive increase in exports of engineering goods from India and exports during 1963-64 approximated Rs 14 crores. Considerable scope exists for expanding the volume of our exports and diversification of the range of export items in view of the encouraging trend in world demand. However, as Dr Ramaswami Mudaliar pointed out, various programmes aimed at export promotion are impeded by paucity of raw materials, power, fuel and other essential components. As exports depend on intensified production, it is imperative to augment production for twin objectives of minimising manufacturing cost to the possible extent and making available larger exportable surplus.

Inadequate availability of raw materials is a major handicap for the engineering manufacturing units and certain items are in short supply owing to foreign exchange difficulties and insufficient domestic output. Keen competition from other exporting countries is a reminder to the necessity for enhancing quality of engineering goods exported from the country and offering them at competitive prices. The large doses of incentives offered by the Government have led to the sprouting of innumerable exporters some of whom have even stooped to derogatory practices. The implementation of the programme of quality control and pre-shipment inspection will of enormous help to resist exporters from resorting to malpractices and to keep the prestige of the country intact.

The seminar has made some valuable suggestions for boosting exports of engineering goods. The recommendation to set up an Export Industries Materials Corporation for catering to the raw material requirements of the export-oriented industries is to be speedily implemented for enabling production of engineering goods without disruption. As pointed out at the seminar the procedural delays which more often than not put manufacturing units into needless embarrassments have to be abruptly done away with. Liberalisation of imports of essential plants and equipments for the rapid modernisation of the units will go a long way in ensuring production of quality goods at reduced cost and adoption by the different undertakings of modern production techniques is an urgent need. Requisite assistance from the Government to the engineering industry in its efforts at enlarging exports is required.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as
the wind
To blow on whom I please"
—As You Like It

IT'S President Johnson, by a landslide. It thus happens that I have to confess that, happily, my apprehensions of the past few weeks regarding the outcome of the American elections have gone awry. In some senses, President Johnson's triumph is even more spectacular than was President Roosevelt's experience in 1936. For, at that time, FDR still failed to make inroads into two traditionally Republican New England States. On the other hand, LBJ has wooed and won away voters who were dyed-in-the-wool Republicans but who, on the present occasion, just could not bring themselves to support the extreme views of Senator Goldwater. It is ironical that the only area in which the Republican candidate had some success was in the deep South. Even before he began to nurse his wounds, Senator Goldwater has indicated that, although he expected that he would control the party till the next Presidential elections, he would expect the Republicans to nominate some other candidate in 1968. But, well before that time, with Mr Goldwater having resigned his Senate seat in order to seek Presidential office, he will be, as of next January, in the wilderness. The implications of such a man being the titular and effective head of a party not in power are that, in 1968 also, the Democrats will find it relatively easy to remain in possession of the White House. For, it is only after a battle for succession has taken place that the Republicans will be able to put up a strong candidate of their own.

As for the Democrats, President Johnson has a mandate not only to implement the policies originated and initiated by John F. Kennedy but also to put through his own ideas of what America stands in need of today. As I have said on a previous occasion, I doubt that Mr Johnson will, though he is permitted so to do, seek re-election in 1968. But, on the wings, ready to step in is Senator Robert Kennedy, whose was a signal victory over Republican incumbent Kenneth Keating. Bobby Kennedy will thus control not merely the State with the largest number of electoral votes but will also be able to count

on receiving massive support from Massachusetts, where his brother, Teddy Kennedy, is also a Senator. However, the grand design that John F. Kennedy's brother might have had in part failed, in that Mr Pierre Salinger, has been defeated in his bid for a Senate seat from California. Nevertheless, Bobby Kennedy has now proved that he has been able to triumph in a keenly contested election, and thus he will be able to press his case for consideration as a Democratic candidate in 1968.

I think we should expect that Bobby Kennedy will plan over the next two years to gain the support of some other major States. For example, his brother-in-law, Mr Sargent Shriver, is expected to contest the gubernatorial elections in Illinois in 1968. Also, undoubtedly, Mr Salinger will try again from some State or other—Pierre has not shown himself averse to the title of carpet bagger. Thus, I find it difficult to escape coming to the conclusion that America's next President—aside from the possibility of Vice-President Humphrey succeeding before the end of President Johnson's term of office—will be Mr Robert Kennedy. However, I would stress the qualification I have just made, that if Mr Humphrey were to succeed to the office of President before 1968, then as of right he could expect to seek election in that year.

A rather interesting point has been made by Karl Meyer writing in the New Statesman. The article was published before the elections, and suggests that President Johnson's triumph would be complete if it achieved three objectives. Firstly, it had to be landslide in character in order that Goldwaterism might be given its quietus. Secondly, Mr Johnson would need to increase Democratic strength in the Congress, so that his would be a strong mandate for effective action. Thirdly, such landslide should nevertheless be accompanied by 'ticket-splitting' in order to accommodate liberal Republicans who had repudiated Goldwaterism. From what I can make of the returns so far, the first two objectives have quite been hit; but I am not quite sure

that the odd liberal Republican has been able to fight against the avalanche in favour of Mr Johnson and his party. The classic candidate in this regard was Senator Keating, with a proven record in Congress of liberal thinking and who had pointedly dissociated from Goldwater; in the event, he has lost to Robert Kennedy. I dare say, however, that there have been instances where Republicans, despite the crushing defeat of their Presidential candidate have been successful. One such is Mr Murphy in California, who defeated Mr Salinger. There will, then, he these stray instances where the non-Goldwater Republican has been able to go it alone. But, by and large, for the Republicans to regroup themselves it is an essential prerequisite that they choose a party leader as soon as possible. It may be that neither Governor Scranton nor Governor Rockefeller (or, for that matter, Governor Romney) will be powerful enough to wrest leadership from Mr Goldwater; will Mr Nixon be the compromise choice?

The Indian Investment Centre, I see, has last week opened up a European office at Dusseldorf. IIC's energetic Chairman, Mr G. L. Mehta, flew over for the occasion, and this, I take it, is evidence of the importance that is being attached to the work done by the

IIC. We may be permitted to infer that the location of the European Centre at Dusseldorf is in response to steadily growing West German interest in investment in India. In fact, Mr Mehta referred to the conclusion of the Investment Guarantee Agreement between India and the Federal Republic of Germany, which, he hoped, would "facilitate the task of this office". The audience that Mr Mehta addressed was an influential one, and this would account for his stressing, in his welcome address, the role of foreign capital in India as well as the treatment that is accorded to it. Thus, he pointed out that, in case of nationalisation, compensation is provided for, and that the Constitution prohibits discrimination. In one sentence, Mr Mehta has sought to allay apprehension regarding expropriation and to clarify that foreign capital is treated on a par with Indian capital. I wonder why, while enumerating the reasons why foreign capital could usefully flow to India, Mr Mehta omitted to mention the tax concessions given to foreign technicians. But this is only by the way, since in every other respect IIC's Chairman has concisely summed up for his European audience the virtues and attractions of investing in the industrialisation of India.

Olympus - A Letter from Delhi

AGRO-INDUSTRIES Development Programmes

WHILE approving the aims and objectives of the Fourth Plan as set out in the Planning Commission's memorandum, the National Development Council had underlined the need for giving the highest priority for the development of agriculture for the achievement of a rate of growth of not less than five per cent per annum. The measures indicated in this connection would call for the development of agro-industries in order to provide the equipment and materials required for the improvement of agricultural productivity through the adoption of modern techniques. The progress so far achieved in the field of agro-industries and the Fourth Plan programmes for manufacture of tractors, power tillers, equipment for plant protection and irrigation, pesticides and plant for food processing and preservation are expected to be discussed in detail by the Central Advisory Council for Industries which will be meeting here next week.

Tractors

It has been estimated that additional capacity for about 24,500 tractors per annum would have to be licensed in order to fill the gap between existing capacity and the Fourth Plan requirements. The present effective capacity for manufacture of tractors is estimated at about 8,500 and production at 4,657 tractors. For meeting the requirements of the Fourth Plan period averaging 30,000 tractors of all ranges per annum, it is considered that capacity at the end of the Plan period should be at least 40,000 numbers per annum. It is learnt that more than thirty applications for licences are now under consideration of the Government.

Likewise, a large number of applications for manufacture of power tillers, it is learnt, are also under various stages of examination. In regard to power tillers, however, no firm assessment has yet been made regarding the likely demand. According to a rough estimate made some time ago, the demand might be of the order of about 50,000 by

the end of the Third Plan and may go up to twice that figure at the end of the Fourth Plan period. Against this, two schemes for a total capacity of 27,000 numbers have been licensed, but it is learnt that one of the parties has subsequently surrendered the licence. Three more schemes for total annual capacity of 14,000 numbers have been approved in principle.

Among the schemes under consideration is a proposal for a unit in the public sector to be established with Czech collaboration. The Ministry is understood to be of the view that before fixing the Fourth Plan target for power tillers, the response of the farmers should be ascertained. For this purpose about 1,000 tillers of the different makes proposed for manufacture in India would be imported and sold to farmers and their reactions as to the usefulness of the tillers would be ascertained.

Irrigation Equipment

The total requirements of diesel engines and pumps were recently assessed by the Development Council for I. C. Engine Pumps, etc. The demand at the end of the Fourth Plan period has been estimated at 190,000 for diesel engines (including 69,000 per annum for pump sets) and 320,000 for power driven pumps of all types.

Capacity and production of engines and pumps has kept pace with requirements—the entire demand at present is met from indigenous production, in which a large number of small scale units are engaged in addition to large scale manufacturers. Practically all the components required are manufactured locally for the sizes of engines required for agricultural purposes. The limiting factor on the scope for increasing production is the availability of pig iron required for castings.

The use of electric motors for irrigation pumping has increased during the first two plan periods from 25,000 in 1951 to 160,200 in 1961. With the extension of rural electrification, it is expected that a total of about 2.75 lakhs of motors of capacities of 3 to 5 h.p. would be commissioned during the Fourth Plan period. In addition, larger motors of capacity ranging from 10 to 50 h.p. would be required for tube wells and for lifting water from rivers. The number required is estimated at

5,000. These are at present being manufactured in the country.

In addition to pumps and prime movers, drilling rigs for constructing wells in difficult and rocky terrain would also be required.

Pesticides

Though adequate capacity for manufacture of some of the basic materials required has been established, shortage of raw materials has kept production at a low level. In regard to several items, there is either no existing capacity or the production is far below current requirements.

As regards spraying equipment, increase in production will depend on the development of manufacture of engines and the resources available for import of basic raw materials and components and as well as on the size of the orders that may be expected.

There are two categories of power driven spraying equipment. The conventional type is mounted on carrying platforms which can be shifted from place to place as required. The other type known as the Knapsack sprayer is extremely light weight. The entire equipment, including the engine, is light enough to be carried on the shoulders or back and hence the name. Indigenous engines have been recently tested and found suitable for conventional type of sprayers. It is expected that about 5,000 engines required for these types of sprayers would be produced in the current year. But engines which could be used for Knapsack Sprayers are not at present manufactured in India and have to be imported. A unit for manufacturing these light-weight engines has been licensed recently with an ultimate capacity of 7,000 numbers per annum. It is expected that 3,000 engines would be produced by the middle of 1965.

The requirements of dusters and sprayers by 1971, it is estimated, would rise to 75,000 Knapsack Sprayers of the approximate value of Rs 60 million and 25,000 conventional sprayers costing Rs 50 million.

Food Preservation

The foreign exchange required for import of machinery and equipment, tin plate and raw materials required by the food processing industry is estimated at Rs 2 crores for the next two years. The largest item is tin plate for open top cans, which has to be imported; the annual require-

ment is about 5,000 tons of the value of about Rs 70 lakhs. The expenditure on this account may be cut down to the extent that use of tin plate for packing is substituted by other materials like aluminium foil, polythene, etc. These materials, however, could be used only for packing dehydrated vegetables.

The growth of the food preservation industry depends on the progress of manufacture of refrigeration equipment. There are now 16 units engaged in the manufacture of industrial type air conditioners and refrigeration machinery with total licensed/approved capacity for production of equipment worth Rs 110 lakhs per annum. Five more units for production of refrigeration compressors, package units etc. with an annual capacity of Rs 17.50 lakhs, have been licensed. Out of this licensed capacity of Rs 17.50 lakhs, capacity for Rs 11.18 lakhs is expected to materialise by the end of the Third Plan.

The principal items of refrigeration machinery now being manufactured in the country are motor engines, compressors, condensers, thermocole packing, refrigeration cabinets etc. The items which are allowed to be imported are compressors above and below the present range of manufacture in the country, certain components of compressors, controls, relays, thermostats, copper tubing and refrigeration gas. The production of industrial refrigeration equipment has shown steady increase over the last three years, from Rs 95 lakhs in 1961 to Rs 109 lakhs in 1963.

FICCI on British

Import Levies

Mr K. P. Goenka, President of the Federation of Indian Chambers of Commerce and Industry, has described the import duties announced by the British Government on 26 October as a reversal of the liberal trading system which the UK has been following vis-a-vis Commonwealth products. The measures, he has pointed out, have also to be looked at in the background of the discussions held in March at the UN Conference on Trade and Development that advanced countries should buy more of manufactured goods from the developing countries to accelerate their economic growth. He has expressed the apprehension that these measures would damp the Kennedy Round of Tariff Negotiations due to open in Geneva this month.

Regarding the impact of the increased import duties on India's exports to the UK, the Federation President has pointed out that number of manufactured and semi-manufactured products like cotton textiles, jute, woollen carpets and rugs, East India kips, including tanned, semi-tanned and treated leather, coir manufactures and newly developing lines of exports like engineering goods which had hitherto enjoyed duty free entry, would be adversely affected.

The Federation President has urged the Government of India to seek a high level meeting with the British Government, so that the pro-

blems of the developing Commonwealth countries in seeking greater outlets for their manufactured and semi-manufactured products do not receive any serious set-back. He has particularly stressed that even the temporary charges should not be attracted by handmade products including coir manufactures, carpets, handloom fabrics etc. and that products like cotton yarn and semi-tanned leather should be treated as raw materials and be free from the new duties. He has also expressed the view that the Commonwealth Exports Council, which has been recently set up by the British Government, might review all problems of

two-way traffic between Britain and Commonwealth countries.

US Business Delegation

Representatives of the Federation of Indian Chambers of Commerce and Industry, led by the Vice-President, Mr S. L. Kirloskar, recently held discussions with a visiting team of US Businessmen, representing the Action Committee for International Development. The talks were mainly concerned with the complexities of the procedural problems in setting up and running enterprises in India. There was general appreciation that business

conditions in India were favourable for foreign investment and that there were good growth prospects in several new lines of production. It was, however, felt that there was need for greater education on the part of both the Indian and American collaborators about the investment conditions in India which were, on the whole, favourable. Frequent contacts between Indian businessmen and their counterparts in the USA, it was agreed, would help and, in this connection, it was also suggested Indian businessmen should be given adequate facilities for visiting the United States for establishing and strengthening business contacts.

Leaders in Instrumentation Now Pioneers in Automatic Process Controls

WE LIVE ON THE PAST: Four years ago, we ventured into the manufacture of a wide range of industrial measuring instruments in collaboration with Electroflo Meters Co. Ltd. of U.K. a member of the Elliott Automation Group. **WE LIVE IN THE PRESENT:** Our present range of measuring instruments has been fully accepted by users as conforming to the rigid specifications required of precision instruments. Some users have done us honour of specifying the brand name 'Mahindra-Electroflo' against their requirement. **WE LIVE FOR THE FUTURE:** And now we look ahead, with plans under way for the manufacture of a further range of sophisticated pneumatic, electronic, hydraulic process control equipment in collaboration with the same British Group. These instruments will find wide application in industries like... steel, paper, power generation, chemicals, fertilisers etc. where precise measurement and accurate control of Flow, Level, Pressure and Temperature is required.

Market NEWS and Trends

JUTE Subdued Trend

AFTER hectic activity earlier in the week, the jute goods market has developed a reactionary trend. The principal reason for the decline in speculative interest appears to be the continued absence of foreign orders which were expected to be placed with Indian mills in view of the continued strike in Pakistani mills. There have no doubt been indications of increased foreign interest during the past few days in Indian goods but the size of the orders is not yet such as to warrant the conclusion that overseas buyers have begun to divert their business to India. It is still on the cards, however, that in the coming weeks demand may pick up appreciably because latest news from East Pakistan indicates that the jute

industry there is almost paralysed by the strike of 90,000 workers in 14 jute mills in Dacca and Narayanganj. Be that as it may, it would appear that mills in India will take early steps to augment the supply of heavy goods by shifting looms from hessian to sacking production. Moreover, the outlook for stepping up exports in general appears to be rather bleak for the simple reason that with raw jute prices continuing at the ruling levels, there is very little profit for mills on simultaneous business. For a reasonable profit, jute goods prices will have to be increased. But higher prices will almost certainly scare away the overseas consumer from jute goods and the substitutes will be the gainer.

It has been a short working week on the jute goods market as

it remained closed for half the period for Diwali holidays. Opening on a firm note following the report on the previous day of a sizable Burmese tender, the market witnessed heavy price fluctuations especially in the heavy goods section on Friday. Presumably apprehending a squeeze in ready B. Twills speculators extended their commitments. B. Twills Nov gained another one point to be done at Rs 154.00 with Hessian 40"x10 oz Nov done at Rs 50.80 in sympathy. Saturday however found the market in a subdued mood in the absence of much business. During the day only scattered business was reported done and the only encouraging factor was the indication of a revival of interest from the US. However, as the day's session progressed, enthusiasm showed marked diminution and with profit taking sales, prices slipped back. B. Twills closed the day at Rs 153.50 with Hessian 40"x10 oz at Rs 50.60. On Monday, there was further deterioration in market sentiment in the absence of business coupled with the report that mills may soon take steps to increase production of sacking by the mechanism of shifting some looms from hessian manufacture. B. Twills Nov lost Rs 1.25 by close of day to be finally placed at Rs 152.25 while Hessian 40"x10 oz Nov was down by half a point at Rs 50.10.

In the raw jute market, conditions remained fairly steady throughout the past week. In earlier dealings holders were reluctant to sell at prevailing levels presumably encouraged by the hectic activity in the goods section. In later dealings, although they appeared to be keen for business, prices remained steady at Rs 37.50 per maund, for Assam Bottoms. The steady trend has been helped by the fact that the Jute Commissioner announced on Monday the allotment of compulsory quotas for a total quantity of 1,75,000 bales for the week ending 7 November.

In the futures market, wide fluctuations were noticed. E. Twills November moved both ways to be finally placed at Rs 149.40. The firm trend however proved shortlived as in subsequent

trading the rate progressively declined to Rs 148.65 and finally on Monday to Rs 147.85. Hessian November was also easier and closed at Rs 49.86.

TEA Sales Promotion Drive

ACCORDING to a report released from New Delhi, India and Ceylon have decided to set up a joint tea commission for promoting the sale of tea in the principal tea-consuming countries. The commission, which will consist of three senior officers of each government, will meet periodically.

The importance of the United Kingdom, which is the largest consumer of tea in the world, in joint promotional campaign was recognised by the two ministers. A concerted drive on a large-scale is felt to be necessary to promote the tea drinking habit in that country. It is agreed that efforts should continue to be made by the Governments of Ceylon and India to secure a substantial reduction in the internal duties of tea in West Germany.

Efforts are already being made in co-operation with the local tea trade as also in other regions of the world where joint promotion has not so far been undertaken. It is recognised, however, that uni-national promotion of tea, by origin, need not be ruled out to the extent that such promotion does not hamper the joint effort. Meanwhile, the Tata-Finlay tea factory is one of the biggest 'instant' tea factories in the world and has started producing samples for the USA. Preliminary examples have been sent by air for testing. It is stated that, unlike other 'instant' tea factories, this factory produces tea powder direct from the Green Leaf and this imparts freshness and quality.

The tea is to be wholly exported. The factory is fully automatic and employs a staff of about 100 people. The capacity is expected to be in excess of one million pounds per annum. The factory equipment is operated either by steam oil or electricity and was recently commissioned by foreign

engineers. It is proposed to train Indian nationals who will eventually take control of the factory.

In the export sale held in Calcutta this week, offerings were 47,985 packages of Leaf grades. There was a good general demand. The support for plain orthodox tea continued and prices realised were fully firm to dearer. "Teas for price" met with an improved demand and, following competition, were sold at enhanced levels. Medium orthodox BOPs were a strong feature of the sale at fully firm to dearer rates. With the exception of the few selected good Assam orthodox teas which were sold well, the majority came to an irregular and lower market.

While the good CTC brokens came to an easier market, their fannings were an irregular feature and, following competition, selected lines realised higher rates. Mediums and plain CTCs were irregular and easier with the brokens receiving better support than their corresponding fannings. Whole Leaf grades realised fully firm prices, especially the stylish kinds.

Carjeeling teas, although well absorbed, were irregular and easier. Legg-cut teas were sold well and were slightly dearer. Following rates (per kg) were quoted:—Clean Plain Pekoe Rs 5.20 to Rs 5.50; Plain Orthodox BP Rs 4.20 to Rs 4.40; Plain Orthodox Fannings Rs 4.20 to Rs 4.30; Plain CTC BP Rs 5.00 to Rs 5.20; Plain CTC Fannings Rs 4.70 to Rs 5.00; Medium CTC BP Rs 5.50 to Rs 6.00 Medium CTC Fannings Rs 5.50 to Rs 5.60; Good Assam CTC BP Rs 6.30 to Rs 6.60 and Good Assam CTC Fannings Rs 6.50 to Rs 6.90.

A quantity of 184,439 kg of tea was offered for internal consumption in the sale held at Coonoor. The quality in general showed slight improvement as compared to last sale. The market opened firm and prices generally went up to 15 paise per kg. Good Nilgiri dusts remained firm and the quality was well maintained. Other Nilgiri dusts were 10 to 20 paise deared.

Nilgiri-wynaads met with good support at firm rates, while whole Leaf grades showed a declining tendency. Good Nilgiri Dust was quoted at Rs 6.00 to Rs 6.35; other Nilgiri dusts at Rs 3.50 to Rs 4.50; Nilgiri Brokens at Rs 3.70 to Rs 4.50; whole Leaf grades at Rs 3.50 to Rs 4.85; Nilgiri-Wynaads at Rs 3.65 to Rs 5.25 and Plainest types at Rs 3.30 to Rs 3.50.

In the Cochin market, offerings were 7.49 lakh kilogrammes of Leaf tea for exports. The quality of teas from the Nilgiris continued to be a little irregular, while teas from other districts were fully maintained. The market opened with a good demand, which strengthened towards the close. Low Mediums and Mediums met with a good enquiry

and prices for these were fully firm. Good Mediums also met with irregular support and were generally lower according to quality.

At this week's auction held in Colombo, offerings were 6,580,460 pounds tea. At the opening, high-grown brokens from western districts met with a good demand; but the best liquoring descriptions were on average 10 to 15 cents per pound lower. Plain sorts opened about steady; but were often a little dearer. Medium descriptions were a strong feature

of the sale and advanced by 5 to 15 cents per pound.

Brighter liquoring Uvas and Uva Pussellawa teas were irregularly dearer. Plain sorts were generally fully firm. Leafy-grown teas met with a little more buying interest and prices advanced by about 5 to 10 cents. Bright liquoring small leaf brokens were 5 cents dearer; but plain sorts were about steady. Better liquoring high-grown EOP Fannings were usually lower; but plain sorts and mediums were firm to slightly dearer.

In London, about 27,141 packages of North Indian and other miscellaneous teas were finally put for auction after 2,490 packages had been withdrawn from the quantity originally advertised for sale. There was a fair demand, but at lower levels for all teas between 5sh 3d and 6sh 6d per pound. Best Assams were fully firm, but for below the best prices were irregular and sometimes 6d per pound lower. Teas up to 5sh 3d, including Doors and some Africans, were mainly fully firm.

LET US TAKE A WALK

Now let's take a deep breath, and go forth into the open air. Now for the open road, the world out of doors, source of all health and pleasure. Surely there's no more healthy and enjoyable pastime than walking. And to keep on walking, two feet deep in comfort, in a pair of Bata shoes.

"Teas for price" were fully firm to dearer.

Stocks in London, as on 23 October, were slightly lower at 97.24 million pounds as against 98.44 million pounds in the previous week. The total amount to be landed on the same date was 26.67 million pounds. Total afloat was 42.27 million pounds including from Calcutta 31.62 million pounds; from Chittagong nil; from Cochin 943,080 pounds; from Ceylon 8.23 pounds and from other Ports 1.50 million pounds.

COTTON Bullish Trend

Aided by better upcountry advances and the reported downward revision of the crop during the current season, the futures market in Bombay evinced a bullish trend toward the closing stages of last week. The sentiment was also supported by the reports of damage to cotton crop in some

cotton tracks in the country. The initial firmness in the Jarilla March contract yielded place to a mild set-back toward the middle of the week largely on account of the profit-taking at higher levels. This phase, however, was of a short duration and the contract staged a smart rally to close the week at Rs 743.00 per three quintals. The offtake was fairly large. The threatened strike by the mill workers was viewed with concern, though its postponement induced fresh mill buying.

The spot market at Sewri presented steady conditions though the turnover failed to measure up to the expectations. Mill enquiry was confined to popular growths such as CO 2, L 147, Khandesh and Berar. The new crop varieties which have started arriving in increasing quantities managed to attract good spinner interest. The prices, however, displayed a steady trend.

The reported rumour about the possibility of delayed arrivals of cotton from the US under PL 480

caused a flutter among the trade circles. It was also feared that the American cotton under this programme will be of inferior quality. Sudan and African varieties met with some interest during the week.

In the export section, fair overseas demand was reported and registration for exports gathered momentum.

WORLD COTTON SITUATION

World cotton output during the 1963-64 season registered an increase of 1.5 million bales to 59.3 million bales. As usual the United States figured as the leading single cotton producing country in the world accounting for nearly 15.34 million bales. There has been a similar step-up in world cotton consumption, which moved up by 2.5 million bales to 48.3 million bales. Understandably enough, there has been an improvement in the world stock by a shade over 2 million bales to 25.3 million bales. It should, however,

be noted that the availability of extra-long staple growths produced in Egypt and Sudan continues to be far below the requirements. Significantly enough, cotton is currently enjoying a slight boom despite the upsurge in cotton production and the progressive increase in the utilisation of man-made fibres.

PAKISTAN COTTON

According to the preliminary estimates, 1964-65 Pakistan crop is placed around the previous season's production figure of 2.5 million bales. This is encouraging, as the damage to the NT crop in Sind consequent on the cyclone in the month of June is feared to have been considerable. But thanks to the prospects of higher production of Punjab cotton there will not be any decline in production from the previous season's level.

Consumption of cotton by the mills in Pakistan jumped up to 1.6 million bales from 1.3 million bales in the previous season. This increase is largely accounted for by the installation of additional spindles in the season which took the total spindlage to 22.15 lakhs. It needs special mention that exports touched a new peak during the season. Export sales registered with the State Bank till 31 August totalled 774,851 bales of American seed cotton. New crop sales aggregated 95,892 bales. The leading importers of Pakistani cotton were China, Hong Kong, Europe and Japan.

PIECEGOODS

The trading conditions in the Bombay piecegoods market during the week under review caused disappointment to those who were awaiting brisk activity owing to the proximity of Diwali. It is unsurprising, therefore, that business in the domestic and export sections was restricted.

It appears that the trade has not yet recovered the intricate nature of new multipliers. This has been amply evidenced by the tepid enthusiasm of the traders in the controlled varieties of cloth. The traders generally preferred to wait for large arrivals of controlled goods in the market before making any commitments. The upcountry purchasers however, showed some interest in the available lots of controlled cloth.

The imposition of a surcharge of 15 per cent on all imports by the Labour Government virtually stopped the offtake by the UK buyers. The political turmoil in Sudan has blasted all hopes of an immediate revival of demand from that destination.

East Africa accounted for a moderate quantum of usual lots. Continental countries were active in the market but owing to disparity in prices little business was transacted. New Zealand and Australia were content with business according to the availability of licence. Other destinations were inactive during the week.

Drive for Increase in Coffee Exports

THE Chairman of the Mysore State Planters' Association has stated that both the Central Government and the Coffee Board have to make out a strong case before the International Coffee Council to increase the "export quota" for coffee from India to the international market. He says that the quota for India is based on the average exports of the country during the previous years, while such a quota for other coffee-producing countries is fixed on the actual production. For Brazil, the quota is 80 per cent of coffee production and it is not even 40 per cent for India.

Growers, in the meanwhile, have been asked to expand coffee production in the country and any expansion will therefore result in more production. Even now, the exportable quantity of Indian coffee is of the order of 50,000 tonnes after meeting the internal demands and the actual exports amount to hardly 30,000 to 35,000 tonnes. When production is increased in the coming years, it will be possible for India to export 75,000 tons for which they have to create the foreign markets. The only way to impress on the International Coffee Council is the need to increase the export quota to India and this can be made only if the Council adopts the policy of fixing the quota on production basis.

The year just completed has seen the crop touch 68,200 tonnes—the highest ever harvested. Mysore's share in this crop is roughly 53,000 tonnes. From a position among the lowest-yielding countries two decades ago, India has now occupied a place among the first three of the high-yielding countries. The 1965-66 crop is expected to touch the 75,000 tonne-mark. On the basis of the production forecast, big surpluses of the order of 45,000 to 50,000 tonnes of coffee will become available in the coming year.

RUBBER Replanting Scheme

The Chairman of the Rubber Board has stated that the Board is now giving subsidy at the rate of Rs 1,000 per acre for replanting areas under old rubber. Such areas approximately total 1.6 lakh acres. Of these, only 30,000 acres can be replanted under the scheme so far. Efforts are being made to step up the acreage brought under replanting.

There are two other financing schemes. One is to give loan at the rate of Rs 750 per acre, spread over a period of 7 years for extending the area under rubber by small holders up to 5 acres and above up to 15 acres. The other

scheme is for giving loans for the same category of small holders for immature areas of rubber. The total amount of loan payable under this scheme is Rs 450 per acre. Loans under both schemes are free of interest and repayable in annual instalments from the tenth year onwards.

Under the replanting scheme, the primary financial agency will be the scheduled banks, who will be provided with re-finance by the Agricultural Refinance Corporation. The total area to be planted under the scheme has been estimated at 50,000 acres within a period of 5 years at the rate of 10,000 acres per year. The scheme is to run for a period of 15 years.

SUGAR Prices Firm

Sugar prices have continued to rule firm as supplies are restricted and the demand is good. In the Muzaffarnagar market, the rate is quoted up to Rs 185 per quintal unofficially. The Uttar Pradesh Government has released the entire frozen stocks of khandasari in the State, retaining only a few thousand tons of the sulphitation variety. Traders are, however, warned that the released stocks are not to be sold above the controlled price and the despatches are also to take place within the State.

With this, the distribution of the commodity against permits has come to an end; but the despatches will continue to destinations in Rajasthan, Madhya Pradesh and Gujarat of yellow and brown khandasari against permits. Inferior and medium deshi khandasari are not in demand and trading is confined to the white crystal variety, which is quoted up to Rs 155 per quintal.

Gur, khandasari and grain merchants have hailed the decision of the State Government to release the frozen stocks for sale in the open market; but they have urged the Government to withdraw its order on the inter-State movement also so as to clear the heavy burden of stocks which are lying in the State. It is pleaded that the new crop arrivals will commence after a month and, therefore, withdrawal of movement restrictions will not only lessen the stocks in the State, but, will also help in meeting the sugar requirements and bring down the prices.

Meanwhile, it is understood that the Tariff Commission will make a fresh study of the cost structure of the sugar industry to determine the fair price that should be paid to the industry. The Government has issued a notification that the Commission has been asked to go into the problems facing the industry and to submit its report within one year. The Government is of the opinion that a fresh

examination of the cost structure of sugar and of the fair price payable to the industry is necessary. The Government has asked all persons and firms interested in expressing their views on the matter to address their representations to the Tariff Commission.

NON-FERROUS METALS Copper and Tin Touch New Peaks

On the London Metal Exchange, Copper and Tin prices have touched new peak levels for the year. There is plenty of buying interest in copper, probably from consumers. The boom in this metal has been the results of heavy industrial demand continuing against this year's series of labour disputes limiting production. The ready rate for copper wirebars is quoted at as high as £522 per ton against the previous week's rate of £502.

Tin has reached yet newer all-time price records on shortages induced, in part, by labour disruption to Bolivian and Nigerian output. But production is adversely affected mainly by the unsettled political climate in Malaysia and Indonesia—the main producers—plus a continued lack of formerly large Chinese supplies. Here, too, the world demand has been especially heavy.

As a result, cash tin is quoted up to £1697 10sh per ton against previous week's rate of £1,590. Outlook is for the present buoyancy to persist, although in six to eight months' time prices may touch lower levels. Prospects for the rest of the base metals is similar to that of tin. Lead spot is quoted around £122.15sh as against £121.8sh in the previous week.

DYES AND CHEMICALS Dull Conditions

Conditions in the Bombay market for dyes and chemicals remained generally dull and price movements were confined to narrow limits. However, sustained demand from upcountry centres, especially from Ahmedabad and Delhi, and the paucity of stocks accounted for a further improvement in the prices of Hydro-sulphite of Soda. On the other hand, Rangolite suffered a setback in prices, as indigenous goods were available. Other chemicals remained more or less steady.

In the Dyes section, trading was listless with a small turnover. Demand for imported goods dwindled further, as Indian goods were available in the upcountry centres direct from the manufacturers. The arrival of overseas goods under the export promotion scheme has also restrained buyers to enter the Bombay market.

OILS AND OILSEEDS Two-sided Fluctuations

Trading in the Pombay Oilseeds market was characterised by sharp, two-sided fluctuations. In the Groundnut section, business in ready and forward positions reflected the prevailing uncertainties. The favourable outlook for the new crop and the possibility of abolition of ban on the export of groundnut from Gujarat provided major bearish influences. On the other hand, a section of the trade was inclined to support the market at lower levels on the belief that the impact of the new crop had spent its force to the time being.

There are, however, indications that oil prices in the country will soon be established at lower levels. With the flow of Gujarat oil to the city, the price may come down to a normal level of Rs 17 per 10 kg. If the ban on the export groundnut oil from the country is extended to the current season also, a further fall in the price is likely.

In the castorseed section, trading lacked a clear design as prices fluctuated irregularly on alternate buying and selling. The demand for castor oil is somewhat subdued, as foreign buyers appear to have withdrawn for the time being.

In the Linseed section, price variations were irregular, as the market depended mainly on manipulations by uncountry operators.

In the Madras market, Groundnut prices have recorded a further fall although a slight recovery is noticed towards the week. Arrivals of seeds average about 30 tons a day and only a part of the stocks is taken up by local crushers. The rate for peanuts declined to Rs 73 from Rs 87, to finish better at Rs 83 per bag of 80 kgs. Dealers holding stocks are also stated to be unwilling to sell due to the heavy loss sustained in the previous week by the steep fall in prices.

The rate for ready Groundnut Oil is quoted at Rs 207, the lowest touched being Rs 182. Vanaspathi interests are operating and sizable quantities are reported to have been taken by them. More business would have been possible, but for the hesitant attitude of sellers.

SILK Firm Trend

Prices of Filature raw silk at Government Silk Filatures ruled firm between Rs 100.32 and Rs 101.42 per kg during the week ended 30 October. Similarly, the prices for Kisan silk also ruled firm between Rs 104.00 and Rs 105.00 per kg. The prices of cottage basin silk, however, looked

In quest of gold

More and more Indian manufacturers are today earning valuable foreign exchange by selling their products abroad. Exports of cashew nuts, fish, vanaspathi, toiletries and other consumer goods in Metal Box packages alone earned over Rs 8 crores last year. That's a lot of foreign exchange, and for the nation it's as good as gold.

To sell in highly competitive overseas markets the product must be of the finest quality. And so must the package. It must be of the right size and must have the right finish. And an attractive surface design that will score over competition in sales appeal.

All this requires research, experience, resources. Metal Box have them. They also have access to the fund of marketing and technical know-how of their world-wide associates. This is why Metal Box can

provide a comprehensive packaging service as no one else can. This is why, too, so many packers come to Metal Box for advice, send their goods abroad in packages designed and manufactured by Metal Box.

And Metal Box customers are not located in India alone. Last year Metal Box exported nearly Rs 30 lakhs worth of containers, clothes and machinery direct to packers abroad.

You see, word gets around.

up to be quoted at Rs 80.75 to Rs 95.62 per kg., as against Rs 80.47 to Rs 93.14 last week. As it is comparatively a lean season with limited supplies in the market, prices particularly of the lower grades are likely to move further.

While the prices of super-fine charka continued to be quoted at Rs 85.42 to Rs 89.56 per kg., the first quality showed a marginal downward shift during the week-end. But moderate upsurge was noticed in respect of 2nd quality charka raw silk ruling at Rs 62.00 to Rs 65.31 last week. Similarly,

the 3rd quality charka also registered an upward trend from the price level of Rs 54.01 to Rs 60.35 to the level of Rs 58.97 to Rs 62.83. There was no change in the prices for dupion silk which continued to be quoted between Rs 19.81 and Rs 30.87. The market witnessed brisk activity in charka silk and this was one of the main reasons for the prices moving up particularly in charka 2nd and 3rd qualities.

The seed-cocoon market did not show much interest as demand appeared to be slackening with the onset of winter conditions.

Brisk activity was observed in the cocoon market and prices tended to move upwards owing to limited flow of cocoons. The upsurge in prices was marked particularly in the Mugur area as cocoon crops were thinning out after the heavy "Tharagaddi" season. The prices in Sidlaghatta area ruled between Rs 5.37 and Rs 6.87 against the level of Rs 5.25 to Rs 6.75 in the previous week.

The Channapatna market also registered an upward trend owing to inadequate supplies and ruled between Rs 4.40 and Rs 4.85 per kg. as against the level of prices

between Rs 3.17 and Rs 4.06 during the previous week. The prices for Mugur areas also move up and were between Rs 4.00 and Rs 6.01 per kg. as against Rs 3.17 and Rs 3.55 in the previous week.

Bhagalpur continued to rule high as in the previous week. The trading was dull as the flow of cocoons and silk into the market was neither even nor sufficient. The industrial rearings are in full swing in the rearing zone and with the incoming of fresh goods, it is anticipated that the prices would come down.

In Malda, there was no perceptible change in the prices for raw silk, thrown silk or cocoons. With the distribution of hybrid layings for the Agrahayani crop, there is prospect of heavy harvest of cocoons in the coming weeks and also lowering of prices for all sericultural products.

Prices in the Assam silk market ruled firm for another week.

The F.O.B. prices and landed cost of Japanese Raw silk 20/22 Dr. '2A' were quoted at Rs 56.00 and Rs 91.48 per kg. respectively during the month of September, 1964.

Brooke Bond's New Export Blend

'Taj Mahal', a new export blend of Brooke Bond India Private Limited is being flown through Air-India to the International Exhibition in Paris commencing on November 8, 1964. This 100% Indian Tea will be sold in the European Common Market countries.

India's Foreign Trade in Merchandise

The provisional figures of India's Foreign Trade in merchandise by all routes, i.e. sea, air and land, on private and Government accounts during August 1964 according to information available to-date in the Department are given below:

	(In Lakhs of Rs)
Exports	66.93
Re-exports	17
Imports	90.02

Note:—The above figures include value of India's land-borne trade with Nepal and exports by parcel post of pearls, precious stones, etc. Trade with Bhutan and Sikkim is, however, excluded.

Mr. M. I. Pritchard, M.C., Managing Director, F. Perkins Ltd., Peterborough (with whose collaboration Perkins Diesel Engines are being manufactured in India by Simpson & Co. Ltd., (Madras) and Lord Robens, Chairman of National Coal Board are to receive the Top Marketing Awards for 1964 from the British Institute of Marketing of which HRH the Duke of Edinburgh is the Patron and Sir Edwin Leather, the President. The award is given for notable achievement in ensuring and expanding markets for British Industry.

The Bank of Baroda has been handling foreign business for many years. Today, the Bank has branches in London, East Africa, Fiji Islands, Mauritius and East Pakistan.

The Bank of Baroda through any of its foreign branches or its correspondents is fully equipped to offer all the services needed in foreign trade and to handle every type of foreign exchange business—including opening Letters of credit, the negotiation/collection of export bills, clean bills and cheques, foreign remittances, credit information, etc., and is always willing and prepared to assist you in solving your problems concerning imports, exports and foreign travel with prompt and efficient service.

JWT-88/202

For the INVESTOR

INVESTMENT GOSSIP Goodyear Rights Issue

IN the Stock Exchanges, the topic of the hour is the rights issue made by Goodyear. The immediate reaction to the announcement of an 8 for 5 rights issue was one almost of dismay.

Firstly, it is noted that the company has not paid any dividend so far, at least in reference to the Indian shareholders of the company.

Secondly, it is pointed out that the company has a sizable loss carried forward.

Thirdly, shareholders are in the unhappy position of having to exercise their rights, since otherwise the value of their current holdings will depreciate.

Fourthly, there is querulousness about the fact of the rights issue being made at a premium of Rs 7 per share.

Now that I have noted down the major points which have determined the trend of discussions on the Goodyear issue, I think it is important for the investor that he should understand and appreciate something more about the background of the issue itself.

Goodyear was given an industrial licence for the manufacture of 510,000 tyres annually. With the completion of the first phase, a production capacity of 210,000 tyres has been reached. The company is under commitment to expand its capacity to the value of its industrial licence by the end of 1968. I think we may presume that there would also have been some understanding about an increase in capacity before that time.

Hence, in spite of the fact that the capital market is not in very good shape, and despite the fact the company is in the almost untenable position of having to ask shareholders for fresh money before even a maiden dividend has been paid, Goodyear apparently had no alternative to the announcement of the rights issue, so that, by the end of next year, it could raise its capacity to 310,000 tyres.

As for the premium, I surmise that the Controller of Capital Issues may not have agreed to the rights issue being made at

par; and he may have readily acquiesced in the issue being made at Rs 17. Also, I think it is possible that the company itself, knowing that its past difficulties, now thankfully left behind, were only temporary in nature, was in a position to make a clearer assessment of the return it would be able to give to the shareholders in due course.

The investors, now called upon to subscribe to the rights issue, might, let me add, be doubly reluctant to do so in view of the fact that, with the installation of new equipment of the value of perhaps Rs 1½ crores during the next year, the provision that would have to be made for depreciation and development rebate might be as high as Rs 30 lakhs or even more. In this regard, my understanding is that the rate of depreciation available on a basic item of equipment—moulds—is over 30 per cent. This means that the depreciation to be provided against the original purchase of moulds three years ago will be reduced to negligible proportions in 1965. Thus, the distributable profit for 1965 should on this account be higher. Furthermore, the increase in capital will also contribute to an improvement in earnings.

Goodyear has already reported that it made a profit of Rs 22 lakhs in the first nine months of this year, as against the loss in the corresponding period of last year of roughly Rs 50 lakhs. I think we may take it that the Goodyear profit for the current year as a whole would be in the environs of Rs 35 lakhs.

My purpose should by now be clear. On the surface the reasons against exercising the right to buy the new shares are overwhelming. But, on closer scrutiny, the sophisticated shareholder will realise that he merely has to wait for some more time before his investment in Goodyear begins to pay off handsomely.

One last word: obviously, for attaining capacity of 510,000 tyres by 1968, the company will need by that time to lay its hands upon more resources. I wish to suggest, in this regard that, as in the present instance, the foreign exchange is likely to be made available by the parent company as a loan. Se-

condly, I rather think that the company, if it negotiates with the US aid authorities for securing a rupee loan from Cooley funds, would be able to avoid a further burden on the Indian shareholders. I therefore hope that the rights issue will not prove a failure, since such a result would merely indicate that the Indian shareholder is not yet a sophisticated investor.

NEW ISSUE NOTES Poysa

Poysa Industrial Company Limited will be raising fresh capital to the extent of Rs 85 lakhs, divided into 8,50,000 equity shares of Rs 10 each. Out of this, 2,50,000 shares will be offered to the existing shareholders by way of rights and the balance of 6,00,000 shares will be offered for public subscription, at par.

A sum of Rs 2.50 per share is payable on application; Rs 2.50 per share on allotment and the balance of Rs 5 per share on further calls as may be determined by the directors. The subscription list will open on 13 November and will close on 23 November or earlier at the discretion of the directors, but not before 16 November.

The company's main factory, situated in Bombay-33DD, is proposed to be shifted to the Kalva Industrial area near Thana. The company has proposed to establish two additional factories—one at Cochin to cater to the requirements of South India and the other at Ghaziabad to take care of the North and East Indian requirements. The modernisation and expansion programme will increase the company's capacity from 40 lakhs to 1 crore of cans per month, on a single shift basis.

INVESTMENT NOTES IISCO

Despite the intervention of a number of holidays, the Indian Iron and Steel Company Limited has released satisfactory production figures for last month. Although the output of Pig Iron has shown a sharp decline to 94,065 metric tons from 104,733 metric tons in September, that of Steel Ingots has risen to 85,674 metric

tons from 74,244 metric tons and Saleable Steel to 68,190 metric tons from 54,671 metric tons. Despatches have also shown a sharp rise to 61,863 metric tons from 49,826 metric tons.

TISCO

The Tata Iron and Steel Company Limited has reported an increase in the output of Saleable Steel from 126,100 metric tons in September to 129,100 metric tons in October. The output of Steel Ingots has also improved to 165,300 metric tons from 161,700 metric tons, while that of Pig Iron is slightly lower at 157,500 metric tons against 157,600 metric tons.

Mahindra & Mahindra

The Chairman of Mahindra and Mahindra Limited has announced that approximately 65,000 equity shares of Rs 10 each of International Tractor Company India Limited will be offered to the shareholders of Mahindra and Mahindra Limited, its employees and Voltas and other associates. The Controller of Capital Issues has, however, made a stipulation that the shares allotted under this offer cannot be sold or transferred within a period of one year. The basis of allotment for the shareholders of Mahindra and Mahindra Limited has been indicated.

Gwalior Rayon

Gwalior Rayon Silk Manufacturing (Weaving) Company Limited has, under consideration, many new schemes for implementing which, it is proposed, to raise Debentures for Rs 3 crores. The company recently obtained permission from the Controller of Capital Issues for raising loan capital for this amount in debentures carrying interest at 7 per cent, taxable.

The prospects for the current year are considered to be promising. Apart from the expectation that the pulp plant at Mavur, near Calicut, will yield better results, the reduction in the excise duty on staple fibre is expected to result in a better margin of profit and stimulate consumption of staple fibre. Besides, import licensing may be more strict in future, as heavy foreign exchange

expenditure was incurred on avoidable imports of rayon yarn and staple-fibre. In fact, it was complained for a time that a glut of stocks prevented indigenous producers from utilising their capacity fully.

IN BRIEFS

Union Carbide India Limited has proposed an interim dividend of 75 paise per share, subject to tax, for the year 1964. This is payable on or after 30 November to those shareholders registered as on 13 November, 1964.

Bababudin Coffee has maintained the dividend at 6 per cent, subject to tax, for the year ended 30 June 1964.

Shevroy Estates Limited has maintained the ordinary dividend at 6½ per cent, taxable, for the same year.

Gangapur Sugar Mills Limited has once again skipped the divi-

dend for the year ended 30 June 1964.

Swinton Estates Company Limited has proposed an interim dividend of 10 per cent, taxable, on the equity shares for the year ended 31 March 1965.

Cowcoody Estates Limited has reported a higher net profit, before providing for taxation, of Rs 1.96 lakhs for the year ended 30 June 1964 as against Rs 1.03 lakhs for 1962-63. The total distribution is raised to 20 per cent, taxable, from 17½ per cent, taxable, paid previously.

Katras Jherria Coal Company Limited has proposed an interim dividend of 50 paise per share, taxable, for the year ended 31 January 1965, payable to those registered as on 23 November. Transfer books will remain closed from 9 to 23 November, 1964.

Coromandel Fertilizers Limited has decided to make a first call of Rs 2.50 per share on all shares is-

sued by the company (other than shares which have already been fully paid), payable by 7 Dec. The payment, it is added, will be accepted with interest at 6½ per cent per annum after the said date and that the shares are also liable to be forfeited under the provisions of the Articles of Association of the company.

BALANCE-SHEET REVIEWS

Excellent Results of Sirpur Paper

SIRPUR Paper Mills Limited has produced excellent working results for year ended 30 June 1964. Subject to audit, the net profit, after providing Rs 40.89 lakhs for depreciation, Rs 53.00 lakhs for Statutory Development Rebate Reserve and writing back development Rebate Reserve of Rs 41.00 lakhs, amounts to as much as Rs

51.73 lakhs as against only Rs 3.03 lakhs for the previous year.

Further, the directors have transferred a sum of Rs 3.00 lakhs to Contingencies Reserve and Rs 11.00 lakhs to General Reserve, carrying forward a balance of Rs 77,350 to next year. There is no tax liability for the year in view of the carry-forward of unabsorbed depreciation and development rebate of the preceding years. A dividend of 85 paise per share is recommended on the ordinary shares, excluding the interim of 35 paise per share already paid. This makes a total of Rs 1.20 per share as against only 50 paise, per share taxable, paid previously.

Growth of Philips India

Philips India Limited has shown a rapid growth, particularly during the last three years. Its sales grew from Rs 6.82 crores in 1961 to Rs 10.3 crores in 1963. The profits before tax rose from Rs 66 lakhs in 1961 to Rs 1.66 crores in 1963. The company was able, despite higher corporate taxes, to increase the distribution by way of dividend from Rs 26.4 lakhs in 1961 to Rs 33 lakhs in 1963, and its rate of dividend from 12 per cent in 1961 to 15 per cent in 1963.

The progressive expansion of the company's manufacturing activities, coupled with the efficiency of its sales and service set-up, has been the main contributory factor towards the steady growth of sales and profits as well as higher rates of dividend.

Brooke Bond Pays Less

Lower average sale prices realised, increased taxation and the rise in the garden cost of production are reflected in the working results of Brooke Bond Estates India Limited for the year ended 30 June 1964. Although a satisfactory crop of 1,426,004 kgs against 1,351,189 kgs was manufactured, the average sale price realised is lower at Rs 5.12 against Rs 5.27 while the cost of production has further increased by about 9 paise per kg.

With the result, the net profit for the year, after providing for depreciation and taxation, works out to only Rs 3.63 lakhs as against Rs 4.62 lakhs (including Rs 50,000 being excess provision for taxation in respect of past years withdrawn) for the previous year. Except Development Rebate Reserve which is raised to Rs 18,764 from Rs 1,200, all other allocations have been reduced.—Depreciation from Rs 3.11 lakhs to Rs 3.06 lakhs; Taxation from Rs 5.40 lakhs to Rs 4.45 lakhs and Capital Reserve from Rs 7,244 to Rs 5,090.

The directors have proposed to withdraw Rs 26,000 from General Reserve for paying the dividend. The dividend on the ordinary shares is reduced from 7½ to 5 per cent, subject to tax. Annual General meeting will be held on the 1 December.

Scindia Steam Does Better

Scindia Steam Navigation Company Limited has reported better results for the year ended 30 June 1964 in spite of a decline in freight income from Rs 18.22 crores to Rs 17.64 crores. The net profit, before providing for depreciation and taxation, is slightly higher at Rs 332.76 lakhs as against Rs 330.56 lakhs for the previous year.

The provision for Depreciation is increased to Rs 198.31 lakhs from Rs 192.32 lakhs; but the Taxation provision is reduced to Rs 22.50 lakhs from Rs 68 lakhs owing to the need to set aside as much as Rs 97.50 lakhs (Rs 9 lakhs) towards Development Rebate.

The decision to pay a higher dividend on the equity capital must have been due to the improved outlook for the company in the current year and the acquisition of new ships. To pay the dividend, however, it has been necessary to transfer Rs 50 lakhs (nil) from General Reserve.

Kothari Sugar Skips

Kothari Sugars and Chemicals Limited has been able to report satisfactory results for the first year of working though the output of sugar could have been higher if adequate cane supplies were available and the recovery was not also very low of 8.86 per cent. It is expected that, in the current working season, there will be a significant increase by about 50 per cent as compared to 1963-64 and it will be possible to achieve a much higher level of earnings.

The net profit, before providing for depreciation, amounts to Rs 12.31 lakhs as against a small loss of Rs 16,485 incurred in the preceding year. This level of profit could not, however, meet fully the charges towards depreciation in respect of two years amounting to Rs 23.03 lakhs. The balance of Rs 10.71 lakhs has, therefore, been carried forward.

No provision has so far been made towards development rebate if the estimates regarding cane availability and production of sugar are fulfilled.

Thakur Paper Incurs Loss

Although the company started production from 1 February 1963, Thakur Paper Mills Limited could not reach its target during the year ended 31 December 1963, mainly due to inconsistency in the supply of electricity and the delay in commissioning the pulp section.

As the position regards the supply of power has now considerably improved, the company is maintaining progressively its target. Meanwhile, the accounts for the year under review, reveals a loss of as much as Rs 7.03 lakhs as against a loss of Rs 4.39 lakhs incurred in 1962. No depreciation is provided.

The directors state that the working result will improve in the current year due to increased production, turnover and the reduction in the rate of electricity by the Bihar Government. Annual general meeting takes place on the 10 November.

STOCK EXCHANGES Selective Buying

STOCK markets have exhibited steadier conditions during the week under review. Although operators are generally cautious in their commitments on the feeling that the Government may not modify the fiscal system before the next budget, prices have responded to selective support.

Reopening after the "Diwali" holidays, Lyons Range displayed a steady trend.

Trading on Dalal Street lacked lustre.

On the Madras Stock Exchange, business took place only in a few shares in the cleared list.

CALCUTTA

AFTER ruling initially quiet, the local stock market took a slight turn for the better after the "Diwali" holidays, thanks to scattered support for selected shares. Activity was, however, confined to the cleared securities.

On the opening day of the week, there was no perceptible change in the pattern of trading, which remained cautious. This was due to the approaching holidays for "Kali Puja" and "Diwali" holidays.

In the special Moorat session held on Tuesday, however, the cleared securities were able to record small all-round gains, thanks to the reports of a possible landslide victory for President Johnson in the US elections. Cash counters were also selectively supported.

Reopening on Thursday after the holidays, the slight improvement in sentiment, that was noticed in the Moorat session, was well maintained. Although activity was restricted owing to clearing adjustments, prices responded to selective support, resulting in scattered gains on balance.

It was, however, clear that the hesitancy on the part of the operators to enter into big commitments, especially when the atmosphere now obtaining in the stock markets was very different from the conditions that prevailed in the corresponding period of last year.

At this time last year, an impression was gaining ground that the Finance Minister would take genuine effort to revive activity in the stock and capital markets and his budget for 1964-65 might contain substantial concessions.

But, the present feeling is that the corporate outlook has become steadily dark and the recent fiscal developments have brought about a profound change in the financial structure of the companies. The companies have now to depend more and more on bank finances for their working capital,

especially when this has happened at a time when they require some finances for expanding their production.

Apart from these factors, the increase in bank rate, the upward revision of deposit and lending rates, the unsettled political situation, the difficult food situation and the prospect of a stiffer dose of taxation are considered to have made the outlook uncertain for stock markets.

Above all, concern is expressed over the proposed amendment of the Companies Act to restrict the period of holding shares on blank transfer to six months. All the stock exchanges have, in a joint memorandum to the Government, protested against the proposed measure. It is felt that this move will do more harm than good.

That blank transfer has contributed to the liquidity and negotiability of stocks and shares is a known fact. But the present move by the Government will, it is feared, discourage investors by impairing the liquidity of shares. It is suggested that, if the Government is determined to impose the restriction, the validity period should be extended at least up to the time when the share transfer book of a company is closed. It is also suggested that restriction should be followed by a substantial reduction in the stamp duty on share transfers, which is considered to be very high.

With the result, there is now distinct lack of any significant professional buying although the drying up of offerings at the depressed levels impart a measure of steadiness.

Gilt-edged securities ruled generally quiet, 3 per cent 1986 fluctuated narrowly around Rs 62.10.

Except United Commercial which met with business up to Rs 72.75, Bank shares were devoid of interest.

Jute shares were traded cautiously. Birlas changed hands at Rs 35.56 to Rs 36.25 and New Central at Rs 10.56 to Rs 10.81. Ganges were well maintained at Rs 12.87.

There was little doing in the Coal section. Bengal met with some enquiry up to Rs 241 from Rs 239, with Western Bengal hovering idly around Rs 8.50.

Tea shares lacked buying interest.

Sugar shares remained depressed. In the Textiles section, Bharat Commerce were done at Rs 19.50 to Rs 19.75 and Dunbar at Rs 26.75 to Rs 26.91. Jaya Shree were quiet at Rs 13.12.

Among Engineering shares, Indian Irons recovered slightly due to some short-covering. After opening steady at Rs 25.54, the scrip improved gradually to Rs 26.14 before closing at Rs 25.98. TEXMACO were taken up to Rs 26.45 from Rs 26.10 while Jay Engineering were keenly sought after up to Rs 20.94 from a low of Rs 19.62. Jessop hovered narrowly around Rs 26 with Kumardhubi ruling steady at Rs 5.50.

Miscellaneous issues moved gene-

rally in sympathy with the general trend of the market; but activity was mostly confined to the cleared list.

Following were the price trends of a few selected shares:

	As on 31 Oct.	Week's High	Week's Closing
FORWARD LIST:

Calcutta-1.
Dated the 31st October, 1964

A ROAD IS NOT THE ONLY PLACE
WHERE YOU CAN DRIVE A JEEP.

DRIVE IT OFF THE ROAD. RUN
IT THROUGH IMPOSSIBLE
TERRAIN. ON A CART
TRACK. UPHILL. DOWN
A ROCKY SLOPE.

THROUGH SLUSH
AND MUD. VIRTUALLY
ANYWHERE. YOU WILL BE
ASTOUNDED BY ITS
STRENGTH AND VERSATI-
LITY! POWERFUL, MANOEUV-
RABLE, THE WORLD'S BIGGEST
LITTLE VEHICLE IS UNBEATA-
BLE IN PERFORMANCE AND
ECONOMY. IT HAS A 72 BRAKE
HORSE POWER ENGINE. A 4
WHEEL DRIVE...CAN BE EASILY
ADAPTED TO MANY USES.

THE JEEP UNIVERSAL IS THE
MOST DEPENDABLE
VEHICLE YOU CAN OWN

FOURTH FIVE YEAR PLAN

Deliberations at the NDC

I—Objectives Approved

The National Development Council, at its twenty-first meeting held in New Delhi on 27-28 October agreed with the long-term objectives indicated in the Memorandum on the Fourth Five-Year Plan, prepared by the Planning Commission. These objectives briefly are: (i) to lay a sound foundation for self-sustaining economic growth; (ii) to provide avenues and opportunities of employment to all those who seek it; (iii) to narrow economic and social disabilities; and (iv) to ensure a minimum standard of living.

It was noted that the shortfalls in the Third Plan and the consequent rise in prices had made the achievement of these objectives more difficult; nonetheless, they remained as compulsive as ever and had to be accomplished. The rate of growth in the Fourth Plan had accordingly to be higher than was assumed for the Third Plan in order to make up the leeway and to improve the per capita income, despite the rise in population. The aims of the Fourth Plan were (i) achieving a rate of growth of not less than 5 per cent per annum in agriculture, and an overall rate of growth of not less than 6 per cent; (ii) ensuring the availability of inputs for agriculture, such as fertilisers, manures, pesticides and improved seeds, and the materials needed by agriculture, such as cement for wells and other construction purposes, iron and steel for implements and equipment and cheap power for lift irrigation and agro-industries; (iii) enlarging the supply of essential consumer goods, such as cotton-textiles, sugar, kerosene, cement, drugs and medicines; (iv) providing for continued growth in metals and mining, chemicals, machine-building, electric power and transport; (v) raising productivity through the development of human resources; (vi) controlling the growth of population through an extensive family planning programme; and (vii) generating adequate opportunities for employment of the new entrants to the labour force including those seasonally under-employed.

OUTLAY FOR PLAN

The Council accepted the size of the Plan as proposed in the Memorandum. The total outlay in the Fourth Plan ranged between Rs 21,500 and Rs 22,500 crores and the outlay in the public sector between Rs 14,500 and Rs 15,000 crores. The development programmes in each sector will identify projects with a total outlay of Rs 1,000 crores to be initiated during the second half of the Plan if the economy improves and resources can be mobilised.

All possible steps should, however, be taken to accelerate pro-

gress in the early years of the Fourth Plan in order to make the mobilisation of the additional resources possible. The appropriate advance action programmes were preparation of detailed project reports, careful selection of quick-yielding schemes, completion of administrative arrangements by starting training programmes and placing the trained staff in position.

The Council appreciated the immensity of task of raising the order of resources required for the Plan and discussed generally the measures for fulfilment of the task. It was decided that the matter would require detailed consideration of a high-level committee.

SECTORAL ALLOCATIONS

The Council also discussed the sectoral allocations and priorities indicated in the Memorandum, including the need for special programmes for backward areas, vulnerable sections of the community and the provision of basic rural amenities, such as drinking-water, village approach roads and schools.

The Council agreed that top priority should be given to agriculture and a concerted programme for family planning started immediately on as extensive a scale as possible. The Council felt that, whereas there had been a substantial increase in agriculture and in social services, the provisions in the Memorandum for power, major irrigation, transport and industries had not been stepped up adequately.

The Council was of the view that the sectoral allocations and priorities needed to be re-examined in the light of the immediate needs of stepping up productivity.

HIGHEST PRIORITY TO AGRICULTURE

The Council agreed that agricultural development should be given the highest priority in the Fourth Plan and a rate of growth of not less than 5 per cent per annum should be achieved.

The financial allocation indicated in the Memorandum on the Fourth Plan, it was agreed, should be treated as tentative. The physical targets to be achieved in agriculture should be built up from below, through detailed work in the States, on the basis of the block and district plans and their implication in terms of financial resources and material inputs worked out in detail, and provision made in full before providing for other sectors. Some of the items, which were high-lighted, are the adoption of a project approach for planning and implementation of agricultural programmes area by area, in a selective and integrated manner; emphasis on quick maturing schemes; development of local manual resources side by side with the use of fertilisers, pesticides etc.;

use of improved agricultural implements; extension of rural electrification for water lifting; early completion of soil surveys throughout the country; planning and implementation of minor irrigation programmes on the basis of systematic surveys of water resources; undertaking of plant protection measures as a service over large areas simultaneously at the appropriate time; provision of improved seeds on a large scale; development of animal husbandry; poultry; piggy & fisheries; timely and adequate irrigation facilities; and, above all, improvement in the quality of service and effective coordination of all agencies, institutions and departments concerned with inter-related and interdependent aspects of agricultural production.

SUB-COMMITTEE

The Council decided to set up Sub-Committees for Agriculture and Irrigation; Industries, Power and Transport; Social Services; Resources and Hill Areas. These Sub-Committees would also look into the needs of the backward areas and the provision of basic amenities. The composition of the Sub-Committees is as follows:

Committee on Resources.

1. Mrs Sucheta Kripalani, Chief Minister, Uttar Pradesh.
2. Mr M. Bhaktavatsalam, Chief Minister, Madras.
3. Mr P. C. Sen, Chief Minister, West Bengal.
4. Mr Mohan Lal Sukhadia, Chief Minister, Rajasthan.
5. Mr Fakhruddin Ali Ahmed, Finance Minister, Assam.
6. Mr S. K. Wankhede, Finance Minister, Maharashtra.

Committee on Industries, Power & Transport.

1. Mr D. P. Mishra, Chief Minister, Madhya Pradesh.
2. Mr Balwantray Mehta, Chief Minister, Gujarat.
3. Mr Ram Kishan, Chief Minister, Punjab.
4. Mr G. M. Sadiq, Prime Minister, Jammu & Kashmir.
5. Mr R. Venkataraman, Industries Minister, Madras.
6. Mr S. G. Barve, Industries & Electricity Minister, Maharashtra.
7. Mr Veerendra Patel, Public Works Minister, Mysore.
8. Mr K. P. Tripathy, Planning Minister, Assam.
9. Mr Saila Kumar Mukherjee, Finance Minister, West Bengal.
10. Mr Girdhari Lal, Irrigation & Power Minister, Uttar Pradesh.
11. Mr M. P. Sinha, Irrigation & Power Minister, Bihar.

Committee on Social Services

1. Mr M. Bhaktavatsalam, Chief Minister, Madras.

2. Mr G. M. Sadiq, Prime Minister, Jammu & Kashmir.
3. Mr Mathuradas Mathur, Planning Minister, Rajasthan.
4. Mr Rabindra Lal Sinha, Education Minister, West Bengal.
5. Mr Hitendrabhai K. Desai, Home Minister, Gujarat.
6. Mrs Yashodhara Dasappa, Social Welfare Minister, Mysore.
7. Mr Sayendra Narain Singh, Education Minister, Bihar.

Committee on Agriculture & Irrigation.

1. Mr V. P. Naik, Chief Minister, Maharashtra.
2. Mr G. Narayana Gouda, Agriculture Minister, Mysore.
3. Mr Darbara Singh, Home & Development Minister, Punjab.
4. Mr S. N. Sinha, Agriculture Minister, Bihar.
5. Mr Arjun Singh, Agriculture Minister, Madhya Pradesh.

Committee on Hill Areas.

1. Mr P. Shilu Ao, Chief Minister, Nagaland.
2. Dr Y. S. Parmar, Chief Minister, Himachal Pradesh.
3. Mr Koireng Singh, Chief Minister, Manipur.
4. Mr S. L. Singh, Chief Minister, Tripura.
5. Mr G. L. Dogra, Finance Minister, Jammu & Kashmir.

IMPROVEMENT OF ADMINISTRATIVE AND TECHNICAL BODIES.

The Council stressed the need for improving the administrative and technical organisations responsible for Plan implementation. There was urgent need for a systematic analysis of the reasons for failures in past Plans and the qualitative changes needed in administration to meet the demands of a bigger Fourth Plan.

The questions relating to the pattern of assistance for States and of certain types of projects being earmarked for full Central assistance were also generally discussed. It was agreed that these would be discussed in a special meeting of the National Development Council, to be convened at an early date.

P. M.'S CONCLUDING REMARKS

In his concluding remarks, the Prime Minister laid special emphasis on raising agricultural production and utilisation of existing resources to the fullest extent for this purpose. The Prime Minister also emphasized the need for improvement of qualitative aspects of existing services in the fields of education and health.

The Prime Minister further indicated that the size of each State Plan should not be unduly large and should bear proportion to the total outlay.

II—Text of Prime Minister's Speech

Following is the text of the Prime Minister's speech:

Friends,

I am happy to welcome you to the 21st meeting of the National Development Council. This is the first meeting of this Council which will not have the guidance of Jawaharlalji. It was his vision that led to the introduction of planning in India and it was his example and advice that inspired many other developing countries. I was, in fact, in Cairo the other day and President Nasser said that he had long talks with the late Prime Minister and it was in pursuance of those talks that he had decided to set up a Planning Board. President Nasser said that he took the idea from Shri Jawaharlal Nehru. As long ago as 1938, soon after popular Governments were formed in the Provinces, when Subash Babu was the Congress President, a National Planning Committee was set up under Jawaharlalji's Chairmanship. It was again he who decided as the first Prime Minister of India to set up the Planning Commission in 1950, and to constitute the National Development Council.

Now he is no longer with us. But the objectives which he had set before the country are there to guide us. This is indeed a heavy burden that falls on our shoulders. I shall, therefore, need the fullest cooperation of this Council if I am to discharge my responsibilities adequately and I would suggest that we should meet at more frequent intervals than in the past, say, every 2 or 3 months, until we have given final shape to our Fourth Five Year Plan.

We have to function in a complicated world. There is the recent Non-Aligned Nations Conference which has emphasised co-existence, peace and disarmament. There is the explosion of the atom bomb by China. There are so many other revolutionary developments. In accordance with our past traditions, we have to remain cool and deal with any situation which comes up with all the resources at our command and with all our might. Undoubtedly Defence has assumed great importance for us. But we do not want to be war-minded. Nor do we want to create a climate of conflict and of cold war. India must fly the flag of peace. At the same time it must safeguard its freedom and maintain its integrity and sovereignty.

I do not want to deal with the world situation as it is today. I have made a reference to this only to emphasise the fact that our

strength even in relation to outside lies in what our real strength is within. In this background the remaining period of the Third Plan and the period of the Fourth Plan assume the highest importance.

We have before us a Memorandum on the Fourth Plan which has been prepared by the Planning Commission. It must be regarded as essentially a first approximation. I shall leave it to the Deputy Chairman of the Planning Commission to dwell upon the issues which need consideration at this stage of our thinking regarding the Fourth Plan. I would, however, like to say that it is the essence of the planning process to seek a balance between the problems of today and the potentialities of the future, between resources and needs, and between the immediate and the ultimate.

There is no doubt that what we achieved specially in our First Plan is something to be proud of. National income rose by 18%, surpassing the plan target of 12%. We started well in the Second Plan but half-way through we ran into serious difficulties regarding foreign exchange and we had to prune many projects which could not be treated as being in the core of the Plan. Nevertheless, with the additional external assistance which we received, we were able to achieve an increase of 21.5% in our national income against the original target of 25%. Taking the decade covered by the first two Plans as a whole, national income increased by 44%, per capita income by 18.5% and per capita consumption by about 16% despite the fact that population had grown by 21.6 per cent.

MID-TERM APPRAISAL

In regard to the Third Plan, the Mid-Term Appraisal which was undertaken last year, revealed that the progress in the first two years had been very slow indeed. Some of the reasons for it were undoubtedly outside our control. But we would be less than honest if we did not face up to the fact that our own performance was, in many respects, poor. Fortunately, in the third and fourth years of the Plan, progress has been somewhat better than in the first two years. But it is not good enough. The growth in national income was 2.6 per cent. in 1961-62, 2.4% in 1962-63 and a little above 4% in 1963-64, while our aim was to have an increase of more than 5% each year.

This sluggishness in our growth obviously calls for a re-doubling of our efforts. If we are lagging behind, we must increase our speed. Unfortunately, the slow rate of growth has left us with less of resources. It has engendered a sense of frustration. Even the shortages and high prices are themselves the result of the slow rate of our progress. How do we overcome these difficulties is the real problem before us. We must, I think, look at the past in order to identify our achievements and failures, and to ascertain the reasons therefor. A realistic and objective

study of this nature will provide the right guidance for the policies to be adopted and for the course of action to be taken in the future.

I would suggest, therefore, that apart from the consideration which the Council would be giving to the Memorandum on the Fourth Plan we should apply our minds to a few specific and concrete problems confronting us. First and foremost there is the problem of increased agricultural production, of procurement of foodgrains and their distribution and of the regular supply of a few other articles of daily necessity. The steps which are proposed to be taken about the latter aspect were discussed in detail with the Chief Ministers yesterday. I would not, therefore, go into further details.

AGRICULTURAL SECTOR

All of us know that our achievements in the agricultural sector have not been up to the mark. What we need now is a programme of concrete action. Such a programme to produce immediate results has to be conceived in terms of the resources and facilities which are available and not in terms of what might be done in ideal conditions or in the distant future. All too often there are complaints about the shortage of fertilizers because we do not produce enough and cannot import enough. But are we making fullest possible use of compost, manure and other indigenously available sources of nutrition for the soil? We are planning, and rightly, many major irrigation projects. But even while these are under construction, are we doing all we can in the field of minor irrigation? Cannot more wells be dug, cannot ponds be deepened, cannot the available waters of irrigation projects already completed be more fully utilised? Surely these are within our reach if we go about our task in a spirit of self-help. We have to make a determined effort to find our requirements from within the country and not always to depend upon imports and foreign materials which we can afford to do without.

CO-ORDINATION AT DISTRICT LEVEL

All too often we think of these things at the national level and the State level, while there is neglect and even confusion at the village level. The farmer has now to deal separately with representatives of different Government agencies each owing allegiance to a Department or Ministry at the headquarters of the State or Central Government. The co-ordinating role which the District Officer used to play in the past has been lost. I would suggest to all the Chief Ministers present here today that they should restore to the District Officer, whether he is known as the Collector or the Deputy Commissioner, the status of a co-ordinator of all governmental activities in the district and confer upon him the responsibility for guiding all the efforts under-

taken on behalf of Government, Central or State. This may well mean splitting up the larger districts into more compact administrative units. This task should be faced as one of urgency. I would like to emphasise this point. Some of the districts, for instance, in Uttar Pradesh, Bihar and West Bengal are very large indeed. It would be advisable for better administration to break up these districts even if it means more expenditure which will be well worthwhile.

This toning up of administration is essential, whether we think of our short-term problems, or of our long-term problems, of agriculture or of industry. Without better administration, control over prices, a more equitable distribution of available supplies and all the other things which we need to impart stability to the economy will be impossible. And again it is only through better administration that our public sector projects can be completed with speed and the private sector too can discharge its responsibilities in the way that it should.

OBJECTIVE OF THE FOURTH PLAN

Even while we concentrate on measures to deal with our current problems and take steps to improve our efficiency and performance in the remaining months of the Third Plan, we cannot but start thinking of the Fourth Plan and the Memorandum prepared by the Planning Commission is the main item of business before us today. What should be the main objective of the Fourth Plan? It must ensure that in spite of unanticipated difficulties in the immediate past, the move towards a better life for the common people maintains its momentum. We have, therefore, to aim at as large a Plan as we can possibly find the necessary resources for. The programme outlined in the Memorandum envisages an outlay in the public sector ranging between Rs 14,500 crores and Rs 15,500 crores against the estimated resources for the public sector of Rs 14,500 crores. Even this order of resources is based on certain assumptions.

MOBILISATION OF RESOURCES

Thus one of the main issues to which the Council should apply its mind today is the task of resource mobilisation. There have been shortfalls in the State sector during the Third Plan. We cannot take such a risk in the Fourth Plan. I say this not to find fault with the State Governments whose contribution to our resources is below the target. I know the States have had difficulties and problems. We must anticipate them so far as the Fourth Plan is concerned and not give in to them when the time comes. The National Development Council may well like to set up a Sub-Committee to consider this important matter in detail, as also of priorities to be accorded.

So far as the rural population is concerned no one likes to add to

the burdens of the farmer. Yet I know he would be willing to pay more if he sees some tangible results before his eyes. Perhaps, one reason why we find it so difficult to secure the co-operation of the farmer in the matter is that we do not establish the kind of visible link which is needed between the contribution which the farmer makes and the benefits that accrue to him. The farmer faces the Government as a collector of revenues through its District Administration. He also sees a number of other people who are building roads, bridges, hospitals and schools, providing fertilisers, seeds and credit. He does not see the link between the two sets of operations. In my opinion, we shall have greater successes in raising additional revenues from the agricultural community if we can give them the orientation and appearance of a betterment levy. Thus, if a new bridge is built and a toll charged for it, the user understands its logic and feels that he is paying for a service and not being taxed. The same logic applies to the other amenities which we provide. Of course, the larger agriculturists can be expected to make larger contributions.

Another matter connected with resources in which we must all make a combined effort is in the earning of foreign exchange. Ever since 1958, the shortage of foreign exchange has been one of the most serious handicaps to our development. One reason why our decisions cannot be quick, why many factories have idle capacity, why machinery which is damaged or broken down cannot be replaced immediately, is the dire shortage of foreign exchange—which has persisted despite the aid that we have received. Foreign exchange continues to be a major matter of concern for our Fourth Plan.

EXPORT DRIVE

It is thus essential that our export drive should do even better. Here again is a subject for which the Centre is responsible in matter of form, but in substance, the effort to increase our exports depends very considerably on the support and co-operation of the State Governments. It has also to be realised that sales tax and other things which are not really meant to affect the export trade are levied in a way which hampers our exports and raises their prices. May I suggest to State Governments that it would be desirable to have a special Cell in the appropriate Department in the States which will pay special attention to exports and give their support and co-operation to measures to increase our earnings of foreign exchange. Perhaps such cells already exist in some of the States.

FLOOD CONTROL

Another matter in which co-operation between States is most essential is in respect of programmes relating to irrigation and flood control. It often happens that steps taken in one State lead to serious difficulties in another. For instance there is the problem

of water-logging which has a vital bearing on agricultural production. We have seen in recent months how vast areas of good agricultural land have been rendered unusable by flood waters which cannot be drained out. The worst position is as we know in Punjab, Delhi and parts of Uttar Pradesh. This is a problem which has to be dealt with on a regional basis and I think it would be desirable to consider the establishment of a special body to study this problem and to make concrete recommendations. I feel certain that if we can deal with this problem effectively, we would have made a substantial contribution towards increased food production.

The more I think of our problems today, the more convinced I am that there is much greater need for coordination and solidarity than is generally realised. The main task of the National Development Council should be to promote thinking on a national plane for the attainment of our national objectives. State Governments must certainly attach the greatest importance to the State Plans. They have to be discussed, however, within the framework of the national Plan and I feel that discussion at this meeting should be mainly on the national Plan and the national effort needed to sustain it.

I have deliberately refrained from going into the details of the Memorandum of Planning Commission as placed before us. This is because the Memorandum speaks for itself and I should like to leave it to the Deputy Chairman, who is a distinguished leader of an able team, to draw the Council's attention to the salient points of the Memorandum. The Planning Commission is the brain-trust of our development. It is not a part of the Central Government and we look to it for taking an objective view of our economic problems and how we should meet them. These problems have become more difficult and more complex.

NATIONAL PLANNING COUNCIL

Both the Deputy Chairman of the Planning Commission and I have, therefore, felt that it would be an advantage if more experts could be associated with the preparation of the Fourth Plan. Unfortunately, the number of top-level experts in the country is limited and it is not easy for them to give up the important tasks on which they are already engaged in order to work on whole-time basis on the formulation of our Plan. I have, therefore, in consultation with the Planning Commission, come to the conclusion that it would be most useful if we were to constitute an ad hoc body consisting of scientists, engineers, economists and other experts who could help the Planning Commission on a part-time basis. The intention is not to have yet another advisory body, nor a body which will meet for a day or two at long intervals, look at some memoranda,

offer its comments and disperse, but to get people to work on the Plan, spending a week to a fortnight in Delhi at a stretch and giving their best to our national effort. It is proposed to call this body as "The National Planning Council" to consist of 15 to 20 people who are prepared to work in the manner that I have just indicated. I would also like to inform you that the Deputy Chairman of the Planning Commission would be the Chairman of the National Planning Council.

What I should like to see in our future planning is indeed a complete, self-contained and well co-ordinated plan for industry and another one for agriculture, each closely bringing out the employment aspect, which to my mind deserves deeper consideration. On the industrial side the detail of each major project should be worked out. Its time-table of implementation should be prepared fully and we should know what building materials, what machinery and what raw materials would be needed and when. In the past, the ultimate cost of a project has tended to be tremendously different from the original estimates. Some variations are understandable and inevitable, but we cannot allow the kind of differences that have frequently been known in our previous Plans. Similarly, we should have estimates of the cost of the ultimate product and the profits which we expect to make. If this task has been performed realistically and thoroughly, it will be much easier to keep a watch on progress and performance and to find out if there is any shortfall, where and on whom the responsibility lies.

Such an approach is necessary not merely for industry, but also for agriculture. It is not enough to talk in terms of the money to be spent on agriculture, or even of the money to be spent on irrigation, seeds and fertilisers. We have to adopt a project approach towards agriculture also. We should know for each such project what supplies, what facilities are needed and also have an estimate of what extra production we hope to get thereby.

SOCIALISM AS OBJECTIVE

I should like to say here a word about the relative roles of the private sector and the public sector. Our objective, as you all know, is socialism. This does mean an immense growth of the public sector. In regard to the private sector each Plan sets out what the private sector will do and what the public sector will do. Failure in either sector affects the Plan and creates imbalances in the economy. We have, therefore, to ensure that the targets allotted to the private sector, no less than those allotted to the public sector, in our Plan are fulfilled. The private sector has had and will continue to have a role to play in our expanding economy.

The Industrial Policy Resolution has already brought out that the two sectors cannot work in

water-tight compartments. In the context of rising prices and the difficulties which the common man has to face about basic consumer goods, it would be necessary that some of the consumer goods industries also are developed in the public sector. It seems to me that Government should also set up textile mills, sugar factories and plants for the manufacture of cement, drugs and medicines. Only then can we be assured that the shortages which we have been experiencing in the recent past will not become chronic. Such industries also will give us better profits and a scope for larger employment.

HEAVY INDUSTRIES

Heavy Industries will, of course, continue to be the backbone of our economic development. Steel and machinery must be produced in larger quantities. Care has, of course, to be taken, as I have had occasion to emphasise in the past, that we secure the utmost out of the investment which we make in heavy industry in the shortest possible time. Planning of heavy industries for the Fourth Plan has to be on the basis of performance. Only then will planning become more real and more accurate.

I shall not take up more of your time by dwelling upon other aspects of our future planning and development. The Deputy Chairman will do that. I have deliberately confined myself to certain practical issues which seem to me to be of paramount importance. They are issues for us to face here and now. Unless we can stabilize prices, increase production and improve our administration, the most careful Plan will not help us. We who claim to be responsible to the people have to be responsive to the people. It is up to us to restore to them a sense of dignity and hope. Unless we are able to do this in the remaining year and a half of this Plan, our Fourth Plan may not succeed, no matter what resources we mobilise.

The Fourth Plan presents a challenge to the nation. The challenge can only be met if we are prepared to undertake the many tasks which confront us with a truly national approach. I am quite sure that the National Development Council will give the right lead to the country and the nation.

*

III—Text of Deputy Chairman's Speech

The following is the text of the speech made by Mr Asoka Mehta, Deputy Chairman, Planning Commission, at the 21st meeting of the National Development Council.

Mr Chairman, Sir, after the comprehensive and illuminating address by the Prime Minister there is very little that needs to be

said. On behalf of the Planning Commission, we have placed before the National Development Council a Memorandum which offers the outline of the Fourth Plan.

We hope that as a result of the deliberations of this Council, on this occasion and at the future meetings, this Outline will be filled in depth, detail and design.

BIG PLAN NECESSARY

Sir, we are inviting the nation to launch upon a big plan because we feel that this big plan is necessary. At the same time, we realise that a Plan of this size and dimension is also not without some hazards. Just now, we have been experiencing a great amount of difficulties. In the past two or three years we have, as it were, stumbled upon the roughest patch in our developmental efforts. To think in terms of the efforts, of the kind and of the size that we are indicating, requires a considerable amount of justification. I would only say that while we should not ignore difficulties that are facing us, we should also not underrate the growth that has been built up.

There is a certain delay, a certain time-lag in the achievements that are to be accomplished; but it is our hope, our confidence, that our economy has already started picking up. In the current year the performance has been better and it will be our duty and our endeavour to maintain it and to carry it forward. Sir, as you have pointed out in the concluding part of your address, it is in the next 18 months that we have to create a situation which would enable us and entitle us to embark upon this big effort and big achievements.

The Fourth Plan is almost double the size of the Third Plan, or it is as large as the first three Plans put together. The comprehensive Memorandum provides some of the indications of the expansion and the diversification of our economy and our social structure that is sought to be achieved during the Fourth Plan.

Sir, as an illustration I would like to say that the targets we would like to realise, say, in power production, modest as they are, are ten times what we tried to attempt and what we have achieved during the first two plans. This gives some idea of the size of the effort for the tremendous activation of our economy that we are anxious to realise.

HIGHEST ATTENTION TO AGRICULTURE

The Plan has been so conceived that the present needs of the people may be attended to the maximum extent possible. Naturally, the highest attention is being given to agriculture.

The total outlay in agriculture, including irrigation, both in public

and private sectors, comes to over Rs 4,000 crores, and it is hoped that it will be possible for us not only to mobilise the resources and absorb these resources for most productive ends of agriculture but also, through this process, bring about a fundamental transformation in the life of our people and in our rural areas.

In the same way, we have tried to provide adequately for expansion of consumer goods. In various industries, and in small scale as well as in large and organised sectors, efforts had been made to see that consumer goods would be available in ample measure.

Again, the future of our people, their capacity to respond to the various challenges, ultimately depends upon the kind of services that we offer to them in health, education and housing. There, again, you will notice that the whole structure of the Plan has been considerably altered from what we have done in the past. A much larger outlay, a much larger and greater investment, have been indicated for these essential nation-building activities to help build up the human resources without which we cannot fully utilise our material resources.

But even if such an attempt is made, and even if this big Plan is put through successfully, we shall not be reaching our objectives by 1975, neither in employment, nor in raising the level of living, nor in achieving a self-sustaining growth in economy, nor even in providing adequately the foodgrains. That is the reason why this outlay is the minimum that we have put forward for the Fourth Plan.

FOREIGN EXCHANGE

While this is the minimum effort, we have to realise that even this effort has to organise itself in the face of many serious handicaps. You have already drawn our attention to the very difficult foreign exchange situation. You have also, Sir, understood the overwhelming needs of attending to the requirements of our expansion. We have envisaged a net outflow of foreign assistance for the Fourth Plan which we are likely to get during the Third Plan.

A number of consequences will flow from this. First, this has been a serious limiting factor in the programmes and projects of development. Take, for instance, power. We can argue that there is need for more power production. The reason why one has to be careful about outlay that can be indicated for power is that about 20 per cent of foreign investment is envisaged in this field. There is a certain limitation which we cannot overcome. There is another aspect to which I would like to draw the attention of the National Development Council. In the Third Plan, the rate of investment will

be about 16 per cent of the national income in the fifth year of the Third Plan, while the rate of savings will be about 15 per cent of the national income, meaning thereby that 3 per cent of the investment that we are making is a saving as a result of the assistance that has been offered to us by friendly countries.

In the next Plan the investment which will be made available in the form of foreign assistance will be only a little over 1 per cent of the national income, meaning thereby that there will be a gap; and the gap will have to be filled up by our own internal resources or internal effort. The size of the Fourth Plan is twice that of the Third Plan. But still the foreign assistance or exchange component of it is kept where it was in the Third Plan. Therefore, the resources we have to mobilise from our own people will have to be larger, not only absolutely but relatively larger than in the Third Plan. Unless this fact is recognised, we shall get into serious difficulties.

PUBLIC INVESTMENT

Sir, the resources in sight are anything between Rs 10,500 and Rs 11,500 crores, while we have suggested a public sector investment outlay of Rs 15,500 crores. But we feel that, by better planning and better effort we may be able to perhaps raise resources. But what is more important is that there is still a gap of anything between Rs 2,500 to Rs 3,000 crores if we accept the lower level of outlay and Rs 1,000 crores more if upper level investment is taken into account.

This gap has to be filled up. If not, it is not going to be by foreign assistance. In the past we used to fill this gap by foreign assistance. But this time it has to be filled by ourselves.

We need not consider this to be an impossible task. Even in the Third Plan, with a smaller base of economy, with slower rate of growth, with many difficulties that we had to encounter, we had been able to raise even larger resources than we are contemplating for the next Plan. The States themselves promised Rs 616 crores in the III Plan and, I think, by now Rs 570 crores are likely to be raised. There are still two more budgets to come and I have no doubt that not only what was promised will be realised but perhaps more will also be achieved.

There is no reason why, while we are generating resources on the one side, we should not be able to mobilise resources on the other. The whole effort, the whole rationale, behind outlays of the IV plan that has been offered, is to activate every section of the economy, to blast the stagnation that is still throttling our country. With the dynamism of our people to move fast, I see no reason why it should not be possible for us

simultaneously to generate resources as well as to mobilise them.

PLAN DISCIPLINES

There can be no deficit financing in the next Plan. Not only there will be no deficit financing but as you have rightly emphasised, care is to be taken to see that both in drawing up and in implementation inflationary potential is not released.

If some of the schemes which are to produce goods most of the people need, are not attended to, and the other schemes with long periods of gestation are attended to, it will create an imbalance. The larger the plan the greater is the danger of imbalance. Therefore the whole question of financial discipline, administrative discipline and social discipline become crucial to the Plan. This is necessary because the needs of the people, the needs of the economy require it. We cannot remain where we are. Threats of stagnation are greater than the risks of moving forward. We must therefore be able to generate the necessary discipline in financial, administrative and social matter. As the Minister for Food and Agriculture has been pointing out—that has been his main contribution—the whole approach, indeed the price policy, etc. the various new measures that he is taking are ultimately designed to bring about basic transformation in the scale and style of life and work in agriculture. It is the wish of our people—that is one of the changes that has taken place—and our agriculturists are not what they were in the past. There is a new dynamism, a new confidence, a new capacity to respond. If that is so, the administration has also to change—a new style of work. As the Prime Minister has pointed out, the total planning, the project operation, evaluation, all this, have become the crucial part of our plan-making and plan-implementation.

BACKWARD REGIONS

There are backward regions and people. In drawing up the plan, we shall have to take care to see that their needs and requirements are being looked after. That is why, as the Prime Minister has pointed out, a number of meetings will have to be held of the NDC, so that we are able to form various committees and sub-committees. We may then be able to study the problems and prepare, as you, Sir, pointed out, most detailed, most thoroughly worked out plans which will take into account various social objectives.

There has been a lag, a hiatus between fulfilment of our objectives and strategy we have followed so far. Our effort is that the strategy should be such that it will move closer to the objectives. There will be some difficulty. Some lapses which cannot all be eliminated, but difficulties and

lapses have to be reduced to the minimum.

NEW SOURCES OF REVENUES

The financial discipline needed will be that non-plan development expenditure should not be allowed to go up beyond 3½ per cent per year and the general administrative expenditure beyond 5 per cent. I do not dilate upon the need to increase the earnings from public enterprises as well as better collection and also identification of new sources of revenues.

I am grateful to you, Sir, for suggesting that NDC should set up a special committee for this purpose so that it may go into this fully. All that I would appeal and request the Chief Ministers is that the next budget may provide a useful opportunity to raise some more resources. If anything is postponed now, much larger amount will have to be raised.

SCARCE COMMODITIES

As regards social discipline, some of them have been touched upon by the Prime Minister in his speech.

In the concluding observations, it will be noticed that what has been suggested is that the public sector will have to be extended both in internal and external trade. It has been suggested that the State will have to participate in the consumer goods industry. It has been indicated that there are elements in the economy in which constant appreciation in the value has taken place. There are scarce commodities which have recorded growth and development because of the social development that is taking place, and with considerable appreciation in the value. It has been suggested that these accretions should be availed of for the community as a whole and should not be allowed to remain in the hands of any individual, at least to the extent that is possible.

REDUCING INEQUALITIES

The concluding observations suggested that if socialism is our objective, it has to be revealed in the economy. We shall have to come forward with concrete suggestions about how the increasing differences in wealth and income can be narrowed. If that has to be done, it is obvious that greater and greater responsibility has to be undertaken by the administration. If backward areas are to be developed, if backward people are to be supported and helped to move forward, if social inequities have to be ended, if disparities are to be reduced sizeably, if in areas where considerable profits are made are to be undertaken by the State, it is obvious that greater responsibility should fall on the administration. Also a considerable share of new responsibilities has to be undertaken by public organisations.

We have been talking about providing essential civil supplies at proper and reasonable prices. In order to do that, the Planning Commission has suggested to the Government and it has been agreed to, that there will have to be considerable

expansion in consumer co-operative movement. In various directions like this, the co-operative movement and other movements will have to undertake considerable organisational responsibility.

This task of both galvanising our economy and altering the social structure to our needs are the two things which have to be attempted simultaneously, if the objectives that we have placed before us are to be fulfilled. If that has to be done, it is obvious that the administration has to undertake far more responsibilities in terms of generation of resources, in terms of mobilisation of resources, in terms of changing the structure of the economy, and in terms of changing the social structure. Tremendously greater and newer responsibilities have to be undertaken by the administration. Therefore, I would conclude by saying that we are inviting you to accept to fill up an outline of a plan which, as I said, is all the more bigger than the previous plans. If that has to be done, we should be aware of the task that is before us and the challenge that we are facing, and I have no doubt that your guidance and inspiration will prove equal to the task.

★

IV—Text of Finance Minister's Speech

The following is the text of the speech made by Mr T. T. Krishnamachari, Union Finance Minister, at the 21st meeting of the National Development Council:

I think, Sir, after you have dealt with the general objectives of the Fourth Plan and indicated the types of advance action that have to be taken during the period between now and the Fourth Plan and the exhaustive analysis of our objectives regarding the Fourth Plan given by the Deputy Chairman, I have now only one thing to say and that is to draw the attention of the Chief Ministers to the resources position. We tried to stretch the resources position to an extent almost co-terminus with elasticity. We thought first of a Rs 18,000 crore plan. Then came the question of current outlay, which certainly could not be less than Rs 2,500 crores. It will be found that the objectives that have been outlined are to be reached before 1975 cannot be reached unless the growth potential is somewhere between 6 and 7 per cent. And resources position if it is crystallised at Rs 18,000 crores plus Rs 2,500 crores current outlay will not help us to achieve that amount of growth. To look for additional resources now, raise the resources position to Rs 18,000 crores with the proviso that if some of the schemes we undertake in the early years of the Plan or rather with the advance action we would take next year and their implementation awaiting advance

action in the first two years of the Plan, may be the economy will generate the resources to enable us to undertake and add Rs 1,000 crores to the resources of the Plan making it to Rs 22,500 crores.

There are a number of imponderables in making these resources. The small savings which we have estimated at a much higher level must be generated. The increase in the collection by the Central Government and the State Government of taxes must have a progression. Assuming that the present levels remain, the foreign loans that we expect by way of help in regard to foreign exchange, as also addition to our resources, more than Rs 2,500 crores must be found and the burden that will be cast on us during the Fourth Plan of repayment of Rs 1,200 crores by way of principal and interest to foreign countries must also be provided in some other way.

And, over and above all these imponderables, we have taken that there will be Rs 3,000 crores of additional resources. They will be produced to make up Rs 19,000 crores of investment. It is on this particular matter that I seek your help and guidance.

The Deputy Chairman pointed out that in the past two Plans the effort in raising resources by the Centre has been much in excess of what has been planned. It is good so far as it goes.

On my part with your guidance and with your help and moral support I am prepared to go as far as I can. At the same time, it would not be unfair if I suggest to you that you should take a portion of the responsibility. I agree that the resources position inside both for you and me—both for States and Union at the present moment—do not seem to be insight. They do not seem to exist. But may be we can rationalise our tax structure and so far as I am concerned, I know that the evasion in regard to Central tax is very great and the recent attempts that we have made, however ineffectual it might seem only indicate the range of evasion.

In the question of stepping up of resources, I would need yet your help—more than your help your fullest cooperation. At the same time, there is an area, a sector both in regard to the size and in regard to the nature of the collection in respect of sales tax. A large degree of evasion may be. When they try to collect the sales tax the officers take crude methods and we become unpopular. This is a matter we have to review today. The position is not a quarrel between the State and Central Government and is a question of division of responsibility which both of us have to exercise.

The responsibility is onerous. It is a question of finding how best to adjust the position.

In the last Finance Ministers' Conference I had suggested to my colleagues in the States whether a single income tax covering both agricultural and non-agricultural income and would not be better, assuring the States the benefit of the increase from agricultural tax. In fact with the land legislation as it is today and the possibility of everybody who has an urban has also an agricultural income, that seems to be a logical way of tapping the excess agricultural income that goes into the hands of the people. Everything has to be investigated.

We have to think of a few items of sales tax and converting into excise provided the sector gives growth element. I do not want to take your responsibility and saddle myself with that responsibility. Many people would like it. I think it is wrong to take away the area of responsibility for the State in a large manner. The other thing which I feel as a Central tax gatherer in an area where evasion is high, high rates multiply. Lower rates will help.

It is worthwhile thinking whether these high rates of taxes except in certain commodities which could be turned into excise is worthwhile. We have to examine and I am merely illustrating these ideas not so much as to meeting and giving you an idea of what you should do but to tell you that this question of resource mobilisation for the Fourth Plan—increasing the resources that are available from Rs 19,000 crores to a little more is a matter which should be of a cooperative and common effort between us.

But, believe me, I cannot meet the resource of Rs. 3,000 crores. There are non-plan expenditures, in the Central Government which are bound to rise, for instance, on unforeseen contingencies, for meeting which I used to take a small percentage of the Plan expenditure. Chief Ministers want additional help. So therefore I have to think of doing my part in regard to the Rs. 3,000 crores but also look for mobilisation of resources for the non-plan expenditure which are now unforeseen but which are bound to come. The weather condition will not go on operating in the same way in a certain way as it has been all along. So I want every state to make an effort in this direction.

There is one more point before I close my address. It is in regard to the central contribution to the state finance. I have always hoped that the Centre is a spirit to the body, the States, and it cannot operate without the help of the States, because the spirit cannot operate alone. The idea of differentiation is not correct.

In the First Plan, I find that the Central contribution to State plans effort was about 30 per cent, and in the Second plan, it is equal, i.e., half and half. In the third

plan, it varies from 65 to 80 per cent according to the States and sometimes it is little more because States who promised raising resources could not do for various good and valid reasons.

Now, what should we do in the fourth plan. My friend, Mr. Nijalingappa, suggests—I think very good—that Centre should go up to 80 per cent of the State plans? It is a question for co-operation. Now, I would suggest, I tell you, it will be wrong for you to depend upon the Centre for everything you want to do.

I think, what we should do is this: The centre should take up some specific responsibilities. The Centre cannot operate the States' spheres but specific responsibility in regard to some major items like power, even transport if you want, may be, some hydraulic schemes and may be even industrial ventures. The advantage of a direct responsibility is this. I have not got the figure for the current year but up to last year, the States have taken loans up to Rs. 3,000 and odd crores and everytime you have to pay the interest. The interest is adjusted according to the nature of loan like loan for social overheads, loan for industry and so on.

But even so, there is the current responsibility for adding interest to the principal and adding interest on the interest. It might be an advantage if the Centre keeps the account and keeps the interest as a Centre's liability. And, ultimately, the State has got the benefit of it; and if the Centre gets the benefit, the State gets it in turn.

If we do that, then we go over to the old system of saying: whatever you could get, we will also put out. That will be a thing to consider when you consider financial provisions of the plan.

But I think, as the Deputy Chairman rightly pointed out, this plan is in size, in terms of monetary effect, more than the aggregate of the three plans. The investment potential has got to be more than the aggregate of the three plans, and the need that is generated that the Fifth Plan will have to be much bigger one.

And it is right that the Prime Minister suggested that there should be more frequent meetings. I must say this that I am in a happy position, and if my visit is welcomed by the Chief Ministers, I shall, if it is possible, try to spend at least 25 weekends in the States to discuss with them and

their colleagues their problems. We have to prepare a graph for a project which we take up and watch the implementation.

Coming back to the burden of my talk, I will say that it represents two problems. The resource mobilisation in regard to the Rs. 3,000 crores must be a joint effort and your contribution and help and guidance are very necessary for this purpose. Secondly, we should also investigate in regard to the outlay on the plan as to how much could be definitely earmarked as a Central responsibility, which will mean interest, but interest on the investment for which the Centre will be responsible to see that it is adequately serviced and progressed, and how much will be the matching contribution.

It is not right for us to think of looking perhaps at the social overheads with a state of indifference because the expenditure on these social overheads to a large extent is an integral part of the plan.

Take for example, technical education. If you say that we want technical education to be more but if there is no fundamental education, technical education will be a failure. And if you say I look after water supply that is

a matter of political agitation, if you do not have malaria eradication and small-pox eradication and looking after these seasonal diseases, well, I am afraid, water will not solve your problem. Other things will come.

We have not merely to train technical people, we have got to have enormous number of classes. But I am happy to hear from my colleague, the Deputy Chairman, that, by and large, most of the States are thinking of family planning in a vigorous way. We should do something about it.

If we save adequate resources, it is better than whatever you produce is not swallowed up.

But I want you to think in terms of what parts of this plan that you will choose for direct Central assistance, positive Central assistance we should have a matching basis. These things cannot be determined in a meeting like this. We will have to meet again and meet in your place. I am suggesting to the Deputy Chairman that, instead of the old system of your coming here, we should go there. I will suggest that the Planning Commission should be put on the wheel for some part of the year and should go there, meet you and meet your officials.

116. LOWER CIRCULAR ROAD, CALCUTTA-14.

The story of the growth of NRM is a search for progress within a growing national economy. Conceived primarily, to meet the contemporary needs of the nation in Rubber, NRM programmes include the manufacture of Cycle Tyres and Tubes and a versatile range of Industrial and Mechanical Rubber Products. Some of the latter are : Hoses of all types, Industrial 'V' Belts, Railway Rubber Fittings, Fan Belts, Transmission and Conveyor Belting.

On December 15th 1946, **NATIONAL RUBBER MANUFACTURERS LIMITED** was incorporated. Today, the House of NRM has grown into *the largest single unit in India*, manufacturing Industrial and Mechanical Rubber products.

The story of the growth of NRM is a search for progress within a growing national economy. Conceived primarily, to meet the contemporary needs of the nation in Rubber, NRM programmes include the manufacture of Cycle Tyres and Tubes and a versatile range of Industrial and Mechanical Rubber Products. Some of the latter are : Hoses of all types, Industrial 'V' Belts, Railway Rubber Fittings, Fan Belts, Transmission and Conveyor Belting.

Recently, NRM sponsored INCHEK TYRES LIMITED—the first wholly Indian-owned Automobile Tyre Company. Manufactured specially to suit Indian road and climatic conditions, INCHEK TYRES have received widespread consumer acceptance.

Today, the scope of NRM activities has widened. With the implementation of its *second major expansion programme*, the House of NRM hopes to adequately supply the growing demand for its products in many foreign markets, and at the same time earn the country vital foreign exchange.

Equities Listless in October

Except for occasional steadiness, stock market sentiment during October remained depressed with equity prices marked down on balance appreciably by close. The main reason for the lack of interest was the consensus that unless some worth while tax reliefs were forthcoming, there would not be a revival of the capital market. At one time however it

was believed that the Finance Minister would favourably consider some of the proposals put forward by a delegation of the Federation of Indian Chambers of Commerce and Industry but hopes in this regard received a setback following the speech of the Managing Director of the International Monetary Fund in New Delhi to the effect that there was great scope for increasing taxation in India. Such an opinion from an eminent person coupled with his warning against the dangers of deficit financing was interpreted to mean that there would be further doses of direct taxation. It is not surprising that a reference to further taxation engenders a depressed mood. For, the level of taxation in India is already very high and thanks to the last two Central Budgets, savings in the hands of the individual have almost disappeared. With individuals in no position to spare funds for deployment in equities, the capital market is in the del-

drums. That is why it has been urged by all knowledgeable persons that for a revival of the capital market, it is essential that tax burden on the individual is reduced while at the time investment in equities is made attractive by the abolition of such taxes as the dividend tax.

After the long Pujā vacation in Calcutta, the stock markets developed a distinct weakness presumably induced by fresh developments both within the country and abroad. Among international events were the sudden retirement of Khrushchev and the explosion of an atom bomb by China. Renewed apprehensions about increased taxation during the Fourth Plan period was also responsible for the easier trend which prevailed towards the close of the month. The Government's approval of a Rs 21,500 crore investment in the Fourth Plan period, failed to enthuse operators because it was believed that the economy already strained by the heavy taxation imposed during the current plan would not be able to bear any further burden. It was pointed out that the aim of the Fourth Plan should be to consolidate the gains already achieved and in this view the proper thing to do was to ensure that the in-

dustrial capacity so far created was utilised in full. While fears of additional taxation was worrying operators, the outlook for the private sector as a whole was rendered obscure by some of the statements made by both the Prime Minister and the Finance Minister. Speaking at the National Development Council, Mr Lal Bahadur Shastri had suggested the expansion of the public sector to include certain basic consumer goods industries. The proposal marks a departure from what is generally believed to be accepted industrial policy. It has been generally assumed that the public sector will interest itself only with basic industries which will be beyond the capacity of the private sector to undertake. Moreover, there appears to be no particular advantage in encroaching on consumer industries; for as yet public sector undertakings have not proved their ability either in the direction of increasing production or reducing cost. Mr T T. Krishnamachari's indication that managing agencies would be gradually terminated was also not conducive to an expansion of business on the stock exchanges.

Sectionwise, jute shares were for a time selectively supported presumably on the belief that profits

would improve in view of the continued disposition to the Pakistan people owing on account of labour trouble. In subsequent trading however sentiment turned cautious on the apprehension that consequent to the imposition of a 15 per cent surcharge on imports by the British Government, jute goods exports to the United Kingdom would suffer a diminution. Moreover, there were also indications that overseas consumers would increasingly turn to substitutes if jute goods prices continued to scale higher levels. Coal shares were listless in the absence of demand. Tea shares were a dull market reflecting the disappointment over lower prices in the auctions for the commodity.

Textile issues were generally marked down, as doubts were expressed in some quarters whether the introduction of partial decontrol on cloth would improve the profitability of the mills. Sugar shares were depressed. It was felt that the piecemeal measures, announced by the Government to provide incentives for early crushing and greater production, might not help the industry much. In the Engineering group, price movements were mostly influenced by the speculative buying in Indian firms which, in turn, were subjected to selling pressure. The Miscellaneous section was demoralised.

(a) After transferring Rs 204,000 from General Reserve.
(b) After transferring Rs 4,200,000 from General Reserve.
(c) It is proposed to capitalise Rs 2,125,300 from General Reserve and issue Bonus shares.
(d) After transferring Rs 60,000 from General Reserve.
(e) It is proposed to capitalise a sum of Rs 585,000 in equity shares of Rs 10 and issue one bonus share for every ten shares held.
(f) After transferring Rs 665,000 from General Reserve Rs 235,000 from Cotton Fluctuation Reserve, writing back Rs 11,688 being sundry credit balances and including premium on surrender of Cotton Import quota.
(g) After writing back Rs 645,151 being excess provision in previous years.
(h) After transferring Rs 812,716 from Reserve for Depreciation of Assets Rs 682,079 from Reserve for Development Rebate, Rs 60,000 from General Reserve and including Rs 951,391 being profit of sale of Mills and Machinery and Rs 178,872 being sundries.

(i) After transferring Rs 841,000 from General Reserve.
(j) After transferring Rs 450,000 from Dividend Equalisation Reserve.
(k) After transferring Rs 204,000 from General Reserve and Rs 330,129 being excess provision of statutory Development Rebate Reserve.
(l) After transferring Rs 1,425,000 from General Reserve.
(m) After writing back Rs 750,000 from Reserve for Rehabilitation and writing back Rs 7,927 being excess of Excise Duty and Rs 6,946 being excess provision for rates and taxes.
(n) After transferring Rs 425,000 from General Reserve and writing back Rs 790,235 being provision for Bonus for 1958.
(o) After transferring Rs 500,000 from Reserve for taxation and Rs 201,988 from General Reserve.
(p) After transferring Rs 1,279,165 from General Reserve and Rs 648,019 from Renewal Reserve.

(q) Includes Rs 947,178 being depreciation adjustment in respect of additional depreciation provided in previous year's and Rs 3,100 being excess of Secretaries Remuneration.
(r) After transferring Rs 783,834 Rebate Reserve and Rs 650,000 from General Reserve.
(s) After transferring Rs 200,000 from General Reserve.
(t) After transferring Rs 306,835 from Development Rebate Reserve.
(u) After transferring Rs 1,734,803 from Development Rebate Reserve.
(v) After transferring Rs 113,089 from General Reserve.
(w) After transferring Rs 300,000 from General Reserve.
(x) After transferring Rs 450,000 from Dividend Equalisation Reserve.

CARBORUNDUM UNIVERSAL

COATED ABRASIVE SLEEVES

Mounted on expandable mandrels and used on high speed pneumatic or electric grinders, these coated abrasive sleeves have countless uses. They are virtually indispensable for grinding shoulders of moulds, dies, etc. The abrasive is available in sizes ranging from 1/2" to 4 1/2" diameter, and in various widths as required.

An increase in jute supplies and exports has led to an optimistic estimate of India's own prospects by the Food & Agricultural Organisation. While cotton faces a challenge from many man-made fibres, the substitutes for jute fabrics are not making much headway, though cotton bags are well established as a packing material along with paper. The downward curve of jute production since 1961 however, seems, significant. An excess of manufacturing capacity in India is still a handicap for the export trade and jute mills are naturally looking beyond conventional products or traditional markets. New mills set up in Burma or Thailand do not promise an early expansion of export trade and the fluctuations in prices of hessian and sacking are of little help to export. Access to markets in Eastern Europe may perhaps sustain the belief that Indian jute mills' prospects are not damaged by the ECM tariffs which will help Belgian and other mills to sell more within Europe in the future. Price-support programmes for raw jute can hardly improve the manufacturers' prospects and the tendency of big mills to diversify production by undertaking new cement, chemical and other ventures is a sign that prosperity cannot rest on jute products including carpet backing. If polythene-lined bags offer scope for increased sales, the original consideration that jute manufacturers depend mainly on the export markets can hardly be overlooked. An early increase in foodgrain output may give some relief to the industry, but it is well not to place excessive reliance on the growth of domestic consumption.

Anticipations of extra demand from Australia or Japan are neutralised by the rise of the industry in East Pakistan which commands certain advantages. Post war statistics relating to production confirm the view that more jute is available after the partition of India, but the interests of grower and manufacturer do not necessarily coincide. Prosperity which returned to the mills in 1962-63 does not appear permanent and the trend of US imports is still watched with anxiety, because competition from sisal and hemp appears to increase. The Far East excluding China takes more jute but that cannot be regarded as quite satisfactory because a decline in volume over recent years is a feature of international trade.

If a recovery in the export trade after the decline in 1963 is expected, it is chiefly because the higher output of manufactures is expected to raise the volume of exports. To assume too readily that changes in stocks will help to enlarge overseas trade in jute or jute manufactures is to ignore the more important factor that jute is a vulnerable industry on many counts and the mills are definitely concerned over their future—not merely in respect of raw material supplies which have not risen according to the Plan estimates.

The importance of export promotion in respect of jute fabrics has been repeatedly emphasised by many trade missions that find bulk storage facilities increasing in countries like Australia and Argentina. State trading in foodgrains may inject a new disturbing element, and even if grain imports from abroad are enlarged there can be no stable demand for jute fabrics because they are semi-durable to some extent. Unlike sugar, coffee or other tropical products there is no international agreement covering the supplies and prices of jute manufactures and it is possible for Pakistan to plead that its own infant industry must be encouraged by foreign customers. Whether price-support for grains sold by farmers will help to keep up domestic prices for hessian and sacking is an issue of minor importance as compared with the nature and volume of foreign demand. The regulation of jute prices and wages in the mills stabilises costs at a high level and the Indian jute industry is therefore subject to the pressure of rising costs like the cotton mills whose future appears dim in view of the UK tariff surcharge levied as a crisis measure.

The maintenance of competitive capacity by the mills in Bihar or UP appears doubtful and yet no rationalisation scheme has been prepared for the jute mills. The example of the Lancashire cotton industry has not been adopted or even suggested, though the modernisation of mill equipment by borrowing on a large scale has been carried out over a decade. The elimination of weak units is probably difficult to recommend but the recovery of profit-earning capacity in relation to the capital invested (not the nominal capital) is required, if only to keep up exports and to help jute-growers who may be disposed to reduce acreage for some compelling reasons. If there is no artificial substitute for jute, as there is now for rubber, it is well to point out that hard fibres from Africa represent a rival hard to overcome.

The FAO's comprehensive report on the state of agriculture in 1964 devotes little attention to jute, while it says much about

synthetic fibres that compete with cotton, wool and silk. The indices of agricultural production in Europe may be said to favour a larger offtake of jute manufactures but the question is whether the Indian mill industry will be able to take advantage of any new opportunities. On this point some scepticism is permissible, not only because this year has shown that Indian agriculture lags far behind industry, but because the jute-grower exposed to high food prices may expect a higher price without due regard to the mill industry's vulnerability to competition. In a sense, jute mills are like oil mills crushing oilseeds or making vegetable ghee. But they happen also to be dependent on external markets and cost inflation therefore poses a real threat to the profitable operation of jute mills.

The mills' capacity for adjusting themselves to altered circumstances rests not on the experience of the past but over positive guidance from the Indian Jute Mills Association. The removal of overage or redundant spindles or the scrapping of looms may appear a more desirable objective to many than the promotion of direct export of fabrics by the mills. The Government too has a specific interest in the prosperity of the industry that contributes so much to foreign exchange receipts. In the light of a forecast that the country's export trade may not shape very well in the second half of 1963/64 it is well to note that the process of closing uneconomic units must be resorted to again. What was laid down in the development programme under the Third Plan may be less urgent or relevant in spite of increased jute supplies. And the level of cost cannot be trimmed by quality control or export inspection. The present mistrust of jute shares including Bally or Hukumchand Jute is derived largely from the changing fortunes of an old and successful industry whose past seems brighter than its future.

Salem Steel—IV

WITH Neyveli going into production and its capacity to add to the output of lignite and electric power since established, the official attitude of shelving the Salem Steel indefinitely lost its essential rationale. Salem Steel was no longer a vague dream which could be indulged in by some and treated with scorn by others. All the preliminary exploration had been done over a long period. The ores had been analysed. Different methods of preparing the ore with its low content of iron had been examined. Pilot plants had been set up and their experience carefully noted. The stage was therefore set for a project report and its preparation was duly entrusted to Messrs Dastur and Co. It is not too much to say, though it may be anticipating what is to follow, that the Consultants have, as a result of their labours, given an altogether new complexion to the economics of Salem Steel. They have prepared their report on the basis of a detailed study of an integrated steel works in the Neyveli—Salem region located near the Kanjamalai site near Salem and using the raw materials available within the region.

Although the Salem plant will primarily meet the regional requirements of plain carbon steels, the market and product—mix have to be determined in the light of the all-India picture. Over the past decade, consumption of finished steel in India has grown three fold

from 2.1 million tons in 1954 to 6.3 million tons in 1963. Eastern India (comprising the eastern and central zones of the Iron and Steel Control classification) accounts for about 45 per cent of total consumption in the country, of which the area around Bombay accounts for about 22 per cent, with the northern and southern regions each consuming 16 to 18 per cent. Of the southern region's share, about half goes to Madras State. The boundary of the Madras State virtually coincides with the marketing area for Salem plant. The region's future steel requirements may be assumed to grow at about the same rate as those of the country as a whole. In categories for which the all-India supply position is comparatively easy, the region's requirements can be met from plants outside the region. The new plant can therefore undertake production of those categories in which there are both all-India shortfalls and sizeable requirements.

This consideration, however, need not apply to alloy and special steels which are relatively high priced products in which transport cost will bear only a small proportion to total delivered cost. The Salem Steel plant can, therefore, meet a part of the all-India shortfalls in alloy steel and need not be restricted to the regional market. The high quality of iron which would be produced, and the steel-making and continuous casting facilities proposed will be well-suited for the production of low alloy steels to meet part of the all-India shortfalls in these categories. Gothic sections required for seamless tubes can also be produced.

The initial capacity of the plant, based on the production of only section products to meet regional shortfalls in plain carbon steels and part of the all-India shortfalls in low alloy steels, is placed at 0.5 million tons per year. The product-mix suggested includes 50,000 tons of low alloy constructional steel, 35,000 tons of low alloy high tensile structural steel and 10,000 tons of gothic sections. Provision is, however, made for rapid expansion to about 1.2 million tons in the second stage. The plant capacity could be increased as and when required to about 3 million tons at a later date. Fortunately for South India, which has no coal deposits, new processes have recently been developed which can use different types of non-coking coals and lignite. Some of these have been used commercially for large scale production. Tests carried out with Kanjamalai magnetite ore and Neyveli lignite have conclusively established their suitability for the economic production of iron by adoption of new technology.

A preliminary study indicates that the Bellary-Sandur ore transported to Kanjamalai will have no cost advantage over the beneficiated and pelletised Kanjamalai ore; on the other hand, pellets made from Kanjamalai concentrate would form a superior charge material for iron making. Accordingly, the Kanjamalai deposits have to be preferred as the iron ore source for the Salem plant. Extensive tests carried out on the suitability of Kanjamalai iron ore for concentration by magnetic methods and pelletising of the concentrate thus obtained have established that the ore could be economically concentrated to over 64 per cent iron, and the concentrate so produced could be made into high grade pellets. The plant has been based on the use of lignite char for the production of iron. The annual requirements of lignite for the initial 0.5 million ton plant is estimated at 328,000 tons.

Lignite as mined contains about 50-60 per cent moisture and 20 per cent fixed carbon. Lignite char obtained by low temperature carbonisation of lignite briquets contains lower ash and higher volatile matter than coke from the Bengal-Bihar coals. The limestone deposits in the Sankaridrug, Namakkal and Tiruchengode taluks of the Salem district are proposed as the source both for iron and steel-making. Most of these deposits occur within 20 km from the Sankaridrug railway station which is 39 km south-east of Salem on the Salem-Erode BG line. It may be necessary to find other sources if the flux grade limestone should be unsuitable. There are a number of developed mines which supply magnesite for refractory works and other steel plants in the country. The magnesite requirements of the Salem plant can be met from these mines. The refractory requirements of the Salem plant, both for construction and operation, will be much less than those of other Indian steel works, because the facilities proposed do not include coke ovens, open hearth furnaces and soaking pits, which have relatively high refractory consumptions. Bulk of the refractories can be obtained from indigenous sources. In fact, with the changing pattern of consumption in the steel industry, brick making capacity at the end of the Third Plan is likely to be adequate to meet even the requirements of steel capacity in the Fourth Plan. Some special refractories may, however, have to be imported. The requirements of bauxite in place of flourspar can be met from Shevaroy hills around Yercaud which is 48 km away. Electrode paste required for self baking Soderberg electrodes will come from Alwaye in Kerala State. Bentonite is required in small quantities as a binder for balling the iron ore concentrate into pellets. Rajasthan has large reserves of sodium-based bentonite and the requirements of Salem can be met from this source. Ferro-manganese will be readily available as capacity would be over 200,000 tons by the end of the Third Plan. Ferro-silicon can be obtained from the Mysore Iron and Steel Works, where the capacity will reach 20,000 tons shortly. Aluminium pellets and copper can be secured from the market. Nickel and ferro molybdenum have to be imported. Ferro-chrome and ferro-vanadium have also to be imported till such time as these are manufactured in India. The water requirements can be met from the Mettur reservoir on the Cauveri river about 27 km north-west of the site. The same source can also meet the future requirements of the plant. The maximum power demand for the steel plant is estimated at about 97 MW. This power will be available from the Madras grid and it is expected

RAW MATERIALS	ASSEMBLY	COST

that there will be no difficulty in obtaining additional power to meet increased future requirement.

After studying the various sites in the Neyveli-Salem region, Kanjamalai (14 km west of Salem town) is recommended as the most suitable site for locating the steel plant. Its advantages include favourable raw materials, assembly cost, availability of water and power, and adequate BG and MG rail transport facilities providing ready access to sources of raw materials and to markets.

Magnetite ore mined at Kanjamalai hill will be upgraded in a concentration plant located on the hill slopes, and the concentrate in the form of slurry will be pumped through pipe lines over a distance of about 5 km to the steel works. Lignite char will be transported, over meter gauge from Sankaridrug by the Erode-Salem BG Line. A comparative study of assembling raw materials for the different locations indicates that about 159 ton-km of transport will be required for assembling iron ore concentrate, lignite char and fluxes per ton of steel at the Kanjamalai site. This figure is the lowest amongst the sites considered for this project; also the lowest of all other steel works in the country. The finished products from Kanjamalai have easy access over BG routes to Madras, Coimbatore and Tiruchirappalli, the three principal steel consuming centres in Madras State. Other areas linked by MG lines can be served on those routes. Small tonnages to places within 100 to 150 km may be sent in truck-trailer combinations by road.

The broad facts about the Salem Steel project are such as to lift the question above the level of controversy or doubt, though in some technical aspects it may need closer scrutiny. But such scrutiny must come only in the wake of a favourable decision and not a precondition of it. It is to be hoped that enlightened public interest will assert itself and put an end to the procrastination that has prevailed hitherto.

(Concluded)

Recovery on Rails

A GUARDED but not unexpected hint that the reshaping of Britain's railways may be stopped and Dr Beeching's plan to reform and reorganise rail transport may be given up appeared after Mr Wilson assumed office. The claim of scattered rural communities, especially in Scotland and Wales for the regular maintenance of transport facilities were recognised in the Labour party manifesto and the idea of economy propounded

by Dr Beeching was made subordinate to the maintenance of employment and other social considerations.

Whether the Transport of Act of 1962 will undergo drastic modification remains to be seen but directions for closure of lines and stations may be suspended in view of the surmise that railway transport will have to be subsidised for keeping up the rate of economic growth in the UK.

Dr Beeching's programme of modernisation carried out in 1963 did not appeal readily to many who argued that even if bus services were subsidised, the railway facilities were terminated abruptly and the drive for profits in operation was pursued without any reference to the desires of local people, though due notice was given in 1962-63 and representations were heard usually against closure demanded by the deficit on working over years. Indeed the unification of the railways after nationalisation did not prevent recurring losses and drastic steps were proposed and accepted. Dr Beeching was invited to become chairman for putting through a programme of reshaping by concentrating on the business principles which a nationalised undertaking could not adopt readily or completely.

The first annual report of British Railways under the new regime or dispensation appeared in June 1964 and was formally presented with the accounts to Mr Marples. But the recent election has introduced a new element, and it remains only to be seen whether a strenuous, singleminded search for economy will be kept up when Labour has argued that earning enough to discharge the capital obligations is less urgent and important than the rescue of depressed areas. The conflict of motives or interests is certainly coming to the surface, but it is well to note that British railways in 1963 fared distinctly better and the fall in traffic was not pronounced. It may also be easily concluded from the annual report that in 1963 the deficit was reduced and further improvement in 1964 may well lead to a calculated reversal of policy.

In evaluating the achievement of 1963 a reference to the major features like the reduction of steam locomotives, the increase in AC electric traction and the enlargement of Derby as a central workshop is called for. What Dr Beeching carried out under a specific mandate was to cut losses, wherever possible, and to augment income. The competition of road transport has to be restrained according to the Labour party but Dr Beeching assured that higher operating efficiency is the only remedy for the financial ills to which State owned railways are heir to. Bigger marshalling yards, longer trains and depots for delivery of coal hauled from Wales or other areas were in a way the consequence of the new rule of working that longer hauls and quicker turnround of wagons are required.

Passenger receipts were less than goods earnings in the UK but new fast trains running between major towns plus specific concessions offered helped to raise passenger earnings in 1963. But working expenses were higher than income and the year 1963 closed with a deficit of £81.55 millions. It is true the railways made a profit on the shipping services, harbours and hotels as before but the British Railway Board can point only to reduction in costs in a difficult year not a surplus. It strove to reduce capital outlay and avoided borrowing from the Government because it began to apply new criteria of investment. It may be added that a return

of 5.58 per cent per annum on capital is prescribed and this perhaps will suggest that in India the railway budget in 1965 will be guided by a reference to tight money conditions and the clamant need for economy in working.

In spite of a total deficit of £134 million for 1963 (including £58 million due as interest) the British Railway board sought to prune its expenses by reducing the labour force by 7.6 per cent and met up to a point claims of railwaymen for higher pay. The application of rationalisation was followed by work study, leading also to incentive payments. Despite curtailed services the annual income rose up by £22 million as a great effort to build up truck traffic, for instance, by agreement with the oil companies and big consumers was made. Express services to the ports from key inland centres helped to stiffen incomes.

Trends of some significance to India today may be spotted in the reassuring record of British experience. Not only is it necessary to stimulate export trade, the speed and punctuality of trains must be improved. Increase in the tonnage carried can even coincide with a definite fall in rolling stock. The concentration of goods traffic at selected convenient points, particularly, in the case of sundries traffic is another means to efficient and economical operation. Of course, the Indian Railway Board, like other authorities, has kept in touch with BR which means to upgrade road transport fleet for effective maintenance. In buying locomotives BR did not rely on the workshops alone. It made purchases from the big engineering concerns not only to test costs and prices, but to keep in being an old export trade.

The remodelling of big stations was an item in the improvement scheme which embraced the use of welded rails on selected routes. Improvements to bridges figured in the 1963 works programme and trains control arrangements underwent improvement, as freight liner trains came into use. Standardisation beyond the workshops was undertaken along with curtailment of stocks and spares. The report notes that the police force on the railways includes a canine squad for checking and detecting crime. A fall in crime reported in 1963 is not less remarkable than the reduction of claims made for losses by railway users.

From the 1963 record it is possible to argue that continuity in improvements will be preserved by the new Minister who will probably approve the accounting procedure that relates all capital outlay to the revenue realised over a period. Sale of surplus sites and buildings at a profit is likely to be approved, because such sales will keep down land values and therefore capital gains obtained by private parties. The BR principles of depreciation assign 30 years to steam locomotives and 25 years to diesel and electric locomotives but the rates are liable to review. There is a reference to an internal insurance account to meet losses due to fire and other accidents. This innovation may prove desirable in India in view of the new liability assumed by the State railways as a common carrier. Though nothing is said about excess rail capacity in an advanced country, the point to note is that nationalisation has not obviated the need to cut losses and seek extra revenue. Like any branch of transport today railways too must look for profits, reasonable in relation to past and present.

World of Finance

BANK RETURNS

Impact of Dewali Payments

PREDICTABLY, the inter-bank call money rate, which had soared in the early days of the month, has now subsided to a rather more sober level. Thus, it is now abundantly clear that the 1964-65 busy season, though it has already notionally started, is a long way away from posing problems of stringency for the money market. However, we would again stress that tightness may come upon us somewhat earlier this year, having regard to a number of considerations. Firstly, there are the stiffer liquidity requirements. Secondly, the penal cost of borrowing from the Reserve Bank. Thirdly, there is the apparent slowing down in the pace of Deposit growth. Fourthly, the better export performance and the larger availability of untied foreign aid can both mean that imported components and raw materials, supplied on larger scale, will lead to increase in industrial production such that the industrial demand for bank financing goes up. For all these reasons, therefore, we believe that money market stringency will this busy season be in evidence earlier than has been the norm in recent years, and also that consequently tightness will obtain for a longer time than we have been used to. For, relief for the money market will coincide only with the fiscal year-end payments of Government, disbursements customarily made from the end of February onwards.

Predictably, also, the impact of the dewali disbursements superimposed upon the usual beginning of the month demand for money has been very considerable, as disclosed in the latest banking returns.

The returns of the Reserve Bank for 6 November show that Active Note circulation has expanded steeply by Rs 70.31 crores to Rs 2,467.59 crores. Secondly, outflow of Rupee

coin is also unusually large at Rs 5.13 crores. With Foreign Securities unchanged at Rs 85.46 crores, currency has been expanded against Rupee Securities for Rs 60 crores, raising them to Rs 2,181.14 crores.

The return for the Banking Department reveals that Investments, too, are higher by Rs 21 crores at Rs 125.20 crores. Inferentially, the Centre resorted to deficit financing for around Rs 80 crores. That there has been recourse to created money, there is no doubt; but its magnitude, as we shall see, should have been much smaller. The State Bank, in the week under review, disinvested in gilt-edged for Rs 45 crores. Thus, deficit financing was undertaken for about Rs 35 crores. Of this, an element of Rs 25 crores is represented by the need for Government to institute counter-availing deficit financing in respect of maturities of this order in the Reserve Bank's portfolio of Treasury Bills purchased and discounted. Thus, the Centre's balances were replenished by no more than Rs 10 crores as a result of deficit financing.

Then, it is to be noted that the Centre's balances are sharply lower by Rs 45.81 crores at Rs 50.13 crores, or just over the traditional minimum, in spite of the deficit financing for Rs 10 crores. It will be clear, from a reading of the States' position vis-a-vis the Reserve Bank, that about half of the Centre's decline in balances is due to payments to the States, whose Deposits have improved by Rs 6.84 crores to Rs 18.56 crores while, at the same time, their borrowings have been cut by Rs 14.23 crores to Rs 33.04 crores. Thus, the Centre's own beginning of the month disbursements affected its balances by upwards of Rs 20 crores.

The strain upon Scheduled Banks by 6 November was already in evidence; their borrowings from the Reserve Bank have been marked up by Rs 4.20 crores to Rs 5.88 crores, though this has been accompanied by a rise of Rs 7.76 crores to Rs 96.91 crores in their Reserve Balances; but this latter is due in the main to the State Bank.

It remains to add, apropos the Reserve Bank returns, that Balances Held Abroad show a welcome rise of Rs 2.11 crores to Rs 10.43 crores, and so the foreign assets held by the Reserve Bank are again above the Rs 95 crore mark.

Dewali disbursements, in addition to the non-early demand for money, have involved for the State Bank, as disclosed in its return for 6 November, a loss of Rs 10.29 crores to Rs 665.16 crores in Deposits and a rise of Rs 8.31 crores to Rs 344.72 crores in its total of Advances. There has accordingly been steep disinvestment in gilt-edged for Rs 45 crores, reducing holdings to Rs 275.97 crores. That some part of this will be made good is indicated by the rise of Rs 17.2 crores to a shade under Rs 50 crores in Other Assets. The end result is that cash balances, including money at call and short notice, have improved by Rs 4.85 crores to Rs 33.40 crores.

The statement of Scheduled Banks for 30 October shows changes most of which are attributable to the State Bank. Net Demand Deposits are better by Rs 1.69 crores at Rs 1,338.48 crores and net Time Deposits by Rs 4.73 crores at Rs 1,381.52 crores; of the rise of Rs 6.42 crores in net Deposits, an element of Rs 4.49 crores is on account of the State Bank. The total of Advances has risen by Rs 7.50 crores to Rs 1,729.42 crores, and the State Bank's share is Rs 5.57 crores. Of acquisitions to gilt-edged amounting to Rs 34 crores—raising holdings to Rs 873.66 crores—Rs 20 crores belong to the State Bank. Cash balances, including money at call and short notice, are lower by Rs 38.38 crores at Rs 245.52 crores—and the State Bank's share is Rs 24.77 crores. The other Scheduled Banks account for a reduction of Rs 0.86 crore to Rs 39.63 crores in borrowings from the State Bank and for a rise of Rs 0.61 crore to Rs 1.22 crores in indebtedness to the Reserve Bank.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 10 November, 1964. Total amount offered was Rs 2,05,00,000. Tenders at Rs 93.380 per cent were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.499 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 16 November, 1964. Successful tenderers should make payment on Friday, 20 November, 1964 at all centres. Other conditions are as usual.

During the week ended 6 November, 1964, Government of India Treasury Bills for Rs 141,69,00,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills sold from 4 November, 1964 to 7 November, 1964, amounted to Rs 48,50,000.

EDUCATION

Need for Proper Guidance

It would be a mistake to regard guidance in the educational and vocational fields as a non-productive item, for, by its contribution to the development of human resources, guidance can help the economic growth of the country. This point was made by Dr V.K.R.V. Rao, Member Planning Commission, while inaugurating the annual conference of the All India educational and vocational guidance association at Shantiniketan last week. Proper guidance would reduce wastage and thus help to ensure balance between the demand and supply of trained man power. Natural resources are no doubt essential for economic developments, but the investment in the development of material resources will not become fully fruitful unless the human factor is able to respond to the opportunities created. That is the function of education and training.

Guidance at different levels of education and training would improve the human response by enabling persons to take up courses suited to their talents and interests. The working of guidance services would also indicate the lines on which the educational system should be reorganised so as to make it development-oriented. The need for such a reorganisation has been recognised by the Planning Commission. In this connection Dr Rao had drawn attention on a different occasion to the memorandum submitted by the Planning Commission to the recent meeting of the NDC which had stated: "Highest priority has been given to the inclusion of programmes which have direct relationship with production and economic development."

Lack of correspondence between the content of formal, academic education and the requirements of a developing economy is partly responsible for the dissatisfaction with the present system of education. Reorganisation of the system in a manner which will clearly show the relevance of education to economic growth will create awareness of the crucial importance of investment in human resources for the achievement of plan objectives in the sphere of industrial and agricultural production.

CUSTOMS

Cupidity—or Stupidity?

The letter published recently in a Madras newspaper by a US citizen about the procedure of customs department officers in India, their cupidity or stupidity, their open eagerness for ex gratia payments and their slowness on the job has certainly opened the Government's eyes. The Finance Minister's reference to smuggling done in collusion with the Government employees proves only that the effective anti-corruption measures are yet to be evolved. The Chanda Committee's report on improving the administration may prove less useful than the adoption of new measures to check bribery.

The Minister's own confession in public that the prevalence of smuggling is due to the criminal element in the staff means not only that the very high duties encourage smuggling but that the rake-off for officials is substantial. Steps adopted in Burma to check illicit export of gold acquire fresh importance, though the point to notice here is that Burma is trying to impound the private capital of Indian emigrants. The Minister's plain speaking confirms what is known about the old practices in respect of goods drawn from Goa and Pondicherry.

An extremely rigid import policy gives an impetus to illegal activity and nourishes the black market. Changes made in the law about like radio transistors or watches the acquisition of smuggled goods can hardly work, if the department is able and willing to connive at smuggling. The Finance Minister's speech may suggest that some excises too are being evaded but the commodities like sugar or cement are not like gold and the manufacturer has to keep records. On the other hand, the black money used for import of luxury goods—let in by corrupt officials—leads to the later sale of such goods at a profit and the public revenue is absorbed again in private profit.

The annual reports of the Customs department refer only to occasional loss of revenue by errors and omissions but contain no clue as to corruption in the establishment. Vigilance measures may be stiffened but the bad tradition can

be uprooted only by new laws and a new spirit. The rewards for informers may have to be increased but the departmental staff must be interchanged often and the resistance to temptation must be built up by a new elastic system of promotions. The exposure of dirty linen by the Finance Minister only shows that the old suspicions about undue favours and fears are well-founded.

TEXTILE MACHINERY

Raw Material Shortage

The textile machinery industry is encountering a serious shortage of essential raw materials such as foundry grade pig iron and hard coke coupled with inadequate credit facilities which throttle indigenous production. Despite these inhibiting factors the output of textile machinery during recent years has been progressively expanding and total production in 1963 amounted to Rs 20 crores against Rs 15 crores in the previous year. And if this trend in manufacture is well maintained there is every possibility of reaching the target of Rs 22 crores by the end of the current Plan period. But this is not adequate enough to meet the growing internal requirements. During the past three years imports of textile machinery and components have averaged approximately Rs 22 crores per annum and according to current estimates the gap between demand and supply of textile machinery during the Fourth Plan will be of the order of Rs 75 crores. The urgency for stepping up domestic manufacture is, therefore, pressing.

Inaugurating the annual general meeting of the Textile Manufacturers' Association in Bombay last week Mr T. N. Singh, Union Minister for Heavy Industries, pointed out that in view of the country's foreign exchange difficulties imports of only those equipment which are not indigenously available will be permitted and stressed the necessity for achieving a fair degree of self-sufficiency in textile machinery and parts by the end of next Plan. While appreciating the genuine grievances of the industry, Mr Singh drew attention of the manufacturers to the deleterious effect of extreme reliance on foreign technical know-how. This sort of dependency is something which the

country could entertain any longer and the industry should develop a research and development organisation equipped with modern appliances which would go a long way in reducing the manufacturing cost and stimulating production without impairing quality. Mr Prabhu V. Mehta, who spoke at the occasion enumerated the hardships to which the industry was put owing to the lack of proper co-ordination between the various Government departments. All these factors only highlight the imperative need for initiating requisite measures in order to enable the industry to become self-reliant within the shortest time possible.

CHILLIES

Madras Sets a Hot Pace

Madras as a producer of chillies—for export also—is ahead of Maharashtra and Andhra Pradesh. The main producing area is Ramnad and as part of dry farming, helped by irrigation from wells, the commercial crop is of much help. Though studies of

PRO/HS-2

villages have gone out of fashion the information relating to Uppattur, 38 miles from Virudhunagar, suggests agricultural progress in a backward area has been stimulated by the NES. As ISS for chillies in regard to length and colour have been produced to help grading, chillies are well established in the export field like onions but the price has not gone up this year whereas coriander prices have spurted along with vegetables or fruits.

Cultivation of chillies in Rannad has increased perceptibly after 1959. And 60 per cent of the local agriculturists (as recorded in an article in AICC economic review) depend on chillies and grow millet as a second crop only with irrigation. Pumpsets aided by electric supply explain the current preference for chillies as the main crop. Wide fluctuations in prices since 1960 have helped the ryots who go in for heavy regular manuring. Plant protection measures have been applied to effect and average

yield is about 5.38 quintals per acre. As 93.3 per cent of the area in the village is under chillies, the desire to go in for specialisation is obvious. More important is the reliance on onions—destined for export to Ceylon. Intensive methods help the small holder to go in for chillies instead of food crops and women are able to obtain regular work in the fields, getting their wages in kind. With extra credit farmers can certainly do better by heavy use of fertilisers but the facilities are limited and many farmers still rely on bullock power for lifting water from their wells to the fields. A check on middlemen's profits also may be desired and small farmers require the sort of protection that the Government can alone give. The notice of men and methods will suggest that what may be called truck farming pays even if a big city market is not at hand and the progress seen is due clearly to better farming by great attention to a single crop raised for sale—not for consumption in the village.

TRADE Prospective Markets in Malaya

Opportunities for trade with Malaya may be enhanced by the boom in tin in London and Singapore. Changes seen in Bolivia of late may limit supplies from the US stockpile. Singapore's trade relations and volume may however alter and in textiles the competition may be keener in Malaysia where the demand for materials required for local manufacture is expected to increase in view of joint ventures with which big British and Japanese interests are associated. Prospects for better grade tobacco and cigarettes are described as promising. In engineering goods India has enjoyed a fair share of the market but jute manufactures have lost ground on account of Pakistani mills competition. Exports of fans, sewing machines and cycles have been maintained over years but the rivals are making headway.

Since India cannot export food-stuffs the current prospects are poor though Malaya may be regarded to day as the only prosperous Asian country which can afford to import more from India. At Madras a trade seminar considered the need to improve sales methods and promote exports in regard to handloom goods. Since the balance of trade with Malaya as well as Singapore has always remained unfavourable the need to increase exports is obvious. Raw rubber imports are indispensable like tin so it is necessary to look to the future by enhancing exports of manufactures—not only jaggery and onions. The freight and other advantages may help India but export prices must be lowered—not only for sugar and chemicals but for the engineering goods for which new outlets are required, after increase in capacity and production. Increase in UK import duties may well force India to look for extra trade with Malaya and it is important to note that Malaya too is bent on industrialisation, also that Australia has forged trade links with Malaya and investors in Singapore look latterly to Australia rather than India. The precise bearing of the present depression in rubber on Malaya's future may be hard to describe but the essential point is that Malaya has to spend more on defence and the future tax policy may be shaped by the Emergency arising from Indonesian claims to North Borneo on various grounds. Malaya's large resources may help and it is useful to point out that leather goods or batteries from India may find wide acceptance though Hong-kong will retain many advantages as a supplier of consumer goods.

EXPORTS Prawns Called Shrimps

India's exports of prawns called shrimps in the USA seem to have an edge in price. But the US market buys more from Mexico and Central American countries. A detailed notice of the trade furnished by the Indian Consul-General in San Francisco indicates that even if India is eager to export shrimps, the fall in US imports in 1964 must influence the current trade. In this matter of seafood many varieties persist in view of different tastes and the USA appears to favour Panama, if not Pakistan, as a source of shrimps.

A point to note is that pink is rated better than white and colour seems to have an appeal in New York. A new source of supply is Thailand and the USA draws its supply from Japan and South Korea also. The success of export rests largely on canning and the Indian export trade has been reminded that the US standards of cleanliness are very high and any suspicion as to purity may spoil the market for Indian shrimps. Fresh shrimps are evidently preferred by the US buyer and the advantage held by

Mexico or the West Indies owing to proximity is unassailable.

The more important consideration for the Kerala fishing industry is that the trade with Ceylon or Burma is not likely to improve and the USA may be a better market like Western Europe, for which the supply from Africa may be small. The development of fisheries for export will probably take into account the conditions in the US market which prefers large shrimps selling at a higher price and the grading must be done with a view to the size and freshness. The most important aspect of the trade is that the USA still prefers fresh to canned stuff and the shipping services must be guided by that consideration. The New York prices for shrimp in summer are based on the moderate stocks. It is clear that carry-over even of frozen shrimps is not easy and the attempt of exporters to stock up (as in pepper) is also not possible. The finer varieties of shrimps are drawn from tropical waters near the USA and the better sale prices realised are perhaps due to lower freight paid. That is more obvious.

SAUDI ARABIA The Quiet Revolution

A quiet revolution in Saudi Arabia has been carried out effectively by Prince Feisal. The de facto ruler has emerged as the de jure ruler as King Saud feels his age and realises that the dynasty's future depends on his own withdrawal. The republics that have replaced kings in Egypt, Iraq and Yemen will probably see that a constitutional monarchy and proper public administration in Arabia will lead to good neighbourly relations. Restoration of financial stability in Riyadh is the first task but Prince Feisal has experience of office and has been careful to retain tribal goodwill for the dynasty's continuance.

In two centuries the small Wahabi kingdom has grown but it is oil in which the West is interested and the USA has more interest in the Persian Gulf than India at present. The modernisation of Kuwait—a midget kingdom which is the richest region in the world—may induce Prince Feisal to think of assisting other countries where the ties of religion and language are kept in view.

That Mecca is the world centre of Islam and the new ideas have come into Arabia also will be taken as the reason for the replacement of a King who spent too lavishly abroad and let his people stay poor too long. All that will be changed and the Saudi Arabian Kingdom will move into the 20th century like Persia where the pressure of opinion has led to many radical changes. As a source of oil, Arabia is important for Britain also but the maintenance of a military base at Aden is not easy in view of the unrest seen in the Arab world. The British will doubtless see that the South Arabian federation is hard to keep

Exports Increase by 8.59 Per Cent During April-August, 1964

Exports during the first five months of 1964-65 have recorded an increase of nearly Rs 27 crores as contrasted with the relative figures for the corresponding period of the preceding year. Exports of all Sections have improved with the only exception of Animal and Vegetable oils and fats which are marked down by Rs 4.60 crores at Rs 3.66 crores.

Prominent increases are shown by the following:

Food, drawn higher by Rs 7.99 crores to Rs 99.54 crores, owing to an upsurge in exports of coffee, tea, cocoa, spices and manufactures thereof which accounted for earnings of Rs 51.82 crores against Rs 45.51 crores and increased exports of fruits and vegetables to Rs 15.08 crores from Rs 12.69 crores.

Crude Materials inedible, except fuels, higher by Rs 2.13 crores to Rs 54.62 crores, bene-

fit by enhanced exports of metalliferous ores and metal scrap to Rs 24.84 crores from Rs 18.34 crores.

Finally, Manufactured Goods classified chiefly by material, up by Rs 17.01 crores to Rs 142.39 crores, thanks mainly to the rise in exports of textile yarn, fabrics, made-up articles and related products to Rs 116.44 crores from Rs 104.63 crores.

We have pointed out in our issue dated 31 October (see page 775) that imports during the first five months of 1964-65 were marked down, as compared with the previous year, by Rs 58.49 crores at Rs 463.83 crores against Rs 521.87 crores. With the increase in exports besides, the balance of trade deficit in April-August stands considerably reduced at Rs 126.42 crores against the gap of Rs 211.56 crores in the relevant period in 1963

EXPORTS	(In Rs Crores)		Change

up when the Arabs object. The survival of Jordan rests on the goodwill of Egypt and Saudi Arabia alike, and if the change-over in the Saudi Arabia forces the US State Department to think of Arabia as well as the Sudan there is little doubt that Colonel Nasser's prestige will go up further and the Arab world too will recognise that Socialism is bound to expand the non-aligned nations will be again able to think of coexistence when Saudi Arabia is ready for changes.

UK Background to the Crisis

The background to the latest British crisis is found in the Bank of England quarterly bulletin (September 1964). The appraisal

of the economy in view of the adverse balance of payments was not favourable and repayment of Government debt to North America and Switzerland increased the liabilities leading to the weakness of sterling in the exchanges. Defensive measures adopted by the new Cabinet seem logical in view of the sluggish export trade referred to in the bulletin. The fall in reserves after September also confirms the view that a check on imports was required and a national incomes policy is required to hold down costs.

Changes in the Treasury's position are related to the rise in Bank advances, coinciding with a small rise in investments in 1964. There are no special deposits since December 1962 and the rise in bank advances to over 50 per cent indicated that savings by companies and individuals were up. The increase in US bank branches in the UK is

reflected in the rise in their deposits and external loans made by US banks, which also kept more cash. Foreign banks do not seem as well placed but the main point to note is that the Commonwealth banks have a rival in London, also that the US banks have more intimate connections with the Continent. The UK liabilities to North America naturally exceeded claims and the measures adopted lately suggest that the British Government had to take note of the dues to nonsterling countries which include the Vatican City and Andorra—a small republic between France and Spain to which funds gravitate owing to the advantages of secrecy and safety. In recent years Andorra protected by France, has become a haven for foreign funds and some probably are diverted for casual or regular employment in London.

What Mr Wilson said on October 26 about the pressure on sterling and about the need to avoid deflation at home because a stimulus to export trade is wanted along with a reduction in imports is logical. Restrictionist policy is therefore limited by the UK's own circumstances. The Government forces an adverse balance in 1965, also and that implies a curtailment of imports by quotas perhaps rather than duties. The refusal to raise the bank rate is a consequence of Mr Wilson's own opinion that a long haul upwards cannot be secured by the offer of extra interest to short term creditors who must keep external reserves in sterling accounts. But what the bulletin indicated more clearly in advance was that the slowdown in domestic investment was due to rising prices and costs at home.

TI Dividend Revised

A dividend of 11.25 per cent as against 10 per cent for previous year declared by Tube Investments of India for year to July 1964 confirmed the view that a higher bicycle output helped to raise the profits. Tube production has also risen. The cold rolling mill is to be extended. The new subsidiaries have not contributed much to profits, affected also by rising costs and difficulties as to materials. The net profit is Rs 48.59 lakhs after providing for depreciation and taxation. The year's dividend requires Rs 28,12,500 and Rs 22.5 lakhs is added to general reserves and Rs 1.5 lakhs to divided equalisation reserve, leaving only Rs 4114 as carryforward.

In the balance sheet as on July 31, Development rebate reserve is put at Rs 63,83,356 and Development, replacement and research rebate is unchanged at Rs 50 lakhs. The reserves amount to Rs 239.59 lakhs against a paid up capital of Rs 250 lakhs and the 100 rupee shares look perhaps fairly valued at Rs 174 cd in the Madras market. The rise in sales for the year from Rs 5.96 crores to Rs 7.48 crores is reflected in stocks as also the year's better profits.

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service.

With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

Mr Sanjivayya on Industrial Relations

Mr D. Sanjivayya, Union Minister of Labour and Employment said recently in Guntur that if the country was to lead itself out of its present poverty, it could hardly afford to have work stoppages. But at the same time, there was no question of stifling the freedom of action by workers.

Mr Sanjivayya was inaugurating a seminar on industrial relations and added that industrial relations should be discussed at the seminar in the context of the present social situation. Perhaps our system needed modifications here and there, but it had stood the test of time and any radical change might lead us into a quandary.

The following is the full text of the speech of Mr Sanjivayya:

"I am grateful to you for asking me to inaugurate this seminar on Industrial Relations. It is always a pleasure to come to attend a seminar. Here we discuss problems more objectively and with a degree of detachment from immediate preoccupation. Even when there are issues which are hot, we try to understand them in a sort of cool-headed way, without passion and without prejudice. That is why seminars can often point the way to solutions which seem to elude us in our obsession with the immediate aspects of a problem.

INDUSTRIAL RELATIONS

The problem of good relations in industry has many facets. No system, however, elaborately worked out, can hope to take care of all the elements that determine the state of industrial relations. What a good industrial relations system can, at best, seem to achieve is to minimise possibilities of conflicts; and when conflicts do arise, provide for their smooth and speedy settlement. It must also ensure that the process of easing tensions or settling conflicts does not leave a trail of bitterness behind. No mechanical system can ensure this. Only when the parties to an industrial dispute are also willing parties to its settlement, can we be sure that the settlement will last.

This only underlines the fact—which we often ignore—that industrial relations are essentially an aspect of human relations. Men, however, humble, have their pride and, however, wise, have their prejudices. Yet men are also rational and can be forgiving and generous. Once the industrial relations system touches the nobler instincts rather than hurt men's pride or feed their prejudice, it has done its job.

LABOUR MANAGEMENT RELATIONS

The work place is the scene of labour management relations. It is much more than a mere place of work. Here men in different positions are in continuous contact. The pace and rhythm of work are, of course, the common compulsory routine. But different individuals

and different groups react to it very differently. If men were machines there would have been no problems of industrial relations to baffle us. Any lack of harmony between machines would have been for an engineer to correct. But men have their life outside the factory. Inside the factory also, unlike the machines, they are very much alive. While an industrial relations system, by itself, may not have much to do directly about the irritants that lie outside the workplace, it must at least take good care of the differences that arise out of the work routine itself.

Let us look at the system we have evolved for ordering relations inside industry. Firstly, it is not rigid. Secondly, it neither prohibits nor inhibits freedom of action. It is roomy and provides for a variety of choice. It is rather a framework within which labour and management can freely adjust their mutual relations. The basic idea behind this system is not to suppress or even to eliminate completely all disputes and differences which, in the nature of things, are bound to arise. What our system seeks to achieve is to contain these disputes and to devise methods for resolving them, in a peaceful and civilised manner, with the co-operation of the parties concerned—and without resort to any naked trial of strength.

PLANNED ECONOMY

We have planned economy and our production has to proceed in accordance with the pace set in the Plan. If we are to lead ourselves out of our present poverty we can hardly afford to have work-stoppages. But at the same time we operate on a democratic base and there is no question of stifling the freedom of action by workers. Our present system of industrial relations seeks to answer the needs of planned development as also the needs of a free society. We have had our legal system which provides for conciliation, arbitration and adjudication. But in the railways you have permanent negotiating machinery and elsewhere we have the Code of Discipline. Both the permanent negotiating machinery and the Code have one aim viz., that of getting disputes settled through mutual consultations. Their common approach is the promotion of a sense of responsibility and an awareness of the common stake that labour and management have in making a success of the nation's economic endeavour.

JOINT CONSULTATION

Apart from the legal and voluntary system we have evolved for the settlement of industrial disputes, we have established a tradition of joint consultation at the factory level and above. The works committees in workshops and factories, the industrial committees, the Indian Labour Conference and the Standing Labour Committee are institutions which have been promoting cooperation between labour and management. More recently, we have started some

experiments also in workers' participation in management and a number of joint management councils have been set up. But in all human affairs there is a time lag between the formulation of a new approach and its fruitful realisation in practice. This is essentially a problem of education. That is why we have taken in hand a scheme of workers' education on a fairly extensive scale. I have no doubt in my mind that, as years pass, the climate of industrial relations in this country will undergo a basic change.

SETTLEMENT OF WAGES

As I have said earlier, there are many irritants to good relations inside industry. I need not tell you that the most important of them is the question of how much you earn from your work. It is not surprising that the bulk of the industrial disputes, that we have, are related to wage questions. Even in this rather difficult ground, we have made a new venture by introducing the principle of wage settlement through mutual consultation. Our wage boards which are tripartite in character are the instrument of this new policy. Another instrument of the same policy is the Bonus Commission which has laid down some basic principles on the baffling question of bonus. The Government have accepted the Commission's recommendations with some modifications. The success we have had so far with the wage boards, encourages me to hope that we will be discussed outside the arena of conflict. A major disturbing factor in industrial relations will then have been removed.

I would not claim that the system that we have evolved is perfect. But I believe that, by and large, it suits the circumstances in which we function. A different type of society might well have a more closeknit and a more water tight system but a democratic society has its limitations. I think these limitations themselves are its glory.

SCARCITIES AND SOARING PRICES

I have said at the beginning that in a seminar we discuss problems with a degree of detachment. I am fully conscious that the current scarcities and soaring prices have created a situation in which detachment is not easy to command. When the daily life of practically everyone is under severe stress it is only natural that our main thought would be directed towards this menacing problem. But here again, we must understand that the problem is not the workers' alone and is also, in no sense, a permanent one. I have no doubt that with goodwill and co-operation from all sides and earnest efforts on the part of the Government, we will find a solution to this problem which seems to overwhelm us at the moment. The purpose of this seminar will be lost if it is bogged down in discussing a problem which has its ramifications throughout the economy. I would, therefore, ask the participants in this seminar to devote their time rather to a sober evaluation of the system of industrial relations that we have evolved in this country and consider

how far it is serving the purpose for which it has been evolved.

NO RADICAL CHANGE

I would conclude with the plea that the state of industrial relations be discussed in the context of our present social situation. Perhaps our system needs modifications here and there. But it has stood the test and stresses of time and any radical change may lead us into a quandary.

I have every hope that discussions here would throw up practical suggestions which may be followed up with profit. It is with this hope that I declare the seminar open.

INDEX NUMBER OF WHOLESALE PRICES

The official wholesale price index (with the year ended March 1953 as 100) registered a fall of 1.5 per cent to 155.8 during the week ended October 24, 1964 as compared with 158.1 (revised) for the previous week. The index was lower by 2.4 per cent when compared with the corresponding week of the earlier month but was higher by 14.6 per cent when compared with that of a year ago.

The index for food articles declined by 1.8 per cent to 165.4 as against 168.5 (revised) for the previous week owing to a decrease in the prices of wheat at Bhopal (—18 per cent), at Chandausi (—14 per cent) and at Bahriah (—6 per cent), groundnut oil (—18 per cent), gingelly oil (—16 per cent) mung (—14 per cent), bajra (—8 per cent) gur (—7 per cent), maize (—6 per cent), jowar, bananas at Bombay and mustard oil (—5 per cent each), gram and masur (—4 per cent), arhar (—3 per cent) and rice urad and meat (—1 per cent) each although the prices of wheat Kanpur (+23 per cent), turmeric (+14 per cent), onions and oranges (+13 per cent), each barley (+5 per cent), cardmoms (+4 per cent), black pepper and betelnuts (+3 per cent), each, ragi and cashew-nuts (+2 per cent each), and potatoes, milk, coconut oil, coffee, shillies and salt (+1 per cent each) exhibited advances.

The index for 'tobacco' remained unchanged at its earlier week's revised level of 130.4.

The index for the fuel, power, light & lubricants group also stood unchanged at its previous week's level of 144.9.

Lower prices of raw hemp (—18 per cent), groundnuts (—12 per cent) and rapeseed (—2 per cent) brought down the index for industrial raw materials by 2.9 per cent to 162.9 as compared with 167.7 (revised) for the earlier week. The prices of castor seed (+2 per cent) and raw wool, raw silk, gingelly seed and Cottonseed (+1 per cent each), however, showed a rise.

Prices of zinc (+4 per cent) and tin (+2 per cent) moved up while those of linseed oil (—3 per cent) came down and the index for intermediate products fell to 152.4 as against 153.0 (revised) for the previous week.

The index for finished products worked out to 135.6 as against 135.7 for the previous week. There was a fall of one per cent each in the prices of silk & rayon manufactures and oilcakes.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as
the wind
To blow on whom I please"
—As You Like It

THERE are two kinds of weeks in which I find it difficult to write. One is when there are too many subjects, and the other is when there are too few. I have not quite made up my mind which kind of week the past one has been. True, there has been the final annihilation of Goldwater, and that's always a good topic. For that matter, even the slightest hint that we may have rationing makes for another good subject. And then, we have had that old reliable, TTK, spouting forth remarks worthy of notice in Clive Street Gossip. But, when you come to the final reckoning, you would find that after all the week that was was not much of a week.

★

So, I am afraid I have got to go over ground that has been trodden on before. Let me confess, then, that I have lost a bet in the magnitude of Senator Goldwater's failure. Surely, I did not expect that he would win much in the way of electoral votes; but I did suspect, and here I was quite wrong, that grass roots support for him could be quite considerable. That President Johnson should have beaten Roosevelt's record of 1936 is, as far as I am concerned, slightly distressing. For, the two Presidents are just not in the same league: I would have felt sympathetic if it had been a John F. Kennedy who assumed the role of a giant-killer; but I cannot quite frankly see LBJ in such role. Thus, what consolation I have rests in this, that the magnitude or kind of triumph that friend Johnson has enjoyed owes not a little to votes against Goldwater being registered. Which reminds me of the 1960 Presidential elections, when in my opinion it was Nixon who lost rather than that Kennedy who won. There was a bigotry of a sort which ran riot in that year—and there was bigotry in 1964, too. What matters is that bias in both years led to the election of the better candidates. The only difference is that in Johnson's case it enabled a landslide, of a size that I had not expected. I thought poor old Goldwater would get some 40 per cent of the votes, and poor old Goldwater has therefore cost me a century in favour of two certain gentlemen operating in Goodyears and in American Express, who obviously knew their American people better than I.

Ration; that, to me is a dirty six letter word, as bad perhaps as any of the good ole Anglo-Saxon four-letter ones that we learnt surreptitiously in school. For, in practice rationing never seems to work out efficiently, and even those that were honest are then compelled to have recourse to the black market. Certainly in Calcutta, and I presume in the other "major" cities, we shall shortly be having our foodgrains on ration. The pitiable Bombayite, in addition to queuing for his daily rationing by bus, will now face a few hours lining up before the foodgrains shops. Because the ration could quite possibly be of substandard stuff, there may be many who will habitually prefer under the counter supplies, and thus the black market will thrive. But, I am afraid that, though ration might be a dirty word, the fact remains that it may be the only solution for the metropolitan areas. For, it is the demand from the cities, and in particular from industrial labour, which marginally creates scarcity, panic purchases and runaway prices. Until such time as the distributional apparatus for food is in more honest hands, there is really no alternative to rationing. This is because it is so absurdly easy for the traders to exploit what may be no more than a marginal shortage; a little withholding will go a long way in realising higher prices, and therefore profits. Thus, again I have to confess that rationing, though in itself unsatisfactory and undesirable, may be the only possible solution.

★

Mr Wilson's 100 days promise to be hectic enough, though the temptation to compare them with the similar period of Roosevelt in 1933 must be resisted. But I would suggest that if the British Prime Minister is able to achieve the bulk of what he has chalked out for himself, his will have been a much greater feat than was Roosevelt's. For, FDR had the benefit of crisis and distress in the country as well as an unambiguous mandate in the form of large majority for his party in both Houses. But the Labour Prime Minister has a very slender majority indeed in the House of Commons, and there can be no telling when defecting or absentee Labour members combined with lack of

support from the 9 Liberal party members could serve to defeat him on a vital issue. He has, however, started very well indeed to set the British economy aright. The almost parlous foreign exchange position is sought to be tackled by the 15 per cent import surcharge as well as the incentive scheme for exports. Another measure intended to achieve the same objective has just been announced by the Chancellor of the Exchequer, Mr James Callaghan, in the special autumn Budget. This is a 17 per cent increase in the Petrol Tax. The Income Tax rate for 1965-66 is also to rise to 8sh 6d in the pound, presumably in order that the Government could substantially increase pensions and unemployment benefits. In this regard, I am reminded of a recent letter in The New Statesman which points out that for the aged pensions can never be any substitute for love. The correspondent cited India as a country where the aged no less than the children were dependents for whom the responsibility was taken by the breadwinner of the family. Thus, this particular measure will bring no more than material relief. Nevertheless, it is indicative of the concern that the Labour Government has always had for social welfare and security. I presume the one major enactment left for Mr

Wilson to put through in his first 100 days will be the re-nationalisation of the steel industry. That, I fancy, is going to be a difficult enterprise. Thereafter, we may expect Mr Wilson to announce a reshuffle of the Cabinet which, as it stands today, was rather shatteringly described by a commentator in The Spectator as Lord Atlee's third eleven. The question for which we will still be awaiting an answer is, how long will this well-intentioned Labour Government last?

★

Lastly, as to TTK's remarks. While on the first of his 25 sorties to the States, to acquaint himself at first hand about progress of projects, he chanced to say a few choice mots, not all of which were bon, about matters concerning revenue. He hazarded the guess that no more than perhaps 65 per cent of taxes due were being paid. It could be a very accurate guess, but should a Finance Minister thus confess to such large-scale evasion? He insinuated that Port and customs authorities could be working hand in glove with smugglers. Also probable, but should one in authority make a general and sweeping charge as this? I would, were I TTK, pretend to be Sir Orde, saying nothing but hearing all.

Olympus - A Letter from Delhi

Ring Round Tax Evaders

THE steps that are being taken to tighten the ring round tax evaders were explained by Mr J. P. Singh, Chairman, Direct Taxes Board, at a press conference here last week. Along with the stick, judicious use will also be made of the carrot.

The Income tax department has also embarked on a new programme of external survey operations with a view to finding out new assessee and concealed assets and businesses. These survey operations have resulted in bringing on the books of the department many new assessee, some of whom have substantial incomes. The number of tax payers in the books of the department at the end of current year is expected to be more than two million.

Those who come forward to make a voluntary disclosure of concealed income are promised lenient treatment. No prosecution will be launched in such cases. The authorities feel that tax evaders who are desirous of turning a new leaf are deterred by fear of levy of heavy penalties and prosecution. Mr J. P. Singh stated that, in the cases of assessee who themselves disclose their concealed income, the Department will be appreciative of such voluntary disclosures. If an assessee makes a purely voluntary disclosure of his income and co-operates in the enquiries made during the assessment, the Department would be prepared to show due consideration to these facts in regard to the levy of penalty, and no prosecution will be launched.

At the same time, the Chairman of the Direct Taxes Board made it clear that attempts to locate unaccounted wealth would be intensified progressively. The adequacy of the existing provisions in the law for countering tax evasion is being constantly reviewed in the light of the experience gained, and steps will be taken for strengthening these provisions. In this connexion, attention was also drawn to this year's Finance Act which has introduced several measures for effective action against tax evasion. The Income Tax Department has now wider powers than before for making searches for unaccounted wealth and secret sets

of account books and making survey at business premises of assessee. These powers, said Mr Singh, have already been exercised effectively in a number of cases, resulting in detection of considerable amounts of unaccounted wealth.

Liberalisation of the rules regarding payment of rewards to informants, is one of the important administrative steps which was decided upon recently to facilitate detection of concealed income.

Incentives for Informers

The minimum reward will now be raised to 7½ per cent (the present level is 2½ per cent) of the additional amount of tax which is realised on the basis of the information supplied by the person concerned or through the assistance rendered by him.

The reward can go up to ten per cent of the extra tax realised, depending upon the extent of the help rendered by the person giving the information in the shape of evidence, documents etc. and the risk or sacrifice incurred by him in securing the information.

The amount of the reward will not be liable to tax.

The identity of the person furnishing the information will be kept secret if he so desires.

Commissioners of Income-tax will be authorised to sanction rewards up to Rs 10,000 without reference to the higher authorities.

Arrangements will also be made for expeditious payment. Interim rewards will also be granted in suitable cases.

★

US Business Delegation

The 15-man delegation of American businessmen, sponsored by the Action Committee for International Development, who were here last week have left with a favourable impression of the climate for joint ventures in this country.

Addressing a press conference on the conclusion of their seven-day visit, members of the delegation expressed great satisfaction with talks they had with Indian businessmen and officials. They were particularly impressed with the definite feeling of welcome they received in all quarters. The fears

entertained by some members of the delegation regarding procedural difficulties hampering joint ventures had been largely allayed and they were confident of setting up fruitful collaborations with Indian partners.

It was disclosed that, even during the present short visit, several members of the delegations had reached basic agreements with Indian partners in the fields of pharmaceuticals and machinery manufacture. There is also the prospect that Government might be willing to consider proposals for joint venture in the private sector for manufacture of light aircraft.

The spokesman of the delegation made it clear that minority participation would not block the flow of American capital into this country. In fact, American businessmen would welcome that a sizeable share of the capital is raised through public issues.

The spokesman also told the press conference that more members of his group are likely to come to India in the near future for exploring further possibilities of collaboration.

A meeting with the American Ambassador, Mr Chester Bowles, who gave a positively encouraging picture of American investment in India and the opportunities which lay ahead, started the round of talks the delegation had in India. These included meetings with Mr Manubhai Shah, Union Minister of Commerce, Mr S. Boothalingam, Secretary, Department of Economic Affairs, Ministry of Finance, Mr S. Ranganathan, Secretary, Ministry of Industry, prominent businessmen, executives of the Federation of Indian Chambers of Commerce and Industry, the Punjab and Delhi Chamber of Commerce and the officers of the Indian Investment Centre.

ISO Conference—Award for Dr Verman

The 1964, Leo B. Moore Medal—the "supreme honour" awarded by the Standards Engineering Society, New Providence, N.J. (USA) to Dr Lal C. Verman, Director of the Indian Standards Institution and Honorary Adviser on Standardisation to the Government of India, was presented to him on the opening day of the

Sixth Triennial General Assembly International Organisation for Standardisation (ISO) currently in session in New Delhi. The Conference was inaugurated last Monday by the Vice-President of India, Dr Zakir Hussain.

The award which is made annually is named after Prof Leo B. Moore of the Massachusetts Institute of Technology. It was instituted in 1963 and the US Defence Secretary, Mr Robert S. McNamara was its first recipient.

This year's award announced by the Society last September is made inter alia for 'distinguished service in the field of standardisation and its professional advancement through original research and writing, creative application and development, or professional and public service.'

The citation of the award to Dr Verman takes note of 'his highest achievements, extraordinary contributions and distinguished services in the field of standardisation and its advancement through creative application and service to his own nation and to the International community.'

Dr Verman's research activities cover a large and varied field of industry—mechanical, electrical, civil, radio, automobile engineering etc. Besides, he has guided investigation on a large number of industrial problems. He has published over hundred original research and technical papers in Indian, American and British scientific and technical periodicals and holds numerous patents in several fields.

Dr K. L. Moudgill Prize For Dr Gopal Shankar Hattiangdi

This year's Dr K. L. Moudgill Prize was awarded to Dr Gopal Shankar Hattiangdi, Chief Chemist, Hindustan Lever Ltd., Bombay.

Sir Jehangir Ghandy, who made the announcement, said that this prize is given yearly to a citizen of India for the best contribution towards the advancement of the objectives of the Indian Standards Institution and the cause of standardisation, nationally and internationally.

The prize was instituted in 1957 on the retirement from ISI of

Rajyasevapravina Dr K. L. Moudgill, to commemorate the excellent services which he had rendered to the Institution and to the cause of national reconstruction through standardisation. Dr Moudgill came to ISI in 1948 after retiring as Pro-Vice Chancellor of Travancore University and contributed significantly to the establishment and progressive development of standardisation in this country.

The citation of the award to Dr Hattiangdi took note of his valuable contributions to the development of Indian standards covering such areas of chemical technology as oils and fats, soaps and other surface active agents, cosmetics, food colours, and natural and synthetic perfumery materials. Many of these standards are pioneering documents which have received world wide appreciation for originality of treatment and for breaking new ground.

About five hundred delegates in all 300 from abroad and 200— from India—representing forty countries and three international organisations are attending the Conference of the ISO which is meeting for the first time in Asia. The Conference will discuss matters of far-reaching consequence affecting world trade in agricultural and food products, including cereals and pulses, spices and condiments and tea and coffee; steel and steel sections; iron and manganese ores; coal; aluminium etc. International standards or some aspects of it are expected to be finalised at this Conference.

A press conference, held on the eve of the ISO Meet, was addressed by Mr A. E. Viatkin, President of ISO, Monsieur Jean Birle, Vice President, Mr Henry Saint-Leger, General Secretary and by Mr E. A. Wegelius, a former president of ISO, as well as by Dr Verman. Incidentally it may be mentioned that Dr Verman cleared a natural confusion in regard to nomenclature. He explained that the full name of the organisation was International Organisation for Standardisation, but the initials were transposed in the abbreviated form ISO.

The ISO is the only international organisation which has been able to keep clear of political controversies. It goes about its highly technical job undeterred by political considerations. Mr Viatkin made a special reference to this aspect of the organisation's working at the press conference. In this connexion it may be of interest to know that the list of delegates includes representatives of standards organisations from USA, Western Europe, the USSR, East European countries, Japan, Israel, the UAR and North and South Korea. Mr Henry Saint-Leger, the General Secretary of ISO, told your correspondent that both North and South Korea were admitted at the same meeting, neither the USA nor the USSR raising any objection. The Sixes and the Sevens also cooperated in the ISO in framing international standards.

Preparation of international standards, Dr Verman explained at the

press conference, was a slow and difficult task involving agreements at different levels between nations which have developed their own national standards. The effort of the international organisation would be to guide the framing of national standards in such a manner as to facilitate the emergence of international standards, by circulating draft standards among the member countries of ISO and helping to coordinate different national standards. The Conference, he said, would deal with several subjects in which similar standards are on the anvil so as to help the framing of international standards.

★

H. C. Dasappa

During the short period he was a member of the Union Cabinet, the late Mr H. C. Dasappa held charge of three important portfolios: Railways, Irrigation & Power and Industries. The first two did not make any severe call on his energies. The problems of the Railways were mostly sorted out before Sardar Swaran Singh took over the Ministry of Food & Agriculture in the wake of the Kamaraj Plan which brought Mr Dasappa into the Cabinet in September 1963. In the Ministry of Irrigation & Power, which was assigned to him in the reshuffling of portfolios after Nehru's death, he had the able, expert assistance of Dr K. L. Rao, who had earlier held independent charge of this

Ministry. There is widespread regret that sudden death has deprived the country of his wise counsel in shaping industrial policy during the crucial period of the preparation of the Fourth Plan. For this task he was eminently fitted by his political record and administrative experience.

Mr Dasappa was among the few Congress leaders whose record of sacrifice in the fight for freedom was matched by legislative and administrative experience. A founder-president of the Mysore Congress, he suffered imprisonment on four occasions for taking part in the freedom movement and his name was struck off the rolls of the Bar in 1940 for political reasons. After independence, he was Minister of Finance & Industries in Mysore State from 1947 to 1952. Later, as Chairman of the Estimates Committee, he had the opportunity of gaining a thorough insight into the working of public sector undertakings. While he was Chairman, the Committee brought out the series of comprehensive reports on the working of these undertakings. His successor, Mr T. N. Singh—it is generally assumed that the temporary assignment will be made permanent in due course—brings to his office a similar background of political and legislative service as well as the rich experience gained as member for Industries in the Planning Commission, a position he continues to hold.

Market NEWS and Trends

JUTE Repudiation

Time once was when the word "bonus" conjured up pleasant thoughts. If you were an investor, it meant that your company, having abundant reserves, was now going to capitalise them and issue free "bonus" shares. If you were an employee, it meant that your company was doing so well, that it was in a position to make an ex gratia payment to you out of its profits. Then days, I regret to record, are gone.

Nowadays, the shareholder shudders if he hears that his company is going to issue bonus shares, for he is going to be mulcted by tax on a notional and non-existent capital gain. The company itself need make no profit, may even suffer a horrendous loss, but it is still liable to pay bonus, not ex gratia, but as an irrevocable right of its labour.

Things have come to a head again in the jute goods industry. There is a threatened one-day strike scheduled for 1 December. Reason? The jute labour unions apparently want that bonus should be paid on the formula laid down by the Bonus Commission. Fair enough, you might think.

But consider what happened four years ago. At the time, Government set up a Cental Wage Board, composed of representatives of Government, employers and employees. Since a Bonus Commission had by then already been constituted, the Board sought to leave the question of bonus to be decided by the Commission; but no, at the insistence of the trade unions, the Board was compelled to evolve a scheme whereunder a bonus become payable whether or no a profit was made. Furthermore, it was made plain that upon the expiry of the term to which the Board's award, that is, till the end of 1967, it had been agreed that bonus to jute mill employees would be based on its own recommendations, and that it would not be liable to be changed in the light of any formula devised by the Bonus Commission during that period.

Which is why it is manifestly unfair that the trade unions should now press for the Bonus Commission formula—obviously more favourable—to be applied with

immediate effect, and superseding the award of the Wage Board, an award that the trade unions had insisted upon.

It bodes ill for this country if the labour unions are permitted in this wise to abrogate agreements. It is to be hoped that Government will take serious cognisance of the illegality, no less than the unfairness, of the strike called for 1 December. It is in order, in this context, to quote from an IJMA press note released last week:

"If the unanimous decision of the tripartite Wage Board is allowed to be reversed on one pretext or another, not only will the effectiveness of future Wage Boards be at stake but the value of tripartite discussions and decisions is also bound to be put in doubt to the detriment of indus-

trial peace and harmony. It is also to be noted that the Bonus Commission itself has given due weight to the existing agreements and has made it clear that the formula proposed by the Commission would not apply during the currency of any industrywise or unitwise agreements except where such agreements stipulated that the formula recommended by the Bonus Commission should apply in modification or substitution of existing arrangements."

Meanwhile, prices of jute goods fluctuated both ways on alternate buying and selling. The market ruled initially quiet as overseas buyers did not show interest. Internal buyers were also inactive due to a fear that trade in foodgrains would be drastically reduced, as offending traders were

faced with a summary trial for certain offences in respect of the supply, distribution and sale of foodgrains.

But, there was a sudden burst of activity especially in the sacking section in the middle of the week on reports of shortage of ready goods and of the strike in the Pakistani jute mills being continued. The upward trend in prices was aided by the subsequent news of a sharp decline in total stocks with the mills at the end of October as compared to the previous month-end. Another important factor to sustain the firmness of the market was the threat of a strike by a section of mill workers to press their demand for bonus in terms of the Bonus Commission's recommendations.

According to the figures released by the IJMA, stocks of hessians have declined from 47,500 tonnes in September to 45,900 tonnes at the end of October; sackings from 43,600 tonnes to 40,800 tonnes; carpet-backing cloth from 24,000 tonnes to 20,000 tonnes and other varieties from 11,000 tonnes to 10,600 tonnes. Thus, total stocks are shown at only 117,300 tonnes as against 126,100 tonnes at the end of September. These compare with only 108,300 tonnes at the end of October last year.

As compared to the corresponding month of last year, however, hessian stocks have risen to 45,900 tonnes from 34,500 tonnes; carpet-backing cloth to 20,000 tonnes from 13,800 tonnes and other varieties to 10,600 tonnes from 7,800 tonnes. Stocks of sackings have, however, declined to 40,800

STOCKS OF JUTE GOODS AT THE END OF OCTOBER, 1964

Description	(000 Tonnes/Tons)		
	31 Oct. 1964	30 Sept. 1964	31 Oct. 1963
Hessian Cloth and Bag	45.9 (45.2)	47.5 (46.8)	34.5 (33.9)
Sacking Cloth and Bag	40.8 (40.1)	43.6 (42.9)	52.2 (51.4)
Carpet Backing	20.0 (19.7)	24.0 (23.6)	13.8 (13.6)
Others	10.6 (10.5)	11.0 (10.8)	7.8 (7.7)
Grand Total	1,17.3 (1,15.5)	1,26.1 (1,24.1)	1,08.3 (1,06.6)

tonnes from 52,200 tonnes. It is, therefore, expected that the jute mills may make some adjustments in the production of hessian, sacking and carpet backings in the future.

Despite a lack of demand from the mills, the raw jute section was ruling almost steady, thanks to the firmness of the gunny section. Anxiety was, however, shown for business by stockholders in view of the increased arrivals and the mills showing interest only in selected grades. Assam Bottoms were nominally quoted around Rs 37 per maund.

TEA

General Demand at Lower Rates

IN the week's export sale held in Calcutta, offerings consisted of 75,932 packages of Leaf grades. There was only a fair general demand at lower rates. Plain orthodox teas, especially broken, were absorbed at rates around 10 paise per kilo below the last level. Medium Doors BOPs were in demand at a drop of 10 to 20 paise; but similar Fannings and Orange Fannings were a weak feature of the sale.

Medium and good Assam teas of orthodox manufacture were sold fairly well; but prices, with the exception of a few selected lines, followed the lower trend of the market. CTC offerings received less support than in recent weeks, the best teas selling at prices up to 50 paise below last week. Medium and plain liquoring CTCs were irregularly easier; but there was a better demand for fibrous secondary grades. Withdrawals of CTC types were, however, comparatively frequent.

Whole Leaf grades were sold fairly well; but Darjeeling teas were generally slightly easier following quality. Legg-cut teas came to a lower market. Following rates were quoted:—Clean Plain Pekoe Rs 5.20 to Rs 5.50; Plain Orthodox BP Rs 4.20 to Rs 4.30; Plain CTC BP Rs 4.90 to Rs 5.10; Plain CTC Fannings Rs 4.70 to Rs 4.80; Medium CTC BP Rs 5.30 to Rs 5.80; Medium CTC Fannings Rs 5.10 to Rs 5.50; Good Assam CTC BP Rs 5.80 to Rs 6.20 and Good Assam CTC Fannings Rs 5.80 to Rs 6.20.

In the internal sale, offerings consisted of 33,824 packages of dusts. There was a good general demand, which eased towards the close of the sale. All CTC descriptions received fair support with good sorts occasionally realising quite satisfactory prices. Towards the end of the auction, however, a markedly easier tendency prevailed. Plain orthodox and medium Assam teas came to slightly lower market; but the brighter lines of the latter category were sold quite well. Legg-cut teas received good support and were firm. Following rates were quoted:—Plain Orthodox Dust Rs 4.10 to Rs 4.60; Medium

Assam Dust Rs 4.70 to Rs 5.10; Legg-cut Dust Rs 4.85 to Rs 5.10; Plain CTC Dust Rs 4.80 to Rs 5.05; Medium CTC Dust Rs 5.05 to Rs 5.30 and Good Assam CTC Dust Rs 6.00 to Rs 6.40.

Meanwhile, production in North India has set up a new record. It has amounted to 546.84 million pounds to the end of October 1964, showing an increase of 48.95 million pounds over that for the corresponding period of last year.

In the Cochin market, offerings were 674,000 kg of leaf tea for export. The quality of teas was generally well maintained. The market opened with a good general demand, which continued throughout the sale. Low mediums and mediums met with useful enquiry and were irregularly dearer by 10 to 15 paise per kg. Good mediums also received strong support and some of these types registered advances in prices.

There was better enquiry for higher-grade teas than of late and these were sometime dearer. Similar fannings were irregular and even easier. Clean black leaf descriptions met with better demand and were quoted dearer, while teas of unorthodox manufacture were irregular and easier. Whole Leaf grades were sold well at around last week's rates. There was useful enquiry for a small selection of Tippy teas on offer. Low Medium was quoted at Rs 4.20 to Rs 4.90 (Rs 4.15 to Rs 4.60); Medium at Rs 4.90 to Rs 5.20 (Rs 4.65 to Rs 5.00); Good medium at Rs 5.20 to Rs 6.00 (Rs 5.10 to Rs 5.60) and Nilgiri BOP at Rs 5.00 to Rs 6.10 (Rs 4.80 to Rs 7.60). Figures shown within brackets were the rates quoted for the corresponding period of last year.

According to trade sources, direct exports of North-East India tea to the UK, during July 1964, amounted to 13.34 million pounds as against 11.56 million pounds in the corresponding month of last year, showing a rise of 1.78 million pounds. The total direct exports, in the current year up to July 1964, were also higher at 19.48 million pounds as against 17.08 million pounds in the corresponding period of last year.

The break-up showed that while exports to London auctions rose from 16.63 million pounds up to July 1963 to 19.07 million pounds in the period under review, those against private sales and forward contracts fell from 447,230 pounds to 407,260 pounds.

In London auction a total of 28,277 packages, including 22,480 packages from North India, was offered. There was a good, but selective demand at a lower level of prices for all descriptions. Assams, where quality showed a decline, were 3d to 6d per pound easier. Teas from the Doors met with fair support and prices remained about steady.

Tea stocks in London, as on 30 October, were slightly higher at 98.96 million pounds as against 97.24 million pounds in the preceding week. The total amount, to be landed on the same date, was

25.56 million pounds. Total afloat was 42.59 million pounds including from Calcutta 31.79 million pounds; from Chittagong nil; from Cochin 969,050 pounds; from Ceylon 9.13 million pounds and from other sources 705,000 pounds.

COTTON Jarilla March Firms UP

The bullish trend in the cotton futures market gathered further momentum during the past week thanks to the renewed bull support and short covering. The broadening spinner interest in the new crop cotton was also bullishly interpreted and the damage to the crop in some cotton growing areas fanned, to some extent, the upward trend in the futures market.

The ruling contract Jarilla March, which opened the week on a firm note, moved up to Rs 750.50 per three quintals from the previous week's closing of Rs 743.50. The contract, however, finished the week slightly lower at Rs 750.25 registering a net gain of Rs 6.75 against the previous week's gain of Rs 3.75 per three quintals. Though the higher levels induced some profit taking it had apparently little impact on the market. The operators from North India figured as the leading buyers in the market.

Quite contrary to the expectations a mood of despondency prevailed during the moorat trading and the offtake was restricted. The operators were reluctant to enter into large commitments obviously on account of the commencement of the marketing season.

The spot market at Sewri presented moderate trading conditions during the week under review. Mill enquiry was noticed in selected growths such as Kalyan, CO 2, Laxmi, Jayadhar and Becar. Because of the reported damage to the crop and the possibility of delayed arrivals of cotton under PL 480, spot houses were unwilling to liquidate their holdings in order to realise higher prices at a later date.

In the meantime, the textile commissioner has issued some clarifications relating to the application of realisation multipliers on cotton piecegoods. It has been made clear that no allowance is permissible for the mixture of domestic cotton with imported growth for the manufacture of cloth attached to Group V. However this allowance will be permitted to mixture of foreign cotton excepting Foreign B cotton with indigenous growth for cloth qualities linked to Group VI subject to certain conditions.

According to the latest report of the United States Department of Agriculture, world cotton production during the 1964-65 season will touch a new high of 51.5 million bales as compared with the previous record of 50.1 million

bales. Consumption of cotton during the season is estimated to be a shade over 50 million bales. The cotton crop in the communist countries is likely to go up by about 9 lakh bales.

Foreign free world cotton output in the season is placed roughly at 22.4 million bales, an improvement of 5 lakh bales from the previous record. Cotton production in Mexico is approximated at 2.3 million bales while the crop in Central America is estimated to move up thanks to increase in acreage under cotton. Moderate improvements in cotton production in Brazil and Argentina are also predicted, though much depends on weather conditions. A seven per cent increase in Egyptian crop to 2,165,000 bales is also anticipated.

The estimates of the US Department of Agriculture predict production declines in countries like Greece, Spain, Pakistan and the United States owing to different reasons. In Greece, for instance, the decrease in cotton crop is alleged to the large-scale diversion of land to wheat and other crop cultivation while the inadequate support price is ascribed to have led to the shrinkage in cotton production in Spain. Pakistani crop, on the other hand, has been adversely affected by unprecedented rain and flood.

According to the reports from the UAR, the country's cotton export season has got off to a flying start in September and exports scale new heights. The total off during the season is expected to take between 1 September and 29 September aggregated 18,000 tons which shows a three-fold rise from ponding period of the previous season. The relative figure for the current season is expected to be 18,000 tons. The spurt in exports can be attributed to the country's constant search for new outlets in addition strengthening its hold in traditional markets.

Rubber Shortage

The Chairman of the Indian Rubber Board has stated that the demand for Rubber, at the end of the Fourth Plan, will be 2,20,000 tonnes, while production of natural rubber will rise only to 72,000 tonnes. According to the latest statistics released by the Board, production of natural rubber in India in August was 3,151 tonnes. Synthetic and reclaimed rubber production remained at a standstill. Imports were 3,246 tonnes, while consumption was 6,908 tonnes. Stocks with estates, dealers and manufacturers were 20,873 tonnes.

Indian rubber imports are expected to assume gigantic proportions towards the end of the Fourth Plan. It is, therefore, possible for both natural and synthetic varieties to co-exist in the internal market. Although new areas have been opened up in Goa, Assam, Tripura and Andamans for rubber, self-sufficiency in the com-

modity is very difficult to envisage. In Andamans, the Board is launching a thousand-acre plantation scheme. The State-owned Kerala Plantation Corporation has already applied for land in Andamans.

The Board has, at present, no proposal under consideration to eliminate dealers and to take up marketing of rubber. It is proposed to open up 50,000 acres in Malabar during the Fourth Plan period and the Agricultural Finance Corporation has agreed to finance the scheme. The Board has earmarked Rs 100 lakhs for small holder; but as yet it has been able to spend only a small sum.

In the meanwhile, a report, released from London, states that Malaysia, the world's leading rubber producer, is to step up research to produce a single, countrywide high standard of rubber. The move is aimed at strengthening the Malaysian industry's fight against competition from synthetic rubber. It is stated that less than 10 per cent of the country's annual rubber exports of 850,000 tons is low grade below the RSS third quality level; but further improvement is essential.

With a greater increase in natural rubber output, there is the prospect of a continuing rise in world consumption. Usage is expected to jump by 60,000 tons to 2.25 million tons a year, while total production will probably go up more sharply from 2.05 million to 2.13 million tons. The deficit will largely be met from American stock-piled surpluses.

At the same time, synthetic rubber is estimated this year at 2.69 million tons—nearly 150,000 tons more than consumption. By the end of this year, synthetic's share of total use is expected to reach 53 per cent. But these statistics do not include Eastern European production which, it is suspected, to be substantial.

* SUGAR ISMA's Concern

The Indian Sugar Mills Association, Calcutta, has voiced serious concern at the sudden decision of the Government to ban the manufacture of A and B grain size sugar. The Association has pointed out that the sudden ban on production of bold grain-size sugars, imposed by the Government, is wholly unwarranted since factories have already commenced crushing operations for the 1964-65 season. They fear that this sudden ban will seriously dislocate the working of the factories, especially carbonation factories numbering 36 whose production capacity will be adversely affected.

These carbonation factories have installed costly plant and equipment for producing bold grain-size sugars for which there is considerable demand in the country

due to the great preference therefor shown by consumers. Besides, bold grain-size sugars have established markets and they also command a premium in normal free trade. As such, the Association, has pointed out that there is hardly any justification for the sudden ban on the manufacture of bold grain-size sugars due to temporary reported difficulties, if any, experienced under controlled distribution which is considered to be a temporary feature.

The Association has also urged the Government to reconsider the matter and if, at all, they decide to prohibit the manufacture of these grain-sizes, they should give adequate time of at least two years to the concerned factories to effect necessary changes in plant and machinery so as to guard against any dislocation in their working, thereby ensuring that the output of these units is not affected.

It is a known fact that the new sugar season has started in the midst of controversies at various levels and it is feared that, despite a record cane crop, the output this year may not be far excess of the modest produce of the last season. It is also understood that the stocks of sugar with the mills are now exhausted and releases for the second half of November will be made from whatever is produced during the first half. For the next few weeks, sugar will have to be rushed to consumers fresh from the factory pan.

The uncertainty about the prospects of the current season has arisen, because of the stiff opposition in some quarters to the interim recommendations of the Sen Commission. There are clearly two schools of thought in the Government on the sugar problem. According to one, the present situation calls for an all-out effort to produce more and take full advantage of the bumper cane crop. Also, minor technicalities must not be allowed to stand in the way.

But, the second view is that the industry must not expect special favours. The Union Finance Ministry has opposed the Sen Commission's recommendation to grant excise rebates to the industry during the middle of the season. The Commission has suggested that a rebate of 20 per cent should be given on production up to 10 per cent in excess of the 1962 production and a rebate of 40 per cent for still higher production during this period.

Production without this concession may not exceed 2.7 million tons. But, it may reach 3 million tons if the rebate is granted. Industrial circles fear that, without a rebate, production may not even reach 2.7 million tons; because last year the industry got a 20 per cent rebate from the Centre and an exemption from

cess in many States. This increased its capacity to pay for cane. Still the production was barely 2.5 million tons. Moreover, the competition from the gur industry is keener than ever before. Developments in the coming weeks are keenly awaited.

* CARDAMOM Fresh Rise in Prices

Prices of Cardamom have shown a fresh rise during the week under review. In the Bombay market, the net increase is Rs 2 kg. The expectation that the crop will turn out less than anticipated earlier has induced the stockists to tighten their grip over the available supply. There is a distinct tendency among the holders for stockpiling, as they anticipate that there will be a considerable rise in price with the advance of the season.

Arrivals at the terminal markets are promptly absorbed by the powerful stockists. Shippers also feel that they will realise better prices subsequently. They, therefore, try to stockpile so that they can dispose it of at attractive prices.

* YARN Market Depressed

Barring a moderate improvement in Bemberg yarns, the Yarn market in Bombay ruled generally dull with prices displaying and easier tendency. Indigenous yarns also did not attract any appreciable buying interest even at lower levels.

The Rayon yarn market has continued to be in a subdued state. The hopes of revival of demand have tended to fade, as offtake has failed to pick up. It is stated that production has out-paced demand, while consumption has been steadily declining. Indian consumers seem to have switched over to synthetic and pure silk fabrics, while the demand for rayon goods has shrunk considerably. With the spinners obliged to reduce the prices from time to time and when the consumers are reluctant to buy more than their immediate requirements, dealers are naturally disinclined to stock the goods.

It would be recalled that recently the Government decided to issue advances for Art Silk yarn to the extent of 50 per cent of the value of exports expected against bank guarantee. By this decision, the price of indigenous yarn as well as imported yarn is expected to go down further and worsen the situation. Looking to the ruling premium on import licences, it may even be economic for an exporter to obtain the advance import licence and not to export all thereby having his bank guarantee forfeited and gain in the overall bargain.

Thus, the Government decision, it is stated, may encourage unfair methods of obtaining extra advance licences in good quantities and may weigh heavily on the foreign exchange resources. This policy thus may result in multi-sided losses to the country as well as to the art silk spinning industry, which is presently in a miserable plight.

* OILS AND OILSEEDS Falling Trend Arrested

The Bombay Oilseeds market, which had been ruling weak during the past few weeks, has developed a slightly steadier tendency, thanks to the Gujarat Government having decided to abolish the current ban on the export of groundnut and groundnut oil from 19 November and allow exports on a permit basis. It is understood that the Gujarat Government will allow the movement from the State only after keeping some reserves. Evidently, the Government intends to make a provision for the future requirements of the State. It will not, therefore, allow indiscriminate "export" of groundnut and groundnut oil from the State.

Prices in the Groundnut section have actually moved up slightly in view of the uncertainty about the receipt of goods from Gujarat. For instance, Khandesh variety has improved by Rs 6 to Rs 113 per quintal and Groundnut oil by Rs 1.25 to Rs 23.25 per 10 kg.

In the Castorseed section, trading reflected somewhat subdued conditions. While there were reports of East European enquiry for castor oil, hopes of a substantial business seemed to have receded following the news that Russia had already completed its purchases for 1964 and that a fresh demand would not be forthcoming till February next. Consequently, the market lacked support at the higher levels.

Thanks to the speculative support inspired by higher North Indian advices in respect of rapeseed, the Linseed section revealed a bullish trend. The demand was small, although the inflow of ready seed was reported to be meagre.

In the Madras market, prices of groundnut displayed a steady trend after a quieter tone early in the week. Arrivals averaged 40 tons a day in the shape of new crop peanuts. Local crushers were again the main buyers. The rate was quoted around Rs 86 per bag of 80 kgs.

In the Oil section, sellers were not keen due to the rainy weather. Buyers, too, were not freely coming forward to operate with Deepavali demand being over. The quotation for ready oil is quoted around Rs 210 per quintal.

For the INVESTOR

INVESTMENT GOSSIP Taken ill with Dengue

It has been a desultory week, as if the market had been taken ill with dengue. Prices have been vacillating, and if any pronounced trend was in evidence, it was downward. The good doctor, the Finance Minister, has so far been as helpless as any of his brethren in the profession to find the cure for dengue. Stock Exchanges, which till the announcement regarding blank transfers had relatively showed some semblance of steadiness, have suddenly lost the will to survive. Good corporate news has little or no impact upon the views and doings of operators, and so, I have to say it, the Stock Exchanges are in a condition of helpless drift.

If they are to get direction again, I am afraid they have to prepare themselves for three months more of being becalmed before—we hope—an incentive Budget next February will provide a wind of change favourable for the investment climate.

How much dare we hope for? Not much, I am sorry to say. Just before he passed away, I was talking to B. N. Chaturvedi; and he had quite lost his erstwhile optimism. I was then of a view with him, but I added I could see a psychological transformation in market confidence if Government announced no more than three specific reliefs. I make no apology for here reproducing suggestions made on a former occasion in another section of this journal. These three reliefs, briefly, are that the annuity deposit scheme, like its predecessor the Compulsory Deposits scheme, should be consigned to the limbo of dead statutes; that the taxation of bonus shares in the hands of shareholders be discontinued; and that the hardships at present faced by the old Section 23A Companies be mitigated.

There is, when I come to think of it, another sorely needed relief, which I had forgotten to mention to the ex- and late President of the Calcutta Stock Exchange. I refer to the oppressed middle classes, on whom taxation touches—heavily—at every point. Without concessions thus giving incentive for the individual, I fear industrial progress in the country will suffer.

Strangely enough, the state of the market had not served quite wholly to prevent new issues from being offered to the public. Though there

has been one noted withdrawal, this is more than counter-balanced by a continuing spate of offers. This is perhaps because companies that are needing money for expansion and which have already proved that they are well-run and profitable enterprises do not apprehend that shareholders will fail to respond to their rights issues. Similarly, new issues which have the backing of reputed foreign collaboration are still attractive because of the assured growth potential.

Incidentally, those who bought the Unit Trust at its issue price are already on to a good thing. In around five months, the value of the unit has appreciated by about five per cent—and this despite a generally lassitudinous state of stock exchanges. Thus, it would seem that for the small investor there can be no better buy than the Unit Trust.

* NEW ISSUE NOTES Indian Air Gases

Indian Air Gases Limited, a new company formed for the manufacture of oxygen and acetylene gases, has been granted an industrial licence to set up a factory at Varnasi. The total capital outlay on the project is estimated at Rs 61 lakhs, to be financed by the issued capital of Rs 31 lakhs, a loan of Rs 25.25 lakhs from the IFC and the company's own resources amounting to Rs 4.82 lakhs.

The issued capital will be made up of Rs 23 lakhs in equity shares and Rs 8 lakhs in preference shares. The directors, friends and associates have agreed to take up equity shares of the value of Rs 10 lakhs. The IFC of India has already sanctioned a rupee loan of Rs 8.09 lakhs and a loan of \$357,455 (equivalent to Rs 17.16 lakhs). It has also agreed to underwrite shares (equity and preference) of the value of Rs 2 lakhs. The company is expected to enter the market with a public offer in the coming month.

New Swadeshi Mills

The New Swadeshi Mills of Ahmedabad will soon raise Rs 25 lakhs by the issue of 25,000-9.3 per cent cumulative redeemable preference shares of Rs 100 each, at par, payable in full on application. After the purchase of Bharkhand Textile Manufacturing

Company Limited in December last, the company's requirements of funds have increased and the proceeds of the present issue will be utilised to meet the increased requirements. The shares are redeemable, at par, at any time after 31 March 1976 and before 31 March 1978 on three months' previous notice by the company.

Appeejay Structurals

Appeejay Structurals Limited, Calcutta, is to issue capital of Rs 65 lakhs for cash, at par, consisting of Rs 50 lakhs in equity shares of Rs 10 each and 15 lakhs in 15,000-9.28 per cent cumulative preference shares of Rs 100 each. Out of these, such number of shares as will entitle the scrip to be listed on the recognised stock exchanges will be issued to the public by prospectus. The capital will be utilised for the manufacture of steel structurals.

N. & N. Cutting Tools

N. & N. Cutting Tools Limited, Bombay, is to issue Rs 52.50 lakhs—Rs 37.50 lakhs in equity and Rs 15 lakhs in preference shares, both of Rs 100 each. All the shares will be issued for cash, at par. The money will be utilised for the manufacture of twist drills, taps and dies.

Britannia Engineering

Regarding the recent issue of 25,000-9.3 per cent Redeemable Preference shares of Rs 100 each, the Britannia Engineering Company Limited has announced that it has extended the last date for the receipt of applications from 7 to 21 November 1964.

* BONUS ISSUE NOTES Travancore Sugars

Travancore Sugars & Chemicals Limited, Trivandrum, is to issue bonus shares of the value of Rs 6 lakhs on capitalisation of its Share Premium Account. The bonus shares will be issued in the ratio of one for five shares held.

Mysore Stoneware

The Mysore Stoneware Pipes and Potteries Limited, Bangalore, is to issue further capital of Rs 60,000,

divided into 6,000 equity shares of Rs 10 each, to be issued as fully-paid bonus shares to the existing shareholders of the company in the ratio of one bonus share for every 10 equity shares held, on capitalisation of the company's Share Premium Account.

* INVESTMENT NOTES Devidayal Metal

Devidayal Metal Industries Limited has successfully commissioned into production a new Sendzimir Mill, which is the first of its kind in this country. It is even claimed that there is only one unit of this type between Yugoslavia in the West and Japan in the East. It is stated that this mill will be able to meet the demand for high precision metal sheets and strips for use by producers of automobile components and by defence production units and factories making precision parts for aircraft, electronic devices, etc. The company has also a programme for building up an export trade as it is expected that there will be a good market for its products particularly in the Middle East and in South-East Asia.

Indian Explosives

Indian Explosives Limited, which has already a factory in Bihar for the manufacture of commercial explosives, has a programme for establishing a new plant for producing plain and electric detonators in order to complete the range of commercial explosives manufactured in this country. The company is jointly owned by ICI of UK and the Government of India, former's shareholding being 80 per cent of the equity capital.

It is now proposed to offer equity shares to the public in order to secure the rupee resources for constructing the new plant. The British participants have agreed to a reduction in the proportion of their holdings to 70 per cent from the present figure of 80 per cent of the issued capital with a view to giving an opportunity to the Indian investing public. It is learnt that 4.3 lakh equity shares will be offered to the public, at a premium of Rs 12.75 per share. Out of this issue, 57,000

equity shares will be taken up by the directors and employees of Indian Explosives Limited and those of other associated companies. The balance of 3.73 lakh shares will be offered for public subscription..

Ashok Leyland

Ashok Leyland Limited has raised the dividend from 7 to 9 per cent for the year ended 30 September 1964. It is learnt that the net profit, before depreciation and taxation, has jumped to Rs 241.61 lakhs from Rs 109.11 lakhs, thanks to the full benefit out of the large capital expenditure incurred in recent years. Since it is expected that fresh capital may be raised shortly for implementing the new schemes, the decision of the directors to raise the distribution to the shareholders must be taken as an indication of the confidence that the management has in the outlook for the company.

LINDA

At a meeting held this week, the Board of Directors of the Indian Aluminium Company Limited decided to pay an interim dividend of 75 paise per Ordinary share in respect of which the nominal or par value has been fully paid-up, for the year ended 31 December 1964. This is payable to the ordinary shareholders registered as on 6 December 1964 and will be

subject to deduction of tax. The ordinary share transfer books will remain closed from the 6 to 12 December, 1964.

IN BRIEFS

Regarding the recent issue of 25,000-9.3 per cent Redeemable preference shares of Rs 100 each, the Britannia Engineering Company Limited has announced that it has extended the last date for the receipt of applications from 7 to 21 November 1964.

The Budge-Budge Jute Mills Company Limited has proposed an interim dividend of Rs 3 per share, taxable, for the year ended 31 October 1964, payable to those shareholders registered as on 24 November, 1964.

Premier Automobiles Limited has proposed a taxable dividend Rs 4 per share for the year ended 30 June 1964 as against nil previously.

Mysore Coffee has maintained the dividend at 10 per cent for the year ended 30 June 1964.

Panchura Estates Limited has maintained the dividend at 15 per cent for the same year, while a proportionate dividend will be paid on the new equity shares.

Stanes Amalgamated Estates Limited has repeated the dividend at 12 per cent for the year ended 30 June 1964.

Osmanshahi Mills Limited has, once again, skipped the dividend for the ended 30 September 1964.

BALANCE-SHEET REVIEWS J. K. Steel Repeats

According to the preliminary report, J. K. Steel Limited has shown a slight decline in the net profit, after providing for depreciation and taxation, from Rs 31.75 lakhs to Rs 7.54 lakhs for the year ended 30 June 1964.

In the above connection, the directors state that the profit has been affected on account of the increase in the prices of stores, colours and chemicals as also dearness allowance payable to labour. The selling prices of cloth have also stagnated at the old level due to voluntary price scheme, while Defence orders were executed at unremunerative prices. In respect of allocations, Depreciation is raised to Rs 3.50 lakhs from Rs 3.19 lakhs and Development Rebate to Rs 2.54 lakhs from Rs 6,000, while General Reserve is lowered to Rs 5.06 lakhs from Rs 19.23 lakhs. A sum of Rs 13.44 lakhs is provided for Taxation against Rs 14.63 lakhs provided for Taxation Reserve. The directors have proposed to maintain the dividend on the equity shares at 15 per cent, subject to tax. In the preceding year, the dividend was paid out of General Reserve, which was created by a transfer of Rs 15.24 lakhs from profit and loss account and Rs 3.99 lakhs from development rebate reserve.

Morarjee Goculdas Earns Less

DESPITE a rise in sales from Rs 5.83 crores to Rs 7.65 crores, the

Morarjee Goculdas Spinning and Weaving Company Limited has reported a substantial decline in the net profit, after providing for depreciation and taxation, from Rs 31.75 lakhs to Rs 7.54 lakhs for the year ended 30 June 1964.

In the above connection, the directors state that the profit has been affected on account of the increase in the prices of stores, colours and chemicals as also dearness allowance payable to labour. The selling prices of cloth have also stagnated at the old level due to voluntary price scheme, while Defence orders were executed at unremunerative prices.

In respect of allocations, Depreciation is raised to Rs 40.37 lakhs from Rs 36.21 lakhs and Taxation to Rs 2.25 lakhs from Rs 1.65 lakhs. After transferring Rs 1.15 lakhs being excess provision of managing agency commission, Rs 1.45 lakhs being excess provision for taxation on longer required and Rs 10,710 being unclaimed dividends forfeited, a sum of Rs 11.52 lakhs (Rs 13.00 lakhs) is transferred to General Reserve.

In the preceding year, a sum of Rs 18.85 lakhs was paid as bonus to staff labourers and Rs 7.25 lakhs was provided for taxation in respect of earlier years. The directors have proposed a taxable dividend of Rs 15 (20) per share on 51,750 equity shares, payable from the General Reserve as no sepa-

rate provision has been made therefor.

The directors hope to complete the expansion and renovation programmes of the company by the end of the current year.

The new spinning building to house additional 45,000 spindles is getting ready and is expected to be commissioned before 30 June 1965.

Asher Textiles Pays Less

Higher working expenses, deterioration in labour relations and loss of working days on account of the power-cut are reflected in the working results of Asher Textiles Limited for the year ended 30 June 1964.

The net profit, before providing for depreciation and taxation, amounts to only Rs 9.39 lakhs as against Rs 12.36 lakhs for the previous year. Depreciation is raised to Rs 4.50 lakhs from Rs 3.67 lakhs; Development Rebate to Rs 1.07 lakhs from Rs 60,000 and Gratuity Reserve to Rs 50,000 from Rs 20,000, while Taxation is reduced to 1.20 lakhs from Rs 5.55 lakhs. The dividend on the equity shares is reduced from 12½ to 10 per cent, subject to tax.

The programme of modernisation is being implemented and orders have been placed for installing 15 ring frames in order to replace a similar number of ring frames installed in 1950, besides new equipment for increasing capacity.

New Kaiser-I-Hind Incurs Loss

The New Kaiser-I-Hind Spinning & Weaving Company Limited had another adverse year of working during the twelve months ended 31 March 1964. Despite an improvement in sales from Rs 333.59 lakhs to Rs 365 lakhs and additional income of Rs 2.42 lakhs from processing charges, the company has incurred a loss of Rs 21.49 lakhs before providing for depreciation. This is on top of a deficit of 26.81 lakhs incurred in the preceding year.

There is a total deficit of Rs 66.94 lakhs to be carried to next year. In view of the heavy loss, the company has not been able to provide any depreciation and the total arrears on this account from 1960-61 onwards amount to Rs 19.82 lakhs. The arrears of preference dividend from 1957-58 to 1963-64 aggregate Rs 6.82 lakhs.

New Savan Sugar Does Better

New Savan Sugar and Gur Refining Company Limited has reported a slightly improvement in earnings for the year ended 31 May 1964. Thanks to the rise in income by royalty from Rs 1.23 lakhs to Rs 1.75 lakhs, the net profit, after providing for depreciation, amounts to Rs 17,243 as

against Rs 9,317 for the preceding year.

Depreciation is raised to Rs 1.15 lakhs from Rs 1.09 lakhs. After providing Rs 34,000 (Rs 6,800) for Taxation and Rs 1,500 (Rs 5,670) for Development Rebate Reserve, the accounts reveal a net loss of Rs 17,936, which is carried forward to next year.

The quantity of cane crushed is higher as 765,303 quintals against 527,252 quintals and sugar produced at 72,011 quintals against 50,522 quintals.

STOCK EXCHANGES Industrials Dip Further

STOCK markets have retreated further in the absence of any support. Although the Finance Minister's suggestion for the removal of unremunerative excise and custom levies has induced some recovery in mid-week, it has been proved short-lived. There is a growing feeling that the Finance Minister may have to raise direct taxes for gathering resources on the desired scale for implementing the Fourth Plan schemes.

Extremely dull conditions prevailed on Lyons Range where equity prices displayed an easier tendency due to subordinated selling pressure.

Dalal Street retreated owing to tired long liquidation in selected shares.

The Madras Stock Exchange was quiet and dull with business confined to only a few shares.

The Ahmedabad Stock Exchange suffered a heavy setback on nervous bull liquidation.

Only two or three shares were traded on the Bangalore Stock Exchange.

Share values declined further on the Delhi Stock Exchange.

On the London Stock Exchange, prices showed a rising tendency following the new Labour Government's emergency budget tampering tougher taxation with bigger social security benefits.

CALCUTTA

ACTIVITY in the local stock market continued to be restricted and the tendency for prices was to seek lower levels, reflecting the hesitancy on the part of the operators to enter into any commitments. A feeling was gaining ground that there might not be any appreciable reduction in the burden of taxation when the Central Budget would be presented to Parliament in February next.

There were even talks that the Finance Minister will have to

levy additional taxes on a large scale on account of the known unwillingness of the States to gather resources on the desired scale for implementing the Fourth Plan schemes. To make matters worse, the adoption of the resolution at the Guntur session calling for the enactment of suitable legislation to enforce ceiling on urban property was viewed with concern. The intractable food situation and the growing discontent in some States also induced a mood of caution.

Apart from the fears about new taxes, those investors, who had entered into commitments some time ago with the help of borrowed funds, thought it advisable to reduce their holdings, especially when the outlook for the corporate sector had become dark. Moreover, the issue of fresh capital on large scale by many established companies also led to some selling in order to find the required funds for subscribing to the issue of right shares. Although the volume of selling was not heavy, it was forced upon a market, which was bereft of any buyer.

The Gilt-edged market was quiet and dull. Apart from some enquiry for the short-dated issues, medium and long-dated securities continued to be on offer. 3 per cent 1986 Conversion Loan eased off further to Rs 62,000 from Rs 62.10 quoted in the preceding week.

Bank shares were neglected.

Jute shares were dealt in cautiously and turnover showed a further contraction. Birlas were on offer at Rs 25 against Rs 35.56 and New Central at Rs 10.25 against Rs 10.81. Ganges were, however, a steady feature at Rs 12.84.

Coal shares lacked any interests on reports of accumulation of stocks at various pit-heads. East Indian met with some enquiry up to Rs 26.50 with Central India moving narrowly between Rs 8.31 and Rs 8.56.

In the Tea section, operators seemed to have not been impressed by the larger output in North India, since the average prices obtained now at the auctions were still lower than those of the previous season. Considering the seasonal deterioration in quality of teas combined with the prospect for an adequate supply, the trend of prices was expected to soften further in the coming weeks.

Sugar shares reacted unfavourably to the Government ban on the manufacture of bold grain-size sugar. It was feared that this move would affect production, especially when there was urgent need for raising the output. It was felt that the incentive in the form of a rebate of the basic excise duty on excess production in the current season was unlikely to stimulate output.

In the Cotton Mills section, J.K. Cotton were neglected at Rs 10.37, while Bharat Commerce came in for some enquiry up to Rs 23.69 from Rs 23.50 and Elgins up to Rs 19.50 from Rs 19.19.

Engineering shares ruled generally quiet under the influence of Indian Irons. Against the previous week-end closing of Rs 25.74, Indian Irons opened better at Rs 25.86, but receded gradually to Rs 25.38 before finishing the week better at Rs 25.42. Texmaco fluctuated between Rs 25.80 and Rs 26.05; G. K. Williams between Rs 23.12 and Rs 23.37 and Jessop between Rs 25.06 and Rs 25.37. Jay Engineering, however, met with consistent support up to Rs 21.50 from Rs 21.25, while J. K. Steel were almost maintained at Rs 17.79 following the dividend being repeated for the year ended 30 June 1964.

Miscellaneous issues moved in sympathy with the general trend of the market. Dunlop Rubber changed hands at Rs 31.69 to Rs 32.62; Hindustan Motor at Rs 16.31 to Rs 16.75; Indian Aluminium at Rs 31.62 to 31.94; Indian Copper at Rs 3.34 to Rs 3.39; Kesoram at Rs 24.31 to Rs 24.87; Orient Paper at Rs 31.00 to Rs 31.65; Rohtas at Rs 9.94 to Rs 10.19 and Orissa Cement at Rs 11.50 to Rs 11.72.

There were only few dealings in the cash section where Chemicals & Fibres changed hands at Rs 16 to Rs 16.31; Sirpur Paper at Rs 11.87 to Rs 12.26; Martin-Burn at Rs 26.75 to Rs 27.12 and NICCO at Rs 24.87 to 25.12 India Steamship were a very steady feature at Rs 6.50 with Union Carbide cheaper at Rs 29.87 against Rs 30.25. Woolcombers hovered narrowly around Rs 10.31.

Durgapur Steel

During the month of October there was an improved performance in most sections of Durgapur Steel Plant compared to the previous month. Rated capacity or near rated capacity outputs were obtained in the Coke Ovens and Blast Furnaces. The pig casting machines exceeded rated capacity and the Steel Melting Shop at 91 per cent of capacity showed an improvement over the last two or three months.

In the mills the Merchant Mill gave an outstanding performance and was well over the rated capacity at 23,760 tonnes. The Sleeper Plant achieved its best performance to date and showed a marked increase over previous months.

The despatch of Pig Iron at 48,427 tonnes was the highest so far achieved. The total despatch at 113,000 tonnes was also good considering that a substantial tonnage of materials for export orders has been held up through port difficulties.

With our 14 branches overseas and over 1000 correspondents almost all over the world, we are well equipped to assist you in every way.

Trade enquiries? Letters of Introduction? Credit information and status reports? Exchange Control Regulations? Travellers' Cheques? Remittances? Purchase and sale of foreign currencies? Import problems? Export problems?

Standards Indispensable to Growth of Trade

Inaugurating the Triennial General Assembly of the International Organisation for Standardization (ISO) in New Delhi, the Vice-President of India, Dr. Zakir Husain, said:

"I am happy today to be here with you among so many distinguished leaders of standardization movement from almost all parts of the world. I have been by profession a teacher, which is the same thing as being a student. All true education is a life-long preoccupation and there is always something to learn. Much, therefore, as I hesitated to accept your kind invitation to inaugurate this Assembly owing mainly to my almost total ignorance of your special field of competence, the student in me prevailed. It is always a rewarding experience to be amongst people who know more. And so here I am.

It seems to me that anthropologists, archaeologists, historians, scientists, would all share your enthusiasm when, during their studies, they come across examples of outstanding character exhibiting nature's tendency to standardize and of the many successful attempts made by early man in that directions..

The biological similarities among the species of the vegetable and animal kingdoms, the typification of anthropomorphic characteristics and their systematic variations from race to race, the absolute universality of the laws of physical sciences—all these one may claim represent nature's design for creation on the basis of standardization. Archaeologists in their searches have unearthed evidence of spontaneous effort at standardization made by early man. During the stone age, for example, when long distance communications over the face of the earth were no better than slow migrations spread over decades or even centuries the stone implements fashioned by human communities separated by continental distances showed such remarkable similarities of pattern and correspondence of technique, that one may well wonder if standardization were in fact not a universal urge, spontaneously or subconsciously guiding all human activity.

Coming nearer home, we find that as long as more than five thousand years ago there flourished in the North-Western part of this subcontinent a highly developed culture now well known as the Indus Valley civilization. Physically it covered thousands of kilometers North to South and East to West, and temporally two to three millennia. Throughout this period, one finds a highly developed and prosperous society liv-

ing in this vast region, whose mode of life was guided by what in modern language may justifiably be called clearly marked standards. The excavations made during the past four or five decades clearly indicate that these standards of the Indus Valley civilization were concerned with many facets of the economic life of those times, for example in the realm of weights and measures, of water supply and drainage, of building construction, of food grain handling and storage, of calligraphy and the like.

Be that as it may, what to me as an educator appears to be the most remarkable success of man at standardization is that of the spoken word, that is the language itself. Presumably when early man discovered that he could produce several distinct sounds with the vocal apparatus in his throat and mouth, he began to standardize the meaning of each sound pattern and began to use these patterns for expressing his emotions and desires and in due course for communicating his wishes and idea to his fellow beings. Ever since, many languages have evolved from these primitive sound patterns and today they have become so sophisticated as to be able to express with facility the most complicated scientific and mathematical concepts. Yet no modern language can be considered as an ideal language for an ideal language would be that in which one word will have only one meaning and one concept will be expressible by only one word. Nevertheless, most modern languages work marvelously well in fulfilling the function they are intended to perform, and the variations in the meanings of words and expressions are skillfully exploited by poets and writers to lend colour and charm to their creations.

For the standards engineer of today, however, the lack of strict one-to-one correspondence between the word and its meaning constitutes a serious impediment in his way for his whole raison d'être demands clarity of expression and exactitude of meaning. That is why you in the ISO and in each of the standards organisations among your member countries are so preoccupied with standardization of terminologies and glossaries—giving exact meanings to words and designating distinct terms for every concept in modern usage. This to my mind is not only a pre-requisite for all standardization but a really noble task basic to all education and essential for the development of scientific thought and free exchange of information between the countries of the world.

Apart from the accomplishment of standardization effort in the realm of language and calligraphy, the modern industrial society has developed a keenly-felt need for standards to deal with the ever-increasing complexity of economic goods and services constantly being produced, sold and brought, by individuals, groups and nations. One Indian thinker rightly stated that "Standardization is to industry and commerce what culture and social manners are to society." Just as cultural values and rules of social behaviour are essential for a well-ordered and contented existence of human beings in a social set-up, so are the industrial standards and codes of practice indispensable to an orderly conduct of exchange of goods and services in the industrial complex of the world.

As in the wake of scientific advancement industrial operations become more and more intricate and products more and more sophisticated, so grows the need for more and more standards of progressively growing complexity. It is no wonder that during the past couple of decades the standardization movement has spread out not only among most of the developing countries where it was needed anyway to serve the newly emerging economies, but also in the developed countries themselves, where it has come to assume a new complexion and acquired greater vigour to enable it to meet the growing and exacting demands of the newer industries that are being constantly brought into being as a result of scientific advancement and technological progress. Thus we find that the International Organisation for Standardization (ISO), while it is, on one hand, preparing standards for the old fashioned goods like agricultural products and minerals, it is, on the other, concerned with the latest developments in the realms of nuclear energy for peaceful uses and of computers to supplement the human brain. I am sure it would not be long before artificial satellites and space vehicles for interplanetary travel also come within its purview.

By boldly tackling problems of international standardization in the older as well as the newly developing realms of science and industry, ISO to my mind is making a pioneering effort at building up a system of technical documentation to help regulate the exchange of goods and services between one nation and another. If this documentation which represents the result of years of negotiations and discussions among member-bodies, and incorporates the cream of experience and knowledge of many nations, is to be truly effective, it will have to be accepted as such by all nations of the world and used as a guide for directing the national policies for standards within each country. Thus, to follow-up what has been

accomplished by way of agreed solutions to standards problems to their logical conclusion becomes an even more important task for the ISO.

Looked at in this light, it becomes clear that the international agreements on technological matters affecting economic life of nations constitute an important element in international understanding and an essential supplement to the efforts that the statesmen of the world are presently making at laying down the foundations for a world order.

The peace and prosperity of the people of this world depends in considerable measure on just such efforts. I, therefore, wish you all—friends from abroad and your Indian colleagues—success in your noble undertaking and hope that your deliberations in New Delhi will contribute substantially towards the early achievement of your goal.

With these few words, I take pleasure in inaugurating the Sixth General Assembly of the International Organisation for Standardization and its associated meetings which are to commence this afternoon."

Machine Tool Output

Indian Machine Tool Manufacturers' Association report that the total approximate production of various machine tools by their 36 leading member-firms during the month of August 1964, was as under:

Description of Machine Tool Manufactured	Quantity Nos.	Value Rs. (in lakhs)
Lathes	450	58.27
Milling Machines	51	28.24
Portable Elec. Tools	7868	12.86
Radial Drills	17	6.50
Grinding Machines	14	6.13
Presses	27	5.21
Drilling Machines	138	4.4 5
Regulators	2948	4.52
Shaping Machines	51	4.21
Capstan/Turret Lathes	7	3.20
Boring Machines	2	2.68
Lathe Chucks	809	2.53
Welding Machines	43	2.36
Cutter & Tool Grinders	12	2.34
Shearing Machines	70	1.96
Furnaces	6	1.94
Planing Machines	11	1.71
Blowpipes	790	1.67
Miscellaneous	452	1.48
Drop Stamp Hammer	1	1.29
Hacksaw/Bandsaw Machines	19	1.04
Slotting Machines	5	0.61
Pneumatic Power Hammer	1	0.57
Drill Chucks	491	0.19
Plate Bending Machine	1	0.16
Automatic Lathe	1	0.13
	14285	156.35

NOTE: Annual figures are averages of months; those of sugar relate to crop years.

*Data of Matches, Hurricane Lanterns, Sewing Machines and Bicycles from January 1963 onwards and those of Footwear (leather) from April 1963 relate to units having fixed assets of Rs 5 lakhs and more.

†Data in respect of certain units are not included from January to May 1963.

(1) Monthly figures are exclusive of production in Punjab (Kangra) and Himachal Pradesh.

(2) Relating to the production by mills in the membership of Indian Jute Mills' Association and to one non-member mill.

(3) Includes canvases.

(4) Figures relate to stable variety only from June 1962.

(5) Including figures for Jammu and Kashmir.

(6) Figures relate to production of organised factories.

(7) Boxes are of 60 sticks each upto February 1961 and thereafter of 50 sticks each.

(8) Total of viscose yarn, staple fibre, acetate yarn and cellophane.

†From January except in the case of sugar where the figures are progressive from November of the preceding year, the crop year being November—October.

*Provisional.

Deeper in the Muddle?

THOUGH the critical features of the present economic situation are not under-rated in official circles and in spite of the readiness to admit the shortcomings in policy-making and in administration, surprisingly little has been done during the last two months by way of providing for a better state of affairs in the future. At the present moment the current trend in our export trade appears to be the only bright spot in an otherwise depressingly bleak outlook. Though one would have thought that the weaknesses of a nation's economy are seen at their worst in its exports, India's exports have been looking up during recent times and one might feel thankful that adverse trends in this vital sphere have not added to our embarrassments. Our experience of the balances on account of invisibles have also been of the welcome kind. But these would seem to be only exceptions to emphasise the rule. The achievements of the Third Plan, it is said, are likely to prove even more disappointing than the mid-term appraisal led us to expect. It is some time since the Prime Minister emphasised the importance of strengthening the expert element in those who are entrusted with the drawing up of our Five Year Plans. The National Development Council met only recently with the expectation of solving some of knotty differences that prevailed in and about the Planning Commission regarding the Fourth Plan. The Chief Ministers have met more than once to settle the questions concerning zoning and the movement of food grains. The food problem developed some of its ugliest phases and many parts of the country are still in the throes of a food crisis. The end of the calendar year is usually regarded as the time when the Finance Ministry takes up the preparation of the next budget. And this year, the budget is certainly no routine affair since the unfavourable impact of the budget on productivity and the progress of the Plan is recognised on all hands. What is more, the financial relations between the States and the Centre regarding the financing of the higher projects and even the administration of them are being thrown up by the mere pressure of actual developments for reconsideration. Back of all this is the need for State Governments to think up sources of additional taxation such as would enable them to bear their part of the financial burdens of the next Five Year Plan. This time, the need has to be considered seriously since it would be idle for State Governments to continue in the hope that the

Centre would find some way of relieving them of their unpleasant task. But the difficulty lies not in its unpleasantness but the virtual impossibility of accomplishing it in the present conditions. State Governments have in a sense been pampered by the Centre, since the Centre has been aiding the allocation by the Financial Commission of increasing shares of the divisible pools, affording them loans and grants on a large scale without affronting their political or financial autonomy, flattering them by urging them to grandiose plans of their own and letting them to indulge in liberal non-plan expenditure. But the limits of this policy have now been reached and appeals for economy will be followed by admonition. The lines on which the thoughts of the Rajamannar Commission run are indeed difficult to guess. But one thing is certain. The next Union Budget can ignore vital issues of financial reform and financial reconstruction only at the peril of a grave financial, economic and even constitutional crisis.

But one looks in vain for any sign that the issues confronting the country are being tackled in a courageous and realistic spirit. All that the public knows of the proceedings of the National Development Council is that it agreed on a compromise regarding the total outlay on the Plan. Though it must have considered the resources budget of the Fourth Plan, little of its proceedings in this respect has been made known to the public. So little indeed that one might even doubt the correctness of the assumption. But it is the resources budget that ought in fairness to be given greater publicity. For the public mind is full of forebodings that the indiscreet priority accorded to size might mean the piling up of even more serious hardships on the people than they are now suffering. The latest index of prices to hand shows that the continuous rise of prices has not been arrested, has not even been slowed down. If the old policy of finding additional revenues without regard for the effect of the imposts should be persisted in, then the consequences would be difficult to tackle. The addition of a demand for foreign exchange of Rs 30 crores for import of foodgrains has had to be acquiesced in by the Finance Minister though not without much humming and hawing. But that is an arresting instance of the shortcomings of planning causing a serious upset at a most inopportune moment. Even though we have not got to the end of the food muddle, there is enough in the experiences of the last one month and more to give food for thought to the Minister

in charge of this ill-starred portfolio. The food debate in Parliament was sterile of concrete suggestions for the Government to adopt. The courage which Mr C. Subramaniam showed in acknowledging responsibility for the crisis in Kerala and, no less, in resisting the demand of the Opposition for his resignation should be followed by the most careful examination of the errors of omission and commission of which he may consider his Ministry to be guilty. To talk of buffer stocks, procurement, State Trading and rationing in the midst of a food crisis is so irritatingly commonplace, so strongly reminiscent of similar talks on previous occasions that one wonders whether the country is condemned to an all too frequent repetition of history in this regard. Apart from the confusion caused by ill conceived orders, administrative bungling and corrupt practices here and there, the food problem is in the main the result of defects in planning, unwise or premature attempts at organisational changes of ideological significance. Is it not time that if only as a break in the monotony or sameness of modes of suffering, some consideration was given to ways of purifying the channels of private trade, so that the State may not take on itself more than it can perform and the consumer spared the hardships of profiteering and statutory rationing alike?

It is absolutely essential that some definite improvement should be achieved well before budget time, so that the budget itself may signify the beginning of a new phase in public finance and planned development, one in which, taxes, and costs and prices and productivity and progress will form no tangled skein as hitherto. But no such improvement will be possible, if vital issues continue to be shelved and decisions are taken only on the spur of the moment and under pressure of events. The techniques underlying the formulation of a plan must be improved without delay and the public must be informed as far as possible at different stages of its evolution. The problem of holding the price line must be attacked with vigour and with some openness of mind. The misgivings of the public regarding the burdens of taxation as well as the burdens of maladministration must be allayed in every manner possible. And this can be done only if more is made known of the next Plan and public discussion of both sides of the plan budget is facilitated.

New Dimension in Minor Irrigation

IN the context of the current difficult food situation there is now a welcome recognition of the significance of minor irrigation schemes for the achievement of increased production in the short term. The Planning Commission is reported to have approved, last week, an additional allocation of Rs 6.85 crores for minor irrigation programmes, bringing the total allocation for minor irrigation for 1964-65 to over 75 crores for all the States. The additional allocation, it has been explained, is intended to be utilised for schemes which could be completed within the current financial year. This will be in conformity with the policy of concentrating on quick yielding

schemes, which has been repeatedly emphasised by the Prime Minister.

The Fourth Plan programmes have also assigned an important role to minor irrigation in the achievement of the target for additional irrigation. The Irrigation and Power Seminar which met in Trivandrum last month is reported to have approved the target of 100 million acres of irrigation to be created before Gandhiji's birth centenary in October 1969. The overall irrigation potential at the end of the Third Plan including continuing schemes, it has been estimated, will be of the order of 89 million acres, so that additional potential of 11 million acres has to be created in the next five years. Out of this, minor irrigation works are expected to contribute 5.2 million acres.

For the achievement of this target, construction of minor irrigation works would have to be taken up on a systematic basis. The schemes, moreover, will have to be carefully selected with reference to cost, availability of resources and potential benefit in the shape of contribution to the overall development of the rural economy. In assessing the value of such projects, not only the economics of construction, but the possibility of efficient utilisation of all factors of production must be taken into account. In prevailing conditions of massive unemployment and underemployment in rural areas, the investment-employment ratio should be one of the principal factors determining the choice of schemes for implementation.

In the light of the criteria briefly indicated above, the type of large Kutcha Well which was constructed in Sultanpur* near Delhi four years ago, and has since been providing irrigation to two hundred acres of farm land, bringing manifold increase in agricultural productivity and incomes, appears to be particularly well fitted to be taken up for immediate implementation on a large scale, wherever soil conditions and the water table are suitable for the construction of large percolation well.

The well at Sultanpur, which has given a new dimension to minor irrigation, was constructed as an experimental project to resolve the doubts expressed by specialists regarding the claims made for the scheme, regarding cost and benefits, when it was originally put forward in 1956 by Mr M.A.T. Iyengar, ICS. The well was ready in 1960 and the data now available should be more than sufficient to establish the significance of the scheme for a rural works programme for the creation of productive assets of permanent value.

The major limiting factor to extension of cultivation in scarcity areas is shortage of water. Physical features confine the benefits of canal irrigation, and of tanks which impound rain water during the monsoon, to particular areas and seasons. In this connexion it is also worth mentioning that, while substantial progress has been made in extending or stabilising irrigation for kharif crops, it has not been possible to do much for crops raised during the rabi season. Schemes which help to extend irrigation for rabi crops will have far greater impact on production than schemes which stabilise irrigation to an equivalent kharif area. Kutcha wells of the type constructed at Sultanpur can meet this crying need in large tracts of the Gangetic valley.

*The details of construction and benefits were described in two installments of *Clive Street Gossip* on 20 and 27 August, 1960.

The wells are easy to construct by unskilled labour and can be maintained by the farmers themselves. Large wells can be completed within three months by about 200 labourers and can yield benefits even during the construction period. The programme can be initiated with a loan to finance the cost of the model well to a group of interested farmers. Thereafter, the additional income generated by the availability of irrigation would help to wells in the area. Apart from the small finance the construction of further similar initial investment, which could be recovered with interest in a few years, the scheme would be practically self-financing.

The Sultanpur experiment has clearly demonstrated that a well capable of irrigating 200 acres could be constructed by local labour at an average cost of about forty to fifty thousand rupees, including the cost of pumping set. The bulk of the cost is for wages, so that the total may vary according to the level of wages and whether the wages are paid in cash or in food grains. The Sultanpur well has also demonstrated that the additional income generated in the irrigation command of the well can be more than double the cost of construction. In Sultanpur itself, the gross income per acre has increased thirty-fold, from about Rs 100 per acre before the well was constructed to Rs 3000 at present. All places may not be as advantageously situated as Sultanpur in the vicinity of a metropolis which provides a ready outlet for products like vegetables which bring the highest return. But, in any place, the well would bring a substantial rise in agricultural production and income.

It has been estimated that 25000 large wells can be completed in as many villages in scarcity areas within a year and at a total cost of Rs 100 crores. The process can be continued by investing part of the extra income from the first set of wells. The 25000 wells constructed in the first year can help to produce within one year of operation 2.5 million tons of extra food grains, and this extra yield will be available in subsequent years without further capital outlay. One hundred crores of rupees invested in constructing 25000 large wells in one year will, over a period of five years, save the country about Rs 500 crores which will, otherwise, have to be spent on import of 12.5 million tons of food grains. If the scheme is taken up and implemented with zeal, it is possible to envisage the construction of three lakhs of wells in six years, stepping up the production potential by thirty million tons of food grains, which will be the extra production required to reach the Fourth Plan target. During this period the original investment of Rs 100 crores would also have been fully repaid. To go by the experience of the farmers of the lucky village of Sultanpur, it will be difficult to find a more beneficent scheme to be taken up under the rural works programme.

The Right Minimum of Education

By "EKADANTHAM"

AT a time when the economics of material capital is more and more yielding place of importance to the economics of human capital,

particularly in under developed countries with large population, men's thoughts naturally turn to planning education. But perhaps not so properly for there are very definite limits. In education, as in most human activity, failure may follow as much from attempting too much as from doing too little; and success must depend on checking waste of effort in useless diversions yielding petty and redundant results. It is an interesting thought if, after all, the right minimum of education may not be the best education, even as the right minimum of Government is apt to be the best Government.

The convocation address delivered at the Karnatak University by Professor V.K.R.V. Rao, Member, Planning Commission dealing with the role of a University in a developing society occasions such speculations. As can be expected, it embraces most of the concrete ideas current on the subject of higher education and lays stress on the utilitarian function of the Universities in preparing students for satisfying and remunerative employment, on the need for shift of emphasis from humanities to education, medicine, science, engineering and agriculture, and on the necessity to restrict admissions in order to preserve and improve standards. None of this can be disputed in the current temper of impatience; it is all just so true as may lead us into dangerous error.

It is a moot point whether inertia and inability to forecast manpower needs is all that is at the back of tardy progress of Universities in adjusting to utilitarian standards. It would be nearer the truth—certainly more charitable—to say that at the root of this policy of caution must lie a highly desirable concern for the primary function of a University of creating the capacity for original thinking and sharpened tastes in the students, so they may be left to evolve their own scale of values and order their activities accordingly. Such attitude, far from being deplorable as anachronistic, merits to be cherished as respectful of creative evolution, which ought to be the guiding principle and basis of a democracy. The argument for the utilitarian objective is one of avoiding social waste, but, alas, it is so easy to have wrong ideas as to what is social waste.

Educational planning is so closely linked with economic planning that it is hardly possible to speak of one without criticising the other. Serious rethinking on the norms of economic planning is just becoming manifest, and it must be fool-hardly to pronounce definitely on the desirable structure of education. Much less can we afford to be dogmatic. A country with a large population to feed must necessarily set aside a large part of its resources to agriculture and hence perforce the economy must remain largely rural and agricultural. Our wishing otherwise is not going to make much difference to these realities. Any plan for education must meet these hard facts. The key to the problem is, therefore, an adequate programme of rural education, which has so far hardly received the priority it deserves. The State Governments have made little progress in this direction, mainly because they have thought they have better uses for their scarce finances. But surely there are inexpensive ways of spreading education, without elaborate school structures and equipment. There must be respectable gentlemen in the villages including some retired persons, who are prepared, for a small remuneration, to undertake teaching the three R's and provide a modicum of moral education through

biographical anecdotes and stories. Their instruction can be supplemented by a team of touring qualified teachers, a mobile library and programmed scientific and other exhibitions. But training in the trades and link with employment must necessarily depend on the attention given to development of agriculture and cottage industries.

This is not to underestimate our need for technical talent. But before we go deeper it may not be out of place to make a few observations. Our anticipation of needs are often far in excess of the needs which actually materialise because of our predilection to paper planning without regard to real resources. On no other premise can we reasonably account for the large unemployed and misemployed technical talent with which we are faced. Secondly, the more and more we depend on expansion of state management, with the large overheads entailed by the necessity of close control of expenditure from public funds, the more and more we generate a demand for persons who must do no more than write notes, quite out of proportion to the demand for technical hands. This is certainly an important factor contributing to the large number of persons with scientific training and background misemployed as clerks in government offices. Thirdly, sons of traders and private entrepreneurs start their education with some definite plans as to their careers, as many of them may adopt the vocation of their parents as one form of continuation of the age-old plan of varna. With the progressive decapitation of these entrepreneurs this link between education and employment must be lost. Our economic policies therefore so distort our calculations that any planning is out of practical politics.

With these reservations, we must certainly provide for our needs of technical talent. On the whole it may be a better plan to meet these needs by suitable institutions separately established and recognised for the purpose. Such institutions may more easily adjust supply to demand. Better still, a link between technical education and employment may be provided, if industrial establishments initiate training with some promise of absorption of the trainees on successful completion of the training. While the Universities may provide for general scientific education and research, they must give their undivided attention to what no other institution can possibly do—their highest function of advancement of learning, training of the intellect and the heart, and promotion of truth.

Far more urgent than paucity of technical skill is the growing slackness and indifference rampant amongst the people everywhere. Democratic way of life and modern ideas of labour management require that every individual must conduct himself in work with a due sense of responsibility. Economic distress cannot explain everything. It may explain theft, crime and petty corruption when opportunity tempts, but certainly cannot explain a lack of responsibility. The cause goes deeper and must be recognised in the failure of evolution of conscience. In this context, the emphasis that can be given to technical education is hard to determine. Rightly does Dr Rao insist on inculcation of what he calls industrial discipline and 'political requirements', but even though the Universities have a great purpose in these matters, much the greater work has to be done in lower education, if only for the reason that the moral sense gets direction in early years. This is more significant than we realise, because with specialisa-

tion and restriction of admission to Universities we shall have to depend very heavily on moral training given in schools—and at present there is a lamentable lack of it.

The greatest political training for citizenship in a democracy is in creation of the capacity to entertain differences without friction or rancour and for orderly debate. Much of this training can be had if the teaching by lectures is place to some measure of group discussions and symposiums, even at the School. Such measure will certainly also improve the quality of education for true and useful education caters to awakened interest without tortuous burdening of young brains. It was not for nothing that Socrates and Arcesilans and our sages made their scholars speak first before imparting knowledge.

It is quite well to say that scholars should learn the discipline of obedience of majority decision, but equally it is true to say that political education consists in inculcating the capacity to maintain differences tastefully and the moral courage to stand true to one's conviction in exceptional cases. We shall hardly be preparing for a democracy if the minority were to surrender their right to persuade the majority even after a decision and had to give up their right to be true to themselves and non-cooperate in extreme cases. This is something which can only be called moral self-confidence, for want of a better expression.

The theory of 'the right minimum of education' is based on the faith that life is the best educator. With the minimum of literacy, moral conscience and aesthetic sensibility, and the lesson that others' needs and ideas may be as important to them as ours are to us, we may do supremely well as citizens, and learn trade skills as we work. We are yet to find intelligent ways to assign our scarce means to these great but ordinary ends.

Urban Growth And Rising Needs

BECAUSE local bodies' finances and problems under the Five Year Plans are yet to receive due attention the Madras Government has lately indicated that a comprehensive review of the situation and requirements will be undertaken so that all claims for grants-in-aid will be properly dealt with. The growth of towns between 1951 and 1961 in Madras State specially suggests that urban development creates more than problems of administration and the issue is not one of rating or electoral arrangements but of giving an adequate and appropriate financial framework for urban development.

If big cities like Calcutta have come in for notice for certain reasons it is chiefly because of the political angle and the special problem of refugees. The municipalities do not threaten security but public health and other needs may require more detailed and sympathetic consideration in future, because there is invariably a housing problem as also a sewage problem. The improvement of transport has created already a different set of circumstances—not only as to road maintenance or lighting but with reference to education. The Fourth Plan too may deal with welfare in general terms, but it is well to point out that urban growth is pronounced in recent years and the

raising of standards of living depends as much on the public authorities as on private institution. The water supply or sanitation can be soon improved only by raising more revenue and the relation of taxes paid to property values or income must be fixed by reference to the optimum standards of health.

Since Madras has enjoyed for long a good reputation as to municipal administration the last official report on 66 municipalities at work in the State may throw some light on the policy to be adopted for raising the standards of local self-government. The appointment of executive officers working (not under but) with Councils has distinguished Madras State for long and the classification of municipalities preceded the introduction of adult suffrage which has of course stimulated the demand for more amenities for townfolk also.

What is known generally as municipal trading has not so far reinforced revenue. Only a few town councils run electric undertakings and the principal prop of municipal revenue has been the entertainment tax collected mainly from cinemas. Reliance on a surcharge on stamp duty has been familiar but toll compensation has not been enough to meet cost on roads. The many differences noted as between one town and another will indicate only that towns vary in size, population and prosperity and the sincerity of elected councils in their work cannot be measured by the revenue realized or parks opened. The debt of municipalities to government contracted for the execution of improvements has not been large, for reluctance to tax even for improvements has been common and the average tax burden in 1960-61 was as low as Rs 10.43 per head. This proves only that urban growth stimulated by the rise of industry has not led yet to the acceptance of responsibility and the enterprise shown by Madurai or Coimbatore is exceptional. A point to note is that establishment charges in relation to revenue are fairly high and the Government has to provide about ten per cent of the cost of municipal administration though not many municipalities in Madras were hindered by defects on current administration.

Rising expenditure on education, health and communications strain municipal finances and the result is that rising expectations are not easily realised in the towns or in the villages now under Panchayats grouped in unions. The absence of octroi in Madras will be regarded as a satisfactory feature while the levy of pilgrim tax is by no means an arbitrary exercise of power. The capital represented by endowments is small and non-tax revenue is light. This accentuates the familiar dependence on Government grants which are guided by the state of administration for only 44 municipalities enjoyed satisfactory administration according to the last Government review which also indicates that only 12 municipalities were able to report a satisfactory financial position. If four municipalities enjoyed a tax revenue exceeding Rs 10 lakhs a year, the point to note is that age is a factor and Madurai surprisingly held larger investments than an industrial centre like Coimbatore. First class municipalities like Coonoor or Ooty were by no means better off and the curious will note that Anglo Indians and Europeans found no place in the elected councils in the two towns mentioned.

This is perhaps of less interest than the striking difference in tax incidence ranging from 91 paise in Colachel to Rs 17 in Chingleput which is certainly not large for prosperous like Madurai or Coimbatore. The property

tax rate is higher in Madurai or Coimbatore as compared with Pudukottah or Tirunelveli. The collection of taxes from dangerous and offensive trades which take out licences is clearly inspired by the City Corporation's practice but few councils kept fire engines and most of them openly depended on the Police. The net debt at Rs 789 lakhs may seem small in relation to revenues but the Councils that planned extension had very limited resources and one may conclude that inflation will inhibit improvements in the case of towns that must pay more to employees.

Since no independent borrowing is possible and money gets dear for the Government the programme for municipal progress must be affected and the consequence may be greater dependence on Government that deposes inspectors to examine regularly the state of affairs. The universality of profession tax (not applicable to pensioners) is perhaps a less striking factor than the levy of a tax on carts and vehicles. The situation has not changed since 1961 and reliance on Government for financial assistance is more obvious because drainage and water supply schemes call for regular or substantial capital outlay.

The absence of town halls, libraries and theatres is apparent from a mere look at the figures which reveal that if area is increasing (along with responsibilities) the capacity to provide amenities is still strictly limited. The majority of Councils did routine business. The impulse for improvement was lacking and the ratepayers evinced no great interest in civic administration run on party lines. The postwar feature in many Southern towns is a park but the point to note is that in a town like Vellore the major item of revenue is entertainment tax (enhanced in 1963) but collected by Government for the benefit of local bodies. In a sense, the financial health of the film industry is a big factor in an urban community's progress and this too will certainly suggest that Tamil and Hindi films are very necessary even in a town like Vellore that collects a library cess like the Madras Corporation and earns a regular income from the lease of big markets and the sewage farm. The building licence fees remain a minor item of revenue in all towns but charge for clean water supplied is of some importance.

The advent of large scale industry does not seem to influence urban growth and alter the nature of the town much. This may be deemed satisfactory by many who will, however, note that few towns follow Madras City in collecting a tax on advertisements and the levy of a charge for thatched sheds is not accompanied by any tax on hoardings and billboards. But big cities levy tax on hoarding posters displayed and billboards. But some towns levy tax on unbuilt sites and agricultural lands.

The taxation of urban income and property will probably undergo radical changes in the near future in the light of the AICC resolution adopted at Guntur recently. The more important point to consider is whether unearned increment can be secured for local authorities who do not seem to collect betterment levy, though a rise in market value may warrant a departure in municipal taxation, especially, when dependence on grants from the Government appears inescapable. There is no association, formal or other, with Government in local projects for improvement and planning from below by the local authorities' active participation (prescribed by Mrs Hicks for economic advancement) is now virtually

absent. This seems a gap that will certainly produce pessimism having regard to the conditions or circumstances of democracy in India. The Indian municipality has not felt the impact of the Five Year Plans though welfare measures must be channelled only through the elected popular agencies and evolving socialism must rest on the inspiration from local Councils.

American Aid in Indian Economic Development

S. D. Derashri

INDIA is foremost among the developing countries of the world. It possesses a large and rapidly increasing population predominantly dependent on a backward agricultural economy. It has adopted a programme of democratic economic planning to raise the living standards of its people. Like most developing countries, India is faced with a scarcity of capital and foreign exchange resources for industrial and economic development. Even if India is able to produce more and save more it will need large foreign exchange resources to import machines and capital goods required for industrial and economic development.

INDIA'S NEEDS

India's needs of external assistance for the various Plan periods have been estimated to be as under:—

	Total External outlay Assistance (In Rs Crores)
1. First Five Year Plan ...	1,980 180
2. Second Five Year Plan ...	4,800 1,090
3. Third Five Year Plan ...	7,500 2,200
4. Fourth Five Year Plan ...	21,500 2,500
(Preliminary estimates)	

It is clear from the above table that India's needs for external assistance have been increasing with increasing economic development. This is because the estimated rate of saving has been lagging behind the projected rate of investment. It is, however, estimated that by the end of the Fifth Plan period, the rate of domestic saving would rise to 18 to 19 per cent and would enable an investment rate of 19 to 20 per cent. Thus "by the end of Fifth Plan the economy would be strong enough to develop at a satisfactory pace without being dependent on external assistance outside the normal inflow of foreign capital." (1)

AMERICAN ASSISTANCE

India is a non-aligned country. It has accepted external assistance both from the democratic as well as the communistic countries. But about two thirds of external assistance has come from the USA alone. According to the Reserve Bank of India "external assistance authorised by various friendly countries (excluding International Institutions) upto end of December 1963 amounted to Rs 3,793 crores. Out of this as much as 61% has come from USA alone. Other major contributors being USSR (10%), Western Germany (9%), and UK (7%), all other donor countries together contributing 13 per cent." (2) Thus USA has ranked the first among India's donors.

American economic assistance to India now totals Rs 2,795.6 crores as on October 30, 1964.

(1) Third Five-Year Plan, p. 29.

The following table gives the detailed breakdown(3):—

	Rupees (Crores)
1. U.S. Agency for International Development Mission's Technical Co-operation Programme:	
(a) Development grants (not repayable) ...	177.0
(b) Loans (Repayable in rupees or dollars) ...	73.4
2. U.S. Agency for International Development: Development Loans (Repayable in dollars) ...	558.5
3. U.S. Development Loan Fund Credits (Repayable in rupees) ...	243.0
4. Public Law 480, Title I (Grants and loans repayable in rupees) ...	1,372.9
5. Public Law 480, Title II (Grants not repayable) ...	4.1
6. Public Law 480, Title III (Agricultural commodities donated through voluntary agencies; not repayable) ...	89.9
7. Emergency Flood and Famine Relief Grants (Not repayable) ...	2.8
8. Export Import Bank loans (Repayable in dollars) ...	183.9
9. Wheat Loan of 1951 (Repayable in dollars) ...	90.3
Total ...	2,795.6

AMERICAN AID AGENCIES

Apart from the Wheat Loan of 1951 for which the US Congress enacted special legislation, American assistance to India is at present extended principally through the following three agencies:—

1. United States Agency for International Development (USAID).
2. The Agricultural Trade Development and Assistance Act (US PL 480).
3. Export Import Bank (Ex-Im Bank).

Let us briefly consider the forms and terms of assistance extended by each of these agencies separately:

US AGENCY FOR INTERNATIONAL DEVELOPMENT (USAID)

This agency was created on November 3, 1961 to bring American assistance under unified administration. It is in charge of activities previously administered by the International Development Administration represented in India by the Technical Co-operation Mission (TCM), the Development Loan Fund (DLF) etc.

USAID gives both grants which are not repayable and loans which are repayable.

Grants totalling Rs 177 crores have been given by USAID and TCM for eradication of Malaria and Small Pox, higher education, National Productivity Council, craftsman training, dairy development, community development, technical and equipment assistance in the fields of Agriculture, Industry, Health, Education, Labour, Management etc.

Loans granted by the USAID or its predecessors the TCM or the DLF are of three types viz:

- (i) Loans repayable in non-convertible rupees: DLF loans amounting to Rs 243 crores extended to India between 1959 and 1961 fall in this category;
- (ii) Loans repayable in rupees or in dollars at the option of the Government of India: loans amounting to Rs 73.4 crores granted by the TCM up to 1961 before the creation of USAID belong to this class;
- (iii) Loans repayable in dollars: between February 28, 1962 and August 6, 1964 thirty two such loans totalling Rs 558.5 crores have been authorised by the USAID.

(2) Report on Currency & Finance, 1963-64, P 21
(3) U.S.I.S. handout issued in October, 1964.

The first two types of loans repayable in blocked rupees are what may be called "Soft Loans". The loans in the third category appear to be the conventional type of "Hard Loans" between two governments. But looking to the limited ability of India to repay foreign loans or interest on them at the prevailing rates, the terms of these loans have been extraordinarily softened. In the first place the amortization period has been extended to 40 years including a 10 year grace period during which there will be no repayment of principal. Secondly, 22 of these loans authorised through 1963 are free of interest and carry a credit fee of three quarters of one per cent per annum. For the remaining 10 loans instead of the credit fee interest at three quarters of one per cent is to be paid for the first ten years and at 2% during the remaining 30 years. The extremely soft conditions without any political quid pro quo reflect a realization on the part of United States of its international obligation which is unparalleled in history and is highly commendable.

THE AGRICULTURAL TRADE DEVELOPMENT & ASSISTANCE ACT (PL 480)

The Agricultural Trade Development and Assistance Act of 1951 was the 480th Public Law enacted by the 83rd United States Congress (Parliament) and is known as US-PL 480. It has three principal titles or chapters:

Title I authorizes the President of the United States to sell agricultural commodities for foreign currencies and provide for the use of the proceeds. Under this title India has entered into a number of agreements with the United States for the supply of large quantities of wheat, rice, coarse grain, cotton etc. payable in rupees. The total value of commodities agreed to be supplied by the United States to India is Rs 1,372.9 crores. Under these agreements, about 80% of these rupee funds are put under the disposal of the Government of India either as grants or loans for development projects. Under Cooley Amendment another 7 per cent is given as loans to private firms in India which are affiliated to American firms or Indian firms which assist in marketing American agricultural products. This is intended to encourage investment of private American capital and know-how in the industrial and economic development of India. The remaining 13% funds are reserved for US Government uses in India.

Title II of PL 480 authorizes the US President to furnish emergency assistance to foreign countries in meeting famine and other urgent relief requirements. Supplies made under this title are donated and do not involve repayment. Under this title India has received agricultural commodities worth Rs 4.1 crores.

Title III permits bartering of American agricultural commodities with foreign countries and also donation of food to non-profit voluntary agencies for use of needy persons. Food stuffs worth Rs 89.9 crores have been distributed in India through voluntary agencies.

EXPORT IMPORT BANK (Ex-Im Bank)

This bank was established in the thirties to extend loans and guarantees for the purpose of promoting the export and import trade of the US. Loans given by it are repayable in dollars. The interest charged on its loans is determined by the period of loans, the risk

involved and the prevailing US Government and commercial rates. The bank has authorised 13 such loans to India totalling Rs 150.6 crores. The rate of interest charged on these loans averages about 2½ per cent per annum.

To sum up American economic assistance to India has assumed three principal forms viz. (i) Grants which are not repayable; (ii) "Soft loans" repayable in rupees; and (iii) "Hard loans" repayable in dollars. The following table gives the category-wise breakdown of American assistance as on August 14, 1964(4):—

	Rupees (Crores)	% of Totals
(i) Grants ...	648.8	24.9
(ii) Local currency repay- ment ...	1,124.3	43.2
(iii) Loans repayable in dollars ...	829.4	31.9
Total ...	2,602.5	100.0

† This includes loans repayable in rupees or dollars, the Cooley Fund for loans to private enterprise, and amounts under PL 480, Title I, agreements reserved for U.S. Govt. uses.

Thus about a quarter (24.9%) of total American aid represents grants. About two fifths (43.2%) represents loans repayable in rupees which do not involve utilization of Indian foreign exchange earnings or export of goods from India. And only about one third (31.9%) involves foreign exchange repayments. The greater part of these loans is at exceptionally low rates of interest and is repayable over a period of 40 years.

If we classify the aid authorized by USA purposewise we find that about half (54.8%) of it has come under Commodity Programme Assistance and another one third (Transportation 11.3% plus Power 19.7% = 31%) for strengthening the weak infrastructure of the Indian economy and the remaining one sixth directly or indirectly for the development of industries and mining. Sector-wise a little less than half (46.6%) of US Government dollar lending has been given for direct public investment and the rest (53.4%) has gone directly or through public institutions for the private sector.

GRANTS VERSUS LOANS

An important question that arises regarding external assistance is whether it should be in the form of outright grants or loans. Like all legislatures the US Congress prefers to authorise a loan rather than a grant for various reasons. In the first place, although there is nothing to choose between a grant and a loan so far as the immediate impact on American taxpayer is concerned, the eventual repayment of loan enables the US Government to spend more at home or to reduce taxes. Secondly, the amount authorized for loan being repayable can be re-lent to another developing country and thus a revolving fund can be created. Thirdly, a permanent fund like DLF constituted by public funds authorized for lending abroad can be augmented by private subscriptions in the capital market and thus acquire independence from annual appropriations which depend on the changing moods of the legislature. Fourthly, it is claimed that loans are more "business like" both in as much as they bring a return to the lender and they are likely to be more economically and efficiently utilised by the borrower. This is, however, not an important consideration in Indo-American economic

(4) U.S.I.S. handout issued on 14th August, 1964

relations because the US Government is not motivated by the considerations of earning interest through its foreign aid policy. And in view of scarcity of foreign exchange there is already sufficient incentive for the Indian Government to use aid economically. However, as a self-respecting country, we should also prefer loans provided they are not beyond our capacity to repay.

It is in this context that we can realise the importance to India of USAID loans which carry a nominal rate of interest and whose repayment is spread over a long period of 40 years or so. Indeed it is because both the American and Indian Governments dislike aid in the form of outright grants that ingenious devices have been designed to disguise aid which is very much similar to grants but which is given in the form of "Sale" of surplus agricultural commodities for blocked Indian currency or "Soft loans" repayable in blocked rupees or "Hard loans" repayable in dollars but whose terms have been so extraordinarily liberalised as make them adequately "soft".

PROBLEM OF BLOCKED RUPEE FUNDS

While these camouflaging devices may conceal the real nature of American aid, they lead to accumulation of huge amounts of blocked rupees in the hands of American aid authorities in India. This phenomenon is mainly caused by the sale of surplus agricultural commodities to the Government of India under PL 480. As we have seen about 80% of these funds are put at the disposal of the Government of India, in the form of grants or loans. While it cannot be denied that the supply of PL 480 commodities has helped to stabilize their prices in India and saved us from distress, it has bred an attitude of complacency regarding the food problem. It is also contended by some that PL 480 aid has encouraged inflationary forces in India. But on close examination the argument does not stand the test of logic. On the contrary, while the effect of PL 480 operations is neutral so far as money supply is concerned, the supply of PL 480 commodities by increasing the flow of food grains has helped in stabilizing their prices which are of strategic importance in the price situation.

PROBLEM OF EAR MARKING OR TYING

A very important problem concerning American economic assistance, and for that matter any external assistance, is the ear-marking of aid as to use and the tying it to country-of-origin purchases. Although the two problems are closely related, it will be preferable to deal with them separately. We shall first take up the issue of project tying.

A developing economy like India needs to import various types of goods such as 'consumption goods', 'capital-goods' and 'intermediate goods' etc. Further 'capital-goods' may be required for maintenance or replacement uses or for creation of new productive capacity. The aid giving countries generally like to restrict the use of their assistance to the creation of new productive capacity. But it is as important to maintain the existing capacity as to create new capacity and the import of capital goods may be as necessary as import of raw materials or even "wage goods". If aid is rigidly tied to a project there is no room left for the aid receiving country to apply the aid for the most urgent purposes. Sometimes due to the non-availability of complementary imports the project may be held up. Moreover it is possible that

the project preferences of several aid givers may not be complementary to one another. For instance project tying will be obviously harmful if all aid givers help in setting up heavy industrial projects and no one is interested in agriculture. Further the extent to which project tying can go also depends upon whether some extra aid funds are available for buying essential raw materials etc., and whether the country has sufficient export earnings or foreign exchange reserves to buy the non-aid financed import requirements. These considerations point to the indivisibility of tying aid to particular projects.

Despite this economic logic to the contrary we find an increasing tendency in American aid policy to become more rigidly project tied. This is particularly bad for India now that it does not have surplus foreign exchange reserve to finance import requirements not covered under any aid. Moreover, if Western Germany, the UK and Japan also follow the American practice, Soviet block assistance being already completely project tied, there will be little leeway left in the situation. It is, therefore, necessary to go into the factors motivating project tying by the aid givers. Some say that project tying is preferred because it enables the aid giving government to distribute the patronage among home industries as it likes. Others say that project tying is preferred to create psychological or public relations effect. These considerations do not seem to carry much weight with American aid agencies. Yet there is increasing insistence on project-oriented assistance in American aid programmes. Apart from adherence to procedural standards they seem to be motivated by a desire to retain "some right to participate in decisions made as to Indian uses of American aid and some right to review the results." (5)

Although it may injure our national pride if outsiders should insist on having a say in planning and evaluation of the development efforts, I see no harm in allowing USAID or other aid givers a right to be consulted regarding the use of their funds. But the role of an aid giver can best be consultative and not directive. The final decision to accept or reject the advice must always be ours.

It is argued in favour of project tying that it will lead to better planning and better phasing of our development projects. There is also the danger of untied aid being applied to non-priority uses. It is also claimed that project-tying makes appropriations for aid more easily acceptable in the donor country. There is considerable weight in these arguments. Under the circumstances the best thing would be to insist on combining project aid with sufficient untied supplementary assistance in future aid agreements.

PROBLEM OF ORIGIN TYING

Turning from 'Project-tying' to 'country-of-origin-tying' we find that most aid giving countries like their funds to be used for purchases from their own country. The funds supplied by DLF were originally based on "buy-it-anywhere" policy but since 1959, like the Ex-Im Bank, the DLF has also started tying its loans to US purchases. This may have been done partly with a view to relieving the American balance of payment difficulties. This practice has been adversely commented on in India, because even allowing for quality differences American prices are relatively high. Till lately American manufacturers of machi-

nery and capital goods have been indifferent towards the Indian market. If they undertake promotional pricing and play the market winning game they may be able to supply equipment to India at competitive prices. But the double tying of loans i.e. the insertion of 'Buy American' requirements into project tied loans demolishes supplier competition and places the few American machinery and equipment manufacturers in a semi-monopolistic position. Although it may be politically unrealistic to recommend complete abandonment of country-of-origin-tying double-tying should be strictly avoided.

PROBLEM OF TIMING AND CONTINUITY OF ASSISTANCE

In order to help the aid receiving country external assistance must be timed to fit the requirements of the recipient's development programmes. Similarly development planning being a long range and continuing process external assistance should be provided on a long term multi-year basis. In view of uncertainty of relations between the executive and legislative organs of the American Government it is all the more necessary that India should ask for long term aid commitments. But the US Congress is unwilling to sanction long term appropriations. Moreover, the cost of obtaining funds which remain unutilised may also be heavy. Detailed and careful phasing of development projects may avoid the necessity of large long term aid commitment which remain unutilised. But some way has to be devised to ensure that the required amount of aid will be forthcoming for development planning which is essentially a long term process.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

United Bank of India Ltd.

HEAD OFFICE: 4, CLIVE GHAT STREET, CALCUTTA

World of Finance

BANK RETURNS

Steep Disinvestment in Giltedged

THE money market continues to rule easy and demand for funds is expected to pick up only toward the end of the year, though, in the first week of December, there may be a temporary stringency owing to the combination of beginning of the month disbursements and tax payments. However, it would appear that banks are preparing themselves for meeting this special demand, in as much as their cash balances are tending to be rather higher than they are normally wont to be. It is significant that Dewali disbursements did not necessitate large-scale recourse to borrowings from the central banking institution; this of course is because banks want to avoid paying penal interest. Even so, it may be that banks are seeking to minimise, and as long as possible during the current busy season, their reliance upon the Reserve Bank.

The demand upon Scheduled Banks during Dewali week, because of the added strain in that period owing to beginning of the month disbursements, is fully revealed in their statutory statement for 6 November. First of all, constituents drew down their balances; and as such, net Demand Deposits are marked lower by Rs 2.87 crores at Rs 1,335.61 crores and net Time Deposits by Rs 13.18 crores at Rs 1,368.34 crores. However, it needs to be noted that the bulk of the fall—slightly over Rs 10 crores—is on account of the State Bank. Constituents also needed to borrow more, as witness the rise of Rs 14.92 crores to Rs 1,744.34 crores in the total of Advances; and the State Bank's share in this regard was a little over Rs 8 crores. Banks met this demand in three ways: they borrowed Rs 1.97 crores more at Rs 41.60 crores from the State Bank; their indebtedness to the Reserve Bank rose by Rs 3.83 crores to Rs 5.95 crores; and they sold Government securities for Rs 61 crores, reducing holdings to Rs 812.94 crores, with State Bank sales placed at Rs 45 crores. As a result, cash balances, including money at call and short notice, were higher by Rs 15.32 crores at Rs 260.84 crores.

The returns of the Reserve Bank for 13 November reveal a small element of currency contraction. Active Note circulation is marked lower by Rs 6.86 crores at Rs 2,460.73 crores, and inflow of Rupee Coin is placed at Rs 0.10 crore. With Foreign Securities unchanged at Rs 85.46 crores and with Rupee Securities slightly adjusted at Rs 2,181.13 crores, the Reserve Bank's cash in the till has improved by Rs 6.94 crores to Rs 25.62 crores.

State Governments have made repayments of advances to the Centre; thus, their Deposits are lower by Rs 11.45 crores at Rs 7.11 crores, and their ways and means borrowings higher by Rs 4.77 crores at Rs 37.81 crores. The Centre's balances, however, do not reflect

these receipts, in being higher only by Rs 1.59 crores at Rs 51.72 crores. Investments are more or less unchanged at Rs 124.25 crores, but having regard to the fact that the State Bank purchased about Rs 12 crores of securities during the week, the possibility of there having been some small recourse to deficit financing cannot be ruled out.

The demand for funds owing to the combination of Dewali and beginning of the month disbursements having been met, the Scheduled Banks drew down their Reserve Balances by Rs 1.02 crores to Rs 95.89 crores and at the same time cut debt to the Reserve Bank by Rs 5.09 crores to a nominal level of Rs 0.79 crore.

Balances Held Abroad have fallen back slightly by Rs 0.29 crore to Rs 10.14 crores; but foreign assets in the possession of the Reserve Bank continue to be slightly more than Rs 95 crores.

In the week ended 13 November, the State Bank has made good slightly its hefty disinvestment in giltedged of the previous week. With Deposit resources improving somewhat by Rs 1.16 crores to Rs 666.33 crores and with the total of Advances declining by Rs 2.34 crores to Rs 342.38 crores, the opportunity has been taken to add Rs 12 crores to the giltedged portfolio, raising it to Rs 287.20 crores. For this purpose, Other Assets have been drawn down by about Rs 3 crores, and cash balances, including money at call and short notice, are also marked lower by Rs 1.27 crores at Rs 29.13 crores.

SYNDICATE BANK

195th Branch

The Directors of the Syndicate Bank Ltd., have announced that one more branch of the Bank has been opened at Bombay at Broach Street on 7 November, 1964. This will be the 5th branch of the Bank in Bombay, the others being at Fort, Mandvi, Matunga and Mulund. With the opening of this branch, the number of branches of the Bank will be 195.

The Bank is also opening two more branches, one at New Delhi and another at Alwal (Andhra State) shortly.

TAXES

Quick Refunds

Mr R. N. Jain, Commissioner of Income-tax, West Bengal-I, Calcutta, informed the Regional Direct Taxes Advisory Committee in Calcutta last week about the special drive launched by the Income Tax Department during September last to clear pending refund cases.

Presiding over the third meeting of the Committee, Mr Jain said that over 5,000 refund claims were disposed of and more than a crore of rupees refunded. He also pointed a survey operation which was intended to rope

out that the Department was in the midst of in new assessee. The number of tax-payers on the registers of the Department on 1 April 1964 was 224,589, to which an addition of about 100,000 was expected to be made during the current financial year.

One of the points discussed by the meeting related to the charge of interest on the deficiency in payment of advance tax. Mr Jain made it clear that in calculating the deficiency liable to interest charge, the income earned in Pakistan which could not be received in India would not be taken into account.

The Committee was informed that the Department had taken adequate measures to ensure quick supply of challans to assessee wishing to pay tax on self-assessment.

Another point raised pertained to the allowance of depreciation or development rebate on air-conditioners, refrigerators and furniture provided at the residences of company employees. The Committee was informed that no such allowance could be permitted as the provision of air-conditioners and refrigerators, mostly at the residences of Directors and highly-paid employees, was not wholly based on business considerations.

SMALL SAVINGS

Record Collections

The net collections under small savings in the first half year of the current financial year, which ended on 30 September, 1964, show an all time record of Rs 55.33 crores. The figure is Rs 11.33 crores higher than the previous best achieved in the preceding year.

It is significant that during practically every month of the current year, the collections have substantially exceeded those of the corresponding month in the preceding year. The net collections in September 1964 was Rs 11.11 crores against Rs 9.84 crores in September 1963 which itself was the highest for that month, and in August 1964 it was Rs 11.73 crores against Rs 9.11 crores in August 1963.

During the first half year, the collections in 12 year National Defence Certificates were Rs 53.18 crores gross and Rs 31.34 crores net. The collection in Ten-Year Defence Deposit Certificates was Rs 12.71 crores gross and Rs 10.55 crores net. The Post Office Savings Bank added Rs 10.01 crores net to its deposits. The Cumulative Time Deposit Accounts brought in Rs 3.52 crores.

Among the states, Maharashtra leads with Rs 11.47 crores net collections. During this period, closely followed by West Bengal, Rs 10.74 crores. The Other States where collections showed substantial improvement over the previous year were UP, Rs 5.75 crores, Bihar, Rs 5.00 crores and Gujarat, Rs 4.44 crores.

During this period the sale of Premium Prize Bonds totalled Rs 1.26 crores of which

Madras, Rs 23 lakhs and West Bengal, Rs 22 lakhs.

UNIT TRUST

125,000 Applications

The Unit Trust of India has stated that the public response to the unit scheme launched on 1 July last has been very generous—the number of applications received during the initial sale period, i.e., 1 July to 14 August 1964, being more than 125,000.

The Trust had from the beginning planned mechanisation of the work relating to the registration of applications and the preparation of unit certificates with the advice and assistance of experts in the field. However, the facilities available in Bombay City for processing, within a short period, the large number of applications received were found to be inadequate and consequently, arrangements had to be made to secure facilities at other centres. The work is in full swing and the despatch of the unit certificates to unit holders has commenced from 24 October 1964. The Trust is now despatching certificates at the rate of several thousands per week and efforts are being made to step up the rate of despatch.

The Trust very much regrets the inconvenience caused to unit holders on account of the longer time taken than was anticipated, for the issue of certificates. It is hoped that the unit holders will appreciate that this has been due to circumstances beyond the Trust's control.

The Trust will commence repurchase operations from 16 November 1964 as per the terms of the Unit Scheme 1964.

UK

Reasons for the November Budget

By John Kingsley

THE financial year in Britain traditionally begins in April, and this is the time for the Chancellor of the Exchequer to announce his Budget proposals. But the Budget nowadays is something more than an attempt to balance public revenue against public expenditure. Fiscal policy has been recognized for 30 years past to be one of the Government's most powerful weapons for influencing the behaviour of the economy as a whole; and since the

constantly changing, taxes have sometimes to be changed at untold time of the year.

There were three reasons, as I see it, for the new Government's decision to introduce a supplementary Budget in November.

The first, and most important, was to legalize the proposed surcharge on imports and remission of indirect tax to exporters—and to compensate for their effect on demand at home. The second was to announce the promised improvement in social security benefits (which, it is hoped, will encourage organized labour to collaborate in the voluntary restraint of incomes and prices), and to demonstrate the Government's readiness to finance them by increasing taxation. The third was to look forward to the various tax reforms which there has not yet been time to prepare but which will be introduced in the regular Budget in April.

I will take these three points in turn. First, the import surcharge, the temporary nature of which the Chancellor, Mr James Callaghan, went out of his way to emphasize. "We want lower trade barriers, not higher," he said, "and the duties that have been imposed are of an emergency character to stop the drain on our reserves. They will be reviewed reduced and removed as soon as our balance of payments is in a healthy state."

Internally, the surcharge might have the disadvantage of encouraging British manufacturers to raise prices, and of increasing the pressure of demand on home production. But any price rises, Mr Callaghan gave plain warning, would be handled roughly by the proposed prices review body. The amount of demand which will be diverted back home is impossible to estimate; but it is to be absorbed, in a necessarily rough-and-ready way, by an increase in the tax on petrol. Discussions are to be held with bus companies to see if a way can be found of giving them some relief. If the petrol tax does not balance the import surcharge as expected, the Government has power to vary indirect taxes in general—even before next April—to put things right.

TAX REFORMS

Second, the tax reforms proposed for the future. Two are of particular importance and have been generally expected—a tax on long-term capital profits and a change in the basis of company taxation. The former has long been acceptable to public opinion in Britain, and the only dispute which is likely to arise will be about detail. The detail will be better for the fact that the Government has chosen to hasten slowly. (Mr Callaghan has stated that there was no question of making such a tax retrospective.)

A change in the basis of company taxation, too, has long been urged by reformers of all political colours and entails nothing more than a change from the peculiar British system to that which has long been accepted in the United States and other countries. The previous Conservative Government had been contemplating just such a move.

Third, the proposed improvements in social security benefits, and particularly in pensions for the old and unfit. The new Government holds strongly that this section of the community has been unfairly treated, and that an improvement in their condition is not only justified in itself but will encourage labour to exercise restraint in wage claims. The increases suggested will not come into force until the spring, but they are large. Their cost is to be met mainly by an increase in social security contributions (larger for employers than for employees), and also by an increase in direct taxation which will affect companies, income-earners above the average level and, most of all, the recipients of unearned incomes.

PRICE AND INCOMES POLICY

It is obvious that these anticipations of the spring are more important than the one immediate proposal—an increase in the tax on petrol. The other two sumptuary taxes, on drinks and tobacco, had been raised in the last Budget by Mr Reginald Maudling. It is obvious, too, that the new Government is relying both on its price review body to discourage increases in the price of key commodities and on its ability (which the improvement in social security benefits will certainly increase) to get the support of organized labour for a policy which sets out to regulate the growth of all kinds of income—wages, salaries, dividends and profits.

The Government has also now demonstrated that it is ready to increase taxation and is ready, if it does not get a system of price and wage restraint into operation by the spring, to raise it still further in the April Budget. The threat, backed by the promise of greater help to those who need it most, may be enough to get for the Government the backing it needs.

"There is now," Mr Callaghan said, "the opportunity to fight our way out of the economic trap in which we have been caught for too long. The British people can do it, and I put my trust in them."

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 17 November, 1964. Total amount offered was Rs 4,00,00,000. Tenders at Rs 99.400 per cent were accepted in full. Lower tenders were rejected. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.400 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 23 November, 1964. Successful tenderers should make payment on Friday, 27 November, 1964 at all centres. Other conditions are as usual.

During the week ended 13 November, 1964, Government of India Treasury Bills for Rs 112,53,00,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills sold from 11 November, 1964 to 14 November, 1964, amounted to Rs 11,25,25,000.

Notes of the week

TRADE

Decline in Exports to UK

While overall trade figures for September show a satisfactory performance on the export front—exports have registered an increase of Rs 12 crores during this month—it is disturbing to note a reverse trend in trade with the United Kingdom which still remains the largest market for Indian products. HMSO statistics for the month show a substantial decline of over Rs 2.5 crores in Indian exports to Britain as compared with September 1963. The cumulative figures for the first nine months (Jan-Sept) also show a decline of the same order.

Tea exports have recorded the sharpest fall of as much as Rs 8.4 crores. Tobacco exports have decreased by Rs 1.7 crores. Other items whose export has declined during January to September 1964 are oil cake, ores and metal scrap, and crude animal and vegetable materials. On the other hand, export of textiles (yarn, fabrics and made-up articles) show an increase of about Rs 9 crores during the period. The figures indicate that, over the period as a whole, India has a favourable balance of trade of about Rs 6.3 crores with the UK. It is, however, not possible to derive any degree of satisfaction over this development, as our trade with new markets in Eastern Europe or the developing countries is planned on a self-balancing basis, and this tendency will also be reflected in our trade with our traditional markets, though the trade with countries having free market economies may not be regulated according to annual plans and trade agreements.

The causes for the decline in exports to Britain during the month, coming as it did before the imposition of the new tariffs, and in the context of the general spurt in the country's exports, call for the immediate attention of the Minister of Commerce. The favourable balance of trade, combined with the availability of general purpose aid on a substantial scale, indicates that it would be opportune to adopt a more flexible policy regarding imports which would enable better utilisation of manufacturing capacity.

—Better Prospects in Eastern Europe

The Indian Trade Delegation that has just returned from Eastern Europe has made what appears to be an encouraging assessment of prospects of increased trade with this region. Mr S. V. Ramaswamy, Union Deputy Minister for Commerce, who led the delegation is reported to have told the Press in Delhi that he expected an overall increase of the order of twentyfive per cent during 1965 in trade with the four countries—Czechoslovakia, Rumania, Bulgaria and Hungary—which were included in the delegation's itinerary. Increases of about 25 per cent are envisaged in trade each way with Hungary and Bulgaria, and of 15 per cent with Rumania. Trade with Czechoslovakia is expected to register a substantial increase of Rs 9 crores over the current year's level of Rs 15 crores each way.

A satisfactory feature of the development of trade with these countries is the increasing interest displayed by them in Indian manufactures, particularly engineering goods. Both Czechoslovakia and Hungary are interested in purchase of railway wagons made in India. The development of exports to the extent envisaged in the trade plans for the coming year—the next year's trade plan for Indo-Soviet trade provides for an increase of forty per cent—will however depend on the assurance of adequate supply of raw materials to the concerned industries.

Many of these industries have been severely handicapped in the past by irregular and inadequate supplies of the materials required to maintain capacity production. Increased output of railway wagons will call for increased allocations of steel plate, which is one of the scarce categories which have not been decontrolled. Spokesmen of the Engineering industry have frequently drawn attention to the deplorable fact that half the installed capacity in engineering units, particularly in the small scale sector, remains unutilised for want of materials.

—And in Afghanistan

The arrival of a trade delegation from India at Kabul for reviewing the functioning of the Indo-Afghanistan trade agreement and

finalising arrangements for 1965-66 is significant in view of the widening trade between the two countries during recent years. The trade statistics show a systematic increase in the volume of trade both ways. Imports from Afghanistan in 1956-57 totalled Rs 4.4 crores while exports to that destination amounted merely Rs 2.4 crores. In 1962-63 Indian imports moved up to Rs 5.3 crores while exports were stepped up to Rs 6.2 crores and in 1963-64 total trade aggregated Rs 12.55 crores.

Imports from Afghanistan include dry and fresh fruits, medical herbs, cumin-seeds and asafoetida while exports from India are mainly traditional goods such as tea, textiles, engineering goods, spices and apparatus. Though prices of fruits imported from Afghanistan are slightly higher than international rates there has been no departure in Government's import policy. It needs special mention that on account of the inadequacy of banking facilities in Afghanistan, trade between the two countries was largely transacted on a barter basis till last year. Owing to the expansion of trade between the two countries the Reserve Bank of India has adopted a liberal policy for facilitating unhindered transactions.

The agreement for the current year, which was arrived at by the two Governments in January, envisages an improvement of nearly 20 per cent in the trade both ways. According to official estimates Indo-Afghanistan trade is expected to go up by about Rs 2 crores in 1965-66 consequent on the negotiations that are currently under way between the two countries. The growing demand in Afghanistan for a variety of goods augurs well for augmenting our exports and also diversification of the range of export items.

LABOUR

Rights & Duties

Mr Asoka Mehta speaking at Delhi about trade unions' failure to conform to the requirements of economic planning did not deal with the rise in wages or the need for any income policy calculated to restrain wages and profits alike. He dwelt on the need for saving but skirted the issue of control over public expenditure and investment. Refer-

ence made to Israel may be inappropriate. If the law has made recognition of trade unions compulsory and welfare legislation has been concerned with canteens, sickness insurance etc., the point that compulsory bonus payments are now expected as of right was not emphasised. Nor is it necessary to say that outside industry in occupations like banking and journalism, the trade union principles and methods have been imported wholesale so that higher wages do not promise or promote higher efficiency at present. The affluence of British trade unions which operate pension funds and unit trusts too need not be contrasted with the indigence of trade unions in this country or their known political connections with the Congress or other parties.

The disparities in wage rates, governed by industrial awards, and the earnings of rural labour (even of the self-employed) may well prevent any rise in small savings, prescribed as necessary for the financial health of the government. The striking if familiar point that inflation limits seriously the value of small savings while raising the value of real property and jewels

which the rich can buy need not be examined, except to show that savings can be constant, only if the price-level is kept down.

Too much talk on socialism soon breeds indifference to realities. Since many even in towns do not know much about the Five Year Plans, their aims and results, it is reasonable to hold that trade unions must be educated by some agency of adult education concerned with raising the level of intelligence and adaptability, and checking resort to direct action in the case of grievances, real or assumed. That American capita-

lism is confronted by the countervailing power of trade unions is a common place after Prof Galbraith explained how big unions secure their rights and advance their interests. The situation is different in India because the immaturity of capitalism is accompanied by the relative weakness of the trade unions also and the State has to finalise as referee too frequently. It is certainly necessary for trade unions to realise their deficiencies but the brake must be applied on well meaning but ill adapted labour legislation in a developing country where the scarcity of capital and the volume of

unemployment are inescapable concomitants of planning.

NEW COIN Doubts Stilled

The silver tankas are extinct like Staters and the new Nehru coins are in nickel. If the introduction of a head on a coin provoked some reflections about propriety in general, the formal ceremony on Saturday stilled doubts. But the size and denomination will not render Nehru acceptable to the numismatists for whom the past, not the present,

really matters. And the appearance of a nickel rupee that is wholly unrelated in weight or value to the silver coinage familiar for 200 years can only excite the feeling that rupee today means inconvertible paper money. The distinction of having a Nehru rupee (distinguished from an Afghani rupee or Nepali rupee familiar to India also in the past) may seem real and substantial but the Museum will not find a place for the coins that are a clear reminder of India's exiguous stock of metals, nickel included.

The advent of an aluminium piece in advance of the Nehru nickel was certainly a sign of a time out of joint. The purchasing power of the new coin at home or abroad can only be a subject of speculation but like the Grand Mogul, Mr Nehru has had a coin struck not in his name but for his perennial face. The privilege of striking a coin belongs to the Republic exclusively and the princely States' petty coins are no longer current, whereas the Nehru nickel might be in circulation for a longer period because the inflow of small coins into circulation from three mints is governed by the price-level and the decimal system makes the small coin less handy in some respects than the old annas. The nickel coins struck in the name of Mr Nehru will be called rupee and fifty paise. It is only Simon Bolivar who has the coin named after him while South Africa proclaims openly its dependence on gold by substituting the Rand for the Pound.

LANGUAGE Facilities for Study

The demand for instruction in the Chinese language has been great of late and the Government has recognised that local facilities for education in Chinese are inadequate. There is nothing like the facilities offered to many cities by German and French courses under official auspices and the Russians have not lagged behind. Spanish is hardly in the picture but the demand is for part-time courses in Chinese because the Emergency has made India realise that as a neighbour China must be studied.

The Ford Foundation has sensed this need and a grant has been offered to Indians because the Ford Foundation is found always ready to help education abroad or at home. The Chinese community in India (anti-communist) may be perhaps less useful than Taiwan which may send out instructors able to teach in English those willing to learn Cantonese or Mandarin. But this raises the issue of diplomatic recognition for the Chiang regime as this country has declined to recognise the existence of two Chinese and sees the mainland republic as the successor to the old Manchu Empire. Past contacts via Santiniketan may prove of little use to the Indian Government or the Universities because the demand is not for teaching in religion or philosophy but for modern courses—official or

business. The script difficulty is great but the Northern or Southern language can be studied only if the overseas Chinese care to help India and the Hongkong or Singapore Universities participate in the creation of new facilities in Delhi for learning Chinese. During and before the last war many evinced interest in learning Japanese but the present demand for Chinese courses may call even for a modification of the ban on Chinese official literature entering India. What is to be appreciated is not the desire found here for learning Chinese—a world language like Arabic—but the Ford Foundation's catholicity of judgement drawing the useful distinction between the recoil from imperialism by way of communism and Chinese civilisation itself.

CLOTH CONTROL A Vivid Picture

The fog of confusion that has enveloped the scheme of partial control on production and pricing of cotton textiles seems to have ultimately dissolved. This will certainly enthuse the industry and the consumers alike who were hitherto been groping in the dark owing to the lack of a vivid picture. The deliberations at the Textile Control Advisory Committee's inaugural meeting held last week in Bombay have made it clear that many of the obstacles pertaining to the scheme of multipliers and prices have been overcome. Controlled cloth has started arriving in the market and it is expected to gather further momentum within a couple of weeks. Prices of most of the controlled items of piecegoods have been brought down by nearly 5 per cent to 10 per cent and the quarterly output of controlled cloth is expected to be higher at 190 million metres.

Government's determination to successfully enforce the scheme and safeguard the interests of the consumers has been amply and forcefully indicated by Mr Manubhai Shah and Mr V. P. Naik who spoke at the meeting of the Committee. Mills have rightly been warned that drastic action will be taken on those who indulge in any sort of malpractices which will defeat the very purpose of the regulatory scheme. Government's assurance to industry that a revision of the minimum obligations will be effected in April next when relevant statistics will be available and willingness to remove any of the drawbacks that will come to its notice in the working of the system are encouraging. Nevertheless, the industry's plea for eliminating the ambiguity regarding combining allowances remains unheeded to and the stipulation that each mill will have to approach the Textile Commissioner for this purpose will naturally delay the movement of goods from the mills to the market.

Side by side with these measures there is an urgency for Government action for enabling the mills

to extend their full co-operation in this endeavour. Mills should be given the requisite incentives for the speedy completion of modernisation and rehabilitation of their machinery and equipment for producing quality goods at reduced costs. The prevailing high prices of cotton which will only inflate manufacturing cost is another disturbing feature. The current trend in prices is unwarranted owing to the comfortable cotton supply position consequent on last season's record crop and larger carryover of cotton. The authorities, therefore, will have to exercise strict vigilance on this aspect in order to ensure that mills will be able to procure cotton at reasonable prices.

PAKISTAN Basic Facts

The Economic Adviser to the Pakistan Government in presenting the third Election of Pakistan

Basic Facts has dealt with planning in relation to its aims and achievements by references to resources. It is useful to know that East Pakistan is ahead of West Pakistan in literacy as also numbers and the election campaign now in progress may be influenced by differences in the make-up. The economic situation or potential of Pakistan is conditioned by the lack of minerals though coal output in 1963 went over 1.1 million tons. Cement production is certainly helped by an abundance of limestone leading to the recent take-over of Indian-owned factories by an offer of compensation spread over some years.

Vigorous efforts to push agriculture have not led to the disappearance of food shortage-reduced only in 1963-64 by a bumper rice crop in East Pakistan. Increased output of cash crops has been secured in the last 15 years but West Pakistan sells jute and cotton to buy foodgrains from foreign countries. And jute production is not

growing, though jute mills have increased in capacity and number. Tea in Pakistan is not really a major export crop and the home market is satisfied by the Sylhet and Chittagong estates. Deficits in relation to consumption requirements are noted under milk, ghee, oilseeds. It is only in regard to Virginia tobacco grown for cigarette manufacture that Pakistan has recorded progress as under sugarcane. West Pakistan can claim much progress with acreage up by 100 per cent since 1948 and production put at 2.1 million tonnes in 1963-64 though it is clear that jaggery is the major product. The white sugar output was 243,000 tons in 1962. A more striking advance in textile output with many mills producing yarn for export also is the major result of centralised planning. Vanaspathi output has also risen with cottonseed only used for extraction of oil. Unilever has its own base in Pakistan also poised for expansion.

The Bank of Baroda has been handling foreign business for many years. Today, the Bank has branches in London, East Africa, Fiji Islands, Mauritius and East Pakistan.

The Bank of Baroda through any of its foreign branches or its correspondents is fully equipped to offer all the services needed in foreign trade and to handle every type of foreign exchange business—including opening Letters of credit, the negotiation/collection of export bills, clean bills and cheques, foreign remittances, credit information, etc., and is always willing and prepared to assist you in solving your problems concerning imports, exports and foreign travel with prompt and efficient service.

Lympus - A Letter from Delhi

Food Crisis

The food crisis in Kerala cast its long shadow over the Lok Sabha when it reassembled on Tuesday after adjourning on the opening day of the winter session as a mark of respect to the late Mr H. C. Dasappa. The unfortunate combination of circumstances which led to the crisis in Kerala in the first week of this month was patiently explained by the Minister for Food and Agriculture to an unsympathetic House in his reply to the debate on the adjournment motion moved by the leader of the Communist group. While Mr Subramaniam did not seek to cover up the mistakes, he refrained from apportioning blame, and concluded with an assurance that the worst was over and that movement of wheat and rice had been planned properly to avoid a repetition of what had happened. Mr Subramaniam also placed on the table of the House a statement reviewing the food situation in the Southern States and the steps being taken to maintain supplies to deficit regions. Lack of consensus among the Government's critics blunted the attack despite the massive indignation behind it. The adjournment motion met with the expected defeat.

While the inadequacies of the policies that have been pursued in the past have been underlined by events, the steps that will be taken by the Centre and States to implement informal rationing in big cities have yet to be clearly defined. When the maintenance of supplies to deficit pockets depends on a complex system of inter-State movements on Government account, it will be essential to eliminate the least possibility of misunderstanding regarding the responsibilities assumed by the Governments concerned. The difficulties caused by lack of coordination of administrative action by State Governments may be expected to be eliminated when the Food Grains Trading Corporation starts operations next year. In the meantime, the Bill for setting up the Corporation was also introduced in Lok Sabha last Tuesday.

The FTC is not the only set up on the launching pads. A proposal for establishment of a Bureau

of Public Enterprises was announced by the Finance Minister while addressing the conference of Financial Advisers of public Sector Undertakings which met here last week. The Bureau is intended to serve as a reference and consultancy organisation for industrial undertakings in the public sector. Its assistance should help to eliminate some of the drawbacks in the working of these enterprises to which Mr T. T. Krishnamachari had drawn pointed attention.

New Export Body

A new body—the Federation of Export Organisations—is also expected to make its debut on the Export Front which has been the scene of considerable activity in recent weeks. Chairmen of Export Promotion Councils and representatives of trade organisations met here on Monday, to discuss the proposal, and set up a drafting committee to finalise its constitution. It also set up a 30-member Standing Committee, with Mr P. A. Narielwala as president, and consisting of representatives of major chambers of commerce like FICCI, ACCI and AIMO, Export Promotion Councils and Commodity Boards.

Mr Manubhai Shah who presided over the meeting said that the functions of the proposed Federation which would be a coordinating body, would not come in the way of the various export promotion councils and commodity boards. Only such a unified export organisation, he felt, would ultimately create the picture of India as a dynamic trading country.

Expert Team on Exports

For the achievement of this objective, the Government is not too proud to take the help of foreign expertise in the field of export promotion. A team of experts in foreign trade, sponsored by the Ford Foundation arrived here last week to advise on export promotion techniques. Included in the group are economic and trade consultants, managers of coordination departments of firms of world repute, representatives of associations of manufacturers and members of institutes of marketing and economic affairs.

The seven-member team consists of two members each from the United States, the United Kingdom and Japan and one from Italy. They are Dr Robert J. Clark, Mr Masayuki Katon, Mr William Thomas Pearce, Mr Alexander T. Stanley, Dr Elie Tosarelli, Mr Herbert William Vallender and Mr Minora Yoshida. A counterpart Indian team led by Dr P.S. Lokanathan, Director General of the National Council of Applied Economic Research has also been set up to work with the visiting team of experts. Other members of the counterpart team are: Mr E. N. Adarker, Additional Secretary, Ministry of Finance, Mr G.L. Bansal, Secretary General, Federation of Indian Chambers of Commerce and Industry; Mr H. D. Shourie, Director General Indian Institute of Foreign Trade; Mr S. Hamid, Joint Secretary Commerce Ministry; Mr S. S. Marathe, Economic Adviser to Government; Mr S. Subramaniam, Chairman Tariff Revision Committee; Dr R. M. Honavar, Officer on Special Duty, Commerce Ministry; and Mr C. R. Krishnaswamy Rao Sahib, Joint Director of Export Promotion.

The visiting team, which will be in India for seven weeks, will split into two groups after a round of discussions with its counterpart in Delhi which is slated to last till the 22nd. One group will go to Calcutta and Madras and the other to Bombay and Ernakulam for discussions with export promotion councils, commodity boards, export organisations etc.

Trade Plans

Talking about export promotion, the Trade Delegation to East European countries led by Mr S. V. Ramaswami, Deputy Minister for Commerce, returned last week fully satisfied with its success in projecting the image of India as an industrial country capable of exporting many engineering, chemical, pharmaceutical and other products. Mr Ramaswami told a press conference on his return that the delegation had been able to prepare the ground for substantial expansion of trade with the countries visited by them. Trade with East European countries, including the

USSR, accounts for Rs 200 crores out of present total annual export of Rs 800 crores. Trade in the coming year is expected to register an increase of 25 per cent over the 1964 level.

Mr Ramaswami also reviewed the prospects of increased trade with individual countries. Trade with Czechoslovakia so far, in the current year, was round about Rs 15 crores each way; there are still two months of the calendar year to be taken into the reckoning. The target for 1965 has been pitched at Rs 24 crores each way. The highlights of the 1.65 plan are that Czechoslovakia has agreed to utilise all funds available in India for purchase of goods in India. The purchase of components and spareparts for tractors has been increased in order to step up the production of tractors in India and the purchase of capital goods in 1965 is likely to be more than in 1964. As regards exports from India, the sale of tyres and tubes, tea, tinned fruits etc. will be increased. A Czechoslovak delegation for the purchase of railway wagons is now in the country. Czechoslovakia is also interested in the purchase of Vitamin intermediates and Hormone intermediates.

Arrangements have also been made to step up trade with Rumania which has not been up to earlier expectations. A 15 per cent increase is envisaged for 1965 to bring it up to Rs 8 crores each way. Rumania will be buying a fairly large quantity of Iron Ore. They will also purchase Rs 15 million worth of textiles, including handloom products worth half a million rupees. India proposes to import 10,000 tons of crustic soda and the same quantity of heavy and light soda ash from Rumania. Imports will include Rs 40 lakhs worth of fertiliser (urea) and Axle Oil for Indian Railways worth Rs 90 lakhs.

The target for export to Bulgaria has been stepped up from Rs 4.5 crores each way in the current year to Rs 5.5 crores in 1965. The trade plan provides for increased exports of iron ore and imports of zinc and caprolactum.

The current year's target of Rs 12 crores each way for trade with

Hungary has been implemented to the extent of about Rs 10 crores each way. The trade envisaged for the coming year is Rs 14.5 crores each way. The trade plan for 1965 provides for larger exports of cotton textiles, leather footwear, chemical products and engineering products. Hungary is also interested in purchase of railway wagons and a delegation is due to arrive here this week. While imports of wheels and wheel sets from Hungary has been reduced as these items are now being produced in Durgapur, increased provision has been made for chemicals, drugs, sera and vaccines in the 1965 plan.

GATT Action Programme—Progress of Implementation

Information is now available regarding the steps taken by the EEC and other West European countries to facilitate expansion of exports of developing countries in terms of the GATT Action Programme which was approved at the Ministerial meeting in 1963.

The European Economic Community have suspended or reduced the rates of Common External Tariff on a number of items like, cashewnuts, spices, shellac, tea, coffee, castor oil, tobacco seed oil, tropical woods, carpets and rugs, ready made clothes of certain categories, equipment for cricket and polo etc. The national tariff rates of a number of the member states have also been aligned to these reduced rates. The member States, it is stated, have also relaxed or removed quota restrictions on a number of items. It is estimated that, with these concessions, about seventy per cent of India's exports should be able to enter the European Economic Community free of duty. Barring a few items in the field of textiles, the rates of duty on the remaining items cannot be regarded as very high or insurmountable by a determined export promotion effort.

Among other European countries, Norway had already removed quantitative restrictions on coffee and with the abolition of duty on bananas, all tropical fruits now enjoy duty free entry. Duty on coffee has been reduced from the beginning of the current year as well as duty on coco a waste.

Spain has either reduced or suspended duties on products like coffee, specified types of tropical wood, henequen and sisal. The surcharge on tea and coffee were also removed with effect from July 14.

Australian Trade Delegation

Talks between the Australian Businessmen's delegation led by Mr A. J. White and the Minister of Commerce have, it is understood, helped to define the scope for increased export from India of items like tea, coffee, jute, black pepper and manufactured goods

and the import from Australia of tallow, wool, raw hides and skins. The starting of joint enterprises in India making use of raw hides and skins and of Australian tallow was also considered at the meeting. A proposal for import of wool from Australia for processing on a commission basis for re-export, was also discussed. The members of the delegation are understood to have expressed their readiness to explore possibilities of increasing trade and economic cooperation between the two countries.

Housing Boards

The Union Ministry of Works and Housing is considering the question of setting up a Central Housing Board to co-ordinate the activities of State Housing Boards. At present there are Housing Boards in six States—Andhra Pradesh, Gujarat, Madhya Pradesh, Maharashtra, Madras and Mysore.

In a communication to the Chief Ministers, stressing the urgency of gearing up the administrative machi-

inery for the effective implementation of housing programmes, during the Fourth Plan, Mr Mehr Chand Khanna, Union Minister for Works and Housing, is understood to have suggested that other States should also set up Statutory Housing Boards, because experience had shown that housing programmes had made better progress in the States where these boards exist. Mr Khanna has also enumerated a number of advantages of Housing Boards.

First, according to the Minister, the Boards can unify activities relating to housing, town planning, public health engineering, slum clearance and allied matters by coopting representatives of the concerned departments as members.

Secondly, the Board can avoid delays which are inherent in Government procedures. With a consolidated fund of its own, the Board can avoid lapse of funds not utilised in a financial year. The funds allocated to the Board can be carried forward by it to the next year, whereas the funds allocated to a Government department lapse if they are not utilised by it within that year. Another ad-

vantage is that the funds allocated to the Board can be utilised only for housing and cannot be diverted to other development heads.

Thirdly, the Board will be able to secure additional resources for housing from the open market by accepting deposits and issuing shares and debentures etc, against the guarantee of the State Government. The Board would also be able to set up a revolving fund which could finance a bigger programme of housing, land acquisition and development within available resources.

Lastly, the Board can set up its own establishments for production of building materials, such as brick and lime kilns, sand and stone quarries, timber seasoning and treatment plants, carpentry shops for doors and windows and factories for prefabricated components.

In this communication, the Minister for Works and Housing is also reported to have proposed that all work relating to housing and allied matters should be centralised in one department under one Minister. At present more than one department deals with matters relating to housing.

A great beginning...

In 1907, when India could not even produce a decent pin, the House of Tata announced its intention to build a modern steel works in India. There were not a few who doubted that the project would ever be a success.

Yet, shortly afterwards, India's first steel works was set up at Sakchi, as Jamshedpur was then called, and the first steel ingot was successfully rolled in February 1912. This event not only marked the birth of India's steel industry but also proved that India had the necessary potential in terms of iron ore and other raw materials to sustain an ever-expanding steel industry on modern lines.

The steel that has flowed out of Jamshedpur for over 50 years has helped India to take her first steps on the road to industrialization. And Tata Steel will continue to play an important role in our developing economy now poised to produce atomic power and manufacture steel plants to make more steel.

TATA STEEL

Market NEWS and Trends

JUTE Steady Trend

THE steady trend noticeable most of the time this week in the jute goods market has mainly stemmed from the belief that supply will lag behind demand. There are two factors influencing this sort of calculation. In the first place, the continued strike in Pakistan is having serious repercussions on that country's jute industry. The strike is now more than a month old and indications are that a settlement is as distant as ever as both sides to the dispute seem to be reluctant to concede any ground. Moreover, the strike is not confined to one or two centres but appears to have brought to a stop the entire jute goods industry of Pakistan. Besides the loss of foreign exchange that might have accrued from exports of jute goods, there is now the problem of disposal of raw jute which is

accumulating as a result of the long shut down of mills. While thus the Pakistani industry's sad plight may indirectly benefit Indian jute goods exports, there is also the threat that our own jute production will be adversely affected. For, it would appear that efforts at settling the dispute between workers and employers over the question of Bonus have so far failed. It has been reported that Wednesday's meeting between labour and employers and the Conciliation Officer has ended in failure. The representatives of the workers seem to be adamant that employers should agree to pay the minimum bonus as recommended by the Bonus commission. It is the contention of the Indian Jute Mills Association that so long as the wage Board's recommendations are in operation, the Bonus Commission's Award cannot become operative. The position now seems to be

that the workers have reiterated their earlier decision to resort to a token strike on 1 December.

That the decline in October end stocks to 117,300 tonnes is partly accounted for by a decline in production during the month will be evident from the figures pertaining to output during October. Total production amounted to 98,000 tonnes as against 104,000 tonnes in the previous month. The fall is due to the smaller number of hours worked during the month—192 hours as against 208 hours in the previous month. A significant feature of the October figures is that the level of sacking production has been maintained more or less unchanged at 42,300 tonnes as against 42,900 tonnes in September while that of hessian has declined markedly to 42,700 tonnes from 46,600 tonnes. Production of carpet backing cloth shows a small increase to 7,600 tonnes from 7,400 tonnes. Other goods are lower at 5,400 tonnes.

times lower rates with Fannings and Orange Fannings a week feature.

CTC offerings received better support although prices were irregularly lower. Plain CTC brokens were about steady; but their Fannings declined by up to 10 paise. Medium liquoring CTC teas were easier by up to 20 paise, while best liquoring kinds showed a decline by up to 40 paise. Whole Leaf grades were sold well; but Darjeelings were irregular and lower with selected lines selling well.

Following rates (per kg) were quoted:—Clean Plain Pekoe Rs 5.20 to Rs 5.50; Plain Orthodox BP Rs 4.10 to Rs 4.20; Plain Orthodox Fannings Rs 4.10 to Rs 4.20; Plain CTC BP Rs 4.90 to Rs 5.10; Plain CTC Fannings Rs 4.60 to Rs 4.80; Medium CTC BP Rs 5.20 to Rs 5.50; Medium CTC Fannings Rs 5.00 to Rs 5.30; Good Assam CTC BP Rs 5.60 to Rs 6.00 and Good CTC Fannings 5.60 to Rs 6.00.

In the internal sale, offerings consisted of 35,353 packages of dusts. There was a good general demand, but at easier rates. All CTC descriptions continued to decline except the small, bright lines and the very best sorts, which were sold well. All orthodox teas came to an easier market, while leg-cut teas were well supported at around last levels. Following rates (per kg) were quoted:—Plain Orthodox Dust Rs 4.05 to Rs 4.50; Medium Assam Dust Rs 4.60 to Rs 5.10; Leg-cut Dust Rs 4.85 to Rs 5.10; Plain CTC Dust Rs 4.80 to Rs 4.95; Medium Assam CTC Dust Rs 4.95 to Rs 5.25 and Good Assam Dust Rs 6.00 to Rs 6.40.

In the Cochin market, offerings were 11.33 lakh kilogrammes of Leaf grades. The quality of teas was a little irregular. Some of the Nilgiri teas were bright, while in the case of medium categories a few of the later invoices were a little inferior. The market met with a good demand at slightly lower rates, particularly for the Fannings grades. Low Mediums and Medium Brokens met with a good enquiry but prices for these sometimes inclined easier. Similar Fannings, however, received best support and were easier by 10 to 20 paise per kg.

Good Mediums were sold at around last week's rates, while

highgrowns met with an irregular support. Improved liquoring teas were sometimes dearer, while others came to a lower market. Fannings under this category met with a better support than last week's prices. Black leaf descriptions met with a useful support and were sold well. Unorthodox descriptions also received useful support; but prices for these inclined lower. Tippy sorts were sold well at around last week's rates.

According to tea sources, exports of tea from India, excluding exports by land, in the first ten months of the year, were lower at 147,488 metric tons as compared with 163,933 metric tons in the corresponding period of last year.

Cut of the total shipments, exports of North Indian tea declined from 127,750 metric tons in January/October 1963 to 119,369 metric tons in the period under review as did those of South Indian teas from 36,183 metric tons to 28,119 metric tons.

The UK, the largest buyer of Indian tea, accounted for 84,156 metric tons out of the tea exports from India during the period under review. This was 18,331 metric tons less than their offtake in January/October 1963.

In London auction, 32,073 packages, including 30,734 packates, from North India, were offered. There was a fair demand but prices were lower. CTC Assams showed a decline of a penny to 4d per pound. Best liquoring Dooars met with good support and prices remained about steady; but the remainder of the offerings were a penny to 2d easier.

COTTON Bull Pressures Still

The cotton futures market was under the grip of bulls during the past week also and the Jarilla March contract was pushed to a new high of the season. The spurt in price was not altogether unexpected. The reports of damage to the crop in some parts of the country, the encouraging advice from the cloth market, the uptrend in cloth production and the reported delay in the arrival of cotton from the US under PL 480 were bullishly interpreted in the market. The reports of limited arrivals of cotton in the consuming centres also induced bears to cover their sales hurriedly.

The ruling contract, after commencing the week on a firm trend, moved up Rs 780.00 per three quintals from the previous week's closing of Rs 750.20 before winding up the week slightly lower at Rs 759.50. Upcountry centres were active in the market during the week. Toward the mid-week, however, the market developed an easier trend consequent on the

rumours that 1.50 lakh bales of US cotton under the PL 480 along with the global quota of nearly 2.14 lakh bales will be released by the authorities. This apart, the fears about the intervention of the Government and Forward Markets Commission at high levels also imparted cautious trading. However this phase proved shortlived. Toward the close of the week the contract moved up further and registered a net gain of Rs 9.25.

A general revival in demand was noticed in the spot market at Sewri during the week. New crop varieties of Digvijay, L 147 and CO 2 met with good spinner interest. Growths such as Wagad and Kalyan firmed up thanks to improved demand but the turnover was meagre.

In the wake of brisk buying Bengal Deshi cotton edged forward. The short covering and fresh investment buying that was noticed in the market emanated from fears of reduced crop during the

season. In the import section, African and Sudanese cotton met with encouraging demand.

The 1963-64 cotton season that has ended on 31 August is remarkable for more than one reasons. According to official figures, indigenous output of cotton during the season touched a new high of 6.13 million bales against the preceding season's crop of 5.76 million bales. The record crop during the season under review was primarily owing to the upsurge in production of cotton in areas such as Punjab, Rajasthan, UP, MP and Maharashtra. Owing to enhanced domestic production and the large carryover of 2.68 million bales the aggregate lot of cotton available stood at 8.93 million bales against 8.25 million bales in the previous season. This is significant as imports of cotton during the season have been slashed to a great extent. Understandably enough, consumption of cotton by the mills was markedly

higher at 6.05 million bales as compared with 5.67 million bales in the previous season and it is encouraging that this improvement is wholly accounted for by internal crop. Consumption of Indian cotton by the mills was marked higher at 5.45 million bales from 4.79 million bales in the previous season. There was, therefore, a reduction in the consumption of imported growth. Distressingly enough, shipments of cotton did not exhibit a corresponding rise to the enlarged supply position. On the contrary, our exports slumped to 2.8 lakh bales from 3.34 lakh bales which led to the piling up of stocks with the trade. The unsold stocks at the end of the season amounted to 2.52 million bales as contrasted with 1.74 million bales at the end of 1962-63 season comprising 2.24 million bales of Indian cotton and 2.8 lakhs bales of imported cotton.

The higher domestic crop and the comfortable supply position spurred the authorities to initiate a

TEA Little Change In Prices

IN the export sale held in Calcutta this week, offerings consisted of 75,383 packages of Leaf grades. There was a better general demand, but again at lower rates. Plain orthodox teas were sold at prices around last week's rates with more demand for fannings grades than in recent weeks. Medium Dooars BOPs were sold well at fully firm rates; but similar Fannings and Orange Fannings, although irregular, were irregular and generally 10 to 20 paise per kg lower. Medium and good Assam BOPs were sold at irregular and some-

NARROW REEDED MAURESQUE MOROCCO PINHEAD HAMMERED

Patterned HPG decorative glass for your home, your office

HPG decorative glass has a beautifully patterned, uneven surface on one side. That's why light passing through it gets softly diffused and vision is obscured. HPG decorative glass is ideal for partitions and screens... in homes and offices, schools and clubs. ■ HPG decorative glass is manufactured by Hindusthan-Pilkington Glass Works Ltd. in full technical collaboration with Pilkington Brothers of UK—people who have been making glass for more than a century. ■ Choose from the HPG range of decorative glass—Mauresque, Hammered, Morocco Pinhead and Narrow Reeded.

When you buy HPG you buy Quality and Reliability

liberal cotton policy for the season. The vexatious compulsory quality survey and supervision scheme have been removed, though in January Government had to reintroduce some restrictions on the movement of Digvijay "A" cotton because of the abnormal price increase upto April at which date it was discontinued. Mills were allowed to purchase 100 per cent of their requirements of indigenous cotton on the basis of their consumption in 1961-62. Moreover, the floor prices of cotton were revised upwards by Rs 100 per candy. In the ultimate analysis, therefore, the 1963-64 cotton season figures as a notable one.

PIECEGOODS

The cotton piecegoods market continued to exhibit sluggish conditions during the week. The up-country centres evinced little or no interest in controlled varieties while the mill section met with only scattered enquiry.

On the export section, restricted booking was down with the US

in usual varieties. The delay in the issue of export licence for the UK by Government of India pushed the prices of grey cloth meant for exports to that destination slightly. Shipments to East Africa were nil owing to the reports that no imports into that country will be permitted without an import licence.

Tin—Minimum Price Raised

THE International Tin Council has raised the guaranteed minimum price of Tin in an effort to boost production of the metal. The Council has announced that consumption, at roughly 160,000 tons, has exceeded the output by about 20,000 tons in each of the last five years. The floor price in the international Tin Agreement has been raised from £850 to £1,000 per ton. The Council says that this decision will give both the producing countries and investors greater

assurance that tin prices will not fall to unreasonable levels.

The ITC's buffer stock was exhausted early this year as a result of the boom in the metal. The spot price on the London Metal Exchange is presently quoted £1,430 per ton against the record high of £1,715, the month-ago level of £1,612-10sh and the year-ago level of £965.10sh. The present uncertain tone in tin reflects the shakeout several days ago of what was felt to be large speculative content.

Outlook in the short term, nevertheless, still leaves scope for some further recovery to recent high levels. But, in the longer term, booming demand may not be matched in mid-1965 and prices can drop to former low levels.

World shortage of Lead has also boosted its price to record levels and it is expected to persist throughout next year. There is, however, a feeling that the metal's statistical tightness may be eased in the longer term by new output in

America though this will be from low-yield sources. At current high price levels, however, the metal has become subject to a lack of stability control and the threat of competing substitute materials.

This year, mine production of lead has increased only slowly and high metal output has been achieved through a reduction in concentrate stocks and a rise in the usage of scrap. Next year, supplies will be in much the same situation. Although new mines are on the way in North America, it will be well into 1967 before production is in full swing. The main source of additional metal in the past has been Russia; but this year no lead has arrived from this source and it certainly cannot be counted on next year.

Prices for the metal, on the London Metal Exchange, have reflected the commodity's worsening shortage throughout the year despite American stockpile sales. The rate for the spot position is presently quoted around £134 per ton as compared to £105 on 1

August. The Study Group says that production and stocks of both lead and zinc have fallen to very low levels, because supplies are below consumption and it is difficult to see how they can fall much further.

Zinc prices are also falling firm, being quoted at £122-10sh per ton as against the 1964 low of £90-15sh.

SUGAR Changes in Price Schedule

The Government of India has announced the ex-factory prices of sugar for the 1964-65 season. The new prices are slightly higher than the ruling rates in certain cases and lower in certain others. The price revision is related to duration and recovery of sugar during the last season. A further revision of the ex-factory prices, based on the cost structure and all other factors, is expected to be made after the Tariff Commission completes its exhaustive study and submits its report.

But the industry is greatly disappointed at the new prices. Its expectation has been that the Government would take the opportunity to offer incentives to the industry to produce more. The Government need not wait for the Tariff Commission's report to do this and the new prices are not calculated to induce the industry to produce more.

While accepting the Sen Committee's recommendation for a thorough study of the price question by the Tariff Commission, the Government seems to have modified the suggestions regarding the number of zones and the prices. The Government has divided the country into five zones instead of four as suggested by the Sen Committee.

Sugar producers in Maharashtra are disappointed. They have termed the Government decision as unfortunate and one which will adversely affect the sugar industry as a whole and particularly in Maharashtra. They feel that the Government's negative policy is likely to work as a disincentive to greater production at a time when everything should be done to increase the output and relieve the acute shortage, so that the open market prices can be lowered.

COFFEE More Receipts

According to the figures released by the Coffee Board, receipts of coffee into the 1963-64 Pool, up to 31 October 1964, amounted to 68,620 (55,623) tonnes, comprising 28,400 (24,430) tonnes of Plantation variety; 10,470 (9,243) tonnes of Arabica Cherry and 29,750 (21,950) tonnes of Robusta. Figures shown within brackets are for

the corresponding period of last year.

Arrivals of the 1964-65 crop, mostly Palmis, have started. Up to 31 October, about 10 tonnes of coffee have been received.

Up to the end of October 1964, 30,078 tonnes of the 1963-64 crop, made up of 17,050 tonnes of Plantation, 4,568 tonnes of Arabica Cherry and 8,460 tonnes of Robusta have been sold for export. The following quantities are earmarked for the export open auction at Mangalore on the 12 November and 2nd December respectively:—

(Figures in Tonnes)		
Arabica	Robusta	Total
Cherry		
350	668	1,018
258	617	875
608	1,285	1,893

A quantity of 2,946 (2,967) was released in the internal market in October, bringing the total quantity released from January to October 1964 to 28,400 tonnes as against 28,077 tonnes in the corresponding period of last year.

RUBBER Natural Vs Synthetics

The Vice-President of the Indian Rubber Manufacturers' Association has ruled out the possibility of natural rubber consumption and production in India being affected by the development of synthetics. He says that, on the other hand, it will not be possible for the plantations in the country to meet the requirements of the manufacturing industries, which are growing at the rate of 10,000 tons per annum.

Referring to the percentage of synthetics used in rubber goods, the Vice-President has stated that the maximum quantity used is by the USA where the percentage is about 65 per cent, while in India the manufacturers use only 25 per cent. The low percentage use in India is attributed firstly to the high cost of synthetics manufactured in India and secondly, the time needed for acclimatisation in use of synthetics. Normally, any use of synthetics. Normally, any industry will need three to four years' time to adjust to new situations.

The price of synthetic rubber in the international markets is 20 per cent lower than natural rubber. In India, however, it is 10 per cent higher. The price of natural rubber itself is higher than international price by about 15 per cent and synthetic rubber in India cost

76 per cent more than the international price.

CARDAMOM Sustained Rise in Prices

In the Bombay market, there is a fresh rise of Rs 3 per kg in the prices of Cardamom with Alleppy green average quality quoting at Rs 20 to Rs 22.50; medium at Rs 22.50 and superior at Rs 25 to Rs 28 per kg. This rise is attributed to the meagre arrivals at the terminal centres.

Meanwhile, the persistent rise in prices has perturbed the exporters who feel that the export of this commodity will be very small this year. Although foreign importers do not mind paying higher rates for the commodity, the real hitch is the maximum prices fixed for the commodity by the authorities. Shippers are expected to sell within the limit of these prices fixed for the purpose of export. They are not in a position to do so since the current prices are much higher than the stipulated prices.

For instance, the export price for AGSI, an export variety of cardamom, is Rs 21.33, while it is actually available at as high as

Rs 23 to Rs 25 per kg. This means that the export of cardamom is not possible unless the shippers resort to under-invoicing of goods. Shippers in Bombay have, therefore, drawn the attention of the Government to this situation and suggested that the Government should be satisfied with the minimum prices only which will safeguard the interests of the growers.

OILS AND OILSEEDS Reaction After Initial Rise

In the Bombay Oilseeds market, a halt has been cried to the recent upward movement in prices. Despite fairly good arrivals of ready groundnut and groundnut oil, there was a strong speculative support early in the week. This was attributed to the belief that, despite the official decision to allow exports of groundnut from Gujarat, the actual receipt from the State might be smaller than earlier expectations in view of the enforcement of the permit system. But the subsequent fears that the Government might take action to curb speculative activity in the market caused a reaction in prices towards the close.

With the lifting of the ban on the outflow of groundnut and groundnut oil from Gujarat with effect from 10 November, the Gujarat Government is devising several measures to ensure that the export of the commodities is not indiscriminate, speculative transactions kept in check and exports are made strictly under the regulations. The movement of the commodities will be allowed only by rail and sea transport so as to keep a watch on exports and prevent smuggling by road.

The State Government has also decided to allow the marketable surplus to be exported only after ensuring adequate supplies within the State. The groundnut crop, which is expected to be a bumper one this season, is expected to be 12 lakh tonnes. The State Government is planning to build a buffer stock of oil during the peak season to provide a cushion in the critical months at the end of the season.

The overall tendency in the Castorseed section was generally upward. While the inflow of ready seed was relatively small, Gujarat and North Indian interests figured as active buyers.

In the Linseed section, prices displayed a firmer tendency on account of North Indian speculative support. Higher rapeseed advices from North India provided the main stimulant.

In Madras, the groundnut market maintained firm conditions. Arrivals of seeds average 50 to 70 tons a day and local crushers were the main buyers. Arrivals were stated to be mostly wet due to the rainy weather. The rate for peanuts advanced from Rs 86 to Rs 90 per bag of 80 kgs.

In the Oil section, the rate for the ready position soared from Rs 212 to Rs 230 per quintal due to the poor availability of oil and keen demand from all sources. Production was stated to be slow due to the seeds being wet.

SILK

In the Bangalore silk market prices of Filature raw silk at Government Silk Filatures during the week ended 13 November, 1964 ruled firm between Rs 101.32 and Rs 101.42 per kg. Similarly the prices for Kisan Silk also ruled firm between Rs 103.00 and Rs 104.00 per kg.

The prices of cottage basin silk, however, underwent a slight downward shift to be quoted at Rs 80.19 to Rs 94.80 per kg. as against Rs 80.47 to Rs 96.27 last week. While the prices of superfine charka raw silk almost ruled steady, the prices of first quality showed a marginal decline during the week-end. But prices of charka raw silk of II and III qualities have tended to rule slightly upwards as compared to last week prices. Prices of II and III quality charka raw silk were quoted this week-end at Rs 62.50 to Rs 66.69 and Rs 57.87 to Rs 62.28

per kg. as against what they ruled at Rs 61.73 to Rs 66.14 and Rs 57.32 to Rs 61.73 per kg. respectively.

Though the supplies of raw silk to the market were limited, the demand also appeared to be dull at present. The prices of dupion however swung up, to be quoted this week-end at Rs 21.50 to Rs 33.07 per kg. as against Rs 19.84 to Rs 32.33 per kg. last week due to lack of adequate supplies against growing demand. The prices of seed cocoons of foreign race have sky-rocketed for another week too sharply to be accounted for. The momentum has been partly induced to domestic seed cocoons also. The shortage of foreign seed cocoons has been largely responsible for such an upward trend.

The prices of mulberry reeling cocoons in Siddlaghatta area ruled between Rs 3.87 and Rs 6.25 against the level of Rs 3.87 to Rs 5.90 per kg. during previous week. Channapatna variety was quoted between Rs 2.85 and Rs 3.68 as against the level of prices of Rs 3.95 to Rs 4.80 per kg. last week, showing slump in prices due to the poor quality of the cocoons flowing into the market. Prices for Mugur areas remained stationary.

In the Bhagalpur silk market prices of tasar reeling cocoons of Bogai variety reeling cocoons have reached an all-time high level of Rs 150/- per kahan due to spurt in demand by manufacturing interests engaged in production of export material. The new crop is expected to move in only sometime at the end of December 1964. Until then the market is likely to be bullish.

In the Malda silk market, prices of cottage basin silk and charka raw silk (Thana) and (Varna) ruled between Rs 90.00 and Rs 100.00, Rs 84.00 to Rs 87.00, Rs 72.00 to Rs 77.00 per kg. respectively.

In the Assam silk market there was no perceptible change for eri and muga silk products.

The FOB prices and landed cost of Japanese raw silk of 20/22 Dr. 2A were Rs 56.00 and Rs 91.48 per kg. respectively during the month of September, 1964. The prices have shown a remarkable tendency to stabilise at these levels.

NOTICE STATE BANK OF INDIA.

Bombay, the 4th November 1964
13th Krtk. 1886 (Saka)

NOTICE is hereby given that the Principal Register and the Branch Registers of the State Bank of India will be closed for transfer of shares from Wednesday, the 16th December 1964 to Thursday, the 31st December 1964, both days inclusive.

N. A. KRISHNAN,
Managing Director.

For the INVESTOR

INVESTMENT GOSSIP

Depressed Sentiment

THE slight improvement in sentiment noticeable in later dealings this week is largely to be attributed to technical considerations though it is quite on the cards that bear operators who have earlier hammered down rates almost without any opposition have also turned cautious following rumours of impending Cabinet reshuffle at the Centre. The fact that despite continued encouraging corporate news there has been no revival of buying interest as such indicates that hopes entertained earlier that there would be some worthwhile fiscal changes in the near future have receded. It is generally believed now that that it would be idle to expect tax concessions before the next budget. Moreover, some of the recent developments do not encourage the hope that the private sector industries will have their legitimate grievances considered with sympathy.

With the recent decision to include drills in the controlled categories of cloth, a large proportion of mill production has come under Government control. The revised sugar prices have ignored the industry's plea for incentives in order to enable sugar factories to step up their production. As for the jute industry, the continued high price of raw jute has rendered simultaneous business unremunerative and current prices of jute goods are considered high by overseas consumers. It is not surprising that coal shares are neglected because due to lack of demand, coal stocks are accumulating fast at pit heads. While almost all major industries are thus offering gloomy prospects, operators are reluctant to extend commitments because of the growing apprehension that Government may sooner or later clamp down further restrictions on the stock markets. It has been reported that the Company Law Administration has proposed far reaching measures to check malpractices pertaining to transactions in shares. It may be recalled that some time ago the Chairman of the Company Law Board visited UK and USA with a view to studying the working of the stock exchanges in those countries. It is now reported that he has already submitted a report to Government recommending a series of steps which will give the Government wide powers of control over stock

exchanges and on dealings in shares generally.

NEW ISSUE NOTES Tractors and Bulldozers

Tractors and Bulldozers Limited will be entering the capital market with a public issue of Rs 35 lakhs in equity shares of Rs 100 each. The company has an authorised capital of Rs 1 crore. The issued and paid-up capital is Rs 20 lakhs. This is to be increased to Rs 70 lakhs by the present issue of Rs 50 lakhs of which Rs 15 lakhs is taken up by the directors and their friends.

The entire public issue has been underwritten by the LIC, ICICI and other financial institutions. The proceeds of the issue are to meet the expansion programme of the company. The company has entered into a technical collaboration agreement with a Czechoslovakian firm.

Philips India

Philips India Limited has received the consent from the Controller of Capital Issues to issue 4,00,000 Ordinary shares of Rs 10 each, at a premium of Rs 6 per share. Of these, 3,00,000 shares will be offered to the existing shareholders other than N. V. Philips' Gloeilampenfabrieken, Holland, on a rights basis, in the proportion of three shares for every five shares held. The balance will be taken up by N. V. Philips' Gloeilampenfabrieken, Holland.

Sandoz

Sandoz (India) Limited, Bombay, is to issue further capital of Rs 75 lakhs, divided into 7,50,000 equity shares of Rs 10 each, at par. Of this, shares of the value not exceeding Rs 23.6 lakhs (Rs 13.6 lakhs for cash and Rs 10 lakhs for consideration other than cash) will be offered to the company's foreign collaborators, Sandoz Limited, Basle, Switzerland. The balance, including shares of a value not less than Rs 30 lakhs will be offered for cash. The money will be utilised on the company's expansion scheme.

HOC

The Hindustan Organic Chemicals Limited, Bombay, a Govern-

ment of India undertaking, is to issue further capital of Rs 17 lakhs, divided into 1,700 equity shares of Rs 10 each, at par. The money will be utilised for financing the company during 1964-65.

Suraj Textiles

Suraj Textiles Limited, Malout Mandi, Ferozepur, Punjab, is to issue further capital of Rs 30 lakhs, divided into 15,000 equity shares of Rs 100 each and 15,000 preference shares of Rs 100 each. The capital will be utilised for financing the expansion programme of the company.

Bharat Collieries

Bharat Collieries Limited, Calcutta, has been granted consent to the postponement of the date of redemption of Debentures of the value of Rs 30 lakhs from 31 October 1964 to 31 October 1972 and to the increase in the rate of interest thereon from 6 to 7 per cent per annum, effective from 1 November 1964, subject to the agreement of the debenture-holders and subject to the further condition that such of those debenture-holders, who want to be repaid in cash, shall be so repaid within a period not exceeding three months.

INVESTMENT NOTES Jaipur Unit

Considerable progress has been made at the company's new unit of 25,000 spindles at Jaipur. The construction of the building is in progress and will be completed before long. Orders for all the indigenous and foreign machines have been placed and it is expected that production will start in 1965. The Rajasthan Government has agreed to sell to the company its shareholdings of the subsidiary of the company, the Jaipur Spinning & Weaving Mills Limited. On purchase of these shares, the company will be holding about 92 per cent of the shares of the Jaipur Spinning & Weaving Mills Limited. Thereafter, it is intended, subject to usual formalities, to amalgamate the Jaipur Spinning & Weaving Mills Limited with the company. After the amalgamation, 27,000 spindles will be added to the capacity of the company.

INDAL

In connection with the recent decision to pay an interim dividend of seventy-five paise per ordinary share for the current year, the Indian Aluminium Company Limited has issued certain clarifications. There will be no distinction for the purpose of payment of this interim dividend between the old and new ordinary shares. There will, however, be distinction between the ordinary shares in respect of the nominal or par value has been fully paid up or partly paid-up. The gross dividend payable per ordinary share, in respect of which the par or nominal value has been paid-up, will be 75 paise proportionately reduced to the extent the par or nominal value has not been paid-up. The net dividend, after deduction of tax payable per ordinary share, in respect of which the par or nominal value, has been fully paid-up, will be 60 paise for "residents"—proportionately reduced to the extent the par or nominal has not been paid-up.

BALANCE-SHEET REVIEWS Maiden Dividend from India Carbon

THANKS to the satisfactory performance of the company's plant, India Carbon Company Limited has reported a smart rise in sales from Rs 48.66 lakhs to Rs 83.45 lakhs for the year ended 30 June 1964. The net profit, after providing for depreciation and development rebate reserve, is shown at Rs 5.10 lakhs as against nil for the preceding year.

In respect of allocations, Depreciation is raised to Rs 7.12 lakhs from Rs 3.65 lakhs and Development Rebate Reserve to Rs 8.09 lakhs from Rs 1.59 lakhs.

From the profit, Rs 2.17 lakhs is distributed as dividend on the preference shares—all held by the Assam Government. Out of the balance of Rs 2.92 lakhs, the directors have proposed a maiden dividend of 6 per cent on the equity shares, payable to those shareholders registered as on 23 November.

Being a recently-started company, it is understood that the dividend will be tax-free. Annual general meeting will be held on 4 December.

5% U.P. STATE ELECTRICITY BOARD-BONDS for Rs. 400 Lakhs.

The Uttar Pradesh State Electricity Board has resolved to float a loan of the nominal value of Rs. 400 lakhs redeemable at par at the end of 12 years. The bonds will carry interest at 5% and will be issued at Rs. 99.75 per cent.

The issue will open on November 23, 1964 and will be closed on November 28, 1964 or earlier.

Subscriptions will be received at the Head Offices of the State Bank of India at Calcutta, Bombay, Madras and New Delhi and at all branches of the Bank at district headquarters within the State of Uttar Pradesh. The Head Office of the State Bank of India at Calcutta will be in charge of the issue and management of bonds.

The bonds are fully guaranteed by the Government of Uttar Pradesh in regard to the repayment of the principal and payment of interest. The bonds will be trustee securities under the Indian Trusts Act, 1882 also approved securities for the purposes of the Insurance Act, 1938 and the Banking Companies Act, 1949. The bonds will also be treated at par with Government Securities for the purpose of advances to Scheduled Banks and State Co-operative Banks under section 17(4) (a) of the Reserve Bank of India Act, 1934 (11 of 1934). The Electricity Board will be providing in each financial year from 1964-65 to 1976-77 (both inclusive) for contribution to the U.P. State Electricity Board Bonds Redemption Fund such sums as, together with interest thereon, will amount to the total nominal value of the bonds by the time the repayment of the bonds becomes due.

All sections of the investing public are requested to extend full support to the bonds now under issue.

The issue is in terms of the Bond Prospectus, copies of which can be had from the aforesaid offices of the State Bank of India.

B. B. LAL, ICS., Chairman.
Uttar Pradesh State Electricity Board, Lucknow.

PHILIPS INDIA LIMITED

NOTICE

Notice is hereby given that a General Meeting of the members of the Company will be held at the offices of the Company's Registrars, Jardine Henderson Limited, 4, Clive Row, Calcutta 1, on Thursday, December 17, 1964, at 11 a.m. to consider and if thought fit to pass with or without modifications the following resolutions which will be proposed as special resolutions:—

(a) That 4,00,000 new ordinary shares of Rs. 10/- each in the authorised capital of the Company be issued at a premium of Rs. 6/- per share, i.e. Rs. 16/- per share payable in full on application on the footing that such new ordinary shares shall rank in all respects pari passu with the existing ordinary shares in the Company save and except that they shall not participate in any dividend which may be declared in respect of any period ended on or prior to December 31, 1964.

(b) That subject to the approval of the Reserve Bank of India, out of the said 4,00,000 new ordinary shares of Rs. 10/- each, 78,125 shares be issued to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Holland for subscription for cash at a premium of Rs. 6/- per share aforesaid and 21,875 shares aggregating to a total of 1,00,000 shares) at a premium of Rs. 6/- per share for consideration other than cash in partial conversion of their loan of Rs. 50 lakhs to the Company.

(c) That subject to the approval of the Reserve Bank of India wherever necessary the remaining 3,00,000 new ordinary shares of Rs. 10/- each so issued be offered in the first instance for subscription for cash at a premium of Rs. 6/- per share to those members (other than N. V. Philips' Gloeilampenfabrieken, Eindhoven, Holland) whose names are registered on the Register of Members of the Company on December 17, 1964, in the proportion as nearly as circumstances admit of three new ordinary shares for every five ordinary shares held as on that date, fractions if any of a new ordinary share issuable on this basis being disregarded with a right to renounce all or any of the shares so offered to them in favour of any other person and that any question arising in the apportionment of such new shares or any of them amongst members and in the avoidance of fractions shall be determined by the Directors in their absolute discretion.

(d) That the Directors be and are hereby authorised to offer the said 3,00,000 new ordinary shares of Rs. 10/- each at a premium of Rs. 6/- per share i.e. Rs. 16/- per share payable in full on application for subscription to the members aforesaid other than to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Holland by a Letter of Rights specifying the number of shares to which they are entitled and providing therein that the offer if not accepted within thirty-one days from the date of offer shall be deemed to have been declined and specifying that the payment for such shares at the rate of Rs. 16/- for each new ordinary share so offered shall be required to be made in full on application.

(e) That any new ordinary shares not taken up by any of the said members or their renounees in response to the aforesaid offer shall be available for subscription by such of the said members who take up their rights in full under the aforesaid offer and who apply for additional shares.

(f) That the right to apply for additional shares shall not be renounceable in favour of any other person and in the event of applications for additional shares exceeding the number of shares available, the allotment shall be made in such manner as shall be determined by the Directors in their absolute discretion.

(g) That the Company authorises the Directors to dispose of any new ordinary shares not taken up by the said members or their renounees in accordance with the terms as detailed hereinabove in such manner as shall be determined by the Directors in their absolute discretion.

(h) That no allotment of any new ordinary shares shall be made to a person not resident in India unless he or she has obtained prior approval of the Reserve Bank of India.

(i) That the Directors are further authorised to settle any question or difficulty that may arise with regard to the issue and allotment of these shares in such manner as they shall determine in their absolute discretion.

The Register of Members of the Company will be closed from December 3, 1964 to December 17, 1964, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and, on a poll, to vote instead of himself; such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not later than 48 hours before the Meeting.

An Explanatory Statement as required by Sec. 173 of the Companies Act, 1956, is being posted to members.

By Order of the Board
W. A. C. H. BOSSCHAART
Chairman and Managing Director
7, Justice Chandra Madhab Road
Calcutta 20
November 16, 1964

Oudh Sugar Repeats

According to the preliminary figures released by the company, the Oudh Sugar Mills Limited has made a higher gross profit of Rs 103.93 lakhs for the year ended 31 July 1964 as against Rs 79.39 lakhs for the previous year, thanks to a substantial rise in the quantity of cane crushed from 83.14 lakh maunds to 117.65 lakh maunds.

After providing Rs 12.48 lakhs for Depreciation and Development Rebate (Rs 13.43 lakhs); Rs 60.79 lakhs for Taxation (Rs 53 lakhs) and Rs 40,000 for Contingency Reserve (Rs 1.40 lakhs), the net profit has more than doubled to Rs 30.29 lakhs from Rs 14.56 lakhs. With Rs 27,000 brought in, the sum available for distribution is Rs 30.56 lakhs. From this, the directors have provided Rs 10 lakhs to General Reserve (nil) and Rs 5.00 lakhs to Renovation and Renewal Reserve (Rs 3.00 lakhs). The directors have proposed to maintain the dividend at Rs 20 per share, subject to tax.

Jaswant Sugar Pays 75 Paise Per Share

The preliminary figures released by the Jaswant Sugar Mills Limited reveals a net profit, before providing for taxation, of Rs 1.10 lakhs for the year ended 31 May 1964 as against Rs 3.94 lakhs for 1962-63. A sum of Rs 6.50 lakhs (nil) is provided for Taxation, while Rs 7.50 lakhs is transferred from General Reserve to cover the payment for taxation and dividends. The directors have proposed a taxable dividend of 75 paise per share for the year.

West Coast Paper Pays More

In its fifth year of production, the West Coast Paper Mills Limited has done exceedingly well with a record production of 30,213 tonnes against 27,252 tonnes in the previous year, considering the fact that the company's installed capacity is only 18,000 tonnes. The present level of production reflects the remarkable efficiency attained by the company within a short span of five years.

Turnover for the year has risen from Rs 4 crores to Rs 4.44 crores, which has resulted in an increase in the gross profit from Rs 109.87 lakhs to Rs 148.84 lakhs. The provision for Depreciation is raised from Rs 39.38 lakhs to Rs 49.81 lakhs, while Development Rebate Reserve gets only Rs 50,000 against Rs 75,000. Taxation absorbs as much as Rs 51 lakhs (Rs 10,000). The company no longer enjoys the tax holiday. This leaves a balance of Rs 47.52 lakhs which, together with Rs 6,096 brought in, makes a total of Rs 47.58 lakhs. From this, the directors have provided Rs 21 lakhs to General Reserve (Rs 39 lakhs).

They have proposed to raise the dividend from Rs 11 to Rs 13 per share, less tax.

The current level of production is reported to be encouraging and the company is expected to do still better next year. What is more, the company has also under consideration plans for diversification of its production by ordering some balancing equipments which will enable the company to produce art paper. The estimated cost of this diversification is expected to cost the company Rs 1.25 crores, the benefits of which will be reflected in 1966. This is to be financed from internal resources.

Bombay Burmah Earn Less

The Bombay Burmah Trading Corporation Limited has reported a setback in its earnings for the year ended 31 May 1964. This is essentially attributed to the cessation of its timber operations at the Wallace Bay branch since January this year. The activities of this branch have been taken over by a subsidiary of the company known as Wallace Bay Limited.

As a result, the gross trading receipts of the company have declined sharply from Rs 592.79 lakhs to Rs 537.47 lakhs. Sales of timber have declined from Rs 270.81 lakhs to Rs 207.20 lakhs, while those of coffee, tea and manufactured have improved. The gross profit on the latter account has declined from Rs 150.57 lakhs to Rs 149.18 lakhs.

After providing Rs 18.63 lakhs (Rs 36.64 lakhs) for Depreciation and Rs 60 lakhs (Rs 47.30 lakhs) for Taxation, the net profit amounts to Rs 70.56 lakhs as against Rs 104 lakhs for 1962-63. The provision for Depreciation is increased to Rs 3.89 lakhs from Rs 2.96 lakhs and Development Rebate to Rs 1.64 lakhs from Rs 1.43 lakhs. Taxation claims Rs 7.55 lakhs (Rs 6.20 lakhs). The dividend on the equity shares is maintained at 10 per cent, subject to tax, on the capital increased by the new issue to the extent of Rs 10 lakhs.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

5% RUPEE DEBENTURE STOCK, 1970 INTEREST FOR THE HALF-YEAR ENDED 31st DECEMBER, 1964

Notice is hereby given that interest at the rate of Rs. 25/- (less Indian Income Tax) per Rs. 1,000/- of Stock will be paid on 1st January 1965 to Debenture Stockholders registered in the books of the Company on 18th December, 1964. Applications for transfers received at the Company's Office at Victoria House, Post Box 304, Chowringhee Sq., Calcutta, upto 18th December, 1964 will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above interest.

Debenture Stock Transfer Books will be closed from 19th December, 1964 to 31st December, 1964 both days inclusive.

By Order of the Board,
B. P. Sen Gupta
Actg. AGENT
Victoria House,
Calcutta, 18th November, 1964.

against Rs 63.63 lakhs. With Rs 2.63 lakhs brought in from the previous year (Rs 2.03 lakhs) and taking into account the income attributable to previous years, the directors have transferred Rs 24.78 lakhs (Rs 7.99 lakhs) to the various reserves and other accounts. The dividend on the equity shares has been raised from 16.8 per cent, subject to tax. Last year, the company paid a centenary bonus of 3.2 per cent.

Hingir-Rampur Coal

Pays 10%

The Hingir-Rampur Coal Company Limited has earned a gross profit of Rs 8.44 lakhs for the year ended 30 June 1964 as against Rs 8.72 lakhs for the previous year. After providing Rs 2.21 lakhs for Depreciation and Amortization (Rs 1.65 lakhs); Rs 1.28 lakhs for Development Rebate Reserve (Rs 29.316); Rs 69,909 for managing agents' commission (Rs 68.8 8) and Rs 1.76 lakhs for Taxation (Rs 4.71 lakhs) the net profit works out to Rs 2.53 against Rs 1.42 lakhs for 1962-63. The directors have proposed a taxable dividend of 10 per cent on the ordinary shares. The entire profit has been taken to General Reserve from which the dividend is to be paid.

Shah Construction Repeats on Increased Capital

The working of Shah Construction Company Limited has resulted in a higher net profit, before depreciation and taxation, of 17.39 lakhs for the year ended 30 June 1964 as against Rs 14.06 lakhs for 1962-63. The provision for Depreciation is increased to Rs 3.89 lakhs from Rs 2.96 lakhs and Development Rebate to Rs 1.64 lakhs from Rs 1.43 lakhs. Taxation claims Rs 7.55 lakhs (Rs 6.20 lakhs). The dividend on the equity shares is maintained at 10 per cent, subject to tax, on the capital increased by the new issue to the extent of Rs 10 lakhs.

The company has large contracts on hand, their value being over Rs 15 crores. The technical collaboration with French interests is proving to be helpful and a large contract in connection with the construction of the oil refinery at Koyali will be executed by the company with the co-operation of French technicians.

Modella Woollens Pays More

Modella Woollens Limited has reported a higher net profit, before depreciation and taxation, of Rs 22.91 lakhs for the year ended 30 June 1964 as against Rs 18.11 lakhs for 1962-63. In respect of allocations, Depreciation is raised to Rs 11.45 lakhs from Rs 5.25 lakhs and Taxation to Rs 3.55 lakhs from Rs 1.31 lakhs, apart from providing Rs 2.50 lakhs

(nil) to General Reserve. Development Rebate Reserve is, however, lowered to Rs 63,000 from Rs 5.82 lakhs, while a sum of Rs 57,000 (Rs 56,826) has been written off preliminary expenses.

The directors have recommended a higher dividend of 7 per cent, subject to tax, on the capital increased by the issue of equity shares for Rs 13.33 lakhs to the British participating firm. In the previous year, a taxable dividend of 6 per cent was paid.

Some portion of the dividend, as on the former occasion, is expected to be exempt from tax and an application is being made to the income-tax authorities.

IN BRIEFS

Markara Rubbers Limited has raised the dividend from 12½ to 15 per cent for the year ended 30 June 1964.

Hemalatha Textiles Limited has reduced the dividend from 5 to 4 per cent for the same year.

STOCK EXCHANGES Lack-lustre Trading

Stock markets have a very uneasy time this week. Equity prices have suffered a further setback owing to persistent bull liquidation as operators have taken a discouraging view of the outlook. There is a considerable shrinkage in the volume of business.

Trading on Lyons Range was dull and featureless and price movements were confined to narrow limits.

Dalal Street continued to rule weak.

Activity on the Madras Stock Exchange was restricted.

The Ahmedabad Stock Exchange finished the week on a subdued note.

On the Delhi Stock Exchange, share values declined further owing to persistent selling pressure.

There was little relief from the depressed conditions that persisted on the London Stock Exchange and prices again drifted lower in response to further small selling.

CALCUTTA

SENTIMENT on the local stock exchange continued to remain subdued. Lacking any incentive, business passing was very low and, as such, even small offerings had an exaggerated effect on prices.

On the whole, the resumption of the week's trading saw only a continuation of the easier tendency of the past few days. This was attributed to the fact that earlier expectations of Mr T. T.

Krishnamani's announcing some tax reliefs had receded.

But the most disturbing factor was provided by the reports that the Chairman of the Company Law Board had suggested a serious of recommendations which would have the effect of giving the Government wider powers of control over stock exchanges and share dealings. Also, there was a great deal of worry over the growing shortage of funds.

Investors were keeping out of the market, as they were preoccupied with the mobilisation of resources for subscribing to the many new issues. Apart from a feeling that the immediate outlook for stock markets was not encouraging, they entertained the fears that the forthcoming Central Budget might not be helpful to the corporate sector.

Against this background, bear operators turned aggressive, resulting in a fresh decline in values. Even intermittent short-covering and strong support for select shares failed to check the downward trend. On the contrary, such of those shares, benefiting from favourable reports, could not even hold previous levels.

Little of note occurred in the Glitged section. Business was limited in the absence of interest from institutional investors. Prices of short-dated issues ruled rather steady, while medium and long-dated loans were altogether neglected. Most of the State Loans were available at a discount. 3 per cent 1965 Conversion Loans came in for offer at Rs 61.75 against Rs 62 quoted in the previous week-end.

Except some enquiry in Punjab National up to Rs 20.25 from Rs 20.06, Bank shares were generally quiet.

In the Jute section, there was an appreciable decline in turnover. Operators were inclined to reduce their commitments in the continued absence of any enquiry for jute goods and this gave rise to a fear whether the output of the mills would be sold. Birlas changed hands at Rs 34.75 to Rs 36.37; Ganges at Rs 12.75 to Rs 12.87 and New Central at Rs 9.75 to Rs 9.94. Howrah closed at Rs 13.31 after touching a high of Rs 15.50.

Coal shares were offered freely without attracting buyers. This was due to reports of accumulation of stocks at various pit-heads, not to speak of the decline in demand for the commodity.

Tea shares were traded cautiously in view of the decline in the average prices still obtained at the auctions. The revision of the ex-factory prices seemed to have no effect on the Sugar section, where sentiment continued to remain depressed.

Textile issues were no exception to the general trend of the market. Although mills were more or less assured of an adequate supply of raw cotton during the current year on expectations of a bumper crop combined with fair imports, the

rising trend in the commodity price induced some caution. Bowreah were sticky at Rs 23.50, while Elgins receded to Rs 19 from Rs 19.50 and Jaya Shree to Rs 12.75 from Rs 12.94.

Engineering issues ruled generally weak under the influence of Indian Irons. There was a general disposition to wait until the Government would decide how the advances given to it would be repaid. Indian Irons opened the week at Rs 25.34. After receding at one time to Rs 24.96 and improving again to Rs 25.16 the scrip closed finally at Rs 25.03. G. K. Williams with business at Rs 22.94 to Rs 23.31; TEXMACO at Rs 25.45 to Rs 25.65; Jessop at Rs 24.81 to Rs 25.12; Jay Engineering at Rs 20.62 to Rs 20.81 and J. K. Steel at Rs 17.75 to Rs 17.81. Marshalls were unchanged at Rs 3.25, although Bharatia Electric were on offer at Rs 14.94 against Rs 15.06.

Miscellaneous issues moved in sympathy with the general trend of the market. Dunlop Rubber were done at Rs 30.12 to Rs 31.06; Hindustan Motor at Rs 16.12 to Rs 16.31; Indian Aluminium at Rs 31.00 to Rs 31.44; Indian Copper at Rs 3.28 to Rs 3.33; Kesoram at Rs 31.50 to Rs 32.10; Orissa Cement at Rs 11.44 to Rs 11.62 and Shree Gopal at Rs 25.37 to Rs 25.50.

In the Cash section, dealings were few and far between. Alkali Chemicals were on offer at as low as Rs 28.50 against Rs 30.19, while Chemicals and Fibres were rather cheap at Rs 15.75 against Rs 16.12. Sirpur Paper met with business at Rs 12.12, although Titagur Paper were weak at Rs 10.81 against Rs 11.62. Hindusan Aluminium changed hands at Rs 12.87 to Rs 13.00; India Carbon at Rs 12.69 to Rs 12.87; India Steamship at Rs 6.37 to Rs 6.56; J. K. Synthetics at Rs 12.44 to Rs 13.06; NICCO at Rs 21.44 to Rs 24.81 and Universal Cable at Rs 9.85 to Rs 10.06.

WBSEB Bond Issue

The West Bengal State Electricity Board is making a bond issue for Rs 125 lakhs at an issue price of Rs 99.75 for every Rs 100 of the bond applied for. Subscription will be received from 23 November to 29 November 1964, both days inclusive, unless subscriptions are closed earlier. The bonds will have currency of 12 years from 23 November 1964 and will be repaid at par on 23 November 1976. The West Bengal State Electricity Board's principal duty is the promotion of co-ordinated development of generation of supply and distribution of electricity within the State. The present issue is being made with a view to extending its activities for augmenting the generating capacity and for extension of its Grid and Substation. The West Bengal Government has fully and unconditionally guaranteed under Section 66 of the Electricity (supply) Act, 1918 as to repayment of principal and payment of interest thereon at 5 per cent per annum subject to income tax.

Asia's Agricultural Problems

Rural development will receive special attention from delegates of the 22 Colombo Plan countries when they meet in London later this month. This is the 16th of these Ministerial Consultative committee meetings since held, which are held annually in rotation in a different member country. The special topic at last year's meeting, in Bangkok, was the utilisation of manpower. In addition, as at all these meetings, there will be exhaustive surveys of progress and needs in the area as a whole and in each individual country.

This makes possible the best use of outside capital aid and of inter-regional and outside technical assistance and training. All these activities are on the basis of bilateral nation-to-nation agreements, except in the case of assistance provided through the United Nations financial and technical agencies.

South and South-East Asia has a quarter of the world's population, but only one-sixteenth of the world's land area. The Colombo Plan area is rich in natural resources, but low productivity, extreme density of population and high birth rates have resulted in a low standard of living for its peoples.

Serious and successful efforts are being made to develop heavy industries and to expand and create secondary industries, but this is a process that must take decades. One great potential asset of the region is hydro-electric power, on the development of which, in conjunction with irrigation, hundreds of millions of pounds are being spent. But this also is a slow and expensive process, especially where hydro-electric power has to do more in the way of creating new industries than in supplying immediate demands.

The result is that the area as a whole is traditionally overwhelmingly agricultural, and is likely to remain so for the foreseeable future. In fact, agriculture provides the livelihood for 70 per cent. of the population—that is, for about 500,000,000 people. It accounts for 65 to 85 per cent. of the employment in the various countries. Its proportion in the total domestic product is, significantly, much lower, at 40-60 per cent., but it still remains the main element. This covers both subsistence production and the production of commodities such as tea, rubber, cotton, copra, jute, oilseeds, rice, sugar and on. Moreover it is the latter products which provide the foreign exchange earnings needed to finance economic developments in all fields.

Another dominating factor in this situation is the rapid growth
