Commission which obviously cannot have a binding force. The real case against the acceptance of the link has been cogently argued by the second Pay Commission. The cost of living index, as is common knowledge, gives as heavy a weightage as 50 to 60 per cent to food articles. Now, increases in food prices are usually the result of natural calamities for which Government price policy cannot really be blamed. Similarly, adverse terms of trade may upset the domestic price level and here again the rising cost of imports obtained from the supplying countries is not a matter amenable to the influence of Government's price policy. Even apart from these, the hardship involved in an upward trend of prices ought to be shared by all categories of employees. However, the main argument against the automatic link between the dearness allowance and the cost of living index is that it injects into the structure of emoluments of the Central Government employees a permanent element having the effect of giving a boost to inflation by virtue of the wage-price spiral. Hence, the proposals of the second Pay Commission for a moderate increase in dearness allowance, consequent on a rise in the cost of living index, ought to be accepted as equitable.

The Government has shown a conciliatory attitude despite the militant posture adopted by the Joint Council because it is interested in ensuring the contentment of its employees. It cannot be ignored that a good part of the Government employees themselves are willing for an amicable settlement over the recommendations of the Pay Commission. What is more important, the National Federation of Indian Railwaymen has already reached a settlement with the Railway Board on all differences over the Pay Commission's recommendations, except a few, which are now referred for arbitration. And railwaymen constitute about half of the total Central Government employees. If in spite of these, the Joint Council has chosen to go ahead in challenging authority, it only strengthens the suspicion that its preparations are inspired by objectives which are not strictly relevant to a trade dispute. No Government can look at the situation with equanimity and there can be no doubt on which side the public will throw their weight in any action that the Government may choose to take.

Ugly Portents in Assam

RECENT events in Assam are disquieting and should be cause for genuine concern. Apart from the Naga problem (which has now come into the fore by the dramatic dash of Phizo to England and his activities in mobilising support for an independent Naga land) there are signs to show that along with the Punjab, this border State may also grow into a veritable trouble spot. According to reports this week, there is complete lawlessness in two districts of the State arising out of the language controversy. Along certain railway lines, the trains are carrying armed police guards and the situation in Gauhati is reported to be so tense that the administration has found it necessary to rush armed police. Unless the situation is tackled energetically, it is likely that the forces of disintegration will soon gain the upper hand. The centrifugal tendencies have here three different faci—linguism, provincialism and tribalism, one sometimes overlapping on the other. The result is the periodic manifestation of violence in different forms with different origins that should cause anguish and sorrow among all those who value the unity of this country and its progress on ordered lines.

The concept of unilingual States ever since the reorganization of States on a linguistic basis has been made into such a fetish that there seems to be no end to the process. Recently, at its Poona session, the All-India Congress Committee passed a resolution refusing to countenance any further division of the States. This is as it should be, though it is possible that it may only be a pious wish. The fact is a feeling has been engendered that any agitation will have its reward if it is persisted in. This is unfortunate. The language controversary in Assam has no consistent logic behind it. Assam is a multilingual State and the demand for making Assamese the State language cannot be sustained for the simple reason that Assamese is the language of only the Ahamiyas who constitute a minority of the population and are confined to six out of 11 districts of the State. The States Reorganisation Commission itself in its report pointed out that in spite of the interesting post-1931 spread of Assamese according to the census figures, the Assamese speaking population still constituted only 55 per cent of the population of the State. In the face of this, it is no wonder that the State Chief Minister, Mr. Chaliha, had originally refused to accede to the demand for making Assamese the State language unless it had the support of non-Ahamiyas. Last week, however, apparently under political pressure, he gave an assurance that during the next session of the State Assembly, a bill declaring Assamese as the official language of the State would be introduced with suitable safeguards. But it is evident that as the agitation in favour of Assamese intensifies, there is bound to be a demand for separation of the hill-tribes and eventually an Assamese-speaking State consisting of only six districts can be formed. This will be *reductio ad absurdum* which will not find favour even with the Ahamiyas. But linguistic fanaticism has in the meantime erupted and the recent events are the result of the violent turn the unfortunate language controversy has taken. Thus a systematic compaign has been started making life and property insecure to those who are opposed to Assamese being made the State language.

A variant of this linguistic agitation is the manifestation of an aggressive provincialism that took an ugly turn last month and threatened to hamper the activities of the oil refinery near Gauhati. The decision, it may be recalled, to set up an oil refinery near Gauhati was itself a concession to parochialism and political pressures and a powerful agitation launched in August 1958 to bring about this end. The trouble recently has been over recruitment of posts in the refinery. The movement against non-Assamese recruited by the refinery is nothing but philistinism of the most reprehensible type. There was even resort to violence and some non-Assamese officers of the refinery were assaulted in the streets and threatening letters were sent against their continuance in office. It would appear that even as it is, out of the 485 employees of the refinery, 315 belong to Assam, but the parochialists would not be satisfied unless non-Assamese are completely excluded. This is an absurd demand and, if followed, will lead to the most undesirable consequences.

The refinery project is a Central Government venture in which all the citizens of India have a claim. Apart from this, it has to be recognised that the top cadres of the refinery have to be men of great technical competence without in any way being governed by provincial considerations. A national undertaking cannot obviously be put into jeopardy for satisfying the whims of a few misguided elements. It is one of the merits of the Central Government projects that they serve as cementing forces of unity in the growing atmosphere of fissiparous tendencies. The all-India services to a certain extent perform this useful role and it is necessary that without prejudice to the claims of local aspirants, technical personnel for the execution of development projects should be recruited on a common basis so that they might have uniform standards of efficiency and have a feeling of belonging to common and important cadres. This is one of the important recommendations of the States Reorganisation Commission which, seeing what formation of unilingual States will ultimately lead to, was careful to suggest measures for correcting particularist trends. The happenings in Assam are a pointer and, if allowed to go on, bode ill for the future of this country.

The Sindri Scandal and Coal

THE revelation that the production of fertilizers at Sindri dropped precipitately by 55,000 tons from 330,000 tons in 1958 to 275,000 tons in 1959, is as shocking as it is unexpected. The steep decline in output has a moral to convey. It is doubtful whether the ground lost last year has been retrieved during the first half of this year. After Sindri had started on its dynamic phase of accelerated output, one should have expected the tempo of expansion to be carried to a higher pitch. The set-back now disclosed calls for a candid probe. From available reports in the Press it would appear that shortage of coking coal was primarily responsible for the shortfall. According to this version Sindri has been the victim of eleventh hour diversion of part of its coal supply to the public sector steel plants.

Last year's crisis in the supply of coal in general, and of coking coal in particular, was not an altogether unforeseen phenomenon. About the middle of the year, the coal industry had issued clear warnings to the Government about the growing magnitude of the crisis based on the current trends. The private sector's steel plants had been driven to a critical situation in which they had to use coking coal with an admixture of low-grade coals. More recently, towards the end of the first quarter of this year, the railways found themselves confronted with a crisis of a great magnitude. The danger point was almost reached when the curtailment of goods train services seemed almost unavoidable. Stocks of coal were hardly sufficient for consumption requirements of two to four days, as against the average of ten days, on some railways. The crisis was tided over by the make-shift of diverting coal from private industrial consumers to the railways. It is, of course, true that there was no alternative to this course since supply of coal to the railways is the very pre-condition of carrying stocks to other consumers. The solution merely amounted to transferring the hardships of shortage from one sector of the economy to the other.

The crisis of coking coal and the stop-gap device of diversion of supplies from Sindri cannot be attributed to any accidental circumstances. The root cause of the acute shortage of this type of coal is to be traced to the failure in implementing the schemes for setting up the coal washeries. It was on the basis that the coal washeries would supplement inadequate output of coking coal that the programmes for the public sector steel plants, among others, were drawn up. But the woeful delay in the coal washery projects has upset the balance in the distribution of coking coal even among priority consumers. The first coal washery is not expected to be commissioned into production until 1961, unless further impediments arise.

It is unfortunate that a dogmatic attitude of giving precedence to ideology over urgent practical considerations should have been adopted by the Government in preparing the present Plan for expansion of the coal industry. Production of coal in the private collieries in 1955 stood at 33.8 million tons and in the public sector collieries it was as low as 4.2 million tons. The private sector's offer to undertake the bulk of the additional output in the Second Plan, subject to the extension of requisite facilities, was turned down. In their ideological zeal the Government and the Planning Commission fixed a low target of 10 million tons of additional output for the private sector, which was less than one-third of its actual production at the start of the Plan. The public sector was allocated a target of 12 million tons of additional production, equivalent to nearly three times as much as its output at the outset. On what assumption it was believed to fulfil this Herculean task is difficult to comprehend. But the result has been that a shortfall of not less than 7 million tons is apprehended in the Second Plan target of 60 million tons, largely attributable to the State collieries.

There is obviously an urgency to step up the output of coking coal at least till the time the proposed coal washeries go into production. No doubt, our deposits of high-grade coal are limited, and have to be used sparingly, but it is nothing short of foolhardiness to allow production in some of the key industries like steel and fertilizers to suffer because the essential fuel required by them has to be conserved for future use. The extra depletion of coking coal reserves can be made up by curtailing its use when washed coal becomes freely available. The larger interests of the country today demand that private sector collieries, which supply practically the entire coking coal consumed in the country at present, should be allowed to increase their production of this type of coal even by granting them some special incentives. Apparently, these incentives cannot cost more than the heavy price the country will have to pay for procuring imports of essential commodities like fertilisers, to counterbalance the loss in domestic output.

In some circles, it is also suggested that the collapse in production at Sindri last year was partly due to managerial bottlenecks. A spokesman of the coal industry has challenged the reported shortage of coking coal supplies to Sindri on the basis that only a few weeks ago Sindri invited tenders for the purchase of 65,000 tons of hard coke said to be surplus to their requirements. How far this establishes that there was no shortage of coking coal supplies to Sindri last year it is difficult to say. But whatever be the reasons for slowing down of production at the Sindri Fertilizer Factory, it can hardly be denied that a major disaster has been allowed to overtake the country by complacency in New Delhi. This only provides major fuel for the criticism that the public sector is not fit for the expansion it has set for itself in the Third Five-Year Plan, as it is unable to maintain even in good operation a public undertaking completed in the First Plan. The Prime Minister owes it to the country to explain how public sector expansion can take place in circumstances such as these.

A DELHI DIARY

ARMA VIRUMNQUE CANO

I HAVE been commanded by the Editor to deal with two matters of major military interest—the tense situation on the Sino-Nepal border and the report of Dr. Raghuvira of his conversations with President Ayub Khan of Pakistan. I have also a personal claim in that I must say something about Sudhindranath Dutta, the great Bengali poet, whose sudden demise last Saturday has put Bengali litterateur and a great deal more in a deep mood of dejection. Thus, in a sense, I am dealing with arms and a man, although they are unrelated in this particular case. Undoubtedly, these matters of great moment needed editorial finality rather than the irregular undigested comment of a columnist who is sometimes (unjustly) accused of attempting humour. But perhaps just as what cannot be said may sometimes to sung—as Voltaire seems to have said—so what cannot be editorially dealt with can be discussed in seemingly trivial manner. I take no responsibility either for the failure to comply with my promise to deal with India and the German economy this week, or with the inadequacy of my treatment of the aforesaid serious matters which have been left in my inadequate hands.

The Mustang incident, as it has now come to be called, may well be a landmark in both Sino-Nepal and Indo-Nepal relations. No one, who followed Mr. Chou En-lai's utterances in Nepal in April, could have dreamt that so early a violation of the Sino-Nepal agreement would take place. It looked to us at that time as though Chinese policy was to play Nepal against India rather than to create a bitter fear and get Indo-Nepal friendship into a state of greater preparedness. Why, one wonders, have the Chinese made another Himalayan blunder of this kind? Could it be that they are determined now to use their superior might and are placing themselves in an impregnable position, keeping some areas disputed to prepare the grounds for "conversations", they did in the case of Ladakh? I doubt if in the Indian Union, at this time, China has a single all-weather friend. In Delhi the concern is deep and, on the whole, determined. The next session of Parliament, exactly a month away, promises to be full of foreign policy and defence. This means, surely, that like the last, we will hear much about Mr. V. K. Krishna Menon. And in Dr. Raghuvira's Press Conference on Thursday, coming events seem to have cast their shadows or is it their promise?

DR. RAGHUVIRA 'ENFANT TERRIBLE'

One of the consequences of the new pressure on Nepal was reflected in the unique interest excited by Dr. Raghuvira. Dr. Raghuvira has, it is true, just seen the Pakistan President, Field Marshal Ayub Khan, but one would never have believed that a Member of the Congress Parliamentary Party could have held such a conference on a matter concerning External Affairs, if there were no disquiet in the public mind on the manner in which our defence is being conducted. The suggestion of the Pakistan President "if the Indian army could be disentangled from the Indo-Pakistan border, it could very well defend the country from China, however numerically strong or equipped the Chinese army might be," certainly struck an answering chord. But what is one to make of this statement which Dr. Raghuvira also credited to the Pakistan President? "Mr. Nehru is a wall. He is unchanging. He is impervious to suggestions and he finds solace in the company of Mr. Krishna Menon, who considers Pakistan as the eternal enemy and China the eternal friend of India."

I keep asking myself this question: Would Dr. Raghuvira have made known this utterance, had he not felt that it would have had some interest for public and some effect on the Parliamentary Congress Party? In other words, is there not a feeling in the Congress Party already—which Dr. Raghuvira sought to encourage—to the effect, firstly, that Mr. Krishna Menon's influence was unduly large, and that the theory that Pakistan is the enemy and China the friend—past or future—is mistaken? If there was nothing more to the Press Conference than Dr. Raghuvira's personal presentation, it seems to me the Press Conference was without purpose. Nobody in Delhi would believe that.

SUDHINDRANATH DUTTA

For those who know Sudhindranath Dutta well, it is difficult to speak without enormous prejudice in his favour. By the magnificent many-sided quality of his mind, by his intense intellectual humility, by his generosity at all times, by his charming old world manners, he laid a spell over a large circle of friends both here and abroad. It was difficult to recognise in his company that he was not merely Bengal's first poet acknowledged with distinction almost every year (including the West Bengal Government's Tagore Prize more than once), but also eminent in philosophy, a good judge of music, and a master of English literature. In his last three years he found congenial occupation in lecturing on literature to a small group of eight in post-graduate work at Jadavpur. There can be few instances of men, in the whole range of Indian scholarship, who have had this magnificent many-sided achievement. And he was great as a man. He bore erudition not merely with humility but almost with denial. He was a deep critic of himself. While his criticism of other's writing was open and frank, it was always free from malice and invariably contained, with its charity, a constructive side.

Some of the work that Sudhindranath Dutta started remains incomplete. In the field of both Bengali poetry and Bengali prose, he has started trends which are the subject of continuous discussion in a small and selected group of Bengali writers, of whom Buddadeva Bose is perhaps the best known. Practically all recent writers in Bengali are, in part, his disciples, as he was the beloved disciple of the great Rabindranath.

There will be general regret that the autobiography which he began, while he was a visiting Professor at Chicago last year, has not been completed. There may be even greater regret that he departed in a creative mood, full of the fever of writing and the passion for teaching at Jadavpur. Perhaps it is good that he died thus in harness, for his work will not look as though it was finished. He was cut off, thus even at the age of 59, in his prime. It was of men like him that Lawrence Binyon wrote:

"They shall not grow as we are that are young grow old,
Age shall not weary them nor the years condemn.
At the going down of the sun and in the morning
We will remember them."

ARGUS

World War I

THE WEEK'S NOTES

Africa

THE MARCH OF NATIONALISM

THIS WEEK has been eventful for Africa. Four more States, the Belgian Congo, British Somaliland, Italian Somalia and Madagascar have emerged into independence. British Somaliland and Italian Somalia have, however, merged to form a Somali Republic. Thus another milestone has been reached in the onward march of African nationalism and the great rejoicings that have marked the celebrations in these countries underscore the sweep of the wind of change across this awakened continent. It is obvious that colonialism and European domination, which are already on the retreat, will be swept away by the rising tide of change that is shattering the old social patterns. The two stumbling blocks that stand in the way of the entire continent becoming free are the apartheid policy of South Africa and Portuguese colonialism. But these two also have to bow down before the storm sooner or later.

The emergence from tutelage of the African States, however, poses its own challenge. This is the consolidation of the newly-won freedom and translating it in terms of economic and social programmes that will give content to freedom. This by no means is an easy task. Our West European correspondent in two recent despatches in 'The Eastern Economist' has explained under what circumstances the Belgian Congo has emerged into independence and the problems facing the new State. It is revealing to know that the Congo has no more than 15 university graduates and she has to face the problems of national development and a fast growing population with almost no native technicians or administrators. It has to take into account the centrifugal forces at work—the personal rivalries of leaders, the threats of secession from the Katanga province and the growing evidence of a reversion to tribal division and conflict. It is, therefore, necessary that apart from what support Mr. Lumumba may be able to muster from African leaders in building a national State, the West should lend its hand without any hesitation. The treaty of friendship and co-operation signed between Belgium and the Congo will no doubt assist to some extent the young nation to hold on to its feet. But that is not enough if the political orientation of the Congo is not to become a matter for Communist exploitation.

Planning

WEST GERMAN AID

MR. MORARJI DESAI'S recent visit to Bonn has been fruitful though the outcome has not been quite spectacular. This is not quite surprising since with elections near, there has been no inclination on the part of the West German Government to commit itself to anything definite. Nevertheless, there is enough in the joint communique at the end of his talks with the Federal German Government that should be quite welcome to this country. For one thing, the West German Government has agreed to make a further $30 million available to meet the exchange gap under the Second Plan. This brings the total of West German aid, since the Washington Conference held in 1958 under the auspices of the World Bank, to $100 million (about Rs. 47.5 crores). Including the credit for the Rourkela plant of Rs. 75 crores, the total contribution of West Germany for the Second Plan would amount to Rs. 122.5 crores. Secondly, the West German Government has agreed for deferment of two-thirds of liabilities under the Rourkela project maturing up to March 31, 1961. It may be recalled that under an agreement signed in February 1958, the Government of India was enabled to postpone the payments by three years up to a total amount of Rs. 75 crores. The present deferment is now for a period of four years and even this, it has been stated, is "for the time being.". The implication is that at the appropriate time, the West German Government would consider sympathetically a request for further deferment from the Indian side.

Lastly, the communique has underlined West Germany's readiness to make her contribution to India's Third Five-Year Plan. This not only relates to the programme for the expansion of the Rourkela Plant, but the "participation in multilateral measures yet to be decided upon in detail." It is, of course, true that no negotiations had taken place as to the exact quantum of assistance that can be expected from West Germany. This can obviously be done only after exploring to what extent aid would be forthcoming from the other creditor countries of the West. But the substantial achievem of Mr. Desai's visit lies in the fact that he had West German leaders of industry and trade and l impressed upon them the beneficial aspects of grea West German investment in India. He had show how a developing country, which was compelled to b row for its development, could not possibly progr through loans and aids alone, and it had to earn forei exchange in ever-growing volume through exports meet her growing needs for imports as well as to servi its loans in the form of interest payments and capi repayments. It is in this context that his appeal the 'liberal tradition' of West Germany to remove sor of the restrictions imposed by it on the import of Indi goods gains force. How far this will find an echo in tl hearts of the Germans remains to be seen.

Small-scale Industries

CREDIT GUARANTEE SCHEME

THE LAUNCHING of the scheme on July 1 by th Reserve Bank of India guaranteeing commercial an co-operative banks' loans to small-scale industries fill a major lacuna in a sector of the Indian economy which is gradually coming to the fore not only as a important supplier of consumer goods but also as ar extensive field which would provide increasingly large avenues for employment. The scheme, which envisages sharing of the loss by the Reserve Bank to the tune of the Rs. 1 lakh in respect of any one loan by 49 commercial banks, the State Bank of India and its subsidiaries, 22 State co-operative banks, 14 State Financial Corporations and the Madras Industrial Corporation, to small industries with a capital not exceeding Rs. 5 lakhs, in 22 selected districts of the 15 States of the Indian Union, on a guarantee charge of ¼ per cent per annum on the maximum amount of advance (or limit) sanctioned, will go a long way in resolving the financial difficulties of the small entrepreneurs who hitherto have been finding it difficult to get adequate accommodation from commercial banks and other lending institutions. Since the scheme is being tried for the first time in this country and its success depends largely on the prudence of the lending institutions, both while granting and recovering loans, it is only natural that the Government of India should have stipulated a review of it to be undertaken after two years of working in the light of the difficulties experienced and deficiencies brought to surface.

It is comforting to note that the scheme envisages grant of both short-term and long-term advances extending up to seven years, which may be given for the

purpose of acquiring fixed assets or equipment or for providing working capital. Though the Reserve Bank has not stipulated any range of interest to be charged on these loans, it is hoped the terms would be kept quite liberal so that the small entrepreneur is able to derive the maximum benefit out of the scheme. Channelising of part of the PL 480 funds for provision of credit to the small-scale industries sector should also be helpful; the Government will do well to explore this possibility. These funds can be lent to small entrepreneurs through commercial and co-operative banks at quite a low rate of interest.

I.L.O.

PROBLEMS OF DEVELOPING COUNTRIES

MR. NAVAL H. TATA, in his speech delivered at the forty-fourth session of the International Labour Conference, held in Geneva recently, referred to some of the problems of the developing countries like population, development and housing. He suggested that workers should be made conscious of the impact of rising population on their living standards and through repeated warnings be told that real income would fall with the rise in population. This will, of course, take time, but in the long run prove useful in arresting population growth to some extent. As regards rural development, he said, it was a pity that not much attention was paid to it probably due to the 'prestige' value attached to industrialisation and to attempts made to emulate the 'glamorous' success of highly industrialised countries. The point is while not minimising the importance of industrialisation, one has to guard against the pitfalls of a lopsided economic development. Thus, while it is essential to exploit the industrial potential of a country, it is equally imperative that rural development should also be given high priority. Here, Mr. Tata suggested a programme before the ILO because it is concerned with the good of all the workers, whether in the industrial or the rural sector. He said that the ILO should evolve a special programme for a fairly long period of five to ten years and special efforts should be made to allocate a substantial grant to finance the programme far beyond the limits and resources available under the Expanded Programme of Technical Assistance. Also, a team of international experts should be invited to chalk out the programme of operational activities and programme embracing vocational training, productivity, management development in the cottage sector, research facilities, co-operatives and agricultural workers' education. Action on these lines, he said, would help to ameliorate the lot of the rural workers in the countries of Asia, Africa and Latin America. For the programme to be successful, it is essential that there should be active collaboration between the ILO and the FAO since both these organisations are connected with various facets of rural development.

A Window on the World

A FOREIGN VIEW OF INDIA'S ECONOMIC GROWTH: II

By

ODYSSEUS

WE noted last week as an encouraging sign of the times that the current issue of the "Economic Review" of the National Institute of Economic and Social Research (2, Dean Trench St., London S.W.1) contains an authoritative article, entitled the "Strategy of Indian Development", by Mr. I. M. D. Little, Fellow of Nuffield College, Oxford, which is both a critical analysis of India's development finances and a plea for foreign aid. The first conclusion that Mr. Little reaches — we noted here last week — is that India's shortage of capital and difficulties in earning foreign exchange render it all important that India should make adequate use of her own resources, which means, above all, adequate use of her abundant man power Since less than 3.5 millions are employed in India's factories, Mr. Little argues that it is mainly in agricultural investment that the possibility exists of a greatly increased use of labour.

There is no doubt that many more millions could be employed in rural development with the equipment that could be made available even in the next five years. Men can work on improving the land with negligible equipment — shovels, baskets, and good will — which would not divert capital from industry. The 1959 Report of the Ford Foundation's Agricultural Team on India's Food Crisis is one among many which testify to the unlimited possibilities in this sphere. Not all of it, perhaps, would be very productive, but some undoubtedly would. The possibilities include contour bunding, terracing and levelling, draining, irrigation ditches and minor canals, digging wells, fencing, making local roads, and other constructions from indigenous material, which can, again, be obtained with shovels, baskets, and honest sweat. Some social services also need negligible equipment, e.g., primary education and population control clinics. In this connection, it is relevant to note that widespread unemployment exists amongst university graduates, who are the kind of people equipped to teach others. Unfortunately, unless attitudes have changed greatly in the few years since I left India, it will be difficult to persuade university graduates to return to village life where they find themselves cut off from their peasant neighbours by the intellectual interests that they have developed. University graduates are inclined to be too "bossy" and intellectually contemptuous towards country folk.

RISKS OF INFLATION

Mr. Little draws attention to the need to prevent greater employment from increasing consumption too much. This might lead to inflation in the short run and, in the longer, it would be necessary to find more capital to produce factory-made consumer goods. This would mean a slower build-up of the capital goods industries and therefore further postponement of the day when India can grow her own resources. On the other hand, the existence of unemployed resources makes it possible that their fuller employment could yield, after some lag, both more investment goods and more consumption.

It has been suggested that inflation would not be created by putting idle hands to work because agricultural production (and more than half of India's personal consumption comes from agriculture) would quickly increase. Mr. Little believes that this is a mistake, because, men employed on improving land must be paid, and any extra output, however, quickly it comes (and in fact there must be a lag), will add to peasants' incomes, as well as to output, so that the extra output is only an offset to the extent that the peasants save more of their higher income.

Thus, the ability or willingness to tax is a limit not merely to the size of the Plan, but to the amount of employment that it can offer. A larger plan with less employment may put less strain on a politician's courage than a smaller and more labour-intensive plan.

The limitation on employment is not in opportunities for employment but in the immediate supply of consumption goods, primarily food. Thus, in Mr. Little's view, more employment depends on the government's willingness to redistribute consumption sufficiently in favour of the newly, or more intensively, employed men. This is the barrier round which many believe that China has found a way.

It has been argued that India's agricultural targets are, if anything, too high already. Would not much more employment on improving the land result in too much food? Mr. Little replies that (1) there is no certainty in agriculture, and (2) there is the matter of timing. For several years such further employment, which would increase each year as the programme was built up, would add more to the demand for food than to its supply. The problem would be to prevent excess demand for food. If it subsequently became clear that the eventual increase of supply would be excessive, some of the more capital-intensive ways of producing more food (e.g. major irrigation and fertiliser plants) could be cut back. Some combination of falling food prices and increased indirect taxation of factory-made consumer goods could always steer the extra consumption towards food. This would be necessary to prevent too large a part of future plans from being devoted to manufactured goods, with a consequent delay in the establishment of sufficient industry to provide for enough capital investment without foreign aid.

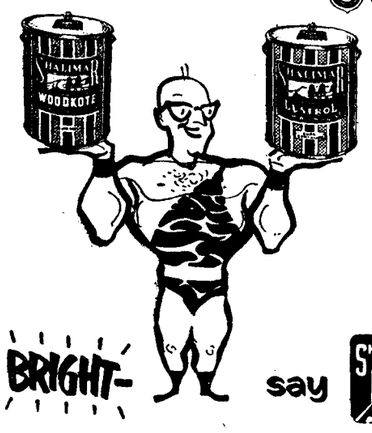
TAXES: THE HEART OF THE PROBLEM

The fiscal problem is, in Mr. Little's view, the heart of the problem. If a much larger programme of land improvement were added to the Third Plan, the need for taxation would be increased in the initial years. At it is, the Third Plan will demand considerably higher taxation. But these increases in taxation will not be excessive — if the Plan is a success. This needs no argument, because total consumption is planned to rise by 4 per cent a year and the increased taxation will be needed only to prevent it from rising faster. At a very rough guess, assuming that India obtains the aid that she hopes for, £75 millions worth of additional taxes, or increased rates, might be needed every year. Mr. Little emphasises that this is more every year than any Indian Finance Minister has yet added in any one year, and that the idea horrifies the middle classes

which are the back bone of the Congress Party. Yet, Mr. Little argues, very few need be made poorer, and those not for long.

Mr. Little points out that some people have the impression that tax rates in India are high. This, he says, is not so. Only corporation tax and direct personal tax on the very rich are high and the latter (in Mr. Little's view) is not effective. Other rates of tax are mostly low. In fact, the middle classes, those, say, with over £180 a year, are very lightly taxed: even on paper, the direct tax paid does not match British standards below about £4,000 a year, and indirect taxation is far lower. Administratively, it is harder to tax in India, but there is no doubt that the fiscal requirements of the Third Plan are well within India's administrative limits. Nevertheless, Mr. Little makes no secret of his fear that "fiscal pusillanimity" is a danger, especially because of the difficulty that the Government of India has in persuading the State governments to increase the taxes reserved to them, which, of course, include all taxation of land, and of incomes derived from the land.

If the Third Plan were enlarged to step up employment on land improvement, a still greater taxation effort would be required in the first few years in order to damp down the demand for food. All taxation will do this to some extent. But increases in land taxes — which in real terms have been declining for decades — would be most appropriate, not only because the peasants would be first to benefit by the increased employment of those members of their families who are at present under-employed, and by the subsequent increase in output and in the value of their land, but also because they eat a higher proportion of their incomes than others.



Increased land taxation depends, however, not only on the co-operation of the states, but is particularly disliked by the Congress Party, much of whose support comes from the richer farmers. But they should not forget that if agricultural output responded well to increased investment, then the burden of taxation should be shifted towards the indirect taxation of manufactured consumer goods.

Mr. Little finally invites us to note that the higher paid wage earners in India are scarcely touched by taxation. The only way to restrain the rise in their consumption is to stop real wages from rising. Mr. Little counters the suggestion that this would be harsh by pointing out that the average wage in organised industry in India is about four times as high as the lowest wages. Mr. Little urges that it is not sufficiently realised that high real wages help to keep down the numbers who can be employed and provide employers with an incentive to use more capital, though he is careful to add that this is of secondary importance only because the number of well paid employees is still small.

Mr. Little concludes that despite the political difficulties of raising taxes and of restraining the consumption of those with sufficient work, the best use of India's resources required a still larger, and more labour-intensive, plan. This assumes that sufficient foreign aid will be available for industrial development and other import using projects.

In India does not obtain the aid that she needs, the industrial part of the Third Plan would have to be cut. India could partly compensate for the loss of income so caused by increased effort towards agricultural improvement and in the social services (education, etc.). But in that event the day when India can stand on her own feet to ensure her own growth, from a level of desperate poverty, would recede even further into the future. This would be a catastrophe not only for India but for the whole free world. If it is to be avoided, the industrialised West will have to restrain its immediate consumption in order to release savings for investment in India. Since the biggest pressure for greater consumption comes from the trades unionists of the West, I suggest that India's trade unions should send a delegation on a prolonged tour of America and Europe to put the facts before the workers of the free world.

The European Scene

AUSTERITY AND DICTATORSHIP

From Our Special West European Correspondent

SAN SEBASTIAN, June 27.

SAN SEBASTIAN is the summer capital of Spain and so this week, in an operation that recalls the stately annual migration of the Governor-General from Calcutta to Simla, all the Ministries and embassies of Madrid will move up here to work, throughout the torrid Spanish summer, beside the beautiful bay of the Basque city. The transfer of the Government here does not make San Sebastian a particularly suitable place from which to follow the evolution of the Spanish economy, because all official information in this country (and that includes everything that appears in the Press which is entirely Government-run, editors being appointed by the Caudillo) is lies, evasions and hypocrisy. For example, our Madrid homonym, "El Economista", has the impudence to refer in this week's issue to "the Spanish economic miracle", meaning by that the 20 years of ignorance, indolence and inflation that brought Spain to bankruptcy last year and made her the ward of the IMF and the OEEC. This sort of fatuousness is typical of the regime but, more important, it shows the special conditions in which the Western banks and international organisations are seeking to rehabilitate the Spanish economy.

To do that, they are using medicine that has proven its value since the war in countries such as Britain, Belgium, West Germany and, quite lately, France. The ingredients are familiar: devaluation, rigid control of credit, a balanced budget, higher taxes and dearer public services, and a liberalisation of imports. This entails a period of deflation and austerity, with an inevitable reduction of consumption and some increase in unemployment. But (and this is an essential part of the formula) it is not deflation for its own sake: once prices are stabilised, the currency honestly valued and economic ambitions brought into line with economic possibilities, there follows a period of expansion. This indeed is the whole object of the exercise, the preceding deflation being intended to base the expansion on a sounder foundation. The resumed expansion is not financed by inflation but draws its substance from three main sources: domestic saving, which revives when price stabilisation renews confidence in the national money after long inflation; foreign investment which is attracted by the new value put on the currency and by sundry reforms in exchange regulations, capital-movement facilities, company law, etc; and finally a previously established government investment programme, made possible by the reduction in personal consumption and in productive state spending. A fourth source of cash, the loans consented by the IMF and foreign banks at the time of devaluation, is not meant to finance later expansion but simply to safeguard the exchange rate during the difficult and dangerous transition period.

That, very briefly, is the familiar and well-tested doctrine of Western financial orthodoxy, which has at various times been associated with the names of Camille Gutt, Ludwig Erhard and Antoine Pinay. For all its rigour, it is basically a democratic programme, firstly because the main idea is to persuade a nation to return to the system of putting free-market prices on all goods and services, including "welfare", and secondly because its success depends on the people (both workers and entrepreneurs, as well as soldiers, planners and other public spenders) realising the danger of continued inflation and accepting the necessity for a spell of painful austerity. Thus, publicity and intelligent explanation are vital, as are the people's confidence in the good faith of their leaders and their knowledge that everybody is suffering, if not equally at least to a substantial extent.

One may judge of the incompetence of the Francoist regime to carry through such a reform when no one has any trust left in the Caudillo, when a gaged Press is incapable of explaining anything to the people let alone win their confidence, and when the official doctrine is that Spain has been brought to this pass by an "economic miracle." Because of the absence of free discussion and impartial information, many Spaniards do not yet understand the necessity of the current financial reform, and they regard its rigours as new burdens added on top of the sufferings caused by previous bad governance. If they are better informed, they know that the new policy is not a continuation of the old but was forced on a reluctant Franco by his American and West European saviours, but that merely inclines them to take it as another intervention by the wicked foreigner, that stock whipping boy of the regime. (For 20 years past, Franco has preached the perfidy of "soul-less Western capitalism" just as vigorously as he has denounced atheist Communism). The bewilderment of the Spanish worker is expressed in a manifesto published lately by the Workers' Catholic Action, a document that was not meant to be clandestine but which, having been seized by the police, is circulating here secretly. ..

"The working class", it says, "which in many cases has no authentic representation and no means of making its voice heard or its influence felt, was not consulted either during the preceding inflationary phase or before the adoption of the current stabilisation plan. The lack of information disconcerts the worker, who does not know the real causes and reasons for the sacrifices that are being imposed on him...It is useless to try to convince the workers that they must humbly accept salary-cuts or even total unemployment as long as public and private waste continue." Actually, public and private waste have vastly decreased in the past year but the regime cannot show the people that they have done so without admitting the scandalous proportions they attained before. This republic of silence and subterfuge cannot even claim the credit due for its recent wisdom, without telling the truth about prior misgovernment. Having bluffed and suppressed for 20 years, it cannot claim the nation's trust and patience now when they are needed, in order to ensure the success of the only rational economic programme modern Spain has known.

Another document that is circulating here at present attacks the same weakness. It is a letter signed by 339 Basque priests and addressed to the bishops of San Sebastian, Pamplona, Bilbao and Vitoria; it deplores the fact that "super-propaganda and the one-sided presentation of facts are making impossible any knowledge of realities" and declares: "The fact is in Spain that the present political leaders have cut out all public opinion by the roots, by monopolising or dominating all means of expression and by repressing with the aid of military tribunals every vestige of political action that does not follow the unique line of thought imposed to the exclusion of all others...The Spanish Press, reversing the order established by God, is an instrument for the deformation of public opinion. It does not educate the citizen for public life; it does not express impartial judgment on the activities of the country's political, economic and social institutions..." The Basque priests

go on, in their very long indictment, to condemn such a regime in the name of natural law and the Catholic religion. My present point is more limited: the difficulty of implementing a rational economic programme in a country shrouded in ignorance and distrust. Tha totalitarian atmosphere is compatible with a variety of economic policies but not with the one that Franco has reluctantly agreed to follow under the instructions of the Western democracies. For that, the support of public opinion is an indispensable condition.

The obvious danger is that this policy, which deserves to be set to the credit of the Government, is counted as another of its sins. Franco is at last doing something useful and hopeful for Spain but he has never been more unpopular. Yesterday in a San Sebastian bar I heard him vilified with the most exquisite obscenities before a crowd of clients, something that would have been unthinkable when I lived in Spain four years ago. It is an open secret that the Spanish Church is at present quite divided over the consequences of the economic reform, with all the more liberal and humane clergy condemning that policy, leaving the defence of economic rationality to those that have been unfalteringly subservient to the regime.

This would not be so serious if one could be sure that present sufferings were a passing phase and that within a year everyone in Spain would have seen the benefits of the period of deflation and austerity. But the lack of confidence in the reform is prolonging the dangerous stage of economic contraction, and signs of the subsequent upturn are still rare. One reason is that foreign capital (and, no less important, native capital that has been smuggled abroad), which is an essential element in the recovery and the object of the devaluation and exchange-control liberalisation, remains as uninformed and as distrustful as domestic opinion. The Pinay reform in France, to take the most recent successful example, was accompanied by the repeated public admission that France had been behaving foolishly for over a decade but that a clean break was now made with the past. Full information and honest accounts secured the acceptance of this conviction, and capital began to flow back to the country for the first time in 40 years, setting off a compensatory expansion that was eventually reinforced by the revival of domestic saving.

This is not happening in Spain, where Franco again congratulated himself in Barcelona recently on "20 years of consolidation and reconstruction" alleged to have been accomplished since the civil war. No wonder foreign opinion is not convinced of the Spanish reform and that "El Economista" should complain this week that "foreign capitalists are not completely satisfied. Little capital has been invested. We have not managed to create that climate of confidence that is the basis of a flow of investments". This frankness is quite unusual in the Spanish Press (no statistics on capital movements and the payments balance are ever published and it is doubtful if Madrid really has had any reliable information on this subject until lately) but the journal in question drew from this a counsel of despair: that Spain should join the Common Market and try to use her cheap (and oppressed) labour to attract some of the American capital now going into united Europe. This is absurd of course; Spanish industry would be annihilated in the Common Market. It would be a sufficient beginning if the regime practised the obligations imposed by Spain's admission to the OEEC and told the truth, both to Spaniards and to foreign investors, about the deplorable condition into which Franco led the country and about the reasons, and the hopes, of the current painful reform.

Economic Report from the U.S.

TRADING WITH THE SOVIET UNION

BY GUY SIMS FITCH

WASHINTON, June 29.

THE past two years have witnessed a general and heartening trend towards the elimination of discriminatory trade and payments arrangements around the world. The progress made in this direction, hailed in the U.N. International Monetary Fund's recently released eleventh annual report on exchange restrictions, has been cited as a major element in both the growth of international trade and the evident economic progress being made by many free nations. Reports of sustained economic growth and high levels of international trade have come not only from the United States and Western Europe, but also from such areas as Australia, Canada, Japan, India, Argentina, Brazil and West Africa.

There is another United Nations study, however, that offers a rather sharp contrast to the Monetary Fund's favourable report on the easing of trade relations among the free nations. Prepared for submission to the July 5 meeting in Geneva of the U.N. Economic and Social Council (ECOSOC), its main burden is that nations with basically free market economies have a difficult time in their dealings with countries with centrally planned economies. This report notes that countries with centrally planned economies—for which one can read the communist-bloc economies—place many obstacles in the way of normal international trade relations. Among the obstacles cited are the secrecy surrounding actual opportunities open to traders from free nations; the subordination of foreign trade plans to national political and economic programmes; and the question of "dumping" when deemed expedient. There also is the added difficulty that in a centrally planned state the barriers against trade with outsiders are in the words of the report, "neither precisely identifiable nor of constant incidence."

It is interesting to note that a recent survey among more than 500 American businessmen in some 77 countries has turned up pretty much the same reaction to dealings with communist countries. The survey, conducted by the U.S. Chamber of Commerce, was principally with problems of trading with the Soviet Union, the prime example of a centrally controlled economy. Specially, the survey brought out a number of points which the businessmen cited as obstacles to the expansion of trade with the U.S.S.R. The foreign trade of the Soviet Union seems politically motivated to a large extent, with its main effort concentrated in countries where the U.S.S.R. may be able to gain particular political advantage; the methods used by the communists vary from country to country.

Experience has shown the Soviet practice is not to honour patent rights and other types of contracts; The Soviets seem interested mainly in short-term arrangements, especially those that enable them to obtain the latest in American machines and technological know-how which can serve as prototypes for Soviet production. One can only conclude, on this basis, that the Prime element of fruitful international commerce seems to be missing when it comes to dealing with the Soviet Union: that is, trade should be mutually beneficial and of long-term advantage to all parties. One of the most interesting studies yet made of Soviet trade practices indicates, moreover, that its own communist satellites of Eastern Europe fare even more poorly than do the free nations when it comes to trading with the U.S.S.R. Prepared by Dr. Horst Mendershausen, an economist with the Rand Corporation, a leading private research organization, the study shows that the Eastern European satellites have been losing more than $100 million a year in their trade with the Soviet Union, mainly because that trade is conducted at prices that usually favour Soviet buyers and sellers. The study discloses, additionally, a pattern of adverse price discrimination in Soviet trade relations with its satellites when compared with Soviet commerce with Western Europe. Moreover, non-communist countries which have unusually close trading relations with the Soviet Union also suffer price discrimination when compared with Western Europe, although they generally receive better treatment than do the patently exploited Soviet satellites.

All this would appear to warrant a sign labelled "caution" when it comes to establishing close trade ties with the Soviet Union. And it may help explain why American businessmen see little prospect at this time of any substantial increase in their trade with the U.S.S.R., even while they welcome the expansion of international commerce generally as an important contribution to a healthy, world-wide economic growth.

A Letter to the Editor

TOWARDS DIESELISATION?

Sir,

All credit to Mr. Suri for putting the existing hydrodynamic, hydrostatic and mechanical components into a new configuration (British Patent specification No. 818, 964) and for bringing the invention to the development stage. The transmission may prove to be an alternative to the Voith and the Maybach transmissions which are widely used in the present day Diesel-Hydraulic locomotives.

It must be remembered that Suri-transmission, in common with the Voith and the Maybach ones, does not constitute a complete drive from the engine to the locomotive wheels. Therefore, in estimating the overall efficiency of a locomotive one has to take into account other components such as the engine, final drive, auxiliaries etc. along with the main transmission that go to make a complete drive. And the design features of these components differ according to the characteristics of the main transmission.

A new development of this kind, naturally will take time, may be five years or more, before the teething troubles are overcome and the invention proved to be a workable proposition both technically and commercially. The claim that the new invention is 10% per cent better than the existing electric and hydraulic transmissions, it seems to me, at any rate, at this stage, is of a very tall order. Someone, it appears, has been counting his chickens before the eggs have been hatched.

Another interesting point to be considered is that if the transmission proved successful, can India hold her own against Maschinenban Kiel (MAK) with MAK holding the initiative by virtue of their preliminary work in the development of the invention?

Yours truly,
SCEPTIC

Dudley, England,

Special Article

INDIA'S TRADE WITH COMMUNIST COUNTRIES: 1956—59

A NEW trade and payments agreement with Hungary was signed by the Indian Union on June 25, 1960. This is a bilateral agreement envisaging payments in Indian rupees for transactions of both commercial and non-commercial nature between the two countries. This is not the first agreement of its kind. Such trade agreements, based on non-convertible rupee account, in fact, exist between India and most of the other Communist countries. An appraisal of our trade with these countries has assumed added importance in view of the bleak prospects forecast for the primary exports of the ECAFE countries in one of the recent studies of the Economic Commission for Asia and the Far-East. The Commission had analysed the likely pattern of the export prospects of ECAFE countries with the free world ignoring altogether the probable pressures of demand from the Communist bloc. Perhaps the solution of the trade imbalance between the ECAFE countries and the industrially advanced nations of the free world could be corrected by extending trade relations with the Communist bloc. In the case of the Indian Union it seems a major gap could be filled by the rupee account trade. It is with this background in view that Indian trade with the Communist countries during the last four years has been analysed in this special article.

Till 1958 there existed an unfavourable balance of trade with the Communist countries as a whole. The emergence of a favourable balance of trade in 1959 was in part a result of the bilateral agreements between India and these countries. This fact is brought out clearly in Table I below. Whereas in 1956 India's imports from the Communist bloc exceeded exports by nearly Rs. 12 crores, a sharp swing occurred in 1959 when Indian exports exceeded imports by as much as Rs. 15.2 crores. The balance of trade with the U.S.S.R. in particular, improved by a significant order. While an adverse balance of trade with East Germany, Poland, Bulgaria and Hungary still persists, the magnitude of our trade with these countries is extremely small. The favourable balance of trade with the U.S.S.R. more than wiped out the marginal imbalance registered in the case of other countries. Another interesting fact which needs to be recorded is that India's trade with the Communist bloc rose by more than fifty per cent in the period under review. As against the total trade with the Communist bloc at Rs. 54.47 crores in 1956, it rose to Rs. 87.84 crores in 1959.

Tables II and III present both country-wise and commodity-wise structure of India's foreign trade. Amongst our major imports from these Communist countries may be mentioned machinery, transport equipment, chemicals and base metals such as aluminium. In recent years, the base metals have indicated a declining trend while the share of machinery and chemicals, both relatively and absolutely, is on the increase. Base metals which constituted about two-thirds of our imports from these countries in 1957 declined to two-fifths in 1959. On the export front, tea, coffee, cashew nuts and cocoa form the biggest group, followed by crude materials, consisting largely of mineral ores. The pattern of exports to all these countries is not uniform. While food articles constituted, on the average, about 42 per cent of the U.S.S.R. imports from the Indian Union during the period 1957-59, in the case of Czechoslovakia, they were less than 5 per cent of the total imports from the Indian Union. Czechoslovakia, on the other hand, imported mostly crude materials. This pattern was in keeping with Czechoslovakia's general import structure, because more than half of her total imports in 1958 consisted of raw materials.

This analysis indicates that the demand for Indian products in the Communist countries is likely to grow steadily. It has, after the signing of the bilateral agreements, shown a marked upward swing and promises to grow more rapidly in the next few years. It will not be surprising if during the next two years, India's exports to the Communist countries rise from the current level of about Rs. 52 crores to over Rs. 100 crores. This belief is strengthened by the ambitious seven-year plan which the U.S.S.R. has already embarked upon in an effort to catch up with the standard of living in the USA. The trend of consumer goods' imports in the USSR indicates a pronounced upward course. Consumer goods constituted not more than 5 per cent of the total imports of the USSR before the war. By 1950, they have risen to about 15 per cent and at the end of 1958 the share of consumer goods was a little less than one-fourth of the total Russian imports. There is, thus, sufficient ground to believe that India's new markets in the Communist countries will grow steeply in the years ahead. Are Indian industrialists thinking enough about this new demand? The answer at present is in the negative.

THE BUSINESS WORLD

Commendable Change in Census Concept

By

CROESUS

TO many census is no more than a decennial 'tamasha' of counting heads. Even to many actually engaged in the census operations, save where it is performed voluntary, it is a matter of how much money one can make. I can well recall my contribution to the census work in 1921, which consisted of no more than writing a number of slips (slip-writing as this used to be called, though it would be more appropriate to describe it as slipshod writing) and entering a few details about age, sex, and occupation. Although with each subsequent census, more particulars have been collected, it is still true to say that the importance of census has not been understood or fully appreciated. And, as for considering the census data as an aid to the promotion of economic and social development, the less said the better. Indeed, this is a new concept which has assumed importance or grown with the concept of economic planning. It is a sad commentary on the preparedness of the underdeveloped countries that they should still be apathetic to, if not unaware of, the profound implications of the census data and demographic research to planned economic development. Dr. V. K. R. V. Rao, the Honorary Chairman of the Seminar on Evaluation and Utilisation of Census Data for Asia and the Far East, doubtless had this at the back of his mind when he urged the Seminar to take a much larger and wider view of census operation than we have been accustomed to take so far in this part of the world. In this connection, he said: "countries of the ECAFE region cannot solve their current problem of poverty, nor get rid of all the stigma of economic backwardness, nor indeed reach their full potentialities of economic growth, unless they resort to social and economic planning. But planning presupposes knowledge of requirements and resources. (Earlier in this address, I should like to say here, Dr. Rao divided resources into human and material and, in pointing out that the Seminar was chiefly concerned with the human aspect, of economic development, added: "man is both producer and consumer; his needs, therefore, determine the objectives of planning, while his abilities determine the strategy for fulfilling these requirements.")

India, (without being too parochial, may I add Bombay?) is undoubtedly fortunate that this Seminar, the first of its kind to be held in the ECAFE region, is being held here. As the Chief Minister of Maharashtra State observed in his inaugural speech, this Seminar "is not only the first international gathering to be held in this new State of Maharashtra after its formation, but it concerns a subject of vital importance to all of us, namely the effect of the rapid growth of population on the standard of living of the people and its bearing on the formulation of plans and policies for economic and social development." Another reason why the Seminar is of particular significance to us — and this the Union Minister of Health pointed out — is that we are "not only on the threshold of the 1961 census but are facing a serious demographic challenge". After listening to the speeches of Mr. Chavan and Mr. Karmarkar, one could not fail to discern the anxiety of the two about such aspects of population as the rapid rate of growth, the migration from rural to urban areas and, above all, the subject of family planning. The Union Health Minister did not mince words when he repeatedly referred to the problem of family planning, which he described as "a problem that can be neglected only at great hazard". It was also clear from the speeches of all the three that the census operations so far have lacked both diversity and dynamism, features so necessary, to make them useful. Although the decennial census offers an exceptional opportunity for collecting valuable information and digging out vital results from a mass of statistical data collected during the census, much of their usefulness is lost to us because they are made available after an appreciable interval of time, as Mr. Karmarkar pointed out, The importance of vital statistics lies not so much in their collection as in their being made available promptly and interpreted precisely. Dr. Rao evidently had all these considerations in his mind when he insisted on the census organisation being not an ad hoc and amateur agency coming into existence and dying within a brief span of time of every ten years, but a permanent and continuous agency having a whole time professional and trained staff which would be continuously engaged in census operations by samples and also in analysis and research, enlarging themselves every ten years for the purposes of undertaking the more comprehensive national census by enumeration. This, no doubt, invites what one may call the coming into operation of Parkinson's Law and all the attendant expenditure, but, as Dr. Rao said, the choice that is left to us is severely limited. It is whether we can afford this necessary luxury or whether we are prepared to carry the stigma of economic backwardness indefinitely.

Dr. Rao, it seemed to me, was unduly apologetic about accepting the Chairmanship. Out of modesty, he said, he had no special qualifications, nor was he a trained statistician. Even after the brilliant address he made and the series of valuable suggestions he threw out, he was seeking the indulgence of his more expert colleagues in the Seminar. There were, of course, present people like Prof. F. W. Notestein, President of the U.S. Population Council, who came to India not only to participate in the Seminar but to deliver a Convocation Address to the students of the Demographic Research and Training Centre at Chembur. (Incidentally, this centre owes its origin to the munificence of the United Nations and the Sir Ratan Tata and the Sir Dorabji Tata Trusts. The person that I missed most on the occasion was Dr. John Matthai, who greatly helped to bring the Centre into being. He was also the first Chairman of the Governing Body of the Centre. It occurs to me that a proper recognition of the late Dr. Matthai's work for the Centre would be to have a full-size oil painting of that great and inspiring personality.)

Among the suggestions that Dr. Rao put forward for the consideration of the Seminar, I would attach the utmost importance to his suggestion for a properly trained personnel, to undertake the census operations. No less important and very interesting too was his suggestion for a simultaneous intensive sample survey, along with each census, of the enumerated household by traineed investigators.

The need for this can be appreciated by what the sample verification count, taken for the first time in the history of census operations, after the 1951 census of India, revealed. It revealed, as Dr. Rao disclosed to the Seminar, an underenumeration of the order of 1.1 per cent. The idea of publishing a handbook along with each census is also an excellent one. But the handbook must be a really intelligent one, giving all the relevant details of the methods and machinery employed in the census. If we had such a handbook accompanying each census operation, any research worker would be able to work out norms of comparability and prepare analysis of census material extending over several decades. But perhaps the most important of Dr. Rao's suggestions to the Seminar was his proposal for linking census investigations with the initiation and continuation of research on demographic problems. As he pertinently observed in this connection an analysis of census data is becoming more and more a technical affair, needing not only the assistance of statistician but also of the economist and the sociologist. The time has come, therefore, when every country, especially in the ECAFE region, should think in terms of delibrately sponsoring and encouraging demographic research. Fortunately for us, we have already a number of demographic research centres, independent of the Governmental machinery. These include the centres in the Institute of Economic Growth, Delhi, and in the Indian Institute of Statistics in Calcutta, beside, of course, the Demographic Research and Training Centre in Bombay. It is gratifying to learn that there are plans for setting up several more of these centres. It is not that there are no demographic research centres which are doing valuable work in other parts of the world. Indeed, valuable contributions have been made by some centres in the West, contributions which are not without their usefulness to us. Even then there are problems which are peculiar to the economically less developed countries and only Demographic Research Centres established in these countries can deal with them by evolving, if need be, new techniques applicable to our situation and environment.

However, whatever original work we may do or whatever special techniques we may evolve, we can never afford to remain impervious to implications of fresh research techniques in other parts of the world. For this reason, I must say it was a well-considered proposal that Dr. Rao made to the participants in the Seminar to observe the working of the Chembur Centre and offer their suggestions for making it more useful for the promotion of Demographic Research as an aid to economic developments in Asia and the Far East. This centre enjoys the good fortune of not only having such reputed academicians as Dr. V.K.R.V. Rao and Dr. P. S. Lokanathan to guide its destinies, but also an eminent Demographist in the person of Dr. C. Chandrasekharan as its Director. Dr. Chandrasekharan, who has assumed charge as Director of this Centre, brings with him a distinguished record of valuable contribution to the science of demography, which has already earned for him international reputation.

Canada's Industrial Progress *

CONTRIBUTED

CANADA is no longer on the fringes of industrialization but ranks among the world's important manufacturing countries. Basic historical developments, such as the opening of the West and the magnitude of requirements of all kinds for World Wars I and II, have been followed by recent discoveries of far-reaching significance. Such events as the discovery of a major oil pool on the Prairies in 1947, the discovery of large-scale deposits of iron and the successful search for uranium have given new dimensions to Canadian thinking and business planning. Yet it is not the mere rate of expansion that is significant. The real signifiance is that never before had there been an advance on such a broad industrial front as in the past few years. A shift gradually took place toward the further expansion of basic industrial capacity and away from investment in consumer goods and services.

The stability of current levels of manufacturing is indicated by the fact that such activity is the result of business assessment of resources and market potentialities. Millions of dollars are being invested in oil because the Prairies can produce oil as economically as other great fields on the North American Continent. Petrochemical plants are being erected because the raw materials are readily at hand. Kitimat is based on the coincidence of abundant and cheap hydro-power and access to ocean transportation, both of which are essential to the low-cost production of aluminium. The exploitation of the Ungava iron deposits rests on the belief that the steel industry of the North American Continent will need the high-grade ores involved in order to meet continuing peace-time demands. No country is in a more favourable position than Canada to supply uranium for the production of atomic energy.

Perhaps the most significant contribution to Canada's post-war growth and potential as an industrial power—presently sixth industrially and fourth in international trade among the nations of the world—is the abundance and variety of energy resources. Thus, to Canada's rich coal resources of some 98,000,000 tons and its abundant and widely distributed water-power resources may now be added the vast resources of petroleum and natural gas in its extensive interior plains, estimated in 1958 to comprise proved recoverable reserves of 3,500,000,000 bbl. and 21,000,000,000,000 cu. ft. respectively. The tremendous activity that has recently taken place in the transporting, refining and marketing of oil and gas energy resources has significantly strengthened the Canadian economy. As a result of several major pipeline operations and the attendant expansion of strategically placed oil refineries, Canada is rapidly becoming self-sufficient in oil and gas, and the economy of the Western Provinces and Ontario is undergoing important structural changes through the establishment of ancillary industries utilizing these fuels; the thriving petrochemical industries close to the major refining centres or near the low-cost natural gas and oil fields are striking examples.

Canada is, moreover, a leading world source of uranium ores, one of the newest and most spectacular of energy resources. Its 20 uranium mines in production at the end of 1958 with 16 processing plants had attained a uranium ore capacity of 39,700 tons a day. Canada is also among the leaders in atomic research for industrial purposes and has under construction an atomic power station for experimental purposes in the technical field of electric power generation through the use of nuclear fuels.

That Canada in ten years has more than doubled its mineral production indicates that it is producing many basic minerals vital to its own economy and in short supply in other countries. Furthermore, the fact that these resources are available in a politically and economically sound Canada has attracted a remarkable inflow of investment capital and technical skills from the United States. Increased Canadian and foreign investment in new mines, in oil fields and related industrial projects, and in new transportation facilities has brought about substantial shifts in Canada's economic geography, broadening the distribution and diversification of industry and strengthening the national economy.

* Canada's National Day—July 1—is an appropriate occasion to review her rapid strides in industry.

It is only in the past two decades that manufacturing has attained its position of pre-eminence in the Canadian economy. When war broke out in 1939, Canadian industry responded to a flood of military orders and expanded and diversified at a dramatic rate. Canada, along with the United States, became "the arsenal of the free world." Productive capacity, inadequate to meet the demands placed upon it, underwent intensive expansion, particularly in the heavy industries producing automobiles, aircraft, ships and steel. There was spectacular development in such fields as aluminum, electrical apparatus, tool-making and chemicals.

The postwar period brought neither a reversal of the outstanding industrial progress of the war years nor any major setback. Reconversion from wartime to peacetime production was completed within two years, and most industries embarked upon programmes of modernization and expansion. The outbreak of the Korean war in 1950, Canada's obligations under the NATO treaty, and heavy annual defence expenditures served to stimulate industries in the fast-developing fields of electronics, jet aircraft and engines, and shipbuilding. Full employment, immigration, a high birth rate—all made for strong and sustained consumer demand.

In less than twenty years the number of manufacturing establishments increased by almost 50 per cent and the total number of workers in industry by about 110 per cent. Manufacturing directly supports nearly one-third of the whole population; it contributes significantly to the employment of other Canadians through purchases by manufacturers and their employees of raw materials, foods, farm products and transportation services, to mention only the more important. There are now as many Canadians employed in manufacturing as in the combined industries or farming, forestry, fishing, mining and construction. The value of manufactures—$9,822,000,000 in 1957—was nearly one-third of the gross national product for that year.

Indicative of the rapid industrialization and changing pattern of Canadian manufacturing production during the past decade is the increasing importance of the industries producing durable goods. Aircraft and parts which did not rank among the leading industries in 1949 advanced to the ninth place in 1957; miscellaneous electrical apparatus and supplies from nineteenth to eleventh place; industrial machinery from twenty-sixth to twelfth place; miscellaneous food preparations from twentieth to thirteenth place; primary iron and steel from eighth to sixth place; and petroleum products from fifth to second place. On the other hand, moderate declines were recorded by some of the consumer goods industries.

Business Notes

Shipping

INADEQUACY OF ALLOCATIONS

THE INDIAN SHIPPING tonnage has no doubt been steadily expanding since Independence, as the table below shows, but one cannot contend that the extent of expansion has been satisfactory, let alone adequate, considering the phenomenal growth in world tonnage, world trade, and India's own international trade.

Period	Second-hand Ships		Ships newly constructed		Total acquisition	
	No.	GRT	No.	GRT	No.	GRT
Pre-Plan (1-1-46 to 31-3-51)	57	252,921	18	80,127	75	333,048
First Plan	42	117,467	31	192,596	73	310,063
Second Plan (Upto 30-11-59)	33	128,193	11	73,582	44	201,775
TOTAL	132	498,581	60	346,305	192	844,886

The inadequacy of Indian tonnage will become particularly obvious if we set down our position against the international setting. The rate of new additions made every year to world tonnage—which stands today around 130 million tons gross—is as high as 9 million tons, largest additions to this evergrowing fleet being made by the major shipowning countries of the world. While countries like Germany and Italy which had practically lost their fleet during the Second World War possess today tonnage higher than what they had in the pre-war days, a number of the countries which did not have to face the ravages of the war, like Norway and Sweeden, have increased their tonnage spectacularly. Thus, while the major maritime countries of the world have been steadily acquiring more and more tonnage annually, India's tonnage expansion, though upward, has been neither remarkable nor commensurate with the country's requirements. On the other hand, India's tonnage has remained for quite sometime now at just a little over one per cent of world tonnage, accounting for the carriage of not more than a meagre 10 per cent of our seaborne trade.

Viewed against this background, the announcement made by the Union Minister for Transport and Communications, Dr. P. Subbarayan, regarding an allocation of just Rs. 55 crores in the Third Five-Year Plan for the development of shipping when he inaugurated the last Annual General Meeting of the Indian National Steamship Owners' Association in Bombay, is bound to cause disappointment. This allocation is far too inadequate to enable this vital industry to make any substantial headway. It is difficult to understand how or why even at a time when the economy is said to be on the threshold of a "take-off" and when no stone is being left unturned both to earn and conserve foreign exchange, allocations to shipping, which is both an important earner and saver of foreign exchange, could be made so grudgingly. If nothing else moves the Government, at least the imperative need to participate in importing the 17 million tons of foodgrains from the United States to the maximum extent feasible ought to provoke it to a better sense of proportion in regard to this question. The first step in this direction then should be to revise upwards the allocation to shipping substantially, or, better still, double the present provision of Rs. 55 crores.

Co-operation

BOMBAY STATE CO-OPERATIVE BANK

THE BOMBAY State Co-operative Bank, one among the three Apex Banks in the co-operative banking hierarchy of the former Bombay State, has been playing a vital role in fostering co-operative movement in the State since 1912. The year 1958-59 (ending June 30, 1959) was another successful period in the annals of co-operation in the State. The credit goes to the Bombay State Co-operative Bank, though generous and timely accommodation by the Reserve Bank of India and the net-work of branches, which the State Bank of India had been building up, played no less a significant role in bringing about this success of the movement.

Its deposits, which had more than doubled in the last decade and which stood at a level of Rs. 17.20 crores on June 26, 1959, constituted a little more than one-third of the total deposits of all the sixteen Apex Banks combined together. This improvement in deposits had enabled the Bank to meet the credit needs of the affiliated institutions and place less reliance on refinancing facilities as compared to other Apex Banks. In the year under review, the Bank improved its resources—paid-up capital, reserve funds, borrowed capital, deposits etc.—by about Rs. 5 crores, and three-fifth of this addition

came from a rise in deposits. This raised the share of deposits in the total resources from 56 to 57 per cent This increase in deposits was in tune with the rise of deposit of the banking system as a whole in 1958-59.

The demand for financial accommodation broadened considerably during the year under review, though on account of improved repayments, outstandings at the close of 1958-59 showed a net rise of Rs. 80 lakhs only. The bulk of lendings was for financing short-term agricultural operations and this had a definite bearing on the increased agricultural output in 1958-59. Income, largely in the form of interest received on loans, was up by about Rs. 10 lakhs, but profits increased by Rs. 1.5 lakhs only. This was because of larger appropriation under the head interest paid on borrowed capital and deposits which increased by about Rs. 4.7 crores in the same year.

A well-merited tribute ought to be paid to Mr R. G. Saraiya who retired on 14th October 1959 from the Chairmanship of the Bank, for his invaluable services. It is largely because of his sterling guidance as Chairman (1938-59) and Director (1932-59) that the institution continued to occupy a dominating position among all the Apex Banks in the country.

Rayon

NATIONAL RAYON'S STEADY PROGRESS

THE NATIONAL RAYON CORPORATION achieved a higher level of turnover during 1959. While the output increased as compared to the previous year, the figure for cost of raw materials consumed was considerably lower. This is essentially due to the fact that caustic soda, the principal raw material required for the manufacture of rayon yarn, was produced by the company itself. The company's plant worked at full capacity so that it did not have to purchase imported caustic soda and instead, only salt and raw materials required for the manufacture of caustic soda were purchased. The company has not, however, been able to make proper use of chlorine, an important by-product of caustic soda, because it does not have sufficient number of cylinders and other containers. As the empty containers return to the company very late it is considering the purchase of some more cylinders. At the present time production of chlorine compounds is in the research stage and depending on its success it may be manufactured on a commercial scale.

Mr. Kasturbhai Lalbhai, Chairman of the Company disclosed at the last annual meeting that the scheme for the production of Tyre Cord was progressing well and expressed the hope that production would start some time in the second half of 1961. This section will certainly prove fruitful as the number of tyre manufacturing companies is growing rapidly. On the score of the distribution of Rayon Yarn, which is practically controlled by the Government due to shortage, the Chairman has made a pointed reference to the fact that there have been delays in the issue of necessary quota certificates and cards for the distribution of yarn, although the scheme has been in operation for a period of three years. "The office entrusted with the work," he added, "still takes about two to three months to distribute cards to consumers". This delay perforce necessitates the holding of larger stocks by the producers and is detrimental to the industry as well as the consumers. The Government ought to investigate this complaint to eliminate avoidable delays.

Engineering

PROGRESS OF KAMANI CORPORATION

AT THE 14th Annual General Meeting of the Kamani Engineering Corporation Ltd. Mr. R. H. Kamani, Chairman of the Corporation, spoke with confidence of the progress attained by the Corporation. In a nutshell, the progress achieved is demonstrated in the record production, technical collaboration for railway electrification work with its Belgian partner and further development in the manufacture of Mark II "Tractamount" Road Rollers with latest improvements. The encouraging aspect in the development of the Mark II Kamani-Twose Tractamount Road Roller is that not only will it supply the necessary machinery for road development, but would also save considerable foreign exchange. In regard to the railway electrification work, the first contract received by the corporation is for the supply and installation of 25 Kv. A.C. Traction Overhead Equipment over Kharagpur-Tatanagar Section of the South Eastern Railway at an approximate value of Rs. 56 lakhs. With a larger electrification programme envisaged for the railways in the Third Plan, more opportunities will be opened up to the corporation,

In addition to all this, is the satisfactory development in the field of exports. First of its kind to be exported from India is the Kamani Engineering's modest consignment of 47.6 meters high communication Mast exported to Thailand for the Royal Irrigation Department, Bangkok. Thailand is in need of engineering goods in particularly the transmission line towers. Every effort needs to be made to cater to that market. Greater exports to that country could help us in paying for the much-needed rice. In the country itself Kamani's have supplied to important power projects over 50,000 tons of towers ranging from 22 KV to 220 KV. They have designed as many as 200 different types of towers for about 59 projects, 100 sub-station structures and about 30 Aerial Communication Masts. The Corporation is thus firmly set on a new phase of expansion.

Bicycles

SEN - RALEIGH'S FORWARD RECORD

THE BICYCLE industry in India attained another peak in the field of production so that output during 1959 increased over the previous year by 30 per cent. In line with the industry in general, Sen-Raleigh Industries have been able to achieve an expansion of about 50 per cent in their production and sales of bicycles over 1958. One notable development in the industry has been the successful operation of a bicycle export pool organised by the Cycle Manufacturers' Association of India. Sen-Raleigh Industries in this respect played a prominent part and contributed nearly 70 per cent of the total exports during 1959. This fine record of the Company speaks of the quality of its products which were appreciated in the foreign market. It may be added that no little part in the improved working of the industry was played by the import licensing policy of the Government of India. As the foreign exchange position became less stringent, a simpler and rational import licensing policy was introduced which has helped the industry considerably.

Although the output targets in the proposed Third Five-Year Plan for the bicycle industry are bound to be higher, at the moment the Government of India has a policy to restrict the issue of licences for additional units. The Chairman, Mr. Abhijit Sen, pointed out at the annual general meeting, held recently in Calcutta, that the Company is thinking along fresh lines of branching out into such allied lines of light engineering manufacture where capacities are granted more easily and fed to the fullest extent by release of raw materials. The Company already has a reputation for quality and for technical ability in developing light engineering goods which certainly would stand in good stead to obtain industrial licences. It goes without saying that such diversification into new lines of manufacture will help turnover and reduce overheads considerably. It need not, however, shift the Company from its main line of activity where it has established itself during the last few years.

Current Topics

CUT IN U.K. ATOMIC POWER PROGRAMME

The British Government's accelerated £919 million power station programme, which was announced in 1957, is to be cut by £90 million.

THE main reason for this, says a White Paper published last week, is that coal has become plentiful and oil supply prospects improved. Another reason for the reduced programme is the extent of the fall in the cost of producing electric power from the new conventional stations.

The White Paper says: "Since 1957, coal had become plentiful and oil supply prospects have also improved. The need on fuel supply grounds for an immediate and sharp acceleration in the rate of ordering nuclear capacity has, therefore, passed. Although the cost of electricity from the first nuclear stations to be commissioned next year will be rather higher than earlier estimates, the costs of later stations are following closely the downward trend foreseen in 1957. What was not foreseen was the extent of the fall which has also taken place in the costs of conventional power from new stations."

The developmen of larger generating sets, it says, has reduced the capital cost of these new stations and the use of higher steam temperatures and pressures has increased their efficiency. Siting of new stations near to low-priced coal sources has also had an advantageous effect.

The White Paper says that the national interest will best be served by continuing for the time being to place orders for nuclear stations at the rate of about one every year. At this rate, there should be at any time five or six stations in various stages of development. Because the capacity of individual stations is likely to increase, this decision should produce a steadily rising rate of nuclear commissioning which should give the country about 5,000 megawatts of capacity in 1968.

However, despite the present world surplus of coal and oil, says the White Paper, Britain still faces the eventual prospect that her growing energy demands will call for more and more supplies of nuclear power. By 1975 power stations will be consuming the equivalent of some 125 million tons of coal a year — well over double the present rate — and by the 1980's their annual requirements would reach the equivalent of 200 million tons. In the long run, Britain shall, therefore, need increasing supplies of nuclear power. In about 10 years' time it should be cheaper to generate base load in nuclear stations than in conventional ones provided Britain achieves the technological progress that is expected.

Sir Roger Makins, chairman of the U.K. Atomic Energy Authority, questioned about the statement in the White Paper that there would be some loss to the Authority, said that a large part of the loss would be due to the stocks of uranium secured to meet the 1957 programme. "It was necessary to procure uranium on long-term contract", said Sir Roger, "and there had to be installation of capacity to fabricate and process the fuel. The loss is a substantial figure — some millions — I would not like to say further than that."

PRODUCTION OF STAINLESS STEEL

It is proposed to make a trial run for the production of 100 tons of nickel-free stainless steel in the new Alloy and Special Steel Plant to be put up in the public sector. The economics and prospects of production on a commercial scale will only be known after the success of the trial test.

THE metal, which is included under the broad category of stainless steel, is used for all kinds of domestic utensils, pressure cookers, cooking ranges, wash-basins and sanitary fittings. It is also used in hospital ware, dairy equipment, decorative and architectural purposes, steel furniture and high strength structural members. This category of steel may also be manufactured at the special steel plant in the private sector the application for which is already under consideration of the Government.

The public sector special steel plant was originally planned to produce about 40,000 tons of special steel ingots with provision in the layout for rapid expansion to 80,000 tons. But as the demand for special steels is growing rapidly, it may be necessary to have a larger plant initially. In the agreement with the consulting engineers, therefore, an alternative scheme for a works with an initial output capacity of 80,000 tons of ingots a year calculated to yield 50,000 tons of saleable finished products and capable of rapid expansion to 160,000 tons of ingots a year, calculated to yield 100,000 tons of saleable products, has been included. The location of the plant will be decided after examining the detailed project report. The consulting engineers are to examine the suitability of the site at Bhadravati, Rourkela, Bhilai and Durgapur and make recommendations on their relative merits.

The private sector plant — Tatas — have submitted a scheme for setting up an alloy and tool steels plant with an initial capacity of 100,000 tons of ingots or 60,000 tons of finished products per year. According to their scheme the plant is to be located near their main Works at Jamshedpur from where clean scrap will be readily available without much transport difficulty and cost.

*

The year 1959 was notable in Britain's economic annals as a year of rapidly increasing activity which culminated in November with a record total working population estimated at 24,385,000. The annual report of the Ministry of Labour, published on June 28, states that by the autumn overtime had risen to a very high level and short-time working had fallen to one of the lowest levels recorded. Although the year started with nearly 621,000 registered unemployed—the highest number since 1947—the fall in this number brought the average down to 475,000. The fall in the course of the year was nearly 200,000, and unemployment became essentially a local problem.

A DELHI NOTEBOOK

HEAVY PLATE AND VESSEL WORKS

SOME details are now available of the recommendations of W. S. Atkins and Partners on the establishment of a Heavy Plate and Vessel Works in India. "The works would provide a market for the steel plate to be manufactured by India's large new iron and steel industries and would supply a market created by general industrial expansion." The works will be a jobbing shop capable of making a very wide range of products from heavy steel plate, the main portion of the output being vessels (both pressure and non-pressure vessels) and containers with their ancillary pipe-work and supporting structures. As the products of the works are to be mainly "purpose built" there will be little scope for adoption of the methods of mass production.

W. S. Atkins and Partners have expressed the opinion that it would be desirable that the works is self-contained, capable of completing the job in a form ready for use by the consumer. For this purpose, they have included in their scheme both heavy machining capacity and facilities for fabricating structures. A few ferrous and non-ferrous castings, however, would have to be obtained from other sources.

The works will have a manufacturing capacity for working plates 1½ inches thick and for hot pressing plates 2 inches thick. Vessels would be made up to 15 feet diameter and 100 feet long, although larger vessels could be made by making special arrangements. The planned output is 12,000 tons per year when working on a single shift basis, but provision is made for extending the shops to raise output by approximately 30 per cent. This output, however, would only meet a fraction of India's demand.

A typical sub-division of the various kinds of platework and ancillary work is as follows:

Product	Typical Yearly Output Maximum Size	Output (In tons)
Plate pressings	15 feet diameter	2,000
Heavy flat and rolled platework	3 inches thick	2,800
Light flat and rolled platework	1 inch thick	3,000
Structural work	All rolled sections	3,200
Ancillary pipework	14 inches bore	200
Machined parts	—	800

A total of 142 staff and 654 work people would be required for the scheme with single shift working. The total capital cost, including working capital and commissioning expenses but excluding the cost of the land required, is estimated at Rs. 619.06 lakhs. After two years' working, when the works should be in full and efficient production, the profit is estimated as Rs. 152.69 lakhs per year after allowing for depreciation. This gives a return of 27 per cent on the capital outlay before allowing for provision for taxation. The estimated capital and operating costs are based on prices ruling in July 1959. Although certain provisions are incorporated for rising prices, the financial conclusions of the report are subject to changes in price level. It is estimated that 2-1/3 years would be required to complete the project, with an additional period of at least 4 months for running-in, depending upon the experience of the staff and technicians.

No specific site has been recommended in the report as W. S. Atkins and Partners were not required to go into this matter. In preparing their report, they have made some assumptions, the important of them being (1) that sufficient electrical and water supplies would be available on the chosen site; (2) that the works would be located within a reasonable distance of the supply of steel plates, steel sections and castings; and (3) that adequate staff and labour would be easily available.

To achieve a flexible production unit capable of manufacturing the wide variety of products, the works is planned to have three main fabrication bays; namely the heavy vessel shop, the light vessel shop and the structural shop. The remaining bays, comprising two stockyards, the marking and preparation bay, the press shop and the machine shop, will provide service to the fabrication shops.

THIRD PLAN

The latest reports indicate that the draft of the Third Five-Year Plan will be published for public comment by the end of the next week. In addition to the inclusion of the fourth public sector steel plant, to be set up at Bokaro, the final draft, it is understood, contains a provision for a higher coking coal target. The coking coal target, it is learnt, has been stepped up from 9 million tons to 11 million tons and the major portion of this output will come from the private sector.

Some details about the Bokaro Steel Plant too are now available. It is learnt that this plant will be a second Rourkela so far as the end-products are concerned. It will mainly manufacture plates and sheets which are currently in short supply and which are likely to remain so far another few years to come.

An important feature of the Third Plan, it is further learnt, is that at least the first two years of it would be devoted to the preparation of detailed reports of the projects included in it. During these years, therefore, the actual expenditure in the public sector may not be according to schedule. It is largely for this reason that the view is held in some circles that the foreign exchange requirements of the first two years of the Third Plan may prove to be over-estimates.

DISTRIBUTION OF PETROLEUM PRODUCTS

The Government of India, reports suggest, is in favour of utilizing service co-operatives for the distribution of petroleum products like kerosene, wherever feasible. The oil companies, it is said, have already been informed of this move and they are credited with having assured the Government of their co-operation. The service co-operatives will assist the newly set-up Government-owned oil marketing company, the Indian Oil Co. Ltd., in its operations. The Indian Oil Company, it is understood, has already applied to the International Co-operative Petroleum Association, for affiliation. The ICPA at present has affiliates in nearly 20 countries, including Egypt and Israel.

ELECTRIFICATION OF EASTERN RAILWAY

The implementation of the second phase of the electrification programme of the Eastern Railway system, it is learnt, is well underway. The Railway Board has placed an order with the British Insulated Callenders Cables Group for the supply and installation of overhead equipment for 25 A.C. electrification on some 300 track miles between Gaya and Moghalsarai, on the main line connecting Delhi and Calcutta. The contract is worth £1,200,000 and is to be executed by July next year. The equipment to be supplied is similar to the one being installed at present on the South-Eastern Railway system.

CALCUTTA PORT SERVICES

The Government of India has decided to set up a one-member committee, consisting of Mr. S. N. Guha Roy, a retired judge of the Calcutta High Court, to enquire into the conditions of service of the six Marine Services—Assistant Harbour Masters' Service, Hooghly Pilot Service, Dredger and Despatch Service, Marine Engineers' Service, River Survey and Berthiug Masters' Service—at the Calcutta port. This follows the putting in of a series of demands by each of these services, which the Governmnt thinks can best be dealt with collectively by one person.

WORLDGRAM

India

Good-Year's New Tyre Project: Details of the erection of the Rs. 6-crore tyre and rubber manufacturing plant at Ballabgarh, 21 miles south of Delhi, were revealed by Mr. R. E. O. Carey, Managing Director of the Good Year Tyre & Rubber Co. of India Private Limited. The 71-acre site was chosen after a careful study of various factors, and was encouraged by the desire of the Government of India to industrialise this area, and to equitably distribute the manufacture and marketing of tyres. This will be the most modern tyre factory in India and will operate the very latest in equipment. In addition, it will introduce into India the revolutionary new processing of tyre fabric—called 3-T, which has been developed by Good Year technicians after years of reserach and considerable investment. The 3-T unit is a factory within a factory. Mr. A. G. Buckley, Manager, Construction Engineering of Goodyear, Arkon, Ohio, who is in charge of construction, stated that the plant is expected to be completed early in 1961. It will employ approximately 900 workers and manufacture a complete range of passenger, truck and farm tyres and tubes. The project is a part of the programme of Goodyear—the world's largest tyre company—to place before all its overseas organisations, the benefits of its experience, resources and technical skill.

*

Liquid Fuel from Coal and Blast Furnace Gases: The possibilities of producing liquid fuel from low grade coals and blast furnace gases are now being investigated at the Indian Institute of Technology at Kharagpur. A 100-gallon per day capacity pilot plant for the production of synthetic fuel from coal has been designed and fabricated in the Department of Chemical Engineering of the Institute. Its working will provide data for the design, construction, operation and maintenance of a commercial plant.

*

Bhilai Steel Billets for East Pakistan: The first consignment of 600 tons of mild steel billets produced at the Bhilai Steel Works was dispatched from Bhilai recently for East Pakistan. This is for the first time the Hindustan Steel billets from Bhilai are going to a foreign country. The Bhilai Steel works have produced more than 120,000 tons of steel billets which have been despatched to re-rolling mills all over India.

*

Manufacture of Scooters: The Enfield India Limited Tiruvottiyur, will commence production of scooters from 1961. This factory which is the only motor cycle manufacturing unit in West and South-East Asia and which is now annually turning out 5,000 Royal Enfield motor cycles, is licensed to produce 6,000 scooters a year. The Government of India have given formal sanction for the manufacture of scooters by the factory.

U.S.S.R.

Joint Beneficiation Combine in Urals: Work has started on a giant beneficiation combine at Kachakanar, near the Urals city of Nizhni Tagil. The undertaking will take up an area of 100 square kilometres. It will process the Kachkanar iron ore the resources of which, according to preliminary estimates, will last for 130 years if worked at 30 million tons a year. The first section of the combine will be put into operation in 1961. By the end of the Seven-Year Plan (1965) it will have become the principal supplier of enriched ore to the iron and steel industry of the Central and Northern Urals.

U.S.A.

Assistance to India: The United States Government's assistance rendered to India up to June 18, 1960, is as follows:

	Dollars (Million)	Rupees (Crores)
Aid under Indo-American Technical Co-operation Programme	475.4*	226.3
Public Law 480, Title I	2,243.5	1,067.9
Development Loan Fund	281.1§	133.8
Export-Import Bank credits	165.4	78.7
Wheat Loan of 1951	189.7	90.3
Agricultural commodities distributed through voluntary agencies (Public Law 480 Title III	102.1	48.6
Famine relief grants to Indian Government (P.L. 480—Title II—$4.9 million + ICA—$5.5 million)	10.4	4.9
Total	3,467.6	1,650.5
Breakdown		
Loans repayable in dollars	355.1‡	169.0
Loans repayable in rupees or dollars	1,493.7†	711.0
Grants to Indian Government for economic development	1,051.8¦	500.7
Amounts under PL 480, Title I reserved for U.S. Government use (including funds for loans under the Cooley amendment)	448.4	213.4
Famine relief grants to Indian Government	10.4	4.9
Agricultural commodities distributed through voluntary agencies (PL 480, Title III)	102.1	48.6
Foreign currencies programme	6.1	2.9
Total	3,467.6	1,650.5

* As of 30th April, 1960. Includes $6.1 million worth of foreign currencies made available to India in exchange for rupees.

§ Includes $10 million DLF loan to National Small Industries Corporation announced on June 17. This is the only change in the statistics since last fact sheet dated June 4, 1960.

‡ Consists of wheat loan of 1951 and Export-Import Bank credits.

† Loan portion of PL 480, 1st to 5th agreements $1,062.6m
Development Loan Fund loans 281.1 „
4 loans granted by TCM 150.0 „
$1,493.7 „

¦ Grant portion of PL 480, 1st to 5th agreements $ 732.5 „
Aid under Technical Co-operation Programme ($475.4 million) less loans ($150 million) and foreign currencies programme ($6.1 million) $ 319.3 „
$1,051.8 „

United Kingdom

Economic Aid to India: Details of the amounts of loans, grants and other forms of economic assistance made available by the British Government to India since she became an independent member of the Commonwealth were given in the House of Commons

June 21 by Mr. C. J. M. Alport, Minister of State for Commonwealth Relations. Mr. Alport, in a written answer to a question put by Mr. George Thomson, gave these figures:

(a) Loans made under Section 3 of the Export Guarantee Act tied to U.K. goods and services, 1958, for the Durgapur steelworks £15,000,000; 1958, for general imports $28,500,000; 1959, for the Assam pipeline £3,000,000; 1959, for general imports £19,000,000.

(b) 1958, advance repayments of surplus pension funds due to India £22,000,000.

(c) 1951-59, technical assistance costing approximately £1,400,000.

*

Modernising Iraqi Irrigation System: A British firm's scheme for modernizing an irrigation system near Baghdad has been approved by the Iraqi Economic Planning Board, it was stated in London on June 21. It is estimated that the work will cost £17,000,000. The Iraqi Ministry of Agriculture has been instructed to sign a contract with the firm (Sir M. Macdonald & Partners). The scheme is intended to improve the existing system of irrigation in the Diayala area, which extends north-east of Baghdad, by using water stored behind the Derbendi Khan Dam, now being built.

France

Warning Device for Icy-roads: The Jules Richard Company, which is well known for its measuring and weather devices, has just developed a new device for warning of frost and icy road conditions. The new device will be used by the Bridges and Highways Department, at airports, by rail-roads (for switches and on traction cables), by port installations and for various purposes in mountainous country.

Italy

Laying the Assam-Bihar Pipeline: An Italian-German combine, SAIPEM (of ENI Group) and MANNESMANN ROHRLEITUNGSBAU, has been recently awarded the contract for laying the 720 miles long pipeline which will convey the crude oil drilled in Nahorkatiya, Assam, by Oil India Pvt. Ltd. to the new refineries of Gauhati and Barauni. The first stretch, connecting the oilfields to the refinery of Gauhati, will be 260 miles long, and the diameter of the pipes will be 16". The second stretch, which will reach the refinery of Barauni, Bihar, will be 460 miles long and the diameter of the pipes will be 14". The pipe laying work will take about two years. The pipeline will run mostly through jungle, tea gardens and paddy fields, and will require the crossing, either suspended or submerged, of several rivers. The approximate cost involved in the execution of the project is calculated at about US $12,500,00.

Japan

MITI Releases White Paper on Japan's Foreign Trade: The Ministry of International Trade and Industry has recently released a White Paper on Japan's Foreign Trade (1960 edition). The latest White Paper, the 12th of its kind to be published since the first edition was issued in 1949, analyses the current picture of Japan's foreign trade on the basis of trade developments in the calendar year 1959, and points out various problems to be tackled in the period ahead, placing special emphasis on the question of liberalizing Japan's foreign trade and exchange controls.

U.A.R.

Locust Control Agreement: Seventeen of the 19 countries participating in the UN Special Fund's six-year project for controlling the desert locust have now signed formal agreements with the United Nations. The Food and Agriculture Organization is the executing agency for the $ 3.8 million project, which seeks to reduce losses from locust damage in an area stretching from the western part of Africa through the Arabian penninsula and the Middle East into Pakistan and India.

The United Arab Republic is the latest country to sign an agreement. The other 16 are Ethiopia, France, Ghana, India, Iran, Iraq, Italy (Somalia), Jordan, Lebanon, Morocco, Pakistan, the Sudan, Tunisia, Turkey, the United Kingdom and Yemen. The other two participating countries are Kuwait and Saudi Arabia.

Rumania

Production of Mineral Fertilizers: According to the provisions of the draft Directives of the Third Congress of the Rumanian Workers' Party for the plan of development of the national economy in the years 1960-1965 and for the long-term economic programme, Rumania's production of mineral fertilizers will reach some two million tons in 1965. In the plan of development of the industry of fertilizers, particular attention is paid to the production of nitrate fertilizers which have a powerful basis of raw material—the methane gas. A factory of nitrate fertilizers has started functioning at the chemical combine of FAGARAS which, by the chemical treatment of the methane gas, will yearly produce 100,000 tons. Assembly work is also going on in a combine of nitrate fertilizer in Moldavia with a production capacity of 210,000 tons a year which is to start operation in 1961.

Yugoslavia

Trade with East European Countries: As shown by the statistical data available, Yugoslav trade with the countries of Eastern Europe during the first quarter of 1960 was at an appreciably higher level than in the corresponding period of 1959. The value of exports was raised by 1.3 billion dinars and totalled 7.8 billion in all. This proves that the upward trend of exports registered by the end of 1959 was continued at the beginning of 1960; on the other hand imports from the East European countries were also increased appreciably having reached about 17 billion dinars during the first quarter of 1960 against only 5.04 million during the corresponding period of 1959.

Belgium

Biggest Power-Station Turbo-Alternator in the World: Two turbo-alternators which can be considered at the moment as the biggest units in the world designed for a speed of 3,000 r.p.m. are shortly to be installed in France, in the central power-stations of the E.D.F. The machines in question will be built in France according to the plans supplied by the Belgian firm of Ateliers de Constructions Electriques de Charleroi, which recently finished the complete study thereof.

F.A.O.

Freedom-From-Hunger Campaign: The world-wide Freedom-From-Hunger Campaign sponsored by FAO will be launched in the various countries on July 1st. In India, where a National Campaign Committee has been constituted under the chairmanship of Dr. Panjabrao Deshmukh, Union Minister for Agriculture, for participation in the five-year Campaign, the Campaign will be inaugurated on July 1st with a recorded broadcast talk to the nation by Dr. Rajendra Prasad, President of India. The proposal for a Freedom-From-Hunger Campaign was first conceived by the Director-General of FAO and outlined at the meeting of the Economic and Social Council (ECOSOC) in the summer of 1958. The proposal was later discussed at length at the Tenth Session of the FAO Conference in November 1959. The main objectives of the Campaign it will be recalled, are to promote a better understanding of the problem of providing adequate food for the present and future world population in the light of the rapid increase in populations and of all the methods available for bridging the gap between available and optimum food supplies, and to stimulate national and international action with a view to bridging the gap. To achieve these ends, the activities related to the Campaign will fall into four broad categories, viz. informational and educational; research; national action programmes; and FAO guidance when requested for Technical Assistance projects and programmes.

NEWS IN BRIEF

INDIAN

According to an analysis made by the World Trade Department of the Indian Chamber of Commerce, India's exports of tea, jute goods, cotton textiles, and engineering goods showed substantial increases in the first quarter of 1960 over the corresponding period of 1959.

*

Agriculture and weaving head the list of crafts whose educational potential as a medium of children's education has been the subject of research at the National Institute of Basic Education in New Delhi.

*

The programme of training extension personnel has been geared to meet the full requirement of 50,000 gramsevaks and 10,000 gramsevikas by October, 1963.

*

Over Rs. 605 lakhs were earned as revenue by the Damodar Valley Corporation from the sale of power, produced by its network of power houses, in the year 1959-60. The cumulative sale of power during this period was about 1,312.5 million KwH.

*

The attention of the Government of India has been drawn to the insistence by many Indian companies on the production of Estate Duty Clearance Certificates under the provisions of Section 84(2) of the Estate Duty Act, 1953, before allowing mutation of shares held by deceased members in the names of their heirs or successors.

*

A six-member technical team of officials left recently for Poland to study the projects for which the Polish credit of Rs. 14.3 crores could be utilised.

*

The import of rice and paddy, including their products, into Rajasthan has been prohibited, according to an extraordinary gazette notification issued by the Central Government.

*

As a measure of export promotion, the Government of India propose to grant drawback of duty on iron castings at the rate of Rs. 10 per ton, consequent on the imposition of Central Excise duty and a corresponding increase in the rate of import duty with effect from March 1, 1960.

*

The Government of India have referred the dispute between the Madras Port Trust and their employees to the Additional Industrial Tribunal, Bombay, for adjudication.

*

The Government of India have sanctioned the purchase of two shipping tugs for the major port of Vizagapatam at a cost of about Rs. 78 lakhs. The tugs which are required to provide facilities to the ships coming into the port, are to be built in India.

FOREIGN

In line with its policy of encouraging private investment in developing Greek industry, the Government has decided to hand over the development of the new Greek sugar-refining industry to a mixed company. The headquarters of this company will be at Salonika

*

Soviet exports of oil and oil products moved up from 4.2 million tons in 1953 to 25 million tons in 1959, according to figures published in the latest issue of "Vneshnaya Torgovla" (Foreign Trade). In the same period exports of iron ore moved up from 6.3 to 13.4 million tons; rolled steel from 1.2 million tons to 2.4 million tons and sawn timber from 1.3 million cubic metres to 4.4 million cubic metres.

*

It is reported that by 1962, Mexico will have 28 petro-chemical plants. Half of these are already under construction.

*

The Government of South Africa is backing a sea-going exhibition of South African products in an attempt to open new markets in the Persian Gulf area.

*

Two Czech concerns are to build eight factories in Cuba for completion of next year. Recently Dr. Castro announced that negotiations were going on with Czechoslovakia for the purchase of 70 complete plants, to be built in Cuba during the next three to four years.

*

Increased quotas for the export of consumer goods and machinery and equipment were agreed at the annual review of Anglo-Soviet trade which finished in London recently.

*

A large number of new jobs for people in Scotland, particularly in the engineering and chemical industries is envisaged by the Scottish Council (Development and Industry) as a result of its energetic campaign to attract new industry north of the border.

*

Under an agreement between the International Harvester Company of Great Britain and S. A. de Construcciones Agricolas of Sevilla, a version of the IHB-275 tractor is to be made under license in Spain.

*

The Export-Import Bank has announced the granting of a $ 5 million six-year credit to the Central Bank of Chile, which in turn, will lend the fund to Chilean businessmen for the purchase of U.S. equipment and services.

*

The Bundesbank is renewing two credits to the World Bank totalling $55 million at interest rates below the normal commercial level.

*

The Italian Government is studying possible changes in taxes on stock transactions along with changes in the general taxation system.

*

It is reported there was a bigger expansion in the planting of coffee, tea and pyrethrum in African farming areas of Kenya during 1959 than in any previous year. In the case of coffee, 5,800 arcres were planted and the estimated African crop currently being sold from earlier plantings is 4,785 tons, which has an export value of £1,900,000.

COMMODITY NEWS AND NOTES

RUBBER PRODUCTION IN CEYLON

Rubber production in Ceylon in the first quarter of 1960 showed an increase of about 40 per cent over the comparable quarter of 1959. The amount exported rose by 31.3 million pounds to 87.7 million pounds. Of the total exported, 62 per cent was in the form of sheet rubber, a predominant portion of which was shipped to China. The rest of the shipment consisted of crepe rubber. The steep increase in the volume of rubber shipments in the first quarter of this year was mainly due to an increase in the level of exports to China. Smaller increases were also recorded in respect of the United Kingdom and Canada. In contrast with the rising trend of Ceylon rubbers to most markets, shipments to the U.S.S.R., which had totalled about 8 million pounds in the first quarter of 1959, declined sharply to slightly under 1 million pound in the period under review.

NO BAN ON EXPORT OF WHEAT, RICE OR JOWAR FROM MAHARASHTRA TO GUJERAT

Reports have been received from various foodgrain dealers, merchants, Associations, Chambers of Commerce etc., alleging imposition of ban by the Maharashtra Government on the export of wheat, rice and jowar from that State to places in Gujarat State. The Government of India has been informed by the Government of Maharashtra that no statutory restrictions have been imposed on the export of wheat, rice or jowar from that State to Gujarat State.

WOOL PROMOTION TALKS IN HONG KONG AND JAPAN

A series of wool promotion talks are now taking place in Japan and Hong Kong between representatives of the New Zealand Wool Board and leaders of the respective wool textile industries. Those from New Zealand taking part in the talks includes Messrs H. J. Wardell, chairman of the New Zealand Wood Board, J. Acland, deputy chairman, and J. D. Fraser, general manager of the Board. Before leaving Wellington, Mr. Fraser said that the visit to Hong Kong was being made for the purpose of launching wool promotion activities there. Hong Kong would become a centre of wool promotion throughout the Far East and was regarded as a show window for Communist China, whose shipments of New Zealand wool increased from 7,500 bales in July 1958/February, 1959 period to 25,000 bales in the same period ending February this year. Japan took 32,500 and 41,500 bales in the same two periods. These talks follow the decision at the recent London meeting of the International Wool Publicity and Research Fund executive to launch an unprecedented wool sales-promotion campaign in the Far East.

CEMENT PACKING CHARGES FOR JULY-SEPTEMBER

The Government of India have fixed the packing charges for cement for the next quarter commencing from July 1, 1960, at Rs. 18.77 per ton (20 bags) in new D. W. Heavy Cees quality gunny bags. All the State Governments have been informed accordingly. The packing charges for cement are fixed every quarter on the basis of the average of the maximum and minimum market price for packing material during each week of the immediately preceding nine months plus Rs. 1.25 per ton to cover incidental charges. On this basis, packing charges for the current quarter were fixed at Rs. 12.80 per ton for New D. W. Heavy Cees quality gunny bags.

DEMAND FOR COTTON

Demand for cotton in international markets continued strong in the first quarter of this year, reflecting the continuing growth of cotton consumption—now estimated to reach some 31 million bales in 1959-60—and the replenishment of stocks in importing countries. Cotton prices have therefore stayed firm or increased further. The long and extra long staple cottons in particular have benefited, and their premium over medium staples, which had become unusually small in the 1958-59 season, has again assumed more normal proportions. A major part of the Egyptian cotton exports has in recent years been sold to the U.S.S.R., Eastern Europe and China (nearly 70 per cent in 1958-59), and demand from those countries has been strong this season, too. A larger share than last season, however, has been sold to Western Europe and Japan, as well as to India which has experienced domestic supply difficulties owing to a reduced crop. Therefore, the over-all demand for Egyptian cotton has been very strong.

BEGG, SUTHERLAND & CO. PRIVATE LTD.

Managing Agents for:—Elgin Mills Co., Ltd., Brushware Ltd., The Cawnpore Sugar Works Ltd., Champarun Sugar Co., Ltd., Cawnpore Textiles Ltd., Saran Engineering Co., Ltd.

Secretaries of:—The Beta Picker Co. Private Ltd.

Agents for: **The Royal Exchange Assurance.**

SECRETARY TO ... 8 - JUL 1960 PUBLIC DEPARTMENT

COMPANY AFFAIRS

THE AHMEDABAD MANUFACTURING AND CALICO PRINTING COMPANY LTD.

The annual report of the Company reveals that the cost of production in the cotton textile industry has been increasing and during the year to March 31, 1960, the raw material position caused some amount of concern to the producers. The supply of foreign cotton was severely limited on account of India's foreign exchange shortage. Towards the end of the year, due to a substantial shortfall in the Indian cotton crop, Government controlled Indian cotton by fixing ceiling prices and rationing supplies by quota system.

In response to the appeal by Government for larger exports the Company made a bid for export market. Senior members of the sales staff travelled to several countries to establish contats and ascertain consumer preference. On the basis of these investigations distinctive designs were prepared to suit the tastes of export buyers. It is reported that the results achieved during the last six months were fairly satisfactory.

Considering that there has been an increase in cloth produced by hand and power-looms and most of the weavers have no facilities for bleaching and finishing their products, the Calico Mills have purchased the shares of Rajindra Dyeing & Printing Mills Private Ltd. which had a small processing unit in Ahmedabad. It will be necessary to re-equip the unit in order to make it an efficient and modern independent cloth processing plant.

The Company was granted permission to issue Debentures of the second series for Rs. 1.48 crores ranking pari passu in point of security with the debentures of the first series. The Company proposes to borrow money from banks against the security of these debentures. The building for the Polyvinyl Chloride and Calcium Carbide Plants have been completed and machinery erection is proceeding satisfactorily. The plants are expected to go into production during 1960-61.

During the year under review there was a substantial rise in profits to Rs. 2.04 crores against last year's Rs. 1.59 crores. The Directors have credited Rs. 6.23 lakhs to the Statutory Development Rebate Reserve and Rs. 2.08 lakhs to Rehabilitation and Development Reserve. A sum of Rs. 28.05 lakhs will be absorbed on account of the payment of Final Dividend for the year at the rate of Rs. 17 per share subject to income tax on 1,65,000 shares. This includes Re. 1 to be paid out of Tax-exempt Dividend Reserve (Interim Dividend of Rs. 14 per share subject to Income-tax paid).

THE INDIAN GALVANIZING CO. (1926) LTD.

The year to December 31, 1959, was considerably eventful for the Company in the sense that it entered into agreements with Industrial Containers Ltd., and Steel Containers Ltd., for the transfer to these companies of certain assets belonging to the Company. In consideration of this transfer, shares in these companies were issued to the Indian Galvanising Co. (1926) Ltd. and in consequence Industrial Containers Ltd., and Steel Containers Ltd., have become its subsidiaries.

Steel Containers Ltd., acquired the entire assets of the Company's branch at Bombay and since January 1, 1959, has been fully operative and carries on the business of manufacture of steel drums formerly carried on by the branch. Industrial Containers Ltd. acquired the assets of the Company formerly employed in the manufacture of 40-45 gallon steel drums in the Calcutta factory and these assets have now been installed in a new factory established at Paharpur, Calcutta. The factory is now complete in all respects and is in a position to commence production as soon as supplies of steel are forthcoming.

The licence for the establishment of the business to be carried on by Hope's Metal Windows (India) Ltd. has still not been obtained, which the Company hopes to get shortly. Negotiations for the sale of the remaining assets of the Company are successfully concluded and the directors hope to proceed with the implementation of the plan to wind up the Company, to repay the Preference Share Capital and to distribute shares in the new companies to the members registered in respect of the Ordinary Shares. The indications are that it should be possible to do so in the near future.

The profit for the year (including items relating to previous years) was Rs. 96,167. The Board has transferred Rs. 81,268 from the provision for doubtful debts to Profit and Loss Account. After deducting these two items from the balance brought forward of Rs. 2,73,694 and after payment of Wealth Tax amounting to Rs. 22,257, there remains a balance of Rs. 1,24,516 at the debit of Profit and Loss account which it is proposed to be carried forward.

CAPITAL ISSUES

During the last quarter of 1959 the Controller of Capital Issues gave consents to 50 applications involving an amount of Rs. 38.15 crores. A break-up indicates that the amount consented for the industrial groups was 84.7 per cent of the total. An analysis of the type of securities to the issue of which consent was given indicates that 49.2 per cent of the issues were in ordinary shares and 25.1 per cent in fixed dividend/interest bearing securities. Out of the later 25.1 per cent, Preference shares constituted 4.4 per cent and debentures, 20.7 per cent.

The table below gives the Industry-wise distribution of consents granted during the year 1959 for issue of capital to non-residents of the value of Rs. 21.7 crores in 26 new companies.

(In lakhs of rupees)

Serial No.	Industry	No. of consents	Total capital involved	Issue to non-residents
1.	Addressing and embossing machines	1	10.00	5.50
3.	Aluminium	1	15.00	3.90
3.	Aluminium cables	1	30.00	15.00
4.	Calendar bowls	1	7.00	4.20
5.	Cement	1	100.00	25.30
6.	Combing wooltops	1	28.00	10.67
7.	Condensed milk	1	30.00	27.00
8.	Crude petroleum	1	2,100.00	1,400.00
9.	Drums	1	15.00	7.00
10.	Electric wires and cables	1	110.00	66.00
11.	Engineering equipments	1	540.00	268.92
12.	Gears	1	25.00	6.50
13.	Glass	1	20.00	7.00
14.	Iron and steel	1	70.00	52.50
15.	Medicals and pharmaceuticals	2	27.50	18.00
16.	Oil	1	13.67	3.00
17.	Portable compresser and rockdrills	1	36.00	36.00
18.	Portable electric tools	1	20.00	9.00
19.	Rayon yarn	2	700.00	66.80
20.	Steel wires	1	20.00	1.00
21.	Synthetic rubber	1	450.00	112.50

23.	Tyres and tubes	1	200.00	10.00
24.	Yeast	1	20.00	6.60
	Total	26	4,608.57	2,172.89

Company Meetings

THE NATIONAL RAYON CORPORATION LTD.

SPEECH OF THE CHAIRMAN, SHRI KASTURBHAI LALBHAI

Speech delivered by Shri Kasturbhai Lalbhai, Chairman of The National Rayon Corporation Ltd., at the Thirteenth Annual General Meeting held on 23rd June, 1960.

Gentlemen:

It gives me great pleasure to welcome you this evening and to place before you for adoption the 13th Annual Report of the Directors and the Statements of Accounts for the year ended the 31st December, 1959. These were circulated and have been in your hands for over a month now and if you will permit me, they may be taken as read.

2. The report covers all the salient points regarding the working of the Company during the year. The accounts also give the figures of the preceding year for comparison and I will, therefore, confine myself only to making a few general observations by way of further elucidation.

3. The higher turnover this year amounting to about Rs. 90 lakhs was principally due to the increase in production as already reported. A sizable portion of the increase, however, pertains to the additional excise duty due to increase in its rates and also due to lower stocks of yarn at the close of the year.

4. The figure of cost of raw materials consumed appears lower than that of the preceding year in spite of increased production and requires some explanation. As you are perhaps aware caustic soda is one of the principal raw materials required for the manufacture of rayon yarn. The Company's caustic plant having worked at its full capacity during the accounting year, the Company had not to use any imported caustic soda. Under the item of cost of raw materials consumed, the figure of the preceding year includes the cost of imported caustic soda, whereas for the accounting year only the cost of salt, the raw material required for the manufacture of caustic soda, has figured, the other items of operating costs having been debited to respective heads of accounts. This, combined with a few other factors account for the lower figure of cost of raw materials though there has been all round increase in the production of different products during the year.

5. The slight increase that you find in the operating costs and Other expenses are in proportion to the increased production all round.

6. You will have also observed from the report that we have recommended payment of dividend on the preference shares at Rs. 5 per share subject to deduction of tax at the rate of 30 nP. in a rupee as prescribed under Section 18(3) (d) of the Indian Income-tax Act. The Board had to consider the new system of deduction of tax from dividends (as introduced by the Finance Act, 1959, and being amended by the Finance Bill, 1960) so far as it affects the rights of dividends of Preference Shareholders. Though different interpretations are possible, the Board hold the view that the Preference Shareholders should continue to receive the same gross amount per share as they used to receive under the old system of taxation. The Company has declared dividends on preference shares accordingly and you are hereby requested to confirm the same.

7. You must be aware that the price and distribution of rayon yarn are practically controlled due to shortage of this material in the country. It appears this position will continue for quite a few years to come. While we have nothing to say about the price and distribution control of yarn which is quite equitable and fair and in the larger interests of the weaving industry, I wish the Government offices entrusted with the issue of necessary quota certificates and cards are adequately staffed with a view to facilitating quick distribution of yarn to intending consumers. As it is, even though the scheme of controlled distribution has been in operation for over a period of 2½ to 3 years, the office entrusted with the work still takes about 2 to 3 months to distribute necessary cards to the consumers thereby necessitating holding of large stocks in the godowns of the Company to the considerable detriment of the genuine consumers concerned. Incidentally, I may add that we are strictly adhering to the selling rates which were approved by the Government and which are in vogue for the last three years.

8. As already reported the Tire Cord scheme which unfortunately was delayed for about a year and a half for reasons beyond our control, is now well under its way and we hope to be in production sometime in the second half of 1961. You must have already observed from the reports appearing in the newspapers that the tyre manufacturing industry is growing at a fast rate in the country and by the time we are in production, we believe the country's requirement of tire cord yarn would be much more than what we had anticipated when we embarked upon this scheme. We do not, therefore, expect difficulty in marketing the product.

9. The full utilisation of chlorine, co-product in caustic soda chlorine plant, is still an unsolved problem, because we have not on hand sufficient numbers of cylinders and containers for filling in the liquid chlorine for supplying it to users all over the country. Their turn-round from the moment they leave our factory till the empties are back with us is not as fast as we wish, and this serves as a handicap to clear the chlorine stocks that accumulate on production. Efforts to get more containers are being made and also to try to utilise chlorine for manufacturing different allied chlorine compounds for marketing them on a commercial scale, but the stage is not yet ready beyond research on pilot plant level.

10. As regards raw materials position, I may say that in spite of the tight foreign exchange, the Government has adopted a policy which ensures reasonable supplies of all the important raw materials required by the industry and this has enabled us to maintain a fair inventory of raw materials like pulp, sulphur and other processing chemicals. The prices of raw materials were fairly well maintained during the report year. There was a slight decrease in the price of sulphur but this reduction has been offset by the increase in price of coal and more recently by levy of a surcharge on railway freight on coal.

11. The Central Government have accorded their approval to the reappointment of Messrs Chinai And Company Private Ltd., as Managing Agents of the Company but have reduced the tenure of their offce from 10 to 5 years and have fixed the following sliding scale

of remuneration subject to a minimum of Rs. 50,000 per year in the event of absence or inadequacy of profits in any one year:

10 per cent on the first Rs. 10 lakhs or fraction thereof,
9 per cent on the next Rs. 10 lakhs or fraction thereof,
8 per cent on the next Rs. 10 lakhs or fraction thereof,
7 per cent on the next Rs. 10 lakhs or fraction thereof,
6 per cent on the next Rs. 10 lakhs or fraction thereof,
5½ per cent on the next Rs. 25 lakhs or fraction thereof,
5 per cent on the next Rs. 25 lakhs or fraction thereof,
and 4 per cent on any sum over one crore of rupees.

Your Board at their meeting held on the 12th May, 1960, have approved of these modifications and have executed a new Managing Agency Agreement. Very shortly, a circular letter will be issued to all the shareholders embodying the details of the executed agreement.

12. The workers of your Company have recently presented us with a Charter of Demands asking for substantial increase in the scales of their wages and for further concessions in the conditions of service. The emoluments now being paid to our workers and the service conditions they have been enjoying are not only fair and better than those prevailing in the industries operating in the vicinity of our factory but compare very favourably with the emoluments paid by many of the progressive and leading industrial units in the country. I only hope that at the time of negotiations better counsels will prevail and that a settlement satisfactory to all the interests concerned would be reached to usher in a fairly long period of industrial peace and harmony in the industry.

13. I am sorry to state that some interested parties have been spreading rumours about the activities of the Company which are incorrect. It is quite true that the Company is investigating the project for the manufacture of rayon grade Pulp but it is still in its exploratory stage and even if the Company ultimately decided to go in for one, it is unlikely that the pulp to be manufactured here will be cheaper than the imported pulp. The main objective for going in for manufacturing of pulp is to make the industry, as far as possible, self-sufficient in respect of its main raw materials.

14. About the persistent rumours for the issue of fresh capital, I may assure the shareholders that no such issue is under contemplation at present.

15. Before I conclude, I must say a word or two about the workers and the staff whose efficient work, I must admit, has been largely responsible for the smooth running of the whole plant and satisfactory working of the Organisation.

16. With these few words, I commend the Report and the Statements of Accounts for adoption and propose the following Resolution:-

RESOLUTION

"THE THIRTEENTH ANNUAL REPORT AND THE STATEMENTS OF ACCOUNTS FOR THE YEAR ENDED THE 31ST DECEMBER, 1959, BE AND THEY ARE HEREBY ADOPTED."

Thank you, Gentlemen.

Note: This does not purport to be a report of the proceedings of the Annual General Meeting.

KAMANI ENGINEERING CORPORATION LTD.

RECORD PRODUCTION AND BRIGHT FUTURE

An all time record production, Technical collaboration for Railway Electrification work and further development in the manufacture of Mark II 'Tractamount' Road Rollers with latest improvements were some of the highlights of the progress made by Kamani Engineering Corporation Ltd. as referred to by Shri R. H. Kamani, Chairman of the Corporation in his speech at the 14th Annual General Meeting held in Bombay on 24th June, 1960. The rising trend in earnings was maintained this year also. Shri R. H. Kamani referred to the encouraging record both in production and import business as follows:

HIGHER PROFITS

It is encouraging to note that the Gross profit made by your Company during the year under review has reached a record figure of Rs. 19.49 lakhs. This has successively gone up from a figure of Rs. 4.59 lakhs for the year 1955-56, which means that there has been more than a fourfold improvement in three years.

RECORD PRODUCTION

In keeping with the trend of progress your factory achieved another record monthly production of 1,601 tons during the month of December 1958, in the year under review, against the earlier record of 1,000 tons achieved in May, 1958 in the previous year. The high production achieved during the year under review is maintained and still being improved upon as evident from the working of the past eight months of the year 1959-60, and this is actually about 20 per cent higher than the corresponding period of the year under review. Efforts are being made to increase the production still further as due to continued improvements in process and methods we have ample capacity for producing more with the existing plant and facilities.

Having presented to you a brief picture of the financial and production achievements of the year under review and the production trends of the current year, I would like to take this opportunity of conveying to you the highlights of important events of the current year. In doing so I am limiting myself only to the achievement during the current year, as the important achievements for the year under review have already been included in the Directors' Report.

FOREIGN TECHNICAL COLLABORATION

You will be glad to know that your Company has been successful in securing foreign technical collaboration with a Belgian firm and with their technical assistance your Company has been the first Indian Company to secure a contract for supply and erection of Traction Overhead Equipment for Electrification of Railway Lines. The first contract received by your Company is for supply and installation of 25 kV A.C. Traction Overhead Equipment over Kharagpur-Tatanagar Section of the South Eastern Railway at an approximate value of Rs. 56 lakhs. I am hopeful that this will open a completely new field of activity to be pursued by your Company in future to participate in the larger railway electrification projects of the Indian Railways, especially in Third Plan.

EXPORT DRIVE

The Export Sales Department which was established only last year for exporting the products of your Company has achieved encouraging results. Considerable Sales Promotion work has been done and some of the most difficult obstacles, in the way of export of Indian Heavy Engineering Goods abroad, in the face of very acute international competition have been studied and partly overcome. The Export Promotion Directorate and the Engineering Export Promotion Council, set up by the Government of India have both

given us considerable help and I have every hope that the remaining obstacles and difficulties will be solved soon. These efforts have resulted in securing the first order for the export of our galvanised structures, which has been successfully executed to Thailand.

NEW MODEL "TRACTAMOUNT" ROAD ROLLERS

Figures for the tentative allocations for the expenditure during the Third Five-Year Plan for 'Road Development', reveal that an amount of Rs. 250 crores has been set aside under this head which coupled with the estimated requirements for the 20 years Development Plan for Roads, is very encouraging. In light of this, our new Mark II Kamani-Twose Tractamount Road Roller which has been successfully developed and will be taken for production soon, is expected to be very popular and useful in supplying the necessary machinery not only at a fraction of the cost of imported Road Rollers but also in saving considerable foreign exchange.

IMPROVEMENT IN PRODUCTION TECHNIQUE

The research and development department of your Company has been actively working on the improvements in the process and methods of production, product improvement and new product development. As a result of their studies it has become possible to improve quality, increase production and at the same time achieve economy by using the existing plant and personnel facilities. It is further hoped that by introducing diversification and increasing the present production level, further economy in our costs would be achieved by utilising our surplus capacity to the full, without increasing any major capital expenditure. In this way, your Company is getting ready for taking care of the increased requirements of development in the Third Five-Year Plan period. It is gratifying to note that the technical excellence and know-how attained by your Company in the field of Transmission Line Engineering has attracted some enquiries from foreign countries for getting our technical know-how and collaboration to start similar manufacturing activities there. These proposals are under active consideration of your Company. Side by side, your Company is actively pursuing and negotiating with some foreign manufacturers of world-wide reputation, for technical collaboration and 'know-how' to develop further industrial activity in line with your Company's present activities.

IMPORTS

In spite of the acute shortage of foreign exchange and import restrictions, as you may have already observed from the Directors' Report, your Company during the year under review has secured import orders of almost double the value as compared to the previous year. However, you will be glad to know that in the present year also this rising trend has been maintained and an import order for one of our Foreign Principals at a value of Rs. 7 crores has been secured from an important National Project.

CONTRIBUTION TO THE PLAN

As the Second Five-Year Plan is nearing completion the achievement made by the Nation proves the soundness and the foresight of our Planners in so far as most of the targets set for the plan have been completed in time. It is specially noteworthy to observe that such huge projects like Bhilai Steel Plant were completed in time and that your Company in its own turn contributed towards the early completion of this Project of great national importance, for which it received due appreciation for its efforts from the Government. The tentative targets set for the Third Five-Year Plan, have now been acclaimed by several world authorities to be achievable by our Nation specially in light of our previous performance.

ENCOURAGING FUTURE

The Third Five-Year Plan target increasing the installed capacity for electric power generation by 6 million kilo watts indicates a very encouraging future for the activities of your Company. In fact the full impact of the industrial revolution in our country will be felt during the Third Five-Year Plan period and all efforts will be made by your Company to actively participate in it.

Concluding Shri R. H. Kamani said that this encouraging record of achievements in the past and hopes for a bright future, are a proof positive of the good efforts and co-operation of the workers and the staff of your Company, and the backing and support that your Company has received from all of you from time to time.

NOTE: This does not purport to be a record of the Proceedings of the Annual General Meeting.

SEN-RALEIGH INDUSTRIES OF INDIA LTD.

CHAIRMAN'S REVIEW

The 10th Annual General Meeting of the Sen-Raleigh Industries of India Ltd., was held in Calcutta on the 23rd June, 1960. Mr. Abhijit Sen, Chairman of the Company, said:

It is with pleasure tinged with sorrow that I welcome you to the 10th Annual General Meeting of the Company. It gives me pleasure to report that the Company's operations once again show a satisfactory trend but it is with the deepest regret that I have to record that the hand that guided the destinies of the Company to this stage is no longer at the helm of our affairs. The sudden loss of the Chairman and founder of this Company has removed from the scene an almost legendary figure in the annuls of the Bicycle trade and industry in the Indian Sub-continent. He entered the Bicycle trade at the turn of the century when the Bicycle was considered a luxury and after devoting his whole life to the pursuit of popularising the Bicycle as the only means of personal transport for the people of this country, he left the world satisfied in the knowledge that his efforts had not been in vain and independent India had recognised the need for bringing cycling to the masses. It was not for nothing that he was acclaimed as the father of the Indian Bicycle Trade and Industry by the admiring trade of the country.

The Directors' Report and Accounts of the Company for the period ending 30th September, 1959 have been circulated and with your approval, I shall take these as read. You will find that with an improvement in the level of production—largely of complete Bicycles—there has been a corresponding improvement in the trading results of the Company and this has allowed your Directors to recommend a higher rate of dividends for Ordinary Shares.

A matter, I am sure, that has been engaging the minds of all members is the effect on this Company of the merger in the UK of the Bicycle and Moped interests of our Associates—Raleigh Industries Ltd. and Tube Investments Ltd. The merger does not affect the separate identity of this Company and your Company will continue to manufacture and market Bicycles and Freewheels under the Raleigh concessions granted to them exactly as it has been doing in the past.

Once again the year 1959 was a record year for the Bicycle Industry in India, and it is a happy thought that whilst the overall increase in production of the Industry over the previous year (including the performance of the Small-Scale Sector) was of the order of 30 per cent for Bicycles, your Company was able to achieve an expansion of approximately 50 per cent in its production and sales of Bicycles over its 1958 figures although the import level of materials was not substantially in excess of 1957 levels.

No little part in the improved working was played by a more consistent import licensing policy—a consequence of the assurance held out by the Minister for Industries to the Cycle Manufacturers' Association of India in March 1959 that simpler and more effective import licensing procedures were on the way. We are grateful to the Commerce and Industries Ministry for moving with the times and introducing a rational import licensing policy which has remainded with us now for over a year and has helped considerably in fostering expansion of industries.

The demand for bicycles and particularly for the products of your company shows no sign of slackening. If retail margins are any guide to consumer preferences, the past financial year must have seen an unprecedented demand for our products for in spite of the fact that much larger deliveries were effected during the period, the retail margins maintained a uniformly high average throughout the year. This demand has continued into the present year which also opened on a note of high optimism and not even the imposition of an excise duty on various bicycle components—notably Rs. 2 per Freewheel and Rs. 4 per Rim with an overall impact of Rs. 10 on a complete bicycle has resulted in a slackening of demand for bicycles in spite of the fact that most manufacturers took this opportunity to adjust their prices to counter rising costs as well as excise levies. In line with other manufacturers prices of our products were also adjusted.

Your Company's future activities are necessarily linked partly with the present industrial policy followed by the Government of India, and partly with the development of the 3rd Five-Year Plan which is now gradually taking shape. Very recently the Government have issued various notifications on the revised procedures relating to industrial licensing which for the first time in many years give a fairly clear picture of what industries Government feel would require immediate development and what industries are now considered by the Government to be so developed that issue of industrial licences should be restricted. The Bicycle industry falls within the latter category where applications for expansions or for new capacity may be rejected for the time being without reference to the Licensing Committee.

In view of this, it is time to think along lines of branching out into such allied lines of Light Engineering manufacture as are considered more essential to the development of the country by the Government of India at the moment, and where capacities are granted more easily and fed to the fullest extent by release of raw materials. Our reputation for quality and for technical ability in developing Light Engineering production would stand us in good stead to obtain Industrial licenses and capacities in such lines and would allow a fuller utilisation of our resources.

Diversification into new lines of manufacture is expected to help turnover considerably and reduce overheads as there is better scope of obtaining material requirements in these lines and production could grow. Diversification would not mean a shift from our main line of activity which is and will remain the manufacture of Bicycles and its components and accessories—and first call on the resources of the Company would always be for expansion in the Bicycle industry provided capacities were available and could be fed adequately with material.

Whilst the immediate prospects of Bicycle expansions are clouded, it is only right to mention that the long-term prospects of obtaining further capacities in this industry appear brighter. From information available the targets for the 3rd Five-Year Plan period for bicycles are expected to be double those of the present Plan period. In planning for our future full consideration is being given to doubling our own capacities wherever practicable should industrial sanctions for such capacities be forthcoming.

A new development in the Indian bicycle scene has been the successful operation of a Bicycle export pool organized by the Cycle Manufacturers' Association of India which in its first year of operation came very near to reaching a self-imposed target of export for complete Bicycles. It is a pleasure to be able to report that your Company played a prominent part in helping to achieve the export target and its share of India's Bicycle export business in 1959 was nearly 70 per cent. In general, there was appreciation of the quality of your Company's products in the markets where these were introduced.

On the labour front, a three-year agreement was concluded with the recognized Union in August, 1959 and the effects of this agreement will be evident in the next few years. Whilst the Company's own relations with its workers were generally satisfactory, intra-Union and inter-Union strife for leadership continued and on more than one occasion in the year under review and even as recently as last month smooth operation of the factory was marred by violent clashes and unbridled rowdyism. It is unfortunate that different shades of political opinion or different views on trade unionism can so far affect workers that forgetting the basic tenet of the solidarity of the worker, there are these outbursts of violence which can neither benefit the worker individually or collectively nor the Company where they serve. It is hoped that good sense will prevail amongst the different sections of workers and that the quieter conditions that have followed the immediate disturbances at Asansol have come to stay with us for good. Workers should realise that violence cannot effect a reconciliation between divergent shades of opinion—far less can violence ever completely annihilate a divergent point of view.

I have to report the retirement of Mr. L. C. Clarkson who as Works Director of Raleigh Industries Ltd., had been one of first people concerned with the planning of the Indian factory. His place is filled on our Board by Mr. L. L. Roberts who is the present Works Director of Raleigh Industries Ltd., in-charge of Home and Overseas factories.

With the expansion of activities of the Company, it has been considered necessary by your Board to appoint a whole-time Director, and the Company has been very fortunate in obtaining the consent of Mr. D. Chakraverti to join its Board. He joins this firm after a distinguished career in Civil Aviation both in India and abroad. He brings to the Company an administrative and technical experience which will benefit the Company greatly in its development schemes.

Before I close it is my pleasant duty to thank my colleagues, the staff and the workers of the Company, our foreign associates and our dealers for another year of unfailing support to the Company.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

Flint Upon Flint?

WHEN flint strikes flint, sparks must fly. In much the same way, when massive organisations of employers and employees maintain hard and flint-like determination, a clash is inevitable. At the time of writing, negotiations between the Government of India and the Central Government employees, who have given a strike notice effective from midnight of July 11, have failed. Thus the country is being asked, at a time of emergency, to face the futile, dangerous, and possibly violent method of a strike to settle a dispute which, surely, is capable of some adjustment. There can be no doubt — and this was maintained by *The Eastern Economist* last week — that the strike should be forbidden and, therefore, the Government Ordinance issued today is fully justified. On the other hand, it cannot be right in a democracy to maintain that an overpowering legal solution, even if respected — the Ordinance is likely, in fact, to be defied — which keeps all grievances in animated suspense, is any solution at all. While the authority of the Government must be maintained, it is time to argue that, after maintaining its prestige, the Government must stoop to conquer.

There is good ground for a further concession. The theoretical stand that the Government of India has taken—that it is impossible to concede to the principle of any linking between the cost of living and remuneration of Central Government employees — cannot in reason be sustained. This is because the Government of India has already acquiesced in this linking up in some cases in the private sector and Mr. Gulzari Lal Nanda, who has been Government's main negotiator in this case, has himself been instrumental in prescribing this counsel liberally elsewhere. In Ahmedabad, in the textile industry, a linking formula exists which provides for 100 per cent compensation for rises in the cost of living. It is too late in the day — quite apart from Mr. Nanda's egregious performance at the Fifteenth Tripartite Labour Conference—for the Government of India to assert that what is good for the private sector and in the national interest elsewhere, suddenly ceases to be good or in the national interest when applied to itself. Some spirit of accommodation needs, therefore, to be shown, subject always to the condition that the national interest is not imperilled to a point at which everyone (and the Plan) is endangered. Obviously, there must be some point at which a concession is preferable to a general strike, meaning, in fact, that the country will lose less by the

concession than it would lose, both in spiritual and in material terms, by a widespread conflict attended by violence, which seems the only alternative.

It is not weakness in these circumstances to review the field in a somewhat different manner from that presented by the Prime Minister's broadcast on Thursday evening. It is only a limited answer to grievances to argue that there is a national emergency. It is open to Central Government employees to point out a significant measure of wasteful or non-productive expenditure which is sustained in spite of the emergency. If the Government is to argue that the emergency prevents any concession, it must lay the axe to all Government expenditure which can reasonably be deferred; who will doubt that perhaps Rs. 25 crores of expenditure per year could in fact be deferred if the will to defer it were as large as the emergency is made out to be? Is it also true the Government of India has done everything possible on the price line? More than one Finance Minister must bear a high responsibility for the failure to maintain the price line over the last two years.

It is still true that those who threaten to go on strike at the present time are not actuated by a simple motive of maintaining a just right. Unhappily, the struggle for power between the Communist Party and the Praja Socialist Party, each of which is trying to show the effectiveness of its leadership more than the other, has been a dominating factor in producing the rigid posture in which the workers' case has now come to be set. It is impossible for a Government to allow a political sectional interest — whether the Communist Party or the Praja Socialist Party — to dictate to it in the central and basic activities commanded by the Railways and the Defence Industries. If, therefore, there should be an attempt to pursue the strike, public opinion will support any measures the Government might take to crush it. The workers have been greatly misled in using the strike weapon in this case to enforce even just demands.

The questions that can now be asked are few; their answer should be clear. Firstly, neither the Government of India nor workers' associations can be free from blame for allowing the situation to deteriorate so fast. Secondly, knowing that it has deteriorated, the authority of the Government must remain unchallenged; if a strike should take place, it should be dealt with with determined, and even relentless, force. Thirdly, even while it is being so dealt with, the point that the price line has either to be held or compensation in manageable form granted, must be admitted. There is still time in recognising these basic guiding lines to avert participation by the moderate section of the Trade Union leaders. To them this challenge is addressed; not to the Communists to whom liberty means nothing. Responsibility, no less than vigilance, is the price of liberty.

The Third Plan

THE outlay in the Third Plan was virtually a pre-determined quantum inasmuch as investment, which accounts for the bulk of the outlay, had to conform to the "perspective" plan for investment much of which was reflected in the Second Plan itself. This fact, however, does not make the outlay now fixed in the Draft Outline of the Third Plan a matter devoid of interest. The projections made in the Second Plan for investment over a period of 25 years ending 1976 envisage a combined investment target of Rs. 9,900 crores in the public and private sectors in the Third Plan. It is interesting, however, that the tentative draft of the Third Plan approved by the National Development Council in March last raised this target of investment to Rs. 9,950 crores and now the Draft Outline has stepped it further to Rs. 10,200 crores. This step-up of Rs. 250 crores in a matter of about four months need not come altogether as a surprise. The Planning Commission's estimate in the tentative draft was based on the Budget Estimates for the year 1959-60 — the latest data then available. But the Revised Estimates for the year have revealed a buoyancy in the budgetary revenues.

It is possible to argue that in spite of this "buoyancy" adherence to the first target of Rs. 9,950 crores of investment in the two sectors would have proved a course of practical convenience. The scheme of financial resources for the Third Plan discloses that out of a total outlay of Rs. 7,250 crores in the public sector (composed of Rs. 6,200 crores worth of investment and Rs. 1,050 crores on account of current outlay) contains a substantial component of Rs. 2,200 crores by way of external assistance. The climate for external assistance is no doubt improving and perhaps it is fair to assume that aid of this magnitude will be underwritten in the absence of any extraordinary developments. But both external aid and internal resources represent acts of faith.

The programme of internal resources drawn up in the Draft Outline is unlikely to raise any substantial divergence of opinion except in a few items. The largest single component of internal resources is additional taxation which is placed at Rs. 1,650 crores. This is not plain taxation as such, but in it is incorporated an extra element described as "measures to increase surpluses of public enterprises". This is rather confusing and the better course to adopt would have been to include the latter in the relevant source, namely surpluses of public enterprises which have been computed on the existing basis only. It is, therefore, obvious that Rs. 1,650 crores does not represent the full magnitude of additional taxation as such. But making allowance for a marginal amount of revenue by way of extra surpluses from public enterprises, new taxation in the Third Plan will not be less than Rs. 1,500 crores. This is 50 per cent higher than the revised estimate of additional taxation in the Second Plan. The Outline says that one-third of the additional taxation will be allotted to the State Governments.

This may be its Achilles heel. Rs. 500 crores of additional taxation in the States imposes an obligation on them of which the implications must be understood and faced squarely. The State Governments must be prepared to take unpopular decisions with severe political repercussions. Additional taxation at the State level now would undoubtedly mean that the agricultural class, which has enjoyed relative privilege for ten years, will need to share an equitable part of the burden. Land revenue has remained static in spite of the phenomenal increase in prices over the last three decades. It offers genuine scope for enhancement and it is difficult to see how this resource can be deferred again. Apart from this fact, the obligation placed on the Centre for additional taxation of Rs. 1,000 crores, if not more, is by no means an easy liability. The buoyancy in revenues could have been utilised, at least in part, if not fully, to give relief here.

The targets of surpluses of public enterprises other than railways (Rs. 440 crores) and provident funds, betterment levy, steel equalisation fund and miscellaneous capital receipts (Rs. 510 crores) would appear to be ambitious. As regards the former, the basis on which this target of Rs. 440 crores is pitched has not been explained in the Draft Outline and *prima facie* it appears excessive. As regards the latter, it is significant that it has been stepped up from Rs. 380 crores as envisaged in the tentative draft of March last to Rs. 510 crores. It is not clear whether due account has been taken of the diminishing size of the steel equalisation fund with increasing domestic production. Market loans have been conservatively estimated at Rs. 850 crores.

Marginal adjustments in the targets for internal resources could be made on lines such as these in the final shape of the Plan. They are urged by an important factor which is highlighted in the review of the progress of the Second Plan incorporated in the Draft Outline. During the Second Plan the general index of wholesale prices will have risen by more than 20 per cent. The pressure on prices which development outlay of a high order in the Third Plan and bias for heavy industry will place must be read in the context of the inflation already generated on a substantial scale in the Second Plan. The National Development Council cannot afford to continue to grope for a price policy; prices form the sheet-anchor of the Plan.

Rubber: An Act in Haste

THE proposal of the Kerala Finance Minister for a new plantation levy to cover part of the revenue deficit in the budget for the current year has understandably enough caused a controversy. The proposed levy is to be Rs. 10 per acre on all plantation holdings having an extent of five acres and above in the place of the existing basic tax of Rs. 2 per acre. That this arbitrary five-fold increase will have serious repercussions on the growth of the plantation industry is patent enough even though from the immediate and narrow fiscal point of view, it may bring Rs. 80 lakhs to the State exchequer. The fact that shortly after the proposal for the levy has been made, the Finance Minister himself has offered concessions to the extent of exempting the first two acres from the operation of the new levy is evidence enough of bad conscience; but the disease has not been remedied.

The main justification in support of this new levy stems, according to the Finance Minister, from the fact that the yield from plantations was several times that from ordinary land and hence no one would dispute the ability of plantation owners to contribute a greater share to the pool of the Government's resources. But this is not quite true. The fact is, as a statement by the United Planters' Association of South India shows, "the new tax is not the only solitary new levy imposed on an otherwise prosperous industry and it is only the latest of a series of punitive levies on plantations in Kerala." When the Communists were in power, they saw to it that this industry was oppressed with fiscal burdens in the shape of steep increase in the rate of taxation on larger properties. But here the Congress Party provided no act of liberation: quite the reverse. It is also a fact that today Kerala has the highest rate of agricultural income-tax and this falls with undue weight on planting companies.

The main objection to the tax is not so much that it will hit the plantation owners and their profits; it is that it impinges on the national interest at a time when rubber has profound effects both on our foreign exchange and domestic elements. The primary need today whether in Kerala State or elsewhere even for ushering in a socialist pattern of society is industrial expansion. But its wheels are continuously being impeded by acts of indecent haste which could never have been embarked upon if some thought had been expended on the matter. How seriously the new levy will operate in practice can be seen from the fact that irrespective of whether a rubber or coffee estate makes a profit or loss, it would put up the cost by about Rs. 5 per 100 lbs. In view of the fact that 97 per cent of the total rubber holdings in the country are situated in Kerala, rubber production is of vital importance not only to her economy, but to the whole country. The element for rehabilitation and the margin of profits of the rubber producers have already been reduced by previous taxation measures. The new levy would hit them further unless the Government of India quickly offsets the levy by a liberal revision of sale prices. Again, the new tax would push the tea growers into an unenviable position in a highly competitive market as tea is already subject to an agricultural income-tax that is higher than in the adjoining Madras State or in the Northern India tea districts. What is more significant, companies which have large development programmes and hold land for the purpose would now be liable for payment on land which does not earn anything. The result will be a drastic curtailment of the entire developmental programme by rubber planting companies.

This is a situation that can hardly be looked at with equanimity. There is no use Government merely exhorting plantation companies that they have the greatest scope for expansion when its actions belie its profession. The basic fact to be conceded is that unless taxation policy is adjusted to leave much larger resources in the hands of plantation managements, development will inevitably be impeded, if not halted altogether. The Kerala Government cannot be unaware that the Draft Outline of the Third Plan lays considerable emphasis on exports and an increase in commercial crops. The latter, it holds, is as important as increased food production. It is hence, for instance, an increase of 71 per cent in rubber production, 78 per cent in coffee and 17 per cent in tea is envisaged in the Draft Outline. This is the time when one would have expected the Kerala Government to adopt an imaginative policy of incentives for expanding the base of the plantation industry. On the other hand, by its latest move, what it has done is only the reverse. If even after the considerable opposition that has been voiced both within and outside the State to the new measure, the Kerala Government does not see its way to retrace its step, it may perhaps become necessary for the Central Government to exercise some pressure. For, whatever may be the constitutional position, the Centre cannot afford to adopt a *non-possumus* attitude when the action of a State Government is likely to put in jeopardy important foreign exchange earners of this country. And industrial policy will hang on a slender thread if it is left to the tender mercies of State Finance Ministers seeking revenue at any price.

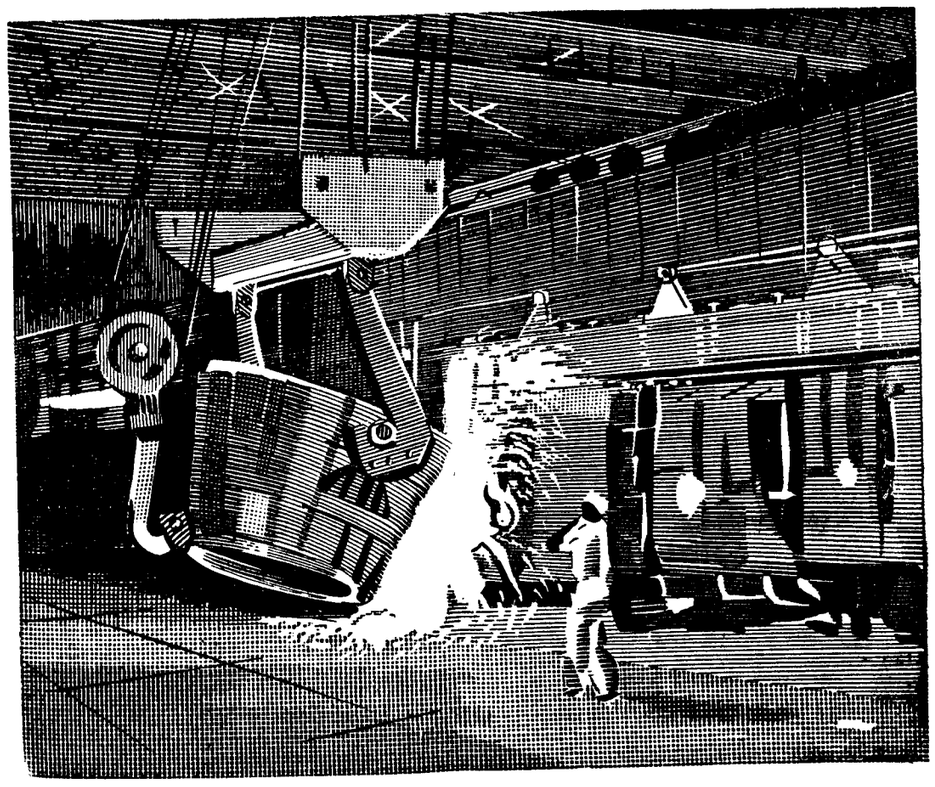
A DELHI DIARY

TO LINK OR NOT TO LINK?

LOOKING at the wide world from Delhi, there seems to be only one question, that relating to the strike which is due from Monday night. To strike or not to strike is the question. Whether it is nobler in the mind of many to suffer the slings and arrows of inflation or to take arms against a sea of (domestic) troubles and by opposing try to end them, I know this is no laughing matter for anybody, and, least of all for the Members of the Government of India. I cannot think of one Member of the Cabinet who can be happy about his particular role in this long drawn out affair. For the Government of India as a whole, which has been never tired of telling private employers how they should treat their employees and how important it is to maintain their standard of living, and how necessary morale is for productivity etc., etc., the present experience must come as a rude shock. It would appear that the Government of India is by no means as model an employer as its frequent prescriptions would allow one happily to believe. The fact that Mr. Gulzari Lal Nanda, at the Fifteenth Labour Conference, accepted a "needs" norm and today argues that the Government of India was not committed to it, does not raise either his prestige or that of the Government of India extremely high. Not, indeed, that one can support the strike in any way, but one need not at the same time fall listlessly into the Government's lap. I, therefore, propose to allow myself on this occasion to play the part of an indecent heretic. Will I be burnt at the stake?

THE PERILS OF PERSONALITY

I look upon the present crisis as the resultant of a large number of personal equations written into Government policy. In the first place, there is the Prime Minister's large personal equation for a bigger, and yet bigger, Plan. The Third Plan, which has emerged in draft this week, is also true to form—bigger than the last, even than the first draft of the Third Plan which appeared only three months ago. Documentary growth inside the Planning Commission is a law of nature, just as Parkinson's Law applies inevitably to growth in the number of employees in a Government office. But, as I was saying, the Prime Minister's devotion to a big Plan implies, inevitably, that there must be a strain on financial resources. Secondly, there is Mr. Gulzari Lal Nanda's view, not merely that there should be bigger and bigger plans, but there should be a bigger and bigger slice each time for industrial labour. This is, like Parkinson's First Law, an immutable law of Trade Unionism all over the world, and Mr. Nanda, being a devout trade unionist, cannot be expected to deviate. As a result of the laws of the bigger plans and the bigger slices, there is generated what might be called a wavy price line. The precise wave to be put into the price line is supposed to be a matter for fiscal and monetary policy and, therefore, the special domain of the Finance Minister. Anyone, who looks at the wavy price line over the last two years may hold his peace or his opinion on the Finance Ministers before and after this period. I think that "The Eastern Economist" Budget Number—which incurred much displeasure in official circles and not a little in at least one of our contemporaries—struck the true note some months ago. A wavy price line was made even wavier as a result of the volume of deficit financing to which the Finance Minister subjected the country this year. The Reserve Bank curbs came too late to restore the balance.



Can this business of linking up dearness allowance with the cost of living be evaded? It has been practised in the private sector, but dire consequences are expected to flow from it when the demand has been raised that it should be practised in the public sector too. I seek enlightenment as to why when private sector employment is larger than public sector employment, the dire consequences of this linking were not recognised earlier. I admit I am now on a very shaky ground, but I have found difficult at least one argument which I have heard in the last week. Pandit Pant—he is the fourth of the personalities that dominate the situation—stated last week that the price line must be held. But if the Government of India has the capacity to hold the price line—with a big Plan, with a big slice and a (now) determined Finance Minister—why is it afraid of the general idea that there should be some linking of dearness allowance with the cost of living? Obviously because the Government is not going to hold the price line, although it says it will and must. It does seem to me that inconsistency, while it pays great dividends in some political fields, is unlikely to be effective in this one. Is it not possible for the Government of India to form itself into a committee which will integrate the big Plan, the big slice, and the wavy price line with a policy and treat both the private and the public sectors alike?

THE PEOPLE AND THE PLAN

Few persons who heard the Prime Minister's broadcast on Thursday evening could have failed to be moved by his deep sense of distress. Indeed, I felt the emotion in his voice as he spoke of the new hindrances to the great adventure on which we had embarked. He referred to the irony of our prescribing paths to peace abroad and our not being able to maintain peace at home. Can it be that the planning of the Indian Union, directed as it is so much by the Prime Minister's leadership, has grown somewhat out of touch with the capacity of the Indian people, first, to venture in the grand manner, and, secondly, to accept the necessary price? I am inclined to think the disappointment the Prime Minister feels is largely the result of his feeling that his leadership on major issues is no longer being readily accepted by large sections in the country, notwithstanding the sense of crisis which the border situation is supposed to entail?

Can it be that the strike is, in fact, a blessing in disguise, forcing us to recognise that the pattern of thinking in New Delhi with much that has gone before, including two complacent Budgets, is inadequate, first, to obtain the broad co-operation of the people and, secondly, to obtain the narrower co-operation of those most intimately concerned with Government enterprises? I am inclined to believe that much good can result from a searching of our souls to discover if New Delhi has not been significantly out of step with the feeling in India's middle and industrial classes. It may be that the Third Plan will need, notwithstanding the agreement expressed almost everywhere, to give, under the hammer of the spiritual and emotional strains raised in the last two years, some ground in order to obtain more popular enthusiasm than now exists. And I am coming more and more to feel that the essence of the gap between Indian intellectuals and lowest income working class groups is the fact that the workers of India are increasingly demanding a pause, and at least a temporary cessation of strain. Their gaze needs to be shifted a little from the distant horizon to present satisfactions; perhaps after a year or two, they might be more ready for a trial of endurance. Will our psychologists tell us if there is something in this view?

THE WEEK'S NOTES

Aneurin Bevan

A VALIANT FIGHTER

THE NEWS of the passing this week of Nye Bevan (as he was affectionately called) has come as a shock in spite of the last few medical bulletins which seemed to have anticipated this inevitability. It was hoped that after his last serious illness, Providence was kind enough to spare his services for some more time, but it was not to be. His death is a grievous loss not only to the British Labour Party but the entire left-wing movement. His ebullience and fiery oratory, his sturdy independence and idealism and his great gifts of leadership made for enlivening British politics for more than three decades. In spite of his non-conformity, he was throughout loyal to the Labour Party and always subordinated his personal interests to those of the party. When he found that what was termed as "Bevanism" was tending to sow discord, he was quick to give it up. Though he was the inevitable leader of the left-wing radicals, by a strange irony, it was the presence of this "stormy petrel" that acted as a cementing force in recent years to ensure party unity. His death has come at a time when the Labour Party is passing through perhaps its most critical phase with an uncertain future.

His greatness, however, does not lie merely in his services to his party and the Labour movement. He was, in fact, the champion of the downtrodden and oppressed humanity all over the world and he espoused their cause with singular courage. He was a great friend of India (which he had visited twice) and as an influential member of the Labour Government, which was responsible for the transference of power, this country owes him a debt of gratitude. Of few people can it be said with greater truth that the world is poorer for their loss than in the case of Mr Bevan without the customary hyperbole involved.

Cuba

RIFT WITH U.S. WIDENS

CUBA HAS again come into the news this week. For refusing to process Soviet oil, Premier Castro ordered the seizure of the American-owned Texaco and Esso oil refineries and the British-controlled Shell refinery. This has given the signal for a series of developments that are bound to grow in intensity in the coming weeks. Immediately, the State-owned Cuban airline suspended all trans-Atlantic flights because of an international boycott against Cuba. There is also speculation that Western oil producers, who have so far been supplying Cuba with her oil needs, may decide to stop supplies as a measure of retaliation. In that case, she has to rely on Russia for her requirements and the big question is whether the shortage of crude oil caused by the departure of the Western oil companies can be entirely made up this way. The fact is that even the promised Soviet imports of 1,150,000 tons of crude oil are stated to be sufficient to supply the Cuban electrical power and the transportation only for four months. It is possible that in the long run, the Cubans may be able to run the refineries themselves with the help of Soviet technicians, but immediately Dr. Castro's worry is one of finding the necessary dollars to buy the needed supplies of crude oil on the world market.

Since Cuba is to rely mainly on her sugar exports for getting her foreign exchange, U.S. proposals to cut the preferential sugar quota have come as a great blow to her. Cuba has now the highest quota, which is almost one-third of U.S. consumption. Also like other foreign suppliers, Cuban producers get a premium of about 2 cents a pound over the world price of about 3 cents. The U.S. Congress has now passed a resolution giving the President authority to cut Cuban sugar for the rest of the year. It has been estimated that a reduction in American imports of Cuban sugar would mean cutting the subsidy that the United States is now giving of about $125 million a year because of the differential price. There is no wonder therefore that Dr. Castro denounced this action of the U.S. Congress as "stupid and criminal." He has now threatened to seize United States investments "penny by penny until nothing is left" if the quota were cut. American investments in Cuba amount to $850 million and there is a fear among the Americans that Dr. Castro is planning to forfeit all of them. This process of retaliation and counter-retaliation bode ill for the future of Cuban-American relations. It is true that the United States had all along shown commendable restraint in her dealings with Cuba in spite of extreme provocation. But the adoption of a tough policy now will only help Russia which is now playing oil politics to get a foothold in the Caribbean.

Planning

PUBLIC ENTERPRISES AND PROFITS

IN THE scheme for financing the Third Plan outlay in the public sector, credit is taken for a sum of Rs. 150 crores by way of contribution from the Railways and Rs. 440 crores by way of surpluses of "other public enterprises on the existing basis." Since the Railways have contributed Rs. 150 crores during Second Plan, the estimate in this respect for the Third Plan may be taken as valid. But as regards the contribution of "other public enterprises" there is room to doubt the validity. Under this heading, the figure for the Second Plan is not given separately, but it is stated that the "balance from revenues on the basis of existing taxation" covers this item. In any case, among the State undertakings, the principal contribution should have come from Posts and Telegraphs. The Draft Outline points out that the surpluses from Central Government enterprises are estimated at Rs. 300 crores and from the enterprises of State Governments Rs. 140 crores. Under the former comes enterprises like iron and steel, fertilisers, oil extraction and refining, and Posts and Telegraphs and under the latter electricity boards, transport undertakings etc. It is also mentioned that these estimates represent the balance of resources available with public enterprises after providing for their working expenses as well as depreciation outlays and these estimates have been made on certain "broad assumptions" and are therefore "very rough."

What these "assumptions" are have not been, however, told. But judging by past performance, the Planning Commission's claim is of a tall order. A recent study of public sector enterprises made by the Central Statistical Organisation shows that 19 industrial undertakings of the Central Government, which have been completed and are in full operation, have a total capital of about Rs. 171 crores, but their profits before taxation come to about Rs. 6 crores. The profits before tax as percentage of net assets present a disconcerting picture as the percentage is as low as 2.67 in Engineering and 0.70 in Coal Mining. So on the existing basis, there seems to be no possibility of reaching the target fixed, but the Planning Commission is undaunted because it points out that measures must be taken to raise the surpluses of public enterprises. An inkling of these "measures" is given when the Commission goes on to argue that though increases in the prices of products of public enterprises will tend to raise prices and costs, this is part of the calculated sacrifices that have to be made. Evidently much water has flowed since it was fashionable to proclaim that public enterprises should operate not so much for profit as for the benefit of the public.

TARGET FOR SERVICE CO-OPERATIVES

THE PLANNING COMMISSION has tentatively fixed the target of increasing the number of service co-operatives by the end of the Third Five-Year Plan to 2.5 lakhs, which will serve 40 million families, constituting 55 per cent of the total rural population or 74 per cent of the agricultural population. In view of the expectations that nearly 2 lakhs such societies would have been established by the end of the current Plan, the Third Plan target of the number of the societies to be set up is by no means an ambitious one. But taking into consideration that

only 17 million families would be members of service co-operatives by 1961, forming nearly 25 per cent of the total rural population and 33 per cent of the agricultural population, the task of raising the membership to 40 million during the five years to 1966 is indeed stupendous. More so if the membership is to be on purely voluntary basis.

It is heartening to note that realization has dawned on the Planning Commission and the Government that time has come when instead of just multiplying the number of primary agricultural societies, efforts should be directed towards increasing their size so as to make them viable units. Under the Third Plan the average membership of these societies is sought to be raised from the current level of 85 to 160. This, along with the proposal to link marketing of surplus farm produce with the provision of credit by these societies, should go some way in improving their working.

One of the main factors that has hampered the progress of co-operative movement in India is the lack of adequate managerial and organizational skill. This is evident from the fact that a large number of co-operative societies, particularly in the Eastern Zone, are at present in none-too-healthy a state of affairs. Any programme of expansion of the co-operative movement, obviously, has to be preceded by energetic action in the direction of imparting training to the personnel of co-operative societies. Not much attention, unfortunately, has been so far paid to this and it may prove to be real bottleneck in the implementation of the Third Plan programme which envisages enlarging of the functions of the primary agricultural society.

Sugar

PLEA FOR DECONTROL

IN VIEW of the present comfortable supply position leaving a probable surplus of 5.33 lakh tons at the end of this season, and prospects of a still higher output in the next season, spokesmen of the sugar trade have reiterated their plea for doing away with the present controls on sugar. It is contended by them that the imposition of controls has paralysed the entire normal channel of distribution, leading to maldistribution and unemployment. "Because of the defective distribution system under controls," they aver, "sugar does not reach the rural areas in required quantities, with the result that a large majority of the consumers in the interior areas had to pay higher prices in the black market, of Rs. 150 to Rs. 200 per bag. The maldistribution inherent in controls on a commodity like sugar, has given scope for anti-social elements to exploit the consumers. What has happened is that, apart from a few big cities, the general consumer has not benefited at all by the controls."

While the two main arguments of the trade, namely, the disruption of normal trade caused by the imposition of controls and satisfactory supply position — and the output during the current season is placed around 24 lakhs tons, which is perhaps an all-time record—are very forceful and are accepted as such by all concerned, there seems to be a feeling that it would be better to take an important policy decision like decontrol of sugar only after the authorities have a complete and full picture in respect of the domestic supply. This can be had towards the end of the year when the prospects of the current year's crop become known. In other words, this section wants a postponement of a final decision by a few more months. Secondly, during the last decade, the consumer has suffered rather heavily due to the too frequent policy changes affecting this commodity and he is in no mood to have a repetition of this experience. The consumer's apprehensions that decontrol may lead to his having to pay more in the open market should be allayed, though they are born of a certain complex.

A Window on the World

WHEN THE U.S.S.R. BECOMES AN AFFLUENT SOCIETY

By

ODYSSEUS

JUSTIFICATION, if any was required, for the attempt that I made here on June 17 constructively to criticise J. K. Galbraith's readable, witty, but in some respects misleading best seller, "The Affluent Society" (H. Hamilton. London. 1958. 21 sh.), has quickly come in the shape of Mr. R. H. S. Crossman's adoption (in his admirably written new pamphlet "Labour in the Affluent Society." Fabian Society. London S.W. 1. 2sh. 6d.) of Galbraith's theories to replace Marxism as basic doctrine for the British Labour Party.

"What," asked the Manchester "Guardian" reviewing Mr. Crossman's pamphlet, "does a party of catastrophe do when no catastrophe is in sight?" Answer: It invents one. Before World War II, Socialists assumed that Capitalism was morally wrong and economically disastrous. Without Socialism, the cycle of alternating boom and slump, with its immense waste of resources, human and physical, would go on for ever. Keynes destroyed that Socialist assumption by showing that it was possible to iron out the steep ups and downs of the cycle into manageable proportions. Mass unemployment could be reduced to relatively small variations in full employment. This could be done without nationalisation and without clamping all workers into the strait-jacket of complete economic equality. But if the contradictions of capitalism can be resolved without Socialism, why should anyone vote Socialist? This explains why the Labour party has lost three elections in the UK, and why the German Socialists have never had a look-in since Germany secured control of her post-war affairs. The German Socialists, as a whole, and the Right wing of Britain's Labour party, have now recognised this. Mr. Crossman has, however, found in Galbraith the substitute for Marx that provides the catastrophe necessary to enable Socialists to continue as prophets of doom.

For Mr. Galbraith, the affluent society (for details see this column, June 17) contains the contradiction that while the individual grows ever richer, the state and its public services are plunged into increasing squalor, because of an alleged inherent inability to allocate sufficient resources to defence, education, scientific research, health, and welfare. Public policy is subordinated to private profit. The wants of the community are subordinated to the wishes of the individual consumer, and to the interests of the rings of big manufacturers who live by encouraging the consumer to buy what they are producing in ever greater quantities. It is these industrial "oligopolies", not the state, which set the economic priorities of the affluent society.

Basing himself on Galbraith, Mr. Crossman argues that so long as the public sector remains the minority sector throughout the free world, we are bound to be "defeated" by the Soviet bloc in every kind of competition. In military power, industrial development, technological advance, mass literacy, and eventually in mass consumption itself, "the planned Socialist economy, as exemplified in the Communist states, is proving its capacity to outpace and overtake the wealthy and comfortable Western economies."

THE DOOM OF THE WEST

Mr. Crossman rises to Marxian heights in his apocalyptic vision of the coming doom. Gradually the eyes of the people will be opened to the threat to democratic values for years concealed from them by governments systematically appeasing the private profit makers at the cost of public service and public enterprise. "And one day anger will replace complacency." For "a left wing Government is required only where the change must be radical and involve a repudiation of orthodoxy; and the occasion for it will be a crisis in which the people, shaken out of their complacency, lose confidence in their traditional rulers, berate them on the ground that they have betrayed the nation and deliberately insist that what the country needs are new 'men' and a big step forward."

I do not seek to deny that the USSR's economy is making substantial strides, and in some respects may be catching up with the West. But neither Mr. Crossman, nor anyone else, has adduced evidence that it is as efficient as Soviet propaganda makes it out to be. Secondly, if the Soviet economy is catching up, Mr. Crossman does not discuss the human cost at which this is being achieved. Soviet priorities have concentrated on building the USSR into a mighty world power, geared for war, whereas the West has concentrated on consumers' choice as well as defence. If consumers' choice had been clamped down in the West, as it has behind the iron curtain for the past twenty years, the West could have built up as mighty a war machine as the USSR.

In that case, although the states of the West would have been more powerful, their individual citizens would, materially, have been infinitely poorer. Would they have been spiritually richer?

Mr. Crossman, however, is convinced that there is no need to fear military aggression from the USSR. He asserts that the Kremlin now assumes that a nuclear war would actually prevent the victory of Communism. The USSR's determination to practise peaceful co-existence is a sign of strength. Mr. Crossman foresees that we shall one day wake up to find that the USSR has achieved a higher standard of affluence than the West, at which point we shall burst out in anger against our complacent Conservative rulers and vote Galbraithian Socialists into office.

It is reasonable to ask whether Mr. Crossman is right to be so certain that the USSR will not use its growing power for aggressive expansion, but I submit that this is not an economic but a political question. I do not know what answer there is to the world race in armaments, but I am sure that to confuse it with the world race to multiply wealth is no answer. On this point hear Mr. George Schwartz, the shrewd and witty economic commentator of the London "Sunday Times", who replied thus to Mr. Crossman on June 19: "Now, for my part, if I woke up tomorrow morning to find that by a miracle the standard of living all over Asia

was as high as ours, or even higher. I should let out a great Alleluia. Dash it, what am I to think about this matter? I am asked today, particularly by the Crossmans, to concern myself that the standard of living in those continents is low, distressingly low. They are not above accusing people of my kidney of complacency in this matter, even of callousness. But if the time comes when these luckless people achieve a high standard of living, I am supposed to explode with wrath."

Mr. Crossman, Mr. Schwartz points out, seems to think that no people, or section of a people, can become better off except at the expense of, and to the prejudice of, other people. This is an occupational disease on the Left, I wish that the USSR were prosperous enough to lend all the money that India requires for her Five-Year Plans, and that the Soviets could afford to buy on a huge scale from the people of India, Pakistan, Burma, Ceylon, Cuba, Africa, and South America. That would give a boost to production and prosperity in all those countries. At the expense of Europe and the USA? Why should the West be poorer if the USSR and the underdeveloped countries enjoy large spending power? Because they will not spend any of it in the West? Has Mr. Crossman never heard of triangular and multilateral trade?

If the Galbraithians would study economic history, they would find that the UK did exactly what Mr. Crossman warns us that the USSR may do. The UK opened up markets in vast areas all over the world which had hitherto been economically stagnant for centuries.

I am well aware that some people argue that, in opening up new world markets, the UK did so at the expense of the under developed countries—exploited them. No human activity has ever been entirely free from error or injustice, and there are, of course, also such factors as the terms of trade to take into account. But whatever the short term repercussions on some markets of the UK's 19th century splurge of expansion, the long-term result was to multiply wealth and to raise standards of living in varying degree everywhere. Naturally, if you live in a country, such as Greenland to take an extreme example, which does not happen to be rich in raw materials, you will not prosper at the same rate as a country which chances to have oil wells or tea plantations within its border. Nevertheless, if the British had said to themselves: "We must not try to sell more, nor to buy more, overseas because some of the terms of trade are in our favour, and we may grow rich more quickly than other peoples," the whole world would have been poorer today, and would be positively panting for some enterprising country, without such scruples, to set the ball rolling.

Mr. Schwartz cites Spain which has declined as a leading political power, and asks whether she has become economically absolutely poorer since the UK became prosperous and powerful. Did the UK push Spain down in the world by becoming rich enough to buy Spanish oranges, drink Sherry, import Spanish copper, iron ore, and pyrites? Is the UK worse off today because the USA has streaked ahead of her in the twentieth century? Would the UK be better off if the Americans were too poor to buy British motor cars and Scotch whiskey?

The European Scene

JOINT ECONOMIC POLICY FOR W. EUROPE

From Our Special West European Correspondent

PARIS, July 4.

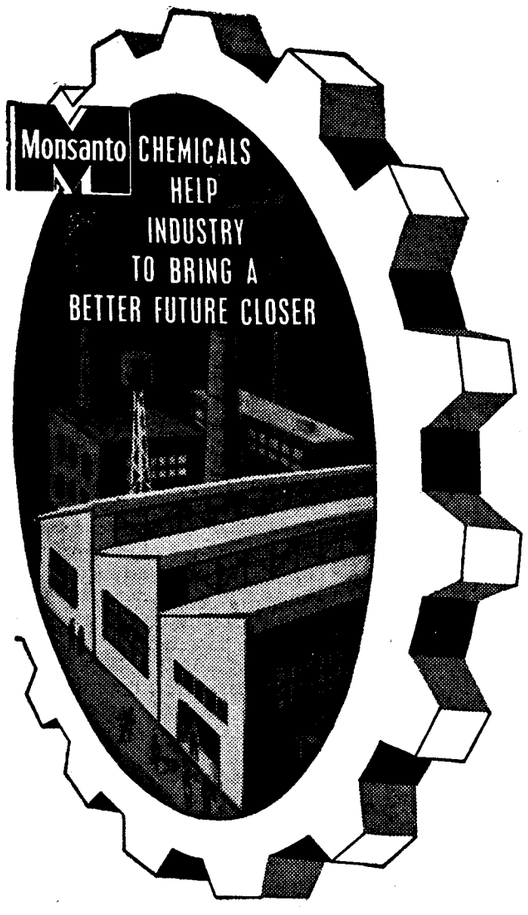
THE idea that the level of economic activity in the United States has a predominating influence over business conditions in all other Western and Afro-Asian countries is already out of date. The US economy no doubt remains a major factor in the life of the non-Communist world but its importance is no longer overwhelming, and is constantly diminishing. The days are gone when it seemed that John Doe's decision to buy or not to buy himself a new car determined whether the rest of the world experienced a boom or a slump. It was never as simple as that, of course, but for several decades the USA had an export-monopoly in recessions and inflations. Sudden variations in American business activity caused disproportionately violent fluctuations in US imports of raw materials, and because the supply of these latter is inelastic the revenues of raw-material exporting countries rose or fell dramatically and this in turn governed their imports of industrial goods from West Europe. Not only was the American economy much bigger and more competitive than its nearest rivals, but its relations with other countries were bilateral: each of them depended on the USA more than the USA depended on it.

The return to multilateral trading conditions and, above all, the vast expansion of the West European economies (to which, it must never be forgotten, the USA powerfully contributed) have changed all that. The weight of West Europe in the world's economic affairs has much increased and is still growing. This weight makes itself more readily felt because West Europe plays a larger role in international commerce than do the USA or the Communist economies. Moreover, West Europe is still divided into nation-states that trade intensely between themselves but must each safeguard a payments position, so that inflationary or deflationary tendences in any one of them can be considerably multiplied in their effects on non-European countries. The USA's share in the exports of raw-material producers has diminished and West Europe's grown, while US imports are gradually tending to include more finished goods (mainly from West Europe) which are less affected by cyclical variations than are raw materials. Meantime, too, the American administration has made much progress since the war in controlling the amplitude of internal economic cycles. The upshot is that inflationary and deflationary tendencies originating in the USA are now feebler than before the war, and are less and less extensively transmitted to the rest of the world. The two latest downturns, in 1953-54 and in 1957-58, of which at least the first was expected to have disastrous consequences abroad, had in fact only moderate effects on most developing countries (with several painful exceptions) and very little effect in West Europe. It now appears that the mild recession of 1958 in West Europe had almost nothing to do with the prior American recession but was the result of stabilisation programmes enforced in France, Holland, Belgium and Italy for quite separate reasons.

The foregoing points to a trend (West Europe's relative weight in the world economy is growing and the USA's, relatively, diminishing) and is not intended to be a static comparison, e.g. that one is more important than the other. It will never be true in our time that developing countries can be indifferent to the state of the US economy, but it is already true that the level of activity in West Europe is of comparable importance and deserves the same attention as business men everywhere have given since the war to the monthly business indicators in the USA. For the same reason, everybody is concerned in the lesson that the West European countries draw from this new situation: the need for co-ordinated short-term economic policy to be applied simultaneously in as many West European countries as possible. The ideal would be a harmonisation of all public actions liable to affect the level of business activity, in all Western nations. Since that is impossible, the experiment in co-operation is at present limited to the six nations of the Common Market.

This co-operation so far has no institutional expression; there is no sign of a supra-national finance ministry co-ordinating budgets, taxes and interest rates in the six countries. But there are regular meetings of Finance Ministers and governors of central banks where the overall European situation is reviewed No decisions binding on all participants are taken at these meetings but, what is no less important, a code of good conduct and co-operation is gradually being evolved which would make it morally difficult for any one member to take drastic action to safegoard his own position at the expense of the others. This is not enough; closer and more formal co-ordination of economic policies is needed, and so lately the leading economists of West Germany and France met in Paris to discuss what forms it could take. In the neo-capitalist, free-market economies of West Europe governmental action on business activity can take three directions: budgetary, fiscal (i.e. taxes) and monetary (i.e. credit), The problem of co-ordination thus has these three faces.

If co-ordination means uniformity of techniques, the difficulties are immense. Comparison of national budgets soon shows that (to be Irish) they are simply not comparable. Only in France is the state budget presented as the nation's accounts, so that there is some hope of seeing what the effect of a budget entry will be on the economy as a whole; elsewhere the budget is just the accounts of the central or local government, and its nomenclature and subdivisions make no economic sense. They differ widely between federal and centralised nations, and in the Federal Republic they differ from one Land to the other. Budget years differ; accounting systems contrast; no two countries agree on where the public sector ends and the private sector begins; all budgets include "invisible expenses" in the form of a maze of special exemptions, reductions and subsidies. The economists concluded that "the present state of budgetary documents in the different countries does not permit of useful comparisons and this excludes the possibility of an adjustment of financial policies in the framework of a common economic programme".



However, they went on to say that what really mattered was not uniformity of techniques but agreement about ends. If the six governments could agree to make a common effort toward the same goal, namely to avoid the transmission across their frontiers of inflationary or deflationary movements detrimental to their neighbours, then the diversity of the means they used to that end would matter less. Naturally, they would have to be sure that their various means really were means to the same end, and that entails beginning now on the long and tedious task of writing their budgets in a common language. This question has never before attracted the attention of economists, and the recent Paris meeting was therefore epoch-making (as was meeting of European company lawyers who decided to draw up the model of a joint-stock company that could be constituted in any of the six countries). The vision of a joint Common Market budget will only be realised, if at all, very far in the future but the intention to bring a common spirit into budgetary practice is already a reality.

Similarly in fiscal practice, it soon emerged that the tax systems of the six countries are incomparable and fantastically complicated. Every nation's tax system be-

gins from different assumptions and is riddled with discriminations in favour of various pressure-groups who would strongly resist the withdrawal of their privileges in the name of uniformity. Here again, the economists agreed that uniformity (e.g. equivalent rates of taxation) was less important that the assurance that various taxes were equally effective and flexible in the different countries. The common goal in this matter should be agreement about what constitutes taxable revenue, a greater reliance on direct taxes than on indirect taxes and a general limitation of the French system of a "tax on added value". A single West European tax system is probably a chimera, but the equalisation of company taxation and the appearance of a "European Tax" imposed universally on something or other to finance common institutions are perfectly possible.

On monetary policy there was instant agreement about the importance of co-ordination. The spectacle of competitive bank-rate increases (treated in an article here in February) was too absurd for there to be any doubt about this. No one dreams of a single West European bank rate but it is obvious, and feasible, that no country should change its interest rates without first carefully examining the effects on the liquidity and payments problems of its neighbours. The Common Market countries have already accepted this point of view and this is the first way in which their co-ordination of economic policies will affect countries overseas, and particularly the developing countries. A West Europe in which credit policies vary simultaneously and in response to the same view of the world economic situation will be an influential novelty in international trade. The economists who met in Paris disagreed about the long-term objectives of monetary policy, the West Germans tending to place more emphasis on the defence of currency stability and the French on a maximum rate of economic growth. This conceals a deep-seated discord about the very aims of governmental intervention in economic life, which would have to be resolved before West Europe could have a joint economic programme.

A common economic policy, in the literal sense, will emerge only slowly and with difficulty in West Europe. But for overseas countries the major point is that this region now has a greater relative influence over world economic conditions than in the recent past, and it is seeking the means to make that influence felt jointly and coherently, in the framework of a discipline.

Monsanto works constantly both to develop new, better chemicals—and to improve those chemicals already used in every major industry.

PHARMACEUTICALS
acetylsalicylic acid, phenacetin, benzoic acid, phenol, phenolphthalein, germicides are but a few of the many Monsanto products in this field.

RUBBER
Monsanto's accelerators help speed vulcanisation, add quality. Anti-oxidants improve resistance, prevent early cracking, give increased flexibility.

TEXTILES
Monsanto Syton is widely used in spinning cottons and woollens, increases yarn strength, allows for reduction in twist.

PRESERVATIVES
Monsanto's pentachlorophenol chemicals help to preserve a wide range of products. Monsanto sodium benzoate helps prevent corrosion.

PAINT
Monsanto's chemicals are used extensively in the manufacture of high-quality paints, varnishes and lacquers.

SYTON is a Registered Trade Mark

Monsanto
chemicals for every industry.

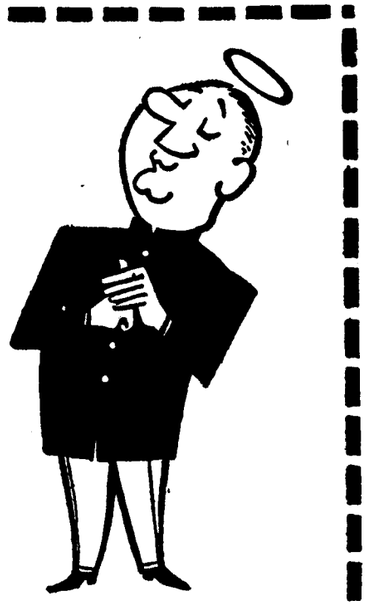
Economic Report from the U.S.

BUDGET SURPLUS ANTICIPATED

By

GUY SIMS FITCH



WASHINGTON, July 5.

THE fiscal year 1960 came to a close last Thursday, June 30, and the US government's budget has emerged in far better shape than anticipated. The final data are not yet available, but on the basis of fairly firm estimates by the US fiscal authorities, the outlook is for a 1960 budget surplus in excess of $500 million. While this figure may not seem large in relation to the size of the of the US budget, it represents the first surplus of the past three fiscal years, and it certainly is a far cry from the $12,400 million deficit of the 1959 fiscal year, when the US was recovering from the brief 1957-58 business depression. It is, moreover, some two and half times larger than the $217 million surplus projected by President Eisenhower last January in his regular mid-year budget review. As recently as last April, some Administration officials were concerned that there might not be surplus at all. This was because corporation tax receipts were running behind the forecasts, as the lingering effects of last year's lengthy steel shut-down were cutting into corporate profits. It follows, then, that a budgetary surplus of $500 million outdoes the expectation not only of the sceptics but also of the more optimistic among the fiscal experts.

Behind fiscal year 1960's improved budgetary position undoubtedly lies the solid growth of the American economy. As compared with the 1959 fiscal year, Federal Tax Revenues, reflecting the incomes of American individuals and businesses, have jumped more than $10,000 million, while federal outlays, no longer geared to combating the effects of the 1957-58 dip, have declined by about $2,500 million. As a matter of fact, the situation with regard to both receipts and expenditures in fiscal year 1960 appears to have improved in just the past six months, with the former higher and the latter lower than projected in the President's January review.

Despite the recent improvement, the estimated federal tax receipts from corporate profits still appears to have fallen below the $22,200 million projected in January, but this apparent loss has been more than made up by unexpectedly high personal tax receipts from individuals. These were estimated at $40,300 million in January. The steadily rising personal incomes of the American people, however, seem to have brought the actual total to well above the forecast. As a result, the final accounting for fiscal year 1960 promises to show that total budget revenues from all sources were somewhat higher than the $78,600 million projected by the President in January. Federal spending, meanwhile, appears to have fallen below the January forecast of $78,400 million. A principal reason for this was the heavy export sales of cotton, which helped reduce net outlays under the Government's farm price support programme. Also a factor may have been the early repayments by several foreign governments of loans from the US Export-Import Bank. This could have had the effect of reducing the net expenditure of that international agency of the US Government.

One of the happy consequences of the improved budget position is that it seems to be enabling the US treasury department to borrow less than it otherwise might in the US capital markets. Because the bulk of the treasury receipts normally comes in the first half of calendar year, the Government still must do some borrowing in the months ahead, despite the 1960 budget surplus and the anticipation of an even larger surplus in the 1961 fiscal year, just getting underway. But reduced borrowing by the Government could help ease the competition for capital, making more available for the private sectors of the economy and indirectly providing a further stimulus to economic activity. The newspaper, "Journal of Commerce", summing it up says: "The fight for fiscal discipline has thus given the economy a budgetary surplus. The lessened need for treasury borrowing and the economic effects that this will have are the rewards that the economy has now for these efforts to achieve fiscal disclipline".

We are rather proud of ourselves

TODAY, banking is almost a public utility. Its success depends on its ability to give friendly and helpful service.

We modestly believe that our progress shows that our clients, whether they are industrialists, exporters or just men who want to deposit Rs. 10/- in a Savings Bank account, realise that in IOB they have an institution that has made friendly service the basis for all their activities.

BOOK REVIEWS

PARLIAMENTARY PROCEDURE

Practice and Procedure of Indian Parliament: By S. S. More, with an introduction by Dr. S. Radhakrishnan: Published by Thacker & Co. Ltd., Rampart Row, Bombay: Pages 569: Price Rs. 27.50.

A CONTINUOUSLY growing body of rules governing the procedure in the Indian Parliament makes Sir Erskine May's classical treatise necessarily not always a useful guide. It is primarily to fill this deficiency that Mr. More has made this venture and the result is a valuable contribution to the scanty literature on Indian parliamentary procedure and convention.

The introductory, historical part of the book traces the organic growth of parliamentary institutions in India. Between the introduction of the Legislative Councils in 1854 and of dyarchy in 1920, the legislatures functioned as mere advisory bodies to "irresponsible and irremovable" executive governments. When the Law Member paid a flattering compliment to Gokhale as "the leader of the Opposition", the latter replied: "We are far away yet from the time when Government Members will exchange places with private members in this Council and until that time comes there can be no regular Opposition here, as the term is understood in Western countries." It shows the extent to which the intelligentsia in this country had imbibed the spirit of parliamentary democracy even then. This book gives some glimpses of the struggle inside the legislature for the achievement of responsible government.

Undoubtedly a good deal of success of parliamentary democracy depends upon upholding the dignity and authority of the House as well as of the rights and privileges of its Members. Responsibility for this task devolves primarily on the Speaker. In India the Speaker is invariably elected from the party in office. This phenomenon distinguishes the Speaker in India from his prototype in Great Britain and it may be that this high office will develop on lines somewhat different from that in Great Britain. Speaker Patel and Speaker Mavlankar frankly stated that it was impossible for them to divest themselves of a whole life-time's political associations. But this tie was never allowed to come in the way of steering clear of party alignments and acting on a non-party basis. A tradition of impartiality has been scrupulously built up and jealously safeguarded by the Speaker of the popular House. The Simon Commission has testified to this fact in the context of the Presidents of provincial legislatures.

The book contains a fund of instructive details on procedure. In the over-crowded Budget Session, the guillotine is by no means used as an instrument to exclude discussion on controversial demands or grants. A convention has grown whereby the party whips come to an agreement to concentrate on important demands and to leave the unimportant ones for the contingency of the application of the guillotine. Adjournment motions generally ought to be taken as censure motions, but not invariably so. The frequency with which recourse is had to adjournment motions reveals a vulnerable spot in parliamentary practice in India. Mr. More records the fact that during the 15 sessions of the House of the People (1952-1957) elected after the first general elections as many as 157 adjournment motions were tabled out of which only one secured the consent of the Speaker. Perhaps it would not be wrong to say that some of them were moved with a sense bordering on frivolity. The present Lok Sabha may probably exceed this record.

Question-time is easily the most important in parliamentary sessions, barring, of course, the Budget debates and the debates on important Bills. The author states that "the terror with which Government Departments regard question-time has to be felt to be believed." Of course, more important than the initial questions are the interpellations. It would hardly be uncharitable to assume that the effect produced on Government Departments by questions is produced in some measure on the Ministers by the suspense created by likely interpellations. This weapon is effectively used in the Indian Parliament for a variety of objects including eliciting information, exposing abuse of authority, ventilating grievances, extracting promises or embarrassing the Government. Question-time, in fact, has always been the ideal time to judge the quality of the working of the Indian Parliament. This is a book that should find a place not only in every public library but in the private libraries of those who can afford the price.

EVOLUTION WITHOUT TEARS

What We Did To Father: By Roy Lewis: Hutchinson, 16s.

[Indian readers will remember Roy Lewis in a number of serious studies, the earliest of which was that on the British Middle Classes. Here and there, his riotious sense of fun penetrated through the most closely-woven argument; somehow it managed, on the whole, however, to be contained. At last it has made good its escape.]

It takes courage to jest about the origins and destinies of man, or to trace the dilemmas of the modern citizen back to his ancestors of the pleistocene age, and relate them to pre-history. Such an attempt suggests a vast work in several volumes, yet here, in a new novel, we have a souffle dealing gaily and with a fair amount of accuracy with just this.

Father is a horde-father, out to 'outfight, out-think, out-manoeuvre, out-propagate and out-evolve' both his neighbours and the larger forces of nature. His sons inherit his passion for experiment, though theirs are more limited natures. Oswald the hunter, Willbur the scientist, Alexander the artist, William the farmer are all in their turn outmanoeuvred by the Old Man of the Tribe. Only Ernest, the intellectual (and narrator of this book), is able to arrive at last at a satisfactory plan for parental control and to persuade his brothers to collaborate.

The steps by which this is achieved are riotously amusing, indeed Father's introduction of exogamy, and the efforts of his unfortunate sons to catch up with suitable mates across the vast land-scapes of primaeval Africa verges on slapstick. Every family has its aunts and uncles too, and these are a particularly engaging collection; in particular Uncle Vanya, the reactionary, contrives to be remarkably contemporary in his own pleistocene way.

This book can be read at an entirely light-hearted level, and William Hawison (of 'Punch') provides some good illustrations to add to the gaiety. Nevertheless, there runs through this tale of our origins a strong consciousness of the contemporary dilemma. One is reminded of a New Yorker drawing of two battered monkeys on an atom-blasted Pacific atoll.

"Well" says one to the other, "Here we go again".

Special Article

FINANCIAL RESOURCES IN THE THIRD PLAN

THE Draft outline of the Third Five-Year Plan released by the Planning Commission this week contains no surprises. Great interest, however, centres round the manner in which additional financial resources are to be raised. The financial outlay of the Plan allocates a sum of Rs. 7,250 crores for the public sector as against Rs. 4,000 crores in the private sector. A larger share for the public sector is written into Indian planning since December 1954, when the Lok Sabha declared that the broad objective of economic policy would be to achieve the "socialist pattern of society." But not too much should be read into this arithmetical division. Orders on the private sector by the public sector will make income generation even at the end of the Plan no less than 80 per cent of total income generation.

Table I below sets out the pattern of financial resources raised in the first two plans as compared with the proposed Third Plan. It will be seen that the public sector outlay at Rs. 7,250 crores is more than three times the First Plan and more than 50 per cent of the Second Plan. What is interesting is that the budgetary receipts corresponding to external assistance assumed in the Third Plan in the public sector are greater by about Rs. 200 crores than the total public sector investment in the First Plan. In other words, the Third Plan leans very heavily on external assistance. This ambitious figure for external assistance has been incorporated on the basis of the heartening experience in the Second Plan wherein a provision of Rs. 800 crores (out of a total of Rs. 4,800 crores) was made for external assistance, but the actual receipts are likely to be about 25 per cent higher at Rs. 982 crores.

Another interesting feature of the scheme of financing the Third Plan is the marked reduction of deficit financing which has been the basic cause for raising the price level significantly during the first four years of the Second Plan. It means that the Planning Commission has recognised that with lower level of foreign reserves to cushion increased money supply consequent upon deficit financing, it would be unwise to embark upon deficit financing of the same order in the Third Plan as in the Second. This indeed is a welcome decision and seems to have been dictated by the recent unrest in the fixed income groups; the decision has proved inescapable.

The level of additional taxation at Rs. 1,650 crores proposed in the Third Plan is higher by 65 per cent over the Second Plan. Performance during the Second Plan has been encouraging in this particular sector, but a fact which is ignored while discussing the inflationary pressure on the Indian economy is that a part of the price rise is due to additional taxation. The upward trend in the cost of living indices in the past four years has also been partly due to additional excise duties imposed upon a number of consumer goods. It is necessary, therefore, that the figure under additional taxation be reduced by Rs. 200 to 300 crores and the same

TABLE I.

FINANCIAL RESOURCES FOR THE PUBLIC SECTOR

(Rs. crores)

	First Plan		Second Plan		Third Plan
	Allocation	Actual	Allocation	Actual likely to be achieved	Allocation
1. Balances from revenues on basis of existing taxation	570	575	350	(—)100	350
2. Additional taxation			450	1000†	1650†
3. Contribution of the Railways	170	115	150*	150	150
4. Surpluses of other public enterprises on the existing basis	—	—	**	**	440
5. Loans from the public	385	508	700	800	850
6. Small Savings			500	380	550
7. Provident funds, betterment levies, steel equalisation fund and miscellaneous capital receipts	133	80	250	213	510
8. Budgetary receipts corresponding to Central assistance	811	203	800	982	2200
9. Deficit financing		532	1200	1175	550
10. Gap	Nil	Nil	400	Nil	Nil

gap filled, as indicated above, by raising loans from the public, through small savings or through prize bonds.

The pattern of foreign exchange resources in the Third Plan as projected on the basis of the experience in the three years 1956-57 to 1958-59 is set out in Table II below. This analysis proposes raising of exports from the average level of Rs. 600 crores to Rs. 690 crores per annum, only a modest rise, too modest in fact. Invisibles are likely to drop significantly in view of negligible interest receipts because of the sharp depletion in sterling balances. A sum of Rs. 100 crores per annum is also likely to be paid out on capital transactions. In the net result, the foreign exchange resources available from exports would be around Rs. 614 crores per annum, on the average. The Planning Commission has made some estimates in regard to imports necessary to maintain the internal level of business activity at Rs. 714 crores, leaving thus a gap of Rs. 100 crores per annum. The strain on foreign exchange resources for development purposes would be in addition to this gap. In other words, but for the substantial assistance of friendly nations a foreign exchange crisis would be perpetual. The total volume of the foreign exchange gap is estimated at Rs. 2600 crores out of which Rs. 1,900 crores represent the import of machinery and equipment for projects in the Plan. A sum of Rs. 500 crores would be needed to cover the excess of payments over receipts, while another sum of Rs. 200 crores would be required to provide components and intermediate products for increasing the production of capital goods in the country.

All in all, the important thing to realise is that differences on this Plan are now only marginal and academic. The great question mark is Implementation or Management. The latter is India's scarcest resource; therein lies our peril.

TABLE II.

BALANCE OF PAYMENTS ESTIMATES FOR THE THIRD PLAN PERIOD

(Rs. crores)

	Annual average 1956-57 to 1958-59	1961-62	Total for 5 years (1961-62 to 1965-66)	Annual average (1961-62 to 1965-66)
1. Exports	602	650	3450	690
2. Invisibles (net) (excluding official donations)	101	45	120	24
3. Capital transactions (net) (excluding fresh receipts of official loans and private foreign investment	—22*	—150	—500	—100
4. Foreign exchange resources available for imports (1+2+3)	681	545	3070	614
5. Maintenance imports	728	730	3570	714
6. Foreign exchange resources available for development imports (item 4—item 5)	—47	—185	—500	—100

* This figure excludes IMF drawings and PL 480 assistance, but includes capital movements on private account.

GOVERNMENT OF INDIA

3½ PER CENT. BONDS 1966, ISSUE PRICE Rs. 99.75 PER RS. 100 (NOMINAL). REPAYABLE ON 18TH JULY, 1966.

4 PER CENT LOAN 1980 ISSUE PRICE RS. 99.90 PER RS. 100 (NOMINAL). REPAYABLE ON 18TH JULY, 1980.

Subscriptions to the above bonds and loan will be received simultaneously and will be limited to a total of Rs. 175 crores (approximately). Subscriptions may be in the form of (i) cash/cheque or (ii) securities of the 2¾ per cent. Loan 1960 or 4 per cent Loan 1960-70 or 2½ per cent. Hyderabad Loan 1955-60, which will be accepted for conversion at the following rates:-

2¾ per cent. Loan 1960 . .. Rs. 100 for Rs. 100 (Nominal)

4 per cent. Loan 1960-70 .. Rs. 100.30 for Rs. 100 (Nominal)

2½ per cent. Hyderabad Loan 1955-60 .. Rs. 84.75 for Rs. 85.71 or O.S. Rs. 100 (Nominal)

Interest will be paid on the 2¾ per cent. Loan 1960, 4 per cent. Loan 1960-70 and 2½ per cent. Hyderabad Loan 1955-60 tendered for conversion up to 17th July, 1960 inclusive.

The new bonds and loan will bear interest from 18th July, 1960. Interest will be payable half-yearly on 18th January and 18th July.

Subscription lists will open on 18th July, 1960 and close on 20th July, 1960 or earlier without notice.

Applications for the bonds and loan will be received at:-

(a) Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi;

(b) Branches of the State Bank of Hyderabad conducting Government business and those at Mancherial, Nagarjunasagar, Purli Vaijnath and Sailu;

(c) Branches of the State Bank of Mysore in the State of Mysore except at Bangalore, Mangalore and Gulbarga; and

(d) Branches of the State Bank of India at Mangalore and at other places in India, except at the places mentioned in (a), (b) and (c) above.

For full particulars apply to any of these offices or branches or treasuries.

THE BUSINESS WORLD

Policy for Scrap Exports

THE importance of export expansion has been sufficiently stressed in the Draft Outline of the Third Plan. Even though export figures for the first quarter of this year make gratifying reading, one cannot say that the nation has turned the corner and that this rate of expansion would be maintained. The position of underdeveloped countries in respect of export trade has been notoriously disconcerting since the beginning of the fifties. Thus, the share of India in world exports, which stood at 2.5 per cent in 1948, slumped to 1.8 per cent in 1951. Since the cessation of the Korean War, especially, the trend has been one of steady decline, the share of this country in total world exports standing in 1959 at no more than 1.3 per cent. The sombre picture becomes complete if to this none too happy situation is added the emergence of regional economic groupings in Europe, which, by adding a new dimension to the problems of international trade, has greatly complicated the task of export promotion by underdeveloped and semi-industrialised countries. All this is not to suggest that an average annual level of exports around Rs. 700 crores is beyond the capacity of this country to attain, or to take an unduly pessimistic view of the situation. It is only intended to underline the fact that in the prevailing international circumstances, the attainment of this target demands a far greater effort by the industry, on the one hand, and a more imaginative handling of the situation by the powers-that-be on the other.

The present position as regards export promotion is not as satisfactory as one would desire and certainly not adequate to meet the growing challenge. Many of the present schemes of export promotion indicate, as Mr. Naranji L. Kara, Chief of the All India Exporters' Chamber, said the other day, a "lack of adequate knowledge of the mechanism of export trade." Apart from this inadequate appreciation of the mechanism of export trade, the policy-makers seem to pay scant attention, if at all, to even larger issues, such as the conditions of production, in particular the industrial cost structure. Again, in certain other cases, they betray a lack of precise understanding of even the most elementary details, such as domestic supply, domestic demand, centres of availability and channels of exports, of certain items of export, such as iron and steel scrap, which have made their appearance on the country's export front only recently. The export promotion policy should aim not only at consolidating our present gains in respect of traditional items of exports but also at establishing markets for the newer items.

The memorandum submitted recently by the Scrap Traders' and Exporters' Association, Bombay, to the Minister of Steel, Mines and Fuel, Government of India, is an eloquant testimony both to the defective nature of our present ferrous scrap export policy and to the ignorance of the policy-framers about the correct statistical position of this commodity. The Scrap Investigation Committee, which went into the question of assigning the domestic arisings and utilisation of scrap some time back, made a gross underestimation of this country's scrap potential, giving rise to certain misconceptions in the minds of the policy-makers who thought that (1) scrap export was at best a temporary phase in the utilisation of our scrap arisings; (2) that, though scrap arisings are shooting up, the capacity for domestic utilisation of scrap also has been increasing proportionately and (3) that whatever scrap export is being permitted has been at the cost of domestic consumers of melting scrap. Nothing could be further from truth than these assumptions.

The following table, culled out from the Association's memorandum, compares the estimate of scrap arising, made by the S.I.C. and the actual utilisation achieved during the years 1957 to 1959. This clearly establishes the Association's contention that "it is on account of the over-cautious and severely restricted scrap export policy that the total scrap utilisation achieved during these years was well below 50 per cent of the very very conservative estimate of arisings of the S.I.C."

S.I. Committee's Estimates	Tons	Year	Tons	Actual Utilisation achieved
Domestic consumption	188,500	1957	86,929	Domestic consumption
Estimated surplus	238,500		80,000	Exports (*92,944 — 12,944
Total arisings	427,000			80,000)
			166,929	Net Utilization
		Surplus Unutilized	261,071	
Domestic Consumption	208,923	1958	85,616	Domestic consumption
Estimated surplus	255,077		90,000	Exports (*116,615 — 26,615
Total Arisings	464,000			90,000)
			175,616	Net Utilisation
		Surplus Unutilized	288,384	
Domestic Consumption	215,575	1959	87,559	Domestic consumption
Estimated surplus	279,425		196,907	Exports (*266,907 — 70,000
Total Arisings	495,000		284,466	196,907) Net utilization
		Surplus Unutilized	210,534	

Scrap Investigation Committee's estimates of arisings do not include primary producers' skulls, etc., cast iron borings, hence the exports of these have been excluded from the total export figures.

The net result of this has been that, during the three years 1957 to 1959 about 758,989 tons of surplus scrap were wasted in the country resulting in a loss of about Rs. 10 crores in terms of precious foreign exchange. This, let it be emphasized, is on the basis of the estimates of scrap arisings made by the S.I.C. itself. The trade, however, feels that our uncollected and unutilised scrap during the three years was not 7½ lakh tons but 1.5 million tons and the total loss involved in terms of foreign exchange around Rs. 25 crores! Surely, this is not the way of promoting exports.

The Association also enumerates in its memorandum a number of other factors that affected adversely both the collection and the utilisation of the country's unwanted scrap. It maintains, inter alia, that the export levy payable to the domestic furnaces for the export of inferior bundles is burdensome and has been directly responsible for stifling the export of inferior bundles. (Export of No. 3 bundles has been reduced to nothing on account of the levy. Due to the same cause, export of No. 2 bundles has been below the mark.) Further, there is hardly any justification, says the Association, for compelling the scrap exporters to feed the domestic furnaces at the controlled price. The Association has also pleaded for concessions in railway freight on scrap with a view to facilitating "upcountry" collection of scrap which is continuously growing. At present, says the memorandum, collection of scrap is confined to the economic zones around the port towns, as the incidence of railway freight is very heavy for transporting scrap from the outlying areas to port towns. The incidence is heavy, because unprocessed scrap, particularly light scrap, cannot be loaded to full wagon capacity. On an average, the load carried by the wagons of unprocessed scrap, particularly of bundles amounts to only 60 per cent. of the full wagon capacity. The Saxena Committee, it may be recalled, has recommended that, to encourage collection of scrap from outlying areas the railway freight on scrap should be reduced. Notwithstanding this, for purposes of freight, it is ironical that scrap should be treated almost on a par with finished steel, ignoring altogether the price disparity between the two. The industry has therefore urged that railway freight rates should be reduced by at least 40 per cent. of the prevailing rates. To sum-up, the whole scrap policy has become outdated and meaningless. A reorientation seems to be called for urgently and an altogether new and long-term policy needs to be evolved. For this purpose, as Mr. S. A. Nathani, President of the Association suggested, at a Press conference recently, a high powered committee should be appointed to examine the entire ferrous scrap policy. Such an inquiry, there can hardly be any doubt, will not only reveal the existence of a huge surplus scrap but also help stimulate scrap export to the benefit of both the scrap interests and the country at large.

The position of scrap has been elaborated above only as a typical case. The economics of nearly every export item requires to be scientifically studied, before formulating export programmes. Indeed, this should actually be the strategy now and in drawing its short period programmes for export promotion, the co-operation of all interested organizations should be enlisted by the Union Ministry of Commerce and Industry.

Business Notes

Financial Corporation

BOMBAY

THE BOMBAY STATE FINANCIAL CORPORATION'S report for the financial year ended March 31, 1960, is important for the reason that it discloses the emergence of the Corporation from a state of stagnation in which it was bogged down owing to the low level of economic activity for the previous two years. Once again it has raised its financial operations. The amount of total loans sanctioned increased steeply from Rs. 65.4 lakhs in 1958-59 to Rs. 90.4 lakhs in 1959-60. This indicates that industrial expansion activity has begun to look up and the resources of the Corporation will find more fruitful employment than in the preceding couple of years. However, the amount of actual disbursements out of the total sanctioned loans did not make any marked advance above the previous year and stood at Rs. 20.52 lakhs. This, of course, is a matter entirely dependent upon the actual needs of the borrowing concerns for funds and it would appear that the slow flow of imported materials as well as building materials put a brake on demands for actual advances.

The Corporation's profit was higher in 1959-60 at the figure of Rs. 8.47 lakhs than the figure of Rs. 7.78 lakhs the year before. Even so, the Corporation could not make provision for distribution of the guaranteed dividend to the extent it would have desired. The reasons have been explained convincingly by Mr. Purshottam Kanji in his annual speech from the Chair. Referring to the different appropriations out of the profit, Mr. Kanji has pin-pointed attention on the comparatively high figure of Rs. 1.43 lakhs earmarked for credit to the Reserve for Bad and Doubtful Debts. It must be emphasized that this appropriation does not in any way indicate a worsening bad debt position. On the contrary, the detailed overall information given by Mr. Kanji shows that the factor of default is of a small magnitude. It so happened that one concern from which payment is due has disposed of its assets, but the Corporation has taken legal action for recovery of the outstanding debt against the guarantor. The guarantor is a sound party and the Corporation's money is safe. But the Corporation has accepted the technical advice of the auditors to make a suitable appropriation to the reserve for bad debts until actual recovery is made from the guarantor.

The amount of subvention asked for from the Government in the year under report was Rs. 4.28 lakhs as against Rs. 5.97 lakhs in the previous year. The Chairman rightly observes that in the absence of the higher appropriation to the bad debts reserve, this lower subvention would have been still reduced. However, what is important to note in this connection is the frank, if somewhat pessimistic, statement made by the Chairman. He says that subventions would be dispensed with when the Corporation's volume of transactions overshoots the Rs. 4-crore mark. This is a far cry from last year's improving performance at the level of Rs. 90.43 lakhs.

There are sufficient indications in the Chairman's speech that small industries are being increasingly assisted and carefully guided in their requirements. Also, the agency arrangement for channelling government aid to small industries through the Corporation is progressing satisfactorily under its revised and onerous form. The Corporation has entered into an arrangement with 8 scheduled banks, having a network of 402 branches in the State, for acting as its agents in the distribution of credit supplied by it. All in all, it is a record of encouraging progress.

Finance

THE CENTRAL LOANS

UNUSUAL INTEREST was attached to this year's floatation of the Central loans. Not because the Union Finance Minister, Mr. Morarji Desai, had planned to raise as much as Rs. 250 crores through market borrowings and prize bonds, but because the stock market had linked this issue with the upward revision of the Bank Rate. Due to the delay in the announcement of the Central Government's borrowing programme and the credit squeeze effected in the months of March and May last, feeling had been growing for sometime past that the Reserve Bank would raise its discount rate before the Union Government disclosed its loan programme. This week's announcement of the floatation of two loans by the Centre should clear the mist. The terms of these loans being in line with those floated since the Bank Rate was fixed at 4 per cent, it is now apparent that the Reserve Bank does not contemplate any change in its discount rate in the near future, if for no other reason than the fact that it would not like to undermine the confidence of the investing public in Government policies.

As regards the success of the two loans, it can safely be said that no difficulty is likely to be encountered in their being fully subscribed. Return on both of them is in tune with the current yield pattern of Government securities. The new 3½ per cent 1966 loan with its issue price of Rs. 99.75 gives a redemption yield of 3.547 per cent which is slightly better than that of the 1965 3½ per cent loan currently quoted at Rs. 99.85. Similarly, the 4.007 per cent redemption yield of the 4 per cent 1980 loan at the issue price of Rs. 99.90 compares quite favourably with the 3.98 per cent yield of the 4 per cent 1979 loan now mentioned around Rs. 100.30. The short-term loan should prove a hot favourite with the banks and port trusts, while the long-dated one should get good support from the Life Insurance Corporation and Provident Fund accounts.

The total amount envisaged to be raised through the two loans is only Rs. 175 crores out of which nearly half can be expected to be subscribed by means of the conversion of the 2¾ per cent 1960 loan, 4 per cent 1960-70 loan and the 2¼ per cent 1955-60 Hyderabad loan; the total outstandings against these three loans are reckoned around Rs. 112 crores. Fresh subscriptions to the extent of about Rs. 85 crores are not beyond the capacity of the institutional investors at the moment. Even if they are, the Reserve Bank can be trusted to take up the balance which it can sell later on tap as and when the market is able to absorb it.

That the loan programme of the Central Government falls short of the Union Finance Minister's plan by as much as Rs. 75 crores is scarcely surprising. This shortfall can be easily made up by the impounded additional deposits of the banks and the yield from prize bonds the response to which has far exceeded expectations.

Sugar

MYSORE SUGAR'S EXPANSION PROGRAMME

THE SUGAR industry ran into various difficulties during 1957-58 season so that there was a sudden fall in output. This downtrend continued during the next season also and in 1958-59 the output of sugar was 19.2 lakh tons. This unsatisfactory state was mainly due to the inadequacy of cane supplied to factories. In the face of rising demand and lower output, a tightening of controls was found necessary and the distribution of sugar had to be regulated and prices had to be controlled by the State Governments. Under these distressing circumstances the scheme to export 1 lakh tons of sugar had to be dropped and only 12,500 tons were exported.

Mr. B. K. Krishnan, Chairman and Managing Director of the Mysore Sugar Co. Ltd, pointed out at the Annual General Meeting of the Company at Bangalore that as a result of certain incentives given to industries in the new sugar policy announced by the Government of India in October last, the output during the current season has gone up by nearly 5 lakh tons to 24 lakhs tons. In view of the fact that the sugar target in the Third Five-Year Plan draft has been fixed at 30 lakh tons, the Mysore Sugar Company is examining its programmes for expansion. The Chairman has given the outline of a scheme prepared for the Company for achieving an overall crushing capacity of 4,000 tons of cane per day. This will be made possible by stepping up of the capacity of the Mandya factory to 3,000 tons partly by rehabilitation and partly by expansion and transferring the remaining capacity of 1,000 tons to a branch unit to be set up in the Maddur region

The Chairman has expressed satisfaction at the fact that at least two factories, including the Mysore Sugar, wish to expand and about half a dozen new factories are likely to come up during the Third Plan period in the Mysore State, so that it will not only become fully self-sufficient but may well be able to export some quantity. He has, however, expressed the apprehension that States in South India may be faced with a surplus because all these States have Plans for starting new factories. Under these circumstances he has advocated an overall co-ordinated expansion programme and has cautioned against any haphazard expansion in any of these States.

Engineering

PROBLEMS OF CONTAINER INDUSTRY

MR. K. C. MAHINDRA, Chairman, The Metal Box Co. of India Ltd., while reviewing the annual working of the Company expressed his dissatisfaction over the new excise duty on tinplate and aluminium imposed in March last. It was specially disappointing for the Company because it will not be able to pursue its policy of reducing the prices of its goods, which it achieved following greater operational efficiency. Considering the fact that the demand for tin containers is fairly elastic (any rise in price will divert the demand from small containers towards loose goods sold in bulk containers) excise duty has regressive effect. It has been voiced in various circles that the trade in spurious goods in pilfer-proof consumer packages is the single remedy for the evil of food adulteration. The Company has played a significant role in the mass production and sales at economic rates of tamper-proof containers which are packed in factory-sealed consumer units. The government, by levying new excise on tinplate and aluminium has, though unwittingly, facilitated food adulteration. It is hoped that proper attention is paid to this grievance.

The Chairman has also pointed out that the stocks of raw materials pose a problem which some times takes a grave turn. Past experience has shown that the availability of tinplate both at home and abroad can change at very short notice. He has, therefore, expressed his desire that the consumers should be permitted to keep a stock which covers these risks. It also may be helpful to grant them the licences for adequate quantities giving them sufficient margin of time.

Current Topics

PROGRESS OF PLANNING, 1951—61

In the Draft Outline of the Third Five-Year Plan published this week, a chapter is devoted to the achievements of the First and Second Five-Year Plans. Following are highlights indicating the main lines of progress.

THE total investment in the economy during the first two Plans will be a little over Rs. 10,000 crores, of which outlay in the public sector will amount to about Rs. 6,560 crores.

(Rs. crores)

	First Plan 1951-56	Second Plan 1956-61 (anticipated)	Total 1951-61
Public Sector outlay	1960	4600	6,560
Public Sector investment	1560	3650	5,210
Private Sector investment	1800*	3100*	4,900
Total investment	3360	6750	10,110

(*These are estimates revised in the light of fuller information and are in lieu of the estimate of Rs. 1,600 crores in the First Plan and of Rs. 2,400 crores in the Second Plan).

During the First Plan, national income increased by 18 per cent. The increase in national income over the Second Plan period is expected to be about 20 per cent. Over the ten years 1951-61, national income will, therefore, have increased by about 42 per cent, per capita income by about 20 per cent and per capita consumption by about 16 per cent. Agricultural production will have gone up by 40 per cent and industrial production by 120 per cent.

The following table gives a summary of agricultural production trends since 1949-50:

INDEX OF AGRICULTURAL PRODUCTION
(1949 - 50 = 100)

	1950-51	1955-56	1958-59	1960-61 (expected)
All commodities	95.6	116.9	132.0	135.0
Food crops	90.5	115.3	130.0	131.0
Other crops	105.9	120.1	136.0	143 0

The table shows that there is a rising trend but variations from year to year had been considerable. The increase in the production of major agricultural commodities has been as follows:

Commodity	1950-51	1960-61 (likely achievement)
Foodgrains (cereals and pulses) (million tons)	52.2*	75
Oilseeds (million tons)	5.1	7.2
Sugarcane (in terms of gur) (million tons)	5.6	7.2
Cotton (million bales)	2.9	5.4
Jute (million bales)	3.3	5.5

* Estimate of production adjusted for changes in statistical coverage, etc. upto 1956-57.

The total irrigated area will increase from 51.5 million acres in 1950-51 to 70 million acres in 1960-61. The consumption of nitrogenous fertilizers will increase by six times from 55,000 tons (in terms of nitrogen) in 1950-51 to 360,000 tons in 1960-61. During this period four million acres of waste land have been reclaimed and green manuring extended to 22 million acres and soil conservation programmes to 2.7 million acres.

The growth of industrial production since 1951 is shown in the following table:

INDEX OF INDUSTRIAL PRODUCTION

(Base : 1951 = 100)

	1955	1956	1959
All Commodities	122.4	132.6	151.1
Cotton Textiles	111.9	117.5	111.5
Iron and Steel	113.3	119.4	163.1
Machinery	163.9	215.0	424.3
Chemicals	159.0	171.1	214.0

Total finished steel capacity will increase to 4.5 million tons as compared to 1 million tons at the beginning of the First Plan and 1.3 million tons at the beginning of the Second Plan. The aggregate value of all kinds of industrial machinery produced in the country has risen from Rs. 11 crores in 1957 to above Rs. 79 crores in 1958.

The following table shows the progress made in the production of important producer goods:

Commodity	1950-51	1960-61 (likely production)
Finished steel (Million tons)	1.0	2.6
Aluminium (Thousand tons)	3.7	17
Diesel engines (Thousands)	5.5	33
Electric cables (ACSR) conductors (Tons)	1674	18,000
Locomotives (Number)	3	295
Nitrogenous fertiliser (N) (Thousand tons)	9	210
Sulphuric acid (Thousand tons)	99	400
Cement (Million tons)	2.7	8.8
Coal (Million tons)	32	53
Iron ore (Million tons)	3	12

Similarly, there has been substantial increase in the production of consumer goods like cotton textiles, sugar, bicycles and automobiles as the following table shows.

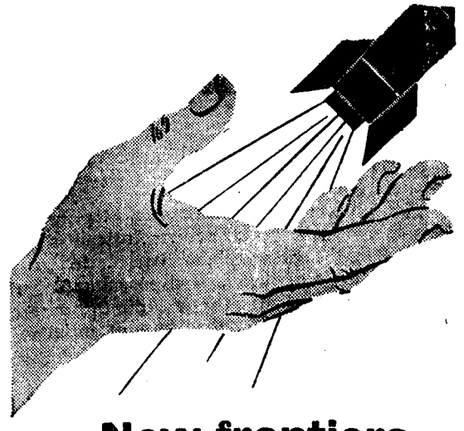
PRODUCTION OF CONSUMER GOODS

Commodity	1950-51	1960-61 (likely production)
1. Cotton Textiles Mills Cloth (Mil. yds.)	3726	5000
2. Sugar (Mil. tons)	1.10	2.25
3. Paper and paperboards (000' tons)	114	320
4. Bicycles (organised sector only) (Thousands)	101	1050
5. Automobiles (Numbers)	16,500	53,500

The period has also shown considerable development in village and small industries. Between 1950-51 and 1960-61, the production of handloom cloth will have increased from about 742 million to about 2,125 million yards, of khadi from over 7 million to about 80 million yards, and of raw silk from about 2 million to about 3.7 million lbs.

The installed power generating capacity will increase from 2.3 million K.W. in 1950-51 to 5.8 million K.W. by the end of 1960-61. The number of towns and villages electrified will have increased by more than five times from 3,687 in 1950-51 to 19,000 by 1960-61.

The period has seen a considerable expansion in transport. The total freight traffic originating on the railways is expected to increase by about 80 per cent from 91 million tons in 1950-51 to 162 million tons at the end of the Second Plan. The number of locomotives will increase from 8,200 at the beginning of the Second Plan to 10,600 by the end of the Second Plan and coaches from 19,200 to 28,900 and wagons from 199,100 to 354,100. The milage of surfaced roads will increase from 97,500 miles at the beginning of the decade, to 144,000 miles in 1960-61. The shipping tonnage will increase from 3,90,000 G.R.T. to 9,00,000 G.R.T.



Facilities for education, health and social welfare have increased substantially during the period. The percentage of children attending school to all children in the age group 6-11 will increase from 43 in 1950-51 to 60 by 1960-61. The total number of students in schools will go up by 75 per cent and in Universities by 140 per cent.

In the field of health, the number of hospitals and dispensaries will increase from 8,600 in 1950-51 to 12,600 in 1960-61. The number of medical colleges will increase from 30 to 55 and of registered doctors will increase from 59,000 to 84,000 during the period.

In varying degrees, throughout the first four years of the Second Plan, prices of foodgrains and agricultural raw materials as well as of several industrial commodities have tended to rise. The index of wholesale prices (1952-53=100) which stood at 99.2 in the last year of the First Plan rose to 105.1 and 106.1 during the two following years. Thereafter, it rose to 111.7 in 1958-59, the highest level reached during the year being 116.3. By the end of 1959-60, it stood at 118.6

The increase in employment during the Second Plan has not kept pace with the growth of the labour force. It was hoped that the development programmes envisaged would lead to the creation of 8 million additional jobs outside agriculture. The achievement for the Plan period is at present estimated at about 6.5 million.

New frontiers
From the beginning of time human eyes have looked up into space and wondered, and wondering, desired to possess the moon.
Today, man has travelled far on the road of knowledge; today he is about to inherit the moon.
We may not yet know all the details of that first flight which will send him hurtling through space. But of this we are sure, he will need Oxygen to sustain him. And of this too we are sure, that Oxygen will have helped to cut or weld his space-ship and its equipment.
INDIAN OXYGEN LIMITED
Twentyfive Years' Service

A DELHI NOTEBOOK

THIRD PLAN

THE draft outline of the Third Five-Year Plan has been released for eliciting public comment. The general framework of the Plan is in line with the indications given in these columns from time to time. The Plan envisages a total investment of Rs. 10,200 crores—Rs. 6,200 crores in the public sector and Rs. 4,000 crores in the private sector—over the five years' period to 1965-66. The total outlay in the public sector will be Rs. 7,250 crores.

The broad aims of the Plan are:

(i) to secure during the next 5-year period a rise in national income of over 5 per cent per annum, the pattern of investment being designed also to sustain this rate of growth during subsequent plan periods;

(ii) to achieve self-sufficiency in foodgrains and increase agricultural production to meet the requirements of industry and exports;

(iii) to expand basic industries like steel, fuel and power and establish machine-building capacity, so that the requirements of further industrialisation can be met within a period of 10 years or so mainly from the country's own resources;

(iv) to utilise to the fullest extent possible the manpower resources of the country and to ensure a substantial expansion in employment opportunities; and

(v) to bring about a reduction of inequalities in income and wealth and a more even distribution of economic power.

One of the principal objectives of the Plan is to secure a marked advance towards self-sustaining growth, which implies that savings and investment in the economy rise sufficiently to secure a rate of growth of income on a continuing basis. As self-sustaining growth can only be achieved by balanced development both in agriculture and industry, the Plan calls for effort both to enlarge the capital base and to raise the output of food and raw materials.

According to latest estimates, the population of India in 1966 will be 480 million instead of 434 million assumed in the Second Plan Report. In an economy with low levels of income and consumption, high rates of population growth severely limit the pace of economic development. It is, therefore, essential to stabilise the population.

PRIORITY FOR AGRICULTURE

The Plan emphasises that in the scheme of development the first priority necessarily belongs to agriculture. The importance of achieving self-sufficiency in foodgrains and meeting the requirements of industry and export is one of the major aims of the Third Plan. Agricultural production has to be increased to the highest levels feasible so that the incomes and levels of living, as the rural population rises, should keep pace with incomes in other sectors.

The Plan provides for an outlay in the public sector of Rs. 1,025 crores for agriculture and community development and Rs. 650 crores for major and medium irrigation works. Investment by the private sector (exclusive of assistance received from the public sector) is estimated to be of the order of Rs. 800 crores. As the Plan proceeds, if larger resources are needed for assuring more rapid advance within the rural economy, specially through the fuller use of manpower, these will be made available.

Agricultural production is to be stepped up by 30 to 33 per cent, depending upon the targets which may be finally decided as a result of work on area agricultural plans. The targets of production proposed for some of the important agricultural commodities are:

Commodity	Annual Production 1960-61 (Expected)	1965-66 (Target)
Foodgrains (million tons)	75	100-105
Oilseeds (million tons)	7.2	9.2-9.5
Sugarcane (in terms of gur) (million tons)	7.2	9.0-9.2
Cotton (million tons)	5.4	7.2
Jute (million bales)	5.5	6.5

In addition, measures will be taken to increase the production of food articles like fruits and vegetables, milk, fish, meat, eggs, as also of other commodities like coconut, arecanut, cashewnuts, pepper, cardamom, tobacco, lac and timber.

The target proposed for foodgrains would allow for consumption of about 15 ozs. of cereals and 3 ozs. of pulses per capita per day, besides providing some margin against emergencies. The target for raw cotton is expected to be sufficient to provide about 17.5 yards of cotton textile per annum per capita and in addition, allow for some exports.

The net irrigated area is proposed to be expanded to about 90 million acres by the end of the Third Plan as against 70 million acres expected at the end of the Second Plan. About 40 million acres will be covered by dry farming techniques. Soil conservation measures are to be extended to an additional area of 13 million acres. The consumption of nitrogenous fertilizer is to be increased from 360,000 tons in terms of nitrogen in 1960-61 to 1 million tons in 1965-66. Plant protection measures will be extended to 75 million acres. The community development programme will be extended to the entire rural area by October 1963; the programme of co-operative development will be intensified and finance through co-operative agencies is expected to play a considerable part in increasing agricultural production.

INDUSTRIAL SECTOR

A high priority is also being given to industry, power and transport because development in these fields is vital for lifting the economy to a higher level and for its accelerated growth. Public sector outlay in large-scale industry and mineral development will be Rs. 1,500 crores and private sector investment (exclusive of assistance from public sector) is expected to be Rs. 1,000 crores. Special emphasis is placed on heavy industries which will help make the economy self-sustaining, namely, steel and machine building and the manufacture of producer goods. Necessary measures are also proposed to be taken to expand the production of consumer goods.

Steel: Developments in iron and steel are linked with the capacity target of 10.2 million tons in terms of steel ingots and 1.5 million tons of pig iron for sale. The additional capacity and output in this field are expected to be realised almost entirely in the public sector. The Bhilai, Rourkela and Durgapur steel plants are proposed to be expanded contributing jointly 5.5 million tons of steel ingots. The Plan also provides for a fourth steel plant in the public sector to be started at Bokaro.

Machine Building: Proposals for machinery and engineering industries include heavy machine building plant, foundry forge, coal mining machinery plant, heavy machine tool factory, doubling of the output of Hindustan Machine Tools, Bangalore, expansion of Heavy Electrical Project in Bhopal, two additional heavy electrical projects and scheme for the production of high pressure boilers and precision instruments. Machinery manufacturing programmes in the private sector are expected to supplement considerably the efforts of the public sector. Near self-sufficiency is expected in regard to textile, sugar, cement and paper machinery.

Fertilisers. The production of nitrogenous fertilisers is to be stepped up from 210 thousand tons of nitrogen at the end of the Second Plan to 1 million tons at the end of the Third Plan and of phosphatic fertilisers from 70 thousand tons to 400-500 thousand tons in terms of P_2O_5.

Coal: Production of coal is to be increased to 97 million tons at the end of the Third Plan as against the target of 60 million tons at the end of the Second Plan.

Oil: On the basis of the present proved reserves, the Naharkatiya area is expected to produce 2.75 million tons of crude oil per year. Provision has been made both for the completion of refineries at Nunmati and Barauni for processing the Naharkatiya crude oil and also for further exploration with a view to obtaining additional production of crude oil from Cambay and other areas where prospects appear to be favourable.

Among the other important industrial targets which have been proposed are:

	Annual Production 1960-61	1965-66
Aluminium (thousand tons)	17.0	75.0
Cement (million tons)	8.8	13.0
Paper (thousand tons)	320.0	700.0
Sulphuric acid (thousand tons)	400.0	1250.0
Caustic Soda (thousand tons)	125.0	340.0
Sugar (million tons)	2.5	3.0
Cotton taxtiles (mill cloth) (million yards)	5000.0	5800.0
Bicycles (organised sector) (thousand Nos.)	1050.0	2000.0
Sewing machines (thousand Nos.)	300.0	450.0
Automobiles (Nos.)	53500.0	100,000.0

Considerable emphasis has been placed on the development of village and small industries. Provision has been made for positive forms of assistance like facilities for training, technical know-how, supply of credit and raw materials, etc. Production of cloth in the decentralized sector is proposed to be increased from about 2,600 million yards in 1960-61 to 3,500 million yards in 1965-66. The number of industrial estates is expected to increase from 60 in the Second Plan to 360 in the Third Plan. In the programmes for small-scale industries, the emphasis will be on promoting their development in small towns and rural areas and on linking them up more closely with large-scale industries as ancillary or feeder units.

DEVELOPMENT OF POWER

As regards power, it is proposed to increase the total generating capacity from 5.8 million kw. at the end of the Second Plan to 11.8 million kw. at the end of the Third Plan. The programme for power includes a project for nuclear power generation of 300 thousand kw. It is expected that 15,000 additional towns and villages will be electrified during the Third Plan bringing the total to 34,000.

TRANSPORT AND COMMUNICATIONS

It is expected that the railways will be able to carry goods traffic to the extent of about 235 million tons in 1965-66 as against 162 million tons in 1960-61. One thousand two hundred miles of new railway lines will be constructed. Under the road development programme, it is proposed to expand surfaced roads from 144,000 miles in 1960-61 to 164,000 miles in 1965-66. The expansion of road transport will be mainly in the private sector. It is estimated that the number of commercial vehicles will go up from about 200,000 to about 300,000. The shipping target proposes to add about 200,000 G.R.T. to the tonnage of 900,000 G.R.T. expected to be achieved at the end of the Second Plan.

SOCIAL SERVICES

It is proposed to provide for free and compulsory primary education in the age group 6-11 years. Making allowance for slow progress in women's education in certain backward areas, it is estimated that the proportion of pupils to the number of children will go up from 60 to 80 per cent in the age group 6-11, from 23 to 30 per cent in the age group 11-14 and from 12 to 15 per cent in the age group 14-17. The total number of students in schools will go up from 41 million in 1960-61 to 60 million in 1965-66.

Scientific and technical education will be given increasing support. The intake capacity of engineering colleges and polytechnics will increase from 37,200 at the end of the Second Plan to 53,500 at the end of the Third Plan,

The number of registered doctors will increase from 84,000 to 103,000, of hospitals and dispensaries from 12,600 to 14,600 and of primary health centres from 2,600 to 5,000. The number of family planning centres will increase from 1,800 to 8,200.

Programmes for low-income group housing, housing for industrial workers, slum clearance and slum improvement and acquisition and development of land for housing will be expanded and finance for housing will be provided through Housing Finance Corporation.

The Plan includes a programme of local development works for enabling all rural areas to provide themselves with certain minimum amenities. These are (a) adequate supply of drinking water, (b) roads linking each village to the nearest main road or railway station and (c) village school building which may also serve as a community centre and village library.

OUTLAY AND INVESTMENT

For achieving the above targets the draft outline envisages a total investment of Rs. 10,200 crores in the economy during the five years to 1966. Of the amount, Rs. 6,200 crores will be in the public sector and Rs. 4,000 crores in the private sector. The total outlay in the public sector will be Rs. 7,250 crores. A sum of Rs. 200 crores is expected to be transferred from the public sector for capital formation in the private sector. The total outlay and investment in the Third Plan as compared with those of the Second Plan are as follows:

(Rs. crores)

	Second Plan	Third Plan
Public Sector		
Plan outlay	4,600	7,250
Current outlay	950	1,050
Investment	3,650	6,200
Private Sector	3,100*	4,000*
Total Investment	6,750	10,200

* Exclusive of Rs. 200 crores of assistance transferred from public sector.

The general pattern of investment in the Second Plan is being continued in the Third. But in the public sector there is greater emphasis on agriculture, industry and power and on certain aspects of social services.

The distribution of the Third Plan outlay in the public sector as compared to the Second Plan is as follows:

(Rs. crores)

Expenditure Head	Second Plan	Third Plan
1. Agriculture and minor irrigation	320	625
2. Community Development and co-operation	210	400
3. Major and medium irrigation	450	650
4. **Total** 1,2 and 3	**980**	**1675**
5. Power	410	925
6. Village & small industries	180	250
7. Industry & minerals	880	1500
8. Transport & communications	1290	1450
9. **Total** 5, 6, 7 and 8	**2760**	**4125**
10. Social services	860	1250
11. Inventories	—	200
Grand Total	**4600**	**7250**

The allocations proposed at present are necessarily provisional. They are intended to assist the Central and State Governments in undertaking detailed studies of their programmes and projects and in establishing priorities within each sector. It is stated that for approved programmes and targets under agriculture, village and small industries, primary education, technical education, special works programmes for utilising manpower resources etc., additional domestic resources will be made available, if found necessary, after examination by States and Ministries. In respect of approved projects for which substantial external finance is required, once the necessary foreign exchange is found, every effort will be made to find the requisite internal resources. Out of the total outlay in the public sector of Rs. 7,250 crores, Rs. 3,600 crores will be in the Centre and Rs. 3,650 crores in the States. Central assistance to States is estimated at Rs. 2,500 crores.

RESOURCES FOR THE PLAN

The resources for the Third Plan, compared to those for the Second, are to be drawn as follows:

(Rs. crores)

	Second Plan	Third Plan
1. Balance from revenues on the basis of existing taxation	(—)100	350
2. Contribution of the Railways on the existing basis	150*	150
3. Surpluses of other public enterprises on the existing basis	**	440
4. Loans from the public	800	850
5. Small savings	380	550
6. Provident funds, betterment levies, steel equalisation fund, miscellaneous capital receipts	213	510
7. Additional taxation, including measures to increase the surpluses of public enterprises	1000	1650
8. Budgetary receipts corresponding to external assistance	982	2200
9. Deficit financing	1175	550
TOTAL	4600	7250

*Inclusive of increased fares and freights.
**Included in (1) above.

Of the Rs. 1650 crores to be secured from additional taxation, including measures to increase the surpluses from public enterprises, the share of the States has been fixed at about one-third. The Plan envisages increases both in direct and in indirect taxation and checking of evasion through various means such as watch on expense accounts of companies. To curb inflationary tendencies, deficit financing is proposed to be limited to Rs. 550 crores in the Third Plan as against Rs. 1175 crores in the Second.

FOREIGN EXCHANGE

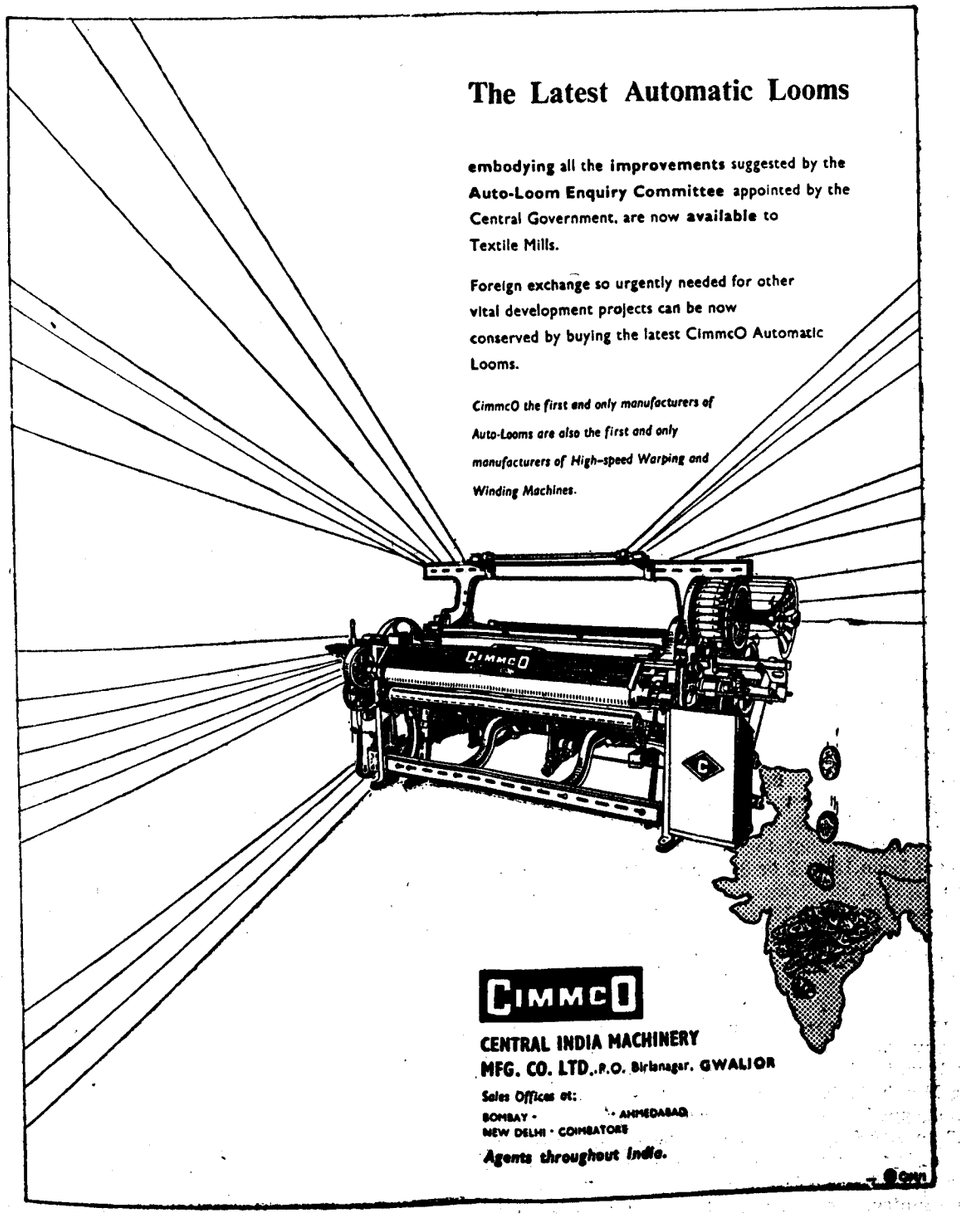
The Third Plan, with its emphasis on rapid industrialisation, would involve a considerable amount of foreign exchange expenditure. It is estimated that the direct foreign exchange component of the Plan will be of the order of Rs. 1900 crores. In addition, it will be essential to provide for imports of about Rs. 200 crores worth of components, balancing equipment, etc. needed to increase the production of capital goods within the country. Thus, for the Plan and for imports of components, etc., foreign exchange of the order of Rs. 2100 crores is needed.

The estimates made at this stage show that even if the Plan requirements are not taken into account, the balance of payments position, because of the repayments of capital and payment of interest due in the Third Plan period, would show a deficit of Rs. 500 crores. The requirements of foreign exchange in the Third Plan period would thus come to Rs. 2600 crores. To this total of Rs. 2600 crores have to be added the estimated receipts of Rs. 600 crores by way of PL 480 commodity assistance from the USA. On this basis, the total balance of payments deficit for the Third Plan would come to about Rs. 3200 crores.

As to the prospects of securing external assistance of the order required, no prediction can be made. The Plan will have to be flexible and the commitments in regard to foreign exchange expenditure will have to be made only on the basis of external resources that are clearly in sight.

PRIVATE INVESTMENT

Investment in the private sector covers not only organised industry, mining, electricity and transport, but also large and dispersed fields like agriculture, village and small industries, rural and urban housing, etc. The following table sets out the likely levels of investment in the private sector in the Second and Third Plans.



(Rs. crores)

	Second Plan	Third Plan
1. Agriculture (including irrigation)	675	850
2. Power	40	50
3. Transport	135	200
4. Village and small industries	225	325
5. Large and medium industry and minerals	700	1050
6. Housing and other construction	1000	1125
7. Inventories	525	600
TOTAL	3300*	4200*

* Inclusive of Rs. 200 crores transferred from the public sector by way of assistance.

The Third Plan envisages a substantial step-up in private investment mainly in the field of large and medium industries—from Rs. 700 crores in the Second Plan to Rs. 1050 crores in the Third Plan. Increased investments in the other sectors are relatively small and it is assumed that they will be financed from their normal sources which include savings by agriculturists, by those engaged in arts and crafts and in trade in small industries.

Under the Plan there is a considerable scope for the private sector in the industrial sphere. This is due in the main to the wide opportunities provided by the expansion of the economy under the impact of successive Five-Year Plans. One of the main objectives of policy is that the opportunities which thus arise for private enterprise should be availed of by a large number of comparatively small and medium entrepreneurs and that possible trends towards concentration of economic power should be checked in the early stages

WORLDGRAM

India

Facilities in Calcutta Port: A scheme for the installation of eleven 5-ton portal electric cranes in Calcutta port at a cost of about Rs. 28.65 lakhs has been approved by the Government of India. The scheme is part of the programme for re-conditioning and strengthening of the Kidderpore docks of the port intended to provide modern facilities. The electric cranes will be supplied and erected by a West German firm. A considerable part of the total cost of the scheme will, however, be incurred in India, the foreign exchange cost being about Rs. 17.4 lakhs. Calcutta, which is a river port, is now handling over 10 million tons of cargo every year. The two most important foreign exchange earners, tea and jute goods, are exported through Calcutta. The modernisation of part equipment, on which emphasis has been laid in the Second Plan, will, together with other schemes now under implementation, raise the capacity of the port at the end of the Second Plan to 12.5 million tons per year. A provision of about Rs. 32 crores has been made in the Second Plan for development and improvement of facilities in Calcutta port. A part of the expenditure is to be carried over into the Third Plan during which, it is hoped, a total expenditure of about Rs. 22 crores will be incurred on further improvement of the port.

*

Two New Central Loans Floated: The Government of India have announced the simultaneous issue of the following two new loans for a total sum of Rs. 175 crores:

(a) 3½ per cent Bonds 1966—Issue price Rs. 99.75 per cent and repayable at par on the 18th of July 1966; and

(b) 4 per cent Loan 1980—Issue price Rs. 99.90 per cent and repayable at par on the 18th of July 1980.

Interest on the new loans is payable half-yearly on the 18th of January and the 18th of July and will be liable to tax under the Indian Income-tax Act, 1922. Subscription lists will open on the 18th of July 1960 and close on the 20th of July 1960, but may be closed earlier without notice as soon as the total subscriptions to the bonds and loan amount to Rs. 175 crores approximately. Government reserve the right to retain subscriptions up to ten per cent in excess of the notified amount. Subscriptions may be in the form of cash/cheque or securities of the 2¾ per cent Loan 1960 or 4 per cent Loan 1960-70 or 2¼ per cent Hyderabad Loan 1955-60 (H.E.H. the Nizam's Government 2¼ per cent O.S. Rupee Loan 1365-70F) which will be accepted for conversion at Rs. 100 per Rs. 100 (Nominal), Rs. 100.30 per 100 (Nominal) and Rs. 84.75 per Rs. 85.71 or O.S. Rs. 100 (Nominal) respectively.

*

Lowest Man-Days Loss in Railways: Man-days lost through work-stoppages on the Indian railways touched the lowest point since independence during the year ending March, 1960. An official review shows that the losses dropped sharply from 2.26 lakh man-days in 1956-57 to 12,000 and 11,000 man-days respectively in the following two years and to less than 5,000 man-days in 1959-60. The largest public-owned undertaking in the country, the railways at present have over 11 lakh men on their pay rolls who put in more than 400 million man-days of work annually. In the country as a whole, 56 lakh man-days were lost in the industrial sector during the calendar year 1959, while 78 lakh man-days were lost in the previous year.

*

Durgapur Furnace Commissioned: The second 200-ton basic open hearth furnace of the Durgapur Steel Works went into production on June 30, 1960. The production of steel started at Durgapur on April 25, 1960, when the first open hearth furnace was commissioned. So far, the furnace has produced about 11,000 tons of ingot steel. The first consignment of finished steel in the form of billets left the Steel Works on June 27, 1960. The Durgapur Steel Works which will produce one million tons of ingot steel annually, will have seven 200-ton and one 100-ton open hearth furnaces. The latter will turn out special steel for the wheel and axle plant of the Steel Works.

U.S.A.

US Loan to India: The US Development Loan Fund announced the simultaneous signing of seven loan agreements totalling $89.2 million (Rs. 42.4 crores) for enterprises in India. Five loans are for power generating facilities, one is to a development bank and one is for the importation of American-made jeep and truck parts. The Road Transport loan which is for $13.1 million (Rs. 6.2 crores), will enable private manufacturing firms in India to procure American-made auto parts to be assembled into jeeps and trucks in India. Firms will receive licenses from the Government enabling them to import components and pay US suppliers with dollars provided by the Development Loan Fund. Auto components to be imported will consist mainly of frames, axles, transmissions, differentials and wheels. These will be combined with other components manufactured in India to produce 5,000 jeeps, 800 jeep station wagons, 800 jeep trucks, 800 Dodge one-ton trucks and 6,000 Dodge 3-ton trucks.

The loans involving power generating facilities include: 1. The Ahmedabad Electricity Co., Ltd., ($3.9 million) to cover foreign exchange costs of adding 30,000 kilowatts to its system; 2. Barauni Thermal Power Project ($3.8 million) to add 30,000 kilowatts generating capacity to its power plant near the Ganges river, 250 miles north-west of Calcutta. (Barauni has also received Rs. 1.3 crores of assistance in PL 480 rupees). Two grants totalling $1,024,178 (Rs. 48.7 lakhs) from the US Technical Co-operation Mission were also announced. Of the total, $719,935 will be spent for importing DDT, the insecticide used against the malaria carrying anopheles mosquito. The rest of the funds will be utilized in the importation of antimalaria drugs and laboratory equipment.

Switzerland

41st Lausanne National Fair: The Lausanne Fair will be taking place from September 10th to 25th, 1960 at the Palace of Beaulieu, whose premises extend over a total area of 1,320,000 sq. ft. More than 2,300 exhibitors, countless tried and proven products, spectacular novelties, huge collective exhibitions of agricultural machinery, the electricity and gas sectors, industrial exhibits, textiles and the luxury industries, the arts and crafts as well as big shows and markets of horses and large and small livestock, will be on display in the 23 sectors of this important autumn fair, representing the Swiss economy in all its unified diversity.

I.F.C.

IFC's Investment in India: Rober L. Garner, President of the International Finance Corporation announced recently an investment of $1,365,000 in Assam Sillimanite, Ltd., for expansion of operations to manufacture high-grade refractory bricks and shapes. Assam Sillimanite, incorporated in 1951, has been engaged in mining and processing for export sillimanite, magnesite and kyanite—minerals used in high-temperature furnaces employed by the steel, glass and ceramics industries. The company, whose Chairman is S. M. Wahi, works valuable deposits of some of these minerals in India. The IFC investment will help finance a plant designed to produce 46,000 tons annually of refractory materials. India imported more than 120,000 tons of refractories in 1957. Production by the new plant will fill some of the basic needs of India's growing industries for high-temperature furnace materials. All raw materials are locally available. It is estimated that the first two years of full operation will provide net annual foreign exchange savings to India equal to IFC's dollar investment.

NEWS IN BRIEF

INDIAN

The Heavy Electrical Factory at Bhopal, the first of its kind in India, commenced production on July 1, according to schedule. The annual output at the factory will be of the order of about Rs. 25 crores.

*

The US Development Loan Fund has announced the simultaneous signing of seven agreements covering loans totalling $89.2 million (Rs. 42.2 crores) for enterprises in India. Five loans are for power generating projects, one for a development bank and one for the import of American-made jeep and truck parts.

*

Man-days lost through work-stoppages on the Indian Railways touched the lowest point since Independence during the year ending March last, according to an official review. The review shows that the losses dropped sharply from 2.26,000 man-days in 1956-57 to 5,000 man-days in 1959-60.

*

The Government of India have set up an eight-member committee to study the problem of utilisation of iron ore fines. The various technical processes for agglomeration to render fines fit for steel plants or export, will also be studied by the committee.

*

The Board of Directors of the Hindustan Insecticides, which runs the State-owned DDT factories at Delhi and Alwaye (Kerala State), has decided to raise the management's contribution to the Employees Provident Fund from 6¼ per cent to 8-1/3 per cent.

France has announced the removal of a number of tentative restrictions on imports of certain goods from the OEEC and dollar countries. The list of goods includes certain types of electrical generators, vacuum cleaners, machines or the production of paper and cardboard and some other equipments.

*

The US General Electric Company has developed a electronic device, called "compactron", which, it hopes, will replace conventional valves and transistors in radio and TV receivers and gramophones.

*

The Soviet Union has agreed to buy $25 million worth of Canadian goods each year under a new trade agreement.

*

The Cuban Government has announced a minimum price of 3 cents per pound for the sales of sugar in the world market.

COMMODITY NEWS AND NOTES

SUGAR POLICY A SUCCESS

The Union Food Minister, Mr. S. K. Patil, recently expressed his firm view that by "tactful handling" of the situation in respect of sugar they had turned the corner and had built up a five-lakh ton buffer stock as against two-and-a-half-lakh tons expected earlier. Everbody could now have as much sugar as he wanted for genuine consumption. The Government was also releasing more and more sugar and prices had come down in the north where it had gone up sometime back. The sugar policy of the Government thus, had succeeded, he claimed. If they found that there was no risk they would even remove control and restriction on sugar. It should be even possible to export sugar to earn foreign exchange if the present trend continued, he added.

Mr. Patil said the Government had made efforts to increase the capacity of sugar production by 10 to 15 per cent. As many as 20 new factories had been licensed particularly in areas where cane production was the largest. In an area in Maharashtra, he said, cane production reached a new peak about 75 tons per acre in the country. That meant sugar production would be somewhere between seven and a half to eight tons per acre of cane which, he claimed was probably the highest in the world.

MORE IMPORT OF RAW WOOL

The Government of India have decided to grant additional licences for import of raw wool and wool tops and shoddy yarn and rags to manufacturers of woollen hosiery yarn and shoddy yarn on an ad hoc basis. A Public Notice issued in this connection says that this decision has been taken to relieve the general scarcity of woollen hosiery yarn and shoddy yarn in the country. Licences will be issued in consultation with the Textile Commissioner, Bombay, and will be subject to the following conditions.

i. Raw wool and wool tops and shoddy wool and rags imported against the licence will be exclusively used for the manufacture of hosiery yarn or shoddy yarn.

ii. Sale of hosiery yarn or shoddy yarn manufactured out of raw wool and wool tops imported against the licences can be effected only on the directions of the Textile Commissioner, Bombay and at prices not exceeding those to be specified by him.

iii. In case of short delivery of hosiery yarn or shoddy yarn manufactured from the raw wool and wool tops imported against the licence, double the quantity of raw wool and wool tops or shoddy wool will be deducted from the allocation which might be made to the licensee in the next half year. This will be without prejudice to any other action which may be taken for contravention of the condition imposed on the licence under the I.T.C. regulations.

MINERAL ORES IN ORISSA

Preliminary surveys in some districts of Orissa have revealed that there are large deposits of mineral ore. Kalahanfi abounds in bauxite, Undargarh and Sambalpur in limestone, Talchar in iron and Balasore in chromite and magnetite. Talchar is known for long to have rich deposits in coal but its extensive survey has not yet been made despite the fact that three coal mines are already being worked there. Five State-sponsored survey parties who are now considering after exhaustive surveys, the prospects for the technical feasibility of the extraction of the State's minerals and assess their exact quantities, will submit their reports in September next, it is learnt.

UTILISATION OF IRON ORE FINES

The Government of India have set up an eight-member committee to study the problem of utilisation of iron ore fines. With the rapid increase in the production of iron ore to meet the requirement of expanding steel industry and the export trade, utilisation of huge quantities of such fines, which are incidental to mechanised mining, has assumed a problem of considerable importance. The Committee will study and make recommendations on the problems of utilisation of iron ore fines in all its aspects including extent of fines production and the cost at which these can be procured. The various technical processess for agglomeration to render fines fit for steel plants or export together with their economics will also be studied by the Committee. The Committee will study the extent to which fines can be and should be utilised in Indian steel plants and the measures for securing this utilisation. Research facilities and pilot plant, the allied problem of suitable feed for blast furnace and the need to conserve coking coal reserves will also be studied by the Committee.

THE TATA IRON & STEEL CO., LTD.

NOTICE

Extension of date for submission of coupons and applications in respect of "A" Second Preference shares and new Ordinary shares.

NOTICE is hereby given that the extended period for submission of **coupons** in respect of the "A' Second Preference shares and the new Ordinary shares in terms of the Company's Circular dated the 12th October, 1959, expires on the 30th June, 1960. As some shareholders have not yet exercised their right to obtain shares by submitting the requisite coupons, the Directors have extended the period of submission of coupons to 29th July, 1960, and the Company's bankers have accordingly been authorised to receive applications on and after 1st July, 1960, up to but not later than the 29th July, 1960, in respect of such coupons Provided that along with each such application with the required coupons and the moneys to be received with such application interest at the rate of 9 per cent per annum (which the Directors have decided to charge) shall be paid to the Company's bankers as under:-

(i) For applications with coupons from **resident** shareholders from 16th December, 1959 to the date of payment; and

(ii) For applications with coupons in the case of **non-resident** shareholders from 1st June, 1960, to the date of payment.

The Directors have also resolved that the last date for receiving applications in respect of "A" Second Preference **shares** and new Ordinary **shares** from the **non**-resident shareholders which was 30th June, 1960, be extended upto 29th July, 1960, provided that along with each such application and the moneys to be received with such application interest at the rate of 9 per cent per annum thereon (which the Directors have decided to charge) from 1st day of April, 1960 to the date of payment shall be paid to the Company's bankers.

No application in respect of coupons received from resident shareholders on and after the 16th December, 1959, and from non-resident shareholders on and after the 1st June, 1960 and no application in respect of right "A" Second Preference shares and new Ordinary shares received from non-resident shareholders on and after the 1st April, 1960, will be entertained by the Directors unless interest is paid as aforesaid. No such application will be entertained after the 29th July, 1960.

Dated at Bombay this 29th day of June, 1960.

By Order of the Directors
For and on behalf of
The Tata Iron and Steel Company Limited
Tata Industries Private Limited
Managing Agents
By their Constituted Attorney
V. G. Mokashi

COMPANY AFFAIRS

METAL BOX: HIGHER SALES

Higher exports and larger sales of non-tinplate products like plastics, industrial components and machinery produced at the newly constituted factory at Calcutta helped the Metal Box Co. of India Ltd. to successfully raise its sale proceeds in 1959 to Rs. 830 lakhs, about 19 per cent higher than the previous year's figure. In view of the success in Ceylon, Burma, Thailand, Iran etc., the Chairman, Mr. K. C. Mahindra, is hopeful of good results in the coming years too. He has pointed out that it would be vital that the concessions on tinplate prices applicable last year for export purposes, which were reduced since December 1959, are restored to their previous level.

He made a pointed reference to the new excises levied on tinplate and aluminium. The Company has been trying to reduce the prices of its goods but these excises have stood in the way. This will, the Director has pointed out, damage the use of pilfer-proof consumer packing and the goods might be sold loose in unhygienic bulk containers, which are a standing temptation to adulteration. With the latest impositions tinplates will bear 33-1/3 per cent in the form of excise, sales tax, etc. Similarly, aluminium will now cost the Company higher, and ultimately the public may have to pay higher; almost twice as much as it does in the USA and the UK. In view of the need to popularise the use of packages which protect their contents from adulteration, it is necessary that some way out is found to reduce the excise duty imposed on tinplate.

The Chairman also pointed out that the stocks of tinplate were always very low with them and it was not possible to meet adequately the normal demand. Past experience has shown that the availability of tinplate both at home and abroad can change at very short notice. It is, therefore, necessary that the consumers are permitted extra quantities for stocks which will cover such vagaries. The licences should be granted to them for adequate quantities well in advance. The Chairman has also pleaded for a higher installed capacity of tinplates and aluminium in the country.

Sales of the Company increased by Rs. 134.9 lakhs to Rs. 845 lakhs and profits have increased by 10.7 lakhs to 108.3 lakhs. To compensate Ordinary Shareholders for the changed tax procedure increased dividends are recommended. An Interim Dividend of 90 nP., subject to Income Tax, was paid in January 1960 on the Ordinary Capital, exclusive of the new Shares offered in December 1959, which did not rank for this dividend. The Directors now recommended the payment of a final dividend of Rs. 1.60 subject to Income Tax on the increased Ordinary Capital of Rs. 161 lakhs.

In December 1959 the capital was increased to Rs. 161 lakhs by the issue to Ordinary Shareholders at par in the proportion of two new shares for every five held.

RISING PROFITS FOR PURTABPORE

In sharp contrast to the previous year's loss of Rs. 2.13 lakhs, the Purtabpore Company Limited has shown a profit of Rs. 2.81 lakhs during the year to October 31, 1959. This is the first report of the company since the resignation of their managing agents. The quantity of cane crushed by the company was 26.04 lakh maunds with an extraction of 9.88 per cent as against 24.91 lakh maunds with an extraction of 9.91 per cent in the previous year. The sugar obtained during the season (1958-59) was 2.57 lakh maunds as against 2.47 lakh maunds during the previous season. Prospects for the coming year (1959-60 season) are still better as the mills have crushed 36.9 lakh maunds of cane which is the highest quantity crushed since the start of the mills, The overall result naturally would be better.

Taking into account the profit on the sale of agricultural land (3.27 lakhs) and the transfer from general reserve and stock & stores reserve amounting to Rs. 25 thousand and Rs. 1 lakh respectively the surplus comes to Rs. 7.33 lakhs. Taking in account the previous year's deficit of Rs. 2.82 lakhs, there is a credit balance of Rs. 4.51 lakhs. A sum of Rs. 3.27 lakhs is proposed to be transferred to rehabilitation reserve. Dividend on cumulative preference shares for 1956-57 and 1957-58 will absorb Rs. 1.20 lakhs. The directors have proposed not to pay any dividend on ordinary shares in view of losses incurred by the company during the previous two years.

BRITISH INDIA ELECTRIC'S RISING COSTS

The turnover of the company increased during the year as compared to the previous year, mainly due to higher production of switch gear, although there was a reduction in the sales of motors. In spite of this higher turnover the profits were reduced, largely by the implementation of the Third Omnibus Engineering Tribunal Award which is reflected in the increase in labour cost. Profit during the year after providing for taxation and depreciation comes to Rs. 3.45 lakhs as against 3.51 lakhs during the previous year. The board of directors has transferred Rs. 32,907 to Development Rebate Reserve and Rs. 1.81 lakhs to general reserve. A final dividend at the rate of 25 per cent is proposed to be distributed which will absorb a sum of Rs. 1.25 lakhs.

Company Meetings

THE METAL BOX COMPANY OF INDIA LIMITED

CHAIRMAN'S REVIEW

The Twenty-seventh Annual General Meeting of The Metal Box Company of India Limited, will be held on Wednesday, the 20th July, 1960 at 59C, Chowringhee Road, Calcutta.

The following is a copy of the Review by the Chairman, Mr. K. C. Mahindra, which has already been circulated to members.

SALES

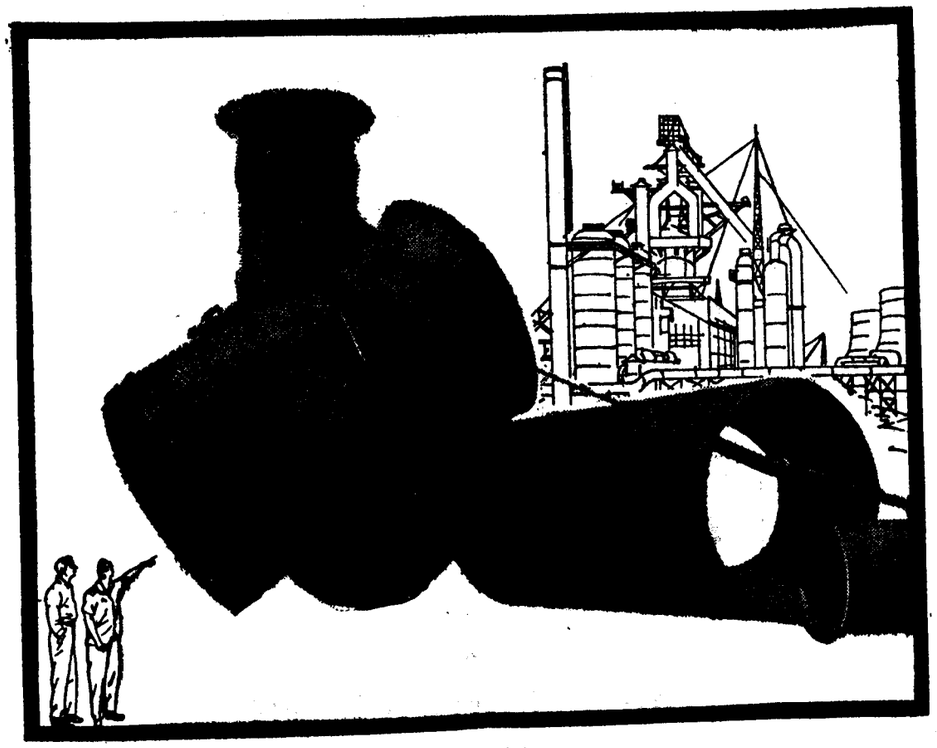
Once again it is my pleasant privilege to review a successful year with sales at Rs. 830 lakhs, 19 per cent over last year's. This increase was achieved notwithstanding unexpectedly poor offtake by the new fish canning and milk processing industries; it is substantially due to your Company's success in enlarging exports and sales of non-tinplate products, namely plastics, industrial components and machinery made at the newly constituted Calcutta No. 2 Factory. The improved exports I anticipated last year have been realised: we registered a sevenfold increase. We sought markets far and wide: during the year we exported goods to Ceylon, Burma, Thailand, Iran, Hongkong, East Africa, Pakistan, Malaya, Italy, the Fiji Islands and Aden, with particular emphasis on the first four. Having established ourselves in these export markets, we can with confidence look forward to a further expansion this year, but for achieving this it is vital that the concessions on tinplate prices applicable last year for export purposes—but reduced progressively since December 1959—should be restored to their previous level.

The new excises on tinplate and aluminium were not imposed until March and have had no effect on the year's operations. But in view of the success I reported to you last year in effecting, in the face of rising costs, price reductions following greater operational efficiency, these imposts are most disappointing. Faced with the task of bridging a large gap between expenditure and revenue, and in pursuance of a policy of broadening the base of indirect taxation, the Finance Minister in his latest budget made use of the fact that there is scarcely any income group in urban India which does not purchase packaged goods; these heavy excises, added to the already abnormally high prices charged for tinplate and aluminium, will bear down upon poor and rich alike. However simple they may be as a device for collecting taxes, these excises have a damaging social side effect with repercussions on the nation's health. This step must adversely affect the province of the Health Ministry since the most effective single remedy for the evil of food adulteration and the trade in spurious goods is pilferproof consumer packaging. Through its own Research Division, its Technical Development Section and its Technical Consultants overseas, your Company has played a leading part in developing the mass production and sales at economic rates of tamperproof containers which now constitute the major part of its business. The result: instead of being sold loose in unhygienic bulk containers which are a standing temptation to adulteration, an increasing volume of goods is being packed in factory-sealed consumer units. These branded consumer packages—containing from a few grams to a few kilos—may be Notampa-sealed Rigid Tubes, Pockets made from heat-sealing aluminium foil laminate, Bottles and Cans sealed with R. S. Closures, Open Top Cans, Diaphragm Cans, Scored Cans or Cans fitted with Capsule Overseals. Surely any Government which has declared its intention of beating the problem of food adulteration should encourage the use of these packages.

What we find happening in reality is the imposition of a heavy excise on two of our essential raw materials for producing tamperproof packages. With the latest imposition, for example, tinplate will bear some 33-1/3% in the form of excise, sales tax and the levy for the Steel Equalisation Fund. Likewise aluminium will now cost your Company—and ultimately the public—almost twice as much as it does manufacturers in the USA and UK. Particularly affected by this increase will be the R. S. Closure which has been accepted in the last six years as the most efficient seal in preventing adulteration and substitution in the ethical drug, fruit drinks, and other beverages trades.

It may be argued that the excise will not affect the current year's sales, and that there is no harm introducing deterrents against the use of materials in which the country is not yet self-sufficient. No doubt in short-term no damage may be done but the long-term implications are clear; self-sufficiency is in sight both in respect of tinplate and aluminium and there is a simple choice on the one hand between condoning adulteration and, on the other, of encouraging the use of packages which protect their contents from adulteration. By making the materials from which they are produced freely available at the lowest possible prices, much food adulteration could be prevented and the maximum use could be made of the country's installed capacity to protect consumer goods. My hope is that there will be some rethinking in high places and that these discouragements to sound packaging will either be removed altogether or substantially reduced.

RAW MATERIALS



At the beginning of the year under review stocks of tinplate were so low that it was not possible to meet adequately the normal demands placed on us by our customers and, to keep packing industries supplied as far as possible, uneconomical sizes of plate had to be used. The position had an adverse effect on the efficiency of our operations.

It was indeed fortunate that indigenous supplies were well maintained. Without these supplies the delayed arrivals of imported materials would have had serious repercussions on our production.

Towards the second half of the year the stock levels had improved but the forward position was still a matter of grave concern. Past experience has shown that the availability of tinplate both at home and abroad can change at very short notice. It is therefore essential that we be permitted a stock level which will cover such vagaries.

Furthermore, because of the length of the order books of foreign producers, it is essential in today's

conditions that licences are granted for adequate quantities well in advance.

Having regard to the relatively high capital-output ratio of secondary steel products, it is to be hoped that Government will make available as quickly as possible within the country a capacity of at least 250,000 tons of tinplate per annum. If this is not achieved over the next five years the development of packaging will be held back.

The position in respect of supplies of aluminium has also presented difficulties. It was not so many years ago that your Company was asked to make an all out effort to help develop the use of aluminium to provide an outlet for the increased production of aluminium envisaged at that time. Your Company made the effort and its consumption of aluminium increased from 327 tons in 1956-57 to 827 tons in 1959-60. It is hoped the new units licensed for the manufacture of primary aluminium will soon come into production.

As a result of the efforts of the Company's Research Division, more and more ancillary materials are being developed from indigenous sources and the quality of these products is showing a marked improvement. However, although work is in hand on new formulae, the supply position needs constant watching as a number of these materials are still dependent on a comparatively small percentage of imported constituents. As you can imagine this will remain a frustrating experience for all concerned until a more liberal attitude is possible towards the licensing of such materials.

As in the past the full resources of your Company will be concentrated on obtaining the desired materials to maintain its output but in the last analysis its success will depend upon the support received from the Government.

DEVELOPMENTS

I would again like to comment on the new Calcutta No. 1 Factory and I am pleased to report that the improvement in the operational efficiency mentioned last year resulting from the new premises has continued proving beyond all doubt the advisability of building a new factory which allowed of adequate space for well laid out equipment and a well designed flow from raw materials to finished products.

At the rehabilitated old factory, re-organised as Calcutta No. 2, the expanded production of plastics envisaged there, embracing injection moulding, polyethylene extrusion, printing and bag-making, was implemented. I am pleased to report that the establishment of these processes was significantly devoid of the teething troubles normally expected with new projects which reflects well on those responsible.

The Machineey Building Section of the Calcutta No. 2 Factory has been expanded and now produces for our customers an increased range of closing and ancillary equipment. In addition, it has undertaken the manufacture of individual production machines to help towards the conserving of foreign exchange that would otherwise be required to import the equipment. To the same end it is undertaking the manufacture of spare parts. Development in these directions must be dependent on the availability of adequate machine tools. If these are supplied, there is the skill and knowledge present to make great progress.

Your Company's efforts to provide Industrial Components for many of the new products which are now being manufactured in India continue and the Company's range of these products has widened considerably. It produces many such components which hitherto were imported from overseas.

During the year the Company's Technical Development Section was transferred from its existing premises to the Calcutta No. 2 Factory to provide space for the expansion of the Company's Research Division. This expansion was necessary to progress the development of indigenous raw materials and to increase the facilities to meet the manifold packaging problems encountered by our customers.

The factory at Faridabad, New Delhi, has been completed and the transfer of equipment from the old premises at Azadpur will be effected shortly. Delay in moving was caused by the shortage of power at Faridabad and even now it can only be made available during restricted hours. It is hoped that this position will improve during the current year with the increase in power supply planned by Government.

RIGHTS ISSUE

As forecast in my last review, the rights issue at par in the ratio of two new shares for every five shares held was made in December 1959. The money so raised has already been fully utilised.

It seems to us that if a rights issue is made at an attractive price, extra care should be taken to ensure that as far as possible no shareholder loses by his failure to take up the shares to which he is entitled. In our case only 656 shares were not taken up by the shareholders entitled to them. The Directors decided to allot these to a Board of Trustees who promptly sold the shares at market prices. The profit on sale was then paid to the shareholders originally entitled to the rights shares. By this means the best interest of all our shareholders was safeguarded.

INDUSTRIAL RELATIONS

In the present stage of development it would be most unusual if I had nothing to report in that most important field of Employee Relations. There has been a lot of activity. In the main the good relationship normally found in the Company between Management and Employees has continued and almost without exception any dispute that has arisen has been settled on a bi-partite basis. The negotiations on this basis show an awareness on the part both of Management and Employees that there must be "give and take". I hope that the Employees are as proud of their Company as the Company is of the Employees.

The apparently inevitable rise in the cost of living led, during the year, to negotiations in respect of Dearness Allowance, apart from which, in certain cases, there has been a revision of grading schemes. In nearly all cases agreement was reached on a basis of understanding and friendliness to the mutual benefit of all concerned.

Last year it was reported that a revised production bonus had been introduced in Bombay. This has been extended to the other units in the Company with a substantial increase in productivity and a comparable increase in earnings.

The Directors' offer to increase the level of contributions to the Providend Fund from 6¼ per cent to 8-1/3 per cent was much appreciated by the Employees of the Company.

The only tri-partite negotiations have been in respect of the hourly rated Employees of the Madras Branch. Their demands are still under negotiation on a tri-partite basis but it is to be hoped that ultimate agree-

ment will be reached without recourse to the time consuming processes of the Industrial Courts.

In the field of training there has been considerable development and as forecast in last year's review, the training staff of the Company has been substantially reinforced. Apart from the training organised within the Company, the Company has participated actively in all available spheres of external training. Only recently the second course in the Primary Centre established under the Workers' Education Scheme sponsored by the Government was inaugurated in Calcutta at the Company's No. 1 Factory there.

The Company again offered facilities for parties of Employees to visit projects being developed under the Five-Year Plans which were attended with continuing enthusiasm.

STAFF

In times of rapid economic expansion a multiplicity of problems in running a business is to be expected, problems which seem to be inevitable and of a nature difficult to forecast. The Officers and Staff responded once again admirably to those which had to be faced during the year and I have ever growing confidence in the ability of our Officers and Staff to deal satisfactorily with these problems as and when they arise.

We continue to receive the benefit of overseas training in the U.K. with the Company's Associates there. Within India we are participating more and more in Management and Technical courses being organised throughout the country and through facilities provided by the National Productivity Council

I would also like to make reference to successful efforts to promote social and sports activities within the Company, the importance of which should not be overlooked as a valuable contribution to the consolidation of a fine team spirit so essential to an effective organisation.

I thank the Officers and Staff for a year of hard work and successful results.

VISITS FROM ASSOCIATES

It was with great pleasure that towards the end of the year we welcomed to India Sir Harold Roxbee Cox. Deputy Chairman of The Metal Box Company Limited, England, accompanied by Lady Roxbee Cox, and also Mr. K. D. Brough, Managing Director of The Metal Box Company Overseas Limited. The purpose of their visit was, as representatives of our Technical Consultants, to see at first hand the industrial expansion so rapidly progressing in India and the developments that had taken place in your Company with a view to assessing in which directions they could make the most effective contributions.

Whereas we have had the opportunity of welcoming Mr. Brough from time to time over a considerable number of years, it was Sir Harold's first visit and as a prominent industrialist and a renowned scientist he evinced keen interest in all aspects of the Company's activities and India's progress. He has subsequently told me how impressed he was and for my part I would like to thank him for the refreshing results of his visit which helped to cement the growing mutual understanding and respect between members of your Company and those of its Associates in the U.K.

THE MYSORE SUGAR COMPANY LIMITED, BANGALORE

The twenty-sixth Annual General Meeting of the Mysore Sugar Company, Limited, was held at the Registered Office of the Company at Bangalore on Tuesday the 28th June, 1960, under the Chairmanship of Sri B. M. Krishnan, I.A.S. (Retd.) Chairman and Managing Director of the Company. Moving the adoption of the Report and Accounts, the Chairman made the following speech at the meeting:

"GENTLEMEN,

It gives me great pleasure to welcome you to this the Twenty-sixth Annual General Meeting of the Shareholders of the Mysore Sugar Company, Limited. Copies of the Directors' Report and the Audited Statements of Accounts for the year ended 30th June, 1959 have already been circulated to you in advance and I shall, with your permission, take them as read. You will notice that the pattern of presentation of Accounts has been slightly modified so as to show separately and at a glance the financial results of working of the different lines of activities of the Company.

2. A word of explanation is perhaps due for the delay in convening this meeting which should, in the ordinary course, have been held before the 31st March, 1960. This has been due to reasons beyond the control of your Directors. The audit of the Company's Accounts by the Officers of the Commercial Audit Department took more time than was anticipated and the final comments of the Comptroller and Auditor-General on our Accounts, which a Government Company is required to publish along with its Accounts, were received only in the middle of May 1960. The meeting could not, therefore, be convened earlier. Since the audit comments are published, your Dirctors have thought it advisable to publish their replies also for the information of Shareholders.

3. The downward trend in the country's sugar production, which set in during the 1957-58 season, continued during 1958-59 also, and production declined to 19.18 lakh tons, in spite of an increase in the number of factories. In the face of the increasing demand for sugar, the unsatisactory production,which was mainly due to inadequacy of cane supplies to factories, led to a tightening of control measures. The result is that the responsibility for distribution of sugar and for regulating its price at various levels has once again passed on to the State Governments. With the fall in production, the programme for export of sugar for earning foreign exchange received a set-back and the original export quota of 1,00,000 tons had to be drastically cut to a nominal 12,500 tons. How precarious the position was, could be gauged from the fact that the carry-over stock at the end of 1958-59 season had come down to about 1½ lakh tons, as against 4 to 5 lakh tons usually held by factories at the end of every season

4. As against the above discouraging picture, it is gratifying to note that the performance of the industry during the current season has shown a remarkable improvement, with production reaching 24 lakh tons, which is nearly 5 lakh tons more than what it was in the previous year. This has been possible largely because of the incentives given to the industry in the new sugar policy announced by the Government of India on the 25th October, 1959. Under this new policy, the price of sugarcane has been raised by three annas a maund and factories which show an increased production are given a rebate of 50 per cent in the basic excise duty on that part of the production which is in

excess of the average of the preceding two seasons. The higher production has enabled the authorities to raise the level of monthly release for consumption and, consequently, the supply position is now eased. The country can now be said to have turned the corner in regard to its sugar position in respect of production and, given the proper incentives, there is no doubt that production will rise further in the coming season and thus pave the way for an early de-control of sugar.

5. The target of 22½ lakh tons of sugar fixed for the II Five Year Plan has been proved to be not too ambitious under the conditions now obtaining and a much higher target of 30 lakh tons has been envisaged for the Third Plan. In order to achieve this, the Government of India propose licensing additional capacity. This opportunity has been seized by us to revive the pending expansion programme of our factory at Mandya. After a thorough examination of the cane potential of the Mandya area and taking into consideration the several advantages we already possess, your Directors have formulated a scheme for achieving an overall crushing capacity of 4,000 tons of cane per day. This scheme envisages stepping up the capacity of the Mandya factory to 3,000 tons partly by rehabilitation and partly by expansion, and transferring the remaining capacity of 1,000 tons to a branch unit to be set up in the Maddur region. Necessary applications for licences under the Industries (Development and Regulation) Act have been submitted to the Government of India and the matter is under their active consideration. In regard to Mandya unit we have already been asked by them to formulate definite proposals to procure the units necessary for expansion from manufacturing sources available in India and the matter is receiving urgent attention.

6. With its existing seven factories, Mysore is currently self-sufficient in sugar on the basis of the present controlled system of distribution. According to my information. at least two factories, including our own, wish to expand and about half a dozen new factories are also likely to come up in the co-operative sector. When all these factories go into production before the end of the Third Plan, Mysore State will not only become fully self-sufficient but may well be faced with a surplus, the disposal of which is likely to create a problem, especially when every other State in South India has plans for starting new factories. In these circumstances, it becomes necessary to guard against an un-co-ordinated overall expansion of the sugar industry in South India, which may soon cease to be a deficit region.

7. A matter of significance to the industry has been the publication recently of the report of the Tariff Commission which had gone into the cost structure of sugar and the claim of the industry for a suitable allowance in the sugar price on account of rehabilitation of plant and machinery. The main recommendations of the Commission, which have been accepted by the Government, fall short of expectations and have naturally given cause for concern. A return of 12 per cent on Capital employed, to meet a variety of commitments like bonus and gratuity to workers, Directors' remuneration, interest on borrowed capital, taxation, and finally, dividend to shareholders, can hardly be considered adequate in the sugar industry. On the burning question of rehabilitation allowance, the Commission has expressed itself against inclusion of any element of rehabilitation allowance in sugar price on a uniform basis. In my address to you last year I had stated at length the problem of rehabilitation of sugar plant, which is of recent origin so far as our industry is concerned, and I do not wish to cover the same ground again. Suffice it to say that the need for rehabilitation has now been well recognised and has also received judicial support. It is too late in the day to argue that rehabilitation should be met from normal depreciation or other extraneous sources. This is a matter which is of vital importance to the future of sugar industry and calls for re-consideration, especially as it has a vital bearing on the Price Linking Formula. On the question of the share of the cane growers in the price of sugar, for purposes of application of the Price Linking Formula prescribed by the Government of India for the 1958-59 seasons, which was the origin of the reference to the Tariff Commission, the Commission has not thrown any light. Our plea has been that the percentage share of sugar price to be passed on to growers under the formula needs to be revised after giving credit for adequate rehabilitation allowance in the sugar cost. It now remains to be seen in what way the formula will be modified having regard to the ever expanding needs of the industry.

8. I shall now deal with the working of your Company. From the Report and Accounts in your hands you would have seen that the Company had another year of successful working. Production of sugar in our Mandya Factory during 1958-59 came to 35,771 tons which is 3,749 tons less than the peak production of 39,520 tons recorded in the previous year. The quantity of cane actually crushed was 3,48,814 tons, while the percentage of sugar recovery was 10.24. The corresponding figures for the previous season were 3,79,545 tons and 10.40 per cent respectively. The duration of the season was also shorter, being 217 days as against 239 days for which the factory worked in 1957-58. The fall under these heads accounts for the drop in production. However, the quantity of sugar sold was more than that in any previous year and the total value realised was also the highest.

9. As in previous years, the statutory price of sugarcane continued to be Rs. 1.44 per Md. (Rs. 39.20 per ton) for delivery at the factory gate. Over and above this price, suppliers are eligible for a deferred price calculated according to the Price Linking Formula. Although the 1958-59 season closed a year ago, the decisive 'X' factor in the formula is yet to be announced in its final form. Consequently, it was a problem how to close our financial accounts for the relevant year. Pending assessment of the exact liability on this account, an assumed figure, based on a rough calculation, has been provided for and debited in the accounts, which will admit of payment of additional price up to about Rs. 5 per ton. The additional price of Rs. 3 per ton paid for the previous year's supplies did not satisfy the cane growers and after re-consideration, a further payment of Rs. 1.20 nP. per ton was made in June 1959, raising the additional price from Rs. 3 to Rs. 4.20 per ton. The cost of this extra payment amounting to Rs. 4,50,890 has been absorbed in the Accounts of the year under review.

10. The financial results of the year's operations have resulted in a net profit of Rs. 6,54,699 after making adequate provisions for depreciation and development rebate, taxation and rehabilitation. This is almost on par with the net profit of Rs. 6,87,575 reported in the previous year, although there has been a sizable drop in the gross profits from Rs. 45,70,846 to Rs. 31,89,054. The decline in earnings is to be attributed mainly to the rise in sugar manufacturing costs, resulting from lower percentage of sugar recovery, and increased costs on account of items like additional cane price, salaries and wages. Another important factor that is responsible for the fall in profits is that against the year's profit a loss of Rs. 3,37,688 had to be set off incurred on the disposal, during the year under review, of our export quota of 1000.3 tons of sugar released out of the 1957-58 season's production, in terms of the Sugar Export Promotion Act, 1958.

11. As shareholders are aware, the procedure relating to payment of dividend has been radically altered

by the Finance Act, 1959, under which income-tax is to be deducted at source out of the dividend declared and the system of grossing up of dividend by shareholders is discontinued. In the altered circumstances it has become necessary to make a departure from our normal practice of declaring a 20 per cent dividend—a practice which your Company has consistently followed during the last two decades. After careful consideration, your Directors have decided to raise the dividend for 1958-59 to 30 per cent, subject to deduction of tax, so that shareholders may be compensated for the loss arising from the abolition of grossing and may receive a net return which is a little more than what they have been accustomed to get in the past. Consequent on the unavoidable delay that has occurred in convening the general meeting, your Directors have, in anticipation of your approval, already paid the dividend recommended by them, treating it as an interim dividend. This will now have to be confirmed as the final dividend for the year.

12. Efforts in the direction of affording greater amenities to labour and of promoting better labour-relationship continue to be made by your Company. During the year under report, the second phase of the Swarnasandra housing colony was completed by the Labour Housing Board under which 116 tenements were made available for occupation, in addition to the 496 houses built under the first phase a few years ago. Another block of 184 houses is nearing completion. Our employees pay only 50 per cent of the prescribed rent for these houses, the remaining 50 per cent being met by the Company as a subsidy. The policy of issue of foodgrains on subsidised basis is also being continued. The Company's High School, where free education is imparted to the children of employees and cane growers, is being steadily expanded and a new High School building at a cost of nearly Rs. 3 lakhs is now under construction.

13. The agitation for additional bonus, which has now become an annual feature, was repeated in respect of the year 1957-58. Contrary to the accepted principle of settling industrial disputes by arbitration, the Management's offer to refer the issue to arbitration was turned down by labour which persisted in its demand and threatened a strike. Your Directors finally agreed to grant an additional bonus of two months' pay as Silver Jubilee Bonus, over and above the bonus of four months' pay already paid. The problem of bonus to employees in the Sugar industry is somewhat complicated. Here, the cane growers, who constitute an integral part of the industry, also come in for a share of profits and the usual Bonus formula for determining the surplus profit available for grant of bonus to workers cannot be automatically applied in our case. There is as yet no authoritative formula for determining the relative claims of cane growers and workers for bonus and we look forward to some guidance, on this important issue, from the Central Wage Board for the Sugar Industry which is examining the question of the principles on which bonus is to be granted in the sugar industry.

14. The proposal for utilisation of bagasse obtained in our sugar factory for the manufacture of superior quality paper under the auspices of Mandya National Paper Mills Ltd., has materialised and it is expected that the Paper Mills would go into production by about the middle of next year. Under a thirty-three year agreement entered into between your Company and the Mandya National Paper Mills, Limited, on the 21st September, 1959, we have agreed to release our bagasse for paper manufacture in exchange for coal of equivalent calorific value to be supplied by the Paper Mills for being used as substitute fuel in our factory boilers, in addition to royalty. In pursuance of this understanding, action is being taken to instal a large multi-fuel boiler in our factory at a cost of nearly Rs. 18 lakhs of which a small portion amounting to about 10 per cent will be contributed by the Paper Mills. As a gesture of our goodwill towards the new undertaking, your Company has subscribed for shares of the value of about Rs. 4 lakhs in the Paper Mills and the latter has reciprocated by providing a place for one of our nominees on its Directorate.

15. You may recall that in my speech last year I had referred to the problem of our large alcohol potential and had posed the question why we should not embark on some useful and remunerative schemes of development which would solve our alcohol problem, on the lines indicated in the report of the Alcohol Committee. I am very happy to announce that your Directors have now under active consideration a scheme for the establishment of a new industry at Mandya, designed to manufacture Cellulose Acetate flakes and moulding powders. They are advised that this is a promising line of manufacture, for which there is bound to be great demand from the growing Plastics and Raw Film industry in our country. The Government of India have promised to grant a licence, provided certain conditions are fulfilled, and we are almost at the stage of finalising our efforts very early when we will be moving the Central Government for the final licence. This will be a major project involving heavy capital outlay and calling for foreign collaboration, both on the financial and technical sides. Negotiations with certain foreign firms who have taken a lively interest in the proposal, are in progress and there is every possibility of our being able to secure excellent foreign collaboration for this new venture.

16. Let me also mention another line of development that is finalised. We hove a well-equipped workshop attached to our factory and its present operations are confined to maintaining the sugar machinery in an efficient condition. We are advised that it has potentialities to do some thing more and therefore we have obtained from the Government of India a licence to work it as a unit for manufacturing chemical plant and machinery. We hope to re-organise the workshop as a Manufacturing unit very early.

17. There is yet another line of expansion which I should place before you though it may appear to be inconsequential against the back-ground of our activities connected with the manufacture of sugar and alcohol. I refer to our excellent product which is already familiar to you all in the name of "Golden Syrup". It has all along been a showpiece and presentation article. With the stoppage of imports, it has assumed significance in the consumers' market. Negotiations have, therefore, been completed to put it on the all-India market through the good offices of Messrs. Spencer & Co. Ltd. A resolution to approve the deal is before you. May I add that this may, though in a small way, be a product that could be exported to earn foreign exchange which the country is in dire need at present.

18. From what I have already said you will appreciate that we are on the eve of embarking upon a number of development schemes calculated to achieve a many-sided expansion of our activities which will put Mandya prominently on the Industrial map of India. In the first place, there is the proposal for expansion of our sugar plant and for starting a branch factory designed to secure an overall crushing capacity of 4,000 tons of cane per day and double the present production by nearly 35,000 tons of sugar. The scheme for conversion of our bagasse into paper is well under way and though this industry is not sponsored and run by us we will still be closely associated with it. By far the most important scheme which we have under consideration is the project for manufacture of Cellulose Acetate based on our alcohol. Detailed project report for the scheme is now under preparation by experts. Closely allied to this project is a proposal for further expansion of our Distillery so as not only to take care of the anticipated increased production of molasses but also to provide the basic raw material for the proposed new industry.

19. The implementation of the above schemes of expansion and new projects naturally call for large financial resources. While your Company undoubtedly enjoys high credit and can raise funds by borrowing, the magnitude of the capital that would be needed for the Cellulose Acetate project would necessitate our going to the capital market for raising fresh capital. Details in regard to this matter are yet to be finalised and I am therefore not in a position to say anything at this stage. There is also the pending question of re-organisation of the capital structure. Certain definite proposals in this behalf have been submitted by your Directors to the Government of Mysore who hold majority share interests in our Company and if these are concurred in by them, action will be taken to implement them as soon as possible

20. In my speech last year I referred to the proposal for celebrating the Silver Jubilee of the Company. A committee consisting of all interests connected with the Company has since made certain proposals calculated to benefit not only the employees of the Company but also the shareholders and cane growers. The proposals cover a wide range of schemes of a beneficial nature, such as, construction of hospital, maternity home, high schools and a community hall and grant of weightage increments to employees, institution of Silver Jubilee Gold Medals under the auspices of the Mysore University, issue of Bonus Shares and grant of token bonus to the large body of cane growers. Your Directors have generally accepted the proposals and the question of implementing the same in a phased manner, consistent with the financial resources of the Company, is now under the consideration of your Directors. In fact, some items in the proposed programme have already been covered, like grant of Silver Jubilee Bonus to staff and employees and presentation of Silver Jubilee valets to shareholders and others connected with the working of the Company.

21. Before I conclude, it is my pleasant duty to acknowledge the valuable assistance and co-operation received by me from my colleagues on the Board. The employees of the Company, from the General Manager downwards, have all continued to serve the Company loyally and efficiently and the thanks of the Management are due to them. The Company is also thankful to the large body of cane growers from whom it has received unstinted co-operation. Above all, the Company is grateful to the Government of Mysore for their continued solicitude towards it."

The Report and Accounts for the year 1958-59 were adopted and the Interim Dividend of 30 per cent, subject to tax, already paid, was confirmed as the final Dividend for the year. The retiring Directors, Sri H. K. Veeranna Gowdh and Sri L. Siddappa were re-elected unopposed. The meeting also accorded its consent to the appointment of Messrs. Spencer & Company Ltd. Madras, as the Sole Agents for the sale of Golden Syrup for a period of three years.

With a vote of thanks to the Chair, the meeting terminated.

H. MAHARUDRIAH,
Secretary.

Bangalore,
Dated 29th June, 1960.

NOTE: This does not purport to be a report of the proceedings of the General Meeting.

Ordeal by Fire

THERE is a soul of good in things evil. Events this week have brought the Indian people face to face with themselves, and in the process of this searching of their own souls they have found some inner strength. Thus, notwithstanding the deep distress which the strike has inevitably caused, it is proving an operation fully worth while. Over the last twelve years of Independence, a listless complacency has replaced enthusiasm, and a great decline in discipline has accompanied even quite substantial achievements. The nation has not girded its loins in a supreme effort to battle with poverty or to accept the strains of development with inadequate financial, managerial, and operational resources. We have attempted always to obtain too much for too little. The Central Government employees, who made excessive claims in this respect, were only reflecting a national disease. But we can take pride from the fact that, before it was too late, we recalled ourselves to some degree of discipline and self-control. It was a tragedy that the strike was called by certain misguided trade unions. But the tragedy has been much relieved by the remarkable growth of discipline and determination by the public at large, and by the new efficiency created in the Central Government.

Undoubtedly, the first fact that comes to light is the extraordinary capacity of the Congress organisation under pressure to withstand its opponents. The Praja Socialist leaders and the Communists, who have too often derided indiscipline of the Congress, have still to learn the lesson that in spirit, the Indian people will always side with the Congress organisation when it has its back to the wall. It is quite true that the general public has its own major interest in siding with the administration. But it would be foolish to ignore the fact that Congress leadership, weak and disorderly as it often appears, has a remarkable capacity of rising to the occasion in times of stress. Perhaps the discipline of the pre-Independence age has carried over below the surface. Certainly, amongst the great leaders, Jawaharlal Nehru, Pandit Govind Ballabh Pant and some Chief Ministers, particularly Dr. B. C. Roy, have their remarkable stature under great pressure; at their substantial ages, they can still ride almost any storm set by their opponents. The extraordinary efficiency with which the Central Government has operated in Delhi has raised high hopes that the power of prompt decision, which seemed to have departed with Sardar Vallabhbhai Patel, can suddenly come to life again. The firm action of the Ministry of Home Affairs has stricken fear into disorderly members of the Central Secretariat; from now, perhaps, there will be increased output corresponding to the desperate needs of the nation at the threshold of the Third Plan.

There is also some negative satisfaction to be found. It has done the country good to recognise the irresponsibilities of the Praja Socialist and the Communist leaders, who launched on an all-India strike, which, firstly, as a trade unionist measure could never achieve its object, and, secondly, which has inevitably led to

violence in which workers have been the main sufferers. The fact that the sabotage of some valuable equipment has also been attempted will add anger to the reaction of the public to the irresponsibilities of these leaders. Now, surely, there can be very little ground for negotiation, until the strike is called off unconditionally. But if it should be called off unconditionally, the minimum of punishment and the removal of the humiliation which workers have endured, will not only be good counsel, but an act of duty. For the leaders only, there should be no mercy.

The fact remains that a victory in this case for the Government machinery and for the Congress Party is, by no means, synonymous with the removal of the emergency. Nor does it, in any way, overcome the point that the Government of India has lost touch with the great mass of its own workers, who are sullen and bitter, because the strain of living, with no adequate control on prices, has become almost intolerable. This time at least, when the Government talks about holding the price line, it must mean business. It must accept the obligations of failure on its part to carry out its commitments. More important still, it must cease to talk ideologically and not fail to practise what it preaches to the private sector. Inevitably, this should mean that Mr. Gulzari Lal Nanda, who bears the main responsibility for having undermined the basic principles of ordered development of the wage structure, should be replaced by a Minister of Labour who is conversant with the present temper of the country to get full value for work paid for by the Central Exchequer. The nation's will has been demonstrated in the quite remarkable degree of discipline and support for the administration. It would be the greatest tragedy if this opportunity were allowed to pass without our benefiting fully from the instruments it gives the country for correction of the errors of indiscipline and waste of the last twelve years.

Delhi's New Master Plan

AS an essay in spacious thinking, the Draft Master Plan for Delhi published last week by the Delhi Development Authority is a *magnum opus*, a fitting end to the dedicated work of Albert Mayer and his versatile team. An attractive pattern has thus been woven into the Delhi to be built in the next two decades. It is the product of prodigious labour extending over the last four years and incorporates the results of a number of surveys and investigations undertaken by experts. It can also lay claim to being a pioneer in taking within its ambit not only the metropolis, but the region around to bring about what is termed a metropolitan-urban-rural integration. Greater Delhi that is covered thus includes even certain areas in the Punjab and Uttar Pradesh, making for an estimated total population of 10 million by 1981.

The Master Plan has come none too soon. From about 9 lakhs prior to Independence, the population of Delhi has been growing by leaps and bounds to 21 lakhs by the end of 1959. It has been estimated that during the present decade, the equivalent of a city is being added to Delhi's population every year, and indications are that even on a conservative estimate, the population of the city will be around 5.5 million by 1981. The major contributory factors for this phenomenal rise, apart from the normal growth and regular migration, have been the influx of refugees consequent on Partition and the massive growth of Government employment. Lacking a plan, the result has been haphazard development, providing ugly contrasts, with extravagant use of valuable land in certain parts and woeful congestion in others. In certain areas, the density of population is as low as 15 to the acre whereas in others, it is as high as 1,000. Similar have been the contrasts in the provision of public utilities, services and community facilities, which, if allowed to go unchecked, will lead to the growth of more slums and a distorted physical environment, hardly conducive to harmonious economic and social development and leading in turn to increasing social conflicts and tension.

The problem here is, of course, colossal, as is evident, for instance, from the statement in the Plan that roughly one-third of the total population of Old Delhi lives in areas which are to be replanned and rebuilt almost completely. The development envisaged, therefore, is on the lines of rectifying the adverse consequences of past growth as well as the regulation of growth in the future. The elimination of slums, the rebuilding of deteriorated areas and the removal of overcrowding as far as possible from congested localities and densification of thinly populated areas, which are some of the stated objectives, are meant evidently to provide a corrective for past neglect, while the suggestion for an inviolable "green belt" around the city is meant to limit the ultimate physical growth of the city to contain an estimated population of about five million.

It is open to doubt whether the eventual size contemplated will not be too unwieldy. To meet this difficulty, however, the Plan proposes an attractive scheme to divide the existing and proposed urban area into suitable sectors or planning districts numbering eight. Each district is intended to be self-contained in employment and community facilities, with a shopping centre, a major work centre, a college and a general hospital, and at the same time connected by a system of roads and highways both within the district as well as in relation with other districts. This scheme is a part of an over-all plan for land use which tries to relate residential land requirements to work areas, shopping, recreation, transportation and municipal services. A basic problem, however, relates to housing and slum clearance. The Plan estimates the housing shortage in 1959 at one lakh whereas population is also increasing at the rate of 1 lakh a year. Hence land will have to be acquired on a big scale for undertaking housing construction for various categories as well as for slum clearance. The Plan rightly, therefore, places emphasis on a large-scale land acquisition policy, an aspect to which adequate attention does not seem to have been bestowed hitherto. At the same time, it is worthwhile to plan for the dispersal of the Central Government offices on a more systematic basis so as to reduce the pressure on the employment in the public services, expected to be doubled in 1981.

The real crux of the problem is, as always, implementation and the translation of theory into practice. It revolves on two major premises, a suitable agency and resources, what will be the cost and how it is to be met. This is in short the prose of this long poetry. The plan itself concedes that an essential imperative is an organisation whose sole business and duty is to carry forward the various activities envisaged from start to finish. But the structure it has proposed is an *ad hoc* committee consisting of representatives of U.P., Punjab and Delhi to initiate in the first instance, preparation of plans for the entire Greater Delhi area and review those in progress. It feels that this is the only feasible arrangement instead of an alternative, for instance, of a statutory planning agency. Its view that no difficulty is likely to occur in securing the maximum possible co-ordination from the participating units out of this arrangement seems to err very much on the side of optimism. As regards cost, the Plan does not give out much except to say that it is expected to be followed with studies and proposals relating to financial planning and capital budgeting. However, it has made proposals for phasing the programme until 1966, but even this has been purely in physical terms and has yet to be co-ordinated to the revenue resources. One may wonder whether finance is to be the stumbling block. The citizens of Delhi must now with one voice demand that their interests, so greatly neglected over the years, do not now become the first victim of false economy.

The Crisis in Coking Coal

IT seems that for some time past, the country has been facing one of the worst crises on the coal front, especially in regard to coking coal, the supply position of which is said to have worsened to an extreme point. Reports suggest that the three public sector steel plants are eking out a hand to mouth existence so far as coal supplies are concerned. In this context it is stressed that they have for some time carried on with stocks of coking coal hardly sufficient for two or three days' consumption. The position in the private sector steel plants too is said to be critical. They are also reported to be constrained to operate with fuel stocks considerably less than what they carry normally.

It is intriguing how this situation has been allowed to develop. The crisis of superior grades coal, which has raised its head now, is by no means a passing phase. All available evidence tends to establish that it is the cumulative effect of the lag in production practically over the whole of the Second Plan period. As against a production ceiling of 15 million tons, output of coking coal in 1956 amounted to only 13.8 million tons. In 1957, 1958 and 1959 actual raisings at 15.08 million tons, 15.16 million tons and 14.57 million tons fell short of the ceiling by 1.62 million tons, 2.04 million tons and 3.83 million tons respectively.

Still another aspect of the problem which has received little notice, despite strongly ventilated grievance of the steel industry, is that for quite a long time now the quality too has deteriorated considerably. The coking coal supplied to the steel plants is said to contain 25 per cent ash content in place of a maximum of 20 per cent previously. The effects of a higher ash content are reflected greatly in the decline in the output of steel and the rise in production costs. For every increase of one per cent of ash content, it is estimated, the output of steel goes down by about 4.6 per cent, while at current prices the production costs rise by about Rs. 7.2 per ton.

This acute shortage of coking coal would not have made its appearance at this vital stage when the State-owned steel plants are being commissioned into production but for the serious failure of the programme of erecting the four coal washeries in the public sector. Only the washery at Kargali has so far gone into production, but the rate of output there has been very disappointing. The establishment of the other three washeries has been postponed and it is rather amazing that among the major reasons of this delay is the technical flaw in the planning of the plants. It would mean that a long delay has become inevitable. Alongside this grievous failure in respect of washeries, there has been the omission to implement the Central schemes for stowing in the Jharia and Jambod|Kajora coalfields. In the absence of stowing facilities, large quantities of coking coal, it is feared, are going to be lost to the collieries. The repeated demand for a flow of sand and stowing materials in requisite quantities in these areas has proved fruitless. The shortage of supply of coking coal to the steel plants appears to have been aggravated to some extent at least by the lag in the supply of wagons too. A certain margin of stocks at the pitheads is a normal feature of the operation of collieries, but during 1959 in particular, the disparity between the raisings of coking coal and their dispatches was as large as 0.52 million tons. For coking coal this is undoubtedly a large accumulation at pitheads.

On no account, obviously, can this rot be allowed to continue. The country cannot afford to wait until the remaining three washeries in the public sector are erected. Apparently there is need to take energetic action to step up coking coal output. It is ironical that a rigid attitude should have been taken by the Central Government on the question of fixation of coal prices when they were revised recently. Between the submission of the Coal Price Committee's Report and the belated decision on its recommendations, the situation underwent a rapid change which made the estimates and assumptions on which the price formula was based somewhat outmoded. The industry's deputation which called on the authorities was peremptorily told that the issue was closed and it could not be re-opened. The result is that a large number of collieries are reported to be unable to carry on production at full swing for sheer inadequacy of the prices now fixed to cover the production costs.

The coal industry's first requirement at present, it thus appears, is to enable it to arm itself to carry out the programmes of expansion in the Third Plan. The priority need in this respect is that reasonable prices should be fixed for coal which would not only be in alignment with the production costs, but leave a surplus to be utilized to finance rehabilitation and development programmes. For the former, it is also essential that the industry should be allocated adequate foreign exchange so that it may be able to acquire spares for lack of which machinery is sometimes kept idle. There is, however, an overriding consideration dictated by the target fixed for coal production in the Third Plan. As against the anticipated output of 53 million tons during the current financial year, the target for 1965-66 is pitched at 97 million tons. To raise production by nothing less than 87 per cent in five years is a real challenge to the industry. It is somewhat surprising that, when the short supply position of coking coal is a recognised fact, the Draft Outline of the next Plan does not throw any light on the break-up of the composite target into at least the major categories. The Industrial Policy Resolution of 1956, insofar as it relates to coal mining, throws a heavy weight on the public sector which its current performance does not at all warrant. Total output—and not its sectorwise allocation — is the basic requirement of the economy. Pragmatism requires that the policy on coal production should be modified to transfer greater responsibility where there is proved capacity to deliver the goods.

A DELHI DIARY

STRIKES AND ASTROLOGERS

AT moments of great crisis in India — quite apart from that most critical moment of birth — astrologers must be called in to provide consolation and assurance. True to the inevitable course of human events, astrologers have been busy in Delhi this week, telling us how long the strike will last and what are its long-term consequences. Exactly how astrologers arrive at this information is not for me to describe. Presumably the main actors have their individual horoscopes which when added up give what is called a total picture. The question is: How are they added up? Be that as it may, I have before me three astrological predictions. One of them says that the strike will last for one week, the second says it will last for two weeks, and the third says it will run for three weeks. It seems clear to me that astrology, with all its magnificent reputation in this country, cannot in these circumstances be always right. As in the law of perjury in the Indian Penal Code, it is not necessary to prove which prediction is right to demonstrate that two of these three astrologers must certainly be wrong. And why, unless these astrologers are greatly under the influence of the lunar month, and vulgar fractions thereof, must they necessarily choose a week as the unit for the measurement of duration, rejecting sevenths? These are deep psychological questions which I leave to those who have probed deeper into astrologers who, apparently, have a life of their own.

Looking at the disturbing events in Bombay and Calcutta, and then at the solid front in the rest of the country, I argue that the strike will last ten days with the greater portion of it broken long before. I, therefore, add my own astrological prediction to the aforesaid three predictions; I can claim flexibility in that I am not bound to the lunar month. Thus at least my prediction cannot be deemed to be of the same ordinary quality as the rest.

THE PERILS OF PROCRASTINATION

Last week I referred — somewhat disrespectfully, I am told — to the perils of certain personal philosophies, and I did some injustice, seeing that the personalities discussed there have shown, in the event, their great capacity to deal vigorously, and even imaginatively with the strike situation. I should really have concentrated far more on personalities in the Council of Action, particularly, Mr. S. M. Joshi, Mr. Peter Alvares and Mr. Nath Pai. All these three have shown, to my mind, the most glaring inadequacy. This was particularly revealed last Sunday when, as D-Day was approaching, they were obviously losing their own nerves having played heavily on the nerves of others. The story goes that Mr. Peter Alvares, who was left alone at 4-30 p.m. on Sunday with powers to call off the strike, could not summon enough courage to do it on his own. He tried feverishly to get some vocal support from Bombay. While the telephones refused to oblige — is this called the boomerang? — a precious half hour passed, and Mr. Peter Alvares lost the chance of being on the right side of history. He is also now on the wrong side of the prison bars; people are even asking why it took forty-eight hours to arrest him after the strike commenced.

OSSA VENIENTIBUS SERA

For late comers, as the Latin proverb says, there will be bones. One question that is being asked is how on earth has it come about that Mr. Asoka Mehta, Chairman of the Praja Socialist Party, which seems to have been sponsoring this strike through important leaders in Bombay, could possibly have stayed out of India when his intervention might have saved his Party from this egregious blunder? The habit of leaving the country for long periods, which seems to have descended on Praja Socialist top politicians, has done the Party considerable damage in the public mind. I cannot help agreeing that on this occasion Mr. Asoka Mehta should have stayed at home while so serious a situation was building up. I also think, although the leader of the Swatantra Party was very much here, his silence was by no means the line which the Swatantra Party should have taken on this major question. Political parties must sooner or later recognise that they exist to present a point of view for the public, even if it is a controversial, and unacceptable one to the majority. In this particular case, neither the Praja Socialist Party nor the Swatantra Party chose to give the country any good lead and, undoubtedly, the feeling has gained ground that at times of crisis the only party on which to rely is the Congress. I need not mention the Communist Party. For a party participating in the strike, its utterances have an ambivalence, which is no improvement on silence. But at least it never raised expectations. But surely the democratic opposition has done itself considerable damage by stultifying acts of neglect. This is not one of the problems which will save the Opposition by mere efflux of time. There are — as a famous Dewan of Mysore used to say — a large number of problems which do solve themselves in this manner. And, of course, in the long run, as Keynes has reminded us, time solves everything since we will all be dead. But in the short period in which we live, all Indian Opposition parties seem to be in the doghouse. At least that is my reading. Do I hear any noises from afar, particularly Bombay and Madras?

DEUS EX MACHINA

Since I am dwelling in Latin phrases, perhaps I should ask what is the Deus ex Machina to rescue us from the trouble? I see that Mr. Guruswami, a member of the Joint Council of Action, is coming to Delhi with the complaint that other members of the Council of Action are not available for consultation. Since during the period when they were in consultation they were unable to take a sensible view, and now almost no consultation is necessary because the strike has been lost, it is difficult to see the force of Mr. Guruswami's contention. But I must try my hand at a constructive proposal. The proper thing for him to do is to revive the Feroze Gandhi proposals, and for the Government to stand by the last offer made, provided the strike is unconditionally withdrawn. This, I know, sounds extraordinarily like not driving home one's advantage. But since it is after all a Deus ex Machina that is being applied, it must be a merciful instrument; after all, none of the Almighty's instruments lead to the humiliation of men who are made in the Divine image. I, therefore, recommend to Mr. Guruswami the suggestion that what he needs now is his old formula and his old authority to get the railway men to call off their mistaken rebellion; he can do this without all his colleagues on the Joint Council. So can the country.

BACK TO THE STEEL FRAME?

In conclusion, may I say that the crisis has had another beneficial effect? In meeting external aggression, the (political) Government of India has discovered anew the virtue of its own (administrative) limits. How else can one explain the sudden delegation of powers to five, good men and true, at Bombay, Calcutta, Madras, Chandigarh and Lucknow? Can it be that the Government of India is coming round to the view that some of the best trouble-shooters of the world were reared in the civil service here in Delhi without deep mass contact with the people?

ARGUS.

THE WEEK'S NOTES

Assam

NEED FOR CENTRAL INTERVENTION

EVEN FROM the guarded reports that trickle through, it is evident that a very serious situation has arisen in Assam. The trouble that has been brewing over the language issue for some time now has taken an ugly turn during the last one month resulting in violence and mob rule. Rioting, loot and arson have been on the ascendent and the situation has got so much out of control in many places of the State that army reinforcements had to be rushed to put down lawlessness. The large-scale military operations of the last few days no doubt seem to have yielded some results, but it is not known when complete normalcy will be restored and a sense of security ensured to the law-abiding citizen. Retaliation and counter-retaliation between members belonging to the different communities have reached such sanguinary proportions, reminiscent of the holocaust of the Partition days, that short of some drastic action, it may prove difficult to retrieve the situation.

The visit of the Defence Minister this week to the State and the proposed visit of the Prime Minister shows the serious concern of the Centre towards this troubled State. On all accounts, the State Government has betrayed its helplessness and cannot be depended upon to ensure the peace. There is also the fact that it is a partisan in the language dispute and the Chief Minister has been made to make a 'volte face' under political pressure from the wise stand he took earlier, namely, that Assamese cannot be made a State language unless it has the acceptance of the non-Ahamiyas in the State. Whatever may be the merits or demerits of the Assamese case, the present time is most inopportune to seek a solution to the vexed language controversy. The need is to put down lawlessness with a heavy hand and restore order and normalcy. This cannot brook any further delay and calls for the promulgation of even President's rule if the Governor advises such a step for rescuing the State from large-scale hooliganism and violence.

Congo

MR. LUMUMBA'S FOLLY

WITHIN A fortnight of its achieving independence, the Congo Republic is faced with a crisis which threatens its very existence as an independent country. While the Central administration lies paralysed by rank indiscipline in the army, the mineral-rich Province of Katanga has declared itself independent of the Central authority. Belgium has flown in troops in quite a large number on the pretext that they are needed there to protect the Belgian nationals who preferred to stay back in the Republic. Prime Minister Lumumba has appealed to the U.N. and the U.S. Government to send military aid to help in restoring law and order in the country, especially in the southern region where army indiscipline is reported to be verging on revolt.

This grave debacle, though deplorable, is scarcely surprising. It can be directly attributed to the unstatesmanlike utterances of Mr. Lumumba during the inauguration ceremonies when he harped on the sufferings endured by the Congolese during their fight for independence. As if not satisfied with that, he is reported to have dwelt on this theme in an address to the soldiers, little realising that he was treading a path which could lead to disaster, especially when regional, tribal and personal rivalries had not died out and he had at his disposal only a half-trained administrative machinery to deal with the situation in case it took an adverse turn. Events of the past few days have borne out this fact. Mr. Lumumba's outbursts have caused a turmoil in the Republic, resulting in not only harassment of Europeans, but also in the killing of not a few Belgians. This will undoubtedly give a mighty handle to the protagonists of the policy of racial discrimination in South Africa and elsewhere on the 'Dark Continent.'

In the circumstances, the only hope for restoring peace in the Republic is through U.N. intervention which Mr. Lumumba has sought. In view of the inexperience of the Congolese in running the administration, the U.N. obviously ought to make available to the Congo Government the services of some military experts and administrators, preferably from the adjoining independent West African countries, till the time the Congolese become experienced enough to manage their affairs. Efforts also need to be made to bring about rapprochement between the Central authority of the Republic and the rebellious Katanga Government.

Census

AN INTERESTING PHENOMENON

THE TWO-DAY conference of the Directors of State Statistical Bureaux that was held in the capital this week once again focussed attention on the magnitude of the task confronting the coming census. It has been stated that emphasis will particularly be laid on the economic data to be collected in view of the large development programmes initiated. While this may be so, the data to be collected under the head "Social" may be equally rewarding. As an instance, the 1951 census data pertaining to higher education provides some interesting results. Below are given two tables of females and males for some States who have received higher education, classified as non-graduates and degree holders. In all the States except the Punjab, one finds that among women, non-graduates preponderate over graduates. In the case of the Punjab, however, the percentage of graduates is nearly double that of non-graduates. What can be the explanation for this curious phenomenon? If it is contended that higher education may be cheaper in the Punjab than elsewhere, why are not men so avid in taking to it? Or does it indicate that the lower and higher middle-class families are more prosperous in the Punjab to afford higher education for their daughters? Or does it mean that the social inhibitions are less acute in that State so that women can take to professional careers more easily than elsewhere? It will be interesting to know what the coming census is to offer here for the social scientist to answer these with greater ease and confidence.

FEMALES

State	Non-Graduates (1)	Diploma and Degree holders (2)

Window on the World

PRIVATE AFFLUENCE AND PUBLIC SQUALOR

By

ODYSSEUS

)MRADE KARL MARX has been discarded as "old hat" by what remains of the orthodox Socialists in West. Their new prophet is Mr. J. K. Galbraith,)se basic thesis is that because a Capitalist society luces for private profit, the individual becomes ever 'e affluent, that there is an inherent inability to cate sufficient resources to national defence, edu- on, scientific development, and welfare services, and t the planned USSR economy, in which the needs of ence and the public services come before those of consumer is rapidly overtaking the complacent West. t week, we argued that if, in fact, the USSR is ving towards affluence, this was a matter for rejoicing ier than for anxiety. The richer that the USSR omes, the more buying and selling that she does rnationally—following the example of the UK in 19th century—the better off we shall all be.

But is it true that the West, in general, and Mr. lbraith's own USA in particular, are starving their)lic services? The June issue of the "Monthly ter" of the First National City Bank of New York ows interesting light on this question. The Bank ws statistically that the trend in the USA has been vards an ever increasing assumption of responsibilities the Federal and state governments, and it would be y to compile similar statistics for the UK, France, l Germany—to cite but three leading Western coun- es.

US statistics of numbers employed in government vice, taxes collected and federal expenditure dis-)ve the allegation that the share of the government in the US economy is shrinking. The US government enjoys an income of one hundred thousand million dollars a year—a bigger spending power than that of any other government on earth. Just look at the figures below.

The table certainly weakens the force of the suggestion that I made here on June 17 that the Americans lack a sufficiently developed social conscience. The question that presents itself instead is: Are they getting value for money for their enormous expenditure?

If the US government lives in public squalor, it is not because the US taxpayer is stingy, since while the US government's cash intake has multiplied twenty times since 1927, US personal disposable income—i.e., what, after paying his federal taxes, the individual citizen has left to meet state taxes and, after that, to spend on himself—is only slightly more than four times more than what he had in 1927.

THE RELUCTANT VOTER

One excuse for increasing the Federal government's aid to states and municipalities is that the electors cannot, or will not, provide the latter with enough money. But might not one reason be that the burden of Federal taxation leads many electors to vote against expensive state and local government schemes involving still higher taxes? In spite of this, however, state and local governments income in the USA has risen to more than five times what it was in 1927.

The poverty-stricken US government has difficulty in meeting its expenses on its one hundred thousand million dollar dole from the American people. The First

U.S. PUBLIC EXPENDITURE

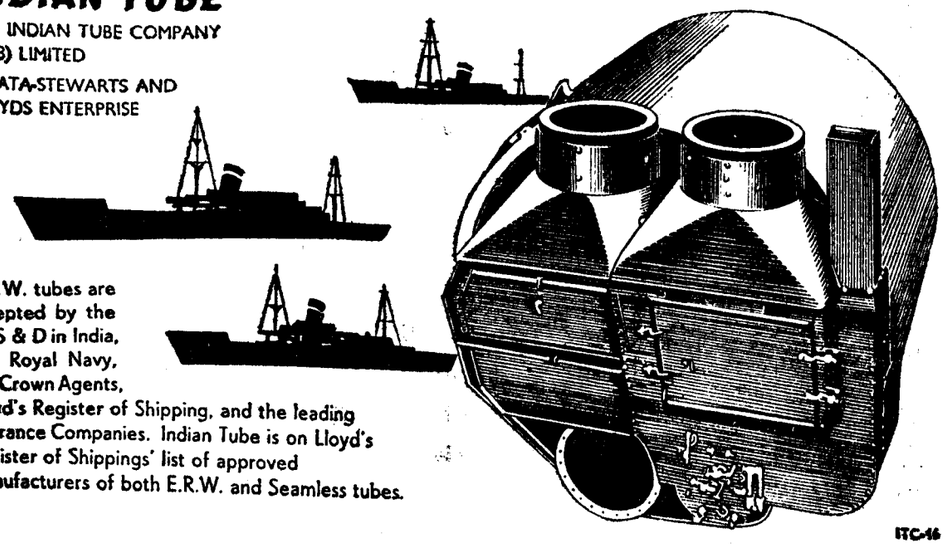
National City Bank explains this by pointing to the bewildering variety of US spending programmes. The purposes for which funds are sought today are far removed from the emergency relief programmes of the 1930's. Encouraged by Federal help and example, the states open their purses wider and wider. The New York State Supreme Court has decided that houses made available to individuals and families with incomes as high as $6,200 to $14,060 a year could legally be built under New York State's housing programme for people with "low incomes". Why, one asks, rubbing one's eyes, should the state subsidise people who have incomes double that of the US national average? Who but those subsidised can pay the bill—with the administrative charges added on to the building costs? How much US man power is wasted collecting taxes and doling out benefits to America's affluent citizens?

If the USA provides the biggest and best example of Welfarism running riot, Britain, France, and other Western States, provide examples proportionate to their respective national incomes. And if it is true, as it often is, in other countries besides the USA that local electors grudge municipalities money for schools, libraries, etc., the reason is the same: with ever rising central government taxes, they seek by whatever means they can to curb fresh schemes of public expenditure involving still higher taxes.

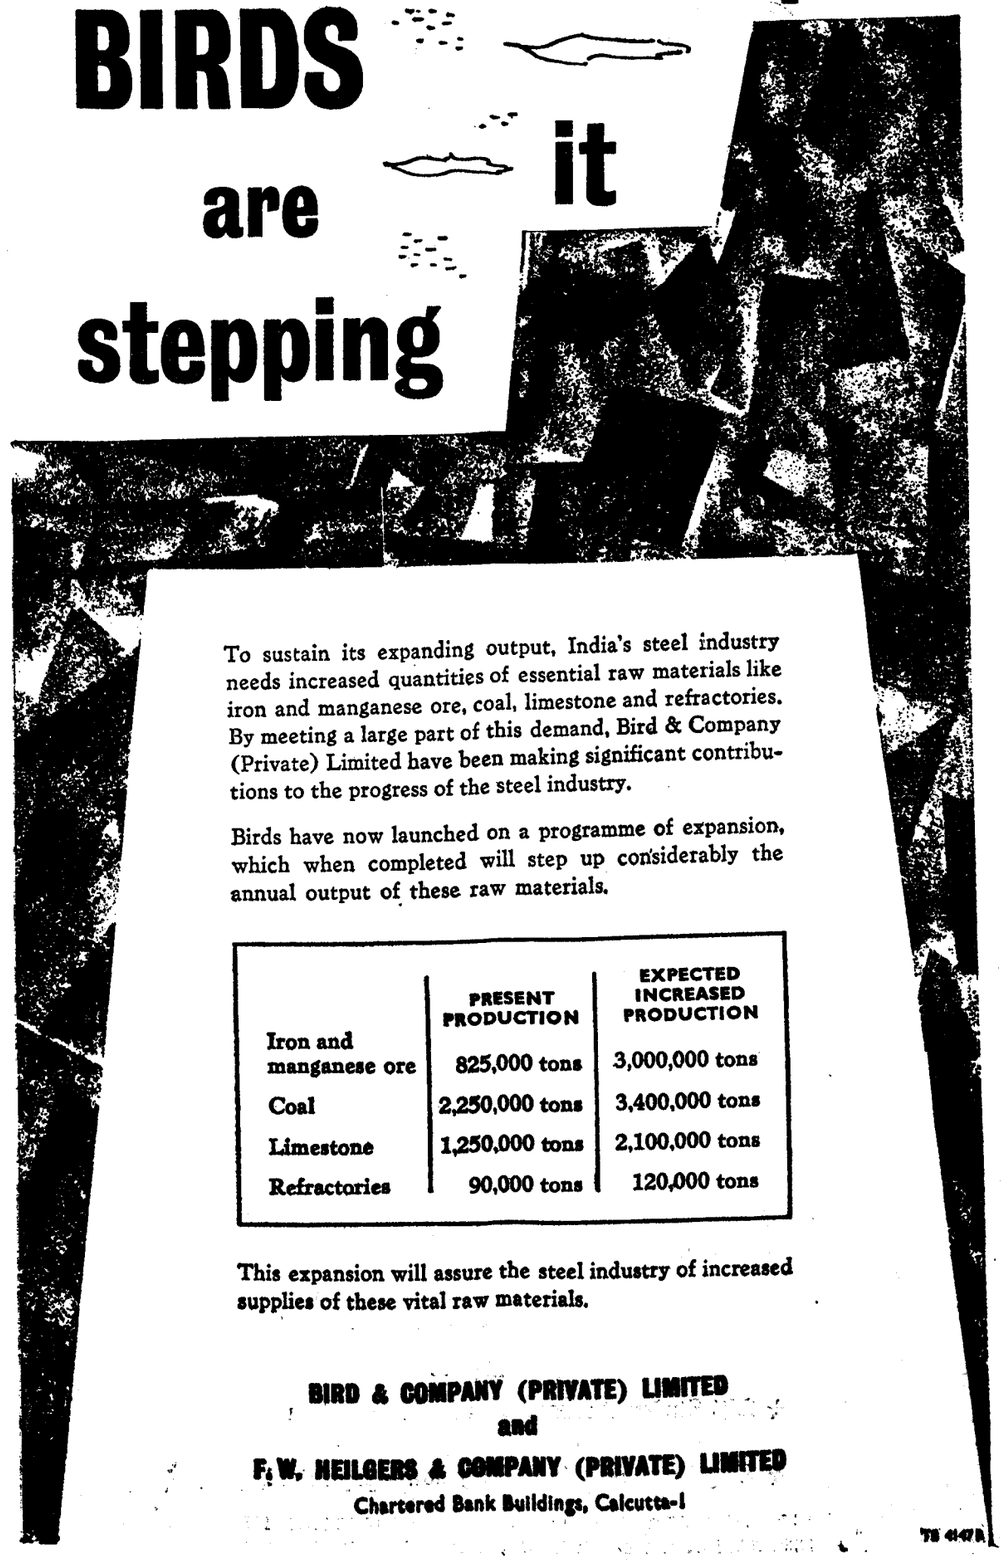


But once we admit any reluctance on the part of citizens to pay taxes, does that not give the whole case away to those who argue that, left to himself, the citizen in a Capitalist state will only spend on himself? The answer is, I submit, that it is not taxation in itself, but excessive and ever increasing taxes which undermine the individual's conscience and turn him from a normally public spirited citizen into a "fiddler" who seizes every opportunity to charge items to an expense account, which undermines his sense of personal responsibility and civic consciousness, and makes him turn to the state to educate his children, pay his doctor's bills, and grant him an old age pension. He thinks that he ought to get something back out of all the Welfarism for which he is paying. That is why governments keep finding it necessary to raise more and bigger subsidies, which in turn, need to be financed by higher taxes—or by inflation.

In short, the danger in today's affluent societies is not that public policy is subordinated to private profit, but that private profit is so plundered that it cannot afford to make its full contribution to society. Public expenditure on education and other services is not subject to the need to show a profit, and is therefore apt to be wasteful and to distort the true priorities in the economies. If democratic Capitalism has an inherent weakness, it is its tendency towards inflation. Inflation disrupts the mechanism of production, reduces productivity, causes production bottle necks, makes employers careless in their use of raw materials, provokes organised workers to hold society up to ransom for higher wages (which only add to the inflation), and robs all those on fixed incomes. Pushed hard enough, as in post-World War I Germany, it ends in bankruptcy and revolution. Now, however inadequate the battle that the Conservatives in the UK, and in other free countries, are putting up against inflation, they are aware of its dangers and they are struggling against it. Mr. R. H. S. Crossman's Galbraithian type of Socialist not only puts up no struggle at all but is unaware of the danger. He would, if returned to power, let loose planned spending programmes which would hasten the day on which the free nations would be united in one totalitarian world.

E.R.W.
MARINE
BOILER
TUBES

Recognised for their outstanding performance E.R.W. steel boiler tubes, manufactured by Indian Tube, are specially designed for protracted use in land, loco and marine boilers. High frequency current ensures efficient welding, and normalising is carried out in controlled atmosphere furnaces to produce a ductile tube with a smooth, blue finish. Rigid quality control from the raw material stage to the finished product guarantees that Indian Tube's E.R.W. tubes will meet all the tests specified by Lloyd's Register of Shipping. E.R.W. tubes are, in every respect, the equivalent of seamless tubes of similar dimensions.



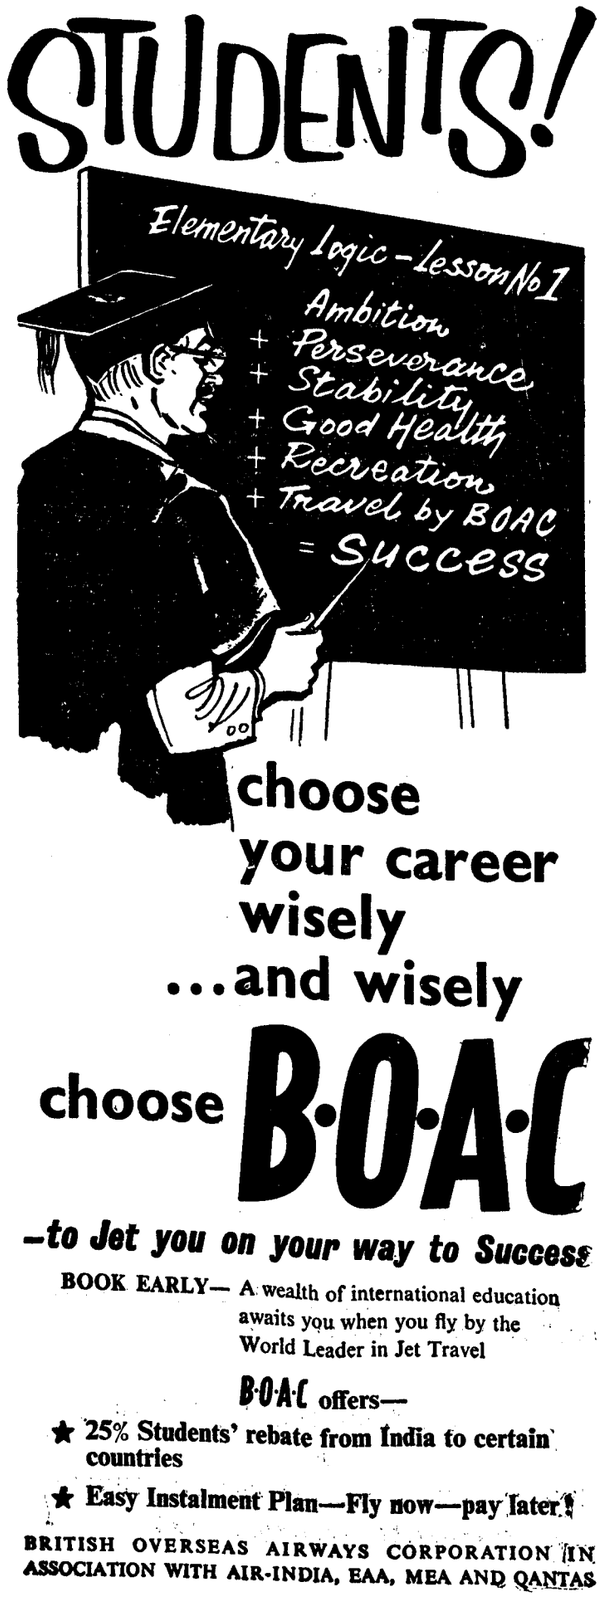
INDIAN TUBE
THE INDIAN TUBE COMPANY (1953) LIMITED
A TATA-STEWARTS AND LLOYDS ENTERPRISE

E.R.W. tubes are accepted by the DGS & D in India, The Royal Navy, the Crown Agents, Lloyd's Register of Shipping, and the leading Insurance Companies. Indian Tube is on Lloyd's Register of Shippings' list of approved manufacturers of both E.R.W. and Seamless tubes.

ITC-16

BIRDS are stepping up it

To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.



Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED INCREASED PRODUCTION
Iron and manganese ore	825,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,400,000 tons
Limestone	1,250,000 tons	2,100,000 tons
Refractories	90,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of these vital raw materials.

RESULTS OF THE GERMAN CREDIT SQUEEZE

From Our Special West European Correspondent

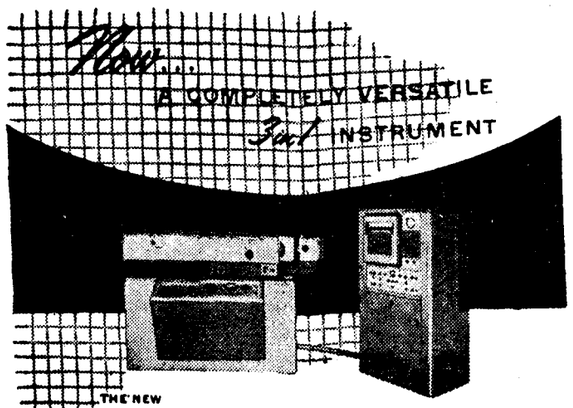
PARIS, July 10.

WHEREAS interest rates were lowered last month in the USA and Canada and credit slightly cheapened in France, the West German central bank (Bundesbank) was obliged to put up its rediscount rate to 5 per cent (having raised it to 4 per cent last October) and its rate for advances against gilt-edged securities to 6 per cent. Clearly this is not another case of competitive bank rate increases such as took place in the West during the winter, (although bank rate also rose in the UK) but an attempt to control the excessive liquidity that is threatening the booming West German economy with inflation. Because the price of money went down in other financial centres just when the Bundesbank increased it in West Germany, the authorities had to take special steps to prevent a flight of capital into the country which would have annulled the effect of the bank rate rise. That is what happened last October: the rise in interest rates brought foreign money flowing into German banks and encouraged West Germans to repatriate funds, so that the net deflationary effect was nil. This time, the authorities not only increased banks' compulsory deposits and lowered the ceiling on paper accepted for re-discount, but ruled that no interest would be paid on foreigners' call deposits and none on new term deposits. Technically, this amounts to a retreat from the convertibility of the mark for non-residents, but a breach of principle was inevitable if the full effect of the rise in the price of money was not to be wiped out by migratory capital.

A firm limitation of liquidities is urgent because, although West German prices are to date surprisingly steady, the economy is strained to the limit—a limit set by manpower resources. The motive force of this wave of expansion is investment; stock accumulation has actually eased off in recent months, and consumption has not yet followed the upward trend of revenues. But it could begin to do so at any moment, for consumers seem to be accumulating their recent gains merely in order to buy durable goods: cars, washing machines, electrical appliances. If the expected rise in consumer outlays begins while investment is still running at its present peak, and while foreign demand for West German exports remains as strong as it is now, inflationary price rises would be inevitable. Since wage increases are general because of the manpower shortage (there are also rises in salaries and pensions), the resulting pressure on the mark could be awkward; hence the vigour of last month's monetary measures.

The stagnation of the labour force (the migration from the East has virtually ceased just when the very small war-time generation reaches adult age) is the central factor in the situation. West German industry has the material capacity to meet all present demand, even taking account of the fact that order books are 30 per cent longer today than this time last year, but it has not the trained men to run the plant. The emphasis is on "trained"; temporary Italian and North African workers will not do. The position would already be critical were it not for the extraordinary rise in productivity in German industry: output per man-hour is 10 per cent better than a year ago. Much current investment is aimed at further rises in productivity, notably by means of automation, and obviously this sort of investment must not be curtailed if West Germany is to learn to live with a stagnant labour force after being accustomed for years to a steady supply of adult, trained workers from the East. Meantime, there is a difficult phase of adjustment to accomplish if inflation is to be avoided.

This phase is commonly called the "end of the German miracle". The miracle is not ended in the sense that the German economy is threatened with contraction; on the contrary, the national product continues to expand. In April, the last month for which there are certain figures, industrial production reached the record index number of 247 (1950 equals 100), which was 11.7 per cent better than April 1959. But it is ended in the sense that the Germans cannot go on doing everything at once: export, invest, reconstruct, house, consume and modernise. Until the Bundesbank put the brakes on last month, West Germany was still trying to do everything at once. The demand for producer goods was at a record level in the first four months of this year, because investment was high. Building of houses and factories was still booming; construction permits issued in the first quarter were 16 per cent above first quarter 1959. Consumption, although not yet fully reflecting the rise in revenues, was growing apace: retail trade volume was 5 per cent above 1959 in January and February, 8 per cent above in March and 13 per cent above in April. Finally, exports flourished in response to strong foreign demand. The Germans used to blame inflation in neighbouring countries for the high level of their exports; now that their neighbours have controlled inflation, they blame the comfortable trade surpluses those neighbours have earned in their commerce with the USA. Whatever the reason, West German exports up to May were 24.3 per cent higher than last year (since prices have been stable, this rise in values is also a rise in volume.) Despite a 28 per cent increase in West German imports, this still left a very large trade surplus, which released further liquidities in the German economy.



This record-breaking on every front cannot continue. One or more of these activities must be slowed down until the total volume of demand is in accord with the size of the labour force, to increase thereafter only as productivity increases. This is emphasised by the Federal Bank in its report for last month, written four weeks after the credit squeeze referred to above. The bank notes that the discriminatory measures taken against foreign deposits have succeeded in diminishing the flow of speculative funds into Germany, but it stresses the fact that monetary tension persists and that the limitation of credit must be pursued. Incidentally, it reveals that the official declaration by Bonn lately that the Deutschmark was not to be revalued was issued because rumours of an upward valuation of the currency were threatening to set off a new movement of funds to West Germany, thus undoing the effects of the credit squeeze.

A question that concerns India in this German monetary discipline is the likely effect on German capital exports. Plainly, in so far as capital movements depend solely on money-market rates—as they have

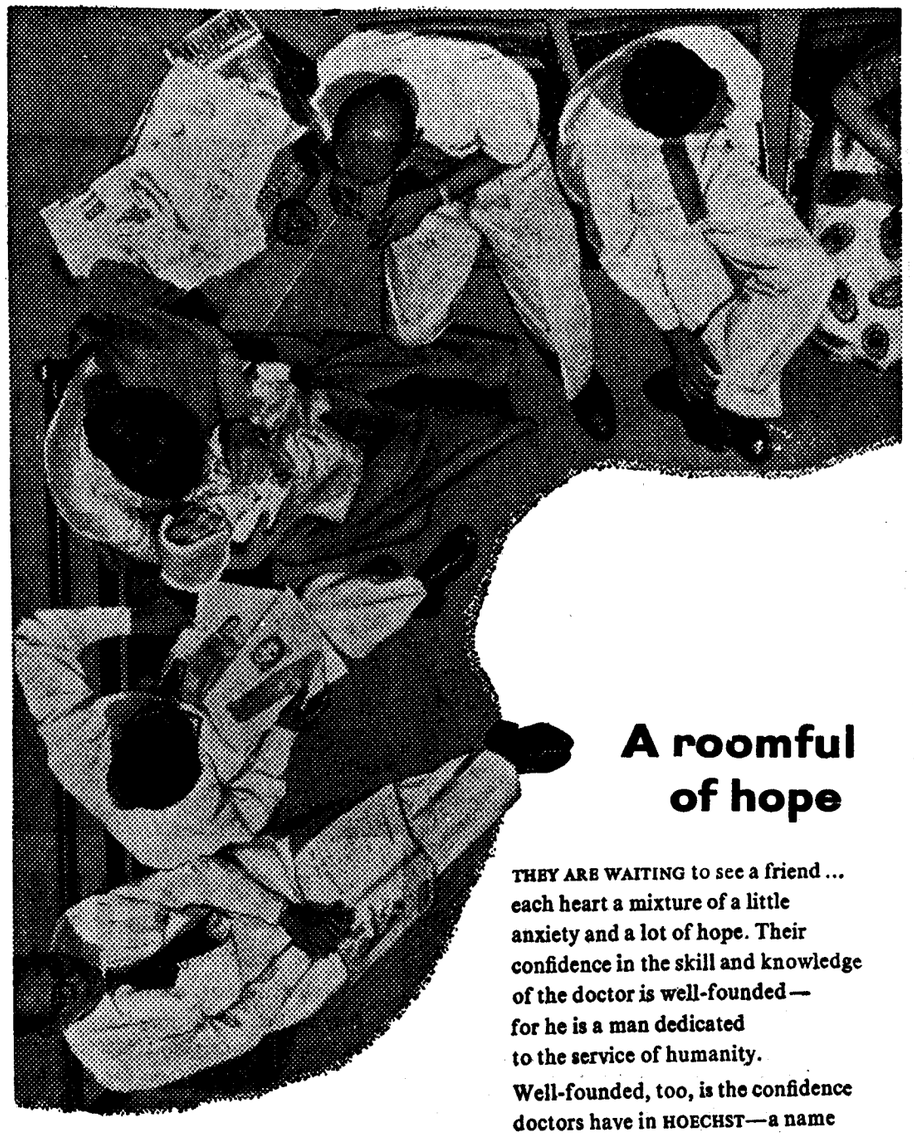
done in the free-enterprise German economy—the higher cost of money will discourage private investment abroad. Fortunately, a larger volume of German capital is becoming available to countries such as India otherwise than through the free money markets. Gradually departing from its rigid free-enterprise ideology, the Federal Government is venturing further into the field of direct lending on public account. On July 6, the West German Treasury Minister announced to the Development Aid Group of the Atlantic nations that his Government had set aside 1,500 million DM (about Rs. 150 crores) for direct aid to developing countries. This sum is in fact smaller than the figure suggested by Dr. Erhard, who is in favour of a special new tax to be imposed on Germans in order to build up a fund for loans to developing countries. Nevertheless, it is a substantial and useful sum to become available just at this moment when credit restriction at home might reduce private investment abroad.

The place where the credit squeeze is likely to have the quickest and most noticeable effect is in housing, for interest charges are a larger part of building costs. Here the Germans have already made a magnificent effort, and although there is still, theoretically, a housing shortage, they could afford to slow down construction for a time. Since 1952, the West Germans have built regularly over half a million new houses or flats each year, not taking account of construction in West Berlin and the Saar. Thus between 1949 and 1959, they completed 5,157,000 new housing units, and more than one-third of their present accommodation is now of recent erection. This restores the accommodation situation of before the war, when there were 3 to 4 persons per lodging; after the war-time destruction there were 5 to 6, but the figure is now back to 3.6. The Housing Ministry claims that there is still a shortage of 1,500,000 housing units and would like to maintain the present rate of building until 1965. On the other hand, the statistics show that housing construction has been becoming more luxurious; four-room lodgings were only 37 per cent of those completed in 1952, but last year they were 67 per cent, and the proportion of houses with baths and central heating has similarly increased. I am not suggesting that West Germans lie too soft o' nights, but in their present strained situation housing is the department of activity most likely to be curtailed, and with least damage.

Going through the statistics for this article I saw another sign of higher German living standards, which I do not mention here as a candidate for austerity restrictions, but simply because it is a little known aspect of the German miracle. Before the war, in the whole of the Reich as it then was, brewers produced 43.6 million hectoliters of beer; last year in the much smaller territory of the Federal Republic they produced 50.4 million hectoliters, and they are increasing output each year by over 8 per cent. Exports have nothing to do with this corner of the German miracle, because the West Germans drink 96 per cent of the beer they make, themselves. This means that last year they drank on an average, men, women and children, 91.5 liters of beer, which I should think is a world record.

THE NEW
ARL QUANTOGRAPH®
SPECTROGRAPH • MONOCHROMATOR • QUANTOMETER®

For the first time a single instrument can provide your laboratory with a variety of spectrochemical techniques. As a photographic instrument, the Quantograph® is the most compact, truly versatile spectrograph available today. As a direct-reading instrument, coupled with a source and recording console, the Quantograph® can be used either as a monochromator, allowing the sequential analysis of any group of elements in any matrix – or as a spectrometer, allowing high-speed parallel analysis of a selected group of elements. In this latter capacity the instrument becomes a compact, optical emission Quantometer®.



The Quantograph® can be furnished as any combination of these three instruments and can be economically expanded later, according to your needs. Why not ask an ARL field engineer for the exact setup that you require.

ARL spectrochemical instruments include three complete lines designed for Optical Emission Analysis, X-ray Fluorescence Analysis, and Raman Spectrum Analysis

Economic Report from the U.S.

NATION'S FARM POPULATION

By GUY SIMS FITCH

WASHINGTON, July 13.

ONE of the great economic revolutions of our time is dramatically underscored in a new report by the US Census Bureau. One of a series of reports on the preliminary results of the 1960 decennial national census, it shows that for the first time in the history of the United States less than 10 per cent of the population—fewer than one person in 10—is counted as living on a farm. This marks the continuation of a trend which over the years has seen a drift of rural inhabitants into cities and of farmers into other lines of work. Yet so pronounced has been the technological progress and the soaring productivity of American agriculture, that this one-tenth of the population can feed and clothe this entire nation of 180 million people with abundance and almost limitless variety—something which nine-tenths of the population could not do nearly so well for a country of a few million people 150 years ago.

This transformation of the United States from a predominantly rural to a predominantly urban—and now suburban—society has been particularly marked in recent years. It has been so marked, in fact, that the Government has been moved to revise its definition of just who and what American farmers are. The new definition has automatically eliminated some four million American "farmers" at one statistical stroke. To qualify as a farmer, a person now must sell at least $50 worth of products—crops or livestock—a year. In the past, he did not have to sell anything commercially just so long as he was a farm dweller. This new and more rigid classification reflects the growing numbers of persons—many of them retired or semi-retired—who technically live on farms. The net result is an official listing of only 4,076,000 farm households in the United States today. Under the old system, the number would have been 5,158,000. A decade ago, the number of American farms totalled more than 5.6 million.

A more detailed analysis of the farm population is now in preparation, but on the basis of the latest estimate of 3.9 individuals per farm household, it would appear that the farm population of the United States now is figured at approximately 16 million persons, less than nine per cent of the total population. Under the old definition of a farm, the number would have come to 20 million persons, or some eleven per cent of the population. But whether one uses the old or the new definition, the figures are clear enough in showing the steady decline that has taken place in the nation's farm population. As recently as 1936, one of every four persons in the United States—25 per cent of the total—was counted as a farm dweller. Population growth, coupled with the steady urbanization of the country, brought this ratio down to 13 per cent by 1955.

A trend of this nature has obvious repercussions not only on the economic life of the country, but on its social and political life as well. As one example, small towns which once catered mainly to meeting the needs of farmers for agricultural supplies and services, may be looking to new and different pursuits. And the political orientation of many of these towns and their surrounding areas, which in the past may have been geared principally to agricultural questions, may also be undergoing a shift. Yet what undoubtedly is the most startling and revealing element in this entire situation is the productivity and efficiency demonstrated by American agriculture. Even under the Government's old farm definition, the farm population of the United States has decreased by one-sixth in the past ten years, yet farm production over the same period has increased by one-fourth. Going back over the past 20 years, the farm population has decreased by one-third, but farm production has increased by more than two-thirds. What of those who have left the farms? The evidence is clear that they have found productive lives in their new homes in the cities. The out-migration from the farms has been especially pronounced in the past two decades, and the total civilian labour force has grown by some 15 million in that period. Yet non-agricultural employment has climbed from 38 million in 1940 to 52 million in 1950 and to 61 million today. It is no exaggeration to say that the United States has maintained a thriving agricultural and industrial complex in the midst of social and economic change.

BOOK REVIEWS

BACKGROUND TO CONSTITUTION

India's Constitution in the Making: By B. N. Rau: Orient Longmans: Price Rs. 25.

MR. B. SHIVA RAO has rendered a distinct public service in publishing this volume of writings on India's Constitution of his distinguished brother, the late Mr. B. N. Rau. The only records on this subject so far available to the public have been the debates of the Constituent Assembly and the published reports of some of its committees. Students of the Constitution and research scholars have felt the handicap of a paucity of documents pertaining to the various stages of constitution-making in India. Beyond the Cabinet Mission's statement of May 16, 1946, laying down the basis for the setting up of a Constituent Assembly for framing independent India's Constitution, authentic information has been lacking on the several steps that were subsequently taken to give effect to that proposal, and on the inter-play of events following the non-participation of the Muslim League in the Constituent Assembly — such as the decision to proceed with the framing of a Constitution for India excluding the areas now included in Pakistan, the patterns and principles to be followed in the drafting of the Constitution, etc. These are all vital matters in which a student of constitutional history would be greatly interested. The present volume is, therefore, particularly welcome as throwing light on these points.

When the British Government announced, in February 1947, their decision to transfer power in India not later than June 1948, the question arose as to how this transference was to be effected and what the prospects were of the final Constitution being ready before the prescribed date. Among the other complicating issues were: if the Muslim League finally decided not to come into the Constituent Assembly, would the Constitution framed by that Assembly be binding upon the "unwilling parts" of the country under the terms of the Cabinet Mission's Plan; how could these "unwilling parts" be determined and what Constitution would they have?

There arose also a number of other points relating to procedure: how, for instance, was provincial co-operation to be ensured in the framing of the Constitution and what should be the mode of voting; was the Constitution to be prepared in two or more stages, with an interval for criticism; how was the Chairman of the Constituent Assembly to be chosen; what was the language to be used in the Assembly; should the sessions of the Assembly be open or 'in camera'? Mr. B. N. Rau dealt with them in a manner that was at once clear and precise, thus greatly simplifying the task of the members of the Assembly.

With regard to the framing of the Constitution, the principles to be embodied therein had to be settled by the Assembly before proceeding with the detailed drafting. In order to ascertain public opinion, Mr. B. N. Rau prepared and issued to all members of the Central and Provincial legislatures a questionnaire on such subjects as the Head of the Indian Union, the type of executive, legislature and judiciary suitable to Indian conditions and the provision to be made relating to the amendments to the Constitution. When the Constituent Assembly set up two committees to report on the main provisions of the Union and Provincial constitutions, Mr B. N. Rau who, as President Rajendra Prasad has said in his foreword, was "the inevitable choice" for the post of Constitutional Adviser, prepared for their consideration memoranda on the Union and Provincial constitutions together with draft clauses. He also produced detailed notes on the scope and content of Union subjects, democratic executives, fundamental rights, second chambers, head of the State, system of representation and other allied matters. These memoranda and notes, apart from their great value, give us an insight into the circumstances under which the principles embodied in our Constitution were formulated.

The vexed problem of linguistic provinces and regional arrangements also received detailed consideration at his hands. He discussed this with reference to similar situations which had arisen in Hungary before World War I and in Ireland under the Government of Ireland Act, 1920, and suggested a plan for adoption in India without the creation of linguistic provinces. Another interesting question that arose early in the proceedings of the Constituent Assembly was whether, in the context of the passage of the Indian Independence Act by British Parliament in July, 1947, India would have the right of secession, and in what respect her position under the Act in this regard differed from that in Canada, Australia, South Africa or Ireland under the Statute of Westminster. There was also the very important question of India's relationship with the Commonwealth in view of India becoming a sovereign independent Republic. These and other matters have been dealt with in separate chapters in a masterly fashion, bringing to bear upon them an approach unique for its impartiality and lucidity.

Special mention must be made of a report included in the volume, submitted by Mr. B. N. Rau to the President of the Constituent Assembly, embodying the the results of his discussions on certaain important features of India's draft Constitution with leading constitutional experts such as the Chief Justice of the U.S. Supreme Court, ex-Chief Justice Hughes, Justice Frankfurter, President Truman, Mr. de Valera, Dr. Jessup and Prof. Dowling. This report reveals the interesting fact that the provision under Art. 249 of the Constitution conferring power on Parliament to legislate on matters in the State list in the national interest was inserted as a result of these discussions. In suggesting this amendment, Mr. B. N. Rau said:

> "Under the draft Indian Constitution, agriculture, co-operative societies and the production, supply and distribution of goods are all exclusively provincial subjects. Suppose, however, that in order to raise the standard of living of the Indian people as a whole, a system of co-operative farming and of price control of agricultural products on a national scale, and not merely in a single province, becomes desirable; in that event, the Centre should not be precluded from legislating in respect of the above subjects. As a safeguard against unwarranted encroachment on the provincial spheres, a resolution by a special majority of the Council of States, which for the most part represents the units of the Federation would be desirable ..... The essence of the matter is that where legislation is called for on a national basis, the Central Legislature should have power to enact it without amending the Constitution."

Among other chapters included in the volume are a note on the President's powers under the Constitution, the text of an address delivered by Mr. B. N. Rau to I.A.S. probationers on the "Parliamentary System of Government in India," a note on "Panchayats as Electoral Colleges" for the purposes of elections to the Central and Provincial legislatures, a paper on the "Citizenship in the Commonwealth of Nations," a note on Bhutan's relationship with India, and an article on the "Constitution of Burma" in the framing of which he played a significant part.

In their statement of May 1946, the Cabinet Mission had visualised the likelihood of a treaty between

the Union Constituent Assembly and the United Kingdom to provide for certain matters arising out of the transfer of power. Mr. B. N. Rau had prepared a draft of an Indo-British treaty envisaging a contingency of this nature, though the proposal for having such a treaty was ultimately given up. The volume under review reproduces the draft of this treaty together with his notes on the different provisions.

Mr. B. Shiva Rao, the editor of this volume, has written an illuminating introduction giving a connected account of the main events starting with the Cabinet Mission's statement and the several efforts made to persuade the Muslim League to co-operate in the work of the Constituent Assembly in the hope of partition being avoided up to the final decision to partition India. It also contains records of certain important discussions of an exploratory nature which took place between Mr. B. N. Rau and Prime Minister Nehru. For students of the Constitution and research scholars, this volume will be, as the Prime Minister pointed out, "invaluable as source material." As Dr. Rajendra Prasad has observed in his foreward: "The volume, so welcome by itself, underlines the urgent need for further research, to bring together the scattered mass of background material and data which influenced and shaped thinking in the Constituent Assembly and has given to our Constitution its present form and content. Such research is necessary, not only for the student of contemporary politics, but for a full understanding by future generations of our Constitution and of the interplay of social forces and attitudes behind the prosaic work of legal draftsmanship."

PEOPLE'S MOVEMENT

Community Development: Two Volumes: Volume I — The Quest: Volume II — A Movement is Born: By S. K. Dey: Publishers — Kitab Mahal, Delhi: Pages 194 each: Price Rs. 7.50 each.

These two volumes give a fairly comprehensive description of the ideas that inspire the man who is presiding over the Community Development programme in India. In the first volume entitled "The Quest", the author records some of the "eternal thoughts of India" which, according to him, constitute the prelude to the movement. He, in fact, attempts to present in a simple and summarized manner 'the national heritage of philosophy". In the second volume entitled "A Movement is Born", it is essentially the Minister of the Community Development, or the first servant of the movement, as he prefers to call himself, that speaks.

A single theme connects the two books, and it is the development of man and the community. Perhaps, it is not possible to agree with whatever Mr. Dey has to say. The way he equates totalitarianism and what he calls capitalist democracy, or his sketchy picture of a new society which would need "endless amendments to the Constitution," are instances of oversimplification. And over-simplification is perhaps what he is attempting for his readers. But to him, society is only the means to an end and that is the development of human personality.

The books, a word of caution may be added, are neither meant for a student of Indian philosophy, nor for research workers interested in evaluation studies quantitatively. They are more fire-side chats with semi-literate village folk. The ease with which the author moves from abstract ideas to down-to-earth issues is attractive. But the writing at times is disconnected and often dogmatic. Some editing might have improved the book from this angle but that might have also affected the spontaneous flow of ideas. It is likely that Mr. Dey deliberately preferred to appear in the books as he is, a dreamer with vision and a worker with a passion for work. Nothing emerges so well out of this book as this image of a man, with unbounded enthusiasm, and a profound passion for sharing experience even when the channels of communication have not been adequately developed for the most profitable reception of his ideas. All in all, he has been markedly successful in telling his story. Controversy on its theme will continue but here at least is Mr. Dey's "Apologia pro Vita Sua"; it should be read with sympathy even if agreement cannot be found.

INDUSTRIAL FINANCE

Industrial Organisation and Industrial Finance: By V. R. Sonalker: Publishers, Sonalkar Publishing Co., 479|7, Ganeshkind, Poona-5: Pages 208: Price Rs. 12.00.

From the annual reports of the several lending institutions connected with industrial finance, it can be seen that there are gaps between loans sanctioned and their utilisation. Allowing a certain margin for the time-lag in installation etc. of machinery, it can be assumed that in many cases, the utilization has to be delayed because the data furnished by the applicant is not adequate. Mr. Sonalker, who has dealt with these procedural matters, in detail, suggests that a solution to the problem seems to be to instil an awareness on the part of the industrialist about what details are required to be furnished and a strengthening of the inspection arrangements with the lending agency. This may no doubt be helpful, but the complex nature of industrial growth necessitates the sponsoring of an agency both on the national and the States' level which will specialise in furnishing technical data and report on the feasibility of the venture or its expansion programme. It would be obviously economical for industrialists to avail of the services of a centralised agency in furnishing all data instead of doing it on their own. It is also important that the financial institutions themselves should develop strong bodies of inspection whose function, besides checking the data and the proposal forwarded by the client, should be to guide and help him in reshaping his proposals, if necessary, in a co-operative spirit, as stressed by Mr. Sonalker.

Lack of full utilisation of the funds with certain institutions, however, should not deter the authorities in facilitating expansion of industrial credit, because the high rate of taxation, inadequate funds for replacements and rehabilitation and rapid technological change, necessitating addition of new plant are bound to make a heavy demand for industrial finance in future. The pattern in vogue in the U.K. may perhaps be of interest, namely, to have a separate financing body for important sections of the industry. This calls for vertical and horizontal expansion of institutions concerned with industrial finance. This book is full of practical suggestions and there is no doubt that it will fulfil a vital need for students of industrial finance by putting together the relevant facts on the subject.

As you look at the prospects of the British economy, you may like to remember that we are 14 years from the end of the second world war, and in 14 years from the end of the first war, we had experienced long-continued mass unemployment, taking us to the trough of the worst depression the world had ever known. There is something more than luck in our change of fortunes, there is also a notable piece of economic clear thinking which broke through to the consciousness of nations in the expositions of John Maynard Keynes. Governments no longer, as they did in the 1920's and 1930's meet depressions by measures which make them worse. As the nation and its individual business units meet the shocks and unexpected changes of the next 25 years, they are likely to need more economic clear thinking. They will not get it unless more men of ability can be persuaded to enter the profession, and unless economics and other social sciences receive some greater but still tiny fraction of the endowments now available to the natural sciences.

(From a lecture to the Royal Society of Arts by Prof. C. F. Carter of the University of Manchester.)

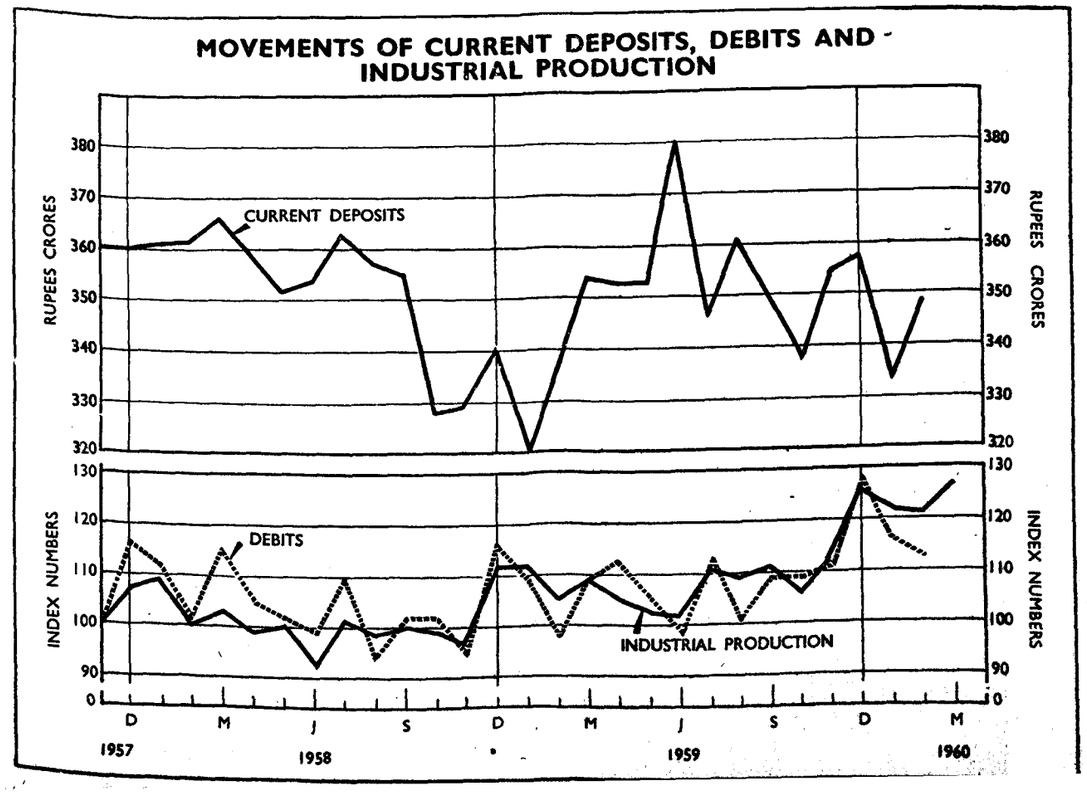
Special Article

THE SEASONAL FLUCTUATIONS IN SCHEDULED BANK DEBITS

FOR some reasons debits to bank accounts never receive the same attention as deposits, though bank debit turnover is a truer measure of the magnitude of demand for funds. For two reasons, it is a better gauge of need for funds than the bank credit outstanding — an indicator of the extent of demand for funds met by the banking system at any point of time. Firstly, the figure for debits includes debits against cash credit and overdraft limits as well as current deposits. Secondly, while change in bank advances between two points of time shows a **net** change in demand for funds for transaction purposes, debit turnover indicates the actual amount of funds used for business transactions. In this Special Article an attempt is made to study the seasonal character of debits to current accounts with the scheduled banks in India. Moreover, their regional character is also studied in order to evaluate the nature and magnitude of regional differentials. Further, an attempt has been made to correlate these debits with the movement of some important economic indicators such as the Index of Industrial Production and current deposits with the banks.

THE SEASONAL PATTERN



The seasonal fluctuations of bank debits exhibit a distinct and stable character. Firstly, three distinct peaks in debit turnover are attained in the periods March-April, July and December-January as shown in the table and graph below. Secondly, instead of March-April — a period when the busy season is at its zenith — the highest among the three peaks is reached in December-January. The possible explanation for this paradox lies in the fact that outstanding bank advances are much higher in early March as compared to early December. Thus, scope for debiting against unutilized approved cash credit and overdraft limits is much larger in December-January period than in March-April. The substantial debit turnover in July may not result in a very encouraging response to the new Government borrowing programme this month.

In order to study the regional differentials in bank debits, all the States for which data is available have been clubbed together to form five zones, viz., Northern Zone, Western Zone, Eastern Zone, Central Zone and Southern Zone. The States comprising each zone are the same as those recommended by the States Reorganisation Commission which fully kept in view the common problems of the States, besides their geographical contiguity. It will be seen from the table that the zonal pattern of debits conform to the All-India pattern. Individually also, in most of the States seasonal movements of debit turn-over are not materially different. This implies that there are some factors which operate uniformly over all regions and tend to wipe off regional differences.

RELATION WITH INDUSTRIAL PRODUCTION

When debits are correlated with the Index of Industrial Production as well as current deposits with the scheduled banks, it turns out that their movement is more in harmony with the former than with the latter. This is clearly brought out in the graph below (current deposits are shown in crores of rupees while industrial production and debits are depicted in index numbers, with November, 1957 as base).

Whereas debits and current deposits fail to move in unison, industrial production and debits not only attain their individual peaks at the same period, but also move in close harmony. This is largely because of the fact that demand for funds, which is reflected by the debits to current accounts, is chiefly determined by the business activity which in turn is closely related to the tempo of industrial production. Though arrival

of agricultural produce in the market also has a bearing on demand for funds, level of industrial production has a definite effect on transactions, particularly on release of stocks by factories to the wholesalers and by the wholesalers to the retailers. Moverover, another reason for lack of consonance between the movement of current deposits and debits is the fact that only two-third of the debits are against current deposits. The remaining one-third are against cash credit and over-draft accounts.

Linking bank debit turnover with some other important economic indicators needs to be further explored. For example, volume of foreign trade has a definite bearing on debits. In fact it has been found that in the period (November, 1957 to February, 1960) for which data for debits are available on a monthly basis, indices of imports and exports have been ruling fairly high in March-April, July and December-January when debits attain their peaks in seasonal fluctuation. But the harmony in movement is not so pronounced as in the case of Index of Industrial Production. In reality, seasonal fluctuations of imports and exports are not stable over time.

THE BUSINESS WORLD

First Reactions to Third Plan Outline

By CROESUS

THE first important reaction to the Draft Outline of the Third Five-Year Plan, released early this week, was available to the public of Bombay, hardly three days after the release, thanks to the Commerce Graduates' Association, which, in conjunction with the Progressive Group and the Democratic Group, has arranged for a series of talk on the Third Plan. The first of these talks was given on the 8th inst. by Dr. V. K. R. V. Rao, Vice-Chancellor of the Delhi University and a leading economist of this country. Views coming from an economist of such eminence as Dr Rao always merit attention, but, since the Ooty Seminar in which he is believed to have played a prominent part, his views have come to be followed more closely than ever, inasmuch as they are supposed, if not to reflect, certainly to influence the policy of the political party in power today considerably. I must say Dr. Rao has lost none of the vigour he is reported to have displayed at Ooty, the enervating monsoon climate of Bombay notwithstanding. On the other hand, he chose to remind his audience that, much as many may be fondly feeling that the Ooty Seminar has been all but liquidated, its spirit still remained and would remain. For, he said, what transpired at Ooty followed a realistic appreciation of what he called "the realities of the Indian economic situation" which the country can afford to ignore only at its peril. Now what are these "economic realities"? They are, according to Dr. Rao, that (i) India is a poor country, (ii) that she has not the resources to pull herself up by her own bootstraps to the level of other advanced countries of the West. (iii) that she cannot afford to be indifferent to the need to raise the standard of living of her millions, especially when they have a vote to exercise and also come to know the results of effective demonstration, and (iv) that India can build herself up economically in a democratic and peaceful way only if she reverts to the policy chalked out for her by the Father of the Nation. It is against this background that we must examine his reactions to the Draft Outline of the Third Plan.

In so far as the pattern is concerned, Dr. Rao said, there was not much to be said, because, broadly, it was as had already been indicated in the First and the Second Plans. As regards the proposed total investment on the Third Plan, however, he was inclined to feel that, in real terms or on the basis of the 1948-49 level of prices, which formed the basis for the First Plan, the total investment of Rs. 10,200 crores was, after all, not so ambitious as it was made out to be. Generally also, he seemed to have little to say about the allocations to power, industry and minerals, and major and medium irrigation, but he was critical of the unduly low priority given to transport and communications, village and small-scale industries, and social services, on the one hand, and of the very large allocation to agriculture, on the other. The learned doctor was convinced that this large allocation to agriculture was perhaps the result of agitation, both within the country and abroad. According to him, agricultural output could be greatly raised without so much outlay, and he was categorical that all that needed to be done fruitfully to explore the available possibilities had not yet been done. He was, therefore, for cutting down the allocation under agriculture and transferring it to village and small-scale industries. It is not clear why, in spite of his feeling so strongly for the low allocation to transport and communications, he did not favour a transfer of the amount saved by a cut in the allocation to agriculture suggested by him to transport and communications. It does not also appear clear if Dr. Rao is fully aware of what the Estimates Cmmmittee has said about the actual performance of village and small-scale industries during the Second Plan period. Whatever may be the theoretical justification for supporting this sector, it seems to me, the planners cannot be blamed if they have made the allocations of investment they have made on the basis of proved performance.

In regard to resources, Dr. Rao mainly touched on "additional taxation, including measures to increase the surpluses of public enterprises" and drew attention to para 23 of Chapter IV ("Resources for the Plan") which reads as under:

"As regards income and corporation taxes, further increases in yields will have to be sought 'mainly' through a tightening of tax administration, watch on expense account of companies and other measures to check tax evasion. Indirect taxes and increases in the prices of products of public enterprises will, it must be recognised, tend to raise prices and costs, but this is part of the calculated sacrifices that have to be made."

The Economist of Ooty Seminar fame interpreted the above to mean that, by and large, there would be no increases in direct taxation and that whatever increases there might be would be only in indirect taxes, such as excise and sales tax. Although to put this interpretation is to read the para without the important adverb "mainly," that is probably the only interpretation that the facts of today permit. It is a separate issue, however, if Dr. Rao wants to raise direct taxes with a different end in view as, for instance, reducing inequalities in income. He was also critical of what the Draft Outline has to say about the price effects of indirect taxes as compared to those of deficit financing, and, in this context, he pertinently recalled the experiences of the country in the wake of the excise duties on cotton textiles imposed in September, 1956.

On prices and price effects, the Delhi Vice-Chancellor dwelt at quite some length and strongly criticised the absence of a detailed and pointed reference to

the policy on prices in the Draft Outline. Although he did not say so in as many words, I got the impression that he meant to suggest that, in having dismissed this important question by saying that the National Development Council was seized of it presently, the planners were guilty of a serious omission, even as they had been, as he said, in regard to the policy on reduction in inequalities of income and employment. While on the question of prices, he stressed the need for taking the public into confidence and educating it about the complexities of the price problem. There was no doubting his suspicion that profits in the private sector have been unconscionable and, therefore, needed to be brought down. While reiterating his Ooty thesis on a ceiling on all incomes, I thought he made a slight modification; whereas, in Ooty, he pleaded for a compulsory ceiling, this time, he was content to advocate a voluntary ceiling on incomes to be imposed by people themselves in the private sector. This poor country cannot afford to have the high incomes that a few persons in India are having today, he declared, but he made another important concession here, when he said that he was not for a ceiling for all times but only a decade, that is till such time that the country became self-sustaining or reached the take-off stage. An important point that apparently escaped Dr. Rao's attention is that, if even the present incentives are removed, the level of savings and investment in the country may not only not be maintained but go down to such a low level as to put off the take-off stage indefinitely.

In passing, Dr. Rao referred to the threatened strike of July 11, 1960, and said that it represented what the country might expect in the absence of a proper and effective price policy. He did not think there was anything unusual in the union leaders insisting on either a rise in the emoluments of the Government employees to neutralise the rise in prices or a stable price level. Prima facie, this is unexceptionable, but many would have appreciated if Dr. Rao had also told the union leaders that they cannot actively set in motion the factors that make for a rise in prices and passively pass on the responsibility to counter it to the Government. This seems to me something like pinching the baby and rocking the craddle at the same time. Just as the baby won't go to sleep with this treatment, the country's problem of rising prices won't be solved so long as no action is taken to prevent factors, such as higher and higher wages all the time without a corresponding or even something approximate to a corresponding rise in productivity, which make for higher prices. If higher wages don't mean higher real incomes, I wonder whether all the trouble taken in securing the higher wages is worth anything. Rather than that, would not everyone and, therefore, the country also, be better off, if all bent their energies to prevent higher wages and the resulting higher prices, instead of demanding stable prices and doing everything to upset that stability? This is a line of thought, to which, I submit our union leaders ought to pay a little attention today.

Business Notes

Financial Corporations

MADHYA PRADESH

THE FINANCIAL year ended March 31, 1960, was a year of better performance for the Madhya Pradesh Financial Corporation in respect of provision of credit than the previous year. The total amount of loans sanctioned during the year under report were of the order of Rs. 32 lakhs as against Rs. 18.75 lakhs in the previous year. In respect of beneficiaries, their number stood at 12 in 1959-60 which is to be compared with the number of 8 concerns the year before. At the end of the past year, 18 applications for assistance to the tune of Rs. 30.23 lakhs were pending. It is gratifying to learn that the number of rejected applications is diminishing. Last year only 6 applications for aid of Rs. 3 lakhs were rejected as against 16 applications for Rs. 33.15 lakhs in the previous year. The principal reason for rejection is the absence of proof of clear and marketable title to the assets offered as security as well as inadequacy of sureties. Last year's progress with higher sanctions shows that industrial concerns in the small sector are beginning to learn the value of tendering in time acceptable documentary proof of title. The net profit, however, was a shade lower at Rs. 4.09 lakhs in 1959-60 than Rs. 4.22 lakhs in 1958-59. The Chairman attributes the lower profit figure to the decline in the rates on call and short-term deposits offered by scheduled banks in pursuance of their inter-bank agreement on deposit rates. This implies that a substantial part of the funds of the Corporation are placed as scheduled bank deposits.

The outlook for accelerated industrial development is bright for Madhya Pradesh. This is the predominant conclusion which arises from the Techno-Economic Survey of the State conducted by the National Council of Applied Economic Research. In the private sector a wide range of industries like paper, superphosphate, coal carbonization, tractor, hardboard, aluminium, solvent extraction, caustic soda, sulphuric acid etc. are likely to be set up over time. The Japanese team of experts in small industries which visited the State had discussions with the Managing Director of the Corporation. Among the suggestions it has made for promoting small scale industries in the State, as in other parts of the country, are channelling of Government loans through the State Financial Corporation and utilisation of the branch offices of the State Bank of India as agencies for the transactions of the Corporation.

MYSORE

THE MYSORE STATE FINANCIAL CORPORATION'S annual report for the year ended March 1960 is its first. Some part of this year was occupied in going through the organisational and procedural preliminaries and as such the time left for attending to regular business was shorter than a year. Even so, it appears from the speech of Mr. H. V. Koujalgi, Chairman of the Corporation, that good business was transacted during the time available. Applications for requests worth Rs. 39.2 lakhs, which were tendered to the State Government under the State Aid to Industries Act were transferred to the Corporation for disposal. In addition, the Corporation received applications independently. The total sanctions came to Rs. 28 lakhs. Out of the sanctions of Rs. 28 lakhs, actual disbursements were made to the tune of Rs. 13 lakhs, which is a creditable performance, considering the short time of business operation and the performance of many other State Financial Corporations. The Corporation is taking sufficient precautions to see that loans are utilised for the purposes for which they are taken and, to this end, a follow-up machinery for supervision is built up. Like the other State Financial Corporations, the Mysore Corporation is also being used as an agency for the implementation of the "Pilot Scheme" introduced by the State Bank of India for the provision of cheap institutional credit to small industrial units for short-term working capital. The scheme is progressing satisfactorily in its liberalised form.

The Corporation's net profit during the year amounted to Rs. 2.45 lakhs out of which Rs. 11,871 were appropriated to the statutory reserve and Rs. 1.13 lakhs were set apart for payment of income-tax. Thus the balance available for dividend distribution was Rs. 1.20 lakhs. In terms of the guaranteed dividend at the rate of 4 per cent, a total sum of Rs. 2.87 lakhs is required for dividend payment. The Corporation has asked the State Government for subvention of the order of Rs. 1.67 lakhs.

One reason which facilitated the good start made by the Mysore Corporation was that the State Government granted exemption to borrowers to the extent of 50 per cent from payment of the stamp duty on mortgaged deeds. This concession was limited to the first year of the Corporation and a request has been made to the State Government to extend it to the current year. The Mysore State has asked the National Council of Applied Economic Research to conduct a survey into the potentialities of the expansion of forest and small-scale industries as well as ports in the State. The Chairman has made the pertinent observation that the part played by the Central and State Governments in stimulating industry in the State can have only a limited effect. By and large industrial expansion in the State must be undertaken, with the necessary risks it involves, by local entrepreneurs. He has assured these entrepreneurs that the Corporation would extend to them financial help within its powers.

Bicycles

SATISFACTORY PERFORMANCE

MR. BISHAMBAR DAS KAPUR in his presidential address at the Annual General Meeting of the Cycle Manufacturers' Association, held recently, outlined the remarkable progress made by the Indian bicycle industry during the last few years. The annual installed capacity which stood at 1.2 lakhs of bicycles in 1951, rose to 10.5 lakhs in 1959 in the organized sector. The number of factories also increased from 2 in 1951 to 21 in 1959. Mr. Manubhai Shah, Union Minister for Industry, who inaugurated the meeting, expressed satisfaction at the perfomance of the industry. He added that production during 1960 too has shown a steady increase so that during five months January to May it was 4.5 lakh bicycles as against 3.8 lakhs during the corresponding five months of 1959. One striking feature of the industry's development is that it is rapidly becoming self-sufficient, so that nearly 97.5 per cent of components are of indigenous production.

The Union Minister for Industry appreciated steps taken by the Association for export promotion on a voluntary basis. He was hopeful that the export drive through the co-operation of the Association would be successful. During 1959, out of the target for export of 10,000 bicycles, about 7,500 were exported to the neighbouring countries in the East as well as in West Asia. It may be added that the finish of Indian cycles was considerably improved and Indian bicycles were comparable in quality to those of a foreign make. The Union Minister pointed out that in a few years the industry may export one lakh bicycles thereby earning more than Rs. 1 crore. The president of the Association, however, pointed out that considerable difficulty was being experienced in respect of non-availability of standard quality of consumable stores such as electroplating salts, nickel anodes, polishing bobs, etc. Since these items are not locally available in adequate quantity, the Government, in the interest of larger exports, should allow the industry to import them on a more liberal basis. If proper attention is paid to these minor inconveniences of the industry, there is no reason why it should not be able to achieve the above mentioned export target as well as the output target of 20 lakh bicycles as proposed in the Draft Outline of the Third Five-Year Plan.

Rubber

RUBY RUBBER'S NEW ISSUES

RUBY RUBBER WORKS LTD. has been carrying on the manufacture of rubber goods and selling the same directly and through various depots. The factory situated at Changanacherry is at present producing cycle tyres and tubes, cycle rubber parts, automobile parts, hose pipes of all varieties, industrial sheetings and all types of moulded goods required for various industries. It has been responsible for supplying goods in large quantities to the Director General, Supplies and Disposals, and to various other departments of the Government of India. In view of the steady rise in the demand for the rubber goods being manufactured by the Company, the Board of Directors have decided to establish and operate a branch factory at Bangalore. The Company has obtained sanction from the Government of India to produce at the Bangalore factory 9 lakhs lbs. of tyre retreading material, like tread rubber, camel back, cushion compound, etc. Land for the factory has already been purchased and the office building is nearing completion.

The cost of the machinery and building for the proposed factory at Bangalore may be anything like Rs. 2 lakhs. To meet this cost and a part of the working capital, the Company has decided to issue 25,000 preference shares, 10 per cent (subject to deduction of tax) of Rs. 10 each, which will raise a sum of Rs. 2.5 lakhs. The details of the notice regarding the prospectus of the Company can be found elsewhere in this issue. Considering the market reputation of the Company, the soundness of the proposal and the steadily rising demand for rubber goods, the share issue is bound to have a good response.

RAW MATERIAL SHORTAGE

RUBBER MANUFACTURERS in the country would appear to be agitated over the present situation of raw rubber. Consequent upon insufficient domestic production and the non-utilisation of their import licences by a number of producers by reason of the world prices being higher than the Indian controlled prices, an acute shortage of raw rubber has developed. It is also said that there is an inclination on the part of the planters to hold up the supplies of raw rubber in anticipation of their getting a higher price following the Tariff Commission's recommendation. This factor has also contributed to the prevailing shortage of raw rubber. The Tariff Commission, it is known has already submitted its report to the Government, but the Government has not yet made known its decision thereon, though it is expected to do so shortly. It is, however, felt — perhaps rightly — that a mere announcement of price will not solve satisfactorily the serious problem of shortage of raw rubber. Not until an adequate supply of the commodity, commensurate with the demand is assured can this situation be remedied. As Mr. L. M. Jamnadas, Chairman of the Indian Rubber Industries' Association said, "high prices and black market in rubber will continue, unless there is an effective distribution control on raw rubber, so

that the licences by the Rubber Board are issued for a quantity which is available in the country. The manufacturers should also import adequate quantities of rubber even at higher prices, so that the industry is assured of adequate stocks of raw rubber in the country at Indian controlled prices." After substantiating his argument with some facts and figures the I.R.I.A. chief asserted that "this is the only solution which in my opinion will solve the present problem of the availability of raw rubber and its unlawful high prices."

Road Transport

KEY ROLE OF AUTOMOBILES

ALTHOUGH THE role of transportation as an initiator of growth has been generally accepted, nothing substantial has been done by the authorities concerned to get over the transport bottleneck. While the railways have been experiencing a very severe strain during the past few years, particularly after the commencement of the Second Five-Year Plan, congestion at ports has become more or less a permanent feature. With the allocation made to Transport and Communications in the draft outline of the Third Plan, this situation is bound to assume serious proportions in the next few years, if alternative modes of transport, especially road transport, are not developed adequately. Despite repeated pleas that road transport should be allowed to grow without any inhibitory conditions being imposed on it, the authorities have been displaying an attitude of lofty indifference. This is most regrettable, to say the least. The experience of our own country, since the beginning of the planning era and the experience of other industrially advanced countries, particularly the U.S.A. and the U.K. suggests that such indifference on the part of the Government towards road transport is most unimaginative. Even a cursory scrutiny of the transport requirements of the country and the available facilities brings out this point clearly. The annual production of the country, expected to go up to 245 million tons at the end of the Second Five-Year Plan, has been estimated to increase further to about 370 million tons by the end of the Third Plan. If we add to this the annual imports of about 20 to 30 million tons, the total tonnage required to be transported would be of the order of 400 million tons. The railways, the waterways and the bullock carts are together expected to carry towards the end of the Third Plan about 220, 20 and 80 million tons, respectively. Leaving a balance of about 80 million tons still to be carried by road transport. It is thus clear that there is more traffic available than what the railways can carry. In the circumstances, one finds it very difficult to understand Government's apathy, if not the Railways' attitude of a rival, towards road transport.

By far the most important impediment in the way of a rapid growth of road transport in India, apart from the Government's irksome and unnecessary fiscal and other regulatory measures, is the inadequate expansion of automobile industry, brought about, among others, by the foreign exchange shortage which has prevented the import of sufficient quantities of components or raw materials for building up complete vehicles. But "the expansion of commercial road transport in the Third Plan will depend," as the draft outline of the Third Plan says, "on the manufacturing capacity of the automobile industry in the country". The problems of the automobile industry should, therefore, be considered more realistically. The pertinent plea of Mr. P. L. Kumar, the new President of the Madras branch of the Indian Roads and Transport Development Association, in the course of his address at the recent annual general meeting of that body, to allot more foreign exchange to the automobile industry so that it may meet its requirements fully is unexceptionable and deserves careful consideration in official quarters.

A DELHI NOTEBOOK

TRACTOR MANUFACTURING PROGRAMME

THE policy of the Government of India in regard to tractor manufacturing programme, it is learnt, has undergone some change recently. Previously only tractors in the range of 12 to 18 Draw Bar HP were considered sufficient for the country's immediate requirements. It is now felt that substantial capacity in the ranges 20 to 30 and 35 to 45 Draw Bar HP will also have to be installed. The Government, it is understood, has invited proposals, both from newcomers and those who already hold licences for manufacturing light tractors, for the production of tractors in these ranges. Newcomers will not be allowed to manufacture light tractors in the range 12 to 18 Draw Bar HP.

There are two industrial units—David Brown/Mahindra and Mahindra and Eichers of West Germany—which at present hold licences to manufacture tractors in the lower range. The former have already applied for a licence for the manufacture of tractors in the uppper ranges. Eichers of West Germany too are expected to follow suit. Two more manufacturers are also said to be interested in making medium and heavy tractors in this country. The application for a licence from one of them—Massey Ferguson Amalgamated (Private) Ltd. (Masseys and Simpsons)—it is reported, is already with the Government of India. The other interested party, Zetors of Czechoslovakia, is expected to submit its proposals shortly.

It is not known whether the Fords would renew their offer to set up a plant to manufacture heavy tractors in India. Some time ago they had proposed to erect a factory the whole cost of which was to be borne by them. They had also suggested that they would arrange for all foreign exchange involved in the import of components from abroad till the time production here became 100 per cent indigenous. This offer was not accepted by the Government of India as it envisaged 100 per cent capital control by the Fords and because they wanted a monopoly in the field.

UNFAIR ON THE PART OF INDIAN SHIPPERS?

The Indian shipping companies, it is alleged, are not playing fair to the country. Under the recent Indo-US food deal, India will be importing 17 million metric tons of food grains which will be unloaded at various ports. As Calcutta is already a congested port, food grains meant to be stored in West Bengal will be unloaded at Visakhapatnam from where this cargo will be carried to Calcutta by Indian ships. The Coastal Shipping Conference rate for carrying food grains cargo between Visakhapatnam and Calcutta is Rs. 20 per ton. But some shippers are said to be demanding as high a rate as Rs. 24 per ton; they claim that the Conference rate is only a paper rate. This increase in freight charges will obviously hit the consumer.

WHOLE-TIME DIRECTORS' INCOME

The Company Law Administration, it is understood, is dealing with two important problems at the moment. One relates to the remuneration and the commission of whole-time directors in private sector companies and the other to public participation in the capital of State enterprises.

Earlier this year, a tentative ceiling of Rs. 1.20 lakhs per annum was fixed for the remuneration and commission of some whole-time directors. But as this was not a Cabinet decision, this ceiling has varied in the recent past. Some cases are now pending before the Company Law Administration where a demand has been made that whole-time directors of some companies should be allowed a total income up to Rs. 7 lakhs per year. Another aspect of this problem is that since the same person can be a whole-time director of two companies, what should be the ceiling on income in such cases? The Government of India, it is expected, will take a decision on this issue in the near future.

In regard to the second issue—public participation in the capital of State enterprises—two proposals are said to be under examination. One suggestion is to offer to the public part of the capital of these enterprises in the form of ordinary shares, the rate of dividend being determined by the progress of the undertaking just as in the private sector. The other proposal envisages issue of preference shares or debentures.

The main question to be solved if the latter proposal finds acceptance is what should be the rate of interest or dividend that is to be allowed on the debentures or preference shares of the State undertakings offered to the public? Since these debentures and preference shares will be directly competing with the floatation of Government loans, the rate of return on them cannot be made more attractive than that of the gilt-edged securities, for in that event Government's borrowing programme will receive a setback. On the other hand, no worthwhile subscriptions may be forthcoming from the public if the debentures and the preference shares of the State enterprises do not yield a return in tune with those of private sector undertakings.

Another point to be considered in this connection is whether public participation in the capital of State enterprises would adversely affect the resources for the private sector. There is a feeling—and this is borne out by the experience of the private sector company floatations in the recent past—that there is a good amount of idle money in the country which can be channelised into safe investment avenues. Public sector can well make use of this.

EFFECT OF PAY COMMISSION'S REPORT

With the finalisation of the Government decisions on the Central Employees Pay Commission's recommendations, a clear picture is now available of the financial burden that will have to be borne by the nation consequent upon the implementation of the Pay Commission's report. The immediate incidence is estimated around Rs. 44 crores per year, while ultimately the burden will be of the order of Rs. 55 crores. The following is a rough break-up of this additional expenditure:

IMMEDIATE INCIDENCE

(Rs. crores)

Interim relief given on Pay Commission's recommendation in 1957	12.00
Immediate effect of recommendations regarding pay, allowances and pension already accepted (excluding Defence personnel)	20.00
Improvement in Family Pension Scheme, Contributory Health Service Scheme, and educational and canteen facilities ,if accepted by Government—Decision has not been taken yet	4.70
Immediate effect of extension of the benefit to Defence Services personnel	7.00
TOTAL	43.70

ULTIMATE EFFECT

Increase in pay and allowances	25.00
Retirement benefits	6.00
Interim relief	12.00
Improved Family Pension Scheme	1.00
Extension of Contributory Health Service Scheme	3.00
Educational and Canteen facilities	0.70
Extension of benefit to Defence Personnel	7.00
TOTAL	54.70

WORLDGRAM

India

Manufacture of Motor Vehicles: Production figures of motor vehicles in the first half of 1960, which have now become available, indicate that the output this year will be about 40 per cent than last year. During January-June 1960, production of motor vehicles totalled 32,247 as compared to 19,025 during the corresponding period last year. A break up of the January-June production figures shows that the rise has been particularly striking in respect of cars, commercial vehicles and scooters. The output of cars at 9.218 was almost double that during the first half of last year. In the case of commercial vehicles, production of January-June 1960 amounted to 12,213, about 50 per cent higher than during the corresponding period last year. Scooter production amounted to 5,838, as against only 2,008 in January-June last year. The production of jeeps and motor cycles also was much higher than during the last year. Half-yearly production of these totalled 3,045 and 1,933 respectively as against 2,628 and 1,363 last year.

*

Manufacture of Gas Cylinders: The Government of India have decided to permit the setting up of units for the manufacture of gas cylinders in the country. The decision has been taken in view of the large-scale expansion in the production of various industrial gases likely in the next few years and the corresponding rise in tne domestic demand of cylinders for bottling and transporting these gases. While the sizes and specifications of the cylinders vary according to the nature of the gases, it has been estimated that by the end of the Third Plan, about a lakh of cylinders would be required. By the end of the Fourth Plan the domestic requirement would be double this number.

In forwarding their proposals for Government approval, intending entrepreneurs have been asked to indicate particularly what arrangements they have made for importing the required capital equipment. The Government would prefer import of capital equipment through the utilisation of the share of the foreign collaborator in the capital structure of the scheme. Import of capital machinery and equipment required for the project under long-term credit arrangements or long-term deferred payments acceptable to Government or through Rupee Payment Arrangements will also be considered. The applicants should also indicate the terms of royalty and other technical fee which involves payment in foreign exchange. Details regarding the manufacturing process, arrangements for securing necessary raw materials etc. should also be furnished. The proposals may be forwarded to the Union Ministry of Commerce and Industry as early as possible before the close of this year.

*

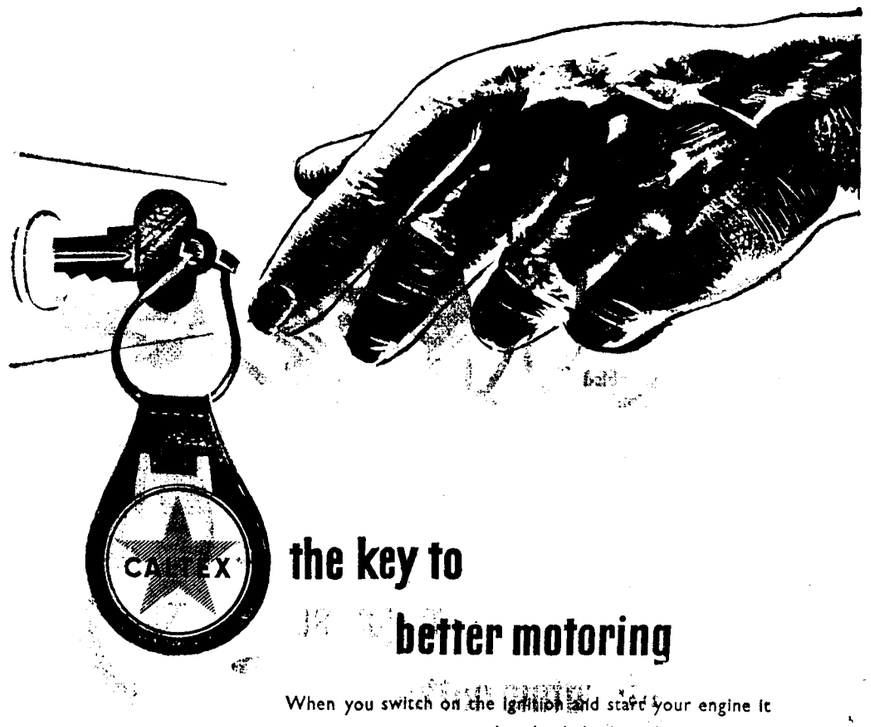
Central Excise Revenue: According to a review of the Central Excise Administration in India published by the Central Board of Revenue, the cost of collecting the Central Board of Revenue of Rs. 312.5 crores in 1958-59 was only 1.6 per cent as against 1.8 per cent in the preceding year. The revenue realised in 1958-59 exceeded the revenue realised during any of the previous years—the gross revenue being 14 per cent higher than the amount realised in the previous year. The increase in the net revenue collection of 1958-59 over the previous year was contributed by almost all excisable commodities except cigars and cheroots, cotton fabrics, vegetable non-essential oils and motor spirit. Cotton fabrics yielded the highest excise revenue in 1958-59, amounting to Rs. 62.09 crores, followed, among others, by sugar which yielded Rs. 59.71 crores, unmanufactured tobacco Rs. 34.47 crores, motor spirit Rs. 33.48 crores, matches Rs. 19.11 crores, cement Rs. 14.1 crores and refined diesel oils and vaporising oils Rs. 11.27 crores. In all these cases except cotton fabrics, revenue was higher than in the previous year. Total gross collections were the highest in Bombay amounting to Rs. 114.91 crores.

*

Fountain Pen Industry: V.J. heads the pioneering, fully mechanised, complete fountain pen manufacturing unit, the Dhiraj Pen Manufacturing Co. Private Ltd., Andheri, Bombay. It is reported, Dhiraj Pen Mfg. Co. Private Ltd. will now soon have Ball Point Pen Refil Plant, Ink Mfg. Plant, Rolled Gold and Gold filling machinery. In general, it may be mentioned about the pen industry that it is planning expansion and more production to meet the increasing demand for exports. Encouragement from the Government is also forthcoming.

*

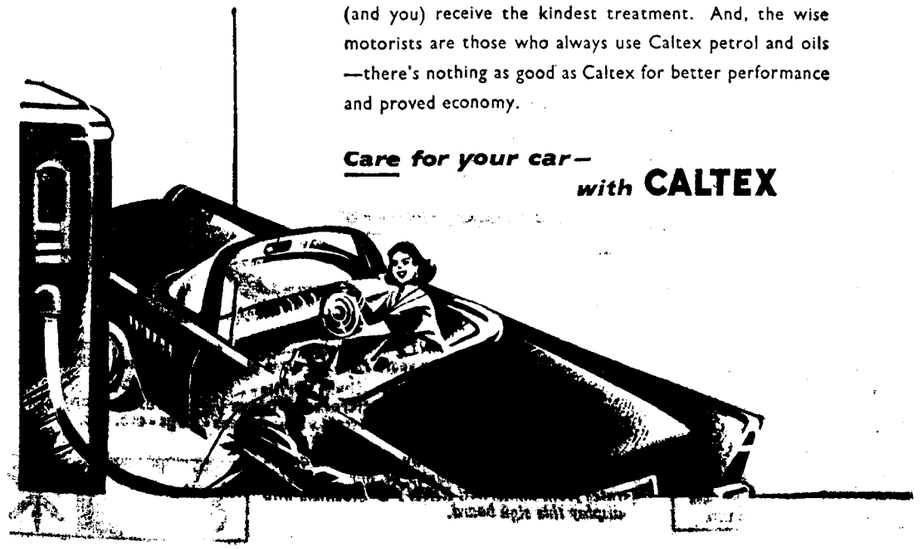
Nangal Project to Start Production This Year: The Nangal Fertiliser Project, which is nearing completion, will go into production towards the end of this year. It is expected by that time electric power from the Bhakra Hydro-electric System will become available in bulk for the project. The fertiliser factories at Rourkela and Neyveli are scheduled to commence production in 1962 and 1963 respectively.



U.S.A.

Legislation Authorising US Participation in IDA: President Eisenhower signed recently new legislation authorising United States participation in the international development association (IDA). The measure signed, authorises a United States subscription of $320,290,000 to IDA over a five year period, with an initial payment of about $74 million and the balance paid during the remaining period. The industrial nations would contribute approximately $763 million of IDA's original capital, with the remaining nations contributing approximately $837 million.

United Kingdom



Steel Production: Steel production in Britain last year totalled 20,200,000 tons, about 5 per cent higher than in 1958, states the annual report of the Iron and Steel Board issued in London recently. From the second quarter onward, output rose as general production increased, first in the consumer goods industries and later in constructional, mechanical and electrical engineering. The Government's stimulus to investment in the public sector resulted, in the later part of 1959, in increased demand from the building and engineering trades; in contrast, demand from mines, railways and shipyards remained depressed. Imports again declined in 1959. Sheet steel accounted for three-quarters of the total. Exports revived markedly in the second half of the year, and in the year as a whole were nearly 10

the key to better motoring

When you switch on the ignition and start your engine it commences to use petrol and oil, both rather expensive items these days. So it's quite important that your car (and you) receive the kindest treatment. And, the wise motorists are those who always use Caltex petrol and oils —there's nothing as good as Caltex for better performance and proved economy.

Care for your car— with CALTEX

Scruffy and Smarty

Scruffy: *"I shall be saddled with a typewriter all my life. And look at my qualifications."*

Smarty: "If only you grumbled less and paid more attention to your clothes."

Scruffy: *"What's wrong with them? I spend a fortune on them."*

Smarty: "Why waste money on bad cloth? Can't you choose your cloth better? BINNY'S, for instance. BINNY'S Quality Control their production. Defects, invisible to the naked eye, that might have crept into the cloth are carefully eliminated at every stage of production. That is why BINNY'S suitings look smart and last long."

BINNY—
a great name in textiles

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings - Khaki Drills - Bleached & Dyed Drills - Anticrease Suitings - Tussores - Union Fabrics - Towels - Silk Sarees - Rugs - etc. etc.

QUALITY FABRICS
BINNY & CO. (MADRAS) LTD.

REMEMBER, you can buy all your requirements of BINNY'S fabrics at our controlled rates from authorised BINNY'S Stockists who display this sigh board.

JWT BY-848

per cent above 1958. The increase was mainly in plate, sections and tinplate.

*

New Teleprinter: A striking feature of the new teleprinter machine which was displayed at the British Exhibition at New York recently in its size is 15" wide, 13" deep and 11" high, the same size as an ordinary typewriter, and the weight is 35 lb., about half that of earlier machines. Speeds of 100 words a minute can be transmitted, but a simple gear change will adapt it to the more commonly used speeds of 60, 66 or 75 words a minute. Attention has been paid to reducing maintenance costs and lubricating intervals have been extended by the use of self-lubricating bearings in the machine. Another major feature is the exceptional versatility. Incorporating numerous technical innovations the machine provides facilities which are of special interest in processing data.

Germany

Oil Output: The oil output of the Federal Republic of Germany has been expanding steadily. It exceeded 5 million tons in 1959, that figure itself representing a 15.1 per cent increase over the production during the previous year. This expansion continues smoothly. Of last year's 99 exploratory drillings, 21 resulted in finding oil or gas. The year before there had been 123 such drillings, but only 19 of them had been successful. The total of metres drilled was 782,000 as against 753,000 the previous year, which reflects some decrease in exploratory and expansion drilling, while production drilling increased from 410,000 to 428,000 metres. Of production drillings, 84 per cent were successful. The rate of growth was relatively stronger in the pre-Alpine country, the latest German Oil region near Munich. Output grew by 85 per cent in this province, mainly due to the satisfactory development of the new fields of Ampfing, Moenchsrot and Lauben. In absolute figures, production is not large here as yet. It reached 113,000 tons as against 61,000 the year before. In other districts of the Alpine foothills oleiferous structures were found, but there is no production yet.

Austria

Consumption of Cotton: On a per capita basis, Austria stands second to last as a consumer of raw cotton among the EFTA countries, International statistical studies (based on yarn production in 1957) record the amounts of cotton processed per capita as 7.9 pounds in Austria, 5.9 in Portugal, 10.1 in Denmark, 10.3 in Norway, 13.4 in Sweden, 14.1 in England and 16.5 in Switzerland. Among EEC countries the corresponding poundages vary from 7.5 in Italy to 12.8 in the Federal Republic of Germany and 15.4 in the Netherlands. In Eastern Europe (including the USSR) the amount averaged 10.6 pounds per head, and in the USA and Canada 21.8 pounds. Yarns produced for export are included in all of the foregoing figures. The statistics provide a measure therefore of the extent of cotton spinning facilities per head rather than of the consumption of cotton by the population.

Ceylon

Employment Opportunities: In order to provide more employment opportunities, the Government of Ceylon has decided to give top priority to development works in next years budget which will be presented in late August. The Ministry of Labour, Industries, and Fisheries have established a committee to investigate the possibilities of setting up vocational training centres and the feasibility of establishing industries, on a co-operative basis, for the manufacture of electrical goods, garments, concrete products, enamel ware and agricultural implements.

Nigeria

Oil Production and Exports: Nigerian oil, the search for which was initiated in 1937 and resumed in 1946 after the interruption caused by World War II, was exported for the first time in 1958. In that year, oil deliveries amounted to approximately 230,000 long tons, worth nearly £1 million. In the first 11 months of 1959, the value of oil exprots was £2.3 million. Present daily production of crude oil is about 15,000 barrels (corresponding to approximately 2,000—2,000 long tons), but it is expected to rise to 30,000 barrels by the end of 1960 and to 50,000 barrels by 1961. If development continues at the present rate, production should rise to ten million tons within the next decade, which would place Nigeria among the first 10 world oil producers, according to the Managing Director of Shell—B.P (Nigeria) Ltd.

Australia

Comprehensive Coal Preparation Plant: In one of the largest collieries in the Southern Hemisphere at Clifton,NSW—a most comprehensive coal preparation plant is used. Built by the Australian Engineering firm of A.E. Goodwin Ltd. at a cost of £A1,000,000, this plant has the capacity to wash and size up to 400 tons of coal per hour. In order to produce a wide variety of coal with a low ash content for various purposes, the plant has three types of separation machines and an array of crushers. Major point of interest, apart from the size of the plant, is the first use in Australia of fine coal washers to clean the fine material.

U.N.

Conference on Problems of Paper Industry: Ways of developing the pulp and paper industry in the countries of Asia and the far East will be considered this autumn, at a United Nation Conference to be held in Tokyo from 17 to 31 October. The Conference will bring together government representatives, industrialists, research specialists, forest experts and equipment manufacturers. It will concentrate on the problem of overcoming obstacles preventing the establishment of economically sound paper mills in the region, where paper consumption is far below the world average. Although forests cover about a fifth of the total land area, recent statistics place average annual per capita consumption at less than one and a half kilogrammes, compared with the world average of 22 kilogrammes. The figures do not include Japan, mainland China, and Oceania. The conference will be sponsored by the United Nations Economic Commission for Asia and the Far East, the UN Bureau of Technical Assistance Operations and the Food and Agriculture Organisation. Tokyo was chosen as the site at the invitation of the Japanese Government.

I.F.C.

First Investment in Argentina: Robert L. Garner, President of the International Finance Corporation (IFC), announced recently the corporation's first commitment to invest in an Argentina enterprise. The Company is Papelera Rio Parana S.A., a pulp and paper enterprise whose share are listed on the Buenos Aires stock exchange. Its plant in Campana, Buenos Aires Province, has been in operation since 1950. IFC's commitment is for US $3 million to help finance the new sulphite mill to produce dissolving pulp for rayon and cellophane manufacture, and bleached sulphite pulp for paper production. The company's own plantations in Entre Rios Province will supply an increasing part of the pulping wood required for a new mill.

NEWS IN BRIEF

INDIAN

The Government of India have assumed control of the India Electric Works Limited, Calcutta, under Section 18A of the Industries (Development and Regulation) Act, and have appointed Mr. S. C. Banerji, Development Officer, Ministry of Commerce and Industry, to take over the management of the undertaking.

*

Production in the Government-owned D.D.T. factories at Delhi and Alwaye reached a record level in May 1960. The production of formulated D.D.T. during 1959-60 amounted to 2,252.50 tonnes, against 693.66 tonnes in the previous year.

*

The Government of India has sanctioned the Khaperkheda thermal station extension scheme, under which a third generating set, having a capacity of 200,000 k.w. will be erected at Khaperkheda in the Vidharbha area of Maharashtra.

*

The first consignment of billets was despatched by railways from the Durgapur steel works recently. The billets were sent to re-rolling mills in East Punjab and West Bengal. Production of billets started on a trial basis at Durgapur on June 17.

*

Soil engineers from India and abroad will participate in a symposium on load bearing capacity of soils scheduled to be held in New Delhi during January 1961.

*

An agreement was signed recently between the Government of India and the United States Technical Co-operation Mission for further aid to India's Malaria Eradication Programme.

*

The Indian Standards Institution has recently prepared draft specifications for toffees and lozenges covering their ingredients, physical characteristics and chemical requirements.

*

Legislation has now been enacted in all States and Union Territories for enforcing the metric system of weights and measures in trade and industry.

*

In 1950-51, there were 1.15 lakhs primary credit societies with a membership of over 51 lakhs, in 1957-58, the number rose to 1.67 lakhs and over 102 lakhs respectively. The actual figures for 1958-59 are not available, but it is estimated that the societies have increased to about 1.75 lakhs and membership to about 120 lakhs.

*

The Government of India has prescribed tariff values for certain types of commercial vehicles in order to eliminate day-to-day disputes that might arise in the determination of value, while making assessment of Central excise duty on such vehicles, as well as for administrative convenience. The tariff values range from Rs. 24,350 to Rs. 53,850.

*

India's, export earnings in the financal year 1959-60 were the highest on record except for 1951-52 which was a boom year for exports because of the Korean war. The value of exports in 1959-60 which amounted to Rs. 641 crores, was higher by about Rs. 83 crores or 15 per cent over the previous year.

FOREIGN

Yugoslav exports to Brazil in 1959 were increased by 100 per cent as compared to 1958 and 200 per cent as compared to 1957. Although this increase is considerable in absolute figures it does not reach the 1955-56 level of exports.

*

Austrian imports in the first quarter of 1960 rose 32 per cent as against the same period of 1959, to reach 8,621 million schillings. Exports, on the other hand, increased 19 per cent to 6,694 million schillings.

*

U.S. production of cars and trucks in the week ended June 24 is estimated by Ward's Automative Agency at 175,815 units, compared with 173,574 revised in the previous week and 164,608 units in the same week last year.

*

Concordia, of West Germany, which has been exploring for oil in North Syria for four years, has struck oil in the second well in the Suwaidiyah district in the Gezira province at a depth of 1,630 metres, the Industry Minister in the Syrian region of the U.A.R. has announced.

*

Progress in reducing or eliminating exchange restrictions was substantial and made on a wide front during 1959 and the first four months of 1960, according to the eleventh annual report on exchange restrictions published by the International Monetary Fund.

*

Close co-operation in the Congo between the Rockefeller group and the Societe General de Belgique was announced recently. The Rockefeller transaction will take the form of allotment of shares in the Societe Generale Congo holding company, Commerce et l' Industries (C. C. C. I.).

*

Northern Ireland has five new factories ready for occupation and five more nearing completion. The five nearing completion were in the vicinity of Belfast. One of these was capable of division into three small productive units.

*

Bromine production in Israel is expected to be more than double in the coming year. Whereas annual output was 2,000 tons in 1959, it is expected to reach 4,500 tons by March, 1961. Israel is the third largest exporter of bromine in the world, and the bromine concentrations in the Dead Sea are the richest to be found anywhere.

*

Japan has agreed in principle to supply Iran with a $30 million credit in the form of a deferred payment limit to finance imports of Japanese goods, the Japanese Ministry of Finance announced recently.

*

Nepal will depend on foreign aid for 88 per cent of her development Budget in the coming year. General Subarna Shamsher told the House of Representatives recently. Nepal's Budget showed a deficit of Rs. 17.5 million.

*

West Germany imported more than 7,000 tractors from Britain in the first five months of this year, according to the West German economic news agency VWD. This was 68 per cent more than in the corresponding period of 1959.

That is what is meant by the appointment of INDMAG Private Ltd. as sole representatives in India for DEMAG well-known for their mechanical equipment for the mining industry steelworks, blast furnaces rolling mill plants and foundries electro-metallurgical and electro-chemical plants cranes and loading installations

Product performance counts...

For the speedy production of machine parts to close size tolerance with good surface finishes, Grinding Wheels of high quality, efficiency and precision are essential. The picture above shows a Hardened Steel Machine Shaft being precision ground by Carborundum Universal Grinding Wheel on a Jones & Shipman Universal Cylindrical Grinder.

CARBORUNDUM UNIVERSAL manufacture a wide variety of Grinding Wheels and other Abrasive products of the highest quality for every industry. These products are helping top firms to make better products, to cut costs and to speed production. Whatever the Grinding operation, Bonded Abrasives by CARBORUNDUM UNIVERSAL cannot be beaten for high quality and economy.

We are now in a position to manufacture and supply large wheels upto 36 inches in diameter, thus offering our customers a complete range of Vitrified and Resinoid Grinding Wheels.

BONDED ABRASIVES: Grinding Wheels, Segments, Rubbing Bricks, Sticks, Sharpening Stones, Valve Grinding Compound, etc.

COMMODITY NEWS AND NOTES

INTERNATIONAL TIN AGREEMENT

The text of a new five-year international tin agreement which enters into force on July 1, 1961, has been negotiated by the representatives of 35 producer and consumer countries and territories. It was approved at the close of the United Nations Tin Conference which had been meeting, mostly in private session, since May 23. The new agreement, which requires minimum of 15 ratifications, would replace the present agreement which has worked satisfactorily since it came into effect for a five year period on July 1, 1956. The operational mechanism (buffer stock export control) remains in the new agreement the same as in the present agreement and the International Tin Council, a 19-nation inter-governmental organisation outside the United Nations with head-quarters in London, will continue to administer the provisions of the agreements and operate the buffer stocks.

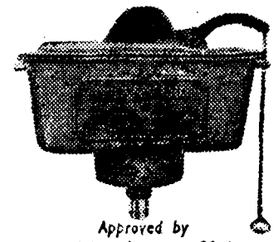
Certain changes are also proposed in the fixing of the control periods, that is the periods which the Tin Council fixes from time to time to determine the quantities of tin which may be exported. The new agreement provides for most decisions of the International Tin Council to be taken by simple "distributed" majority, that is majority of the votes cast by the producing countries and a majority of the votes of the consuming countries, counted separately. The present agreement provides generally for voting by simple majority.

PAKISTAN IMPOSES TEA CONTROL

The Pakistan Government promulgated recently an ordinance imposing strict control on the price movement and distribution of tea. All forms of forward speculative transactions in tea at the internal auctions have been banned. The announcement added that any forward transactions outstanding immediately before promulgation of the ordinance should be considered void. The ordinance empowers the Controller-General of prices to maintain separate registers for the registration of bidders, importers, wholesalers and retailers of tea. It authorizes him to fix maximum prices of tea at all stages and lays down that no person shall be allowed to sell or resell tea in excess of the fixed prices.

WOOL CONSUMPTION IN U.K.

In May the rate of consumption of wool and the rate of production of wool tops was slightly lower in U.K. than in April, according to the Wool Industry Bureau. At 45.12 million lbs the rate of total consumption of wool during May (allowing for a larger number of working days) was 2 per cent lower than in April, and 6 per cent lower than a year ago. The figure for the rate of topmaking consumption in May was also 2 per cent lower than in April.



SUGAR DEVELOPMENT IN GHANA

The Ghana Industrial Development Corporation and the Agricultural Development Corporation have jointly embarked on £3½ million sugar plantation scheme at Kemenda, in the Western Region, according to Barclays Bank, D.C.O. A representative of a Dutch company of sugar consultants has said that eight varieties of sugar cane had been planted for experimental purposes. He anticipated that when the new factory was in production it would produce about 20,000 tons a year. The current rate of sugar consumption in Ghana is about 40,000 tons a year.

PROTECTION OF METALS FROM CORROSION

Studies conducted at the Central Electro-Chemical Research Institute, Karaikudi, have shown that two inexpensive organic chemicals, 'meta-dinitrobenzene' and 'beta-naphthol' afford adequate protection to metals against corrosion if they are kept enveloped by the vapour of these chemicals. This newly-developed method of corrosion prevention, named vapour phase inhibition, eliminates the need for applying grease or oil on the metal surface. The chemicals so modify the atmosphere that corrosion ceases to take place.

YOU CAN ALWAYS TRUST WHEN IT'S Shanks

Approved by the Malaria Institute of India

SHANKS single-pull "NOMOS" Cisterns are mosquito-proof and work on the valveless syphon principle. They last long and outdo other varieties in working efficiency.

COMPANY AFFAIRS

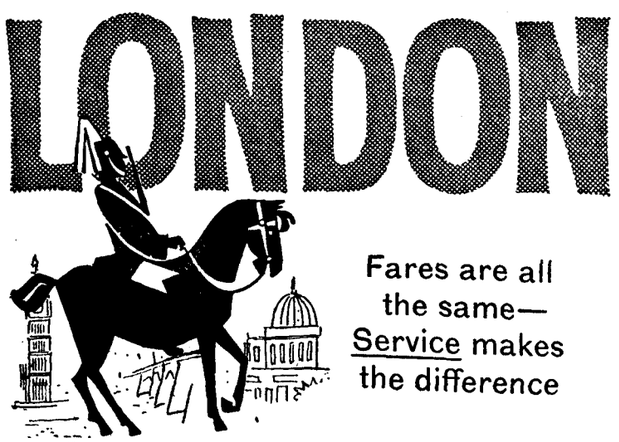
NIZAM SUGAR MAINTAINS DIVIDENDS

The Directors of the Nizam Sugar Factory Ltd. have decided to pay dividends on ordinary shares for the year to June 30, 1959, at the rate of Rs. 5.40 per share of Rs. 25 each subject to deduction of tax which will absorb a sum of Rs. 23.85 lakhs. This compares quite favourably with the amount of Rs. 19.87 lakhs paid during the previous year. In view of the fact that the conditions prevailing during the current season were quite unfavourable, the Directors took timely action and necessary steps to retrieve the position to the maximum extent so that the Company has reported a gross profit of Rs. 56.97 lakhs and a net profit of Rs. 24.67 lakhs after making provisions for depreciation, bonus to employees, taxation, etc.

Draught conditions in the area caused severe damage to the sugarcane crop. Rains set in late and there was not enough water in the Nizam Sagar Canal for irrigation so that both the yield and the quality of cane suffered. During the year 4.43 lakh tons of cane was crushed and 44,336 tons of sugar produced, giving a recovery of 10 per cent. During the previous year, 5.25 lakh tons of cane were crushed and 55,987 tons of sugar were produced, with a recovery of 10.66 per cent. The lower recovery was due to less sucrose content in the cane on account of the draught. The factory farms produced 1,87,513 tons at an average of 35.95 tons per acre; corresponding figures for the previous year were 2,44,803 tons and 46.94 tons per acre respectively.

An amount of Rs. 26,96,509 has been provided for the 'extra cane price' in this year's Profit and Loss Account as compared to Rs. 25,50,499 of the previous year, on the basis of the Profit-sharing Formula of the Government of India adopted by the Company for the year 1957-58. The 'X' Factor of the Formula for 1958-59 has not yet been announced by the Government of India. The auditors have pointed out that 'X' Factor is under revision by the Tariff Commission, and liability may extend to Rs. 9 lakhs. They have objected that no provision has been made towards this liability. The Directors have, however, explained that the liability cannot be determined unless the 'X' Factor in the revised formula is officially published by the Government of India.

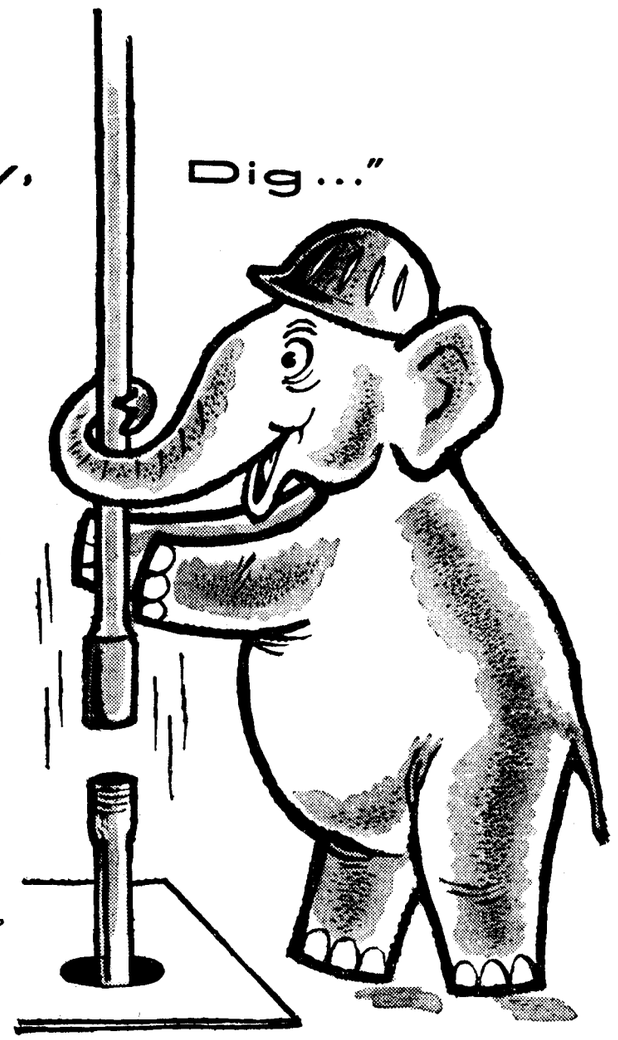
The Managing Agents of the Company, Industries (I.F.) Department, Government of Andhra Pradesh, have informed the Company that they will be relinquishing the Managing Agency of the Company with effect from August 15, 1960.



BENGAL PAPER: HIGHER SALES

The Bengal Paper Mills Co. Ltd. closed down partially for one and a half months due to a major breakdown in the turbine which resulted in a loss of production. The results for the year to December 31, 1959, nevertheless, are better than those for the previous year. Production during the year was 15,927 tons against 14,826 tons during 1958. In line with production the sales too have registered a significant increase at Rs. 3.08 crores as against Rs. 2.66 crores during the previous year. In a way, it shows the capacity of the Company to withstand such minor crises.

Net profit for the year to December 31, 1959, comes to Rs. 25.73 lakhs which is over 50 per cent higher than the previous year. The Board of Directors paid an interim dividend of Rs. 6.3 lakhs (Rs. 5.4 lakhs on ordinary shares) on January 11, 1960, and have now recommended the payment of Rs. 9 lakhs as final dividend (20 per cent) on ordinary shares.



As a result of the recommendations of the Tariff Commission accepted by the Central Governmennt in December 1959, with effect from January 1, 1960, the selling price of paper was substantially reduced. This will affect the profit of the industry in the coming years. A memorandum on revision of prices has been submitted to the Government by the Paper Manufacturers' Association on behalf of the industry. It is expected that the Company will be able to meet the effects of the Tariff Commission during the current year by modernisation and more production.

The Company has formulated a scheme to expand and modernise its existing plant for increasing the daily production capacity to 100 tons. The scheme has already been approved by the Central Government and the necessary expansion licence has also been obtained. Steps are being taken to finalise orders for plant and machinery.

Memoirs of an Elephant—2

"Dig Boy, Dig..."

As I told you before—in the 1880s I made a great discovery by stepping into a pool of oil. Soon, these human beings started drilling holes into the earth to try and find more of this precious fluid.

Very hardworking men they were. All the time, day and night, they used to be at this drilling job. When the first well was being drilled I used to see one Willie Leova Lake stand at the well site and shout "Dig Boy, Dig"—I think he was trying to encourage the workmen. "Dig Boy, Dig" became such a familiar phrase in the locality, that I believe the place eventually came to be known as "Digboi".

Work on this first oil well was started, I remember, in 1889. When they completed it they had taken 14 months—and they had drilled to a depth of 662 feet. Today, things have changed completely. The AOC can drill a 10,000-foot well in less than 10 days. When I asked one of the AOC men how they are able to do this he tells me it is "experience", "know-how", "technical development" and a few other things.

One thing more. I think the AOC took the clue from the words "Dig Boy, Dig" because they have been digging ever since. Today, about 1000 wells have been drilled by them in this area—all, they say, to unearth that precious fluid oil for the Nation's use.

Rubynagar Post, Changanacherry, Kerala State.

OBJECTS, HISTORY & BUSINESS

The Company was incorporated on 7th September, 1955, to acquire and take over the lands, buildings, machinery, equipments etc. of the Concern known as "Ruby Rubber Works" situated at Changanacherry with its goodwill and the various sales depots situated throughout India. The Company obtained its Certificate of Commencement of Business on 9th January, 1956 and acquired the above-mentioned "Ruby Rubber Works" and has been carrying on the business of manufacturers of rubber goods and selling the same directly and through various depots. The Factory is at present producing cycle tyres and tubes, tyre retreading materials, hose pipes of all varieties (plain, delivery, armoured suction pressure, pneumatic, tool hoses etc.) industrial sheetings, car materials, automobile parts, cycle rubber parts, all varieties of moulded goods required for various industries, rice polishers, ebonite goods, all varieties of extruded goods etc. Ruby's extruded quality tread rubber (tyre retreading compound) enjoys a wide Director, General Supplies and Disposal, Delhi, and is supplying various rubber products to various Government Departments, Central as well as States, various Railways, semi-Government Firms and automobile and cycle manufacturers throughout India.

EXPANSION

With a view to more efficiently serve the large volume of customers in the States of Mysore and Andhra and in view of the steady rise in the demand for the rubber goods being manufactured by the Company, the Board of Directors of the Company have decided to establish and operate a branch factory at Bangalore. Sanction has been received from the Government of India as per Licence No. L/30-4/N-23/60 of 24th February, 1960, authorising the Company to produce at the Bangalore Factory 9,00,000 lbs. of tyre retreading materials like tread rubber, camel back, cushion compound etc. The requisite land for the Bangalore Factory measuring 8 acres has been purchased for Rs. 20,000 and is situated on the Bangalore-Bannerghatta Road about 1½ miles outside the city boundary. Construction of office premises costing about Rs. 25,000 is nearing completion and the factory buildings and godowns to be constructed are estimated to cost about Rs. 75,000. For the requisite machinery, viz., two mixing mills, two extruders, one small size three Bowl Calendar Machine and one Solution Mill orders have already been placed with Fabricators in India and together with other machinery under fabrication in the Company's Workshop at Changanacherry, the total cost of machinery for the Bangalore Factory is estimated to cost round about Rs. 75,000.

OBJECTS OF THE ISSUE

To meet the cost of the machinery, buildings and land referred to above estimated to cost in the aggregate to Rs. 2,00,000 and to provide for a portion of the working capital required to the extent of Rs. 50,000 the present issue is made. For further working capital estimated at Rs. 1,00,000 the same could be covered by borrowing facilities from Commercial Banks.

After the Storm

THE strike of Central Government employees was called off dramatically at midnight last Saturday. It had lasted exactly five days and, it is believed to have cost the country Rs. 25 crores in loss of production and additional expenditure. It has cost about 3,000 Central Government employees their jobs, and it has involved some hundreds of cases in law courts, and some thousands in departmental enquiries. Everyone has lost and no one has gained unless it be in terms of prestige—that great intangible which, in the Indian Union, as elsewhere in the East, is a great maker of destiny. Certainly, the stature of the Congress organisation, and in particular of the Central Government, has reached an all-time peak. By contrast, the Praja Socialist and the Communist Parties have sunk even lower in public estimation, and thus the monolithic character of the Indian State has been further emphasized. Whether this is a good or a bad thing the future will need to decide in terms of the coming Congress leadership. For the moment the country will heave a sigh of relief that there is a strong Government even if it is monolithic.

Much of the discussion following the strike has been concerned with problems of discipline. Practically everyone who is responsible has expressed the hope that the will of the Government exhibited during the period of strike will carry over and maintain discipline in the execution of the projects of the Plans. The anxiety to be

lenient can easily be overdone. The idea that those who went on strike can be forgiven by a mere act of regret is bad both for the strikers and for the country, since it will breed irresponsibility in that the consequences of highly anti-national action will not be brought home to those who err. On the whole, the Government's proposals, which seek to maintain action against all those guilty of violence and against those who have taken a leading part in the strike but to review cases where moderately good excuses can be found for absence, are fairly sound. But one can only wonder how the leaders of the strike, particularly Mr. S. M. Joshi, Mr. Peter Alvares and Mr. Nath Pai, have got off so lightly. It is obviously here that leniency has been misdirected. These leaders, whose vanity and irresponsibility were huge, should never have been allowed to escape without prosecution.

For the future, the country needs to consider not merely the need for strong Government, but the need for wisdom in the execution of wage policies. For this purpose, the long debate, which is now arising, as to the progress towards a "needs" norm and holding the price line, or in the alternative an assurance in regard to the order of uncompensated rises needs to be driven to a rapid conclusion. It is probable bad public relations was an important factor in the timing of the strike, but bad public relations cannot bear the brunt of the blame. Surely, grievances spring from much deeper causes than the absence of goodwill.

All in all, a pretty collection of problems lies before the Government and the country as a result of the experience of the last unhappy week. But at least the problems are not new; they have risen to the surface by the force of events which, rightly understood and rightly treated, might be deemed to contain winds of a good augury. The country has now come face to face with itself and with challenges on its character and energy which the future will soon exhibit in full measure. If we can carry over first to a full year, and then to five, the power of decision and organisation exhibited in the last week, there is no limit to the hurdles which cannot, in time, be overcome.

The Concentration of Power in Trade Unions

THE Prime Minister was not indulging in rhetoric when he told the Congress Parliamentary Party meeting on the eve of the strike that it was a "civilian rebellion" and "if it succeeds, the Government goes." It was a measure of the great concentration of power in the trade unions, which, in the name of fighting for a trade union objective, posed a challenge to the civilian authority established by constitutional means. This is a portent whose warning cannot be missed and unless a searching analysis is made of this whole phenomenon and adequate steps taken to forestall it, there is no knowing when it will again rear its ugly head, thereby setting at nought not only the development programmes of this country, but the very future of the democratic framework and its ordered progress.

It is a fallacy to believe that the ultimate weapon of the trade union official is the strike. The ultimate weapon is coercion. Acts of sabotage, which fortunately were few and far between during the strike, were its most dangerous symptoms. Nobody would deny that in the imperfect labour market of today, labour can assert itself against the employer only with collective bargaining made possible by the trade unions. The essence of collective bargaining lies in the resolution of conflicting views into a workable compromise, with the power of the two parties in relative balance. What are the permissible limits of union action and how should workers' organisations develop so that collective bargaining may acquire its legitimate place in industrial relations? These are issues to be squarely faced.

According to the 1951 census, organised industrial labour constitutes only about 6 million of the total working force of about 142 million. Of the 6 million, the effective subscription-paying membership of trade unions is just between 2 and 2½ million. In spite of the fact that it is numerically small, the trade union movement has grown into powerful dimensions because of three principal reasons. Firstly, it is concentrated in cities and urban areas and, therefore, can be mobilised more easily to take on an aggressive form. Secondly, it is concentrated in the key sectors of the economy like transport and industry and thirdly, its growth was throughout taken care of by political parties who conceived it as part of an essential element for buttressing their own evolution. Thus it has come about that political parties proclaiming different ideologies have parcelled out among themselves the organised labour force.

This last aspect is particularly important because it is germane to a consideration of the power of the trade unions. The central fact of trade union organisation today in this country is the supply of outside leadership which takes two different forms to make it effective. One is the executive offices in the unions are occupied by men who do not belong to it. The other is the influence the political parties wield directly at the level of policy-making in the unions. The result is often issues relating to industrial relations are not considered on merits but on considerations of political strategy for feathering the nests of political parties. It also happens that union officials sometimes pursue their own political interests that may even be opposed to the interests of the members. Last week's strike was proof of this tendency and it was patent that the Joint Council of Action did not advance the well-being of those whom it was supposed to represent by the course it adopted.

It has been a fashionable slogan to proclaim the concentration of economic power in management as an endemic danger in the capitalist system. In his book on American Capitalism written as early as 1952, Prof. J. K. Galbraith examined this problem and pointed out how in the United States, with the widespread disappearance of competition, new restraints on private power appeared in what he termed "countervailing power". The operation of the countervailing power has kept managerial excesses in check. But class consciousness has meant that labour is much less divided amongst itself and there are no countervailing checks in trade unionism as now practised.

In India, emphasis has generally been on the concentration of power in management and the need for breaking it. Government's intervention by way of statutory regulations governing industrial labour has all along been pervaded by a sense of 'social justice'. Nobody imagined the potential mischief of the concentration of power in irresponsible trade unions. This was revealed in all its nakedness during the last strike. It is also doubtful whether the present outside leadership of trade unions will restrain intemperate unions. The concentration of power can be minimised only if the outside leadership is curbed by statutory control on union excesses. Then only will the present angry and militant mood of the trade unions lead to a moderation of purpose which will engender the feeling that it is better to negotiate and get something than to strike and lose all.

Oil Prices

OIL has captured the spotlight again and this is not in the least surprising because, for a considerable time past the problem of procuring oil supplies in the face of stringent foreign exchange shortages has been engaging the anxious attention of the Government. Expansion of petroleum production capacity at home is limited partly by the results of the exploration activity undertaken in the recent past. The Draft Outline of the Third Plan has placed installed capacity in March 1966, including that of the two refineries in the public sector at Nunmati and Barauni, at 8 million tons in terms of crude oil. Production has been estimated at 7.4 million tons in terms of petroleum products. As against this, the Ministry of Mines and Oil has placed overall consumption requirements at the end of the Third Plan at 14 million tons per annum. This would mean that imports will rise progressively, reaching the level of 6.6 million tons in the final year. Any estimate of foreign exchange involved in it is a pure academic exercise because whether the target will be pitched at 14 million tons or below is uncertain. This is the meaning of the Planning Commission's silence in the Draft Outline on this crucial point.

At the present time there is one happy circumstance which indicates that India's problem may be eased partially. There is an excess of oil supplies leading to a glut in the world markets. The major limiting factor on the capacity of many importing countries, like India, to buy from abroad all the requirements is their foreign exchange position. To them the pressure of excess supply is a boon; it has brought about a decline in the prices of both crude and petroleum products. Burmah-Shell has announced a reduction of 7.5 per cent in the cost of the crude which it will import for its refinery and Stanvac soon after declared that it had similarly negotiated a reduction in the cost of its crude oil which works marginally higher than Burmah-Shell's. No changes in ex-refinery prices to the distributing companies are contemplated. The refineries are prepared to pass on the total saving to the Government as has been the case with the reductions in their retail prices. Caltex will necessarily soon follow suit. While it is undoubtedly true that the world perspective has influenced this reduction, the timing of its announcement is not unconnected with another important development.

This is the conclusion of an agreement between the Governments of the USSR and India for the purchase by the latter of oil products from the former. The full terms of the agreement are not yet known, but during the next 3½ years India will receive supplies of petroleum products to the tune of 1.5 million tons. The prices of these products are stated to be considerably below global prices and furthermore payment is to be made in non-convertible rupees. The gain on these two counts is impressive.

There is an offer from the USSR of supply of crude oil to India. But it does not form any part of the agreement signed recently. There are some, but perhaps exaggerated, advantages in Russian crude on the scores of price and mode of payment. But there are also inconveniences of possible unbalanced trade and, further, the political uncertainties involved should not be ignored. Since the capacity of the two projected refineries at Nunmati and Barauni will be fully occupied by indigenous crude, it will be open to us to import Russian crude only if there is a prior understanding with the three foreign refineries that they will use it in part substitution of their conventional imports from the Middle East. Such an understanding would go to relieve the strain on India's balance of payments. Until the present moment, the oil companies have been unwilling to process Russian crude.

This, however, is a complex question into which various considerations enter. And in any event its political overtones are sufficiently powerful. The refineries appear to have explained their position in the long-term perspective. Their commitments over time with the supplying areas in the Middle East are based on firm minimum prices. These can be varied only with the consent of the ruling authorities who are understandably averse to forgoing their assured royalties—the mainstay of their external payments.

Quite apart from these factors, that there will be a continuity of supplies of crude from the USSR need not necessarily be taken for granted. Out of its total exports last year of about 24 million tons of crude and processed products, two-thirds entered the non-Communist world accounting for a share of a mere 3 per cent or less in its export market. This fractional share is unlikely to increase rapidly in the near future. India could not tie herself permanently to a source of crude which is at least 1,000 miles further away than the Persian Gulf and the supply line for which has to pass through highly vulnerable strategic areas such as the Dardanelles and the Suez Canal. In addition, it is unlikely that India would wish to antagonize the Arab States by depriving them of this increasingly important outlet for their crude.

The agreements with the three refineries stipulate that, without prejudice to their right to fix the prices of their products in parity with or below prices of imported products, any proposed changes in prices should be made after consultation with the Government of India. This stipulation has provided ample scope for mutual understanding based on a spirit of accommodation. The Government of India has succeeded in persuading the distributing companies to reduce the prices of their products. Mr. K. D. Malaviya has stated that the prices of Russian petroleum products are highly competitive, but how high has been naturally not disclosed while consultation on price changes with the refineries is in sight. It would be wisdom, in view of the large political implications involved, to keep both sources of supply in competition on terms which would bring a gain to the national interest. This implies, without doubt, the honouring of agreements already signed.

A DELHI DIARY

TO ERR IS HUMAN

I DEALT last week with erring astrologers. I have decided this week to comment on a genus of the same species, though they are often called social scientists, and carry remarkable prestige in our modern pseudo-scientific society. They predict "correct" courses of action, without consulting the stars, though they are often starry-eyed. A great debate has been going on in Delhi as to whether or not the "proper" course after the strike is to be firm and unrelenting or to be gentle and mild. Mr. Asoka Mehta, who has been very much in evidence in the week, moving from one Minister to another (and surrounded not a little by anxious and admiring Pressmen) has been unfolding the doctrine that the best way in which to heal the wounds of war is to be generous. This is sound practice at the end of a killing war. But I wonder whether the quality of mercy is not strained when it is applied indiscriminately in peace time.

SOCIAL SCIENTISTS

Social scientists of a different category argue—in my own opinion, rightly—that whereas in peace, following war, the "prevailing" philosophy changes and mercy is appropriate to peace as killing was to war, this cannot apply to internal revolt. If the bulwarks of a society are maintained by the Rule of Law—in the piping times of peace—anything which undermines the respect for law cannot be extolled. The "prevailing" philosophy does not change because of a strike; for strikes are, or should be, consistent with the Rule of Law. I think it should be driven into the minds of all law breakers that, irrespective of the nature of the constitutional authority that has enacted a Law, obedience to the law is a continuous duty. The analogy to generosity, when the ruling tenets of a society have changed after war, is a totally misleading one. In this particular case the Government of India, after much deliberation, has decided on categories, and I was sorely tempted to expect something like our Industrial Policy Resolution when I was told of the three categories which had been chosen. (Happily these categories do not have the same chilly note that appears in Industrial Policy Resolutions). But why must we continue to talk about categories instead of classes? Perhaps in the Socialist Pattern of Society it is unprogressive to have classes whereas it is progressive—very progressive—to have categories. It is also very progressive to be wishy-washy after a strike; for to err is human, to forgive Divine. There is much room here for that other brand of the social scientist called the social psychologist who thinks we must avoid group tyranny. I can make nothing of it all; can you?

IT WAS A GLORIOUS VICTORY

Consider, for example, Mr. Nath Pai's cryptic remark on emergence from prison that this strike constituted "an epic fight" and such epic fights cannot be in vain. The epic quality cannot, of course, be measured by duration or endurance; but will the aforesaid social scientists agree that Mr. Nath Pai must be speaking with his tongue in his cheek? One comment was to the effect that there was plenty of cheek!

The strike as a whole has been a good instrument of diagnosis of what is wrong with the political anatomy of the nation; perhaps a stethoscope applied to its heart. The beat is sound enough and one of the great surprises has been the remarkable performance of the Indian Territorial Army which many of us have been inclined not to take too seriously. Over the whole of India, except West Bengal, the Territorial Army stayed as firm as a rock; in the conflict of loyalties between trade unionism and the national discipline, national discipline seems to have come out very well particularly on the Railways. In West Bengal where the defection figure cannot be deemed very high, it was still equal to that over the whole of the rest of India. It is clear that something drastic has to be done in regard to defections in the Territorial Army and I hope my friends who are advocating meek and mild policies would not suggest that even in cases of failure of military discipline, the blind eye — or to use a better metaphor, the Nelson touch — is to be applied. Nothing would be more disastrous than to suggest that defections in the Territorial Army are similar to lapses from civilian duties. It is sincerely to be hoped that the military authorities will under no circumstances take a lenient view of the few failures that there have been.

Not much below the display of national discipline in the Territorial Army comes the extraordinary cohesion of public sentiment, and the willingness of a large number of people to face even personal danger in order to deliver mail or to carry out various duties which might be construed as strike breaking. The case of the millionaire in Jodhpur who delivered mail in a magnificent (Cadillac?) car, is, of course, an exception. Much the greater portion of the solid work was done by people who might easily have incurred personal risks to themselves or to members of their families. Last, but perhaps not least, one must record that the sensitive instrument of the stock exchanges refused from the very first day to be depressed, and, I am told, that it continues to bull now without understanding exactly why it is in this remarkably cheerful mood. It is conceivable that, since the Government has had a taste of the medicine it so often gives to the private sector, private industrialists are feeling that, for some time, Mr. Gulzari Lal Nanda need not weigh heavily on their minds. Thus has a new personal equation entered into the heart of the Indian business. But has Mr. Nanda also had a change of heart?

MRS. SIRIMAVO BANDARANAIKE

I have just time joyfully to record, with a genuine display of romantic gallantry, the arrival of the first woman Prime Minister of the world, Mrs. Sirimavo Bandaranaike. She was sworn in as the Prime Minister of Ceylon at 1-30 p.m. on Thursday amidst rejoicings which, I suppose, are both tributes to her husband and to womanhood in general. Perhaps her arrival as Prime Minister will be reckoned a spiritual return of Mr. Solomon Bandaranaike, who thus obtains continuity of residence in Rosmead Place, the residence of the Prime Ministers of Ceylon. I see that the Praja Socialist Party in India, much in need of encouragement at this time, has hailed her victory as its own. Thus is a new world abroad being called in to redress the balance at home. Only it is not Mr. Canning that is calling in the new world to redress the balance of the old, but Mr. Asoka Mehta. Has the balance been truly redressed?

MIRANDA HOUSE

In Delhi too, the fair sex has had its due share of attention. There is tension, and not for the first time, in Miranda House, a girls' college in Delhi University. On Tuesday, 200 girls seem to have broken the lock of the gate which was duly designed to restrict their movements to a Coffee House which exists in the neighbourhood. Constables — of both sexes — have been seen both inside and outside the College gates. Meanwhile, behind closed doors what are described as "agitated" discussions are proceeding, and it is greatly to be feared that attention to academic work will descend as much as the other agitation rises: the breakeven point has been passed, and a breaking point is soon to be reached. But here, happily, one can recall that, except possibly for some gallant gentlemen in the Coffee House who seem to exhibit remote control over inmates of Miranda House, the hand of man has been conspicuous by its absence!

ARGUS

THE WEEK'S NOTES

Second Plan

TARGETS AND ACHIEVEMENTS

THE PROGRESS REPORT of the Second Five-Year Plan, issued covering the first three years of the Plan is a revealing document. It shows that Rs. 2,519 crores or over 55 per cent of the revised outlay of Rs. 4,500 crores have been spent during the first three years. The following table gives the breakdown of the expenditure under different heads and also the targeted outlay.

(Rs. crores)

Head of Development	Revised Total Outlay	Expenditure 1956-59	Percentage of (2) to (1)
I. Agriculture and Community Development	510.0	264.0	51.76
II. Irrigation & Power ..	820.0	488.2	59.54
III. Industry & Mining ..	950.0	588.1	61.91
IV. Transport & Communications	1,340.0	788.1	58.81
V. Social Services ..	810.0	338.3	41.77
VI. Miscellaneous	70.0	52.3	74.71
TOTAL	4,500.0	2,519.0	55.98

It can be seen from here that in the sector of industry and mining, a relatively higher rate of progress of expenditure was recorded. This was mainly due to the successful implementation of the several of the Central sector projects. Next comes Irrigation and Power to be followed by Transport and Communications and Agriculture and Community Development.

What is, however, of interest is the progress made in the fulfilment of the physical targets. Except in Agriculture, one finds that the achievements in the other sectors during the three years have been very substantial. In foodgrains, as against the additional target of 15 million tons for the Plan period, achievement was only of the order of 7.7 million tons in 1958-59, which comes to just about 50 per cent. On the other hand, in irrigation, against the target of 10.2 million tons of irrigation potential to be created, achievement was nearly 7.2 million tons or about 75 per cent. In industry, by the end of 1958-59 a total expenditure of Rs. 455 crores had been incurred, being about two-thirds of the revised Plan outlay and it is estimated that at the end of the Plan period, the entire Plan outlay will be fulfilled. In the private sector, the progress of industry had been phenomenal and the table given in the Report indicating the targets and achievements shows that in many items, the targets have been very nearly reached. Similar is the story in respect of social services like education and health. For example, under education, it is shown, that nearly 91 per cent of the target in respect of schooling facilities for children of the age group 6—11 has been reached. Based on these figures, it is difficult to resist the conclusion that even with a reduced outlay, most of the targets in the Second Plan will be reached if the progress made in the first three years are any indication. This is indeed heartening just when the Draft of the Third Plan has been published.

U.S. Presidency

MR. KENNEDY'S NOMINATION

THE DEMOCRATIC CONVENTION, which met at Los Angeles, last week has finally put the seal on speculations as to who is to be its nominee for the US Presidency. The young and handsome Senator Kennedy (43) (who according to reports looks much younger) has won by a sizeable margin over all the three other contestants, Senator Lyndon Johnson, Mr. Adlai Stevenson and Senator Stuart Symington. Apart from his youth, a major handicap of Mr. Kennedy was his religion. In 1928, Governor Al Smith was mainly defeated because of his being a Roman Catholic, but much water had evidently flowed even since and the very fact that Mr. Kennedy had turned his supposed handicap to his advantage shows how religion has ceased to be a decisive factor in American politics. Mr. Kennedy had shown how vigorous and hard a campaigner he is and by getting Senator Lyndon Johnson nominated for the Vice-Presidency, he has assured himself of the Southern votes, which might have wavered by the strong stand taken by the Party on the question of civil rights. It is taken for granted that the nominee of the Republicans at the Convention to be held next week will be Vice-President Nixon and the battle will be joined between the two for the Presidental elections to be held in November.

It is a hazardous game to indulge in speculations as to who will be in the White House next year since an election is always a tricky affair. Whether a Democrat or a Republican, the future President has to continue the programme of assistance to the underdeveloped countries that has now been accepted as US policy and of which India is a significant recipient. But with Mr. Kennedy, India stands in a special category. His interest in this country dates back to the year 1951 when he visited India as part of an Asian tour. Along with Mr. Cooper, he was responsible for the proposal made for a long-term financing of the Development Loan Fund, possibly on a five-year basis. He is also committed to a larger Fund and without the stipulation of 'tying' aid to spending in the United States. More important, he was one of those who as early as in 1954, understood the Indian policy of neutralism and never shared the feeling then prevalent that neutralism is something "mysterious or wrong." In his acceptance speech as the Democratic nominee, Mr. Kennedy said that he would demand sacrifices by the American people to repair what he termed the failures of President Eisenhower's administration. Leaving the electioneering element here, it is obvious that the Eisenhower era has now ended. Lacking the great prestige of Mr. Eisenhower (who in fact gained it outside politics) it is obvious that whether it is Mr. Nixon or Mr. Kennedy, the new President has to work from scratch and give respect to this office by asserting its importance on a more fundamental basis.

Congo

CONFUSING PICTURE

NEWS FROM the Congo, which emerged into independence only since the beginning of this month, is disquieting and not a little confusing. For instance, there is a report of a mysterious Polish ship carrying ammu-

nition heading for the Republic. At the same time, in response to the call from Prime Minister Lumumba, the U.N. has taken prompt action in sending military aid to restore law and order in the State. In the meantime, Mr Lumumba has served an ultimatum that if the Belgian troops, flown in to the Republic from Brussels, evidently to protect the lives and property of the Belgians and other Europeans, were not withdrawn immediately, he would seek the assistance of the Soviet Union.

The situation has been made more intriguing by the fact that the Belgian Foreign Minister has promised economic aid to Katanga which has declared itself independent. It is not known how the Belgian Government could have taken this decision even though it has accorded recognition to the Lumumba Government as the lawful authority in the Republic. This is also not in conformity with the intention of the Belgian Government to bring about a rapprochement between Leopoldville and Katanga. Read with the reports of the capture of the Commander-in-Chief of the Republic's armed forces by the Katanga Government, the arrival of the former Belgian Governor of Katanga at Elizabethville and the order of Katanga's Chief of the General Staff for mobilising all Belgian males between the ages of 20 and 45 to assist the authorities in maintaining the economic life of the province lend weight to the charge of Mr. Lumumba that it is Belgium that is at the bottom of the Republic's troubles. The utterances of the Prime Minister at the inauguration ceremonies of the Republic and later at the soldiers' rally were no doubt unstatesmanlike and served to cause the soldiers' mutiny, which was the starting point of its present troubles, but the recent provocative acts of the Belgian Government have only added fuel to the fire. A heavy responsibility now devolves on the U.N. force. The U.N. Secretary-General has wisely decided to keep the Big Powers out of the Congo affairs. A little more restraint on the part of Mr. Lumumba and expeditious action by the U.N. force would help to free the Republic from the hold of the Belgian troops and restore the status quo ante.

Punjab

THE UNITY FORMULA

ANY SOLUTION of the language tangle of the strategic State of Punjab, short of its vivisection, is welcome. The "unity formula" of the Punjab Chief Minister, Mr. Pratap Singh Kairon, deserves particular notice in this respect for it strikes a golden mean between the contending views expressed on the issue by the representatives of the two principal communities inhabiting the State. Though it has much in common with the Sachar formula, which has been the basis of the language policy of the State Government for the past eight years, it is a definite improvement over the latter in two respects. As such it should go a long way in restoring harmonious relations between the Sikhs and the Hindus, which have been under strain during the recent past due to the Akali Dal's demand for a separate Punjabi-speaking State.

Unlike the Sachar formula, the "unity formula" does not give even a limited option to the students in Government schools to get education in the medium of their choice. The medium of instruction at the primary stage is to be the regional language, Punjabi in Gurumukhi script in the Punjabi-speaking zone henceforth to be known as the eastern zone, and Hindi in Devanagri script in the Hindi-speaking region to be renamed as the western zone. Provision, however, will be made for the teaching of Punjabi in the western zone and Hindi in the eastern zone at the primary stage as the second language if desired by the students. From the sixth standard both Hindi and Punjabi will be taught simultaneously in both the regions. Those seeking employment in the State services will have to achieve proficiency both in Hindi and Punjabi upto the matriculation standard. This arrangement should satisfy the Akali Dal as it meets its basic demand for compulsory teaching of Punjabi in Gurumukhi script in the Punjabi-speaking areas of the State. Hindus can derive comfort from the fact that the new formula excludes from its operation all private institutions which will be allowed to impart education in the medium of their choice. This formula thus, obviously deserves a trial.

The Punjab Governor, in the meantime, has done well in promulgating an ordinance providing for deterrent punishment to persons who abuse holy places for affording protection, encouragement and financial assistance to proclaimed offenders. As the Chief Minister has pointed out, the ordinance will help in dealing effectively with the current Akali Dal agitation for carving out a Punjabi Suba from the present bilingual State of Punjab. This agitation, which has vitiated the atmosphere in this border State to not an inconsiderable extent, has been directed from Gurdwaras which by convention have come to enjoy immunity from police intervention. It is, however, hoped that there will not arise any occasion to invoke the provisions of this ordinance for a solution of the vexed language problem of the Punjab can very well be found out on the basis of the "unity formula". The misgivings entertained by some that this formula would perpetuate the present linguistic divisions and encourage separatist forces appear to be unwarranted. Time is a big healer and with the efflux of time these language bickerings can be expected to die out.

Student Indiscipline

A WELCOME STEP

THE REPORT that the proposed seventh Inter-University Youth Festival scheduled to be held in the Capital this year has been postponed is indeed welcome. It is not known whether the decision pertains to only this year or to the future also. A Committee of the University Grants Commission which went into the question of students' discipline recently drew attention to the harm caused by the so-called extra-curricular activities. The youth festival was one of these. Apart from the waste of public money involved, this has led to a considerable diversion of student energy into channels which can hardly be considered desirable. These festivals have also become a law and order problem as seen from the fact that in the last Youth Festival held at Mysore the police had to intervene very actively. The conference of Vice-Chancellors of universities, which met at Khadakvasla recently expressed the view that such festivals should not be organised on an elaborate scale as at present. It is good to note that the Government has taken the cue and has gone beyond in not recommending the holding of the Youth Festival this year, a view that has been advocated in these columns some weeks back.

SHANKAR'S CHILDREN'S ART NUMBER, 1960

THIS YEAR'S Children's Number (Price Rs. 5) which is the eleventh in the series, maintains the usual richness and variety associated with it. Here has been brought together a collection of paintings and articles adjudged as the best from the contributions of children of as many as 68 countries. In the words of Pandit Pant, who has contributed a nice foreword "it presents a fascinating world in miniature of what children see and how they see it." It is an exquisite piece of production whose perusal will be rewarding as much to the children as to the grown-ups.

A Window on the World

HOW MUCH DO YOU SPEND ON TAIL-FINS?

By

ODYSSEUS

WE HIGHBROWS, who read the "Eastern Economist," suffer from a weakness against which we ought consciously to be forever on guard. Every day we see masses of ordinary mortals, not endowed with our heaven-born intelligence quotients, doing things which are not in their interests: they allow themselves to be bribed by the electoral promises of politicians; they spend too much money on drink and not enough on the education of their children, and so on. We are therefore tempted to say that the Government should do something about it; that there ought to be a law to prevent people from behaving in ways which we believe to be misguided. Politically this lends to dictatorship, as I tried to show in four articles, entitled "What Is Liberty?" published here between February 12 and March 11 of this year. But while many would accept that political freedom is precious, economic freedom is often regarded as suspect.

Mr J. K. Galbraith's "Affluent Society" (H. Mamilton. London. 1958. 21 sh.) has given new encouragement to those who think that, left to himself in a society geared to produce for profit, the individual will waste his money on needless luxuries and will not spend enough on education, health, and other public services. Mr. R. H. S. Crossman in his new Fabian pamphlet, 'Labour in the Affluent Society," says that in military power, industrial development, education, and everything else, the U.S.S.R.'s planned Socialist economy will leave the free enterprise democracies of the West behind.

The high priests of the Affluent Society doctrine cite innumerable examples of private extravagance: they have chosen the decorative tail-fins on U.S. cars as the ultimate symbol of private waste. But I have yet to see them cite examples of public waste. They never mention the stock-piling of wheat in which the U.S. Government indulges. U.S. taxpayers have paid more than $3,000,000,000 towards this Government enterprise. Left to the play of a free, profit-making market, this formidable sum of three thousand million dollars would have been diverted to other purposes; the U.S. standard of living would have been that much higher.

The idea that the moment a private citizen is taken into Government service and made a member of some departmental committee in charge of some "public interest," he sheds all human weaknesses and becomes endowed with heaven-born intelligence, unselfishness, and freedom from error, is the monumental myth of our time.

THE BRITISH GROUND NUTS FIASCO

Let us pause for a moment in pious remembrance of the great British Ground Nuts Plan launched in 1947 to provide the U.K. with ample supplies of margarine, oils, and fats. Britain's Socialist planners decided to spend £25,000,000 to clear 3,500,000 acres in Tanganyike over a period of six years. But by the spring of 1949, with one-third of the allotted time gone, £20,000,000 had been spent and only 30,000 acres were in production! By 1950, the planners had to recognise that mechanised production on the scale envisaged was uneconomic because the rainfall and soil-compaction made cultivation and cropping impractical, so they scaled the scheme down from the original 3,500,000 acres to a modest 12,000 acres, which, by then, amounted to a capital investment of over £2,000,000 per acre! (I wonder if General Motors would care to work out for me how many decorative tail-fins could be put on to how many cars for £2,000,000). So much for the infallibility of the private citizen who forsakes the profit motive in order to take his place on a departmental committee dedicated to the public interest.

But the most persistently quoted example of the alleged contrast between selfish private affluence and public squalor is the U.S. school system. We are told that while the American people lounge around in 'mauve and cerise, air-conditioned, power-steered and power-braked cars, their children's schools are old and over-crowded." The charge is that the States and local communities have failed in their responsibilities. The only hope, say the critics, is federal expenditure, with some proposals running to $4,000,000,000 a year

The truth is that no country approaches U.S. expenditure on education. Total public and private expenditures in 1959 reached $22,000,000,000—almost thrice the total in 1949.

Now, it so happens that owing to the peripatetic career that I have followed, my children have been to school in India, the U.S.A., and the U.K. In the U.S.A., they attended a private school in Washington D.C. and later a State school in a small Connecticut town. I myself lectured in many U.S. universities, both State and private, and Princeton university was good enough to employ me to teach. Personal experience leads me to agree with those American educators who say that the average standard of U.S. education is substantially below that of the U.K. and of leading European countries.

For two reasons. First, where virtually the whole teen age population of a country the size of the U.S.A. is expected to attend high school, and a large proportion of high school leavers are expected to go on to a university, the pace is set by the slowest intelligence. Before 1870, in which year the movement for universal education began in the U.S.A., no American was compelled to stay in high school if he could not, or did not wish to, work. But today's high school must find a place for every grade of student whatever his hopes, intelligence, or, maybe, total indifference to higher education. One of the causes of the serious increase in juvenile delinquency in the U.S.A. has been the compulsory attendance in high schools of masses of adolescents who have no interest in learning. They are compelled to remain children when they would clearly prefer to go out into the world. By earning their living, they would develop interests and an aim in life. They would become adults by taking up adult responsibilities.

The increase in juvenile delinquency in post-war Britain springs in part from raising the age of compulsory attendance to 15. The Government is now committed to raising it to 16. This will lead to an astronomical increase in public expenditure (a) on education, and (b) on police, the administration of juvenile justice, and the building of reformatory schools for delinquents.

EDUCATIONAL TAIL-FINS

Secondly, I agree with those Americans who suggest that the trouble with U.S. education—at any rate in the State-run schools and universities—is that they have far too much public money to spend. What is important is not the possession of the world's finest

buildings and equipment but whether they are used efficiently. Parents who have to pay for their children's education insist on receiving value for money. A private school survives on its scholastic reputation. If the majority of State secondary schools in any country were abolished, a mass of money at present wastefully spent would be released and taxpayers would be able to afford to send their children to efficient schools. Under the present system, Welfare taxes in most countries are so high that people have to make do with the public services available. They cannot afford anything better.

Before universal compulsory high school education, U.S. standards were as high as any in the world. This was because a minority, intellectually equipped to learn, were eager to learn. Today, faced with the problem of teaching masses of unteachables, the U.S.A. has come to believe that the solution is to pour money into buildings and equipment and to substitute what are called "life adjustment courses" for subjects that require genuine intellectual effort. As Dr. Grayson Kirk, President of Columbia University, said this year: "Our public schools, and far too many of our colleges, have virtually abdicated their functions because they are content to give their students little more than an opportunity to have pleasurable social experiences."

In short, because a number of well-meaning highbrows insisted on initiating universal compulsory education in the U.S.A. up to the end of high school, and thereafter enabling hundreds of thousands to go on to college, who were intellectually unfitted to benefit by a university education, the standard of education in the U.S.A. has been lowered—to the detriment of the minority capable of achieving high levels—a huge problem of juvenile delinquency has been created, and billions of dollars wasted.

As I said here on March 11, all history shows that we face choices between ends equally ultimate, the realisation of some of which necessitates the sacrifice of others. This is why men value so highly the freedom to choose. The aims of men are many. Not all are compatible. Conflicts can never be wholly eliminated within a nation, or between nations. The need to choose between absolute claims is unavoidable, and it is this need which gives freedom its value as an end in itself.

I don't say that individual freedom is the sole criterion. The extent of a man's liberty to choose must be weighed against many other values, of which equality, justice, happiness, security, or public order are some examples. We cannot have everything. Those who believe in individual freedom have a hard task, but they uphold a more humane ideal than those who seek to compel men to be free in accordance with "absolute truths," held to be "in the best interests of the public" by all-wise civil servants and politicians who do not understand that the quickest way in which to teach the people where the public interest lies is to create conditions in which the profit motive works. Think of the mountains of public money lost in British ground nuts, subsidised U.S. wheat, and in teaching unteachables in compulsory secondary education. (Primary education is a different matter—virtually everyone can be taught reading, writing, and arithmetic.)

ELECTING THE PARLIAMENT OF EUROPE

From Our Special West European Correspondent

PARIS, July 18.

THE movement in favour of European elections in 1962 or 1963 is gathering momentum, and politicians here—even those who do not belong to the clan of United-Europe visionaries—now think that it is very probable that they will be held. That is to say, on the same day in all six countries that belong to the Common Market, deputies will be elected by universal suffrage to constitute a Parliament of Europe. This is no longer a mere suggestion or pious wish, because the already existing European Parliamentary Assembly which meets in Strasbourg has drafted a treaty to be submitted to the six national parliaments for ratification, which calls for its own re-election by universal suffrage. That Assembly at present consists of 142 deputies nominated by the national parliaments, each nation's delegation representing the national parties **pro rata**. Therefore, the Strasbourg deputies obviously have a pretty shrewd idea of the chances of getting their draft treaty ratified by the parliaments that nominated them. In making this move, they are simply exercising powers given them by the treaties establishing Euratom, the Coal and Steel Pool, and the Common Market, all of which allow the Strasbourg Assembly to arrange its own re-election by popular vote. Those **treaties, having been ratified** by the national parliaments, are positive law in the six countries. Thus, with this plan, we leave the realm of wishful thinking and utopian entreaty and enter the domain of cautious juridical progress toward a supra-national European body.

That point must be noted. European political unity has been dreamed of for so many centuries that most people, even Europeans, regard it as a chimera—despite the fact that the slow and irreversible movement toward unification is going on before their eyes. No one will have forgotten the scepticism that greeted the Rome Treaty setting up the Common Market, and yet today that institution is emerging as a reality, and neighbouring governments that took it for another European-Unity chimera like the "European Army" are now paying the price of their incredulity. The idea of a Parliament of Europe also sounds like a dream, but only because it has long been dreamed of; it would be simple prudence to take serious account of the possibility that tomorrow it might be reality. Besides, one does not have to be a Marxist exponent of the economic interpretation of history to see that the integration now being achieved at the economic level in West Europe must inevitably have a reflection and expression at the level of political institutions.

Indeed, as the Common Market gathers pace, a European Parliament becomes a necessity. Firstly, because the Common Market entails discrimination against the trade of non-members, and those non-members will not suffer that loss merely for the sake of a six-nation commercial club or economic bloc. On the other hand, if the six nations prove, by holding European elections, that their economic club is quite distinct from the British-led Free Trade Zone in that it is the first step toward a confederation of peoples, then the criticism of outsiders is disarmed. No one complained when the Indian Government removed restraints on inter-State trade because everyone saw that Delhi was seeking to weld the old Indian Empire into a single nation; by means of a great political demonstration such as Continent-wide elections, the six nations hope to earn a similar tolerance for their customs union. It would in particular consolidate the support the Common Market is receiving from the USA. It is well known that the Common Market would have been nipped in the bud if it were not for US backing; since that enterprise involves economic loss for the USA, they are supporting it purely for the political benefits of European unity. European elections would be the first guarantee that the design that lay behind the Marshall Plan is at last being realised.

A point that concerns Europeans more especially is that the Common Market so far is the work of Big Business. It is the giant corporations that are getting together, forming discreet monopolies and carving up the market, and to date these operations escape the control of any authority, because they cut across national boundaries and are subject to no supra-national organism. There is a court of justice for the Common Market region which can be appealed to in cases that amount to conspiracy against the consumer, but it has so far had little business. The Commission of the Common Market is a mere collection of bureaucrats appointed by the six governments, and lacking any real supra-national power. The Strasbourg Assembly, as long as its members are nominated, has not the moral authority to intervene, as was shown when its advice was neglected by the French and West German Governments in the matter of coal-output quotas. If it arranged its direct election by the people and attracted a number of well-known, seasoned politicians, it would have the status to intervene more effectively, and thus provide the nucleus of a "countervailing power" to match the emerging European capitalism. This point is important for the European socialists, who could expect to get a good number of seats in a Parliament of Europe (even the Communists can count on 15 per cent of seats).

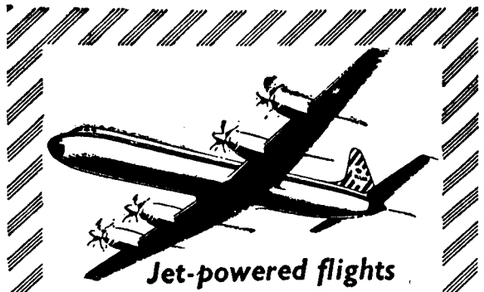
Thus the main significance of an elected Parliament of Europe would be economic, though it would also serve the useful psychological function of interesting the people in the process of unification by means of an election campaign. On the other hand, one must not run away with the idea that it would constitute the first part (and much less the whole) of a new Superstate or European nation. For instance, there is no thought of the European Parliament electing a Ministry, which would begin to tell the national governments what to do. The European-unity ideology has a long way to go before that idea will be ripe. If ever a true European Government emerges, it will not emanate from the ranks of a European Parliament, but from an agreement among existing national governments. When the Cabinets of the six nations delegate Ministers to a joint Cabinet (as they already do in the more or less informal Council of Ministers) and agree to take decisions within that super-Cabinet by means of a majority vote, that will be the Government of Europe. Bonn and Paris will never suffer a seventh government to emerge with overriding powers in Strasbourg, no matter if the Strasbourg Assembly is elected ten times over.

What the European Parliament will do, rather, is crystallise the popular support (and opposition) for unification, provide a moral authority that the national governments and international business corporations will have to reckon with, and, finally, actively look after those parts of the unification process where national governments have already agreed to surrender their sovereignty. This last is the most important. The present nominated Strasbourg Assembly already has the power to control, censure and in certain cases dis-

miss the international administrations that run Euratom, the Coal and Steel Pool, and the Common Market. In reality, those three administrations are equally (if not more) responsible to the Council of Ministers named by the six governments. The Strasbourg deputies hope to persuade the national capitals, not to surrender sovereignty in any new domains, but to leave the running of these three fields to an elected parliament. As a first step, they want to fuse the three administrations into a single bureaucracy, charged with the working of Euratom, the Coal and Steel Pool, and the Common Market, and to make the officials of this embryo European civil service answerable to the elected Strasbourg Assembly. Plans for this fusion are well advanced, all the three administrations having asked the six governments to agree to it, and it will probably be realised next year. Incidentally, the British offer to join two of these administrations but not the third (the Common Market Commission) was interpreted on the Continent as an attempt to prevent this fusion, and thus hamper European unification; whatever the real motives, this plan has misfired.

President de Gaulle is much more interested in forming a directorate of existing governments (in fact a Franco-German committee of management) than in having an elected European Parliament, but he is not totally opposed to the latter provided it does not try to increase its powers at the expense of Paris and Bonn. On the other hand, the smaller states of the Benelux union are opposed to Franco-German domination in a super-Cabinet, and are more interested in the European Parliament, where discussion would be public and the small nations would have a greater representation than their population strictly entitles them to. The most likely upshot of this discord is a compromise where both sides get what they want: the six governments will form a joint permanent secretariat such as de Gaulle is demanding, and the people of the six nations will be allowed to elect their Parliament. This would not be a bad solution, for one would balance the other. In any case, the point to notice is that the traditional reticence of the Gaullists about European political unification will not necessarily prevent the election of a Parliament of Europe within the next two years. The immediate political consequences of European elections will not be as great as the unity-fanatics would wish; they will not include, for instance, the instant appearance of a European Nation. But their long-term results and their symbolic value will be immense. Right or wrong, the world will begin to believe in European unity the day the electorate of 165 million people go to the polls to choose 426 deputies to sit in Strasbourg.

May we help you to export your goods?



Today, the word "Export" is very much in the air. But you need full details of your market before you can take any risk. Perhaps, our branches in Bangkok, Colombo, Hong Kong, Ipoh, Klang, Kuala Lumpur, Malacca, Rangoon and Singapore may be in a position to assist you.

Economic Report from the U.S.

NEW PEAKS OF ECONOMIC ACTIVITY

By GUY SIMS FITCH

WASHINGTON, July 19.

WITH the mid-year mark just passed, the statistics are confirming an evident trend—namely, that the United States during the first half of 1960 advanced to new peaks of economic activity. If there have been any surprises in the statistical record, they reside in the fact that the economy seems to have done even better than earlier estimates indicated. This has been the case even though the major gains of 1960 were scored in the first quarter of the year, and activity slowed a bit in the second quarter.

Now that US Government economists have had a chance to take another long and hard look at economic developments, they are estimating that the Gross National Product (GNP)—the total output of goods and services, and the best measurement available of the economy's overall performance—reached an annual rate of close to $505,500 million in the second quarter, as against the first estimate of $503,000 million. Actually, this revision is based on a close review of the economy's record during the last three years. And the significant elements in this review is that it has resulted in upward revisions of the quarterly GNP records. The new figures show, for instance, that the GNP in the first quarter of 1960 reached an annual rate of $501,300 million, instead of the previously published $500,200 million. This represented a sizeable gain of $14,000 million over the revised figure for the final quarter of 1959, and reflected largely the sharp rebound from the effects of 1959's lengthy steel work stoppage. With this rebound over, the advance during the second quarter of 1960, while respectable enough, was understandably much slower.

For the full year of 1959, the new revisions put the GNP at $482,100 million, instead of the previously published $479,000 million. After adjustment for the minor price increases that took place in 1959, this represented a gain over 1958 of 7 per cent in the real volume of the nation's total output. This undeniably was a highly gratifying performance for an economy as large as that of the United States—and in a year during which the key steel industry was shut down for some four months.

The new 1958 GNP, incidentally, is disclosed as $444,200 million, as against the previously published $441,700 million. And herein lies one of the most interesting, and revealing, stories of this entire three-year statistical refinement. For the 1958 GNP now emerges as higher than the revised 1957 GNP of $442,800 million. Merely from a superficial reading of these figures, one might gather that there was no business dip—or recession—between 1957 and 1958. Yet everyone knows that there was such a dip. What these revisions now underscore, then, are two other important facts. The first is the brevity of the 1957-58 dip, which lasted barely eight months and hit bottom in the spring of 1958. The other is the sharpness of the recovery from that dip—a recovery which, it is now confirmed, was able in the last eight months of 1958 to more than make up for the declines of the earlier months.

From revisions such as these, economists are able to obtain increasingly accurate statistical pictures of what has been—in this case—a new appreciation, in retrospect, of the performance and stability of the US economy. But they also are able to obtain some important insights into possible future developments. What about the immediate future of the US economy? Now that the normally slow summer season is here, it would not be unexpected to see economic activity holding around present levels for several months, with only a modest rise in total output in prospect for the third quarter of the year. The fall months, then, could become a new testing time for the economy. When the year began, Government economists were estimating a GNP for all of 1960 of about $510,000 million. The slower advance of recent months, however, had begun to cast some doubts on this estimate. But now, the new statistical revisions, with their upgrading of the year's record to date, suggest that a moderate pick-up in business later this year could help make that original projection a reality. In any case, the 1960 GNP still promises to show a good gain—something in the neighbourhood of $25,000 million, or better than 5 per cent—over the notable 1959 performance.

Special Article

THE QUANTUM OF RELIEF IN NEW PAY SCALES

IN this Special Article an attempt is made to assess the quantum of relief against rising prices provided in the new pay scales for Central Government employees. In this context the past Government measures of relief in the shape of higher dearness allowance to its employees are also examined, because in some quarters it has been suggested that the Government has always endeavoured to neutralise the rise in consumer prices by providing increased emoluments to the employees.

The additional cost of implementing the new pay scales is, in broad terms, an overall indicator of the extent of relief the Government is offering to her employees. The immediate and ultimate annual costs in implementing the various proposals of the Pay Commission are estimated as follows:

IMMEDIATE INCIDENCE

	(Rs. crores)
Interim relief given on Pay Commission's recommendation in 1957	12.00
Immediate effect of recommendations regarding pay, allowances and pension already accepted (excluding Defence personnel) ..	20.00
Improvement in Family Pension Scheme, Contributory Health Service Scheme, and education and cateen facilities, if accepted by Government—Decision has not been taken yet	4.70
Immediate effect of extension of the benefit to Defence Services personnel	7.00
TOTAL	43.70

ULTIMATE EFFECT

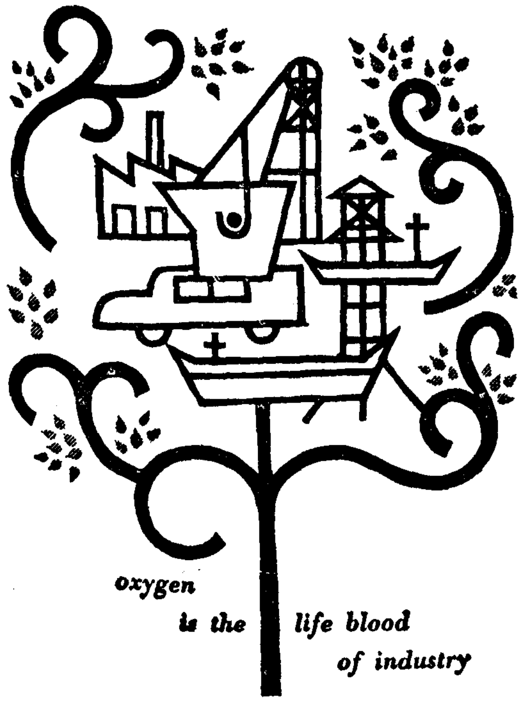
Increase in pay and allowances	25.00
Retirement benefits	6.00
Interim relief	12.00
Improved Family Pension Scheme	1.00
Extension of Contributory Health Service Scheme	3.00
Educational and Canteen facilities	0.70
Extension of benefit to Defence personnel ..	7.00
TOTAL	54.70

The benefit will accrue in varying proportions to employees in different income-brackets. The main beneficiary will, no doubt, be the employee in the lowest grade. In fact, though a rise in price level affects different people differently, within the fixed income groups those at the lowest rung of the income ladder experience the greatest pinch of the price rise. The Pay Commission evidently had uppermost in their mind these employees who constitute about 40 per cent of all the Government employees. In place of the present 11 year scale of 30-½-35, a 16-year scale of Rs. 70-1-85 is offered to them. Add to this basic pay a dearness allowance of Rs. 10 per month, a lowest paid employee of the Government will start on a minimum remuneration of Rs. 80 as compared to Rs. 75 at present and Rs. 70 previously, if the interim relief of Rs. 5 granted by the Commission from July 1957 is excluded. The fact that he will go up with a doubled rate of increment to a maximum of Rs. 95 as compared to Rs. 80 at present is another ingenious way of providing him relief against rise in prices in future. The combined effect of a higher start, a doubled rate of increment and a longer scale will mean a substantial improvement in the value of the new pay scale for this category of employees—the average monthly value of the new scale works out to be Rs. 88.8 as compared to Rs. 78.3 of the old scale.

It is a moot point whether a minimum remuneration of Rs. 80 per month in reality conforms to the controversial "need-based wage" criterion agreed upon at the 15th Labour Conference (the Commission arrived at the figure of Rs. 80 for a family equivalent of three adult males and when consumer price index was supposed to stand at 115). But let us examine the past measures of the Government to neutralise the rise in price level. For this analysis, the vicissitudes of the employee in the lowest grade are studied in detail, for it is he who tends to suffer most when prices rise.

The movements of the consumer price index and minimum remuneration of a Central Government employee are reviewed from 1947 onwards and figures set out in Table below. The minimum remuneration of an employee has increased over the last 13 years, but the overall rise in the consumer price index was slightly faster. This fact is lucidly brought out by the index of real remuneration in column 4 of the Table. Except for 1954 and 1955, this index has tended to rule a few points below 100. In other words, it implies that the higher dearness allowance failed to neutralise completely the fall in real income due to rising price level, except in the year 1954 and 1955. The minimum remunerations which the Government should have provided for full neutralisation against price rise, so that, an employee's real purchasing power is not curtailed, are computed for various levels of the price index. The difference between this minimum remuneration and actual remuneration is a measure of the gap left unneutralised. Except for the years 1954 and 1955 when the real purchasing power of an employee increased because of a substantial fall in consumer price index, the magnitude of unneutralised gap seems to range between Rs. 1 in 1952 and Rs. 12 in 1948. On the average, the gap was only of the order of Rs. 3.5. Thus, the Government has tried to mitigate the hardships to its employees to a great extent.

When the new pay scales come into effect very shortly, it is estimated that the average value of the consumer price index for 1960 might be around 125. The employee would need about Rs. 86—Rs. 6 more than his minimum pay—in order to neutralise fully the rise in price level. The Government is likely to cover this gap substantially by providing more dearness allowance, because the Commission had suggested that "if during a period of 12 months, the index remains on an average 10 points above 115, the Government should review the position and consider whether an increase in the dearness allowance should be allowed and, if so,



at what rate." The recent announcement to neutralise 50 per cent of the rise in consumer price index may effectively wipe off this gap. While the Government is advocating substantial relief to the workers in different industries such as cotton textile and cement where it has readily accepted the recommendation of the Wage Boards, it will be unfair if it shirks to provide full neutralisation to its own employees.

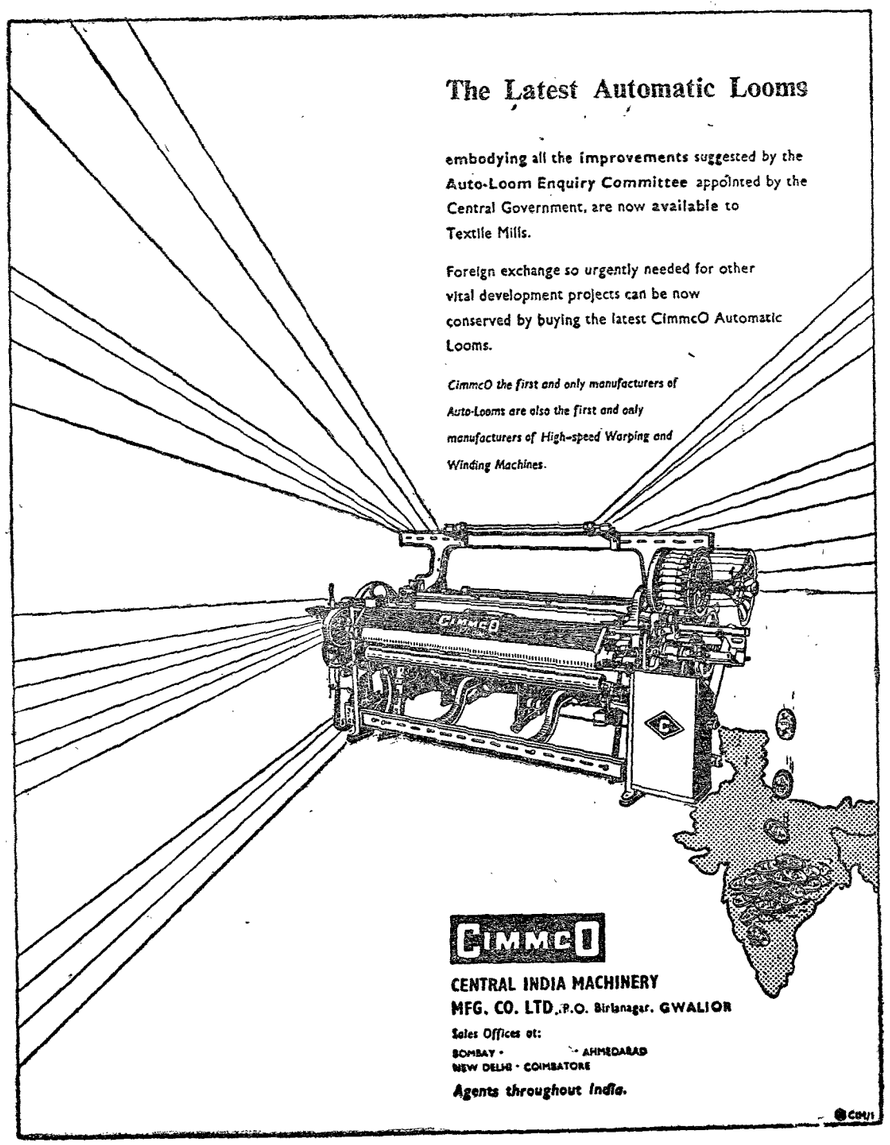
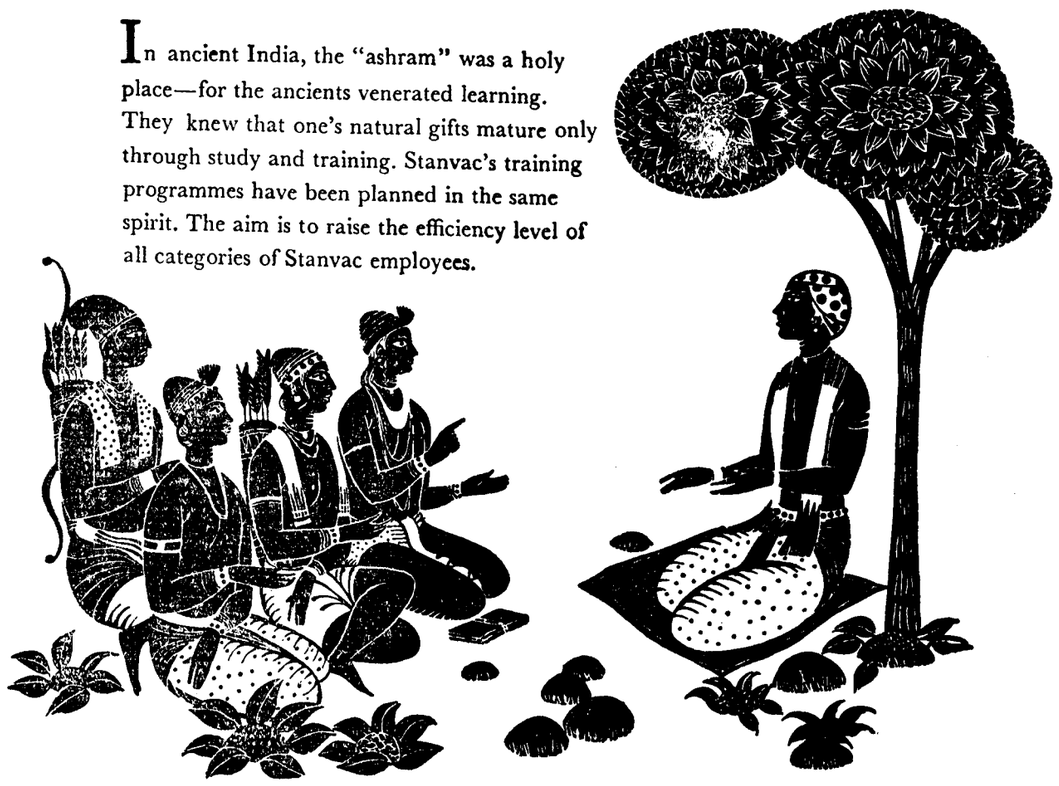
Shift in Shipping Policy

By CROESUS



THERE has been a marked change in the attitude of shipping interests towards the Government in the past few weeks. It was not long ago that these very interests were full of praise for the Government because of the encouraging words uttered by the President in his address to Parliament at the opening session earlier this year. It will be recalled that Dr. Rajendra Prasad, in his reference to shipping, made the following observation: "Indian shipping, which has suffered many handicaps in the pre-Independence period will continue to receive all possible assistance in its modernisation and development. My government is fully aware of the role of the Merchant Navy in our economy, in the conservation and earning of foreign exchange and in its auxiliary and reserve roles in the defence of our long sea coast."

It may be asked: "What has happened in the interval to bring about a sudden change thus in the attitude of shipping interests vis-a-vis Government's shipping policy?" Although there has been no restatement of shipping policy as such by the Government of India, there was enough provocation in the speech of the new Union Minister for Transport and Communications, when he inaugurated the last Annual General Meeting of the Indian National Steamship Owners' Association, to cast a gloom over, if not upset, the shipping community. In particular, two observations of Dr. Subbarayan, I gather, have led to this result, and at least in one case, the speech of the Union Minister raises a doubt as to whether any Minister can almost reverse a declared policy, or go back on the assurance given by another Minister. The shipping interests have naturally been perturbed on this account since the last Annual General Meeting of the INSOA. At this meeting, when offering some remarks about the relationship between the public sector and the private sector in shipping, the Union Minister for Transport said as follows: "My predecessors in office have stated in the past that, as far as possible, the public sector will not be allowed to compete with the private sector. While this may still remain our objective generally, I feel that the time has come when it must be realised that it is no longer feasible to keep the two sectors in completely separate water-tight compartments." It is clear from this one sentence that Dr. Subbarayan does not feel exactly bound by the categorical assurances of two of his distingushed predecessors in office, namely Mr. Lal Bahadur Sastri and Mr. S. K. Patil. Inaugurating the Indo-US Cargo Liner Service in July, 1958, Mr. S. K. Patil, the then Minister for Transport, I remember, assured the private enterprise in shipping that the public sector would not enter into competition with the private sector and that, in what he described as "the joint endeavour of the two sectors," the Government would constitute the junior partner. Two years earlier, I recall, Mr Lal Bahadur Sastri had said: "It is not our intention that shipping in public sector should run in competition on routes on which existing private shipping companies have established themselves." It is thus clear that what everybody believed to be the well established and declared policy of Government in regard to avoidance of overlapping of routes operated by the private and the public sectors in shipping has been virtually repudiated by Dr. Subbarayan. He contended that public shipping should also be allowed to enter some of the "lucrative" trades in which private shipping interests have established themselves.



Now, Indian shipping can legitimately aspire to carry 50 per cent of the Indian overseas trade. As against this, Indian shipping (private) accounts for only six to eight per cent, which still leaves more than 40 per cent, and surely it cannot be the contention of Dr. Subbarayan that the whole of this is unremunerative and that what private Indian shipping interests have been carrying alone is "lucrative." It must not be forgotten that, when the private shipping companies ventured into the routes they now operate, they did so against great odds and have been able to establish themselves only after years of hardship and keen competition. To ask them now either to forgo this or to share it with public sector shipping would be something like the Government asking the TISCO or the IISCO to let all further expansions in their factories be on government account, as it may take years for the Government to raise capacity of its own steel units in Bhilai or Durgapur. Private shipping companies have ventured into trades like West Africa and South America, have revived the service to the USA, which had been abandoned earlier due to lack of cargo, and have gradually been building up these trades. It should be open to the public sector shipping also to venture into new trades and gradually to build them up likewise, instead of claiming a share in the already established trades.

In this context, I do not know why Dr. Subbarayan thought it fit to jibe at the shipping companies participating in the Indo-USSR trade. That was hardly called for. It is true that this trade was originally earmarked for the public sector. But it was at the instance of the Government itself that the private sector entered this trade. Moreover, when this service had to be started in 1956, following the Trade and Shipping Agreement with the USSR, the Government had no ships to put into this trade. So it was not as though the Government had ships of its own and yet allowed the private sector shipping to engage itself in this trade. Instead of complimenting Indian shipping companies which readily placed their ships in this trade and thereby helped the Government successfully to implement its Trade and Shipping Agreement with Russia, the Union Minister for transport chose, rather ill-advisedly, to criticise private sector shipping. This is, to say the least, clearly unfair to the shipping companies in the private sector.

The second observation of Dr. Subbarayan which has greatly disappointed Indian shipping interests relates to his suggestion that Indian ships should accept

In ancient India, the "ashram" was a holy place—for the ancients venerated learning. They knew that one's natural gifts mature only through study and training. Stanvac's training programmes have been planned in the same spirit. The aim is to raise the efficiency level of all categories of Stanvac employees.

In 1959, Stanvac expended more than 48,500 man-hours to train employees in 30 subjects, ranging from basic courses in Business Management to advance courses in highly specialised phases of marketing, and technical branches of refining and exploration. Last year, as many as 18 Indian employees were sent overseas, for advanced training, while 22 employees received assistance for higher studies.

Moreover, Stanvac training programmes are not designed for employees only. To enlarge the trained personnel pool—a matter of national importance—Stanvac extends its training facilities to key groups outside the organisation. In pursuance of this policy, Stanvac provides training to Government-sponsored personnel. The number of such people trained in 1959 totalled 40.

STANVAC —*participating in the country's progress*

world tramp freight rates for Government-sponsored bulk cargo. While, on the face of it, nothing seems to be wrong with this suggestion, it has to be examined in the prevailing context. There are particularly two aspects of the question which require to be borne in mind in this connection. In the first place, world tramp freight rates are at very low, nay, uneconomic levels. Secondly, the Indian shipping industry is still in the nascent stage and cannot be built up on strong foundations if economic rates are not given for cargoes under Government control and if, at the same time, it is compelled to face the full blast of foreign flag tramp competition. This question assumes added importance in the context of the recent Indo-American food grains deal involving the transport of 17 million tons of foodgrains from the US ports to India over the next four years. Under the agreement, 50 per cent of this quantity is available to Indian ships, which is at once a "golden opportunity" and a "challenge" to the Indian shipping industry. The freight amount payable on the transport of this huge quantity is estimated at 195 million dollars or over Rs. 95 crores. If half of this cargo is shipped in Indian vessels, about Rs. 47½ crores can be retained within the country and foreign exchange, which would otherwise have to be paid to foreign tramp shipping, can be saved. This opportunity can also be utilised to develop our shipping and expand our tonnage, as some 10 to 15 ships will have to be bought and placed on this trade, in addition to chartering some tonnage. But, if the large investment involved in the purchase of some 10 to 15 ships is to become feasible, it is imperative to ensure that the investment does not make a loss on the carriage of the foodgrains cargo from the US. On the basis of the proposed present tramp freight rates, however, the ships to be bought will not be able to run on an economic basis. Hence the legitimate demand of the Indian shipowners for "a modest economic and fair freight rate." Surely, as against what the American shipping companies will receive in freight from their Government, this demand is not exorbitant. If, however, the Government of India is not convinced about the inadequacy of the rates offered by it, as alleged by the Indian shipowners, it can accept the proposal of the shipowners to allow Indian shipping companies to lift the American foodgrain, leaving the question of fixing an economic freight rate to a special committee that may be appointed to go into this question. What in effect the Indian shipping interests are requesting the Government to do is only to extend a sort of temporary protection which the present fortuitous circumstances seem to make possible. When the Government has been offering protection to so many Indian industries there is no reason why the Indian shipping industry, which is acknowledged by the authorities themselves as being vital to the economy of our country, should be denied similar protection.

It may also be added here, by way of a post-script, that, if the Indian shipping interests have been obliged to ask for a higher rate than the world rates, it is for the very good reason that the world chartering markets are anything but normal today; they are in a severely depressed state, the UK Chamber of Commerce Freight index being at the very low level of 72.4 (1952=100), compared with 157 in 1956 and 112 in 1957. Even in 1951 and 1954, which may be regarded as relatively more normal years, the index was much higher at 127.7 and 86.1, respectively. The Indian shipping interests are certainly entitled to ask of their Government that the present subnormal state of the chartering market should not be made an excuse to beat down the rates offered to them for carrying foodgrains from the United States. For that would amount to hindering the rightful development of Indian shipping when a God-sent opportunity as it were, has offered itself.

Business Notes

Public Finance

MAHARASHTRA BUDGET

WITH HARDLY any time to reassess either the resources or the developmental requirements of the new State which was inaugurated only seventy-one days before the presentation of the budget, the first budget of the Maharashtra State could not be anything but a tame affair. Mr S. K. Wankhede, the State Finance Minister, was accordingly content with merely placing before the Legislative Assembly modified estimates in the budget of the bilingual Bombay State — excluding the estimates pertaining to the Gujarat region—of the revenue and the expenditure of the new State. The budget shows a small deficit of Rs. 16 lakhs, as against an estimated surplus of Rs. 7 lakhs for the erstwhile composite State, the estimates of revenue and expenditure being Rs. 100.97 crores and Rs. 101.13 crores, respectively. The State Finance Minister has done well in not initiating, at this stage, any fiscal novelties, imposing any new taxes to cover the small estimated deficit.

A notable feature of Mr. Wankhede's speech whilst presenting the budget estimates, was his assessment of the economic situation of Maharashtra. The economic picture of Maharashtra which obtains today "is one of a few industrially developed cities with a relatively under-developed country-side." Consequent upon the high degree of development of Bombay City all the indicators of economic growth appear much bigger which is at once misleading. Taking the example of a few key indicators of growth, such as per capita income, per capita power generation and consumption and percentage of factory workers to total urban population, Mr. Wankhede pointed out, "the national income of the State for the year 1955-56, as computed by our Bureau of Economics and Statistics, was Rs. 1,004 crores, as against Rs. 9,980 crores for the whole country. Since this accounts for about 10 per cent. of the country's national income, as against a population of 9.05 per cent. only, the per capita income in the State excluding Bombay City, must be substantially lower than the per capita income for the country. Per capita power generation for the State as a whole is 71.01 KWH, as against 31.42 KWH for the country. Power consumption comes to 59.90 KWH, as against 26.06 KWH for the Indian Union. The percentage of factory workers to total urban population is 7.02 per cent., as against 4.99 per cent. in the country.

"If, however, the city of Bombay is not taken into account, then these indices would work out as under—Power generation 27.30 KWH per capita; power consumption 21.20 KWH per capita; factory employment 3.60 per cent. of urban population." Thus, in the glare of the growth of a few big cities which have become so prominent, the backwardness of some of the regions, especially Western Maharashtra and certain districts of Vidarbha and Marathwada, tends to stand out prominently. It is imperative, therefore, that all attempts to achieve a "harmonious growth as between the cities and their hinterland and as among the different regions of the latter" are made. All this and the higher administrative costs, which the Government might have to incur consequent upon the enhancement of the emoluments of its employees, will no doubt impose a

heavy strain on the State's finances. It is to be hoped that, in order to find resources for this, Mr. Wankhede will rely more on schemes, such as small savings and a "rigorous cut on non-plan-expenditure," than on further fiscal burdens on industry and the community.

Telco

ACCELERATED PROGRESS

MR. J. R. D. TATA had the happy news to convey to the shareholders in the course of his last annual presidential speech that Telco had exceeded all its targets set for the year 1959-60 and sales reached an all-time peak. Telco can take legitimate pride in this achievement. A gross dividend of 12.5 per cent has been declared on the ordinary shares which gives the investor a net return of 8.75 per cent. Other important financial details of last year's operations will be found elsewhere in this issue in the Chairman's speech.

In spite of the new developments on Indian railways in the direction of use of electric and diesel locomotives, it goes without saying that steam locomotives will continue to be the mainstay of the Indian railway system. Telco has, therefore, a prospect of increasing pressure of demand from the railways for its Locomotive Division in the years to come. Fixing of prices for Telco's locomotives has gained more than the due share of public attention. Mr. Tata has pointed out that the exclusion of the annual bonus (which constitutes an important ingredient of production costs) has been mainly responsible for making the prices fixed for the two years ending with the year under review lower than the expectations of Telco's management. Nevertheless, prices for the supply of locomotives during the remaining period of the current Agreement have been fixed. Now negotiations are underway between the Railway Board and Telco for fixing the price for the batch of 325 locomotives to be delivered by Telco over a period of five years after the termination of the present Agreement. Telco has made it clear to the Railway Board that no uncertainty about the prices during the five-year period under negotiation ought to be left and periodical bargaining ought to be ended. Thus the prices should be fixed on a firm basis, subject, however, to agreed escalators. Mr. Tata has pointed out in this behalf that the benefit of higher depreciation allowed during the current Agreement will accrue to the Railway Board during the next quinquennial period in the shape of prices lower than those of imported locomotives.

In the Automobile Division the year under review was noted for outstanding activity. The programme of establishing the manufacture of Tata-Mercedez-Benz vehicles in four years has been carried out according to schedule as approved by the Government. The demand for freight vehicles is outstripping the supply in the country and in this pressure of demand Telco has an important share. It has in view a mojor programme of expansion which will raise the manufacturing capacity of the Automobile Division to 24,000 unts per year with an indigenous content of over 90 per cent. This major plan is now in the final stage of preparation before submission to Government for its approval.

Mr. Tata has again issued the caution that the manufacture of the small car should not be undertaken by the State. This is because Mr. Manubhai Shah's cryptic observations on two occasions have strengthened the belief that a decision to manufacture the small car in the public sector is imminent. Mr. Tata has emphasised that even after the Rourkela steel plant goes into full production, something like 30 to 35 per cent of the country's requirements of rolled steels of special quality will need to be imported and materials worth about Rs. 700 per vehicle will have to be procured from abroad. The Ad Hoc Committee on Small Car Production has impressed upon the Government the fact that the development of this car will entail a good quantum of foreign exchange expenditure and while this may be allocated, the claims of the automobile industry for its own programmes, as approved by the Government, ought to be treated on a priority basis. This is one of the points emphasised by Mr. Tata apparently because priority for the State may slow down the expansion of the major automobile industry and create an additional bottleneck in transport

Company Registrations

TRENDS DURING SECOND PLAN

THE DEPARTMENT of Company Law Administration's latest Information Broad-Sheet throws revealing light on the growth of companies and particularly on their sectorwise distribution into Government companies and non-Government companies. This Broad-sheet contains a number of tables showing different aspects of growth in company floatations, such as total strength, authorised capital, sizes, types of management, and so on. Much of the value of the first 14 out of the 15 tables is detracted from by reason of the fact that figures relating to the capital are supplied in terms of authorised capital which is of little help. It is obvious that the Department has in its possession statistical data in terms of the paid-up capital of the companies and one wonders why figures of paid-up capital have not been incorporated in the first 14 tables.

Table 15 is divided into two components, one showing the classification of companies into public and private, and, the other, government-owned and non-government-owned companies. The position in the second component is set out below:

(Rs. Crores)

	Government Cos.		Non-Government Cos.	
Year ending March 31	No.	Paid-up Capital	No.	Paid-up Capital
1956	61	66	29,813	9.58
1957	74	72	29,283	10.05
1958	91	2,57	28,192	10.43
1959	103	4.24	27,376	10,86
1960	125	4.68	26,796	11,25

The above figures are not only self-explanatory but eloquent in the sense that they highlight the phenomenal growth of company formation in the Government sector and underline the tardy expansion in the non-Government sector. As against 61 companies with paid-up capital of Rs. 66 crores at the start of the Second Plan in the Government sector, the growth was as high as 125 companies with paid-up capital of Rs. 468 crores at the end of the fourth year of the Plan. While the number of Government-owned companies increased two-fold, their paid-up capital shot up more than seven-fold. In the non-Government sector the number of companies declined from 29,813 to 26,796 during the four years, whereas the paid-up capital increased tardily from Rs. 958 crores to 1,125 crores. Actually one would have expected the anticipated tempo of the Second Plan to give a powerful boost to the growth in the non-Government sector also, showing a much stronger net position, after making allowance for the factor of mortality. The failure in this respect could be attributed to a number of factors such as the initial impact of the Companies Act which was introduced in April 1956, the heavy taxation in the Budget of 1957-58 and the strict foreign exchange control involving poor allocations to the non-Government sector as compared to the Government sector.

Current Topics

NEW COMPANY REGISTRATIONS 1959-60

The total number of newly-formed companies has recorded a further rise in 1959-60 according to a review made by the Research and Statistics Division, Department of Company Law Administration.

THE total number of new companies registered during 1959-60 was 1,452 with a total authorised capital of Rs. 160 crores as against 1,095, 961 and 848 new companies formed with a total authorised capital of Rs. 284 crores, Rs. 103 crores and Rs. 211 crores in 1958-59, 1957-58 and 1956-57 respectively.

The following table gives the total number and authorised capital of new company registrations from 1953-54 to 1959-60.

Year	No.	Authorised Capital (Rs. in lakhs)
1953-54	1,193	1,55,39
1954-55	1,203	2,25,98
1955-56	1,448	1,56,94
1956-57	848	2,10,65
1957-58	961	1,02,71
1958-59	1,095	2,84,36
1959-60	1,452	1,60,54

The study reveals that while the number of newly-registered public companies has gone down, the average size of such companies has grown and in contrast to the average size of the new public companies, the size of the private companies has become smaller.

Out of 1,452 newly-registered companies in 1959-60, the highest number of new companies totalling 399 was formed in West Bengal. Madras became the close second with 342 new incorporations. The total number of new registrations in Bombay and Delhi was 293 and 141 respectively. Taken together, the four States of West Bengal, Bombay, Delhi and Madras registered 1,175 new companies which accounted for about 81 per cent of the all-India total.

A study of the industrywise distribution of new companies shows that out of the 1,452 new companies, 614 have been formed for processing and manufacture of food-stuffs, metals and chemicals and other industrial goods. The total authorised capital of these companies comes to Rs. 119 crores which is nearly 74 per cent of the total authorised capital of all the companies registered in the year. Next in importance is the Commerce (Trade and Finance) group which recorded 367 new companies with a total authorised capital of Rs. 17 crores. Thus, the two main industrial groups viz., Processing and Manufacture and Commerce (Trade and Finance) together accounted for 981 companies or about 68 per cent of the total number of companies formed during the year. Broadly speaking the industrial pattern of new companies remained unchanged.

The number of new giant companies (defined as those having an authorised capital of Rs. 1 crore and over) during the year is 31 as against 22 in 1958-59 and 28 companies in each of the two preceding years of 1957-58 and 1956-57. Of the 31 giant companies, the following seven constitute Government companies, the remaining 24 being companies formed by the private interests; Rehabilitation Industries Corpn. Private Ltd. (Rs. 5 crores); Indian Oil Company Private Ltd. (Rs. 12 crores); Kalyani Spinning Mills Private Ltd. (Rs. 2.5 crores); Tungabhadra Steel Products Private Ltd. (Rs. 2 crores); Film Finance Corporation Private Ltd. (Rs. 1 crore); Pyrites & Chemicals Development Co. Private Ltd. (Rs. 5 crores); Traco Cable Co. Ltd. (Rs. 1 crore).

The total authorised capital of all the giant companies during the year works out to 57 per cent of the total authorised capital of all the companies registered during the year and in the previous years 1958-59, 1957-58 and 1956-57 the shares of giant companies in the total authorised capital worked out to 84 per cent, 64 per cent and 81 per cent respectively.

Of the 23 Government companies registered in 1959-60 three companies viz. Rehabilitation Industries Corporation Ltd., Indian Oil Company Ltd. and Film Finance Corporation Ltd. were set up by the Central Government, one company named Pyrites & Chemicals Development Corporation Ltd. was a subsidiary of the Central Government Company and the remaining 19 companies have been formed by the State Governments of which 14 have been set up by the State of Orissa, two by the State of Assam and one each by the States of West Bengal, Kerala and Mysore. Of all the Government companies floated during the year under review, 22 are private companies and one public company.

The total number of companies at work in the country as on 31st March, 1960 is estimated at 26,921. The total paid-up capital of these companies approximately aggregated Rs. 1,593 crores. Of these, the number of public limited companies is estimated to be 7,306 with an aggregate paid-up capital of Rs. 812 crores, and that of the private limited companies is 19,615 with a total paid-up capital of Rs. 781 crores. At the time the new Companies Act came into force on the 1st April, 1956, the total number of companies at work stood at 29,874 with a total paid-up capital of Rs. 10,24 crores.

A DELHI NOTEBOOK

OIL PRODUCTS FROM RUSSIA

AN agreement has finally been signed between India and the Soviet Union, under which India will be importing 1.5 million tons of oil products, mainly kerosene and diesel oil, from the Soviet Union during the next three and a half years. Imports would be channelled through the Government-owned India Oil Company and would be brought to this country in Russian tankers. The first consignment is expected to arrive next month.

No separate licences, it is learnt, are to be issued to private distributing agencies, which, however, may be given some supplies from the imports effected by the India Oil Company. How exactly these imports are to be staggered will depend upon the storage facilities available in this country and the availability of tankers with the Russians. The quantities to be imported, an official announcement says, will increase from year to year.

These imports, like all other imports from the Soviet Union, will be paid for in Indian rupees. The price asked by the Soviet Union for its oil products compares favourably with the world prices. Exactly how much it is lower than the world prices is, however, not revealed. The agreement does not provide for any imports of crude oil from Russia.

Mr. K. D. Malaviya, the Union Minister for Oil, addressing a Press Conference after the signing of the agreement, indicated that the Government did not rule out a rate war with the existing oil companies engaged in the marketing of oil products in this country. He said he would supply petroleum products to the Indian people as cheaply as possible.

REVISION OF REFINERY AGREEMENTS ?

Meanwhile, the Government of India, it is understood, is having some difficulty with the three oil companies in the country over the refining of the Russian crude which is reported to be available against payment in Indian rupees at a discount of about 20 per cent over the world price. These companies, having refused to refine the Russian crude on the plea that they have already entered into long-term contracts with their suppliers on the basis of their refinery agreements, have offered to get fresh supplies of crude oil from the Persian Gulf countries at somewhat lower rates than hitherto—7½ per cent lower than previously, according to Press reports. The savings thus effected (approximately Rs. 3 crores) are to be handed over to the Central Exchequer.

The reaction of the Government of India to this proposal is not immediately available. But this controversy over the import of Russian crude and its refining by the existing refineries in India has brought to the forefront the issue of the revision of the agreements signed by the Government of India with the Standard Vacuum, Burmah-Shell and Caltex oil refineries. The Government holds that these agreements are out-dated and require wholesome revision, especially in regard to the following four clauses:

1. The oil companies will take such steps as may be necessary to ensure that the Indian company will train an adequate number of Indian personnel in refining operations for employment in the refinery and, subject to the right of the management to select personnel and to judge what is necessary for the efficient and economic working of the refinery, will employ Indians in all capacities to the extent that qualified Indian personnel is available from time to time.

2. To the extent that the Indian company and/or the oil companies do not require them for their own purposes, and to the extent that it may be reasonably practicable to do so without prejudice to the interests of the Indian company, the oil companies will ensure that the Indian companies will make available at reasonable prices to those engaged in the manufacture of chemicals such by-products as they may require, provided:

   a. that these by-products can be made available without added capital investment, and

   b. that should materials be manufactured therefrom which the Indian company and/or the oil companies wish to purchase, these companies shall have a prior right to purchase at reasonable costs.

3. The Government will permit the oil companies to establish the prices of the refinery products from time to time at any level not higher than that at which they sell, or could make available for sale equivalent imported products, provided that subject to the foregoing principle, the oil companies shall consult the Government before they alter the price of any of the product.

4. The existing duty protections on oil products manufactured in India will be maintained for a period of ten years from the commencement of full-scale refinery operations or until December 31, 1965, whichever is earlier. The Government will grant for a period of 10 years from the date when the full-scale refinery operations commence or until December 31, 1965, whichever is earlier, a duty protection by maintaining an import duty on motor spirit of two annas per Imperial gallon higher than the excise on locally manufactured motor spirit.

The Government, as it has already declared, has no intention to amend or modify these agreements unilaterally. It will do so only with the consent of the oil refineries concerned.

RAW COTTON CRISIS AHEAD ?

The Government of India, it is understood, has under serious consideration the supply position of raw cotton. It is feared that unless imports are further liberalised and exports curtailed, the country may face an acute shortage of the "silver fibre" next autumn, leading to rise in prices of cloth, especially those of the coarse and medium varieties.

The all-India fourth estimate of cotton for 1959-60 reveals that area under this crop has gone down by 0.45 million acres compared to the previous year, due mainly to unavourable weather conditions at the sowing time. Trade estimates put the 1959-60 output at only 42.70 lakh bales, as against the corresponding and final forecasts of 52.21 lakh bales and 51.43 lakh bales respectively for the previous year. This sharp drop in production could have been offset to some extent had the carry-over been larger. That too, however, is substantially lower compared to the last year—20.04 lakh bales against 22.65 lakh bales. Consumption, on the other hand, is likely to be higher.

Though the Government of India has already arranged for imports of four lakh bales of cotton from the USA under PL 480, besides the customery imports from Sudan and Egypt, the situation, obviously, calls for rethinking on the part of the Government. Supplies of medium and long staple cotton may be sufficient, but those of short staple varieties are likely to run short considerably. The area under short staple cotton in 1959-60 has been lower by 0.5 million acres at 2.7 million acres.

BRIEFS

A UN Technical Team is expected to visit this country in the near future to advise the Government of India on the question of raising fertilizers output under the Third Five-Year Plan.

*

The Union Food Ministry will be shortly sending a three-man team to Canada to study the handling of wheat in that country.

WORLDGRAM

India

Export Promotion: As a measure of export promotion, the Government of India proposes to grant drawback of duty on "Steel Clips type 'U' for railway track" at the rate of Rs. 52 per ton of steel content. In this respect, the Government have issued a draft notification inviting objections and suggestions, if any, by July 26, 1960.

*

Brown Wrapping Paper from Arecanut Husk: It has been revealed in the investigations conducted recently at the Forest Research Institute, Dehradun, that about 10,000 tons of Arecanut husk available in the country and at present being discarded as waste may be turned into useful raw material for the production of brown wrapping paper. Sulphate pulps prepared from the husk have been shown to possess satisfactory strength properties which can be further improved by mixing the pulp from Arecanut husk with jute or bamboo pulp. Arecanut palm is grown in large groves in the moist hot regions of India like Kerala, Mysore, Bengal, Assam and the Nilgiris and other hills of South India. The raw material received from the Indian Central Arecanut Committee, Kozhikhode, was directly used for the pulping experiments and as a result of that a representative sample was converted into dust for proximate chemical analysis. Unbleached pulps in 40.4 to 57.5 per cent yields can be prepared from Arecanut husk by the sulphate process using 13.5 to 13.3 per cent chemicals for cooking at 170°C for four hours. Although the strength properties of the pulp sheets are not satisfactory for the production of Kraft wrapping paper they are satisfactory for the production of brown wrapping paper. The strength properties are considerably improved if the Arecanut husk pulp is mixed with jute or bamboo pulp.

*

Successful Trial Runs at Timber Treatment Plant: Successful trial runs have now been completed at the timber treatment plant installed at the Hindustan Housing Factory, New Delhi. The plant, which was installed at a cost of Rs. 72,000, employs pressure treatment and treats about 175 cubic feet of timber in two hours. It comprises a treatment cylinder, storage tank, mixture tank and charge, pressure and vacuum pumps. Four types of preservatives are used. Those are: (1) Oil type such as coal-tar, creosote or heavy creosote. This type is commonly used in India for the treatment of sleepers. (2) Water soluble 'fixed' or arsenic comacid cupric chromate, copper chrome, or arsenic composition. This type too is commonly used in India for constructional work. (3) Organic solvent type such as zinc and cover napethenate or DDT. (4) Water-soluble 'leachable' type such as sodium fluride, boric acid or zinc chloride. The timber treatment is done by the Lowry process.

U.S.A.

Employment Figures in June: A total of 68,579,000 Americans had jobs in June, an all-time high employment level. The month's figure was 1,371,000, higher than May's. Record number of teen-age and college-age youths, their current school terms over, joined the labour force in June seeking summer jobs. Most of these young people found such work swelling the employment totals. Labour Department experts in announcing the employment figures called America's greatly expanding teen-age population a harbinger of a changing pattern for the next decade which will see youth predominance in the labour force. So substantial was the upsurge in the number of youthful job applicants, these experts said, that the effect was to increase the overall unemployment as well as employment totals. While more than half of the summer job seekers found work, to bring total employment up, the remainder caused the unemployment total to rise. The June unemployment figure was about 4.4 million.

U.S.S.R.

New Type of Crawler Tractor: The first batch of new Soviet "T-75" crawler tractors have come off the main conveyor of the Kharkov tractor plant. Reporting this event the issue of the newspaper 'Selskaya Zhizn' (Life in the countryside) emphasises that the manufacture of this new machine signifies the transition of the Soviet tractor building industry to the construction of high-speed tractors. The "T-75" can do three to nine kilometres an hour across the field. It is a high-powered model with a 75 h.p. engine and a number of appliances facilitating the work of the driver. This year the Soviet Union will build 27,000 tractors more than last year. This will be achieved by enlarging the operating industrial capacities. Now in one year the USSR builds as many tractors as are available in all of Italy.

*

Trade with Finland: An announcement has been made that negotiations on additional reciprocal goods delivieries between the USSR and Finland for the year 1960 to the total sum of 55 million roubles have been successfully concluded.

*

Trade Agreement with Canada: The Canadian House of Commons has passed a resolution approving the ratification by Canada of the protocol on the resumption of the trade agreement between Canada and USSR. Submitting this resolution, the Minister of Trade stressed that conditions have now been created for trade between the two countries and that the beginning had been laid for its development in a spirit of goodwill and co-operation. He declared that the Canadian Government hoped the fixed levels of trade would not only be attained but even surpassed.

United Kingdom

Loan to Pakistan: Britain has offered an immediate loan of £5 million to the Government of Pakistan, it was stated in a written reply in the House of Commons on July 11. Major Patrick Wall asked Mr. C. J. M. Alport, Minister of State for Commonwealth Relations if he had any further information about the discussions on financial assistance to Pakistan. Mr. Alport replied that the United Kingdom Government has offered an immediate loan to the Government of Pakistan of £5 million to be made under Section 3 of the Export Guarantees Act. The intention is that this loan will be used to pay for imports from the United Kingdom to be agreed between the two Governments. The offer is intended to assist the Pakistani Government to make an early start on industrial development projects incorporated in their Second Five-Year Plan.

*

Financial Aid to Mauritius: Britain is to grant financial aid of more than £6,250,000 to assist the economy of Mauritius. This was made known in the House of Commons on July 14, in a written reply from the Colonal Secretary which also promised the colony further aid, if necessary, after a review of the economy of Mauritius some 18 to 24 months hence.

Steel Output in June: Production of steel in the United Kingdom in June was at a weekly average of 466,400 tons, compared with 475,400 tons, in May and with 383,500 tons a week in June 1959. Seasonal influences affected production in June. Seasonal adjusted figures calculated by the Iron and Steel Board show that in June production actually made a recovery from a temporary setback in May. And production in the first half of this year maintained a moderate rate of advance after a substantial upswing during 1959. Actual output in the first half of this year amounted to 12,390,000 tons which is in line with the total expected for the year as a whole. It represents an annual rate of production of 24,772,000 tons.

*

Indian Order for UK Electrical Equipment: An order worth about £500,000 for rectifiers and transformers for the Hindustan Aluminium Corp. has been awarded to the English Electric Company, it was announced by the firm in London recently. The equipment to be shipped to a new plant in Uttar Pradesh near the Rihand power station next spring, will supply direct current for aluminium smelting. Rihand is intended as the main source of the large amount of electric power needed for aluminium smelting. The output of the new plant will be available for economic developments under India's Third Five-Year Plan. It is expected to be used mainly for consumer goods. The rectifiers and transformers in this new work will be made at the Stafford works of English Electric. The company is at present fulfilling a contract worth about £1,500,000 for similar equipment to supply direct current power for fertilizer and heavy-water production at Nangal. English Electric is also supplying the generating plant and water turbines for the Rihand power station. The new contract also includes control gear, switch gear, and auxiliaries.

Yugoslavia

Production of Copper, Zinc and Lead: The production of copper in Yugoslavia is to increase 2.5 times, and of zinc 2.7 times in the coming five year period from 1961 to 1965. Over the same period the production of lead is to be increased by 50 per cent, while considerable increase in production of some other non-ferrous metals are also expected. As a result, Yugoslavia will be producing 75,000 tons of copper annually in 1965 i.e. 45,000 tons more than in 1959. The investments, which would involve 130 million dinars, should, among other things, contribute to the rapid development in motor, metal manufacturing, chemical and shipbuilding industries.

*

Exports of Footwear: The production of footwear in Yugoslavia is steadily increasing. This high level of production had made it possible for Yugoslavia to export considerable quantities of footwear. Over 2 billion dinars worth of footwear was sold abroad during 1959 as against 1.7 billion dinars worth of these goods in 1958. Exports of footwear accounted for 50 per cent of the entire Yugoslav export of leather goods in 1959. From a former exporter of raw materials, Yugoslavia has become exporter of finished footwear products.

Australia

University Company to Aid Industrial Research: A company formed in the University of New South Wales is assisting Australian industries to overcome research and developmental problems, and will help in the exploitation of patentable inventions made within the University. The company, Unisearch Limited, is receiving support from manufacturers and has already carried out a number of research projects for large and small industries. It is offering the service of more than 600 members of its academic staff. Although similar organisations work in conjunction with universities in the United States of America, Unisearch Ltd., is the first enterprise of its kind to be esablished in the British Commonwealth.

U.A.R.

Iron and Steel Industry: Heavy industry has been given special care in Egypt. The Helwan Iron and Steel Factories started operation in the middle of 1958 with one high furnace. The second furnace has now been set in motion which doubled the plant's previous 400-ton daily output figure. It is reported a third high furnace will also be constructed thereby developing production up to three quarter million tons a year. Appropriation totaliing £E. 56 million had been provided in the Second Five-Year Industrialisation Plan for the develoument of the Iron and Steel Industry, apart from £E. 60 million for metal industries. The second high furnace on which experiments had been conducted has started its production and the total daily produce of both the first and second furnaces will reach 800 tons a day.

Kenya

New Oil Company to be Formed: A new company Caltex Oil (Kenya) Ltd. is to be formed to control the ocean terminal at Mombasa and all other oil installations in Kenya at present operated by Caltex (Africa) Ltd. The company will have headquarters in Nairobi. Marketing interests held by the present company will be taken over by the new Kenya concern. Caltex (Africa) Ltd.'s operations in Kenya are at present directed from a district office in Nairobi. The new company will take over the management of activities and of Caltex staff now employed in Kenya.

I.F.C.

Investment in Italy: The International Finance Corporation announced recently a commitment to invest US $960,000 (repayable half in US dollars and half in Italian Lire) in Margini Meridionale S.P.A., which is establishing a new plant for the manufacture of electrical equipment in the developing area of Southern Italy. This company is a subsidiary of Magrini S.P.A. of Bergamo, Italy. The new company will build a plant in Casavatore, near Naples, which will manufacture low and medium voltage circuit breakers under a Westinghouse sub-licence. These items will be for the domestic market and for export. The total cost of the project is estimated at US$3.5 million equivalent. IFC's investment will be in income notes, half in US dollars and half in Italian Lire, maturing between 1976 and 1979, carrying no fixed interest. IFC will receive in Lire 6 per cent interest contigent on profits and additional payments related to profits. IFC has the right to convert the notes into common stock.

World Bank

West German Loan to World Bank: The International Bank for Reconstruction and Development has arranged to borrow the equivalent of approximately $240 million in US dollars and Deutsche marks from Deutsche Bundes Bank (Central Bank of Germany). This is not only the largest borrowing ever undertaken by the World Bank outside the United States, but is its largest borrowing anywhere since its issue of $250 million of bonds in the United States in the summer of 1947. The new debt will carry interest at the rate of 4½ per cent per annum and will have a final maturity of 12 years.

NEWS IN BRIEF

INDIAN

It is reported the procedure for granting licences under the Industries (Development and Regulation) Act has been further simplified to ensure quicker disposal of applications.

*

A further rise in the number of newly-formed companies was recorded in 1959-60, according to statistics now available. The number of new companies registered during 1959-60 totalled 1,452 as against 1,095 companies formed during the previous years.

*

A Central Employment Exchange has been opened at the Headquarters of the Directorate General of Resettlement and Employment, 18, Gurdwara Road, New Delhi.

*

An arrangement for the import of films from the U.S.A. was signed recently by the Government of India and the Motion Picture Export Association of America. The arrangement, which will be in force till March 1962, provides for utilisation, inter alia, of earnings of U.S. films, production and co-production of films in India and also for investment in Indian Government securities.

*

It has been announced by the Madras Government that they would be floating a new medium-dated loan by August 1960. The medium-dated loan to be floated by the Government would be of the order of Rs. 10 crores. The terms of the loan would be announced in August.

*

India and Nepal have exchanged drafts of the proposed treaty of trade and commerce between the two countries. The present treaty which governs the trade relations between Nepal and India is due to expire in October this year.

*

It is reported two paper mills will shortly be set up at Baramulla and Kathua (Jammu). The Kathua paper mill would use coal from Kalakot and the Baramulla plant would use lignite as fuel.

*

The Government of Rajasthan have alloted Rs. 25 lakhs for distribution as loans under the middle-income-group housing scheme during current financial year.

*

An agreement for the import of 1.5 million tons of Soviet petroleum products, mostly kerosene and diesel oil, during the next four years at prices considerably cheaper than those charged by the British and American oil companies, was signed in New Delhi recently by India and the U.S.S.R.

*

The Development Loan Fund has announced approval of a $1.6 million loan to the Union Government to finance the foreign exchange cost of installing additional generating capacity in the thermal electric power plant of Kanpur.

*

India suffered an unfavourable balance of 29.5 million Malayan dollars in her trade with Singapore and Federation of Malaya during the first five months of this year.

FOREIGN

An Anglo-German consortium has initiated a DM 800m agreement to build a big integrated steelworks at Azna in Northern Persia. British partner in the deal is the Metallurgical Equipment Export Company (Meeco).

*

Discussions have taken place in Sao Paulo between directors of Unilever and representatives of Companhia Gessy Industrial S.A., the Brazilian toilet soap and toilet preparation makers. The possibility is seen of a linking up between Unilever and the local interests.

*

The U.S. Export-Import Bank has granted two loans totalling $52m to Japan. A loan of $40m is to finance the purchase of raw cotton from the U.S. The second loan of $12m is earmarked for expansion of the Japanese motor car industry.

*

A new scheme for international express goods train linking Europe's principal centres of production and consumption is expected to start later this year, it was announced recently by the International Union of Railways.

*

Vercenigde Machine Fabricken NV., Holland's largest engineering company, has received an order worth several million guilders from East Pakistan for the supply of a complete sugar factory with an ultimate daily capacity of 1,500 tons of cane.

*

Japan's exports during the first six months of 1960 amounted to $1,824 m an increase of 19.6 per cent over the first half of last year. Imports during the first six months totalled $2,243m. a rise of 29.1 per cent over the corresponding period of 1959.

*

The first international convention of the Investment Club movement was opened recently in London by Mr. David Moate, President of the British National Association of Investment Clubs.

*

Larger sales of Australian mutton to Japan this year are forecast by Mr. D. C. Cowell, lamb producers' representative on the Australian Meat Board. One leading Japanese company predicted that Japan would import more than 10,000 tons of mutton this year.

*

The Thai Cabinet has approved a draft Bill granting special privileges to investors in Thailand. The Bill assures investors that the Government will not set up an industry which will compete with them and will not take over the industries.

*

Singapore's Minister of Finance and the Shell Company have signed an agreement establishing a $M40 million new oil refinery which Shell is building on the nearby island of Pulau Bukon, the site of the present Shell installations.

*

Iscor, South Africa's State-owned steelworks with mills at Pretoria and Vanderbijlpark, is expected to announce shortly an expansion plan involving the erection of a new mill to raise ingot production to about 4 million tons annually by 1970.

UNDER SECRETARY 30 JUL 1960 PUBLIC DEPARTMENT

COMPANY AFFAIRS

CALTEX: HIGHER OUTPUT AND LOWER PROFITS

The Directors of the Caltex Oil Refining (India) Ltd. have decided not to pay any dividends during the year to December 31, 1959 in view of the fact that the Company is planning expansions in the near future. The construction of two new tanks was completed during the year under review. One of these tanks will be used for the storage of low sulphur and fuel oil, a special product produced by the refinery for use in India's steel mills. The second tank will provide the storage space for the increased production of automotive diesel oil. The Directors had applied to the Controller of Capital Issues for the issue of Preference Share Capital to the extent of Rs. 1.5 crores to implement the agreement executed with the Government of India regarding the establishment of the refinery. The consent order thereof is still awaited by the Company.

The profits of Rs. 1.55 crores for the year under review decreased by 9.6 per cent as compared with 1958, in spite of the fact that there was an increase in the quantity of crude processed and there was a fall in the operating expenses. Two factors were mainly responsible for less favourable financial results. In the first instance, the Directors decided, with effect from October 1, 1959, to surrender to the Government of India, the Company's right to duty protection on motor spirit which, in terms of the Letter of Agreement governing operations of the refinery, represents two annas per gallon. This will bear more heavily on the earnings of future years. Secondly, the Government of India issued an order limiting incidence of duty protection accorded by the Agreement referred to above to the estimated production figures. For the purpose of applying this ceiling, the excise authorities include quantities that are exported from India under bond, and on which duty protection would not in any case have been received. The Directors do not agree that the order imposed reflects the meaning of the Letter of Agreement.

The Company has been progressing with its plans regarding Indianization of its staff. The training of Indian employees continued satisfactorily so that the number of overseas personnel decreased from 47 at the beginning of the year 1959 to 30 at the end of it.

RENOVATION IN MINERVA MILLS

An improvement in the trading conditions during 1959 anticipated by the Directors of the Company, did not materialise during the early part of the year. The prices of coarse and medium varieties of cloth continued to be unremunerative till the middle of the year. It was only during the second half of 1959 that the markets revived and the margin began to improve. Although the working of the Company was not quite satisfactory, the deterioration which set in about two years ago, was definitely halted. The management of the Company is now concentrating its efforts on putting the mills on a sound footing. Some of the measures adopted for this purpose are (i) switching over a substantial part of the production from coarse and medium to super-fine counts and working the spinning department temporarily on three-shift basis so that the workers rendered surplus may be absorbed. (ii) The Company is preparing for a further rationalization to the maximum extent possible in the various departments of the mills. (iii) The programme of renovation and modernization of plant and machinery is also being pursued. The Company has paid ex-gratia compensation to the workers who were rendered surplus and submitted voluntary resignations.

The loss during the year to Decembtr 31, 1959, which was to the extent of Rs. 14.284, has been carried forward along with the previous year's debit balance of Rs. 7.73 lakhs to the profit and loss account. The debit has been finally eliminated by transferring a like amount from the General Reserve. The Directors have pointed out that the provision already made for depreciation on building and machinery up to December 31, 1956, is more than adequate to cover normal depreciation up to December 31, 1959. In view of the losses incurred by the Company, no dividends were declared by the Directors.

LAKSHMI MILLS

As has been the fate of most of the textile mills, the first half of 1959 for the Lakshmi Mills Ltd. was somewhat depressed. There was a definite improvement after August 1959. Scarcity conditions in respect of Indian cotton greatly handicapped the mills' spinning programme. The President of the Board of Directors, Mr T. T. Rathnasabapathy Pillai has pointed that the electricity tariff has gone up by more than 10 per cent and the wage bill is higher due to the increased cost of living index. In view of these facts, the profits earned by the Company can be considered quite satisfactory.

The net profit for the year to March 31, 1960, after providing for depreciation and other adjustments comes to Rs. 51.47 lakhs as against Rs. 37.11 lakhs during the previous year. The Directors have recommended the payment of a dividend for the year at the rate of 20 per cent on the paid-up capital, which will absorb Rs. 21.30 lakhs. The Directors have pointed out that the Central Government agreed to the inclusion of Sri D. Jayavardhanvel as a partner in the Managing Agency firm of Messrs. G. Kuppuswamy Naidu & Company, and have also approved of the reappointment of the same as Managing Agents of the Company for a further period of five years from August 16, 1960.

COMMODITY NEWS AND NOTES

WORLD PRODUCTION OF TIN

According to the latest edition of the International Tin Council's Statistical Bulletin, world mine production of tin rose from 11,700 tons in February to 13,100 tons in March. Total production during the first quarter of this year was 36,600 tons compared with 37,900 tons in the last quarter of 1959. World consumption of tin in the first quarter of this year is estimated by the Statistical Bulletin at 45,200 tons, the highest figure for any period of three months during the past three years.

WORLD COTTON SITUATION

According to a review of the World Cotton Situation by the International Cotton Advisory Committee, the year 1959-60 may well go down in the annuals of cotton as a season of records. Production, consumption and trade were all at peak levels, while there had been a noticeable recovery in cotton prices over the previous year. This aggregate analysis, the ICAC noted, could conceal the true state of affairs for, despite a record world output, smaller crops had been harvested in many countries. While production was at its peak, there was scarcity in the midst of plenty, and some countries were experiencing difficulty in obtaining sufficient cotton to meet the needs of their domestic textile industries.

WORLD SUPPLY OF VEGETABLE OILS

Commonwealth countries accounted for 25 per cent of the total estimated world supply of vegetable oils for 1959, India being the largest Commonwealth producer, says the Commonwealth Economic Committee's Review of the Vegetable Oils and Oilseeds Industry, recently published in London. Commonwealth production was about the same as in previous years. Of the three main groups of oil, the Commonwealth accounts for the largest share in the edible-industrial group, where it provides nearly two-fifths of the total supply; for edible oils it accounts for one-fifth, and for industrial oils for one-quarter, the report says. As a result of good crops harvested in 1958-59, Indian oilseed production was nearly 40 per cent greater in terms of oil equivalent than before the war. Indian groundnut, sesame, rapeseed, and castorseed crops were all considerably greater than in the previous season, but harvests in 1959-60 seemed likely to be generally lighter, the report continues. "Commonwealth net exports showed increases in edible oils and, contrary to the general trend, in the edible-industrial oils; this was the result of large shipments of Indian groundnut oil and a marked recovery in supplies of copra and coconut oil from Ceylon. In the industrial group, however, larger Indian oil surpluses did not entirely offset the fall in Canadian linseed exports," the report says. Dealing with the position of exports from Commonwealth countries, it is stated that since 1955 there has been a fall, largely as a result of a reduction of supplies from India and the decline in shipments of copra and coconut oil from Ceylon—both because of rising internal demand.

In the section dealing with groundnuts, the report says: "The Commonwealth is of outstanding importance in groundnut production, accounting in 1954-55 to 1958-59 for an average of no less than 46 per cent of total world output. "India is the world's largest groundnut producer, although in recent years the quantity of the crop entering international trade has been small. The Indian Government has made very marked efforts in recent years to increase the output of groundnuts in order to satisfy the rapidly rising internal demand for edible oils, and the success of these measures is revealed in the record 1957-58 and 1958-59 harvests.

MAXIMUM PRICES FOR WOOLLEN YARN FIXED

The Government of India have statutorily fixed maximum prices for the different categories of woollen worsted yarn under the provisions of the Industries (Development and Regulation) Act, 1951. The prices have been fixed for worsted hosiery yarn of counts ranging from 2/12s to 2/48s spun from various grades of wool tops from 48/50s to 70s. These prices will be effective from July 2, 1960. During the recent past, manufacturers of woollen hosiery have been experiencing considerable difficulties in securing adequate supply of hosiery yarn at reasonable prices. This question has been under Government's consideration for some time now and the present step of fixing statutory prices has been taken to help the manufacturers of woollen hosiery. Towards the end of last month, the Government had announced their decision to grant ad hoc additional licences for import of raw wool and wool tops to manufacturers of woollen hosiery yarn. Licences will be subject to the following conditions:

i. Raw wool and wool tops and shoddy wool and rags imported against the licence will be exclusively used for the manufacture of hosiery yarn or shoddy yarn

ii. Sale of hosiery yarn or shoddy yarn manufactured out of raw wool and wool tops imported against the licences can be effected only on the directions of the Textile Commissioner, Bombay and at prices not exceeding those to be specified by him.

iii. In case of short delivery of hosiery yarn or shoddy yarn manufactured from the raw wool and wool tops imported against the licence, double the quantity of raw wool and wool tops or shoddy wool will be deducted from the allocation which might be made to the licensee in the next half year. This will be without prejudice to any other action which may be taken for contravention of the condition imposed on the licence under the ITC regulations.

Company Meeting

TATA LOCOMOTIVE AND ENGINEERING COMPANY LIMITED

Statement of Shri J.R.D. Tata, Chairman of Tata Locomotive & Engineering Co. Ltd., for the year 1959-60 (Abridged)

THE YEAR'S RESULTS

Production of all the Divisions has exceeded targets and the sales of the Company's products have been higher than at any time in the past. New construction and expansion have proceeded according to schedule. The results of the year have enabled your Directors to declare a gross dividend of 12.5% on ordinary shares. The net dividend in the hands of the shareholders after deduction of tax will be 8.75%.

PROFIT AND APPROPRIATIONS

The turnover for the year under review exceeded the previous year's figure by about Rs 1.8 crores; and the net profits by Rs. 47 lakhs after providing Rs. 48 lakhs more for depreciation. The amount carried to the Development Rebate Reserve has been reduced from Rs. 74.62 lakhs to Rs. 14.04 lakhs because the value of new fixed assets installed was much lower than in the previous year. The large increase in taxation, from Rs. 13.25 lakhs to Rs. 93.30 lakhs, was due partly to higher profits and partly to the reduction in development rebate.

EXPANSION AND DIVERSIFICATION OF ACTIVITIES

Arrangements for the manufacture of paper & pulp making machinery and power shovels have been completed and production will commence shortly.

The additional capital requirements for both the projects to manufacture paper & pulp making machinery and the P & H power shovels will be met from the internal resources of the Company.

THE AUTOMOBILE DIVISION

This year has been a period of outstanding activity and success in this Division. It is gratifying for me to record that, as anticipated in my speech last year, we have fully discharged our commitment to establish in four years the manufacture of Tata-Mercedes-Benz vehicles, according to the phased programme approved by Government in 1954-55. Members will be gratified to note the findings of the Ad Hoc Committee (Automobiles) on the progress and achievements of the Company, extracts from which are reproduced in the Annual Report. Not only have we kept strictly to the original schedule for developing indigenous manufacture, but side by side we have rapidly and systematically expanded the output and maintained the excellent quality and performance of the vehicles for which the Mercedes-Benz name is rightly famous all over the world.

Despite the four-fold rise in the output of Tata-Mercedes-Benz vehicles, the demand has far outstripped supplies. With the industrial and agricultural development of the country, the requirements of vehicles for road transport will rise further year by year. Your Directors feel, therefore, that it is in the interests of the Company as well as of the country at large to expand the output of vehicles further as rapidly as possible. With this in view, a major scheme for increasing the output of Tata-Mercedes-Benz vehicles is in hand and proposals will shortly be placed before Government. Under this scheme the capacity of the Automobile Division will rise to 24,000 vehicles per year with an indigenous content of over 90%. The capital expenditure involved will be substantial and your Directors will, in due course, put up proposals for meeting it.

In my speech last year, I had referred to the scheme submitted by the Company to Government for the manufacture of the DKW "Junior" car. Although no decision has been announced as yet by Government, two important statements on the subject have been made public in recent months. The first is the report of the Ad Hoc Committee on the Automobile Industry published in January this year. While making no specific recommendations as to the selection of the make of car to be manufactured or the agency to be entrusted with the task, the Committee have recommended that the manufacture of a low cost car should be undertaken in the country and have indicated that the choice would lie between five proposals, including Telco's, amongst the twenty-five proposals received.

One important feature of the Committee's Report is that they have expressed themselves clearly against the project being undertaken in the Public Sector. At the end of March 1960, the Minister for Industry, in the course of a debate in the Lok Sabha, was reported by the Press as having announced that "a car of the people to be manufactured by the people, for the people" would soon be produced. His somewhat cryptic statement was universally interpreted in the Press as meaning that the car would be made in the Public Sector, which seemed to be confirmed by his further statement that Government would try to take the help of the Private Sector for the production of component parts from their existing installed capacity.

I am not sure I understand clearly what all this means. Possibly, Government have not made up their own mind on the subject. But if it is true that Government contemplate establishing the manufacture of a small car by the State and, if, as rumoured, the two reasons advanced for such a proposal are that the cars proposed by established manufacturers are too expensive and that Government find it difficult to choose between the many projects offered, I can only express concern and regret in regard both to the proposal and to the reasons advanced for it.

With the existing automobile industry able and willing to undertake the manufacture of a small car, there can be no possible reason for Government to allocate such a project to the Public Sector except on grounds of socialist ideology or dogma, which Government spokesmen, including the Prime Minister, have repeatedly and unequivocally disavowed as playing any part in their policies.

On the question of the price of the car, I trust Government will take note of the Ad Hoc Committee's view that such a car has to be cheap not only in initial cost but also in running and maintenance cost. When a user buys a car, he really buys a certain number of miles of road transportation. It is no doubt possible to make a very light and low powered car for, say Rs. 1,000 or Rs. 1,500 less than the initial cost of the DKW we have proposed or similar cars, but if, such a car is capable of only half the trouble-free mileage that a more sturdy car would give, or, to put it differently, if the cost of repairs and spare parts is twice as high for the same mileage in the case of the lighter car, then the unfortunate user will in fact have, over the life of his car, paid not a lower price but a much higher

price. Families are, on the average, much larger in India than in Europe, and road surfaces are much inferior and therefore more destructive. I sincerely hope that if a small car is to be made at all, Government will approve of a reasonably roomy car, modern in design and rugged in construction, with a long and economical life built into it.

In any case, I trust that in arriving at a decision concerning any scheme for the manufacture of a cheap car, whether in the State or Private Sector, the Government of India will keep in mind, among other things, its implications in terms of foreign exchange expenditure for capital as well as current account. The Ad Hoc Committee (Automobiles) has rightly stated that the development of a new car presupposes that extra foreign exchange will be available and that the programme of development and expansion of the existing units will not be affected. They go further and recommend that only after certain other priority claims of the automobile industry and road transport have been fully met should any allocation of foreign exchange be made for the new programme. I trust these recommendations will find acceptance by Government.

For the basic raw materials, namely, rolled steels of special quality, we are unfortunately still dependent to a large extent on imports. After the Rourkela steel plant goes into full production, about 65 to 70% of our requirements of steel should be available indigenously. But even thereafter materials worth about Rs. 700 per vehicle will still have to be imported. In this respect, what is true of the automobile industry is, in the main, true also of other engineering industries.

It is unfortunate that up to now Government and the Planning Commission have laid so much more stress in regard to steel on the quantitative rather than the qualitative aspects of the country's requirements. The rapid industrial development and the economic strength of a country depend not so much on total self-sufficiency in ordinary, carbon steels but in the capacity and range of steel processing industries which themselves depend on quality steels and on machine tools and allied equipment. The automobile industry of India and other precision engineering industries will reach maturity and will cease to be a drain on foreign exchange resources only when all the raw materials and most of the machine tools used by the industry are made in the country. I earnestly hope that our planners and Government will keep this important aspect of the question in view when planning the future of the steel and engineering industries.

LOCOMOTIVES

The Railway Board have now indicated to the Company that the Indian Railways will require steam locomotives for many years to come. While the price which has been awarded by the Adjudicator for supplies of locomotives during the period of two years up to the end of the year under review falls short of our expectations, mainly because it excludes altogether the annual bonus to the staff, which is an appreciable element in our cost of production, it is gratifying to record that the Railway Board and the Company have been able to agree on the prices of the locomotives to be supplied during the remaining period of the Agreement. The price of 325 locomotives to be delivered over a period of five years after the completion of the Agreement is still under negotiation but we have made it clear to the Railway Board that the price must be fixed one subject only to agreed escalators as, in their interest as well as ours, there must be an end to the annual bargaining and bickering as well as the unmerited criticism which has characterised supplies of locomotives in the past few years.

The price which the Company will receive will in any case be lower than the prices at which similar steam locomotives can be obtained from abroad. As we have repeatedly explained in the past, the benefit of the depreciation allowed to us through prices in the past years, now flows back to the Railway Board in the shape of lower prices, as a result of lower written down value of plant and equipment.

THE FUTURE

If continuous progress is to be achieved, we have constantly to add to our resources in engineers, administrators and craftsmen as well as in up-to-date equipment. This is a somewhat obvious truth which, however, is not always fully appreciated in our country where industrial enterprises, particularly in the State Sector, are too often visualised mainly in terms of money and machines. I am glad to say that in your Company, very special attention has been paid to this vital problem and our skilled personnel, both in shops and offices has been carefully employed, trained and developed along with our plant and machinery.

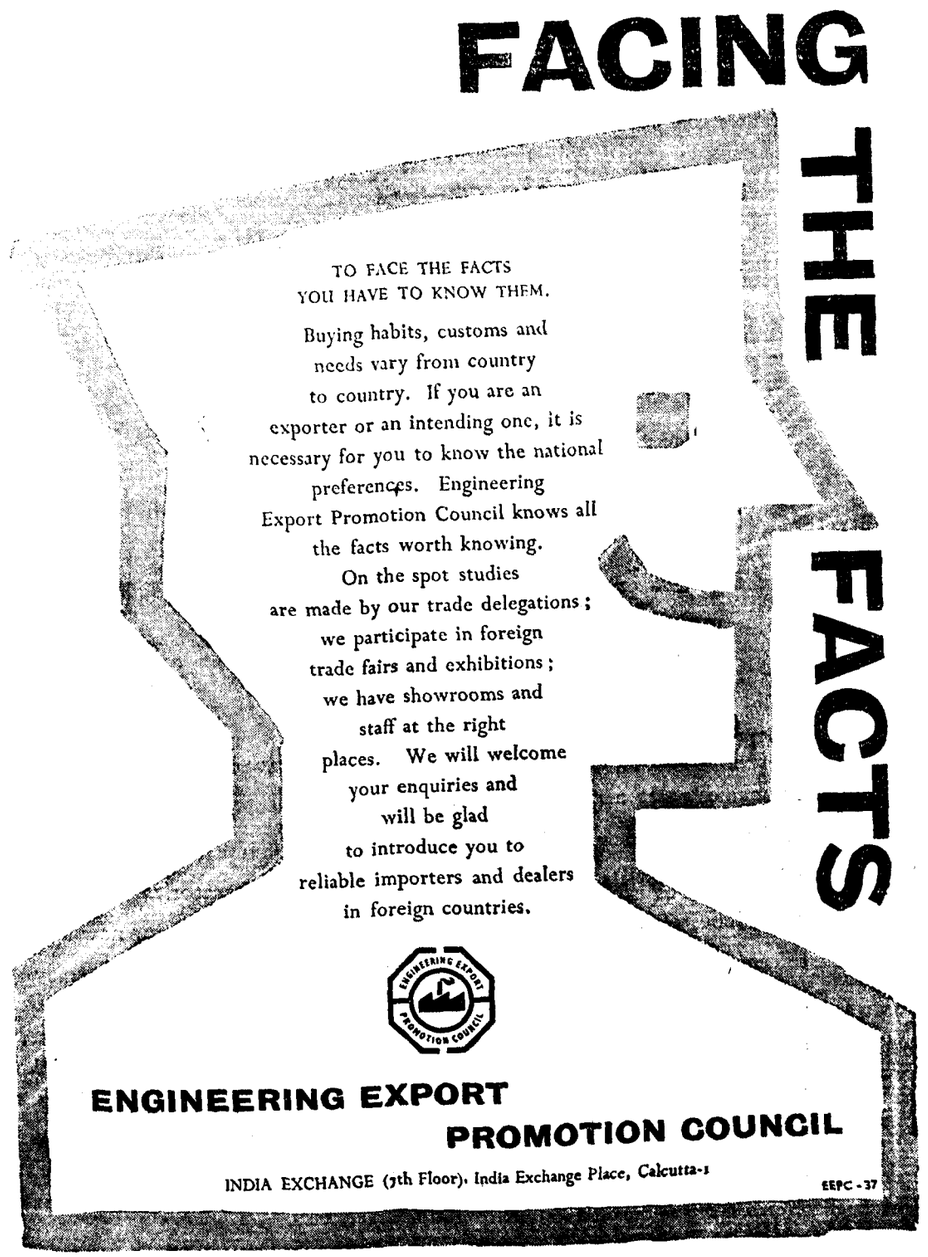
HOUSING

The shortage of housing for the Company's workers which presents a growing problem in connection with the expansion of the Company and the increasingly heavy deficit between the costs of maintaining the Colony and the rents recovered, have been a cause of growing concern. It is gratifying to note that the Government of Bihar, besides advancing housing loans to the industries in Jamshedpur, including your Company, are constructing a housing estate for industrial workers not far from the Company's Works in Jamshedpur.

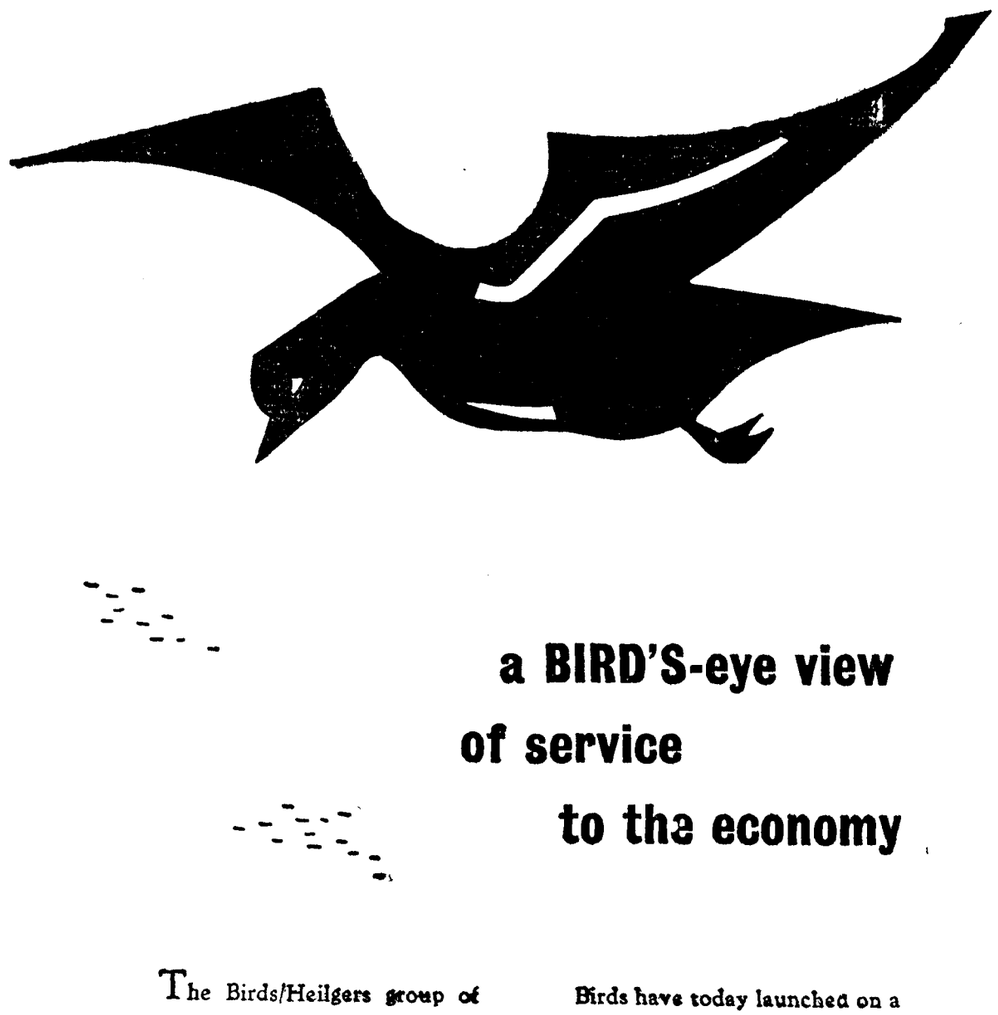
As regards the problem of the heavy burden of maintaining the Telco Township, members will be pleased to learn that in the Conciliation Settlement of 20th October, 1959, the Telco Workers' Union has agreed that "the question of increasing the rates of rental chargeable for the Company's houses under construction in the sixth and following phases of construction be separately discussed and a suitable formula should be worked out for fair rents being fixed."

LABOUR

There have been no strikes or other disturbances to production during the year except for a minor one-day stoppage in the Welding Shop.



The improvement in the industrial climate at Jamshedpur and particularly in the Telco Works is a gratifying development and we are anxious that it be maintained. On our part, we are convinced that the problems which inevitably arise in the labour field from time to time can be solved with mutual goodwill and confidence.



In the engineering industry in which we operate, capital investment per employee is the highest in India. The very modern and expensive plant and equipment installed at the Telco Works offers to the employees an opportunity almost unparallelled in this country to attain high levels of productivity. The Company's ability to provide higher wages and better amenities and facilities depends on the effective utilisation of this equipment and I hope that, in the fulfilment of this objective, we shall receive the wholehearted co-operation of the workers and their chosen representatives. It is only thus that increases in the emoluments of our workers, which are already among the highest in the country, can be maintained.

Our thanks are due once more to our General Manager and all employees, whatever their degree of direct responsibility, for the results achieved. The initiative and the work that members of our staff have put in have been principally responsible for the Company's progress which is reflected in the Report and Accounts before you.

Bombay, 9th July, 1960.

J. R. D. TATA
Chairman.

a BIRD'S-eye view
of service
to the economy

The Birds/Heilgers group of companies meet a substantial part of the country's demand for industrial raw materials like iron ore, coal, limestone, manganese ore, refractories ... provide tubewells for tea estates and factories... manufacture plants for water treatment... supply paper for a variety of uses... make jute goods and steel castings and structurals...

Birds have today launched on a programme of expansion to increase their output and service facilities... And their laboratories are constantly at work exploring new uses for their products so that they may serve India's industries better.

A symbol of industrial leadership, Birds will continue to play a vital role in helping India attain industrial self-sufficiency.

Company Notices

RYDAK TEA SYNDICATE LIMITED

NOTICE IS hereby given that a General Meeting of the Members of the Company will be held at the Registered Office, No. 4, Clive Row, Calcutta, on Thursday the 11th August 1960, at 3-30 o'clock in the afternoon to consider and if thought fit to pass with or without modification, the following resolutions, namely:—

1. **(As an Ordinary Resolution).** "That Jardine Henderson, Limited be and are hereby re-appointed the Managing Agents of the Company with effect from the 15th August 1960, on terms and conditions to be embodied in a separate agreement to be entered into between the Company and the Managing Agents, a draft whereof has been submitted to this Meeting and approved, and which for purposes of identification has been signed by the Chairman thereof."

2. **(As a Special Resolution).** "That the Articles of Association of the Company be altered in the manner following:—

(1) Articles 132 and 133 shall be deleted and the following two new Articles 132 and 133 substituted therefor:—

"132—Jardine Henderson, Limited are and shall continue to be the Managing Agents of the Company up to the 14th day of August 1965."

"133—The terms upon which Jardine Henderson, Limited hold the office of Managing Agents up to the 15th August 1960 are embodied in an agreement dated the 30th August 1957, made between the Company and the Managing Agents and the terms upon which the Managing Agents shall continue to hold office after the said 15th August 1960, shall be embodied in a separate agreement to be entered into between the Company and the Managing Agents."

3. **(As a Special Resolution).** "That, as provided in Clause 12 of the said draft agreement referred to in the foregoing Resolution No. 1, Jardine Henderson, Limited be and are hereby authorised to provide the Company with suitable furnished office accommodation at the Registered or Principal Office for the time being of Jardine Henderson, Limited in Calcutta and also, if so required by the Company, at any other place or places in which Jardine Henderson, Limited may be able to provide such accommodation, and the Company shall pay to Jardine Henderson, Limited a monthly sum of rupees seventy per one hundred square feet of such accommodation PROVIDED that the Company shall be deemed to be the licencee of Jardine Henderson, Limited in respect of any accommodation so occupied and such licence shall be deemed to determine on the fourteenth day of August, one thousand nine hundred and sixty-five being the date on which the term of office of Jardine Henderson, Limited upon re-appointment expires or until the date such term of office expires whether by virtue of the Companies Act, 1956, of otherwise whichever is the earlier PROVIDED always that the Company shall neither have nor be deemed to have any exclusive right or occupation, enjoyment or use of any such accommodation and that Jardine Henderson Limited shall always be entitled to determine the licence on giving to the Company thirty-one days' notice in writing, AND it is expressly declared that such licence is personal to the Company."

THE RELIANCE JUTE MILLS COMPANY LIMITED

NOTICE IS hereby given that a General Meeting of the Company will be held at Registered Office, No. 4, Clive Row, Calcutta, on Friday the 12th August, 1960, at 11-30 o'clock in the forenoon to consider and if thought fit to pass with or without modification, the following Resolutions, namely:

1. **(As an Ordinary Resolution)**. "That Jardine Henderson, Limited be and are hereby re-appointed the Managing Agents of the Company with effect from the 15th August, 1960 on terms and conditions to be embodied in a separate Agreement to be entered into between the Company and the Managing Agents, a draft whereof has been submitted to this Meeting and approved, and which for purposes of identification has been signed by the Chairman thereof.

2 **(As a Special Resolution)**. "That the Articles of Association of the Company be altered in the manner following:

(1) Articles 126 and 126A shall be deleted and the following two new Articles 126 and 126A substituted therefor:

"126—Jardine Henderson, Limited are and shall continue to be the Managing Agents of the Company up to the 14th day of August 1965."

"126A—The terms upon which Jardine Henderson, Limited hold the office of Managing Agents up to the 15th August, 1960 are embodied in an Agreement dated the 29th March, 1957, made between the Company and the Managing Agents and the terms upon which the Managing Agents shall continue to hold such office after the said 15th August, 1960, shall be embodied in a separate Agreement to be entered into between the Company and the Managing Agents."

(2) Article 127A shall be deleted.

3. **(As a Special Resolution)**. "That, as provided in Clause 12 of the said draft Agreement referred to in the foregoing Resolution No. 1, Jardine Henderson, Limited be and are hereby authorised to provide the Company with suitable furnished office accommodation at the Registered or Principal Office for the time being of Jardine Henderson, Limited in Calcutta and also, if so required by the Company, at any other place or places in which Jardine Henderson, Limited may be able to provide such accommodation, and the Company shall pay to Jardine Henderson, Limited a monthly sum of Rupees seventy per one hundred square feet or part of one hundred square feet of such accommodation PROVIDED that the Company shall be deemed to be the licencee of Jardine Henderson, Limited in respect of any accommodation so occupied and such licence shall be deemed to determine on the fourteenth day of August, one thousand nine hundred and sixty-five being the date on which the term of office of Jardine Henderson, Limited upon re-appointment expires or until the date such term of office expires whether by virtue of the Companies Act, 1956, or otherwise whichever is the earlier PROVIDED always that the Company shall neither have nor be deemed to have any exclusive right or occupation, enjoyment or use of any such accommodation and that Jardine Henderson, Limited shall always be entitled to determine the licence on giving to the Company thirty-one days' notice in writing, AND it is expressly declared that such licence is personal to the Company."

4. **(As a Special Resolution)**. "That consent be and is hereby accorded to McLeod Russel & Company, Limited an Associate of the Managing Agents as defined by Section 2(3) of the Companies Act, 1956, and who maintain an office at 149, Leadenhall Street, London, E.C. 3., England, for the purposes of their business of management and administration of several companies of which they are appointed secretaries and agents, acting and continuing with effect from the 1st March, 1961, until the 28th February 1964, to act as agent for the purchase in the United Kingdom and on the continent of Europe of goods from time to time required by the Company and to render services such as recruitment of technical personnel and execution of various commissions entrusted to them from time to time by the Company at a remuneration by way of an allowance calculated at the rate of ten shillings per registered loom per annum on the Company's loomage registered with the Indian Jute Mills Association payable by quarterly instalments in arrear on the last working day of March, June, September and December of each year; that no further sums whether by way of reimbursement of expenses or otherwise be paid to them as such agent as aforesaid other than interest on the balance from time to time outstanding on current account at the rate of 5 per cent per annum or such higher rate as may be agreed upon subject to a maximum rate of 2 per cent above the State Bank of India Advance Rate; that such appointment may be terminated by either party giving the other not less than six months' previous notice in writing of intention so to do.

The expenses estimated at £38,000 per annum incurred by McLeod Russel & Company, Limited in maintaining their London office are in the nature of salary and wages of personnel, insurance, rates and taxes, fuel, light, maintenance and repair of the premises, office furniture and equipment and items incidental thereto and the part which represents the proportion which may reasonably be attributed to the services rendered and work done on behalf of the Company will depend on the volume of the purchases effected and services rendered in relation to the total turnover in each year.

5. **(As a Special Resolution)**. "That this Meeting hereby authorises in conformity with the provisions of sub-sections (4) and (7) of Section 309 of the Companies Act, 1956, such authority to be effective as from the 1st April, 1961, for a period of five years, payment to the Directors to be divided equally between them in respect of each financial year of the Company (as defined in Section 2(17) of the Companies Act, 1956) of an amount equal to 1 per cent of the net profits of the Company for such financial year or part thereof computed in the manner referred to in Section 198(1) of the Companies Act, 1956."

By Order of the Board,
JARDINE HENDERSON, LIMITED
D. FORDWOOD,
Secretary,
Managing Agents,

4, CLIVE ROW,
CALCUTTA-1,
9th July, 1960.

Note: A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead and proxy need not be a member of the Company.

Explanatory statement, Memorandum of Interest and Abstract has been annexed to the copies of this Notice posted to Members.

KAMARHATTY COMPANY LIMITED

NOTICE IS hereby given that a General Meeting of the Members of the Company will be held at the Registered Office, No. 4, Clive Row, Calcutta, on Friday the 12th August, 1960, at 11-00 o'clock in the forenoon to consider and if thought fit to pass with or without modification, the following Resolutions, namely:

1. **(As an Ordinary Resolution).** "That Jardine Henderson, Limited be and are hereby re-appointed the Managing Agents of the Company with effect from the 15th August, 1960, on terms and conditions to be embodied in a separate Agreement to be entered into between the Company and the Managing Agents, a draft whereof has been submitted to this Meeting and approved, and which for purposes of identification has been signed by the Chairman thereof."

(As a Special Resolution). "That the Articles of Association of the Company be altered in the manner following:
(1) Articles 2A and 3 shall be deleted and the following two new Articles 2A and 3 substituted therefor:
"2A—Jardine Henderson, Limited are and shall continue to be the Managing Agents of the Company up to the 14th day of August 1965."
"3—The terms upon which Jardine Henderson, Limited hold the office of Managing Agents up to the 15th August, 1960, are embodied in an Agreement dated the 29th March, 1957, made between the Company and the Managing Agents and the terms upon which the Managing Agents shall continue to hold such office after the said 15th August, 1960, shall be embodied in a separate Agreement to be entered into between the Company and the Managing Agents."
(2) Article 5A shall be deleted.

(As a Special Resolution). "That, as provided in Clause 12 of the said draft Agreement referred to in the foregoing Resolution No. 1, Jardine Henderson, Limited be and are hereby authorised to provide the Company with suitable furnished office accommodation at the Registered or Principal Office for the time being of Jardine Henderson, Limited in Calcutta and also, if so required by the Company, at any other place or places in which Jardine Henderson, Limited may be able to provide such accmodation and the Company shall pay Jardine Henderson, Limited a monthly sum of Rupees seventy per one hundred square feet or part of one hundred square feet of such accommodation PROVIDED that the Company shall be deemed to be the licencee of Jardine Henderson, Limited in respect of any accommodation so occupied and such licence shall be deemed to determine on the fourteenth day of August, one thousand nine hundred and sixty-five being the date on which the term of office of Jardine Henderson, Limited upon re-appointment expires or until the date such term of office expires whether by virtue of the Companies Act, 1956, or otherwise whichever is the earlier PROVIDED always that the Company shall neither have nor be deemed to have any exclusive right or occupation, enjoyment or use of any such accommodation and that Jardine Henderson, Limited shall always be entitled to determine the licence on giving to the Company thirty-one days' notice in writing, AND it is expressly declared that such licence is personal to the Company."

4. **(As a Special Resolution).** "That consent be and is hereby accorded to McLeod Russel & Company, Limited an Associate of the Managing Agents as defined by Section 2(3) of the Companies Act, 1956, and who maintain an office at 149, Leadenhall Street, London, E.C. 3., England, for the purposes of their business of management and administration of several companies of which they are appointed secretaries and agents, acting and continuing with effect from the 1st March, 1961, until the 28th February, 1964, to act as agent for the purchase in the United Kingdom and on the continent of Europe of goods from time to time required by the Company and to render services such as recruitment of technical personnel and execution of various commissions entrusted to them from time to time by the Company at a remuneration by way of an allowance calculated at the rate of ten shillings per registered loom per annum on the Company's loomage registered with the Indian Jute Mills Association payable by quarterly instalments in arrear on the last working day of March, June, September and December of each year; that no further sums whether by way of reimbursement of expenses or otherwise be paid to them as such agent as aforesaid other than interest on the balance from time to time outstanding on current account at the rate of 5 per cent per annum or such higher rate as may be agreed upon subject to a maximum rate of 2 per cent above the State Bank of India Advance Rate; that such appointment may be terminated by either party giving the other not less than six months' previous notice in writing of intention so to do.

The expenses estimated at £38,000 per annum incurred by McLeod Russel & Company, Limited in maintaining their London office are in the nature of salary and wages of personnel, insurance, rates and taxes, fuel, light, maintenance and repair of the premises office furniture and equipment and items incidental thereto and the part which represents the proportion which may reasonably be attributed to the services rendered and work done on behalf of the Company will depend on the volume of the purchases effected and services rendered in relation to the total turnover in each year.

5. **(As a Special Resolution).** "That this Meeting hereby authorises in conformity with the provisions of sub-sections (4) and (7) of Section 309 of the Companies Act, 1956, such authority to be effective as from the 1st April, 1961, for a period of five years, payment to the Directors to be divided equally between them in respect of each financial year of the Company (as defined in Section 2(17) of the Companies Act, 1956) of an amount equal to 1 per cent of the net profits of the Company for such financial year or part thereof computed in the manner referred to in Section 198(1) of the Companies Act, 1956."

6. **(As a Special Resolution).** "That the following contract between the Company and an Associate of its Managing Agents as defined in Section 2(3) of the Companies Act, 1956, a draft whereof has for the purpose of identification, been subscribed by the Chairman of this Meeting be and the same is hereby approved and the Directors are hereby authorised to execute the said Agreement on behalf of the Company with all convenient despatch:

With The Kassipur Company Limited (an Associate of the Managing Agents) for sales of such manufactured jute goods in which the Company regularly trades or does business as may be required by the Associate as raw materials for the purpose of its business;

it being a term of the above contract that the prices at which transactions take place shall be based on rates which are not less favourable to the Company than the market rates or which are otherwise reasonable, and that payment shall be made to the Company by the Associate within one month of the date of supply or sale of goods.

By Order of the Board,
JARDINE HENDERSON, LIMITED
D. FORDWOOD,
Secretary,
Managing Agents,

4, CLIVE ROW,
CALCUTTA-1,
9th July, 1960.

Note: A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead and proxy need not be a member of the Company.

Explanatory statement, Memorandum of Interest and Abstract has been annexed to the copies of this Notice posted to Members.

Company Meeting

THE TRAVANCORE CEMENTS LIMITED

Speech delivered by the Chairman, Sri C. S. Loganathan at the Thirteenth Annual Gen ral Meeting held on 11-7-1960.

Gentlemen,

I have great pleasure in welcoming you to the 13th Annual General Meeting of our Company.

Before I proceed to review the Company's affairs during the year 1959, I would like to refer to the sad demise of two of our Directors, Messrs. A. V. George and H. D. Rajah, since we met last. We bemoan their loss and let us place on record our sincerest appreciation of the services rendered and the valuable contribution made by them towards the progress of our concern.

The Balance Sheet as at 31st December, 1959 and the Profit and Loss Account for the period from 1-1-1959 to 31-12-1959 together with your Directors' Report have been already sent to you separately. With your permission I shall take them as read.

Production and Sales: Our total turnover during the year 1959, has been less compared to the previous year. The total sales for the year was Rs. 33,33,896 and the corresponding figure for the year 1958 was Rs. 48,02,092. During the year 1959 there was some loss of production on account of the change-over to White Cement production. Being the first year of change-over to White Cement, besides the loss of production, we had to pass through experimental stages until quality production could be achieved. We can be certainly proud of the White Cement produced in our factory for its quality and I am glad to inform you that our White Cement compares very favourably with the superior quality White Cement produced in other countries and has been well received throughout India.

Due to the trade holding considerable stocks of imported White Cement on the basis of licences issued in 1958 and 1959 our sales are rather slow. In this connection, it is gratifying to note that the Central Government has now discontinued the issue of further licences for such imports and it is expected that there will be appreciable improvement in our sales without delay. I may also inform you that our Vembanad Brand White Cement is now marketed all over India and export possibilities are also being explored.

In my speech last year I had mentioned that a Central Wage Board for cement industry had been set up by the Government of India. The Wage Board has submitted its recommendations to the Government and the Government have, in accepting the recommendations, requested the cement producers to implement the same with effect from 1-1-1960. The Wage Board has recommended fair wages for the different categories of operatives and clerical, supervisory and lower technical staff. The minimum wage recommended for an unskilled employee is Rs. 91 per mensem including Dearness Allowance and the House Rent Allowance. There will be large increase in the total wages when the Wage Board recommendations are implemented, but the Govemnment have agreed to increase the retention price payable to the producers to the extent of the increase in wages.

Profit and Taxation: It may be noted from the Profit and Loss Account for the year ended 31-12-1959 that the working has resulted in a net loss of Rs. 88,787. This loss is after charging a sum of Rs. 3,85,937 towards Development Rebate Reserve in the Profit and Loss Account and without this the result would have been a profit of Rs. 2,97,150. Further, during the experimental stages of White Cement production, capacity production was not obtained and, therefore, the cost of production was more, reducing the profits. You are aware that under the Income-tax Act, a sum equivalent to 25% of the value of Plant and Machinery installed is allowed as Development Rebate and allowed as an admissible item of expenditure in the Income-tax assessment, provided 75% of such Development Rebate is charged against the profits. In order to avail of the benefit under this provision, a sum of Rs. 3,85,937 is debited in the Profit and Loss Account and taken to a specific reserve. In view of the allowance under Development Rebate, the Company has no taxable income for the year 1959.

I am glad to inform you that the relationship between labour and Management has been cordial during the year 1959. Let me thank you all for coming here today and also other shareholders, the officers, staff and workers for their valued co-operation extended to your Company during 1959.

I now move that the Directors' Report and the audited accounts for the year ended 31st December, 1959, be adopted.

NOTE: This does not purport to be a record of the pro-

The State Bank of India, through its many branches, is ready to offer help and advice to small industrialists in need of a loan. Please call on the Agent of the branch in your town for full particulars.

The Prime Minister of Ceylon

ON Thursday last was sworn in as Prime Minister of Ceylon the first woman Prime Minister of the world. Thus history was created in the island of Ceylon, and its instrument was a gracious lady who has scored a personal triumph which must have few parallels in democratic history. Undoubtedly, Mrs. Bandaranaike has risen to power on the crest of an emotional wave, partly because of the wrong that has been done to her with the assassination of her husband, and partly because of her appeal to the heart, as distinguished from the merits of the policies either of her party or any other. If, as is contended, this was a choice of policy, why was it not recorded earlier in the year? Surely here, if ever, was a magnificent personal campaign borne to success by a great personal performance.

Not, indeed, that there were no other factors on Mrs. Bandaranaike's side. The United National Party's leader, Mr. Dudley Senanyake, made every possible mistake in the campaign; not the least of these was alienating the powerful Governor-General of Ceylon, Sir Oliver Goonetilleke. Whether the Governor-General has, or has not, taken any interest in the elections, his great personal influence has obviously been thrown against the United National Party. This, to those who know Ceylon, is of some consequence. Perhaps also the absence of a positive programme of public sector development on the United National Party's platform has helped the Sri Lanka Freedom Party to win as many as 75 seats in a House of 157. It is not generally recognised that as long ago as 1950-51 Ceylon had, of all Asian countries, the highest share of public investment as a proportion of total investment in the economy. The World Economic Survey 1959 points out that the figure was 47 per cent in 1950-51 as against 31 per cent in India. Even in 1957-58 when India's

share of investment was 50 per cent in the public sector, Ceylon's share was higher at 53 per cent. In other words, a broad-based "public sectorism" has been a feature of Ceylon's economy over the last ten years. It was unwise to suggest too significant a departure from the kind of public investment which has generally been accepted. Particularly to the have-nots to whom substantial new hope has been given, much of the strength of the Sri Lanka Freedom Party comes from sources such as these.

Socialism, whether in India or in Ceylon, cannot look very different from what it has been in the last few years and no one need look with undue doubt and dismay at Mrs. Bandaranaike's return. The financial stability of Ceylon is not now in question. Equally one hopes that her external affairs and, particularly, Indo-Ceylon relations will not show any reverse. So far as India is concerned, there is a likelihood that they will show an improvement. To that end must our energies be bent.

For all these good reasons — firstly, because it is our duty to support someone who comes to office with inexperience but with strong popular support, secondly, because the principles of Ceylon's new Government are not so different in substance from our own socialist pattern of society, and finally, because there is promise of improving Indo-Ceylon relations — India should recognise that the people of Ceylon having thus spoken, their choice should be warmly and fully respected. The opportunities for goodwill and friendship are great; will they be grasped firmly on both sides?

Parkinson and Paper-Work

A VALUABLE paper read at the Third Tata Conference on Management makes the staggering revelation that the overall expenditure incurred by the Tata Iron and Steel Company on the volume of paper-work since it launched its expansion programme increased by Rs. 1.30 crores in three years. The bulk of this growth in expenditure is ascribed to the preparatory work on drawing up plans, inviting global tenders, placing and pursuing orders as well as accounting and correspondence with consulting engineers as also in connection with myriad problems of procurement, and so forth. Parkinson has made a probe into institutional growth and construction activity. But staff expansion and multiplication of paper-work are correlated processes providing mutual acceleration. An instructive chapter could be added on research into this correlation.

It would be absurd to decry all paper-work. The plain truth is that paper-work is fundamental to all creative activity in establishments at all levels. The growth in this activity will cause *mutatis mutandis* growth in the volume of paper-work. This is productive paper-work. But it does not follow that all growth in paper-work is productive. What is true of Parkinson's law on growth of staff is true of the expansion of the bulging volume of paper-work. If "officials make work for each other", paper-work procreates paper-work. Superfluity of paper-work generates superfluity of staff and the complementary process goes on in endless rotation. Superfluity is a curse to all establishments, be they in the government sector or non-government sector.

This superfluity afflicts business establishments even in the absence of the compelling impact of expansion. Is any practical purpose served by the filing of elaborate statistical returns — daily, weekly, monthly, quarterly, half-yearly and yearly? Could they not be eliminated or made slim in the lower rungs of frequency? Here business managements have themselves to blame for becoming unwitting victims to the new weakness for statistics. But this self-imposed affliction is nothing as compared to the oppressive obligation of compliance with new legislation much of which can be hardly justified on the score of utility or perhaps plain common sense. Who can vouchsafe that all the vast quantities of statistics generated by the Industrial Statistics Act are fully digested and reshaped in a condensed form as aids to policy formulation? The Industries (Development and Regulation) Act, the Companies Act and the vast battery of regulations to enforce economic controls have generated mountains of paper-work much of which can be scrapped to the relief of company managements as well as government officials.

Parkinson has been perhaps uncharitable in characterising British architectural work in New Delhi as "no more and no less than a mausoleum". Today Rashtrapati Bhavan is the symbol of the dignity of the Capital City. But post-independence construction activity is multiplying fast in direct proportion to the operation of Parkinson's law and with it the multiplication of paper-work. In the vicinity of the Central Secretariat have sprung up Udyog Bhavan, Krishi Bhavan, Akashwani Bhavan and the latest arrival — Yojana Bhavan — to accommodate the expanding staff. Why a phenomenal expansion of government staff has been allowed to occur is beyond comprehension. How phenomenal the growth has been is clear for any one to see.

Between 1948 and 1957, the strength of staff in the Ministry of Rehabilitation shot up by 1,300 per cent, in the Ministry of Foreign Affairs by more than 600 per cent, in the Ministries of Food and Agriculture, and Labour and Employment by 300 per cent, in the Ministries of Law and Health by 200 per cent, and in the Ministries of Home Affairs and Information and Broadcasting by more than 100 per cent. The Ministry of Rehabilitation which started with a tiny base is an emergency Ministry now on the way to be wound up. The base of the External Affairs Ministry was narrow. A liberal allowance may be made for higher growth of the official staff in a State which has attained sovereignty recently. Even so, these Ministries have out-Parkinsoned Parkinson by an astonishing margin. Parkinson's law places the annual average increase at 5.75 per cent adding up to 57.5 per cent in ten years. The other major Ministries, which had already a comprehensive base, have kept their growth rates during this period between 53 per cent and 44 per cent.

These rates are without reference to the quality of work performed. But leaving quality aside, it is unquestionable that the growth of superfluous paper-work, to which the five-year plans have given not a little boost, is at the bottom of this staff accumulation. During the last ten years the per capita consumption of paper by the staff has gone up approximately by 40 per cent in value. It does not take more than a superficial contact with any government establishment to realise how officials are lost in a thick jungle of paper-work of little practical value. The Organization and Methods Division cannot be credited with even marginal success in streamlining the administration. This self-generating wild growth must be halted. Would it not be useful to carry out a searching investigation into this intractable problem by entrusting it to a mixed commision of official and non-official experts to save the taxpayer and incidentally to save the Ministries themselves from their staff?

A New Policy for Sugar Exports

SUGAR is in the limelight again; this time it is the paradox of high prices in the midst of plenty. Despite an all-time peak output this year, the consumer in various parts of the country is paying a retail price for it which is not justified on the basis of the controlled ex-factory rates. The trade attributes this state of affairs to the Union Government's persistence with the policy of controls, which, it alleges, have disrupted the normal distribution channels; these circles believe that if control on distribution of sugar is done away with, its prices would go down, bringing welcome relief to the hard-pressed consumer. The Government, on the other hand, claims that there are faults in private distribution. To make sugar available to the trade in plenty, monthly releases have been stepped up since last month to two lakh tons which have not been fully lifted. To this extent, the Government's case is good.

Meanwhile, an important development has taken place in the world sugar market. Following Fidel Castro's seizure of American-owned Texaco and Esso oil refineries, President Eisenhower, under authorisation from the U.S. Congress, has announced a slash of 700,000 tons in the amount of sugar which the United States would buy from Cuba during the rest of the current year. With the consumption going up, the U.S.A. is now looking for sources from where it can import 760,000 extra tons of sugar in the next five months. The domestic manufacturers are expected to provide about 200,000 tons extra and the "quota" nations will provide another 200,000 tons approximately, leaving about 360,000 tons to be imported from non-quota nations. The cut in the U.S. imports of sugar from Cuba, reports suggest, is likely to be made permanent. Cuba is also said to be planning to reduce its sugar output in the interest of diversifying its economy.

These new developments, both on the national and the international fronts, obviously make it imperative that the Government of India should attempt a re-appraisal of its sugar policy. It has been a long-cherished desire of the Union Government to export sugar, provided the supply position permits. In fact, in 1956-57 India exported as much as 1.44 lakh tons of this commodity. In the subsequent two years exports were only small at 36,000 tons and 11,000 tons and had to be discontinued in 1959-60 due to stringent supply position. The present time, however, appears to be opportune to resume exports. A proposal, it is reported, is under consideration of the Government to export some sugar to the United States.

Production this year has been a record one around 24.25 lakh tons. Stocks with factories on June 30 were as high as 12.24 lakh tons. According to the current trends, consumption during the four months from July to the start of the new crushing season in October-end is not likely to exceed 7 lakh tons. This will leave a carry-over of over 5 lakh tons out of which an export allocation of about one lakh tons can be conveniently made. This quantity, if exported, is not likely to upset supplies for the domestic consumer. A carry-over stock of 4 lakh tons should be a sufficient guarantee against any undue rise in prices next year, especially when the standing cane crop is reported to be progressing well. Due to a fortuitous combination of three factors, area under cane this year, according to non-official estimates, is somewhat higher than the last year. The 3-anna increase in cane prices announced in October last is said to have given a fillip to cane cultivation. The winter rains also came at the right time and helped sowings to not an inconsiderable extent. Then there has been the rotational shift to cane cultivation in some parts of Bihar and U.P. Some co-operative societies in Uttar Pradesh, fearing a glut of supplies, are understood to have already approached mill-owners in their areas to start crushing a bit early this time. If the current season's concession of lower excise duty on excess production of sugar is repeated for another season, output next year may well exceed this year's peak production.

Exports of sugar to the United States have another advantage. The U.S. imports of this commodity are not governed by the International Sugar Agreement and the price which the U.S.A. pays for these imports is 40 to 50 per cent higher than the world free market price. Indian sugar is currently quoted on the world market around Rs. 18 per maund, ex-factory. If the U.S.A. pays for imports from here at the preferential rate, the loss which we will incur will not be much. For sugar to be bought from the non-quota countries too, the U.S. Government, reports say, has already decided to pay its higher quota price.

Our exporting sugar to the U.S.A. at the present time may be open to a political objection. It may be interpreted that we want to fish in troubled waters and take undue advantage of the Cuban situation, unnecessarily involving ourselves in cold war rivalries. The same objection, however, can be raised if the Government of India decides not to export sugar to the U.S.A. In that event, we can be accused of siding with the Soviet Union which has promised to buy up all the sugar from Cuba. *The Eastern Economist* is of the view that this matter should be treated as a strictly business proposition and decided on that basis. It is this journal's considered opinion that in the long-term interests, India should try to build up an export market for its sugar in the United States. For this, the first step is to export now when we have surplus sugar and the U.S.A. needs it.

As a corollary to the decision to resume exports, it will, of course, be necessary to maintain control over distribution of this commodity in the internal market. Enough sugar can be made available to the trade through adequate monthly releases as is being done now. To meet the objection of the trade that distribution controls hamper free flow of the commodity into the market — acceptance of tenders being sometimes delayed—the Government will do well to improve its machinery. It may also maintain in the new policy flexibility or a readiness to buy sugar on the international market next year should internal prices rise.

A DELHI DIARY

DR. KRISHNALAL SHRIDHARANI

THIS week has been full of sadness: I mention only one of its tragedies. On Saturday last week Dr. Krishnalal Shridharani, one of the best known journalists in Delhi, representative of the Amrita Bazar Patrika, collapsed suddenly in his home in New Delhi. He was only 49. There could be few better illustrations of the warning that in the midst of life we are in death. He had returned from a visit to Iraq only four days ago and was gay and cheerful at a reception at the Polish Embassy on Friday evening. On Saturday morning he had a complaint of pain in the region of heart and was gone before any medical attention could arrive. The loss that has been sustained by his departure is spread over many institutions. Dr. and Mrs. Shridharani have played such a full part in the cultural life of this city that a great gap is now being felt. It is sincerely to be hoped that Mrs. Shridharani, who has been the life and soul of Triveni — the Music and Dance Institution — will continue to give some of her time to dancing for which she has done so much. There was tragedy also in the fact that Dr. Shridharani has just been awarded the Ranjitram Gold Medal for high distinction in Gujerati literature. The presentation did not take place; now it is too late; or is it? Perhaps posthumous awards ring even truer than those given when personal influence can still be exerted by a lively personality.

Many people are beginning to ask in Delhi whether or not there is something that is bringing along the scourge of coronary thrombosis on the scale in which it effects ravages in modern societies mostly by the pressures of improper diet and hard and sustained intellectual work. Undoubtedly, journalists in New Delhi do not have the opportunity to have a simple diet. The round of social engagements is large and varied, but the strain of following rapidly moving events — in Delhi everything now turns round too rapidly — has been so great that the chances of attacks of coronary thrombosis have greatly increased. It is perhaps a necessary public service at this time that senior civil servants, high business executives and journalists and doctors at large should be informed of the advances that modern research abroad has provided against the dangers of early coronary thrombosis attacks. Meanwhile, cannot some statistician work out exactly the degree of intensity with which the death is now operating behind the intenseness of Delhi's social life?

NAGA OR 'NEVER-NEVER LAND'

We have had a delegation of nineteen members of the Naga People's Convention here for the week. They are led by Dr. Imkongliba Ao, and, according to reports, conversations are proceeding satisfactorily. Very few people are, however, conversant with what it is all about. The People's Convention in Nagaland spoke of a separate Naga State alongside Assam. The natural reaction to separate State in the Indian Union (after the Punjabi Suba demand) is a little allergic, and while Mr. Phizo's presence in London will encourage any moderate demand in Delhi, it is difficult to know whether the stars in their courses have decreed an agreement on the lines of the People's Convention resolutions. For my part, I look upon Nagaland as a kind of 'Never-Never Land' where the strangest things happen; head hunting, and at the same time, a lively disposition to be friends. Only with the possibilities of head-hunters mistaking a friend for an enemy, I have never myself summoned sufficient courage to see Nagaland at close quarters. But I may say proudly, I have seen it from the air. It is beautiful enough that way!

THE STATE OF ASSAM

We now have two problem States, the Punjab and Assam. Discussions keep on proceeding and one wonders whether Dr. B. C. Roy and the Ministers of Assam will be able to find a via media by which relations between Assam and Bengal become normal again. The Prime Minister's dramatic visit and his plain speaking, which irritated many audiences in Assam, have been, however, a wonderful tonic for this nation — in the throes of emotional integration of a kind which it seems not to have it for a century. The capacity of the Prime Minister to rise above local debate and even local patriotic fervour to a high national level is one of the great marks of his leadership. Today on his return from Assam we are beginning to realise again how great his contribution to national unity is and will be.

THE MONSOON SESSION

The Monsoon Session of Parliament is to begin on August 1, and I suppose, it will contain a pretty collection of problems with or without Assam. A move is afoot to prevent a heated debate on conditions in Assam, and it will probably receive the co-operation of all parties. It is felt that in the heat of debate many things might be said which would lead to heightened feeling in Assam. This is a tribute to the remote control exercised by Parliament on the minds of the Indian people, and suggests — with what truth, I know not — that proceedings of our Parliament are actually widely read. Be that as it may, it looks as though it would be wise to defer discussions. What is in animated suspense should be allowed to settle down before consumption.

Meanwhile the status of Parliament has been raised by the directive of the Ministry of Home Affairs that observations in the Estimates Committee Report and other Parliamentary documents criticising failure of administrative reform or procedure should receive immediate attention and corrective action applied on the lines indicated in Parliamentary reports. This has constantly been a complaint of the Members of Parliament that they sounded many trumpets but the walls of Jericho failed to respond. Now at least the view is being spread that what happens in Parliament is of some consequence to this nation.

YOUTH BEFORE AGE

Mr. Nixon's nomination as Republican candidate for the United States Presidential election implies that, whatever happens, the United States is to have a young President next year. People in Delhi — equally searching for signs that will show that imitation which is the sincerest form of flattery — are asking whether this momentous decision to trust youngmen — or is it youth? — in the United States will ever catch on in this country. The larger question is: which young men?

ARGUS

THE WEEK'S NOTES

Central Government Employees

ACTION AND REACTION

THE COGENTLY argued statement of Mr. Jaya Prakash Narayan on the recent strike of the Central Government employees deserves close study because it puts certain basic issues in the proper perspective. One relates to the attitude that the Government should adopt with regard to those people who participated in the strike. Here Mr. Narayan feels that the "large-scale victimisation" that now seems to be contemplated will only prove harmful in the long run. The dictum that justice should be tempered with mercy is no doubt sound, but as explained in a leading article of 'The Eastern Economist' last week, the anxiety to be lenient can easily be overdone and it will be unwise to let those who went on strike to resume by a mere act of regret. But this is a matter of detail which can be worked out in practice without showing any considerations of prestige or partisanship.

However, there are other more basic issues that have to be considered. One is the decision of the Government to withdraw recognition to unions and associations which were parties to the strike. It is estimated that the membership of these unions consisting of Railways, Defence installations, Posts and Telegraphs and Central Government employees will run to about 5.5 lakhs. The question is, after the withdrawal of recognition, what happens? Do these employees have the option to form unions and seek Government recognition or should they join unions that are already given recognition or should they just be in a vacuum as it were. If it is Government's intention only to debar outsiders from controlling these unions, there cannot be much quarrel which, in fact, was what was urged in an article in the last issue. Hence this position has to be clarified. Related to it is the other issue, namely, Government's reported intention to ban strikes altogether in essential services. The present position in this respect is rather anomalous. In law, there is nothing that prevents Government servants to go on strike as a logical consequence of the right to form associations. It, however, constitutes a breach of discipline under the Conduct Rules. Mr. Narayan has pointed out with force that the right to strike is only illusory since for all practical purposes, a ban is already there and an ordinance can take it away every time an occasion arises.

The second Pay Commission, which examined this problem throughly, has given some constructive suggestions in this regard. While suggesting that there should not be any amendment of the law to ban strikes, the Commission has argued that a change must be brought about by the employees themselves abjuring the use of the strike weapon. This required two things: one, the introduction of an adequate machinery for the removal of grievances and, two, Government accepting a convention that they would refer to compulsory arbitration any dispute concerning important matters pertaining to service conditions. The machinery suggested was something analogous to the Whitley type machinery existing in Britain. Mr. Narayan has even gone a step further and said that Parliament can even pass a law prohibiting strikes in essential services if the principle of arbitration is accepted both by labour and Government and provision is made for the machinery of arbitration including the procedure to enforce the arbitrator's award. The need for prohibiting strikes may not arise if, as the Pay Commission has suggested, compulsory arbitration is accepted as a necessary complement to a joint machinery for negotiation. What is necessary is that Government should not insist on the right to have the last word and, as in the case of Britain, should give effect to the award of the arbitrator subject only to the overriding authority of Parliament.

Nagas

DELHI PARLEYS

THE NAGA delegation representing the Naga People's Convention held at Mokokchung last October, which is now in the capital to discuss with the Government of India the demand for a separate Naga State has understandably enough hit the headlines this week. The past exploits of Phizo and his present activities in London, after his recent mysterious air-dash with the blessings of Rev. Michael Scott, have given a new edge to the current talks of the Naga delegation. It is now fairly clear that Phizo's popularity has been rather over-rated and he has no considerable following among the generality of the Naga tribes. The Mokokchung convention was a significant event in the sense that it repudiated the demand for a sovereign and independent Naga State, while favouring a separate Naga State within the Indian Union. This marked the first stage as it were in the evolution of the Naga urge for self-determination consistent with national unity. The disturbances in the past in the Naga areas stemmed from the efforts made to treat the Nagas as part of the Assamese in the name of Indian unity. The attempt to impose Assamese language and culture was bitterly resented by the Nagas which led to the demand for separation fomented by the extremist elements. But thanks to a revision of policy in 1958, the Naga hill district was separated from Assam and the Naga areas were consolidated into one territory administered by the Central Government. This, no doubt, had a salutary effect and to some extent improved the situation.

The claim for a separate State within the Indian Union was, however, kept alive and at the Mokokchung Convention, a series of demands was formulated based on this central theme. It was urged that the new State of Nagaland should remain under the Ministry of External Affairs and a separate Governor should be appointed, who will be advised by a Council of elected and nominated ministers responsible to an elected legislative assembly in which all the tribes will be represented. It was also urged that no law affecting the tribal customs and laws should be passed without their consent and the Central Government should make grants-in-aid for the development for the new State. Not the least important was the demand put forth for forming a Naga regiment within the Indian army. The delegation's current talks are based on these demands. While there may be some substance in the claim of the Nagas for special treatment, it is a moot point whether a separate State for a small area with a population of some four lakhs without much resources is a feasible proposition. Much of the current discussions would obviously relate to the question of administrative and financial viability of the new State if it is to be formed. Besides, it has to be considered whether the constitution of a separate Naga state will not result in the other hill tribes of Assam making similar claims. The discussions at Delhi now centre round at finding a mutually acceptable formula consistent with the need for unity and at the same time assuring the Nagas that their position as a distinct and separate entity will be respected.

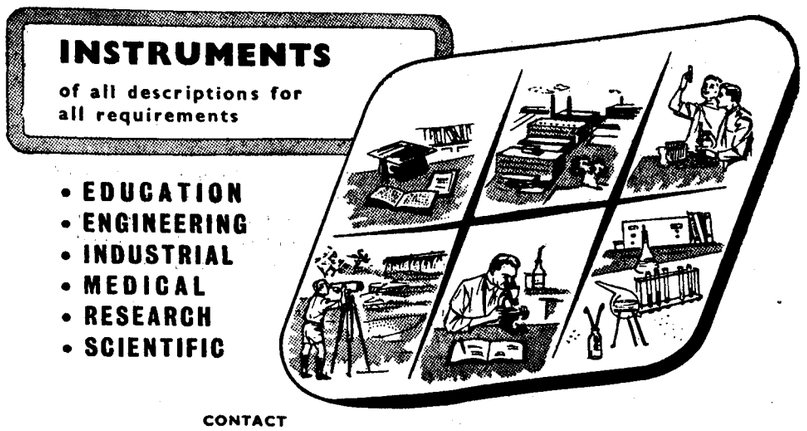
Sugar

TARGET IN THIRD PLAN

IN HIS presidential address to the Twenty-First Annual General Meeting of the Deccan Sugar Factories' Association, Mr. F. Edwards drew pointed attention to two

important problems facing the sugar industry, apart from presenting an overall survey of the prevailing sugar situation in the country generally. In the first place, he rightly cautioned the authorities, who, in their enthusiasm to establish more and more co-operative factories, seem to ignore the economic aspects of their policy, to pay greater attention to economic realities. Mr. Edwards said "the capital cost of creating new production capacity by setting up new factories is always far more than the creation of an equivalent production capacity by the expansion of the existing units. The setting up of a new unit involves additional expenditure owing to the duplication of overhead capital expenditure, such as construction of roads, buildings, etc., as also the duplication of overhead revenue expenditure, such as on management, administration, etc."

But the Government, we are told, has been liberal as it was in respect of giving consent for the establishment of new co-operative factories. "This action," to quote Mr. Edwards, "is quite wrong in its basic economy and—what is more—is contrary to the assurance given on behalf of the Union Government in Parliament that preference would be given to schemes of expansion rather than to the establishment of new units."



Referring to the three-million-ton target fixed for sugar under the Third Five-Year Plan, the DSFA Chief complained that "the targets have been pitched rather on the low side." It is true that the Government cannot afford to direct the limited resources—internal and external—from heavy and machine-building industries. But ignoring the pressures of consumer demand on goods like sugar has its own dangerous repercussions. The recent strike by the Central Government employees could be traced to this inadequate attention paid by the planners to consumer goods industries. Apart from this, sugar as Mr. Edwards said, is a good source of revenue to the Exchequer. The Planning Commission should "at least provide for a careful review of the position at the end of the second year of the Plan and permit programmes to be initiated for further expansion, if the trend of demand for sugar in the first two years points to the need for sugar expansion", if it cannot provide for a bigger target rightaway.

Oil

BURMAH - SHELL'S SUPPLIERS CUT CRUDE COSTS FURTHER

BURMAH-SHELL have informed the Government of India of a further reduction in the landed costs of crude supplies to their refinery at Trombay. The cut comes into effect from July 22 and will achieve a foreign exchange saving estimated at Rs. 1 crore per year. This reduction follows an earlier concession announced by the company on June 2 when it had apprised the Government that its suppliers were able to give a special concessionary price on the landed cost of the crude oil supplied to its Trombay refinery. This concession effected a foreign exchange saving of nearly Rs. 1.5 crores a year. The combined effect of these two reductions is a saving of Rs. 20 lakhs a month in the foreign exchange required for crude oil supplies to the Burmah-Shell refinery.

Meanwhile, the Government of India, is is understood, has decided to set up a three-member Committee to go into the question of the present pricing system of petroleum products in this country. The Committee will be headed by Mr. K. R. Damle, Secretary to the Union Ministry of Agriculture and a former Chairman of the Tariff Commission. Its other two members will be Mr. R. G. Saraiya, a prominent Bombay industrialist, and Mr. N. Krishnan, Cost Accountant in the Union Ministry of Finance. The need for appointing this Committee has arisen because no agreement could be reached between the Governmnt and the three oil companies having refineries in this country, on the basis of the price formula evolved sometime ago by the Government Cost Accountant. Pending final settlement of the issue, the oil companies effected two "ad hoc" reductions last year, the second one on November 1 which at present governs the prices of petroleum products in India. This agreement expires on March 31, 1961. The Damle Committee has been assigned the task of examining afresh the price structure of the oil companies and recommending to the Government, within three or four months, a rational formula which would form the basis for fixation of prices from April 1 next year.

A Window on the World

DENATIONALIZATION IN BRITAIN

By

ODYSSEUS

SOME TIME this year £40 millions worth of the shares of Richard Thomas & Baldwin, the last of the great British steel companies still in public ownership, will be offered to the public.

This has revived the controversy over nationalization and denationalization in the UK, and in the recent House of Commons debate, Mr. Hugh Gaitskell argued that the only reason why the government did not want Richar Thomas & Baldwin to remain in public hands was because its success under public ownership revealed the hollowness of the Conservative arguments for denationalizing the rest of the industry.

It is true that last year Richard Thomas and Baldwin showed a profit of £7 millions (before tax) and paid a dividend of 13½ per cent for the year, covered four times. So at first sight it does seem reasonable to ask why, since under public ownership Richard Thomas & Baldwin seems exceptionally flourishing, the company should be returned to the private shareholder.

In fact, the UK steel industry was, save on paper, never nationalized. The Labour Party's Act to nationalize steel did not come into effect until February, 1951. To avoid the disastrous dislocation in managements which occurred in nationalizing coal, the individual steel firms were left intact, and a holding company, the Iron and Steel Corporation, formed to take them over. This Corporation had time to do little more than gather up the reins before the return, ten months later, in October, 1951, of the Conservatives, pledged to denationalization, put nationalization into cold storage. Denationalization began in mid-1953.

In these circumstances, the boards of the steel companies never lost control. An attempt to compare the effectiveness of management under nationalization and under private enterprise in steel is therefore unrealistic.

That the men who managed steel under private enterprise have remained in charge means that, under the Conservative government, the steel executives have never felt discouraged or frustrated, but have worked under unhampering conditions, looking forward to the formal recovery of their independence sooner or (as in the case of R T & B) later.

My enquiries in steel circles show that if the Iron and Steel Corporation had had time to make nationalization effective, a stream of directors, executives, and technicians, frustrated by bureaucracy, would have left steel to seek the more congenial atmosphere of private enterprise with its opportunities for initiative and experiment.

Labour Party supporters urge that R T & B should remain "nationalized" in order to give the government at least one big steel concern which they could use for projects of national importance if private steel enterprise failed to produe what was wanted. Steel men reply that the government retained the Royal Ordnance factories for precisely that reason and that, compared with private enterprise, these factories prove inefficient and extravagant, which is why they are being closed.

PRIVATE VERSUS STATE ENTERPRISE

What, in the eyes of those leaders of the U.K. steel industry with whom I have recently been talking, are the basic differences between the management of a state enterprise and a private enterprise?

First and foremost is that the executives in a private enterprise live in a challenging, competitive world, which requires them to be on their toes all the time. Management is flexible. An executive who is found to be falling down on his job can be dismissed. Promotion is not by fixed salary scales, nor according to seniority, but in accordance with scales competitive with those with similar responsibilities in other industries. Promotion is by merit. A state official is entitled to security of tenure for life and to an old age pension. He cannot be got rid of. He can only be shunted off onto some other unsuspecting department, or retained in some nominal job invented for him, to keep him out of the way, while a more competent person gets on with the job.

It is no criticism of the businessman to say that he rarely feels at ease as a civil servant, nor of the civil servant that he often finds it difficult to adjust to private enterprise. The qualities required of each differ. Confronted, e.g., with the problem of whether to close down a branch that is losing money, or of where to open a new branch, the civil servant must think first of the electoral or party political repercussions. The votes to be gained by building a new plant in one province rather than in another need to be estimated. In the end the decision may well be to pour fresh capital into a high cost production unit in order to keep it where it is. The civil servant thinks negatively in terms of warding off awkward questions in parliament, of avoiding mistakes, or of covering up a mistake when made, because admitted mistakes are ammunition for party polemics.

Confronted with the same problems, a businessman thinks of efficiency, of what he can do to minimise losses and maximise profits. With some people, of course, "profits" is still a dirty work. British steel men say that the idea that profits should be "reasonable" is a hangover of the economics of the interwar depression years. In common with other industrialists, steel men in 1960 do not hesitate to proclaim that high profits are not a symptom of rapacity but the test of efficiency. High profits indicate that costs are being lowered following the introduction of new techniques or that sales are rising because quality has been matched to the requirements of a new market. To charge less than the market price for a commodity creates an artificial demand for it, impedes the invention of substitutes, promotes a static economy. At controlled prices, demand cannot fail to be greater than supply, and a widening circle of production bottle-necks and delayed delivery dates follow naturally. The object of a free price system is to promote smooth relations between supply and demand.

A businessman is a man who is trained to make money, to size up a choice of evils, to decide which risk to take, and to go ahead. If he discovers that he has made a mistake, he need not hesitate to admit it and

to reverse his decision. A successful businessman is not one who never makes a mistake, but who extricates himself more quickly than his competitors and gets onto a new and better track before they do. The taking of risks, the consciousness of competition, the knowledge that success can bring exceptional rewards and, equally, that failure can bring lasting disappointment or disaster, produces an atmosphere of zest compared with the sober caution characteristic of state enterprise.

ARE SHAREHOLDERS PARASITES?

In the Commons debate Mr. Gaitskell said that the denationalization of R T & B would divert dividends from the publicly owned sector to private hands. It would produce capital gains which would go to the new private shareholders instead of benefiting the public. On this subject, the Labour Party pamphlet, "Steel and the Nation" says: "Perhaps the most hollow mockery.. .... is the pretence that control is exercised by the shareholders. Take Stewart and Lloyds (another great UK steel company) whose booklet proudly claims that they have 'over 19,000 shareholders'. 'Shareholders,' we are told 'receive copies of the annual reports and accounts, are invited to their company's annual meetings and are free to criticise'. If only one third of them turned up, 'their company' would have to take the Albert Hall for the occasion....To sell ordinary shares widely among large numbers of shareholders is the modern capitalist's favourite device for maintaining control in his own hands .... The directors become a self-perpetuating oligarchy, regularly re-elected by a tiny minority ...."

Socialists have an arguable case here which needs to be answered. At first sight, it does seems as though the majority of shareholders are a sheepish lot who merely pocket dividends. That only a minority take enough interest in their company's affairs to turn up at annual general meetings is true. What, however, is overlooked is that (provided the government does not intervene to stop the free play of the market) shareholders perform the essential function of deciding what existing companies should expand or contract and what new companies be launched. They base their judgment on the size of the profits and of the dividends distributed. High dividends mean an efficient company whose shares will be tightly held. A company whose dividends are small, or passed, finds it difficult to raise fresh money, unless it can put forward a persuasive enough case to investors. The terms of a new issue in such a case will also have to be attractive enough, since the element of risk is obviously appreciable.

Socialists approve of a company which ploughs its profits back and does not distribute them. But, as I have more than once argued here, the function of a board is (1) to manage a company and (2) to draw attention to new investment possibilities. It is the function of the investor to decide the best allocation of the nation's savings. A board of directors is apt to be prejudiced in favour of its own prospects for success in its own industry. Shareholders have the whole economy to choose from and will allocate their savings in accordance with their various estimates of prospects and risks and their preference for safety or adventure. Within the limits of sound management and regard for normal reserves, companies should pay out the maximum dividends possible to enable shareholders to perform their function of deciding what industries offer the brightest prospects for investment. That makes for a dynamic economy.

SPECIAL SHOE CARE
—a must in monsoon

WHEN your shoes get wet, stuff them with paper and dry them away from heat.

If muddy, remove lumps with a blunt knife immediately after wear. Then sponge down using a minimum of water and wipe with a dry rag. Do not wet any part more than necessary. Do not rub hard or gritty particles will damage leather.

When dry, apply Bata Polish or Cream. Never use polish or cream to remove dirt; get the dirt off first.

Polish by brisk but gentle use of a soft Bata Brush. Finish off with a dry soft cloth.

Have your shoes repaired at first signs of wear. A new heel or sole will save permanent injury. Take advantage of Bata Repair Service.

The European Scene

ITALY AS AN INDUSTRIAL POWER

From Our Special West European Correspondent

PARIS, July 25.

AMONG the European nations, Italy is already the third supplier of India's imports, after the United Kingdom and West Germany but ahead of Soviet Russia and France. The goods Italy sends to India are predominantly industrial (producers' machinery, transport equipment and various manufactures) and her place is assured because she is one of the very few exporters of industrial goods whose prices have fallen in recent years. As an importer from India (Italy buys mainly crude raw materials for her industry), her position among the European nations is lower, coming behind the four countries mentioned, as well as Holland. Yet her performance is likely to be much better this year since, after a long and comfortable period of running down large stocks of raw materials, Italian industry has been obliged by its high level of activity (and encouraged by the low freights and favourable terms of trade) to expand its raw material imports.

More important in the long run than Italy's present position as a trading partner is the rapid change that is occurring in the Italian economy, a change that is increasing her importance as an industrial power and awarding her each year a larger share in world trade. This significant development is apt to be overlooked because we continue to think of Italy (quite correctly) as a country where poverty and underdevelopment are widespread. That she should nevertheless be building a substantial advanced industrial sector, and a growing foreign trade largely based on it, will be regarded by the exponents of "balanced planning" as a case of lopsided development. Lopsided or not, it is occurring, as surely as something similar once occurred in Japan. It will magnify Italy's importance as a supplier of industrial goods and equipment to India, and—given an active Indian interest in the matter—it could make Italy a much more considerable market for Indian exports.

It is well known that Italy has been steadily expanding her economy over the past decade, in exceptional conditions of price stability and without foreign payments worries. It is also well known that the Italian economy has serious structural deficiencies: a vast pool of unemployed and under-employed, and a striking unbalance between the active North and the backward South. The long-term national plan is directed at repairing these defects, and it is commonly assumed that this must be done before Italy can become a notable industrial power. Paradoxically, it is precisely the spetacular progress of Italian industrialism that is responsible for disappointment about the results of the national plan to eliminate unemployment and unbalance. Almost all the steady annual increase in national revenue is due to industry, whereas the near subsistence-agriculture of the arid South stagnates. The more industry develops, the worse becomes the gap between the two parts of the country which the plan was supposed to close. Moreover, investment is flowing mainly to productive industry and particularly to export industries, while grandiose multi-purpose projects are neglected. Within industry, capital is going by preference to capital-intensive manufactures, which do little directly to relieve unemployment even in the North and nothing to drain off the surplus manpower of the South. Modernisation and automation are readily financed, improving the quality and lowering the price of Italian manufactures, but virtually no capital ventures into the under-developed regions of the country.

The maintenance of a large pool of unemployed (about two millions) and the avoidance of inflationary public development works make it easy to preserve stable prices, and so Italian exports have been increasing by leaps and bounds. Italy has now built up foreign exchange reserves which are fantastic in relation to the volume of her economy: $2,953 million at the end of last year, or more than $200 million more than Britain's and more than any country in Europe with the single exception of West Germany. These reserves are still increasing in 1960 despite the rise in the import bill.

This development is not accidental, but is directly connected with the maintenance in power of the Christian Democratic Party and, even more important, the reliance of the Christian Democrats on the small Liberal Party in order to form a coalition government. The Liberals thus have the power to enforce their economic policy, which favours the rapid growth of Northern industry and of foreign trade rather than "socialistic" nation-building development planning. If the Christian Democrats could brave the instructions of the Vatican and lean however slightly to the Left, the resulting coalition would make a very different use of Italy's reserves of manpower and foreign exchange; it would undertake expensive (and partly demagogic) development projects that would slow down the expansion of Italian industry and exports but might build a more balanced economy. Meantime, however, the boom in export industries continues unabated.

Industrial output is setting new records each month; in March the index number (1953 equals 100) was at 187 against 154 in March 1959. Progress is particularly marked in chemicals, artificial and synthetic fibres, machine tools, electrical equipment, motor cars and other durable consumer goods. More significant—because indicating that producers are confident that the boom will continue—is the rapid growth of the capital goods industries, which are now turning out 20 per cent more than a year ago (33 per cent more for steel). Mechanical construction, transport material, cars and cement are achieving output figures never before known; the only exception is the decline in shipbuilding, which fits into the general picture of the world shipping crisis.

A good part of this increased industrial production is going to exports, which after increasing by 20 per cent between 1958 and 1959 are showing further rises this year, some of them astonishing. Thus first-quarter 1960 exports of metallurgical goods were 96 per cent better than last year, rubber 80 per cent better, chemicals and textiles about 60 per cent better. These exports are being offered abroad at prices about 7 per cent below those of a year ago. Even if the absolute volume of Italian industrial exports remains well below that of West Germany and Britain (although already comparable for such items as synthetic rubber and man-made fibres), the point is that Italy's foreign trade pattern is becoming that of a highly industrialised economy. This is equally well reflected on the imports side: imports were 50 per cent higher in first-quarter 1960 than a year before. Given the progress of exports and the large foreign exchange reserves, Italy can easily afford to increase raw material imports for her industry much more yet.

The most interesting feature of the current Italian industrial boom is that the experts can see no limit to it. The reserves of foreign currency put Italy

beyond the danger that industrial booms always cause in Britain and France: the rapid rise in the import bill. The pool of unemployed safeguards her from the situation now facing West Germany, the limitation on expansion set by manpower supplies. The prospect of more intense competition in export markets does not worry Italian manufacturers, for their prices have fallen and could conceivably fall further as production increases; the cost of credit has been lowered again recently. A foreign experts' report concluded lately, "In sum all the data suggest that Italy finds herself today on a rising curve whose summit is nowhere in sight". The opening of easier markets in the Common Market region comes most opportunely, and Italy has increased her trade with her partners by no less than 30 per cent.

The only accident one can imagine is a political one. The long series of Cabinet crises in Rome this year—Italy has not had stable government for almost two years, but a string of provisional ministries—is due fundamentally to the fact that balance of Italian opinion has now swung against the Right-wing parties who are responsible for this industrial-export boom built on the foundation of an undeveloped and unbalanced economy. I do not mean that this proves there is anything wrong or undemocratic about that policy. In the long run, and not so long at that, a continued industrial expansion of present proportions could cure the Italian economy of its endemic unemployment while perhaps exacerbating the disproportion between the North and South; it is already responsible for a steady rise in Italian living standards, achieved moreover without the least price inflation. It is far from certain that an economic policy that was more faithful to the national plan and sought to repair the structural deficiencies of the economy by a head-on attack would make a better job of it in the long run. Yet a majority of the Italian electorate, that part which votes for the left wing of the Christian Democrat Party, for the two Socialist parties and for the Communists, no doubt wants to see such a policy applied now, in preference to the orthodox free-enterprise programme dictated by the Liberals. All attempts to impose that change on the Christian Democrat leadership have so far failed, and may well continue to fail indefinitely. In that case, the present orientation of the Italian economy will remain and that will be important to the world trade nexus, for it means that without first mending the weaknesses of her domestic situation Italy will go on increasing in importance as an exporter of capital goods and manufactures, and as an importer of raw materials.

Economic Report from the U.S.

TRADE OUTLOOK

By

GUY SIMS FITCH

NEW YORK, July 26.

LENDING considerable support to the high level of economic activity in the United States has been the nation's favourable export balance. During the second quarter of this year, the US export surplus of goods and services added $2,500 million at an annual rate, to the Gross National Product (GNP)—the total output of goods and services. During the same period last year, the United States ran an export deficit which subtracted some $2,200 million from the GNP's annual rate.

Primarily responsible for this shift has been the pronounced increase in US merchandise shipments abroad. Taking due note of this, the Balance of Payments Group of the National Foreign Trade Council, the nation's leading private trade organisation has raised its sights significantly on the US trade outlook for 1960. The Council now predict that the excess of US merchandise exports over import—the trade surplus—will wind up the year at $3,400 million. Last year's trade surplus barely exceeded the $1,000 million mark. In making this new forecast, the Couniil estimates that both exports and imports will hold pretty close to their present high rates. This would mean an export total for the year of about $18,800 million, close to $2,500 million above the 1959 total. And it would mean an import total of $15,400 million, slightly higher than 1959's record figure.

So far, actual 1960 figures are available only for the first five months. They show that US commercial exports totalled $8,021 million, a gain of some 25 per cent over the $6,597 million chalked up during the same period of 1959. Merchandise imports, meanwhile, totalled $6,317 million, up four per cent over the $6,051 million of January-May 1959.

The Council's Balance of Payments Group, made up of economists and other executives of American companies with international interest, attributes this year's large export gain to two basic developments. One is the continuing high level of economic activity abroad, opening up expanded markets for American goods. The other is the trade liberalization undertaken by many countries in the past year, particularly with respect to the removal of barriers against US goods and dollars.

Figuring prominently in the US export rise this year has been a wide variety of products in many categories. Included are commercial aircraft, cotton, copper products, iron and steel products and many others. There also have been many notable trade increases on the import side. Last year, largely because of the length of American steel industry shut down, US imports of iron and steel products soared to unprecedented highs. These imports, understandably, have dipped noticeably this year. Imports of automobiles and some other items also have declined somewhat as compared with 1959. Yet the American economy has been exurberant enough to offset these declines with increased imports of such other items as iron ore, sugar, petroleum products, copper and machinery.

The trade balance, of course, is the main component of the nation's balance of payments accounts, which include all public and private transactions with the rest of the world. Now, with the export surplus running markedly higher this year than last, the Foreign Trade Council confidently expects an improvement in the over-all US balance of payments position. In the case of the United States, with its huge outpouring of government and private funds, this means a reduced deficit rather than a larger surplus in its balance of payments position. US government aid and other loans for 1960, for instance, are estimated by the Trade Council at some $2,900 million, and net private investment and remittances abroad at some $2,800 million. This kind of capital outflow obviously overshadows the anticipated trade surplus, and promises to leave the United States with a 1960 balance of payments deficit of something less than $2,500 million. While this deficit appears high—and no one denies that it is—it none the less is considerably lower than the actual deficits of the past two years. It also is well below the $2,900 million deficit predicted for 1960 when the Council made its regular annual forecast last January. The answer is that trade developments have been so favourable since then as to warrant the more optimistic appraisals in this mid-year review of the Council's findings

You can't get far without Steel

"There are 1800 tons of steel work in that thing—and it all moves with astronomical precision!"

"What do you mean, 'astronomical precision'—like my wrist watch?"

"Er-yes! in a way; I suppose they both take their time from the stars. Incidentally, the same people who built the Jodrell Bank radio telescope also made the spring in your wrist watch."

"What, in the same works?"

"No, they have ironworks, steel works, engineering works, forges, foundries and various other kinds of works, and they make more kinds of steel than anyone else in the country."

"How on earth do you know?"

"I've been reading their advertisements!"

In addition to building radio telescopes and making springs for watches, United Steel make steel for nuclear power stations, for aircraft, automobiles, ships, railways, bridges, bicycles and almost everything else, as well as many chemicals, paints, fertilizers, bricks and roadmaking materials.

Special Article

WAGE BOARDS AND THE WAGE LEVEL

IN an effort to achieve what is described as industrial truce, the Government of India decided as a matter of policy to constitute tripartite Wage Boards to look into the wage structure of the major Indian industries. The Wage Boards for cotton textile and cement have submitted their recommendations which the Government has accepted. In this Special Article an attempt is made to assess precisely the rise in wage level decreed by their recommendations and consequent additions to the wage bill of these industries.

THE COTTON TEXTILE WAGE BOARD

The Wage Board for cotton textiles divided all the mills in two categories. After reviewing the existing wage structure and wage differentials largely according to the tenor of the 15th Labour Conference and the Fair Wages Committee Report, the Board came to the conclusion that an increase at the average rate of Rs. 8 a worker should be given to all workers of mills in category I — such as workers of Calcutta, Ahmedabad, Bombay city, Madras State and Delhi — from January 1, 1960. Likewise, an increase at the average rate of Rs. 6 per month per worker would be given to all workers of mills in category II—at centres such as Kanpur, Nagpur, Indore and Sholapur. Since about two-thirds of the workers (estimated at about 885 thousand in December, 1959) would fall in category I, the addition to wage bill for 1960 as a consequence of the above recommendation might be around Rs. 7 crores. Another Rs. 2.2 crores will be incurred from 1962 onward because of the flat increase of Rs. 2 per month per worker recommended from January, 1962.

Another recommendation of major consequence for the cotton textile industry is the merger of 75 per cent of the dearness allowance with the basic wage. The remaining D.A. is visualised to have a flexible character and adjustable to the cost of living index. This consolidation will inflate the basic wage significantly, particularly at centres like Bombay and Ahmedabad where D.A. constitutes the bulk of the earnings of a worker. An overall two-fold increase in basic pay will imply a substantial addition to wage bills under the head of gratuity, bonus and provident fund. The net result of these and other recommendations such as benefits to clerical staff under new pay scales might mean an additional wage bill of the order of Rs. 15 crores per annum. If the wage bill (including salaries) for 1959 is placed around Rs. 150 crores, this will mean a rise of **10 per cent in the wage bill** for the year 1960 alone. This also is, in broad terms, the decreed rise in average wage level of a textile worker.

As for the lowest paid worker, Table I sets out the benefit that will accrue to him at some important centres. Supposing that the lowest paid worker gets an increase of a minimum of Rs. 7 (or Rs. 5 in category II) from January 1, 1960 the immediate rise (Jan., 1960 over Dec. 1959) in his wage will be of the order of 5 to 6 per cent at Bombay, Ahmedabad, Kanpur, Nagpur and Indore and about eleven and a half per cent at Calcutta. As the cost of living moves up in 1960, additional D.A. will further increase his earnings. On the basis of the past trend in price indices of the various centres, minimum wage in 1960 will prevail above the 1959 level by different proportions at different centres. In particular, attention is drawn to the substantial rise of about 21 per cent for Madras workers. This is an upshot of the Board's recommendation for full neutralisation for workers in Madras, instead of the existing partial neutralisation. Similarly, between 13 to 16 per cent rise in minimum wage level at Bombay and Ahmedabad where minimum wage level already ruled very high around Rs. 117 in 1959—as a result of 100 per cent linking of the dearness allowance with consumer price index, which was unusually high in 1959—will fall heavily on these mills.

The question is being asked what is the extent of rise in wages solely due to the recommendations of the Board. It is to be conceded that earnings of a textile worker had been rising with a rise in consumer price index because they were linked to each other. In the last column of Table I is given the past annual increase in minimum wage during the five year period 1954 to 1959. The difference between column 8 and 9 is a measure of rise in minimum wage level entirely as a result of the Wage Board's recommendations. Except for Kanpur and

* Comprises dearness allowance and basic pay only.
† Estimated on the basis of past trend of consumer price index for the relevant centre.

Nagpur, **this forced rise in minimum wage level is of the order of about ten per cent.**

THE CEMENT WAGE BOARD

According to the resolutions of the 15th Labour Conference which evolved the controversial need-based wage formula, the major recommendation relates to the doubling of the basic wage of the lowest paid worker i.e. from the existing Rs. 26 to Rs. 52 per month from January, 1960. Substantial increases have also been recommended for semi-skilled and other skilled workers. Moreover, the dearness allowance has been linked with the All-India Consumer Price Index for Working Class. The immediate and final effects on the minimum wage level have been evaluated for some centres of cement industry and set out in Table II below:

In view of the substantial increase in minimum wage for the industry, the Board recommends a programme of 'phasing' of the addition in emoluments. For the first year i.e. 1960, the minimum wage should be fixed at Rs. 10 less than the recommended minimum wage (Rs. 101 for Gujerat and Saurashtra and Rs. 91 for other centres) if the immediate increase for a worker turns out to be greater than Rs. 25. If the average for All-India Consumer Price Index is conservatively placed at 125 in 1960 (the Board's recommendations were based on a value of 123), additional D.A. will have to be provided for this rise also. On these assumptions, percentage rise in minimum wage (1960 over 1959) might range from 21 per cent in Sevalia to 39 per cent in Mancherial. But after the phasing is over, the final minimum wage at the beginning of 1961 will be still higher. Compared with cotton textile worker, the cement worker will gain more in relative terms. For instance, in Dwarka (Gujerat) the rise will be 30 per cent for the cement worker as compared to about 15 per cent for a cotton textile worker in the same region.

What will be the additional wage bill for the cement industry as a whole when all the recommendations of the Wage Board are fully implemented? The incidence is worked out for the Associated Cement Companies which together contribute about 50 per cent of the total cement production of the counrty and the results set out in Table III: A 15 per cent increase in the wage bill (excluding gratuity) in 1960 and, over 22 per cent in 1961, for ACC group of factories is fairly representative of the incidence on the whole industry as these units are dispersed all over India. The estimate may turn out a little on the lower side for more than one reason. Firstly, incidence of gratuity is excluded. Secondly, the probable rise in dearness allowance in 1960 is not taken into account. Moreover, additional salary bill for clerical staff under new pay scales is also not included.

TABLE II

THE BUSINESS WORLD

Why this Rise in Cloth Prices?

By CROESUS

EVER since the general strike of the Government employees, the public has become especially sensitive to any rise in prices of essential commodities. Even a reported — though not substantiated — rise makes not only the interests concerned but also the authorities to sit up. The latest instance is the reported rise in the prices of cloth by about 20 per cent to 30 per cent above the normal level. Now nobody has indicated what this normal level is. As early as December last, there were allegations by the 'Mahajans' (wholesale dealers in cloth) that prices of certain varieties of cloth had shot up by as much as 50 to 70 per cent. Enquiries made by the Bombay Millowners' Association at the time, however, would appear to have disproved them. Even after six months since that allegation, and notwithstanding the fact that prices in the meantime have admittedly risen further, millowners contend, the rise has not been anywhere near the indicated extent. Of course, they do not deny that prices have risen, but, in this connection, they draw pointed attention to the sharp rise that has taken place in the price of cotton, both Indian and foreign, particularly cotton of the staple length required to produce course and medium varieties of cloth, and also in both basic wages and dearness allowance, not to mention a number of other contributory factors.

Now, it is common knowledge that the cotton crop this year has seriously fallen short of expectations. As against the initial estimates of 43 lakh bales, the latest estimates of the cotton crop do not place it above 37.5 lakh bales. It may not be out of place to add here that the normal production of cotton in India is of the order of 48 lakh bales and the target of production of cotton at the end of the Second Five-Year Plan is 55 lakh bales. Incidentally, both cotton and textile interests had been urging that this target should be at least 65 lakh bales. Be that as it may, because of the failure of the cotton crop this year India has been obliged to import more cotton than during any other year in the past. Thus, as against the average consumption of foreign cotton over the past three years of around five lakh bales, the country is expected to import over 12 lakh bales and actually consume at least ten lakh bales. Both the textile and cotton interests have been so much shaken out of their complacency by the acute shortage of cotton that developed this season that they have been urging, for some time past, the need for building up a buffer stock of 3½ lakh bales by importing this additional quantity from the United States under the P.L. 480 programme. The demand has been growing in intensity especially in view of the continuing dry weather which has begun to cause not a little anxiety about the cotton crop. Until the end of last month, weather for the cotton crop in most of the producing regions in the country was reported to be excellent and, subject to the continuance of the same weather conditions, it was even indicated that the country could expect a cotton crop of 55 lakh bales without any further increase in the area under cultivation. In short, the position in regard to cotton seems definitely unsatisfactory and the authorities must be prepared for a continuance of the firm trend in cotton prices for several months to come.

In recent months, because of reasons other than higher cotton prices, there has been sharp rise in the costs of working of the cotton mill industry. In addition to the rise in dearness allowances due to the rise in the cost of living index, there has also been a rise in basic wages consequent on the implementation of the Textile Wage Board's recommendations.

The precise extent to which the alleged rise in cloth prices has been brought about by the two factors noted above may not be clear, but that they account for a substantial part of the rise cannot be challenged. Prices rise too when there is a curtailment in output, deliberate or otherwise. But the cotton mill industry cannot be blamed for not maintaining the output of cloth. According to the latest figures available, the production of cloth for the first half of the current year has been, in fact, slightly in excess of the production for the corresponding half-year of 1959, the respective figures being 2,466 million yards and 2,455 million yards. Also, the stocks of cloth with the mills at the end of June last, at 2,83,000 bales, were not much below those at the end of June 1959. Furthermore, total stocks with the mills have been steadily rising since April last. It cannot, therefore, be seriously argued by anyone that the mill industry has deliberately kept down production in order to boost cloth prices. On the other hand, it is well known that the industry has been pressing the Government for liberal imports of foreign cotton to enable it to achieve higher output, because the industry is convinced that the real remedy to meet the present situation is more production. According to Mr. Krishnaraj M. D. Thackersey, Chairman of the Indian Cotton Mills' Federation, there is ample scope for expanding the working of shifts and thereby making more cloth available. At present, the mills are working two shifts and only a few mills operate the third shift. It should be possible, according to the spokesmen of the industry, to introduce third shift in more mills, if adequate supply of cotton were assured. As for the supply of additional labour required for the purpose, Mr. Krishnaraj stated, at a press conference last week, that, judging from the number of trained workers that turn up whenever a notice for third shift working in any mill in Bombay is put up, there was no dearth of workers.

It is noteworthy that the spokesmen of the industry are fuily alive to the prevailing situation. They are only too conscious of the increase that has been taking place in cloth prices, in particular those of coarse and medium varieties. What is more important, they are not averse to taking such steps as lie in their power to stabilise cloth price at reasonable levels. In this connection, suggestions have been made to resort to stamping of prices and the Indian Cotton Mills' Federation itself had suggested that, if necessary, the industry

would stamp prices on a voluntary basis, but veteran spokesmen of the industry feel that price stamping in the prevailing circumstances will not prove efficacious. There are many ways like prevention of hoarding, they say, to meet the situation. The industry as a whole is convinced that price stamping cannot be a substitute for higher production. Some of the mills are really perturbed that price stamping may drive cloth into black market and lay the industry open to the charge of profiteering. They fear that the consequences of price stamping would be loss of revenue to the Government and loss of face to the industry, both certainly avoidable.

After all, if one examines the position dispassionately, it does not look as though the cloth position is really so bad as it is made out to be. An unnecessary scare is being raised about the shortage of cloth and the possibility of further rise in prices. What is necessary presently is to change the psychology of both the public and the trade with regard to the cloth supply position, and, if this is done, there will not be a scramble for cloth, especially of the varieties that are in short supply for the time being, which is really the factor contributing to the somewhat unwarranted rise in demand (at least on the part of those who tend to hoard goods the moment there is talk of a shortage and rise in prices).

To some extent, it is possible the rise in cloth prices may be due to our exports of cloth. Although we are still behind the 1,000-million yard export target, our performance in 1959 was quite encouraging, thanks to the textile export incentive scheme. During the first six months of this year, exports were of the order of 350 million yards. But it is expected that last year's level of exports will be reached. Given even this quantum of exports, the effect on internal prices would be there by reason of the fact that over 90 per cent of our exports today consist of coarse and medium varieties, precisely the varieties in which there has been scarcity and therefore a perceptible rise in prices. While the Government has no doubt been trying to meet this situation by importing cotton of one inch staple and below from America, the industry, on its part, has been spinning down, or weaving lower counts of cloth than the quality of the cotton permits. Incidentally, this is another contributory factor to the present rise in prices.

Although it cannot be established that there is a studied propaganda about the so-called large profits of the cotton mill industry, there is no gainsaying the fact that an impression generally prevails that the mill industry is making huge profits. After all, the cotton mill industry has only recently recovered from a fairly long period of crisis, when cloth prices were unduly depressed. It would be unfair to the industry to judge its profitability generally by comparing the level of prices of this depression period with today's prices. Even in normal times, let alone in the recent 2½ years of depression, the profit margins of the Indian cotton mill industry were among the lowest, whether profits were considered as a percentage of sales or as a percentage of employed capital. Not long ago, the monthly bulletin of the R.B.I. had published a study of industrial profits which showed that gross profits of the cotton textile industry were only 3.1 per cent of gross sales in 1957, while the percentage of gross profits to total capital employed was only 3.4 per cent. The position was not much better in 1958. It is only since 1959 that the industry has begun to recover. It is against this background and the background of the several factors beyond the control of the industry which have contributed to the rise in costs of the industry that one should judge the present price situation in the cotton mill industry. Judged thus, I have no doubt, the industry would come out unscathed. But this is not to say that the industry has no responsibility in maintaining reasonable stable prices. The 'bona fides' of the industry will, in fact, be judged by the stand that the industry will take on the price question at this week's meeting of the Cotton Textile Consultative Board.

Business Notes

Finance

PREFERENCE DIVIDEND

WHILST OPENING the discussion on the Finance Bill in the Lok Sabha the Union Finance Minister, Mr Morarji Desai, it will be recalled, gave an assurance that, if joint-stock companies did not give a fair deal to preference shareholders, the Government would have to resort to legislation with a view to seeing to it that its intentions are carried out adequately. Precisely, the relevant extract of the Finance Minister's speech reads: "While no special action is required for passing on the benefit to the ordinary shareholders, special action will have to be taken by the companies in order to give suitable increases to the dividends received by preference shareholders. The Government still hopes that the companies will do so. It is proposed to watch the situation for some more months and, if it is found that companies do not make suitable provisions in this regard, the Government may have to bring in suitable legislation with a view to securing to the preference shareholders a suitable increase in the dividends. It is, of course, the intention that these increases should apply only to the dividends received on preference shares issued prior to April 1, 1960. In relation to preference shares issued after that date, all parties concerned are aware of the new system of taxation on companies, and it is up to the companies to clarify to the new preference shareholders their right as to the amount of dividend payable to them."

It is a pity the Government created an untenable situation by its own action and then started to meet it first by shifting the responsibility to the company managements and then blaming them for the action taken by them, in every case, after obtaining authoritative legal opinion. Surely the managements of the companies concerned cannot be blamed for this. What is really to blame is the phraseology of the legislation concerned which permits of two entirely conflicting interpretations. Be that as it may, what has followed in the event is that the question of the quantum of dividend payable on preference shares continues to be a matter of assiduous vigilance and animated controversy among company managements and institutional investors, let alone market circles, causing thereby not only endless uncertainty but severe hardship to shareholders of preference shares. It is regrettable that, despite repeated requests and representations, the Government has allowed the issue to hang fire thus. Unable obviously to put up with this uncertainty indefinitely, some institutional investors have rightly decided to make a joint representation on the subject to the Union Finance Minister. The Industrial Credit and Investment Corporation of India, the LIC, the Investment Corporation of India, The Bombay Shareholders' Association, the Industrial Investment Trust and the Bombay Stock Exchange met in Bombay for the purpose, and it is to be hoped that at least the combined efforts of these will bear fruit in solving satisfactorily a problem which has been a source of great worry and vexation.

Power

TATA'S EXPANSION PROBLEMS

MR. J. D. CHOKSI, Chairman of the Tata Power Co. Ltd. announced at the annual general meeting that 1960 being the Jubilee Year of the Company, every employee of the three Companies of the Tata Electric Group will be given, without consideration of rank and status, a Government of India Prize Bond worth Rs. 100. The shareholders, in this connection, will get an extra dividend of ½ per cent. Moreover, a sum of Rs. 1 lakh will be paid to the Indian Institute of Sciences at Bangalore to finance scholarships for research on problems connected with electric power. This Jubilee Year expenditure is to be shared by the three Companies of the Tata Electric Group.

In this Jubilee year, the Chairman has paused to consider the future of power supply in the region. He has pointed out that the demand for power continues to rise at the rate of about 8 per cent every year. With the installed capacity of the Tata System of over 470 MW, the total installed capacity of the Tata-cum-Railway System in the region will be nearly 600 MW. Thus a maximum demand of about 500 MW can be met against the present maximum of 422 MW. It may be added that the Government of India's Koyna Project which will release 60 MW during the later part of 1961, will provide some amount of relief. By the Middle of 1963, when the first stage of Koyna Project is complete the supply of 115 MW can be assured, and when the second stage goes through by 1965, there will be loading capacity of about 700 MW on the Tata-Koyna-Railway inter connected-grid.

The Chairman has stressed the fact that by 1965 the peak demand will also have risen to that level. In view of the fact that power capacity cannot be expanded on a short notice, plans for the expansion of the capacity in the region beyond 1965 should be considered now. A nuclear power plant of 300 MW capacity which is being considered by the Central Government, may take over 5 years to materialise. The Chairman is, therefore, of the opinion that alternative sources of additional power supply should be considered. The Company is in close touch with the Government of Maharashtra and the State's Electricity Board for consultation on plans for expansion of its System beyond 1965, in both hydel and thermal sections.

Warehousing

STEADY PROGRESS

THE CENTRAL Warehousing Corporation opened 17 warehouses during 1959-60, while there were only 9 in existence before. These 26 larger warehouses along with 148 smaller ones set up by the State Warehousing Corporations do not compare favourably with the Second Plan target of 100 large and 250 small warehouses. Even though the target could not be achieved, a large part of the gap might be covered during the current year 1960-61. It appears from the report that more significant than the achievement of these targets in terms of the number of warehouses is their actual performance and in this respect they have encouraging results. While the number of commodities handled increased from 30 to 60, the maximum overall occupancy was 83 per cent with a minimum as high as 60 per cent. The stocks deposited with the Central warehouses at the end of the year under review increased to 517,000 maunds against 163,000 maunds a year before. A five-fold increase was recorded in the gross earnings from storage charges—from Rs. 76,000 in 1958-59 to Rs. 3,81,000 during 1959-60. In addition to this financial achievement, the Corporation also trained as many as 231 persons in scientific storage, marketing, banking, accountancy and other allied subjects during the year.

The Central Corporation conducted surveys of 68 centres all over the country for opening new warehouses. It is proposed to undertake the construction of an additional storage capacity of 1,400,000 maunds during the current financial year (1960-61). It is also proposed to construct two cold storages, one at Delhi and the other at Gauhati, with a capacity of 56,000 maunds. Among other schemes under consideration, the Corporation proposes to extend storage facilities to vegetable oils, molasses, wool and lac intended for export and also to apples and potatoes at Theog in Himachal Pradesh.

This extended capacity of warehousing is going to be of great assistance to the producers as well as the traders in agricultural commodities. It will have a direct bearing on rural credit by facilitating acceptable security. The depositors of commodities with the warehouses can always approach the banks for advances. Apart from credit, their extended capacity of warehousing will be immediately helpful to Government. But the entire complex of the problem of warehousing has been radically changed by the huge quantities of buffer stocks and imports for current requirements under the fresh PL 480 agreement. Past lethargy will not only have to be shaken off but modernised storage will have to be executed expeditiously with a bold new plan.

Protection

ALUMINIUM

THE VERSATILITY of aluminium and its increasing importance to the economy was underlined by Mr. K.R.P. Aiyangar, Chairman, Tariff Commission, while opening last week, the public enquiry into the question of continuance of protection to the aluminium industry beyond December 31, 1960. The economic significance of this metal which stands next only to the steel in the industrial field, is all the greater in this country which suffers from a "deficiency in other non-ferrous metals." Mr. Aiyangar, who discussed at length the economics of aluminium, disclosed some of the important data pertaining to the industry. According to the Tariff Commission Chief, there are at present only two units engaged in the production of aluminium ingot. Three new units—Hindustan Aluminium Corporation Ltd., Tendulkar Industries, and Madras Aluminium Ltd—have been issued licences for an aggregate capacity of 50,000 tons.

The present capacity of the industry for the manufacture of primary metal is 17,800 tons, as against 7,700 tons in 1958. With the expansion of capacity of the existing units and the erection of the three new units already licenced, the aggregate capacity of the industry is expected to increase to 83,000 tons a year. The output of aluminium, which amounted to 8,134 tons in 1958, rose to 17,114 tons in 1959 and 7,387 tons during January-May 1960. The capacity of the organised sector of the industry for semi-manufactures, which was assessed at 17,800 tons a year in 1958, is now placed at 21,000 tons, and 45 small-scale units engaged in rolling non-ferrous metal products, including aluminium at 4,635 tons. The production of aluminium sheets and circles by the organised sector amounted to 13,582 tons in 1958, and 15,931 tons in 1959. The capacity of the sole manufacturer of aluminium foils and contained sheets is reported to be 3,504 tons as against 1,600 tons in 1958. The production of aluminium foils was 1,864 tons in 1958, 2,429 tons in 1959 and 1,342 tons during January-May 1960.

With regard to demand the Development Wing has estimated the current demand between 34,000 tons and 58,000 tons and the likely demand in 1963 to range between 54,000 tons and 98,000 tons. The actual consumption of the country as indicated by the sales of indigenous products, scrap arisings and imports (which are restricted and hence there may be a volume of unsatisfied demand) is placed over the last three years at 34,024 tons in 1957, 32,273 tons in 1958 and 40,301 tons in 1959. With the diversification of the economy, the demand for the metal is bound to increase steadily.

The industry, which has been enjoying protection for more than a decade has registered encouraging progress and the quality of the domestic products produced by the organised sector has been, according to Mr. Aiyangar, satisfactory. Given proper assistance and

incentives, the industry will make further progress, both quantitatively and qualitatively. It is the contention of the industry (and it cannot be disputed seriously) that the aluminium industry is capital-intensive, that domestic bauxite is of inferior quality, that the rates of power supply are comparatively high, that the capacity of their plants are small and that cost of imported raw materials is also rather high." All these aspects may, however, be expected to be carefully gone into, whilst examining the case for the continuance of protection for this industry which it is conceded by all as having enormous potentialities.

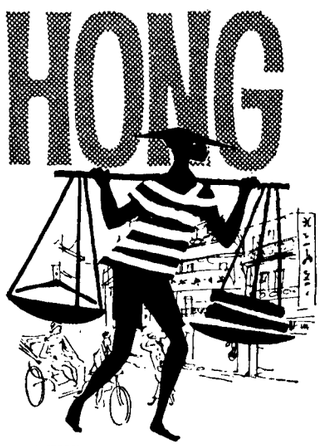
Life Insurance

PROGRESS OF LIC

AT THE last meeting of the Life Insurance Corporation of India, Mr. P. A. Gopalkrishnan, its Chairman, pointed out that the Corporation had been making steady and satisfactory progress since its establishment on September 1, 1956. In 1959, new business secured by the Corporation amounted to Rs. 429 crores recording an increase of 25 per cent over that of the previous year. In 1958, the new business secured was to the tune of Rs. 345 crores. Compared with 1957, the number of new policies issued in 1959 increased by 41 per cent. As a result of the various measures taken, the amount of foreign business done by the Corporation which was already low has increased marginally.

The business in force has increased encouragingly since the inception of the Corporation. At the end of 1955, the business in force was Rs. 1,220 crores and at the end of 1959, it had reached Rs. 1,964 crores, i.e., an increase of more than 60 per cent. During the same period, there was an increase of 45 per cent in the number of policies in force. The Life Fund, which was Rs. 380 crores at the time of nationalisation, reached Rs. 493 crores at the end of 1959. The total assets have similarly increased and the annual income consisting of premiums and income from investments has been steadily going up. So far as lapses are concerned, they have been steadily coming down. The lapses which amounted to 7.6 per cent of the mean business in force in 1955 came down to 6.4 per cent in 1957 and 5.1 per cent in 1958. With increasing business and investments, it is hoped that the Corporation's income would go up further in the future years. Encouraged by its past record, the Corporation has fixed a target of new business of Rs. 1,000 crores for 1963.

The Janata Scheme, however, has not progressed successfully in all the places where it was started. A new scheme which has more or less the same objective as the Janata Scheme has now been introduced. Under this scheme, the policies are issued only up to Rs. 2,000 and even without medical examination in rural areas. This modified scheme deserves a fair trial, but even a trial on a modest scale will require a large staff and sustained drive. The Chairman perhaps implies by his reference to the growth of insurance in the U.S. and Canada that those levels should be our goals after a period of time.



Industry

BENGAL POTTERIES

AT THE Forty-Eighth Annual General Meeting of the shareholders of Bengal Potteries Limited, the Chairman, Sir Shri Ram, had the happy news to convey that the sales for the year 1959 had increased by 38 per cent over the sales for the previous year and the gross profit was Rs. 31.25 lakhs in 1959 as against Rs. 15.88 lakhs in the previous year. The dividend recommended by the Directors was 14.29 per cent, but the net amount receivable by the shareholders will be 10 per cent tax free on account of the new procedure of statutory deduction of tax.

In the field of production, there has been a substantial increase in both the factories. The range of design and shapes of tableware have been widened and the manufacture of stoneware has increased by Rs. 14 lakhs in the year 1959 as compared to 1958. During the year under review, Bengal Potteries have been able to meet the demand of the Posts and Telegraphs Department in regard to electrical porcelain, mostly low tension. In view of the prospective market, further steps are being taken by the Company to increase the production of both High Tension and Low Tension insulators.

The Company, however, had its own difficulties in getting both China clay and reasonably good quality of coal and coke, the prices of which, of late, have increased. But it goes to the credit of the new management that it has withstood all that. There is now contemplated a big expansion programme and its implementation seems reasonably assured in view of the continuously growing demand.

Ref. No.....

23rd June 1960

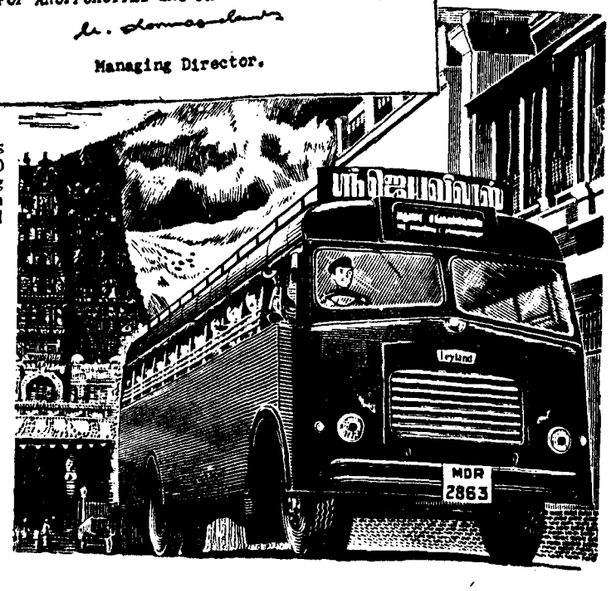
The Sales Manager,
Messrs. Ashok Leyland Limited,
Bank of Mysore Buildings,
N.S.C. Bose Road,
M A D R A S-1.

Dear Sir,

There are fifteen Ashok Leyland Comets in our fleet of 51 buses. The first Comet was put on the road on 1-1-58. We are operating them on mofussil routes and none has experienced any major breakdown so far.

Considering the mounting passenger traffic on the one hand and the indifferent road conditions on the other we unhesitatingly say that the 203" wheelbase Leyland chassis is ideally suited to tackle both the problems. It is the only chassis available in India with the largest seating capacity (we are able to seat 66 persons in all) and it withstands the severe running strain over long distances.

In fact the dependability and economy of the Ashok Leyland Comets are so convincing that we are thinking of replacing the existing vehicles with them.



Thanking you,

Yours faithfully,
For ARUPPUKOTTAI SRI JAYA VILAS (P) LTD.,

Managing Director.

Current Topics

RAILWAYMEN AND THE PAY COMMISSION

Consequent on the acceptance of the Pay Commission's recommendations, there will be an immediate increase in emoluments and a substantial increase in retirement benefits for all railwaymen who number about 11.5 lakhs. These are dealt below:

THERE are nearly 700,000 Class IV railwaymen and 450,000 Class III railwaymen (Class I and II officers on Indian Railways number less than 4,500). The main features of the revised pay structure are: (1) higher minimum and maximum salaries for employees in each grade; (2) generally higher rates of increment; and (3) merger of the bulk of dearness allowance into pay.

Nearly 500,000 railwaymen in the lowest pay scale Rs. 30-35, who now start on a basic pay of Rs. 30, will in future start on a basic pay of Rs. 70, and in addition receive a separate dearness allowance of Rs. 10. Taking total emoluments, these employees at present start on Rs. 75 and retire on Rs. 80, if they are not promoted in the meantime. In future, they will start on Rs. 80 (where they end at present) and rise up to Rs. 95, if they are not promoted in the meantime. During this period, their rate of annual increment would be one rupee, which is double the present rate of increment. This grade of employees includes 133,000 gangmen, 18,000 gatemen, 4,000 chowkidars, 167,000 khalasies, 18,000 engine cleaners, 15,000 porters, 9,000 hamals and 36,000 sweepers.

All the Class IV and Class III employees will have higher starting and higher maximum salaries. For instance, about 64,000 employees in the existing scale Rs. 35-50 who include 37,000 pointsmen, 9,000 keymen etc., will start at Rs. 85 instead of Rs. 80 and end at Rs. 105 instead of Rs. 95. Again, employees in the existing scale Rs. 100-185, who include 8,000 station masters, 2,300 guards, 3,000 train examiners, 8,000 commercial clerks, 2,000 ticket checking staff, 500 train clerks etc., will all start at Rs. 170 instead of Rs. 155 and end at Rs. 260 instead of Rs. 250.

The higher rate of increment is a common feature of all the revised Class IV grades. Thus about 19,000 second firemen in existing scale Rs. 40-50 will receive an average annual increment of Rs. 1.5 instead of Rs. 1.0. About 2,000 drivers 'B' will receive an average annual increment of Rs. 12 instead of Rs. 10. The highest grade Class III staff like loco foremen, station masters and 3,000 inspectors in the existing scale Rs. 360-500 will receive an average annual increment of Rs. 25 instead of Rs. 20. While the emoluments of all the employees will go up as a result of these decisions, which have general application, some of the employees will benefit even more as their posts have been upgraded on considerations of their qualifications, duties, responsibilities etc. Among the categories which would be so upgraded are certain unskilled Class IV staff in workshops, ferro-printers, 'X' ray attendants, laboratory attendants etc.

The immediate increase in total emoluments which will include both pay and dearness allowance in the various grades would vary from Rs. 5.5 per month to Rs. 25 per month. An increase of Rs. 5.5 will accrue to staff in the lowest Class IV grade numbering about 500,000. In the case of the highest grade Class III employees in the existing scale Rs. 360-500 (Loco Foremen, Station Masters, Inspectors, etc.), the immediate increase in emoluments will be Rs. 25.

The categories of posts which have been upgraded would receive a much higher immediate increase. Thus 12,000 drivers grade 'C' who have been ugraded from Rs. 86-185 to Rs. 100-185 in existing terms, will get an immediate increase of Rs. 21.35 per month. The ultimate increase in the emoluments of each employee will be more than the immediate increase. The ultimate increase in the case of the lowest grade Class IV employees numbering 5,00,000 will on an average be about Rs. 11 as against the immediate increase of Rs. 5.5.

As the existing dearness allowance has been merged into pay, dearnes allowance would continue as a separate element only for employees whose pay is below Rs. 300 in revised terms. This would be paid at the following rates: Pay below Rs. 150 (in revised terms) Rs. 10 p.m. Pay of Rs. 150 or above but below Rs. 300 (in revised terms) Rs. 20 p.m.

To illustrate: Skilled workers who are now in the grade of Rs. 60-130 in Loco sheds, workshops, and elsewhere, at present receive Rs. 55 to Rs. 60 of their emoluments in the form of dearness allowance; in future, only Rs. 10 to Rs. 20 of their emoluments would be paid in the form of dearness allowance, the whole of the balance being paid to them in the form of basic pay. Again, the higher grade employees such as drivers 'A', sation masters, yard masters, assistant loco foremen etc., who are at present in the scale of Rs. 260-350 receive Rs. 70 of their emoluments in the form of dearness allowance; but they will draw in future the whole of their emoluments in the form of pay.

One of the major benefits of the merger of dearness allowance with pay would be to increase the retirement benefits substantially. The revision of pay and allowances would increase the retirement benefits of pensionable and non-pensionable staff of the lowest Class IV grade numbering 500,000 by about 50 per cent and by varying percentages in the case of others, the increase in the case of the highest Class III employee being over 10 per cent.

The increase in emoluments on the one hand, and the merger of the buk of dearness allowance into pay on the other hand, will naturally increase deductions on account of provident fund and house rent. The increased deduction on account of provident fund would really represent additional savings for the employee himself and would, in the case of non-pensionable employee attract a larger matching government contribution which would go to increase his retirement benefits. As regards house rent, the rules have been amended to ensure that the rent of those whose pay is below Rs. 100 at present does not go up due to merger of dearness allowance. About 750,000 may benefit from change of rules.

The rates of city compensatory allowance and house rent allowance are also being revised and the revised rates would be higher for the staff in the lower pay ranges. For instance, a Class IV employee drawing basic pay of Rs. 30 at present with a city compensatory allowance of Rs. 5 instead of Rs. 3 at present in a B class city, and an employee drawing Rs. 60 at present will get a house rent allowance of Rs. 15 instead of Rs. 10 at present in a B class city. ('B' class cities are those with a population of over 500,000). These increases will involve an expenditure of about Rs. 100 lakhs.

A DELHI NOTEBOOK

EXPANSION OF STEEL PLANTS

BROAD indications are now available of the expansion programmes of the three steel plants in the public sector. It is understood that the beginning will be made with the expansion of the Rourkela and the Bhilai plants because of two facts. Firstly, arrangements have been made for the foreign exchange component of the cost of expansion of these two plants. Secondly, the end-products of these plants are such that their production has to be expedited.

The expansion of the Durgapur plant may be undertaken later. The Government of India, it is understood, is not very happy with the package deal under which this plant was set up in collaboration with the consortium of British steel manufacturers. Moreover, India is still to secure credit from the U.K. for the expansion of this plant. It is learnt that a loan of nearly £25 million will be required for this purpose. The exact amount, however, will be known only when the Government finally decides whether under the expansion programme, it would have at this plant a strip or skelp mill. The loan also has to be a long-term one; according to Government plans, it should be for a minimum period of twelve years. Meanwhile, it has been decided not to include a fertilizers plant in the expansion programme of the Durgapur steelworks.

So far as the fourth public sector steel plant, to be set up at Bokaro, is concerned, it is learnt that the U.S. interests have made no proposal as yet about their collaboration being available for the purpose. The Steel Ministry is said to be making out a case for the setting up of this plant slightly earlier than scheduled on the basis of the anticipated demand for steel in 1966.

INDO-WEST GERMAN TRADE

The West German Government has agreed to take a series of steps to liberalise imports from India. This follows consultations between the representatives of the Governments of West Germany and India in pursuance of the trade arrangement between the two countries concluded on October 30 last year and the GATT decision asking West Germany to relax existing restrictions as soon as possible.

It is understood that West Germany has drawn up plans to remove most of the restrictions on textile imports during the next five years. Among other items on the restricted list, imports of goods like sewing machines, ceramics and toys, in which Indian exporters are interested, are now regulated under global quotas, which are to be increased annually. Licences for imports from India will be available to German traders in terms of these quotas.

For certain textile items, it has not been possible so far for the West German Government to indicate an official date for complete liberalisation, but it is its intention to establish quotas for these. Indian exporters could utilise this facility to effect sales to German buyers. As regards hand-woven cotton fabrics, the West German Government has indicated its readiness to consider the grant of additional licences, if applications are certified by an Indian Government authority that the goods are "hand-woven".

A consultative protocol on these lines has already been signed between the representatives of the two Governments. The protocol provides that, as soon as the value for which licences are issued is fully taken up, West Germany will automatically increase the quota by 50 per cent. In respect of 'household articles', this automatic rise will be of the order of 100 per cent. The items covered by the protocol are fabrics made of cotton, wool, art silk, artificial and synthetic textiles, filaments and garments, coir carpets and fabrics, sewing machines, toys, etc.

FOREIGN AID

The prospects of economic aid from West Germany, it is understood, have brightened following the recent visit of the Union Finance Minister, Mr. Morarji Desai, to that country. The West Germans are reported to be very keen to assist India in her development plans. Since India requires long-term credit, the West German Government may have to amend its law which bans lending on long-term basis.

Meanwhile, talks between India and Austria for a long-term credit of 350 million Austrian schillings (Rs. 5 crores) from the latter to the former have opened in Vienna. Austria may also give a short-term loan of 150 million schillings to this country to facilitate her exports.

The details of the proposed Swiss credit of £10 million, it is learnt, have been settled. An agreement is expected to be signed in Berne shortly.

The agreement on the provision of £10 million credit by the United Kingdom to this country, announced a few days ago, will be signed here this week by the Union Finance Minister, Mr. Morarji Desai, and the British High Commissioner, Mr. Malcolm John MacDonald.

The United States has provided economic aid to India to the tune of $482 million during the year ending June 30. The following are the details:

	(Million dollars)
Agricultural commodities supplied under Public Law 480. (This estimate is only approximate. Every month India is receiving slightly over 300,000 tons of foodgrains or between 3.5 million and 4 million tons per year).	300
Aid under the Technical Co-operation Programme (including aid for the Malaria Eradication Programme).	23
Development Loan Fund (loans announced or signed during the course of the year)	119
Loans from Export-Import Bank	13
Agricultural commodities distributed through voluntary agencies (Public Law 480, Title III) (approximate value) ..	10
Assistance from Ford Foundation (approximate)	15
Assistance from Rockefeller Foundation ..	2
TOTAL ..	482

BRIEFS

The Government of India, it is understood, is giving final touches to its policy regarding production of fertilizers to be allowed in the private sector. The policy is expected to be announced shortly. A retention price for fertilizers is envisaged.

*

The Avro 748 turbo-prop aircraft, which India has planned to manufacture, will be fitted with the Marconi sub-miniature automatic direction finder, Type AD 722, says an announcement by the Marconi Wireless Telegraph Company of England.

*

The next meeting of the Import Advisory Council will be held here on Saturday, August 27. The Export Promotion Advisory Council will meet on the following day.

UNDER SECRETARY TO ... 2 - AUG 1960 PUBLIC DEPARTMENT

WORLDGRAM

India

Production Programme of Bhopal Factory: The Board of Directors of Heavy Electricals Limited, Bhopal has approved a 3-crore production programme for July 1960—March 1962, which includes the manufacture of switch-gears, transformers and capacitors. The possibility of further increase in the output during this period is being examined. A higher range of switch-gear and transformer manufacture will start from 1962. The Board has also finalised arrangements for the import of machinery for the second and third phases of the project, when production of traction and industrial motors, heavy rotating plants, water turbines and rectifiers will be undertaken.

*

Automobile Hand Tyre Inflator Industry: The recommendations of the Tariff Commission that protection to the automobile hand tyre inflator industry need not be continued beyond December 31, 1960, have been accepted by the Government of India. In the resolution, Government have drawn the attention of the Indian Standards Institution to another recommendation of the Commission that I.S.I. should take up the formulation of a standard for seamless brass tubes required for the industry.

*

Mixer Commissioned at Durgapur Steel Works: At the Durgapur Steel Works the first 800-ton metal mixer of the steel melting shop was commissioned recently. This 'drum-type' inactive hot metal 'mixer', together with a similar unit constitutes the store house for molten basic iron before it is charged in the open hearth furnaces for further reduction into steel. So far, the steel melting furnaces at Durgapur were being charged with pig iron. With the commissioning of the hot metal mixer, molten iron will be charged with the help of 80-ton ladle into the open hearth furnaces. The hot metal — a huge cylinderical steel shell, with magnesite refractory lining — is 16 ft. in diameter and 31 ft. in length. The mixer is maintained at a temperature of 1,250 degree centigrade by coke oven gas and tilted by an electric tilting gear.

*

Khosla Team's Recommendations on Minor Irrigation Works: After several visits to different districts in the State of Andhra Pradesh, the Team on Minor Irrigation Works recommended a 3-point programme for improving minor irrigation projects. These are: implementing the Master Plan for restoring old tanks; utilisation of sub-soil water and drainage water as an extra source of minor irrigation; and regulating the capacity of tanks lost due to silting, by raising their levels and adopting wherever feasible, the Desilting-cum-Reclamation Schemes to reduce the area of submergence.

*

Tariff Protection to Wood Screw Industry: The Tariff Commissions' recommendations that protection to the wood screw industry need not be continued beyond December 31, 1960, have been accepted by the Government of India. In the resolution on the Commission's report which has been published recently, the Government have also taken note of the recommendation that steps should be taken to ensure that no export of wood screws takes place unless accompanied by a proper test certificate, regarding its quality and proper packing. Government have also drawn the attention of the wire manufacturers to the Commission's recommendation that, in the context of increased supply of billets to them, they should endeavour to meet more fully and expeditiously the demand of the wood screw manufacturers for steel wire. The need for taking urgent steps to improve the quality of wire rods and wires and confirm to Indian standard of specifications has also been stressed.

U.S.S.R.

Production of Baby Car: The first 1,500 Soviet "Zaporozhets" baby cars will be produced by the Zaporozhye car factory before this year is out. This will mark the beginning of the mass production of these new autos. The "Zaporozhets" can do over 80 kilometres an hours. It burns only 5.5 litres of gasolene per 100 kilometres and can travel 550-570 kilometres without refueling. The engine of the baby car is air-cooled, which is very convenient in winter. A special electric heater helps the driver to start the car in heavy frosts. This same device heats the car even when the motor is switched off. The car has tubeless tyres, a windshield washer, five-gear transmission and a special place for a radio set. The trial runs of the baby car, held for several past months, were successful. The Soviet car proved to have better road grip, endurance and negotiability than foreign cars of the same class—the "BMV" and the "Fiat".

*

Mechanisation of Kazakh Coal Mines: It is reported that 70 per cent of loading operations in Kazakhstan's coal mines are mechanised. This is a greater extent of mechanisation than that of any of the other coal mining regions of the Soviet Union. The cutting, breaking and delivery of coal in the stepes as well as underground haulage of coal and rock in the mine workings and loading on the railway cars have been completely mechanised. The mechanisation of the major jobs in ore and coal mining, iron and steel and other industries is soon to be completed.

United Kingdom

Tropical Medicine Research Board to be Set Up: A Tropical Medicine Research Board is to be set up to replace the existing Colonial Medical Research Committee, it was announced recently in the annual report of the Medical Research Council. The Board will advise the Overseas Research Council, which is responsible for general policy on overseas research and which will now take over the responsibility for the promotion and co-ordination of all research in the field of tropical medicine supported from public funds.

Yugoslavia

Some Significant Facts About Yugoslav Economy: Industrial production in Yugoslavia is now higher by 18 per cent than in the same period of last year. Agri-

cultural production, according to the present development and estimates has a chance to be fulfilled at the planned level in spite of some negative factors (poor fruit crops, less extensive areas under some industrial crops etc.) because the increase of the livestock fund, specially with agricultural organisations, as well as the realised programme for high yields in sowing and cultivation of main crops, make possible to exceed the planned tasks. Transport, trade and services mainly correspond to the above mentioned trends in industrial and agricultural production. Exports in the past months increased by 16 per cent, which is at present below the planned development, in which exports of agricultural produce lags behind, while exports of industrial products is realised above the planned level.

*

Import of Capital Equipment: Yugoslavia falls among the countries with intensive capital investments. These investments are accompanied by substantial purchases of capital equipment abroad. Capital investments include production machinery and parts which are imported by the domestic machine manufacturing firms and supplemented by their own production and installed in newly built factories. Over the last four years from 1956 to 1959 inclusive, the imports of capital goods had doubled. At the beginning of this period imports costed 20 billion dinars and reached the figure of 40.8 billion dinars in 1959.

Ghana

Export of Aluminium Sheets: An aluminium rolling mill is to be installed at the new industrial township of Tema, near Accra. The mill, which is to start operation early in 1962, will be capable of turning out large quantities of aluminium sheets to meet the entire market requirements of Ghana and will also provide additional capacity for the development of an export market. According to a release issued by the Ghana Aluminium Products Ltd., the mill will cost £1 million and will eliminate the need to import into Ghana many semi-fabricated aluminium products. The rolling mill will initially use imported aluminium ingot until such time that the aluminum smelter of the Volta River Project will be completed, when Ghanian ingot will be used. The installation of the rolling mill will be the second expansion to the aluminium plant at Tema which started production of roofing sheets in August 1959. Since then a second factory has been built to produce a wide range of aluminium products.

Turkey

Demirkopru Dam: The Demirkopru dam was recently opened in Turkey. Built by a large French public works company the Demirkopru dam is an earthen structure rising out of the mountaineous countryside on the Aegean sea. The project includes an electric power plant as well as a dam. In addition to the dam construction by a French company, other French companies supplied almost all of the hydroelectric equipment, making this project entirely French in character.

Italy

Investment Programme: It is reported investments in Italy increased overall by 8.4 per cent, or almost the average for the entire 1950-58 period, and considerably above for the last five years. It is necessary to emphasise the importance of the State's action in this field. Spending on public works and public utilities increased over the last 12 months by some 6 per cent. Other projects, which cannot, strictly speaking, be grouped together under these two headings, nor yet benefit by their appropriations, still did their part as they were planned to do, in encouraging project enterprise. Conservative estimates of the amount of money the State has spent on this sort of incentive investment put it at about twice the total spent on the public works utilities. A good idea of the effort expended on public works can be gained from the fact that appropriations for this purpose rose by 16.5 per cent during the last year. In addition to all this, there was the even greater increase in subsidised public housing.

Israel

Vegetable Export Drive Launched: A big drive to export vegetables to Europe was announced by Mr. Ben-Zion Yitzhar, Chairman of the Vegetable Marketing Board. He said that there were good prospects for the export of 5,000 tons of tomatoes, 8,000 tons of new potatoes, 5,000 tons of carrots and several thousand tons of onions. Trial consignments shipped to Europe last winter proved successful and had led to substantially increased orders this year.

O.E.E.C.

Fertilizer Production: Production of fertilizers continued its upward movement in 1958-59 in all organisation for European Economic Co-operation Countries (OEEC) namely Austria, Belgium, Denmark, France, Germany, Greece, Iceland, Italy, Luxumberg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey and UK. While there was some slowing down in the rate of expansion of nitrogen output production nevertheless rose by 8 per cent to reach 3.7 million tons of nitrogen. Output of phosphate fertilizers also increased considerably compared with 1957-58 (by 6 per cent) to reach 3.7 million tons of P2O5, while the steady rate of expansion of 1957-58 (3 per cent) was maintained for potash fertilisers. Production amounted to 3.4 million tons of K2O in 1958-59.

I.F.C.

Investment in Venezuela: The International Finance Corporation has announced the commitment to investment U.S. $3 million in Siderurgica Venezolana, S.A. (Sivensa), to expand and modernize and diversify the company's facilities for producing steel products. Sivensa was founded in Venezuela in 1948. The IFC investment will help finance a large scale programme designed primarily to reduce manufacturing costs, to upgrade and diversify the products, and to increase rolling capacity from 60,000 to more than 90,000 tons annually. Total cost of the programme, including working capital is estimated at U.S. $6.2 million equivalent. Additional financing is being provided by a loan from the Corporation Venezolana de Fomento and by an increase of share capital and retention of earnings. The I.F.C. investment of U.S. $3 million will be in dollar notes maturing between 1962 and 1970, bearing 7 per cent interest payable in dollars.

NEWS IN BRIEF

INDIAN

An all-India survey of the pattern of unemployment of graduates has been undertaken by the Directorate General of Resettlement and Employment, Government of India. The survey, which covers a sample of about 22,000 graduates from various universities, aims at collecting information regarding their employment, income, etc.

*

It is reported the co-axial cable manufacturing plant would produce 300 miles of co-axial cables per annum costing about Rs. 70 lakhs and would double the output on a multiple shift system in the next two years.

*

In 1959 the Soviet Union purchased from India 11.300 tons of tea valued at Roubles 68.4 million as against 10,700 tons in 1958 valued at Roubles 67.5 million. India and China are the important suppliers of tea to this market.

Italy's Foreign Trade Ministry has announced a new list of goods for which export permits will be needed for shipment to all countries.

*

The participation in the 1960 Leipzig Autumn Fair, due to be held from September 4th to 11th, has been announced of 6,950 exhibitors from 40 States which will be showing their general technical consumer goods.

*

Two new developments in X-ray machinery have been reported one from London and the other from Edinburgh.

*

A British firm—Murphy Radio Ltd.—is to design, supply and install a radio control system for the 800-mile oil pipeline of the Burmah Oil Co. between Nahorkatiya, in Assam, and Barauni in Bihar.

*

Development of an instant brew of tea is believed by its American distributors, to be one of the most important advances in the long history of the tea industry. Already 5 per cent of the total tea sales in the United States are of the instant variety, a powdered tea to which boiling or iced water can be added to produce the drink instantly.

*

It is reported South Africa would have a dual coinage system, using pounds, shillings and pence as well as Rands and cents, for about 20 months after the changeover to decimalisation next year.

*

Ceylon is to have its first industrial estate shortly on a 70-acre site a few miles outside Colombo. Preliminary work should be completed in about two months and it is expectedly that the buildings for the factories would be ready for occupation early next year.

*

Hollands, trade balance took a less favourable turn during June. At Fls. 1,220 million exports were worth Fls. 34 million less than in the previous year. Imports, at Fls. 1,463 million were Fls. 49 million down compared with May.

COMPANY AFFAIRS

TATA OIL: RECORD PERFOMANCE

The Chairman of the Tata Oil Mills Company Limited has claimed that the year to March 31, 1960 has been the best in the Company's history. Production and sales have been higher than ever before. A particularly encouraging feature of the growth in the turnover during the year was the substantial increase in the sales of laundry and toilet soap at a time when the output of the organised sector as a whole was largely static. Despite substantial increase in the price of the raw materials and consumable stores used in the finished products, profits have shown an increase which enabled the Company to pay higher dividends to shareholders and a larger bonus to the employees.

The sale proceeds of laundry and toilet soap recorded an increase of approximately 11 per cent over last year, and those of glycerine also recorded an increase of 12 per cent. In view of the growing demand for refined glycerine, the Company has decided to install a glycerine refining plant at the Calcutta factory. The progress registered in the sales of all toilet preparations was maintained; total sales rising by 12 per cent over the previous year. The Company also made some progress in the field of exports which reached a figure of Rs. 30 lakhs as compared to Rs. 19 lakhs in the previous year.

During the year under review the Company added substantially to its manufacturing capacity. It acquired from Modi Sugar Mills of U.P. their soap plant of a capacity of about 7,500 tons per annum at a cost of Rs. 8.5 lakhs, and also negotiated to purchase the entire factory including building of the Amrut Oil Mills at Sewri, Bombay. The Company will set up a new factory on a site just outside Delhi. It is proposed to manufacture soaps, glycerine and vanaspati at this factory.

The gross revenue during the year was to the extent of Rs. 8.31 crores as compared to Rs. 6.64 crores in the previous year. The profit for the year after providing for depreciation etc. comes to Rs. 17.93 lakh against Rs. 10.15 lakhs during the previous year. The directors have recommended a dividend of Rs. 5.75 per share subject to deduction of dividend tax on ordinary shares as against Rs. 3.25 in the previous year free of income-tax. The directors have set aside Rs. 13.47 lakhs for depreciation.

The directors have obtained the consent of the Controller of Capital Issues to issue debentures of Rs. 1 crore carrying interest at the rate of 6 per cent per annum subject to income-tax. The Company has initially issued debentures of Rs. 50 lakhs and the balance will be issued as and when additional funds are required.

BETTER YEAR FOR HARINAGAR SUGAR

Strike conditions and go slow tactics of labour force troubled the Company during the last five years and therefore the working of the factory has not been satisfactory. During the year ended September 30, 1959 through the good offices of the Deputy Minister, General Administration and Irrigation and Power, Government of Bihar an understanding was reached so that there was no strike or slow down during the season 1958-59.

During the season the factory crushed about 48.5 lakh maunds of sugarcane and produced about 1.70 lakh bags of sugars, showing a recovery of 9.68 per cent. The sales of sugar improved significantly to Rs. 1.76 crores against Rs. 1.29 crores during the previous year. There was a net profit of Rs. 9.42 lakhs including the profit-earned from the farm (1.06 lakhs). The directors have proposed a dividend at the rate of 11 per cent subject to deduction of tax absorbing Rs. 1.10 lakhs. A sum of Rs. 3.25 lakhs has been transferred to investment reserve.

The Shangrila Food Products Ltd., a subsidiary company, suffered losses during the year to March 31, 1959. The directors have, therefore, decided to forgo the interest due on the loans advanced to the subsidiary Company.

UNITED PROVINCES SUGAR

During the year to September 30, 1959, the United Provinces Sugar Company Ltd., crushed a record quantity of sugarcane (40.21 lakh maunds) and produced 4.13 lakh maunds of sugar which also is the maximum quantity ever produced by the Company. As a natural corollary, the sales of sugar and molasses also were significantly higher at Rs. 1,48 lakhs against Rs. 93 lakhs during the previous year. The profits of the Company were also highest which came to Rs. 12.39 lakhs after providing for depreciation and other charges. The directors have proposed the payment of a dividend at 15 per cent for the year subject to deduction of tax, which will absorb a sum of Rs. 2.40 lakhs.

It is reported by the directors that the crushing during 1959-60 seasons comes to 48.74 lakh maunds of sugar which is an unprecendented quantity in the Company's history. The auditors have stated in their report that no provision has been made for the liability in respect of cane crushed on the formula prescribed by the Government. The directors have explained that such provision could not be made because the X factor in cane price linking formula has not been notified by the Government.

COMMODITY NEWS AND NOTES

INCREASE IN MINERAL PRODUCTION

The total value of mineral production in India during the first quarter of 1960 is estimated at Rs. 373 million compared with Rs. 341 million in the corresponding period of 1959, according to the Indian Bureau of Mines. This does not include petroleum, minor minerals and minerals prescribed under Atomic Energy Act, 1948. The increase of Rs. 32 million or 9 per cent over the total value of production in January-March, 1959 was mainly due to the increase in the output of coal, iron ore, chromite, gold, dolomite and limestone. Coal was the leading commodity and was valued at Rs. 262 million which is about 70 per cent of the total value of mineral production. The value of metallic minerals produced during the period was Rs. 75 million of which the ferrous group of minerals accounted for Rs. 47 million while the minerals of non-ferrous group accounted for Rs. 28 million. The output of iron ore reached the peak figure of 2.6 million tons. The overall position is indicated by the quantity index of mineral production which stood at 105.9 in the first quarter of 1960 (Base first quarter of 1959 = 100). The rise in the index of mineral production was contributed by coal, metallic minerals and building materials.

RATES OF COMPOUNDED DUTY ON KHANDSARI SUGAR REDUCED

With a view to helping the manufacturers of khandsari sugar, working without the aid of sulphitation plants, the Government of India introduced a compounded levy scheme from March 1, 1960. Representations have since been received indicating the difficulties of the industry in paying duty at these rates during the galawat period.

In view of the special difficulties of the industry this year, the Government have decided to reduce the rates by one-third for the period July 23, to October 31, 1960. From November 1, 1960 the original rates will apply.

ALL-TIME RECORD IN AREA & PRODUCTION OF SUGAR-CANE CROP

The All-India Final Estimate of Sugarcane, 1959-60 puts the current year's area and production of the crop at an all time record of 5,178,000 acres and 75,038,000 tons in terms of cane (or 7,579,000 tons in terms of raw sugar 'gur') respectively, according to the Directorate of Economics and Statistics, Ministry of Food and Agriculture. As compared with the partially revised estimates of 4,803,000 acres and 70,456,000 tons in terms of cane (or 7,113,000 tons in terms of gur) for 1958-59, the estimate for 1959-60 shows an increase of 375,000 acres or 7.8 per cent in area and 4,582,000 tons (cane) or 6.5 per cent in production.

The increase in acreage during the current year has been reported mainly by Uttar Pradesh, the premier sugarcane growing State, and by Punjab, Bihar, Maharashtra and Rajasthan and has been attributed generally to favourable weather conditions during the sowing period of the crop.

ALL-INDIA FINAL ESTIMATE OF RAPESEED AND MUSTARD, 1959-60

The All-India Final Estimate of rapeseed and mustard for 1959-60 puts the current year's area and production at 7,167,000 acres and 1,037,000 tons as against the partially revised estimate of 6,012,000 acres and 1,025,000 tons for 1958-59, thereby showing an increase of 1,146,000 acres or 19.0 per cent in area and 12,000 tons or 1.2 per cent in production, according to the Directorate of Economics and Statistics, Ministry of Food and Agriculture. The increase in area during the current year is accounted for mainly by Uttar Pradesh — the major rapeseed and mustard producing State — and partly by West Bengal and Bihar and is due mainly to favourable weather conditions during sowing period this year than last year. This increase has, however, been offset to some extent by decrease in area reported from Punjab and Rajasthan and attributed to unfavourable weather conditions at the sowing time.

The increase in production during the current year has been reported mainly by Uttar Pradesh and is attributed to increase in area. This increase has been offset to a large extent by the decline in production reported by Punjab, Rajasthan, Assam, Bihar and West Bengal. The decrease in these States is attributed partly to decrease in area and partly to unfavourable weather conditions during period of growth of the crop this year than last year. Production estimates of rapeseed and mustard in respect of Assam, Madhya Pradesh, Rajasthan, Uttar Pradesh (pure crop only) and West Bengal are based on the results of crop cutting surveys.

Company Meetings

THE TATA POWER COMPANY LIMITED

STATEMENT OF THE CHAIRMAN FOR THE YEAR 1959-60

TO THE MEMBERS,

This is the Jubilee year of the Tata Hydro-Electric Power Supply Company Limited, the oldest of the three Tata Power supply companies. It was incorporated on 7th November 1910, and will be fifty years of age in November of this year. The Tata Hydro-Electric system occupies a unique place in the family of Tata enterprises. It is one of the three great projects, to the planning and development of which the Founder gave so much of the last years of his life. When the late Mr. Jamshetji Tata, who might aptly be described as the Founder of Industrial India, first conceived the idea, in the nineties of the last century, of harnessing the rain water of the monsoons on the Western Ghats, the idea was unique, because although river valley projects had been developed in other countries, it was perhaps the first large-scale project for directly conserving rain water. After extensive preliminary investigation, the plan took final shape some years after the Founder's death. A licence for generating electricity was applied for and obtained in the year 1907 and the enterprise took shape with the promotion of the Tata Hydro-Electric Power Supply Company. The Company's power station at Khopoli started with 5 machines each of 8,000 kilowatts, or a total installed capaity of 40 megawatts.

2. Later the two sister companies were promoted—first in Andhra in August 1916 and then Power in September 1919—and in spite of passing through many vicissitudes, the three undertakings, operating as an integrated system, have continuously expanded and have, throughout, provided a high quality of service noted for its continuity and efficiency. Add to this the low cost of supply, as our rates consistently have been among the lowest in India and omparable with the lowest standard rates obtainable in other countries, and the Tata electric group can, I think with justice, claim that it has well and truly served the people of Bombay and the other areas over which our licences extend. Today, the installed capacity of the group, inclusive of thermal power, exceeds 470 megawatts.

3. Although the Jubilee to be commemorated in November 1960 is that of the Hydro Company, it is also that of the Tata Electric System as a whole. The other two sister companies have, therefore, agreed to take their place as co-equal members of the Tata electric group in the commemorative action that is proposed. The Directors of the three Companies propose to celebrate the Jubilee in a three-fold manner: first, to institute a Foundation of Rs. 1 lakh (to be contributed in the usual proportions by the three Companies) from which to finance scholarships for research on problems connected with electric power. The money will be paid to the Indian Institute of Science at Bangalore—another of J. N. Tata's great schemes—as an endowment for this purpose. Second, to give to each one of the employees of the three Companies, without consideration of rank and status, a Government of India Prize Bond worth Rs. 100. The total cost on this account will also be shared proportionately by the three Companies. If anyone of the staff who receives a Prize Bond is fortunate to win a prize, as I hope will be the case, he will have occasion to remember this Jubilee always. These payments will be made during the year 1960-61.

4. Third although the Jubilee may be considered to fall perhaps more appropriately within the accounts year 1960-61, your Directors have decided that, as it occurs in the calendar year 1960, the Jubilee bonus on dividends should be paid this year out of the profits for 1959-60. Quantitatively, an extra ½ per cent dividend might appear somewhat small, but as you will see from the Statement of Accounts in the Annual Report, it represents a fair contribution from the profits of the Company, and I trust that our dividend proposals will have your approval.

5. The year 1959-60 registers in the case of all three Companies larger energy sales, and therefore larger profits, except in the case of the Tata Hydro Company, where the increase in revenue from power supply is more than offset by the additional tax provision, which is relatively higher because there was no unabsorbed development rebate carried forward from previous years, as was the case with each of the other two Companies.

6. While the financial position of the Companies was sustained satisfactorily, the capital base increased and activities and revenues considerably expanded, the market value of the shares of the three Companies registered a substantial fall during the year. In the case of Andhra, the price of the Ordinary shares actually went below par, a thing which had not happened for nearly twenty-five years in the history of our Group's shares which once stood at a considerable premium and were universally regarded on a par with gilt-edged securities.

7. Considering the buoyant tone of the share market as a whole, the drop in the value of our three Companies' shares, clearly reflects the loss of confidence in these scrips which has resulted from the stringent limitation in profits and other restrictions imposed upon Public Utilities by the Electricity (Supply) Act and, more recently, from the introduction of the tax on dividends under the Finance Act, 1959.

8. I explained at some length in my statement last year the adverse effect of this unfortunate innovation on the reasonable return allowed to our Companies. The Federation of Electricity Undertakings has continued to press the claims of the industry for an improvement in the permissible return on the capital base, either by permitting the tax on dividends to be regarded as legitimate expenditure for calculating the reasonable return and clear profits or by increasing the standard rate of return. While we have been assured of sympathetic consideration there is yet no indication of Government's decision on these representations.

9. I mentioned last year that the manufacturers of the turbine-generators installed at Trombay were about to undertake certain modifications to the first two turbines. I am glad to say that this work has been completed. No. 1 turbine-generator has been proved to fulfil the contracted guarantees; tests on the second machine will be conducted shortly.

10. New Unit No. 3 has now gone into operation within three months of the target date. Its boiler is designed to burn coal in addition to refinery fuel. The Unit was started on refinery fuel, but will soon be switched over to coal firing. Coal comes to us from the Pench Valley areas, and we have reached satisfactory arrangements with the Railways for regular supplies. In addition, suitable reserves of coal will be stacked in our yard.

11. During the months March to June, when No. 2 Unit was out of commission for major modifications,

and No. 3 had not started, we had to lean rather heavily upon the Railway's power station at Chola to meet load demands. I would like to thank the railway authorities for the fine manner in which they co-operated with us. Despite this, there were a few days on which, owing to the demand being almost equal to available capacity, frequency differences and a drop in voltage occurred, causing some inconvenience to the public, which I much regret. On one day alone, however, throughout that critical period did we have to drop load to the extent of about 20 MW.

12. With three Units at Trombay now, the total installed capacity of the Tata system exceeds 470 MW; including Chola, the installed capacity of the Tata-cum-Railway system is nearly 600 MW. We are, therefore, in a position to meet a maximum system demand of about 500 MW against the present maximum of 442, but the growth in demand and energy requirements continues to increase at the cumulative rate of about 8 per cent per year. For the immediate future, we may expect some additional power from Koyna. According to Government plans, the first 60 MW set at Koyna is expected to go into commercial operation during the latter part of 1961; thereafter, at six-monthly intervals, the second, third, and fourth sets of 60 MW each will be brought into service. By the middle of 1963, therefore, when the first stage of Koyna development is completed, we will be assured of 115 MW of additional power from this source, the balance being required to meet other local commitments.

13. The second stage of Koyna development, rated to yield another 240 MW, may be carried out between 1963 and 1965. However, with the inter-State agreement limiting the diversion of water from the Krishna river basin, the limited capacity of the transmission lines connecting Koyna with our system and the reservation of a substantial amount of power required for use in the Southern Maharashtra region, our system can expect to receive no more than 250 MW altogether from Koyna. If Government's plans for the second stage of Koyna go through, we will have by 1965 on the Tata/Koyna/Railway inter-connected grid a firm load-carrying capability of about 700 MW.

14. Studies made by our engineers indicate that the system peak demand will also have grown to about the firm capacity of this inter-connected grid by the end of 1965. What after that? Planning for additional power beyond 1965 has commenced. Two alternatives are being considered: (a) Nuclear power plants, and (b) hydro-cum-thermal development. All of us have heard of the Central Government's intention to set up a nuclear power plant of 300 MW capacity at some suitable location some miles north of Bombay. This plant we are told, will be inter-connected with Surat and Ahmedabad in the north and our system and Koyna in the south. An inter-connected grid such as this extending over many hundreds of miles, with power stations with varying capacities of generating units from 10 MW to 150 MW will create many intricate and difficult technical problems. Our engineers are studying the possible repercussions on our system. We believe, that the commercial operation of a project of this type, dimension and complexity, will take more than 5 years to materialise. It might, therefore, be more prudent to plan some further power development within our own area, independent of the Central Government's project. If necessary at a later stage, these plans could be co-ordinated with the Government project.

15. We are in close touch with the Government of Maharashtra and its State Electricity Board, whom we shall consult in planning further expansion to our system beyond 1965. Development of hydel power on our system, of necessity, will be restricted. Perhaps, a small hydro plant could be installed on the tail race waters outside Bhira on the Kundalika river. This will give additional peaking assistance, but will not, to any substantial extent, meet the demand for additional power beyond 1965. Similarly, on the completion of the new tunnel at Bhira, an additional machine could be installed at the Bhira power station, but even that will add very little to the system capacity. We are, therefore, left with the possibility of considering further thermal expansion at Trombay.

16. May 1, in conclusion, on behalf of the shareholders, the Board, and myself express our thanks to all employees of the Company who have served us so well during the year.

11th July, 1960

J. D. CHOKSI
Chairman.

THE CENTRAL WAREHOUSING CORPORATION

Speech of the Chairman, Shri B. B. Ghosh at the Third Annual General Meeting held on 16 July 1960

Gentlemen,

I have great pleasure in welcoming you to this third Annual General Meeting of the Corporation. The report of the Directors and the annual accounts, which have been presented to you, give an account of the working of the Corporation for the year 1959-60. The report of the auditors has been appended to the balance sheet and profit and loss account. The Director of Commercial Audit has also carried out his audit, on behalf of the Comptroller and Auditor General, but his report has not yet been received.

2. You will notice that during the year under report, there was a significant increase in the number of shares subscribed which was due mainly to the purchase of 4,000 shares by the Life Insurance Corporation. I hope this will act as an encouragement to others. I would specially appeal to the Scheduled Banks to participate in this venture. Apart from this being good and safe investment, I would point out that the banks would distinctly benefit from the development of good warehousing facilities throughout the country. I feel we shall also benefit greatly from their association. It is not desirable that a scheme of this nature should be left entirely or mostly to Government.

3. You will also notice from the report that there has been a steady progress in the actual working of the Corporation. The number of centres has risen from 9 to 26. The stocks deposited at Central warehouses increased from 1,63,000 maunds on 31st March, 1959 to 5,17,000 maunds on 31st March, 1960. The number of commodities handled has risen from 30 to 60. The maximum overall occupancy during the year has been 83 per cent and the minimum as high as 60 per cent. With the increase in business, the financial results have also shown improvement. Broadly speaking, the warehouses, which were started the year before, showed a profit while those started during the year under report are expected to show a profit during the current year. The excess of expenditure incurred directly on the warehouses over earnings dropped from Rs. 1,25,000 during the previous year to only Rs. 19,000 during the year under report. Receipts from storage charges increased from Rs. 76,000 to Rs, 3,81,000 during the same period. There is justifiable reason to feel optimistic about the future. At the initial stage, most of the warehouses have had to be started in whatever accommodation was available on hire. As we make progress in our construction programme and succeed in having warehouses of the economic size and as the total number of warehouses increases further, we can reasonably hope to realise not only our expenditure in the field but also the expenditure on the headquarters organisation. I understand construction work has been undertaken at 20 centres.

4. I should draw attention to another favourable trend in our working. The number of producer-depositors taking advantage of our facilities has shown a marked increase during the period under report. Our main object is to cater to the needs of the producers, either direct or through producers' co-operatives. You may be interested to know that a Central Warehouse has been set up at Delhi with a view to catering to the needs of the Federations of consumers' co-operatives and also to provide cold storage facilities.

5. I mentioned last year that the progress of the Central Corporation should not be judged merely by the development and success of the Central Warehouses, but also by its contribution, financial and otherwise, to the development of the state warehouses. The Central Corporation subscribed Rs. 13,00,000 to the share capital of the state corporations during the year. This brings the total of share capital contributed by the Central Corporation to approximately Rs. 1 crore. The number of state warehouses rose from 42 during the preceding year to 148 during the year under report. The state warehouses rose from 42 during the preceding year to 148 during the year under report. The State Corporations are also, generally speaking, making steady progress.

6. Every warehouse, Central or State, has become our agent for carrying the message of 'warehousing'. I venture to say that largely due to them, there has been a general awakening of consciousness throughout the country of the need and utility of warehousing facilities in any scheme of rural or agricultural development. It is now generally agreed that whether for the development of agricultural production or for the development of co-operatives or even for storage of Government's own stocks, proper storage or warehousing facilities are an essential requirement. There is only some argument occasionally as to the agency which should provide these facilities. As long as we are in a position to provide satisfactory facilities at a reasonable charge, in competition with others, we have nothing to be afraid of.

7. Before I conclude I would like to express on your behalf and on behalf of the Board of Directors our appreciation of the work of the officers and staff of the Corporation.

8. I now invite you to consider the annual accounts and the report of the Directors which have been presented to you.

THE LIFE INSURANCE CORPORATION OF INDIA

Statement by Shri P. A. Gopalkrishnan, ICS, Chairman, at the 52and Meeting of the Life Insurance Corporation of India, held in Bombay on 25th July, 1960 to discuss Annual Report and Audited Accounts for the year 1959.

I have great pleasure in welcoming you to this special meeting of the Board which has been convened mainly to consider the draft Annual Report and Audited Accounts for 1959. These have already been circulated to all the Members. I wish to take this opportunity to review the steady and satisfactory progress made by the Corporation after it was established on 1st September, 1956.

NEW BUSINESS

2. You will remember that the Corporation secured a new business of Rs. 345 crores in 1958 which was 22 per cent more than that of 1957. In 1959, our new business amounted to Rs. 429 crores recording an increase of 25 per cent over that of the previous year. The number of new policies issued has also steadily increased to 1.15 million in 1959, which is about 41 per cent more than the number issued in 1957.

3. A small amount of foreign business is also done by the Corporation and is included in the figures quoted above. During the period between the 19th January and 1st September, 1956, there was considerable uncertainty as to whether the Corporation will do new business in foreign countries. Because of this uncertainty, many of our good agents in those countries left us to join our competitors. Even when we finally decided to do foreign business, we excluded doing of new business in Ceylon, Burma and Pakistan. Owing to these reasons, our foreign business amounted only to Rs. 5.40 crores in 1957. In 1958, it was Rs. 5.62 crores. I visited East Africa in the latter half of 1958 and Malaya and Singapore in early 1959. As a consequence of my visit, we took various measures for increasing our business in those countries. The results of these measures are reflected in our increased new business in 1959 which amounted to Rs. 9.47 crores. The improvement of business thus brought about in 1959 continues in this year also.

4. Although the Janata Scheme is not working successfully in all the places where it was started, the number of Janata policies issued has been gradually increasing. 21,208 policies were issued in 1957, 24,325 in 1958 and 28,705 in 1959, the sums assured being Rs. 1.17 crores, Rs. 1.61 crores and Rs. 2.01 crores respectively. We have recently introduced another scheme which has more or less the same objective as the Janata, namely, extending insurance to sections of the population which would otherwise remain uncovered. Under this scheme, policies are issued without medical examination in rural areas which are inaccessible and where there is paucity of doctors. These policies are issued only up to total sum assured to Rs. 2,000. We have to watch the working of this scheme for two or three years before we decide to extend it all over the country.

LAPSE RATIO

5. Questions have been asked in certain quarters about the stability of the increasing business secured by the Corporation. We have made a detailed analysis of our lapse experience during the years 1957 and 1958. The figures for 1959 are being collected for analysis. You will find from the analysis already made that the

Corporation's experience in the matter of lapsation of business is distinctly better than the experience of the companies before nationalisation. The net lapses which amounted to 7.3 per cent of the mean business in force in 1954 and 7.6 per cent in 1955 came down to 6.4 per cent in 1957 and 5.1 per cent in 1958. The percentage of lapses is thus steadily coming down.

6. It is also a matter for satisfaction that our business in force has increased enormously after nationalisation. It took all the companies in India several decades to build up a business in force of Rs. 1,220 crores at the end of 1955. The Corporation's business in force at the end of 1959 was Rs. 1,964 crores, recording a net increase of Rs. 744 crores, that is, more than 60 per cent. The number of policies in force on 31st December, 1959 was nearly 7 million, representing an increase of 45 per cent over that at the end of 1955.

ECONOMY OF MANAGEMENT

7. The next question to be considered is the economy of management. Here also, we have set up a record which should be deemed satisfactory. I would like to recall in this connection that we took over all the staff of the old companies with their emoluments protected. Then we considerably increased our administrative expenditure by standardizing their scales of pay which meant in several hundreds of cases a considerable increase in the emoluments which they were drawing before nationalisation. On the other side, we reduced our premium income by reducing our premium rates by Re. 1 per Rs. 1,000 sum assured below the Oriental rates and by removing various extras, such as extras on the insurance of female lives. The net result would have been an increase in our renewal expense ratio but for various measures of rationalisation adopted by us. Our progressive increase of new business has also contributed considerably to the fall in our renewal expense ratio. This ratio came down to 15.89 per cent in the accounting year 1956-57 from the combined renewal expense ratio of 17.3 per cent of all the companies in India in 1955. It came down further to 15.46 per cent in 1958. In introduced a system of budget control with effect from 1959, which was approved by the Board. The result has been extremely satisfactory since the renewal expense ratio in 1959 has come down to 12.92 per cent, which compares favourably with that of some of the best companies in the past.

PROGRESS INDICATIONS

8. I shall now refer to some other figures which indicate the progress of the Corporation. Our Life Fund, which stood at Rs. 380 crores on the day of nationalisation, has increased to Rs. 493 crores at the end of 1959. Our total assets have similarly increased from Rs. 414 crores to Rs. 552 crores. Our annual income consisting of premiums and income from investments has been steadily going up until it crossed the hundred crore mark in 1959 amounting in that year to Rs. 105 crores. With increasing business and investments, this income should go up further in future years.

9. Our disbursements to policyholders and their beneficiaries by way of settlement of claims have also been increasing year after year. In 1959, we paid out Rs. 28 crores, of which about 25 per cent were claims arising from death, the balance representing maturity benefits. Since the nationalisation of life insurance, the Corporation has paid about Rs. 82 crores in all on account of claims.

10. While we have, thus, every reason to be satisfied with our performance so far, we have to examine how far we are realizing one of the fundamental objectives of nationalisation of life insurance, namely, the mobilization of resources for the successive Five-Year Plans of the country. Here, I should admit that we have only touched the fringe of the problem. It is true that we have increased the business in force from about 11 per cent of the national income in 1955 to 15 per cent in 1959. There are countries in the world, particularly the United States and Canada, where the life insurance business in force exceeds the national income. Canada is the leader in this respect with life insurance in force amounting to 157 per cent of the national income in 1958. Our population is poor by comparison and the saving potentiality is much less in this country than in the highly industrialized countries like the United States and Canada. Nevertheless, it should be our endeavour to expand our business to the maximum possible extent every year to that more and more resources can be contributed by us for the economic development of our country.

11. As you are aware, the Corporation has started with a modest Five-Year Plan of its own from 1959 and has fixed Rs. 1,000 crores as the targest of new business in 1963. Although there are reasons to believe that the potential business in the country is very much more, this target has been fixed on realistic grounds after taking into account the Corporation's capacity to expand its organization consistent with the maintenance of efficiency. We had inherited from the old companies all sorts of staff who had varying degrees of experience, whose methods of working were not uniform and who needed training before they could be fitted into the Corporation's way of working. We have since then recruited additional staff every year who also stand in need of training. In order to meet this need and to strengthen and equip our organization to handle the increasing volume of business, we have recently started one training college for junior officers and training courses for our clerical staff at almost all the headquarters of our divisions. The eleven training schools that we started over a year ago for our development personnel have already made much progress in training our Field Officers and agents. I hope that these training institutions will enable the Corporation to function efficiently when business flows in accordance with our Plan.

12. Before nationlization, the private companies were operating from their headquarters in big cities and the number of centres in the country, where they had their offices, was only 97. The Corporation has, on the other hand, a widely decentralized organisation and the number of branch and sub-offices has been increased from 216 on 1st September, 1956 to 345 at the end of 1959. A further increase in the number of offices has been sanctioned in 1960. Every care is taken to see that none of the new offices opened by us turns out to be an uneconomic proposition. The method that we have adopted is to start with a development centre where a Field Officer or Assistant Branch Manager is posted to organise business without the aid of an office. When the annual business procured increases beyond a certain limit, the development centre is upgraded into a sub-office which is in effect a miniature branch office. When the sub-office begins to procure more than about Rs. 70 lakhs of business, it is up-graded into a full-fledged branch office. This gradualness of our expansion ensures that we don't take any avoidable risk while expanding our organization in the country. In the next three or four years, our growing net-work of offices should be in a position to serve every nook and corner of India.

13. No large insurance company in the world can operate efficiently without the aid of machines. Millions of premium notices and receipts have to be sent out every year and millions of calculations are necessary in connection with the collection and analysis of statistics, maintenance of acounts and periodical valuations. The output of our employees can be increased considerably by switching over to modern electronic and other equipments, thus reducing our expenses of management and making more and more surpluses available to our millions of policyholders. We have been studying this question for some time and have come to the conclusion that at the rate at which we are expanding, we have no alternative but to resort to the latest machine techniques if our service to policyholders is not to suffer and if we are to reduce our expenses at a rapid rate. I shall be bringing up proposals in this connection as soon as I find it possible to do so.

14. Meanwhile, everything possible is being done to improve our system of working as well as the output of our employees. The average output of a Field Officer was Rs. 4.9 lakhs of new business in 1957. It increased to Rs. 6.5 lakhs in 1958 and to Rs. 7.5 lakhs in 1959. The average output of our agents has similarly increased from Rs. 31,067 of new business in 1957 to Rs. 37,494 in 1958 and to Rs. 44,435 in 1959. These improvements have come about as a result of persistent efforts on our part to improve the quality of our field force instead of depending merely on numbers. When our administrative training has continued for a sufficient time I have every hope that the output of our clerical employees will also register a similar improvement.

15. You are aware that we had a programme for decentralizing the policies of the old companies and getting them serviced by the appropriate divisional offices of the Corporation. The first phase of this programme has now been completed and the policies of 139 companies have been decentralised up to the end of June 1960. The next phase of the programme will be taken up shortly.

16. You will remember that the total book value of our Stock Exchange Investments was Rs. 338.59 crores on 31st December, 1957. The market value of these investments had depreciated by Rs. 8.02 crores of which the depreciation of the investments taken over from the erstwhile insurers was Rs. 7.28 crores. We made a contribution of Rs. 8.02 crores to the reserve for investments which, together with the previous reserves, now stand at Rs. 13.32 crores. As at 31st December, 1959, the book value of our Stock Exchange Investments pertaining to life business was Rs. 409.82 crores while the market value was more by Rs. 4.68 crores. Nevertheless, we propose to leave the reserves intact which will be a cushion against any future developments of an adverse character.

17. As you are aware, we have set up an Investment Research Section in our Investment Department and this Section has been systematically analysing the balance sheets of all the companies whose shares are quoted on the Stock Exchanges of the country. The Investment Committee is thus provided with all the necessary data before its advice is taken on investments to be made. In the case of new industrial ventures which approach us for investments, searching enquiries are made and all relevant data are carefully examined before the Investment Committee is asked for its advice. We thus make sure that all the investments that we make are in sound concerns and bring us returns which we consider attractive. We have also been reviewing the investments that we inherited from private companies and selling all those which are found to be unprofitable. Thus, we are constantly endeavouring to improve the quality of our investments.

18. Before I close this statement, I would like to convey my thanks to all the Members of the Corporation for the assistance and co-operation that I have uniformly received from them. My thanks are also due to the Members of the Investment Committee whose advice has been most useful for the Corporation in the matter of investments. I should also like to put on record my appreciation of the invaluable services rendered by our field force and our office personnel including officers who have contributed in no small measure to the progress of the Corporation.

INDIAN COPPER CORPORATION LTD.

Address delivered by Mr. Patrick E. G. W. Parish, O.B.E., Chairman of Indian Copper Corporation Ltd., at the Annual General Meeting of the Company for the year ended 31st December, 1959, held on the 27th July, 1960.

Gentlemen,

Your Directors' Report and the Accounts for the year ended 31st December, 1959 have been in your hands for some time. I once again welcome this opportunity to give you a short outline and some further information on the results of the working of your Company during the year, together with some comments concerning copper prices which are of interest and affect your Company's working results.

GENERAL REVIEW

It is a fact that, if all Copper Mines throughout the world worked to capacity production would exceed current consumption. In that event prices would be bound to fall. During the year 1959, however, strikes took place in various mines, especially in America, with the result that production was curtailed, world stocks were reduced and a consequent rise in price took place.

For the first ten months of the year the average London Metal Exchange price for this metal fluctuated within small limits around £230 per ton, and thereafter steadily increased to a maximum figure of £255 per ton in December. There were further increases in price for the first few months of this year, followed by a small decline, but at present the price appears to be steady around £255 per ton.

As regards the future, it would seem that, if settled conditions return, stocks will increase and prices are likely to fall unless some of the world's larger producers voluntarily agree to restrict output.

WORKING REVIEW

Your Company's production of Fire-Refined Copper during 1959, but for an unfortunate breakdown in the Smelter during December necessitating the annual shutdown for repairs a month early, should have been another record. However, it is expected that the shortfall of 1959 will be made good during this year, provided there are no other unforeseen setbacks.

Copper consumption in India at present is about 50,000 tons per annum against which your Company, the only indigenous mine, produces about 8,000 tons. Naturally the price at which our Copper is sold is linked to the price of imported metal.

The more copper we can produce the less foreign exchange will be required for imported metal. The steady increase in production during recent years is planned to continue in line with the further development of the Mine. This will obviously require considerable further capital expenditure which will have to be met in the years ahead. In particular, a new Crushing Plant, Smelter and a small Concentration Plant will shortly be required to deal with the increased ore output and these items alone will cost something in the neighbourhood of £1 million.

Prospecting throughout our leasehold continues,

but results so far cannot be regarded as particularly favourable and do not at present indicate that any major deposits which might be equal in size to your Mosaboni and Badia Mines are available. These prospecting operations have been intensified over recent years; it is premature to forecast what final results will eventually be obtained.

Ore reserves have again increased from 4,034,147 short tons to 4,203,547 short tons despite the decrease of 35,793 short tons in Badia Section. This has been achieved by concentrating on development at depth in the Mosaboni Mine and on development of the new small mine—Surda.

The satisfactory final results for 1959 are directly attributable to the increased selling prices. As I predicted last year, the working costs have increased due to the necessity of mining at greater depths. There has also been a further increase in these costs as a result of lower production and heavy maintenance charges.

Once again,I am pleased to inform you that during 1959 relations with the employees remained satisfactory. The three-year Agreement with the Mines and Works Unions is at present under review and negotiations are taking place between the Management and the Unions to try to arrive at a new settlement.

KYANITE

The demand for our raw material in world markets continues to be satisfactory despite the increased consumption of synthetics and competition from other sources. New world markets are being sought and there are hopeful signs that provided prices can be kept at competitive levels, it may be possible to recapture certain established markets, particularly in America. Our exports to the USA last year amounted to approximately 20 per cent of all our exports.

At the moment I have nothing further to report concerning the suits in regard to your Company's Kyanite Leases, as they are subjudice in the Supreme Court.

ELECTROLYTIC PROJECT

All matters appertaining to the Electrolytic Project for the installation of a Refinery and Foundry for the manufacture of Electrolytic Copper and Wire Bar have been finalised, and I am pleased to report that a start has already been made to implement the scheme. The proposal is to utilise some or all of the Company's production of copper supplemented, if required, by the importation of Blister Copper for the Refinery. At the same time the production of Rolled Copper and Brass Sheets will be continued as in the past. The target date to commence production of Electrolytic Copper is the end of 1962.

ACCOUNTS

The profit for the year before providing for Taxation, Depreciation and Reserves amounts to £1,202,259. Your Directors have decided to place £175,000 to Depreciation and £125,000 to General Reserve. Income Tax and Super Tax on profits for the year amount to £439,949.

Your Directors recommend a Dividend of 27 per cent subject to deduction of tax, which gives a slightly higher net yield than the Dividend of 18 per cent free of tax paid in the previous year. You are no doubt aware that, under the Income Tax laws, dividends now have to be declared subject to deduction of tax. With these proposals £107,121 will be carried forward.

STAFF

I think you will agree that we have had another satisfactory year and I am sure that I speak for you all in extending our thanks to the General Manager, Mr. N. A. B. Hill, to the Staff both at the Mine and at the Works, and to the workers, all of whom have contributed to the results during 1959.

Principles of a Price Policy

SLOWLY, but relentlessly, economic affairs are impressing their urgency upon the current Indian scene. Temporarily at least, our preoccupation with the People's Republic of China has been reduced, and while internal political forces, like those presented by Nagaland and the perilous state of passions in Assam, might appear to demand the highest priority, the accent is now elsewhere. A new and dangerous foreign exchange crisis is looming ahead; this calls for a prompt, and, may be, drastic, reappraisal of current policies. The drain on the sterling balances in the last return of the Reserve Bank of India of another Rs. 7 crores has served to highlight a deteriorating situation. India must make up her mind either to obtain the foreign exchange for which she has spaciously planned in the Third Five-Year Plan, or to restrain the implementation of schemes based on its availability. Nothing that the Finance Minister said in his fairly optimistic review in Parliament on Wednesday should make one overlook the point that much more has to be done on the foreign exchange front than either he or his officers have hitherto designed. We need not be too querulous because the task has been beyond the capacity of the small staff which has been designated for this purpose, but the removal of an Additional Secretary dealing with foreign exchange in the Ministry of Finance is a major blunder for which the Finance Minister must be deemed personally responsible. Without further delay the post should be recreated, and a major responsibility imposed on an Additional Secretary to plan a bold campaign for keeping India's foreign payments in balance.

While a new foreign exchange crisis looms ahead, the major accent is on internal prices. The current confusion has been in no way allayed by confident pronouncements by the highest Government authorities that the price line will be held. That the price line can be held with existing Plans and existing policies will never be believed by any intelligent section of the community, and it is time that the Government of India recognized that its assurances in this respect are looked upon merely as defences for inaction on the linking of wages with rising prices. The credit of the Government — and what might be more serious, the credit of the currency — can be severely injured by this ostrich-like approach.

What then has to be accomplished? In the first place, a new psychology of emergency has to be created to deal with prices as on a war footing. The Finance Minister has been responsible over the last twelve months for a degree of complacency both in fiscal and other policies which cannot be defended. But it is largely the level of expenditure in the Plan and not the Finance Minister's policies which are the instruments of inflation. Unless consumer goods production can be raised very substantially and measures for implementation thereof taken with immediate effect, inflation is inevitable with the current level of consumer demand. What then is to be done?

For the purpose of holding the price line by production of more consumer goods, policy must centre round food and cloth. In the current year, failure to import raw cotton under PL 480 in time has helped in raising the price of cloth. Now that restrictions on imports have been removed, it may be possible to get in six months out of mills at least 500 million yards of additional cloth.

What is required is a firm directive forthwith to the Textile Commissioner to allow mills to operate on all lines so as to meet the demand of the country without any inhibition of any kind. The position can well be reviewed at the end of the six months and if — which is unlikely — the handloom industry needs protection, it can be instituted in a few directions which call for the highest priority. But blanket prohibition must be avoided if existing textile prices are to be turned back. The capacity is there; why cannot it be fully exploited? Largely because we are being ruled by ghosts of the past.

On the food front, Mr. S. K. Patil's buffer stock of wheat should be employed not merely to stabilise prices, but to set them back by, say, 5 percentage points. This raises political issues, particularly at a time when support prices are being recommended to provide incentives for foodgrain production. But it is likely that agriculturists would gladly accept support prices between 10 to 15 per cent below the current prices if only they could be assured that at that level they would be maintained for the period of the Third Plan. The country should be prepared, in an all-out effort, to guarantee a support price for particular crops such as rice and wheat with immediate effect. Meanwhile, the buffer stocks of wheat, and whatever imports of rice can be arranged from Thailand and elsewhere, must be operated as a lever to hold prices within a firm ceiling. With food and cloth prices stabilised, there must be a fiscal policy which is designed to cut back deficit financing to perhaps half the level that was originally contemplated in this year's Budget. There must inevitably also be a cut-back in Government expenditure.

With foodgrains price supports and enhanced fertilizer production in the longer period, increased cloth production with the removal of all impediments to production and a cut-back in Government expenditure and of bank credit for non-productive uses, the elements of a price policy have been described. At first sight, these look simple, but each is invested with a political component which makes its implementation difficult. It is time that the Government of India took its political courage in both hands. The Congress Party's stock is sufficiently high to take political risks. This is the time for keeping faith with the people. It is both politically wise and economically expedient that it should act without delay on the lines described. It may be a long time before an equally good opportunity for the display of political imagination and economic discipline comes again.

The Sixteenth State of the Union

THE announcement made by the Prime Minister this week in the Lok Sabha about the constitution of a new State, the Nagaland, climaxed the negotiations that had been going on in the Capital between the Naga delegation representing the Naga People's Convention and the Government of India. It is hardly two months since the All-India Congress Committee met in Poona when a resolution was passed discountenancing any further division of States. And yet, the demand of the Nagas for the separate State has been conceded. The leader of the Naga delegation, Dr. Imkongliba Ao, and his colleagues have reasons to be satisfied that they came and conquered. Apart from the merits of the case, it is obvious that it is the over-riding need for security based on strategic considerations on the north-eastern border that has influenced Government's decision because a Naga state as now proposed cannot stand on all fours with a unilingual State.

In retrospect, going over the developments over the last few years, it would appear that the conceding of the demand was inevitable and the only logical step that the Government could have taken. Though the distinct customary and cultural features of the Nagas were safeguarded by the sixth schedule of the Constitution, they did not seem to have taken kindly to it and had in fact totally boycotted the elections to the autonomous bodies proposed thereunder. It was hence that the area had to be administered by the Assam Government itself directly. But thanks to the policy of the Assam Government, a fear was engendered that what was being attempted was the assimilation of the Nagas and these apprehensions were exploited by the extremist elements under the leadership of Phizo, who demanded a sovereign state for the Nagas. Then followed a period of unrest when trouble spread over the entire Naga Hills district involving the Indian Army in large-scale military operations. However, at a convention held in Kohima in 1957, the moderate elements led by Dr. Ao, who was a former lieutenant of the rebel leader Phizo, demanded that a separate administrative unit of the Naga Hills District of Assam and the Tuensang frontier division should be formed under the direct control of the Central Government. This proposal was meant as an interim arrangement pending a "permanent" political settlement with the Indian Union.

The constitution of a separate administrative unit no doubt helped to restore order to some extent, but the activities of the rebels continued, causing considerable concern to the Government. It was as a consequence of the initiative of the Government itself that a convention was held at Mokokchung in October 1959. Its importance lay in the fact that the idea of a sovereign independent State was once and for all abandoned. On the other hand, a series of demands was formulated, the principal one being the constitution of a separate State within the Indian Union to be known as Nagaland under the Ministry of External Affairs with a Governor and administrative secretariat, a Council of Ministers and a Legislative Assembly. The Delhi parleys revolved round this major demand but the difficulty was over the constitution of a viable State consisting of a population of less than 4 lakhs and with an annual revenue of Rs. 500,000. Few could have, therefore, expected that a satisfactory settlement could have been reached over the substance of the Naga demand and almost all the proposals made at the Naga People's Conventon excepting only a few could be found acceptable to Government. The agreement now reached provides that the same person will be appointed the Governor of Assam and the Governor of Nagaland and the existing jurisdiction of the Assam High Court over the area comprising the new State would continue. The agreement also envisages a transitional period when the Governor will exercise a special responsibility for law and order while he will be advised by a Council consisting of the elected representatives of the various tribes of the area.

The Nagas could not have hoped for more than the arrangement now contemplated, since the area has neither the population nor the resources that a modern State needs to sustain its sovereignty. The fact that the area is situated in a strategically vital stretch of the Indian frontier is a compelling reason why its fortunes should be integrated with those of the Indian Union. At a time when Phizo has stepped up his propaganda offensive against India in London in a bid to prevent a settlement, the Government of India has acted with commendable foresight and has given a healing touch to a vexed problem. While the future of this experiment will be watched with great interest, there are certain questions that remain to be answered. Firstly, how far the moderate elements during the interim period will be able to win back the extremists which is after all the *raison d'etre* of the new arrangement. Secondly, what can be the real purport behind the insistence of the Naga leaders that, the new State should be under the Ministry of External Affairs? Here, there can be room for doubt as to why it should be put on a special footing unlike the other States. Thirdly, what will be the reaction to the constitution of the new State when there are signs elsewhere making a similar demand. For example, it is conceivable that the Punjabi Suba demand, whose sting seems to have been taken by firm Government action for the time being, may again get a new lease of life. Again, thanks to the language problem, there is already restiveness in the other hill districts of Assam which may make a similar claim for the partition of the State. Thus, by a paradox, the very attempt to pacify the Nagas by yielding to their demand may give rise to more troubles. This is not to deny the potential value of the agreement reached with the Naga leaders. What is necessary is that Government should not give further weight to the impression growing that any demand backed by "sanctions" can be had if only relentlessly pursued.

Better Late than Never

THE long-awaited statement embodying Government's decisions on the Central Government Employees' Pay Commission's Report was placed by the Union Finance Minister, Mr. Morarji Desai, on the table of the Lok Sabha on Tuesday. The fact that it has taken so long for the Government to finalise its decisions on matters of vital interest to its two million employees—the Pay Commission's report was submitted about a year ago—needed, but did not receive, full explanation. The irksome delay in taking decisions and making them known has undoubtedly generated a feeling of unrest amongst the Government employees, and was certainly a major cause of their recent strike.

It is, however, heartening to note that the Government has not allowed its judgment to be vitiated by its successful handling of the strike and has, within its limited resources, approached the problem of the emoluments of its employees with understanding. The decisions announced on Tuesday are generally in line with the reports appearing in the Press before the strike and the Pay Commission's recommendations. In some cases they are even better than what was anticipated. The Government has done well in rescinding its earlier decision to give effect to the revised pay scales and dearness and compensatory allowances from November last. They are now to come into force from July 1, 1959, and the arrears, instead of being credited to the employees' provident fund, are to be paid in cash. To avoid any injustice being done to employees who might be adversely affected by the new scales, the Government has quite appropriately decided that if they so choose, they can opt for the existing scales.

Equally heartening are the new concessions announced by Mr. Morarji Desai in respect of retirement benefits and deductions on account of compulsory provident fund. In modification of the Pay Commission's recommendation that all Central Government employees should subscribe at least 6¼ per cent of their pay to General Provident Fund, the Government has reduced the rate to 6 nP. per rupee and has given a concession to Class IV employees to contribute even at a lower rate. The date for effecting compulsory deductions has also been brought forward to April 1, 1960. This will surely help the low-paid employees to have some additional cash at their hand. The liberalisation in retirement benefits, announced in November last, by the Government's decision now to accept the Pay Commission's recommendation that special pay should also count for pension in full if the post to which it was attached was held in a substantive capacity and the extent of half in all other cases should go some way in helping the retiring hands.

The temporary staff, which at present forms the majority in various Government establishments, will derive much comfort from the Government's acceptance of the Pay Commission's suggestion that the permanent requirements of all categories of staff should be speedily determined and action taken to convert temporary hands into permanent ones, within the limits permissible, as early as possible. This should help in improving the efficiency of the temporary employees for it removes the Democles sword from over their head.

A major bone of contention between the Government and its employees, which has been the cause of much resentment among the latter, is the question of linking dearness allowance with cost of living. The Government has decided to accept the Pay Commission's recommendation in this regard that if during a period of 12 months the consumer price index remains on an average 10 points above 115, it should review the position and consider whether an increase in dearness allowance should be allowed and, if so, at what rate. This may provide ammunition to the critics for during the strike-eve negotiations with the representatives of the employees, the Government, it is understood, had shown some flexibility on this point; it was reported to have offered to neutralise to the extent of 50 per cent of the 10 points increase in cost of living and settle about the rest through arbitration. It would perhaps have been better to reiterate this position in the statement. This offer presumably was made on its merits; it should not have been made in weakness.

The fitment formula too appears to be a bit faulty inasmuch as it authorises the Government to stop increments in cases where initial salary on fitment in the new scale exceeds a certain limit, till the time the difference is fully absorbed in increments due. It is a well-recognised practice that increments should not be stopped for more than a year in such cases, lest the efficiency of the persons concerned should suffer. The excess amount is continued to be paid to the employees as personal pay and is adjusted gradually against their future increments over a period of three to five years. The Government will do well to look into this matter and, indeed, to recognise that here too justice delayed is justice denied.

A DELHI DIARY

A NEW STATISTIC

ALTHOUGH this is not mentioned in the best circles, I propose to produce today what the Americans call a new statistic. This is that there have been eight murders in Delhi within the last ten days. The solution for this problem apparently is not to have quicker and more summary justice, but to issue a directive to police officers to devote more time to "field" duties. I am a little surprised to find this prescription for the outbreak of murders, seeing that not very long ago many policemen were present near a scene of a murder in Connaught Place in broad daylight. Nor do I expect much from the new instruction making compulsory for Superintendents of Police to visit scenes of a "heinous" crime soon after its occurrence. Surely, all this should have been unnecessary. The fact that the directive has received wide publicity quite apart from the aforesaid eight murders implies that something is rotten in the State of Denmark. I have it from high authority that when one quotes Hamlet, one is protected from the consequences of libel. I sincerely hope I have not been misled.

BLACK-OUT WITH REGULARITY!

Residents of the less affluent localities of the City have another curious problem (or is it a scourge?) created for them. This week as I went to deliver my Diary and say "Hello" to the Editor, I found him a little worried that his Assistant Editors could not keep to the schedule of work. There was a frank discussion and the Editor was surprised to learn that much of the trouble arose out of the black-out which is clamped on some parts of the city twice every night with a regularity that can be hardly missed. This black-out has made its appearance in the past few days to the complete dismay of everyone — whether one wants to work or relax or retire after the day's exertion. Imagine the breakdowns of electricity recurring day after day and depriving the citizens of Delhi (already too much harassed by humidity in the weather which has touched a new peak, in the last two decades, I am told,) of the elementary amenity of the fan. While most of the inmates have to resign themselves to the vagaries (or helplessness?) of those who manage the Delhi Electricity Undertaking, it is not an unusual spectacle to find women emerging into the streets with children in their arms. I am told (and is it not some saving grace?) that this reputation for efficiency is not demonstrated in quarters where the high-ups reside. A matter of protocol?

ROUND ABOUT TURN

I must now assume a more agreeable mood. May I, in the first place, record the happiness that has been felt in Delhi at the Prime Minister's ascendancy over the Working Committee of the AICC in regard to the election of one-third of the members of the Working Committee! Most people have forgotten the point that at the Poona meeting of the AICC, the Prime Minister lost to the conservatives in the voting on this point. Now, almost the same members of the Working Committee have submitted to his good judgment, and the interesting question is being asked in Delhi who is holding the baby? It would appear that many members of the AICC supported the aforesaid conservative members of the Working Committee in their stand against the Prime Minister's proposal. Now that the members of the Working Committee have accepted the Prime Minister's view, the public reaction is: where are the unfortunate people who were led by the majority in the Working Committee? The answer is: nowhere. This is how the democratic principles make us all the creatures of chance.

Most of the people to whom I have talked on the subject are happy that on this matter the Prime Minister has not yielded and that in his quiet and somewhat persistent manner, he has won the last round. No one in his senses had any doubt that, if the Prime Minister worked hard enough, he could change any resolution of the AICC. Both in respect of the strike and after Assam, people are saying that he has, in fact, acquired a new stature which is considerably greater than the one he had six months ago. Journalistic truth is thus as fickle and feminine as history. I have now come to realise that there is only one excellent golden rule if one does not wish to make a mistake: it is called Silence. Unfortunately, it is a rule which would put me out of business and I venture boastfully to hope this would cause some displeasure amongst "The Eastern Economist" readers.

PARLIAMENT'S TAME OPENING

Parliament opened on August 1, when, I regret to say, I was not present to applaud the brave deeds that were likely to emerge on that day. The opening has, however, been extremely tame and neither the Finance Minister who made a statement on his foreign tour, nor the Defence Minister who, responding to a question carefully put by Mr. Feroze Gandhi, promised a rise in every soldier's salary and pension benefits, has raised any enthusiasm. I have never seen a session of Parliament opening so tamely, but perhaps this is only the lull before the storm.

WHAT MIGHT HAPPEN?

We are still awaiting the Supreme Court's decision in the Nanavati case and the result of Mr. Vishnu Sahai's new enquiry into the Defence Ministry's Canadian deal. It seems the Secretary of the Cabinet has now become the most skilful non-judicial tribunal that exists in the country for major problems of embarrassment for which a mere judge by application of rigid judicial procedure is considered inadequate. Only one hopes that the impression will not be created that when enquiries are held by the Secretary of the Cabinet they are convenient to the Government. A little more imagination in the appointment of officers designed to hold rapid enquiries might, I think, raise a happier feeling in the public mind that no lapse from high judicial objectivity is contemplated. I do not like the word white-washing which I have heard twice this week, although it may have been in another connection. Cannot departmental enquiries always convey the impression that the whole truth and nothing but the truth is being sought?

CHALLENGE AND RESPONSE

A very short time ago, I raised a gallant cry to welcome in Mrs. Srimavo Bandaranaike. This week I have been rebuked for my excessive enthusiasm by the hasty, and may I submit, intemperate manner in which the Prime Minister of Ceylon is approaching Ceylon's Fourth Estate. Since we have had a Press Commission—and we seldom do anything really dangerous—we cannot criticise Mrs. Bandaranaike's Press Commission in the process of being born. But long before the Commission has even assembled, she has banned the entry of an issue of "TIME" about which, it appears, the only complaint is that it has been critical of her. Is it a crime to have said that she is in favour of birth control? If not, what is the crime? If there is no crime, why is a democratic country curtailing the freedom of the Press? I ask these questions praying for an adequate reply so that we, gentlemen of the Press, will not need to be ungallant to a lady!

ARGUS.

THE WEEK'S NOTES

Congress

HIGH COMMAND AND THE ELECTIVE PRINCIPLE

THE CONGRESS WORKING COMMITTEE, which met last week, made news by its decision to reverse the Poona verdict of the A.-I.C.C. relating to the composition of the Working Committee. Then, the proposal made that one-third of the members of the Working Committee should be elected was rejected amidst great excitement when the entire Working Committee (with prominent members like Pandit Pant and Mr. Morarji Desai abstaining) ranged on one side while Mr. Nehru voted with the minority in favour of Mr. Hanumanthayia's proposal for a partially elected Working Committee. This was interpreted as a "defeat" for Mr. Nehru and there were speculations as to why Mr. Nehru should have supported the principle of an elective element in the Working Committee, though earlier he did not give any indication that he would support such a move. By the same token, the present decision of the Working Committee has been hailed as a "success" for Mr. Nehru. What is intriguing, however, is the report that a majority of the members of the High Command, who spoke at last week's meeting favoured either a wholly elected or a wholly nominated Working Committee. This is quite ununderstandable.

Writing in the **A.-I.C.C. Economic Review** soon after the Poona Session, the General Secretary, Mr. Sadiq Ali, said that it was conceded by even critics that there were dangers inherent in the elective process being extended to the whole Working Committee. There was the fear that it would result in disunity and lack of cohesion and it would prevent any firm action being taken by the Working Committee which is after all more an executive body rather than a deliberative one. If this were so, what could have prompted some members of the Working Committee to plead for an entirely elected committee? The members ultimately, however, seemed to have reconciled to Mr. Nehru's view that the proposal for a partial elected committee should be given a trial. This has great significance. It means that there is a recognition of the "wind of change" emanating from the rank and file of the Congress Party which the Working Committee members cannot afford to ignore. It was apparent to observers even at the Poona session that many members of the A.-I.C.C. were forced to vote against their belief because of pressure and powerful lobbying. Therefore, it is not quite correct to say, as Mr. Sadiq Ali had tried to argue, that from the speeches made at the session, it was not clear how the mind of the entire body of the A.-I.C.C. was working on this issue.

In any case, the recent decision of the Working Committee means that the Congress Executive will now to some extent throw itself open to different shades of opinion in the A.-I.C.C. It will also mean that to some degree there will be a measure of decentralisation of responsibility and leadership since all along a nominated Working Committee was having the last word on all policy decisions without allowing the rank and file of the party to have any voice in the formulation of policies. An unseemly wrangle over this issue thus seems to have been forestalled so that when the A.-I.C.C. meets next in October, it can straightaway concentrate on making the necessary constitutional amendment to give effect to the new proposal.

Swatantra

OWNING LEADERS

THE FOUNDER of the Swatantra Party, Mr. C. Rajagopalachari, had often claimed that if Mahatma Gandhi had been alive, he would have supported the Swatantra Party policies and programmes. Apparently, this was based on his belief that the doctrine of trusteeship and the policy of decentralisation that the Swatantra Party has adopted correspond to what Gandhiji had in mind. However, the "trusteeship" that Mahatma Gandhi envisaged was meant for a different ethos altogether and it will be a travety to claim that it can be practised in its spirit in a modern industrial society. Recently, speaking at a meeting in connection with the General Council of Swatantra Party in Bombay, Rajaji went a step further and said that had Lokamanya Tilak been alive today, he would have supported the cause of his party and he claimed that the Swatantra movement was a logical and continuous corollary of what Tilak stood for, namely, **Swarajya**. It is a queer way of buttressing one's party plank by invoking the support of leaders who are no more. Tilak in his days was considered an extremist as opposed to the moderate elements who wanted to extend their co-operation to the British Raj even while fighting for the ultimate independence. There is nothing to warrant the belief that Tilak was either a leftist or a rightist as it is understood in modern economic parlance. There is also nothing to show that on economic issues, Tilak had committed himself to any particular programme. At this rate, one can go far back into aeons of time, and the Swatantra leader may well invoke the support of the author of the Bhagavad Gita himself, of which he is a devoted student. As long as he was in the Congress, Rajaji used to assert his independence even against Gandhiji though he was sometimes in the minority of even one. It was his contention that if a particular policy was good, one should be able to stand by it on its own merits. That was why even when he had the implicit support of Gandhiji to propagate his ideas of partition, he did not reveal this fact on the ground that if what he held were true, it should be supported irrespective of whether it had Gandhiji's approval or not. Apparently much water had flowed since then. However, it will be a salutary principle, if leaders of political parties, even while paying tributes to leaders who are no more, do not claim them for their own party propaganda, if there are no definite circumstances to warrant it.

Britain

CABINET CHANGES

THE BRITISH CABINET reshuffle that was announced by Mr. Macmillan last week has aroused much interest because of the speculations in the British Press over the impending changes. The most important are that the Treasury goes to Mr. Selwyn Lloyd and the Foreign Office to the Earl of Home. Mr. Peter Thorneycroft, the former Chancellor of Exchequer, who resigned over differences of policy comes back as Minister of Aviation. Most of the comments, however, relate to the appointment of the Earl of Home. There has been criticism not only from the Labour Party, but also by even a considerable section of the members of the Tory Party that since the Foreign Office is one of the great offices which generally serves as the "launching pad" for the premiership, it should not be given to a member of the House of Lords. The objection here is that the House of Commons will be denied its legimitate right to question the Foreign Secretary on many important matters of policy that come before it. On the other hand, in support of Mr. Macmillan's proposal, the point has been urged that in view of the heavy burden that has now

been thrown on the Foreign Secretary, it will be better if he is relieved of the necessity to nurse his constituency and also worry himself perpetually over the tyranny of the division labby. Secondly, it is becoming more and more clear that the Prime Minister himself has to take a good deal of the burden of conducting the Foreign Office in view of its growing importance. Since in any case, the Prime Minister is in the Commons, on major questions he will be able to do full justice to them. It is obvious that much can be said on both sides but it will be difficult to substantiate that the appointment of Lord Home will, in any way, diminish the authority of the House of Commons. The fact is that this great office, by a curious paradox, is getting steadily downgraded so that the holder of this office can at best play second fiddle to the Prime Minister. To the extent that the Foreign Secretary need not be looking forward to the possibility of succeeding to 10, Downing Street, his energy may perhaps be now concentrated on his own work at the Foreign Office (which is so back-breaking) without any dissipation of energy.

Middle East

IRAN, ISRAEL AND THE U.A.R.

THE ARAB NATIONS often react sharply, and even violently, to anything which can be interpreted as a factor contributing to the strengthening of Israel's position. Their antipathy to Israel is to some extent understandable for they have an age-old enmity with Jews, but to give vent to it on unconfirmed reports and exaggerated fears is something which can hardly be justified.

In this category probably falls the sharp reaction of the United Arab Republic and the Arab League to reports suggesting "recognition of Israel by the Shah of Iran". Following these reports, the U.A.R. has recalled its ambassador in Tehran and the Arab League is said to have appealed to its member States to effect economic boycott of Iran. It is intriguing how the U.A.R. Government has allowed itself to be swept off its feet and taken the precipitate step without perhaps fully ascertaining the facts from the Iranian Government. A spokesman of the Iranian Government has since clarified the position and denied that Iran in the recent past has taken or contemplated to take any step which has altered or could alter the status quo in respect of its relations with Israel. He has contended that Iran had recognized Israel on de facto basis some 10 years ago when it sent a representative to Tel Aviv to look after the interests of its nationals, who included Jews in no small number. This representative, however, had to be withdrawn a couple of years later due to financial difficulties into which Iran ran consequent upon the nationalisation of its oil industry. Since then no other representative has been sent. According to Iran's Charge d'Affaires in New Delhi, there is no move afoot to send any representative to Israel in the near future. Nor does the Iranian Government intend to make the recognition of the Jewish State de jure.

In the circumstances, the United Arab Republic's action to recall its ambassador in Iran appears to be hasty. By this step the U.A.R. Government has exposed itself to the charge of trying to interfere in the internal affairs of Iran. Now that the Iranian Government has clarified its position, can it be hoped that the cordial relations between Iran and the United Arab Republic will be re-established at none-too-distant a day?

Sales Tax

REPLACEMENT BY EXCISE DUTY

THE OPTIMISM about an early acceptance by the States of the Union Finance Minister's proposal to bring more commodities in the orbit of the scheme of replacement of sales tax by an additional excise duty, evoked by the repeated representations of the trade and the successful working of the system in the case of textiles, sugar and tobacco, has proved to be misplaced. As reported elsewhere in this issue, the State Ministers who assembled in New Delhi last week-end to consider the problem, more specifically in connection with four commodities — silk fabrics, matches, paper and vegetable products — have dispersed without achieving much. While they agreed to extend the scheme to silk fabrics, they could not come to an understanding in respect of the other commodities. Though the official statement issued at the end of their meeting does not go beyond stating that the scope of the scheme could not be widened further owing to different views having been expressed, it is understood the main objections came from three or four States. One State is reported to have objected to the extension of the scheme on the ground that it amounted to incursion on the part of the Centre into a sphere specifically reserved for the States under the Constitution. The other principal objection was based on revenue considerations; it was contended that the scheme deprived the States of a very flexible source of revenue.

It is not easily comprehensible how the Constitution stands in the way of expanding the scope of the scheme when it is already in operation in the case of three commodities and any change in the rate of the levy can only be effected in consultation with the States. Moreover, the scheme only envisages collection of the tax at a single point at the production stage by the Central Government which has to pass on the proceeds, minus cost of collection, to the States. Besides, the proposal was to expand its scope to cover a few other selected commodities, the States being left to devise their own policies in regard to the rest. So far as the objection on revenue considerations is concerned, it is doubtful whether the States will be able to augment their resources by increasing the incidence of the tax on a particular commodity individually to the extent they will be able to do if they work in unison. It is also ironic that some State Governments should be thinking in terms of raising sales tax rates at a time when every effort needs to be made to hold the price line and when the object of raising revenue to no small extent — approximately 25 per cent — can be achieved easily be checking evasion of the tax or reducing the cost of its collection. Considering the relief it would bring to the small trader in respect of maintaining elaborate account books, it is hoped that the dissident States would revise their opinion at an early date and give their consent to widen the scope of this useful scheme.

The tripartite Industrial Committee on Cement, which met in New Delhi recently agreed that the period of operation of the recommendations of the Cement Wage Board should be five years from the date the recommendations came into effect. However, the matter could be reviewed by the Industrial Committee at the end of four years, if the workers' representatives so desired. The Committee also agreed that a central machinery should be set up to clarify doubts, if any, regarding the Wage Board's recommendations and to ensure uniformity in the interpretation of the recommendations. The Central Government should decide on the form and composition of such machinery in the light of suggestions made by members of the Committee.

Life Insurance spells benefits to the security of an individual. But it also spells benefits to the economy of a nation. By investing its funds in agriculture and industry, LIC stimulates vigorous national development.

In fact, by the end of 1958, LIC had Rs. 76 crores invested in such industries as sugar, paper, cement, jute, cotton, textile, iron and steel, engineering, chemicals, pharmaceuticals, shipping, transport, plantations, etc.

With more funds at its disposal, the more will LIC have for investment. Employers everywhere will be working towards greater prosperity in every way by spreading greater insurance-consciousness among their employees.

There are several group schemes which LIC offers to industrial establishments. Ask a Life Insurance Agent to explain the Salary Savings Scheme, the Group Insurance Scheme and the Superannuation Scheme.

A Window on the World

KEEP THAT SCHOOL GIRL COMPLEXION!

By

ODYSSEUS

CASTE AND CLASS DISTINCTIONS are supposed to be contrary to the democratic spirit, but they are clearly in line with human nature the world over. Most of us are members of several overlapping communities, a family, a profession, a social class, a village, a town, a county, may be a tennis club, a university, etc. and finally of a nation. In each one of these groups, we find it more comfortable to observe accepted rules of conduct, and the stranger is looked at askance until he makes himself acceptable to the group. This may not be the way it ought to be, but it is the way that it is from Delhi to Washington D.C. and from China to Peru. We may readily admit that it is frequently difficult for one group to convey its ideas to those living in another.

I am prompted to these thoughts by an article in the quarterly review published by a leading advertising firm, Messrs. Young and Rubicam Ltd., 8, Baker Street, London W.1., which, although directed to a British audience, draws attention to a problem which, in one form or another, exists in all countries. One of the more difficult parts of the advertisement copy-writer's job, says the "Y and R Quarterly," is to allow for the differences between his own background and that of the people to whom his advertisements are directed. The classic example of this, I may incidentally recall, was the slogan — "Keep that school-girl complexion" — made famous some 30 years ago by an American soap manufacturer. It made perfect sense in the U.K., but was merely puzzling when used in India and translated into India's indigenous languages. "What," asked a million Indian village mothers, "is a 'school-girl complexion', and who wants one?"

At the extremes, of course, economic differences are fundamental: the rich are the best prospects for Rolls Royce cars and Britain's 2,000,000 old age pensioners are not seriously in the market for any but the basic consumer goods. But in the middle 75 per cent of the U.K. income scale, differences in outlook may be as important as differences in income in determining expenditure.

In illustration, the "Y & R Quarterly Review" discusses the characteristics of a traditional British working class community. The basic fact is that both men and women tend to live in the same district throughout their lives. By and large this is also true of life in the Indian mofussil, with the possible exception that participation in melas and pilgrimages make the Indian villager slightly more travelled than the average British working class man or woman, who tend to look for work within reach of home. This contrasts with the middle classes who are generally ready to move within reach of a suitable job and to move again in search of advancement.

MARRIED COUPLES

Marriages in U.K. working class communities are generally between men and women from the same neighbourhood, and after marriage they continue to live nearby. For example, in Bethnal Green, a London borough, more than two out of three married people, of whichever sex, with parents alive, were found to live within two or three miles of their parents.

As in India, many couples start their married life in their parents' houses, although more often with the parents of the wife than of the husband, and they will usually live nearer the wife's than the husband's parents when they leave for a home of their own. In Bethnal Green, 51 per cent of the married women, whose parents lived in the borough, lived either in the same house or in the same street as their parents compared with 28 per cent of the married men. Because of this, both husband and wife retain after marriage many of their premarital habits. The husband spends much time with his friends, who are not ordinarily his wife's friends and whom he does not usually invite to his home. The wife sees much of her relatives, especially her mother, on whom she depends heavily for advice and for help in the house and with the children — a situation which can often be paralleled in India.

Because the wife can call on her relatives for help in the house and because neither husband nor wife depends by any means exclusively on the other for companionship, there is little sharing of domestic tasks; the wife has her clearly defined role and the husband his, and he is unlikely to help in washing the dishes or in minding the children. Further, the wife is unlikely to know how much her husband earns. She is given her weekly "pay packet" on which she is expected to run the house and to clothe herself and the children. But, within her sphere, she is fully responsible: even with so important a household purchase as a carpet relatively few working class women take their husbands along to share in the choice. In a recent survey, Young and Rubicam found that 69 per cent of recent carpet purchases by working class families had been made by the wife, without her husband's help, whereas in middle class families only 41 per cent of wives had chosen the carpet without their husbands.

All this is in strong contrast to post-war British middle class life in which newly marrieds normally set up homes of their own, and, free of their parents, share their leisure interests, the looking after of the children, and the household chores.

The conditions of British working class life are also reflected in the attitudes of parents towards the upbringing of their children. Working class parents are much less self-conscious about education than middle class parents, who are constantly pre-occupied by anxiety to try to ensure that their children get the best possible start in life by having had the best education that they can afford. Most middle class children are sent to boarding schools. One curious result of this was noticed during the years that national military service was compulsory. The sons of working class parents, who had never before been away from home, were usually homesick and unhappy and took a while to settle down, whereas middle class boys were self-reliant and fully useful soldiers from the start, because they had been accustomed to 36 weeks in the year away from their parents since the age of 7 or 8.

British working class parents do not have the sole responsibility for bringing up their children. Grandparents, particularly the wife's mother, play a large

part than in the more independent middle class family unit. Then again, working class parents are less beset by anxiety about their children's success in adult life. There is relatively little that most wage earners can do to influence the course of their working lives, and the general attitude is that, once they are grown up, the young people must make their way as best they can. This implies no lack of concern for their children's happiness; on the contrary, working class children are often treated with what, in middle class eyes, is excessive indulgence.

FACTORS OF CHANGE

The British working class outlook, which springs from a close-knit community of relatives and lifelong friends, is vulnerable to any factor that tends to separate a family from its background. Perhaps the most powerful factor for change since the war has been the housing policies of many U.K. municipalities, which have been moving families from densely populated areas to new houses on large estates, often a good distance away. Since 1931, for example, over 41,000 people from Bethnal Green (1931 population: 108,000) have been rehoused on London County Council estates, many of them outside the county. It was not possible to organise the simultaneous migration of the three generations, grandparents, parents, and children, so that many married couples have been thrown largely on their own resources.

The result has been to undermine the rigid segregation of the role of husband and wife and to promote a much closer personal relation between them. From a middle class viewpoint, this is desirable, but these working class families have not found it easy. Many, especially the women, have suffered from loneliness and many have found it difficult to adjust to their new conditions of living.

Social mobility, that is movement from one social group to another, mainly because of changes in occupation, is another factor of change away from the traditional British working class outlook. Some working class families complain that friends or relatives who have got on in the world no longer wish to know their less successful contemporaries. Suspicion is probably mutual, because those working people who are still pursuing their traditional occupations and ways are apt to be on the look out for signs of superiority in those who have got on and to imagine slights where none are intended. Hitherto, the feeling has also been strong that a man who betters himself is guilty of disloyalty to his class. But social mobility usually means a physical change of address, to a better house in a distant suburb, and this is a more important reason than snobbishness for loss of contact with less ambitious relatives.

But these are not the only factors that are slowly transforming the British working classes, weaning an ever increasing number of them away from automatic political loyalty to the Labour party, and transforming them into supporters of the Conservatives. Even among those remaining in Bethnal Green, the old style family relationship was disappearing among the younger married couples. A new companionship is arising between man and woman, which reflects the rise in status of the young wife and children which is one of the great transformations of post-war Britain. When money was scarce in pre-war Britain, the ways in which working class man could spend it were limited; he tended to spend half a crown watching a football match with his other men friends on a Saturday and then go off to a pub. Today with an average earnings of £11-10 a week (compared with £3 pre-war, he goes shopping with his wife on a Saturday, after which he plays a set of tennis or a round of golf with her.

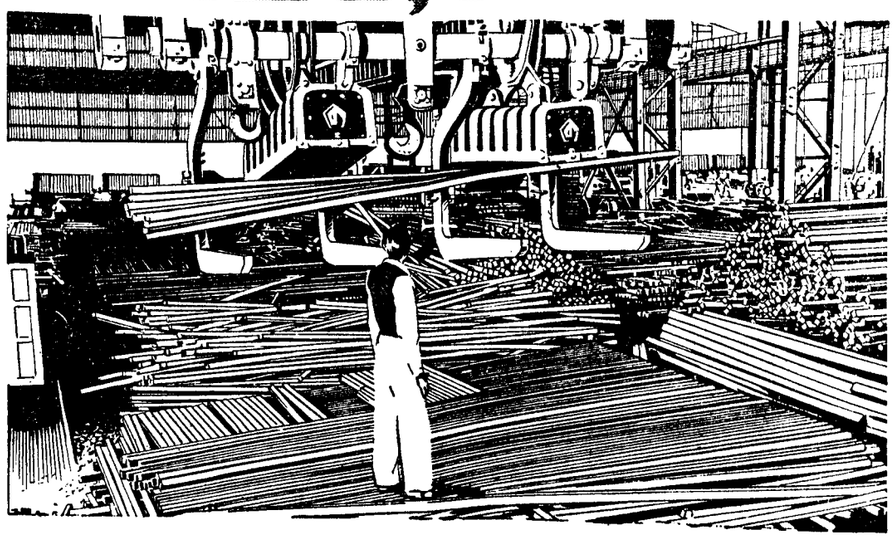
Shakespeare once observed "Beauty is an innate craving of man—so he seeks to dwell in lovely parts of the creation." No age has ever been immune to this captivating spirit of Beauty, the balm of life. Even mother Sita of our epic age fell a victim to the attractions of beauty when she noticed an illusory golden deer, and longed for having it, which resulted in the out-turn of a chain of momentous events in the social life of that epic age.

The Deer is virtually a charming and comely animal which infatuates a man at the very glance.

We do admire this instinct of man and offer our ocean deep ovation for the same. Hence, we have chosen deer as a symbolising brand for our cloth of varying varieties so exquisite, enduring and of so endearing a price.

Our Specialities are:



PRINTS, SHIRTING, COATING, LENOS,

FLANNEL and TOWELS, etc.

BHILAI FEEDS

OVER 120,000 TONS

OF BILLETS TO INDIA'S RE-ROLLING MILLS

Billets worth about Rs. 6 crores have been supplied to Re-rolling Mills all over the country by the Bhilai Steel Works since December 24 last when its Billet Mill went into operation.

The Re-rolling Mills will convert these billets into a variety of finished marketable products like bars, rods, wires and other light sections. With these supplies, the long-felt need for larger quantities of billets by the country's Re-rolling industry has been met. A small quantity of Bhilai billets has even been exported abroad.

Bhilai, one of the three steel plants, owned by Hindustan Steel Limited, has thus already helped in the productivity and stabilisation of the economy of an important industry of the country.

The Billet Mill at Bhilai has an annual capacity of 427,000 tons, out of which 150,000 tons will be for sale and the rest will be used in the Merchant Mill for conversion into rounds, angles, beams, channels, light rails etc., of which there is a great demand in the country.

The European Scene

STEADY EXPANSION IN WEST EUROPE

From Our Special West European Correspondent

PARIS, July 31.

WITH the exception of automobile manufacturers, West European industry has shown no anxiety about the stagnation of the American economy, whose output index (based on 1957) was at 110 and 109 in May and June this year, compared with 109 and 110 in May and June last year. Certainly, Europeans would welcome a resumption of expansion in the U.S.A. They thought they would get it when Mr. Khrushchev turned on the cold-war tap again, but Congress was content with a limited increase in arms outlay although the budget is in surplus. Now they are banking on a Democrat victory in November to stir the sluggish U.S. giant to more activity. Without taking too seriously Mr. Kennedy's rhetoric about "the new Frontier", they calculate that the Democrats will bring back a more facile and less prudent financial policy than that practised by the Eisenhower Administration. But the question is not of overwhelming importance, for the Europeans now feel more independent of U.S. business conditions and, meantime, they are well satisfied with the steady expansion that is going on in their own economies. The optimism that was reported here in January and confirmed in June has not faltered, and now extends to the outlook for the rest of this year and the first months of 1961.

When the Finance Ministers of the Six met in Rome earlier this month, they agreed that the prospects were favourable for their region as far ahead as one could see, and they singled out the case of Italy as showing remarkable progress. The vigour of the Italian industrial expansion was commented on at some length here last week, and so can be omitted from the present review. The solidity of Italian achievement is gaining wider recognition, and it was instructive to hear ex-Finance Minister Antoine Pinay warning the French the other day that they would have to increase their rate of progress if they were to keep up with, not only the West Germans, but the Italians too. The West German situation, also, was described here three weeks ago: expansion there is so dynamic that the authorities are having to sit on it, for fear that the burden of demand on the economy exceeds the supply of manpower. German stock markets are booming so much that the Bundesbank thinks the position is becoming unhealthy, and has just warned banks to restrict advances that might be used for share speculation. Meantime, German foreign exchange reserves have reached record peaks; in July, for the first time ever, they exceeded 28,000 million Deutschmarks.

In the case of Belgium, it is impossible to say anything definite about the economic situation because the country is in the throes of the Congo crisis. The Brussels bourse, dominated for generations by Congo mining shares, has naturally gone to pot, and the unloading of Congo shares by foreigners has depressed the value of the Belgian franc. The "audacious gamble" that the Belgians, we said here in June, were making in the Congo has very decisively failed — without anybody else being the gainer, least of all the Congolese. The deal between M. Patrice Lumumba and an obscure financial adventurer called Edgar Detwiler is probably not worth the paper it is written on, but when the dust settles it will no doubt appear that almost nothing remains of Belgian interests in the country. The attempt of the Belgian mining companies to split off the province of Katanga (where their most profitable investments are) as an "independent" nation was too barefaced to have a chance of succeeding. The Belgians will have to reconcile themselves to the loss of several thousand crores of investments, of about 6 per cent of their national revenue and of the contribution of Congolese minerals to their balance of trade. The situation will be considerably less disastrous for them than for the Congolese, but it will be some months before one can make a sound assessment of Belgium's prospects.

Turning to Holland, we find that the position presents a general similarity with that of West Germany: continuous, rapid expansion whose further progress is threatened only by limited manpower supplies. This limitation is unexpected in Holland, for the Dutch have a high birth rate and have been liberally expatriating migrants for a decade past, notably to Australia. But the boom that began in 1958 and still continues has overtaken labour supplies despite notable increases in productivity last year and this year. Dutch expansion is not based as heavily on exports as the German, because Dutch workers are accustomed to receiving a bigger share of national prosperity than their docile German colleagues. The result is that private consumption this year will increase as fast as the national product, i.e. imports are growing faster than erports. The consequent reduction in the trade surplus can be easily afforded. Nonetheless, this situation cannot be prolonged indefinitely; once an expanding economy runs up against the limit of manpower resources, it must restrain consumption and exports to the pace set by productivity increases. The OEEC, in a report on the Dutch economy, has just advised the government to increase taxes and control credit, while warning against raising the price of money, for fear of competitive bank rate increases in neighbouring countries.

There remains France, where the moderate expansion, that began soon after the surgical shock of the monetary reform, continues unabated. The only dispute is whether it is going as fast as the country could afford. After rising fairly fast at the close of last year, industrial production remained steady in the spring but now seems to be moving up again. This momentary hesitation was enough for the exponents of expansion-at-any-price — of whom there are a larger number in France than elsewhere — to begin shouting for heroic inflation; even the cautious M. Pinay thought it was time to recall that the purpose of his reform had not been to increase the Bank of France's gold reserves. The government, wisely, did not take any drastic action until the size of the harvests was known; it is now assured that crops will be excellent and so there is room for more daring action without jeopardising the currency. In practice nothing special will be required of the government, because the full force of the budget deficit will make itself felt in this second half of the year, and that will be all the stimulation that the French economy needs.

There is no general manpower shortage such as there was at the height of the inflationary boom in 1957, although output has much increased since, thanks to productivity improvements. There is even a certain amount of unused capacity in industry. These three circumstances — good crops, plentiful labour, and some idle machines — encourage industry to think that it can achieve useful increases in output between now and the end of the year without affecting prices. The Chamber of Commerce of Paris in its latest letter forecasts a rise in industrial output of 7 or 8 per cent in the second half of the year, compared with 1959; above the average will be aluminium (up to 16 per cent), chemicals (15 per cent) and steel (11 per cent). On the demand side, the stimulus will come mainly from exports and investment, rather than from private consumption. A recent fall in the French import bill was mistaken by some observers for a sign of stagnating industrial activity, but is in fact due to the replacement of Middle East oil by oil from the Sahara, paid for in francs. This trend will continue, thus strengthening France's trade position month by month.

That completes the picture of general economic expansion in Continental West Europe; the contrast with the stagnation in the U.S.A. is striking. But the most interesting feature of this steady progress is that it is being achieved with virtually stable prices. This stability is almost universal in the industrial West, a fact which suggests that its cause is the most general one possible: namely, the stability, and in some cases the decline, of raw material prices, combined with the continued weakness of freight rates. Since the end of 1958, U.K. price indices have scarcely moved; indeed this is the real reason why the West German authorities have been making such determined efforts to control German prices — Britain and West Germany are keen competitors in the export markets and one can never afford to inflate more than the other. Thus, although the West German price index rose only from 110 to 114 between January 1959 and May 1960, Bonn imposed three successive increases of bank rate, four increases in banks' obligatory reserves, two decreases in the amount of paper accepted for re-discount, the "sterilisation" of foreigners' deposits and various other minor restrictionist measures, not counting numerous warning notices served on banks by the Central bank. The whole programme probably constitutes the most persistent use of the monetary weapon ever made anywhere — all to control a movement of prices that a few years ago would scarcely have been regarded as significant

The point is that, since the return to convertibility and multilateral trade — and particularly with the Common Market where trade barriers have fallen faster than elsewhere — no country can suffer its prices to rise more than its neighbours' without immediately feeling the consequences. The weakness of commodities and freights explains why it has been possible for the West to keep prices stable; the return to freer trade and capital movements explains why it has been absolutely essential to do so, even in countries that are trying to achieve a more rapid rate of economic expansion than, say, Britain and the U.S.A. It is probable that this is keeping the rate of growth below what it could be in some countries, such as France and Italy, where there is no restraint imposed by manpower supplies as in Germany and Holland.

ORISSA GOVT. LOAN 1969

Issue Price Rs. 99.50 per cent

Opens on the 29th August, 1960

The loan will be closed as soon as a total of approximately Rs. 400 lakhs has been subscribed and in any case not later than the close of business on the 3rd September, 1960.

The applications will be received at the Office of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras and Bangalore, at the branches of the State Bank of India in Orissa and at the Treasuries and Sub-Treasuries in the State of Orissa.

Full particulars can be obtained at any of the Offices of the Reserve Bank of India or branches of the State Bank of India or at any treasury or sub-treasury in the State of Orissa.

UNDER SECRETARY TO G[illegible]

Economic Report from the U.S.

ORGANIZATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT

By GUY SIMS FITCH

WASHINGTON, Aug. 3.

THERE is general agreement that the projected Organization for Economic Co-operation and Development (OECD) will have beneficial effects for all free nations as it helps meet the emerging international economic problems of our day. These problems are highly complex, and relate primarily to two related aime: the acceleration of economic growth around the world, with all that this involves in stepping up aid for developing lands from nations now in position to increase their assistance programmes; and the promotion of a healthy and generally non-discriminatory multilateral trade. This new organization took a significant step forward just a few weeks ago, when it was approved at the Ministerial meeting in Paris of the United States, Canada, the 18 nations that have been members of the old Organization for European Economic Co-operation (OEEC), and representatives of the European communities. The fact that the United States and Canada will assume full membership in the new organization indicates the widening of its geographic scope beyond purely European matters.

It was recognized last January, when U.S. Under-Secretary of State C. Douglas Dillon — who also represented the United States at the recent July meeting — met with representatives from Canada and Western Europe, that the old OEEC would have to be revitalized, or be replaced with a new organization. This would have to be an organization equipped to deal with today's problems rather than those of the previous decade, which had been met so ably by the OEEC. For this purpose, a working group was set up, out of which grew the proposals for an OECD. These proposals, recognizing the new economic problems of the world, went far beyond the regional limitations of strictly European concern, and embraced international trade and aid as vehicles for a better life for all people everywhere.

Before such an organization could become a reality, however, two basic questions had to be faced. How far would its authority extend in the field of trade, and what would its relations be to the Development Assistance Group (DAG), nine-nation technical body of capital exporting countries, designed to consult on aid problems and methods. It was finally decided that OECD would deal with matters of general trade policy, including relations between the six-nation European Economic Community (EEC) and the seven-nation European Free Trade Association (EFTA). And through a trade committee would offer a forum to which members could bring their questions and problems.

As for DAG, the decision was to continue its functions within OECD, through the medium of a development assistance committee. Like DAG, this would be primarily a technical body. It would not itself become involved with specific aid programme, which would be handled elsewhere. With these matters settled, the chief result of the July Ministerial meeting was the establishment of a preparatory committee to complete the draft charter for the new organization. It will begin its work in September, and will report to the member governments by November 10. This draft text is expected to contain wording relating to OECD's relations to other groupings, such as the United Nations and Latin American bodies. To get the work of the OECD started, a Secretary-General already has been elected. He is Thorkil Kristensen, of Denmark, a man highly regarded in the field of international economics.

NITROGEN PRODUCTION IN THE PRIVATE SECTOR

The East India Distilleries & Sugar Factories Limited, Madras, have completed their arrangements for the establishment of a factory to produce 51,000 tons of nitrogenous fertiliser (ammonium phosphate) per year, at Ennore, near Madras. A contract for all the machinery required has been placed with Simon-Carves Limited, Stockport, England, and Calcutta, and the factory is expected to go into production in June, 1962.

The project will be financed by an issue of Ordinary Shares to the Company's existing shareholders at a premium of 10s. per Ordinary Share of £ 1 each. This issue will realise £ 825,000 (Rs. 110 lakhs), of which £ 282,000 (Rs. 37.6 lakhs) is subscribable in sterling by shareholders on the London register, and £ 543,000 (Rs. 72.4 lakhs) in rupees, by shareholders on the Madras register. In order to ensure the maximum accrual of sterling, it has been arranged that the London part of the issue shall be underwritten by S. G. Warburg & Co., Limited. Additionally, the Company has arranged loans of £ 600,000 (Rs. 80 lakhs) from the Commonwealth Development Finance Co. Limited, London, £ 250,000 (Rs. 33.3 lakhs) from Simon-Carves Limited, England, and Rs. 180 lakhs from The State Bank of India.

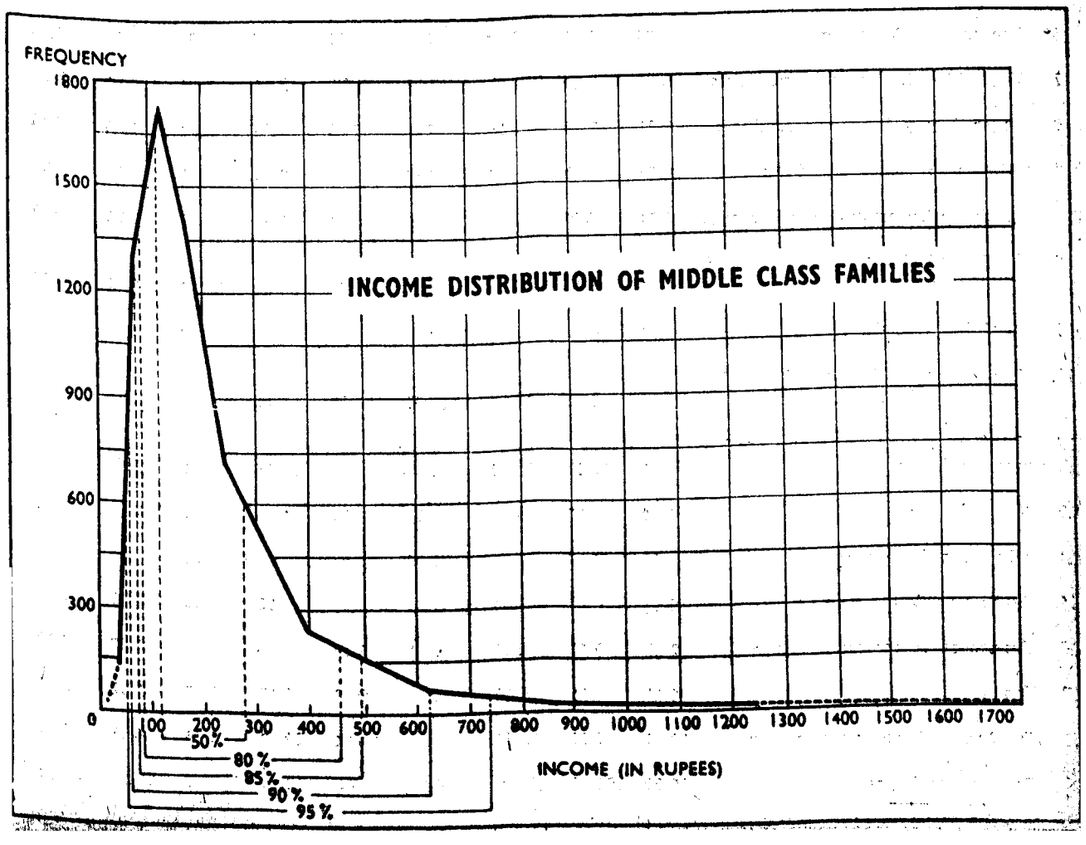
The Government of India has accorded all the necessary sanctions.

Special Article

THE INCOME DISTRIBUTION OF INDIA'S MIDDLE CLASSES

SEVERAL surveys have been conducted in the past in order to determine the pattern of consumer expenditure of working classes in industrial centres but no official survey has hitherto been undertaken to assess the pattern of consumer expenditure of the middle classes. This gap is now being filled by the Central Statistical Organisation in collaboration with the National Sample Survey, the Indian Statistical Institute and the Labour Bureau of the Government of India. One recent survey has obtained useful information about both income and the consumption pattern of the middle classes in India. Tentative results of a sample survey of about 3,600 families carried out in 1958-59 are now available. This new information will assist ultimately in the construction of a suitable cost of living index for the middle classes and will explain how far the incidence of direct and indirect taxes has been instrumental in increasing their burdens in the recent years.

It may be stated here that the families of self-employed income group are excluded from the present survey. In other words, the primary object of this survey has been to determine the relative importance of the different items of consumer expenditure of the middle class employees alone. According to the criteria followed by the Central Statistical Organisation, the middle class family represents the social class standing midway between the working class and the upper class. It is not necessarily the same as the middle income group on the income scale.



The pattern of income distribution of the middle classes is given in the graph below which shows that the bulk of the middle class families are concentrated between the income groups Rs. 60 to Rs. 750 per month. The number of families with an income of Rs. 750 and above are less than 3 per cent of the total families surveyed. In the same manner, families with an income of less than Rs. 60 per month are less than three per cent. In other words, 95 per cent of the families are concentrated in the income range Rs. 60 to Rs. 750 and they are to be deemed as typical middle class families for purposes of analysis.

An interesting fact thrown up by this survey is the "unusual" behaviour of the middle class families in the four metropolitan cities of Delhi, Bombay, Calcutta and Madras. The income distribution of the middle class families in these cities is distinctly different from other major towns and cities. Table I below illustrates this fact. In the case of the metropolitan

TABLE I.

DISTRIBUTION OF FAMILIES BY INCOME

Monthly income group (in Rs.)	Percentage of families to the total number of families			
	Metropolitan cities (A)	Other major cities (B)	Other towns (C)	Combined
1. Below 60 ..	0.89	4.51	2.84	3.02
2. 60—99.99 ..	4.75	17.42	17.26	15.53
3. 100—149.99 ..	14.84	22.40	25.85	23.37
4. 150—199.99 ..	19.29	15.09	19.32	18.17
5. 200—299.9 ..	22.55	20.84	18.68	19.81
6. 300—499.99 ..	21.66	12.44	10.44	12.56
7. 500—749.99 ..	7.42	4.82	4.19	4.82
8. 750—999.99 ..	3.56	1.24	0.64	1.21
9. 1000—1499.99 ..	2.37	0.62	0.57	0.84
10. 1500 & above ..	2.67	0.62	0.21	0.67
TOTAL	100.00	100.00	100.00	100.00

cities, highest frequency occurs in the income range of Rs. 200 to Rs. 300 per month. In the case of the other major cities and towns it lies much lower in the income range between Rs. 100 to Rs. 150. This suggests that the middle class families in the four metropolitan cities have, on the average, income range almost double of those in other major cities and towns.

The consumption pattern of the middle class families in the various income brackets is summed up in Table II below. The first fact that strikes the eye is that the pattern of consumption changes with income. 60 per cent of the families studied have little difference in the consumption pattern and lie between the income range of Rs. 100 to Rs. 300 p.m. This is an indicator of the marginal differences in preferences and, probably of needs, of the middle class families in this income range. This table also highlights the fact that the expenditure pattern in the lowest income brackets of the middle class conforms to that of the working classes. This is depicted particularly by the higher percentage of expenditure on food. Naturally this lends support to the grievance of the lower middle classes that the increasing inflationary pressures are lowering standard of living of this class to that of the working classes.

It would be interesting to compute precise incidence of indirect taxes on the consumer expenditure of the average middle class family. Unfortunately, the details made available in the present survey are not sufficient to make an accurate estimate. Rough calculations have, however, been made in order to estimate the probable incidence of the direct taxes and it has been found that about 6 per cent of the total expenditure is siphoned off by way of indirect taxes. There are items like sugar in whose case excise duties come to as much as one-third of the retail cost per unit. Similarly, there are commodities like cloth, tobacco, beverages which are subject to both the sales tax and the excise duties. At the lower end, the incidence may be as low as two per cent, while at the higher ranges the total incidence of taxes is estimated to be about 15 per cent of total expenditure. Obviously, the incidence will fall very unequally over all income groups when additional taxation is undertaken during the Third Plan.

TABLE II.

PERCENTAGE EXPENDITURE ON VARIOUS GROUPS AND SUB-GROUPS OF ITEMS BY INCOME

Monthly income (Rs.)	Below 60	60 to 99.99	100 to 149.99	150 to 199.99	200 to 299.99	300 to 499.99	500 to 749.99	750 & above	All classes

THE BUSINESS WORLD

Why Victimise Viscose?

By CROESUS

ONLY the wearer knows where the shoe pinches, as the adage goes. Had it not been for a timely representation to the authorities by the Association of Man-Made Fibre Industry, I do not think many would have discovered the mischief potentiality of a seemingly innocuous amendment to Section 56A of the Indian Income-tax Act, 1922. There is currently before Parliament the Taxation Laws (Amendment) Bill, 1960, which seeks to incorporate this amendment. What the amendment seeks to do is to insert under the heading "Chemicals (Other Than Fertilizers)" item No. 5 reading "Man-Made Fibres Other Than Viscose Rayon" to deny to viscose rayon exemption from supertax, which the authorities have rightly proposed to extend, under this amendment, to some specific industries.

I am not quite sure whether the authors of the amendment themselves would really wish to deny the viscose rayon section of the man-made industry this benefit. For, it cannot be that they are unaware of the importance of the viscose rayon industry. It may not be out of place to recall here that the very idea of starting the rayon industry in India was prompted by the desire to meet the shortage of long-staple cotton in the country and thereby save foreign exchange on importing it — a contingency which not only persists, but has become pronounced. Thanks to the viscose rayon industry, it has been possible to do with only a minimum quantity of imported long-staple cotton. It is well-known that, since India started the manufacture of staple fibre (another form of viscose rayon), our dependence on long-staple cotton has been substantially reduced. Moreover, viscose rayon admittedly still retains the prime position among man-made fibres, and, apart from its other advantages, offers a potential line of export by reason of its quality and cheapness alike. Above all, this section of the industry has been contributing to the national exchequer a sizeable amount by way of taxation. Only recently, the Government raised the level of the excise duty on this commodity. Perhaps it might be argued that, by granting exemption of supertax to viscose rayon, the Government would lose revenue. As a matter of fact, whatever the Government may lose currently by granting such exemption is certain to be more than off-set by what it would ultimately gain as a result of increased production.

There are a few other important considerations, besides, which entitle the viscose rayon industry to the special concession that industries to which section 56A is proposed to be made applicable would receive. For instance, the new tyre-cord industry has to depend to a very considerable extent on viscose rayon. It is estimated that the demand for heavy duty tyre-cord yarn in the country would be of the order of some 30 million pounds, but, as against this potential demand, the capacity of the units already licensed to produce tyre-cord yarn amounts to just around 8 million pounds. If the entire demand for heavy duty tyre-cord yarn in the country is not to be met out of imports at the cost of precious foreign exchange, which we can ill afford today, the only alternative left to us is to encourage the viscose rayon industry to expand its capacity. And, if this is to be the desideratum, the authorities must afford the industry more incentives and not take away even those it may be enjoying today.

Again, rayon has a number of uses, as, for example, making of transparent paper, a field which has yet to be fully exploited. Rayon transparent paper, technically called "cellulose film", is in great demand for packaging purposes, and a steady growth in demand for cellulose film in other countries should convince any one that there is unlimited scope for the development of this commodity in our country which is rapidly expanding its industrial base. It should not also be forgotten that, with the rise in the standard of living of our people, the demand for rayon also will increase appreciably, as the country's entire demand for textiles cannot be met by natural fibres alone.

By and large, the expansion of the viscose rayon industry does not also present serious problems with regard to supply of raw material, although presently chemical pulp is being imported. Arrangements are already in progress to manufacture wood pulp from our own indigenous raw materials, so as to reduce the need to import foreign raw pulp at a heavy price.

Then again, considering the use and the scope for continuous research which the viscose rayon industry has opened up in other countries, it would be short-sighted for our Government to do anything to impede the progress of this important industry.

There is yet another, and perhaps a very important consideration, viz. that the new units of the industry which have yet to establish themselves have been set up with foreign collaboration, and, by all evidence it seems inevitable that this country should seek foreign institutional collaboration in respect of a number of other industries as well. In view of this, it is doubtful whether it is prudent to deny to the viscose rayon industry what is after all a minor taxation advantage and disturb, if not scare away, potential foreign investors.

Taking all these factors into consideration, the Association of Man-Made Fibre Industry has submitted a detailed representation to the Union Ministry of Commerce and Industry, in which it has made what I regard as a very reasonable suggestion. It has only asked the phrase "man-made fibres other than viscose rayon" in the present wording of the amendment to be changed to read "man-made fibres, including cellulose film." It is to be hoped that the authorities would view this suggestion with all the care that it merits and accept it without too much fuss.

Role of Agricultural Economics

IT would be an interesting speculation to ascertain the main contributory factors to the considerable emphasis that agriculture has received in the draft outline of the Third Five-Year Plan. If I may venture an answer, this is due, in a large measure, to the silent, imperceptible, but nevertheless important, work of those who have believed in, and worked for, putting agricultural economics on the map. Although it is true that, with the advent of planning, the study of economics of agriculture and the diverse problems of rural life has assumed a special importance, it is due to the pioneering work of institutions like the Indian Society

of Agricultural Economics and of individuals like Sir Manilal Nanavati who have laboured for it unflaggingly for well nigh two decades that we find the problems of agricultural economics receiving the attention that they have begun to receive today in this country. No less a person that Mr. L. K. Elmhirst, Founder-President of the International Conference of Agricultural Economists, England, has, therefore, paid a deserved tribute to Sir Manilal in a recent special number of the Indian Journal of Agricultural Economics in these words: "Thanks to the founding of the Indian Society of Agricultural Economics in 1940 (actually, the society was established in 1939) and to its leadership since 1942 by Sir Manilal, the attempt to measure in figures what can be done, or what has been tried, and to study the factual results, positive or negative, has become established practice among a new generation of agricultural economists in India."

But the struggle that had to be faced before this could happen constitutes a saga of heroic effort and undivided attention to a great cause. Mr. J. J. Anjaria, Chief of the Economic Division of the Planning Commisson, in his tribute to Sir Manilal, has given us a glimpse of this struggle. I think he has summed it up in this one sentence: "Most of us have read in books of determined men being able to overcome all kinds of difficulties; I have seen one in Sir Manilal." But it is not in India alone that it has taken such a long time for agricultural economics to make a place for itself. Mr. Elmhirst has recalled in his article the defeat of an attempt, in the early days of the establishment of the F.A.O., to drive home the need for a judicial balance of science and economics in the drawing up of any programme of rural betterment for an underdeveloped economy. The more I peruse this, the more I feel compelled to quote the following observation of Mr. Elmhirst, as it epitomises the futility of the efforts of our planners:

> "Classical economists, professional statisticians and political theorists have, from time to time, offered panaceas for all rural problems, but they have not always seen the varying nature of conditions from region to region or the need to examine every link in the chain from the point "A", the financing, initial sowing and cultivation of the crop, through harvesting, processing, storage, grading, packing and distribution to the point "Z" when the product reaches its final point of consumption."

Nowhere is this more glaringly brought out than in the case of cotton.

It is only the agricultural economist that can tackle rural problems, for he knows how best to remove all the obstructions, economic, social, and psychological. But not all agricultural economists can be expected to play this role successfully. It is only those who have had the chance to get experience at first hand of the application of social science to the problems at their doors, as it were, that can handle these problems. Perhaps this explains why people like Dr. George F. Warren of Cornell University in New York and Dr. Orwin, the pioneer of agricultural economics teaching in Britain and, to no small extent, Sir Manilal himself have been as eminently successful as they have proved to be. And, more than anything else, I attribute the success of Sir Manilal in his mission to propagate the study of agricultural economics to his extremely lovable nature. On this point I cannot improve upon what Mr. Anjaria has said: "Few men with ideas and with a record of success are lovable. They like to "give" but never to "take," so that, while they receive politeness, they rarely win affection. Sir Manilal has always been responsive to what even youngsters say." This is also my happy experience, as it has been my privilege to meet Sir Manilal not infrequently for informal chats.

Business Notes

States Loans

ANOTHER 75 CRORES

THE STATE GOVERNMENTS have announced their borrowing programme for an aggregate amount of Rs. 75 crores. The terms of the new loans appear to be generally satisfactory and quite in line with the market expectation. In view of the fact that there was comparatively sluggish demand for long-term loans, the present offer of 9 year loans seems to be quite appropriate. The yields of these loans are higher than those of the prevailing State loans. The new States of Gujarat and Maharashtra also are in the market for Rs. 5 crores and Rs. 10 crores respectively for financing their development projects and the issue price of these State loans is at par. The loans of other Governments are to be issued at a discount ranging from 25 nP. to 50 nP. The redemption yield in respect of loans offered at par is 4 per cent, for the loans issued at Rs. 99.75 the redemption yield is 4.035 per cent and for those issued at Rs. 99.50, it is 4.07 per cent. The details in respect of these loans can be found elsewhere in this issue.

Four States — Maharashtra, Madhya Pradesh, Madras and U.P. — have offered conversion facilities in respect of 3 per cent loans maturing in 1960 which are placed at Rs. 13.57 crores. It is expected that a considerable part of this sum will be offered for conversion which may be anything around Rs. 12 crores. A net amount of Rs. 63 crores is, therefore, expected to be raised which is considered to be well within the capacity of the market. In spite of a certain amount of stringency in the money market, fair support can be expected from the commercial banks. In this connection it may be added that if some relief is given to the banks regarding the impounding of additional deposits, the response can be still more encouraging. The LIC and semi-Government institutions are also expected to come forward. Considering the fact that in the first four years of the Second Plan, the States have borrowed an aggregate amount of Rs. 228 crores from the market, the total net borrowings for the Second Five-Year Plan would be of the order of Rs. 290 crores. This seems to be a fairly reasonable account.

Foreign Trade

EXPORTS TO WEST ASIA AND AFRICA

CLOSE ON the heels of its first study examining the scope of increasing our exports to South East Asia and Oceania, the World Trade Department of the Indian Chamber of Commerce have brought out another study 'India's Export Trade with West Asia and Africa'. At a time when increased efforts are being made to increase and diversify our exports, the publication of this study is of considerable interest. The countries selected in this study are Aden, Afghanistan, Iran, Iraq, Pakistan, Saudi Arabia, Turkey, Egypt, Syria, Sudan and Ghana. At the moment very little is imported by these countries from India. For instance, out of India's total exports of Rs. 616 crores in 1959, the share of West Asia was only Rs. 40 crores. The main goods that are exported to West Asia and Africa are cotton manufactures, jute goods, tea and tobacco. Our imports from these countries are of raw cotton, raw jute, fruits and petroleum products which amounted to Rs. 80 crores in 1959 out of our total imports of Rs. 837 crores. So far as our trade with East Africa is concerned, India is having a persistent trade deficit. In 1959, India exported to Africa goods worth Rs. 40 crores and imported goods worth Rs. 45 crores. The main exports to East Africa are cotton and jute manufactures, drugs and medicines, boots and shoes, spices, coir manufacture and leather. In this, cotton and jute manufacture constituted about 16 per cent of the total exports.

The main competition to Indian goods in these markets comes from the U.K., West Germany, Japan, Hong Kong and China. For instance, it may be mentioned that out of Aden's total imports from all countries during 1959 valued at £35 million (excluding petroleum products valued at £37 million), the U.K. accounted for £6.68 million, India £4.3 million, and Japan £4.12 million. Even Pakistan, in spite of her geographical contiguity with India, obtains the bulk of her requirements from the U.K., the U.S.A., Japan, France, etc. This is unfortunately a projection of politics as relations between India and Pakistan have not been cordial since partition. The position, however, promises to improve and there is already evidence of increasing goodwill and desire for better economic relations.

The study is hopeful of increasing the scope of exports to these countries as they are at present set in reorienting their economies. With rising incomes, it is expected they would definitely import more goods. India could certainly establish a foothold in these markets, if proper attention was devoted to the question of prices, packing, publicity and promptness in delivery. Techniques of marketing will also have to be more imaginative and aggressive in case the challenge from competing countries was to be effectively met. Although the suggestions made by the Indian Chamber of Commerce regarding prices, packing etc., are well known, they need to be reiterated to ensure that they are implemented, with speed and efficiency.

Copper

INDIAN COPPER'S SATISFACTORY PROGRESS

MR. PATRICK E. G. W. PARISH, Chairman of the Indian Copper Corporation Ltd., pointed out at the recent Annual General Meeting of the Company that the profit of the Company for the year 1959 before providing for taxation, depreciation and reserves amounted to £1,202,259. The dividend recommended was 27 per cent subject to a deduction of tax. Although the Company's production of copper was only 8,000 tons against copper consumption of 50,000 tons in India, steady increase in domestic output is planned. This, of course, will require, Mr. Parish outlined, considerable further capital expenditure, in particular a new crushing plant, smelter and a small concentration plant to deal with the increased ore output costing something in the neighbourhood of £1 million. The prospecting operations have also been intensified, but it was premature to forecast the results. The position in regard to the demand for raw material, kyanite, in world markets, Mr. Parish stressed was satisfactory and in spite of the increased consumption of synthetics, the exports to the U.S.A. last year amounted to approximately 20 per cent of all the company's exports.

As regards the electrolytic project, the heartening factor was the completion of all arrangements for the installation of a Refinery and Foundry for the manufacture of Electrolytic Copper and Wire Bar. In the scheme that is now planned it is proposed to utilize some or all of the Company's production and also, imported copper, if necessary. The production at the electrolytic project is likely to commence by the end of 1962.

Engineering

JESSOP'S COMMENDABLE RECORD

JESSOP AND COMPANY holds an important position in the engineering industry and has played a significant role in the industrialisation of the country. During the last three years the shortage of steel has considerably handicapped its progress. Sir B. P. Singh Roy, K.C.I.E., Chairman, Board of Management, pointed out recently at the annual general meeting that the Company has been having the bulk of certain items of steel in hand to wait until the missing items or the 'matching steel' comes to hand. In spite of this minor hindrance the Company has been able to go along with its plans of production according to schedule. The major expansion schemes, started in 1955 and 1956, have now reached the production stage.

The Coach Work Section of the Company has been able to complete the first stage of its contract for electric multiple unit coaches and the last of 16 three-coach units were delivered recently. The second stage is now in hand and the first of 18 three-coach units will leave the works shortly. More contracts are being received by the Company so that this section of the Company will be busy until late in 1962. The Company has also attained its target of furnishing and finishing of metre gauge passenger coaches at the rate of 24 coaches a month. It has established the manufacture of metre gauge bogie motor and parcel van which is entirely of a new design.

In connection with the distribution of preference shares the Company faces the problem posed by the new system of company taxation. Preference shares of the Company bear a dividend of 5 per cent free of tax. Last year such an amount was proposed so that after deduction of tax at 30 per cent, it still left 5 per cent in the hands of the shareholders. With the deletion of Section 18(3E) of the Income Tax Act by the Finance Act, 1960, it is no longer possible to provide additional money for tax on dividends. To change the rate of distribution the Articles of Association in respect of Preference Shares have to be changed, which needs the consent of not less than 75 per cent of both classes of shareholders. This is virtually impossible. It is hoped that necessary amendment of the Finance Act will be considered to save such companies from this dilemma.

Labour

LABOUR POLICY IN THE THIRD PLAN

THE LABOUR policy enunciated in the Draft Outline of the Third Plan is just an extension of what has been evolved in the Second Five-Year Plan. The Code of Discipline is to be enforced rigorously, greater emphasis is to be laid on voluntary arbitration, Works Commitees are to be strengthened and the field of workers' education is to be enlarged. While strengthening the movement of workers' education and enforcing rigorously the Code of Discipline is desirable, it is problematical if the emphasis laid on strengthening the Works Committees is likely to serve any useful purpose, particularly when they have proved a failure in the past. Greater and greater doubts are being expressed more emphatically than before about the satisfactory nature of the existing machinery of settling industrial disputes. The Fifteenth Indian Labour Conference, on the basis of the agreement between the parties, had indicated the content of the need-based minimum wage for guidance in the settlement of wage disputes. Under the present conditions the need-based minimum wage cannot be accepted as there does not exist the capacity to pay that wage. What, as a matter of fact, at present needed is the stabilisation of prices as the rising price line has been the root cause of many of the industrial disputes. It is a pity that the problem of holding the price line has been put off once again when in fact a clear policy ought to have been formulated for it.

It is specified in the Draft Outline that the Employees' State Insurance Scheme will be enlarged and more resources and attention will be devoted to the prevention of sickness. No doubt, it is encouraging, however, it needs to be emphasised that hospital facilities must be improved considerably. The Code of Efficiency and Welfare of the workers that is proposed in the Draft Outline might help in cultivating the right kind of attitude on the part of the management and the workers, and thereby productivity in general. But better gains can only be achieved as is realized by the planners by rationalisation of work loads, work-methods and the functions of management.

In the Draft Outline agricultural workers are the least attended to. Except for the mention that their needs and problems should receive special consideration, there is nothing concrete specified to improve their standards of earnings. Even the Minimum Wages Act has not been enforced for the agricultural workers, while legislation after legislation has been passed to confer benefits on industrial workers. This, indeed, is a noticeable lapse.

4 per cent

MAHARASHTRA

STATE DEVELOPMENT LOAN, 1969

ISSUE PRICE AT PAR.

OPEN ON THE 29TH AUGUST 1960

The loan will be closed as soon as total of approximately Rs. 1,000 lakhs has been subscribed and in any case not later than the close of business on the 3rd September 1960.

The applications for the loan will be received at –

a) the offices of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras, Nagpur and Bangalore,

b) the branches of the State Bank of India within the State of Maharashtra, except at Bombay and Nagpur and at places mentioned in (c) below,

c) the branches and Treasury pay offices of the State Bank of Hyderabad within the State of Maharashtra,

d) the Government treasuries and sub-treasuries in the State of Maharashtra at places where there is no branch or Treasury pay office of the aforesaid Bank.

Full particulars can be obtained at any of the offices mentioned above.

Current Topics

GOVERNMENT'S DECISIONS ON PAY COMMISSION REPORT

In a statement to the Lok Sabha this week, the Finance Minister announced Government's decisions on the Pay Commission's report, accepting all the major recommendations which have a financial bearing. This embraces the general pay structure and a minimum wage of Rs. 80. On the question of dearness allowance also, which figured prominently during the negotiations preceding the last strike, there is no departure from the Commission's recommendations. The following are excerpts from the Finance Minister's statement.

THE new pay structure and the various recommendations of the Commission in regard to pay scales and pay rules have been accepted. In particular, Government have accepted the recommendation of the Commission regarding the minimum wage to be given to a Central Government employee. It was not possible for the Commission to make specific recommendations in respect of all categories of employees or offices of the Government of India, and they had suggested that these could be fitted by the Government into the general pattern of the new pay structure recommended by them after taking all the relevant factors into consideration. The fitting of thousands of posts, with various designations and nomenclature, involving nearly 20 lakhs of employees at present serving in over 500 existing rates or scales of pay into about 140 scales of pay recommended by the Commission was a task of considerable magnitude. Even so, the Government have already finalised pay scales which cover about 75 per cent of the employees, and almost all Class IV and workshop personnel. The remaining pay scales will also be finalised and issued very shortly.

Rules have been framed for giving effect to the revised pay scales, for fixation of initial pay in the new pay structure, the date of increment and other related matters on the lines recommended by the Commission. As a measure of rationalisation, the Commission had recommended considerably fewer scales to replace the existing large number of scales. An inevitable corollary of this is that though most employees will receive the benefit of improved scales of pay, a few might find the existing scales better than the revised scales. As recommended by the Commission, the rules will enable such employees to have the option to retain their existing scales together with dearness allowance at the existing rates. This will ensure that even in the few cases where an employee does not benefit by the revised scales, he suffers no loss of emoluments as a result of the introduction of the revised pay scales.

Following are the prescribed and revised pay scales denoted as A and B respectively of some categories of posts common to all or many departments of the Government of India. The scales were recommended by the Pay Commission and accepted by Government.

CLASS II POSTS

All posts on the standard Class II scale (other than those of economists and statisticians):

(a) 275|25|500|EB|30|650|EB|30|800. (b) 350|25|500|30|590|EB|30|800|EB|30|830|35|900.

CLASS III POSTS

1. Stenographers in non-Secretariat offices: (a) 80|5|120|EB|8|200|10-2|220. (b) 130|5|160|8|200|EB|8|256|EB|8|280|10|300; 2. Upper Division Clerks in Secretariat and 'included' offices: (a) 80|5|120|EB|8|200|10-2|220. (b) 130|5|160|8|200|EB|8|256|EB|8|280; 3. Upper Division Clerks in non-Secretariat offices: (a) 80|5|120|EB|8|200|10-2|220. (b) 130|5|160|8|200|EB|8|256|EB|8|280|10|300; 4. Lower Division Clerks in Secretariat offices: (a) 60|3|81|EB|4|125|5|130. (b) 110|3|131|4|155|EB|4|175|5|180; 5. Lower Division Clerks in non-Secretariat offices: (a) 60|3|81|EB|4|125|5|130. (b) (i) 110|3|131|4|155|EB|4|175|5|180; (Ordinary Grade) (ii) 150|5|175|6|205|EB|7|240 (Selection Grade).

CLASS I POSTS

Posts common to Secretariat offices:

1. Secretary: (a) 3,000; (b) 3,000; 2. Joint Secretary; (a) 2,250; (b) 2,250; (3) Deputy Secretary: (a) 1100|50|1300|1600|100|1800; (b) 1100|50|1300|60|1600|100|1800; 4. Under-Secretary: (a) 800|50|1150; (b) 900|50|1200; 5. Section Officer when held by a member of Grade II of the Central Secretariat Service: (a) 530|30|800; (b) 350|25|500|30|590|EB|30|800|EB|30|830|35|900.

In modification of their earlier decision, Government have accepted the recommendation of the Pay Commission that the revised scales of pay and dearness allowance should be given effect to from the 1st July, 1959, and arrears due for the entire period will be paid in cash. The recommendations of the Pay Commission in regard to house rent and compensatory allowances will also take effect from 1st July, 1959. Deductions on account of the compulsory provident fund scheme will not be made prior to the 1st of April, 1960, since that scheme is being introduced only from the commencement of the current financial year.

Government have accepted the recommendation of the Commission that if during a period of 12 months the consumer price index remains on an average 10 points above 115, the Government should review the position and consider whether an increase in the allowance should be allowed; and is so, at what rate.

The Government have accepted and already announced their decisions on the Commission's recommendations regarding the grant of gratuity to temporary and quasi permanent employees on their retirement, discharge from service, or death, and improvement of death gratuity in the case of permanent employees who die before completing five years of qualifying service, as also in respect of employees who are governed by the Contributory Provident Fund Scheme. The recommendations of the Commission for improvement or liberalisation of retirement benefits in the case of scientists and technologists have also been accepted and orders issued.

Government have accepted the recommendations of the Commission that the permanent requirements of all categories of staff should be speedily determined and that the margin of temporary posts should be the same for all classes of employees. Orders have been issued for converting existing temporary posts into permanent ones within the limit permissible and to confirm all eligible temporary persons as early as possible. The position will be reviewed periodically.

The Pay Commission have observed that it would be perfectly reasonable to require all Central Government employees to subscribe at least 6¼ per cent of their pay to a General Provident Fund, unless they are already required to subscribe at the rate of 8-1|3 per cent. The recommendation has been accepted by the Government except that the rate has been reduced to 6 nP. per rupee. However, on administrative considerations and also having regard to the fact that subscription at the minimum rate of 6 per cent of pay may cause harship to employees in the lower categories, it has been decided that Class IV employees drawing a basic salary of less than Rs. 75 a month may subscribe only Rs 4 a month, and other Class IV employees at Rs. 5. There will be no restriction if anyone voluntarily wishes to subscribe at a higher rate. The date of introduction of the compulsory provident fund scheme is 1st April, 1960.

A DELHI NOTEBOOK

LESS AID FROM UN

REPORTS from New York suggest that India may receive this year less aid than last year under the UN Expanded Programme of Technical Assistance. One of the chief reasons for this, it is stated, is the growing needs of Africa.

Last year India received under this programme $2,337,000 for project costs and $826,421 worth of equipment and supplies. The amount sanctioned for project costs in the first six months of the current year is $1,811,581, as against $1.95 million in the corresponding period last year. The figure went up from $1.95 million in middle of last year to $2,337,000 before the end of the year, partly due to the division of the Contingency Fund and partly owing to the utilization by India of a series of Soviet experts financed by the Soviet Union on rouble basis. The UN Secretariat sources are credited to hold the view that though these factors may push up later this year also the amount provided for project costs in India, it is still likely to be below last year's figures. The decrease, however, may be only small.

The UN sources anticipate that unless overall contributions increase appreciably in the coming years, the needs of the newly independent countries might have to be met at the cost of countries like India.

SWISS CREDIT FOR INDIA

India and Switzerland have signed an agreement providing for the purchase of Swiss capital goods by India for her development programmes on credit basis. The credit is for a period of 10 years covering transactions of the value of 100 million Swiss francs (Rs. 10.9 crores). Of this amount, a sum of 60 million Swiss francs will be made available immediately and the balance of 40 million Swiss francs later. The credit will be provided by a consortium of Swiss banks on mutually agreed terms. It will be guaranteed by the Swiss Government within the framework of its Federal Law on Export Risk Guarantees.

Indian imports of specified capital goods under this agreement will be in addition to the imports under the normal import policy of the Government of India which provides for non-discriminatory licensing so far as imports financed from India's own free foreign exchange resources are concerned.

Discussions on this agreement were initiated last year during the visit of the Finance Minister, Mr. Morarji Desai, to Switzerland at the invitation of the Swiss Government.

HELPING COAL PRODUCTION

Mr. H. E. Longden, the coal expert whose services were lent to the Government of India by the British Government in response to its aide memoirs to various Governments seeking advice on the ways and means to increase coal production in the public sector, has submitted his report, it is learnt. A West German coal expert is also here for a similar purpose. He is expected to finalise his recommendations in the near future. A high-power three-man U.S. team, sponsored by the Indo-American Technical Co-operation Administration, too is coming out shortly to this country under this scheme. Besides, a couple of coal experts from the United States have been here recently on their own initiative to look round the prospects of coal development in India.

During the Third Five-Year Plan period, production of coal by the public sector company, the National Coal Development Corporation, is likely to increase considerably. Though no definite targets have yet been adopted, it is understood, the Corporation will have to undertake coal output to the tune of 45 million tons a year. This obviously will require elaborate planning. The advice from foreign experts has been sought by the Government of India to assist the N.C.D.C. in this task.

RESEARCH ON FERRO-ALLOYS

The National Metallurgical Laboratory, Jamshedpur, has embarked on a major research programme to study the suitability of Indian raw materials for production of ferro-alloys. The Laboratory will also develop methods for the production of special ferro-alloys like low-carbon ferro-manganese and low-carbon ferro-chrome. A pilot smelting furnace with a capacity of one ton ferro-manganese per day is being installed at the Laboratory. The pilot furnace is expected to yield useful information on process efficiency, power and electrode consumption, percentage recovery, and other relevant data on various production techniques.

Ferro-alloys are essential in the production of all types of steel. Their function is to provide the alloying element to be incorporated in steel and, at times, act as an agent for removing impurities in the course of smelting operations. Common ferro-alloys in use are ferro-silicon, ferro-manganese, ferro-titanium, ferro-chromium, ferro-vanadium, ferro-molybdenum and ferro-tungsten. Excepting ferro-manganese and ferro-silicon, other ferro-alloys are largely imported. The value of imports in the first six months of 1959 was, about Rs. 5.8 lakhs.

For setting up the tools and alloy steel industry in the country, the full range of ferro-alloys will have to be produced indigenously. Raw materials for the production of all ferro-alloys, excepting ferro-molybdenum, are available in the country. With the proposed establishment of an alloy and tool steels plant in the public sector for producing special steels, the importance of developing production techniques for ferro-alloys can be hardly over-emphasised.

NORWAY LIBERALISES IMPORTS

The Norwegian Government, it is learnt here, has liberalised import restrictions on over 300 items with effect from July 1. Among the items which have been freed from import restrictions, and are of interest to Indian exporters, are: frozen and preserved vegetables of various kinds; fresh and dried fruits; some fats and oils, jams and preserved fruits; fruit and vegetable juices; printing inks; glues and resins; some kinds of plastic and synthetic rubber products; glass jars; safes; crown corks; certain musical instruments; furniture; brushes; sports goods, fountain pens; some types of jewellery; antiques more than 100 years old, etc.

EXCISE DUTY FOR SALES TAX

The Committee of Chief/Finance Ministers of States, which met here last week-end to consider the replacement of the existing Central and States sales taxes on certain commodities such as silk fabrics, matches, paper and vegetable products, by the levy of additional excise duties by the Centre, agreed that sales tax on silk fabrics should be so replaced. In respect of the other commodities, different views were expressed and it was decided not to pursue the matter until further experience was gained on the working of the existing additional excise duty scheme on sugar, tobacco and textiles.

WORLDGRAM

India

Loan for Indian Railways: A loan equivalent to $70 m. has been made by the World Bank for the improvement and expansion of the Indian Railways. The loan will cover the greater part of the foreign exchange required for the final year of the railway programme under India's Second Five-Year Plan ending March 31, 1961. The railway programme has been a central part of the Plan accounting for about one quarter of all public expenditure under the Plan. The Bank's loan is for a term of 20 years and bears the interest at 5¾ per cent per annum including the one per cent commission which is allowed to the Bank's special reserve. Six private commercial banks are participating in the loan without the World Bank's guarantee to the extent of $2.5 million representing the first maturity and part of the second which falls due between January 1964 and July 1964. The Bank has now lent $328 million for the Indian Railways, the largest amounts ever lent by it for a single project.

*

Manufacture of Fluorescent Tubes & Rods: The new State of Maharashtra will soon witness the establishment of new plant for the manufacture of fluorescent tubes and rods. Messrs. Pimpri Glass Works, Bombay, announce having been granted industrial licence by the Government of India to set up the factory in Bhandup, Greater Bombay Area, with a sanctioned capacity of 3 million tubes per year. The proposed production of fluorescent tubes and rods will not only meet entirely needs within the country but also leave a substantial surplus for export abroad. Negotiations for the purchase and erection of the plant and machineries are in progress and the whole plant is expected to be put into commission during the middle of next year.

*

Central Revenue Collections for May 1960: The revenue realised from important dutiable items in the first two months of the financial year 1960-61 amounted to Rs. 103.05 crores; of this, Rs. 53.88 crores were collected during May, 1960. The corresponding figures for the first two months of the financial year 1959-60 were Rs. 87.28 crores and Rs. 44.16 crores for May, 1959. Details under various heads are as follows:

(In lakhs of rupees)

	May		April-May	
	1960	1959	1960-61	1959-60
1. Customs	13,07	11,19	24,51	23,29
2. Union Excise Duties (excluding coal cess and salt cess) ..	33,27	28,16	64,30	54,73
3. Corporation Tax ..	1,46	62	2,98	1,33
4. Income Tax	5,47	3,57	9,43	6,36
5. Estate Duty	10	12	25	29
6. Taxes on Wealth ..	19	18	64	58
7. Expenditure Tax ..	*	3	3	4
8. Gift Tax	2	2	8	7
9. Opium	30	27	83	59
TOTAL	53,88	44,16	103,16	87,28

* Less than one lakh.

*

Export Risks Insurance Corporation: The Export Risks Insurance Corporation issued 135 policies during the period January 1, 1960 to June 30, 1960 as against 110 policies issued during the corresponding period last year. The Corporation, which started underwritng risks involved in exports on credit terms in October 1957, had a total of 269 policies, with a maximum liability of Rs. 6.74 crores, in force on June 30, 1960, as against 198 policies with a maximum liability of Rs. 6.64 crores on June 30, 1959.

New Process for Producing Aluminium: A press release issued recently by the Indian Aluminium Company Ltd., states that Aluminium Ltd. has approved the construction of new facilities at Arvida, Quebec for the production of aluminium by a basically new process. The process had been under development by Aluminium Ltd. for some years through the laboratory and pilot plant stages. It employes its principal raw material bauxite of roughly similar grades to that required by the conventional process for the production of commercial aluminium. The new process does not appreciably reduce the large power requirement which is an outstanding characteristic of the conventional process. It does, however, give promise of substantial savings in other elements of production cost and in the investment required per ton of capacity. The new facilities designed as an experimental unit will have a capacity of 6,000 to 8,000 tons of aluminium per year. They will be operated primarily for the purpose of confirming the conclusions already reached concerning the production costs obtained with the new process. It is expected that the new facilities will be available within two years. Their capital cost will be of the order of $4,00,000. The new process is covered in a large number of countries by patents belonging to Aluminium Ltd.

*

Export Incentive Scheme for Cotton Textiles: The Cotton Textile Export Incentive Scheme will be extended to the export of ropes, tapes, newar, twine, webbings and braids manufactured out of cotton yarn. This has been announced in an import trade control public notice. The licences will be granted by the Joint Chief Controller of Imports and Exports, Bombay, once in a quarter on the basis of exports effected in the preceding quarter.

*

Small Saving Securities: The Government of India have framed rules providing for nomination facilities to holders of 10-year Treasury Savings Deposits Certificates and 15-year Annuity Certificates. Under the rules, the holders of the certificates can nominate a person or persons who, in the event of their death will be entitled to the certificates and to the payment of amount thereon wihout production of a succession certificate, etc. This facility will however be restricted to individual holders only and will not be available in respect of certificates held by two adults jointly or a guardian on behalf of a minor or by an institution.

U.S.A.

Supply of Cotton under P.L. 480 Programme: An agreement has been signed between the Governments of India and of the United States for the import of an additional quantity of 400,000 bales of cotton under title I of PL 480 programme. Two thirds of this quantity will be available in staple length below 1-1/16 inches and the remaining 1/3rd will be in staple length up to 1-3/16 inches. The cost of the cotton, including 50 per cent of the cost of transportation in American ships, will be $41.6 million (Rs. 19.8 crores). These imports will be paid for in rupees by the Government of India. The agreement indicates that 85 per cent of the rupee sale proceeds will be available to Government of India for economic development. Arrangements have also been made to licence the import of a further quantity of two lakh Indian bales to be procured, from usual commercial sources. Since the inception of PL 480 programme in India in 1956, raw cotton worth $87 million (Rs. 41.4 crores) and covering a quantity of about 8 lakh Indian bales has been received from the United States. The over-all total of US economic assistance to India till 29th July is over $3.5 billion (Rs. 1,666 crores).

*

Self-Sufficiency in Fire-Fighting Equipment: Messrs. Fyr-Fyter Company of USA, known the world over,

as leading manufacturers of Fire-Fighting Equipments have now extended the benefit of their knowledge and experience to India. In collaboration with this firm, Messrs. Lakshmi Sprinklers, a new venture of Thakerseys, well-known in the textile world of Bombay, have started the manufacture of sprinklers for the first time in India under the Globe Sprinklers.

United Kingdom

BOAC Announces Highest-Ever Operating Profit: The Chairman of BOAC, Sir Gerard d' Erlanger, at a press conference in London recently in discussing the Corporation's annual account and report for the year ended 31st March 1960, stated that BOAC had made the highest operating profit in its history. The figure, he said, was over four and a quarter million pounds but, after payment of interest, the surplus on BOAC's own operations was reduced to £2,77,813 compared to a deficit of two million pounds the previous year.

*

Loan for Indian Fertilizer Plant: The Commonwealth Development Finance Corporation Ltd. has signed an agreement with East-India Distilleries & Sugar Factories Ltd. of Madras for a loan of £600,000 as part of the financing of a compound ammonium phosphate fertilizer plant to be erected at Ennore, near Madras. The plant will have an annual capacity of about 51,000 tons, and will contribute towards increasing the yield of food and cash-crops in South India. Announcing the loan, a CDFC spokesman said: .'The solution of India's food problem is probably the most important matter facing the Indian Government today." The East India Distilleries plant has been designed and is to be erected, by the British firm of Simon-Carves Ltd. It would be the first fertilizer factory in India to manufacture compound ammonium phosphates.

*

Orders from India for Aircraft-Towing Tractors: The Indian Air Force and the Indian Navy have placed orders with David Brown Construction Equipment Ltd. of Huddersfield, England for Taskmaster aircraft-towing tractors. The machines will be used for ground handling of aircraft of all kinds, and in the case of the Navy will spend most of the time afloat, on board the aircraft-carrier INS Vikrant.

*

Rise in National Income: Total production of goods and services in the United Kingdom rose by about 3 per cent between the fourth quarter of 1959 and the first quarter of 1960, according to estimates of national income and expenditure issued by the Treasury in London on July 29. On the same basis of comparison, personal incomes rose by 2 per cent and wages and salaries by 1 per cent. Consumer's expenditure also rose by 2 per cent and personal savings were, therefore, practically unchanged. Total investment rose by 3 per cent, seasonally adjusted. Public investment was slightly down, but private investment rose sharply.

France

Electric Equipment and Tools for Viet Nam: Three million new francs worth of electric equipment and tools will be delivered by the French Mission for Technical and Economic Aid to the Viet Nam Technical Centre of Phutho, in the suburbs of Saigon, for a physics laboratory, a chemical laboratory, an electronic measuring laboratory, and an electric equipment testing laboratory. This Technical Centre includes three advanced technical schools: one for public works and surveying; a second for industrial arts and electricity, and a third for the training of naval officers in bridge-building and the use of equipment for the Merchant Marine. At present, 441 students are enrolled in the school and of these 225 are studying engineering.

U.A.R.

First Five-Year Plan: When the United Arab Republic, having completed its political unification settled down in 1958 to implement its aim of building a new state, it inaugurated the first of the series of Five-Year Plans for general economic development. The first phase of this development was finished in 1959—two years before its target date and has increased the national income a thousand million pounds, nearly 20 per cent of which has come from industry. This progress has been made possible by the introduction of the most modern machinery and automation into existing factories, as well as by investment in new enterprises. The cost of modernisation and new investment was originally reckoned at Rs. 357 crores. Actually, over Rs. 420 crores have already been spent and estimates for the total cost now exceed Rs. 462 crores. The necessary capital came in great part from the national income; the balance was covered by foreign loans from Russia, West Germany and Japan. In the light of the great success of the First Five-Year Plan, two important decisions have been taken; first, to double the national income in 10 years instead of the 20 originally envisaged, and, second, to begin the Second Five-Year Programme in 1960 instead of 1962.

Pakistan

Electric Trains on Pakistan Railways: Pakistan Railways are exploring the possibility of introducing electric trains on the 200-mile route between Narayangunj and Chittagong in East Pakistan and from Khanewal to Rawalpindi and Sibi to Quetta in West Pakistan. A consortium of European countries, France, West Germany, and Belgium, will shortly undertake a survey of Chitagong-Narayangunj track. British and Japanese railways are also taking part in the survey.

Austria

Exports to the Soviet Union: Austria's exports to the Soviet Union increased in 1959 against 1958 by 66 per cent to reach 874 million schillings, imports by 35 per cent to 768 million schilings. Between 1955 and 1959 exports to the Soviet Union have increased six-fold and imports seven-fold. The share of the Soviet Union in Austria's overall exports increased between 1955 and 1959 from 0.8 per cent to 3.5 per cent, in imports from 0.5 per cent to 2.6 per cent.

Yugoslavia

Exports for 1960: Yugoslav exports amounting to 175.2 million dinars are planned for 1960. This sum is 32 billion dinars larger than based on efforts begun several years ago to increase the exports of products of a higher degree of manufacture as compared to the larger exports of agricultural products.

I.F.C.

Investment in Finland: The International Finance Corporation announced recently a commitment to invest US $150,000 in a well-known Finnish textile manufacturing group comprising the companies Tricol Oy and Oy Kutomotuote Ab. The investment will help finance the construction and operation of a new plant, expansion of production and, re-location of part of the group's operation. Total cost of the project is about US $825,000 equivalent. In addition to the IFC investment, about US $5 lakhs is being provided by loans from Finnish banks and financial institutions. The balance is to be provided by the group's operations. The IFC investment will be in dollar notes maturing between 1962 and 1968 bearing 6.75 per cent interest payable in dollars. In addition IFC will receive in Finnish marks additional payments related to sales. IFC's commitment is subject to completion of the necessary legal formalities.

THE TATA IRON AND STEEL COMPANY LIMITED

NOTICE

Extension of date for submission of coupons and applications in respect of new Ordinary shares.

NOTICE is hereby given that the extended period for submission of **coupons** in respect of the new Ordinary shares in terms of the Company's Circular dated the 12th October, 1959, expires on the 29th July, 1960. As some shareholders have not yet exercised their right to obtain shares by submitting the requisite new Ordinary share coupons, the Directors have extended the period for submission of such coupons to 29th September, 1960, and the Company's bankers have accordingly been authorised to receive applications on and after the 30th July, 1960 upto but not later than the 29th September, 1960 in respect of such coupons Provided that along with each such application with the required coupons and the moneys to be received with such application interest at the rate of 9% per annum (which the Directors have decided to charge) shall be paid to the Company's bankers as under:

(i) For applications with new Ordinary share coupons from **resident** shareholders from 16th December, 1959, to the date of payment; and

(ii) For applications with new Ordinary share coupons in the case of **non-resident** shareholders from 1st June, 1960 to the date of payment.

The Directors have also resolved that the last date for receiving applications in respect of new Ordinary **shares** from the **non**-resident shareholders which was 29th July, 1960 be extended upto 29th September, 1960 provided that along with each such application and the moneys to be received with such application interest at the rate of 9% per annum thereon (which the Directors have decided to charge) from 1st day of April, 1960 to the date of payment shall be paid to the Company's bankers.

No application received from resident shareholders on and after the 16th December, 1959 and from non-resident shareholders on and after the 1st June, 1960 in respect of new Ordinary share coupons and no application received from non-resident shareholders on and after the 1st April, 1960 in respect of rights to new Ordinary shares will be entertained by the Directors unless interest is paid as aforesaid. No such application will be entertained after the 29th September, 1960.

The above extension of date does not apply to applications in respect of "A" Second Preference shares or "A" Second Preference share coupons, the last date for submission of which is 29th July, 1960.

Dated at Bombay this 28th day of July, 1960.

As a guide for industrialists investigating continental markets, it includes comparisons and details of existing tax systems in Austria, Belgium, Denmark. Finland, France Federal Germany, Italy, Luxemburg, the Netherlands, Norway, Sweden, Switzerland, and the U.K.

*

The International Sugar Council decided recently to raise the export quotas of its producing members to 105 per cent of the "basic tonnage" which means an increase of 1.25 million tons or rather more than 20 per cent over their former levels.

4 PER CENT STATE GOVERNMENTS LOANS 1969

	Name of State	Amount	Issue price per cent
1.	ANDHRA PRADESH	Rs. 900 lakhs	Rs. 99.75
2.	BIHAR	Rs. 300 lakhs	Rs. 99.50
3.	GUJARAT	Rs. 500 lakhs	Rs. 100.00
4.	KERALA	Rs. 400 lakhs	Rs. 99.50
5.	MADHYA PRADESH	Rs. 500 lakhs	Rs. 99.50
6.	MADRAS	Rs. 1200 lakhs	Rs. 99.75
7.	MAHARASHTRA	Rs. 1000 lakhs	Rs. 100.00
8.	MYSORE	Rs. 400 lakhs	Rs. 99.75
9.	ORISSA	Rs. 400 lakhs	Rs. 99.50
10.	RAJASTHAN	Rs. 500 lakhs	Rs. 99.75
11.	UTTAR PRADESH	Rs. 700 lakhs	Rs. 99.75
12.	WEST BENGAL	Rs. 700 lakhs	Rs. 99.75

All the State Governments reserve the right to retain subscriptions up to ten per cent. in excess of the notified amount.

All the above loans will be repaid at par on 29th August, 1969.

THE LOANS WILL OPEN FOR SUBSCRIPTION ON 29TH AUGUST 1960, AND CLOSE ON 3RD SEPTEMBER, 1960 (6TH SEPTEMBER, 1960 IN CASE OF KERALA LOAN) OR EARLIER WITHOUT NOTICE AS SOON AS SUBSCRIPTION APPROXIMATE TO THE AMOUNT OF EACH ISSUE.

All the loans will bear interest from 29th August, 1960.

Subscriptions may be in the form of **CASH/CHEQUE** in respect of all the loans.

3% Bombay State Development loan 1960 will be accepted AT PAR for conversion into the new loan of the Government of Maharashtra. Securities of 3% Madhya Pradesh Loan 1960, Madras Government 3% Development Bonds 1960, Madras Government 3% Loan 1960 and 3% U.P. Loan 1960 will also be accepted for conversion AT PAR into the new loans of the respective State Governments.

Interest at the rate of 3% per annum on the securities of Madras Government 3% Loan 1960 and 3% U.P. Loan 1960 tendered for conversion will be paid upto and inclusive of 28th August, 1960. In case of securities tendered in respect of Madras Government 3% Development Bonds 1960, 3% Madhya Pradesh Loan 1960 and 3% Bombay State Development Loan 1960 which are due to mature on 31st July, 1960, interest will be paid at the rate of 3% per annum upto and inclusive of 30th July 1960 and at the rate of 4% per annum from 31st July, 1960 to 28th August, 1960 inclusive.

APPLICATIONS FOR ALL THE LOANS WILL BE RECEIVED AT THE OFFICES OF THE RESERVE BANK OF INDIA AT BANGALORE, BOMBAY, CALCUTTA, MADRAS AND NEW DELHI.

APPLICATIONS will also be received at **PLACES WITHIN THE RESPECTIVE STATES** as follows:

i) At the office of the Reserve Bank of India at Nagpur in the case of Maharashtra loan

ii) At the branches of the State Bank of India and at treasuries and sub-treasuries in the case of Andhra Pradesh, Bihar, Kerala, Gujarat, Madhya Pradesh, Maharashtra, Madras, Orissa, Rajasthan and Uttar Pradesh Loans.

iii) At the branches of State Bank of India in the case of West Bengal Loan.

iv) At the branches and treasury pay offices of the State Bank of Hyderabad in the case of Andhra Pradesh and Maharashtra State Loans.

v) At the branches of the State Bank of Mysore (except at Bangalore, Mangalore and Gulbarga), the State Bank of India, the State Bank of Hyderabad and at Government Taluk.

vi) In the case of Gujarat Loan the State Bank of Saurashtra at Bhavnagar and its branches in the State of Gujarat will collect applications and forward them to the nearest receiving office.

Copies of Notifications and Applications Forms may be obtained at any Receiving Office.

Applicants tendering their applications at the offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, New Delhi and Madras will, in the event of oversubscription to the loan applied for, be given the option of transferring their cash refunds to any of the other State Government loans, which may not be fully subscribed by that time. To avail of this facility, the persons tendering their applications should complete the SPECIAL OPTION FORM copies of which are available on application from any of the above mentioned offices of the Reserve Bank of India.

for the future

Under the furrowed brow, his aging eyes see
his child grow to manhood. He gives his all: care
and protection, knowledge culled from experience.
And prepares him to meet the future.

Soon the youth will learn from life.
Soon will come the struggle to achieve.
Soon he will be part of the striving . . .

The striving and effort for a better world.
A world that offers a little more—
a little less of the care, a little more of the joy.

Today, as in the past, our products help to make homes cleaner, healthier, happier. But today we are also working for . . . Tomorrow, when the evergrowing urge for better living will demand still greater efforts. And we shall be ready with wider service, new ideas, new products . . .

Today and Tomorrow... Hindustan Lever serves the home.

PR. 4-X52

UNDER SECRETARY TO THE GOVERNMENT 9 - AUG 1960 PUBLIC DEPARTMENT

Company Meeting

JESSOP & COMPANY, LIMITED

The Speech by Sir Bijoy Prosad Singh Roy, K.C.I.E., Chairman, Board of Management, Jessop & Co. Ltd.

Gentlemen,

Once more I have pleasure in welcoming you here today at this the Twenty-Eighth Annual General Meeting of your Company.

This Meeting has unfortunately been delayed as just before the Accounts, which are now before you, had reached the final stage of printing, non-compliance through oversight of certain provisions of the Companies Act was discovered. The matter was purely technical, but before publishing and presenting the Accounts to you the Board of Management thought it proper to bring it to Government's notice with a view to resolving any legal implications. The position has been fully explained in the Board of Management's Report to you.

The year ending 31st October, 1959, was one of consolidation and of continued improvement to the manufacturing potential of your company, and the results are even better than at first sight as I think you will agree if you will bear with me.

The shortage of steel referred to at both the last two annual general meetings continued with increasing severity during the year under review. It was thus exceedingly difficult to maintain production and the greatest credit is due to all those who not only maintained output but actually increased it in the face of this and other difficulties. The steel position is now improving but this welcome change is having, initially, its disadvantages. For any contract steel is needed in a variety of sizes and shapes and it is not possible to start work on that contract until supplies of all those varieties are available in balanced quantities. We have for long been used to having the bulk of certain items of steel in hand and having to wait until the missing items, or 'matching steel' as we call it, come to hand. With the improvement in steel supplies we are now receiving more steel and the missing items are fewer, but they are still there and as important as ever. Thus we find that funds locked up in materials have risen sharply while production itself is still hampered by these shortages. We hope that now that indigenous steel is generally more freely available Government will be abie to concentrate on imports of those types and sizes which are in short supply and that the situation will improve. In fact there are welcome signs to that effect.

Last year I was able to tell you that the major expansion schemes started in 1955 and 1956 had reached the productive stage and I can now tell you that all these have attained their full target rate of output. The quantum of imports required for these products also has been considerably reduced and the work done at Dum Dum has greatly increased, though this fact, involving as it does, the substitution of an item previously imported by one made by ourselves naturally does not show in the sales figures by which output is normally judged.

We have now completed the first stage of our contract for Electric Multiple Unit Coaches and the last of sixteen three-coach units was handed over to the Eastern Railway early this month. For this stage we imported the motor coaches, one to each three-coach unit, in the knocked down condition and we assembled and finished it at Dum Dum. We made the two trailer coaches required for the train set. All the bogies, both for motor and trailer coaches, were imported.

Work on the second stage of this contract is now in hand and the first of eighteen three-coach units will leave our Works for Bombay next month. For this second stage we are making all the motor coaches as well as all the trailers, the bogies still being imported. The quantum of work done at Dum Dum will be some fifty per cent more than in the first stage although its effect will not be reflected in the sales figures.

I am glad to tell you that we have recently secured a further contract for this E. M. U. Stock, again for Bombay, and this will keep the section of the Coach Works concerned busy until late in 1962. For this contract we will build all the bogies at Dum Dum. This will require an extension to the Coach Works which is already in hand.

The Furnishing and Finishing of Metre Gauge Passenger Coaches has now reached its target rate of 24 coaches a month, a coach every working day. We completed the first 150 of these coaches in June last and are now working on the next 300. We also have on our books a further order for 450 coaches and this will keep us busy until towards the end of 1962.

The production of Road Rollers has also reached its target rate of 200 a year and we have fully implemented the terms of our manufacturing licence. The proportion of manufacture at Dum Dum has risen from about 35 per cent in 1957 to about 63 per cent today, an increase of 80 per cent in the work done per roller quite apart from the increased number of machines turned out. The balance 37 per cent consists of the engine, previously imported but now made in Madras, and the transmission which is outside our present manufacturing licence.

The manufacture of the new heavy eight-wheeled BOX Wagon referred to in my last address was unfortunately delayed as the drawings and specifications were not finalised by the Railway Board until February of this year. As a result, it was not possible to despatch any wagons of this type until May of this year and production is still in the stage of being built up. This delay has been most unfortunate for it has meant a long gap between the last of the old four-wheeled wagon and the first of the new. We estimate that production worth about Rs. 300 lakhs will have been lost during this long change-over period, and this fact must be borne in mind in considering the working results.

Since the close of the year under review we have also established the manufacture of Metre Gauge Bogie Motor and Parcel Vans, and the first deliveries were made in May this year. This is an entirely new design of vehicle having the dual purpose indicated by its name and designed to run with passenger trains.

Since I last addressed you we have continued to add to and improve our facilities at Dum Dum and the results are already beginning to show. In the current financial year after a slow start due to shortage of steel and the hold-up on the new wagon, production has increased rapidly and is still increasing. We expect the current year will show considerably greater

output than that you are now considering, and that next year will show a further substantial improvement. We have a very healthy Order Book and the demand for our products continues to be good.

The greatly increased output now being achieved and the fact that it is still increasing means that your company is maintaining its position in the Engineering Industry and that it is playing its part in the industrialization of the country and in the saving of imports It also emphasises the necessity, mentioned in the Board of Management's Report of strengthening the financial resources of the company to meet the greater demand for working capital on account of increased output and for undertaking new and diversified lines of production besides expansion of the existing ones.

In my last address I referred to the Award of the Fifth Engineering Tribunal. On due clarification of the doubtful points, the award was fully implemented resulting in an average monthly increase of Rs. 13½ in the basic wages and dearness allowance of the workmen in general. This increase has, amongst other things, had its effect on the profits of the company.

Thanks to your co-operation, the recent 'rights' issue of equity capital was fully subscribed and it has enabled your Board to reduce the ceiling limit of cash credit facility with the State Bank of India from Rs. 275 lakhs to Rs. 175 lakhs and to release the Guarantee of the Central Government with which that accommodation had been secured. To meet the increasing needs of funds to finance the rehabilitation and expansion schemes, however, your Board has recently finalised arrangements with the State Bank for a 6½ per cent Debenture Loan of Rs. 75 lakhs which takes the form of a second cash credit account and may be drawn upon as and when necessary. The Board intends to reserve this account, as far as practicable, for capital purposes as distinct from day to day use.

As you will see from the foregoing and also from the published accounts the company's financial position is now greatly improved and for this due credit must be given to the sacrifices made by the shareholders. At the same time output has risen and is likely to rise considerably in the future which will necessitate larger working funds. In an industry such as ours, also, it is necessary to plan well ahead and I would remind you of the earlier part of my address today in which I mentioned that major schemes started in 1955 and 1956 had come into full fruition only in 1960. As indicated in the Report of the Board of Management there are other schemes now under consideration and these too will require funds both for capital expenses and for working capital. It is doubtful whether the debenture issue already referred to will suffice to cover these extra demands. The whole matter is having the careful attention of your Board and we shall approach you at the appropriate time for your co-operation and support should we find it necessary to raise furthr share capital.

I think, Gentlemen, that at this juncture you will expect me to say something about that thorny question, the rate of dividend on our Preference shares. As you know our Preference shares are what is known as 5% tax free, by which is meant that the dividend is free of any deduction on account of tax paid by the company on its earnings. Last year by virtue of Section 18 (3E) of the Income Tax Act we were able to gross up the dividend on the Preference shares so that after deduction of tax at 30% it still left 5% in the hands of the shareholders. Unfortunately with the deletion of that section by the Finance Act, 1960, this is no longer possible and the only way now to achieve the desired result would be to raise the rate of dividend which would require a change in our Articles of Association. This in turn would require the consent in writing of not less than 75% of both classes of shareholders, Ordinary and Preference, which is virtually impossible to obtain. We sympathise with the Preference shareholders, but we are not to blame and we can do nothing unless the law is changed.

Gentlemen, in recounting this story of solid achievement I am sure you will wish me to give full credit to those whose hard work has made this progress possible and I am sure that you will join with me in thanking the workmen and all the staff of the company. In this connection you will be interested to know that the Board has, in principle, decided to introduce an incentive system at the Works as soon as possible. A firm of experts is already making a preliminary study but it must be realised that in an organization such as ours which handles a very wide range of products and which is continually venturing on new lines the introduction of such a scheme requires very careful consideration, though all agree that it will be greatly to the ultimate benefit of the workmen and the company alike.

Finally, I cannot close without mentioning the retirement last March of Mr. C. V. Graham, a Member of the Board. Mr Graham had been in the company's employ for over 32 years and we will greatly miss his wide experience and his capacity for hard work. I am sure that you will all join with me in wishing him many happy years of leisure in England.

In Mr. Graham's place Government has been pleased to appoint Mr. M. Lall, who has had twenty-four years' service with the company. I know you will all join with me in welcoming him to the Board.

This does not purport to be a record of the proceedings of the Annual General Meeting.

COMPANY AFFAIRS

HIGHER SALES FOR PHILIPS

An increase in the volume of sales, a higher amount of profit and a larger appropriation for dividend and a further expansion of local manufacturing programme highlighted the working of Philips India Ltd. during the year 1959. With the progressive realisation of the company's local manufacturing plans and the sustained demand for all its products, sales in 1959 have reached a level of Rs. 4.9 crores as compared to Rs. 4.5 crores in 1958. The overall trend is reflected in the aitivities pertaining mainly to the Entertainment group, such as radio, acoustics, etc. Sales of industrial and professional articles, however, continue to be adversely affected by import restrictions. In this connection, it is felt that unless the production of lamps is allowed to expand with the rise in demand, there is likely to be an overall shortage of lamps in the country in the near future.

Profit before taxation has increased from Rs. 53.56 lakhs to Rs. 58.32 lakhs after providing for a higher depreciation charge of Rs. 11.2 lakhs as compared to Rs. 8 lakhs in the previous year, and also after setting aside Rs. 2 lakhs for staff gratuity. The Directors have recommended a dividend of 12 per cent subject to the deduction of Income-Tax. In this connection, the observations made by the Directors in regard to the implications of the recent changes in tax relating to the dividends are of interest: "It would be appreciated that so far as your company is concerned, the new scheme of taxation will adversely affect the liquid position required for the current and future expansion of your company's operations if the net cash dividend is to be maintained at the same level as that obtaining under the old scheme of grossing-up."

Simultaneously with the company's factory at Calcutta maintaining a satisfactory level of production, the new factory at Loni, which was recently inaugurated by Mr. Manubhai Shah, the Union Minister of Industry, has also started producing radio sets and components of different types. While efforts are being made to attain self-sufficiency in the production of radio sets, it has been planned to extend local manufacture to other fields, such as X-ray equipments. The Directors report their endeavours to expand the local manufacture in those directions not only through the company's two factories a Calcutta and Loni, but also in collaboration with ancillary and small-scale industries. Another important feature of the company's activities in 1959 has been the assistance it rendered to the All-India Radio authorities to set up the experimental television station in Delhi which was inaugurated by the President in September last.

REWA COALFIELDS

Owing to acute shortage of wagons, raising from the collieries of the Company were considerably restricted, although the production was in full strength. Raisings and despatches were to the extent of 4.47 lakh tons and 4.45 lakh tons during 1959 against 4.09 lakh tons and 4.11 lakh tons respectively during the previous year. A new pit has been developed at Umaria and in due course raisings of the Company will increase. Overall result were quite satisfactory. The Company made a profit of Rs. 1.40 lakhs. The Directors have recommended the payment of a dividend at the rate of 10 per cent subject to deduction of tax which will absorb Rs. 1.3 lakhs. Capital expenditure during the year was to the extent of Rs. 4.15 lakhs (excluding Rs. 2.82 lakhs in progress) against Rs. 6.43 lakhs in 1958.

THE PUNJAB NATIONAL BANK

The deposits of the Bank on June 30, 1960, exceed Rs. 145 crores against 141 crores at the end of the previous year. Subject to audit, the net profit of the Bank for the half year ended 30th June, 1960 after providing a sum of Rs. 6.39 lakhs for payment to the Gratuity Fund Trust and making necessary provisions amounts to Rs. 45.37 lakhs as against Rs. 42.76 lakhs for the corresponding half year in 1959. After adding a sum of Rs. 3.19 lakhs carried forward the amount available for appropriation is Rs. 48.56 lakhs.

The Directors have decided to pay an ad-interim dividend for the current year at the rate of Re. 1 gross per share amounting to Rs. 12.50 lakhs leaving a balance of Rs. 36.06 lakhs.

The Bank has 400 offices in India, Burma and Pakistan.

THE INDIAN BANK LIMITED

The Directors have announced that subject to audit the net profit of the Indian Bank Limited, Madras, for the half-year ended June 30, 1960, amounts to Rs. 22.38 lakhs. This sum together with the sum of Rs. 8,143 carried from the previous year's account makes a total of Rs. 23.18 lakhs which is available for disposal with the Directors.

THE INDIAN OVERSEAS BANK LIMITED

The net profit of the Indian Overseas Bank Limited for the half-year ended June 30, 1960, subject to audit, including the sum of Rs. 1.26 lakhs brought forward from the last year's account, amounts to Rs. 19.30 lakhs.

THE BANK OF INDIA

The transactions of the Bank of India Limited for the six months ended 30th June, 1960, have, after making the usual provisions for contingencies, resulted in a profit (subject to taxation) of Rs. 42.64 lakhs. To this amount has to be added Rs. 12.47 lakhs brought forward from the last account, making a total of Rs. 55.12 lakhs. This sum the Directors have disposed of as follows: In payment of an interim dividend at the rate of 15 per cent per annum (Rs. 3.75 per share) subject to deduction of tax at the prescribed rates on the paid-up capital of Rs. 3.00 crores for the half-year ended June 30, 1960, which absorbs Rs. 22.50 lakhs; carried forward to the next half-year Rs. 32.62 lakhs, subject to taxation.

PREMIER AUTOMOBILES

The total sales of the Premiee Automobiles Limited for the year 1959-60 amount to about Rs. 20.89 crores. The Company sold 5,733 cars and 5,796 trucks in the same period. Against this the total sales of the Company for the year 1958-59 amounted to about Rs. 17.43 crores. The Company sold 3,237 cars and 5,167 trucks in the same period.

BIRDS cover a wide field

The Birds/Heilgers group do not produce steel. But they provide the vital raw materials that go into the making of steel—iron ore, coal, manganese ore, limestone, dolomite, refractories... They do not grow jute but their mills turn out jute goods for a variety of uses. Their interests cover a wide field from paper to engineering... coal to electricity.

Their production units are today engaged in a programme of expansion to step up output to meet the increasing demands of India's industries. And their laboratories are constantly at work to improve their products... to explore new applications.

Through their service to the country for nearly 100 years, Birds have become a significant part of India's industrial scene.

Wanted: A Policy for Food Production

THE accent happily, at long last, has firmly rested on prices. Cloth is already responding, with an imaginative gesture this week from the Indian Cotton Mills Federation. On the food front a reassuring statement has been made by Mr. S. K. Patil who has suggested that the time has come for removing zonal restrictions on wheat despatches. It is clear that the long-run solution of India's problems rests on food production only. Here the imaginative touch of the Food Minister has not yet gone to work. How can implementation be best built into the Indian agricultural system so that it might survive the acid test, which is not planning but performance and implementation?

Applying the test of performance and implementation to the latest draft proposal of the Third Five-Year Plan, these questions might be asked of the Planning Commission. What performance in recent history indicates the possibility of a 6 to 10 per cent increase in food and agricultural production each year? Have sufficient quantities of improved seeds, fertilizers, storage facilities, farm tools, credit and water been made available to the villagers? What improved techniques of administration and added staff have been made available to perform the educational and service phases of the job? What incentives have been given to the villagers to motivate them to the great effort necessary?

At this stage the Third Five-Year Plan is woefully inadequate in providing farmers of India the necessary production supplies and economic motivation essential to produce 105 million tons of foodgrains—30 to 35 million tons above the level of recent years. In the case of fertilizers, the Plan calls for the internal production and use of one million tons nitrogen and 0.4 million tons phosphates by 1965-66. These are impressive additions to the two lakh tons nitrogen and 40,000 tons phosphates produced last year. But, the amount of fertilizers planned is obviously not enough. From the above data it can be determined that one ton of fertilizers is expected to return an increase of 21 to 25 tons of foodgrains. This is not realistic planning. A more realistic relationship is 6 to 12 tons of increased foodgrains production per ton of fertilizers, depending on the limitations of other factors of production. The Planning Commission might contend that the difference between the ratio of 6 to 12 tons and 21 to 25 tons increased food production per ton of fertilizers will be achieved by increased use of village production plans, better seeds, irrigation and green manures; past experience would indicate this is purely wishful thinking.

The Third Five-Year Plan proposes to supply most of the one million tons of nitrogenous fertilizers from the Sindri Plant and other plants planned for construction in the public sector. But the Nangal Plant with 80,000 tons capacity, due in 1960, cannot possibly be completed before late 1961 or 1962. The Rourkela Plant with 80,000 tons capacity and the Neyveli Plant with 70,000 tons capacity, both due for completion in 1960, now appear to be going late and it will be 1961 or 1962 before production starts. The Trombay, Durgapur, Naharkatiya and Kothagudium plants are still on paper and production there under the best of conditions should not be expected before 1964 or 1965. Plants at other locations are not likely to be constructed and may not start producing fertilizers for use by the agriculturist before 1966 or 1967. Production is down at the Sindri Plant because of shortage of coking coal. This shortage will also continue to haunt other plants based on coal.

The above data indicate that with optimum progress in plant construction, production of nitrogen in India would not exceed 3.5 to 4.0 lakh tons by 1963 and would not exceed 7.0 lakh tons by 1965-66. A more likely production figure is 5.0 lakh tons by that date. If only one million tons or less of nitrogen is to be made available to farmers for food production, then imports must make up the difference or a much more aggressive production programme must be implemented. At least 2.5 to 3.0 million tons of nitrogen, an equal amount of phosphate and one million tons of potash are needed if the 105 million tons foodgrains target is to be achieved. This amount of fertilizers would also supply the requirements for sugarcane, cotton, tea, jute and other cash crops, so necessary to earn foreign exchange.

The Third Five-Year Plan calls for bringing 20 million acres additional land under irrigation, the establishment of 4000 seed farms, the expansion of Community Development services and quite extensive provision of credit for village production plans. The 1965-66 target for insecticide chemicals is identical with the estimate of current production. These factors will no doubt make a contribution to increased food production, but the limiting factor continues to be fertilizers. Increased food production that might come from added irrigation is almost entirely offset by declining food production in other areas due to water logging and increased salinity. Village production plans and added credit do not increase food production except as production requirements such as fertilizers, improved seed varieties, water supply, etc. are made available to the villager. If the fertilizer supplies are not made available, then all production lags.

Village cultivators need a stronger economic incentive to use production practices that increase food output. Fertilizers, for example, cost the Indian cultivator Rs. 380 per ton. Most farmers throughout the world pay less than Rs. 300 for the same grade and quality fertilizers. While Indian villagers may receive more than the world market price for wheat and paddy, the fact of their situation is that they do experience a wide range in market price. This range varies with local production, State trading policies, rumours, weather and many other factors. What is needed is a firm floor production and marketing. On this critical issue the Plan speaks in the broadest, and most unhelpful, generalities.

Cloth: Challenge and Response

MR. LAL BAHADUR SHASTRI, who spoke at the end of the heated two-hour debate on the rise in cloth prices in the Lok Sabha, started his speech with an assurance that he would bring objectivity to bear on his approach to the appraisal of the problem. If only this assurance had been steadily observed much of the prejudice created by the sentimental vehemence displayed earlier during the debate would have been repelled. Unhappily the entire debate proceeded on the assumption that the end-prices paid by the consumer were "dictated and controlled" by the industry. In the result, what the debate actually produced was a distorted picture of the problem and a facile belief that censure on the industry for whatever has occurred would restore immediate balance in prices to the normal level.

An objective approach, as promised by the Minister, demanded in the first instance an explanation of the causes which have led to cost inflation in the industry and made an increase in prices inescapable. The estimates of the last season's cotton crop went totally wrong. As against the normal average crop of 48 lakh bales, the official estimate was of the order of 43 lakh bales. Ultimately, the final estimate had to be scaled down to 37.5 lakh bales. The gap between carry-over plus domestic output and consumption requirements had to be made good by imports. This was a matter difficult of solution because of inadequate allocation of foreign exchange in the midst of strict rationing by the Finance Ministry, as disclosed by Mr. Shastri. Imported raw cotton, costing about 60 per cent more than indigenous cotton, had to be used in unusual quantities in the production of coarse and medium cloth. The addition to the wage bill consequent on the effect given to recommendations of the Wage Board and the higher cost of coal, stores and chemicals were among the important ingredients responsible for cost inflation in the industry of quite an appreciable magnitude.

In the absence of an adequate flow of raw cotton supplies, it was inevitable that production should decline particularly in the varieties of popular consumption. Production of coarse cloth declined by nearly 32 per cent to 293 million yards during the first half of 1960 as compared to the corresponding half year of 1959. What was actually produced was partly with the utilization of high cost imported cotton — an altogether abnormal factor for this variety. The impact of cost inflation on medium varieties was more onerous.

Mr. Shastri has conceded that an allowance, varying between 20 per cent and 25 per cent in the prices of cloth prevailing at present over the price a year ago, could be made on account of these factors. Market trends, however, show that the retail price in the case of some varieties in popular demand has risen in some places as high as 40 per cent during the period. Undoubtedly this rise is excessive. The crucial question, however, is to locate responsibility for this rise and decide workmanlike measures to be enforced to bring prices to reasonable levels in the immediate future.

It is certainly surprising that Mr. Shastri, who only six months ago was inclined to blame the wholesale trade for the price increase when it became evident, has now veered round to the view that the responsibility for the current high increase in retail prices must be put squarely on the shoulders of the industry. The reason assigned for this fresh allocation of responsibility is that industry through its agents and wholesale traders can influence prices at various points. The logic of this view required an explanation how in fact the industry can control and direct the course of prices after the stocks in the mills are sold to the wholesale trade. This exactly was a point which was conveniently omitted.

To what extent the industry has raised the prices of cloth as a result of the cost inflation is not in doubt. The index of wholesale prices of cotton textiles rose on July 23, 1960, over July 25, 1959, by 15 per cent. The Indian Cotton Mills' Federation announced last week a cut of 10 per cent in the retail price of cloth. A crucial qualification which governs the application of this cut has not been appreciated properly. This cut extends to cloth sold in the retail shops and depots maintained by the mills. This is a very restricted sphere of retail trade under the control of mills.

It needed a crisis in prices to draw attention to the urgency of raw cotton imports. An additional quantity of 6 lakh bales is now to be procured from abroad. As imported supplies arrive, production will be stepped up to break the present stalemate. Even so, the high cost of imported raw cotton is bound to produce its inevitable impact on the consumer price. The question of starting the third shift in more mills will be a matter for joint decision by the industry, labour and Government. But it was singularly unfortunate that in a case where the industry has acted with commendable speed and public spirit the Minister should appear not merely unappreciative but hostile. It is not surprising, as Press reports indicate, that hostility is being engendered in return.

Bank Deposits: Protection by Insurance

THE announcement on Tuesday this week that the Palai Central Bank had gone into liquidation has rudely shaken the confidence of the banking public in the Reserve Bank of India. Not since the crash of the Travancore National and Quilon Bank in the late thirties has public feeling been higher. In that case, the assets covered liabilities almost completely. Here apparently the story is different and the impact much greater. The Palai Bank was a scheduled bank with over 100 branches and employing a staff of nearly 1,000 and with deposits of the order of about Rs. 10 crores. Its liquidation after an existence of 33 years is a matter of serious concern and understandably enough not only in the Lok Sabha but throughout the country there has been a popular uproar. There is an insistent demand that whoever is in the wrong should be held accountable. The Finance Minister's statement which was more in the nature of defending the Reserve Bank was hardly calculated to assuage the feelings of those who have suffered by the disaster.

The question to be faced is what is to be done. It concerns not only the depositors of the Palai Bank who have been put to considerable loss and suffering, but the future of the Indian banking system at a critical point in its development. The Finance Minister has given the assurance that he would take action against the Managing Director and the Directors of the Bank, if there was any material for prosecution against them. There have also been reports that even apart from the powers conferred on the Reserve Bank under the Banking Companies Act of 1949, it may be armed with additional powers to have a tighter control over the scheduled banks. These are all, however, only palliatives. What is far more important is to face the central problem of inspiring confidence in the public over the banking system.

There has been a phenomenal growth in banking activity during recent years. Apart from the rise in the deposits of the State Bank which has completed its target of opening 400 additional branches, there has been a steady rise in the growth of the deposits in the banking system as a whole, which has risen from Rs. 860 crores in 1950 to nearly Rs. 2,000 crores by the end of July this year. What is more significant is the growth in personal deposits. Thus the personal account in the Time deposits has risen from about Rs. 175 crores in 1955 to Rs. 360 crores in 1959. In Savings deposits, it has risen from about Rs. 140 crores to Rs. 213 crores. Taking the total deposits as a whole including Demand deposits, it has risen from Rs. 440 crores to nearly Rs. 695 crores. More interesting is the fact that the number of accounts of personal depositors in Savings has risen from nearly 675,000 to 928,000 between 1955 and 1959 and in Time deposits the number has grown from 283,000 to 616,000 during the same period.

This is a remarkable and healthy development and it is the duty of the Government as well as the Reserve Bank to see to it that this process does not suffer a reverse especially when the country is shortly to launch on its Third Five-Year Plan calling for the mobilisation of resources in a greater measure. It is, therefore, necessary that the problem of deposit insurance should receive active consideration and examination because it alone will provide the fulcrum on which the confidence of the depositor will revolve. In the United States when the banking system broke down in 1933, the Government actively stepped into the picture and by the Banking Act of 1933 established a Federal Deposit Insurance Corporation. It was open to all commercial banks and was partly subscribed to by the Treasury and the remainder by the Federal Reserve banks. Since 1942, all insured banks with average deposits of one million dollars or more were required to be members of the Federal Reserve system which resulted in bringing all but a very small percentage of the banking resources of the country into the system. Though there was some criticism over the working of the Corporation, it served as a tonic to the jaded psychology of the American public and did much to remove the public distrust of the banking system.

The position facing the country today is something analogous to that of America in the thirties. Since public confidence has been shaken about the ability of the Reserve Bank to exercise complete control over the banking system, it is necessary to devote serious attention to the formulation of a policy of insurance for deposits. The task is, of course, difficult and there may be any number of objections raised. For instance, the big banks may not be amenable to a scheme whereby they are not likely to be gainers, but only losers. Again, there may be actuarial difficulties. But these should not stand in the way of establishing a corporation on the American model so as to at least cover the large number of small banks. The Corporation may, however, need to be financed by the Government, the Reserve Bank, the State Bank, as well as the bigger banks. Out of evil will come good; if the Palai episode leads to some fresh activity in the protection of depositors, it would not have gone in vain.

A DELHI DIARY

PALAI AND AFTER

IF the last week was tame, this week has been hectic and full of its own trials and tribulations. The liquidation of the Palai Central Bank has created a stir, which has clearly taken both the Government of India and the Reserve Bank by surprise. On the floor of the House on Thursday, there were repeated attacks on the Reserve Bank of India, and at the Prime Minister's Press Conference several journalists asked inconvenient questions which the Prime Minister parried rather than answered. At one stage the Prime Minister argued that "technical" causes of failure could only be studied by the Reserve Bank. It was a nice debating point as to whether a party to a bank failure is in a fit position to judge the "technical" character of its own advice and its own rectitude in the matter. In any case, the state of public feeling is such that the Government of India will not be able to escape with the argument that the Reserve Bank of India has done everything possible or that its reputation among Central Banks is, as the Prime Minister claimed, one of the highest in the world. This was sensed presumably on Thursday evening when both the Prime Minister and the Home Minister explained their willingness to look into the matter further if new facts were found. A new fact was found immediately; the liquid assets of the bank were claimed at Rs. 4.34 crores as against less than half that figure presented in the Finance Minister's statement. It is not possible now to prevent an overflow into politics. After all, the socialist pattern of society cannot afford to be indifferent to the poor. Is it not one of its cardinal principles of policy that it discriminates in favour of the small man? If equality in the magnificient British Constitution is represented by the fact that it allows the rich and the poor equally to sleep on the Thames embankment, surely the hard remark can be made that, in the socialist pattern of society, the rich depositor and the petty one are treated equally indifferently. This, if I am correct in judging the temper of Delhi, just will not do. Some quick action to allay distress is necessary and, with great respect, I suggest that "The Eastern Economist's" proposal of providing insurance for future bank deposits is uncommonly like shutting the stable after the horse has gallopped away.

I think Delhi has agreed on almost nothing except that we do not want another 'Chagla Enquiry'; of that species we have already had too many, apart from the fact that Chaglas are in short supply!

DANGE IN THE DOCK?

Only next to the sensation caused by the failure of the Palai Bank came the revelation that Mr. Dange, the leader of the Communist Party in the Lok Sabha, has been proceeded against by the Enforcement Branch for violation of foreign exchange regulations. With magnificent tact and not a little determination, the Finance Minister of India kept concealing Mr. Dange's name on the ground that it was not necessary that it should be revealed at this stage. The Speaker came magnificently to the rescue of the House and compelled information. Mr. Jaipal Singh was effective with his remark that, if this was not revealed, he would have to look with suspicion on every Communist Member of the House. This was too terrible a cloak of suspicion to be worn by a Party, and now Mr. Dange's Atlantean shoulders bear all the Party's burdens. There appears to be no record of his having used this amount for personal purposes. It is not without significance that various countries' contributions to Mr. Dange's funds have not yet been mentioned.

JAWAHARLAL, THE SILENT

The Prime Minister's Press Conference on Thursday was full of personal interest. Each of us naturally looked for something different, but I was looking for a change in the Prime Minister himself who now speaks with far greater circumspection. To the journalists who asked him why he had been "recently" so tight-lipped on many matters, the Prime Minister said—not without a smile—that he had only three occasions on which he could deliver himself. The first of these was in Parliament, the second at public meetings, and the third at Press Conferences. Since the Parliament was not in session, and public meetings had not been arranged—as if the Prime Minister allows events to overtake him in this manner—and a Press Conference had not been held, his opportunities of expression were very severely limited. Again when he was asked why on international matters, particularly the Summit and the Congo, he had not said more, the Prime Minister spoke of himself as a very "modest" person not competent to give advice to all and sundry. The complaint that Jawaharlal Nehru, who in his younger days (ten years ago) was very quick at pronouncements on international situations, speaks too much has certainly lost its force. Once in a fit of good humour many years ago he accused himself of suffering from foot and mouth disease. He still travels very widely, but who can deny that his utterances are now full of restraint? Half of the old disease (if any) has been completely cured.

The Prime Minister on Thursday also discounted conferences. He talked about an Afro-Asian Conference as being premature unless "adequate preparations were made. The conference disease—which has overtaken the world and comes in epidemic form to New Delhi each winter—is apparently recognized by the Prime Minister as a dubious blessing even if it brings trade and foreign exchange in its wake. He did, however, refer with approval to the ECAFE Conference due next year, as though that might be an exception, in providing the basis of an "Economic Bandung". All of us hope that this wish of the Prime Minister will be father to the thought and through father or the mother to the deed. Will the Economic Commission for Asia and the Far East take note of the high expectations that have thus been raised?

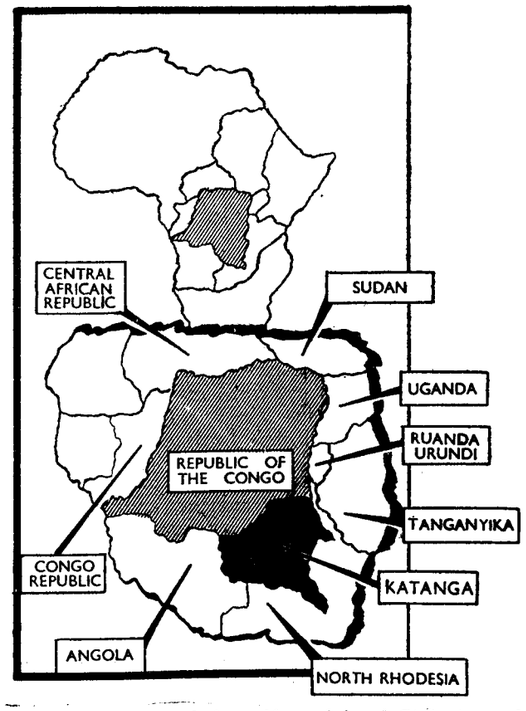
The Prime Minister, who was in exceptionally good form throughout the Press Conference, was at his best not on these questions but on Assam. He argued —convincingly, I thought—against the imposition of the President's rule in Assam, firstly, because the State authorities were "now" dealing with the law and order in that State. Secondly, the imposition of the President's rule would have only put a new barrier to goodwill of the people of Assam to the minorities and would have created an atmosphere in which it would have become difficult to iron out the differences which had already arisen. On Assam, the Prime Minister has done so sterling a service to the country that many of his critics have suddenly changed their opinion on his indispensability. Not to be undone, let me say that I am personally convinced that the Prime Minister's leadership is necessary both because of the difficult situation we have on the foreign exchange front and because of his unrivalled capacity to direct State Governments such as those of Assam, when pressures are beyond the capacity of other men. I, therefore, unusually end with the fervent prayer that Providence may spare Jawaharlal Nehru—until 1967 as Prime Minister and beyond that otherwise.

ARGUS.

THE WEEK'S NOTES

Central Government Employees

WHAT NEXT?



THE TWO-DAY post-mortem by the Lok Sabha on the recent strike of the Central Government employees was a dull affair and it did not bring out anything which was new and was not already known. On the side of the Government, the Prime Minister, the Home Minister and the Labour Minister explained the background and under what circumstances Government had to resort to the promulgation of an ordinance. The speech of Mr. Nath Pai, who was one of the principal leaders of the strike, was intended to be a brave attempt to vindicate the strikers' stand but it turned to be apologetic; and he could not explain as to why in spite of Government's efforts to meet them more than half way, they did not agree for a settlement. In the speeches made by the Home Minister, Pandit Pant, and the Labour Minister, Mr. Nanda, however, there were some discrepancies to which attention should be drawn. Pandit Pant said, referring to the future, that strikes would be banned in the public services and neither the Railways nor the Posts and Telegraphs employees could indulge in such a sort of "suicidal and dreadful upheaval." He also made it clear that though they might have their own unions, they would consist of the services themselves. The present position with regard to right to strike by a Government servant is anomalous. As. Mr. Jaya Prakash Naryan pointed out recently, the question of banning strikes in the essential services is only of academic value, since for all practical purposes such a ban is already in force. The right to strike is wholly illusory because an ordinance is able to nullify it every time the occasion arises. The Pay Commission, in its report, has pointed out that while strike by Government servants is not prohibited by law, it only constitutes a breach of discipline. At the same time it has said that it would be wrong for public servants to resort to strike or threaten to do so. Since it will be to idle to deny that the position of Government employees is different from that of industrial workers in general, it is only proper that the position is clarified beyond doubt. If, therefore, it is Government's intention to ban strike in public services they should see that simultaneously a suitable machinery is evolved for redressal of grievances so that there is no suspicion of any "exploitation" of Government servants. In fact, Pandit Pant told the Lok Sabha that there would be some definite machinery in all branches of the services for conciliation, negotiation, settlement and where necessary reference to arbitration. The exact machinery that may be evolved for this purpose may be known only when the relevant bill is presented to the Lok Sabha.

In the light of Pandit Pant's statement, it is intriguing to see the slightly different stand taken by the Labour Minister. Mr. Nanda said that the question of banning of strikes was really "irrelevant". "We are not going to ban strikes," he said. "We are going to make them superfluous." What does it mean? Is it Government's intention to allow the theoretical right to strike as at present, even while seeing to it that a change is brought about by employees themselves abjuring the use of the strike weapon without amending the law as suggested by the Pay Commission? Again on the question of 'outsiders' in the labour movement, Mr. Nanda pointed out that the objection is not to an outsider as such. Only he should be a wholetime worker and not be simultaneously occupied with different unions. Secondly, he said there should be no 'politics.' It is precisely due to the fact that an outsider, who is involved in trade unions cannot avoid 'politics', elections, and the like that the suggestion has been made that unions should consist only of members of the services themselves. Therefore, the question of 'outsiders' is very relevant and cannot be disposed of in a spirit of quibbling. Whatever measures the Government may take, it must be seen to it that there is no ambiguity and the position is made crystal clear.

Congo

MR. TSHOMBE'S BRICK

HOPES THAT with the intervention of the United Nations forces, peace will be restored in the troubled Congo republic were dashed last week when the Premier of Katanga, the breakaway province which declared itself independent from the Central Government of the Congo Republic on July 10, threatened to fight back if the United Nations troops entered the province. The conduct of Mr. Tshombe, who has since declared

himself President of the self-proclaimed State towards Mr. Ralph Bunche who visited Elizabetheville at the instance of Mr. Hammarskjoeld was, as Mr. Nehru pointed out at the Joint Consultative Committee of Parliament on Foreign Affairs, "highly regrettable and highly discourteous." Apart from the discourtesy shown, his action left Mr. Hammarskjoeld with no alternative except to report back to the United Nations Security Council, since he had no mandate to commit his forces against armed resistance. The Security Council at its meeting this week had done the right thing in ordering Belgium to withdraw her troops immediately from Katanga, but Mr. Tshombe seems to be adamant in his stand that he will oppose the entry of U.N. troops. At the same time, the Congo Premier. Mr. Patrice Lumumba has declared that his Government would move troops into Katanga. Thus the situation in the Republic is becoming explosive.*

However, the U.N. forces have now to act expeditiously since any impression that the United Nations is unwilling to undertake the task assigned to it will only go to undermine African confidence in the

*At the time of going to Press, it has been reported that Mr. Tshombe has warned Mr. Hammarskjoeld that his arrival with two companies of Swedish troops could cause trouble.

United Nations. Already, the Ghana President, Dr. Nkrumah, had offered to put Ghana forces at the disposal of Mr. Lumumba and it is possible other African States may follow suit. This would mean that with the help of independent African States, the Congo Government will be further encouraged in taking any direct action it may deem fit against Katanga. This is the sum and substance of what Mr. Lumumba said when he visited Guinea to seek the help of President Sekou Toure, "Why should I accept everything from the United Nations," he declared. "We have plenty of friends in every part of the world who can supply everything we need." This distrust of Mr. Lumumba apparently stems from the fear that the Congo may be turned to some sort of United Nations trust territory in view of the prevailing chaos. It may be that the ultimate solution to the Congo crisis posed not only by the breakaway Katanga province but by the tribal separatist elements may lie in a sort of loose federation. But that is possible only when the Central Government has a chance for putting its plans before the citizens. The Congo crisis has helped to raise the stature of the United Nations and by its forceful intervention, it has shown how a great international dispute can be settled without involving the great Powers. This experiment should not be allowed to get a setback and any attempts by the Belgian Government to block the U.N. initiative or of Katanga to keep itself outside the jurisdiction of the United Nations must be firmly resisted. It is even possible that eventually the United Nations may be able to play a greater role in the peaceful evolution of the Congo by giving its assistance in running the administrative machinery after peace has been restored.

Kerala

THE AGRARIAN RELATIONS BILL

KERALA PLANTERS can derive some comfort from the fact that their last ditch battle against the Kerala Agrarian Relations Bill, passed by the State Legislative Assembly under the Communist regime in June, 1959, has not been all in vain. The President, having withheld his assent to the Bill, has referred it back to the Kerala Legislature for modification of some of its provisions which were either considered to be not in the best interests of the State's economy or were thought to be offensive to the religious susceptibilities of a large section of its population. He has made a number of useful suggestions for the guidance of the State Assembly which it will do well to take note of.

Of particular interest to the plantation industry are two suggestions of the President; one dealing with the definition of plantations and the other seeking to exempt them from the provisions of ceiling. The President, reports suggests, has directed that the definition of plantations should include "lands contiguous to, or in the vicinity of or within the boundaries of the planted area not exceeding 20 per cent of the area planted with such crops as are covered by the clause for purposes of expansion of the plantation and agricultural land interspersed within planted area and necessary for the efficient management of plantation." Though this definition falls short of the one given in the Central Statute "Plantations Labour Act, 1951," inasmuch as it restricts the inclusion of the lands intended for further plantings only to the extent of 20 per cent of the area already planted, it is a definite improvement over the definition now given in the Bill which excludes all such lands. It would, however, be better if the area enclosed within the boundaries of a plantation but lying unplanted either because it is unsuitable for growing the authorised crops or because it has been kept fallow for replacement purposes, is excluded from the 20 per cent limit. That will be helpful to the industry for it will widen the scope of its automatic expansion to the full extent of 20 per cent. President's directive that plantations should be exempted from the operation of the ceiling provisions in the Bill, however, seeks to rectify the position only technically. They are already meant to be exempted from the ceiling, but the Bill provided for this exemption only in an indirect way.

Since the Bill has now to be reconsidered by it, the Kerala Legislative Assembly will do well to look into the plea of the plantation industry that adequate provision should be made in the Bill for its expansion programmes. The industry thinks that the provision of automatic expansion to 20 per cent of the existing planted area is insufficient in view of the vital role it has to play in making the country self-sufficient in commodities like rubber and in earning valuable foreign exchange by increasing exports of commodities like coffee. Expansion over and above this limit can only be authorised by the State Government at its discretion and the provisions in the Bill in this regard are obviously not commensurate. A plantation is a long-term crop, requiring long-term investment and tending for a period of six to eight years before the plants start yielding. Availability of suitable land is a basic requirement for this purpose. With the State having the discretion, under the Bill, to permit or not to permit expansion, planning will become not only an arduous but an uncertain task. Would it not, therefore, be better if the State only reserved powers for itself to forbid further expansion of a plantation if that is considered to be contrary to public interest, instead of making it obligatory on the part of the industry to invoke the State's discretionary powers?

Small Industries

PRIVATE INDUSTRIAL ESTATES

THE SUGGESTION of the Government of India to State Governments to initiate steps for the establishment of industrial estates organized by private industrialists in their areas is indeed wholesome and can go a long way in fostering development of small-scale industries which have to play a vital role in the Indian economy in the coming years because of their high potentiality for providing employment avenues to the educated. Such estates have been remarkably successful in the U.S.A. where Development Corporations, sponsored by local authorities in collaboration with Chambers of Commerce interested in the industrial growth of specific areas, have been for sometime past engaging themselves in this activity. In India, too, the possibilities of setting up these estates are substantial for with the development of heavy and basic industries, wide fields are opening up for the starting of various ancillary industries which can be conveniently placed there. The success already achieved in this country at some of the Government-sponsored industrial estates during the past few years has been no small. That should help in inspiring confidence among the private industrialists.

Finance is not likely to prove any hurdle in the way of setting up of these estates. Industrialists will be required to invest only upto one-fifth of the total amount needed for an estate if it is meant to be run on co-operative basis and upto one-third if it is to be run on individual basis. The rest of the finance will be forthcoming from credit institutions like co-operative banks, State Industrial Finance Corporations and commercial banks. Quite a good amount of money can also be made available by local businessmen and small investors who can be provided with facilities for investment through issue of debentures of these estates. The difficulty, however, may arise in the procurement of suitable sites for they in most cases are likely to be belonging to local bodies or the Government. Is it not possible to associate local bodies with these estates as is the case in the United States? That will incidentally facilitate provision of water, electricity and such other pre-requisites of industrial activity as the local bodies are generally the agencies which supply these essential services in this country.

This once-smart private secretary will soon be joining the typists' pool. Her appearance is no longer an asset. Not that she doesn't wear the right clothes. She has taste in colour and design, but her chic summer cottons look like hand-me-downs after the first wash. Maybe someone should warn her to look for the label 'Sanforized' on all cotton fabrics and ready-made cotton garments.

Look for the label 'Sanforized' on every yard of cotton material and your clothes will never shrink out of fit.

A Window on the World

CLASS CHANGES IN BRITAIN

By

ODYSSEUS

CASTE AND CLASS distinctions of one kind or another exist in all countries. When, for example, an American expresses astonishment at what he calls the stratification of British society, what he really means is that he is not used to, and does not understand, the particular distinctions that he encounters in the U.K. But if he goes on to claim, as untravelled Americans sometimes do, that the USA is a casteless society, you can, if you are not feeling in the mood for an argument, smile and pass on to another topic. Alternatively, you might invite him to read, for example, the first chapters of the American Negley Farson's autobiography, "The Way of the Transgressor" (Gollancz, London), which is one of the acutest portrayals of American social folk lore that I know.

This is not to say that caste distinctions are everywhere set for all eternity in their existing patterns. A faster or slower evolution is discernable throughout the centuries. Today, old distinctions are breaking down, and new ones are inevitably emerging, under the impact of the modern industrial system. This week we continue the study of such changes on the British working classes that we began last week. When allowance is made for local variations, what emerges, I think, is the number of traits in common that social distinctions have in all countries.

ASSENTERS AND DISSENTERS

Mr J. M. Mogey, examining the contemporary British working class scene in his "Family and Neighbourhood" (Oxf. Univ. Press), distinguishes between "status-assenting" and "status-dissenting" groups in the urban working class. The status-assenters accept the existing class system and show little desire to change their situation in life. They are far less vocal than the others: they accept habits, standards, use of words, and values, which are typical of their area and streets. They rarely discuss the problems of class conflict, trade unions, work, or ideas in general. They are interested in people, in the details of daily living, and make no general observations other than to repeat headlines or cliches from recent newspapers. They are not worried about the future. They do not make plans for their children.

The status-dissenters, on the other hand, discuss the problems of the working class, show signs of ambition to better themselves, occassionally recognise that this may not be possible for themselves and therefore try to advance their children. They are extremely conscious of the distinction between themselves and the others, i.e., they regard themselves as belonging to "respectable" or "nice" people. Other distinction that Mr Mogey draws between the two groups is that the status-assenters think in terms of fate and luck, and have little confidence in their own ability to influence the course of their lives. The status-dissenters, per contra, believe in their own capacity to shape their future.

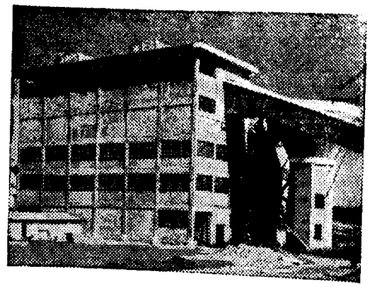
The status-dissenting outlook is broadly that of the British middle classes. Messrs Young and Rubicam (8 Baker St. London W.1.), a leading UK advertising agency, carried out a check on Mr. Mogey's analysis among 120 middle and working class housewives in 1959. They found that middle class women held status-dissenting views much more strongly than working class women, but it was significant that younger working class women tended more to the middle class viewpoint than older working class women.

Young and Rubicam point out that we should not think that either the status-assenting or dissenting view was held in clear cut groups, each wholly rejecting the other's viewpoint. Many hold opinions of both types or have intermediate views. A rigid division of working class people into two distinct groups is unrealistic. The picture is continuous, ranging from extreme assent at one end to extreme dissent at the other, with the younger people tending towards stronger dissent i.e., they have developed ambitions to better themselves.

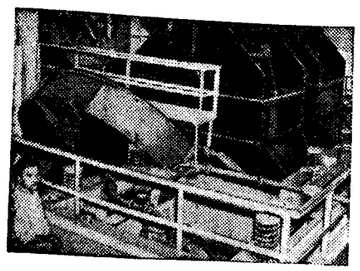
One important aspect of the status-assenting working class is their attitude towards their work and towards the idea of rising in the world. It is sometimes much more positive than a mere acceptance of things as they are and is much more widespread than this simple negative attitude. Working class solidarity, especially in heavy industry and transport has deep roots, and there is strong social disapproval of a man who tries to better himself. I wrote here about this curious fact as far back as September 18, 1953, when I said that a man who tries to get on by excelling in the factory, by extra work, by goodwill towards his employers, by initiative and foresight, arouses the hostility of his fellow workers. It is an offence against the code of accepted British working class ethics to do anything that will show up the weaker, less efficient, mate. To undercut, to deprive others of their rightful share of employment is the gravest sin that a British working man can commit. Of course, more resourceful workers often put others in the shade, but this earns disapproval. A man's work should be as near the average as possible. Is this part of the Indian industrial worker's outlook? Here is an important point for the Indian Institute of Public Opinion to investigate.

This extends, though to a decreasing extent since the war, to British working class children. Those in Grammar schools (which have a higher social status) often find a considerable strain placed on their relations with friends at secondary modern or technical schools (which have a lower status), especially when the latter leave school and begin to earn money. Over three quarters of the British working population are weekly wage earners, of whom most reach their maximum wage (apart from general increases) at the age of 21 and, if they are in heavy manual occupations, maintain it only until around the age of 50 when they begin to decline into the poverty of old age. To people so placed, the prospect of social advancement as an incentive to greater effort or to the purchase of consumer goods, has little meaning and is more likely to provoke hostility than approval. Indeed, a sizeable minority of men living in the Bethnal Green district of London were found to reject the conventional idea that the status of white collar workers is higher than that of manual workers. They esteemed manual work higher because they regarded it as more directly concerned with producing goods. Here again, however, there is

evidence that the rising generation tends to regard white collar jobs more favourably than their elders.



THE WORKING MAN'S VOTE

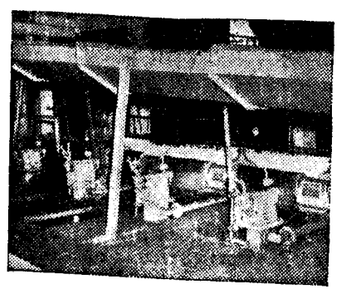


Traditionally, the Labour party has been the political voice of the British working class, and the party still draws most of its support from them. It would, however, be a mistake to conclude from this that working class people necessarily have either a more radical, or a more humanitarian, outlook than the middle classes. Party allegiance depends greatly upon the individual's estimate of which party will promote his own economic interests better. It does not take much perspicuity to detect a middle class bias in Conservative policies. This makes the Labour party's loss of three general elections running all the more significant. The Conservatives could not have won and retained power without a substantial proportion of working class votes. It is interesting to note that in his "Psychology of Politics" (Routledge and Kegan Paul. London. 1954), H. J. Eynsenck observes that among supporters of each major party, the working classes tend to be both more conservative and more aggressive than the middle classes. For example, in the Labour party the constituency section, with its higher middle class membership, is always much more ready to support radical policies than the predominantly working class trade union section. To this I would add that when Mr Gaitskell, and the middle class leaders of the Labour party, came out hot and strong against the Conservatives' Suez adventure in 1956, they received warnings from Labour party officials in working class areas that the Suez policy was welcomed by many working class people as an assertion of Britain's vitality and power.

Discussing these problems here in 1953, I said that the increase in British wages had raised the worker's standard of living as a whole but that his greater expenditure was rarely used to change the pattern of the individual's ways so as to improve his social position. The normal was for him to spend more in the same ways as his neighbours did. He stuck to the traditional way of life of his group. By and large this is still true today. However, the astonishing rise in the British working man's average weekly pay packet from £6-17-11, in 1948 to £11-8-6 in 1960 has begun increasingly to modify the traditional outlook. As I said here on June 3, shopping has become a major Saturday afternoon occupation, even with men. More people own their own homes so that home interests claim greater attention. People are marrying younger, so that more husbands and wives share their leisure-time activities. All this means that whereas before the war an industrial worker spent 2 sh. 6 d. on watching a football match on a Saturday, he now goes shopping with his wife, or stays at home, or plays a game himself, preferably with his wife. That is why attendance at Association football matches has fallen from 41,271,414 in 1948/49 to 33,610,985 in 1958/59, and why individual sports like golf, tennis, or sailing, are flourishing. Slowly the British working classes are beginning to acquire middle class habits and values. The process is likely to take some decades to work itself out. It will be interesting to see whether the Labour party sticks to its radical nineteenth century doctrines while its traditional followers gradually move to the Right.

(Acknowledgments are made to Young and Rubicam's Quarterly Review for many facts cited in this and last week's article, but they are not responsible for my interpolations, interpretations, and political obiter dicta, which are likely to make their hair stand on end).

COAL WASHING CONSERVES INDIA'S COAL RESOURCES



The coal washery illustrated here, a unique feature of the Durgapur Steelworks, was designed and erected by Simon-Carves.

The washery is a part of the coal preparation plant which washes, blends and delivers 360 tons of 3"—0 raw coal per hour. The washery is the first in India to use Drewboy dense medium separator, a device widely used in a number of coal washeries in the United Kingdom and Europe. The ½"—0 fraction of the coal is treated in an ACCO feldspar jig washer, while stocking, blending and reclaiming are carried out on the Robins Messiter system.

The Simon-Carves coal preparation plant at Durgapur is helping India to upgrade inferior coal and use it for metallurgical purposes — conserving India's rapidly dwindling high-grade coal resources—helping to get uniform quality coke for the finest iron and steel.

"Oil is now the world's most valuable seaborne cargo. On any average day some 15 million tons of petroleum and its products, valued at well over Rs. 133 crores, are at sea—a far cry from the early days of the modern oil industry. In the eighteen-sixties, oil was shipped in wooden barrels—a highly inflammable cargo for the wooden sailing ships of the period. The oil industry, however, soon began to develop specialized facilities for swift, safe and economic transport of oil in bulk. Most outstanding achievement in this field was perhaps the production of the oil tanker—a type of ship which now accounts for approximately one-quarter of the world's entire merchant fleet."

COMPLETE SHIP REPAIRS

FOR OVER HALF A CENTURY

The site of Garden Reach Workshops covers an area of 64 acres with half a mile of river frontage, slipway and dry-dock facilities suitable for inland water craft up to 2,000 tons and building berths for shallow-draft vessels up to 1,200 tons launching weight.

✻

SHIPBUILDING FACILITIES FOREIGN EXCHANGE : SAVING AND EARNING

Garden Reach Workshops have provided complete ship repair facilities at Calcutta for over fifty years. The Workshops are fully equipped to handle major and minor repairs to vessels in the River Hooghly, in the stream and in wet-docks, dry-docks and lay-up berths allotted by the Calcutta Port authorities. Stocks of components and spare parts for M.A.N. Marine Diesel Engines are maintained in Bond and complete servicing facilities are readily available.

Garden Reach Workshops handle a daily average of 25 to 35 ocean-going vessels and during the two years ended 30th September 1959, the Workshops have conserved foreign exchange to the extent of **Rs. 48 lakhs** being the value of repairs carried out to Indian-owned deep-sea vessels; foreign exchange earned during the period by way of repairs to foreign-owned vessels amounted to **Rs. 1.44 crores.** Garden Reach Workshops are capable of handling twice this volume.

Shallow-Draft vessels consisting mainly of Harbour Tugs, Launches, Water-Boats, Barges, Dredgers and Pontoons are wholly constructed at Garden Reach Workshops and during the past four years the value of those vessels amounted to almost **Rs. 2 crores,**—a valuable contribution to the saving of foreign exchange. Plant and experience combined with expert craftsmanship and supervision enable competitive rates to be quoted for all General Engineering Work.

The European Scene

THE COMMON MARKET'S EX-COLONIES

From Our Special West European Correspondent

PARIS, August 6.

THE aspect of the Rome Treaty setting up the Common Market that caused most anxiety in India was the association of 24 colonies and trust territories as full members of the customs union. This meant that those countries, mainly African and mostly exporting tropical produce such as could compete with Indian exports, would have favoured access to the large West European market as well as having a prior claim on West European investment capital thanks to the establishment of the "Associated Territories Development Fund". It now appears that matters are not going to work out that way at all. This aspect of the Treaty has been put completely out of date by the vast political changes that have occurred in Africa lately. Most of the 24 countries associated with the Common Market have just become independent and so both sides, Europe and Africa, have to reconsider their economic relations.

It must be remembered that the privileges and advantages the African colonies enjoyed in the Common Market were not demanded by them nor negotiated with their representatives; they were just awarded by the imperialist power. Naturally, as they become independent, the colonies want to look into the whole question for themselves. Even if in general they are willing to retain the advantages of their situation, they want some striking changes introduced into their relations with the Common Market in order to mark their graduation from favoured wards to sovereign states. Thus the Prime Minister of the former French trust territory of Togoland has just written to the Common Market Commission saying that the independence of his country invalidated the existing arrangements and that he wanted to negotiate a new connection with the Common Market just as Greece, Turkey and Tunisia are doing. Obviously, if all the newly liberated territories take this line (and the former French Cameroons have also opened the question) we could end up with a network of different agreements quite distinct from the simple status of "associated territories."

Moreover, the status of association was agreed to on French insistance and against the wishes of West Germany. The political evolution of the colonies now revives German demands for a review of the whole position. When the Rome Treaty was being written, German reservations about the association of the colonies were threefold. Firstly, the preference given to French and Belgian colonies in their exports to the Common Market indisposed other developing countries that were better markets for German exports. If German purchases of coffee from Brazil and of cocoa from Ghana declined because the Frenh African colonies had customs preference in Europe, German sales of industrial goods in those countries would suffer, without significant compensation from the French colonies, which traditionally bought in France. Secondly, the contribution of $200 million demanded from West Germany as its share of the Development Fund for the first five years was regarded as a gift to France, whose colonies were the main beneficiaries. Thirdly, the Germans were afraid of becoming involved in a sort of neo-colonialism, or in something the Africans might take to be that even if it were not. Opposition on these three grounds was so determined that it required all Chancellor Adenauer's prestige to secure German acceptance; the French Government of the day had made the association of the colonies a condition for further progress with the Common Market, and the Chancellor felt that West Germany must accept, in order to save the integration venture from shipwreck.

West German fears have since been shown to be unfounded, at least so far. The last, in particular, was quite baseless: far from association with the Common Market hampering the movement toward independence, it is just in the last few years that most of the territories concerned have achieved their freedom, and no African leader has stigmatised economic association as neo-imperialism even if he wants the contract of association amended. The cost of the Development Fund, for reasons that will be given below, has been much less than expected and the Germans have not been able to complain about financing other people's colonies. On the contrary, they have criticised France for alienating Guinea and letting that country leave the Euro-African association, and no doubt they feel the same way about the clumsy Belgian handling of the Congo's independence. However, there remains the question of damaging trade with non-members by granting customs preference to the commodities sold by associated countries and, now that the Common Market is successfully on its feet, the Germans see no need to make concessions to France in order to save a venture whose future seems assured.

The French Government wants to maintain the privileges of the associated territories, obviously because, although now independent, these countries remain within the loose French "Community" or commonwealth; privileged access to West European markets and capital seems a good way of keeping them happy within that community. Naturally, other Europeans cannot see why, once all Africa is independent, certain African states should have advantages denied to others simply for the sake of the vague French Community. A senior German ambassador who was director-general of the Common Market's associated territories division had to resign in June because his differences with his French colleagues on this point became acute. "It would be dangerous", he stated publicly, "to make a distinction between those African countries that are 'associates' and those that are not. Economic relations between the Common Market and Africa should be intensified, but not at the expense of those countries that cannot be or do not want to be 'associates' of West Europe". The Dutch Government has just expressed agreement with this point of view, emphasising that, like the Germans, it has no objection to making all sorts of concessions and special efforts in favour of the backward African countries that seek European help, but not merely in favour of a privileged group of associates.

Thus the tendency in the Common Market today is to write a policy for the whole of Africa, even for all developing countries that would consider special relations with West Europe, rather than to maintain the arbitrary division of outsiders and associates, which is a relic of imperialism and discriminates against nations whom West Europe has every interest to help. The

future of the system will depend largely on what the independent African nations want. Here, it is hard to know what they want. The inexperienced men who are taking over in Africa this year (though few are as grossly inexperienced as the Congolese Government) are lost amid the conflicting or overlapping international organisations that are open to their allegiance; there is nothing peculiar in this since most Europeans cannot make head or tail of the ECE, OEEC, OECD, UN, FAO and the rest of that labyrinth. They are inclined to be distrustful of organisations into which they were shanghaied before independence, and, even if they decide that on balance it would be advantageous to stay in them, they will want to re-negotiate the terms of their membership. Presumably the more statesmanlike among them realise, too, that for one African nation to take a rise out of its neighbour by selling on favoured terms in Europe would be to block the unification movement that is part and parcel of African liberation, by preserving the artificial divisions introduced by imperialism.

Yet there is one thing that makes them reluctant to break with the associate-member status of the Common Market and which, in their eyes, quite easily distinguishes that institution from other international organisations: the capital aid that is available to them through the Development Fund. Actually, the amount of capital that has been channelled to Africa through this body has been disappointingly modest, but the limit has not been set by European reluctance to lend but by the Africans' inability to put up concrete, business-like proposals. For the five years 1958-62 the Development Fund had $581 million to offer, but the African associated states will not be able to take advantage of nearly that amount. For the first three years 1958-60, they could have had $219 million, but only $163 million were even committed on paper while not a quarter of the total will have been really invested. Part of the blame lies with Paris, which insisted on vetting projects put up by its colonies to the Common Market and thus slowed down the process, evidently the French feared to lose some of their influence in their African territories if they let the Africans approach the European bank directly. This selfish attitude is changing and Paris now lets the Africans deal directly with the Fund but asks to see projects before they are financed to ensure that there is no overlapping with the direct bilateral aid France is still providing, on a large scale, to her former colonies. Nevertheless, capital will not begin to flow to the associate countries on anything like the scale the Common Market could afford until the African states have written development plans, and set up the numerous expert services required to elaborate projects and answer the lender's enquiries. That will take some years yet.

Summing up the position from the point of view of countries like India that feared to lose something by being outside the favoured circle of the Common Market's associates, it seems that the amount of discrimination suffered by outsiders will be small. The commercial discrimination constituted by privileged access to West Europe for certain countries' tropical produce will be broken down at the demand of France's European partners, even if (what is by no means sure) all the two dozen associates choose to remain in associate-status. As for investment capital, the Africans cannot take all that is offered them and so can scarcely deprive others of West European financial assistance.

THE TAXATION OF PLANTATIONS: A CASE HISTORY

By

J. B. SOUTAR

IN the latest Central Budget, the Finance Minister made the point that there was a possibility that something might be done to remove the hardships occasioned to the tea industry by the levy of a number of taxes at various stages by different agencies. It is heartening to know that the Central Government is considering such action. An industry which is in serious trouble, as ours is, must make its difficulties known to the public.

This task of incidence of taxation is no easy one due to the complications to which the Finance Minister has referred. I shall therefore, confine myself to the circumstances of my own Company — The Kanan Devan Hills Produce Company Limited. The name may be familiar to the reader; it appeared frequently in the Press in October 1958 with reference to the violent Communist-inspired strike which lasted for 26 days on its estates in that month.

When the present Government took over, immediate representations were made to remedy the situation arising out of the discriminatory provision introduced into the Travancore-Cochin Income Tax Act, 1957 by the Communist Government. We were not sanguine of any spectacular success, but what happened was startling. Not only did the Government leave the agricultural income tax provisions as they were; they announced their intention of increasing the land tax on plantation holdings from the basic rate of Rs. 2 per acre to a special rate of Rs. 10 per acre.

My case is that the present taxation situation, as applied to my company, is unprincipled, and destructive to the economy of the Company and its workers. While I give proof, it will help the reader to bear in mind two points:

1. Whether trading conditions are favourable or not, excise and export duties and sales tax are levied by the Central Government, and land tax and sales tax by the State Government, so that in a year of poor prices, loss is made or profits are insignificant.

2. When trading conditions are good, income taxes levied by the Central and State Governments at exorbitant rates ensure that a reasonable balance of profits is not permitted to be left in the Company's hands to compensate for the effects of a bad year.

I do not intend to err by overstating my case, so I accept at once that the levy of excise duty on all teas at 4 nP. per pound is reasonable. As for the export duty, I do not think that it can be considered moderate which, when added to excise duty, aggregates more than the net profit left to the producer. This is clear from the price and selling costs. The average price per pound obtaining for South Indian teas at London auctions is Rs. 2.44. The Kanan Devan Company's average estimated cost of production now is Rs. 1.63 per pound. To this, for sale in London, freight charges, cost of marine insurance and London selling charges, totalling 31 nP have to be added. The balance is 50 nP a pound, but the incidence of export duty at 24 nP a pound added to excise duty at 4 nP a pound results in the profit being only 22 nP a pound — lower than the export duty.

The following is the picture of taxes on tea industry of Kerala:

Central Government Excise Duty at 4 nP per pound, payable on all teas produced.

Central Government Export Duty at 24 nP per pound, payable on all teas exported.

Central Government Sales Tax at 1 per cent, payable on teas sold inter-state.

Central Government Tea Cess at Rs. 2 per 100 pounds, payable on all teas exported.

Kerala Government Sales Tax at 5 per cent plus 5 per cent surcharge, payable on teas sold in Kerala.

Kerala Government Land Tax, payable at Rs 10 per acre. Central Government Income-tax payable at 63 per cent on 40 per cent of taxable income.

The amended rates for companies with agricultural income up to Rs. 1 lakh were 25 nP in the rupee for income tax and 12 nP. super tax. The surcharge of 5 per cent of the total agricultural income tax and super tax imposed by the Kerala Surcharge on Taxes Act of 1957 made the new aggregate of taxes for small companies 38.85 nP. in the rupee.

The Government did not employ half measures in their isolation and crippling of the large Sterling Companies in the State. The new slab system increased taxation by stages so that, when a company made over 20 lakhs of rupees of agricultural profit, the aggregate of the rates of income tax, super tax and surcharge was 65.1 nP in the rupee.

It will help to make the position clear to show how taxation affects the Kanan Devan Company, taking last year's figures as the basis for the calculations. The incidence of flat rate imports is given in Table I below:

TABLE I

SALES AND FLAT RATE OF IMPORTS

	Quantity million pounds	Tax paid Rs.
Teas exported directly ..	12	36,00,000
Sold for export at Cochin auctions ..	.5	1,95,413
Teas sold in Kerala for local consumption ..	1.5	2,08,838
Teas sold in India outside Kerala, for local consumption ..	2.5	1,44,250
Kerala land tax at Rs. 10 per acre ..	—	2,39,200
TOTAL ..	16.5	43,87,701

Income taxes are calculated on the estates' aggregate profits for last year of Rs. 38 lakhs.

In order to arrive at the beginning of the income-tax calculations, depreciation allowance at income tax rates has to be deducted. This amounts to Rs. 12 lakhs. Table II gives the income tax incidence.

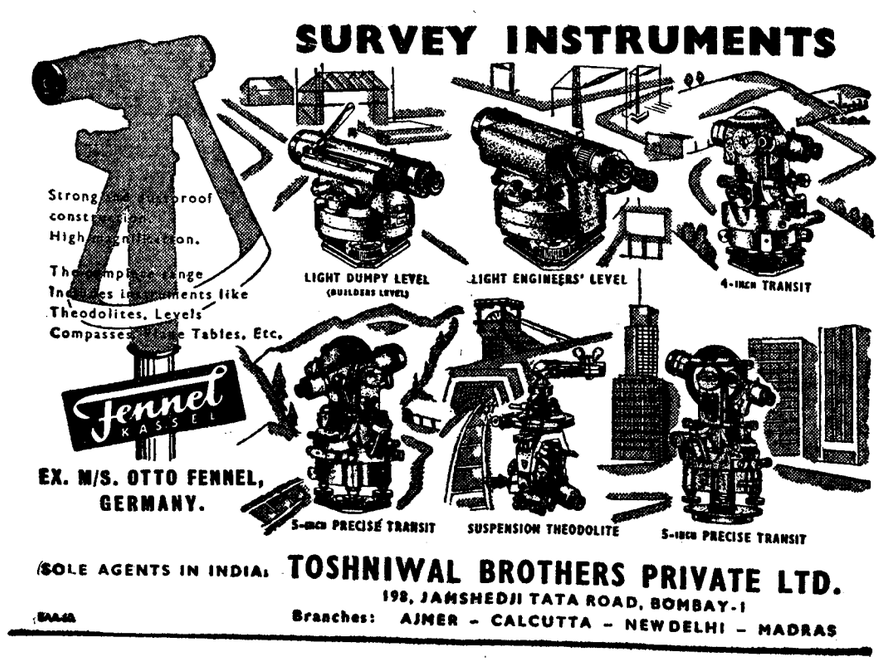
TABLE II

INCOME TAXES

		Rs.
Central Government Income Tax at 63 per cent of Rs. 10,40,000	..	6,55,200
Kerala State Agricultural Income Tax and other special discriminatory provisions in Kerala Tax structure	..	8,28,030
Total Income Tax — Central and State	..	14,83,230
Indirect Taxes	..	43,87,701
Total of Taxation, direct and indirect	..	**58,70,931**

Forty per cent of the balance of Rs. 26 lakhs is subject to Central Government Income Tax, i.e. Rs. 10,40,000. Had the Company's crop not been affected by the strike the amount of profit subject to Kerala Agricultural Income Tax would have been over Rs. 20 lakhs, and the final step in the discriminatory super tax scale of tax at 37 nP in the Rupee would have applied to the balance profit over Rs. 20 lakhs.

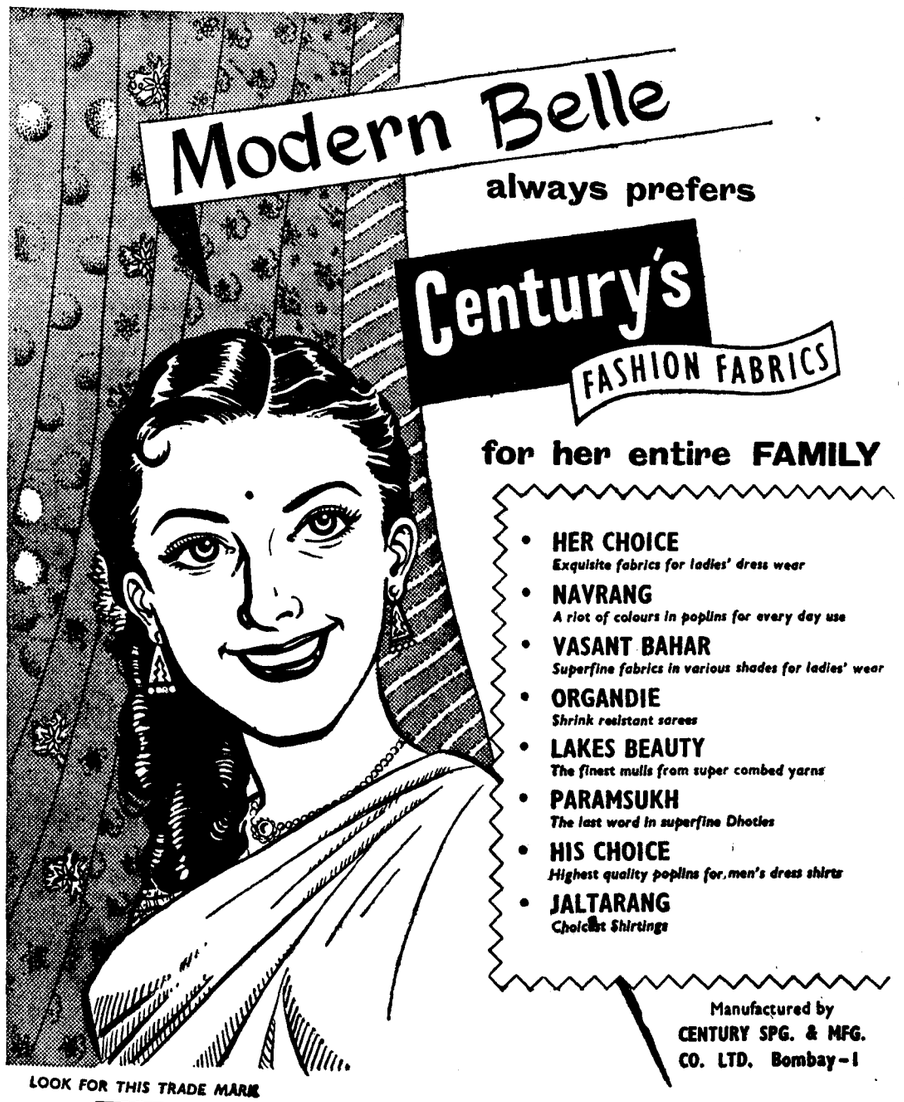
The total of taxation, direct and indirect, is:	..	Rs. 43,87,701
	..	„ 14,83,230
	..	Rs. 58,70,931
The Company is left with:	..	Rs. 38,00,000
	..	„ 14,83,230
	..	Rs. 23,16,770



The unconventional part of the proposition is that, while the Central and State Governments obtain revenue of Rs. 58,70,931 the Company finds that it is only left with Rs. 7,78,770 once capital expenditure costs of Rs. 15,38,000 have been met from the net revenue of Rs. 23,16,770. Rs. 7.8 lakhs represents a return of just over ½ per cent on the capital.

Expressed in another way, the return to the shareholders is Rs. 33 per acre, while the return to Government is Rs. 245 per acre. It is evident that a heavy strain is being put on tax compliance by the honest tax payer.

This situation has to be considered in the context of the establishment by the Central Government of Boards to consider the wage structure in plantation industries. It may well be that attempts will be made to maintain that taxation has nothing to do wih wage levels, but the representatives of employers will have no option but to show that Government's demands on the industry are so excessive that it is impossible to pay more to workers.



Thus nothing helpful is being done to live up to the exhortations which are continually being made by the Government spokesmen on the essential nature of export industries.

This article can thus be treated as the obituary notice of the Kanan Devan Company, to be put in the files for a few years until the jungle of taxation has completed its work.

THE BUSINESS WORLD

Whither General Insurance?

By CROESUS

THAT all is not well with the General Insurance Business in this country is too well-known to need reiteration. In fact, chairman after chairman of General Insurance companies has been complaining about the prevailing state of affairs and it seems strange that not all the organisations of Insurers — there are at least three of them — should be able to provide a workable solution for removing the ills of the industry. During the past week, two chairmen of General Insurance companies — Mr. Tulsidas Kilachand of the New Great Insurance Co. Ltd., and Mr. P. U. Patel, Chairman of Universal Fire and General Insurance Co. Ltd., (also a member of the Tariff Committee) — have expressed their disappointment at the decision of the Executive Committee of the General Insurance Council with regard to the Code of Conduct. Both of them have stated that what has happened — "a sort of patching up," according to pre-conceived notions", to quote Mr. Patel — will lead the insurance industry nowhere. While Mr. Patel seemed evidently helpless, as witness his remarks: "one does not know how long things will be permitted to keep drifting in this manner. There is at least no immediate relief in sight", Mr. Tulsidas expressed the opinion that "the only course open to assist the industry is to remove all provisions of the Insurance Act restricting commission, cost, etc. and leave the companies free as in the United Kingdom to operate solely on the motto of "Freedom and Publicity".

It is interesting to note what the Chairman of the Indian Insurance Companies' Association, Mr. Jayant S. Dalal, had to say on the subject at the last Annual General Meeting of that body, held this week. Although he prefaced his remark by asking the indulgence of members for avoiding "certain delicate and controversial issues", I must say he was quite frank on many issues, including even some controversial ones. Mr. Dalal did not abstain from referring, for instance, to the Code of Conduct and Cost of Management, and, by and large, it is significant, he endorsed the views of the spokesmen of the private sector of the industry. Thus, he agreed that "wasteful competition, heavy procuration costs, rebating and such other undesirable practices still continue. He also expressed disappointment that the result of all the discussions and deliberations of the sub-committee appointed by the Executive Committee of the General Insurance Council, "to take stock of the present position in General Insurance Industry and recommend on the future course" had been practically nil. Of course, his cure for the problem was different from that prescribed by Mr. Tulsidas. According to IICA Chairman, "the major sources of mischief now appears to be the sales organisation prevalent in the trade. While nobody who has any degree of experience on the sales side would underestimate the need for a genuine cadre of salesman, the multiplicity and the number of salaried intermediaries between the client and the office prevalent today needs to be drastically curtailed, if heavy procuration costs are to be reduced. I strongly object that if insurance trade in this country is to retain its good name and play its important role in the country's progress, a pattern of field organisation based on full-time career agents supervised by a few but well-trained development officials will have to be sooner or later adopted."

Mr. Dalal did not mince words when he spoke of the administrative machinery which is supposed to implement the Code. He was categorical that the machinery has proved to be inadequate for want of sufficient number of personnel and sanctions to back its decisions. "If the Code is to be properly implemented", he rightly said, "it is essential that an administrative machinery closely associated with the trade and comprising experienced personnel in the trade is set up with sufficient authority to ensure the observance of the provisions of the Code."

As regards expenses of management it is noteworthy that Mr. Dalal concurred with the view of the private sector spokesmen, namely that the existing formula for expenses of management is not only unworkable but is also mainly responsible for this scramble for business leading to unbridled competition. Not content with pleading for a rise in the limits prescribed under the act as Mr. B. K. Shah of New India, Mr. Tulsidas of New Great and Mr. Patel of Universal Fire and General have urged, he suggested that it was worth considering whether the right course was either to increase the limits prescribed in the Act or to find some other formula not necessarily correlated with the quantum of gross direct premium. Mr. Dalal made a very pertinent point in this connection when he observed that "the very fact that warnings have to be administered to companies well within the solvency margins (according to the Insurance Year Book, a number of companies contravene section 40C and quite a few are administered warnings in terms of sub-section (2) of section 64M every year) shows the arbitrary nature of the present formula.

On the topical question of mergers of insurance companies, Mr. Dalal welcomed the development in the interest of creating strong group of insurers in the place of several weak units which cannot save themselves, but he wanted this to be "on a voluntary basis without any compulsion from any official sources." As he added, the purpose for which the amalgamation must be considered desirable would not be served if the amalgamation is thrust upon the units concerned."

The same philosophy of self-help and voluntary action was voiced by the IICA, Chairman when he went on to say: "It is primarily the responsibility of the trade itself to take necessary steps to place Indian insurance business on a sound and healthy footing." But, earlier in his address, one got the impression he was speaking more as a spokesman of Government than as a spokesman of the Industry. For, as a solution to the situation created by the failure of the latest attempt at finding a cure for the ills of the Industry by the Executive Committee of the General Insurance Company, he went on record as saying: "We as a trade should be prepared to accept any constructive suggestion or regulations that the Government may now choose to put forward." Further on, he said: "In a sense, it is essential that the Government should come out with some constructive suggestion in the interests of this trade which is so vital to the country's economy and I am afraid that,

if the Government do not take a sympathetic and active interest at this stage they might, at a later stage, be faced with a situation far worse than is prevalent now, and may be compelled, under various pressures, to adopt a drastic line of action which would only hamper the growth of this trade." In order, perhaps to indicate the imminence of the danger, he alluded to the proposal of nationalisation of general insurance tabled in the Rajya Sabha recently, as also the demand of the trade unions of General Insurance Employees for nationalising General Insurance.

Mr. Dalal seemed to speak even more as a spokesman of the public sector when he referred to the trend of general insurance business over the period 1953-58 and expressed concern at the steadily increasing percentage of the total business underwritten by the first ten Indian insurers. The increase in gross premiums of over 87 per cent in their case during this period as compared to an increase of only 60 per cent in the case of Indian insurers was considered by him unhealthy for the Indian insurers as a body, as it showed substantial growth only of the larger units. For if this was the danger, he should have applied the same logic to the increase in the share of the government-controlled, companies in the business of the Indian Insurance Companies' Association pool, as also the Aviation Pool to 75 per cent. It is natural, therefore, that insurers in the private sector should feel constrained to say, "the pronounced partiality for companies in the public sector cannot make for confidence in the future. The writing on the wall is there for anyone who cares to read it."

In view of this, I have my own doubts as to whether what Mr. Dalal has described as "a welcome development in the trade" will not be viewed by the private insurers as "a disturbing trend." Private insurers do certainly object to the establishment of another re-insurance company in the country, but their fear is that, because the company that has been established — by conversion of the Indian Guarantee and General Insurance Co. Ltd., into a full-fledged re-insurance company by the LIC recently — is a company which, together with the Indian Re-Insurance Corporation, is too preponderantly official, it might not be of much service to General Insurers in the private sector. Unfortunately, their experience so far of re-insurance with the public sector would appear to be not very happy. Some of them, for example, have openly criticized the official agency which, they allged, is prepared to cede reinsurance with them only on a cent per cent reciprocity basis, although it has no qualms in reinsuring in the London market which does not agree to any cent per cent reciprocity. It is a queer situation when an Indian official re-insurance agency persists in taking up such a stand and a spokesman of the public sector wearing the mantle of the IICA Chairman seeks the blessings of the trade for the insurance company on the plea of gradually reducing the drain of foreign exchange.

For the same reason, I suspect that Mr. Dalal's suggestion, that both Indian and foreign insurers operating in this country should consider the creation of pools in which they may cede business either on a priority basis or as a part of their First Surplus, on reasonable commission terms, with provision for substantial profit commission, will not be acceptable to General Insurers. It will also not be acceptable to them, because he goes on further to suggest that the management and retrocession of the business placed in such pools may be handed over to the two professional re-insurers in the country. The two pools already created, instead of serving General Insurers, as was hoped at one time, would appear to have provided a convenient means for the Government to appropriate whatever share it may decide of the total pool business, regardless of the efforts put in by private General Insurers to develop and underwrite that business.

Business Notes

Prices

AIMO'S VIEW

ALMOST EVERYONE from the Prime Minister downwards has expressed grave anxiety about the rising prices and has urged the imperative need of holding the price line. But few have suggested a practical way of attaining the objective. Even the Planning Commission has done no more than air some pious platitudes on this all too important issue. In the circumstances, concrete proposals which could help the authorities check the rise in prices, especially when they come from responsible spokesmen of the commercial and industrial community, deserve careful scrutiny.

Addressing the First Quarterly Meeting of the Central Committee of the All India Manufacturers' Organisation, last week, at Ahmedabad, Mr G. V. Puranik, Chairman, drew attention to this question. Instead of just emphasising the need to evolve a suitable device to check the rising prices—as many seem content to do—he advanced two suggestions to hold the price line. In the first place, he pleaded for a change in the investment pattern to directly productive activities rather than social services. To quote the AIMO Chief: 'It has been the stand of our Organisation that, in the initial stages of planning, concentration should be on investment on such productive purposes whose return is quicker than on slow productive purposes. Social services are, of course, important and we should not underestimate them. But the question is how much we should provide for them at this stage of our development when our resources are limited. While a reasonable provision should no doubt be made for the same, the emphasis should be on industries, power, transport and agriculture."

The second suggestion of Mr Puranik—this appears to be somewhat novel—refers to certain changes in fiscal policies. He pleaded that the Government should ensure that taxes and levies on commodities do not exceed the prescribed percentage of their price. His suggestion to keep this percentage as low as possible in regard to commodities like cloth and sugar and building materials like steel and cement is particularly appropriate. With a view to make tax payment easy, he further suggested that the Government should combine Sales Tax with Excise levy, wherever feasible, and for a limited period. Obviously, Mr Puranik has taken note of the growing resistance of State Governments to this indirect encroachment of the Centre on the State List.

General Insurance

NEED FOR CO-ORDINATION

MR. JAYANT S. DALAL, Chairman of the Indian Insurance Companies' Association, pointed out at the annual general meeting of the Association held recently at Bombay that the field of insurance was dominated by larger units which were becoming still larger as the growth of small and medium-sized units was arrested. Since the larger units were more efficient, Mr. Dalal welcomed any movement towards voluntary amalgamation of insurance offices so long it did not lead to pressure against the units which were unwilling to follow that course. Mr. Dalal also advocated that larger units should avoid wasteful competition for business already on the books of companies and should concentrate their energies on creating new avenues of business.

In order to enhance co-operation between insurers and also to strengthen their forum, where they could discuss their common problems and present their point of view, it is necessary that an All-India Association of General Insurers is established. In this connection Mr. Dalal pointed out that there were a couple of bodies with varying membership functioning at other centres apart from the Indian Insurance Companies' Association at Bombay. The Union Minister for Finance had also stressed the need for the establishment of an all-India body. These associations should take this question in real earnest and move to create such an organisation as early as possible. It would help the industry to attain more stability in its working through larger co-operation.

PROBLEMS FACING THE INDUSTRY

AT THE Seventeenth Annual General Meeting of the New Great Insurance Company of India Ltd., the speech of the Chairman Mr. Tulsidas Kilachand delivered in his absence by Mr. Jehangir P. Patel outlined frankly some of the problems facing the industry. Disappointment was expressed at the decision of the Executive Committee of the General Insurance Council to continue the status quo as regards the Code of Conduct. Mr. Kilachand felt that it was not likely to help improve the market conditions. In his openion the best way to help the industry was that all provisions of the Insurance Act restricting commission, cost, etc. be done away with and the companies be allowed to operate as in the United Kingdom on the motto of 'freedom and publicity'. But this view ignores the vital issue that the problem of eliminating unhealthy practices would remain unresolved.

The main target of criticism was reduction in the fire insurance rates. In the context of the large number of recent fires, it was feared that it might well turn out to be a disastrous step from the point of view of the industry. The feeling was that it would have been more prudent had the rates been reduced wherever experience had shown favourable claim results. For any further reduction, the insurers were asked to adopt a firm attitude. The Chairman also criticised the steps taken by the Government to gradually deprive the non-governmental companies of their shares in the Government controlled insurance business. Dealing with accounts, the chairman disclosed that the Directors had proposed to pay eleventh dividend on ordinary shares at Rs. 2.50 per share less deduction of income tax. This certainly speaks well of the Company's progressive and reassuring performance.

PROBLEMS OF GROWTH

MR. B. C. RAKSHIT in his Presidential Address at the annual general meeting of the Indian Insurance Companies Association held at Calcutta recently pointed out that with increasing industrialisation of the country, there would be ample opportunities for insurance companies by developing new lines of business as well as by improving further the lines in which they are already engaged. He made an interesting comparison of general insurance business in India with the index of industrial production and observed that only in 1958 the trend was reversed; General Insurance had been lagging behind industrial production since 1955. While the index of industrial production advanced by 2.4 per cent in 1958, insurance business during the year went up by 6.1 per cent. In view of the fact that the premium in 1959 would be only around Rs. 27 crores, it appears that general insurance has still not reached a level where it could play a significant role. He has added that substantial volume of business still consists of large risks. Simple risk business is not popular as yet, which should be concentrated upon.

Drawing attention to the factors that inhibit the growth of general insurance business in the country, he pointed out that periodical reduction in fare rates, fixing expenses of management on unrealistic basis and some of the regulations under the Code of Conduct had hampered the growth of the industry. Considering the fact that 40 per cent of the total gross premium written by Indian insurers was accounted for by fire insurance, the rates should not be revised periodically unless this revision is based on sufficient facts. Mr. Rakshit has pointed out that many times the rates are revised on the basis of inadequate data in spite of protests from insurers.

In respect of the limits of expenses on management, it seems there is a considerably strong case for raising this limit because the marine business entails comparatively more work, and, therefore, higher expenses. As far as the Code of Conduct is concerned, a multiplication of regulations cannot essentially lead to the removal of malpractices. On the other hand, it results in excessive administrative work which is mostly unproductive. It is very necessary, therefore, that the Code of Conduct should be simplified to be of real assistance to the indusry in reducing its costs.

Steel

CRITICISM OF TARGET

THE EMPHASIS laid on the steel and heavy engineering industries in the Third Plan was criticised by Mr. J. R. D. Tata, Chairman of Tata Steel, as 'excessive' and not really justified in the light of the real needs of the country. At the time of the opening of Tisco's new merchant mill recently, Mr Tata said that it was very difficult to make a precise estimate of the country's requirements of steel five years hence. Although, to an extent, the demand of consumers having well-defined development plans, like railways, shipyards and other key industrial projects, could be foreseen, yet outside this area, estimates of demand were subject to a considerable margin of error. As an instance he pointed out that Japan had used about 7.6 million tons of finished steel in 1958-59 and had a far higher output of goods and products made out of steel than India planned to have at the end of the Third Plan period.

Mr. Tata was of the opinion that it was a mistake to think that the industrialisation of a country depended on self-sufficiency in ordinary steel and heavy castings and forgings. Even in a steel plant, heavy items of equipment were, in terms of value, quite small in proportion to the total cost. Taking the country's total industrial operations, he thought that 95 per cent of them required light or medium equipment. Reckoned in terms of foreign exchange, he adds, a million-ton steel plant costing roughly Rs. 150 crores would require an expenditure abroad of Rs. 75 crores, which would save, on the basis of full capacity production, only Rs. 45 crores. Against this, the foreign exchange saving in the case of engineering industries was likely to be much greater. On both counts, therefore, he pleaded for a re-thinking on steel, keeping in mind the desperate scarcity of funds, both internal and external.

Commenting on the employment potential of steel industry, he stressed that with the exception of petrochemical industries, steel provided the lowest employment per rupee of investment. A Rs. 150-crore steel plant was unlikely to give employment directly to more than 8,000 to 10,000 men by Indian standards of manning, whereas the same investment in secondary industries would create at least four times greater employment opportunities. A fresh look at planning priorities was all the more necessary, he said, because the output of certain essential items like fertilisers would be less than the country's real needs at the end of the Third Plan on the basis of the present development programmes, whereas the capacity of power, steel and heavy engineering industries would equal or exceed the real demand.

Shakespeare once observed "Beauty is an innate craving of man—so he seeks to dwell in lovely parts of the creation." No age has ever been immune to this captivating spirit of Beauty, the balm of life. Even mother Sita of our epic age fell a victim to the attractions of beauty when she noticed an illusory golden deer, and longed for having it, which resulted in the out-turn of a chain of momentous events in the social life of that epic age.

The Deer is virtually a charming and comely animal which infatuates a man at the very glance.

We do admire this instinct of man and offer our ocean deep ovation for the same. Hence, we have chosen deer as a symbolising brand for our cloth of varying varieties so exquisite, enduring and of so endearing a price.

Our Specialities are:

FLANNEL and TOWELS, etc.

Current Topics

INDIA'S BALANCE OF PAYMENTS, 1956-60

In an article in the latest issue of the Reserve Bank Bulletin, India's balance of payments during the four years of the Second Plan have been analysed. Below are given extracts from the article.

INDIA'S external payments position during the four years of the Second Plan reflects the combined impact of the substantial stepping up of aggregate domestic investment and of the movements in the world economy. The stress on industrialisation in the Plan has involved a heavy strain on foreign exchange reserves, which fell from Rs. 902 crores at the commencement of the Plan to Rs. 363 crores at the end of the fourth year. The actual reduction of Rs. 539 crores in the reserves during the four years contrasts with the expectation that the reserves would be brought down by Rs. 200 crores over the quinquennium. Further, the heavy draft on the reserves took place notwithstanding the fact that external aid in the form of grants and loans, inclusive of net drawings from the I.M.F., received during this period amounted to Rs. 1081 crores as against the estimate of Rs. 800 crores of external assistance for the entire Plan period. The reserves fell continuously since April 1956 till the end of October 1958 to reach the level of Rs. 330 crores, when the decline was arrested through concerted measures including a revision of the investment programme in the public sector and a severely restrictive import licensing policy. Since then, the reserves fluctuated under the impact of seasonal factors till February 1960 when they suffered a decline following the repurchase of rupees from the I.M.F.

When the Second Plan was formulated, it was estimated that over the quinquennium the total deficit on current account, excluding official donations, would be around Rs. 1100 crores; during the four years of the Plan it has already aggregated to over Rs. 1490 crores. The substantial rise over the estimates in the current deficit occurred despite considerably higher net receipts from invisibles other than official donations and moderately higher earnings. During the Second Plan period, net receipts from invisibles other than official donations and similar assistance were expected to average Rs. 51 crores per annum as against the actual average of Rs. 78 crores in the First Plan. For the first four years of the Second Plan they have in fact averaged just over Rs. 90 crores per year or over three-fourths better than the estimates. Annual average export earnings were expected to be Rs. 593 crores as against the average of Rs. 622 crores in the First Plan period and in the last four years they have averaged Rs. 607 crores. Import payments, however, averaged Rs. 1071 crores per annum during 1956-60 as against the Second Plan estimate of Rs. 868 crores and the First Plan actuals of Rs. 727 crores and were responsible for the sizeable increase in the current account deficit over that estimated at the time of the formulation of the Second Plan.

The overall balance of payments data for the four years of the Second Plan are presented in the table below. The trade deficit soared to Rs. 640 crores in 1957-58 from Rs. 464 crores in 1956-57 and with the help of the severe restrictions on imports was sharply reduced to Rs. 454 crores in 1958-59 to fall further to Rs. 300 crores in the last year. Receipts from official donations amounted to Rs. 40 crores in 1956-57 and have since been almost steady around Rs. 35 crores. They comprise mainly of receipts under the United States T.C.A. programme and under the Colombo Plan. Net receipts under invisibles other than official donations, although much higher than in the First Plan period, and substantially better than the estimates showed a declining trend over 1956-60. In 1956-57 there were net receipts of Rs. 9 crores on investment income account; in the following three years there were substantially growing net payments of Rs. 5 crores, Rs. 19 crores and Rs. 25 crores which reflect the progressive decline in the official holdings of foreign assets and rising foreign indebtedness both on private as well as official account. These payments would continue to grow with the larger inflow of foreign capital that is to be expected. In the result, the net receipts under invisibles may be expected to diminish. The draft outline of the Third Plan puts them at an average of Rs. 24 crores per annum.

*. Includes+Rs. 5.9 crores on account of non-monetary gold movement.

A DELHI NOTEBOOK

STEPPING UP COAL OUTPUT

THE Government of India, it is understood, has received an assurance from the private sector collieries that the recent downtrend in their production would be arrested and they would give certain quantities of both coking and non-coking coal additionally during the short period between now and the end of the current Plan. A Working Group, having representatives of the industry and the Government as its members, has been set up to examine the colliery-wise and grade-wise pattern of these additional raisings and to draw up a forecast of the quantities that would be available month by month. On its part, the Government has assured the industry that, short of a price increase, all possible assistance would be given to remove the difficulties and bottlenecks that may come in the way of increasing production. The latest estimate is that the private sector collieries would be able to achieve 43.5 million tons output by the end of the current Plan. This will be only about 0.3 million tons less than the target. Even this shortfall is likely to be made up within the first year of the Third Plan.

So far as the public sector output is concerned, it is hoped that in the last quarter of 1961 the National Coal Development Corporation collieries would yield a monthly output which would total up to a rate of production of 11 million tons per annum. With this object in view, monthly targets of production have been laid down for the individual collieries owned by the NCDC so that the progress of their production can be watched from month to month and remedial measures taken to arrest any decline if it occurs. The monthly targets for the various public sector collieries are as follows:

Name of Colliery	Monthly Production Targets (in tons) by March, 1961
1. Old Collieries	2,82,000
2. Bhurkhunda (New and Old)	80,000
3. Kurasia (New and Old)	1,00,000
4. Kathara	1,00,000
5. Gidi 'A'	75,000
6. Saunda	1,00,000
7. Sayal 'D'	45,000
8. Bachra	40,000
9. Gidi 'C'	33,000
10. Korba	55,000
11. Korba Block 1	20,000
Total	9,30,000

This would mean a rate of production of 11.16 million tons a year or in round figures 11 million tons a year. It will fall short the target of 13.5 million tons by 2.5 million tons.

Coal shortage, however, can be relieved only if along with the increase in production, steps are taken to improve transport facilities as well. It is estimated that nearly 5,100 wagons a day would be required for the movement of coal in 1961. The present daily average, as the following figures show, is far from satisfactory:

Month (1960)	Daily Average Loadings (in wagons)
January	4,063
February	4,143
March	4,185
April	4,263
May	3,881
June	4,210 (upto 7th)

"JANTA" CAR

A three-man technical Committee, which may have a foreign expert as one of its members, is proposed to be set up to examine and report on the economics of an "Economy" or a "Janta" car. The Committee will go through the necessary data and suggest whether it is possible to place on the Indian market a car whose price does not exceed Rs. 6,500. If the Committee comes to the conclusion that it is possible to manufacture such a car, it will also have to indicate how to secure approximately Rs. 10 crores, including Rs. 5 crores in foreign exchange, to finance the project.

While the Ministry of Commerce and Industry is said to be engaged in drafting a resolution on the Jha Committee's Report and in finalising the personnel and terms of reference of the proposed Committee, the Minister of Industry, Mr. Manubhai Shah, lobby reports suggest, has addressed a letter to the Prime Minister, seeking his approval to go ahead with the project, placing it in the public sector.

EXPORT OF SUGAR

The Union Food and Agriculture Minister, Mr. S. K. Patil, it is understood, is in communication with the US Government on the question of export of Indian sugar to the United States. Exports, if at all allowed, however, are likely to be effected only after the Hindu festivals Durga Puja and Deepawali are over.

PREFERENCE DIVIDENDS

A bill seeking to clarify Government of India's stand on taxation of preference dividends and amplifying section 85 of the Companies Act is under preparation, it is learnt. It will come before the Parliament soon and is expected to be placed on the Statute Book during the current session.

EXPANSION OF DURGAPUR STEEL PLANT

The British Government, it is learnt has agreed in principle to arrange for credit to finance the expansion of the Durgapur Steel Plant. Negotiations to settle the details are understood to be in progress. The loan for this project will form a part of the credit the British Government is planning to give to India to finance her Third Five-Year Plan.

Meanwhile, the agreement for the provision of £10 million credit by the United Kingdom, announced recently, is expected to be signed here this week.

BRIEFS

A Study Group, consisting of Government officials only, has been set up by the Planning Commission to examine how best public participation can be effected in the capital of State enterprises. No formal terms of reference have been framed for the guidance of this Group so that it can examine the problem in all its aspects unhampered by any directives.

*

The Government of India has received a tentative proposal for setting up of an aluminium smelter in Mysore State. Full details about its capital structure, exact location, foreign collaboration, sources of power supply etc., are not yet available. They will be made known if the proposal is accepted by the Government in principle.

*

It has been decided to establish a fertilizer factory at Namrup, in Assam, based on the utilization of natural gas. Messrs. Hindustan Chemicals and Fertilizers Limited have been entrusted with the execution of the project

* * *

The British firm John Lucus is seeking collaboration with an Indian company to set up a unit in India to manufacture its products. The proposal is under consideration in Government circles here.

WORLDGRAM

India

Manufacture of Tungsten Carbide: Messrs. India Hard Metals (P) Ltd., Calcutta, have collaborated with Messrs. Wickmen Ltd., England, to manufacture tungsten carbide powder, tips and tools. All the tungsten carbide products will be produced right from the Indian ore and thus will save huge sums of foreign exchange which is being spent for importing of the finished products. At present the country imports tungsten carbide in different forms to the tune of Rs. 30 lakhs. It is estimated that by the end of the Third Five-Year Plan, there will be a demand to the extent of about Rs. 2 crores. For the entire plant and machinery, order has been placed. The first phase of the project will commence before the end of this year and second phase that is making of tungsten carbide powder and tips, moulding and sintering of tips will start in the early part of the next year. It is expected that the manufacture of the tungsten carbide, right from the ore will start before the end of next year. The capacity sanctioned is 5 tons of Tungsten Metal per month and Messrs. India Hard Metals (P) Ltd. will start supplying the entire need of tungsten carbide powder to those who press and sinter their own tips. Besides, they will produce all mining tungsten carbide tools, all cutting tools, wear resisting parts, special gauges, wire drawing ties, press tools, etc. It is estimated that the completion of the above project will cost in the neighbourhood of Rs. 1 crores. The necessary personnel is being sent for training to England in the factories of the collaborators.

Foreign Trade in Merchandise in June, 1960: The provisional figures of India's foreign trade in merchandise by all routes i.e., sea, air and land, on private and Government accounts during June 1960, according to information available in the Department of Commercial Intelligence and Statistics, Calcutta are given below:

Exports	Rs.	48,46 lakhs
Re-exports	Rs.	48 lakhs
Imports	Rs.	84,95 lakhs
Balance of Trade	Rs.	—36,01 lakhs

These figures exclude overland trade with Nepal, Tibet, Sikkim, and Bhutan. The import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment and of private merchandise under reference to Customs for verification.

Table I below brings together the provisional figures for June, 1960, along with similar figures for May 1960, June 1959 and the revised figures for June 1959:

TABLE I.

India's Foreign Trade During June, 1960, May 1960 and June 1959

(In lakhs of rupees)

Foreign trade in merchandise	For the month of			
	June 1960	May 1960	June 1959	
			Provisional	Revised
Exports	48,46	49,81	42,33	41,70
Re-exports	48	93	1,21	1,23
Imports	84,95	82,77	77,28	81,43
Balance of trade in merchandise	—36,01	—32,03	—33,74	—38,50

The cumulative totals for the three months ended June 1960, shown along with the corresponding figures for 1959 in Table II below:

TABLE II

India's Foreign Trade During the Three Months April-June, 1960 and April-June 1959

(In lakhs of rupees)

Foreign trade in merchandise	Cumulative totals for three months April to June		
	1960	1959	
		Provisional	Revised
Exports	146,46	131,57	1,28,38

Central Revenue Collection for June 1960: The revenue realised from important dutiable items in the first three months of the financial year 1960-61 amounted to Rs. 171.45 crores. Of this, Rs. 66.38 crores were collected during June 1960. The corresponding figures for the first three months of the financial year 1959-60 were Rs. 148.52 crores and Rs. 59.10 crores for June 1959. Details under various heads are as follows:

(In lakh of rupees)

	1960	1959	1960-61	1959-60
	June		April - June	
1. Customs	12,22	11,69	36,73	34,98
2. Union Excise Duties (excluding coal cess and salt cess)	32,90	26,97	97,19	81,70
3. Corporation Tax	12,41	5,48	15,39	6,97

Raw Materials in the Manufacture of Fluorescent Lamps: As a measure of export promotion, the Government of India propose to grant draw-back of duty on raw materials used in the manufacture of fluorescent lamps at brand rates. In this respect, Government have issued a draft notification inviting objections by August 17, 1960. Any objection or suggestions received by that date will be considered by the Government of India.

U.S.A.

Export of Farm Products, The value of America's exports of farm products in the fiscal year ended June 30, 1960 was estimated at $4.5 billion, about a fifth above 1958-59. Most of the increase is due to a doubling in cotton exports as well as more moderate increases in exports of wheat, rice, foodgrains, and fats and oils. For all of 1960, exports of U.S. farm products are expected to about equal the 1957 record and be above 14 per cent above 1959.

U.S.S.R.

World's Highest Dam in Tajikistan: The Nurek 2.7 million kilowatt hydro-power station to be built in Tajikistan Soviet Central Asia, will have the world's highest dam of 300 metres. It will bar a gorge to form a reservoir holding 10.5 billion cubic metres of water. The construction work will start soon and is to be completed in five years. One kilowatt hour of electricity produced by the Nurek station will cost 0.26 Kopecks—the cheapest power in the Soviet Union. The new station will be switched into a single Central Asian Power grid to cover the whole of Tajikistan, Kirghizia, the greater part of Uzbekistan, East Turkmenia and South Kazakhstan.

*

World's Biggest Iron Ore Mine under Construction: The world's biggest iron ore mine with a designed capacity of 20 million tons a year is under construction at the Krivoy Iron Ore Basin in the Ukraine. The mine will produce 4 times as much ore as is produced now by an average capacity mine in this area.

United Kingdom

Equipment for India's First Automatic Lighthouse: The first fully automatic all-electric lighthouse equipment for the Indian Government has been successfully tested at the Crawley (England) works of Stone-Chance Ltd, the British Lighthouse Engineering firm. It is to be erected at East Point, on the East Coast of India between Visakhapatnam and Kakinada. The equipment is designed to operate completely unattended for periods of six weeks, at which intervals it will be visited by an inspector.

Australia

Insurance Aid to Exporters: The service offered to Australian manufacturers by the Government-established Export Payments Insurance Corporation is assisting in the expansion of Australia's overseas trade and facilitating the negotiation of satisfactory contracts and agreements. After 2½ years of operation, the Corporation possesses up-to-date record on many thousands of overseas buyers, and new names are being added daily to the list. The corporation provides information on unknown buyers through cabled enquiries to sources of information in other countries. During the three months ended March 31, an additional £1,400,000 worth of insurance business was written, bringing the total of currently-insured exports to £27 million. The corporation has also a further £15 million of prospective export business under offer and negotiation.

China

Support for Agricultural Production: An item appearing in 'China Today' outlines that State investment in the capital construction for agriculture has increased year by year. From 1950 to 1958, the State issued agricultural loans totalling 12,600 million yuan. Since the people's communes were set up in the rural areas in 1958, the investment in the communes has totalled 1,000 million yuan. State agricultural loans in 1959 came to 3,500 million yuan. The proportion of agricultural taxes in the State's revenues has decreased year by year. It went down from 29 3 per cent in 1950 to 9.6 per cent in 1957 and further 7.8 per cent in 1958. Taxes accounted for 13.2 per cent of agricultural output in 1952, 11.5 per cent in 1957, and 9.6 per cent in 1958. A further decrease was registered last year. In 1959 State supplies of means of production for agriculture were much greater than in any previous year. Compared with 1958, tractors increased by 29.2 per cent, machine-drawn ploughs were up by 57 per cent, machine-drawn harrows by 114 per cent, the horse power of irrigation machinery went up by 112 per cent, chemical fertilizer and insecticides by at least 60 per cent. Under the 1960 Plan of help to agriculture, the output of the major items of agricultural means of production will be doubled.

France

Coal Production: The production of coal in France in June totalled 4,650,300 tons which was a decrease compared with the figure for the previous month 4,842,000 tons. The monthly production average during the first quarter of 1960, was 4,969,300 tons. These figures are less than for the same period of 1959, which had the monthly average of the first quarter, totalled 5,079,300 tons.

Sweden

Foreign Trade: The scope of Swedish foreign trade is still increasing considerably, which is symptomatic of the present boom. During the first four months this year, the import and export figures exceeded those for the corresponding period of 1959 by well over one-fourth: the imports totalled 4,921 million kronor and exports 4,228 million kronor, whereas the respective figures during the same period of 1959 were 3,837 and 3,420 million kronor, i.e. the surplus imports amounted this year to 693 million and in 1959 to 417 million kronor.

Yugoslavia

Increase in Number of Employees: On account of further increase in industrial activity, a substantial increase took place in Yugoslavia during the first half of this year in the total number of employees. In May there were 3,406,000 employees in Yugoslavia which is 8.8 per cent or 260,000 persons more than during the same period of last year. Total earnings of the Yugoslav population during the first five months of this year were greater by 104,000,000,000 dinars, 23 per cent over the same months of the last year.

Holland

Utrecht Autumn Fair: The forthcoming Autumn Fair which will take place in Utrecht, Holland from 12th till 17th September will contain exhibits of 1068 firms from 23 countries. This Fair will be entirely dedicated to consumer goods, of which 16 groups will be represented. An extensive range of products will be on display at the Fair. The principal exhibits will come from Holland, West Germany, Great Britain Switzerland and France. There will also be products from Belgium, Canada, Denmark, East Germany, Egypt, Finland, Hungary Israel, Italy, Japan, Liechtenstein, Norway, Austria, Poland, Spain, Czechoslovakia, U.S.A. and Sweden.

Israel

Gross National Product: The national accounts of Israel, recently published by the Israel Central Bureau of Statistics, show that the value of the gross national products increased to I£3.9 billion (calculated at 1958 prices) from I£3.5 billion in 1958, an increase of 11.5 per cent. On a per capita basis (with account taken of a 3 per cent rise in population), the increase amounted to 8 per cent. Private consumption, totalling I£2.8 billion in 1959, was 10 per cent more than in the previous year. Increases in the expenditure on clothing, household appliances, and entertainment were above average. Gross investment rose from I£ 919 million in 1958 to I£970 million in 1959, the largest investment being in housing (I£298.5 million) and industry (I£ 193.2 million). Investments in electricity, agriculture and transport were less than in the previous year. The national income (gross national product less indirect taxes and depreciation) amounted to approximately I£3 million.

There is a good proposal in the Third Five-Year Plan to set up a television centre in Bombay. It is also proposed to expand the experimental service in Delhi into a regular educational service for the secondary schools in Delhi area.

*

An additional loan of Rs. 50 million (about Rs. 23.5 crores) for the Indian Railways has been approved by the United States Development Loan Fund authorities and a formal announcement is expected shortly.

*

The revenue released from importable dutiable items in the first three months of the financial year 1960-61 amounted to Rs. 171.45 crores.

*

The Lok Sabha discussed recently the Plantations Labour (Amendment) Bill which aims at checking the fragmentation of plantation by owners to evade their liabilities under the Plantations Labour Act, 1951.

*

The railways' manufacture programme is being stepped up substantially during the Third Plan period to make the country more or less self-sufficient in rolling stock and equipment.

*

Nearly 1.9 million tons of steel was produced in 1959-60 in the country. The estimated requirement for the year was about 4.0 million tons.

*

Mr. K. Raghuramiah, Deputy Defence Minister, stated recently that construction of further types of small naval ships was under consideration.

*

The Ministry of Steel, Mines and Fuel has received the project report for the proposed alloy and tool steel plant from its consultants, a Calcutta firm.

FOREIGN

A large Dutch trade mission, the first since the Second World War, is to visit the Soviet Union between September 11 and 25. It will be sponsored by Holland's reputable, but non-official, Central Organisation for Foreign Economic Relations, and led by a prominent Industrialist, Mr. J. W. Hupkes, Managing-Director of De Schelde shipyard.

*

Australia's most ambitious drive to attract more investment and trade from Europe will be made during the Swiss Industries Fair to be held in Lausanne. Highlight will be the broad picture of industry, trade and culture, presented in a display at the Fair at which Australia this year is guest exhibitor.

*

The U.S. Development Fund, in an agreement signed recently made a loan of $7 m. to the Industrial Bank of Egypt to be used to supply private industries with machinery from the U.S.

*

A contract was signed for the purchase by the Shell Company of 50,000 tons of petroleum spirit from Syria. Valued at £360,000, the petrol will be shipped from Latakia port with deliveries spread over six months.

*

Production of wheat, barley, rye and oats in Turkey is estimated to have totalled 13.5 m. tons compared with 12.3 m. last year and 13.4 m. tons in 1958.

*

The World Bank has approved a loan equivalent to $3.84 m. for the expansion of electric power facilities in EL Salvador. The loan will finance imported equipment and services for the construction of the Guagoyo 15,000 kilowatt hydro-electric power plant and associated transmission facilities.

*

As a result of a sharp increase in tax revenues the Canadian Government had a surplus amounting to $156.2 m. in the first quarter of current fiscal year. This compares with one of $32.4 m. for the same April to June period a year before.

*

Australia produced a record 1,689 m. lbs of wool in the year to June 30, the statistics Bureau reports. This was 98 m. lbs. more than the previous record set in the 1958-59 season.

*

East Germany and Cuba have agreed to exchange goods worth up to $ 3 m. on either side. The pact, which was concluded last March, lasts one year and is automatically renewed for another year unless cancelled by one side, according to an official publication of the East German Trade Ministry.

*

Egypt had a trade surplus of £E6.1 in the first five months of this year, as against a £E26.4 m. deficit over the same period last year, according to official figures.

*

It is reported that negotiations have been completed under which Canada will supply 30,000 tons of wheat flour for emergency stockpiling in Britain.

COMMODITY NEWS AND NOTES

PRODUCTION OF LEAD-ZINC ORES IN INDIA

The production of lead-zinc ores in India during January-May 1960 was 63,137 metric tons, according to the Indian Bureau of Mines. The entire production was reported from the Zawar mines in Udaipur district of Rajasthan State. The recovery of lead and zinc concentrates amounted to 2,252 metric tons and 4,007 metric tons respectively. Lead concentrates are sent to the lessee's smelter at Tundo in Bihar State for extraction of lead and silver while the zinc concentrates are shipped to Japan for smelting of zinc, as there is no zinc smelter in India at present.

The production of lead metal during January-May 1960 was 1,562 metric tons.

PRODUCTION OF COPPER ORE IN INDIA

The production of copper ore during January-May 1960 was 182,753 metric tons, according to the Indian Bureau of Mines. This represents an increase of about 8 per cent as compared to the output of 168,683 metric tons in the corresponding period of the preceding year. The entire production was reported from the Singhbhum district of Bihar State. The production of copper metal during January-May 1960 was 3,658 metric tons as compared to 3,141 metric tons in the corresponding period of 1959.

WOOL IN THE THIRD PLAN

The draft outline of the Third Five-Year Plan indicates a target of 90 million lbs. for the production of raw wool. This shows an increase of 25 per cent over 1960-61 estimate. To help raise the production it is proposed to open six additional sheep breeding farms and 4,000 extension centres. Each centre would cover a sheep population of 10,000 to 15,000.

Under the Plan the Government also contemplates starting 300 wool grading and marketing centres to be run by the wool growers' co-operatives. Facilities for shearing, grading, baling and sorting of wool would be provided at these centres. Target for woollen and worsted yarn is fixed at 52 million lbs.

The following table compares the 1965-66 targets with the production under the previous planning:

Item	1950-51 Production	1955-56 Production	1960-61 Estimated production	1965-66 Target for production
Raw wool (mil. lbs.) ..	60	65	72	90
Woollen and worsted yarn (mil. lbs.) ..	18.0	21.7	34	52
Woollen and worsted cloth (mil. yards) ..	—	15.0	23	35
Wool tops (mil. lbs.) ..	—	—	10	31.5

WORLD USES MORE WOOL

Consumption of wool by the ten chief non-Communist manufacturing countries is estimated by the Commonwealth Economic Committee to have increased by two per cent in the first quarter of this year compared with the final quarter of 1959. It is estimated, however, that the average daily rate of usage appears to have shown virtually no change. Reductions in the rate of consumption in France, Italy and the Netherlands were partly offset by small increases in the United Kingdom and Japan, while the position in the United States is estimated to have been unchanged. Compared with a year earlier, actual total consumption in these ten countries was 17 per cent higher, though consumption is now found to be levelling out at the higher figure. Exports of tops from the chief exporting countries in the first quarter of this year were about 6 per cent higher than in the previous quarter and one-fifth larger than a year earlier. Compared with October-December quarter, shipments from the United Kingdom and France — the two largest suppliers — were up by 1 and 2 per cent, while larger proportionate increases were shown by Argentina, Uruguay and Australia. On the other hand, exports from South Africa, West Germany, Switzerland, and Japan were lower in each case.

E. R. W. TUBES FOR ELECTRICAL EQUIPMENT

Highly suitable for use in a wide variety of electrical equipment, E.R.W. Tubes manufactured by Indian Tube, can be employed to great advantage in Transformers, Condensers, Refrigerators and Air-Conditioning machinery. Close dimensional tolerances and a smooth finish are standard features of E.R.W. Tubes; in addition, their great strength combined with their light weight render them eminently suitable for electrical appliances.

RESERVE BANK OF INDIA

Applications are invited for the following posts in the various departments of the Reserve Bank of India—

(A) POSTS AND SCALES OF PAY

Research Officers	**Rs. 375-55-815 E.B. 55-925-60-1045**
Probationary Assistants	**Rs. 250-25-450 E.B. 25-650**
Economic Assistants:	**Rs. 175-12.50-300 E.B. 20-440**

Note:—Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scales.

In addition to pay, the selected candidates will be eligible to draw local pay, house allowance and dearness allowance at the rates prescribed by the Bank from time to time.

(B) AGE LIMITS AS ON 1ST AUGUST 1960

Research Officers	Candidates should not ordinarily be over 30 years of age but the age limit may be extended upto 35 years in the case of candidates with exceptionally good qualifications and/or research experience of value to the Bank.
Probationary Assistants	Between 21 and 25 years.
Economic Assistants	Between 18 and 24 years.

The maximum age limit is relaxable but not beyond 30 years in the case of

(i) candidates possessing special qualifications and experience of value to the Bank;

(ii) candidates with approved war services;

(iii) ex-employees of banking institutions whose services had to be terminated for reasons of economy or as a result of the banks going into liquidation;

(iv) personnel retrenched from Government offices after **at least** one year's service applying through Employment Exchanges; and

(v) candidates belonging to the Scheduled Castes or Scheduled Tribes.

(C) QUALIFICATIONS

(i) **Research Officers, Economic Department:** First or high second class Master's degree in Economics or Commerce of an Indian or foreign University, or a Doctorate degree in Economics of an Indian or foreign University, and a period of research work in one or more of the following subjects: (a) Monetary Economics, (b) Banking Theory and Practice, (c) International Trade and Finance, and (d) Agricultural Economics. Applicants are expected to be proficient in economic analysis. A period of practical banking training will be an additional qualification in respect of applicants with specialisation in (a), (b) and (c) above and experience of agricultural surveys in respect of (d) above.

(ii) **Probationary Assistants, Agricultural Credit Department:** First or high second class Master's degree of an Indian or foreign University in Economics, Sociology or other Social Sciences or in Commerce. Special study or knowledge of rural economics or rural sociology will be an additional qualification; so also will be the experience gained in a responsible position in the Co-operative Departments of the States or in a co-operative institution. Due weightage will be given to the successful completion of courses organised by the Central Commerce for Co-operative Training at its training centres.

(iii) **Economic Assistants, Agricultural Credit Department:** High second class Master's degree or a first class Bachelor's degree in Economics or Commerce of an Indian or foreign University. Specialised study in Rural Sociology will be an additional qualification. Due weightage will be given to the successful completion of the courses organised by the Central Committee for Co-operative Training at its training centres.

Note: Experience in community development, small scale and cottage industries, marketing, training and publicity, co-operative societies, co-operative departments, etc. will be given due weightage for the posts in the Agricultural Credit Department and knowledge of regional languages such as Hindi, Bengali, Oriya, Gujerati, Urdu and Assamese will be an additional qualification.

(iv) **Probationary Assistants, Legal Department:** Applicants should be advocates or Solicitors and should possess in addition to high academic qualifications in Law, practical experience of work in an Advocate's or Solicitor's Office or have practised independently, for at least 5 years. Preference will be given to candidates having M.L. or LL.M. or other equivalent qualifications and special knowledge of banking and company law.

THE SELECTION BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POSTS AND ONLY CANDIDATES WHO POSSESS HIGH ACADEMIC QUALIFICATIONS AND ADEQUATE EXPERIENCE OF THE TYPE SPECIFIED ARE ADVISED TO APPLY.

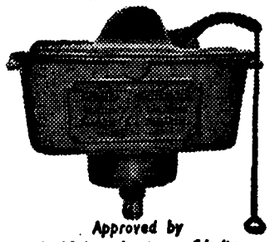
2. Candidates who wish to apply for more than one category of posts must submit **separate** applications accompanied by separate application fees and **should clearly indicate the post and the department for which they have applied.**

3. Applicants for all the above posts except Economic Assistants must remit with their applications a fee of Rs. 7.50 for each category of post in each department by cheque or bank draft on a **Scheduled Bank** payable at Bombay or by postal order. Applicants for the posts of Economic Assistants must remit a fee of Rs. 2.00. **The application fee is in no case refundable.** Bonafide refugee candidates **not in employment** applying through the Employment Exchange are exempted from payment of application fees while in the case of candidates

belonging to Scheduled Castes/Scheduled Tribes, the fee will be reduced to one-fourth.

4. Applications in the candidate's own handwriting in the prescribed forms obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore, Lucknow, Trivandrum and Patna accompanied by copies (**originals should not be sent**) of **at least** two testimonials, **and copies of statements of marks secured in the Graduate and Post Graduate degree examinations** should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1 so as to reach him on or before the 7th September, 1960.

5. **Candidates should also indicate in their applications whether they had applied previously for a similar post in the Reserve Bank and if so with what result.**



6. **Candidates already in service must submit their applications through their employers.** Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact **prominently** in their applications and also enclose a copy of a certificate to that effect from a competent authority.

7. Selected candidates must be prepared to serve in any office of the Bank in India and to undertake tours when required.

8. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

9. If any candidate desires to have his application acknowledged, he should send it by "Registered Post—Acknowledgement Due". Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

M. Ct. Muthiah, Chairman — C. P. Doraikannu, General Manager

Company Meetings

THE NEW GREAT INSURANCE COMPANY OF INDIA LTD.

SPEECH OF MR. TULSIDAS KILACHAND

Mr. Jehangir P. Patel presided over the 17th Annual General Meeting of the shareholders of the Company on the 30th July, 1960, in the unavoidable absence of the Chairman, Mr. Tulsidas Kilachand, and delivered the speech prepared by the Chairman for the occasion. In his Speech, Mr. Tulsidas referred to some of the problems facing the Insurance Industry.

Mr. Tulsidas Kilachand expressed his disappointment at the decision of the Executive Committee of the General Insurance Council to continue the status quo as regards the Code of Conduct which, he felt, would not help in improving the market conditions. Controls merely led to ingenuous methods to circumvent them and this was exactly what had happened in General Insurance Business, with the result that after ten years of the Code, we were witnessing the sorry spectacle of Company after Company closing down. The only course open to assist the Industry was to remove all provisions of the Insurance Act restricting commission, cost etc. As in the United Kingdom, companies should be free to operate solely on the motto of "Freedom and Publicity".

FIRE PREMIUM RATES

Mr. Tulsidas went on to point out that, as was feared last year, the worst had happened and Government had finally decided to reduce the Fire Insurance rates from 1st January this year. He felt that it would have been more prudent had the rates been reduced wherever experience had shown favourable claim results. As it was, the indiscriminate reduction might well turn out to be a disastrous step from the point of view of the Industry as a whole, particularly in the context of the large number of recent fires. He asked the Insurers to adopt a firm attitude against any move for further reduction and also not to hesitate to make upward revision should the results warrant.

GOVERNMENT CONTROLLED INSURANCE BUSINESS

The Chairman made a passing reference to the steps taken by Government to gradually deprive the non-governmental companies of their shares in the Government-controlled insurance business, which he felt was most unfair.

Mr. Tulsidas also took the opportunity of disclosing to the shareholders the happy news that the Company had taken up on hand the construction of the building on Backbay Reclamation which was expected to be completed in 1962.

COMPANY'S ACCOUNTS

Dealing last with the departmental accounts, Mr. Tulsidas stated that the gross direct premium for the year 1959 was Rs. 38,08,922 in Fire, Rs. 27,16,256 in Miscellaneous Insurance, and Rs. 34,42,771 in Marine, whilst the net premiums were Rs. 35,87,510, Rs. 25,90,585 and Rs. 18,16,985, respectively. After providing for losses and expenses and reserves at 50 per cent in respect of Fire and Miscellaneous Insurance, and 100 per cent for Marine, the net amount to the credit of the Profit and Loss Account in all was Rs. 4,31,804. The Directors had transferred Rs. 40,000 to Staff Gratuity Account, Rs. 1,00,000 to General Reserve and Rs. 17,602 to Investment Reserve, and they proposed to pay Eleventh Dividend on Ordinary Shares at Rs. 2.50 per share less deduction of income-tax, amounting to Rs. 2,50,000.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting of the Company.

INDIAN INSURANCE COMPANIES ASSOCIATION

Shri Jayant Dalal Surveys Current Problems

Surveying the recent trends in general insurance business, Shri Jayant S. Dalal, Chairman of the Indian Insurance Companies' Association, while presiding over the 32nd Annual General Meeting of the Association held on the 2nd August, 1960 at Bombay, observed that the slight improvement in the rate of growth in general insurance in relation to industrial production in the country, which had taken place in 1958, was heartening. But he felt that it was doubtful whether this improvement would be maintained in 1959, the final figures for which had not yet become available. A notable feature in the general insurance field in the 1953-58 period was that the share of Indian insurers in the total business had steadily increased.

Shri Dalal, however, felt that in the last five years the expansion in general insurance business had not, by and large, kept pace with the country's economic growth. Besides, the field was dominated by a few big units; the big-sized units were becoming larger and the growth of the small and medium-sized units was stunted. The larger and more powerful units, having the benefit of tied accounts, had therefore to adopt the principle of 'live and let live' by concentrating their energies on creating new business.

In the interests of creating strong groups of insurers, Shri Dalal welcome any movement towards voluntary amalgamation of insurance offices — that is, free from any official compulsion. Any attempt to thrust amalgamation on unwilling units would defeat the purpose it was intended to serve.

Shri Dalal called attention to the worsening of the situation in the insurance market, reflected in the closure of a number of companies in the past few years. If in spite of the increased business potential,

several companies had found it unprofitable to carry on, it could be only because of some basic disorder in the trade.

Shri Dalal next referred to the working of the Code of Conduct. Although it had led to some improvement in the trade, such undesirable features as wasteful competition and rebating still continued. He urged the reduction in the number of intermediaries between the client and the office and the setting up of an Administrative Machinery closely associated with the trade and comprising experienced personnel with sufficient authority to enforce the observance of the Code. The companies, on their part, should be prepared to accept any constructive suggestions or regulations that might be put forward in the interests of the trade as a whole. He felt that the existing formula for expenses of management under Section 40C of the Insurance Act and Rule 17E was a major factor responsible for the present scramble for business. Since even companies, well within the solvency margin and with large reserves, had received warnings for breach of the Section, it was worth considering whether the right course would not be an increase in the limits prescribed under the Act or some new formula not necessarily correlated with the quantum of direct business.

Proceeding further, Shri Dalal felt it was unfortunate that the authorities had not implemented the Taxation Enquiry Commission's suggestion that the insurers should be allowed to add five per cent of their annual premia to the reserves every year, free of tax, until the reserves reached 75 per cent of annual premia in fire and miscellaneous business and 150 per cent in marine and aviation hull business.

COMPANY AFFAIRS

THE TATA HYDRO-ELECTRIC, THE ANDHRA VALLEY AND THE TATA POWER

The Tata Hydro-electric system occupies a unique place in the family of Tata enterprises as well as in the industrial map of India. It was, perhaps, the first large-scale project for directly conserving rain water. About fifty years back the Tata Hydro-electric Power Supply Company Limited was launched and later on the other two, the Andhra Valley Power Supply Company Ltd. (1916) and the Tata Power Company Ltd. (1919) were launched. Passing through many vicissitudes, the three undertakings operating as an integrated system, have served the country efficiently. The Tata Electric System proposes to celebrate its jubilee in three-fold manner: in the first instance the companies have decided to pay a sum of Rs. 1 lakh to finance scholarships for research at the Indian Institute of Science at Bangalore on problems connected with electric power. Secondly, all the employees of the three companies without consideration of rank and status are to be given a State Prize Bond worth Rs. 100 each. The total cost of this account will be shared proportionately by the three companies. Apart from this an extra half per cent dividend has been decided to be paid to the shareholders of all the three companies.

The year ended March 31, 1960, registers in the case of all three companies larger profits, except in the case of the Tata Hydro Company, where the increase in revenue from power supply is more than offset by the additional tax provision, which is relatively higher because there was no unabsorbed development rebate carried forward from previous years, as was the case with each of the other two companies. While the financial position of the companies was sustained satisfactorily, the capital base increased and activities and revenues considerably expanded, the market value of the shares of three companies registered a substantial fall during the year. In the case of Andhra, the price of the Ordinary shares actually went below par, a thing which had not happened for nearly twenty-five years in the history of the Group's shares which once stood at a considerable premium.

Considering the buoyant tone of the share market as a whole, the drop in the value of the three companies' shares clearly reflects the loss of confidence in these scrips which has resulted from the stringent limitation in profits and other restrictions imposed upon Public Utilities by the Electricity (Supply) Act and, more recently, from the introduction of the tax on dividends under the Finance Act, 1959. The Directors have pointed out that the Federation of Electricity Undertakings has continued to press the claims of the industry for an improvement in the permissible return on the capital base, either by permitting the tax on dividends to be regarded as legitimate expenditure for calculating the reasonable return and clear profits or by increasing the standard rate of return. In view of the wider capital base it is hoped that sympathetic consideration will be given in the official circles.

BALMER LAWRIE AND CO.

Trading results of the Company for the year to December 31, 1959, were fairly satisfactory as was also the income from investments and managing agency remuneration. The Directors paid an interim dividend of 5 per cent on December 31, 1959, amounting to about Rs. 4 lakhs. A final dividend of 20 per cent has been proposed to be paid which will absorb a sum of little over Rs. 16 lakhs.

Of the subsidiary companies the Bengal Flour Mills recorded successful working and there was an increase in its dividend distribution. Bridge Roof & Co. (India) Ltd. recorded satisfactory results and the plans for further reorganization of its works are being implemented. British India Electric Construction Co. recorded a fall in profits. The Indian Galvanizing Co., which is in the process of being reconstructed, should be completing its reconstruction programme in the near future. Balmer Lawrie & Co. (Pakistan) Ltd. is being wound-up by a Members' Voluntary Liquidation which commenced from April 1, 1960.

As far as the Associated Companies are concerned, in Assam Pulp Mills the Company has borne the major part of the preliminary expenses in connection with the establishment of a pulp manufacturing plant. During the year under review the Company has given an undertaking to take up a further 3,27,500 Ordinary Shares. The Company resigned its office of Secretaries and Treasurers of the Bengal Paper Mills Co. Ltd. with effect from April 28, 1960. This brings to an end a connection with the management of the Bengal Paper Mills which lasted over 70 years. The Company has contracted to sell a substantial portion of its investment in the Bengal Paper Mill Co. Ltd.

Are You a Small-scale Industrialist?

This will interest you

To help small scale industries fulfil their role in the country's developing economy, the State Bank, in collaboration with other interested institutions, put into operation in 1956 a Pilot Scheme at a few selected centres to make available to them co-ordinated credit facilities.

The scheme has worked well and the Bank is now in a position to offer, at all its branches, liberalised facilities which were originally made available only at the Pilot centres.

If you require financial assistance, why not talk things over with the Agent of our nearest Branch? He will welcome the opportunity of assisting you and will be glad to forward your application, if need be, to the appropriate Governmental and other authorities.

Independence Day: 1960

THE celebration of Independence Day this year has lacked, at least in Delhi, both warmth and confidence. It is true India's fourteenth Independence Day cannot have the right of August 15, 1947. Custom can certainly make stale the formal proceedings such as the Red Fort speech and the normal Independence Day meetings. The absence of the usual crowds at the Red Fort and elsewhere is also partly attributable to inclement weather. A cloud seemed to hang over all proceedings. But when all this is said and done, there was no mistaking the fact that Independence Day, 1960, lacked something in the people's minds. The question is being asked: has the bitterness of Central Government employees flowed over to public feeling generally?

There are some who are prone to argue that there has been a decline in the Prime Minister's personal prestige and the top leadership of the Congress Party. *The Eastern Economist* does not believe this to be true so far as the Prime Minister personally is concerned; it has also argued recently, following the imaginative handling of the general strike by the Central Government, that Congress stock has never been higher. There are, it is true, the pressures of economic events, particularly of the prevailing high prices, which have produced discontent, but the present psychology of indifference to Independence Day is much more a reflection of misgivings within than an immediate criticism of either political leadership or economic pressures. Perhaps a certain habit of doubt on the capacity of the country to fulfil the Third Five-Year Plan has something to do with the lack of enthusiasm which cannot be denied.

There are some who consider that the Third Five-Year Plan can be implemented with the institutional framework and the agencies that have done relatively well in the Second Five-Year Plan. There are others — *The Eastern Economist* is among them — who believe that far greater participation by the people of India is necessary with a far greater display of small private entrepreneurship, if the economic system is to invest and produce in the next five years at a rate equal to that of the last decade. There has been, in the first two Plans, no great widening of the base of the active agents of India's political and economic systems. There has, inevitably, been inequality in the distribution of economic progress in the last ten years. But it is doubful if this inequality would have been so keenly resented but for the fact, firstly, that with rising prices, the burden has been made for many to look much greater and, secondly, with the lack of participation of millions, the feeling has been engendered that the adventure of India is confined to the few and not a vast mobilisation of the many. A social and institutional revolution was held in suspense while expansion of existing institutions greatly increased the power of those in authority. Therein lies much of the malaise which has shown itself this week.

The broadening of the base of participation in India's economic effort is a condition of the dissipation of the lethargy which non-participation has generated to a large degree. Much of the greater area for this participation is required in the countryside — particularly in the Community Development blocks — and in the particular field of agricultural production, which can properly be made the banner of a great national effort, conceived as a war effort, designed to abolish primary poverty and destitution in the Indian sub-connent. Alongside, there must be a far greater programme for small industries, properly designed and adequately serviced. On this Independence Day, it has become clear that those that stand without can be left in stagnation only at the peril of all. To the intellectuals of India dedication can take no higher form than this incorporation of the great mass of Indian citizens in the great Indian adventure.

Exit: Russian Crude?

IT is certainly a curious convention which is being allowed to grow up in India's Parliamentary system that major statements of policy are elicited in reply to questions. This was grotesquely illustrated on August 8, when Mr. K. D. Malaviya, Minister for Oil and Fuel, made a vital statement on the policy in regard to the import of Russian crude oil, as though it were an issue of simple routine. Few Members of Parliament were aware of the tremendous stir which had been created in at least three leading capitals of the world by the controversy initiated by the Minister for Oil and Fuel in regard to the import of Russian crude for rupee payment at prices deemed to be substantially lower than world prices. Not, indeed, that the Minister was in error in exploiting a situation favourable to both our foreign exchange and rupee accounts. The fact that the oil companies responded so well by two reductions surplus of oil which has only made itself evident in the last six months, but nobody in India will deny Mr. Malaviya credit for applying pressure vigorously at what might be called a strategic time. The fact that he has had, after full consideration of the current position, to decide against the import of Russian crude, may, however, have displeased the Russians, with whom the Minister was anxious to extend his commitments. The whole question is now invested with high political overtones, particularly as a similar problem in Cuba has, fairly and squarely, placed that country in the heart of the Cold War.

The Indian Cabinet was obviously wise, in the circumstances in which it found itself, to prevent the Ministry of Fuel from pursuing the policy of using the threat of import of Russian crude to effect a departure from existing agreements. The

prices, might deem now that they have scored a partial success over the Minister, by rejecting outright his suggestion for refining Russian crude. The end of the negotiations, whilst having obtained substantial advantages for the Indian exchequer in terms of prices (which may or may not have occurred on their own), leaves the oil companies secure in the belief that their negotiated agreements will not be unilaterally disowned and the Russians are, at least for the present, outside the Indian crude oil business. With limited possibilities of distribution, and with problems of prices still unsettled, it is difficult to know to what extent the Russians are in the refined products market, though the arrival of the first consignment on the 19th of this month might appear to be some consolation to offset the major defeat on the import of Russian crude.

While the general public will be mystified at the curious ups and downs of these negotiations, it will generally record the wisdom of the Central Government's action in, firstly, underlining the fact that it will honour all agreements reached with oil companies and, secondly, not running the risk (even to save foreign exchange) of a strategic weakening of our vital sources of oil at a time when some many unknowns exist. Even the price situation is clouded with doubt. It is not generally known that the crude that has been offered by the oil companies, sometimes even at a higher price, is competitive with the Russian crude in terms of India's demand for separate products. For sometime past, India has found it more economical to employ Iranian crude at a substantially higher price than Kuwait crude because the chemical composition of this crude was favourable to expanding the volume of middle distillates urgently required. First indications are to the effect that out of the four Russian crudes offered, two were removed from practicability in that they were far in the interior near the Ural mountains and the other two from Baku had a large freight disadvantage compared to oil delivered from Persian Gulf. While the Russians escape the costs of royalty payable to the Middle East countries, the freight disadvantages and some of the chemical properties of their oil would appear to offer us no price advantage.

On the foreign exchange issue, which is probably the most vital of all, a much more detailed examination is necessary. This will be attempted in our issue of September 2, where a Blue Supplement is being added to deal with the pattern of refined products required in the Indian Union at the end of the Third Five-Year Plan. A study published in June this year by the Economic Intelligence Unit of the Indian Institute of Public Opinion suggests that the demand of refined products, particularly in view of the likelihood of both power and coal shortages, would be in the neighbourhood of 14 million tons by 1965-66. If this calculation is reasonably correct, the decision not to add to refining capacity for the moment is obviously perverse, because this would merely enhance our foreign exchange bill for inescapable supplies. Undoubtedly, the offers made by the oil companies to add to their refining capacity need to be reconsidered in terms of a new foreign exchange calculation based on the reduced crude prices. It surely is not impossible to find some level of discounts on crude at which it is in India's interest, notwithstanding foreign exchange required for crude imports, to install additional private refining capacity.

All in all, the decision on Russian crude is only one step in a series of measures designed to place India in a viable position in regard to her energy requirements in the Third Five-Year Plan. Much more constructive thinking needs to go into this subject, which has only been perfunctorily treated both by the Planning Commission and the Ministries of Fuel and Power.

Atomic Energy: Agonising Reappraisal

SPECULATIONS over the first nuclear power station to be established in this country were set at rest when the Prime Minister confirmed in the Lok Sabha last week that it would be established at Tarapore in Maharashtra. Mr. Nehru also indicated that it was Government's intention to go ahead with the construction of more nuclear power stations. Apparently, the object is to push forward the programme of completing one million kilowatts of nuclear power by the end of the Third Plan. This calls for an agonising reappraisal. The question is not over the merits of atomic power as such, but whether it should be pursued with a sense of urgency that is unrelated to the economic realities of the situation. Ultimately, it boils down to a question of priorities when scarce resources have to be allocated among competing demands for subserving the wider needs of the country. An atomic energy programme, it should be made clear, cannot rest on sentimental grounds alone; and it plays no part in our military strategy. It should be on the basis of cost and whether it is economical vis-a-vis conventional fuels or power.

The Atomic Energy Commission bases its case for a nuclear programme on the ground that the resources of conventional fuels will not be able to meet the power needs of the future It estimates that the total hydro-electric capacity in the country is of the order of 40 million kwts. and by 1986 not more than 75 per cent of it could be harnessed. The total installed electric capacity by 1986 is, however, expected to be 50 million kwts. It has, therefore, argued that since the limited coal resources cannot meet, in any large measure, the electric power needs of the future, there is need for resorting to nuclear power. It may be conceded that in the very long run, the estimated coal reserves in the country may not be able to meet the heavy demands for power, but there is nothing to warrant the belief that in the next 25 years the potential resources of conventional fuels will not be adequate for the country's growing needs. In fact, a recent study on "Energy Demand" by the National Council of Applied Economic Research has contended that these resources could even last for a long period thereafter. One has also to take into account that with new discoveries of oil, the potential supply from this source is of considerable importance and even in the generation of power the oil resources are bound to play a more important part.

The point, therefore, to be decided is not about the unavailability of coal but whether it would be economical to depend on it and if it is not so, whether alternative sources would be more feasible. Here, various estimates have been given but even according to Dr. H. J. Bhabha, the capital cost of a thermal station is roughly about Rs. 1,000 per kwt. and for pure hydro-electric projects such as Rihand, Koyna and Kundha, the total cost per kilowatt is over Rs. 1,700. On the other hand, the cost of a nuclear power station is placed at Rs. 1,700 per kilowatt which is 50 or 100 per cent higher than a thermal station, but does not compare favourably with that of hydro-power station. There is no reason to believe, that the capital cost, as estimated by Dr. Bhabha for a nuclear plant will remain as low as Rs. 1,700 per kwt. It may perhaps be valid in regard to stations that are very large and the cost may be more economical. But it has to be recognised that recently certain factors have been altering the competitive position of nuclear power. For instance, the higher interest rates of the past few years have made the high capital cost of nuclear installations more onerous. In addition, such plants have in most cases proved more costly to construct than estimated. Recently in Britain, there has been a cut in the atomic power programme, since it was found that the supply of coal has been more plentiful and oil supply prospects, with a reduction in prices, have also improved. What is more important, it has been found that the cost of building thermal power stations has been virtually halved, and the difference in the cost of electricity from a good thermal power station and from an atomic one has widened to as large as 60 per cent. In the case of India, there is the additional factor that the economic utilisation of exceptionally large power reactors will be rather difficult because of the dispersed nature of power demands.

In considering the question of capital outlay, there is an important aspect to be considered and that is the question of foreign exchange which has now assumed serious proportions. Writing recently in the US magazine "Bulletin for the Atomic Scientists", a writer pointed out that an atomic power station would cost three times the cost of the conventional power projects from the point of view of expenditure on hard currency. He has estimated that the foreign exchange component of a nuclear power station would be $540 to $780 per kwt. compared with $140 or 150 a kwt. for a conventional hydro or thermal power plant. The proposed plant at Tarapore with a capacity of 300,000 kilowatts, which is expected to cost about Rs. 51 crores, will obviously involve a large foreign exchange outlay. On the basis of cost, it is conceivable that the country can have twice the output of power from a thermal plant for the same expenditure. The time for second thoughts is now as a serious error is being made. It is only proper that a competent commission of experts and not the Atomic Energy Commission should go into the matter.

Company Contributions to Political Funds

IT was not to be expected that the highly controversial subject of contributions by joint stock companies to the funds of political parties should escape the attention of the Select Committee during its discussions on the Bill to amend the Companies Act, 1956. As many as seven members of the Select Committee have appended either independent or collective notes of dissent in which they have recorded their strong disapproval of the statutory provision which permits companies to contribute to political funds. Two important points emerge from these notes. One of them highlights the fact that the original prohibition in the Company Law against such contributions was removed and an amendment enabling contributions to be made was inserted at the instance of the present ruling party. Secondly, the amendment proposed by seven dissenting members to ban the contributions was rejected by the Select Committee on the strength of the majority drawn from the ruling party. Thus it was that the party in office was put in the dock when the issue was raised for reconsideration at the Select Committee level.

The objection to the statutory permission to companies to contribute to political funds is familiar. In essence it boils down to the unanswerable contention that contributions by companies usually aim at securing favour at the hands of the party in power, which is the principal recipient of such aid and in consequence political corruption is fostered. The Calcutta and Bombay High Courts, which had occasions about four years ago to consider applications of certain big companies for amendments to their Memoranda of Association enabling them to contribute funds to political parties, have expressed the view that this practice is fraught with danger in an immature democracy. The amendments to the Memoranda were granted by both High Courts but with obvious regret.

The amendment proposed by the Sastri Committee to Section 293 of the Companies Act requires that the fact of such a contribution having been made by any company should be specified in the Statement of Profit and Loss Account, setting out the particulars of the amount given and the name of person or persons or party or political association to whom the donations have been made. [illegible] the amendment, the closure would remove the objection of secrecy. The proposed amendment, although it marks an improvement over the existing provision, can hardly be said to go far enough because disclosure becomes a post-facto intimation which gives shareholders a notional satisfaction of knowledge. In this context it has been stressed that large amounts may be involved in some cases in view of the fact that the ceiling on donations to political parties has been fixed at Rs. 25,000 or 5 per cent of the net profits, whichever is higher.

Post-facto publication does not remove the original objection to such donations. Shareholders subscribing to the capital of a joint stock company can hardly be expected to be of one political mind, owning allegiance to the ideology of only one political party. Such a disclosure in effect deprives shareholders, who are reluctant to approve of the contributions to a particular party, of their right to record dissent. A straightforward procedure demonstrating the voluntary nature of contributions would require that such contributions should be made subject to approval at special general meetings of shareholders. It would also be advisable to reserve the right to dissenting shareholders not to make involuntary contributions. Such a reservation cannot be said to impinge on the ordinary discretion of the Board of Directors to conduct the business of the company inasmuch as making contributions to political parties does not constitute a normal part of the functions of a company.

The fundamental objection to company contributions, however, rests on the ground that in reality such contributions in a vast majority of cases are not spontaneous, but induced under some pressure. The burden of election expenditure is too onerous for the ordinary sources of income of any political party to bear. It is idle to deny that exigencies of election expenditure are at the root of the curious defence of the propriety of allowing companies to make contributions to political funds. These do not seem necessary for the proper information of the electorate; but, even if they were, equity should require they are not biassed in favour of a particular party. Who can deny today that the Congress Party is the main beneficiary of this provision? This is a travesty of its fair name; it is not on forces such as these that Mrs. Indira Gandhi built the Congress [illegible]

A DELHI DIARY

THINNER CROWDS

INDEPENDENCE Day came and went almost like any other. The Red Fort celebrations were clearly less attended, and, if I mistake not, so was the Vice-President's At-Home. Since nothing is so interesting to us as ourselves, the unusual behaviour of the Indian people has naturally been the subject of animated debate. As "The Eastern Economist" has delivered itself on this subject in the first leading article—I had almost said pontifically—there is nothing left for me to say. But I think this repeated discussion about ourselves is one of the most unhealthy things that is occurring at the present time. Who would have thought that instead of discussing the problems of the Third Plan—and, of course, the residual legacies of the Second, particularly foreign exchange—we should be looking backwards all the time. Are we the giants who are supposed to do the great take-off in this decade? If this introspection is widespread—which I deny—India will not take-off. Happily, taking off—I am told (not by Professor W. W. Rostow)—is not primarily concerned with the dismal desponds who abound at the hour of ascent; that is why, I suppose, revolutionary fever occurs not at the nadir but, as Lenin proved, some considerable distance above it. In any case, the men (and women) who do things seldom have the time to think about why other people are dismal and why they grumble.

MORE ABOUT PALAI

For the grumblers, the crash of the Palai Central Bank has provided wonderful fuel. I fear Mr. Gopala Reddy, Minister for Revenue and Expenditure, merely added additional fuel to the fire when he talked on Tuesday about the Reserve Bank not providing any guarantee for "unlicensed" banks. The very next day a spokesman of the Finance Ministry explained that the Reserve Bank did not provide a guarantee at all, and a licence was something quite different. Incidentally, no one has yet discovered what the difference really is, and whether the Minister was just being ill-informed. But the pressure of public opinion has already driven the Government, after consultations with the Governor, to send for the Deputy Governor of the Reserve Bank and for the Chairman of the State Bank of India. They are all here at the moment and I dare not say that too many cooks will spoil the broth. The broth has been spoiled already, and I think a large assembly of cooks is, in any case, required to rescue us from the current muddle. Can it be that the rescuing of banks is as impossible as the unscrambling of scrambled eggs? I hear encouraging noises which suggest that the impossible is to be accomplished after all! I make bold to stick my neck out (as the Americans say). The depositors of the Palai Central Bank will be gloriously surprised before the end of this month. Such, it seems, in the Socialist pattern of society is the inevitability of (gradual) victory for the small, but happily numerous, voters!

ACTION AND REACTION

Since I am facing all the perils of prediction, I might as well hedge against my optimistic conclusion on the Palai Bank with a cheerless view of the official discussions now taking place between the officers of the External Affairs Ministry and the Chinese officers on the border question. The Delhi newspapers dutifully carried the photographs of the visiting Chinese officers, but no one has expressed any optimism or even interest in their impending talks. It seems that the forms of challenge and response (vide Toynbee) have to be gone through in Delhi as well as in Peking for the ritual to be complete. At present I predict that only the ritualists will be satisfied. But one response to China's challenge is certainly greater friendship with Pakistan. The Prime Minister although he is not directly connected with this, has clearly made up his mind about the continuing tension in the Sino-Indian relations.

This is what gives special meaning to the Prime Minister's decision to go in the third week of September to Karachi for the signing of the Indo-Pakistan agreement on the sharing of the canal waters. Seeing that we have lived for many years with this dispute, the complete agreement which has now been reached cannot be treated as an isolated affair. It is true, President Ayub Khan's Independence Day broadcast has attracted unfavourable comments, particularly from Dr. Kunzru; but everyone now feels that the stars in their courses are working for Indo-Pakistan amity. The time may never come again when two men are as happily placed to take major responsibility in their respective countries as Prime Minister Nehru and President Ayub Khan. Most people here feel that the time is still not opportune for an agreement on Kashmir, but it will be wonderful if at least—as in the case of the canal waters — a new formula is devised to keep differences narrowing over some years. I had expressed the hope in my last Diary that the Prime Minister would be in office upto 1967. One can, therefore, look without alarm at a Five-Year Plan for Kashmir which ends in complete agreement. Only I hope it will be possible for us not to keep taking away Ambassadors from Pakistan merely because fears loom large in others' eyes. Mr. Rajeshwar Dayal's term has been promising, and enough for us to believe that he has still an important role to play there. However, no one need dispute the point that the Prime Minister and the President are sufficient on to themselves so far as a solution is concerned. Let greatness rest where greatness is!

SAVING WHOSE FACE?

As a tailpiece to this diary, may I make a brief (and obviously insufficient) reference to the Prime Minister's forceful speech in the foreign policy debate in the Rajya Sabha on August 18. He accused China of violating Panch Sheel by directly entering into a campaign through the Press, thereby, if I might say with due respect, impinging Indian foreign policy which for many years was Panchsheelistly naive in respect of the People's Republic of China. But it is not to commit the heinous crime called 'I told you so' that I am mentioning this speech. The most interesting portion in the debate referred to the road-building programme on which the Prime Minister said that "the procedure evolved would result in the roads being built in one-third or one-fourth of the time that the normal P.W.D. procedure would take". Can such a damning admission be made, and the P.W.D. procedure left intact for less arduous exercises? If it is a fact that "procedure" can be cut down to a fourth in road-building, what justification has it for continuing to exist at all? Will not the Prime Minister explain why P.W.D. procedure takes four times the simplified procedure now devised, and more importantly, what action he proposes to eliminate P.W.D. procedure once and for all. The net effect of the foreign policy debate on my mind has been that the Chinese have done us a remarkable service by directing our attention to the inadequacies of our administrative apparatus. Had the border dispute not arrived, who knows road-making on the border would have taken four times the time, and I do not know how many times the cost. And, of course, there is what Keynes calls the 'multiplier effect', although I have not yet been able to understand exactly what one multiplies by what!

ARGUS.

THE WEEK'S NOTES

Cyprus

A NEW REPUBLIC IS BORN

ON TUESDAY this week, the little island of Cyprus in the Mediterranean, hardly one-seventh of the size of Ceylon and having a population of just six lakhs, became free of British rule extending over the last 82 years. The new Republic will remain an independent Commonwealth country until a final decision is taken on this question. Thus comes to an end the long years of crisis which in 1958 was climaxed by violence, murder and communal riots. This, however, brought a new sense of urgency to a settlement of the Cyprus problem among the concerned participants, namely, the British, Greek and Turkish Governments. The documents initialled in Nicosia early in July this year were meant to maintain the future relationship between the new Republic and its former masters on an enduring basis. A remarkable feature of the birth of the new Republic was that the conditions of its independence were explicitly defined. Thus, the British Government will have sovereign base areas comprising 99 sq. miles and one of the conditions of transference of sovereignty lay in

allowing Britain to have bases in full sovereignty. Not only the British have been left with sovereign areas, but they have also been allowed extensive facilities and rights throughout the island. Another feature of the agreement is that the dream of 'enosis' (Union with Greece) has been finally given up by the Greek Cypriots Lastly, the British Government have agreed to provide to the island over the next five years £12 million and the amount to be paid in future five-year periods would be determined after full consultation with the Republic. It is estimated that this gesture of Britain will amount to making a grant of about £5 per head of the population. When it is remembered that during 1958, the cost of emergency was of the order of £10.5 million, it cannot be gainsaid that the British Government has not been extravagant in the financial aid it has now offered. The strength of the Cyprus settlement lies in the fact that all the three parties have a stake in making it work and if the Cypriots, both of Greek and Turkish origin, remember that it is also to their own individual interest in making it work so that self-government may bring back peace, stability and progress, there is no reason why the young Republic should not advance on the course it has charted for itself.

Press

REGISTRAR'S REPORT

THE LATEST annual report of the Registrar for Newspapers is notable for three new distinct features. One is that unlike in the past years, this report has been able to collect necessary data about 5,232 newspapers out of 7,651 on the Press Registrar's record. In view of the fact that out of 2,419 papers in respect of which annual statements were not received, 467 were, strictly speaking, not newspapers and 623 were new publications and some more may have ceased publication towards the end of the year, it is claimed that the information given in this report covers nearly all continuing newspapers. This is indeed a great advance over the earlier reports when information was less comprehensive. Secondly, in the study of this year, the suggestion made by UNESCO for compilation of data has been incorporated for getting a clearer picture of the press. Thus newspapers have been broadly divided into two categories, namely, General Interest Newspapers and Periodicals. Thirdly, an attempt has been made this year to get a breakdown of the number of copies sold and distributed free. The total average circulation of the 4,738 newspapers and periodicals in various languages about which data were available during 1959 was 172.70 lakhs as against 144.28 lakhs commanded by 4,559 papers during 1958. The details are shown in the table below:

	No. of papers		Circulation (in '000)	
	1958*	1959	1958*	1959
I. G.I.N. (A)				
(a) Dailies	340	318	38,19	42,81
(b) Non-dailies ..	30	29	3,44	4,28
II. G.I.N (B)**				
(a) Dailies	33	51	35	15
(b) Non-dailies ..	13	14	5	15
III. Total of I (a) and II (a) incl. Sunday papers ..	382	379	41,13	46,86
IV. Grand Total (all categories)	4,550	4,738	154,28	172,70

* Revised.

** 'B' category includes publications that are strictly speaking not newspapers such as market reports, school magazines etc. The rest are in 'A' category.

As in the past, during the last year also, one finds that English newspapers commanded the largest circu-

lation. Their position as compared with that of the Hindi papers is shown in the following table.

(Circulation in 000's)

Classification	English		Hindi	
	1958	1959	1958	1959
1. G.I.N. (A) ..	1,190	1391	642	605
2. G.I.N. (B) ..	10	21	3	3
3. Periodicals ..	2,347	2585	2556	2,945
Total of (1, 2 &3)	3,547	3,997	3,201	3,553

The study of ownership shows that during 1959, the number of newspapers controlled by chains, groups and multiple units and their total distribution increased substantially. Thus their number increased from 487 in 1958 to 607 in 1959, and their circulation from 64.08 lakhs to 70.07 lakhs. However, the percentage of the total circulation commanded by them did not correspondingly move. As a matter of fact, there was a decline in the percentage of the total circulation commanded by these units from 41.53 to 40.57. This is due to the fact that the rise in circulation of individual newspapers was considerable. Even then it remains that 12.81 per cent of the newspapers among themselves commanded 40.57 per cent of the total circulation last year. This is no doubt not a very healthy state of affairs. However, it would be unwise to draw any conclusion based on this particular form of ownership that it impinges on the freedom of the Press, because as a study by the PEP (Political and Economic Planning) last year pointed out in Britain, it still remains to be seen whether apart from individual proprietorships, trusts can be more successful in preserving and developing the independence and character of a newspaper. For the fact remains that there is no way of controlling the future conduct of a newspaper by legal arrangements, whether as trusts or in any other form. It is therefore unfortunate that the new Ceylon Government, even while deciding on a Press Commission, should have hastened to announce plans to take over the country's two largest newspaper groups.

Shipping

THIRD PLAN ALLOCATION

THE PLEA of the Congress Parliamentary Party, contained in a resolution passed by it last week, that India should make every effort to increase its shipping fleet substantially during the Third Plan period will undoubtedly receive wide support in the country. It reiterates the contention of the National Shipping Board — and of "The Eastern Economist" — that the allocation for shipping in the Draft Outline of the Third Five-Year Plan is woefully inadequate and needs to be stepped up appreciably.

A major development has taken place in the recent past which necessitates an immediate review of the situation by the Planning Commission. As pointed out by the resolution of the Congress Parliamentary Party, there is no reason why India should not take advantage of the fortuitous circumstances created for augmenting its shipping capacity by the recent Indo-US food deal. Under this deal, India will be importing, in the next four years, 17 million tons of foodgrains, the cost of shipment of which will be nearly Rs. 80 crores. India can save half this cost if it could carry in its bottoms, as it is entitled to, half of this cargo. With the present strength of its fleet, it can only save to the extent of Rs. 5 crores. Cannot the Planning Commission step up the allocation for shipping in the Third Plan at least by Rs. 35 crores, the amount that India will have otherwise to spend in foreign exchange on the shipment of its share under the deal? Surely, it can. By only a slight readjustment in the proposed allocations under some heads, sufficient funds can be made available for development of shipping, which will yield immediate returns in the form of saving valuable foreign exchange.

Apart from this, there is another factor that ought to weigh with the Planning Commission in making a larger allocation for this industry in the Third Plan. There is a buyers' market in ships today and India can save a good deal in investing in shipping now when prices are low. Shipping is one of the very few industries where investment can be recouped in a short space of time. A much greater investment than Rs. 55 crores tentatively allocated by the Planning Commission in the Draft Outline of the next Plan for this industry is thus obviously justified.

Wanted Editorial Staff

For A Financial Daily In Bombay To Be Started By The Express Group "THE FINANCIAL EXPRESS".

The requirements include Leader Writers, Sectional Editors, News Editor, Sub-Editors, Reporters, Market Correspondents, Representatives in important cities, Research Workers and apprentices.

Terms attractive, Correspondence will be treated confidential. Please apply stating age, academic qualification, previous experience and approximate remuneration expected to:

The Editor,

"FINANCIAL EXPRESS"

Publishers: The Indian Express Newspapers (Bombay) Pvt. Ltd., Sassoon Dock, Colaba, Bombay - 5.

Memoirs of an Elephant—3

Unlike rice fields, oil wells cannot be made to repeat their yields. These human beings here in Assam knew that.

When the AOC completed the first oil well they soon started looking out for more wells. Since then the search for new fields has never stopped. These human beings are very persistent. Despite failures in places like Balijan, Namchick, Chattachurra, Baragolai and many others the search continued. It was not until 1953 that their patience was rewarded—they struck oil at Nahorkatiya (that's where my cousin lives—about 25 miles from Digboi). In the past seven years, 60 wells have been drilled by AOC in this area.

Fortune smiled on the AOC—another strike was made at Moran. About time too! With all the time and money spent on "The Big Search" I was beginning to feel very sorry for them.

Recently I asked one of the AOC chaps why he was looking so cheerful. He told me: "Look at Digboi . . . look at Nahorkatiya . . . and at Moran. These are the symbols of our efforts . . . the symbols of our experience . . . of our technical development".

BIRDS are stepping up it

To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.

Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED INCREASED PRODUCTION
Iron and manganese ore	825,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,400,000 tons
Limestone	1,250,000 tons	2,100,000 tons
Refractories	90,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of these vital raw materials.

A Window on the World

AN IDEAL SOCIALIST STATE IN AFRICA

By

ODYSSEUS

THE ORTHODOX SOCIALIST is a vanishing species in Europe. In Germany, he has disappeared. In the UK, the left wing of the Labour party has undertaken a vigorous campaign for his preservation, and the famous Clause 4 of the Labour party's constitution, which Mr. Gaitskell sought to abolish, but which his Left has forced him to keep, may be a sort of a National Park for the preservation of historically interesting wild life, but time seems to be on the side of the progressives.

Only in parts of Asia does it seem that pre-war Socialism is still held in respect. Let us therefore, consider what the orthodox Socialist seeks. He wants the nationalization of the means of production, distribution, and exchange. The acquisitive instinct is the root of all evil: the source of inequality. the capitalist economy has demonstrated the selfishness of individualism. In Germany, and other countries of the West where free enterprise is allowed to flourish, the individual is made selfish and, dazzled by his material prosperity, forgets his obligations to the poor and aged. In place of all this, the Socialist's ideal is a society in which one stands for all and all stand for one. From each according to his capacity: to each according to his needs. Social security is nation-wide and all-embracing. The community guarantees the security of the individual from the cradle to the grave. Society is egalitarian.

This is an ideal picture of a society which exists nowhere? On the contrary, there are many such societies in Asia and Africa, but what should surprise Socialists is that wherever independent nationalist governments have come into being they fiercely condemn the departed colonial powers for having failed to eradicate them and are themselves working tooth and nail to do so! The explanation is simply that the nearer that any society approaches to realizing the Socialist ideal the more fossilised, static, and under developed is its economy. The irony of it is that the less developed countries fail to realize that in so far as they adopt Socialist principles, they are helping to perpetuate the archaic conditions that they deplore.

The June issue of the Journal of the Royal Economic Society (21 Bentinck St., London. W.1.) contains an article entitled "The Social Anthropology of Economic Underdevelopment," which describes just such a society in which social security is all-embracing and perfect egalitarianism prevails. The article, written by Mr J. L. Sadie of Stellenbosch University, is much more interesting than its forbidding title suggests. Mr Sadie does not concern himself with the pros and cons of Socialism and Free Enterprise but offers a study of the economic organisation of the South African Bantus, who number 4,500,000 and inhabit what we in India would call tribal territories. The conditions which he describes differ from what goes on outside tribal territories only in detail and degree. By and large with suitable modifications much of what Mr Sadie reports could be paralleled in many parts of rural India.

A STATIC ECONOMY

The rate of growth of the population of the Bantus is 1.6 per cent p.a., which is more than their area can support without emigration. They are exclusively agricultural. Ninety per cent have a stake in the land, which compared to that of the adjacent developed sector, is of good quality and enjoys a good climate. By the standards of the surrounding developed areas this land could yield at least £90 m. p.a. In fact, its yield remains stationary around £13 m. p.a. As this subsistence farming is inadequate for maintenance, the Bantus add to their income by wages earned in casual spells of work in the developed sector.

The Bantu tribe, while differing from an Indian caste in some ways, reveals similarities in others. It is based on a nucleus of families descended from common ancestors as a result of fairly rigid marriage rules, calculated to strengthen common ties. The mental horizon of the people is limited by their loyalties, which do not extend beyond the tribe, and which are primarily to the smaller family group. This forms a contained economic unit. Trade within the tribe is negligible. Trade between tribes does not exist. There is no medium of exchange, because none is needed. The Bantus neglected the fertility of the soil because movement to new territory was always possible, though I presume this is not so today. The men were hunters and warriors. The women and children cultivated the land. The success of the crop is held to depend less on human than on ritually propitiated divine efforts. The productivity of the local gods is, I gather, consistently low. Cattle breeding is a way of life rather than of getting richer. Cattle are primarily used for ceremonial purposes. Since their ownership confers status, numbers, not quality, count. Starving cattle, denudation of the grass, and soil erosion follow. There is no formation of capital through increments in the value of the cattle by careful breeding.

As an integral part of Bantu culture, many customs are calculated to multiply the propagation of children. The Bantu's izzat rises with the size of his family. In addition to preventing the growth of wealth, these customs make for limited interests. They divert attention from the pursuit of economic aims. The Bantu religion consists of instruction in age-old customs and ensures the perpetuation of an unchanging culture.

INDIVIDUAL SUBORDINATED TO THE GROUP

In contrast to the individual initiative which has hitherto been the outstanding cause of European economic progress, the Bantus live in strongly knit communities in which the rights and obligations of the individual are subordinated to the interests of the group. The Bantu system recalls that of the orthodox Indian caste in that social care is the responsibility of each and all, extending from the family through the family group to the whole tribe. The community guarantees the security of the individual. Those who are better off are expected to look after the poor, hungry, sick, and aged. I am reminded of my period in the service of the Government of India when a colleague of mine one day uttered a mild complaint that the house allocated to him by the government was far too small. I did not grasp what he meant until I visited his

home and found it occupied not only by himself, his wife, and five children, but by what seemed to me a substantial quota of the population of his home province. These, he explained, were a selection of his poorer relatives, for whom, according to custom, he was expected to provide, and which he was loyally doing. As far as I could see, my friend's relatives pursued no occupations but were content to live off his bounty.

However commendable the social security secured by this type of mutual group aid, it does not make for economic development. At any rate as practised by the Bantus it eliminates the need for personal exertion. Social care and mutual aid, coupled with a low standard of living, mean that the disappearance of a particular source of income, or of personal earnings, does not hit the individual as it would in Europe—or, as perhaps I ought to say, as it did before Welfarism emerged. In several European countries today, the state shoulders the burden of social security, just as among the Bantus relations come to the individual's rescue. The progressive Bantu, like many progressive Europeans, can never be sure that he will be able to enjoy in full the fruits of his own exertions. If some Bantus were to cultivate their piece of land better than others, the increase in the crops would be shared by the others (just as in the UK if one active entrepreneur exports too much, his extra profits are siphoned off in steeply progressive taxation to pay for social security). If the Bantus improve their land, the improvement does not become something that they can sell at a profit. Communal grazing severely limits the possibilities of scientific agriculture by individuals.

The Bantus have no urge to attan ever increasing standards of material welfare. Socialists ought to be enchanted with the Bantus because they do not have the acquisitive instinct. Socialists would also rejoice to find that the Bantus realise the ideal of an egalitarian society: there are no stratifications according to income. The result is, of course, the absence of an important incentive to economic advancement and the presence of an equally important incentive to a static economy.

Nor, in these circumstances, need we be surprised to learn from Mr. Sadie that the Bantus do not worry about the future. This worry is, when you come to think of it, the characteristic which more than anything else distinguishes a tribally organised people from those of us who struggle and strain in a changing, technologically developed society. The future as a concept which stirs one into action is not part of the Bantu outlook. "Sufficient unto the day" is their attitude and this deprives them of all incentive to save for the future. Mr. Sadie tells us that good crops in one season may lead to abstention from ploughing and sowing during the next. Not only is there no accumulation of capital but such capital goods as the Bantus have may be allowed to fall into disrepair. Nobody thinks about the maintenance of the fertility of the soil for the next year's crop.

I suppose that one definition of an "under developed" country might be: a country hitherto content with things as they are, which has taken no thought for the morrow, and which therefore cannot accumulate capital for development. This has social and psychological consequences. The Bantus, like other persons organised in tribes, orthodox castes, or Socialist-Welfare states, lack individual self-assertiveness, self-confidence, and initiative. They have little urge to organise, to strive, and to plan their lives for themselves. It is important to note that it is not that people in such circumstances lack intelligence, but that the tribe prevents them from using it.

Next week, we will consider the results obtained by efforts to inject individual entrepreneurial initiative, a cash economy, and the profit motive among the hitherto static but contented Bantus.

US* knows about steels

Our grammar is fine. So are our steels. US is United Steel, the group of companies which produce the widest range of steels and steel products in Britain.

Not just steel—but steels. Each with its specialised qualities and specified uses . . . steel for motor cars, watches or umbrellas. Mining machinery, saucepans or railway lines. Over one-eighth of Britain's steel is produced by the 37,000 people employed in United Steel.

Companies in the United Steel group retain their individuality to a remarkable extent. They are specialists—geared to understand the manifold problems of modern industry. You will see their work in straight-forward railway axles, or the complex structure of the Jodrell Bank radio telescope.

The many special steels that nuclear reactors demand, steel for the Ganga Bridge or the Boeing 707—US makes them all. And to specialisation, United Steel adds the benefits of large-scale co-operation in research and marketing. That's why it pays to know US.

ASPIT-14

The European Scene

THE COMING AUTOMOBILE CRISIS

From Our Special West European Correspondent

PARIS, August 16.

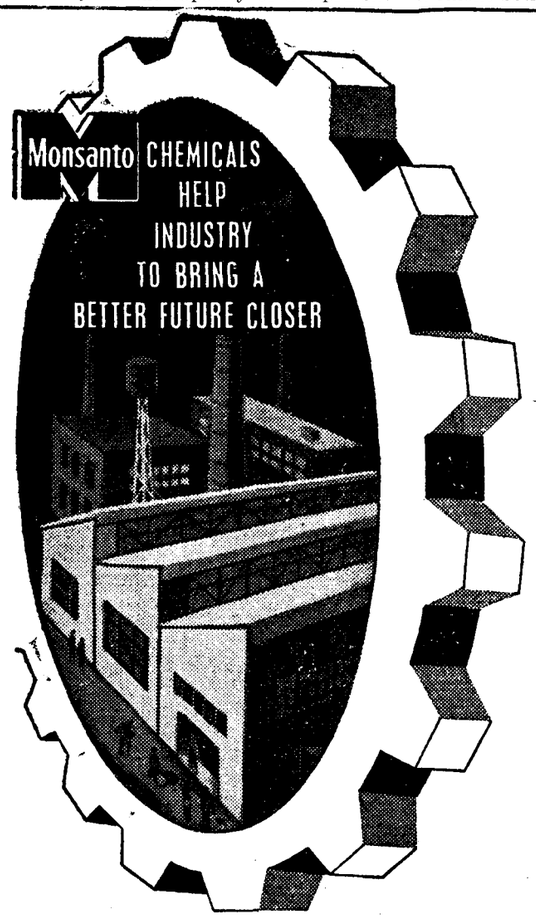
EVERY working day there are produced in the United Kingdom and in the six countries of the Common Market 23,000 motor vehicles (7,200 a day in the U.K. and 15,800 on the Continent). This number is increasing constantly: the largest producer in Europe, the West German nationalised company Volkswagen, having turned out 553,000 vehicles in 1958 and 705,000 in 1959 (27.3 per cent more), is carrying through large investments that will give it a production of 4,000 a day. All the leading companies are investing heavily in expansion, modernisation and automation: Volkswagen invested about Rs. 32 crores in 1958, Fiat the same amount, Ford and Vauxhall in Britain about Rs. 20 crores each and Renault Rs. 17 crores. For each company taken separately, the need to magnify the scale of mass-production is evident: the three biggest US manufacturers produce as many vehicles as all the European factories, including the British, put together. Since the Europeans export about 50 per cent of their output to markets where they must compete with U.S. cars (and now with the small U.S. "compact" cars), they must strive, despite their lower labour costs, to approach nearer to the U.S. scale of production. Further, as the competition between themselves becomes more acute, each must seek to stay ahead by increasing his output.

This latter point becomes more important each week. Up to now, the European industry, though heavily relying on exports, did not compete much in West European markets because each national market was solidly protected. Italian duties on imported cars, for which only tiny quotas were allotted anyhow, were 40-45 per cent; French 30 per cent; Britain the same; Belgian 24 per cent; only West German duties were moderate at about 13-17 per cent. The result was that the German industry, for example, sold 10 per cent of its total output in the U.S.A., 32 per cent in the rest of the world and only 8 per cent in the five neighbouring Euromarket countries. But now the barrage of import quotas is collapsing, and duties are falling steadily inside the Common Market. So the Europeans are joining battle inside Europe itself, with each firm extending its sales network in the neighbouring countries.

If it is clear why each individual company must go on expanding, one may still doubt whether the present rate of expansion for the European automobile industry as a whole can be maintained, at least without extensive changes in the industry's structure and in European economies generally. Volkswagen increased output last year, as mentioned, by 27.3 per cent; Fiat by 24.5 per cent; Renault by 21 per cent; German Ford by 18 per cent; and so on. The danger of relying on export markets to absorb half of this large output (in the French case, exports absorbed more than the total increase for the year, i.e. the home market actually contracted) is shown by recent difficulties in marketing small cars in the U.S.A. The American giants' retaliation with the compact car, which will gain in force each year, has already slowed down U.S. sales for all but the leading European firms. To count on exports taking half of rapidly growing production is unhealthy in a business where access to overseas markets can be closed overnight. The Europeans will have to get more of their production absorbed in West Europe. Yet there are solid social and economic barriers to progress in that direction, at least to progress comparable with the present rate of production-increase.

Not that West Europe is saturated with automobiles. The U.S.A. has one car per 2.5 inhabitants, [illegible] West European countries have about 1 per 7. But given the very great differences between the two continents (Europe's smaller size, denser urban settlement, lower mobility, superior public transport etc.), it seems improbable that Europe will ever get below 1 car per 4 inhabitants, and it will not get there until living standards (now roughly half of American) are comparable. It seems likely that West Europe will reach a stage of temporary saturation within a very few years, whereafter the automobile industry will have to settle down to a "cruising speed" set by the obsolescence of the existing car fleet and the steady rise in living standards. That cruising speed would just about correspond to output for the whole year 1960, given that exports fall off somewhat. So if the industry continues expanding at the current rate, it could run into trouble; and that trouble would be felt throughout each national economy because the automobile industry has become the pilot sector. To what extent it has become so may be illustrated by the French figures: automobiles employ directly and indirectly 6 per cent of the productive population, account for 7 per cent of the gross national product, and pay 12 per cent of the State's tax revenues. Thus a crisis in the car industry could be quite dangerous; at current rates of growth, such a crisis is very likely within a few years; yet no one company can do anything to avoid it because any reduction in its output is at once reflected in high comparative prices, which in the present phase of intense competition could lead to speedy elimination.

The manufacturers, approved by their unions and motor users, have numerous suggestions about what governments should do to meet this situation. They can be summed up in the general proposition that the tax burden on cars and petrol should be lightened, while, at the same time, huge sums of public money should be found elsewhere to make Europe fit for more and more motor cars. Having found that their economies already depend too much on automobiles, which have run ahead of other industries and services, the European nations should sacrifice everything else to cars; housing and education should be neglected to build autoroutes and parking lots. Since the automobile interests are very influential (three of the biggest producers, Volkswagen, Renault and Fiat are publicly owned), some of these suggestions will no doubt be accepted. Meantime, however, there are certain things the manufacturers can, and will probably have to, do themselves.



The first is to concentrate and standardise. Seventeen European firms make fewer cars than three American, and because they rely so much on exports they are making numerous variations of each model to meet different national requirements. One European country with an output of 1,300,000 cars a year has five different producers making 15 types of motors with an infinite variety of accessories. An obstacle to standardisation is the discrepancy between technical regulations in each European country, whether this is due to accident or to a desire to practise surreptitious protection. Each country has a different highway code and its own idea on how a car should be built in order to be safe, so to export in Europe a manufacturer has to make a model for each country. The engineers have calculated that if you built a car to meet all European requirements, it would not work, because subject to contradictory demands.

The prospect of keener competition on the Continent has so far produced only marketing agreements between firms, but it appears that their co-operation will have to go further than this. The most probable form of concentration is not at the top but through the parts and accessories industries: trade is liberalised and duties reduced not only on cars, but on all parts [illegible]

parts. So a German firm can now buy certain accessories and electrical equipment in Italy, and an Italian firm certain parts in France. Reorganisation will come first in these ancillary branches, with a consequent improvement in quality and fall in price. To permit this, the duties on parts traded within the Common Market must be cut, yet at the same time duties on parts coming into the region from outside must be kept high; otherwise foreign manufacturers could assemble more within the region and thus produce a "European" car that would compete in a market that is already becoming tight. That will entail a degree of discrimination that outsiders will be reluctant to tolerate. Anyhow, the West Germans argue that the Common Market does not present scope enough for the scale of operations needed, and that is why they are more anxious than most other industries to arrive at an all-Europe free-trade zone, which would keep the Scandinavian markets open to them and allow co-operation with the British car industry.

If demand for new cars threatened to flag seriously, governments hold an apparently simple remedy, in the price of petrol. This is now largely State tax, the proportion of tax in the price of a gallon of fuel varying between 74.2 per cent for France and 51.1 per cent for Switzerland. Yet governments are afraid to stimulate the home market in this way because, apart from the impact on the trade balance (more going out for oil, less coming in from car exports), it could increase the car fleet (and the circulation of already registered vehicles) beyond the capacity of the present road system, while depriving the State of the funds needed to improve that system. (Presumably only irresponsible people would seriously suggest taking those funds from other public investments.) The magnitude of the work needed to bring the road system up to the requirements of the car fleet may be seen in a calculation that concerns this city: if all the streets of Paris were put end to end they would run from Notre Dame to Budapest, but if all the motor vehicles registered in the Seine department were put bumper-bar to bumper-bar they would reach the border between Iran and Afghanistan!

The Germans are managing to stay one jump ahead of their car industry by building more and more autoroutes; they already have Europe's longest motorways (2,525 kilometres) and are building 375 kilometres more this year. But an autoroute costs Rs. 20 lakhs per 1,000 yards to build (Rs. 30 lakhs at the exit from a city) and few European economies can afford, or could justify, this fabulous expense. The appetite of the automobile industry is voracious; having got the Mont Blanc tunnel it is now demanding a bridge over the Channel (a tunnel would take only trains), at a cost of about Rs. 200 crores, plus a Continental motorway network continuous from Manchester to Yugoslavia and extensive remodelling of almost every European city. If governments recoil before these gigantic projects, West Europe will have to accept within the next few years a slowing down of the progress of its automobile industry; that will be a critical moment both economically and politically.

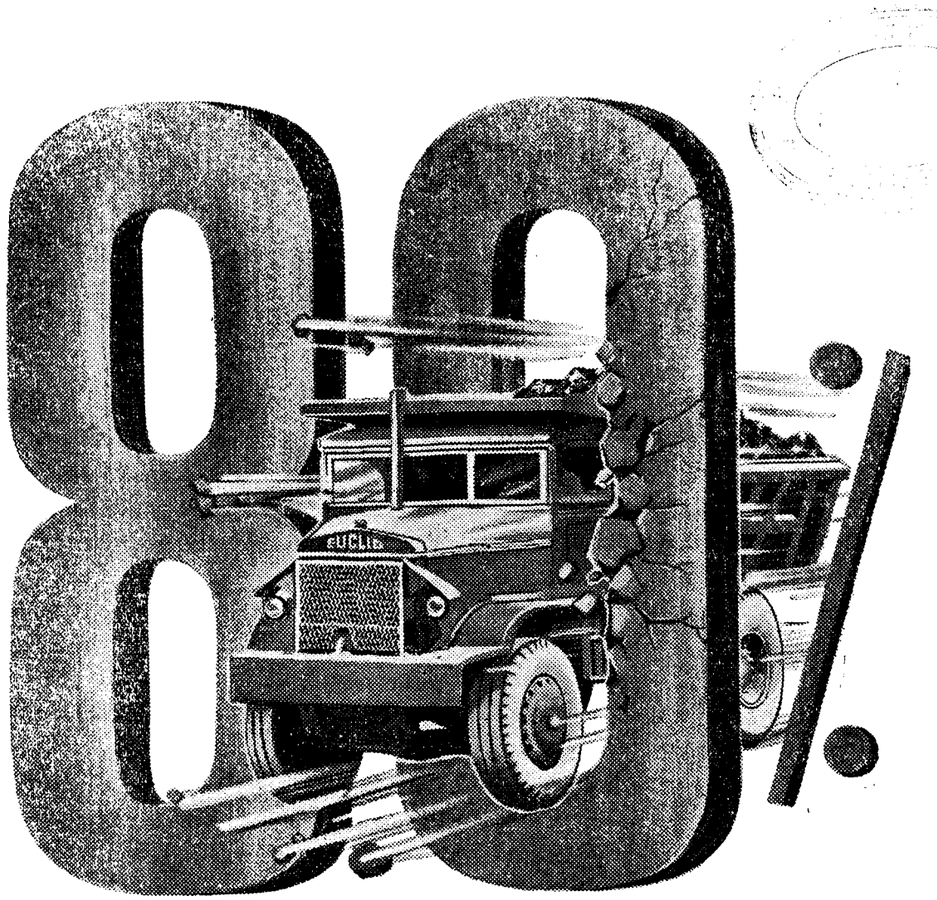
Monsanto works constantly both to develop new, better chemicals—and to improve those chemicals already used in every major industry.

PHARMACEUTICALS
acetylsalicylic acid, phenacetin, benzoic acid, phenol, phenolphthalein, germicides are but a few of the many Monsanto products in this field.

RUBBER
Monsanto's accelerators help speed vulcanisation, add quality. Anti-oxidants improve resistance, prevent early cracking, give increased flexibility.

TEXTILES
Monsanto Syton is widely used in spinning cottons and woollens, increases yarn strength, allows for reduction in twist.

PRESERVATIVES
Monsanto's pentachlorophenol chemicals help to preserve a wide range of products. Monsanto sodium benzoate helps prevent corrosion.



PAINT
Monsanto's chemicals are used extensively in the manufacture of high-quality paints, varnishes and lacquers.

SYTON is a Registered Trade Mark

Monsanto
chemicals for every industry.

MONSANTO CHEMICALS OF INDIA PRIVATE LTD.
Wakefield House, Sprott Road, Ballard Estate, Bombay 1.
Also at: Calcutta, Delhi and Madras.

Monsanto Chemicals Limited, London. Monsanto Chemical Company, St. Louis, U.S.A. Dependable service from Monsanto companies in London, Melbourne, Montreal, Paris, Bombay, Tokyo, Mexico, D.F., Buenos Aires and from sales representatives in all principal cities of the world.

Yes, it is a fact that 80% of all off-the-highway Rear-Dumps used in India today are EUCLID. Built to handle heavy loads in the roughest terrain EUCLID Rear-Dumps keep on going when the going gets really tough.

In mines and quarries, on dam projects, on the national highways, or wherever the country vibrates with construction activity, engineers are placing their reliance on EUCLID Rear-Dumps for their trouble-free performance. Available in capacities ranging from 10 to 55 tons.

DALDA FORUM

IS FAT really FATTENING?

YOU: Isn't fat *fattening?*

NUTRITIONIST: Not as fattening as you might think.

YOU: How do you mean?

NUTRITIONIST: Well, usually the fat in food doesn't turn into body fat as easily, let's say, as starches, I mean foods like rice or potatoes, for instance.

YOU: I don't understand.

NUTRITIONIST: Let's put it this way. Getting fat isn't purely a result of what you eat. It also depends on how well you assimilate your food.

YOU: I see.

NUTRITIONIST: People who have a tendency to become fat have a defective capacity for assimilation. In most cases, it is the starchy foods that are not used up and what remains turns largely into body fat.

YOU: Surely, this happens with fatty food, too...

NUTRITIONIST: Not exactly. Fat is actually the least fattening of foods. This is because fat is used mainly for providing energy—it acts as bellows to body fires, helps burn up even the fat that is stored up in the body.

YOU: Is this a scientifically tested fact?

NUTRITIONIST: Research has proved all this quite conclusively. Incidentally modern 'slimming diets' call for a fat and protein intake—and a reduction in carbohydrates and starches.

YOU: You mean this is actually a better method of reducing than eating less food and following a low calorie diet?

NUTRITIONIST: Well, cutting down on the amount you eat and on calories will cut down your weight. But such diets are less strengthening than a high fat, high protein diet.

WE: It's quite simple. Fats provide energy. Lots of energy. Much more than wheat or rice.

YOU: But what are the direct sources of fat?

WE: Oils—any edible oil or hard fat that is part of food.

YOU: ...And do all these oils and fats provide energy?

WE: Yes. All of them do. But there are fats like DALDA Vanaspati which have more than energy. DALDA, for example, is also nourishing.

YOU: Nourishing?

WE: Yes, because DALDA contains vitamins. Seven hundred International Units of Vitamin A and 56 IU of Vitamin D go into every ounce. These are protective vitamins and are good for the skin, bones, teeth and eyes.

YOU: I see...

WE: All in all, DALDA Vanaspati is an excellent fat. It is made from refined vegetable oils and purified to a high degree. Since it is odourless and has no taste of its own, DALDA makes food taste as it should. And DALDA Vanaspati comes in hygienically sealed tins.

YOU: Hmm. I know that. We use DALDA for all our cooking. In fact, we have done it for over two decades.

WE: Over the years, more and more people are taking to DALDA Vanaspati because it makes an ideal cooking fat, whether they are on a reducing diet or not.

Our West German Letter

DO THE GERMANS GET AID-MINDED?

From Our West German Correspondent

BONN, August 9.

NOWADAYS one can hardly open a newspaper without coming upon notes or reports referring to planning or already executed Western aid to developing countries in Asia and Africa. At last it seems to have dawned that aiding these States and thus contributing to the raising of the living standard of their masses, means in fact stemming the more and more threatening danger of Communism. In this connection one was waiting during the last weeks for comments on Mr. Morarji Desai's visit to Germany. It was strange to see the weak and hardly noticeable resonnance. The only comment criticizing the attitude of the German Government was an editorial in the influential Duesseldorf paper "Handelsblatt" under the heading "Morarji Desai s last resort." Numerous organisations and all political parties—it was pointed out therein—are making ceaseless declarations that something had to be done and sacrifices had to be made (in order to help underdeveloped countries), but so far nothing had happened that looked like a sacrifice. The writer comes to the following conclusion: "The ascetic Morarji Desai will shake his head and feel compelled to find the last and bitter resort by reducing drastically the imports from West Germany and in this way improving India's balance of trade with Germany." In German Government circles one hears a different opinion. It is pointed out that West Germany will definitely assist India in executing the Third Plan and will endeavour to make it possible for the Indian Government, as declared in the official communiqué, to place immediately orders within the framework of the Third Plan, especially for the extension of the Rourkela steelworks. Inquiries about the actual amount Germany would be willing to contribute, yielded the answer that the "Creditors Club" will decide about the contributions at its forthcoming meeting in Washington in September.

In another article of the same paper it is indicated that Rourkela should be considered also from the political (and not only from the commercial) point of view. Allegedly the Russians and representatives of East Germany have offered to finance and to execute the expansion of Rourkela and, therefore, Bonn and the Ruhr industry should take care that the continuity will be observed, i.e., that the expansion of Rourkela must be closely connected with the already existing plant. For this project about 500 mill. DM will be required in foreign exchange as well as about 300 experts who will at the beginning and for a certain period keep the work going. So far, it is said, that only 20 German technicians have been mustered.

In the discussions of the Parliament three speakers who had studied problems of Asian countries on the spot, made eloquent appeals for aid. Germany's Deputy Prime Minister and Minister of Economics, Prof. Dr. Erhard, who had visited India as guest of her Government after the meeting of the World Bank in October 1958, pointed out in the debate that one milliard of the world's population have an income of less than $100 per annum and in those countries people refuse to take their poverty as imposed by God. "West Germany has been asked to help the developing nations to a greater extent," Dr Erhard said, "and the German people should not consume ("verfruehstuecken"—an untranslatable expression) alone what it has produced. The misery in those states is unimaginable and nobody should assume that we could lead a quiet and comfortable life in the long run if the difference of well being between ourselves and the young nations will not become smaller but bigger." Foreign Minister von Brentano who had been in India this year, announced at the same meeting of the Parliament that the next budget will provide for a new section of his ministry in which the aid for developing countries will be concentrated. The economic expert Dr Deist, and Deputy Chairman of the Social Democratic Party which is in the opposition, emphasized in his speech that the career diplomat is not always the right representative in developing states, and at least all deputies of ambassadors should be familiar with economic problems and open minded to the trends in newly created nations. The personnel policy of the Foreign Office, he said, is also an "undeveloped territory".

In this context the efforts of the Catholic Church in Germany deserve to be mentioned. The amounts collected for developing countries may not be sky-high but the value of such activities lies in the awakening of the conscience of the masses in Germany that something has to be done to improve the lot of peoples in Asia, Africa and elsewhere. Through the so-called "fasting offerings" of German Catholics 43 million DM have been collected which will be spent in Asia, Africa, South America and Oceania. Near Frankfurt, in the Taunus mountains Catholics, amongst them bishops, industrialists, bankers and publicists, met to discuss the various problems of developing countries. The Bishop of Essen, Dr. Hengsbach, stressed in his speech that about 30 million people are yearly dying of hunger and although the living standard would never reach one and the same height all over the world, the solidarity of all nations and especially of Christianity, he enthused, should succeed in preparing conditions of social justice. Remy Montagne, member of the French Parliament and President of the "Association Parlementaire Europe-Afrique," lectured on the co-existence between the West and the newly created states in Africa and German students reported about their personal experiences they had made in Ghana, Togo, the Lebanon etc. Papers on economic aspects of developing countries were read by Dr K. Dohrn, member of the board of the Bank for Reconstruction, and Prof. Dr. R. Meimberg, Director of the Deutsche Bank. Prof. von Nell-Breuning, S. J. spoke on the psychological situation of Western aid. At a meeting of the Catholic Agricultural Youth Movement, Food Minister W. Schwarz disclosed that in future the German Government would see to it that young agriculturists who volunteer to go to developing countries for several years, would get proper jobs after their return. In Berlin's suburb, Tegel, a new institute has been opened where Germans who are going to Asia and Africa, are to be trained. At the same time young people of these continents would have the chance to get acquainted there with modern methods in various fields. The first course has just started. The students are living together in hostels.

* * *

After the model of the Rockefeller and the Ford Foundations the family of Thyssen, belonging to the upper ten of the Ruhr industrialists, have incepted a similar institution, the first of its kind in Germany, the "Fritz Thyssen Foundation". The start was not too promising as a controversy about it flared up. Dr. Adenauer's close friend and adviser in financial affairs, the Banker Robert Pferdmenges, announced over Television the inauguration of this Foundation whose chairman he will become. The widow of the Steel Magnate Fritz Thyssen and her daughter, the Countess de Zichy-Thyssen, have decided to pass on to the Foundation 100

Mill. DM in shares from two of the companies of the concern (Phoenix-Rheinrohr A.G. and the August Thyssen-Huette) which represent a market value of about 350-400 million DM. The yearly dividends will amount to at least 10 Mill. DM which will be spent for scientific research. The papers were generally full of praise for this "magnificent donation" and expressed the hope that other industrialists would follow soon. A few days after the announcement, "The World of Labour," the periodical of the head organisation of 16 important trade unions (Deutscher Gewerkschaftsbund-DGB) with 63 million members, published an article about this foundation business. Therein it was pointed out that the Thyssen family had actually not renounced the 10 million DM of dividends because had they not started the foundation, they would have to pay income, wealth and other taxes on this amount as well as on the value of the shares which, according to tax experts, would amount to 72 million DM. Therefore, the Thyssen family has in fact donated only 28 million DM while the balance of 72 million DM constitutes a loss to the state or the public. The same trend was followed up by Germany's most controversial weekly "Der Spiegel" (The Mirror) which also mentioned that Fritz Thyssen had helped Hitler to come to power and had introduced him to the exclusive circles of the Ruhr industry. But the Deputy Chairman of the DGB, Rosenberg, contradicted the periodical of his organisation by pointing out that the trade unions had to judge positively foundations like the one of the Thyssen family.

* * *

The Ministry of Economics published the 6th edition of "Achievements in Figures" with the subtitle "Results of the reconstruction work in West Germany". In the preface Prof. Erhard points out that from the dry figures the untiring, successful labour of the German people will be evident. "They represent a balance of which we can be proud", he says, "and they prove what a free and social welfare minded policy of economics and finance can accomplish." Dr. Erhard mentions the countless sacrifices and privations connected with the reconstruction work which started from scrap. But together with it many milliards DM were invested also in kindergartens, schools, colleges, museums, theatres, churches, homes for aged people, sportfields etc. And all this had been achieved although during the first years of reconstruction the creating of a new basis of production and the re-building of destroyed cities needed all available labour.

Out of the wealth of figures and statistics made up in 68 pages of this interesting booklet, some especially instructive examples may be quoted. The average gross income per month of government officials, other employees and workmen rose from 1950 to 1959 by 91 per cent. The sale of "long-lived" consumer goods has considerably increased; in March 1960, 93 per cent of all households owned radio sets, 22 per cent television sets, 32 per cent refrigerators, 62 per cent vacuum-cleaners and 37 per cent electric cooking stoves. The number of motor vehicles (trucks, cars and motor-bikes) amounted on 1st January, 1960 to 7,331,500. More and more employees are buying cars. 20.7 per cent or 691,004 are owned by workmen, 18.6 per cent or 621,483 by clerks and 7.2 per cent or 239,389 by government officials. The book production (1st editions and reprints) rose from 14,094 in 1951 to 20,476 in 1958. The number of theatres and (professional) orchestras amounted in 1951 to 112 and 70 respectively. The corresponding figures for 1958 are 129 and 79. Hiking and wandering is an old sport of German youth. States, municipalities and private organisations are maintaining youth hostels for night's shelters. In 1950 there were 513 hostels with 34,343 beds and 719 hostels with 75,183 beds existed in 1959. The increase of private consumption (which means improvement of the standard of living) amounted from 1950 to 1958 in the OEEC member states to an average of 26 per cent. In comparison, it amounted in West Germany to 63 per cent, in U.K. to 13 per cent, in USA to 10 per cent and in Denmark to 8 per cent. These percentage figures also prove the hard work of the German people, of employers and employees as well, to overcome the aftermath of defeat. During the period from 1950 to September 1959 the comparative increase of industrial production showed in West Germany 130 per cent, in U.K. 35 per cent, in USA 34 per cent. Italy follows Germany with 114 per cent. To increase the agricultural production the consolidation of holdings is continuously promoted under a voluntary system and supervision of expert officials. It resulted in consolidating from 1945 to 1959 about 7,700 square miles. In comparison to 1949, the iron and steel industry could almost treble its production which amounted to a yearly production of 18.4 million ton pig-iron, 25.8 million ton raw steel and 16.8 million ton sheet steel. The export rose within the years 1950 and 1959 from a value of 8.4 to 41.2 milliard DM, an almost five times increase! The import rose within the same period from 11.4 to 35.8 milliard DM. West Germany's private investments in foreign countries amounted to 2,252 milliard DM, in Europe to 780.9, in Africa to 147.7, in America (USA, Canada, Central and South America) to 1,205.4, in Australia to 34.5 million DM and in Asia to 83.5 million DM. The comparatively small sum invested in Asia shows on the one hand a lack of spirit of enterprise by German investors and on the other hand, the necessity for Asian governments to protect foreign capital against losses caused by nationalisation. For the first time figures are being published which show the various ways by which aid to developing countries had been given by Germany. The total amount of 539.15 million DM for the period of 1950-55 rose to 1,557 milliard in 1959. Besides these sums, the German Government guaranteed up to the end of March 1960 exports to developing countries to the tune of 10 milliard DM and provided from the ERP-Funds further 260 million DM. The contribution from the latter source will probably be substantially raised in the near future.

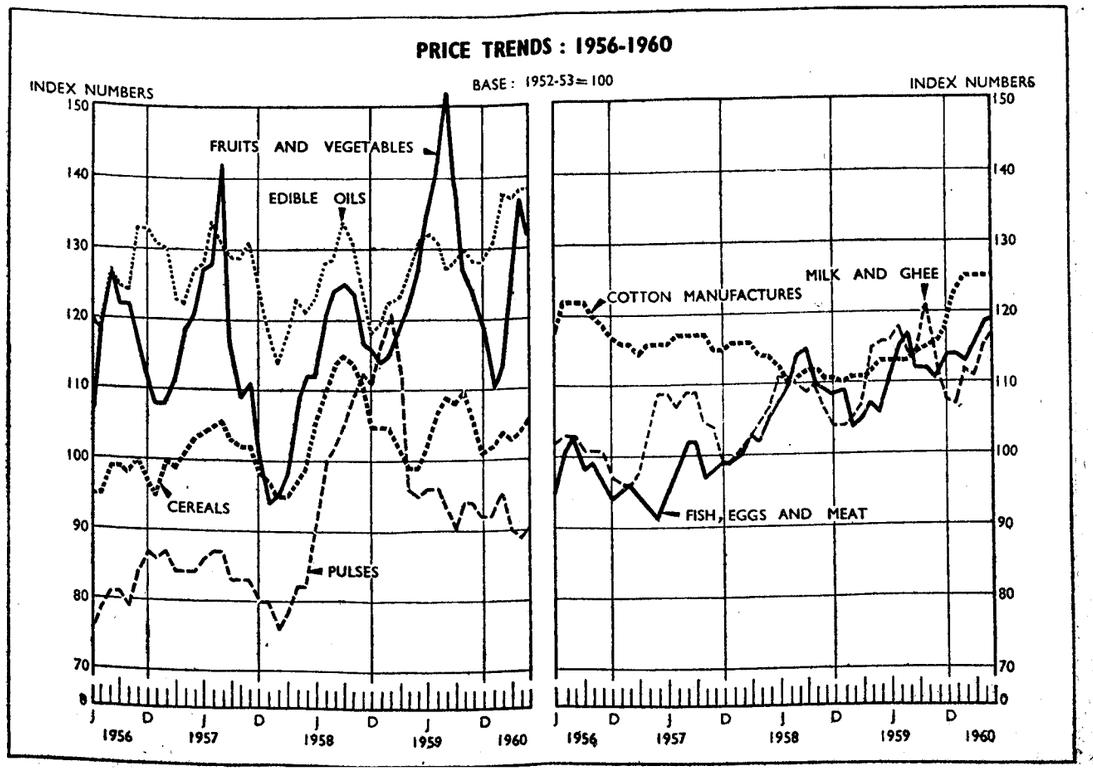
Special Article

DISINFLATION: A MEASUREMENT OF THE LIMITS OF ACTION ON FOODGRAINS AND CLOTH

"THE EASTERN ECONOMIST" suggested a fortnight ago that the only way to hold the price line was to pin down the prices of foodgrains and cloth, two central necessities. It was also recommended that the prices for both these items should be brought down at once by at least 10 per cent in relation to the existing level. It is the purpose of this Special Article to measure the possible fall in the general price level that would follow this drop in prices and the likely benefit to the different classes of consumers. Happily, the Indian Cotton Mills' Federation has already announced the decision to reduce the retail prices of cloth by as much as 10 per cent. A similar fall in foodgrain prices is not easy to induce without the active cooperation of the dealers and through larger supplies of imported foodgrains, particularly wheat.

The relief from the postulated decline of 10 per cent in foodgrains and cloth prices will vary with the importance of these items in the consumer's budget. According to a recent survey conducted under the sponsorship of the Central Statistical Organization for the middle classes, foodgrains and cloth together account for about a quarter of total family expenditure. The corresponding percentage fluctuates widely from 35 to 60 in the case of industrial workers. It is computed that the proposed decline in the food and cloth prices will benefit working classes from 4 to 6 per cent, according to the importance of these items in the consumer budget at different industrial centres. In the case of the middle classes, the relief is not likely to be more than 3 per cent.



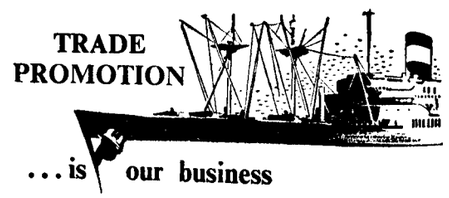
The fact that the overall reduction in the consumer price level is likely to be substantially lower than the proposed drop of 10 per cent in food and cloth prices is to be partly accounted for by the steep rise in the prices of such food articles as meat, fish, eggs, oils, vegetables and fruits, milk, ghee, spices etc. The extent of the rise in the prices of these quality foods has been different at different centres. The idea of the degree of rise in the prices of these commodities can be had from the wholesale price index for the week ended July 23, 1960 — the latest week for which these prices are available.

PRICE TRENDS IN FOOD ARTICLES

Base: 1952-53=100

	Wholesale Price Index 23rd July, 1960
Food Articles	125
1. Cereals	110
2. Pulses	96
3. Fruits & Vegetables	130
4. Milk & Ghee	123
5. Edible Oils	150
6. Fish, Eggs & Meat	128
7. Sugar & Gur	140
8. Others	170

The striking fact brought out by this table is that the pressure on cereals and pulses is not as severe as in the case of other items. With regard to the base 1952-53, cereals indicate a rise of 10 per cent accompanied by a fall of 4 per cent for pulses. All the other components show increase between 23 to 70 per cent.



Most of the quality foods come in the category of the "unplanned sector" as the Five-Year Plans do not seem to provide enough resources to increase their production.

This is not to suggest that steps should not be taken to keep down foodgrain prices. In fact, the irresistible conclusion which emerges from a study of these indices is that the lowering of foodgrain prices is a necessary though not of itself a sufficient condition for holding the price line. The rising incomes in the next few years will necessarily result in a shift in the consumer's choice, thus enhancing the pressure on quality foods. Thus, the Third Plan must earmark sufficient funds for raising the output of these quality foods as well.

Another element which tends to increase the pressure on fixed income groups is that of violent fluctuations in prices which take place within a year. This fact is demonstrated in the graph on the previous page. Though in some cases the fluctuations are of a seasonal character — such as in the case of vegetables, fruit etc. — it is to be borne in mind that these wide fluctuations enhance the hardships of the fixed income groups during periods of shortages. The graph shows clearly that even though the level of prices of pulses was 10 per cent lower at the end of May 1960, than the 1952-53 base, there was no guarantee, because of wide fluctuations, that an individual consumer was protected.

Also, the pressure of prices cannot be measured adequately by an overall index which tends to cancel out diverse movements in prices in the various regions of the country. This point may be illustrated with reference to wheat. The index for wheat prices for the Rewa market in Madhya Pradesh was 35 per cent below the 1952-53 level while at Moga in Punjab it was higher by 21 per cent, with reference to the same base for the week ended July 23, 1960. The averaging of price movements over a number of places conceals the degree of hardship experienced by people in certain pockets in the country. Thus the impact of rising prices is not adequately reflected in the official index numbers and there is urgent need to lower the price level also by increasing the supply of these commodities and by lowering the monetary pressure caused by deficit financing. A cut-back of Government expenditure is necessarily involved.

Australia, New Zealand, and Fiji offer opportunities to exporters and importers and the International Division of the Bank of New South Wales can help those interested.

The Bank's complete banking service includes such specialized facilities as trade and industrial enquiries, economic and trade information, and a complete travel service. The Bank, through more than 1,000 branches and agencies, is closely and constantly in touch with industry, business, and agriculture in the areas it serves.

THE BUSINESS WORLD

Cloth, Promise and Performance

By CROESUS

WRITING in the issue of "The Eastern Economist" July 29, 1960, on the rise in cloth prices, I concluded my piece with the sentence: "The 'bona fides' of the industry will, in fact, be judged by the stand that the industry will take on the price question at this week's meeting of the Cotton Textile Consultative Board." What, then, was the stand of the industry at this meeting and how far has the industry stood by it? The answers to these questions are important not only to prove the 'bona fides' of millowners but also to remove the unfortunate impression that those who argue or write in a dispassionate manner are influenced in any way.

At the meeting of the Cotton Consultative Board held in New Delhi on July 29, 1960, the spokesmen of the Indian cotton mill industry gave the assurance that millowners would ensure adequate supplies of cloth at reasonable prices and take all the measures necessary towards this end. True to their word, following the meeting, the millowners lost no time in implementing their assurance. Early this month, after due deliberations, the Indian Cotton Mills' Federation announced in a Press Note the measures proposed to be taken immediately by the industry both to ensure sufficient supplies and to make cloth available at reasonable prices. It must be mentioned here, in fairness to the industry, that these measures were the same as those that had been adumbrated by Mr. Krishnaraj Thackersey at the Press Conference preceding the CTC Board meeting.

In regard to ensuring reasonable prices, apart from requiring the mills to review their price policy immediately, the Federation wanted them particularly to do whatever they could to see that between the ex-mill stage and the retailer end, prices did not get pushed up unduly. At the same time, the Federation suggested a reorientation of distribution so as to keep the market adequately fed and thereby effectively counter the shortage psychology. The Press Note of the Federation also said that it would consider the price situation in detail at its Committee meeting scheduled for August 11, 1960, and the public was naturally led to expect the extent of reduction in cloth prices to be announced after that date. But the reduction in cloth prices—a cut of 10 per cent in the retail prices of coarse and medium varieties of cloth—was announced on August 7, 1960 itself that is full four days before the formal meeting of the Federation's Committee, evidently after hurried consultations. The result was some confusion, and it was left to the Union Minister for Commerce and Industry to question the justification of the Federation's general decision, namely that there should be 'pro rata' reduction. He, in fact, asked: "What about those mills which have not increased their prices beyond 16 or 18 per cent? How will the Mills' Federation justify 10 per cent reduction in their case?" But what is relevant in the present context is not the confusion but the earnestness of the mills to meet the situation by prompt action.

Whatever the provocation, I am not able to appreciate the "indecent haste" with which the Federation Chairman convened a Press Conference hurriedly on a Sunday to announce a "general decision" that created rather than cleared an uncertainty, on the one, and hardly pleased the authorities whom it was obviously sought to please, on the other. Uncertain as to whether the reduction was applicable to cloth produced by all mills and to all varieties (although there was no justification for the latter) and, more particularly as to who should bear the incidence of the proposed reduction—mills or dealers—wholesalers in cloth practically suspended business. On the other hand, there was hardly any appreciation from the authorities. Although Mr. Shastri welcomed the 'informal' discussions of the Federation about the pattern of production, the retail shops, the exhibiting of list of prices and the exercise of adequate control over the wholesalers and retailers for selling cloth at the fixed prices and he even took credit for having suggested these himself, though the Press had heard of all of them from the Federation President himself weeks earlier—he said: "I am not satisfied with 10 per cent reduction".

He was considerate enough to add, "I must not minimise it also; 10 per cent is from their point of view perhaps a substantial reduction" and to suggest that he would very much like the Federation to bring down the prices further. He did not, however, specifically indicate to the Federation by how much further the prices should be brought down. But he said enough to create the impression—unwarranted by facts—that prices had risen by 40 per cent and that, except in the case of two or three mills, they should come down to much below 30 per cent. In the course of his speech in the Lok Sabha at one stage, he is reported to have said: "I cannot justify the increase of 40 per cent in the price of cloth; it is very much on the high side. I am prepared to give a margin of 18 to 20 per cent. (This, according to him, seems to be justified by the increase in the price of cotton and the increase in the wage bill). I shall even go further up to 25 per cent, because the market does not cut so fine".

Had Mr. Shastri left it at this, the industry would have regarded it merely as an expression of opinion, but the spokesmen of the industry must have felt badly let down by the tone and threats of the Minister. It is not given to all to appreciate a genuine gesture. That is not uncommon. But after one has accepted and honestly endeavoured to implement every reasonable suggestion from a person in authority, the latter, if he be still not satisfied can at best express dissatisfaction. He is not expected, at least in a democracy, to hold out, all manner of threats, as, for example, this: "If the industry does not adequately respond, the Government will not hesitate to take effective action to bring down the prices of cotton textiles"...."Government's advice cannot be easily ignored by these people".

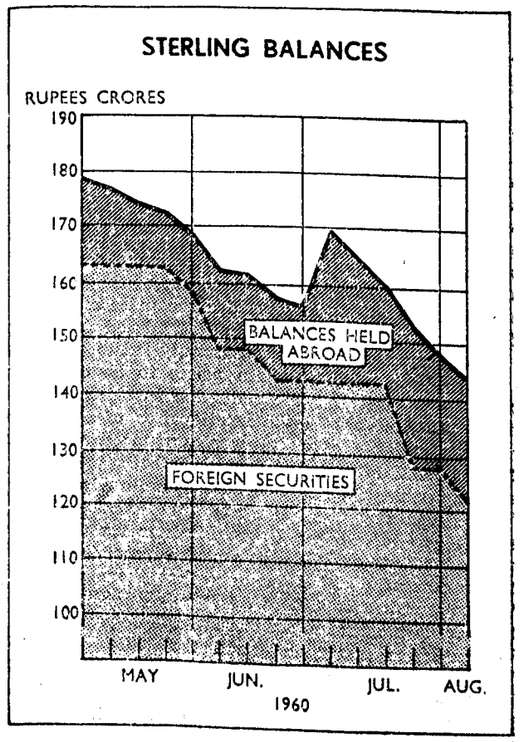
What is the reaction of the mill industry to this unkind cut? The Federation's Committee had not only

the price question but the fulminations of Mr. Shastri to consider at its last meeting on July 11, 1960. It is a tribute to the level-headedness of the Federation's Chairman that, in the Press Note on cloth prices following the deliberations of the meeting, not a word was said about the Government's 'gesture' to this earlier announcement of 10 per cent reduction in cloth prices. The Press Note merely confined itself to the misunderstanding about the rise in percentage and the consequent charge of profiteering by mills. Regretting that the figure of a rise of 40 per cent had been freely tossed about, the Press Note said: In fact, not more than five per cent of the total cloth produced by mills would be selling at this rate, whereas in all other varieties, the rise has been much less." It rightly referred to the sensible observation of the Minister himself that the rise had been 40 per cent only in some cases, whereas in others the rise had been much less. But in order to substantiate its stand, the Federation has said. "The industry is prepared to place before the Government audited accounts of the first six months of any of the mills to prove conclusively that the industry has not indulged in profiteering."

Obviously, without wanting to say in so many words that the Minister has not properly understood the 10 per cent cut in prices proposed by it, the Federation clarifies the position in its Press Note thus: "The cuts proposed by the Federation on those coarse and medium varieties where the price rise had been abnormal related to the current prices. With a 40 per cent rise over 100, in such abnormal cases, today's price comes to 140 and a 10 per cent reduction therefore means a reduction of 14 which brings down the price to 126, and this is just one per cent, more than what Government considers justified." (To quote Mr. Shastri's words in this context in the Lok Sabha: "I shall even go further up to 25 per cent").

In addition to submitting this dignified rejoinder, the Federation has prescribed the specific percentages over the October, 1959, contract prices (10 per cent for superfines, 12½ per cent for fine, 20 per cent for higher medium, 24 per cent for lower medium and 27½ per cent for coarse) beyond which no mill should take up its prices. And what is perhaps the most important and eloquent gesture, the Federation has told the mills that "deliveries to be made henceforward against all outstanding contracts should also be made at prices not higher than those indicated above regardless of the contract prices" I advisedly say "the most important and eloquent gesture" because Mr. Shastri only wanted that "in all the contracts entered with say from tomorrow or two to three days latter (i.e. 9th or 10th to 11th August, 1960) with the wholesalers it should be seen that the cloth supplied to them is at the reduced prices, so that the consumer also may get them at the reduced prices."

I have merely recorded here the promise and the performance of the industry at this length because Mr. Shastri categorically declared in the Lok Sabha. "I am not prepared to accuse the wholesale trader, but it is the mills who are responsible for this unwarranted increase in prices." It is now for the wholesalers, and also the retailers, to prove their 'bona fides' by bringing down their prices in a more positive way than was depicted by the cartoonist the other day in the "Times of India".



Business Notes

Foreign Assets

STEEP FALL

THERE HAS been a noticeable drain on our foreign exchange resources during the last three months and it seems that this trend may continue for sometime more. Figures of the sterling balances reveal that during the week to August 5, 1960, alone the fall in the balances held abroad was to the extent of Rs. 5.4 crores. Again during the week ended August 12, there was a fall in the foreign securities to the extent of Rs. 5 crores. The fact appears more significant when seen in the light of falling foreign securities during the previous three months. From Rs. 163 crores at the end of May, the foreign securities dropped to around Rs. 143 crores in the last week of June and again came down to Rs. 128 crores in the last week of July. There has been a fall of about Rs. 45 crores in a period of about three months and the sterling balances at Rs. 144 crores have touched the lowest level ever recorded during the last several years.

The depletion of sterling balances at this rapid rate indicates the arrival of another sizeable shortage of foreign exchange. It may be remembered that the previous foreign exchange crisis that the country faced in 1957 could be mitigated by withdrawals from the sterling balances which on an average, during the year were Rs. 400 crores. If the drain continues for some time more this time a comparatively small amount of Rs. 144 crores may not be able to provide a safe cushion and keep the crisis in abeyance for long. It may be observed that in spite of some strict controls on imports the adverse balance of trade during the first 6 months of 1960 has been, on an average, of the order of Rs. 26 crores every month. Another factor that has caused this fall in the sterling balances may be that part of the foreign assistance we are receiving is tied to specific projects and current arrivals of shipments are not related to them. Imports which are rising can be financed therefore, largely by export earnings. The scope for further pruning of imports hardly exists. The current difficulties urge a more determined effort to push up exports.

Direct Tax Legislation

HASTY AMENDMENT

MR. GOPALA REDDI could not adduce any cogent and satisfactory reasons to justify the haste with which the Bill to amend the Indian Income-Tax Act, the Wealth Tax Act, the Expenditure Tax Act and the Gift Tax Act was rushed through the Lok Sabha. It is noteworthy that opposition to the hasty passage of the Bill in the Lower House was voiced, among others, by some members of the Congress Party itself.

The plea for go slow and fuller deliberation by reference of the Bill to a Select Committee was a plea for caution to avoid hardships resulting from the rush technique. Already the Company Law has been a singular victim of "legislate in haste and repent at leisure." The provision in the Bill to extend concessions to certain industries smacks of discrimination. Disclosure of information regarding the amount of tax payable by an assessee places an instrument of harassment in the hands of the blackmailer. Mr. Gopala Reddi explained that the taxing authority was being vested with discretion to refuse information to 'confirmed' blackmailers. But what are the criteria to determine who is a confirmed blackmailer? The mischief can nevertheless be committed by a blackmailer who may not be branded as a 'confirmed' blackmailer. Publication of names of persons punished for tax offences together with particulars of the offences is sought to be defended on the ground that it will deter others and this class of persons is not entitled to claim a privilege. There is no question of claiming any privilege because the name of offenders punished for other classes of more repugnant offences are not published for the so-called deterrent effect.

The best course was to wait and bring a carefully considered comprehensive Bill on the basis of all the recommendations of the Direct Tax Administration Inquiry Committee. Mr. Reddi has indicated that a Bill for curbing tax evasion would be introduced in the next session. This piecemeal method of legislation is certainly not necessitated by any emergency or expediency. There was a sound case for a comprehensive and integrated Bill. It is a poor reflection on the Government's zeal for the present Bill that Mr. Mahavir Tyagi, Chairman of the Inquiry Committee, has not extended his whole-hearted support to it.

Rubber

HIGHER CESS ON MANUFACTURERS

AN AMENDMENT to the existing legislation on rubber providing for an increase in the maximum cess that could be levied on rubber was passed by the Lok Sabha recently. The cess which till now was levied at a maximum of one anna per lb. has now been raised to a ceiling of 50 nP. per kilogram which means an increase of nearly 400 per cent. The amendment also permits the levying of cess on the manufacturers rather than on growers. This change has been brought about to tighten up collections as there was good reason to believe collection at the plantations resulted in considerable loss of revenue due to evasion. According to the Rubber Board as much as 35 per cent of the cess collection is lost because the number of growers exceeds 26,000 and a large number of them own considerably small holdings. On the other hand the number of registered manufacturers is just 347 which seems to be quite a manageable number.

It has been pointed out that the increase in the cess has been rendered necessary for the "implementation of certain plans for speeding up the production of natural rubber in the country which are now under consideration." The Rubber Board has not succeeded in creating enthusiasm among the rubber interests over its idea of expansion programme. In fact the Rubber Board has not clearly stated the nature and extent of its planning. There is strong criticism that during the last five years of its existence the Board has done practically nothing to raise the yield or acreage of rubber plantations. There is a large gap between the actual demand and the output of natural rubber in the country. If some positive steps are taken to raise the output there is no reason why dependence on the imports of raw rubber cannot be reduced. Now that the authorisation for putting up the cess has been granted by law it is upto the Rubber Board to make out a case for utilising the additional source of revenue by giving tangible proof that it can deliver the goods.

IISCO

15 PER CENT DIVIDEND

REACTION TO the declaration of a dividend of 15 per cent for the year ended March 31, 1960 by the Indian Iron and Steel Company has been quite favourable. Though this dividend has been described as an interim dividend, the Directors have explained that it will also be the final dividend. This is to say that the total dividend is declared at the rate of Rs. 1.50 per share of the face value of Rs. 10 each. This dividend is, of course, subject to income-tax, but it brings a net yield of 10.5 per cent. This compares well with the previous year's tax-free dividend of 10 per cent.

The Directors took the step to declare the dividend without waiting further for the announcement of the revised retention prices of steel in order to put an end to any suspense. Indian Iron's output of saleable steel improved in 1959-60 to 6.6 lakh tons as against 4.97 lakh tons in 1958-59. This improvement reflected the results of a substantial part of the expansion of the plant having been brought into commission. The balance will be put into production by the end of the current year. There is hardly any room for doubt that the retention prices will remove the present handicap of working expenses showing a burden on the finances of the steel industry. Freight, coal and wages have all gone up and the retention prices due to be declared very soon will undoubtedly make proper allowance for these increases.

Housing

JAXBOARD FOR BUILDING HOUSES

IN ORDER to make the construction of more houses possible, it is imperative that construction material should be economical and capable of being easily fabricated. An entirely new process has been developed recently for manufacturing reeds into strong building boards by Messrs. Ludwig Berger of Austria which can be used successfully in tropical countries for the construction of houses. In India, William Jacks at the instance of the National Buildings Organization have undertaken to develop the manufacture of reed boards. They have entered into negotiations for this purpose with the Austrian patentees of the new board-making process and have obtained the right for its exploitation in India. The factory that has been set up in U.P. where reed grows in abundance has an installed capacity of 36 lakh sq. ft. of board a year.

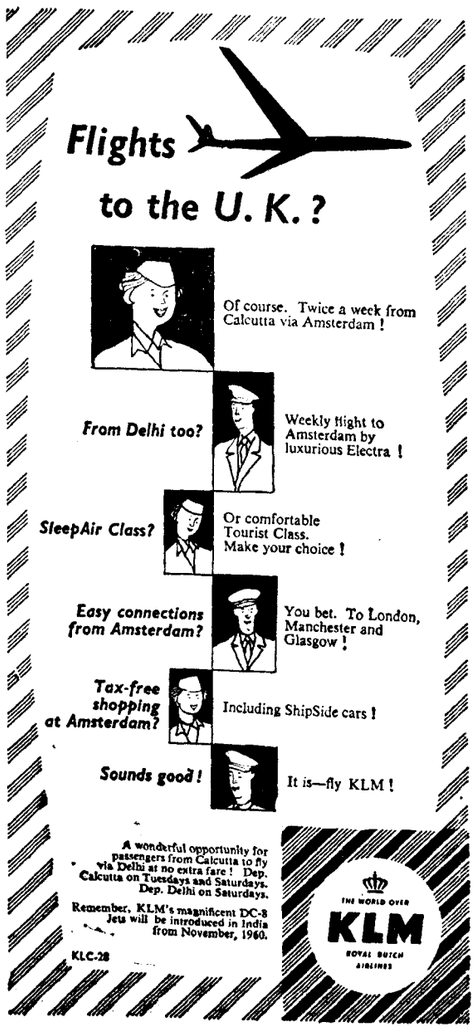
The points in favour of Jaxboard are that it is an ideal constructional material for a tropical country and meets all the requirements of low cost housing in rural areas. It is adaptable for walling, roofing, partitioning, shuttering etc. and can be easily plastered with cement, lime or mud. Besides it has unique insulation properties. Expectations are that it will be able to replace steel in the construction of many types of houses. In case it succeeds in eliminating the use of steel from a wide variety of building and housing construction work, it would prove to be great boon for not only will we be conserving steel for top priority purposes, but save some foreign exchange by cutting down imports.

Plastics

PHENOMENAL PROGRESS

THANKS TO the exigencies of the Second World War and the acute shortage of conventional materials like steel, aluminium, wood, glass, etc., which the world experienced during the war years, new discoveries were made in the realm of plastics for varied and extensive uses ranging from a small paper clip to television and radar equipment. In India too, this industry developed only after the second global war, when the government realised the tremendous bearing it has on the growth of chemical industries. During the past decade or so, the industry has registered phenomenal progress, having about 150 major plastics factories, accounting for an estimated capital investment of Rs. 22 crores and providing employment to about 25,000 workers. The output of the industry, value-wise, stood around Rs. 16 crores in 1959, as against Rs. 12 crores in 1958. The performance of the industry in the export field has also been very encouraging. As the following table shows, the export figures for 1959-60 show an increase of about ten times the level reached in 1955-56!

Year	Exports in value
1953-54	Rs. 15,98,100
1954-55	„ 14,41,000
1955-56	„ 7,62,000
1956-57	„ 7,41,400
1957-58	„ 21,00,000
1958-59	„ 27,78,000
1959-60	„ 73,66,500



That the industry has achieved such a remarkable progress, despite difficulties in respect of raw materials, is a tribute to those who are guiding the destinies of the industry. The question of raw materials shortage is very real and, in fact, quite serious. The only lasting solution to meet this problem appears to be, as Mr. Krishnaraj M. D. Thackersey, said whilst presiding over the thirteenth All-India Plastics Manufacturers' Conference in Bombay, last week, to develop the basic chemicals industry in the country. True, we are producing raw materials like polyethylene, polystyrene and urea formaldehyde which compares in quality even with the imported materials, but our prices are still comparatively much higher than those prevailing in the international markets. This is probably attributable to the relatively smaller scale of our output. It may be hoped that, with the enlargement of domestic production, prices would be brought down. In this connection, the assurance given by the Chief Minister of Maharashtra, Mr. Y. B. Chavan, in his inaugural address to the conference that his government would give every assistance and was prepared to recommend suitable schemes of production of the industry's raw materials will be widely welcomed.

Transport

POOR PROVISION FOR PORTS

THE OMISSION of any explicit reference to an immediate expansion of port capacity, in the inaugural address of Dr. P. Subbarayan, the Union Minister for Transport and Communications, delivered at the Ninth meeting of the National Harbour Board held in Bombay, last week, is somewhat disappointing. The aggregate capacity of all the major ports, which stood at around 20 million tons in 1950-51, went up to about 50 million tons in 1957-58. And this is expected to go up during the Third Plan to around 41 million tons. If the recent trends in respect of the volume of cargo passing through the major ports of the country are any indication, it seems obvious that India would have to experience serious congestion at ports — which has been with us almost since the beginning of the Second Five-Year Plan — during the Third Plan period also. Thus, the quantum of goods that passed through both the major ports and the ports of Saurashtra, Kutch and Okha which stood at 23.94 million tons in 1951-52, shot up to 32.79 million tons in 1957-58. With the anticipated increase of 3 to 15 million tons of cargo in the next few years consequent upon the export of iron ore, the volume of cargo that is likely to pass through the ports will increase tremendously. In spite of this, the Draft Outline of the Third Plan says that, "in the Third Plan, the main objective will be to maintain and improve the existing port facilities, rather than to increase port capacity."

The Minister's address too did not contain anything pointing to our increase in the port capacity during the Third Plan. He was content merely to refer to the outlay and add: "We are now on the threshold of the Third Plan period. The chief features of the Third Plan for the major ports have been set out in a separate memorandum. It lays emphasis on the early completion of the carryover items and on schemes necessary for maintaining existing services and also on essential improvement schemes. Including the carryover, we are making a provision of Rs. 75 crores for the major ports and, out of it, we have already tentatively allotted Rs. 74 crores, with Calcutta getting Rs. 29.5 crores, Bombay Rs. 25.6 crores, Madras Rs. 7.3 crores, Cochin Rs. 1.7 crores, Vizag Rs. 6.3 crores and Kandla Rs. 4.3 crores." If the projected industrialisation of the country during the Third Plan is to be smooth, we are afraid, the present plans for port capacity leave very much to be desired.

Shakespeare once observed "Beauty is an innate craving of man—so he seeks to dwell in lovely parts of the creation." No age has ever been immune to this captivating spirit of Beauty, the balm of life. Even mother Sita of our epic age fell a victim to the attractions of beauty when she noticed an illusory golden deer, and longed for having it, which resulted in the out-turn of a chain of momentous events in the social life of that epic age.

The Deer is virtually a charming and comely animal which infatuates a man at the very glance.

We do admire this instinct of man and offer our ocean deep ovation for the same. Hence, we have chosen deer as a symbolising brand for our cloth of varying varieties so exquisite, enduring and of so endearing a price.

Our Specialities are:

PRINTS, SHIRTING, COATING, LENOS,

FLANNEL and TOWELS, etc.

Current Topics

EXTERNAL ASSISTANCE 1956—60

The latest Report on Currency and Finance has brought up-to-date the position with regard to external assistance for India's Second Five-Year Plan. This is given below.

TOTAL foreign aid authorised during the first four years of the Second Plan period amounted to Rs. 1,337 crores; **including a carry over of Rs. 191 crores from the First Plan period, the total assistance available for use amounted to Rs. 1,528 crores. Of this Rs. 852 crores or 56 per cent comprised loans while PL 480 and PL 665 assistance accounted for nearly one-third viz. Rs. 488 crores which was received in the form of agricultural commodities mainly foodgrains. This is brought out in the table below.

(Rs. crores)

	Undisbursed balance at the end of First Plan	Authorised between April 1956 and March 1960**	Total (1+2)	Estimated utilisation between April and March 1960	Undisbursed amount at the end of March 1960**
1. Loans*					
(a) Repayable in foreign currency ..	87.0	621.5	708.5	441.0	267.5
(b) Repayable in rupees	25.1	117.9	143.0	82.0	61.0
Total I	112.1	739.4	851.5	523.0	328.5
2. Grants	67.1	121.2	188.3	154.1	34.2
3. P.L. 480 and 665 aid (Gross)	11.8	476.1	487.9	357.6	130.3
Total (1 to 3)	191.0	1,336.7	1,527.7	1,034.7	493.0

* Excluding loans out of P.L. 480 and 665 balances.
** Excluding authorisations of (i) Rs. 179 crores from the USSR. (ii) Rs. 23 crores from Czechoslovakia and (iii) Rs. 19 crores from Yugoslavia earmarked for use in the Third Plan period.

Of the total aid of Rs. 1,528 crores comprising authorisations during the first four years of the current Plan and the undisbursed amount at the end of the First Plan, Rs. 1,035 crores or more than two-thirds was utilised, leaving an undisbursed balance of Rs. 493 crores at the close of March 1960; of this, loans accounted for Rs. 329 crores. The utilisation of total aid was considerably lower in 1959-60 (Rs. 294 crores) as compared to that in the preceding year (Rs. 343 crores).

The purposewise distribution of foreign loans excluding credits earmarked for use in the Third Plan period (given in table below) shows that over one-third of loans authorised (Rs. 336 crores) was for several industrial projects while Rs. 274 crores was for the steel plants and for import of steel for other projects. Loan earmarked for transport development totalled Rs. 172 crores, of which Rs. 143 crores was for railways. The bulk of the loans authorised for steel and steel projects and for transport was utilised by the end of March 1960.

(Rs. crores)

Purpose of Loans	Aid available for utilisation after March 1956	Estimated utilisation between April 1956 and March 1960	Undisbursed amount as at the end of March 1960
1. Steel and Steel Projects	274.0	225.9	48.1
2. Transport			
(a) Railway Development	143.0	111.1	31.9
(b) Ports Development	20.5	2.9	17.6
(c) Airways Development	8.0	8.0	—
Total 2	171.5	122.0	49.5
3. Power Projects	40.8	20.9	19.9
4. Industrial Development	336.4	138.6	197.8
5. Iron ore Project	13.3	—	13.3
6. Wheat Loans	15.7	15.7	—
Total Loans	851.5*	523.0	328.5*

* Excluding credits totalling Rs. 221 crores earmarked for use in the Third Plan period.

After March 1960, additional assistance of Rs. 678 crores was authorised. Of this, Rs. 607 crores came from the USA for the supply of agricultural commodities under PL 480. The remaining amount of Rs. 71 crores was in the form of loans extended by the USA from the Development Loan Fund (Rs. 43 crores), Poland (Rs. 14 crores) and West Germany (Rs. 14 crores).

BRITISH CREDIT TO INDIA

An agreement for a credit of Rs. 13.33 crores (£10 million) from the Government of the United Kingdom to the Government of India, was signed on August 16. A third of the credit is repayable in 10 years and the balance in 20 years, the first instalment of repayment on either portion of the credit falling due on May 31, 1966. The rate of interest will be the same as that currently applied by the UK Treasury to a loan for a comparable period out of the UK Consolidated Fund on the same date plus one-fourth of 1 per cent for administrative charges. India will be able to draw on this credit for a broad range of her imports from the UK. With the present credit, the UK Government's assistance for India's Second Five-Year Plan totals Rs. 100.66 crores.

A DELHI NOTEBOOK

BHOPAL HEAVY ELECTRICALS PLANT

THE Government of India, it is understood, is reconsidering the expansion programme of the Bhopal Heavy Electricals Plant. Last year an assessment was made that India would be requiring heavy electrical goods worth about Rs. 80 crores per annum towards the close of the Third Plan. It was then contemplated to meet these requirements by doubling the output at the Bhopal Plant to Rs. 50 crores and by setting up two more factories, one in collaboration with the USSR and the other with the technical assistance from Czechoslovakia. Now it is proposed to expand the capacity of the Bhopal Plant only to about Rs. 35 crores. This, it is thought, is essential to avoid too large a concentration of the industry at one place. A new unit with British aid is, therefore, proposed to be set up elsewhere; it will produce goods worth nearly Rs. 15 to Rs. 20 crores.

Preliminary work has also been taken on hand in regard to the two plants to be set up with the Soviet and the Czech aid. A Committee of Technical Experts has been constituted to discuss the details of their production programme with the Soviet and Czechoslovak experts and to recommend suitable sites for their location. Preliminary project studies for these two plants are expected to be submitted by the Soviet and Czechoslovak experts shortly.

HEAVY MACHINE BUILDING PLANT

According to the detailed Russian project reports, the capital costs of the Heavy Machine Building and the Coal Mining Machinery projects will be as follows:

	Rs. crores
Heavy Machine Building Plant (1st stage 45,000 tons)	21.85
Foundry/forge Plant (corresponding to the 1st stage of the Heavy Machine Building Plant)	45.27
Coal Mining Machinery Plant (30,000 tons)	13.10
TOTAL	80.22

These figures do not include several items of expenditure such as construction of structures outside the plant premises, namely, water works, drainage, sewage, electric supply, railway lines, motor roads, power engineering and telephone communications, cost of the project reports, working drawings, services of Soviet specialists for rendering technical assistance during construction, construction of plant and township with its several services and amenities, construction of temporary storage sheds and other installations for construction purposes, customs duty on imported machinery and equipment, cost of expenditure connected with preparatory work preceding and required for putting the plant in actual production, training of Indian personnel in USSR and in India, cost of services rendered by Soviet specialists at the initial stages of production, technical documentation, cost of fabrication etc. These are being worked out.

The expansion programme of the Heavy Machine Building Plant and the Foundry/Forge Plant to 80,000 tons stage and that of the Coal Mining Machinery Plant to 45,000 tons stage are expected to cost another Rs. 40 crores.

The plants are likely to be completed during the latter half of the Third Plan period. The total expenditure incurred on these projects so far is about Rs. 3 crores. Orders to the tune of Rs. 12.8 crores have been placed with the Russian Export Organisation for the Heavy Machine Building Plant and worth Rs. 7.5 crores for the Coal Mining Machinery Plant. Orders placed with the Czechoslovakian Organisation for the Foundry/Forge Plant amount to nearly Rs. 10.9 crores.

FERTILIZERS AND PRIVATE SECTOR

Government of India's policy in regard to manufacture of fertilizers in the private sector has been clarified by Mr. Satish Chandra, Deputy Minister for Commerce. In reply to a question in the Lok Sabha last week, he made the following statement:

"It has been decided that during the Third Plan period a limited number of fertilizer factories may be allowed to be set up by Indian firms in collaboration with foreign investors. Some Indian parties are exploring possibilities of financial participation by US firms in such joint ventures. Concrete proposals will be considered on merits as and when applications are received for issue of industrial licences. No pre-conditions can be attached to such participation, but foreign investors desire to be assured of the payment of a reasonable price for their product."

Mr. S. K. Patil, Union Minister for Food and Agriculture, has pointed out that during his recent tour abroad he found keen interest among foreign entrepreneurs, especially in the United States, to set up fertilizer factories in India. Much had been done to give the necessary assurances to intending investors, he said. The price policy to be followed for fertilizers during the operation of the Central Fertilizer Pool was being considered and an announcement would be made soon. When this policy was announced, Mr. Patil added, private entrepreneurs keen on investing in fertilizer production in this country would have no cause for fear that the price would work against their interest.

Production of fertilizers in the public sector henceforward will be managed by a single State-owned company, to be called Fertilizer Corporation of India, which will come into being on October 1 as a result of the proposed merger of Hindustan Chemicals and Fertilizers and Sindri Fertilizers.

Hindustan Chemicals and Fertilizers have three projects under construction, one at Nangal which is nearing completion, another at Trombay for which global tenders have been received and the third one in Assam which is at the initial stage of planning.

As a preliminary step towards this merger, both Hindustan Chemicals and Fertilizers and Sindri Fertilizers have been given draft order inviting their objections to it. This is a formality to be observed under the Company Law before the merger can take place.

BRIEFS

Seven ropeways schemes—four for Jharia and three for Ranigang coal field—are contemplated. The Government of India has already received the project reports for one of the ropeways for Jharia area and the three ropeways for Raniganj fields. The remaining project reports are expected to be received shortly. A global tender enquiry for the award of a contract for the first ropeways scheme for Jharia fields is to be put out in India by the Coal Board in a few days. Similar action in regard to the other ropeways will be taken on the basis of their project reports. It is expected that all the seven ropeways would be commissioned by the end of 1962.

*

The Government of India has approved a scheme of Messrs. New India Industries Ltd., Baroda, for the manufacture of 1.2 million square metres of photographic paper per annum in collaboration with the West German firm Agfa. Production is expected to start in another 18 months' time. Box cameras are already being manufactured by this Indian firm in collaboration with Agfa.

*

Messrs. Simon Carves Ltd. are collaborating with the East India Distilleries and Sugar Factories Ltd., Madras, in setting up a fertilizer factory at Ennore. They will design and fabricate the equipment and meet part of the foreign exchange expenditure required for the project.

UNDER SECRETARY TO GOVT. OF INDIA

PUBLICITY DEPARTMENT

Scruffy and Smarty

Scruffy: *"I am kicked out every time. How is it you are always received so well by the clients?"*

Smarty. "It is not that you are a bad salesman. But look at your clothes . . ."

Scruffy: *"What do you mean? I am here to sell my products and not my clothes!"*

Smarty: "But the client judges your product by his first impression of you. So you must dress well. Preferably with BINNY'S. They Quality Control their production. Defects, invisible to the naked eye, that might have crept into the cloth are carefully eliminated at every stage of production. That is why BINNY'S suitings look smart and last long."

BINNY—
a great name in textiles

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings - Khaki Drills - Bleached & Dyed Drills - Anticrease Suitings - Tussores - Union Fabrics - Towels - Silk Sarees - Rugs - etc. etc.

REMEMBER, you can buy all your requirements of BINNY'S fabrics at our controlled rates from authorised BINNY'S Stockists who display this Sign board. →

WORLDGRAM

India

Desiliconising Plant Commissioned: The Desiliconising Plant at the Durgapur Steel Works, the first of its kind in India was commissioned recently. This plant is designed to remove a large part of the 1 to 1.5 per cent of the silicon which is present in the blast furnace iron and which has to be removed in the open hearth furnaces. Its functions are as follows: the blast furnace iron is carried from the mixer in which it is stored in 120 ton ladle to which is added a measured quantity of limestone. The ladle is placed under a refractory-lined hood through which oxygen lances are lowered to the surface of the metal. Gaseous oxygen is blown through steel pipes for a pre-determined time according to the amount of silicon to be removed. After blowing, the slag formed from the limestone and the oxidised silicon is decanted and the disiliconised metal is poured in the open hearth furnaces. The main advantages of the process are, firstly it enables a larger proportion of the blast furnace iron to be used in the open hearth furnaces, secondly, it should result in a considerable increase in the rate of working in the open hearth furnaces and finally, it results in fuel economy. Oxygen for this process is supplied by a separate plant at the Steelworks which consists of two units, each producing daily 50 tons of gaseous oxygen of 99.5 per cent purity.

*

Manufacture of Paints and Varnishes: As a result of the survey recently carried out by the Government, it is felt that for the present there is scope for the establishment of additional capacity for the manufacture of paints and varnishes in the northern region comprising the States of Uttar Pradesh, Punjab, Rajasthan, Jammu and Kashmir, Himachal Pradesh and Delhi and in the Southern region comprising the States of Madras, Andhra Pradesh, and Kerala. Government have, therefore, decided that as a part of the expansion proposed during the Third Plan, fresh capacity of 10,000 tons be installed in each of these two regions and applications under the Industries Act have been accordingly called for from the interested parties. No licence has been granted for the manufacture of paints yet.

*

Government's Guarantee for Repayment of Loans: It was disclosed in the Lok Sabha recently that the Government had guaranteed repayment of the following loans in foreign currencies taken by the private sector agencies from the International Bank for Reconstruction and Development: (1) TISCO — I Rs. 35.71 crores, (2) TISCO — II 15.47 crores, (3) IISCO — I Rs. 14.30 crores, (4) IISCO—II Rs. 9.52 crores, (5) TROMBAY—I Rs. 6.64 crores, (6) TROMBAY — II Rs. 4.67 crores (7) ICICI —I Rs. 4.76 crores and (8) ICICI—II Rs. 4.76 crores. It was also revealed that the guarantee covered repayment of principal and payment of interest and other charges as per loan agreement between the borrower and the International Bank for Reconstruction and Development.

*

Bureau of Petroleum Information: The Bureau of Petroleum Information set up in New Delhi to promote a better understanding of the oil industry is functioning quite efficiently. Its book shelves contain the leading works of reference on the oil industry of the world, particularly emphasis being paid to the data on oil in India and neighbouring countries. The clipping service of the Bureau is quite comprehensive. Besides the oil series, the Bureau maintains economic series, facility series, monetary series, general series in which articles pertaining to various aspects of the country's economy are kept. The B.P.I. plans to issue quarterly a digest of petroleum articles appearing in various periodicals. It also intends to hold film shows relating to the oil industry. It is becoming quite popular among the journalists, authors and all others who write about the oil industry. This Bureau is located on the ground floor of the National Insurance Building, Parliament Street, New Delhi, and is well worth a visit for all those who are interested in the oil industry, both in India and elsewhere in the world.

*

Loans Due from State Governments: The Finance Minister, Mr. Morarji Desai, confirmed in the Lok Sabha recently that State Governments owed to the Central Government large amounts advanced to them as loans. He said the loans were for different periods and were repaid as and when they fell due. No major default on the part of the State Governments had been brought to notice. As regards the total amount of arrears to be recovered from the States, as at the close of the financial year 1959-60, the Minister said that the accounts for the year 1959-60 had not yet been closed. He, however, placed the following statement showing the amounts outstanding against each State, at the end of the year 1958-59 (as on March 31, 1959) on the table of the House: Andhra Pradesh—Rs. 139.31 crores; Assam —Rs. 34.99 crores; Bihar—Rs. 109.71 crores; Bombay—Rs. 174.02 crores; Kerala—Rs. 37.55 crores; Madhya Pradesh—Rs. 81.19 crores; Madras—Rs. 94.78 crores; Mysore—Rs. 71.39 crores; Orissa—Rs. 123.33 crores; Punjab—Rs. 255.00 crores; Rajasthan—Rs. 74.69 crores; Uttar Pradesh—Rs. 171.99 crores; West Bengal—Rs. 215.48 crores and Jammu & Kashmir Rs. 27.75 crores. The total outstanding amounts was Rs. 1,581.18 crores.

*

Naphthalene Plant at Durgapur: The Naphthalene Plant, associated with the By-product Plant at Durgapur Steelworks, was commissioned recently. The Naphthalene plant works in conjunction with the Tar Plant which produces crude naphthalene oil. This is pumped from the storage tanks at the Tar Plant and delivered into crystallising trays at the Naphthalene Plant. The naphthalene oil is allowed to cool for four days to permit complete crystallisation and the oil drained off and pumped back to the Tar Plant for blending purposes. The solid naphthalene crystals are then transferred of the 'Hot Press' unit for pressing into cakes of refined naphthalene. The cakes are delivered by conveyor belt to a crusher and bagging machine and then to storage for subsequent loading to road or rail transport. Naphthalene is one of the versatile and important industrial organic chemicals, being an essential raw material for the preparation of a great many products. It is, for example, familiar to every one in the form of moth balls. Its partial oxidation product, phthalic anyhydride is used quite extensively in the preparation and production of resins, lacquers and plastics of various kinds and for dyestuffs, for fabrics, paper and paint. Derivatives of naphthalene are used in the manufacture of explosives, soaps, photographic chemicals, wetting agents, insecticides, disinfectants and pharmaceuticals, synthetic tannins, oils, fuels and ignoranic synthetics, all of which represent only a part of its widespread potential application. The plant at Durgapur is designed to handle 36 tons per day of crude naphthalene oil to produce approximately 20 tons of refined naphthalene. It has been built by Messrs. Simon-Carves Ltd., a member company of ISCON — the British consortium constructing the Steelworks at Durgapur.

U.S.A.

DLF Loan to Indian Railways: The US Development Loan Fund has announced approval of a $50 million loan (Rs. 23.8 crores) to the Government of India for procurement of diesel and electric locomotives and centralised traffic control equipment. This is the 19th loan granted by the Development Loan Fund to India and brings the total Fund assistance to $348.3

million (Rs. 1,65.8 crores). This is also the third occasion in which Indian railways have received loans from the Development Loan Fund. Out of the latest loan, $10 million will be utilised for procuring electric locomotives and $40 million for purchase of diesel locomotives and centralised traffic control equipment. The diesel locomotives, numbering 170, will consist of the following: 60 metre-gauge, main line locomotives, 40 broad-gauge main line locomotives, and 30 broad-gauge shunting locomotives, all fully assembled, and 40 broad-gauge main line locomotives, to be partly assembled in India. Centralised traffic control and related signalling equipment will be installed between all stations of India's North-East Frontier Railway which connects Assam with the rest of the country. The line on which the traffic control equipment will be installed is of metre-gauge and single-tracked. Installation of a central traffic control system will avoid the necessity for more costly double-tracking of line, will increase carrying capacity and will make possible operating economies, better service and greater safety. Like all credits extended by the Development Loan Fund, this loan can be repaid in rupees.

*

Establishment of Underwood Subsidiary in Venezuela: The Wm. Underwood Company in Boston announced recently the establishment of an Underwood subsidiary in Venezuela which will be producing Underwood Deviled Ham there before the end of 1960. The $1,025,000 operation includes a plant in Cagua, which is about 60 miles west of Caracas, capital of Venezuela. The International Finance Corporation invested $500,000 in Underwood's subsidiary in Venezuela with repayment due within 9 years. Under the terms of the agreement, Underwood owns its newly-established Venezuelan subsidiary, Diablitos Venezulanos CA.

U.S.S.R.

Equipment for Afghanistan: A Soviet-Afghan agreement on the sale of Soviet equipment to Afghanistan on the basis of consignations has been signed. The agreement provides for sale of tractors, workshop equipment, washing machines, radio equipment, photo and cinema cameras, refrigerators, cycles, automobile tyres and tubes. The agreement covers a two year period. In all various goods to the value of 300,000 US dollars will be exported to Afghanistan. The USSR will import chiefly fruit from Afghanistan.

*

Assistance to Korean Democratic People's Republic: Scientific, technical and industrial co-operation between the Korean Democratic People's Republic and the Soviet Union is increasing every year. Under the terms of the agreement of March 17, 1959, the Soviet Union will render technical assistance to the KDPR in the construction of a number of industrial projects and supply them with equipment which is not manufactured as yet in North Korea

United Kingdom

Setting up of Indian Gelatine Plant: A new company for the production of gelatine and glue has been established in India by the British firm P. Leiner and Sons Ltd. Treforest, Glamorgan, who are the world's largest producers of Ossein gelatine. Name of the new company is LEINTER - KNIT Gelatine Company Limited, the shares being jointly owned by P. Leiner and Sons Ltd., and KNIT (Kapurthala and Northern India Tanneries Ltd., Kapurthala). The authorised capital is 50 lakhs of rupees. The new plant, a site for which has not been finally chosen, will be the first of its kind in India, and is expected to start production in six to nine months' time. Technical experts from the Treforest Factory of P. Leiner and Sons Ltd. will assist in the organisation of the factory.

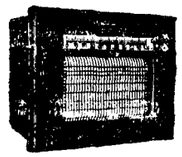
*

Steel Production in July: Production of Steel in Britain in July—a month in which several works closed for the summer holidays — was at an average of 3,91,400 tons a week, compared with 466,400 tons a week in June and 320,000 tons a week in July 1959, the Iron and Steel Board announced recently. Pig iron production was at an average of 288,900 tons a week compared with 295,200 tons a week in June and 221,600 tons a week in July 1959. Deliveries of finished steel to using industries in Britain during the second quarter of this year are provisionally estimated to have been at a weekly average of 300,700 tons, compared with 242,500 tons in the second quarter of 1959.

Australia

Tobacco Growing: Queensland's tobacco-growing industry has become the State's third most important industry, with announcement of a record production of 7,750 tons of leaf valued at nearly £7 million. By comparison last year's sugarcane crop was worth £39 million, while wheat brought this northern Australian State £7,800,000 in the year to June 30. Sound marketing and improved production methods are responsible for the industry's rapid growth, and production is also being assisted by improved irrigation facilities. In addition to higher production total, the quality of the tobacco leaf is equal to the best that Queensland has produced.

Yugoslavia



Imports of Crude Oil: The production of crude oil in Yugoslavia has been increasing very rapidly since the last war. Last year the country produced 592,485 tons of oil, as compared with 1,122 tons in 1939. This year, further advances will be made. It is expected that the total production this year will come to 911,000 tons, which will be enough to cover 70 per cent of the country's needs. Next year production is to be increased to 1,200,000 tons, so that Yugoslavia will no longer be obliged to import this essential commodity.

*

Trade with European Countries: Yugoslav trade with the European countries was valued at 154.9 billion dinars or 75 per cent of total trade done. Trade with the European countries was 35 per cent higher than in 1959 exports having risen by 19 per cent and imports by over 46 per cent. In terms of value exports and imports were 9.3 and 30.4 billion dinars higher respectively than in the corresponding period last year. Exports to the European countries account for 75.4 per cent of total deliveries, of this 49.1 per cent was absorbed by the OEEC countries, 26.0 per cent by the East European countries and only 0.3 per cent by the other countries. The share of the European countries in total imports was 74.9 per cent of which the OEEC countries accounted for 48.2 per cent, East European countries 26.7 per cent, while among the other countries, Finland, accounted for only 36 million dinars.

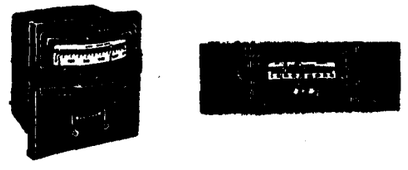
Pakistan

Warsak Project: The 35-crore Warsak Multi-Purpose Project is the first biggest post-independence national development project not only in the Frontier Regions but in the whole of Pakistan. The project, now almost complete within a record time of five years, is example of international co-operation and a lasting momument of goodwill and friedship between Canada and Pakistan who jointly sponsored it under the Colombo Plan. Canada gifted under this Plan all the heavy equipment and machinery worth about 36 million dollars for the construction of this great Project and also the service of 150 Canadian experts while the rupee expenditure has been met by the Government of Pakistan. Much of the country's happiness, prosperity and economic development is linked with the Warsak Project. With the commissioning of all the four generators at the Warsak Power House, each of 40,000 k.w. power requirements in West Pakistan to a large extent will be met.

CHOOSE ElectroniK STRIP CHART CONTROLLERS for detailed, long-term records... and a complete selection of control forms.

CHOOSE ElectroniK CIRCULAR CHART CONTROLLERS for ease of scale reading...convenient daily charts; in a full range of electric and pneumatic control forms.

CHOOSE ElectroniK CIRCULAR SCALE CONTROLLERS where you want readability and control check at extreme distance...without need for a record.



CHOOSE THE PROTECT-O-VANE SAFETY CUT-OFF for simple dependable excess temperature protection...can be used with any temperature control to prevent furnace shut downs and loss of production.

PSBS-H31/60

Whatever your furnace needs for control...

There's good reason why more heat-treating furnaces everywhere are controlled by Brown instruments. First, of course, is performance...sensitive, precise control. And equally important is versatility. In this varied line of instrumentation you'll find just about everything a furnace could possibly need in the way of control.

CHOOSE PYR-O-VANE CONTROLLERS where you don't need a record but do need precise vane type snap action electric control by a millivoltmeter instrument...also available with pulse-type time proportioning action, in both vertical and horizontal models.

NEWS IN BRIEF

INDIAN

Dr. K. L. Shrimali, Union Minister of Education, told the Lok Shabha recently that tabulated results of the pre-test of the first draft of the census questionnaire for the 1961 census, confined to small selected areas of each State, conducted by the Registrar General of India, had revealed a literary percentage of 40.7 per cent as against 16.6 per cent according to 1961 census.

*

Mr. K. D. Malaviya, Union Minister for Mines and Oil, informed the Rajya Sabha recently that the total crude imported by the three refineries during 1959 was 4.9 million tons at prices varying from Rs. 76 to Rs. 85 per ton c.i.f. Bombay/Visakhapatnam.

*

Nearly 500 factories employing about 10,000 persons are now functioning in the industrial estates completed so far. Production in these factories would amount to about Rs. 10 to 11 crores worth of goods per annum. The total investment on the completed estates amounts to about Rs. 5 crores, thus giving an investment-production ratio of 1 to 2.

*

The construction of a railway line between Bailadila and Kottavallasa has been included in the Third Five-Year Plan for facilitating the development of mineral resources in Dandakarnya area. The 310 mile railway line will pass through Jeypore and Koraput in Orissa.

*

The Central Warehousing Corporation has decided to undertake construction of storage accommodation for 50,000 tons at 10 more centres in the country. Project reports for the new construction works were approved at a meeting of the Executive Committee of the Corporation held in New Delhi recently.

*

The U.S. Technical Co-operation Mission has made a further grant of $2.5 million (Rs. 1.2 crores) to India's Malaria Eradication Programme. This brings the total U.S. aid to the programme to Rs. 39.9 crores.

*

An agreement between India and Iran for the operation of air services between the two countries was signed at Tehran recently. The agreement is designed to promote the development of air traffic between India and Iran.

*

A Study Team has been set up by the Committee on Plan Projects to make an appraisal of the schemes of seed multiplication that are being tried in the country and make suggestions for ensuring the supply of pure seed of improved varieties to cultivators.

*

The total electricity produced by the public utility power stations in India in April, 1960, was 1,320.9 million kWh. of which 1,081.9 millon kWh. were sold to ultimate consumers.

*

It is proposed to have an output of about Rs. 30 35 crores at Bhopal and to set up another unit elsewhere for a production of Rs. 15 to 20 crores.

*

The capital investment in the Indian railways, which was Rs. 970 crores, in 1950-51, has risen to about Rs. 1,560 crores. This will go up to Rs. 2,300 crores at the end of the Third Plan.

FOREIGN

Exports of the U.K. drugs, medicines, and medicinal preparations rose by 12 per cent during the first six months of 1960, compared with the same period of last year.

*

French car output in June totalled 135,235 units compared with 130,667 in May and 123,165 in June 1959. In the first six months of 1960 output reached 765,206 units against 665,511 in the first half of 1959.

*

Russia plans to import high quality consumer goods to satisfy the taste of the population, the Soviet news agency "Tass" reported recently. The Agency also reported that the Soviet Government and the Central Committee of the Communist Party had adopted a new decree "on the measures to be taken to achieve a further improvement in internal trade."

*

Pakistan's jute production targets fixed in the Five-Year Plan is to be achieved by raising production per acre instead of bringing more land under cultivation, the Governor of East Pakistan told the Pakistan Jute Mills Association recently.

*

Japan's foreign currency reserves at the end of July totalled $1,505 million — an all-time record. This was an increased of $54 million over end-June holdings.

*

World Bank officials stated recently that negotiations were advancing for a 25-year loan to Israel of $27.5 million for a harbour at Ashdod.

*

It is reported the U.S. Federal Reserve Board is reducing the reserve requirements for some commercial banks.

*

Canadian gold production in May amounted to 376,675 fine ounces, compared with 380,019 ounces in May a year ago. Output for the first five months was up 0.6 per cent at 1,879,802 fine ounces, compared with 1,869,350 ounces in the same period last year.

*

The nationalised Bolivian mines produced 1,230,340 kilos of tin in June, compared with 1,179,416 kilos in May, but 11.42 per cent lower than production in June last year.

*

The U.S. and Canada have agreed on increased co-operation in the development of heavy water-moderated power reactors, the Atomic Energy Commission announced recently.

*

The U.S. Department of Agriculture, in a first official estimate of the 1960-61 American cotton crop issued recently indicated probable production at 14,471,000 bales and the yield per acre at 447 lbs.

*

Export surpluses and the credit squeeze have combined to send up West Germany's gold and foreign exchange reserves to a new record level. The reserves have been rising this year. Since the discount rate was raised from 4 per cent to 5 per cent at the beginning of June the reserves have increased by DM 2,396.2 million.

COMPANY AFFAIRS

BIRLA JUTE'S STEADY PROGRESS

Trading conditions during the year to March 31st, 1960 were difficult in the earlier part due to heavy accumulation of gunny stocks. In the second half of the year under review demand for the jute goods improved considerably. Prospects for the 1959-60 jute crop were on the other hand, good in the beginning but as the season advanced, crop estimates were revised downward, the latest estimate being a crop of only 55 lakhs of bales for India. As a result of this expected shortage in the supply of raw jute, there was a steep rise in the prices in the beginning of 1960. The situation was further aggravated by an unprecedented drought in the jute growing belts during the months of April and May.

The Directors have reported that the modernisation programme of the jute mills machinery, which was undertaken last year, made satisfactory progress and it is hoped to complete this in September 1960. Full benefits and economy resulting from this will be then available and should partly be reflected in the accounts of the current year.

The expansion of the Calcium Carbide Factory was completed during the year and the new furnace with the rated capacity of 25 tons per day was put into commission from November, 1959. In accordance with company's understanding with Government, the benefit of lower cost resulting from this higher production has been entirely passed on to the consumers by reducing the selling rates of Carbide by Rs. 60 per ton for all sizes.

It was decided during the year by the Directors to raise the capacity of Staple Fibre Spinning Mill belonging to the Company from 16,000 spindles to 30,000 spindles. Orders for the machinery have been placed and it is expected to complete this expansion programme by November, 1960. This section worked satisfactorily throughout the year.

The Company's Cement Plant at Satna did not work smoothly during the year due to several breakdowns and other troubles. The total clinker produced during the year was 1,45,937 tons and the total cement produced was 1,63,411 tons. Modifications and improvements have since been made in the plant and better results are expected this year. The machinery suppliers have been unable to fulfil the production guarantee of 750 tons per day and they have, therefore, agreed to pay compensation according to the terms of the contract.

The overall results of the Company however show surplus of Rs. 1.06 crores out of which provision has been made for depreciation to the extent of Rs. 42.27 lakhs, for development rebate reserve to the extent of Rs. 15.66 lakhs, for general reserve Rs. 7.50 lakhs and for taxation Rs. 16.10 lakhs. The Directors have recommended the payment of dividends subject to deduction of tax on ordinary shares at the rate of Rs. 1.50 per share which comes to 15 per cent per annum.

ORISSA CEMENT

The Directors have reported that some breakdowns and mishaps occurred during the year under report which have adversely affected both production and despatches of cement. Due to incessant rains in August, 1959 on one occasion the electrical equipment of the coal mills was submerged in water which caused a setback to the production for about a fortnight. Breakdown in the crane, cement mill and other mechanical troubles in the kiln were also responsible for the decline in production and despatches compared to 1958. The despatches of cement further suffered due to slackness of demand and for some time the silos being full, production had to be curtailed. Compared to 1958, the clinker production registered a decline of 9.7 per cent and cement despatches went down by 24.3 per cent. It is rather unfortunate that after keeping up the clinker production at a satisfactory level throughout the strike period and uptil July, 1959, due to the unfortunate mishaps mentioned earlier, production and despatches received serious set back in the remaining five months of the year.

Another factor affecting the earnings has been payment of stockist commission on cement sales. The retention price of cement fixed by the Government of India on the recomendations of the Tariff Commission with effect from July 1, 1958 for different cement producers did not take care of stockist commission due to State Trading Corporation having taken over the responsibility of cement sales. Some of the producers, however, decided to continue their previous practice of payment of commission to their stockists. This company also introduced, during the year under review, payment of commission to the stockists to stimulate the sale of their cement which has declined on account of a shrinkage in the demand. The commission amounted to about Rs. 1.25 lakhs during the year.

In spite of these adverse conditions the working result have been quite fair. Gross profits for the company during the year ended December 31, 1959 amounted to Rs. 80.33 lakhs against Rs. 85.41 lakhs during the previous year. Net profits come to Rs. 27.15 lakhs. The Directors have recommended a dividend of Rs. 1.10 per ordinary share along with other appropriations. The Company is making application under Section 18(3F) of the Indian Income Tax Act to ascertain the exempted portion of its income from tax under Section 15C of the Indian Tax Act,

ORISSA GOVT. LOAN 1969

Issue Price Rs. 99.50 per cent

Opens on the 29th August, 1960

The loan will be closed as soon as a total of approximately Rs. 400 lakhs has been subscribed and in any case not later than the close of business on the 3rd September, 1960.

The applications will be received at the Office of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras and Bangalore, at the branches of the State Bank of India in Orissa and at the Treasuries and Sub-Treasuries in the State of Orissa.

Full particulars can be obtained at any of the Offices of the Reserve Bank of India or branches of the State Bank of India or at any treasury or sub-treasury in the State of Orissa.

COMMODITY NEWS AND NOTES

PRODUCTION OF COAL IN PRIVATE SECTOR DURING THIRD PLAN PERIOD

The general policy of the Government of India was to confine the expansion of the private sector in coal industry to areas immediately contiguous to their working mines, and covered by the same mining lease. Exceptions to this rule were made only in individual cases provided the areas involved were small and were not required for development in the public sector. A working group consisting of the representatives of the coal industry and the Central Government had been set up by the Government of India to make an assessment of the capacity of the private sector for additional production, both in the short range and during the next Plan period. The allocation of the target of additional production for the next Plan, between the private sector and the public sector was a matter to be decided by Government. In taking the decision the Government would take into consideration the report of the working group which has already submitted its recommendations in regard to coking coal in the short range.

STEEL IMPORTS

Steel imports in 1960 are expected to be of the order of 600,000 tons. Arrangements are being made for the import of steel from the rupee payment Agreement countries, namely, U.S.S.R., Czechoslovakia, Poland, Hungary and Yugoslavia according to the agreements concluded by the Government of India with these countries. Contracts for the imports of 55,500 metric tons of steel from the U.S.S.R. and 500 tons of steel wire from Czechoslovakia have already been finalised. Imports of steel are also being arranged against the U.S. Development Loan Fund credits as well as barter imports from the United Kingdom, U.S.A., West Germany, Japan, Belgium, Holland and Australia.

TWO LAKH TONS OF SUGAR RELEASED

The Government of India has decided to release 2 lakh tons of sugar. There will be no release for free sale from the factories in Uttar Pradesh, Bihar and Punjab except a small quantity which will be released to each factory for sale to its employees. Allotments of sugar to Madhya Pradesh, Rajasthan, Uttar Pradesh, Bihar, West Bengal, Orissa, Madras, Kerala, Maharashtra, Gujerat, Himachal Pradesh, Assam, Manipur and Tripura from factories in the controlled region will be made only to the nominees of the State Governments. In case of Punjab and Jammu & Kashmir allotments will be made direct to the State Governments or to their nominees. Allotments to Delhi will continue to be made on the existing basis. Allotments will be made at prices fixed under Notifications No. GSR 1188[Ess. Com.] Sugar dated October 25, 1959 and GSR 386[Ess. Com.] Sugar dated April 4, 1960. The controlled ex-factory price for U.P. and North Bihar factories is Rs. 37.85 per maund and for factories in Punjab and South Bihar Rs. 38.35 per maund for ISS D-29 grade with the prescribed price differentials for other grades. The fixed f.o.r. destination prices in respect of allotments made to Kanpur and Calcutta will be Rs. 38.60 and Rs. 39.85 per maund respectively for sugar of ISS D-29 grade.

INDIA'S 1959-60 RICE CROP

The Commonwealth Economic Committee Rice Bulletin, issued recently in London, shows that the production of paddy in 1959-60, outside China, promises to reach a new record total of 138,000,000 tons. Harvests in Japan and Indonesia reached a new high level, while those in India, Pakistan, and the Philippines were near-records. Reviewing production for the year in India, the report says: "The final estimate of the harvest in India is of 43,100,000 tons of paddy from 81,300,000 acres, slightly lower than the record crop in 1958-59 (now put at 44,600,000 tons from 81,400,000 acres).

ERRATUM

Reserve Bank of India

In the advertisement appearing on pages 289 and 290 of "The Eastern Economist" dated August 12, 1960, inviting applications for filling vacant posts in the Reserve Bank of India, the last item was inadvertently omitted in print. The last item of the advertisement should read as below:

"10. Convassing will be regarded as a disqualification."

Our fleet of twenty modern freighters offers fast, regular and dependable service between

INDIA—U. K. & the CONTINENT • INDIA/EAST PAKISTAN—SOUTH AMERICA
INDIA—BLACK SEA & EASTERN MEDITERRANEAN PORTS

AUGUST 26, 1960

The New Foreign Exchange Crisis

THE return of the Reserve Bank of India for the week ending Friday, August 12, is well calculated to provide concern on India's foreign payments problems. In the month from July 15 to August 12, foreign securities have come down from Rs. 143.01 crores to Rs. 123.01 crores and balances held abroad from Rs. 22.35 crores to Rs. 21.48 crores. Thus, in a matter of nearly one month, something like Rs. 21 crores net have been paid out in foreign exchange, reducing India's sterling balances to an all-time low of about Rs. 144.5 crores. It is true that we have not long to go before our seasonal exports begin to tell favourably on our current balance of trade. But it is widely believed that, before the tide turns, India might lose another Rs. 15 crores, bringing down the sterling balances below Rs. 130 crores.

This figure by itself is disturbing, but coming as it is at the threshold of the Third Five-Year Plan, it has produced this week exaggerated pessimism in Parliament. When our foreign exchange requirements (including repayments) are of the order of about Rs. 3,000 crores, there is no reason why a drop of Rs. 30 crores should register so powerfully. Our trade and development accounts do not balance one another. Certainly India's obtaining the foreign exchange for the Third Five-Year Plan does not depend primarily on her performance in any one trade year. Quite bluntly, India's foreign exchange needs are to be underwritten by friendly countries and by private foreign investment negotiated on business terms. It is not to be expected that the current trade balance will ever be a major factor in the solution of the wide gap in our foreign exchange payments anticipated in the next five years, and for some time beyond.

While the current "low" in India's foreign balances should not deter us from decisions in the Third Five-Year Plan, it would be foolish to ignore its short-period consequences on import policy at least for the next six months. Until the "Aid-India" meeting of September 12 produces somewhat heartening news on the willingness of our friends to "untie" their credits and make them available for trade deficits, the pressure on the current trade account is such that further drastic import restrictions will be inevitable. The Import and Export Advisory Councils, which are to meet on Saturday and Sunday this week, are expected to advise on where the cuts are best applied. While everyone will recognise that some restrictions are necessary, it is vital that we should not lose all perspective and forget that restrictions, which prevent our exports from rising more than the saving import cuts effect in foreign exchange, are basically in error. Thus, the refusal to permit adequate import of raw jute cuttings from Pakistan at a time when manufactured jute goods are selling well in the United States, is a type of blindness of which 1959 produced many instances. It is a tragedy that the error of 1959 is being repeated in 1960. Similarly, the delay in import of raw cotton under PL-480 last year must be deemed primarily responsible for the rise in the cotton textile prices, following internal shortage, as well as for a reduction in exports. The greater the crisis, the more the imagination and understanding there needs to be in the avoidance of rules of thumb. One of the great difficulties of the last year has been the lack of this recognition that often one needs to import more in order to improve the overall balance of payments. It would appear from the experience of the last six months that the patterns of imports and exports have been far from co-ordinated. The net result is that the foreign exchange crisis has been made greater than before.

It is sincerely to be hoped that the Import and Export Advisory Councils' meeting this week will provide the Government with enough detailed information by which substantial errors in the dovetailing of imports with foreign exchange earnings can be avoided. Thereafter the country will need all the discipline that it has in order to accept with good grace a situation which, for the shorter period, at any rate, cannot be remedied. In the longer period, a far more enterprising policy of explanation of India's Plans is required in order that the Third Five-Year Plan should get under way. When, it is being asked, will the Government recognize the magnitude of the effort that is necessary for this purpose ?

The Third Plan Debate

IF anybody was looking forward to the Lok Sabha debate on the Draft Outline of the Third Five-Year Plan for any fresh light to be shed on some of the burning problems of the day in relation to planning, he must have been sorely disappointed. The tone of the debate was perhaps set by the Prime Minister himself who in his characteristic rambling way initiated the discussion. He dwelt upon, at considerable length, on some of the all-too-familiar aspects of planning in this country, but failed to spotlight such crucial matters as the staggering unemployment, soaring cost of living, and resources for the Plan; the Prime Minister's long speech betrayed a certain amount of lack of enthusiasm which had never been the case hitherto in his references to the great endeavour of the Indian people to improve their lot. What followed late in the debate too had the familiar ring; some Members made a show of their regional loyalties and complained about their States having been neglected in matters of economic development, others pleaded for a bigger or a smaller Plan or asked for allocation for some particular sectors of the economy to be stepped up.

Some Members did touch upon the question of holding the price line as did the Prime Minister, but the suggestions they put forth were painfully old and for the most part academic. It is a pity the Prime Minister could not hold out any assurance of having a definite price policy, though he and his Government have been seized of this problem for quite some time and the country has been crying hoarse that something should be done on this front. Two points stand out of the whole discussion; firstly, there is need to avoid excessive recourse to deficit financing, and secondly, selective controls may be unavoidable if the price spiral is to be held from expanding further. In an expanding economy like ours, there may not be any escape from some rise in prices, but that does not mean that the recent past can be allowed to repeat itself. Controls, no one can deny, are a poor substitute for increase in production and in this country they have not been an unqualified success, rather the reverse. But still the Prime Minister used the magic word as though it were a substitute for action. His categorical assertion that "at the present juncture of India, deficit financing has to be kept in control" is, however, heartening; it can go some way in checking the prices from rising to abnormally high levels. Suggestions have been put forth that price level can be contained by a cut in direct taxation. But this raises the important issue of resources for the Plan. Surprisingly enough the debate contained little on this aspect of the Plan. It was generally taken for granted that the Planning Commission's assessment of the resources would be fulfilled.

On the question of solving the unemployment problem, some powerful voices were heard. It is indeed depressing to note that each Plan should have a bigger backlog of unemployment; the Second Plan which started with a backlog of 5.3 million is anticipated to leave it with an addition of about 2 million. It is, however, an irony that those who spotlighted this vulnerable point in the Plan had hardly anything to suggest as a remedy. Did they lack the courage to point out that there should be a more rational distribution of resources between the capital-intensive heavy and basic industries, on the hand, and the development of secondary and tertiary activity having greater employment potential, on the other?

Equally surprising is the fact that the Prime Minister's dogmatic assertion that co-operative farming was the only panacea for the ills of our agrarian economy went unchallenged from the Members both belonging to the Congress Party and the Opposition. It does not require second thoughts to assert that whatever benefits co-operative farming will confer, we have to go slow with it as long as we have dearth of entrepreneurial skill which is so essential for the success of this experiment. And coercion in this regard can only spell disaster, at least in the short run when the country can ill-afford any setback in agricultural production.

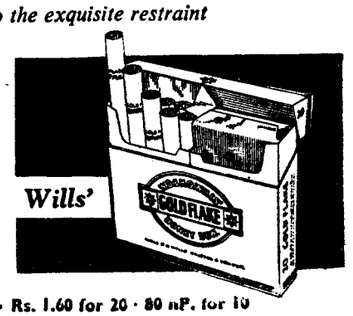
Perhaps the only encouraging fact about the debate is the Prime Minister's highlighting the necessity of having satisfactory audits of performance of the Plan. The real problem before India, as he pointed out, is one of implementation and not of constantly laying down policies. This new stress on implementation is welcome as also the suggestion that a Committee should be set up to find out where the increased income is going. The findings of this Committee can be revealing and would be a good guide for the investment pattern in the future.

Accounting as a Tool of Management

THE three-day seminar on Management Accounting held in the Capital during the weekend did not attract the attention it deserved. Its purpose was to apply modern accounting techniques to evaluation of managerial decisions. As the Prime Minister, who inaugurated the Seminar, pointed out the subject is of considerable value from the point of view of developmental planning. The growing importance of the corporate sector in the economy and more especially the growth of the public enterprises is now generally recognised. Because of the increasingly large investments of national resources in their creation and expansion, the public have a continuing interest in their management and control. While science and technology may provide the know-how and the tools and financiers and financial institutions provide the needed funds for production and marketing, it is obviously the responsibility of management to build a coherent structure to bring into close relationship the diverse elements that enter into production and exchange. Management in the corporate sector has thus to take into account modern concepts of integrated behaviour and social responsibility.

This new responsibility naturally entails new techniques of management. It is no use merely making a plan without evolving an adequate machinery for its satisfactory execution. These exercises in planning and control involve a wide range of activity, but the ultimate test will be the effectiveness of the investment that is made. Mr. Nehru, therefore, urged that well-thought out methods had to be devised for securing data which would show what was actually being done. Management accountancy is a technique that is based on the concept of "promise and performance" and which also seeks to show the way to maximum efficiency and helps in achieving the greatest output at the lowest cost. One way of ensuring efficiency, for example, is to reduce the time lag between the starting up of an operation and its optimum utilisation. This time lag may sometimes be inevitable, but it is often made an excuse for camouflaging inefficiency and defects in management. All these necessitate the working out of a series of dynamic norms against which performance can be judged at each stage of development.

Management accounting comprises various elements, but its chief characteristic is that it is a forward looking approach instead of being just a backward looking philosophy. It seeks to provide a continuous supply of information concerning production and costs to the management on the bases of proper systems of recording, analysis, tabulation and interpretation of the relevant data relating to the working of an enterprise. Essentially, the technique is one of expressing in economic terms the targets of the plan and also measuring performance at each stage so that corrective action can be taken in time. Here the most widely adopted practice is known as budgetary control which helps the management to set up standards of efficiency and performance in advance so that one can go along the course charted in an orderly and planned fashion. By fixing yardsticks of performance sector by sector within the organisation and then affording the means of judging achievement, budgetary control helps in



Named after the ancient Chera Kings, Kerala dates back to a mythological past. This land of palm-fringed lagoons and lush vegetation has a close-knit cultural heritage which is best expressed in its theatrical art.

Every year the Velakkali dancers stage the battle of Kurukshetra in commemoration of the martial past of the country— elaborate dress, make-up and dance-drama are fused in an epic grandeur of mood and movement.

Diversity is the keynote of your journey through India, from the emotional grandeur of Kathakali to the exquisite restraint of the Manipuri Ras dance.

THE WEEK'S NOTES

Laos

THE COUP AND AFTER

THE SPOTLIGHT in South-East Asia is now on Laos where a new Government has been formed after the military coup on August 9. This Buddhist Kingdom in Indo-China, with a population of three million and the size of Great Britain, became independent in 1949 from French rule, but during the last decade it has been perpetually in a state of civil war because of the activities of the Pathet Lao forces from the north. In May last, after a General Election, a rightist Government was formed under the premiership of Prince Somsanith. There was bitter criticism that the elections were rigged since the entire opposition was routed. The leader of the extreme left Neo Lao Haksat, Prince Souphanouvong, escaped with his companions from Vientiane, where they were held, to rejoin the Pathet Lao guerillas. Since the Government feared that the situation was "grave" and the Pathet Lao rebel activity may be stepped up, it took strong measures for putting down "subversive" activities. The situation since then was

far from easy. But no one could have believed that a military coup for exchanging a pro-American Government for one that is strongly neutralist, could have taken place so soon. The circumstances under which it took place were also dramatic. The Government was then at Luang Prabang, the religious capital of Laos, when the 27-year old Captain Kong Le seized power. The revolutionary regime lost no time in attaining a measure of legality and stability by the support it had from Price Souvanna Phuma who had been Prime Minister twice before. The Prince, however, chose to support Captain Kong Le only after the National Assembly had passed a vote of no-confidence in the Somsanith Government.

But the position is far from settled. To the United States, Laos is of vital strategic importance, as it forms a crucial buffer that separates Communist China and North Vietnam from pro-West Thailand and South Vietnam and neutralist Cambodia and Burma. She has poured more than 300 million dollars into the country in the shape of economic and military aid, which is considered a higher per capita aid income than any other country. If the last US soldiers are to leave the country, will she continue to give aid? Evidently, the new Government has to do a lost of tight-rope walking. Immediately, it has to face two problems. One is the threat of a civil war which may be precipitated by any extremist action that may be taken by the former Defence Minister, General Phoumi Nasavan who is held to be the "strong man" of the overthrown Government and who has now fled to Thailand. The situation is further complicated by the fact it is not known how much army support Captain Kong Le enjoys. The second problem is one of ending the war with the Communist-led guerillas. On the whole it is a difficult situation facing the country. Looking back, it would appear that had the Soviet request to Britain as one of the co-chairmen for reviving the Supervisory Control Commission, set up by the 1954 Geneva Conference, been implemented, there could have been a chance for guaranteeing free elections which might have averted the further developments that followed. The next few weeks may perhaps show how far the new Government would make it certain that the coup of August 9 will be an established fact and its writ will run over the entire country.

Espionage

POWERS' TRIAL

PRESIDENT EISENHOWER has said that the sentence passed on Francis Gary Powers at the Moscow trial was 'severe'. This may be partly true, but the fact remains that it could have been worse. The wonder is a trial at all was held when one would have thought that in a case of this sort, a country like the Soviet Union could have chosen to imprison or deport the persons concerned even without any trial. Except for the fact that Powers was not allowed to see a consular representative of his country (that is usually permitted in the West), it could not be said that the trial was in any sense unfair. As a matter of fact, Powers in the dock appeared a genuine witness and there was no suspicion of any "brain-washing." The restrained mode of the proceedings also confirmed to show that Powers got a fair trial. However, the entire episode was used by Mr. Khrushchev to secure propaganda points. According to Soviet Russia, it was not Powers that was on trial but the United States itself. Even before the accused confessed his guilt, President Eisenhower had accepted the responsibility for the directives ordering the flight.

At home, the trial will have the effect of showing the people how devastatingly efficient the Soviet armed machinery is, because as confessed by Powers himself, the plane was shot down at a height which it was thought, would be impossible to do; secondly, Mr. Khrushchev apparently feels he has succeeded in showing to the West that "Socialist legality" is a fact and that Russia has moved far away from the Stalinist days of purges and deportations; thirdly, far more important, Mr. Khrushchev has tried to show to the neutralist countries the magnanimity of Russia towards a man who could have been given a heavy sentence for the grave charge of espionage. He may still have a trump card

in his hands and might choose to further mitigate the sentence to secure still another propaganda point. All these might be true, but the question is whether Mr. Khrushchev is going to let bygones be bygones so that a further attempt may be made for another East-West negotiations after the break-up of the Summit; for it is inconceivable that when the U-2 flights have been stopped, President Eisenhower's successor could ever order them to be resumed. An incidental off-shoot of the trial however, so far as Russia is concerned, seems to be that many Russians are worried that there may be a recrudescence of the powers of the security police over Soviet citizens. According to reports, restrictions on Soviet citizens' rights to correspond freely with foreigners appears to have been re-imposed and there seems to be an obvious danger that foreigners in Russia may be pestered by petty spies while the spy scare continues.

Rourkela

RAW MATERIAL SHORTAGES?

THE STATEMENT of the Union Minister for Steel, Mines and Fuel, Sardar Swaran Singh, in the Rajya Sabha on Friday last that though the third blast furnace at the Rourkela Steel Plant was ready, it would be commissioned into operation only towards the end of the current year, because of lack of adequate and continuous supplies of coking coal and iron ore, is as revealing as astonishing. Coming close on the heels of the startling disclosure of steep fall in production at Sindri last year, it would certainly lead to raising of eye-brows in many a quarter and provide good ammunition to the critics of the public sector; it is yet another instance of the fact that all is not well with the public sector enterprises in this country. Whether it is due to faulty planning or complacency on the part of those who guide the destinies of the State enterprises or inexperience of the bureaucracy in handling the affairs of giant Government-owned commercial establishments, it cannot be denied that the country has lost substantial production of pig iron which could have been utilized for earning valuable foreign exchange, especially at a time when our foreign assets have touched a new "low".

"The Eastern Economist" over a month ago spotlighted the developing coking coal crisis, but, in view of the repeated assurances of the Prime Minister that no industry would be allowed to suffer loss of production for want of essential raw materials, it was hardly envisaged that matters would come to such a pass and that the worst sufferer would be the public sector itself. The Union Government, it is stated, has taken some steps in the past one month or so to increase coal output, which obviously account for the heartening observation of Sardar Sawarn Singh that during the rest of the Second Plan period, the country would be assured of a surplus of 80,000 to 115,000 tons of coking coal every month. But this encouraging view is of little solace as long as transport bottlenecks remain. That transport difficulties are there is evident from the fact that the Rourkela Steel Plant is being starved of iron ore as well the supply position of which is quite easy. Otherwise why should the Minister for Steel and Fuel be sceptical about commissioning in of the third blast furnace before December?

The Rourkela and the Sindri espisodes have a moral to convey. The moral is that the execution of our Plans has to be properly phased, besides the Plans themselves being imaginatively drawn up. The coking coal shortage would have hardly occurred, had steps to increase output been taken early enough during the current Plan period. And though transport bottlenecks are apparant and fears have been widely expressed that they will only accentuate in the coming years, the Planning Commission has not thought it fit to earmark adequate funds in the next Plan for the development of transport in keeping with the other development activity. Can it be hoped that in the final blueprint of the Third Plan a rational balance would be struck between allocations for transport and other components of the development programme and that efforts would be made to properly phase the execution of the Plan?

U.S. ELECTION FORECAST

According to a public opinion poll conducted by George Gallup, Director of the American Institute of Public Opinion, on the prospects of the US Presidential election, Vice-President Richard Nixon starts the race proper ahead of Senator John Kennedy. After interviewing a cross-section of voters from coast to coast it finds that the sentiment is divided as follows: Nixon-Lodge 50 per cent, Kennedy-Johnson 44 per cent, Undecided 6 per cent. It is stated that if it is assumed that the six per cent, who said they are undecided today will divide approximately in the same ratio as the "decideds," the figure would become Nixon-Lodge 53 per cent and Kennedy-Johnson 47 per cent. It is, however, cautioned that the situation is so fluid that it could easily change. According to the Gallup Poll's final pre-convention test of the two men's chances, Senator Kennedy was ahead of Vice-President Nixon among those who had made up their mind by a margin of 52 to 48 per cent. One explanation for the possible shift now may be due to the fact that the survey was conducted just after the GOP convention adjourned which gave Vice-President Nixon the opportunity to have "gotten in the last word."

ANNOUNCEMENT

The British India Corporation Ltd. is pleased to announce that with effect from 16th August, 1960, Central Government has approved their appointment as Secretaries and Treasurers of the following companies:—

(1) Elgin Mills Co. Ltd.
(2) Cawnpore Textiles Ltd.
(3) Cawnpore Sugar Works Ltd.

The European Scene

BRITAIN'S COMMON MARKET PLAN

From Our Special West European Correspondent

PARIS, August 22.

DURING his recent visit to Bonn, Mr. Macmillan is reported to have suggested to Chancellor Adenauer the formation of a Europe-wide customs union for industrial manufactures, which would however exclude agricultural produce and raw materials. This would mean that Britain, abandoning her objections to a common external tariff (and abandoning too her Little Free Trade Area which differs from the Common Market in not having a common external tariff), would join the Common Market, no doubt bringing with her the Scandinavian countries but not the neutrals, Austria and Switzerland. But this wider Common Market would cover only manufactures, which members would eventually exchange duty-free among themselves while imposing a uniform duty on manufactures imported from outside. It would not cover primary produce: Britain would continue to discriminate against Continental agriculture to protect her own farmers and to grant concessions to the Commonwealth countries; and the Continental nations could continue, if they wished, to tax raw material imports but Britain would not. In other words, there would be no common external tariff for agriculture.

This grandiose plan, which is in the best British tradition of ingenious compromise, would be the most realistic proposal London has yet made to the Continental nations. It would be taken much more seriously than the earlier and unworkable project for a free-trade area, whose impossibility London now frankly admits. It would, incidentally, have considerable repercussions on India's foreign trade, most of them favourable in the long term. While guarding free access for her raw materials to the British market, India would lose some preferences for her manufactures: all her industrial exports to West Europe would meet a uniform tariff barrier, but that barrier would be in general lower than the normal British tariff, and it would surround a vast economic unit whose expansion potential (and thus import requirements) would be immense. Moreover, the need to keep their industrial costs down to the British level (since manufactures would be traded duty-free inside Europe) would oblige the Continental nations to lower duties on imported raw materials and to buy abroad in the cheapest market, thereby ceasing to discriminate against India in favour of the African "associated territories".

However, the implementation of this plan would encounter numerous obstacles: objections from the USA about an anti-dollar association in Europe, objections from French industry about British competition being added to West German, and objections from the Little Europe unity-fanatics about the abandonment of integration (because obviously no association that includes Britain can ever move a step towards political unification). Above all, it would meet great opposition inside the UK itself: from British industry when required to sacrifice its present protection, the cosiest in Europe, and from the Commonwealth mythomaniacs of the "Sunday Express" variety. These difficulties would be so considerable that Mr. Macmillan's project could mature only very slowly and would pre-suppose interminable negotiations. In fact, some Continental cynics think that the plan is not sincerely meant.

Indeed, Mr. Macmillan's suggestion would entail the total re-writing of the Common Market treaty, not to mention the ruination of the seven-nation free-trade area. And that, for the time being, is the most interesting thing about it. Sincere or not, practicable or not, how is it that a plan of this revolutionary nature can be put forward now without being rejected out of hand, when the Common Market is supposed to be already firmly established? To understand that, one might look back to the article that appeared here on June 10, where it was shown that, despite official propaganda about the Common Market being "speeded up", the six member-nations had not yet passed the point of no return and would not do so until January next year; until then, it will not be too late for Britain to suggest the most radical changes in the Common Market's programme. Secondly, it was shown that the projected speeding up concerned only industrial manufactures, whereas the integration programme for agriculture had in reality been slowed down because protectionist farming interests in West Germany (whose feelings Dr. Adenauer has to consider in an election year) were frightened by the prospect of cheap agricultural surpluses being imported from France.

The British proposal is neatly designed to meet just this situation. By offering to bring the British and Scandinavian markets for manufactures into the customs union, it removes all the fears of German industrial exporters about losing those valuable markets. By insisting on keeping farm produce out of the customs union, it attracts those interests (mainly but not solely West German) who are beginning to feel that all the agricultural part of the Common Market is a mistake. The Continentals have been finding that the industrial part of their integration enterprise is progressing swimmingly while the agricultural part is causing great trouble. So London offers a scheme that will extend and accentuate the advantages on the industrial side while writing off agricultural integration as a hopeless venture. If this offer is too complicated to be accepted straight away, it is also too attractive to dismiss, and so the Continentals might be enticed to postpone passing the point of no return in January, in order to negotiate. At worst, that will mean so much time gained for Britain; at best, it could produce doubts about the Common Market's future that would slow down or even destroy the enthusiasm for a six-nation customs union.

It is not only the economic situation that favours plans to remodel the Common Market, but a number of complicated political considerations. Dr. Adenauer, and for that matter most West Germans outside the business interests represented by Dr. Erhard, remain firm believers in the building of a supra-national Continental authority whose political institutions would grow naturally out of the process of economic integration. As long as that is the objective, as long as there is a political ideal behind economic union, such difficulties

as those concerned with agriculture or German markets in Scandinavia can be readily solved; no private interests would be allowed to sabotage so grand a political design. But there is General de Gaulle. To everyone's surprise, he has been converted to the project of economic union because he sees the evident benefits it brings to Continental industries, but he remains as opposed as ever to the emergence of supra-national political authorities that would limit French sovereignty. To forestall the campaign in favour of such authorities (e.g. the proposal to elect a Parliament of Europe recently described here), de Gaulle is urgently pressing his demand for a confederation of Continental governments—in reality a Franco-German directorate. Realising that no progress can be made toward supra-national integration as long as de Gaulle is in power, Adenauer is reluctantly agreeing to go along with de Gaulle, limiting the power of the Common Market's international authorities and transferring the initiative to national governments. Thus he delighted Mr. Macmillan in Bonn the other day by saying that Britain's relations with the Common Market would henceforth be dealt with, not by Professor Hallstein and the Common Market Commission, but by the member-governments.

Yet in return for making this concession, Adenauer demands something important from de Gaulle: if the European political authority is not to evolve naturally from the supra-national economic institutions but is to consist in an alliance of governments, then it must not be mistaken for a "third force", or a splinter-group within NATO, or a Continental faction independent of Britain and the USA on whom German defence depends. So Britain must be invited to join. This is the last thing de Gaulle wants, because he could never dominate an association that included Britain, but he is willing to make the gesture toward London, confident that British insularity will always prevent the invitation being accepted. But there he under-estimates British anxiety to break into the Common Market by the political door, and the anxiety of the Erhard faction in Bonn to exploit the slowing down of political unification to slow down economic unification on a six-nation basis.

This criss-cross of motives is tangled and much current negotiation is probably based on misunderstanding. Parts of the London Press, for instance, have run away with the idea that because the move toward political union on the Continent has been stopped by de Gaulle, therefore the process of economic union is threatened and the Common Market can be broken up fairly easily. On the contrary, de Gaulle, who is solely responsible for the political crisis, is ardently in favour of more rapid economic union, and if Paris has its way the Common Market will cross the Rubicon at the end of this year by setting up its common external tariff. All the economic forces pushing the six nations toward a customs union remain as strong as ever. What is true is that by dampening the political enthusiasm for integration, de Gaulle has unwittingly increased the difficulty of dealing with economic opposition to the Common Market: Bonn, for example, would cheerfully sacrifice the farm lobby for the sake of a European Nation, but it cannot sacrifice its farmers for the sake of French farmers' profits. In this atmosphere of uncertainty, the will to push boldly on with the Common Market has been weakened and the British proposal for a new sort of Common Market, which would cover a wider area but fewer products, has some chance of being earnestly considered.

Special Article

THE STATE OF THE PRESS

THAT the Indian Press has passed through a dynamic period during the last decade is evident from the figures of rise in circulation of newspapers in general. There has been a steady increase in the political consciousness of the people coupled with an encouraging rise in literacy which together have not failed to impinge heavily upon the demand for newspapers. The annual report of the Press Registrar for the year 1959 brings home this fact with the aid of facts and figures. It also highlights some of the salient features of the Indian Press and the role of the press in educating the public. It is the purpose of this Special Article to estimate the likely pressure on the Indian Press because of the anticipated steep increase in the number of readers and the consequent likely changes in the pattern of demand.

According to the Press Registrar's report the Indian Press continues to be, by and large, multi-lingual, though dominated by two main languages, namely, English and Hindi. The English newspapers still occupy a place of pride both in terms of total number and circulation. The Hindi newspapers are steadily rising to reach the level attained by the English newspapers. The other important language papers are in Urdu, Bengali, Gujerati, Tamil and Telugu. In the English Press, the daily paper in particular occupies at place of unique importance and it is believed that a tremendous impact on the minds of the intelligentsia is created through this medium.

The table on the next page shows the volume of circulation in 1958 and 1959 (with percentage increase in 1959 over 1958) in respect of important dailies, weeklies and other periodicals having a circulation of more than 50,000. It will be seen that amongst the daily papers there are no less than four which have a circulation of more than 100,000. Three out of the four are in English language; they are, "Indian Express", "Times of India" and "Hindu". In the all-India scale, the Tamil "Daily Thanthi" takes the third place. Amongst the Hindi dailies, "Nav Bharat Times", published simultaneously from Delhi and Bombay and owned by the Bennett Coleman Group occupies the first place, though in the all-India scale its rank is tenth. The total daily circulation of the "Indian Express" which is published in English is more than double the total circulation of "Nav Bharat Times". The annual rate of increase in circulation in the case of "Nav Bharat Times" is slightly lower than that of the "Indian Express".

Amongst the weeklies, there are only two periodicals, both in Tamil, which enjoy a circulation of more than 100,000. In the case of "other periodicals", including tri-monthlies, fortnightlies and monthlies there are only three which have a circulation of more than 100,000. The Tamil tri-monthly "Kumudum" tops the list with a circulation of 1,67,136 and has recorded a steep rise in the year 1959 over 1958. It seems that circulation of the next two important periodicals, namely, "Kalyan" in Hindi and "Filmfare" in English received a setback in 1959.

All in all, there are about a dozen newspapers and other periodicals which enjoy a circulation of 100,000 each.

Curiously, amongst the English weeklies, "The Illustrated Weekly" has yielded place in circulation to "Blitz" and "Screen". It is a sad commentary on the new tastes which the reading public has developed in recent years; but, perhaps, this may act as a stimulus to new thinking in the newspaper world. Why has the Harmsworth revolution of mass circulation escaped India?

While the figures in regard to the total circulation of particular papers make interesting reading, the total circulation of all dailies in all languages does not make a good impression especially when correlated with the total literate population in the country. The last Census (in 1951) indicated that there were no less than 60 million literate people in the Indian Union. By literacy was meant the capacity to read or write one of the major languages. As against these 60 million literate people, the volume of total circulation of daily newspapers at 4.7 million seems inadequate. It means that for every 12 literate people only one daily newspaper is published in the country. This, however, ignores the fact that some of the copies of the daily papers are read by more than one person. Also there are large sections of literate people in the country who cannot read or write but who would like the newspaper to be read to them. This fact was brought to light in one of the all-India rural surveys of readership and news consciousness conducted by the Indian Institute of Public Opinion. The Institute, after having analysed the information collected by its team of interviewers scattered throughout the country, came to the conclusion that a "significantly large number of people" who are unable to read, seek news. This Indicates the scope and tasks of the mass media of communication other than the press. The rural readers of newspapers, according to the survey, displayed a sense of discrimination. One-half of the readers in the all-India sample of the Indian Institute were "satisfied" with the newspapers they read, while only one-third believed "every word in print to be reliable." The survey also indicated that the theory of backwardness of rural India has been rather overworked. It is now almost out of date. This adds to the responsibility of the newspapers which are presented in a fashion acceptable to the sophisticated urban population. There is need for introducing simplicity of language in presentation so that even the rural folk can easily understand the news and the views; perhaps the press should turn towards their major occupation, which is agriculture.

The fact that needs to be underlined in regard to the Indian Press is that the age groups which, after independence have been educated either through Hindi or through the regional languages, have not as yet put pressure on the supply of the newspapers because they are still in the group of "dependents". During the next five years when India's young men and women leave their schools and colleges after having completed their education through Hindi and other languages, there is bound to be an explosion in demand for newspapers in these languages. Then newspapers in English are likely to receive a relative setback. It is for this reason that most of the daily newspapers are simultaneously printing Hindi editions so that any loss in the circulation of English newspapers in future is compensated by the increase of Hindi or other language newspapers.

THE BUSINESS WORLD

Post-Mortem on Palai

By CROESUS

THERE is a very good word in English to describe the outlet to emotions afforded by a drama. The word is "catharsis." The two emotions that well up in any one that witnesses a drama, particularly a tragedy, are pity (or sympathy for the victim) and fear (for oneself). Both these have been in abundant evidence since the unfortunate closure of the Palai Central Bank, which is indeed a tragedy for Indian banking. These are,however, to be expected; they are perfectly natural reactions. But there is a limit even to these understandable, nay justifiable, reactions. If they cross a limit and begin to impinge on judgment, the results may be disastrous. I am not quite sure whether this has not been happening ever since that fateful Tuesday (9-8-1960) when the Palai Bank ceased operations. From the very large publicity that the closure of this bank has received and the unusual interest that has been evinced by some politicians in this episode, one could be excused if one concluded that this country has not known anything like, let alone experienced, a bank mortality. The hard facts, however, are that, as in every country, in our country also, there is what is termed in banking parlance as a certain "wastage" or loss due to bank failures. Over the past 10 years, this "wastage" in Indian banking has been estimated at an annual figure of about Rs. two crores. Insignificant though this admittedly is against a total bank deposit of some Rs. 2,000 crores, it is there all right. A comforting thought, however, is that the incidence of this "wastage" has been kept at, or brought down to, this low level by the vigilance of the Reserve Bank, although, unfortunately, the latter has come in for considerable ill-informed criticism in this connection.

To apportion blame is as easy as it is irresponsible, especially when one does not know all about a particular case. From the way in which even some responsible members of Parliament, let alone interested parties (e.g. the Communists who have not been slow to seize this second chance that has offered itself to them to discredit the Socialists by attacking the present Kerala Ministry headed by a PSP leader, conveniently forgetting that this Ministry has come into power only after the major part of the swindling in the Palai Bank had taken place during the Communist Ministry itself) deemed it fit to dispute the accuracy of the Reserve Bank's figures—it is a great pity the Union Finance Minister did nothing to discourage this—and accept the figures reported to have been furnished by one of the directors of the very discredited Bank, it almost appeared that the pitch had been sedulously queered to bring the Reserve Bank into disrepute. It required the timely intervention of Mr. Nehru to stop this game of witch-hunting started knowingly or unwittingly—and started, I dare say, without any realisation of the likely harm to the Central Banking Institution as a result of this. At this point, it is very necessary for all of us to know precisely what role the Reserve Bank is expected to play in such or similar circumstances. The Governor of the Reserve Bank did well to dwell at some length on the responsibility of the Reserve Bank in the matter of the operational efficiency and integrity of commercial banks in the course of his admirable speech to the Indian Institute of Bankers at that body's annual meeting. These remarks are reproduced here 'in extenso' for purposes of record. Said Mr. Iengar:

> "The Reserve Bank has been given pretty wide powers to inspect, give advice and issue directives. All this, however, is no substitute for operational responsibility. Commercial banking consists in the acceptance of deposits and their outlay, largely in advances to customers. This involves, among other things, assessing the creditworthiness of individual constituents, keeping track of their business, checking securities by, for example, inspecting stocks in workshops and godowns and generally enforcing numerous internal controls and checks. (I do not suppose any one suggests that the Reserve Bank should carry out these responsibilities over nearly 4,000 branches in the country; apart from the sheer physical difficulty, that would be taking over a direct and continuous administrative responsibility which rests on the commercial banks.) The Reserve Bank's powers of control are not and cannot be a substitute for the efficiency and integrity of the management themselves. The need for efficiency and integrity can be forcefully pointed out and they can be encouraged and sustained, but they cannot be created by orders of the Reserve Bank. In the final resort, if a management does not listen to advice and chooses to be recalcitrant, and it is felt that continued pressure would be useless, the Reserve Bank would have no option but to close down in the interests of the depositors. But this decision involves a very delicate balancing of several factors, some of them operative and some psychological, and timing is particularly important. It is easy enough to be drastic. But surely it is better to nurse an institution and bring it to a healthy state if there is any reasonable hope of doing so. It has in fact happened in a number of cases that persuasion and pressure applied persistently over some years have resulted in a bank reforming its ways and puting its house in order.... Such a reform takes patience and time, for the recall of weak advances is a time-consuming process. In some cases, a Board has itself been guilty of mismanagement and pressure has proved useless. There are cases in between. Moreover, the gravity of cases varies a great deal. There is, in other words, a considerable variation of pattern, and there can be no automatic or rule of thumb formula in the matter of the precise action that should be taken or its timing."

Only those in the know of things can judge to what extent the Reserve Bank has acted in conformity with this policy. For ourselves, we can only accept the Union Finance Minister's verdict on this point as final. He categorically said in the Lok Sabha last saturday: "I have little doubt that the action taken by the Reserve Bank and its timing were appropriate. Any further delay in winding up the Palai Bank would have meant that the run on the Bank would have continued and preferential creditors would have got away with whatever ready assets were available."

As Mr. Iengar said in his speech, there cannot be a rule of thumb formula in these matters. So many factors are involved. The credit mechanism—and every bank, be it noted, is a part of this mechanism—is such a delicate device, and the intention of the Banking Companies Act, as has been appropriately argued in the memorandum sent to the Prime Minister by the second batch of 30 Members of Parliament, " is not to wind up banking companies, but to ensure their continuance in business" by, I suppose, employing every mean-

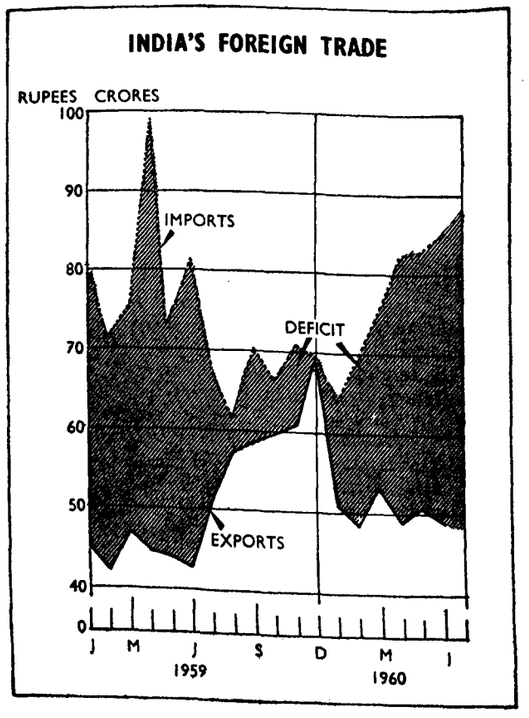
possible. In this process, it is arguable that the depositors of an ill-fated bank would suffer more than they really need to—that is, if anyone can really draw the line so unerringly. But at least 90 per cent out of these depositors, I venture to submit, will not hesitate to give the Reserve Bank, if asked, a free hand to take its time and see that something is done to salvage as much of the assets of the bank as possible. It seems to me, therefore, unjust to charge the Reserve Bank as being late in acting. Law as well as prudence dictates that the Central Bank of a country ought to wait and exhaust every means—that is until it is convinced that a given bank is really beyond redemption—before wielding its big stick.

The next question is: what should the Government do when a bank closes its doors in the circumstances in which the Palai Bank has done? More precisely, must it rush to the assistance of the unfortunate depositors? Judging from the playing up in the Press of the innumerable distress stories of depositors and the pressure that is being openly brought to bear on the Prime Minister, it would seem that there is a school which honestly favours this course, no matter what its consequences or repercussions may be. What is worse, it is being gratuitously suggested that the State Bank of India or some scheduled bank be asked to take over and run the Palai Bank, of course with the Government of India guaranteeing to make good all the losses of the Palai Bank. Every one of these suggestions, however well-intentioned—and who doubts them?—is fraught with grave danger, apart from creating very bad precedents for the future. In the first place, neither the State Bank nor any scheduled bank can be forced to take on such a responsibility without reference to its shareholders and depositors, even if the Government were to underwrite all the losses. Secondly, how can the poor tax-payer be asked to make good to a small section of the community, however pitiable their plight, the losses suffered by them due to the fraud practised by the directors of their own bank? Thirdly, if the depositor victims of one bank failure receive this treatment, will not depositor victims of all bank failures in the future also ask for a similar treatment?

There is then what I suspect is the intriguing silence of the shareholders of the Palai Bank. What is now known to the whole world must have been known at least to some of them? If so, why did they not speak out? Maybe, not every shareholder of a bank, or any company for that matter, understands the risks he may be running, but is it not the sacred duty of the Auditors concerned to disclose to the shareholders the correct state of finances of the Bank or any suspected misuse of funds by the management? Strangely enough, hardly anything is said about all these and only relatively passing demands are made for the prosecution of all those involved in or responsible for, the fraud. For the moment, all the fury seems to have been focussed on the Reserve Bank for its alleged acts of omission and commission.

Finally—and this proves that some good can come out of evil—the cry has come (and, let me add here, not a day too soon) for a scheme of deposits insurance. The way in which this has been put forward by some suggests that it is some brain wave or original idea of theirs. Let these people note that a system of deposit insurance for our country was recommended as early as in 1950—by the Rural Banking Enquiry Committee—and, again, in 1954—by the Shroff Committee. If it was not adopted then, it was presumably because there was no unanimity of opinion among banks in this matter and positively because the Reserve Bank itself thought then that "the time was not ripe for introducing a system of deposit insurance." If it has taken the failure of the Palai Bank for the Reserve Bank to revise its view, a wag whispers that the threat of nationalisation has forced the banks to make up their minds about a scheme of deposit insurance. Whatever may be the provocation, the depositors, especially the small depositors, will wholeheartedly welcome the move, and it is to be hoped the Reserve Bank will lose no more precious time in putting forward a practicable scheme of deposit insurance. (I reliably gather that the Reserve Bank will in all probability produce a scheme in the next few days).

Business Notes



Foreign Trade

THE YAWNING GAP

WITH A deficit of the order of Rs. 158 crores during the first half of 1960, India's foreign trade cannot be considered to be following a very safe course. Although when compared to the performance of the previous year, the picture does not appear to be very discouraging, it must be remembered that the annual average gap envisaged in the draft of the Third Five-Year Plan is of the order of Rs. 440 crores. It appears, therefore, that if positive improvement does not occur in the second half of 1960, as it did during the corresponding period of 1959, and the gap widens at the present rate, the final deficit for the whole year may even be larger than the previous year.

The details of the composition of foreign trade for these six months indicate that the gap would have been narrower if the imports of raw cotton were not rendered imperative due to a partial failure of crops. While the raw cotton imports almost doubled during the six months, imports on account of mineral fuels were higher by about 40 per cent. In the case of other items, like transport equipment and electrical goods, imports remained at the level of the previous year. There was a marginal increase in the imports of the other items of machinery. On the export front, certain improvements were registered in the case of jute manufactures and cotton textiles as also in the case of leather, raw and manufactured. Spices made a remarkable advance and registered a three-fold increase in exports. In the case of tea, however, exports just emained at the previous year's level.

The overall picture that emerges in respect of our foreign trade for the first-half of 1960 is that imports

which have been reduced to a bare minimum can hardly be cut much further in the interest of a sustained growth of the economy. As it is, exports have to be raised to reduce the widening gap. Serious thought should, therefore, be given to find ways and means to achieve a higher level of exports.

Capital Issue

A RECORD PERFORMANCE

IT IS not known what the World's record capital issue is, but no one need hesitate to say that the record for India goes to Synthetics and Chemicals Ltd. The total number of applications for the shares of this new issue, according to a Press Note released by the company last week, reached the astounding figure of 2,74,805, the total number of shares sought falling only a little below one crore. As against 165,500 ordinary shares offered thus, the number of shares applied for aggregated as much as 99,62,750 which means that the issue was oversubscribed by over 60 times! None of the recent issues to subscribe for which there had been a crazy race received anything beyond 20 times and even that performance was hailed at the time as spectacular and unprecedented. Now, it would be worth while getting details of the response to all the recent issues to ascertain how many applications were really genuine. The following details of some of the recent issues make interesting reading.

Name of Company	Amount offered to the Public	Amount Actually applied for
1. Baroda Rayon	Rs. 159.20 lakhs	Rs. 841.70 lakhs
2. Premier Tyres	Rs. 44.10 lakhs	8 times(?)
3. Indian Rayon	Rs. 52.00 lakhs	Rs. 196.64 lakhs
4. Colour Chem.	Rs. 35.00 lakhs	Rs. 600.10 lakhs
5. Synthetics and Chemicals	Rs. 165.50 lakhs	Rs. 9962.75 lakhs

It is common knowledge that in all these cases, at least some applicants sought shares in their own names, in those of their relatives and friends and, quite a few, in permutations and combinations of their own names. Many instances of the same person sending several applications, in the hope that at least one of them might "click" when lots are drawn, also must have been there. Now it can not certainly be that all the applicants were really prepared to take the entire allotment as per their own applications, and, to this extent, therefore, one is bound to get a somewhat exaggerated, as also distorted, idea of the response. Purely from the point of view of the Indian Capital Market, it is evident that this is anything but healthy. There is an enormous amount of 'wastage' involved, in the sense that not all the applications could be said to be for only the number of shares actually required by the applicant himself.

Another interesting speculation about these new issues is how far the response to them has come out of genuine savings and how much from bank accommodation. Reports have been current that actually groups have been formed in some offices in Calcutta jointly to go in for some of these private issues and even a few cases of companies advancing money against their provident funds to employees for the purpose have come to light.

Then there is the question of whether or not the companies concerned should encash all the cheques received against application money. This has raised a volume of controversy.

A very larger number of applications also, creates bottlenecks in handling and processing—not only in the companies concerned but in banks and post offices. No wonder that Synthetics and Chemicals had to enlist the services of I.B.M. staff and their computing gadgets. If the activity in the new issues market were to continue on this scale, the need would arise for a new type of service, namely of handling and sorting out applications, cashing cheques, deciding the basis of allotment and allotting the shares and making refunds to unsuccessful applicants—in the case of Synthetics and Chemicals, this number came to as many as 2,46,000 But all these point to one redeeming trend, namely, the growing interest in shares, which is all to the good of the Indian capital market.

Chemicals

SUSTAINED GROWTH

THE CHEMICAL industry, an essential element in the growth of any economy, has made significant progress during the later part of the Second Five-Year Plan. For instance, the output of sulphuric acid has increased three times and that of caustic soda four times during the Second Plan period. The picture has been so altered that not only imports of chemicals have been greatly curtailed, but considerable potentialities also now exist to promote the exports of certain chemicals. Mr. Manubhai Shah, the Union Minister for Industry, therefore, rightly described the later half of the Second Plan period as the dawn of the era of chemical industry in India.

He pointed out at Calcutta recently that very soon a project will be launched in collaboration with a German firm for the manufacture of basic chemical intermediates. It is of special significance in view of the fact that so far dyestuffs are made mostly from imported intermediates. The proposed project will make the country self-sufficient in this respect. There is another project under the consideration of the Ministry to set up four factories for the manufacture of synthetic drugs, antibiotics, photo chemicals and surgical instruments in collaboration with the Soviet Union. Taking into account these new developments and the pace already attained by the industry, it appears that by the end of the Third Five-Year Plan the country will be able to look to the chemical industry to earn foreign exchange.

Electricity

URGENCY OF FINANCE

MR. A. N. HAKSAR, Chairman, Bombay Suburban Electric Supply Ltd., at its annual general meeting, made a strong plea for the reinstatement of confidence of the investors in electrical undertakings. He was of the opinion that due to the statutory control imposed on electric supply undertakings by the financial provisions of the Electricity (Supply) Act, investors were not attracted to it and the industry was starving for want of finance. He added that to meet the growing demand in the area, the company needed an investment of about Rs. 45 lakhs per year during the period of the Third Five-Year Plan. As far as the internal finance is concerned, the company might be able to raise an annual amout of Rs. 25 lakhs by way of development reserve permitted under the Electricity (Supply) Act, depreciation, etc. The Chairman seems to be worried about the remaining Rs. 20 lakhs.

Raising of finance for electricity undertakings from the market has become all the more difficult since the changes were introduced in the tax pattern by the Finance Act, 1959, whereby the facilities of "grossing up" of dividends were withdrawn. The deduction of tax at the rate of 30 per cent at source reduces the return to the investor. Although it is applicable to all the industries, this particular industry is hit very hard because it cannot distribute large dividends by reason of the stringent control applied under the above mentioned Act. Electricity companies are not allowed to step up their earnings. It is evident that if the present conditions continue, this basic industry would be starved for want of finance for expansion. Early action is, therefore, necessary to provide appropriate relief to it.

Current Topics

ECONOMIC DEVELOPMENTS IN WESTERN EUROPE

In almost all European countries, a vigorous industrial expansion continued in the early months of this year, accompanied by a rapid growth of international trade. However, in most countries throughout the continent, the rise of output achieved in the remainder of this year is likely to depend, to a greater extent than in 1959, on the growth of productivity with a relatively smaller contribution from rising industrial employment.

THESE facts are revealed in the latest edition of the Economic Bulletin for Europe, published by the Secretariat of the United Nations Economic Commission for Europe (ECE).

The present economic situation of western Europe can be considered highly favourable on several grounds, states the Bulletin. Industrial expansion continues at a very high rate, productivity advances have been considerable, and this—in conjunction with moderate nominal wage increases and stable prices for imported raw materials—has been responsible for a remarkable degree of price stability; and western Europe's foreign exchange reserves remain at a comfortable level. The Bulletin points out that in a number of countries the very pace of the expansion is beginning to give rise to concern that physical limitations, in particular labour shortages, may slow down the rate of growth of output, while demand may expand at an unabated rate, thus leading to re-emergence of a wage-price spiral or increasing balance-of-payments deficits or both. In order to discover whether this concern is well-founded, the Bulletin goes on to discuss two questions: to what extent do physical limitations constitute a serious impediment to the maintenance of a high rate of expansion throughout 1960; and what will be the probable effects on economic activity of the policies devised to forestall the appearance of inflationary pressures.

NATIONAL OUTPUT

The total output of western Europe rose in 1959 by some 4 per cent—with the largest increase in Italy, as had also been the case in 1958, followed by Western Germany. The most potent forces initiating the upswing in several countries were the increase in housebuilding activity and demand for consumers' durables. For the greater part of 1959, the principal sectors of expanding demand were exports and public consumption and investment (including residential construction), though in the latter part of the year, private investment and consumption made rapid advances in several countries. With few exceptions (e.g. Denmark and Belgium-Luxembourg) the pace of export expansion was much higher in 1959 than in the previous year (often by as much as three times); and the growth of output was greatest in countries where exports grew most—Italy, Western Germany, Sweden and the Netherlands. A high rate of increase of gross fixed capital formation was in general a feature of the expansion of output in 1959. By the last quarter of 1959 and the first quarter of 1960, private investment in manufacturing—particularly in the capital goods industries—was rising briskly. Private consumption also expanded during the year (except in France)—although generally more slowly than other sectors of demand; more recently—with rising employment and incomes—private consumption, particularly of consumers' durable goods, has risen more rapidly.

The steep rise in total industrial production, which occurred throughout 1959 in most western European countries, continued unabated in the first quarter of 1960. The Bulletin states that there is little to suggest any slackening of pace. For 12 western European countries the increment in total industrial output in 1959 over 1958 amounted to some 7 per cent; in the first quarter of 1960 the increment was almost twice as great —just over 12 per cent—compared with the first quarter of 1959. In all western European countries output is now above the peaks reached before the slow-down—in most of them by a substantial margin.

The authors of the Bulletin note that a rapid expansion of investment in building and construction—and especially of investment in housebuilding—preceded the general upturn of industrial output and has now lasted some 18 months. The housebuilding boom had gone so far by the end of 1959 in most countries (France was a notable exception, as were—to a lesser extent—Italy and Norway) that shortages of both labour and materials were experienced. By the end of 1959 there were no signs in most countries of any autonomous decline in the level of housebuilding activity, and several governments have taken steps to reduce the pressure of demand. The authors point out that with more stable demand for housebuilding both the efficient utilization of scarce manpower and greater flexibility of supply would be promoted.

WAGES AND PRICES

The year 1959 was a year of only modest increases in wage rates—both a reasonable indication that there was no serious pressure on labour resources and a reflection of the stability of the cost of living. Towards the end of last year and more especially in the first five months of this year, wages have been rising more briskly. There has been some wage drift in several countries and a shortening of the working week. Thanks to large gains in productivity and the stability at reduced levels of the prices of many imported raw materials, prices in western Europe have been notably stable. Such increases as have occurred have mainly affected rents, services and the tariffs of public utilities. The vigorous expansion of output in 1959 had resulted by the end of the year in a marked reduction in the numbers unemployed and a sharp increase in unfilled vacancies in all countries except France and the southern European countries. These trends have continued in the first five months of 1960. The authors of the Bulletin note that western European labour markets are becoming increasingly tight and examine the structure of the labour shortage in individual countries in terms of its distribution by sectors of industry, types of skill and regions of the country in order to decide whether there is now in western Europe a shortage of manpower such as to retard the rate of expansion during the remainder of 1960.

The proximity of the output ceiling in western Europe depends not only on the possibilities of mobilizing available labour, but also on the rate of increase in output per man-hour. The authors of the review note that there were appreciable gains in productivity throughout 1959—particularly in those branches of industry in which demand grew most (e.g. iron and steel, engineering and chemicals) and in which the rates of fixed capital to labour is highest. In the current situation of tight labour markets, higher wage claims, and the prospect of keener competition on account of establishment of the EEC and the EFTA, there is a strong inducement to maintain a high rate of investment in

(Continued on Page 374)

A DELHI NOTEBOOK

IFC LOAN FOR ASSAM SILLIMANITE

DETAILS are now available of the investment which the International Finance Corporation has agreed to effect in the Assam Sillimanite Ltd. The Government of India, it is understood, has agreed in principle to this investment, but has not yet examined and approved the terms and conditions proposed by the IFC.

The terms proposed by the IFC for this investment are:

(a) **Amount and Currency:** US$1,365,000 represented by unsecured notes.

(b) **Disbursement:** US$924,000 on or before December 31, 1961; US $441,000 on or before December 31, 1962.

(c) **Maturities:** Notes aggregating $924,000 to mature in 16 semi-annual instalments beginning October 1, 1965, and ending April 1, 1973. Notes aggregating $441,000 to mature in 16 semi-annual instalments beginning October 1, 1966, and ending April 1, 1974. The company will have the right to prepay upto 90 per cent of each note at any time at par plus accrued interest.

(d) **Interest:** 6½ per cent per annum, payable semi-annually in US dollars.

(e) **Profit Participation:** The Corporation will receive a participation in the annual net profits of the company. The participation shall be payable in Indian rupees and be equal to 30 per cent of such net profits in excess of 10 per cent of the then paid-in share capital of the company, for each fiscal year ending on March 31, 1963, 1964 and 1965. The percentage will decrease thereafter by 3 annually.

(f) **Share Subscription Right:** The Corporation will have the right, exercisable at any time upto and including April 1, 1974, to subscribe, in Indian rupees, at par, to 290,000 shares of the common stock of the company, of Rs. 10 par value each, with appropriate provision to protect such right against dilution. The shareholders of the company will have the right of first refusal.

(g) **Commitment Fee:** One per cent per annum, payable in US dollars on the amount undisbursed, accruing from the date of commitment.

The proposed investment will help to finance a plant designed to produce 46,000 tons of refractory materials annually. The plant will be located at Ramgarh in the Bihar State.

RADIO NETWORK IN NORTH-EAST INDIA

The survey work on laying an extensive radio network in north-east India is expected to begin in the immediate future. A contract for this network, which will cost over £950,000 has been secured from the Oil India (Private) Ltd., against international competition, by Murphy Radio, of Welwyn Garden City, England.

Starting near Dibrugarh, Assam, the radiophone system will follow the route of the oil company's pipeline 720 miles westwards, ending at Barauni, Bihar. The system will not only provide telephone facilities, but also carry telemetry and telecontrol signals between all pipeline stations and the central control headquarters at Nunmati (near Gauhati), Assam. At intervals of approximately 30 miles, a Murphy Type MR 851 radio station will be installed at pumping and repeater stations to give 36 communication channels along the pipeline.

A Murphy official, in an interview, has described the project as "one of the most complicated enterprises of its sort which have yet been attempted." All installations will be done by the British company. Ensuring accuracy and co-ordination at every stage of the pipeline system, measurements taken along the pipeline will be telemetered back every 75 seconds to the Nunmati headquarters. Telecontrol will switch valves on and off from a central control point.

Similar schemes using MR 351 have already been completed for the Snowy Mountains Hydro-electric Project in Australia and for rough-country communication for the British Guiana Post Office. The Murphy designs will provide for the maximum possible use of equipment manufactured in India.

CHEMICALS FACTORY NEAR BOMBAY

The Government of India has signed an agreement with a consortium of four West German companies—Bayers, Badische Anilin, Hoechst and Friedrich Udhe—for setting up a chemicals factory near Bombay, at a cost of nearly DM 35 million (£3 million). The factory will manufacture chemical products which are hitherto mostly imported and provide the basis for developing a pharmaceutical and plastics industry in India. The consortium will provide the scientific and technical personnel who will supervise construction of the factory and run it in the initial stages.

ABOUT FERTILIZERS

Ford Foundation, it is learnt, has addressed a letter to the Government of India, offering the services of a number of experts to advise this country on setting up fertilizer plants. The offer is said to be under consideration.

Meanwhile, the Union Government has agreed in principle to the West Bengal Government's proposal to establish a fertilizer factory at Durgapur in collaboration with a Japanese firm. The factory will cost Rs. 20 crores and would produce enough fertilizers to meet West Bengal's requirements. Of the total investment, the equity capital would be of the order of Rs. 5 crores and 51 per cent of it would be held by the State Government.

A proposal for setting up a fertilizer plant in Madhya Pradesh is also under consideration. A private party has offered to take up this project, but no decision has yet been taken whether this plant would be in the public sector or the private sector.

DLF LOANS

The Development Loan Fund of the United States has announced its intention to grant the following loans to India:

(a)	Industrial Finance Corporation for re-lending to private sector industries	$10 million
(b)	National Small Industries Corporation for purchasing equipment to be given to small industries on hire-purchase basis	$10 „
(c)	Kanpur and Barapani Power Projects	$4.1 „
(d)	Railway Development Programme	$50 „

BUFFER STOCK OF COTTON

The chances of India's building up a buffer stock of cotton by means of US aid under PL 480 are not considered to be bright. The recent foodgrains deal is understood to have created some difficulties with friendly countries for the US Government. A similar cotton deal, it is said, will be resisted by the cotton-growing countries, particularly Pakistan and the North African States. Besides, it may affect the tripartite arrangements the US Government has with some countries, especially Burma, in regard to trade in cotton textiles.

WORLDGRAM

India

Aluminium Smelter Plant at Mettur: The Government of India have granted a licence to Mr. R. Venkataswamy Naidu, Peelamendu, Coimbatore (Madras) for the setting up of an aluminium smelter with 10,000 metric tons capacity at Mettur in Salem District (Madras). The company is proposed to be floated with an authorised and issued capital of Rs. 10 crores. The foreign exchange requirements for import of equipment is estimated at about Rs. 5 crores. The Madras Government have agreed to supply the necessary power for the electrolytic process for refining the metal. The venture is expected to have the financial and technical collaboration of Messrs. Monecatinis of Italy. The Government of Madras will also be participating in the capital.

*

Manufacture of Scooterettes: Pearly Scooters, Ludhiana, have concluded an agreement with Messrs. Yamaha Motor Co. Ltd., Japan, for the manufacture of Scooterettes in collaboration with them. The firm intends to manufacture 50 c.c. and 78 c.c. Scooterettes.

The proposal does not involve any down-right payment or royalty for obtaining the technical know-how. Only Rs. 150 worth of components per Scooterette are desired to be imported during the first year and Rs. 100 worth of components to be imporfed during the second year, and during the third year the imported components would be negligible. There is provision for training Indian technicians with their principals in Japan and Japanese technicians would assist in the manufacture of Scooterettes during its initial stages.

It is expected that the production would commence within a year after the installation of the machinery and the price of the Scotterettes would be much less than the scooters which are of a higher horse power class.

*

Manufacture of Agricultural Tractors: Mahindra and Mahindra Limited, Bombay, and Messrs. Goodearth Company, New Delhi, the two firms who were licensed under the Industries (Development and Regulation) Act, 1951 in 1959 for the manufacture of David Brown and Eicher tractors (agricultural) respectively, are likely to go into production very shortly.

In order to meet the expected demand for agricultural tractors during the Third Five-Year Plan, additional licences have been granted under the Industries (Development and Regulation) Act, 1951 in June 1960 as under:

Name of the firm	Make & size of tractor	Annual capacity
M/s. Amalgamations Pvt. Ltd. (Madras)	'Ferguson' 28.4 DBHP	3000 Nos.
	about 35 DBHP	500 Nos.
M/s. Mahindra & Mahindra Ltd., Bombay	'David Brown' 20-30 DBHP	1500 Nos.
	about 35 DBHP	750 Nos.
M/s. Tractors & Bulldozers (P) Ltd., Baroda.	'Zetor' 42 DBHP	1000 Nos.

*

Life Insurance Business: The Finance Minister, Mr. Morarji Desai stated in the Lok Sabha that the total amount of Life Insurance business in India completed since the beginning of the year up to June 30, 1960 was Rs. 99.52 crores. The business has recorded an increase of 6 per cent compared to the figures for the corresponding period during the last year.

Zone-wise the amount of life insurance business completed since the beginning of the year up to June 30, 1960 are:

Northern Zone—Rs. 15.64 crores, Central Zone—Rs. 12.91 crores, Eastern Zone—Rs. 20.26 crores, Southern Zone—Rs. 26.27 crores and Western Zone—Rs. 24.44 crores.

*

Industrial Potentiality of Cambay Region: The Government of India have decided to set up a Co-ordinating Committee to consider the overall problem of industrialisation, development of natural resources and regional planning of the Cambay region.

The Committee has been set up in view of the discovery of oil in the Cambay region which is likely to increase potentiality of the area to a considerable extent.

The Committee will advise the Government on the location of industries in the Cambay region and particularly in the areas with which the Oil & Natural Gas Commission is concerned in its exploration for and development of oil and gas. It will also advise the Government on problems relating to transportation of oil and gas for refinery or other uses.

*

Extension of Provident Fund Act: The Government of India is considering seventeen industries for the extension of the provision of the Employees Provident Funds Act through gazette notification. They are 1. Banks; 2. Film Industry; 3. Hotels and restaurants; 4. Cane farms owned by sugar mills; 5. Rice, flour and dal mills; 6. Pottery industry; 7. Oil well operations; 8. Insurance companies; 9. General trading concerns; 10. Transhipment establishments proposed by the Government of Assam; 11. Cordials, marmalades, jams, squashes and syrups manufacturing establishments; 12. Starch industry; 13. Tanneries and leather products; 14. Tobacco industry including beedies and cigars; 15. Cashewnut; 16. Cinchona plantations; and 17. Air Companies.

*

Credit Facilities for Import of Textile Machinery: Certain credit facilities have now been made available for the import of textile machinery from the United Kingdom on the following deferred payment terms covering f.o.b. costs:

(i) 5 per cent of f.o.b. value on order;

(ii) 5 per cent on shipment plus actuals insurance and freight charges; and

(iii) the balance in equal half-yearly or annual instalments, inclusive of interest, over a period of five years from the date of shipment."

The minimum value covering each order for the import of machinery, however, should be not less than £20,000 sterling.

*

Second Plan Spillover: The total investment on project under execution at the end of the Second Plan remaining to be undertaken mainly during the Third Plan is estimated at Rs. 1800 crores. This includes about Rs. 800 crores under industries and transport and about Rs. 700 crores under irrigation and power.

Pakistan

25 Per cent Rise in National Income: Pakistan's national income has gone up by about 25 per cent during the last ten years, according to a survey carried out by the Finance Ministry.

The national income of Pakistan was estimated in 1949-50 at Rs. 1,723 crores. It is estimated to have risen to Rs. 2,190 crores in 1959-60 The main increase was in the industries sector.

The per caita income, which was estimated to be Rs. 232 in 1949-50, is now put at Rs 252, taking into consideration the increase in population.

*

Cut in Oil Prices in Pakistan: The three major oil companies controlling sale and distribution of petroleum products in Pakistan—Standard Vacuum, Burmah-Shell and Caltex—have decided to reduce oil prices by about seven per cent on average.

The actual reduction ranges from nine per cent in the case of furnace oil to 5.5 per cent in the case of kerosene.

The price-cut will help Pakistan save about Rs. 1.3 crores in foreign exchange.

United Kingdom

Cars Show: Ten countries are showing their newest cars at this year's International Motor Show, which opens at Earls Court, London, on October 19. Cars have come from the United States, Canada, France, Germany, Italy, the Netherlands, Sweden, Czechoslovakia and Russia, though the biggest contribution is from British manufacturers. Altogether some 60 manufacturers are showing new cars, but there will be further 420 stands covering the display of carriage work, motorized caravans, accessories and components, and tyres and transport service equipment. Last year the number of oversea visitors—19,702—was a record. It is expected that this figure will be exceeded at the forthcoming show.

Poland

Polish-American Agreement: An agreement was signed in Washington between Poland and the United States recently concerning indemnisation for American citizens following the taking over of their property by Poland as the result of nationalization, the agrarian reform, etc.

The agreement envisages the payment by Poland of a total sum of 40 million dollars to be paid within 20 years in equal annual instalments of 2,000,000. The division of the indemnisation payments between those concerned will be dealt with by an American Indemnisation Commission. In accordance with the agreement, the property of Polish citizens which has been frozen in the USA since the Second World War, will be unfrozen. The signing of this agreement will contribute to progress in the general development of economic relations between our two countries.

European Fund

Credit For OEEC: The European Fund is a source of credit to assist the OEEC countries to overcome temporary balance of payments difficulties. At present, credit facilities in gold have been granted to three countries, Iceland, Spain and Turkey. The amount granted and the drawings thereon are shown below:

(In millions of units of account*)

Member countries	Credit granted by the Fund	Total drawn (net) as on 30th June, 1960	Undrawn amount
Iceland	12.0	7.0	5.0
Spain	100.0	24.0	76.0
Turkey	21.5	21.5	—
TOTAL ..	133.5	52.5	81.0

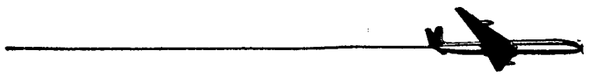
ECONOMIC DEVELOPMENTS IN WESTERN EUROPE

(Continued From Page 370)

labour-saving equipment. It is likely that this investment will yield increased rates of growth of output per man-hour, thus easing pressure on the labour market.

While the volume of exports to North America continued to rise by as much as 38 per cent over the previous year's level in 1959, exports to primary-producing countries remained at about the level of 1958. Thus, exports to overseas countries combined increased by 9 per cent. Data so far available for the first quarter of 1960 show a continued expansion of exports to primary-producing countries by more than 25 per cent over the corresponding period of the previous year. Deliveries to that area may be expected to rise more briskly in 1960 since its import capacity at the end of 1959 was higher than a year earlier and has probably risen further in 1960. Exports to the United States, on the other hand, dropped slightly below the level of the second half of 1959 and it is unlikely that they will rise in 1960 at 1959's exceptionally high rate.

POLICIES AND PROSPECTS



The rate at which the domestic margin for expansion has recently been narrowing varies considerably from country to country—as does the appraisal of the economic risks inherent in the present boom conditions. While concern at the appearance of physical limitations to the growth of output and the revival of demand pressures is being voiced in Western Germany, Austria and the United Kingdom, prospects are viewed with confidence in Italy, Belgium, France and Norway; in the Netherlands, Denmark, Sweden and Switzerland the official attitude is that developments need to be kept under close surveillance in the course of 1960. The promptness with which demand pressures have been anticipated during the present boom, the early identification of specific sectors of strain and the timely reversal of previous measures of stimulation are a welcome indication that useful lessons have been learnt from past experience. Many countries are attempting to apply mildly restrictive monetary and budgetary measures selectively so as to alleviate the pressure of demand in sectors or areas where it originates and to relieve—also with the help of other policy instruments —sectoral supply limitations.

After surveying the outlook for 1960 in selected western European countries on the basis of official forecasts of prospective changes in output and demand and other indicators, the review arrives at the conclusion that a rate of expansion of gross national product of almost 5 per cent for the industrial countries of western Europe combined (compared with the increase of about 4 per cent achieved in 1959) is probable in 1960. How much further demand can grow without setting in train inflationary pressures now depends on three major factors: the rate at which additional labour resources can be brought the productive process and labour mobility increased; the rate of growth of productivity; and the character and scope of policy measures. There is evidence that the authorities are becoming more aware of the conditions which have to be met if disturbances of the process of economic growth—quite often the outcome of measures expressly designed to maintain price stability and balance of payments equilibrium—are to be avoided. It may be hoped that this gradual advance towards more selective and co-ordinated monetary, and other policy measures will make it possible to avoid, in 1961, a repetition of the 1958 setback.

NEWS IN BRIEF

INDIAN

A process on Salicyl Anilide has been developed at the Shri Ram Institute for Industrial Research, Delhi. The process which is covered by an Indian Patent is now available for commercial development on terms and conditions to be settled by the National Research Development Corporation of India.

*

Industrial relations in the public sector is one of the main subjects to be discussed at the 18th session of the Inidan Labour Conference which will be held at New Delhi on September 24, and 25.

*

Mr. Manubhai Shah, Minister of Industry revealed that it was estimated that the cost of imported content in a transistor radio set would be up to 25 to 30 per cent of its ex-factory price and that the average annual expenditure was likely to be about Rs. 31 lakhs, out of a total allocation of about Rs. 1 crores for the radio receiver manufacturing industry.

*

The total acreage of agricultural land irrigated by the canals of Damodar Valley Corporation during 1959-60 was 4,10,000 acres under the kharif crops. The units of electricity generated during the period was 1467.19 million kwt. The income from sale of power was Rs 6,16,04,000 while income from irrigation had not yet been assessed.

*

Mr. Jaisukhlal Hathi, Union Deputy Minister for Irrigation and Power revealed in the Lok Sabha recently that in formulating the irrigation and power programme in the Second and Third Plans, it was necessary to secure the maximum benefits in the shortest time from the large investments that were being made for these projects.

*

It is reported the Government had undertaken to buy a minimum of 400,000 tons of wheat annually on commercial terms in the world market in addition to 16 million tons of American wheat to be purchased in four years under a special deal.

*

Purchases of rice, paddy and wheat in most of the surplus States are continuing. During the crop year 1959-60 6.14 lakh tons of rice have been purchased on Government of India's account and 1.94 lakh tons of rice and 2.05 lakh tons of paddy by the State Governments. Out of this year's wheat crop, the State Governments have also so far purchased about 3.45 lakh tons of wheat.

*

About 15 varieties of improved wheat, 25 varieties of various vegetables including potato and sweet potato, besides varieties of tobacco have been evolved through scientific plant breeding at the Indian Agricultural Research Institute and these are now very popular with the cultivators in various States.

*

The Government of India have constituted a committee for studying public health engineering practices and procedures in foreign countries and for preparing a draft manual for guidance of public health engineers in India.

*

There were 19,956 unemployed matriculates on the live register of the Employment Exchange in Delhi on June 30, 1960. Also, there were 4,471 graduates and 2,258 intermediates on the live register on that date.

*

A symposium on light metal industry in India will be held during early February 1961, at the National Metallurgical Laboratory, Jamshedpur.

FOREIGN

The total value of trade between West Germany and the Soviet bloc increased by 30 per cent to DM2,000 million in the first half of this year as compared with the same period last year.

*

Ruherowen (South Africa) is installing the first £400,000 sterling section of its new £1¼ million factory at Port Elizabeth. Semi-automatic wheel manufacturing plant will make 300 car wheels per hour at a cost somewhat higher than in Europe. Press tools for each type of wheel cost 2,000 sterling.

*

The Israel Cabinet has ratified an agreement with the Federal Government of Nigeria, providing for an Israel loan of £300 million part of which will be in goods.

*

Agreement has been reached with the Soviet Union for the construction at Alexandria of a dockyard costing £E 6 million. The dockyard will be built in three stages, and is due for completion in eight years, when it will be able to repair or construct tankers of up to 40,000 tons.

*

The Ceylon Bank rate has been raised from 2½ per cent to 4 per cent with effect from August 13. This is one of the two measures announced to curb imports and higher purchase of certain type of goods, in which of the continuing fall in the external costs.

*

A company with a paid-in capital of 1 million Swiss frances has been founded under the name AFIT-Aktungesellscraft Fuer Internationale Investment Trust. The Company is to establish international investment trusts, and according to a statement by the newly-founded company the first such trust is to be formed this autumn.

*

Netherlands Railways profit in 1959 was Fls. 9.9 million compared with Fls. 0.2 million in 1958, an increase of Flb. 9.7 million. Income from passenger services decreased by Fls. 2.4 million but freight transport yielded Fls. 5.2 million more. Operating costs decreased by Fls. 5 million to Fls. 488 million.

*

The credit restrictions as exercised directly on trading banks by the Reserve Bank reached a record point recently with the freezing by the Bank of 38 per cent of the trading banks free deposits, the total sum necessary to meet the new ratio requirements will be £112 million

*

Drastically higher tariff levels and import controls are believed to be among the economic measures which the Southern Rhodesia Government has asked the Federal Government to consider introducing in the Federation.

*

The decline in agricultural production in East Germany is revealed by a comparison of the official statistics with those for West Germany, published in Frankfurt. The area now ruled by the Communists was largely self-sufficient in food supplies before the War, while the area of the present-day Federal Republic was an importer. Now the position in many respect is reversed.

COMPANY AFFAIRS

SESHASAYEE PAPER: A NEW VENTURE

Seshasayee Paper and Boards Limited is undertaking the manufacture of paper in Madras State where about 50,000 to 80,000 tons of bamboo can be safely earmarked for paper industry after taking into account a consumption of nearly 30,000 tons yearly for domestic and cottage industry requirements. Sugarcane bagasse is another valuable raw material for paper. When it is mixed with long fibred material like bomboo pulp, the quality of the resultant paper is very superior.

With this background, the Madras Government has been trying to interest the private sector, for the last five years in the establishment of a large paper mill in the State and Messrs. Seshasayee Brothers have responded to its suggestions. They have selected to collaborate with the Blackclawson group of U.S.A., represented by their Export Arm, the Parsons and Whittemore Organization of New Rork. Industrial licence for setting up a unit for the production of 20,000 tons of printing and writing paper has been granted. The foreign exchange required has been provided by allocation from loan from Export-Import Bank of Washington. The blanket import licence for the import of plant, machinery and equipment from the U.S.A. has been issued. Approval of the terms of foreign collaboration has been given. Sanction for the issue of capital by Messrs. Seshasayee Paper and Boards Limited has also been granted. A loan of Rs. 2 crores has been sanctioned from the PL-480 (Cooley)) Funds.

Under the contract with Messrs. Parsons and Whittemore for the supply of plant, machinery and equipment, payment will be made to the extent of 20 per cent with the order (already placed), and the remaining 22½ per cent after six months of the date of the order. Another 22½ per cent is to be paid after 18 months of the date of the order and the balance after the commencement of production. The entire plant and machinery will be imported into the country within 24 months from the date of the order, namely, before the end of July 1962. Accordingly the Mill is expected to commence commercial production by the end of 1962.

GOUREPORE AND NUDDEA

The Directors have pointed out that the industry was fortunate in enjoying favourable trading conditions for the greater part of the year, to March 31, 1960. Prices for jute remained at a level which, taken in conjunction with those attainable for finished goods, allowed Mills a reasonable profit. At the same time consumers of jute goods throughout the world received their goods at rates sufficiently attractive to withstand competition from other packaging materials. Overseas and internal demand ran at a high level enabling the Industry to adopt a cautious but flexible policy towards the unsealing of sealed looms. The Gourepore Company Ltd. and the Nuddea Mills Company Ltd. shared fully in these improved trading conditions.

During the year under review the Gourepore made a profit of Rs. 39.14 lakhs out of which Rs. 5.9 lakhs were provided for depreciation, Rs. 6.5 lakhs for taxation and Rs. 3.06 lakhs for Development Rebate Reserve. The Directors have proposed a Dividend on Ordinary shares at the rate of Rs. 20 per share which together with the interim Dividend paid makes a total of Rs. 30 per share or 30 per cent per annum for the year, absorbing Rs. 4.80 lakhs. A sum of Rs. 15.50 lakhs is transferred to General Reserve.

In the case of Nuddea the profits come to around Rs. 23.69 lakhs from which the depreciation to the extent of Rs. 6.02 lakhs and Development Rebate Reserve to the extent of Rs. 1.74 lakhs are separated. The Directors have now proposed to pay a final dividend of Rs. 3 per share which together with the interim dividend paid makes a total of Rs. 4 per share or 8 per cent per annum absorbing Rs. 4 lakhs. A sum of Rs. 9.50 lakhs is proposed to be transferred to General Reserve.

NEW STANDARD

From the working results of New Standard Engineering Company Ltd. for the year to March 31, 1960, it appears, that the Company has made considerable strides. The profits came to around Rs. 9.4 lakhs against Rs. 5.32 lakhs in the preceding year. The Directors have recommended a Dividend of 12 per cent subject to deduction of tax on fully paid shares. The Directors have also recommended on partly paid (Tax-free) Preference shares dividend at the rate of 9 per cent Gross (making a net of 6.3 per cent) for one month and on partly paid up Equity Shares (New) at the rate of 12 per cent Taxable for one month. It may be pointed out that the present Company was converted into a public limited company after the amalgamation of Messrs. Burjorji Pestonji & Sons Private Ltd. and Messrs. New Standard Engineering Company Private Ltd.

LARSEN AND TOUBRO NEW ISSUE

The Directors of Larsen and Toubro Limited have resolved to issue additional 3,00,000 equity shares of Rs. 10 each at par. The shares will be offered in the first instance to the equity shareholders of the Company in the ratio of three equity shares for every eight equity shares held. The Transfer Books of the Company will be closed for this purpose from 17th October. 1960 to 5th November, 1960.

Notices of "right" shares will be posted to the shareholders at their registered addresses in December, 1960.

COMMODITY NEWS AND NOTES

IMPORTS OF CAUSTIC SODA

As stated earlier, the increase in demand for caustic soda has been outstripping the increase in indigenous production, with the result that instead of becoming self-sufficient in this basic chemical, our dependence on imports has actually been on the increase. The following table gives the quantity and value of imports effected in the past few years:

	1954	1955	1956	1957	1958	1959
Quantity (Tons)	52,638	54,881	93,594	66,042	61,734	147,162
Value (Lakhs Rs.)	317.57	326.77	544.58	338.22	394.89	894.63

Caustic soda is classified under Serial N. 22(a) of Part V of the Import Trade Control Schedule. Since July-December 1956 imports of caustic soda are canalised through an agency approved by the Government, namely, the State Trading Corporation. Applications from actual users of rayon grade caustic soda, however, continue to be considered on an ad hoc basis. Imports are charged to protective duty at the rate of 40 per cent of ad valorem standard and 30 per cent ad valorem preferential.

COTTON EXPANSION PLANS IN ISRAEL

Israel's local production of cotton staple this year will be virtually sufficient to meet all home market requirements. It is expected that the crop will amount to 10,000 tons, compared with 7,000 tons harvested last year. The area under cotton, however, will have to be further increased in coming seasons to keep pace with the rapid expansion of the local textile industry.

RUSSIA'S EXPORTS OF OIL

A break-down of the figures for the Soviet oil exports last year is now available with the arrival in the UK of the official (Russian) trading statistics for 1959. These show that 25.4 million tons of oil were exported during the year, made up of 12.5 million tons of crude oil and 12.9 million tons of petroleum products. Countries outside the Communist group were well represented among the purchasers of Soviet crude. Italy was the biggest recipient, taking 2.4 million tons, followed among the non-Communist states by the UAR (11 million tons) and Finland (900,000 tons). Czechoslovakia imported 1.8 million tons of crude from Russia, East Germany 1.5 million, Hungary 1.2 million and Poland 700,000 tons. China took the largest volume of petroleum products 2.4 million tons—but with only one other Communist country figuring prominently. This was Poland, with some 1 million tons. In the West, Sweden was the biggest importer of petroleum products, taking 1.1 million tons, Finland imported 1 million tons, the UAR 900,000 tons, West Germany 800,000; France 700,000 tons. The UK was low on the list, taking only 101,800 tons.

TEA EXPORTS TO USA

During 1959-60, 23.26 million lbs. of Indian tea were exported to the USA as compared with 24.42 million lbs. in 1958-59. India is a member of the US Tea Council which campaigns for increasing the consumption of tea in that country. Besides joint promotional efforts, a Tea Promotion Officer has recently been posted in New York to look after our tea exports.

FRUITS IMPORTS FROM AFGHANISTAN

The Government of India has decided to permit the import of dried and fresh fruits from Afghanistan on the basis of advance licensing. This has been announced in an Import Trade Control Public Notice. These licences will be subject to subsequent adjustment according to the entitlement of the approved importers. The import permits will be issued on an ad hoc basic within a limited ceiling and on the condition that the importer undertakes to effect exports to counterbalance the import. Only approved importers, who have been registered with the Deputy Chief Controller of Imports and Exports, Central Licensing Area, New Delhi, and Joint Chief Controller of Imports and Exports, Bombay, during 1959-60, may apply for permits not later than September 20, 1960.

R.f. No.

23rd June 1960

The Sales Manager,
Messrs. Ashok Leyland Limited,
Bank of Mysore Buildings,
N.S.C. Bose Road,
M A D R A S-1.

Dear Sir,

There are fifteen Ashok Leyland Comets in our fleet of 51 buses. The first Comet was put on the road on 1-1-58. We are operating them on mofussil routes and none has experienced any major breakdown so far.

Considering the mounting passenger traffic on the one hand and the indifferent road conditions on the other we unhesitatingly say that the 203" wheelbase Leyland chassis is ideally suited to tackle both the problems. It is the only chassis available in India with the largest seating capacity (we are able to seat 66 persons in all) and it withstands the severe running strain over long distances.

In fact the dependability and economy of the Ashok Leyland Comets are so convincing that we are thinking of replacing the existing vehicles with them.

Thanking you,

Yours faithfully,
For ARUPPUKOTTAI SRI JAYA VILAS (P) LTD.,

Managing Director.

JWT/AL-837.

We thought you might like to read this

This testimonial explains Leyland's enormous popularity in over 50 countries in the world. The exacting standards of precision combined with fine craftsmanship makes Leyland the most wanted vehicle today.

Company Meeting

BOMBAY SUBURBAN ELECTRIC SUPPLY LIMITED

CHAIRMAN'S SPEECH

Gentlemen,

This General Meeting of your Company is the first to be held after the inauguration of the State of Maharashtra. We offer our felicitations to Mr. Chavan and his colleagues with the hope that their efforts on behalf of the new State will be amply rewarded. They have our full support and assurance that we shall do all we can to further the prosperity of the new State and its people.

This change in the political scene will mean greater potentiality for industrial development in the Bombay Suburban area — an area in which your Company is playing an ever increasing part. The rate of growth in power supply in the area has continued to be well above the normal, as will be seen from the percentages of increase during the last three years, which have been 16.5, 19.5 and 21.4, respectively. These are impressive figures and justify the confident hopes of those who had all along forecast rapid development in the Suburbs. Careful planning over the last ten years has enabled your Company to anticipate load requirements. A lot of money was spent on intensifying the mains net work and we are now reaping the benefits.

Future development is likely to be even more impressive. This will place a greater measure of responsibility on your Company, and there is no doubt that the bold planning of the past and the efficiency of our staff will ensure that we are not found wanting.

The tempo of power development in your Company's area of supply will require an investment of about Rs. 45 lakhs per year during the Third Five-Year Plan period. A part of this will be met by internal finance to the extent of Rs. 25 lakhs yearly, which will accrue by way of depreciation, consumers' contributions towards service line charges and the development reserve permitted under the Electricity (Supply) Act. This means that we shall need about Rs. 20 lakhs per annum during the next five years. At present development capital is being provided through Bank finance and this will allow the Company to carry on for about two years without needing to tap further sources of capital. Thereafter we shall have to consider what can best be done to raise new capital and it is to be hoped that by then the investment climate for Electricity undertakings is more favourable.

This brings me straight to the effect of the statutory control imposed on Electric Supply Undertakings by the financial provisions of the Electricity (Supply) Act, and its impact on the problem of raising capital for power development. It is well known that for some time no electric supply company has had the confidence to enter the market for equity capital. Furthermore, the position has worsened with the change in the tax pattern introduced by the Finance Act, 1959, whereby the facility of "grossing up" of dividends in the hands of shareholders was withdrawn. In addition, dividends paid to the shareholders have been made subject to deduction of tax at source at the prescribed rate of 30 per cent. Although the new tax pattern applies to industry as a whole, its effect on our Industry has been particularly severe. For one thing, by virtue of the stringent control applied under the Electricity (Supply) Act, we are not allowed to step up earnings to a level which would permit a higher rate of dividend. Secondly, we cannot even divert to investor, the benefit of tax savings as is possible in the case of other industries. Our Reasonable Return, in other words the amount effectively available for distribution to the shareholders, remains to all intents and purposes the same, whatever tax is payable. Thus we and the Industry as a whole are caught between the contradictory provisions of Income-tax Law and Electricity Supply Law.

It was hoped, by way of interim relief, to be able to divert to the investor in respect of the financial year ending 31st March, 1960, the tax difference between 51.5 per cent (the old rate of tax) and 45 per cent (the rate at present in force). However, this suggestion has met with legal difficulties. Efforts are still being made to obtain relief in another form, and the most favourable proposal at present is to permit the Undertakings, for the financial year 1959-60, a special appropriation representing the tax relief of 6½ per cent to be used for "augmenting the machinery of production". This interim relief, if it matures, is expected to be without strings and the incidental benefit to the investor although not significant in terms of cash relief, will still go some way to improve the equity value in the Industry.

However, any interim relief can at the best only be a sop and if the Electric Supply Industry—investment in which, at one stage, was regarded as gilt-edged —is to regain its place in the heart of the investor something more will need to be done. Ultimately the best way to restore equity values—which alone will attract development capital—in the Industry is for the Reasonable Return itself to be upgraded from the present level of the Reserve Bank rate plus 2 per cent to at least the Bank Rate plus 3 per cent. This proposal and other modifications to the Electricity Law which will bestow on the Industry some benefits, have been sponsored by the Federation of Electrical Undertakings of India and I can only hope that before the end of this year the Industry will see a Parliamentary enactment which will improve the investment climate.

With all three units in the Trombay Thermal Station now in commission, the power supply position in the Bombay area has improved. With the expected commissioning of the first generating unit of 60,000 kW in the Koyna Hydro-electric power station by October 1961, the availability of power will become easier still, even allowing for rapid load development. This should mean that there will be progressive releases of bulk power to meet the requirements of industries and homes in Licensee's areas. As a result it will be necessary for your Company, in common with others, to obtain the necessary materials for development, such as cables, transformers, switchgear, meters, and so on in order to pass on power to the consumers. I refer specifically to this point, as we have had considerable difficulties in recent months to obtain import licences for items which indigenous manufacturers are unable to supply. There is a danger that the enormous increase in generating capacity in the country and the money spent on it, will not be used to the best advantage if the materials essential for distribution are not available to the Industry. Power denied to a needy consumer is progress withheld—power denied to potential exporters will cost the country dearly. One bright feature about this problem, however, is the

very valuable assistance rendered by the Central Water and Power Commission to all power systems in obtaining much needed equipment. With power development having received a set-back during the Second Five-Year Plan period because of the foreign exchange crisis, I hope that a greater measure of co-ordination will prevail during the Third Plan period at all stages of power development, so that available power reaches the consumer.

Shareholders may naturally be worried at the resolution adopted recently by the Bombay Municipal Corporation suggesting the municipalisation of the Bombay Suburban Electric Supply Ltd. This is no new development. The first time such a proposal was mooted was in 1953, and ever since, this form of agitation by the Greater Bombay Municipal Corporation has tended to be a recurring feature. Agitation of this nature obviously carries political overtones, often clothed in unknown and untested economic advantages which, it is claimed, would accrue to the Suburban community. However, what is plainly not taken into account is the lower density of population in the suburbs, as compared with the City. This means that for a given amount of capital expenditure on power distribution, less units will be sold in the suburbs than in the City at the present. As development of the suburbs takes place, the disparity will narrow until offtake in both areas will be comparable. When this happens our rates will compare very favourably with those charged in the City. I would remind the agitators, however, that our rates have progressively been reduced since 1947 and this process will continue as load development gathers momentum in the coming years.

In view of the regulations imposed on the Electric Snupply Industry, nationalisation or municipalisation, as a doctrine, may not carry much weight in official circles at the present time. In fact, is is the praclaimed policy of the Central Government that Electric Supply Undertakings rendering valuable service should not be displaced merely for the sake of displacement. I hope I am right in saying, therefore, that the investor in the Corporate Sector of the Electric Supply Industry need not worry too much about premature acquisition.

Turning to the Accounts, the printed Balance Sheet has been in your hands for some time, and I feel sure that you will agree that the results are satisfactory. I would like to add for your information that in accordance with the Financial Principles embodied in the Electricity (Supply) Act, the Clear Profit actually earned for the year is equal to the permitted Reasonable Return.

Another point of interest pertaining to the accounts on which I would like to make some observations is that, shortly before the Accounts for the year were due to be finalised, the Supreme Court judgments on the series of test cases filed by the Income-tax Department on the legality of additional Income-tax became available. These judgments ruled that the levy was not tenable. In consequence, the provisions in respect of Additional Income-tax made in the Accounts amounting to Rs. 3,28,073 for 1953-54 and Rs. 3,55,460 for 1954-55 have been taken to the Appropriation Account. However, at the same time, adjustments in terms of the Electricity (Supply) Act had to be made by reopening the computations for the respective years where necessary further appropriations have had to be made in accordance with law, to the Statutory Reserves. This means that not all the provisions, now written back, are available to the Company. However, I am sure that you will welcome the increase in the dividend this year, which has partly been due to the above-mentioned windfall. As last year, I regret that we must deduct Income-tax but as I have tried to explain, Electricity Companies are in a difficult position. We cannot charge up the Income-tax on your dividends to working as we could before.

A reference has been made earlier to the interim relief which the Electric Supply Industry may be able to obtain in respect of the financial year under review representing the tax saving of 6½ per cent accruing to non-regulated industries as a matter of course. In your Company's Accounts for the year 1959-60, the appropriation seeems feasible and consequently a sum of Rs. 1,06,360 has been set aside, subject to the requisite sanction being obtained from the State Government. The amount in question is included in the sum of Rs. 2,50,000 appropriated to the Dividend Equalisation Reserved. It is likely that the special appropriation may only be approved subject to the amount being retained in the business. If such a stipulation is forthcoming, it may have to be transferred to a Capital Reserve later. If for any reason the limited relief indicated above does not materialise, the Company will be obliged to write back the sum of Rs. 1,06,860 in due course.

During the year under review, Sir Chunilal V. Merta resigned his seat on the Board of your Company and in May 1960, Mr. M. S. Captain did likewise. The services rendered by these two gentlemen to your Company have been very valuable and the Board have recorded their grateful thanks to them. I have no doubt that you, gentlemen, would wish to associate yourselves with the sentiments expressed by the Board.

The Report reference to certain demands made by the Staff Union having been referred to the arbitration of Mr. H. R. Gokhale. The procedure of voluntary arbitration adopted by your Company in matters relating to disputes with the Staff Union has received wide appreciation.

NOTE: This does not purport to be the proceedings of the Annual General Meeting which can be seen by any shareholder on request.

ORISSA GOVT. LOAN 1969

Issue Price Rs. 99.50 per cent

Opens on the 29th August, 1960

The loan will be closed as soon as a total of approximately Rs. 400 lakhs has been subscribed and in any case not later than the close of business on the 3rd September, 1960.

The applications will be received at the Office of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras and Bangalore, at the branches of the State Bank of India in Orissa and at the Treasuries and Sub-Treasuries in the State of Orissa.

Full particulars can be obtained at any of the Offices of the Reserve Bank of India or branches of the State Bank of India or at any treasury or sub-treasury in the State of Orissa.

CENSUS OF MANUFACTURING INDUSTRIES : 1958

		Cement	Jute Textiles	Vegetable Oils*	Electric Lamps	Distilleries and Breweries
1.	Number of registered factories in existence**	30	106	29	11	49

MAHARASHTRA

STATE DEVELOPMENT LOAN, 1969

ISSUE PRICE AT PAR.

OPEN ON THE 29TH AUGUST 1960

The loan will be closed as soon as total of approximately Rs. 1,000 lakhs has been subscribed and in any case not later than the close of business on the 3rd September 1960.

The applications for the loan will be received at –

a) the offices of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras, Nagpur and Bangalore,

b) the branches of the State Bank of India within the State of Maharashtra, except at Bombay and Nagpur and at places mentioned in (c) below,

c) the branches and Treasury pay offices of the State Bank of Hyderabad within the State of Maharashtra,

d) the Government treasuries and sub-treasuries in the State of Maharashtra at places where there is no branch or Treasury pay office of the aforesaid Bank.

Full particulars can be obtained at any of the offices mentioned above.

Shakespeare once observed "Beauty is an innate craving of man—so he seeks to dwell in lovely parts of the creation." No age has ever been immune to this captivating spirit of Beauty, the balm of life. Even mother Sita of our epic age fell a victim to the attractions of beauty when she noticed an illusory golden deer, and longed for having it, which resulted in the out-turn of a chain of momentous events in the social life of that epic age.

The Deer is virtually a charming and comely animal which infatuates a man at the very glance.

We do admire this instinct of man and offer our ocean deep ovation for the same. Hence, we have chosen deer as a symbolising brand for our cloth of varying varieties so exquisite, enduring and of so endearing a price.

Our Specialities are:

PRINTS, SHIRTING, COATING, LENOS,

FLANNEL and TOWELS, etc.

a BIRD'S-eye view
of service
to the economy

The Birds/Heilgers group of companies meet a substantial part of the country's demand for industrial raw materials like iron ore, coal, limestone, manganese ore, refractories ... provide tubewells for tea estates and factories... manufacture plants for water treatment... supply paper for a variety of uses... make jute goods and steel castings and structurals...

Birds have today launched on a programme of expansion to increase their output and service facilities... And their laboratories are constantly at work exploring new uses for their products so that they may serve India's industries better.

A symbol of industrial leadership, Birds will continue to play a vital role in helping India attain industrial self-sufficiency.

Second Thoughts on Indian Import Policy

THE meetings of the Import and Export Advisory Councils this week-end have provided a unique, even if somewhat depressing, evaluation of India's current difficulties in international trade. It is obvious that imports, even on "current" or maintenance account, refuse to balance exports. Mr. B. K. Nehru, Commissioner-General for Economic Affairs abroad, in a frank statement argued that the gap was between Rs. 60 to Rs. 70 crores and just could not be allowed to continue. Meanwhile, the Reserve Bank of India's statement of August 12, showing the sterling balances at an all-time low of Rs. 144.5 crores, was the central point of many speeches, particularly of the speech of the Minister of Commerce and Industry, Mr Lal Bahadur Shastri. The Minister himself, particularly in his bracing concluding remarks, argued that the position was difficult but by no means critical. On the whole, both the meetings of the Import and Export Advisory Councils were workmanlike, and not escapist. One might argue that because they forged some new determination to deal constructively with both imports and exports, both the meetings were amongst the best of their kind.

Views expressed at the meetings varied all the way from the necessity of "maintaining" the economy at almost any price to a fairly drastic view that India's import policy, which had hitherto been guided by the objective of full utilisation of capacity, was incompatible with the maintenance of India's balance of payments. For many years the word 'stability' has had an almost magic connotation. It has conveyed to the business community a sense of a secure right to a certain level of imports, provided it installed the plant capacity under licence. Now that it has become clear that all new undertakings cannot be provided with sufficient imports, the first line of defence—presented ably by Mr. Murugappa Chettiar President of the Federation of Indian Chambers of Commerce and Industry—has been to argue that development should wait while maintenance and utilisation of existing capacity should take first priority. Thus, the debate has been fairly joined between the short-term and long-term demands on India's limited foreign exchange resources with no decision reached. In the Import Advisory Council certainly the majority favoured maintenance. In the counsels of the Government, which are still confused, there is almost equal emphasis on development. How India's foreign exchange bill for maintenance and development has to be underwritten at the same time, no one has answered. It would appear to be the intention of the Government of India to appoint a committee to recommend exactly how priorities can be arranged under given ceilings of foreign exchange. The truth is that political factors have, for a long time, overruled the hard necessity of balancing our current international account. If, as Mr. B. K. Nehru argued, our friends abroad are unwilling to provide resources for maintenance of the economy, there is urgent need for recalculation as to how existing resources are to be assigned. Undoubtedly, a middle course will hurt both existing units and development. It would be foolish to deny that the consequences for the whole economy are fairly grave. In the first place, the import policy for the next half year will be drastic and this will inevitably lead to increase in black market in certain areas of raw materials. The State Trading Corporation, much mentioned at this meeting, cannot, with the best will in the world operating on rupee account imports, maintain demand and supply if they are wide apart. One of the first consequences, however, will be that rupee imports from East European countries will receive a further fillip at the expense of trade requiring foreign exchange. This diversion of trade towards East Europe directed by our payments difficulties has already been under way for this year and the increased diversion is, in fact, the result of the inability of the Western countries in the "Aid-India Club" to provide in time all the sums stated to have been required at the August 1958 meeting, when credits for the Second Plan were first negotiated.

A second consequence is that India's industrial progress, which was rising steadily—it is believed to be moving at an average rate of 13 per cent more than last year—will have a set-back. Perhaps if steel and cotton textiles maintain their advance, the gap will not be very large immediately. But it is inevitable that many industries will be affected, and certainly some grandiose plans will need to be put into cold storage. The plans for a small car and for a watch factory were particularly mentioned as being border-line cases which could well be deferred; they could, but for political reasons, be unmourned casualties.

If India's friends abroad are unable to provide resources for maintenance, it is clear that the remedy for current imports can only be exports. This is an uncomfortable conclusion, seeing that exports present one field which, in the last decade, has been noticeably unattractive to the great majority of Indian businessmen. But now they will need to accomplish, under restrictions of imports, incentives like dovetailing exports with imports and perhaps compulsory exports, the performance of an uncomfortable duty long delayed. How much can be done is anybody's guess, but the lines of new export policy are beginning to form themselves in the Government's mind to these new alteratives. To these we turn.

Exports to the Rescue?

THERE are two ways of looking at the performance of exports during the Second Plan. If one were to compare 1956-57 with 1959-60 there may be some cause for pessimism, because in spite of the long catalogue of measures for export promotion detailed in the Draft Third-Five Year Plan exports have actually come down from Rs. 635.2 crores to Rs. 623.3 crores. On the other hand, it should be a matter for a little gratification that during the last four years, exports at an annual average of about Rs 607 crores were more than those envisaged in the Second Five-Year Plan. There is also a little encouragement from the fact that during the first six months of this year, exports have gone up to Rs. 301 crores as compared to Rs. 266 crores during the corresponding period of last year. Considering the fact that during the second half of last year, exports were of the order of Rs. 357 crores, it is conceivable that the total exports for the current year may exceed Rs. 650 crores which is the target envisaged by Mr. Lal Bahadur Shastri at the Export Promotion Advisory Council meeting.

What then precisely is the magnitude of the problem of exports? According to the Draft Outline of the Third Plan, the annual average of exports envisaged during the Third Plan is Rs. 690 crores which is not sufficient to meet the maintenance imports of the order of Rs. 714 crores. Over and above this, there is need to service existing debt obligations of the order of Rs. 500 crores. This means either the country should make determined efforts to raise the annual export target by another Rs. 100 crores—which is of course a substantial task—or try to convert the obligations falling due during the Third Plan period into longer-term loans. If the second alternative is not feasible—and it only gets us time—it would mean that the annual average of exports should be raised from the current level of Rs. 607 crores by another Rs. 100 crores almost immediately.

The Export Plan for 1960-61 which Mr. Shastri said has been worked out on commoditywise basis and which would also be arranged countrywise and whose details are yet to be announced, will naturally be awaited with interest. But the problem of export promotion has to be looked at from the short-term, as well as the long term point of view. In the short-term, the announcement made by Mr. Shastri that control over 70 items will be lifted would of course be welcome. The only question is on how many more items similar control should still exist. Similarly, in the dovetailing of imports with exports, the suggestion that priority should be given in the matter of foreign exchange for industries which could bring export earnings is obviously commonsense. Why has it been so long delayed?

In the first half of this year, except for tea, most of the traditional items have made substantial gains and the problem is one of not only maintaining them but pushing them further, because traditional exports are of the sort that often face a failing world market. In the case of tea, there is the additional factor of the imposition of fiscal burdens. Therefore besides the question of maintaining competitive prices and ensuring quality, there is also need for concentrating on specific marketing practices like packaging, regular delivery of products and publicity in the several markets. The fluctuation in tea exports also illustrate that there is need for further diversifying our contacts with foreign countries. It is also worth examining whether just as in the case of Japan, instead of dispersed individual efforts, private firms and trade associations with Government assistance, should not combine for promoting exports in foreign markets. Along with the traditional items, the country has also to find new commodities and new markets for promoting exports. From the point of view of earning foreign exchange, the contribution of non-traditional items may not be quite substantial since even the engineering goods currently earn only Rs 7 crores. But from the long-term point of view, their importance cannot be under-estimated. And it calls for a long-term strategy so that individual markets that are now developing in South-East Asia as well as Africa may be surveyed for the different commodities.

Much the most important factor in our larger export industries is price. And the most efficient export policy for every commodity is one which controls the domestic cost of production. This has been almost completely forgotten. The second factor is a fiscal incentive to export against an easy sale in a rapidly growing domestic market. If neither of the above conditions applies compulsory exports will be necessary, with the country bearing a sizeable loss. But the situation brooks no delay. It is good the Export Advisory Council meeting made this clear.

Banking Under Stress

WHAT might have been a major catastrophe in the post-Independence era of Indian banking has happily been averted; the run on the Punjab National Bank in Delhi—not one of the most arduous in its proud history of over fifty years—has been weathered. Though withdrawals of deposits from this bank, one of the "Big Three" in the country, may continue for some time, the tide has turned without doing any significant damage.

Various reasons are being put forth for the storm that the Punjab National Bank has had to face during the past one week. It has been suggested that the run was engineered by some mischievous persons. The Union Finance Minister, Mr Morarji Desai, in reply to a question in the Lok Sabha on Monday stated that "the Government's attention has been drawn to certain allegations in this connection (some Members had asked what action the Government proposed to take against those who had created the mischief and caused the run), but without a detailed investigation it will not be possible to confirm or contradict them". It is hoped the Government has already instituted a probe into this; the findings of this investigation will be eagerly awaited. But the real cause of the run appears to be the shaken confidence of the public following the Palai episode. How otherwise can one explain that it is not one but a number of banks which have witnessed panicky withdrawals in the last few days?

What has caused this general scare in the banking public? The forced liquidation of the Palai Central Bank undoubtedly supplied the initial spark, but it has clearly been increased by doubts raised by the statements of the Union Finance Minister and his deputy, Dr. B. Gopala Reddi, in Parliament during the last two weeks. Mr Morarji Desai's apologia for the Reserve Bank's delayed action in the case of Palai Bank has not helped. Nor has been of any assistance the invidious distinction that Dr. Gopala Reddi has drawn between "licensed scheduled banks" and "unlicensed scheduled banks". The only condition for a banking company for securing a licence is that it should satisfy the Reserve Bank about its working not being detrimental to the interest of its depositors. This is one of the conditions for a bank to entitle it to be included in the Second Schedule of the Reserve Bank of India Act. How then can a scheduled bank be kept unlicensed? The distinction thus having been drawn, doubts were raised about the working of a number of scheduled banks which the public apprehended might not have been granted a licence as yet. To make matters more uncertain, Mr. Morarji Desai came out with an explanation that the Government did not guarantee the health of any bank, whether scheduled or non-scheduled or licensed or unlicensed.

The result of all this has been that some confidence in the Indian banking structure has been shaken. It will take time to restore this confidence and that depends on what steps are taken to restore it and how quickly. The Governor of the Reserve Bank has suggested augmenting of share capital and reserves of the banking companies by broad-based public subscriptions and by ploughing back of profits respectively, but this raises the important issue of "servicing" the capital. Another suggestion—it perhaps is being given effect to in the Banking Companies (Amendment) Bill which the Government proposes to bring before Parliament shortly—is that the Reserve Bank should be given powers to force amalgamation of small and weak banks to form stronger units. This is a step in the right direction and should go some way in consolidating the shaken edifice of the banking industry in this country. The contemplated measures to strengthen the inspection and supervisory powers of the Reserve Bank would also be welcome. But the quality of the Bank's supervisors needs considerably to be raised.

More effective step to put the house of the banking industry in order would, however, be to introduce a Deposit Insurance Scheme as called for by this journal in its issue of August 12. Auditors for all the banking companies should also be approved by the Reserve Bank to whom they should be made ultimately responsible. And perhaps a more liquid position may be necessary. But then what happens to the oft-repeated demand that banks should be encouraged to advance long-term loans to industry? Again, how great is the pressure for "clean" advances? The Reserve Bank cannot have it both ways. More adventurous banking will entail more risk. Are Indian scheduled banks to play safe or are they to be more adventurous? The Reserve Bank should decide early.

Oil: Demand and Supply 1965-66

PROBLEMS of oil continue to strike the headlines. And quite apart from the controversies between the Government and the oil companies there is a major issue of public interest. This is in respect of an energy shortage in the Third Plan. Elsewhere in a *Blue Supplement* in this issue, it is pointed out that a major error has been made in respect of oil requirements by 1965-66.

It is possible to draw the threads of the articles in the *Blue Supplement* together and compute a figure for total demand. Not, indeed, that total demand is any adequae assessment of separate oil needs. There must be a balance in individual components as well as a balance in total; imbalance has already existed too long. Nevertheless for the purpose of looking at the whole picture as now set out, one can argue that total demand is likely to be of the order of 14 million tons.

Against this the supply from all current refineries might be of the order of 6 million tons. Assuming the two public sector refineries at Barauni and Gauhati together produce 2.75 million tons and that a new refinery in Cambay can be brought into operation to produce half a million tons, there would thus be a gap of 4.75 million tons. The structure of the gap in 1965-66 will again naturally depend on the individual components, but the total figure is likely to be unaffected because a shift towards one product is likely to be compensated by a fall in another; diesel and kerosene are substitutes and, if a multi-fuel engine emerges, as seems likely, obviously "the mix" will be greater than at present. All in all one might argue that between 4.5 and 5 million tons is an inescapable gap so far as refined products are concerned.

The Ministry of Fuel has given out the statement that, so far as the public sector is concerned, no additional refining capacity is contemplated beyond the Cambay refinery which, because of the inadequate reserves on which it is based, will necessarily be small. It would, therefore, appear that the gap in refined products to be filled is at least 4 million tons, if not 4.5 million tons.

It is, obviously, advisable that new refining capacity should be immediately installed. The cost of finished products naturally varies with the product, but a fair average price in India's conditions might be between Rs. 145 and Rs. 150 per ton. whereas today's landed cost of crude—this was confirmed by Mr. P. D. Tew, Chairman of Burmah-Shell Refineries, in his speech last week—is only Rs. 65 per ton. If we take the gap in 1965-66 as merely 4 million tons and the difference between refined and crude at Rs. 80 per ton, this would make a difference of Rs. 32 crores in that year. It has been stated that after making allowance for the foreign exchange needed to operate the additional refining capacity (mainly refining fuels, stores and materials) and to service the additional foreign capital, there will be an overall net benefit to the economy of Rs. 25 crores of foreign exchange per year after 1965-66.

It seems obvious that the conclusion of the argument on demand should be the installation of additional refining capacity of about 4 million tons. It would appear proposals for more than half of this have already been made. The question might well be asked as to why they have not proceeded further in the last year. Every year of delay implies an additional foreign exchange cost measured by the differential between crude oil prices and refined products currently estimated at Rs. 80 per ton in foreign exchange. In the present foreign exchange crisis, the delay in sanctioning a new refinery or an expansion of an existing one seems inexcusable.

A DELHI DIARY

THE INSTINCT FOR SURVIVAL

SATURDAY last week will live for ever in the memory of those who were in Delhi at 9-31 p.m. that day. At that hour, and at that minute, we had the most severe earthquake shock and rumbling that we have ever had. As if by sympathetic design, in the area in which I live, the lights went out. If there had been no earthquake at that time, the departure of the lights might have been dismissed as a daily occurrence, but for the first time, the electricity authorities have yielded place to Nature in daily conversation. Every day since then, people around me tell me they feel tremors. Whether it is my mass which resists mild vibrations or not, the fact remains that I have only felt one other shock at a little after midnight on Saturday. On the whole, therefore, I am exercising my instinct for survival by assuring myself that Delhi is a safe place—except, of course, for political storms. For anyone who argues that it is not, let me suggest that the total number of cracks recorded on Saturday has been, in the opinion of the Central Public Works Department, negligible. I have dutifully recorded additional cracks in my own house and find them, if not negligible, at least no worse than those we have endured for a long time. I, therefore, join in spreading that dangerous disease called complacency.

I doubt if Delhi's population has ever had such a powerful education in earthquake and things connected therewith. It now transpires that Delhi lies on the earthquake zone which goes all the way from Turkey right through Iran to Japan. In some mysterious way this band embraces the whole of what is called the Himalayan belt and which, I now see, extends right upto the Vindhyas which were apparently formed some millions of years ago. When the Himalayas were thrown up they were not arranged by Providence in a permanently stable position. They have been for a long time settling down, and we have now to recognise that a million years in the sight of Providence are but as yesterday. We are also recognising that the experts are not nearly so good at seismic predictions as we unwisely thought. The seismograph at Delhi was being shifted on the day of the earthquake so that refined scientific information on this particular tremor was not available here. As far as we can determine, this means that there is a vast area of the country uncovered by critical scientific data at this critical time. A disrespectful friend of mine says we are none the unwiser. There are, it seems, three degrees of ignorance. One is lack of awareness, another is unwisdom, and the third ignorance proper. Only the third is really reprehensible.

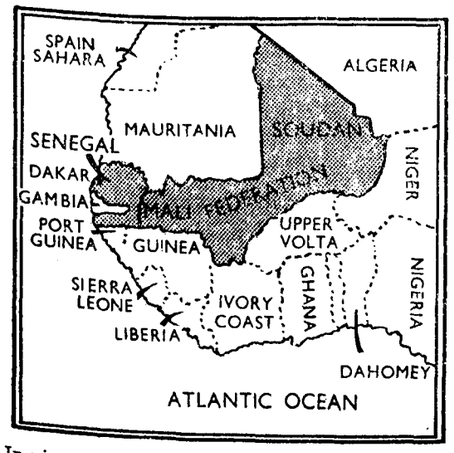
SOHNA: WHO IS SHE?

Meanwhile, a quite interesting theory has emerged in Delhi newspapers. It is to the effect that Sohna, a place thirty miles from here, formerly with hot springs, might well be the source of all the trouble. I must confess I had never heard of Sohna before and when the name was first mentioned to me I assumed, for some reason or another—perhaps my mind moved in a very limited (but pleasant) framework—of a lovely lady. In fact, Sohna is very much the opposite, being some hot springs, thirty miles North or is it North-East of Delhi? Some months ago it was noted that the springs were giving less hot water, which having receded in some way from Sohna, has been converted into steam and is now bubbling over happily beneath the Capital. We are told that some major investigations are shortly going to take place. Whether men are going to be lowered into the Sohna hot waters, or whether Mr K. D. Malaviya is going to do some oil drilling in the area, I am not entirely clear; but there are a large number of people who feel that Nature in an angry mood is best not tampered with, at least by the inexperienced. Who knows if the breaking of new channels for steam might produce an even greater earthquake. If, as I believe, the steam has already done its worst, cannot it be let, like a sleeping dog, to lie?

IMPORTS AND EXPORTS

Next to the earthquake—and some considerable distance below in public interest—were the meetings of the Import and Export Advisory Councils on Saturday and Sunday. It now transpires that India has been living beyond her foreign exchange means and that we have to recognise that so far as our balance of payments is concerned, this cannot be permitted. It would appear also that individuals can go on living beyond their means for a very considerable time, since by a process of double book-keeping one man's loss is another man's gain and the nation as a whole is happily neutral to deficit budgeting on private account. I shall say nothing about deficit financing on public account because my views on this generally are not printable. But I discovered on Saturday that what is harmless for a private individual dealing in rupees only becomes very serious for a nation, since we often have to pay in foreign currencies which we do not possess, or gold of which we possess, collectively, very little. It seems, therefore, that something drastic is to be done and the experts were at great pains on Saturday and Sunday to decide whether this should be by restriction of imports—was the Import Advisory Council founded for this purpose?—or by expansion of exports as becomes the Export Advisory Council. No firm decision has yet been taken as to which medicine is to be prescribed; but I hear from a reliable authority that both are going to be put on together—perhaps, as is hallowed by tradition, under the aegis of a new committee!

Of particular interest was the sense of urgency conveyed in the meeting of the Import Advisory Council by Mr. B. K. Nehru, our Commissioner-General abroad, who made a very frank, and naturally depressing, assessment of the position on obtaining funds for 'maintenance' of the economy. On the side of exports, Mr. R. G. Saraiya struck a constructive note by saying that this was as much a matter of psychology as of prices, and that the Prime Minister, in his letters to the Chief Ministers, should make them conscious of the fact that exports were priority number one at the present time. He also suggested that a special meeting of the National Development Council should take place to discuss export promotion, that is, after the Chief Ministers had been suitably educated in the interval by the Prime Minister's aforesaid letters. The second of these suggestions was warmly applauded by Mr. Asoka Mehta, Chairman of the Praja Socialist Party. He seemed, however, to be less confident of the Prime Minister's letters to the Chief Ministers. Can it be that these letters suffer from the economic law of diminishing marginal utility? The Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, who managed both meetings with remarkable calm and confidence, poured oil skilfully over all the troubled waters and created the impression that the difficulties were by no means insurmountable. All in all, we still live in the best of all possible worlds!



ARGUS.

THE WEEK'S NOTES

Mali

FEDERATION SPLIT

FOLLOWING THE crisis in the Congo, the recent split in the Mali Federation consisting of the former French possessions of Senegal and the Soudan, has caused apprehensions among many whether the process of "Balkanisation of Africa" is after all inevitable. The Mali Federation was formed in January 1959 and it achieved independence within the French "community" only two months ago. The Federation is three times as big as that of France and has a population of about 6½ million. The background to the crisis is not quite clear, but it would appear that it has centred mainly on the election of a President for the independent Mali Federation originally scheduled to be held on the 27th of last month. It has been understood that the President would be a Senegalese and M. Senghor would be the candidate while the Prime Minister would be a Soudanese. But at the last minute, the Prime Minister, M. Keita, himself entered the lists for the presidentship and with his control over the numerically larger population of Soudan, his chances were considered as excellent. On August 19, M. Keita divested the Prime Minister of Senegal, M. Mamdou Dia, of his post as Federal Minister for Defence and Internal Security and assumed these powers himself after proclaiming a state of emergency. The Senegalese leaders, however, did not allow grass to grow under their feet and immediately rushed in support of their Prime Minister and placed under house arrest the Federal Prime Minister who was subsequently released and allowed to go back to his Soudanese capital. It is also alleged that the French army in Africa had a hand in it since they were anxious to see M. Senghor elected president.

In view of this crisis, the intervention of General de Gaulle has been necessitated and according to reports last week, he had asked the two Prime Ministers to meet him in Paris to discuss the situation. However, prospects for a rapprochement seem to be little and the breakup may perhaps be irretrievable. This will have wide repercussions extending to the other areas in Africa because the Mali split is not only due to the rivalry of personalities but also other fundamental differences. There is a great disparity in size and social and economic development as between Senegal and the Soudan. While Senegal is by far wealthier and also more pro-French, M. Keita and his Soudanese followers are leftist in their tendencies. Again, while the Senegalese are in favour of a true federal structure, the Soudanese want a highly centralised government for the Federation. After the split, its is also conceivable that the Soudan may choose to align itself with Sekou Toure of Guinea who is often spoken as being communistic in outlook. This means that the Soudan will move out of the Western sphere of influence and make itself a pawn in the cold war game. For France, there is an additional reason to be anxious because an independent Soudan may conceivably take a more positive anti-French line on Algeria and indirectly strengthen the FLN. In view of these developments, the proposed Press Conference of General de Gaulle in Paris on September 5 is anxiously awaited to know whether he is going to spring any surprise packet.

Co-existence

YUGOSLAVIA AND CHINA

THE RECENT ideological dispute between Mr. Mao Tse-tung and Mr. Khrushchev has come to such a pass that according to certain sources there is no possibility of a compromise. Nevertheless, it has been reported that a Communist "summit" meeting is scheduled to be held in November in Moscow to which China and other members of the Communist bloc have been invited to find out whether this ideological dispute can be settled. Writing in the "New Statesman" recently, a columnist has pointed out how after his recent visit to China, when he suggested that Chinese relations with Russia were rather like those of Britain with the United States and that in both cases the alliance was so important militarily and economically that its more distasteful consequences had just to be endured, there was caused invariably an irrigation. The columnist has argued that perhaps it may be that his point had gone home. He, however, hazards the view that Sino-Russian relations are more likely to be increasingly a marriage of convenience rather than a love-match and if divorce is inconceivable a judicial separation is not.

In this context, the recent treatise on "Socialism and War" by Mr. Edvard Kardelj, a leading theoretician of Yugoslavia and its Vice-President, which was recently given wide publicity has assumed much topicality as it analyses succinctly how the Chinese theories on the futility of co-existence and the inevitability of war have gone wrong. Mr. Kardelj points out that what the authors of Chinese policy demand is "subservience" and not democratic solutions of differences. That is why they try to subordinate the entire policy of international socialism to their own views. The greatest danger of the theory is, according, to him, in the very orientation towards the inevitability of war. While he does not under-estimate the strength of imperialist "factors" he feels that the strength of the progressive and peace-loving forces is also becoming increasingly important and cannot be under-estimated. Where Chinese theoreticians seem to have particularly gone wrong is in their assumption that they will be justified in even resorting to "offensive" war. This, Kardelj says, is palpably wrong because the working class in any country will not favour such a step and war can mobilise the peoples of the whole world on the side of socialism only if it were a defensive war and after the socialist countries had done all in their power to save peace.

The most important aspect of his thesis relates to the Chinese policy of fomenting tension everywhere and especially in Asian countries, which he says, has scared people about Communism and has only strengthened the forces of "bloc alignment". It is impossible for many nations to understand, he declares, how the Chinese can foment tension in its relations with peaceable neighbours over small frontier matters. Such a policy has been the root cause of much distress and even fear. What is more ununderstandable, in his view,

is the policy of the Chinese over the economic development of the backward countries. "The worse the better" seems to be their motto, and the Chinese seem to be guided by a "narrow-minded sectarianism" that it is better for socialism if the under-developed countries remain backward so as to be more revolutionary. If this were the position to be adopted, as recommended by the Chinese Communists, he has no doubt that the Socialist forces would be digging a big gap between themselves and the economically under developed countries, thus isolating themselves from the basic working masses of those nations.

Agriculture

STATE MINISTERS' CONFERENCE

WHEN INDIA is about to embark upon an ambitious "package programme" for agricultural development, it was only expected that the oft-repeated cry would be raised for greater co-ordination between the various Government departments connected with this vital primary activity. The plea of the State Agriculture Ministers, who assembled in New Delhi last week-end for their annual confabulation, for close functional co-ordination between the departments of agriculture, community development, irrigation, co-operation and panchayats, right from the Central and State levels to the district and the village, is thus scarcely surprising. It is, however, intriguing that little should have been done so far—and this is evident from the last week's deliberations itself—in regard to strengthening this link, especially when stress has been placed on this aspect by all the Committees that have been set up since Independence to suggest measures to increase agricultural production. There have been even complaints from the Union Food and Agriculture Minister, Mr. S. K. Patil, that he has not been getting enough co-operation from his counterparts in the States. The State Agricultural Ministers will do well to set the ball rolling themselves by ensuring their whole-hearted co-operation to him in the mighty task of raising farm output in the Third Plan at an annual rate nearly one and a half times that under the current Plan.

It is heartening to note that the Union Food and Agriculture Minister is going ahead with plans to make sufficient quantities of fertilizers available to the agriculturists; he stated in Parliament a couple of days ago that he would export sugar to earn foreign exchange to finance fertilizer imports. But this does not obviate the necessity of making full use of the available organic manures that are allowed to go waste for want of proper storage and processing facilities. The decision to set up a corporation to develop, multiply and distribute improved seeds is equally encouraging. With the growing consciousness on the part of the agriculturists to make use of improved seeds in their bid to increase production, this task has to be undertaken on commercial basis for which a statutory corporation will be eminently suitable. Similar action in regard to the manufacture of improved tools, as suggested by the Prime Minister, can also be of immense help.

The great stress now being placed on minor and medium irrigation works is equally welcome; with the growing popularity of chemical fertilizers, demand for irrigation water will tremendously increase and the quickest way to meet this upsurge in demand is to go in for small works which are easy to build and do not cost much. It is, however, disconcerting to note that the State Ministers could not chalk out a programme for reclamation of waste lands which cover an area of nearly 13 million acres and which, if brought under the plough, can yield over 13 million tons of foodgrains. Not long ago Mr. S. K. Patil expressed concern over the lack of enthusiasm shown by the State Governments in taking up schemes of reclamation of these cultivable wastes. The position, however, does not appear to have improved much. It is to be hoped that due attention will be paid to this problem in the immediate future. There is also need to tone up the agricultural administration in most of the States and attempts should be made in this direction by implementing various recommendations of the Nalagarh Committee.

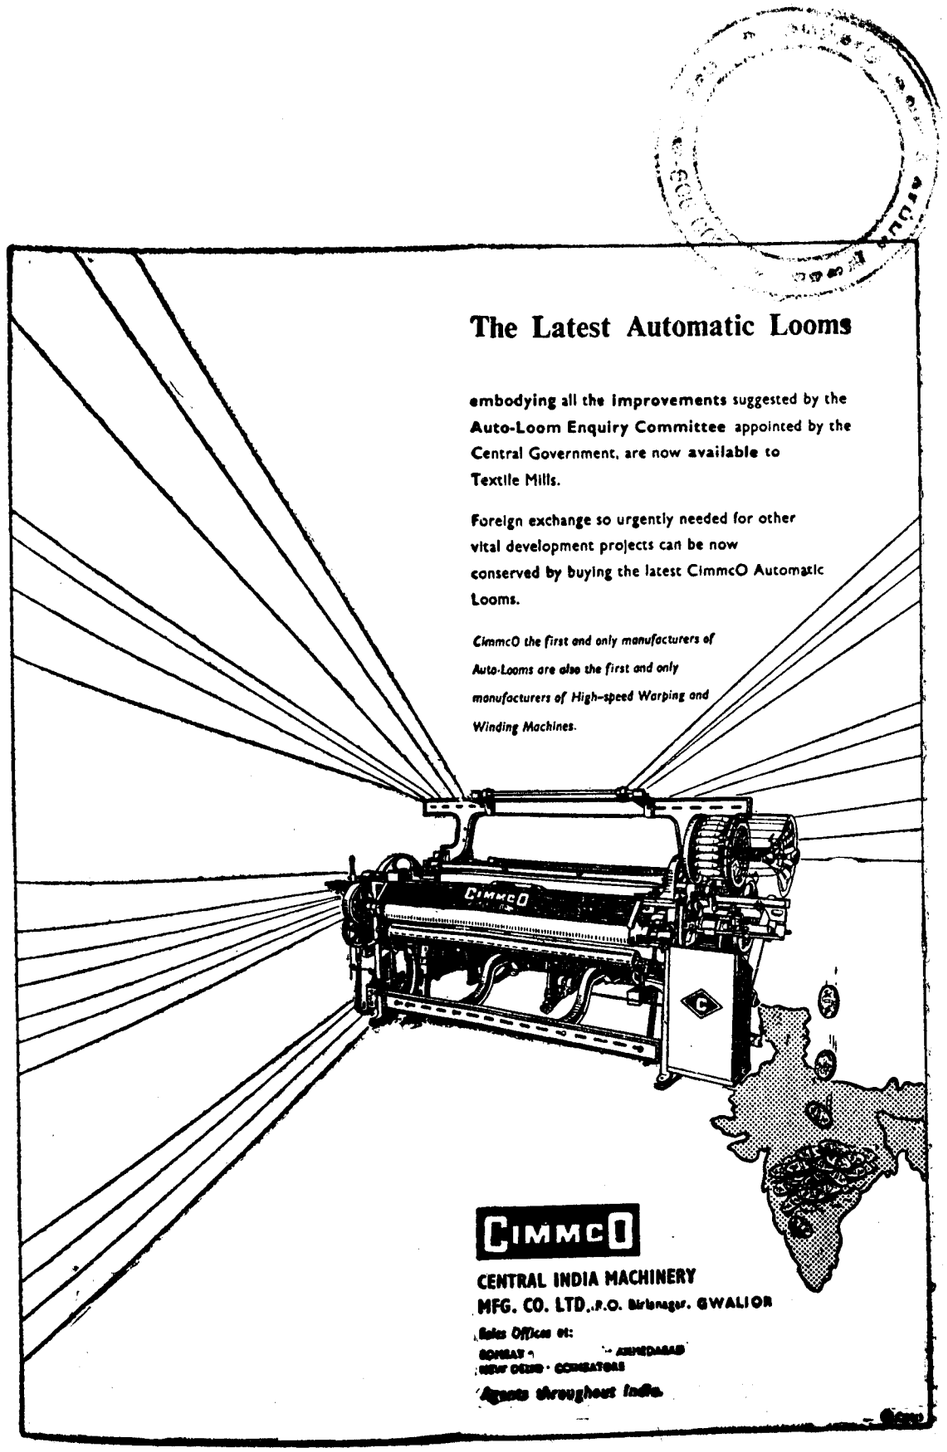
HIGH FREQUENCY MULTI-CHANNEL COMMUNICATIONS SYSTEM

An order has been given to Marconi's Wireless Telegraph Co. Ltd., of Britain, by Bharat Electronics, of Bangalore, for the supply of a very-high-frequency multi-channel communications system for India's South-Eastern Railway.This is the first order received since the recent signing of an agreement between the companies for the right to manufacture Marconi multi-channel equipment in India. The equipment to be supplied consists of 16 HM-100 terminals and eight HM-150 repeaters, with aerials and ancillary gear. It will be used to provide communications over the route connecting Adra, Tatanagar, Chakradharpur, and Garden Reach. The contract is for the supply and installation of the complete system including towers, Diesel generators, telegraph equipment, and teleprinters. Carrier equipment will be supplied by Indian Telephone Industries Ltd., which will manufacture it under its licensing arrangements with the Automatic Telephone and Electric Company Limited, of England. Radio equipment for the undertaking will be partially manufactured in the Bharat Electronics factory at Bangalore.

FORWARD MARKETS BULLETIN

(Monthly)

Published by



Forward Markets Commission
Government of India
Bombay.

Regular features

* A 'General Review' presenting an assessment of trading conditions in the futures markets during the month
* Special articles on technical aspects of forward trading
* Extensive information relating to developments in futures markets
* Detailed commodity market reviews
* Comprehensive and up to date statistical supplement, relating to crop estimates, production and consumption trends, price movements, trading against futures contracts etc.
* About 200 pages in print in crown ¼ size
* Attractive get-up

Annual subscription		Single copy	
In India	: Rs. 24.00	In India	: Rs. 2.50
Abroad	: Rs. 40.00	Abroad	: Rs. 4.00

A Window on the World

FORWARD WITH THE CAPITALIST REVOLUTION!

by

ODYSSEUS

IN THE EFFORT to attain the economic "take-off", whereby a subsistence economy reaches a point at which, with a minimum of foreign aid, it generates self-propulsion towards greater wealth, should India employ the services of anthropologists?

I am moved to ask this by an article in the June Journal of the Royal Economic Society (21 Bentinck St., London W.1) entitled "The Social Anthropology of Economic Underdevelopment", by Mr. J. L. Sadie. In the previous article I stressed that in contrast to the individual initiative which was historically the outstanding cause of economic advance in Europe, the Bantus of South Africa live in strongly knit communities in which the rights and obligations of the individual are subordinated to the interests of the group, which guarantees the individual's security from birth to death. An individual has no incentive to use better agricultural methods, because his extra produce merely goes into the common pool, so that the Bantus are apathetic to change and lack the individual self-assertiveness without which there can be no progress.

Factors making for change have however, been injected into Bantu life. The Bantus periodically add to their earnings by excursions into neighbouring developed areas, and missionaries, traders, civil servants, teachers, and uplift officers invade their territories. It is ironic that Mr. Sadie records that the Bantus are more influenced by the ideas that their own people bring back from their visits abroad than they are by the outsiders who descend upon them. Periodically subjected to the individualistic, rationalistic urban culture, they return home to find traditional ties irksome. Their protest is first directed against parental authority, either because they have come to dislike authority in itself, or because they consider those who have stayed at home too rigid, too orthodox. Some leave the tribal areas permanently. Others, who stay at home, adopt the migratory labour system as their way of life until they reach the age of retirement. Nevertheless, these two factors which make for change have not struck at the root causes of underdevelopment. The all-pervading group social structure is too powerful.

EGALITARIANISM VERSUS THE INDIVIDUAL

Attempts to graft the idea that the individual can better himself onto a community structure, the object of which is to preserve a traditional egalitarian society, fail to produce the abundant growth which the indigenous entrepreneur, indoctrinated with the new ideas, is expected to spread.

Many changes spring to the eye, but they are superficial. Clothing habits, patterns of consumption, and styles of housing have changed. More advanced implements are used in the home and on the land. The new needs evolved in this way have ended the self-sufficiency of the Bantu economy. The volume of trading has risen. Much is still barter, but money as a medium and a store of value is spreading, and the money sector of the economy is gradually expanding. A class of tradesmen has emerged as a policy of protection for the "infant entrepreneur" took effect, and the entry of general dealers from the developed areas was limited or prohibited. But this new class is not strikingly successful because it lacks experience and know-how. However, the new traders are useful, because some assume the role of entrepreneurs outside the traditional agricultural industry, help to increase the size of the market, and slowly transform the subsistence economy into a money economy. The acquired needs are incentives to earn some cash. Encouraged by stock fairs organized for them, they sell cattle on a small scale, and some have even begun to slaughter cattle for sale. Even so, most of the cash is still earned by work for wages in the developed areas outside.

The impact of the new habits has not, by and large, spread to the pattern or mode of production. While the men now give some help in cultivating the soil, women and children still make up most of the labour force. Cattle are still hoarded as precious possessions. Culling is not yet generally accepted. Soil conservation must be enforced by the Development Authority. While a few people are ready to pay good prices for some vegetables and other foods, higher prices do not by themselves stimulate production of these goods. Most Bantus prefer to stick to their traditional crops. Where the agricultural yields are above the average, this is invariably due to the supervision of the Development Officer and to the aid that he gives in the actual ploughing sowing, and fertilizing.

Agricultural officers frequently have to persuade peasants who have been allocated land in new irrigation schemes to start planting each time that a new season begins.And it is quite usual for the Bantu, employed as a demonstrator to instruct his people in the principles of modern farming, himself to ignore these principles and to stick to traditional methods when working on his own plot of land. None of this new fangled nonsense for him!

Experiments in creating individual private land tenure were unsuccessful. Often the land allocated became overcrowded with relations, some of them extremely distant ones, who, seeing that they were on to a good thing, attached themselves to the household of the owner. Evidently the superimposition of private tenure on a pattern of communal tenure cannot make for speedy progress. Nor does farming benefit by formal education; the majority who go through school avoid farming when they come out. Their big idea is that education has qualified them for white collar jobs and that manual labour is below their new status.

LEAVE INITIATIVE TO THE GOVERNMENT

Most significant of all is that as the activities of the Development Officers increased, so did the dependence of the people on that distant cloud-capped body—"the government," as represented by its officers. Rather than take on responsibility for soil conservation, upkeep of fences, boreholes, etc., the Bantus felt that all this was "up to the government." "That the government be respectfully requested" was the most popular phrase that they learned at school and was invariably put at the beginning of all resolutions introduced in their panchayats. In fact, reports Mr Sadie, the untiring efforts of the Development Officers have alone been responsible for such degree of development as has been attained.

There has been no fundamental change in the social structure or habits of the Bantus. The young are still educated in the customs and folklore of the tribe. Cattle raising remains a way of life rather than a commercial enterprise.

The moral that Mr Sadie draws is that the economic advance of an underdeveloped people cannot be reconciled with a traditional social structure in which the welfare of the individual is not his responsibility but that of the tribe as a whole. Where individual initiative is not allowed its reward, the acquisitive instinct remains dormant. Without the acquisitive instinct there can be no profits out of which to build up capital.

The break-up of the Bantu group system, says Mr Sadie, is a pre-requisite to economic advance. To which I add: Please note that the Bantu system fulfills all the basic conditions of the Socialist ideal.

What is needed, says Mr Sadie, is a social revolution covering every aspect of their culture and religious institutions, their psychological attitudes, their philosophy, and way of life. Unhappiness and discontent in the sense of wanting more than is obtainable at any moment must be generated (a euphemism for asserting that you cannot discard the acquisitive instinct and expect wealth to grow). The suffering and dislocation caused may be intense but, says Mr Sadie, it seems to be the price that must be paid for economic development.

It is here that the role of the anthropologist becomes important. He should be able to analyse and explain which local customs prevent growth, to point out the strategic points to be influenced, and to recommend which methods will yield the best results. Thus many years of tinkering at social uplift, which produce superficial changes, but do not modify attitudes of mind, may be avoided. Economic changes can be used to generate the social revolution. This requires an agency from outside to supply the entrepreneurs, capital, and skilled labour. To provide the capital without the entrepreneurial initiative and managerial abilities leads nowhere. The industrial and business enterprises which draw the underdeveloped people into their labour force, and give them opportunities to better themselves, bring them into contact with new ways and standards of living, and form a nucleus for urban development. The towns are the best weapons to break the group system. They provide the proximity of a regular market to foster the growing of cash crops.

Mr Sadie's article demonstrates concretely Professor F. A. Hayek's observation in his newly published "Constitution of Liberty" (Routledge. London. 1960) that there is no more effective way of slowing down the creation of wealth than by allowing to the most successful entrepreneurs incomes only a little above the average. The Bantus have, by preventing anyone from enjoying an income above what they regard as "fair, social justice for all," prevented all advance in wealth.

It is, of course, a tenable point of view that the Bantus have been happy for centuries under their siatic social structure, and that it is a crime to disturb them. But that is not to argue in favour of applying their Socialist principles to our own economy. Do you want to give up the struggle for individual freedom and initiative, and revert to closely-knit groups governed by unalterable custom and status? That is the final development of Socialism. It is worth noting that those countries of the West which are moving backwards towards social structures which set a premium on group influence and action, and which increasingly restrict the sphere of individual initiatives, are those whose rate of economic growth is lagging ever further behind those which allow free play to the acquisitive instinct and the profit motive. They are moving back to the Bantus.

If we push Socialism to its logical conclusion, we shall find ourselves like the Bantus in conflict with some dynamic civilisation, based on individual enterprise, which will either destroy us, or preserve us in a Reserved Area as a laboratory for anthropologists.

BRITAIN ONCE MORE A CREDITOR NATION

THAT BRITAIN has regained her pre-war position as a creditor country is suggested by Mr A. R. Conan in a remarkable contribution to the August issue of the Westminster Bank Review (41 Lothbury, London. E.C. 2.).

In view of the anxiety with which overseas governments, financial authorities, and traders, watch the UK balance of payments and the changing relationship between the figures of sterling liabilities and reserves, it may be helpful to see how Mr Conan, author of "Capital Imports Into Sterling Countries" (Macmillan. 1960), and until recently assistant secretary of the Commonwealth Economic Committee, arrives at his conclusion, and to ask what the implications are.

Mr Conan examines three categories of UK overseas assets and liabilities: (1) the net total long-term private investment; (2) the net UK government debt; and (3) the balance of short-term liabilities and reserves of international currency.

U.K. OVERSEAS PRIVATE INVESTMENT

The UK's pre-war private overseas investments totalled £4,500 m. Wartime and immediate postwar sales reduced this to £3,000 m. But between 1946-58 the UK invested no less than £4,000 m. overseas. Mr Conan estimates that the current value of this original investment of £4,000 m. may now have risen (in money terms) to £7,000 m. Mr Conan argues that this estimate is conservative because (he reminds us) postwar investment has been effected largely through reinvestment of profits. In several countries one-third or more of the capital inflow has accrued in this way. Moreover, the £7,000 m. figure does not allow for any natural rise in the value of the unsold prewar balance of £3,000 m. With half of the prewar total invested in equities and today's equity index thrice as high as twenty years ago, a big rise in value must have occurred. Nor does the £7,000 m. figure allow for the 1949 devaluation of the £, which increased the sterling value of dollar holdings. £7,000 m. is thus a minimum estimate.

Foreign investment in the UK, which Mr Conan conservatively reckons at £1,500 m., must be deducted from this £7,000 m., leaving £5,500 m. net.

U.K. GOVERNMENT OVERSEAS DEBT

The UK's external debt (nearly all US and Canadian loans) was £2,173 m. in 1957. Loans due from other governments were £394 m. After subsequent repayments and borrowings, today's debt is less than £1,500 m.

Subtracting UK government debt of £1,500 m. from the estimated credit of private investment of £5,500 m., the UK's credit balance emerges as £4,000 m.

STERLING BALANCES VERSUS RESERVES

Mr Conan points out that the official figures underestimate the reserves because they cover only the liquid reserve under the government's immediate control; they do not include balances held abroad by UK banks, and commercial firms. In 1958, these non-government balances included about £300 m. worth of dollars. Nor does the reserve include the UK's subscription to the International Monetary Fund, which was originally paid in gold and dollars (£150 m.) from the reserves and can be drawn on at any time. Add these (£300 m. plus £150 m.) to the official figures and the total is approximately £1,500 m.

Turning to the Sterling balances, Mr Conan says that the official total is not a net liability because the balances are recorded gross and include some to which there are counterpart liabilities to the UK. The working balances in foreign currencies held by UK banks and traders (other than the dollar balances cited above) should be set against the London deposits of foreign banks, and the net position in external commercial credit should also be taken into account.

All the evidence suggests that the official totals are substantially over-stated. The working balances of UK firms are nearly £300 m. for the USA alone; S. African returns show that foreign trade liabilities and other short term obligations due to the UK were over £100 m. in 1956; the Irish bank returns show liabilities payable in the UK of over £100 m. The significance of these samples is that they are from three countries alone, but when you remember the world-wide range of UK commerce and banking, the total of such assets must be enormous.

Nor is this the only correction that the official figures need. The sterling balances of the Colonies, about one-third of the total, overstate the UK's indebtedness. This category comprises a number of different items, and although the term 'colonial sterling balances' is used to cover all assets held on colonial account in London, these assets are in fact largely owned by the UK and not by colonial residents. This applies especially to the items which make up the greater part of the total, i.e. banking funds and currency reserves. In both cases, the balances are only nominal liabilities because the sterling used as currency-backing comes from the London offices of the (generally UK owned) banks with branches in the colonies, while the banking funds are in the London accounts of these branches.

By how much, then, do the official figures of £3,350 m. (after deduction of acceptances) exaggerate UK liabilities? Mr Conan suggests that the right figure might be £2,500 m. To anyone ready to challenge this guess, he replies that while he cannot justify it in detail, neither can be UK authorities justify their total. He makes the neat point that while he can prove that their total is far too large, they cannot prove that his is too small.

Setting Mr Conan's £2,500 m. valuation of the sterling balances against his figure of £1,500 m. for the reserves, we are left with a debit of £1,000 m.

The foregoing calculations are set out in the table below:

(£m.)

	1959	1949	1939
Net long-term investments ..	5,500	3,000	4,000
Net Government indebtedness	—1,500	—1,900	(a)
Net short-term liabilities ...	—1,000	—1,600	(b)
Total	3,000	— 500	4,000

(a) Debts arising out of First World War omitted.
(b) Sterling balances less gold reserves.

While Mr Conan emphaises that, with the statistics available, his figures cannot be regarded as final, his claim that there is no reason to doubt the broad picture is not disputed by UK commentators.

Mr Conan urges the authorities to produce more detailed information on the UK's overseas assets and liabilities. Foremost gain from this would be that world confidence in the £ sterling and the UK economy would be buttressed by an authoritative statement of the extent to which the UK has regained her status as a creditor nation. Such a statement would wipe out the impressions created abroad by exaggerated estimates of the UK's post-war indebtedness, and would explode the theory that UK capital exports since the war have been merely re-exports of imported capital.

Some commentators suggest that Mr Conan's estimates give a green light to an immediate expansion of the UK's overseas investment, but the "Times" cools such any such immediate rise in the temperature by asking pertinently: How has the UK achieved this position of strength? The "Times" points out that the payments surpluses over the years 1949/59 do not measure up to the improvement of £3,500 m. cited by Mr Conan. This is partly a statistical point but it may well mean that the UK's overseas position has deteriorated in other ways: one possibility is that in a period in which developing countries have been competing for longer and longer credit terms, the UK's receipts from other countries for exports have gradually been spread over long periods.

The July issue of the Review of the National Institute of Economic and Social Research (2 Dean Trench St., London. SW. 1) also makes a point relevant to Mr Conan's calculation. Discussing the failure of UK exports to rise in 1960, the Institute says that the UK's balance of payments difficulties arise because her rate of economic growth is too slow. Productivity has risen faster in Germany, Italy, and Japan, giving them greater international competitiveness. While deflationary measures are necessary in the UK if the pressure of total demand is too high, it would be wrong to press deflation further if the balance of payments does not improve, because, inter alia, deflation will check domestic investment, and the UK is not investing enough at home. Higher productivity normally comes from higher investment. There are various other ways of overcoming balances of payments difficulties, says the Institute. First, the balance of payments includes burdens of (a) overseas investment and (b) overseas military expenditure, which are greater than those of all UK's competitors save the USA alone. A re-appraisal of foreign investment and of ways of sharing the burdens of defence and of aid is needed. Foreign investment has not brought in the expected harvest of invisible income.

I draw New Dehi's attention to the last twelve words. While India has, since its policy announcements of August, 1958, and of April, 1960, liberalised its attitude towards foreign investors (who have responded by an immediate spurt in investment), there still seems a tendency to encourage the ploughing back of profits and to deprecate the normal export of profis and dividends.

There are likely to be opposite reactions in the UK to Mr Conan's figures: (1) Good! Now we can afford to invest more abroad! And (2) Hey there! What about waiting to get a rise in dividends from what we have already invested so that we don't have to protect our balance of payments by deflation?

WHEN IS MONEY HOT?

From Our Special West European Correspondent

PARIS, August 29.

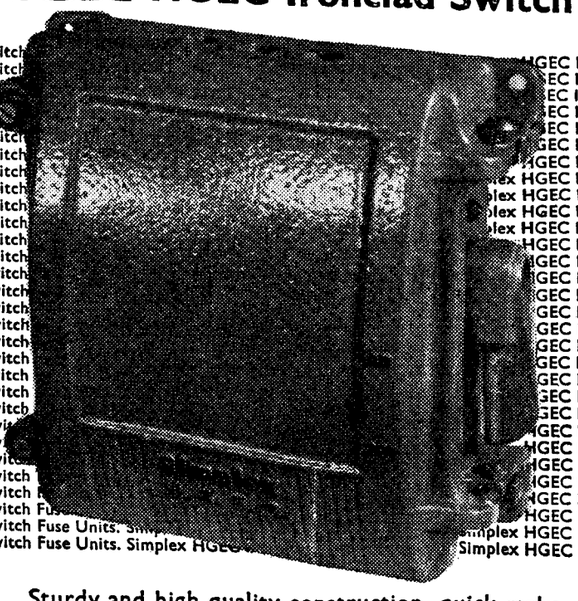
THE free international transfer of capital that was made possible by the return to partial convertibility has assumed unprecedented proportions in recent months, and especially in recent weeks. It has provoked some unprecedented reactions, which in fact amount to technical retreats from full convertibility for non-resident funds: when West Germany and now Switzerland set up barriers to stem the inflow of foreign capital, other currencies thereby become less convertible just as surely as when other governments sought to prevent the conversion of their currencies into marks or Swiss francs. The efficacy of these barriers remains to be tested, but their initial effect has already been to divert the flow of funds to London, and now the British authorities are rumoured to be considering imitating the Swiss and West German examples, i.e. finding some way to discourage short-term investment in sterling without lowering Bank Rate. It seems incredible that the British should do any such thing during the period when sterling is normally seasonally weak, because even the flightiest hot money is welcome if it averts an autumn sterling crisis. But if the influx of capital persisted into the period when sterling is adequately supported by the seasonal trade surplus, some British experiment in the same direction would be reasonable, provided the Swiss and West German ventures had shown themselves successful. A world in which foreigners were actively discouraged from buying sterling, marks and Swiss francs—and in the last case were actually penalised at the rate of 1 per cent a year for leaving funds in Zurich—could hardly be described as a case of convertible currencies.

Must we conclude that the return to convertibility has failed to this extent, that it has set up violent tides of hot money whose movement has spread panic among the stolid bankers of Frankfurt, Zurich and London? Not at all; panic, even when it occurs among bankers (and some of the reactions in Switzerland seem to be quite exaggerated) is no reasonable argument. On the other hand, we are entitled to conclude that the convertibility system cannot be managed properly when each central bank acts in response to its own internal situation without co-ordinating monetary policies throughout the region where convertibility obtains. In other words, increased international co-operation is needed when (a) the demand for a country's currency may have nothing to do with that country's internal economy but with conditions in other countries, and (b) the effects of domestic monetary policy are felt not only at home but in other countries too. As has frequently been pointed out here, if central banks approach this problem from the narrow national point of view, they can find that they are all competing for hot money—and they are now finding that it can be as embarrassing to win that competition as to lose it.

Having insisted on the dangers of bank-rate competition for hot money before the present crisis arose, we are entitled now to play down some of the current exaggeration of those dangers, specifically by showing that not all of the capital migrations now in progress are due to differences in money rates and that their consequences need not be as disastrous nor as long-lived as is being suggested. The first point to notice is that the big loser to date has been the USA, who can well afford it. If the funds now pouring into Swiss and German banks had come from any other source, the convertibility experiment would by now have been wound up as a failure. While unhappy about the fall in US reserves, the American authorities still regard this as a minor matter alongside the stimulation of the stagnating domestic economy. That is why, after months of capital exits, the Federal Reserve has just brought money rates down to the lowest level in the Western world. Indeed, there is even reason to suppose that there is an element of electioneering in this move: the Republicans need to have an answer by November to the easy Democrat charge that they have practised deliberate deflation. If the Republican Administration thinks it can afford to lose a few more hundred million dollars for the sake of an election stunt, there is no call for others to get excited about it.

In fact, low US money rates are not the sole or perhaps even the main cause for the trans-Atlantic migration. Some New York observers say that there is only about $21,000 million of hot money that could leave the USA for that reason alone. Much of the capital transferred or withdrawn is not speculative but normal investment funds, and its movement reflects accurately the difference between European expansion and American stagnation. Thus it will go on as long as that difference persists, and it will reverse itself as soon as European industry becomes overstrained (which will show up first in lengthening delivery delays). If the US economy runs into a depression this winter, this will cause, as depressions always do, a strengthening of the payments balance in US favour. Part of the redistribution of reserves will be permanent, however, because West European recovery is solidly established, and the days are gone when the American economy and hence the dollar dominated the international economy. The US reserves are now down to what they were in early 1940. It is not this that is unnatural, but the period from 1940 to 1960 when the USA was prosperous and Europe crippled. The level of reserves that the Americans came to take for granted during that period was exceptional; one misses this fact if one ascribes the current reduction to speculation or the flight of hot money.

Some small part of the funds now flowing to the European financial centres has come from places other than the USA, but it is not hot money in the sense that is migrating to take advantage of higher interest rates (though those funds sent to Frankfurt in the hope that the mark will be up-valued also deserve that name). This is clear from that fact that it chose Switzerland as its first destination, although Swiss interest rates are relatively low; it only turned to London, where rates are very high, when the Swiss refused to take any more. This money is seeking security; it is refugee money comparable to that that poured into Switzerland at the time of the Korean war. It comes from Belgium, because of the collapse of the Congo, from South Africa because of lack of confidence in that country's future after the racial troubles, and from many other parts of Africa now in turmoil. This reflux of private "colonial capital" to safe European havens is an inevitable accompaniment of decolonisation. It is doubtful whether such monetary measures as South Africa's lifting of bank rate in mid-August can prevent it, and it does not deserve to be confused with the greater



mobility of funds introduced by convertibility any more than the adjustment of investments between the USA and West Europe.

The inhospitable reception this refugee money has received in West Germany and Switzerland needs some explanation, because the inflationary danger it brings to those two countries is much less than it brings to Britain. The risk of inflation in stable Switzerland, which has long learnt to separate its role as banker from its domestic economy, is minimal; outcry in the Swiss Press about rocketing real estate values, ascribed to inflowing capital, is as old as the hills and pops up in every financial crisis. The danger of a speculative stock market boom needs to be considered alongside the fact that Berne has been refusing for a year to let Common Market countries borrow in Swiss money markets, as a measure of retaliation against trade "discrimination" by the Six. The Swiss cannot have it both ways: refuse to lend and complain about too much capital. Not all Swiss bankers agree with either half of this contradictory policy, and the recent scare-reaction was due to the fact that even the Swiss lost their nerve when they saw more money than ever before in their history pouring into their banks.

West Germany's embarrassment is of another order, though it resembles the Swiss case in this, that Bonn and Berne are always ready to cry inflation long before any other European capital. The hot money drawn to German banks by high interest rates (the Bundesbank ruling that foreign deposits should not earn interest cannot be enforced, and foreigners are still getting a return on their cash) and by rumours of revaluation of the mark is only dangerous because it is super-added to the persistently high trade surplus of West Germany. This problem is several years old, and an economy that combines over-exporting heavy industries with fanatically protectionist farming interests cannot find an easy solution to it. To this is now added the labour shortage which, as has been remarked here lately, is the key factor in West Germany today and which does create an inflationary danger—though not so far the reality. Still, the inflow of hot money would not be so exasperating to Bonn were it not that the Federal Government is relying exclusively on monetary measures to meet a situation that, elsewhere, would by now have attracted a battery of other techniques despised in West Germany as socialist or interventionist. Exclusive reliance on the monetary weapon creates monetary difficulties; bank rate is raised, so speculative capital comes to roost, the banks are then made to neutralise this fresh money lest it lead to credit expansion, and so they repatriate their own funds from abroad with the result that their liquidities increase.

When these reservations are made, the fact stands that the ebb and flow of mercurial convertible capital is today a source of embarrassment to certain countries (though it must be noted that it leaves others, like France and Italy, quite untouched). This cannot be eradicated, because one of the very reasons for convertibility of currencies is that it allows capital movements to reflect and penalise discrepancies in the international economy. It can be reduced, but only by co-operation between central banks. This is a suitable subject for study by the coming session of the IMF.

Our West German Letter

MAN-POWER SHORTAGES POSE NEW PROBLEMS

From Our West German Correspondent

BONN, August 30.

THE boom of West Germany's industry and trade is creating a problem which seems not easy to solve: how to cope with the increasing lack of labour? The last July figures just published by the Government Labour Exchange, show that there are 134,000 unemployed persons (the lowest figure ever shown) and 504,200 vacant jobs! The unemployed are mostly composed of elderly and sick men and women as well as probably of people unwilling to work. The obvious danger is that the lack of labour could possibly slow down the continuously growing production. Two-fifth of the open jobs are meant for women, which proves that they have reached a remarkable position in the labour market. Due to the ever-increasing demand for industrial products, factories have expanded their capacity, and to make full use of it they are now compelled to offer higher salaries or wages and various kinds of privileges in order to get additional labour. In an advertisement of one of the largest steel works in the Rheinland, announcing vacancies for female stenotypists, one can, for instance, read: "Your work will be well paid. We have excellent social institutions and the five days working week. We would be delighted to welcome you for a non-committal conversation...." In this connection the German language has coined a new word which one can see every day in advertisements where a good "Betriebsklima" (a comfortable climate of working conditions) is being offered.

A peculiar situation has arisen in the coal mining industry. At the beginning of 1958 there was a certain set-back, when miners were dismissed or advised to look for jobs in other industrial fields. About a lakh of them found soon other occupations. Now the mines are clamouring for additional labour. When the German Ford Motorcar Works in Colougne contacted municipalities in the Ruhr district with the suggestion to build there a new factory, some mining firms protested vehemently because they feared that miners would prefer to work for Ford. This problem is not yet solved. In the iron and steel industry there are about 90,000 vacant positions, 74,000 for men. Nearly 11,000 Italians and some hundred Spaniards are already working in the metal and electrical industries. Negotiations for further "imports" of 5,000 Italians and 3,000 Spaniards are going on. It is also intended to employ Greek workers. Some firms are experimenting with lending machines to cottage workers where the women of the household can make profitable use of their spare time. In the clothing industry there is a lack of about 20,000 tailors and in the building trade of 85,000 men. Foreign workers trained in these industries could not fill the gap. Some firms have even started to employ students during their vacations. Post and railway are equally suffering from the lack of workers. They now contemplate to re-employ pensioners and wives of their employees in part-time jobs. To save labour the postal department is providing small letter boxes to be fixed at the front entrance for all the tenants of a building. Thus the postman has not to climb the stairs or to go up by lift and can, therefore, attend to a bigger beat.

With the increase of foreign labour, the problem of how to house them is becoming more and more acute. The Government Labour Exchange is at present scrutinizing the possibility of granting credits to factories for building quarters for foreign workers. The experience has shown that they are getting homesick after a while and are longing to be re-united with their families. Uptil now the Labour Exchange has financed the building of flats for German workers, of hostels for apprentices and of prototype workshops. According to a newspaper report, the Labour Exchange has saved (from not paying doles) about 4 milliard DM and should be in a position to finance the building of flats for the foreigners. Wouldn't it be a good idea to employ Tibetan refugees in Germany? The climatic conditions in Germany should perhaps be more suitable for them than in northern India and considering the catastrophic lack of labour, the expenses for the transport to Europe should not be a hindrance. As to language difficulties, they would not be greater than with Italians, Spaniards or Greeks.

It is no secret that the boom prevailing in the free European countries has quite naturally brought in its train a certain materialism. In many cases all members of the family are working and earning good money and with the experience in West Germany of bombed cities during and starving after the war, at least amongst the older generation the device might prevail: "Let us be merry, tomorrow we die!" Warnings in this respect were sounded at the Eucharistic Congress in Munich which attracted over a million participiants from all over the world. Josef Cardinal Wendel of Munich said in his opening sermon that for many the false god is the (high) living standard and their life is governed by practical materialism. Pope John XXIII had already in the deed of appointment for the Papal Delegate to the Congress urged to pray that the materialism which undermined the moral life of mankind, might be overcome and give way to higher and spiritual visions.

* * *

The mystery about the Bonn meeting of Dr. Adenauer and Mr. Macmillan remains equally unsolved as the one about the Bundeskanzler's recent conference with de Gaulle at Rambouillet. But one can certainly assume that the ticklish problem EWG-EFTA (i e. the Common Market of the Six and the European Free Trade Association of the Seven) was one of the main subjects that was discussed by the two Prime Ministers and their Foreign Ministers Dr. von Brentano and Lord Home. Also Prof. Erhard took part in the conversations. In Government circles one can, at least unofficially, hear that both the Prime Ministers were in agreement to put the European problems within the framework of world politics. In plain words, it means the dividing of the European free countries into the two economic blocs, which would amount to weakening the common front against Communism and has to be avoided under any circumstances. As a welcome fact it is to be registered that the coolness between West Germany and the United Kingdom has obviously ceased. The reason for this estrangement, seen from the German side, was that it was feared England could persuade the United States to come to a compromise with the Soviet Union at the expense of West Germany (in regard to the so-called German Democratic Republic and West Berlin). With great satisfaction it was noted here that Mr. Macmillan's letter with which he accepted Dr. Adenauer's invitation, began with "My dear friend" and ended with "yours Harold". The Bundeskanzler greeted his guest at the airport with an equally hearty "My dear"

friend". If one would be inclined to sarcasm, one could observe that the cause for the closer friendship is the absurd and shocking behaviour of Mr. Khrushchev during and after the Paris Summit Meeting. It is now up to Germany, England and France to convince their "small" partners in EWG and EFTA that the "Big Three" would not endeavour to unite to their disadvantage but in the interest of a free Europe and finally aiming at a single European Economic Association.

* * *

Did West Germany's first atom ship run aground before it was launched? About 2½ years ago, two atom experts, Prof. Kurt Illies and Prof. Erich Bagge, started the "Gesellschaft fur Kernenergieverwertung in Schiffbau und Schiffahrt" (The Company of Atomic Energy Utilization for Ship Building and Navigation Ltd.) in Geesthacht a small town in the northern Federal State of Schleswig-Holstein on the river Elbe, where there is a shipyard. Prof. Illies is teaching marine engine-building at the Technical University of Hanover where he, already since 1955, is studying with a team of experts the problem of a suitable atom reactor for driving a ship. His associate, Prof. Bagge, is teaching atomic science at the University of Kiel. The first thing the two professors did was the construction of a research reactor in order to find out in praxis the best type of a ship reactor. Their final aim was the building of the first German atom ship. The Atom Ministry in Bonn and the Ministries of Economics of the four northern federal States, Schleswig-Holstein, Niedersachsen, Hamburg and Bremen as well as some industrial firms became also interested in the development of a ship reactor and joined financially the company which was acknowledged as a non-profit organisation. When it became known last year that the ship reactor was a sound project, the interest of big industrial concerns was roused. Four shipyards joined forces with firms already in the "atomreactor market" and the Atom Ministry paid these combines for development purposes 1.5 milliard DM each. The following are the combines: (i) Deutsche Werft, Hamburg and Allgemeine Elektrizitatsgesellschaft (AEG), Frankfurt, (ii) Howaldtswerke, Hamburg, and Siemens-Schuckertwerke, Erlangen, (iii) Blohm & Voss, Hamburg, and Babcock & Wilkox-Dampfkessel-Werke, Oberhausen, (iv) AG. Weser Bremen, Fried. Krupp, Essen, and Brown, Boveri & Co., Mannheim. By the end of last January, the Atom Ministry invited to a conference in Bad Godesberg (near Bonn) firms interested in the construction of atom reactors to discuss further developments. The two professors were not invited although some of the members of the board of their company attended the meeting and it was there decided that the building of a ship reactor should not be followed up by the company any longer. The professors protested as soon as they came to know about this decision which was subsequently cancelled. Nevertheless, the board decided that the professors should give up the management of the company (which, after all, they had founded) and in future consentrate on their research work. The next step in this atomic drama was that Euratom (the Atom Combine of EWG) with which Prof. Illies had taken up the first contacts, offered a contribution of 14 milliard DM for the various ship reactor projects in Hamburg. On June 30, the chairman of the board of the Geesthacht Company, Gerhard Geyer, General Manager of the Esso Oil Company (Standard Vacuum) gave the two professors notice as from the end of this year. But they refused to accept the notice and were thereupon asked to resign immediately from the management and to work under the commercial manager. Prof. Illies reacted spontaneously by giving notice himself with immediate effect. The whole affair is generally regretted as one can see from press comments. One newspaper arrived at the conclusion that West Germany herself takes care not to launch her first atom ship too quickly.

* * *

The agricultural production in the German Democratic Republic is on the decline as one can gather from the official annual statistical report. The obvious reason for it is that the peasants forced into collectives have lost their ambition to produce. They now even plead for an 8-hour working day as the industrial workers are enjoying. The Government is trying to overcome the lack of experienced administrators for the collectives by sending 18,000 farmers to agricultural colleges. It remains doubtful whether this measure will rectify the defect as the standards of these colleges have fallen very low. Although the territory of the German Democratic Republic had been self-supporting in food products, while the Federal Republic of Germany was compelled to import them, the situation seems to have changed to a great extent. Some examples will prove this fact. In West Germany the average production of grain during the period of 1953-58 has risen in comparison to 1935-39 by 17 per cent per hectare, while, according to the above mentioned official report, it has fallen in East Germany by 4 per cent. Potato-production improved in West Germany also by 17 per cent and sank in East Germany by 18 per cent. The corresponding figures for sugarcane are 8 per cent up and 9 per cent down. In 1959 West Germany produced 29 double-hundredweight grain per hectare, East Germany 24.4; for potatoes the proportion is 215.6 to 161.3; for sugarcane 284.5 to 198.9. Compared with pre-war time, the yield per cow rose in West Germany by almost 30 per cent to 3120 kilogram milk while in East Germany the yield remained with 2400 kilogram practically unchanged.

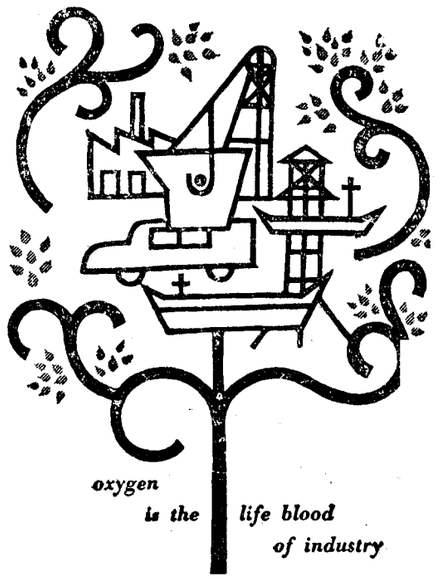
Economic Report from the U.S.

EASING OF MONEY AND CREDIT

By GUY SIMS FITCH



WASHINGTON, Aug. 23.

IT has been clear for some time now that inflationary pressures have relaxed considerably in the United States during 1960, and with this relaxation has come a general easing of money and credit. Graphic evidence of this trend was supplied just within the last few days, when major commercial banks in New York city cut their prime rate—their charge on loans to their best-rated customers—from 5 to 4.5 per cent. This was the first such cut in nearly a year. Reflecting this general trend, the U.S. Federal Reserve Board (FRB) within the last several months has in two instalments reduced its rediscount rate—its charge on loans to commercial banks—from 4 to 3 per cent. It also has made more monetary reserves available to these banks. And it has cut from 90 to 70 per cent the margin—the cash down payment—requirement on the purchase of securities.

It must be obvious that this combination of moves by the FRB—in effect, the nation's central bank—represents a policy shift toward making more credit available at lower interest rates, thereby stimulating lending and investing and supporting general economic activity. This is not to say that a general business downturn is currently evident in the United States. On the contrary, economic conditions appear firm, and the statistics are holding at record or near-record levels. But the FRB apparently is taking no chances. With activity not up to the expectations of many experts and with some slack visible in the economy, the Board is taking those steps which could help prevent a noticeable business setback. In this sense, it is acting as would any enlightened monetary manager, and is demontrating once again its flexibility in the face of changing conditions. In the highly complex modern society, however, economic developments cannot easily be isolated one from another. The general easing of credit conditions and policies in the United States is having some highly interesting by-products at home and abroad. For one thing, it has enabled the U.S. Treasury to carry off the kind of financing, largely through the sale of government securities in the capital markets, which was hardly possible when money was tight and interest rates were high. The net result has been to cut about $1,600 million from the public debt and to reduce the cost of financing the debt by additional hundreds of millions of dollars. When, on top of this, the Treasury is able to announce not only a balanced Federal Budget, but a surplus that exceeds earlier expectations it all adds up to conditions and policies that should reinforce world confidence in the underlying soundness of the U.S. situation.

The world being what it is, however, these domestic developments seem to be creating, almost paradoxically, a somewhat awkward situation in respect to the international financial position of the United States. With interest rates declining at home, and well below those prevailing in many financial centres aboard, there is a tendency for funds to flow from the United States to countries where they can earn more. And since it is customary for other countries to turn a part of their dollar gains into gold, there also has been an acceleration in the outflow of gold from the United States. It should be noted, however, that the gold outflow in 1960 is still relatively small and is running well behind the pace of 1958 and 1959. Moreover, U.S. exports have been booming this year, and despite a continued record pace of U.S. imports, the United States has been running a favourable trade balance of some $430 million a month, compared with only $195 million a month last year. This is a good enough indication that American goods are reasonably competitive in world markets, and that the over-all deficit in the U.S. international balance of payments, fed by the continued and sizable outpouring of U.S. aid and investment capital, will be substantially reduced this year.

As a matter of fact, foreign funds kept in the United States are at an all-time high today, and several governments in Western Europe have taken steps to discourage any large inflow of funds from the United States. One can surmise that they may be doing this partly out of a fear of the possible inflationary effects of such an inflow, and partly out of appreciation of the vast long-term potential of the U.S. economy. What it all seems to come down to, then is the general recognition that in permitting a relaxation of credit conditions and interest rates in a reasonably strong and non-inflationary U.S. economy, the Federal Reserve Board has been putting first things first. To all intents and purposes, it has placed the economic welfare of the American people ahead of the calculated risk of a small increase in the gold and dollar outflow. And this, too, can be cited as an additional source of international confidence in the U.S. economy and U.S. economic policies. As put by the knowledgeable financial analyst and writer J. A. Livingston, "employment comes ahead of gold in most languages."

oxygen is the life blood of industry

Every branch of Indian industry depends on us for supplies of Oxygen. In every phase of India's industrial development, our products and prompt technical service ensure the most modern means and methods of metal fabrication.

Whether in mining or metallurgy, transport or shipping, power or irrigation, mills or factories, we serve every industry, big or small, and contribute today to the prosperous India of tomorrow as envisaged under the Second Five Year Plan.

INDIAN OXYGEN LTD

IOX-713

WORLDGRAM

India

Trade Arrangement with Italy Extended: The trade arrangement between India and Italy has been extended up to June 30, 1961. The trade arrangement, which was entered into in October 1959 between the Government of Italy and the Indian Government Trade Delegation to West European countries, expired on June 30, 1960. Under the terms of the arrangement, the two Governments have agreed to promote economic and commercial co-operation between the two countries and encourage the development of contacts between businessmen and trading organisations in both the countries. Among the commodities listed in the schedule of goods available for export from India to Italy are: tea, coffee tobacco, spices, dried fruits, oils, hides and skins, cotton fabrics, jute, coir, leather footware etc. The list of items for export from Italy to India include agricultural and other types of machinery, scientific, engineering and optical instruments, artificial silk yarn, dye-stuffs, etc.

*

Increased Availability of Indigenous Iron and Steel: Following the expansion of steel plants in the private sector and part commissioning of plants in the public sector, the availability of indigenous iron and steel has increased. This will continue and, in another year's time, the indigenous availability, will be in the region of three to four million tons as against a million tons a few years before. In order to take care of the anticipated increase in indigenous production of iron and steel, it has been decided by the Government of India to appoint additional stock holders of all types in the country. As a first step, therefore, it has been decided to allow the controlled stockists for imported steel to handle indigenous steel also. Further, State Governments have been requested to send proposals for appointment of additional controlled stockists for underserved or unserved areas.

*

Exports of Cotton Textiles in 1959: Exports of cotton piece goods from India improved substantially in 1959 by nearly 230 million sq. yds. to a level close to that attained in the peak year 1957. Other non-communist countries whose exports of cotton piece-goods, improved significantly during the year 1959 were France, 42 million sq. yds., Pakistan 38 million sq. yds., Holland 36 million sq. yards, West Germany 25 million sq. yards, Belgium 25 million sq. yards. Both Japan and Hong Kong also improved upon their exports of cotton piece-goods during the year though to a much lesser extent. On the other hand, exports of cotton piece goods from U.K., U.S.A. and Italy together declined by nearly 95 million sq. yards, the decline being steepest in respect of exports of cotton piece-goods from U.K.

*

U.S. Aid and Private Investment in Africa: The total U.S. Private aid in the Congo is estimated to be between $15 and $20 million. This is very small compared to European investments in the Congo. For that matter, the total U.S. private investment in the whole of Africa—about $789 million—constitutes less than 1 per cent of all other private investment in Africa. And finally, the total U.S. Government aid to Africa—through all economic aid channels—was a little over $497 million from 1949—1959.

*

Record Aid to South Asia: During the fiscal year which ended June 30, countries of South Asia received a large proportion of the U.S. Development Loan Fund's, loan total of $535,150,000. In its annual summary of loan activities, D.L.F. reported that 17 loans totalling $279 million went to South Asia, mainly to India and Pakistan. It noted that this activity was in accordance with the U.S. desire to focus attention on areas, where conditions are considered conducive to rapid developments and Governments are taking effective self-help measures. The summary noted that in South Asia the D.L.F. co-operated with the World Bank in support programmes and the proposed Indus Basin Development Progamme and the Five-Year Plans of India and Pakistan. D.L.F. also reported intensified support of private enterprise.

*

Manufacture of Cameras: An agreement has been signed between the Government of India and Messrs. Nippon Kogaku of Tokyo for technical collaboration in the manufacture of cameras in the Government-owned National Instruments Factory at Calcutta. The agreement provides for a technical tie-up with the Japanese firm for the utilization of their patents in the manufacture of cameras and other optical instruments at the option of the Government. For the time being, it is proposed to commence manufacture of Nikkorex, the latest model which Messrs. Nippon Kogaku are making in medium-priced cameras. This is a 35 m.m. single lens (f 2.5) reflex camera with view finder and built-in exposure meter. The National Instruments Factory is expected to reach an optimum production of 1,000 cameras per month within a period of two to three years. The agreement with the Japanese firm will be current initially for a period of 10 years. Technicians from the Company will visit India shortly and start training Indian engineers.

U.S.S.R.

First Soviet Hydro-Power Station in Peramfrost: It is reported Leningrad engineers are working on the design of the Vilyui Hydro-electric power station, the first Soviet station in the Permafrost area. The station will go up in the deserted territory 1,000 kilometres from the Vilyui, a river flowing through the Taiga. The river will be spanned by 7000-metre-long dam and the force of the falling water will drive the electrical machines. The engineers found an original solution for building the foundations of the dam. To enable the large structure to stand on frozen earth under water, a waterproof screen will be placed in the body of the dam, which will not let water into the earth. The hydro-electric station will firmly stand for centuries. The Vilyui Hydro-electric power station will be commissioned in 1963.

United Kingdom

Britain to Build World's Largest Atomic Plant: Britain's Central Electricity Generating Board has given a contract for the world's biggest atomic-power station to the Nuclear Power group of companies, it is announced in London. It will cost beween £50 million and £65 million and provide an additional 550MW of generating capacity. The new station, which is to be at Dungeness, on the South-East Coast of England, is intended to meet increasing demands for electricity in the mid-sixties.

Expanding Steel Industry: It is estimated that capital expenditure on the expansion of the British steel industry's capacity will rise to the record figure of £125 millions in 1960 and may reach £150 million or more next year as the accelerated strip-mill programme gets into its stride. Last year's capital expenditure by the industry was close on £100 million.

France

Increase in Sales of French Cars in South Africa: Sales of French cars increased considerably on the South African market last year. Great Britain is first among automobile suppliers with 30,300 (compared with 37,400 in 1958 and 35,030 in 1957). However, French sales which increased from 4,908 vehicles in 1957 to 6,428 in 1958 and to approximately 8,000 in 1959 have considerably reduced, the big difference which has separated it from British sales.

Australia

Aluminium Plant: A Swiss company, Aluminium Industries Aktien Gesellschaft, of Zurich, is to design extensions, costing £2,800,000 to Australia's aluminium-producing plant at Bell Bay (Tasmania). The plant is operated by the Australian Aluminium Production Commission, representative of the interests of the Federal and Tasmanian Governments. The extensions will include new furnaces and will result in increased output from the plant, the only one in Australia making aluminium ingots.

U.A.R.

Seven Million Dollar Loan to Development Industries: Dr. Aziz Sidky, Central Industry Minister, has signed an agreement under which the US Development Loan Fund will lend £7 million to the Industrial Bank in the Southern Region. Mr. Frederick Reinhardt, the American Ambassador to the UAR signed the agreement for the Fund. The money so made available will be used to provide medium long-term credits for private industries in implementation of the Southern Region Industrial Development Programme.

Brazil

Area Under Soybeans: Nearly 100,000 hectares are at present planted to soybeans, according to data prepared by the Brazilian Institute of Geography and Statistics. A hectare is a metric measure of surface, equal to 10,000 sq. meters. Although this figure represents an increase of 70 per cent in the five year period, from 1955 to 1959, this oleaginous plant is far from realising its full economic possibilities, says the same source, pointing to the ten million hectares devoted to its cultivation in China and 8 million hectares in the United States. In 1958, Brazil exported 34,000 tons of beans to Japan.

Germany

Feed Mixing Industry: West Germany's feed mixing industry has suggested a plan to help dispose of the country's rye surplus. The basic principle of the programme, similar to the 1931 import certificate system would apply to all cereals. In the case of rye, exporters would be furnished with certificates allowing them to import an equal amount of another product free of duty or equalization fee or at a drastically reduced tariff depending on the season of import. This plan would permit rye exports at world market prices and the import duty-free milo corn.

Yugoslavia

Import of Lard: Yugoslavia has stopped importing lard because its domestic pork and lard output expanded very rapidly in 1959 and is expected to increase even more this year, when hog slaughter will probably be above 1959. Yugoslavia imported 21 million pounds of lard in January-September 1959, and the United States was the most important supplier. However, US exports of lard to Yugoslavia last year were ohly 7.8 million pounds compared with 15.5 million in 1958, and there have been no US shipments since June 1959.

Hong Kong

Import Duty on Tobacco: Hong Kong has substantially raised import duties on tobacco and tobacco products. The increases—30 to 50 per cent above former rates—affect all categories of leaf and products. Under the new tariff schedule, unstemmed leaf of US origin containing 10 per cent or more of moisture will be assessed a duty equal to US dollar 1.01 a pound compared with the 67 cents formerly charged. For stemmed tobacco with the same moisture content the new rate will be $1.03 compared with 68 cents earlier, and cigarettes will now be assessed $1.42 compared with $1.09.

Holland

Expansion of Metallurgical Industry: The number of enterprises in the metallurgical industry in Holland increased from 1,868 in 1949 to 2,771 in 1959. The number of workers in these enterprises rose from 243,000 to 361,000 and turnover from f2,753 millions to f9,068 millions. In the last ten years there was an enormous increase from f640 to f3,174 millions in exports of metallurgical products. An inquiry among 600 enterprises showed that in the said period about 100 inventions were made, some of them resulting in the manufacture of new products and some in the use of new methods of production. It may be assumed that in the past ten years each enterprise in the Dutch metallurgical industry has on an average introduced a new product or part product. Gross investments in fixed assets rose from f235 millions in 1949 to f150 millions in 1959, which expressed in percentages of total Dutch industry, represents an increase from 28 to 33 per cent.

World Bank

Loans in 1959-60: World Bank loans in 1959-60 totalled $659 million compared with $703 million in the previous year. Since 1946 the Bank made 265 loans totalling $5,180 million, mainly to finance reconstruction, electric power projects, transportation, communications agricultural and forestry operations and industry and general development work in 53 countries and territories.

United Nations

Budget Estimates for 1961: United Nations Secretary-General Dag Hammarskjold has estimated that it would cost $67,453,750 to meet the expenses of the organisation during 1961, $4.3 million more than the comparable figure for 1960. Net expenditures, after deducting income from various sources (staff assessment, sale of UN stamps and UN publications, gift shop etc.) are placed at $55,401,970 compared with a net expenditure level of $51,463,200 for 1960. In presenting his report on "Budget Estimates for the financial year 1961" to the forthcoming session of the General Assembly, Mr. Hammarskjold warns that the resources of the organisation "appear to be reaching the limit of their absorptive capacity."

NEWS IN BRIEF

INDIAN

An agreement for setting up a factory in the public sector for manufacture of teleprinters has been reached between the Government of India and the Italian firm, Olivetti.

*

A sum of Rs. 50 crores has been provided in the Third Plan for certain basic amenities in rural areas, such as drinking water, link roads and school buildings.

*

During the three months ended June 30, seventy-nine companies were registered in the Northern Region which comprises Delhi, Punjab, Himachal Pradesh, Uttar Pradesh and Rajasthan.

*

Central assistance to the tune of about Rs. 22 crores will be available to the States during the current year for various housing schemes under the Second Plan. The assistance will be provided in the form of loans and grants.

*

The Union Deputy Minister for Labour, Mr. Abid Ali, informed the Lok Sabha recently that there were no schemes for widening the scope of Employees' Provident Funds Act. The Act was widen enough to enable the Central Government to bring within its scope, through notification in the official Gazette, any establishment or class of establishments employing 50 or more persons.

*

The Finance Minister, Mr. Morarji Desai confirmed in the Rajya Sabha recently that Government's attention had been drawn to the recent extraordinary rise in the value of securities in the stock market. Among the reasons for the rise in value of securities are all-round industrial expansion and growing investment demand.

*

The National Standing Committee for co-ordination of Population and Vital Statistics held its first meeting recently. The Committee has been constituted on the recommendation made by the UN Population Commission in 1959 that the member countries set up National Councils for population studies.

*

There is no proposal to constitute a common pool of engineering and technical personnel for the Union Territories which have reported shortage of such a staff from time to time. Steps had, however, been taken to include certain gazetted posts in the Medical and Public Health Departments of the Union Territories in the Central Health Service Cadre.

*

The Union Government is likely to give financial loan to the Punjab Government in order to increase the yield of milch cattle and its supply to the Delhi Milk Supply Scheme from the areas around Delhi.

*

Relief to the poorer sections of society, elimination of compounding system and an appreciable reduction in the street lighting charges, are some of the highlights of the revised schedule of tariffs applicable to the supply of power from Uhl River and Nangal hydro-electric projects.

*

More branches of the State Bank are to be opened in the former princely States with a view to bringing the comparatively underdeveloped areas in the country into the organized money market.

*

A Wage Board for the jute industry was announced by Mr. Abid Ali, Deputy Minister for Labour, in the Lok Sabha. The Chairman of the Board will be Mr. L. P. Dave.

FOREIGN

A copper manufacturing industry is soon to be established in New Zealand under a joint arrangement by Imperial Chemical Industries of Australia and New Zealand (ICIANZ) and Yorkshire Imperial Metals of Leeds.

*

Commercial bank lending rates in the USA maintained over the past two months despite official pressure for reductions are now being reduced.

*

After a standstill in the first week of August, West German Government foreign currency reserves again jumped to a new peak in the week ended August 15.

*

Crude oil production by Arabian American Oil in Saudi Arabia during July totalled 37,132,763 barrels, a daily average of 1,198,057. Comparable figures for July, 1959, were 32,943,375 and 1,062,690.

*

Lower grain yields are expected to be general among the East European countries this year. Hungary and Czechoslovakia have already announced that this year grain harvest will be lower than those of 1959 and Poland, Rumania and Bulgaria may soon make similar admissions.

*

The yardstick by which the achievements of Finnish industry are measured is the quinquennial Finnish Industries Fair in Helsinki. The seventh fair, running from September 16—October 2, will be the biggest ever held.

*

Japanese businessmen and newspapers are expecting the Bank of Japan to lower its official rediscount rate shortly from 7.30 per cent to 6.935 per cent. The last change in bank rate was on December 1, 1959, when it was raised to its present level in what was described as a precautionary measure against "possible economic overheating".

*

The Board of Trade is sponsoring a display of British Consumer goods at the Canadian National Exhibition in Toronto. More than 200 examples of products have been selected by the Council of Industrial Design for th stand.

*

Jerusalem Pencils has placed an order for pencils worth $50,000 with a German exporter, the Manufacturers' Association reported recently.

*

Agreement on a £30 million loan from Britain, the US and the World Bank to finance Ghana's big Volta River project was officially announced recently by the Ghana Government.

*

Introduction of a decimal currency in Australia has been recommended unanimously by an independent Committee appointed by the Government.

THE BUSINESS WORLD

The Outlook for Plantations

IN any assessment of the state of the economy during the Third Five-Year Plan the prospect for plantations cannot be ignored. Rather, a perspective view ought to be taken in their case in view of their importance as vital commercial crops. Mr. W. Wilson Mayne, President of the United Planters' Association of Southern India, made a comprehensive survey of the outlook for plantations in the near future at the annual meeting of the Association last month-end. His assessment of the prospect for the three major segments of the industry, namely, tea, coffee and rubber, is of undoubted practical interest.

Tea has always ranked as one of our foremost traditional earners of foreign exchange. It is also gaining increasing popularity as a beaverage in every household. It is one of its great sources of strength that the broadening domestic market is giving it increasing stability. But in the context of our next four or five Five-Year Plans, it is as an export item that the value of tea to the economy will be reckoned. Mr. Mayne has pointed out that the prospect for tea in the export market is becoming increasingly difficult. A number of new countries "from China to Peru" are emerging as exporters of tea and competing with Indian teas very fiercely. The fierceness of the competition arises from the fact that the bulk of the Indian tea crop consists of ordinary teas and it is easy for these new entrants to assail it in the export market. Another factor which makes the competition fierce is the fact that Indian teas labour under the handicaps of a heavy burden of production costs and taxation from which the entrants are relatively free.

The UPASI President draws attention to the United Nations Commodity Survey for 1959 and points out that the average price in the international market of tea, coffee and cocoa declined by 40 per cent since 1954, pushing it back to the level obtaining in 1950. Meantime, in India the burden of taxation and costs went on increasing between 1950 and 1959. Nevertheless, conditions for the tea industry have been a shade better than those for coffee and cocoa because consumption of tea has continued to keep pace with expanding production. India's real problem in relation to tea is not so much of accelerating the output at a fast rate as of improving its quality. In the near future it is primarily quality which will enable Indian tea to withstand competition in the export market. Mr. Mayne draws attention in this context to the sense of dissatisfaction expressed by Mr. Satish Chandra, Deputy Minister for Commerce and Industry, about the low production target set for tea in the Third Plan. He maintains that the tea industry is quite capable of achieving high production targets. But bitter experience has brought home to it the sharp consequences of production outpacing consumption. His poignant remark that Ministers are spared from this experience can hardly be considered as uncharitable.

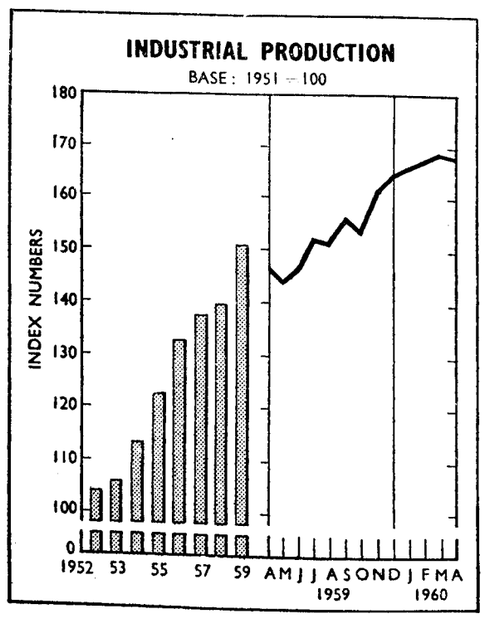
If the immediate problem of tea is to improve quality, it ought to receive assistance from the Government to enable the estates to replace old machinery and to expand factory accommodation. The UPASI President expresses gratitude to the Tea Board for extending to the industry the facility of hire-purchase of machinery, but he emphasizes that the right policy should be to enable the industry to retain a higher percentage of profit for plough-back. Tea propaganda has left much to be desired and Mr. Mayne has underlined the need for intensifying it. A widening disparity between production and export demand makes it all the more urgent that the former International Tea Agreement should be revived with the cooperation of as many of the previous signatories as possible and by trying to pursuade the rest to join as early as possible. Development of tea estates tends to place greater emphasis on replanting, but the importance of raising unit production, of assimilating improved agricultural techniques and of increasing the utilisation of fertilizers must not be relegated to a secondary place.

The outlook for the coffee in the global perspective is sure to cause great concern. The United Nations Commodity Survey for 1959 highlights the fact that the world average output of coffee during 1955-59 was 26 per cent above the output during 1950-54. But consumption increased by a mere 10 per cent. The 1959-60 season finds itself overloaded with a carry-forward of 56 million bags, equivalent to the production of one full year. These trends are reflected vividly in the decline in world prices of coffee during the last two years by a substantial margin varying between 30 and 40 per cent.

Mr. Mayne has pointed out that although India's production of coffee is a small fraction of the global output and it caters mostly the internal market, it cannet completely insulate itself against the rapid and forceful changes which are overtaking the world coffee crop. The dilemma of the world coffee industry consists in "tumbling world prices" and "vastly swelling stocks." While this dilemma is posed before the industry and a way out does not seem within sight, expansion of Indian coffee should be guided mainly by the potentiality of the home market to absorb the higher output. It would be unrealistic to expect the coffee industry to carve out for itself a stable export market in the near future.

India's rubber plantations are in the infant stage of growth and it would appear that this plain fact is

sometimes ignored in the expectations that are entertained about its pace of development. Between 1950-58, over 12,000 acres were replanted with an investment outlay which far exceeds the rehabilitation allowance allotted to the industry in the price structure. Since 1952 the area under rubber trees has been raised by 50 per cent. This 50 per cent represents new plantations—a fact which ought to be fully appreciated in anticipating the growth of output. Most of this area is not in bearing up to now. The long period of gestation, if it may be so called, puts a severe limitation on the capacity of rubber estates to expand production in response to the demand of the manufacturing industries for raw rubber. Furthermore, conditions in South India—which is the only area in this country where rubber is grown—are not ideally suited as they are in Malaya and other staple producing countries and hence the Indian output is low.



These natural handicaps ought to be taken fully into consideration in making calls on rubber estates to meet the fast growing demand of the home manufacturing industry. Mr Mayne expects that the Kerala and Madras Governments, which have taken a decision to undertake cultivation of rubber in the public sector, will acquire knowledge of the difficulties and hazards inherent in rubber plantations and for this reason he welcomes their decision. Finally, he draws attention to the inquiry into fixation of fair prices for rubber which has been referred to the Tariff Commission and makes a well-reasoned plea that uncertainties inherent in any long term agricultural plantation like rubber should be given proper weight in the prices which are to be fixed afresh.

Business Notes

Industrial Production

A NEW PEAK

THE INDEX of industrial production has touched a new peak. The average of the indices for the first four months of 1960 comes to 167.5 (Base: 1951=100) against 147.0 for the corresponding period of the previous year. From these figures it appears that the industrial output during the whole year may record a rise of more than 10 per cent over the previous year. An important feature of this expansion, as revealed from the various components constituting the general

index, is that new industries are the real pace-makers. Traditional industries like cotton and jute manufactures, which command a weightage of 48 per cent in the index, have shown only negligible expansion. The two premier industries are not to blame for this state of affairs. In the case of cotton textiles imports of raw cotton were not procured in time and in sufficient quantities; even so, the previous year's level of output has been maintained. In the case of jute industry, too, a decline in the availability of cuttings has so affected the industry that the expansion was just nominal.

The index has moved up mainly due to strides recorded by chemicals like sulphuric acid, caustic soda, superphosphates, etc. in whose case the rise was to the extent of 30 per cent, 50 per cent and 55 per cent respectively. Other industries which have attained higher output are cement, iron and steel and general engineering where the expansion was of the order of between 40 and 60 per cent during these four months as compared to the same period of the previous year. In the general engineering group, machine tools, sewing machines, fans and certain electrical goods have registered considerable rise. From the record of these four months one is likely to presume that this rate of expansion may be maintained during the rest of the year. This optimism, however, is tempered by the knowledge of the emergence of the new crisis of foreign exchange. The licensing policy for October-March, which threatens to be stringent, may change the course of industrial production in the last quarter and affect the performance over the year as a whole.

Textiles

MODERNISATION FOR EXPORT

THE IMPACT of some of the recent developments in the world of textiles on the exports of cotton textiles from India has been so severe that it is apprehended now that it would be very difficult for this country even to consolidate its present position. Consequent upon a number of favourable factors such as a margial increase in the volume of international trade, the partial withdrawal of China from international market, the 15 per cent cut in Japanese textile industry, the opening up of Sudan as our second biggest market, the grant of increased incentives in May 1959 etc., cotton textile exports from India improved considerably both during the year 1959 and in the first quarter of the current calender year. But the prospects for the remaining months of 1960 appears to be poor; thanks to the steep fall in the production of cotton, increase in the cost of manufacture and the development of local textile industry in a number of our markets like Sudan, Ethiopia, British East Africa, New Zealand and Ceylon. "These developments" as Mr. Neville N. Wadia, chairman, The Cotton Textile Export Promotion Council, said, last week, in Bombay, whilst addressing the sixth Annual General Meeting of that body, "pose a challenge to the maintenance, let alone expansion of our textile exports in the coming years and any complacency in our assessment of prospects will have disasterous results."

In the face of these adverse developments if Indian textiles have to be sold in international markets, the competitive strength of the Indian textile industry has

UNESCO 8 - SEP 1960 DOCUMENTS DEPARTMENT

to be enhanced greatly. This is possible only if the industry is allowed to modernize itself. As Mr. Wadia said: "most important of all is to allow the industry to put its house in order; bring its machinery, plants, equipment and methods up to modern standards. We can no longer expect to be competitive even in those countries where wages are very high as long as outmoded ways of production exist. This is a fact which cannot be too strongly emphasised and Government, labour and mill-owners, must recognise it and tackle this problem with determination. There is no time left for discussions. The facts are staring us in the face and if we shut our eyes to them, we must accept the inevitable consequence." If we are not to harm our export as the TEXPROCIL chief said, automatic looms have to be installed at the rate of, at least, 5,000 to 10,000 looms a year.

Insurance

PROBLEM OF COSTS

MR. A. D. SHROFF, the Chairman of the New India Assurance Co. Ltd., while speaking at the annual general meeting held recently at Bombay, gave a call to the general insurers to face the problem of management expenses, which were fixed at a low level under the Insurance Act, by a process of general consolidation. Considering that larger units can economize on establishment expenditure, he suggested that measures should be adopted by which certain weaker units could be amalgamated with bigger ones. Under the present circumstances of declining margins, such integration could be helpful in creating a new order of soundness in general insurance.

The industry should also try to reduce the costs, Mr Shroff suggested, by bringing about a check on motor repair costs as well as by keeping a proper watch over the rising number of accidents. An increase in insurance rates would not solve the problem, because it would act as a disincentive to new business. He suggested that, instead, a proper claims settling organization should be established. This proposition seems to be fairly sound and is likely to induce efficiency. It is hoped that it will be pursued seriously by the general Insurers' Association as well as by the Government. If these measures are adopted, general insurance companies can effectively reduce costs which will ultimately improve their margins.

Oil

BURMAH-SHELL REFINERIES

MR. P. D. TEW, Chairman of the Burmah-Shell Refineries Ltd., dwelt at length on some of the problems of the oil industry at the Seventh Annual General Meeting of the Company. He stated that, while there can be no question that the first priority should be given to exploration and production of indigenous crude oil, the second priority must be given to increasing refining capacity in the country. For the oil industry it would be prudent to set its targets to cater for a demand of at least 14 million tons of refined products in 1966. The demand in 1955 was 4.67 million tons and will be approximately 7.50 million tons in 1960. If the same rate of expansion is applied, the demand would rise to 13.4 million tons in 1966. At present the existing refining capacity is estimated at 6 million tons and even if 2.75 million tons capacity sanctioned for the two public sector refineries becomes fully effective by 1966, there would still be a gap of 5.25 million tons to meet the balance of 8 million tons likely to be required by 1966.

It is estimated that the additional refinery capacity is likely to cost Rs. 60 crores and to the extent the Government would agree to this being financed by the private sector, there would be a corresponding relief in foreign exchange to the public sector. If the domestic requirements could be met by increasing the refining capacity, there would obviously be substantial saving of foreign exchange. The substantial economy in foreign exchange that could be effected by increasing the domestic refinery capacity is illustrated by the fact that, while the import of one ton of crude oil costs Rs. 65, imports of one ton of refined petroleum products would cost Rs. 150. The Burmah-Shell Refineries Ltd., have submitted a scheme for expanding its capacity to approximately 4 million tons within 18 months and complete a lubricating oil manufacturing complex of between 60|100,000 tons annual capacity within a further year. The commendable feature of this scheme is that the necessary foreign exchange will be arranged by the Company for both the projects. The Chairman has given an open hint that it should be feasible to modify the terms of the refinery agreement, provided the company were permited to go ahead with the proposed expansion. The offer deserves serious attention from the Government.

Paper

SESHASAYEE'S PAPER AND BOARDS

MESSRS SESHASAYEE BROTHERS (PRIVATE) LTD., are floating new company to be styled as Seshasayee Paper and Boards Ltd. It is to be welcomed at a critical time when the pressure of demand on home-produced paper is increasing progressively. The authorised capital of the company is Rs 10 crores and the issued capital is Rs 3,50,00,000. The present issue consists entirely of ordinary shares. Out of the issued capital the signatories to the memorandum namely Messrs. Seshasayee Brothers (Private) Ltd., Tiruchirapalli, Messrs. Seshasayee Brothers (Travancore) Private Ltd., Alwaye (Kerala), Messrs. Parsons and Whittemore South Asia Company Inc., State of Delaware, United States of America, the Directors of the Company and their friends have subscribed among themselves capital worth Rs. 100,10,000, in ordinary shares of Rs. 10 each. Their friends have further agreed to subscribe to 49,000 equity shares of Rs 10 each of the aggregate value of Rs 4,90,000. The Madras Industrial and Investment Corporation Limited have subscribed to 10,00,000 equity shares of Rs. 10 each of the aggregate value of Rs. 1,00,00,000. The balance of the issued capital of Rs. 1,45,00,000 consisting of 14,50,000 ordinary shares of Rs. 10 each is offered for public subscription at par. The entire amount of the equity shares offered to the public has been underwritten by the Life Insurance Corporation of India, brokers and bankers. The subscription list will open on September 7, 1960, and close on September 12, 1960. Applications are to be for a minimum number of hundred equity shares and on application Rs. 5 per share is to be paid.

Seshasayee Paper and Boards Ltd., have entered into an agreement with a famous company Messrs. Parsons and Whittemore South Asia Company Inc., which will undertake the complete commissioning and erection of the plant with a capacity of 20,000 tons of paper per annum to be completed in two years. The noteworthy feature of this project is that the Government of India have agreed to provide the entire foreign exchange required from the Export-Import Bank Loan Aid Programme. Market response to this issue seems assured. Details of the prospectus will be available elsewhere in this issue.

'QUICK' ESTIMATES OF NATIONAL INCOME FOR 1959-60

The National Income of India in real terms recorded a rise of 0.5 per cent in 1959-60 over 1958-59 according to the 'quick' estimates prepared by the Central Statistical Organization on the basis of the trends disclosed by the current available data.

THERE was a fall of 3.9 per cent in agriculture (proper) the contribution of which accounted for 38.7 per cent of the total national income in 1959-60 as compared to 40.5 per cent in 1958-59. This fall in agriculture was, however, more than offset by increases in other sectors, which taken together, registered a rise of 3.4 per cent in 1959-60 over 1958-59 bringing about an increase in the contribution of these sectors from 59.5 per cent in 1958-59 to 61.3 per cent in 1959-60.

The present estimates are tentative as they are based on certain advance information and may be revised in the annual paper on National Income for 1959-60. Contributions of some individual sectors to the overall percentage change in national income in 1959-60 over 1958-59 at 1948-49 prices are shown in the following table:—

Sectors.	Percentage contribution to total national income 1958-59	Percentage change in 1959-60 over 1958-59	Contribution to the overall percentage change in 1959-60 over 1958-59
Agriculture (proper)	40.5	— 3.9	— 1.58
Mining and factory establishments	8.2	+ 8.1	+ 0.66
Communication	0.4	+ 4.0	+ 0.02
Railways	2.4	+ 5.7	+ 0.14
Organised banking and Insurance	0.9	+10.8	+ 0.10
Other commerce and transport	15.2	+ 1.7	+ 0.26
Other Sectors	32.4	+ 2.8	+ 0.91
All sectors	100.0	+ 0.5	+ 0.51

The table below indicates the trend of national income and per capita income at 1948-49 prices during the quinquennium ending 1959-60:

Year (Financial)	National income (Rs. crores)	Per capita income (Rupees)
1955-56	10,480	273.6
1956-57	11,000	283.5
1957-58	10,890	277.1
1958-59 (Preliminary)	11,690	293.6
1959-60 (Provisional)	11,750	291.3

The figures show that the net rise in national income in real terms during the first four years of the Second Plan, i.e. 1956-57 to 1959-60, was of the order of 12.1 per cent.

EMPLOYMENT POTENTIAL OF ROAD TRANSPORT

In an attempt at scientific computation of employment provided by road transport, the National Council of Applied Economic Research has reached the conclusion that contrary to the view held in some quarters, Road Transport accounts for a very considerable volume of employment, directly and indirectly.

SUCH employment, it says, is widely dispersed regionally and occupationally, and is, on the whole, mainly in the lower income categories. As compared with the railways, employment on road transport is not compact, organised, continuous or even adequately remunerated, but the roads provide the means of livelihood for far more people.

The employment provided by Road Transport is estimated at 2.4 million, provision and maintenance of track accounting for the largest proportion, namely, 970,000 or 41 per cent.

In 1957-58 the total number of persons directly employed on the Indian Railways was 11.64 lakhs. The following table shows the employment provided by Roads and Railways:

(in lakhs)

	Road	Rail
1. Track construction	6.61	0.08
2. Track maintenance	3.06	2.71
3. Vehicular operations	7.12	3.78
4. Maintenance of vehicle and supply of fuel	4.92	4.22
5. Terminal services—porters and loaders	1.59	0.55
6. Trasport administration and traffic control	0.24	0.30
Total	23.54	11.64

The employment potential of the industry may also be assessed, it says, in terms of the number employed per vehicle. The employment per commercial vehicle is found to be 12.63 persons inclusive of direct as well as indirect forms of employment. The comparative employment given by passenger buses and trucks, taking direct and indirect employment, amounts respectively to 715,000 and 626,000. From an examination of the financial aspect of the employment potential, the Study indicates that the wage rewards of this industry go mainly to the low income groups. There are also indirect wage effects arising from the money paid as wages moving in several channels of indirect employment, relatively sizeable in the aggregate. The regional spread of wage incomes in the case of Road Transport is for reasons inherent to it more dispersed regionally than with other forms of transport.

FROM THE CAPITAL'S CORRIDORS

FOREIGN EXCHANGE CRISIS—ITS CAUSES

FOREIGN exchange crisis continues to dominate the Indian economic scene. The problem, it is understood, is engaging the attention of the Government of India, which is anxiously looking forward to the Paris Conference of the "Aid-India" Club on September 12

Various explanations are being put forth for this unprecedented crisis on the foreign exchange front. Though the foreign trade figures for the first half of the current year presented an encouraging picture (imports during this period declined by Rs. 22 crores to Rs. 459 crores compared to the corresponding period last year, and exports went up by Rs. 35 crores to Rs. 301 crores reducing the trade deficit by Rs 57 crores to Rs. 158 crores), the country has been obliged to draw upon its foreign assets to the tune of Rs. 22 crores since July 15. No precise explanation is yet available for this heavy drain on our foreign exchange resources, but it is presumed that coinciding of large imports—both of machinery and raw materials like cotton and jute—during this period have been primarily responsible for this. The drain has possibly been accentuated by heavy defence expenditure and repayment obligations of some foreign loans.

It is also suggested in knowledgeable circles that aid from abroad has not been commensurate with the development of the Indian economy in the recent past. It is pointed out that not only there has been some delay in the authorisation of credits by the friendly countries due to cumbersome formalities required to be fulfilled for the grant of loans, the credits authorised so far have fallen short of the requirements of the "hard core" of the Plan by nearly $200 million. Some current earnings from exports thus have had to be diverted to finance imports of machinery for which foreign aid was expected.

In the circumstances, it is difficult to understand why some low-priority projects have been all of a sudden given a high priority. The cases in point are a second Atomic Plant, the "Janta Car" project, dieselisation of railways and manufacture of watches. Such projects can very well be postponed for some time.

AID FROM U.K.

Some indications about the aid that might be forthcoming from the United Kingdom in the next few years are now available. Britain, a few days ago, made available £10 million as its contribution to finance the rest of the Second Five-Year Plan. It is regarded highly unlikely that it will add to this sum at the forthcoming Paris meeting. So far as the Third Plan is concerned, British assistance is anticipated to be around £125 million, one-fourth of which may be available for financing trade deficit. This includes the credit of £20 million already promised for the expansion of the Durgapur Steel Plant.

FURTHER CREDIT FROM U.S.S.R.

The Soviet Union has expressed its readiness to grant India an additional credit of 500 million roubles (about Rs. 60 crores) for the Third Five-Year Plan. The offer has been accepted by the Government of India. The total Soviet aid available for the Third Plan thus amounts to 2,000 million roubles (Rs. 240 crores). The manner in which and the purposes for which the new credit will be utilized will be decided by the Government of India in consultation with the Planning Commission and the representatives of the Soviet Union. The new credit bears the usual 2-1|2 per cent interest per annum.

ABOUT OIL

Mr. K. D. Malaviya, Union Minister for Oil and Fuel, declared in the Lok Sabha early this week that oil would begin to be produced in the public sector at Cambay by the middle of next year. This oil, he said, would be processed at Trombay till a refinery is set up in the Gujerat region, the plans for which are expected to be taken on hand in the near future.

Mr. Malaviya expressed dissatisfaction with the cut in crude prices announced by the three private sector oil companies recently. In the current buyers' market, he said, he was determined to get oil as cheaply as possible. He explained that following the recent fall of about 5 per cent in the posted price of crude oil in the Persian Gulf countries, the three oil companies—Burmah-Shell, Standard-Vacuum and Caltex—had informed the Government that they would be able to offer a 7-1|2 per cent cut on the new prices, which corresponded to a 12-1|2 per cent reduction on the old rates. This would result in saving of between Rs. 5 crores and Rs. 6 crores in the foreign exchange expenditure. Mr. Malaviya hoped that the oil companies would reconsider the matter. Reports suggest that he would like the oil companies to further reduce their crude prices by 2-1|2 per cent. Mr. Malaviya called upon the oil companies to change their approach to "tied" refineries in Bombay, particularly in view of the fact that they were offering similar reductions in crude prices for the "untied" refineries in Italy and Sweden.

Mr. Malaviya also expressed his dissatisfaction with the meagre Third Plan allocation of Rs. 130 crores for oil. He said the Government was determined to have as many refineries as possible in the public sector with the ultimate objective of controlling the oil economy of the country.

SEARCH IN WEST BENGAL ABANDONED

Meanwhile, the management of Standard-Vacuum has conveyed to the Government of India its decision to suspend further oil exploration activity in West Bengal. A spokesman of the company revealing this information said, "Despite the employment of the best equipment and techniques known to the industry, not one out of the ten wells drilled under the Indo-Stanvac Project had found oil and the evidence revealed by actual drilling was so disappointing that it was the confirmed opinion of experts that the huge expenses required for further exploration in this area would be unwarranted."

The spokesman further revealed that last year Standard-Vacuum had retained Mr. Lewis MacNaughton, a leading Consulting Geologist, for appraisal and technical evaluation of the work. Mr. MacNaughton's report, which was handed over to the Government in January last, stated that "unless oil or gas is found in the next two test wells, it is unlikely that further drilling would be warranted." Since the submission of the report, one well which was being drilled at that time, and two additional wells have all resulted in dry holes.

Standard-Vacuum had been exploring for oil in West Bengal since 1949. In the first five years the exploration programme was carried out by the company alone. The total expenditure borne by the company in the exploration effort up to this stage was about 64 lakhs of rupees. Since the inception of the Indo-Stanvac Project the total investment upto the end of June has been approximately Rs. 7.54 crores, of which 75 per cent was borne by Standard-Vacuum and 25 per cent by the Government of India..

HANDLOOM TRADE DELEGATION

The Madras Government, it is learnt here, is sponsoring a trade delegation to visit South-East Asian countries to explore the possibilities of exporting Madras-made handloom fabrics to this region, consequent upon heavy accumulation of stocks of these, following concellation of orders by U.S. firms for reasons like delayed shipment. Most of the accumulated stocks are said to be of "Bleeding Madras" variety which at one time appeared to have caught the imagination of the American garment manufacturers.

The delegation, which will be headed by Mr. Nachimuthu, President of the Madras State Handloom Weavers' Co-operative Society, will leave Madras in a few days and will tour all the South-East Asian countries, including Hongkong, for about six weeks.

Exports of handloom fabrics to this region have dwindled considerably during the last few years and this is causing considerable concern to the industry as a whole.

MANUFACTURE OF TELEPRINTERS

The Government of India has finalised the arrangements for setting up of a factory in the public sector for the manufacture of teleprinters. On August 26, it signed an agreement for technical collaboration for this purpose with the well-known Italian firm Ing. C. Olivetti and Company.

Setting up of this factory, which has always been regarded as an important pre-requisite for the expansion and improvement of telegraphic communication in the country, was included originally in the Second Five-Year Plan. But the implementation of the scheme had to be postponed owing to foreign exchange difficulties In view of the necessity of expanding telegraphic communications during the Third Plan period, it has now been decided to take up the matter on a high priority basis, so that the factory goes into full production in about three years from the date of its establishment. In addition to the production of teleprinters, manufacture of the voice frequency telegraph carriers is also contemplated. Work on this project, it is understood, has also been taken up.

According to the arrangements arrived at with Olivetti and Company, the latter will supply the technical know-how and engineers to help in setting up the factory. Indian engineers will also be trained in Italy. Besides, the foreign collaborators will supply the production tools and machine tools of their manufacture as well as tender advice on the purchase from other sources of machine tools, raw materials, etc., required for the factory.

A very tight production schedule has been drawn up so that the factory goes into full production in the shortest possible time. Commencing with the preliminaries in temporary premises, it is planned to produce about 170 teleprinters in 1961. This stage will consist essentially of assembly operations, even though some parts may be manufactured indigenously. Factory buildings are to be constructed by the end of 1961 and in the following year production is expected to go up to 460 machines. In 1963, over 1,000 machines are envisaged to be produced. In 1963-64, the factory will attain its full production of 1,000 teleprinter machines (both page and tape types), 100 printing perforators, 100 auto-tape transmitters and 200 reperforating attachments. In addition to this, the factory in that year will also manufacture send-only and receive-only machines and various other attachments and fittings.

While the assembly of the equipment will begin immediately, the production schedule provides for early realisation of full indigenous manufacture. Beginning with 13 per cent indigenous manufacture in the six-monthly period from November, 1961, to May, 1962, the factory will reach a 94 per cent indigenous manufacture target in 1962-64. By May, 1965, it will produce teleprinter machines composed of 100 per cent indigenous components, including the specially governed motors.

Three foreign manufacturers of teleprinter equipment had submitted project reports and proposals for the setting up of this factory. The project reports were examined by special technical committees, consisting of engineers drawn from various departments of the Government of India. The negotiations with these companies in regard to their terms and conditions were carried out by another committee, headed by Mr. V. Shankar, the Director-General of Posts and Telegraphs. The final proposals were scrutinized by another high-level committee.

Two senior officials, Mr. B. S. Rau, former Postmaster-General at Hyderabad, and Mr. P. Mukundan, formerly Deputy Chief Engineer (Maintenance), Posts and Telegraphs, have been placed on special duty to form this company on behalf of the Government of India and to complete the preliminaries quickly. They will select the site for the factory in consultation with the foreign collaborators and take other measures connected with the production programme.

INCOME-TAX ARREARS

Arrears of income-tax at the end of the financial year ending March last amounted to as much as Rs. 133.61 crores compared to Rs. 152.36 crores at the end of the previous year. The following table gives a break-up of these arrears circle-wise for the past two years.

(Rs. lakhs)

Circle	Effective arrears on 31-3-1959	Effective arrears on 31-3-1960
Andhra Pradesh ..	3,17	2,92
Assam ..	1,29	77
Bihar and Orissa ..	4,77	4,39
Bombay (Central) ..	13,90	11,59
Bombay City ..	26,93	30,77
Gujerat	4,24	2,45
Poona	1,91	1,46
Calcutta (Central) ..	13,33	11,40
Delhi	17,59	12,87
Kerala	2,74	2,69
Madhya Pradesh ..	3,15	2,41
Madras	5,10	5,28
Mysore	2,11	1,52
Punjab	2,43	1,86
Uttar Pradesh ..	7,06	4,56
West Bengal ..	42,64	36,67
Total ..	152,36	133,61

TROMBAY FERTILIZERS PLANT

The U.S. Government, it is understood, has promised to finance the setting up of the Trombay Fertilizers Plant. D.L.F. will supply the foreign exchange component and PL 480 reserves will be released for meeting the rupee costs. The project will utilise oil refinery gases for the manufacture of fertilizers.

BRIEFS

Two schemes for the manufacture of newsprint from imported pulp have been approved by the Government of India. Negotiations with the foreign suppliers of machinery have been started by the firms concerned.

*

A licence for setting up a plant to produce 20 ton of cheese per month has been issued by the Government.

*

The Union Government proposes to instal a switchgear development and testing laboratory at Bhopal at a cost of about Rs. 200 lakhs.

*

Sixty-two electric cranes are proposed to be installed at the port of Calcutta at an estimated cost of Rs. 1,58,23,391. They are being purchased from West Germany and Japan. The amount of foreign exchange involved is Rs. 93.4 lakhs.

COMPANY AFFAIRS

SHREE GOPAL MAINTAINS PROFITS

Shree Gopal Paper Mills Ltd. maintained its high level of efficiency during the year to December 1959. It continued to turn out the paper of good standard. While the prices of imported machine furnishings remained more or less steady, wool pulp, chemicals and store items registered an increase. The Directors have referred to the enquiry conducted by the Tariff Commission to fix fair ex-works and selling prices of paper and pointed out that the report of the Tariff Commission which was accepted by the Government, recommended a substantial cut in the paper prices. The recommendations of the Tariff Commission have caused considerable hardship to the Industry and the Directors regret that the Government should have enforced the revised prices notwithstanding the creditable past record of the Industry in keeping the prices under check. They have pointed out that during the last 11 years since the costs were investigated by the late Tariff Board in 1948 the Paper Industry trebled its production and there has been an increase in the costs of over 35 per cent. The industry, however, increased its prices by only 16.7 per cent for the civilian market and by about 10 per cent for Government supplies. The lower paper prices which came into effect from early this year are bound to affect the profits of the Company. The impact of the revised prices on the profits would be actually reflected in the working of the Company during the current year, but the Directors hope that the loss in profit would be made up to a great extent by the increased production expected from the new mill.

The vanaspati unit of the Company worked for 176 days producing 2,255 tons of which 2,242 tons were sold. The pool formed by the vanaspati manufacturers of north zone with a view to stabilise vanaspati prices, did not function properly and ultimately had to be dissolved. The vanaspati prices, however, remained favourable all along looking to the then prevailing oil prices.

During the year under review the Company made a gross profit of Rs. 116.45 lakhs against Rs. 105.43 lakhs in the previous year. After providing for depreciation (Rs. 12.54 lakhs) taxation (Rs. 25.20 lakhs) and development rebate (Rs. 24.74 lakhs) the Directors have proposed to distribute dividend on ordinary shares at the rate of 17.6|7 per cent subject to deduction of tax under Section 18(3D) of the Income Tax Act which will absorb Rs. 22.41 lakhs.

GANGES ROPE

The Robe Industry, although small, is quite vital for the economy of the country, particularly in view of its contribution towards the successful operation of shipping lines and other industrial undertakings. A representation to the Government has, therefore, been made through the Indian Rope Manufacturers' Association to treat Rope as a separate industry and not link it with either the textile or jute industries in respect of foreign exchange allocations for the import both of raw materials and machinery. It appears that this demand is fairly genuine and it is hoped that the Government will provide separate foreign exchange allocation for this industry.

Although competition continued to be severe the Directors of the Ganges Rope Company have pointed out that the Company was able to maintain its share of available business. Owing to non-availability of imported raw materials in sufficient quantities a number of orders which would have otherwise added to the revenue of the Company could not be booked. Similarly production was maintained at a satisfactory level although the Company experienced some difficulties in obtaining raw materials from indigenous and foreign sources.

During the year to March 31, 1960, the Company registered a profit of Rs. 8.26 lakhs after providing for the provisions for taxation and development rebate reserve, the Directors recommended the transfer of Rs. 2 lakhs to general reserve and the payment of a dividend at the rate of Rs. 17.50 per share.

CENTRAL CACHAR AND BARADIGHI TEA COMPANIES

It appears from the financial results of these companies that for the year to December 31, 1959, there was considerable amount of improvement by way of reduction in the cost of production but the Directors have pointed out that this advantage was offset to a large extent by a further increase under the Minimum Wages Act 1948 by which adult workers' wages were raised by 20 nP. per day and minor workers' by 10 nP. per day with effect from December 1, 1959. Mostly the effect of this increase will be felt in the results of the next year.

The Central Cachar Tea Company Ltd. recorded a profit for the year to the extent of Rs. 4.06 lakhs. After taking into account the debit balance of Rs. 2.17 lakhs brought forward from the previous year and the provisions for taxation etc. there is an amount of Rs. 1.17 lakhs at the disposal of the Directors. A dividend at the rate of 5 per cent is proposed to be distributed. During the year 1959 total output of tea was 11.3 lakh lbs. against 8.94 lakh lbs. during 1958. It is estimated that during the year 1960 the output may be around 11.53 lakh lbs.

In the case of Baradigi Tea Company the output of tea for the year 1959 is estimated at around 15.41 lakh lbs. against 14.94 lakh lbs. in 1958. Due to drought conditions in the early part of the year the crop estimated for 1960 may be around 14.80 lakh lbs. The Company recorded a profit to the extent of Rs. 7.79 lakhs. After making provisions for taxation etc. the Directors have recommended the payment of a dividend at the rate of 25 per cent subject to deduction of income-tax and super-tax.

COMMODITY NEWS AND NOTES

RUBBER SUPPLIES IN 1960

The International Rubber Study Group has made estimates for requirements and supply of natural and synthetic rubber during 1960. It was estimated that the world might consume i.e., turn into manufactured goods, some 2,110,000 long tons of natural rubber and some 1,750,000 long tons of synthetic rubber apart from synthetic rubber produce in non-member countries. It was estimated that the world production of natural rubber would be around 2,135,000 long tons and the production of the synthetic rubber in member countries would be around 1,810,000 long tons while total synthetic rubber production capacity in member countries was assessed at 2,335,000 long tons.

RISE IN ARGENTINA TEA OUTPUT

Argentina's export trade returns are beginning to feature a new commodity—tea. As yet the figures are insignificant, but, that Argentine tea can aspire to a place in the London Market is evident from the acceptance it has alreay gained with the regular, and increasing, shipments that have been made in the past 18 months or so. Dutch tea importers and traders have also been showing interest in Argentina's possibility as a substitute source of tea supply for Indonesia, and they have recently invested capital in plantation and factories. Two years ago, such small shipments of Argetina tea as were made were in the nature of an experiment only. Last year, however, some 740 tons valued at $504,290 were shipped while this year exports totalling 1,190 tons worth $959,952 were registered in the first quarter alone. The area under tea cultivation today is some 76,500 acres, nearly all of it in the North-Eastern province of Misiones and mostly planted within the past five years. It has been estimated that when the area is in full production—in a few years' time—the yield in dry leaf should be some 200 lbs. per acre, or an annual output of over 15 million lbs.

WORLDWIDE CRUDE OIL SURPLUS

The most conspicuous feature of the Iraq Petroleum Group of Companies review of 1959 is the emphasis on the present world-wide surplus of crude oil, which it puts at about 250 million tons of oil a year. On this estimate, which will be widely accepted, one-fifth of the world's capacity is now idle. And the report also expresses the growth in productive capacity in the Soviet Union. These comments are naturally relevant to the weakness of the oil market which has caused the recent cuts in Middle East posted prices, which have now been announced by all the major companies, operating in the Middle East. The cost of exploration and development is also given some attention in the report which points out that the group is currently engaged in £100 million capital programme to expand productive capacity in Iraq. Iraq's exports last year totalled 38.3 million tons of which over 80 per cent was shipped to Western Europe while production was a record 40.9 million lbs. The Iraqi Government's revenue from production reached £86.6 million.

RAISINGS AND DESPATCHES OF COAL

The raisings and despatches of coal during June, 1960, from all fields in India were 4,212,691 and 3,733,247 tons respectively. The corresponding figures for the previous month were 4,351,572 and 3,605,319 tons respectively. The daily average loading for the month of July, 1960 from the West Bengal and Bihar fields was 3783 wagons as against 4316 wagons in the month of June, 1960. The highest loading on any day during July was 5501 wagons and the lowest 138 wagons, the correspoding figures for June being 4838 and 3480 wagons respectively. A daily average of 143 wagons was allotted for shipment traffic during July 1960 as against 174 in June, 1960. A daily average allotment of 118.03 wagons was made during July, 1960. About 80,498 tons of coal were despatched to Pakistan during July, 1960.

PRODUCTION OF COPPER ORE IN INDIA

The production of copper ore during January-June, 1960 was 219,464 metric tons, according to the Indian Bureau of Mines. This represents an increase of about 10 per cent as compared to the output of 199,945 metric tons in the corresponding period of the preceding year. The entire production was reported from the Singhbhum district of Bihar State. The production of copper metal during January-June, 1960, was 4,379 metric tons as compared to 3,817 metric tons in the corresponding period of 1959.

Company Meetings

THE NEW INDIA ASSURANCE COMPANY LTD., BOMBAY

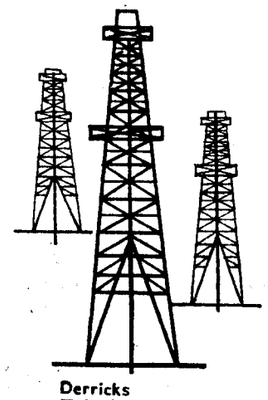
MR. A. D. SHROFF'S ADDRESS TO SHAREHOLDERS

The following is a summary of the Speech delivered by Mr. A. D. Shroff, the Chairman, at the Forty-First Annual General Meeting of the Shareholders of the New India Assurance Company Limited, at Bombay, on August 24, 1960.

Mr. Shroff stated that the year 1959 presented a mixed picture for general insurers all over the world. In India, a basic problem was that the limits of management expenses fixed under Rule 17E of the Insurance Act, 1938, had become unrealistic and he hoped that the Department of Insurance would revise these limits to suit existing conditions.

Mr. Shroff recommended a number of measures to integrate and strengthen the insurance companies in India such as consolidation and integration through amalgamation and group working, rigorous implementation of the provisions of the Code of Conduct and a non-diversion agreement as an interim measure to change over from the present unsound conditions to a new order of soundness, etc. In his view, both Government and industry should take concerted action to rebuild the market on these lines. In his opinion, such a plan called for guidance as also some degree of purposeful and constructive direction by Government.

Mr. Shroff further stated that one of the biggest problems facing the industry was the steady increase in motor repair costs and the rapid rise in the number of automobile accidents. A mere stepping up of the rates was no solution. He recommended, in this connection, the setting up of an efficient claims settling organization. He also emphasized the urgent need to stamp out carelessness and inefficiency in regard to handling of goods and cargo at the railways and ports.



Mr Shroff pointed out that the Government had, by their decision to concentrate in the four companies in the public sector, 75% of the Government business handled through the Indian Insurance Companies' Pool and Indian Aviation Insurers' Scheme, practically withdrawn their support to the Indian Insurance Market. Also, as a result of this, Government were not utilizing fully the underwriting capacity of the whole market and there was likely to be an increased drain of foreign exchange by way of reinsurance effected by the four companies. He pointed out that all the companies are voluntarily giving a 10% share of their business to "India Re". As such, he did not feel that any compulsion by the Government in the field of reinsurance was called for.

On the conversion of "Indian Guarantee," a Subsidiary of L.I.C., into a reinsurance Company, Mr. Shroff raised the doubt whether there was sufficient scope for two reinsurance companies to exist in the Market. He thought that the objective of reducing the foreign exchange drain on reinsurance could be better achieved by encouraging private companies to obtain suitable reciprocity from abroad for the reinsurances they placed. He was of the view that the new reinsurance company could be a better source of strength to the market by specialising in granting reinsurance covers for insurance of growing crops, dairy animals, and hire-purchase business, and not by duplicating efforts already being made in the normal type of reinsurance.

Referring to the working of the Company, Mr. Shroff stated that the large-scale reorientation of the Company's organisation was only completed last year and the Company was able to concentrate its attention on the expansion of business. He also pointed out that the Company's investment policy was making its own contribution towards the development and expansion of industries in the country.

Dealing briefly with the trends in the Indian economy, Mr Shroff pointed out that the country faced two serious problems, viz., (i) the continuous rise in the level of prices; and (ii) the progressive depletion of our foreign exchange balances. He felt that measures taken by Government in the monetary field were not likely to curb any rise in prices, so long as ambitious development plans, unrelated to our resources, continued to be imposed on the country. He expressed the fear that the stresses and strains to which the economy is subjected may well reach a stage where it may involve a large-scale breakdown of the economy.

(This does not purport to be a record of the proceedings of the meeting.)

BURMAH-SHELL REFINERIES LTD.

Statement by the Chairman, Mr. P. D. Tew, at the Seventh Annual General Meeting held on 29th August, 1960

The Directors' Report and Statement of Accounts for the year are before you. The income from refining has increased from Rs. 9.68 crores to Rs. 10.91 crores while the income resulting from duty protections declined from Rs. 3.41 crores to Rs. 1.86 crores; at the same time, despite the increase in throughput of 208,540 metric tons, expenditure has been reduced by Rs. 25 lakhs.

Following on the new provisions included in the Indian Income Tax Acts of 1959 and 1960, your Company has had to set aside only Rs. 1.90 crores for taxation on 1959 profits compared with Rs. 2.51 crores in total charged in the 1958 accounts and this fact coupled with the reduction in expenditure already mentioned, explains the apparent anomaly of a reduction in gross income of Rs. 39 lakhs but an increase in net income of Rs. 41 lakhs.

An interim dividend of 15 nP per rupee was declared and paid in December 1959 on the paid up ordinary share capital absorbing Rs. 207.3 lakhs and the Board now recommend a final dividend of 3 nP. per rupee which will absorb a further Rs. 41.4 lakhs; income tax at 20 per cent, subject to any relief which the Shareholders will be due under Section 15(C), will be payable on these dividends and in increasing the dividend this year from the 15 nP paid in 1958, the Board have acted to leave approximately the same amount with Shareholders as they obtained before the tax changes introduced in 1959.

The year 1959 is the last year in which your Company will be able to benefit from Section 15(C) of the Indian Income Tax Act and it is appropriate to mention here the voluntary surrender of duty protections from July 1, 1959, which means there will be no further income from this source on products currently manufactured at the Refinery. From 1960 onwards therefore the prosperity of your Company must depend largely on the income from refining and the efficiency of operation; in this respect I am happy to be able to say that I am fully confident that we shall be able to maintain efficiency at a standard which has already been proved second to none.

I do not think further remarks are required on the detail of our 1959 accounts which are set out fully in the documents already circulated to you.

During this year there has been considerable speculation and comment in the press on future refining prospects in this country and I should like to set before you the thoughts of your Board on some of these difficult and intricate problems.

First and foremost, what is the size of the problem? How much petroleum will be consumed in 1966? To begin with I suggest that by this date the range of petroleum products in India will have increased and a mathematical progression based on the existing offtake of existing products will by no means tell the whole story of future demand. Some of these products are refinery gas for petro-chemicals and fertilizer plants, naphthas for gasification for chemical and industrial use and perhaps alternative fuels for aircraft, automotive transport and railway engines. I would mention that your Company has already arranged to reserve for specific projects all available supplies of refinery gas, has arranged to supply up to 30,000 tons of naphtha in 1961 for a specific contract and can make available a further 100,000 tons of naphtha.

In this context I think it is important to define the word "demand". The definition used by your Board is the total requirement in India of refined petroleum, i.e. excluding natural gas but including oil required at Indian airfields and ports for international aircraft and ships. With this definition the demand in 1955 was 4.67 million tons and in 1960 will be approximately 7.50 million tons; applying the same rate of expansion the demand should be 13.4 million tons in 1966. In the view of your Board this is a minimum figure as apart from any new products to be introduced it is felt that if, as we all hope, the vast and courageous Third Five-Year Plan is fully effective then the rate of expansion must in practice increase. I consider therefore that it would be prudent for the Oil Industry to set its targets to cater for a demand of at least 14 million tons of refined products in 1966.

There can be no question that the first priority should be the exploration and production of indigenous crude oil; it is significant that the Planning Commission have allotted considerable sums for this purpose and that the Government have stated that, if satisfactory agreements can be reached, they would welcome the entry of private companies into this field.

The second priority must surely be to increase refining capacity in India. Existing capacity is estimated at around 6 million tons. To meet the balance of 8 million tons likely to be required by 1966 only the two public sector refineries estimated together at 2.75 million tons capacity have been, sanctioned. This leaves a gap of some 5.25 million tons. Additional refinery capacity is likely to cost over Rs. 60 crores and, to the extent that Government agree to this being financed by the private sector, there is a corresponding relief to the public sector, already pressed for foreign exchange. Before summarizing progress on the expansion proposal put forward by your Board last year to meet a part of this gap, I should like to outline your Board's views on the possible effects of not expanding refining capacity and leaving the gap unclosed.

If local refining capacity is insufficient to meet the full product demand, there will have to be imports of finished products irrespective of the availability of indigenously produced crude oil. To cover these product imports either additional foreign exchange will have to be found or commodity exports may have to be diverted to barter deals at the expense of foreign exchange earnings. It is difficult to forecast average

prices for imported petroleum products in 1966 but I believe Rs. 150 per ton may well be conservative and at this figure the cost of the products still to be imported will be over Rs. 75 crores a year in 1966. Today's landed cost of crude oil is about Rs. 65 per ton so you can see the big reduction that can be made in the import bill by increasing refinery capacity and bringing in crude oil rather than products; even after making allowance for the foreign exchange needed to operate the additional indigenous refining capacity (mainly refinery fuel and unavoidable imports of stores and materials) and to service the additional foreign capital investment there should be an overall net benefit to the economy of some Rs. 25 crores per year by 1966 if refining capacity is increased in time.

Against this background it will be recalled that in return for conceding the duty protections amounting annually to over Rs. 3.5 crores the Government undertook to examine on its merits a proposal for an increase of approximately 1 million tons in refinery capacity and for the addition of a lubricating oil plant.

Since that date, the Government have been advised that your Company could expand capacity to approximately 4 million tons within 18 months and complete a lubricating oil manufacturing complex of between 60/100,000 tons annual capacity within a further year.

There would be no request to Government for foreign exchange for this expansion.

The net saving in foreign exchange would amount to approximately Rs. 6 crores per annum — effective from 1963 if early sanction to proceed is given.

These then are the outline merits of the expansion case which Government have already undertaken to examine in exchange for our surrender of duty protection.

At the moment we are re-examining the physical aspect of our proposals and I feel there may be room for further modification to the Refinery Agreement provided your Company were permitted to go ahead with this proposed expansion.

No discussion of refinery expansion in India is complete without reference to what is known as the imbalance problem. Forward estimates still show an imbalance between a demand for individual products and the yields of existing and projected refineries resulting in a surplus, for example, of motor gasoline. Ways and means of minimising these surpluses are engaging the Government's/Industry's close attention and even if these measures do not meet with complete success, it is still felt that arrangements can be made to dispose of a fair portion of the remaining surpluses outside India. In the circumstances it can be said that our expansion proposal will do nothing to aggravate the imbalance position in India — and promises to do much to alleviate it.

Earlier I referred to the high standard of efficiency which has been achieved, and I should like to make particular mention of one technological advance. Last year your Chairman reported that the yield of gasoline had been reduced between 1956 and 1958 from 23 per cent to 16.5 per cent while middle distillate production had been increased from 31.8 per cent to 34.6 per cent. Currently the Refinery is producing about 15.0 per cent gasoline and 45.0 per cent middle distillates, an outstanding achievement and a real milestone towards the objective of making refinery production conform to the product pattern requirement of India.

I should also like to mention that every effort continues to be made through improvements in manufacturing technique and the removal of bottlenecks to maximise crude oil throughput of the Refinery as it exists today. Admittedly any increase achieved may throw up small extra quantities of motor gasoline for export, but so long as a home can be found for these exports, they earn welcome foreign exchange and increased crude throughput will, of course, reduce the import bill for most other products.

The task ahead is massive; the demand for oil is built into the process of economic development and as India progresses to the stage of self-sustaining growth petroleum consumption in agriculture, transport and industry will advance. There is no alternative to this expansion of oil demand; it will continue through the Third Plan period and beyond it, gathering momentum with time. The expansion is a challenge and a challenge that can only be met if there is unity of purpose and unity of effort inspiring every section of the Industry. While the public and private sectors will therefore have to work in unison and at maximum tempo, there is clear and evident need for each sector to develop with a sense of partnership in a common endeavour.

I should like once again to thank the Managing Director and all those who work for him for another year of high performance, unfailing ingenuity and the readiness always to find the answers to the new situations with which they are so constantly faced. On their good work the continuing prosperity of your Company depends.

OBJECTS

The Company was incorporated on 22nd June, 1960, for the several purposes set forth in the Memorandum of Association. The main object of the Company is to set up an integrated Pulp and Paper Plant with a capacity of 20,000 tons per annum.

PROSPECTS

India is now going through a phase of acute shortage of paper of every description. Despite the recent increase in domestic production capacity a considerable gap remains between the supply and demand. While the annual demand at the end of the Second Five-Year Plan period was estimated by the Planning Commission at 3,50,000 tons, the existing mills in spite of their recent expansions have not been able to reach the above target. We are now on the threshold of the Third Five-Year Plan period and the Planning Commission has estimated that the country's needs will be of the order of 7,00,000 to 9,00,000 tons by the end of the Third Five-Year Plan. It is, therefore, imperative that new units to produce paper must be established in order to meet this urgent need and this is reflected in policy statements made by the Government from time to time, both in Parliament and in public platforms.

With the rapid rise in literacy and steady increase in industrial activity and in the field of organised commerce, more and more writing and printing paper will be needed and it will take a considerable number of years before production catches up with demand. In this context, the prospects for Paper Industry are very bright indeed.

This Company has been promoted by Messrs. Seshasayee Brothers (Private) Ltd.

SITE

The Pulp and Paper Mill will be located on the bank of river Cauvery at Cauvery Railway Station, about three miles from Erode Junction on the Southern Railway. The Pulp and Paper Mill will be located centrally to the various reserve forests wherefrom bamboo will be supplied. The Pugalur Sugar Factory, wherefrom sugar cane bagasse will be made available, is situated at a distance of only 35 miles. The main Chemicals such as Chlorine, Caustic Soda and Lime are available at Mettur within a distance of less than 50 miles. Being located on the bank of river Cauvery, unfailing and copious supply of water is ensured. The Cauvery Station is served by main broad-gauge railroad from Mettupalayam to Madras. The area is also well-served by National Highways. Thus road and rail transport facilities for movement and transport of goods and materials are available in ample measure. Arrangements have been made to acquire sufficient land to meet not only immediate requirements, but also the needs of future expansion.

RAW MATERIALS

The two major fibrous raw materials, which will be used are bamboo and sugar cane bagasse. Bamboo is the traditional paper making material in India. Sugarcane bagasse is being used successfully in many countries. The paper making characteristics of these two fibres are such that their combination will produce excellent printing and writing papers of various types and varieties.

There are a number of reserve forests within a radious of 40 to 60 miles from the mill site which will yield an abundant supply of bamboo required for the factory. The Company intends to secure from the Deccan Sugar and Abkhari Co. Ltd., supply of adequate quantities of sugarcane bagasse at reasonable costs.

POWER AND WATER SUPPLY

As against a total power requirement of 4,500 kw, the Company proposes to generate about 2,000 kw. by utilising the steam that is employed for diverse process in the Mill. The balance of power requirement can be obtained from the Madras State Electricity Board's Grid, in respect of which the necessary assurances have been received.

Tre river Cauvery will provide unlimited quantity of good water for meeting the requirements of the Industry.

MARKETS

There is no paper mill in the State of Madras. The demand in this State together with the demand in the two adjoining States of Kerala and Andhra will far exceed the production in this Mill. Thus no marketing problem is expected to arise.

PLANT AND MACHINERY

An agreement has been entered into by this Company with Messrs. Parsons and Whittemore South Asia Company Inc., by which they undertake the complete engineering, erection and commissioning of the plant, and procure the bulk of the machinery, which will be of the latest design from U.S.A.; items of machinery and equipment of indigenous origin being reserved to be procured in India. The Government of India have been pleased to provide for the entire foreign exchange required for the project from the Export-Import Bank Loan Aid Programme.

The agreement with Messrs. Parsons and Whittemore South Asia Company Inc., provides specifically for the procurement of machinery suitable for producing not less than 60 long tons of paper per day of continuous operation; and for the designing of the factory buildings and the engineering, procurement and installation of the plant and machinery and its commissioning and operation to reach the guaranteed production stage.

The agreement provides for the delivery of machinery in India within 24 months from the date of contract but Messrs. Parsons and Whittemore South Asia Company Inc., have agreed to use their good offices to accelerate deliveries so that the factory can come into production in about two years time.

Messrs. Parsons and Whittemore South Asia Company Inc., are well-known to the Paper Industry as the export arm of Messrs. Black Classon who have world-wide reputation as paper machinery makers with special knowledge in the working of bamboo and bagasse. They have build many factories in the United States, as well as Europe and South America and have currently on hand a world wide construction programme.

Import Licence CCP No. 998532|EXIM|60|HQ|CG dated 4th July, 1960, has been obtained from the Chief Controller of Imports and Exports, Government of India, for the import of the above plant and machinery and an irrevocable letter of credit has been opened through the United Commercial Bank Limited, in favour of the aforesaid suppliers,, viz., Messrs. Parson and Whittemore South Asia Company Inc., U.S.A.

CAPITAL OUTLAY AND MINIMUM SUBSCRIPTION

In respect of the public issue under this Prospectus, the minimum subscription on which the Directors will proceed to allotment is Rs fifty lakhs being five lakhs of Equity shares of Rs. 10 each.

The Capital required to reach the stage of production is estimated to be as follows:

(1)	Land and Buildings	Rs. 56,00,000
	Machinery and Equipment including freight and erection charges ..	„ 4,43,00,000
	Engineering fee and supervision expenses	„ 40,00,000
		Rs. 5,39,00,000
(2)	Preliminary expenses	„ 3,00,000
(3)	Brokerage and underwritten commission	„ 8,00,000
(4)	Working capital	„ 50,00,000
	TOTAL ..	Rs. 600,00,000

It is proposed to provide the said sum of Rs. 6 crores as follows:

Out of the proposed issue of share capital of Rs. 3,50,00,000, the signatories to the Memorandum, the Madras Industrial Investment Corporation Ltd., and friends of the Directors and promoters of the Company have already subscribed and have been allotted 20,01,000 Equity shares of Rs. 10 each. Out of the balance, 49,000 Equity shares are reserved for further allotment to the promoters and their friends. The balance of Rs. 1,45,00,000 consisting of 14,50,000 Equity shares, is now offered for public subscription.

The sum of Rs. 2,50,00,000 (being the difference between the estimated capital requirements of Rs. six crores and the Equity share capital of Rs. Three crores and Fifty lakhs) as well as any increase, if any in the actual cost over the estimated cost of the plant, machinery and facilities and any amount by which the allotment to the public out of the present issue falls short of Rs. 1,45,00,000 will be raised to the extent required by loans from the Bankers and other financial institutions and if necessary from other sources.

ESTIMATE OF PROFITS

The Company intends to instal up-to-date machinery and equipment and utilise modern manufacturing processes. Based on market conditions, the Directors are satisfied that the operation of this Mill will yield a satisfactory return on the capital invested.

The Company will enjoy the special benefits under the Indian Income-tax Act, 1922 as regards development rebate and depreciation; in addition, as a new Industrial undertaking, it will enjoy exemption from Income-tax for profits up to 6 per cent on the Capital employed for the first 5 years of the Company's operation.

MANAGING AGENTS

The Company will be under the management of Messrs. Seshasayee, Parsons and Whittemore Private Limited, a private company formed jointly by Messrs. Seshasayee Brothers (Private) Limited of Tiruchirapalli and Messrs. Parsons & Whittemore Paper Mills Corporation, State of Delaware, U.S.A. Messrs. Seshasayee Brothers (Private) Limited are well-known industrialists and the Managing Agents of several successful industrial enterprises in South India. Messrs. Parsons & Whittemore have considerable experience in building and operating pulp and paper mills throughout the world. Their knowledge and know-how will be available to the Company for designing the plant and commissioning it. Their associate Company have sub-

scribed Rs. 75,00,000 to the capital of the Company and thus have a substantial stake in its prosperity. The combined experience of these two organisations will ensure the speedy completion and successful operation of the Mill.

Articles 139 and 140 of the Company's Articles of Association provide for the appointment of Messrs. Seshasayee, Parsons and Whittemore Private Limited as Managing Agents of the company on the terms of a draft Managing Agency Agreement referred to therein.

The Articles Provide that subject to the approval of the Central Government, Seshasayee Parsons and Whittemore Private Limited shall be the Managing Agents of the Company on the terms of the draft agreement above referred to. The Managing Agents will be paid by way of remuneration a commission on the net profits of the Company, at the following rates:

10% on the first Rs. 10 lakhs or fraction thereof;
9% on the next Rs. 10 lakhs or fraction thereof;
8% on the next Rs. 10 lakhs or fraction thereof;
7% on the next Rs. 10 lakhs or fraction thereof;
6% on the next Rs. 10 lakhs or fraction thereof;
5½% on the next Rs. 25 lakhs or fraction thereof;
5% on the next Rs. 25 lakhs or fraction thereof;
4% on the balance of the net profits of the Company or fraction thereof.

In the event of inadequacy or absence of profits, the Managing Agents will be paid a minimum remuneration of Rs. 50,000 per annum. The expression "net profits" shall have the same meaning as defined under Sections 349 and 350 of the Companies Act, 1956.

DIRECTORS

The Articles provide that there shall be a minimum of six Directors and a maximum of twelve Directors including ex-officio Directors. The Articles further provide that the Board of Directors may at any time declare in respect of any Director that his continued presence in the Board is of advantage to the Company and that he shall not be liable to retirement by rotation. The maximum number of Directors not liable for retirement by rotation should not exceed one-third of the total strength of the Board.

APPOINTMENT OF DIRECTOR BY THE MADRAS INVESTMENT CORPORATION LIMITED

The Madras Industrial Investment Corporation Limited, so long as they hold Equity shares of the face value of Rs. 30,00,000 in the capital of the Company, or so long as any monies are due by the Company in respect of any loan advanced by the Madras Industrial Investment Corporation Limited, or guaranteed by them shall be entitled to appoint an ex-officio Director to the Board.

PRELIMINARY EXPENSES

The estimated amount of preliminary expenses (inclusive of about Rs. 1,00,000 towards expenses of this issue but exclusive of underwriting commission and brokerage) is Rs. 3,00,000 and will be paid and borne by the Company.

ISSUE OF SHARES

By a Resolution passed at an Extraordinary General Meeting dated 12th August, 1960, directions have been given that the shares now issued need not be offered to the existing shareholders for subscription and that the Board of Directors shall be at liberty to offer and allot the whole or any portion of the issue for public subscription or allot in such manner as they deem fit.

UNDERWRITERS

The Company has entered into agreements with the Life Insurance Corporation of India, the following Banks and Brokers under which they have agreed to underwrite equity shares of the face value set out respectively against their names.

Date	Name		Amount
16-8-1960	Life Insurance Corporation of India, Bombay.	Rs.	25,00,000
-do-	The United Commercial Bank Ltd., Calcutta.	,,	25,00,000
-do-	The Bank of Baroda Ltd., Bombay	,,	25,00,000
-do-	The Indian Overseas Bank Ltd., Madras.	,,	25,00,000
-do-	Devkaran Nanjee Banking Company Ltd., Bombay.	,,	15,00,000
-do-	Messrs. Chitra & Co., Madras	,,	5,00,000
-do-	Messrs. Maconochie & Co., Madras.	,,	5,00,000
-do-	Messrs. Paterson & Co., Madras	,,	5,00,000
-do-	Messrs. P. R. Subramanyan, Bombay.	,,	5,00,000
-do-	Messrs. Lewis & Jones, Bombay.	,,	5,00,000
-do-	Messrs. C. M. Pyne, Calcutta.	,,	5,00,000
	Total	Rs.	1,45,00,000

The Directors are of opinion that the resources of the Underwriters are sufficient to discharge their respective underwriting obligations.

Under the said agreements, the Underwriters are entitled to an underwriting commission of 2½% of the face value of the shares respectively underwritten by them exclusive of brokerage, referred to below.

BROKERAGE

Subject to Clause 13 of the Articles of Association of the Company, brokerage at the rate of 1% will be paid on all allotments made in respect of applications bearing the stamp of a Bank or a recognised Broker. Brokerage on the same basis is payable to underwriters in addition to the underwriting commission, on allotments in respect of applications made or procured by them and bearing their respective stamps.

OTHER COMMISSIONS

The Madras Industrial Investment Corporation Limited will be paid commission at 2½% of the nominal value of the equity shares subscribed by them.

INSPECTION OF DOCUMENTS

Original and/or copies of the Memorandum and Articles of Association of the Company, Consent of the Controller of Capital Issues, License issued by the Government of India for establishing the industrial undertaking, Import Licence issued by the Chief Controller of Imports, Government of India, for the import of machinery, Auditors' Report, Contracts and agreements can be inspected at the Registered Office of the Company at No. 1, Alexandra Road, Cantonment, Tiruchirapalli-1, during the usual business hours on any business day for the period the subscription list remains open.

PROSPECTUS AND APPLICATION FORMS

Application for Equity Shares must be made on the respective forms accompanying the Prospectus. Application should be for a minimum number of 100 Equity Shares.

Copies of the Prospectus on the terms of which alone, applications will be considered and application forms may be obtained from the Registered Office of the Company, the Company's Bankers, the Underwriters and the Brokers whose names have been mentioned in the Prospectus.

The Eastern Economist

SEPTEMBER 9, 1960.

The Governor's Place

ON Monday this week in a *cause celebre* the Constitution Bench of the Supreme Court defined the place of a State Governor in respect of Article 161 of the Indian Constitution. By implication, the judgment, by a four to one majority, conveys a rebuke on the Governor and, since in this case it is known the Governor acted on the Central Government's advice, on the Prime Minister, the Defence Minister, and the Law Minister who initiated action in this case! A nice reading of the judgment might indicate that the rebuke was very qualified in that the operative part of the judgment was only in respect of the point that Commander Nanavati was to surrender to his sentence or to the orders of the Supreme Court before his appeal was entertained. In other words, the powers of a Governor under Article 161 were not impugned, so far as proceedings preparatory to the Supreme Court appeal are concerned. Nevertheless, since the context of the Governor's order was in the light of an appeal to the Supreme Court, thereby raising a conflict between the powers of the Governor under Article 161 and the Supreme Court's rules, the Executive has been shown its place. This is somewhat different from the judgment of the Constitution Bench of the Bombay High Court where no such conflict seems to have appeared; the difference seems to arise from the character of the Supreme Court in the Constitution. Happily it is paramount — as against a Governor attempting parallel jurisdiction.

The legal pedants will continue to argue as to the extent to which the Governor's action was improper. Now that the Supreme Court has given a decision in respect of the need for Commander Nanavati to surrender to his sentence, or in the alternative to accept the Supreme Court's directions as against the Governor's directions in the matter of custody, there is still room for a Governor's action of the kind that has been unfortunately allowed to occur. For there will always be a lag before the Supreme Court's jurisdiction is invoked. If in this case, the law provides an insufficient reply to the critics of the Governor, it is necessary to observe that it equally provides him no support. Where case law is incomplete, as in the exact area of operation of the powers of a Governor under Article 161, and Supreme Court's powers under Article 142 of the Constitution and the rules made under Article 145, good sense should prevail against a mere catalogue of legal rights of operation.

The Eastern Economist takes the view, with a great majority of people in the country, that the issue is not in regard to this particular case and the extent of support that can be wrung from the Indian Constitution for the Governor's action. While the Advocate-General of Bombay has lost his point that the Governor's authority under Article 161 and the Governor's powers were undeterred even when the Supreme Court was seized of the matter, this is not the issue. The issue is a convention in regard to the place of the Judiciary and the Executive. It is vital that in a Parliamentary democracy a conflict between the Executive and the Judiciary in the exercise of justice should be prevented by a clear exercise of powers by the Judiciary over the Executive. The Governor's attempt to encroach upon the functions of the Judiciary and the orders of the courts by intervening at an intermediate stage of trial is reprehensible, not so much in law as in sound democratic practice. Whether in point of fact the law explicitly prohibits such action or not, it is against the spirit of the Rule of Law for the Governor of Bombay to have acted as he has done. It is even more reprehensible because the Governor did not act on his own initiative, but was persuaded by interested parties in Delhi to act for them under virtual political pressure. The abuse of power by a monolithic executive has thus been amply illustrated. For the rest, the country can afford to wait for the Bombay Governor's further action and the Supreme Court's further directions. At least the Central Government and the Bombay Government will now be convinced of their supreme error in attempting to protect a particular individual from the consequences of his conviction. We should take pride in the demonstration that the Rule of Law has withstood the attempt of the Central Executive to distort this country's pattern of justice to its purpose.

State Steel in Siege

THE State steel plants all of which have been duly inaugurated in 1959 are in a state of siege. They are like beleaguered garrisons awaiting supplies. What the effect of these mishaps on the country is no one has yet computed. Perhaps this is the time for the facts; later, the judgment.

On August 19. Sardar Swaran Singh gave a shock to the Lok Sabha when he made the amazing admission that the third blast furnace at the Rourkela steel plant, although fully erected, could not be put into commission possibly until the end of December this year. This was due to lack of adequate and continuous supplies of coking coal and also of iron ore to some extent. Even so, the Minister for Steel ventured the optimistic forecast that towards the end of the present Plan the supply position of coking coal would yield a surplus of anything up to 115,000 tons per month. If Rourkela's third blast furnace seems threatened with starvation until the close of 1960, on what basis is the surplus production immediately after 1960 envisaged? While the Minister sought diver-

sion in drawing a complacent picture of the prospect of coal production (and with it of steel production) on the eve of the Third Plan, the third blast furnace at Bhilai, which was ready at the fag-end of the last month, joined company with its opposite number at Rourkela. Delays have occurred in keeping the schedules of the construction of the plants. The additional time, which thus became available for ensuring production of coking coal, was lost.

A Working Group, representing Government and industry, has been set up recently to prepare a programme of coal production "colliery-wise and grade-wise" for the rest of the period of the present Plan. Whether the results of its detailed investigation, in so far as it relates to the coking coal component, will justify the promised monthly surplus of about 115,000 tons will be disclosed in a few weeks' time. If this summary planning is matched by objective policies assuring implementation, steel may get early relief from a chronic shortage of coal. The position at present is that there are substantial gaps between demand and supply and, as the Special Article in this issue demonstrates, rail transport has aggravated the situation.

These gaps would underline progressive deterioration in the supply situation. One such crucial gap is conspicuous in the strategic indicator of stocks with industry. The size of coal stocks has shrunk substantially from 2.99 million tons to 2.35 million tons in January 1959 and 1960 and from 2.66 million tons to 1.92 million tons in May during the same years. The reasonable conclusion to draw is that increasing overall output, covering all categories and grades of coal, in 1960 has failed to keep pace with the rapidly rising demand. A positive shortage has developed in spite of some increase in overall production.

Trends in the output of metallurgical coal are of real relevance to the steel industry and emphasis on the overall picture may obscure the critical nature of the situation. Looked at from this material angle, the current year has a depressing tale of declining production to tell. Output of soft coke decreased from 174,771 tons in March this year to 158,204 tons in April to take a precipitate drop to 130,440 tons in May. The crisis of steel production, as ironically demonstrated by the enforced idleness from the very outset of the costly new blast furnaces in the State plants, is but a reflection of the deeper crisis of coal production. It gives a foretaste of the critical situation ahead if policy on coal is not overhauled now.

The challenge posed by the recurring crises of coking coal should have created a new sense of crisis reflected in Government's search for solutions. It is discouraging to find that this sense is not being displayed. While the Working Group is busy preparing the short-period programme of accelerated expansion, collieries in the private sector have been assured that all aids will be granted to them with the significant exception of a price increase. Emphasis on price increase always provokes carping criticism of the industry's "disguised design" to grab a larger profit. What really is the truth of the situation?

The plea for price revision is no partisan advocacy. It is a pressing necessity so cogently argued by the World Bank's mission whose report on the Third Plan Draft is now ready. The mission has stated in words beyond equivocation that a target of 90-95 million tons (as against a target of 97 million tons envisaged in the Draft for the Third Plan) will not be realized unless radical changes are brought about in the Government's policy on coal. The major changes it has suggested are to put "modest" trust in the capacity of the National Coal Development Corporation to deliver the goods, to remove restrictions on the issue of new mining leases to private colliery-owners in virgin areas beyond what are contiguous to their present mines and to allow higher prices to facilitate reinvestment. It has recorded its candid view that policy should work for dismantling the price control. Government ought to treat this disinterested and expert verdict with the respect which is its due and subordinate its political prejudices to the logic of hard facts.

The Debate on Assam

THE controversial three-day debate in the Lok Sabha last week on the recent disturbances in Assam has been less helpful in analysing the background to a deep tragedy, than in displaying the diversity of opinion in Parliament. Various reasons have been suggested as to the origin of the disturbances. It has been generally made out that the language agitation had much to do with it. But the very fact that the people in the districts of the Brahmaputra valley, who are by no means opposed to Assamese as the State language, were the worst affected showed that factors other than language were also at play. Acharya Kripalani levelled the charge that there was a "deep-rooted campaign" behind the riots, and there was a clique which wanted to get rid of the Chaliha Ministry. According to the statement of the Assam Government, while the riots were no doubt the result of the language agitation, they were only manifestations of a deep-seated social and economic malady and of a sense of frustration which unfortunately afflicted the people of Assam. Finally, as the Prime Minister himself diagnosed during the course of the debate, the State had remained backward with its numerous problems, especially after Partition, and there were all kinds of "urges" among the Assamese people to come forward and all kinds of difficulties to face. This is an aspect that cannot be ignored, while analysing the background to the recent tragedy.

Though the magnitude of the damage to the property has yet to be properly assessed, even the few figures given from official sources are quite disturbing. According to Government estimates, apart from the loss of lives, 7,000 houses have been destroyed and 1,200 houses damaged. The number of people who had migrated from Assam has been estimated at about 42,000. In spite of the different versions, it also came out during the debate that during the time of riots, the administration for one week failed very badly. The Chief Minister was ill, and the Finance Minister, who was a senior member of the Cabinet, was in Kashmir. There seemed to be no precise knowledge in Delhi of exactly what was going on in Assam, and even if it were so, no action seemed to have been taken in the initial stages. Mr. Nehru himself admitted that the intelligence apparatus was "very, very bad", which made it appear that the situation was far from serious. As against this, there was the statement of Mr. Atulya Ghosh that the I.G. of Police of Assam had sent a note as early as June 1 apprehending "major" trouble. What is more perplexing was even after the trouble assumed serious proportions, the Centre was not able to take any effective action.

No doubt, the army was there, but since it was under the command of local administration, it could not take any independent action. It was courageous no doubt on the part of the Prime Minister and the Home Minister, who vied with each other in owning responsibility for any "lapses" on the part of the Government, but the fact remained that many members remained unconvinced that Government did all it could have done.

So far, as regards the past. The question is what is to be done not only to retrieve the damage, but also restoring a sense of confidence and security in the minorities to facilitate their return. Though the suggestion for President's rule has been canvassed, it would appear that the balance of advantage lies in not resorting to it. For one thing, it would have the effect of humiliating the Government and indirectly the people of Assam. Secondly, as the Home Minister pointed out, President's rule with only the Governor and a few officers associated with him could not have been very effective since the real difficulty in Assam was the weakness of the administrative machinery which could not be remedied in a day or two. Finally, in the ultimate resort, it is the State Government and the people of Assam who should squarely face the responsibility for restoring confidence in the minorities.

This is more easily said than done. But the statement of the Assam Government that they would take steps for toning up the administrative apparatus of the State and deal firmly with the offending Government officials, who showed partisanship, and take firm action against those who committed crimes may go to some extent in reviving confidence. It is also good that the Government has taken up seriously the question to rehabilitation of victims of the riots which will now be supervised by a member of the Union Government. Again, though the demand for an immediate judicial enquiry has been turned down (on which there was considerable lobbying and divergence of opinion), it has been agreed that three or four quick enquiries would be held in different regions to find out the malefactors and punish them. The judicial enquiry that is intended to probe into the deep-rooted causes of the disturbances will be held later at the "appropriate time," since as Mr. Nehru showed, such a comprehensive enquiry at the present juncture would only have the effect of reversing the "processes of healing" that would now be undertaken. A fact of some concern is the reference made to the Press during the debate. It is to be hoped that the Government will not fall into the error of doing anything in haste which will only hamper the Press in developing a sense of responsibility.

Fertilizers for Sugar

MR. S. K. Patil has often described himself as the Minister for Agriculture rather than for Food, meaning thereby that his main concern is to step up farm output. That he is going about this task in right earnest is evident from his declaration at the concluding session of the State Agriculture Ministers recently that "he was thanking of exporing sugar and utilising the foreign exchange proceeds for the import of fertilizers". The linking of sugar exports to fertilizer imports does not imply that foreign exchange would not be made available for the purpose otherwise. It only underlines the fact that, happily, there is now a greater awareness in the counsels of the Government of the need to increase agricultural production through application of inorganic manures.

A disconcerting note in this otherwise promising outlook, however, is the growing imbalance between the demand for and supply of fertilizers. Of late, the supply situation has grown very tight thanks to fall in output at Sindri last year — which, it is understood, is not likely to be made up for at least another year — and the rapidly increasing demand consequent upon improvement in the financial position of the agriculturists, who, as a recent survey conducted by the Indian Institute of Public Opinion reveals, have become remarkably conscious of the yield-raising potentialities of chemical fertilizers. The shortfall in the supply during the Third Plan, at least in the first two years of its operation, available estimates of production suggest, is likely to become more acute. As indicated in these columns earlier, with the optimum progress in plant construction, production of nitrogenous fertilizers in this country would not exceed 3.5 to 4.0 lakh tons by 1963. Consumption during the current agricultural year itself is expected to increase to 3.6 lakh tons. By 1963, with the implementation of the "package programme" in full swing, it may well be in the neighbourhood of 6 lakh tons. Obviously, imports will have to be stepped up to nearly 2.5 lakh tons in another three years, if there is to be established a near balance between demand and supply.

How are these imports going to be financed? No doubt, Mr. Shriman Narayan, Member for Agriculture in the Planning Commission, has promised adequate provision in the next Plan for fertilizer imports, it requires no second thoughts to point out that sufficient foreign exchange will not be available for financing these imports. Attempts have, therefore, to be made to explore possibilities of earning some additional foreign exchange which can be specifically earmarked for the import of fertilizers. It is presumably in this context that Mr. Patil has come out with the suggestion of exporting sugar to finance fertilizer imports. The suggestion is quite practicable at the present juncture and needs to be pursued. Carry-over stocks of sugar from the current season are likely to be around 500,000 tons, out of which an export allocation to the tune of 100,000 tons can be conveniently made. If these exports are effected to the United States, as has been suggested, India can easily earn foreign exchange worth about Rs. 6 to 7 crores, which can finance fertilizer imports to the extent of 200,000 tons.

A notable development has recently taken place in the Western countries in regard to the manufacture of nitrogenous fertilizers. Faced with the task of reducing production costs, these countries are reported to be going in for liquid fertilizers which are less costly to produce than granular fertilizers. The Government should explore the possibilities of adopting this practice here in view of the heavy expenditure that the country will have to incur to step up fertilizer production to meet the growing needs of its agrarian economy. The difficulties of storage and transport may be there in the initial stages, for liquid fertilizers will require tank type wagons for movement. But they are not insurmountable.

A DELHI DIARY

WATER, WATER, EVERYWHERE!

THERE have been floods and rumours of floods; and, of course, everyone knows the tragic story of Rohtak which has been all but submerged after a noble battle in which the army has played a splendid part. What is remarkable is the extent to which our people, visited by great natural misfortunes of this kind, carry on with stubborn determination and good cheer. It makes one proud of being an Indian like unto them. A tea vendor of Rohtak acquired fame in New Delhi newspapers by the fact that in the middle of the flooded street he kept his tea stall going right through the floods. I have been collecting—such is the force of journalistic urge—similar stories of heroism in the Orissa floods and the Punjab floods, which this year have been more severe than almost at any time in living memory. I must confess that as a result of this proximity to abundant water, I have this week pursued water (and the consequences thereof) to the exclusion of subjects of greater international importance. One of my friends, putting it gently, says that I now have water on the brain. It is a fact that most people in Delhi have become very conscious of water—the best of servants, now the worst of masters. It is rapidly replacing another element, fire, of which this was originally said. Can we not teach moderation to these two unruly elements?

AFTER KHANPUR, SULTANPUR

Who amongst my readers has heard of Sultanpur? This is not another Sohna to which I referred last week as the source of possible disturbances resulting in a recent Delhi earthquake. Sultanpur is a tranquil spot about three miles from the Qutab Minar, still I believe in Delhi State or conceivably just outside. Here, in a plot of one acre, I saw last Sunday an experiment which has been tried elsewhere over some years, but is now reaching what is often described as the "critical point" of decision. Some people, and not a few journalists, think that it is a wonderful idea; others, and not a few irrigation pundits or persons under that guise, think that it is one more white elephant. But here at least is an idea which has reached, as I stated, the critical stage of decision. This means—in Delhi at least—that it has endured hard times for what the Americans call "quite a time." So, I might say, has its inventor!

I am aware that Khanpur—the village not very far away from Delhi, where the Ford Foundation initiated a grand experiment on the production of electric power by bullocks with irrigation as a by-product—is being written off. But in Khanpur it was the experts who were optimistic and we (innocent laymen) who were sceptical. We proved to be right in the event; but does the fate of Khanpur matter? The need for a solution of the problems of village irrigation remains as difficult but as necessary as ever. The Sultanpur well is submitted as a possible solution in some areas. In any case, since Nature abhors a vacuum, I trust that it will be received as a better than the emptiness which now prevails!

Let me provide some technocracy in addition to mere description. The Sultanpur well is an inverted cone dug out of the ground covering an area of about an acre. In the manner in which it was done with high wage rates in the Delhi area, excavation and other related work cost Rs. 60,000. There is about thirty to forty feet of water in the well, which is capable of delivering between 12 and 16 thousand gallons per hour using a diesel pump which works on light diesel oil at a cost of Rs. 1.50 per hour. The crops raised in the area round about the well are certainly to be attributed to the new irrigation, and have benefitted therefrom. So far as the national welfare is concerned, I have no doubt that the solution in this particular case is "economic" as the value of the additional annual output which this well can produce has been variously described between Rs. 20,000 and Rs. 30,000, as against Rs. 60,000 capital incurred. The optimists say that it can irrigate a hundred acres, but pessimists say that fifty is about as much as should be safely presumed. In any case, a gross profit of between 30 and 50 per cent seems likely here; or must we have a full balance-sheet and an Estimates Committee report in due course?

Will all wells be as successful as the Sultanpur one? That is the critical point for decision. The inventor of this well, of whom I shall say more in a moment, sunk some in Bankura District in Bengal some years ago (thereby hangs a tale) at a cost of Rs. 15,000 each. The time was a period of drought and the effort was applauded by the people, but (secret!) considered somewhat extravagant by the West Bengal Government. What I would submit is that in the present agricultural situation of our country (a) when we have our backs to the wall agriculturally, (b) when large areas in the country are neglected because canal irrigation does not reach them, (c) where manpower for earth work seems to be abundant, (although the will to use it is often small), and (d) where direct benefits provide incentives to those working on a village project, the Sultanpur experiment has a good deal to commend it as a large-scale proposition for areas where the water table is fairly high. I have no doubt that there will be some errors if the Sultanpur type of well is indiscriminately multiplied. But why must everything be multiplied indiscriminately as though they were party political slogans?

A NEW PANI MAHARAJ?

Pani Maharaj, if I mistake not, was the name of a gentleman who rose dramatically to fame ten years ago as a kind of water diviner, and enjoyed, for a period of some months, access to the highest in the land who believed implicitly in his capacity to find underground streams which would burst forth if only wells were struck at the appointed place and at the appointed hour. History does not record exactly how Pani Maharaj lost fame, but the deserts of Rajasthan have had some connection with him and are, therefore, responsible for much else besides the arid character of the scenery they produce. Mr. M. A. T. Iyengar, I.C.S., who is the inventor of the Sultanpur open well, is not, I hope, to be so easily overcome. Indeed in the last few years he has shown a singleness of mind working on this one project—I believe on leave without allowances—to persuade the Government of India and the State Governments that here in fact is an operation which might make a major contribution to both rural employment and rural prosperity. He has acquired a kind of Sanyasi look (perhaps as a result of dwelling on this single idea) and I fear that in the corridors of the West Bengal Secretariat, and possibly, in the Home Ministry here, his reputation as a Civil Servant has been affected thereby. History, of course, does not prove that singleness of mind is always in error. We might recognise that the idea is one which a country requiring (a) food production, (b) employment and multiplicity of simple schemes and (c) speed should adopt. This—as I have said twice before—is the critical hour of decision. And I think the Prime Minister and Mr. S. K. Patil should both look at this proposition again.

ARGUS.

THE WEEK'S NOTES

Congo

CONFUSION AND MORE

DEVELOPMENTS IN the Congo are becoming intractable. On Tuesday this week, it was reported that President Kasavubu had dismissed Mr. Patrice Lumumba as the Prime Minister. But the next day, reports came that the Prime Minister had denounced the Presidential action and had "overthrown" Mr. Kasavubu. In all this welter of confusion and political whirlpools, it is difficult to predict the future course of events. The only glimmering hope is the presence of the U.N. which stands as a bedrock of sanity. By the end of last month, the withdrawal of practically the entire Belgian forces had been completed and the Kamina military base had also been handed over to the U.N. The forceful intervention of the U.N. at the original request of Mr. Lumumba himself has prevented the Republic from being made a pawn in the cold war game of the Big Powers. The task of the U.N. forces in the Congo was an unenviable one and every time a controversy arose about his Congo mandate, Mr. Hammerskjoeld had tried to refer the dispute back to the Security Council. The U.N. forces came to replace the Belgian forces from the Congo in an orderly way and the U.N. Secretary-General had decided wisely from beginning that it should be predominantly an African operation.

With the withdrawal of Belgian forces, the Congo crisis has moved into a new phase in which the territorial integrity of the young Republic has become the dominant issue. Mr. Lumumba now wants the U.N. forces to interfere even in domestic matters and more especially in putting down the rebellion of the Katanga Province. Apart from Katanga, there has also been trouble from other provinces, the most important of these being the "diamond" State of South Kasai whose independence was declared by Mr. Kalonji. According to reports, fierce fighting seems to have taken place between the Central Government forces and the forces of the Kasai Province and though the Congolese are stated to have occupied Bakawanga, the capital, a clear picture has not yet emerged. The situation is complicated by the fact that the Soviet Union is now giving direct military support to Mr. Lumumba.

In these circumstances, it is unwise on the part of Mr. Lumumba to be often proclaiming that he had lost confidence in the United Nations and its Secretary-General. It is, however, highly significant that at the recent conference of Independent African States held in Leopoldville, delegates, instead of supporting Mr. Lumumba's efforts to undermine the U.N. forces, should have praised United Nations work. Though they were anxious to give the Congo as strong a support as possible, they made it clear that they would do it only through the U.N. Even Dr Nkrumah had advised Mr. Lumumba to desist from attacking the U.N. Secretary-General and to place his trust in him. It is, therefore, clear that Mr. Lumumba is now faced with the choice of conducting any military operations against the recalcitrant provinces entirely on his own or follow the advice given by the conference delegates. Unless the Congolese Premier sees the signs on the wall, the future is full of the unknown for the Republic. It would appear that just as at the earlier stage, Mr Hammerskjoeld took a great military initiative by sending the U.N. forces, he should now explore the possibilities of taking a political initiative if the Congo is not to be torn to pieces. Here, more than anything else, his hands should be strengthened by the independent African States, who should persuade the mercurial Congolese Premier, that for the establishment of peace in the Congo, an early discussion of provincial autonomy and a loose confederation has become an imperative necessity.

Jordan

PREMIER'S ASSASSINATION AND AFTER

THE ASSASSINATION of the Jordanian Prime Minister, Mr. Hazza Majali, along with several other high officials of the Foreign Ministry, on August 29, in Amman, came as a shock even to those familiar with the situation in the Middle East. Since King Hussein's political coup in April 1957, there has been an impression that the Hashemite regime in Jordan has gained in stability though the same cannot be said in respect of its popularity. In May 1959, Samir Pasha Rifai, a veteran of Jordanian politics, was replaced as Prime Minister by Mr Majali and this was construed as a gesture of conciliation by the King, since he was reputed to be less conservative than Rifai. Since taking over, he also acquired some measure of popularity by accelerating the release of political prisoners and by deciding on general elections next autumn. Nevertheless, he was suspect for his pro-Western views and the charge was levelled that he was leading Jordan out of the Arab family into exclusive dependence on the West.

It is still a matter of speculation as to who was responsible for the assassination. One theory is that the late Prime Minister had many enemies within his own country, particularly among the one million Palestinians who regard the present Jordan regime as something imposed by the Western Powers. These apparently have as their objective the establishment of some form of Palestine Government on the West Bank. This move for dismemberment of the kingdom, that was proposed by the United Arab Republic and Iraq at the recent Arab League meeting in Lebanon (which, however, was rejected by Jordan's Foreign Minister) might have provided an excuse for some disgruntled Palestinians. The second theory is that this might have been the work of Jordanian emigres in Syria whose subversive activities might have received the blessings of the U.A.R. In any case, a commission of enquiry has been set up immediately after the tragedy under the chairmanship of an army officer and it is to be seen what its findings are going to be. Whether President Nasser is directly involved or not, there can be no denying that tension has been created through propaganda warfare emanating from Cairo inciting people to violence and terrorism. It is true that Amman has also to take a part of the responsibility here. But it is not a little ironic that the Amman tragedy should have occurred less than 24 hours after the truce had been called to mutual slander from Cairo and Amman.

The fact seems to be that President Nasser looks towards the day when his influence will be paramount in Palestine, while King Hussein is equally tenacious to his claim to sovereignty over what is now the west bank of Jordan. It is, however, doubtful whether President Nasser would seriously countenance the removal of King Hussein, which will lead to a general revolt and with all the attendant consequences of a possible

clash between the Israeli and Syrian armies. Because, it is not inconceivable that in the event of a Jordan break-up, Israel may move to occupy some of the territory. In that case Britain, under her present treaty obligation, must come to the rescue of Jordan against aggression which would mean that she will be simultaneously in conflict with Israel as well as the Arab States. But it is unlikely that the situation would be allowed to deteriorate to such an extent since the U.N. will then be called upon to give its assistance as in the case of the Congo in preserving stability in the region. Already, the Italian head of the U.N. mission in Jordan has rushed to Amman under instructions from the U.N. Secretary-General to watch the developments following the assassination of the Premier.

Banking

THE AMENDING BILL

OUT OF evil has come good; the failure of the Palai Central Bank has not gone in vain. The storm of public criticism which it raised has forced the hands of the Government to amend the Banking Companies Act. Most of the amendments incorporated in the amending Bill are wholesome and should go a long way in expediting liquidation proceedings, thus bringing to an early end the protracted distress which depositors have to endure under the procedure prevailing at present. With the prices spiral continuing to expand, it was obviously necessary to raise the limit of full repayment to the preferred savings bank depositors, in case a bank goes into liquidation, from Rs. 100 to Rs. 250. In the case of other deposits, the Bill provided for payment of 50 per cent of the balance to credit subject to a maximum of Rs. 250. This would have resulted in an invidious discrimination against holders of deposits below Rs 500. For instance, a depositor with a balance of Rs. 300 would have been entitled to receive only Rs. 150. The Finance Minister has done well in accepting Mr R. R. Morarka's amendment, which provides that payment in such cases would be made to the extent of Rs. 250 or in full if the balance to credit is less.

It is heartening to note that the Government has assumed powers to force reconstruction of a bank or its amalgamation with another if its working is not considdered to be proper and on sound lines. Reconstruction or amalgamation of a weak bank with a more sound banking company is always preferable to its going into liquidation, for if the former course is adopted, quite a good deal of unnecessary expense would be avoided which can well be utilised for cutting down the loss to depositors. In using these powers, however, the Government and the Reserve Bank will have to be very careful and judicious; they call for prompt action and not a repetition of the dilatory attempts at remedial measures as has been the case with the Palai Bank. It is comforting that the time limit for such action has not been sought to be extended; the grant of moratorium has been restricted to a period of six months as hitherto.

The one disconcerting amendment which has been effected by the Government, however, is the insertion of two sub-sections in clause 45 of the principal Act, by virtue of which the powers of the High Court have been restricted in the matter of disqualifying a director or an auditor of a bank sought to be reconstructed, amalgamated with another, or liquidated, for a period extending to five years from holding similar office in another organisation. The amendment has transferred these powers to the Government, on which, of course, it will be incumbent to obtain the prior recommendation of the High Court. The Government, however, at the same time has usurped to itself discretionary powers under which a disqualified person can be allowed to hold the office of a director or an auditor in a company elsewhere. The original provision vesting this discretion in the High Court was sound and the amendment is a retrograde measure, which may be criticised by some as opening an outlet for favour. The soundness of a banking company depends on how well its advances portfolio is managed. This amendment will hardly improve matters and may even worsen the position in some cases.

DALDA FORUM

IS FAT really FATTENING?

YOU: Isn't fat *fattening?*

NUTRITIONIST: Not as fattening as you might think.

YOU: How do you mean?

NUTRITIONIST: Well, usually the fat in food doesn't turn into body fat as easily, let's say, as starches, I mean foods like rice or potatoes, for instance.

YOU: I don't understand.

NUTRITIONIST: Let's put it this way. Getting fat isn't purely a result of what you eat. It also depends on how well you assimilate your food.

YOU: I see.

NUTRITIONIST: People who have a tendency to become fat have a defective capacity for assimilation. In most cases, it is the starchy foods that are not used up and what remains turns largely into body fat.

YOU: Surely, this happens with fatty food, too...

NUTRITIONIST: Not exactly. Fat is actually the least fattening of foods. This is because fat is used mainly for providing energy—it acts as bellows to body fires, helps burn up even the fat that is stored up in the body.

YOU: Is this a scientifically tested fact?

NUTRITIONIST: Research has proved all this quite conclusively. Incidentally modern 'slimming diets' call for a fat and protein intake—and a reduction in carbohydrates and starches.

YOU: You mean this is actually a better method of reducing than eating less food and following a low calorie diet?

NUTRITIONIST: Well, cutting down on the amount you eat and on calories will cut down your weight. But such diets are less strengthening than a high fat, high protein diet.

WE: It's quite simple. Fats provide energy. Lots of energy. Much more than wheat or rice.

YOU: But what are the direct sources of fat?

WE: Oils—any edible oil or hard fat that is part of food.

YOU: ...And do all these oils and fats provide energy?

WE: Yes. All of them do. But there are fats like DALDA Vanaspati which have more than energy. DALDA, for example, is also nourishing.

YOU: Nourishing?

WE: Yes, because DALDA contains vitamins. Seven hundred International Units of Vitamin A and 56 IU of Vitamin D go into every ounce. These are protective vitamins and are good for the skin, bones, teeth and eyes.

YOU: I see...

WE: All in all, DALDA Vanaspati is an excellent fat. It is made from refined vegetable oils and purified to a high degree. Since it is odourless and has no taste of its own, DALDA makes food taste as it should. And DALDA Vanaspati comes in hygienically sealed tins.

YOU: Hmm. I know that. We use DALDA for all our cooking. In fact, we have done it for over two decades.

WE: Over the years, more and more people are taking to DALDA Vanaspati because it makes an ideal cooking fat, whether they are on a reducing diet or not.

A Window on the World

ODYSSEUS ATTACKED BY A RAKSHASA

LAST NIGHT I had a nightmare. I dreamt that I was visited by a Rakshasa who tormented me by addressing me thus:—

"You periodically show up the failure and increasing abandonment of Socialism in Europe, and the steady renewal of faith in Free Enterprise. But if you think that, to the extent that you may be helping to undermine faith in Socialism in India and Asia, you are serving the cause of Free Enterprise in these parts of the world you are wrong.

"You see, there was a tradition of individual initiative, enterprise, and capitalism, in Europe which, although it may have lost prestige in the inter-war years of depression, nevertheless existed, and could be revived. But no such tradition has ever been firmly established in Asia. Before the arrival of European influence, Asia slumbered in a multitude of subsistence economies, based on the closely-knit, self-contained, mutual-aid social groups, similar to those described in your two recent articles on contemporary Bantu groups in Africa. In India, broadly speaking, the British did not inject individual initiative and free enterprise into the social structure. Their main aim, after 1857, was to keep the peace and interfere as little as possible with the customs of the people. In so far as their government was progressive, it was paternal. The District Commissioner did little to encourage village self-help. His ideal was to be the villager's "father and mother." The phrase that you quoted as the most important that today's Bantus have learned in the new schools opened for them, and which invariably begins all resolutions passed in their village meetings—'That the government be respectfully requested'—was true of British India, and is scarcely less true today. It is true that many Englishmen (or perhaps—more accurately—Scots!) launched capitalist enterprises in India and that as time went on an increasing but, relative to the population, an infinitesimal number of Indians also started business houses and industries. But as the nationalist movement asserted itself, and the theory of the foreign 'drain' of profits from India to the UK was propagated, these foreign capitalist enterprises were regarded as curses rather than blessings, and the 'westernising' type of Indian business man was apt to be tarred with the same brush—to be reprobated as a capitalist exploiter of his fellow-men rather than praised as an imitator of progressive ways. Finally, the more sympathetic attitude towards independence of the British Labour party meant that our national leaders became indoctrinated with Socialist ideals in politics and economics.

"That is why," continued the learned Rakshasa, "I believe the strength of Free Enterprise economic ideas to be negligible in India, and even more so in other parts of Asia, where there were even fewer indigenous enterprises.

COMMUNISM THE ALTERNATIVE TO SOCIALISM?

"It follows that when you demonstrate the failure of Socialism in Europe, the alternative that suggests itself here is not Free Enterprise but that Communist, totalitarian system, which has made the USSR one of the world's two most powerful states, and which seems to be introducing a good rate of economic growth in China.

"Of course, the Communist system has succeeded by the total suppression of individual freedom. The savings necessary for industrial advance have been obtained by compulsion based on fear. No man has a life of his own. He is the instrument of the state. I recoil from this with the same horror as you do, because I happen to admire that decimal minority who, like Jawaharlal Nehru and others, have absorbed Western ideals of democracy. But the concepts of individual liberty elaborated by John Stuart Mill mean nothing to a mufussil cultivator, or at least not enough to make him fear the inauguration of a Communist government in Delhi. As a matter of fact, the views of the rural masses would, I imagine, count for little in any switch-over to Communism. The people who would bring it about are the vast numbers of half-baked intellectuals, mass produced by our universities. To a student working, sleeping, eating (or rather half-starving), sharing with one, or may be two others, a Calcutta students' lodging house room, size 6 ft. by 6 ft., who is likely to be unemployed, or under employed, and certainly under paid when he leaves—to such a man, John Stuart Mill's plea for liberty reads like a mockery of any reality that he knows. How far, he asks himself, does the sphere of his personal freedom extend? What scope has he for initiative? What chance has he of a saving, launching his own business, becoming a capitalist? No, for him, 'It's up to the government to do something, and if Socialism is as bankrupt as you say it is, then it's Communism for him.

"The only answer that I can think of, for the moment," concluded this learned Rakshasa, "is that if Free Enterprise Europe is as successful as you say, if it wants to save Asia from Communism, then Europe must pour capital into Asia on a far greater scale than today's trickle. This will buy us not only capital equipment but time. We need time to practise political and economic liberty long enough to build up the ideals of democracy and Free Enterprise into part of our own tradition and faith."

I awoke in alarm and despondency at what the Rakshasa had said to me, until I remembered that Rakshasas are not by nature evil beings but creatures destined by Dharma to play a hostile part in the life of a given person in order to do him good. In my case, the Rakshasa's object had evidently been to compel me to cease tossing off easy superficialities here week by week and to go back to fundamentals. Here, then, is what I shall reply to my Rakshasa the next time I meet him.

Up to a point I concede your argument that to demonstrate the bankruptcy of Socialism in Europe will by no means make Asians automatically turn to Free Enterprise as the alternative. On the other hand, do you suggest that I should pretend that Socialism in Europe is going from strength to strength? Would that make the application of Socialist doctrine in India more efficient? Would it multiply productivity and make roses blossom in the great Thar desert?

I accept your word for it that my faith in Free Enterprise and John Stuart Mill's conception of individual political liberty is shared by few in Asia. But I take my stand with Professor F. A. Hayek who, in his courageous new testament, "The Constitution of Liberty" (Routledge. London. July, 1960. Price 45 sh.), agrees with the view also submitted (and quoted in this column before now) by Professor J. K. Galbraith that if people were not at most times led by some system of common ideas, neither a coherent policy nor even real discussion about particular issues would be possible. Professor Hayek doubts whether democracy can work in the long run if the great majority do not have in common at least a general conception of the type of society that they want. But even if such a conception exists, it does not necessarily show itself in every majority decision. Groups do not always act in accordance with their best knowledge, or obey moral rules that they aprove in the abstract, any more than individuals do. It is only by appealing to such common principles, however, that we can hope to reach agreement by discussion rather than by bloodshed.

WHO ORIGINATES NEW IDEALS?

No general conception of what society ought to be can ever be "frozen." Situations, conditions, circumstances, domestic and international, are always in process of change. Conceptions thus need to be kept under constant review—to be adapted to changing circumstances.

Who ought to be engaged in this constant reviewing? Most people are too busy earning their living to do more than accept the current views held by the majority. Politicians? Professor Hayek shrewdly points out that for the politician, concerned with day to day issues, popularly held views are to all intents and purposes unalterable facts. "It is almost necessary that he be unoriginal, that he fashion his programme from opinions held by large numbers of people." The successful politician secures office because he thinks and talks conventionaly within the framework of accepted ideas. His task is to find out the opinions held by the largest numbers, not to put forth new opinions which may become the majority view at some future date.

New ideas start amongst the few and gradually spread until they become the possession of a majority who haven't the least idea where they got them from. New ideas come from those whose profession it is to deal in ideas—philosophers, economists, professors, people like Edmund Burke, John Stuart Mill, Darwin, J. M. Keynes, or F. A. Hayek. Dare I claim that a newspaper columnist has a contribution to make in popularising the ideas of original thinkers, by translating them out of the technical terms in which they are so often expressed into language that can be understood by any busy, mildly intelligent mortal?

If majority opinion is to be educated to accept new ideas to meet new circumstances, the theorist who offers guidance cannot be bound by majority opinion. "The task of the political philosopher," says Professor Hayek, "is different from that of the expert servant who carries out the will of the majority. . . It is his duty to show possibilities . . . to offer comprehensive aims of policy as a whole which the majority have not yet thought of. It is only after such a comprehensive picture of the possible results of different policies has been presented that democracy can decide what it wants," and he concludes with this striking thought: "If politics is the art of the possible, political philosophy is the art of making politically possible the seemingly impossible."

Thus, despite your doubts, I shall continue periodically to expose the bankruptcy of Socialism in Europe in hopes of contributing something to making politically possible the seemingly impossible—the conversion of the majority in India to acceptance of individual initiative, the acquisitive instinct, the profit motive, and Free Enterprise.

For top grade Industrial Chemicals

'SEE MONSANTO' FIRST...

Monsanto works constantly to develop new, better chemicals – and to improve those chemicals you already use. In every industry, whether it be agriculture – automotive – aviation – ceramics – chemical processing – cosmetics – electrical – foods – insecticides – mining – oil – paint – paper – rubber – soaps and detergents, there is a Monsanto chemical that will help to improve production and quality.

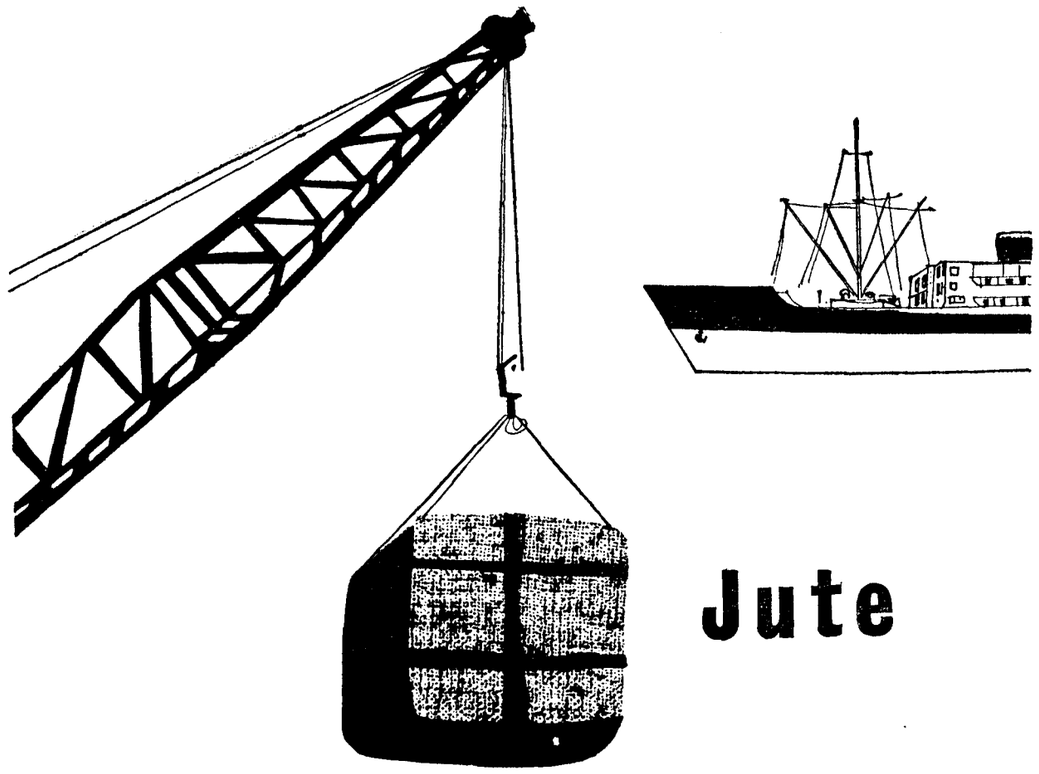
saving the city's water supply

On 1st October 1959, as rain and cyclone lashed Jamshedpur, a small group of Tata Steel workers hurried to a reservoir adjoining the Subarnarekha to save the city of Jamshedpur from a major disaster.

A raft, cut adrift by storm, stood poised on the very brink of a dam separating the reservoir and the river . . . threatening to hurtle down with the swelling current any moment and smash the water main running along a bridge over the river.

As catastrophe seemed imminent, 27-year old Shamsuddin Khan jumped into the swirling water. Fighting his way to the raft, he managed to pull it away. His colleagues gave him a hero's welcome and Tata Steel gave a reward of Rs. 500 and a permanent job to this brave son of an ex-employee.



Risking life from a sense of duty is a tradition that worker heroes like Shamsuddin are setting up in Jamshedpur, where industry is not merely a source of livelihood but a way of life.

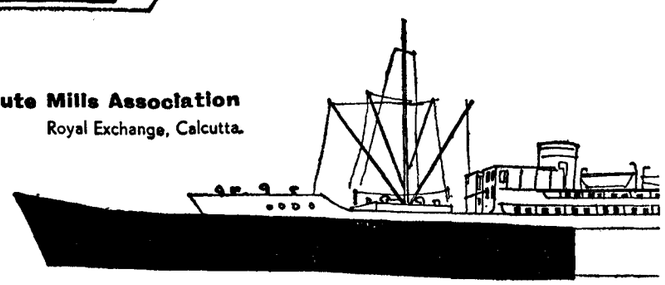
Jute



in the forefront of India's export trade

The Indian jute industry is essentially an export industry. Almost 80% of the industry's production—or about 900,000 tons of jute manufactures—is shipped to overseas markets; 55% of the jute goods used as packaging material throughout the world are supplied by India.

But jute no longer serves merely as the humble gunny or hessian bag. Today, jute fabrics are used in large quantities in industrial processes to give a remarkably wide range of end-products. From the massive export of jute goods the country earns valuable foreign exchange, which in 1959 amounted to Rs. 110.8 crores. Out of this, Rs. 50 crores came from the dollar area, making jute goods India's largest dollar-earner by far.

The Indian Jute Mills Association—the organisation of the industry—carries on extensive propaganda in several foreign countries to promote the exports of jute goods, undertakes research at home to widen the applications of this golden fibre.

BELGIUM COUNTS HER LOSSES

From Our Special West European Correspondent

PARIS, September 6.

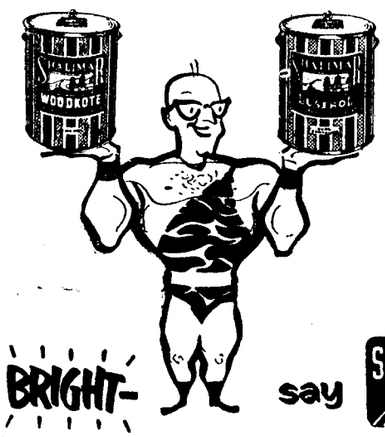
THE Congo drama is not played out yet, and it is too early to try to draw up a final account of Belgium's economic losses in the catastrophe that overtook her former colony immediately after independence. It is of course certain that Belgium has lost all political influence with the central Congolese Government, and the hope of retaining any for long with a secessionist puppet regime in Katanga is very slim. The security of investments in the Congo is another matter, however. Most of these were situated in Katanga and have continued to operate without the least interruption; they could go on doing so if Messrs Lumumba and Tshombe settle their political differences otherwise than by civil war. It is not only in Katanga that Belgian enterprises have been kept going; in the Congo as a whole, 80 per cent of Belgian business is still at work, though under very poor conditions due to the disorganisation of transport, labour unrest and senior staff shortages. The impression given by such as Mr Detwiller (the financial adventurer of whom nothing has been heard since he signed a piece of paper with Mr Lumumba) that all the Belgians had downed tools and fled, leaving Congolese industry to be taken over by whoever cared to try, is false. When the Congolese Government discovers how far it has shaken foreign confidence by its unstable behaviour during the crisis, and how little trust it can place in offers of aid from Moscow and the seedy end of Wall Street, it might well realise that the soundest course is to let Belgian enterprise continue, regardless of political relations with Brussels.

Nevertheless, that favourable outcome is by no means assured and the Belgians are correct to make their calculations on the pessimistic assumption that all will be lost, if not at once then over a few years. The foreign exchange speculators have already done this, and they caused a run on the Belgian franc in the first week of August that cost the central bank several thousands of millions of francs' worth of gold. The bank responded by increasing bank rate from 4 to 5 per cent. Because this coincided with Swiss and West German measures to prevent the influx of capital, with a cheapening of credit in the USA and with rumours of a lower bank rate in Britain, the outflow slowed down and the Belgian franc recovered some ground. There are still rumours of a devaluation, but, for reasons that will be given, these do not deserve to be taken seriously. The fact is that even before the Congo crisis, indeed ever since the last French devaluation which sent French funds home again, the Belgian franc has been regarded as overvalued by many speculators, and the Congo drama turned this sentiment into panic.

In reality, the loss of the Congo does not affect the Belgian economy very gravely. Dollars earned from Congo uranium exports (figures for which are never published and hence are popularly exaggerated) helped put Belgium back on her feet very quickly after the last war and gave her one of Europe's hardest currencies. The belief has persisted that Congo uranium therefore underwrites the Belgian franc, and so its loss must be disastrous. This is by no means the case. The Congo has had for some years its own independent central bank, which receives the foreign exchange proceeds of Congo mineral exports; the only element contributing to Belgium's reserves has been the repatriated profits of the Belgian mining companies. The Belgian reserves are quite healthy (67,000 million francs for a total monetary circulation of about 210,000 million). Meantime, internal prices in Belgium have been remarkably stable for the past year. Industrial production is currently running 10 per cent above a year ago, despite the fact that the coal industry (which accounts for 14 per cent of Belgian industrial output) is barely recovering from a serious slump. Business both with the buoyant neighbouring Common Market countries and with Britain is constantly expanding. In these circumstances, talk of a devaluation of the Belgian franc may be dismissed as senseless.

The losses caused by the rupture with the Congo, while still notable, are of a much more modest order than such as could produce the collapse of the Belgian currency. Belgian exports to the Congo last year (it must not be forgotten that, unlike other European colonies, the Congo was an open market where Belgium enjoyed no commercial privilege) were only 2.7 per cent of total Belgian shipments. True, the pre-independence political commotion depressed the Congolese economy last year, and the figure of 4.7 per cent recorded in 1957 was probably more normal. Imports from the Congo were 5.6 per cent of total imports (5.5 per cent in 1957). For the Congo, on the contrary, trade with Belgium constituted about 33 per cent of imports and exports, so an interruption of this commerce would be much more serious for the colony than for the former imperial power. The Belgian exports to the Congo were the traditional lines: steel, machines and textiles; given expanding West European trade, there would be little difficulty in placing these elsewhere, for the absolute quantities involved were small by European standards. The loss of Congolese raw materials (minerals, non-ferrous metals and cotton) would be more awkward for Belgian industry, but it seems unlikely that this trade will be totally interrupted however bad political relations become; there is no sellers' market in raw materials today, and if the Egyptians have been selling France cotton since soon after Suez one cannot see why the Congo will cease selling raw materials to Belgium.

So much for trade. Next there is the question of the contribution the Congo has made to Belgian economic activity by using that country's ships, ports (70 per cent of Congolese exports to Europe pass through Antwerp), mineral processing industries, etc. During the present shipping slump, and given the keen competition between European ports, Belgium could suffer losses here, and could see her "invisibles" decline in the payments balance . On the other hand, there does not exist adequate refining capacity elsewhere to process Congolese minerals. A certain number of Belgian



industries that were geared to living off the Congo will have to be converted. This will cause a temporary loss of national revenue, but in view of the rate of expansion of Belgian industry this phase can be got by with a minimum of austerity.

Next there is the loss of revenues from Belgian investments in the Congo, which includes both the service of the Congolese public debt placed in Belgium and the dividends of Belgian companies operating in that country. Total loss of these returns could cost Belgium about 3,000 million francs a year, because three-quarters of all the capital invested in the Congo came from Belgium. Matters would have to get much worse than they are now for that to happen; supposing Mr Lumumba ever gets the power to confiscate all Belgian holdings in the Congo (including Katanga where most of them are situated and where Mr Lumumba's writ does not run yet), such action would be an unsuitable prelude to an appeal to foreign capital. Still, this happened with the Dutch in Indonesia so the Belgians must reckon with the possibility. Combined with the loss of trade, services and processing just referred to, complete economic rupture that went to the point of confiscation of Belgian capital would amputate a proportion of the national revenue that some experts put at 3 per cent and others at 5.75 per cent.

Before considering how well the nation could meet that loss, there are two problems that concern more particularly the Belgian Government: the impact of the Congo crisis on the budget, and the cost of assimilating the repatriated Belgians. Short-term, the budgetary problem is the most serious. To the loss of tax revenues flowing from the above decline in business activity and dividend receipts, must be added the high cost of sending troops to the Congo and flying back several tens of thousands of refugees, who must now be supported, and compensated for their losses. A period of budgetary rigour is inevitable, and the Finance Minister has threatened extra taxation and (though this was probably said out of spite when the USA and Britain declined to give Belgium the moral support expected in the UN debate) a large cut in defence expenditures required by NATO membership. As to the 88,000 Belgians who were in the Congo, the return of all of them would be equivalent (since they are 1 per cent of the Belgian population) to the arrival in India of 4 million refugees; since none of them are workers, clerical and professional employment will have to be expanded about 2 per cent to absorb them. This is not beyond the possibilities of an expanding economy, but it means extra strain on an unbalanced budget.

Comparison with the experience of Belgium's Benelux partner, Holland, after the break with Indonesia is inevitable, if only because Indonesia recalled the parallel by breaking off all diplomatic relations with the Dutch at the height of the Congo crisis. The comparison is all in Belgium's favour. The Dutch connection with the East Indies was much older (it dated from three centuries ago) and more profound. There were 220,000 Dutch people in Indonesia before the war, and exports to that country were 10 per cent of total Dutch shipments and imports 8 per cent of purchases (against 2.7 and 5.6 per cent in the Belgian case). Yet Holland is one of the most prosperous countries in West Europe today. And total rupture with her former colony only came because of the New Guinea affair. There is no need for Belgo-Congolese relations to deteriorate to that point, but if they do Brussels' savings on aid to the former colony will amply compensate all the budgetary losses involved, leaving an expanding economy to make good the marginal loss in national revenue.

Economic Report from the U.S.

GATT SESSIONS

By GUY SIMS FITCH

WASHINGTON, Aug. 31.

THE last few weeks have seen the exodus from Washington of a number of ranking U.S. government economists. Some have taken their families with them, and all have taken enough luggage to indicate a long absence from the nation's capital. These experts are not bound for lengthy vacations nor have they suddenly lost their jobs. Quite to the contrary, they are representing the United States at a series of negotiations opening at Geneva this week. These talks, the fifth round of multilateral tariff negotiations under the 13-year-old, 42-nation General Agreement on Tariffs and Trade (GATT), could be the most significant of recent years.

Traditionally, GATT tariff-cutting sessions have been lengthy, drawn-out affairs, as the participating nations have negotiated reciprocal reductions in duty rates on a multinational scale. And this year the give-and-take promises to be even more time-consuming and more important than usual. This is evident from the agenda for the meeting which actually is being held in two distinct stages. The first item concerns the adjustment of the uniform external tariff schedule of the six-nation European Economic Community (EEC)—the so-called Common Market—to the liberal trading principles—France, Italy, the Federal Republic of Germany, Belgium, the Netherlands and Luxembourg—against the rest of the GATT partners. Successful completion of this task will set the stage for the second phase—the general round of tariff-cutting negotiations among the GATT nations themselves and with several other countries which have expressed a desire to adhere to the General Agreement. This second phase is expected to get under way in January and to run through most of 1961.

In its opening phase, then, the main concern of this GATT meeting will be the extent of the liberal position taken by the EEC. Customs unions are permitted under GATT rules, of course. But those rules stipulate, in essence, that such unions should not adopt a common tariff toward outside countries that is more restrictive than the individual national duties being replaced. The basic approach taken by the EEC nations in arriving at their common external tariff is to average arithmetically their individual rates. This, it is presumed, might automatically adjust many of the Common Market duties to the satisfaction of the GATT partners.

In practice, this could mean that the United States—or any other non-EEC nation—might lose a concession from one Common Market country if the new uniform rate is higher than that nation's old individual rate. At the same time, the non-EEC partner might gain a new concession from another EEC country whose tariff schedule would decline under the averaging formula. The general objective would be to retain as far as possible the concessions previously granted by the six EEC countries to their GATT partners. Where this kind of averaging does not produce a satisfactory arrangement, the matter would have to be settled by negotiation. And it is in this realm that EEC's good faith, which already has been enunciated in theory, would be put to the practical test. Adding to the importance of this first stage of the Geneva Sessions is the prominent position of the EEC in world trade. Taken as a unit, the six-nation community today is the world's largest importer and the second-largest exporter. Its population is 165 million, plus more than 50 million associated overseas territories. Its gross national product—total output of goods and services—has more than doubled in the past decade. Intra-community trade has boomed sharply in the three years since the signing of the Rome Treaty, under which the EEC was formally established.

Under the circumstances, it would not be unexpected to find the other GATT nations doing some hard bargaining to obtain meaningful trade concessions from the Common Market countries. U.S. negotiators may have the added incentive of seeking the kind of liberal concessions which reflect the very generous concessions, before the free nations of Europe, and of other parts of the world, had attained their present levels of economic activity.

WORLDGRAM

India

Sale of Scooters to be Controlled: In order to ensure equitable distribution of scooters at fair prices, the Government of India have issued a statutory order under Section 18G of the Industries (Development and Regulation) Act, 1951, controlling the purchase and sale of scooters. The order stipulates that every applicant for a scooter should furnish a bank guarantee of Rs 250 at the time of registration, the amount being payable when the scooter is actually delivered. In the case of customers, whose names have already been registered with dealers, the guarantee may be furnished within 45 days. The dealers will have to sell the scooters strictly in the order of registration and the register of orders will be open to inspection by members of the public as well as the representatives of Central and State Governments. The order stipulates that no person, who has purchased new scooter in any calendar year, can purchase another scooter in the same year except with the written permission of the Controller or an officer appointed for the purpose by the State Governments. In the case of companies or associations, however, they will be permitted to purchase up to a maximum of 6 scooters. The order also prohibits the re-sale of scooters before the expiry of one year from the date of its purchase as a new scooter, except under a permit from the Controller or an officer appointed for the purpose by the State Governments.

*

Membership of Central Trade Union Organisations: The verification of membership of the Central Labour Organisations, as on March 31, 1959, showed that the Indian National Trade Union Congress had a membership of 10,20,653, the All-India Trade Union Congress 507,654, the Hind Mazdoor Sabha 241,636 and the United Trade Union Congress 90,629. The INTUC had more membership than all the remaining three Central organisations put together.

*

Export of Rourkela Steel: The Rourkela Steel Project has received orders for the export of over 78,000 tons of steel slabs and ingots. Among the major orders are one for supplying 25,000 tons of steel slabs to Italy, despatches against which have already started. About 12,000 tons of slabs have already been supplied to Messrs Mannesmann-Export, West German and supply of 10,000 tons of steel ingots to Messrs. Stewarts and Lloyds, UK will be completed by the middle of this month. The pipes manufactured in barter arrangement against these slabs and ingots are already being received and delivered to Burma Oil Company (Pipelines Ltd.) for laying the oil pipeline between Nahorkatiya and Barauni. About 6,000 tons of pig iron has also been exported to the USA. Another order for 7,500 tons of pig iron from Japan is being supplied. These orders will earn the country over Rs. 3 crores in foreign exchange.

*

Power Potential in India: A proposal to carry out a detailed survey of 64 selected schemes on water power potential in India was under consideration. These schemes had an aggregate power potential of about 12 million kw at 60 per cent load factor. It was intended to complete the work in about 5 years. The estimated expenditure was about Rs. 13 crores.

*

Nahorkatiya—Barauni Oil Pipeline: It is reported one hundred miles of high test line pipes have already been delivered to Burma Oil Company (Pipelines) Ltd. for laying the oil pipeline between Nahorkatiya and Barauni as arranged by Hindustan Steel Ltd. The supplies have been made ahead of schedule. According to the contract with Burma Oil Company (Pipelines) Ltd., Hindustan Steel Limited is to supply about 51,000 tons of high grade steel pipes of 14" diameter for laying the 471 mile oil pipeline. The pipes already supplied amount to 11,000 tons. The pipe plant at Rourkela is nearly complete and is expected to be commissioned by the middle of September.

U.S.A.

Ford Foundation Grants for India: The Ford Foundation has announced a grant of $474,500, for a four-year experimental programme of educational television in the higher secondary schools of Delhi and New Delhi. The Delhi Administration had been granted $50,000 for research on technological improvements for village use with special attention to producing electric power and pumping irrigation water. Other grants in India include: Institute of International Education —$20,000 grant to enable 10 Indian specialists to attend the Seventh International Soil Science Congress. Lodhipur Institute—$35,000 grant, for continued assistance in developing and industrial training course. National Council of Applied Economic Research—$740,000 grant for continued support of its general programme. The grant will finance research related to India's economic development and will provide foreign consultants, training outside India for staff members, and statistical laboratory equipment. Punjab University—$38,000 grant, for continued support of its training programme in methods of social-science research. Consultants—$272,000 was provided for consulting specialists in general education, business and management training, home-economics training, economic analysis, and industrial-relations research. Ahmedabad Municipal Corporation—$170,000 grant, for a pilot project in urban community development. Like an earlier foundation-assisted project in Delhi, this project will encourage and assist slum dwellers in improving their living conditions. Allahabad Agricultural Institute—$51,215 grant, for scholarships and instructional costs in developing an under-graduate course in home economics extension work. University of Baroda—$525,000 grant, for a post-graduate training and research programme in home economics in co-operation with Iowa State University.

*

Major Rockfeller Foundation Grants to Indian Projects: Establishment of an International Centre and development of an Institute of Medical Sciences in New Delhi are among the major projects which received Rockfeller Foundation support in 1959, according to Foundation President, Dean Rusk. For the new International Centre in New Delhi, Mr Rusk said, the Foundation had appropriated two grants totalling $834,134.

*

Dow Chemical will Participate in Spanish Petrochemical Venture: C.B. Branch, President of Dow Chemical Limited S.A., has announced that an agreement has been reached between Dow and Union Quimica del Nortes de Espana S.A. (Unquinesa), one of the foremost Spanish manufacturers of organic and inorganic chemicals and plastics, with headquarters in Bilbao, to construct a petrochemical complex in Spain. The basis of the agreement is Dow's financial and technical participation in the development of a petrochemical industry in Spain. An approval for the joint venture has been already secured from the Spanish government.

Yugoslavia

Steel Production: Judging by the past results, it is expected that Yugoslav steel works will manufacture this year, one million and four hundred thousand tons of steel. This will be by 9 per cent more than last year of 7 times as much as in 1946. Production and consumption of steel has been constantly on the rise in Yugoslavia during the last 15 years. Owing to intensive economic development, steel consumption has grown from 17 kilograms per inhabitant in 1939 to 80 kilograms last year. It is estimated that steel consumption during the next four to five years will reach the level of 145—150 kilograms per inhabitant, i.e., it will grow by 12 to 13 per cent annually. A quantity of 1.3 million tons of crude steel was produced in Yugoslavia last year i.e. 900,000 tons of finished steel products. However, the needs of the domestic market were not satisfied with this, so that Yugoslavia was obliged to import another 190,000 tons of finished steel products. In order to meet the domestic requirements considerable sums will be invested in the construction of new steel works as well as for modernisation and enlargement of their existing steel works.

United Kingdom

Equipment for Indian Power Project: A century-old British firm is now working on a contract which will help the electricity power scheme at Harduaganj, Aligarh district, Uttar Pradesh. The firm—Samuel Jellyman and Co. Ltd.—is making special valves, water draining gates, and hydraulic ash-handling equipment to cope with the process of the disposal of ash from the coal-fired boilers. The Indian contract is expected to be completed by the end of this month.

Australia

Rich Mineral Resources: The potentialities of the mineral fields of Queensland are receiving greater attention from prospecting interests and present likely opportunities for increase of Australia's mineral wealth. Iron deposits in the Constance Range, North-West of Mt. Isa, are believed by the Queensland Minister for Mines, to indicate that the field has a great potential as a major iron ore producer. The deposits are being tested by the Broken Hill Proprietory Company Ltd. and although no announcement has yet been made by the company, deposits are being believed to contain a fairly low grade ore but in large volume. One estimate is that the ore body extends over 1,000 sq. miles.

U.A.R.

UAR Joins Isotopes Producing Countries: United Arab Republic has joined the corpse of countries that produce atomic materials for the treatment of incurable diseases such as cancer and gland troubles and the enhancing of land yields.The necessary atomic reactor that will produce those materials has already been set up at Inchas. UAR and Soviet experts at the Nuclear Energy Organisation are engaged in installing the heart of the plant which contains the radio-active material. It is the inter-action between those materials that will produce the isotopes. At the same time, certain materials will be converted into a new type of nuclear fuel.

Poland

India Among Customers for Polish Agricultural Machines: Polish agricultural machines have already gained a good mark in many foreign markets. For instance, the harvesting combines produced by the Plock plant are exported to India, Argentina Yugoslavia and Brazil. Contracts have been entered into for exporting over 300 of these combines this year and further orders are expected. Nearly a 100 of all kinds of tractors turned out in Poland are to be exported this year. Dip-traillers are the new entrants in the import list of Polish agricultural machinery. High compression engines used in agriculture for driving machinery, pumps, mill equipment etc. are already being exported to Tunisia, Algeria, Egypt, Brazil, Turkey and many other countries.

*

River Ships for Export: A series of river tankers for the United Arab Republic is now under construction in Wroclaw. The vessels can be used on rivers and for coastal trade. Tenders have been submitted to a number of countries for other types of river ships. They include tenders for 500-ton general cargo ships for Pakistan. A tender for passenger steamers has been submitted to Burma.

ICFTU-ARO

Fifth Asian Regional Conference: The fifth Asian Regional Conference of the International Confederation of Free Trade Unions Asian Regional Organisation (ICFTU-ARO) is to be held in Manila, from 20th October to 4th November 1960. The Conference is being held in Manila at the invitation of the Phillipine Trade Unions Council (PTU). About 50 delegates from 15 countries in Asia, Ceylon, China, Hong Kong, India, Indonesia, Japan, Korea, Malaya, Nepal, Okinawa, Pakistan, Phillipines, Singapore, Thailand and Vietnam are expected to attend the Conference representing a membership of more than 6 million. In addition to the Asian Regional Secretary's report on the activities of the organisation for the last two years, the Conrence will consider measures for strengthening free trade union organisations in Asian countries.

Trans-world Airlines

Record Profit in June 1960: Trans-World Airlines' earnings in June totalling $4,436,000 after taxes, were the largest for any single month in the airlines history, and helped the company emerge with a nominal six-month profit of $4,000 following net losses of $6,826,000 in the first quarter. Net income before taxes for the month of June 1960 was $7,392,000 made up of $6,674,000 from flight operations and a net of $718,000 non-operating profit from the sale of surplus aircraft.

W.H.O.

Aiding India's Vaccine Plan: The South-East Asia Regional Office of the World Health Organisation is to assist the Government of India in a plan which will help to make possible a country-wide immunization campaign against three dangerous killers of babies and young children—diphtheria, whooping cough and tetanus. Studies carried out in one part of rural India have confirmed that tetanus and tetanus of the newborn are important causes of sickness and death. Whooping cough not only causes much suffering but many deaths occur through secondary complications. A pilot unit for the production of vaccines against these three diseases will be developed at the Central Research Institute, Kasauli.

NEWS IN BRIEF

INDIAN

The production of automobile components which was valued at about Rs. 42.31 lakhs in 1951, had increased to about Rs. 7.5 crores in 1959. In 1951, the production of components was confined to only tyres, tubes, battery and certain other minor components.

In an article written with reference to the tenth anniversary of workers management, 'Vukamanovic' underlines that the working collectives in Yugoslavia manage on an average 46 per cent of the resources gained in the social sector of the economy.

*

French output of electricity during the first half of 1960 was 11 per cent greater than the total for the corresponding period of 1959. The amount of electricity produced during the first half of 1959 was, in turn, only 3 per cent more than that produced during the first six months of 1958.

*

France will probably buy substantially larger quantities of oilseeds outside the franc zone this year because of the small 1959-60 West African peanut crop.

Special Article

TIGHTNESS IN TRANSPORT

THE latest available statistics of wagons loaded on the broad and metre gauges of the Indian railways for the period April to July 1960 corroborate the general apprehension that failures in railway transport is one of the root causes in the coal and steel setback. A minor factor ought to be mentioned in clarification at the outset since it has been partly instrumental in aggravating the position on the railways in July 1960. But although some allowance should be made for it in the decline in railway freight earnings in that month, its magnitude must not be exaggerated. The backlog of traffic as a consequence of the strike on the railways, however, was cleared soon afterwards, so that, on balance, the situation before and after the strike ought not to show any gross disparities in railways earnings as an indicator of the traffic carried.

In the table included in this article details of the major categories of freight traffic on both the gauges have been set out for the four months in question during this year and the past year. They vividly bring out the declining trend in wagons loaded in a large majority of classes of freight traffic which depend heavily on the railways, particularly for long distant transport. They are chiefly the classes which are vital for the sustenance of productive activity. In the main, grains and pulses, oilseeds, raw cotton, raw jute, jute manufactures, sugar, cement, manganese ore and so on, have recorded substantial declines in wagon loadings this year below the loadings in the corresponding period of the last year. The percentage declines are at once conspicuous. Although it is possible to point out some reasons for these fluctuations during the current year for items like jute, cotton etc., they do not invalidate the main conclusion of a distinct deterioration in the position of transport by railways.

Attention ought to be focussed on the comparative state of loadings of coal and coke. In absolute terms, there has been a marginal increase of over 7,000 wagons in the coal carried for the public which gives a percentage increase of 2.03 over the loading in the last year. But the volume of loadings must be compared in relation to the volume of stocks at the pithead which alone would give a correct idea of the yawning gap between the demand and supply. The latest available monthly figures of production of coal and coke and stocks at the pit-head, and the ratio of these stocks to output are tabulated below:

	(000 tons)
January, 1960 :	
Stocks (at pithead)	2,696
Production	4,116
Stocks x 100 / Production	66
February, 1960	
Stocks (at pithead)	2,970
Production	4,296
Stocks x 100 / Production	69
March, 1960	
Stocks (at pithead)	3,068
Production	4,364
Stocks x 100 / Production	70
April, 1960	
Stocks (at pit-head)	3,221
Production	4,383
Stocks x 100 / Production	73

The above monthly figures show that in absolute terms there has been an increase both in the pithead stocks and production. Pithead stocks have risen from 2.70 million tons in January to 3.22 million tons in April, whereas production has gone up from 4.12 million tons in January to 4.38 million tons in April. But the increase in the two has not at all been proportionate as will be seen from a cursory glance at this table. In fact, the real aggravation of the disparity between accumulation of stocks and production is pin-pointed by the ratio of pithead stocks to output. This ratio has gone on increasing progressively from 66 per cent in January to 73 per cent in April. This ratio gives a broad idea of the inability of the railway transport to carry all the coal traffic offerings. It is of course true that a reasonable allowance must always be made for a certain amount of accumulation at the collieries but the fact that these accumulations have gone on increasing can be explained only on the hypothesis of utter non-availability of adequate wagons. This conclusion is further strengthened if it is recalled that January to April represents a period of high tempo of productive activity and since coal is the major type of energy for industry, it generates a high demand for transport capacity.

In the last year of the Second Plan, all energies have to be bent on eliminating the threatened shortfalls below the targets of priority projects which have been accommodated in the reduced outlay of the Plan. Industrial production has been accelerated in 1959-60, after a spell of stagnation, and transport has a key role to play in keeping it going. Demands on rail transport of Sindri fertiliser and the State steel plants which have always enjoyed undoubted priority have not been fully satisfied. Recent failures in the case of these public sector projects are attributable, among other major factors, to the failure of transport to rise to the occasion. There will be worse to come unless the Railway administration is made aware of the deepening coal transport crisis.

WAGON LOADINGS

(1st April to 31st July, 1960)

* Regarding non-revenue loadings, it should be observed that the number of wagons loaded shown in this table excludes departmental wagons loaded by the owning departments and vehicles loaned or lent to the Engineering or other departments for carriage of departmental stores or used in ballast trains etc.

THE BUSINESS WORLD

Unfair and Unimaginative

By CROESUS

I DO not know whether it was at all necessary for Mr. Nityanand Kanungo, Minister of Commerce, to tell the Lok Sabha the other day that, if the voluntary reduction in cloth prices to be effected by the Textile Industry was not satisfactory, "we have to take other steps, legal steps, to bring the prices down." Apart from the fact that such loose language by responsible persons in authority is liable to be misunderstood (actually a wag suggested whether the steps that were hitherto taken by the Government to bring down the cloth prices were illegal!), it ignores the fact that the spokesmen of the Textile Industry and the Government of India were actually still discussing the precise extent of the further reduction in prices (further to those announced on August 11). To me it appears, the Textile Industry has all along been placed in a very unenviable position, in that, while it went as far as it could go, and even out of its way, to accommodate the Government's wishes, the Government went on merely expressing dissatisfaction at every stage at the extent of reduction announced, without caring to indicate the actual reduction that it wanted. After all, in regard to matters like price fixation, one has to go on the basis of the available data or, if such are not acceptable, one has to indicate one's own ideas regardless of all considerations of costs, let alone profits. But merely expressing dissatisfaction at the extent of reduction offered by the industry or threatening to take "legal steps to bring down cloth prices," as Mr. Kanungo did, is, to say the least, abuse of power and authority.

No one who has followed the discussion between the Indian Cotton Mills' Federation and the Government of India in regard to cloth prices will accuse the Textile Industry of not having played fair. In fact, both in regard to the base period from which the reduction has been sought and in regard to the quantum of reduction desired, the Federation has accepted the Union Minister for Commerce and Industry's suggestion. Thus, although the Federation announced its first reduction of prices taking into account the October, 1959 prices and the rise in costs subsequent to it, it eventually agreed to accept the Minister's suggestion that the base period should be August, 1959, and not October 1959. (Although this has been done, the Industry is now being criticised in certain official circles for not having taken the July, 1959 base period). Instead of appreciating this gesture, it has been suggested by some that the Industry has been wanting to bargain, although the boot has been on the other leg — the Government's — all the time. These are not, however, to blame because such an impression seems to have been sedulously created. However, the Textile Commissioner, who has gone into this question thoroughly, atleast must have been convinced that, in having agreed to the second reduction, the industry has subordinated its interests to those of the country's economic necessities, even while realising that the new price structure would result in the uneconomic working of several mills, particularly those producing coarse and lower medium cloth. In the first half of 1960, 12.4 per cent of the total production or 306 million yards was coarse, while 35.8 per cent or 886 million yards was of lower medium, higher medium constituting 40 per cent or 1,002 million yards. If all the mills accounting for this production which had to suffer the additional handicap of having to use high-priced imported cotton come into trouble, then the Government will itself have to thank for it. Fortunately, such a contingency may not arise if the cotton crop this year turns out to be plentiful, and this is the only silver lining to the cloud.

According to the Federation's second press note announcing the new schedule of cloth and yarn prices, mills are called upon not to charge more than 25 per cent, 22 per cent, 18 per cent, 11½ per cent and 9 per cent, over the August, 1959, contract prices for coarse, lower medium, higher medium and fine and superfine cloth, respectively. As in the case of the previous announcement, it is significant that the revised prices now also are to apply to all cloth to be delivered henceforward, regardless of the contract prices. Analysing the effect of the new schedule of prices on different varieties of cloth, one finds that only 9.4 per cent of the total production or 181 million yards of coarse varieties will be subject to an increase of 25 per cent over the August, 1959 prices. As regards lower medium varieties, the percentage which will be subjected to an increase of 22 per cent the percentage is 32.4 or 620 million yards. Higher medium varieties, which will be subjected to an increase of 18 per cent, account for 895 million yards or 46.8 per cent of the total production. Fine and superfine varieties, which are to be subjected to an average increase of 11.5 and 9 per cent, account for only 5.4 per cent and 6 per cent, respectively, of the total production. Taking the weighted average, cloth for internal consumption will be subjected to an average increase of only 19 per cent over the August, 1959, prices. But it will be even less in the case of those varieties where the existing prices are lower, so that the effective average increase over the August, 1959 prices will, in fact, be less than 19 per cent or say around 16 per cent.

Be that as it may, if, as alleged, the mills had been selling at 40 per cent over the August 1959 prices, the reduction now proposed actually works out to about 24 per cent but it is by now well-known, although not so generally accepted, that the charge of a 40 per cent general rise is hardly justified. Even the Union Minister for Commerce and Industry did not accuse the Textile Industry of a 40 per cent rise. It has been estimated that taking all cloth prices into account, the allegation of a rise of 40 per cent may at best be true of not more than 5 per cent of the cloth consumed by the general public. If, in spite of this, some official circles were not satisfied, it is not clear why they did

not persuade the Government to accept the offer of the Federation's representatives to submit duly audited account of the first half of 1960 for disproving the allegation. Aparently the Government was not so much interested in exonerating the industry by accepting this offer as in getting a good chit for itself for having done everything to bring down cloth prices. To have brushed aside the suggestion for getting the accounts audited or that for reference of the price question to the Tariff Commission on the plea that all these would take time and that the circumstances demanded immediate action may be politically all right, but, from the point of view of the affected industry, hardly fair.

A Government which claims today that it is concerned only with prices that the consumer has to pay and nothing else ought to have looked into the factors making for a rise in costs and, therefore, in prices. It is unnecessary to dilate here on how a rise in prices became inevitable due to higher prices of cotton and other raw materials as also the higher wages imposed upon the industry. The rise has also been due to the fact that the Government was very slow in accepting the industry's suggestion to import raw cotton when it became aware of the certain prospects of failure of the Indian cotton crop. Had the Government taken timely action, the mills could have stepped up their production and foreign cotton also could have been purchased by them at a much cheaper price than what had to be done eventually. The Government is again guilty of not having heeded the industry's repeated pleas for adequate expansion of the industry's production potential. Even now, unless the authorities realise the need for this and take prompt action, the country must be prepared for a recurrence of the present situation due to the increase in population, on the one hand, the rise in 'per capita' income generated by the plans, on the other.

I am afraid the entire approach of the authorities to the problem of the textile industry has been both unimaginative and shortsighted. In its bid for popularity, it has not hesitated to overlook economic coniderations. It is a pity that the Government has failed to take into account the stark reality that the industry was in the doledrums not long ago for a continuous period of three years. By forcing the mills, especially those producing coarse and medium cloth, to sell at the low prices now fixed, it will have all but wiped out their profits and it is difficult to see how these mills will be able to make up their past losses. Again, no attention seems to have been given to the facts brought out by the Reserve Bank's study of comparative profits of all industries or those of the officially appointed Working Group which recently estimated the industry's needs for rehabilitation for the next five years at Rs. 180 crores. The findings of both these independent and impartial agencies should have convinced the authorities of the immediate and imperative need to increase the profitability of the industry which is today perhaps the lowest. Because of its low profitability thus, capital naturally tends to shrink away from this industry, and this has been responsible for not only a serious backlog of rehabilitation or modernization but also for the failure of the production capacity of the industry to keep pace with the steadily rising demand for its products. The ideological fads of the powers-that-be who have prevented the organized section of the Indian textile industry to expand is also to blame for the present plight of the industry.

The next few months will show how far the reductions squeezed out of the industry will have benefited the consumer. It is not merely a question of the mills supplying the cloth at the reduced prices or arranging to open a number of shops or of supplying cloth to approved fair price shops, but it is a question of how far these agencies will actually deal squarely with the consumer. It remains to be seen to what extent they will pass on the benefit of the reduction to the consumer. Not all of them can be expected to abstain from the temptation first to dispose of the non-stamped cloth at higher prices before disposing of the newly stamped cloth. Moreover, the authorities cannot prevent the mills from preferring to export more cloth than at present because of the obvious attraction that exports hold out by way of not only a relatively higher price but also the additional advantage of import incentives. If this happens, the Government will be in the unenviable position of having to make a choice between more exports and more cloth for internal consumption, unless the total production of cloth in the country increases perceptibly. In trying to short-circuit normal economic laws, the authorities are creating for themselves fresh and more complicated problems. What is wrong with the powers-that-be today is to quote the Union Home Minister, that "our outlook is growing perhaps more and more illiberal.'" With apologies to Mr Pant again, may I add that, if this process continues much longer, the very foundations of our industrial economy will be eroded.

A CORRECTION

The Taxation of Plantations: A Case History

In the article under the above caption published in the issue of "The Eastern Economist" dated August 12, 1960 on page 271 the following corrections should be made :

(1) Last para, line four—
for "Flat rate imports" please read "Flat rate imposts".

(2) Title of Table I—
for "Sales And Flat Rate of Imports" please read "Sales And Flat Rate Imposts".

[The Errors are regretted.—Ed.]

Business Notes

State Loans

GOOD RESPONSE

JUDGING FROM both the total amount subscribed and the period for which the loan had to be kept open, the response to the State Loans this year has been just good, but not as good as last year, although it has been relatively better than the response to the Central Government Loans. It was, of course, expected that, with the customary lobbying of the concerned State Governments and the influence exerted by them on banks and other credit institutions in their respective States, the loans would at least be fully subscribed, as it has, indeed, proved to be in the event. Compared to their performance last year, however, some of the States have been able to get just their requirements. Thus, the total response at Rs. 85.33 crores against the total face value of all the 12 loans of Rs. 75 crores this year, does not compare favourably with Rs. 102.38 crores as against a total loan amount of only Rs. 63.50 crores, for which subscriptions were invited by the State Governments in 1959-60. Even in 1958-59, the response at Rs. 65.84 crores against a total loan amount of Rs. 50 crores was comparatively better than this year. Be that as it may, the total cash subscriptions to the 12 State Government loans were more than Rs. 73 crores and were, therefore, the highest in three years, but the total loan amount that was invited also was the highest in three years.

There were two surprises in connection with the response to this year's State loans. The first was the rather overwhelming support to the Andhra Loan which was oversubscribed nearly 1½ times. This explains why the percentage of allotment in this case has been the lowest at 72, compared with the cent per cent allotment in respect of as many as seven State Government loans, including those of Maharashtra, West Bengal, Madras, Kerala, Madhya Pradesh, Bihar, and Rajasthan.

A second surprise has been that, contrary to expectations, the Kerala loan was closed much earlier than the last date which had deliberately been advanced in this case in view of the uncertain climate following the recent failure of the Palai Central Bank.

As regards the two loans of the lately bifurcated States of Maharastra and Gujarat, while both loans were over-subscribed, it was the Gujarat loan that was relatively more over-subscribed. Consequently the allotment in the case of the Gujarat Loan was only 95 per cent, as against 100 per cent in the case of the Maharashtra Loan. However, in the market presently, the Maharashtra Loan seems to be in greater demand, as witness the fact that it is already quoting at a premium. On the other hand, there are reports that some loans, especially, the Andhra Loan, though initially heavily oversubscribed, is reported to be quoting at a discount. Probably there have been fairly sizeable sales of this loan by those parties who had subscribed to the loan just to please their State Government.

Scooters

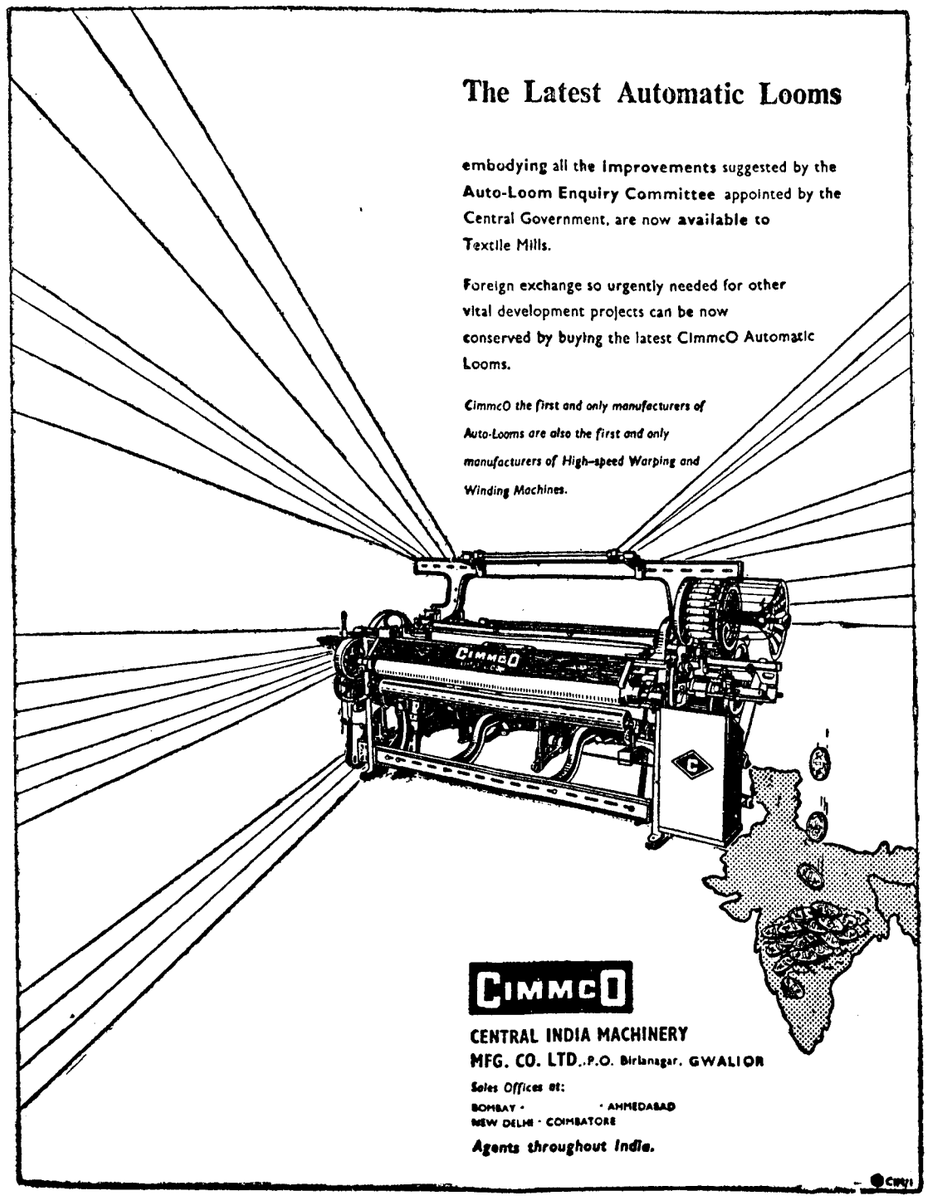
ENFIELD'S PRODUCTION PROGRAMME

MR. K. R. SUNDARAM IYER, Chairman of The Enfield India Ltd., announced at the annual meeting held recently at Tiruvottiyur, Madras, that the Company will commence the production of scooters during the second half of 1961. The Company has obained a licence for this purpose from the Government of India. Being one of the pioneers in the manufacture of powered two-wheeler transport in India, it is quite logical for the Company to take up the manufacture of Scooters when this form of two-wheelers is becoming very popular and its demand is growing fast in all regions of the country. In view of the fact that the manufacture of motor cycles and scooters involves, by and large, similar plant, machinery, techniques and skill, the new scboter project will further strengthen and consolidate the Company to a considerable extent.

Another feature of expansion announced by the Chairman is that the Company will simultaneously commence the manufacture of the well-known Villiers Road Vehicle engines. It may be added that the model of the Villiers engine with minor modifications will be used both on the scooters and the light-weight motor cycles proposed to be manufactured by the Company. This is likely to cause a considerable amount of economy in the production of both the motor cycles and scooters. In this connection, the Chairman of the Villiers Engineering Co. Ltd., of the U.K., the collaborators of the Company, also visited the plant early this year. The Company is bound to gain a lot from the experience of the collaborators.

Electricity

PAUCITY OF FUNDS



THERE PREVAILS a general shortage of capital in the Indian electricity industry. As was stated by Mr. K. A. P. Viswanathan, Chairman of the South Madras Electric Supply Corporation Ltd., at the annual general meeting held recently at Tiruchirapalli, Madras, this Company too is feeling the paucity of finance for investment. Although the Company invested Rs. 10 lakhs on a plan to electrify 19 new villages in the Trichy and Tanjore areas, it was not able to meet the demand of large number of applicants. To meet the rising demand for electricity in the areas served by it, the Directors of the Company raised Rs. 14 lakhs by the issue of equity shares and it is hoped that by March 31, 1961, supply will be augmented for the benefit of the consumers.

The Chairman has stressed that there still will remain a backlog of pent-up demand and the Company will have to tap additional sources of finance. He has pointed out that the Madras Government has placed Rs. 25 lakhs with the Madras State Electricity Board for disbursement as loans to licencees. In this connection the Company has submitted schemes to the Electricity Board and has asked for a loan of Rs. 14 to 15 lakhs. In view of the pressing needs of the Company, the Board is trusted to give due consideration to its needs.

SHORTAGE IN GUJARAT

PRESIDING OVER the annual meeting of the Surat Electricity Company Limited, the Chairman of the Company, Mr. A. N. Haksar, disclosed that the State Electricity Board had withdrawn its earlier notice to the Company to close down its diesel generation station from April 1, 1960, thus making it possible for the Company's diesel sets to continue to be of service to the community. This is a clear indication of the acute shortage of power in the South Gujarat region. It is true not only in areas of supply covered by the Surat Electricity Company, but also in the whole of Gujarat generally, that the pace of economic development is closely linked up with the pace of power development. Economic development in the coming years will undoubtedly receive a fillup with the coming in of the new Gujarat State, but it will depend upon the importance that the new State Government attaches, and the priority that it accords, to the development of power. It is believed that in places like Porbandar, some industries which are ready for being commissioned have not started working only because of absence of power. The great economic waste that delay in the supply of power entails in such cases need not be elaborated here.

Another point which Mr. Haksar made in the course of speech related to the problem of the electricity supply industry created by the fall in share values at a time when there is a general boom in the stock market. To quote Mr. Haksar, the reason for this is the need for a measure of liberalisation of the Electricity (Supply) Act, 1948, with the consequent prospect of a higher level of returns. A second and perhaps a much more serious factor, is the taxation policy of the Government of India which has brought about the present sharp drop in share values. It is to be hoped that the proposals now before the Government of India in this behalf will be processed into a suitable parliamentary enactment before the next financial year and help the electricity industry to emerge out of the woods.

FROM THE CAPITAL'S CORRIDORS

WORLD BANK MISSION'S REPORT

THE World Bank Mission, headed by Mr. Paul G. Hoffman, which visited this country in April and May last to make an on the spot study of our foreign exchange requirements vis-a-vis the Third Five-Year Plan, has done a yeoman's service by spotlighting the vulnerable points of our economy and pointing out the bottlenecks that are likely to arise in the execution of the next Plan. The report of the Mission is a well-reasoned document, designed to evoke interest in our friends abroad so that economic aid may be forthcoming from them in adequate quantities for our struggle against poverty and ignorance. It is a searching assessment of the progress made by India during the last decade and of the developmental task lying ahead.

The Mission is, obviously, gratified by the progress this country had made during the last few years. The most striking change in the Indian economy since the beginning of the Second Plan, it says, has been the broadening of the industrial base and the increased buoyancy of manufacturing enterprise. The most impressing achievement on this front, in the opinion of the Mission, is the establishment of the three new steel plants, even though it will take some time for them to work up to full production. Viewing the industrial scene as a whole, the Mission considers it truly remarkable that so much progress has been made in so short a time; in this it finds promise for the future. The Mission has expressed the view that Indian business men are becoming increasingly investment-minded and that there are signs of a gradual emergence of a new and forward-looking entrepreneurial class.

About the progress in the agricultural sphere the Mission observes, "The change in agriculture is less evident, but here too there are signs of progress, and the potential for increasing production may be greater than the statistics of output indicate." The Mission nevertheless has been greatly impressed by the signs of increased receptiveness of the Indian farming community to new ideas. It has also expressed appreciation of the fact that significant progress has been made in reducing India's dependence on certain types of imports.

The Mission finds little fault with the ambitions expressed in the Third Plan. It says: "The starting point of all Indian planning is a target rate of increase in real national income. The rate chosen—5 per cent a year—can hardly be called excessive when the present level of per capita income is the equivalent of only $63 a year and the population is believed to be growing by 2 per cent every year. To aim any lower would be to admit failure in advance." While the Mission has many detailed criticisms to make and doubts to express, it has been greatly impressed by the quality of thinking which has gone into the preparation of the Plan and it finds it difficult to quarrel either with its broad aims or with the principal assumptions underlying it. These aims and assumptions, it point out, have to be judged in the perspective of a process of development stretching not over five years, but over twenty or twenty-five.

FOREIGN AID ....

With reference to the heavy draft of external finance written into the Plan, the Mission observes: "The Third Plan has been drawn up on the assumption of massive external assistance. Without this assistance the investments proposed would be quite incapable of realisation, since they involve large imports of capital equipment which India cannot pay for out of her own export earnings, and there will be no further room for foreign exchange reserves to be drawn down." External finance, it is points out, is unquestionably the key to the succees or failure of the Plan which assumes that over one-fourth of the proposed investment will have to be financed out of external resources. In this connection a pertinent observation has been made by the Mission which is as follows: "If the Indian Government adopted drastic measures of forced savings to hold down consumption and imposed rigid controls over every aspect of economic life, much larger supplies of agricultural and industrial commodities could no doubt be made available for export and sold for whatever prices they would fetch. At the same time imports of materials for the manufacture of consumer goods could be further curtailed in order to release foreign exchange to pay for capital goods. Such methods, however, even if possible, would be incompatible with the maintenance of free political institutions in India. They would also have a disruptive effect on international trade."

The Mission finds it impossible to accept the view that the Third Plan could at this stage be remodelled in such a way as to greatly reduce its dependence on external support, and yet to retain its identity. Marginal cuts could still be made in certain investment programmes without throwing the whole Plan out of balance. The scope for flexibility has, however, been considerably narrowed by the fact that much of the foreign assistance (as well as the private foreign investment) received by India tends to be tied to large industrial projects for which the equipment is supplied by the aid-giving country. The Mission believes that India has demonstrated a capacity to make good use of foreign aid, and that the continuance of aid on a generous scale during the Third Plan can be justified on econmic grounds. It is of the greatest importance that most of this aid should be extended in a form that does not add to the already heavy burden of debt repayment.

SOME ORITICISMS ANSWERED

Regarding the criticism of the Third Plan that (i) it fails to provide adequately for the mobilisation of unused man-power for purposes of capital formation in rural areas, (ii) it gives too much attention to the production of capital goods and too little to the production of consumer goods, and (iii) it places too much of responsibility for industrial development on the private sector, the Mission is of the opinion that all these criticisms, particularly the last, appear to be in some measure justified. The broad shape of the Plan, however, it says, is well adapted to the requirements of long-term economic growth of India.

The success or failure of India's development effort over the next five years, the Mission points out, is most likely to depend on supplies of water and fertilizers, price and marketing policies and the quality of Government administration insofar as agriculture is concerned, and adequacies of supplies of fuel, power and transport, the availability of raw materials, the quality of higher management and technical personnel, the organisation of public enterprises, labour relations and the trend of productivity in relation to earning insofar as industry is concerned.

Some of other important points the Mission has made are:

(1) **Resources for the Plan:** Nearly one-third of the domestic resources for financing public expenditure in the Plan is to come from additional taxation. The Central Government has displayed considerable courage in raising taxes during the Second Plan, though the record of the State Governments in this respect has been less satisfactory. It believe that, with firm political leadership, the target for the Third Plan can be attained. One of the key issues here in the readiness of State Governments to play their full part in making

a success of the national Plan. Particular attention should be given to increases in taxation of land, to indirect taxes on semi-luxuries, and to higher taxation of the middle income groups, including the better-paid industrial workers. Surpluses of the railways and other public enterprises are relied upon to contribute nearly one-sixth of the internal finances for the Plan. The Mission believes that the railways can reach their target, but it is doubtful about the contribution expected from the public steel and fertilizer plants and oil refineries. On the other hand, there is room for a larger contribution from State Electricity Boards than the Plan allows for, and the Centre should press strongly for a general increase in power rates.

(2) **Coal:** As long as India remains a net importer of oil, it has to depend on coal and electricity for power generation. It is a matter of grave concern that production of coal, particularly of metallurgical coal, is failing to keep pace with the rising demand. Some steel production has already been lost because of the poor quality of the coal supplied, railway efficiency has been adversely affected, fertilizer production at Sindri has had to be curtailed, and valuable opportunities have been lost of earning foreign exchange from coal exports. The target of coal production for the end of Third Plan (97 million tons) is probably higher than can be justified by the probable increase in demand unless coal exports can be stepped up considerably. Nevertheless, at least 90 to 95 million tons of coal per annum may be required by the end of the Plan to support the projected expansion of economic activities generally. There is no prospect of production reaching this level unless there is radical change in Government's policy towards the private sector coal industry. The National Coal Development Corporation, which manages most of the public collieries, is a comparatively young organisation with very limited resources of managerial talent and skilled man-power; it will be hard put to quintuple its output in the short space of six years. Relying as it does predominantly on the open-cast and horizon mining, it may not be able to go in for large-scale production of metallurgical coal for which deep mining operations are required. The over-riding need, in the nation's economic interest, is to get more coal quickly to which all other considerations can be subordinated. The private collieries, therefore, should be encouraged to raise all the coal they can. Restrictions on the issue of new mining leases should be lifted and prices should be adjusted to provide the industry with larger resources for reinvestment. The differential between prices of coking and non-coking coal should be increased. The Government has ample means of ensuring that price adjustments are not followed by unreasonable increases in dividends. A good case could be made out on economic grounds for the removal of price controls altogether.

(3) **Electricity:** There is evidence of electric power shortages in all the main industrial areas. Fairly successful efforts have been made so far to minimize the impact of these shortages by staggering of working hours and placing restrictions on installation of electric appliances, but such forecasts as are available of demand in relation to firm capacity suggest that shortages will be intensified in the future.

(4) Oil: The policy pursued by the Indian Government over the past few years of excluding private capital from further investment in oil exploration and refining has added very considerably to the immediate pressure on India's foreign exchange resources. A change in this policy could free significant amounts of foreign exchange for other uses during the Third Plan by attracting additional foreign capital into the oil industry.

(5) Steel: It is regrettable that steps were not taken earlier to develop this industry on a large scale. Development under the Second Plan has been spectacular, though full production at the new steel plants can be expected only in another two or three years' time because of difficulties of organisation, management, supply of technical personnel etc. The Mission is convinced that foreign personnel will have to be retained in responsible positions for quite a long time if the plants are to be operated efficiently, and if full value is to be obtained from the huge sums invested; it would be a mistake to rush through the process of Indianisation at these plants on misplaced considerations of national prestige. The present organisation of the public sector steel industry is felt to be unsatisfactory by many of those responsible for trying to make it work. It certainly satisfies few of the criteria that have been found elsewhere to be applicable to efficient operation of public enterprises. The Mission believes that this organisation ought to be promptly re-examined. The lines of responsibility drawn in the present three-tyre structure, with the Ministry on the top in New Delhi, the Board of Hindustan Steel Company in between and awkwardly located at Ranchi, and the plant managements at the bottom at Durgapur, Rourkela and Bhilai, are blurred. Those responsible for the technical aspects of the operations feel that their viewpoint is either unheard or mis-understood by those responsible for administrative decisions. Much time is spent in communication. There seems to be insufficient delegation of authority along the line. Little attention has been given to costs and selling prices in these plants. The accounting system so far applied is incapable of producing cost data, being simply an adaptation of accounting practices used in Government departments, such as the post office, and totally unrelated to the requirements of steel manufacture.

(6) **Fourth Steel Plant:** The expansion of the three Government-owned steel plants to raise their capacity to a little over 6½ million tons would not appear to be excessive on current demand assessment, especially when it is unlikely that full production will be achieved within the Third Plan period.The case for the construction of a fourth steel plant in the public sector is much debatable and must rest in the last resort on the arrangements made for running it when it is completed. India will certainly not be able to spare from her own resources the managerial and technical skills required without detriment to the operations of the other steel plants. The shortcomings in the organisation of the existing Government plants anyhow suggest that special arrangements might with advantage be made to secure foreign management for the fourth plant. Nor does the Mission feel that the case for having the fourth steel plant in the public sector can be established until alternative possibilities of obtaining a further expansion of production in the private sector have been thoroughly explored. This does not yet appear to have been done.

(7) Technical Skill: Scarcity of experienced managers, technicians and supervisors is one of the factors most inhibiting to growth of Indian industry. Almost all the industrial plants in India have more workers than they need, and very many more than a comparable plant operating in countries where there is no problem of surplus labour. As a result, labour costs per unit of output are usually much higher than the level of wage rates would suggest. This, however, is not the case with the new industrial units. Another problem that Indian industry faces at this early stage of its development is lack of common servicing facilities and ancillary undertakings which limits the scope for division of labour and necessitates a high degree verticle organisation.

(8) **Price Fixation by Tariff Commission:** The Mission has expressed concern at the extension of price fixation activities of the Tariff Commission. The primary purpose of the Tariff Commission's enquiries, the Mission says, is legitimate enough — namely, to prevent industries which have to be granted protection against imports from exploiting their monopoly position at the expense of the consumer. The trouble, however, is that price fixation has come increasingly to be regarded as a desirable end in itself, and the arbitrary methods employed in deciding what the limits to profits should be are liable to discourage investment. Thus, prices are normally fixed on the basis of an allowance for profits ranging from 8 per cent to a maximum of 12 per cent of capital employed. As a result, after dividends have been paid there is a very little left for financing expansion. The Mission believes it generally desirable that a larger proportion of industrial profits should be retained in future in the business. This is especially important if private industry is to expand sufficiently to utilise the industrial materials and semi-manufactures which are to be produced by the heavy industrial plants in the public sector.

The Mission suggests that the chances for the success of the Third Plan in industry would be greatly improved if the Government were to institute promptly at the enterprise level an objective and thorough examination of the impact of controls on the efficiency of management. There should be two objectives of such a review. The first should be to relieve management of the burden of complying with unnecessary, obsolete and trivial controls and formalities. The second should be to re-examine the case for price controls and the base on which prices are fixed in different industries to ascertain whether, on balance, the industry's development, and the growth of the economy generally, is being helped or hindered by the present arrangements. The mere announcement of the Government's determination to institute such a review should have valuable psychological effect on the progressive forces in the Indian business community.

ARBITRATION ON INDO-U.S. TRADE MATTERS

The Federation of Indian Chambers of Commerce and Industry and the U.S. Arbitration Association have agreed to recommend to the firms engaged in Indo-American trade the insertion in their contracts of the following arbitration clause:—

> "Any dispute or claim arising out of or relating to this contract shall be settled by arbitration. If the arbitration is to be held in India, the dispute shall be submitted to the Arbitration Tribunal of the Federation of Indian Chambers of Commerce and Industry and shall be conducted in accordance with the Rules of that Tribunal. If the arbitration is to be held in the United States of America, it shall be conducted in accordance with the Rules of the American Arbitration Association."

The two associations have further agreed that in the event the parties do not designate the place of arbitration or are unable to agree thereon within 30 days after the demand of arbitration has been made, the place of arbitration shall be determined by a Joint Arbitration Committee of three members, one to be appointed by the Arbitration Sub-Committee of the Federation, another by the American Arbitration Association and the third of a nationality other than that of any one of the parties to act as Chairman to be chosen by the other two members. Moreover, the party demanding arbitration, according as he is resident of India or the United States of America, shall give notice to the Arbitration Tribunal of the Federation or the American Arbitration Association, as the case may be.

ZINC SMELTER NEAR UDAIPUR

The Union Government has granted a licence to the Metal Corporation of India Ltd., Calcutta, to set up a zinc smelter, with an installed annual capacity of 15,000 tons of zinc, near Udaipur (Rajasthan), based on the ore deposits of the Zawar Mines. These ore deposits contain lead, zinc and silver. The scheme under which the company want to go in for smelting of zinc includes production of 25,000 tons of sulphuric acid (for further manufacture of superphosphates), manufacture of 70 tons of cadmium per annum and expansion of the company's Tundoo lead and silver refining plants, raising their capacity to 9,000 tons and 5,40,000 oz. per annum respectively. The company will have the technical and financial collaboration of Krebs and Cie, of Paris, in association with Societe Miniere et Metallurgique de Penarroya, also of Paris.

The Government has as well approved the company's proposal to import plant and machinery for the zinc melter, valued at about Rs. 268 lakhs, under the Indo-French Economic Agreement. The issue of capital has also been approved. The scheme is expected to materialise during the second year of the Third Plan.

INDIAN INVESTMENTS ABROAD

In view of the tight foreign exchange situation, the Government of India has decided that Indian investments abroad shall be limited only to the value of the Indian machinery exported and the value of free shares, if any, allotted by foreign firms to the Indian participants by way of technical fees or payment for 'know-how' etc.

REFINANCE FACILITIES TO BANKS

It has been decided in principle to extend refinancing facilities to certain selected scheduled banks and financial institutions without requiring them to become share-holders of the Refinance Corporation. The proposal also envisages giving the Corporation discretion to determine, within the broad framework of the Five Year Plans, the eligibility of any particular industry for assistance. It has also been decided to increase the maximum period of the loans eligible for being refinanced from 7 to 10 years.

YEN CREDIT

Some details are now available of the manner in which the yen credit from Japan has been utilized. Power and shipping projects have been the principal beneficiaries to the tune of Rs. 23.8 crores. Tractors form an important part of equipment ordered. In the private sector, rayon industry has been allocated Rs. 4.13 crores, of which Rs. 3 crores worth of equipment has been ordered. An allocation of about Rs. 3 crores has been approved for the import of paper mill machinery.

BRIEFS

The Government of India has decided to expand the capacity of the Durgapur Coal Mining Machinery Plant from 30,000 ton to 45,000 tons of machinery items per annum. The expansion programme includes production of 25 tons of light drilling rigs annually and an additional 5,500 tons of heavy oil drilling rigs.

*

A licence has been granted to Baroda Rayon Corporation for the manufacture of viscose rayon yarn. It is understood the firm has entered into a contract with a Japanese concern for the purchase of machinery required for the project. The Japanese firm proposes to take up equity shares of the Baroda Rayon Corporation to the extent of about 7 per cent as part payment for the cost of machinery.

*

Two proposals for the manufacture of chemically bonded basic refractories on commercial basis have been finalised. One of the projects, costing about Rs. 70 lakhs to Rs. 80 lakhs, will be located at Salem, in Madras State, and the other, costing about Rs. 350 lakhs, at Belpahar, District Sambalpur, in Orissa State.

*

The Union Minister for Industry, Mr Manubhai Shah, told Parliament last week that it was proposed to permit setting up of three small-scale units in each State for the manufacture of watches. Four applications have so far been received for this purpose and they are being examined. There is no proposal to set up a watch manufacturing factory at Mussoorie with Russian aid, though Russia makes some of the best watches in the world.

BOOK REVIEWS

STORY OF A BETRAYAL

Revolt in Tibet: By Frank Moraes; Published by Macmillan Company, New York. Pp. 223. Price Rs. 7.50.

Frank Moraes' "Revolt in Tibet" is in every sense a timely, thought provoking book, in the sombre context of the border situation. It suffers, of course, from the disadvantage of a lack of authentic and first-hand experience, except for a brief encounter between the author and the Dalai Lama, who emerges as the pathetic symbol of yet another lost cause. But Mr. Moraes has painstakingly read, questioned, and sifted an impressive mass of information, and set down in great detail a complete picture of Tibet—its history, religion and culture, the events which led up to the invasion of the Chinese, and the flight of the Dalai Lama to India, and a well documented account of conditions in Tibet, since it has been yoked to the Communist juggernaut.

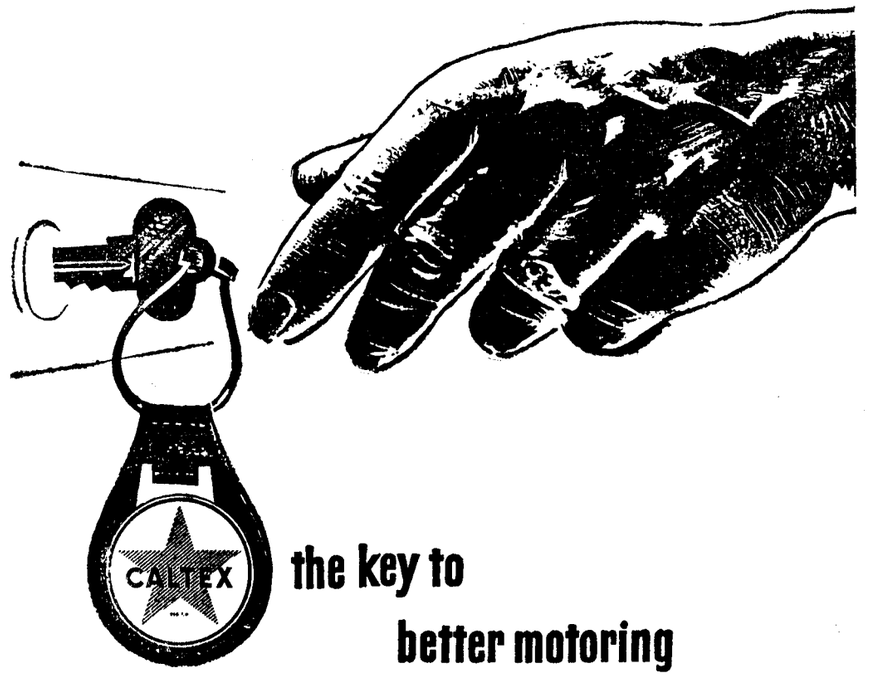
The whole course of Tibet's historical association with Britain, India and China is carefully traced. Basically it reveals, that over 3,500 years, except for brief interludes during the Han dynasty and under the Manchus, China was unable to assert her authority over Tibet, and Chinese suzerainty was a mere technicality. A consistent pattern is established of Tibet's reluctant acceptance of Chinese overlordship when China was strong, and of its assertion of independence, when China was weak. In 1911, when the Manchus were weak, the Dalai Lama declared the full independence of Tibet, both in external and internal affairs, and Tibet had her own coinage and army. This was until 1951, when the Sino-Tibet Treaty was signed, giving China the right to guide Tibet's external affairs while guaranteeing Tibetan autonomy. But the Dalai Lama has since protested that this treaty was signed under duress, and affixed with a forged seal.

Mr. Moraes goes directly to the heart of Chinese claims to overrun Tibet, when he raises the whole question of the meaning of suzerainty. The entire episode of Chinese betrayal and treachery is exposed, their blatantly false promises to respect Tibet's religion and internal administration, which were followed immediately by mass immigration, intensive indoctrination, mass deportations, and drastic reforms, including arbitrary confiscation of property, dissolution of the monasteries, forced collectivization, and systematic and unscrupulous undermining and destruction of the religious beliefs, culture and language of the Tibetans, which they sought to replace with the Chinese language and doctrine. When this was inevitably resisted by the mass of the people, to whom religion was a living issue, the situation was cynically designated as a revolt of "reactionary elements" and massacre and other "dastardly" methods were used to bring Tibet under the Chinese heel. That reforms were long overdue, no one will question, but they should have been initiated "within the framework of Tibetan thinking," and certainly not with a brutal disregard for human dignity.

The author feels that India should have proclaimed Tibet a free and sovereign state when she herself gained her independence instead of meekly accepting an ambiguous situation as a legacy of the British. But whether any action of India could have effectively prevented, or even delayed Chinese ruthlessness, once it was set on its course, is a moot question.

The main purpose of book is to point out forcefully, that Tibet, now "liberated" into a serfdom, more terrible than any she suffered before, is a tragic object lesson to Asia, demonstrating not only the vagaries of Communism, far worse than any Imperialism, but also its tremendous propulsive force, for, to it "expansionism is endemic." The Chinese variety is indeed the more dangerous, because of the Chinese view of themselves as a civilization, rather than as a nation, and their whole concept of state, in which minorities cannot exist as entities, with the right of secession (as in at least the theory of Russian Communism) but must be totally and unrecognizably assimilated into the Great Han Motherland. Tibet, now a mere decoy in Chinese hands, is part of a menacing situation which confronts India along her entire northern border. It is a border which abuts on Sikkim, Bhutan and Nepal, which despite ties of friendship with India are ethnographically a unity with Tibet, and so a fruitful ground for the classic Communist methods of infiltration and subversion.

PUBLIC FINANCE



Currency, Banking and Finance: By K. P. M. Sundharam; Sultan Chand & Sons, Nai Sarak, Delhi; Pp. 233; Price: Students' Edition; Rs. 6.50; Library Edition; Rs. 7.50.

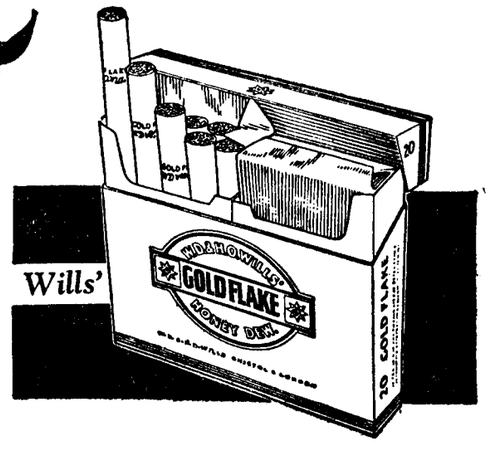
This book by K. P. M. Sundharam, who is in the Department of Economics, S.R. College of Commerce, University of Delhi, is a welcome addition to the current literature on money and banking. The author has explained the main principles of currency and banking in an intelligible and simple manner even while covering a fairly wide ground. It is primarily meant for Indian students, since the syllabus of the Indian universities as well as the application of the essential principles of money and banking to Indian conditions have been taken into account. Another merit of the book is that it includes a small list of select references for those who are further interested in pursuing their subjects. For the benefit of those who are preparing for their examinations, a list of model questions is also appended to each chapter. There is, no doubt, that this useful textbook will be sought after not only by a large body of under-graduate students of universities but others interested in acquainting themselves with the general principles of currency and finance.

ENGINEERING EXPORTS

Directory of Indian Engineering Exporters 1960: Published by the Engineering Export Promotion Council, India Exchange, Calcutta: Price Rs. 10.

This directory, which is the third revised edition published by the Indian Export Promotion Council, is divided into five parts which include an introductory note about the working of the Council, an article reviewing in brief the progress of the Indian engineering industries especially during the Second Plan, and a list of the manufacturers and exporters who are the members of the Council. It also includes an alphabetical list of exportable items and the names of exporters classified according to the products. The earnings from engineering exports are currently of the order of Rs. 7 crores and they are bound to assume greater importance during the Third Plan. It is, therefore, only proper that this directory should be brought out to serve as an authentic guide to the foreign buyers so that they may be acquainted with the wide variety of engineering goods at present exported from India.

the key to better motoring



When you switch on the ignition and start your engine it commences to use petrol and oil, both rather expensive items these days. So it's quite important that your car (and you) receive the kindest treatment. And, the wise motorists are those who always use Caltex petrol and oils —there's nothing as good as Caltex for better performance and proved economy.

Care for your car— with CALTEX

Wherever you go in
Himachal Pradesh
there is the full, rich
flavour of Wills'
GOLD FLAKE to
enhance the
pleasures of travel.

Wherever you go . . .
they're good

COMMODITY NEWS AND NOTES

HIGH PRICES OF GOLD AND SILVER

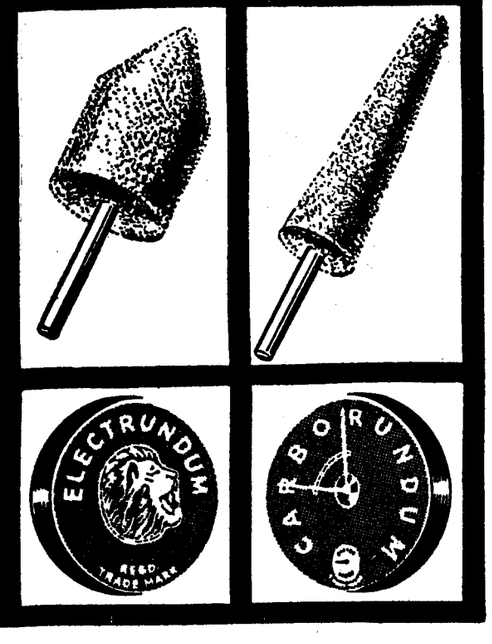
The Deputy Minister of Finance, Mr B. R. Bhagat informed the Rajya Sabha recently that the main factors affecting the price movements of gold and silver were: (i) the continued ban on the imports of gold and silver; (ii) more effective steps against smuggling of gold; and (iii) a marked reduction in the arrivals of Tibetan silver coins. He said the Bombay Bullion Association had been raising from time to time the margin requirements for trading in gold and silver. In reply to a question by Mr. Ansaruddin Ahmed whether Government's attention had been drawn to the present inordinately high prices of gold and silver; and whether it was a fact that a sovereign was sold in May 1960 at Rs. 90.50 nP. against Rs. 80.00 in the corresponding month of the previous year, the Deputy Minister said Government received the market quotations for gold and silver regularly. The average price of sovereign in the Bombay bullion market during May 1960 was Rs. 88.17 nP. as against Rs. 77.94 nP. in May 1959.

EXPORT PROMOTION COUNCIL FOR SPICES FORMED

An Export Promotion Council for spices—twelfth of its kind—has been formed. The Council's head-quarters will be at Cochin. Besides the Joint Chief Controller of Imports and Exports, Madras as Chairman, the Council will include a representative each of the Government of Madras, Andhra, Kerala and Mysore, and the Agricultural Marketing Adviser to the Union Government. It will also have non-official members representing trade in Pepper, Cardamom, Turmeric, Ginger, Chillies and minor spices. The promotion activities relating to pepper exports hitherto handled by the Cashew and Pepper Export Promotion Council, will now be undertaken by the new Council.

The problems facing the different spices are varied. In pepper, the export values have declined on account of the emergence of stiff competition from Saravak and Indonesia during the post-war period. Ginger exports have declined since 1958, the main reasons being the import restrictions in West Asian countries, increasing competition from Jamaica and Seirra Leone and change in consumers' preference. The new Export Promotion Council will address itself to these problems and undertake market survey and research. send out trade delegations, prescribe quality standards and attend to importers' complaints etc. In 1959, India exported spices worth Rs. 10.4 crores pepper accounted for Rs. 4.3 crores, cardomom for Rs. 3.3 crores, ginger, chillies and turmeric for Rs. 50 lakhs, Rs. 30 lakhs and Rs. 26 lakhs respectively. The balance was accounted by minor spices like celery seed, coriander seed, fennel seed etc.

PRODUCTION OF COPPER ORE IN INDIA



The production of copper ore during January-June, 1960 was 219,464 metric tons, according to the Indian Bureau of Mines. This represents an increase of about 10 per cent as compared to the output of 199,945 metric tons in the corresponding period of the preceding year. The entire production was reported from the Singhbhum district of Bihar State. The production of copper metal during January-June, 1960, was 4,379 metric tons as compared to 3,817 metric tons in the corresponding period of 1959.

EXPORT OF TEA

The Minister of Commerce, Mr. Nityanand Kanungo, said in the Lok Sabha recently that the Tea Board had set up promotional units in the U.S.A., Australia and the U.A.R., with Tea Promotion Officers in charge of these units. Similar units would shortly be set up in the U.K. and Germany. A Tea Centre would be shortly opened in Cairo. Mr. Kanungo, who was replying to a question by Mr. Assar, added that the world market for tea was inevitably a competitive market, with world production sometimes tending to outpace the consumption. By and large, our quality teas, he said, had maintained their position. The competition was more severe in respect of our common teas, since world supply was in excess of demand.

COMPANY AFFAIRS

TISCO DIVIDEND MAINTAINED

From the working results of the Tata Iron & Steel Company for the year to March 1960, a brief summary of which was released recently, it appears that the Directors have proposed to maintain the net dividend of Rs. 6.80 per share for the year. The gross dividend will, however, be Rs. 9.72 per share and the payment on account of this dividend will absorb Rs. 2.98 crores. The dividend on the new shares is Rs. 1.70 free of tax, or Rs. 2.43 gross, per share. The dividend on the first preference shares is Rs. 9 subject to tax and on the second preerence shares Rs. 7.50 subject to tax.

This maintenance of the ordinary dividend is in line with the rising output of the Company. Production is up from 1.15 million tons of steel ingots last year to 1.53 million tons; the turnover too was higher at Rs. 73.47 crores against Rs. 54.45 crores during the previous year. Naturally, the profits were higher too. The Gross Profits recorded a substantial increase from Rs. 8.58 crores to Rs. 14.15 crores. After providing Rs. 8.46 crores for depreciation and Rs. 4.14 crores for plant rehabilitation and development rebate reserve, there is a net profit of Rs. 1.54 crores. This amount of Rs. 1.54 crores is transferred to General Reserve No. 2 representing un-taxed profits while a sum of Rs. 3.76 crores has been transferred from General Reserve No. 1 representing taxed profits of previous years for payment of the proposed dividend.

The Directors have reported that although the profits of the Company have gone up the Company has been obliged to draw a net amount of Rs 2.22 crores from the Reserves to pay the proposed dividends, as it did during the previous year too. This, in a way, is a reflection on the uneconomic nature of steel retention prices. The Company is likely to get a tax credit under the provisions of the New Finance Act because the dividends have been paid out of the taxed profits.

BAGALKOT CEMENT

During the year to December 31, 1959, the Company registered a fall in the production of clinker and cement. The output was 94,326 tons of clinker and 96,717 tons of cement against 1,01,004 and 1,01,011 tons, respectively, in the previous year. The despatches of cement by the Company amounted to 98,001 tons against 1,00,494 tons in 1958. The Company introduced certain modifications in the chain zone recommended by the machinery manufacturers for the purpose of improving performance of the kiln. The time involved in carrying out these modifications resulted in the shortfall of production in 1959 but has yielded satisfactory results in operation of the current year.

The expansion of the Company's Cement Plant at Bagalkot from one lakh tons of yearly capacity to that of two lakhs of tons was completed in the month of April, 1960. Certain difficulties were experienced initially and the expansion of the plant was delayed partly on account of transhipment difficulties of machinery from broad gauge to meter gauge at Hotgi. Now the working is quite satisfactory as reported by the Directors.
