in population due to great improvements in health services. The annual rate of increase from 1950 to 1956 was already high at 2.1 per cent. Over the next five years it averaged 2.4 per cent. Later indications showed that it was 2.5 per cent. and still rising.

Over-all gross national products are rising steadily, although at different rates in different countries. Last year's report (1962-63) showed increase of up to 9 per cent. Reduced to a per capita basis, however, population increases brought the highest increase down to 5 per cent. while in some cases there were actual declines.

The report showed that over the past decade there had been an average annual increase in production of 3 per cent. for the region as a whole, but rising population had absorbed two-thirds of this. Over the period, food production per capita had increased only 1 per cent. Yet the advance in the industrial sector was at about 8 per cent. and was continuing to show dynamism. This meant that in the whole agricultural sector the improvement had only kept just ahead of the population increase. In some cases it had dropped behind. As a result, money which had been budgeted by governments for economic develop-

ment had to be spent on food imports.

The lesson is obvious. To meet present needs at their most immediate, and to promote efficiency where it can be multiplied to the greatest extent by the largest number of eager and industrious hands, more money and a higher priority are needed for all aspects of agriculture. This will also provide the widest possible base for future prosperity and for expansion and development in all sectors.

This is, of course, no new revelation. Already a large proportion of outside aid has gone to promote increased agricultural production and diversification. It has covered everything from research for methods, improved crops, and better and cheaper fertilisers to agricultural advice, improved schooling and the establishment of properly planned and assisted rural communities. Hundreds of millions of pounds have been provided for irrigation, flood control, communications, marketing facilities and so on.

But it is still not enough. Nor is it possible to divert resources from the industrial sector, which is vital for the over-all development pattern and cannot be starved at a crucial stage. The only way is through a greater total effort by all concerned and closer dovetailing of the various plans and projects where that is possible and likely to be worth while.

Madras Refinery

The Madras refinery is expected to go on stream by about the middle of 1967. It will achieve full production in 1968. Manali to the north of Madras city, has been provisionally selected as the site for locating the refinery.

Towards the end of December, 1962, the Planning Commission was asked to consider all aspects of expansion of oil refining capacity in India including the likely additional demand for petroleum products and the best way of meeting it.

While examining this problem, the meetings in the Planning Commission took note of the existing and projected refining capacities, amounting to about 17.55 million tonnes, for completion by 1966; the likely target of achievement in regard to those approved capacities by 1966; the likely additional demand, if any, on account of defence, efforts etc. and the surpluses and deficiencies, if any, in the various regional supply areas. It was also considered how best these surpluses or deficiencies in petroleum products could be adequately met either by creating new refining capacities in India or by expansion of the existing refineries including the private sector refineries etc.

MARKET SURVEY

As a result of these deliberations, it was felt that a revised statement indicating, inter alia, the surplus and deficit of petroleum products in the various regional consumption areas should be prepared and a market survey in the Bombay supply area should be conducted by the Institute of Pet-

roleum. It was assumed that there would be a 2.5 million tonnes refinery in the Madras area and a 2 million tons refinery in the Calcutta area.

These revised statements were prepared by the Indian Refineries Ltd and the Institute of Petroleum towards the end of 1963. Thereafter a fresh study was made by these organisations based on the actual sales statistics for 1963. In the meantime, preparatory action for setting up of the Madras and Calcutta refineries was taken in hand.

PROPOSALS

Among others, proposals were received from the following organisations for setting up a refinery at Madras:

National Iranian Oil Company and American International Oil Company; Burmah Oil Company and Shell Petroleum Company group; Phillips Petroleum Company; Esso Standard; ENI of Italy; Caltex; Japan Gasoline Company; Mobil Petroleum Company; Bureau De Recherches De Petrole/Régie Autonome Des Petroles.

WORKING GROUP CONSTITUTED

A Working Group was constituted to prepare a comparative study of the operational economics of the various proposals received and to finalise the report formulating the various issues that called for Government's decisions. The Group consisted of representatives of the Institute of Petroleum, the Indian Refineries Ltd, the Ministry of Finance and the Ministry of Petro-

leum and Chemicals. It met a number of times and completed tabulation sheets covering product yield, process units, crude oil specifications, crude oil prices, financial outlay, etc. It prepared a comparative study of the operational economics of the various proposals and finalised the report formulating the various issues that called for Government's decisions. Informal discussions were also held with representatives of parties for eliciting clarification of several points.

PROPOSED REFINERY AT HALDIA

The firms were requested to confirm these offers in so far as financial and technical assistance was concerned for a refinery to be set up in Calcutta area on alternatively to submit separate proposals.

A number of oil companies have already offered to assist in the establishment of this refinery at Haldia.

GAUHATI REFINERY

The importance of expanding oil refinery capacity within the country to meet, to an increasing extent, the demand for petroleum products, cannot be over-emphasised. The total capacity of four private sector refineries was about four million tonnes in 1957. The expansion of these refineries between 1958 and early 1963, raised it to over 7 billion tonnes. Production of refined products in the public sector was begun on a small scale in 1962. Since then activities of the public sector in this field have been expanding.

The Gauhati refinery was established in 1962. Although it was not able to make good progress during its first 18 months after commencement, it is now working to full capacity. It is now working to expand its annual capacity from .75 million tonnes to 1.25 million tonnes. A provision of Rs 171.20 lakhs has been made for this refinery for the current year.

BARAUNI REFINERY

The estimated cost of the Barauni refinery complex is Rs 40.51 crores which includes the cost of the township, a power station, a petroleum coke plant, a bitumen plant, a lubricating oil plant and ancillary facilities. The expenditure envisaged on this refinery during the current financial year is about Rs 433.64 lakhs. The first stage comprising the one million tonne distillation capacity, the coking unit and the first stream of kerosene unit is expected to be achieved shortly.

COCHIN REFINERY

The Cochin refinery in Kerala State will have a production capacity of 2.5 million tonnes. Its total cost will not exceed Rs 17 crores out of which about Rs 8.73 crores will be in foreign exchange. It is likely to be completed by the end of 1965.

KOYALI REFINERY

The Gujarat refinery at Koyali near Baroda, which is being established with the technical and financial assistance of USSR, will process indigenous oil produced by the Oil and Natural Gas Commission from the fields of Gujarat State.

The ultimate capacity of this refinery will be 3.0 million tonnes per annum. The first stage of one million tonnes per annum will be ready for operation in early 1965.

Australia-India Trade

Prospects for increased trade between Australia and India have increased as a result of a visit by an Indian trade delegation. It was led by the joint secretary of India's Ministry of Commerce, Mr D. K. Srinivasachari. Among the subjects discussed with local departmental officials were industrial co-operation and the possibility of stepping up exports of basic commodities.

Another subject was the possible participation of the Australian fertiliser industry in increased production in India.

India sells tea, jute bags and sacks and other textiles goods to Australia and has lately been developing an important trade in vegetable oils and fats, petroleum spirit, and vegetable fibres.

Australia sells dairy products, wheat, wool metals and manufactures, including machinery. The balance of trade has usually been in India's favour. Mr Srinivasachari said that his Government was now considering rebuilding its exports in traditional commodities.

In discussions in Sydney, Canberra and Melbourne, Australians had expressed their willingness to invest in India and facilities for such investment were explained to them.

OVERSEAS INVESTMENT

Overseas enterprises invested capital in Australia because they felt it was a country with sanity of government and with reasonable stability in currency and management. The Prime Minister, Sir Robert Menzies, told members of the South Australian Chamber of Manufactures, at their recent annual dinner in Adelaide. He also said that he would be much happier if overseas investors were ready to give Australians some equity in their business undertakings here.

Sir Robert was in Adelaide to open the new motor vehicle plant of Chrysler Australia Limited. He said that each time enterprises come into Australia, something was created—an industry or a section of one. It was something added to Australia in experience, know-how, special skills and techniques. These were part of the national asset, and gave employment of a highly stable kind.

The Prime Minister said that no company wanted to throw its money into the whirlpool of inflation and instability and the Federal Government's task had been to achieve maximum stability. While there would be fluctuations, Australia's overseas funds were in a very healthy position, and the interest of shrewd, experienced industrial investors was being attracted. They were looking to Australia because the opportunities were greater than they could see in any other country.

Another point made by the Prime Minister was that when

other products were exported to the same extent as wool, wheat, dairy produce and meat, Australia would have a balanced economy—the greatest type of all to survive the shocks of economic variations.

BANK LENDING REDUCED

The Reserve Bank of Australia has called a further £22,000,000 of the trading banks funds into their statutory reserve deposit accounts. This brings the total in the accounts to £349,000,000. The trading banks have been asked to reduce their rate of new lending below recent levels. They have also been asked to avoid, where practical, further increases in outstanding overdraft limits.

The Governor of the Reserve Bank, Dr Herbert C. Coombs, urged businessmen contemplating major expenditure to minimise their reliance on borrowing. He said that it would also be valuable if those responsible for other sources of credit, ensured that their liquid position was strong, and that the quality of their business was good.

It was becoming increasingly necessary to ensure that resort to various resources did not add to the growing pressures on available resources, and consequently on costs and prices. Unless the growth of this pressure could be moderated it would endanger the continuance of steady growth and high employment, the Governor stated.

The £22,000,000 affected by the

latest call represents an increase of 1 per cent in trading banks' funds in the S.R.D. accounts, from 14.8 per cent to 15.8 per cent.

OVERSEAS TRADE WITH AUSTRALIA

Countries exporting to Australia will find interest in the latest report of the Tariff Board, which shows how local producers are customers for a very large percentage of the country's total imports. During the 1963-64 year the total import bill rose by about £107,000,000 to a record £1,188,000,000. The needs of Australian industries accounted for about 80 per cent of these imports.

The requirements of industries for materials accounted for 51.6 per cent of the total. Capital equipment represented 23.9 per cent, while fuels and lubricants and auxiliary aids accounted for 5.1 per cent. Imports of finished consumer goods represented 17.9 per cent, compared with 19.2 per cent in the previous year.

Biggest proportional increases were recorded for plastic materials, motor and other vehicles, chemicals and timber.

There was a big rise in imports of plastic materials, which, at £20,500,000, were up by 42.4 per cent on the previous year. Imports of iron and steel rose 31.3 per cent to £28,600,000 and motor vehicle components, at £102,300,000, were up by 9.1 per cent.

Purchases of complete motor vehicles from overseas manufacturers increased by 22.7 per cent to £15,700,000.

Asian Development Efforts

Bold steps to harmonize Asian development efforts were urged by Asian economic planners during a one-week conference which ended in Bangkok on 26 October. The planners also called on Governments to take energetic measures to coordinate national planning efforts within each country and to seek public support and understanding for development plans.

These recommendations were made by the ECAFE-sponsored conference of Asian Economic Planners. The session was attended by some 70 top level government official and experts from 22 Asian and non-Asian countries.

The delegates observed that in the current United Nations development decade, economic progress in almost all Asian countries has been "disappointing". The rates of growth in the first half of the decade had dropped below the planned rate and also below the rates achieved in the fifties except for one or two countries. To reverse this process, Governments would have to "identify themselves more closely" with planning processes; was suggested. Plann-

ing bodies should be closely associated with public opinion through universities, business organizations, etc. Workers and peasants should be well aware of national planning goals and activities.

As a first step, towards "harmonization" of national development plans, the delegates proposed pooling of information and experiences in planning and setting up of working group of experts from different countries who would examine development plans in their initial stage. National plans could thus be drawn up to fit into wider regional planning efforts.

They also suggested the setting up of a permanent within ECAFE to provide a standing machinery for coordination of development plans.

The delegates found the difficulties in economic development planning were caused by inadequate or misleading statistical information, absence of sufficient number of trained administrators and technical personnel, ineffective utilization of domestic saving and foreign exchange, and insufficient emphasis on intensification of agricultural production.

The Conference welcomed the establishment within ECAFE of a Regional Centre for Economic Projection and Programming Support was also forthcoming for the proposed Asian Development Bank which, it was stated, would help to coordinate specific regional projects.

Earlier at the opening of the Conference U Nyun, Executive Secretary of the UN Economic Commission for Asia and the Far East, said that the 1964 United Nations Conference on Trade and Development in Geneva had set the stage for tackling "north-south" economic problems of the world for the first time. The developing countries had expressed community of interests in pursuing their economic goals through joint action. The industrialized countries had joined the developing countries in their effort to find constructive solutions.

The idea of economic planning adopted in Asian countries in the 1950's was an attempt to break away from century-old stagnation, he continued. Some countries had achieved remarkable success in speeding up economic development especially in the later half of the decade, he said. The 4 per cent growth rate of the 1950's compared favourably with the virtual stagnation of the pre-world war period. The pace of economic progress, however, had slowed down more recently. The economic growth in the region (excluding Australia, Japan and New Zealand) had fallen short of planned targets and also dropped below the growth rates of the 1950's. Food production, in particular, had not been able to catch up with the population growth, and the deteriorating terms of trade had aggravated the situation still further, said U Nyun.

The economic policy makers, he continued, must ask themselves if this slowing down was only of a temporary nature or whether it pointed to more deeply seated difficulties. It was imperative for Asia's economic planners to identify the obstacles obstructing economic progress and devise means to remove them, he said.

U Nyun observed that national planning authorities are aiming at a considerable higher growth rates, viz., 6 per cent for a period up to 1980. The Asian planners, he said, would have to design policies and measures for necessary structural changes to bring the growth rates within reach. The inescapable and cheerless conclusion, U Nyun said, was that unless strong remedies were successfully applied the relative position of economic welfare in the region would deteriorate further. This economic reality had to be faced. It was an appeal for cooperation among the countries of the region but said that the initiative for harmonization of economic policies and plans would have to come from the governments themselves.

Standardisation Essential for Developing Countries

Addressing the conference of the International Organization for Standardization, which began in New Delhi on 9 November, Mr T. N. Singh, Minister of Industry and Heavy Engineering, who is also the President of the Indian Standards Institution, said:

"When our present Prime Minister, Shri Lal Bahadur Shastri, was in charge of the Commerce and Industry portfolio of the Government of India and as such was presiding over the activities of the Indian Standards Institution, the first move was made to invite the General Assembly of the International Organization for Standardization to meet in India. It has taken us all these years to have the opportunity of actually receiving you here today. It is my special privilege now to extend to you all a very warm and hearty welcome, in which I am sure Shastriji joins me wholeheartedly. We had hoped that it would have been possible for our Prime Minister to be with us today on this occasion. However, due to his extreme pre-occupations with affairs of the State we have been deprived of that privilege.

Shri H. C. Dasappa, Minister of Industry and Supply, who would have presided over this Conference, is unfortunately no more with us. During his stewardship of the Ministry he took a very keen interest in the Indian Standards Institution and though his regime was rather short he made valuable contribution for strengthening the organization through his dynamic approach to its problems. We miss him greatly on this occasion.

Our late Prime Minister, Shri Jawaharlal Nehru, also took an abiding interest in the activities of this Institution. In 1958, when he inaugurated the Fourth Indian Standards Convention and declared Manak Bhavan open he tendered valuable advice, which even today is a great source of encouragement and inspiration to all those concerned with ISI. He attached the highest importance to standardization as an essential movement for the advancement of the economy of our country and despite his multifarious activities and heavy responsibilities, he always found time to give us a word of cheer and came to our assistance with his wise counsels whenever needed.

When the proposal of having the ISO General Assembly was first mooted, many of our overseas friends felt that it would be difficult to ensure adequate representation in such a conference held so far away in the East.

Looking at the attendance of the overseas delegates today and those still to join us during the next fortnight or so I cannot help but congratulate the ISO authorities on their wisdom and foresight in deciding to hold this Year's General Assembly in the Eastern part of the world, in New Delhi, for the first

time in the history of the Organization.

On behalf of the Government of India and on my own behalf I would like to extend our heartiest welcome to Mr A. E. Viatkins, President, ISO, and to the large number of overseas delegates and the ladies accompanying them, who have travelled long distances to participate in this conference. Their presence here today adds yet another proof, if proof were needed, that ISO is doing its bit towards building the 'one world' we all aspire for.

We consider this occasion as of great historic importance, not merely because it is the first time that ISO is meeting in the Eastern Hemisphere since it was established in 1947, but because in meeting here it is for the first time that an opportunity is being afforded to a large number of developing countries located in this region to observe at close quarters methods of its operation and participate directly in its work. I am told like most other leading international organizations, ISO has begun to take particular interest in actively assisting the developing countries of the world with their standardization problems and through such assistance help accelerate their economic development. In this task, let me assure you, the ISO can fully rely on India for every assistance that we can render. In fact the Indian Standards Institution has been assiduously pursuing this objective for over a decade now and is prepared to place its experience and facilities at the disposal of ISO.

I may mention in this connection that India has been making substantial efforts to spread the message of standardization in the region covered by the UN Economic Commission for Asia and the Far East (ECAFE). Apart from contributing technical papers on the subject of standardization at various ECAFE Conferences, ISI had represented ISO at the first meeting of the ECAFE Sub-Committee on Trade held in Hongkong in 1955, where at the instance of the Indian delegation a recommendation was adopted that the countries of the ECAFE region should take early steps to organize standardization activity in their areas, take note of ISO Recommendations in their national work and consider the possibility of becoming members of ISO as early as possible. Several countries of this region have since taken concrete action along these lines.

In 1961, an ECAFE Regional Seminar on Energy Resources and Electric Power Development was held in Bangkok where, at the instance of India, a recommendation was made to ECAFE countries to take steps as early as possible to adopt and evolve appropriate national standards for equipment, methods and practices, suitably co-ordinated with international standards. The Seminar also recommended that standardization be kept as a continuing subject for subsequent meetings of the Sub-Committee on Electric Power and suggested

that the countries of the region should enact appropriate legislation for promoting safe wiring installations and prohibit the sale and use of appliances not conforming to approved standards.

More recently, one of the officers of ISI was delegated to attend the ECAFE Sub-Committee on Metals and Engineering held at Tokyo (Japan) last July. Recognising the importance of international standards, the Sub-Committee, at India's initiative, recommended that in the first instance a comprehensive survey of the position of the national and company standards used by various countries in the region should be made and the ECAFE Secretariat should mobilize all possible resources for such a survey. The Sub-Committee also recommended the convening of an ECAFE regional conference on standardization for organizing training programmes for standards engineers and for the unification of regional standards, which would ultimately be channelled through the ISO.

In spite of these efforts, the achievements of standardization in this region cannot be said to have been spectacular because in most cases economies of these countries are still in the initial stages of development. It is our hope that this ISO General Assembly in New Delhi will give a new fillip to the movement in the East and help bring the benefits of standardization to bear more effectively on the economies of the countries of the region. Developing countries of other far off regions such as Africa and Latin America are also beginning to take interest in the Indian efforts at standardization. The officials of the Economic Commission for Africa have recently been exploring as to how the African countries could take advantage of our experience. In 1962, assistance of the ISI was made available in organizing a model seminar in Santiago, Chile for the unification and simplification of steel product standards in Latin America, along lines similar to those pursued by the ISI in its steel economy project. The Santiago seminar also had for its object the training of standards engineers, who were intended to follow up the work with further seminars in Buenos Aires and Mexico City. Training of standards engineers is coming more and more to be recognised as an important part of all standards programmes. Company standards engineers have been receiving training courses in the USA for many years. More recently, AFNOR, the French Standards Institution, has launched on a programme of training standards engineers to overseas trainees, whose expenses are borne by the French Government. Several years ago, ISI itself has organized a comprehensive course of training for its own newly recruited engineers. This was necessitated because at our stage of development engineers are in such great demand in every sector of industry that the only way the Institution could find its manpower was to train its own engineers. With the assistance of the Government of India through the Technical Assistance Programme of Colombo Plan and the Social Commonwealth African Assistance Plan, this facility has been now thrown

open to trainees from other countries with effect from this year and we have presently among us participants from Malaysia, Philippines and Thailand. We look forward to the day when more and more countries would be able to provide similar facilities for the training of standards engineers to help accelerate developments in the newly emerging countries of the world.

Ever since the creation of ISO in 1947, India, as many of you would know, has been one of the countries taking a leading part in promoting its activities. Her useful role especially as representing the developing countries, has been recognized by other member bodies, as is evident from her almost continuous election to the membership of the ISO Council since 1947. India had provided the ISO with a Vice-President in the person of Dr Lal C. Verman for two consecutive terms from 1949 to 1954. India has had the privilege of serving on many of the important committees of the ISO Council, among them the one appointed in 1949 to propose Modification of the Statutes. Dr Verman has been Chairman of the ISO Planning Committee since it was established in 1953, and a member of the Development Committee as well as the Standing Committee for the Study of Scientific Principles of Standardization. India is an active participating member of 78 technical committees out of a total of 107 and holds 13 secretariats of technical committees and sub-committees.

We can look forward to continued and closer association with ISO and ISO, on its part, can fully depend on our support in accelerating the pace of progress towards the achievement of its objectives.

However, one aspect of this association has always disturbed us. By and large, most of the meetings of ISO are held in Europe with certain important exceptions in the USA. It is very few that are held in the East. True—most older participants in the world standards movement are the European countries and also true—that being highly developed, they are in a much better position to make solid contributions to the work of ISO. Nevertheless, if ISO is to achieve true world-wide importance, it will have to take all possible measures to stimulate standardization activity in every corner of the globe, and encourage every emerging country to bring its problems to the various technical forums it has created. It would thus be necessary for it to arrange more often its technical and other meetings in parts of the world other than the European continent. This first years of its existence is an indication of its desire to meet this need. Let me, however, impress on every overseas delegate present here that it is up to him individually and collectively to go back and convince his principals back home that the creation of 'one-world' order based on international standards demands equal opportunity for every country to be heard and equal weightage given to its opinion. We on our part in India extend to ISO a standing invitation to hold any number of ISO meetings on our soil every year.

Here, I would like to refer to the critical importance of standardization to an underdeveloped country such as ours. As all of you are aware, the philosophy of standardization has manifold aspects. There is, firstly, the question of standards in matters relating to health and safety. Then, there is the question of standards in regard to measurements and specifications, which are of great value to scientists and engineers in their day to day problems. Then, there is the question of standards in regard to quality of products, which have significance to manufacturers and buyers, and which are conducive to trade within the country and as between countries. To us, the most important aspect of standardization is its implication on economic development. In a developed country, the choice as between uniformity, if I may use the word, and multiplicity, is not a critical one. They can afford to have, for example, a variety of sections on steel. They can afford to have diversity in regard to many finished products. Capital resources in underdeveloped countries are scarce, we cannot afford to have multiplicity in great many sectors of our economic activity. Some degree of rationalisation is essential, if we are to make the optimum use of our resources and get the maximum returns. Standardization, in the sense in which I refer here, is, therefore, perhaps of greater significance to us in the underdeveloped countries than in developed countries. These aspects are, of course, engaging the attention of our Standards Institution, but in this, naturally, we would like to share the experiences and needs of other countries similarly situated, and those who have gone through this phase of development at an earlier stage. I have referred to this because there is,

sometimes, an impression that standardization has to come towards the end of development rather than at the beginning.

We are specially happy that the present series of technical meetings are particularly of those committees in which we have considerable interest in relation to our internal and overseas trade. India is a large producer and exporter of iron ores, manganese ores, rubber, stimulant foods, such as tea and coffee and other agricultural products and solid mineral fuels. Again, taking into account our industrialization programmes and development of basic industries our interest is considerable in the meetings of other ISO committees as well, such as those on screw threads, bolts and nuts, steel, sheet and wire and light metals and their alloys. The committee on marks indicating conformity with standards is of particular interest to us, considering the prominent place that the ISI Certification Mark has come to occupy in our economy. In view of our immediate concern to promote international trade, we also attach great importance to the other two subjects being covered by the committees in pictorial markings for handling of goods and inter-conversion of values from one system of units to another, for both of which ISI holds the Secretariat.

In conclusion I would like to say again how very happy we are that the meetings of this august international body are taking place in New Delhi to deliberate on and formulate international recommendations for standards on a variety of subjects of direct interest to us. I wish you all success in your deliberations and a pleasant and fruitful stay in our country.

Commonwealth Shares Scientific Knowledge

Science, it has been said, knows no frontiers; and this is still largely true despite the existence of barriers in some fields of defence interest. Scientists in different countries work simultaneously on different problems, and it is essential for rapid progress that they should be able to keep in touch with one another and test other scientists' results. In the mid-20th century, the importance of the of science for raising living standards everywhere has come to be universally acknowledged.

Commonwealth scientists are helped in the process of diffusing and exchanging scientific information by common language and, to a considerable extent, a common academic tradition. Moreover, they come from both advanced and developing countries in widely differing physical environments, and between them have a wide experience in most kinds of pure and applied research.

In Britain, scientific research began as the responsibility of the universities and the learned societies, and it was not till after the mobilization of science in two

World Wars that research was organized on a systematic national scale, with the Government assuming responsibility and providing funds.

In other Commonwealth countries, too, scientific research is recognized as essential for economic and social development, and most countries have set up national organizations to promote and finance it. A close relationship and collaboration in research within the Commonwealth was maintained from the very first. This was natural enough, as many professors in new universities throughout the Commonwealth were recruited from British universities, with which they kept in close contact.

EXCHANGE OF IDEAS

As the body of scientific knowledge and the institutions concerned with it increased, the informal links between scientists were supplemented by a growing number of formal bureaux, committees and liaison offices set up to facilitate the exchange of ideas between the various national scientific organizations in the Commonwealth. To

these were added schemes for the exchange of scientists between Commonwealth countries, and conferences on scientific matters of common concern.

One such conference—that of the British Commonwealth Scientific Committee (BCSC)—is to be held at Auckland, New Zealand, from 15 November to 6 December, with Dr. H. H. Hamilton, Director-General of the New Zealand Department of Scientific and Industrial Research, in the chair. This is the third time the Committee has met in conference. The two earlier meetings were held in London (1960) and New Delhi (1962).

The forthcoming meeting will aim at bringing about closer co-operation in research, and greater assistance between its members. Among the subjects to be discussed are the organization and management of scientific research, the operation of technical aid schemes, and the communication of technical information.

Before the conference will be a report by the executive secretary of BCSC, Mr. A. J. Vasey, concerning discussions with the newer Commonwealth countries—in Africa and the West Indies—and proposals for meeting their scientific research needs. Mr. Vasey, the first to hold this position, was seconded for a three-year period from March 1954 from Australia's Commonwealth Scientific and Industrial Research Organization.

Countries expected to be represented at the meeting are Britain, Canada, Australia, New Zealand, India, Pakistan, Ghana, Malaysia, Sierra Leone, Jamaica, Uganda, Kenya, and Rhodesia. During the conference, delegates will visit universities and research establishments in various parts of New Zealand.

PAST CONFERENCES

Although the momentum of scientific collaboration within the Commonwealth has accelerated so greatly since World War II, the use of conferences to promote it is by no means new. One of the earliest meetings was held in 1936, on the suggestion of the Imperial Committee on Economic Consultation and Cooperation.

In 1946, no fewer than three scientific conferences were held in Britain, and it was from one of them—an official conference proposed by the British Government—that a standing committee was set up, composed mainly of the heads of the national research organizations of the member-countries of the Commonwealth. Meetings of the committee were held at irregular intervals, until, in 1958, it was decided that full-scale official Commonwealth scientific conferences were unnecessary and should be discontinued in favour of regular biennial meetings of the standing committee, which should be renamed the British Commonwealth Scientific Committee. It is this Committee which is meeting in New Zealand this month.

But the activities of BCSC are only part of the complex framework of scientific co-operation within the Commonwealth, and indeed far beyond it, through the participation of individual Commonwealth countries in regional and international organizations.

Agricultural science was one of the first spheres of Commonwealth co-operation. Today, with the economy of so many new and developing nations depending on increased productivity, it is vitally important that they should have access to up-to-date scientific information on such subjects as animal health, plant diseases, soil erosion, water pollution, and insect pests.

The Commonwealth Agricultural Bureaux serve as clearing-houses of such information for scientists and research workers, not only throughout the Commonwealth but increasingly throughout the world.

They began with an entomological research committee set up in London in 1969 to help identify insect pests sent in by officers attached to departments of agriculture and public health in the colonies. Today, there are 10 bureaux and three institutes dealing with different aspects of agricultural research. Funds for the bureaux are provided by contributions from the Governments of member-countries. Every five years a review conference is held to decide the programmes of work for next five years. The next such conference is due to be held in 1965.

WARTIME COLLABORATION

A feature of World War II was the outstandingly successful collaboration among scientists from all parts of the Commonwealth, and in this scientific liaison offices set up in Washington by member-countries played a large part. In the interests of continuing this collaboration in peacetime, the Commonwealth Governments moved their liaison offices in 1944 into one building under the collective title of British Commonwealth Scientific Offices.

This arrangement proved so valuable that a similar organization was set up in London in 1947. Though there is no governing body or central administration for the offices in either capital, the housing of the offices in neighbouring premises makes not only for easy collaboration but for efficiency and economy. The London office provides convenient machinery for implementing some of the decisions of the British Commonwealth Scientific Committee, for which it also provides the secretariat.

The various levels on which scientific co-operation is continually carried out throughout the Commonwealth are too many to enumerate, or to describe in detail. There are, for instance, a number of schemes to promote the interchange of scientists in Commonwealth universities and research institutions. The Nuffield Founda-

tion in Britain financial research projects in Commonwealth countries and provides grants for students. Jointly with the Royal Society in London, it founded the Commonwealth bursaries scheme which enables researchers to pursue their work in Commonwealth centres.

The Royal Society's Rutherford Memorial Scheme, launched in 1959 to commemorate the brilliant New Zealand scientist, awards scholarships tenable for three years. The British Council provides travel grants and research scholarships, and arranges programmes for visiting scientists. A number of large industrial firms also have exchange schemes of their own for scientific research workers.

Collaboration is close in the field of nuclear energy, especially in peaceful uses. A conference of Commonwealth nuclear scientists was held in Britain in 1953. Certain countries have bilateral arrangements for the supply of uranium, and Britain and Canada have helped other Commonwealth countries to set up their own research reactors.

SPACE RESEARCH

No Commonwealth country has yet a space research programme

Technical Co-operation Under the Colombo Plan

The annual report for 1963-64 of the Colombo Plan Council for Technical Co-operation in South and South-east Asia shows that expenditure on technical co-operation activities in the region amounted to £36.4 million during the year, bringing the total of such expenditure since the start of the Plan to more than £181 million.

The 22 member Governments of the Council at the beginning of September 1964 were, with the dates when they joined the Council:

Afghanistan	.. (1964)
Australia	.. (1950)
Ehutan	.. (1963)
Britain	.. (1950)
Burma	.. (1952)
Cambodia	.. (1951)
Canada	.. (1950)
Ceylon	.. (1950)
India	.. (1950)
Indonesia	.. (1953)
Japan	.. (1954)
Korea	.. (1963)
Laos	.. (1955)
Malaysia	.. (1963)*
Maldiv Islands	.. (1964)
Nepal	.. (1952)
New Zealand	.. (1950)

*The Federation of Malaya was a member of the Council from 1958 to 1963, when it became Malaysia, comprising the 11 States of the Malay Peninsula and the States of Singapore, Sarawak and Sabah (formerly North Borneo).

comparable with those of the United States and the Soviet Union, but there are a number of instances of co-operation on limited projects. Teams of British scientists have visited Australia in recent years with a view to collaborating in joint projects. Co-operation between the two countries in space research includes the use of the Woomera range in Australia, and joint projects in radio and optical astronomy.

Partly as a result of a Commonwealth conference on satellite communications which met in London in 1962, Britain, Canada and Australia instituted exploratory talks with the United States and European countries which led, in July of this year, to agreements for a world communications satellite system.

Conferences of Commonwealth statisticians, survey officers, defence scientists, and of the Commonwealth Advisory Aeronautical Research Council, to mention only a few, all provide illustrations of the way the Commonwealth pools its scientific knowledge. By sharing that knowledge with other countries not in the Commonwealth, it helps in the solution of international problems and in raising living standards throughout the world.

Procedures under the Colombo Plan are simple. There is no channelling of requests through a central secretariat. Governments of requesting countries initiate their own requests for assistance, and prospective donor countries respond only to such applications. The terms upon which assistance is provided are solely a matter for the two governments concerned. As a result, arrangements can be made with speed and economy, and the flexibility of the method allows for emergency action in unforeseen circumstances. The keynote of Colombo Plan technical co-operation is that requests are freely made, and assistance is given, on a bilateral basis between member governments.

There are three main forms of inter-governmental technical co-operation:

- (1) The provision in donor countries of training places in universities, technical institutions or industrial establishments, both private and public, for students from the area, for periods varying from about three months to four years.
- (2) The provision of experts who visit a country in the region for varying lengths of time, to give training or assistance.
- (3) The supply of equipment, sometimes for use by a visiting expert, or for general demonstration and training purposes in the receiving country.

In the years 1950-1964, £181.3 million was spent on technical assistance by Colombo Plan countries. In the same period, 33,046 training places and 5,981 experts were provided.

Total expenditure on technical assistance in 1963-64 amounted to £36.4 million, which was £5.6 million less than the peak figure of £42 million reached in 1962-63 but nevertheless represents an increase of about 36 per cent on the average expenditure over the last five years. There was a fall in New Zealand all recorded increases.

New training places provided during 1963-64 numbered 4,551, which is the highest on record for any single year. Training places were provided in a wide variety of fields, including engineering, technical education, civil uses of nuclear power, agriculture, medicine, industrial management, public and business administration, economics and finance, transport and communications and social services. The major donor was the United States (2,164), followed by Australia (573) and Britain (454). Indonesia was the major recipient of training awards during the year (750). India, which has received the highest number of awards per year since the inception of the Plan (a total of 6,365), dropped to second place

during the year (695), and was followed by Thailand (56) and Malaysia (51). The Colombo Plan Technical Co-operation at the beginning of 1964, appeared as a recipient for the first time, training places having been provided by American and Japanese.

The services of 128 experts were made available during 1963-64, compared with 87 in the previous year. These in the largest categories were specialists in education, engineering, transport and communications, medicine and health, and food, agriculture and forestry. The leading donor was the United States (532), followed by India (308) and Britain (83), and the principal recipients were India (157), Vietnam (127) and Nepal (173).

Expenditure on equipment supplied as part of technical co-operation during 1963-64 was £10.1 million. While this was below the previous year's record figure of £21.1 million, it was above the average for the last five years. Between 1950 and 1964 it totalled £69.9 million.

Britain contributed £1.9 million towards Colombo Plan technical co-operation during 1963-64, bringing its total expenditure on technical assistance since the Plan's inception to £12.3 million. During the year, Britain sent out 86 experts, bringing the figure since the start of the Plan to 638; received 454 trainees, making a grand total of 5,659 since 1950; and supplied equipment worth £285,732, bringing the value of equipment supplied since 1950 to £3 million.

A characteristic feature of the Colombo Plan has been the fact that many countries both give and receive technical assistance. The original donors were the members outside the region, but training is increasingly taking place within neighbouring countries of the region, where the environment and problems may be similar to those in the student's own country. About 8 per cent of the training places in 1963-64 were provided by countries within the region itself, and some 3,058 training places have been provided in this way since 1950. India has already trained 2,440 people from neighbouring Colombo Plan countries, and Burma, Ceylon, Indonesia, Malaysia, Pakistan, the Philippines and Thailand have all accepted trainees. Additional training places are also provided in these countries under the Third Country Training Programmes sponsored by the United States and Australia. There has been a considerable expansion of training facilities within the region in recent years, but these increased facilities are not being fully exploited. A highlight of the year 1963-64 was the appointment by the Council for Technical Co-operation of an Adviser on Intra-Regional Training and the designation of liaison officers in each country in the region to keep the Adviser informed on their Government's progress in surveying training needs, expanding and improving training facilities, and the greater utilisation of intra-regional training both by and in their own country.

NOTE: Annual figures are averages of months; those of sugar relate to crop years.

†Data of Matches, Hurricane Lanterns, Sewing Machines and Bicycles from January 1963 onwards and those of Footwear (leather) from April 1963 and those of units having fixed assets of Rs 5 lakhs and more.

‡Data in respect of certain units are not included from January to May 1963.

(1) Monthly figures are exclusive of production in Punjab (Kangra) and Himachal Pradesh.

(2) Relating to the production by mills in the membership of Indian Jute Mills' Association and to one non-member mill.

(3) Includes canvas.

(4) Figures relate to stable variety only from June 1962.

(5) Including figures for Jammu and Kashmir.

(6) Figures relate to production of organised factories.

(7) Boxes are of 60 sticks each upto February 1961 and thereafter of 50 sticks each.

(8) Total of viscose yarn, staple fibre, acetate yarn and cellophane.

†From January except in the case of sugar where the figures are progressive from November of the preceding year, the crop year being November-October.

*Provisional.

It's 9.30—let's listen to the National Programme

Long before the power cables brought electricity to India's villages it was possible to listen to the radio --thanks to the battery-operated set.

Union Carbide India were the first to manufacture radio batteries in India. And they were the first to make special batteries for transistor and electronic equipment.

Electrical appliances need no longer depend exclusively on mains plug points because of these versatile 'Eveready' radio and transistor batteries. Their exceptionally compact construction and capacity to recover power between uses make them ideal for portable radios, gramophones, tape-recorders, electric shavers and a whole range of electrical equipment.

Union Carbide India's battery manufacturing plants are but a few of the seeds of industry that the Company have sown in India. The variety and value of products made by Union Carbide India today show how the resources and know-how of a world-wide organisation can serve the needs of a developing economy.

IN his speech at the Business Conference last week, Mr S. K. Patil did well to call for an end to what he called the feud between the public and private sectors. He ridiculed the idea of regarding the two sectors as two armies out to destroy each other and emphasised that there was no need for any conflict between the two. It is indeed a relief to hear a member of the Central Cabinet speaking in these terms while nearly all his colleagues avail of every opportunity to stress the socialist commitments not only of the party in power but also of the nation itself according to the Constitution. From whatever angle we may view the principal issue of the national economy today, the relation between the two sectors and the extent to which the Government would be prepared to recognise the importance and the rights of the private sector or to modulate its enthusiasm for expanding the public sector would be seen to form the crux of the problem. We pointed out last week that many vital issues which must be clarified and decided well ahead of the next budget are left undecided and that for this reason more than any other the Government appears to the average citizens to be deeper in the muddle than ever before. The tangle of taxes, costs and of the outlay and the size of the next Plan will be difficult to unravel, unless Government clears its mind of unnecessary animus toward the private sector and prepares itself for exploration of some new modes of development. It is the scale of outlay on the public sector that boosts the Plan to a bigger size than the country can stand at this state. Though the capital market is in a parlous state, the knowledge that the private sector will be treated more liberally will be sufficient to augment the savings that will flow into new investment. Greater reliance on the private sector, far from reducing the new investment in the relevant Plan period may conceivably lead to an increase in the total in spite of the reduction in the allocation to the public sector. The need for this attitude arises from the difficulties attending the implementation of the Fourth Plan on the scale now contemplated. But the wisdom of that change should have been obvious to Government, if it had undertaken at some stage a critical review of the record of the public sector during the last, say, five years. The Finance Minister himself has recently given expression to his dissatisfaction with the working of the public sector. And one can safely venture to suggest that if the public sector had worked more efficiently and earned

sufficient profits to finance its expansion out of its own resources, not only would the pressure of Plan finance on taxation be less, the entire economic situation would be wearing a much brighter look. Since the public sector is engaged in key industries like steel and fertilisers, efficiency in their working would have reduced production cost of a whole range of products inclusive of the agricultural.

But the fact is that, paradoxical as it may seem, it is the shortcomings of the public sector that have impelled the Government to be louder in its professions of faith in the public sector and more vehement in its denunciation of the private sector, particularly private trade. Private trade is a handy scapegoat for the Government at all times. In the present food muddle, private trade has been condemned as obstructive and uncooperative and the food crisis in its present state has been blamed entirely on private trade. Mr Patil in one of his speeches at the Conference in Madras expressed the opinion that the shortage was inexplicable. And the ordinary man is feeling more and more convinced that it is the hindrances, and not the misdeeds, of private trade that are responsible for the present state of affairs. In agriculture, as in industry, a less inflexible attitude would help the national economy move out of its present state.

Of whose creation, after all, is this conflict between the two sectors? Can private firms be said to have hatched a plan to ruin the public sector enterprises? Or can it be said that they have added to the detriment of the public sector a kind of implicit conspiracy? Far from either being the case vested interests in India have never put up any kind of resistance to the Government's assaults on them. The zemindars have been meek and have far from inherited the earth. The lesser landlords may have indulged in some evasive actions, but keep no more than what the law allows them. Industrial enterprises have submitted almost without a demand to all sorts of restrictions on their freedom of action. Life insurance is a monopoly of a State Corporation. Banks are under the constant surveillance of the Reserve Bank. Shipping leans heavily on the crutch of State aid. There is a wide range of laws which, cumulatively, give absolute power to the Government over private business. Where, then is the difference between the public and private sectors, except in the evils peculiar to the former? For, while the evils of private business can be dealt with overnight under some

law or other, there is no handy remedy for any evil in the public sector. Only the whole machinery of the country's political constitution has to be set working, with all its creaking and groaning and its final ineffectiveness. If the evils in the private sector persist, it is only an indication that the powers the Government has taken for itself have not been wisely used. A shift from the private sector to the public can conceivably worsen the position.

In these conditions, Government efforts must be directed to the elimination of the differences between the two sectors, so far as the final results for the public good are concerned rather than on accumulation or exaggeration of the conflict between the two and the consequent compulsion to prefer the one to the other. But, obviously, it does not suit political parties in this light and it is for public opinion to assert itself and force the Government to take a pragmatic attitude. There is a natural division between the ventures that are appropriate to each sector and in a country like India which has started its industrialisation so late, there is a wide enough field for the public sector to cover without encroaching into the spheres of its "rival". The latter is distinguished by its scope for small units and the need to study local conditions and adapt goods and services to the state of demand. The experience of Soviet Russia during the Khrushchev regime has shown that in a collectivist or a socialist regime goods and services can never be tailored to consumer tastes and there can be no organic growth of business units but only an increase in size following the decisions of centralised authority. It is this truth that has to soak into the minds of the masses and take the place of the vague feeling that a Leftist Government will enrich the poorest of them by a mere transference of wealth from the rich. The Government's claim that it has a mandate for Socialism must be shown to be a hollow one. And it can be, because of a recent enquiry has shown that a large majority of the people do not know of the Five Year Plans. How much more ignorant should they be of Socialism?

New Angles on External Aid

VIEWS on economic aid have lately been influenced by the realisation that developed countries are able to achieve a rate of economic growth that eludes the undeveloped countries. In regard to agriculture, the FAO has pointed out that some of the backward countries with an import surplus are confronted by a shortage of food supplies and therefore their plans require adjustment. The National Industrial Conference Board in the USA has stressed that the difference between the rich and poor nations has widened of late, and if the reasons are not listed, the implications are made plain. That development itself induces new tensions and the economic climate is apt to suffer from excessive interference may be cited as a reason for outside advice or guidance.

It is on this score that the continuation of the Colombo Plan up to 1971 will be generally regarded as a helpful contribution to the mastery of adverse circumstances. Competition in giving aid will probably continue by virtue of the acceptance of coexistence and the acceptance of responsibility by the USA for the advance of the backward nations for

whom loans and grants now represent essential capital. It is not only defence that has to be considered important. Development should not suffer and national planning must be seconded vigorously.

The Colombo Plan meeting in London held fast to the view that foreign aid will be more useful, if it is adapted to the Plan requirements of the recipients of aid, though the needs of Bhutan may differ from those of Pakistan. The theory of self-sustaining growth has to be reconciled with the dispensing of assistance, but that is not at all difficult having regard to the rise in population of South-East Asia. Yet the eligibility of countries for aid may be assessed in the light of schemes for mutual aid but the share of world trade held by the underdeveloped countries is not going up, and the new trade groupings do not promise much relief, because the rise of modern industry in the East creates problems as to essential materials and access to markets. Of course, advanced countries can secure additional opportunities but economic nationalism is also stimulated by the emergence of difficulties. This has to be checked, and that is why the Colombo Plan, giving Asian countries the scope for extra contacts, must be viewed not as an end in itself but as a beginning for the sake of co-operation on a long-term basis and view.

The export performance of the backward nations is patchy and even if the direction of trade has altered—as in the case of India or Pakistan—the fact remains that imports exceed exports usually, and the dependence on oilseeds, or cotton—exposed to world influences—is something of a handicap. Improved results may follow improved methods but the load of external debt is an obstacle, and the way to improve agriculture is not very clear at present. The escape from subsistence farming has, however, to be achieved and the necessity for intensive farming that demands both money and knowledge must be generally accepted before it is possible to speak of definitive steps like cutting costs by raising yields per acre. Tropical agriculture has its own risks and problems and the difference between plantations and farms is now obvious. The means is not obvious whereby the latter can soon reach the level of efficiency noted in the former. That is why the developers (not mines which are yet to win minerals) have to think of development from below, to break the inertia of ages and to go in for extension work on a big scale. It is in the last aspect—of results in the field—that disappointment has arisen—not only in India to date.

While countries like Canada and Australia continue to help Great Britain in the discharge of responsibility, the problem that requires elucidation is the export surplus of the affluent countries. The disposal at cut prices of either grain or minerals may entail loss but the needs of the underdeveloped nations will be satisfied. The true problem is the extension of competition in commodities like cotton, and the disposal of aid must not impede the flow of normal trade. The flow of multilateral aid, as Professor Myrdal insisted, must be larger. There are always mixed motives in giving aid, and it is possible that India's aid to Bhutan or Nepal is linked with defensive preparations at home. But these must be subordinated and the rate of aid must go up, as the flow of outside aid increases. Tariff and other policies must be subordinated to aid, and this may seem inopportune. The collection of debt or interest may duly create problems, but it is well to admit that in India, the loan liability

and the foreign exchange shortage are closely connected, as the Finance Minister has conceded lately.

The flow of private capital depends on the conditions prevailing in the underdeveloped countries. In Iran or Pakistan, the opportunities may seem greater to foreigners than in India for some reasons, but a more judicious appraisal of tasks and prospects may induce German or other firms to think of other satisfactory conditions. The interest shown so far in direct investment is small in comparison with the capital put up by domestic investors; nor has the rate of return collected on outside capital been low. This at least must encourage a new view of opportunities for Americans and others in a country where the accent is on chemicals—for fertilizers, fibres, etc. That most recipients discriminate as between sources of aid cannot always be a reason for complaint, because trade relations are changing as also the terms of investment.

In a decade, India has seen vast changes and is now ready to accept Japan as a supplier of capital and technical aid, even if Japan is seen as eager to help China with tractors, fertilizers, cement, etc. The complications do not arise only from Red China's status but from the change from consumer goods to capital equipment in the list of priorities under planning. Whatever might be said usefully about the ambitions developed, it is always useful to remember the low level of consumption in the underdeveloped countries. They are not likely to threaten the Western countries as serious rivals in neutral markets and this is important in respect of mineral products like aluminium as well as textile goods. Their present inability to give up protective tariffs on paper, sugar, etc., is due to the commodity taxation levied at home as also to the fact that the external currency reserves are exiguous.

The Labour Government in the UK was certainly expected to extend and enlarge the Colombo Plan even if the recipients like Ceylon or Burma are not always ready to play ball with neighbours. The latest sterling crisis may interfere with the course of overseas development to which Mr Wilson is committed as a Socialist and a traditionalist, but it is implicit in the foreign aid situation that more will come in 1965 when the US grasps the plain fact that the drama of foreign aid is never concluded and the bolder the programme, the more useful the results. The US Budget message in January 1965 will perhaps spell out what is the object of the Great Society in dealing with poverty beyond the USA. The confirmation of the UK's good intentions under the Colombo Plan is to be viewed as a prelude to a more important US decision about diversification and expansion of aid and trade.

The new view of aid as a factor in world peace is based on political developments and auguries, while the revolution of rising expectations is conditioned by renewed hopes of more aid in the future. The disparities in giving aid that now breed some difference are meant to illustrate the nature or size of the problem more than the fact of more institutions being at work to guide the flow of aid to the underdeveloped nations. As part of the attack on world poverty, aid even more than trade is a potent weapon and the nature and volume of aid over a decade has altered to the advantage of both donors and recipients, while the more significant aspect is that Euro-

pean countries are behind the USA in the assistance programme that embraces specific projects linked to resources available for development.

Scope of Agricultural Refinance

THE Finance Minister is reported to have informed Lok Sabha during question hour, last week, that the progress made by the Agricultural Refinance Corporation could not be considered to be unsatisfactory. In support of this claim he also referred to the schemes already approved by the Corporation involving total outlay of Rs 17.18 crores, as well as to other projects under consideration involving total outlay of Rs 30 crores. This encouraging turn in the working of the Corporation, which had been marking time for nearly one year since its inception, appears to be a very recent development. As late as August last, the Manager Director of the Corporation had occasion to draw the attention of its constituents, to the fact that few worthwhile schemes had, so far, been received by the Corporation.

The Corporation was set up under legislation enacted early last year to strengthen the facilities available for the provision of long-term credit for financing schemes of agricultural development. The Corporation started functioning from July 1, 1963 with an issued capital of Rs 5 crores, contributed by cooperative banks, central land mortgage banks, scheduled banks, the Life Insurance Corporation and the Reserve Bank of India. The Act under which the Corporation was set up also provided ample scope for augmenting the resources of the Corporation, through borrowing from the central and State Governments, as well as through issue of bonds and debentures. In these circumstances, if the Corporation was not able to do much by way of providing refinance for agricultural projects, during the first year of its operation, it was not for lack of funds at its disposal.

The Corporation is empowered to provide refinance facilities to credit institutions for a wide range of agricultural projects, provided repayment of principal and interest on the loans is fully and unconditionally guaranteed by the Government. This condition is based on the view that the successful execution of agricultural development schemes depends largely on the degree of interest taken by the Governments concerned. There is, however, provision in the Act enabling the Corporation to dispense with Government guarantee if other satisfactory security is furnished. The Corporation provides refinance facilities for medium-term loans for periods not less than three years and not more than five years and for long-term loans normally for periods up to fifteen years and, in special cases, to 20 years. The rate of interest for all types of loans will be normally five and a half per cent.

Agriculture has been defined in the Act in very broad terms to include animal husbandry, dairy farming, pisciculture and poultry farming; the following types of schemes would be eligible for assistance by the Corporation:

- reclamation and preparation of land so that facilities for irrigation, in particular, the fully utilised;

- development of special crops such as arecanut, coconut, cashewnut, cardamom, coffee, tea etc.;
- development of mechanised farming, use of electricity for irrigation; and
- development of animal husbandry, dairy farming, pisciculture (including co-operative fisheries) and poultry farming.

Agricultural schemes have to be carefully appraised by technical experts before they qualify for assistance by the Corporation. Scheduled banks whose major activity is the financing of trade and industry do not have the necessary expertise and have to rely on officers of the Government Agricultural departments. The time taken for getting loan applications processed by Government agency is, possibly, one of the reasons why the Corporation had very little to do in its initial year.

As indicated earlier, one of the important objects of the Corporation is to provide refinance facilities for development of plantation crops such as tea, rubber, coffee etc. Spokesmen of the plantation industry have for the last several years been complaining at their annual meetings, and other suitable occasions, about the handicaps suffered by the industry because of lack of resources for development. The establishment of the Refinance Corporation should have immediately stimulated the flow of funds for the development of the industry. Providing finance for the plantation industry is not an unfamiliar activity for the scheduled banks. But, for various reasons, particularly the conditions governing the grant of loans by the Corporation, the plantation industry has not been able to utilise the resources provided for their benefit. It is not clear whether the schemes to which the Finance Minister referred in his answer to questions in Lok Sabha included any schemes for development of plantation crops.

The insistence on Government guarantee for repayment of the loans, has been one of the principal obstacles in the way of the plantations utilising the refinance facilities provided by the Corporation. One of the major items of expenditure, as far as plantations are concerned, is provision of houses for their workers which they are obliged to do by statute. It has also been pointed out that old debts incurred for development of the tea gardens against mortgage of the estates would have to be discharged before the planters are in a position to offer adequate security for the new loans taken for development purposes. It was not clear whether the financial assistance provided by the Corporation would be available for liquidation of old debts or the construction of houses for workers.

The Corporation has, however, recently taken decisions which go a long way to meet the needs of the plantation industry. The Corporation will not insist on Government guarantee for the refinance facilities made available through scheduled banks, provided the financing bank has a good reputation and enjoys a sound financial position and provided the security offered is acceptable to the Corporation. In this connexion it has been made clear that the security of land and other fixed assets would be acceptable. It has also been clarified that refinance would be available for all schemes of a composite nature, covering almost all long-term requirements of the plantation industry, including construction

of old debts if they had been incurred for houses for workers, as well as for discharge development purposes and if the Corporation is satisfied that further development might suffer if the old debts are not cleared.

With the broadening of the scope of assistance provided by the Corporation and relaxations regarding government guarantee, it would be strange, indeed, if worthwhile agricultural development projects, particularly in the plantation industry, are stalled for lack of finance.

Price Policy

By Virendra Agarwala

THE spiralling rise in prices during the last few months has posed a serious threat to the economy of the country. In a developing economy a certain rise in prices is inevitable and within limitations it is, in fact, necessary to keep up the tempo of development. But the recent steep rate of climb is a symptom of the critical state of health of the economy. The reasons for this worsening state of affairs are not far to seek. The authorities have been too well aware of them. Only the complacency borne out of bureaucratic planning, where there are no defined centres of responsibility for the execution of the plans which are drawn out in an atmosphere completely divorced from the realities of the situation and in consequence become academic exercises, has stalled all timely and effective remedial measures. The individual prejudices and predilections of the planners have also induced some distortions in our plans because a truly scientific approach free from all bias has not come to be applied to our planning. Planning for prosperity should mean the most efficient exploitation of available resources for maximising production at the most economic prices so that the burden on the community is not unbearable.

Time and again it has been stressed, and recognised by the planners too, that only on a sound agricultural base can a stable economic structure of the country be built. If good intentions and expenditure of colossal sums alone were any criterion to judge the success of agricultural planning, we should have achieved spectacular success in this field long back. During the first two Plans we have spent about Rs 2,000 crores on schemes of agricultural development. Yet the production of foodgrains, the pivot round which the country's entire price-structure revolves, has not been able to make any appreciable headway. In the case of other agricultural crops too the progress has not been significant. Food and clothing are the basic necessities of life and in our country where the people have sub-marginal living standards their weightage in the average family budget is much greater than in prosperous communities. Almost sixty per cent of the family budget of an average family in India is spent on food and eight per cent on clothing. Any shortfall in the availability of foodgrains, therefore, has far-reaching repercussions on the price levels.

The Third Plan postulates an increase in agricultural production of 30 per cent during the plan period, i.e., 6 per cent per annum and in industry of 70 per cent, i.e., 14 per cent per annum. Actually in 1961-62, the first year of the Plan, agricultural production increased by only 1.2 per cent over 1960-61; in 1962-63 it declined by 3.3 per cent over the previous year. During the last twelve years, agricultural output has been rising at an average

annual rate of 3.5 per cent only. As a result, the prices of foodgrains have shown a significant rise. As compared to a year ago, by mid July wheat prices had recorded a rise of 28 per cent; jowar and bazara of as much as 56.5 per cent and 34 per cent respectively, pulses of 34.5 per cent and gram of 46 per cent. The pressure on price levels has been further aggravated by the slow rate of increase in industrial production, particularly of consumer goods the demand for which has been increasing with the rising income in the hands of the people as a result of the large expenditure on developmental plans. The overall index of industrial production rose by 6.6 per cent in 1961-62 and by 8 per cent in 1962-63. In 1963-64 the increase was 9.4 per cent against the average 14 per cent per annum rise targeted under the Plan. But even within this limited increase in industrial production some imbalances have arisen. During the first two years of the Third Plan, the producer and basic industries have recorded a significantly larger growth as compared to the general index of industrial production. Against the 1960 level of production, the output in basic metal industry showed a rise of 26 per cent, the manufacture of metal products of 69 per cent, manufacture of machinery of 20.22 per cent and chemical products of 23 per cent. The consumer industries, however, showed a lower rate of rise. The production of cotton textiles increased by 6.5 per cent and paper by 9.9 per cent only. The result is that there is a marked scarcity of consumer goods. For instance, in case of cotton textiles, the per capita availability of mill cloth for domestic consumption declined to a mere 9.6 yards in 1963, as against over 11.0 yards in 1957.

Under the Second and the Third Plans, particularly in case of the Third Plan, a greater emphasis had been laid on the development of the producer and basic industries with a lower priority accorded to the consumer goods industries. The gestation period of the former is comparatively longer and before their products flow out additional income is generated giving rise to an increasing demand for goods and services which are, however, not available to the extent required. The situation has been further aggravated by the rising public expenditure especially of a non-productive nature of the Union and State Governments. The higher expenditure on defence necessitated by the Chinese aggression, which has increased from Rs 312.49 crores in 1961-62 to Rs 854 crores in 1964-65, has somehow to be met so long as the threat to the integrity of our frontiers continues to exist, even though it results in creating a certain amount of pressure on prices. Between 1962 and 1964 non-plan expenditure on revenue account increased by Rs 950 crores, of which about Rs 550 crores is accounted by defence expenditure. During the same period the plan expenditure on both revenue and capital account increased by Rs 900 crores. In 1963-64 alone, budgetary spending for both non-developmental and developmental purposes increased by about Rs 880 crores. The inevitable result of all this large expenditure is increasing volume of money supply in the hands of the public. In April 1961 the amount of money supply with the public was Rs 2,878.87 crores which increased to Rs 3,833 crores in May 1964. Between the end of March 1963 and end of June 1964, money supply with the public increased by about Rs 480 crores or by about 14.5 per cent. Thus while the volume of money supply in the hands of the public as a result of the large expenditure on plan and non-plan outlays and

defence is rapidly growing, there is no corresponding increase in the production of foodgrains and other essential consumer goods. Thus the picture that emerges is one of a rising tempo of demand created by the new and additional incomes arising from mounting public expenditure, particularly of a non-productive nature, on one side, and of a correspondingly much slower rate of increase in agricultural and industrial production on the other side. It has been estimated that the total increase in demand in 1963-64 as compared to 1960-61 is likely to have been at least of the order of Rs 4,000 crores against the increase in total supply of about Rs 1,500 crores only. In this widening chasm between demand and supply a rise in prices was inevitable.

The hiatus between the rising demand and static supplies has been widened further by the rapid rate of increase in the population. The current rate of increase is estimated to be of the order of 2.4 per cent per year which means that an additional 8 to 10 million mouths have to be fed every year. Just to think that in a decade the country will have to find food for an additional population of about 90 to 100 million which is about half the population of the United States or the USSR is a terrifying prospect indeed. With the existing pressure of population on land and the limited resources that are available to the country, it is impossible to plan for production of food or other essential consumer goods on a scale which would give the rising population a reasonably fair standard of living. Under the circumstances, the country will find itself sliding down the incline of falling living standards with a gathering momentum.

The division of the country into different zones and restrictions on movement of foodgrains between them has also tended to aggravate the scarcity conditions. The zonal system has encouraged the imbalances between supply and demand and disturbed the equilibrium which in the case of free movement was reached between the surplus and scarcity areas. It is true that under the zoning scheme, the prices of foodgrains in the surplus areas have not risen so sharply as in the scarcity areas. But it is equally true that the scarcity conditions would not have been so acute had a freer movement of foodgrains been allowed between the various zones. Prices no doubt would have recorded some rise; still they would have been stabilised after a while at levels lower than those prevailing now.

The scarcity conditions and the rising prices have created a psychology which is restricting the flow of foodgrains to the market from the producing centres. The trade has been accused of withholding stocks, in the expectation of rising prices. At the same time, it is also being alleged that there has been a certain amount of reluctance on the part of the growers to bring their produce to the market in the expectation that prices will rise still further in the coming lean months. If, however, Government had sufficient buffer stocks of imported foodgrains and were in a position to release adequate quantities to their fair price shops or sale to the public, the position would have immediately eased. But unfortunately, it appears we are working on the basis of "ship to mouth".

This is not a happy picture. If timely and effective remedial measures are taken even now, the position can be retrieved. But this will

need a completely fresh approach to the problem. Our thinking on our future planning has to be so oriented that there is a proper balance between the development of producer and basic industries on the one hand and the development of consumer goods industries on the other with due emphasis on agriculture is unquestionably essential for the over-all industrial development of the country for without these our economy will not have a sound foundation. But their rate of expansion should be such that it is commensurate with the resources available without putting any undue heavy burden on the community and at the same time does not stifle the production of essential consumer goods to such an extent that the consumer is starved of them. Further, to step up production the existing idle capacity in many of our industries should be utilised to a greater extent for which purpose maintenance imports should be allowed move liberally.

The spiralling of prices will, however, be halted only when we are able to devise ways and means to revitalise the entire agricultural front. Agriculture, which is a State subject, somehow or other, has not been given as much importance as it deserves. The portfolio of agriculture should be the main concern of the Chief Ministers because it is upon the successful implementation of agricultural plans that the stability of the entire economy now rests. In the development of agriculture, particularly in the matter of production of foodgrains, availability of adequate quantities of fertilisers has assumed a strategic importance. To overcome the acute shortage of fertilisers Government has to make a two pronged attack. Enough funds should be found to raise the production of fertilisers within the shorter time possible. In the interregnum, i.e., the period till the new fertilisers factories come into production, large-scale imports of fertilisers should be undertaken. Adequate measures to arrange supplies of fertilisers should be given the highest priority. Of course, early implementation of minor irrigation schemes, supply of improved seeds and agricultural implements, etc., should go hand in hand with the arrangements for raising the supplies of fertilisers.

It is not enough to step up production of agricultural crops and consumer goods if timely action is not taken to curtail unproductive expenditure both at the Union and State Governments levels and introduce economy measures even where expenditure is unavoidable. The Union Finance Minister has announced his intention to curtail expenditure to the extent of Rs 70 crores. It can at best be taken as token of Government's desire to introduce economy measures and to that extent it is welcome. But it is not enough. If the pressure of rising money supply in the hands of the public on limited supplies of basic necessities is to be reduced, Government will have to do much more. At least a ten per cent economy in Government expenditure, i.e., roughly at least Rs 200 crores to Rs 300 crores approximately will have to be undertaken to make some impact on prices. This alone will show the earnestness of Government to arrest the rise in prices and make any effective impression on the mind of the public. A continuously rising spiral of prices will result in mounting costs of our schemes of development, which will put the community under an unbearable financial strain. Government's anxiety for the well-being of the people will, therefore, be judged by the

measure of pruning that it is prepared to introduce in its expenditure. Efforts to increase production have to be dove-tailed with corresponding economy measures so that a proper balance in the economic structure of the country is achieved. What is needed at this critical juncture is judicious and well planned action free from all extraneous considerations and not a negative approach.

Rationing and State Trading in foodgrains which are often recommended as the panacea for the malaise on the food front are in themselves an admission of defeat and by creating a psychology of shortages will accentuate the gravity of the problem. They are restrictionist in their effect and present a negative facet of the vexed question of food shortage. Besides, they have their own administrative complexities in a vast country like India. To build up an effective machinery to operate rationing and State trading successfully will need a stupendous effort both in terms of human and financial resources. An army of administrative staff will have to be drafted for this work for which at the higher echelons sufficiently trained people having requisite qualifications and unquestionable integrity may not be available. If enough care is not taken to have it manned by the right people, the entire rationing and State trading machinery will become a sanctuary for corruption and nepotism. In case of rationing particularly, if it is to be a success, a very high sense of discipline and co-operation is called for from the public. It has been seen in the past that the public has not been quite happy with rationing and its fullest co-operation was not, therefore, forthcoming. Rationing and State trading cannot help grow more foodgrains and thus augment our supplies. At best, if operated efficiently, a hypothesis not supported by past experience—they can ensure better distribution. It has, however, been noticed that once the energies of the Government are diverted towards marketing and distribution, the more important task of increasing production tends to be neglected. In case of sugar cane it has not happened in the Uttar Pradesh. The Cane Development Societies primarily intended to do the cane development work started marketing operations also. What has actually happened is that these Societies have concentrated their efforts on marketing and given little attention to the development work with the result that yields of cane as well as quantities have almost remained static all these years. Even in case of marketing of cane their marketing costs are higher than those incurred by the mills when they later were purchasing the cane direct from the growers.

There is another aspect of the problem which needs to be considered. A fully integrated rationing machinery functioning in the various States will, according to some calculations, cost about Rs 100 crores per annum, which means that this additional money income will create an extra pressure on prices without contributing anything towards higher production of foodgrains. Moreover, it has to be considered whether rationing and State trading are going to be part of the long-term policy of the Government or intended to tide over the present crisis and are to remain in force only till we reach a stage of self-sufficiency. If it is the former, it may be construed to mean that the Government is moved by ideological considerations and is taking advantage of the present crisis to push its policy which otherwise might not have been acceptable to the mass

of the public. If, on the other hand, rationing and State trading are to be short term measures to tide over the present difficulties they will defeat their own objectives. Firstly, to bring into being an effective machinery will take a long time, and therefore, in the short run it will not be able to give any tangible relief. In fact, it may add to the confusion by throwing out of gear the channels of distribution which are functioning at present. Secondly, once it is established it will be difficult to liquidate it later because in the meantime it will have created vast vested interests with wide ramifications which it will be difficult to dislodge.

In this connection, the observations made by Mr Charan Singh, Agriculture Minister, Uttar Pradesh, on 5 August, while replying to the general debate on the UP Agricultural Produce Marketing Bill are of particular interest since he is considered to have an intimate grasp of agricultural problems. He is reported to have said, "State trading in foodgrains was a colossal undertaking, impracticable in the present circumstances. . . . Hundreds of varieties of foodgrains were produced in the country. The climate, the kind of soil, the terrain and several other factors determined their prices. Transport and storage were stupendous undertakings involving waste and delay. Total procurement and distribution were most difficult problems. . . . Only partial State trading in selected commodities like sugarcane, ground-nuts and tobacco was possible at present. Those who advocated State trading immediately were slaves to slogans. They did not know what they were up against." These are weighty observations and have to be given very careful consideration, if the pitfalls of a hastily formulated policy are to be avoided.

Government has to consider the entire question in a wider perspective in a dispassionate manner without allowing extraneous considerations to creep into the picture. A truly scientific and rational approach free from all bias has got to be applied to the formulation of a price policy if it is to subserve the larger and long-term interests of the consumer, the producers and the trade allowing sufficient incentives to augment production on all fronts within the shortest time possible. The temptation to take recourse to short cuts which are not based on sound economic premises, no doubt, is great but it is to be hoped that the long term interests of the country will not be ignored to win the easy acclaim of the gallery.

South Indian Notes

ON Monday last began, with a surprisingly expeditiousness in the execution of the preliminaries, the family ration system in the city of Madras. It is a measure of the straits to which the majority of the people had been reduced that even the ludicrously meagre ration of one litre of rice and one litre of wheat per head per week is hailed with a visible sense of relief. Whether it is the expectation of an early and considerable increase in the ration or whether it is the break in the hardship of endless and hopeless queuing, it is difficult to say. Groups of families are directed to the nearest shop on one particular day of the week; and though there was some

delay on the first issue of the ration, there should be little of waiting and none of disappointment in the days ahead. Prospects of increase in the ration are not altogether absent, though there would be more of unwanted wheat on offer. Already, there are reports that many consumers are content with taking their ration of rice leaving the wheat in the hands of the dealer. This is somewhat disappointing to those who thought that in the two decades that have passed since the middle of the war, South India has acquired the taste for wheat dishes in its daily menu and that the most of the food problem, namely, the dislike of wheat, would be and of the way. But this assuredly is not so, though the familiar sight of puris and chappatis in the hotels and restaurants would seem to suggest differently. Government for its part is apparently banking on the feasibility of making greater use of wheat as a partial substitute for rice. The Union Food Minister, too, when he was here was very liberal in his allotment of wheat for Madras in the coming months. But in view of the rejection of wheat by many card-holders, of what avail is the Minister's munificence?

The rice position in the South would now seem to call for a fresh assessment. Formerly, Andhra Pradesh was supposed to have a surplus which would be sufficient to meet the deficit of Mysore and Kerala while Madras was, by and large, self sufficient. But in all the States a two-fold pressure on rice supplies has developed, one that is attributable to increase of population and the other to the change in the dietetic habits of the classes which had formerly been consuming the coarse grains on a considerable scale and are now turning to rice as a more fashionable food. If this increased pressure had been offset by greater tolerance, if nothing better, for wheat there would be no serious worsening of the food outlook. If wheat should be so resolutely declined while large numbers in surplus and deficit States alike slough away their old habit of consuming coarser but unquestionably harder foods, then much that is inexplicable about the current shortage would be easily explained on this basis, Andhra's surplus may have been overestimated, Madras' surplus or self sufficiency an illusion and the deficits of Kerala and Mysore much more than can be coped with. But this premise had not been adopted by those in authority. The Andhra Government spokesmen have possibly their doubts about the size of their surplus—they cannot be blind to the change in consumption within their State. But they are quite confident of meeting the needs of the other States in the South—we can no longer talk of them as a zone!—but want to know what had become of the surplus in Madras, the insinuation being that stocks have gone underground and the Madras Government is incapable of getting the trade to disgorge them.

However, the family card system represents the first groping out of the wood. It is a depressing thought that we do not know how deep we are in the wood. But if no premature shout is indulged there should be sufficient sense of gravity to ensure continuity of earnest and energetic steps. Meanwhile, some steps may be taken to popularise the use of wheat in the South. Much of the distaste may be accounted for by the ignorance of the average housewife to make edible chappatis and some mobile demonstration vans may do a good deal to soften the rigours of the food problem.

World of Finance

BANK RETURNS

Again, Currency Contraction

THE third week in November has brought its customary contraction in currency, notwithstanding the fact that notionally the current busy season has already started. The money market at the moment continues to rule easy, but the next week should witness a return to stringent conditions, though it is possible that such tightness will, for the moment at least, prove to be short-lived.

According to the returns of the Reserve Bank for 20 November, Active Note circulation has been marked down by Rs 27.79 crores at Rs 2,432.94 crores, and there has been return of Rupee Coin from circulation in an amount of Rs 1.79 crores. With Foreign Securities unchanged at Rs 85.46 crores, currency has been contracted against Rupee Securities, which accordingly are marked down by Rs 35 crores at Rs 2,446.13 crores. As a result, the Reserve Bank's cash in the till has also been drawn down by Rs 5.43 crores to Rs 20.20 crores.

With Investments in the Banking Department also shown lower by Rs 3½ crores at Rs 120.77 crores, there is the strong indication that the Centre found it possible to cancel ad hoc Treasury Bills before their maturity in a rather large amount; this, however, is not to be found reflected in or confirmed by figures relating to the Centre. For, with the State Governments reporting a small fall only of Rs 0.63 crore to Rs 6.49 crores in their Deposits, and with their ways and means borrowings from the Reserve Bank marked up merely by Rs 1.75 crores at Rs 39.56 crores, it is clear that the States did not make much repayment of loans and Advances. Thus, it is only special transactions which could have so benefited the Centre as to enable it to institute reverse ad hocs in substantial amount. The Centre's balances, it may be noted, are a shade lower by Rs 0.88 crore at Rs 50.84 crores.

There is no significant change in the position of Scheduled Banks vis-a-vis the Reserve Bank. Their Deposits are, it is true, higher by Rs 5.71 crores at Rs 101.60 crores, but this is almost wholly to be attributed to the State Bank; and their borrowings are only a shade higher by Rs 0.45 crore at Rs 1.24 crores.

The Reserve Bank's portfolio of Treasury Bills purchased and discounted is higher by Rs 20 crores at Rs 178.50 crores; and one-third of this may be linked with disinvestment by the State Bank in the relevant week.

Balances Held Abroad have dipped slightly by Rs 0.71 crore to Rs 9.43 crores, and so foreign assets in the possession of the Reserve Bank have just fallen below the Rs 95 crore mark.

The return of the State Bank for 20 November discloses an improvement of Rs 6.60 crores to Rs 672.93 crores in Deposits; this level is about Rs 2½ crores lower than Deposits were

as on the last day of October. Since it is known that the State Bank has made over this month a sum of Rs 8 crores representing PL 480 funds in course of being transferred to the Reserve Bank, the conclusion is clear that the State Bank has actually experienced an improvement of about Rs 5½ crores in resources in the first twenty days of the month. The total of Advances has crept up by Rs 1.65 crores to Rs 344.02 crores. Adjustments as between Other Assets and the giltedged portfolio continue to be made, with the former showing a rise of Rs 6 crores odd to Rs 51.88

PL 480

New Revelations

The Weekly Statistical Supplement to the Reserve Bank of India Bulletin dated 21 November vouchsafes, in a note to Table 3, the following information:

"Under a fresh arrangement, transfers of Rs 40 crores out of the existing PL 480 deposits with the State Bank of India to the Reserve Bank of India are to take place in monthly instalments of Rs 8 crores each, commencing from November 1964. Of the first instalment, Rs 6 crores were transferred on November 2 and Rs 2 crores on November 10. Subsequent transfers would take place in the first week of each month."

The Reserve Bank of India Bulletin for October 1964, in Table 3, indicates that aggregate Deposits of all Scheduled Banks as at 25 September were placed at Rs 2,518.76 crores; and according to Table 3A, aggregate Deposits of all Scheduled Banks excluding PL 480 and PL 665 Deposits as on the same date were shown at Rs 2,501.72 crores. Thus, according to the RBI Bulletin figures, counterpart funds with Scheduled Banks were no more than about Rs 17 crores as on the last Friday in September; and yet the State Bank did possess, as at the beginning of November, something more than Rs 40 crores of such PL 480 Deposits. Furthermore, there have been no new accruals with the State Bank since May 1960. There is here an apparent contradiction, which we shall in a future issue be attempting to solve.

crores and with the latter declining by Rs 7 crores to Rs 280.08 crores. The consequence of all these changes is that cash balances, including money at call and short notice, are better by Rs 5.83 crores at Rs 34.96 crores.

The statement of Scheduled Banks for 13 November records a welcome increase in resources. Net Demand Deposits are marked up by Rs 5.13 crores to Rs 1,340.74 crores and net Time Deposits by Rs 4.54 crores to Rs 1,372.88 crores. The State Bank's share in this new accretion of nearly Rs 10 crores is a little over Rs 1 crore. The total of Advances has contracted slightly by Rs 4.79 crores to Rs 1,739.56 crores, and half of this decline is

traceable to the State Bank. Giltedged holdings are higher by Rs 7 crores at Rs 819.58 crores, but with the State Bank in that week having effected purchases for Rs 12 crores, it is clear that other Scheduled Banks sold securities for about Rs 5 crores. Debt to the State Bank has been cut by Rs 3.03 crores to Rs 38.57 crores, and borrowings from the Reserve Bank are also shown lower by Rs 2.77 crores at Rs 2.27 crores. The end result is that cash balances, including money at call and short notice, have been added to by Rs 6.39 crores to be placed at Rs 267.23 crores—and here again it is noteworthy that, with the State Bank reporting a fall of something over Rs 4 crores in cash in that week, the other Scheduled Banks added to their balances by upwards of Rs 10 crores.

RBI

New Loan Formula

The Reserve Bank has modified the formula to govern the rates of lending by the Reserve Bank to Scheduled Banks. Hitherto, the net liquid assets position of banks was computed on the basis of their holdings of cash, balances with the Reserve Bank and the balances in current account with the State Bank of India, notified banks and other banks and investments in State and Central Government securities less borrowings from the Reserve Bank of India. Investments in "other approved securities" were, however, not included for purposes of computing the net liquidity ratio. The Reserve Bank has received representations from both banks and the authorities whose issues comprised "approved securities" that banks have been reluctant to subscribe to bonds floated by these authorities. In view of this, the Reserve Bank has decided to include, with effect from 1 December, 1964 "other approved" securities in computing the net liquidity position. However, to preserve the essence of the credit control formula, it has also been decided to exclude from the total of liquid assets of banks, in addition to their borrowings from the Reserve Bank of India and the State Bank of India, also their borrowings from the Industrial Development Bank, as the last partakes of the character of borrowings from the central banking institution.

SYNDICATE BANK

200 Branches

The Directors of the Syndicate Bank have announced that the assets and liabilities of Sri Ranga Raja Bank Ltd, Mettupalayam and The Kothamangalam Namboodiri Bank Ltd, Quilandy will be taken over by the Syndicate Bank Ltd on 23 and 26 November 1964 respectively. Sri Ranga Raja Bank Ltd and the Kothamangalam Namboodiri Bank Ltd will be the 18th and 19th Banks taken over by the Syndicate.

Sri Ranga Raja Bank Ltd was incorporated in 1922 with its Registered Office at Mettupalayam (Madras State). The Kothamangalam Namboodiri Bank Ltd was incorporated in 1929 with its Registered Office at Quilandy (Kerala State).

The South Travancore Bank Ltd, Neyoor will also join the Syndicate Bank shortly.

The Directors of the Syndicate Bank Ltd announce that two more branches of the Bank will be opened at New Delhi and Alwal (Andhra State) on 7 December 1964. New Delhi branch will be the first branch of the Bank in the Capital. With the opening of the Alwal Branch, the Syndicate Bank will have one more branch in Andhra State raising the total number of branches in the State to 23.

The Bank is also opening one more branch in the Capital at Old Delhi shortly.

The South Travancore Bank Ltd, Neyoor (Kerala) will join the Syndicate Bank on 9 December 1964.

This brings the total number of branches to 200.

COLOMBO PLAN

Increased UK Support

The British Government pledged on 20 November to make available £15,000,000 for technical assistance to developing countries in the Colombo Plan region from 1966 to 1971—an increase of 50 per cent on the present level.

The period 1966-71 is the further term of five years by which the Consultative Committee of the Colombo Plan, meeting in final session in London last week, agreed to extend the operations of this international scheme of economic co-operation between countries in South and South-East Asia.

The announcement of Britain's increased support came from Lord Walston, Under-Secretary of State for Foreign Affairs and deputy leader of the British delegation, in the closing stages of a discussion on technical co-operation.

Lord Walston said that the £15,000,000 represented an annual rate of £3,000,000, compared with £2,000,000 devoted by Britain to technical assistance under the Colombo Plan during the past year.

He recalled that Britain's contribution in this field had grown steadily from £45,000 in 1951-52 to £1,000,000 in 1957-58, and to nearly £2,000,000 this past year.

He described the proposal to provide £15,000,000 as "a concrete expression of our belief in the importance of this form of training".

Lord Walston also detailed other ways in which Britain proposed to help with technical assistance.

"We have appointed to Oxford and Cambridge Universities six economists who are available for overseas missions," he said. "The National Agricultural Advisory Service of the Ministry of Agriculture, Fisheries and Food has agreed to increase its establishment so that it can release up to 24 experienced officers for service overseas as needed, with another six from the Scottish Advisory Service—a total of 30 altogether."

In a speech at the closing public session, the chairman, Mrs Barbara Castle, Britain's Minister of Overseas Development, underlined the fact that the personal contacts established during the meeting had been "the key to real understanding" of peoples and problems.

Mr B. R. Bhagat, leader of the Indian delegation, said that the decision to extend the Colombo Plan for another five years was "a right one because we are in the latter half of a development decade and it is a very crucial period. I expect the Plan to play a vital role."

GLEANINGS

The New Busy Season

[Banks are exercised about the strains likely to be posed during the 1964-65 busy season. Their views are summed up in the following extracts from Bank of Baroda's Weekly Review for 20 November.]

Banks are approaching the current (1964-65) busy season with extreme caution. The Reserve Bank of India by imposing severe credit control on schedule banks about a month before the commencement of the busy season has left them in no doubt that their recourse to the lender of last resort should be only marginal. The major burden of meeting credit needs will have to be borne by banks themselves with their own resources. In this context a study of important banking trends during the 1964 slack season assumes added significance. Preliminary reports of this year's agricultural production, particularly of cash crops like cotton and groundnut, are very encouraging. Industrial production is also gradually picking up. The inflationary pressure in the economy is still out of hand. All these factors are likely to make a heavy demand on bank credit. It is earnestly hoped that the Reserve Bank and the banking system will work in the spirit of mutual co-operation and adjustment, keeping in view the larger interests of the economy. They should join hands in ensuring that no productive economic activity would suffer for want of adequate, timely and reasonably cheap credit.

With the liquidity ratio standing around 44 per cent of the demand and time liabilities, scheduled banks can borrow upto Rs 150 crores at Bank Rate. However, this conclusion is misleading because of the fact that the State Bank of India usually maintains a very high liquidity ratio. During the last slack season it fluctuated between 45 and 50 per cent and even at the height of the last busy season it did not slip below 40 per cent. Banks in the private sector operate on a thin cushion. Actually some banks may even find it difficult to maintain their liquidity at the statutory minimum. Diversion of resources into Government securities in order to raise the liquidity position above the minimum will limit

the private sector banks' capacity to expand credit in the busy season.

With the easing of pressures on the banking system, easy conditions prevailed in the money market, particularly in the latter part of the slack season. It is usual for the inter-bank call money rate to harden as the busy season approaches. Contrary to this tendency, the call money rate ruled at the low level of 0.73 per cent in Bombay at the end of the slack season as against 1.86 per cent during the corresponding week of the 1963 slack season and as high as 4.54 per cent at the end of the 1962 slack season. However, the call money rate in Calcutta was 1.64 per cent compared with 1.49 per cent last year.

It is very difficult to predict what will be the trend in credit expansion in the current busy season. Although traditionally the busy season commences from November, the banking trends in recent weeks hardly reflect the season's buoyancy in bank credit, heralding the onset of the busy season. The experience of last two busy seasons suggests that it may take a few weeks for bank advances to reflect the season's vigour. During the last busy season credit expansion touched an all-time peak of Rs 377 crores. The busy season expansion in 1961-65 may be somewhat lower, say around Rs 350-375 crores and the Reserve Bank's share in financing credit expansion will be considerably smaller compared with last year's peak of Rs 110 crores. It is believed that the enforcement of the minimum liquidity provision may sizably increase inter-bank borrowings which were of the order of Rs 20 crores or so in March 1964. Should the trend in agricultural and industrial production show significant improvement, the central banking authority may have to decide to relax somewhat its dear money policy. For a variety of reasons banking trends in the current busy season would have to be watched very closely.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 24 November, 1964. Total amount offered was Rs 2,05,00,000. Tenders at Rs 99.410 per cent were accepted in full. Lower tenders were rejected. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.360 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 30 November, 1964. Successful tenderers should make payment on Friday, 4 December, 1964 at all centres. Other conditions are as usual.

Notes of the week

COLOMBO PLAN Fresh Lease for Five Years

The Colombo Plan Ministerial Consultative Committee's decision to extend the plan for another five years does not spring a surprise in view of the general economic backwardness of the region covered by it. During the past fourteen years of its existence, the plan has been instrumental in one way or another to bolster the economic development of the countries in South and South East Asia. There has been a significant spurt in agricultural production in the member countries and the upward thrust in industrial growth has been expedited. This has been largely achieved by the assistance the region received from the more affluent and generous countries like the US, the UK, Canada and New Zealand. It is, however, disturbing that despite these efforts the region has to make considerable leeway in giving its economy any sort of respectability when compared to other advanced countries of the world. The report of the committee has rightly indi-

cated the danger of adopting any complacent attitude in this regard. Unsurprisingly the report runs on expected lines.

The conference in London has expressed concern at the inherent weakness of the countries belonging to this region in international trade and the galloping population explosion which almost nullifies the effects of gains of growth. Naturally the region will have to depend for a considerably long time on external help for implementing its numerous development programmes. While appreciating the financial needs of the countries, the report has brought to the fore the urgency for liberalising the terms and conditions pertaining to loans by the donor countries and for finding out ways and means for stepping up such assistance. The report has correctly drawn attention to the necessity for expanding the exports from the region with a view to achieving a stable growth in the developing economies. In this context, the report suggests the stabilisation of the prices of primary commodities at reasonable levels and making further inroads into world markets by the region. The decision of the conference to accord top priority to agricultural growth in the region and the willingness of affluent countries to participate in a big way in the economic development of the countries covered by the plan are heartening.

However, as evidenced by the pattern of aid utilisation in India, which is the biggest beneficiary of the plan, untied assistance is utilised more effectively than aid which is earmarked for specified projects. Though there has been quite recently a moderate improvement in the proportion of non-project aid, bulk of the assistance still continue to be tied to purchases from the donor countries. Besides, there is a greater need for wider recognition of the fact that development loans worth the name should be extended on terms that will not impose severe burden of repayment on the recipient countries.

★

RURAL ELECTRIFICATION

A Welcome Measure

The official announcement at the recently convened meeting of the informal consultative committee of Parliament attached to the Ministry of Irrigation and Power that

the terms governing the loan assistance to the State Governments for rural electrification will be liberalised will be widely acclaimed. Rural electrification can, undoubtedly, provide a real boost to the agricultural output and go a long way in bringing about a technological revolution in those areas. It is a known fact that the fruits of planned development that have percolated to the mofussil areas are pretty meagre and despite the abundant scope in many of our villages for setting up small industries, the non availability or insufficiency of electricity has been a major impediment in making any sufficient progress in this sphere. Inevitably the unemployment problem in villages worsened further and they remain as a drag on the economy of the country.

In the circumstances, the gains that will derive from the completion of rural electrification programme will be enormous. Setting up of a few industrial units in the small scale sector in the villages and small towns will part from providing greater employment opportunities result in the diversification of the rural economy. Besides, it can, to a great extent, discourage the migration of people from the villages to the adjacent towns and cities which are already overcrowded.

The decision seems to have stemmed from the Government's awareness of the fact that this important segment of the country's economy has hitherto been more or less neglected. The acceptance of a programme for electrifying one lakh villages by the end of October 1969 at the ninth seminar on Irrigation and Power is a step in the direction. Under the revised terms, loans to the State Governments will be repayable over a period of thirty years, in twenty five instalments, commencing from the sixth year. Such loans, it is encouraging, will not carry any interest in the first five years. The new scheme of lending will certainly give a new impetus to the rural electrification programme but the success of the scheme will largely hinge on the earnest and energetic measures that will be initiated by the State Governments in this regard.

★ COOPERATION Retreat?

The Standing Committee on the Industrial Truce Resolution,

which met last week in Delhi, is reported to have recommended early enactment of legislation making it compulsory for all commercial and industrial establishments employing more than three hundred persons to set up fair price shops for essential commodities. While this is an improvement on the scheme formulated at Bangalore for payment of wages in kind—a proposal capable of throwing industrial relations into complete disarray—the obligation to operate fair price shops will impose a burden which few employers will be able to carry in their stride.

Employers were asked to open fair price shops, two years ago, in the wake of the Emergency. The difficult problem of supplies, and not lack of will, has been the main reason why not many establishments have been able to implement the proposal. Compulsion is not a satisfactory way of resolving the real difficulties of maintaining adequate supplies to the shops, and at prices which will not impose a burden on the employers and thus add to their costs.

When there is so much talk of the need for developing co-operative enterprises in manufacture and marketing, it is not clear why in this field, which appears to be eminently suited for co-operative societies, employers should be burdened with an additional responsibility. Does it mean that Government is disillusioned with the working of co-operative organisations? And if that is the case, can we expect a shift in the policy of co-operative societies in fields where problems to be overcome are more complicated than in the distribution of consumer goods such as, for instance, agricultural production?

★

TOBACCO

Falling Demand

It is only to be expected that our tobacco exports will become increasingly difficult because besides growing competition from other producers, world demand for the commodity itself has suffered a setback following the verdict of a section of scientists linking tobacco with the occurrence of cancer. Perhaps it will be some years before a sizable reduction in consumption of tobacco takes place but there are already indications that increasing emphasis will

be placed on quality. The present large surplus in India has however stemmed from other factors also. In the first place, there has been a sizable rise in production last year as growers especially in Andhra Pradesh have brought additional acreage under the crop under the mistaken impression that world demand would continue on the same level as in the previous year when largely because of a fall in production in some of the tobacco growing countries, consumers placed larger orders than usual on India. Another important reason for the accumulation of stocks with growers in our country is that there has come about a change in the pattern of overseas demand. Consumption of filtertipped cigarettes in foreign markets is increasing fast and consequently there has been a fall in the demand for relatively lower grades of tobacco.

While it is gratifying that thanks to the concerted efforts taken to tap both traditional and new markets, a major portion of last season's crop will be satisfactorily disposed of, the fact remains that if a similar situation is not to recur, remedial action has to be initiated without delay. An important point to note is that production is to be related to world demand and in this view attention has to be paid not only to quantity but quality also. The Committee set up by the Central Government to suggest measures to clear accumulated stocks with growers has also made a number of recommendations which if implemented will go a long way toward eliminating unwanted surpluses.

★

COTTON

An Intriguing Trend

The cotton futures market has recently developed an intriguing trend and the Jarilla March contract on Monday last has pierced the permissible limit of Rs 775.00 at which level official trading came to an automatic halt. The steep upsurge in the price of cotton future at this time of the season, which was occasioned by sustained bull support and nervous short covering, generates at once surprise and dismay to all concerned as the current cotton supply position does not warrant such a disturbing development. The bullish wave that has been sweeping the market during the past few weeks stemmed mainly from the apprehension of a possible scarcity in cotton consequent on the reports of damage to the crop in centres such as Khandesh, Berar and Punjab owing to uncongenial weather conditions and the possibility of restricted cotton imports during the current season because of foreign exchange difficulties. Aside from these, the arrival of cotton into the markets is so meagre that traders swoop on whatever is available even at runaway prices. The uptrend in cotton consumption by the mills is another factor which generates panicky conditions in the market.

Whatever may be the causes that have let loose the inflationary forces in the market, one thing is certain that if the current pattern of price increase is permitted to go unchecked the objective of bringing down cloth prices within the reaches of the common man will get defeated. The Indian Cotton Mills' Federation was swift in drawing the attention of Government for adopting requisite remedial measures with a view to curbing the rigging of prices in cotton or alternatively to refix the rates of controlled varieties of cloth on the basis of the current prices. The Federation has taken a grim view of the tendency in prices scaling the official ceiling at every time the ceiling is revised upward. Such a development can be attributed to the speculative activity which could have been timely checked had the authorities been exercising a strict surveillance over the market. There is, however, a lurking fear in some quarters that cotton supply position will deteriorate in future due to factors like limited imports and

growing spinner demand. An announcement in this regard from the authorities to clear this misconception will be of enormous help in allowing the trade and industry to set their heart ease on this matter.

CMA

Bitter Taste?

The confectionery industry in the country is currently passing through a critical phase of its career owing to a coalescence of factors which are beyond its grip. Already the confectionery manufacturers are experiencing the adverse impact of the progressive enhancement in the production cost and inadequacy of essential raw materials. To add to this catalogue of troubles, Government has totally stopped the sugar allotments to the various confectionery units in the organised sector which has eventually led to the closing the doors of many units while others are confronting imminent

closure. In a telegraphic representation addressed to the Union Food Ministry and also to the Food Development Wing of the Directorate General of Technical Development, New Delhi, the Committee of the Indian Confectionery Manufacturers Association, Calcutta, has apprised the authorities of the deleterious effects which will ensue from such a drastic measure and urged for immediate action to ensure them adequate supply of sugar. The Committee has also drawn the attention of Government to the fact that sugar allocation by the State Governments to the factories has been far from satisfactory with the result that the industry has been compelled to live with idle capacity which has been installed at considerable foreign exchange. The Committee has deprecated Government action in imposing this unnecessary burden on the industry especially when the sugar production in the current season is expected to touch a new high thanks to the bumper sugarcane crop. To enable the industry to

maintain the current trend in output, the Committee suggested that Government should make direct sugar allotment to the units in the organised sector in adequate quantities. As an alternative it has requested the fixation of specific quotas to the different manufacturing units which the State Governments will allot to the industry. Will the authorities adopt the requisite measures for helping the industry to tide over the current situation?

*

GOA A Bone of Contention

Apart from the dispute over Marathi taluks in Belgaum there is another dispute looming. The future of Goa is now discussed by Mysore as also Maharashtra on linguistic affinity. A truce to debate was advised by Mr Patil but the Maharashtrian leaders side with the Goa ministry which wants a merger in Maharashtra. The idea of local option has not been

approved by the Mysore Congress which thinks that Goa must be added to the Kannada States. This too goes against the Bombay view. What is forgotten is that Goa has to be integrated as a territory and the future of Diu and Daman also must be settled. The Union Government has assumed responsibility for Goa but the contiguous States seem to be irked by Central control. This is deplorable, because the example of Pondicherry—outside Madras—has been ignored and the politics of the States intrudes into the arguments, for the communists see only a chance to work up a big agitation over Goa.

The development of Goa's iron ore trade seems more important now to the Centre and regular export to Europe as also Japan is part of the foreign trade programme. The restoration of a flourishing port is all the more necessary for increasing trade and the chances of a steel plant coming up in Goa are spoilt by the harsh argument about Konkani in relation to Kannada. The dangerously easy lapse into the lingu-

istic controversy is connected with the Mysore Congress ministry's readiness to divert attention from other complaints.

The promise of Mr Nehru to Goa that for ten years to come the Centre will maintain local autonomy must be kept and no rift between Hindus and Christians must develop. There should be no handle for complaints from abroad and this too is forgotten by the Mysore Congress that seems to think Goa—as a part once of the Bijapur kingdom—must revert to Mysore. Since history is a meadow in which anyone can make hay it is inopportune to appeal to the past. Goa must not be pressed to join either of the adjacent States. The local ministry got into office by almost a fluke and its views cannot be the basis for any final decision as to merger. The waiting must be taken as inevitable, for one may point to Kashmir which is not fully a part of India as yet in the legal sense. There is no real or urgent issue as to merger and the take-over tactics may even encourage anti-Indian elements in Goa or India.

THE BENGAL FLOUR MILLS CO. LTD.

NOTICE is hereby given that the Board of Directors has today declared an Interim Dividend of 10% (subject to deduction of Income Tax) on the shares of the Company in respect of the year 1964. The dividend will be payable on or after 18th December, 1964 to those members whose names are entered in the Register of Members of the Company on that date. Dividend Warrants will be despatched to members and no application to the Company is necessary.

NOTICE is also hereby given that the Register of Members of the Company will be closed from 4th December, 1964 to 18th December, 1964 both days inclusive.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as
the wind
To blow on whom I please"
—As You Like It

Suddenly last Saturday, a rumour was spreading like wildfire in banking circles that an announcement was imminently to be expected about methodology for banks to permit depositors to draw on their accounts. The way I heard it, the intention of the authorities was apparently that no depositor would be able to withdraw money unless he produced some sort of income-tax clearance certificate. To me, this seems as if, every time Reserve Bank blows hot, the Centre promptly seeks to redress the balance by blowing cold. For, if there could be any announcement or any measure which could better retard the growth of the banking habit, well, I, for one, cannot think of any. I can appreciate that the Central Government is much exercised over the problem of black money in circulation. Such money is doubly cursed. On the one hand, it represents individuals who, by evading tax, are cocking a figurative snook at the Government. On the other, the ownership of such unaccounted money enables such individuals to indulge in transactions the impact of which is such as to give a further impetus to the already rising trend in prices. Hence, the series of searches and investigations that we have had in recent months, beginning prominently with raids on the film stars in Bombay. I admit it would be good for the economy if all black money could be ferreted out and if such resources could be enabled to support worth while industrial production instead of being used, as at the present time it often is, for the financing of the speculative withholding of stocks of commodities in short supply. But, as I had written on an earlier occasion, an unearthing of the present hoards is no guarantee that further black money incomes will not accrue. Increased production, so that supply and demand are better in balance; lower tax rates on the individuals, so that the incentive for or the attractiveness of tax evasion gets reduced; and a minimal of controls, so that the scope for black market activity that the controls themselves make possible and give birth to—this is the set of measures which alone can ensure that the parallel money market gets slowly obliterated. To return to the present context, admittedly there is money deposited with the banking system under fictitious names—but at least it now

serves the useful purpose of being available to the organised sector of the money market for financing productive enterprises. In the face of such a threat as we have just heard, it is possible that withdrawals or closing of accounts are not a few. I would suggest that the present safeguard, of the requirement that the bank must report accounts on which it pays annual interest of Rs 400 or more should suffice as a check-point for large-scale tax-evaded cash kept with banking system. What we want, let us remember, is the fostering of the growth of Deposits with banks—not something which will induce, on the other hand, defections from the organised money market.

*

I have been following with keen interest the debate, both in Parliament and outside of it, on whether or not, in consequence of China joining the nuclear club, India should aspire to develop the atom bomb. My first reaction has been that in line with the great tradition for working for peace, India should not entertain any thought of producing or building up an arsenal of atomic weapons. However, second thoughts are unsettling. This is because we now are apparently at the hapless mercy of the whims and caprices of a fanatic and belligerent neighbour which possesses the atomic bomb. I am not sure, either, that we can with great conviction rely upon the threat of American reprisal acting as a deterrent. Again, it may be a bit late for us to give up the policy of non-alignment and to seek protection under America's nuclear umbrella. Thus, the only deterrent to China can be if we ourselves had the means of, if not massive, at least adequate retaliation.

*

By so doing, let us remember that we would be able to continue with our policy of non-alignment while at the same time strengthening ourselves to meet or to deter aggression from without. At the time of the emergency in the autumn of 1962, this country was prepared enough for sacrifice in the form of additional taxation in order that our national integrity was defended. I suggest that the menace to our sovereignty is now the greater and that, therefore, we should now be in a position willingly to provide the funds for

the development of the atomic bomb as well as its production and stockpiling in adequate measure. In the short run, admittedly, such a proposal would involve the marshalling of resources in more substantial measure than at the present time. In the long run, surely it would be possible to effect economies in the traditional Budget for defence—that is, we need not have as large an army as we now have to maintain. However, our stumbling block will still remain finance. For, politically and otherwise India can ill-afford to slow down its development programme. Consequently, apart from any little dosage of taxation that it may still be possible for the tax-paying public to bear, there are two avenues for financing—and I am ruling out foreign aid for this purpose. One is to improve tax collection such that the yield at current rates is substantially larger. The other is to effect economy in the cost of civil administration. But, before a decision in this regard can be taken, we have to be clear in our minds as to what exactly will be involved financially if we are to proceed with building an atomic bomb of our own. It seems to me that we need urgently at the highest possible level to investigate this aspect of the matter. If Dr H. J. Bhabha is right, then it is possible that the additional resources that

we have to find are not too awesomely high. In any case as a last clincher for having an India-made atomic bomb, let me suggest that it will restore to this country prestige which had so woefully been lost in the autumn of 1962.

*

The annual pilgrimage to India has started. Winter (or fall, as the Americans prefer to call the season) does not, in the West, provide the most comfortable of weather; and this country, on the other hand, is then at its best. Thus it is that by the middle of November there begins a steady stream of distinguished visitors. Bankers, industrialists, Government officials—you name them, we'll have them. What I am sorry about this year is that, should these our visiting friends rely only on newspaper reports, they would be carrying away the impression of an India in dire straits. Food shortages and food riots; charges of corruption and corruption trials; student unrest and student misbehaviour; is this the true India that we live in today? Far from it, of course. But I fancy we are quite talking ourselves into crises of various sorts. It is, I suggest, high time that we started to soft-pedal our shortcomings and instead began to trumpet our achievements.

EAVESDROPPER.

Exporting just any goods from our end does not foster trade with other countries. The goods must be acceptable in the highly competitive market—in quality and in price. Timely supplies, their conformity to the customers' specifications and after-sales service facilities are also important so that further orders are placed from the other end and the business deal is brought to a sound conclusion.

This two-way operation becomes a sustained affair only when every manufacturer endeavours to introduce quality control in production and raw material selection, conforms to high standards and specifications, employs modern techniques of manufacture, adheres to promised schedules of delivery and offers after-sales service.

This Council is equipped to render engineering goods manufacturers every help and assistance in promoting their export.

ECONOMIC FREEDOM THROUGH EFFICIENT BANKING SYSTEM

The development and progress of banking in India during post-Independence years is a pointer to the irrefutable fact that an efficient banking system is the *sine qua non* of economic freedom.

Ever since its inception, Canara Bank has worked silently but ceaselessly by inculcating the banking habit in urban as well as rural areas, meeting the demands for development of trade, commerce and industry and helping people to achieve financial security through better financial management.

The earnestness of Canara Bank to make economic freedom a *fait accompli* finds expression in the diverse services offered by Canara Bank to promote 'better living through better banking' and to improve the social and economic conditions of the people and the country.

Sympus - A Letter from Delhi

Food Corporations Bill

THE progress of the Food Corporations Bill which was taken up for consideration in Lok Sabha, last Friday, was held up for want of quorum after the debate had lasted five and a half hours. The schedule for the passage of this Bill through various stages had necessarily to be extended as a result of this unexpected roadblock. The absence of the members cannot be attributed to indifference on their part to the subject under discussion. Earlier in the day many members had expressed desire to speak on the Bill and had even suggested extension of the time allotted for the discussion which was scheduled to conclude on Saturday. At a Congress Parliamentary party meeting, on the following Monday, some members are understood to have taken strong exception to the manner in which the Bill was introduced without giving the party the opportunity of discussing its provisions in detail. Objections to the procedure adopted in introducing the Bill may not be tantamount to opposition to the provisions of this important legislation. But the delay that has occurred has raised doubts in some quarters whether the Government could count on the active support of the party in implementing its long term food policy. The setting up of the Food Corporation is one of the essential steps in the implementation of this policy. Until the Corporation gets going, Government's policy on the food front will continue to be what it has been in the recent past, a series of hand-to-mouth improvisations.

Speaking on the motion for consideration of the Bill, Mr Subramaniam has stated that the Corporation was the Government's main instrument for protecting the consumer from the exploitation and vagaries of speculative trade. It must function as an essential limb in the integrated set up of Centre and State Government machineries for the implementation of an all India food policy. He also made it clear that, if circumstances warrant a necessity of resorting to the powers of requisitioning under the Essential

Commodities Act or the Defence of India Act, such action will be taken.

The Minister has also expressed the hope that the Corporation would effectively protect the producer against the cyclic and seasonal fluctuations in prices and ensure that he gets a steady return which would also act as an incentive for increased production. Whilst immediately the Corporation will be expected to concentrate on the discharge of its primary functions of trade in food grains, Government envisages that, in due course, the Corporation should play a wider role in the achievement of increased agricultural production. It may then be necessary, the Minister explained, for the Corporation to take the lead in the matter of modernising agriculture by introduction of mechanisation, attention to subsidiary foods, food processing etc. It is only a corporation of the standing and resources as now being set up that can effectively achieve success in this direction, he said.

With the initial capital Rs 100 crores and the borrowing facilities that would be available to it, the Corporation, the Minister said, should be in a position to start and conduct operations in the Southern Zone where its activities will be largely confined to start with. In due course Corporation will extend its sphere of operations to other areas and take on additional responsibilities, including procurement of supplies from abroad.

The objectives of the Corporation, the Minister said, could not be achieved unless it is able to secure the active and continued co-operation of the State Governments and the participation in a big way of the State Government machinery. With this object in view provision has been made in the Bill for setting up either Boards of Management or State Food Corporations, depending on the advice and wishes of the particular State Government concerned.

The Corporation will be expected to use the credit mechanism to ensure that the farmer is able to meet his requirements of seeds, fertilisers etc. In due

course the Corporation would undertake the supply of these productive inputs along with credits to those farmers who enter into suitable agreements with the Corporation.

Assistance for Rural Electrification

The Minister for Irrigation and Power is understood to have told the Informal Consultative Committee of Parliament that the Government has decided to liberalise the terms for rural electrification. Under the revised terms, the loans will be repayable over a period of thirty years. No interest will be payable in the first five years. The principal and interest will be recovered in 25 equal instalments every year from the sixth year. The State Governments have also been requested to pass on the loans to the State Electricity Boards without charging higher rates of interest.

This decision has been taken with a view to increasing agricultural production. The step is expected to facilitate extension of electricity to rural areas and its utilisation for irrigation.

Several members are understood to have welcomed this decision of the Government. They also stressed that rural electrification should not be regarded as a commercial venture, but as a social service scheme in the same way as health and education are dealt with in a big way. It was also suggested that measures should be taken for building up resources for the purpose, including ear-marking a portion of the electricity duties realised by the States and the levy of a cess on industries.

Petrochemicals-Competitive Interest

Mr O.V. Alagesan, Minister in the Ministry of Petroleum and Chemicals, who returned last week from a tour of United States, Canada and Japan, told a press conference on Sunday that leading firms in the countries visited by him had shown "competitive interest" in the development of petrochemical industries in India. Discussions were held with special reference to the industrial com-

plex proposed to be developed round about the Koyali refinery. The Minister indicated that a joint offer had been made by US and a British firm for the establishment of a petrochemical complex comprising naphtha cracker, plastics, synthetic rubber and manufactures of intermediate products. The total cost of the project would be about Rs 55 crores, with a foreign exchange component of fifty per cent. The Minister also stated that while a Japanese firm had shown interest in setting up a unit for manufacture of solvents and resins, a Canadian firm would be sending out a team in January to study possibilities of setting up a synthetic rubber plant.

As regard the pattern of capital participation, Mr Alagesan said that Government would like to retain controlling interest in manufacture of intermediate and finished products may be left to the private sector.

A similar policy would be followed in the manufacture of nitrogenous fertilisers also. This had been made clear to the parties concerned in the course of the talks he had in the USA. In this connexion he referred to the Bechtel Corporation's proposal for putting up manufacturing capacity for one million tons of nitrogen. Several field teams are already in India carrying out feasibility studies, and, from the fact that they are continuing these studies, it may be assumed that they may not be averse to Government retaining the controlling interest. In this connexion the Minister pointed out that a wrong report of General Clay's views on the subject had received wide publicity. What General Clay had actually said was that it was immaterial whether Government held fifty one, or fifty two or fifty three per cent of the shares.

Mr Alagesan referred to the revolutionary changes in the technology of manufacture of ammonia, which enabled production of 1000 tons of ammonia per day in one stream as compared with 200 tons through older processes. The change has resulted in a marked reduction in the cost of production of ammonia as well as of fertilisers. The Bechtel Corporation's proposals, the Minister said, would incorporate the new technology.

The Minister also referred to some other interesting proposals for manufacture of Triple Super-Phosphate, based on imported phosphoric acid. Concrete proposals are expected to be received in this regard.

The Minister also stated that one US Company would be sending its men for talks on offshore exploration off the Cormandal coast, in the second week of December.

The rationale of the regulatory measures that had been taken for developing the exports of "Bleeding Madras", were explained in a statement placed on the table of the House in answer to a question in Lok Sabha last week. The exporters, it was pointed out, are finding it difficult to cope with the large orders received for this fabric from the United States, as the demand is far greater than the handlooms are in a position to supply. The production is continuously increasing as can be seen from the figures of exports. Almost all the production is exported.

While all steps are being taken to maximise production—handlooms have been earmarked in Madras and Andhra Pradesh for producing this fabric and more handlooms are being brought under production in these areas—Government have also introduced certain measures for regulating exports so that long term stability is assured. The measures undertaken are: (i) quality control (ii) pre-shipment inspection (iii) registration of contracts (iv) stipulation of floor and ceiling prices and (v) allotment of quotas to competent established importers.

These measures have ensured stable prices in the interests of both India and the importing countries. Before these regulatory measures were enforced, speculative tendencies and widely fluctuating prices and indifferent quality had led to the loss of export markets in the years 1960 and 1961. As a result of these measures the market has again revived and is expanding.

There has been a substantial and continuous increase in the export of Bleeding Madras over the last several years. The exports in recent year were as under:

Year	Yards Lakhs (approx.)	Approximate Value (Rs lakhs)
1959	69	132
1960	5	10
1961	18	39
1962	76	190
1963	127	307
1964 (estimated)	160	384

International Organisation for Standardisation

Sir Jehangir Ghandy, Director, Tata Sons, was elected president of the ISO for a three-year term beginning January 1965, at the concluding session of the Sixth General Assembly of the Interna-

tional Organisation for Standardisation, on November 21. Sir Jehangir brings to his office a rich and varied experience of the steel industry with which he has been actively associated for over four decades. He has also made valuable contributions to the development of scientific and industrial research and to the progress of technical education and training in this country. He has been connected with the ISO and the Indian Standards Institution for the last ten years.

In his acceptance speech Sir Jehangir made a reference to the 'Development Decade' and pointed out that adoption of standardisation techniques was as necessary as external assistance for the achievement of economic growth and prosperity.

During this session, an ISO sub-committee was set up to deal with the question of stimulant foods—tea, coffee and cocoa—which is of

special interest to India. The Secretariat of the Sub-committee has been assigned to India. The Sub-committee at its first meeting constituted three working groups to deal specifically with the subjects of tea, coffee and cocoa.

Among the significant results achieved by the Conference is the creation of new technical committees to deal with (a) Measurement of liquid flow in open channels; (b) Time measurement instruments; (c) Test methods and accepted tests for pumps; (d) Performance testing of space heating appliances; and (e) Method of testing industrial fans.

A new Coordinating Committee, DATCO, for standardisation in the writing of dates was also constituted. These committees are in addition to the 108 existing technical committees of ISO. Since June last ISO has approved 80 International Recommendations.

Bhilai Steel

The Bhilai Steel Works produced 104,707 tonnes of finished and semi-finished steel products during October, 1964. These included 31,570 tonnes of rails and structural, and 25,142 tonnes of merchant products which were twelve and thirteen per cent respectively more than the monthly rated capacities. The Billet Mill rolled 47,995 tonnes of billets during the month.

Pig iron (hot metal) production during the month under review totalled 100,817 tonnes which was also seven per cent more than the monthly rated capacity of the shop. The production of ingot steel during the month was 91,800 tonnes which was also eight per cent more than the monthly rated capacity. Blooming Mill of the Steel Works rolled 89,254 tonnes of blooms and slabs during October.

Three new daily production record were also set up in the Steel Plant during October.

what is the problem, sir?

If it has anything to do with banking services — and particularly if it relates to help and guidance for developing INDUSTRIES or developing IMPORT-EXPORT BUSINESS — we would cordially suggest a reference to us.

THE BANK OF INDIA LTD., has had over 50 years' experience of trade, finance and industry — it is at the disposal of our customers.

Market NEWS and Trends

JUTE

Outlook for Gunnies

Although the overall trend in the jute goods market during the week under review has been quite steady, there are however indications that the undercurrents are being disturbed by opposing forces. As far as sacking is concerned, the fact that the month-old strike in Pakistani jute mills is still continuing is having an encouraging effect on sentiment. As a matter of fact earlier fears that increased overseas enquiries will after all not come India's way have been belied. It is evident that the long shut-down of production in Pakistan has left some of those overseas consumers who are in urgent need of jute goods with no other alternative but to place their orders with India. In this category are Cambodia, Burma, and Syria with Indo-China also showing some interest latterly. It is expected that orders will continue to arrive from these sources for some weeks yet. But at the same time, the market is also taking into account the possibility of the strike in Pakistan coming to an early end. For indications are that in view of the already heavy loss incurred by the industry, efforts will be renewed to commence production at an early date. As a matter of fact there are already reports that such efforts will become successful. Once the Pakistani mills restart, then the welcome rise in demand for Indian sacking may begin to taper off and if that happens the problem of declining sacking exports will be confronting the industry before long. The continued higher levels are also sustained by the belief that sacking production will be satisfactorily taken care of by increasing internal consumption which this year may reach record levels in view of the good foodgrains harvest and brightening prospects of increased business with Australia consequent to the visit to this country of an unofficial trade mission from that country.

While heavy goods thus appear to be well placed as far as demand in concerned atleast for some time to come, the outlook for hessian continues to be uncertain.

tain still. Hopes of revival of US buying interest have received a setback with the publication of the figures pertaining to burlap consumption during October. A drop of 2.7 million yards in consumption last month at 72.6 million yards has been bearishly interpreted and the fact that stocks have dropped to 268.8 million yards from the previous month's level of 274.5 million yards has also failed to revive enthusiasm because indications are that in view of the decline in consumption, the tendency will be to draw from stocks to meet current consumption needs. Moreover, with production in mills continuing to be at a high level, there will not be any compelling necessity to augment stocks.

The week's trading in the jute goods market was characterised by fully firm conditions most of the time but prices especially in the sacking section developed a sagging tendency toward close. On Thursday B Twills Nov. closed at Rs 155.50 but in subsequent dealings the rate was pushed up to close at Rs 159.00 by close of business on Monday. In Tuesday's trading, sacking prices turned quiet and by close on Wednesday B Twills Nov. came down to Rs 156.35. Hessian however continued to be steady and closed the week at Rs 50.25 for the November position. The generally steady trend despite a fall in despatches during October may be partly due to the threat of labour unrest over the bonus issue. It may be recalled that about 250,000 jute workers had decided to observe one day's token strike on 1 December as a protest against the IJMA's attitude to their bonus demand. In this connection a deputation of mill workers from West Bengal met the Union Labour Minister, Mr D. Sanjivayya on Thursday last and submitted to him a memorandum seeking his intervention in the dispute between the IJMA and the All India Jute Textile Workers Federation. The memorandum pointed out that the IJMA had

refused to implement the Bonus Commission's recommendations and to pay the jute workers the minimum bonus of 4 per cent of total annual earnings.

Total despatches of jute goods during October were lower at 165,800 tonnes as against 109,100 tonnes in September. Despatches for export are lower at 72,760 tonnes as compared with 74,900 tonnes in the previous month while despatches for local purposes too are lower at 33,100 tonnes as against 34,200 tonnes. Under despatches for export, hessian shows a small decline at 39,500 tonnes from 40,400 tonnes while sacking are 2,400 tonnes lower at 20,000 tonnes. Perhaps the most significant change is under carpet backing, the despatches for export of which show a marked rise at 11,600 tonnes from only 6,600 tonnes in the previous month, reflecting the revival of interest in this construction from consumers in US. Other goods exports however are down to 1,600 tonnes from 5,500 tonnes. As for despatches for internal consumption changes are small; hessian are at 5,100 tonnes as compared with 4,800 tonnes, sacking lower at 24,300 tonnes from 26,100 tonnes with other goods 400 tonnes higher at 3,700 tonnes. As for total despatches categorywise, hessian are slightly lower at 44,600 tonnes but sacking is sizably lower at 44,300 as against 48,500 tonnes. As noted above carpet backing is considerably higher at 11,600 tonnes against 6,600 tonnes while other goods are down by 3,500 tonnes at 5,300 tonnes.

The raw jute market commented the week's trading on a quiet note with Assam Bottoms quoted at Rs 35 per maund. But in subsequent trading the trend hardened following announcement of higher compulsory quotas. On a review of the jute position, the Jute Commissioner has issued compulsory maximum quotas for a total quantity of 200,000 bales for the week ending 28 November under the provisions of the Jute (Licensing and Control) Order, 1961. The order also specifies the maximum limit of stock holdings in respect of each mill as on 28 November. Assam Bottoms at one time was done up to Rs 36.50 but towards close the rate came back to Rs 36.

Jute Fire Enquiry Committee

The West Bengal Government has announced the appointment of the Jute Fire Enquiry Committee. The Chairman of the Committee is Mr R. Banerjee, Presidency Divisional Commissioner. The other seven members are: Mr C. L. Bajoria (IJMA), Mr K. P. Modi, General Manager, Ruby Insurance, representing insurance interests; Mr W. S. Wood and Mr H. R. Scott, representing fire-fighting equipment manufacturers' interests; Mr S. K. Bhattacharyya on behalf of the Jute Commissioner, Government of India; Mr Prasad Bose, DIG, CID and Mr S. C. Chatterjee, Director of West Bengal Fire Services. Among other things, the Committee has been asked to recommend measures to reduce the incidence of fires in jute godowns, to prevent damage caused by water at the time of fire-fighting operations, to stock jute scientifically in warehouses and to draw up new regulations, if necessary.

More Yield from Seeds Treated with Bacterial Culture

A bacterium (*Beijerinckia acidia*) which can be employed to fix atmospheric nitrogen for a jute crop grown on land of subnormal fertility has been successfully isolated by the Jute Agricultural Research Institute of the Indian Central Jute Committee.

Field experiments at JARI have shown that the nitrogen-fixing activity of the bacterium is assisted by the application of sodium molybdate.

The use of seeds treated with the bacterial culture, together with a basal dressing sodium molybdate at the rate of 4 kg per hectare, has been found to increase the yield of Tossa jute (*C. olitorius*) by 7 to 24 per cent in fields where no other fertilizer or manure was applied.

The function of the bacterium in successive years of cultivation is being assessed.

TEA Relief Wanted

Tea is India's second highest earner of foreign exchange and it is accepted on all hands that our traditional exports will continue to play a big role in the foreign trade of the country for a considerable time to come. As in the first three plans, in the next five year plan also tea is assigned an important place in earning foreign exchange. But this will involve a sizable rise in tea production because output is to be large enough to meet at once the rising trend in internal production and increased external off-take. Increased production can accrue only if the area under tea is extended and existing overage plantations are replanted. The problem that now faces the tea industry is one of finance because with heavy incidence of taxation it is not able to meet any sizable part of the development expenditure from its own internal funds.

Speaking at the annual meeting of the Assam Branch of the Indian Tea Association, Mr S. G. Brown, has pointed out that if the tea industry is to play the role expected of it, it must be freed from the multiplicity of taxes. At present numerous demands are made on the industry's finances. Apart from the heavy taxation, it is faced with the recommendation pertaining to minimum bonus of the Bonus Commission. The industry in Assam has to meet further additional imposts such as the increase in the Assam Agricultural Income-tax and other impositions envisaged in the Pan-chayat Act. Mr Brown has rightly averred that the additional imposts will hinder the planter's effort to sell his teas at a competitive price in world markets. He however has expressed the hope that now that a committee on tea finance has been constituted, the much needed relief will be forthcoming.

At this week's leaf sale in Calcutta, offerings amounted to 79,128 chests. There was a fair general demand. Although Plain orthodox teas received good inquiry, price realisations were often irregular and generally showed an easier trend. Firm prices were realised by Medium Dooars BOPs but the rates for their fannings were generally lower. Demand for Medium and Assam teas was good but prices realised were generally easier compared to previous markings. A generally easy trend prevailed in plain and medium CTCs with rates lower from between 20 P to 30 P. Among them however BPs received better support than their corresponding fannings. As regards good CTCs, the trend followed the general pattern and here too brokeners were comparatively better supported than the fannings. While whole leaf grades were a strong feature realising firm to dearer prices, Darjeelings were generally firm with selected items fetching good prices.

The following quotations are inclusive of excise duty: Clean, Plain Pekoe Rs 5.20 to Rs 5.50; Plain Orthodox BP Rs 4.00 to Rs 4.20; Plain Orthodox Fannings Rs 4.00 to Rs 4.20; Plain CTC BP Rs 4.70 to Rs 5.00; Plain CTC Fannings Rs 4.40 to Rs 4.60; Medium CTC Fannings Rs 4.70 to Rs 5.00; Good Assam CTC BP Rs 5.40 to 5.60; Good Assam CTC Fannings Rs 5.20 to Rs 5.50.

At this week's export sale in Cochin, a total of 101,000 kg of leaf tea was on offer and there was a good general demand at the lower levels with attention concentrated on fannings. The quality on the whole remained unchanged except for a few best high grown, which were about steady, the rest of the offerings generally showed an easier price trend.

CASTINGS BY BRAITHWAITE

Iron castings of individual weights from 5 lbs. to 5 tonnes—according to IRS or ISI Specifications up to Grade 17.

A total of 5,833,781 lbs were on offer at this week's tea auction in Colombo. A majority of the items was comparatively plain varieties and quality showed a further falling off. High grown western broken, selected best sorts, medium descriptions and well made coloury BOPs were generally dearer but Uvas were irregular following quality. Prices realised on the whole were firms to dearer.

According to the Pakistan Tea Board, the total tea produced during October was 8.49 million lbs. as against 8.24 million lbs. in October 1963. The cumulative total for the current season (from 1 April to 31 October 1964) is 50.58 million lbs. as against 44.10 million lbs. during the corresponding period of last year. No tea was exported during October.

Consequent to the decline in low grown tea prices in Ceylon, the tea trade in that country has urged the Government of Ceylon to come to an understanding with India regarding the marketing of Ceylon and Indian teas abroad pending finalisation of a general commodity agreement. The situation is the direct result of cessation of purchases by Iraq of low teas from Ceylon.

COTTON Spectacular Rise in Futures

The current abnormal increase in cotton price has been viewed with dismay by the textile industry and the authorities alike. The sudden spurt in futures at this time of the season is something unheard of and unwarranted on account of the comparatively comfortable supply position prevailing currently in the country. The inference is that speculative activity in futures is assuming menacing proportions and the Indian Cotton Mills' Federation acted swiftly in urging the Government to adopt immediate steps to confine the price within reasonable levels. The Jarilla March contract, after opening the week at Rs 767.50 per three quintals maintained a firm trend, before closing the week at Rs 764.50. The initial jump in prices was occasioned by the nervous short covering and the sustained bull support. The encouraging reports from the spot market, the uptrend in cotton consumption by the domestic textile mills and the reported damage to the crop in some areas also fanned the upward thrust in prices. However, toward the mid-week the market reacted slightly because of the apprehension of Government intervention to curb the rising trend. At this level bulls indulged

in heavy liquidation but the market again rallied to high levels to finish the week with a net gain of Rs 5.00 per three quintals over the week. The upswing in prices took a sudden turn on Monday when the contract pierced the permissible ceiling of Rs 775.00 per three quintals owing to bull pressures and hurried short covering. The ICMC's plea for making arrangements for immediate import of cotton was bullishly interpreted. Reports from up-country centres indicate a preponderance of buyers over the sellers.

The spot market at Sewri presented brisk trading during the week under review. Ready lots of new crop met with good spinner interest. There was a broadening of demand in American and African cotton which slightly pushed the prices of these growths. In the export section, prices of Bengal Deshi steadied up further to Rs 790 per candy consequent on short covering by shippers against their export commitments for November-December delivery. Business put through in this growth from 1 September to 13 November totalled 81,000 bales.

CLOTH OUTPUT

Production of cloth by the composite mills of the domestic cotton textile industry in October is placed at 404 million metres against 403 million metres in the previous

month. Yarn output remained unchanged at 83 million kg. The stock with the composite mills at the end of the month under review is estimated nearly at 1.34 lakh metric bales as unsold and 1.73 lakh metric bales as sold but unlifted against 1.30 lakh metric bales and 1.81 lakh metric bales respectively in September.

Consumption of cotton by the domestic textile mills from 1 September 1963 to 31 July 1964 registered an improvement of 382,924 bales to 5,558,693 bales from the relevant figure for the same period in the previous year. Consumption of indigenous cotton during the period smartly rose to 5,002,462 from 4,347,713 bales with the result that offtake of imported growth by the mills stands considerably reduced at 556,231 bales against 828,056 bales in the corresponding period of 1962-63.

OBJECTS AND PROPOSED ACTIVITIES

The Company proposes to engage in the world-wide tramping and coastal trade. With this end in view, the Company has, in the first instance, ordered five bulk carriers of about 38,100 DWT each from Bremer Vulkan Schiffbau und Maschinenfabrik, Bremen, West Germany, suitable for carriage of bulk cargoes, from light grains to heavy ores. The vessels are to be built to the design and specification approved by Sir Joseph W. Isherwood and Company Ltd., London, one of the world's most renowned firm of Naval Architects and Consultants, specially in ship design and supervision of construction of ships. The first bulk carrier is expected to be delivered about November/December 1965 and others at an interval of three months each thereafter.

APPLICATIONS

Copies of Application Forms and Prospectus can be obtained from the Company's Registered Office, from any of the above mentioned Underwriters, Brokers and Bankers to the issue named in the Prospectus or any of their main branches at the addresses given in the Prospectus.

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON 2-12-64 AND WILL REMAIN OPEN UNTIL THE CLOSING OF BANKING HOURS ON 9-12-1964 UNLESS CLOSED EARLIER OR LATER AT THE DISCRETION OF THE DIRECTORS BUT NOT BEFORE 7-12-1964.

Imports of cotton from 1 September to 7 November in 1964 totalled 241,610 bales against 93,674 bales in the relevant period in 1963.

PIECEGOODS

Trading in the cloth market in Bombay started picking up conse-

quent on the emergence of a vivid picture relating to controlled and other varieties of cotton piecegoods. The broadening of demand in the seasonal goods was a noteworthy development during the week under review. Interest in controlled items of cloth was somewhat lukewarm while uncontrolled varieties of cloth met with good enquiry. Upcountry centres, particularly from the South, were active in the market and accounted for a moderate quantum of seasonal goods. Traders from Punjab, UP and Kanpur bought a fairly large quantum of coarse

seasonal goods obviously on account of the cool season. Buyers from Calcutta kept away from the market. Distressingly enough, the total turnover in the market did not measure up to the expectations.

Seasonal coarse goods were in short supply and there was a virtual scramble for these items in the market during the week under review. In the superfine varieties prices of uncontrolled cloth firmed up. Cambric and lawns met with good buyer interest even at higher levels. In the print section, both inferior

and superior grades attracted encouraging attention of the buyers. The abundant supply of check-shirtings led to an easy trend in their prices. Coloured and white poplins continued to receive the usual buyer interest.

OILS AND OILSEEDS Buoyant Trend

Buoyant conditions were in evidence once again in the Bombay Oilseeds market as bulls tightened their hold. The main incentive seemed to have been derived from the belief that since the Gujarat Government has only decided to allow exports of groundnut on the basis of last year's performance, there will not be a marked improvement in the supply position at the Bombay market. Another possible reason for the continued rise in prices last week is that the groundnut market has in recent weeks been chosen by speculators from grain markets for their operations. Moreover, the earlier expectation that the Government might take action to curb speculation has not materialised. As a matter of fact it is alleged that the authorities have not done anything to stop unhealthy speculation when the price of the January contract touched the ceiling level. The bullish fervour continued unchecked and jobbers refused to do any trading at the high levels for two days in succession with the result that even though the market remained officially open on those days no transactions were put through.

In the meantime, sentiment in unofficial dealings has turned slightly easier following the announcement that the UP Government has decided to permit the export of oil and oilseeds. The UP Government has amended the Oil and Oilseeds Control Order, permitting the export of groundnut and groundnut oil, linseed and linseed oil, cottonseed and cottonseed oil. In respect of mustard seed, for the time being, 60 per cent of last year's export will continue to be allowed and the position will be reviewed when the new crops will come in April next.

Groundnut futures were firm on sustained bull support coupled with shortcovering. Although in view of the decision at the Chief Ministers' meeting regarding the removal of curbs on the inter-State movement of oilseeds and oils, supplies should increase, there continues to be some uncertainty as to the implementation of the decision. This is responsible partly for the bullish fervour that culminated in the suspension of trading for two days. Spot groundnut was influenced by the uncertainty as to the quantum of supplies from Gujarat.

Price changes in the castorseed section has been generally influenced by fluctuations in the groundnut section. Castorseed

futures firmed up on shortcovering and in sympathy with the firmness in the spot market.

In the Linseed section also prices continued to rule firm but business passing was not much. As in the case of castor here also futures were influenced a good deal by shortcovering as well as the rising trend in the spot section. An additional reason is the absence of a reliable estimate of the rapeseed crop.

In the oilseeds market in Madras, groundnut prices initially depicted an easier trend but with the onset of rainy weather, the trend became steady. The firm undertone was further aided by sustained buying support from Calcutta vanaspathi interests.

NON-FERROUS METALS Spurt in Lead

The feature of last week's trading in the non-ferrous metals market in Bombay is the spurt in the price of lead. The trend in this metal has been upward for some time and during the past week under renewed buying support from dealers and consumers alike prices have made sizable headway. The main reason for the sharp uptrend appears to be the apprehension that prospects for an increase in supplies are assessed to be gloomy. The floating stocks in the Bombay market are reported to be of meagre proportions and it is not expected that supplies will be sizably augmented soon either from arrivals from upcountry or in the shape of imports. In the meantime, the demand for the metal has been progressively increasing on account of the quickening pace of industrialisation. It would appear that the price trend in India has also been influenced by reports of shortage of the metal in world markets. The shortage is attributed to the arrested flow of scrap into the market and the reluctance of scrap interests to dispose of stocks is presumably due to indications that fresh lead supplies will not be available to the world market for another couple of years, or so.

SILK Firm Undertone

There was no revision in the prices of filature raw silk by the Mysore Government for another week ended 20th November, 1964. The Filature Raw Silk prices continued to be released between Rs 100.32 and Rs 101.42 per kg. Similarly the prices for Kisan silk have also followed suit ruling firm at Rs 104.00 per kg.

There was no perceptible change in the prices of cottage basin silk except a small recovery in the minimum prices. Prices were quoted at Rs 81.02 to Rs 94.25 per kg. this week end against Rs 80.19

to Rs 94.19 last week. While the prices of superfine and I quality charka raw silk ruled almost steady at Rs 85.98 to Rs 90.11 and Rs 66.69 to Rs 73.02 per kg. a very small rise was observed in the minimum prices of II and III quality charka raw silk. The prices of dupion have tended to be on a further high side this week also to be quoted at Rs 22.05 to Rs 33.07 last week.

The prices of seed cocoons of Foreign race have undergone wide fluctuations this week with a drop in the minimum prices due to uneven flow into the market. However, the prices of Mysore seed cocoons have calmed down to rule at Rs 4.56 to Rs 5.75 per kg. this week against last prices of Rs 5.19 to Rs 5.75 per kg.

The prices of reeling cocoons have cheered up this week against the slump experienced in the last week. November, being comparatively a lean season, mulberry reeling cocoon prices in Sidlaghata have gained by over Re 1.00 per kg. from Rs 5.00 to Rs 6.50 per kg. this week against Rs 3.87 to Rs 6.25 per kg. last week. Mugur variety has also moved up Rs 3.50 to Rs 4.00 per kg. due to restricted flow of cocoons into the notified cocoon markets this week against Rs 3.00 to Rs 3.75 last week. There is a raise in the maximum for the Channapatna variety.

Prices of non-mulberry raw silk in Bhagalpur continued to rule high as in the last week. But tasar silk waste prices have declined to rule at Rs 22.00 to Rs 23.00 per kg. as against the last week prices of Rs 22.00 to Rs 33.00 per kg.

The prices of cottage basin silk in Malda market have moderately come down to rule from Rs 88.00 Rs 98.00 per kg. against the prices level of Rs 90.00 to Rs 100.00 per kg. last week. Pierced cocoons and matka yarn price ranges have narrowed down with a small decline in the maximum prices. Prices of all other products have remained more or less the same as ruled during last week.

NOTICE
STATE BANK OF INDIA,
Bombay, the 4th November 1964
13th Krtik, 1886 (Saka)

NOTICE is hereby given that the Principal Register and the Branch Registers of the State Bank of India will be closed for transfer of shares from Wednesday, the 16th December 1964 to Thursday, the 31st December 1964, both days inclusive.

N. A. KRISHNAN,
Managing Director.

A LOW-COST PAINT THAT GIVES A MILLION-DOLLAR FINISH!

Here is a paint that gives your walls a superb matt finish at an unbelievable low cost! Supplied in an economical paste form, Blundell's 'Eomite' Latex Wall Paint is so easy to apply. Just dilute it with water and paint away with roller, brush or spray. Eomite Latex Wall Paint spreads smoothly, dries quickly and adheres to surface-dry plaster. It takes to lime and cement plaster, concrete, brick-work, asbestos sheeting, and building board. This opaque and washable wall paint is ideal for your interior walls and ceilings. Choose now from 12 pleasing, Intermixable shades.

Blundell Eomite Paints Ltd.

For the INVESTOR

INVESTMENT GOSSIP

Lack of Confidence

THE shortlived rally in the stock market especially round the more speculative scrip around midweek has been largely brought about by persistent rumours about an impending increase in the steel retention price. The uptrend has also been aided by renewed hopes regarding favourable change in fiscal policy in view of the forthcoming meeting between representatives of commerce and industry in the country and the Prime Minister. The fact that the recovery movement received a setback so soon after its commencement is indicative of the underlying lack of confidence. It is generally admitted that if the private sector industrialisation is to forge ahead, there should be a free flow of fresh capital into the corporate sector. But the prospects for such a flow continue to remain gloomy what with the additional taxation imposed during the last four years. It has now been indicated that far from there being any relief in the coming budget, there may be further additional taxation. The Finance Minister has this week told Parliament that the next Central Budget will indicate the advance action that will have to be taken in respect of mobilising resources to meet the large investments during the Fourth Plan.

It is however clear that without leaving adequate investible funds in the hands of individuals, it will be idle to expect the corporate sector to make much headway. Speaking at the annual meeting of the shareholders of Delhi Cloth

and General Mills this week, Dr Bharat Ram has pointed out that the fiscal and monetary policies of the Government have tended so far to mitigate the growth of private industry by creating scarcity of finance. Dr Bharat Ram has rightly pointed out that the establishment of newer financial institutions is not the answer to the need of the private sector. Thanks to the heavy doses of taxation from year to year, the savings in the hands of the individual have been squeezed to the vanishing point. The remedy is to ensure that there is a free flow of finance from people to industry.

★

INVESTMENT SPECIAL

South India Shipping Corporation

THE South India Shipping Corporation Limited will enter the capital market early next month with a public issue of Rs 70 lakhs (70,000 equity shares of Rs 100 each). The subscription list will open at the commencement of Banking hours on 2 December 1964 and will remain open until the closing of banking hours on 9 December unless closed earlier or later at the discretion of the Directors but not before 7 December. This is the first issue from a shipping company after the recent shipping legislation raising the permissible limit of foreign capital participation in Indian shipping to 40 per cent. The company has an authorised capital of Rs 5 crores divided into 5 lakh equity shares of Rs 100 each, and the issued capital amounts to Rs 2 crores. Of the issued capital Rs 50 lakhs have already been subscribed by the signatories to the Memorandum of Association of the company, the Directors, friends and others. The present issue is therefore for Rs 1.5 crores, of which Rs 80 lakhs have been reserved for the two collaborators, Messrs P & O and Anglo Norriss Shipping Company Limited of Bermuda and the balance of Rs 70 lakhs is now issued for public subscription.

The Company proposes to engage in the world-wide tramp and coastal trade. It has secured the collaboration of M/s Peninsular and Oriental Steam Navigation Company and their Associates Messrs Anglo Norriss Shipping Company Limited of Bermuda. It has already ordered five bulk car-

riers of about 38,100 DWT each from Bremer Vulkan Schiffbau und Maschinenfabrik, Bremen, West Germany, suitable for carriage of bulk cargoes, from light grains to heavy ores. The vessels are to be built to the design and specification approved by Sir Joseph W. Isherwood and Company Ltd, London, one of the world's most renowned firms of Naval Architects and Consultants, especially in ship design and supervision of construction of ships. The first bulk carrier is expected to be delivered about November/December 1965, and others at an interval of three months each thereafter. According to Mr A. D. Shroff, Chairman of the company, the South India Shipping Corporation will also enter progressively into the coastal trade and acquire tankers both for the coastal and international trade. The company has a bright future because considering the country's requirements of shipping, the tonnage so far acquired is very small indeed.

★

INVESTMENT NOTES

India Paper Pulp

The subscription list of the Rs 40 lakhs 7 per cent Debenture Stock 1967/77 of India Paper Pulp Company Limited will open at the commencement of banking on 30 November 1964 and will close at the close of banking hours on 9 December 1964 or earlier at the discretion of the Directors of the Company, but not in any case earlier than the close of banking hours on 2 December 1964. The Debenture stocks will be in units of Rs 1000 each at par payable in full on application. The underwriters and their friends have applied for Rs 20 lakhs stock on firm basis and will be allotted in full. The balance of Rs 20 lakhs is now offered for public subscription. The company's production of paper and board during the year ended 31 March 1964 was 16,636 tonnes. The company has obtained an industrial licence to expand its pulping capacity using jute sticks as the raw material. The new jute sticks pulp plant which is in course of erection will be commissioned in the first half of 1965. With this new machine, the company's total pulp production is expected to go up to 23,000 tonnes a year. The company has also obtained industrial licence for expansion of its paper making capacity to 23,000 tonnes a year.

BALANCE-SHEET REVIEWS

J. K. Steel

Despite unsatisfactory supply position of raw materials, especially Billets, and also continuance of the restrictions imposed on electric power supply, the total turnover of J. K. Steel has been as much as Rs 162.00 lakhs as against Rs 176 lakhs in the previous year. The gross profits earned by the Company before providing for depreciation has also been maintained almost the same as last year's i.e. Rs 31.36 lakhs against Rs 32.27 lakhs in the previous year. After setting aside a sum of Rs 3.50 lakhs as against Rs 3.18 lakhs for depreciation, transferring Rs 5.00 lakhs as against Rs 15.24 lakhs to the General Reserve and Rs 2.54 lakhs as against Rs 0.06 lakhs in the previous year to the Development Rebate Reserve and also making a provision of Rs 13.44 lakhs as against Rs 14.63 lakhs in the previous year for taxation, the Directors of the Company have recommended to the shareholders a dividend of 15 per cent (same as last year) on equity shares. Dividend, this year, is proposed to be paid from the revenue surplus whereas last year it was paid from General Reserve.

The Retention Price of Jute Baling Hoops with effect from 1st July, 1962, has been fixed by the Government, but the same being inadequate, the Company has again represented to the Government for review of this Retention Price.

Manufacture of Electric Hoists and Chain Pulley Blocks has commenced in the new mill of the Company during the year and the products have been very well received in the market. The expansion projects of the Company with regard to its Wire Rope Plant has progressed considerably and most of the imported machinery have been shipped. Erection of these will start as soon as they reach the factory. The Company is further pursuing other expansion schemes of its Cold Rolling Mills and Electric Overhead Travelling Cranes.

New Swadeshi Sugar

Repeats

The Swadeshi Sugar Mills Limited has produced encouraging working results for the year ended 30 June 1964. The net profit, before providing for depreciation and taxation, amounts to Rs 22.25

lakhs as against Rs 20.30 lakhs for the preceding year.

In respect of allocations, Depreciation is raised to Rs 3.09 lakhs from Rs 2.80 lakhs; Taxation to Rs 8.50 lakhs from Rs 8.20 lakhs; Development Rebate Reserve to Rs 32,000 from Rs 11,000 and General Reverse Reserve to Rs 3.00 lakhs from Rs 21,000. The provision for Renovation and Renewals Reserve is, however, lowered to Rs 3.50 lakhs from 5.00 lakhs. The directors have proposed to maintain the dividend at 20 per cent on the equity capital.

There is a sharp increase in the quantity of cane crushed to 31.71 lakhs manuds from 17.67 lakh manuds. The recovery of sugar is also better at 10.32 per cent against 9.78 per cent.

Cauvery Sugar Pays More

Cauvery Sugars and Chemicals Limited has also reported an increase in the net profit from Rs 10.55 lakhs to Rs 11.90 lakhs for the same year. It has been necessary to provide the large sum of Rs 6.90 lakhs (Rs 1.31 lakhs) for Taxation, as the benefit of relief under Sections 84 and 101 of the Income-Tax Act is no longer available.

The provision for Development Rebate Reserve is lowered to Rs 36,850 from Rs 1.27 lakhs and General Reserve to Rs 25,000 from Rs 1.00 lakh. A sum of Rs 3. lakhs was written off for preliminary expenses on the last occasion. The dividend on the equity shares is raised from 6 to 7 per cent, subject to tax. The distribution for the previous year was exempt to a certain extent from payment of income-tax.

Parrys Confectionery Fares Well

Parrys Confectionery Limited has reported a further improvement in working results, presumably with a much higher level of sales. The net profit for the 18 months ended 30 September 1964, before depreciation and taxation, has risen sharply from Rs 11.82 lakhs to Rs 21.82 lakhs for the preceding 12 months.

The provision for Taxation is Rs 11.90 lakhs (Rs 6.30 lakhs), while there is an allocation of Rs 2.81 lakhs in respect of Surtax against Rs 1.85 lakhs towards SPT previously. The transfer to Development Rebate Reserve is higher at Rs 10,000 against Rs 2,500 and General Reserve at Rs 1.60 lakhs against Rs 65,000. The total distribution for the period under reference is 27 per cent or 18 per cent per annum, taxable, against 16 per cent, taxable, for the previous year.

Indian Hume Pipe—Jump In Earnings

The Indian Hume Pipe Company Limited has reported a big jump in earnings, before depreciation

and taxation, to Rs Rs 84.46 lakhs for the year ended 30 June 1964 from Rs 45.36 lakhs for the previous year. There is, no doubt, an increase in sales from Rs 3.00 crores to Rs 3.75 crores; but it appears that the higher margin of profit on contracts has been due to improved efficiency. The completion of important schemes could have also helped the company to double nearly its earnings. All allocations have been raised:—Depreciation from Rs 12.09 lakhs to Rs 14.25 lakhs; Taxation from Rs 15.50 lakhs to Rs 40.00 lakhs; Development Rebate Reserve from Rs 2.40 lakhs to Rs 2.90 lakhs; General Reserve from Rs 4.00 lakhs to Rs 11.00 lakhs and Rehabilitation Reserve from Rs 1.47 lakhs to Rs 6.00 lakhs. There was a provision of Rs 2.00 lakhs in respect of SPT on the former occasion. The high dividend of 15 per cent, taxable, is to be paid out of General Reserve No. 2. A dividend of 14 per cent, taxable, was paid previously out of Dividend Equalisation Reserve.

Three new factories are added to the number of units working in different parts of the country, taking the total to 60. All the units are operating satisfactorily. The pre-stressed Concrete Pipe Division has been making good progress and large contracts have been secured. The Penstock division has also been operating well.

The supply of penstock pipes for the second stage of the Koyna project is nearing completion, while the requirements of the Sharavathi project and the Bhira Works are being supplied on a large scale. The company has been successful in securing the outright patents right in India for manufacturing continuous concrete pipe line from an American firm. Besides the company is expanding its activities to overseas territories and a branch is being opened in Libya with the approval of the Government.

As a result of a smaller crop and higher working expenses, the working of the Blue Mountain Estates and Industries Limited has resulted in a lower net profit of Rs 14.31 lakhs for the year ended 30 June 1964 as against as much as Rs 22.94 lakhs for the previous year.

Blue Mountain Cuts Dividend

The provision for Depreciation is higher at Rs 10.73 lakhs against Rs 9.03 lakhs; but Taxation claims only Rs 2.00 lakhs against Rs 6.50 lakhs. There was a provision of Rs 1.53 lakhs towards Development Rebate on the last occasion. The dividend on the equity capital is reduced from 10 to 8 per cent, subject to tax. Even for making a smaller payment to the equity shareholders, it has been necessary to transfer a sum of Rs 5.00 lakhs (Rs 2.50

lakhs) from Dividend Equalisation Reserve.

Coffee Lands Earns More

Coffee Lands & Industries (Mysore) Limited has, however, recorded a higher net profit of Rs 7.09 lakhs as against Rs 2.27 lakhs for 1962-63 after providing for depreciation and taxation. The transfer to Development Rebate Reserve is 1,761 (nil); General Reserve Rs 2.00 lakhs (nil) and Dividend Equalisation Reserve Rs 1.00 lakh (nil). Though a higher dividend on equity capital has been recommended by the directors, large allocations have been made to reserves.

Same From Neelamalai

The Neelamalai Tea and Coffee Estates Limited has reported a decline in net profit, before providing for depreciation and taxation, from Rs 10.12 lakhs to Rs 8.52 lakhs for the year ended 30 June 1964. The outturn of tea has declined to 7.58 lakh kg from 9.84 lakh kg, while there is an increase in the cost of production to Rs 4.01 from Rs 3.44 per kg. But for the fact that there was a better demand for high-grown teas and the average selling price against Rs 5.22, the decline in was higher at Rs 5.44 per kg earnings would have been more pronounced.

A sum of Rs 1.29 lakhs (Rs 1.34 lakhs) is provided for Deprecia-

tion; Rs 34,000 (Rs 11,500) for Development Rebate Reserve and Rs 3.00 lakhs (Rs 4.95 lakhs) for Taxation. In spite of lower earnings, the dividend on the equity capital has been maintained at 7½ per cent, subject to tax.

★

STOCK EXCHANGES Short-lived Rally

An irregular trend characterised trading on the stock exchanges this week but toward close there was an indication of revival of interest. Even so the undertone continues to be hesitant and higher levels are found to be unsustainable. The improvement in sentiment noticed around midweek seems to have stemmed mainly from revived hopes of a favourable change in Government policy toward the corporate sector. Persistent rumours of an increase in steel retention price diverted attention to steel shares which made handsome gains at one stage. The revival of interest in steel shares also appreciably helped selected shares elsewhere to recover part of their lost ground. The rally however proved feeble as by close of the week prices all along the line developed a sagging tendency in the absence of follow-through support.

The Calcutta stock exchange failed to maintain the weekend

The Proprietors of Indian Patent No. 56043 "Compressed Gas Containers for Fire Extinguishers" desire to conduct negotiations for the grant of a manufacturing licence with respect to or for the disposal of the above-numbered Patent.

Anyone interested should apply to:

EDWARD EVANS & CO.,
Chancery House,
53-64 Chancery Lane,
London. W.C.2.

improvement when it resumed the week's trading but in later dealings displayed signs of a return to steadier conditions, sentiment having been largely helped by a revival of interest in Indian Irons. Even so, support was confined to few selected shares with the bulk of the list undergoing little or no change either way. In the absence of continuing support, values sagged by close with the undertone turing soft.

Dalal Street also showed signs of a recovery around midweek with pivotal shares gaining moderately on scattered replacement buying. Investors however continued to be reluctant to extend commitments in the absence of positive incentives. That further support would not be forthcoming without positive incentives to sustain the recovery movement became clear toward close when equities failed to retain earlier gains.

Sentiment improved slightly in later dealings with selected plantings coming in for better enquiry in the Madras Stock Exchange. In the cash section miscellaneous industrials were also selectively steady though the forward section continued to show a predominance of losses.

In Ahmedabad, prices rallied on better Bombay advices and bear covering and scattered replacement support at one time but the up-trend was arrested in later dealings in sympathy with the trading pattern in the major stock exchanges.

After commencing around previous low levels, shares in Delhi stock Exchange gained moderately in sympathy with higher Calcutta advices. The recovery was also aided by short-covering and absence of selling pressure.

*

CALCUTTA

The Calcutta Stock Exchange displayed a hesitant undertone throughout the week but at times sentiment brightened. The improvement in sentiment noticeable last week-end was found to be untenable when the market opened for the week. The earlier bearish tendency stemmed from apprehension about the adverse impact on the Indian economy of the 2 per cent rise in the British Bank Rate. As the Bank rate increase will make imports costlier and hamper exports, the initial reaction was naturally easier. Such fears however yielded place to the belief that the rise in the Bank rate in UK will have little influence on the monetary policy in India with the result that operators were able to give due consideration to certain developments in the Indian investment situation. In the first place, the coming meeting between the Prime Minister and representatives of trade and industry in the

country has revived the hope about a favourable revision of fiscal policy. Other news items which have been responsible for inducing a constructive trend are the prospects of an early return of normal conditions in Orissa and the Congress victory at Phulpur. The persistent rumour about an increase in the retention price of steel was perhaps the most powerful bullish factor which helped revive confidence especially in Indian Irons. With this pivotal scrip in the lime light, the undertone of the market as a whole steadied up. But the improvement in sentiment proved shortlived as in later dealings a slightly easier trend prevailed in the absence of follow-through support.

In the Clearing section, Birla Jute was subjected to wide fluctuations. Opening the week higher at Rs 37.94 it moved both ways to close at Rs 37.56 on Wednesday. On Thursday the opening was smartly up at Rs 38.31 but the higher levels were found untenable and the scrip lost ground to be finally placed on that day at Rs 37.94. Dunlop Rubber developed a reactionary tendency from the beginning to finally stand at Rs 30.31 as against the week's opening level of Rs 30.87. GK Williams was likewise quiet most of the time to be quoted lower on balance at Rs 23.29. Hind Motors after a shaky start gained ground in later dealings but the higher levels could not be maintained till the last. The scrip was finally placed on Thursday at Rs 16.31. Howrah jute was a prominent counter which was able to retain its gains till the close as it finished at Rs 16.19 as against its opening rate of Rs 16.00. Indian Aluminium was easy and by close was sizably lower on balance at Rs 30.31 as against previous closing of Rs 31.31. Indian Iron opened on a uninspiring note but by midweek it had regained lost ground and at one time was done up to Rs 25.60. In Thursday's trading however the trend once again became easier with the quotation coming back to Rs 25.46 by close. Starting the week lower at Rs 32.20 Orient Paper was done as low as Rs 32.10 before it recovered to Rs 32.25 only to be pushed back again to Rs 32.10 by close.

In the cash section, jute shares were a dull market reflecting the continued absence of an improvement in demand for hessian. Investors are also generally cautious in extending commitments in jute shares because of the uncertain outlook for exports. Although for the time being, sacking is having good overseas demand thanks to the continuing strike in Pakistani Jute mills, it will be idle to expect sustained foreign interest because once the strike is called off, our goods will have to grapple with the question of

Pakistani competition. Moreover, the fact that fibre prices are quite high should discourage the hope about mills' making handsome profits on their sale of goods. During the week's trading however a few selected shares met with some replacement buying. In this category are Anglo India, Caledonian, Barnagore, Champdany and Ganges.

Demand for coal shares continues to be negligible in the absence of fresh incentives. With the demand for the commodity showing no pick up, investors are naturally worried about the outlook for the industry. Among the few shares transacted in, Central India was done at Rs 8.12, South Karanpura at Rs 6.00 and New Manbhoom at Rs 9.12.

In fact, transactions were few and far between reflecting the obscure outlook for the industry. The disappointing average prices realised at this season's auctions so far do not hold out promise of improved dividends. Kilcott was at Rs 14.06 while New Doonars changed hands at Rs 170 with

IN PARLIAMENT

Diamonds

In a written reply to a question by Mr R. S. Tiwary, the Minister of Steel and Mines Mr N. Sanjiva Reddy, stated in the Lok Sabha that the Ramkheria diamond mines were taken over by the National Mineral Development Corporation, a public sector undertaking, on 17 March 1960. He added that 4,870 diamonds weighing 1,066.4g carats and valued at Rs 6.38 lakhs had been recovered during the course of prospecting operations. An expenditure of Rs 26.59 lakhs had been incurred on prospecting operations and ancillary works.

Mr Reddy further added that the National Mineral Development Corporation had not yet started mining operations at Rankheria. Only the prospecting operations were being carried out and, during these operations, 4,870 diamonds had been recovered.

Foreign Aid for Coal

Mr N. Sanjiva Reddy, Minister of Steel and Mines, disclosed in the Lok Sabha that some foreign countries had offered both technical and financial assistance to step-up coal production in the country.

He said that technical collaboration and foreign exchange credit had been offered by Poland, USA and USSR. France was helping in developing in experimental mine by using long wall method with "caving". Similar offers were expected from the UK.

The Minister added that it was estimated that coal production might be increased by 18 to 20 million tonnes as a result of such assistance.

Patnankola marked between Rs 149 and Rs 135.

Though the undertone in textiles was steady, business passing was on a restricted scale. New Victoria was better at Rs 1.12 while J. K. Rayon was placed at Rs 10, with Jayshree at 12.50, and Elgin at Rs 19.12.

In the Engineering section, JK steel was better at Rs 17.87 while Braithwaite was transacted at Rs 32.62.

The following table shows the price trend during the week:

	Week's As at close	
	Opening on Friday	
	Rs	Rs
Birla Jute	37.94	37.87
Burrakur	16.44	16.50
Dunlop Rubber	30.69	30.06
Hind Motors	16.44	16.19
Jalpur Udyog	10.12	10.09
Indian Alumn.	31.12	30.35
Indian Copper	3.34	3.30
Indian Iron	25.52	25.30
J. K. Cotton	9.94	9.75
Orissa Cement	11.62	11.90
Kesoram Ind.	24.44	23.81
Rohtas Ind.	9.87	9.62
Texmaco	25.75	25.20
Orient Paper	32.50	31.80
Howrah	16.00	16.12
G. K. Williams	23.25	23.19
Shree Copal	25.50	25.50

Copper Deposits at Dariba

In a written reply to a question by Mr Karmi Singhji, the Minister of Steel and Mines, Mr N. Sanjiva Reddy, informed the Lok Sabha that prospecting of the Dariba deposits in Rajasthan had been carried out by the Geological Survey of India and the Indian Bureau of Mines. Mineralisation of copper ore had been located in and around this area.

The reserve of copper ore, he said, had been estimated at 567,000 tonnes, the average grade of ore was estimated to contain 2.46 per cent copper.

Coal Industry

Lord Robens, Chairman, National Coal Board, who is now holding discussions with the Union Government on the proposed collaboration for developing the Jarandih mines in Bihar will come to Calcutta on 29 November.

From Calcutta Lord Robens will go to Bihar to visit Jarandih and other coal fields now being developed by the National Coal Development Corporation. He will return to Calcutta on 2 December when he will hold discussions with the Joint Working Committee of coal industry and the Secretary, Department of Mines and Metals, Ministry of Steel and Mines.

The National Coal Board have prepared a project report for the Asnapani drift mines in the Jarandih (East Bokaro) field. Each of these drift mines is being planned for an annual output of 0.75 million tonnes. The Asnapani project, the first of the three drift mines, is expected to cost about Rs 7 crores and provide employment to about 1,300 persons.

Russian Aid for Power

Adequate supply of power is a basic prerequisite for the economic progress of a country. Industries, whether large or small scale, cannot grow without a proper increase in power generation. This is the experience of all developed countries. Realising this our planners have also given top priority to power generation programme.

It will not be out of place here to recall how the question of power generation was treated before independence, when in the course of two centuries—only some small power houses were established to supply power to military cantonments and centres of administration. But beyond that no efforts were made to create power generating capacities. As a result of this policy, the output of power remained at a very low level.

The total installed generating capacity at the beginning of the First Five-Year Plan stood at 2.3 million kw—0.63 million kw in the state-owned public utilities, 1.08 million kw, in company-owned public utilities and 0.59 million kw in industrial establishments. The little that had been achieved in this sphere had by far no relation either to the power needs or power potential of the country.

In the very first years of its existence, the Government of independent India took some bold steps to harness the power and irrigation potentials of the country. It took up some big river-valley projects like the Damodar Valley, Bhakra-Nangal, Tungabhadra and Hirakud projects, which are today providing not only irrigation facilities but also electric power to vast territories. During the first decade of planning, i.e. by March 1961, the country's output of power had increased from 2.3 million kw to 5.7 million kw. This was achieved as a result of systematic efforts and planned development of our power resources.

It was during the second half of the last decade that active and fruitful co-operation began between India and the USSR. Following the agreement on the construction of the Bhilai Steel Works with the economic and technical assistance of the USSR, the way was opened for the establishment of Soviet-aided projects in other spheres of economy. Under the second Soviet credit of November 9, 1957 for industrial projects, the construction of a thermal power station at Neyveli was also agreed upon. In the following years, more power-generating schemes were taken up, and at present they are playing a significant role in the power development plans of the country.

Under the Third Plan, which aims to increase the power-generating capacity of the country from 5.7 million kw (which is expected to be under commercial operation by the end of the Plan), the Soviet-aided power projects are expected to contribute more than 33 per cent of the new installed capacity. For this purpose the Soviet Union is helping India to set up both thermal and

hydro power stations which will utilise hydro-power, coal and lignite resources of the country. Besides, the exploration and development of oil and natural gas with Soviet assistance is also contributing to the growth of power industry. Already the natural gas discovered in the Gujarat area is being used for producing power at the Dhuvran Power Station. According to the latest details, the following power stations are being built with the economic and technical co-operation of the USSR in different parts of the country:

Name of the Station	Capacity in KW
1. Neyveli Thermal Power Station (Madras) ...	400,000
2. Korba Thermal Power Station (Madhya Pradesh) ...	200,000
3. Obra Thermal Power Station (Uttar Pradesh) ...	250,000
4. Patratu Thermal Power Station (Bihar) ...	400,000
5. Harduaganj Thermal Power Station (Bihar) ...	400,000
6. Bhakra (Right Bank) Hydro-Power Station (Punjab) ...	100,000
7. Mettur Hydro-Power Station (Madras) ...	200,000
8. Balimela Hydro-Power Station (Orissa) ...	360,000
9. Hirakud Hydro-Power Station (Orissa) ...	25,000
Total Capacity ...	2,735,000

Besides these nine stations, the Soviet Union has built power stations at the Bhilai plant and the Barauni Oil Refinery. Similar power stations are going up also at the Koyali Refinery and at the Hardwar Heavy Electrical Equipment Plant.

Of the above power stations, Neyveli has already started working to the capacity of 250,000 kw, some others are under active stages of construction and on the rest work has been begun only recently.

It would be worth while here to mention some particulars and details of the individual projects their importance for the particular areas where they are being built, the scope of their further expansion and their economies.

The Neyveli Thermal Power Station, being the first large Soviet-aided power-generating project, has already become famous. Situated in the South Arcot district in Madras, the station is working at the capacity of 250,000 kw. Its first 50,000 kw unit was inaugurated by President S. Radhakrishnan on August 5, 1962. Three other units had been commissioned by the end of 1963. The fifth unit of 50,000 kw which went into production in April last, was officially commissioned on August 5, this year, thereby completing the first stage of 250,000 kw.

An important feature of this station is that it is utilising lignite in place of coal. The significance of this fact can be appreciated if it is remembered that coal is not available in the area. The nearest it can

The Patratu Thermal Power Station, it may be pointed out, will lead to the further industrialisation of the Bihar state. The station is designed in such a way that it can be further expanded to meet the growing needs of the industry.

Recently, on October 1, 1964, the Soviet organisation V/O "Machinoexport" offered the Bihar State Electricity Board help in the expansion of the Patratu Station up to 800,000 kw.

Taking into account the desire of the Board to reduce the cost of the generated capacity per kw and the cost of the installed capacity per kw, this offer provides for the installation of two highly economical units of 200,000 kw each.

The installation of the giant 200,000 kw turbines, as compared with the 100,000 kw unit will result in the following advantages.

200,000-kw units result in a sizeable reduction of heat consumption and will lead to an economy of fuel consumption of 7—8 per cent; the cost of the main building equipment will, at the same time, be reduced by 5.8 per cent and that of the civil engineering part of the main building by 25-30 per cent.

The offered time of delivery of the equipment for the two units will ensure an uninterrupted cycle of the civil engineering and erection works for the expansion of the Patratu Station provided that the collection of the initial data and the designing work began immediately.

When completed the power house will be the biggest of its kind not only in Bihar state, but in the whole of North-East India.

Kobra:—With the setting up of a 200,000 kw thermal power station at Kobra in Madhya Pradesh, the provision for which was made under the Third Plan Soviet credits of Rs 178.58 crores, the power generating capacity of the area will increase more than three times. The power-house at Kobra will meet the needs of the expanded Bhilai Steel Works and other industries rapidly growing up in the region. It will supply power to the aluminium plant, for which talks are currently under way with the Hungarian authorities.

Building and Assembly work is in full swing at Kobra. A number of Indian technicians, trained at Soviet power-houses, are working shoulder-to-shoulder with the Soviet engineers. (About 65 Indian and Soviet technicians were working at the site early this year). Two 50,000 kw units for the station have been supplied, the third unit was completed in the early part of May this year at the "Electrosil" Plant in Leningrad and the remaining one will be completed by the end of the year. The station is expected to begin power generation by the end of the Third Plan.

Obra:—The construction of a 250,000-kw thermal power station in Uttar Pradesh near Singrauli at Obra was envisaged under the Soviet credits of Rs 178.58 crores granted to India on September 12, 1959. According to a contract, signed between the Uttar Pradesh Electricity Board and the Soviet organisation "Technopromexport" in December 1961,

the latter supplied the Detailed Project Report and working drawings to the UP Board.

A contract for the supply of Soviet equipment and machinery, worth Rs 13.6 crore, was signed this year on May 20 between the "Technopromexport" and the UP Electricity Board. In accordance with the contract, the Soviet side will supply five units each of 50,000 kw capacity and provide the technical assistance for the erection and commissioning of the Obra thermal power station.

The erection of the equipment will be done by Indian engineers with the technical guidance and co-operation of the Soviet experts. The first unit of the power house is expected to be commissioned by the end of 1965.

The Obra thermal station, it may be mentioned, can be eventually expanded upto 750,000 kw capacity. On its completion, the station will supply power to important industrial enterprises in UP.

Harduaganj:—The contract for the Detailed Project Report for the Harduaganj "B" thermal power station, near Aligarh, in Uttar Pradesh, was signed on November 1, 1963 in Lucknow. It will have a generating capacity of 100,000 kw. The Soviet engineers are taking special steps to meet the problems connected with the setting-up of this station. The area, it is pointed out, has high seismicity and loose ground. The power station will be built on pile foundation and its boilers will be specially designed to withstand nine-point earthquakes.

The turbine of the station with a capacity of 100,000 kw is expected to be ready by the end of the Third Plan. The station can be expanded to a capacity of 300,000 kw.

Apart from these thermal power stations, four big hydro-power stations are also being built with Soviet assistance. Among them the biggest so far is the Bhakra Hydro-Power Station being built on the right bank of the Sutlej river. The 600,000 kw station will raise the generating capacity of the Bhakra hydro-electric project to one million kw.

The provision for building this station was made in the Soviet credit of Rs 59.53 crores for the Third Plan granted to India on February 21, 1961. According to the original agreement, the station was to be supplied with four hydro-generating units of 1,20,000 kw capacity each. The contract for the supply of the complete equipment for 480,000 kw station was signed on July 3, 1963.

The civil works for the power station have been progressing according to schedule and the first consignments of the equipment have been received. In the meantime the Soviet Union has also agreed to supply the fifth unit of 120,000 kw to bring the capacity of the station to 600,000 kw. A contract for this was signed on April 29 last.

The Leningrad "Electrosila" Works completed the first 120,000

kw unit for the station in June this year. The delivery of all the five units will be completed by the next year.

The construction of the Bhakra Station will play an important role in meeting the power requirements of the Northern region of India, especially the Punjab, Rajasthan and Delhi. It will supply power to the growing industries in the region, besides helping the rural and urban electrification schemes.

A number of Indian engineers from the Bhakra plant have already visited the USSR, and some are still undergoing training there. A team of Soviet engineers is helping in the construction of the station.

Besides Bhakra, there are three other hydro-power stations in the construction of which the Soviet Union has rendered or is rendering assistance to India, namely, Mettur in Madras state, Hirakud and Balimela hydro-power stations in Orissa.

Mettur:—The contract for the supply of the first two units of 50,000 kw capacity each for the Mettur Tunnel Hydro-Electric Project was signed between the Madras Electricity Board and the Soviet organisation "Mashinexport" in April 1961. The agreement provided for the supply of equipment, its erection and commissioning. The second agreement for the supply of two other units of the same capacity was signed on January 30, 1963.

Work on the construction of the station is progressing well, and power generation will begin by the end of the Third Plan.

Hirakud:—The 25,000 kw capacity hydro-power station at Chiplemia near Hirakud in Orissa has been erected and has been working satisfactorily since September, 1963. The hydro-generating unit for the station was supplied to India by the Leningrad plants, which supplied power generation equipment to many other power stations in India.

Balimela:—The Soviet Union is cooperating with the Government of Orissa in the construction of a big hydro-electric station at the Balimela Dam across the River Sileru which flows across Andhra and Orissa.

After negotiations between the Orissa Government and the Soviet organisations, the specialists from the Giproproekt Institute started working on the design of the power station. According to the present indications, Soviet assistance for the Balimela power station is fully assured. A recent PTI report from Moscow quotes a representative of the Soviet organisation "Mashinexport" as saying that the Soviet specialists have reached complete agreement with the local authorities in Orissa on all the terms of the contract.

The Balimela Power Project is expected to add 360,000 kw to the capacity of the power system of the Orissa state. It will be a high-pressure hydraulic station, comprising six turbines and generators. The bulk of the equipment for the station will be supplied by the

USSR and the power station will be built by India engineers and workers according to Leningrad-made blue-prints.

This is the picture of the separate power projects which are being built either under Soviet credits or under separate trade contracts providing for the import of Soviet equipment. In passing, we may mention also the power stations built or being built as part of Soviet-aided industrial enterprises.

Bhilai:—The power station at Bhilai was designed by the Moscow branch of the Thermal Power Station Design Institute of the USSR. Built with the help of Soviet specialists, this station, despite the small capacity of its turbines—64,000 kw—is a compressed air and steam.

Barauni Refinery:—The power station, built at the Barauni Oil Refinery, has a capacity of 24,000 kw. The station, like the Refinery has been built with Soviet assistance, economic and technical. It operates on the waste products of the oil refinery.

Koyali Refinery:—Like the above the power station, being built at Koyali Refinery, also has a capacity of 24,000 kw. It is part of the refinery and as such is covered by Soviet assistance for the refinery. The station is being constructed, under the guidance of Soviet engineers, by the Indian engineers and workmen, who have already gained the experience of building such a station at Barauni.

It may be pertinent to note here that the Soviet-aided power projects have some distinct features. No power station built with Soviet aid has so far given any trouble in operation. In designing the power stations for India Soviet designers and manufacturers of power station equipment have solved a number of problems connected with the operation of the equipment in tropical conditions. Special anti corrosion coating has been used to prevent any harm to the equipment from high temperatures and air humidity. The Soviet experts have mastered many new techniques for adapting Soviet-made equipment for use in the tropical conditions. They have thereby ensured the smoother and uninterrupted operation of this equipment.

The Soviet designers have also taken into account all the local conditions, while preparing the blue-prints for plants and equipments for India. Consequently these blue-prints provide, for the consumption of the local cheaper fuel, which radically reduces the cost of transport and ultimately reduces the cost of power generation. For example, the use of lignite for power generation at the Neyveli Thermal Power station has resulted in the production of cheaper power for the Madras grid. Soviet factories producing power generating equipment for India try to develop new varieties of equipment which make it possible to use the inferior grade coal. A special coal grinding mill supplied to the Korba thermal power station is a typical illustration of this.

Another point which needs mention here is the power-generating capacities of the units supplied by the USSR—in most of the cases it is not less than 50,000 kw and in some cases it is up to 100,000 kw. Even bigger units of 200,000 kw have been offered. The installation of such large units results in considerable saving since the capital cost per kw of installed capacity tends to be lower in the case of big size thermal units. The Third Five-Year Plan has the following remark on this question: "Installation of large thermal units employing higher steam temperatures and pressures would result not only in increased thermal efficiencies but also in reduction of capital costs per kw of installed capacity. The thermal efficiencies attainable with modern plants of 30,60,100 and 120 mw units are of the order of 26, 28, 32 and 34 per cent respectively....With the general adoption of larger units, the overall thermal efficiency....is expected to improve considerably, thus enabling more kilowatt-hours to be produced from each ton of coal utilised." (Third Five-Year Plan, Ch.XXIV, P. 396.)

Besides delivering to India complete equipment for power stations, the Soviet Union is also helping the country in the future development of power generation, through the setting-up of the Heavy Electrical Equipment Plant at Hardwar. The Hardwar plant is covered by the first Soviet credit of Rs 178.58 crore for the Third Plan, granted to India on September 9, 1959. The appropriate agreement for the construction of Plant was signed between the two governments, on February 12, 1960. The plant, the Detailed Project Report for which was prepared by the Soviet organisation "Prommashineksport", will be the biggest heavy electrical plant in South-East Asia.

The plant has been designed to fabricate generating units up to 200,000 kw for thermal power stations, up to 100,000 kw for hydro power stations and electric drives upto 10,000 kw for use in heavy engineering plants. The total manufacturing capacity of the plant for steam and hydro-turbo units will be 2.7 million kw—1.5 million kw in turbo-generating units and 1.2 million kw in hydro-generating units—and of electric machines of 515,000 kw annually. The value of the annual output at the full capacity is estimated at Rs 40 crores—almost equal to the capital outlay on the project.

The importance of the plant for the power industry is evident from the fact that while a total of 7 million kw of generating capacity is planned to be installed during the Third Plan period, the Heavy Electrical Equipment Plant alone will provide a potential of 2.7 million kilowatts annually. In other words, the equipment produced at the plant would enable the country to create more installed capacity every year than what was available in the country before the beginning of the First Plan, i.e. just 2.3 million kw, which was in operation before.

Unit Trust—Its Progress

By R. S. Bhatt

I had the pleasure and privilege of addressing the listeners on the All-India Radio about the Unit Trust of India, just before the Unit Scheme was launched on 1st July 1964 and I think it would be very useful if I indicated the progress it has made over the past three months.

The Unit Scheme has been received very well all over the country and the response has been very generous. During the six weeks from 1st July to 14th August when the units were sold at their par value of Rs 10/- we received about 1,25,000 applications, the bulk of these being from small and medium investors. These applications came mainly from about 4,000 offices of the State Bank of India and other commercial banks which have contributed to the initial capital besides the brokers on the recognised stock exchanges in the country. In terms of the amount also, the response has been very good and these figures will be published shortly. After the 14th August, the sale price of the unit is being determined every day and published in papers and is also being announced by the important stations of the All-India Radio in the commercial news broadcasts. The sale price is now Rs 10.50. We have been receiving applications for the purchase of units even at a premium, for investors are aware that the price includes an element of income which will be returned to them when they receive the annual dividend, for all investors, irrespective of the time when they buy the units, will receive the same rate of dividend.

Now, the Unit Trust has entered into another phase of its operations, namely, repurchase of units from the investors who wish to sell them. The repurchase price of units has been determined at Rs 10.00 and notified the press. This price for repurchase of units, will be determined daily along with the price of sale of units in accordance with the terms of the Unit Scheme.

Incidental to the repurchase of units, is the issue of unit certificates which, for those who wish to sell, must be endorsed on the reverse for purposes of selling back to the Trust. Here, I wish to explain why the issue of certificates has taken longer time than originally anticipated. It is quite natural that unit holders are anxious to receive the unit certificates and are worried why they have not received them so far. From the beginning, we had planned mechanism of the work relating to registration of applications and preparations of unit certificates, for you will appreciate that it is not feasible to cope with a very large number of

applications by manual process. We had taken the assistance of experts in the field. But it so happened, that the facilities available in Bombay City for processing, within a period of two months, 1,25,000 applications were inadequate and we had to secure these facilities at other centres. The work is in full swing and about 30,000 certificates have already been despatched and arrangements have been made to despatch the unit certificates at the rate of several thousands per week. Efforts are being made continuously to step up the rate of despatch.

We very much regret the inconvenience caused to unit holders but I hope they will appreciate that this was due entirely to circumstances beyond our control. I wish to assure the unit holders that the officers and members of the staff have been working overtime and they are determined to finish the job as quickly as possible.

The Unit Trust had before it alternatives: either to extend the date of commencement of repurchase of units or to go ahead with it on the date as provided in the Unit Scheme. After due consideration, the Board of Trustees have decided to adhere to the date announced in the Scheme, for it would not be proper to deny the opportunity to sell, if they so desire, to those who had already received their certificates. Others will receive them within a short time. For these unit holders whose certificates have not been despatched but who may wish to tender units for repurchase by the Trust, we shall try to make appropriate arrangements so as to avoid hardship to them. But I would like to mention in this connection that units are like shares and it is necessary that certain formalities must be completed to protect the interests, and the title of the rightful owners.

Since the price for repurchase of units has been determined for the first time there is a difference between the sale and repurchase price of units, let me explain how these prices are determined and what are the considerations that are taken into account for this purpose. It will be remembered that both the prices for sale as well as repurchase of units are determined in accordance with clauses 8 and 10 of the Unit Scheme.

In simple language, the manner of determination of the sale and repurchase prices of units laid down in the Unit Scheme involves three steps. The first step consists of ascertaining, what may be called, the 'net asset value' of each unit. This is arrived at by calculating the value of all the assets of the Trust, less its current liabilities (i.e. payments

due to all others except to subscribers to the initial capital of the Trust and the unit holders) and dividing this by the number of units deemed to be in issue. The Scheme also lays down the manner of valuation of these assets. Thus, investments in shares and securities are to be valued on the basis of the closing prices on the stock exchange. Other assets are to be valued, as is normally the case, at their book value. One important point which I would like to stress in respect of this is that under the scheme in determining the value of the assets, accrued income of the Trust in respect of interest-earning deposits, securities, debentures and shares should also be taken into account. The second step involves adjustments in respect of usual expenses like brokerage, commission, stamp duty etc. which are incurred in dealing with securities and shares.

The third step relates to rounding adjustments, with a view to facilitating accounting calculations. The sale price of unit is arrived at by adding to the net asset value of the unit determined as mentioned above, charges towards brokerage, commission, stamp duty etc. and a charge for management expenses. The resulting figure is adjusted upwards to the nearest 5 paise per unit. As regards repurchase price, from the net asset value of the unit, the charges towards brokerage, commission, stamp duty etc. are deducted and the resulting figure is adjusted downwards to the nearest 5 paise per unit.

The methods of calculation of the sale and repurchase prices of units described above are based on well established principles of unit trust operations. According to these principles, the sale price of a unit, should, at any time, correspond to the cost and other expenses that the Trust may have to incur in relation to the acquisition of the assets held by it at the time of fixation of the sale price. Similarly, the repurchase price should reflect the net amount that the Trust will realise, if its assets were to be liquidated, to meet its repurchase obligations. In regard to valuation of the assets, the accrued income is taken into account, because in the case of sale of unit, a purchaser, since he is treated equally with the unit holders already in the Trust in the matter of distribution of the dividends, should pay for the amount of income that has already accrued to the Trust upto the time of his purchase of units. Similarly, in the case of a repurchase, the unit holder who desires to leave the Trust, is entitled to the income accrued with the Trust upto the time his money was employed in the Trust.

I would like to state here the considerations which govern the determination of prices for sale and repurchase of units, for they are crucial to the Unit Trust

operations. The determination of unit prices has to take into account the interests of (i) unit holders who continue with the Trust, (ii) investors who want to come in and (iii) unit holders who desire to leave the Trust. It is the task of the Trust to hold the balance fairly amongst the interests of those three classes of people and its pricing policy should accordingly be equitable. It is in the light of these considerations that the price of sale and repurchase of units should be viewed. In this context, it is important to bear in mind that the Trust is essentially a mutual fund which belongs to the unit holders. The unit holders who continue to remain with the Trust are the real owners of the Trust; they bear the expenses of acquisition of the portfolio of investment, management and other charges and at the same time receive the benefits accruing to the Trust. Now those who wish to join at a later date can come in provided they agree to share the expenses already incurred by the Trust and also pay a part of the income earned by the Trust on its investments if they expect to receive the same rate of dividend. These charges and the income element are therefore loaded into the 'sale' price of the unit at different periods. This is the normal method adopted by unit trust to hold equitable balance between the interests of the unit holders who are already in the Trust and who wish to come in later. Now let us consider the case of those who wish to leave the Trust.

It will be appreciated that in order to repurchase the units the Trust would have to sell a part of its underlying securities. In addition to the usual expenses that will be incurred by the Trust in disposing of its securities and realising the sale proceeds, account has also to be taken of the possibility of the investments being disposed of at a loss. Some allowance has therefore to be made in the determination of the repurchase price for these factors since otherwise, the interests of those unit holders who elect to continue in the Trust, would be adversely affected. Further, in the case of unit holders who leave the Trust before the distribution of the dividend, some means has to be found for recovering a proportionate amount of the running expenses of the Trust from him as otherwise he would be benefiting at the expense of the existing unit holders.

As you know the structure of the Unit Trust of India is broadly modelled on the Unit Trusts in Britain. And we have incorporated in the unit scheme the practices of the British Unit Trust. In Britain the Unit Trusts. In Britain the Unit management and other expenses by loading them in the sale price. In other countries the quantum of loading is similarly allowed,

Unit Trusts therefore maintain a reasonably wide margin between the sale price of units and their repurchase price.

The repurchase price of unit as announced by the Unit Trust of India at Rs 10.00 per unit makes allowance for all these factors, which explain the margin over the sale price, namely Rs 10.50 now. I would like to add that any profits that may accrue to the Trust because of this margin, unlike privately managed unit trusts where such profits accrue to the managers, go towards augmenting total income of the Unit Trust of India and thus get distributed to the existing unit holders. Therefore the unit holders who hold units on a long-term basis derive the maximum advantage from units both by way of current income as well as capital appreciation of the units.

We have just made a beginning in India and the response to the Unit Trust has been very good as I stated earlier. Experience in other countries where Unit Trusts or mutual funds have been operating for nearly three decades has shown that investors regard units as long-term investments, which are safe, and bring in steady income and those who stay with the Trusts derive the maximum advantage both in income from dividends and capital appreciation.

Perhaps you may be interested to know the progress the Trust has made in regard to

investment of its funds. As you may be aware, it is the aim of the Trust to build up a sound and balanced portfolio maintaining a judicious balance as among the fixed-income bearing securities and variable-income bearing securities, including in this category new issues with growth prospects. The investment objective in building up such a portfolio of investments, I would like to add, is to provide the unit holders with security of capital as well as a reasonable return including a measure of capital appreciation of investment. I am happy to say that the bulk of the Trust's investible funds has been invested in accordance with this aim. The Trust has now in its portfolio, securities of over 150 industrial enterprises which include among them the scrips of leading companies in the country or what are called "blue chips". Incidental to its main investment activities, the Trust has also embarked upon, of course, in a limited way, underwriting of new issues by old and established companies by way of offering firm commitments to invest up to the amounts underwritten. We hope to publish at an appropriate time, broad details of the Trust's investment portfolio, for the information of unit holders. I would take this opportunity to assure the unit holders that in underwriting as well as in investment operations of the Trust it is the interests of the unit holders that will be the primary consideration. (Courtsey-AIR)

Sir Jehangir Ghandy New ISO President

[The following is the speech by Sir Jehangir Ghandy at the concluding session of the sixth triennial General Assembly of the International Organization for Standardization (ISO) at Vigyan Bhawan, New Delhi, on 21st November 1964.]

I am deeply moved by the great honour that this Assembly has done me today by electing me President of the International Organization for Standardization. I am most grateful for the confidence that you have in me by electing me to this august office. While I welcome the opportunity to serve ISO and through ISO the cause of human well-being, I must confess that my sense of joy is considerably tempered by the thought of the very heavy responsibilities that you have placed on me. I shall try to do whatever I can to discharge these responsibilities but in this endeavour I earnestly seek your help and co-operation.

I must say that I have been deeply impressed by the personalities who have served ISO in the past as its Presidents. ISO, in my view, has been particularly fortunate in having such distinguished men to guide its destiny as Mr. Howard Cooley, Mr. Albert Ciquart, Mr. Hilding Tornebohm,

investment of its funds. As you may be aware, it is the aim of the Trust to build up a sound and balanced portfolio maintaining a judicious balance as among the fixed-income bearing securities and variable-income bearing securities, including in this category new issues with growth prospects. The investment objective in building up such a portfolio of investments, I would like to add, is to provide the unit holders with security of capital as well as a reasonable return including a measure of capital appreciation of investment. I am happy to say that the bulk of the Trust's investible funds has been invested in accordance with this aim. The Trust has now in its portfolio, securities of over 150 industrial enterprises which include among them the scrips of leading companies in the country or what are called "blue chips". Incidental to its main investment activities, the Trust has also embarked upon, of course, in a limited way, underwriting of new issues by old and established companies by way of offering firm commitments to invest up to the amounts underwritten. We hope to publish at an appropriate time, broad details of the Trust's investment portfolio, for the information of unit holders. I would take this opportunity to assure the unit holders that in underwriting as well as in investment operations of the Trust it is the interests of the unit holders that will be the primary consideration. (Courtsey-AIR)

of extraordinary ability, Mr. Saint-Leger has conducted the difficult job of co-ordinating the activities of ISO in no less than 51 countries with great skill and tact which has not only won for it goodwill throughout the world but has also helped to build up close and friendly relations with I.E.C. I should also like to express my deep appreciation of the work of the dedicated staff of the ISO Secretariat which has contributed in no small measure to the success of ISO.

I should now like to say that I consider my election to the ISO Presidentship to be more of an honour to my country than to myself individually. Through your action, India becomes the first Asian country, one of whose citizens has been invested with this distinction which I am proud to share with my fellow-citizens. I cannot help feeling that my election is perhaps a recognition of the good work done by my colleague, Dr. Lal G. Verman, and his fellow-workers in the Indian Standards Institution, which has made Dr. Verman a well-known figure in the ISO world today in his own right. In addition to building up the Indian Standards Institution, he has had as much of a hand in building up ISO as anyone in his position could have had. I shall have to depend a great deal on his help to carry the responsibilities of my office. On behalf of all my Indian colleagues and myself, I should like to express my deep-felt thanks to ISO for the honour done to my country.

In our world of clashing ideologies and turmoil, the most important characteristic of ISO, to my mind, is its freedom from political affiliations and its neutral and objective attitude. By concerning itself wholly with the economic well-being and the progress of its member countries, ISO has been able to entrench itself firmly in the world community of International organizations with the support of 51 progressive countries both in the developed and developing categories. I am happy to see the way in which the membership has grown during the past years and hope that it will continue to grow with every passing year in the future.

As you know, the sixties of this twentieth century were designed as the "DEVELOPMENT DECADE" by the UN General Assembly in December 1961, because it was rightly felt that prosperity, like peace, was indivisible. This implied a much greater and more sustained flow of aid in terms of men, money and materials from the developed nations to those less privileged, the target being that one per cent of the national income of the former would be placed at the disposal of the developing countries to help them reach the goals of the decade.

Already, this policy of planned aid has made its impact on the developing nations who are moving ahead on the path to economic growth and prosperity through peaceful co-operation. The newly developing countries on the three

continents, in Asia, Africa and America, are striving to raise their national income by five per cent every year, which is the target set by the "Development Decade". This would not only mean better life for millions of people through industrialization but would also help find markets for the surplus goods of the affluent nations, thus knitting the entire world in an invisible but strong bond of mutual economic interdependence.

It is not enough to raise a country's production. It is equally necessary to take full advantage of standardization techniques to achieve the highest productivity with the minimum expenditure of resources and maximum elimination of waste. It is here that ISO is expected to play a key role by spreading the message of standardization and bringing about a universal consciousness of the manifold advantages of standards and how they may be achieved.

Like all efforts at international co-operation, the results of ISO's work are not confined to the field of standards alone. One cannot overlook that, while promoting world standards, ISO is helping to develop a greater degree of co-operation and exchange of ideas and thought in the intellectual, scientific, technological, and economic spheres. In short, it is helping the various countries to know one another better through mutual co-operation. In a sense, one of the most significant aspects of the work being done by ISO is in the strengthening of the forces that are devoted to bringing about a great new world where all people would live in friendliness and work for the common good of mankind.

My association with the work of standardization in this country for well over a decade and with the ISO activities for the past four or five years has convinced me that a great deal of good-will could be brought about in the world, if the ISO ideas were kept in view and applied sincerely. It is in this spirit of service and with your co-operation that I shall endeavour to shoulder the responsibilities attached to this distinguished office. I hope that I shall prove worthy of the honour and trust you have reposed in me.

INDIA'S FOREIGN TRADE IN MERCHANDISE IN SEPTEMBER, 1964

The provisional figures of India's Foreign Trade in merchandise by all routes i.e. sea, air and land, on private and Government accounts during September, 1964 according to information available are:

	(In Rs Lakhs)
Exports ...	75.30
Re-exports ...	37
Imports ...	89.06

The above figures include the value of India's land-borne trade with Nepal and of exports by parcel post of pearls, precious stones etc. Trade with Bhutan and Sikkim is, however, excluded.

Large-Scale Aid Still Necessary

Aid on a large scale would continue to be necessary to enable countries in South and South-East Asia which are members of the Colombo Plan to finance development programmes, the Consultative Committee of the Plan reported at the end of its annual meeting in London on November 20. Ministers representing 22 member-countries attended the meeting.

The annual report of the Committee declared that "it would be unrealistic" to suggest that progress in solving the major problems of the region was "in more than the early stages".

With this assessment came the announcement that the Colombo Plan, which took shape in 1950, is to be extended for another five years until 1971. Its further renewal after that will be considered in 1969.

The themes of development, aid, and trade—enunciated at the recent United Nations Conference on Trade and Development in Geneva—formed the background to the deliberations of the Consultative Committee. Its annual meeting was the first major international conference on this theme to be held since the Geneva conference.

The communique issued at the end of the meeting and the annual report both stress the undiminished need for aid, and also emphasize the necessity for the developing countries to be given "softer" terms of aid. The Committee also underlined the special value of aid to be made available for general purposes and not specifically tied to particular projects.

FOOD PRODUCTION

It drew attention to the fact that food production per capita in the region is only just keeping abreast of population growth, and underlined the great importance of expanding agricultural output, although it considered that this should be in balance with other sectors of the economy.

The communique said that substantial increases in development expenditure had occurred in many countries during 1963. Other expenditures also rose, particularly on defence. Continued efforts would be necessary to pursue policies which would maintain financial stability while not inhibiting investment in essential development.

The level of public expenditure on development per head over the area as a whole remained low, and measures were urgently necessary to accelerate the rate of investment and moderate the rapid rise of population growth.

Aid on a large scale would, however, continue to be necessary to enable the region as a whole to finance its development programmes as well as its current imports.

The total aid provided by Britain, Australia, Canada, Japan,

New Zealand and the United States to recipient countries since 1950 had risen to \$14,864 million. The value of aid contributed in 1963-64 had been \$2,165 million. In addition, regional members were providing an increasing amount of aid to each other and had also invested substantially in the region.

The Committee also showed its awareness of the problems relating to terms and conditions of aid. It said some members had taken steps to make aid available on easier terms during the past year, and the resources of the International Development Association (which includes several members of the Colombo Plan among its major contributors, and which has contributed largely to financing development in the region on easy terms) had been increased. Most aid, however, continued to be tied to purchases from the donor countries, although there had been an increase in the proportion of aid not tied to specific projects.

The communique added. "Further efforts will be needed to provide aid on liberal terms and conditions, and to deal with the

problem of the accumulation of external debt."

The Ministers recognized the importance of training within the region and emphasized that there was scope for considerable expansion in this field.

PROBLEMS OF RURAL AREAS

The Committee dealt with development problems of the rural areas in the region—a special topic for discussion by Colombo Plan countries this year.

The Ministers noted with concern that while the demand for food was increasing constantly, both because of population growth and higher incomes, current food production seems barely to be keeping ahead of population growth. It was felt that priority should be given to expanding agricultural output. At the same time, it was suggested that governments should not think of rural development in isolation but should try to achieve a balanced growth between agricultural and industrial sectors.

The special topic of regional interest for discussion at next year's meeting of the Consultative Committee will be "The relationship between population and economic development in the Colombo Plan area".

Movement of Commodity Prices

Wholesale prices as measured by the official index (with the year ended March 1953 as 100) witnessed a further rise of 2.0 per cent to 158.6 during the month of September, 1964, when compared with 155.5 (revised) for August, 1964.

During the month under review, 'Food Articles' advanced by 2.7 per cent to 169.5, 'tobacco' by 1.5 per cent to 128.5, 'industrial raw materials' by 2.0 per cent to 107.3 and 'manufactures' by 1.0 per cent to 137.0.

FOOD ARTICLES

The sub-group index for 'cereals' moved by 4.0 per cent to 150.2 due to an increase in the prices of all the cereals. At this level the index for cereals was higher by 28.0 per cent when compared with that of a year ago. Higher prices of all the pulses (except urad) raised the index for 'pulses' by 11.4 per cent to 177.1. Lower prices of oranges and cashewnuts brought down the index for fruits and 'vegetables' by 4.7 per cent to 184.0 although the prices of potatoes, and onions and bannas moved up. A fall of 0.7 per cent to 145.8 in the index for 'milk and ghee' was attributable to a decline in the prices of milk despite a rise in the prices of ghee. Increased prices of all the edible oils, pushed up the index for 'edible oils' by 5.3 per cent to 217.0. As a result of a rise in the prices of fish and meat, the sub-group index for 'fish, eggs and meat' went up by

3.0 per cent to 177.4 although the prices of eggs witnessed a fall. Higher prices of gur raised the index for 'sugar and gur' by 2.7 per cent to 212.3. Lower prices of tea, black pepper, chillies, cummin (jira), cardamoms and betelnuts brought down the index for 'other food articles' by 2.1 per cent to 182.9. The price of salt, however, moved up.

TOBACCO

Higher prices of raw tobacco raised the index for 'tobacco' by 1.5 per cent to 128.5.

FUEL, POWER, LIGHT AND LUBRICANTS

The index for the 'fuel, power, light and lubricants' group remained unchanged at its earlier month's revised level of 43.8. The price of castor oil, however, witnessed a rise during the month under review.

High prices of raw jute raised index for 'fibres' by 1.2 per cent to 148.3 although the prices of raw cotton, raw wool and raw silk exhibited declines. Increased prices of all the oilseeds (except cotton seed) pushed up the index for oilseeds' by 2.6 per cent to 213.8. 'Minerals' stood unchanged at the previous month's level of 103.7. The sub-group index for 'other industrial raw materials' moved up by 2.0 per cent to 134.6 owing to an advance in the prices of raw hides, raw skins, lac and logs & timber. The prices of tanning materials, however, came down.

Higher prices of zinc, brass, copper, tin and lead raised the index for 'intermediate products' by 0.3 per cent to 150.9 although the prices of rayon yarn and coir yarn witnessed a fall.

Increased prices of jute manufactures (+6.8 per cent) to 118.5) and cotton manufactures (+0.4 per cent to 136.5) pushed up the sub-group index for 'textiles' by 1.7 per cent to 132.8. The prices of silk & rayon manufactures (+0.4 per cent to 136.3), however, fell down. 'Metal products' remained unchanged at the earlier months' revised level of 169.5. The sub-group index for 'chemicals' went up by 0.8 per cent to 120.4 due to an increase in the prices of general chemicals, dyeing materials and paints, 'oil-cakes' registered a rise of 1.3 per cent to 197.7. The sub-group index for 'Machinery & transport equipment' stood stationary at the previous month's level of 127.1. The sub-group index for other finished products also remained unchanged at its earlier month's level of 127.8. On the whole, the index for 'finished products' advanced by 1.1 per cent to 134.7 during the month under review.

Machine Tool Output

Indian Machine Tool Manufacturers' Association report that the total approximate production of various machine tools by their 35 leading member-firms in September 1964 was as under:

Description of Machine Tool	Quantity Nos.	Value Rs. (in lakhs)
Manufactured		
Lathes ...	411	54.23
Milling Machines ...	56	31.68
Grinding Machines ...	34	15.22
Radial Drills ...	42	14.73
Furnaces ...	16	10.23
Capstan Lathes ...	19	6.83
Sharps ...	58	4.82
Drilling Machines ...	157	4.38
Portable Elec. Tools ...	1735	4.36
Regulators ...	2913	4.22
Planers ...	13	3.40
Drop Stamp Hammers ...	2	3.09
Lathe Chucks ...	1074	3.03
Welding Machines ...	53	2.36
Blowpipes ...	1099	2.36
Presses ...	28	2.26
Miscellaneous ...	489	2.23
Slotting Machines ...	6	1.74
Boring Machines ...	1	1.58
Special Purposes		
Machines ...	4	1.42
Turret Lathe ...	2	1.10
Pneumatic Power		
Hammers ...	2	1.03
Hacksaw Machines ...	12	0.75
Drill Chucks ...	1065	0.25
Cutter & Tool		
Grinder ...	1	0.20
Sand Mills ...	1	0.13
Automatic Lathe ...	1	0.13
	9294	177.76

Germany's Incentives for Investments in India

The signing of the investment guarantee agreement between the Government of India and the Government of the Federal Republic of Germany has removed the only remaining major stumbling block in the way of German industrialists for availing themselves of India's attractive investment opportunities. This agreement, together with the two other important measures taken previously by the German Government, namely, special tax-relief and financial assistance for and German company making investments in developing countries, completes a comprehensive and purposeful system of incentives. It is expected that German industries now will seek, in a greater measure than before, new outlets for their capital and technology in India.

A brief summary of these incentives is given below:

The law enables the Government of the Federal Republic of Germany to issue, on the request of German entrepreneurs, guarantees for their capital investments in foreign, preferably developing nations. This guarantee can only be given for future investments and not to already existing investments.

The prerequisite for extending investment guarantees is that an agreement between the Federal Republic and the foreign host country has been concluded to ensure acceptable protection of the German investments in that country.

The guarantees cover the following political risks.

- Nationalization, confiscation and other measures including illegal actions by higher powers in the host country which in their consequence amount to confiscations.
- War, other armed conflicts, revolution and violent civil disorder.
- Payment prohibition and moratoria.
- Impossibility of currency convertibility or of transfers.

Economic and commercial risks connected with the investment are not covered.

Under the guarantee the Federal Government assumes liability for losses of invested capital (equity and long-term loans) as well as for losses of income on the invested capital. Normally, the guarantee is not given for more than 15 years.

The amount of the guarantee for loss of capital during the first three is 100% or covering the entire capital investment. Thereafter the guarantee amount normally begins to decline at specified rates at the end of each year

depending on the total term of the guarantee as shown below. In case of loss, the person taking a guarantee has to bear at least 10% himself within the limit of the maximum amount.

Term of guarantee	Rate of annual decrease of Percentage	Still covered in the last year
5 years	10	80
10 years	5	65
15 years	1.77	50
20 years	3.53	40

With regard to the guarantee for loss of income, the Federal Government limits its liability to an annual maximum. The overall ceiling at present is 24% of the capital brought in, while in any one year it cannot be higher than 2%. Here also it is stipulated that 10% of the loss in income must be borne by the entrepreneur who took the guarantee.

There are two organizations in Germany assigned to handle these guarantees, namely:

Deutsche Revisions- und Treuhand—A.G. (Treuhand) and Hermes Kredit Versicherungs A.G. (Hermes). Both are located in Hamburg. The applications have to be directed to Treuhand.

Because commercial risks cannot be covered by Government guarantees, the Federal Republic of Germany, has sought to compensate for this by granting tax facilities. The development tax law consequently provides for:

- A one-time deduction of 15% of the amortizable capital investment in a developing country from the taxable profits of the parent company in Germany.
- A further deduction of 50% of the balance (after the 15% deduction) of the amortizable invested capital from the taxable profits of the German company. However, this deduction, must, after a period of six years, be compensated by a proportional increase of profits during a further period of six years.

In other words, a German company, making an investment in a developing nation, receives a permanent tax relief to the extent of 15% of its foreign investments, and a further relief of 50% of the balance during the first six years of the foreign operations. Thus, 57.5% of foreign investment can be earned back, tax free, during a period of six years.

- In case machinery and other capital goods are provided in the investment in the book value of which hidden

reserves are contained, there will be no tax liability on these hidden reserves.

The German Government has set up the Development Association (Entwicklungs-Gesellschaft) in Cologne, for the purpose of assisting German entrepreneurs in the financing of their projects in developing countries.

This institution, offers broad facilities to prospective investors. It can take equity participation in joint-ventures and also convertible debentures. It can grant long-term loans, on favourable terms, and also underwrite stock issues.

There are at present 30 to 40 applications from the proposed Indo-German joint ventures seeking financial assistance. The Development Association should prove to be a valuable factor in the further growth of German investments in India.

The Federal Government also refines some Indian financial institutions through Deutschmark credits. These institutions are the Industrial Credit and Investment Corporation of India (ICICI), the Industrial Finance Corporation (IFC) and the National Small Industries Corporation (NSIC).

It is expected that the system of guarantees and incentives will induce an appreciably larger number of German entrepreneurs to seek new outlets for their capital and technology in India than has been the case so far. In this context it is significant to note that at present the total German investment in India stands at DM 82.4 million, accounting for only 1.2% of the total German overseas investment estimated at DM 6.5 billion.

Superior Coal Located in Bihar

Twenty two coal seams, some of superior quality with coking property and appreciable thickness, have been located by the Indian Bureau of Mines in the Ramgarh coalfield in Bihar.

The seams have been located by the IBM after detailed exploration by intensive drilling in four notified blocks comprising a total area of 70.84 sq. kms.

The location of these seams is considered important in view of their proximity to the proposed site for Bokaro Steel Plant. Besides, exploitation of the seams will help achieve the production targets of coking coal during the Third and the Fourth Plan periods.

The Bureau has, for the first time, established systematic correlation of 16 out of the 22 coal seams. Out of the 22 workable coal seams, particularly four seams

have attracted special attention for their superior quality, coking property and appreciable thickness. These seams have moderate to strong coking properties and are of selected grade to Grade II in quality.

On the basis of the investigations carried out, a total proved reserves of 270.351 million tonnes of coal has been estimated, out of which 82.223 million tonnes are quarriable and the rest can be exploited by underground mining. Of the total reserve of coal, 70.574 million tonnes are of good quality (selected Grade to Grade II) and the remaining 199.777 million tonnes are of inferior grade (Grade III A and inferior).

As a result of the encouraging results of this detailed exploration, it has been decided by the National Coal Development Corporation to develop open-cast mines with the projected production target of 1.5 million tonnes of coal per annum during the Third Plan period which will be raised to 4 million tonnes during the Fourth Plan period.

It has also been decided to set up a coal washery with the American aid and to link-up this washery with Marapahy railway station on the Chandrapura—Muri section of the Eastern railway near the proposed site of the Bokaro Steel Plant with a view to despatching washed coal from this coalfield directly to the Steel Plant.

Business Science Conferences

The University of Poona would be the host to a series of learned Business Science Conferences that would meet at Poona on January 1-4, 1965. This is the first time when business scientists belonging to different areas of specialization from India and abroad would gather together in such large numbers to exchange ideas on a variety of important subjects.

Dr P. S. Lokanathan, Chairman of the National Productivity Council, would preside over the session of the Indian Committee for Management Development (the Indian affiliate of an international association of developing countries) on January 2, 1965. The discussions would centre round the recent developments in the field of management education in India and the future lines of growth, as also the vital problem of introducing modern management techniques in developing countries. The participants include Professor Warren Havnes (Harvard University), Professor Ted Alfred (MIT), Dr A. N. Agarwala (Allahabad University), Mr N. K. Bhojwani (Director, National Productivity Council), Mr R. L. Gupta (Principal, Administrative Staff College of India) and other Indian and foreign experts.

NOTE: Annual figures are averages of months; those of sugar relate to crop years.

†Data of Matches, Hurricane Lanterns, Sewing Machines and Bicycles from January 1963 onwards and those of Footwear (leather) from April 1963 relate to units having fixed assets of Rs 5 lakhs and more.

‡Data in respect of certain units are not included from January to May 1963.

(1) Monthly figures are exclusive of production in Punjab (Kangra) and Himachal Pradesh.

(2) Relating to the production by mills in the membership of Indian Jute Mills' Association and to one non-member mill.

(3) Includes canvas.

(4) Figures relate to stable variety only from June 1962.

(5) Including figures for Jammu and Kashmir.

(6) Figures relate to production of organised factories.

(7) Boxes are of 60 sticks each upto February 1961 and thereafter of 50 sticks each.

(8) Total of viscose yarn, staple fibre, acetate yarn and cellophane.

†From January except in the case of sugar where the figures are progressive from November of the preceding year, the crop year being November—October.

*Provisional.

**"Someone should
tell him about State Bank
Travellers Cheques!"**

Armed guards can cost a lot of money.
Why not carry all the cash you want
in the form of State Bank Travellers
Cheques? They're absolutely safe,
and much more convenient.

The State Bank of India issues its
own Rupee Travellers Cheques
in denominations of Rs. 50/- and
Rs. 100/-. These can be cashed at
any of the 1700 Offices of the State
Bank of India and its Subsidiaries.
They are also encashable at encashing
Agents at airports, and hotels and
shops; in India and abroad. They're
good anywhere, anytime, even after
banking hours.

No irksome formalities. No risk. If lost,
these cheques can easily be replaced.

*Don't take risks.
Take State Bank Travellers Cheques.*

**"DRAMATIC
NEW TYRE"**

**with the record mileage
SUP-R-TUF Miracle Rubber**
the most advanced tyre ever built
to give you **EXTRA** mileage

Firestone research and development engineers have done it again! They have formulated a new miracle rubber—"SUP-R-TUF"—which gives extra mileage ...at no extra cost! And at the same time, comes the NEW DeLuxe Champion tyre, with its perfected tread design for safer motoring. Now, every Firestone passenger tyre is built with SUP-R-TUF rubber to give you extra mileage on any road at any speed. And you get greater safety, because SUP-R-TUF is tougher and has more resistance to punctures, bruises and breaks.

Firestone *NEW* **DELUXE
CHAMPION TYRE**

Deficit Financing & Fresh Taxes

THE Finance Minister's statement that deficit financing will be eschewed in consideration of the price situation will be received with mixed feelings by the public. It is, no doubt, good to be told that the Government will not resort to the facile way of making up the insufficiency of revenues by printing more of paper currency. For, in spite of this method of financing expenditure having acquired a high degree of respectability in the post-war period, actual experience of the effects of such unregulated additions to currency has created in the public mind a wholesome fear that persistence in this method would get the price situation entirely out of hand. The economics of deficit financing which depends on the uses to which the additional funds are put is not so simple as to admit of plain likes and dislikes. But, as has been mentioned earlier, confidence in wise use of deficit financing is by no means well grounded in past experience; and its prospective abandonment may be welcomed without any thought for the good that might have flowed from discreet use of this admittedly unorthodox, but not necessarily unsound, method.

But the sense of relief at this prospect is fast overtaken by the fear that it may mean increases in taxation which apart from its effects on incomes and prices and costs of production and living, might conceivably do more harm to the price situation than even continued indulgence in deficit-financing. There has been no attempt on the part of official spokesmen to assuage such fears. On the other hand, there have been attempts to prepare the public for fresh additions to the tax burden. Though the long drawn deliberations among high circles on the size of the fourth plan are said to have produced a consensus in favour of a relatively smaller outlay, the outlay is by no means small enough to obviate large scale increases in taxation. It is not easy to think of new taxes which will not directly or indirectly exert an upward pressure on prices. If the price situation is the primary concern in framing financial policies for a five year plan of the size indicated, there is, in fact, little to choose between deficit financing and higher taxation. Both are calculated to worsen the price situation and it would normally be impossible to pick out one or the other as the lesser evil.

The Finance Minister has probably leaned toward higher taxation on the ground that deficit financing calls for the kind of self restraint which is not necessary in the case of

additional taxation, because in the case of the latter, the Government would perforce have to reckon with the inevitable outcry from the public and from those in Parliament who are sure to sympathise with it. There is also the additional argument that deficit financing is prima facie unsound and that higher taxes can be credited with a deflationary value. Higher taxes can be used as a weapon against rise in prices only if they reduce buying power without putting up costs and prices. The price situation, therefore, can improve only if deficit financing and higher taxes are both shunned alike.

It will be asked, whether this is possible, however desirable it may be? Its feasibility doubtless rests on the size of the plan being reduced to the size of the resources we can find at each stage without imposing a dangerous strain on the national economy. Here, it is necessary to distinguish between the strains which individual citizens may be called upon to bear in the interests of future development and even in expectation of compensatory increases in wellbeing at a later stage, and the strains which the national economy with its organisational structure, the interrelations of its parts and the interplay of the different forces at work within it will be subjected to. The strain on the individuals may be borne in a spirit of heroic sacrifice or of inert resignation. It will not matter which; and it is only the powerful trade unions who can put up successful resistance to the imposition of such hardships. In any case, it will not be impossible to afford some reliefs where they are sorely needed. But when fiscal policies and price patterns are such as to affect the links between different parts of the productive organisations, and therefore of their outputs, then the whole national economy tends to be thrown out of gear.

It is the latter kind of strain that we have to dread, though inequitable distribution of tax and other burdens certainly produces dangerous embitterment and friction. The opposition to the strains on the national economy as being prejudicial to growth can be easily misrepresented as a plea for soft living for individuals, and members of the upper classes at that. The Government policy of stiffening taxation every year may in part be attributed to this kind of misrepresentation and the consequent virtuosity of individual members of the Government. When austerity is practised by large numbers of people either

out of choice or out of compulsion, consumption standards are bound to remain at low levels and there would be little ground for claiming any improvement in living standards. In fact, this journal has always maintained that in the conditions of this country planning is possible without tears and the cry of limiting consumption in the interests of development is unjustified.

The question that has now to be considered is whether it is possible to avoid both deficit financing and high taxation without a serious cut in plan outlay. The size of the outlay has been taken out of its turn and should not in fact be allowed to shape the thinking on the other vital issues of the national economy. Without implying that there are no untapped sources of new revenues here and there, it ought to be accepted by the Government that increase in plan outlay ought to bear some relation to the increase in revenue from the growth of the national economy under the stimulus of the plan. Moreover, the prevalence of tax evasion, and black money on a large scale indicates one vast field from which new revenues can be obtained without adding to the burden of taxation. As for deficit financing, the use of created money on the lines thought of by the advocates of social credit rather than the lines favoured by politicians would surely deprive it of its inflationary sting.

No Free Wheeling in Exports

THE upturn in exports which commenced last year continues to be the only bright spot in a dreary economic landscape. Exports for the first half of the current financial year, at Rs 414 crores, show a rise of Rs 39 crores as compared with April-September 1963; and exports of Rs 75.7 crores in September have set up a new monthly record. While the Board of Trade, which will be meeting in Madras next Monday, can derive a measure of satisfaction from the trends which vindicate the promotional efforts on a broad front in which industry and trade and the various export promotion councils have taken part, it will also have to take note of certain negative factors which underline the need for vigilance to prevent any sliding back. Export promotion has to be a continuous effort, and it will be a long haul to the target set for the last year of the Fourth Plan. The adverse developments should be properly assessed and measures to counteract their effects adopted without delay.

The first point which attention may be drawn in this connexion is the fall the rate of increase in export earnings as compared with the corresponding period last year. During April-September 1964, the increase in exports was of the order of 50 crores i.e. about 16 per cent as compared with the increase of ten per cent in first half of the current year. The rate of increase of exports, as of other indices of growth, is bound to slow down in course of time, but we in India cannot afford to rest complacently on the assumption that exports have reached a plateau, unless at the same time we are prepared for a radical change in the objectives and strategy of planning.

The ban on the export of vegetable oils and reduction in the sugar export quota have probably contributed significantly to the smaller increase recorded during April-Sep-

tember 1964, as compared with last year. Considering the problems of increasing the output of oil seeds and the rising domestic demand which cannot be held down without depressing the already low levels of nutrition, a realistic export plan will have to provide for a progressive decline in the exports of these commodities. This has to be done despite the fact that there is a ready and expanding world market for these products. The position regarding sugar may improve, if the efforts to step up output of cane and cane sugar yield the expected results.

Another point to be taken into account in assessing the level of exports for the current year is that the export quota of cotton textiles to the United Kingdom was fulfilled in the first half of the year, so that a sharp decline under this head may be expected during the second half. Exports of manufactures to the UK will also attract the increased surcharge of 15 per cent and the prospect for the next year will depend on the duration of the surcharge.

Traditional exports—Jute and Tea—along with coffee and ferro-manganese have contributed substantially to increased exports during the half year. Jute manufactures account for as much as ten crores out of the total increase of Rs 38 crores while coffee exports have increased by Rs 5 crores. The vulnerability of jute exports is underlined by the decline in the prices of jute manufactures in foreign markets. The volume of exports has increased more than the earnings. Pakistani competition has brought been responsible for bringing down the prices which is to the advantage of neither India nor of Pakistan. It should be possible to arrive at some understanding regarding the export prices of jute manufactures.

Increased offtake by USSR has helped to increase exports of tea and coffee as well as of jute manufactures and cashew nuts. Analysis of exports by destinations shows that East European countries account for Rs 22 crores out of the total increase in exports of Rs 38 crores during the half year. Barter deals with the USA have helped to boost exports of ferro-manganese as well as of manganese ore.

Our Public Undertakings: the Time to Stop and Think

By Ekadantham

ONE would hope that the intention of our Government to enter consumer industries like cement, cotton textiles, sugar, drugs etc is backed by something more substantial and positive than mere ideological fervour. Even the most enthusiastic socialists have been wary of state enterprise in consumer industries, if only because their management calls for quick decisions which, in the nature of things, must be beyond the capacity of the state subject to extra-commercial pressures of various kinds. At a time when totalitarian States are acting on the realisation that free enterprise and profit incentive are indispensable for production of more and better consumer

goods, our Government has chosen to assume a courage which can prove ruinous if not well founded. Apart from records of alacrity when the fashion of the times was so clearly expressed that inaction would have been downright silly or when somebody tending to turn into a political nuisance could be conveniently nailed down under the DIR, there has been very little to disturb the peace of those who find Governmental delays lucrative or to dispel the gloom of those who find them disconcerting. And the PAC had found it necessary to state bitterly that an expansion of the public sector can have meaning only if we have men to manage public undertakings efficiently and to good purpose. All this notwithstanding, the PM hopes that the state would benefit from profits made on consumer industries. One therefore expects to find some staggering evidence of stupendous improvement in the working of our public undertakings such as would warrant this measure of confidence.

However, there has been no showing to that effect. The slight increases in net profit shown by some undertakings in 1963-64 hardly justify any heady leap. Mr B. R. Bhagat had declared an important role for public undertakings in raising a surplus of Rs 300 crores, but this would be about the same order as the usual 1% on net worth. There have been reports that the HSL units are working to full capacity but the economics of their production is still to come under review. Timely statistics showing the overall working of state undertakings are seldom available for an adequate criticism.

A study of the finances during 1962-63 of 48 Government companies, out of 154 registered at the end of March 1962, appears in the Reserve Bank of India Bulletin of September 1964, but it reveals next to nothing. Firstly, the selection excludes major undertakings like the HSL and the Neyveli Lignite Corporation Ltd. and secondly, the selection of 48 companies has no claim of a representative sample. As such, the study has little value for drawing valid conclusions as to efficiency or otherwise of the public undertakings. Even as it is, the study shows little concern to meet the usual points of criticism of public undertakings. In Table I, which purports to compare the working and growth of the companies during 1962-63 with those in 1961-62, against an increase of 10.7% in paid-up capital, Reserves and Surplus has been shown a much greater increase all round—in fixed assets, inventories, production, sales, profits etc. A misleading picture has been produced by omission to show the significant fact that there has also been an increase of 29.5% in borrowings i.e. from Rs 94.19 crores to Rs 121.92 crores. Of these borrowings the bulk (Rs 87.5 crores) is from Government. On these borrowings of Rs 121.92 crores an interest of Rs 4.61 crores has been paid. Since May 1962 share prices have consistently declined and investible funds have dwindled. New issues have been fewer, and large portions have had to be taken up by underwriters. At a time when the capital market was so difficult, when even the Government could not raise sufficient loan money, this meant a sacrifice for which the slight increase from 4.3 to 5.4 of the percentage of gross profit on capital employed was small compensation. Another important omission is that, while the gross profit on sales is shown to have increased from 8% in 1961-62 to 9% in 1962-63, there has been no attempt to analyse whether this significant variation was due to

the new inclusion of the units of Fertiliser Corporation in 1962-63 or otherwise due to effects of inflation with which wages and other expenses did not keep up. A misleading impression is therefore created that this increase may all be due to improvement in working, while, on the other hand, quite the reverse could be the case. Table II, giving the Combined Income, Expenditure and appropriation A/c., shows such different items as stocks of finished goods and work-in-progress or salaries and productive wages grouped together into insignificant figures. Unless the items of prime cost and overheads can be separately known there can be no settling the usual complaint that overheads in these undertakings are quite out of proportion, a complaint supported by a criticism by the Auditor General that HSL alone employs about 20,000 staff in excess. Neither is there any indication of such important pieces of information as the extent to which established capacity is being utilised, the extent of idle time, the size of maintenance expenditure, the valuation of the risk of obsolescence etc. A summarised form of the combined Balance Sheet for 1962-63 (Table V) is given below:

(Figures in Lakhs of Rs)			
	Engineering (11 coys)	Chemical (10 coys)	Operating cal companies (48 coys)
Paid-up Capital ...	48.92	53.10	181.63
Reserves and Surplus	9.59	13.54	45.85
Provisions (non-current)	1.18	14	1.78
	59.69	66.78	229.26
Borrowings ...	24.24	37.54	121.92
Other Liabilities ...	41.33	11.08	101.42
	125.36	115.40	452.60
Gross Fixed Assets ...	55.46	116.03	299.04
Less Depreciation Provision ...	16.45	36.29	87.41
Net Fixed Assets ...	39.01	79.74	211.63
Inventories ...	60.47	17.19	119.54
Other Assets ...	25.88	18.47	121.43
	125.36	115.40	452.60

Note:—Inventories of Rs 119.54 crores consist of:

	Rs Crores	
Raw Materials ...	...	20.30
Finished goods and works-in-progress	...	51.50
Others ...	...	47.74

There is no indication how much of Rs 47.74 crores of other stores relates to stores and spare parts for maintenance of plant etc.

The above figures show that the capital has been locked up in fixed assets, so that working capital has to be found in borrowed funds. During 1962-63 internal sources could provide only Rs 28.97 crores as compared to Rs 53.56 crores from external sources, including borrowings of Rs 18.76 crores from the Government and borrowing of Rs 8.98 crores from other sources. Even at the present rate of 80% retention of profits (Rs 9.31 crores) it may take about 15 years before the companies can be self-reliant in working. The position is, therefore, far from healthy and that the return on net worth as dividends is as low as 1.6% for Engineering, 0.6% for chemical and

1% for all companies together brings little consolation.

No wonder then that in the All India Conference of Trade Unions of Workers in the Public Sector Industries held at Bangalore Mr Dange and Mr Menon thought the possibility of the undertakings being handed over to private management sufficiently serious to merit disparagement. We make no such suggestion, if only because it is not practical politics now. The necessity to improve their management is however admitted by all sides. Mr Nehru hit on the truth when at the UN. Seminar on management of private undertakings in December 1959 he said that the normal civil service approach was not quite the same as what might be called the approach required for big industry. And yet the Government has accepted the Vishnu Sahai Committee's recommendation that there should be no ban on officials managing the undertakings and has let them be run largely by deputationists, giving rise to a sense of neglect amongst the officers of the Industrial Management Pool established in 1957. The Fifty Second Report of the Estimates Committee on Personnel Policies of Public Undertakings strongly criticised the lackadaisical treatment of the IMP and urged specific job reservations for the Pool and eschewing of the system of 'deputationists'. The problem can however be finally settled only when outstanding talent is directly recruited from the universities and specially trained for management positions.

The problem of staffing apart, organisation has to be improved by decentralisation and guarantee of autonomy. Prof. Galbraith's suggestion of decentralised multipurpose operating units under the command and control of a large sized public enterprise should be immensely suitable because decentralisation of authority can really take place only in a divisional pattern or organisation. As a measure of internal autonomy, some experts favour that the line executives should enjoy greater freedom from staff or advisory executives, who, they feel, do great harm to work from their sheltered positions. This suggestion is however fraught with dangerous possibilities and may wait till decentralisation and external autonomy are truly effected and ensured.

The great question, however, is whether public funds should be spent under such lax control. On the plea of providing for rapid development the controls on capital expenditure by Government have been so much reduced that their very nature has been altered and the decisions for expenditure are really taken by the Planning Commission and the Congress Party, the endorsement by Parliament being a mere formality. The Standing Finance Committee which examined and approved estimates for Capital Expenditure was replaced by the Estimates Committee which was to review select schemes post-facto and recommend to the Government on possible improvements. Now the PAC and Estimates Committee are proposed to be relieved of their jurisdiction over state undertakings, the work being transferred to a separate Joint Committee of Parliament, whose functions and scope are yet to be defined. The audit of the Government companies is being done by Auditors appointed on the advice of the Auditor General but obviously the arrangement is not satisfactory since the independence of Audit guaranteed by the restrictive provisions in the Constitution regarding re-employment of the CAG etc cannot be secured

to the same extent in respect of the Auditors of the companies. Again checks that operate against mismanagement in private sector such as judgement of share market, credit worthiness, confidence of investing public etc. do not operate in the public sector and the Auditor General himself has been pleading in vain for extension of his jurisdiction over the public sector undertakings. The alternative therefore seems to be between an extensive but inefficient expensive and awkwardly managed public sector and a much smaller one which is autonomous, decentralised and efficient. The choice must clearly be the latter, so further extensions must be discouraged. Not only do they force on the people the double waste of bureaucratic control and the cost of collection of taxes for financing the projects, but they also breed and foster a natural but unfortunate step-motherly treatment of the private sector and thus do an even greater damage to the economy. Be it foreign exchange, coal, power or other essential materials, the private sector is left to starve. In a memorandum submitted to the Rao Committee, the F.I.C.C.I. pointed out that out of the total authorisation of loans and credits upto the end of the second year of the Third Plan only about 10 per cent would have accrued to the private sector for specific projects although the total investment undertaken by the private sector in the first 3 plans would exceed 45 per cent of the national investment. There are also the effects of the unreasonable price policy of our Government, on which the World Bank experts had occasion to comment adversely and of great delays in issue of licences. Despite all this the private sector excelled the expectations of the Planning Commission by 25 per cent during the Second Plan period and against an expected investment of Rs 575 crores actually invested Rs 725 crores with better productivity results.

However distasteful ideologically, it must therefore be admitted that there is a great deal of practical sense in letting people with industrial experience take up such ventures. There must be a time to give up the folly of spending tax moneys and loans on manufacturing in public sector what can be obtained more cheaply by manufacture in private sector or by imports. One estimate by Prof. B. R. Shenoy places the waste of resources in manufacturing what can be imported cheaply at about 40 per cent of the annual output of the undertakings. There must be reasonable limits to the costs at which premature self-sufficiency may be attempted. Agriculture, cottage industries and light industries can with their high employment potential serve as the best infra-structure for economic growth in our land. Our wrong identification of basic industries and our ideological preference for state management have landed us in grave difficulties and the time has truly come for serious rethinking.

Limited Industrial Progress in the South

THE unequal distribution of resources and investment over a decade of planning is reflected also in the nature and size of corporate investment. This has results bearing not only on organised employment but on the growth

of service or ancillary industries. What is evident is that in the South organised industry has not developed as fast as in Bengal or Maharashtra and the inadequacy of saving and capital is due in part to delayed industrial development, illustrated by the trend in joint-stock company floatations and their paid-up capital.

A recurring complaint that industrial development in the Southern region during the Plan period has not been as rapid as in Western India is heard. The complaint is based on the distribution of new industrial licences as also the slowness of capital formation. Jointstock companies in southern region including Andhra Pradesh, Madras, Mysore and Kerala are not as numerous as in Bengal or Maharashtra. In 1962-63 there were 5,106 companies in the South as compared with 25,504 in the whole of India. This disparity is regarded as a brake on employment and income. The difference is more pronounced in respect of paid-up capital, the southern region accounting for Rs 320.15 crores in 1962-63 as compared with Rs 2,185 crores for India as a whole. The pace of company formation is certainly slower as 258 new companies were registered in 1963-64 in the Southern region while 1127 companies were set up in India. It may be noted that in Andhra Pradesh only 27 new companies were started out of 258 attributed to the South.

In regard to the Government-owned companies also the distribution suggests that the Southern region is handicapped. And as for the foreign companies there were only 43 in the South as compared with 583 operating in India. Figures as to paid-up capital of Government companies suggests only that the South is definitely lagging behind the industrialised States that forged ahead before and during the Plans. The rate of saving and investment has a marked effect on the retardation of enterprise, but it may be inferred also that capital from the South has flown into new enterprises set up in other States whose own industrial base is older and broadbased. Yet the chronic paucity of capital in the region is reflected in the relatively small number of investment and trust companies, as also banks and insurance companies at present. Taking into account the mortality of jointstock companies during the last four years, it is permissible to argue that company formation has been slower and the industrial tradition weaker, despite new opportunities opened up.

Any inquiry into the causes of imbalance will perhaps lead to an analysis of power shortage, deficiency in respect of coal and oil, as well as the use of minerals for export, not use at home. The trend of registration will however, suggest that private limited companies enjoy a wider vogue, especially in Madras and the fillip to public jointstock enterprise has been given by financial institutions that have aided new companies. Nevertheless, the general trend is unfavourable—not because capital is shy but because the managerial tradition has not developed to the same point as in the Western region. The figures as to companies at work or the capital at their disposal indicate that only 14 per cent of the capital is accounted for by the big companies in the south region though 18 per cent of the total number of companies can be claimed for the Southern region. It is Andhra Pradesh that has lagged behind for more that the rest because the private investment has been small and intermittent as compared with Madras where a Stock Exchange has been at work since 1937. In comparison A. P. shows up

badly but it must be noted also that the Andhra enterprises launched from Madras in the past have depended on capital drawn from outside and the companies that are specifically due to local initiative are now fewer than supposed.

This situation is described in terms of local capital being shy or scarce and the Hyderabad enterprises (private or public) having a chequered record. The agricultural advance seen in regard to commercial crops does not have a parallel in regard to industrial growth and the reorganisation of States on a linguistic basis has not led to any upsurge in the field of industrial development. Conventional disposal of surplus income has been a brake on development but the managing agency system has also been less active and less affluent, so that in the South development probably hinges on the influx of capital and skill from other States.

The cotton textile or sugar industry in the South has depended on local initiative and the relative weakness of the units calls for notice, as and when companies are made. Yet a better return on capital is forthcoming and if this is in line with interest rates, higher in the southern region necessarily, it must be confessed that the attractions of money-lending or trade as against investment in industry seem to weigh with many who have money to spare, especially, in Andhra Pradesh. The education of the public in the proper use of savings may not come from the efforts of the L.I.C. or the Unit Trust of India but from the fuller utilisation of banking facilities available in greater measure in the Southern region.

The fact of underdevelopment is not perhaps peculiar to the South but it is certainly worth examination from other angles than revenue collected or taxable capacity. The existing disparities in income leading to the rise of monopoly may be treated as a reason for some new thinking about the possibilities of the South though it is plain that private enterprise must take steps to correct this present imbalance. The industrial growth of Mysore, Travancore or Hyderabad in the past was largely due to State initiative and the Dewans took steps to create new industries. That tradition has been sapped and an adequate substitute has not been evolved. Conferences of businessmen who look at resources or needs and the climate for investment are by no means satisfied that the South can rely wholly on self-help.

Whether the Fourth Plan will lead to a drift to the South, offering certain advantages like a relative abundance of skilled labour, is a moot point. It is just because the impulse for diversification is going to be checked and the managing agency system put under additional restraint that it is now possible to reckon on the early enlargement of the industrial enterprises though one may note in passing that a South Indian shipping company launched with foreign aid, has made its bow so as to contradict the old impression that it is in the South private enterprise that is dormant.

The crucial point is that in the South, the size of the capital market does not favour rapid or continuous expansion and the tax burden and other handicaps loom larger, not only for small investors today. The conference held on the responsibility of the Indian businessmen did not deal specifically with the creation of confidence among the large body of investors whose experience has been chasten-

ing enough in recent years. The conference duly emphasised the need for morality in the business world and the lawyer's view was put forward by Mr Setalvad in plain and direct terms. It is perhaps necessary to argue that the selfish or perverse capitalist is an obstacle and the investing public must be more wary than in the past. But it is necessary at the same time to stress the need for the steady import of outside talent, and the fact that some view changes in company control as promising an improvement in operations requires special notice.

The weakness of the industrial tradition as well as the failure of new companies to match promise of performance may demand a new effort in the South to get both capital and know how from foreign collaborators as well as Indian collaborators to whom the South may seem safe. The existing conditions in the South may warrant a new, close look at the industrial potential just because the old companies like Mettur Chemical or India Cements have reached maturity. It is idle to think of the South being able to get up steam on its own, and as a means to national integration, the expansion of big, old companies from the North may now seem both just and expedient. But what is more pertinent at present is that the South is relatively underdeveloped, that small industries are likely to prove useful as feeders and the State Governments are latterly more energetic in promoting power development. The disparities then need not be a reason for despair. But more cooperation is required to remove differences in structure and ambitions in the economic sphere.

Small Car Again!

It has now been officially acknowledged that the alternative proposals for increasing the output of cars and bringing down their cost which indicated more than a year ago have not made any tangible progress. This is not entirely surprising, for, one of the proposals envisaged integration of the existing manufacturing facilities into a common unit for the production of a low priced automobile. The integration would have called for a measure of coordination which might have been practicable if the different units had been located in one centre. But the manufacturing units in India are located at distance of over thousand miles and the transport of components from one unit to another would inevitably have added to the costs of the final product.

The other proposal was that one of the existing units might be selected for substantial expansion, the selection being made on a competitive basis. Car manufacturers have not jumped at the opportunity of expanding their output when it was made conditional upon substantial reduction in cost. They do not consider that a reduction of more than Rs 750 per car would be possible even if the production were to be increased to 50,000 per annum.

In this situation the small car project, which was put on the shelf two years ago, continues to attract attention. But the manner in which the project was dropped when details of collaboration for manufacture of the Dauphine had been finalised, and the only thing left was the formal signing of the agreement, raises doubts about the seriousness with which Government will go ahead with the project for manufacture of a small car at a reasonable price.

World of Finance

BANK RETURNS

Steep Rise in Deposits

SCHEDULED Banks have, during the week ended 20 November, experienced a steep rise in Deposit resources. This possibly accounts for the fact that during the first week in December the inter-bank call money rate did not rise unduly, such new accretions apparently being sufficient to meet the demand occasioned by tax payments and beginning of the month disbursements. Thus, the beginning of tightness in the money market has been avoided and deferred, we may suggest, till the new year, except for the pressure that, owing to window-dressing by banks for their balance-sheets, might be expected to manifest itself toward the end of this month.

But we may be sure that once the busy season pressure begins to impose a strain upon the banking system—say, from the first or second week in January—tightness in the money market thereafter would be relentless until, in March next, the end of fiscal year payments are made by Government. Also, so as to finance their constituents, banks are unlikely to entertain any new applications for accommodation till that time.

According to the returns of the Reserve Bank for 27 November, Active Note circulation has declined by Rs 10.48 crores to Rs 2,422.46 crores, and there has been inflow of Rupee Coin for Rs 1.63 crores. Both Foreign Securities and Rupee Securities are

unchanged at Rs 85.46 crores and Rs 2,146.13 crores respectively, and so the Reserve Bank's cash in the till has improved by Rs 12.11 crores to Rs 32.30 crores.

Investments in the Banking Department are lower by about Rs 2 crores at Rs 118.44 crores; and regard must be had for the fact that the State Bank has in the week under review figured as a purchaser of gilt-edged for Rs 9 crores. It would appear, then, that the Centre instituted deficit financing, partly to meet the maturing liability of Rs 12 crores on Treasury Bills purchased and discounted by the Reserve Bank; and such recourse to created money has partly been concealed by the sale to the State Bank. The Centre's balances have improved by Rs 9.31 crores to Rs 60.14 crores. The States report little deviation in their figures with their Deposits a shade lower by Rs 0.15 crore at Rs 6.34 crores and their ways and means borrowings marked down by Rs 0.70 crore at Rs 38.86 crores.

Reserve Balances of Scheduled Banks are, owing mainly to the State Bank, lower by Rs 7.65 crores at Rs 93.95 crores; and Scheduled Banks' borrowings from the Reserve Bank are a shade lower by Rs 0.41 crore at a still nominal Rs 0.83 crore.

Lastly as far as concerns the Reserve Bank returns, Balances Held Abroad have slipped back by Rs 1.42 crores to Rs 8.01 crores; since this occurs when the busy season for exports has already started, the inference is that repayments of and payments of interest on foreign loans are beginning considerably to be felt.

The return of the State Bank for 27 November discloses a fall of Rs 6.17 crores to Rs

666.75 crores in Deposits and a rise of Rs 1.46 crores to Rs 345.48 crores in Advances. Are we to understand, then, that the State Bank in any event has begun to experience busy season pressure? With a downward adjustment of Rs 13 crores or so to Rs 39.04 crores in Other Assets, way has been paved for the acquisition of Rs 9 crores of gilt-edged, raising holdings to Rs 289.43 crores. Thus, cash balances, including money at call and short notice, have in the event been drawn down by Rs 4.84 crores to Rs 30.12 crores.

Scheduled Banks have, according to their return for 20 November, had a sharp accretion to Deposits, adding up to Rs 19.43 crores, of which one-third is ascribable to the State Bank. Net Demand Deposits are up by Rs 6.07 crores at Rs 1,346.91 crores and net Time deposits have improved by Rs 13.36 crores to Rs 1,386.24 crores. At the same time—hardly to be expected when notionally the busy season has commenced—the total of Advances has shrunk by Rs 5.59 crores to Rs 1,733.97 crores, despite the State Bank in the relevant week reporting a rise of Rs 1.05 crores in the credit it extended. Gilt-edged investments are shown higher by Rs 9 crores at Rs 828.82 crores; but with the State Bank in that week having disinvested for about Rs 7 crores, the implication is that other Scheduled Banks acquired about Rs 16 crores' worth—again, scarcely a busy season phenomenon. Indebtedness to the State Bank is up by Rs 5.12 crores at Rs 43.69 crores, while borrowings from the Reserve Bank are lower by Rs 0.81 crore at Rs 1.46 crores. So, cash balances, including money at call and short notice, are more or less unchanged at Rs 266.78 crores.

GLEANINGS

The US Money Market

[Immediately after President Johnson's landslide victory The Morgan Guaranty Survey, in its issue for November 1964, made a certain assessment of the US money market; and this was published before the Labour Government in fact raised bank Rate. While in this sense the analysis has become dated, the following extract is still important for the student of the money market as indicating the views held at the time by one of America's most important banks.]

The money market, whose continuing occupation it is to judge the future course of interest rates, has adjusted its expectations slightly in recent weeks. It now appears to be leaning—ever so cautiously—toward confidence that

the basic policy review promised by the Federal Reserve authorities for mid-November will not be quickly followed by any sharp move toward restraint. Price strength has prevailed in all sectors of the long-term bond market—corporate, municipal, and government. Yields on Treasury bills and other short-term issues have firmed a bit recently, but primarily this appears to be a seasonal phenomenon.

In their appraisal the buyers and sellers of debt securities seem to be discounting the calls for tighter money that have come with increasing frequency from economists both in and out of the banking community, who see storm signals of inflation in recent wage settlements, price rises, and the narrowing of the gap between production

and capacity in some industries. For the moment at least, the market is betting that the policy makers will be more impressed by such contrary—if ephemeral—signs as the toning-down of the auto industry's pace by labor troubles and the reversal during the second half of October of the long rise that had been occurring in the money supply.

Also affecting market psychology is the choice by Great Britain's new Labor government of means other than an increase in bank rate as its response to the British balance-of-payments problem. Strong bank rate action would have put pressure on the dollar and probably would have forced official action aimed at stiffening interest rates in the United States as a deterrent to capital outflows.

Looking into the longer future, the money market is pondering

what effect President Johnson's massive electoral mandate may have on his attitude towards credit policy. During the campaign he reiterated his view, stated in his Economic Report last January, that continued monetary expansion is "essential" to economic growth. But he did not preclude the use of appropriate measures by the monetary authorities if inflation should boil up at home or if this country's international payments score should slip badly.

If the election results have changed the context of monetary policy at all, they may have pushed a notch or two higher on the warning gauge the point at which the Administration would be inclined to favor the application of restraint. Most money market observers guess the change won't be great enough to cause a serious clash between the White House and the Federal Reserve Board.

THE BRITISH SCENE

Doleful and Dazed

BRITAIN has had an extraordinarily trying fortnight. People with long memories compare its events to those that destroyed the Labour Government in the early thirties. The pressure on the sterling has been mounting throughout September and October but the real situation had tended to be obscured by Britain's borrowings from the European Central Banks. But the onslaught on the pound from the third week of November was qualitatively different. On Monday 16 November, Mr Harold Wilson spoke about his determination to keep the sterling strong and riding high and darkly hinted at further measures to defend the strength of the pound, should they become necessary. This was widely interpreted as the imminence of the jacking up of the Bank Rate. But when the following Thursday brought no increase in the Bank Rate, foreign exchange markets appeared to develop an almost indecent desire to get rid of sterling. The pressure against the reserves was immense which the formal announcement of the details of the \$1,000 million stand-by credit from the IMF did nothing to abate. On Monday, (23 November) the Bank Rate was raised to 7 per cent and this seemed to have a certain steadying effect on the pound. This did not last long enough, as it was interpreted more as a panic measure than anything else. The fact that the United States increased its discount rate by half a per cent did not in itself constitute a major deterrent to the flow of funds to London or to the return of confidence in the sterling. Obviously, the pressure on the pound was due to a far deeper crisis of confidence and it was only when on Wednesday (25 November) when the Central Banks of eleven countries and the Bank of International Settlements announced a line of credit of \$3,000 million that the blood-letting was staunch. The purely speculative pressure on the pound was eased as a result of this emergency transfusion of credit.

The post-mortem on the events of the last fortnight has been both doleful and somewhat dazed. Almost everyone seems to think that the Labour Government has been both clumsy and reckless in the way in which it set about clearing the economic mess it had inherited from the previous government. Almost everyone, is also agreed that it did inherit a mess. Even conservative papers concede this. But the impression that Labour exaggerated the extent of the crisis for party political reasons is widespread. This is held to have boomeranged with the foreign exchange markets accepting rather too readily and literally the

Labour analysis of the economic crisis and drawing therefrom the conclusion that there was "no percentage" in the pound, either in the short or the long run. It is also held that Labour has been ham-handed in dealing with foreign opinion, especially the opinion of its partners in the EFTA. The failure to consult them on the question of import surcharges has particularly offended them and subsequent amendments have had the unfortunate effect of making people doubt whether the import surcharges will last long enough to keep at long the payments difficulties. Labour is also supposed to have quite needlessly exacerbated French opinion by ostentatiously mentioning the Concords project as one of the expensively prestigious projects that it was going to consider jettisoning in the interests of economy. The little budget of Callaghan is also held to have failed to reassure foreign opinion of the readiness of Britain to take self-disciplinary measures in the context of balance of payment difficulties. The announcement of social service benefits (which were in any case to commence only in the next financial year) and the announcement of a six-penny increase in the standard rate of income tax were both considered *faux pas* for different reasons. The former was held to be unreasonable in that it announced further extravagance from the point of view of foreigners looking for signs of discipline in expenditure in a Government faced with balance of payment difficulties. Increased income-tax was also considered as hardly the action of a Government wishing to provide incentives for economic upsurge. Both were considered measures meant more to forestall criticism from Labour's own ideological supporters (which, ironically, it didn't with Mrs Herbyson the Pension Minister badly mauled at Party forms) than as measures taken to instil a sense of discipline in the management of the economy.

In all this criticism, *schadenfreude* is far from absent, but there is a certain amount of oblique sympathy for Wilson's Government for the difficulties it is facing. It is felt, for example, that the Labour Government is unfortunately obliged to adopt by force of circumstances policies that are against its own economic philosophy. The brave new world that Labour had promised, a world in which Britain will recover its competitive edge by modernising its industry, by ruthless elimination of economic waste and by a rational incomes policy, is at the moment a receding one. Extremists among the Labour supporters speak suspiciously and bitterly of an international political conspiracy to destroy British Labour. This is palpable nonsense. Labour's prejudice against international finance, stems from the experience of the thirties but the fact that the central banks of Europe have

promptly provided the three thousand million dollar credit that alone succeeded in injecting confidence in the pound should dispel all such notions.

The first 50 days of Wilson's 100 days have thus been those of alarms and excursions. There is distinct evidence that some of the rashness with which Labour began has worn off and Labour is certainly in a more chastened mood than it was fifty days ago. At the moment, with time bought at such high psychological expense, it is probably staking everything on its ability to produce an acceptable incomes policy that will make sense as a code of discipline for both the employers of the TUC. Whether it will succeed in this remains to be seen. Meantime, export performance will have to improve noticeably in the coming year if the balance of payments position is to improve. The incentives already announced amounting to a tax rebate is widely considered in Britain as totally inadequate. There is much talk of recasting the taxation system in such a way as to make exemptions for it for export earnings fall within the four corners of the GATT regulations. Reduction of overseas commitments is also slated but this is more likely to be in the military than in the "aid" sphere.

ANNUITY DEPOSITS

Certificates Delayed

Deposits under the Annuity Deposit Scheme, 1964 are being received with effect from 1 October 1964.

It was expected that against the applications initially received by the various deposit offices, the Annuity Deposit Certificates would be issued and delivered on 30 November 1964. However, owing to delay in the printing of the Annuity Deposit Certificate forms, the deposit offices will now be able to deliver the certificates on the above mentioned date.

According to the present indications, against deposits received up to 30 November 1964, the Annuity Deposit Certificates will be delivered on or about 30 January 1965. Efforts will, however, be made to deliver the certificates earlier to the extent possible.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 1 December 1964. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.400 per cent were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.400 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 7 December 1964. Successful tenderers should make payment on Friday, 11 December 1964 at all centres. Other conditions are as usual.

During the week ended 27 November 1964 Government of India Treasury Bills for Rs 40.44.25,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 2 December 1964 to 5 December 1964 at Rs 99.416 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 25 November 1965 to 28 November 1964 amounted to Rs 52,00,000.

Notes of the week

PM

Discovery of London

The Prime Minister's visit to London is certainly more important than his visit to Cairo for talks with Mr Wilson may help India's defence expansion programme. If there is a crisis in the UK as the 7 per cent Bank rate indicates there is a continuing crisis in India. The food shortage and the foreign exchange difficulty cannot be eased by the UK but the latter can help to secure more untied aid from the USA and Canada. The Chavan mission was a limited one concerned with naval expansion and aircraft engines. On the other hand, Mr Shastri, as Mr Nehru's successor, can certainly present a case for aid in development as well as defence, though Mr Shastri is not likely to advertise unduly India's difficulties either with China or Pakistan.

In the altered context of Britain's relations with the Middle East, for example, the insulation of the South Arabian federation, it is evident that the Labour Government will look at India's position in Asia in a different light by reference to the events in Indo-China and US commitments. The chances of extra aid to India must be examined by reference to the Colombo Plan's progress rather than tariff advantages, for what is clear is that UK imports will be kept down in future and India must try to seek new outlets for its exports.

The effective aid available by way of loans for maintenance imports might not increase but if a real community of aims and interests is established, Mr Shastri may be able to get Britain to look at the Fourth Plan requirements precisely. Since no hard and fast programme is ready, the Fourth Plan itself may be well shaped by resort to foreign advice, chiefly in view of doubts and difficulties felt in India. What Mr Shastri's visit may lead to is an apt appreciation of Indian policy, foreign and domestic, so as to remove the impressions created by the discussion on the need for making the atom bomb here. India's finite view will be put before HMG and

this country's intentions cannot be misrepresented by either accident or design. The Phulpur election result will certainly indicate to Mr Wilson that the Congress party's stock is not falling and Mr Shastri's own contribution to the victory of Mrs Pandit will be rated highly.

THE LAW

The Ladies Meet at Delhi

The meeting of lady lawyers in Delhi was encouraged to find out that a Welfare State in India is being created by stages. Whether the next session (to be held in Liberia) will be as fruitful may be doubted because the African republic is not distinguished for its adherence to freedom and progress. However, what the meeting at Delhi produced was a demand for an Ombudsman. In the British Commonwealth only New Zealand has set up an office to protect the private citizen against the public authority in the event of oppression. Others are content to rely on old methods and machinery and think of the Scandinavian institution as a legal luxury.

That India can always point to many legal reforms after 1956 as proof of equality of sexes deserved by the feminists is perhaps enough to show that the constitution contains all safeguards Lady Chatterjee—who was in the Labour Department in India and as Dr Gladys Broughton gave shape and meaning to labour welfare measures here—has recognised that advance in social welfare has followed constitutional change in India. The Government has taken the lead in reform and efforts to put down immoral traffic or extend prison reform are derived from the appreciation of needs and desires. If exclusion of an Israeli delegate from a luncheon was a lapse from decorum the conference itself did not think of the vast differences between the advanced and backward nations. It saw the shining ideal—not the obstacles in the way of realising it—and the problem of Indian poverty which

erases sex differences was not examined. To think of official jobs for ladies learned in the law is easy and natural but the country must be able to pay for it. The conservation of traditions to protect the social fabric is hardly taken into consideration by ardent reformers who see only that others push forward and the long-range view is seldom approved. The crucial difference between new and old countries eg. Arabia and Algeria cannot be overlooked by ladies inclined to think of novelties as necessities. The economic structure must be able to stand the burdens that reforms impose and there is certainly some justification for another point of view, about Prohibition or a ban on child labour.

FOOD & HEALTH

Scourges of Hunger

The urgency for an early eradication of the scourges of hunger and ill-health from the world has been spotlighted by the seminar on food and health organised by the Eucharistic Congress in Bombay. The magnitude of the problem can be easily gauged from the fact that nearly 1,500 million people are in a state of chronic undernourishment and the Papal Legate Cardinal Agagianian was only stressing the obvious when he reminded the affluent countries of their moral responsibility to "feed the hungry, clothe the naked and shelter the homeless". The causes for the disturbing state of a good portion of the world's population are not far to seek. Population growth in these countries has far outstripped their foodgrain production and the per capita income of their citizens is a mere trifle when compared to that of their counterparts in the industrially advanced countries.

Hearteningly enough, the rich countries have been constantly endeavouring to expedite the economic growth of the developing countries. Such programmes, however, did not meet with uniform success owing to several factors which varied from one country to another. The lack of expertise and capital is a common problem manifest in all the underdeveloped

countries. The pressure of population on the available food supply has been rapidly increasing necessitating large scale imports involving huge drain of foreign exchange. As most of the gains of economic growth are offset by population explosion, there is an imperative need for containing it within manageable proportions. The growing interest of the developed nations in the economic uplift of the developing countries augurs well for the betterment of famished section of world's population in the none too distant future.

PAPER

Recovery of Chemicals

The deliberations of the second international seminar on "Recovery of Chemicals and Forestry Operations" held in Dandeli in Mysore State under the auspices of the Indian Pulp and Paper Technical Association are of topical interest to India which is

currently experiencing a progressive uptrend in paper manufacturing cost. The seminar, which was attended over by about 100 technical experts from within and abroad, highlighted the immense financial gains that will accrue to the mills from chemicals recovery and the vast scope for work on account of the marked disparity in the percentage of recovery in India from that is prevailing in the industrially advanced countries of the West. At the same time it was rightly pointed out that from the point of view of economy it would be beneficial to start paper mills with a capacity of at least 50 tonnes per day as one per cent in recovery of chemicals would yield a substantial gain of Rs 1 lakh per annum. In the circumstances, it is significant that most of the chemicals utilised in paper production could be recovered if the plant is equipped with a modern recovery plant. The small units in the industry will derive little enthusiasm from this as the installation of a recovery plant will involve heavy capital expenditure. But it is encouraging that though much advance has been registered in the recovery of chemicals, the prospects for improving the economics of paper manufacture are considered to be vast enough.

As suggested at the seminar the setting up of a central research laboratory will revolutionise paper manufacture in the country and most of the intricate procedures in pulp operations could be simplified. The statement of Mr S. Nijalingappa, Chief Minister of Mysore, while inaugurating the seminar, that fifty per cent of the expenditure involved in the project will be met by his government is really encouraging. Understandably enough, the seminar took an alarmist view of the unreliable raw material supply position that is prevalent in the country. The seminar was critical of Government attitude in this regard and stressed the need for an immediate shift in its forest policy for ensuring better availability. The idea of diverting bagasse for paper manufacture has been shelved because of the failure to find alternative fuel to the sugar industry. Inevitably the paper industry in the country found itself landed in a soup and the efforts from the authorities to extricate it from the sloughs have been of little avail. As the future of the industry is closely interlocked with the availability of raw materials a vigorous development of forestry on planned lines should brook no delay.

KERALA Roads, Yes: Bridges, No

Road transport in Kerala has developed with reference to the needs of Mysore and Madras, still

served by ports on the West Coast. The railway mileage in Kerala is 552 miles and Ernakulam is linked with Trivandrum as well as Coimbatore. The inland rivers and canals are said to extend over 1,200 miles and 13 ports on the coast serve countrycraft. But road mileage has risen steadily though many are not pucca roads suited to heavy or fast traffic. The lack of bridges is still noted and an appraisal of the Plan performance in Kerala notes that during the monsoon river-borne traffic is difficult for 500 motor boats and 1,300 country boats in use. There are 113 vehicles for a lakh of population so that Kerala is well above the Indian average with 36,560 mechanical vehicles in 1962-63 (showing a rise of 50 per cent on 1960-61.) The number of buses rose by 6 per cent only but the State transport carries millions and scheduled services over long distances offer a useful alternative to travellers who fear overcrowded trains. There is scope for further increase in transport and there are still areas to be opened up. Careful choice of routes and vehicles may justify fresh investment calculated to strengthen the economic system. A point to note is that road services too help the regular import of food and export of perishables like pineapples and bananas to distant cites. The systematic planning of road services certainly helped to create tourist traffic to Cape Comorin and it is easy to say that transport workers earning Rs 1,183 per annum are better off than most factory workers. There are seven large workshops to handle repairs to motors and more than 3,500 persons earn a living in repair shops which seem more important than the engineering workshops in regard to labour employed.

FAO The Equestrian Population

The FAO bulletin estimating the population of horses, mules and asses in the world in 1962-63 indicates that France had more horses than the UK where the tractor has replaced working animals. India had fewer horses since the bullock is the work-animal here whereas Poland and Spain rely on horses and the latter has more mules and asses. The USSR still contains more boasts than any other country and the USA is a poor second though the Southern share-cropper depends largely on mules to grow cotton or tobacco. It is the same in Mexico.

The animal population in Asia is small because of the usual fodder scarcity but Pakistan seems to retain faith in horses like Turkey. In Africa the largest number of mules and asses is found in Ethiopia, and South Africa of late raising beef cattle

and sheep has relatively few animals despite a dry climate and large holdings. The declining trend is perhaps due to the advent of farm machinery in South Africa also, a point that shows how agricultural progress can lead to the reduced dependence on both men and animals. Climate is a factor, so is farm income. Political unrest has obviously reduced the number of farm livestock in Algeria in recent years. But in Ireland too horses are fewer, and racing is not enough of a prop for horse breeders either in Ireland or Australia.

The displacement of the horse is ascertainable from figures relating to Belgium, Germany and Hungary. The trend is in favour of machines, and nowadays trucks or tractors are preferred except in countries like Poland or Yugoslavia. The horse has lost ground in Cuba as well as Canada because the internal combustion engine has come to stay. The Indian figures too point to the same conclusion because the taxi is now more common than the tonga in big cities. The world was estimated to have 66 million horses, 16.2 million mules and 41.6 million asses in 1962-63 and the numbers do not seem to have gone up since 1957 which alone might indicate that horses are out of fashion not only in the armed forces that looks today to rapid mechanical transport of weapons and ammunition.

BHUTAN The Ancient House and Modern Times

The difficulties in Bhutan—the hidden kingdom—are probably over with the King's return. As in Nepal, the Indian Government's major aim is to support traditional authority vested in the King and check reforming zeal. It is realized that democracy is out of place in the Himalayan Kingdoms and the royal authority must be upheld for the sake of quiet. Aid to Bhutan from outside will perhaps increase after the disclosure of internal strain but the treaty signed after Indian independence must be reinforced by a new agreement as to defence and external affairs. The real issue is linked with sending a military mission to keep out Chinese interference from the Tibetan base and India must be equipped in Sikkim also to deal with a threat that is by no means idle. The advantages of making roads and opening up Bhutan as also Sikkim accrue to the people who may not realise that a protectorate alone is calculated to keep Bhutan free of entanglements. The problem for the King is not personal, even after the removal of the conspirators. It is really political, how can an ancient house keep up its place in this terrible century. The answer

is not easy but surely India's Foreign Minister could have made a trip to Bhutan in the crisis to dispel doubts, if not difficulties.

The restoration of power to the King is certainly welcome for after the Prime Minister's assassination, it is the King who has held Bhutan together. The need to reinforce his authority is plain and the Indian Government has realised that if the botanist Hooker just escaped oppression in Sikkim he brought the kingdom within the British Indian sphere of influence. To improve upon the past in regard to Nepal, Bhutan and Sikkim it is necessary to show China that the internal troubles can be dealt with always by India acting for itself and not waiting upon events or on outside advice. The double dynastic rule in Nepal or Bhutan is, of course, a troublesome memory but the Indian republic must help the Throne to get back and assert its power. The whole point of the border roads organisation is to keep in touch with the kingdoms adjoining India and the effort to increase food or other supplies to Bhutan must be made soon to create popular support for the King now back in Bhutan.

HONGKONG Freezing Out Hot Money

In recent years the money and exchange markets in Hongkong too have come under regulation. The Colony's rules were framed at the instance of a Bank of England official deputed in 1962 to organise or control the banking business. The two big Exchange banks are not alone. Many Chinese bankers and moneylenders do a lot of business and the nonstop boom has brought in money from outside. The new rules to apply from December are derived from the arrangements in force elsewhere. The ceiling placed on deposits for the local native banks will perhaps help the H & S Bank to do more business for itself against the local scheduled banks. The gold market will perhaps be under control so as to check smuggling based on Hongkong.

Private bankers will perhaps not be affected by rules that apply to local Chinese moneylenders, though it may be guessed that the control is really meant to help UK trade in future with China, as private banking in the old style will be displaced gradually and the inflow of hot money will be kept down so that the HK dollar will be in a stronger position in relation to sterling.

The move certainly means that the freedom of financial dealings is noted in the postwar period is gone even in Hongkong, but the local level of interest rates has been higher than in Britain and money may not go to Singapore

or Manila from Hongkong if control comes. The New Territories on the mainland will be served by mobile banks run from Hongkong and the Chinese population may accept a sort of banking control as part of the price for British protection. However, the flow of remittances for investment in Hongkong, with the textile industry there adapting itself to the use of synthetic fibres, may continue and the land boom which makes Hongkong developers eager will certainly continue. The important advantages that Hongkong offers to Americans also will be unaltered by control of banking and the H&S banks prestige—higher than that of the Colonial Government—will be reinforced by its status as a bank of issue and the Government banker in Hongkong.

MALAYSIA Fidelity Fund for Investors

Protecting the investor is a job undertaken seriously in Malaysia and the broadening of interests in Singapore and Kuala Lumpur has led to legislation and administrative safeguards. The knowledge of Sydney has been made available by Australian experts who came out to improve S.E. methods and manners and a full-time manager supervises floor trading. The reinstatement of ethics in investment has been done by new, improved byelaws and the listing rules are strict enough. New companies that turn in experts' reports about property or prospects have to satisfy the S.E. first of all. Publicity about corporate progress is meant to defeat the insiders' operations and the emphasis laid on clean trading is perhaps suggestive of the new Asian countries' real anxiety to help economic growth. The climate for private investment is improved by the creation of a fidelity guarantee fund meant to protect investors against default by brokers. The initial grant of 100,000 dollars is to be raised gradually to 500,000 dollars and the more important safeguard is that brokers have to get regular audit done apart from keeping the money belonging to clients in a special bank account.

The improvement carried out in 1964 on the advice of Mr A.C. Wallace, brought out from Sydney to tighten up regulations in the interlinked markets of Singapore and Kuala Lumpur, suggest only that Malaya's economic prospects for the investor particularly are not compromised by the latest budget. The appearance of a sales tax from which exports are exempt, capital gains tax and a new tax on profits from tin-mining may spell a setback temporarily. But the federal income tax is subject to a ceiling of 50 per cent and rise in Singapore import duties on diesel oil etc

will certainly limit consumption and promote saving. Differences in federal taxation as between Sarawak and Singapore are eliminated by 25 November budget which is influenced by the Emergency occasioned by the renewed Indonesian objections to a Malay Union. Export duties on palm oil at 7.5 per cent will fall on the overseas buyer. The 15 per cent levy on films shown will certainly upset Tamil producers who export to Malaya regularly. To that extent the Malayan budget will alarm some in India but small people get considerable relief under estate duty and the higher duties on fruit, sugar etc., mean bigger grants for Sabah and Singapore.

CEYLON The Illiterate Tamils

The Central Bank of Ceylon with the help of the Census Dept and the Cooperative Department undertook a sample survey relating to current income and spending. The findings, even more than the methods, are of real interest for some points of similarity with India may be discovered easily. The level of education or employment and the size of households varied from urban to rural areas and on the estates, the conditions were not different. It may be noted in passing that

over 60 per cent of the Indian Tamils were illiterate and the local citizenship issue is therefore complicated.

The major conclusions are that the estate workers have less education but more economic security, also that the shortage of skilled labour is a brake on industrial development. Over half the population still depends on agriculture. A more disturbing feature is that since 1953 non-working dependents have increased and employment opportunities have fallen in an island whose population now exceeds ten millions. However the survey indicates that Indian Tamils are usually employed. Both women and children work on the plantations when work is available and few care to go to school after 14. Overcrowding is a result of conditions of work, even in rural areas. It is noted that 72 per cent of houses are overcrowded—and in the rural areas also, lack of space is a result of lower incomes. Village slums are far too common. Investment in housing is, therefore, imperative but the capital has to be found mainly by the Government. Only 7 per cent of the population enjoyed an amenity like electric supply and the improvement seen since 1953 is perhaps the most gratifying feature of a rather sombre picture.

Over half the population had an income below Rs 100 per month and those who can be called well-to-do constituted only 0.36 per cent getting about 7 per cent of the total income. The inequalities of income and property are probably the reason for the rise of Leftist parties in Ceylon. The rise in wages has helped the lower classes but inflation is an enemy of the poor, in Ceylon as elsewhere. And income differences do not show a tendency to narrow down. A more important finding is that average income is the lowest for Tamils of Indian origin and advantages held by the Burghers of Eurasian origin are attributable to higher education. That urban wages and incomes are well above rural wages or incomes is, of course, due to the differences in cost of living. As for spending habits, the estate population spent more on food owing to the high cost of unrationed rice. The total consumption of rice in a year is put at 1,069,000 tons and Ceylon depends on imports for part of the essential supply. What is more suggestive is that in rural areas too, dependence on rationed rice is inescapable and the quota for rationed rice is 14 measures per head for two months. These details may not be without some value for India at present.

Wealth Tax Act Amendment Bill

In the Lok Sabha last week, the Finance Minister, Mr. T. T. Krishnamachari, moved that the Bill further to amend the Wealth Tax Act, 1957, be taken into consideration. He said:

The Wealth Tax Act, 1957 follows the pattern of the Income-tax Act, 1922. The law relating to income-tax has been reclassified by the Income-tax Act, 1961 and several changes of form and substance have been made in that Act with a view notably to checking avoidance and evasion of tax more effectively and ensuring prompt collection of tax and granting of prompt refunds. It is necessary that the provisions of the Income-tax Act pertaining to collection and recovery of tax, to the grant of refunds and to the checking of evasion of tax should be adopted for wealth-tax purposes as well.

It would be recalled that the Income-tax Act, 1961 incorporates a number of provisions relating to assessments, appeals and collection of tax based on the recommendations of the Direct Taxes Administration Enquiry Committee. Some of those recommendations apply as much to wealth-tax as to income-tax and can be usefully adopted for purposes of wealth-tax.

This opportunity has been also taken to introduce a few amendments which have been found necessary in the light of experience gained in the operation of the Wealth-Tax Act during the last seven years.

I need not trouble the House with those purely formal amendments which propose to replace the references to the numbers of sections of the Indian Income-tax Act, 1922, by references to the corresponding sections of the Income-tax Act, 1961. A large number of the provisions proposed in the Bill are based on the corresponding provisions in the Income-tax Act, 1961, or give effect to the recommendations of the Direct Taxes Administration Enquiry Committee which have been accepted by the Government. I would like to refer to some of the more important of these provisions.

TRANSFER OF ASSETS

The existing provisions of the Wealth-tax Act, under which assets transferred by an assessee to his wife or minor child are includible in his net wealth, are proposed to be made more broad-based, as in the Income-tax Act. In order to defeat transfers of assets made to defraud revenue, it is provided that assets transferred by either spouse to the other or to the minor children not only directly but indirectly as well, otherwise than for adequate consideration, would be includible in the net wealth of the transferor. Likewise the value of assets transferred for the deferred

benefit of the assessee or his or her spouse or minor children will also be included in the assessee's net wealth. In view, however, of the heavy incidence of gift-tax as a result of the increase in rates made by the Finance Act, 1964, it is proposed to move an amendment that the value of such assets will not be included in the net wealth, if gift-tax is either chargeable in respect of their transfer or if such transfer is specifically exempt under the provisions of the Gift-tax Act. This benefit will be given to the transfers chargeable to gift-tax in the assessment year 1964-65 or a later year.

DEDUCTION OF DISPUTED TAXES

One of the recommendations of the Direct Taxes Administration Enquiry Committee, specifically relating to Wealth-tax, was regarding deduction from the net wealth of taxes which an assessee was disputing in appeal. Under the present law taxes which are outstanding on the valuation date and which are claimed by the assessee as not being payable by him in appeal, revision or other proceeding, and taxes which are outstanding for more than twelve months on the valuation date for any reason, will not be treated as debts and will, therefore, not be allowed as deduction in computing the net wealth. In pursuance of the recommendation of the Direct Taxes Administration Enquiry Committee, it is now provided that if the assessee pays the disputed taxes within six months of the decision in first appeal or revision, the Wealth-tax Officer will rectify the relevant assessment and allow deduction of such taxes which had not been earlier deducted.

PENALTIES AND PROSECUTIONS

The provisions relating to penalties and prosecutions have been recast on the lines of the Income-tax Act. A minimum penalty of 20 per cent of the tax sought to be evaded is provided for concealment, while the maximum penalty remains the same as before. Minimum penalties are also prescribed for failure to furnish the return of net wealth or for failure to comply with notices for production of evidence. The provisions relating to prosecutions are made more stringent by extending punishment for false verification of the return to rigorous imprisonment for two years instead of simple imprisonment for one year as at present. Such imprisonment shall not be for less than six months unless there are special and adequate reasons to the contrary to be recorded by the Court. Similar punishment is also provided for persons who abet or induce furnishing of false particulars of net wealth. At the same time, in order to encourage persons to come forward with evidence of

concealment, the Central Government will have power to grant immunity from prosecution to such persons in suitable cases. The immunity is, however, liable to be withdrawn if it is found that the terms of its grant are not observed by the person concerned or if he is found to be wilfully concealing anything or to be giving false evidence.

SELF-ASSESSMENT AND PROVISIONAL ASSESSMENT

By the Finance Act, 1964 a provision has been made for self-assessment by the assessee under the Income-tax Act, 1961. A similar provision has now been made in the Wealth-tax Act, whereby an assessee is required to pay *suo moto* tax on the basis of his return if the tax payable exceeds Rs 500. A provisional assessment can also be made as in the Income-tax Act.

APPEALS

Rights of appeal are provided against all orders adverse to an assessee, for example orders of rectification, orders imposing penalty on defaulters for non-payment of tax on the basis of self-assessment, orders imposing fine for non-compliance with summons issued, and an order treating a person as an agent of a non-resident. Provision is also made for the filing of a memorandum of cross-objections by the assessee or the Department when the opposite party has gone in appeal to the Appellate Tribunal. The Appellate Assistant Commissioner is empowered to review the wealth-tax assessment in appeal before him and enhance the assessment, if necessary, in respect of matters considered by the Wealth-tax Officers, even if the issues were not raised in appeal before him by the appellant. The provisions relating to valuers are also brought in line with the provisions of the Income-tax Act as amended by the Finance Act, 1964. A direct reference may be made to the Supreme Court by the Appellate Tribunal in a case where there exists a conflict of decisions of different High Courts.

REFUNDS

The provisions relating to refunds have been recast to ensure refunds being granted promptly. Where a refund is due an assessee and the Wealth-tax Officer does not grant the refund within a period of six months from the date of the order resulting in the refund, the Central Government shall pay to the assessee simple interest at 4 per cent per annum on the amount of the refund due. Similar interest will also be payable where, under certain circumstances, the refund is withheld to safeguard the interests of revenue.

RECOVERY

The Income-tax Act, 1961 contains a self-contained code for the purpose of recovery of income-tax. These provisions will now apply mutatis mutandis for the purposes of the Wealth-tax Act. It is no doubt necessary to discourage persons from transferring property to

defraud revenue. Such transfers shall be void against the claim of revenue unless it is made for valuable consideration and without notice of the pendency of proceedings under the Act. A similar provision already exists under the Income-tax Act.

FINE IN CASE OF NON-COMPLIANCE OF SUMMONS ETC.; SEARCH AND SEIZURE

In order that the machinery for countering tax-evasion will be more effective, Wealth-tax Officers as well as other authorities under the Wealth-tax Act will have powers for search and seizure, as under the Income-tax Act. Wealth-tax authorities will be able to fine witnesses who do not comply with their requisition to appear before them or produce evidence. They can also impound documents produced before them.

Hardship is often caused where an assessee pays wealth-tax both in India as well as in a foreign country in respect of the value of the same assets. To obviate this hardship, Government will have powers to enter into agreements to avoid double taxation with such countries as may agree to it on a reciprocal basis and also to provide for grant of unilateral relief in respect of the value of assets in a country with which such an agreement has not been entered into. These provisions are in line with the corresponding provisions in the Income-tax Act.

RULES FOR VALUATION OF ASSETS

I will now briefly refer to a few of the other provisions which have been found to be necessary. At present the computation of the net wealth of an assessee is based on the market value of his assets. Experience has shown that there is considerable divergence as to valuation made by different valuers, by different Wealth-tax authorities as well as by the Appellate Tribunal. It is, therefore, necessary to empower the Central Board of Direct Taxes to make rules in regard to the valuation of assets. The rules will provide for the valuation of assets on an equitable basis.

ASSESSMENT OF EXECUTORS

There is no specific provision at present for the assessment of executors who administer the estate of a deceased person. Such a provision has now been made and this also clarifies that where there are more than one executor, the executors shall be assessed as an individual for the purpose of wealth-tax. The status of the executors as regards residence and citizenship would be the same as that of the deceased person on the valuation date immediately preceding his death.

The Wealth-tax is an important part of our integrated tax structure. The present Bill is intended to mould the Wealth-tax Act to fit into the general scheme of direct taxes, as one of its integral components.

A very warm and affectionate greeting awaited Pope Paul VI as he landed in Bombay; and I trust this spontaneous display of real pleasure on the part of that city's populace would at least in part have cancelled out the most unfortunate attempts to demonstrate against the visit. The antagonists are of course precisely those people who would not have a secular India; and the firm denunciation of such by Government has served, I should think, to confirm the image abroad of a tolerant India where many a religion co-operatively co-exists. In any event what matters is that Pope Paul should himself have considered this country sufficiently deserving of the honour he has done us. For, I see from The Statesman that since 1809 the visit to India marks merely the third time that the Pontiff has gone beyond Italy's boundaries. In 1809, the Pope's visit to France was involuntary, since he went there as Napoleon's prisoner; and the journey to Jerusalem was one which really had been planned, but which could not be put through, by his predecessor. So, it may be said that India first came to mind for Pope Paul's first essay abroad. Undoubtedly, the Eucharistic Congress as a result has received much more publicity, but I dare say that the presence of the Pontiff will make little difference as far as the deliberations or ceremonies are concerned. However, it may be that Christianity generally in India, and perhaps Roman Catholicism in particular, will receive a fillip. The missionaries in India, since Independence, can hardly be charged with having indulged in proselyting; if anything their zeal has been concentrated on education. If, today, despite the wishy-washy attitude of Government toward the place of English in India, we are still producing youths who are proficient in the language, it is not a little due to the missionary schools that so well have kept up standards. I can't see, frankly, that we are likely to have any significant new converts to Christianity as a result of the Pontiff's visit; but I hope that strength will be imparted to the role of the missionaries in India's educational system.

A similar kind of record has been set up by Lal Bahadur Shastri, for his trip to London is not quite the first time he has stirred out of India. But then, had he not, soon after assuming office as Prime Minister, become indisposed, it was England which would have been the destination of his first visit abroad. There was at the time very keen interest, to see how he would fare, in an assemblage of Commonwealth Prime Ministers, as compared to a Nehru who in earlier years had dominated proceedings. In the event, he could not go, and TTK and Mrs Indira Gandhi "subbed" for him—adequately, in the main, though there were a few rumblings because a reference to Kashmir had somehow been allowed to creep in, in one of the official communiques. On the whole I think it is an advantage that Mr Shastri in this wise had to put off his mission to London by nearly half a year. For, in the meantime, Labour has returned to power, a party which, because it so gracefully transferred power to India, Mr Shastri will find rather easier to get along with. Here again, we cannot expect much tangible to emerge from such discussions that Mr Shastri might have in London. Indeed, he has taken with him no specific brief, his mission does not have any defined objective. He will merely be able to get to know the men who are responsible for the governance of England; but this itself may tantamount to a considerable gain. Personal contact established, decision-making in England on matters that touch India's interests will now be imbued at least somewhat with personal considerations. In the midst of a crisis as it is, England can hardly be expected to announce larger appropriations for aid to India for some considerable time.

★

The Finance Minister has, during this past week, been busy with loopholes: he has been trying to plug them, firstly in the matter of wealth tax and later in regard to foreign exchange regulations. That, in any statute hastily contrived, there are bound to be loop-holes, I nothing doubt: that, in due course, these should be plugged, I do not question. But I would here enter a plea,

not by any means for the first time, for more of enforcement of tax laws and less of enactment of new ones. The so-called 'leakages' that occur are nothing as compared with tax-evasion. All that happens, when you discover a means of tax-avoidance—which is quite licit—and when you promptly resort to measures for preventing it, is that more tax-evaders are thereby created. Let us take, for example, the Wealth Tax; collections, it is true, would be rather better if it were no longer possible for assets to be transferred to spouses or children, unless gifts tax had been paid thereon. But surely it is a bit grim to describe such individuals as had taken advantage of tax laws as having done so to "defraud" the Government. Similarly, in the case of the foreign exchange regulations, the system and methodology are already available for scrutinising all suspect accounts or transactions. If I had often to stress the importance of enforcement of tax laws, it is because the resulting improvement in collections would itself make possible reductions in rates and with lower rates the attractiveness of evasion would correspondingly be on the wane. Incidentally, during the discussions on the tightening up of foreign exchange regulations, TTK found

himself in agreement—for the first time?—with Mr Dandekar, Swatantra: both felt that in preference to foreign aid we should seek the inflow of foreign investment. In the light of which, it was surely absurd that in the same debate we heard a call for limits on remittances. The Finance Minister, in reply, explained that we could exercise control in this sphere but, because of the International Monetary Fund's rules, we could impose no limit: his answer, I suggest, could as easily have been that this country honours foreign exchange commitments—and therefore will not do anything to limit legitimate remittances or repatriation, whether of dividends or capital. The trouble is, there is a thriving black market in foreign currencies, with a whole drain of rupees being paid out at greatly depreciated values for a handful of pounds or dollars. The fact that the rupee quotes at a discount—because of such transactions—rather mars the image of our currency continuing stable. I wonder whether a more liberal allocation of foreign exchange, to would-be travellers, would not, by that extent reducing the demand for illicit exchange, tone up the value of the rupee in the great grey markets of the world.

Olympus - A Letter from Delhi

State Plans for 65-66

DISCUSSIONS on the annual plans of the States for 1965-66 started in the Planning Commission as scheduled on November 24. The talks are expected to continue till the beginning of January. As these relate to the last year of the third plan period, the discussions will provide the opportunity for a critical assessment of achievements and short falls in respect of implementation of development programmes as well as the mobilisation of resources. The annual plans will also have to include proposals for advance action on Fourth Plan programmes. These would relate largely to training of personnel, surveys, investigations, preparation of pilot studies as well as preliminary steps for projects which are expected to materialise during the first half of the Fourth Plan, as the possibility of stepping up the outlay to 22,500 crores is contingent on the results that accrue during the first half of the Plan period.

In connection with the preparation of the annual plans, the Deputy Chairman of the Planning Commission, it is learnt, has drawn the attention of the Chief Ministers to the abnormal rise in prices and urged that deficit financing, both on revenue and capital account, in the budget should be avoided. Other measures suggested by him include close scrutiny of outlays proposed so as to maximise the return on investments already made and further intensification of the drive for increased agricultural production including the production of subsidiary foods.

He is also understood to have indicated to the Chief Ministers that there is very little possibility of arranging additional Central assistance. In the circumstances, it is up to the States to take steps to augment their resources for sustaining the larger programme of outlays envisaged in the Fourth Plan.

Indian Trading Houses

The establishment of 'Indian Trading Houses' on the pattern of a big department store in certain key centres abroad is one the proposals that will come up for the consideration of the Board of Trade at its forthcoming meeting in Madras. These establishments are expected to function as permanent advertising and selling agen-

cies for a wide range of Indian goods.

It is possible that the first Indian Trading House would be set up in Singapore which is still a free port and caters to a large market in South East Asia. The Trading House, it is proposed, should be run by the Export Promotion Councils and Indian Exporters as a commercial organisation. The Government's role would be limited to the provision of necessary facilities and assistance for setting up the Trading House. Mr D. K. Srinivasachari, Joint Secretary, Ministry of Commerce, had in his report on his visit to countries in South and East Asia drawn attention to the fact that though Indian goods are competitive both in price and quality, they are not able to make sufficient headway owing to inadequate publicity. Trading House, where Indian goods both traditional and non-traditional could be displayed, would be an effective means of supplementing publicity through other media.

Another topic which will come up before the Board of Trade Meeting is the proposal for the establishment of an India South East Asia Development Association on the lines of India Africa Development Association. The Seminar on Trade with Malaysia, held in July 1964, had recommended that the Government of India should promote the establishment of a body consisting of a representative cross section of Indian industrialists and businessmen with the object of promoting the establishment of joint ventures in industry in Malaysia and other countries in South East Asia. It is considered that there is need to explore methods other than the conventional ones for expanding our trade with South East Asia. One such method would be to encourage the establishment in Malaysia and elsewhere of joint ventures through Indian enterprise. In this connexion attention has been drawn to the "Pioneer Status" the Malaysia offers to certain industries. Under this a foreign investor gets certain advantages including a five year tax holiday.

Scope for Joint Ventures

The delegation of Indian businessmen sponsored by the India Africa Development Association has returned from its tour of nine

African countries with an encouraging impression of scope for joint ventures in African countries. The report of the delegation, which led by Mr A.M.M. Murugappa Chettiar, was submitted to the Ministry of Commerce on November 27.

According to the delegation, the best form in which India could collaborate in joint ventures was to offer plant and machinery and, possibly, long-term credit. But it may not be possible to provide financial participation to any significant extent and this has been made clear in their discussions with the African Governments. The delegation had visited Ethiopia, Ghana, Kenya, Malawi, Nigeria, Northern Rhodesia, Sudan, Tanganyika and Uganda. The delegation has suggested the setting up of an appropriate agency for coordinating the programmes of collaboration and cooperation with African countries.

The need for an imaginative programme of technical and economic cooperation between India and the developing countries in Africa was also explained by Dr V.K.R.V. Rao at a press conference which he addressed on his return from his recent visit to Uganda. Dr Rao had gone to Uganda on the invitation of the Ugandan Government to advise them on economic and financial matters. Dr Rao's views on the subject gain added force from the fact that, even as recently as the last meeting of the EXIMP Council, Dr Rao was not very hopeful about the prospects of economic cooperation with African countries.

Dr Rao gave a comprehensive account of the economic situation in Uganda and the development plans that are being drawn up for doubling of the per capita income in a period of fifteen years. The Country, Dr Rao said, was well endowed with natural resources and the development programme could be put through if they could get the requisite capital and technical skills of which they were short.

India, he believed, could, and should, play a helpful role in filling the gaps in technical resources through provision of seats for African students in technological institutions in India and even more, by helping to establish technical institutes in these countries. In this connection he referred with enthusiasm to the Jawaharlal

Nehru Institute of Technology, which a private group is setting up in Kampala with the backing of the Uganda Government. Participation in joint ventures, he felt, would help to tone up Indian industry by providing the competition which is lacking in the sheltered home market.

West German Loan for NSIC

A loan of DM 5 million from the German Bank for Development has enabled the National Small Industries Corporation to step up its programme for supply of machinery and equipment under its hire-purchase scheme. The Corporation has decided to make available imported machines and equipment worth Rs 60 lakhs to small industrialists on hire-purchase basis. This is the Third loan secured by the NSIC from West Germany, for import of machinery and equipment required by small industries. Loans for DM 5 and DM 10 were secured in April and July this year. It is understood that the Corporation is negotiating with the West

COMPANY NOTICE

THE INDO-BURMA PETROLEUM COMPANY LIMITED

Registered Office:

Subhas Road,
CALCUTTA-1.

Notice is hereby given that the Preference Register of Members of the Company will be closed from the 18th December 1964 to 30th December 1964, both days inclusive for payment of the dividend for the half year ending 31st December 1964, on the 2nd January 1965, at the rate of Rs. 2.914 per share (being the stipulated dividend of Rs. 3.50 per share increased by 11% to Rs. 3.885 less Rs. 0.971 being Income Tax at the Company's rate of 25%) subject to tax being deducted therefrom in accordance with the provisions of Section 191 of the Income Tax Act, 1961.

By Order of the Board
STEEL BROTHERS AND
COMPANY LIMITED
Managing Agents,
27th November 1964.

German parties for a further loan of DM 5 million.

The German Bank for Development has also granted a loan for DM 10 million to the Industrial Credit and Investment Corporation of India. With these loans the total so far made available to ICICI comes to DM 35 million. The Industrial Finance Corporation of India has also received loans for DM 40 million. The total of the loans for the three institutions thus comes to DM 95 million. Further agreements for an amount of DM 25 million for the three Corporations are under discussion and are expected to be signed shortly.

FICCI Liaison Committees

The Federation of Indian Chambers of Commerce and Industry will soon appoint Committees in different States to function as liaison between the local administration and traders, especially in regard to the controlled distribution of food grains. This was announced in a statement made by Mr K. P. Goenka, President of the Federation after his meeting with the Prime Minister on November 26, along with other representatives of the Federation.

One of the important subjects discussed at the meeting related to the food situation in the country. There are virtually thousands of traders, said Mr K. P. Goenka, whose services are indispensable in the movement of foodgrains from the centres of production to those of consumption. The authorities, he has pointed out, have so far been very cautious in the matter of introducing rationing, for this step would lead to rigidities in life, rigidities which cannot be easily dispensed with. Therefore, it is up to the trading community and the authorities, said Mr Goenka, to shed distrust of each other and work in unison in the cause of common good.

Defence Production

Mr A. M. Thomas, Minister of Defence Production, stated in a written answer to a question in Lok Sabha on November 30, that it was proposed to set up a self-contained unit for 'Shaktiman' and 'Nissan' trucks. The factory is proposed to be set up at Jabalpur and will have a planned capacity for production of 500 Shaktiman trucks and 600 Nissan vehicles per month.

A few days earlier, the Minister had also made a statement in Lok Sabha regarding the establishment of new ordnance factories.

Of the six factories which were planned, one intended for small arms ammunition production is being set up with US assistance and has commenced production. As a result of the visit of the Defence Minister to the United States, the US Government have agreed to assist in setting up the Engineering Factory at Ambajhari. The third factory—the Filling Factory—is being set up partly with the assistance of the Government of the United Kingdom.

Mr Thomas added that it has not so far been possible to get assurances of assistance for the remaining factories. However, as the requirements of small arms were emergent, it has been decided to use free foreign exchange resources for the fourth factory at Tiruchirappalli.

The remaining two factories were intended for the manufacture of explosives and propellants. The estimate of expenditure for the establishment of these two factories was of the order of Rs 60 crores, including a foreign exchange element of about Rs 21 crores. In the case of these factories the investment output ratio is also high. The products of these factories are such that there is little scope for conversion to civilian use during times of peace. There are financial advantages in increasing the stockpile of explosives and propellants rather than setting up capacity for their manufacture.

In these circumstances, said Mr Thomas, the proposal to establish

an Explosives Factory in Orissa and a propellant factory in Maharashtra has been excluded from the Defence Plan for the present. It has been decided that, as an alternative to the proposal to set up these factories, the existing stockpiles of explosives and propellants should be increased suitably. A certain increase in the existing

capacity for the production of explosive and propellants is also being planned, but the increase determined is such that it can be more conveniently done by the modernisation of the existing factories or by the installation of new plant at the site of the existing factories. These proposals are under consideration.

Working of Collieries in July

According to official statistics released by the Chief Inspector of Mines, 818 collieries were reported to have been working during the month of July 1964, with an average daily employment of 393,530 workers, the corresponding figures for the previous month being 821 and 405,564 respectively.

The output of coal per manshift was estimated at 1.36 tonnes for miners and loaders, 0.70 tonne for all workers below ground and in open-cast workings and 0.59

tonne for all persons employed, including above-ground workers, compared to 1.37, 0.73 and 0.51 respectively for June. The percentage of absenteeism was of the order of 13.54, as against 13.92 in the preceding month.

The overall cash earnings of the workers per week for the whole of the Indian Union was Rs 26.80, the corresponding figures for Jharia and Raniganj fields being Rs 26.62 and Rs 26.84 respectively.

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service. With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

Market NEWS and Trends

JUTE

Importance of Research

The problems facing the jute industry have been highlighted at the Conference of Research Directors of the Jute manufacturing industries in India, Pakistan and the United Kingdom. It is only appropriate that the first such conference is being held in India because this country is by far the largest producer of jute goods in the world. Gone are the days when jute goods were the only low cost packaging materials available to the consumers all over the world. With the progress of science and technology, ways and methods have been devised to use other materials where before only jute reigned supreme. So the main problem now facing the jute industry is to meet the ever increasing competition from substitute packaging materials. It is however not to be denied that jute goods are still being preferred to substitutes even in such highly sophisticated markets as the US and UK but the fact remains that consumers now looking for packaging materials have substitute materials waiting to take the place of jute. It will be therefore evident that jute can hope to maintain its position with consumers only if its price is competitive and its products are of a high quality.

Inaugurating the conference of research directors at Calcutta early this week, Mr R.H. Morrison, Chairman of the Indian Jute Mills Association, has emphasised the need for the jute industry utilizing the results of the latest research, because jute goods have to match the alternative goods seeking to oust them. In the course of his address at the conference which is being attended by distinguished leaders of jute and textile research along with representatives from the principal machinery makers, Dr W.G. Macmillan, Research Director of the IJMA, has pointed out that "the present indications are that the jute industries of the world are going to have to face competition from materials, methods and processes, which have stemmed from advances in the science and

technology of fibre utilisation and package or transport development". In order to meet this growing threat, all jute interests have perforce to rely increasingly on the research organisations connected with the jute industry. Dr Macmillan has therefore suggested close scientific liaison and pooling of knowledge on some of the more basic aspects of research so as to eliminate or at least reduce unnecessary duplication of research. This way substantial economies in finance, time and effort may result. Among the various aspects of the industry that require assistance from Research, perhaps the most important is that which pertains to the raw material. As fibre represents about 60 per cent of the total cost of manufacture, it will be evident that attention should first and foremost be given to the supply of jute in adequate quantities, in the right qualities and at reasonable prices. One way of reducing the price of the fibre is to devise ways and means of utilising the by-products of the jute plant. Research has already proved that jute sticks can be profitably used in the paper industry. About 2½ million tons of jute sticks are available each year and if industrial outlets are found for the entire quantity, the value of the plant to the cultivator will increase thereby leading to a reduction of the cost of the fibre.

★

TOKEN STRIKE

As decided earlier, workers of most jute mills in West Bengal went on a one-day token strike on 1 December to press their demand for bonus in accordance with the recommendations of the Bonus Commission. According to an estimate, as a result of the strike, the jute industry has sustained a loss of Rs 1.20 crores worth of jute goods while the loss to workers in terms of wages will be about Rs 12 lakhs. A few days before the strike was scheduled to take place, the Union Government announced that the bonus dispute would be discussed at a meeting of the Industrial Committee on Jute convened for 19 December. Following the announcement the Union Minister of Labour, Mr D. Sanjivayya entered an appeal to the workers to call off the

strike in view of the coming meeting of the Industrial committee on Jute. According to the spokesmen of the workers, the appeal had come too late for their decision to be reversed.

★

Fully steady conditions have prevailed in the jute goods markets this week following receipt of enquiries from a number of overseas countries. Contrary to expectations, the prospects of an early settlement of the strike in Pakistani jute mills have become gloomy once again. This has encouraged the bulls to extend their commitments and bears to cover their positions. The result has been a resumption of the uptrend in prices. Presumably operators believe that even if the strike in Pakistan is called off increased business will continue to be coming India's way for some time because overseas consumers who have been waiting for return of normal conditions in Pakistani mills may not be able to hold on for much longer and they will be obliged to come to India for their requirements. Moreover, even with the resumption of work, Pakistan will not be in a position to take all orders at once. The bullish sentiment has also been helped by the prospect of increased offtake of carpet backing which had met with good demand last month. Another contributory factor has been the token strike of workers in 80 jute mills on 1 December involving the loss of production to the tune of about 4000 tons of jute goods.

The undertone of the raw jute market has also been steady this week and this is partly in sympathy with the steady conditions in Pakistan. It would appear that the improved tone is brought about by a diminution of stocks following the larger purchase quota for the week ended 28 November and a seasonal fall in arrivals. With the commencement of the paddy harvest, it is quite on the cards that arrivals of jute at the upcountry markets may tend to drop at least for some time. The steady trend in the goods market may also be expected to influence prices in raw jute market.

TEA

World Tea Situation

The importance of tea as a world agricultural commodity of considerable importance is brought out in a recent review of the world tea situation by the Food And Agriculture Organisation. More than 800,000 tonnes of tea were produced annually outside China and the Soviet Union in the 1960-62 period. Of this total, 738,000 tonnes came from Asia, with India producing 340,000 tonnes, Ceylon producing 205,000 tonnes & Pakistan, Indonesia, Japan, Taiwan and other Asian countries producing the balance of some 193,000 tonnes. Outside Asia, an additional 65,000 tonnes came from various African and South American countries, while above and beyond this come a further 38,000 tonnes from the Soviet Union and 153,000 tonnes from China. Western Europe accounted for more than half of the total imports of tea, while the UK alone was responsible for well over two-fifths. Western Europe declined slightly in market importance over the last ten-year period as did Oceania and North America, which together took some 21 per cent of world imports last year. For the rest, imports to African countries rose particularly to the UAR. The Soviet Union remained a relatively small market for imports, 12,000 tonnes in 1962 compared with 19,000 tonnes for Canada. The FAO Study estimated that the production outside China and the USSR may be expected to rise to around one million tonnes by 1970, representing a 6% growth rate and tea consumption is expected to rise at a slightly slower pace. Tea lies about tenth in terms of value, amongst agricultural commodities, entering world trade. It accounts for a substantial part of export earnings of some countries, two-thirds of Ceylon's export trade, one-fifth of India's, one-tenth of Kenya's.

STOCKS IN UK

United Kingdom tea stocks in London Provincial warehouses for the week-ended 20 November totalled 103,873,110 lbs. against 102,035,600 lbs. in the previous

week. The total quantity to be landed on 20 November was 30,440,974 lbs. Deliveries during the week totalled 10,913,654 lbs, and landings 12,751,164 lbs. Total afloat was 41,622,260 lbs including from Calcutta 32,654,080 lbs., from Chittagong nil, from Cochin 2,183,070 lbs., from Ceylon 5,046,310 lbs. and from other parts 1,738,800 lbs. Average price realised at the auction during the week was 51.72 pence per pound against previous week's 54.10 pence and 50.41 pence in the corresponding period of last year.

At this week's (Sale No. 28) export sale in Calcutta, offerings amounted to 78,058 chests. Demand was only fair with prices ruling easier as compared to previous markings. There was a decline of between 20 to 30 P in the rates for Plain Orthodox teas while Fannings were a weak feature. Though there was a good enquiry for Medium Dooars BOPs, prices realised were easier by 10 to 20 P and here again Fannings showed a weak trend. Despite a fair demand for Medium and good Assam teas of orthodox manufacture rates were lower. CTC offerings met with selective demand with prices for all descriptions ruling lower. Both Plain CTCs and medium categories were taken 30 to 40 P lower than previous valuations. Good liquoring CTCs declined upto 50 P with some withdrawals. While Darjeelings sold fairly well, whole leaf grades were generally lower following the trend of the market. The following quotations are inclusive of excise duty: Clean Plain Pekoe Rs 5.10 to 5.40; Plain Orthodox BP Rs 3.80 to 4.00; Plain Orthodox Fannings Rs 3.80 to 4.00; Plain CTC BP Rs 4.40 to 4.70; Plain CTC Fannings Rs 4.10 to 4.30; Medium CTC BP 4.70 to 4.90; Medium CTC Fannings Rs 4.40 to 4.70; Good Assam CTC BP Rs 5.00 to 5.30 and Good Assam CTC Fannings Rs 4.80 to 5.10.

At last week's Dust tea sale in Calcutta, 34,894 chests were on offer and the demand was considerably weaker with price realisation much lower than previous markings. Except the small bright sorts, all CTC descriptions declined by up to 59 P while Orthodox teas came to a similar market. Though selling well, Leggcuts declined by up to 25 P. The following rates are inclusive of excise duty: Plain orthodox Dust Rs 3.90 to 4.40; Medium Assam Dust Rs 4.40 to 4.90; Legg-cut Dust Rs 4.65 to 4.80; Medium CTC Dust Rs 4.80 to 5.10; Good Assam CTC Dust Rs 5.70 to 6.20.

TEA PRODUCTION

Production of tea in India in 1964 is so far running ahead of last year's crop. Output in North-East India upto October amounted to 546.8 million lbs as compared with 497.9 million lbs. in 1963.

South Indian production however is lagging behind this year with the total upto October lower at 145.2 million lbs. against 163.8 million lbs. last year. Thus total Indian production upto October 1964 is higher at 692.0 million lbs. as compared with 661.7 million lbs. in the corresponding period of last year.

Elsewhere production in Pakistan upto October is higher at 52.1 million lbs. as compared with 44.9 million lbs. upto October 1963. Production in Ceylon is lower (up to September) at 369.4 million lbs as compared with 374.7 million lbs. Indonesian output (upto May) is slightly ahead of last year at 41.6 million lbs, as against 38.4 million lbs. East Africa too has recorded higher output (upto September) at 76.2 million lbs. against 68.4 million lbs. while Mozambique shows a similar trend with output upto August) at 18.4 million lbs against 16.2 million lbs.

COTTON

Buoyant Trend

The cotton futures market in Bombay depicted generally buoyant conditions during the past week and the effect of the withdrawal by the Forward Markets Commission of the free limit concession of 1,000 bales for the payment of margins if the rate rules over Rs 775.00 per three quintals at the delivery period proved to be rather transient. It is true that consequent on this measure the ruling contract, Jarilla March, lost some ground on Thursday owing to heavy bull liquidation and the outstandings of the order of 2.5 lakh bales in the initial days of the week slumped by nearly 100,000 bales. Fears of further restrictive measures by the Government, the generally unsatisfactory trend in the spot market and the indications of importing 9.5 lakh bales of cotton in the current year had a sobering effect on the market. The reports of

steady arrivals of cotton in the terminal markets and reluctance of mills to make any commitment at higher levels led to cautious dealings. However, toward the close of the week the Jarilla March rallied to Rs 770.00 before winding the week lower at Rs 768.75. The market closed on a steady trend and the total gain to the contract over the week amounted to Rs 4.25.

Steady conditions prevailed in the spot market at Sewri during the week under review. In the early dealings prices of popular growths firmed up because of strong mill covering induced by the apprehension about paucity of cotton in the current season. But this phase proved short lived owing to encouraging arrivals of cotton into the markets and the announcement of import of 9.5 lakh bales of cotton for the current season gave a rude set back to the buying spree of the mills.

In the export front, Bengal Deshi steadied up in the initial

Blueprints of expansion of a nation's industrial activity require adequate financial resources for implementation.

Allahabad Bank plays its part in providing funds for projects. The investor's money thus plays a vital role in the country's rapid development, the Bank guaranteeing its security and interest to the investor.

AG-AD-51

days. The December delivery was pushed up to Rs 814.00 though in subsequent dealings it slipped down to Rs 812.00. Registrations of Bengal Deshi for exports totalled 82,854 bales as on 23 November.

In the import section, spinner interest was conspicuous in East African and Sudan growths.

The West Bengal Government proposes to constitute textile vigilance committees to exercise strict surveillance over the sale of controlled varieties of cotton piecegoods throughout the State. For the city of Calcutta Government will set up a vigilance committee for each corporation ward with representatives of different interests while each municipal town in the districts with a population of 25,000 or more will have one committee each. Complaints from the public about the sale of controlled cloth will be received at the office of the State Director of Textiles.

According to the International Cotton Advisory Committee (Washington) world supply position of extra-long staple cotton will become tight toward the end of this season. This is certainly disturbing news for India, which figures as the leading consumer of this superior variety of cotton and which solely depends on imports as there is no cultivation of this particular growth in the country. Consumption of extra-long staple cotton by India during 1963-64 amounted to 1.9 lakh bales out of the total world consumption of 1.3 million bales. The growing demand for this growth is evidenced by the fact that the prices are currently ruling pretty high despite the upsurge in production. The latest estimates of the committee place the current season's output of extra-long staple cotton a shade over the previous season's level but demand is expected to broaden to a great extent on account of the uptrend in consumption in Japan and West European countries. Moreover, the improvement in production has been more than offset by the steep decline in stocks which aggregated merely 5.75 lakh bales on 1 August as against 8.32 lakh bales in the same date in 1963. Nevertheless, if the current trend in the competition from synthetic fibre is of any import there is unlikely to be virtual scarcity of extra-long staple cotton in the 1964-65 season. The congenial weather conditions in the leading producing countries also augur well for an improvement in the yield and higher crop.

Government's decision to issue import licences for Egyptian or Sudan stockpile cotton lying with the Community Credit Corporation in America will be widely acclaimed. The import licences will be issued by the authorities against pending contracts entered into on or before 26 September. The quantum of pending contracts is roughly placed at 12,000 bales of 400 lbs each. According to this arrangement domestic mills will

be able to procure Egyptian or Sudan cotton from the US within a few weeks.

PIECEGOODS

The cotton piecegoods market evinced brisk trading during the week under review. Both local traders and upcountry dealers were active in the market especially in uncontrolled varieties of seasonal goods. Consequently moderate business was transacted even at higher rates.

Inferior varieties of cloth firmed up owing to the current paucity of those goods. A leading upcountry mill sold coating at the rate of Rs 1.18 per metre against the previous rate of Rs 1.04. Quality shirtings changed hands even at higher rates, some of the items making good gains. Nevertheless, it was evident that higher realisation of rates varied from mill to mill.

Improved activity was noticed in the woollen section. Demand for woollen rugs and textiles perked up obviously on account of the cold spell that is prevailing in the city and other regions. Even woollen hosiery met with better buyer interest.

OILS AND OILSEEDS FMC Takes Action

Owing to the hectic rise in prices, trading in Jany. 1965 groundnut and oil futures contract remained suspended for 5 days upto last Tuesday. With a view to restoring normal conditions, the Bombay Oilseeds and Oils Exchange had earlier requested the Forward Markets Commission to fix the price limit for the contract. But the Commission had rejected the suggestion. The Commission however announced on Wednesday the imposition of a second marginal line on groundnut and groundnut oil. The measures announced by the FMC are as follows: the imposition of a second marginal line at Rs 103 per quintal in respect of groundnut and Rs 20.60 per 10 kg. for groundnut oil above which margins would be payable at the rate of Rs 40 per quintal in respect of groundnut and Rs 8 per kg. in respect of groundnut oil and withdrawal of the facility of free limit altogether whenever the price of the ruling January contract for groundnut and groundnut oil exceeds the second marginal lines.

In the meantime, the Government of Gujarat decided to lift all restrictions on the outflow of groundnut oil from Gujarat with effect from Thursday 26 November. With the prospects of larger arrivals from Gujarat and in view of the heavy margin imposed, the price of January Groundnut contract turned soft. The easier trend however prevailed only for a couple of days for by Friday, prices steadied up following better advices from the spot market. The revival of bull support stemmed

from the belief that further fall in prices would be untenable in view of the fact that the Gujarat Government retained the ban on the movement of groundnut from the State.

World linseed supplies, including the seed equivalent of linseed oil, from the 1964 crops which will be available for export will be determined largely by the output of Argentina's crop to be harvested late this year, according to the US Department of Agriculture. As the acreage under the crop in Argentina is down by 11 per cent, production probably will be somewhat less than 30 million bushels produced last year. However, unless exports rise sharply during the remainder of the year, a large carryover of old crop stocks could—as in the US—far more offset reduced production.

NON-FERROUS METALS Lead Continues Firm

The firm trend in lead noticeable for some time past shows no sign of abatement. During last week, in the Bombay market lead prices scaled new high following continued good demand from industrial users as well as higher advices from markets overseas. As local supplies are not being augmented from fresh arrivals, prices have naturally been pushed higher and higher owing to sustained demand. Sentiment in the market is being considerably influenced by the fact that prices of lead are being continuously rigged up by strong demand against indications that supplies are getting reduced. Of other non-ferrous metals, zinc tended to be easier in the absence of sustained demand. Prospective buyers may have also been influenced by indications of supplies getting larger by addition of imports expected in the near future. Copper too developed a soft undertone on lack of buying interest. A similar tendency prevailed in tin owing to comfortable supply position.

According to the preliminary figures released by the International Tin Council, the world production of tin in concentrates amounted to 11,700 tons in August compared with 12,400 tons in July and 11,300 tons in August 1963. Countrywise productions is as follows: Malaysia 4916 tons (4887 tons), Bolivia 1773 tons (2194 tons), Thailand 1255 tons (1342 tons) and Nigeria 673 tons (743 tons). World output of primary tin metal rose from 11,000 tons in July to 11,500 tons in August. Production increased from 1,195 tons to 1,409 tons in the UK and from 678 to 796 tons in Nigeria while there was a decline from 6,067 to 5,824 tons in Malaysia. World consumption of primary tin metal totalled 13,600 tons in August.

SILK Bearish Outlook

Prices of filature raw silk continued to rule in the same level as in the previous week. However the outlook was bearish with dull movement, as the demand from weaving centres had not picked up, while all other varieties including cottage basin silk showed signs of increase due to restricted flow of supplies into the market from production centres.

Charka and cottage basin raw silk prices ruled at a higher level this week end compared to previous week. Prices of cottage basin silk ruled at Rs 81.85 to Rs 95.76 as against Rs 81.02 to Rs 94.25 last week. While charka raw silk prices of all the three qualities increased by about Rs 2/- per kg. due to comparatively higher demand against shrinkage in supply. Prices of I quality raw silk which represents the bulk of transactions ruled this week at Rs 68.48 to Rs 74.96 per kg. as against Rs 66.69 to Rs 73.02 per kg. last week and the offtake was good. Dupion silk although the offtake was appreciable ruled steady indicating a tendency to stabilise at present levels of Rs 21.37 to Rs 31.00 per kg.

Prices of mulberry reeling cocoons of Sidlaghatta variety underwent a sudden decline to rule between Rs 3.94 to Rs 5.97 this week as against at Rs 5.00 to Rs 6.50 last week due to poor yield of raw silk arising out of weak ends of cocoons, a characteristic of winter conditions, where as Channapatna variety showed an upward shift to rule between Rs 4.00 and Rs 5.20 per kg. as against Rs 2.94 to Rs 4.19 per kg. last week due to fall in supplies to markets.

The prices of foreign race seed cocoons have shown further tendency of ruling high at Rs 20.25 to 35.50 per kg. during this week against Rs 17.75 to Rs 35.00 last week mainly due to inadequate supplies. The Mysore race seed cocoons followed suit to register a corresponding rise this week to rule at Rs 5.00 to 5.66 per kg. as against Rs 4.56 to Rs 5.75 last week.

There was no perceptible change in the market conditions for silk products in West Bengal. However Mulberry reeling cocoons quoted this week at Rs 4.19 to Rs 4.50 per kg. showed a subdued level compared to the corresponding period last year when the prices ruled between Rs 5.10 to Rs 5.62. There was a marginal decline in the maximum prices of Matka yarn and mulberry silk waste during this week end.

The prices of other commodities in all other markets remained unchanged.

INDIAN OIL CORPORATION LIMITED

Another Year of Progress and Achievements

Speech of Shri P. A. Gopalkrishnan, I.C.S.

The following is the speech of Shri P. A. Gopalkrishnan, I.C.S. Chairman, Indian Oil Corporation Limited, at the Annual General Meeting held on November 24, 1964:—

Gentlemen,

The Balance Sheet and Profit and Loss Statement of the Indian Oil Company are in front of you for your ratification. These documents throw a flood of light on the transactions of the Company but I shall confine myself in this statement only to certain salient features.

SALES

1. The sale of oil products has gone up to 1.17 million kilolitres as against 6,29,639 kilolitres in 1962-63. The sale of Petroleum Coke was 11,498 metric tons in 1962-63 but is 26,488 in 1963-64.

Shri P. A. Gopalkrishnan, I.C.S.
Chairman

OPERATIONAL COST

2. The operational cost per kilolitre has come down to Rs. 29.21 as against Rs. 30.16 in 1962-63 and Rs. 31.68 in 1961-62.

PROFITS

3. The profit before taxation is Rs. 104.77 lakhs as against Rs. 62.41 lakhs in the previous year. The return on equity capital is 21.1% as against slightly less than 20% in the previous year.

UNAVOIDABLE EXPENDITURE

4. The profit would have been very much higher but for two important items of expenditure which the Company had to bear. One is the under recovery of railway freight of Rs. 55.77 lakhs on account of the location of the Gauhati Refinery. Government have fixed ceiling selling prices for all oil products on the basis of import parity and companies are allowed

to charge only upto these ceiling prices plus freight to the consuming point from the relevant port.

Since many of the consuming points are situated farther away from Gauhati than from the port, the Indian Oil Company had to bear the excess railway freight which it could not recover from the consumers. Burmah Oil Company's share of this unrecovered freight has been taken as Rs. 19 lakhs in our accounts as approximately this amount is due to us from them.

The second item of expenditure is the under recovery of Central Sales Tax amounting to Rs. 26.92 lakhs.

This is collected at the rate of 2% on sales outside Assam but accrues to the State Government, as it has not exempted inter-company transactions on oil products from sales tax as some other State Governments have done. The State Governments who have exempted such inter-company transactions from sales tax are Maharashtra and Andhra Pradesh. Kerala has also agreed to grant this exemption.

A word of explanation is necessary in respect of both the items. They refer to all the Gauhati products sold by the Indian Oil Company either to consumers or to other oil companies. The latter have refused to pay their share of the under-recovery of freight as well as of central sales tax, on the ground that these are not recoverable from the consumer and they are allowed to sell products only at the ceiling selling prices fixed by the Government on the basis of import parity. References have been made to Government on these two matters for the last two years but to no effect. The Company had therefore no alternative but show these amounts as reductions from the profit made.

In spite of the two serious handicaps mentioned above, the Indian Oil Company has made a handsome profit in 1963-64 and the net profit (after taxation) gives a return on equity capital of 16.8%.

INCREASED TANKAGE

The increase in sales has been made possible because the Company increased its tankages at installations and depots and built many new depots during 1963-64. The facilities of the Company have grown enormously and it can tackle a sale of more than two million kilolitres at the present time.

MERGER

By an order of the Government, the Indian Refineries merged with

the Indian Oil Company on 1st September 1964 and now the combined organisation is known as the Indian Oil Corporation Limited.

The Indian Refineries include the refinery at Gauhati and the one which has now gone on stream in Barauni. The third refinery at Koyali in Gujarat which is under construction by the Oil & Natural Gas Commission will also merge with the Indian Oil Corporation shortly.

The Corporation has at present two divisions, the Refineries Division and the Marketing Division. It will have two more divisions in

future, the Pipelines Division and the Petro Chemical Division.

As I have already mentioned more than once in the statements that I have made before, this Corporation is likely to become the biggest oil organisation in the country in six or seven years.

Finally I thank all the Directors of the Board for their co-operation and advice and thank all those officers and staff who have worked hard to make the year successful.

Bombay, 24th November 1964.

(The above does not purport to be a report of the proceedings of the Annual General Meeting).

EDUCATION THROUGH EXHIBITION

Canara Bank believes that one of the important services that a Bank should render is to spread the banking habit in urban as well as rural areas.

This service can be rendered best by mass education. The best means of mass education are exhibitions. People from all walks of life, of all income groups, from big towns and small villages come to see exhibitions. They come to learn from the exhibits and explanations.

And so, Canara Bank started its programme of "education through exhibition" in 1958. So far, it has held over 25 exhibitions in South India.

Lakhs of people who have seen Canara Bank's exhibitions have received banking education. They have been taught to save for their future; to keep their money in banks to earn more money; to use a bank to enjoy better living.

Almost everywhere the exhibition authorities have awarded first prizes to Canara Bank pavilions. V.I.P.s and people from all over India have praised Canara Bank's active efforts to popularise banking by "education through exhibition".

In the years to come, Canara Bank plans to educate more and more people through more and more exhibitions.

Distinguished Public men like Mr. V. V. Giri, Governor of Kerala and Mr. Medhi, former Governor of Madras took keen interest in Canara Bank's Educational Exhibition.

LIFE INSURANCE CORPORATION OF INDIA

Salary Savings Scheme More Popular

Steps to Control Lapses Bearing Fruit

Shri B. K. Kaul, I.C.S., the Chairman, on Organisational Set-up

The following is the statement by Shri B. K. Kaul, ICS, Chairman at the Hundred and Second Meeting of the Life Insurance Corporation of India held in Bombay on 30th November, 1964.

The draft of the Annual Report and the Statement of Accounts for the period 1st April 1963 to 31st March 1964 have been circulated and are now before us for consideration.

The country suffered an irreparable loss in the sad and sudden demise of Jawaharlal Nehru. At its meeting held on 29th June, 1964, the Corporation passed a resolution placing on record its deep sense of sorrow at the passing away of our beloved Prime Minister. The Corporation was proud to recall the privilege of having him on 26th December, 1963 in

31st March 1963. During this period the Corporation completed a business of Rs 708 crores. There has thus been a slight reduction in new business.

The rise in the cost of living during the year under review as also the introduction of the Compulsory Deposit Scheme, which affected the tax-payers, had their inevitable repercussions on our business. In addition to this, natural calamities like famine conditions in some parts of the country and excess rainfall in others also had their adverse effect on our business. The shortfall in business is only marginal and, in the context of the prevailing conditions, the achievements should be considered as fairly satisfactory.

FIRST INSURANCES

As many as 11.54 lakhs policies, forming 70.5% of the total policies issued during the year, were taken by persons who were insuring for the first time. The corresponding figure for the previous accounting period of 15 months was 12.22 lakhs policies, being 69.5% of the total policies issued. This confirms the trend of growing insurance consciousness and gives satisfaction that the message of insurance is being taken to more people who have hitherto not availed of life insurance protection for their families.

RURAL BUSINESS

5.85 lakhs policies assuring Rs 209.40 crores were issued to people in rural areas. The corresponding figures for the accounting period of 15 months ending 31st March, 1963 being 6.77 lakhs policies assuring Rs 233.45 crores. The classification of urban and rural areas is the same as adopted in the 1961 Census.

The scheme for collection of premiums through selected Post Offices in rural areas, where banking facilities do not exist, which was operating in Jaipur District of Rajasthan, has since been extended to the whole State of Rajasthan. The Postal authorities have also agreed to extend the scheme to the States of Andhra Pradesh, Kerala, Madras and Mysore, and the details are being settled.

OFFICES

As on 31st March, 1964, we had offices in 251 out of the 316 districts and in 5 out of 10 Union Territories in India. We also had Development Centres in 32 of the remaining districts and in one of the Union Territories. The programme for 1964-65 is to open 2

Branch Offices, 3 Sub-Offices and 17 Development Centres.

NON-MEDICAL BUSINESS

During the year 7.21 lakhs policies assuring Rs 164.87 crores were issued under the Non-Medical Schemes: 2.38 lakhs policies assuring Rs 36.36 crores being under the Non-Medical General Scheme and 4.83 lakhs policies assuring Rs 128.51 crores under the Non-Medical Special Scheme. It may be mentioned that under the Non-Medical Special Scheme, proposals are entertained for amounts upto Rs 10,000 from special categories of persons in civil employment and also category A-1 of commissioned officers in the Armed forces.

SALARY SAVINGS SCHEME

Under the Salary Savings Scheme, we issued during the year under review 2.71 lakhs policies assuring Rs 81.47 crores as against 1.93 lakhs policies assuring Rs 61.03 crores during the previous accounting period of 15 months. I am glad that the scheme is proving popular with the employees and employers in general. More and more employees are coming forward to make the premium deduction a first charge on their salaries, this ensuring insurance protection for their families with least inconvenience to themselves.

I am happy that in addition to the existing scheme for employees of Kerala State Government, satisfactory arrangements were made with the Governments of Rajasthan and Punjab for introducing the Salary Savings Scheme amongst their employees. In July 1964, similar arrangements have been made with the Government of Orissa.

GROUP INSURANCE AND GROUP SUPERANNUATION SCHEMES

New Business amounting to Rs 12.30 crores was written during the year under the Group Insurance schemes and under the Group Superannuation Schemes. Life Annuities of Rs 2.86 lakhs per annum were granted. The comparative figures for the previous 15 month-period were Rs 10.49 crores and Rs 5.05 lakhs respectively.

BUSINESS IN GOA

The policies issued by the erstwhile Portuguese Companies to Indian citizens resident in Goa, Daman and Diu vested in the Corporation as from 8th June 1962, which has been fixed as the Appointed Day while applying the

Life Insurance Corporation Act to these territories vide notification issued on 29th February 1964 by the Government of Goa, Daman and Diu. How to meet the deficit in respect of this business is being discussed with the Central Government.

FOREIGN BUSINESS

During the year the Corporation issued 8,532 policies assuring Rs 10.21 crores in the foreign countries where it is operating, as against 9,498 policies assuring Rs 11.24 crores during the previous accounting period of 15 months. For the sake of comparison, it may be mentioned that during the period April 1, 1962 to March 31, 1963 the Corporation issued 8,885 policies assuring Rs 10.58 crores. The slight set-back in the business is due to a shortfall in business in Mauritius and East Africa. At other places there was satisfactory progress.

BUSINESS IN FORCE

The total business in force as at 31st March 1964 was Rs 3,571 crores under 103.28 lakhs policies as against Rs 3,165 crores under 95 lakhs policies as at March 31, 1963, thus recording 12.8 per cent increase during the year under review. I may mention that the business in force as at 31st March 1964 is almost three times the business in force of all the Insurers taken together as at 31st December 1955.

LAPSE RATIO

The ratio of lapses to mean business in force was 8.2% during the year as against 8.1% during the period 1st January 1962 to 31st March 1963. The impact of the general economic conditions and of the Compulsory Deposit Scheme on the saving capacity of the insuring public would be expected to have an adverse effect on the lapse ratio. From the very slight increase in the lapse ratio, it appears that the various steps which the Corporation took to control lapses are bearing fruit and the rising trend has been arrested.

VALUATION

During the year the Fourth Valuation of the Corporation's business as at 31st March 1963 was completed. Usually the Corporation's business is valued biennially but consequent upon the change in the accounting year of the Corporation, it was decided that the Fourth Valuation should cover the 15 month period ending 31st

March, 1963. As a result of this Valuation, Rs 25.03 crores were allocated to the participating policies. The rates of reversionary bonus allowed to the policies issued by the Corporation were increased from Rs 16 per thousand sum assured per annum to Rs 17.50 per thousand sum assured per annum in the case of Whole Life Policies and from Rs 12.80 per thousand sum assured per annum to Rs 14 per thousand sum assured per annum in the case of Endowment Policies. In the case of policies issued by the erstwhile insurers corresponding increased bonuses were allowed in accordance with the scheme of differential bonuses.

UNDERWRITING OF FEMALE LIVES

As a result of the review of the conditions for grant of assurances to female lives, a new categorisation for grant of such assurances has been adopted and Joint Life Assurances on the lives of husband and wife have been re-introduced, subject to the condition that both should be earning and the amount of insurance should be commensurate with their separate incomes.

PREMIUM AND OTHER INCOME

The premium income for the year under review amounted to Rs 146.32 crores against Rs 150.38 crores in the previous accounting period of 15 months.

The total income for the year under review was Rs 179 crores as against Rs 185 crores during the previous accounting period of 15 months.

LIFE FUND, INVESTMENTS AND TOTAL ASSETS

The Corporation's Life Fund as at 31st March 1964 was Rs 808.36 crores, registering a handsome rise of Rs 88.80 crores over the adjusted Life Fund at the beginning of the year.

Of the total investments in India of Rs 707.60 crores, the Public Sector accounted for 75.5%, Co-operative Sector 4.3%, the Joint Sector 1.0% and the Private Sector 19.2%. During the year, 70 new issues were agreed to be underwritten to the extent of an aggregate sum of Rs 13 crores.

The total assets of the Corporation as at 31st March, 1964 amounted to Rs 880.57 crores as against Rs 785.94 crores as at 31st March, 1963. The net increase in the assets of the Corporation, since its inception, amounted to Rs 466 crores.

RATE OF INTEREST

The income from interest, dividends and rents before deduction

of income-tax was Rs 38.25 crores as against Rs 39.38 crores during the 15 months ended 31st March, 1963. The gross rate of interest realised on the mean Life Fund was 5.11% per annum as against 4.76% per annum during the previous accounting period.

The net rate realised was 4.07% per annum against 4.08% per annum during the previous accounting period. The net rate of interest has not increased commensurately with the increase in the gross rate due to the fact that a refund of tax of about Rs 4.04 crores in respect of the previous accounting period had not been received in the year as the income-tax assessment of the Corporation had not yet been finalised. If this refund of tax of Rs 4.04 crores had been received in the year, then the net rate of interest would have been 4.61%.

EXPENSE RATIO

The overall expense ratio for the year has come down to 27.5% from 29.3% in the previous accounting period of 15 months. The Renewal Expense Ratio has also come down from 14.13% to 12.46%. This is gratifying because the reduction has been achieved in spite of the increase in salaries and allowance of employees in Classes II, III & IV.

CLAIMS

During the year the claims inclusive of bonus additions amounted to Rs 33.86 crores under matured policies and Rs 10.80 crores under policies becoming claims by death. The total claims for the year amounted to Rs 44.66 crores as compared with Rs 43.96 crores in the previous accounting period of 15 months. The outstanding claims as at 31st March, 1964 amounted to Rs 14.91 crores as against Rs 13.55 crores as at 31st March 1963.

The percentage of outstanding claims as at the end of the accounting period to claims arising during the period has been gradually coming down. It was 49.9% for the year 1959, 40.8% for the year 1961 and 33.4% for the year under review. We are constantly endeavouring to reduce delays in settlement of claims. During the year a "Service to Claimants Campaign" was initiated and our Branch Managers and Assistant Branch Managers called on a large number of claimants personally to render them assistance for early settlement of claims. This form of service to the claimants will be rendered as a part of the normal settlement procedure hereafter. I hope that our efforts will bear fruit and with the co-operation of

the public we shall be able to speed up claim settlement.

BUILDING ACTIVITIES

During the year, apart from the Divisional Office at Varanasi and buildings at other places, our Central Office building "Yogakshema" was completed and was opened at the hands of the late Prime Minister, Jawaharlal Nehru.

MORTGAGES

As I mentioned in the last Report, the "Own Your Home" Scheme came into operation from the 1st of January, 1964 at 26 centres. It has since been extended to further 49 centres and it is proposed to extend it to two more centres from the 1st January 1965. The earlier scheme for grant of loans on immovable properties which was in operation in 26 centres was extended to 10 more centres.

In addition to the schemes mentioned above, we are advancing loans to State Governments for financing the Middle Income Group Housing Schemes, the Rental Housing Schemes, the Village Housing Project Scheme, the Low Income Group Housing Scheme, the Plantation Labour Housing Scheme and Land Acquisition & Development Scheme. Loans are also granted to Co-operative Societies formed by employees of the Corporation and a scheme has been introduced for grant of loan to individual employees of the Corporation for purchase or construction of houses. The total assistance given by the Corporation to housing development under these various schemes upto 31st March 1964 amounted to Rs 62.78 crores.

PUBLICITY

The Corporation continues to do vigorous work both in the urban and rural areas, using a wide variety of media. Emphasis is being placed on outdoor publicity and use of audio-visual media in the shape of films, slides, and slide-ions exhibited in 2,500 theatres throughout the country and through the Corporation's publicity vans and projection units in the outlying rural areas. I am proud to mention that the total publicity effort has won for the Corporation the I.S.A.-Khatau Gold Medal awarded by the Indian Society of Advertisers. The presentation is being made today at the hands of Smt. Indira Gandhi, Union Minister for Information and Broadcasting. I am also happy to mention that the Corporation's House Magazine, 'Yogakshema' was awarded the first prize in the category of English periodicals (other than Annuals) at the Ninth State Awards instituted by the Ministry of Information and Broadcasting.

GENERAL INSURANCE

Implementing the decision taken during the year under review, with the approval of the Central Government, the Corporation has started transacting all kinds of General Insurance business from 1st April 1964. We can now look forward to giving complete and

comprehensive insurance service to the public to suit their varying needs. I may mention that although the Corporation is not a member of the Tariff Committee of the Insurance Association of India, we have adopted the tariff rates for the present. It is, however, open to us to revise the rates in due course in the light of our own experience.

ELECTRONIC DATA PROCESSING

The Corporation has decided to install two Computer Systems, one at Bombay and the other at Calcutta. These machines will ultimately replace the existing Adrema and Punch Card machines and are expected to do the job more efficiently yielding more information to the management to bring about an improvement in the servicing to policyholders and agents. I may reiterate that this decision will not lead to any retrenchment in the existing staff.

ORGANISATIONAL SET-UP

A re-organisation scheme was prepared during the year and it was to be implemented in stages. Since representations were received from members of the public, from institutions and other bodies, further steps in the implementation of the scheme have been deferred. In the meantime, a review of the scheme, in the light of the points raised in the representations is being made.

I have always received sincere co-operation and valuable advice from my colleagues on the Board and on the Investment Committee. I offer my grateful thanks to them. I take this opportunity to record my appreciation of the services rendered by the officers and staff at all levels. It is their services which have solely contributed to the fine results achieved by the Corporation. Finally, I thank all the agents who have done such excellent work in spreading the message of insurance to the people.

Note: This does not purport to be a record of the proceedings of the annual general meeting.

THE INDIAN IRON & STEEL COMPANY LIMITED.

NOTICE

LOST—Certificate for 5 Preference Shares Nos. 259369/373 in the above-named Company registered in the name of Mr. Sachdev Singh has been reported as LOST. An application for the issue of a Duplicate Certificate in respect of the said shares in the name of the registered shareholder in lieu of the original reported lost has been made to the Company. Notice is hereby given that the issue of a duplicate certificate will be considered unless valid objection is lodged with the Company within one month from date. The Indian Iron and Steel Co., Ltd., Martin Burn Limited, F. G. LIVERSEDGE, Managing Director.

Registered Office: 12, Mission Row, Calcutta. Dated the 25th November, 1964.

Shri B. K. Kaul, I.C.S.
Chairman

Bombay to declare open its new headquarters, 'Yogakshema', and his inspiring words on that occasion which would guide the Corporation in carrying on such activities from 'Yogakshema' as would contribute its humble share in the various tasks of national reconstruction so dear to him.

NEW BUSINESS

During the year under review, our new business amounted to Rs 703 crores under 16.46 lakhs policies as against Rs 746 crores under 17.68 lakhs policies in the previous accounting period. As that period comprised of 15 months while the period under review covered 12 months only, a direct comparison of the figures is not possible. However, the new business performance during the year under review may be evaluated by comparison of business completed in the period 1st April 1962 to

For the INVESTOR

INVESTMENT GOSSIP

No Early Relief?

THOUGH equity values have not yet declined sharply, stock market sentiment continues to be weak and indications are that sentiment may deteriorate further if no incentives are forthcoming soon. Both operators and investors are once again losing confidence in the stock market especially after the reported disappointing outcome of last week's meeting between the Prime Minister and leaders of industry and commerce. It is said that the meeting has not produced any tangible result and the general belief now seems to be that any favourable change, if at all it is coming, will be announced only at the time of the next Central Budget or soon thereafter. In the meantime, some of the statements of the Union Finance Minister in Parliament have caused renewed apprehensions about additional taxation and more curbs. Replying to the general debate on the Wealth Tax (Amendment) Bill, Mr T. T. Krishnamachari has pointed out that the country's economic situation is extremely grim. The balance of payments position continues to be difficult and this will mean that imports will continue to be strictly controlled. Consequently, industries still depending on imported raw materials and components will suffer. It is generally accepted that if industrial production is to increase to the needed extent, private sector industries should be enabled to expand at a fast pace. This is not possible as matters stand at present when almost all savings are absorbed by taxation. The expectation that a change favourable to the corporate sector is in the offing has received a rude setback after last week's meeting between the Prime Minister and representatives of industry.

★

INVESTMENT SPECIAL

Chemicals and Plastics India Ltd.

With the progress of the plastic industry, the demand for various kinds of plastic compounds is going up in the country. The present position is such that demand is far outstripping indigenous supply. As against the Third Plan target of 85,000 tons for capacity

for plastic compounds, the present installed capacity is only 30,000 tons with production around 25,000 tons. It will be clear therefore that there is need for stepping up the production of indigenous plastic compounds by increasing rapidly the installed capacity in the coming years. In this view there is need not only for the expansion of existing units but the establishment of new units so that the base of the industry can be broadened in a short period. The magnitude of the effort that is required in expanding facilities for the plastic industry whose products are finding newer and newer uses both in industry and in the home, will be evident from the fact that demand during the Fourth Plan period is placed at 300,000 tons for various plastic compounds. It goes without saying therefore that a bright future awaits Chemicals and Plastics India Limited, which will set up at Mettur Dam, near Salem in Madras State a factory for producing polyvinyl chloride with an initial capacity of 6,000 tons annually. A significant point to note is that the company is having collaboration with BF Goodrich of Akron, USA, world's largest producers of polyvinyl chloride. Chemicals and Plastics India Ltd has entered into a 10 year collaboration agreement with this US firm with the approval of the Government of India. A second factory for manufacturing extruded products like rigid and flexible tubes, will be established in Bombay with an annual capacity for processing 1,500 tons PVC resins. The total capital outlay of the project has been estimated at Rs 3.39 crores and the expenditure is proposed to be met as under: By issue of share capital Rs 150 lakhs; by dollar loan from Exim Bank Rs 149,940 lakhs; by rupee loan from Cooley funds Rs 32,606 lakhs and by borrowing from local banks Rs 6,331 lakhs.

The authorised capital of the company is Rs 2 crores and the issued capital will be Rs 1.50 crores dividend into 1,35,000 equity shares of Rs 100 each and 15,000 preference shares of Rs 100 each. The foreign collaborators, BF Goodrich Company will be allotted 17,212 equity shares in satisfaction of the payment in foreign currency amounting to \$350,000 for providing technical assistance. They will also be allotted an additional 17,213 equity shares for consideration

other than cash. The directors and their friends and associated companies will be subscribing for 51,068 equity shares and 2,500 preference shares. India Cements and Mettur Chemicals, who are interested in the promotion of the new company will be taking 13,500 shares and 5,000 shares respectively. The balance of 49,500 equity shares and 12,500 preference shares will be offered for public subscription. The entire public issue has been underwritten.

★

NEW ISSUE NOTES

Struthers Wells

Struthers Wells (India), Bombay, a new company incorporated in the State of Maharashtra is to issue capital of Rs 150 lakhs divided into 1,20,000 equity shares and 30,000 preference shares, both of Rs 100 each to be subscribed as to Rs 40 lakhs (Rs 9.5 lakhs cash and Rs 30.5 lakhs other than cash) in equity shares by Struthers Wells International Corporation of New York, Rs 17 lakhs in equity shares by the International Finance Corporation, Washington (in cash) and out of the balance of Rs 38 lakhs in equity and the entire preference issue of Rs 30 lakhs will be offered for cash at par for public subscription and balance of Rs 17 lakhs in equity to be subscribed by the promoters, directors etc. The company will manufacture items of chemical machinery and processing equipment, etc.

Hastings Mill

Hastings Mill Limited, Calcutta, is to issue 7 per cent debentures of the value of Rs 50 lakhs in units of Rs 1,000 each for cash at par. The proceeds of the issue will be used for financing expansion of the silk unit and for setting up a new unit for the manufacture of coir products in the State of West Bengal. The company has a subscribed and paid-up capital of Rs 65 lakhs.

Singarani Collieries

Singarani Collieries Company Limited, Hyderabad is raising further capital of Rs 166 lakhs divided into 1,660,000 equity shares of Rs 10 each to be subscribed privately for cash at par. The capital will be used for financing the expansion programme of the company.

HMT

Hindustan Machine Tools, Bangalore, a Government of India Undertaking is issuing further capital of Rs 150 lakhs divided into 15,000 equity shares of Rs 100 each to be subscribed privately by the Government of India. The money is required for meeting the capital expenditure on the fifth machine tools factory at Hyderabad to be set up in 1964-65.

★

Selected Satgram

Selected Satgram Collieries Limited is raising fresh capital to the tune of Rs 30 lakhs dividend into 20,000 equity shares of Rs 100 each and 10,000 9.5 per cent Redeemable Cumulative Preference shares of Rs 100 each (free of Company's tax but subject to deduction of tax at the prescribed rate.) The Directors, Managing Agents and their friends have subscribed to 10,000 equity shares of Rs 100 each and shareholders and/or their nominees 7,454 equity shares and 5,431 Preference Shares. The balance of 2,546 equity shares and 4,569 Preference Shares are now offered at par for public subscription for cash. The issue of these shares have been underwritten. Selected Satgram Collieries Limited is carrying on business of mining coal from collieries situated in Ranigum Coal Fields and Chanda Coal Fields. The new issue of the capital is principally meant for the expansion programme of the collieries and for expanding as a separate Engineering Unit, the existing Engineering Workshop which undertakes the manufacture of ferrous and non-ferrous casting requirements of collieries belonging to the company. The subscription list will open at the commencement of the banking hours on 9 December 1964 and will close at the close of the banking hours on 14 December 1964 or earlier at the discretion of the Directors, but not before the close of banking hours on 12 December 1964.

Mysore Acetate and Chemicals

The Mysore Acetate and Chemicals Company Limited is entering the capital market with a public issue of Rs 70 lakhs divided into 70,000 equity shares of Rs 100 each. The issue is fully underwritten. The terms of payment are as follows: on application Rs 25 per share, on allotment Rs 25 per share and the balance of Rs 50 payable in two calls of Rs 25 each

at intervals of not less than two months, provided that the last call shall be made not later than 18 months after allotment. The subscription list will be open at the commencement of banking hours on 10 December 1964 and will close at the close of banking hours on 22 December or earlier at the discretion of the Directors of the company but not earlier than the close of banking hours on 12 December 1964. The company has been incorporated with the immediate object of manufacturing about 1200 tonnes of Cellulose triacetate of film quality and 2400 tonnes of cellulose acetate with expert foreign collaboration. Cellulose acetate will be converted into moulding compounds by the addition of plasticisers fillers. Production is expected to start by the end of 1966.

★

BALANCE-SHEET REVIEWS

DCGM's Jubilee Year

The Delhi Cloth and General Mills Co Limited has, from the viewpoint of its shareholders, fittingly completed—its seventy-five years of existence. In the year ended 30 June 1964, the company experienced a sharp rise of a little over Rs 5 crores to Rs 46.78 crores in sales, including inter-branch transfers; and other income also marked an increase of Rs 39 lakhs to Rs 1.36 crores. It was accordingly able to show an increase in the disposable profit, thus making possible a higher dividend to shareholders.

The provision for depreciation for 1963-64 is sharply higher for three reasons: firstly, triple-shift depreciation for the previous year has now been provided, in an amount of Rs 21.79 lakhs; secondly, the charge of depreciation in the year under review is also accordingly higher; and thirdly, with the increase in gross block, a higher provision has been automatically entailed. Thus, the provision of Rs 2.63 crores compares with the figures of Rs 1.10 crores for the previous year.

The charge of taxation, for precisely the same reason, has declined. Whereas Development Rebate absorbed Rs 33 lakhs for 1962-63, this provision has now increased to Rs 98.51 lakhs. Thus, taxation gets Rs 27 lakhs as against Rs 1.50 crores for the previous year, though it needs to be added that the 1962-63 provision included Rs 45 lakhs pertaining to income-tax and super profits-tax for previous years.

The accounts show the disposable profit to be Rs 1.83 crores against Rs 1.18 crores. Both these figures, however, have been arrived at after a number of adjustments. The total of such adjustments for 1963-64 works out to just under Rs 38 lakhs, and the relative figure for 1962-63 was Rs 52 lakhs. It will thus be seen that even net of the adjustments the disposable profit improved by around Rs 29 lakhs in 1963-64.

Transfer to funds (other than Development Rebate) total Rs 82.70

lakhs against Rs 65.26 lakhs in 1962-63. The ordinary dividend has been stepped up from 13 per cent to 17 per cent, absorbing nearly Rs 25 lakhs more at Rs 74.40 lakhs; and as was the case last year, the distribution is out of the Dividend Reserve and tax-exempt profits reserve.

As at the end of June 1964, the balance-sheet of DCGM disclosed reserves and surplus placed at Rs 9.03 crores against the paid-up capital of Rs 5.76 crores. During the year, the gross block rose by over Rs 7 crores to Rs 26.49 crores, whereas the net block, because of the high provision for depreciation, has risen only by Rs 4.50 crores to Rs 13.14 crores.

IGNR Sells Indian Business to RSN

The accounts of India General Navigation and Railway Co Ltd for 1963 have been greatly delayed due, as the Directors' Report points out, "to the many Accountancy problems which arose relative to the sale of the Company's Indian business to the Rivers Steam Navigation Company Limited with effect from 28th February, 1963." The accounts have accordingly been prepared for two distinct periods—the first two months and the rest of the year. In the first two months, the company suffered a loss of £71,401, after providing £17,019 for depreciation. In the last ten months, this was converted into a surplus of £37,042. The accumulated loss, of £410,603, has been written off by transfer from Reserves. Thus, the year's surplus has been utilised to pay the preference dividends for the years 1956 to 1959. It has also been noted that on 1 December 1964 the preference dividend for 1962 and 1963 has been paid, and these dividends are therefore up to date.

The Company's investment in RSN has so far not been profitable, in as much as that company has intimated that a trading loss was sustained in 1963 and that, therefore, IGNR could not expect to receive a dividend on its preference share-holding for that year.

Against this has been juxtaposed the comment in the Directors' Report that, "as to our investment in Pakistan River Steamers Limited, it is pleasing to report that their operations during the year 1963 were satisfactory". It is thus clear that IGNR's directorate, though they have not explicitly said so, are none too happy about the prospects of their Indian investments yielding them a return.

India Machinery Maintains

An increase in sales did not help India Machinery Co Ltd to report a higher disposable profit for its operations in the year to 30 June 1964.

Sales rose from Rs 40.39 lakhs to Rs 48.34 lakhs. The provision for depreciation has been stepped up slightly from Rs 1.89 lakhs to

Rs 2.08 lakhs. Taxation absorbs Rs 1 lakh more at Rs 4 lakhs, and the disposable profit is a shade lower at Rs 2.91 lakhs as compared with just under Rs 3 lakhs in 1962-63.

The transfer to Reserve has been maintained at Rs 50,000, while the allocation to other funds has been halved to Rs 25,000. Development Rebate, as in the previous year, gets a nominal amount.

The dividend on ordinary shares has been maintained at 8 per cent and Rs 1.76 lakhs are needed for the distribution.

As against the ordinary capital of Rs 21.95 lakhs (there is, besides, Rs 3.13 lakhs in preference capital), the Reserve Fund is shown at Rs 2 lakhs. On the other side of the ledger, the gross block of Rs 40.67 lakhs is shown to have a net value of Rs 24.83 lakhs.

★

STOCK EXCHANGES

Dull Conditions

Stock market sentiment continued to be depressed this week also and in the absence of incentives prices sought new low levels. However toward the close selling pressure abated while buying at the prevailing low levels was also noticeable. Even so, the undertone was hesitant indicating that both investors and operators are chary of extending commitments in view of the receding hopes of early reliefs. It has been reported that the recent meeting between the Prime Minister and the representatives of trade and commerce has not produced any encouraging indication. On the other hand, most people in the market now are of the view that it would be idle to expect any change in fiscal policy before the next budget. While hopes of tax concessions have thus received a setback, sentiment has also been adversely affected by renewed fears about fresh curbs on the day-to-day trading on the stock markets.

Extremely dull conditions prevailed on the Calcutta Stock Exchange most of the time last week. Sentiment however tended to be quietly steady in later dealings mainly because of lessening of selling pressure. Though lower levels attracted some attention especially around selected scrip, there has been no indication of follow-through support with the result price movements have been within a narrow groove.

In the Madras stock exchange also interest has been at a low ebb following the trend in the principal stock markets in the country. During the week's trading, except some selected plantings, the rest of the market has generally been featureless.

A weak undertone prevailed on the Ahmedabad stock market following lack of fresh interest. Values declined most of the time but toward close, bear covering at lower levels arrested further loss.

With activity at a low ebb, equity values receded on Delhi Stock Exchange in earlier dealings. In later dealings a slightly improved tone

was noticeable but activity continued to be at a meagre level in the absence of incentives.

★

CALCUTTA

Except for occasional attempt at arresting the continuous downtrend, the Calcutta Stock Exchange this week has presented a very dull appearance with equity values developing a sagging tendency toward close in the absence of interest. Both operators and investors seem to be once again on the verge of losing confidence in equities because expectations of a favourable turn in fiscal policy have so far not materialised. It would appear that after last Thursday's meeting between the Prime Minister and representatives of industry, enthusiasm has reached a low ebb. It is now believed that no relief can be expected before next February. While investors are chary of extending commitments in view of the gloomy outlook for equities, the speculators are concerned about the uncertainty regarding blank transfers and the growing tightness in the money market.

In the clearing section, Birla Jute has been a prominent feature its movement being the more noticeable because of the general depression in the section as a whole. In later dealings Hind Motor steadied up on revival of buying. Both Dunlop Rubber and Kesoram were easier on sustained selling pressure. Despite persistent rumours about an increase in retention price and the announcement of an interim dividend, Indian Irons failed to attract sustained attention reflecting operators' reluctance to extend commitments in view of the many uncertainties in the investment situation.

Although the jute goods market has once again begun to show fully steady conditions, jute shares continue to be generally neglected. There is considerable anxiety among marketmen about the dispute between workers and IJMA on the question of Bonus. The dispute has already resulted in a one day token strike.

Price movements in the coal section have been within narrow limits with the volume of business passing also at a low ebb. During the week only a few shares changed hands and most rates were unchanged. With the demand for coal showing no signs of picking up, investors are naturally having little enthusiasm for extending their commitments in this section.

Though Mr Manubhai Shah, Union Minister for Commerce has hinted that the demand of the tea industry for effective relief and adequate finance for its development programmes will be sympathetically dealt with, tea shares have continued to be sluggish. This is because investors are influenced by the near term outlook which is not very good what with the lower price realisations at this year's auctions so far.

The Miscellaneous section, was generally easier with only one or two steady spots. Most shares both in the clearing and in the cash sections closed the week with moderate losses on balance.

MR SANJIVAYYA SAYS :

Hindrances to Production Must Go

Inaugurating the Central Institute for Training in Industrial Relations in New Delhi last week Mr D. Sanjivayya, Union Minister for Labour and Employment, said that in the context of objectives envisaged in our plans, the maintenance of healthy industrial relations had assumed special significance. Therefore, hindrances to production in all fields of economic activity had to be minimised. Mr Sanjivayya added that the country must speed up its economic and social progress and for this industrial peace was very essential. The Governments both at the Centre and in the States had passed a number of labour laws. These must be efficiently and effectively implemented so that the benefits contemplated in these legislative measures were secured and enjoyed by the workers.

Speaking about the Institute, Mr Sanjivayya said that even for the first course, the response from the State Governments was quite good in as much as eight state governments had deputed ten officers for training. He said that he was happy to learn that for the next course commencing from the first week of January, 1965, some of the South, South-east Asian and African countries like Malaysia, the Philippines, Thailand and Nigeria were deputing their officers for training.

The Minister said that those who were entrusted with the task of prevention and settlement of industrial disputes must know how to deal with the employers and the organisations of the workers and persuade them to adopt a reasonable approach for resolving their differences and disputes.

The following is the full text of Mr Sanjivayya's speech:—

"I am extremely happy to be amidst you all this evening and have great pleasure in formally inaugurating this institute.

It has been set up under the Chief Labour Commissioner's organisation for imparting in-service training to officers of the industrial relations machinery at the Centre and in the States. It started working from September 1, 1964 with the commencement of the first course of three months' duration. I feel confident that it will develop, in the course of time, into a guildded and competent institute dedicated to the cause of improving the skills of industrial relations officers.

GOOD RESPONSE

I understand that even for this first course the response from the State Governments was quite good in as much as eight State Governments have deputed ten officers for training. In a way it is good that unlike many other inaugurations, this institute is being inaugurated after it has actually

started functioning and we have been able to see the results.

IMPARTING SPECIALISED TRAINING

This training institute was approved as a Third Five Year Plan project for imparting specialised training to the officers engaged in the maintenance and promotion of industrial relations and enforcement of various labour laws. The importance of such training need hardly be over-emphasized.

Our country, after independence, has embarked upon an ambitious planned development programme and we are more than half way through the Third Five Year Plan. The Government have already approved the tentative framework for the Fourth Five Year Plan about which you must have already read in the newspapers. In the context of objectives envisaged in the plans, the maintenance of healthy industrial relations assumes special significance. Hindrances to production in all fields of economic activity have to be minimised. The meeting of the Standing Labour Committee held at New Delhi on March 10 and 11, 1960, therefore, rightly recommended that provision should be made for "training on the job as well as refresher training" for officers of the industrial relations machinery.

USEFUL SCHEME

This training project, however, had to face certain difficulties including the problem of its location and accommodation. Immediately after I joined the cabinet and came to know about the scheme I got myself acquainted with the details of the scheme. I was convinced that the training scheme envisaged, was indeed a very useful one and would go a long way in meeting the needs for in-service specialised training for the officers with a view to increasing their efficiency and competence in their day-to-day work. It was earlier proposed to start training from August 15 this year and with that end in view we had addressed the State Governments. Later I had an opportunity to discuss this scheme with the Labour Ministers and the State officials at the time of last Indian Labour Conference at Bangalore. They also appreciated the scheme and some of them indicated that they might be given some time to consider the question of deputation of their officers. The institute, therefore, started functioning from September 1, 1964.

FOREIGN TRAINEES

I am indeed happy to learn that for the next batch commencing from the first week of January, 1965 some of the south, south-east, Asian and African countries like

Malaysia, Philippines, Thailand, Nigeria etc. are deputing their officers for training. This is the first time that training of this type will be given in India to nominees of foreign governments. In fact, this institute is the first of its kind in the country. It is quite different from other institutes or colleges affiliated to various universities which prepare students for diplomas and post-graduate degrees in various special sciences, labour welfare and industrial relations. The difference lies in the fact that in these institutes the teaching methods, for obvious reasons, lay more emphasis on books and theory and emphasis on practice and procedures is much less. This lack of practical approach to the labour problems certainly is a factor which is responsible for the outlook of the persons undergoing the training and who get their diplomas or degrees.

As you all know, our country must speed up its economic and social progress and for this, industrial peace is very essential. The Governments both at the centre and in the states have passed a number of labour laws. These must be efficiently and effectively implemented so that the benefits contemplated in these legislative measures are secured and enjoyed by the workers.

WORKERS AND EMPLOYERS

Every year number of important decisions are taken in the Indian Labour Conference, Standing Labour Committee and various Industrial Committees with regard to matters affecting both employers and workers. There are other voluntary arrangements accepted by the representatives of the employers and workers such as the Code of Discipline, Inter-Union Code of Conduct and Industrial Truce Resolution. With regard to the policy of the Government and the decisions of the various wage boards and the tripartite bodies on labour matters, the role played by the officers who worked in the labour fields, whether they are Labour Commissioners, Conciliation Officers Labour Officers or Labour Inspectors is undoubtedly very significant. The officers connected with the enforcement of the Labour Laws must know the technique of inspection. Those who are entrusted with prevention and settlement of industrial disputes must know how to deal with the employers and the organisations of the workers and persuade them to adopt a reasonable approach for resolving their differences and disputes.

CONCILIATION

Conciliation is an art. It calls for high qualities and skill and a deep understanding of human nature. Many complicated and intricate situations are bound to arise which these officers have to face and for which they are required to find solution on the spot. These techniques and procedures cannot be learnt from books and they are not taught in institutes and college to which I have made a reference earlier. The officers who are undergoing training are actually

doing these jobs and their discussions here will be fruitful from the point of view of adopting a correct approach to the various problems.

ARBITRATION

In the Industrial Truce Resolution much stress has been laid on increase in production and voluntary arbitration and a good number of disputes have been resolved through recourse to 'voluntary arbitration' in the central sphere. The Regional Labour Commissioners, Conciliation Officers and even some of the Labour Inspectors have acted as arbitrators successfully. This was possible because proper instructions were issued to them and they were also given training as to how they should actually handle arbitration cases. I have great faith in voluntary arbitration as one of the most effective and expeditious methods of settlement of disputes and I understand that special emphasis is being laid in this institute to train officers to work as arbitrators.

HEAVY RESPONSIBILITIES

Officers working in the Labour field as conciliators or labour inspectors and labour officers have to shoulder heavy responsibilities. The possibilities of disappointment and discouragement are very great, but they must not easily accept defeat. They must have faith in human nature and also in the possibilities of creating, with the help of ordinary men and women, employers and workers, a better social and industrial order. To do something towards this end is their real vocation. The questions and problems which they are likely to call upon to deal with may often be new and without precedent. To tackle them, they must have physical courage as well as that born of conviction. They should be ready to face opposition and to speak without fear or favour to the employers as well as workers.

The training in this institute will not only be intensive with a practical bias on various aspects of the jobs to be done by the officers in their respective capacities, but will give them an opportunity for exchange of views, ideas and experience. The provision of short refresher courses has a definite purpose as they would enable the officers to keep themselves active and their knowledge up-to-date.

INTENSIVE TRAINING

I am also informed that the officers undergoing training derived considerable advantage from their visits to various important industrial undertakings, at places like Bombay, Ahmedabad, Calcutta, Dhanbad, Asansol, Hyderabad and Singareni Collieries. While these officers were visiting one of the public sector undertakings, a senior officer with whom they were having discussions mentioned that they would like to depute their officers for training in this institute. The Government has also approved the arrangement for a short two weeks' course for the benefit of officers of the Posts

and Telegraphs Department. I am sure that as the people come to know about the activities of this institute, there will be more requests for grant of the training facilities.

The experts on labour problems who are invited to talk in the institute will undoubtedly give the benefit of their knowledge and experience to the trainee-officers who would naturally ask them questions not out of academic interest

DR NAGENDRA SINGH REVEALS

Plans for Relieving Port Congestion

Addressing the twelfth meeting of the Consultative Committee of Shipping Interests in Overseas Trades in New Delhi last week, Dr Nagendra Singh, Special Secretary, Ministry of Transport, said:

The representatives of the shipping interests have furnished critical and thought provoking memoranda on ports which they wish to discuss at this meeting. The suggestions concern the operating conditions at ports and require consideration. The Government and the Port authorities will give close attention to these suggestions as ports exist to serve the interests of shipping and trade.

We have to be constantly in touching with the users' requirements and do everything possible to meet them promptly. Unnecessary delay in the remedy of a grievance or a short-coming will, of course, serve no purpose. I believe in fact that we must have more frequent meetings with the shipping interests, though not necessarily of the full Committee, to discuss major problems. We shall discuss this point in detail when we take up the agenda.

CONGESTION AT PORTS

I shall now make a few general remarks about ports. Firstly, as regards the problem of congestion at our ports which must naturally be uppermost in the minds of all of you, I find it has been analysed in the notes furnished by the shipping interests. While it is true that our ports have had periods of congestion from time to time over the last fifteen years or so, I must say, and I am sure all of you will agree, that, by and large, the measures taken by Government and the port authorities in the successive five year Plans have helped to keep the recent spells of congestion under a very large degree of control. However, we should not grow complacent and be satisfied with the present conditions.

Our objective is and should be to eradicate congestion totally at our ports. Our port capacity must be sufficient to meet the requirements of any emergency. That is the real test of adequacy of port capacity. It can be achieved only by the intensive use of available facilities at our ports by the rationalisation of operations, the maxi-

but from the point of view of their actual experience and difficulties. The discussion that will follow is bound to be interesting and instructive.

The institute has already made a good beginning and the leaflet in your hands would give you some idea of the training plans. I wish the first batch of trainees who would be completing their course very soon a bright future and the institute success."

mum possible mechanisation of handling, the simultaneous expansion of port capacity on a planned basis, and the balanced distribution of bulk traffic between alternative ports according to operational requirements.

QUANTITY OF TRAFFIC

The quantity of traffic handled by the five major ports, Bombay, Calcutta, Madras, Cochin and Visakhapatnam, in 1951-52 was 22 million tons out of which the dry cargo traffic handled in that year was 18.5 million tons. In 1962-63, the total traffic handled by the major ports, excluding Mormugao, was 37.5 million, the dry cargo being 23.4 million tons. In other words, the dry cargo traffic has increased from 18.5 million tons to 23.4 million tons. The quantum of traffic handled at our ports is generally on the increase. In this increase, POL, foodgrain imports and ore exports have a large share.

As regards the position this year, the monthly quantum of foodgrain traffic handled since January at our ports has been as follows: January 3.1 lakh tons; February 4.0 lakh tons; March 4.6 lakh tons; April 3.6 lakh tons; May 4.6 lakh tons; June 5.3 lakh tons; July 5.8 lakh tons; August 5.9 lakh tons; September 5.0 lakh tons; and October 6.8 lakh tons. In November the programmed arrivals total over eight lakh tons. The pressure of this traffic at Bombay and Calcutta has been particularly heavy.

The figures I have read out give us a picture of the magnitude the problem of foodgrain imports has assumed in recent months and also the extent to which our ports have been geared to meet this unprecedented demand for handling capacity. By and large, we have met it.

But the question really is how to achieve it without pressure on the general cargo traffic and with due regard to the natural and seasonal limitations of some of the ports and also the human factor. This, as the shipping interests have pointed out, has to be achieved by a series of both short-term and long-term measures.

HUMAN FACTOR

By human factor I refer to the labour attitude to mechanisation.

I may explain that Government's general objective is to explore all possible methods of further mechanising the handling of every variety of cargo at the major ports consistent with the principle that employment opportunities of labour are not seriously affected and such labour, as may be rendered surplus in the process, is provided with alternative employment without being subjected to loss of emoluments or other disadvantages.

As regards port capacity, I must say that both Kandla and Madras have helped us considerably to take the load. This situation is also due partly to the satisfactory arrangements made by the Railways to step up the supply of wagons. The new wet dock at Madras, which our Prime Minister opened formally on the 6th of this month, has been commissioned at a crucial time.

We must intensify the use of Visakhapatnam by a special programme designed to speed up the completion of the new general cargo berths at that port and the improvement of the railway yard facilities there. These matters are engaging our special attention.

FACILITIES AT PORTS

I am in full agreement with the principle that the facilities at all our ports for foodgrains handling must be the most efficient possible, the object being to maximise the discharge and clearance using the minimum number of berths. As the memoranda prepared by the shipping interests have pointed out, the problem has been studied closely by the Srinivasan Committee and the Committee of American Experts and the Food Ministry are taking necessary steps to implement their recommendations in cooperation with the port authorities.

As regards Calcutta, it is true conditions are special. As regards foodgrain, the Port Commissioners have been allowing the maximum number of foodgrain vessels to be berthed the practice being that foodgrain vessels are allowed their turn in the queue for general berths over and above the four priority berths allocated for this traffic. It is this arrangement which has enabled Calcutta Port to cope with the heavy arrivals of foodgrain traffic. The port has handled as much as 1.9 lakhs tons of grain in a month.

In the present circumstances, food imports have to be given top priority. I fully agree that, if the same result could be achieved by utilising fewer berths, it would help to relieve the congestion of general cargo ships. I am sure, the port Commissioners will continue to review this aspect of the matter carefully.

I shall now describe briefly the progress of the Third Plan works regarding our ports.

The total financial outlay envisaged in the Third Plan for major ports is about Rs 110.8 crores according to estimates made last year, against which we have spent Rs 38 crores in the first three years

and we hope to spend Rs 21 crores this year and about Rs 40 crores in the year 1965-66.

At Calcutta, the Third Plan schemes have been making good progress. The new estuarine dredger is expected early in 1965.

HALDIA PROJECT

As regards Haldia, the preparation of the designs, drawings and the specification is in progress. The acquisition of land required for the Haldia project covering about 9 square miles is going on.

While the major works at Haldia cannot be started pending finalisation of the loan from the World Bank for which an application has already been made a number of preliminary work e.g. the manual excavation of the Dock, the raising of land required for the port, the Oil Refinery and the Fertiliser Factory, the construction of the access roads, temporary offices and staff quarters etc., are proposed to be taken in hand during the present fair season.

As regards the rail link between Panchkura and Haldia, the land required for the rail link has been acquired and handed over to the South Eastern Railway by the West Bengal Government. The detailed planning and designs of the stations in this link have been completed. The work has already been taken up.

The existing road between Panchkura and Haldia, which is to be used for the transport of construction materials, is being suitably strengthened and widened by the West Bengal Government.

BOMBAY MODERNISATION SCHEME

As regards Bombay, the Dock Modernisation Scheme is making satisfactory progress. Tenders for the marine works relating to the Dock Expansion Scheme and the Ballard Pier Extension Scheme have been received by the Port Trust. Meanwhile several preliminaries have been taken in hand. The target date for the completion of the scheme is 1968.

At Madras, the new Wet Dock has been completed and all the six berths have been put into commission recently. It has been decided to allot one of the three berths on the eastern side of the Wet Dock for iron ore traffic. A mechanical plant is proposed to be installed at this berth for handling the ore. The Scheme is estimated to cost about Rs 248 lakhs of which about Rs 137 lakhs will be in foreign currency. The berth is expected to handle an annual export of 3 million tons of iron ore. The Port Trust are going ahead with the preparation of specification designs and estimates for the project in the light of their Consulting Engineers' report and the invitation of tenders.

The fourth berth wharf in the Eernakulam Channel was fully commissioned in 1963. The construction of an open berth in the Eernakulam Channel (estimated to cost Rs 84 lakhs) for handling

coal has been sanctioned and the work is in progress.

The construction of the ore berths at Visakhapatnam Port is nearing completion. It is expected that the erection of the new ore handling plant will be completed by April, 1965.

As regards Kandla Port, one additional berth has been completed except for the dredging in front of it. The dredging is expected to be undertaken as soon as the pipeline is ready.

MORMUGAO PORT

A firm of Consultants has been appointed to prepare a project report and Master Plan for the development of Mormugao Port. The new dredger for Mormugao is expected to be received in 1955.

As regards the Mangalore and Tuticorin Harbour Projects, Preliminary works are going on such as land acquisition, quarters roads, rail connections etc. The detailed layouts have been prepared and it is expected that the contracts for the works proper will be awarded during the year 1965-66.

Our Minor Ports and Intermediate Ports have continued to play a useful role and the Third Plan development works at several of these ports are in progress.

FREIGHT RATES

Lastly, coming to shipping and freight matters, I find that the agenda this year is very light as compared to past years. I can only take it as an indication that most of the other problems and difficulties that used to figure in the past are being resolved. Still, since the problem of freight increases is an ever-recurring problem, I would like to make a brief mention of it here.

As you are no doubt aware, so far as the India-UK/Continent Conference is concerned, an agreement was reached some two years ago which provides that any general increases in freight rates would be preceded by discussions and consultations between the Conference and the trade interests concerned in India and, failing an agreement between them, there would be consultations between the Conference and the Government of India.

In July this year a circular letter was issued by the Freight Investigation Bureau to all other Conferences/Rate Agreements and Shipping Lines serving India's overseas trades requesting them to adopt this method of consultation and discussion before increasing freight rates. Most of the addressees have sent interim replies that the matter is receiving their attention. I would like to take this opportunity to appeal and emphasise to all concerned to give their very earnest consideration to this suggestion which, to my mind, will go a long way towards establishing better relations and understanding between the shippers and the Conferences by helping them to appreciate each other's difficulties and problems."

FOREIGN AID

\$60 Million More from the USA

The Governments of India and the United States have signed three agreements providing for US loans totalling \$60.3 million (Rs 28.7 crores) to promote the development of industry, power generation, and transport in India.

Mr C. S. Krishna Moorthi, Joint-Secretary, Ministry of Finance, signed for India and Mr Joseph N. Greene, Charge d'Affairs, signed for the United States in the absence of Ambassador Chester Bowles.

The first loan provides for \$50 million (Rs 23.8 crores) to be used by the Government of India to finance the import of a broad variety of commodities required to maintain existing facilities and expand both agricultural and industrial production. This non-project loan covers the import of fertilizers, steel, lubricants, machinery and machinery parts, sulphur, rubber, tyre cord, carbon black, caustic soda, insecticides, chemicals and a wide-range of components. Within these categories, the Government of India is free to set the amounts of imports according to the needs of the economy.

By making possible an increased flow of raw materials and spare parts, non-project assistance helps maximum production and also lower production costs. This, in turn, increases India's ability to expand its exports and earn foreign exchange. Total non-project assistance extended by the United States for the Third Plan comes to \$835 million (Rs 398 crores).

DIESEL LOCOMOTIVES

The second loan amounts \$7.2 million (Rs 3.4 crores) and will meet the cost of acquiring 25 broad gauge diesel locomotives by the Indian Railways. These 2,600 horse power diesel locomotives will be among the most powerful machines ever exported from the United States.

During the Third Plan, the Indian railways plan to commission 497 broad gauge diesel locomotives. The present loan and earlier US government credits are financing the purchase of 324; the balance of 83 will be produced at the Varanasi Diesel Locomotive Factory, which has been established with the assistance of a separate US Export-Import Bank loan. The loan concluded today is the sixth credit extended by the US Agency for International Development (USAID) to the Indian railways.

Diesel locomotives have several advantages over steam engines. They accelerate faster and their use of dynamic braking permits them to operate at higher speeds with safety. The faster speed makes it possible for more trains to be run and for more service to be obtained from railroad wagons. In addition, diesels are cheaper to operate than steam locomotives. They can be used for as long as twenty hours per day.

The 25 diesels to be provided under today's agreement will be used in

the Manmad-Dhond and Dhond-Sholapur-Wadi sections of the Central Railway. In these two steeply-graded sections of Maharashtra, the anticipated traffic is larger than can be adequately handled by steam engines.

SHARAVATHI HYDRO-ELECTRIC PROJECT

The third loan, amounting to \$3.1 million (Rs 1.5 crores), will be used to procure and install a 89,100 kilowatt generator at the Sharavathi Hydro-electric Project, Mysore State.

IATA Meeting

The Composite Traffic Conference meeting of the International Air Transport Association ended in Athens on 13 November, 1964 after completing a detailed review of passenger fares and cargo rates. The validity period for the passenger fares discussed will be from 1 April 1965 to 31 March 1967.

As a general policy the Athens meeting agreed that ordinary fares worldwide are to be maintained at their present levels despite the pressure of rising costs. Proposals for a variety of special promotional fares, many offering substantial reductions on present levels, received wide support. There was a substantial measure of agreement on the basic fare patterns and the Athens meeting was not able to reach complete unanimous agreement on all fares or inflight services for all routes. Further discussions on promotional fares and certain other aspects will be required before fares for certain routes can be formally adopted and submitted to governments for approval. One group of delegates is remaining in Athens to continue negotiations on fares within the area Europe/Middle East/Africa.

One of the other aspects on which complete accord was not reached at this stage was the question of whether or not in-flight entertainment such as movies or television, should be prohibited. One of the two carriers now showing movies on board their aircraft in international services was unable to agree to phase out this feature. IATA airline, in their determination to resist increasing costs and continue fare reductions to the public, do not wish to incur the additional expenses involved in the provision of new audio-video equipment.

In anticipation of complete agreement being reached the normal fares discussed at Athens are being processed by computer so as to ensure that they will be made known to the public as soon as possible. The following are areas for which agreement on fare patterns was reached: Mid-Atlantic, South Atlantic, Europe/Far East/Australasia, within the area Pakistan/India/Far East/Aus-

This will be the eighth generator of the same size to be commissioned in this vast undertaking.

US credit of \$26.8 million and Rs 34.5 crores already have been made to meet the major part of the cost of this project, which will have an ultimate capacity of more than one million kilowatts. The first generator of the Sharavathi undertaking is scheduled to be dedicated soon by the Prime Minister.

These credits have been extended to India by the US Agency for International Development. They are repayable in dollars over a 40-year period, with no repayments called for during the ten-year grace period. The loans carry interest at three quarters of one per cent per annum during the grace period and two per cent per annum for the remaining 30 years.

tralia, across the South Pacific, and around the world.

For the North Atlantic there was general agreement to maintain existing fare levels. While it was agreed that there should be low promotional fares between North America and all Middle East points, there was disagreement as to what form these low fares should take. For the North and Central Pacific routes no agreement was reached. It was agreed to defer consideration of problems peculiar to the routes between North and South America to a further meeting. Special group fares with discounts of up to 30 per cent on normal fares were agreed by the Athens meeting for travel between certain points in the area Pakistan/India/Far East/Australia. Various inclusive tour fares, up to 40 per cent less than normal fares, were agreed for a number of routes in this area.

Twenty-three day excursion fares were agreed by the Athens meeting for travel between the West Coast of North America, Honolulu and Tahiti. Also agreed were group fares between the area West Coast of North America/Mexico/Honolulu and the area Fiji/Noumea/Australia.

Reflecting the increasing importance of air freight, the Athens meeting decided that in future cargo rates are to be discussed at special Composite Traffic Conference meetings rather than combined with passenger matters as up to now. The first separate Composite Traffic Conferences meeting on cargo is scheduled to open in Europe in April 1965, to recommend to governments new cargo rates to come into effect in September 1965 for a two-year period. The first separate Composite Traffic Conferences meeting on passenger matters is to start in Honolulu in September 1966. It will make recommendations to governments on passenger fares to become effective on 1 April 1967 for a period of two years.

The Composite Traffic Conferences meeting in Athens was under the chairmanship of Joachim von Frankenberg of Lufthansa German Airlines.

NOTE: Annual figures are averages of months; those of sugar relate to crop years.

†Data of Matches, Hurricane Lanterns, Sewing Machines and Bicycles from January 1963 onwards and those of Footwear (leather) from April 1963 relate to units having fixed assets of Rs 5 lakhs and more.
‡Data in respect of certain units are not included from January to May 1963.
(1) Monthly figures are exclusive of production in Punjab (Kangra) and Himachal Pradesh.
(2) Relating to the production by mills in the membership of Indian Jute Mills' Association and to one non-member mill.
(3) Includes canvas.
(4) Figures relate to stable variety only from June 1962.
(5) Including figures for Jammu and Kashmir.
(6) Figures relate to production of organised factories.
(7) Boxes are of 60 sticks each upto February 1961 and thereafter of 50 sticks each.
(8) Total of viscose yarn, staple fibre, acetate yarn and cellophane.
*From January except in the case of sugar where the figures are progressive from November of the preceding year, the crop year being November—October.
†Provisional.

INVESTOR'S SUPPLEMENT

Equity Prices React in November

Trading on the stock markets during November has been indicative of the continued uncertainty over the future of equities. Initially, prices of most shares ruled steady especially after the Diwali holidays but soon it became clear that both investors and operators were unable to extend their commitments for want of fresh incentives and in view of many uncertainties in the investment situation. In the special Moorat session the stock markets had exhibited a steadier tendency with operators lending their support, albeit still cautiously, on the belief that before long there would be fiscal changes which would favour the revival of the capital market. The resurgence of confidence however yielded place to renewed apprehensions about Government policy toward private sector becoming increasingly stiff with the burden of taxation also becoming heavier in view of the large outlay envisaged for the Fourth Plan. In the first place, operators are of the view that for stock market activity to broaden, there should be reasonable assurance that frequent changes will not be made in the rules and procedures governing the working of the stock market. In this connection, the proposed amendment of the Companies Act to restrict the period of holding shares on blank transfer to six months has caused concern. Blank transfer has contributed to the liquidity and negotiability of stocks and shares and hence the move of the Government to restrict blank transfers will discourage investment. In a joint memorandum to the Government all the Stock Exchanges in the country have protested against the proposed measure.

The Stock exchanges have pointed out that the proposed restrictions on the currency of blank transfers is far from justified in its basic assumptions. They have suggested that instead of seeking to restrict the currency of blank transfers, the legitimate interests of holders on blank transfers should be safeguarded and the same status, as is enjoyed by Government securities and negotiable instruments in general, should be conferred on shares by including in the Companies Act appropriate provisions on the lines of the Uniform Commercial Code and the Uniform Stock Transfer Act which have been adopted through-

out the US. The memorandum further says that the blank transfers are not the same as nominee holdings. Nominee holdings exist independently on the blank transfer system. The proposed restrictions would not, therefore, bring about disclosures of beneficial interest nor would it solve the problem of nominee holdings. Restrictions on blank transfers may divert investment of secret profits from shares to other channels but, it cannot check tax evasion. Government securities in the form of promissory notes transferable by endorsement and delivery are more perfect forms than shares on blank transfer for holding secret profits. The memorandum points that there is tax evasion even in the US but, instead of restricting the currency of blank transfers, the American law has given statutory recognition and protected holders on blank. It says that the blank transfer system has a historical justification in that it has been in vogue since the inception of joint stock enterprise. In one form or another, it is found in all parts of the world. The blank transfer system has given the market its essential and indispensable qualities of liquidity, continuity and stability. The memorandum also says that the proposed restrictions would render the financing of corporate activity more difficult and would curtail banking and other credit facilities.

As the month reached its mid-way mark, the hopes about sympathetic consideration of the difficulties of the operators receded with the report that instead of relaxing controls on the stock market, Government may be thinking in terms of further tightening them. In this regard it was reported that the Company Law Administration had proposed far reaching measures to check malpractices pertaining to transactions in shares. The apprehension about fresh curbs has evidently stemmed from the report that the Chairman of the Company Law Board on his return from a tour of the US and UK has submitted a report to Government designed to vest Authority with wide powers of control over stock exchanges and dealings in shares.

Even so, stock market sentiment was found to be occasionally

steady and this was attributed to the continuing hope that Authority would find it possible to devise some method to revive the capital market especially since there is a consensus in the country that without a reduction in taxation it is impossible to attract fresh capital to industries. With a view to impressing on the Government the urgent need for remedial measures, representatives of industry, trade and commerce met the Prime Minister toward the end of the month and although the meeting aroused high hopes, sentiment suffered a setback after the meeting which is said to have brought no cheer. As a matter of fact, the general feeling in the stock market now is that no concession can be expected before the next Budget.

It is even considered possible the next budget may bring a rude shock because a few days back the Finance Minister has told Parliament that the next Central Budget may indicate the advance action that may be necessary in order to mobilise resources to sustain the large investments envisaged in the Fourth Plan period.

Sectionwise, turnover was at a low level in the Jute section throughout the month reflecting the lack of investment support. In earlier dealings, the general tendency was to reduce commitments in view of the continued absence of enquiry for jute goods. Even when foreign buying picked up late in the month, thanks to the fact that the workers' strike in Pakistani jute mills showed no sign of coming to an early end, investors were not impressed by the simple reason that in view of the high prices of the fibre, the larger sales will not bring much profit to the mills. Perhaps the main reason for the lack of enthusiasm at the prospects of large sales of goods as a result of the Pakistani strike is that sooner or later the strike in Pakistan will end and then, the Indian industry will be once again faced with the old problem of competition from Pakistan.

Coal shares were a neglected market and it is not surprising that investors showed little interest in the section. For, while on the one

hand the selling price of coal continues to be unremunerative, on the other, there is the fresh problem of disposing of raisings. For some time now demand for coal is stagnant while production is maintained at a satisfactory level. This has resulted in mounting stocks of coal at pitheads and the collieries are hard put to it to prevent unmanageable accumulations.

In the Tea section, transactions were few and far between. In view of the lower average prices obtained so far this season, interest in tea shares has continued to be at a low ebb. Investors seem to believe that profits and consequently dividends for the current year will be smaller than for the previous year. Although, there has been a revision of the ex-factory prices of sugar, sugar shares have failed to attract attention. It is believed that the finances of sugar companies will improve only if suitable incentives are given to the industry. The fact that Government has so far not accepted the industry's plea for permission to allow the mills to sell a part of their production in the free market has come as a disappointment. Sugar production too will not increase to the extent expected because with the price of the commodity strictly controlled and with production costs progressively increasing, sugar mills are unable to compete effectively with gur and khandasari manufacturers in buying their requirements of cane. Though textile shares just managed to be steady presumably in view of the expectation that raw material supply will be adequate, there has been no marked enthusiasm on the part of investors to extend their commitments as more than half of textile industry's production has come under price control regulations. While engineering shares were generally weak, miscellaneous counters, following the general trend of the market, were easy.

Business in Government securities section was on a meagre level in the absence of institutional interest. While the 3 per cent Conversion Loan 1986 was quoted around Rs 62 most of the time during the month, short and medium dated loans were barely steady. Interest in Bank shares was confined to one or two selected counters.

(s) Includes Rs 947,178 being depreciation adjustment in respect of additional depreciation provided in previous year's and Rs 3,100 being excess of Secretaries Remuneration.

(t) After transferring Rs 783,834 Rebate Reserve and Rs 650,000 from General Reserve.

(u) After transferring Rs 200,000 from General Reserve.

(v) After transferring Rs 306,835 from Development Rebate Reserve.

(w) After transferring Rs 1,734,803 from Development Rebate Reserve.

(x) After transferring Rs 113,089 from General Reserve.

(y) After transferring Rs 300,000 from General Reserve.

(z) After transferring Rs 450,000 from Dividend Equalisation Reserve.

(a12) After transferring Rs 350,000 from General Reserve.

(a13) After transferring Rs 400,000 from General Reserve.

(a14) After writing back Rs 1,258,414 being provision for taxes and expense and Rs 1,375,000 being bonus provision.

(a15) After transferring Rs 150,000 provision for taxes.

(a16) After transferring Rs 300,000 from Dividend Equalisation Fund.

(a17) After transferring Rs 300,000 from General Reserve.

(a18) After transferring Rs 368,000 from Dividend Equalisation Reserve and providing Rs 199,659 for bonus.

(a19) After transferring Rs 200,000 from General Reserve.

(a20) After transferring Rs 775,000 from General Reserve and writing back Rs 108,018 being excess provision of taxation.

(a21) After transferring Rs 1,296,000 from General Reserve.

(a22) After transferring Rs 62,204 from Capital Reserve No. 1 and Rs 49,544 from excess provisions.

Reserve and withdrawing Rs 414,973 from provisions and Rs 66,392 being income previous years.

(a23) After transferring Rs 625,712 from General Reserve and providing Rs 1,884,559 for bonus to staff.

(a24) After transferring Rs 825,000 from General Reserve.

(a25) After transferring Rs 310,000 from General Reserve.

(a26) After writing back Rs 786,539 being excess provision for depreciation.

(a27) After transferring Rs 1,988,415 from Development Rebate Reserve.

(a28) After transferring Rs 763,578 from Capital Reserve Rs 10,969 from provisions and including Rs 40,966 being items relating to previous years.

(28) After transferring Rs 1,450,000 from General Reserve and Rs 222,288 from Development and Rehabilitation Reserve.

(a29) After transferring Rs 1,200,000 from General Reserve and Rs 205,179 from Development and Rehabilitation Reserve.

(a30) After transferring Rs 300,000 from Dividend Equalisation Reserve.

(w) After transferring Rs 140,000 from Taxation Equalisation Reserve.

(x) Includes Rs 570,363 being profit on sale of assets; Rs 24,318 being Development Rebate no longer required and Rs 4,098 sundry income.

teas were somewhat lower except for the bright liquoring Assams which received useful support. Leggcut descriptions sold at fully firm rates and were sometimes dearer. Teas for Price were again a weak feature. The following quotations are inclusive of excise duty: Plain Orthodox Dust Rs 3.70 to 4.20; Medium Assam Dust Rs 4.20 to 4.70; Legg cut Dust Rs 4.45 to 4.70; Plain CTC Dust Rs 4.45 to 4.65; Medium CTC Dust Rs 4.70 to 5.15; Good Assam CTC Dust Rs 5.90 to 6.40.

COTTON Restrictive Measures

The strident rise in cotton prices during the past few weeks has precipitated a baffling problem to all concerned and the imposition of a ban on official trading in futures was merely natural as price pierced the official ceiling of Rs 775.00. With a view to reversing the trend, a high level representative conference of cotton cultivators, the trade, and the mill industry was convened by the Union Ministry of Commerce in Bombay when some decisions were taken to contain the price level within reasonable level. The decisions broadly pertain to the re-introduction of compulsory survey in respect of such cotton as is sold above the official ceiling, the fixation of definite dates for ginning and processing and requisitioning of cotton by the Textile Commissioner at different points, including the stocks with the mills, as and when the first two measures fail to bring in normalcy in the market. Cotton ceilings will be, however, strictly enforced by the Textile Commissioner with a view to ensuring supply of available cotton to the mills at rates not higher than the basic ceiling prices.

These decisions are unlikely to receive unanimous support from the various cotton interests in the country primarily due to the none too encouraging success which compulsory surveys met with in the past. The delay in announcing the details has already generated misgivings in a section of growers and traders which feel that the enforcement of the scheme will only create further difficulty to the mills in securing adequate cotton at regular intervals. The postponement of the announcement had immediate effect on spot prices in Madhya Pradesh, Khandesh, Berar, Punjab etc which rallied back after the recent slump. The paucity of stock in the markets also fanned the uptrend in prices. An early announcement of the full particulars of the scheme will be helpful.

Official transaction in the ruling contract, Jarilla March, during the past week was absent as prices ruled above the official ceiling of Rs 775.00 per three quintals. In unofficial dealings, however, the

contract was lifted up to Rs 781.00 before closing slightly lower at Rs 780.00. As the operators were waiting for further measures by the authorities for controlling the price trend, the volume of business was practically little.

The spot market, which exhibited a stubborn trend to hover around the ceiling, turned easy owing to the decisions taken at the special meeting convened by the Government even though arrivals in the terminal centres were restricted.

Bengal Deshi cotton ruled around of Rs 818.00 though activity in the export section was rather tame. In the import section African, American and Pakistani growths met with good demand.

The latest issue of the journal of the Indian Cotton Mills Federation shows that the genesis of some of the controversies raging over the current pattern of international textile trade can be linked to the mode in which the Long Term Agreement on textiles is being observed by the advanced countries of the World. The future of the agreement will naturally hang on "the loyalty shown to its spirit by signatories". It should be noted, in this context, that countries having restraints and quota restrictions on imports are not unduly worried over relaxing them with the requisite degree of speed while the developing countries such as India are definitely placed at a disadvantage. The Indian delegate stated in unambiguous terms that the developing countries are opposed to the idea of extending the agreement beyond September 1967 as it has been a bitter disappointment to them. While pleading for a realist approach for settling the difficulties experienced by the developing countries, the Indian delegate suggested that developed countries should allow imports of about 20 per cent of their domestic consumption from developing countries. This recommendation was, however, received with mixed feelings. While countries like Japan supported this move, West European countries insisted on the continuation of the agreement. One thing has emerged clearly: the developing countries will not opt for giving the agreement another lease of life if it fails to create new opportunities for them to boost their export trade.

PIECEGOODS

Trading in the cotton cloth market in Bombay continued to follow the familiar pattern during the week under review. Controlled varieties of mill made cloth were almost neglected while decontrolled superfine items firmed up on account of encouraging upcountry demand. Prices of superfine varieties such as cambrics, lawns, dorais and bleached mulls took an upward turn taking a cue from brisk upcountry enquiry. Bleached dhories also met with some buyer interest. Purchasers from UP, Rajasthan and Bihar were active in

the market while those from Calcutta were conspicuously absent. Because the huge accumulation of stock with them the mills are reported to have taken a more lenient attitude toward prices in order to liquidate their stocks as quickly as possible. Demand for calendared or bleached goods was few and far between but grey powerloom cloth steadied up thanks to good demand.

OILS AND OILSEEDS Trading Again At Standstill

A firm trend continues to prevail in the oils and oilseeds market as demand is strong while arrivals are restricted. In the futures section, again no trading has been found possible though the Bombay Oilseeds and Oils Exchange has permitted the resumption of trading in groundnut, castorseed and linseed which remained suspended for some days last week following the hectic uptrend in prices which pierced the permissible weekly ceiling rates. However since the rates fixed fell far short of the unofficial indications, no business resulted and the stalemate has continued. In Groundnut the Forward Markets Commission's price limit was fixed at Rs 110 for January groundnut. As in unofficial trading the rate quoted was 10 to 12 points higher, the removal of the informal ban on trading by the Exchange had little practical significance for the market. The earlier expectation that the FMC in consultation with the trading interests would arrive at a workable formula as also indicate the terms and conditions for the next contract has not materialised and the uncertainty has further deepened since the postponement of the meeting between representatives of the trade and FMC called on 21 December.

In the Madras oils and oilseeds market, a firm trend has continued to persist. With arrivals also showing a declining trend, sentiment has become somewhat nervous with vanaspati interests and crushers unable to take a decision in view of the unchecked rise in prices.

SUGAR Steady Trend

In the Hapur sugar market, prices in the open market were steady as supplies continued to be restricted. The hardening trend is attributed to the belief that there will be no early improvement in the supply position as output is hampered by the paucity of cane to sugar mills in the Meerut and Muzzafarnagar Districts of UP. The following is the press communique issued by the Indian Sugar Mills Association on the situation brought about in one important segment of the sugar

industry as a result of the strike of cane growers.

Cane Growers' Strike

The Committee of the Indian Sugar Mills Association, are seriously concerned at the cane growers' strike since 15th December due to which all the eight sugar factories in the Meerut District are lying completely closed, throwing out of employment thousands of workers. Besides this, the sugar factories numbering four in the neighbouring Muzaffarnagar District are having only partial working about 50 per cent of their capacity. This is a very important sugar producing area in the country as the factories in these two districts are of about 24 per cent of the total production in UP or about 10 per cent of the entire sugar production in the country. It is rather unfortunate that at a time like this when there is urgent need for increased sugar production and all efforts are being made to achieve the same, these large units should be facing cane strike resulting in considerable loss of production which cannot be made up later on. With a sugar recovery of only 50 per cent in gur and khandsari compared to sugar factories, there is considerable loss of sugar involved in diversion of cane to gur and khandsari from factory areas which is a national loss, the country can ill-afford.

This situation has been brought about by the high price of gur which is now ruling as high as Rs 36/- per md. in the above regions. At this price, by converting the cane into gur, the growers are able to get a much higher return than Rs 2/- per md. payable by the sugar factories. Unless, therefore, this basic factor is duly taken into account and immediate efforts are made to bring down the gur price to the parity level, no lasting improvement in the present situation would be possible.

While extending their utmost cooperation towards achievement of increased production, the Committee urge upon the Central and the State Governments to take immediate and effective steps for the restoration of normal working by ensuring adequate and regular cane supplies to the mills in the above areas thus enabling them to maximise production.

Ban on A & B Grains

Appropos the Government ban on manufacture and sale of A and B grain-size sugar by the sugar factories on the 2nd November, 1964, the Indian Sugar Mills Association convened a conference of the Senior Technologists of the various sugar factories to consider the effect of the ban on the production of sugar, at New Delhi, on the 4th December, 1964. The conference was attended by most of the leading sugar technicians, including two ex-Directors of the National Sugar Institute, namely

Messrs. J. M. Saha and S. N. Gundu Rao. After a considerable discussion of the matter, the Conference had come to the unanimous conclusion that the Government had erroneous notions in arriving at the decision that there was loss of production in the manufacture of bolder grains. On the other hand, where adequate and proper equipment existed, there could be no loss of production nor could the manufacture of bolder grains be considered as wasteful. The Conference was further of the view that serious working difficulties would arise in the change-over from the manufacture of bolder grains to smaller grains in such units. The difficulty in the switch-over would be mainly felt in the centrifugals and in the drying stations as also in the grading section. The Conference also felt that the layout of the plant and equipment at the various sugar factories which were mainly producing bold grain sugar were such that it was extremely difficult to switch over to the production of smaller grains without adversely affecting the cane crushing rate, thus adversely affecting the production of sugar. The extent of reduction in the crushing rate would vary with individual mills and was likely to go up as the season advances with the increase in sugar recovery.

According to the technologists, the layout of a factory designed to produce bold grains was such that the centrifugal capacity was just sufficient to purge bolder grains. The purging of bolder grains will naturally take more time with the result that the centrifugal capacity will be reduced ultimately affecting the rate of cane crushing. The drop in capacity of centrifugal station alone was estimated by the technologists to be between 15 to 30 per cent and the crushing rate will be affected correspondingly. No doubt, there can be some small saving in pan capacity but the same cannot be utilised so long as there are bottlenecks at the centrifugal station. The factories will be having difficulties at drying end also, inasmuch as, in the production of smaller grains, there would be increased steaming time as well as drying and cooling time at the hoppers. The experience of about a month's working of the factories whose technologists were present at the above Conference, has also confirmed the above difficulties. The daily cane crushing capacity, according to the technologists on account of these bottlenecks would go down by about 25 to 30 percent which was not at all desirable.

Further the ban would also completely upset the historical and the traditional economy of the carbonation factories who were mainly producing bold grain sugars as they would be deprived of the higher realisation for such grains while the cost of production would remain the same even for the manufacture of smaller grains. Further

these mills have to change-over to sulphitation process for production of smaller grains by incurring additional capital expenditure by way of installation of new plant and machinery, while a number of existing machinery would be rendered idle. As these units are already faced with higher manufacturing charges, their working would be seriously affected which was bound to reflect adversely on their production. Even in the case of sulphitation factories who were producing bulk of their required grains, considerable alterations in machinery would be required to switch over to the production of smaller grains, involving additional capital expenditure.

In consideration of the above compelling circumstances, the Indian Sugar Mills Association has strongly urged upon the Government of India to reconsider their decision and drop the ban on production of A & B grains in the interest of smooth working of factories and increased production which is the declared objective of the Government.

NON-FERROUS METALS Divergent Trends

The non-ferrous metals market showed divergent trends last week. Tin was easier on selling pressure coupled with indications of accretion to stocks from arrivals from upcountry centres and imports. Although zinc too displayed a similar trend most of the time, there had been an improvement in sentiment in later dealings owing to revival of some buying support. While there was no marked change in lead, copper was generally steady with copper electrolytic gaining sizable ground on paucity of offerings coupled with a strong demand. It would appear that the somewhat subdued appearance of the market in contrast to recent firm conditions around is partly due to the apprehension that any hectic trend will attract strong regulations from Government.

PEPPER Margins Imposed

The buoyant trend noticed for some time in the pepper market has continued unabated most of the time last week in Bombay.

In earlier dealings speculative buying lifted the price in the forward section. Operators had been encouraged by reports of sustained American buying and the growing interest in the market from some East European countries. With arrivals in the primary market continuing to be restricted, the trend further hardened in Bombay. That responsible sections of the trade were perturbed over the continuing rise in prices was evident from the fact that the Board of Pepper and Ginger Merchants' Association tried to prevent any dislocation of the market, though ineffectually. Later only after the FMC had imposed heavy margins on the two ruling contracts that the unbridled price rise could be arrested.

SILK Unchanged Conditions

The prices of Filature Raw Silk remained unchanged at the Bangalore Silk Market during the week ended 19th December, 1964. Kisan Silk rose to range from Rs 109.00 to 110.00 per kg. Prices of Cottage Basin Silk appreciated slightly to rule at Rs 86.53 to Rs 102.80 per kg.

A mixed trend was noticed in the prices of charka raw silk. The superfine quality showed an upward trend only in the minimum to rule between Rs 87.08 to Rs 92.59 per kg. against the last week's level of Rs 87.08 to Rs 92.59. Prices of all the three qualities also noticed an upward trend. Prices ranged between Rs 72.48 to Rs 78.82 (I quality) at Rs 68.07 to 72.20 (II quality) at Rs 63.37 to Rs 67.24 per kg. (III quality). Dupion (charka) ruled at Rs 27.00 to 39.12 per kg.

Spun silk yarn remained stagnant for yet another week.

Reeling cocoons: Prices of reeling cocoons indicated a rising trend particularly in Sidlaghatta market at Rs 5.58 to 6.75 compared to those ruled during the last week. Prices at Channapatna Market rose to rule at Rs 4.07 to Rs 5.89 per kg. Mugur Market remained unchanged.

Seed Cocoons: The prices of Foreign race seed cocoons declined to rule at Rs 12.25 to Rs 23.25 per thousand compared to the prices in the last week. Prices

of Mysore race rose only in the maximum at Rs 6.00 to Rs 6.75 per thousand as against Rs 6.00 to Rs 6.50 per thousand last week.

Bhagalpur Market: The prices at Bhagalpur market remained unchanged.

Malda Market: The prices of Cottage Basin silk in Malda market did not change. Reeling cocoons at Malda ruled at Rs 4.12 to Rs 6.50 per kg. Prices of pierced cocoons and matka yarn ruled at Rs 10.00 to Rs 13.50 to Rs 6.50 and Rs 27.00 to Rs 41.00 per kg. respectively. Silk waste was available at Rs 1.25 to Rs 1.75 per kg.

Assam Silk Market: There was no perceptible change in the Assam Silk Market for eri and muga silk products.

Trend of silk prices in Japan: F.O.B. prices of Japanese raw silk ruled between 4,220 yens and 4,400 yens. The latest quotations place the prices for 20/22 Dr. silk at Rs 57.27 F.O.B. and landed cost works out to Rs 91.87 per kg.

Consumer Price Index

The Labour Bureau series of consumer price index numbers for working class (base: shifted to 1949-100, except where otherwise indicated) increased in 9 centres during October, 1964.

The maximum rise of 8 points was recorded by the index for Silchar which stood at 140.

The index numbers for Dehri-on-Sone, Tinsukia and Ludhiana appreciated by 4 points each to 150, 153 and 134 respectively, for Ajmer, Berhampur and Kharagpur by 2 points each to 141, 168 and 143 respectively and those for Gauhati and Akola by 1 point each to 130 and 147 respectively.

In this group of centres, the food group index numbers appreciated at 8 centres, the fuel and lighting group index numbers at 6 centres, the clothing group index numbers at 3 centres and the miscellaneous group index numbers at 4 centres.

The index for Jabalpur declined by 4 points to 163 and that for Cuttack by 1 point to 179.

The index for Jabalpur declined due mainly to fall in food group index and that for Cuttack due to fall in clothing and miscellaneous group indices.

The all-India index appreciated by 4 points and stood at 163 during October, 1964.

THE CHARTERED BANK

(Incorporated in England by Royal Charter 1853).
(Liability of Stockholders Limited)
Affiliated Institution:—
ALLAHABAD BANK LTD.
Head Office:
38, BISHOPSGATE LONDON E.C.
West End Branch, London:
2, Regent Street, London S.W.1.
and at
MANCHESTER, LIVERPOOL,
NEW YORK and HAMBURG.
Branches of the Bank are
established at most centres of
commercial importance through-
out Southern and South-Eastern
Asia and the Far East.
Branches of The Eastern Bank
Limited, a wholly-owned subsidi-
ary of The Chartered Bank,
are established in Bahrain,
in the Persian Gulf at Qatar and
Sharjah, Lebanon and Hadra-
maut and in India, Pakistan,
Ceylon, Aden and Malaysia.
Calcutta Office:
4, Netaji Subhas Road.
Sub Branch: J. RUSSELL
31, Chowringhee Road. Manager

THERE CAN BE
NO REAL STRENGTH
WITHOUT DEVELOPMENT

THE BANK WHICH IS MORE THAN A BANK

Dr. RAJENDRA PRASAD, when he laid the foundation stone of Canara Bank's Administrative Office Building at Bangalore said:

"I have felt particularly drawn towards your various welfare activities. Your Book-Bank Scheme, Jubilee Education Fund, the Housing Loan Scheme, the Jubilee Staff Welfare Fund, etc., symbolise activities aimed at the improvement of social conditions....."

These appreciative words of the late President of India emphasise the spirit of community service which underlines the activities of the Canara Bank.

With the vigorous promotion of a number of welfare organisations and with the continuous assistance to many other social welfare bodies the Canara Bank is today THE BANK WHICH IS MORE THAN A BANK.

Bank's Administrative Office Building

Approach to the Fourth Plan

THE Planning Commission's memorandum on the Fourth Five-Year Plan must dispel such doubts as may have lingered here and there that the planners would approach their task with a fair recognition of their blunders and failures in the past and draw up the next plan with a realistic sense of our limitations. Faith in our ability to implement a plan with a total outlay of Rs 22,500 crores is undiminished by the doubts and queries that have been raised even among the highest circles in the Government. And the most serious of our present limitations, more serious than even the lack of some essential materials, namely, the rise in prices during the last three years, is referred to as a "fact" which "must necessarily receive due consideration in defining the tasks to be undertaken in the Fourth Plan." There is indeed much to be said for regarding the price situation as it is now and as it should be in the years ahead, as governing the choice of the principal tasks under the Fourth Plan. But it is not difficult to recognise the difference between the kind of plan which would be necessary in the interests of a proper price level and the kind of plan which is needed for ensuring soundness and strength for the national economy and for its genuine development and growth at the requisite rate. The price situation as it has prevailed during recent years is important not only for itself but also as an index of the defects of the plan and the failures under the plan. If we take the rise in prices as the indicator of the tasks to be accomplished under the next plan, then we have to consider hardships caused to the common people by the shortages in the output of the daily needs of the people, and the increase in the wages, prices of raw materials for production and the spiralling of costs and prices. This approach would mean oversight of the gaps in the capital equipment of the nation and the need to speed up the basic industries which can impart strength to the economy at a later stage only if we start from now to build them up.

The approach to the Fourth Plan, in this view, lies in two distinguishable paths, one that of making up for past errors of omission and commission which have got the price situation out of hand, increased the hardships of the people and made an inextricable tangle of taxes, costs and prices; and the other based on a longer view of the needs of the national economy and its growth in the face of mounting numbers. The former would call for the measures necessary to bring about an

immediate increase in foodgrains and food articles and other needs of the daily life of the common people. It would also indicate the importance of stepping up the output of fertilizers, increasing our wealth of milch cattle and cattle feed. It would draw attention to the neglect of the Centre's housing grants and loans by the State Governments. The output of intermediate products would also need to be stepped up. These problems are not simple, since the shortages are not the result of production below capacity; and in most cases, capacity itself will have to be increased by taking suitable and timely steps towards the end.

The other guiding principle of the fourth plan, namely the establishment or the speeding up of the working of basic industries which can sustain a growing GNP in the coming years, raises more complex problems regarding not only the finding of money capital on the required scale, but also the securing of foreign aid and foreign collaboration. The increase of capital equipment which strengthens the economy but is slow to give yields is naturally in conflict with the increase in consumer goods needed to maintain the price level in a period of forced and planned development. But in India, the conflict between the two is softened a great deal by such circumstances as foreign aid for specific projects, free foreign aid and food imports under the Public Laws of the United States and an unlimited supply of labour which, if properly used, could certainly increase the production of consumer goods to the requisite extent in all parts of the country.

It is on this ground that we have always maintained that in India planning calls for no sacrifices from any class rich or poor. The richest will suffer nothing more than a surrender or a transfer as the case may be, of their superfluous wealth or income. The middle classes can conceivably be free from the sense of frustration and enjoy a higher standard of living and more satisfying opportunities for the exercise of their faculties than they could have dreamt of in their wildest dreams twenty, thirty years ago; and their only complaint would be that the fiscal policies of the Government do not allow them to keep a little more of their income. As for the lower classes, nothing more would be required than an honest day's work for which, by all reasonable standards, ample recompense could be afforded. The more or less simultaneous increase of capital equipment and current production was certainly possible, if State

policy had been a little free from doctrinaire distractions and concentrated a little more on the improvement of the material conditions of living and the health and strength of the national economy.

But such has not been the case. And the "fact" to which today due attention has to be paid in drawing up the fourth plan is that the opportunity for such harmonious progress has been missed, and that crises of various kinds have to be overcome and warded off before planning for positive progress. But the essential basic features which make planning without tears possible are still there, and it would be wrong to suggest that because of the crises many-sided progress should not be aimed at. At the same time, it should not be supposed, as the Government apparently does, that our purposes can be achieved by persisting in the old ways of reckless high taxation, extravagance in non-plan expenditure and in unproductive expenditure under the plan, and in practical policies which are determined more by the animus against private trade or private enterprise than love for the poor. It is a sad thing that after nearly three five years plans, there has been no authentic account of the concrete results of plan expenditure in the addition to concrete capital equipment and in the flow of goods and services for consumption. The scale of plan expenditure should by itself have no terrors for the public. But past mistakes being what they are, a new tax holiday and careful consolidation may enable us, after two, three years, to take even bigger leaps than the Planning Commission now dare contemplate.

Wanted: New Deal to Investor

IN speaking up for the average investor more effectively than the shareholders' associations, the stock exchanges have called attention to the origin and course of the depression in which stock markets wallow at present. The combined representation made lately to remind the Union Finance Minister that the objects of saving and investment are frustrated by a slump, for which the Unit Trust of India can scarcely be a remedy, the stock exchanges have kept in view the public interest.

Psychological factors apart, the stock exchanges are convinced that fiscal policy is at the root of the slump. The official accent is on development and defence but the consequences are serious—not only for the investor but for industries committed to expansion. The revival of the usual activity in stock exchanges is of specific interest to the authorities who look for resources to support the Plan. The encouragement of private investment or at least a check on disinvestment is as much a public purpose to which economic policy must be now directed as the growth of bank deposits by the creation of more stable conditions. Higher yields on capital now available on shares do not attract funds from outside, because the risk of depreciation is regarded as greater now in view of fiscal policy calculated to defeat the aims set out in the last Budget. It is clear that from last March 1964 the fall in share prices has proceeded steadily and it is possible to say that except for electric supply shares every group has suffered because the new taxation touched off a new depression. It is calculated that non-speculative shares have depreciated to the same extent as shares

in the forward list in Calcutta and Bombay. And the point to note is that after November 2, 1964 the fall continues. The withdrawal of support except that available from institutional investors is the more significant features to which the Presidents of the Stock Exchanges have drawn attention. This affects the response to new issues which have to secure guarantees of subscription—at a price that raises the cost of any new floatation. This is a minor aspect of the depression that exposes the vulnerability of the country and may react on foreign aid for private ventures. The flow of foreign capital will certainly be prejudiced by the unfavourable symptoms seen like the failures of dividend paying shares to come up to par, as also the reluctance of the investor to link market value with rise noted in the value of corporate assets. The re-instatement of confidence is vital for restoring the volume of savings. And a change in taxation is prescribed for the reason that stability in share prices is an element in economic growth by which the Government sets great store.

Among the positive steps needed is the removal of the new tax levied at 7.5 per cent on dividends paid on ordinary capital. This may help to retain profits for useful employment but as a measure that depresses dividends distributed it is discriminatory up to a point. The taxation of corporate profits by a levy on the amount appropriated to dividend paid to the proprietors looks unfair, especially, when bonus issues made out of reserves capitalised are subject to taxation. The super-tax on private companies has been enhanced so as to defeat the healthy practice of conserving profits and converting them into capital for expansion. This, of course, does not come within the purview of the stock exchanges, concentrating rightly on the taxation of bonus shares also as capital gains. The passage of certain amendments to the Wealth Tax blunts the edge of the argument that personal taxation applied at a penal rate now implies the erosion of capital by stages. What is really stressed is that subscriptions to new issues by exclusion from liability to wealth tax are just and necessary in the circumstances of a weak and unwilling capital market.

The present pattern of a return of 12 per cent on mortgages and 8 per cent or more on fixed deposits is a distinct handicap for companies that offer shares for public subscription. If wealth tax applies as usual, the new shares will not tempt even the affluent investor to go in for these. The case against the surtax is certainly set out. The higher the earned profit, the higher the tax paid. This seems a penalty on the efficient conduct of affairs and it is important perhaps to note regular additions to reserves are compromised by the levy of a surtax which does not apply to certain industries or concerns.

What the memorandum says about annuity deposits or the legitimate limit in regard to compulsory deposits in a period of rising prices and spending may occasion less surprise than the list of available remedies set out. The relaxation of margin rules when share business is bad is expedient and just. And the accruing gains to public confidence in the future will be great. The propriety of banks extending favourable terms for loans lodged as collateral security against advances to customers will be recognised though each bank may apply its own rules to separate the sheep from the goats, so to speak.

It is perhaps the final part of the memorandum that buttresses the case for taking a new

view. The function of the stock exchange in a capital market needs no exposition. But the marketability of shares into which savings flow depends on the preservation of prices. And the encouragement of jointstock enterprise leading to a wider ownership of shares in public companies is an approved purpose of public policy. Specific means have been devised to encourage purchase of shares by others including employees.

The mobility of capital put to work is enhanced by the stock exchanges which take care to apply safeguards in the investors' interest. What Mr D. C. Kothari and other Presidents have been at pains to emphasise is that the stock exchange, when it is required to function smoothly, must be allowed to state its case against onerous taxation that prejudices the formation of capital and its effective utilisation. The underdeveloped country that seeks to draw in capital from abroad must present also a picture of financial health—not only a framework of regulations adapted to needs and resources.

If the reply to the memorandum cannot be regarded as immediate or wholly favourable, it will at least be recognised that the voiceless investor has found a spokesman able to present a case for relief proportioned to the fact of inflation coinciding with a loss of morale for which even the war years provide no parallel. There has been adequate improvement in the conduct of business, with the stock exchanges recognising their own responsibility but their own inability to raise market morale is the compelling reason for the case stated—for a new deal to the investor.

On Providing for Increasing Numbers

By Ekadantham

WE are now passing through an agonising experience which has come as a retribution for neglect of the truth that the whole science of economics is there to provide for consumption and does not find its fulfilment in the mere writing of Five Year Plans. When problems relate to fundamental needs niceties of calculation matter much less than quality decisions as to priorities, more so when the scope for ambitions is limitless. The enormity of the problem of feeding four hundred and fifty millions has had to be forced into our consciousness in a manner which reflects no credit to our intelligence.

Not that we have been taken unawares. There was never any scarcity of erudite and despairing talks on our "population explosion" which must in two decades give us an increment about equal to the present population of Africa. Despite all this knowledge, our reactions have alternated between hysteria and the blissful indifference of the frog which, lodged in the snake's mouth, flicks its tongue at the passing fly, whereas the commonsense approach would have been to appreciate composition trends in population and apply them in directing national activities. Vague reliance on family planning and rapid industrialisation through foreign aid etc., is not sufficient answer, because their success is conditioned by too many 'ifs'. Unfortunately the need for a new look has not been suffi-

ciently realised and, despite warning signs, a complacency still persists that all will end well if only we manage to keep the symptoms under reasonable control. Brave face is all right, so long as it does not carry the stamp of utter foolishness.

Let us see one thing clearly: population control is not everything of the solution—and even here our concern has not been reflected in plan allocations. Family planning has not been very popular with that section of the people who need it most, and it has not been free from controversy, both in respect of the idea itself and in the selection of methods. This is one subject where coercion has no place and temptations or inducements offered have so far ended only in feeding racketeers. Any advance in this direction must be made without violence to people's sense of propriety, which is a reality to be admitted and faced. There is therefore, little likelihood in the near future that family planning may yield significant results.

The burden of interest and repayment is already so large that conservatism is called for in incurring further foreign liabilities. The results of injecting investment through deficit financing have been so dismal that the Government had to disavow intentions to carry on the disastrous policy and to speak of increasing savings and taxes. Now this is odd, for even in the latter course the limits of prudence have long gone by and now the problem consists of the two imponderable tasks of milking the dry cow and collecting the vanishing dew.

It, therefore, seems that, after all our misadventures with Keynesian economics, we must now return to the more orthodox thinking of making the best of living within our means. That means giving up extravagant dreams and seeking out the most urgent and economical uses for our meagre savings. With this end in view, an analytical study of population statistics is given below to show some important trends, apart from the awesome overall increase.

The following are some of the more significant trends revealed:—

(a) Between 1951 and 1961 the population in the working age—group 15.64 has fallen from 58.3 per cent to 56.6 per cent whereas the population of children in age group 0-14

has increased from 39 per cent to 40.7 per cent.

(b) The growth rate in the age group 0-14 (2.77 per cent) is higher than the overall rate (2.24 per cent) and of the growth rate of working population (1.89 per cent).

(c) The proportion of persons aged 65 and above is practically stationary.

(d) The overall rate of growth of population per year was 1 per cent, 1.4 per cent and 1.4 per cent between years 1921-31, 1931-41, and 1941-51, but has risen to 2.1 per cent between 1951 and 1961.

(e) There is a greater increase in the female population in the working age-group (19.2 per cent) against 18.4 per cent for males. This, however, appears to be a temporary feature, possibly due to better maternity facilities, so to say correcting an imbalance existing in 1951 and bringing about the same pattern of distribution of male and female population in the three age groups. The story told by the percentage increases in 0-14 age group and the male-female ratios is in favour of a contrary trend.

(f) While there has been a shift of population to towns it has been 0.7 per cent only in the decade of planning, as against 3.4 per cent in the previous decade.

Before we proceed it may be instructive to notice that most of these trends except (e) have the appearance of permanence. The swelling of the lowest age-group is natural because the rate of growth (2.77 per cent) must be higher than the average rate (2.24 per cent), because death rate is relatively unimportant in this group. A large enough reduction in birth rate, through family planning, may relieve the pressure now, but in the long run the problem must recur for solution. The size of our population and the proportion of the lowest group (40 per cent) are such that any postponement is not likely to improve the chances of solution very much. Similarly, trend (c) which seems to show that life expectancy above 65 is about the same and trend (d) which seems to be attributable to reduction of Malthusian positive checks appear to be of lasting nature. For some time to come the latter trend may overlap and swallow up the marginal results of family planning. Trend (f) seems to indicate the negligible impact of our strenuous efforts at industrialisation, and

Table V
Rate of Growth

Year	Population
1921	248.1
1931	275.4 = 248.1 (1.01)10
1941	314.8 = 275.5 (1.014)10
1951	360.6 = 314.8 (1.014)10
1961	442 = 360.6 (1.021)10

also has the look of permanence, specially in view of increasing pressure of population on land. There seems, therefore, to be more scope for decentralised light and cottage industries and less for centralised heavy industries.

The above population analysis shows that we are not only short of capital but also of labour, in the sense that increase in non-productive consumers (in age-groups 0-14 and 65 +) means a fall in per capita income and calls for increase in productivity of labour (or greater participation) and improved methods of production, though capital is certainly more scarce. Assuming a capital—output ratio of 2.64 (estimated for Second Plan period), the capital accumulation required to maintain the existing level of per capita income against a rise in population of 2.24 per cent is 5.91 per cent, whereas to absorb an increase of 1.89 per cent an accumulation of 4.99 per cent is required. The investment required because of increase in educational expenses (an investment) due to increase in number of children in age group 5-14 may roughly be of the order of Rs 250 million or 2.08 per cent of national income. And about Rs 682 million or 5.68 per cent of national income may be necessary for housing due to the increase in population, which is a social welfare investment of high capital-output ratio (assuming a household of seven, Rs 3,500 per urban dwelling and Rs 500 per rural dwelling).

The pressure on capital is, therefore, formidable. And capital is one thing which has been obstinately difficult to raise. A saving of 13.5 per cent was estimated for the Second Plan period, but now it looks an optimistic hope to expect it to reach 13 per cent at the end of the Third Plan. Ideological methods of distribution have not been any help to capital accumulation.

In these circumstances it certainly is no morbid pessimism to see the need for re-ordering of priorities on the following lines:

While universal education is our goal, considerable thought must be given to the kind of education which may be worthwhile and within our means. The total expenditure per pupil under the present system has been estimated to be of the order of Rs 98. Clearly, any extension on this basis is impossible, for the cost of educating about 100 million children between 5 and 15 years will be about Rs 1000 crores or 8.3 per cent of the national income. Our educational system has drawn inspiration mainly from the UK and the absurdity will be more clearly seen if our per capita income of about Rs 300 is compared with that of about Rs 4,400 in the UK.

On the other hand education is our best hope. In any case we can ill afford to lag behind in scientific and technological research. A compromise formula therefore seems called for, because while there is no merit in failing by attempting too much there should be no tardiness in essential investment. A commonsense approach would then require, in broad outlines:—

(a) Selective admission of outstanding merit for technological and scientific studies and later utilisation of this trained talent in research centres;

Table IV
Urban—Rural Distribution

Census Year		Figures in millions											
		1921						1961					
Urban	28.2	11.4	33.4	12.1	43.8	13.9	62.3	17.3	79.6	18.0			
Rural	219.9	88.6	242.0	87.9	271.0	86.1	298.3	82.7	362.4	82.0			
Total	248.1	100	275.4	100	314.8	100	360.6	100	442.0	100			

- (b) Development of vocational and professional talent mainly by a system of apprenticeship, both in order to dispense with separate training establishments and to render the period of training productive in some measure;
- (c) Spreading a right minimum of education in rural areas by a sort of Education Extension Service, such as discussed in greater detail in our issue dated 21 November 1964.
- (d) Greater dependence on books, touring teachers, mobile libraries, exhibitions, film shows and radio programmes in the spread of education, because of the scarcity of trained teachers and the high cost of their education.

The educational system may then have to aim at very modest ends for the large mass and very high and exacting standards of specialised training for a select few. Much as we may desire otherwise, we may for a long time have to remain content with this much in the interest of conserving our resources.

As a corollary, our demand for qualifications for employment should be reasonable and based on precise knowledge of job requirements. Extravagant demands for the highest qualified man available for the remuneration offered will mean chaotic dispensation of dear talent and scarcity where qualifications are really required.

With a view to securing some participation of non-productive consumers and increase the participation women workers (which now is only about one-third) greater attention should be devoted to developing such industries as may be run as family units. In this way, children may be enabled to assist their parents without being exposed to the hazards of factory-working and exploitation, and in our present state this is certainly desirable. This emphasises the importance of cottage industries and of industries which can distribute work to be done in homes. We may remember that this economic truth is what the Charka stood for.

Industries calling for special abilities and tastes of womenfolk should receive more attention, so that better use may be made of available population in the working age-group. Not only will the increased participation of women labour obviate to that extent the necessity of capital deepening, which is welcome in a country with more man-power than capital, but it will establish desirable social and economic habits.

Under the existing conditions of relative abundance of labour and high unemployment and underemployment, labour has greater marginal productivity than capital, and as such, labour intensive methods of production should be preferred. Otherwise for failure to raise the necessary capital labour will have to be wasted unutilised. This would, however, not bar subsequent mechanical substitution as may be found necessary and possible.

When the proportion of non-productive consumers is increasing, there must come a time for better and capital intensive methods of production. It would be wiser to wait for that necessity, since heavy industries requiring large slabs of capital are subject to basic and thorough changes in production methods and heavy risk of obsolescence. Greater attention must, therefore, now be bestowed on light industries.

Scarcity of capital imposes obligation for frifty use, and to that extent dreams of

premature self-sufficiency and hankering after industrial prestige must be cut down. As such, except to the extent dictated by security considerations, we must give up the wasteful practices of trying to produce what may be imported more cheaply and exploring export markets by disastrous underselling.

Besides more rational apportionment of resources between food crops, cash crops and industries, greater attention is required (a) on application of nutrition research in food processing industries, so that what now goes waste may be rendered fit for consumption (b) on dairy industries, poultry and fisheries (c) food preservation industries and (d) cattle food industries. In the long run a great deal of waste may be avoided if we proceed on the theory that we must live and have more calories before recording staggering industrial advance.

As though by a curse, on most of these points thinking in those quarters which matter has either been in default or in the reverse direction. Our hope now is that reality has a logic which cannot be ignored for long and that commonsense may not be too late in asserting.

South Indian Notes

Kerala is most assiduously living up to its reputation as the problem State of the South. Its record number of times under President's rule is no spur either to the people or to the parties to make orderly democratic government less difficult in the future than in the past. The fissiparous forces are stronger, not weaker, as the elections draw near. And the political picture, from the point of view of electioneering, is like a kaleidoscope in which the coloured glass pieces are continually splitting up into more and more fragments. The Communists, who may be deemed to be in the most advantageous position to cash in on the food crisis, have actually weakened themselves by the growing split between the Leftist and the Rightist wings. The possibility of an alliance between the Muslim League and the leftist communists is not at the moment rated high. But even with a semblance of organisational unity and efficiency, the Congress should be able to hold its own. Only, the split which brought down the last ministry has its own aftermath and the dissentients are not without influence or outside support. For the present, it is a comforting thought that the Congress will not have to go to the polls when the people are suffering the pangs of hunger. The food position in Kerala has been brought under control, though one cannot see what sort of permanent solution there can be for a State which insists on a rice diet, but grows no rice and has a staggering rate of population growth.

The drawing up of State plans for the next five year period is proceeding apace, though one would think that the planners at State levels have to contend with even greater and even more numerous uncertainties than the Planning Commission or the Centre. But if the Plan is a memo of intentions rather than a finalised programme of determined action, the plan can be drawn up with a liberal margin for possible pruning. But Andhra Pradesh's Fourth Plan appears to be a cut-and-dried one based on the assumption that 20 per cent of the total outlay of Rs 700 crores will be found by the Centre. Considering the power shortage in the State, an allocation of Rs 200 crores for power schemes is not too liberal. Agriculture is to absorb Rs 210 crores, of which major irrigation will account for

Rs 75 crores and minor irrigation Rs 45 crores and ayacut development Rs 12 crores. The rest of the agricultural programme gets an allocation of Rs 78 crores, and mining and industries Rs 60 crores. The balance will be devoted to education, public health, housing and development of drought-affected areas. It is interesting to note that Nagarjunasagar and Srisailem projects are not included, presumably because they are expected to be run as central projects.

The harsh features of the food situation in the South have begun to soften perceptibly. In the City of Madras the weekly ration of rice for the family card has been increased and the Chief Minister has held out the promise of a further increase which will meet the consumer's need in full. More than that, the general scheme of utilising the indubitable, though probably small, surplus in the State for effective satisfaction of consumer needs in the City is taking shape. Procurement will in a short while find the golden mean between oppressive compulsion of agriculturists to part with their surplus and an inert acceptance of what is offered voluntarily. The Chief Minister himself has referred to complaints of coercion and his intention to keep executive action in a wholesome halfway house between the two extremes. As the next harvest is expected to be a bumper one, procurement will be satisfactory and, what is more, enough will be left in the hands of producers to make private trade a wholesome supplement to rigorous rationing under official auspices. By all signs, private traders have now succeeded in enlisting official sympathy for the position to which they have been reduced. They are not unlike the goldsmiths after the gold control measures, and a Government which parades its concern for additional employment cannot be indifferent to people whom they have deprived of their lawful vocation.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

BANK RETURNS

Sharp Expansion in Currency

THE first week in December, owing to the combination of beginning of the month demand for money and of tax disbursements, has witnessed a steep increase in currency in circulation.

However, it may be noted that, while early this month, an increase in the inter-bank call money rate reflected the pressure that then the banking system was being subjected to, the position has, as we had remarked last week, some what eased since then. It may be expected that the money market will be imbued with greater easiness till the last week of the month, when demand for funds occasioned by window-dressing of banks' balance-sheets would again cause a spurt in the call money rates.

According to the returns of the Reserve Bank for 4 December, Active Note circulation has jumped up by Rs 50.51 crores to Rs 2,472.97 crores, and outflow of Rupee Coin is also large at Rs 3.34 crores. With Foreign Securities continuing to be unchanged at Rs 85.46 crores, currency has been expanded against Rupee Securities, which are Rs 40 crores higher at Rs 2,186.13 crores. Even so, the Reserve Bank's cash in the till has been drawn down by Rs 13.85 crores to Rs 18.46 crores.

There is some measure of recasting to be observed in the return for the Banking Department. The one significant innovation is the break-up of Loans and Advances to Governments as between the Centre and the States; but the figure against the former is nil.

Investments are Rs 1 crore lower at Rs 117.51 crores; and we are therefore to infer that there may have been some element of deficit financing. As such, it may be that the rise of Rs 26.16 crores to Rs 86.30 crores in the Centre's Deposits is owing to the proceeds of created money rather than to receipt of tax payments; but in the next week it will no doubt happen that the Centre's balances will reflect large-scale inflow of revenues. The States report a fall of Rs 0.85 crore to Rs 5.49 crores in Deposits and a rise of Rs 5.56 crores to Rs 44.42 crores in ways and means borrowings from the Reserve Bank.

The pressure upon banks in early December is attested to by the fall of Rs 4.72 crores in Reserve Balances of Scheduled Banks, and more prominently in the rise of Rs 17.43 crores to Rs 18.26 crores in borrowings from the Reserve Bank.

Hearteningly, Balances Held Abroad have improved by Rs 3.38 crores to Rs 11.39 crores; and so foreign assets in the possession of the Reserve Bank are inching their way toward the Rs 100 crore mark.

The week ended 4 December has involved for the State Bank a steep rise of Rs 17.24 crores to Rs 362.72 crores in Advances. This would be due partly to the demand upon the bank itself owing to beginning of the month disbursements and to tax payments and perhaps partly to increased borrowings by the other Scheduled Banks. There is a small rise of Rs 0.47 crore to Rs 667.23 crores in Deposits. Disinvestment in gilt-edged of Rs 5½ crores, reducing the portfolio to Rs 283.93 crores, is matched by a decline of Rs 4½ crores to Rs 34.41 crores in Other Assets. As a result, cash balances, including money at call and short notice, are slightly lower by Rs 1.63 crores at Rs 28.49 crores.

The highlight of the return of Scheduled Banks for 27 November is the sharply higher recourse to borrowings from the State Bank, which have jumped up by Rs 13.27 crores to a record high of Rs 56.96 crores. Debt to the Reserve Bank is a shade lower by Rs 0.15 crore. Net Deposit resources have fallen by Rs 10.66 crores, with the State Bank accounting for Rs 6.17 crores of the decrease. Net Demand Deposits have especially been drawn on, in being lower by Rs 8.32 crores at Rs 1,338.49 crores, while net Time Deposits are also marked down by Rs 2.34 crores at Rs 1,383.90 crores. The total of Advances has moved up by Rs 0.89 crore to Rs 1,734.86 crores, but this is due wholly to the State Bank. Even so, the increase of Rs 10½ crores in gilt-edged holdings to a level of Rs 839.26 crores is attributable as to Rs 9 crores to the State Bank. Lastly, again, the fall of Rs 5.05 crores to Rs 261.73 crores in cash balances, including money at call and short notice, is mainly on account of the State Bank.

UBI

New Chairman

Dr N. N. Law having retired on grounds of health, Dr S. B. Dutt, a senior Director of the Bank, has been elected Chairman of the Board of Directors of the Bank. Dr Law became the Chairman of the Bank on 30 November 1951.

Dr S. B. Dutt, the new Chairman of the Bank, was the Managing Director of Comilla Union Bank Ltd., one of the amalgamating units, and has been a Director of the United Bank since the amalgamation in 1950. He was the President of the Bengal National Chamber of Commerce & Industry in 1946-47 and was the Sheriff of Calcutta in 1949-50. He is in the Banking line for over 25 years and was in the old days Chairman of the Calcutta Clearing Banks Association when clearing was done through the old Imperial Bank and also Chairman of the Calcutta Branch of the Indian Banks Association in 1950-51. He was a Committee Member of the Federation of Indian Chambers of Commerce & Industry, New Delhi and its Honorary Treasurer for some time. He is also the Chairman of the West Bengal State Warehousing Corporation and a Director of the West Bengal Financial Corporation.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 8 December 1964. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.375 per cent were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.500 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 14 December 1964. Successful tenderers should make payment on Friday, 18 December 1964 at all centres. Other conditions are as usual.

During the week ended 4 December 1964 Government of India Treasury Bills for Rs 2,58,00,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 9 December 1964 to 12 December 1964 at Rs 99.391 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 2 December 1964 to 5 December 1964 amounted to Rs 1,29,50,000.

TRADE

Code for Exporters

The Ford Foundation Team examining the prospects of trade is assisted by the National Council for Applied Economic Research. It may, therefore, be taken for granted that a code for exporters will be got ready as intended. The need for market surveys abroad or effective trade representation of Indian export industry in foreign centres will call for a special effort by the promotion councils which are conscious of the need for keeping up quality. But price quoted is a point of decisive importance and Indian confectionery exports are lagging because Indian sugar and glucose used by a major producer happen to be costly. At Parry's Confectionery meeting Mr H. V. R. Iengar drew attention to the question of wrapping materials also in connection with production for export. Packaging is as important as preparation with colours or essences and Indian confectionery makers are confronted with difficulties due to sugar control and

limited quotas. The chances of raising export of tea are bound up with extension of cultivation but tea growers are handicapped by high taxation of agricultural income, as Mr D. C. Kothari has pointed out in his comments on Blue Mountain Estates' results for 1963-64. Relief under excise is not the only means available to enlarge coffee or tea exports. The grading of price according to quality or district to suit export requirements may be advisable and there is yet no marked change in policy despite a fixed quota for India.

The growth of trade with Eastern Europe is helped by rupee payment agreements but the country's main need is foreign exchange and the Board of Trade must realise that a higher import bill for the country must be met in the current half year. The problem cannot be solved by a rise in pepper, cashew or cardamom prices. It can come only from a rise in volume and the issue raised is whether production can go up in Mysore or Kerala if there is chronic food shortage. The authorities may not deal directly with this point but exporters will see that a rise in costs and ergo prices compromises the chances of improvement. The impact of prices on external trade may not be ignored in view of the increase in UK import duties applicable to Commonwealth goods also. The discussions as to foreign trade have been academic to a degree and a knowledge of the methods adopted by India's rivals—for instance, Ceylon as regards tea—has not been influential in shaping trade policy. The dynamism that can come from a longer surplus under steel or pig iron output is not predictable and it should be recognised that the excessive eagerness to ship high cost Indian manufactures to foreign markets may depress prices not only for Indian suppliers of manganese ore mica etc. A formal review of mineral exports like coal has hardly been undertaken though selling coal raised has become a pressing problem for developing mines. The position created by the NCDC plans will require attention and it may be necessary to regain Ceylon, Burma and other outlets by means of regular

shipping services and special inducements to established exporters of coal which many help also to keep down mineral oil imports

Prospects for Expansion

Exhortations that India should invest more and enlarge its trade with Africa appear regularly. But the opportunities in several countries appear to be more limited than presumed. It may be mentioned here that India's trade with the Congo has shrunk greatly in 1963 because independence there has been followed by unrest in the republic. The financial position of the Congo has deteriorated steadily and if the USA figures as the major supplier of goods, instead of Belgium as in the past, the Congo's purchases from India have fallen away greatly while exports from the Congo to India have gone down after 1962 owing to the fall in purchases of metal. The mining industry controlled by foreign interests has not performed according to expectations and in 1963 and after the Congo's dependence on American aid has been pronounced. The trade with W. Europe has shown a measure of recovery but the import surplus has tended to increase and plantations have failed to keep up exports as Unilever's report has indicated. The Congo is an inconsiderable buyer of jute manufactures and cotton textiles as may be inferred from trade figures and the worsening of the outlook has followed import restrictions, applied to the Congo. The chances of India competing effectively with Europe are decidedly small though it is supposed that shoes, light engineering goods and hardware may be sold easily if credit terms could be offered. But this seems difficult at present because of the rebellion.

The UAR and Israel compete actively in the Congo where Indian exports are hard to push because there are no local agents to serve Indian exporters. The sudden swing from prosperity to depression seen after 1960 prove only that ordinary commercial risks have multiplied and the Indian exporters should think only of

Nigeria and Zambia as worthwhile markets for trade and investment alike. The decline in N. Rhodesian imports may be made good if engineering exports are consistently expanded. What is obvious from any analysis of trade figures is that the former French colonies offer very little scope for India as compared with Ethiopia or Zambia and the regular maintenance of trade with Malawi depends on connections with Portuguese East Africa. This is obviously difficult at present. The shares held by India in Africa's trade is necessarily small because India's own imports for instance of cocoa have been curtailed greatly and it is impossible to expect any increase in trade when Asian traders in East Africa are subject to political pressures. The export promotion plans must take into account the aberrations of African nationalism and even the scheme framed for joint industrial ventures must be viewed with caution chiefly because the remittance of profits earned abroad may not always be easy.

★

PLANNED GROWTH Need for Fresh Thinking

The need for an immediate shift in our planning with a view to ushering in greater prosperity to the country rather than indulging in the pernicious exercise of ad hoc coping was spotlighted by Mr Sookamal Ghose in his presidential address to the Second Quarterly General Meeting of the Indian Chamber of Commerce held in Calcutta last week. This suggestion assumes special significance when viewed in the light of the limping progress in the country's economic expansion and the host of problems that are causing head ache to the authorities and have evoked widespread disaffection from the public. The mid-term appraisal of the Third Plan has already sounded a warning about the shape of things which will emerge when the plan expires. There is a growing feeling among the people that the approach to get into grips with the vital problems such as elimination of the

hardships of the common people and providing them with the bare necessities of life has so far been haphazard and inconsistent with the requirements. The abnormal increase in prices, the shortages of essential commodities, burdensome taxation, vexatious controls, insufficient accommodation facilities and the like are not mere fortuitous developments. The penchant on the part of the authorities for clamping down controls whenever shortages occur is calamitous in that such problems will rear their ugly heads again at a later date.

While the need of the hour is to stimulate the production of those goods that are in common use, Government has adopted the deleterious policy of pampering the public sector at the expense of the private sector which has failed to live up to the expectation. In this context Mr Ghose cites the experiences of the USA which has recorded tremendous economic growth and enhanced the social security of the people. On the contrary, as Mr Ghose indicated, our thinking in this direction is hazy and more often than not our vision gets distorted. The cumulative effect of all these is that the paralytic growth of the economy becomes more manifest. Agricultural sector still continues to a drag on our economy while industrial development did not measure up to the expectations. The surfeit of controls and regulations, the under utilisation of industrial capacity, the infinitesimal growth registered in the per capita income etc., can be directly or obliquely attributed to defective planning to which we are accustomed. A better appreciation of these difficulties of the taxpayers by the planners and formulation of ways and means for providing the requisite thrust for economic development will be in order.

★

ENGINEERING UNITS Unutilised Capacity

For the first time Government has formally acknowledged the existence of unutilised capacity in the engineering industry in the course of an answer to a question on the subject in Lok Sabha. Shortage of steel, particularly of alloy and special steels which have to be imported, is one of the main reasons, but not the only one. There are also other shortages too, deriving from the overall shortage of foreign exchange. The resources available are rationed on a selective basis, based on an assessment of the importance of the industry to the national economy, with the result that others which do not make the grade are unable to make full use of their installed capacity. And these cover a wide range of industries. Shortage of pig iron is even more serious that shortage of steel. Plans for stepping up

Imports Fall by 10.43 Per Cent in April-September, 1964

Imports during the first six months of 1964-65 have registered a steep decline of over Rs 64 crores when compared with the relative figures for the relevant period in the preceding year. Imports of almost all sections are placed down except those of Manufactured Goods classified chiefly by materials which spurted up by Rs 8.96 crores to Rs 107.50 crores, Machinery and Transport Equipment which improved by Rs 7.92 crores to Rs 228.44 crores, Animal and vegetable, oils and fats which crept up by Rs 0.10 crore to Rs 3.03 crores and Beverages and Tobacco which inched up Rs 0.01 crore to Rs 0.17 crore.

Prominent declines are indicated by the following:
Food, drawn by Rs 32.70 crores at Rs 60.06 crores, owing to a steep fall in imports of cereals and cereal preparations to Rs 42.16 crores from Rs 77.43 crores.
Crude Materials, inedible

except fuels, marked down by Rs 8.61 crores at Rs 55.64 crores, thanks chiefly to a decline in imports of textile fibres (not manufactured into yarn, thread or fabrics) and waste to Rs 32.87 crores from Rs 37.87 crores.

Mineral Fuels, Lubricants and Related materials, drawn down by Rs 17.37 crores at Rs 42.80 crores, on account of a decrease in imports of petroleum, crude and partly refined, to Rs 18.82 crores from Rs 29.18 crores and petroleum products to Rs 23.92 crores from Rs 30.93 crores.

Chemicals, lower by Rs 10.23 crores at Rs 42.62 crores, because of a decline in imports of fertilisers, manufactured to Rs 9.44 crores from Rs 19.11 crores.

Lastly, Miscellaneous articles, marked down by Rs 11.61 crores at Rs 10.26 crores: accounted by lower imports of Miscellaneous Manufactured articles, NES, to Rs 3.04 crores from Rs 15.27 crores.

	(In Rs Crores)		
	April to Sept.		
	1964	1963	Change
Section 0—Food	60.06	92.76	-32.70
Section 1—Beverages and Tobacco	0.17	0.16	+ 0.01
Section 2—Crude Materials inedible, except fuels	55.64	64.25	- 8.61
Section 3—Mineral Fuels, Lubricants and related materials	42.80	60.17	-17.37
Section 4—Animal and Vegetable oils and fats	3.03	2.93	+ 0.10
Section 5—Chemicals	42.62	52.85	-10.23
Section 6—Manufactured Goods classified chiefly by materials	107.50	98.54	+ 8.96
Section 7—Machinery and Transport equipment	228.44	220.52	+ 7.92
Section 8—Miscellaneous Manufactured articles	10.26	21.87	-11.61
Section 9—Miscellaneous Transactions and Commodities, NES	2.57	3.45	- 0.88
Total ALL SECTIONS	553.09	617.50	-64.41

production have talked about for months, but indigenous production is not likely to catch up with domestic demand before the end of 1967.

Apart from iron and steel, shortage of non-ferrous metals is also one of the factors responsible for the existence of unutilised capacity in the engineering industry. It is by no means clear whether the development plans for non-ferrous metals have been given the priority indicated by the scale of requirements of these metals. The development programmes for industries envisage a four-fold increase in the consumption of these metals by the end of the Fourth Plan. As the country cannot certainly afford to import all the requirements, either indigenous production of these metals will have to be increased to the maximum

extent possible, or the industrial plans will have to be curtailed. It is nobody's case that the country will be able, at any time, to dispense with imports of non-ferrous metals, except perhaps aluminium. Still it should not be impossible to make more progress than has been made so far in the manufacture of zinc, lead and copper.

★

ELECTRONICS Indigenous Know-how

The imperative necessity for setting up of design and development groups as part of every production project has been stressed in the latest interim report submitted by the Electronics Committee.

Incidentally, it is interesting to note that Mr T. N. Singh, Minister for Industry and Heavy Engineering, has also drawn attention to the same point while opening the exhibition of refrigeration and air conditioning equipment in Delhi last week. According to the Committee which was set up last year under the chairmanship of Dr H. J. Bhabha, there is no other way by which the electronics industry would be able to keep abreast of developments in the rest of the world. Some industries, especially the older ones, could be established in developing countries if the latter are content to be about a quarter of a century behind the times. But the time lag inevitably rules out new industries like electronics which have come into existence in the course of the last two decades.

Electronics, moreover, is so closely intertwined with defence, that either we develop our own designs or do without. It is just not practicable to purchase or borrow know-how. The Committee itself has come to the conclusion that it would not be possible to separate civilian production from military production and has, therefore, suggested that the development of the industry should be planned on an integrated basis. A forward looking programme for development of indigenous know how and technical skills is the only way to build up the industry to the size envisaged for it by the Committee.

The value of indigenous know-how in the production of sophisticated equipment is strikingly illustrated by the success of the designs for micro-wave equipment prepared by the Telecommunication Research Centre of the Posts and Telegraphs department. By next year, equipment capable of providing 300 circuits is expected to be in production at the Indian Telephone Industries, Bangalore. Having designed this equipment, the Research Centre is now engaged in preparing designs for micro-wave equipment which will provide 1,200 to 1,800 circuits.

★

RUBBER INDUSTRY Strident Expansion

The slow growth of the rubber industry in India till 1960 may be explained by reference to the conditions obtaining in the tyre industry abroad. Neither the import duty nor the excise had much effect on the development of the industry. Though the first rubber goods factory was set up in Calcutta in 1920 it is only under the Third Plan that India has attained some importance as a manufacturer of rubber. The larger imports of rubber, natural and synthetic, noticed in 1964 are the result of rubber industry's expansion. Dr Banerjee of National Rubber Manufacturers Ltd has

pointed out that the rubber manufacturing industry in India has special features. Out of 750 manufacturing units, more than 500 are small enterprises and there are really eight big units, consuming over 1,000 tonnes of rubber per annum. These large units account for the production of tyres, tubes and belting. In regard to tyres, the two big units located in Maharashtra account for over 1.4 million tyres as compared with 1.08 million tyres produced by the two factories working in Bengal.

It is estimated that the total output in 1965 may exceed 5.1 million tyres and the tyre manufacturers' problem may be viewed as one of selling a larger output, when automobile output is not rising under the Plan, as expected or desired. For the tyre manufacturer, the export outlook is by no means clear and if the rubber planting industry can offer more material the local price is higher just as in the case of synthetic

rubber. In order to help the growth of tyre and tube output reclaimed rubber is also made available locally and carbon black manufacture has been started in Bengal and Bombay soon will have its own source of supply. Tyre cord from rayon plants is now available and a bead-wire plant as also an auto-tyre valve factory has been started in India. Progress of tyre manufacture cannot be measured easily by the prosperity of the manufacturer and it is a fact that new units (unlike Dunlop which happens to be a pre-war enterprise) have got very little to show by way of results so far. The supply of synthetic rubber has been a very qualified success and the conclusion the tyre company shares have been deflated since 1962 is justified by the company reports that dwell on the sales problem as well as operating difficulties. If standardisation has helped local manufacturers' real difficulty has been created by the form and force of competition.

WHEAT World Production

The decline in Indian wheat production in 1963 and after is part of the acute food situation seen in India. A fall of 10 per cent in output in 1963 has not only forced the prices but made imports imperative. But in other countries the wheat situation is distinctly better. Agricultural production has raised wheat output further in France and the French eagerness to export foodstuffs on a larger scale is responsible of the rocking of the ECM Board. In Europe itself the forecast of higher output of wheat will help Italy to curtail imports while Germany also, with a bigger wheat crop recorded in 1963-64 may be expected to limit purchases abroad.

No estimate as to Russian production is available but the USA expects in respect of 1964-65 a larger crop of 34.9 million tonnes because farm production is rising in the wake of a higher national

income and the USA enjoys as usual an agricultural surplus. As for India, the FAO bulletin contains an estimate of 9.7 million tonnes as the likely production in 1964-65. This compares favourably with the Argentine output of 8.5 million tonnes in 1963-64, but then the population of India is vast and Argentine is not only undeveloped but under-populated. The Canadian output placed at 19.7 million tonnes is naturally far ahead of Indian production though one may add that Indian wheat supplies are being augmented by shipments from the USA. The Australian wheat output is expected to fall to 7.6 million tonnes so that the International Wheat Agreement fixing annual quotas for export will be maintained without embarrassment. The marginal export of wheat from Turkey or Pakistan count for little in the world situation at present. It may be added that the more important factor is the volume of import by China which has turned to Canada and Australia for meeting its food deficit. The total world supply of wheat, put at 215.8 million tonnes, suggests clearly that any shortage of rice must be alleviated by resort to wheat. If world wheat production shows a drop compared with 1962-63 the world position will be better though Asia will show a deficit under food supply as usual. The remarkable advance in post war production of wheat is not confined to the USA because Western Europe also has reported a steady expansion of production. The trend of wheat prices may dip slightly if Western Europe curtails buying from North America which will use PL 480 to ship more wheat to countries in need of foodgrains. The competition among the big, regular exporters will be keener in view of the probable increase in wheat supplies next year. All the same, India's difficulties will persist and the provision of foreign exchange for import will cut into earnings of reserves available for maintaining the import of capital goods. This is why in spite of an optimistic picture for the world as a whole the Finance Minister has recently referred to the disturbing element in the trade position in relation to the food problem in India.

GERMANY Role of Railways

The Federal Government in Germany as the owner of the Railways which were an instrument of the country's unification in the last century has reason to change its opinion about their value and possibility. The German State Railways long handicapped by rising costs of operation and falling profits have been forced to think of something like the Beeching Plan applied last year to restore British Railways to economic health. In any developed country,

with motor transport as an active rival, the Railways fail to get up steam and rationalisation becomes inescapable. In Germany also a number of lines has been closed according to plans so that Government need not reap the deficit incurred by the Railways. About 35 per cent of the mileage in Germany will be out of use and a number of small stations are marked out for closure. Of course this will not alter very much the volume of traffic for what is clear is that Germany is compelled to practise self-mutilation adopted by European Railways in recent years. Germany, it is reported, will be compelled to put into effect the Grand Plan prepared after 1960 for getting the railway system into order.

The loss of passenger traffic to motors and buses has made such a decision inevitable. In order to cut costs of maintenance track must be closed and the public in many localities will have to rely on road services as and when trains cease to run. But for heavy goods traffic the railways will remain independent and the closure of branch lines will not affect industrial activity to any extent, especially in big towns where every increase of motor traffic creates problems of congestion. But relief will certainly be afforded by road transport in the case of suburban services, because buses are preferred by the public as fast, safe and inexpensive. The German Railway Minister Dr Seeböhm has indicated that lay-offs and dismissals will not cause much unemployment and the retrenchment enforced by economy measures will be spread over a period so as to cause minimum dislocation. It is presumed that most of the towns buses will take care of the passenger traffic and the railways by carrying out essential reforms will be able to provide a better service and, incidentally, reduce the losses borne hitherto by the Federal Treasury.

A direct result of the reorganisation will be execution of improvements to the main roads which be called upon to carry more traffic, diverted from towns which are deprived of railway services. Another result will be that arrangement will be made with the European Economic Community for reducing the delays and difficulties arising in foreign trade. The Committee of Six at Brussels is expected to review the railway problem in the light of adjustments demanded by the decline of coal-mining in Germany and the acceptance of rationalisation in the steel industry. What is now clear is that the UK example is being copied for good reasons in Germany, chiefly because a prosperous country can think of carrying out reorganisation in such a way that public complaints will be inconsiderable.

POLAND Ship-Building Again at Danzig

Polish shipping is based on the revival of Danzig as a shipbuilding centre. The export of ships is established on a major item along with coal and machinery so that Poland is no longer a peasant republic. Sale of over 1.6 million tons in the past 15 years makes Polish shipyards significant for overseas buyers, including Switzerland and France. The Gdansk shipyard is now one of the world's major yards and concentration on fishing craft is a feature. Supply of ore carriers of large size has also been undertaken after the rehabilitation of the shipping industry. Supper engines are usually fitted to motorships made in Poland and the previous record has been surpassed by the trained labour brought in to reinforce the old hands. Sale of

ships to Soviet Russia by Danzig yards employing over 30,000 men is a result of Comecon arrangements. But a noteworthy feature is that ships launched in Poland rely on oil, not on steam, and bulk carriers are preferred to cargo liners. In this respect too, the yard in Poland is fully abreast of modern shipbuilding industries and the annual output is about 50 ships with a total displacement of 400,000 tons. This indicates clearly that export orders sustain the Polish shipbuilders on their Baltic base. The maritime tradition recovered quickly after the war helps the export of coal. Expansion of shipbuilding has made Poland independent to a certain extent of Soviet aid and the recent advance of Yugoslavia as a builder was anticipated by the Polish republic though it is Japan that is now the chief builder—for export mainly. The interest shown by France in renewed friendly relations with Poland is

probably based on appreciation of what can be done to enlarge the trade in ships even if France were to leave the ECM and forge links with the Eastern Bloc.

*

ITALY Exporting Rubber Know-how

The manufacture of rubber tyres, cables and belting in Italy has led to a large export trade in recent years. Names like Ceat and Pirelli are familiar enough to suggest that Italy with a flourishing automobile industry has developed rubber manufactures, not only for cycles and scooters that are widely used. The foundation is provided by a big chemical industry and Italian products include rubber coverings and mats as well as adhesive tapes for packing. Half of Italy's rubber exports are accounted for by tyres

ASPI/LIC/PR-2

LIC PLANTS THE MONEY

L.I.C. sows saplings into the economic soil of the country. Saplings which will grow into a rich harvest of prosperity tomorrow.

L.I.C. invests nearly 3 million rupees a day in industry, agriculture, railways, transport, electricity and many other projects. The growth effect of these investments creates more jobs, more incomes, more food—in fact, a higher standard of living for everybody.

Remember, when you insure or are already a policyholder, your premiums are helping in two ways. Firstly in protecting yourself and your family, and secondly in helping to improve economic conditions for the country at large.

Some LIC Investments at a glance	
Plantations	Rs. 240 lakhs
Rubber Products	Rs. 253 lakhs
Coal	Rs. 316 lakhs
Dyes, Chemicals & Pharmaceuticals	Rs. 323 lakhs
Banks	Rs. 462 lakhs
Cotton Textiles	Rs. 1,216 lakhs

LIC—YOUR COMPANION IN PROGRESS

Unit Trust of India

Over 1,25,000 Applications for 'Units' have been received during the initial sale period, July 1 to August 14, 1964 alone, when the units were sold at par.

Applications continue to flow in for 'Units' at Premium

The premium on 'units' includes an element of income accrued to the Trust, which will be returned to unitholders as part of the Trust's income distribution as dividend.

Units are a safe investment, bring in steady income and are liquid enough to realise when you need money. Further, income on unit up to Rs. 1,000/- is exempted from Income-tax.

Repurchase operations by the Unit Trust have commenced from November 16, 1964.

Units certificates are being despatched every day. Those who have not yet received their certificates will receive them shortly.

UNITS ARE ON SALE AT ALL BRANCHES OF LEADING SCHEDULED BANKS THROUGHOUT THE COUNTRY

for various purposes but other rubber goods have increased in recent years, with exports also touching higher levels. Lupi of Milan is a specialist manufacturer while the most comprehensive range of products is now claimed by Pirelli which serves other industries.

What is clear is that Italy like the USA accepts rubber for its versatility and the manufacture of sports goods, conveyor belts, and diving suits is part of the new industrial resurgence that gives Italy many synthetic rubbers to use along with the natural rubber, imported necessarily. Tubing for the transport of petroleum products has been evolved by Italian companies and exports of rubber products in 1963 totalled 37 billion lire or 59 million dollars. The outlook for rubber manufactures is improved by Italy's connections with ECM and the high quality has helped the enlargement of exports since 1960 in a competitive field. As in the case of rayon, it is chemical progress

that has helped the rubber industry in Italy.

SOUTH AFRICA Arms Exports

The UK Government's decision to allow the manufacturer to supply 16 Blackburn aircrafts to South Africa under the old contract has certainly disposed of doubts provoked by a debate. The threat to stop the use of Simons-town Bay by the British Government was hardly put forward because the S. African Government merely suggested that the UK's overseas defence arrangements should be kept in view. The present eagerness of many African countries to prevent South African airlines plying over them and their anxiety to condemn the inclusion of S. W. Africa as virtually a fifth province of the South African Union can only be explained by objections to the alliance between Portugal and South Africa, though it will be generally

understood that Portugess colonialism was not condemned by the UK in the past.

The strict regulation of arms exports to South Africa may compel the Union Government to buy in Europe both planes and ships. Orders may be placed with either Germany or France which are not quite sure yet about NATO requirements. The means to pay is not in doubt. As far as Britain is concerned, South Africa is a very good customer of long standing and the old arrangement to sell the entire gold output at a fixed price is far more important every year to the UK than to South Africa. The cancellation of an old agreement will impair Britain's position, not only as an important investor abroad. The gold in the reserves of Europe is replenished by South African supply and as when South Africa diverts gold from the UK the loss will fall on others than South Africa. The gold shipments are vital for the Commonwealth also indirectly and the rumour as to

devaluation of sterling was probably inspired by a belief that if the 16 Buccaneer planes did not arrive, the S. African government would simply sell gold for dollars in New York and convert the Rand into an independent currency like the Canadian dollar. The risk of devaluation has gone, because the City view came to prevail, not only as regards the Bank rate but in regard to the connection between US capital and South Africa in mining enterprises. A disruption of existing arrangements would compel the USA to deal directly with South Africa and sell machinery or grain for gold bought regularly from South Africa to reinforce US currency reserves, said to be falling again. The implications of any break must have been made apparent to the UK Treasury which has probably overcome sentiment against apartheid and decided that South Africa is not like Spain to whom frigates will not be supplied because socialists dislike General Franco even as in 1937.

Commodity Prices

Wholesale prices as measured by the official index (with the year ended March 1953 as 100) declined by 0.6 per cent to 157.6 in October, 1964 when compared with 158.6 for September, 1964.

During the month under review, 'food articles' moved down by 0.6 per cent to 168.5 and 'industrial raw material' by 3.4 per cent to 161.5 while the index for 'tobacco' advanced by 1.5 per cent to 132.8, 'fuel, power, light and lubricants' by 0.6 per cent to 144.7 and 'manufactures' by 0.7 per cent to 138.0.

FOOD ARTICLES

Lower prices of rice, bajra and maize brought down the index for 'cereals' by 1.0 per cent to 148.7 although the prices of wheat, jowar, barley and ragi witnessed advances. At this level the index for cereals was higher by 25.2 per cent when compared with that of a year ago. Increased prices of all the pulses raised the index for 'pulses' by 3.8 per cent to 183.9. A fall of 2.1 per cent to 180.2 in the sub-group index for 'fruits and vegetables' was caused by a decline in the prices of oranges and bananas despite a rise in the prices of potatoes, onions and cashew-nuts. The sub-group index for 'milk and ghee' rose by 0.2 per cent to 146.1 due to an increase in the price of ghee although the price of milk witnessed a nominal fall. Prices of groundnut oil and gingelly oil moved down while those of mustard oil and coconut oil went up and the index for 'edible oils' worked out to 216.9 as against 217.0 for the earlier month. As a consequence of fall in the prices of fish, eggs and meat, the sub-group index for 'fish, eggs and meat' drifted lower by 7.3 per cent to 164.4. Lower prices of gur brought down the index for 'sugar and gur' by 1.8 per cent to 208.4.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as
the wind
To blow on whom I please"
—As You Like It

MR SHASTRI'S visit to London has been a more triumphant success than I would have thought possible. He has brought back with him, as he reported to Parliament, some sort of a scheme whereunder the nuclear have-nots can presume to secure their protection from those who belong to the Club. The trouble of course is we shall never know whether in practice those who so agree to provide the nuclear shield will in fact stick by their word. And for us in India it is the outlaw member, China, which gives us cause for alarm. Can Russia really come to India's aid in the event that our belligerent neighbour should lodge a nuclear attack upon us? As I said on a previous occasion, we can scarcely count upon a Russia or even an America to come, like all good men, to the aid of the party in distress. I concede that negotiations such that Mr Shastri has had may have won us some time; but provided the cost is not so onerous, we must go ahead about joining the nuclear club ourselves: at best, we can rely upon the deterrent of the nuclear shield to succour us over the short-term, and no more. How, in such international affairs, there is room for disagreement was brought out in two statements during the week. On the one hand, it was announced in Moscow that Russia and America had agreed to cut back on defence expenditure; on the other, the disclaimer was not slow in issuing forth from Washington.

Pakistan at last seems to be realising that, in regard to its raw jute, it has landed itself in the soup. There was a time, after Independence and even more bothersomely when, in 1949, India devalued its currency and Pakistan did not, when we were held to ransom for our requirements of raw jute. Fortunately, such blackmailing on the part of Pakistan had merely the effect of compelling us to augment our own output of raw jute. In this we have succeeded spectacularly, and we can now take Pakistan's jute or leave it. Thus, much the most important market for its raw jute has in this wise been lost. The other, Continental consumers are in no mood to brook the contrived instability in Pakistan's raw jute markets. So, we have come to the stage when Pakistan would have a global attempt to

stabilise the raw jute markets. In the event what I suppose will happen is that Pakistan and the Continental consumers of the raw material will soon be enabled to get the jute at rather lower prices. This would raise a fresh problem for us, in as much as our jute is costlier to produce and of a lower quality as compared with the Pakistani crop. But I don't think we should get unduly worried. In the light of the emphasis that will undoubtedly be laid on agriculture in the Fourth Plan, the internal demand and internal shipments are bound steadily to rise. True, there is here the prospect of our earning less from exports of jute goods; but then, even if Indian jute goods could be competitive, we would be unable to maintain export shipments unless we could raise production of raw jute and therefore of jute goods. Inescapably, over the years, we shall have, as internal consumption keeps steadily rising, less of a surplus for export both in regard to jute goods and tea; and by virtue of the fact that we have to concentrate on foodgrains production, there would be limits to the increase we could achieve in the output of raw jute and tea. So, we had best plan on the basis that, in a few years' time, the traditional exports would be rather less dominant in our exchange earnings.

The building of luxury hotels as an Indo-American enterprise seems to be going the way of the VOA. Hilton Hotels International, in return for the expertise they provided and the trust they evoked in tourists fearful of drinking water abroad, would have been in a position to earn 50 per cent of the net profit—a newspaper report puts the relevant figure at around Rs 23 lakhs annually, which could be repatriated. This apparently is the nub of the matter: Why should Hiltons without a red cent of investment be permitted to appropriate such earnings? What is forgotten is that the hotels sought to be built would earn foreign exchange to the extent of something like \$2.5 annually; and there would still remain the matching profit within India itself. Surely, Rs 23 lakhs a year is a small price to pay, to lay our hands on foreign exchange earnings five times that amount. So, I am still keeping my fingers

crossed; we may yet have Hilton Hotels in India.

I was talking to a friend the other day, just returned from Delhi; and since what he said to me confirms a view I have had, and since the matter itself is of significant interest to Clive Street, I make no apologies for referring again to the prospects of tax relief in the next Budget. The drive for new assessments that has just been launched could have an important bearing on whether or not the individual tax-payer can hope for a concession. If the treasure-hunt is bountifully successful, why, then, there would be a strong case for relief being passed on to those, who these many years, have honestly paid their taxes. That is to say, we are beginning to have the beginnings of enforcement of tax laws; there is a reasonable chance that with enforcement collections even at the existing rates show a not inconsiderable improvement; at that stage, the way would be opened for Government to hold out prospects of incentive for the individual. I am still soberly confident of a set of Budget proposals, next February, that will restore confidence to the individual no less than to industry. Surely, the monetary authorities could not have failed to take notice of the luke-warm response that practi-

cally every new issue is greeted with. If we have to get the country moving again, an incentive Budget is inescapable. But will political obstacles stand in the way? To use Mr Kamaraj's favourite word, "parkalam", which in English means, let us see.

But whether or not the next Budget is going to be replete with reliefs, the fact remains that the better part of discretion would dictate some degree of abstinence from stock exchange activity till that time. There are, and investors will have noted it, not a few shares which are under-priced; but such is the case only in regard to genuine investment purchases. Straight-away I could think of two: Indian Irons and Jessops. Unfortunately, the tendency is for operators to depress prices of precisely this kind of share when a wave of pessimism flows over the stock exchanges. Of course, even such sales would have little significance as to intrinsic values of the shares concerned. However, no investor would exactly enjoy seeing an erosion in the shares he holds; and so it could well be that we shall have this time a long interim of inactivity before the Budget—an interim that, it would appear, could last as long as three months.

Essential Commodities (Amendment) Bill

The Bill moved by the Union Minister for Food and Agriculture, seeking to replace the Essential Commodities (Amendment) Ordinance promulgated on November 5, ran into stiffer opposition than was apparently expected. A resolution tabled by Jana Sangh and Swatantra members, expressing disapproval of the Ordinance, was taken up for discussion along with the Bill. The proposed legislation was characterised as "unnecessary, uncivilised and cruel" by Mr N. Dandekar of Swatantra party, while the Jana Sangh spokesman argued the Government was evading its own responsibility for the food crisis. Mr Dandekar denounced the Bill as running counter to the essential principles of jurisprudence which would lead to erosion of fundamental rights. Mr Dandekar warned that most of the traders were seriously considering giving up their trade and pointed out that the elimination of the large number of honest and decent small traders would have a serious effect upon the free

BALMER LAWRIE & CO. LTD.

NOTICE is hereby given that the Board of Directors has today declared an Interim Dividend of 7% (subject to deduction of Income Tax) on the Ordinary Shares of the Company, in respect of the year 1964. The dividend will be payable on or after 29th December, 1964 to those members whose names are entered in the Register of Members of the Company on that date. Dividend Warrants will be despatched to members and no application to the Company is necessary.

NOTICE is also hereby given that the Register of Members of the Company will be closed from 18th December, 1964 to 29th December, 1964, both days inclusive.

By Order of the Board,

D. MANSON
Managing Director.

21, Netaji Subhas Road,
Calcutta, 8th December, 1964.

flow of food grains from the cultivator to the consumer, Mr Dandekar also wanted to know what would happen to cultivators who held back their produce with a view to selling it at the most opportune time. Would they also be considered as traders and hoarders. The Government itself, he reminded the House, had been taking steps to increase the holding power of cultivators to prevent distress selling.

The support that was forthcoming for the Bill from the Socialist Party was lukewarm, and even those who conceded the need for speedy trial of food offences were apprehensive about the possible misuse of extraordinary powers, while others thought that the provisions might not be effectively implemented.

Mr Subramaniam said that, during the period since the Ordinance was promulgated, Government had reviewed its provisions and considered that it was desirable to make certain additional provisions. Under the new provisions a notification would have to be issued by the Government specifying the particular order as the special order for the purpose of adopting the summary procedure for trial of offences under the Order. In regard to the specific provisions regarding the forfeiture of property, it has been laid down that, whether or not any order of forfeiture of property or an order under 517 of the Criminal Procedure Code is made in addition to a sentence passed by the concerned Magistrate, an appeal shall lie to a higher court only where a magistrate passes a sentence of imprisonment in excess of one month or fine exceeding Rs 2000 or both.

Having regard to the stringency of this new law, Government, the Minister said, considered that its duration should be limited, Clause 1 (3) of the Bill lays down that these new provisions shall cease to operate after 31st December 1966. A specific provision has also been made that the notification issued under the new provision specifying the special orders for the purpose of the introduction of the summary procedure for trial shall be laid before both the Houses of Parliament, as soon as

such a notification is issued. This would give an opportunity for Parliament to be kept informed of the implementation of the new provisions sought to be introduced in the substantive law for the control of prices and regulation of trade and commerce relating to the distribution of food stuffs and other essential commodities.

Shipping Exchange in Delhi

Chartering of non-American ships for carrying of P.L. 480 food grains, which used to be done through the Baltic Exchange Chartering Committee, London, was being done, since the last two months, by the Central Chartering organisation in Delhi. This was stated by Mr Nagendra Singh, Special Secretary Ministry of Transport in his address to the 11th meeting of the Shipping Coordination Committee which met here a few days ago.

Mr Singh also said that the Organisation had developed what amounted to a shipping exchange in Delhi with representatives of reputable brokers from London, New York and Tokyo offering vessels for Government bulk cargoes. He also welcomed the entry of New York brokers into the business of chartering non-American vessels for PL 480 food grains, as it increased competition in their field.

The Committee it is understood expressed its satisfaction at the successful manner in which the shipping coordination and chartering activities had been developed in recent years, resulting in considerable savings in exchange. The Committee also expressed the hope that in future the total quantum of cargo handled would amount to 5½ million tons a year.

The Shipping Coordination Committee, it may be recalled, was formed in 1958 with a view to co-ordinating the shipping requirements of all Departments of the Government of India, State Governments, as well as all Public Sector projects and undertakings in the country. It consists of officials from the Ministry of Transport and other Ministries like the Ministries of Supply, Railways, Commerce, Industries etc. as well as representatives of ship-

owners. The Committee has attached to it a chartering organisation under the Chief Controller of Chartering whose business it is to charter foreign vessels on a competitive basis for the movement of Government bulk cargoes when Indian shipping is not available.

Automatic Trunk Exchanges

Mr Satya Narayan Sinha, Minister of Communications, is understood to have told the Informal Consultative Committee of Parliament that schemes for installing automatic trunk exchanges at Bombay, Delhi, Kanpur and Madras had been sanctioned. The equipment for these exchanges had been placed on order. The exchanges were expected to be commissioned during 1966.

The scheme for installation of an automatic trunk exchange at Calcutta was being processed. This was expected to be completed towards the end of 1967. Schemes for interconnecting the remaining State capitals, namely, Bhubaneswar, Chandigarh Hyderabad, Shillong and Trivandrum, he is reported to have said, would be included for implementation during the next Plan.

Rural Industries

A statement outlining Government's programme for development of rural industries was laid on the table of Lok Sabha last week. Forty-five rural industries projects in different states have been started on the recommendation of the Rural Industries Planning Committee of the Planning Commission. It was expected that these projects would offer useful lessons for formulation of a stable policy of rural industrialisation in the future.

One project covers an area, on an average, of five community development blocks. A nucleus provision of Rs 20 lakhs has been provided for each project to cover the four-year period 1962-66, which is over and above the present allocations under the Third Plan for which the area is normally eligible from the various development departments.

The rural industrialisation programme in the small scale industries sector, in the past comprised

the establishment of cluster type training centres for artisans, common facility centres, rural industrial estates, ear-marking of founts for schemes for location in rural and semi urban areas, supply of improved tools to artisans, making available of credit facilities, organising of industrial co-operatives of artisans etc. These programmes, the statement pointed out, had not resulted in rural industrialisation to any significant extent. The main reason for the slow development of small scale industries in rural areas, it was explained, has been the lack of local entrepreneurship, apart from the required infrastructure such as power, suitable skill, communications and transport facilities etc. Shortage of essential raw materials is also an important reason.

German Business

Delegation

A delegation of German Industrialists and Bankers, jointly sponsored by the Federation of German Industries and the Indian Investment Centre, will arrive in Delhi on January 16. The delegations, whose 35 members represent a wide range of industries, will begin its engagements with discussions with the Government of India in Delhi and will then visit Bombay, Ahmedabad, Baroda, Poona, Bangalore, Madras, Coimbatore, Calcutta and Jamshedpur and return to Delhi on February 2 for further discussions. Part of the delegation will leave on February 6, while the others will stay on for attending the 20th Congress of the International Chambers of Commerce.

Progress of Refrigeration And Air Conditioning

Inaugurating an exhibition of air conditioning and refrigeration in Delhi last week, Mr T. N. Singh, Minister for Industry and Heavy Engineering, urged the industry to set up its own organisation to look after its scientific and technical needs so that it could develop its own know-how.

Delivering the welcome address Mr R. N. Seth, President of the Northern India Refrigeration and Air Conditioning Trades Association, observed that it is not fully appreciated that air conditioning and refrigeration is today a vital tool to modern industry and that it has played an equally vital role in food preservation.

The industry has made rapid progress in recent years. Industrial refrigeration load has exceeded 1,50,000 H.P. It provides employment to approximately 30,000 people engaged directly or indirectly in manufacturing, marketing and servicing of its products.

While the output of the industry has increased, the imported content has fallen from an average of 50 per cent in 1936 to less

than 10 per cent at present. The only components that the industry imports, said Mr Seth, are controls and special valves and fittings.

He also added that Indian made water coolers, room air conditioners, ice plants and cold storages are being exported to the Middle East, East and West Africa, Pakistan, Burma, Malaysia and Ceylon. Indian manufactures, however, suffer from the handicap of low production volume with consequent high cost of manufacture.

He further pointed out that the industry suffered a set back because of the high incidence of excise duties, sales taxes and the phenomenal prices of indigenous raw materials.

Iron Ore Production

The production of iron ore in India during the month of September this year was 1,624,000 tonnes, according to the Indian Bureau of Mines.

This brings the total output during the January-September period to

14,921,000 tonnes, which is 3 per cent lower than the corresponding period of the last year.

Orissa was the leading producing State during the month under review, contributing 453,000 tonnes to the all-India output.

This was followed by the Union Territory of Goa (441,000 tonnes), Bihar (273,000), Madhya Pradesh (240,000 tonnes) and Mysore (200,000 tonnes).

The States of Andhra Pradesh, Maharashtra and Rajasthan jointly contributed the remaining 17,000 tonnes.

THE MYSORE ACETATE AND CHEMICALS COMPANY LIMITED

(INCORPORATED AS A PUBLIC COMPANY ON DECEMBER 24, 1963 — AND OBTAINED CERTIFICATE OF COMMENCEMENT OF BUSINESS ON MAY 25, 1964)

Registered Office:

MYSUGAR BUILDINGS, SRI JAYACHAMARAJA WADIYAR ROAD, BANGALORE-2 (Mysore State)
FIRST TRIACETATE FACTORY IN INDIA

PROPOSED ACTIVITIES OF THE COMPANY:

The Company was incorporated with the objects stated in its Memorandum of Association and with the immediate object of manufacturing about 1200 tonnes of Cellulose triacetate of film quality and 2400 tonnes of Cellulose acetate with expert foreign Collaboration. Cellulose acetate will be converted into moulding compounds by the addition of plasticizers and fillers. Production is expected to start by the end of 1966.

LOCATION OF FACTORY:

The Factory will be located at Mandya, in Mysore State, about 60 miles, from Bangalore on the Bangalore-Mysore Road in the neighbourhood of the Sugar Factory and Distillery belonging to the Mysore Sugar Company Ltd. As the Acetic Acid required by this Company is to be produced and supplied by the Mysore Sugar Company out of alcohol produced in its Distillery, the location of the Factory at Mandya ensures the maximum savings in transport costs of Acetic Acid which is a basic raw material in the manufacture of Cellulose acetate.

Mandya is also ideally suited for the location of the Factory on account of adequate supplies of water, power and labour and proximity to Ooty where the Hindustan Photo Film Manufacturing Company Ltd., consumers of Cellulose Triacetate is situated.

BOARD OF DIRECTORS:

1. Sri A. M. M. OBJECTS, PROPOSED ACTIVITIES AND LOCATION OF INDUSTRY

The main objects of the Company are as set out in the Memorandum of Association and include inter alia the following: to carry on business as manufacturers of

and dealers in polyvinyl chloride, polyvinyl dichloride and other chemicals and products of a like nature or otherwise; and also to carry on business as manufacturers and dealers in all other chemicals, plastics/petro-chemicals, oils, paints, pigments and varnishes and in any similar or allied business and either in connection with the said business or as a distinct or separate business; to carry on business as distillers, gas makers, smelters, metallurgists and chemical engineers, manufacturers and dealers in rubber and rubber products, textiles, nylon, rayon and materials of all descriptions connected with the foregoing; to manufacture, deal in and manipulate PVC bases into electrical wires, leather cloths, lining material and as films, sheets and pipes for general use and for construction material; to construct, maintain and alter any chemical and industrial plants, buildings or works.

The Company has been formed with the object of setting up a factory at Mettur, Madras State, for the manufacture of polyvinyl chloride (P.V.C.) and other chemicals and products which may be usefully or conveniently combined with or derived from the same and another factory near Bombay in Maharashtra State for fabricating P.V.C. pipes, fittings, other extrusions and mouldings (both rigid and flexible). The Company has entered into a Technical Service Agreement for a period of ten years in the first instance with the B. F. Goodrich Company of Akron, Ohio, United States of America (Goodrich), the largest producer of polyvinyl chloride in the world. Goodrich will provide the Company all technical information, knowhow, and data and the Company will be licensed to use in India the relevant patents of Goodrich. Goodrich will assist the Company in planning the layout of the factories and provide drawings, designs, blue prints and specifications for the plant, machinery and equipment for the setting up of the factories, besides procuring for the Company trained and competent engineers and technicians and providing in its plants in the U.S.A. training facilities for the Company's technical personnel. It is expected that the factory will go into production before the end of 1966.

APPLICATIONS

Copies of Application Forms and Prospectus can be obtained from the Company's Registered Office, from any of the above mentioned Underwriters, Brokers and Bankers to the issue named in the Prospectus or any of their main branches at the addresses given in the Prospectus.

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON 16.12.64 AND WILL REMAIN OPEN UNTIL THE CLOSING OF BANKING HOURS ON 24.12.1964 UNLESS CLOSED EARLIER OR LATER AT THE DISCRETION OF THE DIRECTORS BUT NOT BEFORE 18.12.1964

UNDERWRITING
The entire issue to the public of 49,500 Equity shares of Rs. 100/- each and 12,500—9.5% (free from income tax payable by the Company but subject to deduction of tax under Section 194 of the Income tax Act 1961) Cumulative Redeemable Preference shares of Rs. 100 each has been underwritten as follows:

Name and address of Underwriter	Value of shares underwritten	
	Equity Rs.	Preference Rs.
1. The Madras Industrial Investment Corporation Limited, 23, Nungambakkam High Road, Madras-34.	25,00,000	10,00,000

THE Need for Price Stability

THE suggestion of Pakistan's Commerce Minister, Mr Wahiduzzaman, that steps should be taken on international level to check fluctuations in jute prices will be welcomed by jute interest all over the world and especially in India. For, since raw jute constitutes about 60 per cent of the cost of production of jute goods, wide fluctuations in raw jute prices will be quickly reflected in the prices of manufactures. Although jute products continue to be in favour with consumers, it is not as though they will go on meekly purchasing them no matter how wide their price fluctuations are. As has been noted at last week's Jute Research Conference in Calcutta, owing to advances in the science and technology of fibre utilisation, there are already serious competitors to jute such as the multiwall paper bag and bags made of heavy gauge plastic fibres. It will be evident therefore that if jute is to hold its own in world markets, it has to combine quality with cheapness. Overseas consumers who use jute as a packaging material will be discouraged to use it if prices of jute products are not reasonably stable for the simple reason that wide fluctuations will pose a serious pricing problem for their end products. So in order to safeguard the future of jute, it is essential to ensure that the price of the commodity when it is made available to the jute mills bears a close relation to the world prices of jute goods.

Another problem to which attention must also be given pertains to the competition in jute goods. It is well known that owing to the fact that Pakistani exporters of jute goods have the advantage of the bonus voucher, Indian sacking has been priced out of most of its traditional markets. Despite this serious loss, the Indian Government has not taken retaliatory measures that can neutralise the advantages enjoyed by the Pakistani exporters. With her production going up, it is only natural for Pakistan to try to expand its exports. But this should be done without undue competition. Pakistan's Commerce Minister himself has noted that the world demand and consumption of jute is steadily increasing, especially in Asia and

Africa and new uses are being found. That a rate war between India and Pakistan is no solution to the problem of expanding exports has been emphasised by Mr Manubhai Shah, Union Minister of Commerce. He has pointed out that since demand is expanding, both India and Pakistan can have their due share of the world market.

★

OUTLOOK FOR SACKING

The outlook for sacking has to be assessed more cautiously in view of the possibility of an early settlement of the jute mills strike in Pakistan, according to the latest issue of the Indian Central Jute Committee's monthly Jute Bulletin.

Once the Pakistani mills got going again, a decline in sacking prices would be unavoidable. "It will be difficult in that event for fibre prices to resist a sympathetic drop".

The Calcutta raw jute market, the bulletin said, was being maintained at its present level solely on the strength of sacking prices, which had reached their highest point in the past three years. Jute sellers could see that the size of the current crop was no longer "an unknown quantity", and with the increase in maximum purchase quotas to match the increasing imports of jute, there was now "much less talk of a possible shortage developing towards the end of the season."

The price trend in raw jute during October and the greater part of November, according to the bulletin, confirmed that the earlier advance of the market was largely speculative. Were the overall supply position in respect of jute really as tight as the subnormal market arrivals till about the first week of November indicated, the recent developments on the demand side would have taken fibre prices much higher than their current level of Rs 36.50 per maund on the basis Assam Bottom. The bullish points favouring an advance of the jute market were two: First, mill output of jute goods during September and October, notwithstanding the reported voluntary cuts, was higher than in the similar months of 1963; secondly, the demand for gunnies remained buoyant with

oftakes from the mills during January-October this year running 50,300 tonnes, ahead of the same period last year at 1,028,500 tonnes.

The Jute Bulletin said: "If, in spite of all these props, jute prices tended downward, it could be due to the highly vulnerable position of speculative dealers who had feverishly bought during the August scare in the hope of attempting a squeeze later in the season. Some recklessly high prices were paid for many of these purchases. Now the gamble has not paid off, stockists are anxious to minimise their loss by attracting buyers with offers of discount."

★

After initial steadiness, the jute goods market developed a soft trend following news that the two-month-old jute mill strike in Pakistan involving about 80,000 workers has ended with effect from Monday in all the 14 affected units of the industry. Although there were reports of fresh tenders in sacking from the Government of India and some foreign countries including Australia, sentiment failed to improve as shortage of supplies is considered improbable in view of the resumption of capacity working by mills. It would appear that now that the strike in Pakistani mills has ended, there is a tendency to assess the prospects for sacking anew. As has been pointed out in this column, overseas consumers will have once again the advantage of choosing the market they will want to buy from. The realisation that Indian sacking hereafter will not get all the business has come quickly enough as will be evident from the decline in sacking rates during the past few days. The reaction must have also partly stemmed from the indication that higher prices for jute will become untenable now that the prop of good business that has come India's way as a result of the prolonged strike in Pakistani jute mills. In the meantime, hessian which has continued to rule steady, has also developed a sagging tendency in sympathy with sacking. Toward the close of the week, however, sentiment showed slight improvement following the publication of

jute goods stock figures as at the end of November. Total stocks declined by 3,600 tonnes to be placed at 114,200 tonnes as compared with 117,800 tonnes as at the end of October. While hessian has declined by 500 tonnes, the decline in sacking is sizable at 2,700 tonnes. Carpet backing was lower by 300 tonnes while other goods are down by 100 tonnes.

The trend in the raw jute market was quiet in sympathy with the goods section. With the resumption of work in Pakistani mills from early this week, sentiment was depressed. It is also believed that those who have been holding on to stocks in anticipation of continued heavy demand at the higher rates will tend to unload their stocks on the market in view of the decline in goods prices.

TEA Fair Demand

At leaf sale No. 29 in Calcutta, offerings amounted to 79,723 packages. Demand was at a fair level but price realisations were lower than previous markings. Plain orthodox brokeners were sold by 20 to 40 P lower but their Fannings met with an improved demand. 'Teas for Price' were readily absorbed but here again price realisations were lower than at the previous sale. Medium Doars BOPs again met with good enquiry with selected lines among them fetching higher rates. In Medium and Good Assam teas only a few selected lines managed to rule steady while others came to an easier market. CTC teas met with selective demand but prices for all categories de-

Market **NEWS** and Trends

clined by 20 to 40 P with buyers showing preference for BPs, Selected best lines however sold well. There were some withdrawals especially in the Fannings grades. Demand for whole leaf teas was good only at reduced rates while Darjeelings were almost unchanged. The following quotations are inclusive of excise duty: Clean Plain Pekoe Rs 4.90 to 5.20; Plain Orthodox BP Rs 3.70 to 4.00; Plain Orthodox Fannings Rs 3.70 to 4.00; Plain CTC BP Rs 4.20 to 4.40; Plain CTC Fannings Rs 3.90 to Rs 4.10; Medium CTC BP Rs 4.50 to Rs 4.70; Medium Fannings Rs 4.20 to 4.40; Good Assam CTC BP Rs 4.80 to 5.10; Good Assam CTC Fannings Rs 4.50 to 4.90.

At Dust Sale No. 28 in Calcutta, offerings totalled 34,340 packages and there was a better general demand than in the previous sale but price trends showed an irregular pattern. Clean leafed plain and medium CTCs sold slightly easier and fibrous sorts came to a much easier market. Despite satisfactory support noticed for Good CTCs price realisations were lower. A weaker trend prevailed in Plain orthodox teas while medium Assams though selling readily declined up to 30 P. Teas for Price showed a sharp fall and Legg cuts also depicted an easier trend. The following quotations are inclusive of excise duty: Plain Orthodox Dust Rs 3.70 to 4.30; Medium Dust Rs 4.30 to 4.70; Legg Cut Dust Rs 4.50 to 4.70; Plain CTC Dust Rs 4.55 to 4.70; Medium CTC Dust Rs 4.70 to 5.05; Good Assam CTC Dust Rs 5.60 to 6.20.

★

COTTON Bright Outlook

Last week witnessed certain developments which should enthuse the country's cotton trade and the textile mills which have been nursing serious misgivings about cotton supply position during the latter half of this season. Mr Manubhai Shah's statement in the Lok Sabha that about six lakh bales of cotton out of the total of 9.5 lakh bales of cotton will be imported by March-April, the reported move to secure 50,000 bales of Pakistani cotton and the assurance given by Mr W. Glenn Tussey, the head of the Cotton Marketing Branch, the US Department of Agriculture, to the East India Cotton Association that his government will be able to make immediate shipments of nearly 4.5 lakh bales of cotton cannot but perk up the dampened enthusiasm of all concerned. The impact of these developments on the cotton futures market in Bombay was swift and sudden: the upswing in Jarilla March contract yielded place to subdued conditions. After opening the week higher at Rs 770.75 Jarilla March slipped down to Rs 765.75 but rallied to Rs 775.00 consequent on the sustained spot support before finally finishing

lower at Rs 771.00 per three quintals. The market closed the week on a subdued trend. The better scope for imports and fears of action like imposition of heavy margin to the Kalyan loosened bull grip over the market and restricted the gain of the contract merely to Rs 2.25.

Steady conditions prevailed in the spot market at Sewri during the week under review. Selected growths such as L 147, Khandesh CO2 and Kalyan met with good spinner interest. Spinners from Madurai, Ahmedabad and Bombay were active in the market.

In the export section demand for Bengal Deshi tended to decline as the price evinced an uptrend.

★

Consumption of cotton by the mills in India from 1 September 1963 to 31 August 1964 registered a smart improvement by 411,743 bales to 6,081,803 bales. Consumption of indigenous growth during the period went up to 5,475,326 bales from 4,789,414 bales in the relevant period of 1962-63 while utilisation of imported cotton declined to 606,477 bales from 889,546 bales.

Description	1 Sept. '62 to 31 Aug. '63	1 Sept. '63 to 31 Aug. '64
Indian	4,789,414	5,475,326
Pakistan	111,470	6,082
American (Inc. Peruvians)	354,482	277,895
Egyptian	126,931	146,229
Sudan	202,342	122,631
East African	73,312	47,981
Others	12,109	5,659
Total	5,670,060	6,081,803

Imports of cotton from September to 21 November 1964 totalled 257,643 bales against 108,553 bales in the same period in 1963.

Description	1 Sept. to 21 November 1963	1964
American	50,762	205,285
Sudan	32,184	18,179
Egyptian	18,191	12,642
East African	5,990	15,929
Other Sorts	1,426	5,608
Total	108,553	257,643

Exports of cotton from India during the same period looked up to 37,327 bales from 18,456 bales.

Countries	1 Sept. to 21 November 1963	1964
UK	589	472
Continent	663	3,956
Hongkong	3,864	2,120
Japan	12,934	29,641
USA	100	988
Others	306	150
Total	18,456	37,327

According to the US Commerce Department, the second year of the long term arrangement (LTA) governing cloth imports closed with an eight per cent decrease when compared to the relative figures of the initial year. The decline in imports of cotton tex-

tiles is ascribed to the peculiarity of the machinery constituted under the agreement which permitted higher imports from certain privileged countries in the first year. The fog that enveloped the price cotton legislation in the United States upon orders placed by indigenous mills abroad for a short duration also had limiting effect on imports. It should be noted, however that these influences are inactive and the import during the remaining years covered by the arrangement is expected to expand to a considerable extent.

★

Total area under cotton cultivation in the country in 1964-65 is expected to register an encouraging expansion. The all-India first estimate conducted by the Ministry of Food and Agriculture envisages an increase of 3.39 lakh acres to 16,495,000 acres. The improvement in acreage has been accounted chiefly by the increase in acreage in UP, MP, Punjab, Rajasthan and Maharashtra. The propitious weather which was prevalent during the sowing season also induced extension of the area under cotton cultivation. The estimate does not take into account the entire area under the crop and if past experience is of any import the first estimate generally covers merely 80 per cent of the final placings.

PIECEGOODS

The cotton piecegoods market in Bombay presented a mixed trend during the week under review. Demand for uncontrolled items from the upcountry centres and local traders broadened further while the controlled varieties attracted only restricted interest. It would appear that the mills were constantly endeavouring to liquidate their stocks of old goods rather than disposing of the controlled goods. Brisk activity was reported in seasonal items such as coatings and gadlapat whose supply was rather insufficient to meet the growing demand. Consequently, the prices of these goods firmed up by about 10 to 15 per cent. Upcountry centres evinced keen interest in superfine varieties. Cambrics and lawns also evoked good buyer interest during the week. Demand from Bihar, UP and Delhi flowed on an encouraging level while purchasers from Calcutta displayed only tepid enthusiasm during the week.

★

OILS AND OILSEEDS Uptrend Resumed

Buoyant conditions prevailed in the oil and oilseeds market with prices especially in the groundnut and groundnut oil sections ruling far above the weekly stipulated limits by close. The stipulated limit of Rs 103.90 for the January

groundnut contract was reached quite early in the week and for two or three days thereafter trading was almost at a standstill. However, bulls continued to be aggressive notwithstanding the stiff margin limits. Following the report that bull operators had not hesitated to pay up the heavy margins (the margin paid is reported to be the environs of Rs 65 lakhs), bears rushed to cover their positions with the result the rate was taken up to Rs 109 in unofficial dealings while on official dealings the closing price on Monday was placed at Rs 106.90. From the very commencement of the week, it was evident that the uptrend of prices could not be arrested with the present regulations of two line margin. Speculators were emboldened to extend their commitments following the decision of the Government to permit the export of HPS groundnut. The main reason for the hectic rise in prices is the continued shortage of groundnut in the Bombay market. As the Gujarat Government has banned the movement of groundnut from the State, it is generally believed that the shortage will continue. Groundnut oil prices also firmed in sympathy with groundnut but towards close, the higher levels were found to be untenable in view of the decision of the Forward Markets Commission to impose a second margin line at other centres also.

In Madras, a firm trend developed in groundnut despite the fact that arrivals of new crop were on a satisfactory level. The decision to permit export of HPS coupled with shortage of oil in Calcutta market, lifted prices to new highs. With the uptrend in prices, crushers became keen buyers. While supplies were restricted, demand was heavy as Calcutta vanaspathi interests and local consuming interests vied with one another to bid for all available supplies. The result was a smart spurt in prices of oil.

In Castorseed in Bombay, prices raced to the prescribed limit quite early in the week and since then remained at that level with the undertone continuing to be firm. As in groundnut, here also the reason for the upswing in prices is the firm trend prevailing in the spot section.

Linseed futures too displayed a firm trend and the trading pattern was almost similar to that in castorseed. The permissible maximum price level was reached by midweek and the trend has continued to be firm afterwards to the close of the week. Shortage of ready stocks was the main reason for the price spurt in the futures market. Contonseed ruled firm partly in sympathy with the other sections and partly due to the reported heavy shortage of stocks in the ready market.

NON-FERROUS METALS Firm Trend in Copper

In the non-ferrous metals market, buoyant conditions continued to prevail, the only exception being tin. Paucity of buying coupled with prospects of addition to stocks with dealers from impending import arrivals has imparted a subdued trend to this market with the result holders were keen for business. In the other sections, however, the trend was fully firm with buyers extending commitments. Copper was a firm market with demand overstepping supply. For some time there is always a sizable proportion of unsatisfied demand and indications are that this pattern will continue to characterise trading in this section. Although imports have been higher this year, owing to increasing demand reflecting progress of industrialisation, supplies have continued to be inadequate.

★

SUGAR

Steady Trend

A steady trend prevailed in the sugar market in Hapur mainly because of inadequate supplies in the market. There is some concern about continued supplies in the market because it has been reported that already some of the UP sugar mills are experiencing shortage of cane. In the open market sugar prices are quoted some Rs 50 above the controlled rate. According to mill circles it would become increasingly difficult for mills to get adequate supplies of cane so long as the gur and khandasari manufactures are unable to offer any price they like for cane.

According to the Indian Sugar Mills Association the total sugar production in the month of October, 1964, was about 38,000 Metric Tons as against 33,000 Metric Tons produced last season during the corresponding period. This brings the total production during 1963-64 Season ending 31st October, 1964 to 25,70,000 Metric Tons as against 21,56,000 Metric Tons during the corresponding period last season.

The off-take of sugar from factories during the month of October, 1964 (including 3,000 Metric Tons despatched for exports) was 2,01,000 Metric Tons as against 2,35,000 Metric Tons (including 11,000 Metric Tons despatched for export) during the corresponding period last season. The total despatches in 1963-64 season ending 31st October, 1964, were 25,54,000 Metric Tons (including 2,62,000 Metric Tons despatched for exports) as against 30,22,000 Metric Tons (including 4,96,000 Metric Tons despatched for exports) by the same period last season.

The total closing stock of sugar with the factories on the 31st

October, 1964, was 1,66,000 Metric Tons as against 1,50,000 Metric Tons on the same date last season.

Gur prices ruled steady in Hapur following good buying enquiries from the southern markets. A firm trend continued to prevail despite large arrivals because of sustained demand from several consuming centres and the easy wagon position. In Muzzafarnagar also the trend was firm owing to brisk demand from markets in Punjab, Gujarat, Maharashtra and Madhya Pradesh.

★

PEPPER

Spurt in Prices

In the spices market, pepper developed a firm trend on speculative support following higher overseas advices. The spot market too has been ruling fully steady following indications of a fall in the arrivals in terminal markets. The spurt in prices has been touched off by the belief that export demand will pick up in view of the reported shortage

of the commodity in the US. In the American market prices during the past few days firmed up on improved buying enquiry. It is generally expected that buying interest will strengthen further in coming weeks as it is reported that the trend in overseas markets is also firm.

Forward trading in pepper at Alleppey commenced on 10 December. The Alleppey Oil Mills and Merchants Association which is now conducting futures trading in coconut oil, has been granted permission by the Union Government on the recommendation of the Forward Markets Commission to open a ring at Alleppey for conducting futures trading in pepper also for one year up to 11 November 1965.

Export earnings from spices during 1963-64 have recorded an increase of Rs 2 crores as compared with 1962-63. Cardamom, chillies and ginger mainly accounted for the increase, while earnings from black pepper, coriander seed, garlic and some minor spices declined. Since the introduc-

tion of quality control for pepper, chillies and cardamom, the Spices Export Promotion Council had graded 8.5 lakh packages for shipment. It is expected the Council's proposals for introducing quality control in respect of ginger and turmeric, will be taken up soon.

Pepper prices in the Bombay market continued to rule firm on sustained speculative support following indications of increased American buying. The firm trend was noticeable in the futures market as well as in the spot section. It is expected that American buying which has so far amounted to about 50 tons will be further stepped up in coming weeks. In anticipation of fresh orders, speculators have been extending their commitments not only in the near positions but in distant deliveries also. The strength of the spot market is partly derived from reports that the supply of the commodity in the primary markets is slowing down as growers are tending to hold on to stocks in anticipation of a further rise in prices.

WANT TO STEP UP PRODUCTION?

IT'S EASIER WITH AN IDLER!

Here's an efficient, modern belt-grinding technique — employing Carborundum Universal Backstand Idlers, Contact Wheels and Abrasive Belts! It ensures faster and cooler cutting, improved finish, reduced operator fatigue, and greater safety. Switch over and watch your output increase, your product quality improve! Backstand Idlers are available in both Floor and Bench types.

CARBORUNDUM UNIVERSAL LTD.
(MEMBER OF THE INDIAN STANDARDS INSTITUTION)
MADRAS-CALCUTTA-BOMBAY-DELHI
Manufacturers of Bonded and Coated Abrasives, Grains and Super Refractories.

For the INVESTOR

INVESTMENT GOSSIP Need to Revive Capital Market

Depressed conditions have continued to prevail in the stock markets and it is becoming increasingly evident that both investors and operators will find no attraction in equities if no worthwhile incentive is forthcoming soon. The reason for the lack of investor interest in the stock market is not far to seek: confidence is impaired by the heavy taxation already effected in the last two budgets and the belief stemming from the interest evinced by authority in reviving the capital market that reliefs will be conceded has been considerably weakened first, by the decision to have a large fourth plan and, secondly by the Finance Minister's description of the economic situation as grim. However the report that Mr Lal Bhabdur Shastri has said in London during his recent visit that efforts will be made to revive the capital market seems to have brought about renewed hope that some remedial action will be taken to restore confidence of investing public. In a memorandum submitted to the Union Finance Minister, the presidents of the recognised Stock Exchanges in the country have renewed their plea. That urgent steps should be taken to revive the capital market. The memorandum makes it clear that the only way out of the present stagnation is to provide adequate incentives to the investing public. These should mainly be a downward revision of taxes and the abolition of the dividend tax. The memorandum however has said that if the levy is to be retained it should be made applicable only when equity dividends are above 10 per cent. The bonus tax is unjustified and the wealth tax combined with income-tax and supertax will reduce savings with individuals to the vanishing point. The memorandum has also suggested a number of administrative measures designed to encourage flow of funds into equities. One of the urgent measures indicated in this regard is the relaxation of margins rules. This will help revive activity in the stock markets to some extent.

INVESTMENT NOTES Chemicals and Plastics

Chemicals and Plastics India Limited is entering the capital market with a public issue of Rs 62,00,000 divided into 49,500 equity shares of Rs 100 each and 12,500 9.5 percent Cumulative Redeemable Preference shares of Rs 100 each. The subscription List will open at the commencement of banking hours on 16-12-64 and will remain open until the closing of banking hours on 24-12-64 unless closed earlier or later at the discretion of the directors but not before 18-12-64. The company is setting up a factory at Mettur, Madras State for the manufacture of PVC and other like products and another factory near Bombay for fabricating PVC pipes, fittings, extrusions and mouldings. The company has entered into a technical service agreement with BF Goodrich Company of US, the largest producer of PVC in the world.

Hindustan Ferodo

The subscription list for the public issue of Rs 54,68,000 (5,46,800 equity shares of Rs 10 each at a premium of Rs 17 per share) will open on 17 December. The company was formed to take over the manufacturing and associated selling activities of Asbestos, Magnesia and Friction Materials Ltd. The company has now been licensed to manufacture asbestos mill board and flooring sheets in addition to woven metallic and moulded brake and clutch linings, asbestos yarns, dry and lubricated asbestos plaited packings etc.

TISCO Production

The Tata Iron and Steel Company Limited, report that the approximate production of iron and steel at the Steel Works at Jamshedpur during the month of November 1964 was as follows:—

	Tonnes
Iron	170,600
Steel Ingots	173,200
Saleable Steel	135,300

National Rubber

National Rubber Manufacturers Limited has declared a dividend of 5% (subject to deduction of income-tax) on the Ordinary Share Capital. This dividend will apply to Ordinary Shareholders whose names will be registered in the books of the company at the

close of business on Tuesday, 22 December, 1964. The rights shares issued by the company for which subscription list closed on 20 June, 1964 will also be eligible for this interim dividend.

Power Cables

Power Cables Private Limited will be shortly implementing an expansion programme for their existing Welding Electrodes Project. The Company has received the necessary Import Licence for Rs 4.5 lakhs for the import of Capital Equipment from USA to implement this programme.

★

BALANCE-SHEET REVIEWS

Burrakur Coal's Sales and Profit Rise

With an increase in raisings from 1.297 million tonnes to 1.338 million tonnes the Burrakur Coal Company Limited has, despite despatches being shown lower at 1.317 million tonnes, been able to report, in its accounts for the year ended 30 June 1964, both an increase in sales and in the disposable profit. Sales have gone up from Rs 3.66 crores to Rs 4.18 crores. The provision for Depreciation has been raised from Rs 15.56 lakhs to Rs 21.30 lakhs. It is in the charge of taxation that the Company's liability is reduced sharply from Rs 20.76 lakhs to Rs 9.30 lakhs. As such, the disposable profit, after adjustments of about Rs 1.40 lakhs in each of the two years, has risen from Rs 27.18 lakhs in 1962-63 to Rs 32.54 lakhs in 1963-64.

The Development Rebate Reserve gets a rather larger provision of Rs 18.46 lakhs against Rs 6.95 lakhs. But the transfer of Rs 1 lakhs to the Debenture Redemption Reserve, for the obvious reason that such debentures outstanding are only of the order of Rs 20 lakhs, has this year been skipped. The ordinary dividend, maintained at 13 per cent absorbs Rs 11.82 lakhs.

The Balance Sheet as at 30 June 1964 shows a gross block of Rs 6.13 crores having a net value of Rs 3.29 crores. As against the Ordinary Capital of Rs 90.92 lakhs, the Reserves and Surplus are almost double the levels at Rs 1.81 lakhs.

It may be mentioned, additionally, that the Directors' Report points out that Burrakur Coal will have fully utilised all its licences in respect of the World Bank loan, the full delivered value of the

equipment already received being around Rs 85 lakhs.

PAL Pays 4 per cent Against Nil

The Premier Automobiles Limited has also reported substantial increases in sales and in the disposable profit for the year ended 30 June 1964. Sales have risen from Rs 20.11 crores to Rs 24.10 crores. The provision for depreciation has been raised by Rs 13.47 lakhs to Rs 76.95 lakhs. Taxation claims Rs 33.90 lakhs against Rs 19.15 lakhs. As a result, the disposable profit has increased from Rs 27.33 lakhs (which included Rs 2.05 lakhs written back) to Rs 37.35 lakhs including Rs 7.35 lakhs written back. The transfer to Development Rebate Reserve has been stepped up by Rs 3.25 lakhs to Rs 17.00 lakhs. Other funds also get a transfer of Rs 20.11 lakhs against a nominal Rs 1,000 in the previous year. A dividend of 4 per cent, absorbing Rs 29 lakhs, is to be paid out of the dividend reserve as against nil in the previous year.

The Balance Sheet discloses the paid-up capital at Rs 7.43 crores, against which the reserves and surplus add up to Rs 2.20 crores. The gross block of Rs 10.26 crores has a book value at slightly less than half that figure at Rs 5.08 crores. New projects under creation are shown to have a value of Rs 5.09 crores against Rs 1.64 crores.

Inchek Tyres Commence Production

The Fourth Annual Report of Inchek Tyres Limited shows that, with sales at Rs 28.88 lakhs and provision for depreciation at Rs 3.66 lakhs, the Company's net loss for the year under review worked out to Rs 8.55 lakhs. This is because commercial production at Inchek commenced only in December 1963. We may expect a swift improvement in the Company's fortunes. At the moment the debit carry forward is Rs 12.75 lakhs.

The value of the gross block has risen spectacularly from Rs 4.73 lakhs to Rs 1.91 crores, this in turn having a net value of Rs 1.87 crores. The Company's Ordinary Capital is placed at Rs 79.37 lakhs.

Great Eastern Shipping Pays 10.8 Per Cent

Although The Great Eastern Shipping Co Ltd has reported an increase of nearly Rs 75 lakhs at

Rs 5.27 crores in its operating earnings, the disposable profit is nevertheless lower (despite transfer of Rs 16 lakhs from General Reserve No 2, which is untaxed, and of Rs 0.82 lakh from Dividend Equalisation Reserve) because of two reasons: on the one hand, the provision for depreciation had to be raised by Rs 11 lakhs to Rs 75.94 lakhs; on the other, the company had to provide nearly Rs 14 lakhs against tax for 1957-58, on the basis of an assessment against which the company has already preferred a reference petition. The Directors' Report points out that the provision is being made "as a measure of abundant precaution," and shareholders would no doubt concur in such decision.

As noted, the disposable profit is lower at Rs 47.33 lakhs against Rs 57.24 lakhs. The transfer to Development Rebate Reserve is marked down by about Rs 15 lakhs to Rs 36.30 lakhs. An ordinary dividend of 10.80 per cent absorbs Rs 11.02 lakhs; in the previous year in lieu of dividend a sum of Rs 30 lakhs had been capitalised and bonus shares issued at the rate of one for two shares held.

The gross block has risen from Rs 10.34 crores to Rs 11.94 crores; but the net block shows a smaller rise from Rs 6.85 crores to Rs 7.81 crores. The 1963 expansion of fleet programme has been put through successfully with the acquisition of 5 vessels at a cost of Rs 1.70 crores. Since, however, these ships came into operation only late in the year under review, their contribution to operating earnings can be fully measured only in 1964-65. The Company has submitted its 1964 Expansion Programme whereunder it seeks to acquire another five vessels for Rs 3 crores; but here, too, if the proposal does get favourably considered by Government, the impact of this addition to fleet will be felt fully only two years hence.

The share capital of the company has risen during the year by nearly Rs 60 lakhs to a shade under Rs 1.50 crores. Against this, the Reserves total Rs 2.61 crores as compared with last year's figure of Rs 2.72 crores, the decline being ascribable to the transfer of Rs 16 lakhs from General Reserve this year.

The Directors' Report does not quite make a prediction about prospects, though it contains the following significant sentence: "We have good tools in hand, and, should favourable port conditions be made available to ships, we have no doubt that the Company would be able to do well."

★ STOCK EXCHANGES Listless Trading

Listless conditions prevailed in the stock markets during the week as both operators and investors were reluctant to extend commitments. As a matter of fact in earlier dealings the trend was toward lower levels owing to persistent selling pressure. Although there were re-

ports to the effect the Government has made it clear that there is no immediate threat of nationalisation of private industry, sentiment failed to revive. Likewise the statement of the Prime Minister at London to the effect that efforts are being made in India to revive the capital market has been largely ignored presumably because previous assurances to the same effect have not been accompanied by any worthwhile remedial measure.

In the Calcutta Stock Exchange, trading commenced on an easier note following bull liquidation. Clearing shares had to bear the brunt of the bear pressure. In later dealings, there have been occasional attempts at rally but in the absence of fresh incentives profit taking pared off the little gains. However, the market closed the week on a slightly improved tone.

But for some brightness brought about by renewed attempt at a rally, the Bombay Stock Exchange depicted a depressed state of affairs most of the time. Earlier dealings were marked by nervous sales but the improvement noticed toward midweek became untenable in the absence of follow-through support. Toward close, selected shares looked up on some buying interest at the lower levels.

The pattern of trading in the Madras Stock Exchange was similar to those of the two principal markets of Bombay and Calcutta. Earlier depression yielded place to slightly better conditions by close but in the absence of incentives sentiment failed to show much improvement.

After earlier depression, the Ahmedabad stock Exchange witnessed some lessening in the selling pressure but conditions continued to be dull in the absence of fresh buying.

Earlier easier advices from Calcutta imparted a quiet trend to the Delhi stock exchange but sentiment improved somewhat in later dealings. Even so undertone remained dull and hesitant.

★ CALCUTTA

In the absence of incentives, equities in the Calcutta Stock exchange most of the time depicted a soft trend with the more speculative scrip in earlier dealings under selling pressure. After midweek, although the selling pressure seemed to have abated, sentiment continued to be apathetic in the absence of support. Apart from the general disinclination to extend commitments in view of the obscure outlook for equities, attention is now diverted to the number of new issues that are currently in the market. As has been pointed out in the memorandum submitted to the Union Finance Minister by the presidents of recognised stock exchanges, the heavy tax burden has created an atmosphere of ner-

vousness in the minds of investors. The fact that Government has not so far taken steps to revive the capital market although it has often been saying that it is its intention to do so has made investors extremely cautious.

In earlier dealings, trading was on an easy note with the cleared shares subjected to persistent selling pressure. Reports that Government has assured foreign interests that nationalisation will not be undertaken in a hurry coupled with the statement of the Prime Minister in London to the effect that India will be taking steps to revive the capital market failed to enthuse operators. Although the slight improvement in sentiment toward the second half of the week would seem to suggest that hopes about fiscal changes are reviving, it would appear that operators would prefer to wait for actual offer of incentives to extend their commitments.

Dull conditions prevailed in the Government section with 3 per cent 1986 Conversion Loan moving within a narrow groove around Rs 62.

In the Cotton textile section, interest was at a low ebb with prices where marked showing little variation. With demand for coal showing no sign of expansion, coal shares were neglected. Burrakur has maintained the dividend and in earlier dealings the scrip was steady at Rs 16.25 but later on lost ground to be placed at Rs 15.87. Elsewhere, Western Bengal and South Karanpura were subdued.

Jute Shares generally displayed a quiet trend in the absence of buying interest. The outlook for jute goods has been bearishly assessed with the end of the two month old strike in Pakistani jute mills. It is apprehended that sacking will once again be confronted with competition from the Pakistani industry. Birla was a steady spot on interested buying and gained some ground on the week's trading to be placed at Rs 38.25 on Thursday. Anglo India was done at Rs 180 with Kinnison at Rs 105.

Engineering shares were generally subdued and were influenced by fluctuations in Indian Iron which most of the time moved within a narrow groove. On Thursday the scrip opened at Rs 25.28 and moved within narrow limits to close unchanged on balance at Rs 25.28. Jessop was done at Rs 25.62 while J. K. Steel was fractionally better at Rs 17.81. Texmaco was lower on balance at Rs 25.10.

Tea shares continued to be neglected as investors are disappointed at the lower prices realised at the auctions. With production showing an uptrend and with increasing competition in world markets the outlook for exports has become somewhat obscure. Not unexpectedly sugar shares are not in favour with investors. While the new selling prices are considered unremunerative, the prospects for increased output are also not bright as it is feared that sugar factories will not be able to

get adequate cane supplies in competition with manufacture of gur and khandsari who are able to pay higher prices for cane as they are not subject to controls as the organised sector of the industry.

Miscellaneous shares were largely dull. Dunlop Rubber was however better at Rs 30.56 against previous closing of Rs 30.12. Hindustan Motors after earlier easiness rallied to Rs 16.31 but still lower on balance on the week's trading. Indian Aluminium reacted to Rs 30.20 from Rs 30.50 as did Kesoram to Rs 23.50 from Rs 23.87.

Durgapur Steel

During November the Section Mill of Durgapur Steel Plant broke all previous records by producing 22,878 tonnes at 135 per cent of its rated capacity against the previous best of 22,350 tonnes in March this year. Many daily and shift records were also established.

During the month the rated capacity outputs were exceeded in Blast Furnaces and Blooming Mill besides the Section Mill. The number one Blast Furnace produced 1,765 tonnes of hot metal on November 22 surpassing all previous daily records of production for any individual Blast Furnace.

Coke Oven production was according to the programme. Output in the Steel Melting Shop at 93 per cent of the rated capacity was an improvement over the last three months. The Merchant Mill output though lower in tonnage than last month included several difficult and thinner sections. The principal production statistics for November are as follows:

	Tonnes
Coke	125,896
Hot Metal	112,528
Pig Casting Machine Output	43,022
Steel Ingots	80,824
Blooming Mill Charge	
Weight	80,062
Section Mill	22,878
Merchant Mill	14,490
Sleeper Plant	4,602
Total Despatches	107,176
Despatch of Saleable Iron and Steel Products	100,268

First Asian to Receive IRI Hancock Medal

Dr D. Banerjee, Director and Technical Adviser, National Rubber Manufacturers and Inchek Tyres Limited, Calcutta, has been awarded the Hancock Medal for 1964 for his outstanding services. The Institution of the Rubber Industry London who awards this honour to one outstanding personality each year in recognition of his services in the technical field, is the largest and oldest technical institution in Rubber Industry in the world. An M. Sc. in Applied Chemistry of the Calcutta University and a Ph. D. of the London University, Dr Banerjee is acknowledged as a top ranking personality in the rubber industry of the world.

1788
THE E.I.D. PARRY GROUP
1964

THE HOUSE THAT THOMAS PARRY BUILT

Founded in 1788 as a small trading firm, Parrys have served the country well and truly for 176 years.

The remarkable progress made over more than one and three-quarter centuries has resulted in the E. I. D.-Parry Group of today, comprising nine companies of substance—all making important contributions to the nation's economy.

The strong position it has achieved has given the Group courage and confidence to expand its resources to meet the country's diverse needs in fertilisers, sugar, confectionery, sanitaryware, acids, chemicals, industrial and potable alcohol, etc.

1965.

—Editor.

Without Prejudice

When governments issue statements which merely emphasise the obvious, one has perforce to go behind the words in suspicion of ulterior aims. Nobody needs to be told that the location of the fifth steel plant requiring an investment of hundreds of crores of rupees and coordination with so many other plans and programmes under the five year plans "will be decided on economic and technical consideration alone." Or even "the decision on the site will be that of the Government and that Government's choice will be based on a consideration of all available data and advice".

There may be need for some reassurance that the location proposed in the studies made in the Goa-Hospet, Visakhapatnam and Salem regions are all under detailed study in consultation with the Anglo-American consortium; and it is not known precisely that the consortium will offer advice as to two of the best possible locations in these regions. But one cannot admit the implication in the Government's expressions of the hope that "no unhealthy controversy will be imported into this issue in the future". For it is implied very definitely that the plea for a steel unit in any of the sites was in the nature of a controversy and that the present official statement should suffice to rid the atmosphere of the unhealthy effects of a controversy. It is only in respect of Salem that the advocates of locating a steel plant in this region have for years been emphatic in the expression of their views. But before the Dastur Report on the proposal was made known to the public, these views were natural expressions of a desire that the industrial backwardness of the South and its remoteness from the big steel centres in the country should, if it were possible, be made up by utilising the region's natural resources of iron ore and lignite not only to supply steel for these areas but also provide an essential basis for genuine development for some partisans of an extreme kind who had in most cases their affiliation with separatists political factions, were out to deepen suspicions of unfair treatment of the South by the Central Government. But others were quite aware of the numerous and weighty technical considerations involved and always desisted from any kind of acrimonious controversy. The Madras Government, for its part persisted, with remarkable courage and in the face of the repeated disappointment and discouragement, in expert examination of the various issues connected with the project, the prospects for which were definitely improved when the Neyveli Lignite Corporation got into stride. The Dastur Report gave

the project an altogether new complexion by pointing to economies which had not been thought of earlier.

In the light of what is being done to the Bokara project nobody would rush to the conclusion that the project as drawn by Messrs Dastur and Company is altogether perfect or flawless and that it would be perverse not to order its immediate implementation. The authors of the report have themselves indicated many points requiring detailed examination. But while it is necessary to await the results of enquiries conducted or being conducted by foreign experts and by agencies whose collaboration will be necessary it is certainly unfair to suggest that in spite of the absence of any preliminary examination in respect of the other projects, the Salem project should be deemed by the public concerned to be on the same footing. It is quite conceivable that after the proposed studies the Goa-Hospet or the Visakhapatnam project or possibly, even both, may reveal advantages which might tilt the scales decisively against Salem, if as the Government statement indicates only two more sites are to be chosen. But there are hardly any indications of such overwhelming advantages. And it was soon after the publication of Dastur Report and at a time, when by, contrast, little or nothing had been done for the rival projects by way of preliminary examination that the Minister of Mines brought the Salem project under a heavy cloud. The affirmations to the contrary of some Madras Ministers and Union Ministers from Madras hardly sufficed to improve the position. The statement of the Chief Minister of Madras that Salem Steel might even be taken up as a State Project was welcome, despite the tricky issues that such a step might give rise to.

It would be wrong to anticipate the findings of the Anglo-American consortium. But it is difficult to imagine circumstances which can outweigh the economies in transport and the advantages of utilising Neyveli lignite which the Salem project indisputably has. The economic and technical considerations on which, the Government of India affirm, their decisions will be based must include the fillip which Salem steel will undoubtedly give to the industrial development of this region. Regional development and balanced development of different regions is an aim which the Government has always professed in drawing up their plans. But the fact remains that big projects cannot be distributed equally among the different regions with a view to making up the disparities in this development. At

the same time, where it is possible to stimulate the growths of industries by locating interdependent or mutually helpful projects which in their turn will bring more industries into being as a matter of course, the Government should be guided by the gains to the economy at a later stage of the development that is possible and can be clearly envisaged, and not the differences indicated by cold calculations made with myopic vision.

The industrial development of Madras has reached a point when it can respond most satisfactorily to the stimulus of a steel manufacturing unit within the region and all that it means is assurance of supplies of steel and other advantages. Now that the Madras refinery has moved out of the cloud of doubt and hesitancy, and the Tuticorin project has been inaugurated by the Prime Minister, it is possible to envisage further industrial development on the lines chalked out by the techno economic survey conducted by Dr P. S. Lokanathan. The main industrial complexes indicated by the survey can be given a good start. Though the Salem Steel project is sound enough taken by itself, its value to the country and to the region should be considered in a wider setting and longer view.

Looking to the East

Following a trade agreement with Japan in 1959 there has been a desire on India's part to develop commerce with East Asia. Even South Korea falls within the ambit surveys connected with Indian exports. Currency depreciation in Indonesia or Laos or South Vietnam may limit optimism about the immediate future. And it is clear that removal of import curbs in Japan promises more than the opening of trade with Burma to which India was the chief supplier of textiles and many manufactures before the war.

Political changes have altered permanently the direction of trade and it is evident that the STC too cannot hope for much by way of barter trade in view of the Burmese Government's desire to engross foreign trade. Competition from Japan and China remains a formidable obstacle to early expansion even in Malaysia and it is obvious that in regard to tea or coffee, India will have to reckon with Indonesian competition. The old trade in raw cotton with Japan depends largely on the surplus of short-staple cotton available in India and the present advance in price is not calculated to enlarge exports of cotton raw or waste. In regard to jute fabrics or sugar, the export performance may improve if production for export increases as expected after the setback in 1963. The export of capital in order to reinforce trade by local investment is dependent on several factors. However the estimate that a rise in trade in 1963-64 is part of an emerging pattern offers a foundation for a new drive to lift export from the rut. Expert advice linked with extra help for publicity through regular displays may shape the future course of trade. An increase in trade with Taiwan or Vietnam may not be so significant as a lift in exports to Hong-kong that supplies other countries.

The export of capital goods to Ceylon together with technical aid may be regarded as an interesting possibility. The political background is certainly important in any appraisal and India's present need for rice imports may stimulate efforts to push Indian

exports to Thailand as well as Burma. The Emergency in India may require a special effort in making Ceylon and Burma useful customers because trade may inspire goodwill and restore good intentions. Tariff changes in Thailand, Malaya or Ceylon may compromise prospects to some extent, and the need to be fully competitive in price and quality has been repeatedly stressed.

The adverse balance of trade with Japan aims from the progress of India's own plans and the case for increasing sale of steel scrap or pig iron is now plain enough.

That few significant changes have been recorded in 1964 is inferable from the trade figures except that in the first half the value of exports to Japan was higher than the value of India's imports just as in the case of Singapore. The disappearance of trade with China may stimulate India's trade with other Asian countries and a growing demand for rubber or metals may influence imports with India though the 1964 figures afford no basis for conclusions that show how trade actually moved. In 1964 exports from India went up but the Asian markets accounted for only a small part of the increase and the conclusion that India's disadvantages as a high-cost manufacturer persist cannot be avoided.

The important consideration is that the political background in relation to Burma or Indonesia which are impressed easily by Chinese achievement—atomic or other. And trade pacts ensuring a supply of rice, copra, tin count for less than the pressure to which Indians are subject in Indonesia, Ceylon or Burma. The official analysis does not notice at all the imponderables in the foreign trade situation after 1961 and it is clear that while Pakistan is a major rival as regards cotton or jute, the outlook for trade with Japan is improved by collaboration arrangements made with Indian industrial ventures. There is no change for Japanese textiles but it is clear that sale of textile machinery present chances to Japan because India's export requirements demand the installation of more and more automatic looms. The sale of textiles to the UK has been curtailed by surcharges so that India must turn to other markets including Asian for sale of cloth.

The old trade in coal has to be revived because Japan is a regular importer of coal and India has a surplus at present. The sale of vegetable oil cashew kernels, coffee, pepper etc., is connected with prices ruling in India and the present boom militates against any increase. And a long depression in the Mangalore tile industry is a reason for assuming that old lines are not so dependable as presumed in the field of foreign trade because Malaysia has curtailed building. The co-prosperity sphere that Japan once aimed at, falls within the Indian markets but the strong come back in trade has been made by Japan (offering preparations to Burma and others) and not by India which has reduced imports while Japan has raised her own imports to keep step with the needs of developing countries.

There may be no particular lesson for India but all the same, it will be agreed that foreign aid has governed the flow of trade and Asian countries are not likely to look beyond Europe or the USA. The ISI or other marks may stimulate exports up to a point but the lowering of costs and prices in respect of every export item from bicycles to sewing machines is a condition for success in trade with Asia, because there are alternative sources of supply and the import restrictions are as tight in most countries as in India at present.

Aluminium for Copper . . .

The shortage of indigenous mineral resources for the manufacture of non-ferrous metals, particularly copper, zinc and lead, has provided the impetus to the search for substitutes. Aluminium is an obvious choice as India has substantial reserves of basic raw materials required for the production of this metal, though current production is far short of requirements and imports will have to continue for several years to meet the growing requirements in various sectors of industry. A programme of substitution of copper by aluminium in the electrical industry was taken up in 1960 and a start was made with the Electric Cable Industry. At present most of the types and sizes of cables are being made with aluminium. The initial difficulties experienced in the manufacture, installation etc. have been successfully overcome. The Indian Standards Institution has also made a valuable contribution to the success of the substitution programme by developing revised specifications for aluminium cables in a very short time. Public utilities and Government departments have adopted aluminium cables wherever practicable. Copper is used only for special types such as Railway signalling cables, control cables, mining cables, flexibles etc. A new area of substitution indicated at the last meeting of the Development Council for Non-ferrous Metals is the aluminising of high tensile steel wire used for ACSR cables.

In support of the use of aluminised wire it has been pointed out that aluminised steel core wire is superior to galvanised steel core for power transmission and distribution purposes and that, from the long-range point of view, there may be substantial saving in foreign exchange, provided all the requirements of aluminium could be met from internal sources. But the point to be considered is whether there will be any saving in foreign exchange so long as aluminium has to be imported to meet overall requirements, and the quantity of zinc required for galvanising core wire is insignificant. The foreign exchange costs of conversion of existing galvanising plant and for expanding production of aluminium have also to be included in the reckoning. It is also estimated that aluminised core wire will cost ten per cent more than galvanised wire, which means higher cost of cables and transmission and distribution lines. The superiority claimed for aluminised cables has to be proved in practice. Even in the USA, aluminised core cables have been in use only for a few years and a longer period of trial is necessary to decide whether the higher cost would be justified by longer life of the aluminised cables.

In view of the fact that the saving in foreign exchange will not be realised in the short run, the programme for setting up aluminising plants for core wire will be justified only if it is clearly established that there is an export market for the cables produced with aluminised core wires. If further study of the various factors involved shows that conversion to aluminised cores is worthwhile, the existing galvanising plants could be converted on a staggered basis. There is no profit in forcing the pace of substitution when the balance of advantage is not clearly evident.

World of Finance

BANK RETURNS

Further Expansion of Currency

The return of the Reserve Bank for the week ended 11 December shows that Active Note circulation has been expanded by Rs 37.56 crores to Rs 2510.53 crores. Rupee Securities have risen by Rs 30 crores to Rs 2216.13 crores. Foreign Securities are again unchanged at Rs 85.46 crores. Rupee Coin is lower by Rs 1.20 crores at Rs 100.88 crores. Cash in the till has been drawn down by Rs 8.76 crores to Rs 9.70 crores. Investments have risen by Rs 24.94 crores to Rs 142.45 crores. While deposits of Central Government have declined by Rs 33.25 crores to Rs 53.05 crores, those of State Governments have gone up by Rs 12.33 crores to Rs 17.82 crores. Scheduled Banks' deposits at Rs 93.55 crores show a rise of Rs 4.32 crores. Borrowings by State Governments are lower by Rs 12.79 crores at Rs 31.63 crores but those of Scheduled Banks are higher by Rs 5.04 crores at Rs 23.30 crores. Balances held abroad are lower by Rs 0.55 crore at Rs 10.84 crores.

The Return of the State Bank of India for the week ended 11 December shows that Advances are again higher by Rs 7.86 crores at Rs 370.58 crores. Deposits at Rs 661.19 crores are lower by Rs 6.04 crores. Investment in Giltedged at Rs 257.06 crores is lower by Rs 26.87 crores. Other Assets at Rs 45.38 crores are higher by Rs 10.97 crores. Cash Balances, including money at call and short notice are higher by Rs 5.37 crores at Rs 33.86 crores. A sizable rise in Borrowings to Rs 8.21 crores from Rs 1.24 crores and a decline in other Liabilities to Rs 26.46 crores from Rs 28.76 crores are the other marked changes.

The return of the Scheduled Bank for the week ended 4 December shows that Net Deposit resources have declined by Rs 26.90 crores. Net Demand deposits are lower by Rs 17.39 crores to stand at Rs 1321.10 crores., while net Time Deposits show a decline of Rs 9.51 crores at Rs 1374.39 crores. Borrowings from the State Bank have again gone up markedly by Rs 11.14 crores to stand at Rs 68.10 crores. Debt to the Reserve Bank also shows a similar uptrend, the increase being Rs 14.06 crores. Cash balances, including money at call and short notice show a fall of Rs 13.20 crores at Rs 248.53 crores. Investment in giltedged, have declined sharply by 36.72 crores to Rs 802.54 crores. The total of advances is substantially higher by 49.48 crores at Rs 1784.34 crores.

Chartered Bank

The Chartered Bank is acquiring a 40 per cent interest in the ordinary share capital of

the Mutual Acceptance Company Limited of Sydney, Australia, which is to be increased to A£3,203,725. The total cost of this investment to the Chartered Bank will be A£1,922,235 (£1,537,788 sterling), including a premium of 50 per cent. The Mutual Acceptance Company Limited was incorporated in 1936 and at present is the largest Australian finance company without bank backing. The company with its subsidiaries provides a full range of hire purchase and general finance facilities and has offices in Sydney, Melbourne, Brisbane, Adelaide and Canberra.

Sterling Crisis and After

Britain is still licking the wounds of the bad mauling it has had in the economic field in the last few weeks. The details of the rescue operations by the European Central Bankers are being retailed by the daily Press with a considerable sense of drama. The events of the fateful Wednesday have been set down in highly melodramatic terms by the papers with Lord Cromer cast in the role of a reluctant hero doing a grimly competent job of saving the pound from death. These accounts, especially that part that implied a complete and abject abdication of responsibility by the Government to the Bank with a pathetic request to be saved, have subsequently been found to be highly coloured. What has followed the rescue operations has been a kind of uneasy lull. The pressure on sterling has certainly eased somewhat but nothing like complete confidence has been restored. Already there is talk of a longer term loan to Britain to take the place of the emergency 3000 million dollar aid. The standby credit has been used up for repayment of earlier Basle credits and part of the American portion of the emergency aid would also appear to have been already substantially committed. Besides, the short term nature (contrary to earlier belief) of the 3000 million dollar aid has tempted some people to look longingly for a

long term loan like the Keynes arranged after the war. The Paris correspondent of the New York Times reports American initiative in arranging a two billion dollar loan maturing at the end of seven years. The Continentals who are being sounded for providing part of the funds are frigid and persons in authority in Britain did not dare talk about it too openly for fear of further psychological damage. Many in Britain, including Lombard of the Financial Times, do not like it at all and consider it inexpedient and they are probably right.

Meantime, at the recent meeting of the OECD, Britain, though not exactly on the mat, was curtly told that it cannot expect to obtain uncomplaining acquiescence for its setting right its balance of payments difficulties without jeopardy to its own growth potential at the expense of others. Britain's rather plaintive reply to this was that the measures it has taken is far more restrictive of domestic activity than the continentals imagine. This probably is true enough. Even the Economist, "as the dour Statist noted, has had to concede that" it is now clear that economic growth in Britain will be tailored, curbed and restrained to whatever the defence of the £ at 2.80 dollars will allow." It is thus more generally accepted that the "requiem for 4 per cent growth rate has already been sung. The political repercussions of this circum tenate to Labour fortunes are still rather obscure. There is much back bench dissatisfaction among Labour though as the Economist noted articulations of this is surprisingly muted so far.

Mr Callaghan's long awaited statement on the Corporation Tax and the Capital Gains Tax answered many questions (especially on the proposed Capital Gains Tax) but raised many more (especially on the Corporation Tax). Clarificatory questions in Parliament are slated for the next week. Tax consultants are busy unravelling the mysteries and next week should yield a clearer picture. Mr Callaghan has asked for representations of difficulties and anomalies which he has promised will be taken into account when the actual proposals are framed.

Notes of the week

MONDAY
TUESDAY
WEDNESDAY
THURSDAY

IGC

Breaking the Crust

The International Geological Congress, now in session in New Delhi, has provided the opportunity for the biggest get-together of geologists from all parts of the world. The occasion should also enable our young geologists who have done excellent work—it was the preliminary work done by them, and not mere luck, that led to the discovery of oil in Cambay and Gujarat—to sharpen their prospecting techniques. The visiting geologists should also find many things of interest in the data accumulated by one of the world's oldest geological surveys. Since the Indian Geological Survey was established 114 years ago, it has made valuable contributions to the different branches of geology, both in the collection of data as well as in the elucidation of theories. Dr D. N. Wadia, the President of this session of the International Geological Congress, has pointed out that the doctrine of Isostasy, which was announced in Calcutta in 1852 "has proved a fructifying concept in explaining several anomalies in the dynamics of crustal

deformation." The discovery of Gondwana land, which produced a fertile crop of theories, came two decades later. What will be of more immediate interest to the audience of distinguished geologists will be the new data brought out by recent aero-magnetic, gravity and seismic surveys regarding the morphology of the Gangetic plain to which Dr Wadia made a passing reference in his address.

Like the phenomena which geologists investigate under the earth's crust, their findings are also covered by a thick crust, in this case of technical jargon, which keeps the theoretical aspects of the subjects beyond the reach of the layman. That probably is one reason why drilling for oil, not to speak of an oil strike, is big news, while the geologists whose preliminary investigations have made this possible, seldom make the front page of daily newspapers, even when they hold an international congress. The GSI will not lose its scientific stature if it brings out a readable account, in non-technical language, setting out its achievements and indicating their bearing on the economic development of the country.

The maintenance staff constantly on the move. Because the overhead wires run cross-country, most of the patrolling has to be done on foot. Considering the variety of hazards to which the lines are exposed, it is a wonder that breakdowns are not more frequent than they are. The public are, however, more keenly aware of the inconvenience caused by the breakdowns than of the promptitude with which the maintenance staff goes into action and, working round the clock, reopens the lines to traffic.

The prospect of uninterrupted communications will improve considerably, and the burden on the maintenance staff will be lightened to a corresponding extent, when the overhead wire system is replaced by underground coaxial cables, and by microwave links in mountainous regions where laying and maintenance of overhead wires or underground cables is costly and difficult. Under a project launched by the Post and Telegraph department, laying of 5000 kilometres of coaxial cables, providing underground links between important cities, is expected to be completed within eighteen months. A number of microwave links are also expected to be completed in the same period. With the completion of the project, the department should be in a position to offer better and more reliable service.

The levy of a terminal tax will not be readily commended because it is felt that it forces up prices. It is all right to collect tax on timber or tiles but a tax on grain or fodder brought in from outside will hit consumers even more than traders. Whatever the reason for enhancing taxes, the continuance of terminal duties or octroi is viewed as objectionable and the Corporation may well content itself with a profession tax applicable to income-tax payers because collection then would be easy. The whole case for extra grants required by a growing city can be strengthened by a vigorous tax effort but this too must take into account the pockets of poverty found in every city. Yet progressive taxation may be justified by reference to the scale of rents paid in many shopping centres.

The City Commissioner's advocacy of municipal trading for opening cinemas, filling stations and restaurants may excite doubts. The competence of the staff for difficult and responsible tasks may be doubted because in the lines suggested private competition is keen and widespread. The Wattal committee favoured entry into profitable sidelines but it is certainly open to argue that getting good films for exhibition is not easy. And the municipal authorities may not find it easy to run restaurants that depend on public patronage because of the food difficulty today. Developing sites for sale is of course, legitimate and the corporation might help to arrest a further ascent in land values even while betterment levy can be used to absorb a part of the unearned increment.

What is important to notice here is that the metropolis calls for planning and a budget that meets the demands of growth is only a beginning. An extra tax on water and drainage postulates an improvement in supply or service. An appeal made for efficiency of administration must be related to the revenue proposals.

SHARE VALUATION

Many Points

Of more than ordinary interest to keen investors is a research paper by Mr N. D. Joshi on share valuation. The usual method is to value the tangible assets reduced

by loans and liabilities shown and divide by the number of shares issued. The other method is to relate the rate of return to the average rate in the industry. The third method is to link net assets with income. But far safer is the market value based on dividend and earnings over a period of years. This is ascertainable from the Reserve Bank of India's analyses though it is not very safe to go by averages. However, most people know that shipping is not as good as sugar. In the market valuation of shares, many considerations enter and goodwill or patents may be as significant as fixed assets. When fixed assets are large, as compared with current assets, the real value may be higher than the market value and a share may be valued on potential, not actual, income realised.

The institutional borrowings made by a company may limit its attractions in respect of a take-over. Tax liability and other items enter into careful calculations of interested parties though in the case of planting it is the opportunity open to management—not the replacement value of fixed assets that guides bids for control.

The differences as between mining with its many risks and cotton mills that can supplement big units will be apparent but one thing is plain. The take-over bid is not common in India and the desire to acquire free reserves etc., is always restrained by the fear of a government that may refuse to grant permission. The presence of blocks with voting power attached is also an element in the situation and when the Directors hold a majority of shares issued, the market valuation is normally not governed by the dividend paid. A further point to note is that a foreign connexion confers extra advantages and the blue chips known to our investors are the Indian affiliates of big firms like Guest Keen Williams.

USSR

Development Above Defence

While the USA has denied promptly any intention to cut Defence spending other than the closure of redundant bases at home, the Soviet Union budget has announced the new leaders' readiness to enhance a revenue surplus by a modest reduction in arms expenditure. The seven year plan is revised so as to enlarge civilian production and spending. The aim is to move on to a new society of abundance by making the State and the Communist Party work for raising the standard of living.

Competitive coexistence calls for the enlargement of consumer goods required for Russia where not housing alone is scarce and dear. The declared purpose to catch up with USA implies an increase in trucks and tractors for large-scale farming as well as fibres and footwear. Whether the new 7 year plan

Exports Increase by 10.23 Per Cent in April-September, 1964

Exports during the first six months of 1964-65 have registered an improvement of a shade over Rs 38 crores when contrasted with the relative figures for the relevant period of the previous year. Exports of all Sections have moved up with the sole exception of Animal and Vegetable oils and fats which are placed lower by Rs 4.55 crores at Rs 4.83 crores.

Notable increases are indicated by the following:

Food, placed higher by Rs 11.16 crores to Rs 126.18 crores, thanks primarily to enhanced exports of coffee, tea, cocoa, spices and manufactures thereof to Rs 72.31 crores from Rs 63.27 crores.

Crude Materials inedible, except fuels, drawn higher by Rs 4.46 crores to Rs 65.04 crores, largely because of a rise in exports of metalliferous ores and

metal scrap to Rs 26.53 crores from Rs 22.67 crores.

Lastly, Manufactured Goods classified chiefly by materials, up by Rs 21.66 crores to Rs 172.06 crores, benefited chiefly by an upsurge in exports of textile yarn, fabrics, made-up articles and related products to Rs 140.23 crores from Rs 125.52 crores.

We have indicated in our issue dated 12 December (see page 1077) that imports during the first six months of 1964-65 were drawn down, as compared with the preceding year, by Rs 64.41 crores at Rs 553.09 crores against Rs 617.50 crores. With the increase in exports besides, the balance of trade deficit in April-September stands sizably lower at Rs 140.83 crores against the gap of Rs 243.49 crores in the corresponding period in 1963.

EXPORTS	(In Rs Crores)		
	April to Sept.		
	1964	1963	Change
Section 0—Food	126.18	115.02	+11.16
Section 1—Beverages and Tobacco ...	18.37	17.59	+ 0.78
Section 2—Crude Materials inedible, except fuels	65.04	60.58	+ 4.46
Section 3—Mineral Fuels, Lubricants and related materials	6.02	4.80	+ 1.22
Section 4—Animal and Vegetable oils and fats	4.23	0.38	— 4.55
Section 5—Chemicals	4.70	3.34	+ 1.36
Section 6—Manufactured Goods classified chiefly by materials	172.06	150.30	+21.66
Section 7—Machinery and Transport equipment	4.01	2.68	+ 1.33
Section 8—Miscellaneous Manufactured articles	2.30	8.65	+ 0.25
Section 9—Miscellaneous Transactions and Commodities, NES	2.15	1.67	+ 0.48
Total ALL SECTIONS	412.26	374.01	+38.25

envisages a rise in foreign trade also may be in some doubt but the emphasis laid on continuity of policy suggests readily that Russia's trade with non-communist countries will be stimulated by any cut made in the arms budget, for the sale of oil, steel or ships for overseas customers may in future be easier.

The trade outlook may change in view of a budget surplus forecast by Mr Kosygin because in place of China other countries will enlarge their trade with Russia and they may hope for enhanced off-take of spices, tea or coffee, not metals in which Russia happens to be more or less self-sufficient. An increase in consumer spending may be easy, if larger power supply helps in the production of rayon or aluminium. But what is more important is that Mr Khrushchev's rule that austerity cannot be kept up when there is no external threat is being followed by the successors who now put development above defence, chiefly because no threat to East Germany or Hungary

is foreseen and the ideal of bigger profits from bigger output in the State factories is accepted by M. M. Breznev and Kosygin as part of new order in Russia.

NEWSPAPER INDUSTRY A Case for Better Deal

The newspaper industry because of wage awards feels entitled to complain now that newsprint supplies to meet rising circulation and the demand of advertisers must secure extra imports. In spite of the Finance Minister's reference to a grim situation, the Indian and Eastern Newspaper Society has urged that the limit set to circulation increase must be removed.

The alternative source of supply—the Government owned Nepa Mills does not appear satisfactory to the Society that has pointed out that in point of price and quality,

the indigenous material is unsatisfactory. But substitution is incapable and the recourse to printing paper offers a way of escape. Whether all newspapers can afford substitutes is the major question raised. The differences in circulation and revenue must be kept in view and old established papers feel they have a case for additional supply and the public interest is cited as a reason for reviewing a decision that is probably based on experience. Nevertheless, a protest has been made at Madras after the formal meeting and the newspapers argue that allocation of foreign exchange must be made since education of the citizen is the sole aim of the Press.

The fact that newspapers are helped by import control and tariff applied to waste paper deserves mention. The newspaper industry for a decade has enjoyed the advantage of selling waste paper as packing paper at home and the gain has been real. The sale of newsprint, when it is surplus, has been another item of revenue. But more important is the growth of Government advertising paid for at higher rates for space purchased. The favours long received have apparently not ensured gratitude and the most prosperous papers are now laid in protesting that the rationing of newsprint is unfair. No reference has been made to import cuts applicable to more important and sensitive industries and the Press overlooks the emergency as a reason for curtailing dollar imports. The trend in newsprint production and world prices may be reckoned favourable but the point is that others have not pleaded for special consideration whereas the Press, which is hardly a public industry in which outside investment figures, has been emphatic in arguing that sacrifices are one-rous. Whether the Press is a privileged body may be in doubt but it is clear that big prosperous papers went to keep ahead of their rivals and to finance expansion of equipment by rising revenue and reduced unit costs.

COMPANY PROFITS Contributing Factors

The pattern of profits in big companies is not shaped entirely by volume of sales or assets. Analysis of 50 big UK Companies made, by the Investors Chronicle (reproduced in Company News and Notes on 1 December) makes it clear that improved results in 1963 are not related wholly to assets and rising costs affected the profits for BICC as well as big steel companies. When or where a monopoly element helps, profits have gone up as in the case of Joseph Lucas supplying a variety of components to the motor industry. The best showing as regards profit in 1963 is made by Distillers Ltd., because the large whisky exports constitute to large profits and if chemicals have not helped

TELECOMMUNICATION A Variety of Hazards

Annoyance is natural when business is dislocated by the breakdown of telecommunication lines. But the equally natural impulse to curse the Posts and Telegraph department when a breakdown occurs would be resisted if there is understanding of the magnitude of the task performed by the department in keeping the lines open, often in the most difficult circumstances. Telephone and telegraphic messages, as well as teleprinter and telex traffic, in our country are carried over the open wire system extending over thousands of miles in difficult terrain. To the natural hazards, like floods and blizzards which levy a heavy toll, must be added the ravages caused by human agency. The prevailing shortage of copper has aggravated the problem.

The annual loss caused by theft of copper wire has been estimated at about ten to twelve lakhs of rupees. The various hazards to which the lines are exposed keep

so far the company has a real advantage in export trade not only to the USA.

The 1962 and 1963 results compared in the case of Courtaulds indicate clearly that strong recovery followed the failure of the takeover bid by ICI and the new board has tried to get farther into fibres and textiles by turning investments into working capital. The strong recovery trend is apparent in the case of Leyland Motor owing to its dominant position as a maker of commercial vehicles. Nevertheless, the rate of profit is not so high as in the case of British

Motor Corporation. Why Rootes accepted the offer of Chrysler for a part of its share capital may be inferred from the fall in sales during 1963 and the resulting squeeze profits, though it is clear that an entry of nil against ratio of profits to sales or assets used may be wide of the mark.

Stability of profits at a low level in aircraft manufacture or steel is a consequence of heavy investment. But high profits are coupled with risks and the newspaper combine (International Publishing Company) earning 6.4 per cent as profit on sales is so well placed as

Imperial Tobacco though the profits of the latter were influenced by the cancer scare. The influence of Mr Close who has turned the footwear industry into a chain store affair can be discerned in the emergence of Sears Holdings as a truly major company though it did not get its way easily with Barratt. What is more important is the effect of integration not only in flour milling and baking. The trend towards bigger units that can expand with assured profits has continued and if earnings have not consistently risen, the point to note is that overseas in-

come has kept up profits for British Petroleum as well as Unilever. In contrast to India, the steel companies in the UK are less important as regards size or growth than presumed, and mining is represented by Rio Tinto, Consolidated Zinc and not by the South African mining houses. The many questions provoked may lead to a long survey of performance or prospects but it may be noted that Brooke Bond, well set in the tea trade, is as well placed as any big brewery or British Oxygen whose status invited the notice of the Monopolies Commission.

Automotive Springs are made by The Indian Standard Wagon Company who have 45 years' experience in the manufacture of all types of springs.

Made from the highest quality raw material using the most up to date methods and plant, ISW Automotive Springs are tested quality products.

After considerable research a "Fatigue Resistant" quality of Springs has been developed which will give an extended dependable life under the most trying conditions of service.

SHIPPING

A Tale of Woes

The woes of the shipping companies in India are many and varied but the leisurely manner in which Government tries to tackle them is disappointing if not bewildering. The statement of Mr Dharamsey M. Khatau, chairman of the Scindia Steam Navigation Company Limited, circulated along with the report and accounts for 1963-64 to the shareholders deals with the problems which adversely affect the finances of the shipping companies. In the overseas trade the company had to confront difficulties such as inflated costs and wasteful competition from companies which are outside the Conference Lines, while in the coastal and adjacent trades its major head ache, apart from enhanced operation costs, was the irregular and inadequate availability of cargoes. Over and above these factors, the company was subjected to a good deal of embarrassment and financial loss by extraneous causes such as delay in ports, enhanced charges in stevedoring, cargo handling etc, the frequent strikes and go slow policy adopted at the port. The cumulative effects of all these on the company are obvious and as Mr Khatau pointed out Government should initiate with expedition requisite measures for maintaining efficiency at ports and making labour more productive by offering them sufficient incentives.

Despite these disturbing matters, it is gratifying that the company was able to record good results during the year under review. Besides, it has added eight vessels to its fleet and has placed orders for three 15,000 ton vessels for its overseas trade. The acquisition of these vessels will certainly go a long in yielding better results in the coming years.

*

KENYA

Bright Prospects

Though Kenya is not so well placed economically as Tanzania the new republic may hope that foreign aid will help to give minerals and plantation products a push. The one-party State does not depend on a single item like cocoa and may count on fair prospects for tea and coffee. The Arabs, Britons or others in Kenya are now in a different position and much depends on their willingness to help in Kenya's progress after the acceptance of racial equality. The failure of moves towards federation in East Africa is not due wholly to tribal loyalty but to the circumstances that the political and economic situation is shaky chiefly because the exodus of foreign capital in recent years has laid bare the inability of East Africa to develop on its own momentum or initiative.

The position is not improved by recent African intervention in the Congo's affairs and the trend in commodity prices may discourage

foreign capital. Nevertheless, Kenya can hope to raise more food for a population that has got to apply the Swynnerton plan for the rehabilitation of agriculture. The use of simple tools and better seed may help, though climate is a big factor in crop production and Kenya has known both floods and droughts in recent years. The extinction of party strife based on tribal rivalry and the retention of Mr Tan Mboya in the Cabinet promise something better for Kenya than the obscure destiny of Zanzibar or Burundi. There is a frontier dispute with Ethiopia which must be settled quickly and

the new republic must show at home that the rule of law is strong enough to prevent subversive influence raising their head. The African experience after liberation has been different from the Asian in many ways and the significant or obvious differences may govern the flow or volume of foreign aid. What is important is the welfare of the tribes uprooted by the settlers. And denunciation of Portuguese colonialism must be replaced by positive measures for steady economic growth—of small enterprises producing consumer goods as also proper control of grazing by superfluous cattle.

INTERNATIONAL FAIRS

A Useful Guide

International exhibitions and fairs have of late gained tremendous popularity and the enthusiasm evinced by the interested parties in partaking in them is indicative of the benefits derived thereon. Unsurprisingly enough, the advanced countries of the world still dominate the scene but the speed with which the developing nations are manoeuvring to impress their mark is commendable indeed. Evidently, the number of such fairs and exhibitions is on

the increase and the 1965 International Directory of Fairs and Exhibitions (copies of which can be obtained from Graphointer, 4, Stadiou Street, Athens (133), Greece) has been timed well in advance to serve the purpose for which it was published. The Directory, which runs to 370 pages, provides a wealth of information to those engaged in industry, commerce, travel and tourism about 1,000 trade fairs and exhibitions as well as specialised shows from 56 countries regarding attendance, exhibit space, participation, general features and organisers' addresses. A noteworthy feature of the Directory is that it is appropriately and adequately illustrated and all the events slated to take place in 1965 are listed under geographical, chronological and classified sections for ready reference. Obviously spurred by the world-wide acclaim the 1964 Directory, the first of its kind, received, the publishers have endeavoured to

make the present issue authentic to the possible extent, though they have advised the users to contact directly with the managements of the shows for obtaining confirmation of details regarding individual fairs and exhibitions. Nevertheless, the usefulness of the Directory as a reference book will never be contradicted.

*

THE FINLAYS A Familiar Name

The Finlay magazine for autumn 1964 contains an illuminating notice of the three mills that make Finlay fabrics famous. The Bombay branch of James Finlay runs Swan, Finlay, and Gold Mohur and at least Finlay in the forward list is quite familiar to many investors in India. The Swan mill at Sewree started in 1905 and a public company was

floated in 1908. The yarn mercerising plant came in 1936 and a modern cone-drying plant was installed in 1938 when the dye-house was enlarged to meet the needs of the three mills. The introduction of automatic looms in 1940 was accompanied by the arrangement made with Firestone Tyre for production of tyre cord and canvas. The Swan mill took up rayon and nylon cord after 1952 and cotton cord has been displaced since 1959.

As the first mill driven by electric power Finlay mill in Parel has a distinction, apart from its 63,000 spindles providing yarn for powerlooms also. A modern bleech house meets the needs of of the group and the cotton printing machinery has been extended and improved. The Finlay mills undertake the production of cotton thread in partnership with

English Sewing Cotton and use locally the same trade marks.

The export trade enables the Finlay group to obtain Egyptian and Sudanese cotton for shipping high counts while PL 480 supplies of US cotton have helped. But there is a limit to exports and fabrics made from imported cotton, with labour charges 25 per cent higher in Bombay than in Lancashire are not competitive in world markets. This is certainly suggestive of a limit to textile exports. Finlay's shops in the major cities sell direct to customers. There is a modernisation programme to replace all Lancashire looms by automatic looms and warping and winding machinery has to be replaced while new sizing machines have been ordered to fit in with the expansion of capacity approved by Government. Laboratory tests to assist quality control help to keep Finlays to the fore while the departures seen in verticalisation are an anticipation of current trends in the Lancashire industry.

BORDER DISPUTE

Cambridge Realism

A sentence from Mrs Joan Robinson's article 'India Wake up!' It is later than you think' must set up wide echoes because it is clearly derived from a direct knowledge of Chinese strength. Mrs Robinson has not disguised her view that negotiations to end the border dispute are inevitable and the Indian Government must now keep in view the Chinese advance in modern weapons. The unpalatable truth that defence and development in India will not lead to parity in military or economic strength is implicit in Mrs Robinson's survey of the affair that has dragged on for two years.

There is no use pretending that an unarmed victory has been secured by China but the main point to consider is that an arms race means a threat to peaceful advance in India and India's decision not to enter on manufacture of atom bombs is certainly practical, for it is impossible for a poor country to enter into a competition with China. The state of Chinese agriculture or industry must not blind one to the fact that China's renewed dominance in Asia is wellfounded in history or geography and the new countries like Malaysia or Burma must keep in mind the end of British empire and the militancy of communism.

The call to India to wake up must not suggest that Mrs Robinson's spiritual home is Peking. What she has tried to emphasise rightly is that the economic task in India is far more urgent than the defence of prestige and keeping up the race with China in industrial development is more important than spending more on defence—even with foreign aid made available.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as
the wind
To blow on whom I please"
—As You Like It

IT is Christmas again, but Christmas this year is marked by shortages and scarcities everywhere. I hear tell that, for example, that the ordinary crepe paper festoons and bunting, due precisely no doubt to being in short supply, are prohibitively expensive. Spirits, of one kind and another, indigenous and foreign, are hard to come by. Calcutta, I am afraid, has even been cheated of the gaiety we have known at this season, of a top-notch cricket match being played. Zest and joie de vivre, at least as far as I can see, are rather less conspicuously present. It adds up, doesn't it, to a certain bleakness—and yet of course this is the time of cheer, when we should be counting our blessings. Enough, then, of gloom; let us proceed to mark what achievements there have been in anno domini nineteen sixty-four.

*

Our greatest blessing, surely, has been the manner in which this country coped with the tragedy of Jawaharlal Nehru's passing away. The world little expected, except for the few abroad aware of India's political maturity, that in the immediate days, weeks and months of an India without Nehru we could be able to avoid chaos and disorder. Even more impressive was the calmness with which we set about choosing his successor, and this in the midst of some genteel but by no means unseemly politicking. Then, the person of the successor we did choose is eminently satisfying—there is a quiet, gentle dignity in Mr Lal Bahadur Shastri that does us proud. Thus, sedately and without fuss—count this a blessing—India, reconciled itself to a Nehruless India.

Nehru's legacy, not necessarily intended, included a bunch of problems that intruded themselves upon us while yet the Shastri Cabinet was trying to find its feet. Any single one of them, had they occurred in a country where democratic principles are not as deeply rooted as in India, would have served to defeat the Government. By far and away the greatest trouble that beset us was in the realm of supplies of foodgrains for the populace. It is no good arguing that the Government was equal to this task. But fortunately, as I see it, the shortage was marginal and accentuated in industrial and metropolitan and urban areas. Even in this shortage, and the ensuing high prices, there is, if you care to look for it, the silver lining of a blessing. I have been

holding the view for some time that foodgrains are steadily tending to be insufficiently available for the urban consumer, despite increase in production and wholesale imports under Public Law 480, because the agriculturist himself is now consuming a larger proportion of his produce. If this hypothesis is correct, then the implication is that the undernourished and starving masses of the people who live on the land have at last started eating better—and did we not want to achieve precisely that objective? Secondly, the very fact that prices of foodgrains have risen means that mass purchasing power has improved—and wasn't that, too, one of our most important objectives?

*

We have, next, our almost pathological preoccupation with corruption. It is not as if in Nehru's time we were a pure and lily white nation; but the outcries have been oftener and criticism more vociferous and trenchant. The awareness is thus the greater—thanks to Mr Nanda?—and we also seem as a result to be trying to root it out. Naturally no solution in the short-term is possible. And New Delhi, like the capitals of other countries, will undoubtedly have its own fair share of the five per-centers. It may even be that we in India will have to face up with this problem for a very long time—the scope for corruption increases in proportion with the number of controls or matters requiring licences of one sort or another. Otherwise, and count this a blessing, I fancy we are no more corrupt than any other peoples. But we seem suddenly to have acquired the nasty habit of going in for mass-scale washing in public of dirty linen.

*

I think it a distinct gain that we have finally set about remonetizing unaccounted money. That TTK has these past few months repeatedly laid stress on unaccounted money; that there have been not a few raids all over; that the trend is now on for spreading the tax net to cover those whose earnings are in the taxable range—all these can only mean that, in due course, with collections improving, the long-suffering, honestly tax-paying assesses will be afforded some relief.

*

The Crathorne Committee's report on the statutory absurdities about what can and cannot be done by British citizens on Sun-

days has been both solemnly and irreverently received by the public. The present practice that permits films on Sundays but not plays, sale or "kippers" in a raw state but not cooked to be brushed aside as founded on nothing more than dead habit. The general emphasis is on basing the permissible and impermissible activities on the footing that Sunday should be different from the week-days but not for reasons of religion or morals but for secular reasons of the need for breaking a pattern and for rest. Sundays, if the committee's typically English compromises were adopted, be more like the Indian Sundays, tho', of course, no overt gambling or professional sport would still be possible on Sunday.

*

The very inconclusiveness of Mr Wilson's talks in Washington has been generally considered as a triumph. Wilson is attempting a tight-rope walk trying to perform the almost impossible trick of satisfying his own extremist left wing followers and win De Gaulle's acquiescence in the MLF. He has reported greater support between the US and Britain, but all that has probably happened is the US willingness to let Britain "sell" the idea of MLF to Europe. There is considerable ambiguity, if not equivocation on the question of 'German finger' on the trigger and on the precise nature of

British commitment on "mixed manning". But then in this, as other things, time has been bought which at the moment is important for Mr Wilson, in order that he may recapture something of his 'pre-crisis' bounce.

*

The cement industry in the South has forged ahead large owing to the careful development of India Cements and the managing agents' own record can be glimpsed in the growth of a company that is responsible for adding about a million tons to India's cement output. That is why N. T. S. Narayanaswami's appointment as Sheriff of Madras met with general approval for it is his quietly efficient guidance that helped the company to grow up to real maturity. New business interests may well lay claim on N. Narayanaswami's energy but his rare initiative in the industrial field marks him out among the leaders of business. Of course, it is not a big noise in Chambers of Commerce but is content to devote his attention to company affairs with the satisfaction spared by those who can see that he is not only a banker transplanted to the more competitive field of industry but a negotiator whose own success in sponsoring a new shipping venture marks him out as one with vision plus the capacity for the essential spadework.

Symposium - A Letter from Delhi

Finance for Machine Tools

MEASURES for the provision of longterm finance to the machine tool industry, as well as to other machinery manufacturing industries, it is learnt, are under consideration of the Government of India. In this connexion discussions are going on with the newly started Industrial Development Bank. This is reported to have been indicated at the last meeting of the Informal Consultative Committee of Parliament for the Ministry of Industry Heavy Engineering.

Lack of rupee finance, it has been pointed out, has been one of major handicaps of the machine tool industry as of other machinery manufacturing industries. Investors are put off by the long gestation period which is the rule in this group of industries, which means that no returns on the investment could be expected for many years to come. The credit institutions have yet to be organised to provide long-term finance. This is one of the reasons for the large gap between the capacity for machine tool manufacture which was licensed at the beginning of the Third Plan and the capacity that has actually been set up.

Against the total capacity for manufacture of machine tools worth Rs 50 crores per annum which has already been licensed in the private sector, installed capacity does not exceed Rs 11 crores per annum. The production of these units in 1963-64 was about Rs 8.24 crores. With the increased allocation of foreign exchange for import of components, it is expected that production would rise to Rs 13.71 crores in 1966-67 and it is also hoped that these units will be able to produce machine tools worth Rs 21 crores in 1970-71.

The requirements of machine tools during the five years covered by the Fourth Plan have been estimated at Rs 149 crores. On this basis a capacity target for production of tools worth Rs 131 crores per annum has been indicated. Out of this, the factories of Hindustan Machine Tools will have a total capacity of Rs 50 crores per annum. HMT is expected to have, by the end of the Third Plan, five factories in production with planned capacity of Rs 25

crores and actual production of Rs 16 crores worth of machine tools per annum. Out of the five units, three are already in production—two in Bangalore and one at Pinjore. Another factory, at Kalamassery (Kerala) started production in October, 1964 and is expected to produce the first machine tool by the middle of 1965. The fifth factory under construction in Hyderabad is scheduled to go into production in October 1965.

The expansion programme of HMT envisages the setting up of five more units during the Fourth Plan. Three of these will be duplications of the units at Pinjore, Kalamassery and Hyderabad. The remaining two units will be new factories. All the five factories will be financed by HMT out of its internal resources without any financial assistance from Government.

New Units

As already indicated, with the completion of the expansion programme, HMT will have a total capacity of Rs 50 crores. The Heavy Machinery complex at Ranchi, which is being set up by the Heavy Engineering Corporation with Czech assistance, is expected to start production by 1966-67 and to have an ultimate capacity of Rs 10 crores per annum. The second credit agreement with Czechoslovakia includes provision for the establishment of two new units for manufacture of machine tools. The details are now under discussion with an expert team from Czechoslovakia.

Apart from the lack of rupee finance and shortage of raw materials, expansion of the machine tool industry in the private sector is hampered by the difficulty of obtaining the know-how, particularly for the sophisticated types of machines. With a view to overcome this handicap, it was indicated that Government are following a policy of encouraging Indian manufacturers to enter into collaboration agreements with well-known foreign firms. It was also indicated that Government would be prepared to approve special terms in cases where know-how is particularly difficult. Financial participation by the foreign collaborating firms is also encouraged, as that will ensure their continued participation in the Indian enterprise.

Government will also be prepared to relax the condition regarding the proportion of indigenous content.

Normally Government insists that manufacture should commence with 80 per cent indigenous content, increasing to 100 per cent in three years' time. In cases involving intricate know-how, where it is difficult to commence production with such high indigenous content, the condition is relaxed. In this regard Government is adopting a flexible policy.

Udex Unit at Koyali

A contract for the establishment of an 'Udex' extraction unit at Koyali (Gujarat) was signed early this week on behalf of the Oil and Natural Gas Commission and of NUOVO PIGNONE, a subsidiary of ENI of Italy, who will do the detailed engineering of the plant and supply main process equipment. A contract has already been entered into with the Universal Oil Products Company of the USA for the use of their patented Udex process.

The unit, when it goes into production early in 1967, will extract about 33,000 tons of benzene and 14,000 tons of toluene per annum from the catalytic reformate emanating from the Gujarat Refinery now under construction at Koyali. The benzene will be used for the manufacture of certain petrochemicals like nylon, in the petrochemical complex which is proposed to be established near the refinery.

The foreign exchange cost of about 1.2 million dollars will be financed out of the ENI credit to the Government of India. The total cost of the plant has been estimated at about Rs 1.42 crores.

Spare Capacity for Ammonia

Future planning of fertiliser plants should include provision of ten per cent spare capacity for supply of ammonia to other manufacturers of fertilisers. This is one of the recommendations made by the Development Council for Inorganic Chemicals which reviewed the progress of the fertiliser, alkali and salt industries at its meeting in Delhi on December 14. This recommendation endorses the suggestion made by the Fertiliser Association in their memorandum to the Planning Commis-

sion, that arrangements should be made, while setting up fertiliser factories in conjunction with oil refineries, to reserve part of the production of ammonia for manufacturers of complex fertilisers in the private sector.

The Council has also indicated that immediate action should be taken to arrange procurement and supply of sulphur and rock phosphate for the fertiliser industry and of mercury for the caustic soda plants which are being installed. This will entail provision of additional foreign exchange, which, however, is unavoidable if production is to be maintained.

The Council has noted with satisfaction the progress registered in the installation of new plants for manufacture of caustic soda. As regards distribution, it has been proposed that a certain quantity should be made available to the Directors of Industry in the States for distribution to small scale industries, which experience difficulty in obtaining their requirements under present arrangements.

The cost of production of caustic soda is linked with the economic utilisation of chlorine which is obtained as a byproduct in the manufacture of the alkali. The Council has decided to arrange a Symposium on the utilisation of chlorine and development of chlorine-based products, at an early date.

The decisions of the Government of India on the Tariff Commission's recommendations regarding continuance of protection on five items, namely, caustic soda, soda ash, calcium carbide, titanium oxide and dye-stuffs were announced early this week. Except in the case of the last item, dye stuffs, for which protection at existing rate of 20 per cent ad valorem is to continue, Government has not accepted the Commission's recommendations for continuing the protective tariffs.

In explanation of the negative decisions, it is stated that, having regard to the progress made by these industries, and to the fact that, in present circumstances, there is likely to be no unhealthy competition from imports continuance of protection is not considered necessary.

In formulating their recommendations the Tariff Commission have no doubt taken into account the present position regarding

imports and the fact that they are restricted or totally banned in some cases. The Commission have, however, pointed out that import restrictions dictated by economic expediency cannot be regarded as a suitable alternative to duty protection and the continuous watch over an industry's progress that goes along with the grant of protection.

In regard to caustic soda, attention has been drawn to the views of the Alkali manufacturers' Association that the producing units are undergoing a process of development and have, therefore, to be nursed and protected. The Directorate General of Technical Development had also taken the view that continuance of protection was necessary for implementing an integrated programme of development. Agreeing with these views the Commission has pointed out that the industry has still to make up a lot of leeway and continuance of the scheme of tariff protection would facilitate its regulated development.

It may be pointed out in this connexion that, under a scheme of protection, the affairs of an industry would come up automatically for periodic review by the Tariff Commission. On the other hand, the decision to discontinue protection is in conformity with the earlier decision to decontrol the prices and distribution of a number of industrial materials including the de-protected commodities.

Price Control of Commercial Vehicles

The Lok Sabha was informed last week that the following points in favour of decontrol of prices of commercial vehicles and jeeps were made by representatives of the automobile industry at a meeting of the Development Council for Automobiles:

- (1) Supply of commercial vehicles and jeep is currently approximating to demand and, in view of continually increasing production, it is probable that demand would not outstrip supply in future. The consumer would, therefore, be protected against irrational price increases by the competition which, it is anticipated, would develop progressively.
- (2) Figures on which demand is based are to a considerable extent unrealistic because middlemen are registering orders with dealers with a view to reselling the vehicles at a premium. This unhealthy state of affairs would disappear if controls are lifted with considerable benefit to the consumer.
- (3) The Commercial Vehicles Industry is prepared to commit itself to self-discipline with a view to ensuring fair prices to the consumers; and it is considered unlikely that the removal of price control would result in any serious price increases.

- (4) It is illogical to control the price of an end product when no control exists over the price of components and units purchased from ancillary manufacturers.

The Development Council which considered the proposal of the automobile manufacturers for price decontrol has not yet made any final recommendations to Government in this regard. Before taking a final view of the matter, the Council has requested the Association of Indian Automobile Manufacturers to furnish more informative data regarding demand, production, the extent to which prices would increase in the event of decontrol and the manner in which control of prices by the manufacturers would be exercised. It was also the majority opinion of the Council that the removal of distribution control should precede the removal of price control on commercial vehicles.

Garden Reach Workshop

The Rajya Sabha was told by the Minister of Defence Production on Tuesday last, that the Garden Reach Workshop will shortly undertake the manufacture of eight to ten diesel-engine driven Road Rollers. The machinery required for the initial phase of

SEARCH FOR MINERALS

With the necessity for the rapid growth in the industrial and agricultural sectors in the economy of the country, the demand for minerals and mineral based raw materials has also greatly increased. To meet this increasing demand for minerals, it is necessary that the development of the mineral industry proceeded in a co-ordinated manner. Due attention was paid in this respect in the first three Five Year Plans and it is now proposed to further augment the efforts in this direction in the Fourth Five Year Plan.

FOURTH PLAN PROJECTS

The following are some of the important mineral projects which are proposed to be taken up in the Fourth Plan period:

IRON ORE PROJECTS:

- (a) Project to produce 2 million tonnes of pellets for export based on Bailadila deposits.
- (b) Projects to produce 6 to 7 lakhs tonnes of pellets based on Kiriburu and adjacent deposits for supply to indigenous steel mills.
- (c) Project to produce 3 million tonnes of iron ore from Malangtoli block in Orissa.
- (d) Project to produce 7 million tonnes of ore from Bellary-Hospet area in Mysore.
- (e) Project to produce 1 million tonnes of high grade ore from Barajamda area.

COPPER PROJECTS:

- (a) Integrated copper project to produce 15,000 tonnes of metal based on Rakha-Room-Sideswar Blocks in Singhbhum District, Bihar.

production has been obtained and that for subsequent phases is still to come. According to present estimates, the only components to be imported would be Ball and Roller Bearings.

Shipping

Details of tonnage acquired, or under order during the Third Five Year Plan were given in a statement laid on the table of the Lok Sabha on December 15, in answer to a question asked by Mr R. Ramanathan Chettiar. The original target laid down for the Third Five Year Plan period was a gross acquisition of 3,75,000 GRT, against which the gross acquisition already made is 5,83,000 GRT over and above 93,000 GRT delivered against the Second Five Year Plan Orders. In addition, about 6,90,000 GRT are already on order and another 4,00,000 GRT are expected to be ordered before the end of the Third Plan.

The statement also gave details of tonnage acquired by individual shipping companies in the private sector with loans sanctioned during the Third Plan period from the Shipping Development Fund. Sixteen private sector shipping companies had already acquired 3,45,099 GRT and had on order or under construction another 2,92,428 GRT.

- (b) Project to produce 10,000 tonnes of copper from Kolihaan near the Khetri deposits in Rajasthan.
- (c) A project to establish a pyrite floatation plant and a sulphuric acid plant to produce 700 tonnes of sulphuric acid and also for recovering other by-products of the Khetri Copper Smelter.
- (d) A project to produce 2,000 to 3,000 tonnes of copper metal from deposits in the neighbourhood of Agnigundala village, Guntur District, Andhra.
- (e) A project to set up a smelter of 30,000 capacity based on imported concentrates.

LIMESTONE:

A project for mining of limestone of SMS Grade from promising blocks at Bela and Bankui near Rewa.

FLOURITE:

A project for working the Amba-Dongra deposits in Gujarat and Dungarpur deposits in Rajasthan.

MAGNESITE:

A project for working the Almora magnesite deposits in UP.
A project to exploit gypsum deposits near Nagaur in Rajasthan.

MANGANESE:

- (a) Setting up manganese beneficiation plants.
- (b) Expansion of production capacity of MOIL.

ZINC:

- (a) A project to set up zinc smelter of 30,000 tonnes capacity based on imported concentrates (with Polish collaboration).

- (b) Establishment of two zinc smelters of 50,000 tonnes capacity based on imported concentrates.
- (c) A project for developing Zawar mines deposits in Rajasthan for expanding the production to 50,000 tonnes of metal per annum.

During the Third Plan period, the important mineral projects which were taken up for execution were:—

- (i) The Kiriburu Iron Ore Project in Orissa-Bihar for production of 2 million tons of sized ore for export to Japan.
- (ii) The Bailadila Iron Ore Project in Madhya Pradesh for an annual production of 4 million tons of sized ore for export to Japan.
- (iii) The development of the copper deposits at Khetri for a production of 21,000 metric tonnes of copper metal.

KIRIBURU

The Kiriburu Project is a multi-purpose project involving the development of the mine; construction of railway link lines to connect the mine to the port of Vishakhapatnam and provision of facilities at the port of Vishakhapatnam including the installation of a mechanical ore handling plant. To meet the foreign exchange requirements of the railway and port development programmes, a credit of \$21 million from the US President's Asian Economic Development Fund was obtained. This project has already been completed but the commencement of export at the rate of 2 million tons has been delayed somewhat on account of the delay in the installation of the mechanical ore handling plant at the Vishakhapatnam port.

BAILADILA

The Bailadila project is under implementation and is expected to commence production by the end of 1966. To meet the foreign exchange requirements of this project for purchase of equipment and machinery from abroad, Japan has offered financial assistance to the extent of \$21 million.

As for the Khetri Copper Project, an application for a loan of Rs 9 crores for the foreign exchange cost of the project was made in September, 1963, to the Export-Import Bank of United States of America. Since the scope of the project is enlarged, it is proposed to make a revised application for loan from the Exim Bank during the financial year 1965-66. The application made in September, 1963, has been withdrawn.

Market NEWS and Trends

JUTE

Blurred Outlook for Jute Goods

Wide fluctuations characterised trading in the futures market this week reflecting the speculators' difficulty in assessing the outlook for jute goods. B Twills February opened last Thursday quite firm at Rs 145.75 and the week's highest level was touched on the same day with the rate at Rs 147.25. After dipping to Rs 145.50, the rate was finally placed at Rs 146.10. The incentive has evidently been derived from the spot market where fair business has been reported done in wool-packs from Australia for all deliveries up to June as also some scattered business in hessian with both UK and US. But in the subsequent five days, the trend in the futures market became rather quiet on selling pressure evidently brought about by the changed supply position of goods in world markets following the resumption of production by the Pakistani jute mills. The closing quotation was down by Rs 1.50 on Friday and by close on Saturday a further sizable decline took place when the quotation was finally placed at Rs 142.50. Starting lower at Rs 142.90, B Twills Feb. improved on bear covering and after touching a high of Rs 144.10 closed higher on balance at Rs 144.00. Sentiment however was depressed on Tuesday on liquidation by bulls and bear selling for all positions in the spot market. The quotation once again fluctuated widely before finally marked down to Rs 142.60. The trend again changed with prices developing a firm undertone following reports of enquiries for substantial quantities of B Twills delivery December-March from Nigeria. B Twills Feb. opened on Wednesday with an overnight gain of 60 P and at one time was placed at Rs 144.65 to close at Rs 144.10.

The fluctuations in Feb. Hessian however were comparatively within narrow limits. As in the case of B Twills, the week's highest level was reached on the first day itself (Rs 50.68). The lowest level was touched on Saturday at Rs 49.60. As against the week's

opening rate of Rs 50.38, Feb. Hessian closed on Wednesday at Rs 50.10. The comparative steadiness of hessian is attributed to reports of good overseas inquiries for this construction and scattered business with US almost throughout the week.

In the spot market B Twills December was subjected to heavy fluctuations. Opening at Rs 155.40, the rate declined to Rs 153.65 and then to Rs 152.25 on selling pressure. The rate however recovered to Rs 153.50 only to be pushed down to Rs 152.10. On Wednesday sentiment showed considerable improvement with the quotation taken up to Rs 154.00 following indications of a large order from Nigeria in B Twills. Spot hessian 40" X 10 oz opened the week at Rs 49.90 and after moving within a range of 60 P closed at Rs 49.60.

An easier undertone prevailed in the jute market although sellers were by no means prepared to discount rates despite their keenness to sell. On a review of the jute position the Jute Commissioner has issued compulsory maximum quotas for a total quantity of 2 lakh bales for the week ending 19 December. The order also specifies the maximum limit of stock holding in respect of each

mill as on 19 December. It would appear that the anxiety on the part of holders to sell has stemmed from the easier trend in the jute goods market. Although imports in agencies continue to be in the environs of one lakh maunds only, holders seem to have become somewhat nervous latterly owing to a growing belief that supplies will turn out to be plentiful following the fact that official estimate of the jute crop in West Bengal is sizably larger this year at 36.7 lakhs bales as compared with last season's 32 lakh bales.

According to the final forecast by the Statistical Bureau of the West Bengal Government, jute yield in the State this season is expected to reach a level of 36.7 lakh bales, a record figure, as compared to 32 lakh bales produced last year. The area under jute cultivation has also registered an increase from 11 lakh acres to 11.2 lakh acres. The total increase in the output is attributed to the rise in yield per acre from 2.97 bales last year to 3.21 bales this year.

JUTE GOODS PRODUCTION:

The increase of 6,500 tonnes of jute goods in mills' production in November is directly the result of an increase of 8 hours in the

number of hours worked by them to 200 hours during the month. Of the total output of 104,500 tonnes, hessian accounts for 43,500 tonnes showing an increase of 800 tonnes over the previous month. Production of sacking which is placed at 46,800 tonnes is substantially higher by 4,500 tonnes, showing the increased emphasis that has been placed on the output of this category following heavy demand for spot goods that is still continuing. Production of carpet backing is higher by 600 tonnes at 8,200 tonnes while other goods also show a gain of 600 tonnes at 6,000 tonnes. At the corresponding month of the previous year, total production amounted to 103,800 tonnes with the mills working for 208 hours. While output of hessian was placed at 45,400 tonnes, that of sacking was at 42,900 tonnes with those of carpet backing and other goods accounting for 8,100 tonnes and 7,400 tonnes respectively.

TEA

Rising Production of North Indian Tea

Production of tea in North East India during November, 1964 increased by 21.54 million lbs. to 72.53 million lbs. compared to the output in the corresponding month of last year, according to the Indian Tea Association. The output during the current season up to the end of November 1964 amounted to 619.42 million lbs. against 548.93 million lbs. in the corresponding period of last season, showing a rise of 70.49 million lbs. Indications are that this season's North Indian tea crop will reach a record level. Such en-

couraging increase in production, it is apprehended, may tend to induce a weaker trend in the auctions. Speaking at last week's meeting of the Calcutta Tea Traders Association, Mr J. C. Brock, has pointed out that the weaker trend in the November and December auctions is due to the growing fear among traders that the increased supply may be in excess of actual demand. Upto October however sales have proceeded smoothly and prices were maintained at a satisfactory level. That is because there was very little carry over from the previous

season's crop which was small and there was a reduction in the quantity of tea offered for sale in London as a consequence of the slow and threatened strikes in the London Docks. The position now is that during November and December the trend has weakened and since the bulk of the crop still remains to be disposed of, the outlook is somewhat obscure. Referring to the prospects in the coming months Mr Brock says: "We can only hope that world demand will have increased sufficiently to absorb this larger crop and in which case it may be anti-

pacipated that prices will be firmer later in the season".

Referring to the efforts at maximising export earnings from Tea, the chairman of the Calcutta Tea Traders Association has pointed out that it should not be assumed that increased production will automatically result in increased export earnings. Already this season we are witnessing that the prospect of larger supplies is having the effect of weakening demand with prices realised being also lower. If this trend were to persist, the possibility is that though the quantities exported may

rise, export earnings will decrease. However, if export earnings are to increase, it is only possible if world demand increases appreciably so as to absorb the large supplies that will be available from all sources. In order to expand world demand it will be necessary to increase the popularity of Indian tea abroad. While all efforts should be made to induce more people abroad to drink tea, it will also be necessary to provide a cushion for our tea in times of slack world demand. In this view it will be wrong to continue the present policy of not encoura-

NATIONAL RUBBER MANUFACTURERS LIMITED was incorporated eighteen years ago. Today, the House of NRM represents the largest single unit in India manufacturing Industrial and Mechanical Rubber Products. Its activities include production of Cycle Tyres and Tubes, Rickshaw Tyres, Railway Rubber Fittings, all types of Hoses, Industrial 'V' Belts and Fan Belts, Transmission and Conveyor Belting.

A second major expansion programme envisages increase in production capacity of Cycle Tyres and Tubes and also the manufacture of new items like P.V.C. Conveyor Belting and Reclaimed Rubber. This expansion is not just the result of the need to meet the increased national demand for NRM products, but also to fulfil the ever-widening export commitments.

Recently, the House of NRM sponsored INCHEK TYRES LIMITED—the first wholly Indian-owned Automobile Tyre Company. Marketed under the brand name "INCHEK" these tyres have already won widespread consumer acceptance for quality. The company is already planning the expansion in production capacity from 1,80,000 to 3,00,000 each of tyres and tubes and 6,00,000 kgs. camel back annually.

Inchek Tyres Limited

In brief these are the activities of the House of NRM. They represent NRM as a progressive organisation within the growing economy of the country. They demonstrate that the House of NRM is ever-attuned to the contemporary needs of the nation.

NATIONAL RUBBER MANUFACTURERS LTD.

THE HOUSE OF NRM

ging, if not actually discouraging, internal consumption. As a result of this policy internal consumption is already showing a decline. Mr Brock rightly thinks that this trend could be a serious matter for the Indian tea industry because only when internal consumption is maintained at a level commensurate with the rising level of production, it will be possible to prevent any undue decline in prices.

Offerings in leaf sale No. 30 at Calcutta amounted to 78,397 packages and there a good general demand. Although enquiry for Plain orthodox Broken was good, prices were lower. Support for the Fannings were also good but price realisations were firm to dearer. The market for medium and good orthodox teas showed an irregular trend with prices tending to be easier, with BOPs being a weak feature. CTC offerings came to an active market with Plain descriptions realising firm prices. Medium and Good CTCs sold well at firm to dearer prices with the Broken receiving better support than the Fannings. Demand for some selected lines was quite good. The fibrous CTCs were a strong feature, especially the better liquoring kinds. Whole leaf was only slightly easier and Darjeeling teas realised prices almost on a par with previous markings. The following quotations are inclusive of excise duty: Clean Plain Peko Rs 4.90 to 5.10; Plain Orthodox BP Rs 3.70 to 4.00; Plain Orthodox Fannings Rs 3.90 to 4.10; Plain CTC BP Rs 4.20 to 4.40; Plain CTC Fannings Rs 4.00 to 4.20; Medium CTC BP Rs 4.50 to 4.70; Medium CTC Fannings Rs 4.30 to 4.50; Medium Assam CTC BP Rs 4.90 to 5.20; Good Assam CTC Fannings Rs 4.60 to 5.00.

At Dust sale No 29 in Calcutta, a total of 33,895 packages was on offer and there was a strong and more general demand than in recent weeks. Except poor liquoring fibrous sorts which were lower, all CTC descriptions sold at around previous levels. There was keen competition for Good CTC teas. The market for orthodox descriptions was slightly easier. Legg Cuts were also slightly easier but found ready buyers. The following quotations are inclusive of excise duty. Plain orthodox Dust Rs 3.70 to 4.20; Medium Assam Dust Rs 4.20 to 4.70; Legg Cut Dust Rs 4.40 to 4.65; Plain CTC Dust Rs 4.50 to 4.70; Medium CTC Dust Rs 4.70 to 5.05; Good Assam CTC Dust Rs 5.70 to 6.20.

COTTON Trading in Futures Suspended

The trading in cotton futures market came to a standstill for the major part of the week as the ruling contract, Jarilla March,

pierced the ceiling level of Rs 775.00 per three quintals. Though the East India Cotton Association suspended official trading in the contract, the upswing in price continued unabated and the contract was lifted to Rs 780.00 on Saturday consequent on the sustained support from upcountry centres.

The spot market at Sewri displayed steady conditions with prices exhibiting a tendency to scale higher levels. Spinner interest in available lots continued to flow but the cultivators were reluctant to dispose of their stocks which led to hardening of prices. The mills were clamouring for re-quisition of cotton at or below official ceilings but their efforts proved abortive. A plea was also made for the reintroduction of compulsory survey of cotton after it had reached the mill premises with a view to bringing ready cotton prices.

The Indian Cotton Mills' Federation reiterated its plea for ensuring adequate supplies of cotton to mills at prices within the official ceiling or to readjust the multipliers on the basis of the current prices of cotton. Government is, however, determined not to make any departure from its stand, and an official spokesman is reported to have stated in Bombay that it will not adopt any of the measures suggested by the ICMF. He explained Government's intention is to stabilise prices and is bent upon stabilising prices rather than permit speculative activity to thrive to the detriment of consumers. All these matters will be taken up for discussion in the meeting of the representatives of cultivators the trade and cotton textile industry scheduled to take place on Thursday. It is also learnt that the meeting will take stock of the working of the statutory control scheme which was enforced a few weeks ago.

US CROP

According to a penultimate estimate of the United States Agricultural Department, the US cotton crop during the current year is expected to aggregate 15,356,000 bales against last year's output of 15,327,000 bales. The area under cotton cultivation is put at 14,834,000 acres against 14,843,000 bales in the preceding year.

EGYPTIAN CROP

According to the second official estimate, the Egyptian cotton crop during the current season will be 98,91,000 cantars against 94,31,000 cantars as estimated earlier. Total acreage under cotton cultivation is likely to approximate 16,10,863 feddans. The second official estimate reveals an improvement in the output of all the four categories. Production of extra long staple cotton over 1-3/8" is placed higher at 44.52 lakh cantars against 42.82 lakh cantars, long medium at 24.89 lakh cantars (23.31 lakh cantars) medium at 28.23 lakh cantars (27.22 lakh cantars) and

Scarto at 1.27 lakh cantars (96,000 cantars).

Reports from Ahmednagar district indicate that long staple Deviraj cotton crop will be marked down considerably on account of the attack of pests. Total loss to the cotton cultivators is roughly placed at Rs 5 crores. The cotton growers allege that the seeds supplied to them by the agriculture department were defective and loan facilities from the co-operative societies were insufficient. An early probe into these complaints by the authorities will be helpful.

The Bengal Deshi cotton crop in Punjab and Rajasthan is expected to be in the environs of 4 lakh bales, out of which nearly 2.15 lakh bales have been already marketed.

PIECEGOODS

A significant development in the cotton piecegoods market in Bombay during the past week was the heavy booking for exporting to the countries behind the iron curtain, with USSR, Hungary and Yugoslavia accounting for the bulk of the transactions. Demand from shippers from those destinations covered a wide range including printed furnishing fabrics, printed poplins, printed flannels and ready made shirts. This development in the cloth market was gratefully greeted by the mills which were agitating over the relapse in the export front and the earlier expectation of a reduction in prices for exports came to nought.

Though the UK showed some interest in the usual qualities brisk offtake by that destination before the Christmas is unlikely. Demand from the United States continued to be encouraging but the marked disparity in prices stood in the way of any worthwhile transactions.

The recent disturbances has set the Sudanese to adopt a cautious attitude and, therefore, the business transacted with that destination was necessarily limited. Moderate business in grey furnishing cloth was done with the non-traditional East European countries.

The controlled varieties of mill-made cloth continued to be neglected while decontrolled items, especially superior varieties, attracted good buyer interest. Purchasers from upcountry centres paid little attention to stamped goods as most of them were available in the uncontrolled section. The mills, too, were anxious to dispose of their stocks of cloth under voluntary price regulation scheme.

Bihar, UP, Rajasthan and Assam were the prominent upcountry buyers in the market. Calcutta evinced only tepid interest. Inferior quality coating met with good demand obviously owing to the intensity of winter. Interest from upcountry centres was pronounced in flannels and drill while long-cloth was totally deserted.

OILS AND OILSEEDS Business at Standstill

In the Bombay Oils and Oilseeds market sentiment continued to be buoyant with bulls in full control of the situation. The weekly permissible limit in January groundnut of Rs 106.30 was reached toward the end of the previous week and since then, no forward trading was found possible. The hectic uptrend was due to the fact that import from Gujarat continued to be banned resulting in acute shortage of the commodity in the spot market. Although throughout last week, no forward deals in official trading took place, in unofficial trading the January contract continued to be quoted at higher levels, with the rate quoted as high as Rs 110.50 at one time. At that stage however the trade took active steps to prevent serious dislocation to further business and an unofficial committee was able to solve the tangle with success. It was agreed that all transactions should be squared at the rate of Rs 110.50. Commencement of forward trading in the next contract now awaits the meeting between the representatives of the trade and the Forward Markets Commission when terms and conditions for the April contract are expected to be discussed. In the case of linseed and castorseed futures also a deadlock prevailed as prices had pierced the weekly permissible limits. In the spot market, groundnut gained further ground on paucity of offerings. Towards close however, there were reports of fresh arrivals but the trend continued upward. Groundnut oil and Oilcake were also firm with rates showing further appreciation. Oilcake was particular strong with prices up by more than 30 points.

In Madras, groundnut prices were again firm although arrivals showed sizable improvement. The crop is moving quite fast as the rains are over. The high level of ruling prices cannot be said to be due entirely to consumer interest as buying is confined to Calcutta and vanaspathi interest. Even so, arrivals are absorbed as quickly as they reach the market. It is evident therefore that the continuing firm trend in Bombay and elsewhere has encouraged the hope that higher prices will not become untenable in the near future.

SPICES Sustained Buying in Pepper

Pepper prices in Bombay further firmed up on sustained buying interest in the spot section by shippers. The general belief in the trade seems to be that the demand from the US which is already quite strong will further strengthen in coming weeks. With

spot prices depicting a strong uptrend, the forward market prices gained substantial ground. It would appear that the tendency to slow down the movement of the commodity into the primary markets by growers in anticipation of further higher levels noticed for some time now will persist.

Total exports of spices from India in the first five months of the year increased to 38.3 million kg. valued at Rs 10.98 crores from 36.2 million kg worth Rs 9.21 crores in April-August, 1963. The total export value of pepper during April-August 1964 is Rs 1.92 crores against Rs 1.86 crores during April-August 1963, registering an increase of Rs 0.06 lakhs. The increase is significant in the case of Czechoslovakia (Rs 14 lakhs) and Rumania (Rs 12 lakhs). Export earnings considerably decreased in the case of UAR (Rs 16 lakhs), USA (Rs 10 lakhs) and GDR (Rs 10 lakhs). The reason for this decline is said to be due to higher price for Indian pepper compared to international price. In cardamom, there is an increase of Rs 36 lakhs mainly accounted by Kuwait (Rs 19 lakhs) and Saudi Arabia (Rs 7 lakhs). The total export value of Chillies during April-August 64 rose to Rs. 87.7 lakhs from Rs 23.4 lakhs during the same period in 1963. Turmeric has registered a phenomenal increase of Rs 50 lakhs. It is anticipated that the period April-September 1964 will continue to show a net increase of about Rs 50 lakhs in spices exports.

SUGAR Paucity of Stock Lifts Price

Steady conditions continued to prevail in the sugar markets all over the country, the main reason for such conditions being inadequate supplies. In Hapur the wide gap between the controlled price and free market price continues to prevail as there has been no improvement in the supply position. The persistence of ideas of scarcity despite the fact that all factories in UP have commenced production is attributed to the apprehension that cane supplies may once again prove to be inadequate in view of the stiff competition for the available supplies from gur and khandsari manufacturers who are in a position to pay higher prices than the sugar factories.

Gur prices too have steadied up in Hapur although arrivals continue to be on the heavy side. The sustained buying interest shown by several State interests is said to be due to the apprehension that some sort of control will soon be imposed on Gur. This fear has evidently stemmed from the repeated complaint of the organised sector of the sugar industry that unless the gur and khandsari

manufacturers are also brought under control, there is little hope of increasing the production of sugar to the desired level.

ADDITIONAL PRICE TO CANE GROWERS:

The Sugarcane (Additional) Price Fixation Authority has announced the additional or "deferred" price payable by the sugar factories located in Madras, Punjab and Uttar Pradesh (East) to the cane growers supplying cane to the factories during each of the two sugar years beginning November 1, 1958 and November 1, 1959 respectively.

Letters intimating the additional price payable by each factory in respect of the cane received by it during the two crushing seasons, viz. November 1, 1958 to October 31, 1959 and from November 1, 1959 to October 31, 1960, have been posted to the factories and cane growers' associations concerned. Awards in respect of remaining factories will issue shortly. Initial work for the determination of additional price in respect of the sugar years 1960-61 and 1961-62 is under way.

It will be recalled that the Sugarcane (Additional) Price Fixation Authority was set up by the Ministry of Food and Agriculture on July 1, 1963 to determine the additional price payable to the cane growers for each of the four successive years beginning November 1, 1958. The authority is composed of a Chief Cost Accounts Officer, Director, Sugar (Tech.) from the Department of Food, Ministry of Food and Agriculture and a nominee of the State Government in whose jurisdiction the sugar factory concerned is located.

NON-FERROUS METALS Weak Trend in Tin

A generally steady trend prevailed in the non-ferrous metals market except in tin which was distinctly weaker. The decline in prices is due to the growing belief that supplies will be quite adequate and even in excess. While local stock position is said to be satisfactory, imports are also expected soon. Paucity of supplies continues to impart a steady trend to copper but indications are that buyers are unlikely to go on supporting the firm trend. Zinc prices too are developing a sagging tendency as consumers do not

appear to be in urgent need of replacement. firm trend however continues to characterise trading in Lead on sustained buying interest from industrial consumers.

COFFEE

The receipts of coffee into the 1963-64 Pool upto 30-11-64 amounted to 68,720 (55,709) tonnes, comprising 25,400 (24,445) Plantation, 10,470 (9260) Arabica Cherry and 29,850 (22,004) Robusta, the figures within brackets indicating corresponding receipts last year. The arrivals of the 1964-65 crop have amounted to 235 (677) tonnes, comprising 225 (641) Plantation and 10 (36) Arabica Cherry, the figures within brackets indicating corresponding receipts into the Pool on 30th November last year. Including the coffees sold on 2-12-1964 the quantities sold for export out of the 1963-64 crop have amounted to 31,995 tonnes, comprising 17,050 Plantation, 5,182 Arabica Cherry and 9,763 Robusta. A quantity of 524 tonnes made up of 245 Arabica Cherry and 279 Robusta is earmarked for the export open auction on 22-12-1964. 3,100 (2997) tonnes of coffee, made up of 1,000 Plantation, 466 Arabica Cherry and 1,634 Robusta, was sold for the internal market during November 1964, bringing the total for January-November 1964 to 31,700 (31,074) tonnes, comprising 10,700 Plantation, 4,400 Arabica Cherry and 16,600 Robusta, the figures within brackets indicating corresponding releases last year.

SILK Prices Tend to Rise

Prices of Filature Raw Silk particularly of the state owned Filatures in Mysore state witnessed no change during the week ended 11th December, 1964. However Kisan Silk showed visible signs of looking up by moving from Rs 106.00 to Rs 107.00 per kg. A perceptible improvement was also noticed in the prices for Cottage basin silk with range of Rs 84.39 to Rs 98.00 per kg. swinging to Rs 85.98 to Rs 100.30 per kg.

Prices of superfine charka raw silk looked up to rule between Rs 87.03 and Rs 92.59 per kg. against the last week level of Rs 86.53 to Rs 90.95 per kg. Prices of all the three qualities also followed a similar upward trend. Prices of I quality raw silk ranged

at Rs 70.55 to Rs 77.16, II quality at Rs 60.14 to Rs 70.55 III quality at Rs 66.14 to Rs 70.55 and Dupion at Rs 24.25 to Rs 37.48. The upward trend was largely due to inadequate supplies of raw silk to the market and a comparative rise in demand from consuming centres like Kanchipuram, Salem to meet the seasonal demand for fabrics on account of ensuing Christmas and Pongal festivals.

Reeling Cocoons:

Though the silk prices indicated a rising trend the conditions in cocoon markets were not quite in sympathy particularly Sidlaghatta due to the poor quality of cocoons which did not favour the reeling industry with a good yield. However, Channapatna market was brighter than the other two areas. Prices of mulberry cocoons of Mugur variety were quoted at Rs 4.40 to Rs 4.44 exceptionally narrow range due to limited turnover. Sidlaghatta Rs 3.00 to Rs 5.50 per kg. whereas Channapatna market rose to rule at Rs 4.40 to Rs 5.25 per kg.

Seed Cocoons:

The prices of Foreign race seed cocoons showed an upward trend at Rs 23.00 to Rs 30.00 per kg. compared to the prices in the last week. Prices of Mysore race did not show any perceptible change. They ranged between Rs 6.00 and Rs 6.50 per thousand as against Rs 5.75 to Rs 6.19 last week.

Bhagalpur Market:

Prices at the Bhagalpur Market did not show any change.

Malda Market:

The prices of cottage basin silk in Malda market have come down moderately to rule between Rs 85.00 and Rs 95.00 per kg. and charka raw silk (Tana) at Rs 80.00 Rs 84.00 per kg. showed a downward trend. Prices of varna slightly declined at Rs 69.00 to Rs 72.00 per kg. The declining trend which was only marginal during the week under report was due to the expectation of a sizable harvest of Aghrayana Cocoon crop moving into the market in the course of this month. Prices of other varieties remained unchanged.

Assam Silk Market:

There was no perceptible change in the Assam Silk Market for eri and muga silk products.

Is this what lights my torch?

Yes, the electricity that produces the bright beam of a torch comes from the dry battery. And the torch is only one of many ingenious devices that work on 'packaged' electricity.

The many types of 'Eveready' dry batteries made by Union Carbide India, power torches and radios...help run telecommunications equipment used by India's armed forces...operate railway signalling systems...furnish power for such diverse applications as hearing-aids, toys, weather balloons, electronic and transistorised equipment.

Union Carbide India established the first dry battery manufacturing plant in India in 1926. And since Independence the demand for dry batteries grew so fast and for so many diverse applications that a second 'Eveready' battery plant was set up in Madras in 1952.

Union Carbide India's dry battery plants and their torch factory in Lucknow—one of the most modern—are but a few seeds of industry that the Company have sown in India. The variety and value of products made by Union Carbide India today show how the resources and the know-how of a world-wide organisation can serve the needs of a developing economy.

UNION CARBIDE PRODUCTS FOR INDIA'S HOMES, INDUSTRIES, AGRICULTURE:

EVEREADY Torch Batteries, Torchers, Torch Bulbs, Radio Batteries, Transistor Batteries, Photoflash Batteries, Hearing-Aid Batteries, Dry Cells, Telephone Cells, Railroad & Industrial Cells, Mantles, NATIONAL Arc Carbons, UNION CARBIDE Polyethylene Resins, Polyethylene Film, Polyethylene Pipe, Plastics, Chemicals, Acetic Acid, Butyl Alcohol, Butyl Acetate, Ethyl Acetate, Agricultural Chemicals, Zinc Addressograph Strips, EMMO Photoengravers' Plates, UNION CARBIDE Carbon and Graphite products, Welding and Cutting Equipment.

UNION CARBIDE

sowing the seeds of progress

Scindia Steam Navigation Company, Limited

Coastal Vessels Need Adequate Support

Lack of Efficiency at Ports

Shri Dharamsey M. Khatau, the Chairman on Freight Structure

The following is the Summary of the Statement of Shri Dharamsey M. Khatau, Chairman, The Scindia Steam Navigation Co. Ltd., made at the 45th Annual General Meeting of the Shareholders on Wednesday, the 16th December 1964, at Scindia House, Ballard Estate, Bombay.

Shri Dharamsey M. Khatau, Chairman of the Scindia Steam Navigation Co., Ltd., referred feelingly to the sad death of our beloved Prime Minister Shri Jawaharlal Nehru who gave national shipping its place of pride in the transport economy. In welcoming the new Prime Minister Shri Lal Bahadur Shastri, he referred to the consolidation and expansion of the shipping industry achieved due to bold energetic policy pursued by him during his tenure as Transport Minister. While referring to the recent freight increases which were effective only for a period of the year, he stated that these increases were off set by continued increase in costs. He was critical of the entry of other Indian Lines into the Shipping services which were satisfactorily maintained by Indian Lines, Members of the Shipping Conferences, inasmuch as such entry would render a working of the Lines uneconomic. He made special reference to strikes in ports in India and abroad, the berthing and dry-dock delays and the poor despatch, which all went to add to the cargo handling costs. He urged the Government to take active interest in requiring Port Trusts to maintain efficiency at ports at the highest level possible and to make labour more productive through the introduction of incentive schemes and the adoption of other similar methods.

Regarding the rates of freight on the Coast, he pressed for adequate increase in the background of a detailed reference to the 1962 recommendation of Shri R. G. Abbhi's Commission, which was not fully accepted by the Government and which itself was not considered adequate by the industry. He referred to the costs that have since risen and maintained that the view that the return on capital would be adequate if "some uneconomic ships" were eliminated was not practical. His reason was that apart from the fact that all units of any industry are not economic in operation at all points of time, the Coastal industry suffered from a particular handicap in that though it was keen on eliminating uneconomic units, foreign

exchange was not available for purchase of replacement vessels. He insisted that the Coastal vessels should be given adequate quantities of coal, salt and other cargoes which must be continuously assured to enable Coastal shipping to work economically and to develop in a planned manner and at the same time to provide for efficient services.

He made particular reference to the urgent need for making continuous and expeditious use of the machinery of the Maritime Freight Commission and observed that this Commission should be charged with the responsibility of making periodical assessment of costs of operation and thereafter permitting the shipping companies appropriate increases from time to time. He requested the Government to take required decision early.

Shri Khatau made reference to the addition of eight vessels to the fleet since the last Annual Meeting. Of these, six are for employment on the Coast of India, one for the West Coast and one for Overseas trade. A further order for three 15,000 ton vessels was placed with Messrs. Lithgows Ltd., Glasgow. There were also on order with the Hindustan Shipyard three vessels and one 3,800 d.w.t. motor vessel was on order abroad.

Regarding War Risk Insurance, Shri Khatau referred to his observations back in 1962. The Indian National Steamship Owners' Association, he had said, have been requesting the Government of India since September 1959 to evolve a suitable scheme and it was urged that immediate measures be taken to formulate the scheme so as to ensure adequate insurance protection to Indian vessels, against war risks. Although the Association were advised that the Government were actively considering the matter, nothing had so far happened. He, therefore, reiterated his appeal to the Government to give this question priority consideration.

Regarding Scindia Workshop Ltd., he referred to the conclusion of the contract with Messrs. Siemens Engineering & Manufacturing Co. of India Ltd., Bombay, for manufacture of cargo winches and to the negotiations with Messrs. MacGregor-Comarín, Paris, for manufacture of Ship's Hatch Covers.

Regarding Konkan services, Shri Khatau observed that the new Committee which was expected to

be formed by the Government and to submit its report to the Government had not yet been formed. As a result, no progress had been made in determining the amount payable to the Company for the year 1962-63 and onwards. This was, he said, in the background of the original claim of the Bombay Steam Navigation Co. (1953) Ltd. against the Maharashtra and the Central Governments for the two years 1961-62 and 1962-63 amounting to Rs. 25,68,253. He requested the Government to hold early a Tripartite Conference between the Government of India, the Government of Maharashtra and the Company. In his concluding remarks he said unless freight rates were designed to cover costs of operation, shipping companies cannot work on an economic basis.

Regarding future prospects, his observation was that the Company's year under review was good

and, as far as he could see, the Company expected to maintain the improvement.

Shri Khatau welcomed Shri Raghunath Singh, the newly appointed Chairman of the National Shipping Board, and referred to his close knowledge of shipping problems. He said he would look forward to further satisfactory progress of the industry. He also expressed his appreciation of the active assistance of Shri Raj Bahadur, Transport Minister, and Dr. Nagendra Singh, Special Secretary, for their efforts in stabilising and expanding Indian Shipping.

He thanked the shippers, patrons and consignees, here and abroad, and appreciated the services of the Management, Officers and Staff and the Company's Agents.

Note. This does not purport to be a record of the proceedings of the annual general meeting.

For the INVESTOR

INVESTMENT GOSSIP

Role of Stock Exchanges

The cheerful conditions witnessed on the stock market during most the time this week is attributed to the renewed hopes that early steps would be forthcoming to revitalise capital market and that Prime Minister would give some positive indication in this regard, when he addresses the Associated Chambers of Commerce next Monday. There is a consensus that stock market sentiment will not show sustained improvement unless steps are taken by Government to infuse confidence in the investing public. The presidents of the recognised stock exchanges in the country in a recent memorandum to the Union Finance Minister have pointed out that because of the heavy taxation the capital market has become emaciated and anaemic and the corporate sector has been finding it extremely difficult to mobilise resources from the public. Addressing a meeting of the Calcutta Stock Exchange Association this week, Mr K. P. Goenka, President of the Federation of Indian Chambers of Commerce and Industry has lucidly analysed the cause of the present stagnation in the capital market. He has pointed out that the stock exchanges provide an essential link between prospective investors and entrepreneurs. Therefore the stock markets have an important role to fulfil. Since the 1963-64 budget, however, the capital market has become depressed because of the heavy impact of taxation on individuals and the corporate sector. The investor has not only lost confidence in the stock market, but he has also little saving that can be invested. Mr Goenka has rightly pointed out that the current fiscal policies have contributed largely to the continuing depression in the capital market. With the heavy load of taxation the investor has little incentive left for investing in industrial scrip. Mr Goenka concludes that if the capital market is to revive, it is essential that current taxation policies are reviewed and rationalised.

★

NEW ISSUE NOTES

Heavy Electricals

Heavy Electricals (India) Ltd., Government of India Undertaking, is to issue further capital of Rs 3.45 crores, divided into 34,500 equity shares of Rs 1,000 each at

par. The money will be utilised for civil engineering works, purchase of machinery and plant, training of engineers, etc.

RIC

Rehabilitation Industries Corporation Ltd., Calcutta, a Government of India Undertaking, is to issue further capital of Rs 1 crore divided into 10,000 equity shares of Rs 1,000 each for cash at par. The capital will be utilised for financing the various projects under its control during the year, 1964-65.

Handicrafts and Handlooms Exports Corporation

Handicrafts & Handlooms Export Corporation of India Ltd., New Delhi, is to issue capital of Rs 28 lakhs, divided into 28,000 equity shares of Rs 100 each to be issued privately at par. The capital will be utilised for the promotion of handicrafts and handlooms.

Steelcrete Foundation

Steelcrete Foundation Ltd, is to issue, Rs 1 crore equity capital in shares of 10 each for cash at par, of which shares of the value of Rs 46 lakhs will be subscribed by Foundation Overseas Ltd., Canada, or their nominees, against supply of construction machinery etc. Of the balance, Rs 29 lakhs will be subscribed privately and Rs 30 lakhs will be offered to the public by prospectus. The money will be utilised in meeting the cost of installation etc, in connection with the contract of Yamuna Hydrel Project awarded to the company by the UP Electricity Board.

Indian Explosives

Indian Explosives Ltd., Calcutta, is to issue further capital of Rs 43 lakhs, divided into 4,30,000 equity shares of Rs 10 each for cash at a premium of Rs 12 per share. Of this, shares of the value of Rs 57,500 will be issued to directors and employees of the company and of associate companies. The balance of shares, of the value of Rs 37.30 lakhs will be offered for subscription to the public by prospectus. The capital will be utilised for the manufacture of detonators.

Larsen and Toubro

Larsen and Toubro Ltd. Bombay, will be issuing Rs 175 lakhs debenture stock carrying 7 per cent rate of interest redeemable in 1976 and in units of Rs 1,000 each. The debentures will be offered to the public for cash at par. The money will be utilised on the expansion programme of the company.

Modi Industries

Modi Industries Ltd., Madanagar, UP is to issue capital of Rs 50 lakhs divided into 5,000 debenture units of Rs 1,000 each for cash at par. The debenture will carry interest at a rate not exceeding 7½ per cent per annum. The capital will be utilised for construction of an electric furnace, a re-rolling mill and a wire-drawing plant.

Star Paper

Star Paper Mills Ltd., Calcutta, is to issue further capital of Rs 30 lakhs divided into 3,00,000 equity shares of Rs 10 each for cash at par. The issue will be made to the existing shareholders and to the public simultaneously on the condition that only shares not taken up by the existing shareholders will be allotted to the public. The money will be utilised for financing the expansion scheme.

Aluminium Industries

The Aluminium Industries Ltd., Kundara, Kerala, is to issue capital of Rs 67.50 lakhs in 6,75,000 equity shares of Rs 10 each for cash at a premium of Rs 2.50 per share. The capital is required for the manufacture of wire-drawing and standing machines at Ramachandrapuram, near Hyderabad in collaboration with a Japanese firm. The shares will be issued to the existing shareholders in the ratio of one new share for every two shares held.

★

INVESTMENT NOTES

Good Year

The Shareholders of Goodyear India Limited have confirmed the decision that the Company would expand its operation in India. This was done at an extraordinary general meeting of the Com-

pany held at Calcutta on 15 Dec. when shareholders unanimously passed resolutions relating to this expansion.

The first resolution as an ordinary resolution increased the share capital of the Company from over Rs 2 crores to a little over Rs 2.61 crores by the creation of 6,00,000 new equity shares of Rs 10 each.

Then followed two special resolutions, the first of which altered the Company's Articles of Association to accommodate this increase in share capital, and the second inter alia authorising the Directors to offer the 6,00,000 new shares to its existing shareholders, in the ratio of eight new shares for every five existing shares, at a premium of Rs 7 per share.

The proposed expansion will permit production capacity of the Company's factory at Ballabgarh near Delhi to increase from 2,00,000 to 3,00,000 tyres per year (or from 750 tyres to 1,000 tyres per day) before the end of 1965 and follows Goodyear India's progress in sales and profits during the year 1964.

The 1964 trading results are encouraging, gross sales being Rs 10.6 crores for the first eleven months of the year as compared to Rs 8.4 crores for the same period last year. Net profit is Rs 30 lakhs compared to a net loss of Rs 53 lakhs for the eleven months ending November 1963.

Simultaneous with granting Goodyear this permission to expand its capacity by nearly 50 per cent, the Government has extended until December 1968 the Company's overall industrial licence to manufacture 5,00,000 tyres and tubes a year.

The Directors anticipate an overall net profit for the year 1964 in excess of Rs 40 lakhs.

The parent company of Goodyear-India, The Goodyear Tire and Rubber Company of Akron, Ohio, USA, has not been offered any new share capital, but will provide foreign exchange in dollars to the value of approximately Rs 80 lakhs in the form of a long term loan to the Indian subsidiary in order that specialised plant and machinery necessary for the expansion may be purchased abroad.

Bonus from Larsen & Toubro

The Board of Directors of Larsen and Toubro Limited, has decided to submit an application to the Controller of Capital Issues

for his consent to capitalise an amount of Rs 33 lakhs out of the share premium reserve in the Company's accounts by the issue of bonus shares in the proportion of one equity share for every seven equity shares held by the shareholders.

Blundell Eomite Paints

Since the present paint factory at Mazagaon has nearly reached optimum production capacity, Blundell Eomite Paints is building a new one on a 27-acre site at Kolshet, Thana. This factory's main Oil, Varnish and Resin Units will commence production shortly.

By 1966 Blundell Eomite Paints will have one of the most modern paint factories in India equipped with the latest plants and equipment and up-to-date Research and Quality Control Laboratories. Provision for housing and welfare has also been made. Ample space for increase in production facilities in future has also been taken care of. The Company for several years has had marketing offices in Bombay and Delhi. Recently marketing offices were opened in Cochin and Calcutta and another one will be opened in Madras during 1965.

Sankey Wheels' Progress

Sankey Wheels' new factory at Durgapur making pressed steel wheels for trucks and other commercial and military vehicles, has commenced production; trial runs of the plant which started some time back have proved successful. This new factory is equipped with the most modern equipment for manufacture of pressed steel wheels of all types. It may be recalled that Sankey Wheels Limited was incorporated in December, 1962 and has as its technical collaborators, Messrs Joseph Sankey and Sons Limited, who are a member of the G.K.N. Group, and the largest manufacturers of wheels in Europe and the Commonwealth. The factory, which was completed within a record time of 14 months, will meet a very substantial part of the country's requirements of wheels.

★

BALANCE-SHEET REVIEWS

Sugar Companies Fare Better

The year ended 30 June 1964 has been a rather better one for sugar companies. Three balance-sheets received during the week indicate that, while the previous two years were productive of losses and of dividends passed, the latest accounting period has been such as to write off losses brought down and thereafter still to have a sufficiency of disposable profit for the resumption of distribution to ordinary shareholders. Of the three we shall be analysing, the performance of Tulsipur Sugar Co Ltd is by far and away the best.

Tulsipur Sugar Pays 10 per cent

Tulsipur Sugar Co Ltd's crushing season lasted for 121 days as against 88 days in the previous season, and sugar manufactured was placed at 112,547 tonnes as against 80,020 tonnes. The recovery was placed at a record 10.39 per cent which, the Directors' Report points out, is probably the highest in Uttar Pradesh; and this recovery compared with 10.14 per cent in the 1962-63 season.

Sales have improved from Rs 1.22 crores to a shade under Rs 1.30 crores. Depreciation has absorbed Rs 3.21 lakhs (Rs 2.63 lakhs in the previous year), and the provision for taxation is Rs 3.24 lakhs against nil. Moreover, a sum of Rs 71,000 has been added to the Development Rebate Reserve, which now stands at Rs 4.12 lakhs.

The disposable profit is Rs 6.35 lakhs. This is more than sufficient to wipe off the loss brought down from previous years amounting to Rs 3.76 lakhs. A transfer of Rs 75,000 has been effected to General Reserve, and an ordinary dividend (paid in the year as an interim) of 10 per cent absorbs Rs 1.40 lakhs.

As against the capital of Rs 14 lakhs, the Reserve and Surplus add up to Rs 14.28 lakhs. The gross block of Rs 50.38 lakhs has a net value of Rs 24.22 lakhs.

6 per cent from Champarun Sugar

Sales of Champarun Sugar Co Ltd improved during the year to 30 June 1964 to Rs 2.39 crores from a fraction under Rs 2.2 crores in the previous year. After increasing the provision for depreciation by Rs 2.30 lakhs to Rs 4.42 lakhs, and providing Rs 0.94 lakh for tax, the disposable profit shows a sharp improvement. In 1962-63, indeed, a disposable profit of Rs 1.55 lakhs was possible only because of receipt of Rs 1.69 crores as rebate on cane cess and burnt sugar in respect of previous years. In 1963-64, the disposable profit of Rs 11.62 lakhs includes a transfer of Rs 1.44 lakhs from General Reserve and income of Rs 3.20 lakhs relating to previous years.

Such profit has enabled the debit brought forward of Rs 8.51 lakhs to be written off. A provision of Rs 1.85 lakhs has been made for Development Rebate Reserve, against just under Rs 1 lakh in the previous year. An ordinary dividend of 6 per cent (against nil) absorbs Rs 1.08 lakhs, leaving Rs 17,712 to be carried forward.

The balance-sheet position of Champarun Sugar is extremely strong. Against the ordinary capital of Rs 18 lakhs, the Reserves and Surplus amount to Rs 57.09 lakhs. The gross block of Rs 1.00 crore has a book value of Rs 33.53 lakhs.

And 4 per cent from Balrampur Sugar

Although sales of Balrampur Sugar Co Ltd have fallen from Rs 1.19 crores to Rs 65.72 lakhs, the results for the year are extremely satisfactory. Contributing to such results has been an improvement in the recovery from 9.99 per cent to 10.28 per cent. Depreciation gets Rs 1.93 lakhs against Rs 1.79 lakhs. After writing off the debit brought forward of Rs 1.53 lakhs, the disposable profit is placed at Rs 1.17 lakhs, which compares with the previous year's net loss of Rs 1.69 lakhs. Transfers of Rs 56,000 each have been made to Development Rebate Reserve and to Dividend Reserve. A dividend of 4 per cent (against nil) is to be paid from Dividend Reserve.

Reserves and Surplus at Rs 11.53 lakhs compare with the ordinary capital of Rs 14 lakhs. The gross block of Rs 41.31 lakhs stands depreciated at Rs 15.45 lakhs.

Loyal Textiles Resumes Dividend

Loyal Textiles Mills Limited is another company which has, in respect of the year ended 30 June 1964, been in a position to resume the payment of dividend on ordinary shares. With sales rising from Rs 1.27 crores to Rs 1.37 crores, and after providing Rs 9.42 lakhs against Rs 6.83 lakhs for depreciation and Rs 1.30 lakhs for tax against nil, the disposable profit works out to Rs 7.63 lakhs; this profit figure however, includes transfers and write backs amounting to almost Rs 1.93 lakhs. It may be noted that, last year, the company has suffered a loss of Rs 90,246. The development rebate reserve gets Rs 1.76 lakhs, the preference dividend at 6.5 per cent for two years absorbs Rs 1.95 lakhs, and ordinary dividend at 3 per cent takes up Rs 94,000. There is, however, still the debit carried forward of Rs 22,698 against the debit brought in of Rs 1.90 lakhs.

Against the ordinary capital of Rs 31.52 lakhs, the reserves and surplus are shown at Rs 10.87 lakhs. The gross block of Rs 1.40 crores has a book value of Rs 74.35 lakhs.

Standard Batteries Pays 11 per cent

Sales of the Standard Batteries Limited for the year to 30 June 1964 improved significantly from Rs 1.40 crores to Rs 1.65 crores. There was a similar rise in the disposable profit. After increasing the provision for depreciation from Rs 4.53 lakhs to Rs 6.24 lakhs; the transfer to development rebate reserve from Rs 0.96 lakhs to Rs 1.11 lakhs; and the provision for taxation from Rs 9 lakhs to Rs 12 lakhs, the disposable profit is shown at Rs 7.13 lakhs against Rs 5.67 lakhs.

The transfer to general reserve has been stepped up by Rs 1 lakh to Rs 2.20 lakhs. Whereas, last year, there was a transfer of Rs 4.50 lakhs to dividend reserve (from which a dividend at 10 per cent absorbing Rs 4.50 lakhs was paid) the current year's dividend at 11 per cent absorbing Rs 4.95 lakhs is shown in the appropriation account itself.

The reserves and surplus are shown at Rs 27.07 lakhs against the ordinary capital of Rs 45 lakhs. The gross block of Rs 96.56 lakhs is shown to have a net value of Rs 43.07 lakhs.

★

STOCK EXCHANGES

Revival of Interest

THERE has been a heartening revival of activity in stock markets this week with popular scrip coming in for sustained interest at rising prices. Renewed expectation of fiscal change favourable to capital formation appears to be the main driving force while to some extent the fact that operators from the commodity markets have evinced interest in equities has also contributed to the bullish fervour. Even so, the upsurge has been confined largely to the more speculative scrip while the cash sections have witnessed little expansion of business. Toward close even the enthusiasm so prominently evident most of the time during the week around the popular scrip has shown signs of waning.

Dalal Street which closed last week in a subdued note, burst into activity from early this week with bulls taking the initiative. Although profit taking interfered now and then, gains were generally well maintained on follow-through support. Selected scrip recorded notable gains on the week's trading, but the closing tone was somewhat subdued.

In Lyons Range, speculative counters firmed up on sustained support most of the time. Conditions elsewhere, however, continued to be rather dull. The improvement was well maintained despite profit-taking in later dealings, but closing prices were below the best levels reached during the week.

Conditions in the Madras Stock Exchange were steadier but business was rather restricted owing to intervention of a holiday. Among cash scrip, selected plantations were in request.

In the Ahmedabad Stock Exchange, leading shares were in the limelight following revival of buying interest. Higher advices from Dalal Street was an added influence. In later dealings higher levels were pared by profit-taking.

Selected scrip in Delhi Stock Exchange scored sizable gains as sentiment became constructive following the trend in the principal stock exchanges. Higher levels, however, attracted profit-taking.

★

CALCUTTA

SENTIMENT on the Calcutta Stock Exchange displayed considerable improvement during the week with the

more speculative scrip gaining fair ground in active trading in the first half. While bull operators extended their support at rising levels, bears also rushed to cover their short positions. The revival of bullish fervour appears to be partly due to the support for equities from operators from those commodity markets where business has come to a standstill owing to recent hectic rise in prices. The main incentive has been derived from renewed hopes that the Government would soon announce measures that will favour the smooth expansion of the corporate sector. In this regard the recent statement of the Prime

Minister that steps are being taken in this country to revive the capital market has been taken as encouraging factor. It is generally believed that Mr Lal Bahadur Shastri will have something further to say on the question when he addresses the Associated Chambers of Commerce in Calcutta next week. The fact that the improvement in sentiment is largely confined to the speculative issues is indicative of the continued lack of confidence in equities on the part of the investor. A general upsurge in prices can therefore ensue only when there is some worthwhile incentive.

Mr Shastri Stresses Role of UK Investment in India

An audience with the Queen, lunch with the British Prime Minister, a visit to both Houses of Parliament, and a reception given in his honour by the Federation of British Industries (FBI)—these were among the engagements carried out in London by the Prime Minister of India, Mr Lal Bahadur Shastri, while on his visit to Britain.

Speaking to nearly 200 industrialists members of Commonwealth societies and other friends of India at the FBI reception, Mr Shastri said that further British investment in his country would be of great assistance.

He said that the third Five-Year Plan was nearing its end and the fourth was being prepared. After thanking Britain for the finance and technical aid she had already provided, Mr Shastri said: "Talking about the balance-of-payments problem, Britain has her own, and I hope that she get out of this present difficulty in weeks or months. But it is a matter of years before we can say we have no balance-of-payments problem. . . .

"British capital, both public and private, has played an invaluable role in the development of our economy. Our exports are still far from adequate, and there is a serious gap between exports and imports. We aim at expanding our export trade, and further investment of British capital in India will be of great assistance. I hope that it will be forthcoming."

Mr Shastri said that British investors had come forward with many new ideas to help his country, and they had also provided machinery and technical know-how for the expansion of industry. "But we have many problems, and they are problems of a growing country," he added. "We have to keep up our attempts to achieve economic expansion and development. In this great endeavour to better our standard of living we seek the assistance of this country."

INDO-BRITISH PARTNERSHIP

Welcoming Mr Shastri, Sir Peter Runge, President of the FBI, said: "May I assure you that you are among old, though I trust not too rapidly ageing, friends. There are some 600 companies, members of this Federation of British Industries, who are closely involved in the development, progress and prosperity of your great country—either as investors or as full partners in Indian industry."

"In the ever-expanding range of Indian industrial enterprise, there is hardly a field in which British technical skill is not actively employed. The many companies play their full part in Indian life. They share in the ups and downs of your economic fortunes; they rejoice in your triumphs and walk in sadness with you in your setbacks. You will be aware how deeply shocked British opinion was by the Chinese invasion across your frontier, and of the sympathy which has been evoked by its economic consequences."

Sir Peter went on to say how proud Britain was to help India in her industrial expansion. "We also derive some pride from the part we played in establishing the concept of maintenance aid which in India has come to be known as 'Kipping aid'. . . .

"The original allocation of some £4,000,000 was most expertly, judiciously and effectively administered by your Government. As a result, great benefit was derived both by the many British industrial firms established in India and by those many Indian concerns who—as a matter of course and showing their usual good sense—use machinery and engineering equipment supplied from Britain. We are delighted to learn that out of the recent allocation of £14,500,000, a second instalment of £4,000,000 is to be allocated as Kipping aid."

FAITH IN COMMONWEALTH

After outlining Britain's trade with India in the first six months of this year—Britain imported

Indian goods to the value of approximately £98,000,000 while exporting goods valued at just over £93,000,000 to India—Sir Peter said: "I can assure you that our recent preoccupations with the continent of Europe and with other countries has not dulled our faith in the strength and destiny of the Commonwealth."

"We welcome you here today with great warmth and sincerity as an old trading partner and as a fellow-member of the Commonwealth, but above all, if you will allow me to say so, we welcome you as a friend."

In the afternoon, Mr Shastri was the guest of honour at a reception given in the House of Commons by the Commonwealth Parliamentary Association. He was received at Westminster by Mr W. J. Molloy, secretary of the British branch of the Association, who acted as joint host with Mr Arthur Henderson, M.P.

Later Mr Shastri toured Parliament—first the House of Lords and then the Commons, where he heard a Bill on National Insurance being debated.

PURPOSE OF VISIT

On arrival at London Airport, Mr Shastri had been welcomed on behalf of the British Government by the Secretary of State for Commonwealth Relations, Mr Arthur Bottomley.

The Indian Prime Minister told newsmen that the main purpose of his visit was to meet the British Prime Minister and to have an exchange of views with Government leaders on matters of common interest.

"I do not propose to ask for any aid as such, but naturally our problems and difficulties will be discussed," he said.

Asked if India could solve her food shortage without foreign aid, he replied: "Ultimately we have to do without foreign aid. In the course of the next two or three years we will have to depend on imports. Simultaneously, and side by side, we are increasing our agricultural production. Unless we increase our production, it will not be possible for us to get a buffer stock."

Questioned about the possibility of India manufacturing atomic weapons to match the Chinese, he said: "I have said that India does not believe in the policy of making atomic bombs. . . . We hope to continue it in the future."

The Prime Minister said that he was glad that Belgian forces had been withdrawn from the Congo, or were on the point of withdrawing. "I do think that the Congo should be given a free hand to govern its country."

INDO-PAKISTANI RELATIONS

On the possibility of closer relations between India and Pakistan, he said: "We have tried to keep

very good relations with Pakistan. But unfortunately it must be admitted that we have not been able to achieve much in that direction. However, there have been occasions when we felt that our relationship had considerably improved."

"My visit to Karachi recently did produce a good impact on me, and I felt that some of our problems and burning issues would be discussed and steeled. Unfortunately, it seems that because of the elections in Pakistan those discussions have been postponed."

Mr Shastri said that the question of Kashmir took second place. What was more important was that India and Pakistan should live peacefully in a good relationship.

After leaving London Airport, Mr Shastri had an opportunity of seeing something of the capital on his drive to the Indian High Commissioner's residence in Kensington.

Later he drove to Buckingham Palace, where he was received by the Queen. Mr Shastri then went to Clarence House, the Queen Mother's residence, where he signed the visitors' book.

His first meeting with the British Prime Minister, Mr Harold Wilson, was at a "working lunch" at 10 Downing Street. Other guests included Mr Arthur Bottomley; Dr Jivraj Mehta, the Indian High Commissioner in London; and Sir Paul Groce-Booth, the British High Commissioner in India, who is now in London.

To commemorate Mr Shastri's visit, a special number of India Weekly—which goes into regular production at the end of December—was issued by the group of Indian journalists in London who are launching the journal.

Dr Tarapada Basu, a member of the group, visited the Indian High Commission and presented the Prime Minister with a copy, which carries messages of goodwill from eminent Indian and British personalities, including Dr S. Radhakrishnan, Sir Alec Douglas-Home, and Earl Mountbatten.

The journal, which aims at bringing news from and about India to the Indian communities living in Britain, also had Mr Shastri's message, which read: "I am happy to learn that a weekly devoted to Indian news is to be published in London. India Weekly will not only give the large Indian population in Britain—students residents—fuller information about India, but also be of interest to members of the British public who have past associations with India or who are otherwise interested in Indian affairs."

"I wish the India Weekly all success in its effort. I hope, through its reporting of Indian events and developments, it will promote a better understanding of our problems and policies in Britain."

Fourth Plan to have Positive Content for Common Man

The Fourth Five-Year Plan will have a positive content for the common man in respect of food, clothing, shelter, medical aid and education.

This is the key-note of the Fourth Plan outlined in the Memorandum on the Fourth Plan, a copy of which was placed by Mr B. R. Bhagat, Union Minister of Planning on the tables of both Houses of Parliament.

The Memorandum has presented "In fairly broad terms" the principal magnitudes of the Fourth Plan. According to this document, the essential priorities in determining the size and distribution of outlays in the Fourth Plan are a substantial improvement in agricultural production, an assured supply of basic consumer goods to the people at stable prices, and further development of heavy industry in order to provide a sound base for the economic advancement of the community. In an annexure the Memorandum gives a summary of the suggestions made at the 21st meeting of the National Development Council held in New Delhi on 27 to 28 October, 1964.

REDUCING ECONOMIC & SOCIAL DISPARITIES

The Memorandum says that while achieving rapid economic growth and increasing productive capacities, a major objective in the Fourth Plan must be not only to prevent concentration of economic power and the emergence of monopolistic tendencies but also, progressively, to reduce the existing disparities in income and wealth, secure for the bulk of the people their basic needs for food, clothing, housing, education and health and expand opportunities for employment. Further, excessive profits and unearned incomes will have to be mopped up drastically through taxation and other means. Within the country, a few new projects for the production of essential commodities of mass consumption would have to be set up in the public sector, in addition to large projects which fall within the category of heavy industry.

In the implementation of the Plan, a place of importance will have to be assigned to co-operative endeavour in agriculture as well as in industrial and other sectors. For enlisting the support of the people for the Plan, efforts in this direction will, therefore, have to be pursued energetically.

The Memorandum points out that the crucial problem for the Fourth Plan is of accelerating the tempo of development without accelerating inflationary trends in the economy.

PRIORITIES

The preliminary outline of the Fourth Plan, presented in this Memorandum, keeps in view the following:

(i) for enlarging the income of the rural population, as well as for augmenting the supplies of food articles and agricultural raw

materials, all possible efforts should be made to ensure a growth rate of not less than 6 per cent per annum and, if possible, more in agricultural production;

(ii) for enabling this objective to be realised, production of such goods as fertilizers, insecticides, agricultural implements, including pumps, diesel engines, tractors etc, should be given the priority in the programme for industrial development;

(iii) for enlarging the supplies of essential consumer goods on which additional incomes will be spent, production of articles like textiles, sugar, drugs, kerosene, paper etc, should be accelerated;

(iv) with a view to improving the supply of residential housing, the production of cement and other construction materials should be augmented;

(v) for ensuring continued growth in the metals, chemicals, machine-building, mining, electric power and transport industries, schemes in hand should be completed early as well as new schemes undertaken;

(vi) for the development of human resources, not only should the maximum possible facilities be provided in the social services sector, but that these, should be suitably reoriented in the direction of increasing productivity;

(vii) the organisation of effort in these directions should be such as to promote rapid progress towards greater employment and social justice.

Considering all aspects particularly the availability of resources, it is felt that the Fourth Plan should be framed on the basis of a minimum outlay ranging between Rs 21,500 to Rs 22,500 crores,

As against the estimated requirements of Rs 15,500 crores for the public sector programme, the current assessment of capacity for raising domestic savings and mobilising the financial resources in the public sector taken together with the uncertainties regarding the balance of payments, suggests that it may not be possible at this stage to assume firm commitments for more than Rs 14,500 crores. This will leave approximately Rs 1000 crores of outlay in the public sector to be taken up if the progress of the economy in respect of the growth of output, resource mobilisation and balance of payments during the next 3-4 years is satisfactory.

Thus, at present the total outlay in the Fourth Plan has to be envisaged as ranging between Rs 21,500 and Rs 22,500 crores and outlay in the public sector as ranging between Rs 14,500 and Rs 15,500 crores. It has also been agreed that the programme of development in each sector should be carefully scrutinised and phased and that efforts should be made to identify as precisely

as possible projects involving a total outlay of Rs 1,000 crores to be initiated during the latter half of the Plan.

While preparatory action, involving small expenditures in respect of these projects, may be taken in the earlier years of the Fourth Plan, the actual implementation of the schemes would be contingent on improved prospects for resource mobilisation in the second half of the Plan.

The precise composition of the programmes and projects involving a total outlay of Rs 1000 crores will be determined after the various sectoral programmes and their phasing have been worked out in greater detail.

SECTORAL ALLOCATIONS

As regards sectoral allocations, the Memorandum says that a significant increase is envisaged in the Fourth Plan in the proportionate allocations for agriculture and the social services. This is in keeping with the objectives of increasing agricultural production and providing for the basic social needs of the masses.

The industrial sector, together with the ancillary infra-structure on power and transport, shows a percentage decrease, largely under transport, but in absolute terms is double the original Third Plan provision. This takes account of the fact that in the Third Plan allocations for transport were substantially raised and the rail transport system will have some reserve capacity at the beginning of the Fourth Plan. The programmes under this group have been drawn up in terms of the current needs of the economy and the perspective of the Fifth Plan. Their feasibility in terms of implementation has also been taken into account. The small allocation of Rs 25 crores for rural works is in the nature of a token provision at this stage. A firm figure will be known only after State Plans have been formulated and a view taken of the size of the residual problem of unemployment in rural areas which may call for a supplementary rural works programme.

The programmes visualise an annual increase in agriculture of not less than 5 per cent and of 11 per cent in organised industry, 8 per cent each in small industry, communications, railway and organised banking and insurance and 6.5 per cent each in other commerce and transport and services. This should give an overall rate of growth of around 6½ per cent.

IMPORTANT TARGET

Production of foodgrains is proposed to be stepped up to at least 120 million tonnes in 1970-71 from 92 million tonnes in 1965-66; cotton from 63 to 85 lakh bales and sugar cane from 110 lakh tonnes to 135 lakh tonnes. From major and medium irrigation projects irrigation facilities would be provided for additional area of 14 million acres.

Under the power programmes installed generating capacity will be almost doubled from 11.7 m.k.w. to 22 m.k.w. Industrial production

will be considerably expanded especially in the fields of metals, chemical fertilisers, agricultural machinery, consumer goods, machinery and intermediates, and petroleum refining. Production capacity of steel ingots will go up from 8.9 million tons in 1966-67 to 16.5 million tons at the end of the Fourth Plan; Pig iron from 1.2 million tons to 4 million tons and aluminium from 68,000 tons to 240,000 tons. Capacity for the production of nitrogenous fertilisers will increase nearly four-fold; that of newsprint over five-fold and bicycles, electric fans and cement about two-fold. Railways will carry 50 per cent more freight in 1970-71 as compared to 1965-66; the number of commercial vehicles on road will almost be doubled.

Under Communications, 7 lakh telephone connections would be provided. Schooling facilities will expand considerably for all age-groups and the admission capacity for the engineering and technology courses at the degree level will be augmented to train 68,600 students in 1970-71. The admission capacity for craftsmen to be trained in the Fourth Plan will increase from 100,000 to over 200,000. Medical facilities and family planning programmes are also proposed to be substantially enlarged.

SUGGESTIONS OF NDC

The summary of suggestions made by National Development Council points out that it was decided to constitute five Committees. These Committees would consider respectively, (i) Agriculture and Irrigation, (ii) Industry, Power and Transport, (iii) Social Services, (iv) Resources, and (v) Development of Hill Areas.

The Memorandum says that the Council generally endorsed the proposals of the Planning Commission regarding the size and objectives of the Fourth Five Year Plan. Chief Ministers of States emphasised the importance of giving top priority to agriculture and providing resources and inputs sufficient to achieve a rate of growth of not less than 5 per cent per annum.

It was felt that, as compared to the Third Plan, the step-up in outlays on power, on major irrigation projects and on transport was likely to prove insufficient. Special stress was placed on road development and, more particularly, on the provision of rural market roads and village approach roads. There was some doubt whether it would be possible for States to provide for as large an increase in the allocation for social services as had been envisaged in the Memorandum of the Planning Commission. In the field of social services, priority should be accorded to family planning, technical education and supply of drinking water, both in rural and in urban areas. The suggestion was also made that the allocation for industries in the public sector to be undertaken by State Governments, placed tentatively at Rs 135 crores in the Memorandum, needed to be raised. Regarding the States' Fourth Five Year Plans, the Chairman suggested that, broadly speaking, plans of States should be formulated, so that the outlays pro-

posed in each case did not exceed twice the outlays in the Third Plan.

The Council agreed in principle that proposals for setting up in the public sector consumer goods industries, for instance, textiles, sugar, cement, drugs and medicanes, etc. should be worked out and provided for in the Fourth Plan. The suggestion was made that some consumer goods industries and processing industries should be entrusted to State Governments.

The Council noted the tentative estimates of resources for the Fourth Plan indicated in the Memorandum and the gap remaining to be filled, if a total outlay of the order of Rs 22,500 crores was to become feasible. Reference was made to the increased levels of committee expenditure and repayments of interest and capital to the Central Government for which States would have to provide.

It was suggested that the Central Government should indicate the directions in which additional resources might be raised by States in the Fourth Plan, so that there could be both a broadly uniform all-India approach and careful study of the scope for raising additional tax resources in different States.

The Council agreed upon the need for securing an adequate return from investment in public enterprises. The point was, however, made that it might not be feasible or desirable to seek a return of 10 to 12 per cent in enterprises engaged in supplying essential raw materials and services needed for agriculture.

The Council stressed the need to ensure minimum levels of living and to reduce disparities in development between different regions and, more specially, in relation to areas which have remained markedly backward.

COORDINATED AND DETAILED PLANNING

At the suggestion of the Chairman, the Council, says the Memorandum, agreed that, while formulating the Fourth Five Year Plan, special care should be taken to draw up complete, self-contained and fully coordinated plans for industry and for agriculture. In respect of each major project, all details should be carefully worked out and the time table for implementation should be indicated. In each sector, there should be systematic analysis of past shortcomings and steps should be taken to provide against these during the Third Plan itself, so that the larger task to be accomplished in the Fourth Plan becomes administratively and technically feasible. All necessary advance action should be taken without delay. Employment aspects should be gone into fully in relation to different sectors of development and plans for individual areas. Every possible effort should be made to accelerate progress during the remaining period of the Third Plan. Special attention should be given to ensuring effective coordination at the district level and the District Collector should be enabled to exercise his overall role.

The Chairman referred to the decision which had been taken to constitute a National Planning Council

under the chairmanship of Deputy Chairman, Planning Commission, which would consist of fifteen to twenty distinguished scientists, engineers, economists and other experts who would agree to spare part of their time to assisting and working with the Planning Commission on problems connected with the prepa-

Record Small Savings in 1963-64

Addressing the two-day session of the National Savings Central Advisory Board in New Delhi recently, Mr B. R. Bhagat, Minister for Planning and Minister in the Ministry of Finance, said that net small savings collections in 1963-64 had reached an all time record figure of Rs 127 crores. During the current year, he said the collections had so far been even better. Till the end of October, the collections amounted to Rs 62 crores, about Rs 10 crores more than in the corresponding period last year. He had every hope that this tempo would continue to be maintained and the Third Plan target of Rs 600 crores reached. Mr Bhagat announced that the State Bank of India had agreed to undertake the sale of Savings Certificates at as many of their branches as possible. This was one of the recommendations made by the Board last year and it was hoped that the scheme would be introduced next year. He explained that while the Certificates to be sold through the State Bank would, in all respects, be identical with those sold through post offices, they would be a distinct series. The details of the arrangements and the rules governing these certificates were being worked out. In this was Savings Certificates would be available at a larger number of agencies than hitherto.

The Minister announced Government's decision to discontinue the Prize Bonds Scheme after the sales under the present Scheme came to an end at the end of this month. Experience of the Prize Bonds Schemes had been hardly happy. In this connection, the Interest Free Prize Bonds sold from April 1960 until June 1962 would mature for payment in April next year. An amount of over Rs 20 crores thus become repayable. Means must be devised, he said to mop up these repayments through the various instruments of small savings. The rules regarding the savings certificates etc. were being amended to allow the utilization of maturing prize bonds for making investments. He called upon Members of the Central and State Advisory Boards to take special steps to publicize the facilities so provided and also otherwise help in mopping up the Prize Bonds maturity through small savings.

Speaking of the role of the

ration of the Fourth Five Year Plan. The Memorandum has eight chapters, in addition to an introduction and annexure, and it runs into 97 printed pages. The programmes of development are described under fourteen heads while the last chapter includes concluding observations on the Fourth Plan.

small savings movement in mobilising resources for our development plans and national defence, the Minister said that this source had vast potentialities and must be assiduously developed. Last year's collections, good no doubt, still amounted to less than one per cent of the National income and less than Rs 3 per head of the population. The country was almost at the threshold of the Fourth Five Year Plan which envisaged a substantial step-up in the rate of growth of our economy and also resource mobilization to provide for an outlay of at least Rs 21,500 crores. As a planner, he would expect small savings to bring forth substantially large resources that in the past, for meeting the outlays proposed in the public sector. The public sector, the Minister said got the benefit of private savings mainly through market loans and the small savings schemes of Government. He had no hesitation in saying that the pride of place should to small savings, meant as they were for the common man. Small savings had always played an important role in providing resources for our Plans. They contributed about Rs 240 crores during the first Plan and nearly Rs 400 crores in the second Plan, thus, accounting for a substantial part of the public sector outlay.

Referring to the sources from which and the manner in which small savings had so far been raised, Mr Bhagat said that the figures for 1963-64 showed that Rs 51 crores came from provident fund investments and Rs 16 crores from interest on post office savings bank deposits. A recent study had shown that the small savings schemes were to a considerable extent being patronised by persons with large income taking advantage savings movement, the Minister said could not be built up merely on institutional investments and by well-to-do persons. The movement must be built up from below where people in thousands contributed to small savings even if these came in dribblets. This was an aspect which must receive the attention of the Board. The Post Office Savings Bank had an important role to play, particularly in the rural areas in promoting the savings habit of the common man. The Post Office Savings Bank had

a very wide spread organisation providing service to the people at their very door step. Yet deposits in the banks had not increased even fractionally in recent years as compared to the deposits with the scheduled banks. The banking habit, the Minister emphasised must spread, especially in the rural area where substantial incomes were being generated as a result of the drive to step up the output of foodgrains. Furthermore, the banking habit would in turn lead to the growth of the savings habit among the people.

In his address, Mr Bhagat referred to the Cumulative Time Deposit Scheme which provided the best means for ensuring regular monthly saving even by persons with modest means. It should also appeal to self-employed persons in view of the tax concessions which the scheme offered. Another instrument of savings recently introduced was by the sale of Units through the Unit Trust of India. The Unit Trust would secure the peoples ownership of the means of production. It had thus an important role to play in our national economy. The success which it had achieved so far was particularly encouraging. What was more he said it had not affected the small savings collections.

Summing up, Mr Bhagat said: "The success of the small savings movement should be measured not so much with reference to the collections but by its ability to convince the people that their participation is an index of their determination to see that our development plans succeed. There is no easier and better way for the common man to identify himself with the country's progress and strength."

★

BHILAI

Production During November 1964

The Bhilai Steel Plant produced 1,64,801 tonnes of finished and semifinished steel products during November, 1964. This included 31,664 tonnes of Rails and structural, 46,039 tonnes of Billets and 27,048 tonnes of Merchant Products, all figures being higher than the monthly rated capacities of the respective shops.

The production of Pig Iron (Hot Metal) during the month totalled 97,216 tonnes.

The Steel Melting Shop produced 92,100 tonnes of ingot steel, which included 3,657 tonnes of steel produced from the seventh Open Hearth Furnace.

The production of Blooms and Slabs during the month under review was 81,819 tonnes which was also higher than the monthly rated capacity.

Two new daily production records were also set up in the Steel Plant during November.

NOTE: Annual figures are averages of months; those of sugar relate to crop years.

†Data of Matches, Hurricane Lanterns, Sewing Machines and Bicycles from January 1963 onwards and those of Footwear (leather) from April 1963 relate to units having fixed assets of Rs 5 lakhs and more.

‡Data in respect of certain units are not included from January to May 1963.

(1) Monthly figures are exclusive of production in Punjab (Kangra) and Himachal Pradesh.

(2) Relating to the production by mills in the membership of Indian Jute Mills' Association and to one non-member mill.

(3) Includes canvas.

(4) Figures relate to stable variety only from June 1962.

(5) Including figures for Jammu and Kashmir.

(6) Figures relate to production of organised factories.

(7) Boxes are of 60 sticks each upto February 1961 and thereafter of 50 sticks each.

(8) Total of viscose yarn, staple fibre, acetate yarn and cellophane.

†From January except in the case of sugar where the figures are progressive from November of the preceding year, the crop year being November-October.

*Provisional.

SCHEDULED BANKS IN

Ancient seal of a Hanseatic League city over the Lufthansa symbol.

SHB2/LGA-17

What does 'Lufthansa' mean?

In German, 'luft' means air and 'hansa' means a guild of merchants. The merchants in our guild are the original independent flying companies that sprang up in Germany after 1917 and later joined with the federal government to form a single national air transport system. Long ago, German sea merchants and their city governments formed a similar alliance for stability and efficiency. They called themselves the Hanseatic League and prospered for four centuries.

Our company is much younger... but our traditions of German efficiency, mechanical skill and experience in transportation go back a long, long way. Fly with us and enjoy a few centuries of history in a new jet.

The Challenge of the New Year

NEVER did the Old Year cause more regret at its passing than does 1964 now. It has had more than its share of radical changes in the governments and public policies of powerful nations and had not unoften raised the hope that some of the more harrowing problems of our time would before long be shorn of their more forbidding features. While these problems have lost little of their terrors, international relations have certainly become more tangled in the political as well as the economic spheres, in a manner in which it is difficult to see the possible trends in the year ahead. In India, the death of Mr Nehru had the expected effect of putting the Congress organisation on its mettle and bringing out more and more into the open the various economic and political problems which his immense personal prestige had successfully pushed into the background. The results so far have not been of the decidedly heartening kind, though it is far better that the issues are faced up to and the consequences of immediate failures cheerfully suffered than that ignorance and complacency should be allowed to prevail in high places.

It is now known that the achievements of the Third Plan will fall far short of the targets and that it will provide a much less efficient spring-board for any leap forward that the Government and the Planning Commission may contemplate for the next five year period, that the food problem will be with us for two or three years more at the least, that the problem of stepping up industrial production will be beset with shortages of raw material and essential imports, that to raise the tempo of progress under the Fourth Plan, heroic efforts will be needed in different spheres and different agencies. More than all these, it is certain that India will have to continue to step up her defence expenditure and that the threat from China will grow rather than diminish in the coming years.

The menace on the northern border sharpens our interest in the international situation which in the days of Mr Nehru had been somewhat academic. Mr Khrushchev's fall from power was regrettable, not only because of his affable personality and the proofs which he gave of his courageous resolve to avoid war, but also because of the attempt to heal the breach between Moscow and Peking which it presaged. The international situation has grown more and more intriguing, despite the overwhelming nature of Mr Johnson's triumph over Mr Goldwater and the sharper features

which his personality has revealed in the last few months. The advent of the Labour Government in Britain may well prove to be a powerful factor in international affairs, since its slender majority in Parliament is compensated to a great extent by the clear cut-ideas formed by Mr Wilson and the courage and determination which he brings to their application to practical problems.

But, on the Continent of Europe, General de Gaulle has scored fresh personal triumphs for himself. While Mr Wilson's first steps to cure the ills of Britain's economy—the 15 per cent surcharge on imports and the 7 per cent bank rate—have had a bad reception and had to be followed up by an international loan, which is a favour from his opponents abroad, General de Gaulle has had his way in the matter of common policy for agricultural prices and saved the ECM from the threat of dissolution. How far the resulting consolidation of Western Europe will help the resolution of the complications in regard to the MLF and other issues outstanding, it is difficult to say at the moment.

For India, the survival of the Common Market makes it clear that she will have in the future to nurse and develop her export markets in Western Europe and pay whatever reasonable price may be required at each stage for this purpose. Her foreign policy, and particularly her relations with Soviet Russia, though basically sound and cordial, may often present ticklish problems to be solved with tact and discretion. At the moment, the fact that the attempt at rapprochement between Russia and China following the ousting of Khrushchev has not been an impressive success and that one can set more store by the view held by many experts, that the differences between the two countries are too deep and vital to be made up by mere changes at the Kremlin.

It is however in the domestic economy that the disappointments have been particularly disheartening. Critical conditions have developed in more than one department and a sense of crisis is felt by Government and people alike. One exception to this has however to be gratefully recorded, the increase in India's exports, such as to induce a measure of confidence that the target for the fourth and fifth year of the Third Plan might be exceeded and that the target of over Rs 5000 crores for the Fourth Plan is by no means too ambitious. But even this confidence may well be undermined, if industrial output fails

to show an adequate growth in the years ahead. Though sacrifices in internal consumption for the sake of exports should not be grudged, exports must be securely based on genuine surpluses left after the satisfaction of the needs at home. That over a wide range industries have been unable to work to capacity and that shortages of essential articles have been experienced by them is indeed the most disquieting feature of the economy today. Neither agricultural production at home nor foreign exchange resources necessary for essential imports can be expected to come up to requirements without herculean efforts towards that end. It is not foodgrains but also agricultural raw materials that call for a crash programme which will ensure an annual growth of 5 per cent in our agricultural output.

It is not surprising that Government is quite determined to achieve it, though there is no sign yet that, when it comes to modifying some of its pet ideas for the purpose, it will be found ready to accommodate itself. Whatever that may be, it is certain that the growth rate has to be high and that the scope of the Plan cannot be cut in fear of possible inadequacy of resources. The peculiar feature of India's economy and public finance today is that the shortage of resources is the result, not so much of low levels of capacity for taxation and production, as of unwise policies which have not only failed to husband our resources, but have paralysed the economy by heedless overstraining. It is time that the Government recognised that we can ill-afford to scorn any of the available means of increased industrial production and that we must attempt to ensure imports of essential goods by speeding up and increasing the flow of private foreign capital. Likewise, industrial activity and new investment have to be stimulated by tax reliefs without counting the immediate loss of revenue and with an eye to the larger gains that wise policies are sure to bring nearer. A year that opens with new challenges to our courage and grit must prove better than one which seemed at first to have belied our fears.

Agreement at Brussels

POTENTIALLY the most important bit of European news last week was the agreement reached by the Council of Ministers of the European Economic Community on a common cereal price within the Community from 1 July 1967. In many ways, this is a historic decision and is a tribute to the untiring negotiating skill and resilience of the bureaucrats of the member nations. They were determined to wear down opposition of all kinds to the idea and make a reality of a common agricultural market in the same way a common industrial market that has already been created. Obviously, behind the bargaining postures adopted by the participants and behind the very real conflict of national interests, there was a genuine impulse towards unification. This impulse derives its motive power from the idea of a common European destiny that has inspired from the beginning the EEC and its guiding spirits like Monet, Schuman and others.

The Rome Treaty is a cunning document with elaborately devised safety catches and

valves that operate in an irreversible way. In other words the steps taken are incapable of being retraced and these ostensibly commercial and economic policies imposed their own inexorable political obligations from which there was no escape. Even when President De Gaulle threatened last month that failure to agree on a common cereal price would make France dissociate itself from the Common Market was something of a bluff since there were legal difficulties in getting out. However, price has less to do with his threat than with the pressure of the logic of the evolution of the community over the years but it is certainly true that with the present agreement on a common price for cereal within the Community the seal has, as it were, been set on the European Economic Community. The point of no return has definitely been crossed. That is why Mr Mansholt, who, more than anyone else, has reason to be satisfied with the outcome on Tuesday (15 December), emphasised the political importance of the decision.

The Politics of the Decision and . . .

That such a decision with pregnant political implications could have been taken at a time when overtly political problems are surely dividing the members of the Community is at first sight, perplexing. Here again, some obscure impulse to which we made a reference earlier is at work. This is not to say that France and Germany will now find it easy to settle their differences over MLF or ANF as it has since been rechristened) and other matters. The disarray among the NATO partners over the kind of European defence set up that should function in the changed context of nuclear stalemate is far too complicated. The principals involved in the dispute have sharply opposing notions on the implications of the different plans that each is suggesting. Nevertheless, two political consequences of the economic decision of a common cereal price can hardly be overestimated. First, De Gaulle is no longer in a position to make use of a handy economic argument about West German intransigence over farm prices to threaten to break up the European Community. If De Gaulle wants to wean Germany away from Anglo-American influence and make it fall in with his own thinking on military matters, he will have to depend on the intrinsic political and military merit of his argument than play upon collateral economic fears. He cannot blackmail Germany by threatening to break up an association which Germany has found extremely useful.

Secondly, whatever the politics of European defence, the politics of European economics has been to erode progressively national frontiers. De Gaulle may still have reservations about the precise nature of the eventual European polity that is to come out of the economic community. But when Europe from Sicily to Holland becomes not only industrially but agriculturally one community with decisions taken at Brussels rather than at the national capitals, the resistance to a common decision making becomes more and more difficult. A common price level, means eventually a common policy on inflation within the Community and a closer integration of fiscal and monetary policies. The political implications in terms of diminution of national sovereignty, of these extensions are obvious. This will be particularly so when appropriate common political institutional appertenances, in however rudimentary a form, exist and are eager to function to the

fullest plenitude of their functions. Here again the unconscious impulse towards a common political destiny will act inexorably.

Its economics

The economics of the common cereal price are simple enough. Though it would be wrong to ignore other subsidiary clashes within the Community, the essential problem in EEC agriculture as indeed in anything connected with the EEC is best highlighted in terms of the conflict of interest between France and West Germany. Briefly France has been wanting to break down the barriers to the free movement of the grains within the Common Market. As the country which has made the relatively greater sacrifices in the matter of the breaking down of national barriers for industrial products, France had long been clamouring for this *quid pro quo* in a commodity in which it had the advantages of relative efficiency.

West Germany has been resisting the fixation of a common cereal price at a level well below the price that German farmers will have to be paid if they are not to be destroyed out of existence by competition from less expensively produced cereals in, principally, France.

West Germany has, therefore, been resisting this development largely for political reasons founded upon the powerful farm lobby. The farm votes are of crucial value to the Christian Democratic Union to which Dr Erhard belongs, though Erhard's own economic philosophy would make him more sympathetic to allowing the blast of competition to make German agriculture more efficient. West Germany has, therefore, been stalling the negotiations over this question for nearly two years. The eventual solution that has now been found acceptable has accommodated Erhard's requirements to the extent of making the new harmonised cereal prices for the entire Community effective from a date well after the West German Federal Elections that are to take place next year.

France is ostensibly to gain a great deal from the new arrangements. At a community price well below the "German price," France's cereals will have a better chance of obtaining a share of the German market. Germany will have to support as best as it may its own farmers by a variety of subsidies at the expense of its tax-payers, and by increasing the efficiency of its agriculture partly by structural changes aided by community funds.

The agreement on a common cereal price has by no means solved all the outstanding agricultural problems in the Community. One of the most contentious problems is the share-out of the common agricultural fund that has been created. This fund has been created principally for three purposes: to subsidise exports of the farm surpluses of the EEC, to keep internal prices stable by open market operations and to finance structural reforms in the agricultural sector so that improved methods could bring about increased agricultural products.

Quarrels over this fund are many and complicated and include differences of opinion on the most equitable method of imposing such a levy and on the invidious share out of the common fund. The present rules are governed by an agreement made in 1962 and are due for revision July next year. The Italians nearly wrecked agreement on a common cereal price and by bringing up the unfair way in which Italy was receiving less than its fair

share of benefit from the fund. Both as export subsidies and as grants for improved agriculture—these grants are quantified at a third of the sum spent on export subsidies—Italy has received much less than it expected. It has been estimated that between 1962 and 1964, France has benefited most from this fund and Italy the least, with Germany, Belgium and Luxemburg coming in between. In fact, it would appear that these other countries have been principally financing France's exports of farm surpluses. For example, because of the subsidy from this fund, France was able to sell about a million tons of wheat to China at well below world prices which itself was below French prices. A rather odd consequence of this fund is, therefore, to make it irrelevant to France whether or not it gets a share of the Community's farm market so long as it is able to find other world markets to which it can export its farm products and get automatically subsidised by this fund. Italy's grievance was particularly strong because according to the rules, not all agricultural products are eligible for subsidy from this fund at the moment and in consequence items like fruits in which Italy has a surplus does not benefit by the subsidy. Some gesture towards Italian complaints has been made with promise of Community Finance for fruits and vegetables and certain other adjustments of its maximum contribution to the agricultural fund.

Flow of Foreign Capital

IN SPITE of the opening of Investment Centres abroad (not to invest but to interest foreign capitalists in India not as a market for goods but as a field for development), the Government of India is compelled to explain what it wants, why, and how. This explaining has been done also by foreign journalists after conducted tours but the overriding need for foreign funds—in foreign currency—impels the Government to say that it prefers private capital to Government loans at present and wants foreign concerns to take shares—not to make loans which entail regular interest payment—in a foreign currency too—right from the date of issue.

It is easy to say that the balance of advantage lies in the entry of foreign capital as risk capital, not as loan capital, because many industries and companies have already fixed prior charges and it is clearly unwise to increase the burden of debt in the face of a profit squeeze due to high taxation and rising costs. Whether the Finance Ministry is engaged in special pleading, in trying to improve the climate for foreign capital need not be debated. What is clear now is that position today is different from that obtaining in 1961 and the Government's problem (not usually different from that of private enterprise) is to make Indian rupee companies, new or old, worthwhile for foreigners.

The stock market depression will certainly restrain hopes of early expansion though one can argue that industrial licensing procedure has undergone changes and the expansion of industry here has limited the field of investment. Of course, tariff advantages are held out and chances of profits in a large sheltered market look good enough to impress the authorities. If the bait is the Fourth Plan, the

Government's refusal to let US Steel still decide the shape or size of the Bokaro project may be cited as a reason. But General Clay came out to India in order to examine the investment potential after a private mission and it is just possible that the US views may change though one must take note of the active discouragement of the export of capital which strains the balance of payments as also the higher interest rates arising from a continuous boom.

What is truly important at present is that manufacturing is regarded as suited for the US or other capital and Government is willing to issue licenses quickly though the limit of expansion in several industries has been reached so as to obviate expansion through new units. The limit set to competition in future is an advantage to a certain extent, but the issue is whether a minority holding will satisfy those who are willing to provide both financial and technical aid to new ventures. On this point, some scepticism is permissible and it will be admitted that efforts to make US firms become Indian rupee companies are not going to make much difference to the course of development for the whole issue of participation hinges on the rate of profit available even more than foreign companies' record here. As India is not a low-cost producer—even of textiles—the foreign capitalist may not see many prizes within easy reach. The other point is cost inflation, making the cost of ventures exceed investment estimates.

The Government must show that it can check inflation effectively before it can ask others to take a bold or optimistic view. No reference to the background of Indo-Pak relations is required but foreigners may like to see goodwill and stability in the sub-continent. Some may even wait for the Kerala election result to see whether the investment climate is good enough to take official assurances at their face value. What is said by company chairman in India about the problems more than prospects will doubtless carry more weight than any press note about changes and chances in India.

There is Consortium aid from year to year but the question is whether maintenance imports in adequate volume can be kept up for the smooth running of industry. It must not be forgotten that there are many African countries looking out for foreign capital and India has to compete for attention—with Nigeria, Zambia, Sierra Leone and other countries that can offer minerals required in Europe or America. This point requires emphasis when reference is made to either export objectives or outlets. The most important consideration is not the absence of export duties but the possibility of supplying adjacent markets from India. On this score it is not possible to speak with any assurance and it is certain that selling cycles or trucks made in India is not easy when Japan is a keen rival in Asian and African markets.

Export surveys latterly tend to stress difficulties. That foreign exchange has to be conserved over a long period may justify every plea made for foreign capital for raising the volume of new investment in all directions. The supply of second hand machinery in working order may or should come within the scope of consideration because the time has come to consider the cost of capital and the optimum rate of return thereon. Unlike other underdeveloped countries, India does not offer an attractive return on new capital

and the assurances regarding remittance facilities etc, cannot compensate for the low rate earned on capital here. This is crucial when asking others to participate and it is still worth noting that personal, not national advantages, have to be kept in view by foreign investors also. Of course, an established success like Toyo Rayon or Canon Camera of Japan can ask foreign capitalists to buy shares or lend money but it is scarcely possible for any Indian company to try the same approach. Formal rules about applications for shares by non-residents must be scrapped before any useful advance can be made. If an Indian resident in the Persian Gulf States is going to put in money to work he should not be asked to give a lot of details about either the origin and use of his funds. The non-resident shareholder must have extra protection—as he cannot vote—but the company law must be armed specifically for the purpose.

The problem is by no means simple but foreign capital is urgently needed and untied or independent borrowing means that capital goods can be got from many sources in future. The outside evaluation of economic planning may be sought indirectly by an approach to foreign investors or banks which are more closely connected with industry than presumed. If an outside verdict on currency and exchange policy is held to be inexpedient for various reasons the attractions of India as a field of investment may be greatly reduced for it is not only the rate of economic growth but the fiscal system that will be scrutinised without predilections for or prejudice against socialism.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resource for the National Plan.

BANK RETURNS

Impact of Tax Payments

IN the week to the second Friday in December, Scheduled Banks felt fully the pressure arising from tax payments made by constituents. As a result, they had to disinvest heavily in gilt-edged, though it needs to be added that the bulk of such sales were effected by the State Bank. As the year draws to its close, the money market has not quite recovered from the stringency that was witnessed from early in the month, and with the demands relating to window-dressing of bank balance-sheets, it is almost certain that tightness will continue to prevail into the first or second week in January; and, by that time, the current busy season will have started perceptibly to impose a strain upon the banking system. As such, the prospect is that busy season stringency will prevail for a somewhat longer period this year than has been the norm in recent seasons. It may be noted that relief for the money will be evident only from the middle of March, when governmental disbursements relating to end of fiscal year payments come to be made. However, it is possible that the expansion in bank credit will not during the current busy season reach the level that was attained in the last busy season. This is because, save for the State Bank, the scope for borrowings from the central banking institution is extremely limited. Hence, the higher liquidity requirements are likely to have the effect of curbing the quantum of seasonal finance that the banks will be in a position to extend. Inevitably, then, unless the monetary authorities relent, in the matter of central banking accommodation for the banking system, productive efforts are likely to be adversely affected for want of bank finance. If past experience is any guide, we can safely expect suitable action being taken by the monetary authorities.

According to the returns of the Reserve Bank for 18 December, there has been a small fall of Rs 3.08 crores to Rs 2,507.46 crores in

Active Note circulation, and there has also been inflow of Rupee Coin in an amount of Rs 0.86 crore. With Foreign Securities and Rupee Securities unchanged at Rs 85.46 crores and Rs 2,216.13 crores, the Reserve Bank's cash in the till has improved by Rs 3.91 crores to Rs 13.64 crores.

The State Governments are again under considerable financial pressure. Their Deposits have dropped by Rs 7.03 crores to Rs 10.79 crores; and their ways and means borrowings from the Reserve Bank have risen by Rs 8.41 crores to Rs 39.04 crores. On the otherhand, the Centre continues to be comfortably placed, with Deposits slightly marked up by Rs 1.26 crores at Rs 54.31 crores.

There is little change in the position of Scheduled Banks vis-a-vis the Reserve Bank. The fall of Rs 3.46 crores to Rs 90.09 crores in their Reserve Balances is mainly to be attributed to the State Bank; and their indebtedness to the Reserve Bank is marked down by Rs 0.49 crore at Rs 22.81 crores.

NOTICE

Owing to the intervention of the New Year holidays, there will be no issue of Indian Finance dated 2 January 1965. The next issue will be published on 9 January 1965.

—Editor.

Incidentally, the fall of Rs 11 crores in the Reserved Bank's portfolio of Treasury Bills purchased and discounted could mean that the Centre was in receipt of repayments of loans by State Governments, such inflow of revenue being utilised to meet the maturing liability on such Treasury Bills.

It remains to add that Balances Held Abroad have again dipped by Rs 0.98 crore to Rs 9.86 crores; and so foreign assets in the possession of the Reserve Bank just barely exceed the Rs 95 crore level.

The return of the State Bank for 18 December records a welcome accretion of Rs 4 crores to Rs 665.19 crores in Deposit resources. However, this was insufficient to cover the week's expansion in Advances, which are marked up by Rs 5.95 crores at Rs 376.53 crores. Gilt-edged holdings are practically unchanged at Rs 257.12 crores. An increase of Rs 5 crores to Rs 59.91 crores in Other Assets is matched by a fall of Rs 3.54 to Rs 30.53 crores in cash balances, including money at call and short notice.

As noted, tax payments combining with spill-over of beginning of the month disbursements into the second week have made their impact fully felt in the return of Scheduled Banks for 11 December. The total of Advances has jumped up by Rs 20.36 crores to cross the Rs 1,800 crore mark in being placed at Rs 1,804.70 crores. This has involved for the banking system adjustments of various kinds. In the first place, there has been heavy disinvestment in gilt-edged, holdings being marked down by Rs 37 crores to Rs 765.97 crores; however, as much as Rs 27 crores of this decline is traceable to the State Bank. Secondly, indebtedness to the State Bank has risen by Rs 4.33 crores to Rs 72.43 crores. Thirdly, borrowings from the Reserve Bank have been marked up by Rs 6.62 crores to Rs 21.99 crores. Fortunately for the Scheduled Banks, tax payments did not result in constituents drawing down their Deposits. A fall of Rs 5.17 crores to Rs 1,315.83 crores in net Demand Deposits is more than offset by an increase of Rs 6.64 crores to Rs 1,381.03 crores in net Time Deposits. Indeed, if regard is had for the State Bank in that week having suffered a depletion of Rs 6 crores in Deposits (owing to repayment of Public Law 480 counterpart funds), it would be evident that other Scheduled Banks actually had an inflow of new resources exceeding Rs 7 crores. Finally, the increase of Rs 5.58 crores to Rs 254.11 crores in cash balances, including money at call and short notice, is wholly attributable to the State Bank.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 22 December 1964. Tenders offered amounted to Rs 2,15,00,000. Tenders at Rs 99.380 per cent were accepted in full and those at Rs 99.375 per cent were allotted 93 per cent approximately. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.499 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 4 January 1965. Successful tenderers should make payment on Friday, 8 January 1965 at all centres. Other conditions are as usual.

MOTOR INDUSTRY

Crippling Taxation

While the plea that a tax on transport must be made only through a tax on fuel consumed as in most countries is familiar enough, the suggestion that the excise or other tax on cars should be through a single levy—not on all the parts used in manufacture—has been made in Madras by the Minister of Industries. At the formal opening of a new private industrial estate set up by Enfield India, the Minister pointed out that high unit cost was due to the tax element. This has been indicated in recent advertising by Hindustan Motors to explain why cars are dear and scarce in India. As Minister running transport Mr Venkataraman also pointed out that the separate taxation of spares and components raised the price and Indian export trade naturally suffered. In a reference to commodity or indirect taxes, Mr Venkataraman said that high indirect taxes are the index of a backward country. But he added "I do not think we are a backward country any longer". This is flattering indeed, when the states now look to the sales tax as the chief item of revenue though it will be urged that the tax in Madras has been rationalised under expert advice. However, the enlarged supply of auto ancillaries for manufacturers of motorcars and motorcycles is promised by the development of many firms in Madras engaged in producing equipment like castings, bearings, and piston rings.

The dispersal of the motor industry is an accomplished fact but the volume of production is still dependent on getting essential imports. The visit of Mr T. N. Singh to Madras may not promise immediate or substantial relief but expansion of truck or car output to licensed capacity may not prove impossible. This will permit a reduction of price by 15 to 30 per cent and the high price of even second hand cars will probably disappear and black marketing in new cars will probably come to an end. Any change in the Budget as regards excise applied to motor components may be hard to predict but the Madras Minister for Industries has outlined the direction of improvement. The inception of small scale manufacture is hailed as a welcome development though

foreign collaboration is needed for getting a start in the line. The supply of genuine replacements by manufacturers is vital for the efficient operation of engines and the present reliance of users on brand names must be acknowledged. The Government in the Third Plan has attracted much importance to the evolution of industrial estates affording facilities for small enterprises and the experience of Italy has been cited as an argument in favour, though it may be noted that in Italy the industrial giants are few and get really bigger every year because the supply of additional capital—from abroad also—depends on the emergence of bigger units that can compete in the ECM. The linkup of Europe's motor firms and the entry of US capital will suggest that even as in rayon, there is a place only for very strong units in the automobile industry.

PESTICIDES

Problem to Manufacturers

Programmes that have been drawn up for increased food production have consistently stressed the need for systematic pest control which involves the wide-spread use of pesticides, including aerial spraying. But, till recently, there has been very little awareness on the part of the Government, or of the public at large, of the dangers attendant on the indiscriminate use of pesticides. At a recent meeting of the representatives of the Government and manufacturers of pesticides, attention has been drawn to the hazards involved in the manufacture, transport and use of insecticides. The meeting has also proposed that the Indian Standards Institute should set up a committee for drafting standards for containers used for various types of insecticides.

Standardisation of containers will, however, deal only with a limited aspect of the problem. It is not clear from the report of the meeting whether the long-term effects of continued use of pesticides on the soil, plant and animal life received adequate consideration. The risk arises from the fact that the basic chemicals used in the pesticide formulations do not disintegrate in the soil. They remain unchanged in the tissues of

the plants growing in the contaminated environment and in the tissues of the animals eating the plants as well as of human beings. It is also suspected that some of these chemicals are carcinogenic.

The adverse effects of the use of pesticides on bird and insect life have attracted a good deal of attention in the UK where the use of certain types of insecticides was prohibited last year. In India the use of pesticides on widespread scale has been started only very recently and the harmful effects may not be evident for some years. But that is no reason why we should not learn from the longer experience of other countries and adopt precautions from the very start, including careful selection of the pesticides that are to be broadcast all over the countryside.

IATA

Tramps in the Air

Development of trade in certain commodities and to certain markets, could make better progress if air transport were a practical proposition. Almost the whole of India's trade with Afghanistan is carried by air, which naturally keeps down the volume. Similarly markets for perishable commodities could be built up if air transport charges were economic. Attention has naturally been drawn to the subsidiary charter companies operated by many western countries in addition to the national carriers. And it has been felt that a separate air freight unit outside the IATA could give a new edge to the export drive.

An expert Committee which was set up last year to study this proposition has underlined the advantages of setting up an air freight unit for carrying cargo and passengers on a tramp basis. But on an examination of the practical possibilities, it has been found that it would not be feasible as originally proposed, to form the unit as a subsidiary of Air India and the IAC with the latter's surplus Dakotas. For one thing the IAC is not now in a position to spare any of its Dakotas. Moreover, Air India and IAC, as members of the IATA, are precluded from participating in the capital of a non-IATA unit. The funds required for the purchase of air craft and equipment as well as for working expenses will have to be put up by the Government.

The aim of setting up the special freight unit is to offer reduced rates, and it remains to be seen how far it would be possible to reduce costs of operation. In any case it is clear that the economical operation of the tramps in the air will depend on the availability of an adequate volume of two-way traffic. There may be no great difficulty in providing sufficient export cargo for the outward trips, but there is the problem of return traffic. To get over this difficulty the Committee has suggested that the possibility of catering to student traffic, seamen groups and other group movements, for which national carriers are obliged to give clearance to tramp operators, should be explored. The Committee, however, does not expect that the tramp plane will bring in profits in the first two or three years of operations.

GOLD CONTROL

Public Animus

Gold control—a byproduct of the Emergency—is facing criticism voiced by the Congress party mem-

bers. The case against control has been formulated by Dr R. S. Singh—a member of the Government. The price of gold has not fallen, the smuggling of gold has not declined, and the popular preference for gold as a store of value has not been sapped. This statement of objections (against the objects) will doubtless influence the parliamentary debate and, it is significant that Mr Rameswar Tanta also expressed his dislike of gold control. The hartal organised lately by the traders and artisans represented the essential hostility of the citizens to a measure that has increased unemployment and deprived shops of steady custom.

The really important result of control is yet to be realised, for the Government has not got the essential stocks or supplies required for its currency reserves out of private hoards. The Gold Control rules as applied have incidentally forced up the cost of gems and the official theory that demand for gold will dry up has not been accepted in the country so far.

The Finance Minister may get some support from the Opposition but the division of opinion within the Congress party suggests that the Central Excise administration is not going to produce a great change in the public attitude to gold though customs seizures help to raise prices for those willing to buy gold today, from necessity even more than choice. The failure of an anti-inflationary device, also meant to increase small savings, will doubtless be examined from many angles but the problem is really connected with the depreciation of the rupee at home and abroad. The control over the industrial use of gold has not checked depreciation and the free market abroad has registered fully the decline in the purchasing power of the rupee. From this angle, control has been a failure and even the prospective rise in gold mining output will not help India. The crucial factor is that probable disinvestment in gold has not appeared so far and the planners have not created any aversion to gold just because gold

happens to be preferred by those traders with black money. To attack the latter, it is hardly necessary to enforce the 14-carat standard on an unsophisticated country that has declined so far to give up gold or silver for religious or secular purposes. While gold control may not be an electoral issue in Kerala, it is evident that differences of opinion among Congressmen will not be missed by outsiders.

AIR Listeners' Discontent

The enquiry into the working of the AIR promised by Mrs Indira Gandhi and entrusted to an expert review Committee is inspired by dissatisfaction with results. A desire for more revenue by the introduction of advertising on the air is not the only factor that has led to an inquiry. India's

external publicity has proved inadequate for several reasons and the AIR as an agent of national integration has not scored any success. The demand for a statutory corporation independent of Government is linked with the plea for commercial advertising during specified hours of peak listening. Whether this will help sales of radios in a poor country that can show 4 million radio sets and 600 television receivers (limited to Delhi alone) is doubtful. The circumstances of an undeveloped country in which the written word has not a large impact may foster a belief in radio for mass communication. The Ford Foundation team discovered that the available media for publicity have not helped to create much popular support for two Five-Year Plans. The complaint against bureaucracy is implicit in the Ford Foundation team's analysis of results—appointing so far. Whether a charter as in the case of BBC, that is growing in influence and its interests, is necessary for an efficient public agency may be ascertained by careful scrutiny of the Information and Broadcasting Ministry's efforts in the field of films, radio and publications. Admittedly the diversity of language and regional interests handicap AIR but it is still useful to look at the BBC's last report to look at the improvements carried out.

That AIR suffers from the exclusion of religion as also political controversy is patent and its attitude to current events is too cautious as many confess. Sale of BBC programmes and records to other countries are part of the projection of England aimed at 30 years ago. Sales of techniques and equipment follow such exports and the British radio firm can count on other advantages even when nationalism is rampant. The BBC engages regularly in appeals for good causes. To that extent it differs from the AIR and it may be noted that John Mills and his wife appealed last year on TV and got £33,877 for the Freedom from Hunger Campaign. For the Yugoslav earthquake disaster the BBC appeals produced £381,206. This too will show that in spite of competition from companies that show their own artists and features, the BBC has held advantages.

More programmes presented in the morning stimulate popular listening and if the major event for the BBC was the end of wireless jamming by an agreement with Russia the main feature was that radio has reached the masses even more than the classes. This may be part of the drive for men's minds mainly because communist countries try to do more by way of external broadcasting and China is now ahead of the BBC because a Tamil programme supplements Malay and African languages. It may be added that the UAR is trying to influence the Arab world and a new commercial station supplements the external service beamed by its 1,000 KW medium-wave transmitter.

CLOTH Higher Exports in First Half of 1964

The November issue of the Textile Bulletin published by the Cotton Textiles Export Promotion Council of India reveals some interesting features about the changing pattern of cotton textile exports from the country. Exports of piecegoods during the first half of the current year have not only been stepped-up to 312.129 million yards valued at Rs 273.47 million from 268.62 million yards worth Rs 201.77 million in the corresponding period of the previous year but the price realisation has also registered a modest but significant rise by 13 paise to 88 paise per yard. It is equally heartening that our efforts at promoting exports of finishing fabrics have started yielding results as is evidenced by the notable improvement in their exports to 135.04 million yards from 111.74 million yards thus enhancing their share in the aggregate total to 43.3 per cent from 41.6 per cent. Similarly, exports of non-grey goods have jumped up by 23.30 million yards to 135.04 million yards while exports of grey cotton textiles smartly improved by 20.38 million yards to 177.26 million yards.

A zonal-wise break up of the figures indicates that exports to the European countries have almost doubled to 153.98 million yards valued at Rs 142.76 million from 85.18 million yards valued at Rs 70.26 million and offtake of Indian goods by Asian countries has gone up to 81.39 million yards worth Rs 65.85 million from 66.31 million yards worth Rs 46.42 million. The spurt in exports to European zone can be ascribed to the accelerated shipments to the UK and the bulk purchases of Indian textiles by some of the East European countries. On the contrary, exports to Africa, America and Oceania are marked down to 41.47 million yards from 59.29 million yards, 17.16 million yards from 36.68 million and 18.30 million yards from 21.16 million yards respectively.

The broadening trend in world demand for finished textiles is encouraging as far as India is concerned to expand its exports of piecegoods. The welcome revision in our export promotion programme to include in the export targets finished fabrics as well as cotton manufactures is admirably suited to the changing pattern of international textile markets. But factors like the restricted exports to African countries owing to protective tariffs and growth of indigenous textile industry should not be overlooked when formulating our export schemes. The rise in price realisation of non-grey items when compared to that of grey goods is a point to be taken due note of. This has been obtained largely through the special care taken to boost export prospects of Indian textiles. The fierce competition in Indian goods is encountering in foreign markets should be com-

bated by increasing production of goods which are competitive in both price and quality. A rapid modernisation of Indian cotton textile industry and manufacture of quality goods to evoke overseas demand will help enormously in expanding textile market for Indian textiles. The great impact made by Indian goods displayed at the various international exhibitions during the year on the visitors is a happy augury.

MANGANESE A Welcome Development

To the Indian manganese ore industry which has been a victim of the relapse in world demand, the reported revival in demand will be certainly enlivening news. Many of the units in the country had to close their doors during the past few years on account of uneconomic prices which also ultimately led to the inevitable decline in domestic production. With the recent spurt in prices to Rs

140 from Rs 100 per ton the re-opening of many of the units has almost become a certainty. Such a development is most welcome for not only honouring the barter deals entered into with foreign countries by the Minerals and Metals Trading Corporation but also for exploiting the present situation for regaining our lost hold in the world markets.

It is, however, disturbing that the manufacturing cost has become prohibitive, largely because of extraneous factors, to vitiate any attempt at consolidating the position of the industry. The industry avers that production cost has gone up to such an extent that the profit margin at the current level of prices will be rather slender. Though the industry has been constantly pleading for lightening the onerous burden of multiple levies, taxes and other charges on the f.o.b. cost of the ore, Government has been adopting an unhelpful attitude. Therefore, Government should introduce requisite measures for redressing the genuine grievances of the industry with a view to enabling it to maintain its

hold in the highly competitive international markets. Any delay in acting on these lines on the part of the Government will seriously impair the industry's position and the existing opportunity for expanding exports of Indian manganese may slip out of our control.

COCONUT Fall in Output

The recent spurt in coconut oil prices that occasions anxiety among industrial consumers also is derived from the failure of coconut plantations to supply copra. At the last Indian Chamber of Commerce meeting in Cochin it was stated that coconut farming is proving uneconomic and coconut gardens—not being classed as estates—are being fragmented with the inevitable rise in costs of production. Dr S. B. Rao dwelt on the decline in coconut yield as a major handicap for the coconut oil-milling industry. Coconut oil is now a substitute for other oils including mustard oil in Bengal. But coconut oil made out of indi-

Over 100 Years of Banking in India

NATIONAL AND GRINDLAYS BANK LIMITED

(Amalgamating National Bank of India Limited, Grindlays Bank Limited, and the Eastern Branches of Lloyds Bank Limited)

Registered in London under the Companies Act of 1862 on the 23rd March, 1866. The Liability of Members is Limited.

Bankers to the Government in Aden, Kenya, Uganda and Zanzibar.

ISSUED CAPITAL AND RESERVES OVER £ 11 MILLIONS

HEAD OFFICE: 26, BISHOPSGATE, LONDON, E.C.2.

London Branch:

genous copra is clearly insufficient and imports from Ceylon, Malaya and other sources are needed to supplement home output. Owing to foreign exchange difficulties imports have fallen away since 1961, though actual users were enabled to get licenses. Besides the direct licenses further allotment was made to users through the State Trading Corporation. But in 1963-64 actual users who run oil mills did not get copra. Under the export incentive scheme only the STC is benefited as no one else can claim to have carried on export trade. Since the STC cannot use the license as it has no mills, the sale of licenses at a premium has been undertaken. This means that for whatever copra imports are got the price is forced up. In order to keep the oilmills going it is necessary that the EPS license should be earmarked for Kerala.

It may be mentioned here that copra does not figure among exports through Cochin and only coconut oil-cake is shipped. Coconut oil is shipped but in 1963 the tonnage recorded a decline like cardamom, ginger and other exports through Cochin. As for copra the imports fell from 21,117 tonnes in 1962 to 5,473 tonnes in 1963. This illuminates the point is to inadequate supplies for the mills.

The Cochin port figures also indicate that pepper is being exported to Czechoslovakia and East Germany as well as the USA and Egypt. The boom in cashew nut exports is reflected in all the port's trade returns for 1963. The chief destination is New York and the West Coast firms are still the chief hipsters. On the other hand, coir exports have declined and the emery seems to be mechanisation of spinning etc. But a fall in coconut production implies reduced supply of fibre for yarn and it is noteworthy that if new markets like the USSR, Italy and Japan have been located the supply of that a fall in coconut gardens—raw materials has been reduced, so that a fall in coconut gardens—area and outturn—means a curtailment of coir exports.

IRI Unit in Bombay

The formal inauguration of the Bombay branch of the Institution of the Rubber Industry at Worli by Mr S. G. Barve, the State Minister for Industries, is an event of far reaching consequence as far as our rubber industry, which is encountering fierce competition in the international market, is concerned. The comparatively high manufacturing cost of rubber products in India has been and continues to be a major handicap in making marked inroads in the overseas markets which only highlight the urgency for adopting modern production techniques. Viewed in this angle, the enormous benefits which will be accrued from the Bombay unit to the rubber industry will be obvious.

The rubber industry in the country has undoubtedly made

commendable progress during the past and its future is not as dim as it appears to be at present. As Mr K. M. Philip, the chairman of the committee Bombay branch, averred at the occasion, with proper planning the industry could forge ahead and embark on an era of prosperity. This will, naturally, depend on a host of factors such as the availability of cheaper raw materials and chemicals indigenously and the introduction of cost reducing manufacturing techniques. The Worli unit which offers training facilities to the technicians in the industry in familiarising themselves with advance knowledge of production techniques will be able to traverse much ground in this respect. Similar facilities will also be made available in other parts of the country in due course. As the rubber industry is poised for rapid expansion in the Fourth Plan these centres will attract greater number of trainees from the industry which will go a long way in minimising production cost without impairing the quality of the products. Development of by products from the materials which go as waste currently and the manufacture of essential raw materials at reduced rates domestically will be of immense assistance to the industry in bettering the export prospects of its products.

AUTO COMPONENTS Swift Pace

In the motor components business the race is still to the swift and it is not only Joseph Lucas alone that has ventured far ahead. Every big automobile manufacturing country has set up branches abroad to get over tariff walls and in the Indian auto ancillary industry also German collaboration, technical and financial, is growing. The manufacture of steering gear or piston rings requires German assistance and Indian firms launched recently count on German help because one of the leading automobile manufacturers is tied up with Daimler-Benz A. G. The German auto component manufacturer, Robert Bosch has many oversea affiliates and the local participant is invariably content to rely on the name of Bosch for magnetos or other items. The Stuttgart firm has a branch in Glasgow as also Milan proving that the national industries are willing to buy from a local subsidiary. Of a German firm. In India the Motor Industries Company of Bangalore producing spark plugs is an affiliate of Bosch. The capital is Rs 225 lakhs but the firm's growth does not seem to depend on the local participants' contributions. It is perhaps Telco that has an interest in Mico. The exclusion of imports is a guarantee of success. But in Argentina, the sale of Bosch components is linked with the manufacture and distribution of Daimler-Benz vehicles. What is clear is that Daimler-Benz as the second biggest maker of cars and trucks in Germany is linked with Robert Bosch, not only in its Swiss

branches but has outlets in minor motor manufacturing countries like Sweden and Japan at present. The North American branches are more vigorous because automotive manufacturers depend on a large number of suppliers of components.

UK Kaldor on the Carpet

Professor Nicholas Kaldor assailed by the Press as a sinister figure has not lacked defenders. As Cambridge men readily support other Cambridge men (criticised by others) it was natural for the Provost of King's College to defend Professor Kaldor whose views on profits and taxes seem harsh to capitalists. That another Fellow of King's (J. M. Keynes) who was with the British Treasury did not suffer in public esteem because of compulsory deposits may be set down to the power of Sir Winston Churchill and the prevalence of full employment arising from the war. There is of course no chance of Mr E. M. Forster (a Kingsman) being attacked for being sceptical of democracy but economists who want to apply their opinions must now be targets, because the political aspect of political economy is latterly plain and the lectures of Professor Rostow on growth have made Cambridge not exactly orthodox. Cambridge economists look askance upon imperfect competition, with monopoly and restrictive practices examined by Courts that are suspicious of big business like the Judge in Charles Morgan's novel. There is, however, something to be said for unpopularity because the economists get into the news and as temporary civil servants are not condemned to anonymity. The Labour Government has got Sir Eric Roll, McDougall and others for its brains trust and one may add that in FDR's time, the brains trust was unpopular with American businessmen who did not like Government to lean on academic opinion too much. That too was an exhibition of anti-intellectualism to which the modern world, including India, is prone.

ECM Complications in Wine Trade

The European Common Market is likely to face complications in the wine trade. A bigger grape harvest in France and Germany too will enlarge 1964 supplies. Abundance of grapes in Spain in 1964 promises extra supplies and competition in exports will certainly increase. A possible result may be a decline in the imports from North Africa because the low quality wine used in France for mixing may not be needed at all. Efforts to increase the use of wine instead of spirit depend on tariff regulations and the surcharge on British duties may not help either

Spain or Portugal. So many countries seek to build up the home market and stress the virtues of national vintage as against imported wines. Germany is particularly anxious to push Rhenish wines to the notice of natives whose prosperity may lead to the substitution of dark beer by light wines.

The prospect of a common market with a low tariff may not satisfy Germans because German production at 1.1 million gallons is just 4 per cent of the total wine produced in the ECM and it is apprehended that even a higher average yield per acre does not help Germany against Italy or France because definition of famous wines or regions will put France at an advantage in regard to exports within ECM also. As Germany is a regular importer like Holland the idea is that in the ECM she will have to accept others' rulings.

Cheaper wines from Italy or elsewhere will get in, according to many who argue that, like Scotch whisky, French wine will be preferred in Germany. This has led to various protection proposals but no talk is heard of sales to the USA when the Californian wines are still handicapped as against foreign wines in the hotels and restaurants. The extraction of more brandy is a possible remedy but even here the French will always have an advantage over Germans who cannot try to push new unstarred brands across the frontiers. Germany does not take stock in table grapes and in any event, raisins and currants from the Balkans will be more acceptable to housewives.

WHOLESALE PRICES Further Rise

The official wholesale price index (with the year ended March, 1953 as 100) advanced to 156.9 during the week ended 5 December, 1964; as compared with 155.6 (revised) for the previous week. The index was higher by 1.6 and 17.1 per cent respectively, when compared with the corresponding week of the earlier month and that of a year ago.

Higher prices of fish (+15%), groundnut oil (+11%), cardamoms (+7%), potatoes at Patna (+8%), masur, oranges and gingelly oil (+5% each), wheat, coconut oil and turmeric (+4% each), gram and mustard oil (+3% each), jowar, maize, mung, urad and coffee (+2% each) and arhar, ghee, meat and black pepper (+1% each), raised the index for 'food articles' by 1.0 per cent to 164.8 as against 163.2 (revised) for the previous week. The prices of 'onions' (-8%), potatoes at Delhi and tea (-6% each), eggs (-4%), salt (-2%) and rice, bajra, barley, bananas, milk and gur (-1% each), however, exhibited declines.

Lower prices of raw tobacco (-1%) brought down the index for 'tobacco' by 0.4 per cent to 133.2.

Increased prices of castor oil (+2%) pushed up the index for the 'fuel, power light and lubricants' group from 144.9 in the earlier week to 145.0.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as
the wind
To blow on whom I please"
—As You Like It

He is a naive and Micawberish individual who would have expected Mr Lal Bahadur Shastri to give firm indications, in his speech before the annual general meeting of the Associated Chambers of Commerce, of what Government's fiscal and economic policy is going to be. With the Budget barely two months ahead, obviously the chief guest, whether he is the Prime Minister or the Finance Minister, would not show his hand before this forum. Thus, the Assocham meeting gets to assume importance more for its own deliberations and the resolutions that are passed than for the inaugural address and such. For, such business transacted could possibly influence emerging Government policy by bringing to the attention of those in authority the frustrations and difficulties experienced by industry. And certainly the pleas put forward this year have rarely been so justified and sober. The seven resolutions which were carried unanimously cover the whole gamut of problems faced by industry, dealing as they did with prices, taxation, international investment, ports and transport, labour and production, food and agriculture and power and water. The question, then, is, to that extent is Government likely to be responsive?

To a considerable extent, the problem of prices and the question of taxation are inter-connected. The severe deterioration in the price situation during last year has not exactly been neglected: both on the Government side and on the part of spokesmen of the private sector, there have been recurrent calls for cooperative action to be taken. However, it needs to be realised that in the ultimate analysis there can be only one solution for resolving the problem of incipient inflation: and that is to increase the supply of goods. For us in India, import as a means of thus adding to available internal supplies is more or less completely ruled out because of the parlous state of our foreign exchange reserves. Therefore, the change reserves. Only way open to us of bringing into being a better equilibrium between demand and supply is to increase production. Unfortunately, efforts in this direction are inhibited by governmental controls and regulations—and, let me add, by Government's fiscal policy. The reader may remember that, some weeks ago, there was a trial balloon from New Delhi to suggest that

Government was thinking in terms of entering into the production of consumer goods. At that time, I asked, is this really necessary? The private sector is willing and able to produce the consumer goods. (In another forum, in South India, Mr G. D. Birla was calling upon industrialists to create a glut of consumer goods). Thus, what is necessary is the removal of the many controls and regulations which serve to harass the private sector and to prevent it from as expeditious an increase in productive capacity as it really is capable of.

That Government is anxious to foster production in selected spheres was made dramatically clear by the reliefs that Mr T. T. Krishnamachari announced as a sort of Christmas present. Implicit in the announcement is an awareness of tax policies as inhibiting investment. Moreover, the relief is intended for the individual: in effect, the small investors, up to a ceiling of Rs 35,000 in new shares and specified industries, are being guaranteed a return on equity capital for the first four years. Thus, the maximum of the windfall to the individual investor would work out, over the period, to Rs 5,000 on such a level of investments. Good, surely, in so far as there now appears to be recognition by Government of the need to offer tax incentives to the individual. I trust ours will not be the fate of an Oliver Twist, since we certainly want more, much more, next February. In this regard, the Assocham appears to have objections to two of the levies introduced in the last Budget, namely, the taxation of Bonus shares as liable to capital gains in the hands of the shareholders and the tax payable on dividends. I would want, additionally, the scrapping of the annuity deposits scheme and a reduction of significant size in the rates of taxation payable by individuals. As I have argued on previous occasions, the repeal of the new levy on bonus shares would actually result in augmenting governmental revenues, for by once more making possible capitalisation of reserves, Government would stand to realise the 12.5 per cent it collects from the companies which thus issue bonus shares. Similarly, the repeal of the annuity deposits scheme would also be productive of higher tax revenues, inasmuch as to corresponding extent the taxable income of the individual assessee would go up.

And the crux of the matter of course is that corporate growth can be encouraged only if there is the restoration of incentive for the individual. If the capital market is shy, if underwriters this last twelve months have been left with the bulk of new issues, it is not because prospects for the new companies were poor or bleak: almost anything made can be sold in India today, with the glaring exception of new issues. This is because the individual no longer is interested, because of lack of incentives, in new investments. I trust, then, that the next Budget will carry a step further the move that Government is apparently making towards more reasonable and less harsh tax rates as affecting the individual.

While on the subject, I might as well suggest that some relief is needed for the Section 104 companies. Indeed, the corporate tax itself should be reduced from its present level: it may be recalled that when the corporate tax structure was sought to be rationalised, the rate was fixed at 45 per cent in order that revenues to Government were maintained. At that time, it was clear that the rate so fixed was too high, a 40 per cent rate would have been sufficient to secure the indicated revenue. Instead of a downward revision thereafter, we have actually had another increase. TTK's reliefs of last week will in due course help

revive the capital market: but due course in this regard may mean a matter of years, since confidence returns but slowly to stock exchanges and the capital market. Furthermore, since the tax certificates will not be available in respect of rights issues by existing companies, such entities will have to continue to rely in the main upon the ploughing back of profits for putting through expansion programmes. As such, I would suggest as being eminently desirable and necessary that the surplus after payment of taxes gets increased. Perhaps we should again think of reviving the tax rebate that used to be available on profits of a company that do not get distributed. The present method, of penalising dividend distribution, is at best a negative approach: and the tax rebate I have suggested on undistributed profits will, I am confident, positively make possible large transfer to reserves.

A word in conclusion: plaudits again for the Prime Minister, for the aplomb with which he carried himself at the Assocham meeting. Mr A. D. Ogilvie's speech, too, was remarkable for its dignified restraint. The encounters, between spokesmen for the private sector and those in the highest echelons of Governments, are every year getting more cordial. I am actually beginning to look forward to them.

Symposium - A Letter from Delhi

Companies (Amendment) Bill

After a protracted debate the Lok Sabha, on Monday, referred the Companies Amendment Bill to a Joint Select Committee of both Houses. The intention of the Bill is to give effect to the recommendations of the Vivian Bose Commission and the Daphtary-Sastri Committee and to strengthen provisions relating to investigation into affairs of companies and to provide for more effective audit.

Of the 62 clauses in the Bill, 19 clauses and three sub-clauses, the Finance Minister explained in his speech moving reference of the Bill to the Select Committee, arose directly out of the recommendations of the Vivian Bose Commission and the Daphtary-Sastri Committee. Important amendments in this category were those which were designed to curb abuses by blank transfers, inter-company loans and measures to check malpractices in relation to take-over bids. Another category of amendments were designed to make audit more effective and to ensure that audit reports revealed the real efficiency and character of the management. The third group of amendments sought to simplify procedural requirements.

In a forthright attack on the Bill, Mr M. R. Masani described it as "unnecessary and uncalled for." He felt that the present law was adequate to deal with companies and that it was wrong to keep on amending basic laws, as economic growth demanded stability in the field of administration. The threatening attitude of the Government towards the corporate sector, he said, had already done great damage to the economy. The capital market was in the doldrums, the investors were shy and industrial progress had collapsed. He warned that the only result of such measures would be that, not only would the flow of capital into India stop completely, but there may even be an outflow of capital. He was against restrictions on blank transfer of shares. While he was not against cost audit, he stressed that the report of the auditors should not be passed on to the Registrar of Companies, for, that way it

would become a public document, and discourage investors.

The ranks of the critics of Bill was strengthened by Mr R. R. Morarka who said it was unfair to prevent honest companies from functioning with a certain measure of flexibility, because one company had committed an offence in the past. The evasion of the law in the last few years since the Company Act was rewritten had been on the decline, he observed, and there was more discipline in the corporate sector now than before.

Replying to the debate the Finance Minister said he would like the Select Committee to take a decision on the question of blank transfers. He felt that, although blank transfers were convenient and of value to financial institutions, they were liable to abuse. Regarding cost audit, he said that there could be a safeguard against disclosure of production techniques. The reports would be kept confidential unless penal action was called for. He also indicated his preference for a Government agency through which inter corporate investments could be channelised.

Tillaya Water for Gaya

The possibility of utilising the waters of the Tillaya Dam for irrigating lands in Gaya district was under consideration in the Ministry of Irrigation & Power. This was stated by Dr. K. L. Rao at a Seminar of Members of Parliament from Bihar called to consider measures to step up food grain production in the State. The Gaya District, Dr Rao said, was 630 feet below the level of the Tillaya Dam and it should be possible to lead the waters down through an eight-mile tunnel. The dam was generating only three to four megawatts of power and that, too, intermittently. The use of its waters in other ways was, therefore, very necessary.

The Seminar was arranged by the Ministry of Irrigation and power to focus attention on the measures necessary to step up food production in Bihar. Participants included Dr Ram Subhag Singh, Union Minister of State for Railways, Mr S. D. Mishra, Union Deputy Minister for Irrigation and Power, Prof M. S. Thacker, Member, Planning Commission, and Mr Mahesh Prasad Sinha, Minister

for Irrigation, Power and River Valley Projects, Bihar.

It has been estimated that the State would have to increase food grain production by two million tons by the end of the Fourth Plan to meet the requirements of the growing population. Dr Rao told the Seminar that, despite rich water resources, the addition to the irrigation potential of the State during the three plans was only of the order of one and a half million acres. Completion of the projects under construction would raise this figure to seven and half million acres. He also referred to the poor irrigation facilities in South Bihar and urged speedy action to make up the deficiency.

Speedy extension of electricity to rural areas and reduction of the rates charged for agricultural purposes were among the suggestion which elicited a wide measure of support. The Bihar Government, the Seminar was informed, had set up a committee to go into the question.

Power Rates

The price policy to be pursued by electricity undertakings is now under consideration of the Government on the basis of two reports. According to the decision of the Conference of State Ministers of Irrigation and Power held in January 1964, a Power Tariff Committee with Mr R. Venkataraman, Minister for Industries, Madras, as convener, was set up to recommend measures for improvement of the financial position of the State Electricity Boards. The Committee has submitted its report. A Working Group set up by the Planning Commission to examine and make recommendations on the price policy for electricity undertakings had also submitted its report in June 1964. The recommendations of the Committee as well as the Working Group are now being examined by the Government.

"Puzzolanas"

The technical aspects of the use of alternative materials to augment the supply of cement, which is in short supply, were discussed at a "Symposium on Puzzolanas" which was inaugurated by Mr M. C. Chagla, Union Minister for Education, at the Central Road

Research Institute on December 18. Dr S. Husain Zaheer Director-General of the CSIR, who addressed the symposium, said that scientific use of selected puzzolanas as an admixture to cement could save cement to the extent of 20 to 25 per cent without loss of strength. Appropriate mixture of lime and "Reactive Surkhi" could also effectively replace cement in masonry mortars without additional cost.

Research at the Central Road Research Institute had shown that surkhi obtained by powdering bricks does not yield a high quality material. Special types of clays, after controlled burning within an optimum range of temperature and pulverisation to the fineness cement" yield a highly reactive material. The Institute had followed up the work with a countrywide survey to locate suitable sites of major clay deposits for the development of the reactive surkhi industry. More than two hundred deposits have been located during the past four years in the course of an all-India survey. This, Dr Zaheer said, could form the basis for the starting of a new industry in different parts of the country. The Small Scale Industries Department could usefully start manufacturing units for reactive surkhi and other puzzolana products at different centres near the located deposits in each State. Some of the cement factories, which are within economic reach of these deposits, added Dr Zaheer, could also manufacture puzzolana cement, resulting in increased production of cement having higher resistance to chemical attack, better water tightness, less heat generation and other beneficial properties as compared with ordinary cement. Other puzzolanic materials like fly ash could also be used for this purpose.

Dr Zaheer expressed the view that the lime industry as well as the puzzolana industry should be brought within the purview of the Technical Development Directorate in order to ensure proper development of the industry and maintenance of standards of quality.

OTA Symposium

Like cement, oils and fats are also very much in short supply.

As Prof. T. R. Seshadri, F.R.S., Head of the Department of Chemistry, University of Delhi, and President of the Delhi Branch of the Oil Technologists' Association (OTA) pointed out, there is scope for maximising resources through scientific methods of production, storage, processing, development of new products, reduction of waste and production of useful products from waste.

The different aspects of production and utilisation of oils and fats were reviewed at a symposium held here last week. The Symposium was jointly sponsored by the Oil Technologists' Association, the Vanaspati Manufacturers' Association of India and the Soy Bean Council of America. Besides six technical sessions, devoted to production, processing, marketing etc. there was a group discussion on "Soybean Oil in the National economy of India". The discussion was led by Mr Glenn H. Pogeler, President, Soybean Council of America, Inc.

At a press conference held on the eve of the three-day Seminar, Lala Kishan Narain, President, Oil Technologists' Association of India referred to the recent agreement to import 75,000 tons of Soy bean oil under P.L. 480 and expressed the view that another 75,000 tons would be required to meet the current shortage of vegetable oils in India.

Report on Tea Finance

The point repeatedly made by spokesmen of the Tea Industry in recent years, that the industry is not in a position to undertake the expenditure involved in development, has received powerful support from the report of the Tea Finance Committee which was released on Monday last.

The Committee has examined the problem in the context of the need for development of the industry for achievement of plan targets of production and export. A review of the financial position of the tea companies has led the Committee to the conclusion that a financial incentive was called for in order to encourage the industry to embark on a programme of development. The Committee, however, has not conceded all the demands made by the representatives of the Industry.

In addition to substantial reduction of excise duty, they had wanted that the whole expenditure on extensions and replacements should be treated as revenue expenditure for the purpose of income tax assessment. The Committee has proposed that incentives should be in the form of tax reliefs linked with performance.

It has recommended that a development allowance should be provided for in the computation of taxable income at the rate of 50 per cent for newly planted areas and 40 per cent for replanted areas. The Committee has

also recommended that portion of the excise duty on tea which is exported should be refunded.

The representative of the Government of Assam in a minute of dissent has objected that development allowance for replantation will amount to a double benefit as expenditure on replantation in old areas is already treated as revenue expenditure for tax purposes. He has also expressed the view that the rate of 50 per cent for development allowance for new plantations is too high. It has, however, been pointed out that allowance on replantation cannot be regarded as conferring a double benefit as tea bushes are not treated as depreciable assets.

The Committee has also recommended the setting up of a Tea Finance Corporation to provide medium and long term finance for development as well as to provide guarantees to commercial banks for the repayment of short term advances made by them on hypo-

thecation of tea crops. In regard to fiscal matters, the Committee has also recommended that the West Bengal entry tax on Tea should be abolished. Cooperative enterprise is prescribed for small growers who cannot set up factories of their own.

Explaining the major recommendations, Mr V. V. Chari, Chairman of the Committee, told newsmen that the Committee had approached their task purely from the point of view of the need for development of the industry in the national interest. He also drew attention to the working results of a selection of better than average companies which showed a steady downward trend in net returns over a period of years. This had a damping effect on fresh developmental expenditure.

Other recommendations made by the committee are:

1. All lands suitable for tea plantation within the existing grants of tea gardens should be

exempt at least for some years from resumption or requisition by the State Government, unless required for public projects of paramount importance.

2. Applications from tea gardens for additional government land for expanding the area under tea should receive favourable consideration of State Governments.

3. The price of fertilisers paid by tea gardens should not exceed the price payable by other agriculturists.

4. Tea cess should be levied on all tea produced at the rate of 4 paise per kg. with effect from April 1, 1966.

The Committee has also endorsed the recommendation of the Working Group on Plantations Labour Housing that a subsidy of 25 per cent of the cost of houses should be provided to the tea industry on the lines of the Industrial Housing Scheme.

The LIC is at the centre of a ripple whose widening impact is felt throughout the land.

On the one hand, LIC's operations are far reaching. They cover about 729 centres, a number which is steadily increasing. So is the number of new individuals in India being covered with Life Insurance.

On the other hand, the LIC invests nearly 3 million rupees a day in industry, agriculture, railways, transport, electricity and many other projects. The radiating effect of these investments creates more jobs, more incomes, more food—in fact, a higher standard of living—for everybody.

ASHOK LEYLAND LIMITED

ENNORE, MADRAS

Spectacular Rise in Production and Sales—By Over 50%

Expansion Programme Nearing Completion

“BEAVER” Heavier Duty Chassis in 1965

The Chairman, Sir A. Ramaswami Mudaliar, Surveys the Conditions in the Industry

The following speech was delivered by Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon.) Chairman, Ashok Leyland Limited to the Shareholders at the Sixteenth Annual General Meeting of the Company held on December 17, 1964, at Ennore, Madras:

Gentlemen,

I have great pleasure in extending to you a cordial welcome to the Sixteenth Annual General Meeting of your Company.

The Directors' Report, audited balance sheet and profit and loss account for the year ending 30th September 1964 have been circulated to you and, with your permission, I shall take them as read.

As the Profit and Loss Account shows, the sales for the year 1963-64 at nearly Rs. 17.38 crores were a little over 59% in excess of the corresponding figure for 1962-63. This result was achieved by an increase in the average output of Comet chassis per month from just over 200 in 1962-63 to 315 in 1963-64; and by a substantial increase in the sale of spare parts, arising partly from a larger allotment of foreign exchange providing for the manufacture of more spare parts in your factory. The surplus available after provision for taxation has enabled your Directors to propose a dividend of 9% subject to deduction of tax and to transfer to general reserve a sum a little in excess of Rs. 36 Lakhs.

Your Factory's ability to increase its output by over 50% in one year must be accepted as unusual, being in excess of what could normally be expected. In January 1964, in my speech at the last Annual General Meeting, I enumerated the reasons which had made the results for the 1962-63 year disappointing. I also advised you that it was possible to anticipate an improvement with some confidence; and I indicated that the re-establishment of a flow of materials adequate to sustain the Factory's output, the more rapid installation of plant and machinery after a period of delay in machine tool deliveries and other steps which your Company had taken to overcome the difficulties faced during 1962-63, would make 1963-64 a more satisfactory year from the financial point of view. By the end of 1963, production had been re-established at a satis-

factory level; and it is to the credit of all concerned that throughout the year which ended on the 30th September 1964 there was a steady improvement.

SMOOTH PROGRESS

A study of the graph of output from 1954 to 1964 included in the Balance Sheet, will show that a smooth upward curve could be drawn, on which the actual output figures would lie approximately, with the exception of actual output figures for 1961-62 and 1962-63, the former being above the smooth curve and the latter below it. This indicates that in the year 1961-62 we produced more chassis than was justified by the foreign exchange available for imported materials, this fact contributing among others which I have previously enumerated to the very serious drop in production in 1962-63. I would not wish to be over-optimistic on the basis of the 1963-64 results, but it is very satisfactory to note that they indicate a reversion to the previous steady increments in yearly output, the actual 1963-64 output being approximately equal to what the curve would indicate. It is interesting to record that your Company anticipates an output in the 1964-65 year of not less than 4500 "Comet" chassis and that this figure is close to the one which would be obtained from the curve to which I have referred, if it were plotted from an equation satisfying the actual outputs from 1954-55 to 1963-64, excluding the figures for 1961-62 and 1962-63. It is to be noted that if the 1964-65 target is achieved, the increase in production will be approximately 20% in comparison with the 1963-64 year.

It is necessary for me, at this point to emphasise that all forecasts of future developments assume the maintenance of good relations between Management and employees. While, on the whole, these relations have remained cordial since your Company started production in 1954-55, there have recently been indications of some restlessness amongst employees,

leading to a regrettable tendency for workmen deliberately to reduce output on several occasions, with a view to induce Management to make concessions. The temporary shortage of rice, which has faced employees with domestic worries, has contributed to some deterioration in their readiness to co-operate in achieving full output from the Factory. It is hoped, however, that better counsels will prevail and that the Company's employees will revert to a tempo of work which will maintain the steady increase in output which must be achieved for economic working.

EXPANSION PROGRAMME

I am happy to be able to inform you that the expansion programme initiated in 1960 with a view to increasing the production of Comet chassis to not less than 5000 per annum, with adequate provision for spare parts manufacture is nearing completion. Within a month or two all the plant and machinery, including jigs and special tooling, will have been installed; and steps taken some time ago to train artisans will make it practicable for full utilisation of the installed capacity to become effective. Based on the output achieved during the 1963-64 year, it is possible to hope that actual production will in due course considerably exceed the planned figure. This arises from the fact that, assuming your employees will work with a will, their efficiency will be at a higher figure than was anticipated, so that in future years it will not be at all impossible to achieve outputs considerably in excess of 5000 per annum without further capitalisation. At the same time, it will become increasingly practicable to produce in your factory spare parts adequate to meet the demand.

I have referred to the production of spare parts as one of your Company's important activities. In recent years, the supply of spare parts to your customers has been, for reasons beyond control, far from satisfactory and too many vehicles have been temporarily unserviceable for prolonged periods because essential replacements parts were not available. In common with other Automobile Manufacturers, your Company faced the difficulty that insufficient

foreign exchange could be made available for the import of spare parts, while factory facilities remained inadequate to provide for the level of output necessary to meet the demand not only for current production but for the servicing of the large number of vehicles already in service. Another disability has been that the ancillary industries, manufacturing in India a wide range of components which manufacturers purchase in the finished condition, were unable to meet the demand for spare parts additional to supplies made to manufacturers for inclusion in the chassis and engine. The position has already greatly improved and will continue to do so. More foreign exchange has been made available for importing spare parts not available from Indian factories; and improved output facilities in the factories is enabling manufacturers increasingly to produce components, additional to those required for chassis manufacture, for sale as spare parts. If the present improvement can be maintained, it is anticipated that your Company will soon be in a position to meet all spare parts demands within a reasonable period from the receipt of orders.

I have referred to the general expansion programme which was inaugurated in 1960. More recently, in 1963, with a view to increasing the indigenous content of the Comet chassis, it was decided to add to components being manufactured in your factory differential wheels, pinions and trunnions; engine cam shafts; and engine timing gears. Your Directors decided that it would be undesirable to risk over capitalisation by making a capital issue to cover the expenditure which would have to be incurred on the import of plant and machinery for the manufacture of these new components. Accordingly, a loan of Rs. 60 Lakhs was negotiated with the Commonwealth Development & Finance Company, which became available from August 1964. All the plant and machinery required for this expansion of the Factory's manufacturing facilities is currently being ordered and it is hoped that it will be installed so that actual production will commence in 1965. With the inclusion of this additional range of components to be

manufactured in your Factory and your Company's ability to purchase additional bought out finished components, for example brake assemblies, from new manufacturing concerns established more recently in India, it is anticipated that it will be possible to increase the indigenous content of the Comet chassis to 90% before the end of 1965, compared with a figure of 82% at the present time.

NEW MODELS

In my speech to you in January 1964, I informed you that the Government of India had approved the inclusion of new models in your Company's range of products, based on the Leyland Beaver chassis; and I enumerated the types of vehicles it was proposed to manufacture. You will be pleased to know that during the 11 months which have elapsed since the last Annual General Meeting, considerable progress has been made with planning for the introduction of the heavier duty chassis. The provision of new buildings for the first phase of the "BEAVER" project has been included in the Company's 1964-65 Capital Budget. Building plans are nearing completion and work will be commenced in the near future. Provisional estimates have been completed with a view to assessing the expenditure which will have to be incurred on plant and machinery for the new project. These estimates indicate that about Rs. 330 Lakhs will be required for the purchase of machine tools, jigs, etc. which will have to be imported. Additionally, a sum exceeding Rs. 200 Lakhs will be required for buildings and for plant and machinery to be purchased in India. Your Directors are giving their active consideration to the most advantageous manner in which finance can be made available to meet the very high level of expenditure involved. In this connection, it is with pleasure I am able to inform you that the Leyland Motor Corporation has indicated its readiness to provide the amount of Rs. 330 Lakhs (approximately £2.5 million) which will be required for imported plant and machinery, subject to satisfactory arrangements being approved by the Government of India. Your Company is engaged in ascertaining as closely as possible the amount of money in rupees which will become available from internal resources, so that it will be possible to calculate the balance which will have to be provided by a capital issue. As far as work on this problem is concerned, it appears that it will not be necessary to raise capital to cover the total estimated expenditure of approximately Rs. 550 Lakhs (the sum of the amount required for imported plant and machinery and that required for buildings and plant and machinery to be purchased in India). It is probable, therefore, that the necessary finance will be raised partly by a capital issue and partly by a loan from the Leyland Motor Corporation, subject to the Government of India approving such

a loan and its terms. Certainly, however, some additional capital will have to be raised and an application to the Controller of Capital Issues has been made for a new issue of Rs. 221 Lakhs, of which Leyland Motor Corporation will take approximately Rs. 133 Lakhs and the balance be subscribed by Indian shareholders.

Until such time as the heavier duty chassis have 100% indigenous content, it will, of course, be necessary for your Company to obtain an allotment of foreign exchange to cover the import of components from the United Kingdom. It is possible that such an allotment will not be made earlier than the 1st April 1965, so that the first of the heavy duty chassis for sale may not be available until after June 1965. Market surveys indicate that there will be a demand for the heavier duty chassis which will justify your Company's decision to include the new models in its range of products. In this connection, it is anticipated that by 1968 when production of the heavier duty chassis will be fully established, with a high indigenous content such restrictions on gross vehicle weights as might at the present time inhibit sales in a number of States will have been amended, so that it will be practicable for road transport users to take full advantage of the greatly increased payload capacities of the new model.

ENNORE FOUNDRIES

The increase of your Company's demand on Ennore Foundries Ltd. and additionally the increase in the demand for iron and aluminium castings by other manufacturers has necessitated steps being taken to ensure that Ennore Foundries can meet this demand. Plans are nearing completion and orders have already been placed for plant and machinery to enable Ennore Foundries to increase its output to 200 tons per week. Looking to the future, provisional plans are already in train, so that when the demand arises the Foundry output can be increased to something over 400 tons per week.

You will be interested to know that your Company recently prepared a Five-Year Plan with a view to forecasting the probable increase of its turnover, the capital expenditure necessary to achieve it and the likely profitability each year. Calculations made in relation to this Five-Year Plan indicate that by 1967-68 the Company's turnover may reach a figure of about Rs. 33 Crores, with a reasonably fair profit on capital employed at that time, after taxation. Data utilised for the preparation of this Plan were conservative, revenue being calculated on the low side and the expenditure on the high. However, the figures must necessarily be treated with reserve because the assumptions on which they have been based may prove incorrect with the passage of time. Any unexpected or abnormal increases in material costs, reductions in foreign exchange available for the Automobile Industry, loss

of production due to labour disputes, etc. would obviously reduce the turnover and at the same time the Company's profitability. The plan will, nevertheless, be useful, as representing reasonable annual targets at which the Company can aim and indicating that subject to reasonably normal conditions being maintained, output of your Company's products may increase steadily with satisfactory profitability.

I have considered it necessary to give you a fairly detailed account of the programme of expansion which the Board has decided upon and which I trust will have your general approval.

CHANGES IN BOARD AND TOP MANAGEMENT

Let me now refer to the changes in the constitution of the Board itself and to the changes in the Company's top management. It is with deep regret that I have to report the loss that the company has sustained by the sad demise of Sir Henry Spurrier, Chairman of Leyland Motors, and a Director of your Company since the collaboration agreement was arrived at by the Indian Company with Leyland Motors. Sir Henry took the keenest interest in the development of the Indian company and we were fortunate to have more than one visit from Sir Henry, to your factory and offices. It was his vision which enabled us to undertake the expansion of this company, after its formation as Ashok Leyland Ltd. The Directors have placed on record, their deep sense of loss at the passing away of Sir Henry and I am certain that you as shareholders, will join in expressing your great appreciation of his contribution to the success of the Company and your regret at his demise.

Mr. W. West, Chairman and Managing Director, West Yorkshire Foundries Ltd., and a Director of Leyland Motors, has been co-opted as a Director in the place of Sir Henry.

I referred to changes in the top management of the Company. Mr. A. E. L. Collins, who has been managing Director of the Company since its reconstitution, is shortly leaving us to take a place in Leyland Motors, London. His services to your Company have been invaluable. His devotion to duty, his concern for the growth and prosperity of your Company, his intimate knowledge of Indian conditions, his suave manners and his tact in dealing with the staff, particularly with the workers in the factory, cannot be exaggerated. Mr. Collins has set a pattern of conduct as Managing Director which can be paralleled by only a few examples. As this will be the last meeting of the shareholders which Mr. Collins will be attending as Managing Director, I am sure you would like to place on record, a Special Resolution of appreciation of his unique services.

To remove any deep feelings of disappointment at his departure which you may feel at this juncture, I should hasten to state that he will still be available to us for

advice and consultations in India over a long period. In the projects that we are undertaking, the expansion that we contemplate, it is essential that Mr. Collins, who has been associated in the planning and has such intimate knowledge of it, should be available, particularly in the initial stages. I said that Mr. Collins will be joining the Leyland Motor Company in London, but he has kindly agreed to visit our Company at least once a quarter to see the progress we are making and give us the benefit of his advice. We are extremely thankful to Mr. Collins for this gesture of his deep interest in our Company—a gesture which entails not a little trouble, labour and time on his part. We are also thankful to Leyland Motors for not merely agreeing to this proposal, but actively supporting it. As you will see from the Notice, Mr. Collins will be retiring at the end of March from the services of your Company.

From the notice of the Meeting before you, you would have seen that the Board of Directors has decided to appoint Mr. J. C. Watson as Managing Director of the Company for a period of five years from the 1st April 1965. Mr. Watson has been the Factory Manager from the 1st October 1963. His work has been quite satisfactory and much of the credit for the improved production in the factory during 63-64 is largely due to him. The Directors have no hesitation in recommending to you, for approval, the resolution which is before you, to appoint him as Managing Director for the period mentioned therein. With your approval, the Company will approach the Government for its sanction.

THANKS

It only remains for me now to thank the Management, Officers, Clerical Staff and the Workers at the Factory for their enthusiastic co-operation which has helped the Company to progress steadily during the years. I trust that this co-operation on the part of the workers, particularly, will continue in the future and even as they are proud of the place that Ashok Leyland occupies in the automobile industry in India now, they will be even more proud in the near future, of its position—a position which will be due in no small measure to the co-operation of Officers, Staff and Workers.

I should like to thank both the Central Government and the State Government for the advice, help and assistance that we have received from them.

Finally, I should like to thank you all—the Shareholders of the Company for the continued support that you have extended to us, which has enabled the Board to go confidently forward with its plans for enlarging the scope of your Factory.

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

J. K. STEEL LIMITED

The following is the Chairman's address by Mr Lakshmiapat Singhania at the 11th annual general meeting held in Calcutta on Monday, December 21, 1964.

Gentlemen,

I have pleasure in welcoming you to the 11th annual general meeting of the company. The annual report and accounts for the year ended June 30, 1964, together with the directors' report have already been circulated.

During the year, a number of far-reaching changes have taken place in our country and abroad. We have lost our most beloved leader, Pandit Jawaharlal Nehru, who showed us the way for economic uplift of the country. He was a worldwide figure and was recognized as a unique personality of the time. The lead given by him in the economic, social and political fields will be of invaluable guidance to us for the future in building up the Nation. We have

Mr. Lakshmiapat Singhania

been fortunate to have Mr Lal Bahadur Shastri as country's new leader and Prime Minister. He hails from the masses and, therefore, understands the difficulties of the common man much more than anybody else. There can be no doubt that his leadership will be of immense benefit to the country.

The country is facing at present difficult problems, such as very slow rate of economic development, shortage of essential commodities like food and consumer goods, and slowing down of the rate of production in many spheres. The result is that the real value of rupee has been going down and, due to the incidence of extraordinary heavy taxation on the people who form a small minority of the total population, the economic condition of these people has been greatly affected. Shifting the blame from one place to another is not going to solve the problem. The wholesale dislocation of normal channels of trade and foisting blames on certain people, who create the wealth, is not going to help. I have always believed that, taking the nation as a whole, there cannot be anything wrong in the country. It reminds

Rising Costs Hit Profit Making

Good Progress in New Schemes

The Chairman, Mr Lakshmiapat Singhania, on the Economic Growth of the Country

me of a saving "You cannot divide nothing. Wealth is production and the more you produce the more there is to divide but if you won't produce anything above bare subsistence and no matter how you divide, it is still nothing."

PRODUCTION HINDRANCES

I have always emphasized that, under no circumstances, production should be hampered. Unfortunately, what is happening in our country today is that there are more hindrances to production, and those who produce, meet with more of discouragement and obstacles than of encouragement and help. The fundamental basis of production is co-operation between the Government, the producer and the worker, and unless and until it is viewed in this perspective, it is not possible to step up production, no matter whosoever is blamed. Without production no problem can be solved and, therefore, all emphasis should be laid on more production instead of laying stress on certain theoretical and political aspects, which tend to retard production.

Coming to the affairs of the company, sales have slightly gone down and gross profit is less by about 2½% as compared to last year. This can be mainly attributed to the fact that last year's sales included substantial portion of carried forward stocks. The margin of profit on sales was also affected on account of higher prices of raw materials and increased cost of labour and stores. Further, continued restrictions on power and difficulty in getting raw materials affected production. I hope, in the coming year, we will not only make up this leeway but also increase our sales, as we have started the manufacture of new products and also expect the supply of raw materials to improve.

The supply position of billets, which is the raw material for production of jute baling hoops, continues to be very difficult. Further, the main producers are reluctant to manufacture and supply 2" square billets, which the company has been getting from the very inception and for which your mills are designed and equipped. We are now asked to take and roll bigger size billets which are more than 50% in weight and which will result in lowering of production. Probably the reluctance of the main producers to supply 2" square billets, which they have so far been doing is due to the fact that the price of 2" square and bigger size billets being the same

leaves them with lesser margin of profit when rolling 2" square billets. We have suggested to the Government that it should examine this matter and allow suitable increase in the price of small sized billets so that the rolling industry is not made to suffer. It is an irony of fate that the rolling industry which is rendering important service to the nation, has not been looked after properly. It was expected, that after the public sector plants would come into operation and after the expansion of the existing private sector plants, there would be enough supply of billets to the rolling industry. Unfortunately, however, the situation has worsened rather than improved, and at present billet supplies to the rolling industry is not even half of their total requirements, resulting in continuous national loss due to idle capacity.

WIRE ROPE PLANT

As mentioned by me last year, the project for doubling the capacity of your wire rope plant has made good progress. The foreign exchange requirements were arranged through the help of the Industrial Credit & Investment Corporation of India Limited. The machinery has started arriving, the building is practically ready and, it is hoped, that in a few months, the plant will be put into commission. Although it was hoped that we would be able to start this plant earlier, there has been some delay due to the delays in getting the import licence and going through other formalities. The Government has already licensed production capacity for steel wire ropes to the extent of 40,000 tonnes whereas the present consumption in India is very much less. Several new wire rope factories have recently come into operation and it will be some time before production and demand will adjust themselves. However, a significant development is the change in the pattern of demand of wire ropes from mining to engineering because of considerable reduction in the production target of the coal industry, which is the largest single consumer of wire ropes in India.

During the year the company commenced production of electric hoist blocks and chain pulley blocks. These products of the company are of good quality and have been well received in the market. I hope that this new line of manufacture of your company will, in course of time, develop further with the growing

demand in the country for such goods.

The company is also finalising the arrangements for the manufacture of electric overhead travelling cranes and it is hoped that in not too distant future we shall be able to commence their manufacture.

LABOUR SITUATION

The labour situation in the State is unfortunately not conducive to an atmosphere of higher production and has been a constant source of worry and disturbance. The labour leaders do not adopt helpful and constructive policies but encourage new and unreasonable demands about which there is no finality. They frequently advise go-slow tactics which means not only a loss to the nation but also a great loss to this State as entrepreneurs are losing faith in the establishment of new industries in this State. I have always viewed this development with great pain, particularly when there is so much unemployment in this State and the prime need of the State is increased opportunities for more employment, which can be generated only by establishing new industries and by expanding existing industries. I hope that the State Government will give this matter very serious consideration at an early date and take steps to improve the situation.

It is unfortunate that the Bonus Commission recommendations and the subsequent Government decisions on it have not led to better industrial relations between employers and workers. On the contrary, more confusion and difficulties have been created in resolving the bonus problem. Unless the situation is cleared. It will have an adverse effect on production. I only wish that while taking decisions on this matter the Government would keep in mind the ultimate burden on the consumer and the requirements of industrial development.

Gentlemen, as I have said earlier, I wish to repeat that prosperity of the country depends upon greater production with greater efficiency and I earnestly appeal to every one, who is interested in the welfare of the country, particularly of this State, whether he is a worker or belongs to management, to do his utmost to increase the production.

On your behalf I must express my appreciation for the good work done by all sections of the company's employees. Our thanks are also due to the managing agents for the very valuable services rendered by them and to our customers for their continued patronage of our products.

N.B. This does not purport to be a record of the proceedings of the annual general meeting.

INCHEK TYRES LIMITED

A Satisfactory Beginning

Sir A. Ramaswami Mudaliar Predicts Growth for Tyre Industry and Company

Addressing The Shareholders of Inchek Tyres Limited, at its 4th Annual General Meeting on December 22, 1964 at Calcutta, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon.), Chairman, said:—

Ladies and Gentlemen:

I have great pleasure in extending to you a hearty welcome to the Fourth Annual General Meeting of your Company. The Director's Report and Audited Accounts for the year ending 30th June, 1964, have been in your hands for sometime now and with your permission I shall take them as read.

The working of the Company during the first year of its commercial operation ending June 1964 resulted in a loss of Rs. 5,29,140/- which, after providing for depreciation to the extent of Rs. 3,65,355/-, amounted to Rs. 8,94,995/- and your Directors have recommended that the said amount be carried forward. Considering the fact that commercial production and selling operations commenced at the end of the first-half of the year under review, the loss incurred is neither heavy nor unusual and it compares favourably with the performance of similar tyre manufacturing units established in India in the recent past.

EXPORTS ENCOURAGING

(1) You will have noticed from the Directors' Report that the Company has already embarked upon a programme of progressively raising its exports to a number of countries so soon after the introduction of its products in the internal market. The orders received from these countries are indeed encouraging.

PRODUCTION RATIONALISATION AND QUALITY

(2) Your Board of Directors undertook during the year under review a programme of rationalisation and balancing of types and sizes of tyres and tubes to effectively meet popular demand. You will be gratified to learn that the quality of the Company's products has been highly appreciated by customers all over the country and abroad and the retreading performance of the tyres has also been very satisfactory. I am confident that consequent on your Board's policy of maintaining a high standard of quality and rationalisation of production according to the pattern of demand, there may not be much difficulty in selling the products manufactured by the Company.

RISE IN PRICES OF RAW MATERIALS

(4) A redeeming feature of the 1964 Budget was the extension of certain concessions in respect of excise duty on tyres and tubes particularly to the newly established units. It is, however, rather disquieting to note that this welcome fiscal assistance is being largely offset by the continuously rising prices of indigenous raw materials which the industry has to consume in an increasing measure. I hope, in consideration of these circumstances, the Government would provide for further fiscal concessions to the industry, particularly to the new and smaller units.

DEVELOPMENT OF INDIAN TALENTS AND CORDIAL LABOUR RELATIONS

(5) With the increase in the strength of trained Indian personnel, the number of foreign technicians deputed by the collaborators has been progressively reduced and at present there are

only three senior foreign technical personnel, who will stay in India for some time more according to the terms of the collaboration agreement.

In pursuance of its policy of achieving higher productivity, the Company has recently negotiated and settled a suitable system of labour payment linked with productivity. The scheme has been well received by the labour union and workers. The relation between the Management and labour has been cordial.

(6) Before I conclude, I take this opportunity to express our sincere appreciation of the co-operation and assistance offered by the technical collaborators Messrs. Technoexport Foreign Trade Corporation, Praha, Czechoslovakia and the loyal and devoted work of all officers and staff of the Company throughout the year under review.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

Market NEWS and Trends

UTE Easy Trend

Conditions in the jute goods market have been easy with prices steadily losing ground throughout the week. The reactionary trend has been mainly brought about by persistent selling activity in the futures market. Although the near-term outlook appears to be satisfactory with fair enquiries for heavy goods and scattered business in hessian, coupled with improved despatches of goods during November, operators seem to be of the view that the long term prospects have become obscure with the resumption of production by Pakistan mills. Total despatches during November have amounted to 107,500 tonnes made up of 71,000 tonnes for export abroad and 36,500 tonnes for local purposes. In October, total despatches amounted to 105,800 tonnes comprising 72,700 tonnes for export abroad and 33,100 tonnes for local purposes. Hessian despatches for export in November were fractionally lower at 39,200 tonnes as compared with the previous month while those of sacking are 1,100 tonnes higher at 21,100 tonnes. Despatches for export of carpet sacking have sizably declined to 8,500 tonnes from 11,600 tonnes while other goods are 600 tonnes higher at 2,200 tonnes. Despatches for local purposes are higher at 36,500 tonnes as compared with 33,100 tonnes in October. Despatches of sacking are considerably higher at 28,400 tonnes as against 24,300 tonnes while other goods are 500 tonnes lower at 3,200 tonnes. Taking total despatches, hessian shows a fall of 500 tonnes at 44,100 tonnes at sacking are 5,200 tonnes higher at 49,700 tonnes. Other goods are fractionally higher at 400 tonnes.

The encouraging figures for despatches especially for heavy goods however failed to embolden operators, presumably because they think that with the resumption of production by Pakistani mills, the overseas demand for sacking will continue to be as good as in the recent past. Another consideration that appears to have entered the calculation of the speculators is that now once again mills in India have started working up to their full capacity with no loom idle with the emphasis on the production of sack-

ing there is no possibility of a shortage for the next few months atleast. In the meantime, the news on the hessian front has not been quite good. This category has for some considerable time been getting only sporadic business and the trend of burlap consumption in US in November has revived the apprehension that hessian's best customer may not be a good buyer this year. Burlap consumption in the US during November has declined to 65 million yards from 73 million yards in the previous month. Stocks in that country have risen to 272 million yards at the end of November from 269 million yards at the end of October.

The jute goods market opened the week on a subdued note with no fresh overseas enquiries to enliven trading. B Twills December in the spot market was hovering around Rs 152 with the April-June position as low as Rs 141.50 reflecting the concentration of what little interest there was, on the near positions. During the rest of the week, the price declined steadily to Rs 151.75 and then to Rs 150 to be finally placed on Tuesday Rs 148.00. Hessian 40" X 10 oz Dec. likewise developed a sagging tendency to be finally placed at Rs 48.30. Except for some business in woolpack with Australia in the early part of the week, there has been no other business of importance.

In the futures market, the trend has been downward on

persistent selling pressure and lack of support. Hessian Feb. opened the week (Thursday) at Rs 50 and after touching a high of Rs 50.26 closed at Rs 49.90. For the rest of the week prices tended to be lower with the quotation placed finally on Tuesday at Rs 48.80. B Twills Feb. opened at Rs 144.85 and continuously lost ground to quote at close of transaction on Monday at Rs 141.00. In Tuesday's trading, after earlier steadiness, the rate declined rather sharply to close at Rs 139.19, as against the day's low of Rs 139.00.

In the raw jute market, sentiment was easier despite the lower arrivals. It was evident that the decline in the price of jute goods was having an adverse effect on holders who showed keenness to discount rates with the result Assam Bottoms was quoted 50 P lower on balance on Tuesday. The belief that in view of the lower crop in Pakistan and with the resumption of production in mills there, raw jute prices would harden is held to be untenable because of the accumulation of raw jute with Pakistani mills during the two month old suspension of work. As far as Indian production is concerned, the consensus is that the crop is large enough to meet the full requirements of the mills and to leave a comfortable carryover. The fall in arrivals noticed for the past few weeks is attributed to the preoccupation of cultivators to the harvesting of paddy. Before long

they will once again turn their attention to jute and then arrivals will begin to be normal.

On a review of the jute position, the Jute Commissioner has issued compulsory maximum quotas for a total quantity of 2 lakh bales for the week ending 26 December.

★

TEA Market Outlook

In its tea market review for the month of November, J. Thomas and Company says that November has seen the turning point of the Calcutta market this season and demand was throughout the month considerably weaker than hitherto. The figures of the end-October and mid-November crop were released during the month, and to mid-November 1964 the North Indian crop was estimated at 27.8 million kg. higher than at the same date last year, and over 9 million kg ahead of the same date in 1961—the year of the previous North Indian record crop. This news had its effect on the Calcutta market and coupled with the announcement of an increase in the UK bank Rate resulted in less demand from UK blenders and consequently much lower prices, particularly for CTC types.

After discussing the price trend during the month for the various types, the review continues:

It is of interest that despite the weaker market in November the total sale average price, leaf and dust combined, at the end of November was only 6 paise per kg. below that to the same date last year. Nevertheless the undertone of the market at this time last year was stronger than it is today and there was less uncertainty regarding the future. It would appear that following the sharp decline in prices throughout the month, particularly for CTC types, stronger enquiry, at the present level may well be expected from out-market which have in the past found Calcutta price levels to be uncompetitive against other primary markets; much, however will depend on the quality of the teas on offer and with the quantity of clean orthodox tea becoming limited, the market for clean plain and low medium types may well steady at current levels.

It is reasonable to expect, however, that prices for the large quantity of rather stinky unattractive tea which may be expected on this market in the future, will show a further decline. So far as CTC offerings are concerned, today's level of price for the best liquoring, well made teas may well prove attractive to overseas buyers but the increased quantity of poor fibrous tea must prove increasingly difficult of sale.

World Tea Production

According to the latest crop figures available for various tea producing countries, world tea production so far has increased to 1397.4 lbs. from 1,317.7 million lbs. in the comparable period of the 1963 season. Output of North India (April-Nov.) has increased from 548.9 million lbs. to 619.5 million lbs. while that of South India (Jan-October) has declined from 162.7 million lbs. to 156 million lbs. Production in Pakistan (April-Nov.) is higher at 59.3 million lbs. as compared with 51.6 million lbs. but production in Ceylon (Jan-Oct.) has declined from 411.1 million lbs. to 404.6 million lbs. Indonesia this year (Jan-July) accounts for 56.5 million lbs. as compared with 51.9 million lbs with Malawi (Jan-Oct.) also improving its outturn to 24.3 million lbs. from 22.2 million lbs Kenya, Uganda and Tanganyika have produced (Jan-Oct) 58.8 million lbs as compared with 53.1 million lbs with Portuguese East Africa's production placed at (Jan-Aug.) 18.4 million lbs as compared with 16.2 million lbs in the comparable period of 1963.

At Sale No. 31 at Calcutta this week, a total of 72,848 packages were on offer and there was a better general demand than at the previous sale. Firm rates were realised in the case of Plain Orthodox teas while the support for Fannings continued at dearer prices. Medium Dooars BOPs realized higher rates while the good Assams were irregular with the brighter liquoring lines fetching better prices. The clearer OFs and Fannings under both these categories ruled firm to dearer. CTC teas continued to maintain the improved demand noticeable last week with prices for the plain descriptions fully firm to dearer. The broken received better support than their fannings. Medium and good CTC teas came to an irregular but generally dear market, with buyers' preference again for broken grades. The fibrous CTCs sold readily, particularly, better liquoring kinds. Whole leaf grades came to a dearer market, while Darjeelings were well supported. The following quotations are inclusive of excise duty: Clean Plain Pekoe Rs 5.00 to 5.20; Plain Orthodox BP Rs 3.70 to 4.00; Plain Orthodox Fannings Rs 4.00 to 4.30; CTC BP Rs 4.30 to 4.50; Plain CTC Fannings Rs 4.10 to

TEA FINANCE COMMITTEE'S RECOMMENDATIONS

The Tea Finance Committee, in its report submitted to the Government, has recommended that the Tea Industry in India should be given a financial incentive so that it may embark on a programme of development to achieve its targets of increased production and export. Such an incentive is called for, says the Report, for a survey of the financial position of the industry shows "a downward trend of net return" over a period of years. Such a trend, apparently, has had a damping effect in incurring fresh development expenditure on new plantations.

The 25-member Committee, which was appointed in July, 1964 with Shri V. V. Chari, Additional Secretary, Ministry of Finance, as Chairman, completed its work in a little under five months. The report has one note of dissent by Shri M. Ahmed, Joint Secretary, Government of Assam. On some of the points made in the dissenting note, the Chairman, in his letter of transmittal, has offered clarifications.

The Report lays emphasis on the place of the tea industry in the country's economy as an important foreign exchange earner—exports in 1963 having exceeded Rs 132 crores. Its contribution to the exchequer of the Centre and the States is also substantial. Therefore, in the context of the growing needs of the Plan, says the Report, we should aim at the further development of such an important industry.

The Committee examined the tax structure of tea and has come to the conclusion that the financial incentive to be given to the tea industry should be in the form of tax reliefs linked with performance in the field of development. After considering the relevant circumstances and various alternatives, the Committee has recommended that a development allowance of 50 per cent of the cost of plantation in new areas and of 40 per cent for replanted areas should be given as a deduction in computing taxable income for purposes of Central Income tax as well as State Agricultural Income tax.

The expenditure on planting for the purpose of computing the development allowance will include (1) the cost of preparing the land; (2) the cost of seeds cuttings and nurseries; (3) the cost of actual planting and (4) the cost of upkeep upto and including the fourth year commencing from the year in which a start is made for preparing the land. The Assessing officers should deduct expenditure on the cost of upkeep after plantation in new areas in computing the taxable income.

4.30; Medium CTC BP Rs 4.60 to 4.80; Medium CTC Fannings Rs 4.40 to 4.60; Good Assam CTC BP Rs 4.90 to 5.30; Good Assam CTC Fannings Rs 4.70 to 5.10.

For the purpose of computing the development allowance, the cost of planting will be subject to a ceiling of Rs 4,000/- per acre in the plains and Rs 5,000/- per acre in the hill areas.

The Report says that the rate of tax on the agricultural portion of the composite income should not exceed the rate of tax on the non-agricultural portion of it. Plantations which own their factories are taxed by the Centre as well as the States. The whole income of such plantation is first computed under the Income tax Act. 40 per cent of the income is treated as non-agricultural income liable to Central tax. The balance of 60 per cent is liable to State Agricultural Income tax.

As a measure of export promotion and also having in view the general practice with regard to the levy of excise on commodities exported the Report says that a portion of excise duty on tea which is exported should be refunded. The rate applicable to Zone I is currently 18 Paise per kg.

Another recommendation made by the Committee is that the West Bengal Entry Tax on tea should be abolished. The present levy of this tax is at the rate of 13.78 Paise per kg. on all teas entering Calcutta for sale, use or consumption. The tax is, however, not levied on teas entering Calcutta in the course of their direct export out of India on a non-f.o.b. basis. Consequently the teas which are sold at the Calcutta auction are subject to this levy even if they are exported abroad immediately after sale at the auctions. As the teas which are directly exported are not subject to this tax and those are consumed in India pay the usual sales tax, the Committee has recommended the abolition of this tax as an incentive to the industry.

Bought Leaf Factories in the Nilgiri area, says the Report, should be grouped into a separate zone and charged excise duty applicable to Zone I. A Bought Leaf factory should be defined as one which purchased more than 2/3rd of its green leaf from outside sellers during the year 1963-64 and in the year in which duty is levied.

The Committee reviewed the arrangements for financial assistance available to the industry and has recommended the setting up of a Tea Finance Corporation to provide medium and long term finance for development and to extend guarantees to commercial banks for the repayment of short term advances made by them on the hypothecation of crops to Tea companies whose title deeds are

lodged with the Corporation as security for medium and short term loans.

The Committee has recommended that a suggestion made by the Agricultural Refinance Corporation that finance for small tea growers should be provided through the co-operative structure of Central Cooperative Banks and Land Mortgage Banks should be pursued. For the economically weak gardens, which are not necessarily small in area, the Committee has recommended the relaxation of some of the conditions applicable to loans made by the Tea Board. Also, extension service on the lines of what has been done for agriculture should be provided. Hire purchase loans should be allowed to be repaid over a period of ten years instead of the present duration of 7 years. Furthermore, the hire purchase scheme should be extended to the purchase of second-hand driers and prime movers provided the Tea Board is satisfied that these machines are suitable in all respects. As newly planted areas take time to yield saleable crops, the Committee has recommended that the interest on plantation finance loans should be restricted to 4 per cent during the first 5 years. The balance of the interest due for this period at 6 per cent should be recovered during the next two years.

Other recommendations made by the Committee for development of the industry are:

(1) All lands suitable for tea plantation within the existing grants of tea gardens should be exempt at least for some years from resumption or requisition by the State Governments unless required for public projects of paramount importance.

(2) Applications from tea gardens for additional Government land for expanding the area under tea should receive favourable consideration by State Governments.

(3) The price of fertilisers paid by tea gardens should not exceed the price payable by other agriculturists.

(4) Tea cess should be levied on all tea produced at the rate of 4 Paise per kg. with effect from April 1, 1966.

The Committee endorses the recommendation of the working Group on Plantations Labour Housing that a subsidy of 25 per cent of the cost of labour houses should be provided to the tea industry on the lines of the Industrial Housing scheme. The Committee commends to the industry the need for devoting attention to measures of cost and quality control.

Offerings at Dust Sale No. 30 at Calcutta totalled 35,700 packages and demand was good and general. CTC teas were in good demand and prices of all except the

plain and plainer liquoring medium sorts showed an advance over previous levels. While the former were sometime easier the latter were barely steady. Orthodox

teas were somewhat lower except for the bright liquoring Assams which received useful support. Leggett descriptions sold at fully firm rates and were sometimes dearer. Teas for Price were again a weak feature. The following quotations are inclusive of excise duty: Plain Orthodox Dust Rs 3.70 to 4.20; Medium Assam Dust Rs 4.20 to 4.70; Legg cut Dust Rs 4.45 to 4.70; Plain CTC Dust Rs 4.45 to 4.65; Medium CTC Dust Rs 4.70 to 5.15; Good Assam CTC Dust Rs 5.90 to 6.40.

COTTON Restrictive Measures

The strident rise in cotton prices during the past few weeks has precipitated a baffling problem to all concerned and the imposition of a ban on official trading in futures was merely natural as price pierced the official ceiling of Rs 775.00. With a view to reversing the trend, a high level representative conference of cotton cultivators, the trade, and the mill industry was convened by the Union Ministry of Commerce in Bombay when some decisions were taken to contain the price level within reasonable level. The decisions broadly pertain to the re-introduction of compulsory survey in respect of such cotton as is sold above the official ceiling, the fixation of definite dates for ginning and processing and requisitioning of cotton by the Textile Commissioner at different points, including the stocks with the mills, as and when the first two measures fail to bring in normalcy in the market. Cotton ceilings will be, however, strictly enforced by the Textile Commissioner with a view to ensuring supply of available cotton to the mills at rates not higher than the basic ceiling prices.

These decisions are unlikely to receive unanimous support from the various cotton interests in the country primarily due to the none too encouraging success which compulsory surveys met with in the past. The delay in announcing the details has already generated misgivings in a section of growers and traders which feel that the enforcement of the scheme will only create further difficulty to the mills in securing adequate cotton at regular intervals. The postponement of the announcement had immediate effect on spot prices in Madhya Pradesh, Gujarat, Bihar, Punjab etc which pulled back after the recent slump. A paucity of stock in the market has caused the upturn in prices. An early announcement of the full particulars of the scheme will be helpful.

Special transaction in the mill market, Middle March, during the past week was absent as prices ruled above the official ceiling of Rs 775.00 per three quintals. In unofficial dealings, however, the

contract was lifted up to Rs 781.00 before closing slightly lower at Rs 780.00. As the operators were waiting for further measures by the authorities for controlling the price trend, the volume of business was practically little.

The spot market, which exhibited a stubborn trend to hover around the ceiling, turned easy owing to the decisions taken at the special meeting convened by the Government even though arrivals in the terminal centres were restricted.

Bengal Deshi cotton ruled around of Rs 818.00 though activity in the export section was rather tame. In the import section African, American and Pakistani growths met with good demand.

The latest issue of the journal of the Indian Cotton Mills Federation shows that the genesis of some of the controversies raging over the current pattern of international textile trade can be linked to the mode in which the Long Term Agreement on textiles is being observed by the advanced countries of the World. The future of the agreement will naturally hang on "the loyalty shown to its spirit by signatories". It should be noted, in this context, that countries having restraints and quota restrictions on imports are not unduly worried over relaxing them with the requisite degree of speed while the developing countries such as India are definitely placed at a disadvantage. The Indian delegate stated in unambiguous terms that the developing countries are opposed to the idea of extending the agreement beyond September 1967 as it has been a bitter disappointment to them. While pleading for a realist approach for settling the difficulties experienced by the developing countries, the Indian delegate suggested that developed countries should allow imports of about 20 per cent of their domestic consumption from developing countries. This recommendation was, however, received with mixed feelings. While countries like Japan supported this move, West European countries insisted on the continuation of the agreement. One thing has emerged clearly: the developing countries will not opt for giving the agreement another lease of life if it fails to create new opportunities for them to boost their export trade.

PIECEGOODS

Trading in the cotton cloth market in Bombay continued to follow the familiar pattern during the week under review. Cotton cloth varieties of mill made cloth were almost neglected while decontrolled superfine items firmed up on account of encouraging overseas demand. Prices of attractive varieties such as cambries, lawas, dorus and bleached muslins took an upward turn taking a cue from brisk overseas enquiry. Bleached dhories also met with some buyer interest. Purchasers from UP, Rajasthan and Bihar were active in

the market while those from Calcutta were conspicuously absent. Because the huge accumulation of stock with them the mills are reported to have taken a more lenient attitude toward prices in order to liquidate their stocks as quickly as possible. Demand for calendared or bleached goods was few and far between but grey powerloom cloth steadied up thanks to good demand.

OILS AND OILSEEDS Trading Again At Standstill

A firm trend continues to prevail in the oils and oilseeds market as demand is strong while arrivals are restricted. In the futures section, again no trading has been found possible though the Bombay Oilseed and Oil Exchange has permitted the resumption of trading in groundnut, castorseed and linseed which remained suspended for some days last week following the hectic upturn in prices which pierced the permissible weekly ceiling rates. However since the rates fixed fell far short of the unofficial indications, no business resulted and the stalemate has continued. In Groundnut the Forward Markets Commission's price limit was fixed at Rs 110 for January groundnut. As in unofficial trading the rate quoted was 10 to 12 points higher, the removal of the informal ban on trading by the Exchange had little practical significance for the market. The earlier expectation that the FMC in consultation with the trading interests would arrive at a workable formula as also indicate the terms and conditions for the next contract has not materialised and the uncertainty has further deepened since the postponement of the meeting between representatives of the trade and FMC called on 21 December.

In the Madras oil and oilseeds market, a firm trend has continued to persist. With arrivals also showing a declining trend, sentiment has become somewhat nervous with vanaspati interests and crushers unable to take a decision in view of the unchecked rise in prices.

SUGAR Steady Trend

In the Hapur sugar market, prices in the open market were steady as supplies continued to be restricted. The hardening trend is attributed to the belief that there will be no early improvement in the steady position as output is hampered by the paucity of cane to some mills in the Meerut and Muzaffarnagar Districts of UP. The following is the press communiqué issued by the Indian Sugar Mills Association on the situation brought about in one important segment of the sugar

industry as a result of the strike of cane growers.

Cane Growers' Strike

The Committee of the Indian Sugar Mills Association, are seriously concerned at the cane growers' strike since 15th December due to which all the eight sugar factories in the Meerut District are lying completely closed, throwing out of employment thousands of workers. Besides this, the sugar factories numbering four in the neighbouring Muzaffarnagar District are having only partial working about 50 per cent of their capacity. This is a very important sugar producing area in the country as the factories in these two districts are of about 24 per cent of the total production in UP or about 10 per cent of the entire sugar production in the country. It is rather unfortunate that at a time like this when there is urgent need for increased sugar production and all efforts are being made to achieve the same, these large units should be facing cane strike resulting in considerable loss of production which cannot be made up later on. With a sugar recovery of only 50 per cent in gur and khandasari compared to sugar factories, there is considerable loss of sugar involved in diversion of cane to gur and khandasari from factory areas which is a national loss, the country can ill-afford.

This situation has been brought about by the high price of gur which is now ruling as high as Rs 36/- per md. in the above regions. At this price, by converting the cane into gur, the growers are able to get a much higher return than Rs 2/- per md. payable by the sugar factories. Unless, therefore, this basic factor is duly taken into account and immediate efforts are made to bring down the gur price to the parity level, no lasting improvement in the present situation would be possible.

While extending their utmost cooperation towards achievement of increased production, the Committee urge upon the Central and the State Governments to take immediate and effective steps for the restoration of normal working by ensuring adequate and regular cane supplies to the mills in the above areas thus enabling them to maximise production.

Ban on A & B Grains

Approves the Government ban on manufacture and sale of A and B grain-size sugar by the sugar factories on the 2nd November, 1964, the Indian Sugar Mills Association conveyed a conference of the Joint Technologists of the various sugar factories to consider the effect of the ban on the production of sugar, at New Delhi, on the 4th December, 1964. The conference was attended by most of the leading sugar technicians, including two ex-Directors of the National Sugar Institute, namely

Messrs. J. M. Saha and S. N. Gundu Rao. After a considerable discussion of the matter, the Conference had come to the unanimous conclusion that the Government had erroneous notions in arriving at the decision that there was loss of production in the manufacture of bolder grains. On the other hand, where adequate and proper equipment existed, there could be no loss of production nor could the manufacture of bolder grains be considered as wasteful. The Conference was further of the view that serious working difficulties would arise in the change-over from the manufacture of bolder grains to smaller grains in such units. The difficulty in the switch-over would be mainly felt in the centrifugals and in the drying stations as also in the grading section. The Conference also felt that the layout of the plant and equipment at the various sugar factories which were mainly producing bold grain sugar were such that it was extremely difficult to switch over to the production of smaller grains without adversely affecting the cane crushing rate, thus adversely affecting the production of sugar. The extent of reduction in the crushing rate would vary with individual mills and was likely to go up as the season advances with the increase in sugar recovery.

NON-FERROUS METALS Divergent Trends

The non-ferrous metals market showed divergent trends last week. Tin was easier on selling pressure coupled with indications of accretion to stocks from arrivals from upcountry centres and imports. Although zinc too displayed a similar trend most of the time, there had been an improvement in sentiment in later dealings owing to revival of some buying support. While there was no marked change in lead, copper was generally steady with copper electrolytic gaining sizable ground on paucity of offerings coupled with a strong demand. It would appear that the somewhat subdued appearance of the market in contrast to recent firm conditions around is partly due to the apprehension that any hectic trend will attract strong regulations from Government.

PEPPER Margins Imposed

The buoyant trend noticed for some time in the pepper market has continued unabated most of the time last week in Bombay.

these mills have to change-over to sulphitation process for production of smaller grains by incurring additional capital expenditure by way of installation of new plant and machinery, while a number of existing machinery would be rendered idle. As these units are already faced with higher manufacturing charges, their working would be seriously affected which was bound to reflect adversely on their production. Even in the case of sulphitation factories who were producing bulk of their required grains, considerable alterations in machinery would be required to switch over to the production of smaller grains, involving additional capital expenditure.

In consideration of the above compelling circumstances, the Indian Sugar Mills Association has strongly urged upon the Government of India to reconsider their decision and drop the ban on production of A & B grains in the interest of smooth working of factories and increased production which is the declared objective of the Government.

In earlier dealings speculative buying lifted the price in the forward section. Operators had been encouraged by reports of sustained American buying and the growing interest in the market from some East European countries. With arrivals in the primary market continuing to be restricted, the trend further hardened in Bombay. That responsible sections of the trade were perturbed over the continuing rise in prices was evident from the fact that the Board of Pepper and Ginger Merchants' Association tried to prevent any dislocation of the market, though ineffectually. Later only after the FMC had imposed heavy margins on the two ruling contracts that the unbridled price rise could be arrested.

SILK Unchanged Conditions

The prices of Filature Raw Silk remained unchanged at the Bangalore Silk Market during the week ended 19th December, 1964. Kisan Silk rose to range from Rs 109.00 to 110.00 per kg. Prices of Cottage Basin Silk appreciated slightly to rule at Rs 86.53 to Rs 102.80 per kg.

A mixed trend was noticed in the prices of charka raw silk. The superfine quality showed an upward trend only in the minimum to rule between Rs 87.08 to Rs 92.59 per kg. against the last week's level of Rs 87.08 to Rs 92.59. Prices of all the three qualities also noticed an upward trend. Prices ranged between Rs 72.48 to Rs 78.82 (I quality) at Rs 68.07 to 72.20 (II quality) at Rs 63.37 to Rs 67.24 per kg. (III quality). Dupion (charka) ruled at Rs 27.00 to 39.12 per kg.

Spun silk yarn remained stagnant for yet another week.

Reeling cocoons: Prices of reeling cocoons indicated a rising trend particularly in Sidlaghatta market at Rs 5.58 to 6.75 compared to those ruled during the last week. Prices at Channappatna Market rose to rule at Rs 4.07 to Rs 5.89 per kg. Mugur Market remained unchanged.

Seed Cocoons: The prices of Foreign race seed cocoons declined to rule at Rs 12.25 to Rs 23.25 per thousand compared to the prices in the last week. Prices

of Mysore race rose only in the maximum at Rs 6.00 to Rs 6.75 per thousand as against Rs 6.00 to Rs 6.50 per thousand last week.

Bhagalpur Market: The prices at Bhagalpur market remained unchanged.

Malda Market: The prices of Cottage Basin silk in Malda market did not change. Reeling cocoons at Malda ruled at Rs 4.12 to Rs 6.50 per kg. Prices of pierced cocoons and matka yarn ruled at Rs 10.00 to Rs 13.50 to Rs 6.50 and Rs 27.00 to Rs 41.00 per kg. respectively. Silk waste was available at Rs 1.25 to Rs 1.75 per kg.

Assam Silk Market: There was no perceptible change in the Assam Silk Market for eri and muga silk products.

Trend of silk prices in Japan: F.O.B. prices of Japanese raw silk ruled between 4,220 yens and 4,400 yens. The latest quotations place the prices for 20/22 Dr. silk at Rs 57.27 F.O.B. and landed cost works out to Rs 91.87 per kg.

Consumer Price Index

The Labour Bureau series of consumer price index numbers for working class (base: shifted to 1949-100, except where otherwise indicated) increased in 9 centres during October, 1964.

The maximum rise of 8 points was recorded by the index for Silchar which stood at 140.

The index numbers for Dehri-on-Sone, Tinsukia and Ludhiana appreciated by 4 points each to 150, 153 and 134 respectively, for Ajmer, Berhampur and Kharagpur by 2 points each to 141, 168 and 143 respectively and those for Gauhati and Akola by 1 point each to 130 and 147 respectively.

In this group of centres, the food group index numbers appreciated at 8 centres, the fuel and lighting group index numbers at 6 centres, the clothing group index numbers at 3 centres and the miscellaneous group index numbers at 4 centres.

The index for Jabalpur declined by 4 points to 163 and that for Cuttack by 1 point to 179.

The index for Jabalpur declined due mainly to fall in food group index and that for Cuttack due to fall in clothing and miscellaneous group indices.

The all-India index appreciated by 4 points and stood at 163 during October, 1964.

PAPER & HARDBOARDS:

For the INVESTOR

INVESTMENT GOSSIP Tax Concessions

First reaction to the eagerly awaited speech of the Prime Minister at the Associated Chambers of Commerce annual meeting early this week has been one of disappointment. For the speech contained no specific reference to reliefs although it has touched upon the question of the continued sluggishness of the capital market. But a careful reading of the speech seems to have convinced marketmen that reliefs will be forthcoming sooner or later. For Mr Lal Bahadur Shastri has said in the course of his speech that there have been considerable difficulties in raising fresh capital in the market. The important sentence as far as the marketmen are concerned is this: "What measures need being adopted to get over this sluggishness is a matter which is receiving Government's serious attention."

So during the past few days speculators have been active pushing up the prices of the more speculative counters evidently on the belief that some relief is in the offing and that too in the near future. Actually, some tax concessions have been announced before the week was out.

At long last the Union Finance Minister has admitted that the investment climate in the country is not propitious for capital formation. In his own words: "there is something lacking in our present arrangements for stimulating a greater flow of savings into industrial investment." After giving the factors that are inhibiting investment in equity shares, Mr T. T. Krishnamachari has announced on Thursday some measures which are proposed to be included in the next Finance Bill. The very fact that he had deemed it necessary to announce the concessions when the Central Budget is only two months away is an indication of the urgency of the relief measures. Explaining the reason for announcing the tax concessions now, the Finance Minister has pointed out that even during the next two months these measures will have a beneficial effect on the economy. The main purpose of the first concession announced is to give valuable relief to investors deploying their savings up to a prescribed limit in ordinary shares of new companies. The assistance will take the form of tax certificates valid for a limited

number of years. Another concession pertains to income on Government securities. The Finance Minister has also announced a concession designed to encourage the inflow of foreign exchange from Indian residents abroad.

INVESTMENT NOTES Progress of Unit Trust

During the initial sale period i.e. the six weeks from 1 July to 14 August, when units were sold at their par value of Rs 10, the UTI received about 1,25,000 applications. Up to 30 November 1964, more than 1,30,000 applications have been received, the aggregate amount of sale of units being Rs 18.2 crores. Of this Rs 17.1 crores were subscribed in the initial period of six weeks when the units were sold at Rs 10 per unit and Rs 1.1 crores when they were sold at a premium. The bulk of the application are from individuals as the investment from institutions is only for Rs 1.3 crores. Of its total funds aggregating over Rs 23 crores, which consists of Rs 5 crores of initial capital and Rs 18.21 crores of unit capital as of 30 November, 1964, Rs 18.4 crores were in stock exchange investments. Of these, Government and semi-government securities accounted for Rs 5.6 crores (23.8 per cent), ordinary shares of corporate enterprises for Rs 7.6 crores (32.3 per cent), preference shares for Rs 1.3 crores (5.5 per cent) and debentures for Rs 3.9 crores (16.2 per cent). Rs 5.2 crores (22.1 per cent) were in deposits which will be adjusted for investment in debentures which the Trust has already decided to underwrite, the balance of Rs 13 lakhs (0.1 per cent) being cash.

According to Mr R. S. Bhatt, Chairman of the Unit Trust of India, the Unit Scheme 1964 under which units are now being sold is only the beginning. The Trust plans to bring out various other types of schemes, such as savings schemes, accumulation Plan, high income and capital growth schemes etc.

BALANCE SHEET REVIEWS

7½ Per Cent from Ballarpur Paper

Although sales of Ballarpur Paper and Straw Board Mills Limited have

substantially increased from Rs 2.74 crores to Rs 4 crores, the disposable profit for the year ended June 1964 shows a sharp decline to Rs 15.26 lakhs from Rs 47.98 lakhs. But profit before charging Depreciation is, however, higher at Rs 58.62 lakhs as compared with Rs 55.90 lakhs for the previous year. The sharp reduction in the disposable profit is due to the fact that depreciation has gone up steeply to Rs 43.37 lakhs from Rs 7.92 lakhs. Development rebate reserve is allotted the substantially large amount of Rs 43.50 lakhs as against only Rs 90.00. Provision for taxation is nil against Rs 23.50 lakhs. There is thus a debit balance of Rs 27.74 lakhs which has been set off against general reserve which amounts to Rs 44.78 lakhs. The ordinary dividend which has been reduced to 7.5 per cent from 14.5 per cent paid previously, is proposed to be paid out of the dividend equalisation reserve.

Explaining the cut in dividend the directors in their report have pointed out that in view of the heavy disbursements in connection with the implementation of the expansion scheme costing over Rs 9 crores, it is necessary to conserve the available resources and hence the temporary cut in the disbursement to the shareholders. As for the company's working, the accounting year should be considered to be quite satisfactory in as much as sales have substantially increased despite ever rising manufacturing costs owing to a steady increase in the price of raw materials, chemicals and other stores. Sales could have been further higher had it not been for the fact that the new MG machine commissioned last year had to be run on purchased pulp as the company's new pulp plant was not ready. However the new pulp plant has since been completed and this will go some way toward reducing the cost of production.

Phosphate Company Maintains

The disposable profit of Phosphate Company Limited for the year ended June, 1964 has more than doubled to Rs 8.05 lakhs from Rs 3.99 lakhs in the previous year. Such an encouraging position has been brought about by a sharp increase in sales to Rs 1.49 crores from Rs 99 lakhs. Depreciation has been increased to Rs 5.24 lakhs from Rs 4.70 lakhs while provision for taxation is also higher at Rs 7.50 lakhs from Rs 6.50 lakhs. Development rebate is placed at Rs 27.473 against Rs 1.22 lakhs with General Reserve getting an allo-

cation of Rs 3.20 lakhs against Rs 1 lakh. A sum of Rs 4.65 lakhs has been transferred to Dividend Reserve out of which an ordinary dividend of Rs 15 per share (same as last year) is proposed to be paid absorbing Rs 463,515. It may be noted here that the dividend is maintained on the increased capital of Rs 3,089,750 as the paid-up capital amounted to only 2,250,000 at the time of the last accounting period.

The excellent results have been made possible because during the year under review production of superphosphate touched a new peak at 50,900 tonnes as against the licensed capacity of 36,000 tonnes. For a time, however, the lower allotment of rock phosphate necessitated the shut down of the plant. But the position has since improved as the licensed capacity of the company has been increased to 61,800 tonnes per annum and it is expected that sufficient quantity of raw material will become available. The rise in cost of production since the beginning of 1964 could not be fully compensated by the increase allowed in the price of superphosphate of Rs 9.14 per tonne with effect from 28 November, 1964, as manufacturing cost has continued to be upward owing to a rise in the price of gunny bags, sulphur and rock phosphate.

Same from Kusum Products

Sales of Kusum Products Limited for the year ended March, 1964, have substantially increased to Rs 6.97 crores from Rs 5.41 crores as production in all departments have recorded sizeable increases. During the year production of vanaspati increased by 17.7 per cent while the output of soap increased by 20 per cent. After providing for depreciation of Rs 419,794 against Rs 274,313 there is a disposable profit of Rs 19.05 lakhs against Rs 12.62 lakhs. Reserve gets an allocation of Rs 1.75 lakhs against Rs 50,000. Reserve for taxation Rs 13.55 lakhs against Rs 8.30 lakhs and development reserve is reduced to Rs 80,534 against Rs 1.05 lakhs. A sum of Rs 1.60 lakhs has been transferred to the Dividend Reserve from out of which an ordinary dividend of 20 per cent, same as last year, is proposed to be paid.

The company has installed a second glycerine-lyc evaporator to effect fuel economy. A glycerine distillation plant is nearing completion and it is expected to be commissioned shortly for the manufacture of refined

glycerine. The company has obtained a licence for import of machinery for manufacture of synthetic detergents and orders have already been placed for the requisite plant. It has also ordered a continuous oil-refining plant which is expected to be installed during the current year.

15 Per Cent from Jeypore Sugar

Sales of Jeypore Sugar Company Limited for the year ended June, 1964 have declined to Rs 2.03 crores from Rs 2.43 crores. Even so disposable profit is shown higher at Rs 12.07 lakhs as against Rs 11.50 lakhs. Depreciation is higher at Rs 17.14 lakhs against Rs 14.03 lakhs while taxation is also higher at Rs 8.86 lakhs from Rs 6.35 lakhs. Development rebate reserve is placed at Rs 1.07 lakhs against Rs 44,000. A sum of Rs 7.61 lakhs has been transferred to Dividend Reserve from out of which an ordinary dividend of 15 per cent is proposed to be paid (same as last year). The company's Chagallu factory is being expanded to a daily crushing capacity of 1,250 tonnes and the work is nearing completion. In view of the rise in the cultivation of sugarcane in Andhra Pradesh, the company has applied to the Government of India for further expansion of its Rayaghadra factory to 3,000 tonnes daily crushing capacity. It has also applied for an industrial licence for the establishment of a textile mill at Rayaghadra with a capacity of 25,000 spindles. Application has been made to the Government of Orissa for permission to utilise the distillery for the production of Indian made foreign liquors and rectified spirit. The distillery has not been in production since introduction of prohibition.

Mysore Sugar Pays 15 Per Cent on Increased Capital

Sales of Mysore Sugar Company Limited for the year ended June, 1964 amounted to Rs 3.77 crores as against Rs 3.77 crores. Depreciation absorbs Rs 9.58 lakhs as compared with Rs 8.53 lakhs in the previous accounting period. Taxation gets a considerably higher provision at Rs 7.37 lakhs as compared with Rs 70,000. Development rebate is much higher at Rs 2.71 lakhs as against Rs 81,008. The disposable profit of Rs 10.06 lakhs includes a transfer of Rs 4 lakhs from Dividend equalisation reserve, Rs 75,000 from provision for fluctuation in market value of investments and Rs 29,084 from bad and doubtful debts reserve and writing back Rs 318,695 being provision made on previous years, but no longer required. The previous year's disposable profit of Rs 7.13 lakhs was after transferring Rs 5.80 lakhs from dividend equalisation reserve and Rs 1.50 lakhs from provision for taxation. The ordinary dividend of 15 per cent absorbing Rs 6.47 lakhs compares with 30 per cent paid last year. But it is to be noted that the present capital has almost doubled since the previous balance sheet was published. The paid-up capital now stands at Rs 4,316,050 as against Rs 2,179,280. The directors in their report

have pointed out that results would have been better had it not been for two important adverse circumstances: first, low crushing season owing to paucity of cane and an expenditure of Rs 6.6 lakhs on account of exgratia payment made to the workers relative to the year 1962-63 which had to be charged off in the accounts for 1963-64. During the accounting year, the actual number of working days was 155 as against 202 in the previous year. The distillery had also been faced with shortage of molasses. The company's expansion programme envisages doubling the distillery capacity from 1.2 million gallons to 2.4 million gallons and manufacture of acetic acid.

STOCK EXCHANGES Cheerful Sentiment

Stock markets have ruled steady this week and the more speculative scrip have gained sizable ground in active trading in later dealings. The start, however, has been rather subdued reflecting the initial disappointment

ment over the Prime Minister's speech at the annual meeting of the Associated Chambers of Commerce at Calcutta. Contrary to expectations Mr Lal Bahadur Shastri has not disclosed any concrete proposals for reviving the capital market. But on second thoughts, operators seem to have found in his speech enough indications to take an optimistic view of the future of equities. From Tuesday there has been a distinct improvement in sentiment with bulls once again coming to the fore. Bear covering has aided the recovery further. Even so, the recovery movement has been confined mainly to the clearing section with the cash shares showing no appreciable expansion in activity.

Lyons Range commenced the week on a dull note but soon sentiment especially around popular shares improved. Higher advices from Dalm Street has also aided sentiment. The cash section however has remained generally unaffected by the growing enthusiasm in the cleared section. During the last day of the week, there has been profit-taking but this

has not seriously interfered with the recovery movement.

Although Dalal Street also started the week on an uninspiring note, subsequent trading was cheerful. Selected scrip were in good demand at hardening price levels. Good corporate news was taken full advantage of by bulls to push up prices. The sudden aggressive buying by bull operators caught bears napping and they were left with no alternative but to rush to cover their short positions. The result of all this has been active conditions in which pivotal shares gained sizable ground. It would appear that the bullish fervour has stemmed from a belief that though the Prime Minister has not given any indication of the possible measures to bolster up the capital market, Government may well be seriously considering some suitable measure or other to achieve the end in view.

The Madras stock exchange witnessed active conditions with a marked expansion of business. At the earlier stages interest was confined to selected scrip but toward close there has been further expansion of acti-

SMALL SCALE INDUSTRIES

...We shall be happy to consider requests from Small Scale Industries for financial assistance.

■ For details please consult our nearest Branch or the Industrial Finance Department at the Bombay Main Office.

THE BANK OF INDIA LTD.

T. D. KANSARA, General Manager

vity with more and more shares participating in the revival. While Plantings and textiles were quite active, selected miscellaneous issues were in good request especially toward close.

Aided by higher advices from Dalal Street, sentiment on the Ahmedabad stock exchange turned active after initial hesitancy. Popular scrip gained sizable ground in the course of the week's trading.

A generally improved sentiment prevailed on the Delhi Stock Exchange with the trend from day to day patterned on the activity in the major stock markets in the country.

★

CALCUTTA

After a hesitant start, selected scrip in the clearing section gained some useful ground on the Calcutta Stock Exchange last week. The closing tone of the market was constructive. The cash section however has generally remained unaffected by the renewed enthusiasm in the clearing section. Earlier hesitancy stemmed from the disappointment at the absence of any specific reference to fiscal relief in the Prime Minister's speech at the Associated Chambers of Commerce. Second thoughts have evidently shown Mr Lal Bahadur Shastri's speech in a more favourable light and bull operators have lost no time in expressing their optimism. Unlike Dalal Street, Lyons Range however witnessed only somewhat restrained enthusiasm on the part of the bull operators. For upto almost the close of the week, the participants in the upsurge were restricted to selected scrip from the cleared section, with the rest of the market continuing to be listless. Apart from the tightness of the money market (nothing unusual at this time of the year), investors rightly ignore the frequent changes in market sentiment. For them the time to extend commitments will be when incentives are a reality.

Among the scrip in the cleared section which made better showing during the week's trading, Birla Jute takes a prominent place. The scrip however did not improve its position after the initial gain. Opening with a gain of 6 P at Rs 38.81, the scrip continued to rule at that level upto close on Wednesday. In Thursday's trading however, it met with profit-taking to lose ground to Rs 38.69. Hind Motors was a steady counter and although the week's higher level could not be held to the last, the closing price is better on balance. The scrip closed at Rs 16.84 as against its previous closing of Rs 16.75. Indian Iron met with good support partly because of the revival of the rumour that steel retention prices will soon be increased. All through the week, it was well supported at hardening levels and though the closing level was placed at Rs 25.84 it had often during the week crossed the Rs 26 mark. Indian Aluminium has made notable gain on balance closing at Rs 30.44 as against its previous closing of Rs 29.87. Texmaco moved within comparatively narrow limits to close at Rs 25.50 with an on balance loss of 5 P. Orient Paper was another scrip whose fluctuations were confined to narrow limits.

The scrip closed at Rs 33.25 against previous week's closing of Rs 33.20; Kesoram Industries gained modest ground to close at Rs 24.50. Dunlop Rubber was rather subdued to be finally placed at Rs 30.61 against previous closing of Rs 30.81.

In the jute section, trading continues selective. Even the news that the value of Jute Goods exports in the first half of current financial year has surpassed that of the corresponding period of the previous year by Rs 10 crores has failed to enthuse investors, who seem to be now mainly interested to know how jute goods will fare in the future. With the news of the resumption of working by Pakistani mills after two months' cessation of production, sentiment in the gunny market has been depressed. During the past week jute goods prices have declined rather sharply as it is feared that Indian goods will before long have to sell in competition with the cheaper and better Pakistani jute goods. Among the few shares transacted during the week Barnagore was steady at Rs 248. Anglo-India was done at Rs 186. New Central was done between Rs 9.95 and Rs 9.50. Kinnison was marked at Rs 107 with Ganges transacted between Rs 12.37 and Rs 12.12.

With no new incentives forthcoming, coal shares have continued to be neglected with prices where marked generally lower on balance. The biggest problem for the industry currently is the disposal of raisings. But with demand showing no signs of expansion, stocks continue to accumulate causing severe financial and other difficulties for the coal industry. Burrakur was marked at Rs 15.75, Central India was quoted at Rs 8.06 with Dhemo Main at Rs 2.45, East Indian at Rs 26 and Equitable at Rs 18.87.

Although recent developments have been encouraging, investors continue to be extremely cautious in extending commitments in the tea section. In the first place, there has been some improvement in the price realised in the auctions. It is admitted that the fact that North-Indian tea production has increased this season is having an adverse effect on tea demand. But it is quite on the cards that foreign buyers will step up their buying from India if only for the attractive price levels now obtaining. The recommendations of the Tea Finance Committee have been well received by the industry. If the recommendations are accepted by Government many of the problems of the industry will be solved. Even so, investors for the time being seem to be guided by the near term outlook only. Birpara changed hands from Rs 145 to Rs 148 with Patrakola marked at Rs 151. Hattikhira was done at Rs 6.50 with Dhelakhat marked at Rs 20.62.

In the Miscellaneous section, B I Corporation improved to Rs 11.06. Good Year was done at Rs 19. Hindustan Aluminium was quiet at Rs 12.31, India Carbon was wanted up to Rs 13. Among paper shares India paper was done at Rs 16.39 with Titagur at Rs 11.31. Seharayee continues to be quiet and closed at Rs 7.10.

World's Busiest Telephone Exchange

Looking at the nine-storeyed skyscraper in Dalhousie Square, it is difficult to appreciate the noiseless efficiency with which the busiest telephone exchange in the world functions from this giant structure. This is the Telephone Bhavan, the nerve-centre of the largest telephone network for any city in India.

Brisk activity in trade and commerce in the city make a heavy demand on telephone calls and the two automatic exchanges primarily serving the commercial community have to cope with an average of 40 calls per telephone every day, the highest rate in the world. Despite shortcomings, the Calcutta Telephones remain one of the best essential services in the city.

Calcutta's telephone system is the largest for any city in India, and over one lakh telephones are served by it. No wonder the telephone directory for the city weighs several kilograms. By next year, another 10,000 lines are likely to be added, though it would still be far short of the demand.

The expansion of the Calcutta Telephones during the past few years has been really spectacular. The last six years have seen the capacity of the system nearly doubled, and today it has 98,000 lines serving over a lakh telephones.

Calcutta had its first telephone as far back as 1880, when a private telephone company started operating under a licence agreement with the Government of India. It was only in 1943 that Government took over the system from the corporation on the expiry of its licence. Except one, all the exchanges then were manual and the total capacity was about 19,000 lines.

AUTOMATIZATION SCHEME

Automatization of Calcutta's Telephones was undertaken comparatively recently. When Government took over the telephone system, the manual exchanges were so fully loaded and the traffic so very heavy that it became impossible to provide satisfactory service without recourse to automatization.

It was the biggest automatization scheme ever handled by the Posts and Telephones Department, and, to begin with the assistance of engineers of the British Post Office was sought. Soon the P. and T. Department engineers acquired the necessary skill and experience for undertaking the large project, which involved the setting up of a network of 15 large automatic exchanges in the central part of Greater Calcutta.

The first automatic exchange—"24" exchange—was commission-

ed in 1953, and by 1958 the exchange capacity rose to 55,000 lines, compared to 20,000 lines in 1943. Since then the expansion programme has made steady progress and, but for the lack of resources, it would have gone on even faster. The demand on the Calcutta telephone system can be gauged from the fact that more than 50,000 people are now waiting for telephone connections.

Calcutta's telephone network today embraces an area of 600 square miles and is served by 27 exchanges. Over the years, it has spread its tentacles from 250 square miles to what it is today, and with the development of the fringe towns it is being further extended.

Earlier, the entire network was divided into three sectors, with provision for a toll-charge for a call from one sector to another. Gradually, the toll system is being abolished and the three sectors are being brought within an integrated network. The remaining manual exchanges in the system are also being automatised.

MAINTENANCE SERVICE

For a large network of telephones that Calcutta has, a well-organised maintenance set up is inevitable for efficient service to subscribers. Underground cable run into 4,800 kilometers, but each cable, in its turn, carries a large number of small cables, which put one after the other would be long enough to go round the earth a number of times.

A constant watch has to be kept to detect faults in this huge underground network. Since a large number of agencies are frequently digging up the city roads, the telephone cables get frequently damaged, and during the monsoon moisture affects the damaged cables to cause trouble. A round-the-clock breakdown service is provided. By dialing a number, a subscriber can record his complaint, but repairs are carried out only during daylight, though emergency lines, like those to hospitals and police, are attended to all the 24 hours.

SPECIAL ASSISTANCE

A staggering number of callers daily seek the special assistance service provided by the Calcutta Telephones. During the last cricket test match between India and England, 28,000 people on an average rang up everyday for scores.

The assistance service now handles about 34,000 calls a day. It ranges from information about cinema, theatres, air and train timings, weather bulletins, and tides in the Hooghly. A stranger to the city today can move around the town with telephone assistance without the fear of being lost and busy executive can safely depend upon his telephone to be reminded of his engagements.

Role of GSI in National Planning

By Dr M. K. Roy Chowdhury

Since independence India has embarked on an era of rapid industrialisation through planning. As a first stage it is envisaged to implement a programme of planning for a period of 25 years from 1951 to 1976, which in turn, is divided into five Five Year Plan periods. The rate of growth of industrial production in the advanced countries like the USA and the USSR is proportional to the rate of growth of mineral production. The value of mineral production excluding oil, which was about Rs 1,050 million in 1951 is expected to rise to Rs 7,300 million by the end of 1975.

Discovery of mineral deposits and demarcating blocks for exploration for sustaining this increase in mineral production is one of the important functions of the Geological Survey of India. Besides this, the Department is responsible for the study of the dam-sites and reservoirs in our multipurpose river valley projects and for systematic investigation of groundwater for domestic, agricultural and industrial purposes. Thus the Department's activities are closely integrated with national planning and the major highlights of achievements are briefly reviewed here.

FIRST FIVE YEAR PLAN

Regional geological mapping in the virgin areas in Dhenkanal, Keonjhar, Mayurbhanj and Kalahandi districts of Orissa revealed the existence of new deposits of manganese, chromite and iron ores.

A new coal-bearing field at Barjora, Bankura district, West Bengal was discovered.

Re-mapping and re-interpretation of data down to a depth of 610 metres in the Raniganj and Jharia coalfields indicated reserves of 13,208 and 12,192 million tonnes of coal respectively.

Re-survey of Karanpura coalfield brought out the presence of many new coal seams.

The lignite deposits in Kutch were proved by drilling. The reserves were estimated at 11.2 million tonnes.

Mapping and investigation of the Panna diamond fields was carried out and an ultrabasic pipe (rock which generally contains diamond) was located.

Large-scale mapping of Dariba copper deposits of Alwar district, Rajasthan was completed. Later IBM (Indian Bureau of Mines) established 0.5 million of tonnes of copper ore in this locality.

By detailed mapping of the lead-zinc mines in Zawar, reserves were estimated at 10.87 million tonnes of ore with combined lead and zinc content more than 3 per cent.

Experimental mining of the Ajmor pyrites deposits in Bihar was done. A reserve of 50,800 tonnes was provided and much larger reserves were indicated. New exposures of pyrite were established along the same zone over a larger area. IBM blocked out large reserves for later exploitation by the NMDC.

Large-scale mapping of the well known MP Manganese belt conclusively proved than had hitherto been estimated. The probable reserves were estimated at 144 million tonnes, out of which 76 million tonnes are of shipping grade with 48 per cent manganese. Detailed studies of the Singhbhum-Keonjhar-Bona manganese areas revealed that the probable reserves are of the order of 20 million tonnes, of which 30 per cent are expected to have manganese content 49 per cent and above.

Geophysical studies in Cambay region revealed possible oil-bearing structures which were later drilled by the ONGC with success.

Geophysical (Magnetic) methods were successfully applied for locating hidden manganese deposits in Madhya Pradesh.

The probable iron-ore reserves of India were estimated at 21,337 million tonnes revealing that India stands first in the world with regard to its iron-ore reserves.

Detailed mapping of the potentially oil-bearing regions of Jawalamukhi in the Punjab and Jaisalmer in Rajasthan was carried out.

Aerial photographs came into extensive use for geological mapping during this period. Large scale maps were made in connection with surveying of economic deposits. Considerable amount of underground mapping of mine working was also undertaken. Geochemical prospecting was carried out in the country for the first time in 1953 in many areas with a view to locating and tracing the extension of ore bodies.

The Engineering Geology and Groundwater Section of the Geological Survey of India continued to be closely associated with many River Valley projects and other constructional activities. The Survey advised various Project Authorities on the stability of dam sites, suitability and availability of construction materials, etc. Resident Geologists were posted at many of the Project Sites to approve the foundation and supply any other relevant information desired by the engineers. It may be mentioned here that on the advice rendered by this Department changes were made in the alignment of certain dam sites and in some cases in the design of the dam itself. Thus the Geological Survey played an important role in the successful and economic implementation of many of the projects.

In 1954, a Groundwork Exploration Section was initiated under the Indo-American Technical Co-operation Programme No. 12, in order to study systematically the groundwater conditions in various tracts in India by exploratory boreholes. The schemes included certain unexplored areas in the plains such as Kutch, Saurashtra, Western Rajasthan and Gujarat. Narmada, Tapi and Purna Valleys and the coastal tracts of Orissa,

Andhra and Madras. The section also utilised the services of the Geophysical Section for locating hidden sources of groundwater and for delimiting areas of saline water from those containing sweet water.

The Section was also closely associated with the study of the artesian conditions of water in the Neyveli lignite field and the feasibility of depressing the water table by large scale pumping as a preliminary step to the mining of lignite. But for the groundwater studies carried out, the mining of the Neyveli lignite would have been impossible.

By the end of this plan period, an Oil and Natural Gas Commission was calculated to intensify the search for oil and natural gas in the country. Officers from this Department formed the nucleus around which the various Technical Sections of the Commission have been organised. In addition, the Geological Survey helped in imparting training to the personnel recruited by the Commission.

SECOND FIVE-YEAR PLAN

Work was intensified in the coal-bearing areas, large scale mapping in parts of Talchir, Karanpura, Singaren, Deitonganj, Panch-Kanhan, Jhilmili, Raniganj, Singrauli, Ramgarh, Kalakot, Jangalgali and Dharangiri coalfields was undertaken and mapping of about 6,980 sq kms was completed. The highlights of the coal exploration work are: (a) discovery of 21.27 m. thick seam in Singrauli coalfields; and one 22.5 m. thick seam and another 3.91 m thick seam in Ramgarh coalfield, the latter two being of caking quality, (b) proving the occurrence of the Dishergarh seam at minable depth south of the Damodar river in unleased areas in Raniganj coalfield after a geological re-interpretation of the structure, (c) proving the existence of Laikidhi seam 6.1 m thick in the unleased areas near the Kulti Steel Works, (d) proving the existence of Barakar coal seams under the barren measures by deep drilling in the Jharia coalfields, (e) drilling in the Karanpura coalfield in the notified blocks of NCDC to help them in opening up new mines, (f) tracing the extension of the Raniganj coalfield eastwards in the Ondal area, (g) proving large deposits of coal in Garo hills and (h) proving coal and lignite in Jammu and Kashmir.

By drilling 76,270 m in Karanpura, Singrauli, Darangiri, Jharia, Raniganj, Barjora, Ramgarh, Jangalgali and Kalakot coalfields, a reserve of 3,048 million tonnes was estimated.

Detailed mapping of Vijayanagram-Srikakulam manganese belt revealed that the ore reserves are of the order of 0.51 million tonnes. After detailed investigations of the Manganese deposits of Jhabua (Madhya Pradesh) North Kanara (Mysore) and Panch Mahal (Gujarat) 2.54 million tonnes of ore with manganese content of 43.46 per cent were estimated.

Detailed mapping of the Kolar goldfields was completed. Underground mapping of the mines was also carried out to help the nationalised Kolar Gold Mining undertakings of the Government of Mysore to explore and develop certain areas

within and along the extension of the mines. The southern extension of the field into Chittoor district of Andhra was also mapped.

Detailed mapping and investigation of Ramagiri goldfields in Andhra have brought to light that this abandoned fields is one of the prospective areas for future development. The IBM is continuing the investigation with a programme of trenching, drilling and underground development.

Large-scale mapping of Gadag goldfields was completed. The results so far obtained indicate that the lodes are of low to medium grade and should be further explored to prove their economic potentialities.

A preliminary study of some old mines in Wynad goldfields indicated that proper attention was not paid by the earlier prospectors to the localisation of gold along reefs and that a more intensive study is necessary to evaluate the potentialities. The work is in progress.

Chromite deposits of the Nuggihalli schist belt, Mysore and Ratnagiri district, Maharashtra were examined. The reserves of the deposits other than Byrapur in the Nuggihalli schist belt were estimated at 114,800 tonnes while the reserves of Ratnagiri deposit were estimated at 72,100 tonnes.

Detailed mapping of the iron-ore deposits of Bastar, Madhya Pradesh and Udhampur district, Jammu and Kashmir was completed. In Bastar, five new iron-ore bodies were located. The reserves are estimated at 770 million tonnes. Later IBM blocked out 325 million tonnes of reserve which can sustain an export of 10 million tonnes annually.

By drilling 6,016 m. in Nagaur area of Rajasthan, the reserves of the buried deposits of gypsum were estimated at 950 million tonnes. The reserves of gypsum in the Ramban-Doda-Assar area were estimated at 45,72 million tonnes. These studies increased eight-fold our known reserves of gypsum so important for the country's fertiliser industry.

High grade bauxite deposits, with a reserve of 6.6 million tonnes were located in Halar district, Gujarat. Mapping and prospecting by pitting 24 bauxite deposits with an estimated reserve of 6 million tonnes were located in Kutch.

About 14.9 million tonnes of flux grade and 150.5 million tonnes of cement grade limestone were located in Anantnag, Baramul and Srinagar districts of Kashmir. Investigations of limestone deposits in the Sahabad district and in the Bandu-Bassaria area. Hazaribagh district, Bihar; Satna district and Konger river, Kotomsar and Patanar area of the Bastar district, Madhya Pradesh and in the area North of Giri river in the Sirmur district, Himachal Pradesh, were undertaken.

A reserve of 20.32 million tonnes of benetomite suitable for bleaching petroleum and vegetable oil after activation was estimated in the Barmer area of Rajasthan.

At Khetri, besides the mapping of the known Singhana-Babai mineralised zone, another belt between Satkui-Dhanota-Udaipur and beyond

was traced. By drilling in the geophysical anomaly zones the known northern extension of Mandan Kudan mineralised zone was proved to extend for another 2 kms under the soil cover.

Detailed mapping revealed the presence of lead mineralisation besides copper at Agnigundala in Andhra Pradesh. The aggregate strike length of the mineralised zones is 4.8 kms. Surface indications and other geological features suggest that this group of deposits may prove to be commercially important.

Mapping in chamoli district, Uttar Pradesh, revealed for the first time the presence of antimony ore in that area.

By geophysical studies in the eastern coastal belt of Madras, the thickness of sediments were found to be 2,743 m. which has enhanced the oil-bearing potentialities of the area.

By geophysical studies a second important ultramafic plug (rock which generally contain diamonds) was discovered in the Panna area, MP.

A number of promising geophysical indications suggesting the presence of graphite were located in Trivandrum district, Kerala. Some of these have been tested and found to contain high grade graphite.

Under the All-India Groundwater Exploration Project (Technical Assistance Programme of USA, Indo-American Operational Agreement No. 12), 300 exploratory wells were completed in 13 States of India and 139 of them were converted into production wells. Several areas were delineated for large-scale groundwater development. In addition 400 investigations were carried out to meet the requirements of water needed for domestic, industrial and agricultural supply.

Advice was given on more than 162 projects with regard to suitability and treatment of dams, bridges, tunnels and foundation sites, road alignments, etc.

THIRD FIVE-YEAR PLAN

As an active member of Coal Resources and Assessment Committee of the Coal Council of India, GSI has completed the assessment of categorised reserves (according to the Indian standard procedure) in respect of Jharia, Raniganj and East Bokaro coalfields.

The highlights of the exploration by drilling are given below:—

(a) Proving of additional reserve of good quality metallurgical coal in the Fatepur Dome area in Jharia coalfield. Based on this work, NCDC has already given priority for developing this block.

(b) Estimation of 30 million tonnes of additional reserves of coking coal from the 22 metre thick seam discovered during the Second Plan in Ramgarh coalfield, close to the proposed Bokaro Steel Plant.

(c) Establishment of the existence of a few caking and semi-caking seams in a portion of the West Bokaro coalfield. Out of the 200 million tonnes in the notified Taping Block, 50 million tonnes are at quarriable depth.

(d) Proving the dipwise extension of semicaking coal seam in the

Kanhan Valley coalfield beneath the younger Motur formation and demarcating a block with 116 million tonnes of blendable reserves for exploitation.

(e) Discovery of 138 metre thick Jhingurda in Singrauli Coalfield with an estimated quarriable reserve of 248 million tonnes.

(f) Establishing 48 metres thick Argadaseam, in Jainagar block in South Karanpura coalfield. A reserve of 77.5 million tonnes of Grade I & II coal has been estimated in this seam.

(g) Structural drilling was undertaken to obtain preliminary data for shaft sinking by Polish experts in Sudamdih block in Jharia coalfield where exploitation of the steeply dipping coal seams by horizon mining is planned.

(h) By drilling over 58,000 metres, this Department estimated over 6,500 million tonnes of reserves in Jharia (211 million tonnes), Ramgarh (222 million tonnes), West Bokaro (305 million tonnes), Raniganj (548 million tonnes), Talcher (330 million tonnes), Singrauli (4,418 million tonnes), Pench Kanhar (233 million tonnes) South Karanpura (125 million tonnes), North Karanpura (196 million tonnes), during the Third Plan. Further exploration in these and Sohagpur, Jhilmili and Birsampur coalfields is in progress.

Recent field work has led to the recognition of Karharbari beds in Talcher, Jharia, Raniganj, Birsampur and Bokaro coalfields (which, in Giridih, contain some of the country's best coking coal).

In Roam Sidheswar area in the Singhbhum copper belt, a reserve of about 21 million tonnes of ore with ropper content of 1–2 per cent was estimated within a depth of 300 metres by drilling 5,375 metres over a strike length of 1,300 metres. This block has been handed over to IBM for further work. Promising mineralised zones have also been located by drilling in the adjacent Tamapahar area, where a reserve of 1.58 million tonnes of ore assaying more than 1 per cent copper has been so far estimated.

In the Mamandur hill area, South Arcot district, Madras, a copper-lead-zinc mineralised zone has been proved by drilling over a strike length of 610 metres with width varying from 1 to 12 metres. A reserve of 800,000 tonnes was tentatively estimated down to a depth of 150 metres. The average metal content of the ore is 1.75 per cent lead, 1.56 per cent zinc and 0.65 per cent copper.

In the Agnigundala copper-lead mineralised zone, drilling is in progress. Results so far obtained show two mineralised zones between 66.25 to 67.43 metre depths; and between 69.52 to 71.32 metre depths. The former zone assayed 7.25 per cent lead while the latter 3.24 per cent lead and 0.18 per cent copper.

OTHER MINERALS

Detailed structural mapping of the Hutti gold mines and the other associated old but now abandoned mines was carried out in Raichur district, Mysore State. The main auriferous zone in the Hutti gold mines consists

of six known reefs from east to west over an area of 1830 by 1220 metres within the mining area are arranged. This work established the strike continuity of gold quartz reefs, in a virgin area over a length of 2km.

In the Kolar gold field, Mysore, the Bridge shaft lode has been proved a strike length of 300 m. down to an average depth of 60 m.

Investigation in the Kolar gold field, Mysore, and the Wynad gold field, Madras, and Kerala are being continued.

Detailed proving operations were undertaken at Phutkapahar and Amarkantak areas for establishing reserves of bauxite for the public sector aluminium plant that is going to be set up in Madhya Pradesh with the cooperation of the Hungarian Government. Out of 3.0 million tonnes of bauxite with alumina content 45 per cent and above, proved at Phutkapahar, 1.96 million tonnes of ore contain 50 per cent and above of alumina. In the blocks in Amarkantak area, out of gross reserves of 5.22 million tonnes of ore with alumina content 45 per cent and above 2.59 million tonnes have alumina content 50 per cent and above. In Sidhapahar, Jamboi and Betne area in Belgaum district, Mysore, a reserve of 0.33 million tonnes of bauxite with more than 50 per cent alumina content was estimated.

By detailed mapping of the Cuttack Dhenkanal Chromite belt, the minimum available reserves of metallurgical grade chromite were estimated at 1 million tonnes and lower grades at 2 million tonnes. By an integrated geophysical and geochemical exploration programme, a buried high grade, powdery chromite deposit was located in Gurjang area, in the Sukinda chromite belt, Cuttack district. By drilling 11 boreholes in this area, the reserves of this buried chromite deposit were estimated at 256,000 tonnes. Investigation of Jojaitau chromite deposit in Singhbhum district Bihar is in progress.

In the Ambadongar area Baroda district Gujarat, 26 pockets of flourspar rock have been proved by drilling, pitting and trenching. The reserves are estimated at 10 million tonnes for the first 35 metres of depth and more than half of the reserves are expected to be above 50 per cent in CaF₂ content.

Drilling for flourspar has also been carried in Chandi Dungri area Madhya Pradesh. The reserves of flourspar bearing rock have been estimated at 0.5 million tonnes.

Geological Survey of India has been carrying out a programme of exploration for locating flux grade lime tone within 430 km from the existing Iron and Steel Plants in Durgapur-Burdur-Tatanagar-Rourkela-Bokaro-Bhilai Steel belt and in the areas around Bailadila Visakhapatnam and Bellary-Hospet. The results of the investigations so far carried out reveal, that though the position regarding blast furnace grade limestone in these belts are satisfactory, the reserves of SMS grade limestone are limited only to the Rewa-Satna belt in MP. Drilling and sampling operations in the Bela block, Rewa district indicated a reserve of 19 million tonnes of SMS

grade and 33 million tonnes of BF grade limestone. This block has been handed over to the IBM for further work. In the Bankuiyam block, Rewa district, the reserves are tentatively estimated at 40 million tonnes of both BF and SMS grade. The inferred reserves of SMS grade limestone in Achhibal area, Anantnag district, J & K State, were estimated at 19 million tonnes. Work by GSI in other areas is in progress.

In the Machkot-Tirra area Bastar district, Madhya Pradesh, a reserve of 35 million tonnes has been estimated. In Jalpaiguri district, West Bengal, probable reserves of refracted flux and other grades of dolomite were estimated at 6000 million tonnes. Delineation of suitable areas in Jalpaiguri area containing flux grade stone is in progress.

Investigation of white clay deposits was carried out in Gopiballapur, Dhanpahari and Burjhor areas of Midnapur and Birbhum districts, West Bengal. In Burjhor area a clay bed of over 6 metre thickness was traced over an area of 8000 sq. metres. In the Dhanpahari area the bed is 3 to 5 metres in thickness and was traced over an area of 10,000 metres. Reserves of 25 million tonnes of clay have been estimated in Makdum-nagar-Shaikardh and Chonbatta areas. The probable reserves of all clay deposits investigated in East Godavary District, Andhra Pradesh, are estimated at 5 million tonnes.

Teenching and pitting operation were carried out in Dhoni-Maibla, East Palloo, Lakhora and Bisrasar areas of Ganganagar, district Rajasthan. Probable reserves of fertiliser grade gypsum of these areas are estimated at 248,000 tonnes.

Drilling in the Pulivendla area, Andhra Pradesh, where one of the best grades of asbestos are found, has established considerable strike and depth extension of the deposits.

To step up the Iron Ore export trade, investigation of the large deposits of high grade ores in the Mangtoli Block, Orissa, has been taken up.

In Goa 16 million tonnes of iron ore analysing 58 per cent Fe, have also been estimated by the Department.

The number of engineering geology and ground water investigations, undertaken by the survey, are also steadily increasing, and recently this department has been entrusted with bringing out an integrated geohydrological picture of the whole country for future planning of townships and industrial undertakings.

The Geological Survey of India which is one of the oldest and largest institute of its kind in the world has played a significant role in the national planning for economic development. Although the post independence awareness of the Department by intensifying the mineral investigations has yielded promising results, the task ahead of it is of much greater magnitude and responsibility. More and more aggressive scientific leads would be required to bridge the gaps in basic knowledge of our resources and break through the barriers of hidden wealth to enable the country to attain the desired levels of industrialisation.

"DRAMATIC NEW TYRE"

with the record mileage
SUP-R-TUF Miracle Rubber
the most advanced tyre ever built
to give you **EXTRA** mileage

Firestone research and development engineers have done it again! They have formulated a new miracle rubber—'SUP-R-TUF'—which gives extra mileage...at no extra cost! And at the same time, comes the NEW Deluxe Champion tyre, with its perfected tread design for safer motoring. Now, every Firestone passenger tyre is built with SUP-R-TUF rubber to give you extra mileage on any road at any speed. And you get greater safety, because SUP-R-TUF is tougher and has more resistance to punctures, bruises and break

Firestone *NEW* DELUXE
CHAMPION TYRE

You owe your wife and children

a visit to State Bank of India

As a family man you owe it to your dependants to make a proper will, sort out your affairs legally and correctly.

The State Bank of India acts as executor and trustee for its clients and offers its services for appointment as (1) executor of a will (2) trustee of public, religious, charitable and private trusts (3) custodian trustee of provident and pension funds (4) special trustee of life insurance policies under Married Women's Property Act 1874.

We have expert staff to handle such business and access to the best legal guidance. Leave these affairs in our hands. We will take care of them.

Our Agents at branches will be happy to be of assistance to you.

SPOTLIGHT

ON

METALLURGY

MINISTER OF STEEL & MINES
GOVERNMENT OF INDIA

NEW DELHI
17th October, 1964

ON the occasion of the Second National Metallurgists Day, I send my greetings to our metallurgists and congratulations to those among them who have won recognition by their contribution to metallurgical science. While we do honour to our leading metallurgists today, let us dedicate ourselves to the hard tasks which lie ahead of us in the field of research and development in this very important sphere of activity.

I wish the National Metallurgists Day success.

N. Sanjiva Reddy

MINISTER FOR
FOOD & AGRICULTURE
GOVT. OF INDIA

NEW DELHI
30th October, 1964

I AM happy to know that the Second National Metallurgists' Day will be celebrated at Durgapur this year on the 13th and 14th November. I send my best wishes for the success of the function.

C. Subramaniam

GOVERNMENT OF INDIA
Secretary, Department of Iron & Steel
Ministry of Steel & Mines

NEW DELHI
24th October, 1964

ON the occasion of the Second National Metallurgists Day, I would like to send my warmest greetings to those participating in the celebrations at Durgapur and elsewhere. It was a happy idea last year to start a National Metallurgists Day, and the enthusiasm with which it was celebrated justified the hopes of those who thought that the idea was worth pursuing. The science of metallurgy is destined to play a leading role in the future industrialisation of our country. I personally feel that we should give encouragement to our young metallurgists by recognising their abilities on this day. I wish the organisers and the celebrations this year every success.

N. N. Wanchoo

Symposium on Steel

NOT many years ago, Indian steel was among the cheapest in the world. So much so, Government was in a position to evolve a scheme whereunder the Indian steel producers—who were at that time only in the private sector—indirectly had the privilege of subsidising imports of foreign steel. Almost coincidentally with the setting up of the public sector steel plants, India has progressed to the stage when our steel no longer is, vis-a-vis world markets, economically or competitively priced. The reasons that thus contributed to a gradual but relentless increase in the cost of production of steel in this country have before been the subject matter of studies. What is of moment at the present time is to discover methods whereby we would be in a position to effect reduction in the cost of production of steel. While the prices of basic raw materials and excise duties levied by Government both have a bearing upon the unit cost per ton of steel, we suggest it nevertheless must be borne in mind that ultimately savings are to be obtained only through improvements in productivity. Nor, for that matter, can productivity be considered in isolation since it depends not on the efficiency of labour or the newness of plant and equipment alone. If there is no proper management, there tend to be seepages in efficiency at what should be and normally are vital check-points. Again, it is not as if, with our present stage of development and with steel being a commodity in short supply, we can afford to relax our efforts at finding substitutes for steel. Aluminium, for example, can usefully replace steel in a range of industries.

Thus, the present thinking on the metallurgical industries has to encompass studies from various viewpoints. The Indian Institute of Metals, to which the responsibility has been given of organising the National Metallurgists Day, has chosen this year to focus the spotlight on reducing costs in steel production. In this special supplement, Indian Finance publishes relevant and important data pertaining to the papers which are to be read at this symposium. Secondly, the full text of the presidential address given by Dr D. P. Antia is also reproduced, and this statement is a dissertation upon the role of management in productivity. Thirdly, a brief history of the Indian Institute of Metals, indicating the important role that metallurgists have to play in the development of India, is printed. Finally, we have obtained an article which sets out the uses to which, in road transport, Aluminium can be put.

We trust that as a result of the opportunity given at Durgapur for the free interchange and exchange of ideas amongst the metallurgists of this country, we shall have an increasing growth of technical and applied research on improvement in productivity and savings in the cost of production of the metallurgical industries, in particular, steel.

**UNION CARBIDE INDIA LIMITED
ANNOUNCES**
the formation of a
METALLURGICAL PRODUCTS DEPARTMENT
to handle the
MARKETING OF PRODUCTS AND EQUIPMENT
offered by
UNION CARBIDE INTERNATIONAL COMPANY, U.S.A.

Products and Equipment offered:

- Shielded-Arc Welding Machines, Power Supplies and Consumables (Fluxes, Welding Wires) (HELIARC, SIGMA, PLASMARC, UNIONARC, UNIONMELT)
- Cryogenic Vessels, Dewars, for liquefied gases
- Oxy-Acetylene Shape-Cutting, J-Grooving and Scarfing Machines
- Carbon and Graphite Products—Mould Stock, Cupola Linings, Crucibles, Gouging Electrodes, Fluxing Tubes, Powders
- KARBATE Centrifugal Pumps, Heat Exchangers, and HCL Absorbers.
- STELLITE Rods and Electrodes, Hard-facing Powders, Equipment for Hard-facing
- HAYNES and HASTELLOY Alloys for Abrasion and Corrosion-resistance. Also machined castings.
- Ferro-Alloys (Ferro-Chromes, Ferro-Manganese, Ferro-Silicons, Foundry Alloys, Ferro-Columbium, Calcium Metal, Electrolytic Grades of Chromium and Manganese)

A complete listing of products is available on request. Please write to UNION CARBIDE INDIA LIMITED, INDUSTRIAL PRODUCTS DIVISION, POST BOX 2170, CALCUTTA-1.

(The Terms HELIARC, SIGMA, PLASMARC, UNIONARC, KARBATE, UNIONMELT, NATIONAL, STELLITE, HAYNES, HASTELLOY are registered trade marks of Union Carbide Corporation, U.S.A.)

INTUC 2123

Some Aspects of Industrial Management and Productivity

By DARA P. ANTIA

It is not only a great privilege for me to be re-elected president of The Indian Institute of Metals, but also to deliver this address before such an august company assembled to honour the metallurgists of this country. The part played by metallurgists in the development of India is basic and pivotal and the Minister of Steel and Mines and the secretariat of the ministry deserves everlasting gratitude of all metallurgists of the country in recognising and honouring this profession.

Presidential address of learned bodies very often bring forth in review the personal knowledge of the speaker on matters affecting the field of endeavour he is connected with. Since my work mostly involves management I want to take this opportunity to present some thoughts on factors involved in the management of industries.

The pattern of management in large industries in India has been well defined and organisations are generally understood to be running on sound lines. The remarks I make are neither directed towards such organisations nor towards the personnel employed by them. What I shall attempt to do is to make general observations on the functions of the Manager, his authority and responsibility; the tools of management and control and their effectiveness on the process of decision making and broader policy planning. I have purposely confined my remarks to what I consider important general aspects of management rather than elaborating on any of them since my purpose is to highlight areas which need attention particularly in Indian conditions.

In my address to this body in February 1963, I laid emphasis on the training of metallurgists as future managers of metallurgical industries. I again want to stress that managerial jobs require abilities not involved in mere technical know-how. Selection of managers on the basis of technical knowledge alone demonstrates failure to recognise that the essential characteristics of management lies in getting things done through others; which demands skills in co-ordinating the activities of subordinates. It is necessary, however, to recognise that people with technical background and knowledge can be taught to acquire managerial skills more quickly and easily, given sufficient training and opportunity. In fact for the better management of industries it is but expedient that those in the enterprise with adequate technical knowledge and experience should get the first opportunity for the necessary management training, for undertaking the greater responsibilities of directing the enterprise. The background of technical knowledge and experience must be there for the manager to be

effective and to make correct decisions on a multitude of problems which could be better understood only in the light of the technical experience.

THE MANAGERS' MAIN FUNCTIONS

The first step towards the task of analysing the management function is to breakdown the management job into those functions which distinguish it from the operating tasks of manufacturing, selling, purchasing, accounting etc., which are undertaken to gain the desired objectives. For purposes of present discussions I would like to classify managerial activity around the functions of organising, planning, directing and controlling. It is not always possible to compartmentalise the managerial activities as I have mentioned since the functions overlap. However, this classification is a good starting point for developing the subject.

Planning is the function of selecting objectives and the policies, programmes and procedures for achieving them. Planning naturally means decision making involving, choosing among alternatives; while policies, programmes and procedures encompass the entire operation. Organisation involves the determination and enumeration of activities required to achieve the desired objectives, the grouping of activities in various departments under sub-managers and the delegation of authority to carry them out.

Staffing consists of activities required in manning and more important, keeping manned the positions called for by the organisation structure. It involves defining the requirements with regard to people, including inducements to effective performance; appraising and selecting candidates and training and developing them. Direction involves activities of guiding and supervising subordinates. This means having the subordinates understand fully the objectives and policies of the enterprise as well as the organisation structure, interdepartmental relationship and personalities involved. They must become familiar with their duties and usage of their authority. Above all, however, direction requires the quality of leadership.

Control function includes activities which are designed to compel events to conform to plans. Controls measure and correct the activities of subordinate groups to assure the accomplishment of plans. This means that planning must precede controls and that

plans must be carried out and modified if necessary to realise desired objectives. Control devices or objective counting, show whether plans are working out but compelling events to conform to plans really means locating the persons responsible whose work or results are not in accordance with the plan and taking steps to ensure improved performance. Control of all objectives is thus achieved through control of people.

The above remarks do not say anything about coordination. The manager's most essential function is coordination of activities of individuals towards the accomplishment of group goals. Coordination in most cases is the essence of management and the technique of coordination involves sound organisation structure, personal contact, effective communications, group meetings, expediting devices etc.

It is necessary to distinguish between the functions and techniques of management. The former is what the managers do, while the latter refer to the way these functions are performed. Thus a manager may control some activity through the technique of a budget or organise a department through the technique of a written job description. Another important aspect to note is that a manager in himself does not have all the skills he is directing. It is essential, however, that he knows skill which should be employed in his particular enterprise and be familiar enough to pose discerning questions to his technical advisers. He must also understand the role of each skill employed and the inter-relationship between these skills. It is because of the necessity for familiarity with the pertinent skills that managers are not expected to make important decisions immediately after their appointment but spend considerable time in the study of the purpose, policies as well as its strong and weak points, each of which involves broad acquaintance with technical skills. This is the reason why I mentioned earlier that for managing large industrial enterprises the managers must have technical background.

ORGANISATION

One of the tools of making organisation principles work is the organisation chart. While it would be interesting to chart an organisation by showing flow lines of formal authority, authority is not subject to such measurement. Moreover, all the lines of informal relationships if drawn, would so complicate a chart that it would lose its value as a guide. At the time some-

thing of this nature could be achieved by accompanying organisation charts with statements of authority and duties of each management job. Job descriptions are therefore essential but not many organisations in India take the trouble to describe each job and adhere to such description. However in any dynamic establishment, organisation patterns need to be changed frequently to meet real needs and organisation flexibility has to be established by constant organisation review.

Organisation cannot be designed unless there are basic objectives, not of organisation itself, but of the enterprise as a whole. General goals will determine the basic structure while departmental objectives can decide the general structure of such organisational units such as production, engineering, sales, finance, personnel, public relations etc.

In an organisation structure there are many valid reasons for appointing staff assistants and specialists and building large departments around them. However, there is a danger that the staff specialists will be used to undermine the authority of the managers charged with the administration of the functions on which the staff is intended to advise. The undermining of the managerial authority may extend to subordinate line managers. The top manager may so preoccupy himself with staff people and their work that he may spare very little time for his key line subordinates. He may also tend to assign problems to his staff which should be rightfully assigned to his line managers.

The services of specialists and specialised departments are essential for business efficiency but it should be remembered that these services are designed to facilitate the central activities of the business. The danger of too large a number of functional authority delegation is the breakdown of unity of command. The financial adviser is given power to prescribe accounting procedure and control expenditure. The purchasing officer may be given authority to prescribe how and when all purchases are to be made. The personnel manager may dictate to all supervisors how employees will be classified for pay purposes, fringe benefits, etc. The organisation and methods adviser may want all procedures to be sanctioned by him before being put into practice, while the legal adviser may insist on all contracts of any kind bearing his approval. The public relations manager, the tax adviser, the security officer and all other staff having a chunk of the line authority, the line manager may find himself with too many supervisors in addition to his principal to whom he is supposed to report.

What I have mentioned above applies to many organisations in India in greater or lesser degree. In public sector enterprise where staff specialists are appointed from different government ministries, the loyalties of such staff are essentially to their ministries and not to the organisation to which they are attached. Evaluation of their job performance and their future promotion is dependent essentially on the superiors in the ministries of their origin. In fact they are so rigidly bound by the practices and procedures of their respective departments, that they only nominally report to the top man of the enterprise, their main direction being received from their parent ministries. While there may be some need of general guidance in presentation of main reports the earlier such practices are changed the better it will be for the health of the organisations concerned. One way to accomplish this change would be to permanently sever the connection of such appointees with their parent ministries and appoint them in public sector enterprises on new terms and conditions for them to make fresh career in such appointments. This will promote management practices which are conducive to cooperative and coordinated efforts and give the managers flexibility in trying out methods and measures according to the exigencies of circumstances unhampered by departmental procedures. The staff officers will then be accountable only to their own superiors in the organisation set up.

STAFFING

No organisation of any type can afford to take chances on the random availability of needed managerial skill. In terms of the time spent in the discovery and training of managers, there is little question of the fundamental importance of staffing. The future of any business depends more upon the people in it than upon any single other element.

Tardy recognition of staffing function is evidenced by slowness to understand what a manager does. In India many believe that in industrial concerns what a manager does is indistinguishable from technical skill. Many executives are also slow to realise their personal responsibility for the development of future managers. Few Indian concerns have in their organisation the specific functional duty of training executives. Uncertainty about the proper training methods to use makes many delay and defer a training programme until it is too late to carry through the idea of training in the organisation with any degree of real success.

A proper staffing programme requires a thorough comprehension of the managerial position, a proper method of selection, adequate understanding of problems of executive compensation and knowledge of motivation and incentives necessary for adequate performance of the managerial respon-

sibility. Each of these factors needs a rather careful study by industrial enterprises in both the public and private sectors in this country. Many good managers are frustrated because compensation is inadequate or job challenge too poor. Conditions of employment in India make it difficult for a person to change his job frequently without loss of monetary benefits and many a time undue advantage is taken of this situation in keeping a good man pinned to an indifferent job.

The problem of staffing involves many other aspects besides proper selection, compensation and training. The most important is the appraisal of the man in his job and still more important is post-appraisal counselling. The factors to be appraised and who should appraise and counsel have to be very carefully thought out. A good method is to have a team of three appraisers with the person to whom the man reports directly as the chairman of the team, the two other being senior men who functionally come in repeated contact with the work of the person concerned. The appraisal itself could be in two sections, one section dealing with job performance over the past year while the other section could deal with the managerial attributes such as leadership, drive, breadth of interest, analytical ability, ability to communicate, delegate, etc. Having appraised the man and found his potential strength and weakness the next step is to counsel the man in areas where he should improve and the ways in which such improvement could be effected. This is a delicate task and requires a great deal of patience, tact, understanding and ability on the part of the superior, so that the person counselled feels that the advice has been worthwhile and helpful to him. Failure to conduct the post-appraisal counselling in a proper manner may lead to morale problems as well as strained relationships.

Appraisal programmes are good guides for training programmes as they highlight the areas where training should be given to the middle and front line managers to mould them as future top executives.

PLANNING

Planning is a function of every manager at every stage in an enterprise. Although the character and breadth of planning varies with the manager's authority, it is virtually impossible to achieve organisation goals without planning. Plans are selected courses along which the manager desires to coordinate group action, and could take many forms such as objectives, policies, procedures, rules, budgets, programmes or strategies.

Objectives are the end point of planning and represent the end towards which the management activities of organising, staffing, directing and controlling are aimed. The overall organisation as well as each department may have

the objectives which though consistent could be entirely different.

Procedures are also plans, in as much as they involve the selection of a course of action that applies to future activity. Such procedures become more numerous and exacting at lower levels, largely because of the necessity of closer control and reduced need for discretion in action. Well run managements try to organise manuals of procedures which may be different for different levels of organisation. Such 'standard practice' manuals need constant revision and must be kept up-to-date. Rules are frequently confused with procedures although the two are entirely different. A rule requires specific and definite action to be taken with respect to a situation. A rule may be related to or be a part of a procedure but differs from procedure in that it specifies no time sequence regarding particular acts. A rule represents a prior decision of the management about action to be taken in a specified situation. For example the procedure regarding purchase of spare parts may have a rule that all parts costing over a certain sum of money must have the prior sanction of the head of the maintenance department.

A budget is essentially a plan expressed in financial terms or in other units such as manhours, units of products manufactured, machine hours etc. Budgets are usually control devices and are fundamental planning instruments in almost all organisations. By being forced to establish for a period in advance a compilation of expected cash receipts and expenditures, an organisation is forced to plan. Control cannot be exercised without a budget and a budget cannot be made without a plan. Programmes on the other hand are a complex of policies and procedures supported by the necessary capital and operating budgets and designed to put into effect major course of actions. Thus an expansion programme of a steel plant is composed of a large number of detailed plans, procedures, budgets, timings etc. Such a major programme in itself is a complex structure of various other programmes. It is this interdependence of plans and programmes which causes so much difficulty and complexity in planning which is as effective as the weakest link. Coordinative and hence effective planning requires extraordinary and exacting managerial skills. I am afraid that in many quarters there is not enough appreciation of the exacting nature of the job of top management, be it in any sector of endeavour.

GOVERNMENTAL CONTROLS

In today's conditions in India the most important aspect of business planning is participation by Governmental authorities both Central and State in all areas of decision making. Such participation takes many forms such as manufacturing licences, control on financing, foreign exchange control, import control, price control,

labour regulations etc. There is no country in the world today without some type of control on business planning, and perhaps India needs planning and controls more in order to make rapid strides in industrialisation. What needs complete overhauling is perhaps the machinery of exercising such controls and to instil in the people who are entrusted with control functions a sense of urgency and public service so that the time taken to hand down decisions is the minimum. Considerable amount of executive time and talent of good managers is expended today both in public and private sectors of industry, in finding their way through a maze of control procedures instead of devoting such time to high productivity and sound management practices. However, there is a growing awareness among the higher government authorities both as to the need of reducing and streamlining controls as well as reducing delays incident upon such control measures, and action has been initiated to this end.

DECISION MAKING

Fundamentally the core of planning is decision making or selection from among alternatives. The ability to develop alternatives is often as important as the decision itself. Ingenuity, investigation and overall grasp of problems are required to make sure that the best alternatives are considered before a course of action is selected. In several cases decisions have to be made in areas of uncertainties such as the degree of governmental control and interference and it is here that the experience and judgement of the decision maker is important provided that experience is carefully analysed rather than blindly followed.

Once alternatives are reduced to those regarded as most suitable decision making requires evaluation of these alternatives and selection of one that is considered most suitable for meeting the objectives of the enterprise. This is the point of final decision although a large number of other decisions have been taken in the process of planning. In the process of evaluation both tangible and intangible factors have to be taken into account and compared. In many cases, such as the decision to make investment in additional equipment, the standard applicable may be return on investment. In determining the production plan of a rolling mill, however, the loading of the mill and utilisation of manpower may be the strategic standard against which to measure the most desirable scheduling programmes.

MARGINAL ANALYSIS

In the final selection from alternatives several techniques could be used. The technique of marginal analysis uses the approach of additional quantities or finding the results of incremental changes. Thus the goal of maximum profits is reached when the additional revenues and the additional costs are equal. Beyond this point

any additional costs incurred would not be recovered through additional revenues and below this point the spread between marginal costs and marginal revenues would reduce profit. This technique can also be used to find the optimum output of a piece of equipment. Thus in a rolling mill one could vary inputs against outputs until the additional input equals the output. This would then be the point of maximum efficiency for the rolling mill. Marginal approach thus accentuates the variable in the situation and de-emphasises averages and constants.

OPERATIONS ANALYSIS

Another very useful technique for selection among alternatives is the method and approaches of Operation Research or Operations Analysis. This technique is sometimes referred to as "quantitative common sense" and is the application of scientific methods to the study of alternatives in a problem situation, with a view to providing a quantitative basis for arriving at an optimal solution in terms of goals sought. The most successful application of operations research to business problems is linear programming. This is a technique of determining the optimum combination of limited resources to obtain a desired goal. It is based upon the assumption that a linear or straight line relationship exists between variable and that the limit of variables can be well determined. For example in a steel rolling mill the variables may be units of output per mill in a given time, direct labour or material costs per unit of output, the number of passes to run out a given section and similar factors. The technique is specially useful when input data can be quantified and objectives are subject to definite measurements, such as in production planning, shipping rates and routes and utilisation of production and warehouse facilities to achieve lowest overall costs. The area of operations research is new and complex but its technique along with advances in mathematics and computation has a sharp impact on the quality of managerial decisions.

DIRECTION

Direction is the function of guiding, informing and overseeing subordinates as well as taking action to improve their performance. Guiding implies a great deal of the teaching function and a manager is more often a teacher to his subordinates than he realises. He has to assign, explain, describe, illustrate and in various other ways develop a team of subordinates among whom he delegates a part of his authority and responsibility.

It is necessary that the superior manager must have mutual understanding of policies, procedures and programmes with his subordinates to prevent duplication of work and uncoordinated activities.

It must be realised that it is extremely difficult to present policies and programmes in unambiguous terms and still more difficult for subordinates to have a common understanding of them by their own efforts. In the ordinary process of carrying out policies and following procedures, subordinates come across ambiguities, contradictions and costly practices, all of which will raise questions regarding the need for a change. In order to prevent frustration, the subordinate must also be taught the appropriate procedures for changing policies or programmes at the same time stressing the need for him to conform to procedures and not cut corners or reinterpret policies, till modifications are agreed upon by all departments concerned.

The problem of guidance and supervision really constitutes problem in communication both oral and written. While I do not want to enlarge on this point here, I must comment on the fact that the one single factor which causes more frustration, problems and misunderstanding, is the very poor progress in quick communication services in India particularly for enterprises under one overall management which are scattered over various distances.

Direction embraces many aspects in which human relationship and leadership plays a very significant role. The manager is obliged to act both with integrity and efficiency in achieving coordinated teamwork among his subordinates, with the main purpose of accomplishing the objectives of the enterprise. If he is lower in the organisation structure than a general officer, he must seek to accomplish his sectional or departmental objectives so as to contribute his full share to the total purpose.

CONTROLS

The control functions of managers embrace the measurement and correction of the performance of the different units of the organisation to ensure the accomplishment of the objectives for which plans have been made. Control thus implies the existence of objectives and plans and is the function of all managers at all levels, and not only of the top managers as is very often implied.

Since the manager cannot do anything about the past, the best control system is one which reports deviations from plans most expeditiously so that he can take suitable action to avoid continuous failures. Accounting gives the information about past transactions and is therefore weak in supplying control information. Moreover, such accounting data may reach the manager several weeks or sometimes months after the event has taken place. It does a manager no good to know in October that operations in August made losses. For this reason accounting data, apart from being provided quickly must be supplemented with accounting estimate of the present and future.

CONTROL THROUGH BUDGETS

Among the various control devices the budget is one of the most widely used devices for effecting managerial control. However, in many Indian enterprises this control device is only tardily or not effectively utilised. As stated earlier, budget is the formulation of plans for a given period in the future in specific numerical terms. A budget in order to be useful must reflect the organisational pattern by breaking down its elements into organisational components. Thus the budget furnishes a way of correlated planning and a means whereby authority can be delegated without loss of control.

There are several types of budgets such as expense and revenue budget; material and product budget; manpower budget; capital expenditure budget; cash flow budget etc. Although these various types of budgets greatly assist planning and control, there is a danger in overbudgeting by making too detailed a budget for minor expenses leaving the manager no scope for amending or flexibility. Budgets can also be misused and big deficiencies in badly following procedures. If an expenditure was allowed in previous year it may continue to be allowed in succeeding years without being examined. Some managers purposely overstate their requests knowing that there may be some reduction before final approval. Unless, therefore, budgetmaking is accompanied by constant re-examination of standards, and the bases of planning, a budget can become an umbrella to hide inefficient management.

If budgetary controls are to work at all it should be remembered that they are a tool of management and not something to replace management. The only persons who can administer budgets are the managers responsible for the programmed budget and not the treasurers or the financial advisers who may assist the manager in the preparation and use of these budgets. At the same time it is necessary that top management takes real interest not only in making and reviewing the final budget but also in administering budget. A wide participation of all levels of management is necessary in making the budget and top management will better succeed in developing loyal acceptance of the plan if reasons are given when ever requests from subordinates are not honoured.

One of the keys to making budgeting work in practice is to develop and make available standards by which the manager's work can be translated into the need for operating expenses, capital expenditure, material and spares requirements, etc. Many budgets fail because they are made without such standards. With such conventional standards developed, the superior manager can have the information on which to approve or reject a request. He does not have to depend upon arbitrary

cuts which provide subordinates no add enough padding for their requests.

Another important budget control is through property budgets in which managers are made to anticipate their requirements on property items required during the next year for improvement of processes and reduction of costs. Each major property item or group of items could be justified on the basis of improved performance or return on investment or replacement due to age or obsolescence. Expenditure then can be approved for items which give the best return or improved overall performance or qualitative improvement. This approach can make limited funds available for new property to be utilised to the best advantage.

Control through budgets gives a tool to management for overall control of operations. For this purpose summary reports embodying sales volumes, costs, profits, utilisation of funds and return on investment are necessary. However, such financial reports are of limited use unless accompanied by reports to show how actual operations compare to plans, and most important the reasons for deviations. A team plan or budget, for example, would be of no use only showing higher cost unless the reasons for such as poor quality, low material or high scrap losses due to machine defect or inefficient labour performance are brought out. Corrective action can then be planned more effectively, provided of course the reports are promptly issued.

PERT

One technique of planning and control which is gaining considerable support is what is known as Programme Evaluation and Review Technique or PERT. This technique stresses the value of time in controlling programmes and is applicable in a large number of situations. Its special characteristic is that all the events and activities are visualised and put down in a network. An event is a specific programme accomplishment at a particular instant of time, while an activity represents time and resources necessary to progress from one event to another. Both events and activities are defined with sufficient precision so that there is no difficulty in checking actual accomplishment as the programme proceeds. Further, the sequence of events and activities in the network must be under a logical set of rules which allow the determination of critical and sub-critical paths. The most important rule is that no successor event can be considered completed until all its predecessor events are completed. Depending upon the size and complexity of the network, computers can be used to determine the critical path or the critical activity. Efforts of the management are then concentrated on deviation from the critical path and to see that all critical activities are completed according to the time schedule in order to meet an overall programme date. Of

course time estimates are the essence of the PERT net work and in this area probability function could be used to take an average time by estimating the most optimistic, most pessimistic and most likely time schedules for important events. PERT techniques have been very successfully used in major construction programmes where "Massive Engineering" programmes like erection of new steel plants are concerned. However, application of this technique to production programmes has also been successful.

PRODUCTIVITY

Under present day conditions in India where costs are rising but price increases are becoming difficult to obtain either because of competition or governmental price control, many organisations are taking strong measures to reduce costs, eliminate waste and increase productivity. In fact we hear almost everyone exhorting the industrialists and managers to increase productivity. Productive efficiency is a measure of the efficiency with which resources (input) are used to produce and distribute services (output). The most important of these resources are men and management; plant, equipment, products and services to be used in production and capi-

tal invested. The efficiency with which resources are utilised however depends upon the management of men. In India the usual method applied to achieve high productivity and low cost is for the top management to put pressure on their organisation at every point. Jobs are timed and standards set in departments where timing and standards did not exist previously. Budgets are made more detailed, tighter and controlled more vigorously. Economies are looked for and enforced all throughout the organisation.

These types of pressures in an industrial organisation are nothing new. The consequences of the steps taken by the management have, however, been the subject of serious study by the American Institute of Social Research in recent years and their findings on short range and long range consequences of these steps are worth serious consideration in India.

The efforts of management in reducing costs and enforcing high productivity are usually not limited to a short time period, nor are they limited in scale. They extend over a long time and deal with every part of the organisation where it is believed that action can be taken. There is likely to be a reduction in personnel, parti-

cularly in staff departments. Standards are introduced or extended to more jobs and increased pressure is applied to get performance up to standard. Budgets are tightened, more detailed and scrupulously controlled. Maintenance and supply activity is often curtailed and expenditure on activities such as research and development, advertising, public relations, etc., may be reduced. These changes in management behaviour almost immediately improve productivity and achieve cost reduction where fairly good management and organisations exist, and even continues for some length of time. But several months after this cost reduction programme starts, the lower level of management and workers develop hostile reactions towards the cost reduction programme and towards higher levels of management. After twelve to eighteen months of continued pressure for high productivity, deterioration is apparent in such aspects as loyalties, attitudes, motivation, skills, communication etc. This is manifested in decreased turnover, increased absenteeism, poorer labour relations, deterioration in quality and service, etc.

If management pays as much attention in the beginning to scrap reduction as it pays to increased productivity, wastage will also de-

crease and be as satisfactory as productivity. Otherwise the setting in of the adverse reactions causes scrap to go up steeply along with decrease in productivity.

The increase in labour difficulties and in turnover among the supervisory class of employees, coupled with higher scrap loss and poor quality makes top management start to examine what is happening and why. Some corrective action is taken which may or may not improve the situation.

Further deterioration in the situation compels the top management to take drastic corrective action and reduce the pressure for higher productivity and lower cost. This action may be precipitated by serious quality problems or labour difficulties. If a plant or division of an organisation so involved, the top management changes the plant or division manager and the new manager is selected for his skill in handling people and labour. His mandate is to reduce scrap, improve quality and change the climate of deteriorating labour relations and decreasing morale of the supervisory staff. Pressure for high productivity and decreased cost is discontinued as priority is given to dealing with more serious problems.

The new manager focuses his attention on improvement in

Indian Finance Supplement: Spotlight On Metallurgy

Indian Finance Supplement: Spotlight On Metallurgy

human relations and there is likely to be some success in his efforts. But when hostile attitudes and distrust of management are widespread, it takes years even for a competent manager to bring about substantial changes. In the meanwhile the ideals of high productivity are forgotten, and at best the organisation settles down to average performance.

While the above may be a typical picture, in actual practice the events may vary considerably and many factors may be obscured due to innovations, automation or changes introduced due to technological improvements. However, the end results more or less show a sorry picture.

Since the usual approaches to cost reduction and high productivity arouse negative attitudes, other ways and means of achieving positive results have to be found. This does not mean that all the present approaches are useless and must be scrapped. It only highlights the necessity for a different managerial approach, which uses

these procedures to create co-operative rather than hostile motivations both among the supervisory and worker levels.

ELEMENTS OF HIGH PRODUCTIVE EFFICIENCY

It is well known that those managers and managements who are able to show superior productivity and cost performance use techniques and methods which are different from those managers who are less successful. Studies have been and are being made of such principles of effective management, some of which I shall discuss further. The key concept is how to organise human activity so as to achieve the best co-ordinated, co-operative effort to accomplish organisational goals. Such effective organisation takes considerable time and a great deal of patience to build.

High productivity is not obtained by putting direct pressure on subordinates but by building co-operative organisations with high motivation and performance goals, efficient communications and good

team work. The methods employed must be such that non-economic motives reinforce the economic motives rather than cause conflicting motivational forces. An effective organisation must provide conditions which stimulate each member to make full use of his abilities and to grow to his full potential and which give him both a sense of achievement and economic rewards in the form of an economic and secure income. These conditions must prevail at all levels of organisation.

Co-operative and productive motivation is further obtained by supportive relationships. The leadership of the organisation must be such as to ensure that in his relationship with other employees each member will, in the light of his background, values and expectations, view the relationships as supportive ones, that is as tending to build his sense of personal worth and importance.

The technique of generating co-operative motivation and linking such motivations to the goals of

the organisation is through informal face to face work groups. The organisation structure should, therefore, place each member in one or more groups which are stable in membership and function to elicit group loyalty. Such groups must encourage effective work relationship and have links with other groups through multiple or overlapping membership. A department head may act as a member of the work group with other department heads; as a member of a work group with his own immediate staff and subordinates and also as a member of several co-ordinating committees, thus serving a link function which enables better co-ordination and communication throughout the enterprise.

The setting of goals and priorities and the assessment of accomplishment then becomes a continuous activity. These objectives and accomplishments need to be interpreted in terms of the resources and functions of each lower level group. Individual and group goals can then be set in a high but realistic manner as each participant is involved in the decisions that affect him.

The successful application of these principles depends upon helping the supervisors and managers to develop competence in leadership and in membership rolls in groups. Several months are required for this to be done well enough for subordinates to experience a sufficient number of changes in many circumstances, to be persuaded that management is really behaving more supportively; displaying greater confidence and trust; communicating more adequately; involving subordinates more fully in decisions about their work and so forth. Successful and continuous improvement in attitudes, communication, confidence and trust results in increasing productivity and quality and reduction in costs and scrap loss. This trend continues and does not taper off as is the case when crash programmes are utilised for high productivity and cost reductions. Bringing about automation, technological changes, process changes, higher standards e.g. become easier, more rapid and more successful under such a climate leading to still higher productivity. However, to obtain full benefits, management must apply these principles to all of the operating procedures and practices of the plant or organisation. Partial application is far less effective. Also it must again be emphasised that to build up an organisation on the lines described and to maintain it at that level requires good leaders as managers. Employees respond best to managers who plan soundly, organise clearly, select and train their subordinates well, know how to direct subordinates effectively and make sure that sound plans are accomplished. High productive efficiency is thus a measure of management practices because it is only good managers and supervisors who could utilise the plant, equipment, products, services and capital resources to their best productive efficiency.

**Tensile's
pre-stressed
concrete
wire**

has all the characteristics
of High Carbon
Steel Wire

IS:1785
TENSILE becomes
the first to bear
this sign for
their product

For the special use you have in mind, you can depend on TENSILE's p.c. wire. Range from 2.5 mm to 8 mm. Has all characteristics such as high tensile strength, sufficient elongation, bondability to concrete, high proof stress and very small relaxation loss. Absolutely dependable in quality, it is made to IS, BS, ASTM & JIS Specifications. 4 mm, 5 mm, and 7 mm plain and/or indented wires can be supplied to your requirements.

Packing according to your requirements...bare, or in paper or jute.

Immediate supplies available. No import licence needed. When ordering, please give all details.

Cost Reduction in Steel Industry

By INDARJIT SINGH

General Manager, Hindustan Steel In Bhilai

"You are partners of an enormous enterprise engaged in changing the face of India"

— Jawaharlal Nehru

while inaugurating the Section Mill of Durgapur Steel Plant on March 29, 1961

The green carpet was rolled back a little to make way for an advanced industrial society in the heart of rural West Bengal.

Side by side with its gigantic steel plant Hindustan Steel chose to build its Alloy Steels project at Durgapur. The twin plants are like a magnet to enterprises large and small.

With the burgeoning industries, a growing population, a network of developed roadways, increasing power supply and modern civic amenities in the steel townships, Durgapur today bears an imprint of India tomorrow.

Progressive expansion of Hindustan Steel's plants will further widen the vision of prosperity. One has to be in Durgapur to discover the miracle of growth, to see how industry begets industry, and to feel how employment and well-being follow in its wake. Witness at Durgapur the emergence of a new Bengal.

A NEW BENGAL AT DURGAPUR

HINDUSTAN STEEL

Backbone of Industry

Regd. Office: Ranchi

JWTHS 1884 A/Sales

India is fortunately endowed with raw materials and other conditions necessary to produce steel at competitive prices. But curiously enough cost of steel production in India has been increasing in the past few years and it has almost come to a level where it can no longer be considered as competitive. This naturally has an undesirable effect on the potentiality of steel as a foreign exchange earner. Costs cannot be allowed to drift this way. Concious efforts are necessary to stabilise the production cost and making attempts to reduce it if possible. A scheme for reducing production costs in steel industries assumes special importance.

A pre-requisite to any attempt at cost reduction is the knowledge of how costs are built up. An analysis carried out by us in respect of steel ingots in Bhilai is shown below:

Composition of the cost of a tonne of ingot steel at Bhilai Steel Plant.

S. No.	Cost Element	Percentage of the Total
1.	Raw materials other than coal	16.28
2.	Coal	11.14
3.	Labour	13.23
4.	Repairs and Maintenance including Operating Stores and miscellaneous expenditure	20.48
5.	Services	4.13
6.	Overheads	5.34
7.	Depreciation	12.85
8.	Excise duty	16.50
	Total	100.00

It will be seen from the analysis that depreciation and overheads account for as much as 21.80% of the cost of steel. This can, however, be expected of a capital intensive industry like steel. Reduction on this score is possible only through quantitative increase in production.

Increasing the volume of production cannot be achieved over-night. A co-ordinated programme of cost reduction, as mentioned earlier must be drawn up. People concerned must be exposed to the ideas of cost reduction and should be motivated to taking necessary action.

The other items which account for sizeable proportions of the cost of steel are: raw materials, fuel and repair and maintenance. Reduction in the cost of fuel and raw materials can be effected only through technological improvements and calculated measures for reducing waste. Effecting economy in maintenance cost is still more difficult. Several factors such as inventory of spares, services, machine and men utilisation, have a large part to play in maintenance costs. Sophisticated techniques like net-work analysis have to be utilised if one has to make a dent on the subject. Any cost reduction programme in the present circumstances, there-

fore, has to be aimed at increasing the volume of production and improving norms and standards on a continuous basis. In Bhilai we have concentrated on both and in the latter case on a few selected

items of major costs keeping the rest, as far as possible constant, until we could have time to attend to them. The following table shows the increase in production achieved during 1963-64 as compared to 1962-63:

Particulars	Rated Capacity	UNIT—TONNES		Percentage Fulfilment to rated Capacity	
		1962-63	1963-64	1962-63	1963-64
1. Blast Furnace Coke	1,039,000	1,088,515	1,105,496	99.0	100.6
2. Sinter	1,000,000	683,547	931,135	69.4	93.1
3. Pig Iron	1,110,000	1,182,122	1,295,665	106.5	116.7
4. Ingot Steel	1,030,000	1,059,808	1,142,742	106.0	114.3
5. Ingot Steel Rolled	1,000,000	1,010,491	1,121,121	101.0	112.1
6. Billets	427,000	473,153	522,709	110.8	122.4
7. Rail and Structural	365,000	335,874	385,956	92.0	105.7
8. Merchant Products	255,000	225,215	282,497	88.3	110.8

The problem of increasing production in an integrated steel plant can be achieved only through a multi-pronged attack on different fronts. Improvement of production at one point will not yield the desired results unless matching improvements are not planned all along the line. The figures given above show marked improvement at every point. The technical, technological and managerial efforts which were needed to bring about this result cannot be described in the span of a short article.

We can mention, however, a few factors which have contributed to the increase in production.

- Preparation of an annual plan and breaking it on a rational basis into monthly and weekly plans.
- Compilation of task lists calculated to achieve the targets laid in the plan.

- Continuous review and appraisal of tasks as planned and as executed and making necessary adjustments.

- Conscious planning of maintenance through the application of modern techniques such as network analysis, Line of Balance etc., with a view to reducing maintenance time and thus create additional production potential.

- Intensive industrial engineering studies with a view to improving existing norms, and, last but not the least,

- the organisation of periodic meetings of line authorities with a view to making them cost conscious, exposing them to the various ideas of cost reduction and motivating them to taking timely action for reducing costs in actual practice.

(1) Blast Furnace Production:

The coefficient of utilisation of the useful volume which is an index of the performance of the Blast Furnace has improved to a figure of 0.75 in the latter half of 1963 against the figure of 0.637 assumed in the Project Report. The Blast Furnace has established a record daily production of 4,297 tonnes of hot metal on the 18th October 1963 which was 240% of the rated capacity. The Coke rate per ton of pig iron showed a marked downward trend. It was the lowest in January 1964 being 767 Kgms dry as against the projected figure of 917 Kgms. All these have contributed to the decrease in cost of ingot steel and these have been achieved through improvements and innovations in every aspect of iron making starting from ore preparation to the subtle adjustments of furnace regime.

(2) Production in the Steel Melting Shop:

The output of the Steel Melting Shop depends to a great extent on the furnace availability. We were able to achieve marked improvement in this through reduction in repair time. Techniques like network analysis, enables us to find out avenues for reduction of time on maintenance and repairs and suggest measures for the intensified use of men and machinery. Attention was also paid to increasing the efficiency of technological processes and labour productivity through intensified training and improvement of skills. All these have helped us in reducing the time on cold repairs from 18 to 20 days to as low as 7 to 8 days.

'Gram: Coke Plant

- COKE BENZENE, TOLUENE and TOLUOL
- BENZOL (MOTOR, REFINED and INDUSTRIAL GRADE II)
- LIGHT and HEAVY SOLVENT NAPHTHA
- XYLENE

TAR DISTILLATION PLANT PRODUCTS

- PROCESSED and ROAD TAR (RT 2 & RT 3)
- NAPHTHALENE and NAPHTHALENE OIL
- OIL (CARBOLIC ANTHRACENE, WASH and TIMBER PICKLING)
- SODIUM PHENOLATE
- PITCH and RESIN

(3) Soaking Pit Problem:

Another difficult problem which was confronting us was the production at the Blooming Mill which could not keep pace with the production of the Steel Melting Shop. Consequently, the stock of cold ingots was building. The disposal of the stock was posing a big problem as charging of greater percentage of cold ingots would further aggravate the position in the Blooming Mill. This had an inhibiting influence on the production in the Steel Melting Shop.

A detailed industrial engineering study of the problem revealed that considerable improvement could be effected by: (a) better sequencing of charging and discharging of ingots in the Soaking Pits, (b) reduction of track time, and (c) minimising of bunching of heats at the Steel Melting Shop. Round-the-clock studies were undertaken at all concerned points and the following steps were taken to achieve the objectives mentioned above:

(a) A detailed programme of operations in the Soaking

Pit was prepared taking cognisance of the Mill availability, crane availability, etc.

(b) A passport system was introduced for movement of heats from Steel Melting Shop to the Soaking Pits fixing time limits for every stage of the movement, and

(c) On the basis of detailed observations of a number of heats and the analysis of the causes for bunching, instructions were issued as to how bunching could be minimised. Certain other problems which cropped up during this drill, such as the supply of test analysis of Blast Furnace metal in time to the Steel Melting Shop were also solved.

The result was that we were able to achieve nearly 11% more capacity than last year with record rolling and despatch of finished products. The production in some months exceeded 3000 tonnes of ingots a day as against the rated

capacity of 3333 tonnes a day with record rolling at 4658 tonnes in a day which is 139.7% of rated capacity.

(4) Record Production in Steel Melting Shop:

By similar methods, it was possible to obtain record production in the Steel Melting Shop during 1963-64 and we had the proud distinction of producing 6000 tonnes of ingot Steel which is 219% of rated capacity on one day.

(5) A Notable Instance of Maintenance Programme:

Another notable instance about the application of the network analysis was the repair of the Mixer in the Steel Melting Shop. The initial estimate of time showed that the refining work in the Mixer would take 41 days. A revised programme made in consultation with the Soviet Experts showed that the Mixer repair would take a minimum of 31 days. It was not possible at that time to spare the Mixer for repairs for such a long

time, if the production levels of the Blast Furnace and the Steel Melting Shop were to be maintained. The maximum time that we could spare the Mixer was 15 days.

We, therefore, took recourse of network analysis which pinpointed avenues for 'buying' time and thereby reduce the total time for repairs to 15 days.

The entire staff, who were to work on it, were activated, the job was placed under single control to whom every one was responsible; for high level co-ordination, three senior executives met for half an hour in the morning; and then enthusiasm, built up by the realisation that it could be mathematically done, was such that the job was finished in 11 days 22 hours and 30 minutes at a cost 25% less than the old cost, half of which was shared, in gratitude for the extraordinary planning and hard work put in by those employed on it. Everything worked even better than pre-determined targets. This shows the value of these sophisticated techniques.

(6) Stepping up Production of Ingot Moulds:

Production in the Steel Melting Shop depends to a great extent on the availability of ingot moulds and bottom plates. The Foundry could not produce the components at the rate required by the Steel Melting Shop. It was feared that this would have its effects on the quantity and quality of steel production.

A detailed industrial engineering study of the work in the Foundry was undertaken and by sequencing of items of work and synchronisation of the jobs to be done by different sections, it was found that without any additional investment on men or machines, the Foundry could produce 9 ingot moulds and 6 bottom plates a day against six ingot moulds and 4 bottom plates that were being produced. The proposal was discussed in a meeting attended by all concerned. Officers were motivated towards bettering their job and reducing delays. Suitable reporting systems were instituted. These had a significant effect on the production of the Foundry. The production has picked up and it is expected that the objective set forth, namely, 9 ingot moulds and 6 bottom plates a day will be attained soon.

I need not go further. Without being too modest I say that some of our achievements in the field of production improvements and reduction of maintenance time, have been quite spectacular. This is reflected in the financial accounts for the year 1963-64, which we closed with a net profit of Rs. 16.3 million as against a loss of Rs. 44.8 million at the end of 1962-63 in spite of the increase in the cost of raw materials and services to the extent of Rs. 12.15 millions. Altogether there was a total improvement of nearly Rs. 80 million in 1963-64 as compared to 1962-63, i.e., about Rs. 70.00 per tonne of steel.

This only shows how a systematic scheme of cost reduction envisaging the use of modern management aids can bring about good results within limits.

Economic Productivity in Iron & Steel-making

By Dr. B. R. NIJHAWAN, Ph.D., F.I.M., F.N.I.,

Director, National Metallurgical Laboratory, Jamshedpur.

General:

The subject of economic productivity in iron and steel-making apart from being intrinsically complex invokes different thoughts and viewpoints in various circles engaged directly or indirectly in feeding the sinews of an Iron and Steel integrated Complex and indeed in operating it in the background of one important aim and slogan of exceeding the "rated production capacity". One very often hears of "rated production capacity" being exceeded in different steel plants and by itself, it is a commendable achievement indeed by our steel plant operators. However, the other parameters closely linked with attaining and exceeding "rated production capacity" are hardly or as widely discernible as should be the case even though these might figure somewhat obliquely or unobtrusively in the executive folders and files. These parameters cover the production costs, yield figures, plant maintenance and life, cost of spares and replacements, and last but not the least the "quality" criteria of the output and its consumer acceptability.

In the absence of the closest possible co-ordinated study of these parameters in relation to "rated production capacity", any discussion of the latter strictly speaking would be completely out of the context. Another important feature which does not really come to the surface as much as it should, is the "driving" rate of the plant within optimum limits, without necessarily and aimlessly aiming to increase the production beyond rated capacity figures laid down but essentially from the standpoint of ensuring effective "preventive maintenance" within the range of available spares and replacements etc., most of which of necessity, have to be imported today.

Any empirical achievement of higher production may well nigh be at the expense of the steel plant equipment itself and its highly capitalized structure. To illustrate the point, one could drive the iron blast furnace real hard and at any cost, employing whatever unprepared or unsized raw-materials burden including the fuel available and attain high production rates indeed whilst at the same time, achieving a remarkable rate of "tyvere burning" also, electrolytic copper for which is exclusively imported and which of-course, does not show itself so obviously in the upward production curves in the executive's office. In any case, when a steel plant is set up with a well set rated capacity, it may well be to attain the latter with ease whilst setting one's heart and continuous endeavour to lower the production costs, attain higher yield figures, lower plant maintenance and spare replacement costs, and at the same time achieve high quality of output in relation to rigid physical and metallurgical specifications and related criteria; in essence, it would be the latter parameters which would determine the profitability of steel plant's operations. And of-course, all talk of economic productivity unlinked with profitability even whilst not taking into account the depreciation of a new and heavily capital intensive steel plant, may rightly be regarded as loose.

At the same time, there is no all pervading yardstick to measure economic productivity since various base line criteria to do so in different Steel Plants would materially differ. To illustrate the point, one might state that a Steel Plant such as the Durgapur Steel Complex, the venue of this Symposium, should have different parameter's base in view of their basically not owning their own "captive" mines, such as for example, for their iron ore supplies.

One does not really have to elaborate on the handicaps of not owning the "captive" mines for the "basic" raw materials for iron and steel-making or refer to the advantages of possessing them with full and effective managerial, technical and operational controls, shown in practice in despatching well regulated and quality controlled raw-materials supplies and feed to the iron blast furnace and steel-making furnaces. The author is aware of the times, the Durgapur blast furnaces had to be fed with an iron ore containing no less than 18% alumina simply because there was nothing else to feed the blast furnaces with—such a situation is not likely to arise in case of a "captive" iron ore mine whose manager is as much a "captive" of the Steel Plant, as the "captive" quality and quantity of his iron ore despatches. Viewed in this and related context, it is necessary to consider and judge a steel plant's productivity and its economics on its intrinsic base "parameters" rather than define and judge with an open mind its performance on any "universally applicable yardstick" despite the best of intentions of doing so.

Specific conditions and basis of economic productivity:

With this general background, one may now consider various factors that influence the cost of production in an iron and steel plant. Whilst, in a paper of this size, it

would indeed be presumptuous to take on the assessment of economic productivity of all the constituent departments of a Complex integrated steel plant producing diverse ranges of finished products, it may well be necessary to study a specific product, such as iron production somewhat more at length. And, of-course, in an integrated steel plant itself, certain variables, operational factors and maintenance costs would be common for its constituent departments. In the case of iron production, economic productivity would be determined on the basis of the following factors which have to be closely related to Indian conditions of iron smelting.

- Cost of basic raw-materials covering their run-of-mine price structure, transport and processing including sizing, beneficiation, agglomeration, sintering etc.
- Cost of smelting operations covering, ore, fuel and flux rates, norms of consumption of different raw-materials, slag volume etc.
- Cost structure of hot metal yield, pig casting, taking into account the "off grade" iron melts.
- Cost of auxiliaries, such as of gas cleaning, power, water, labour, supervision and overheads.
- On the credit side would be included credit for the by-products such as the blast furnace gas, slag etc., which will be debited to the works cost of the pig iron smelted, either for direct sale in the case of foundry iron or basic iron for refining into steel.

Factors covering metallic yield figures and daily output, efficiency of metallurgical operations based on slag analyses and their metallurgical characteristics, such as its desulphurising potential, viscosity etc., the ratio of indirect to direct reduction as shown by the blast furnace gas analyses etc would largely determine the parameters governing economic productivity of pig iron in a steel plant. If not directly included on the credit side, but somewhat obliquely, the use of by-products from other departments for iron smelting, would improve the overall economics of iron production, such as the capacity to use mill-scale, coke breeze, flue dust, raw materials' fines etc.

Further on the debit side, would loom factors not precisely metallurgical, such as mechanical breakdowns and maintenance requirements requiring furnace "banking"

and consequent loss of production, rate of tyvere burning, metal or slag break-out and so on. Whilst it is agreed that these factors can hardly be regarded as entirely predictable, nevertheless, sound blast furnace practice and optimum "preventive maintenance" in preference to "breakdown maintenance" can go a long way in minimising their damaging effects on economic productivity.

On the subject of the effects of capitalized items on economics of iron production, the furnace life itself including its refractory linings and that of its auxiliaries, such as blast furnace stove life, valves etc would be important factors. At the same time, it can be gainsaid that no universal yardsticks in relation to capital items and their effects on economic productivity, can be applied.

And lastly comes the labour force, absenteeism i.e. the cost of labour, wages etc per ton of iron smelted—their cumulative effects could be highly pronounced particularly under Indian conditions where labour productivity in relation to international standards, is indeed low.

The entire spectrum of economic productivity is complex particularly in a fast developing economy, such as ours, where factors completely outside the control of steel plant operators and executives can take an alarming toll, such as the non-availability of wagens causing non-uniformity of ore, coal and flux supplies.

Probably, a totally extraneous factor where the steel producer is a Government body and so is the buyer, the effects of non-payment for finished steel supplies for periods extending over years on some account or the other, is a devastating factor, if economic productivity and resultant profitability are to run on parallel tracks particularly when heavy capital has initially been invested, such as a new Steel Plant inevitably claims.

These then are the known and unknown factors operating on the stage and behind the scenes, whose inter-play determines the economic productivity of a new iron and steel plant. The top executive and sub-managerial skill, initiative and drive needed to keep up the chase unceasingly, incessantly and yet tactfully are important factors in relation not only to inherent technical efficiency of steel plant operations but also considered in the context of labour relations and welfare—their complete breakdown such as the

labour strike is not unknown in India and overseas.

The pricing policy of the Government including excise duty, taxation and related charges cannot be excluded from their background exhilarating or damping effects on the economics of iron and steel production even though, it may ostensibly be outside the purview of those managing or operating a steel plant.

The break-up of production cost factors for steel-making through refining of basic pig iron and subsequently to rolled finished products can likewise be split into its composite constituents and rationally analysed with the dual objective of making the steel plant

workers cost conscious and also to lower the actual production costs of individual items as far as possible. In many advanced steel producing countries, it is a common sight to see wall-sized posters outlining the cost price of individual items of raw materials and of spares needed for plant maintenance and replacements. It may well be worthwhile to institute in each Steel Plant regular campaigns on "COST FIRST" much on the same basis as "SAFETY FIRST". Strictly speaking, there is little difference between the two where the worker's psychology is concerned. The payment of production bonus should not be based merely on iron and steel produc-

tion itself but must closely be related to the cost of production or rather conversion costs, yield figures, plant maintenance and replacement and above all to the quality of iron and steel output and their consumer acceptance. Furthermore, the production bonus could well be linked with "invisible" parameters, such as the plant "hold up" and "detention" periods, coefficient of "furnace utilisation" and the furnace availability figures etc. It is quite possible that adjudged on the basis of these factors, the production bonus may be somewhat more than what a straight line production linear relationship would award. It must equally be con-

ceded that any industry, including a steel plant is basically established to make money once this concept is universally accepted and understood, good quality steel at high output rates would be come a very valuable by-product; the two factors dovetailed into one another would supplement and reinforce each other to promote maximum economic productivity in the iron and steel industry.

Improved techniques of iron and steel-making:

The introduction of improved techniques for iron and steel making should not be imposed without a balanced appraisal of the economic benefits accruing thereby in relation to increased productivity conforming to accepted quality criteria. The incorporation of new innovations and advanced technological developments should not be considered as a general panacea of all ills and difficulties. Any haphazard acceptance of advanced technology divorced from balanced economic appraisal studies, would in the ultimate analysis inflict precisely the opposite effect. Furthermore, such scientific and rational analyses have to be done under our Indian conditions and not merely because such and such technological practice abounds in the United States of America or the Soviet Union. The introduction of new process innovations and technological developments based on a rational relevant economic study would exercise a multifold impact in cutting down production costs and improve the quality of the iron and steel products.

A word now about the "Research" in relation to economic productivity in iron and steel industry. In the author's opinion, the "Research" into iron and steel making is a "MUST" even if there were no iron and steel plants themselves. The conviction about the undoubted value of research and its creative functions must be genuine—it is the "conviction" that matters and not merely the "belief". To elaborate on the role of Research in relation to production economics would require indeed a separate paper. Suffice it to say here that "Research" and "Production Economics" relate to complementary subjects and can well be covered under the general term "Productivity" in iron and steel-making. Applied research particularly fits exceedingly well in this categorisation since it is aimed at cutting down production costs through improved applied technology following superior yield figures and quality of output. Despite the raised eyebrows in certain quarters, "Research" in relation to Iron and Steel production technology in India has come to stay and is winning periodical winners in demonstrating its utilitarian functions and benefits in diverse fields of iron and steel production technology under Indian conditions and winner it shall always be.

Cost Reduction Possibilities in an Integrated Iron and Steel Plant

By U. H. BHRANY

Chief Metallurgist, The Indian Iron & Steel Co. Ltd., Burnpur.

Any efficient management should be interested in reducing costs for their products. This proposition becomes all the more attractive for an Iron and Steel Plant simply because of the gigantic nature of the operations. Here even a single paise reduction in cost per ton of steel produced multiplies into a substantial sum. With this in view, we have chosen to write on those problems which appear rather insignificant but make a considerable effect on the final "profit and loss" sheet. These items should correctly be classified under good house keeping, and hardly require much research to rectify some of those. Solutions for the problems discussed vary from plant to plant and hence, we will review these with only a few general suggestions for improving costs. The major emphasis is given to pointing out areas where attention would decrease costs without much additional investment.

Let us examine the very basic needs of an Iron and Steel Plant. These are, water, air, coal, iron ore, limestone and other raw materials.

Water requirement in certain plants in India is of the order of 430,000 litres per ton of finished steel. This usage is not to be confused with consumption or make up water. We will come to that in a moment. On an annual basis for a one million ingot ton plant this means that the pumping system should be able to handle almost 400 billion litres per year, which amounts to about Rs 3.70 per ton of steel on pumping operation costs alone. Compare this with an average water circulation rate of 20,791 gallons = 78,600 litres (using US gallons) per ton of steel in USA. You can choose any gallon you like whether imperial or USA you find this figure is less than one fifth of ours. Where is all our water circulating. Even if we could decrease our utilization by 1/3 we are talking of savings of the order of Rs 1,250,000 per year from this alone for a million ton a year plant. Without going into the details for this requirement, suffice

it to say, waste of water represents a lot of rupees down the drain.

The make up water at most Indian plants varies between 3 to 4 thousand gallons per ton. This figure is also quite high as compared to some plants in water scarcity areas where every effort is made to conserve water—such as the Kaiser Steel Plant in Fontaine, where make up water amounts to only 1340 gallons per ton. Fortunately, our plants are not built in water scarce regions but still—we find there is some scope for savings without elaborate water conservation system.

Let us go to the next important raw material, air. It is seldom that Metallurgists pay attention to air as a raw material. Since it is abundantly available but here again if one compares air consumption per ton of iron at certain Indian Blast Furnaces as compared to some furnaces abroad, we find our air consumption is almost twice as much as 95,000 to 100,000 cubic feet per ton in several plants abroad. This represents for a similar size plant, over a year, a saving as high as Rs 3.12 million per year, if the air consumption can be reduced to 56,000 cubic feet per ton of hot metal. Excess air, sometimes called over-blowing, definitely results in higher coke consumption, which should be avoided on both counts—it wastes fuel as well as air. Any attempts to lower air consumption can, therefore, be expected to be amply rewarded. However, we should notice, lowering air consumption is not only connected with the practice but also with burden preparation. With highly beneficiated burdens the lowest air consumption rate has been achieved. Air savings are possible in other parts of the Works, such as Steel Melting Shop and Converter Plant. These should also be examined.

In the case of coal, our next important raw material, we have hardly any choice in the ash content of the coal we receive—these are all high ash. The recent attempts at washing have yet

to prove their economic merit in India. However, another very deleterious component of coal is the moisture in the coal. Each one per cent increase in moisture causes a decrease in coke production by nearly two per cent. Taking the case of our own batteries an increase of one per cent in moisture in the coal charged to the batteries would result in a loss of nearly Rs 5,000 per day or about Rs 1.6 million per year. So when one is considering use of washed coals—the role of moisture in coke production should also be carefully evaluated and not only the decrease in ash content should be considered. Another way of looking at it would be to examine the effect of coal moisture on coke cost and shall we say consequently the cost of production of pig iron and steel.

Let us move from iron production to steel making—here again we find several sources which add unnecessary costs to our products. These are loss of iron units at various stages. In the converters if we are using the duplexing process, which is used by some of our plants—the converter practice costs vary between Rs 15—20 per ton alone and many more rupees per ton because of the practice of producing high silicon iron for the converter plants. This necessarily causes greater and greater load on the Blast Furnaces. In the converter process every per cent increase in yield represents nearly a million rupees per year—but how often do you see either the hot metal or the blown metal getting skulled away due to some delay or the other. All these delays mean loss of money. Above all—the very use of duplex practice should be re-examined in these plants. This process is a white elephant in our Works and wastes away a lot of our revenues.

Coming to the Melting Shop we have endless troubles caused by this high silicon iron in terms of bad bottoms—the largest single source of delays and lost production resulting in higher costs per ton of steel. In the Open Hearth the largest source of wasted steel

are the skull, spills, butts and defective ingots. How often one finds skulls and spills because some one did not pay attention to ladles or heat was short, and the time when more than one butt appear from the same cast. A little care to decrease these would result in increased profits because nothing else is needed here to boost your production by 10,000—15,000 tons of steel so that the unavoidable losses from these sources do not exceed more than a per cent or so.

In the Rolling Mills, attention must be given to the optimum cropping at each stage and for each section. Each section would, therefore, require an optimum size of ingot and bloom. Now often one finds this basic relationship is not established and good steel ends up as scrap. Not only the optimum size of ingot for a particular section should be established but care should also be exercised in giving crops. Both of these represent not only decreased yield but also increased recycle in the plant the handling of which represents a substantial loss and added cost to saleable steel. In some of our plants top and bottom crop and mill scrap can be as high as 20-25 per cent. This for a million ton steel works amounts to upwards of 60 million rupees a year. No one expects that all the 20-25 per cent wastage can be prevented but even a decrease of one per cent forms a nett savings of over 3 million rupees. Any wastage at this stage is the most expensive for the plant. If some steel has to be discarded due to some process difficulties or otherwise—it should be discarded at the earliest possible stage because every additional processing is unnecessary and only adds to the cost of the saleable steel. Hence in-process inspection to some degree helps save costs.

These are just a few of the areas if given attention to would result in increased revenues for the badly needed expansion and modernization plans in our plants and of course, should bring down our production costs.

Travelling beyond the field of thermal power generation in India, where giant power plants bear witness to its technological finesse, Kuljian has long since become active in the field of steel and metallurgy. Already technical consultants for the Mahindra-Ugine Alloy Steel Plant in collaboration with Cetig of France and for a number of steel casting foundries in the public and private sectors in several States, Kuljian offers all or any of the following consultancy services to the iron and steel industry with the same confidence as it has been displaying in the field of power generation for the last 15 years.

Aluminium in Road Transport

By HARISH AMIN

Modern Road Transport is the outcome of a process of development of over a period of some 60 years. Curiously enough, the history of aluminium industry in many ways runs parallel with that of the motor vehicle industry. Each had its genesis in advances made in 1886. In India, the use of aluminium in Road Transport has been very recent—since the last 8 years.

Aluminium in its commercially-pure state is a soft, ductile metal, too low in strength to be of more than passing interest. The addition of small amounts of certain other elements, however, has a striking effect on its properties, generally increasing strength and—what is more significant—making the resulting alloy susceptible to heat-treatment, and more readily work-hardened. Of the many alloying elements, the most important are copper, magnesium, silicon, manganese, zinc, nickel and chromium. The question of which elements are used to formulate an aluminium alloy, and in what quantities, is decided not only by the mechanical and other properties required in the finished material, but also by the fabricating methods to be employed.

Aluminium is a very flexible metal, in the sense that it can be cast, forged, extruded and rolled into flat products. For the Transport Industry special alloys have been developed and the properties of these alloys, both for sheet and extrusion are given in Table II. The Transport Engineer who is accustomed to wood, steel or composite construction shall have no difficulty in expressing his ideas in aluminium, as familiarity with the metal is quickly gained. In mechanical properties, and in the forms in which it can be used, it differs widely from steel; an approach to design based on the mere substitution of aluminium for steel, and governed by the conventions of steel practice, may lead to unnecessary weight and cost. The economical use of aluminium as structural material will depend on the sound appreciation of its fundamental properties mentioned below, and particularly of the ways in which it differs in behaviour from steel.

One of the major reasons for the use of aluminium as a structural material is its low density. Aluminium weighs 160 lbs per cu. ft. In contrast, structural 486 lbs. per cu. ft. From the design point of view it is rarely practicable or desirable to substitute aluminium for steel, and hence, the weight economy of fifty per cent is realised, where aluminium is used.

Modulus of elasticity of aluminium is approximately 10×10^6 lbs. per sq. in. one-third that of steel. In short, under equal stress, an aluminium member deflects three times as much as a steel member of the same size. This as a rule does not affect the performance of the vehicle. If deflection is a critical factor, section modulus of aluminium extrusion should be increased—for example, a steel beam can be replaced by an aluminium beam of the same width, but 40 per cent greater depth and 50 per cent more flanged area, with a saving in weight of about 50 per cent. In body panels, where rigidity is required, panels of an extra gauge have to be used, thus giving a feeling of solidity that a thinner gauge of stronger metal cannot give. This property together with low density gives aluminium alloys high strength to weight ratio which is of primary importance. From the point of safety, the low modulus of elasticity is an asset. In general, it can be said that the lower the modulus, the greater will be the ability of the structure to absorb impact without permanent set. This results in minimising and localising damage during accidents, thus ensuring maximum safety to passengers and cutting down resultant maintenance cost.

of cold work. For aluminium alloys used in body building, it varies from five tonne per sq. in. to eight ton. Although the ultimate tensile strength of mild steel is double that of aluminium, a structural member can be suitably designed to give equal rigidity and strength.

Aluminium alloys do not show a sharply defined yield point under tensile loading and hence proof strength is specified and can be regarded as equivalent to yield strength.

Aluminium and its alloys have exceptionally high durability due to the thin but tough layer of oxide that forms spontaneously on its surface. This layer, acts as a barrier against further natural oxidation. When removed, it reforms. Under normal atmospheric exposure, provided the correct alloy is chosen for the environment, it can be safely said, that aluminium does not rust and last forever, unless new technological changes make it impossible for re-use. It is not uncommon to see aluminium bodies outliving several chassis. Case histories have shown that bodies having covered 3,27,000 miles over twenty years are still in service. Formation of the oxide film imparts to aluminium good resistance to ab-

readily removed by the load but quickly reforms and is again abraded off; thus reducing the thickness of metal. Nothing happens to aluminium and because of this, aluminium flooring has proved durable under arduous duty. This property of aluminium has an important effect on the maintenance of goods trucks used for carrying coal, coke, gravel and similar loads.

Other properties of aluminium include high heat capacity, in other words, low specific heat, good conductivity and high reflectivity. High heat capacity has been made use of in designing aluminium brakes. Recent tests made in USA on aluminium brakes proved their superiority, as this metal is able to diffuse heat faster. The high reflectivity makes it an effective thermal insulator—mainly used for insulating milk tankers, refrigerated food vans and air-conditioned buses. For this application aluminium is supplied as crumpled foil.

The coefficient of linear expansion of structural aluminium is approximately double that of steel, hence in constructions where long continuous members are planned, this point may need attention. Usually, bodies are sufficiently flexible to take up any movement due to temperature changes. Experience has shown that no difficulty has been encountered due to this. Because of the low modulus the thermal stresses in aluminium amount to about two-thirds of those in steel, which is a positive advantage.

Aluminium being electropositive towards certain other metals is attacked due to galvanic action in the presence of moisture. Relative attack depends on the position of the metal in galvanic series—the risk being most marked with copper and its alloys. Little action occurs with steel, whilst in case of zinc or cadmium, it is the latter which suffers. The surest way to avoid bimetallic corrosion is to avoid contact of two dissimilar metals. However, if this cannot be avoided, such articles should be plated with

ROTATING-CANTILEVER FATIGUE TESTS
RESULTS (S/N CURVE) F/R B51 SWP
EX TRUDED BAR

Many aluminium alloys differ from steel in their behaviour under fatigue conditions. When a stress/endurance curve (see above) is plotted for a typical high strength alloy, although the curve, flattens, it does not become parallel to time axis, even after hundred million cycles of stress. This shows that failure by fatigue, if any, may be due to sharp changes of section, notches, deep tool marks, or other centres of high stress concentration.

Ultimate tensile strength though a physical factor depends on the chemical composition and its process treatment including heat-treatment if any, and in the work-hardenable alloys on the degree

of cold work. For example, it may be thought that aluminium flooring being softer than steel, would be less durable, but actually, the reverse is the case. In the case of steel, rust being non-adherent is

the zinc or cadmium, preferably the latter, or be given a good coat of diesel engine paint.

In building road transport vehicles it is not only necessary to choose material which will satisfy stress requirements but also lend itself to ease of fabrication and assembly. Aluminium can be riveted, welded, brazed, beaten to any shape, machined at high speeds, formed; in short, all operations of workshop practice can be easily performed. Most of the operations can be carried out with simple equipment. Some data concerning this are given in Table III. Most transport engineers are under the impression that aluminium cannot be welded. Latest developments have shown that aluminium can be welded very efficiently although it requires considerable skill. It is normally not recommended to weld structural sections because of loss of strength. It may be mentioned that the structural sections are of heat-treatable type and as such original strength can be gained only after heat-treatment. However, it is possible to weld reinforced, casting aluminium alloy as done in shipbuilding.

Casting and forging are widely adopted for engine and transmission components where lightness, strength, machinability and thermal conductivity are important. They are also available in a range of alloys having different mechanical and physical properties. Depending on the volume of production, pressure die casting or gravity die casting can be employed. Current applications include cylinder heads, cylinder blocks, pistons, sumps, gear boxes, brake drums, crank cases, miscellaneous fittings, such as door handles, window clips, decorative fittings etc.

Because of the high cost of aluminium, maximum structural efficiency has to be achieved. Hence, the use of aluminium extrusions for main body structural members is a natural choice as this enables the designer to choose a section which will utilise the material at its maximum efficiency. Because of the low cost of extrusion dies, it is possible for the designer to make use of functional structurals for the specific job. For example, a cantail can be designed to combine a structural section, drip moulding and flanges for their attachment of panels. The alloy usually chosen for these extrusions is a heat-treated aluminium-magnesium type having proof stress of fifteen tons per sq. in. (See Table I). It has a high endurance limit, comparing favourably with other grade steels, and has excellent anti-corrosive and forming properties. It is also free from inter-crystalline stress corrosion.

For stressed panels, gusset and light stressed sections which are usually folded from sheet, two per cent magnesium alloy (M57S)

sheets in half hard temper, having proof stress of 12-15 tons per sq. in. are used.

In case aluminium sheets are used for folding unstressed sections it is necessary to make allowance for the metal at the bend. This allowance will depend on the angle, the radius of the bend and the thickness of the metal. The following formula is used for bending allowance:

$$\text{Bending allowance} = 2(R + \frac{t}{2}) \times \frac{\pi}{360} \times \frac{1}{t} \times \text{angle of bend}$$

(R = inside radius of curvature)
(t = thickness).

Usually all vehicle bodies are of riveted construction and hence, although the joints are similar to those used in steel construction, due to certain difference in properties there is slight variation in the design methods. In designing riveted joints the rivet diameter may be calculated from expression:

$$d = 1.4 \sqrt{t}$$

where d = rivet dia. in inches
t = thickness of sheet in inches.

The rivet strength can be taken as approximately 60% of the tensile strength and the lap joint strength 1.5 times. The most economical size of rivet for

Indian Finance Supplement: Spotlight On Metallurgy

equal strength in shear and bearing being about 3t. In load carrying joints, rivet pitch should not be less than three and more than six times rivet diameter. For unstressed panelling, greater pitch, if desired, may be used. The distance from the center of the rivet should not be less than twice and not more than ten times the rivet diameter.

From the properties discussed above it can be said that aluminium alloys have excellent mechanical properties, low weight and strength required for making vehicle bodies. Lower body weight besides giving operating economy and higher payload, makes it possible to bring down the centre of gravity of complete vehicle lower towards the ground. This is very important in the case of double deckers which are high and have high centre of gravity. Designers will agree that aluminium is the right material which gives economic design using stressed skin principle. Aluminium is finding increasing favour among vehicle designers; already London Transport with Park Royal Vehicles and A.E.C. Ltd., have designed a chassisless double decker bus.

The trend in vehicle design continues to be influenced by the demand for improved performance, increased periods between overhauls, increased reliability and safety of passengers and goods. This has led to larger engines, greater robustness of both mechanical and structural parts, which means that vehicle designers had to increase chassis weight. Increasing fuel prices, boosting capital cost, and higher wage-bills together with the fact that the chassis manufacturers are already supplying engines having a minimum fuel consumption, the transport engineer, in order to obtain the maximum operating economies and maximum operating weight as low as possible have turned their attention to aluminium.

By choosing aluminium for body building, the designer is able to achieve low weight with its resulting economies and durability of the body. By using aluminium a saving of approximately 50 per cent in body weight usually results; Table IV gives the comparative body weights for single and double decker vehicles plying at present in India. From this table you will note that all-aluminium single decker body weighs 4,150 lbs and the double decker 5,500 lbs. Due to Government restrictions and available floor area, it is not always possible to increase the payload. Some organisations by changing the flooring from wood to aluminium on old composite bodies have realised a saving in weight of approximately 350 lbs. thus enabling them to increase the carrying capacity by three passengers. Another example is provided by B.E.S.T. double deckers: old composite bodies used to weigh 7,700 lbs accommodating 63

TABLE IV
COMPARISON OF BODY WEIGHT
(a) Single-Decker—City-203" W. B. Leyland

	Wt. of completed body, including all fittings, seats, etc.
Aluminium structure, panels and floor	4150
Steel sections, aluminium panels and wooden floor	5100
Steel sections, steel panels and wooden floor	5500
Weight of aluminium floor	350
Weight of wooden floor	700
Weight of one complete two-seater seat	32

(b) Double-Decker

	Wt. of completed body	Seating capacity
Underfloor and bulkhead in steel; other structure, panels and floor in aluminium	5500	70+Standeers
All steel with wooden floor	8000	63
Composite with wooden floor	7600	63
Weight of wooden	1312	
Weight of aluminium floor	761	

passengers only; the new buses of longer length weigh only 5,300 lbs and can provide seating accommodation for 70 passengers and 8 standees. If we were to take the average earning of 3 paise per seat-mile a vehicle averaging 120 miles per day, will earn an

extra revenue of Rs 120 per month or Rs. 1,200 per year. Permissible weight per seat being 120 pounds, it means that extra earning during the first year of operation would be Rs. 10 per pound of weight saved.

The cost of operation per mile is dependent on the expenditure of fuel and repairs. These items on fuel and closely related to the unladen weight of the vehicle. As far as tyres are concerned, weight of completed structure being less, one can use a smaller size tyre thereby getting same mileage at lower cost. Unfortunately, big transport organisations who are already operating all-aluminium buses are unable to give figures of economy, but it is hoped that in the interests of other organisations they will do so in the near future.

It is reported that the Oslo Tramway Company have shown a saving of £80 per vehicle on their all-aluminium buses, with service

TRUCKS WITH ALUMINIUM BODIES

offer increased payload...last longer...
reduce maintenance...

Get the best out of your truck. Reduce deadweight, increase payload by using aluminium for the body. Though the initial cost is slightly higher, aluminium is economical in the long run because—

- trucks with aluminium bodies carry more load
- give you more ton-miles per gallon
- reduce wear and tear on tyres
- save on maintenance
- and aluminium bodies last three times longer than the conventional type of truck bodies.

INDIAS 5311

cost being only half those of a composite type body. There is no doubt that the saving of weight is worth a lot of money. About nine years ago, at the Public Transport Conference held in U. K. Mr. G. F. Sinclair of London Transport stated: "Every hundred pounds saving in weight corresponds to at least £20 capital cost". As far as India is concerned, it can be assumed that we can spend Rs. 3 per lb of weight saved in the capital cost. This conservative figure is taken because it is not possible to always increase the payload.

Besides operating economies transport organisations would be able to save considerably on the overhaul and other maintenance cost because of the durability of aluminium. If desired, painting cost could be eliminated. Some organisations in South India do not paint their vehicles. Saving in painting cost may come to Rs. 2,000/- or so over a period of 8 to 10 years.

Aluminium has a high resale value. If, due to some technological changes, the vehicle has to be scrapped, the transport operators would, without difficulty, be able to realise approximately Rs. 2,000/- to Rs. 3,500/- as scrap value

for a single-decker bus, which is of considerable significance.

With the present Foreign Exchange restrictions, it is unlikely that the production of trucks could be stepped up to meet the country's demands and hence the only way of solving the problem would be to increase the payload carrying capacity of trucks. An aluminium lorry body can be designed to give the minimum extra-payload of 1,000 lbs. On comparing the cost and weight of a drop-side lorry built on a 165" W.B. Mercedes Benz, we get:

Material used	Weight (lbs)	Approx. cost Rs
Aluminium with timber runners	1050	4,200
Steel	2745	2,500
Composite — mostly timber	2000	1,600

From the above it will be noted that the cost of an aluminium drop-side lorry is about Rs 2,600/- more than an equivalent composite and Rs. 1,700/- more than an all-steel body. Taking freight charges to be approximately 16 paise per ton per truck mile and assuming that the truck will run a revenue paying average on approximately 20,000 truck miles per year, it

will earn an extra revenue of Rs. 1,600 to Rs. 2,500/-. This shows that an initial extra expenditure incurred would be realised within the first two years without taking into account the saving incurred due to various other economies and the scrap value of aluminium.

A test carried out by a private operator in Canada on thirteen aluminium and fifteen steel bodies on trucks of identical size and gross vehicle weight over a period of 20 months, showed that trucks with aluminium bodies averaged 11.6 miles per gallon against 9.1 of steel, cost per mile of operation on aluminium bodies was 2 cents less and aluminium vehicles carried extra payload of 1200 lbs. During the period a saving of \$1,270.00 was achieved.

Other road transport vehicles where aluminium has an advantage are the Municipal Refuse Collectors, vans of all types including meat and milk, tipping lorries and road tankers. In tipping lorries because of the flexibility of aluminium, impacts are absorbed over a great area. The aluminium plate usually lasts twice as long as steel due to its resistance to abrasion. Municipal Refuse Collectors in their simplest form, are tippers with side shutters. Because of the lightness of the load, weight saving does not play an

important part. Aluminium is used because of its intrinsic resistance to corrosion by refuse and organic waste. The Bombay Municipality in order to satisfy themselves, have on their fleet, five all-aluminium and twenty-one partial aluminium refuse trailers. In foreign countries, aluminium road tankers are widely used for carrying milk, fuel, chemicals petrol, etc. For the same laden weight, it is possible to carry fifteen per cent more payload. This means fewer trips and a smaller fleet to transport the same amount of product. To quote an example a 2000-gallon tanker carrying automobile fuel weighs in steel 4,000 lbs. While an aluminium one weighs 1900 lbs. In India, milk is not carried in tankers although the Aarey Milk Colony have a fleet of aluminium insulated trucks, which are found highly satisfactory for the purpose.

With such an honourable history, it may well be asked why aluminium is not in greater evidence in the Road Transport Industry in our country. Is it, high price; the possibility of restricted supplies; the hesitation on the part of the transport engineer to venture into new fields because of the risk it may involve? Whatever the reason, one fact emerges clear, aluminium has come to stay.

The Indian Institute of Metals

By P. N. SETH

THE Indian Institute of Metals owes its birth to a small band of devoted metallurgists — the idea behind this move being 'promotion and advancement of the study and practice of the science and art of making, shaping and treating of metals and alloys'. IIM was fortunate in being able to attract outstanding men of science and technology as its Presidents, such as Sir Jehangir J. Ghandy, the late Sir K. S. Krishnan, the late Sir Padamji P. Ginwala and Professor M. S. Thacker. It has been doubly fortunate in having a dynamic personality at its helm of affairs since its inception, first as its Honorary Secretary for a period of 12 years and for the last 3 years as its President Dr Dara P. Antia. He has given a great deal of his time and energy in the formulation and execution of various facets of the Institute's activities.

It is needless to stress the importance of metals in the day-to-day life of mankind. From the village blacksmith upwards to 'Apollos' and 'Voskhods'—in the most backward peasant economy to the sophisticated advanced countries—metals have an incomparable role to play. Be it at home or in the office, in schools or in playgrounds, in workshops or in hospitals, in any walk of life, metals make a vital contribution. It was therefore appropriate that the IIM should have been formed just after attainment of Independence by our country, as it was even then foreseen that metals will have to be the foundation of our plans for national industrial development in India.

Starting with a modest membership of only 45, IIM today has about 2,000, mark and 15 branches all over the country, situated in important centres of metallurgical education and industry. The present rate of growth in membership is above 20 per cent per annum and many more branches are planned to be started in new places of metallurgical interest. Though these figures are impressive enough in isolation, when viewed in the context of achievements of comparable professional associations in the industrially advanced countries, the inadequacy of our performance is brought sharply into focus. To cite a few examples, the American Society for Metals has a membership of above 35,000, has branches and has an annual budget of approximately \$2,700,500. The Iron and Steel Institute, London has more than 7500 members and an annual budget of approximately £1,77,000, though it does not seem to have attached much importance so far to opening many branches, having 17 only

every year through its various branches; publication of a quarterly journal including in its columns results of research work carried out in our Universities, Laboratories and factories, the journal having a place amongst technical publications all over the world; holding national and international conferences and symposia—at least once a year—enabling persons in the metallurgical profession to get together, form personal and professional bonds, exchange ideas, discuss topics of mutual interest; and lastly holding examinations equivalent to a degree in metallurgical engineering from an Indian or foreign University. The importance of examinations lies in the fact that these give a chance to persons who could not pursue higher studies in metallurgical engineering, but who are employed in Institutions

Against these comparisons, our 2000 members, 15 branches and an annual budget approximately of Rs 75,000 are seen in right perspective and show how much distance has still to be traversed, how much remains to be achieved, before we can take our place in the comity of industrially developed nations.

Despite the modest picture portrayed above, it will be but stating things in their correct perspective if it is borne in mind that our newly won independence is only 17 years old, and that formulation and implementation of schemes of national development are younger still by a few years. Viewed in this context, the IIM has a proud record of achievements to its credit. Its manifold present activities include holding nearly 100 technical meetings

of metallurgical teaching and research or metallurgical workshops. These persons through the medium of IIM examinations can now hope to obtain higher qualifications and make themselves eligible to hold higher positions of responsibility. The IIM has been invited by Government to organise and take the responsibility for the secretarial work connected with the National Metallurgists' Day, which is intended to focus attention on the important role played by metallurgists in the present scheme of national development.

To further the cause of science and specially of the profession of metallurgists the IIM awards Gold Medals annually and periodically three medals for the excellence of technical and research papers published in its Journal, one to the best candidate passing the Institute examinations, one to the candidate of highest merit from amongst all the 14 colleges imparting degrees in metallurgical engineering and one medal for outstanding contribution in the field

THE INDIAN IRON & STEEL CO., LTD.

(WORKS: BURNPUR & KULTI (WEST BENGAL))

PRODUCTS:

Rolled Steel Products: ~ Blooms, Billets, Slabs, Rails,
Structural Sections, Rounds, Squares, Flats, Black Sheets
Galvanized Plain Sheets, Corrugated Sheets * Spun Iron
Pipes, Vertically Cast Iron Pipes, Sand Stowing Pipes,
Iron Castings, Steel Castings, Non-Ferrous Castings *
Hard Coke, Ammonium Sulphate, Sulphuric Acid,
Benzol Products.

HIGH TENSILE wires FOR PRESTRESSED CONCRETE

High Tensile Wires for Prestressed Concrete are manufactured in 7mm to 2mm, plain or indented, to exacting quality conforming to IS: 1785 and BS: 2691, in coil diameters from 2-metre to 1-metre guaranteed to pay off straight. The wires manufactured by us have high tensile strength and proof stress and very small relaxation loss. Prompt deliveries available. No import licence required. These wires are manufactured by us in Technical Collaboration with M/S KOBE STEEL WORKS LTD. and SHINKO WIRE CO. LTD., JAPAN.

ALSO AVAILABLE:
Spring Steel, ACSR Core,
Cycle Spoke, Signal,
Roping, Piano and other
High Tensile Wires.

HINDUSTAN WIRES LTD.,
16/5, Chowringhee Road,
Calcutta-13.

of metallurgical production, education or research. The IIM organises special Annual lectures and invites eminent men in industry, science or public life to speak on topics of their choice—thus giving an opportunity to its members and others to listen to such eminent persons, as Sir C. V. Raman, the late Sir K. S. Krishnan, the late Dr S. S. Bhatnagar, Professor M. S. Thacker, Dr S. Bhagwantani, Dr D. S. Kothari, Sir Jehangir J. Ghandy, Mr G. L. Mehta and National Professor Satyan Bose.

The IIM has no intention of resting on its oars and has formulated a bold course of action for itself in the years to come, to play its rightful role in national economic and technological development. Briefly, this programme includes:

1. Vocational guidance to fresh entrants in the field of metallurgical engineering;

2. Providing practical training opportunities and placement of fresh graduates;
3. Survey of the metallurgical profession in the country;
4. Holding joint technical meetings in India with foreign sister Societies;
5. Publishing its journal monthly (instead of Quarterly);
6. Publishing text books on Metallurgical Engineering written by Indian authors;
7. Organising refresher courses for personnel attached to metallurgical organisations and institutions;
8. Preparation of a historical volume of the country's ancient heritage and achievements in the field of metals;
9. Providing a literature review or digest service with proper classification and coding;
10. Providing proper library facilities;

11. Compilation and publication of statistical data on production and consumption of raw materials and finished products, both ferrous and non-ferrous; and The Governing Body of the Council of Scientific & Industrial Research on a recommendation of its Metals Committee have approved a grant of 15,660 - to the Indian Institute of Metals for compilation & publication of statistics for the steel industries.
12. Having its own headquarters building to house the offices, library and reading rooms, lecture hall and conference rooms to enable IIM to provide an adequate and efficient service to the country's metallurgical profession.

This short chronicle of the IIM's activities would have justified the labour and time spent in piecing it together if it has been able to

make clear that the IIM does not intend merely to exist but exist fruitfully and be conscious of the obligations devolving upon it as the only professional association of metallurgical engineers in the country.

NATIONAL METALLURGISTS' DAY

Civilisation, as we know it today, would not have emerged—nor could it be sustained without an extensive use of iron and steel and non-ferrous metals. The basis of all industry is metal and in focusing attention on it and those who produce it, the Metallurgists' Day wants the Nation to appreciate what are our future plans and aspirations and what may be done to overcome the present deficiencies if we, as a people, are to enhance the standard of living and develop a self-reliant economy.

The metal industry, still young in India, is spearheaded by the steel complex which has, by and large, reached its phased targets within a short time inspite of many handicaps. Modern India saw Jamshedji Tata stepping in as the pioneer of steel production about fifty years ago. This initiative gained momentum and by the late thirties and forties of the present century, the steel plants at Burnpur (HISCO) and Bhadravati, respectively, cropped up. To day, the Hindustan Steel Limited towers the landscape of Indian steel industry with three mighty plants at Durgapur, Bhilai and Rourkela. Besides, the Bokaro Steel Project is already in the offing and more steel plants are under contemplation of the Government of India during the fourth and subsequent plans. The Alloy Steels Project at Durgapur is well nigh nearing production stage.

By 1970-71, the steel production target is envisaged to be raised to about 17.5 million tonnes. To attain this, detailed planning and coordination in various fields, particularly in respect of manpower planning, have to be made. It is estimated that India will need by 1970-71, about 6,500 engineers including about 2,500 to 3,000 metallurgists. Besides iron and steel, we need very large quantities of copper, aluminium, lead, zinc, tin and other metals for our industrial growth and self-sufficiency.

All these will require more metallurgists and training facilities. If the massive metallurgical programme before us is to succeed, the country will have to think of orienting its educational apparatus to this end. Plans are already afoot to expand the scope of education in metallurgy, and towards that goal, training centres have been opened in all the steel plants. There being diverse problems facing the metallurgists and the metal industry today, the objectives before the National Metallurgists' Day celebration are to encourage pioneering work in the field of metallurgy and to accelerate industrial progress by pooling and exchanging ideas.

ALUCOIN

aluminium

ALUCOIN meets your requirements in:

- Commercial Grade Aluminium Ingots.
- Electrical Conductor Grade Aluminium Ingots & Wire Bars.
- Aluminium Alloy Ingots, Notched Bars & Shots. Extrusion billets.
- Rolled Products
 - Sheets
 - Circles
 - Corrugated sheets
 - Coils
 - Strips
- Extruded Sections

Plants are under construction for meeting the country's needs in Foils, and A.C.S.R. & A.A.C. Cables.
