The Queen's visit has already become top news. There is great excitement about the Benaras brocade piece which has been shipped posthaste to Buckingham Palace to be made into an evening gown, which Dame Rumour reports, will be worn by the Queen at the President's Banquet. Meanwhile, the annual winter cleaning—it takes place in winter and not during spring in India—has been advanced and, I gather, somewhat accelerated in intensity and in tempo. Eastern and Western Courts, for reasons not entirely clear to me, received first preference. But I noticed—such is the force of monarchy still—that special attention was being given to the statue of King George V near India Gate. It is only to be expected that the Queen will devote some minute attention to this excellent representation of her grandfather. I see also that she is to spend with the Maharajah of Jaipur an interesting day in the Shooting Lodge at Sawai Madhopur. Are the tigers being suitably trained for the occasion, or are we leaving everything to the mercies of chance? I happen to have some inside information in regard to VIP shoots, but it would not be tactful for me at this critical point, when Indo-British relations are in the balance, to divulge all I know!

THE WEEK'S NOTES

Japan

VICTORY FOR LIBERAL DEMOCRATS

THE PEOPLE of Japan have returned to power the ruling Liberal Democratic Party under Mr. Ikeda. The total number of seats won by the Liberal Democrats has been 296 as against 283 in the last Diet. The Socialists have also improved their strength from 122 seats in the dissolved House to 145 seats in the new House. The newly formed Democratic Socialist Party, however, cut a sorry figure as it secured only 17 seats instead of 40 seats in the outgoing Parliament. This election has made one fact abundantly clear and it is that the political issues are perfectly clear in the minds of the electorate. Any party like the Democratic Socialist Party which wishes to charter a path in-between the two groups is bound to fail.

It was not obligatory to hold the new elections till 1962. But Mr. Kishi, under pressure of widespread unrest in the country, had promised fresh elections to ascertain the confidence of the people. The present elections were preceded by hectic developments including the assassination of the Socialist leader Mr. Asanuma. At one time it was believed that the lunatic attempt on the life of Mr. Asanuma would result in heavy deflection from the Liberal Democrats to the Socialists. In fact it has turned out to be true to a certain extent but the party seems to have gained at the expense of the newly formed Democratic Socialist Party and not at the expense of the Liberal Democrats.

The elections in Japan were fought on the issue of neutrality versus close association with the United States of America. The Socialists advocated neutrality in the international affairs and the people of Japan have refused to place faith in their philosophy. In fact, the results of this election have exhibited the faith of the people of Japan in a policy which encourages complete co-operation with the West in the international affairs and, incidentally, it also affirms the faith of the people of Japan in the Japan-U.S. Security Treaty.

The widespread prosperity in the Japanese economy in the recent past is also one of the reasons for the defeat of the Socialists. In a market where the wages of the workers have been steadily rising, Socialists could not incite the workers against the ruling party. In other words, the economic boom in Japan came to the succour of Mr Ikeda and his party. It also shows the firm belief of the people of Japan that their fate is intimately linked with the West without whose co-operation they could not face their powerful neighbour.

Laos

COALITION WITH PATHET LAO

HAVING OPENLY accused the United States for meddling with the affairs of his country by backing the insurrection of the right-wing General Phoumi Nosavan, the Prime Minister of Laos, Prince Souvanna Phouma, has agreed to admit Pathet Lao representatives to his Government and to accept aid from Communist China and North Vietnam. The development is scarcely surprising for it was with great difficulty that the Laotian Prime Minister had been able to maintain an equilibrium between the pro-Communist forces in the North and pro-West elements in the South-East, by declaring that he would restore peace to his strife-torn country by following a policy of neutrality between the two power blocs. General Phoumi's revolt has obviously tilted this precarious balance and in a way compelled Prince Souvanna Phouma to lean on Pathet Lao in order to maintain his position.

There can be little doubt that the entry of Pathet Lao representatives into the Central Government will considerably help the Communist forces to dig themselves deep in the body-politic of Laos. To counteract any further growth in the red influence in Laos, should Thailand and South Vietnam Governments associate themselves with the rightist forces in Laos, or should they step in directly—which in view of their utterances in the recent past is not unlikely—there is every danger of the situation deteriorating. The consequences of this can be well imagined.

Prince Souvanna Phouma has been rightly following the policy of neutrality between the two power blocs and if he is to steer clear his country of Communist domination, his hands must be strengthened. The United States should realise that its support to General Phoumi, as alleged by the Laotian Prime Minister, will only defeat the purpose it has in view. There is obviously need for some rethinking in the USA about its Indo-China policy. Canada and Britain are understood to have been counselling the United States to support a country's legitimate Government. It will do well to heed this advice specially when such a Government, as in Laos, is capable of maintaining stability in the country and that too by retaining it in what is called the "Free World".

Orissa

DISSOLUTION OF COALITION

THE ORISSA COALITION MINISTRY is proposed to be dissolved after the Budget Session of the State legislature. This decision has been taken by the Utkal Pradesh Congress Committee after considering the report of a special Sub-Committee which was appointed to report on the continuance of the present Ministry. If this decision of the Pradesh Congress Committee is implemented, all the important groups in the State would get about eight months for approaching the electorate and seeking a clear verdict in the next General Election, since President's rule is likely to prevail after the present Ministry's dissolution. This vital decision has one encouraging feature for the Congress Party in that it has helped the Ministerial Group and the dissidents in Orissa to patch up their differences. Till the next Budget Session at least, Dr. H. K. Mahatab will continue as Chief Minister and he would not press for his resignation which he had proposed earlier.

Will similar procedure apply to other States as well? It may be stated that the decision to form the Coalition in Orissa was taken under the directive of the Congress High Command. Under almost similar circumstances, the Congress Party in Kerala had to join hands with the Socialist Party and the Muslim League in order to over-throw the Communists. Will the High Command advise the Kerala Pradesh Congress Party also to adopt the same line? It is obvious that it will not do so. By sheer logic it follows that the decision of the Orissa Pradesh Congress Committee is in contradiction with the all-India policy dictated by the High Command. Perhaps this decision would be reversed before the Budget Session.

What are the chances of a non-Congress Government in Orissa after the dissolution of the Coalition Ministry? It must be conceded that it is not necessary to promulgate the President's rule if all the opposition groups join together to form a non-Congress Government, since they possess a clear majority of 76 out of a total of 140. This, however, seems to be highly theoretical and from the indications now available, it is obvious that such a Government could not continue for long because of the pressures of the smaller splinter groups. If the High Command goes by the recommendations of the Sub-Committee and allows the coalition to cease to function, the President's rule seems almost certain. In that case, the Congress Party can take credit for a policy, which takes into account the local situation and shows flexibility in the interest of ensuring stable Governments in the States.

Agriculture

A USEFUL PUBLICATION

CERTAIN RAPID changes have been witnessed in the field of Indian agriculture during the previous decade as in every other field of the Indian economy. To keep track of this changing picture many economists must be looking for developments from month to month. In this respect "Agricultural Situation in India," published every month by the Ministry of Food and Agriculture, Government of India, is quite a handy publication. Its Annual Number issued recently presents a factual and integrated picture from all angles for the year 1959-60.

Indian agriculture, as revealed by the Index of Agricultural Production appended to the publication, has tended to show a secular uptrend during the Second Plan period and the average annual rate of growth has been recorded around 4 per cent. This uptrend has, however, been interspersed by certain troughs, as it was in 1959-60. If the index (base: 1949-50 = 100) in 1956-57 was 124 against 116.8 a year before, it also dropped to 114.6 a year later. Similarly, if 1958-59 was a year of record agricultural output with index touching the 132.3 mark, it is no wonder that the year under review, 1959-60, is a year of comparative discouragement.

The publication contains comprehensive notes on recent developments in respect of Land Reforms in India, Problems and Prospects of Ceilings on Landholdings etc., which can be read with interest.

The World Abroad

PUG'S EYE VIEW OF THE WORLD

By

ODYSSEUS

ON RETURNING to my office in Delhi one day in the hot weather of 1947, I found a telephone message asking me to ring up Lord Ismay, who was then Chief of Staff to the last British Viceroy. I called his number, gave my name, was put through without delay, and asked him what he wanted. "Your secretary must have made some mistake, I did not 'phone you. But," I heard Ismay continue with the utmost bonhomie, "as I've never met you, this seems an admirable opportunity to put that right. Are you free for a drink this evening?"

As anyone who has a "Who's Who" within reach can see for himself, Ismay occupied positions of ever increasing responsibility and importance until his retirement from the Secretary Generalship of the North Atlantic Treaty Organization in 1957 at the age of seventy. Born in 1887, he was educated at Charterhouse and Sandhurst, and launched out on his long career by joining the 21st Cavalry (Frontier Force) at Risalpur in the old Northwest Frontier Province. Thus began his connection with India, a country which he learned to love, and to which he rendered great services as a key member of Lord Mountbatten's staff in the last days of the raj. In the 1914/18 war he served throughout in Somaliland. Thereafter, he passed through the Staff College at Quetta, served at Army Headquarters in Simla, was Military Secretary in 1931/33 when Lord Willingdon was Viceroy, and eventually succeeded Lord Hankey as Secretary to the Committee of Imperial Defence in 1938. He was chief of staff to Winston Churchill from 1940 to 1946. After serving with Mountbatten in India, he became Secretary of State for Commonwealth Relations 1951/52, before going on to NATO in 1952. Yet, as is illustrated by the chance through which my acquaintance with him began, Ismay, despite rarified atmosphere in which he moved, remained the most approachable and friendly person. Far from being on his dignity at being called to the telephone by an obscure special correspondent, he answered the phone cheerfully, in person, and seized the opportunity of adding one more to his contacts with the press. He gave me valuable guidance on several subsequent occasions, which helped me to avoid publishing nonsenses and him to get accurate reports into print.

Ismay's Memoirs do not suggest that he is what is called (usually scornfully today—heaven knows why!) an intellectual. But every page does reveal unconsciously the characteristics that enabled him to make invaluable contributions in all the key positions that he occupied: a shrewd natural intelligence, a lust for hard work, a conscious desire to smooth out the inevitable conflicts between personalities that spring up wherever two or three are gathered togther in a common task, struggling under great burdens and responsibilities. Again and again these pages ("Memoirs of Lord Ismay." Heinemann. London. 1960. 42sh) testify to Ismay's ability to turn a blind eye to the weaknesses of those with whom he had to deal and his quickness to appreciate their good qualities. People like being liked. Appreciation brings out their best qualities. Lucky was the chief who had such an intelligent and tireless repairs and maintenance expert to diminish the friction of the wheels of administration and to keep the machine going when breakdowns occurred. This does not mean that Ismay lacked firmness or the courage of his conviction when he deemed it necessary to dig his toes in. (It is the determined jut of his jaw which has led him to be called "Pug" by his friends). There comes a moment when temperamental colleagues and chiefs must be brought into contact with unpleasant realities and Ismay never flinched. That also was part of his secret: his enthusiasm and loyalty were without limit, but by keeping his self-respect intact, he held the respect of others.

War memoirs are two a naya paisa nowadays. I happen to have read those of Churchill, Eisenhower, Alanbrooke, and Montgomery. As H. R. Trevor-Roper has pointed out, Churchill's show the working of the machinery from the top. They are the version of the man who drove the machine. In them, we see the master mind at work, but we do not see the processes behind the decisions, nor the strains which their impacts created. Alanbrooke's diaries bring the process to life. But for them, we might think Churchill's achievement less than it was: that he had only to think and command for the job to be done. Alanbrooke reveals the human predicaments and pressures which animated the machinery and our respect for Churchill is increased.

ALANBROOKE, MONTGOMERY AND ISMAY

While Churchill commanded, and Alanbrooke advised, Ismay was the Prime Minister's staff officer, the head of the bureaucracy that carried out the strategy of war. It is Ismay's merit that he strove to wipe the grit out of the machinery and to keep it oiled. I do not seek to denigrate the tremendous achievements of Alanbrooke and Montgomery (in their very different roles), and I readily concede that their memoirs are important contributions to history, but I confess that I find that their constantly protruding egotisms make their books tiresome to read. Alanbrooke and Montgomery too often create the impression that they were the sole embodiments of perfect wisdom, and that they were surrounded by a pack of maddening children, who had to be cajoled into their places, if the war was to be won.

Ismay's memoirs cover a great deal of the same ground as those of Eisenhower (not to be included among the egomaniacs), Alanbrooke, and Montgomery. It is Ismay's merit that he helps to set these great events in calmer perspective. Even the critical Mr. Trevor-Roper is forced to concede that Ismay is lucid: the summaries of both sides of great quarrels—the pros and cons of Munich, the debates between British and Americans over the timing and placing of the attack on the European mainland, and the failure to grasp the USSR's post-war ambitions to ensure supremacy in post-war Europe—are masterpieces of compression, fairness, and clarity.

Nowhere is Ismay's gift of clarity and compression better displayed than in the chapter to which readers in India will certainly turn first—"The Last Days of the Raj." Here, in 36 pages, he gives a bird's eye view (or should I say a "Pug's eye view"?) of the ground covered in detail in the 370 pages of Alan Campbell-Johnson's "Mission with Mountbatten", managing, in addition, a sketch of the events from the Montagu Declaration of 1917 up to Mountbatten's arrival in March, 1947, without which much of the significance of the last viceroy's task—as the culminating point in a long sequence—cannot be fully grasped. I am not suggesting

that Ismay supersedes Campbell-Johnson's book. He sets it in valuable perspective.

LESSONS FOR INDIA

What lessons have Ismay's memoirs for India? The mazes of the bureaucratic machine in New Delhi, on the one hand, and the clashes of personalities—political and service—struggling to make the machine work, on the other, have often been the subject of scorn and satire. Ismay's memoirs serve to remind us that the bureaucracy of New Delhi is a pigmy compared with the sprawling congeries of Whitehall and the stupendous web that spreads from the Pentagon, downwards, sideways, and upwards, in Washington D.C. It was the failure to devise means to control, and to make the best use of these vast, but necessary, machines, and to create a harmonious team spirit between politicians, generals, admirals, airmen, and civil servants, which led to the bitter personal vendettas, the blood baths, and the Himalayan blunders of World War I. (And it emerges clearly from these pages that a similar—and fortunate—failure in co-ordination and harmony in Nazi Germany was one of the biggest single factors contributing to Hitler's downfall).

The reasons for the failures in the administrative machine, and in human relationships, were exhaustively studied in the UK between the wars, under the chairmanship of the late Lord Hankey, who was the guiding influence in setting up the Committee of Imperial Defence.

Publishers' blurbs are not always to be trusted, but Messrs. Heinemann's blurb for these memoirs is, for once, justified in its statement that "The waging of total war in a democracy is a complex business: committees and conferences have to do their work, temperaments have to be reconciled, and methods of implementing decisions arrived at. It is this vital aspect of the war that Lord Ismay's book illuminates, and it is likely to become the definitive work on the English machinery of war direction since the beginning of this century." To this I would add that the waging of (comparatively total) peace in a democracy is just as complex, and I cannot help thinking that it might be worth Mr. Nehru's while to appoint some retired veteran—such as Mr. V. P. Menon, now far from the heat and dust of political and administrative battles—as Officer on Special Duty to study, quietly and carefully, the chapters in which Ismay outlines Hankey's work, and his own role in succession to Hankey, in order to draft a pilot scheme setting out what is necessary. This could be followed up by a study tour in London, and in NATO headquarters, to see to what extent the British wartime machinery has been modified in the UK and adapted in the North Atlantic Treaty Organisation, over which Ismay presided for five critical years.

GATT ON TRADE AND DEVELOPMENT

From Our Special West European Correspondent

PARIS, November 19.

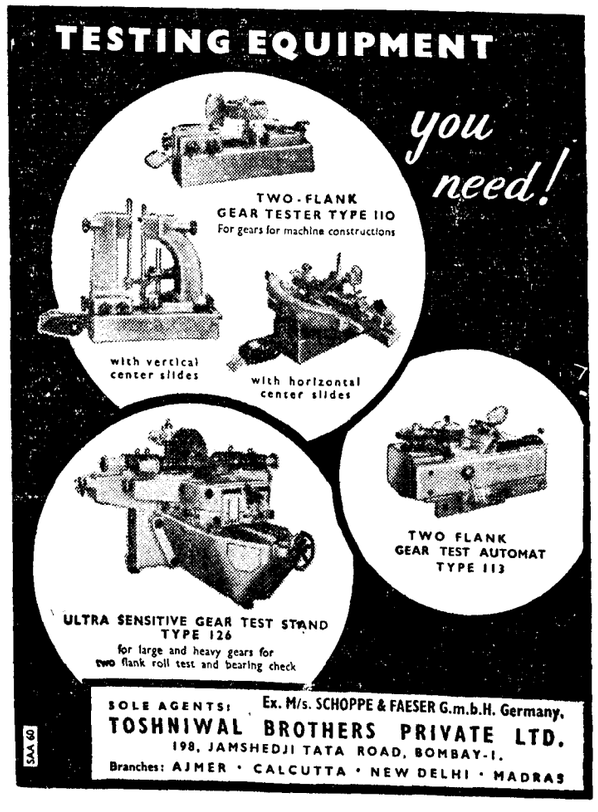
GATT has just published its report on "World Trade in 1959", which was an altogether exceptional year for the developing countries because, taken as a group, they managed in that twelve months to wipe out their trade deficit. Yet they achieved this apparently satisfactory financial results only because (a) they were still practising the drastic import restrictions imposed previously, while (b) their exports benefited from the sharp expansion in world trade that followed on the recession of 1958. The value of world trade had contracted by 4.5 per cent in 1958, but in 1959 the recovery from the mild slump caused an increase of 6 per cent. Part of this increase consisted of bigger imports of raw materials by the industrial powers, and so the developing nations saw their export earnings rise while import outlays remained limited. Thus their total trade deficit, which in each of the years 1957 and 1958 had been about $2,600 million, disappeared. Naturally, from the point of view of development, this was a bad result because it meant that the supply of equipment from the West to the industrialising nations had had to be reduced, even to achieve balanced trade in a year that was favourable to raw material exports.

The year 1959 being exceptional, the GATT report does well to set it in the context of the longer period 1953-1958 — the year 1953 being chosen as the beginning of an epoch because the Korean war ended then. What emerges in this survey of the longer period is this: there is a secular trend toward more active world trade, but this is benefiting above all the industrialised nations because most of the increased trade takes place between themselves while the developing countries see their export earnings expanding much more slowly (a) than the export earnings of the rich countries and (b) than their own import bills. Thus the trade figures confirm that the gap between the rich and the poor is constantly widening despite the aid furnished by the first to the second.

The GATT experts in this month's publication show this trend separately for West Europe and North America. They take West Europe first because this region is much more important for the exporters of raw materials and the importers of industrial equipment: in 1953, the base year, West Europe's exports overseas were more than twice North America's. Those exports continued to grow throughout the period 1953-58 until in the latter year they were 150 per cent of 1953. Yet West Europe's imports of raw materials grew much more slowly: in 1958 they were only 112 per cent of the 1953 figure. North America registered very sharp increases in exports in 1956 and 1957 but suffered a contraction of 15 per cent in 1958, the year of the recession. Still, at the end of the period the value of North American exports was 141 per cent of 1953. Yet imports of raw materials into North America hardly grew at all: in 1958 they were less than 102 per cent of 1953. (These figures are value statements, but the trend is the same whether we measure trade in volume or price.)

The proportion of imports of manufactures that developing countries could pay for with exports fell in this period from 90 per cent to 64 per cent. This growing deficit was mitigated by $4,500 million worth of gifts and public and private long-term loans furnished by the rich countries. Over the same period, the export price of manufactures rose by 7 per cent, while raw material prices fell by 5.5 per cent. As a result, the national income of the rich countries increased by $2,800 million (at 1953 prices), while the purchasing power of the developing countries fell by $1,700 million. It is no surprise then that while incomes and living standards rose remarkably in the West, in this period, the per capita revenues of the inhabitants of the poorer countries rose, in the nine years 1950-58, only from $103 a year to $119.

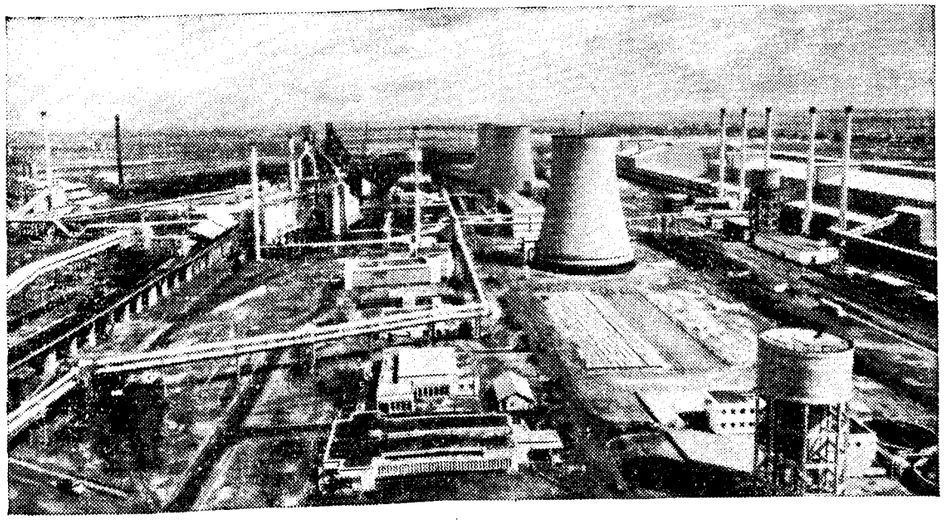
This trend is not new, and has been referred to here often before. But the GATT report not only brings our information on it up to date but shows something that is new: the increasing share of responsibility of West Europe in this situation, as compared with the role of the USA. West Europe as a region has usually been more important in world trade than the USA, because less richly endowed with raw materials and more closely connected, thanks in part to imperialism, with the developing countries. Yet in the last decade West Europe has been rapidly increasing its role, compared with the USA, as an importer of raw materials, and as a supplier of manufactures, and at the same time it is in West Europe that intra-regional trade has been expanding fastest and living standards rising most quickly. The technological revolution — which means that industry consumes less raw material per unit of output, and totally replaces certain natural raw materials with artificial products — has been proceeding more spectacularly in West Europe than anywhere else. Since West Europe has traditionally been the biggest buyer of raw materials, this is one of the main causes of the discomfiture of the developing economies. The GATT report puts the world trade problem in a nutshell when it says: "The low-income countries cannot increase their output and revenues without substantially increasing their imports from the industrialised countries, whereas the industrialised countries can increase their output and revenues while reducing their imports from the primary producers".



The obligations that this situation lays on the industrialised nations are very inadequately realised in West Europe. For example, in the current issue of a European economic journal, I find a long discussion of techniques of export credit insurance, where it is clearly stated that what European exporters who grant credit to developing countries want to be insured against is not so much "the dangers of expropriation, nationalisation, political disturbance and wars". It is, "much more importantly, purely economic upsets such as blockade of payments and transfers, or the decline in currency values; these upsets, in developing countries whose economic equilibrium is often uncertain, may be due to internal causes or to disturbances in the world economy (e.g. fluctuations in raw material prices)." In other words, what European exporters want to be insured against is precisely the consequence of the situation described by GATT — because it is as a result of their unbalanced trade with the rich coun-

tries that the developing nations are obliged to cut imports, block payments, devalue and even, occasionally, default. To seek to boost European exports to these clients only makes matters worse if nothing is done to increase their own export earnings. While to insure credits granted to those same clients is about as rational as my taking out an insurance policy on your life when I am starving you to death.

You might say that the individual European exporter is not responsible for this situation, and so he is acting rationally when he tries to protect himself, individually, against its dangers. But in reality the business of export credit insurance is almost everywhere handled by the State, from the British Export Credit Guarantee Department to the West German Hermes Committee. So we are entitled to accuse West European governments of irrationality, or at least of tinkering with a minor aspect of a situation while doing nothing to face the main facts. They are promoting ways of increasing exports to clients who cannot afford to buy those exports out of their revenues, and they are consenting to insure export credits when, on the GATT analysis, they are fundamentally insecure and uninsurable. If the facts about trade between the poor and the rich countries were properly understood, it would be plain that the only sound way to guarantee the credits that the second give the first is to expand the export earnings of the developing countries.



This point is, of course, realised by many observers. Thus Herry Walter Scheel, who is a Liberal deputy in the Bundestag and presides the commission concerned with the Common Market's relations with the African territories, wrote lately: "It would be much more sensible to buy the products of developing countries, or not to prevent the sale of those products by means of fiscal and administrative obstacles, than to give them gifts as a sop for the business they cannot put through. Credits and outright gifts are not enough to keep developing countries out of the Soviet orbit if nothing is done meanwhile to absorb their exports into the trading nexus of the free world. In every part of the world where a developing country has been unable to sell its harvests, the Russians or their satellites have stepped in with long-term contracts". As means to ensure the absorption of primary produce by the industrialised West, Herr Scheel urged long-term contracts between Western industries and the developing nations, and steps to stabilise commodity prices, this latter question being "decisive" because of the deterioration in terms of trade referred to in the GATT report. He suggested that, even without putting up any cash to subsidise raw material production, the Western nations could make a useful contribution by building adequate storage space for those materials on their own soil.

Herr Scheel considers that there is too little co-ordination (if any) between Western importing firms and export houses, dealing with developing economies. If they would co-ordinate their activities (i.e. "marry" an order for raw materials with a sale of manufactures) many deals could be concluded which at present cannot be put through. To this end, he suggested that Western governments agree with the governments of developing nations to set up mixed study groups that would examine the scope for reciprocal exchanges. Although it sounds like a relapse to something near barter, this idea seems reasonable, as at least taking account of the main fact in world trade today, the growing incapacity of developing nations to match their imports of vitally necessary manufactures with the volume of raw materials that West Europe consents to buy from them.

TOWARDS ACHIEVEMENT

In three brief years a wilderness of swamp and paddy fields has been transformed into the giant steelworks at Durgapur. This remarkable achievement has been made possible by ISCON—a consortium of thirteen leading British firms who are responsible together for the construction of the steelworks. When completed, the steelworks will have capacity for one million ingot tons of steel and a wide range of end products for the industrial markets of India.

Our West German Letter

GERMAN BOOM AND GERMAN AID

From Our West German Correspondent

BONN, November 21.

A SHORT time ago, the Minister of Economics, Prof. Erhard received a delegation of five Indian journalists and your correspondent had been requested by the Ministry to attend this meeting. A very interesting question was put to Prof. Erhard. "Is it true," he was asked by a colleague, "that West Germany prefers to give aid to developing countries in Africa?" The Minister remained silent for a moment and then said smilingly: "I love all my children." I think it is correct to say that he really tries very hard to secure as much aid as possible to all developing countries whether in Asia, Africa or South America. But it appears that this attitude is not accepted generally by various Government departments and influential circles. The Speaker of the West German Parliament, Dr. Eugen Gerstenmaier, a powerful personality, went twice, in 1959 and again this year to Africa, accompanied by the famous author Klaus Mehnert who had been till then mostly concerned with Asian affairs ("Asien, Moskau und Wir"—"Asia, Moscow and We"). African delegations are visiting the Bundesrepublik quite often and an "African Week" was recently held here in the capital, with Prof. Erhard and Dr. Gerstenmaier as speakers. When talking to various kinds of Government officials one really gets the impression that the newly created African countries are at present closer to the German heart. Asian developing nations, in their opinion, should better be looked after by U.S.A. and U.K., India as member of the Commonwealth especially by the latter. Should such strange and short-sighted views spread, it would be a great pity. They overlook, at least, the potentialities of the Indian and other Asian markets.

The subject of "Entwicklungshilfe" as it is called in German, meaning aid for developing countries, is still very much in the news and will obviously remain in the foreground of very lively discussions inside and outside the Parliament. It has now become a rather peculiar aspect. Prof. Erhard is very solicitous about the continuous boom in Germany which might show in the course of time inflationary tendencies. He would, therefore, like to reduce to a certain extent the export but to increase the import. In the previous "West German Letter" it had been mentioned that the industry is objecting to any such planned measures. In the last issue of the Weekly Survey, published by the "Institute of German Industry" (affiliated to the Federation of German Industries, it is pointed out that both, exports and imports, have increased considerably. But it is all too often overlooked that this vigorous expansion is leading to decreasing, not to increasing export surpluses. In 1958 observers might have been inclined to think of a purely temporary development when—for the first time since 1955—imports of the Federal Republic rose more than exports. Meanwhile, it has become increasingly clear that West Germany is an attractive market for foreign suppliers. During the first three quarters in 1960 the export surplus shrank from DM 3700 million in 1959 to DM 3400 million. This is a trend, the Survey says, strongly supporting industry's theory that it would be wrong to interfere artificially with foreign trade just now. The arguments of the Survey are not too convincing as the decrease of only DM 300 million might be a temporary one. At any rate, the German industry is now prepared to contribute a loan of DM 1500 million to the aid for developing countries. This loan, to be signed by companies and businessmen all over the country, will carry an interest of 5 per cent. It will be redeemable in 15 years, with redemption to begin 5 years after the date of floating. The loan is seen as a vote of thanks from German business to the fathers of the Marshall Plan so instrumental to German post-war recovery. According to the Institute of German Industry, the loan will also substantially ease the pressure on the budget of the United States who are urging a higher German share in foreign aid programmes because of their balance of payments troubles.

While this report is flying to India, two perhaps not all too welcome guests from the United States, Finance Minister Robert Anderson and the Under-Secretary of State in the State Department, Dillon, will arrive in Bonn. President Eisenhower in a letter to Dr. Adenauer had announced this visit. There is a possibility that the American Government will renew the demand for a German contribution towards the maintenance of American troops on German soil. During the last 8 years the costs for the maintenance of American troops in Germany have risen from $244 million to $679 million in the last financial year. These expenses are greater than in any other country where American troops are stationed. It is also assumed that the U.S. Government will ask the Bundesrepublik for considerable aid to go to developing countries.

The German Federal States which offered aid for the same purpose to the extent of DM 500 million have been asked by the Central Government to increase this amount to DM 700 million. In fact, these sums are to be paid from tax surpluses, just caused by the general boom. But there is one Chief Minister who is pleading for a special tax, the yield of which should be used as additional aid. This Chief Minister of Schleswig-Holstein, Kai Uwe von Hassel, has been born in Tanganyika and has accompanied Dr. Gerstenmaier on his last trip to Africa....

In the context of aid, one should perhaps mention the speech of the Indian Ambassador Tyabji with which he inaugurated the Third Indian Cultural Week at Berlin. He quoted a World Bank report on India which, as he told the audience, had troubled his mind. In this report the Government of India was asked to do something to accommodate the millions of refugees who have crowded in the city of Calcutta. "I asked myself", the Ambassador said, "where are these millions of dollars to come from? From the poor oppressed peasantry of India? From where?" He then referred to the Berlin problem: "It is not a question of how many calories of food a man eats in West Berlin, and how many a man eats in East Berlin. As I was telling to the Burgermeister, to an Indian it seems that both eat too much!" This was, at least, an original way of making although an indirect appeal to Germans for aid ....

* * * *

If the motor car industry is the weather-glass for the economic situation of a country, one can notice a slight downward trend of the mercury. When your correspondent returned from India to Germany some time ago, he had been warned that he had to wait for a couple of months till he would be able to get a car. Prepared to be put on the waiting list, he entered the Bonn branch of a famous car factory where he was told

that he could pick up the car "tomorrow". Not only has the British Motor Corporation, England's largest car manufacturer, reduced the working hours of its 43,000 employees, not only have the State-owned French Renault works given notice to 3,000 workers, but also in the Bundesrepublik the well-known firm of Borgward in Bremen is going to dismiss 3,450 workers out of 22,000 employees. The reason for this measure of the German firm might be that people are switching over from small cars as produced by Borgward to bigger cars. But it also seems that most firms have now-a-days difficulties in exporting cars to the same extent as hitherto. In the United States, for instance, two producers brought out along with their "cruisers" middle-sized (so-called compact) cars which definitely reduced the German export to that country. The General Manager of the "Volkswagen-Werk", Prof. Heinz Nordhoff, explained the other day to economic journalists that in spite of belonging to the EWG (Europaeische Wirtschaftsgemeinschaft of the SIX), France and Italy make it almost impossible to sell German cars in either of the two countries. The customs duties have been reduced according to the treaty of the SIX, but other charges make this advantage almost illusory. As soon as the organisation of EFTA (European Free Trade Association of the SEVEN) comes more and more into force the exports to these countries also will decline. On the other hand, Germany has become the largest car importer in Europe. In 1959 Germany imported twice the number of cars as England, France and Italy put together. But still, Prof. Nordhoff who just celebrated the sending off his four millionth People's Car from the conveyor belt is on the whole optimistic. He mentioned that in U.S.A. every third person owns a car, in Sweden every seventh, in France and England every tenth, but in Germany only every thirteenth. Why should Germany in some years, 1963 till 1965, not reach the level of the last two mentioned countries, he asked at the above-mentioned meeting. The slow switch over from export to the home market will bring the problem of proper roads into the foreground. The net of highways will have to be enlarged and the streets in cities and towns as well will have to be made more suitable for the ever increasing traffic. This problem has to be solved within a short time as, according to statistics, the German car owner is driving on average 25,000km the year while his French neighbour is content with 8,000km. Facing all these difficulties, the German Ford Works in Cologne are equally optimistic. They have just started to erect a new factory and are negotiating with the municipality of the city of Hamm in Westphalia to buy an estate for building a third factory.

* * * *

In some respect West Germany seems to be less progressive than India. While India can be proud to have three ladies as Deputy Ministers, the highest post a German woman has so far achieved, was Secretary of State in a Ministry. But in another field German women have proved to be extremely successful — as entrepreneurs or managers of undertakings in the private sector. A few days ago, the annual meeting of the "Vereinigung von Unternehmerinnen") Association of female entrepreneurs) took place in Berlin. In the Bundesrepublik not less than 6 lakhs of these very active ladies are registered, which means that the head of every fifth undertaking is a lady; indeed an astonishing fact which just now became known. This also means that 3 million employees have a female boss. The model for this admirable association was the French "Femmes Chef d'Enterprise". It is pointed out by their German sisters that the purpose of the union is not to show a new perhaps "suffragettish" achievement of the skirt but to improve the position of women in the industrial fields where they generally had occupied, and still occupy, subordinate jobs. As there is a considerable lack of engineers in the Bundesrepublik, the Association has now suggested that more girls should be admitted to technical colleges. In its memorial it is emphasized that in Russia 40 per cent and in U.S.A. 20 per cent of technical students are girls while the percentage in West Germany is only 3.9 per cent. The Association considers at present this demand as one of their main aims in order to remove the prejudice against female engineers. The President of this remarkable union is Mrs Kaete Ahlmann who since many years is the head of steelworks with 3,000 employees. She took over the management when her husband died. The loss of the husband had been in numerous cases the reason that suddenly wives had to face the responsibility for more or less large enterprises. One finds ladies today managing textile factories, department stores, breweries, tree-nurseries, restaurants, etc. Two other ladies deserve a special mentioning, Kaete Kruse and Margarete Steiff. They started many years ago, first at home, to make dolls for their children. From these small beginnings they have developed in the course of time huge factories which export now-a-days their products all over the world.

* * * *

Next February Chancellor Adenauer (then in his 86th year) will meet, as announced, President Kennedy (43) in Washington. People are guessing (or joking) here how the two will get on. Will good old Konrad pat young John on the back telling him: "My dear boy, if you want some advice, don't hesitate to ask me?" Or will young John pat good old Konrad on the back telling him: "Listen Grandpa, our generation is now before the footlights. If you want to know something about our ideas, don't hesitate to ask me?" However, this meeting will pass. Adenauer is, according to a public opinion survey of the EMNID Institute, the most admired man. The question read: Whom amongst the living men do you admire most? Two thousand people had been asked this question and every fourth decided in favour of Adenauer. Last year Albert Schweitzer was topping the list. This time he is No. 2, Berlin's Mayor Brandt No. 3 and the former President Heuss No. 4.

Not by Words Alone...

The story is told of St. Francis of Assisi, that he once stepped down into the cloisters of his monastery, and laying his hand on the shoulder of a young monk, said, "Brother, let us go down into the town and preach".

The venerable father and the young monk set out together, conversing as they went. They wandered down the principal streets, and wound their way through alleys and lanes, and even to the outskirts of the town and the village beyond, until they found themselves back at the monastery again.

Then enquired the young monk, "Father, when shall we begin to preach?"

And the father looked kindly down upon his son and said, "My child, we have been preaching; we were preaching while we were walking. We have been seen....looked at; our behaviour has been remarked, and so we have delivered a morning sermon. AH! MY SON, IT IS OF NO USE THAT WE WALK ANYWHERE TO PREACH UNLESS WE PREACH AS WE WALK".

YES .... it is no use that we walk anywhere to preach unless we preach as we walk ..... in building the India of our dreams ... there is little room for preaching by mere words .... what are needed are DEEDS ... And DEEDS include higher production of some ESSENTIAL commodities like

CEMENT ... THE GREAT MODERN MATERIAL OF BUILDING CONSTRUCTION ....

In 1952, we had placed at the Nation's disposal over 1,32,000 Tons of Cement.
In 1954, we had produced over 2,02,000 Tons of Cement.
in 1958, we produced nearly 3,50,000 Tons of Cement.

This year .... in 1960 ....

We expect to place at the nation's disposal over 3,60,000 Tons of Cement

BECAUSE INDIA NEEDS MILLIONS of TONS of CEMENT ...

for Building the richer and prosperous India of our dreams ...

ORISSA CEMENT LTD ... Rajgangpur ... (Orissa)

Economic Report from the U.S.

BALANCE OF PAYMENTS DEFICIT

By GUY SIMS FITCH

NEW YORK, Nov. 20.

IF there is one pressing economic problem which the experts—private businessmen here or government officials in Washington—cannot ignore, it is the continuing deficit in the international balance of payments of the United States. This problem received a major airing at last week's National Foreign Trade Convention here, and loomed large in the final declaration which was approved by the private traders and businessmen attending the Convention's concluding session November 16. What makes the deficit particularly troublesome is the fact that it has persisted despite a marked 1960 improvement in the US trading position.

Basically, it is because the balance of payments takes into account all of a nation's international transactions. And in the case of the United States, the outflow of capital in the form of government aid to other lands, private foreign investment, tourism and other similar remittances, far outweighs the surplus earned by US exports. It is in these areas, that some recourse for the burdensome balance of payments deficit must be sought. Here, the thinking of the private businessmen in the national foreign trade council parallels that of the US government. Significantly, they reject resort to actions that would restrict imports or otherwise impede the flow of goods, services and capital—a flow that is vital to economic growth around the world. Rather, they favour moves that would on the one hand enhance further the US export potential, and on the other hand cut down on US outlay's abroad wherever this would be possible without impairing US economic assistance or international security obligations.

As another example, it proposes greater efforts to promote tourism to the United States, in the expectation that this would bring more money into the country and thus offset to some degree the large amounts of money leaving the country with the record number of Americans travelling abroad. Going further, the declaration notes that other industrialized countries, themselves major beneficiaries U.S. Assistance in earlier post-war years, are now in sufficiently strong economic and financial position to take up a larger share of the world's economic development and security efforts from their own resources. Also, with foreign gold and dollar reserves rising as US reserves fall, other countries appear to be in position to make further substantial reductions in their barriers against US goods.

Interestingly enough, this is the very course which the US government has been following. Just this past week—coincidentally, on the same day the national foreign trade convention approved its final declaration —President Eisenhower announced from his vacation headquarters at Augusta, Georgia, several important steps aimed ultimately at saving an estimated $1,000 million a year in US expenditures abroad. Included, generally speaking, would a $500 million reduction in US defence outlays in other countries. Another $330 million would be gained by emphasizing the purchase of American rather than foreign goods under US aid programme. And some $170 million would be saved through various economies in the foreign operation of a number of US Government agencies. These moves are expected to take place gradually and to be so executed as to have little, if any adverse effect on the overall security, economic assistance and development programmes of the free nations.

An even more important point, however, is that in taking these steps the United States is safeguarding its position as the world's leading supplier of capital and as a strong partner in the world's economic growth and security—a position which is essential to the well-being of all free nations.

Income-tax Exemption Certificates No Longer Necessary: The Government of India have made an important change in the existing administrative procedure regarding the issue of Exemption and Tax Clearance Certificates under Section 46A of the Income Tax Act to Indian nationals proceeding abroad. Under Section 46A persons of Indian domicile who, in the opinion of the Income-Tax authority, are not likely to return to India have to obtain tax clearance certificates before their departure. Airways and shipping companies are responsible for ensuring that the persons carried by them are in possession of such certificates. In order to help the carriers to identify the Indian nationals liable to produce tax clearance certificates, the practice hitherto has been to require all Indian nationals proceeding abroad temporarily to obtain exemption certificates from the Income-Tax Department.

As the result of the experience of the past several years, Government have now decided to abolish the requirement that exemption certificates should be produced by every Indian national proceeding abroad. It is only in a case when the income-tax authority concerned declares that a particular person is not likely to return to India that the clearance certificate will be required from him. In such a case the person concerned will be intimated of this requirement by the Income-Tax authority and his name will also be communicated to the collectors of customs at the various sea and air-ports, and through them to the carriers. Except in such an exceptional case, it will not be necessary for an Indian national proceeding abroad to obtain a certificate under Section 46A of the Income-Tax Act. The new procedure will come into effect from the 1st of December 1960. The new procedure applies only to Indian nationals, but as regards persons of non-Indian domicile, the existing procedure will continue to apply.

*

Prototype Production Centre in Madras: A four-member delegation from France has arrived to discuss further details about the establishment of a Prototype Production-cum-Training Centre for precision instruments at the Industrial Estate in Guindy, Madras. The Prototype Production-cum-Training Centre in Guindy will be the fourth of its kind to be set up in India. In Okhla near Delhi, a centre is being set up with assistance from West Germany. The Rajkot centre has been undertaken in collaboration with the United States Technical Co-operation Mission, while the centre in Howrah is being organised with assistance from Japan.

*

Sale of Imported Russian Oil: Slow progress of sales in the initial stages of the imported oil from Soviet Russia might not be consdered unusual as it was inherent in the situation of a rate competition, stated Mr. K. D. Malaviya, Union Minister for Mines and Oil, in a written reply to a question by Mr. Osman Ali Khan and 22 others in the Lok Sabha recently.

The Indian Oil Company's plan was to sell oil in bulk to Government users and other public consumers only, in the initial stages of its development. The shipment arrived slightly earlier than expected. As a result of heavy under-cutting of prices of the private oil companies to the bulk buyers; and certain amount of hesitation and the inability of public consumers at the State level to understand the long-term implication of this competition raised by the private oil companies, the progress of sales of product of the Indian Oil Company was retarded to some extent.

Among the steps taken by the Indian Oil Company to accelerate its sales are:

(i) rate contract has been entered into with D.G.S. & D. for supply to Government indentors.

(ii) a contract has been finalised for bulk sales to one of the existing marketing companies.

(iii) sales to State undertakings, private bodies and co-operatives are being organised, and it is also proposed to open retail outlets.

Mr. Malaviya further informed the House that as a result of mutual agreement the quantity of import had been increased and consequently the shipping programme and receiving arrangements had had to be readjusted resulting in slowing down of imports for a short time.

United States

Rise in Population: It is reported that the United States population in the past ten years has increased by more than 28 million persons. As on April 1, when the 1960 census count was made final, there were 179,323,175 Americans. In 1950 the total was 151,325,798.

U.S.S.R.

Kerosene and Diesel Fuel from High-Paraffin Oil: A new method of producing naval masut and motor fuel from the residual product of the refining of high-paraffin oil (direct refinement masut) has been developed at the Omsk Oil Refinery in Siberia. It will enable the manufacture of additional tens of thousands of tons of fuel, inasmuch as previously only petrol was seperated out during the manufacture of these products from high-paraffin oil, while kerosene and diesel fuel remained. Under the new method, direct refinement masut is combined in a definite proportion with gas oil fractions. The resinous substances in gas oil fractions neutralized the paraffin, as it were, lowering its crystallisation point to a below-zero temperature (centigrade). Thus, direct refinement masut remains liquid even under fairly low temperatures, which makes it possible to use it for the manufacture of naval masut and motor fuel. In the course of this process, kerosene and diesel fuel can now be extracted from oil, whereas previously they were left for the liquefaction of masut.

*

Machine to Remove Cotton Stems: A 'pressing and rooting out' machine has been designed at the harvester combine works in Syzrani on the Volga for removing cotton plants after the picking of the balls. The processing and rooting out machine is tractor-drawn. It roots out cotton stems, presses them into rectangular packages and ties them up with wire. Its hourly capacity is 2.5-3 tons of pressed stems. The machine has been designed to satisfy the big demand in cotton stems for the chemical industry which extracts a valuable substance, furfural, from this raw material.

United Kingdom

New Machine Enables Blind to Read More Easily: Thousands of blind people all over the world will be

you have just opened

A METAL BOX OPEN TOP CAN!

Simple though it looks, the 'Open Top' Can in which processed fruits, vegetables, fish, milk or butter comes to you is a container scientifically designed to protect and preserve perishables over long periods. The Open Top Can allows processing of the contents *after* they are hermetically sealed, thereby killing all disease-carrying and other germs. Wherever necessary, Open Top Cans have an inner coating of a chemically inert lacquer that effectively prevents interaction with the metal of the container itself. Thus, Open Top Cans prolong the life of perishable products, allow round-the-year selling, encourage wide distribution and thus help to stabilise prices.

Metal Box, leaders in the packaging field, have been supplying Open Top Cans in India for nearly a quarter of a century. This is only one example of their wide range of scientifically designed containers that deliver consumer goods to you.

MB

METAL BOX

Over 1000 manufacturers in India are being supplied by Metal Box with scientifically designed containers and closures that go to pack over Rs. 100 crores worth of consumer goods every year.

OPEN TOP CANS for processed fruit, vegetables, fish and dairy products • **GENERAL LINE CONTAINERS** for confectionery, tea, biscuits, baby foods, edible oils, paints, insecticides, powders, etc. • **COMPOSITE CONTAINERS** of cardboard & metal • **COLLAPSIBLE AND RIGID TUBES** for toothpaste, ointments, adhesives and pills • **CROWN CORKS** for carbonated drinks • **R. S. PILFER-PROOF AND OTHER CLOSURES** for bottled products • **COMPONENTS** for radio, automobile and electrical industries • **PUBLICITY MATERIAL** including advertising tablets and calendars • **PLASTIC PRODUCTS** including Diothene bags, foil laminate pockets and injection mouldings • **HARDWARE** including trays and table mats **MACHINERY** Can Closing and Reforming and Bottle Sealing Equipment

Are You a Small-scale Industrialist?

This will interest you

To help small scale industries fulfil their role in the country's developing economy, the State Bank, in collaboration with other interested institutions, put into operation in 1956 a Pilot Scheme at a few selected centres to make available to them co-ordinated credit facilities.

The scheme has worked well and the Bank is now in a position to offer, at all its branches, liberalised facilities which were originally made available only at the Pilot centres.

If you require financial assistance, why not talk things over with the Agent of our nearest Branch? He will welcome the opportunity of assisting you and will be glad to forward your application, if need be, to the appropriate Governmental and other authorities.

STATE BANK OF INDIA
INDIA'S LEADING BANK

able to read more easily because of a new machine made in Britain that prints braille in plastic dots. It took Mr. Edward Pyke, Technical Officer at the Royal National Institute for the Blind, London, ten years to develop this process. As a result of this invention, there will be more books for the blind, and they will be cheaper to produce and will be less cumbersome. For example, the braille Bible by this method will comprise only 36 volumes, in stead of the present 72.

Japan

Trade Agreement with France: France and Japan have agreed to extend the Franco-Japanese trade arrangement further for six months until March 31, 1961 as a temporary step pending the conclusion of a new arrangement to replace the present one. The present arrangement was signed on July 10, last year and remained in force until June 30 this year, then, it was extended for three months, from July 1st to September 30, while negotiations to conclude a new arrangement have been underway in Paris since June 8, this year. Simultaneously with this latest extension, France agrees to establish and increase its single quotas on Japanese imports and also to widen the scope of its minimum customs tariff that it applies to Japanese products.

Switzerland

New Techniques in the Matter of Road Signals: The increasing development taking place in road traffic has brought about the development of new techniques, especially in the matter of road signals. A Swiss firm has achieved considerable renown both in its own country and on foreign markets for its motorised machines for the application of paint for the marking of roads. This same firm has now begun to manufacture tiny glass beads, which, when mixed with paint or strewn on to still fresh paint produce a reflecting effect which renders the demarcation lines and the road signalling much more visible during the night, when they are illuminated by the headlights of the motor vehicles. These glass beads for road marking are made in various sizes, in accordance with the use to which they are going to be put and their diameter varies from 1½ mm. to six hundredth part of a millimetre.

Germany

Trade and Payment Agreement with India: According to the arrangement for long term trade and payment agreement concluded between the Government of G.D.R. and the Government of India, the signing of the list of goods to be exchanged for the year 1961 took place in the Ministry of Foreign Trade and Innergerman Trade, Berlin, on November 14, 1960. The exchange of goods between the G.D.R. and India based on the principle of bilateral trade which was increasing steadily in the last few years, corresponds to the requirements of the national economy of both countries especially in regard to machine tools, polygraphic machines, precision mechanical and optical instruments, fertilizers, chemicals and cinematographic material. The 1960 turnover of the Foreign Trade Enterprise of the G.D.R. shows in some cases considerable increase for the forthcoming year, a further increase of the turnover by about 35 per cent is planned. India is supplying mainly tea, coffee, spices, iron and manganese ore, deoiled cakes, vegetable oils, jute fabrics, shoes and other products.

Yugoslavia

Rise in Steel Production: Average monthly steel production in Yugoslavia from January to September reached 121,700 tons compared to 107,000 tons last year. This year Yugoslavia will manufacture 1,390,000 tons of steel, or about 20,000 tons more than the five-year plan for 1961 calls for. This rapid increase is due to the fact that the iron and steel industry received the greatest investment funds since the war. The Zenica steel works is already in the position to turn out 750,000 tons of steel annually, Jesenice 300,000 Niksic 140,000 and Sisak 120,000.

France

Air Credit Plan: Encouraged by the success of the "Fly Today Pay Later" scheme elsewhere in the world, the Four Pool Partners, namely, AIR FRANCE/ALITALIA/LUFTHANSA/T.A.I., have inaugurated their "Air Credit Plan" in India. Under the AIR FRANCE/ALITALIA/LUFTHANSA/T.A.I. Air Credit Plan, the passenger is required to make a down payment of only 20% of the passage fare—the rest being payable in monthly instalments over a maximum period of 15 months, if so desired. A very simple scheme which is expected to yield good dividends. This deferred payment scheme, which seeks to extend the scope of commercial aviation, will certainly open out new avenues of business hitherto untapped. The benefit of repayment in easy instalments, over a period of 3, 6, 9, 12, and 15 months, will appeal to a new "class" of travellers, who cannot always afford the large initial investment to buy an international air ticket. The challenge of the jet-age, which brings with it a substantial increase in capacity offered, has been accepted by airlines. An intensive as well as extensive effort is being made to make the public more air-minded. Seeing the determination with which the problem is being tackled the optimism evinced by airline managements appears to be well founded.

Austria

Hotel Rates in Austria and Neighbouring Countries: According to an investigation in Vienna during the summer months, the average rate paid in Austria for full board and accommodation was Sch. 71.30 (Rs 13.1) for all classes of hotels, and Sch. 86.20 (Rs 15.8) for class A hotels, while the average rate to be paid in West Germany was DM 17.40 (=Sch. 107.70=Rs 19.7), in Switzerland Sfrs. 22.70 (=Sch. 136.90=Rs 25.1) and in Northern Italy Lire 2800 (=Sch. 112.1=Rs 20.5). Thus Austria is far less expensive a tourist country than the most important competitors among its neighbours.

S.A.S.

SAS to Open First International Data Processing System in the World: "Agent sets" now under installation in six countries are to give Scandanavian Airlines System the first international electronic reservations system in the world. Their function is to produce instantaneous booking information. The push-button agent set looks roughly like a calculating machine. All sets are linked with the electronic brain in the S.A.S. Air Terminal in Copenhagen. In four seconds —the time it takes to transmit the impulses to the brain and back—they can answer whether space is available on any given flight. Furthermore, if the answer is no the electronic brain provides up to nine other alternatives for the destination, date and class desired by the passenger. The 120 agent sets now being installed are located in London, Hamburg, Helsinki, Oslo, Stockholm, Burgen, Stavangar, Gothenburg, Malmo, Aalborg and Aarhus. The system is the first in Europe to handle data processing over transmission links, and it is the first in the world to do so on an international scale. All 120 sets will be in operation before the end of November. They will supplement sixty similar agent sets previously installed in Copenhagen. Next year, the network of S.A.S. agent sets will be expanded to Central and Southern Europe.

NEWS IN BRIEF

INDIAN

The Montecatini Company of Italy has offered a credit of Rs. 500 m. for setting up projects by mutual consultation in India's third Plan period.

*

In a written reply to a question by Mr. D. C. Sharma in the Lok Sabha, the Minister of Industry, Mr. Manubhai Shah, stated that the programme for expansion of penicillin production by 60 per cent at Pimpri from 25 million mega units to 40 million mega units annually had been completed.

*

A proposal for setting up of a unified authority for soil conservation works and for enacting necessary legislation in the country was discussed at the annual meeting of the Central Flood Control Board, held under the Chairmanship of Hafiz Mohd. Ibrahim, Union Minister for Irrigation and Power.

*

Rapid industrialisation has inevitably led to a rapid growth of towns and an alarming shortage of housing. India is no exception to this rule and, therefore, since the beginning of the first Five-Year Plan, the Government has been making special efforts to meet the growing demand for houses by industrial labour.

*

Government servants purchasing or disposing of any immovable property worth more than Rs. 1,000/- other than through an authorised dealer, must obtain prior permission of the Government. A Government servant is also required to report any transaction in respect of movable property of more than Rs. 1,000, whether the transaction was effected through an authorised dealer or not.

*

Mr. A. M. Thomas, Deputy Minister of Food, stated in the Lok Sabha recently that the all-India index number of wholesale prices of rice had come down from 115.3 in August to 106.80 which was the lowest as compared to the figures for the corresponding periods of the last three years.

*

It is reported development and popularisation of parboiled rice will be taken up on a large-scale during the third Five-Year Plan. As part of a large programme for the production of protective foods and their effective utilization, the Union Food Department has prepared a scheme which aims at improving the nutritional quality of rice through par-boiling.

*

The Uppal Committee on location and utilization of wastelands in India has reported that several large-sized blocks of wastelands comprising 1,13,640 acres, are available in West Bengal for reclamation and that the cost of reclamation would be Rs. 1.32 crores or Rs. 116 per acre.

*

Over 10,000 metric tons of sugar of the export quota of 50,000 tons released by the Government in September has been sold so far. Out of this over 7,000 metric tons have been sold to Malaya and the rest to the Middle East countries.

*

The Andhra Pradesh Government have sanctioned the incurring of an expenditure not exceeding Rs. 1,97,300 during 1960-61 on a scheme for raising coffee plantations over an area of 100 acres in the Agency areas of Vasakhapatnam district.

*

The Government of India have informed the Assam Ministerial delegation that a fertilizer factory, costing Rs. 11 crores, has been earmarked for Assam.

FOREIGN

The Federation Government has announced that Malaya will ratify the International Tin Agreement of 1960 and that arrangements are being made for the instrument of ratification to be lodged with the British Government.

*

Many leading businessmen and industrialists are to be members of the new Export Council for Europe, the aim of which is to promote increased British exports to the Continent.

*

A merger has been announced in which Astra will absorb Nouvelles Huileries Calve-Deft. Both companies are French subsidiaries of the Unilever group.

*

Suenska Metallverken, Sweden's largest producer of non-ferrous metals is to spend some Kr. 15m. in the next three years to raise its output of rolled semi-finished aluminium products from 20,000 to 30,000 tons a year, and its output of pressed aluminium products from 2,500 to 3,500 tons a year.

*

British Motor Corporation commercial vehicles are to be made in Spain, with delivery from early in 1961, as a result of an agreement between B.M.C. and Sociedad Anonima Vehiculos Automoviles (S.A.V.A.) of Valladolid, on co-operation in vehicle manufacture.

*

The Uganda Development Corporation has decided to build a fertilizer factory at Tororo, Eastern Province, to produce 25,000 tons of super-phosphate yearly. Production is expected to start in about a year's time.

*

The U.K. trade gap rose to £122m. in October from £76m. in the previous month. Exports in October fell from £295m. to £225m. but imports remained at £385m.

*

Preliminary official figures show that tin exports from Singapore and the Federation of Malaya in October amounted to 6,966 tons, compared with 6,234 in September and 5,195 in October of last year.

*

The U.S. Ford Motor Company intends to make an offer for the 45.4 per cent shareholding in the Ford Motor Company of the U.K. which it does not already own.

*

Australia expects a record wheat harvest of between 220m. and 225m. bushels, with records in all States except drought-ridden Queensland.

*

An insurance scheme for guaranteeing export credits against lack of payment was published in the official bulletin recently. It aims at favouring an adequate and quick expansion of Spanish exports by guaranteeing up to 75 per cent of losses caused by 'political and extraordinary risks.'

THE CHANGING INVESTMENT OUTLOOK

By GEORGE CARVELHO

THE lot of the private investor in India is by no means easy or pleasant. In the eyes of the Government he is simply a part of the private sector of which, it has been made clear, those in authority have a very poor opinion. He functions in an economic system, with a declared socialist objective and he has been left to wonder whether the attainment of this goal will involve the extinction of his kind. At no time in its history, has the country been so greatly in need of venture capital, yet there has been little evidence up to now, that either the Government or the authorities of the various stock exchanges in the country are seriously concerned about the spread of the shareholding habit, at least among the educated middle-class. In spite of such apathy, if not hostility, informed observers are agreed that the almost continuous rise in share prices from the beginning of 1958 till the end of July 1960 was financed, to a large extent, by the savings of the growing number of middle class investors. With a planned programme of unit trusts, investment clubs and other devices that have contributed to the phenomenal figure of 12.5 million shareholders in the United States, spectacular results could be accomplished in India.

The private investor has also to contend with the fact that, on Indian stock exchanges, it is speculators rather than genuine investors who call the tune. In such conditions, instead of being a barometer of the economic outlook, the stock market, if we may vary the simile, becomes a distorting mirror and, to the other difficulties of the investor, is added that of judging and allowing for the extent of distortion caused by the quite irrational behaviour of speculators caught up in the excitement of a bull market. For some months in 1960, roughly speaking from the beginning of March till the beginning of August, investors found themselves perplexed and baffled by just this problem. The average investor in India, as in other countries, is a pretty ordinary sort of person and very far from a high level financial expert. The services of investment consultants and analysts are neither well-organised nor widespread and are, for the most part, beyond the reach of the little man. Small wonder then that most investors appear to have followed blindly in the lead of speculators, with the result that, the weight of genuine investment funds, instead of acting as a stabilising influence, tended to strengthen the speculative boom and to lift prices to yet more dangerously unrealistic levels. When the crash came and prices fell, wiping out the earlier gains, they were left ruefully wondering where they went wrong.

Overvaluation with regard to share prices is a far from simple concept and one, over which even experts may differ. It is therefore too much to expect the ordinary investor to be able to judge when the rise in the market value of his scrip has gone beyond the point that would be justified by a reasonable assessment of growth prospects. Yield calculations, on the basis of the last dividend, are not of much help, because the investor is usually prepared to sacrifice some portions of current yield, in view of expectations of capital gains and high returns in the future. The whole difficulty lies precisely in deciding how much and how long.

It is tempting, with the benefit of hindsight, to say that any prudent investor should have known by July 1960, that the rise had gone too far and that a corrective reaction was due. But intrinsically, there was no reason why the bull market should not have lasted longer. The reversal of the rising trend was not the result of any specific event or pronouncement. It was not the consequence of credit restriction, seeing that the bull market had shown itself virtually impervious to the two earlier instalments of credit restraint, in March and May. There is, as far as can be judged from the available data, no reason why the change came at the beginning of August, rather than earlier or later. It was just that market sentiment, that imponderable factor that defies precise analysis, happened to change at that particular time.

The position with regard to new issues was more obviously out of hand. It just did not make sense that investors should think so highly of the prospects of new enterprises, which had hardly gone beyond the stage of collaboration agreements, that over-subscriptions to the extent of sixty times the amount asked for and market premiums of the order of eight times the issue price, should become possible.

It would be naive to explain such a situation in terms of the boundless confidence of investors in the growth prospects of the economy. It was in large measure the consequence of stagging operations, where operators applied for the new issues, intending to sell out their allotments and make a quick profit. The growing weakness of existing shares, as the number of new issues increased, suggests that the funds came mainly through diversion from existing holdings rather than from new shares. No doubt much of the money that accompanied the applications was borrowed at high rates of interests, which the borrowers were willing to pay in the hope of substantial profits through sale of their allotments. Perhaps the most ominous consequence of the new issue boom of 1960 is Mr. Nehru's deduction therefrom that it was ridiculous to talk of the burden of taxation being excessive when people had so much money which they were willing to invest. The conclusion is unwarranted, first because much of the money was diverted from existing holdings or borrowed for the purpose. Secondly, Mr. Nehru evidently did not realise that, very often, it was the same money that figured in successive new issues, like a stage army that appears in several scenes, creating the illusion of a vast fighting force.

It is no less difficult to forecast when the bear phase will touch bottom and another revival will set in. At the moment, it looks as if the worst is over. The Reserve Bank's latest directive, taking effect from November 11, seems to indicate that the dear money policy will not be carried to the point where it is likely to become a serious deterrent to business activity. In any case, expert opinion as well as empirical observation have tended to minimise the influence of the rate of interest as a determinant of investment. It is possible that in the long run, money will prove to be no more of a drag on rising share prices than the Krishnamachari system of direct taxation turned out to be. Controversies will continue to rage over such questions as the share of the private sector in the Third Five-Year Plan, the foreign exchange situation and the prospects of foreign aid, the extent to which inflation can be controlled and the possibility of further increase of taxation. But ultimately the inherent expansionary tendency of a developing economy will, almost certainly, make itself felt. Ruling out the possibility of some quite catastrophic political and economic upheaval, the secular trend of shares prices should be upward.

It is perhaps not too much to hope that some day, those who control the economic policies of this country will realise that the most effective way to counter concentration of economic power would be to encourage the widest possible diffusion of ownership of shares. A people's capitalism or shareholders' democracy may well turn out to be the real socialist pattern of society.

THE BUSINESS WORLD

120 Million Pounds for the U. K. Ford Minority

By WILLIAM REES-MOGG

THE American bid for the Ford Motor Company of England is an event of obvious financial importance, but it is also a crucial event in the development of international investment. First of all it is the largest single financial offer that has been made in British industrial history. At a price of 145s. a share—which is itself probably too low—the bid would cost the Ford Motor Company of the United States about £120 million, if the whole of the minority share-holding is accepted.

Obviously this raises all sorts of interesting financial implications. There is the problem of making a fair valuation of the shares; there is the prospect of the London market having £120 million to reinvest; there is the effect on the United States gold and dollar reserves of an investment of $250 million or so (there is quite a large American minority holding) being paid out in one lump.

It is not, however, the financial implications which have attracted the most attention in Britain and it is certainly not the financial implications which have the greatest significance for the rest of the world. This is, in fact, the conflict between two principles, both of them of great importance.

The first principle, which is in itself a legitimate one, is the growing tendency for businesses to be organised on an international basis. What Fords want to do is to provide a single financial control for an international company, rather than continuing to operate as a string of national companies with at least a considerable degree of independence.

This partly represents the effect of the American anti-trust legislation. Under the anti-trust acts a company is free to make its own prices for goods transferred between wholly owned subsidiaries, but does not enjoy the same freedom to make agreements on prices between independent companies. Ford is said to be planning to manufacture in Europe some of the components for a new small car which will be assembled in the US. It is a considerable convenience in being able to fix prices in making such an arrangement. The fear of losing this business to Germany has certainly influenced the British Government in its attitude to the bid.

However, there is more to it than a simple desire to avoid the restrictions of American legislation. Ford is clearly concerned to establish itself as one of the completely internationalised groups; the oil companies have led the way in practising business on the assumption that there is a single world market. Ford is only one of the first industrial companies to appreciate the advantages of following their example.

The other principle, which is certainly worrying some people in London—and not only on nationalist grounds—is that international investment ought increasingly to be a matter of partnership and not of unilateral control of the equity. This is increasingly the attitude that British firms seem likely to adopt in their foreign investment, and there are already some examples of it in recent British investment in India.

On this view the pity of the Ford deal is that it jeopardizes a uniquely successful international investment partnership that was already in existence. Ford of Britain has in fact been more successful than Vauxhall, the wholly owned General Motors subsidiary in Britain. It is in fact the only major Ford Company which has clearly proved itself the superior of its direct competitor from the General Motors Group.

For a motor company there are, of course, particular advantages in retaining some local shareholders. For one thing people tend to buy cars manufactured by companies in which they have a shareholding. It is certainly true that in Britain Ford has enjoyed a special degree of goodwill, greater than that of Vauxhall. The British people have been able to identify themselves with the brilliant commercial success of the British company. It has been a matter of satisfaction that many shrewd observers regarded the Ford management in Dagenham as considerably superior to that in Detroit.

The British interest in this matter is, of course, influenced by Britain's own position as an international trader and as the owner and provider of large sums of international investment capital. There is clearly a British concern to avoid imposing arbitrary restrictions on international investment. For one thing large American investment in Britain can be and has been counter-balanced by large British investment overseas. It is true to say that the money provided by the Ford bid, if it should be accepted, would in part be used to increase the British investment in the Commonwealth. It would be very surprising if a British Government took the attitude that international investment in Britain ought to be stopped on nationalist grounds. For Britain the argument for the free international flow of capital is essentially the same as the argument for the free international flow of trade.

When all this has been said there does, however, remain a nagging doubt and a nagging anxiety. No other country would wish to get into the situation of Canada where the Government has recently announced that it is taking steps to encourage "greater Canadian participation in the ownership and control of industry and resources in Canada". Canada's foreign debt now amounts to $17,000 million and increased by $1,500 million. By the end of 1957 foreign companies and investors had a controlling interest in 56 per cent of all manufacturing industry in Canada. Far the greater part of this investment is controlled by the United States. The conflict between the need for international investment and for international industrial integration on the one hand, and for international partnership on the other, plainly has yet to be worked out. It seems reasonable, however, to look on the Ford bid as an error of judgment, in which genuine commercial interests have been given too much weight as against the international and social factors which ought also to govern investment.

Business Notes

Shipping

FALLING FREIGHTS AND MALPRACTICES

THE CENTRAL theme of Sir. A. Ramaswami Mudaliar's presidential speech, delivered at the India Steamship Company's annual meeting held on November 14 at Calcutta (a text of which appears elsewhere in this issue) was fierce competition arising from a steep decline in cargo and its grievous effects on freight earnings. During the last year ended March 31, 1960, the India Steamship Company's gross freight earnings were Rs. 8.39 crores as against Rs. 8.04 crores in the previous year. But in net terms, the company suffered a substantial loss during the year 1959-60. The reason was that due to competitive under-cutting rates fell steeply, the company had to undertake 47.5 liner voyages as against 39 in the previous year and to call at an unusually large number of ports in a frantic search for cargo. All these involved higher operating costs.

Acute competition is the result of the decline in international trade which has reduced the volume of cargo offering. Competition has taken a cut-throat form and, in the first instance, tramp shipping launched an aggressive rate war by all possible means to the great detriment of liner shipping. It is one of the features of the parallel working on the same routes of liner ships and tramps that the latter always score over the former. But revealing light has been thrown by Sir Arcot on the malpractices to which increasing resort is being had by member companies against co-members of the same conference lines. It is understandable that freight rates should be reduced when the supply of shipping capacity exceeds the volume of cargo. But even the well-established members of the conference lines have started giving, in a clandestine manner, high and fantastic rebates to shippers. This is in direct violation of conference agreements. The onslaught of competition has not stopped with offers of excessive rebates. But forwarding agents, who normally render a valuable service both to shippers and shipping companies, have jumped into the fray and, in booking advance shipping space, they have resorted to many questionable and unfair practices. India Steamship's Chairman points out that these forwarding agents have gone even to the length of inter-meddling with the direction of cargo. Immediately, some companies in whose favour such bookings are made, may benefit, but this kind of malpractice is bound to recoil in the long run on the shipping companies as well as shippers.

This sharp turn in competition and the magnitude of malpractices has forced considerable hard thinking on the ways and means to stop the rot. A solution is being found so that international shipping in general and the conference lines in particular should restore their operations to fair and sound practices. At the present time a scheme of pooling together the freight earnings of all the members of the conference lines and making allocations to them on a certain agreed basis is under active consideration. This pooling arrangement is to last for a period of years—precisely how many cannot be stated at this stage—and therefore it also involves the question of making allocations to shipping companies belonging to different countries with due consideration to their legitimate aspirations to expand. In this arrangement, at the present time, a general assurance appears to have been given to under-developed maritime countries that they would receive a fair deal and accommodation would be made for their ambitions to develop their national shipping industry. Precisely, this issue is bound to prove ticklish. The whole problem is very complex and, although the consideration of the pooling arrangement has got off to a good start, it would be premature to be optimistic about the final out-come of this proposal.

Management

TOWARDS BETTER STANDARDS

IN HIS inaugural address to the Advanced Management Programme for Senior Executives, jointly sponsored by the I.L.O. and the National Productivity Council, held recently at Bangalore, Mr. Gulzarilal Nanda, the Union Minister for Labour and Employment, called for a re-orientation of outlook of both management and labour in their mutual dealings and in their relations with the rest of the community. It is heartening to find that this "rest of the community," which is invariably held to ransom by the recalcitrance of unsocial elements, especially in the ranks of labour, is not being ignored.

Mr. Nanda was right in holding that no sustained or real increase in productivity was conceivable without a degree of harmony in the relations between management and labur in industrial enterprises. For the greater part, therefore, his address dwelt on the need for a living wage to labour to increase productivity and the basic tenets of his Ministry's policy. He also touched, albeit very briefly, on the all important question of workers' education and their participation in management. But there was hardly anything in his address, at least as reported in the daily Press, with regard to the needs of management in the present day set-up. Surely, under the Third Five-Year Plan, which envisages further advances in the industrial field, problems of management will assume the utmost importance. In particular, the application of scientific methods of personnel problems which, until recently, did not receive adequate attention, cannot be delayed very much longer, if mistakes have to be avoided not only with regard to initial employment but also when deciding on promotions. The task of selection, evaluation and development of key executives is becoming a highly specialized business.

In this connection, reference may be made to the team of eminent and outstanding Management Specialists from the United States who have been in this country for sometime past to conduct a series of seminars for company directors and top executives. The team has been moving from one principal industrial centre to another with the specific purpose of making it possible for Indian industry to avail itself of high level Management Consultancy Services. There are two features of this seminar programme which must be mentioned here. The first is that it is a programme in which top executives from both the public and the private sector enterprises have participated. Secondly, this is probably first time that such a programme of technical assistance has been made available to Indian management through the initiative of private consultancy firms in the two countries without the assistance of any Government or Foundation. The Indian firm in question is "Personnel and Productivity Services," a well-known firm of Management Consultants in Bombay, and the American counterparts are the "McMurry Company." Three management specialists—Dr. Robert N. McMurry, Mr. Lawrence E. De. Neufville, and Mr. Robert E. Sheaffer—all of considerable standing in the United States, are participating in the seminars. This is certainly a very laudable move towards better management.

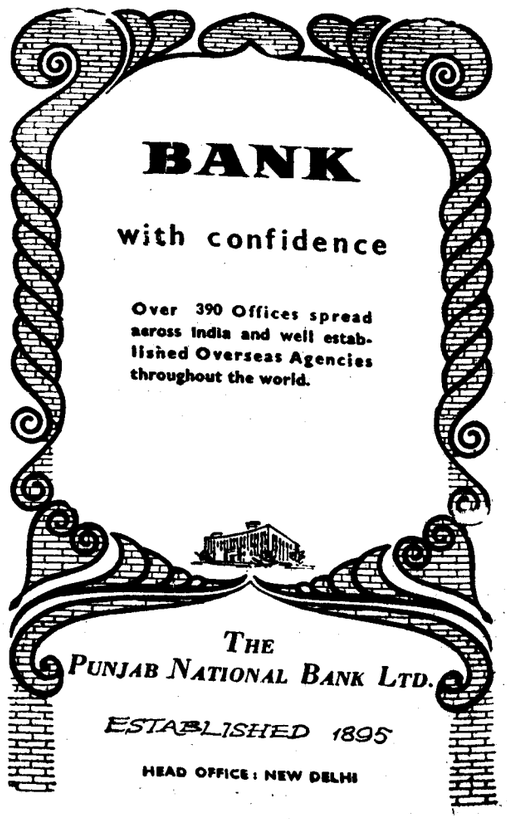
Steel

REDUCTION OF SELLING PRICES

SIR BIREN MOOKERJEE'S statement issued to shareholders along with the Directors' Report and Audited Account for the year ended March 31, 1960, (which is published in this issue) makes a very elaborate survey of the varied problems which face India's steel industry today. Of great interest undoubtedly is that part of the speech which discusses the two-fold question of the prices of steel. The retention prices of steel contain various elements of high costs for which the industry is in no way responsible. For instance, the excise duty on steel ingots was raised steeply from Rs. 4 per ton to Rs. 40 per ton from 16th May, 1957. Besides, there are a number of labour and social welfare cost increases which have now come to stay. No relief in these inflationary elements is possible. But the point which Sir Biren wants to make is that, on the score of production costs as such, the Indian steel industry has decidedly proved its high competitive efficiency.

The selling prices of steel contain a substantial overload superadded to retention prices which goes to build up the Steel Equalisation Fund. Sir Biren has argued that, if subsidising of imported steel is the justification of charging high selling prices much in excess of the retention prices, that justification will soon disappear in toto. India is rapidly expanding her steel industry and, although some types will need to be imported, virtual self-sufficiency will have been achieved. Not only that, but we may be confronted even in the immediate future with surplus steel for which an export outlet will have to be found. In view of steep reduction in imports, it would be pointless to saddle the consumer with manipulated high selling prices. Steel enters into the production of a very wide range of industries and non-industrial consumer requirements. If selling prices are reduced some relief will have been provided to the economy at several points. Furthermore, he argues that lower selling prices will sharpen the competitive strength of Indian steel in the export market. These are some arguments which deserve careful attention at the hands of the Government in reconsidering the issue of selling prices.

But the views of spokesmen of the industry on India's capacity to capture the overseas market lack unanimity. At what point selling prices are to be brought down is another crucial question which will need a good deal of investigation and thought. There can be little doubt that uniform selling prices for steel will be essential, irrespective of the fact whether it is produced in the public sector plants or the private sector plants. What cost differentials will emerge as between the different producing plants will also need to be watched. Experience of Tariff Commission's enquiries into steel prices has shown that the very complicated nature of the investigation consumes long time and invariably the revised retention prices are given retrospective effect. Home producers are reimbursed for the retrospective increases out of the Steel Equalisation Fund. In future there would arise the necessity of revising steel prices for a variety of causes and a pool may be required to meet a similar contingency. The whole question raises complex issues. What Sir Biren has pleaded is to bring selling prices below their present level and not complete elimination of the difference between the two sets of prices.



Engineering Industry

PLEA FOR CENTRALISED SERVICES

ALTHOUGH THE Engineering Association of India is in general agreement with the schemes envisaged in the Third Plan for building up engineering industries, it feels that maximum co-ordination between various agencies entrusted with the commissioning of the plants and ensuring economy in capital costs is very necessary. In a memorandum submitted to the Planning Commission, the Association has drawn attention of the planners in this respect and has made the plea to avoid pitfalls in future in the planning and commissioning of plants, estimates of engineering know-how and estimates of demand related to plant capacity.

The Association considers that capital and working costs can be considerably brought down if centralised services are brought into being. In case the machine tool industry is to be developed rapidly, centralized services would be very essential. Services such as tool room, foundry forge, etc., are vitally necessary, besides the Central Organization that should be set up to undertake design work for a reasonable fee. In the opinion of the Association this Organization should also have capacity to make certain intricate parts of machine tools. The advantage of centralised services would be that a good deal of productive capacity would be released for new items of manufacture without traditional capital investment, without additional expenditure of foreign exchange, and without additional technical personnel.

The Association has asserted that the present output of the equipment for various industries can be considerably improved by perfecting the consortium outlook. What is implied is that each constituent member of the consortium should make only a particular part of an industrial plant and not the whole plant, but the relation inter se should be complementary. It should, however, be noted that there should be no rigidity about the consortium pattern everywhere. Of equal cogency is the proposal for setting up ancillary units in the vicinity of major plants and entrusting to them the manufacture of certain parts over which the former ought not to waste their capacity or whose production by them involves high costs.

FROM THE CAPITAL'S CORRIDORS

MORARJI'S STATEMENT

THERE has been a lot of talk on economic matters in the Lok Sabha during the past seven days. On Monday, the Union Finance Minister, Mr. Morarji Desai, made the long-awaited statement on his recent visit to the United Kingdom and the U.S.A. Earlier, coal and foodgrains supply position figured prominently and two important statements were made by Sardar Swaran Singh, the Minister for Steel, Mines and Fuel, and Mr. S. K. Patil, the Minister for Food and Agriculture.

Mr. Morarji Desai stated that India's foreign exchange situation continued to be "one of serious concern." The country's foreign balances had reached the rock bottom level — around Rs. 141 crores — and were "too low to provide any cushion." There was, therefore, no escape from cutting down the import bill and for all developmental activity the country had to depend upon external assistance. "Over the entire period of the Third Plan," Mr. Desai pointed out, "it is going to be a continuing and difficult quest for foreign exchange to match the external costs of the projects included in the Plan and to meet other commitments".

The Finance Minister disclosed that against Rs. 2,600 crores of foreign assistance required for developmental purposes under the Third Plan, the aid promised so far by the friendly countries totalled nearly Rs. 750 crores. It was heartening, Mr. Desai said, that in all the discussions he had with foreign Governments and international lending institutions on the Third Plan, there was no criticism suggesting that the Plan was an over-ambitious one or too big.

Mr. Morarji Desai pointed out that the country needed more and more investment domestically and there would be a growing volume of external debt to service. "These claims", he said, "can be met only by increased savings, which, in turn, require an all-round intensification of the production effort and the exercise of maximum restraint on consumption."

Calling for greater economy in imports, Mr. Desai observed that it was necessary to take this step so that "a more satisfactory level of balances could be built up by the end of this winter before the balances started coming down due to seasonal factors."

IMPORT POLICY

Soon after the Finance Minister's statement in Lok Sabha, the Government came out with the import programme for the current half-year in respect of twelve of the twenty items for which the decision had been withheld when the import policy for October, 1960 —March, 1961, was announced. As could be expected, imports of these items have been reduced.

The items for which the import policy has now been announced include machine tools; surgical instruments, apparatus and appliances; agricultural tractors; watches, photographic negatives and printing paper; packing and wrapping paper; giant motor, motor cycle and bicycle tyres and tubes and unset and uncut diamonds.

For machine tools, the import quota for established importers has been redueed from 30 per cent general and 30 per cent soft to 20 per cent general and 20 per cent soft. In the case of surgical instruments, apparatus and appliances, while there is no change in the import quota, the concession extended during the last half-year period in the shape of supplementary licences has been withdrawn. For tractors, there will be no import quota for the current half-year.

The import quota in respect of complete watches has been halved to 5 per cent general 5 per cent soft. For photographic negatives and printing paper, excluding X-Ray films, the reduction will be from 33-1/3 per cent general and 33-1/3 per cent soft to 25 per cent general and 25 per cent soft. For printing paper, the quota has been reduced from 12½ per cent to 7½ per cent and for packing and wrapping paper from 7½ per cent to 5 per cent. In the case of filter paper, there is no change as compared to April-September, 1960. For paper not otherwise specified, the quota has been maintained as during the last half-year, but the additional licences which were being issued during the last half-year will now not be granted.

For giant motor, motor cycle and bicycle tyres and tubes and flaps and solid tyres, the quota will continue to be as during the last half-year, viz., 75 per cent. The licences will, however, not be valid for import of bicycle tyres and tubes. For diamonds unset and imported uncut, excluding bort and industrial diamonds, the quota has been reduced from 10 per cent to nil. The import policy for card clothing and card accessories will, however, continue to be the same as before viz., 66-2/3 per cent general and 66-2/3 per cent soft.

The import policy in regard to the remaining items — betel nuts, dates, cloves, cotton yarn (80 counts and above) nutmegs, mace, cork manufactures (not otherwise specified) and cardamoms, cassia and cinnamon — it is understood, will be made known in another ten or twelve days.

STATEMENT ON COAL PRODUCTION POLICY

The following statement was made in the Lok Sabha by Sardar Swaran Singh on Government of India's policy in regard to coal production.

The Minister said: "The basic policy in regard to coal production, which was adopted during the Second Plan and had the approval of the Parliament, was to assess the total requirements of coal in our national economy and then to apportion responsibility between the private and public sectors to achieve this production according to their capacity. The policy still remains the same.

"Our main objective being to produce all the coal that is needed, the allocation of the respective shares of the private and public sectors cannot be on the basis of a pre-determined target for each. The proper course is to make an assessment of the capacity of each and then to work out what contribution it should be called upon to make in order to achieve the total production needed. This has been our approach in deciding the part that each of these sectors has to play in the Third Plan.

"Our estimate of coal requirements during the Third Plan works out to 95 million tons, exclusive of an extra 2.5 million tons required for the projected fourth steel plant at Bokaro. This means an additional production of 35 million tons over the target of 60 million tons in the Second Plan.

"A Working Group, comprising the Coal Controller, the Coal Mining Adviser attached to the Ministry of Steel, Mines and Fuel and a representative of the coal industry, was set up recently to invite offers from

individual units, through the Joint Working Committee of the industry in regard to the additional production they were capable of achieving during the Third Plan. This Working Group after securing the necessary information from the industry and scrutinising the individual offers from the point of view of feasibility, made an assessment of the total capacity of the private sector.

"The final estimate of the said Group is that the private sector is capable of producing about 4.87 million tons of coking coal and about 11 million tons of non-coking coal, thus making a total of 16 million tons approximately. Of this total, about 12 to 13 million tons are estimated to be produced from the existing workings in the collieries in question and the rest from areas adjacent to them as well as from non-contiguous or proximate areas. This estimate can be considered fairly realistic, based as it is on an examination of what individual units are capable of producing. The figure has turned out to be the same as was tentatively mentioned in the draft outline as the private sector's target.

"Similarly the capacity of the public sector comprising the National Coal Development Corporation and the Singareni Collieries has been estimated at 19 million tons. This assessment is again based on a careful examination of what the public sector is capable of achieving, taking into account such important factors as the availability of the necessary equipment, man-power and technical know-how.

NO RIGID ALLOCATION

"The intention, however, is not to treat these allocations as rigid. These have been laid down for the present for the purpose of programmes to be drawn up by the various units, and the evaluation of performance from time to time. It is proposed to keep a close watch on the progress of each unit that is participating in the programme of additional production, and if short-falls are noticed in one sector, adjustments would be made in the programme of the other sector, the basic objective being to ensure that the total production planned for is actually achieved.

"The above policy is fully in accord with the Industrial Policy Resolution of 1956. That Resolution stipulates that all new units in the coal industry will be set up by the State. But this does not preclude the expansion of the existing privately, owned units or the possibility of the State securing the co-operation of private enterprise in the establishment of new units when the national interests so require. The role that has been assigned to the private sector I have just mentioned does not involve a general relaxation of the Industrial Policy Resolution itself. A realistic assessment having been made of the optimum production that can come from existing mines and areas immediately contiguous to these mines in the private sector, our intention is to give special permission to individual units to work new or non-contiguous areas where the raising of coal from such areas has to be ensured to make up the total production required. This is quite in consonance with what the Industrial Policy Resolution states, namely, that where the national interests so require, private enterprise may be allowed to expand.

POLICY ON PRICES

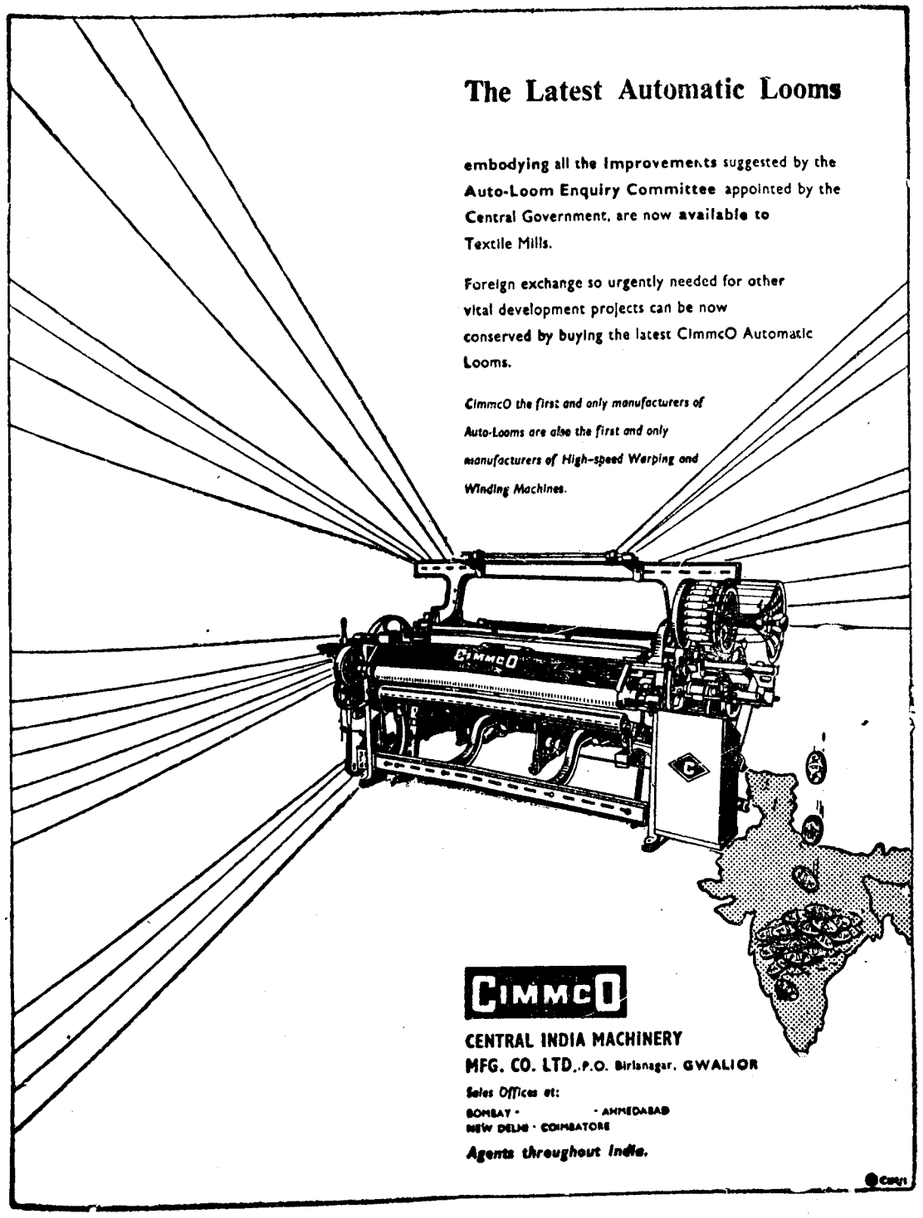
"Another important aspect of coal policy pertains to coal prices. In this regard we have adhered to a policy of holding the price line. It will be recalled that some time ago Government had constituted a Coal Price Revision Committee which went into the entire price structure of coal and besides recommending an economic price for coal, made certain other recommendation, the object of which was to create the right conditions for the expansion of coal production and assurance of supplies to consumers. These recommendations were accepted by Government and are being implemented.

"A very important one among these is the introduction of a scheme of subsidy to collieries which are handicapped by adverse factors such as presence of gas, very deep workings, difficult geological conditions, excessive accumulation of water, etc. and which cannot be worked economically at the existing coal prices, although it is in the national interest to keep them in production.

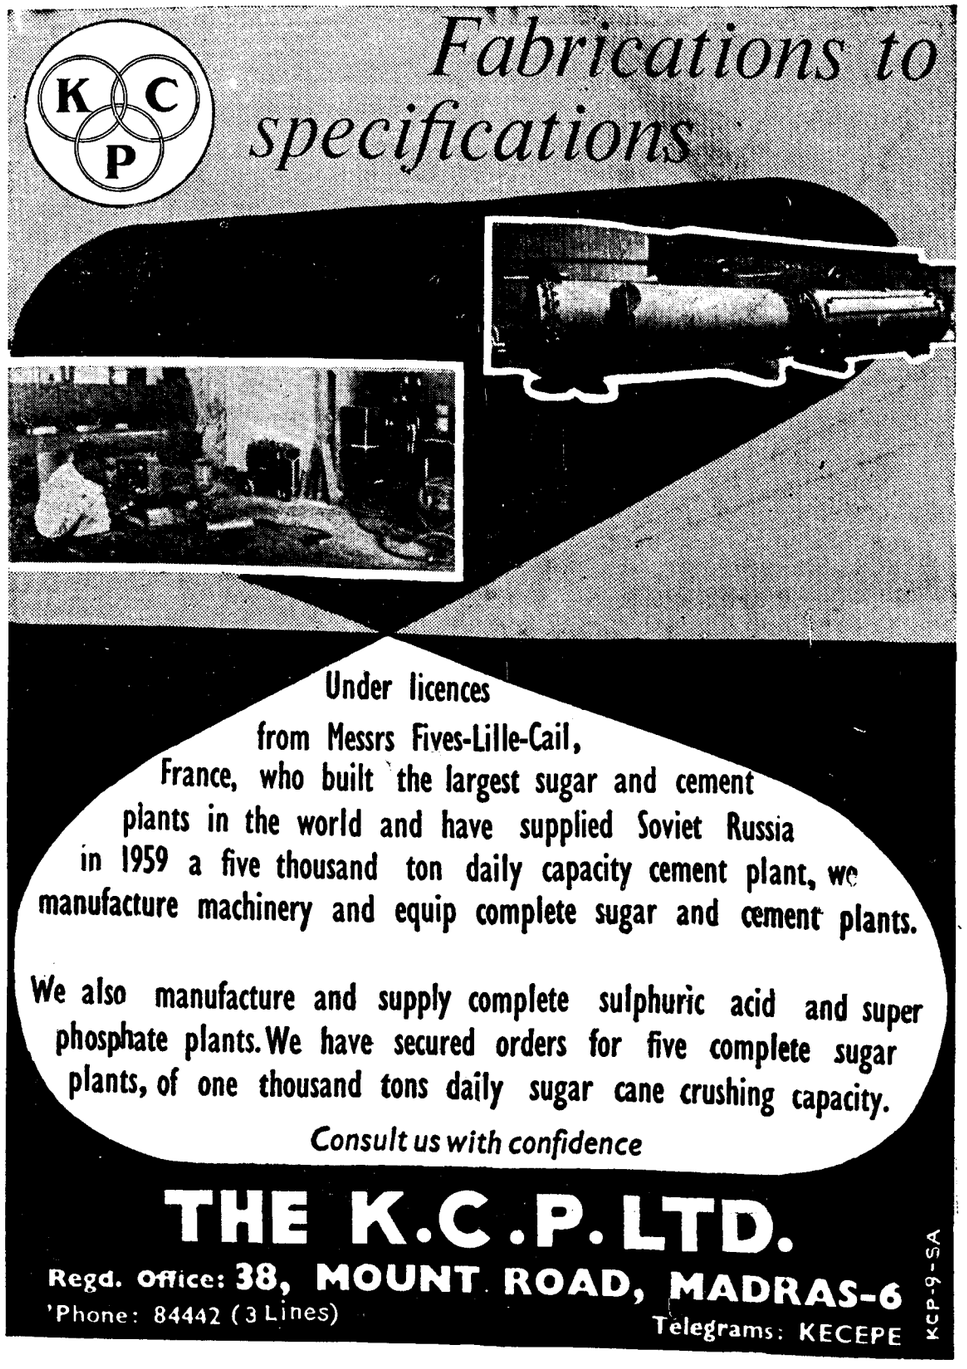
"Another important measure is the raising of the ceiling for stowing subsidy from 75 per cent/85 per cent to 100 per cent. Government are also going ahead with the scheme to put up Central ropeways both in Jharia and Raniganj coalfields for extraction of sand from the river beds and distribution to individual collieries. The scheme is expected to be put into effect by the end of the first quarter of 1963. All these schemes will benefit the private and public sectors alike.

"To sum up then, there has been no radical change in Government's policy on coal. It is based on what the national interests require, and is entirely within the scope defined by the Industrial Policy Resolution of 1956."

COAL OUTPUT



Reviewing the progress of coal production during the past ten years, Sardar Swaran Singh said coal output in 1950 amounted to 32.30 million tons. In 1951 it increased to 34.43 million tons. The production in 1955 was a little over 38 million tons. Against a target of 60 million tons fixed for the second Plan, the output in 1959 was 47.06 million tons. Production during the nine months to September last has been around 38 million tons. By March next, the last month of the current Plan, production would be raised to a level which should give an annual output of 54 to 55 million tons.



The shortfall of 5 to 6 million tons in the level of coal production vis-a-vis the second Plan target, Sardar Swaran Singh said, would be mostly in the production from the collieries of the National Coal Development Corporation. The output of coal in the public sector collieries during the year 1959-60 was 7.11 million tons; 4.8 million tons in those operated by the National Coal Development Corporation and 2.26 million tons from the Singreni group of collieries. The Minister added that all arrangements on ground would have been established by the NCDC by the end of March, 1961, for a production commensurate with the target of 13.5 million tons fixed for it. The targeted rate of output would be attained by the NCDC within the first year of the Third Plan.

To increase the supplies of coal for brick burning and domestic consumption, which have a very low movement priority, Sardar Swaran Singh said the Government had under consideration a proposal to open coal dumps at suitable places in the country. Consumers, he added, were encouraged to take more supplies during the slack season of railways. The annual demand from all the States for brick burning coal, moved by railways, is about 150,600 wagons.

PROTECTING THE FARMER

The Union Food and Agriculture Minister has indicated that if there was a sharp fall in foodgrains prices because of good crop this year, the Government would take necessary measures, including entering the mar-

ket, to protect the farmers. Considerable relief has been felt in Government circles here on the downtrend noticed in foodgrains prices consequent upon the arrival of the kharif crop in the market. Foodgrains output during the current agricultural year is expected to be a record one around 76 million tons as against 71.8 million tons in 1959-60 and 75.5 million tons in 1958-59. The Government is making efforts to augment its rice stocks by imports from abroad; as indicated in this column last week, two rice deals are likely to be finalised soon.

Meanwhile, the Food and Agriculture Ministry is understood to be pressing hard for the adoption of a policy of fixing "floor" prices for the major foodgrains so that the agriculturist may be assured a fair return for his labour. The various implications of this policy are currently being thrashed out by the Planning Commission.

REMUNERATION OF COMPANY PROMOTERS

The Government has decided to place some restrictions on the remuneration of company promoters. This was revealed by the Commerce and Industry Minister, Mr. Lal Bahadur Shastri, while replying to the general debate in the Lok Sabha on the Companies (Amendment) Bill. Mr. Shastri said the total promotional expenses of companies run by managing agents would be restricted to 1.5 per cent of the cost of the venture and in the case of companies managed by boards of directors these expenses would not be allowed to exceed 2 per cent. The principles for fixing the remuneration of company promoters, Mr. Shastri added, were:

(1) The Government would see whether the promoters or their relatives or associates were being appointed as managing agents or managing directors or managers within the meaning of the Companies Act.

(2) In the case of companies managed by managing agents, the total promotional expenses should not exceed 1.5 per cent of the estimated cost, based on careful preparation of the project.

(3) In the case of companies managed by boards of directors, the promotional expenses should not exceed 2 per cent of the estimated cost.

(4) Even when the promotional expenses are within these limits, the Government should have the right to ask for detailed information, whenever it considers calling of such information necessary.

(5) In no case should the ceiling be exceeded unless the promoters could justify with facts and figures that expenditure in excess of it was essential for the promotion of the company concerned.

It had been decided, Mr Shastri said, that the Controller of Capital Issues should be apprised of these principles and asked to consult the Department of Company Law Administration in future in all such cases.

Mr. Shastri also revealed that the Government proposed to scale down the ceiling requirements on new company floatations; in future a new company floated with a capital of Rs. 10 lakhs or more would need the sanction of the Controller of Capital Issues. Companies which wanted to be listed on the stock exchange would be required in future to complete their share allocations within three months.

About the "special audit" provision in the Bill, the Minister disclosed that the Government in this regard proposed to make an example of a few companies whose affairs were in a very bad state. But he rejected suggestions to lessen the rigours of "special audits." The firms concerned, he said, would be informed of the special audit reports if only minor irregularities had been pointed out in them. If, however, a report contained major allegations, it would not be advisable to give a copy of the report to the company. The matter in such cases would be sent to the court and the company would be entitled to fight it out there. If the Department of Company Law Administration did not take any action within four months of the submission of a report, a copy of it would be sent to the firm to give it an opportunity to rectify its mistakes.

MANUFACTURE OF TRACTORS

A factory to manufacture tractors and earth-moving machinery is proposed to be set up at Ennore, in Madras State. The capacity of this undertaking will be as under:—

Item	Output per annum Nos.	Tons
Steel structurals	—	1800
B.L.H. shovels	30	900
Allis-Chalmers motorised scrapers	80	—
Allis-Chalmers motorised dumpers	100	—
Allis-Chalmers crawler tractors and bulldozers	To be determined later	

The authorised capital of the undertaking would be Rs. 2 crores, out of which nearly Rs. 1.6 crores would be issued in the first instance.

TRADE AND INDUSTRY REPORTING SYSTEM

The Government of India has set up a Committee to simplify, co-ordinate and rationalise the system of reporting in relation to trade and industry. The Cabinet Secretary is the Chairman of the Committee. The other members of the Committee are: Director, Organization and Methods Division, Government of India; President, Federation of Indian Chambers of Commerce and Industry; President, Associated Chambers of Commerce and Industry and one more representative of the industry as may be nominated by the Federation of Indian Chambers of Commerce and Industry. The Committee will have the power to associate as member any other person it considers useful for its work.

The terms of reference of the Committee will be to undertake a survey of the requirements placed on the industries by the administration in the matter of supply of data, submission of reports, etc., to Government, and to suggest ways and means of securing the elimination of unnecessary reports or information, reduction of frequency of reports or information, reduction in the number of copies of reports or data, simplification or consolidation of existing reports or data, elimination of unnecessary details, delay or cost of reporting and elimination or modification of specific procedures.

The survey will be carried out jointly by trained Government and business personnel under the directions of the Committee. To begin with, the Committee of Direction will take up for study the coal and textile industries.

THIRD PLAN

The Union Finance Minister, Mr Morarji Desai, has written to the Chief Ministers of States, indicating the quantum of assistance which will be made available to the States by the Centre for their development programmes in the first year of the Third Plan. The allocations have been made according to a formula under which the Plan expenditure will be staggered, beginning with roughly 12 per cent of the total Plan budget in the first year and ending up with about 25 per cent in 1965-66.

The Central assistance promised to the various States for their 1961-62 development programme is as follows: Andhra Rs. 21 crores; Bihar Rs. 31.5 crores; Jammu and Kashmir Rs. 9 crores; Gujarat Rs. 15.5 crores; Kerala Rs. 16 crores; Maharashtra Rs. 22.5

crores; Madhya Pradesh Rs. 30 crores; Mysore Rs. 19 crores; Orissa Rs. 19 crores; Punjab Rs. 19.5 crores; Rajasthan Rs. 22.5 crores; West Bengal Rs. 23 crores; Uttar Pradesh Rs. 51 crores. The allocations for Assam and Madras will be finalised in the next few days.

TECHNICAL PERSONNEL FOR HINDUSTAN STEEL

The major shortage of Indian technical personnel in Hindustan Steel, according to the Union Minister for Steel, Mines and Fuel, is mainly in the categories of senior and middle grade supervisory staff. The requirements of trained junior engineers for manning the three public sector steel plants had been fully met. The reasons for the shortage of trained Indian hands in the senior grades, as enumerated by Mr. Leo Werts, the Ford Foundation Man-power Consultant to the Union Ministry of Steel, are that persons with experience are not available in the country and the sources from which the new steel plants can draw their man-power are practically exhausted.

The remedies recommended to meet this shortage are a comprehensive training plan and an organisation to develop the newly trained engineers, association of some top Personnel and Training Consultants from another country with Hindustan Steel's training programme, setting up a Technical Advisory Committee on Training and the integration of Technical Training Institute at the steel plants with a country-wide training programme.

LOCATION OF PIG IRON PLANTS

The general criterion for the location of pig iron plants in various parts of the country is that they should be located far from the major steelworks and be based on utilisation of non-coking coal and preferably low-grade iron ore available in areas nearby. Six small pig iron plants, three each in Bombay and Madras, have been licensed under the Industries Development and Regulation Act. Besides, one unit near Gwalior (Madhya Pradesh) had been permitted to be set up under the Iron and Steel (Control) Order. One of the licensed units in Madras and the small furnace near Gwalior are in production; in addition, one unit in Orissa is in regular production. The total production in the Orissa and Gwalior units has been about 15,200 tons.

At present the scope for setting up new electric furnaces is very limited as existing furnaces and those already sanctioned are expected to consume most of the available melting scrap, estimated at about 600,000 tons by 1961. However, the question of permitting new furnaces in the context of Third Five-Year Plan is being examined.

PLAN FOR STRENGTHENING BANKING STRUCTURE

The Government of India, it is learnt, is considering, in consultation with the Reserve Bank, a four-fold plan to strengthen the banking structure in the country. The plan envisages amalgamation of weaker units with the sounder ones, introduction of Deposit Insurance Scheme, widening of the equity base of the banks and raising of their liquidity ratio. There is no proposal, however, to entirely do away with small banking institutions; they will continue to function if properly managed. Nor is there contemplated any large-scale merger of small banks with bigger ones.

The final decision on this plan will be taken after going into all the pros and cons of it. Each of the four steps has to be weighed properly, for howsoever desirable it may be, it would involve certain disadvantages. Introduction of the Deposit Insurance Scheme and amalgamation of weaker units with the sounder ones, for instance, will put some burden on the efficiently-managed banks, which they may not like to bear. Widening of the equity base would raise the important question of servicing of the increased capital. Raising of the liquidity ratio may hamper the lending operations of the banks, resulting in lower profit.

The Deputy Governor of the Reserve Bank, Mr. M. V. Rangachari, who recently studied the working of the Deposit Insurance Scheme in the United States, is expected to submit his report shortly.

Despite the stresses and strains which it has undergone recently, the banking structure in this country, official sources reiterate, is pretty sound.

CREDIT POLICY

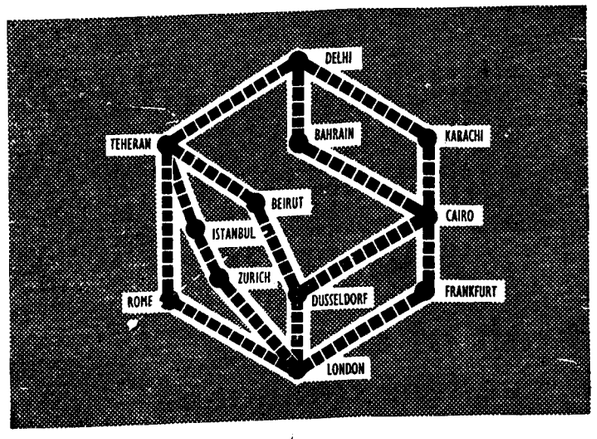
The Government of India, it is understood, will adhere to its present policy of dearer credit in order to keep the inflationary forces in the economy under control. Deficit financing is also being curtailed with the same purpose in view. The Government, however, has no intention to deny credit for legitimate purposes.

Deficit financing has been reduced from Rs. 450 crores in 1957-58 to Rs. 120 crores during the current financial year. In the next budget, it is expected to be curtailed further.

POLISH, YUGOSLAV AND JAPANESE CREDITS

The Union Finance Ministry has made allocations for the utilisation of the Polish, Yugoslav and Japanese credits. The $30 million Polish and the $40 million Yugoslav credits will be mainly used for coal, power and transport projects. Exact details of these allocations will be available shortly.

The 18,000 million yen (Rs. 23.31 crores) credit will be utilized as follows:



Programme	(Rs. lakhs) Value of Loan Agreements signed	Value of Pending Loan Applications	Total
... ...			
A. PUBLIC SECTOR			
1. Equipment for Power Projects	369.45	40.23	409.68
2. Equipment for National Coal Development Corporation	6.57	17.08	23.65
3. Tractors for Rajasthan Canal Project	11.28	—	11.28
4. Tractors for Dandakaranya Project	120.29	2.96	123.25
5. Equipment for Small Scale Industries	—	8.95	8.95
6. Equipment for Posts and Telegraphs Department	9.79	1.52	11.31
7. Tanker for the Western Shipping Corporation	108.00	—	108.00
8. Equipment for Roads projects	99.09	65.16	164.25
B. PRIVATE SECTOR			
1. Cargo vessels for the Scindia Steam Navigation Company Ltd.	275.71	—	275.71
2. Equipment for Rayon Industry	43.76	322.58	366.34
3. Equipment for manufacture of Paper, Steel Wire, etc.	54.62	92.52	147.14
Total	1098.56	551.00	1649.56

The balance of Rs. 7.31 crores is fully covered by approvals already given for purchase of equipment required for power projects, ports, broadcasting, industrial projects, etc.

Japan authorised this credit in 1958. The delay in its utilisation has been caused by certain procedural difficulties to overcome which long-drawn negotiations had to be carried on.

COMPANY AFFAIRS

KOTHARI SUGAR: A NEW VENTURE

A new sugar company to be called Kothari Sugar and Chemicals Ltd. was incorporated recently with an authorised capital of Rs. 5 crores and an issued capital of Rs. 89 lakhs. The object of the company is to set up a sugar factory in Tiruchirappalli, 200 miles south of Madras, with a crushing capacity of 1,000 to 1,250 tons a day. The present sugar production in the South is around 80,000 tons while the consumption is of the order of about 1,35,000 tons every year. There is thus a significant gap which can be bridged by production in the South and this factory is supposed to meet this extra demand.

The plant and machinery for the factory will be manufactured by M/s. Binny's Engineering Works, Madras in collaboration with M/s. Mirrlees Watson and Co. Ltd., Glasgow, reputed UK sugar machinery manufacturers. The factory is supposed to go into production by December 1961. Of the total capital issue of Rs. 80 lakhs the Indian Investment Corporation of Madras and the Life Insurance Corporation of India will each subscribe to shares worth Rs. 15 lakhs. The balance of the issue has been under-written. The equity share will be offered to the public from December 15, 1960. The company has been floated by M/s. Kothari and Sons of Madras and it will have on the Board of Directors leading industrialists of India.

SWINTON ESTATES' PEAK PRODUCTION

Swinton Estates Company Ltd. during the year to March 31, 1960 harvested the biggest crop of Arabica coffee since the inception of the company. The Directors have pointed out that the policy of intensive cultivation has started yielding good results and the programme of intensive manuring was further stepped up during the year. The company incurred Rs. 10,713 during the year towards the cost of two drying yards, pipes and fittings and the installation of a hydram on Swinton.

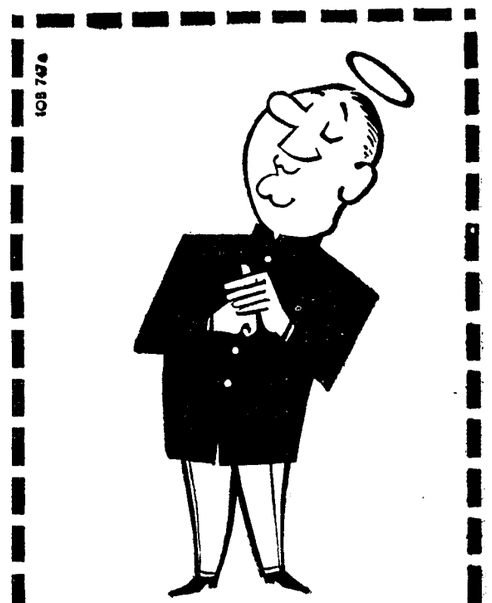
After meeting all expenses, the year's working results show a profit of Rs. 85,141 out of which appropriations have been made towards taxation (Rs. 42,000) and general reserves (Rs. 3,000). A sum of Rs. 20,785 has been provided to write off the entire preliminary outstanding expenses. The Directors have recommended the payment of dividend at the rate of 12½ per cent less tax, which will absorb Rs. 15,625.

CENTRAL INDIA'S GRADUAL IMPROVEMENT

During the year to March 31, 1961, Central India Coalfields Ltd. made satisfactory improvement in its working. There were increases in both raisings and despatches over the previous year.

	1958-59	1959-60
Raisings (tons)	3,16,881	3,74,738
Despatches	3,06,540	3,73,884

This rise was attained in spite of difficult mining conditions which restricted the output at the Pure Chirimiri and Khas Badjna collieries of the company. The working at the Orient Colliery, however, was quite satisfactory.



The profit for the year under review before providing for depreciation and taxation comes to Rs. 16.15 lakhs, a figure significantly higher than Rs. 9.93 lakhs during the previous year. After making the usual provisions, there remains a balance of Rs. 4.27 lakhs out of which the directors have recommended the payment of dividend at the rate of 80 nP. per share subject to tax, absorbing Rs. 4 lakhs. A sum of Rs. 1.2 lakhs of the accumulated depreciation has been written off during the year and the directors have further transferred Rs. 75 thousand to a new account called Reserve for Contingenicies.

ANGLO-INDIA JUTE

The Directors have reported that the comfortable jute stocks with which the industry entered the year to March 31, 1960 enabled "simultaneous business to be carried on profitably until November, when fears of a smaller crop than that originally estimated led to a rise in raw jute prices.

Modernisation of a part of the Mills was completed during the year and both mills are now fully equipped with modern spinning machinery. The company has commenced the modernisation of other sections too and orders for additional machinery are awaiting receipt of an import licence for which the company has made the application.

During the year to March 31, 1960 the company recorded a net profit at Rs. 37.40 lakhs. The Directors have recommended the payment of dividend on ordinary shares at the rate of 20 per cent per annum subject to deduction of tax. They have also proposed a transfer of Rs. 1.20 lakhs to Contingency Reserve to Compensate Preference Shareholders for tax deducted at source at the rate of 30 per cent but the actual payment will be made in accordance with the provision of the Preference Dividend Bill now pending before the Parliament.

We are rather proud of ourselves

TODAY, banking is almost a public utility. Its success depends on its ability to give friendly and helpful service.

We modestly believe that our progress shows that our clients, whether they are industrialists, exporters or just men who want to deposit Rs. 5/- in a Savings Bank account, realise that in IOB they have an institution that has made friendly service the basis for all their activities.

COMMODITY NEWS AND NOTES

TYPES AND GRADES OF UNMANUFACTURED TOBACCO

Tobacco yields an income of about Rs. 49 crores to the growers and earns for the country foreign exchange of Rs. 15 crores per annum. Exports of this important commercial crop have been steadily going up and during the five-year period ending 1957, India exported an annual average of 35 million pounds of unmanufactured tobacco. This was nearly double the pre-war average of 47.5 million pounds. The Directorate of Marketing and Inspection of the Union Ministry of Food and Agriculture has published a monograph on types and grades of unmanufactured tobacco exported from India in 1957 to provide precise information on the nature of requirements of different importing countries as a step in boosting up tobacco exports. Besides giving information on the export of different types of grades, the monograph provides detailed information about the forms in which unmanufactured tobacco is exported to various countries.

REGULATING JUTE PRODUCTION

The two-day discussions between representatives of the Indian Jute Mills' Association and the Union Government ended recently. It has been decided that the curtailment of production by jute mills should be limited to the equivalent of an additional 8 per cent of the loomage, besides the 9 per cent looms sealed earlier. IJMA have agreed to accept the decisions of the Government on the quantum and method of regulating the production. In the course of the discussion, questions relating to the supply of raw jute and maintenance of production of jute goods were fully examined. It was agreed that production should be maintained at stable levels and as high as possible, taking into consideration the supply position of raw jute, both local and imported. It was also necessary that the prices of raw jute and jute goods should not be allowed to go up unreasonably as a result of speculative activities. In this connection, a reference was made to the measures taken by the Forward Markets Commission for restraining such activities. It was felt that the present prospects of the jute crop in India and Pakistan were not unfavourable as compared to the last year. Some regulation of production would, however, become necessary in order to maintain stability. The prices of raw jute would now be sought to be maintained at reasonable levels through a regulated programme of buying by the jute industry and other necessary measures. The IJMA representatives agreed that jute goods for the export markets should have a reasonable relationship with raw jute prices and should not rule unduly high. The Government hope that, as a result of these measures, the prices of raw jute and jute goods will be kept at reasonable levels.

FOOD PRODUCTION

Mr. M. V. Krishnappa, Deputy Minister for Agriculture, said in the Lok Sabha recently that according to present indications prospects of food production during this year were on the whole quite satisfactory, despite damage to kharif crops by natural calamities in certain parts of the country. The estimates of production of food crops for 1960-61 were not yet available. The Minister replied in the affirmative to another part of the question whether it (prospects of food production) had affected the food prices. The prices had generally shown an easy tendency during recent weeks, he added.

Reducing Material Costs Means Extra Profits

Do you know that more than half of your total production costs goes for materials and purchasing ?

Do you know that two per cent saving in purchase can give you as much additional profit as seventeen per cent increase in sales ?

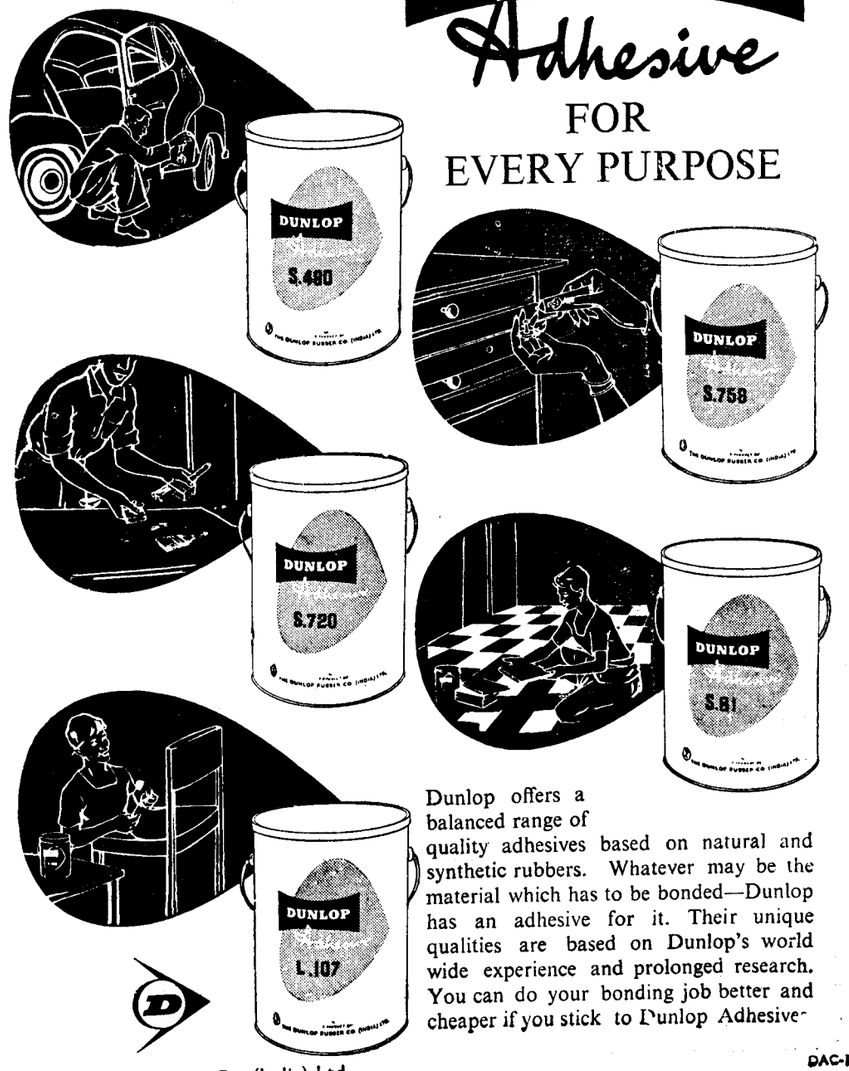
Your purchase and stores departments may not be running at maximum efficiency. Why not review your operations?

A. R. PALIT & CO., PVT., LTD., offer you Specialised Consulting Service covering the entire field of purchasing, materials-planning and management and stores inventory-control.

We have highly qualified specialists under the guidance of Mr. A. R. Palit who has had twenty years of purchasing experience in India and the U.S.A.

We can assist you to set up or overhaul your purchasing and materials-management. Our expert analysis and advice will show you ways and means for substantial cost reduction, which means direct profits to you.

ASSISTANCE OFFERED BY OUR CONSULTING SERVICE INCLUDES :—



* **Complete advice regarding setting up an efficient materials and purchase management department including store-keeping and stores inventory-control ; or modernising your existing operations.**
* **Analysis of your particular purchasing and inventory-control problems for specific recommendations for greater efficiency including ways and means for cost-reduction.**
* **Detailed recommendations regarding store-keeping and stores inventory-control problems.**
* **Arranging for practical instructional course for all your senior and junior officers who handle purchasing and materials-management. Drawing up or revising policy and procedure manuals.**
* **Introducing application of modern methods in your organisation under our supervision.**

Please write for further details:

fewer children . . . happier families

In Jamshedpur, groups of workers' wives gather in the evenings at the seven maternity and child welfare clinics run by Tata Steel. Here, trained advisers tell them about the baneful effects of improvident parentage and distribute contraceptives at cost price to ensure planned parenthood. More such units are being set up. Jamshedpur is the first city in India where, since 1959, oral contraceptive pills are being tested out on a fairly extensive scale.

An important feature of these efforts is male sterilization operations being carried out since 1951 under the guidance of Dr. Harbans Lall, who is in the forefront of a devoted group of workers engaged in popularising family planning in Jamshedpur. A Fellow of London's Royal College of Surgeons, Dr. Lall has so far been responsible for carrying out over 475 operations successfully.

In keeping with the national objective of curbing the runaway growth of population, pioneering work is being done in Jamshedpur . . . a city where industry is not merely a source of livelihood but a way of life.

Company Meetings

INDIA STEAMSHIP CO., LTD.

Address of Sir A. Ramaswami Mudaliar, K. C. S. I., D. C. L. (Oxon.)

Chairman India Steamship Co., Ltd.

Delivered at the Annual General Meeting of the Shareholders of the Company, on the 14th November, 1960

Gentlemen,

The Audited Accounts and Directors' Report for the period ending March 31, 1960, have been in your possession for some time. With your permission, I shall take them as read.

The Directors' Report shows that the freight earned during the year was Rs. 8,38,59,427 as against Rs. 8,04,04,160 in the previous year. The total number of liner voyages during the year was 47.5 compared to 39 voyages in the previous year. Though the freight earned was higher than last year, I regret to state that the net result is a substantial loss to the Company. It is necessary that you should be informed of the reasons for the loss and the steps that are being taken by the Company to remove some at least of the factors that produced this result.

OVERSEAS TRADE AND FREIGHT RATES:

I had referred last year to the decline in international trade and to its effect on international shipping which is always extremely competitive. During the year under review, the liner trade had to face aggressive competition from tramps which, scouring the seas for decreasing volume of commodities, offered rates of freight which made many shippers divert their custom from their usual liner companies. In spite of the conferences reducing freights to meet this fierce competition particularly in commodities which could form bulk cargo the lines were heavily handicapped. Your Company has felt the effect of this competition both in the outward and inward trade. Your ships had to call at an even greater number of ports than usual, to secure the cargo and had necessarily to incur heavy expenses for port dues and other similar charges.

The first factor which affected your Company's net earnings and which perhaps was common to many other lines in this trade was the reduced rates of freight. A second and more serious factor which affected your Company was the unhealthy and unfair competition to which it was subject from some of the liner companies which are its colleagues in the main conferences of which it is a member. It must be recorded, however unpalatable the fact, that competition by undercutting the freight rates through larger rates of rebate to shippers than permissible by conference rules, has been freely resorted to by some lines in a desperate attempt to secure the freight at any cost. Other forms of evasion of rules have come to notice and their effect has been equally disastrous.

The system of entrusting the booking of cargo by shippers to institutions named 'Forwarding Agents' is a useful and well recognized system and has been of equal help to shippers and shipping companies. But unfortunately during the last two years, even this system has come to be misused by some forwarding agents on the Continent of Europe who, by illegitimate means, have influenced the direction of cargo to the ultimate detriment of both the shipper and the lines concerned. It is unnecessary to refer in any detail to the methods adopted by these few Forwarding Agents and the harmful effects of such practices. In addition to some lines adversely affected by such practices, the Central Government has also been thwarted in its attempts to conserve foreign exchange and the authorities are generally aware of the position.

A LIKELY SOLUTION:

Your Company, along with some others, have given most anxious consideration to means whereby these evils can be reduced, if not eliminated. They have realised along with some of their colleagues that the Conference system itself will be seriously jeopardised if these conditions continue. It is unnecessary to dilate on the salutary purpose which the Conference system serves. Contrary to the notions of a few shippers who sometimes feel that it restricts their freedom of choice of ships, it is of at least equal value to shippers as to shipping companies. The suggested solution, which is now engaging the serious consideration of the lines, is the allocation of the total freight earnings of all the shipping lines of a Conference in certain proportions over a term of years, providing at the same time for the growth and development of the fleets of underdeveloped countries, through a defined and reasonable increase in the rate of allocation during the years comprised in the stated term. Your Directors have, after very anxious consideration, put forward proposals in this regard jointly with the sister Indian Company, the Scindia Steam Navigation Company Ltd. and are expecting that an arrangement would be agreed upon by all Companies, members of the Conference in the India|U.K.|Continent trade, very shortly. I do not wish to deny that there are some disadvantages in any practicable arrangement that may be arrived at, but your Directors after weighing both the disadvantages and the advantages have come to this decision. It will eliminate those unworthy charges of Flag discrimination which really reflect on the fair and equitable judgment of those who level such charges. Above all, the evil practices that I have referred to will be greatly minimised. If contrary to expectations an arrangement on the above lines is not arrived at and that very shortly, the Indian lines are prepared to adopt other measures in consultation with their Government to secure their right.

It should not be imagined that, if a pooling arrangement of freight earnings is adopted, Indian companies can sit back and calmly await the result of the allocation of the pool amount. Your Company cannot relax its efforts to carry a fair amount of freight in either direction and shippers whether in the private sector or in the public sector will, I hope, fully co-operate in developing National Shipping by a fair allocation of cargo to Indian shipping companies. I may, in this connection, be permitted to express my concern and disappointment at the manner in which the State Trading Corporation in its chartering section has been functioning. It may be that, owing to the rigidity of financial regulations, it has had to pursue a policy which, at least among Indian shipping companies, has not found a supporter. There are more far-reaching aspects of chartering than

the consideration that a cheap freight can be had from an over-tonnaged tramp fleet or a distress charter vessel. Foreign exchange earnings for which an intensive drive is being made by the Central Government should be, one would have thought, a formidable corrective to an over-simplified calculation of a low freight charge. I still hope that the Charter Committee will be reconstituted on a broader and firmer basis and its policy better clarified.

PORT DELAYS :

A severe handicap particularly to Indian shipping is the condition of some of the Indian ports and the substantial delay in the turn-round of ships both at Indian and foreign ports. I have stated at successive annual meetings that ships earn only when they are voyaging on the high seas and that more time is spent in ports in a year than on the high seas. During the year under review, the drafts in the port of Calcutta showed further deterioration and in many cases ships were unable to lift even the decreased cargo that was offered owing to draft restrictions. I must however, in fairness to those in charge of the port, state that conditions have considerably improved during the current year and that, thanks to their sustained effort and the interest taken by the Transport Ministry, more permanent improvement is in the offing. While we are thankful for these improvements in the major Indian ports and for the greater awareness which the Government and the port authorities are showing in the modernisation of our ports, we must also express our regret at these beneficial results being nullified by the attitude of labour at some of these ports. Unauthorised strikes by Dock labour unions and lightning strikes such as the strike of Tug Operators are causing loss and damage to shippers and shipping companies, the extent of which is not properly understood or appreciated. The recent Tugmen's strike in Bombay paralysed the work of the port for many days with considerable financial loss to all concerned. But what is not apparent is the adverse effect it has on other ports when the strike is over, by the bunching of ships at these ports and consequential delays in obtaining berthing facilities. It is not in Indian ports alone but even more in foreign ports and particularly in the U.K. ports of London and Liverpool that this evil of undeclared and unauthorised strikes is manifesting itself all too frequently. Unless remedial measures are adopted, such chaotic conditions will lead to harmful results to all concerned.

THE FUTURE :

I have given a faithful picture of conditions that existed during the year. I confess however that there may be over-tones in the picture presented and that it may lead you to the belief that the future is one of unrelieved gloom. I do not hold to that belief myself. International shipping is notoriously subject to fluctuations, sometimes violent fluctuations. I consider that we have passed through such a period and that it will not be unreasonable to look forward to a less anxious future. Your Company in particular is firmly established and rests on a solid basis. The eagerness and enthusiasm which its officers of all ranks and the staff show is unabated. The interest that is taken by the authorities in the development of Indian shipping is gratifying and encouraging. The National Shipping Board, under its Chairman, Mr. G. L. Mehta, continues to take an increasing interest in the development of Indian shipping. The present Minister of Transport, Dr. Subbaroyan, and the Minister of Shipping, Mr. Raj Bahadur, are evincing keen interest in the problems of Indian shipping. Mr. Raj Bahadur has devoted himself to a study and understanding not merely of the major but even of the minor problems of Indian shipping. The Ministry of Transport, through its Secretariat, the Director-General of Shipping and the Senior Deputy Director and other officers, have been in constant touch with Indian shipping companies and have greatly helped them with advice and assistance. The establishment of the Shipping Co-ordination Committee holds out promise of fair treatment to Indian shipping. When the Chartering Section of this Committee is properly organized and broadbased, it should help the development of Indian tramp shipping, so badly needed by the country. Above all, the development of shipping in the public sector, insofar as it is within proper limits, is in my opinion a help and not a hinderance to the development of Indian shipping in the private sector. It will present to the authorities more directly and more vividly the difficulties and handicaps which it suffers from and thereby will increase still further the awareness of problems of Indian shipping by the authorities. I therefore take a fairly optimistic view of the future of Indian shipping and of your Company in particular.

TRIBUTE:

In spite of the financial results of the year, I feel it my duty to pay a tribute to the devoted services which the officers, both ashore and afloat, and the staff of the Company have rendered during the year. In the face of exceptional difficulties, they have spared no pains to achieve results such as they are. I must also convey the thanks of the Board to the shippers who have extended their continued and firm support to us and to the Brokers and Forwarding Agents who have shown confidence in us and in the standard and quality of our shipping service.

N.B. This is not a report of the proceedings at the above Annual General Meeting.

THE INDIAN IRON & STEEL COMPANY LIMITED

STATEMENT BY THE CHAIRMAN, SIR BIREN MOOKERJEE

I DEC 1960
PUBLIC

Dealing with the Year Ended 31st March, 1960

The Annual General Meeting of the Indian Iron and Steel Company Limited will be held at 12, Mission Row, Calcutta, at 3 p.m. on Thursday, the 15th December, 1960. The following statement by the Chairman, Sir Biren Mookerjee, has been issued to the shareholders along with the Directors' Report and audited accounts for the year ended 31st March, 1960.

The highlight of the year was the improvement recorded in the Company's output of steel, the production of steel ingots at 827,072 tons showing an increase of 218,867 tons over the previous year. This position is of course attributable to the enlargement of the steel making capacity of our plant under the expansion programmes and while we have still a long way to go to achieve our ultimate target of one million ingot tons, it is heartening to see the planning and labour of the last five years now beginning to bear fruit. On the reverse side of the picture there are however no grounds for complacency as regards the production of iron which was, and continues to be, seriously affected by the high ash content of our coke consequent upon the unsuitable quality of the coal that we are being forced to accept. I will refer to this matter in more detail later since the position with which not only ourselves but the iron and steel industry of the country as a whole is faced as a result of the inadequacy of supplies of good quality coking coal is of the utmost gravity.

ACCOUNTS :

I am compelled to comment again this year on the taxation provisions relating to the allowance of development rebate which require that as a prerequisite to the grant of such allowance an amount representing 75% of the rebate shall be charged against profits and set aside to reserve. With Company taxation now at the revised rate of 45% this means that over and above the saving in taxation arising from the allowance, which quite rightly should be set aside to reserve, a dead charge of 30% of the amount of the rebate is thrown against available profits compared with 23½% in the previous year. In our own case the excess of the compulsory reserve for the year under review over the actual taxation saving amounts to no less than Rs. 1,03,49,296 and I cannot on principle accept without protest a position whereby a charge of this magnitude should be thrown against the profits of a Company. In order that the Profit & Loss Account should show the true results of the working for the year the position has therefore been compensated by the write back to profits from the General Development Reserve of this excess amount of Rs. 1,03,49,296, the effective and logical result being, accordingly, a net accretion to the Development Reserves of the actual saving in taxation and a consequential net charge against profits of the amount of taxation that would have been payable but for the allowance of development rebate.

In the Profit & Loss Account this year will be found a new head of expense namely "Interest on Special advance from the Government of India" which I should perhaps explain. The special advance totalling Rs. 10,18,26,476 consists of two items of Rs. 10 crores and Rs. 18,26,476 covered by separate agreements with Government, the Rs. 10 crores having been granted as direct assistance towards finance of the cost of expansion and the Rs. 18,26,476 to meet the commitment charge on the first World Bank loan between the date from which such charge commenced to run and the later date, owing to circumstances beyond the control of the Company or the World Bank, from which the loan actually became effective for withdrawal purposes. In terms of the relative agreements it was provided that the advance should bear no interest prior to the 30th June, 1958 or such other later date as might be mutually agreed upon and that thereafter, the question of charging interest and the rate of such interest should be decided by Government on the advice of the Tariff Commission. It was further provided that any interest charged should be payable by the Company out of its earnings arising from a special element in the prices of iron and/or steel over and above the normal retention prices. The matter was accordingly in due course referred by Government to the Tariff Commission who recommended that interest should be charged at the rate of 5% per annum as from the 1st July 1958, but that recovery of such interest and the allowance of the special element should be postponed until after the 31st March 1960 when decision had been taken as to the retention prices to apply from that date. Acceptance of these recommendations was notified by Government on the 25th November 1959. The Company has protested against the unnecessary complications introduced by deferment of the interest compensating element and since in terms of the agreements with Government all interest chargeable must be compensated, the interest accrued from the 1st July 1958 to the 31st March 1960, as necessarily provided for in the Accounts under review, has been offset by the inclusion under the head "Sales" of the similar amount to arise from the enhancement of the sales retention prices.

DIVIDEND ON PREFERENCE SHARES :

I would take this opportunity to express my sympathy with the Preference shareholders in the position in which they have been placed in regard to their dividends by the amendments made to the Income-tax Act by the Finance Acts of 1959 and 1960, for when we have been able to compensate the Ordinary shareholders in full for the loss of the previous notional credit on their dividends in respect of income-tax payable by the Company, it should follow in equity that the Preference shareholders should also be compensated. Under the provisions of the 1959 Act we were able to increase the Preference dividend for the half-year ended 30th September 1959 to such gross

amount as after deduction of 30% thereof represented the amount previously payable without deduction of tax, but with the cancellation of these provisions by the 1960 Act we have had no option in law but to pay the dividends for the half-years ended 31st March 1960 and 30th September 1960 at the rate of 5% stipulated in the Company's Articles of Association.

The Preference shareholders were advised at the time of payment of the 31st March 1960 dividend that your Directors were considering the legal steps to be taken in an endeavour to effect a fair and reasonable adjustment of the position. In the meantime however a Bill entitled The Preference Shares (Regulation of Dividends) Bill has been introduced in the Lok Sabha and is awaiting the consideration of Parliament. If passed into law, the provisions of this Bill in their application to our own Preference dividend would mitigate the present most unsatisfactory position to the extent that the rate of Preference dividend would be compulsorily increased with retrospective effect. Since legislation is now pending your Directors accordingly feel that it would be inadvisable for them in the meantime themselves to take any unilateral action lest this should result only in making confusion worse confounded.

COMPETITIVE POWER OF INDIAN STEEL :

I am glad to inform you that over the last price fixation period of five years which ended on the 31st March 1960, we have been able to achieve in total a production of saleable steel exceeding by some 13% the target set us by the Tariff Commission in 1955 and that despite heavy increases in our Works costs the position remains that under a free economy no foreign steel could undersell us in our own country. Under the present policy of Government however the advantage we enjoy over foreign steel is appropriated by Government and a further heavy burden by way of surcharge is additionally loaded by Government on to the selling prices. In this connection not even our retention prices, that is to say the prices which we are allowed to retain as distinct from the much greater prices we are required to charge to the consumers for the further benefit of the revenues of the country, give a true indication of the position since these retention prices themselves include the incidence of the heavy excise duty levied by Government of Rs. 40|- per ton on ingot steel equivalent to about Rs. 50|- per ton of saleable steel. Even if allowance be made for this excise duty, our competitive power is in fact greater than the retention prices would indicate for we suffer from a number of disabilities peculiar to our country.

We are handicapped by the policy of the Government which prevents us not only from reducing the number of superfluous labour but compels us to retain in our employment workmen who are found by experience to be inefficient. We have to employ a large number of men to provide all the necessary health and municipal services which are supplied by the Government or the municipal corporations in other countries. We have also to provide housing accommodation requiring heavy capital expenditure and maintenance costs. We have also to provide at heavy capital and recurring expenditure, buildings for schools, hospitals and social services, to equip them adequately and to secure and pay for the necessary trained staff to run them.

I explained last year the dangers of the present extremely heavy loading of the price of steel to the consumer by way of surcharge and I would again urge the necessity that the statutory selling prices should be reduced. Steel either directly or through the medium of construction or operational costs enters into the final cost to the consumer of practically every commodity and artificial inflation of this cost is certainly no help towards the solving of the urgent problem of effecting a reduction in the cost of living. The surcharge levied by Government was intended primarily to rebate the cost of imported steel so that each category of steel, whether indigenous or imported, should be sold at the same price. With the increase in production of the plants in the Private Sector and with the three Government Steel Plants now coming into operation, imports of steel have already fallen considerably and will continue to fall. Maintenance of the surcharge at its present level can therefore no longer be justified.

It is necessary also that selling prices should be reviewed having regard to the necessity for building up an export market for the surplus production there will in my opinion undoubtedly be when the three Government plants come into full operation. In this connection it is reported that certain exports of semi-finished steel have already been made by the Government plants and it would be of considerable interest to know the real effective prices at which these exports have proved possible.

INCREASE IN WORKS COST :

Owing to variations in the different categories of end product an assessment of the trend of Works costs in relation to the production of saleable steel gives a somewhat unreal picture. It is preferable therefore to compare Works costs in relation to ingot production. This will include also the variations in the Works cost of pig iron. At the same time since the ingot enters into every finished product, its Works cost will be distributed in proportion to the quantity of ingot used in the production of each saleable product. If this basis is adopted we are able to obtain a more accurate picture.

Under normal conditions, that is to say when there are no external causes beyond the control of a manufacturing unit to affect its operations, it is to be expected that the Works cost per ingot ton should show inverse variation according to the volume of production. In our own case however, while the production of ingots increased between 1955-56 and 1959-60 by about 55%, the Works cost increased over the same period by nearly 40%. Some explanation of this illogical position is therefore required. The main cause is of course the enhancement by Government of the rate of excise duty on steel ingots from Rs. 4|- per ton to Rs. 40|- per ton with effect from the 16th May 1957. Other causes, some or all of which have operated in our Works at differet times either separately or simultaneously as you will have gathered from my previous statements are (a) continued upward revision of labour costs as a result of the pernicious system of automatic annual increments as opposed to an assigned pay for each particular job and of enforced increases in the rates of wages, allowances and incentive bonus; (b) increase in railway freight rates on raw materials and stores; (c) the sales taxes imposed by the State Governments or excise duties by the Central Government on such indigenous raw materials and stores as are used in the manufacturing processes and the customs duties on imported goods imposed by the Central Government; (d) the increases from time to time in the statutory prices of controlled commodities such as coal and other raw materials; (e) variation in the quality of stores and raw materials and in particular the severe deterioration in the quality of coking coal; and (f) complete, partial or go-slow strikes by labour.

COAL—AN INTRACTABLE PROBLEM :

There has been for a long time a deplorable shortage in the quantity of coal required by the iron and steel and many other coal consuming industries. A still greater difficulty in maintaining, far from increasing, the production of iron is created by the admitted and evergrowing deterioration in the ash content of available coking coal. Washing the coal before use has therefore become an indispensable necessity. There has however been virtually no decision yet taken by Government for the establishment of washeries at he main coal producing centres to meet the needs of the iron and steel industry in the Private Sector.

Our Works costs and our production alike are seriously affected by the continuous deterioration that has taken place in the quality of coking coal and by its chronic inadequate availability although paradoxically we are virtually sitting on top of coal. Such is the position that, apart from diversion of outside supplies, there has even been an occasion when coal in transit to Burnpur from the Company's own collieries has been diverted elsewhere. These factors will definitely preclude us from achieving the production envisaged under our expansion programmes until improvement in the quality as well as the quantity of coking coal is effected. To illustrate the conditions under which we are now forced to operate our Blast Furnaces I have had a chart appended at the end of this statement showing the variation in the ash content of our coke due to the inferior quality of the coal we are being allotted. This chart shows not only the current increase in the ash content over the previous normal but also the present extremely wide day-to-day variation in ash content. Paucity of stocks has made it impossible for us to blend the coal in an attempt to achieve in some measure a consistent even if far too high ash content in our coke and the problem of endeavouring to produce a standard grade of iron under these most unsatisfactory and constantly varying conditions is one that can be better imagined than described.

Recently as a result of concentration of railway transport on the priority movement of coal against the demands of the steel industry there has been some increase in the volume of coal supplies, although I very much fear that this may be only a temporary phase. So far as we ourselves are concerned this increase in transport has however merely served to emphasise the shortage of good quality metallurgical coal that exists in the country, for all that has happened is that collieries have taken advantage of the position to get rid of accumulations of inferior quality coking coal totally unsuitable for the steel industry. In our own case, an ash content of the ridiculously high figure of 32% has been recorded in much of these additional supplies. While therefore on paper our stocks of so-called coking coal have shown some improvement in tonnage, the added supplies have resulted only in a still further increase in the ash and sulphur content of our coke and an accentuation of operational difficulties to a point of the utmost gravity in relation to the maintenance of production.

The last fixation of our steel retention prices expired at the 31st March 1960 and the question of the revised prices to apply from that date is now under consideration by Government. So long as the metallurgical coal position remains unchanged there is, as I have said, no possibility of achieving the production envisaged under our expansion programmes and any fixation of prices by reference to a theoretical plant capacity based on normal working conditions would, accordingly, be entirely erroneous. I have full confidence, however, that the abnormal conditions under which, through force of circumstance, we are now being compelled to operate our plant will be recognised by Government so that the new retention prices may be fixed on the basis of working conditions as they actually obtain and not by reference to a theoretical capacity or standard of working that, until the raw materials problem is resolved, is quite incapable of attainment.

I am afraid that until the further coal washeries scheduled by Government have been installed, which will probably take a minimum of three years, the position as regards metallurgical coal will remain critical for there will in fact be an increasing demand against the already inadequate available supplies as the Government steel plants attain their full production potential. In the case of the jute industry where installed capacity greatly exceeds production, the industry has had to adjust itself to the position by the sealing of looms. It would be a tragedy if the steel industry, to adjust itself to the inadequacy of the supply of suitable coking coal, were to find itself faced with the alternative either of having to seal off Blast Furnaces or to operate its plants uneconomically and hazardously below the efficient level of their productive capacity.

Blueprints and fixation of targets of coal production are no substitute for effective and instant action for alleviation of the position with the minimum of delay. The target fixed for the Second Five Year Plan of sixty million tons per annum will definitely not be achieved and the still higher target for the Third Year Plan of ninety seven million tons annual production has meagre chances of success unless a large number of new collieries are opened up in the Private Sector and the existing ones substantially expanded wherever possible even at a higher cost. This will necessitate the purchase and installation of foreign mining and handling machinery for which the tentative allocation in the Third Five Year Plan of about Rs. 138 crores may prove to be inadequate. It has been reported in the Press that in a statement made in the Lok Sabha it was admitted that there would be a shortfall of some six million tons from the target fixed for the Second Five-Year Plan but the matter was dismissed with the remarks that the shortage would be made good in 1961 and that this would therefore involve a delay of only a few months. In face of the position with which the country is confronted it has been somewhat disconcerting to note the apparent complacency with which this critical question of coal supplies has until recently been regarded by Government. I am glad to say, however, that the seriousness of the position appears at last to be realised with the appointment by Government of a high-powered Committee to examine means for the amelioration of the position of the Iron and Steel Industry in regard to the shortage of raw materials in general and coking coal in particular.

The coal producing and coal consuming interests alike will be further prejudiced by the Government's industrial policy resolution of 1956. Future main development of the coal industry is undertaken by the Government under this resolution to the exclusion of the private sector which has been practically solely responsible for starting, expanding and equipping the industry at great financial risk during the last hundred years or so. A further deterrent to the expansion of the existing private industry has been created by the enactment of the Coal Bearing Areas (Acquisition and

Development) Act of 1957. What is however of great national importance is that the Government do not seem to have adequately realised that no new collieries can be opened and brought into full operation within less than five years under the most favourable conditions and that during this period all industries, including the iron and steel industry in particular, are likely to face disaster both in the public and private sectors. I would urge, therefore, that to retrieve so far as possible the desperate position with which the country is faced, Government should relax all ideological restrictions and permit and encourage the private sector of the coal industry to participate to the fullest extent in the great effort that is called for to meet the crisis. Apart from its vital necessity, such action would also involve the mundane consideration that to the extent to which this participation is allowed the cost to Government funds of the development of the industry would be reduced.

THE STRIKE OF GOVERNMENT EMPLOYEES:

It is impossible to estimate the total loss to the country by reason of a strike, particularly if it takes the form of such a General Strike as the recent one of Government employees, for it hits the national economy at too many points visible and invisible to permit of any measurement of the damage caused. I can therefore give you only the position as it affected our Company.

An integrated iron and steel Works is a complex organisation in which all departments rely on each other, the primary and subsidiary products of one entering into the operations of the others, the whole being designed as a fully balanced plant. The primary basic producing units, that is to say the Coke Oven Batteries and Blast Furnaces, are continuous operational plants and any disruption of their working causes innumerable problems. Blast Furnaces have to be damped down involving risk of their loss through sudden or too rapid cooling while on the other hand Coke Ovens must be maintained at high temperature in order to prevent their collapse even if little or no metallurgical coke is produced in the process. The ensuing loss of Blast Furnace and Coke Ovens gas for heating and power purposes affects all other departments.

As a consequence of the strike, all inward supplies of raw materials ceased from the morning of the 12th July, 1960. Ground stocks having been reduced to below emergency level owing to the previous inadequacy of transport and supplies, the Coke Ovens throughput was reduced to 1,800 tons of coal a day from the 15th July, 1960 against the normal throughput of approximately 6,000 tons. No. 1 Blast Furnace was damped down from the 13th July, 1960 and No. 4 Blast Furnace from the 15th July, 1960. No. 2 Blast Furnace which had been re-lined but which, owing to the previous shortage of coal supplies, had already been waiting one month to be brought back, had to continue to remain out of production. The Steel Melting Shop activities were reduced from seven to two furnace operation. Loss of production, an irretrievable loss to the country as well as to ourselves, amounted to some 22,000 tons of iron and 20,000 tons of ingot steel. Despatches of finished steel remained totally suspended from the 9th to the 19th July, 1960 owing to non-allotment of wagons. The strike was called off from the 17th July, 1960 and from the 18th July, 1960 the Blast Furances, Coke Ovens and Steel Melting Furnaces were gradually brought back into production and by the 26th July, 1960 all plant and equipment was again fully operational. Such in our case was the result of the strike. I am glad to inform you however in testimony to the skill with which the position was handled by the Works senior executive staff that it has been confirmed by our Consulting Engineers that little, if any, damage has been caused to the plant as a result of the enforced shut down.

STRIKE LEGISLATION:

The strike of Government employees has given an illuminating indication of the difference between the policy of Government in respect to the handling of a strike and its treatment of its own employees and its policy in relation to strikes in the private sector. The dismissal of many of its employees, the disciplinary action of various kinds against others and even imprisonment under the Preventive Detention Act were perhaps very necessary, and it is not my purpose to call Government's action in question for all strikes are anti-social in their effect and cannot be taken as a matter of course whatever justification there might be from the employees' point of view. The point I wish to make however is that no employer in the private sector is allowed in self defence to adopt any of these or similar courses but is obliged to stand the consequences of a strike with all that these entail.

To illustrate the effect a strike even of brief duration can have, I will relate the sad experience we ourselves had in September last year when an illegal one-day strike was brought about by the INTUC Labour Union over the question of profit sharing bonus. Although in our working for 1958-59 we had fallen short of the estimate computed by the Tariff Commission it was decided by the management as a gesture of goodwill to pay the same profit sharing bonus of 65 days wages as for the previous year. Considerable agitation was worked up by the Union leaders that the amount of bonus should be increased and on the management standing fast on their generous decision workers were prevented by the Union from taking payment of their bonus, although in fact some of the men had already willingly accepted payment, and the illegal one-day lightning strike brought about commencing from midnight. Revenue loss to the Company at retention prices as a result of the direct loss of production for the day amounted to approximately Rs. 15 lakhs, while the cost to the country of making good this loss of production from foreign sources is computed at some Rs. 20 lakhs.

This however is not the full story for unfortunately severe damage was caused to No. 1 Blast Furnace by the irresponsible action of the strikers in refusing to co-operate with the management to damp down this Furnace in an orderly manner. The Furnace was scheduled to be blown out on the 25th September for a partial re-lining from the mantle upwards which work would have taken approximately 30 days to complete. Before a Furnace is taken out for re-lining it is essential that some blast be kept on so that the charge may remain fluid for draining off. Owing to the action of the strikers the charge went cold and about 100 tons of metal and slag solidified inside the Furnace necessitating long labour for its removal by blasting with high explosive followed by a complete instead of partial re-lining. As a result work on the Furnace lasted 110 days instead of the contemplated 30 days with a consequential loss of production of some 39,000 tons of pig iron and an additional re-lining cost of some Rs. 13 lakhs. To complete the sad story it has to be added that this Furnace was producing against an export order from Japan, the contract for which had to be cancelled in view of inability to supply with resultant direct loss to the country of foreign exchange to the extent of some £700,000 or Rs. 93 lakhs. In total the loss caused accordingly amounted to some Rs. 121 lakhs; such is the damage that can be done to a Company and to the country by an ill-considered and irresponsibly led strike even of one day's duration.

I have in previous years emphasised the necessity that Government should require and instil the utmost sense of responsibility in Trades Union leadership and it is accordingly the more disturbing to me that occurences such as the above can continue to take place in an industry so vital to the progress of the country. The position becomes all the more difficult for me when I am asked by shareholders to comment on the fact that the leader of the INTUC Union in question is also a Government nominated Director of Hindusthan Steel Limited. I can of course say nothing on this matter for the propriety of such a duality of roles is naturally a subject solely for Governmental policy decision.

Government have recently decided in the case of all essential Government services inter alia (a) completely to ban strikes (b) to permit no outsider to be the leader of any union, though Unions affiliated to the Government sponsored Indian National Trade Union Congress are led by complete outsiders and (c) to provide machinery for compulsory arbitration. It is difficult for any impartial observer to understand why similar legislative provision should not be made to protect some of the most essential industries such as the iron and steel industry and the engineering industries on which practically the whole structure of our national planning is to be built through the establishment of heavy industries of which these are the linchpins.

Far however from the extension of these provisions to the private sector, as I have pointed out on previous occasions, all kinds of disabilities are imposed upon it in regard to disciplinary action, reduction of redundant labour and payment of heavy compensation to labour when a unit in whole or in part is closed down temporarily or permanently. Though in the more efficient industrial units in the private sector, generally speaking, as in our own works, the workers enjoy more favourable conditions of service, wages, housing and other amenities than those employed by the Government in comparable non-technical departments, we as employers are brought under constant Government criticism as if we were indifferent to the welfare of our labour. Consequently, on almost every occasion when any serious conflict takes place between us and our employees, and the dispute is referred to a Tribunal or for conciliation proceedings, often after a delay which may have already caused us heavy loss, the awards of the Tribunals or the directions or orders of the Government have been generally in favour of labour, increasing their wages, their amenities and other perquisites. The natural consequence of this continuous increase in wages is to accentuate the inflationary effect created by the Government on prices of all essential commodities and particularly of food and other consumer goods. If for instance, steps were taken by the Government to reduce the cost of living by the provision of more food and consumer goods, a tremendous improvement at much smaller cost than is involved in the establishment of heavy industries could be made in the standard of living of the country at large, which would help also to reduce the excessive burden of taxation and the heavy costs of industrial production.

I maintain that the first duty of our Government as that of any other country is to adopt prompt and adequate measures to promote the reduction of prices of essential commodities by increasing their production particularly in the private sector. Apart from the incalculable monetary loss, strikes of any kind and high cost of living will slow down the pace of our industrial development and make the cost of implementation of future plans so high as to be beyond our domestic or foreign aid resources. It must be remembered that the common man and woman are the real sinews of national economic and industrial development, and not high taxation, heavy domestic borrowings, foreign aid, deficit finance or unreliable index figures and ad hoc statistics. Without securing the complete and wholehearted co-operation of the common man by supplying at reasonable prices his daily needs, particularly of food, clothing, shelter and health services, the optimistic Five Year Plan for the future may remain substantially on paper.

162514

LABOUR LEGISLATION:

To the already full roll of labour legislation there has recently been added The Employment Exchange (Compulsory Notification of Vacancies) Act, 1959 and rules have been framed under this Act requiring every establishment whether in the public or private sector to report to the Local Exchange vacancies, with some few exceptions, occurring in such establishments from time to time. So far as I am aware, there is no democratic country in the world where the employers have to notify vacancies to the Labour Exchanges, though those in search of employment may have to register their names in the local Exchanges. If the employer is desirous of recruiting any operatives he may apply to the appropriate Labour Exchange and if he is satisfied, select such of them as appear to him to be suitable for the particular jobs. It is true that the Rules as promulgated by the Government definitely state that no compulsion will be used by Exchanges to employ any particular person but rules may always be changed and I must confess to some misgiving that these Exchanges should be under the control of the individual State Governments and administered by local officials who cannot fail to be subjected to pressure in varying forms.

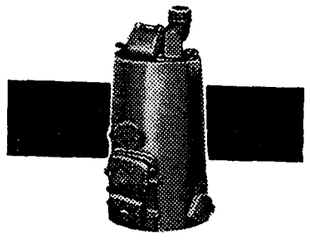
I very much fear that the present requirement for the notification of vacancies may be only the first step towards the prohibition of the filling of vacancies except through the medium of the local Labour Exchanges. I sincerely hope that my fears may be groundless for the consequences that might follow are disturbing to consider, including as they would the dangers of nepotism, favouritism and corruption and above all of fostering the evil of provincialism of which there is already alarming manifestation in the country and which, if not checked, threatens in my opinion ultimately to disrupt the Union.

PROVINCIALISM—A NATIONAL EVIL:

There has been for some time an agitation sponsored by some Trade Unions and several of the State Governments to insist on the restriction of jobs to those popularly described as "sons of the soil". If this principle is carried to its logical conclusion it will amount virtually to the negation of the right of the citizen as a member of the Union to seek employment in any part of the Union territory, a right which has been virtually guaranteed to him by the Constitution. Also, it is bound to result in retaliation by some States who may be affected by the principle rigidly applied against them by any other States. The mobility of industrial labour which is of benefit both to the workers and their employers, will be seriously impaired and cause no small embarrassment to the management of industrial establishments all over the country.

It is regrettable that in order to confine the available jobs only to the "sons of the soil", some States are making the local language the official language.

21,N49EE



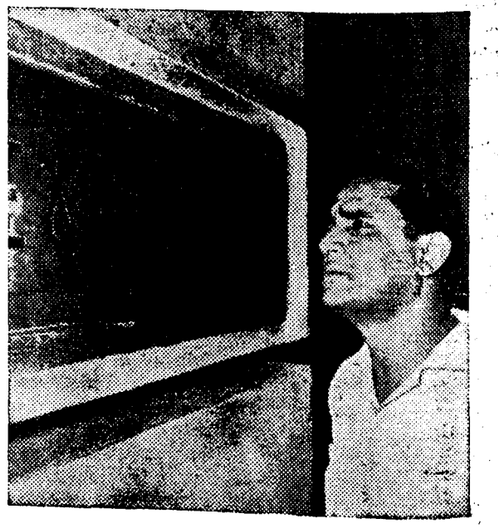
Recent unhappy, tragic and most deplorable occurrences in Assam prove the danger of adopting such a course for achieving an object outside the purpose for which the States have been given the right to localize the State language.

So far as our Company is concerned we employ as many "sons of the soil" as we find suitable for the jobs to be filled but for the rest impose no restrictions of any kind. This to my mind is the only reasonable course. This is no platform for discussing the merits of the language controversy, either at the Centre or in the States, and all I wish to emphasise as a business man is the adverse effect that any other course will have on the economic development of the country.

ACKNOWLEDGMENTS :

In conclusion I should like to express on behalf of the Directors our appreciation of the services rendered by the General Manager, Mr. J. McCracken, and his executive staff throughout the year. An expansion on the scale undertaken by our Company throws a very great burden and responsibility on all staff additional to the normal cares, troubles and anxieties of management on which there has now been superimposed the constant problem of the operational difficulties caused by the short supply and severe deterioration in quality of raw materials. Our thanks are also due to our Consulting Engineers, The International Construction Company Limited, who have so ably planned and supervised the execution of the expansion. To all it must be a source of the greatest satisfaction to see as a monument to their efforts the fine expanded plant as it stands today in the final stages of its completion. It gives me pleasure to place on record this expression of our thanks.

The above Statement is not a report of the proceedings of the Annual General Meeting.



We manufacture

- C. I. Domestic Hotwater Boilers
- C. I. Sewer Flushing Syphons
- C. I. Revolving Distributors for Sewage Disposal
- C. I. Turnstiles

DECEMBER 2, 1960

The Deepening Foreign Exchange Crisis

THE announcement last week that there will be an additional and severe cut on imports for the current half-year has come as a rude shock to those who, reading the last import policy declaration and the deceptive Red Book optimistically, deduced that things were to remain very much as they were. This was not the feeling of *The Eastern Economist;* but even its prediction that a cut of Rs. 25 crores was involved in the new import policy, has turned out to be too low. The current estimates are to the effect that for the half-year ending March 31, 1961, the cut may be as much as Rs. 30 crores on private account. A cut of this order on about a normal import figure for the half-year of Rs. 150 crores on private account, coming on top of severe rationing for two years, and the rise in production, means, bluntly, that even 'maintenance' of the economy has become impossible. A steep decline in production in certain fields depending on imports is thus written into the current declaration. There is worse to come on 'development.'

There is no doubt that the deepening foreign exchange crisis has greatly shaken confidence in the Indian industrial expansion. The fact that the Planning Commission proceeds to raise the total volume of investment in the Third Plan and State Governments cheerfully undertake to raise additional resources to finance it does nothing to remove the gathering gloom in regard to the foreign exchange component. The question is being asked as to whether or not the Ministry of Finance and the Planning Commission live now in entirely different worlds. There seems to be no element of realism in the manner in which the Finance Ministry propounds the doctrine of extreme economy in expenditure and the Planning Commission promptly devises ever-rising targets for the Third Plan. There is no comfort to be found from the repeated suggestions that this is a short-period phenomenon for it is written more into the Third Plan than in the few remaining months of the Second. The Third Plan on paper is not related to anything which has been underwritten since the Finance Minister gave this figure in the Lok Sabha last week as Rs. 750 crores only against requirements of Rs. 2,600 crores over the whole period. The net result is that Indian 'maintenance' is at a standstill and Indian development, so far as foreign exchange is concerned, is limited to Rs. 750 crores, specifically underwritten for this purpose. As far as can be seen at the moment, development in the first year of the Third Plan will be running at a level significantly below the average of the last two of the Second Plan.

This is all dismal enough, but takes no account of the impediments that are likely to arise if additional foreign exchange is earmarked for development at the expense of current maintenance. This has raised the old question of maintenance versus development imports. It is time that the Government of India made up its mind that, for a period at least of one year, development should be kept in cold storage except in respect of areas for which foreign exchange has been underwritten, while maintenance receives all the foreign exchange which the country can earn. The Minister for Industry, Mr. Manubhai Shah, has been particularly responsible for an absurd allocation of new licences far in excess of the country's foreign exchange capacity. The insistence on a small car, on watches, and so on is merely a mark of this great unwisdom. Vast idle capacity is being created in the country at a time when, in order to cushion inflation, every element of capacity should have been fully utilized. A serious divergence between policy in the Ministry of Finance and the Ministry of Commerce and Industry has resulted in a crisis of non-utilization for which both Ministries must be deemed responsible. In the continuing crisis which the Finance Minister did nothing to dissolve in his speech last week, it is clear that what is now required is a fierce allocation of priorities in such a manner that no doubt is left as to which projects are to receive foreign exchange. In this allocation public sector projects must come under the same rigid discipline as those of the private sector. The axe must be used ruthlessly to secure at long last some order in this chaos.

Unless the Prime Minister recognizes forthwith that it is necessary in the public interest that many pet schemes (including atomic energy and some other pet long-range projects) will have to wait until better times, the deepening crisis can only lead to a great shaking of confidence in Indian planning, and, as a consequence, in the economy as a whole. A serious crisis has to be averted by a hard decision now to be taken on what can be done for the next twelve months. It is time that the confusion of tongues in the various Ministries of the Government of India was dissolved by a single Draconian decision in which the agonies of maintenance and development are finally resolved at least "for the duration."

Wanted: An Index for State Plans' Allocations

THE discussions between the Planning Commission and the States in regard to the financial allocations of the Third Plan have now concluded and complete details of the anticipated share of each State in the Third Plan and the volume of Centre's assistance are now available. The total size of the State Plans for the Third Plan period is now estimated at Rs. 3,769 crores, while Central assistance to the States is computed at Rs. 2,380 crores. In the Second Five-Year Plan, the estimated outlay for the State Plans came to Rs. 2,044 crores out of which Rs. 1,050 crores were provided by the Centre. Thus, the total outlay of the State Plans for the Third Plan period is likely to be a little less than double of the anticipated outlay for the Second Plan. Central assistance also has increased but to a greater degree than the increment in outlay of the State Plans; whereas the financial allocation has risen by 84 per cent, Central assistance has increased by 127 per cent. How so much Central assistance is to be provided is another matter.

What were the factors which governed the allocations for the State Plans? Did the Planning Commission take into consideration the size of each State—area as well as population—while fixing the allocations? Was the degree of backwardness of each State also deemed a necessary factor affecting the size of the State Plan? From the figures available, it appears that the allocations made by the Planning Commission for the State Plans have been arrived at by a process of hit and miss. No scientific technique seems to have been evolved for determining the size of the State Plans for individual States, or, if one exists, its description has been conspicuous by its absence.

Subjecting the allocations made by the Planning Commission to close scrutiny, grave anomalies are revealed. On per capita basis, for example, Uttar Pradesh received the smallest allocation both in the Second Plan and the Third Plan. Per capita allocation for Uttar Pradesh for the Third Plan works out at Rs. 63 as against the allocation of Rs. 141 for Kashmir. Thus, on a per head basis, the allocation made for Kashmir is more than double the allocation made for Uttar Pradesh; this is too blatantly political. Again, in the Second Plan, the allocation for Uttar Pradesh, on per head basis, was Rs. 35 only while for Punjab the Second Plan allocation was as high as Rs. 84 per head. Similar divergence is revealed in these allocations when measured on the basis of per square mile. Lowest in this regard stands the State of Kashmir with Rs. 9,000 followed by the State of Assam with about Rs. 14,000. Perhaps it is right that the State of Kerala should be the highest with more than Rs. 1,13,000 for every square mile.

It must be conceded that no scheme of allocations will be deemed to be in the interest of the whole country if the broad attempt of maximising the national income is not taken into consideration. But where is the line to be drawn between the whole and the parts? Surely some attempt should be found in the planning documents for the Third Plan to show that a happy mean has been struck.

Apart from such factors as area, population, backwardness etc., of individual States, there is an important factor which has to be considered while earmarking financial allocations in the Third Plan. This refers to the basic facilities in each State needed for economic progress, technically described as infrastructure consisting of communications, roads, electric power generation, railways, irrigation, development, harbours, etc. For the development of the individual States, none of these factors can be ignored.

Thus, it is patent that any single factor employed for this purpose is likely to yield unsatisfactory results. There is an urgent need for an overall index which takes into account the various factors involved. It is desirable, therefore, that a new index based upon area, population, degree of backwardness, availability of resources etc. should be evolved for allocating Plan resources in a scientific manner. This is as much a challenge to private research agencies as to the Planning Commission.

The Ministerial Tangle in U. P.

DR SAMPURNANAND'S ultimate decision to resign office, under some pressure, as Chief Minister of Uttar Pradesh and to retire from public life has put an end at long last to the rot in the ministerial crisis in this premier State. There can hardly be any doubt that he committed a serious political error in treating the defeat of his nominee and the election of Mr C. B. Gupta as President of the State Pradesh Congress Committee as a vote of no-confidence in him. Constitutionally as well as politically this was an unwise mistake. But having opted for it, the forthright course for Dr. Sampurnanand was to give up office and save the Ministry from one of the worst phases of demoralization. It is true that he continued to stay in office under the pressure of the majority in the State Congress Legislature Party. But, meanwhile, with Mr. C. B. Gupta's formidable control of the organizational wing of the party, the danger was that the rupture between the legislative and organisational wings would go on deepening.

It was this apprehension which appears to have initially persuaded Mr. Nehru to intervene and use his personal influence in straightening out the ministerial tangle. Mr. Nehru was perhaps driven to this course because of the failure of Pandit Pant's efforts to avert a showdown at the election of the State Congress presidentship. His repeated counsel to Dr. Sampurnanand was — and this he made emphatically clear at the Raipur session of the A.-I.C.C.— that further continuance of Dr. Sampurnanand in office would, apart from prolonging the rot, seriously impair the authority of the Cabinet and demoralize the administration of the State. It can hardly be denied that these undesirable but avoidable consequences have already taken place.

Up to this point, the disentanglement of the ministerial tangle in U.P. went on fairly smoothly. But the ministerialist group was in no mood to accept without a vehement protest Mr Nehru's choice of Mr. C. B. Gupta as the Chief Minister of the State in succession to Dr. Sampurnanand. The unanimous election of the leader was clearly ruled out, when the ministerialists set up Mr. Girdhari Lal as their candidate in the contest against Mr. C. B. Gupta. A showdown on November 29, the date first fixed for the election of the leader of the State Congress Legislature Party, seemed imminent. The ministerialist group was evidently exasperated by the intervention with the Legislature Party's independent choice of its leader and, as if to assert this fact with a vengeance, it imported another delicate and embarrassing element in the controversy by nominating Mr. Girdhari Lal in place of Mr. Hukum Singh. If Mr. Girdhari Lal is the seniormost member in the Cabinet, with the exception of the out-going Chief Minister, it may be more important to remember that he is a Harijan.

The issue in the original dispute now shifted to an entirely different ground. To begin with, it was a trial of strength between the organisational wing and the legislative wing of the party. But now it virtually boiled down to the unfortunate contest whether the choice that was to prevail should be that of the State Congress Legislature Party or that of Mr. Nehru. Already the ministerialist group had mustered the minimum majority required for the election of the leader—190 out of a total membership of 379, with Dr. Sampurnanand obviously expected to remain neutral. There were also indications that it could get a further and appreciable addition of votes in support of its nominee. Pandit Pant's eleventh-hour dash for Lucknow and the postponement of the election of Dr. Sampurnanand's successor to December 1 were regrettable but inevitable emergency developments. The constitutional issue about the impropriety of intermeddling with the choice of the legislative wing of the party to elect its own leader completely receded in the background.

To describe yesterday's election of Mr. C. B. Gupta as "unanimous" would be a serious travesty of the truth. His election was made an issue of Mr. Nehru's personal prestige and all the resources at the disposal of the Congress High Command were mobilised to crush opposition. A section of the State Congress Legislature Party abstained from the meeting in protest against denial of the right of free election of leader. As many as 19 out of 26 members of Dr. Sampurnanand's cabinet have declared their decision not to participate in the new government, if invited. Mr. C. B. Gupta has stated that he has not accepted the leadership to keep the party disunited. But he will emerge a sadder man. The High Command may have contrived to save the Prime Minister's personal prestige, but this will be a poor recompense for a bitter experience that high-handed intervention cannot ensure harmony and co-operation.

The U. N. Development Fund

MR. B. K. NEHRU, our Commissioner-General in America, apparently went wide of the mark when last week-end he spoke in the U.N. Assembly on a 44-nation draft resolution urging for the establishment of a United Nations Capital Development Fund. With the United States faced with a serious balance of payments crisis and the other leading aid-providing countries of the West hesitant to enter into any additional commitments at least for the time being, an agreement on world disarmament still remaining a far cry, and the Soviet Union unwilling to join any international lending institution, it was indeed premature to press for the setting up of such a fund. More so when only recently there has come into existence the International Development Association, an adjunct of the World Bank, designed to provide "soft" credits, repayable in local currencies over relatively long periods, for developmental programmes for which loans from the World Bank may not be available.

There is, no doubt, considerable force in Mr. Nehru's plea for increased economic aid to underdeveloped countries—their number as independent nations has greatly increased in the past few months — and routing of this aid through the U.N. which has certain obvious advantages. But the arguments he put forth, as India's representative, in commending the draft resolution are astounding, to say the least. Criticising the International Development Association, in the setting up of which he himself played an enthusiastic part only last year, he said this Association "did not have universality of membership and had weighted voting, so that it necessarily reflected the ideology, philosophy and even the theology of the group in control". Scarcely a more uncharitable remark could have been passed on the constitution of this august body. It is certainly not the fault of the West if the Communist countries under the leadership of Russia, did not participate in this Association, which would have given to it a universality of membership.

Mr. Nehru's second observation on the IDA that it could not and would not provide for the establishment of a steel plant "in the public sector" and thus it was necessary to set up a U.N. Capital Development Fund, is equally preposterous. He has surely pre-judged the issue, because the IDA has been in existence for only a very short period and it is too early to pass any verdict on its working—much less on any conceivable stray instance. More intriguing, however, is Mr. Nehru's argument, couched practically in the same terminology as so often used by the Soviet Union, for increase in the quantum of aid from the colonial powers of the West. These powers, he is reported to have argued, owe some kind of conscience money to the under-developed countries whom they exploited in the hey-day of their colonial rule.

The vital question that must be answered is whether Mr. B. K. Nehru overstepped his brief. The Union Finance Minister will do well to clarify the position. India has written into its Third Five-Year Plan a heavy draft of external assistance. And a major part of this assistance has obviously to come from the West, particularly from the Aid-India Club. Mr. Nehru's impetuous utterances in the U.N. Assembly will hardly contribute to a better understanding of this country's point of view. India has been fortunate in getting appreciable foreign aid from both the West and the Communist countries and that too without strings. It would be presumptuous on our part to doubt the bonafides of such international lending institutions as the IDA, whatever their initial shortcomings.

A DELHI DIARY

A RED HERRING?

BEFORE I dwell on more agreeable things, let me proceed on a course of deep introspection to determine whether or not I can find an answer from within to the thousand-rupee question which the President, Dr. Rajendra Prasad, presented to the Law Institute at its inauguration last Monday. Coming as the proverbial bolt from the blue (since there was no inkling in Delhi that there was any unrest in the President's mind in regard to the curtailment of his powers or authority), the President proclaimed the need for some deep research to be undertaken on the privileges of his office. It now transpires — and we journalists must be extremely foolish not to have given some consideration to it earlier — that the President was asking a very real question. My legal advisers — should I have said luminaries? — now tell me that there is no provision in the Constitution which makes it clear that the President acts only on the advice of his Cabinet though Article 74 states that the President should so act in specific matters. This section does not seem to be of an intrinsic or central character running like a golden thread through all sections of the Constitution. The pundits now say that there is much to be said for the view that the Indian Constitution has not described the President's role as subordinate to the Council of Ministers on issues on which they have taken a stand. Ergo—post hoc, sed non propter hoc?—the President is free to act in many respects, contrary to the advice of his Ministers.

Those of us who have been in Delhi since the Constitution came into force know of instances where the Prime Minister and the President have differed. In small respects, notably as to where he should be on Independence Day, the President has stuck to his guns and has repeatedly visited the South when it was the advice of the Government that he should be present in Delhi. There are smaller matters on which he has raised issues of disagreement, but he has, in fact, not pressed them; one such was co-operative farming. But if he should now really feel that the Constitution permits him to act without the advice of his Ministers, is there not likely to be a long period of testing until the appropriate conventions are accepted? In any case, the theory evolved by the Prime Minister that the President is a 'Constitutional' Head of State is now fairly and squarely in the melting pot. For my part, having done some substantial research on the basis of the President's chance remark — was it not so casual as it looked? — I have come to the conclusion that the President of the Indian Union is likely, in the near future and for some time thereafter, to raise a convention of a somewhat different character than that which has hitherto existed. With the strong support Dr. Rajendra Prasad has in the House, this is a factor, they tell me, which will necessarily circumscribe the excessive powers exercised by the Council of Ministers. I await developments with not a little (constitutional) excitement.

HOWLERS — BOTH

Before I come to the events surrounding the visit of the Crown Prince and the Princess of Japan, may I further exhibit my ignorance by saying that I have been convicted this week of having the most disrespectful views of two geographical entities which have suddenly become alive? The first of these was Mauretania, the new State which has become free this week. I always thought that Mauretania (and Ruretania!) was a fictional Balkan state referred to as a kind of joke — only unreal, while Monaco, an "individual" principality, was real. I now see that Mauretania is a very substantial kingdom, Mea culpa, mea culpa, mea maxima culpa! The next howler of which I have been guilty is on Timbuktu. On the borders of Mauretania there lies a real Timbuktu which I thought was nothing else but a legendary name to whom one could consign those whom one preferred to remove from this pleasant earth without sending them to a place as unpleasant as Hades. My apologies to Timbuktu are deep and full of humility!

KANGEI

Until the Crown Prince Akihito and Princess Michiko of Japan came here this week, none of us knew what 'Kangei' meant. We have been educated so much in two days that, at the Civic Reception on Wednesday, shouts of 'Kangei' — the Japanese word for welcome — rent the air. The Crown Prince and Princess have charmed everybody. The Prime Minister paid a special tribute to Princess Michiko, when he said at the Red Fort reception: "Whoever sees her feels a sense of happiness. She has embodied in herself all the grace and artistry of Japan." Those of us who have read about her romance — the story goes, she had the temerity to beat the Crown Prince roundly at their game of tennis, an act of extreme boldness in Japan where one never measures oneself against the Royal House, still less against the coming Emperor — have specially watched her in the last three days. Practically all that Michiko has done, seems to be just right, and perhaps, for the first time in the history of Japan, a woman will play a high part in the counsels of the nation.

It was appropriate that the Crown Prince should have been brought into the laying of the foundation stone of the India International Centre near Lodi Gardens, because Japan's International House at Tokyo was the model on which our own is now being built. Mr. C. D. Deshmukh, President of the Board of Trustees, made a very happy speech in which he referred to the adjustments that Japan had made, firstly, with the outside world after a long period of isolation, and secondly, with the serious misfortunes which have more recently come upon it. He spoke appropriately of the Crown Prince and the problems of adjustment of which he has shown himself to be a master. His distinguished father, the Emperor Hirohito, had an even greater problem of adjustment, having to surrender divine attributes almost overnight to accept a subordinate position to an army of occupation and subsequently, a wholly human position as a nearly constitutional Head of State. The young Prince has to effect an adjustment of a somewhat different kind. He is to be a much travelled ambassador of his country apart from maintaining the veneration which traditionally belongs to the Emperor. One of the greatest tributes that I have heard paid to the Crown Prince in the last few days may be very simply expressed in the statement that he has proved equal to the occasion. With one of the most difficult tasks of adjustment in the world, he has shown a natural ease with which he is taking the changed role of a Crown Prince of Japan completely in his stride. He could not have made a better choice in seeking a partner than in Princess Michiko. For at a time when the Emperor was discarding privilege, there could be no better indication of his coming to terms with his people than the decision to seek an alliance outside the Royal family tree. I sometimes wonder whether our own feudal aristocrats have fully appreciated the wisdom of marrying outside their circles. I will not attempt to describe which circle will be improved by the process; my views are, perhaps, too modern!

ARGUS.

THE WEEK'S NOTES

Press

M. S. M. SHARMA

THE DEMISE this week, while travelling back to Patna, his second home, of M. S. M. Sharma, removes from Indian journalism one of its most colourful figures. M. S. M. Sharma—no one thought of referring to him without all his initials—was a figure of controversy long before he became Editor of the 'Searchlight' at Patna. In Karachi as Editor of 'The Daily Gazette' and elsewhere he was known for his determined opposition to Pakistan and as a book, published long after Partition, showed the embers of that controversy had not died down inside his mind. As Editor of the 'Searchlight' he will be remembered for a conspicuous case of privilege which he carried to the Supreme Court unsuccessfully. In a sense, he was fighting a losing battle not only in the 'Searchlight' but also against failing health and the difficulties of adjusting himself to the climate of opinion which seemed to him to be becoming more monolithic and unresponsive. His was a vigorous mind but, almost because of its vigour, always in opposition. He carried in this opposition both his qualities and his defects of single-mindedness and passionate expression.

Only his friends will know how amidst these vigorous campaigns of outward rebellion he tried over the years to cultivate deep internal peace of mind with the help of his late Guru, the Swami of Sringeri Mutt of Mysore. The deep devotion with which he followed the teachings of his Guru over a quarter of a century, whilst indulging in all the parry and thrusts of worldly debate, was reassuring to those who sometimes doubted whether his springs were those of deep conviction. Now in rest, everyone must pay tribute to one who may have failed in many things, but who sustained himself in failure with deep philosophy. Each year as his difficulties increased, he seemed to renew his strength more abundantly. To such men death has no sting and the grave no victory.

World Unity

INDIA INTERNATIONAL CENTRE

RECOGNITION OF India and its cosmopolitan capital, New Delhi, as occupying a vantage position at the crossroads of East and West, where various currents of intellectual, cultural, political, social and economic thoughts meet freely, was reiterated on Wednesday afternoon when in the picturesque surroundings of the famous Lodi Gardens, the Crown Prince of Japan laid the foundation stone of the spacious building which will house the India International Centre. Sometimes referred to as a "Super-University," this Centre is the second one to come up in a series of four. The first such centre, known as the International House of Japan, was established a few years ago in Tokyo. The other two are to be located in Paris and New York. The trustees of the Delhi Centre could hardly do better in their choice of the Chief Guest for the foundation-laying function. Prince Akihito, of the Land of the Rising Sun, was obviously the most appropriate person to perform this ceremony. As Dr. C. D. Deshmukh, President of the Centre, pointed out in his welcome address, he, although so young, exemplifies by his own career the "informed and inspired adjustment" to the changing times.

The need for establishing such centres to foster amity and friendship amongst the different communities of the world can hardly be over-emphasized at the present juncture when not a few of them stand divided in two warring camps and unseeming spectacles are not infrequently witnessed on the world stage. Promotion of understanding between the nations of the world through the study of their past and present cultures and by dissemination or exchange of knowledge thus gained is a laudable objective indeed and requires to be pursued. The India International Centre like its prototype, the International House of Japan, will endeavour to achieve this goal by undertaking research and organizing, in collaboration with world institutions interested in this work, study courses, conferences, seminars and lectures on matters relating to different cultural patterns. The literature thus produced will be published for the benefit of all. The Centre during the past two years of its existence has already made a modest beginning in this regard. The tempo of this useful work will undoubtedly increase when the Centre's spacious house is completed next year.

Inflation

THE HISTORIC LAW OF RISING PRICES

DO PRICES always rise? An attempt has been made to answer this question in a provocative article by R. G. Lipsey in the October issue of Lloyds Bank Review. Professor Lipsey has analysed the available price index numbers for the UK covering seven centuries. A secular trend of prices since 1275 worked out by Phelps Brown and Sheila Hopkins shows that an increase of half of one per cent per annum has been witnessed over the period of 700 years and this rising trend is, indeed, the basis for the historical law of rising prices.

A study of the percentage changes between the main peaks and troughs of the price level between 1275 and 1959 shows the following variations:

Period	No. of Years	Percentage change in price level %
1275-1525	250	+29
1525-1650	125	+550
1650-1744	94	— 38
1744-1813	69	+263
1813-1893	80	— 51
1893-1920	27	+183
1920-1932	12	— 59
1932-1959	27	+322

It will be seen that as against three negative signs appearing in the last column, there are five positive signs. A year to year comparison, however, shows an entirely different picture. In 343 years the price level rose from one year to the next, while in 328 years, the

price level fell. For the remaining years, it was unchanged. Thus the price level fell from one year to the next in almost as many cases as it rose. In other words, a study of short term durations provides no guidance for future trends.

The same exercise was repeated by Professor Lipsey with "time horizons" of ten and fifty years. With periods of 50 years, the frequency for the prices to fall was found to be higher than the frequency to rise; there were 82 instances in which price level fell as against 69 cases of rise. When the time span was changed to ten years, frequency of price level increases was 125 as against the frequency of falls at 124. This analysis based over varying time horizons shows that the historical law of rising prices is a poor guide for forecasting future trend in prices. Thus, any advice to investors to expect inflation in the future because this was the experience in the past is based on "shaky basis".

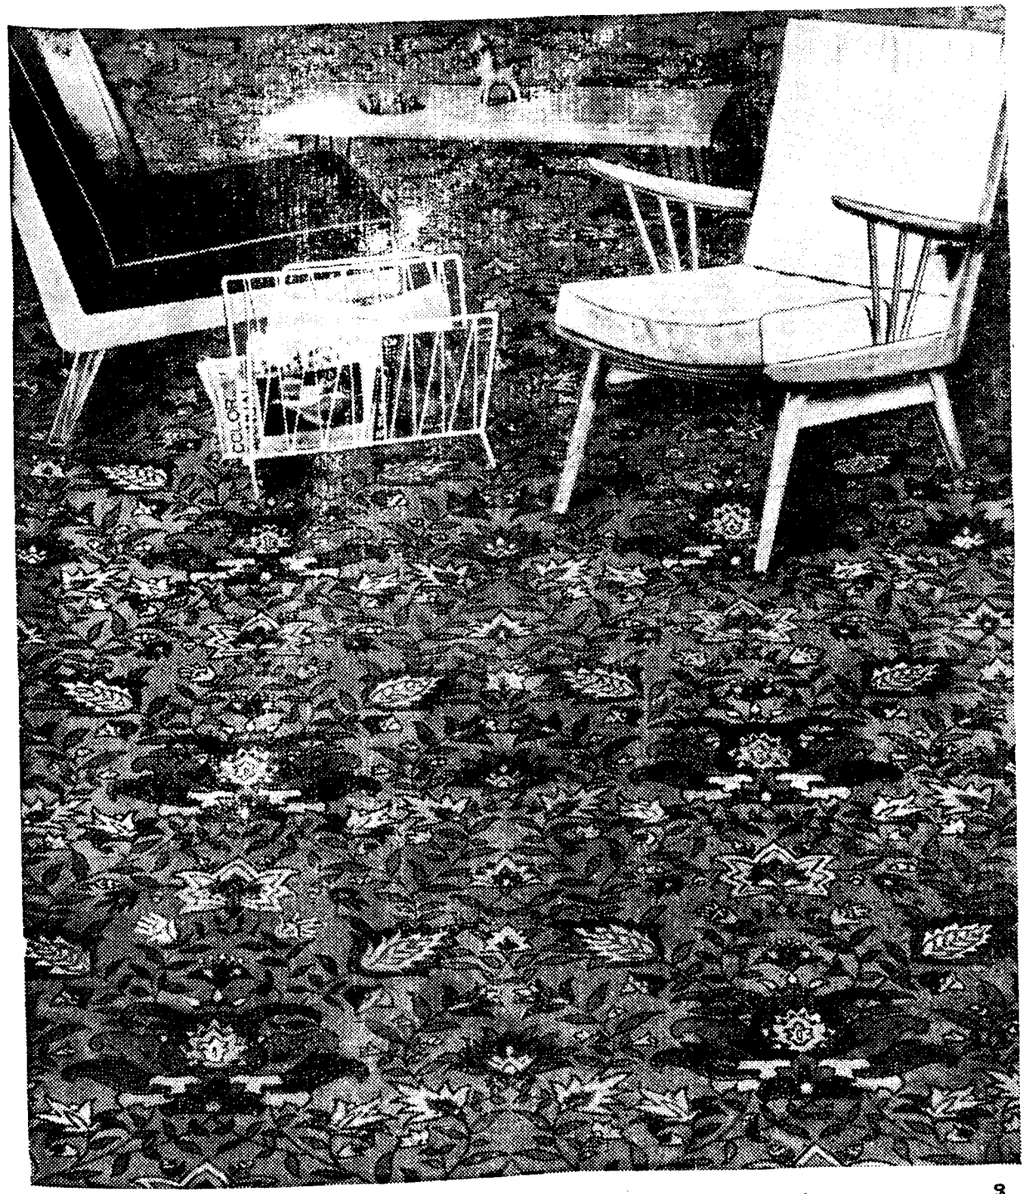
Finance

INDO-PAKISTAN TALKS

DURING THE last one week, many outstanding Indo-Pakistan issues have been the subject of study and scrutiny at the various meetings of the representatives of the two Governments. Although each issue in itself is important, it is the Indo-Pakistan financial talks that draw the first attention. It is unfortunate that no final agreement could be arrived at regarding an issue which has been hanging fire for the last 13 years. The only saving factor in the complex situation is that the talks have ended on an optimistic note. The communique that was issued at the end of the talks stated that "though a final agreement could not be reached, the two Finance Ministers have a full understanding of each other's point of view. They hope to meet again and will endeavour to give an agreed answer to the outstanding problems." This obviously shows that the two sides have displayed considerable accommodating spirit.

The Indian Union was hopeful that in view of the amicable settlement in canal waters, there might be an early settlement of the financial disputes as well. But Pakistan has been toeing the old line that a distinction should be made between what she claims as current payments due to her from India and the partition debt she ows to India. India's contention is that current payments could not be divorced from an overall settlement, including the partition debt. In the matter of share of income-tax arrears, Pakistan is understood to have claimed these arrears even from the people who had lost their all in Pakistan. Pakistan has claimed that current payments due to her amount to Rs. 180 crores (previous regimes in Pakistan had estimated this at only Rs. 80 crores). The partition debt due from Pakistan, valued at Rs. 300 crores, was to have been paid in 50 instalments starting from 1952 but no payments have so far been made.

It is high time that Pakistan started paying annual instalments towards the partition debt, particularly when India is to pay nearly Rs. 8 to 9 crores annually towards the cost of the canal works in Pakistan. With goodwill on both sides, there is every likelihood of all these differences being resolved at an early date.



HINTS FOR FOREIGN INVESTORS

NOT ALL the foreign assistance needed for the Third Plan is likely to come from friendly Governments or the World Bank. A sizeable part of our gigantic needs for foreign exchange will have to be met by private foreign investments. Unfortunately, there seems to be a substantial volume of ignorance and mis-information all-round about the prospects of investments in the Indian Union. The Federation of Indian Chambers of Commerce and Industry and the Indian National Committee of the International Chamber of Commerce have done a valuable service to India as well as to the foreign investors in bringing out a brief but informative brochure giving complete details in regard to potentialities, climate, incentives and procedures of foreign investments in India.

The potentialities of investments are demonstrated with reference to the availability of natural resources and programmes for industrialisation in the Third Plan, with special reference to the industrial policy of the Government of India. It is indicated, for example, that the mixed economy of this country has allowed a wide field for the expansion of the private sector. A separate chapter is devoted to "climate" for foreign investments. It is explained that treatment to foreign capital is meted out on par with domestic capital, though it is desired that a major interest in ownership and effective control of any undertaking should be in the Indian hands. There is, however, no hard and fast rule in this regard and each case is dealt with on merit. In case the foreign enterprises are nationalised compensation is paid on a fair and equitable basis.

Amongst the facilities and incentives provided for foreign investments, double taxation agreements between India and Sweden, West Germany, Norway, Denmark, USA and Japan have been explained in detail. The provisions for repatriation of foreign investments, remittance of profits etc. indicate that the restrictions are less rigourous than is commonly believed. The last chapter explains the procedures involved in setting up an industrial undertaking, right from the issuance of the industrial licence to the actual putting up of the plant.

Shakespeare once observed "Beauty is an innate craving of man—so he seeks to dwell in lovely parts of the creation." No age has ever been immune to this captivating spirit of Beauty, the balm of life. Even mother Sita of our epic age fell a victim to the attractions of beauty when she noticed an illusory golden deer, and longed for having it, which resulted in the out-turn of a chain of momentous events in the social life of that epic age.

The Deer is virtually a charming and comely animal which infatuates a man at the very glance.

We do admire this instinct of man and offer our ocean deep ovation for the same. Hence, we have chosen deer as a symbolising brand for our cloth of varying varieties so exquisite, enduring and of so endearing a price.

Our Specialities are:

PRINTS, SHIRTING, COATING, LENOS,

FLANNEL and TOWELS, etc.

The World Abroad

ARE SHAREHOLDERS PARASITES?

By

ODYSSEUS

THE LEARNED Rakshasa, who periodically torments me, has been at me again. He said: "Where an industry is privately owned and is not subject to any direct public control, the community's interests are wholly unprotected. Directors of companies today are responsible to no one. The shareholders who nominally appoint them are far too numerous, and incapable of joint action to control the board properly. So that boards of directors, free from the interference of sheep-like shareholders, are self-perpetuating oligarchies, with no incentive to efficiency and no deterrent to incompetence."

To which I replied: How do the "interests of the community" suffer? The "community" is not an abstraction. It consists of all the men, women, and children in the country. What are their "interests"? The production of the goods and services that they want, as abundantly and as cheaply as possible. Now, to uphold free enterprise does not mean that the State has no function. Its first job is to prevent monopolies and restrictive practices, price agreements, etc., and to enforce conditions in which competition flourishes. Once that is secure, competition between producers must satisfy the needs of the people who make up the community.

Secondly, although the average shareholder may appear to be a passive creature, that does not mean that he exercises no influence. It depends on the prevailing political atmosphere. If the government despises shareholders as pariahs, Company directors will feel able to ignore them. The more that shareholders are "socially approved", the more will directors bear them in mind when taking a decision. In the last resort, even assuming, which is not true in a free economy, that shareholders have no influence at all, managements cannot indulge in more than a certain degree of incompetence without losses that will end in bankruptcy.

SHAREHOLDERS' FUNCTIONS

The shareholder performs at least two major social functions: (1) he saves in hopes of a future income; (2) he invests his savings according to his estimate of how his hopes can be best attained. To enable him to perform these functions properly, companies must pay out maximum dividends consistent with normal business reserves. If companies plough back profits on a large scale they are assuming a responsibility for which they are not the best judges, namely, how savings can best be allocated between different firms and industries. A company is naturally biased in favour of its own prospects. A shareholder compares prospects over whole market before he invests.

The basic point is: What (in an imperfect world) is the best way of making directors accountable to the community?

Two main ways have been tried. The first is that of Free Enterprise. Here those responsible for management are clearly identifiable and accountability is forced on them by the interaction of shareholders and the higgling of the market. The second is Nationalization. This is worked in different ways in different countries. In the UK, the Nationalization Acts of 1945-50 vested control of electricity coal, railways, civil aviation, road transport, and gas, in independent boards with general duties but free from ministerial control. They were not placed under the direct control of Parliament in order that business and technical decisions should not be influenced by continual political interference, e.g., to close a factory might be right from the technical and economic viewpoint but disastrous to electoral prospects. The result has, in the UK, been a fuzzy muddle in which it is almost impossible to pin down accountability onto anyone at all.

Clearly, the boards could not be wholly independent unless they were to be chartered monopolies. Ministers had to be given some measure of power over the boards and Parliament had to have some right of criticism. In practice, that right has been limited by sheer lack of time in Parliaments inundated by the contemporary obsession that legislation is the cure of all evils. At present, there is an imprecise balance of power between the Boards, the Ministry, and Parliament, It is impossible to assess precisely because it depends on the interplay of personalities, departmental committees, and the state of party political warfare. The members of the independent nationalized boards have infinitely less scope for the exercise of business initiative, enterprise, and adaptability to new circumstances and ideas, than the directors of a privately owned company. Nor has a Minister, who chances to be progressive and enterprising, the means or the right to intervene in anything but broad questions of policy.

Compared with this vagueness, the accountability of the board of directors of a private company, in satisfying directly their shareholders, and the consumers of their products, is pinpoint clear.

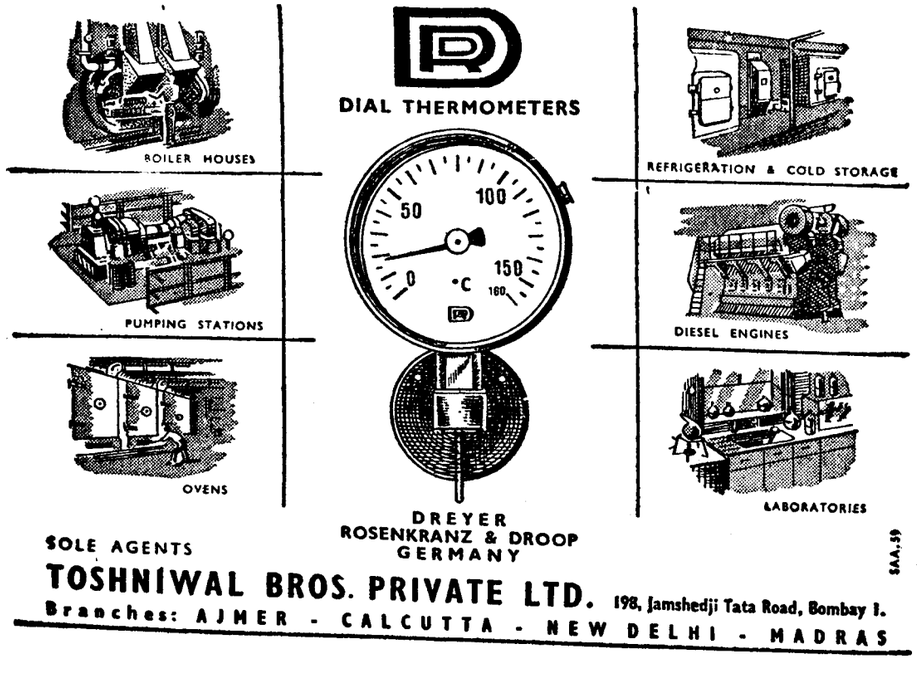
At this point my Rakshasa said sardonically: "In other words, your idea of the perfect State is one in which the government has no economic functions to perform because there is no such thing as the national interest, over-riding the selfish interests of particular groups of industries, shareholders, and consumers."

ROLE OF THE GOVERNMENT

First, there is no perfect State, I answered. Secondly, the national interest is upheld by creating a society in which there is full scope and reward for individual talent and initiative, in which as many people as possible, consistently with the avoidance of inflation, are kept employed, and in which no one is allowed to fall below a certain level of well-being—a level, which must, however, be defined realistically in terms of what is economically possible, and that means that the State must be controlled by strictly applied constitutional general principles which do not allow transient majo-

rities to impose burdens, which they don't accept themselves, on minorities of taxpayers or others, whose fewness makes their votes not worth buying.

Let us, for example, see what the UK government's relations are with one of the UK's biggest private industries: motor manufacture.



One of the UK's government's main post-war problems has been the balance of payments, and the export of motors was an obvious potential source of foreign exchange. The Labour government's system was to set export targets as high as 75 per cent of production and enforce exports by rationing the allocation of steel. This policy, coinciding with the small amount of foreign competition in the first post-war years, produced immediate expansion. Exports rose from the 1936-38 average of 95,633 cars to 370,642 in 1948. This expansion had the disadvantages of an artificially-stimulated drive, which became clear when other competitors, notably Germany, entered the field. British cars were sold higgledy-piggledy in those years in any market and supplies of spare parts were often inadequate. Concentration on exports meant that the industry lacked the base of a strong home market. Germany catered for her home market first, and following success there, was able to reduce production costs before entering the export market with a thoroughly developed sales organization.

The Conservative government ended the State's direct intervention in steel allocation of the motor industry and sought to achieve its policy aims by fiscal means, chiefly purchase tax and the control of hire purchase arrangements. Since 1955 the tax has varied between 60 and 30 per cent. To say that an industry, the price of whose products can be increased overnight in the domestic market by the Chancellor of the Exchequer by a stroke of the pen, is not subject to public control is to misuse words, and to go on to argue that it should be nationalized and a whole panoply of boards and government committees created in order to secure control is to abuse them. The UK government's Restrictive Practices Act of 1953 has ended collective retail price maintenance agreements and the industry has never been more efficient or competitive.

It is more difficult to secure accountability to the community in a nationalized industry and because nationalized industries are not, in the normal meaning of the term, profit-making concerns, nationalization deprives the community of one of the most powerful, because wholly automatic, means of protecting its interests. As to the national interests that should prevail over group interests, the government can protect them by maintaining conditions of competition, stable currency, adjustments of credit and full employment, and securing its various other aims, such as export promotion, by fiscal means, with the minimum of direct interference in economic processes.

Government has, or can acquire without nationalization, all the powers it needs to make national policy prevail over group interests. The UK example shows that nationalized industries are far less accountable to the community than private enterprises and the lesser efficiency and competitiveness of the nationalised industries are burdens on the community. Industries in any sensibly run Free Enterprise economy are not only more efficient, competitive, and progressive, but are subject to a degree of Government influence which Socialists find it convenient to ignore.

The climate of the economy and the protection of national interests are functions of the government, but in exercising its role the government should distinguish between two kinds of control: (1) the positive control exercised by those responsible for managing an industry, for initiating and carrying out enterprises which need business experience, courage, and imagination; and (2) the negative application of (a) general laws, such as those against restrictive practices, and other rules that come under the head of Company Law, to prevent individuals or groups from encroaching on the rights of others; or (b) of policies, such as the expansion or contraction of credit, which are governed by over-all considerations of the economic climate and of national aims.

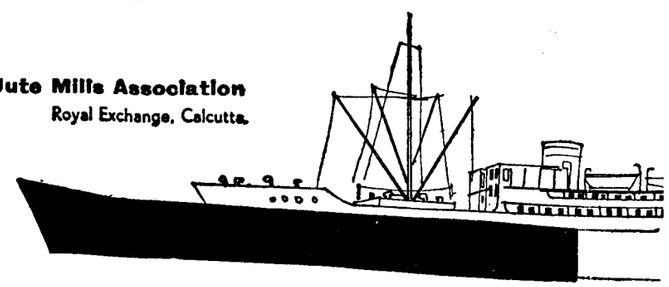
Jute



in the forefront of India's export trade

The Indian jute industry is essentially an export industry. Almost 80% of the industry's production—or about 900,000 tons of jute manufactures—is shipped to overseas markets; 55% of the jute goods used as packaging material throughout the world are supplied by India.

But jute no longer serves merely as the humble gunny or hessian bag. Today, jute fabrics are used in large quantities in industrial processes to give a remarkably wide range of end-products. From the massive export of jute goods the country earns valuable foreign exchange, which in 1959 amounted to Rs. 110.8 crores. Out of this, Rs. 50 crores came from the dollar area, making jute goods India's largest dollar-earner by far.

The Indian Jute Mills Association—the organisation of the industry—carries on extensive propaganda in several foreign countries to promote the exports of jute goods, undertakes research at home to widen the applications of this golden fibre.

The European Scene

THE INEVITABILITY OF BIGNESS

From Our Special West European Correspondent

PARIS, November 26.

THE slogan "concentration of economic power" has happily become popular in India this year. I say "happily" because, although this subject provides an excuse for a good deal of egalitarian claptrap, the phenomenon of concentration is a sign that economic progress is under way. There can be no progress in industrialisation, or even in agriculture, without noticeable concentration of capital, whether in private or in so-called "public" hands. In fact, it is likely that in a developing country there can be no progress without an initial increase in the inequality of revenues—which would be as scandalous as the egalitarians say it is if it led to greater inequality in expenditures, but is not so if it leads rather to more capital formation. In an editorial in October called "The Inevitability of Bigness?", the "Eastern Economist" correctly recalled the necessity of bigger business in Indian development. Some people are not yet reconciled to this necessity. One hopes, for the sake of their Marxist purity, that this does not include the Communists, who should be overjoyed at the prospect, because it confirms part of the analysis of economic development given by their prophet. The others had better get used to the idea, because it is an inevitable aspect not only of the first stages of development but of all later stages too—as I propose to illustrate with figures concerning the great industrial boom of the 1950's in France when that country was growing as fast as any on earth.

One thing that the French figures will not confirm is what the editorial just referred to called "the growing conflict between small-scale and big-scale industry which is now, for the first time, threatening to disrupt the solidarity of private sector operation". If concentration of industrial power in India has been leading to conflict with smaller firms, then that is something that need not happen and does not happen abroad. It can be avoided, as the editorial suggested, by extending the practice of sub-contracting. As big business gets bigger in relative terms, a greater number, in absolute terms, of medium and small industries can flourish in its shadow, which is one of the reasons why the tendency toward concentration that Marx correctly saw in 19th century Britain has not led to the "proletarianisation" of the rest of the capitalists, which he quite incorrectly forecast.

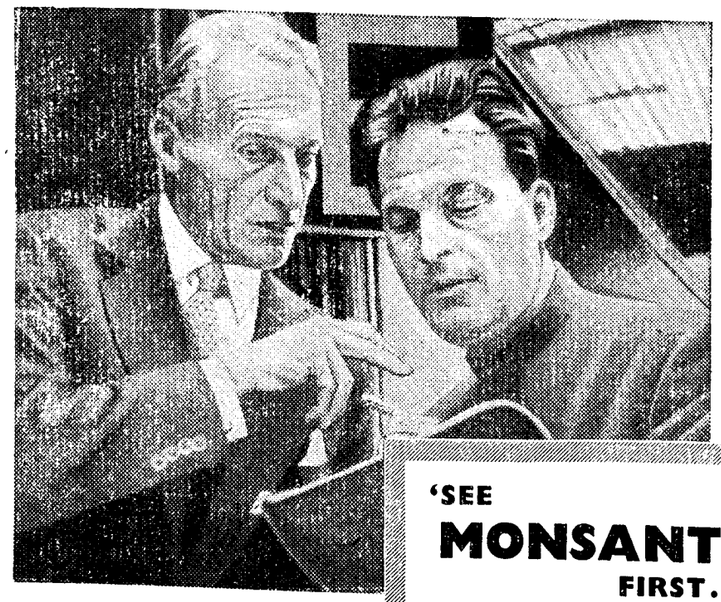
The first set of French figures, those provided by the National Statistical Institute, cover the period 1951-56 which included a year of rapid but inflationary expansion in 1951, two years of stability, and then, in 1954-56, a boom when the industrial production index moved from 101 to 128 at fairly steady prices. So they cover all sorts of economic weather. They exclude the public sector of industry, and are all the more valuable for that when drawn to Indian attention: the tendency to concentration would have been much more marked if State enterprises had been included because these comprise, as in India, some of the biggest, e.g. the largest automobile producer, Renault, electric power and aviation. What they show is that the number of private firms with sales volume exceeding Rs. 10 lakhs annually increased in the period by 46 per cent, until at the end of the period one-tenth of the firms were doing two-thirds of the nation's business, whereas four-tenths of the firms were doing only 8.6 per cent of the nation's business. Moreover, by separating private firms up according to their sales volume and then comparing the performance of each group with the industrial activity index, it can be shown that there is an exact correlation between the movement toward concentration and the level of industrial activity. "Every variation in the level of industrial activity corresponds to a variation, in the same direction, in the tendency to concentration. Expansion favours concentration and recession retards it".

Private firms can be divided up into individual or family concerns, private limited companies, and public companies, and the behaviour of these three groups then studied in phases of stability and expansion. It emerges that the relative importance of individual or family concerns is about steady; that the relation between the other two groups is stable as long as business is quiet; but that once vigorous expansion is under way, the number of private limited companies falls sharply in favour of public companies. A complex analysis of the sales volume, investments, stock and profits of each group gives these reasons for this diverse behaviour. The number of public companies depends on the scale of investment, and as economic progress increases this scale, more private firms must "go public" as the Americans say. On the other hand, the proportion of private companies and of individual or family concerns has nothing to do with the scale of investment; private limited companies are more numerous in periods, or in sectors of industry, where the possibility of profit is greater but the danger of loss is also greater.

It is interesting to see the changes in a firm's accounts as it moves into the bracket of big business. For industry as a whole, in time of fast expansion the wages and salaries bill tended to increase parallel with increasing earnings, but with a delay of one year. That is, entrepreneurs kept up with an expanding market by taking on more help and cutting their profit per unit of output, but had to give labour more when the balance sheet showed that this operation had paid off the previous year. On the contrary, in the group of really big firms the wage bill fell, very slowly up to a sales volume of Rs. 1 crore but quite fast thereafter, despite the fact that hourly wage rates boosted. That is, these firms kept up with an expanding market by increasing productivity; they paid much better wages and made bigger gross profits. That is why the big firms claimed a larger place in the economy, took over undisputed leadership in technological progress and established model relations with their labour.

The investment habits of the giant firms also changed notably. It emerged that there is little or no correlation between their outlay on fixed assets and the bank rate, nor between that outlay and the rate of current earnings. But there was a close correlation between current investments and (a) last year's earnings, (b) current wholesale prices of manufactures. That is, as the firm got bigger it relied less and less on short-term credit and current income in deciding its expansion, and more and more on last year's ploughed back profits (auto-financing) and on the evolution of the market as reflected in industrial prices. The correlation between investments and this last factor was uncannily precise: over the whole period, a variation of industrial prices of 1 per cent, up or down, caused a similar variation of 5 per cent in the investments of big firms.

A second set of statistics covers the subsequent period, 1956-58, and is drawn from the weekly journal



"Entreprise". It demonstrates that the tendency toward concentration has continued unabated, with the biggest group of firms continuing to outdistance the rest of industry in annual growth rates. "Entreprise" takes the country's 500 biggest firms in order and finds that the top 35 are expanding and concentrating fastest of all; after them come a solid block of old, stable firms which continue to grow moderately; and at the bottom there is a jostling pack of dynamic new firms breaking their way into the big class.

Finally, a third set of figures issued by the National Statistical Institute refers to the topmost group of 46 companies, with a sales volume of over Rs. 1 crore, and carries the analysis of their performance up to the end of last year on the basis of provisional figures. This group continued to expand faster than the rest of the economy, in which it therefore claimed a larger share. Concentration was most marked exactly in the most dynamic industries: steel, petrol, chemicals, electronics.

Reverting to the group of 500 leading companies, an apparent anomaly is that net profits calculated as a percentage of total capital at work decline as one goes from the bottom to the top of the list. Of the biggest 100, only five firms managed to declare net profits exceeding 10 per cent of capital at work, but in the bottom 200 firms of this list, 48 did so. The really big societies, that is, seem to be less profitable than the not-so-big. The explanation no doubt is that the biggest firms are writing off assets much more quickly, and one would thus get a different impression if one could compare gross earnings (i.e. net profits plus depreciation plus current allocations to reserves).

On the effects of this concentration on medium-scale businesses, I will quote the conclusion of "Entreprise's" annual study of big business: "We drew the conclusion last year that increasing concentration did not entail by any manner or means the disappearance of small or medium enterprises. This is confirmed again this year. The giant companies are powerless on their own and they need an ever-growing number of sub-contractors and complementary firms. Moreover, the chances for medium firms to move up into the big bracket remain as good as ever. This is proven this year by the appearance (in the list of the big 500) of new petrol companies and pharmaceutical laboratories. The entry into the top class of new chemical and electronic firms is expected in the near future".

Economic Report from the U.S.

HALTING THE OUTFLOW OF GOLD AND DOLLARS

By GUY SIMS FITCH

WASHINGTON Nov. 23.

NATIONAL policies are rarely as effective as have been those instituted by the US at the end of World War II. So effective have they been, in fact, that the US now faces what could be called a surfiet of success. It has had to take strong measures to safeguard its own financial position by curtailing the persistent outflow of its gold and dollar reserves. Yet, it was but a few years ago that economists around the world were still talking about the "dollar gap"—the shortage of US dollars which prevented other free nations from financing their necessary international transactions and domestic programmes out of their own resources.

The immediate aim of US post-war policy was to help the war-ravaged nations rebuild their economies and provide for their national security. To this was added the further US objective of helping the less-developed lands accelerate their economic growth. Both these endeavours were imposing and challenging. Into them the US has poured its treasure—its goods, its money, its technical know-how, and its manpower. In cost, it all has added up to a governmental outflow of more than $70,000 million in assistance to other countries. As additional aids to international economic rehabilitation and growth, the US had followed liberal trade policies which have welcomed increasing quantities of dollar-earning goods from abroad, and encouraged the flow of private American funds—for investment, travel and other purposes—to other lands. In the meanwhile, it was willing to accept the temporary need for other countries to set up extraordinary barriers against US goods, services and dollars as a means of conserving their meagre gold and dollar reserves.

All this meant that, as a general rule, gold and dollars flowed out of the US to other free nations in virtually every post-war year. The only exception of the past decade was 1957, when the abnormalities created by the Suez situation elicited such strong demand for US goods that the United States was able to increase its reserves by a small amount. By the end of 1958, however, it was becoming increasingly clear that US post-war policy had won the day. Other industrial nations had rebuilt their reserves to the point where they were in position to make their currencies convertible on world markets, and with their economies rehabilitated and modernized, to compete more successfully for the world's burgeoning trade. In that year, the US deficit in its international balance of payments shot up to $3,400 million. In 1959, when US imports continued to soar and US exports did not, the deficit rose to $3,800 million. It was clear that deficits of this magnitude could not be sustained indefinitely, and there was considerable hope that with a rise in US exports the 1960 deficit would be reduced substantially. Such, unfortunately, has not been the case. Actually, the US has been earning more on its export trade this year than in any previous year except 1957. And when all the accounts are in, the export total may yet exceed the 1957 record. In terms of goods and services, the US trade surplus—the excess of exports over imports —has been running at a rate of close to $6,,000 million a year. Moreover, because of other additional factors, largely the lower interest rates in the US than elsewhere, there has been a tendency this year for speculative money also to move from the US to other countries. The net result is that the 1960 US balance of payments deficit could conceivably reach the $4,000 million mark.

Since it is customary for other countries to take some of their foreign exchange earnings in gold, if only to maintain a balance between their gold and dollar holdings, the US gold stock has declined markedly in the past decade. It has fallen by $4,500 million in just the past three years. The 1960 outflow alone has come to about $1,400 million so far, and the total US gold stock is now down near the $18,000 million level, the lowest in 20 years. Admittedly, this is still a huge reserve, close to half the entire free world's supply. Obviously, the situation is not what it used to be, and the time has come for the US to pay more attention to its own interests, without reversing the essentially liberal course of its foreign economic policies. It is generally conceded that the US interests are no less important to other free nations, since the US is the world's prime supplier of capital and most important trading partner, and its dollar is in effect the cornerstone of international commerce.

It is in this context that one must view the actions taken by the US government last week to cut down on the outflow of gold and dollars. These actions will mean a cut in US Defence Department procurement and spending abroad, a greater emphasis on the purchase of American goods and services under US government aid programmes, and the screening of other US government outlays around the world. In all, the hope is that a total of $1,000 million can thus be saved in the next few years. These steps come in the wake of US efforts to have other industrial countries, with their vastly improved economic and financial conditions, assume a larger share of economic assistance to developing lands, and to have all free nations reduce their restrictions against US goods, and services whenever and wherever feasible. There are indications that other countries are co-operating in this effort to halt the outflow of US funds. Some significant steps have been taken to dismantle outmoded barriers against US goods and dollars, some increases in economic assistance have been announced or are in prospect. In addition, interest rates have recently been reduced in several European countries, to narrow the differential between US and European rates and thus discourage the flow of speculative funds from the US. Meanwhile, the US Federal Reserve system—in effect, the nation's central bank—has adopted a new policy of buying short-term US government bills on the open market. This has had the effect of bolstering short-term rates in the United States, further narrowing the gap between foreign and US rates.

In another move, US Treasury Secretary Anderson and US Under Secretary of State Douglas Dillon have visited Bonn to see what further steps the Federal Republic of Germany can take to increase its share of the economic load. The Federal Republic, which has announced it is planning an increase in its foreign aid programme, has been a prime recipient of US aid and is considered to be in exceptionally good economic and financial position to further widen its international commitments. With steps such as these have come indications that the movement of capital from the US may be subsiding. And looking ahead the heavy US gold and dollar outflow of the past few years may be viewed in retrospect as a manifestation of healthy transition, from a period when only the United States was strong enough to finance free world security and economic growth, to a time when other free nations also were strong enough to assume their proper share of the common effort.

Ref. No.....

23rd June 1960

The Sales Manager,
Messrs. Ashok Leyland Limited,
Bank of Mysore Buildings,
N.S.C. Bose Road,
M A D R A S-1.

Dear Sir,

There are fifteen Ashok Leyland Comets in our fleet of 51 buses. The first Comet was put on the road on 1-1-58. We are operating them on mofussil routes and none has experienced any major breakdown so far.

Considering the mounting passenger traffic on the one hand and the indifferent road conditions on the other we unhesitatingly say that the 203" wheelbase Leyland chassis is ideally suited to tackle both the problems. It is the only chassis available in India with the largest seating capacity (we are able to seat 66 persons in all) and it withstands the severe running strain over long distances.

In fact the dependability and economy of the Ashok Leyland Comets are so convincing that we are thinking of replacing the existing vehicles with them.

Thanking you,

Yours faithfully,
For ARUPPUKOTTAI SRI JAYA VILAS (P) LTD.,

Managing Director.

JWT/AL-8876

We thought you might like to read this

This testimonial explains Leyland's enormous popularity in over 50 countries in the world. The exacting standards of precision combined with fine craftsmanship makes Leyland the most wanted vehicle today.

WORLDGRAM

India

Rupee Payment Agreements: The Deputy Minister of Commerce and Industry, Mr. Satish Chandra disclosed recently in the Lok Sabha that India had concluded rupee payment agreements with 13 countries. The countries are Afghanistan, Bulgaria, Burma, Czechoslovakia, Egypt, German Democratic Republic, Hungary, Pakistan, Poland, Rumania, USSR, Democratic Republic of Vietnam and Yugoslavia. Besides, the State Trading Corporation of India had separate agreements with official trade organisations in North Korea, and Tunisia.

*

Rural Employment Bureau: The scheme for setting up Employment Information and Assistance Bureaux in selected Community Development Blocks has already been put into operation. These bureaux will disseminate information regarding employment opportunities and be a link between the rural employment-seekers and the employment exchanges in the districts.

*

National Association of Purchasing Executives: 'To evolve a code of purchasing ethics and to institute a curriculum of study and training for those who wish to make purchasing their career' were a couple of the more constructive objectives ennumerated by the National Association of Purchasing Executives which was formed on the 29th October, 1960, when purchasing executives from several leading industrial organisations met at the Seminar rooms of the University of Bombay. The Association also hopes to achieve a better exchange of ideas on purchasing policies and techniques by holding seminars and by maintaining constructive liaison with organisations which are interested in purchasing in both its academic and practical aspects. An executive Committee consisting of Dr. P. N. Vakil of M/s. Sarabhai Chemicals (President), Mr. M. D. Boovariwala of M|s. Sadoz Products Pvt. Ltd. (Vice-President), Mr. P. K. Palit of M/s. Mahindra & Mahindra Ltd. (Hon. Secretary), Mr. S. Sankar of M|s. Sarabhai Chemicals (Hon. Treasurer), Mr. N. G. Morarjee of M|s. National Machinery Ltd., A.F. Lilauwalla of M/s. Tata Industries Pvt. Ltd., G. V. Ambardekar of M/s. Premier Automibiles Ltd. and John Broadley of M/s. Johnsons and Johnson of India Pvt. Ltd., was elected at the meeting.

*

Smelter Plant to Produce Sulphur: A big smelter to produce 400 tons of sulphur a day from the sulphur pyrite ore, discovered in Amjore area of Bihar State, is proposed to be set up by the Government, Mr. Manubhai Shah, Minister for Industry, told the Lok Sabha recently. It was also proposed to set up a plant for the production of 1000 tons of sulphuric acid a day to meet the growing demand of industries. Mr. Shah said that originally it was expected that the smelter would be set up within two years, but now it would take one more year. It was further revealed that at present India was importing about three lakh tons of sulphur annually. The demand of the country would rise to six lakh tons by the end of the Third Plan, and half of it would be met from internal production. It was expected that the country would be able to meet its sulphur needs entirely through internal production by the end of the Fourth Plan. As regards the cost of the smelter plant, the Minister revealed that earlier estimate was about Rs. 8 crores, but now it would go up because of the revised plants.

United Kingdom

New Rubber and Plastics Research Association: A new research association for the rubber and plastics industries has been established in Britain. Some 70 members of the British Plastics Federation have decided to support the move. Mr. David Radford, Chairman of the Federation, said: "We are confident this will be of mutual benefit to the two industries scientifically and economically." Research will be undertaken at the laboratories of the rubber industry at Shawbury, Shropshire.

*

Underwater T.V. Camera to Aid in Fish Research: An underwater television camera ordered by the North Scotland Hydro-electric Board will be used for research into fish behaviour in Scottish lochs. Among other things, the camera will inspect the huge fish screens which guard turbine intakes and prevent smolt (young salmon between one and three years old) from being swept into the turbines. Inspecting these schemes—which also guide migrating fish into passes and hence to the sea—was a job previously undertaken by divers. The camera will also be used to study fish behaviour in the passes, and to inspect tunnels linking dams and power stations. Engineers will thus be able to report on conditions of tunnels without having to undertake the costly job of draining.

U.S.S.R.

New Baby Car: Production of 'Zaporozhets' baby cars has begun at Zaporozhye, on the Dniepper. It is a four-seater with an all-metal body and tubeless tyres. A 23 h.p. air cooled engine gives it a speed of up to 90 kilometers an hour. The car holds well to the road and easily negotiates ascents. The car's four-cylinder engine is mounted in the rear, while the luggage hold, a small one, is in front. This design has made it possible to unite the engine, the gear box and the rear axle into a single unit, which insures the car's high performance. The new model is already on sale for the population.

*

Construction of International Oil Pipeline: Construction has begun of the international "Druzhba" (Friendship) oil pipeline which will stretch from the Volga to the European People's Democracies. Work is underway on the first stretch of the pipeline up to Uzhgorod over 300 kilometres long.

*

Europe's Biggest Iron Ore Plant Designed: Soviet designers have produced the blueprints of Europe's biggest iron ore plant which will be built in the Krivoy Rog ore basin, the Ukraine. It will produce some 21 million tons of dressed ore a year, half again as much as the total output of West Germany. At present, several big mines and dressing plants are being built in the Ukraine's vast ore fields. In 1965 they will produce some 80 million tons of ore, which means that in five years the Ukraine alone will produce more ore than any capitalist country including the United States.

*

Fast Electronic Computer Built in Kiev: A general purpose fast electronic computer, the 'Kiev,' has been manufactured by specialists of the Computing Centre, of the Ukrainian Academy of Sciences. This calculating machine has been designed for the solution of a wide range of mathematical and logical problems

arising in connection with scientific, technical, engineering and other work. The speed of the machine is about 10,000 operations a second. Additions and subtractions are effected at a speed of 12,000 operations a second, multiplication 5,000 and divisions 3,000 a second. The machine can be employed to solve systems of differential equations involved in the study of the nucleus, to calculate statistical control tables, and also to solve various problems connected with the selection of the best variation from a large number of admissible ones. It can also be used for translations from one language into another, for automatic programming and other purposes. The distinguishing feature of the machine is that its every section works independently, making it possible to modernize the entire machine all the time.

Poland

Polish Colliery Machinery for China: The first installation for the big hydro-mechanized colliery now under construction in the Chinese People's Republic at Lu-Tsian-to have already left Polish mining plants. Colliery designers from the Gliwice Mine Designing Office have also left for China to inspect the assembling and drilling work. The Lu-Tsian-to will be a giant of its kind, for when it goes into full operation, its output will be 9,000 tons of coal per day. Almost all extraction and transport is to be done by water at high pressure. A number of most modern technical solutions will be applied in this mine which will be equipped exclusively with Polish machinery. Many operations will be automatic.

Yugoslavia

Macedonia to Supply Cotton to Yugoslav industry: The long-term plan of the Macedonian Republic—the chief cotton producer in Yugoslavia — envisages increase of surfaces to 46,000 hectares by 1964, which will be three times as much as this year. More intensive cultivation of about 40,000 hectares of land which will be irrigated, as as well as application of modern agro-technical methods will bring a yield up to 30 metric centners per hectare. This will provide for meeting 60 per cent of the total needs of the Yugoslav Textile Industry in cotton.

*

Housing Problem to Ease for Yugoslav Families: According to the new Draft Five-Year Plan, 37,500 flats will be built in Belgrade from 1961 to 1965. From 1956 to 1960, 18,861 flats were built in Belgrade, with more than 1,032,000 metres of housing space. The rate of housing construction in the capital of Yugoslavia has already begun to be equalized with the accretion of the population. Now there are about 1,15,000 flats in Belgrade. About 30 per cent of this number has been built after the war. More than 70 million dinars were invested in housing construction after the war.

*

Yugoslav Agriculture: The wheat and rye yield in Yugoslavia was this year over 3.8 million tons, which is 300,000 tons more than the production envisaged by the long-term plan for 1961. With 6 million tons of maize produced this year the Plan for 1961 has been surpassed by about 5 lakh tons as a result of which Yugoslavia has aligned herself among the first five or six maize producers in the world. From an approximately the same surface under wheat—2 million hectares—a quantity of 2.3 million tons was obtained from 1951 to 1955, while in 1956 the production was as small as 1.8 million tons. High production during the last two years enabled Yugoslavia to free herself from wheat imports, for which large financial means had been appropriated during the post-war years. Lard and sugar are now no longer imported either. Large funds have been invested to ensure a high production in agriculture. These funds surpassed 100 billion dinars annually during the last two years.

Israel

Ceramic Works: Rs. 5.23 million will be invested in the expansion of the Harsa Ceramic Works in Beersheba. The addition of a new wing and production facilities will double the enterprise's productive capacity by mid-year of 1961. Harsa's output of bathtubs, sinks, sanitary appliances, wall tiles and artistic ceramic were reached a value of Rs. 10.56 million last year and its exports amounted to $300,000. Output in 1960 will probably reach the Rs. 10.56 million mark and the exports will attain a value of $400,000.

Mexico

New Plant for the Manufacture of Metallic Cloth: During the first part of October, the Minister of Industry and Commerce, inaugurated Wanger de Mexico, S.A. a new industrial plant to be devoted to the manufacture of metallic cloth for the paper industry. Located in the Federal District, this is the second factory of its type to be installed in Latin America. Technical guidance for the Mexican concern is being supplied by the Hermann Wanger Company, of Reutilingen, Germany. The plant is designed to turn out almost any type of metallic cloth required by domestic paper mills and when working at full capacity will be able to supply practically all local consumption needs. It is quite likely that the new enterprise will be able to devote a sizeable portion of its production to exports to various Latin American countries.

Netherlands

1960 Crop Estimates: Based on the third provisional crop estimate held on August 20th last, the Central Bureau of Statistics has published the following production figures for some arable crops. For rye a total production is expected to be 470,000 m. tons (1959:386,000 m. tons) for winter barley over 43,000 m. tons (last year :33,000) and for spring barley more than 246,500 m. tons (1959: 235,500 m. tons). These yields are also affected by acreage differences in comparison with 1959. Against an increase of rye and winter barley acreages there was a reduction in the acreages under spring barley. The average production of rye and spring barley per acre was 14% and of winter barley 7% higher than last year. In the group pulses, marrowfats showed a decrease in production from 30,600 m. tons to 27,300 m. tons as a result of the smaller area under cultivation. For garden peas, duns and grey peas the smaller yields per acre were compensated by large acreages. Special attention should be paid to the flax production figures. The production turn reveals itself clearly in the acreage total 59,280 acres (1959: 37,000 acres) after the continuous decline of the last few years. The aggregate yield of rippled flax amounted to almost 145,000 m. tons (1959: 77,000); linseed more than 21,000 m. tons (1959: 14,000 m. tons). With regard to the average production per acre 1960 may be considered a good flax year.

Ceylon

External Assets: The external assets of Ceylon which have fallen steadily and without interruption since April 1959 registered a further drop of Rs. 26.1 million in September compared with a fall of Rs. 11.3 million in the previous month and at the end of the month stood at Rs. 529.9 million. For the first three quarters of this year external assets have dropped by Rs. 158.9 million compared with a drop of Rs. 118.8 million for the same period of 1959.

you have just opened
A METAL BOX CONTAINER!

Salted or plain, cashewnuts need to be sealed in a specially designed container in an inert atmosphere. This way they retain their freshness and flavour for long periods. Thanks to the container's protective qualities, India has been able to export large quantities of cashewnuts to distant lands and to earn valuable foreign exchange. The U.S.A. alone buys Rs 11 crores worth every year, making the humble cashewnut India's second largest dollar earner.

In the country's drive to expand the export of consumer goods, Metal Box, leaders in the packaging field, are playing an important role. Already, over Rs 30 crores worth of consumer goods — mostly perishables—are finding their way abroad in Metal Box containers. Scientifically designed for protection and superbly printed for sales appeal, Metal Box containers are showing how correct packaging helps to establish Indian goods in foreign markets.

Metal Box are also taking a direct part in the country's drive to earn foreign exchange by rapidly expanding the export of containers, closures, hardware and publicity media.

NEWS IN BRIEF

INDIAN

Small saving collections during October, 1960 amounted to Rs. 25.01 crores gross and Rs. 7.63 crores net.

*

According to information supplied by the Akhil Bharat Sarva Sena Sangh 44,11,191 acres of land had been donated up to August 1960 by various individuals towards the Bhoodan movement.

*

It is reported the West German Government have agreed to an agrrangement under which a portion of the loan falling due for repayment up to the 31st December 1961, on account of the Rourkela Steel Plant would be extended for a further period.

*

Two hundred and seventy-seven textile mills have implemented the recommendations of the Textile Wage Board fully and 67 partly.

*

The Government of India have accepted the Tariff Commission's recommendation that protection granted to the sheet glass industry should be continued at the existing level of duty 70 per cent ad valorem for a further period of two years i.e. up to December 31, 1962.

*

It is reported the prtotype production-cum-training centre at Rajkot has started functioning and that 118 candidates have been admitted there. The cost of machinery and equipment for the Centre received up to October 1960 from the T.C.M. was approximately Rs. 19.26 lakhs.

*

It is reported village establishments in the Malabar area will be reduced to about 400 from the present 871, under the rationalized set up of village administration in Kerala.

*

The total electricity produced by the public utility power stations in India in August 1960 was 1,383.7 million kWh. of which 1,143.1 million kWh. were sold to ultimate consumers.

*

The three-man team that has been appointed by the Centre to study the working of Nyaya Panchayats in rural areas has invited suggestions and comments from persons and bodies who have any experience in this field.

*

The President has given assent to the Madhya Pradesh Industrial Relations Bill, 1960, which seeks to unify three different laws on industrial relations now in force in various parts of Madhya Pradesh.

FOREIGN

Imperial Chemical Industries has reduced the UK price of 'Alkathene'—the company's brand of polythene —by 4 d.per pound to 1s. 10d. per pound. This is the fourth reduction in price since September 1958, and represents a reduction of 33 per cent over the two year period.

*

South African wool earnings for the period July-October dropped by over £3 million or 19.5 per cent, states the South African Wool Board.

*

South Vietnam has asked the Esso and Shell Companies in Saigon to draw up plans for the construction of the first oil refinery in Vietnam, the English language newspaper, 'Times of Vietnam', reported recently.

*

Norway is seeking a World Bank Loan to help finance the second and third building stages of the Tokke hydro-electric scheme.

*

A £560,000 oil appliance manufacturing factory built for a new company operating in Iran and controlled by Aladdin industries was opened in Teheran the other day. The project has been carried out with the full support of the Iranian Government and has taken two years to complete.

*

The South African Sugar industry has been granted a long sought price increase of a half penny a pound, which will increase the proceeds of the 750,000 tons sold locally by £3 million a year.

*

Verolme United Shipyards of Rotterdam, is to build two shipyards in Peru—one at Callad and the other at Chimbote.

*

After months of investigation and negotiation Consolidated Zinc of Australia is to establish an aluminium smelter for Queensland bauxite in the Southland province of New Zealand.

*

Ghana, the world's biggest cocoa producer, is to introduce changes which will enable cocoa to be sold to overseas buyers in Ghana as well as in London.

*

West German industrial production this year will probably be 11 per cent higher than last year, the West German Institute for Economic Research announced recently. This compares with a rise of 7 per cent between 1958 and 1959.

*

World production of rubber during August amounted to about 150,000 tons, compared with 155,000 tons in July and 177,500 in August, 1959, according to a preliminary estimate of the International Rubber Study Group. Production during the first eight months of this year totalled 1,265,000 tons.

Special Article

GERMANY'S UNFAIR SHARE

By

PAUL BAREAU

AMONG nations, as among members of a family, disputes about money are usually the most damaging disturbers of goodwill and amity. Relations between the countries of the Western alliance have recently been bedevilled by differences on economic and financial issues. Among these causes of disruption has been the estrangement in Western Europe due to the formation of two trading blocs, the Six of the Common Market and the Seven of the Free Trade Association. This, however, is a separation to which we are becoming both inured and resigned. It would be wrong today to regard it as a focus of virulent infection.

More envenoming at this juncture is the undercurrent of resentment felt by the United States, and to a lesser extent by the United Kingdom, at the alleged unequal and unfair distribution of the burden of collective defence among the members of the Western alliance. In this item of collective defence must be included not merely the military budgets but also the aid to less developed countries which must be regarded as the truly constructive part of the strategic outlay on the cold war.

This resentment has recently been crystallised by the coincidence on the one hand of serious pressure on the dollar and the U.S. balance of payments and on the other of the continued accretion of reserves to the greatest current creditor of the free world, namely Western Germany. These may be coincidental but they are also interrelated phenomena, for it is in the German current surplus that we can find the major reflection of the overall deficit which has for some time past been run by the United States.

The steps so far taken by the United States to ease this pressure on their balance of payments include a promised cut in their external military expenditure which will fall with particular severity on what might be called the trimmings of that expenditure, namely, the wives and children and the various facets of the American way of life that have in the past accompanied American soldiers serving abroad. Such economies cannot, however, account for more than a minor part of the problem with which the American authorities are dealing.

In addition, therefore, there are to be endeavours to secure from other countries a larger contribution to common defence and also to the economic aid given to countries in need. The matter was taken up in very specific terms when a United States delegation, including no less a person than Mr. Anderson, the Secretary to the U.S. Treasury and Mr. Dillon of the State Department, visited Bonn in order to press the West German Government on these points. The Americans suggested that given the persistent creditor status of Germany and recent spectacular reinforcement of its reserves, that country should play a much more important role in underwriting the support costs of American troops maintained in Germany. The specific demand made on the West German Government in this context was for an annual payment equivalent to $600 million.

Two supplementary demands were made by the American delegation. The first was that Germany should abandon some of its agricultural protectionist devices. It was argued that restrictions on imports of agricultural produce into Germany could no longer be justified on balance of payments ground and should therefore be abandoned. In addition it was suggested that a far greater contribution to economic assistance to less developed countries should be forthcoming from Germany in the future than had been provided in the recent past.

The only positive answer to these three suggestions came in respect of foreign aid on which Germany promised, though in decidedly vague terms, to earmark anything upto 3,000 million D-marks for overseas investment in an indeterminate future. The problem of agricultural protection was remitted to the impending discussions in Geneva between signatories of the General Agreement on Tariffs and Trade. As for larger German contribution to support costs, the answer, insofar as it can be read between the lines of the official communique was a point blank refusal.

The main reason for this refusal may well be tactical. Dr. Adenauer, the German Chancellor, is soon going to Washington to make the acquaintance of the new President of the United States. The German Chancellor may reserve his concessions to a time at which he can make them, not to an outgoing but to the new Kennedy Administration. The good marks that might be earned by Germany in acceding to American requests, would shine with greater virtue and more lasting effect if the arrangements were made with the new administration than if the German concessions merely added a few leaves to the meagre laurel crown of the departing President. It may be deemed good tactics on Germany's part to hold its hand for a few weeks.

Meanwhile, however, the problem of imbalance in international balances of payment persists. Germany is still pilling up vast surpluses and is investing, or rather sterlising them partly in gold but mainly in reserve balances in the United States. If, as a result of this disequilibrium the United States are forced to take defensive action, including a tightening of credit, creditor Germany could well become the immediate cause of deflationary infection in the free world.

Contractionist and defensive measures by the United States would quickly spread their unfortunate effects to other parts of the free world. That would be a far graver and more disruptive matter than mere resentment at the unfairness of the share borne by Germany in the collective defence of the West. It is, therefore, to be hoped that the rebuff which met the American delegation in Bonn, will not be the last word uttered in the debate on this all important issue.

Cement Yesterday, Today and Tomorrow

By

CROESUS

I THINK it would be a worthwhile essay for someone to find out the number of industries which have already got their licences, foreign exchange, technical know-how and even plant and machinery that are being stalled for want of cement. Actually, according to an industrialist, whereas he could secure all these things without much difficulty or waiting very long, it has not been possible for him to obtain cement for the release of which, he said, he had applied months ago. As much as this scarcity in cement, the suddenness with which cement shortages have been occurring all too frequently in our country requires to be carefully gone into.

Now, shortages may occur either due to an unprecedented increase in demand, or to an unforseen fall in production or to a failure of transport, if not a faulty system of distribution, or perhaps to a combination of all in varying degrees. There has certainly been an increase in the demand for cement, but it cannot be said that this increase has been unprecedented. Certainly the rise in demand that has eventuated was more in the realm of expected possibility than the target for the increase in cement under the Second Five-Year Plan from 4.9 million tons to 16 million tons that had been initially envisaged. Actually, the Government of India even issued industrial licences to raise the cement manufacturing capacity in the country to 15.4 million tons! Only the financial crisis that hit the country at the end of October, 1957 made it impossible for all the projected increases in plant capacity to materialise. As Dr. F. P. Antia of the Cement Marketing Company of India (Pvt.) Ltd., told a Rotary Club meeting, last week, some projected works had to be cancelled, while others had their pace and phase of construction slackened. This reflected itself in a steady decline in the demand for cement, so much so that the order-load on the factories fell very low and a surplus position developed. The position was worsened, atleast to some extent, by the considerable consumer resistance that followed the increase in the price of cement to Rs. 132 per ton in retail. The net result was a cement glut during 1958 and 1959 and even as late as the Spring of this year. In short, therefore, any unprecedented increase in the demand for cement as a contributory to the situation that has developed must be dismissed.

As regards the shortfall in capacity, while there has been a definite and drastic fall, especially as compared to the initial targets under the Second Five-Year Plan — 9.5 million tons (actual expected) as against 16 million tons (originally targeted) — one cannot argue that this has been the result of unforeseen factors. The non-materialisation of the targeted capacity is entirely due to the impossibility of the goal sought to be achieved. What was planned to be achieved was practically a three-fold increase in the capacity within five years. Referring to this Dr. Antia said: "I do not know if any industry anywhere in the world has aimed at or achieved such a target. We seemed to have lost all sense of reality". Anyway, in the event, the country bids fair to reach not 16 million tons as orginally envisaged, nor even 10.3 million tons as subsequently revised, but only 9.5 million tons (estimated) at the end of the year 1960-61.

This poor performance, combined with the demand that has picked up to satisfy the accelerated tempo of constructional activity with the approaching end of the Second Plan, has led to the scarcity that has now set in. But, more than this, it is the failure on the transport front, not to speak of faulty distribution, that must be mainly blamed for the avoidable scarcity that we are witnessing today. In this connection, what Dr. Antia had to say in worth quoting: "Notwithstanding the fact that it has claimed the largest single appropriation during the First and the Second Plans amounting to Rs. 1,525 crores, the Railways have found themselves completely incapable of coping with their normally expected assignment of keeping the industry (cement) supplied with coal, stores, and raw materials. Thanks to this inability, several plants are being closed wholly or partly even today. The dislocation of the railway transport caused by the July strike of the Central Government employees deepened the scarcity and, at some plants, the effect thereof is still being felt ..... The railways found themselves incapable of moving the full quantum from the factories to the consuming markets."

While on this point, I must refer to the magnificent efforts the industry has been making to supplement the transport facilities provided by the railways. Dr. Antia stated, in the course of his Rotary address referred to above, that the ACC has introduced, at as many factories as possible large-scale transport of cement by roads. He claimed that, currently, ACC plants are transporting by road at the rate of about 8 lakh tons of cement per year. But, as he added, not all cement plants in the country are so located as to be able to use roads for despatch of cement. In fact, the biggest unit of the ACC itself, namely its plant at Shahabad, which feeds as important a market as Bombay city and Maharashtra State, has no read communication at all! So also is another ACC factory at Lakheri. The fact that not only many of our villages but also some of the factory towns are thus handicapped for want of road communications must be news to many, not excluding the Planning Commission.

One can understand the absence of roads as a hindrance to transportation of goods. But, if there are obstacles in the way even where there are roads that could be put to use, it is something that cannot be tolerated. It was painful to note from Dr. Antia's talk that "some cement plants are so located that, with the present hostile attitude of Central and State Governments towards road transport, they find the consuming markets beyond the roadable distances. "Inter-State road transport," he said, "is even more of a problem, what with the present policy on road transport and the sales-tax hurdles." There can be no better proof of the anomalies presently prevailing in the cement transport than the fact that the Bombay market should be obliged to ship its cement from factories as far away as Tinnevelly via Tuticorin at the extreme southern tip of India.

And now, what are the prospects of adequate, assured and continuous supply of cement under the Third Five-Year Plan? While it is estimated that the demand for cement would rise to about 14 million tons by 1965-66, the target capacity of the industry has been pitched at about 15 million tons, or an effective capacity of about 14.25 million tons. In other words, the projected production would be on a par with the possible demand; nor is this an unrealistic projection, considering that the capacity of the industry rose from about 3.3 million tons in 1950-51 to 4.9 million tons (an increase of 1.6 million tons) at the end of the First Plan period and will further rise to 9.5 million tons (an increase of 4.5 million tons) at the end of the Second Plan. In other words, the increase contemplated over the Third Plan period is about the same as during the Second Plan or only slightly higher. Even so, after noting the many chronic problems that face the industry, one feels that this achievement too can be realised only with considerable difficulty. Unless, therefore, early and earnest attention is given to the solving of the difficulties that are being faced by the industry, the hope of a steady, abundant and assured supply of cement even throughout the Third Plan period may prove elusive.

Tata Hydro's Eloquent Testimony

IT was just as well that I chanced to come across the fascinating story of the Tata Hydro-Electric Power Company, Ltd., consequent on its completion of fifty years on November 7, 1960, as I was ruminating over one more of our Prime Minister's perpetrations at the recent Raipur session of the All-India Congress Committee. This was by no means new or novel, but, perhaps, as he was speaking more as a Congress leader, Mr. Nehru laid it so thick that even those who were not wont to take his criticism of the private sector seriously started sitting up and rubbing their eyes. Mr. Nehru solemnly told the A-ICC meeting that the private sector 'had neither the capacity nor the mental approach to set up heavy industries', because 'it was obsessed with securing quick dividends'. One has only to peruse "The Gift of Power", the brief story of Tata Electricity from 1910 to 1960 to dismiss this cavalier condemnation of private enterprise as not at all called for. The Tata Hydro-Electric Power story is a saga of imagination and initiative of an individual who had great capacity and a rare breadth of outlook. But this is just one instance, in one sphere only, of the capacity' and 'mental approach' of but one enterprise in the private sector. One can recall scores of such instances, although not every one of them has been recorded, let alone carefully compiled. I wish some one would take the trouble of collecting and publishing these instances, if only to prevent posterity from drawing wrong conclusions after reading such speeches as those of Mr. Nehru at Raipur and other misguided enthusiasts of socialism. May I commend to their notice—for a proper appreciation of the changing concept of Socialism—the excellent and thought-provoking article on "Welfare without Imbalance" in the latest issue of "Swarajya" by the veteran journalist, Mr. Pothan Joseph?

It was again the great Jamshedji Tata that gave us the first steel plant who first conceived the idea of harnessing electricity for industrial uses. He had watched the growing use of electricity abroad and its tremendous advantages. As early as in 1875, when electricity was still an undreamed of luxury, he, a spokesman of the private sector, chose to dream of electricity for this country. Long before coal supplies began to pose a problem to the industries of Bombay, it was this far-sighted 'entrepreneur' who thought in terms of making Bombay industries less dependent on coal. His "mental approach" to the problem of generating electricity whereby he proposed to achieve this was certainly not one of "securing quick dividends"—in fact, the first dividend on ordinary shares that the Tata Hydro Electric Power Company Limited gave was only in 1916 that is nearly six years after the starting of the company—but one prompted by his desire "to make Bombay a smokeless city". It was typical of him, we are told, that "the thought of making money never entered his head; he looked upon his scheme as a national endeavour initiated by Indians for Indian industries and homes".

What is striking about Tata Hydro Electric Power is not merely this "missionary spirit in business", but the magnitude of the project visualised by Jamshedji. It was indeed a prodigious scheme that he conceived for generating electricity. Discovering in the monsoons a vast potential for electricity, he turned his thoughts to how to harness the rainwater at its highest in the Western Ghats, to check the flow of two rivers that drained away the water and make them flow westward instead of eastward. Could it be that the success that attended these 'Bhagirathian' efforts inspired the diversion of waters of Koyna today to harness electricity? If so, the private sector could well claim to have blazed the trail for the public sector, though I am not sure how far the latter would accept the claim. Be that as it may, here is a brief but succinct description of the ambitious scheme referred to above:

> "Three great reservoirs were to be constructed to collect the rain water in the valleys dividing the Western Ghats. The first, the Lonavla Lake, at the Southern point, was near Lonavla at a height of 2000 ft. By means of a dam almost three-quarters of a mile long, water would be stored during the monsoon. This would mean a regular supply for the generating plant. The Walwhan Lake was to act as a storage reservoir for the dry season. In another corner the great Shirawta Lake would take up 5 square miles. If released, the combined waters of these three lakes would have flooded the entire city of Bombay as it stood in 1907 under 5 feet of water. The water then rushed through huge pipes, 7ft. in diameter to Khopoli, more than 1,700 ft. below, developing a pressure of 750 lbs. to the square inch by the time it reached the power house.
>
> "Here the hydraulic energy is converted into electrical energy through generators. The starting pressure of 5,000 volts is raised to 1,00,000 volts by

means of static transformation. The energy is then transmitted to the Parel Receiving Station 43 miles away."

I am tempted to assert that the success of the Tata Hydro Electric Power Company, as of several other utility and industrial undertakings in India, was greatly facilitated, because it began as a joint Indo-foreign enterprise. For this meant not only the ready availability of know-how, far more difficult to secure then, than it is now, but also the assured sympathy of even an alien government. The letter of Sir Richmound Ritchie the permanent Under-Secretary of the India Office, London, to Jamshedji, in which he said that, if the scheme for utilising the electric power generated in the heights of the 'ghats' for the purposes of Bombay and its neighbourhood is successful, "it will be an achievement of which you may indeed be proud" is a clear proof of that sympathy.

One of the bad names given to the managing agency system to hang it is that, since, under this system, the business passes from father to son and a great father does not always beget a great son, the business cannot be assured of the same high quality of leadership as before. Among the many business houses in India which have totally disproved this by deliberately giving proper education and training to the scions of the family, the House of Tatas is the most notable. So it is not surprising that, when Jamshedji passed away in 1904, that is six years before his dream was translated into reality, his elder son, Dorabji Tata, picked up the thread (or is it wire?) where his illustrious father had left and saw it soundly and firmly fastened to tower after tower that spans the distance from the 'ghats' to Bombay to give us the electricity we so freely use today. The following extract from the story puts it more aptly:

"The whole burden of succeeding a man of vision descended on Dorabji, after the death of his father. Although normally a clever father rarely has a clever son, the Tata family has continuously produced brilliant men, and Sir Dorab had no intention of allowing any of his father's schemes to lapse."

Even in this age of advanced planning, as we seem to believe we are living in, we find schemes envisaged in the one five-year plan being carried over to the next and the next and so on. But, without any high-sounding words like a plan, in almost four years to the day when the foundation stone had been laid, it is noteworthy, the power of Tata Hydro Electric Co. Ltd., was switched on by Lord Wellington.

Mr. Nehru charged the private sector as being "obsessed with securing quick dividends". If this were so, could the Tata Power Co. Ltd. make the claim, as it is able to make today, that "power was sold to the consumer at the lowest rates and these rates continued for the next 45 years to be lower than those charged in any other part of India?"

Again, if "quick dividends" were the only look out of the private sector, it would not think in terms of expansion. But the Tata Hydro Electric scheme has expanded so much since that today it serves an area of more than 1,000 sq. miles of the Bombay-Poona region.

Then, again, I do not know whether to describe the farsightenedness displayed by the Tatas in anticipating the demand for power and providing for it well in advance as "capacity" or "mental approach." As far as I am aware, it was certainly not the public sector that troubled itself to think of what would happen to all this supply of electric power if the one simple natural phenomenon on which the hydro-electric projects depended, namely the rains, failed. Whoever bothered about it, I know the Tata group of power companies saw the solution to it in thermal power, but it is common knowledge that, far from facilitating the full expansion of their thermal projects, needless obstacles were placed in the way, if only for a time. It is a comforting thought that, at least at times, the public sector does not take long to discover its faults and also make amends for it.

Business Notes

Company Law

THE TECHNIQUE OF ASSURANCES

ON FRIDAY last week the Lok Sabha adopted the clause on special audit of the accounts of specified companies during the second reading of the Companies (Amendment) Bill. This was one of most controversial clauses in the Amendment Bill incorporated at the instance of the Joint Committee. Some of the objections raised against this clause were that unqualified power to institute special audit should not be conferred upon the executive department and a show-cause notice should be issued to the company to explain how the situation really stands before an order for special audit is issued.

These objections cannot be said to have been rejected out of hand by the Government and at any rate the reasoning behind them was not disproved. On the other hand, it should be clear from the tenor of the reply of Mr. Nityanand Kanungo that he tacitly accepted the reasoning and propriety of the objections. At the fag-end of his reply he gave positive assurances to the effect that intimation would be given to the companies concerned as a matter of normal procedure, except in cases where it was deemed inexpedient in the interest of safeguarding evidence, that the Company Law Advisory Commission would be consulted in the matter of directing special audit and that the decision to order appointment of the special auditor would be taken at the ministerial level. It undoubtedly goes without saying that these assurances will be observed fully in the spirit in which they have been given by Mr. Kanungo.

This is beside the point. The fact remains that in a strict legal sense such assurances are no substitutes at all for express provisions of law. The plain legislative course was to amend the clause by inserting the assurances, verbally given, as its integral parts. In interpreting the law, the courts will be guided by the plain language in which its provisions are couched and the legislature will be taken to have conveyed its intention and meaning in the language actually used. Verbal assurances, or for that matter any other solemn commitments, that have been made in the course of parliamentary discussion cannot form any part of the law at all and the courts will be under an obligation to disregard them in their duty to interpret the law. On Monday this week again, on another controversial clause in the Bill regarding appointment of sole selling agents of companies, Mr. Kanungo gave the assurance

that the power to impose official controls on their appointment would be used sparingly. This novel technique of giving assurances has no place in the legislative process and the sooner it is dropped the better. Assurances must be incorporated in the relevant provisions of law so as to be binding on the courts in their duty to interpret law.

The Third Plan

INVESTMENT

COMMENTING ON the Estimates of Investment and Resources in the Draft Outline of the Third Five-Year Plan, the Working Committee of the All-India Manufacturers' Organisation (A.I.M.O.) has made a few observations which require to be widely disseminated, inasmuch as they follow a careful and severely objective assessment of the problem. "When current revenue is able to contribute as much as Rs. 195 crores for financing the Plan outlay of Rs. 1,080 crores in 1960-61," and AIMO Committee observes, "it is incumbent upon Government to maintain at least this rate of saving and investment throughout the Third Plan period." According to the original estimates of the Planning Commission, it may be recalled, there should have been a surplus of Rs. 350 crores from current revenue at the existing (1955-56) rates of taxation. Actually, however, even after taking into account additional taxation to the tune of Rs. 295 crores, the surplus that the Plan could benefit from was only Rs. 195 crores. In other words, there was a net shortfall of Rs. 100 crores, mainly because of the very large non-Plan expenditure, as witness the following extract from the Ninety-Second Report of the Estimates Committee of the Lok Sabha by the A.I.M.O.:

"The Committee considers that, in view of the phenomenal rise in non-Plan expenditure in spite of the reasonable size envisaged by the Planning Commission in that direction, it would be most desirable for the Planning Commission to have a special study made of the disproportionate rise and make suitable suggestions to see that such expenditure is kept under control and will not expand in the Third Plan as it has done during the Second Plan period."

The Estimates Committee has also indicated that as much as Rs. 604 crores of additional revenue raised by the Central Government have been absorbed by increases over the Plan estimates in non-Plan expenditure. Drawing pointed attention to this aspect, the A.I.M.O. has appealed to the Government to set an example at least now by maintaining, if not improving, the rate of surplus in order to be able to finance the Third Plan. As regards any further increase in non-Plan expenditure, the A.I.M.O. Committee is of the view that such should be met out of the increased revenue, which, it says, is possible, even at current levels of taxation in view of the likely expansion of the economy.

ADDITIONAL TAXATION

DEALING WITH the question of additional taxation to the tune of Rs. 1,650 crores envisaged by the Planning Commission during the Third Plan period, the A.I.M.O. Committee says it is frankly unable to appreciate the reasoning of the Planning Commission. Taking the percentage of tax revenues to National Income during 1960-61 as 9.5 (approximately) or Rs. 1,230.83 crores, it estimates that, over a period of five years, taxation at the current level, (even when there is no expansion in the economy) should yield Rs. 6,154.15 crores. If, however, the taxation is raised gradually from 9.5 per cent to 11 per cent of the National Income during 1961-66 as proposed, the total yield during the five years 1961-66 would be as much as Rs. 7,985.3 crores, that is Rs. 1,831.1 crores more. Deducting from this the yield from normal expansion that may be expected during the Third Plan period, in the light of the experience of the First and the Second Plans — this has been estimated by the A.I.M.O. at Rs. 850 crores — additional taxation will be Rs. 981.1 crores and not Rs. 1,650 crores as visualised by the Planning Commission. Instead of resorting to further additional taxation, therefore, the A.I.M.O. has emphasised the need for greater efficiency in tax collection and administration. There is large-scale tax evasion in the country and, if this is checked, opines the A.I.M.O., it should be possible for the Government to add to the tax revenue by at least Rs. 250 crores during the five year period—1961-66.

The A.I.M.O. has also gone into the question of the proposed share in the Plan outlay of the private sector and has urged that the investment outlay of this sector should be Rs. 4,700 crores, as against only Rs. 4,200 crores now allotted to it. In arriving at the former figure, the A.I.M.O. has taken the following three factors into account:

(i) Growth in population to the extent of 10 per cent during a five-year period which naturally enlarges the size of the private sector as it would comprise more people.

(ii) Increase in 'per capita' income to the extent of 20 per cent during the Third Plan period, and

(iii) the proposed increase in saving from 8 per cent to 11 per cent.

It is noteworthy that, out of the proposed investment of Rs. 4,700 crores as above, the A.I.M.O. wants at least Rs. 1,300 crores to be earmarked for large and medium industry and minerals.

Industry

TUBE INVESTMENTS

AT THE Eleventh Annual General Meeting of the shareholders of Tube Investments of India Limited, Sir A. Ramaswami Mudaliar, Chairman of the Company, had a satisfactory progress to report about the expansion schemes in connection with the cycle factory and the tube factory. The association in technical matters for the chain project has now been secured from Messrs. American Steel Foundries International, and a subsidiary of the Tube Investments of India Ltd. has been formed under the name of T.I. Diamond Chain Private Ltd. Another subsidiary company to manufacture lamps under the name of T.I. Miller Private Ltd. is likely to be established shortly in collaboration with Messrs. H. Miller & Company Limited of Birmingham. So far as the Tube factory is concerned, a second tube mill has been erected and is in operation. It is to be noted that all this expansion and the consequent foreign exchange outlay have been made available as a result of the co-operation of Tube Investments of Birmingham. The foreign exchange has been obtained partly in the increased equity capital allotted and partly in the form of loans.

Regarding industrial development in Madras State, Sir A. Ramaswami Mudaliar made it clear that shortage of power and to some extent the provisions regarding 'development rebate and how and when it is to be provided for', were the major factors responsible for its slow and inadequate growth. He stressed that this tax legislation stood in the way of expansion because the incidence of such a provision infringed seriously on a fair dividend policy which a company wanted to pursue.

Since adequate power supply is essential for rapid industrial development, it is imperative that possibilities be explored both by the Centre and the State Government to add to the power supply in that area.

Locomotives

MANUFACTURE OF DIESEL LOCOS

LAST WEEK, during question hour, the Railway Minister disclosed in a cryptic statement that the Government had arrived at a decision to start the manufacture of diesel locomotives in the public sector—apparently at the Chittaranjan workshops. This decision is as surprising as it is abrupt. India is about to make her debut in the export market with her recent tender for the supply of steam locomotives to Argentina. As reports indicate, there are also chances of exporting steam locomotives to Pakistan. One would have expected that the Railway Board would concentrate its efforts on utilising our loco-manufacturing capacity for competitive production to capture the export market rather than make a diversion in a dubitable direction. It is rather curious that Mr. Jagjivan Ram did not find it necessary to explain in detail the reasons for Government's decision in spite of the fact that it has far-reaching consequences.

It is true that the trend all over the world is to veer away from the use of steam traction to electrical and diesel traction. This is for reasons of efficient and cheap operation. But the decision to switch over to diesel locomotives cannot be taken in our country in a light-hearted manner. India is greatly deficient in oil resources and although some encouraging signs of oil finds have been available in the Cambay region, there is absolutely no warrant for the conclusion that production of indigenous oil in substantial and sufficient quantities for our domestic requirements is anywhere in sight. The change-over to diesel locomotives would mean that this country will have to spend its scanty foreign exchange on the import of diesel oil at a time when coal and electricity are available in the country. The current difficulties of suitable supplies of coal of the requisite quality are a passing phase. In the light of the discovery of coal deposits in the Bengal-Bihar region, it is reasonable to assume that the coal shortage will be tided over in course of time. The decision to manufacture diesel locomotives for use on Indian railways can only be a long-term decision. It should not be finalised unless there is a reasonable certainty that we can produce all the oil we require and in any situation it should not make our rail transport system vulnerable to the exigencies of fuel supplies from abroad. There is still time to reconsider and rescind this hasty decision.

Foreign Trade

INDO-BURMESE TRADE

ON THE Indo-Burmese Trade problems, there was a frank exchange of views between the Government of India officials and the Burmese Trade Delegation, which visited this country recently. It was made plain by the Burmese Delegation that they would not be prepared to buy from India unless the prices were competitive and deliveries prompt. In their discussions with the South Indian Chamber of Commerce, they emphasised that in future the prices of spices be quoted lower. They, of course, agreed to the procedure of calling for tenders in buying yarn and mill cloth from India. Burma is also prepared to pay in sterling for goods bought in India. Payment realized in sterling will be advantageous for this country as her sterling balances have now reached the bottom level of Rs. 141 crores.

During the talks the Burmese Delegation offered to sell and the Indian Delegation agreed to purchase 200,000 tons of rice out of 1961 crop for the present. The Burmese Delegation also agreed to offer an additional quantity later, if possible. The agreement was also reached that the volume of trade between these two neighbouring countries should be raised to as high a level as practicable and that the question of entering into another long-term trade agreement and also another long-term rice agreement should be considered. The existing five-year rice agreement between India and Burma is to be over by the end of this year.

Trade at present between India and Burma is governed under the Agreement signed on September 5, 1956. India had an unfavourable balance of trade to the tune of Rs. 50 lakhs in 1959 and during January-August 1960, it rose steeply to Rs. 1025 lakhs. The main imports from Burma are cereals and cereal preparations, wood, lumber and cork and base metals. Exports from India mainly consist of fish and fish preparations, coffee, tea, cocoa, spices, mineral fuels, animal and vegetable oils, textile yarn, fabrics, transport equipment and machinery other than electric.

While the anxiety on the part of Burmese to protect their own hand-weaving industry and to procure things on lower prices is understandable, it is worth considering to what extent Indian prices compare favourably or otherwise with those of supplies from the non-Communist countries. Burma is at present looking for light machinery, electrical goods, textiles, coal, jute goods, dry prawns, yarn and pulp for which the Burmese Trade Delegation had come here to make on-the-spot purchases. The encouraging factor is that India is in a position to supply these goods and the talks have concluded assuringly. It is now only to be hoped that a permanent arrangement will be arrived at in due course of time.

FROM THE CAPITAL'S CORRIDORS

INDUSTRIAL POLICY RESOLUTION

THE statement of Sardar Swaran Singh, the Union Minister for Steel, Mines and Fuel, on the Government of India's coal production policy, made in the Lok Sabha about two weeks ago, has provoked a controversy in regard to the role of private sector in the industrial development of the country. It has been argued by economic commentators that the statement is a departure from the 1956 Industrial Policy Resolution. According to them, the departure has been warranted by the exigencies of the situation at present prevailing in the country.

Two questions have been posed in this respect: (a) Whether the development of the country and the industry has been retarded because the public sector has followed a dog-in-the-manger policy in the matter of coal and alloy metals in particular as also in exploration of oil and gas and (b) whether the proposed implementation in the Third Plan of the Industrial Policy Resolution of April, 1956, will lead to undue preponderence of the public sector.

The view held in the official circles is that the Government and the Planning Commission are still being guided by the Industrial Policy Resolution of 1956 which reserves for the public sector the establishment of new industrial units under some basic industries listed in Schedule "A" of the Resolution and extends its domain to the industries listed in Schedule "B" to enable the Government to assume control at some of the strategic points of the economy. Since, however, the Resolution provides for relaxations to be made in special circumstances, in practical application there have been quite a number of instances of relaxation in favour of private enterprise having regard to the circumstances which have developed in the last two to three years.

In respect of coal, official circles point out that the programme of development under the Second Plan gave adequate scope for the private sector to expand its production — the private sector was allowed to raise an additional 10 million tons of coal. The target set in the Second Plan — 60 million tons of coal — involved the raising of production by 22 million tons during the five years to 1960-61. The bulk of this additional production had to come from new mines and in terms of the Industrial Policy Resolution these mines had to be in the public sector. Since the policy did not rule out the expansion of existing private collieries — and such expansion being possible — the private sector was allowed to increase its production from the existing workings and immediately contiguous areas by 10 million tons. It is, therefore, not correct to say that the public sector has followed a dog-in-the-manger policy in the field of coal. If the target is not achieved in full, it is due to the inherent difficulties in establishing new production of the order envisaged — the areas had to be investigated in detail, which is a time-consuming process, before project reports could be prepared and an organisation set up and geared to shoulder this big task. Almost the whole of the equipment required had to be imported and this required a large amount of foreign exchange, the obtaining of which in the initial stages of the Plan was a little difficult. In spite of these difficulties, it is expected that by the end of the Second Plan period the capacity would have been established for a production of about the same magnitude as the target, though the actual production might fall short of it.

MINERAL OILS

The official contention in regard to mineral oils is as follows: "Mineral oils are listed under Schedule 'A' of the Industrial Policy Resolution. This means that all future development in this field will be in the public sector. The Policy Resolution does not, however, preclude the possibility of Government securing the co-operation of private enterprise in this field when national interests so require. Government's policy in regard to oil exploration and production enunciated in November, 1959, while laying down that Government can reserve certain areas for exclusive exploration through their own agency, also permits throwing open other areas for exploration by private enterprise. In permitting the private sector to explore for oil, it is necessary to ensure that natinal interests are safeguarded and these demand a careful consideration of the terms and conditions on which private parties can be allowed to enter the field. The Petroleum and Natural Gas Rules notified simultaneously with Government's policy on oil indicate in broad terms the scope for the private sector to enter the field. On the basis of this, Government invited offers from foreign parties with sufficient standing and experience in prospecting and mining of petroleum and natural gas resources. Offers received in response to this are under examination and Government will decide these applications after discussing with the parties concerned."

ALLOY METALS

In the case of alloy metals, it is pointed out that the schemes put forward by private enterprise for the manufacture of ferro-silicon, ferro-manganese, ferro-chrome and other ferro alloys were licensed by the Government and the delay, if any, arose on account of the need to make arrangements for foreign exchange for the import of plant and machinery which was a problem common to the projects both of the public as well as the private sectors. In the case of alloy tool and special steels, including stainless steel, the investment requirements are very large and, therefore, the need for evolving a co-ordinated programme of development embracing the schemes of the Government and the private sector assumed considerable importance. The assessment of the requirements for these products under different categories was also a somewhat time-consuming process as compared to other industries. These two factors are the principal reasons, rather than a doctranaire approach on the part of Government, which account for the loss of time in reaching sound decisions on the overall programme as well as individual schemes proposed for consideration. This phase of preparatory work on alloy steels is now over and the schemes of both the public and the private sectors can move forward with speed hereafter.

PUBLIC SECTOR'S ROLE

The place to be assigned to the private sector under the Third Plan, official sources contend, has to be judged mainly against the background of the overall requirements of diverse industrial products by the end of the Third Plan and the extent to which these could be met from industrial developments in the public sector.

The responsibilities of the State are much larger than those of private industry since it has to expand resources for the development of the overheads required for the entire national economy. Against this background, its responsibility in the industrial field has been conceived basically in terms of control at strategic points and in terms of the development of industries listed under Schedule 'A' of the Industrial Policy Resolution. By undertaking the manufacture of commodities like iron and steel and a wide range of capital goods, the State has a controlling position in relation to the activities of the private sector. Though in terms of financial outlay the investments under the private sector are larger than under the public sector, the preponderance of the former is more apparent than real, if due regard is taken of the importance of the fields for development proposed for these two agencies.

It is perhaps inevitable that in the early stages of

industrial development the number of firms in a position to command larger financial resources should be limited and that consequently these firms should play at the outset a disproportionately large role in the industrial expansion, particularly in fields requiring heavy capital investment. In addition, the following factors have contributed to a substantial part of industrial growth in many fields being fostered by a few big houses.

(i) A large part of the capacity established during the First and Second Plan periods has been the result of expansion of existing undertakings, i.e. main steel plants, aluminium plants, cement plants, paper plants, rayon plants etc.

(ii) The existing units operating in the field of consumer and producer goods have sought to extend their manufacturing activities into allied fields, e.g., rayon and staple fibre plants extending their operation to the manufacture of caustic soda and chemical pulp, paper plants undertaking the manufacture of caustic soda, arrangements of some automobile manufactures (TELCO) for production of rubber tyres and of the main steel producers (TISCO) for the production of pipes, refractories and ferro-manganese.

(iii) Foreign houses operating in India and able to command considerable financial resources have extended their manufacturing activities through their subsidiaries in this country, sometimes in financial collaboration with Indian enterprises, e.g., ICI expansion through the Alkali Chemical Corporation of India (Polythelene and Rubber Chemicals), Indian Explosives Ltd., and ICI-Atul.

In the circumstances, it is pointed out by official sources, industrialisation has entailed a substantial enlargement of the activities of certain industrial groups and at best one could only hope that this tendency would be kept within reasonable bounds. That the need to check trends towards excessive concentration has not been overlooked is evidence from the fact that there are quite a few instances where in the matter of licensing new units, preference has been deliberately given to new-comers rather than to concerns already established in the line. Other measures to be taken consistent with the requirements of the situation during the Third Plan are matters for further detailed study. A start has been made on these further studies by the appointment of a Committee, headed by Professor Mahalanobis, recently.

OVER-CONCENTRATION

Over the last 10 years, it is asserted, while a few big houses have undoubtedly expanded, there has also been a considerable addition to the total number of industrial entrepreneurs in this country and at the same time a number of small industrialists have moved up to the middle rank and soms of those in the middle rank having enlarged the scope of their enterprises will soon begin to stand comparison with the giants. This process already set in motion will, to some extent, itself provide a cure for the disease of over-concentration.

Since the commencement of the First Plan, there has been a significant increase in the investment outlays under industry as compared to the earlier period. The step-up of investment was specially significant from 1954-55 onwards. The importance of the growth of the public sector has to be assessed in terms of the control which it is expected to obtain in basic industries which will set the pace for expansion in the rest of the industrial sector as well as the economy as a whole e.g. iron and steel, fertilisers, machine building plants, heavy industrial machinery, mineral oils, basic chemicals and essential drugs, rather than in terms of the figures of actual outlays made by it as compared to the private sector.

The rising levels of investment in the successive Plan periods since 1950-51 and the rapid expansion of the public and the private sectors in the industrial field are illustrated by the following data:

(Rupees crores)

	Estimated Gross Fixed investment in large and medium industries		
	Public Sector	**Private Sector**	**Total**
At the commencement of First Plan	48	750	798
At the commencement of Second Plan	109	1080	1189
At the commencement of Third Plan	834	1905	2789
At the end of the Third Plan	1770	3100	4870

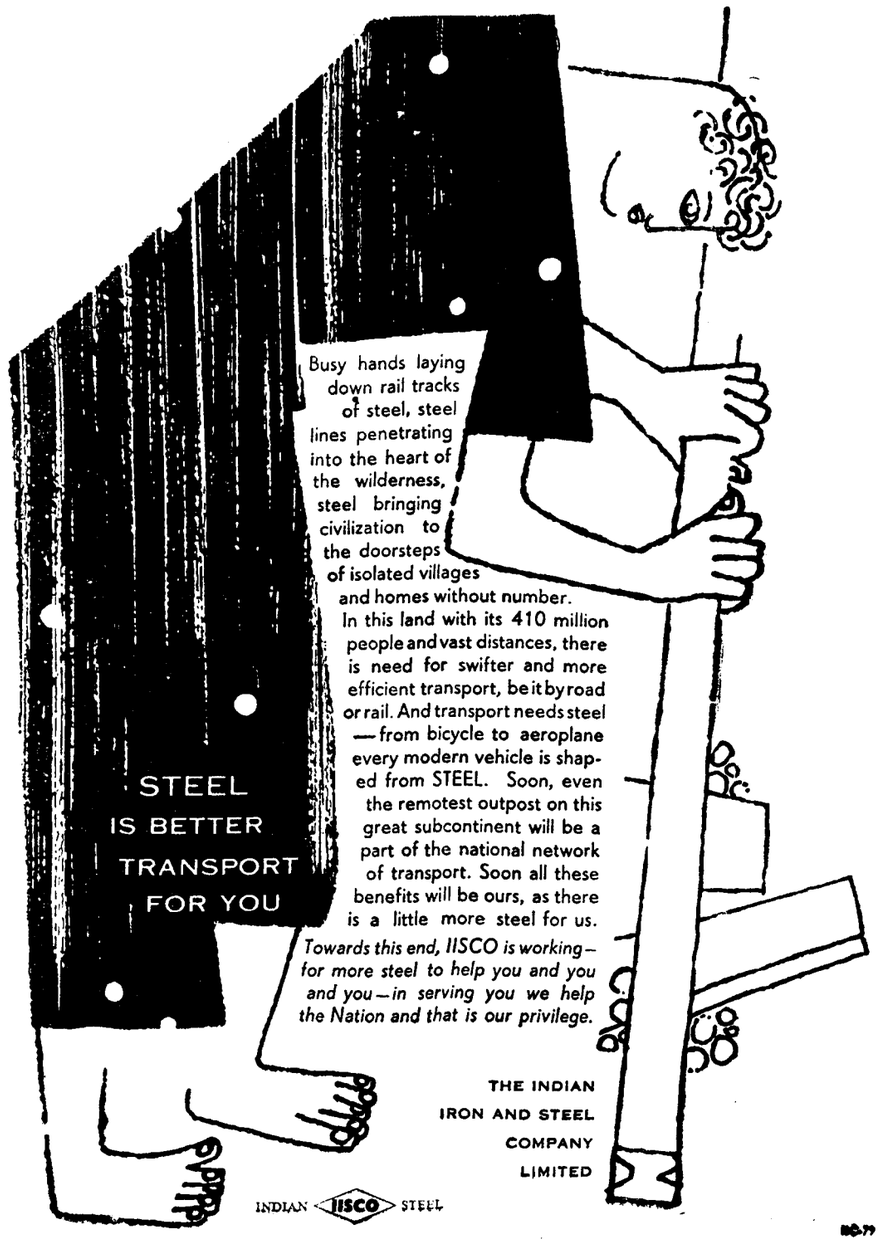
THIRD PLAN

Some re-thinking, it is understood, is going on in Government circles on the allocations for power, mining and transport provided in the Draft Outline of the Third Plan. It is increasingly being recognised that bigger allocations for these projects may have to be made if the bottlenecks experienced during the Second Plan period are to be avoided. It is now agreed that lack of power is holding up rapid industrialisation, particularly in the South. It is also well-known that inadequate planning of mining of coal and its movement by railways has hampered production in the three public sector steel plants. The final decision on the matter, however, rests with the Planning Commission which has to accord priorities for various developmental activities.

COAL TARGET

The Coal Council at its meeting here last week-end adopted a production target of 37 million tons of additional coal for the Third Plan. 17 million tons of this would be raised by the private sector and 20 million tons by the public sector. The private sector target includes coal to be raised in new areas.

The Coal Council has asked the Council of Scientific and Industrial Research to appoint a Committee to go into the question of feasibility of underground gassification of coal for generation of power and to locate suitable areas where this could be tried out on a commercial scale. The Committee would also be required to indicate the economics of the proposal.



The Coal Council's Committee on Requirements and Utilization has suggested that the Government should go ahead with the production of smokeless domestic fuel from coal and the Planning Commission should be approached to give it the necessary priority.

About the movement of coal, a spokesman of the Railways is understood to have assured at the meeting that everything possible was being done to cope with the demand for wagons. But there had been difficulties, he said, the blame for which had to be shared by other departments also.

The Government of India has decided that colliery-owners may be paid, in addition to the existing coking coal prices, the following further amounts with effect from August 24, 1960.

In the case of Selected Grade 'A' coal:

(i) If the ash content is less than 14 per cent	a sum of Re. 1 per ton of 2,240 pounds (Re. 0.98 per tonne of 1,000 kilograms) over the price of Selected Grade 'A'.
(ii) If the ash content is 14 per cent or more but is less than 14.5 per cent	a sum of Re. 0.50 per ton of 2,240 pounds (Rs. 0.49 per tonne of 1000 kilograms) over the price of Selected Grade 'A'.

towards the Quarter Million mark

INDIAN TUBE is expanding again ! A licence has just been granted to instal a second high-speed, continuous weld mill, with a capacity of 90,000 metric tonnes a year, at the Jamshedpur works, taking the total in this category of tubes to 200,000 tonnes.

Adding to this the 30,000 tonnes of seamless, and 20,000 tonnes of electric resistance weld tubes made at Jamshedpur, the total tube capacity will stand at a quarter million tonnes—an impressive advance since the first mill went into operation five years ago. In addition, Indian Tube makes tubular steel poles for which it has a capacity of 150,000 a year.

With all the technical and service facilities already available at Jamshedpur, this latest expansion will, like the others, be speedily completed to provide a substantial increase in output, bridging the present gap between demand and supply.

INDIAN TUBE

THE INDIAN TUBE COMPANY (1953) LTD.
A TATA-STEWARTS AND LLOYDS ENTERPRISE

ITC-50

In the case of Selected Grade 'B' coal:

If the ash content exceeds 15 per cent but is less than 16 per cent	a sum of Re. 0.50 per ton of 2,240 pounds (Rs. 0.49 per tonne of 1000 kilograms) over the price of Selected Grade 'B'.

In the case of Grade I coal:

If the ash content exceeds 17 per cent but is less than 18 per cent	a sum of Re. 0.50 per ton of 2,240 pounds (Rs. 0.49 per tonne of 1000 kilograms) over the price of Grade I.

OIL AGAIN

Oil has figured prominently in the Lok Sabha during the past one week. The Union Minister for Oil, Mr. K. D. Malaviya, has assured, in clear and unequivocal terms, the existing oil companies that the Government had no intention to drive them out. This is in line with his earlier statement that the Government had no intention to revise the agreements with the oil companies unilaterally; they could be modified only with the consent of the companies concerned. He, however, made it clear that the Government had every intention to press as hard as possible to get the best terms and most favourable conditions from the oil companies in all spheres, exploration, production, refining and distribution. He declared that the public sector Indian Oil Company had come to stay and would discharge its functions, if possible in collaboration with the private distribution companies and if not independently.

Replying to a question in the Lok Sabha, Mr. Malaviya said the first phase of the working plan of the Indian Oil Company Ltd., which covers the period ending March 31, 1962, had been received by the Government on November 14 and was under scrutiny. The scheme broadly provides for the construction of adequate bulk shortage installations at the main ports and storage depots and retail dispensation points at various places in the economic supply areas. It also lays down (i) the details of organisational set-up for handling distribution and marketing of deficit petroleum products that are being imported from USSR and the products of Nunmati Refinery which is likely to go on stream early in 1962, (ii) a programme of imports from USSR, (iii) a programme of distribution and (iv) details of capital outlay. The Minister thus confirmed the contention made in this column a few weeks ago that the Indian Oil Company had no distribution organisation when the Russian oil reached this country.

Replying to three other questions, Mr. Malaviya said:

"In regard to the transport of petroleum products, the programme of laying pipelines is being considered and it may take some time before decisions are taken after techno-economic studies.

"The crude oil found in the oilfields in Assam will be transported by a 720-mile long pipeline to Nunmati, in Assam, and further to Barauni, in Bihar. The latest estimated cost of this project is Rs. 41.48 crores... The decision to transport crude oil from Assam by pipeline was reached after considering the comparative economics of other available means of transport in that area.

"The crude oil pipeline will be 720 miles long. The first leg of the pipeline from Nahorkatiya to Nunmati will be 260 miles and of 16" diameter. The second leg of the pipeline from Nunmati to Barauni will be 460 miles and of 14" diameter. To facilitate the transport of crude oil by this pipeline, there will be 8 pumping stations enroute. The work on this project has already commenced.

"That, the Government had decided to establish a refinery with a capacity of about 1 to 1.5 million tons per annum, if possible in Gujarat."

The Minister also said that two new types of Rumanian 4-LD Rigs for Cambay had been purchased and purchase of one more Rig of the same type was under negotiation.

MANUFACTURE OF DRUGS AND PHARMACEUTICALS

Three corporations are being set up to undertake the manufacture of drugs and pharmaceuticals in India. One of these corporations will handle the four projects — (i) Antibiotic Project (Rishikesh), (ii) Surgical Instruments and Medical Appliances Project (Madras), (iii) Synthetic Drugs Plant (Hyderabad), and (iv) Phyto-chemical (Alkaloids) Project (Munnar, Kerala) — to be financed with aid from Russia. The combined output of these projects will be worth about Rs. 30 to Rs. 40 crores a year. The second corporation will look after the manufacture of organic intermediates required by the dye-stuff industry and by the first corporation. The third corporaton will take care of the Pimpri factory which is being expanded with assistance from the World Health Organisation, UNICEF and the U.S. firm Sharpe, Mark and Dome. This corporation will also manufacture Vitamin C and tetra-cyclines.

To secure an effective co-operation and combination amongst these corporations, it is proposed to constitute a technical committee consisting of their top representatives. This body, it is expected, will lay down the broad policy for the industry.

The representatives of Bayers, the West German combine which is participating to the extent of 10 per cent in the equity capital of the plant to be set up to manufacture organic intermediates under the supervision of the second corporation, are here these days. They would select a site for the plant and would prepare lists of equipments to be ordered from Germany, other foreign countries and from Indian sources. They will also discuss with the Government the organisational set-up for this project and the provision of training facilities to Indian personnel in this country and in Germany.

ALLOY STEEL PLANT

The Government has finally decided to locate the Alloy Steel Plant at Durgapur. This project would cost Rs. 50 crores. The Canadian firm Atlas is expected to provide technical know-how for it.

There appears to be some uncertainty about the availability of finances required to meet the foreign exchange component of the cost of this project. As the British interests have already offered £20 million for the Durgapur Steel Plant, £15 million for some other tied projects such as the expansion of the Bhopal Heavy Electrical Plant and a Fertilizer Plant to be set up in Assam and another £15 million for the purchase of some other types of machinery and equipment, it is very unlikely that they will be coming forth with a credit for this project. The Canadian firm too is not likely to offer any credit for the project, though it will provide the technical know-how. No chedit is also expected from the Canadian Government. Under the circumstances, the Government of India may have to arrange a number of credits from various sources for buying some parts of the equipment required for this project from Britain, some other parts from West Germany and yet some other parts from the United States.

HEAVY MACHINE TOOLS PROJECT REPORT

Negotiations are in progress here with the Czechoslovaks to settle the terms under which the preparation of the Project Report for the Heavy Machine Tools Building Plant is to be entrusted to them. The Heavy Machine Tools Plant is to be designed for the manufacture of 22 types of machines falling in seven cate-

gories. The following are the different categories:

Category	Models
1. Central lathes	6
2. Planers	3
3. Horizental borers	4
4. Vertical boring and turning mills ..	3
5. Plano-milling machines	2
6. Grinding machines	2
7. Radial drilling machines	2
Total ..	22

The savings in foreign exchange likely to be effected as a result of the establishment of the plant would be about Rs. 5 to Rs. 6 crores per year.

METRE GAUGE LOCOMOTIVES FOR RAILWAYS

Negotiations having been finalised, a supply contract will be shortly concluded between the Railway Board and TELCO for the supply of 325 metre gauge locomotives to Indian Railways during the period from June 1, 1961, to March 31, 1966. The present 16-year contract between the two parties terminates on May 31, 1961.

The agreed prices are Rs. 3,80,750 per Y.G. locomotive and Rs. 3,78,750 per Y.P. locomotive. These prices are below the price of Rs. 3,80,917 per Y.G. locomotive settled by the last arbitration award for the period 1958-60, covering the supply of 200 locomotives or an average annual supply of 100 locomotives. The average annual supply by TELCO between 1961 and 1966 will be only about 65 locomotives.

AVOIDANCE OF DOUBLE TAXATION

Mr. Brooks of the British Board of Central Revenues is expected here shortly from Pakistan where he is negotiating an agreement for avoidance of double taxation between the two countries. A similar agreement between India and the United Kingdom is also envisaged. Taxation of profits from shipping has been the main bottleneck in reaching this agreement so far. During his stay in Delhi, Mr. Brooks is expected to make an attempt to resolve this deadlock.

MANUFACTURE OF CAST IRON PIPES

The Government of India has issued a licence under the Industries Development (Regulation) Act to Mr. Gyalo Thondup, New Delhi, to set up a company under the name "The Gayday Iron and Steel Company Ltd." to undertake the manufacture of 30,000 tons of cast iron spun pipes and fittings per annum. The plant is proposed to be located at Kodarma, in Bihar State.

A part of the finance required for this project, according to Mr. Gyalo Thondup, might be provided by His Holiness the Dalai Lama. The Government has been informed that the project would indirectly provide employment opportunities or other assistance to Tibetan refugees.

INTERNATIONAL INDUSTRIAL EXHIBITION

The United Kingdom has decided to participate in a big way in the International Industrial Exhibition to be held in New Delhi next winter. Mr. Michael Belfour, Head of the Exhibition Division of the British Board of Trade, is in India at present having discussions with the British industrial interests in this country on their plans to participate in the exhibition. During his recent stay in New Delhi, he visited the exhibition grounds to select a site for the British pavillion.

TRAINING OF INDIAN PERSONNEL

Mr. A.H.P. Humphrey, Director of the U.K. Technical Assistance Programme, is visiting India shortly and will stay here for about 10 days. He will discuss with the Government and the authorities incharge of Ranchi and Durgapur projects a long-term programme for training of Indian technicians and employment of British technical personnel in this country till Indians are sufficiently trained to undertake every operation of some of the public sector enterprises. A similar training programme is being arranged with the West German Government which will bear half the cost of training.

INDO-BURMESE TRADE AGREEMENT

Burma will be supplying India two lakh tons of rice out of its 1961 crop. An agreement to this effect was signed here last week between the Government of India and a Burmese trade delegation which had been touring this country to make some on-the-spot purchases of light machinery, electrical goods, textiles, coal, jute goods, dry prawns, yarn and pulp. The Burmese delegation agreed to offer some more rice later, if possible. It was also agreed that the volume of trade between India and Burma should be raised to as high a level as practicable and the question of entering into another long-term trade agreement and a rice pact should be considered.

INDIA'S DEBT TO FOREIGN COUNTRIES

The total outstanding debt of the Government of India to foreign countries, including the debt due to the International Bank of Reconstruction and Development, as on October 1, 1960, was approximately Rs. 670.80 crores. This was exclusive of the amount of Rs. 93.18 crores representing foreign debt on account of public sector non-Governmental organisations and private sector agencies and Rs. 60.71 crores due to the International Monetary Fund for the repurchase of rupees. It also did not include deferred payment liabilities of the public and the private sectors.

The repayment liability of the Rs. 670.80 crores debt during the next ten years is estimated to be as followed:

Year	(Rs. crores)
1961-62	27.14
1962-63	36.89
1963-64	50.06
1964-65	30.90
1965-66	34.11
1966-67	39.00
1967-68	39.10
1968-69	37.73
1969-70	39.57
1970-71	31.89
Total ..	366.39

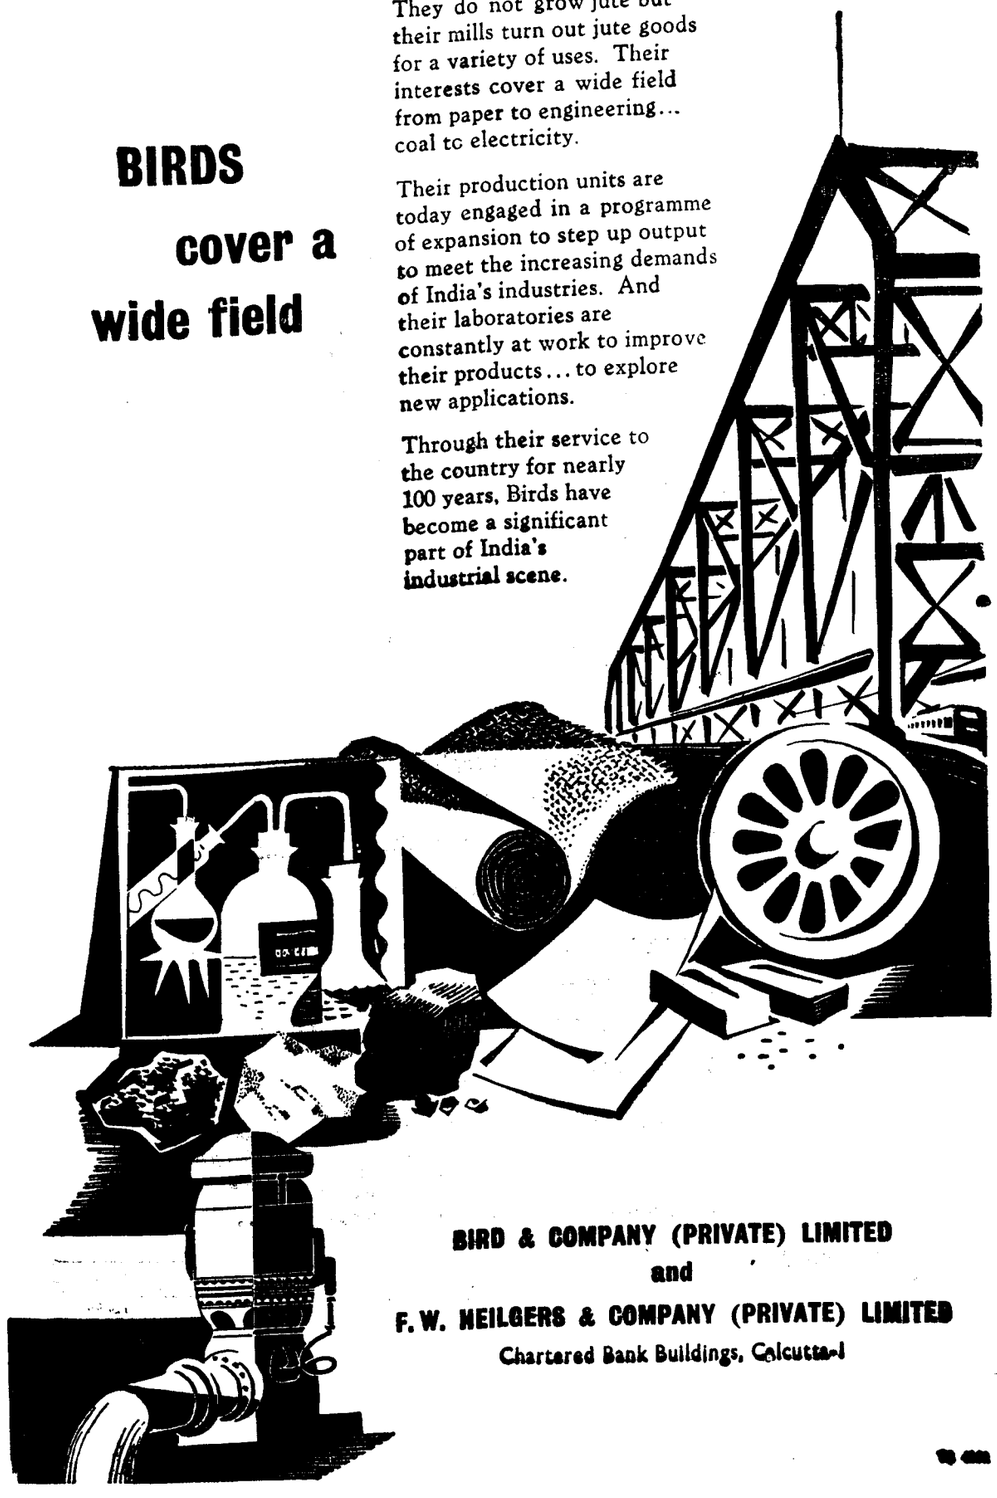
BRIEFS

The State Trading Corporation has been negotiating with an Italian firm for the import of fertilizers and other commodities in exchange for Indian goods. The arrangements have not yet been finalised. Meanwhile, some quantities of fertilizers have been imported on an 'ad hoc' basis and exports of Indian goods in exchange are in the process of being made.

* * * *

There is no specific proposal under consideration for subsidising Indian shipping companies for the carriage of the foodgrains cargo under the recent PL 480 agreement concluded with the U.S.A. Indian ships are even now offered as much foodgrains cargo as they can lift at the prevailing rates of freight in the world market.

* * * *



The Madhya Pradesh Government has issued an order under which the wholesale dealers of Madhya Pradesh, Maharashtra and Gujarat States who want to undertake export of wheat and rice from Madhya Pradesh will be granted licences freely for this purpose. Such licenced dealers will have the authority to export wheat and rice from Madhya Pradesh to Maharashtra or Gujarat without any export permit.

BIRDS cover a wide field

The Birds/Heilgers group do not produce steel. But they provide the vital raw materials that go into the making of steel—iron ore, coal, manganese ore, limestone, dolomite, refractories... They do not grow jute but their mills turn out jute goods for a variety of uses. Their interests cover a wide field from paper to engineering... coal to electricity.

Their production units are today engaged in a programme of expansion to step up output to meet the increasing demands of India's industries. And their laboratories are constantly at work to improve their products... to explore new applications.

Through their service to the country for nearly 100 years, Birds have become a significant part of India's industrial scene.

man's faith

Faith that makes man aspire, strive ...
awakening him to tasks in the early-glow of dawn.
That melts rock, shapes granite; transforms
still waters to surging power.

A faith in the living future:
in a world that offers a little more—
a little less of the care, a little more of the joy.
Faith that gives meaning to life.

Today, as in the past, our products help to make homes cleaner, healthier, happier. But today we are also working for ... Tomorrow, when the evergrowing urge for better living will demand still greater efforts. And we shall be ready with wider service, new ideas, new products ...

Today and Tomorrow... Hindustan Lever serves the home

HL 6-X52

COMPANY AFFAIRS

HIGHER OUTPUT FOR INDIAN IRON

The production of steel ingots at the Burnpur Works of the Indian Iron and Steel Company Ltd. during the year to March 31, 1960 showed an increase of 218,867 tons over the previous year. Production of saleable steel improved to the extent of 164,562 tons. The output of the Kulti Foundries was again satisfactory and recorded an increase in tonnage of approximately 19 per cent over the previous year. These increases are reflected in the improved trading results achieved for the year under review. Some of the details are given below.

	1959-60 (Tons)	1958-59 (Tons)
Pig Iron	1,053,612	959,933
Steel Ingots and Castings ..	827,072	608,205
Bars	55,870	52,124
Structurals	156,387	112,370
Black Sheets	75,617	64,463
Galvanised Sheets	70,208	73,355
Rails	63,669	43,048
Blooms, Slabs and Billets ..	240,062	152,191
Coke	1,343,069	1,232.301
Castings	175,881	147,325
Coal Raisings	339,082	362,648
Coal Tar	55,619	51,028
Sulphuric Acid	22,889	18,753
Sulphate of Ammonia ..	20,218	16,137

This increased production of the Company is primarily due to the fact that all the major items of plant installations scheduled under the 1953 and 1955 expansion programmes have now been commissioned though it will be some time yet before the provision of the many subsidiary facilities required for the full and efficient working of the expanded plant is finally completed.

Increase in the steel retention prices in compensation for those increases in production cost subject to the agreement with Government was notified by Government on the 10th November, 1960 and as in previous years has been granted by averaging the incidence over the five year period ended 31st March, 1960.

In accordance with the recommendation of the former Tariff Board a sum of Rs. 51.15 lakhs has been transferred to Plant Rehabilitation Reserve and under the terms of the Company's agreement with Government an amount of Rs. 30.51 lakhs has been carried to the Extensions Special Reserve. Consequent upon the further large additions to fixed capital expenditure under the expansion programme the provision for depreciation has been raised from Rs. 2 crores to Rs. 3 crores.

After making normal provisions for loan interest, taxation, etc., there is a profit of Rs. 2.04 crores which is a significantly higher figure than the previous year's Rs. 17.49 lakhs. The Directors had declared on August 9, 1960 an interim dividend on the Ordinary Share Capital of Rs. 1.50 gross per share, payable under deduction of tax at the prescribed rates, on the understanding that although termed "interm" this would in fact constitute the full dividend for the year. No further distribution in respect of the year under review is accordingly recommended by the Directors. In comparison with the dividend of 10 per cent "free of tax" paid in respect of previous years, the present dividend of 15 per cent gross affords compensation in full to shareholders for the withdrawal, consequent upon the amendment of the Income-tax Act, of the former national credit on their dividends in respect of income-tax paid by the Company.

MYSORE CHEMICALS AND FERTILIZERS

The Directors of the Mysore Chemicals and Fertilizers Ltd., Mysore, have pointed out that during the year to March 31, 1960 the results of the Company have shown a change for the better and the production and sales are the highest recorded so far. The Factory worked continuously during the year only with minor interruptions, thereby resulting in improved production in all departments. Sales realisation during the year under review was Rs. 47.55 lakhs as against Rs. 31.72 lakhs of the previous year. The manufacture of Fertiliser mixture was undertaken on a large scale during the year and there has been good demand for this product.

The Directors have expressed their concern over the fact that the charges levied on the Company for the supply of electrical energy are normally unworkable. However this heavy and abnormal expenditure has been met with great dfficulty by the Company.

Recognising the urgency of speedy rehabilitation and renovation of the several Units in the Factory the Directors took steps to examine this essential question with particular reference to the equipments which have already worked for more than 20 years. While on the one hand action was taken to improve the all-round efficiency of that Plant with a view to securing both increased production and better quality, the Directors also decided to expand the Superphosphate Plant by adding suitable equipment which was got manufactured indigenously. The production of Superphosphate was thus stepped up to a considerable extent.

Profit during the year came to Rs. 3.42 lakhs. The Directors have proposed the payment of a dividend at the rate of 10 per cent subject to tax.

SCINDIA STEAM'S DIVIDEND

The Board of Directors of the Scindia Steam Navigation Company Ltd., at their meeting held on 23rd November, 1960, decided to recommend to the shareholders, for declaration at the forthcoming annual general meeting of the Company, a dividend at the rate of 60 Naye Paise per share, subject to deduction of tax, for the year ended 30th June, 1960.

THE MYSORE KIRLOSKAR LTD.

YANTRAPUR, P.O., HARIHAR.

NOTICE

Notice is hereby given that the Nineteenth Annual General Meeting of the Company will be held on Monday the 26th December, 1960 at 11 A.M. (I.S.T.) at the Registered Office of the Company at Harihar, to transact the usual business and also special business, the details of which have been made known to the shareholders separately by notice sent along with the Balance Sheet and Profit & Loss Account and Directors' Report.

The Share Transfer Books and Membership Register shall remain closed from 19th December, 1960 to the 2nd January, 1961 (both days inclusive).

By Order of the Board,
For THE MYSORE KIRLOSKAR LIMITED,

Sd/- M. S. VARTAK,
Secretary.

30th October, 1960.

COMMODITY NEWS AND NOTES

EXPORT OF MANGANESE ORE

The Government of India announced the policy for export of manganese ore for a three-year period beginning from January 1, 1961. During this period, the export of manganese ore will be regulated as follows: Export quotas will be allotted as in 1959-60 for the period beginning January 1, 1961. The releases of quotas for October, November and December 1960 will be made on a pro-rata basis. In order to co-ordinate movement capacity with export potential and ensure supplies of ore according to the qualities and schedule of deliveries desired by overseas buyers, all export transactions of manganese ore will have to be registered with the State Trading Corporation. A copy of the relevant sale contract should be filed for this purpose with the Corporation. All shipments will be made by the shippers/owners including State Trading Corporation in their own name. To enable established exporters and mine-owners to maintain and develop their relationship with the traditional buyers of Indian manganese ore, they will have opportunity under the Joint Marketing Arrangements of the STC to negotiate, sign and execute contracts and ship the ore, as agents of the STC in respect of the quantities out of the STC's quota placed at their disposal. Newcomers, i.e. the parties, who had no quotas to their credit in 1959-60, have been advised to offer their tonnages to the STC and may export as agents to the STC.

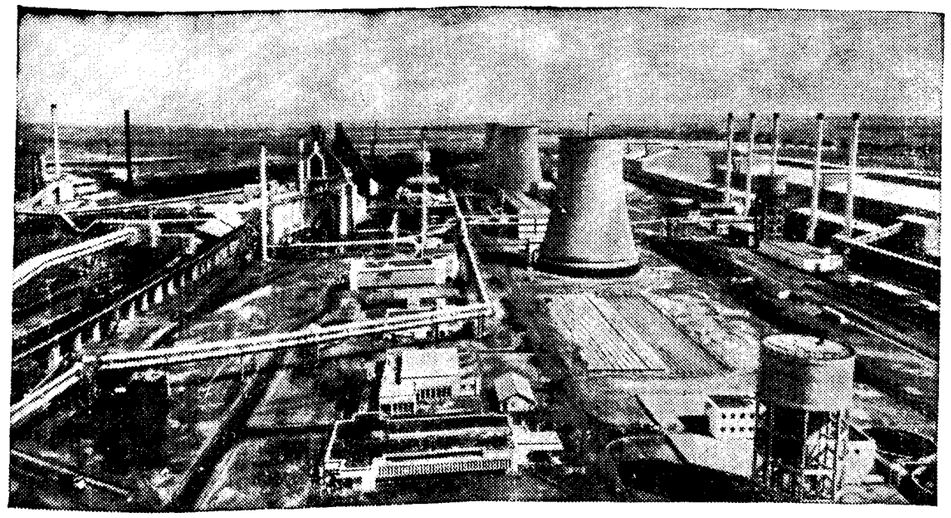
In order to make rail movement free to the maximum extent practicable, it has been decided that no movement quota slips will be necessary for any grade of ore on the Western Railway sectors to the Bombay port, i.e. from loading stations of Dohad, Shivrajpur, Nathpuri and Pani in Panchmahal Districts of Bombay and Rajasthan stations. Movement quota slips will be freely issued for the railing of low grade ores analysing 40 per cent and below from Garividi, Sri Kakulam, Bobbli, Salur, Raygada and Nallimaria stations for export through Vishakapatnam, on the production of foreign sales contracts to the railway authorities. To facilitate and continue rail movements on and from January 1, 1961, all Joint Chief Controller of Imports and Exports will be asked to issue movement slips to all parties who had quotas in 1959-60 to the extent of half of their tonnages covered by such quotas. A meeting will be arranged in the Ministry of Commerce and Industry in the second week of December to examine how best the total rail movement capacity for all ores on different sectors like Barajamda to Calcutta could be best utilised for the movement of various ores from the point of view of foreign exchange earnings and other factors. All barter transactions will be handled only by the STC; the export tonnages under such transactions will be procured under the Joint Marketing Arrangements according to the qualities, ports of shipment, schedule of delivery, etc. In order to enable parties, who held quotas in 1959-60 and were unable to fulfil their firm commitments owing to rail transport difficulties, the validity of quotas against unfulfilled commitments has been extended up to December 31, 1960 in respect of tonnages lying at the port or in transit on September 30, 1960.

PRODUCTION OF COPPER ORE IN INDIA

The production of copper ore during January-September, 1960 was 330,549 metric tons, according to the Indian Bureau of Mines. This represents an increase of about 9 per cent as compared to the output of 302,190 metric tons in the corresponding period of the preceding year. The entire production was reported from Singhbhum district of Bihar State. The production of copper metal during January-September 1960 was 6,651 metric tons as compared to 5,885 metric tons in the corresponding period of 1959.

RAISINGS AND DESPATCHES OF COAL

The raisings and despatches of coal during September, 1960, from all fields in India were 4,216,502 and 3,976,109 metric tons respectively. The corresponding figures for the previous month were 4,203,506 and 3,926,017 metric tons respectively. The daily average loading for the month of October, 1960, from the West Bengal and Bihar fields was 4,782 wagons as against 4,627 wagons in the month of September. The highest loading on any day during October was 5,456 wagons and the lowest 3,956 wagons, the corresponding figures for September being 5,442 and 3,142 wagons respectively. A daily average of 208 wagons was allotted for shipment traffic during October, 1960 as against 151 in September. A daily average allotment of 198.03 wagons was made to Pakistan during October, 1960. About 135,058 tons of coal were despatched to Pakistan during the month.



IMPORT OF COTTON FROM USA

The Minister of Commerce, Mr. Nityanand Kanungo, disclosed in the Lok Sabha the other day that negotiations were in progress for import of further quantities of cotton from USA under the PL 480 Programme. Mr. Kanungo, who was replying to a question by Mr. Rajendra Singh and five others said that this would be in addition to the cotton which had already been imported. Mr. Kanungo added that the proposal was to pay for the cotton in Indian rupees. Since the proposal was under negotiation, the quantity that might be available was uncertain.

TOWARDS ACHIEVEMENT

In three brief years a wilderness of swamp and paddy fields has been transformed into the giant steelworks at Durgapur. This remarkable achievement has been made possible by ISCON—a consortium of thirteen leading British firms who are responsible together for the construction of the steelworks. When completed, the steelworks will have capacity for one million ingot tons of steel and a wide range of end products for the industrial markets of India.

Company Meeting

TUBE INVESTMENTS OF INDIA LIMITED

Address delivered by Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), Chairman, at the Eleventh Annual General Meeting held in Madras on 28th November, 1960

Gentlemen,

I have much pleasure in extending to you a cordial welcome to this the Eleventh Annual General Meeting of the Shareholders of Tube Investments of India Limited.

The Directors' Report, the Balance Sheet and the Audited Accounts for the year ended 31st July, 1960 have been in your hands for some time and with your permission, I shall take them as read.

In my last Report, I referred to various expansion schemes which were in progress, both in connection with the Cycle factory and the Tube factory. The year under review has seen the completion of some of these projects. Your factory now produces Bottom Bracket Axles and Bottom Brackets, and these are expected to be available to manufacturers by January next. I referred to the Chain project in my speech last year. It is our object in establishing the Chain project, to produce industrial chains as well as chains for bicycles. Owing to a change in the foreign collaborators whose technical know-how was specially desired for industrial chain production, the project was a little delayed. We have now secured the association in technical matters of Messrs. American Steel Foundries International, who are associates of Diamond Chain Company of Indianapolis, U.S.A., and a subsidiary of your Company has been formed under the name T.I. Diamond Chain Private Limited. Another subsidiary company, TI Miller Private Limited, will shortly be established for the manufacture of lamps for all kinds of automatic vehicles, bicycle dynamo lamps, etc., in collaboration with Messrs. H. Miller & Company Limited of Birmingham.

The manufacture of Wright saddles to which reference was made last year has been slightly delayed owing to the fact that it has since been decided that the factory should be situated at Ambattur and not at Avadi. The machinery for the purpose has started coming and production will begin during the current year.

So far as the Tube factory is concerned, a second Tube Mill has been erected and is in operation. The work and preparation for the installation of the Cold Rolling Mill is proceeding and we hope to have it in production during the current financial year.

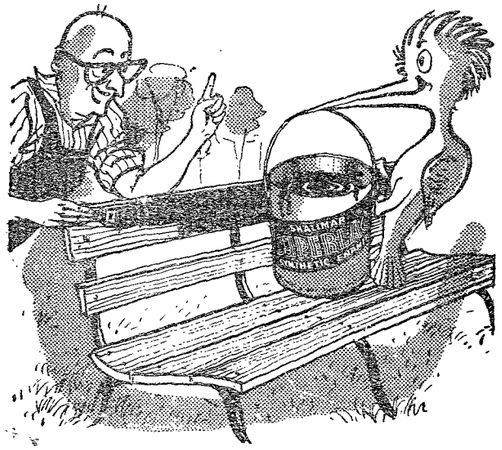
All this expansion and the consequent foreign exchange outlay have been made possible by the unhesitating co-operation which Tube Investments of Birmingham, has extended to us. The foreign exchange has been obtained partly in the increased equity capital allotted to them and partly in the form of loans. While these developments are in themselves satisfactory and while further progress is anticipated, there are certain factors which I hope will be resolved to enable the smooth evolution of the productive capacity of our work in several directions.

One of the urgent needs in this State for proper industrial development is adequate power supply, a fact which has been frequently brought to the notice of the authorities. The resources from hydro-electric power have virtually been exhausted. Thermal power is stated to be costly as coal is not available within the State itself. The power proposed to be derived from the lignite at Neyveli, is virtually earmarked for industrial development round that area. It is, therefore, of the highest importance that the State Government and the Central Government should explore the possibilities of adding to the power supply in this area, if industrial development adequate to the needs of the population has to be ensured. I look forward partly to the collaboration in this regard of the neighbourng southern Indian States which may have power supply in excess of their needs; but I look forward even more to the Central authority which, by its planned programme of industrialisation, has taken the responsibility of ensuring for each area, at least a minimum standard of industrialisation and therefore of industrial employment, to see that the essential factor in industrialisation, namely, power supply, is ensured for this State.

A second factor which has to some extent affected rapid development is the law that has been enacted regarding Development Rebate, and how and when it is to be provided for. The present legislation on the subject makes it very difficult for industrial units which desire to expand rapidly, and find their own foreign resources to do so, as the incidence of such a provision seriously impinges on a fair dividend policy which a company wishes to pursue. I still hope that the Finance Minister will reconsider this aspect of the question and provide for a substantial period of time during which the amount of Development Rebate may be spread over.

There is a third factor which has caused concern to industrialists and intending industrialists, particularly in areas like the southern region. It has been stated that the policy of the Government is to see that no particular industry is over developed in any particular region. If, for instance, the bicycle industry is developed in West Bengal or Madras, new units for the production of cycles should be licensed elsewhere than in these States. 'Prima facie' this looks reasonable, but there is a serious fallacy behind this reasoning.

If every industry could be so distributed, equally or proportionately, in every part of the State, such a decision may not be incorrect. But the position that would arise if this were to be followed to any degree will be that the under-industrialised areas, are even more at a disadvantage with resultant over-prosperity in one area and under-employment and sub-prosperity in another area, for it is quite patent that certain areas can only develop certain kind of industries. The fact is that the total industrial development of an area has to be taken into consideration and not the development and distribution of a particular industry alone. The public projects established by the Central Government have created enough disharmony among the various States and I venture to utter a caution that this disharmony may be aggravated and added to, by the policy of distributing any particular industry to all parts of the country.



Let me turn now to our own specific problems. As you may have noted from the Directors' Report, there was an unfortunate strike in the Cycle factory for a period of six weeks, due more to misunderstandings than to lack of sympathy or co-operation on the part of the Management. I am, however, glad to state that a five-year agreement has been reached, between the Management and the workers, whereby conditions of peace and progress will prevail during the period.

Your Company, as I pointed out in a previous report, is aware of the part it should play towards society, and especially towards the society around which it is situated. The profits that it earns are not only divided between the Governments and the shareholders, but a substantial portion of them has been diverted towards promoting the social needs of the population in the area. The Polytechnic established in the area is one of the best in the State. The Higher Secondary School which has recently been inaugurated and the Hospital which is contemplated and the foundation stone of which will be shortly laid, are evidences of the enlightened policy of the Management, a policy in which the British shareholders participate with equal enthusiasm along with the Indian shareholders. I should add that these projects costing several lakhs of rupees have been made possible by a very substantial contribution by the A.M.M. Charities Trust, the trustees of which are also among your Directors. Whatever comment may be made about the Private Sector and its policy of profit making, I trust that you have sufficient evidence to show that this Company and your shareholders are trying to march with the times and are conscious of the dictates of the times.

I should only like to say a final word about the excellent and enthusiastic co-operation we have received from all our Officers and from our workers both in the administration office and in the factories, during the year under review.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

The Lessons of Lucknow

EVENTS this week in Lucknow, from whatever angle they are viewed, must be deeply disturbing. In the country as a whole cynical views are being expressed on the manner in which the Congress High Command has chosen to browbeat opposition in the election of a leader, whom the Congress Legislature Party was unwilling to elect. The repeated urge—or rather appeals—to maintain the Prime Minister's "prestige" only made the act of command more humiliating than it might otherwise have been. But, quite apart from the fact that the Congress High Command used its influence improperly, there is the naked fact that the purpose of the operation, which was to secure full co-operation between the "organisational" and "ministerial" units of the State Congress has not been achieved. Nineteen of the Ministers of the old Cabinet have not chosen to accept invitations to join the new Ministry. If "fixing" can be applied to any political operation, here has been one of the most notorious cases of "fixing" that India has even seen.

It is not, at present, important to remember that Mr. Gupta has been twice defeated in elections and his election as President by the Uttar Pradesh Congress Party is no substitute for a popular election. But it is relevant to argue that the Prime Minister, when Mr. Gupta was first defeated in 1957, made it clear that he would not allow a Ministership to be given to a defeated candidate unless his defeat was rectified by election prior to such appointment. One notable principle of the Congress Party has thus succumbed to political expediency. Secondly, a major constitutional principle that the Governor should only call upon some one in the House with a proved following to form the Cabinet has been jettisoned to accommodate the Congress High Command. Finally, the principle of a free election has been vitally injured by the blatant orders which the Home Minister himself carried to Lucknow that opposition to Mr Gupta had to be "suspended" in the Prime Minister's name. Three central principles of democratic procedure have thus been violated. This is a far greater loss to the country than the continued split of the State Congress Party.

It is difficult for those who have been in virtual absolute power now for thirteen years at a stretch, to understand the extent to which their prestige has been undermined by the mere efflux of time. The revolution is receding, and with it, inevitably, the authority of the leading heroes of the revolution. It is unthinkable that the events of this week at Lucknow and Calcutta (on Berubari) could have occured two years ago. What has emerged is a solid fact, that the revolution has been greatly dimmed and the heroes of the revolution are now almost mortal men. Even the legend of Mahatma Gandhi is wearing thin; Jawaharlal Nehru is now unable to exorcise the ghosts which five years ago responded even to his unexpressed wish. To attempt, at a time such as this, to employ 'prestige', not once but many times in the course of three days, is additional proof of the fact that the currency has declined. It was a serious mistake for the Prime Minister to put his own prestige to the test. He has barely succeeded this time, but the decreasing marginal utility of his name has been impressed on the entire country.

The lessons that have to be learnt from Lucknow should be plain. Firstly, if 'grass roots' democracy is to grow, a healthy convention of non-intervention must be created. The Congress High Command should exist for resolving disputes for which no democratic procedure has been prescribed, but it should not be the means of supplanting legitimate local opinion on the choice of leaders. Secondly, if a political managerial problem arises, it should be settled by persuasion, not by virtual force. If, on second thoughts, Dr. Sampurnanand wished to stay on as Chief Minister for a year, until the elections and a working agreement could have been reached—as was not impossible between Dr. Sampurnanand and Mr. Gupta—it was obviously right and proper for the Congress High Command to revise its original opinion and let the Ministerial Party elect Dr. Sampurnanand again. Thirdly, the convention that the Governor should only call upon a Member of the House duly elected by popular vote to form Ministry should never be called in question. Finally,—and this might be the hardest of all—the Prime Minister of India must recognise that personalities are no substitutes for principles, and that the use of his name repeatedly and under pressure to enforce an obviously unprincipled decision, is one which is doing further damage to his good name and to the healthy growth of democratic conventions in a country which is all-too-ready to adopt authoritarian short-cuts to power. If the Congress High Command does not correct its ways, the future of the country will be bleak.

The Revised Railway Convention

THE recommendations of the Railway Convention Committee, which were approved by the Lok Sabha this week and are being transmitted to the Rajya Sabha, are based on the forthright assumption that during the next five years railway finances will be confronted with an outlook of stringency. In essence, the scheme of the revised Railway Financial Convention is to make concessions to railway finances in their liability to the General Revenues to ease this stringency.

Of the fact of shortage and, therefore, the need for relief there need be no doubt.

The major concession comes in the form of the rate of dividend prescribed for payment to the General Revenues as a fixed percentage of the capital-at-charge of the railways. This dividend is not equivalent to the net contribution of the railways to the General Revenues, because the liability to pay interest on the capital-at-charge is borne by the latter. The net contribution is to be computed after deducting the interest payment. Apparently, the rate of dividend has been increased from 4 per cent, as prevalent during the last eleven years, to 4.25 per cent for the quinquennial period of the revised convention. The reality of the situation, however, is that the average rate of interest during the current convention period is estimated to rule around 3.17 per cent, but it has now hardened and at the beginning of the next convention period it will stand at an average of 3.53 per cent. In effect, the net contribution which the General Revenues will receive from the railway finances out of the dividend will be reduced from 0.83 per cent as at present to 0.67 per cent during the next convention period synchronising with the period of the Third Plan.

Adequate appropriation to the Depreciation Reserve Fund has become a matter of great urgency, but at the same time one which hardly admits of a satisfactory solution. The capital-at-charge of the railways will increase from Rs. 1,563 crores at the end of the Second Plan to Rs. 2,313 crores at the end of the Third Plan. Allocations to the Depreciation Fund, in the light of this order of expansion of capital, need to be massive—but they hardly can be. During the Third Plan, expenditure on replacement of assets is estimated to be Rs. 350 crores. The Railway Convention Committee has recommended that allocation to the Fund should be at an average annual rate of Rs. 70 crores. This is barely sufficient to cover the cost of replacement, as estimated at current prices. There is another crucial factor to be borne in mind. At the commencement of the Second Plan, the Depreciation Fund had a cushion of the order of Rs. 103 crores in the form of the opening balance. At the commencement of the Third Plan it will have shrunk to Rs. 18 crores.

The Development Fund has been a source of much concern to the Committee. During the Second Plan period, the final net surplus of the railways (after paying the dividend to the General Revenues) was appropriated in toto to the Development Fund, leaving the Revenue Reserve Fund high and dry. Of course, no debits were made to the latter. It was found incumbent for the Development Fund to take loans from the General Revenues during the last three years of the Second Plan aggregating Rs. 33 crores. It is now proposed that these "temporary" loans should be liquidated by adjusting the charge of the outlay partly against capital and partly against the Revenue Reserve Fund. This device has become inevitable to enable the Fund to start with a clean slate in the next period. Even so, what is the outlook? With dividend fixed at 4.25 per cent, the net surplus of the railways during the period of the revised convention is estimated at Rs. 11.44 crores, which is all that can be allocated to the Development Fund. As against this, the liability of the Fund to contribute to the Third Plan outlay is of the order of Rs. 115 crores. The implication is that the Fund would borrow not less than Rs. 100 crores as "temporary" loans from the exchequer.

This "temporary" character is underlined by the fact that the deficit in the Fund during the convention period will be nine times as high as the allocations. The sooner this fiction of the railways providing a good part of development outlay out of their internal resources is ended the better. The truth of the situation is that a new and radical view of railway finances needs to be taken. The railways are under high pressure of rapid expansion. They form, along with other sectors of communications, power and irrigation, the core of the infra-structure of the economy which it is the function of the General Revenues to make sufficiently broad-based.

Guest Editorial

A Pause in World Trade

By WILLIAM REES-MOGG

THERE are various times when the economy of the world seems to pause uncertainly, and we are all of us a great deal happier when the moment passes and some new trend seems to have been established. One of these moments has come upon us now, and has not yet been resolved.

The most remarkable point about this situation is that the old landmarks, which used to look so certain, are now almost without exception being called into question. Not since the war has the monetary framework of world trade been the subject of so much anxiety and dispute. Admittedly, of course, sterling has been under pressure on a number of occasions since the war, but behind sterling there have always been comfortable certainties of gold and the dollar. Now neither of those certainties is any longer sure.

We certainly cannot expect to know how the gold and dollar situation is going to work itself out until the new American administration has had time to start work. My own feeling is that there will not in fact be an increase in the gold price, and that President Kennedy will defend the dollar successfully. But at this stage such a view cannot be more than a personal impression. The next two or three months at least will have to pass before one can be sure how the new administration is working out its financial policy. If, which as I write is still a rumour, Mr. Eugene Black does become the Secretary of the Treasury, then that in itself will add to world confidence. Mr. Black has an enviable reputation for continuing orthodoxy, liberalism, international experience and good plain common sense.

To the currency uncertainty must be added a great uncertainty about trade. Whichever area one looks at the trade prospect is unsettled. International trade as a whole has ceased to rise, and could easily fall back in 1961. The United States shows signs of another recession, and the efforts to strengthen her balance of payments position and put the dollar right have already affected the trade of other countries.

The primary producing countries have started to feel anxious about the future course of commodity prices. In the sterling area Australia has already run into a serious balance of payments problem, and the under-developed countries all have their own anxieties about the prospect for their development plans.

In Europe the initial impetus of the Common Market seems to have worked its way through, and a more leisurely rate of growth will probably have to be accepted for 1961. Some of the rather narrowly based European security markets show extraordinarily low yields and would seem to be very vulnerable to any change of climate. In Britain stock exchange values have throughout been much more realistic. Just recently we have been having a sharp setback which has made some investors and some business men feel rather nervous. Indeed stock exchange upsets seem to be a world-wide phenomenon.

The British position is nevertheless a worrying one. British exports have been lagging behind those of the rest of the world, and 1960 has been a worse year in the balance of trade than any since 1955. Part of the deterioration has been caused by the heavy building up of stocks of imports, but the weakness of exports has been more disturbing.

When one looks round the world one does, therefore, see few countries in which the immediate economic prospect is not one of some degree of recession or of slowing down in expansion. Even in the Communist world the recent devaluation of the Russian rouble, while it does little or nothing to make the rouble an acceptable international currency, does suggest that the Soviet system has been facing some degree of monetary difficulty.

This world situation would be even more worrying if there were not the strong stabilising influences which do in fact exist at present. The high levels of government expenditure in all countries, the acceptance by most nations of full employment policies as a national commitment, the existence of unemployment insurance in most industrial countries, the continued rate of technological and scientific discovery, the pressure for international investment,—all these are factors which make a prolonged downturn of international trade seem very unlikely. The election of a strongly expansionist administration in the United States is also an obvious and very important influence in favour of recovery in world trade.

Nevertheless this is going to be a testing period for the policies both of nations and of individuals. The world has got used to a prolonged phase in which it has paid to be over-committed, in which most people have got into the habit of investing rather more than their cash would really support. Both individuals and countries have come to regard conservative finance as an unnecessary restriction on the pursuit of their objectives.

Certainly for the next few months and perhaps for longer than that the climate of uncertainty is likely to penalise those who have pushed this policy too far. In Britain at any rate one can feel the growing preference for liquidity, the desire for cash and the improvement in the relative bargaining position of cash which one would normally expect to accompany the beginning of a new phase of recession. The next few months could easily upset many of the comfortable doctrines of permanent inflation.

D.L.F. to the Rescue?

THE recent visit of Mr Vance Brand, Managing Director, US Development Loan Fund, is significant in the sense that it has helped to clarify the implications of the 'buy American' policy which governs the issue of future DLF loans for India's development projects. The policy lays down that, in financing the foreign exchange costs of development projects and programmes, DLF will place primary emphasis on the financing of goods and services of US origin.

This change in policy has been motivated by various reasons; the apparent ones being the outflow of gold from the United States, accumulation of large dollar reserves by Western European countries and growing competition in US export markets. Under the circumstances, it is quite natural that the USA should like to correct her own balance of payments position. The new approach, incidentally, goes to show that the United States will conform more closely to aid-policies followed by other nations.

What distinguishes the aid given by DLF from that given by other countries is that the local currencies acquired by DLF are not to be utilised for the purchase of goods to be exported to the United States. Another attractive feature of DLF loans is that the rate of interest on them is comparatively low (3½ per cent), especially when they are utilised for projects which constitute the 'infra-structure' of the economy.

The factor of high cost of American goods is probably exaggerated over the whole range of capital goods. In respect of several items, American prices are competitive; how else could America export so much equipment? Again, against relatively higher costs for certain goods, there are distinct advantages of delivery on schedule, lower maintenance costs and longer trouble-free performance. The fact that India spent a considerable portion of DLF funds to buy goods in the United States when it could easily ultilise funds in the past to make purchases elsewhere, itself goes to prove that the American goods have certain positive merits.

In the context of India's difficult foreign exchange position, the help rendered by DLF, apart from its being timely, should be of special value. DLF will not merely encourage private investors to extend loans to developing countries (these unlike the World Bank loans, need not necessarily have Government guarantee), but also make for greater participation by American private investors in joint undertakings in India. So far the total credits extended to India by DLF amount to $423.3 million (Rs. 201.5 crores). A number of agreements covering loans totalling $114.1 million (Rs. 54.3 crores) were signed last Monday.

To what extent these loans would be helpful in promoting small-scale industries, which have greater employment potential and which assure a broad and decentralised base to the national economy? For small enterprises requiring not more than $100,000 (Rs. 4.75 lakhs) in foreign exchange, DLF—IFC loans would be helpful, since the dollars would be spendable anywhere outside Communist countries. Because DLF is to be slanted towards small industry, it may at long last happen that small entrepreneurs will head the long queue on foreign exchange.

A DELHI DIARY

HIGH FINANCE

I AM giving myself up this week to high finance and not-so-high politics. The sudden interest in High Finance has been projected—I believe this is the correct word—by the Finance Minister's 'firm' indications in regard to his intentions. Apparently he is not in favour of dearer money, and no increase in the Bank Rate is, therefore, contemplated. Secondly, the relations between the Ministry of Finance and the Reserve Bank, contrary to popular belief, are cordial, and, in fact, on policy matters, "identical". Thirdly, and not least important of all, notwithstanding the fact that the States have so obligingly agreed to raise additional revenue if they are given larger allocations for the Third Plan, the Third Plan can be made no bigger than it is at the present time. On the last point my only comment is, if this was the Government of India's "firm" intention, why on earth was the Planning Commission not informed earlier so that many futile discussions could be avoided and the States were not led up the garden path? I applaud the Finance Minister's decision which is "realistic"—happy word!—though from time to time I consider that even the size of the Third Plan, before the "additional" figures were added, was a nice leap in the dark. The Finance Minister described himself as "reasonably hopeful" about obtaining the required assisance from abroad. Careful observers note that the word 'hopeful' has now been qualified by the word 'reasonable.' Is reasonably hopeful hopeful with reason, or does 'reasonably' mean only 'moderately'? That is a new question which I entrust to students of technical literature—and psychology!

Meanwhile, Mr. Jagjivan Ram, holding another court, which purported to relate the Railways' performance to the socialist objectives of the country, said, even more hopefully, that the Railways would have to depend to an increased extent on their own finances for development. If he implied that the earnings of the Railways, after meeting their costs, were going to rise per unit of capital employed, he was arguing flatly in the face of the evidence of the last few years. How then is self-reliance to be imposed upon the Railways? One of the proposed devices to secure "self-reliance" is to reduce the contribution to General Revenues. Thus it comes about that the Railways will be self-reliant simply by robbing Peter to pay Paul. Considering that Peter and Paul are two names of the same pocket (a certain very distinguished economist tells me), the self-reliance thus practised is an extremely generous word for default. On the other hand, since economists are, by no means, of one mind—did not Keynes say that, if six economists are gathered together, there would be seven opinions?—I have sought another authoritative view. This is to the effect that, notwithstanding Mr. Jagjivan Ram and his "self-reliance"—moral or otherwise—it is essential that the country should get used to the idea that additions to the infra-structure or "basic" overheads must be made irrespective of whether or not they earn a profit in a commercial sense. For years we have allowed ourselves to be deceived by the belief that the Railways were a "commercial" organisation, which could "pay" their way. In truth, they belong to that great group of public enterprises, sometimes called public utility undertakings, which are supposed to provide a basis for someone else's profits, but not for their own owners. I am inclined to agree with the view that Mr. Jagjivan Ram has chosen the wrong year in which to proclaim self-reliance. The Railways have now moved to a point at which they are receding into the "infra-structure"; after some time they will be happily settled there. This is a great advantage for him, since he will not have to justify the absence of profitability. Why does he not seize the opportunity with both hands?

LOW POLITICS

The whole of the week has been filled with blasts and counterblasts in political affairs. I shall not refer—since I am told by the Editor that he has already done this—to sad goings-on in Lucknow, but I must have my say—the Editor notwithstanding—on Berubari. How on earth has it come about that the Prime Minister of India and the Chief Minister of Bengal should be squabbling on who said what and how much was endorsed by the other party and how much was done by the Prime Minister on his own? Indeed, the observation has been made that Dr. B. C. Roy's statement in West Bengal Assembly belongs far more to the Opposition than to the Congress Government. We all understand his political difficulties. There is a widespread suspicion here that the Prime Minister made his consultations with the West Bengal Government far too casually for a matter of this importance. Certainly, the West Bengal Government should have agreed in writing to his proposal before it was finally put through. But even if Dr B. C. Roy's verdict on the facts is accepted—and he slipped up on the receipt of copies of the Bill—it does not carry us very far. Surely, granting that the Prime Minister made an error in that consultation was imperfect, nobody in his senses wishes, in an international agreement of this kind, to argue that, apart from recognising a mistake, India should denounce the Prime Minister's signature on an international treaty. Why then is a great team of people coming here to pursuade Members of Parliament to take a different line on Berubari? The Prime Minister has said that the Supreme Court now agrees that the procedure adopted is in order. Why this Convention which is being arranged on Saturday? Is it likely to make things easier for anyone?

As usual I append, without explanation, my naughty cartoonist's view of the umpiring that is taking place on this particular game of cricket. I think we are going to hear more, as the years go on, on the controversies between the States and the Centre. Now at least one of the illusions, which was that, so long as Jawaharlal Nehru was Prime Minister, we would not have any Centre-State trouble, has been rudely shattered. Such is the inexorable march of history in predestined grooves. Not a bus, not a bus, but a tram!

"And I say he's NOT out!"

—ARGUS

THE WEEK'S NOTES

Parliament

FINANCIAL AUTHORITY OF THE HOUSE

ONE OF THE most regrettable features of the proceedings in Parliament which culminate in feelings running high is the incomprehensible attitude of some of the Ministers—the Defence Minister, to make a conspicuous mention—in attempting to keep deals or transactions, to which the Government of India is a party, shrouded in mystery. Naturally, the reaction is that these special efforts are motivated by a desire to withhold information from the House. Controversies about financial obligations incurred by the Government —sometimes rashly or extravagantly—form part of agreements with private parties or treaties with foreign governments. In so far as the power of entering into these treaties or agreements is concerned, the executive has the full power to conclude them and it is nobody's case that the House should be consulted in such matters in advance. But once these matters reach the final stage of signature by both the parties, the straightforward course for the executive is to place the cards before Parliament. This is for the simple reason that the final power to sanction the funds required rests with the Lok Sabha.

In the current winter session two occasions of this type arose. The first related to the liability which the Government has incurred under the Indus Waters Treaty to pay Rs. 83 crores in foreign exchange to the Government of Pakistan. In this particular case, it is clear that misunderstanding which gave rise to heat and passion in debate was misplaced. The simple fact is that this Treaty, which opens a new chapter in Indo-Pakistan relations and is to the permanent benefit of both the countries, must be honoured. The liability accepted by India to pay Rs. 83 crores to Pakistan is neither unwarranted nor excessive. Actually, Pakistan had pitched her demand as high as Rs. 300 crores and as Mr. N. D. Gulhati, India's principal negotiator for the Treaty, has explained the amount agreed was arrived at by Indian engineers on the most economical and careful calculations.

But the case of the Defence Ministry's deal with Messrs. Garden Reach Workshop (Private) Ltd., Calcutta, which involves an undisclosed amount of money to be paid in sterling, stands in a category quite apart. The plain facts about this deal now are that the agreement has been completed and each party knows how it stands in relation to it and there is no question of modifying or changing it. Mr. Krishna Menon, as usual, offended the House by his refusal to divulge the particulars of a completed agreement. All sections of the House, without party affiliations, united to assert its financial authority and it is a matter for gratification that the lead was taken by members of the Congress Party. It redounds to the Speaker's deep sense of discharge of the duty of his high office that he upheld the contention of members of the House and made it clear to the Defence Minister that the plea of "non-disclosure in the public interest" could not be claimed by him in respect of the financial part of the agreement.

It is amazing that, in spite of the Speaker's admonition, Mr. Krishna Menon advanced the faltering excuse that the other party ought to be consulted before facts are made known to the House. The inevitable intervention of the Prime Minister on behalf of the Defence Minister occurred on this occasion also. Mr. Nehru pleaded that this deal would not be kept a permanent secret from the House. The financial particulars of the deal, however, were not still disclosed. It is to be trusted that this sort of intransigence will be abondoned and the constitutional rights of the House respected without reserve. Or, do the Ministers need the embarrassing posture from the House of a blunt refusal to grant demands for funds?

Nehru-Noon Agreement

BERUBARI

THE UNFORTUNATE controversy between the Prime Minister of India and the Chief Minister of West Bengal, over the transfer of Berubari to Pakistan under the Nehru-Noon agreement of 1958 has brought home two important lessons. In the first place, it has emphasised the fact that, whatever the constitutional proprieties, the Prime Minister should have consulted the Chief Minister of West Bengal before committing himself in regard to the transfer of Berubari and in future also, he should take into confidence the Chief Minister of the particular State involved. In the present case, the presumption that the decision had the assent of the West Bengal officials who attended the conference was not sufficient. Secondly, the Prime Minister may—for setting healthier traditions of democratic Government—consult the leaders of Opposition as well. Both these steps would definitely go a long way in obliviating chances of similar ugly controversies in the future.

Now that the time for honouring the agreement has arrived and the Pakistan President has exhibited his disinclination to amend it in any manner, it is essential that all sections of the Indian public opinion should back the Prime Minister so that he may honour his word. With due regard to the dislocation and discomfort that might be caused to more than 1,000 inhabitants of Berubari, the "prestige" of the Prime Minister of India is indeed more important, especially when the decision that he took was in over-all terms not against the Indian Union. The present agitation which is being whipped up in West Bengal is, indeed, unwarranted and sooner the saner elements prevail the better it will be for the country.

Congo

NEED TO ENLARGE U.N. MANDATE

THE SITUATION in the Congo has been changing so rapidly during the past one month that it has been quite a difficult job to keep track of all the events happening in that country. By all accounts, it appears it has not only deteriorated fast, but has also become more confusing. Although President Kasavubu's representatives have been seated in the U.N.—thus giving recognition to the authority of his office—he is not the person who is the real repository of power in the Congo. He has not yet been able to invite the proposed U.N. Conciliation Commission to his country. Nor has he been able to exercise restraint on the activities of Col. Mobutu and his armed forces, who besides indulging in unwarranted attacks on the U.N. personnel and mem-

bers of the Diplomatic Corps, have not hesitated from raiding even the President's Palace.

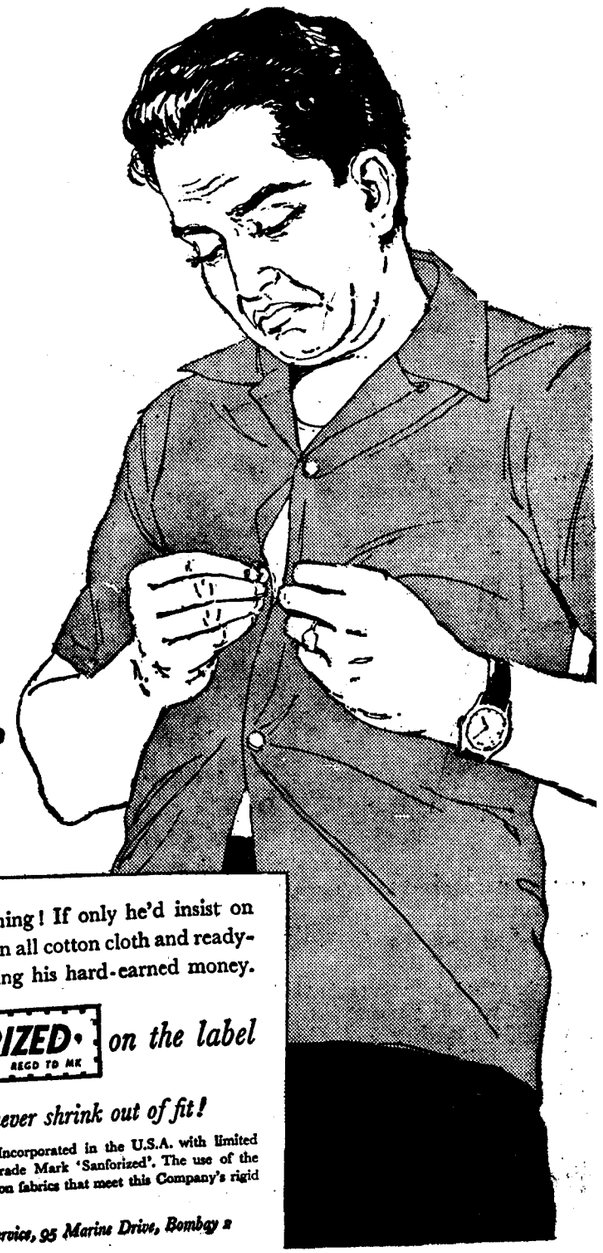
Meanwhile, Mr. Lumumba, the ousted Premier, has been the main target of Col. Mobutu's wrath after his unsuccessful attempt to escape from Leopoldville. He is now reported to be lying seriously ill in detention in a cell at the Thysville military camp. Nobody is allowed to meet him, not even his wife and the U.N. representatives. Following his re-arrest, fighting is reported to have started on the borders of Orientale and Equateur, two pro-Lumumba Provinces which, like the Kasai Province, may secede from the Republic at none-too-distant a date. The Katanga Chief, Mr. Tshombe is said to have been dashing between Brussels and Elizabethville with a view to strengthen his position in this break-away Province.

While the Congo Republic thus faces a break-up and there are dangers of civil war breaking out any moment, the United Arab Republic, Ghana, Ceylon and Yugoslavia have decided, or threatened, to withdraw their contingents from the Congo. Col. Mobutu has placed restrictions on the transport of strategic UN materials within the Republic. The UN Treasury is depleted to near-bankruptcy and Russia has refused to contribute any further sum to meet the cost of keeping the UN Force in the Congo unless Col. Mobutu's troops are disarmed. In the Security Council and in the UN Assembly, cold war rivalries, at the height, are preventing any dispassionate discussion on the issue. In the circumstances, the UN Force under its limited mandate is finding itself helpless in retrieving the position. Is it not time to enlarge the mandate of the UN Secretary-General's representative in the Congo so that he may be able to meet the menace of Col. Mobutu effectively? Curbing of Col. Mobutu's activities is obviously the first step towards restoring of peace in the unhappy land of the Congo Republic. Total withdrawal of the UN Force is obviously ruled out. The consequences of such an action can be well imagined.

National Income

ESTIMATES OF REGIONAL INCOME

IN A leading article last week in the "Eastern Economist" attention was invited to the paramount necessity of computing an index, based on a number of relevant factors, for guidance in making financial allocations to the States under the Third Five Year Plan. It was also indicated that one of the important factors to be considered was that of backwardness and that there could be no better measure of backwardness than the per capita income of a State or a region. Happily, the forthcoming ninth conference of Central and State Statisticians to be held in the third week of this month at Jaipur will discuss not only the technique of estimating State income but also the manner in which the difficulties in the way of computing regional incomes are to be overcome.



There is no doubt the purists will run down the attempts made so far by the pioneers in this field. A large number of States have attempted estimates of their State incomes broadly on the pattern set down in the final report of the National Income Committee, with marginal adjustments. These attempts need to be praised and encouraged. The only drawback in these estimates, however, lies in the fact that they may not be strictly comparable. Attempts have recently been made by some non-official agencies such as the Indian Institute of Public Opinion to set forth similar estimates on a comparable basis.

When the leading statisticians of the country put their heads together at Jaipur, it is certain that some formula acceptable to all—even the purists—will be evolved so as to compute an acceptable series. Research work in the tertiary sector at the State level needs to be encouraged if the reliability of the regional estimates is to be enhanced.

The World Abroad

FREE TRADE

By

ODYSSEUS

"TO REDUCE the tariff protecting the British motor car industry would result in increased imports of foreign cars. I do not see how this could increase exports." This extract from a recent letter to the "Times" of London sums up the popular view of the benefits of Protection.

Now, it so happens that within minutes of reading this "Times" letter I received for review "The Seven: A Provisional Appraisal of the European Free Trade Association" (Barrie & Rockcliff. Pall Mall Press. London. 18sh.) by F. V. Meyer, a brilliant young economist of Exeter University, who gives the simplest, and most convincing, case for free trade that it has been my good fortune to come across.

Mr. Meyer points out that manufacturing lends itself to specialisation among firms. Two cultivators may produce identical maunds of wheat of the same grade. Two firms seldom, if ever, produce, say, electric heaters that are identical for all purposes. Unimpeded expansion of manufactures is normally accompanied by a more than proportionate increase in inter-regional and international trade.

Firms export either because prices abroad are higher than domestic prices for their products, so that the extra trouble of exporting is compensated for; or they export because they produce more than can be profitably sold at home.

If firms export more because the price abroad is better than the home price, they divert more goods from the home to export markets. This causes a scarcity of their goods in the home market, so that people who want these goods at home must pay the international price. The general domestic price level need not catch up with the international level, partly because home sales give less trouble, so that exportable goods can be sold rather more cheaply at home than abroad; partly because the domestic price level is not only influenced by exportable goods. But exporters, who sell to whosoever values their products most highly, find that a rising export market protects their home market. In such circumstances, businessmen do not need official exhortations to export: they find that exporting ensures rising profits in both foreign and home trade. They are prosperous exporters because their enterprise meets a rising world demand even more than a rising domestic demand, as proved by the higher international price. Should foreign governments then tax imports, their profits are reduced, because the exporter must accept lower prices if he wants to keep his market. With lower profits, the stimulus to further expansion is reduced. This is even more marked when the world price ceases to be above the home price, so that the domestic market too becomes less profitable: the domestic market is no longer protected by the higher world price. Economic expansion slows.

PROTECTION HOLDS BACK WORLD EXPANSION

When the international market is second best to the home market, because the world price is below the home price, international trade does not expand in response to rising international demand. International demand is not so intense as to be ready to pay a higher price. If foreign governments impose tariffs, the exporter has to pay all, or most, of the duty or be content with lower sales or loss of markets abroad. He must then either sell more at home, which will spoil the domestic price, or he must contract output. Domestic protection and the monopolistic exploitation of the home market usually go together. There are no natural monopolies in manufacturing industry. The world price is lower than the domestic price because the home market is kept short, and/or because the protected industry's international efficiency is not as great as its domestic efficiency.

When foreign protection makes exporting less profitable, exports become too cheap (from the producer's viewpoint) to be maintained profitably at their free trade level, so that expansion is halted and contraction may set in. The home market is weakened as well as the international market. Profits and employment fall in the exporting country. (It is here relevant to remember that while the trend throughout Europe is towards tariff reduction, the UK now remains one of the highest tariff countries in the world).

Protection falls first on the most rapidly expanding sector of the world economy, i.e., manufacturing. If protection were once again to become widespread, profits and employment would be reduced throughout the world. Renewed protection would do this, directly, by denying the best opportunities for expansion, and, indirectly, by its repercussions on the raw material producing countries, demand for whose products would fall because they are wanted for their contribution to manufacturing and for nothing else.

Food producers, too, are hit by protection of manufactures in industrial countries. The retardation of the growth of manufacturing delays the transfer of workers and resources from agriculture to industry. There is too much food producing in areas that would do better in manufacturing. The whole of Europe and North America is bedevilled by too much relatively inefficiently produced food, often heavily subsidised at the expense of industry. The ironical result is to limit the incomes, profits, and opportunities for expansion, of the more efficient food producers.

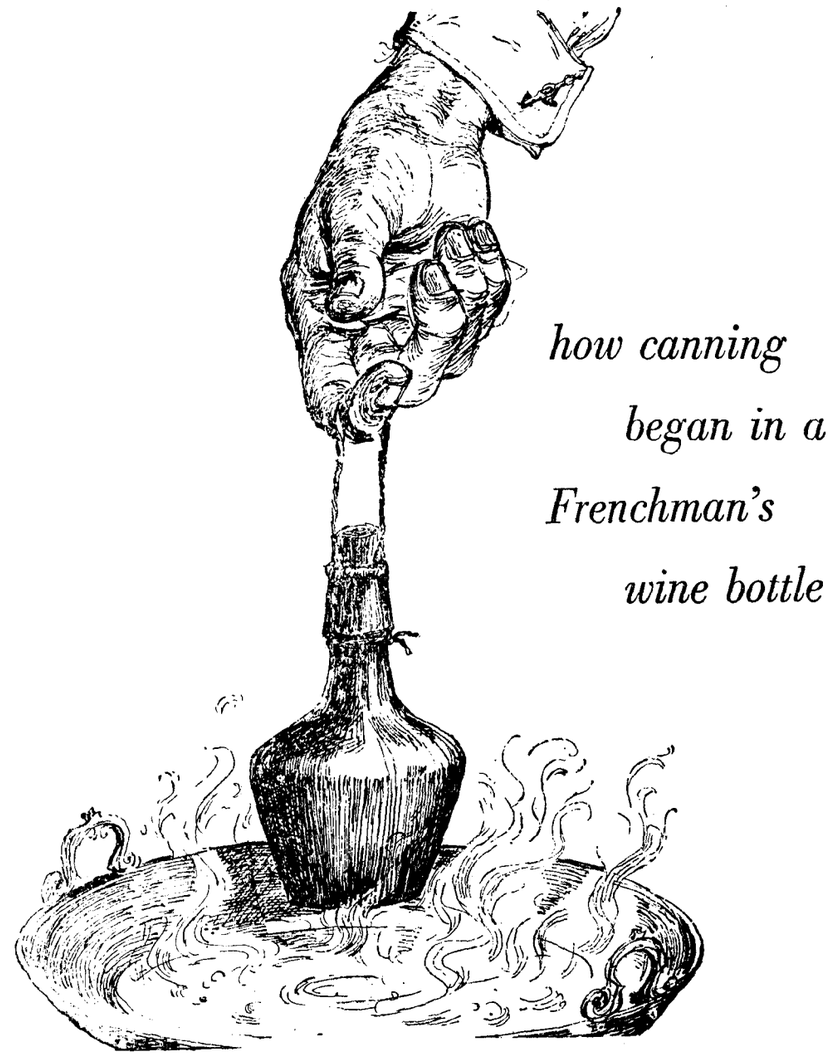
Let us consider prices for a moment. A rise in prices reflects a rise in real values if it results from an increase in the production of goods that are more in demand. In a progressive economy, new goods should be more valuable than old ones. An electric light bulb should be dearer than a candle, a TV set dearer than a sound radio. All this is changed if protection enables the production of the same old things to continue in more expensive ways, or if it forces the copying of one economy by every other.

THE HEART OF THE PROBLEM

At this point Mr. Meyer asks two questions that pin-point the case for free trade in the simplest possible terms: Must every economy have a Chicago? Is Chicago rich (a) because there is a pork-canning industry there, or (b) because pork-canning is done well there? Naturally, if the answer is that wealth depends on canning pork, every country must can pork, and local pork-canning must be protected lest the original innovators of pork-canning in Chicago do it so well that

they sell more cheaply than the local industry in an unprotected market.

In a world of rising protection of manufactures, manufactures become too cheap in the world market, too dear in the protecting countries' home markets, and too cheap in the home markets of the countries excluded from selling abroad by tariffs against them. This invites counter-protection in order to raise prices in the excluding countries' home markets, which, in turn, lowers export opportunities and domestic prices in the countries which protected first.



In a Protectionist world, all industrial countries exclude and are excluded. They exclude what others can do more cheaply and are excluded from selling what they can do more cheaply.

As protection becomes more widespread, the various manufacturing economies become more and more alike. After all, the object of protection is to exclude the foreigner in order to do just as he does! As more economies become alike, more do what each can do as well, rather than what each can do best. Consequently, the manufacturing economies offer more like goods in the international market. They have less to offer each other and must rely on third markets, i.e. primary producers where wealth grows more slowly than in manufacturing countries. Primary producers are impoverished because of reduced sales opportunities, and/or low prices, for their goods in a restrictionist manufacturing world. Thus, world trade in manufactures becomes more and more a trade in like goods for the poor.

Glancing back over history, Mr. Meyer allows that in the state of economic development and technological knowledge in the 1870's, there may have been sound reasons why the countries of Europe sought to copy the UK rather than specialize in somewhat different goods. But whatever mixture of sound and unsound economic and political arguments carried the day in each country, the result was the rejection of the UK's free trade example and a return to protection and economic nationalism. Mr. Meyer suggests that had industrial inventiveness come to an end in 1880, protectionism might have been justified, but points out that in fact the economic nationalists saw that the UK was rich because she produced textiles and steel well. By ignoring the word "well," they made the UK's wealth the grounds for their own duplication of her production. Thereafter duplication preponderated over diversification in the development of European manufactures from the 1880's to 1950. While Europe duplicated, the USA developed into the dominating commercial power. Certainly the USA achieved this behind protection, but there are points to be noted. A fair amount of local savings in European countries were used to buy out British capital, while US savings were not diverted from creating new capital; foreign lenders were repaid in the commercial course of events. Secondly, the US market was large enough, and had a rapidly growing population, eager for industrial products, to support a domestic industrial revolution. It is only now that the US economy is bursting out of her frontiers. Would European growth have fallen so much behind US growth had European protection not impeded the access of European manufactures to large numbers of industrially conscious consumers? (US protection, of course, also impeded their access).

From this argument, it follows that Mr. Meyers concludes that regional groupings, surrounded by external tariff walls, such as the European Free Trade Association of the Seven, and the European Economic Community of the Six cannot be regarded as ends in themselves, but only as stepping stones to a wider extension of free trade.

how canning began in a Frenchman's wine bottle

Fascinating experiments, 150 years ago, which have changed the habits of the world

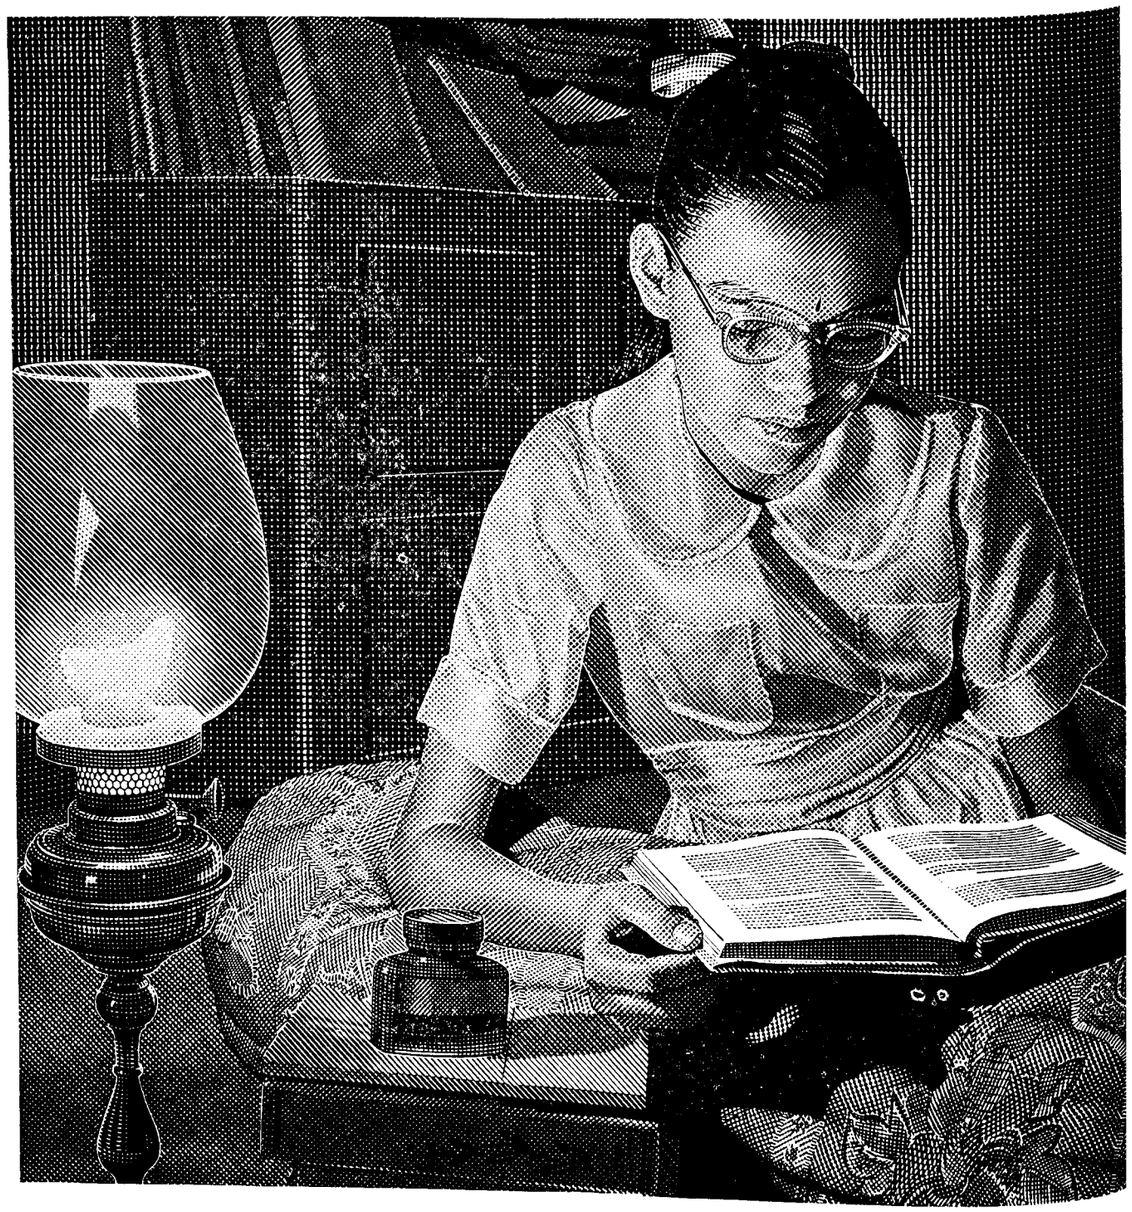
When Napoleon declared that an army marches on its stomach he said it perhaps in a moment of despair. For starvation was taking a heavy toll of his far-flung forces. So much so that in 1795 a prize of 12,000 francs was offered to anyone who could invent an effective means of preserving food for France's hungry soldiers in distant lands.

Nicholas Appert, an obscure Parisian confectioner, took up the challenge ··· and after 14 years of patient experiment achieved success. Appert sealed partially cooked food in wine bottles and then immersed them in boiling water. Opened after many months the bottled food was found to be perfectly edible.

Appert's experiments sparked an idea which Peter Durand, an English merchant, advanced by using a cylindrical cannister made of crude tinplate instead of the Frenchman's wine bottle.

This was so successful that in August 1810 Durand was granted a patent for vessels of "pottery, tin or other metals or fit materials".

Since then the food processing industry has come a long way. Today the world produces 50,000 million cans of food annually, accounting for 20% of all food consumed in some countries of the West. The Indian canning industry offers a variety of excellent products from many parts of the land and Indian canned foods — such as prawns — are now finding markets all over the world.



As the pioneers and leaders of India's can-making industry, Metal Box take great pleasure in relating the fascinating story of the beginnings of today's versatile can — the vessel of "fit material" which in 150 years has changed the habits of the world.

Inserted on the 150th Anniversary of the Metal Can by The Metal Box Company of India Ltd

The comforts of life are spreading

Rising standards of living are finding their way into the remotest village and are coming within the reach of people with quite modest means. Consider Kerosine, for instance, which by bringing illumination to the humblest home is playing a part in this welcome development. By the end of the Third Plan, Burmah-Shell estimates that demand for Kerosine will be around 2.9 million tons, or well over 800 million gallons a year. There can be no question that the first priority should be exploration and the production of indigenous crude oil; the second priority must be to expand refining capacity in India. Oil is essential to economic growth and Burmah-Shell believes that

for tomorrow's needs we must act today

The European Scene

AUTOMOBILE LABOUR FEARS SLUMP

From Our Special West European Correspondent

PARIS, December 3.

FOR four days in Paris this week labour representatives from 15 countries, including India, belonging to the World Federation of Free Trade Unions, discussed the threat of crisis in the automobile industry. Trade unionists came from the majority of non-Communist countries interested in car manufacture: from the big five (USA, UK, Germany, France and Italy) who between them make almost all the world's cars, from minor producing countries such as Sweden, from European countries specialising in assembling parts made elsewhere (Holland and Belgium), and from the newcomers in the field such as India, Australia and Japan. One delegate declared that the purpose of the conference was "to find ways of ensuring that the development of man will dominate the development of machines". Less poetically, this means that the trade unions want to ensure that if the automobile crisis deepens, their members do not bear the full burden of restrictions. More specifically still, they want to prevent their employers exploiting the willingness of workers in various countries to accept widely varying wage rates by transferring the production of cars from high-wage to low-wage regions. The means the trade unions have in mind to prevent this transfer is international collective bargaining designed to close the gap between different countries' wage rates in this industry.

Stated thus baldly, the objective is plainly utopian. Wage rates are not going to be equalised around the world by trade union action, and if they were the gain would be all in favour of the American unions. One supposes that the Indian delegate did not need to be told that if producers in his country were obliged to pay the hourly rates paid in Detriot, the Indian industry would fold up. So what the unions are getting at is the need to co-ordinate their action internationally because their employers are doing so. Employers negotiate wage agreements only with the workers in one factory or at most in one country. Yet there are no more purely national automobile industries: the purchase by Ford of all the shares in its British affiliate has just illustrated the fact, by transferring over half the British industry into foreign hands and by increasing the stake of the American producers abroad. The mergers and pacts between the industries of the Common Market have the same effect, and in any event all major producers have assembly lines (at least) in a number of foreign countries. Thus the producers are organising their business on a global scale, and one of the facts they take into account in doing so is the variation in labour costs. Not unnaturally, the unions see here the need to collaborate in a similar way, especially when the forecast for the motor industry is "white water ahead".

As if to justify the anxiety of the labour representatives on this last point, the news from the industry during the conference was all bad. The UK Ford organisation had barely got the Commons' approval for the sale of shares to the parent company when it put 18,000 more men on a four-day instead of a five-day week. So there are now 100,000 auto workers in the UK, out of 442,000, on short time. US car stocks were reported to be 900,000 new vehicles, of which 300,000 are last year's models and thus virtually unsaleable at catalogue prices. Order books were reported slimmer in the UK, West Germany, France and Belgium. The trouble at Renault, where 3,000 out of 65,000 workers were laid off recently (trouble that led to some violence), had barely died down when French figures for October showed that industry output had fallen to 113,000 vehicles against 128,000 in September and 122,000 in October last year. Chrysler International revealed that sales of its French-made Simca had been hit by the recession in Britain, and its director forecast that West European producers could only hope to hold US sales at between 400,000 and 450,000 a year, "but it would be hard selling all the way".

For the European workers, news from North America suggested that it would be difficult to maintain sales even with very "hard selling". Representatives of Volkswagen and of the British Society of Motor Manufacturers and Traders have been battling before the Canadian Royal Commission on the Automotive Industry to convince the Canadians that they should not raise tariffs on European cars. Meanwhile, persistent rumours from the USA credit Detriot with the intention of moving into the "super-compact" car market, i.e. making a really small car of the dimensions of a Dauphine. Chrysler denied this for their part, but "US News and World Report" last week insisted that plans for a baby car were under study, despite denials. At least, when M. Dreyfus, boss of Renault, lately suggested that the USA should leave baby cars alone so that the "free world" could distribute its energies as rationally as the Communist countries do, he got a lecture on the virtues of competition from leading US newspapers.

The spate of bad news dominated the workers' conference, but it was not without relief. The Italian spokesman, was able to report a flourishing home market that was years away from saturation, although Fiat (who make 90 per cent of Italian vehicles) have had to cut prices to meet growing competition in the Common Market. The West German delegate was pessimistic about the future, but the figures (apart from some short time at Bord Ward) are not alarming yet. French unionists could point out that only Renault has been hard hit so far because Renault is the biggest exporter, and this illustrates the fact that the French producers are in trouble because they have been over-exporting on the basis of a too narrow home market; during the conference the French Government promised cheaper petrol next year, which should widen domestic demand.

Yet the part of the discussion that must have most interested the Indian trade unionists was the one that saw most unanimity among the representatives of the Big Five: the threat of "dumping" by cheap-labour countries. You may not have guessed it, but what the US and other unionists meant by "dumping" was the practice of installing assembly lines in developing countries, who thereby benefit from the capital investments and technological knowledge of the big producers, while these latter gain from the low wages paid to local workers. Assembly chains have been built all around the world by the major manufacturers, at a very fast rate in the last two years. During the conference came news that Citroen was setting up another in Yugoslavia to build 2CV's, while Fiat and Simca (i.e. Chrysler) were planning a joint assembly line in Morocco. Mr. Victor Reuther (US delegate and brother

of Walter Reuther, vice-president of the AFL-CIO) dwelt at length on this danger, taking Japan as a typical case. The Swiss and Canadian delegates had this in mind in urging international collective bargaining aimed at preventing employers exploiting wage differences around the world, or at least exploiting them to the too obvious detriment of Western workers.

It would be easy to reply that in setting up assembly lines in India, Argentina or Morocco the big automobile producers are not seeking so much to take advantage of cheaper labour as to safeguard their markets in those countries in the only possible way. The choice is not between assembling a car with expensive Western labour or assembling it with cheap local labour, but between selling cars in knocked-down condition or not selling them at all. The developing countries are short of money and find it cheaper to import knocked-down parts and assemble them locally, and they know that assembly lines are a sensible way to start mechanical industries in countries that have none and want to industrialise. So their governments have numerous reasons for prohibiting imports of cars, and some of them have done so, suddenly and brutally. The big Western producers are reckoning with the fact of economic nationalism (more or less rational in various countries) rather than with the circumstance of varying labour costs. The intelligent exploitation of lower labour costs does indeed account for much US manufacturing investment in West Europe (not in the developing countries) but even there it began as an attempt to get around the bans on dollar imports imposed during the dollar-shortage.

Still, granting that from the point of view of the Western worker the setting up of an assembly line in Asia or Africa or Latin America looks like an attempt by his boss to exploit cheap foreign labour, one may ask: so what? Western workers, and none more than automobile labour, have been living for years in a fools' paradise. They have preferred, as Keynes said, higher prices with higher wages to stable prices with stable wages (let alone lower prices with lower wages). This preference is economically irrational, but within the Western economies, granted that they were all inflating at roughly the same rate, it has worked out fairly satisfactorily. It has not worked at all satisfactorily, however, from the point of view of the developing nations—who have had to pay higher prices for Western manufactures while still receiving the same low wages. The prices of their commodities and raw materials have not risen comparably, for a number of reasons (Western demand is restrained by technological progress, there are too many producers of raw materials, etc.), but they have had to pay ever-higher prices for industrial goods and notably for cars and other vehicles. If Western workers had been willing to accept higher real wages instead of ever-higher money wages, the international division of labour would have had some ghost of a chance of working (though it would still have been unacceptable on other grounds), because the price of manufactures expressed in the moneys of the non-industrial economies would not have risen so fast. As it is, Western labour chose a different course and it will not now be able to stop the recourse to cheaper foreign workers by trying to enforce international collective bargaining.

.....Not only promises

The beginning and the end of a Five Year Plan are vital dates in the nation's history. Each Five Year Plan is both an assessment of the past and a call for the future. It seeks to translate into practical action the aspirations and ideals of the millions in the country and gives to each of us the opportunity of service in the common cause of eliminating poverty and raising standards of living...

Today, on the eve of the Third Five Year Plan, we of Dalmia Cement (Bharat) Ltd. believe that almost 23 years of useful service to the Nation is something to talk about. Here are a few facts about our "achievements" and our contribution towards raising the standard of living of our people during the past few years.

For building the India of our dreams, the richer and prosperous India, there is little room for preaching by mere words and what are needed are DEEDS... DEEDS, in the terms of rebuilding of our nation, including higher production of some of the essential commodities like

CEMENT

the great modern material of building construction

In 1947, we had placed at the Nation's disposal over 67,000 Tons of Cement
In 1950, we had produced over 1,64,000 Tons of Cement
In 1954, we produced over 2,70,000 Tons of Cement
In 1957, our production reached nearly 2,80,000 Tons of Cement
And This Year.... in 1960

We expect to place at the nation's disposal over 4,25,000 Tons of Cement

BECAUSE WE NEED MILLIONS of TONS of CEMENT

for building the richer and prosperous India of our dreams....

Economic Report from the U.S.

POPULATION GROWTH

By

GUY SIMS FITCH

WASHINGTON, Nov. 29.

THE birth here last week of John F. Kennedy, Junior, first son of the President-elect of the United States, has been but the most notable of many births all over the nation during the year. In 1960, as in previous recent years, some 4 million new Americans have seen or will see the light of day for the first time. This represents a birth rate more than twice that of the 1930's. In fact, the statisticians tell us that more American babies were born this past September than in any other month in US history. In all, more than 40 million babies have been born in the United States since the end of the World War II. To give an idea of what this means in terms of population growth, it is as many as were born in the United States in the entire preceding century and a half. And given the current trends, some experts are predicting that the annual number of births in the US will exceed six million by 1975.

This statistical recital is of more than passing interest. It is significant to the economist and businessman, no less than to the obstetrician and pediatrician. For it holds out the promise of an economic growth that truly dazzles the imagination. Let us explore some of the potentialities. At the moment, the "baby boom," as it is some times called, is having its most obvious effect on those industries which cater directly to the "infant"or "child" trade. Sales of high chairs, baby carriages, cribs, and similar equipment, are up 50 per cent just in the past decade. Similarly affected have been sales of vaccines, baby foods, powders and other special concoctions for the nation's juniors. These totalled an astounding $1,300 million in the one year of 1959 alone. Makers of children's shoes and publishers of children's books are among others reaping a record harvest of earnings. But the full impact of the population boom is yet to be felt and appreciated. These youngsters are growing up. Soon, in increasing numbers, they will be marrying and raising their own families. The conclusion is inescapable: an intensification beyond anything yet experienced of the need for more clothing, more public facilities, more goods and services of all kinds.

Recent projections in two important industries furnish a clue to the kind of demands the nation's rising population will stimulate. Home builders estimate that the number of new dwelling units put in place each year will have to rise from the current level of about 1.4 million to more than 2 million within a decade or so. And automobile makers see the annual new car market expanding from six million to eight million in the decade ahead. These trends also may go far toward explaining what has been happening to the US economy in the past year. It may well be that the old post-war demands at last have been met, while the new demands of a new era have yet to flower. Thus, this past year, and perhaps the next as well, may be viewed by future economic historians as a kind of transition. If this analysis is correct, it is certainly understandable that the 1960 American economy is marked more by stability than by rapid growth, more by a diminution of earlier inflationary pressures than by a sharp new upsurge of demand. In such a setting, business fluctuations tend to be narrower, and the pace of economic advance somewhat slower. So, American business men are turning their attention increasingly to cutting costs, to keeping a rein on inventories, to meeting the growing foreign competition.

This is a period, too, when the US government is putting renewed emphasis on bringing under control the troublesome deficit in its international balance of payments—a deficit which is largely the legacy of earlier post-war years, when the United States to all intents and purposes was the world's sole economic support in the struggle for freedom, security and prosperity. The important thing is that the US economy seems to be making this transition—if such it is—without suffering a serious relapse, and while generally maintaining a strong and healthy condition. In the meantime, a sound groundwork is being laid for the unparalleled progress that lies ahead.

WORLDGRAM

India

DLF: The Finance Minister, Mr. Morarji Desai, revealed in the Lok Sabha that subsequent to the information given in reply to a question in the House on August 20, 1960, the United States Development Loan Fund have announced their intention to grant the following loans:

Name of Loan	Amount of Loan	Rate of interest & period of repayment	Object of Loan
1. Industrial Credit and Investment Corporation	5 million	5 per cent 15 years after 1st disbursement	To assist in financing the foreign exchange costs of medium and long-term loan to private industries.
2. Trombay Fertilizers	30 million	5¾ per cent 10 years after 1st disbursement	To assist in financing the foreign exchange costs of constructing a fertilizer Plant at Trombay by Hindustan Chemicals & Fertilizers Ltd.
3. Private Sector Capital equipment	25 million	5¾ per cent 10 years after 1st disbursement	To assist in financing the acquisition and importation of capital machinery and equipment by private industrial firms in India.
4. Importation of Steel for Industrial enterprises	25 million	5¾ per cent 10 years after 1st disbursement	To assist in financing the acquisition and import of items of steel for private and public enterprises in India.

Mr. Desai said the loan agreements had not yet been signed.

*

Aid and Loans Given by India: The Finance Minister, Mr. Morarji Desai, gave in the Lok Sabha the available information regarding the aid and loans given by India from 1955-56 to 1959-60 under the Colombo Plan for Co-operative Economic Development in South and South-East Asia. He said information regarding aid and loans given outside the Colombo Plan were being collected and would be placed on the table of the House. Mr. Desai said, the amount of aid given by India to Nepal for her development works from April 1st, 1960 to October 31, 1960 was estimated to be Rs. 52,82,952. No part of this aid was given as loan.

		Loans				
Burma				15,00,00,000 (the remaining Rs. 5 crores out of Rs. 20 crores promised in 1957 was actually paid in 1960-61).		

Note: Figures of technical assistance relate to Colombo Plan years (i.e. 1st July to 30th June).

Motor Cycles and Scooters: The production of motor cycles and scooters during this year up to September had been 12,233 as against the Second Plan target of 11,000 numbers annually. Production in the country had commenced in 1955 and the 1956 level of production had amounted to 1,022 numbers for motor cycles and 4,735 for scooters. By the end of the Second Plan period, the production of motor cycles and scooters would rise to 24,000 annually. No separate financial allocations have been made to the two industries. The fixed investment in these industries roughly amounted to Rs. 2.34 crores.

*

Machine Building Plant at Ranchi: It has been estimated that 10,883 workers would be required for the heavy machine-building and foundry forge plant at Ranchi and for the coal mining machinery plant at Durgapur. Categorywise the number of highly skilled workers required would be 2,283 and skilled workers 5,649. For semi-skilled workers, the number required would be 1,626, while the requirements of unskilled workers would be 1,325.

*

Premier Automobiles: The Premier Automobiles today is one of the largest automobiles concerns in India. It employs over 7,500 people in its 90 acre factory at Kurla, Bombay, to produce Dodge, Plymouth and Fiat cars and Dodge and Fargo trucks, in collaboration with Chrysler Corporation of U.S.A. and Fiat of Italy. As Mr. Walchand always wanted it, it is the full-fledged Indian company with Indian capital and Indian technicians.

On 9th December, 1960, Dr. Rajendra Prasad, the President of India, will visit the Premier Automobile Factory in Bombay and unveil the bust of the great industrialist of our time, the late Mr. Walchand Hirachand, founder of the Premier Automobiles Ltd.

United States

Unemployment in the United States: "The Wall Street Journal" reports from Washington that according to preliminary estimates there were over 4.2 million unemployed in the United States in November, and it is possible that unemployment reached as many as 4.5 million. This is the highest level for November in the past 15 years. In October, the number of unemployed in the United States was 3,579,000. It follows from the weekly report of the Department of Labour that only 1,962,000 unemployed receive unemploment benefits.

*

Investments in Cuba: United States Private Enterprise has sent to Cuba and re-invested in that country much more than has been taken out of Cuba in profits. The National Foreign Trade Council, Inc., leading spokesman for American overseas commercial interests, states "that the U.S. firms spent nearly $300 million to purchase material and services in Cuba $170 million for wage and salary payments, $30 million for income-taxes, $40 million for other taxes in 1957. The number of jobs created by the U.S. companies in Cuba was 1,60,000 virtually all of which were held by Cuban citizens. Earnings of the U.S. direct investments in Cuba were $73 million, of which remittances to the United States in dividends, interests, and branch profits amounted to $48 million. This latter, classified as income, represented only 6 per cent of the total $8,49 million value of these investments in 1957. In 1959, U.S. firms added $76 million to their investments in Cuba, including $62 million of net capital outflow from the United States and $14 million of undistributed subsidiary earnings, which were kept in Cuba, the Council's report added. Payments to the United States in dividends, interest and branch profits amounted to $22 million, or 2.3 per cent of the $955 million U.S. investments in Cuba.

U.S.S.R.

Production of Cement: The new cement plant near Leningrad, construction of which is in the finishing stages, will have an annual output of nearly 1 million tons. It will be one of the world's most modern, fully automatic plants. Its sacking machines, for instance, will have an hourly output of 2,000 sacks. This huge enterprise will have a staff of only 20 workers and engineers — a fraction of the personnel at any cement plant abroad. Six such plants are now being built in the U.S.S.R. This year the Soviet cement output will reach 45 million tons, much more than produced in Britain, Italy and France taken together. In the seven year period cement production will double.

United Kingdom

BOAC to Start New Jet Service to Los Angeles: BOAC will introduce the fastest jet service between Los Angeles and London on March 2, 1961. Boeing 707's will operate twice a week each way on this direct service, increasing to three times weekly in the peak summer season. The flight schedule from Los Angeles to London will be 11 hours. This is the first time that BOAC will be operating into Los Angeles. The service will operate on Thursdays and Saturdays in each direction. Initially the Bocings will carry 32 First and 97 Economy passengers. In the peak period 21 First and 111 Economy passengers will be carried.

France

Construction of an Alcohol Plant in Ceylon: The Ceylon Development Bureau has made the Societe Lepage et Urbain responsible for the construction of a plant for the transformation of molasses into alcohol at Colombo. The production capacity of the plant would be 9,000 litres a day. This French Company is now working practically exclusively on foreign projects.

*

Renewal of the Franco Japanese Trade Agreement: The Franco-Japanese Trade Agreement signed in 1959, which expired on June 30, 1960 and which had been extended for 3 months, has been renewed for the period between October 1960 and March 31, 1961. During the first 6 months of 1960, a considerable increase in Franco-Japanese trade was registered. As a result, the figure for Japanese imports into France totalled a value of 39,333,000 new francs compared with 18,547,000 new francs for the first half of 1959. During the same period French imports by Japan totalled a value of 66,970,000 new francs compared with 48,747,000 new francs for the first half of 1959.

Germany

Foreign Trade: According to the East Asiatic Society in Hamburg, the volume of foreign trade of the Federal Republic of Germany with the countries of East Asia in the first nine months of 1960 advanced by about 17 per cent as compared to the position during the corresponding period of the last year. The German imports, to the value of 1.58 billion DM (nearly Rs. 1,800 crores) as against 1.14 billion were higher by about 38.7 per cent whereas the exports, valued at 2.18 billion, as against 2.06 billion DM, showed an increase of 5.8 per cent only. This upward trend in imports led to a decline of German export surplus from 920 billion (nearly Rs. 1,000 crores) to 600 million DM (about Rs. 675 crores).

NEWS IN BRIEF

INDIAN

The Government of India have accepted the Tariff Commission's recommendations that protection to the Industry manufacturing plywood, including plywood panels for teachests and battens for teachests should not be continued beyond December 31, 1960.

*

The International Telex service has become available with the USA. The rates will be Rs. 51 for the first three minutes or part thereof and Rs. 17 for every additional minute or part thereof. Report fee will be Rs. 4.

*

Mr. Manubhai Shah revealed in the Lok Sabha the other day that arrangements had been made to import about 1.2 lakh tyres through the State Trading Corporation. The Minister added that out of this, orders for 50,000 tyres had already been placed.

*

Mr. Manubhai Shah, Minister of Industry, disclosed in the Lok Sabha that it had been arranged with the Iron and Steel Controller to plan one-third of the indigenous allocation of steel on a priority basis, to be distributed immediately to small scale units in the industrial estates and outside.

*

It is reported the Coffee Board has released 560,700 kilograms of coffee for export out of the 1959-60 crop. Over the years, the membership of the Colombo Plan has grown to 22-16 countries within South and South East Asia and six countries outside it.

*

The proposed opthalmic glass plant at Durgapur in West Bengal is likely to go into production some time in 1963. Durgapur project would manufacture 300 tons of opthalmic glass per year and the revised project report for the project would be received shortly.

*

The Minister of Revenue and Civil Expenditure, Dr. B. Gopala Reddi, disclosed in the Lok Sabha recently that the number of non-company wealth-tax assessees as on 31st March, 1960 with net wealth over a crore of rupees was 28.

*

Generation of electric power for the year ending March 31, 1960, in all the States and Union Territories was 14,991,501 million kWh. The installed thermal and hydro plant capacities for the year ending March 31, 1960 were respectively 2,343,021 and 1,530,145 kW.

*

According to quick estimates of national income at 1948-49 prices, prepared by the Central Statistical Organisation, the per capita income of India has declined from Rs. 293.6 in 1958-59 to Rs. 291.3 in 1959-60. National income in 1959-60 was 0.5 per cent more than the national income in 1958-59 but since the population increased at a higher rate, there was fall in the per capita income.

*

More items have been added to the export list on either side in respect of trade between India and Pakistan under the Indo-Pakistan trade agreement of March last.

FOREIGN

A £42 million deal is now on the point of being finalised between Anglo American Corporation and Guest-Keen and Nettlefolds on one hand and a Japanese group representing the Yawata and Fuji iron and steel companies on the other for the supply of 1.2 million tons of iron ore annually for the next ten years from deposits in the Bombou Ridge in Switzerland.

*

Full agreement has been reached between the Finnish and Soviet Governments on Finland's association with the European Free Trade Association.

*

It is reported, the existing investment of £18 million in Irish airports and aircraft would be increased by £6 million in the next three to four years.

*

A 'talking magazine' is expected to appear on news stands in Formosa some time in December. Named the 'Four Seas', it will contain plastic records.

*

The International Atomic Energy Agency (IAEA) is arranging at the invitation of the Indian Government, a symposium on radio isotopes and radiation in entomology at Trombay from December 5 to 9.

*

The Government of Ceylon has reduced the export tax on rubber from 38 cents a pound to 30 cents.

*

The U.S. Agriculture Department predicted that a record 57,722,000 short tons of sugar would be produced throughout the world in the crop year ending next April 30. World sugar production in the previous year totalled 53,539,000 tons.

*

Caltex has completed a survey of sites near South African ports with a view to establishing a £35 million refinery in the Union and is now awaiting a decision from the Company's headquarters in New York.

*

Gold and foreign currency reserves of the Netherlands Bank increased by Fls. 3.8 million to Fls. 5,965 million during the week ended November 21. Bank notes in circulation increased by Fls. 2.3 million to Fls. 4,551 million.

*

A new selective weedkiller — Carbyne — for application to cereal crops has now been introduced by Fistons Pest Control. Treatment with the new product, which is designed to prevent the rapid build-up of wide varieties of oats among all types of cereal crops, is stated to cost about 70 shillings per acre.

*

Kaiser Aluminium and Chemical Corporation is to take over the role, previously held by British Aluminium, of an equal partner with Consolidated Zinc Corporation in the establishment of a £100 million Australian aluminium industry.

*

Corn drilling from the air is being carried out by Auster aircraft for what is believed to be the first time in Britain on a farm just outside Holsworth (Suffolk).

DEVELOPMENT SAVINGS BANKS AND INDIA'S THIRD PLAN

FOR some years Mr. C. Loganathan's provocative scheme of development savings bank has been under active discussion. A resolution is being passed this week at the International Chamber of Commerce meeting at Karachi supporting it in principle. It has been approved over the last two years, by the highest banking and fiscal authorities in many countries of the world. It now forms a central pillar of Ceylon's Ten Year Plan. The question naturally arises as to whether India's Planning Commission has given to this scheme the same study as it has received elsewhere. Unhappily the answer is in the negative. This is the more surprising because it is not being clearly realised that for the mobilisation of vast additional internal resources, access must be had predominantly to low income groups and, in particular, to the wages and salaries sector of the economy. Mr. Loganathan, with great foresight, has seen the relationship between the growth of development income and the mobilisation of resources. He has recognised that, when saving schemes are linked in a direct manner with development, the willingness to save can be substantially created. On the other hand, he has not been so unrealistic as to assume that there is an automatic matching of saving with development needs. While, therefore, his scheme is essentially a voluntary one in terms of assisting democratic effort in the economic sphere, it does not exclude compulsion required once a country has democratically chosen to decide for itself on a higher rate of development than voluntary saving will support. The discussion of some such scheme and its inclusion in the Third Plan is not merely timely but essential. Some description, mostly in Mr. Loganathan's words, of the scheme will, therefore, be of high topical interest:

"The Development Savings Bank scheme provides for a part of the gifts granted by foreign governments to be invested in the private sector, and for the investments or the benefits of the investments to be distributed on some equitable basis among the low-income groups subscribing to the scheme.

"Some international private or governmental lending institutions financed directly or indirectly by private institutions or Western democratic governments, do finance the private sector in the less developed countries to some extent, but those at the receiving end in the private sector are only enterprises owned by a relatively few capitalists. Political power is in reality vested in the low-income groups through adult suffrage. In other words, international lending institutions should also finance the low-income groups so as to enable them to have a stake in the private sector and to have an abiding interest in it.

"The Development Savings Bank scheme is an institutional device which will provide the means of achieving this and other ends to which reference has already been made.

"The Development Savings Bank scheme combines features of social security, savings and investment schemes embracing the people in general, and more particularly, the workers in the government and private sector, urban and rural sector and also peasants. This scheme is applicable to all types of economic activity including agriculture, commerce and industry. The primary purpose of this scheme is to effect through the joint stock device, a new fiscal policy, induced savings and foreign aid, a rapid increase in the wealth of the country, and at the same time, to enable the common man himself to have a stake in the different enterprises of the country.

"The Development Savings Bank scheme provides for voluntary and compulsory contributions from wages and salaries and for these to be credited to the accounts of the salary and wage earners themselves in their individual names in the Development Savings Bank.

"This scheme also provides for contribution by employers both in the Government sector and private sector to the accounts of the employees either as a percentage of salaries and/or of net profits voluntarily or compulsorily under government regulations or Tribunal awards.

"This scheme further visualises tax rebates to taxpayers to be used for productive purposes in the private sector in their own names with the approval of the government, so that the incentive of a person to earn is not stifled, and at the same time, he is compelled or induced to use a part of his wealth in diversifying the country's economy in the interests of society and himself.

"A part of the tax rebates, however, will be used for investment in the private sector for the benefit of the members of the Development Savings Bank below a certain income.

"A part of the gifts granted by foreign countries will also be invested in the private sector for the benefit of the lower income groups in the Development Savings Bank.

"Employees in the different enterprises (government or private, urban or rural) will be permitted to transfer their provident fund balances into their accounts in the Development Savings Bank for investment in the private sector, if they so desire.

"Freedom of choice is also permitted in the matter of investment, but official advisory bodies would be available at any time to give advice to the members. Trade Unions themselves could have their own financial advisers. The investment could take the form of Governments Bonds and Shares in companies and also units in Unit Trusts embracing many enterprises so that the risks will be spread over many enterprises.

"The Development Savings Bank scheme means, therefore, not only the siphoning off of savings and a part of the current purchasing power in the hands of the nation and the people into productive investment for the purpose of increasing the country's national wealth and employment, but also the creation of a society in which the people in general, in increasing numbers with increasing employment, would own the means of production in the form of investment that will appreciate in terms of money unlike most of the existing types of savings."

THE BUSINESS WORLD

Woes of the Woollen Industry

By

CROESUS

NOTABLE among the few industries that have not asked for a higher target under the Third Five-Year Plan than the Planning Commission has outlined and one that has demanded "a working basis for the industry which is really workable" is the Indian Woollen Industry. I am glad it has had the courage to tell the Government of India that first things must come first and that paper plans for further development might well wait until the Government has decided the question of modernisation and rehabilitation of the industry. It is primarily with a view to exploring the possibilities for securing machinery (against rupee payment or under deferred credit schemes) for rehabilitating the industry, one thought, that a delegation of the Indian woollen industry was sent abroad by the Government of India recently. Strangely enough, neither the report of this delegation nor the report of the Working Group for the Rehabilitation of the Woollen Industry, which was appointed much earlier, has been made public, although both the reports have already been submitted to the Government of India. One is at a loss whether to describe this as secretive or callous. However, without intruding on the secrecy of these documents on which the Government seems to be sitting tight, it is possible for one who has followed the fortunes of this unfortunate industry to make out that the main burden of their recommendations must perforce relate to rehabilitation and modernisation of the industry. Indeed, without rehabilitation, not only will the quality of Indian woollen products tend to deteriorate, but it will also not be possible for this country to establish itself in the international markets against powerful competition, as Mr V. Calloway, Chairman of the Federation of Woollen Manufacturers in India (F.W.M.I.), observed at the Annual General Meeting of the Federation last week.

As was to be expected, Mr Calloway dwelt at great length on the recent Control Order and the prospects of a further extension of the said Order. There seems to be something mysterious about this Order, for neither the F.W.M.I. nor the All India Woollen Mills Association, the two bodies at least who ought to know, has been able to elicit from the Government the basis for fixing the percentages for manufacture of worsted yarn for weaving, hoisery, and knitting, respectively. It is not clear why the authorities should be so secretive about this basis of formula and keep the industry guessing. For instance, even the President of the F.W.M.I., after perusing statistics compiled on the basis of reports by the Federation members found it difficult to understand how the Government had established the pattern of production that it has decided upon. But, whatever the formula, according to Mr Calloway, there is a lacuna in it. While a representation has already been made by the Federation to the Governmnt on the subject, which, I am sure, will receive careful consideration, reference may be made to the few pertinent questions that Mr Calloway raised. Surely these questions need to be answered by the authorities, if they have to justify their stand. The first question is: whether all the units of the industry have the necessary equipment installed in their mills to produce all the different types of yarn as envisaged by the Order? Secondly, are there not at least some units of the industry which have never sold worsted yarn but have produced it only for their own weaving sections? Thirdly, is it reasonable that mills should be compelled to change their production pattern overnight by a Government Order, especially when they have evolved a pattern of production over several years for producing worsted yarns in given proportions for weaving, hosiery, and knitting? Again, will not such diversion of the production pattern result in starving composite units and compel them to purchase their requirements from the market? Further, if such diversions of production pattern continue, is there not the danger of the composite units becoming disintegrated? And, finally, have the authorities at all considered the repercussions of their Order on the employment situation in the leading units of the composite sector?

From the questions posed above, it is clear that, far from remedying the situation the Control Order has actually brought about near chaotic conditions. It is not very often that responsible spokesmen of industry speak so vehemently about a particular order unless, according to them, it is "technically not feasible and thoroughly impracticable." It does not appear, however, as though the authorities are still convinced that great harm is being done to the industry, judging from the fact that, instead of revising it to make it more workable, they are reported to be contemplating the establishment of a production pattern for woollen fabrics also. In the words of Mr Calloway, this would be "the last straw on the camel's back." Of course, when the last straw is put on the camel's back, the camel is not consulted, and on this reckoning, it is not surprising that the Government has not cared to consult the industry before resorting to this action. The F.W.M.I. Chairman was expecting too much if he thought the Government would do this, and that too when it had not cared to consult the industry at an earlier stage, that is, before imposing the production pattern for worsted yarn, as it should have. It is a pity that, even at such a critical hour for the industry, the industry is not able to speak with one voice. As a matter of fact, it is this unfortunate development viz., the existence of more than one association, that is now being exploited by the authorities to intervene and intervene too in a way which means no good to either of the sections of the industry.

In conclusion, I should make a pointed reference to Mr Calloway's observation regarding the Government's attempt to impose on the industry "a production pattern on egalitarian principles." Let me quote his own words: "Even in other parts of the world where the egalitarian ideology is the cornerstone of the State's policy not only are the organised sectors of the industry not allowed to disintegrate, but they have gradually been converted into large-sized units incorporating the latest methods, principles, and techniques of modernisaton, rationalisation, and automation." But the F.W.M.I. Chairman evidently forgot that, just as the so-called Indian version of socialism is distinct from all known forms of Socialism in other countries, our Socialistic Pattern of Society also is quite distinctive. It is only arising from this that the attempt is being made to impose a production pattern on egalitarian principles on the Indian woollen industry. Whatever may be the justification for the Government's beliefs in these things, it cannot be too strongly asserted that even the Government's declared aims of industrialisation cannot be reconciled with the measures that it has now adopted. These measures, as a responsible spokesman of the Woollen Industry has pointed out, are calculated to destroy, rather than build up, efficient manufacturing units. It is to be hoped, therefore, that wiser counsels would prevail before further damage is caused to an industry, the export potentialities of which have only recently been recognised, and on which the country must needs rely, especially at the present juncture.

Business Notes

Marketing Research

INCOME, URBANISATION AND COTTON TEXTILES

THE COTTON TEXTILES FUND COMMITTEE has just released a report "on the pattern of consumption of cotton textiles and competing fabrics in Uttar Pradesh." This report is based on a pilot survey conducted by the Marketing Research Corporation of India, New Delhi, in March 1959 employing the technique of sampling surveys in the villages, towns and cities of Uttar Pradesh for determining the structure of demand for cotton textiles and the volume of pressure from competing textiles such as artificial silk, silk and woollens, largely in relation to changing income.

Mr. R. G. Saraiya, Chairman of the Cotton Textiles Fund Committee, has rightly stressed in his foreword the need for the industry "to keep constantly abreast of the changes in demand for textiles from time to time". In the words of the Chairman, the report "traces the relation between the income and consumption pattern of fabrics; the consumption pattern of mill-made cloth as affected by alternative and competitive fabrics and the changing preferences and structure of the demand for cotton cloth." The report has drawn, in the opinion of the Chairman, certain important conclusions which are "of sufficient interest to stimulate thought and warrant further study by the textile industry."

It has been shown, for the first time, that "the pattern of cotton textiles consumption known to be paradoxical in its income component, can be explained, in large measure, by the pressures on cotton textiles consumption arising from: firstly, the pressure of substitutes on certain critical income levels (different for each competing group), and secondly from the pattern of "other" expenditure which, again, varies at each income group". Another interesting result of this survey is the extent to which the small town is closely allied to the village. The process of urbanisation, which is the determining factor in producing the differential in consumption patterns in the three areas of rural sector, small towns, and cities, does not seem to have proceeded far enough in the case of small towns in Uttar Pradesh. An interesting but somewhat paradoxical conclusion is that "the peak consumption in terms of rupees appears in a low income group, where there is a massive rural population, but there is an almost equally massive demand in the rural groups of Rs. 101-150 and Rs. 151-200 as well as Rs. 201-300. Higher income is offset by a smaller population, so that the paradoxical result is reached that the highest sales are actually recorded in some of the lowest income groups". From the point of view of where and how to direct advertising, this conclusion should be useful. A second and a very encouraging conclusion at that is "the village, so far as Indian cotton textiles sales are concerned, is the most hopeful place for increased textile consumption"...."A larger percentage of current expenditure will be expended on cotton cloth in the village than either in towns or cities". This means that the industry should now turn more and more to the villages. True, the bulk of our cloth consumption even today is in our small towns and villages, for even the India of the sixties is essentially rural, about 80 per cent of our people still living in the villages. Nevertheless as suggested by the study, though we have in these villages a large potential market not enough has been done to carry the message of the industry to these areas.

State Trading

STC UNDER FIRE

THE DISCUSSION in the Rajya Sabha on the report of the State Trading Corporation for the year 1958-59 was highly critical in its general tone. What is particularly striking about the criticism is that strong views were expressed by several members of the Congress Party who participated in the debate and also by a spokesman of the Praja Socialist Party. This complexion of the critics is an important factor in taking note of the criticism.

The major attack was on the excessive expansion of the staff of the Corporation, the total strength of whose employees now swells into 1,600. This size of personnel, it was sharply pointed out, was absolutely out of proportion to the business transacted. Mr. Nityanand Kanungo had a flimsy defence to make, when he made reference to a stray case of absence of the appointment of the senior official. But much more important than the criticism of the number of employees was the forthright criticism of the composition of the Board of Directors. A majority of the critics drawn from the Congress and the P.S.P. bluntly spoke of the high degree of bureaucratization of the Corporation's Board of Directors. Most of them placed special and repeated emphasis on the necessity of inviting at least some element of business men with proved practical experience of foreign trade. Here again, Mr. Kanungo's defence was flimsy. He said that in course of time—not a distant time, perhaps—persons from the "ranks" with business talent would be elevated to the Board. Probably he means upgradation of the employees themselves. How this is going to fill the vacuum of lack of business acumen and experience outside the narrow operation of the Corporation, Mr. Kanungo conveniently omitted to explain.

The other criticism centred round the uncertainty about the Corporation's programme of future extension of its actvities in fresh lines of business. Nobody could conjecture which line it would enter and when. It was

pointed out that it had selected business "on the soft side", implying either bulk deals by direct negotiations or lines of trade entrusted to it by the Government for exclusive import or distribution. Another important point made was that the Corporation was not as alert in safeguarding the interests of Indian shipping in its requirements as it can be by emulating the universally acknowledged practice in other countries. This is a hardy annual to which the Chairmen of Indian shipping companies find themselves constrained to make a reference.

While this criticism was freely ventilated, the consensus was that the STC was functioning on a limited scale to supplement the activities of the normal trade channels. This characteristic description of the Corporation puts its role in the country's trade in the correct perspective.

Power

AHMEDABAD'S EXPANSION SCHEME

MR. A.N. HAKSAR, Chairman of the Ahmedabad Electricity Co., Ltd., pointed out at the Annual General Meeting held recently that the pressure of demand for power is increasing every day because new industries are being set up in the areas served by the Company. The pressure of demand, he added, has increased specially after the formation of the new State of Gujarat. Recently the maximum demand on the Company reached the danger level of 150 MW while its installed capacity was around 157.5 MW. To meet this rising demand the Company has placed orders for the purchase of 30 MW of plant which is likely to be commissioned by March 1962. A similar order has been repeated by it so that another 30 MW capacity will be available a year later. Sanction for this new expansion has been received from the Gujarat Electricity Board, and the Chairman is hopeful that the Government will release Sterling necessary for the purchases. The Chairman has estimated that with the completion of these extensions of the Company, and also taking into account the available power capacity with other sources like the Dhuwaran Thermal Station and the Utran Thermal Station of the Gujarat Electricity Board, the potential installed capaciy may be short by at least 30 MW of the probable demand in the State. This would entail the location an additional generating plant.

In any case, the Company has to carry out its planned expansion and a large measure of finance will be needed to augment distribution facilities in its area of supply. The Chairman has revealed that as far as the first 30 MW extension is concerned, the foreign exchange component has been covered by a loan of $3.9 million (Rs. 1.85 crores) obtained by the Company, from the Development Loan Fund of the United States. This loan carries interest at 3½ per cent and is repayable in 15 years. With the completion of the first extension unit the way would be paved for the successful raising of the funds for the execution the second extension.

AMALGAMATED ELECTRICITY

MR. N. C. JAVERI, Chairman of the Amalgamated Electricity Company, stated at its annual general meeting that the Company's works have been progressively expanding and the installed capacity was now 20,000 kW. In 1936, it was only 2,000 kW. During this period, consumers served by the Company have risen from 4,000 to 72,000. Similarly, revenue has increased from Rs. 5,00,000 to Rs. 95,00,000. While this speaks of the satisfactory position of the Company, the need for sizeable finance for large-scale expansion continues to remain unsolved. This is because of the difficulties placed by the Finance Act of 1959 in the way of the undertakings to raise funds for development. Mr. Javeri pleaded that since the scheme of the Sixth Schedule to the Electricity (Supply) Act is based on a complex structure of taxes, it is proper that the return to the investor should be really tax-free. He further underlined that as the electric supply industry requires large capital for expansion, restoration of the position that existed before the Finance Act of 1959, would not by itself be sufficient; what is required is a further measure of incentive to attract new capital for development.

As far as power development is concerned, the Draft Plan visualises an investment of Rs. 900 crores. When so much finance has been earmarked for State and quasi-State projects, there is no reason why conditions should not be created for the licensee electric supply undertakings to raise finance for development. In this context, Mr. Javeri stressed that it is proper to make available to these undertakings sufficient loans as part of the outlay on power projects.

New Issue

KOTHARI SUGARS AND CHEMICALS

KOTHARI SUGARS AND CHEMICALS LTD., a company promoted by Messrs. Kothari and Sons, Madras, proposes to establish a factory for the manufacture of sugar in Lalgudi Taluq in Tiruchirapalli District of Madras. The initial crushing capacity of the factory will be around 1,000 tons per day, which can be raised at any time later to 1,500 tons per day. In view of the availability of quality raw materials in the region, the factory is likely to show a high level of recovery. The project is sound for another reason too. The present demand for sugar in the South is estimated at around 1.35 lakh tons, against the present production capacity of 80,000 tons. This factory can be expected to bridge a part of this gap.

The company proposes to enter into an agreement with M/s. Binny's Engineering Works Pt. Ltd. for the supply of the plant and machinery. The factory will be able to commence production early in 1962. The capital required to reach the stage of production is estimated at around Rs. 160 lakhs. The Industrial Credit and Investment Corporation of India Ltd., and The Bank of India Ltd., have agreed to give a loan of Rs. 35 lakhs each and the balance required will be borrowed from banks and other sources.

The authorised capital of the Company will be Rs. 5 crores. Out of the issued capital of Rs. 80 lakhs, equity shares of Rs. 10 each worth Rs. 12 lakhs, have been subscribed by the signatories to the memorandum, the directors and their friends. The Madras Industrial Investment Corporaton Ltd. has subscribed to equity shares worth Rs. 13 lakhs. The Life Insurance Corporation too has agreed to subscribe to equity shares worth Rs. 15 lakhs. The balance of 4 lakh equity shares of Rs. 10 each, worth Rs. 40 lakhs, is offered for public subscription. The list will remain open between December 15 and December 22. The issue is certain to get a favourable response in the market. It may be added that the entire issue has been underwritten.

Foreign Assistance

WHY INFRUCTUOUS COLLABORATIONS ?

THE STUPENDOUS task of the less developed countries in clearing the backlog of development and in ensuring a reasonably satisfactory rate of economic growth postulates a good measure of foreign assistance from the relatively more advanced countries. One of the ways of obtaining foreign assistance is to have collaboration agreements between the developing and the developed countries. By reason of the dearth of trained personnel and people knowing the technical know-how to man industries in our country, our dependence on foreign assistance in some cases is almost cent per cent. When the need to enter into collaboration agreements with foreign industrialists is so much, the procedure laid down by the Government of India for securing such collaboration is unfortunately too onerous and time-consuming. Mr. K. H. Dhamdhere, President of the Maharashtra Chamber of Commerce, while speaking at the Thirty-third Annual General Meeting of the Chamber, last week, felt called upon, therefore, to urge the Government to enunciate a definite policy on the maximum percentage of foreign capital participation permissible for different industries and specifying, at the same time, the exceptional circumstances in which a majority share capital would be allowed to foreign collaborators.

Although it has been the avowed policy of the Government of India to induce and encourage the private sector to enter into collaboration agreements with foreign industrialists, it is rather strange that it has not taken pains to remove the difficulties in the way which very often lead to frustration and loss of initiative on the part of foreign collaborators and, at times, even termination. The Government should declare the priorities for the various industries and the maximum levels of royalty payments in respect of schemes (a) with capital participation and (b) without capital participation. Due to the departure made in certain cases in the general policy of not allowing a major share capital to foreign participants, as the M.C.C. Chairman pointed out, many foreign manufacturers were led to expect and even ask for a majority shareholding for themselves, but when such proposals were turned down by the Government, they took umbrage, began to suspect discrimination, and even withdrew their offers of collaboration secured after necessarily prolonged negotiations.

Mr. Dhamdhere also drew attention to the fact that foreign collaborators, who are generally corporate bodies, have to pay 63 per cent tax on their royalties and dividends. The Government, he said, should conclude reciprocal agreements with all the countries in the matter of double tax relief, without any delay, as a high incidence of tax would operate as a disincentive to foreign collaborators. The M.C.C. President further suggested that a liaison office should be established to guide, assist and expeditiously dispose of all matters pertaining to collaboration proposals. The new Investment Centre to be set up in Delhi to assist foreign investors might well begin by taking up this question with the Government of India.

THE JAIPUR UDYOG LIMITED

NOTICE

The Annual General Meeting of the Company will be held at the Registered Office of the Company at Sawai Madhopur on Friday, the 30th December, 1960 at 4 P.M. to transact the following business:

1. To receive and adopt the Directors' Report and the Audited Statements of Accounts for the year ended 31st March, 1960.
2. To declare dividends on Preference and Ordinary shares.
1. To elect a Director in place of Shri C. L. Jaipuria who retires by rotation but, being eligible, offers himself for re-election.
4. To elect a Director in place of Shri A. K. Roy who retires by rotation but, being eligible, offers himself for re-election.
5. To elect a Director in place of Shri C. L. Jhunjhunwala who retires under Clause 118 of the Company's Articles of Association but, being eligible, offers himself for re-election.
6. To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, M/s. R. D. Joshi & Co., Chartered Accountants, being eligible, offer themselves for re-appointment.

The Share Transfer Books of the Company will remain closed from Monday, the 19th December, 1960 to Friday, the 30th December, 1960, both days inclusive.

By Order of the Board,
For THE JAIPUR UDYOG LIMITED.,
M. L. RATHI,
Secretary.

SAWAI MADHOPUR,
Dated 28th November, 1960.

Note: (a) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(b) The dividends declared will be payable to those shareholders whose names stood on the Register of Members on Friday, the 30th December, 1960 or their mandatees.

THE CALCUTTA ELECTRICITY SUPPLY CORPORATION LIMITED

(INCORPORATED IN ENGLAND)

5% RUPEE DEBENTURE STOCK 1970
INTEREST FOR THE HALF-YEAR ENDING 31ST DECEMBER, 1960

Notice is hereby given that interest at the rate of Rs. 25 (less Indian Income Tax) per Rs. 1,000 of Stock will be paid on 2nd January, 1961 to Debenture Stockholders registered on the books of the Company on 19ts December, 1960. Applications for transfers received at the Company's Office at Victoria House, P.B. 304, Chowringhee Square, Calcutta-1, upto 19th December, 1960 will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above interest.

Debenture Stock Transfer Books will be closed from 20th December, 1960 to 31st December, 1960 both dates inclusive.

By Order of the Board,
D. H. P. HENDERSON,
AGENT.

Victoria House, Calcutta,
1st December, 1960.

Since 1935 Simon-Carves have received orders for and put into service, one hundred and thirty two Simon-Carves-Monsanto sulphuric acid plants of which 21 have been installed in India. With an aggregate rated capacity of nearly 3¼ million long tons of 100% sulphuric acid per annum, these plants have been built in twenty three countries throughout the world. Their individual rated capacities range from 10 to over 400 tons of 100% acid per day. Designed to use any sulphur bearing material including raw sulphur, pyrites, sludge acid, refinery waste gases, anhydrite etc, their output is used in oil refining, steelmaking, uranium processing, the production of fertilisers, explosives, rayon, dyestuffs, pigments and many other industries.

FROM THE CAPITAL'S CORRIDORS

PRODUCTION OF FERTILIZERS IN U.P.

THE Fertilizer Technical Committee, it is learnt, has recommended the setting up of a factory at Gorakhpur (U.P) with a production capacity of 85,000 tons of ammonia (equivalent to 70,000 tons Nitrogen) and 138,330 tons of urea (equivalent to 61,230 tons Nitrogen) per annum on the basis of 330 production days in a year. About 5,000 tons of ammonia per year can be had from this factory after the production of fertilizers, for sale to industrial consumers for the production of ammoniated superphosphate, nitric acid etc., as well as for use as a refrigerant.

Petroleum naphtha from the proposed refinery at Barauni would be the raw material for the production of hydrogen for synthesis gas. The cost of production of ammonia, estimated on the basis of naphtha being available at Rs. 100 per ton at Gorakhpur, works out to Rs. 383 per ton. This figure is comparable with the cost for ammonia estimated for other Uttar Pradesh centres examined by the Committee. The Committee has suggested that necessary steps may be taken to obtain for naphtha used for fertilizer production exemption from payment of excise and other duties so that this essential raw material is available at an economic price.

The Committee feels that once the mining of coal is properly organized in the Singrauli coalfields, it would be possible to consider the establishment of another fertilizer factory in U.P. This factory may produce ammonium sulphate by the acid neutralisation process. Its capacity could be 50,000 tons Nitrogen per year. In view of its central position between the pyrites deposits at Amjor, in Bihar, and coalfields of Singrauli, Chopan may be considered along with other suitable sites for the establishment of this second unit.

INVESTMENT REQUIRED

The total investment required for a 70,000-tons Nitrogen fertilizer project at Gorakhpur is estimated at Rs. 181 million. The foreign exchange expenditure involved is of the order of Rs. 80 million, exclusive of financing and interest charges for the import of plant and equipment on deferred payment basis.

The total investment required for a 50,000-tons Nitrogen fertilizer factory for the productoin of ammonium sulphate at Chopan is estimated at Rs. 170 million, inclusive of foreign exchange expenditure of Rs. 70 million for the import of plant and equipment on cash payment basis.

The State Government had suggested for the consideration of the Committee the following possible sites for setting up fertilizer plants in Uttar Pradesh: (1) Ghaziabad; (2) Harduagunj, near Aligarh; (3) Chopan, twenty miles from Pipri at the site of the Rihand Dam; (4) Gorakhpur; (5) Shahjahanpur and (6) Farrukhabad.

WHY GORAKHPUR?

Giving the reasons for its selection of Gorakhpur as the site for the first fertilizer factory in U.P., the Committee says: "Gorakhpur is a city with a population of about 200,000 on the main metre-gauge line of the North-Easern Railway and is the headquarters of the Gorakhpur Division in eastern U.P. The distance by rail from Barauni is 202 miles. Gorakhpur has all the facilities of a city, including hospitals, schools, colleges, as well as a University. It is also in the centre of a densely populated area in the midst of sugarcane farms and paddy fields. Except for sugar factories, there is hardly any industrial activity in this Division with a total population of about ten million. Consequently, there is acute unemployment, leading to migration of labour to other parts of the country.

"The Committee was informed that power upto 30,000 KW. would be made available from the grid originating at the Rihand Hydel Scheme and that the rate at Gorakhpur for a fertilizer factory would be 4 nP. per KWH.It was stated that this represented a no-loss no-profit rate for power at Gorakhpur.

"There is no fertilizer factory in the region north of the River Ganga, which is served exclusively by the metre-gauge railway system. Gorakhpur, which is at the centre of this system, is favourably situated for distribution of fertilizers in this area. However, if raw materials, viz., pyrites, rockphosphate or coal, have to be brought to Gorakhpur, transhipment from the broad-gauge to metre-gauge system would be necessary either at Barauni or at Varanasi."

GHAZIABAD RULED OUT

On the merits and demerits of Ghaziabad as a possible site for locating a fertilizer plant, the Committee observes: "Ghaziabad is a town 15 miles from Delhi on the Delhi-Calcutta broad-gauge line. Its main advantage is that because of nearness to Delhi, it could serve as a useful location for setting up an integrated unit for the supply of town gas to Delhi as well as synthesis gas for a fertilizer factory if the gas is produced from coke. In view of the large surplus of naphtha that is likely to be available in the country in the near future, this advantage might no longer be significant because town gas could be produced by itself from naphtha in Delhi without excessive investment and with economy in the laying of pipe mains".

The Committee records that during its visit to Ghaziabad, a large number of farmers who cultivate the land proposed to be the site for setting up a fertilizer factory had gathered to make a representation against the selection of this site. They pointed out that 192 families who now subsist on this land would lose their means of livelihood if it was taken away from them. The State officials pointed out that the plot lay within the area earmarked for industrial development in the Master Plan. Therefore, even if the site was not selected for a fertilizer factory, the farmers who worked on it at present would have to go elsewhere. Power would be available at Ghaziabad from the Jamuna Hydel System or from the supergrid originating from the proposed Singrauli Thermal Station and passing through Kanpur. Because of the distance separating Singrauli from Ghaziabad and consequent transmission charges, the cost of power would be as high as 6 nP. per KWH.

SINDRI FERTILIZERS

Dr. Hassain Zaheer, a Director of Sindri Fertilizers, who, at the instance of the Board of Directors of the Company, undertook a study of the reasons for the decline in production at Sindri during the past two years has submitted his report. The main causes for the fall in production, according to Dr. Hassain Zaheer, are (i) clinkering troubles in the gas generators due to use of coke of poor and inconsistent quality and (ii) wear and tear of gas generators.

Meanwhile, some important changes have been made in the administrative set-up of Sindri Fertilizers. Mr. K. Ramachandran, formerly General Manager of Chittaranjan Locomotives Works, has taken over as Managing Director of the Company in place of Mr. V. Nilakantan, who has proceeded on leave preparatory to retirement. Mr. K. L. Ramaswamy, Superintendent of Production at the Sindri Works right since the inception of the Company, is joining the Bihar Government as its Industrial Adviser. His place has been taken by Mr. J. Simon, who was Mr. Ramaswamy's deputy. Some other top officials of Sindri Fertilizers have been transferred to Nangal Fertilizers Project and the Trombay Fertilizers Project.

FAIR PRICES FOR COTTON TEXTILES AND YARN

Obviously not satisfied with the Indian Cotton Mills Federation's attempts to bring down cloth and yarn prices which witnessed a spurt this year due to fall in raw cotton output, the Government of India has asked the Tariff Commission to conduct a comprehensive enquiry into the question of production costs and selling prices of the cotton textiles industry.

The Commission will recommend to the Government fair ex-mill prices for cotton cloth and yarn and also suggest a formula on the basis of which adjustments in these prices could be made from time to time in the light of major fluctuations in the prices of raw cotton and other elements of cost of production.

By a resolution published on Tuesday in the Gazette of India Extraordinary, the Government has asked the Tariff Commission to report on the following specific aspects of the issue:

(i) The cost of production of various representative types of cloth and yarn;

(ii) The capital structure, investments and fair return thereon, bearing in mind the need for continuous rehabilitation and modernisation and what would be a fair return to allow to the industry over the cost of production;

(iii) Fair ex-mill prices of cloth and yarn.

The Commission will also enquire into the distribution cost of cloth and yarn in the country with reference to all relevant factors, including the present pattern of sales adopted by different units of the industry. On the basis of this, it will suggest a reasonable formula for determining fair retail prices for cotton cloth and yarn.

On a suggestion from the Government, the Indian Cotton Mills Federation a few weeks ago had advised its member mills not to charge prices at a rate higher than 25 per cent for coarse cloth, 22 per cent for lower medium cloth, 18 per cent for higher medium cloth, 11½ per cent for fine cloth and 9 per cent for super-fine varieties over the August, 1959, contract prices. The Federation had also asked the mills to stamp ex-mill and retail prices on all types of cloth so that the consumer could buy his requirements at the authorised rates.

COTTON CLOTH EXPORTS TO SUDAN

India exported 32.82 million square yards of cotton textiles to Sudan during the nine months to September last, compared to 59.60 million square yards during the corresponding period last year. The main reason for this fall in exports to Sudan is said to be the import restrictions imposed by the Sudanese Government early this year because of excessive stocks lying in that country due to heavy imports last year. Another contributory factor has been the tough competition offered by other exporting countries.

EXPORT OF COTTON GOODS TO UK

About 135 million square yards of cotton manufactures, worth about Rs. 118 million, were exported to UK from this country during the first eight months of the current year.

India's exports of cotton manufactures to the United Kingdom are regulated by an understanding reached between the British cotton textile interests and representatives of cotton textile industries of India, Pakistan and Hongkong some time ago. During the three years' period beginning January, 1960, India has promised to export cotton manufactures to UK to the extent of only 175 million square yards per year. The term "cotton manufactures" covers all varieties of cotton goods retained for consumption in UK, whether in the form of made-up garments or cloth, except cotton carpets, cotton rugs, cotton durries, cotton shawls and handloom products. The ceiling of 175 million square yards per annum does not apply to UK's imports of cotton goods from this country which are subsequently re-exported.

THIRD FINANCE COMMISSION

The President has, by a formal Order promulgated in a "Gazette of India (Extraordinary)", constituted a Finance Commission—the third one since the coming into force of the Constitution—under the Chairmanship of Mr. A. K. Chanda, formerly Comptroller and Auditor-General of India. The other members of the Commission are: (i) Mr. P. Govinda Menon, former Chief Minister of Kerala State; (ii) Mr. Dwijendra Nath Roy, retired Judge of the Allahabad High Court; (iii) Mr. M. V. Mathur. Head of the Department of Economics and Public Administration, University of Rajasthan; and (iv) Mr. G. R. Kamat. Mr. Kamat will be the member-secretary of the Commission. The Chairman and members of the Commission are expected to assume office by about the middle of the current month.

The Commission has, under Article 280(3) of the Constitution, to make recommendations to the President in regard to (a) distribution between the Union and the States of the net proceeds of taxes, and (b) the principles which should govern the grants-in-aid from the Centre to the States. In addition, the President has directed it to make recommendations to him on the following further matters: (i) The assistance that may be granted by way of grants-in-aid under Article 275 to such States as are in need of assistance, having regard to the requirements of the Third Five-Year Plan and the efforts to be made by those States to raise additional revenues from the sources available to them; (ii) The changes, if any, to be made in the principles governing the distribution amongst the States under Article 269 of the net proceeds in any financial year of the Estate Duty in respect of property other than agricultural land; (iii) The changes, if any, to be made in the principles governing the distribution amongst the States under Article 269 of the net proceeds in any financial year of taxes on railway fares; (iv) The changes, if any, to be made in the principles governing the distribution of the net proceeds in any financial year of the additional excise duties levied on each of the following commodities, namely, (a) cotton fabrics, (b) rayon or artificial silk fabrics, (c) woollen fabrics, (d) sugar, and (e) tobacco, including manufactured tobacco, in replacement of the States sales taxes formerly levied by the State Governments.

This Finance Commission is being constituted a year earlier than its due date in conformity with the recommendation made by the Second Finance Commission that the period of the development plans should coincide with the period covered by the recommendations of the Finance Commission. Accordingly, this Finance Commission has been asked to make its recommendations for four years commencing from April 1, 1962. The assistance to the States during the year 1961-62 will continue to be regulated under the award of the Second Finance Commission.

QUALITY CONTROL COMMITTEE

The Government of India has appointed a Committee to examine the question of quality control on goods exported from this country and to recommend measures for ensuring goods quality exports which would help in building up enduring trade relations between overseas buyers and Indian exporters.

The Committee will be headed by Dr. Lal C. Verman, Director of Indian Standards Institution. Its other members will be: (1) The Agricultural Marketing Adviser to the Goveriment of India; (ii) Drugs Controller, Union Ministry of Health; (iii) Chief Inspecting Officer (Textiles); (iv) A representative of the Development Wing, Commerce and Industry Ministry; (v) A representative of the Directorate-General of Supplies and Disposals; (vi) The Development Commissioner for Small-Scale Industries; and (vii) The Joint Director for Export Promotion, Ministry of Commerce. The last mentioned officer will be the member-secretary of the Committee.

The Committee is expected to submit its report to Government by the end of March next year.

Meanwhile, Mr. K. B. Lall, Additional Secretary, Union Ministsy of Commerce and Industry, who has returned to the Capital after a tour of East India, is said to be holding the view that consciousness is growing in this country, particularly in the inter-industry sectors, about the production of quality goods. Greater competition, especially in the case of cycles and trucks manufacture, is compelling the producers to market improved quality goods.

According to Mr. Lall, industrial climate in India is changing rapidly, largely due to ban on imports. Ancillary industries are fast developing around giant industrial units. Though the Indian industrialists are becoming quality conscious, Mr. Lall is said to be of the view that they still lack adequate cost consciousness. Foreign collaboration in some industrial units, Mr. Lall feels, is proving pretty costly to the Indian consumer.

IMPORT OF CAPITAL GOODS

The Union Government has decided that all importers of capital goods, wishing to negotiate loans with credit agencies abroad, should secure the prior approval of the Government before entering into negotiations. The requests for such approval would be entertained by the Special Officer (Capital Goods), Capital Goods Division in the Office of the Chief Controller of Imports and Exports, New Delhi.

Approval to negotiate with credit agencies abroad will ordinarly only be granted where the value of the equipment proposed to be imported exceeds Rs. 150 lakhs. For smaller schemes foreign exchange loans are available from the Industrial Finance Corporation of India, Industrial Credit Investment Corporation of India and the National Small Industries Corporation. Licences for such smaller schemes can also be issued against foreign exchange loans available to Government and under the special trade and payment arrangements negotiated with certain countries by the Government of India.

MANUFACTURE OF OPTICAL AND OPHTHALMIC GLASS

Consequent upon the Central Glass and Ceramic Research Institute having successfully evolved a process to manufacture optical glass on commercial scale, some changes are being made in the plans for the manufacture of optical and ophthalmic glass at Durgapur.

The Government had earlier decided to set up an optical and ophthalmic glass plant at Durgapur, West Bengal, in technical collaboration with Soviet Union by utilising a portion of the 500 million rouble credit made available by Russia under the principle agreement signed on November 9, 1957. In pursuance of this agreement, a contract was entered into with M/s. Technoexport, Moscow, on December 19, 1957, for the preparation of the detailed project report for this plant. The detailed project report, which envisages the production of 200 tons of ophthalmic glass and 10 tons of optical glass per annum, was received in July last year.

It has now been decided to undertake the manufacture of optical glass at Calcutta by the process evolved by the Central Glass and Ceramic Institute. The Durgapur Project will now manufacture 300 tons of ophthalmic glass per annum. The revised project report for a plant of this capacity has been called for. It is likely to be received in the near future.

PRODUCTION OF TYRES

Mr. Manubhai Shah, Minister for Industry in the Union Government, told the Lok Sabha last week that efforts were being made, with the co-operation of indigenous tyre manufacturers, to check mal-practices in the tyre trade. He announced that arrangements had been made to import about 1.2 lakh tyres through the State Trading Corporation. Out of this quantity, orders for 50,000 tyres had already been placed, he added.

Mr. Shah also disclosed that the Government was taking steps to increase the production of tyres in the country. Indigenous production has gone up from 6.4 lakh tyres in 1956 to 11.38 lakh tyres in 1959. Output during the current year is expected to be 13.5 to 14 lakh tyres. The licensed capacity for tyre manufacture has been raised to 29.4 lakh tyres a year. Production is expected to increase by 1.5, 2.5 and 3 lakh tyres in 1961, 1962, and 1963 respectively. A proposal to increase the capacity by another 14.4 lakh tyres per annuam is under consideration.

CHEMICALLY BONDED BASIC REFRACTORIES

To meet steel industry's demand for chemically bonded basic refractories, Burn and Company Ltd. Salem (Madras), Belpahar Refractories Ltd., Balpahar (Orissa), and Orissa Cement Ltd., Rajgangpur (Orissa) have included in their manufacturing programme, the production of these refractories. These three companies are already licensed under the industries (Development and Regulation) Act, 1951, for the manufacture of various types of basic refractories.

The process for the manufacture of chemically bonded basic refractories is covered by a world patent drawn out by a US firm. The three Indian manufacturers have sought the Government of India's approval for foreign collaboration to obtain the technical know-how. The collaboration terms have been approved by the Government.

ANOTHER ALUMINIUM PLANT!

The Government of India, it is understood, has under consideration a proposal, submitted by Tendulkar Industries (of Bombay), to set up an aluminium manufacturing unit in Koyna area. This plant will have a production capacity of 20,000 tons per year. The US firm Alcova will provide the technical know-how. The Government is expected to approve of the project in the near future.

RUSSIAN CREDIT

A Russian delegation is visiting New Delhi next week to finalise, in consultation with the Government of India, the list of projects which would be financed with the 500 million roubles credit made available by the Soviet Union recently. The Government of India has tentatively decided to utilise this credit for the setting up some power plants, purchase of oil drilling and exploration equipment, establishment of coal washeries, putting up of a refinery in Gujarat State and import of machinery for heavy compressors and pumps project, basic refractories projects and the ball and roller project.

As already reported in this column, the Government of India has decided to set up a refinery in Gujerat, primarily to refine the crude struck at Cambay and Ankleshwar. It is proposed to have some additional capacity at this refinery to refine Russian crude as well.

MODERNISATION OF BOMBAY DOCKS

The Bombay Port Trust has prepared a new scheme for modernising the Bombay docks. The scheme, which is now being examined in details by the Trust's British consulting engineers, is estimated to cost Rs. 8.35 crores, of which Rs. 1.50 crores will be the foreign exchange component. It is proposed to connect the Victoria Dock with the Alexandra Dock by providing a communication passage between them. This passage will provide six new deep water berths along its sides and will enable the Victoria Dock berths to be served by the entrance lock from the Alexandra Dock instead of being served by tidal gates as at present. This will result in maintaining a higher level of impounded water in the Victoria Dock, thereby making it possible to accommodate ships of heavier draft. It is also proposed to reclaim land on the harbour wall side so as to increase the cargo-handling potential of the berths on the eastern side of Victoria Dock basin by enlarging the area available for laying roads and railway lines, constructing transit sheds and providing for sufficient open space for cargo storage.

FREIGHT SURCHARGE ON SHIPMENTS TO COLOMBO

The Conference Lines handling cargo between the United Kingdom, Continental countries, Japan and Ceylon have announced some reductions in freight surcharge on shipments to Colombo as a result of the improvement in the conditions at this port. The Indian shipping companies which are members of these Conference Lines, it is expected, will abide by this decision.

FOREIGN FINANCIAL JOURNALISTS IN DELHI

Nine financial editors and economic commentators from the United States, five from the United Kingdom and four from West Germany have arrived here, at the invitation of the Government of India, for a three weeks' study tour of this country. They will visit various parts of India to see a cross-section of her achievements in the economic field during the past ten years. They will also study India's Third Five-Year Plan and have discussions with economic experts of the Government and the Planning Commission.

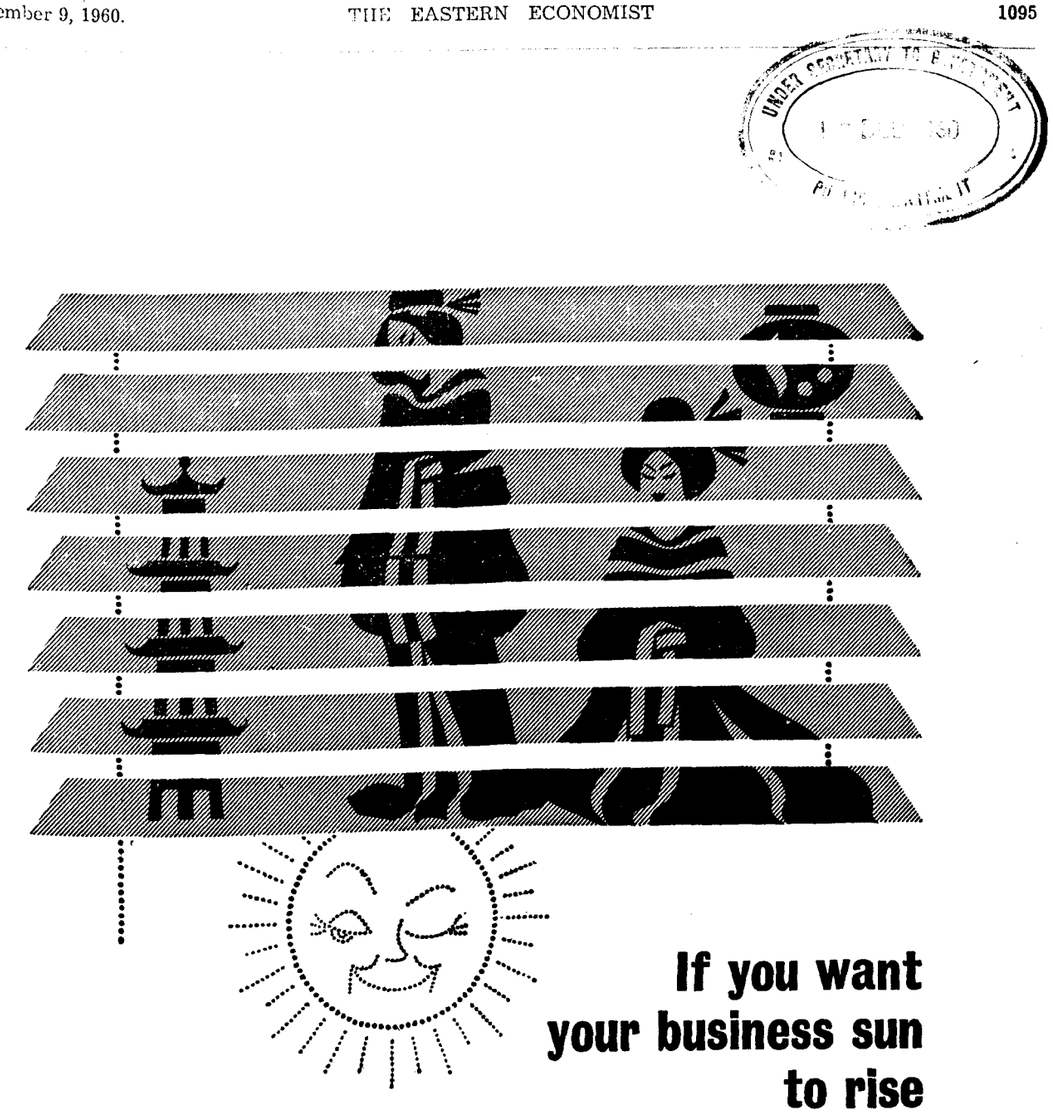
BRITISH CONSULTANCY SERVICE

Sir Bruce White, Wolfe Barry and Partners, a British engineering consultants' firm, has set up a subsidiary office in Bombay to make available to enterpreneurs in this country its services of designing and supervision of projects in the following fields: (1) Marine works, docks and harbours, canals dredging, etc; (2) Water supply and sewerage; (3) Town planning; (4) Power stations (thermal, hydro, diesel, atomic); (5) Dams and hydraulic works including irrigation and reclamation schemes; (6) Roads; (7) Railways; (8) Bridges; (9) Buildings, offices, industrial establishments, factories, oil installations, etc; (10) Special structures such as cranes and other heavy machinery and foundations; (11) Naval architecture, dredgers, tugs, lighters, etc.

BRIEFS

About one lakh tons of wheat are expected to be imported from Canada between November, 1960, and March, 1961, on account of the $7 million Canadian grant under the Colombo Plan.

•



Hindustan Steel Ltd. has received from the German firm Mannesmann 10,520 tons of pipes for which it had placed an order some time ago. The German firm in exchange purchased 12,000 of steel slabs from Hindustan Steel. No steel ingots were sold to Messrs. Mannesmann.

•

It is proposed to set up a Central Technical Assistance Board to advise the Government on the development of Port and Inland Water Transport.

•

The Railway Board has placed orders for the import of 96,000 tons of steel from Japan, Holland, the United Kingdom, West Germany, Spain, the U.S.A., France, Belgium, Norway, Sweden and Italy. The average price is Rs. 675|- C. & F. per long ton.

If you want your business sun to rise

—fly your goods to TOKYO

3 flights a week, via Bangkok and Hong Kong

The businessman who's up and coming is up and sending his goods by air...to satisfy the markets of Japan quickly, economically—with products that are new, fresh, ahead of the competition!

We offer you three Super Constellation flights each week to Tokyo, via Bangkok and Hong Kong —plus years of experience in handling every kind of cargo. May we help *you* to enjoy quicker turnover, faster profits?

To anywhere—it's best by air

Excellent Prop-Jet connections from Amsterdam to the U.K.

ARRIVAL: London Sunday 13.50 hrs.

Sincerely yours

KLC-38

COMPANY AFFAIRS

MORE PROFITS FOR BLUE MOUNTAIN AND WATERFALL

Blue Mountain Estates Ltd., during the year to June 30, 1960 earned the highest profit which it has earned till now, of Rs. 29.3 lakhs before depreciation, and taxes, as compared to Rs. 9.06 lakhs for the previous year. This profit has been mainly due to the higher tea crop, a higher realisation for tea and also the higher coffee crop. A dividend of 12½ per cent has been declared on the Equity Capital and a sum of Rs. 7.5 lakhs has been taken to General Reserves. Bonus shares are being issued in the ratio of one new share for every 5 shares held.

The Chairman has stressed the significance of diversifying the activities of the Company in putting up a Fertilizer Plant (Super Phosphate) with the collaboration of the well-known U.K. firm, Messrs. Simon Carves. This will enable the Company to become a part agricultural and part industrial Company and result in steadier profits year after year. The project is to be financed partly by the issue of Right Shares to the existing shareholders and partly by loans.

During the last few years large amounts have been ploughed back into the working of the Company, over Rs. 16 lakhs having been spent in improving the machinery and building, etc., and about Rs. 11½ lakhs for the purchase of further estates and shares of a tea factory. This has resulted in an expenditure of Rs. 27½ lakhs in the last five years which has been ploughed back entirely from profits.

The Waterfall Estates Ltd. too has shown a higher profit for the year ended June 30, 1960. The profit before Depreciation and Taxation came to Rs. 14.1 lakhs as against Rs. 12.0 lakhs during the previous year. The higher profit is due to a slightly better realisation on Tea, with a decrease in cost per pound. A dividend of 12½ per cent is declared, the same as last year. The Company is issuing shares in the ratio of one new share for every 2 shares held and like its sister concern, Blue Mountain Estates, is diversifying its activities and is putting up a Coffee Curing Works in Hassan, which will cure coffee, apart from its own group, of the other Estates too. There is a dearth of coffee curing works as the coffee crop has gone up from 25,000 to 50,000 tons but correspondingly the curing capacity has not gone up. It is also proposed to start one or two other industries for which the name of the Company is being changed from Waterfall Estates Ltd., to Waterfall Estates & Industries Ltd. The Company is now manufacturing tea by the C.T.C. method, and this tea is very much liked in the market and fetches higher prices than tea of orthodox manufacture.

A large sum of money, namely, Rs. 36.5 lakhs has been spent over the last five years for new extensions, renovation of factory, machinery and buildings and purchase of additional Coffee Estates in Coorg and Mysore. The whole amount has been ploughed back from profits. The Directors are therefore following a conservative policy of ploughing back as much as possible into the business so that there may be an appreciation of the property in general.

ALUMINIUM CORPORATION'S EXPANSION PROGRAMME

The working and production of all departments — bauxite and coal mining, power generation, alumina, carbon electrode plant, metal production and rolling — of Aluminium Corporation of India during the year to March 31, 1960, have been satisfactory. More diversified products including different alloys have been manufactured to meet the growing industrial requirements of the metal in the country. The Government of India have approved the scheme of expansion by which the capacity of the Corporation's completely integrated Jaykaynagar plant will be trebled by expansion of all sections and the entire metal production will be fabricated into finished and semi-finished products. The Government have granted the necessary licence under the Industries (Development and Regulation) Act and they have also granted the import licences. The whole of the expansion project is estimated to cost about Rs. 4.5 crores. Order for the equipments are placed in consultation with the Technical Consultants, Messrs. Aluminium Industie Aktien-Gesellschaft, Zurich. The contract for supply of power with the Government of West Bengal has been signed and the civil engineering work has been taken in hand. The foreign exchange requirements of the project have been arranged through deferred payments and the Industrial Finance Corporation of India have agreed to give guarantee for such deferred payments. To meet the Indian expenses, the Industrial Finance Corporation of India have also agreed to grant a loan of Rs. 80 lakhs and further funds necessary for the project are expected to be financed from the Corporation's own resources. The Directors have decided to raise a part of the amount by way of Equity Shares, to the extent of Rs. 31.25 lakhs, by offering one Equity share at par to the holders of every two existing Ordinary shares. The necessary permission from the Controller of Capital issues has been obtained for this issue by the Company.

Out of a gross profit of Rs. 36.20 lakhs during the year to March 31, 1960, the Directors have proposed the provision for taxation of Rs. 14.5 lakhs and for depreciation including provision towards arrears of unabsorbed depreciation of Rs. 9 lakhs. A dividend at the rate of 12 per cent has been proposed to be paid on ordinary shares.

TRADE PROMOTION

. . . is our business

Australia, New Zealand, and Fiji offer opportunities to exporters and importers and the International Division of the Bank of New South Wales can help those interested.

The Bank's complete banking service includes such specialized facilities as trade and industrial enquiries, economic and trade information, and a complete travel service. The Bank, through more than 1,000 branches and agencies, is closely and constantly in touch with industry, business, and agriculture in the areas it serves.

COMMODITY NEWS AND NOTES

PRODUCTION OF LEAD-ZINC ORES IN INDIA

The production of lead-zinc ores in India during January-September, 1960 was 115,000 metric tons as compared to 121,000 metric tons in the corresponding period of the preceding year, according to the Indian Bureau of Mines. The entire production was reported from the Zawar mines in Udaipur district of Rajasthan State. The recovery of lead and zinc concentrates amounted to 4,557 metric tons and 7,440 metric tons respectively as compared to 4,832 and 7,271 metric tons in the corresponding period of the previous year. Lead concentrates are sent to the lessee's smelter at Tundoo in Bihar State for extraction of lead and silver while the zinc concentrates are shipped to Japan for smelting of zinc, as there is no zinc smelter in India at present. The production of lead metal during January-September 1960 was 2,641 metric tons as compared to 3,023 metric tons in the corresponding period of 1959.

COMPOUNDED LEVY SCHEME FOR KHANDSARI

A compounded levy scheme for the Khandsari Sugar produced without the aid of sulphitation plant was introduced with effect from March 1, 1960. Representations were received from the Khandsari manufacturers producing Khandsari with the aid of sulphitation plant for extension of the scheme to their units also. In order to help such manufacturers, the Government of India have decided to extend the scheme to these units also with effect from December 1, 1960.

By virtue of this scheme, the manufacturers will be required to pay a composition fee on the rated capacity of the equipments employed and would thereafter be absolved of the day-to-day checking or verification of the production by the Central Excise staff. The rates for different types of centrifugals used by the industry have been notified in the "Gazette of India" Extraordinary of December 1, 1960.

REQUISITIONING OF BENGAL DESHI COTTON

The Textile Commissioner has received representations from mills consuming Bengal Deshi cotton that they are not able to procure their requirements within the ceiling prices. At the request of some mills, stocks of Bengal Deshi cotton have already been requisitioned and additional stocks will be requisitioned, as applications are received from the mills in terms of the Press note dated October 28, 1960 issued by the Textile Commissioner.

With a view to ascertaining the actual quantity of Bengal Deshi cotton required for the whole season, textile mills and factories engaged in the manufacture of absorbent and surgical cottons are requested to send to the Textile Commissioner, Government of India, Cotton Branch, Ballard Estate, Bombay-1, particulars of their requirements giving the following infofmation: (1) stocks and outstanding deliveries of Bengal Deshi cotton at the end of the season 1959-60, (2) first quota of Indian cotton granted this year i.e., 1960-61, (3) purchases of Bengal Deshi cotton made from this year's quota, (4) total requirements of Bengal Deshi cotton during the season 1960-61 (state also whether "fine and below" or "higher grades"), (5) additional quota required to complete the season's requirements of Bengal Deshi cotton. (This should be calculated with reference to stocks at the end of August, 1960, purchases made and the supplies required for the first two months of the next season, i.e., September and October, 1960) and (6) quantity desired to be requisitioned for the consumption of the mills, if any.

MECHANISATION OF RAJHARA IRON ORE MINES

The iron ore mines at Rajhara have now been fully mechanised to supply 7,000 tons of iron ore daily to the Bhilai Steel Plant. Iron ore is the principal raw material in the manufacture of steel. The Bhilai Works will require about two million tons of iron ore annually for the production of one million tons of steel and about 300,000 tons of pig iron. Situated 55 miles south of the steel plant, the Rajhara deposits have been estimated at 114 million tons. These are spread over a length of about four miles up to a height of 1920 feet, and provide one of the best variety of ores with iron content ranging from 65 to 69 per cent. The mines have been linked with Bhilai by a broad gauge railway line. Equipment for the mechanisation of the Rajhara iron ore mines, weighing about 2,700 tons, which has been received from the USSR, has been installed with the technical guidance of Soviet specialists.

So far the Rajhara mines were worked manually and it was difficult to ensure adequate supply of iron ore to feed the two blast furnaces now in operation. Continuous manual raising of large quantities of iron ore, transport to railway sidings and loading into wagons also proved to be a difficult operation. The blasted ore will now be loaded into dump cars by power shovels and transported by rail to the crushing plant. After crushing and screening the fines, blast furnace and open hearth grades will be conveyed by belt conveyors to the storage yard, from where these will be loaded by power shovels into wagons for despatch to Bhilai. Special type of wagons with large capacity have been provided by the railways for the purpose. The mines also include magazine for explosives, chemical laboratory, repair shops, etc.

Company Meetings

THE AHMEDABAD ELECTRICITY CO., LTD.

CHAIRMAN'S SPEECH

Delivered by Mr. A. N. Haksar

Gentlemen,

The Forty-eighth Annual General Meeting of the Company is the first to be held after the inauguration of the State of Gujarat. The new State embraces an area which is both prosperous and progressive and it is certain that the achievements of the past will be more than embellished under the new constitution. It is perhaps not realised today, that, in years gone by, your Managing Agents made a substantial contribution to the growth of the region which today is the State of Gujarat. Apart from various industrial enterprises including your own Company, they promoted a number of Railway Companies which more than anything else, perhaps, led to the opening up and rapid development of the northern part of the old Bombay State. We, today, are as alive as our predecessors to the needs of the new State, and on your behalf, as well as my own, I extend Greetings and all best wishes to Gujarat in the years to come. As in the past your Company will be called upon to play an important part in the development of Gujarat and I am certain that we shall not be found wanting.

As an example of what I have just referred to, I would like to tell you that on the eve of the birth of the new State your Company was called upon to make available special power facilities to numerous premises, both public and private, in the city of Ahmedabad and its environs. All these calls were fully met and I am pleased to say that the promptness with which the Company responded to the demands has been fully appreciated and recorded by the Gujarat Government.

The area served by your Company has witnessed significant industrial development in recent years, in the wake of a rapid expansion in generating capacity at the Sabarmati Power Station. With the formation of Gujarat State the pace of development is expected to be stepped up at an even quicker pace. This will be seen from the fact that the Gujarat Electricity Board is now engaged in organising large scale thermal development at Dhuwaran, near Cambay, comprising three 50 MW sets with an option for one more similar set. The Board of your Company following the decision to purchase 30 MW of plant, has now decided to repeat the order even before the first set is installed. Materials for this first set are now beginning to arrive from the suppliers and the commissioning date is expected to be at the latest, March 1962. The idea of repeating the earlier order is to try and ensure that additional power capacity is brought into commission by March 1963. Sanction for this new expansion has been received from the Gujarat Electricity Board, and it is hoped that Government will release Sterling for the new project. It is appreciated by all concerned that a repeat order will bring the quickest relief to the power starved city of Ahmedabad and Gujarat State as a whole. Efforts are therefore under way to obtain the necessary clearance from the Exchange and Import Authorities so that firm orders can be placed with the overseas suppliers.

With the completion of these extensions, the Sabarmati Power Station will have reached its optimum size at the present site. As far as is known at present the first 50 MW set at the Dhuwaran Thermal Station is expected to be commissioned by the end of 1963 or the beginning of 1964. The subsequent sets are expected to be brought into commercial use every 3/6 months thereafter. Further power for Gujarat is expected to be available from the proposed 300 MW Nuclear Power Station to be installed at Tarapore in Maharashtra. Power from this source may not, however, be available during the Third Five-Year Plan period. Hydro power resources in Gujarat have large scale potentialities but by its very nature development of hydro power is time-consuming and consequently new power capacity from these sources will not be available until after the Third Five-Year Plan period.

In the immediate years ahead, therefore, power availability both in the North Gujarat and South Gujarat regions will be limited by the plant capacity at Sabarmati Power Station (217.5 MW), Dhuwaran Thermal Station (200 MW) and the Utran Thermal Station of the Gujarat Electricity Board (67.5 MW). These together will make a potential installed capacity of 480 MW. Making due allowance for standby, it has been anticipated that by the end of the Third Five-Year Plan period, the demand in the combined regions including Saurashtra will out-pace the available capacity by at least 30 MW. In the light of experience gained in so many power systems the world over one has been led to expect a much faster rise in demand than planners generally have reckoned with. I predict that this trend will, if anything, be even more marked in Gujarat, in view of the new sense of drive and direction in industrial development following the creation of the new State. There may therefore be scope for your Company to expand even further its generating capacity. I am sure I echo your views when I say that the Company for its part is more than ready to take upon itself further obligations in this direction. This, however, would entail the location of additional generating plant at a completely new site, and preliminary thoughts are already being given to this problem.

Whatever may be the Company's position in Gujarat's scheme of power development, whether it continues to export power for distribution by the Gujarat Electricity Board or whether it will have to import power from the Board for distribution in its own licensed area, there can be no doubt that a large measure of finance will be needed to augment distribution facilities in its area of supply. Certainly the City of Ahmedabad is a centre of great load density, but the history of power expansion shows that there

is no such thing as saturation point and money will be needed in the years to come to satisfy the inevitable growth in demand.

Speaking of development, it is only appropriate for me to elaborate at this stage on the factors which influence adversely, investment in the Electricity Supply Industry at the present time. Since the application of the financial provisions contained in the Electricity (Supply) Act, 1948, Electricity shares have continued to shed their values. The Amendment Act of 1956 brought no improvement. The situation became worse when the Finance Act of 1959 prevented "grossing up" of dividends as hitherto and in addition, shareholders had to suffer a deduction of tax at the rate of 30% from the dividends paid to them. The Industry's memorandum submitted to the Ministry of Irrigation & Power following the enactment of the Finance Act, 1959 suggesting that the tax deducted from dividends be permitted as a charge on the consumer of electricity did not find favour with the authorities, and the best which has been achieved so far has been a recommendation by the Government of India to the State Governments requesting the latter to permit undertakings as special appropriation, the tax relief of 6½% representing the difference between the old rate of taxation of 51.5% and the present rate of 45%, being permitted to be ploughed back into the business without deduction from the capital base.

As your Company has a 'nil' assessment for the financial year 1959-60—for which period the tax relief visualised would apply—there cannot be any tax "saving," but nevertheless an opportunity has been taken pursuant to the recommendation by the Central Government, to represent to the Gujarat Government that in our cases the sanction should be extended to cover notional tax relief. Government's reaction is still awaited.

More recently the Federation of Electricity Undertakings of India has on behalf of the Electric Supply Industry, formulated proposals for consideration of the Central Government which, among other matters, are to include (1) shifting of the tax burden on to the consumer, which if conceded would automatically permit the tax at the prescribed rate deducted from dividends payable to the shareholders being reckoned as a charge for determining the clear profit under the Electricity (Supply) Act, and (2) an increase in the Standard Rate by 1% on the old capital block and 2% in respect of new finance. Profitable opportunities are available for equity capital in other sectors of industry, and it is to be hoped that the authorities will recognise that capital always flows towards the enterprise which can offer the best return. While the problem of offering adequate incentive for new capital is paramount in relation to development, the need to restore values in existing equities is equally important. Otherwise disinvestment in the Industry already evident in loss in share values, will be further accentuated. I believe that it was the intention of those who framed the Electricity (Supply) Act that investors in the Industry should receive a net return on their investments. I further believe that the return stipulated at the time was worked out taking into account the fact that it has always been the general practice to gross up dividends in the hands of shareholders. I would therefore urge those who are at present engaged in reviewing the financial provisions of the Act to consider this point and frame a reasonable return on investments accordingly. I would also like to point out that in so many other ways does the Electric Supply Industry receive priority in planning and in foreign exchange allocation for example, although unfortunately much of this priority is directed towards the Public Sector. I hope that the Authorities will not overlook the major contribution which the Private Sector has to make in the field of power development. However more should be known about the liberalisation of the Electricity (Supply) Act within the next few months.

While at this stage we must suspend judgment on any future financal provisions of the Electricity (Supply) Act, we must face up to the need to raise finance to cover expansion plans. As far as the first 30 MW Extension is concerned, the foreign exchange component has been covered by a loan of $3.9 million (equivalent to Rs. 1.85 crores) which the Company was very fortunate to receive from the Development Loan Fund of the United States. This loan carries interest at 3½% repayable in 15 years in semi-annual instalments, the first instalment being repayable three years after the first disbursement. This loan will make it easier to finance the second 30 MW project and how best the needed resources can be raised will receive your Board's consideration in due course.

The demand for power on the Company's System has continued to grow, and recently the maximum demand has reached the danger level of 150 MW. With an installed capacity of 157.5 MW this means that we only have one old 7.5 MW generating set available as standby in case of breakdowns and the greatest ingenuity is needed in order to carry through the programme of routine maintenance. For the present a measure of control involving the staggering of recesses on a 5 group basis has been introduced for the Textile Mills in Ahmedabad. This load control is expected to bring about a relief of 3 MW. There can be no doubt however that until the first 30 MW Set is brought into commission in March 1962, further control measures will be necessary. Furthermore the demand for power is growing at such a pace that it would be rash to assume that controls will not be necessary after the installation of the first 30 MW set. Much of the capacity of this set has already been mortgaged and by March 1962, overhauls of our hard worked existing plant may be necessary.

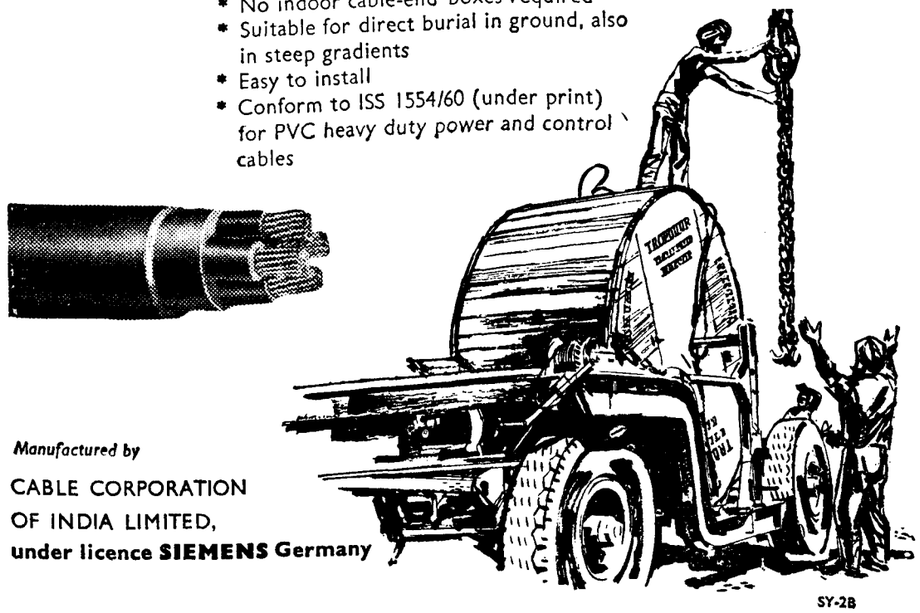
I have no doubt that suitable measures will be implemented as circumstances demand so that the available power supply can be equitably distributed to the best advantage of all concerned. In the meantime the heavy load carried by the plant installed in the Company's Power Station speak well of both the type of plant in operation and the skill and hard work of the operating staff in keeping it in good order. The operating difficulties have been further accentuated by the inadequate movement of coal supplies to the Company's Power Station in the recent months. This has been due partly to the diversion of coal to the new steel plants and partly to the recent Railway Strike. However, I should be failing in my duty if I did not point out the serious consequences that would arise if for any reason there was a further stoppage of vital coal supplies to our Power Station. The problem is of general application at the present time, and we are in close touch with the authorities to try and ensure that adequate stocks are built up.

Your Company's agreement with Killick Industries Limited, the Managing Agents, was renewed by the Central Government with effect from 1st April, 1960 for a period of 5 years. May I take this opportunity to stress that your Managing agents will strive to conduct your affairs even more vigorously than has been the case in the past. We are fully aware of our responsibilities at this critical juncture in your Company's affairs and once again I would ask those people who in recent years have tended to be critical of us to give us a chance to show that we are fully capable of improving upon even the high standards of the past.

The Accounts for the year under review reflect a satisfactory position. The proposed final dividend of Rs. 4.50 per share, making 7 per cent for the year, represents some improvement, albeit small, and a sum of Rs. 1 lakh has been set aside to the Equalisation of Dividends Reserve.

A reference has been made earlier to the Company's application to the Gujarat Government claiming as a special appropriation under the Electricity (Supply) Act the tax relief of 6½ per cent on the notional assessable income. A sum of Rs. 4,71,778 has been set aside on this behalf in the Accounts under review, subject to the sanction of the State Government. In view of the fact that it would be a condition of the approval that the money will be ploughed back into the business, it is hoped that the approval will be forthcoming.

You will also have seen that the note which was appended to the Balance Sheet up to 1958-59 concerning the contingent liability for Additional Income-tax on Dividend, is omitted in the Balance Sheet under review. This is due to the fact that following the judgment of the Supreme Court on test cases filed by the Income-tax Department, all the appeals filed by this Company covering the six years 1948-49 to 1953-54 have been heard and disposed of in favour of the Company. The sum of Rs. 4,03,922 which was actually paid in respect of 1948-49, subject to appeal, has also been refunded.



It now remains for me to record our thanks to the Resident General Manager, Mr. K. N. Paulin, and all ranks of the staff for yet another year of successful operations. While on the subject of staff and before closing my speech I would also like to make reference to the fact that our relations with the Union have never been more cordial than at present. This has not been only because of the efforts made by the management but is also due in no small measure to the friendly co-operation which we have received from the officials of the Union. I hope that this satisfactory state of affairs may long continue so that the Company and the Union may share their joint responsibility to our employees, consumers and shareholders.

Note: This does not purport to be the proceedings of the Annual General Meeting which can be seen by any shareholder on request.

THE AMALGAMATED ELECTRICITY COMPANY, LTD.

Statement of Shri N. C. Javeri, Chairman of the Amalgamated Electricity Company Limited, for the year 1959-60

To

THE MEMBERS,

The current year of the Company is the Silver Jubilee year. The Company was incorporated in the year 1936 with a capital of Rs. 12,50,000 and under it there were four undertakings. In the year 1951, Ajmer and Jalgaon Public Limited Companies were merged with this Company and four other undertakings were taken over in the same year. The capital of the Company this year is Rs. 1,25,75,000.

The Company's Works have been progressively expanding and the installed capacity which was 2,000 K.W. in 1936 is today about 20,000 K.W. The Company served a population of about 1,00,000 in 1936 and today it serves a population of 10,00,000. The consumers served have risen from 4,000 to 72,000 during this period. The revenue of the Company similarly increased from Rs. 5,00,000 to Rs. 95,00,000. The result of the working shows a satisfactory position as befitting the Company's Jubilee year.

The practical way in which this occasion would have been celebrated is the recommendation of the Board of a Bonus of 1 per cent dividend totalling this year to 10 per cent. Similarly the Directors have decided to pay this year about Rs. 80,000 as a special allowance to the employees of the Company, so also at their discretion until otherwise decided by them to grant every year as a measure of staff welfare about Rs. 6,000 to deserving children of the employees of the Company for taking higher education.

Yours is a Company which has special characteristics in that the nine undertakings owned and operated by the Company are not contiguous to one another. They are in various States, and this aspect alone creates a number of complicated problems which are not normally faced by other undertakings operating in compact areas.

In almost all the power systems operated by the Company expansion continues apace. Most of the undertakings operated by your Company run on Diesel Plants and in spite of progress being made in multi-purpose River Valley Projects it looks as if in almost all these areas the Company will have to reconcile itself to the possibility of further diesel expansion. We have had considerable difficulties in obtaining import licenses for plant needed at Malegaon and Ajmer but due to the good offices of the Central Water and Power Commission firm orders have materialised for these plants.

By their very character development of diesel stations beyond optimum sizes would not be economical and I can only hope that before long bulk power would be available in these areas. In common with the rest of the Power Systems in the country, the undertakings managed by the Company have scope for large-scale expansion. This in turn would call for sizeable finance. While in the rest of Industry in general there is general recognition that expansion should by and large spring from internal resources the basic character of the Electricity (Supply) Act, 1948—under which the Electric Supply Industry now operates—is such that new development must perforce depend on new finance.

Speaking of finance, this for the present is circumscribed by the very limited return under the Electricity (Supply) Act. Whereas until the enactment of the Finance Act, 1959, whereby the old tax pattern was changed involving the abolition of 'grossing up' and deduction of tax at 30 per cent was made applicable from dividends, undertakings could raise a measure of finance for development, the situation after the enactment of the Finance Act of 1959 has considerably deteriorated. When the scheme inherent in the Finance Act, 1959, was under consideration it was understood that the rates of taxation were based on the assumption that industries by and large distributed only 50 per cent of their nett earnings. It was therefore on this basis that 45 per cent Corporate Tax and 30 per cent Dividend Tax were fixed. However the situation in the case of the Electric Supply Industry is not on all fours with other Industries, and it is, perforce, obliged to distribute all the 100 per cent of the profit to maintain even the modicum of Reasonable Return. All efforts so far made to prevail upon Government to permit the tax deduction from dividends as an operating expenditure chargeable to the consumer have not succeeded. With the scheme of the Sixth Schedule to the Electricity (Supply) Act being one based on all forms of tax it is only proper that the return of the investor should be really tax free. I can only hope that before long this proposal would be acceptable to the Central Government.

Rectification of this anomaly in the case of the Electric Supply Industry would at best mean restoration of the 'status quo' prevailing prior to the finance Act 1959. However, with the Electric Supply Industry requiring large blocks of capital for expansion a restoration of the prior position would not by itself be sufficient and what is additionally required is a further measure of incentive to attract new capital for development. The situation has also been further complicated by the Reserve Bank rate tending to be out of focus from time to time with prevailing rates on borrowings. As this type of anomaly is likely to persist, it is only proper that the differential of 2 per cent over the Bank rate now fixed under the Electricity (Supply) Act for determining the Clear Profit should be upgraded at least by 1 per cent. There are a number of other improvements which are necessary to streamline Electricity Legislation and the Federation of Electricity Undertakings of India, of which your Company is an active constituent is vigorously engaged in this task.

It has been some months since the Draft Third Five-Year Plan has been before the public, subsequently there have been discussions on details of the State Plans. As far as power development is concerned the Draft Third Plan visualises an investment of Rs. 900 crores. With such large-scale finance being earmarked for State and quasi-State projects, one wonders why Government should be less bold when it comes to creating conditions which would enable the Licensees' Electric Supply Undertakings to raise finance for development. The alternatives are either for Government to create such stable conditions or make available to the licencee Electric Supply Undertakings sufficient loans as part of the outlay on power projects, repayable at the time the undertakings are due for acquisition by the purchasing authority.

Rural electrification has always found exponents and the enthusiasts have tended to advance the cause by overlooking hard economic facts. By their very nature supplies to rural areas are uneconomic and if the beneficiaries are unable to outlay the finance then presumably somebody else should. Most of your undertakings have semi-rural and rural areas and your Company is doing its best to enlarge the scope of supplies to cover such areas. This task would be rendered easier if the State Governments who are allotted sufficient finance by the Planning Commission for rural development take into account the requirements of Licensees' undertakings and offer appropriate support. I can only hope that this proposal will be acceptable in the interest of the rural population.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

A copy of the Prospectus has been duly filed with the Registrar of Companies, Madras State, for registration. Consent of the Central Government has been obtained to this issue. A licence has been obtained from the Central Government for the establishment of this new Industrial Undertaking. The Madras Stock Exchange Limited has agreed to grant an official quotation for the Shares of the Company and permission to deal in them on the Company complying with the usual and necessary formalities after the closure of the subscription list

The subscription list will open at the commencement of the Banking hours on Thursday the 15th December, 1960, and will close at the close of the Banking hours on Thursday the 22nd December, 1960.

KOTHARI SUGARS AND CHEMICALS LTD.

(Incorporated under the Companies Act, 1956)

AUTHORISED CAPITAL:
50,00,000 Equity Shares of Rs. 10 each Rs. 5,00,00,000

ISSUED CAPITAL:
8,00,000 Equity Shares of Rs. 10 each Rs. 80,00,000

SUBSCRIBED CAPITAL:
2,50,000 Equity Shares of Rs. 10 each Rs. 25,00,000

PAID-UP CAPITAL:
At the rate of Rs. 5 per share on
2,50,000 Equity Shares of Rs. 10 each Rs. 12,50,000

Out of the above issue, the signatories to the Memorandum, the Directors of the Company and their friends have subscribed among themselves for 1,20,000 Equity Shares of Rs. 10 each to the aggregate value of Rs. 12,00,000. OBJECTS OF THE COMPANY

The Company has been incorporated on 7th November, 1960 for the several purposes set out in the Memorandum of Association, in particular to carry on the business of sugar manufacturers, in all its branches.

PROSPECTS

The Company has been promoted by M|s. Kothari & Sons, Madras. The Promoters obtained a licence for this Company from the Government of India for the establishment of a Sugar Factory by this Company in Lalgudi Taluq of the Tiruchirapalli District, Madras State for the manufacture of sugar with a crushing capacity of 1250 tons of sugar-cane per day.

It is proposed to establish a factory for the manufacture of sugar in the Lalgudi Taluq in Tiruchirapalli District, Madras State with an initial crushing capacity of 1,000 tons per day which could be increased later on to 1,500 tons crushing capacity per day.

TAX BENEFITS

The Company will enjoy the special benefits under the Indian Income-tax Act, 1922 as regards development rebate and depreciaton; in addition, as a new Industrial undertaking, it will enjoy exemption from Income-tax for profits upto 6 per cent on the Capital employed for the first five years of the Company's operation.

Shareholders of the Company would also be exempt from Wealth-tax on their holdings for a period of five years under Clause XX of Sub-section (1) of Section 5 of the Wealth-tax Act and may also be exempt from tax on such dividend paid from the Company's profit exempted from tax under Section 15C of the Indian Income-tax Act.

PLANT AND MACHINERY

It is proposed to enter into an agreement with M|s. Binny's Engineering Works (Private) Ltd., for the supply of the plant and machinery. They have agreed to import the necessary foreign components and to manufacture and supply the plant before the end of 1961. It is, therefore, expected that the factory will commence production early in 1962.

CAPITAL OUTLAY

In respect of this issue, the minimum subscription on which the Directors will proceed to allot is Rs. 15 lakhs being 1,50,000 Equity Shares of Rs. 10 each.

The capital required to reach the stage of production is estimated as follows:

	Rs.
(a) Land and Buildings	31,00,000
(b) Plant and Machinery (Including spares)	1,05,00,000
(c) Preliminary Expenses	4,00,000
(d) Pre-operative Expenses	4,00,000
(e) Working Capital	16,00,000
Total	1,60,00,000

The Industrial Credit & Investment Corporation of India Ltd., and The Bank of India Ltd., have agreed to give a loan of Rs. 35 lakhs each i.e., Rs. 70 lakhs secured by a mortgage over the land, factory, plant and machinery and other fixed assets. The loan by The Bank of India Ltd., will carry interest at the rate of 2 per cent over the Bank Rate subject to a minimum of 6½ per cent while the loan from the Industrial Credit and Investment Corporation of India Ltd., will carry interest at 6½ per cent. The balance required will be borrowed from Banks and other sources.

MANAGING AGENTS

Subject to the approval of the Government of India, the Company will be under the management of M|s. Kothari & Sons (Industries) Private Limited. Articles 137 and 138, of the Company's Articles of Association provide for the appointment of M|s. Kothari & Sons (Industries) Private Limited as Managing Agents of the Company on the prescribed scale of commission subject to a minimum of Rs. 50,000 per annum.

UNDERWRITING

The Underwriters will, each be paid an underwriting commission of 2½ per cent on the face value of all the shares underwritten by them respectively besides brokerage of 1 per cent on shares allotted on application bearing their Rubber Stamp.

BROKERAGE

Brokerage at the rate of 1 per cent will be paid on all allotments made in respect of applications bearing the stamp of a Bank or a recognised Broker. Brokerage on the same basis is payable to the Underwriters in addition to the underwriting Commission on all allotments in respect of applications made or procured by them and bearing their Rubber stamp.

Copies of the Prospectus and application forms may be obtained from the Company, the Underwriters, Bankers and Brokers set out above.

DECEMBER 16, 1960.

The Revolution in Nepal

THE dramatic proclamation by King Mahendra of Nepal yesterday, dismissing Nepal's first elected Government headed by Mr. B. P. Koirala, and assuming all powers unto himself, has had an electrifying effect in Delhi. No one questions the power of the King under the Constitution to act as he has done. But there are many who wonder whether or not, in the age and time in which the proclamation has been issued, the King will have the requisite authority to carry on without the forms of popular support. In Nepal this may be more easily done than it could be in India, and, of course, stability of administration in Pakistan suggests that one-man rule may often be more abiding than elected governments. Nevertheless, there has been recorded here a severe set-back for the forms of thought which we in the Indian Union customarily entertain. Therefore, while there will be understanding of the King's difficulties, there will be a natural feeling of doubt as to whether or not the alternative which he has adopted is the one most suitable for himself and his country. On the other hand, while doubts can be entertained, there is no reason why at the outset his action should be in any way resented, especially when India's relations with Nepal are in no way impaired. The King has the constitutional authority to act as he has done and, so long as no Indian interest is at stake, we have no right to protest against the manner in which another country administers its affairs.

There is also to be said not a little against the administration which has been replaced. There have been, over the last few months, increasing complaints about corruption, if not at all levels, at least at many. There has also been some justified criticism that corruption has marched with inefficiency, though this might have been natural under conditions in which Mr. B. P. Koirala had to function. The Government in Nepal has not got the Secretariat organisation that we have in Delhi and nobody would accuse Delhi of surpassing excellence in efficient disposal. More germane to the substance of the charge against the Cabinet is its uncertain base in foreign policy, with some particular leanings, from time to time, towards the Communist side, and not a little accommodation so far as Chinese policy is concerned. In India there has been noted, from time to time, in Mr. B. P. Koirala's statements an ambiguity far from assuring. If, under the new administration, partnership with India can be without these ambiguities, there are few people in this country who would regret Mr. B. P. Koirala's departure from office. Our theoretical devotion to democracy is far less than our practical interest in the security of that long border in which the policy of Nepal and the policy of India are inextricably intertwined.

A less important point from the Indian view, but possibly more important from the point of view of popular discontent in Nepal, is the manner in which land has been assigned, after acquisition without compensation or with inadequate compensation, and the strong leftist turn that has been given not merely to land but to other domestic policies. Curiously, this has not awakened popular support. The firing in Gorkha province in October and the killing of thirteen persons has also left a scar which has affected confidence in the law and order situation. Whether or not these are signs of real distress, it is difficult for anyone from outside to assess. But they have hastened the King's action.

It is vital, at the time of stress which has come upon us with the unfriendly attitude of the People's Republic of China, that nothing should be done either by the printed or spoken word to suggest that the Indian Union disapproves of the King's action in terms which may involve a lack of future co-operation between the Indian Union and Nepal. Indeed, it would appear that King Mahendra is more in favour of joint security measures against the Chinese than were his Ministers, always walking on a razor's edge and attempting, with almost no room to manoeuvre, to play a difficult "neutral" hand with India and the People's Republic of China. It is in the interest of both the countries that there should be a high level resumption of talks in regard to security matters. It is always to be remembered that the People's Republic of China might react hastily to the King's action, and there are enough Chinese persons in Kathmandu to make such intervention extremely effective. It is vital, therefore, that the King should receive—whatever academic views we hold on democratic form of government in Nepal—the support of the Indian Government in any measures designed to strengthen his country's security against the superior power which the People's Republic of China might choose, at any moment, to exercise improperly.

Sugar: The Perils of Confusion

THE last week in Parliament has provided yet another instance of how the Union Labour Ministry is working at cross-purposes with the Ministries concerned with industrial and agricultural development. It is history's ironic touch that on the day the Food and Agriculture Minister, Mr. S. K. Patil, was pleading in the Lok Sabha for reduction in the cost of production of sugar, the Deputy Labour Minister, Mr. Abid Ali, should have placed on the table of the Rajya Sabha a copy of the report of the Central Wage Board for the Sugar Industry, which contained recom-

mendations for a drastic upward revision of wages of the majority of workmen engaged in this industry.

The Wage Board has recommended, with effect from November 1, 1960, a basic minimum of Rs. 60 per month for the unskilled workmen in the sugar industry. It has divided the country into four regions—Northern, Central, Maharashtra and Southern—for which separate minimum wage scales have been prescribed; the difference between these wages and the basic national minimum is to be treated as dearness allowance which is adjustable with the consumer prices index. Pay scales have been fixed for other employees as well upto the supervisory stage. Gratuity has been provided for all the permanent and seasonal workmen. Provision has also been made for payment of retention allowance during the off-season at the rate of 25 per cent of the salary, including dearness allowance, in the case of semi-skilled workmen and 50 per cent in the case of skilled ones. All workmen who are provided with houses by the management, will, however, have to pay now house rent, grade-wise, with a minimum of Rs. 5 per month.

The net incidence of its recommendations during the present crushing season has been calculated by the Wage Board at 4.2 to 6.2 nP. per maund of sugar for all the four regions. It is, however, doubtful if these calculations of the Wage Board, based as they are on an analysis of the wage bill of only 19 factories in the whole of India, reflect the true picture. The Wage Board, summing up the effect of its recommendations on increase in salaries and wages, has stated that most of the unskilled workmen in the northern region shall receive an increment of Rs. 21 per month, including the interim relief granted in January last. In the central region, such workmen will get an increment up to Rs. 20 per month, in the Maharashtra region up to Rs. 22 per month and in the southern region up to Rs. 25 per month. The minimum increment which every workman for whom pay scales have been recommended shall be entitled to is Rs. 10, provided this does not take his salary to a level beyond the maximum prescribed in the scale. On a rough calculation, the industry's wage bill, consequent upon the implementation of the Wage Board's recommendations, is likely to go up by not less than Rs. 72 lakhs. Spread over an estimated output of 26 lakh tons of sugar during the current crushing season, the cost of production will go up by nearly 10 nP. per maund. If the incidence of gratuity and retention allowance is also taken into consideration, the cost of production will increase even more.

Who is to foot this burden? The Wage Board has not made any recommendations in this regard; at least not publicly. With the ex-factory price of sugar statutorily fixed in the northern region, which produces bulk of the commodity, there is little doubt that there will be a clamour from the industry for an increase in the controlled price, notwithstanding the fact that as many as 171 factories have voluntarily agreed to implement the recommendations after the Government decision on them is announced. The increase of 10 to 15 nP. per maund in the selling price of sugar may not, on the face of it, look very much, but if account is taken of the fact that the industry may have to be allowed rehabilitation allowance—the Tariff Commission has already been asked to re-examine the issue—and export of nearly five lakh tons of sugar per annum has to be effected in the years to come, the consumer may have to shoulder a burden much heavier.

The cost of sugar has been inflated appreciably by the heavy excise duty imposed by the Centre and the cane cess levied by some States. Is it not possible that these two elements in the cost of production should provide a cushion for the increased labour costs? The Wage Board's strong plea for undertaking a work-load study in the sugar industry to determine labour surplusage should help in lowering the incidence of its recommendations to some extent. An early action on this proposal and rectification of the situation in the light of the findings of this study is obviously required.

The consumer is already groaning under high cost of living and has got to be given a respite. He has got some relief due to fall in foodgrain prices. It is hoped that whatever he has gained on that account, he will not have to part with due to increase in the price of sugar. The Government has been solicitous in the recent past about holding the price line during the Third Plan period. In the same breath, it has been devising measures which work in the opposite direction. This philanthropy at the expense of the consumer has got to end. The Government will do well to keep this in view while taking a decision on the Sugar Industry Wage Board's recommendations. The time for rendering only lip service to holding the price line has obviously passed. What is needed now is a concrete demonstration of the Government's determination in this respect. The decision on the Sugar Industry Wage Board's proposals will show how serious the authorities are to hold the price line.

Forward Trading

THE Forward Contracts (Regulation) Amendment Bill, which was adopted by the Lok Sabha, aims at removing several shortcomings in the original Act, in the light of its operation during the last six years. Opposition to the Bill came from the Communist Party's spokesmen who challenged the very validity of forward trading in a planned economy and pleaded for a total ban on it. The argument that forward trading is anathema to a planned economy is obviously based on the faith that price fluctuations can be eliminated by means of a machinery of regimentation. Democratic planning, however, cannot endorse this belief, nevertheless it does not claim to be fool-proof. Particularly in an economy such as ours, where agriculture contributes half the national income, the basic fact must be reckoned that the monsoons are not amenable to the discipline of planning. The wide variations which occur in the output of agriculture from season to season are inevitable, until a potential corrective is provided by perennial irrigation. Fluctuations in production of foodgrains and commercial crops, most of which constitute key raw materials for industry, threaten to react sharply on the whole range of prices. Hedge trading is a healthy protection in such a situation against recurring and violent upsets in prices. Forward trading in non-agricultural commodities performs the same function.

The Amendment Bill provides for compulsory registration, with the Forward Markets Commission, of all associations set up for forward trading. Registration does not in itself confer the status of a recognised association. The object of registration is to enable the Forward Markets Commission to obtain a complete census of associations at present trading in transferable specific delivery contracts in free commodities as well as those trading in non-transferable specific delivery contracts or in prohibited commodities. This census is intended to enable authority to locate where pressures of speculation are being exerted and how they can be countered.

A number of offences which cannot at present be dealt with under the Act for want of adequate provisions have been enumerated in the Bill. Recognised associations under the present law have no power to declare as illegal certain types of transactions, for instance, kerb trading outside their official hours. These inadequacies are now being rectified. One of the criticisms levelled against the present Act is that it has not proved an effective weapon in preventing forward deals in violation of the law. The Forward Markets Commission is being armed with powers to examine witnesses summoned by it on oath and, furthermore, police officers not below the rank of sub-inspectors are being empowered to make search of premises and seize documents under the authority of search warrants issued by a Presidency Magistrate or a First Class Magistrate.

In regard to penal provisions, the element of deterrent punishment is being inserted not without the risk of producing real and uncalled for hardship in genuine cases. The Amendment Bill provides that punishment for breach of provisions of the Act should be not only a fine extending up to Rs. 1,000 but, where a second or subsequent offence is committed, a compulsory sentence of imprisonment which should not ordinarily be less than one month and may extend to one year. The nature of these offences specified at great length in the Act and now supplemented by the Bill makes it plain that some of them are merely technical and, then again, the interval between the commission of the first and subsequent offences may be so short that no deliberate intention to flout the law may exist or can be reasonably inferred. In such cases sentence of imprisonment would be a real severity.

The stringent regulatory measures which have been incorporated in the Bill were defended on the ground that they would suppress speculative activity in forward trading. Mr. Lal Bahadur Shastri referred to the recent steep increase in the prices of raw jute as a case in point. But the truth is universally known. The root cause which resulted in jute prices rocketing high was the short supplies resulting from a poor crop at home and Government's ununderstandable vacillation in permitting timely imports of jute cuttings from Pakistan. Forward contracts within the four corners of the amended Act will be a greater aid to price stabilisation. But it would be idle to expect that there can be any effective substitute for a price policy enunciated on realistic principles. Present indications are that the Government's quest for a price policy may continue to be an endless process.

Cloth Prices Again

IT IS quite possible to question the wisdom of the reference of fixation of cloth prices to the Tariff Commission. The textile industry has, however, to recognise that for every advantage it takes it has to pay a price. On the present occasion the industry's willingness to accept ceilings came too late to ward off a popular belief that profits had been made. It is a pity the industry did not act earlier or that Government chose to press home its full advantage. What has happened is one more proof that the textile industry's public relations are by no means ideal; also that faith in tariff enquiries can easily be overdone.

The Government of India's resolution of December 5, 1960, which defines the terms of reference to the Tariff Commission, stands in a category quite apart from similar references of price enquiries. It makes a positive reference to the increase in mill cloth prices in relation to the level prevailing in August 1959 (which in itself was a level of depressed prices) and also their reaction on other sectors of the cloth industry, especially handloom.

The terms of reference appear to be very comprehensive and they suggest that the purpose of the enquiry is not to determine whether they have fluctuated far away from the August 1959 level. The shift now is to a number of correlated factors. The Tariff Commission is enjoined to take into consideration a wide range of factors from raw material to the finished product and even beyond that the wholesale and retail price points. The mill industry's internal resources for rehabilitation and modernisation, to the extent it is possible for the industry to build them, is a vital term of reference. Now it is unanimously accepted that the cotton textile industry has not been able to rehabilitate its extremely dilapidated machinery and equipment after abnormal use during the war. Then again, the competing countries in the export market have stolen a decisive march over the Indian industry by modernising and rationalising their equipment.

It is not only the internal aspect of the industry but also the external obligations of this industry which are of vital importance to the country's economy. On this assumption, an important term of reference directs the Tariff Commission to determine what should be the prices of cloth in order to enable the industry to get not only a reasonable return as normally understood but a return which will enable it to earmark funds for the backlog of rehabilitation and for undertaking an appreciable measure of modernisation. This term of reference undoubtedly would mean that cloth prices should be pitched on a higher level than would normally be expected.

Altogether, the reference of mill cloth prices to the Tariff Commission seems to have been made with utter confusion of purpose and conflicting terms of reference have been prescribed for the Commission. How to emerge from the dilemma of doing full justice to the diverse considerations will be a real test for the Tariff Commission. Once the Commission has made its own recommendations, at what level will prices be ultimately fixed by the Government and what sanctions will be forged to ensure that those prices are maintained without detriment to demand and ultimately to the output of the industry? The danger in politics in a pre-election year will not permit "fair" economic prices: but for this factor, the industry should have nothing to fear.

A DELHI DIARY

EXCURSIONS AND ALARUMS

THE week has been full of excursions and alarums and I have, in fact, been quite close to the most disturbing seat of them all. I refer to the pretty disgraceful behaviour in the West Bengal Assembly when Berubari popped up and down for several days this week. Let it be conceded that the people of West Bengal have a grievance; also that Dr. B. C. Roy sided with the Centre against Bengal when the chips were down. But assuming—as practically everyone I have talked to confirms—that feeling on Berubari is intense, what can be done now to stop the passage of a Constitutional Amendment prior to transferring this area to Pakistan? Most of us are not uncritical of the manner in which the consent of West Bengal was assumed. But we cannot agree that the answer to one error is a display of ineffective temper in a childish or adult goonda manner. The stealing of the mace in the West Bengal Assembly and the open riot in the House have only blackened the face of Bengal in every one's eyes; what has been gained?

At the Prime Minister's Press Conference on Thursday, one wondered whether or not he had taken in the full significance of West Bengal's feeling. I judged not. In his whole Press Conference there was an air of assurance which, it seems to me, is a little excessive. The use of the word 'prestige' hardly defines what is involved. The Prime Minister was right to say his prestige depends on more permanent things than on an adverse vote either at Lucknow or at Calcutta. But he is not right when he assumed that "those other things" have been unaffected. Our notoriously ineffective policy on China, the muddle that we have got into in the Congo, and the feeling that our international affairs are now based too much on the Prime Minister's personal equation have, in fact, undermined his stature abroad as well as at home. I greatly fear that if the Prime Minister does not recognise that he is lowering his stature now and needs, from time to time, to consult Indian public opinion and to concede he has made errors of judgment, the course of his political career will be rapidly downward. Having said this duly impertinent piece, let me take refuge in personalities!

ELLEN ROY

The brutal murder last Tuesday night of Ellen Roy at Dehra Dun has come to all her friends as a deep and personal shock. There are some of us who knew her as a miracle of dedication working all hours of the day and night on what she conceived to be the Radical Humanist's purpose and the spirit of the work of M. N. Roy. There are others who have seen and lived at 13, Mohini Road, who know what was required in order that, all alone, Ellen should have dealt not only with the Radical Humanist Movement, but also with the M. N. Roy Archives Projects and the numerous daily chores with which she was oppressed. Those of us who have seen her in pain (with arthritis of the spine yet doing her daily work in spite of everything), were irretrievably her admirers. There have been few people in the Indian Union in the last three years who have so compelled the admiration of persons with whom they were sometimes in fundamental disagreement. For her small circle of friends, affection for her grew more deeply each year when it was recognized how, although she valued friendship greatly, she was ready to make the supreme sacrifice of staying at her post even when friends called her away. Of dedication such as this, I personally have seen none of equal depth for a long time. Why, we keep on asking ourselves, should a woman of this supreme dedication have found an enemy? Why an enemy, so hateful in every way that he should have battered her to death? It would be a shocking thing if we discover that the person guilty of this crime had any claim to being an intellectual. And yet what could have been the motive of this senseless and ghastly crime? One's mind recoils at the horror of it all. There has been a demand everywhere that the murderer should be pursued relentlessly to the gallows. I am feeling pretty much like everyone else.

DEAN RUSK

I am passing quickly from Ellen Roy and the sadness that her memory leaves, to refer to Mr. Kennedy's new Secretary of State, Mr. Dean Rusk, whose appointment has been so well received in New Delhi. The Prime Minister spoke sincerely at his Press Conference when he talked with appreciation of his meeting with Mr. Rusk when he came two years ago as President of the Rockefeller Foundation. Those of us who have known Dean Rusk for a longer time are naturally even more delighted at his appointment; his charm grows with the years of knowing. Few people now remember that he was Assistant Secretary of State for the Far-Eastern Affairs at the time Korean War broke out, and it was his initiative which led to a momentous decision which stabilised the Free World at least on one front. In his wide knowledge of international affairs he is nearly unsurpassed. His experience included, during the War, a term with General Stilwell in China; he had some brief spells in Delhi for negotiations in this capacity. I believe that he was chosen for that particular assignment by a computing machine which sorted out cards bearing some hard specifications, which included excellence in politics and international affairs, endurance and high physical fitness, and high powers of negotiation! That computing machine—whatever the non-statisticians might say—certainly knew its job. But I should mention, while denying no credit to computers, that the machine had been fed with some very substantial information with which to support its judgment. Dean Rusk, it had probably noted, was a Rhodes Scholar at Oxford. He is now an Honorary Fellow of his own College there, St. John's. He won the Cecil Peace Prize in his Oxford days as well as a Blue for Lacrosse and many other honours. Languages come very easily to him, particularly German; I guess conversation with Dr. Adenaur will now flow more freely. Perhaps more important of them all is a negative political qualification in the United States. Dean Rusk, it seems, has no enemies. He has also, for a young President anxious to play his own hand in foreign policy, the supreme quality of standing gracefully behind the scenes. Not, indeed, that he lacks the power of forceful decision as the Korean War abundantly proved. But he can be both forward and retiring. It is difficult to know today which hand he will need to play first. All in all, the President of the United States, without a computing machine, has done nearly as well as that War-Time Mechanical Selector!

May I add—knowing how difficult it is to please all the ladies all the time!—that one of his first assignments after Oxford was a Professorship in Mills College, California, which, for the unsophisticated, is an exclusively Women's College. There he won the highest distinction—and Mrs. Rusk! Rumour has it that they pooled their golden keys as Deans of Faculties on their wedding day and from then on, no ill can befall them!

ARGUS.

THE WEEK'S NOTES

Central Africa

THE WALK-OUT

THE CONSTITUTIONAL REVIEW CONFERENCE of the Central African Federation which commenced at London on December 5 encountered foul weather within a week as "the big three", namely, Dr. Hastings Banda of Nyasaland, Mr. Kenneth Kaunda of Northern Rhodesia and Mr. Joshua Nkomo of Southern Rhodesia staged a walk-out and refused to participate further in the deliberations of the conference which had been specially convened for reviewing the constitution of the seven year old federation. In addition to the UK Government, the other four Governments represented at the conference were those of the Federation and the three territories. With a population of nearly 8 million Africans and 300,000 Europeans, the federation has hitherto been governed on the principle of "multi-racial partnership" while the nationalist leaders have all along been pressing for breaking up the federation, providing universal adult franchise and giving each component the right to secede from the federation as and when desired. As a sequel to the boycott of the African leaders, the UK Government decided to postpone the territorial conferences on North Rhodesia and South Rhodesia indefinitely.

The old techniques of diplomacy in Central Africa, it seems, will not bring about a solution of the problem. Unless new thinking is brought to bear upon the African question, keeping in mind the nationalist aspirations of the people, it is doubtful if the present deadlock can be resolved. The wind of change which is blowing over Africa has given an impetus to the nationalist movement in the federation and it may not be possible to keep down, by repressive measures, the restless Africans from their much cherished goal of independence. There is extreme urgency about rooting out racial discrimination in the federation which is particularly widespread in Southern Rhodesia.

The UK Government has more than once pleaded that one of the units, namely, Nayasaland, is not competent on economic grounds to run its affairs without a subsidy of £3 million per year from the federation. Unfortunately, the African leaders have not paid any attention to this problem as all their energy is diverted to keeping the political battle alive in an effort to win the freedom of the country. They are leaving the economic problems for the future—to be tackled as and when they arise.

To a certain extent the British Government has to blame itself for the present muddle in Central Africa. Not for long will it be possible to deny the African population its claim to equal rights. An assured "future of peace and stability" which the British Prime Minister promised while opening the conference, can be achieved only if the UK Government takes into consideration the changed circumstances and acts expeditiously before the fresh waves of nationalism make the task of reconciliation and compromise rather impossible.

Laos

SITUATION WORSENS

THE SITUATION in the strife-torn Laos has deteriorated fast during the past three weeks. The neutralist Prime Minister, Prince Souvanna Phouma, hardly had he started negotiations with his half-brother, Prince Souphanou Vong, the Pathet Lao leader, to include the latter in his Cabinet, had to flee to Cambodia under pressure from the right-wing assault of General Phoumi Nosavan, whose forces are now reported to be in the neighbourhood of Vientiane, ready for attack on the administrative capital of the country. Since his departure, Captain Kong Le, the paratroop leader, who brought about a coup earlier this year, after which the neutralist Government headed by Prince Souvanna Phouma was set up, is said to have assumed control of Vientiane. Meanwhile, General Phoumi has received more aid from the United States through the pro-West Governments of Thailand and South Vietnam. Six Russian Ilyushins are reported to have simultaneously brought Russian arms and ammunition from North Vietnam for Captain Le's forces. The two warring groups thus appear to be poised for a major conflict of arms, to avoid which, obviously, an energetic action is needed.

The situation in Laos as obtaining today forebodes ill for this small kingdom on the periphery of the Communist world in Asia. It can be easily imagined who will benefit from the present unstable conditions in this country. In the circumstances, the reported offer of Prince Souvanna Phouma to form a national Government, representative of all the political parties in Laos, deserves trial. The United Nations, pre-occupied as it is with the Congo affair, has apparently little time to devote to the Laos problem. The reconvening of the International Control Commission under the 1954 agreement may also not help; the experience in South Vietnam with this remedy is a pointer to this fact.

Prince Souvanna Phouma has been rightly following the policy of neutrality between the two power blocs and he appears to be the only person who can help his country steer clear of its present troubles; his hands must be strengthened. Obviously, General Phoumi and his collaborators have to realise that their present move to replace him by an out and out pro-West Prime Minister will defeat the very purpose they have in view. Should the limited civil strife in Laos develop into a major conflict, it will not only engulf this kingdom in a fratricidal war, but may also ignite the spark of a conflagration in the neighbouring States.

Madhya Pradesh

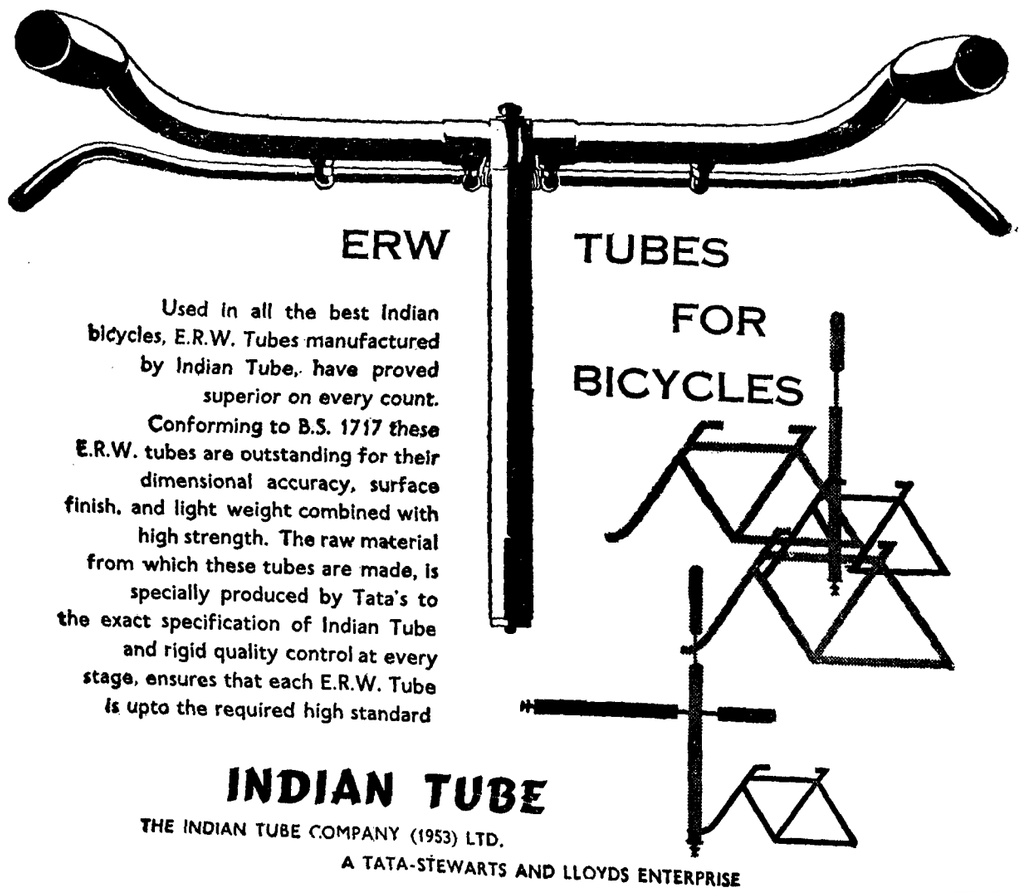
BASTAR

FOR THE past one month, Bastar—an Adivasi district in the south of the State of Madhya Pradesh in Central India—has been in the grip of extreme tension. The Governor of the State, Mr. Pataskar, has described the situation as "delicate". The root cause of the disquiet is reported to be the dispute between the Katju Ministry and the former Ruler of Bastar on certain petty matters, bordering on pride and prejudice. The Maharaja of Bastar, who was once a Congressman, but has now fallen out with the Congress Party, continues to enjoy the confidence of the vast majority of the Adivasis in the district. The Adivasis seem to resent the "advice" of the Katju Ministry to the Maharaja to leave the State for some time and live at some other place. The Katju Ministry has accused the Maharaja of indulging in extremely "objectionable and irresponsible activities". The nature of the activities has, however, not been disclosed. There is a belief that the anti-Congress activities of the Maharaja have annoyed the Congress rulers of the State. The refusal of the Maharaja to accept the "advice" of the Katju Ministry and his continuous stay in his palace has made Congress bosses extremely angry and they have now referred the matter to the Centre for guidance.

Since 1947, there have been a number of defections from the Congress Party all over the country and not much importance has been given to them. In the present case also the fact that Maharaja had left the Congress Party and was leading an opposition group

should not have been construed as a crime. The fundamental right of organising a political party—even opposed to the ruling party—cannot be denied to any citizen of the Indian Union, least of all the ex-ruler of Bastar unless it is feared that his activities are likely to jeopardise the peace of the State. The Ministry, on the other hand, enjoys wide powers and can take precautionary measures so as to forestall any clash. The Government, however, cannot take an extreme step without taking the public into confidence about the so-called nefarious activities of the Maharaja.

As the tussle between the Katju Ministry and the ex-Maharaja continues to drag, it is becoming clear that there is an urgent need for a face saving formula for reconciliation. The Maharaja seems to have already made a move in the matter. The other day he left his palace to receive the Governor of Madhya Pradesh at the air-port of Jagdalpur. For the first time he went out to receive a VIP. In the past the Maharaja never found it necessary to pay even a courtesy call to the VIPs visiting the district. The present move, therefore, clearly shows that the Maharaja is in no mood to initiate any political battle—least of all any bloodshed—against the Government and that he is prepared to come to terms with the State authorities. It will be wise if the Union Ministry advises the State Ministry not to carry the dispute any further, and make a serious attempt to patch up the differences in the interest of the peace of the district.



Tolstoy

THE FIFTIETH ANNIVERSARY

WAS TOLSTOY the founder of Gandhism? Did he believe in progress by industrialization? Is his message of love utopian without any practical significance? These and a host of other questions were discussed at a seminar in New Delhi commemorating the fiftieth death anniversary of the Russian philosopher. Present at the Seminar were outstanding literary luminaries such as Stephen Spender, Nicholas Nabokov, V. S. Pritchett, Ernest Simmons, John Wain, Jai Prakash Narain, Dada Dharmadhikari, etc.

That Tolstoy had a great influence on the life of Gandhiji is a well established fact. It was through Mahatma Gandhi that some of Tolstoy's ideas were put into practice in India. The ideal of non-resistance to evil which became a part of Gandhi's philosophy of non-violent resistance had a great bearing on India's independence movement. In Gandhiji's own words, "the Bhagvad Gita deepened the impression of the doctrine of non-resistance to evil while Tolstoy gave it a permanent form."

At the Seminar, Mr John Wain acknowledged that "industrialisation is the enemy of the human spirit." "If one country gave off industrialisation, the others would engulf it. Where do we go from here?" he asked. Mr. Stephen Spender also spoke in the same vein. He said: "If mechanisation dehumanizes us, it is safe to say that poverty sub-humanizes us. Neither Tolstoy nor Gandhi wanted a programme of Welfare States in which every one slaves equally." A fitting reply to this pro-industrialisation view was provided by Dada Dharmadhikari in these words: "Love is a fact of life. It is not a theory. Hate requires some reason or occasion. What requires reason or occasion is not our nature." The disciples of Tolstoy's theory of love seemed to carry the day.

That's from our own farm!

THERE ARE OVER 20,000 private and public carriers in South India alone with a carrying capacity of nearly 70,500 daily tonnage. They carry not only rice bags from distant farms, but haul different types of goods like furniture, bales of cloth, motors, etc.

Back in the twenties, when TVS started its Southern Roadways service they realised that South India needed a vast number of transport organizations to meet the growing demand for road transport. To help these, they started several units to give expert and efficient service.

From supplying the chassis, building the bodies, providing the finance, right down to reconditioning of worn-out parts, these units meet the increasing demands of the automotive industry in all its aspects in South India.

TVS UNITS INCLUDE

T. V. SUNDRAM IYENGAR & SONS PRIVATE LIMITED
Madurai, Tiruchi, Tirunelveli, Pudukkottai Salem and Coimbatore
Motor vehicle Dealers, Automobile Engineers & Body Builders

SUNDARAM INDUSTRIES PRIVATE LIMITED
Pudukkottai - Madras - Coimbatore
Tyre Retreaders

The World Abroad

GERMAN SOCIALISTS TALK

To

ODYSSEUS

THE continuously growing importance of the German economy in the post-war world explains (a) the amount of space devoted to Germany by my colleague, Our Special Correspondent in Western Europe, who writes from Paris, and (b) why this journal now has its own correspondent in Bonn. What right have I, based on London, to barge into my colleagues' territory and write about Germany?

Well, I have just returned from a three weeks' tour of Bonn, Cologne, Dusseldorf, Hamburg, Hanover, and Frankfurt, in the course of which I was able to meet a cross section of Germany's political, economic, and industrial leaders, ranging from cabinet ministers, such as Dr. Hans Wilhelmi, Minister in charge of State Owned Enterprises; senior officials in the Ministries of Foreign Affairs, Economics, and Agriculture; members of the Opposition, such as Carlo Schmidt; industrial, commercial, and trade union leaders, and four post-war millionaires, Axel Springer, the newspaper proprietor, Josef Neckermann, the chain stores and mail order tycoon, Friedrich Flender, who makes gears and power transmission drives, and Iwan Herstatt, a leading private banker.

Nothing that I learned conflicts with the picture presented to you by our correspondents in Bonn and Paris. I refer you to their columns for their fully documented expositions of Germany's problems and the impact on Europe of her policies. My aim is more modest. I would like to take you behind the scenes to meet some of the actual people struggling with these big problems.

While I was in Germany, seven UK bye-elections were being fought, and the problem of Labour party unity over nationalization was kept to the fore by the fierce exchanges between the Left and Right wings of the party. I was therefore anxious to hear what German socialists thought about the UK elections.

One of my informants said: "Men like Ollenhauer, Deist, Carlo Schmidt, and Herbert Wehner, are not what Richard Crossman, K. Zilliacus, and Tom Driberg mean by Socialists. In English political terms, the German SPD is a party of progressive radicals."

"Do you think that their spiritual home would be with Joe Grimmond in the British Liberal Party?" I asked.

"There's doubtless an element of truth in every paradox," said my informant diplomatically.

Another informant said: "Willy Brandt, Berlin's dynamic mayor, is being groomed as the SPD's candidate for the Chancellorship. Anyone less like a Marxist would be hard to find. Adenauer's party alleges that Brandt is intended only as a kind of glamorous film star figurehead, and that the real SPD leader is Herbert Wehner, who is being kept out of the limelight because of his past associations with the extreme Left. In fact, however, Wehner is more responsible than any other SPD leader for extricating the party from Marxism. And even if one believes the incredible, namely, that if the SPD wins power, Wehner will try to swing the party back to Marxism, he could not do so without creating the same disastrous split as now plagues British Labour."

As a leading SPD member said to me sitting in his office in the parliament building in Bonn: "In the UK 'socialism' seems synonymous with nationalization, bureaucracy, and an all-planned economy. In Germany, 'socialism' today means 'democracy'—a property owning democracy, in which bureaucracy is held at bay, and in which private enterprise has a definite and important role to play. Incidentally, we find the UK Labour party's doctrinal quarrel embarrassing to us in Germany because it tends to undermine public confidence in the sincerity of what in the UK would be called our radicalism. We don't reproach Adenauer's party because it stands for competition, but because we don't think that it is enforcing enough competition. It has allowed the teeth to be taken out of its anti-cartel law. It allows wealth to be concentrated in too few hands."

"You want to step up income-tax to secure a better distribution?" I asked.

"Don't let us confuse 'income' and 'wealth'", he said. "We don't want to redistribute income so much as the ownership of capital—there's a big difference."

GERMANY'S TWO BASIC FEARS

Socialists, trade unionists, and men of all parties, agreed in hammering home two points:

(1) "We are the only nation in Western Europe which has suffered two total depreciations of our currency, in which all values were destroyed. We are therefore all alive to the overwhelming need to allow no policy, whether emanating from the government or from the trade unions, which would undermine the purchasing power of the currency. A recent Gallup poll was revealing. To the questions 'Which would you prefer (a) rising wages and rising prices or (b) stable wages and stable prices?' 80 per cent favoured stable wages and prices."

(2) "We lived through twelve years of a totalitarian, government-controlled economy, in which all power, political, economic, and juridical, was concentrated in a monolithic state, in effect in the hands of bureaucrats, and we are determined never to repeat that experience.

"We Germans have painfully verified the British maxim: 'All power corrupts and absolute power corrupts absolutely.' British Socialists seem to think that the state control exercised in war-time Britain proves the efficiency and painlessness of socialism. They don't know what they're talking about. First, those controls were geared to winning a war (and patriotically tolerated as temporary expedients to that end). Secondly, they were not intended to cope with the problems of securing the growth of the economy in a competitive world market. Nor did the UK experiment last long enough to attain all-pervading development as it did with us under Hitler".

THE STATE'S ECONOMIC ROLE

A German economist said to me: "German Socialists and non-Socialists are agreed that concentrations of wealth create economic power and that this constitutes a threat to freeedom. But we are all equally agreed that the problem of economic power is not solved by amalgamating it with political power. That merely intensifies and magnifies the evil. We know what we're talking about. 17,000,000 of our brothers and sisters in the Eastern zone live in an economy dominated by officials administering all enterprises. It may

be that the worker is at a disadvantage in dealing with a vast firm like Krupps. But in a free country, he has unions and members of parliament to protect him, and in this age of full employment and competition for labour, he has his own bargaining powers. In the last resort, he can always change his job. But in East Germany the whole population has only one employer—the State. To escape from the 'insecurity' of employment under Krupps—a model employer, by the way—to the 'security' of employment by officials, subject to central planning offices, is to jump from mitigated insecurity and injustice into total insecurity and injustice."

"Then German Socialists believe in laissez-faire?" I asked.

"No party in Germany believes in laissez-fair," said my informant. "No economy can be left to itself, unregulated, but the role of the state is not itself to engage in production and distribution but to ensure a stable currency, and real competition, and to prevent the concentration of wealth in too few hands, and to ensure the widespread ownership of property and savings."

Here are the official pronouncements of the German Socialist Party itself on these points, taken from the party manifesto:

"Fundamental rights should not only protect the freedom of the individual against the state; they should also help to form the community and the basis of the state.

"In its social purpose, the State must provide for its citizens in order to allow everyone to determine his own life according to his own responsibility and in order to further the development of a free society.

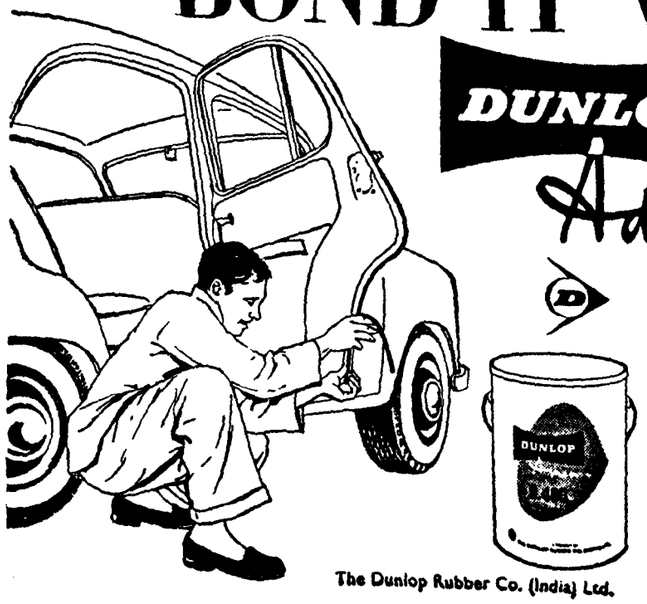
"Economic policy must secure full employment on the basis of a stable currency, increase productivity and raise the general standard of wealth.

"The State cannot shirk responsibility for the course the economy takes. It is responsible for a forward-looking policy in regard to business cycles and should restrict itself mainly to influencing the economy indirectly.

"The free choice of consumer goods and services, free choice of a place to work, free initiative for employers are decisive foundations, and free competition an important element of a free economic policy. The autonomy of employee and employer associations in the conclusion of wage contracts is an important part of the free order. Totalitarian control of the economy destroys freedom. The Social Democratic Party therefore favours a free market, wherever free competition really exists. Where markets come under the domination of individuals or groups, however, manifold measures are necessary to preserve the freedom of the economy. As much competition as possible—as much planning as necessary."

"So in the end, you do believe in state planning," I commented.

"Not as an end in itself, but backed by all the qualifications we've previously mentioned, the answer is yes."



In the UK, the Opposition's job is to oppose and to convert the electors to its way of thinking if it can. Doubtless this is why Labour has lost three general elections running. In Germany, the SPD seems to have grasped the risks of such continuous upholding of unpopular policies, for in its official bulletin of September, 1960, the SPD refuted the charge that it does nothing but oppose and stressed that it voted with the government on 71 occasions and against on only 15. The British Labour Party might look into this. For obviously if the voters have repeatedly demonstrated their dislike of your policies and their approval of those of the government, it might be a good plan to demonstrate that you too approve of the government's policies! This SPD bulletin led me to ask a non-party German friend: "Would you say the difference between Right and Left in Germany was perhaps merely one of emphasis, as between Republicans and Democrats in the USA?"

"By and large, yes," he replied. "The Right may be slower to regulate the economic climate. The Left may be quicker. But competition for votes will lead us more and more towards a 'Welfare' state, with heavier taxation and fairer shares."

For reasons that I will quote from other informants next week, it seems probable that the 'welfarisation' of Germany may be a fairly slow process, and that for a good many years to come, Germany's rate of economic growth, while slower than hitherto, will continue to be above the average in the free world.

BOND IT WITH

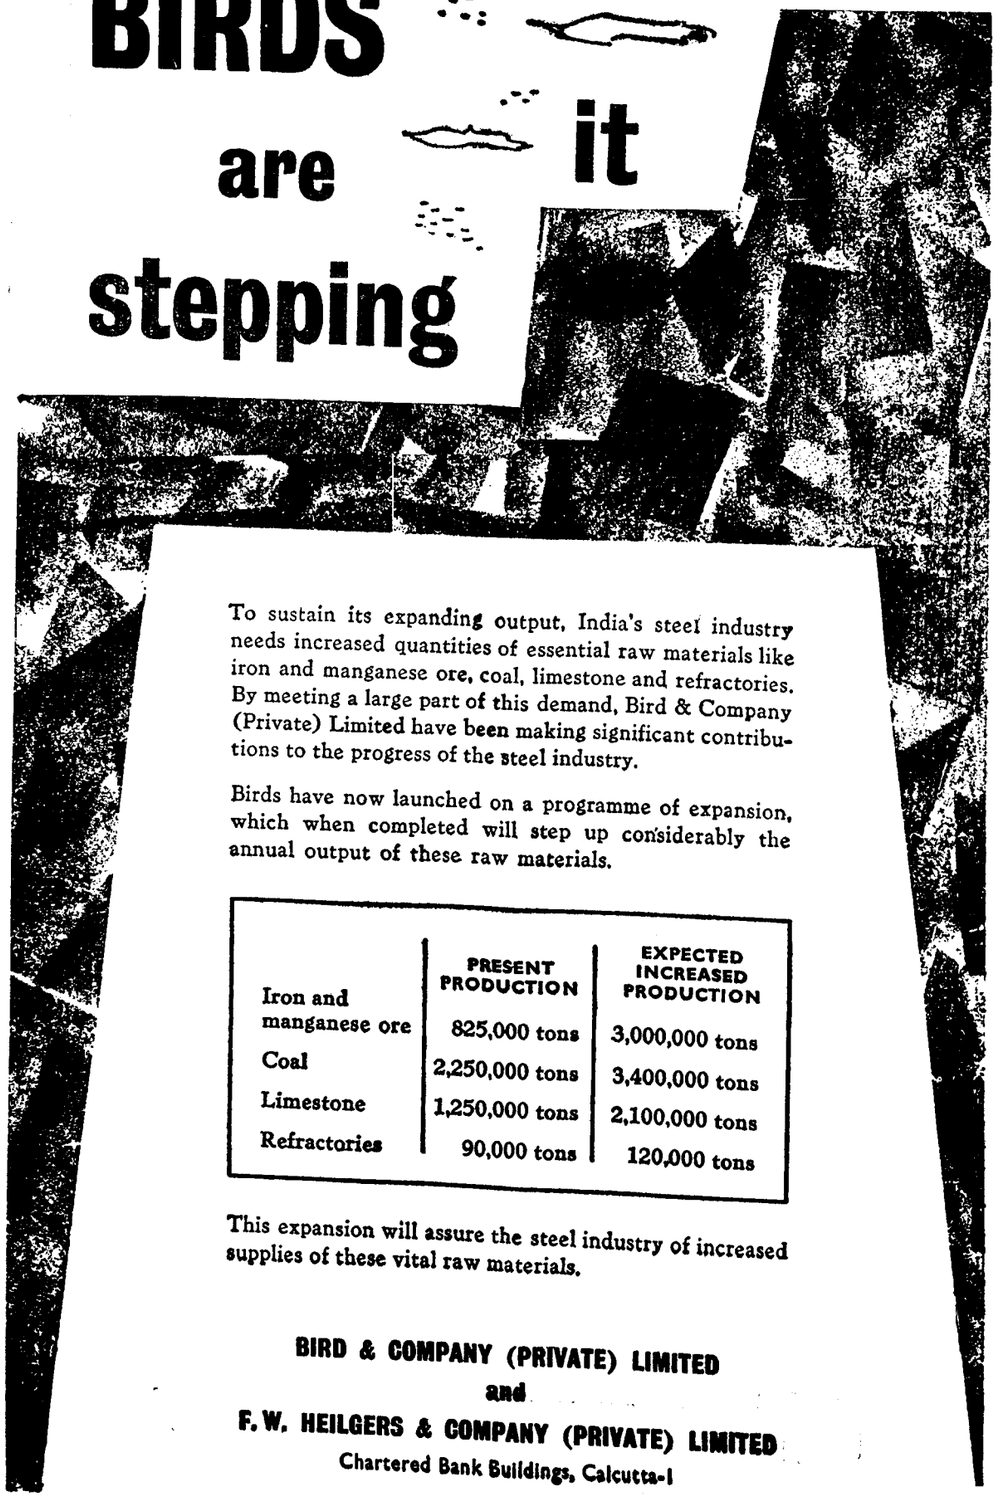
Quality. Something intangible. Yet it is present in any form of human activity where certain standards are maintained.

Take everyday commerce, for example. There are many goods in the market which are not made to any standard. And yet, if they could be, they would have the assurance of quality.

Today, there are relevant standards, prescribed by the Indian Standards Institution, for the manufacture of many consumer and industrial products. On application, and after exacting tests and examinations, ISI also gives its certification mark to those manufacturers whose goods conform to specified standards. The ISI mark is the guarantee of quality.



Once the licence to use the mark is granted, ISI maintains a constant vigil to see that the quality of the products continues to be maintained and the mark is not misused in any way. For, its integrity must always be safeguarded.

BIRDS are stepping up it

To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.

Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED INCREASED PRODUCTION
Iron and manganese ore	825,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,400,000 tons
Limestone	1,250,000 tons	2,100,000 tons
Refractories	90,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of these vital raw materials.

The European Scene

THE WORLD'S BIGGEST STEEL INDUSTRY

From Our Special West European Correspondent

PARIS, December 10.

IN the third quarter of this year, for the first time in history, steel production in the six Common Market countries was greater than in the USA: 18 million tons against 17.8 million. Of course, there were special reasons for this. The American mills were working very far below capacity, whereas the Continental steel-makers were fully employed. If the Americans were to step on the gas again, they would soon reclaim their place as number one steelmakers. But precisely: there is as yet no prospect of the American mills using most of their installed capacity, while in West Europe expansion is going forward faster than ever. If it had been the Russian industry, or even the combined industries of the Soviet bloc, that had stolen the lead last quarter, however transiently, one can imagine the singing and dancing that would have gone on to the tune of "overtaking and surpassing" the capitalist monopolies. The peoples of the Common Market countries have, as yet, so inadequate a sense of unity that nothing was made out of last quarter's performance; it was seen simply as the interesting addition of six national production figures. Yet these nations have been associated in a common market for steel (in the Coal and Steel Pool, or CECA) for over ten years, or much longer than their co-operation in a general common market for all goods. Indeed, their association in CECA is one of the reasons for their appearance this year as the world's biggest steel producers, so they would be entitled to regard their record output as something more than an addition of individual performances.

The rate of expansion in crude steel production in this region has been phenomenal in recent years, as may be seen from the following table of percentage increases up to 1959, counting from 1936 and 1950 respectively:

	Since 1936	Since 1950
Italy	234	186
France	126	76
Belgium	102	70
Luxembourg ..	85	49
W. Germany (without the Saar) ..	74	113

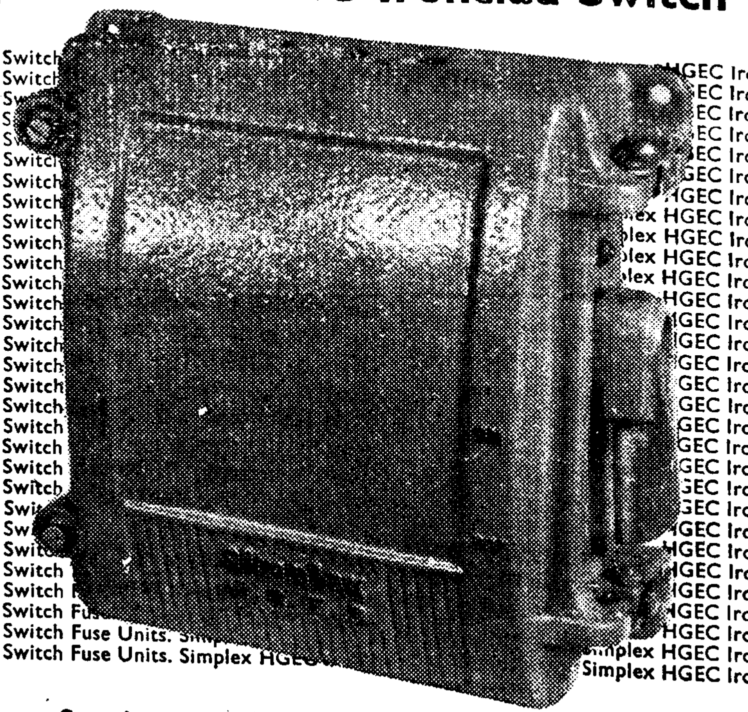
These big percentage rises are not just the illusion produced by calculating from very low starting points. I have omitted the Dutch figures to avoid that error; the Dutch had virtually no steel industry before the war and they have a few respectable mills now. Germany, France, Belgium and Luxembourg were all substantial producers before the current expansion began. Italy is a special case. Production was indeed low before the war: output of crude steel was 2.32 million tons in 1938. Yet estimated production for this year is 8.22 million tons, which means that in addition to achieving a rate of expansion unique in the world, Italy has added on 6 million tons, or the equivalent of France's pre-war crude steel production. For finished products, Italy will this year produce 6.56 million tons against 1.94 million in 1950, thereby adding on in a decade the equivalent of Belgium's and Luxembourg's combined 1950 output. Taken either in relative or absolute terms, Italian performance has been astonishing—and it has been achieved by a country with no coal or ore resources worth talking about.

The biggest national industry remains, of course, the West German, which, despite a setback during the 1958 recession, has continued to expand so fast that laymen were wondering last year whether the pace were not being forced dangerously. West German steelmakers say no, and recall that the minimum target, allowing the industry to meet all domestic needs and begin exporting, was attained only in 1958. In setting new and higher targets, they wisely disregarded temporary fluctuations in demand, which cannot be allowed to influence investment plans valued in hundreds of millions of marks and stretching out over several years. For the longer period, West German steel men are confident of constantly growing demand for their products. This is confirmed by results so far this year, for monthly averages are running about 35 per cent above last year for steel ingot production. (It is hazardous to compare West German production in these two years more exactly, because the definitive incorporation of the Saar into the Federal Republic dates from July 1959, and the Saar is a major steel producing region.)

French output this year is setting records 15 per cent above 1959, and total production for 1960 will easily top 16 million tons of crude steel. Since West Germany and France between them produce about two-thirds of Common Market steel, the boom in these two countries explains largely why the region is this year expected to turn out 72.8 million tons, compared with 63.2 million tons in 1959. Crude steel output in the third quarter, when the Common Market took the lead over the USA, was 18.5 per cent better than last year.

The smaller producers are not being left behind. Belgian output last year was 6.36 million tons, up from 5.91 million in 1958. Annual investments have been multiplied by four since 1955, and when extensions in course are complete capacity will be 8.3 million tons. The Belgian industry's target is 10 million tons by 1964. This expansion is being accompanied by costly modernisation, automation and specialisation. The last point is important; it is the division of labour among the various producers that shows that the Continental industry is becoming one, rather than the sum of the old national industries.

Specialisation in production is accompanied by specialisation in research. It is in research that the Continental industries have made the most significant progress and this is the secret of their expansion. They have discovered new methods (and, thanks to agreements formed with the Common Market in view, they have shared these discoveries) of using Europe's endowments in coal and ore, and her supplies of scrap, in the most economical way. Italy, indeed, has succeeded in building a dynamic and fully competitive steel industry in a country with no natural endowments; and now the experiment is to be repeated by the French with the steel mill at Bone, in Algeria, where there exist none of the raw materials for steel except power, in the shape of natural gas supplies piped a thousand miles from the Sahara. The Continentals



have proven—and the fact is of importance to all developing countries—that there are few places where one can say a steel industry cannot be located. (A former Indian ambassador has told me how he once gave Colonel Nasser a little lecture on the impossibility of building a steel industry in Egypt). If competitive mills can be built in south Italy, in North Africa and in Holland, they can be built almost anywhere. The only rational place for a steelworks, in fact, is on the water, where it can be fed raw materials brought from almost anywhere by ship. The French are putting this into practice with the giant new works to be constructed at Dunkirk; although near an area traditionally regarded as a heavy industry basin, it will be built on the water, not on land.

Of may technological advances in steelmaking on the Continent in recent years, the most important and the most revolutionary is the use of oxygen to purify pig for making high-grade steels. The Austrians perfected the technique of injecting pure oxygen into the vats of liquid metal (the LD process) but the Common Market countries have been at work ever since seeking to improve this process and adapt it to their needs. The most striking result was the opening this year of the oxygen pipe-line in Lorraine. Already 25 miles long and shortly to be extended to 125 miles, this network pipes pure oxygen from the factory of the Liquid Air Company to the mills of half a dozen companies in the region; it is the biggest hook-up of the sort in the world.

The point of this technical digression is to emphasise that the vast expansion of Continental steel output concerns quality steel. It would be of less interest if it related only to Thomas steels, while the proportion of Martin steel remained as low as it used to be (only 30 per cent of French production, for instance). The use of oxygen on a massive scale is breaking down the traditional distinctions between grades of steel, distinctions based on their manner of manufacture. By this method Thomas steel may be prepared of at least equal quality to Martin steels, and in some cases of superior quality. All the new plant now building in the Six countries, and the extensions to old plant, rely on this method and the day is foreseen when this will be the only way of making steel. Thus the Six have not only claimed leadership, for a time at least, in volume of output but have made much more high-grade steel, thereby enlarging their export markets and reducing their dependence on overseas steel industries.

This extraordinary progress in West European steel is far and away largely the fruit of private enterprise. But not entirely. The industry that has achieved the most spectacular results, the Italian, is dominated by a State holding company called Finsider which is responsible for 55 per cent of Italian crude steel production. Finsider is currently investing heavily with the object of doubling its output of steel and tripling its output of pig iron. It has shown itself to be one of the most resourceful and competitive of European steelmakers. So there are more than technological advances for Indian steelmakers to study in the Common Market. Given the role the State has claimed in the Indian industry, it is encouraging to see that a public-sector corporation can more than hold its own in the world's fastest growing steel industry.

Economic Report from the U.S.

REVIEW OF THE ECONOMY

By GUY SIMS FITCH

WASHINGTON, Dec. 8.

A REVIEW of economic conditions in the United States during the past year leads to the inevitable conclusion that the decade of the 1960's has started off somewhat more slowly than many of the experts had expected. This is not to say that 1960 has been a poor year; on the contrary, in terms of over-all economic activity, it is marking another new high for the U.S. economy. During 1960, the nation's total output of goods and services—the gross national product (GNP) —passed the historic landmark of a $500,000 million annual rate. For the year as a whole, the GNP promises to reach or exceed $505,000 million, a new peak and nearly 5 per cent above the record 1959 total.

Annual measurements, however, must be subjected to closer analyses, to take into account the underlying economic trends. And there is no doubt that the trends during the latter part of 1960 pointed to a slowdown in activity. Many economists still prefer to term this slowdown rather than a recession. This is because its dominant feature has been a massive turnaround in inventory policy, from accumulation to liquidation, while final demand for goods and services, on the part of both consumers and businessmen, has held pretty much at peak rates. Indicative of the essential soundness of the 1960 U.S. economy are the record levels of personal income, consumer spending and employment during the year. Business spending on new plant and equipment also has held at near-record levels. In addition to these evidences of strength in the private sectors of the economy, public spending has continued its steady advance to another new high. Leading the way, as in the past, have been outlays by state and local governments to meet the growing U.S. population's expanding needs for public services and facilities. In the understandable absence of final statistics covering the last two or three months of 1960, it is hardly possible at this time to present definitive figures for the year as a whole. Enough, however, is known about the trends to offer some estimates of the likely 1960 statistical record in certain major economic categories. The importance of these estimates lies not so much in their ultimate or individual accuracy, as in the general range of gains they show over the 1959 results. The figures in the following tabulation are in thousands of millions of dollars:

	1959	1960
Gross National Product	482	505
Personal Consumption	314	328
Business Investment	72	75
Government Spending	97	99
Net Export Surplus	1	2
Personal Income	383	405
Disposable (After Tax) Income	337	355
Corporate Profits	RU	46

Several factors stand out in appraising this record. For one thing, these 1960 estimates lean to the conservative side. The actual totals could turn out to be somewhat higher than indicated, depending on the strength of the usual fourth-quarter surge in demand for goods and services. For another thing, 1959 itself was a record year for U.S. economic activity — something to bear in mind when making comparions. Finally, as has been indicated, over-all figures do not reflect trends during the course of the year — that is primarily the fact that since the second quarter, the economy seems to have lost some of its earlier buoyancy, though the indices still compare favourably with 1959. This is seen most markedly, perhaps, in the record of industrial production. For 1960 as a whole, this index, which uses 1957 as a base of 100, has reached an estimated 109, compared with last year's 105. The readings for the closing months of the year are likely to be nearer to 106 or 107. A somewhat similar situation exists with regard to employment. The total number of jobholders, on an annual average, is estimated at a record of 66.9 million for 1960, compared with 65.6 million for 1959. But during the latter part of 1960, employment, while still at record monthly levels, generally has failed to come up to seasonal expectations. Meanwhile, the labour force has been growing, and unemployment, while with less than 4 million still relatively small, has tended to rise in terms of percentage of the labour force, when allowance is made for normal seasonal movements. While the rule of the joblessness has been concentrated in a few industries and a few parts of the country, the slowdown in industrial activity does seem to have affected the total employment picture to some degree.

Another result of the slowdown has been to hold prices down and thus put something of a "squeeze" on the earnings of business, as is seen in the dip of corporate profits from last year's total. Also involved has been an upsurge in competition for markets, both at home and abroad. These developments, along with the turnaround in business inventory policy, can be cited as evidences of a major economic adjustment to an essentially non-inflationary condition. In all this, one of the prime sources of economic strength during the past year is found on the financial side of the picture. In the first place, the U.S. government budget has been brought under better control than many experts dared imagine a year ago — with a $1,100 million surplus on the books for the 1960 fiscal year that ended last June 30. A similar surplus has been projected for the current 1961 fiscal year, although the economic slowdown, with its related lower tax receipts and probably higher Federal spending, could result in a small deficit. But this is still a far cry from the huge $12,000 million deficit of the 1959 fiscal year. In the second place, U.S. merchandise exports have soared during the past year. Thus, the net export surplus of goods and services, which was non-existent in 1959, bids fair to add some $2,000 million to the GNP accounts in 1960. This surplus is being earned even while U.S. imports have been holding at or very close to the record 1959 levels — an indication that despite its publicized slowdown the U.S. economy has been buoyant enough, within the framework of the traditionally liberal U.S. trade policies, to absorb large quantities of goods and services from abroad.

WORLDGRAM

India

Aid Received Under PL 480: The Government of India have so far executed five agreements under PL 480 (Title 1) programme for the import, against rupee payments, of surplus agricultural commodities covering a total of $2,302.203 million (Rs. 1096.28 crores) as shown below (in million dollars):

1. First PL 480 Agreement signed on the 29th August, 1956, as subsequently amended (Wheat, Rice, Cotton, Tobacco and Dairy Products)	354.536
2. Supplementary agreement signed on the 23rd June, 1958 (Wheat Yellow, Corn and Serghum)	55.277
3. Second PL 480 agreement signed on the 26th September, 1958 (Wheat and Yellow Corn)	259.800
4. Third PL 480 agreement signed on the 13th November, 1959 as amended (Wheat, Rice, Cotton, Tobacco and Corn)	297.870
5. Fourth PL 480 agreement signed on the 4th May, 1960 as amended (Wheat, Rice Milo, Corn, Cotton, Tobacco and Soya-bean Oil)	1,334.700
TOTAL	2,302.203

(or Rs. 1096.28 crores)

The rupee payments were being deposited in the US Government account in the State Bank of India upto May 15, 1960. It was not known how much of these deposits were utilised by the State Bank of India in the investments of the Bank in securities. Since 16-5-1960 however, the rupee payments were being deposited in a special US Government account in the Reserve Bank of India. Out of these deposits, the Reserve Bank had invested in special securities till 30-11-1960 an amount of Rs. 146.77 crores.

*

Power and Distribution Transformer Industry: The Government of India have accepted the Tariff Commissions' recommendation that protection to the power and distribution transformer industry should be continued at the existing rate of duty i.e. 10 per cent ad volerum for a further period of three years ending December 31, 1963 and that the protective duty should be made applicable to Power and Distribution Transformers upto 10,000 KVA and 132 KV on the HT side, and parts of such transformers, not otherwise specified. The Government Resolution on the Commission's Report, which was published recently, states that Government have also accepted the recommendation regarding the continuance of the present practice of assessing transformer oil imported with transformers to duty at the same rate as is applicable to transformer oil imported separately and steps will be taken to implement it in due course. The Government have taken note of the recommendations of the Commission for thorough scrutiny of applications for import of transformers upto 10,000 KVA and 132 KV on the HT side. classification of imported power and distribution transformers by voltage etc. Steps will be taken to implement them as far as possible.

*

Chinese Method of Paddy Cultivation: Mr. M. V. Krishanappa, Deputy Minister of Agriculture disclosed in the Rajya Sabha that the Chinese method of paddy cultivation had been abandoned after experimental trials at certain centres. In a written reply to a question by Mr. S. C. Dey, the Minister said that the results of trials conducted at various centres had proved that this method was more expensive and was not superior to the Japanese or the local improved methods of paddy cultivation.

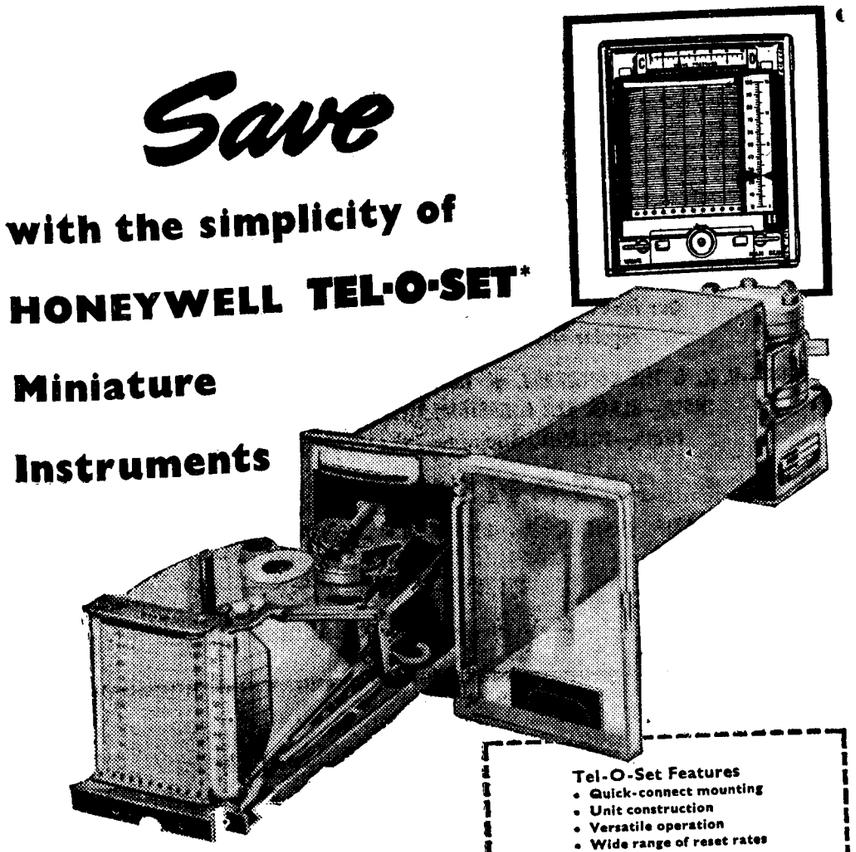
U.S.S.R.

New Textile Mill Under Construction: A large textile mill is being built in the Siberian town of Chernogorsk. It will annually manufacture fabrics sufficient for making five million suits. The new mill is one of the 212 enterprises of Soviet Textile industry which are now being built or reconstructed. Their construction is underway in Central Asia, Siberia, in the Urals, the Transcaucasus and in other areas of the countries. Large textile mills have already been built during the past years of the current seven year period in Engels (on the Volga) in Kishinev (Moldavia), Kiev (Ukrain), and in many other cities. The commissioning of the new textile enterprises will provide the Soviet Union with facilities for manufacturing this year some 8000 million metres of fabrics, i.e., more than is manufactured by France, Britain and West Germany combined.

*

Single Power Grid in Uzbekistan: A single power grid has been set up in Uzbekistan linking in the Republic 31 electric stations with a total capacity of more than one million KW. This year the output of electricity in Uzbekistan will already amount to 5,700 million KWh. The annual output of electricity per capita will total 700 KWh which is several times more than the per capital output of electricity in Turkey, Iran and Pakistan.

*



Oil Refinery for Ethiopia being Designed in USSR: A group of Soviet hydrogeologists have gone to Ethiopia to prospect there for sources of fresh water needed for the oil refinery of 500,000 tons annual capacity, which is now being designed in the Soviet Union. The Soviet geologists will be working in the area of Assab. The drilling rigs, movable power stations and other prospecting equipment were shipped to Ethiopia recently from the USSR. The Soviet Union is helping Ethiopia in developing its national economy in accordance with an agreement reached during the stay in Moscow of Emperor Haile Selassie last summer. The Soviet Government then also agreed to grant Ethiopia a long-term credit of 400 million roubles on favourable terms. With the Soviet Union's help a technical school will be built in Ethiopia to train specialists for different branches of national economy. The plan for this educational establishment has been prepared by Soviet architects and the construction of the school will be started soon.

United Kingdom

Further Rise in Sterling Area Reserve: The Sterling Area's central gold and convertible currency reserves rose by £10 million during November and stood at £1,131 million on November 30. It was pointed out that there has been a steady increase in the reserves this year. The reserve level in November was the highest since September 1959, when it was £1,173 million.

*

Increased Overseas Demand for British Equipment: More overseas countries, it is reported, are going to Britain for such diverse lines of equipment as farm machinery, office appliances, and equipment for the oil industry. The Agricultural Engineers' Association announced in London on November 29 that exports for

NEW and improved *Tel-O-Set* miniature pneumatic instruments are low in cost, easily installed, compact and require minimum maintenance. They can handle a broad range of temperature, pressure, flow and liquid level applications...

With all their simplicity, these instruments are highly sensitive and respond instantly to change. They operate on a pneumatic-balance principle which eliminates lost motion and friction.

Honeywell *Tel-O-Set* indicators, recorders and controllers are today's most advanced miniature instruments.

the first ten months of 1960 totalled £108,700,000—£3,000,000 ahead of the previous record figure set up for the whole of last year. Exports of farm machinery were up by 13.3 per cent on the period January to October 1959 at £15,750,000 and the value for exports of complete farm tractors showed an increase of 33.3 per cent. By the end of October, the United Kingdom had exported 123,663 new farm tractors-compared with the previous record of 115,769 for the whole of 1959. Australia was still the leading buyer (14,511), with the United States (11,559) second.

France

French Consumption of Oil Products: During the first nine months of 1960, total consumption of oil products increased 11.4 per cent: 16.4 million tons compared with 14.7 million tons during the same period of the previous year. Based on a period of 12 months ending 30 September 1960, annual consumption of oil products in France increased from 20.1 million tons to 22.9 million tons, which was an increase of 13.6 per cent. Consumption of ordinary and high-test gasoline during the first nine months of 1960 totalled 5.7 million tons compared with 5.3 million tons during the same period of the previous year, which was an increase of 7 per cent. Consumption of those products during the year ending 30 September 1960 increased 6.2 per cent compared with the equivalent previous period. Consumption of gas oil totalling 1.5 million m3 compared with 1.4 million m3 during the first nine months of 1959 increased 7.9 per cent. Over a period of 12 months, it increased 6.2 per cent. The increase in the consumption of domestic fuel during the first nine months of 1960 totalled 20.8 per cent: that of light fuel 14 per cent and that of heavy fuel 8.4 per cent.

U.A.R.

Aswan High Dam Tender: Aswan has been alloted a total credit of LE 20,236,000 of which LE 10,286,000 were earmarked for the high dam works upto June, 1961 and LE 6,458,000 for mineral development, dairy industries, refrigeration facilities and sugar plants for Edfu, apart from the establishment of training and maintainance centres. A further provision of LE 2,062,000 has been set aside for a variety of other plans at Aswan. In the meantime tenders for the execution of the first stage of the high dam will be opened on January 3, 1961. These tenders include the construction of the front and back dams as well as the diversion canal to be completed in 1964.

Norway

Cultivated Land: The total figure for land under cultivation in Norway has decreased during the last ten years from 2,569,944 acres in 1949 to 2,520,522 acres in 1959, according to the agricultural census carried out last year. There were 434,000 farms and small holdings, ofwhich 198,000 covered an acreage of more than 1.23 acres.

China

$25 Million Credit to Guinea: With the granting of the $25 million credit to Guinea Communist China's commitments to foreign trade to uncommitted African nation countries have risen to $190 million.

Cuba

More Nationalisation: The Cuban economy seems likely to pass almost completely under Government control as a result of a decree nationalising 382 business concerns, including 61 textile plants, 18 distilleries, 8 railway companies and many firms in food supply, the film industry, port operation, basic metallurgy and chemicals. The nationalisation of 105 sugar mills will put the sugar industry, the basis of Cuba's economy, under Government control. These moves follow the nationalisation in September of the Cuban branches of the three main American banks, operating there—the Chase Manhattan, the First National City of New York and the First National of Boston.

Greece

Industrial Development Corporation: It is reported a delegation from the Greek Industrial Development Corporation visited London in October for talks with the Board of Trade. The Corporation was formed recently in Greece with a capital of $40 millions, to assist private enterprise and to support state investment in developing Geek industry.

Haiti

New Stand-by Agreement: The IMF has entered into a new stand-by arrangement, making available the equivalent of $6 millions for one year in support of convertibility of the Haitian currency. It became effective on October 1, when the present $4 million stand-by agreement, on which Haiti has not drawn, came to an end. Haiti's outstanding drawing under previous arrangements amount to $4 millions.

Iran

New Stand-by Arrangement: The IMF entered into a new stand-by arrangement, authorising the Iranian Government to draw the equivalent of $35 millions over the next year. The Fund has also agreed to a postponement from January 1961, until July 1963, of re-payment of a drawing of $17.5 million in sterling made in July 1960. These moves are intended to support the stabilisation programme designed to overcome current balance of payments difficulties. Iran's external payments have risen sharply over the past two years and have exceeded its foreign exchange income. Import taxation, particularly of non-essential goods has been temporarily increased, but liberal import and exchange policies will be continued.

Japan

Record Import Bill: The import bill for the six months to the end of March, 1961, has been fixed in Japan at $3,530 millions, the highest figure ever and some $300 millions above for the preceding six months. Much of the increase is accounted for by the necessity to expand imports of fuel and raw materials to accommodate the rise in industrial production.

World Bank

Electric Power Loan to Norway: The World Bank has made a loan equivalent to $25 million to the Kingdom of Norway to assist further in financing the Tokke Hydro-electric Development Scheme. The Tokke undertaking, the largest hydro-electric power project in Norway, consists of three power plants having a combined capacity of 810,000 kilowatts. Transmission lines will also be built to connect networks serving southern and western Norway and to provide a connection with the Swedish grid for the export of power. The total cost of the new power plants and transmission lines is estimated at the equivalent of $58 million. The Bank loan will cover $25 million of the cost and the remainder will be met by the Norwegian Government. The works are scheduled for completion in the second half of 1964. The loan is for a term of 25 years and bears an interest at the rate of 5¾ per cent annually including the 1 per cent commission which is allocated to the Bank's Special Reserve. Amortization will begin on November 15, 1964.

NEWS IN BRIEF

INDIAN

It is reported the Swiss Foundation for Technical Assistance would provide the Council of Scientific and Industrial Research with one million Swiss francs worth of equipment and eight Swiss experts for a period not exceeding five years for establishing a centre for training precision mechanics and technicians for the instruments industry.

•

Exports of Indian films during January-August 1960 had improved as compared to the corresponding period last year. India had exported cinematograph films of the value of Rs. 1.23 crores during the period January-August, 1960. For the whole of 1959, the value of exports had been of the order of Rs. 1.6 crores.

•

As against a production target of 9 lakhs of electric fans for the Second Plan, production during the year 1960-61 would be about 1 million. The production of electric fans during 1950-51 amounted to 1.94 lakhs.

•

Philips India Limited, the pioneers in the Indian radio and electronic industry, have acquired from the official liquidator to Calcutta High Court, the land, buildings, plant and machinery in Bombay previously owned by the Osler Electric Lamp Manufacturing Co. Limited (in liquidation).

•

India's rayon exports in the current year have exceeded Rs. 331 lakhs. This is Rs. 14 lakhs more than what India exported during the same period January-October last year.

•

The Government of India have accepted the recommendation of the Tariff Commission that protection to the ball bearings industry should be continued for a further period of two years ending December 31, 1962 at the existing rate of duty viz. 95% ad valorem.

•

The Minister of Industry, Mr. Manubhai Shah disclosed in the Lok Sabha that it was proposed to set up a separate company for implementing the four new drug projects with Soviet collaboration.

CAN WE AFFORD SOUTH AFRICA?

By

Andrew Boyd

DURING the last Commonwealth Conference, I talked privately (and separately) to some of the heads of governments after their private (and separate) talks with the South African Foreign Minister, Mr. Eric Louw. Their off-the-record comments were memorable, and it is sad to think that we shall have to wait for a full public account of those hard-hitting exchanges until, after a decent interval, one of the Prime Ministers or Presidents involved publishes his personal memoirs. Mr. Louw, in defending apartheid and denying the other Commonwealth countries' right to concern themselves with South Africa's internal affairs, obviously gave as good as he got. Equally obviously, he got plenty. One of the heads of government told me that talking to the South African Minister had been like talking to the Rock of Gibraltar. Another, his habitual vigour of expression in no way impaired by the fact that our conversation took place at breakfast time, said it had been like talking to a rhinoceros.

The discreet and carefully worded communique issued at that conference last May did not, in fact, reflect the real significance of what had happened. Formal respect was paid in the officially agreed words to the idea that Commonwealth countries do not presume to sit in judgment upon each other's policies. But this did not alter the fact that, as a result of the pressure applied by the Malayan Prime Minister, all the heads of government attending the conference had been compelled to face up to the very real problem that South African racialism creates for all of them. The Sharpeville shooting, and the mass arrests and emergency regime that followed it, were still fresh in their minds when they met. In the formal part of their conference, they contrived, probably for the last time, to step delicately round the more unpleasant features of the problem. In the informal part, however, they ran into it head on.

Only a few months have passed since May, but in those months the problem for the Commonwealth has become still more pressing. Nigeria has joined the company of sovereign Commonwealth countries; has joined it in an atmosphere of dignity and mutual confidence; and at the Commonwealth table, now graced by the presence of the greatest state in Africa, the South African government's argument that Africans cannot be entrusted with any political power must now appear more derisory than ever. With Nigeria's advance to full membership, the Commonwealth club, already predominantly Asian and African in terms of population, also acquired an Asian-African majority among the sovereign member governments. By next April, when Sierra Leone's rendezvous with independence falls due, the club will comprise four Asian and three African nations out of a total of twelve.

The Commonwealth wisely abhors the kind of struggle for majorities in voting by representatives of sovereign states on which the United Nations Assembly expends so much energy. The mere fact that African and Asian member nations henceforth control a majority of seats on the "board" is not, therefore, in itself decisive. What is significant is the general consensus of opinion; and it is obvious that both the growth of African representation, and the trend of opinion among the older members, in the Commonwealth club are hurrying South Africa's rulers toward total isolation.

They themselves have made their contribution to the pace of events not only by maintaining their repressive policies, but also by carrying through the referendum which, in October, voiced the wish of a narrow majority of the white electorate that the South African Union should become a republic. By doing this, Dr. Verwoerd's government has focussed much of the general and growing feeling that South Africa, as it is today, does not fit into the Commonwealth concept, upon the more particular idea of terminating the Union's membership when it adopts a republican constitution. This has both complicated, and illuminated, the issues.

Two reasonably firm dates now mark the calendar for 1961; in March, the next conference of Commonwealth heads of government; in May or June, the proclamation of the South African republic. As these dates draw nearer, the controversy which today is still relatively muffled and diffused is bound to become louder and sharper. The process of informal lobbying is already actively begun; individuals and groups representing various South African interests have been briskly trekking to London and making contact with Commonwealth representatives at a variety of levels. There is irony by the ton, one might say, in the sight of Afrikaner Nationalists who, only a few years ago, used to try to chill British blood with threats about going republican and quitting the Commonwealth if they were criticised, now today busy reassuring their followers that Britain has promised them that they need not fear expulsion.

All such reassurances are dishonest. First, because the British government has given no such promise to the South African government, either publicly or privately. Secondly, because it simply does not have the power to fulfil a promise of this kind. Thirdly, because South Africa's chances of remaining a member of the Commonwealth are not merely still in jeopardy; they are increasingly so.

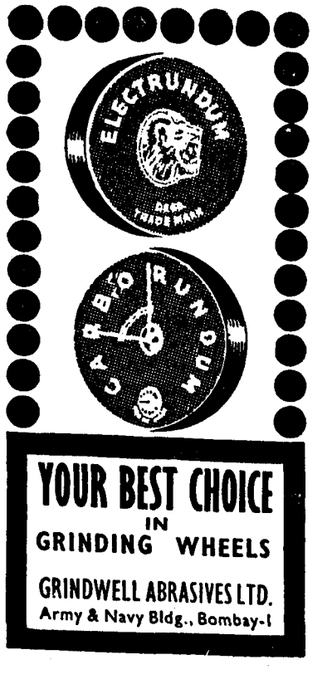
It is true that the arguments against the ousting of South Africa from the club are now being painstakingly mustered by some distinguished personalities in London — by men whose opposition to this ousting is the more significant because they are sincere and outspoken enemies of racialism, and detest Dr. Verwoerd's policies. Their arguments cannot be just brushed aside. They deserve to be demolished.

It is argued that India, Pakistan, and Ghana have adopted republican systems without jeopardising their rights to membership of the Commonwealth; why, then, should South Africa be picked on? Is not a clear precedent established, according to which each member is free to choose between monarchical and republican forms?

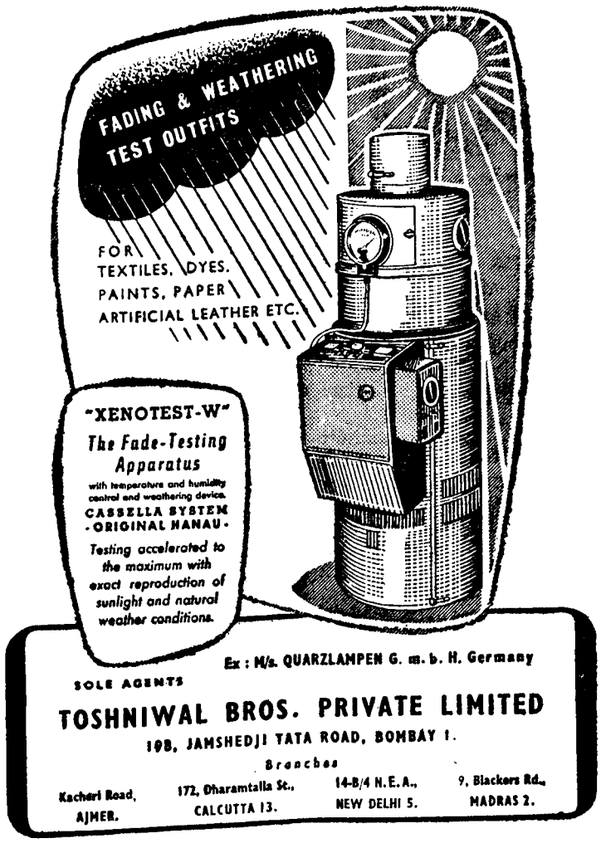
The answer is simple, if outrageous in its quiet way. The Commonwealth is not, in fact, a lawyer's dream of dependable precedent. It is, and always has been, a system (if that is the right word) based on the holding of precedent by agreement. Its own emergence from the old empire was itself without precedent. Its network of cosy consultation between partners who openly differ on many major questions, and even quarrel bitterly over some, is unprecedented. Its adjustment to republican forms, seen in perspective, was only one of its more modest violations of precedent, long since outstripped by more widely fantasticated innovations. In the federation of Malaya, the Commonwealth now accepts a modern version of the old Holy Roman Empire —an elective, partly rotary, monarchy, distinct from and in no way subordinate to the British monarchy, only accepting the British monarch as Head of the Commonwealth. Malayan ministers are His Majesty's, not Hers. Again, what are still commonly called Prime Ministers' Conferences have ceased to be anything of the kind; for they are now attended, as a matter of routine so safely established already that it excites little comment, by presidents who (in Ghana and Pakistan) are heads of government as well as heads of state. Many other instances of this kind of exuberant improvisation, less akin to the traditional caution of Britain than to the wild imaginativeness of Ireland, could be cited. (It is only fitting, by the way, that the Irish Republic, which left the Commonwealth years ago, has its relations with Britain handled not by the Foreign Office but by the Commonwealth Relations Office.)

Thus the notion that the Commonwealth is bound by precedent should be thrown aside at once. It is perfectly free, if it agrees to do so, to obstracise and expel any member country at any time, regardless of the republican issue, which in the case of South Africa is no more than a convenient pretext for bringing the matter to a head.

It is argued that to oust South Africa from the Commonwealth would disrupt the sterling area (the Union being a major gold producer) and the Commonwealth Preference tariff arrangements (the Union being a major trading partner for Britain, and conducting over half its trade with Commonwealth countries).



Membership of the Commonwealth and of the sterling area, however, is not the same thing. Canada belongs to the first but not to the second; Iceland, Ireland, Libya and Burma to the second but not to the first. Likewise, South Africa's "Commonwealth Preference" in trade with Britain is not dependent on its membership of the Commonwealth; it enjoys this tariff preference, along with, again, Burma and Ireland, because it is specifically listed in the appropriate section of the 1948 Import Duty Act passed by the British parliament.



It is argued that as long as South Africa remains in the Commonwealth its government can be somehow influenced in the direction of less barbarous racial policies than it now pursues. This argument founders on the simple fact that the only evidence available on the subject points in the opposite direction.

It is argued that a Commonwealth country's internal affairs are its own affairs. So they are. To oust South Africa would not be an intervention in its internal affairs. Nor would it be a hypocritical holier-than-thou act of moral Pharisaism. The Commonwealth is neither a court of law nor a court of morals; most of its members have skeletons rattling in one cupboard or another of their own glass houses, and have good reason neither to dig out bones nor cast stones. But a modern society limits its contacts with a leper, nor through fear that its purity will be defiled, but because it understands the medical risk of contagion. And the Commonwealth has a healthy instinct for self-preservation. (How else could it be surviving in its extraordinary way?)

The argument for ousting South Africa is the simple and compelling one that the Commonwealth cannot afford to harbour the Union much longer. To go on harbouring it would be to destroy the purpose of the organisation. Characteristically, the Commonwealth is for the most part quite unaware what its purpose is. One vividly recalls British Tories complaining, in the bitter aftermath of Suez in 1956, that a Commonwealth was "no damned use if it doesn't back you up" — and thereby revealing a sublime ignorance of the nature of this sisterhood of sovereign equals. They have their counterparts in other member countries. But it is surely beyond serious argument that the prime purpose of the Commonwealth today is that it provides a unique bridge between East and West — or, as more and more people now put it, North and South; between the non-European world, and the world of Europe and its transoceanic daughters in America and Australasia; between races, creeds and political orientations; between countries at every stage of economic development.

A riven world has great need of this bridge. But the bridge can be based only on relations of equality — on equal dealing between nations large and small and between racial and other human groups. And the present Union of South Africa is founded on the opposite proposition. All the constitutional, ethical, and other arguments amount to little alongside the plain fact that, unless South Africa changes, the Commonwealth will have to eject it if the purpose of the Commonwealth is to be fulfilled. It may be that, if a general shrinking from unpleasantness should lead the other Commonwealth member countries to agree at least for a while to go on putting up with South Africa's presence in their midst, some sort of organisation, under the name of Commonwealth, might continue to exist, and that all of them might find it possible to remain members of it. But would such a ghost of a once great sisterhood be anything more than a twittering and melancholy reminder of what might have been? Would such a "Commonwealth" be worth the while of any of its members — including South Africa?

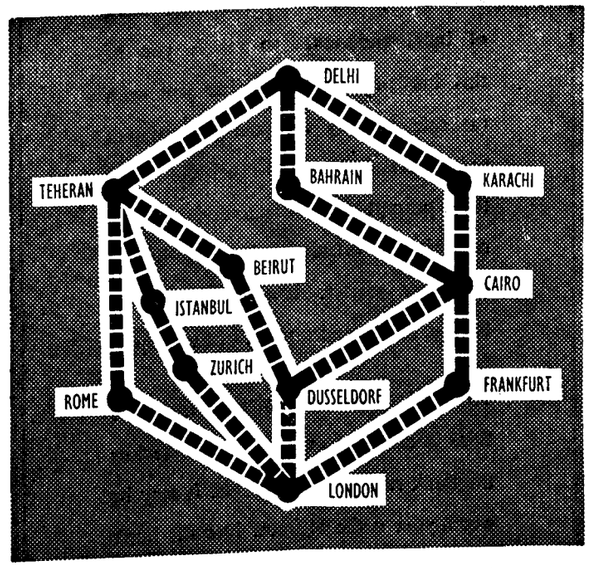
THE BUSINESS WORLD

A Landmark in Textile Research

By

CROESUS

THE inauguration of the Textile Research Institute of the Bombay Textile Research Association (BTRA) last Friday by the President, Dr. Rajendra Prasad, was a memorable function. The importance of such an institute, and that too as a result of the co-operative effort of all the units of the Industry in the region (i.e. Zone I which covers the old Bombay State to the south of River Tapti, Madhya Pradesh, and Hyderabad), was underlined by the fact that the President himself came down to perform the inaugural function. Of course, being one of the foremost organised industries in this country, and making as it has been, a valuable contribution to the country's economy and progress, the Cotton Textile Industry is entitled to all the attention that it has been receiving. To quote Mr. Krishnaraj M. D. Thackersey, Chairman of the Governing Council of B.T.R.A., "the total value of cloth produced by the 479 cotton mills, situated in different parts of the country, is estimated to be well over Rs. 510 crores per annum. The Textile Industry's annual contribution to the Exchequer in the form of taxes and levies comes to above Rs. 100 crores. Further, it provides direct employment to as many as eight lakhs of people, the amount of wages distributed being about Rs. 100 crores a year. Besides this, the mills are the mainstay of the cotton-growing industry and also provide indirect employment to a large number of small and subsidiary industries and trades. It is also a sustainer of the young, but important, textile machinery manufacturing industry in our country. Next to jute and tea, cotton manufactures are the major earners of foreign exchange to the extent of Rs. 60-65 crores a year through exports." Such, in brief, is the pride of place held by the Cotton Textile Industry in our country's economy, and it is but appropriate that its continued progress and prosperity should be regarded as a vital matter of national importance.



While Mr. Krishnaraj highlighted the importance of the Cotton Textile Industry, it was Dr. Rajendra Prasad, I thought, who really made out a case for a separate Research Institute for the Textile Industry. And, in doing so, whether he intended it or not, he paid a rather left-handed compliment to the Industry when he said: "Although the number of units of production has been steadily increasing with the corresponding rise in output, it is felt that, with all its stability, the Textile Industry in India has not reached the stage which may be said to be reasonably beyond the pale of stalemate." Be that as it may, as the President said, the changing needs and trends, calling for constant adjustments in the nature and quality of cloth, constitute one reason (for an Institute of this kind); increasing competition from textile manufactures of foreign countries is probably another reason. "It has, therefore, been felt" said the President, "that a challenge which these conditions posed should be met squarely, and there is no other way of doing it except by conducting research. In the face of the phenomenal advance of science and technology, the need for research is imperative." The President further expressed his happiness that the owners of the textile mills themselves had realised this and organised a special body for undertaking research. In this connection, he also pointed out that, although the Government, being keen on encouraging and undertaking research, was providing many facilities, the scope thereof was bound to be rather wide and general in nature, while each industry had its own peculiar problems to tackle. The Textile Industry might no doubt benefit from the results of research undertaken in Government Institutes, but such might not meet either the precise or the immediate requirement of the Textile Industry. In other words, research for this purpose can only be undertaken by the mills themselves, as they have, in fact, done.

It is not that the need for organising research on a co-operative basis, was not recognised by the textile interests. Indeed, Mr. Krishnaraj claimed, in his speech, that the Industry had recognised it years ago, but he also added: "The financial resources of the Industry were not encouraging enough to undertake any scheme in this behalf." Hence, as admitted by the Chairman of the B.T.R.A. himself, the impetus had to be, and was, provided by the Government of India to promote and organise Textile Research. It was the Government of India that promulgated the Cotton Textiles Ordinance in 1944 and also constituted the Cotton Textiles Funds Committee for administering the funds raised by the special levy of customs duty on yarn and cloth exported from this country. Thanks to this Fund, India will be having four Textile Research Institutes, one in each of the four zones—ATIRA (Ahmedabad), BTRA (Bombay), SITRA (Coimbatore) and another (at Kanpur). Since the object of the Cotton Textiles Fund Ordinance was "to create a body to supervise the exports of cotton cloth and yarn and **to develop technical education, research and other matters pertaining to the cotton textile industry,** the amount collected under the Ordinance is now being rightly utilized, that is to subsidise the scheme undertaken in fulfilment of that object. The CTFC has agreed to share the recurring and non-recurring expenditure incurred by each of these four institutes on a fifty-fifty basis. The BTRA's complete scheme entails a capital outlay of Rs. 1 crore and a maximum recurring expenditure of Rs. 11½ lakhs per annum. This means that the CTFC has to contribute Rs. 50 lakhs towards capital outlay and Rs. 5¾ lakhs per annum towards recurring expenditure of BTRA alone. The rest of the recurring expenditure of BTRA is well taken care of by its present (36) and prospective members. The total entrance fee of the present membership amounts to Rs. 34 lakhs. But, as the Joint Director of the Institute, Dr. C. Nanjundiah, took particular care to point out, the completion of the Institute building and installation of the pilot plant and laboratory equipment, planned for the first phase of the Institute's work alone, has so far absorbed Rs. 66 lakhs,

Safe Custody and Management of Shares and Securities

To those who buy and sell securities and shares, their safe-keeping and management is often a source of worry.

For a very small cost the State Bank of India undertakes to relieve you of this burden and to provide you with (a) safe custody for your Government securities and share and debenture scrips, (b) a prompt and efficient service for the collection of interest and dividends, and (c) other services connected with the buying, selling and transfer of the scrips.

This Safe Custody service of the State Bank is one of the many banking services the Bank renders to its clients. It may be worth your while to know how the Bank can be useful to you by calling on any of the local head offices or branches of the Bank.

STATE BANK OF INDIA
INDIA'S LEADING BANK

SISTA'S-SB-28

while nearly a third of the original scheme of the Research Institute has yet to be implemented. In other words, the need for continued financial support to the Institute has to be borne in mind by both the CTFC and the members of the BTRA.

It was quite appropriate that Mr. Krishnaraj availed himself of the opportunity to pay a fitting tribute to the late Sir Vittal N. Chandavarkar, but for whose "persuasive enthusiasm in the cause of textile research and indomitable courage in surmounting all difficulties", the Research Institute of the BTRA could not have come into existence. It is a pity that Sir Vittal did not live to see the fruits of his sincere and magnificent efforts. Who does not know that it was his personal interest that is mainly responsible for the Institute coming up within a remarkablly short space of time of less than two years? The Association itself was registered on April 21, 1954; the Foundation Stone of the Institute was laid by Mr. Y. B. Chavan, the Chief Minister of the then Bombay State, on April 1, 1957; the actual building construction was started only in March, 1958, and, by July, 1960 already, the Office and Technical Staff had moved in. That the BTRA has already become an integral part of the Bombay Textile Industry is clear from the nature of its activities even within these two years. The submission of as many as 384 technical reports and the publication of several reports and papers, not to speak of the seminars and training courses conducted by the Institute, are an achievement, of which the Governing Council of BTRA might well feel proud.

Before I conclude, I feel I must refer to one sober observation of the President which shows not only his concern for the 'Khadi' and handloom industries but also the proper perspective in which the country has to view the place and progress of these different sectors of the Textile Industry of the country. Remarking that India was a great cotton-producing country and was next only to China from the point of view of numbers, Dr. Rajendra Prasad referred both to the need to utilise the cotton grown in the country and the need to clothe the teeming millions of India. In this task, he said, "the 'Khadi' and handloom industries have also a share in utilising the cotton and providing clothing for a larger number of people. They have an enormously larger share in providing employment, but"—and this is a very important observation which is unfortunately ignored by many of those in power today—"the major share in the matter of supply undoubtedly belongs to the textile industry". In my opinion, it is this vital aspect of the Industry that has to be borne in mind by all those whose pronouncements, policies, or recommendations have a bearing on the fortunes of the Indian Cotton Mill industry.

Business Notes

Prices

WHITHER FOOD PRICES?

JUDGING FROM the current trend of rising agricultural production, it seems, a curious situation may arise, in the not distant future, when it would perhaps become necessary to check a fall in the price level of agricultural crops, especially foodgrains. That this anxiety is shared in the highest counsels of administration in the country is obvious from a statement which Mr. S. K. Patil, the Union Minister for Food and Agriculture, made, some time ago, regarding the possibility of prices of agricultural products recording a decline. In fact, he also said that a situation might arise when it would be necessary for Government not only to retain the incentives to the farmers but also to administer a scheme of price support. In passing, the Union Minister also referred to the complications involved.

Meanwhile, the subject has attracted considerable interest and even figured prominently in the Presidential address (at the Third Quarterly General Meeting of the Indian Merchants' Chamber, Bombay, last week) of Mr. Pratapsinh Mathuradas. Mr. Pratapsinh first listed the factors responsible for the downward trend in food prices. These, according to him, include: the shipments under the latest P.L. 480 Agreement for the import of 17 million tons of foodgrains; the shortage in the storing capacity of imported foodgrains and the resulting impact on market supplies, and the programme of the Government to build up a buffer stock of five million tons. All these factors, coupled with the psychological effect, the I.M.C. President said, could contribute to a falling tendency in foodgrain prices. As a result of the development of industries and the falling prices in foodgrains, thus, Mr. Pratapsinh felt, the incomes of the urban sector would tend to rise, whereas that of the rural sector might tend to fall. In other words, the existing disparity between the rural and the urban sectors would be further accentuated, he feared. What is worse, as a result of this unhappy situation, the agricultural population may switch over to the cultivation of commercial crops instead of food crops, thus seriously affecting food production, with all the attendant complications in holding the price line. In this connection, endorsing the thesis adumbrated by Mr Patil, referred to earlier, Mr Pratapsinh made the suggestion that "Government should make an attempt to evolve a floor-price structure for foodcrops, having regard to all the factors which tend to depress the prices in certain areas and should give a clear assurance to the agricultural population that the necessary price support would be forthcoming in adequate measures at the appropriate time. "The principle of fixing floor price and evolving a price structure for foodgrains which should meet the requirements of the cultivators and of other interests," he added, "should be accepted as an integral part of agricultural policy."

Speaking on the formation and working of the zonal system in respect of movements of foodgrains and supply, the President of the I.M.C. said that the measures for centralised purchase and other regulations and barriers imposed by the States on the movement of foodgrains had not at all met the requirements of the deficit areas. Instead, he complained, they had resulted in the development of serious imbalances which led to unjustifiably wide differences in the prices of foodgrains from State to State. Mr Pratapsinh accordingly urged the Government to give serious thought to the various State regulations affecting the movement of foodgrains and to devise a scheme of effective distribution arrangements so as to remove the basic factors at present causing wide variation in foodgrains prices in the different states.

Foreign Capital

FRANK DISCUSSION AT KARACHI

THE SESSION of the Commission on Asian and Far Eastern Affairs of the International Chamber of Commerce, at its meeting on December 8, provided an appropriate occasion for clarification of the viewpoints of capital-importing and investment-exporting countries. Mr. Mohammad Shoaib, Pakistan's Finance Minister, inaugurating the discussion as the guest speaker, set the tone for the emphasis on the demand of the developing countries for foreign loans on easy terms and expansion of foreign equity investment. Speakers, who represented the developing countries of Asia and the Far East, made a strong plea for an immediate change in the policy of the World Bank in respect of the interest rates it charged and the commission it levied. Mr. Shoaib himself made no bones of the fact that neither deferred payment facilities for imports of capital equipment nor short-term credits are going to provide any worth while assistance to the capital- hungry countries. That phase—particularly of short-term loans—is nearing the point, where, some at least of the loan-receiving countries may, perhaps, be faced with the unpleasant contingency of default in repayment. Mr. John Wild who replied on behalf of the World Bank was quite candid in his statement that it was not practicable for the Bank to lower its interest rates. The reasoning which he tried to impress upon the delegates was that the Bank had to build up reserves and create a definite level of self-sufficiency in its own resources against possible (though not at the present time probable) defaults. The Press report could not give anything more than a sketchy summary of Mr. Wild's speech. Did he have the possibility in mind that, with consecutive receipts of loans and a number of newly liberated or to be liberated countries having little background in investment and foreign loans pouring in for aid, defaults may be a phenomenon to be reckoned with? Perhaps.

The International Finance Corporation has attracted rather strong criticism of its interest policy from the second year of its operation. At the Karachi session its lending policies were the target of discussion and most fo the speakers who touched the IFC pleaded for flexibility in its lending policies. Mr. John G. Beevor, who represented the IFC, explained that the IFC was working with a modest capital base and at the present time it was functioning as an experiment in its own field. He stated that this present role of the IFC was not fully understood by the investment-receiving countries. But he did not reply the moot point whether flexibility in the IFC's operations could not also be a part of the experiment.

The discussion on foreign private investment was valuable for the restatement of the position from both the sides which became available. Dr. H. C. Boden, leader of the German delegation, who presided over the day's session, placed accent on the fact that the foreign investor always attached importance to the long-term treatment given to exported capital by the importing country. Foreign investment would prefer to stay in the soil where it got acclamatized, but its decision to stay must necessarily be voluntary. This was to suggest that policy on foreign investment has to provide the necessary incentives. He uttered a note of caution against the policy of loans tagged to individual projects, which, he said, would probably create inconvenience for both the parties. He suggested comprehensive planning for aid. This is precisely what the aid-receiving countries are asking for.

Some flutter was caused by the unexpected and extreme view placed at the session by Mr. Henares of the Philippines. He stated—crudely—that foreign companies, whose repatriated profits had been sufficient to recoup in full the investment, should cease to be treated as foreign concerns in the matter of concessions. Sir Jeremy Raisman was quick in his retort that, the foreign investor would judge the investment-worthiness of a country with reference to the treatment it accorded to foreign enterprises at the present time, meaning thereby that discrimination by reason of profits sent home having recouped the capital would be an adverse factor and positive disincentive. He also went further and frankly stated that promises of fair treatment of foreign investment in the future would not influence the investor's decision in such a climate. Asian delegates, who followed Mr. Henares, dissociated their countries from the surprise view so vehemently expressed by him. Sir A. Ramaswamy Mudaliar undoubtedly explained the overwhelming view of the region by emphasising that sanctity of contract and non-discrimination must be the basis of treatment of foreign investment.

Railway Convention

RAJYA SABHA DEBATE

IN ITS discussion on the report of the Railway Convention Committee, the Rajya Sabha decidedly scored over the Lok Sabha. In the popular House, it must be regretfully stated, the discussion was rambling and it betrayed the much-needed effort to analyse the full implications of the forthcoming convention, particularly in regard to the state of the railway finances in the Third Plan. Stock arguments were advanced in the Lok Sabha asking for greater economy in expenditure and so on. A plea was made for raising the rate of the dividend to even as high as 5 per cent, when, in fact, the Railway Board's estimates of railway finances in the next five years, appended to the report, clearly showed that even at 4.5 per cent rate of dividend, the railways would run at a deficit of over Rs. 12 crores during the period. But by contrast, the participants in the Rajya Sabha debate spoke out their mind frankly by stating that the policy of concessions was detrimental to the interests of the railways in the long run. It may put a premium on complacency. There was some opposition to the continuance of the authority to the Development Fund to borrow loans from the General Revenues in order to raise "internal resources" to finance development. The Rajya Sabha at least made a straight attack on this fiction of "internal resources." The fiction is underlined by the fact that eventually the so-called temporary loans are fractionally charged to the Revenue Reserve Fund and preponderatingly transferred to capital, thereby raising reliance on the Exchequer.

What is really important and most interesting about the Rajya Sabha discussion was the frontal attack on the merger of the tax on railway passenger fares into the regular fares. The issue of the constitutionality of this course was raised in the debate. Under Article 269 of the Constitution, the revenue from the railway passenger fare tax belongs to the States and it was argued that it could not form part of the Consolidated Fund. Therefore, it could not be merged with railway revenues. The solution to tide over this technical difficulty, as Mr. S. V. Ramaswamy, Deputy Minister for Railways, pointed out, was simple. The Railway Passenger Fares Act should be repealed and railway fares should be increased by a rate equivalent to the rate

of the tax. Here again, it must be pointed out, that there is a snag which results in discrimination against the States. In terms of the convention, the States are to be reimbursed or compensated for the merger of the tax by an annual payment of Rs. 12.50 crores on the basis of the actual collections in 1958-59 and 1959-60. Actually what would happen is that, with progressively increasing passenger traffic, the railways would realize revenue, by reason of the merger, in excess of Rs. 12.50 crores and appropriate the excess to themselves. Here, the analogy of the merger of the sales-tax levied by the States on cotton textiles, tobacco and sugar could be recalled. The fact that analogy is never complete is demonstrated in this case ironically. In the case of these three sales-taxes, they were merged as surcharges on the Central excise duty levied on the three articles. Thus, their identity was retained in the changed form of surcharges and the revenue collections were precisely accounted for. In the case of the railway passenger fares tax, the identity of that tax is to be wiped out and a fixed amount by way of compensation or reimbursement (whatever it may be called) is to be paid to the States and not the full realisations.

Industry

PROBLEMS OF PAPER

THE OVER-ALL production of paper in the country at present still falls short of the demand, but this is not because the industry has not played its part or achieved adequate progress during the past few years. On the other hand, the zeal for knowledge and the pace of spread of literacy among our people have created an unprecedented demand, far in excess of the available supplies. Recognising this, doubtless, Mr. H. P. Singhi, who presided over the 18th Annual General Meeting of the Indian Paper Mills' Association (IPMA) in Bombay, last week, emphasised the need for a sizeable expansion in the productive capacity of the industry and that as quickly as possible. Unlike the cement industry, which seems to regard a three-fold expansion as unthinkable, the paper industry is insisting on at least a three-fold expansion. Indeed, this, Mr. Singhi, said, was the crux of the problem facing the industry today. In this connection, he pointed out how, by the end of the Second Plan period in March, 1961, the Paper industry hoped to attain its output target of 3.50 lakh tons as set by the Planning Commission, despite all its handicaps, and wondered why the target for installed capacity under the Third Five-Year Plan had been set up at only 8.20 lakh tons, instead of at 9 lakh tons, as had been urged by the IPMA so as to ensure an actual output of seven lakh tons. According to Mr. Singhi—and experience has also established this—installed capacity should always exceed anticipated production by a margin of at least 20 per cent to 25 per cent. Accordingly, he was afraid that, if the capacity was limited to 8.20 lakh tons, the actual output might eventually fall short of the target of even seven lakh tons. Further, whatever the programme of development decided upon, he made it clear, could be carried out successfully, only if the Government gave the industry all the necessary facilities, such as, priority in allocations of foreign exchange, etc.

Alluding to the Tariff Commission's recent recommendations on paper prices, Mr. Singhi expressed the view that the officially prescribed prices at which mills have to sell their products, are "uneconomic", in that they are not even enough to cover costs. Elaborating the point, he said this was so, because the prescribed prices now in force were estimated on the basis of costs prior to November, 1958, since when there have been further increases in costs, as, for example, in railway freight, surcharge on raw materials, and prices of waste papers and chemicals, among others. He further felt that the contingency allowance of five per cent allowed by the Tariff Commission to cover any cost increase was hardly enough to compensate for the rise that had already occurred between the time the new prices were announced and the time the officially fixed prices actually came into force, that is at the beginning of this year.

On the highly controversial question of a fair return on capital employed, the retiring President of the IPMA was highly critical. As against the 25 per cent return on capital employed, which the industry had asked for, he complained, the Tariff Commission had allowed only 12 per cent. And he raised the pertinent point as to how the Commission came to estimate 12 per cent as a fair return on capital employed. (12 per cent now seems to be the TC's standard rate). It is needless to say that this 12 per cent is hardly adequate to provide investors with the incentive necessary to put in all the additional capital required by the industry to carry out the expansion programme expected of it during the Third Plan. In addition to this, as Mr. Singhi stated, the depreciation allowances, for income-tax purposes, also were quite inadequate. But, perhaps the worst of all, the turning down of the industry's claim for a separate rehabilitation allowance seems to have created difficulties and this might come in the way of modernisation of equipment. As anyone even with an elementary knowledge of the condition of the Indian paper mill industry will admit, without modernisation, any appreciable increase in our paper production must be ruled out.

FROM THE CAPITAL'S CORRIDORS

AN INTERESTING EXERCISE !

An interesting exercise is being done in the official circles here to assess how much of the public sector outlay of Rs. 7,250 crores under the Third Five-Year Plan will benefit the Indian economy as a whole, what portion of it will have its direct impact on the rural population and what percentage of it will help primarily the urban areas.

According to one tentative estimate, about 60 per cent of this outlay is likely to benefit the economy as whole. Thirty per cent of the outlay will have its impact on the rural population and only 10 per cent of the outlay will have its bearing directly on urban areas. This estimate is based on the following calculations:

(1) Almost the whole of the expenditure (Rs. 1,025 crores) envisaged to be incurred during the Third Plan period on agriculture, minor irrigation and community development will help the rural population.

(2) Of the total outlay of Rs. 250 crores earmarked for the development of village and small-scale industries, roughly two-fifths or Rs. 100 crores are expected to be utilised for the development of khadi, village industries, coir industry and sericulture. This expenditure will, therefore, directly benefit the rural population. The remaining Rs. 150 crores will benefit the urban population for that sum is likely to be used for the development of small industries to be set up in industrial estates round small towns.

(3) The whole of the outlay on power (excluding the expenditure to be incurred on electrification of rural areas and towns), Rs. 820 crores, will help the economy in general. The outlay of Rs. 650 crores earmarked for irrigation and flood control and Rs. 105 crores provided for rural electrification (making a total of Rs. 755 crores) will directly benefit the rural population.

(4) The outlay of Rs. 1,500 crores provided for the development of large-scale industries and mining will benefit the entire economy as it will be spent on the expansion of steel plants, setting up of machine-building units and other heavy industrial units and establishment of fertilizers factories.

(5) The outlay earmarked for the development of transport and communications (Rs. 1,450 crores) will also benefit the economy as a whole though its impact on the rural population will be appreciable inasmuch as quite a substantial part of it will be spent on construction and improvement of roads in the countryside, opening of post offices there, and implementation of community listening schemes of the Information and Broadcasting Ministry.

(6) As regards the allocation made in the Third Plan for the provision of social services (Rs. 1,250 crores), it is difficult to estimate the impact of this expenditure separately on the rural population, urban areas and the economy as a whole. Roughly, about Rs. 150 crores out of the funds earmarked for the spread of education are likely to benefit the rural population, about Rs. 210 crores may benefit the economy as a whole and the remaining Rs. 140 crores will cover the schemes which will benefit the urban population. Under "health", schemes envisaging the setting up of primary health units, malaria eradication, supply of water in rural areas and establishment of family planning centres in the countryside will directly benefit the rural population. The schemes envisaging supply of water in urban areas and setting up of urban family planning clinics will benefit the city population. Only about Rs. 120 crores are likely to be spent on schemes relating to hospital services, medical education, control of tuberculosis and leprosy. This outlay will benefit the economy as a whole. Similarly, under "housing", about Rs. 35 crores are likely to be spent for the benefit of rural population on such schemes as building of houses in the countryside and those for plantation labour. The whole of the outlay earmarked for social welfare and uplift of backward classes (Rs. 125 crores) will also help the rural population. Bulk of the outlay under the head "miscellaneous", which include items like rehabilitation, collection of statistics, public co-operation etc., will help the economy in general. The urban sector will benefit directly by building of houses for industrial workers and slum dwellers.

Apart from the above outlay in the public sector, considerable expenditure is expected to be incurred in rural areas by the private sector. As indicated in the Draft Outline of the Third Plan, the following investment may occur in rural areas through private effort: agriculture and community development Rs. 800 crores; village and small industries Rs. 275 crores; social services Rs. 1,075 crores.

THIRD PLAN: STATE OUTLAYS

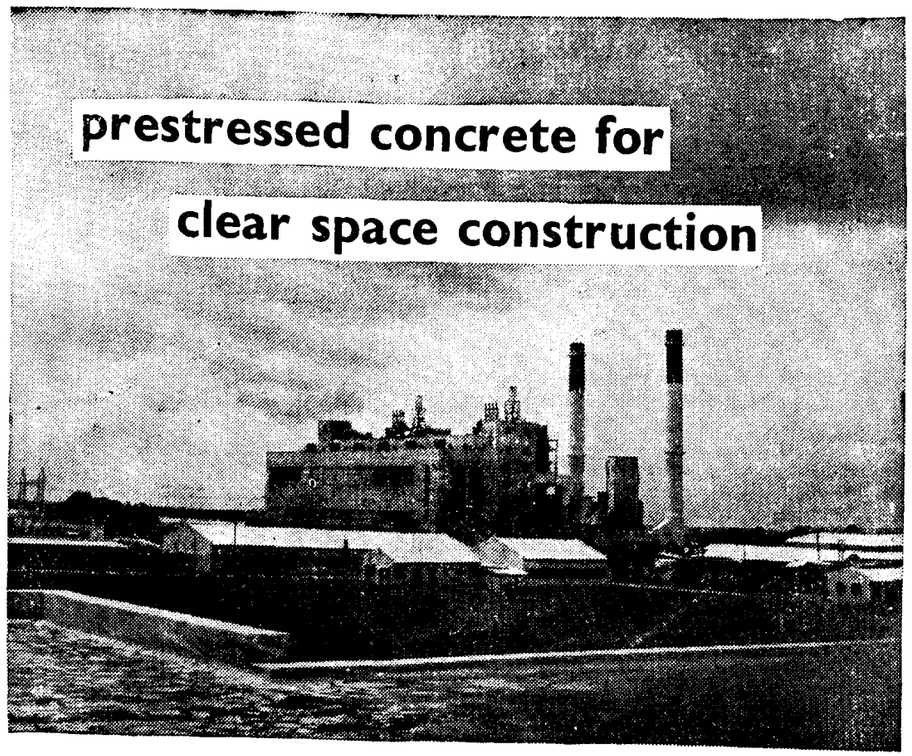
According to lobby reports, Mr. Morarji Desai, the Union Finance Minister, has ruled out the possibility of any major upward revision of the Third Plan outlay of Rs. 10,200 crores. He is understood to have told the Informal Parliamentary Consultative Committee that the resources position as now envisaged did not permit the taking up of any additional burden. Any substantial increase in the Third Plan outlay, according to Mr. Desai, can only be considered at some future date in the light of production trends, execution of the Plan programmes and course of prices.

The Minister, it is learnt has expressed the opinion that the Central Government could not agree to the proposals of State Governments to increase the size of their Plans even if they promised to find out additional resources. He, however, did not rule out the possibility of some minor adjustments in State Plans, provided they did not come in conflict with the overall scheme of priorities.

Mr. Morarji Desai is also understood to have told the Consultative Committee that there would not be any increase in the Bank Rate for the present.

Meanwhile, the Planning Commission has finalised the pattern of outlay for all the States and the Union Territories for the Third Plan period. The outlay for the various States, with its break-up between their share of expenditure and the Centre's contribution, is as follows:

(Rs. Crores)



State	Total outlay	State's Share	Centre's Contribution
Andhra	305	105	200
Assam	120	33	87
Bihar	337	119	218

Durgapur Thermal Power Station

Prestressed Concrete Plank Roofing was adopted for the Durgapur Thermal Power Station because of its lightness thus reducing the cost of the foundation and superstructure. It also made rapid construction possible.

A conventional cast-in-situ roof was ruled out because of the unusual height between roof and floor.

The roof area covered was 50,000 sq. ft. The job was completed in about twelve months.

An additional feature is thermal insulation with foam concrete blocks.

FORMATION OF EXPORT HOUSES

The Government of India has decided to recognise a limited number of private trading concerns as export houses. A trading firm seeking recognition as an export house will have to contain in its Memorandum and Articles of Association provisions stating:

(a) the range of goods with which it proposes to deal and the countries to which it would be exporting these goods (it is not necessary to limit the export to any one country). The commodities selected shall, as far as possible, be such as are not normally exported, in large quantities, to countries referred to. Further, it will undertake the export of more difficult or non-trading items and to difficult destinations;

(b) that a minimum of 50 per cent of the net profit would be set aside and utilised as trade development reserve;

(c) the aims and objects indicating the policy which will be adopted in the matter of (i) purchase and sale of goods for export, (ii) development of brand publicity in foreign markets, and (iii) arbitration for settlement of commercial dispute;

(d) that in case any Corporation owned by Government is a share-holder in an export house, the Managing Director of the same shall be a person approved by the Central Government (Company Law Deparment) as required under Section 269 of the Companies Act, 1956;

(e) that the Central Government will have a right to nominate a Director on the Board of Directors of an export house, notwithstanding the fact that the Central Government may not hold any shares;

(f) that the Memorandum and Articles of Association shall not be amended without obtaining the concurrence of the Central Government.

The Government will give the following facilities to such a concern:

(i) The recognised export house would be granted incentives and facilities available to individual exporters in accordance with the rules and regulations in force. The services offered by it would be kept in mind in routing foreign trade enquiries or transactions where possible.

(ii) The Export houses would be granted facilities in the matter of rebates, refunds or drawback of duties, preferential freight rates, transport facilities etc., as are available to individual exporters.

(iii) Commercial Representatives of the Government of India abroad would forward to the export house enquiries and reference regarding export of Indian commodities.

(iv) Facilities would be provided to the export house to undertake the study of markets and conduct surveys of consumer tastes in foreign countries.

(v) Whenever possible, representatives of export houses will be included in selected Trade Delegations sponsored by the Government.

(vi) Reasonable facilities would be accorded to the export house to enable it to participate in international fairs and exhibitions.

(vii) The export house will be given reasonable facilities to open branches in foreign countries, if considered necessary.

(viii) Individual barters or compensation arrangements submitted by the export house will be examined on merits and reasonable facilities will be accorded.

IMPORT POLICY

The import programme for the current half-year in respect of six more items has been announced. As expected, imports of these items have also been reduced in line with the overall import policy. Now there remains only one item, cork manufactures (not otherwise specified), the import programme for which has yet to be announced.

Of the six items in regard to which import policy has been announced now, the import of four items, viz., betelnuts, mace, cassia and cinnamon, and cloves, has been linked with the export of groundnut oil and tapioca flour.

Ad hoc licences for the import of betelnuts will be issued to established imporers for a value equal to their entitlement at 2½ per cent of half of their best year's imports on the condition that the licensees will, within six months of the import of betelnuts, export groundnut oil or tapioca flour, either direct or through an Export Council or Association or through an established exporter, at the rate of one ton of groundnut oil or 8 tons of tapioca flour for every 7.5 cwts. of betelnuts.

For cloves, ad hoc licences will be isseud to established importers for a value equal to their entitlement at 5 per cent of half of their best year's imports on the condition that the licensees will, within six months of the imports, effect exports of groundnut oil or tapioca flour at the rate of one ton of groundnut oil or 8 tons of tapioca flour for every 2.5 cwt. of cloves.

In the case of mace, ad hoc licences will be issued to established importers for a value equal to their entitlement of 5 per cent of half of their best year's imports. For every 2.5 cwts. of mace to be imported, two tons of groundnut oil or 16 tons of tapioca flour will have to be exported.

Ad hoc licences for the import of cassia and cinnamon will be issued to established importers for a value equal to their entitlement of 5 per cent of half of their best year's imports of cardamom, cassia and cinnamon. For every 2.5 cwts. of cassia and cinnamon, one ton of groundnut oil or 8 tons of tapioca flour should be exported.

For the import of dates, established importers will be given ad hoc licences for a value equal to their entitlement at 20 per cent of half of their best year's imports on the condition that the licensees, within six months of the date of importation of dates, will effect export of tinned fruits, biscuits and confectionary, cyrups, and juices, pickles, mollases, cigarettes and bidis, etc., upto a value of 50 per cent of the imports.

In all these cases, licensees will be required to give a bond duly supported with bank guarantee for an amount equal to the c.i.f. value of imports for fulfilment of the export obligation.

For import of nutmegs, the established importers' quota will be 5 per cent.

The last date for receipt of applications by the licensing authority for the import of the above-mentioned items will be January 31.

IMPORT OF GOODS FROM PAKISTAN

The Government of India has decided to grant licences for the import of 12 more items from Pakistan as provided for in Protocol No. 1 to the Trade Agreement signed between the Governments of India and Pakistan on March 21, 1960. These twelve items are fresh fruits, betel leaves, dhanicha seeds, chuna khari pearls, eggs and poultry, books and periodicals (in Indian and Pakistani languages), gramophone records (in Indian and Pakistani languages), films exposed (in Indian and Pakistani languages), fish dry and salted, betelnuts, drugs and medicines including Unani and Ayurvedic, and mother of pearl shells.

Protocol No. 1 to the Trade Agreement provides for import of these items from Pakistan against payment in non-convertible Indian rupees.

TRADE PACT WITH INDONESIA

Negotiations for the revision of the trade agreement with Indonesia are expected to take place some time in February-March, 1961. In the meantime, necessary action is being taken to extend the present agreement upto March 31, 1961.

EXPORT OF IRON ORE TO RUMANIA

Negotiations are currently in progress here between the Government of India and a Rumanian delegation for the export of about one million tons of iron ore from here to that country.

TEA EXPORTS TO USSR

India exported 23,261,000 lbs. of tea to the USSR in 1959-60, compared to 29,081,000 lbs. in 1958-59. The Soviet Union only buys from here unblended tea in bulk.

PETRO-CHEMICAL INDUSTRY

An inter-departmental Committee has been set up to evolve a programme for the organisation of petro-chemical industry under the Third and the Fourth Five-Year Plans. The Committee is headed by Dr. G. P. Kane, Senior Industrial Adviser (Chemicals), Ministry of Commerce and Industry. Its other members are: (1) Mr. K. K. Sahni, Joint Secretary, Ministry of Steel, Mines and Fuel; (2) Dr. J. S. Ahluwalia, Chemical Engineer, Ministry of Steel, Mines and Fuel; (3) Mr. K. Vyasulu, Chief of the Industries Division, Planning Commission; (4) Dr. A. Seetharamaiah, Development Officer, Development Wing, Ministry of Commerce and Industry. Dr. Seetharamaiah is the member-secretary of the Committee.

The terms of reference of the Committee are (a) to make an assessment of the types and quantities of materials whose production may have to be organised in petro-chemical industries, (b) to evolve a suitable pattern for development in India in the context of the integrated pattern of production of petro-chemicals in advanced countries, (c) to assess the extent to which aromatic as well as aliphatic raw materials may have to be produced as petro-chemicals during the period 1961-71, and (d) to recommend the pattern of development of petro-chemical industries in the country.

The Committee is to submit its report within four months.

EXPANSION OF DURGAPUR STEELWORKS

A British technical expert is expected here shortly to look into the expansion programme of the Durgapur Steel Plant. After having discussions with him, the Government will get a project report prepared by its consultants on the basis of which it will invite tenders, only from British firms, for the supply of plant and equipment required for this expansion programme. The Indian Steelworks Construction Company (ISCON), it is expected, will be one of the tenderers.

Meanwhile, following the Hoffman Mission's Report, the Western countries have shown little interest in helping India to set up a steel plant at Bokaro.

ALUMINIUM INDUSTRY COSTS

Cost of production of aluminium can be reduced only if the following conditions are fulfilled:

(i) The plant is an integrated one, i.e. reduction of bauxite to alumina and refining of alumina into aluminium is done in the same place and in the vicinity of bauxite deposits.

(ii) The plant is of the minimum economic size, viz., 20,000 tons per annum capacity.

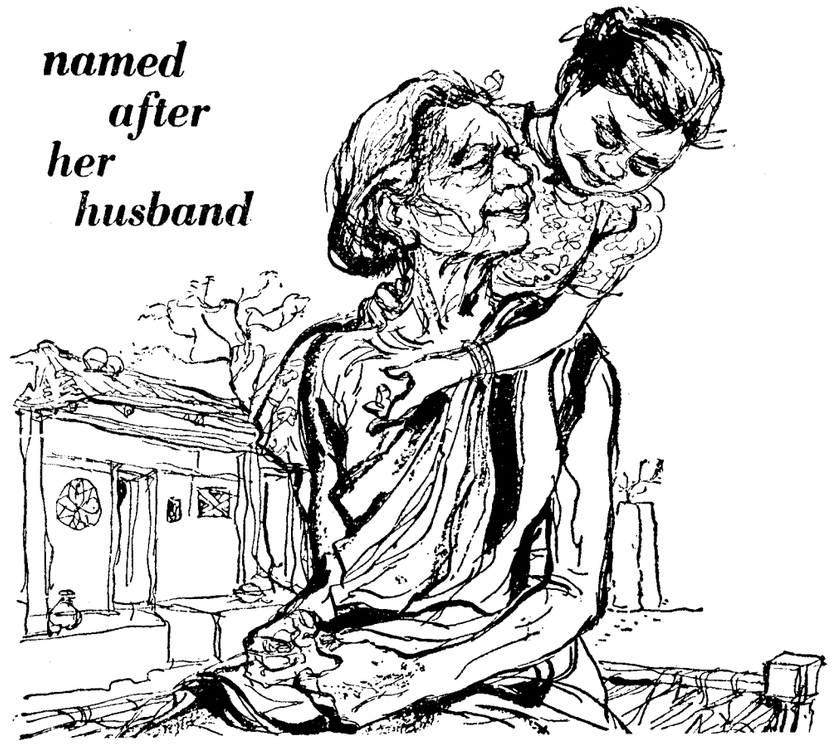
(iii) Electric power is made available at cheap rate.

At present, there is no aluminium unit in the country which fulfils the first two conditions. Units fulfilling these conditions are expected to go into production during the Third Five-Year Plan.

SETHUSAMUDRAM PROJECT

Capt. J. R. Davies R.N.R. (Retired) has been invited by the Government of India to advise her on the navigational requirements of the Sethusamudram Project. This project envisages linking of Palk Strait and the Gulf of Mannar by means of a shipping canal. When completed, it will help in avoiding long trips round Ceylon and would result in shortening the distance between the east and the west coasts by about 360 miles, with consequent saving in time of voyages upto a day and a half.

BOMBAY HARBOUR ENTRANCE CHANNEL



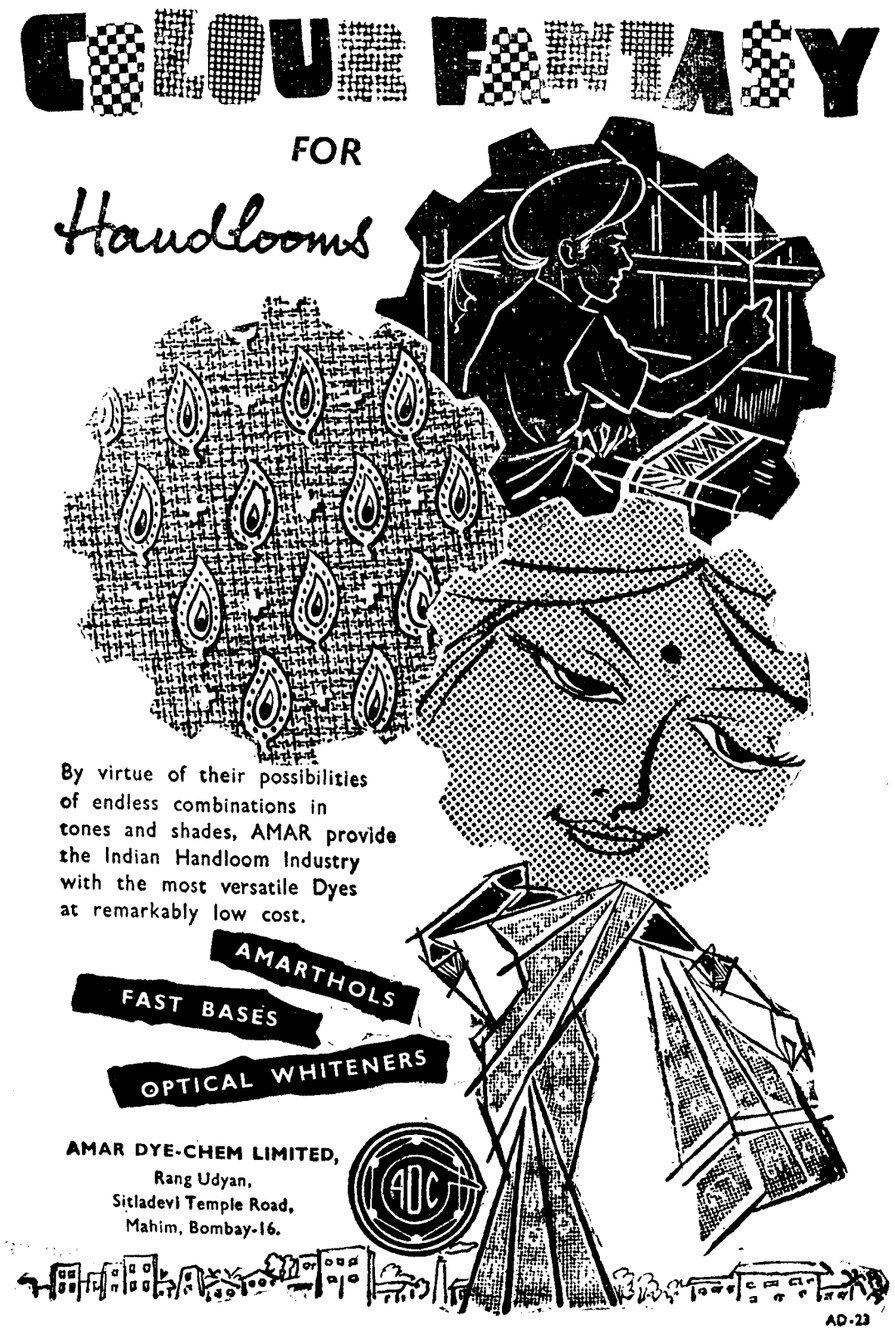
A three-phase scheme has been prepared for the dredging of the Bombay harbour entrance channel. The first two phases, covering the middle and the northern portions of the channel, will be executed by contract dredging and the third phase, covering the southern portion of the channel, which is not considered to be so urgent, is likely to be executed departmentally after the new dredger, at present being built for the Bombay Port Trust in the Netherlands, is received. The governing depth in the entrance channel at present is 30 feet. It is proposed to dredge the channel to a depth of 33 feet. In addition, an anchorage, dredged to a depth of 38 feet, will be provided to accommodate three deep-draft tankers.

On the basis of the model experiments conducted by the Central Water and Power Research Station, Poona, two sites—one off the Thal Reef and the other off the Prong Reef near the mouth of the harbour—have been selected for the disposal of the spoil in the flood and ebb tides respectively.

PLANTATION INDUSTRY WAGE BOARD

The Government of India has set up a Wage Board for the Plantation Industry "to work out a wage structure (for the industry) on the principles of fair wages, as set forth in the report of the Committee on Fair Wages, as far as practicable." The Board consists of Mr. L. P. Dave (Chairman), two independent members, Mr. T. Manaen, M.P. and Dr. R. Balakrishna, two employer's representatives, Mr. L. T. Carmichael and Mr. J. B. Soutar, and two workers' representatives, Mr. G. Ramanujam and Mr. B. Bhagwati, M.P.

In addition to the consideration relating to fair wages, the Board, while fixing the wage structure,



Last year, 61-year old Lakshmi Hansda retired from the Jamshedpur Steel Works which she and her late husband, Sitaram Hansda, joined as a young Adivasi couple shortly after the first steel ingot was cast in 1912. The family connection with the Steel Works is maintained through two of her three sons who work there.

Lakshmi and her family — sons, daughters and grandchildren — live in the same area in Jamshedpur where she first set up her home on arrival from a Ho village in Seraikella nearly 50 years ago. That once-desolate spot is now a busy, bustling Adivasi community, with clean huts, roads, water supply and a primary school and is named Sitaramdera in memory of Lakshmi's husband.

Like men and women from other parts of India, Adivasis have found a happy home in Jamshedpur, where industry is not merely a source of livelihood but a way of life.

JAMSHEDPUR
THE STEEL CITY

The Tata Iron and Steel Company Limited

will take into account (i) the needs of the industry in a developing economy, (ii) the system of payment by results, (iii) the special characteristics of the industry in various regions and areas, (iv) the various categories of workers to be covered (this may be according to the definition of workmen given in the Industrial Disputes Act,) and (v) the working hours in the industry. Whenever applying the system of payment by results, the Board shall keep in view the need for fixing a minimum (fall-back) wage and also the safeguards against over-work and undue speed. The headquarters of the Board will be located at Calcutta.

PACKAGE PROGRAMME

The Intensive Agricultural District Programme, popularly known as the Package Programme, has been launched as yet only in three districts out of the six in which it was expected to be launched in the beginning of the current rabi season. The three districts where it has been implemented are Pali (Rajasthan), West Godavari (Andhra Pradesh) and Shahabad (Bihar). In Ludhiana (Punjab), Aligarh (Uttar Pradesh) and Raipur (Madhya Pradesh) arrangements are being made to implement the Programme partially during the current rabi season and fully from the next kharif crop.

A training course for the officials who will be incharge of implementing the Programme, began at Nilokheri last week. Both Mr. S. K. Patil, the Union Food and Agriculture Minister, and Mr. V. Shankar, Special Secretary, Food and Agriculture Ministry, told the project officers that this concentrated attempt to deal with the problem of food production was so full of promise and so vital to the country's economy that there was no room for any dilatory or half-hearted measures. They stressed the need of making the scheme a success.

Requirements of nitrogenous and phosphatic fertilizers of the districts covered by the Programme are being met through indigenous production and special imports. Supply of good quality seeds to the farmers has also been arranged.

The Reserve Bank officials connected with the Programme have already visited Ludhiana, Aligarh, and Pali to examine, in consultation with the local co-operative bank officials, the question of building up a proper credit structure for meeting the needs of these districts. They will be visiting West Godavari, Shahabad and Raipur districts within the next one or two months. The Central Government has also communicated to the State Governments its decision in matters such as State participation in the share capital of the primary agricultural societies in these selected districts and the contribution to be made by the Government to the bad debt funds of the primary co-operative credit societies and Central co-operative banks to make more resources available for agricultural purposes.

All the State Governments concerned, it is understood, have communicated to the officers incharge of the Programme their decision to liberalise the financial and administrative powers, so that the officers may have adequate freedom of action.

BRIEFS

The Durgapur Industries Board is constructing a railway siding which would serve a number of industries around Durgapur, including the Coal Mining Machinery Project. The capital cost of the siding, amounting to Rs. 16 lakhs, is being borne by the Board. The parties using the railway siding will share the annual recurring expenses which will include depreciation charges and interest on capital employed.

•

The Government of Canada has agreed that a portion of the counterpart fund representing rupees generated by the sale of its 1958 wheat gift, equivalent to $10 million, be earmarked for the development of technological institutes for higher studies in this country.

•

It has been decided to establish a regional engineering college at Rourkela during the Third Plan period. The college will conduct degree courses in engineering and will have an admission capacity of 250 students per year.

•

Hindustan Steel Limited has under consideration a proposal to extend the technical consultation agreement with M/s. Krupp Demag in regard to the Rourkela Project.

•

It is proposed to have diesel traction for goods trains on about 3,800 miles of busy sections during the Third Plan period for the movement of coal and raw materials for steel plants and other through freight traffic.

•

The major and medium irrigation projects taken up under the first two Plans, on completion and on full development, would irrigate about 38.51 million acres.

COMPANY AFFAIRS

ASHOKA CEMENT LTD.

The directors in the annual report have pointed out that the Central Wage Board for Cement Industry while recommending substantial increase in wages with effect from 1st January, 1960, came to the conclusion that the Industry had no capacity to pay the high wages recommended. The Government accepted the recommendations but gave specific assurance that they would correspondingly increase the ex-works price payable to cement producers covering the additional burden. The implementation of Government's resolution substantially increases the Company's wages and cost of limestone. The directors have indicated that but for Government's assurance about compensation it would not have been possible for the Company to agree to the implementation.

It has been made clear that the retention price allowed for the Company's cement was unremunerative. Representations made to the Government of India for suitable increase in the price of the Company's cement have not produced any results so far. Even the recommendation of the Tariff Commission in the matter of increase in price to the Cement Industry to cover the rise in the pit-head price of coal has not been considered by the Government. The directors feel that the difficult situation confronting the industry is not appreciated by the Government.

The Government of India have requested the Tariff Commission to undertake forthwith a fresh examination of the cost of cement production for the purpose of determining the fair ex-works prices payable to the cement producers from July 1, 1961. The adverse basis of the last price fixation seriously impaired the resources of the Industry. The proper measure should be that the Tariff Commission and Government should fix revised prices on the basis of working conditions as they actually exist and not by application of theoretical capacity or standards of working. The price revision should help alleviate the losses sustained under the current price fixation. The determination of prices on actuals would enable the industry to receive an adequate margin of profit and the working results of the Company would substantially improve.

During the year a significant improvement was brought about in the production capacity.

Calendar year	Production (Metric Tons) Clinker	Cement	Cement despatches
1958	1,15,848	1,19,741	1,18,489
1959	1,35,880	1,63,453	1,57,286
1960 (11 months upto November)	1,50,654	1,58,541	1,56,233

During the year to March 31, 1960, the profit was Rs. 15.89 lakhs out of which a sum of Rs. 6.90 lakhs was separated towards depreciation and Rs. 2.50 lakhs towards general reserve. The directors have recommended the payment of a dividend at the rate of 7 per cent subject to tax per equity share which will absorb Rs. 4.20 lakhs.

THE JAIPUR UDYOG LTD.

During the year to March 31, 1960 cement and clinker production of the Company increased by nearly 2 lakh tons. With this improvement in production, the increase in profits would have been larger but for the higher cost particularly on account of substantial rise in the freight on limestone, the incidence of which is very high in the case of this Company. A breakdown in a turbine affected production in the current year which would otherwise have been substantially higher. A new Turbine of 4200 KW is being installed as a stand-by till the expected power supply from Chambal is available. The Company has been experiencing acute difficulty about proper quality of coal. The position has deteriorated with the Government's revised grade-wise allocation of coal under which the grade and size of coal for cement industry has been considerably lowered. This creates difficulties in working and hampers production due to lower power generation on account of unsuitable quality of coal. This has also resulted in increased consumption of coal and consequent increase in production costs. The directors are hopeful that the Government and the Tariff Commission would take notice of the position.

During the year under review cement sales increased considerably to Rs. 5.97 crores against previous year's figure of Rs. 3.79 crores. In line with sales the gross profits also recorded an increase at Rs. 104.74 lakhs against the previous years Rs. 78.2 lakhs. After making allowances for depreciation and development rebate reserve, the directors have recommended the payment of a dividend at the rate of 6 per cent subject to tax on ordinary shares of Rs. 10 each.

GANGES MANUFACTURING CO. LTD.

Jute prices in April, 1959 were the lowest during the year under review. However, when it became known that the Jute crop of 1959-60 would be smaller than estimated, the prices started rising and at the close of the year i.e. end of March 1960 the prices had risen by approximately 50% as compared to the beginning of the year.

During the year to March 31, 1960 the company recorded a new figure of profits of Rs. 28.59 lakhs, the highest for the last seventeen years. It has been possible not only to wipe off the entire loss brought forward from the previous years but also to provide for the full arrears of dividend on the Cumulative Preference Shares due for the last three and half years as also for the current year. Furthermore the directors have recommended a dividend on Ordinary Shares at 10 per cent—a rate which has not been available to the holders of Ordinary Shares over the last thirty years.

Out of a gross profit of Rs. 28.59 lakhs, provisions were made for depreciation, taxation, development rebate reserve and general reserve so that balance came to Rs. 11.16 lakhs and a dividend at the rate of 10 per cent per annum was paid on ordinary shares. The Dividend on Preference Shares for the year under report has been recommended subject to deduction of tax pursuant to the provisions of the Finance Act, 1960. However, the Directors have recommended that the preference shareholders may be paid such further dividend as may become payable on enactment of the Preference Shares (Regulation of Dividends) Bill.

HEAD, WRIGHTSON INDIA LTD.

A well-known British engineering firm which has had close links with India for many years is forming a new subsidiary with administrative headquarters in Calcutta. Head, Wrightson & Co. Limited, of Thornaby-on-Tees, County Durham, has announced the registeration of Head, Wrightson India Limited, which will act as contracting company for the supply—as far as possible from Indian sources—of various types of plant to the designs of the parent company. Head, Wrightson is at present playing an important part in the Durgapur Steelworks project, and is supplying all the iron-making plant together with much of the ancillary equipment.

COMMODITY NEWS AND NOTES

EXPORT OF BENGAL DESHI COTTON

The Government of India have decided to allow for export a quantity of 50,000 bales of Bengal Deshi Cotton of 'Superfine and Above' in grade, valid for shipment up to August 31, 1961. A quantity of 2,500 bales out of the 50,000 bales is ear-marked for distribution among co-operative societies situated in areas growing such cottons and the balance will be licensed on a 'First Come First Served' basis, on presentation of shipping bills, subject to an individual quantitative ceiling of 10 per cent of the quantity allowed. Apart from other conditions, it is laid down in the trade notice under issue by the Joint Chief Controller of Imports and Exports, Bombay that each intending exporter shall have sold and delivered, after December 9, 1960 to a cotton textile mill or a factory manufacturing absorbent cotton which are traditional consumers of Bengal Deshi, a quantity equal to the quantity sought to be exported. The relevant trade notice will be issued in due course.

TWO LAKH TONS OF SUGAR RELEASED

The Government of India has decided to release 2 lakh tons of sugar. There will be no release for free sale from the factories in Uttar Pradesh, Bihar and Punjab, except a small quantity which will be released to each factory for sale to its employees. Allotments of sugar to Madhya Pradesh, Rajasthan, Uttar Pradesh, Bihar, West Bengal, Orissa, Madras, Kerala, Maharashtra, Gujarat, Himachal Pradesh, Assam, Manipur and Tripura from factories in the controlled region will be made only to the nominees of the State Governments. In case of Punjab and Jammu & Kashmir, allotments will be made direct to the State Governments or to their nominess. Allotments to Delhi will continue to be made on the existing basis. Allotments will be made at prices fixed under Notification No. GSR 1112/Ess. Com/Sugar dated September 15, 1960. The controlled ex-factory price for U.P. and North Bihar factories is Rs. 37.85 per maund and for factories in Punjab and South Bihar Rs. 38.35 per maund for ISS D-29 grade with the prescribed price differentials for other grades. The fixed f.o.r. destination prices in respect of allotments made to Kanpur and Calcutta will be Rs. 38.60 and Rs. 39.85 per maund respectively for sugar of ISS D-29 grade.

PRODUCTION OF PIG IRON

Maximum productipn of pig iron has been reported from the blast furnace of the Durgapur Steelworks during the month of November. During the period, the total production of pig iron was 35,710 metric tons making an average of about 1,200 metric tons daily while the rated capacity of the blast furnace is 1,000 tons per day. At present only one blast furnace out of the three to be set up is in commission. The second one is expected to go into production shortly. In the steel melting shop production reached a new high on November 26 when 968 metric tons of rollable steel was produced in one day in two open hearth furnaces, which is a creditable performance in relation to the rated capacities of the furnaces. Three open hearth furnaces are functioning at present in the steel melting shop out of eight to be set up.

RECORD RICE CROP FORECAST FOR INDIA

A record rice crop is now forecast for India as well as Japan and a good, though late, harvest is expected in Thailand, says the Commonwealth Economic Committee rice report, issued recently in London. Dealing with production, the report says: "Prospects for the 1960-61 crop appear, in general, to be satisfactory, although unfavourable weather conditions have occurred in parts of Asia and in Europe." India expects the record crop despite the drought and subsequent floods in some areas. In East Pakistan, however, the autumn crop is estimated to be 27 per cent lower than last year's, owing to drought in the early stages of growth. Further floods have occurred in that region. Because of a shortage of rain, the crop in Burma will probably fall a little short of earlier expectations.

In spite of severe weather conditions, the crop in South Korea is estimated at nearly 3,100,000 tons—only slightly smaller than that of last year.

IMPORT OF COPRA AGAINST GROUNDNUT OIL EXPORTS

The Deputy Minister of Commerce and Industry, Mr Satish Chandra, laid a statement on the table of the Lok Sabha when Mr. A. K. Gapalan and three others called attention to 'the situation arising out of the policy of the Government allowing exporters of groundnut oil to import coconut oil and copra'. The statement reads: "Coconut oil is not allowed to be imported and the question of its import by the exporters of groundnut oil does not arise. Groundnut oil has been an important source of earning foreign exchange, which in the year 1955 amounted to about Rs. 21 crores. Though the production of groundnut improved in subsequent years, it became difficult to export groundnut oil on account of high internal prices and severe competition in foreign markets. It was decided sometime ago to link the export of groundnut expeller cake carrying a good margin of profit with the export of groundnut oil to compensate the loss incurred in selling the oil at international prices. The gap between the internal and world prices widened further during the current year and this link of groundnut expeller cake became ineffective.

The landed cost of imported copra is much lower than its local price, so that the actual users or crushers who get import allocations enjoy a high margin of profit. It was felt that part of the profits earned on imported copra, for which appreciable amount of foreign exchange is spent, should also be linked with the export of groundnut oil. Tenders were, therefore, invited to quote the minimum quantity of copra to be imported against export of each ton of groundnut oil. This was done to provide an additional incentive to the usual export allotment of 3½ tons of expeller cake for each ton of oil. The total quantity of lowest tenders, which have been accepted, comes to only 175 tons of copra at the rate of half ton for each ton of groundnut oil to be exported. This quantity is negligible in comparison to the total import of copra which was about 90,000 tons in 1959. It is obvious that the small quantity of 175 tons is not likely to affect the copra crushing industry in any way. Government will, in formulating any scheme for promotion of exports, ensure the supply of imported copra in reasonable quantities to the actual crushers."

United in Balanced Optimism?

THE Annual General Meeting of the Associated Chambers of Commerce of India held in Calcutta this week has served a useful purpose in underlining the extent to which, under the pressure of events, leaders in India's public and private sectors now carry, at least in their speeches, the same refrain. This was particularly happy in the address of Mr. H. M. L. Williams, the President of the Associated Chambers. He paid a warm tribute to Government's achievements in the decade, which can bear repetition. "Government deserves", he said, "great credit for the energy and resource which have been shown in planning and commissioning these gigantic projects—the Steel Works, the Chittaranjan Locomotive Works, Sindri Fertilizer Factory, the Integral Coach Factory, Hindustan Machine Tools and the Hydro-Schemes—which, I think, it is now generally accepted, would have been beyond the ability of private industry to finance in so short a period." Returning the compliment, the Finance Minister paid his tribute to the private sector and emphasized the fact that its opportunities were increasing and should increase even further. He stressed the point that implementation under the Industrial Policy Resolution—as the case of coal had shown—was flexible and there was no intention to divide industries into "two water-tight compartments". There is broad agreement on the size of the Plan, the absence of narrow competition between the two sectors, the willingness to make the most of existing investment, to push on with productivity, and accept the discipline necessary with the current bottlenecks on foreign exchange and the pressure on prices. Against this vast area of agreement everything else might be described as truly marginal.

The marginal differences arise largely in respect of the manner in which inducements should be set out for development of both foreign investment and local incentives; secondly, in respect of priorities which must obtain when foreign exchange threatens to be an almost permanent bottleneck. On the first point, while Mr. Williams' suggestions, both on taxation and on a better climate for foreign investment, were not accepted by the Finance Minister, one might argue that the room currently to manoeuvre is small. Indeed, the President of the Associated Chambers even made his submission on personal taxation "without much hope". It is obviously impossible, in view of the size of the Plan and the political repercussions likely to be raised by reducing taxation on higher income groups, to do very much in the short period. But this is the more reason to make inexpensive gestures for the future. The Finance Minister might well have responded to the point that the remuneration of managements should not be restricted when the rates of taxation are high enough to provide significant ceilings. There are other means of social reform than the use of the Companies Act to restrict managerial remuneration. Top management happens to be the most severe bottleneck on the fulfilment of the Plan; the determination to ignore the workings of the laws of supply and demand will only end in India's losing some of the best talent available on the world market for this top management in very short supply. Indeed, as the President stated, our policy is an inducement for men of high qualification and experience to seek employment in other parts of the world. All this points to that, while taxation must necessarily be high, it must reckon with India's need for foreign capital, to assist in solving the foreign exchange problem, and with the need of some foreign management "to break through" at levels at which we are now encountering great obstacles. The Ministry of Finance and the Ministry of Commerce must recognise that the problem of a true 'take off' raises issues far beyond the colour of the society, which the Congress Party decrees; its faith born out of austerity, or the deep feelings of inequality created by the large paper salaries which managements seem to draw, is unworkable beyond a point. The hard facts of economic life must rise superior to both political and social ideological shibboleths.

A difference on another point, namely, the use of limited foreign exchange, is likely to be less important. Where allocations of foreign exchange are tied to development, obviously no question of choice arises. Mr. Williams did not refer to the

"tied" loans as an element in the criticism that maintenance does not take enough preference over development. The truth is that there are foreign exchange development allocations untied, which can be used for maintenance. There are development schemes which are given high priorities but which have no business to be included in the list when existing capacity is not being utilised. The case of the small car is only one bla.ant instance of waste of foreign exchange, loading the foreign exchange bill with a component which does not "belong". Surely, the Finance Minister should agree that the admission of every single development scheme should be allowed only after the fullest consideration that the national interest is assisted by choosing development in place of maintenance. The Plan is full of doubtful, or at least low priority, cases.

At this particular meeting, the Associated Chambers of Commerce passed three resolu.ions which are central to the whole problem of priorities. These resolutions were on power supplies, transport and communications, and effective implementation of agricultural policy. These migh' be said to be the pivots of good priority and of sound operation of the economy at this time. Every.hing else should be put into cold s.orage until the power, transport, and agricultural bottlenecks are firmly broken. All the country's foreign exchange, if severely limited, must be commit.ed to these ends, and must be seen to be so committed, just as justice must not only be done but also seen to be done. The margin of agreement would be far greater if the Government of India were ready to prepare its schemes of priority and publish them first for general criticism, and then indicate how the na ional interest was, in each case, justified by the priority chosen. Even to exhibit them would produce new assurance that the Government has a lively sense of proportion. To remove "pet schemes" altogether would show both wisdom and imaginative political sense. The Finance Minister's reply would have carried much greater convic.ion if he could assert without doubt that he was sponsoring nothing which did not pass the hardest scrutiny on grounds of essentiality.

I.A.C.: Saturation Point?

THE Indian Airlines Corporation has rightly received high praise for its new and encouraging financial performance in the last official year ended March 1960. A special tribute is to be paid o its top Management, which, under the effective leadership of Air Vice-Marshal P. C. Lal, has accomplished what seemed incredible twelve mon.hs ago. The depressing period of heavy losses has been left behind—probably for all time—and the Corporation has given evidence that the public sector has at times the capacity to so order its affairs that it can hold promise of a new phase of dynamism, both in financial working as well as in tapping of new sales potential. It was certainly a remarkable achievement on the part of the Corporation to reduce the loss of Rs. 103 lakhs in 1957-58 to Rs. 91 lakhs in 1958-59 and then to make a supreme effort to turn the corner and earn a profit of about Rs. 8 lakhs in 1959-60. The fact that this profit is modest is not so important as the fact that the gap beween the loss of the previous year and the profit of the last year is substantial. That is the real measure of its financial success.

The cost per available ton-mile was brought down from Rs. 1.83 to Rs. 1.75. This speaks for the Corporation's improved and effective control over its financial operations. But the key to last year's success is to be found in the striking increase in the capacity operated and to a lesser extent in the rationalisation of the route pattern. It is significant that no additions were made to the fleet last year and consequently one has to look to the aircraft utilization factor for a correct explanation of the expansion of capacity operated. The utilization of the Dakotas (55 units) was held at an average of 1,441 hours per annum in contrast wi.h the peak of 1,506 hours in 1958-59 for reasons of airframe modifica.ions. The Skymasters (5 in all) improved their performance to 2,196 hours, but it was a far cry from their all-time high of 2,574 hours in 1957-58. It is the Vickers Viscounts (10 in an active fleet of 73) which enabled the Corporation to step up the capacity offered.

Since the introduction of Viscounts in 1957-58 they have shown progressive utilization from an average of 2,447 hours to 2,478 hours in 1958-59 and from there steeply to 2,633 hours in 1959-60. The Viscounts now fly all the trunk routes as well as the medium ones, with the maximum load factor, which has very nearly approached the hundred per cent mark. They combine safety with speed and comfort, while their capacity is the largest among the types of aircraft in use. These factors have made them the most valuable assets to the Corporation. Commercial firms and industrial concerns, which cannot afford prolonged periods of absence of their executives on business tours, have found in the Viscount an irresis.ible instrument in their activities. The results are not all happy. Two years ago, bookings were available at short notice, but today even ten days' advance action for booking is likely to turn the client away in despair and resentment. It is of the essence of the service rendered by an airline that it must accommodate the traveller who rushes to it under emergency. This is true of the business client, but it must also be true of the foreign tourist who is now being sadly neglected.

The fact that the saturation point is being reached in so short time must be construed as a serious warning. It threatens not only to stultify the Corporation's progress but set the tempo for air travel in the reverse direction for reasons of dependability. Repeated frustration is most likely to generate a psychological hardening of attitude and seriously undermine preference for the airline. Intensive utilization of aircraft has carried the Corporation's performance to an all-time high, but further strides cannot be made unless more Viscounts are pressed in'o service. The five Fokker Friendships which are due to be delivered by March next year are intended to replace only one-eleventh of the Dakotas. They are no answer to the dearth of aircraft capacity on the trunk routes. Already last year, the Corporation lost two opportuni.ies of placing orders for two second-hand Viscounts. Whe.her the Corporation is responsible for it or the Finance Ministry's red tape is a matter for in'ernal apportionment. The Corporation must buy at least five Viscounts in the immediate future to break the stalemate on the trunk routes.

The cost factor need not deter it. While economies of large-scale operations assure increasing returns, it is short-sighted policy to consume time in cold and cautious calculations. The Corporation and the travelling public must face up to the reality that air fares in India are among the lowest in the world and they provide sufficient elbow-room for stepping up much needed financial resources. Even without this factor of fleet expansion, the Corporation will be constrained to raise its fares. There is a candid and purposeful reference in the last year's report that the wage-bill is bound to be inflated substantially — partly by recruitment of additional staff, but mostly by increases in pay and allowances. One estimate puts the increase at not less than Rs. 40 lakhs per annum. This threatens a saturation point in the Corporation's finances which have just had the initial glimpse of buoyancy. An effective breakthrough cannot be provided by expansion of fleet alone. An increase in air fares is inevitable and nothing less than 10 per cent rise on Viscounts will meet the current critical situation. This choice must be accepted without hesitation as no alternative can be found, but it is justified on strictly commercial grounds as a necessary charge for servicing the capital for additional aircraft.

The Planning Commission, the Ministry of Finance and the Cabinet should come to an emergency decision to buy five additional Viscounts and put them in service before the current tourist season ends.

The Jaipur Statistical Conference

MORE than a hundred eminent statisticians from all over the country assembled at Jaipur between December 15 and 19 to deliberate upon some highly topical statistical problems. Outstanding amongst these may be mentioned the estimation of regional income, analysis of distributive trade throughout the country, new consumer price indices of working and middle classes, and index numbers of agricultural production for States. The discussions at Jaipur demonstrated that there was great urgency about resolving differences speedily and getting Indian statistics into a business-like frame. There was a widely expressed feeling that too much time was being wasted on refinements which ultimately did not produce the anticipated far-reaching difference.

Almost all the participants were agreed upon the need for a set of figures for State incomes compiled by a single agency. Only one of the papers submitted produced estimates, the rest dilated unduly upon the methodological niceties. Many delegates demanded that the papers submitted to the Statistical Conference should concentrate on producing some estimates instead of getting bogged down in statistical refinements. By and large, the definition of the State income as "income originating within the geographical bounds of a particular State" was accepted as the most plausible and convenient defintion that could be used under the circumstances. Suggestions were also made that the State incomes could be built up through the expenditure approach — a line of thought which had not been touched upon in any of the twelve papers on State income which had been presented at the Seminar. Unfortunately, the only agency which can produce useful and reliable estimates at the State level by the expenditure approach is the National Sample Survey. Somewhere in the archives of the N.S.S. lies buried data which could be processed so as to arrive at some useful results which may be of great use to the planners as well as the businessmen. While the consumer expenditure data could be processed through the National Sample Survey, extreme doubts were expressed in regard to the pattern of capital formation at the State level. The all-India estimates of capital formation prepared by the Central Statistical Organisation have got stuck at 1953-54. For reasons unknown, the CSO has not carried forward its series relating to capital formation.

The Central Statistical Organisation has, however, done valuable work in the field of industrial statistics. The time lag in the collection and publication of the census of manufacture statistics has been considerably reduced. It was made known that the census results for all the industries were available for the year 1958. From 1959 onwards the number of industries included in the census was being raised to 63 as against 29. This was necessitated because of the vast expansion which had taken place in the industrial sector. The international classification of data is being adopted from 1959 and this is indeed a healthy change because it will make easy the comparison of Indian industrial growth with other countries.

Precious little seems to have been accomplished in the field of distributive trades. A fruitful suggestion was made at the Conference that a proper use of the sales tax statistical data available at the State level could be made. Directorates of Economics and Statistics at the State level were particularly requested to examine the sales tax data which was readily available from the Sales Tax Departments. It could certainly throw up useful information in regard to the changes in the pattern of income in certain groups of society.

There has been considerable delay in releasing the new series of consumer price index numbers for the middle classes. The survey of middle classes has long been over and it seems that the work has been held up at the processing level. For a number of years, the Pay Commissions have repeatedly asked for data in relation to the movements in the cost of living of the middle classes but have received little help from the official agencies. The Indian Statistical Institute which has the responsibility for processing these results should expedite its processing machinery so as to supply the much-awaited middle class cost of living series.

Thrown into the common pool, official research agencies may gather something of the impatience which the country is developing against ancient figures on the one hand and theoretical faddists on the other. The time is ripe for a quick response to public feeling which, in this case as in others, is perhaps better appreciated by commercial agencies compelled to sell their output in a new competitive market.

A DELHI DIARY

FOUR THINGS, YEA, FIVE

SOLOMON, the wisest of men in his time, delivered himself of a profound observation when he said:

> "There be three things which are too wonderful for me, yea, four which I know not: The way of an eagle in the air; the way of a serpent upon a rock; the way of a ship in the midst of the sea; and the way of man with a maid."

No doubt, had he been living today, he would have found some substitute for the eagle in the air; he might have preferred to talk of jets rather than eagles. But would he not also have added something about the tortuous ways of some politicians? I am daring to add Mr. Krishna Menon to Solomon's list, having just read (for the second time!) Comrade Zorin's approval of Mr. Krishna Menon's performance in the United Nations General Assembly this week. That I am not the only person to be so struck is shown by the fact that Pandit Kunzru, in the Rajya Sabha, made a pointed attack on Mr Krishna Menon to which the Prime Minister's reply has generally been deemed to be extremely inadequate. What on earth has come over the Indian delegation in the United Nations now that it is clasped to the bosom of the Soviet Union and has become a rebel against the Secretariat of the United Nations? Our own officers are operating for the Secretariat and bearing all the burden and heat of the day. It is a nice debating point as to whether or not they are Indian officers or United Nations officers as the verbal technicians (or political technocrats) may say: the fact remains we are criticising ourselves when we criticise the Secretary-General, for we are more than ever responsible for the conditions that prevail there since Indians head both the administrative and military set-ups.

What encourages me to say my piece about Mr. Krishna Menon's behaviour — in Solomon's words too wonderful for me! — is the point that he is now supporting a totally indefensible position. Almost everyone in India knows that the United Nations in the Congo is surrounded by three times its numbers in armed troops. It is, therefore, just not militarily possible for Mr. Rajeshwar Dayal to demobilise Colonel Mobutu and put Mr. Lumumba back on the throne (which is what, more or less, the Soviet Union would like). If India's proposal is not this, what is the point of interference? Is it merely to indicate our capacity to order other people's affairs better than our own? All my friends here were greatly taken aback when Mr. Krishna Menon allowed himself to be rebuked by the Secretary-General exercising his right of immediate reply. My own sympathy is entirely with the Secretary-General of the United Nations. What is his charter or mandate to act in the manner which Mr. Krishna Menon has left delightfully vague? Obviously, there must be some resolution of the United Nations Assembly or the Security Council under which Mr. Krishna Menon deems that the United Nations has the power to carry out raids in the Congolese territory and take charge of the law and order situation rushing in all directions? But if they exist, may I kindly have the appropriate resolutions and mandates? Why is he unable to convince anyone, including the General Assembly, that there has been such a mandate? Even the U.S.S.R. and Comrade Zorin, who now quotes Mr. Krishna Menon with extraordinary approval, can have no proof that the mandate of the Secretary-General has been as sweeping as proposed. And if he has the mandate, who has provided him with the forces with which to implement it? There are not a few of us who feel that, under extreme pressure, the Secretary-General may be goaded into getting out of the Congo saving nobody's face, but his own. This will be a momentous defeat for India which has headed both the administrative and military wings.

COMRADES ALL

I am not myself extremely worried about the Congo though there are a large number of people who are so obsessed with the "do good elsewhere" philosophy that they cannot bear to think of a single unfortunate incident in which India's moral integrity is not somehow involved. Most of us are far more concerned about our neutrality, which is dangerously under suspicion, since Mr. Krishna Menon is roundly attacking the West, while Comrade Zorin seems to be hugging the leader of our delegation to his expansive breast. The Prime Minister cannot fail to see that the feeling has become widespread that we are now almost entirely in the Congo in the Russian camp. Is it not time to restore the balance?

AND NEPAL

My friends — who must be a reactionary lot — were also taken aback considerably by the Prime Minister's somewhat uncertain remarks on Nepal. If, as he said, we did not have sufficient information, surely we should refrain from passing judgment on King Mahendra's action. He has contrived to give the impression that he is taking the side of the dismissed Prime Minister. My friends keep on asking whether India is to subsisit on these high moral principles, or is she to consider the hard facts of political life? The truth now is that power vests with the King; it is vital that India should have a firm ally in Nepal. Again, in Sikkim and Bhutan we have non-democratic systems with which we are in "complete" alliance. Why should we find Nepal alone such a difficult situation. Obviously, the Prime Minister has made a serious error in appearing to criticise the King's action. It has assisted anti-Indian feelings in Kathmandu. Obviously, the error has to be corrected forthwith.

CURTAIN ON BERUBARI

At the time of writing, the Rajya Sabha is still dealing with the Constitution (Amendment) Bill on Berubari, but the political prophets tell me that all will be well in a day or two. If this is so, the curtain is best rung down on that affair, though it must be admitted that even at the moment of his success, the Prime Minister has made one or two damning admissions. The first is that he did not know that there were so many refugees in Berubari and, secondly, that a constitutional amendment was necessary for him to act as proposed. Meawhile, the Berubari Committee is determined to go to the Supreme Court again on January 2, thus carrying this controversy unhappily into the New Year.

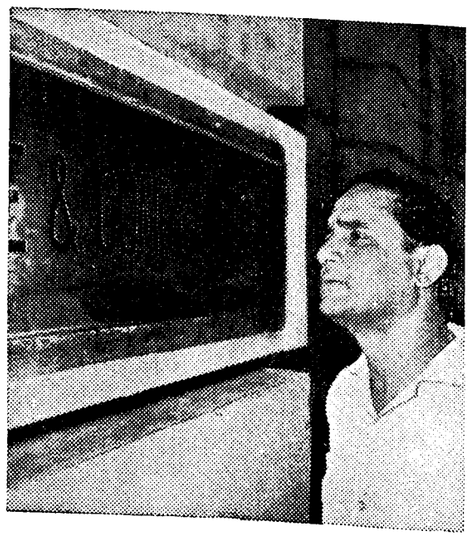
A HAPPY NEW YEAR

The new year is not likely to be — both on the political and economic fronts — a very propitious one. I say this without consulting my astrologers, unless the economic prophets can be so described. Meanwhile, since "The Eastern Economist" has no issue on the 30th December and the next issue is the Annual Number, in which I am forbidden to appear, may I wish, on behalf of "The Eastern Economist", all readers of this Diary a very happy and prosperous New Year!

ARGUS.

The Human Touch

Humanism has been defined as devotion to human interests. You are certainly entitled to receive the necessary attention.



At all the offices and branches of the State Bank you may expect to find friendly, eager and alert officials to cater to your needs. Whether you are opening a modest account or putting through a big deal, there is the same human warmth in the service rendered to you.

Besides, the State Bank offers the widest banking facilities to the depositor and the borrower alike. It will be worth your while to call at the office or branch of the Bank nearest to you to know in how many different ways the Bank can serve you.

STATE BANK OF INDIA

India's Leading Bank

TURNING AWAY A PROSPECTIVE CLIENT?

That tarnished name plate outside your office may spoil a good chance.

Keep it shining with Brasso. A regular rub with Brasso will keep all your brass articles and fittings gleaming like new. It's so easy and economical.

TBR 4236 ATLANTIS (EAST) LIMITED (Incorporated in England)

A tradition extended...

With the merger on 1st January 1961 of the Eastern business of Lloyds Bank Limited with National and Grindlays Bank Limited a momentous step will be taken. This pooling of resources will help both Lloyds and National and Grindlays to offer better and wider services to their constituents. Lloyds, who will hold shares and be represented on the Board of National and Grindlays, will continue, through this association, to maintain a close interest in the banking business of all territories where they have established strong ties.

National and Grindlays Bank—one of the oldest of the Exchange Banks—have throughout had the same ideal as Lloyds: rendering first class service. The merger is therefore between two Banks similar in outlook, in tradition and in achievement. To maintain what both Banks consider is so essential—the personal touch—you will find Lloyds Branches after the merger manned by the same personnel, ready as usual to give the efficient, expert and helpful advice which their constituents have been accustomed to receiving.

THE WEEK'S NOTES

The Akali Agitation

A GRAVE DEVELOPMENT

SANT FATEH SINGH'S action is going on a fast unto death marks a grave development in the Akali Agitation for the creation of the Punjabi Suba. There cannot be any doubt that it will create nation-wide concern inasmuch as it is not only deplorable but fraught with sinister consequences. Potti Sriramulu's death by fasting which set the conflagration in Andhra, ultimately leading to the creation of the Telugu speaking state, cannot by any means be invoked as a precedent. A very delicate problem is posed before the Punjab Government and the Centre, but they have to be firm in safeguarding the bigger national interest on this frontier of India. One fact at least cannot be ignored that the demand for the creation of Andhra State was practically a unanimous demand of the people of the region, whereas the demand for the Punjabi speaking State emanates essentially from the Sikhs and its character as a demand for a communal state stands.

The Punjab Government is following a policy of responsive concessions to the demands of Sikhs. The modifications introduced in the Regional Formula recently as well as the action of the Punjab Government in going full speed ahead with the plan to set up a Punjabi University in the State are eloquent proofs of this policy. The fast unto death in question, if unfortunately it is carried out, is likely to touch off statewide disorder. The issue is surcharged with intense emotion and considerations such as those of martyrdom might add to the complexities of the situation. It is to be sincerely trusted that Akali leaders themselves would strain every nerve and pursuade Sant Fateh Singh to give up his fast. The Punjab Government has shown extreme tolerance is not taking strict action, dictated by considerations of law and order. Ample proof has been forthcoming that the Akali agitation is being guided from within the precincts of Sikh gurdwaras. Preservation of law and order requires that the police should deal with these centres of the direction of the movement as any other trouble spots. The Punjab Government has stayed its hands obviously in order not to hurt religious susceptibilities of the Sikhs and to give a handle to communal hot-heads in raising the cry of religion in danger. The State Government is acting with great restraint and undoubtedly under serious strain on its potience. It is doing so in the hope that its hands will not be forced to take a course which it would be most reluctant to take. In the interest of the state as well as in their own interest, Akali leaders should take stock of the situation and avert any ugly developments.

Labour

WAGES OF AGRICULTURAL LABOUR

THE SECOND AGRICULTURAL LABOUR ENQUIRY REPORT for the year 1956-57, published this week, makes a depressing reading in relation to the First Report for the year 1950-51. The major conclusion of this report is that between 1950-51 and 1956-57, the average wages of agricultural labour declined while there was a rise in unemployment and indebtedness.

It is a pity that the findings of the Enquiry are being made known almost four years after the survey. While the report indicates that the First Plan had no major beneficial impact on agricultural labour, it is necessary to find out the impact of the vast development expenditure during the Second Plan on the way of living of agricultural labour. It cannot be that the enormous economic development which has taken place throughout India during the last decade has failed to affect agricultural labour at all. It is high time that the Third Enquiry was initiated and its report made available without much loss of time in order to assess the impact of ten years of planning on this important section.

The results of the Second Enquiry are not exactly comparable with the results of the First Enquiry because of the conceptual differences in definitions introduced in the Second Enquiry. There were, for example, 16.3 million agricultural labour households in 1956-57 as against 17.6 million in 1950-51. If the results of the two surveys were strictly comparable, this would certainly be an encouraging feature. But the report clearly indicates that this fall might be due to the difference in the definition of agricultural household. The Second Enquiry defined an agricultural labour household as one for which agricultural wage earnings constituted the major source of income. In the First Enquiry, an agricultural labour family was defined as one in which either the head of the family or 50 per cent or more of the earners reported agricultural labour as their main occupation.

During 1956, the average income of an agricultural labour family was Rs. 437 while the average consumption expenditure was Rs. 617, the deficit being of the order of Rs. 180. The gap between income and expenditure was filled from past savings, sale of stocks, remittances received and loans. The last item, namely, loans was specially analysed to find out if there had been any appreciable rise in indebtedness. As against the total indebtedness of Rs. 80 crores in 1950, the latest enquiry for 1956 showed the rise of indebtedness to Rs. 143 crores. The debt was incurred for various reasons. 46 per cent of the debt was incurred for meeting consumption expenditure while 24 per cent was incurred for social purposes. Only 19 per cent was incurred for productive purposes while remaining 11 per cent was for miscellaneous uses.

In 1950-51, the general level of food prices throughout the country, both in rural and urban areas, was higher than in 1956-57. This fact to a major extent explains the fall in the wage level between the two enquiries. Also, agricultural wages in 1950-51 were generally higher than non-agricultural wages but the position was reversed in 1956-57. Thus in 1956-57, there was either a decline both in employment and wages or an increase in employment but a decline in wages. This resulted in lowering the per capita income of agricultural labour from Rs. 104 in 1950 to Rs. 99 in 1956. Since the national per capita income was Rs. 291 in 1956-57, it seems that standard of living of agricultural families in terms of money incomes was one-third of the all-India average income.

Handlooms

NEW DESIGNS IN TEXTILES

THE RECENT exhibition "Designs 1960" organised by the Weavers' Service Centres of the All-India Handloom Board at the All-India Fine Arts and Crafts Society

galleries, New Delhi, indicates a vital new approach to the problem of designs in relation to textile production. The Weavers' Service Centres are the technical cells of the All-India Handloom Board concerning themselves with problems of research and training and acting as service channels through which handloom units receive design, dye and technical assistance in the pre-loom, loom and post-loom production processes.

One of the major weaknesses of the handloom industry has been that because of the decentralised nature of the industry, the handloom weaver has had to function in isolation from the advances of the laboratory and yet had to meet the demands of a rapidly altering pattern of production, and has had to absorb the impact of changes in his raw materials and tools from handspun to mill spun yarn, from vegetable dyes to aniline dyes and from simple looms to semi-automatic looms and new appliances. This he has had to put into operation without technical personnel trained in the new methods of the laboratory and capable of translating the language of the laboratory into the idiom of the handloom.

Rapid changes in socio-economic relations, improved communications and the breakdown of the traditional pattern of life have resulted in an increasingly complex pattern of rural and urban distribution with new consumer demands both in the internal and export markets.

The strengthening of the structure of the handloom industry demanded technical cells that could integrate the programmes of research production and marketing. The Weavers' Service Centres, five of which have started functioning at Bombay, Madras, Banaras, Calcutta and Kancheepuram operate through the following sections:

(a) A weaving shed, with master weavers representing the various traditional skills and techniques.

(b) A design studio, with young artists drawn from the main art schools in this country as well as traditional "naksha bandhas" or indigenous designers.

(c) There is a dyeing and finishing laboratory with a printing section. These laboratories undertake research into the problems faced by the handloom weaver in the field of dyeing and finishing. They also advise the Handloom Board on the types of dyehouses to be set up by co-operative societies under the Cess Fund Schemes. Artists work in close collaboration with the dye laboratory and the weaving shed. All designing is within the disciplines imposed by the yarn, the dyes and the techniques. A great deal of emphasis is given to the necessity for designing for various income groups and for integrating the work with production units.

The recent tremendous demand for 'bleeding' Madras varieties in the USA and the equally abrupt dropping of interest in this highly specialised variety lead to accumulated stocks with the producers. An impressive solution is being worked out by the Weavers' Service Centres—in over printing of the Madras Plaids, resulting in a totally new dimension of design and in the production of cloths of great beauty both in quality and design and in the depths of colour. An export of these new over printed varieties has already commenced and the reaction abroad has been excellent.

With the changing pattern of handloom exports, and the increasing barriers to export to the traditional markets—the whole future of handloom export will be largely dependent on the capacity of the handloom industry to produce new designs which would attract the foreign consumer.

The European Scene

BIRTH OF THE O.E.C.D.

From Our Special West European Correspondent

PARIS, December 17.

ON Wednesday, December 14, twenty governments met together in Paris to sign a treaty which, the developing nations hope, will give birth to the most effective instrument for international economic co-operation yet devised. The twenty were: the USA, Canada, the Seven of the Little Free Trade Area, the Six of the Common Market, plus their five economic satellites, Greece, Spain, Turkey, Ireland and Iceland. In short, all the advanced nations of the non-Communist world save Japan. A twenty-first party did not sign the treaty but will be present in the new organism as a full member: the Common Market Commission. The treaty set up a body called the Organisation for Economic Co-operation and Development which will begin work when the 20 national parliaments have ratified the convention; that should be by autumn 1961.

The document itself was of an extraordinary banality. It simply listed the members, declared that they would meet periodically and take decisions unanimously except in certain cases where a majority vote would suffice, and finally that the Organisation would have a secretary-general elected for five years. A separate communique stated the aims of the OECD; the promotion of economic expansion and full employment in the member-countries in conditions of financial stability, assistance to economic development in other countries, and the expansion of world trade on a multilateral and non-discriminatory basis. This declaration of pious intentions is not very earth-shaking, and the reference to non-discrimination might be regarded as simply hypocritical—because most of the signatories are members of regional trade associations of which discrimination is the very essence. Six are united in the Common Market, seven are in the Free Trade Area, and Britain is in the Imperial Preference network as well. None of the five satellite members could possibly afford to practise free trade, while the most powerful member, the USA, celebrated the signing of the treaty by issuing instructions to developing countries forbidding them to use US aid to buy goods from most of the other signatories! So much for non-discrimination.

Moreover, a procedural scuffle that went on in the wings of the conference showed that the signatories had very different ideas about the nature of the new association. Some members, led by France, urged that the secretary-general have three mentors, one American, one British and one French. This recalls recent Russian suggestions about the organisation of the UN Secretariat, and has a similar purpose: to consecrate the three-fold division of the association into: the dollar world, represented by the USA, the Free Trade Area, represented by Britain, and the Common Market, represented by France. This was totally opposed by West Germany not so much because Bonn objected to Paris representing the Common Market, as because it seemed undesirable to crystallise in procedure a division that should be the object of the new association to overcome. Secondly, a group of small countries (Switzerland, Austria and Benelux) expressed their nostalgia for the old OEEC and wanted the new OECD to write similar rules about the liberalisation of European trade. In other words, they had not accepted the US view that the OECD should be concerned with global matters instead of the limited question of internal European trade.

These differences concerned trade, but unanimity was no more evident in matters of aid. The US Government, shortly before the conference, had sent emissaries to Bonn asking for more West German help in relieving the burden on the dollar. They went back to Washington empty-handed, in part because it had emerged that Washington and Bonn had radically different conceptions of the utility of foreign aid for development. Worse (from the point of view of the developing countries) the dollar crisis had become so serious that Washington seemed less interested in using the OECD to expand the sum total of such aid, than in reducing the American contribution to existing aid programmes. Just when the USA, by joining the OECD, seemed to be co-operating with West Europe as an equal partner, a number of signs suggested that Europe was being taken down a few pegs in Washington's list of priorities: Mr. Herter came to a NATO meeting to threaten a reduction of US forces in Europe, American soldiers' families were being sent home, military spending and the budgets of US embassies in this part of the world were being cut in favour of expansion in new African states. The feeling grew — and it would cause as much anxiety in Delhi as in Bonn — that the great new organisation for Western aid was being converted into an instrument for the defence of the dollar rather than for the support of backward economies.

In sum, despite official eloquence, the birth certificate of the new organisation was written this week in Paris in quite unpropitious conditions. The developing countries, who have seen more than one grandiose international aid wonder delivered still-born into an expectant world, might well wonder whether the rich nations were not once again settling accounts with each other while giving themselves a good conscience with declamations about more aid and freer trade. Since they will have to wait a full year for the newcomer to get legally on its feet, it might be a long time before the aid-hungry capitals of Asia and Africa know whether the OECD is going to mean one rupee of extra assistance. Scepticism and indifference would appear to be justified.

On the other hand, there are reasons for optimism. An exactly similar scepticism greeted the formation of the OEEC which, after Stalin had torpedoed the great design of General Marshall, made its appearance as the sorry relic of a much more ambitious plan for international economic co-operation. Yet the OEEC went on to become one of the major factors in the spectacular recovery of West Europe from the ruins of the war. The successor OECD faces equally vast, and yet no more difficult, problems. The recovery of West Europe is complete, the USA is at grips with certain financial problems but is in an inherently sound economic position, all the countries of the Atlantic world are convinced of the need to co-operate more than they have ever done in the past, and all are alive to the needs of the developing countries. In these circumstances, the mere decision to co-ordinate their activities and to act inside a general agreed framework could be of immense importance, and in any event has no precedent in history.

Even if, at first, the Atlantic nations are forced by the Americans to give priority to the question of the weakening of the dollar, this could be, in the long run, of direct benefit to the developing nations. After all, whatever the Americans say, it is not their aid to developing countries that is jeopardising their currency. On the contrary, much of their foreign aid for development and for defence comes back to the USA in the

form of orders for American goods, and thus the aid programmes are, as Barron's of New York lately said, simply round-about subsidies to American export industries. A dollar off foreign aid seems to be a dollar off the payments deficit, but it is also a dollar off the trade surplus — and 50 cents off the Federal Government's tax revenues into the bargain. So the Americans are not going to strengthen the dollar by unloading part of the aid burden. Yet they could strengthen it by protecting the exposed flank of the US reserves: the competition for funds between Western central banks, and in particular the power of attraction of West Germany as a harbour for convertible capital.

By agreeing among themselves to stop competing for a limited fund of gold, the Western nations could free themselves of the need to cut each other's throats, and thus be able to give more attention to assisting the backward countries. The boasts about "how much we are doing for the developing economies" and the complaints about "how little West Germany is doing" are entirely irrelevant, because the plain fact is that all the aid the Western countries are giving added up together and multiplied by five would still not be enough to weaken any one of their currencies — provided they co-ordinated their credit policies. Has not France just succeeded in doubling her gold and foreign exchange reserves in the space of two years, while continuing to give more economic aid than anyone else to Africa, wasting a fortune every day in a colonial war, repaying much of her foreign debts and spending lavishly on atomic weapons? She was able to do this because, compared with the USA, her economy was in full expansion, her credit tight and her costs, expressed in dollar terms after a massive devaluation, were low.

Similarly, because West German costs were lower, money dearer and expansion faster than American, the movement of convertible funds became a headlong rush out of the dollar. So the problem — and it is important to see that it has been created by the return to convertibility — is the discrepancy between various Western economic policies in the domestic sphere. If this discrepancy were reduced (as it has been, somewhat, by the recent reduction of money rates in France, Britain and West Germany), many anxieties would disappear. Naturally, there can be no question of removing the discrepancy entirely, because the whole sense of convertibility of currencies is that it introduces automatic rewards for sound policies and automatic punishments for inflation. A uniform bank rate throughout the Atlantic world, for instance, would be nonsense. If Americans continue to live beyond their means while Europeans continue to reap the benefits of a wider market and a technological revolution, then a movement of funds across the Atlantic is inevitable and no international organisation is going to stop it. It will continue until certain familiar, slow-acting economic mechanisms have restored the balance by making European prices and wages higher and US investment opportunities more attractive.

Nevertheless, within these limits, there is much the Atlantic nations could do to make life easier for each other, and the new OECD is the best possible forum for such arrangements. Even if it does not seem to be producing much extra aid quickly, the developing nations will see that the elimination of unnecessary throat-cutting in the West is a guarantee of more Western aid in the long run. The future of economic aid will be uncertain as long as, every time one Western central bank loses gold to another Western central bank, it declares that for the safety of its currency it must limit its contribution to development assistance programmes.

Our West German Letter

THE BATTLE OF BERLIN HAS STARTED

From Our West German Correspondent

BONN, December 15.

IN the same building, the Foreign Office, which some weeks ago the Anderson-Dillon Delegation had left without achieving success of their mission, the Soviets too did not reach their aim, i.e. the conclusion of a new trade treaty. There are differences between the two cases. The Americans had spent only two days in Bonn while the Russians had been negotiating for exactly two months. But the greatest difference was—strange as it may sound—that in the latter case everybody expected a positive outcome because these German-Russian parleys took place, we were assured, in a friendly atmosphere till it came to the break-up. The whole crowd of accredited journalists waited on 12th December from 8 p.m. onwards in the press-room of the Foreign Office convinced that the treaty would be signed till after 2½ hours Minister von Brentano appeared and told us that it had not been possible to come to an agreement. The "casus belli" was the so-called Berlin clause. The German Government wanted to include Berlin's trade with the Soviet Union but the head of the Soviet Delegation, the Russian Deputy Foreign Trade Minister Borissow, declared that he was not authorised to do so. In other words, this means that the purely commercial arrangement had slipped into world politics which is a bad omen for things to come in 1961. So the battle of Berlin has started. Although from 1st January, 1961 onwards there will be no trade treaty one can take it that the trade as such will go on but not increase as suggested by the Russians. On the whole the trade between countries on both sides of the Iron Curtain works quite satisfactorily. Even West Germany's trade with Red China is increasing and bigger than the trade of other Western nations with that country. To a great extent it is being handled via Switzerland, the Netherlands and U.K. During the first four months of 1960 China imported for about 184 million DM from West Germany, and it is assumed that this import for the whole year will amount to 550 million DM. West Germany imported from China to the tune of 147 million DM from January to April 1960. To quote another example of co-operation, at least in the future, the Government of Poland had invited Mr. Berthold Beitz, number one of the Krupp industrial empire, with all the paraphernalia which goes along with a royal visit. Even a battue is officially included! As the Krupps have built in the twenties of our century huge works of different kinds in Soviet Russia, it is quite possible that Poland will follow the steps of the great brother.

* * * *

The subject "Entwicklungshilfe", meaning aid to developing countries has stirred up the conscience of the German people which in some cases was perhaps clouded by a kind of what might be called "boom lethargy". Associations of industry and commerce, trade unions and religious circles organize continuously lectures, mainly given by people who know a particular developing country. Even if their views may not always be completely correct, these lectures give some impression of the urgent necessity to lift the living standard of the countries concerned. It should after a while, or to be more exact, after the next year's elections obviously be possible to issue a new tax, direct or indirect, the yield of which would go to the Entwicklungshilfe. But not money and machinery alone can help. It is also necessary to prepare engineers and foremen, teachers and all kind of experts before they go abroad. Let us quote the example of the Rourkela steelworks. First class German technicians came out to the Orissa jungle some years ago and had to start work with thousands of Adivasis. Or, in other words, the technically highly developed 20th century met with the primeval period. Both sides were not prepared for this unexpected encounter and one can well imagine that all kind of misunderstandings occurred or simply had to occur which could have been avoided. Even if such extreme cases will be an exception, it is no doubt most important to train beforehand outgoing Germans and, the other way round, to train technicians and students coming from developing countries to the Bundesrepublik. The Institute of Economics and Social Policies (Institut fur Wirtschafts—und Sozialpolitik), generally known as "Haus Rissen" and named after the suburb Rissen of the Hansa city of Hamburg, is one of the institutions which in Germany have taken over the above mentioned additional task.

Your correspondent had been asked to lecture there on "India as seen from India" in a seminar for people shortly leaving for India. The other lecturers were an indologist of Hamburg University, two former German consuls who had served for longer periods in India, an official of the Indian Embassy in Bonn and an Indian importer living since many years in Germany. Besides the German participiants were an Indian atom physicist and an Indian shipbuilding engineer, both studying in Hamburg. After the lectures there were discussions lasting generally more than two hours and since lecturers and students were living for a couple of days together in guest houses, having their meals together, one can say without any exaggeration that there was a very lively atmosphere which certainly serves the wanted purpose. This is the merit of the Director of this remarkable establishment, Mr. Gerhard Merzyn, an outstanding personallity who had visited India this year for about two months. He had trained in "Haus Rissen" the so-called Nehru-scholars. One will remember that when Mr. Nehru visited Hamburg in 1956, one hundred scholarships were donated. These 100 people stayed for two months in Haus Rissen to study the German language and German habits before being admitted to universities, technical colleges, industrial firms and banks. Mr. Merzyn was now invited by former students, amongst them engineers, bankers and teachers to stay with them in India. In fact, he arranged according to these invitations his trip which brought him from Trivandrum to Amritsar. (By way of parenthesis it should be mentioned that this institute holds also seminars for German industrialists and trade unionists, for officers and non-commissioned officers of the army, not only at Haus Rissen but also elsewhere, i.e. in Bonn and Berlin. A similar institute has now been opened in Berlin which is exclusively concerned with developing countries. Krupp will be sending out to Rourkela next year a team of 200 technical experts who will attend a 10 days seminar on India there).

* * * *

There is something more to be said on the inexhaustible subject of Entwicklungshilfe. The annual meeting of the Social Democratic Party in Hannover carried a resolution which pleaded for a new ministry which should only be concerned with aid for develop-

ing countries. In Dortmund, the centre of the Ruhr, the chairman of the board of the Vereinigte Glanzstoff-Fabriken AG., one of West Germany's huge chemical undertakings, Dr. E. H. Vits made an appeal to the audience consisting of leading industrialists to support the 1.5 milliard DM loan which is part of the 4 milliard DM West Germany's aid programme for 1961. Dr. Vits said verbally: "How could we expect from worthy personalities like the Indian Prime Minister Nehru that they support us continuously in the Berlin and the German questions if we do not show understanding for the situation in their own countries and prove our understanding by deeds." Within Prof. Erhard's Ministry of Economics a study group has been formed which will in due course publish come proposals to be put forward to the European Common Market of the SIX. The gist of these proposals is that the SIX should reduce the custom's level towards the developing countries without asking for similar measures in return. There should also be no difference in customs between raw materials and finished products imported from developing countries. Furthermore, these countries should also be helped in exporting their goods. Up till now it was assumed that it was entirely their own affair to look after the export. The Minister himself told recently journalists that the Western industrialized nations had to import finished products from countries in Asia and Africa. It would be illogical, he said, to help these states to industrialize and then to refuse to take their goods. The German Federation of Chambers of Commerce came at their meeting in Bonn to similar conclusions. This is altogether a very healthy development and it is only to add that the West German Parliament has formed a committee which will exclusively deal with all questions of aid. There remains the problem to find the right people in Western countries who would be prepared to go out to Asia and Africa for a couple of years. No doubt, amongst the younger generation in Europe the lust for adventure has diminished. West Germany's President Lubke appealed the other day to young farmers at an agricultural meeting to go to Asia and Africa to show modern methods of cultivating land. Prof. Erhard said in an article published by the independent newspaper "Welt" that one often hears nowadays one should give way to the young generation for public activities. In going to developing countries young people, in his opinion, would have a wide field for their activities.

We mentioned above the necessity of increasing imports from developing countries to industrialized countries. In this connection an economic report published by the Institute of German Industry in Cologne is quite interesting. According to it, imports of West Germany from countries in Asia rose to 1.580 milliard DM for the first nine months of 1960, up a sizeable 40 per cent on the comparable 1959 period. Exports increased by about 6 per cent only, to 2.180 milliard DM. Direct shipments accounted for about 50 per cent of West German purchases and 90 per cent of West German deliveries. The "Ostasiatische Verein" in Hamburg (the association of traders with East Asia) hailed the figures as a "clear indication that the Federal Republic of Germany is not only a large supplier but also a good customer of countries in Asia." India continued to be West Germany's most important partner by buying goods 612 million DM worth and sold goods 136 million DM worth. So far the report. There remains, as we see, still a great discrepancy. But to be just, Indian exporters could do perhaps also more on their part to increase their business. Your correspondent was told by the head of one of the biggest import firms in Hamburg that he had placed large orders for Indian artistic handicrafts to be sold to departmental stores all over Germany which, after having seen samples, placed their orders well in time for Christmas. The goods in spite of written and cabled reminders were shipped too late. In fact, they have just arrived in Hamburg when the wholesale Christmas business is over since two months. It should likewise be considered whether the Trade Centre of the Government of India is sufficiently staffed. It should be staffed by suitable people and not by officials who are able to catch the Minister's eye.

* * * *

The following paragraph will deal with—I am sorry to say—alcoholic drinks. But the writer feels his duty to report in accordance with truth. He went from Bonn to Hamburg by sleeper and just when he was going to retire there was a knock at the compartment door and the attendant offered a bottle of champagne — mind you — free of charge. Admittedly, it was a small bottle bue when inquiring about the kind sender I was told: "The Railway". It was the German Railway's 125th birthday since the first train rolled from the city of Nuremberg to its neighbouring town of Furth. The next morning in the dining car the passenger received at the breakfast table a huge slice of Christmas cake, nicely wrapped and wishing him in print good speed and merry Christmas. In this remarkable train called (sorry again!) after the legendary inventor of beer-brewing "Gambrinus" there is wireless telephone and a special compartment with a lady secretary to whom you can dictate in German, French and English for two Rupees an hour. If you are interested in shares the latest market-rates of stock exchanges are thrown in printed forms into the compartment. As we have dared to talk about alcoholic drinks let us finish with the news that this year's vintage in West Germany shows the record figure of 6.9 million hectolitre which means that the already reduced wine prices will go down further. A good Rhine wine costs today about two rupees a bottle, but I better close, not to water the mouth of the readers if one could use that idiom in this connection without being accused of adulteration....

STEEL manufacture at MUKAND

In 1940, Mukand employed 694 men; in June 1960—2,187. Over the past seven years, production figures have soared—18,234 tons in 1952/53; 49,787 tons in 1959/60. This increase is a reflection of a good management of finances:—

	1957/58	1958/59	1959/60
	(Rs. in lacs)		
Capital	51	51	71
Depreciation provided up to date	32	36	41
Profits retained in business to date	25	35	45
Profit for the year	19	30	32
Dividend for the year	5	5	8

Mukand manufacture high-grade steel products—bars, rods and castings. Presently an expansion programme is under way. It will cope with the growing influx of big orders—like the one placed by the Railways with Mukand on 16th July 1960 for 4,035 sets of Centre Buffer Couplers valued at 84 lacs.

Mukand provides India's new and growing industries with the quality steel components they must have.

MUKAND | **STEEL STRENGTHENS THE NATION**

Economic Report from the U.S.

DEVELOPMENTS OF 1960

By GUY SIMS FITCH

WASHINGTON, December 13.

THIS has been a strange year for U.S. economic relations with other countries — a year both of notable rewards and persistent difficulties. Yet, in the final analysis, the rewards for outweigh difficulties, as the U.S. and other free nations have scored significant gains in their international trade and have marshalled their resources in new co-operative efforts to advance economic progress throughout the world. In summary, 1960 has been a year in which U.S. exports and surplus earned in trade with the rest of the world have soared. Yet in which the deficit in its over-all balance of international payments has been reduced hardly at all. It has been a year in which the U.S. has joined in setting up new economic development programmes and international financing institutions, yet in which the U.S. Government felt it necessary to take steps to protect its own reserves of gold and dollars. It has been a year of remarkable economic progress among the industrialized nations of Europe and Japan, yet in which the needs of developing land received a new awareness.

From the view point of U.S. trade, the most notable single development of the year has been the sharp improvement in the U.S. trade balance — the excess of exports over imports. After dipping to barely $1,100 million in 1959, the trade surplus rose to a more "normal" level of about $4,500 million in 1960 — close to an all-time high. Principally responsible for this improvement has been the sharp rise in U.S. commercial merchandise exports, to an estimated and near record $19,500 million from last year's $16,300 million. Imports, meanwhile, have held their own at close to the $15,200 million record of last year, as the U.S. economy again has demonstrated its ability to absorb large quantities of all kinds of goods from other lands. There was a tendency earlier in the year to attribute the export rise mainly to expanded shipment of a few products, such as cotton and jet aircraft. The final record, however, indicates the wide variety U.S. merchandise has shared and contributed to the increase.

The importance of this development cannot be exaggerated. It demonstrates that U.S. products can compete successfully on world markets, and that a continued export improvement is possible. This means that, given a reasonable opportunity to sell its goods abroad, the U.S. can look forward to a substantial improvement in its balance of payments position, in which exports play the major role, without having to fall back on protective measures that could restrict imports or otherwise impede international flow of commerce and capital. To foster a continued and healthy growth of its exports and trade, the U.S. has embarked on a new government-sponsored export promotion campaign. It includes planned increases in U.S. trade missions around the world, new credit facilities for private U.S. traders, enlarged U.S. participation in international trade fairs, and an expanded flow of foreign trade information to U.S. businessmen. In the final analysis, of course, the most effective export promotion steps are those taken by businessmen themselves in seeking out new markets, expanding old ones, and generally making their products and services available. At the same time, the U.S. has been urging other countries to continue reducing and removing their barriers against U.S. goods and services. Many of these barriers were erected in past years to protect foreign exchange reserves, but in general — particularly in the case of other industrialized lands with their greatly-improved gold and dollar holdings — are no longer needed or justified.

This is a matter of special concern, since, despite the large exports surplus it ran up during 1960, the U.S. continued to lose gold and dollars in its transactions with other countries. This was because, as in most other post-war years, its huge outflow of capital has more than counter-balanced its export surplus. This outflow has taken such forms as U.S. Government economic assistance and military spending abroad, private investment capital, tourist outlays, and other remittances. An additional factor in 1960 was the move of speculative funds from the U.S. to Europe, where interest rates generally were higher. As a result of all this, the 1960 balance of payments deficit could well approach the $4,000 million mark, and thus approximate the extraordinary high and generally unacceptable levels of 1958 and 1959. Part of the U.S. deficit normally is taken in gold by other countries. In 1960, the gold loss was intensified by speculative moves in some foreign capital markets. Firm assurances by the U.S. Government that it would not raise the price it has been paying for gold for more than a quarter of a century seems to have contributed effectively to stilling the speculation, and the gold drain seems to be abating.

Nevertheless, the U.S. gold supply has fallen to the lowest level in 20 years. At about $18,000 million, it still is close to half the free world's useable reserve — evidence enough of continued U.S. monetary and financial strength. But during the past year it became clear to the U.S. Government that the gold and dollar losses would have to be stemmed. In 1960, then, U.S. Government was moved to take some strong steps to safeguard its balance of payments position. Involved were actions to reduce military spending abroad; to put primary emphasis, wherever feasible, on the purchase of U.S. goods under U.S. Government aid programmes; and to hold down foreign spending by U.S. Government agencies generally. The belief is that these moves, put into effect gradually and with a minimum of disruption to present international programmes eventually could save the U.S. as much as $1,000 million a year. Behind them too, was the recognition that other industrial nations, with their economy clearly rebuilt and prospering — the result in good part of past U.S. assistance — now are in position to finance their own exports and to increase their commitments to international economic progress and stability.

It should be emphasised that these moves were not designed to curtail U.S. international obligations. They will diminish neither U.S. economic assistance to developing lands nor U.S. participation in international security endeavours. Nor will they affect the normal flow of international commerce. U.S. Government officials have been specific and emphatic on these points. This continued adherence to international responsibility

is demonstrated by U.S. participation during 1960 in new and enlarged efforts to help developing lands accelerate their economic progress and to advance the well-being of peoples everywhere. Noteworthy was the formal establishment, largely as a result of earlier U.S. initiative, of the International Development Association (IDA), new $1,000 million soft-loan affiliative of the United Nations World Bank, to which the U.S. is by far the largest financial contributor. Similarly, the U.S. is the largest contributor to the inter-American Development Bank, new regional organization set up by the American republics to help finance economic development in Latin American countries. In another effort to aid Latin American progress, the U.S. has offered financial help to the projected inter-American Bank for Economic Integration and Development. The past year also has seen the launching of one of the most significant and ambitious of all U.S. aid ventures. This is the $500 million programme to help advance social as well as economic development in Latin America, which won the approval of the Organization of American States (OAS) in the now-famous act of Bogota. It would involve such fields as education, housing and land reform, as well as the more traditional industrial and agricultural development projects. No less important have been the co-operative steps taken by the industrial nations to foster world economic-growth and development. Early in the year, the U.S. joined with eight other capital-exporting countries, including Japan, plus the European Economic Community (EEC) Commission to form a Development Assistance Group (DAG). This body was designed to promote more effective international aid efforts through co-ordination of national programmes and the exchange of information among its members.

DAG now is being incorporated within the larger framework of the Organization for Economic Co-operation and Development (OECD), new 20-nation body which has recently been established officially as the successor to the old Organization for European Economic Co-operation (OEEC). The fact that the U.S. and Canada, formerly associate members of OEEC, are full members of OECD indicates international orientation of the new organization, as against the primarily European orientation of its predecessor. The use of the word "development" in its title, moreover, indicates that OECD's primary concentration will be on stimulating economic growth around the world. OECD will not, itself, be an aid-dispensing agency, but through its concentration and co-ordination machinery, the assistance base can be broadened and the aid total can be enlarged and made more effective. Reflected in all these 1960 developments is the new ability of other industrial nations to take up an increased share of the international economical responsibilities which have been borne primarily by the U.S. — to step up their aid efforts, finance their own exports and reduce their trade barriers. From this one can deduce that the liberal trade and aid policies of the United States, aimed at post-war economic reconstruction and the re-establishment of a sound and orderly international trading system, have done their work well. Now the world stands at the threshold of a new era, one in which the resources not only of the U.S. but also of many other strong and free industrial nations can contribute in their full measure to the advancement of economic well-being around the world.

WORLDGRAM

India

Major Development Programme for Non-Ferrous Metals: A major expansion of the country's production capacity in respect of non-ferrous metals has been programmed for the Third Plan period. While the country cannot afford self-sufficiency in some cases on account of the limited natural resources, the main objective of the development programme in this field would be achievement of self-sufficiency in aluminium and a many-fold increase in the domestic output in copper, zinc and lead. The development programme as envisaged in the Third Plan would save the country foreign exchange to the tune of Rs. 30 to Rs. 40 crores. In 1959, the import of non-ferrous metals accounted for as much as Rs. 37.5 crores. The need of the country in non-ferrous metals by the end of Third Plan would be about Rs. 80 to Rs. 100 crores per annum. In the field of aluminium, self-sufficiency by the end of the Third Plan is the aim. As against the present installed capacity of 17,500 tons, a five-fold rise in the indigenous capacity to 82,300 tons annually has already been licensed, which would materialise during the Third Plan period. This consists of two expansion schemes in respect of the existing units and three new schemes—in all with an aggregate capacity of nearly 65,000 tons. One more scheme of aluminium is under consideration. As against the present capacity of 17,500 tons the total demand for aluminium in the country by the end of the Third Plan period has been estimated at 1.25 to 1.5 lakh tons annually.

*

Progress at Durgapur. Iscon at Durgapur is determined to beat the scheduled date for the completion of Stage 3; more than three-quarters of the work will be finished and with five months still in hand it seems most likely that this will be achieved. This year has been one of intensified activity for Iscon with No. 1 Blast Furnace going into production at the end of last year. Half way through 1960, steel making and the rolling of steel were well on their way, with the commissioning of the first 3 Open Hearth Furnaces, the 42" and 32" Mill, Billet Mill and Sleeper Plant. The rest of the programme for Stage 2 including the By-Product Plant also saw completion as Iscon advanced towards the third phase of this construction which is scheduled for completion at the end of next April. Upto the end of November the Blast Furnace had produced 3,90,000 tons of iron in the form of pig iron, foundry iron and hot metal for the Open Hearth Furnaces. The furnaces themselves have produced nearly 75,000 tons of steel. This in turn has been rolled into over 45,000 tons of billets, the rest has gone into blooms, and stocking for the future mills. The Sleeper Plant too has produced nearly 3,000 tons of sleepers. Operation and construction now continue side by side with increasing productivity, but entail adjustments so that each can proceed according to plan. Included in the Stage 3 plan is the completion of the third and final units of the Coke Ovens and Blast Furnace Plants. The third Battery of Coke Ovens, 78 in number, will bring the total number of ovens upto 234. The third blast furnace like the second one, is equipped for operation with high top pressure.

*

Cow-Dung Gas Plant: In a written reply to a question, Mr. M. V. Krishannappa, Deputy Minister for Agriculture, said in the Lok Sabha that the potentialities of the latest developments in the design and manufacture of cow-dung gas plants had been scientifically examined with a view to conserving cow-dung manure in the country. It was proposed to conduct a short training course in installation and working of the cow-dung gas plant at the Indian Agricultural Research Institute, for the benefit of supervisors and mechanics employed in State agriculture workshops.

*

Interest Paid on Foreign Loans: The amount of interest paid in foreign currency during 1959-60 in respect of foreign loans repayable by the Government of India was Rs. 13.03 crores approximately. In addition, a sum of Rs. 4.21 crores approximately had been paid towards interest in foreign currency during the same period by the public sector non-Government organisations and private sector agencies in respect of foreign loans repayable by those bodies.

*

Central Revenue Collection for October 1960: The revenue realised from items on which duties are levied and collected by the Central Government in the first seven months of the financial year 1960-61 amounted to Rs. 441.11 crores. Of this, Rs. 71.67 crores were collected during October, 1960. The corresponding figures for the first seven months of the financial year 1959-60 and for the month of October, 1959 were Rs. 386.70 crores and Rs. 58.21 crores respectively.

Following are details of the revenue under various heads:

(In lakhs of Rupees)

	October		April to October	
Revenue Head	**1960**	**1959**	**1960-61**	**1959-60**
1. Customs	1,576	1,301	9,371	8,722
2. Union Excise Duties excluding coal cess and salt cess	3,269	3,052	22,643	19,871
3. Corporation Tax	1,038	400	4,911	2,843
4. Income Tax	1,201	890	5,908	5,955
5. Estate Duty	22	17	104	114
6. Taxes on Wealth	37 (Prov.)	49	184 (Prov.)	207
7. Expenditure Tax	8	5	21	19
8. Gift Tax	5	4	28	24
9. Railway Passenger Fare Tax	N.A.	95	668 (Prov. upto	728 Sept.)
10. Opium	11	8	273	187
Total:	7,167	5,821	44,111	38,670

N.A.: Not available.

U.S.A.

Aid for Indian Rehabilitation Research Projects: Mr. Donald V. Wilson, Secretary-General of the International Society for the Rehabilitation of the Disabled announced recently that Rs. 12 lakhs would shortly be made available to India for research in rehabilitation of the physically handicapped. The money will be distributed in the form of grants to individual research projects whose aim is the investigation, analysis and

evaluation of current rehabilitation techniques. The amount earmarked for India, Mr. Wilson said, is part of the U.S. Government's P.L. 480 rupee fund which the office of vocational rehabilitation of the U.S. Department of Health, Education and Welfare has been empowered to allocate. Grants under this programme will be made after scrutiny by the Department of Applications for Specific Projects.

Affiliate of Union Carbide Announces Start-up of Latin American Liquid-Oxygen Plant: S. A. White Martins of Rio de Janeiro, affiliated with Union Carbide Corporation, has announced that their new liquid oxygen plant, the largest of its kind in Latin America, has gone into production. The plant has the capacity to produce upto 25 million c.f. (over 7 lakhs cubic metres) of liquid oxygen per month, and can produce liquid nitrogen and high-purity argon as well. Storage facilities for 10 million cubic feet (almost 300 thousand cubic metres) of liquid oxygen have also been completed. Through the utilisation of the latest oxygen production and distribution equipment, the plant is expected to fulfil the demands for these liquefied gases in the rapidily expanding economy of the Sao Paulo area for several years. Beginning with a specially built tank truck fleet and other liquid distribution equipment capable of supplying industry within a 150 mile (240 km.) radius of Sao Paulo, services will be increased as needed to keep pace with the local product demand. Under its technical assistance agreement with Union Carbide, S. A. White Martin now has the largest, most modern and efficient, Brazilian production facilities yet designed for the manufacture of liquid oxygen. Its future growth potential is excellent because of its access to the extensive continuing research of Union Carbide in this field.

U.S.S.R.

High-Speed Computor: Assembly of a high speed BESM-2 electronic computor has been completed at the computing centre of the Leningrad branch of the U.S.S.R. Academy of Sciences Institute of Mathematics. One of the best of its kind in the U.S.S.R., this computor does nearly 10,000 arithmetical operations per second on an average, which is 100 times faster than the widely used Ural mathematical machine. The experimental computor can with the aid of an arithmometer complete up to 2,000 arithmetic operations in a 7-hour work day. The new machine will shortly be adjusted. It will go into operation next year.

*

Record Crop of Sugar-Beet: This year the Soviet Union grew the record sugar-beet crop of almost 57 million tons, 13 million more than last year. The biggest yields were in the Ukraine, which is the country's principal sugar-beet centre. In some regions there, as many as 250 to 300 metric centners of beet were lifted per hectare. Before the October Revolution in 1917 Russia produced only a fifth as much sugar beet.

France

French-Moroccan Trade During the First Half of 1960: Moroccan imports from France during the first half of 1960 totalled 49,780 million Moroccan francs compared with 32,832m. Moroccan francs during the same period of 1959, which was an increase in value of 51.41 per cent. Moroccan exports to France during the same period of 1960 totalled 41,739 million Moroccan francs compared with 35,787 million a year ago, which was an increase of 17 per cent. 83.8 per cent of all purchases were covered by sales in 1960 compared with 108 per cent in 1959. The increase in value was partly due to the currency devaluation of October 17, 1959 (17.5 per cent), partly to the increases in purchases of industrial equipment and consumer goods, and partly to the increased sales of agricultural and mining products. Moroccan imports from France accounted for 49.7 per cent of Morocco's total purchases during the first half of 1960. Moroccan exports to France accounted for 44.8 per cent of that country's total exports. In 1959, these percentages during the same period were 45.6 per cent and 49 per cent respectively.

Holland

Investments in Fixed Assets: According to the Netherlands Central Bureau of Statistics gross investments in fixed assets in Holland were f4.95 milliards in the first half of 1960, compared to f4.21 milliards and f4.91 milliards respectively in the first and second half of 1959. Investments in the first half of 1960 included f882 millions in houses, f905 millions in business and government's building, f1,124 millions in means of transport, f520 millions in road and hydraulic engineering constructions and f1,518 millions in machinery and other equipment.

Poland

Coal Extraction: The production of coal this year will reach the record figure of 104 million tons, thus exceeding by 5 million tons the 1959 output and by some 3.5 million tons the targets of the national economic plan. A marked increase of labour productivity was noticed in the coal industry this year which contributed to this rise in output. The extraction costs were also reduced in this year. The mechanisation of work in collieries contributed no less to this phenomenal progress. At present already more than 27 per cent of coal is loaded mechanically. As compared to the preceding year, the share of machines in coal extraction has increased nearly two-fold.

I.F.C.

Investment in Columbia: International Finance Corporation has announced commitment to invest U.S. $700,000 in a Columbian company, Envases Colombianos, S.A., of Barranquilla, primarily to help finance the construction and initial operation of a plant to manufacture metal cans for food packing and for general use. The new company will also take over the paper and sheet metal printing operations of an existing Colombian company, Empressa Litografica, S.A. Controlling interest is owned by Messrs. Alberto Roncallo and Adolfo Gieseken of Barranquilla. The minority stockholder of the company is American Can Company, the world's largest producer of metal cans. Equipment for the new plant will be supplied by American Can Company and installed under the supervision of American Can Company experts. American Can Company technical personnel will be in charge of production until completion of a training programme designed to replace American personnel with Colombians. Production is expected to begin about mid-1961.

Total cost of the project is estimated at $2,830,000 in U.S. dollars and dollar equivalent. In addition to the IFC investment of $700,000 this will include U.S. $1,300,000 equivalent of share capital, plus other peso financing. The IFC investment will be in unsecured dollar notes bearing 7% interest payable in U.S. dollars and maturing from 1966 to 1972. IFC expects also to receive additional interest on a deferment plan related to profits, and an option on capital stock of the Colombian company. IFC's commitment is subject to completion of the necessary legal formalities.

NEWS IN BRIEF

INDIAN

The Government of India have decided to grant a special rebate of 5 nP in the rupee on all retail sales of handloom cloth during the Eighth All India Handloom Week celebrations from February 5 to 12, 1961.

*

The Government of India have accepted the Tariff Commission's recommendation that protection granted to the cotton textile machinery (spinning ring frames, spindles, spinning-rings, fluted rollers and automatic looms) industry should be continued at the existing level of duty of 10 per cent ad valorem for a further period of three years i.e. upto December 31, 1960.

*

During the Second Five-Year Plan a generating capacity of 650 kw had been added for rural electrification in Manipur, including Imphal town.

*

It is reported a large number of entrepreneurs from all over the country have already sought an allocation of space to the extent of over 250 acres in the proposed Kandla Free Trade Zone, which is expected to be launched by April next.

*

The private and public sectors in India produced 37.92 million tons of coal till September this year against 35.93 million tons in the corresponding period of last year.

*

Reduction in sales tax on articles manufactured in the local industrial units and subsidizing power rates to some extent in respect of power supplies to new industrial units, with a view to inducing entrepreneurs to start new industries were under the consideration of the Government of Andhra Pradesh.

*

The Government of India have decided to release a quota of 20,000 tons of H.P.S. groundnut kernels for export by all shippers against registration of contract in the form of cable offer and cable acceptance in 1961.

*

Japan is likely to offer a 5,000 million yen credit to India to help build a vast chemical fertilizer factory in Assam State. The proposed credit is to become part of an overall capital assistance plan for India now under study by Japanese Government authorities for submission at the next international conference of India's creditor nations in March.

*

The President has given assent to the Bombay Tenancy and Agricultural Lands (Gujarat Ammendment) Bill, 1960. The legislation amends the Bombay Tenancy and Agricultural Lands Act, 1948, to make the intention of the Legislature quite clear in respect of some provisions and to remove certain lacunae in the Act.

FOREIGN

An Arab Development Fund with an initial capital of £20 million was proposed recently at the Arab League Economic Conference. The capital, which would be put up by member countries in proportion to their contribution to the League, would be used for development projects in the Arab States.

*

During the first ten months of 1960, French production of electricity and the balance of exchanges with foreign countries (consumption and losses) totalled 56,384 million kWh compared with 50,585 million kWh during the same period of 1959 and 48,752 million kWh during the same period of 1958.

*

It is reported that no visible provision has been made for servicing pre-war foreign debt in the 1961 Greek Budget. Nearly 26 per cent of revenue is devoted to defence and internal security.

*

Steel export sales worth $110 million are expected to be made this year by Canada's four basic producers. This is double the 1959 volume and is largely attributable to surging U.K. and European demand for plate, strip and sheet steel.

*

Trade between the Soviet Union and Austria in the next five years is likely to increase by at least 50 per cent. An agreement on reciprocal goods deliveries between 1961 and 1965 and a protocol in the volume of trade has been signed.

*

Nigeria has announced higher import duties on a wide range of goods, including bicycles, motor vehicles, clothing, shoes, textiles, beer, wines and spirits and cement. Protective duties are imposed on flour and sugar.

*

Savings banks throughout Australia will increase their deposit rates from 3 to 3¼ per cent from January 1 and raise the maximum amount on which interest is payable from £A 2,000 to £A 2,500. This increase applies to savings organisations conducted by both Governmental and private trading banks.

*

The Canadian newsprint industry which has been operating at a high rate this year, is expected to show an increase in production of about 341,000 tons or 5.3 per cent. Output will therefore be at a new high record and about 4.1 per cent more than the previous record of 1956.

*

World rubber consumption, exclusive of Soviet bloc synthetic rubber, should reach a new high of 3.8 million long tons in 1961, an increase of 10 per cent above this year's record.

*

The U.S. Export-Import Bank has granted a $25.5 million credit to the Australian Government for the purchase of three Boeing 707 jet aircraft for Qantas and to modify seven 707s already owned by Qantas.

*

New capital issues by West German companies in Germany during the year to September 30 totalled nearly DM 7,500 million, according to the Bandesbank's monthly review for November, more than DM 2,000 million or 20 per cent less than in the previous year.

Special Article

INDIA REVISITED

By

PAUL BAREAU

THE immediate impression left by a visit to India after a four year interval and a three weeks' intensive tour of the industrial areas of West, East and South, is that of a dynamism and momentum which were not so apparent at the close of 1956. The new industrial "middle class" one sees in and around the factories of the Bombay belt, Jamshedpur, the new industrial complex of Bihar and West Bengal, the clean and impressive development near Madras and Bangalore, is a portent for the future as well as a token of what has been achieved in the Second Five-Year Plan. Industrial India is unquestionably on the move. But the journeys made between the public and private showpieces of the Plan reveal to the visitor how much there is to move and from what an abysmally low level of well-being the move has had to begin.

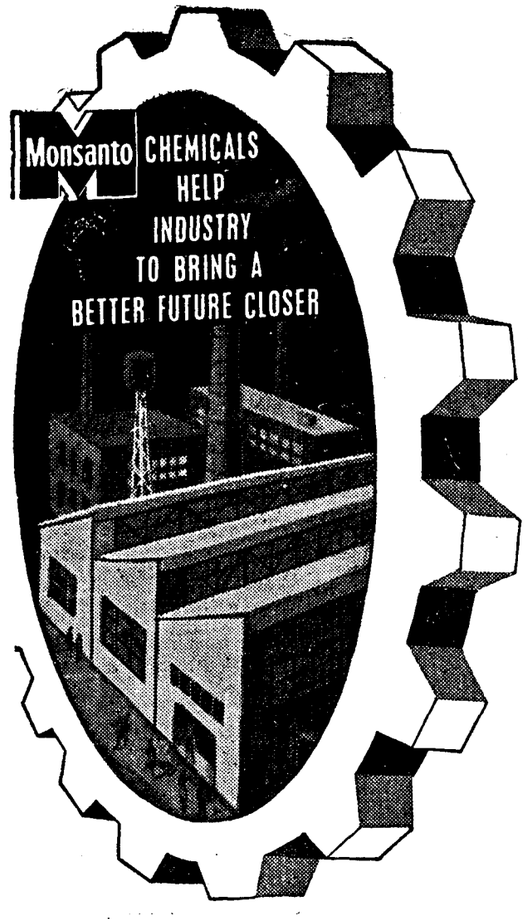
Whatever reservations one may have about the details of the Plan, of its order of priorities and of its pace, there is no doubt that the momentum behind the process of industrialization could not have been imparted without centralised planning and a wide measure of State intervention. The almost compulsory extraction of large masses of external capital and the equally compulsory generation of domestic savings by conscious deficit financing would not otherwise have been possible. Had the industrialisation of India been left to private enterprise fewer monumental investments and, therefore, fewer monumental mistakes, might have been made; but the tempo of the venture would have been slowed down—and time is of the essence of this great enterprise.

In discussing the problems of India with Ministers and officials one gets an impression of greater flexibility and realism. The doctrinaire attitude to the respective roles of public and private enterprise is still there; the orthodox incantations still have to be uttered. But when it comes to action the dogma can be reconciled with practical good sense. What is being done in the realms of coal mining, the manufacture of fertilizers, the refining of oil, the plans for making special alloy steels, the admittance of foreign capital in joint enterprises on majority terms—in these and other respects I detect a healthy relic of the arts of adaptation and pragmatism which must have been inculcated in the days of British India. To make mistakes is a sin; but the mortal sin is to refuse to learn from one's mistakes; and in this respect the authorities in India are showing distinct signs of virtue.

My own personal predilection would be to favour a continuation of this trend admitting what I have already written about the need for planning and for considerable intrusion of the State in industrial enterprise. I still believe that India would have much to gain by blurring still further the frontiers between the two sectors of its economy. It is depriving itself of a considerable inflow of much needed foreign capital by the restrictions placed on the activity of the private sector. The touchstone of commercial profitability is needed in many spheres reserved for the public sector. There is a danger that the siting of oil refineries or steel plants may be dictated by political rather than economic considerations. Here lies real danger of building a high cost structure into the Indian economy —a defect that would be all the more ironic given the present low labour cost advantage which India holds. That way lies far deeper seated danger to the currency than derives from the meagerness of external reserves and the continued dependence on external aid.

If, however, the role of private enterprise is to be extended more emphasis should be placed on the need to enforce on this private enterprise the essential discipline of competition. Large-scale industry in India tends to be given two types of protection. First there is protection from imported goods, given the harsh facts of the balance of payments and the declared policy of the Government not to allow the import of any goods that can be made at home. Secondly, it is protected from domestic competition by the policy of giving each large-scale manufacturer a virtual monopoly in a certain type of article—be it a small or medium sized car, a particular size of truck, and so on. This is done in the interests of economy, to avoid what might be deemed an unnecessary and wasteful duplication of effort. But this is a mistaken view of economy. If the private sector is to be allowed greater scope, it is essential that the healthy breeze of competition should be allowed to keep it sound and to prevent the far greater wastage involved by the abuse of monopoly power.

A visit to the new steel plants and to their natural outlet, Calcutta, has convinced me that rather than start building a fourth State plant the more urgent priorities are to provide good management for the three that have been built and to undertake the major task of dealing with the port and city of Calcutta. I hope India will have the wisdom and humility to entrust the running of these three admirable steel plants to teams of foreign technicians and managers who in due course will train Indians to take their places at the head of these extremely expensive gadgets.



As for Calcutta, it seemed to me the biggest single blot on modern India and also the biggest single social, political and economic problem that has to be tackled. Much of the work that has to be done there is labour intensive, sparing in its foreign exchange requirements and precisely the kind of work needed to employ the available underemployed labour and make Calcutta safe for democratic India.

On the subject of priorities, I would also suggest that underemployed labour be used to improve road communications. That is the best contribution that would be made to raising levels of efficiency in agriculture—a problem which will be priority number one in the Third and also in the Fourth and Fifth Five-Year Plans.

The Second Five-Year Plan, now drawing to a somewhat expurgated close, began with the foreign exchange coffers fairly flush and with the requirements for external aid seemingly within reach. The Third Plan will begin with external reserves down to an irreducible minimum and with grave reservations about the external borrowing programme. The United States have suddenly had to become aware that there is such a thing as a balance of payments. The United Kingdom is likely to show a deficit in its current balance of payments for 1960 and no country can invest a deficit. From India's direction the problem of securing the required aid abroad will be complicated by the fact that the equivalent of some Rs. 600 crores of external debt will be maturing during the next five years and will have to be met by reborrowing or by an extension of maturity dates.

Yet, despite this seemingly unfavourable contrast, I am more confident that the Third Plan will reach its objectives than I was of the prospects for the Second Plan. For that I give credit, firstly, to the greater realism and flexibility with which the task of industrialisation is now being tackled. The second ground for optimism is the fact that the momentum of economic expansion is gaining and shows real signs of becoming self-generating. I would rank as irresponsible optimism the view one often hears expressed in official quarters in India, that the country will be independent of external aid in ten years' time.

The Achilles heel of the Plan is in its balance of payments. The absurd striving for industrial self-sufficiency may load the Indian economy with such high costs, and so burden its traditional exports that genuine equilibrium in balance of payments will not be achieved without damaging adjustments of the external value of the currency.

Monsanto works constantly both to develop new, better chemicals—and to improve those chemicals already used in every major industry.

PHARMACEUTICALS
acetylsalicylic acid, phenacetin, benzoic acid, phenol, phenolphthalein, germicides are but a few of the many Monsanto products in this field.

RUBBER
Monsanto's accelerators help speed vulcanisation, add quality. Anti-oxidants improve resistance, prevent early cracking, give increased flexibility.

TEXTILES
Monsanto Syton is widely used in spinning cottons and woollens, increases yarn strength, allows for reduction in twist.

PRESERVATIVES
Monsanto's pentachlorophenol chemicals help to preserve a wide range of products. Monsanto sodium benzoate helps prevent corrosion.

PAINT
Monsanto's chemicals are used extensively in the manufacture of high-quality paints, varnishes and lacquers.

SYTON is a Registered Trade Mark

Monsanto
chemicals for every industry.

MONSANTO CHEMICALS OF INDIA PRIVATE LTD.
Wakefield House, Sprott Road, Ballard Estate, Bombay 1.
Also at: Calcutta, Delhi and Madras.

Monsanto Chemicals Limited, London. Monsanto Chemical Company, St. Louis, U.S.A. Dependable service from Monsanto companies in London, Melbourne, Montreal, Paris, Bombay, Tokyo, Mexico, D.F., Buenos Aires and from sales representatives in all principal cities of the world.

Since 1935 Simon-Carves have received orders for and put into service, one hundred and thirty two Simon-Carves-Monsanto sulphuric acid plants of which 21 have been installed in India. With an aggregate rated capacity of nearly 3¼ million long tons of 100% sulphuric acid per annum, these plants have been built in twenty three countries throughout the world. Their individual rated capacities range from 10 to over 400 tons of 100% acid per day. Designed to use any sulphur bearing material including raw sulphur, pyrites, sludge acid, refinery waste gases, anhydrite etc, their output is used in oil refining, steelmaking, uranium processing, the production of fertilisers, explosives, rayon, dyestuffs, pigments and many other industries.

The Indian Urban Markets—A Measure

THE Market Research Department of J. Walter Thompson Company has just brought out a pamphlet dealing with a new consumer index of Indian markets based on a study of "market factors" in 504 cities and towns with populations of over 20,000. The index can be used by manufacturers and distributors as a fairly reliable indicator for planning sales and advertising in urban areas. The urban market has been analysed town by town by taking into consideration no less than 12 major economic factors such as the size of total population and factory labour, the rate of growth in population, the level of literacy, the number of radio sets and private cars in use, the number of banks, doctors, chemists, druggists, cinemas, number of cinema seats and domestic consumption of electricity.*

The city of Calcutta has been assumed as base because it topped the list in regard to all these factors; the consumer index for each city is expressed with the city of Calcutta equal to 100. Thus, the city of Bombay with the index at 79.56 depicts a level in regard to the size of the market which is four-fifths of Calcutta. Delhi's market turns out to be less than half of Calcutta, while Madras seems to possess a market which is almost one-third of Calcutta.

The table alongside summarises the results of this analysis. The big twenty-six cities taken together seem to constitute 46 per cent of the urban market. It is interesting to see that only eight cities in the Indian Union seem to have a reasonably good market as compared to Calcutta, though their combined total hardly exceeds double the size of Calcutta. Two-thirds of the urban market is covered by 83 cities and towns. Almost one-third of the urban market lies scattered in no less than 421 smaller towns.

The index, it seems, had to be built on the basis of these twelve indicators because no direct evidence on the purchasing capacity of each of these towns was available from any published sources. Income surveys in the 26 towns and cities which cover nearly half of the urban market would give a clear indication of the relative status of each one of these major cities and towns. The Indian Institute of Public Opinion has conducted surveys in Calcutta, Bombay, Delhi and Madras and their results are available but if the other towns were also covered, a reliable index, based on the purchasing power of the cities, could certainly be constructed. The city surveys sponsored by the Research Programmes Committee of the Planning Commission in all the major cities could also be utilised for this purpose.

The index suffers from the major defect that it is based on statistics collected during a decade, though corrections have been made on the most plausible assumptions. There is need for a more dynamic index which could indicate the changes in the purchasing capacity of the major markets as a result of the vast development expenditure already incurred by the country, and the likely pools of new incomes to be generated in the next decade.

Class of Market	Index Group	No. of Towns	Total Market Score	% of Market
A (a)	75.00 — 100.00	2	179.56	18.9
(b)	10.00 — 75.00	7	151.44	16.0

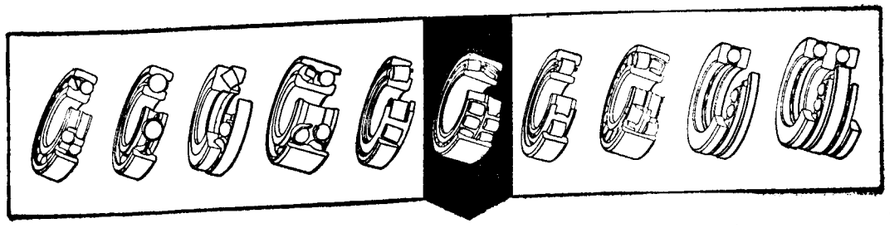
Dangerous Deviation

By CROESUS

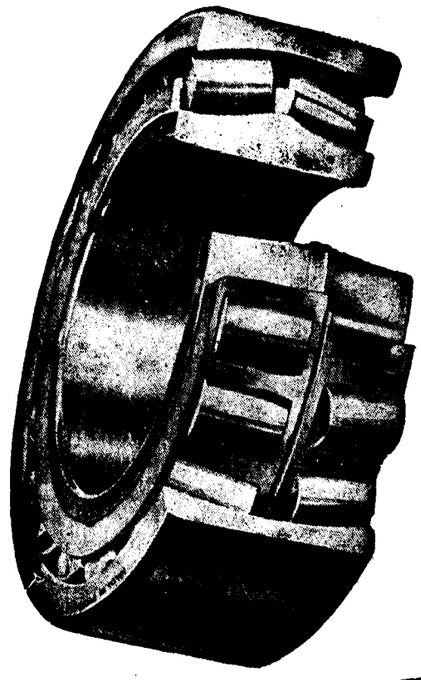
AS I write this despatch, the prices of shares of sugar companies in the Deccan have been sliding down sharply even after the downward trend on the Bombay Stock Exchange seems to have generally halted. What has prompted this sudden downward trend in the prices of shares of Deccan sugar companies is the fear that the proposed land ceiling legislation of the Maharashtra State Government may not exempt the cane farms of sugar factories, as the land ceiling laws of other States have done. Although the Maharashtra Land Ceiling Bill has not yet been published and nobody knows what the exact contents of the Bill are, reports appearing in the Press since the past few days would appear to have occasioned all the disquiet. For, according to these reports, the Planning Commission, which had been withholding its approval to the Bill, or rather was still considering it, has since given its approval "on the intervention of the Prime Minister". Why was the intervention of the Prime Minister necessary, it is asked, if the Bill followed the same pattern as similar bills enacted, or are in the process of being enacted, by the other State Governments? Evidently, the answer seems to be that the Maharashtra State Bill proposes to deviate from the said pattern. Incidentally, the pat

* The weightage assigned to each factor is, however, not indicated in the brief appendix.

tern for land ceiling laws by all the States has been arrived at after a good deal of discussion between the Planning Commission and the State Governments concerned and also the plantation or farm interests affected. The position, one thought, was further stabilised when the President returned the Kerala Land Ceiling Bill and insisted on certain changes, including exemption of the land held by plantations from the scope of that bill. It is not clear, therefore, whether the deviation from the set pattern actually relates to this exemption or to some other aspect, especially as the general impression all along has been that the Chief Minister of Maharashtra, Mr. Y. B. Chavan, is so shrewd and practical an administrator that he is not likely to subscribe to any such dangerous deviation.



Notwithstanding this, if the sugar shares on the Bombay Stock Exchange have reacted in the way they have done, the presumption obviously is that there can be no smoke without fire. According to those who are usually in the know of things, the Maharashtra State Land Ceiling Legislation bids fair to chalk out a distinct line of its own in the matter of exempting farm lands owned by sugar factories or other joint-stock companies from the scope of the proposed legislation. Whatever form this individualistic line of approach with regard to land ceiling legislation may take, it is now clear that it will deviate from the pattern so far approved and accepted and that it will lead to consequences which no responsible State Government can afford either to ignore or to brush aside, except at its own peril. The arguments—and these are all admittedly valid and reasonable—for exempting certain categories of land holdings from the purview of the land ceiling legislation are too well known, but there are special justifications for exempting the sugarcane farms operated by sugar factories in the Deccan from the scope of the proposed legislation. It should not be forgotten that it is due to the pioneering efforts and great sacrifices of the sugar factories in the Deccan that so much land in the State is today under cane cultivation and adding to the national output of the country. It is to the sugar factories, in a large measure, that the Government of Maharashtra today, and the Government of Bombay until the other day, must be beholden for the profitable utilisation of their canal waters and also contributing a tidy sum to the exchequers of both the Central and the State Governments. If only because of these considerations, any legislation affecting the Deccan sugar factories for all times, must come only after the greatest care and circumspection has been devoted to the subject. It is easy to give assurances and persuade the powers-that-be—as seems to have been done—especially when a general election is in the offing, to concede to a legislation of any far-reaching nature. But it is difficult, nay impossible, to retrace the false, or rather a wrong step, and undo the untold harm stemming from the dislocation and disruption of an otherwise smoothly running economy. Perhaps few industries can lay claim to all the benefits that the sugar industry can lay claim to 'vis-a-vis' agriculture. In no area other than in and around a sugar factory, particularly in the Deccan, can one see practically all the benefits that one can expect from an agro industry that the sugar industry is. And, yet, if an attempt is being made to throw a spanner into this smooth working machinery and create chaos and confusion, which are the certain consequences of the proposed deletion of the exemption of sugarcane farms operated by sugar factories from the scope of the Maharashtra Land Ceilings Legislation, it is to say the least, deplorable.

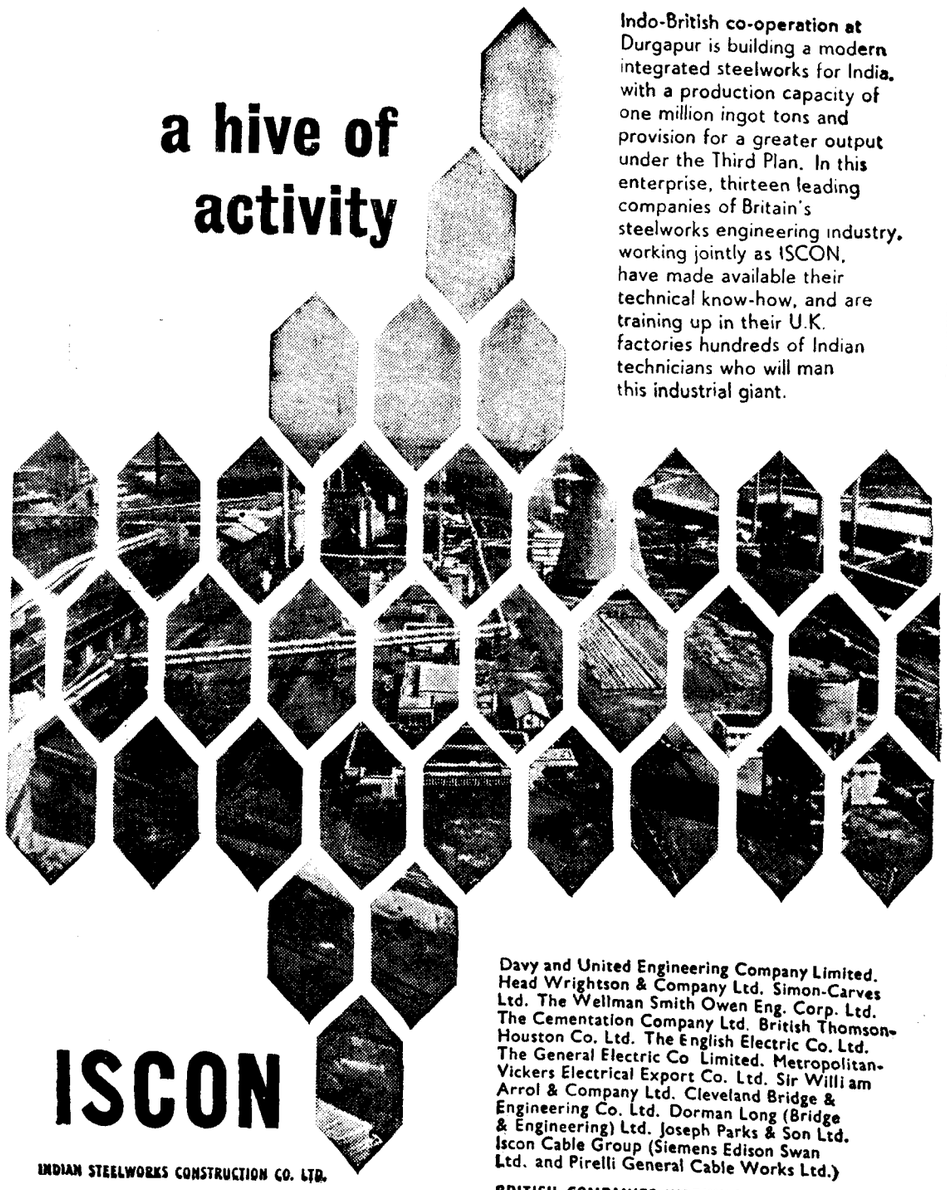


Apart from the fact that the lonely path, which the Maharashtra State Government seems to have chosen to tread, comes in the way of a uniform policy by all State Governments on the vital question of land policy, what are the benefits that the reported proposal in question will yield which the existing position does not? What will, again, be the agency that will take over the management of these large farms? And will any such agency command all the resources in men, material and methods, not to speak of experience, that the sugarcane factories command? Is it prudent, especially when the entire approach to agricultural reforms of the authorities is towards economic holdings, to adopt a course that will not only break up what have been transformed into economic holdings but also to throw to the winds the advantages of large-scale economy which have been so sedulously and strenously evolved by the Deccan sugar industry after years of devoted labour? If the State policy is that the land should go to the tiller, will not the proposed action go contrary to it?

Let us pause and examine what the large cane farms operated by the sugar factories in the Deccan have achieved. In the first place, these farms have ensured regular and assured supply of cane to the sugar factories and have contributed to the increase in the sugar production of the country. It is needless to say that any delay, interruption or dislocation in the supply of cane will disrupt the economy of the sugar industry. Secondly, thanks to the care and attention bestowed by the sugar factories in the Deccan on their farms, the sugar industry in India can boast of not only the latest and the most advanced improvement in agricultural practices but also the use of the most modern and up-to-date equipment, mechanisation, research, soil study, manuring and improved seeds. It cannot be claimed that all these facilities would be available to an individual cultivator or even a small co-operative factory. Thirdly, the farms operated by sugar factories in the Deccan have not only benefited the factories, but practically every cultivator within a radius of several miles all round. The Maharashtra State Government would do well to enquire of these individual cultivators as to what benefits they have derived. Indeed, the factory farms have verily transformed sugarcane cultivation in the entire region, by means of improved seeds, better varieties of cane and pesticides to fight all the known cane diseases. They have contributed to the raising of the standard of living of the cultivator individually and to the augmenting of the national output of the country as a whole. They have also contributed to raising the national income of the country by the admittedly higher prices they pay to both the suppliers of cane and the agricultural labourers on their farms. In short, they are doing a sort of unpretentious extension service in the sphere of sugarcane cultivation. But for them, it is a moot point whether the large tracts of waste and jungle land, which had been practically abandoned as uncultivable at one time, would have been reclaimed and transformed into smiling cane fields of today. The large outlay that all this work entails is certainly beyond the capacity of individual cultivators or even of co-operatives. Above all, let no one forget the large employment potential of these sugar factories, both on the farm and in the factory. If today a good many agricultural graduates, engineers, and chemists are well employed, it is not a little due to the openings provided by these sugar factories, both directly and indirectly. It is doubtful whether any other agency that may be under contemptation to replace the management of farms by sugar factories can provide all the amenities that these factories are providing to the workers on the factory farms.

Granting that all these advantages are going to be guaranteed under the new dispensation envisaged, will the breaking up of the commercial farms not lead to a fall in production? The experience of country after country, not excluding Soviet Russia, has established this beyond a shadow of doubt. Our neighbour Pakistan

SKF *offer the widest selection of bearings*



Illustrated here is the latest improved design of SKF SPHERICAL ROLLER BEARING designated the C type, regarded as the pre-eminent type of bearing for carrying heavy loads, having approximately 40% greater load carrying capacity than bearings of the original design.

It is completely self-aligning—a feature which is only present to a limited extent, if at all, in other types of roller bearing.

has found to its cost that the parcelling of commercial farms in small plots has led to a fall in the standard of cultivation and a reduction in production. According to Stalin himself "the weakness of small peasant farming lies in the fact that it lacks, or almost lacks, these opportunities (use of machinery, fertilisers, etc.) and, as a result, it is semiconsuming farming, yielding little grain for the market." Dr. Schacht, the famed wizard of finance of Germany, in his "Account Settled", says: "The breaking up of the big estates will not lead to an increase in harvest yields, but to a diminution. The small-scale holdings will not be able to provide the industrial towns with their food requirements anything like as efficiently as did the bigger farms. Distribution from many smaller units is more expensive, takes up more time, and requires more labour power and, in addition, it increases the danger of wastage by deterioration. Further, the portion of production retained by a small-scale unit for its own consumption is greater than in the case of a large unit. The improvement of agricultural technique is more difficult for the small farm than it is for the large."

Besides these disadvantages, the proposed legislation also leads to a number of complications, especially in the case of sugar factories in the Deccan. For, apart from the land which they hold on their own account and which they have steadily increased from year to year to get the maximum benefits of large-scale economy, they also hold on lease vast areas of land on terms settled not merely mutually as between the factories and the cultivators, but approved by the Government, and the position with regard to these leases, many of which expire in the next 25 or 30 years, requires to be examined. Similarly, there are agreements between the sugar factories and the Government with regard to the use of the canal waters. The factories are required to pay for at least 90 per cent of the "guaranteed supply", whether they use the water or not. Now what will be the position if the factories are prevented by a new legislation by the Government itself which hinders the fulfilment of this obligation? Next, what is to happen to all the investments of these factories, not only on their farms and equipment but also on the large-scale housing programmes imposed upon them by the Industrial Courts? Not all the additional allocation that Mr. Chavan has succeeded in extracting from the Planning Commission for the outlay on the State's Third Five-Year Plan will possibly suffice to meet the cost of taking over the farms and their appurtenances of all these sugar factories. Even if it does, the Maharashtra State can ill-afford such a luxury when it has many more pressing and urgent tasks to tackle. The ultimate decision, which, of course, rests with the Maharashtra Government, will not only show how the conflict (that the proposed legislation involves) between a seemingly attractive ideology and the assured advantages of a realistic and practical approach is going to be resolved but also squarely place on the shoulders of that Government a responsibility for the serious consequences that will follow

Business Notes

I.F.C.

ENLARGED POWERS

THE INDUSTRIAL FINANCE CORPORATION ACT is being amended with the express purpose of strengthening the powers of the Corporation to assist industrial concerns either with direct loans or by means of subscription to their equity capital or issues of their debentures. It is only proper that the Corporation should be provided with new teeth in order to make it a more potential and effective lending agency for industry. In particular, the Amending Bill aims at enlarging the functions of the Corporation as a guarantor to industrial concerns seeking assistance and also to enable it to participate in the equity capital and in the profits of a concern instead of resting content merely with receipt of interest on payment of loans or debentures. This is on the pattern of industrial finance agencies in the West.

The Amending Bill has made substantial changes in Section 23 of the original Act. Under the Act as it now stands, the Corporation can underwrite the issue of shares, debentures etc. and in case it is required to subscribe to the shares or debentures in consequence of its under-writing liability, it can ordinarily retain the shares or debentures in its own name up to a period of seven years. Experience has shown that certain concerns who benefit from the under-writing powers of the Corporation required more loans etc. and their work could be facilitated if some change is made in the present provision in this behalf. The Amending Bill, therefore, enables the Corporation to make direct subscriptions to the shares or debentures instead of acquiring them through the indirect mode of under-writing contracts. The Corporation has further been empowered to subscribe to the shares of an industrial concern irrespective of the fact whether the issue of shares is under-written by it or not. The new power is of considerable significance and it is expected to strengthen the effectiveness of the Corporation and also to fulfil the requirements of industrial concerns for capital. In the light of this new power the Corporation can advance its assistance partly in the shape of loans and earn interest on them and partly by agreement to buy shares and participate in the profits by a right to dividend. This new power, of course, will throw more onerous obligations on the Corporation because, having once obtained a stake in equity capital, it will inevitably have to take the consequential responsibility of participating in the management of industrial concerns by nominating its own representatives on their Boards of Directors. In a sense, this function is not altogether new to the Corporation. Now, under the present Act, if the Corporation has to grant loans or to subscribe to the debentures of an industrial concern in excess of Rs. 1 crores, it has to obtain the guarantee of the Central Government for the repayment of such loans, debentures and the interest on them. It has been argued that since Government owns 20 per cent of the shares of the Corporation and it stands guarantee for the balance of the share capital and all the bonds issued by the Corporation, this additional guarantee in respect of loans etc. of the value of more Rs. 1 crores is superfluous. Therefore, the Amending Bill has abolished the need for guarantee and in its place it has substituted prior approval of the Central Government.

The Corporation already possesses the power to guarantee deferred payments agreements for imports, although such agreements are few and far between. It has been found that small units which find it necessary to purchase indigenous capital goods on deferred payments agreements are handicapped for want of an acceptable guarantor. To remove this handicap the Amending Bill empowers the Corporation to provide such guarantees. The other amendments made by the Bill are of a minor nature and still others are of procedural or consequential nature. All in all, the new powers conferred on the Corporation amount to a ver-

dict of good performance in the past and a vote of confidence in its ability to be an effective agency for financial assistance to industry in the future.

Foreign Exchange

ACCENT ON EXPORTS

EASILY THE most serious developmental problem the country has been facing today is the foreign exchange problem. On the availability of adequate foreign exchange will also depend the future tempo of India's economic development. It is not surprising, therefore, that the question has been receiving urgent and serious attention almost everywhere in the country. The other day, inaugurating a symposium on "Problems of Foreign Exchange Resources" in Bombay, Mr. B. R. Bhagat, the Union Deputy Minister for Finance, observed that the country must make every effort to reduce its imports, on the one hand, and increase its exports on the other, if the foreign exchange problem has to be tided over. The Minister attributed the balance of payments difficulties during the Second Plan period to the high rate of investment, particularly in industry. (But that was precisely what the Plan was intended to achieve.) In the first four years of the Second Plan, he went on to disclose, imports rose by about fifty per cent over the annual average during the First Plan, while there was actually a decline in the annual rate of exports from Rs. 622 crores in the First Plan period to Rs. 607 crores in the first four years of the Second Plan. As reasons for the sudden rise in imports he listed a substantial rise in capital goods imports; an unexpected rise in import prices—particularly of machinery and iron and steel; increases in food imports and imports of raw materials and intermediates.

The last mentioned particularly is significant, in the sense that it is so closely linked up with the progress of our industrialisation. In view of this, it represents, in fact, one of the chief problems of the future, unless we can produce increasing quantities of these new materials and intermediates at home. Referring to factors on the export side mainly responsible for the present weakness in our balance of payments position, the Minister said that not only had the average level of exports been generally declining during the Second Plan period but this decline, especially in our main traditional export items, such as tea, cotton, and jute, was more the result of a fall in quantity than in price. Of course, to some extent, exports also declined because of the international recession in 1957-58. However, the increase in exports in 1958-59 was not because of an expansion in volume but because of a rise in prices. Yet another reason, Mr. Bhagat said, was that the long-term prospects for many of our staple exports were poor, due to competition from synthetic substitutes or from producers from other countries. He did not, of course, say that the neglect of staple exports by ourselves, as witness jute goods, was no less responsible for this result.

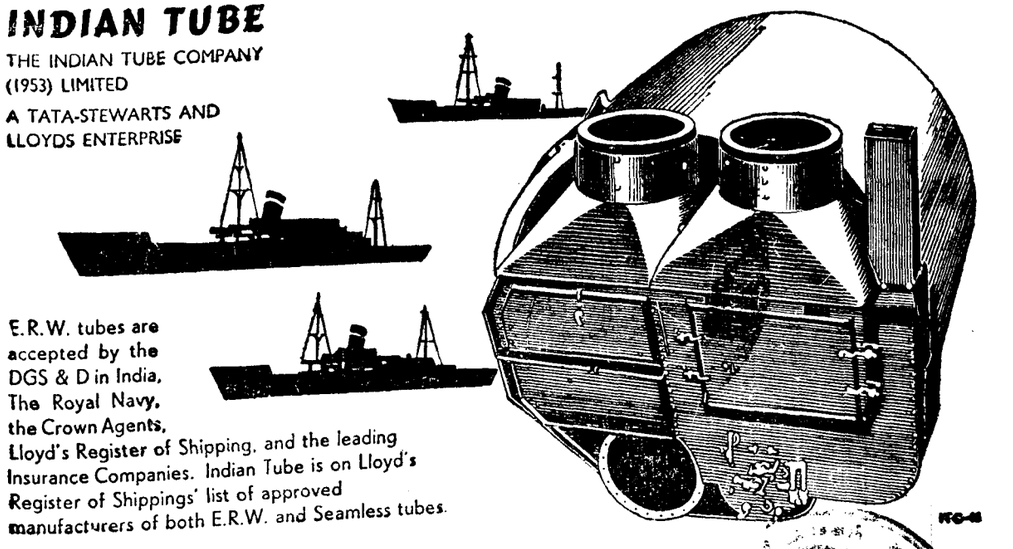
Mr. Bhagat estimated that India would require Rs. 1,900 crores for the import of machinery in respect of projects included in the Third Plan and Rs. 200 crores for imports of components and intermediate products, in addition to the maintenance imports of Rs. 3,570 crores during the 1961-66 period. However, as against this, the country's foreign exchange earnings were likely to amount to no more than Rs. 3,570 crores, including receipts of invisibles valued at Rs. 120 crores. But, over and above this, he said, the country would require about Rs. 2,600 crores more to bridge the gap resulting, 'inter alia', from repayment obligations to the tune of Rs. 500 crores. After painting this gloomy picture, the only concrete suggestion that he made was to appeal to the industry and trade to play an active part in the development of the country by taking suitable measures for the improvement and standardisation of all our exportable products. It is, of course, the duty of Indian industry and trade to pull its utmost weight to maximise exports, but is the Government doing everything in its power to stimulate exports? According to Mr. Morarji J. Vaidya, President of the Indian Council of Foreign Trade, at any rate, every effort is not being made to increase exports of our manufactured goods by the trade, but that such is actually being hampered by the constant dependence and long waiting that has become inevitable under the present system of controls, licensing and permits. Even the plans of expansion of industries and their efforts at expanding production by co-operative effort like Export Houses have been continuously delayed, thereby leading to frustration.

Mr. G. L. Mehta, our former ambassador to the United States, has a solution to our foreign exchange problem, which is that the country should undertake the manufacture of light and simple machinery instead of heavy plants. He has also suggested that, Indian steel being the second cheapest in price in the world, steps should be taken to explore the possibilities of increasing steel exports. He further wanted the projects entailing the least foreign exchange requirements to be given a priority.

New Issue

MADRAS ALUMINIUM

THE MADRAS ALUMINIUM COMPANY LIMITED, a 10-crore-rupee project for the production of aluminium is proposed to be established in collaboration with an Italian firm, Messrs. Montecatini, who have rich experience in the production and processing of aluminium. The factory will be located at Mettur where high quality bauxite is available from Salem District, in Madras State. The factory will have the facility of electric power which forms about 25 per cent of the industry's cost of production. The Madras Government have guaranteed power supply at a very concessional rate. The project will have an initial capacity to produce 10,000 tons of aluminium per annum—7,000 tons of ingots and 3,000 tons of alloys. The capacity is likely to be doubled as soon as the first plant is completed. The promoters of the Company have made it clear that no additional capital will be required for the expansion to 20,000 ton capacity, as the Company will be able to meet all the additional capital requirements from its own earnings.



The present issue is of Rs. 6 crores out of which the Italian collaborators are being allotted Rs. 1.20 crores worth of equity shares in lieu of technical know-how etc. offered by them. The Madras Government is subscribing to the extent of Rs. 1.50 crores; preference shares worth Rs. 90 lakhs and equity shares worth Rs. 60 lakhs have been subscribed by the Madras Industrial Investment Corporation. The Industrial Finance Corporation of India is subscribing to the extent of Rs. 1.20 crores equally divided between preference and equity shares. The promoters of the venture and their friends are subscribing Rs. 1 crore worth of equity shares and the remaining Rs. 1.10 crore worth of equity shares are being offered to the public. The issue which opens on January 6, 1961, is obviously likely to receive a good response in the market.

It is gathered that most of the machinery for the project will have to be imported from Italy at a cost of Rs. 3.80 crores. The amount will be paid in 1963 when it is shipped to India. The Italian collaborators of the Company have made arrangements with an Italian bank for the payment of this amount and the interest thereon against ten-year Italian lira Bonds of the value of Rs. 4 crores. This will be a sort of debenture loan at 5 to 6 per cent interest. For an Indian venture, this will be a new experiment and appears to be a fairly sound arrangement.

E.R.W.
MARINE
BOILER
TUBES

Recognised for their outstanding performance E.R.W. steel boiler tubes, manufactured by Indian Tube, are specially designed for protracted use in land, loco and marine boilers. High frequency current ensures efficient welding, and normalising is carried out in controlled atmosphere furnaces to produce a ductile tube with a smooth, blue finish. Rigid quality control from the raw material stage to the finished product guarantees that Indian Tube's E.R.W. tubes will meet all the tests specified by Lloyd's Register of Shipping. E.R.W. tubes are, in every respect, the equivalent of seamless tubes of similar dimensions.

INDIAN TUBE
THE INDIAN TUBE COMPANY (1953) LIMITED
A TATA-STEWARTS AND LLOYDS ENTERPRISE

E.R.W. tubes are accepted by the DGS & D in India, The Royal Navy, the Crown Agents, Lloyd's Register of Shipping, and the leading Insurance Companies. Indian Tube is on Lloyd's Register of Shippings' list of approved manufacturers of both E.R.W. and Seamless tubes.

FROM THE CAPITAL'S CORRIDORS

PROF. GALBRAITH'S VIEWS ON INDIAN ECONOMY

REPORTS from Washington suggest that Prof. J. K. Galbraith will be the next US Ambassador in India. How does he look at our Third Five-Year Plan and the development of the Indian economy during the past ten years? Prof. Galbraith was here in April last. He submitted at that time two notes to the Planning Commission; one on the foreign resources for the Third Plan and the other on the rationale of Indian economic organisation. These notes reflect his views on the need for increased foreign assistance for the implementation of our next Plan and on the deficiencies of the present economic system of this country.

In his note on "Foreign Resources in Third Plan", Prof. Galbraith finds fault with the suggestion made in certain quarters that foreign assistance in our Third Plan, especially towards its close, should be reduced considerably and that the main aim of this Plan should be to make India independent of such assistance. In Prof. Galbraithis opinion these suggestions emanate from dubious and false propositions; the arguments in their defence are mainly political and moral.

Prof. Galbraith has expressed the view that it is very unlikely that India having thrown off the British yoke, will succumb to the control of its creditors. "Among the ominous figures in Indian history", he says, "Eugene Black is unlikely to rank with Robert Clive, Warren Hastings or even the late Lord Curzon." It is true, he argues, that in the past several small countries have been taken in hand for their debts. But this is not the fate of great nations. Had it been so, the United States in the 19th century, always a large debtor and sometimes an unreliable one, would have succumbed to Baring Bros. Creditors, he says, will always presume to make suggestions to debtors. Debtors if they are otherwise strong need not hear or fear them.

About the moral aspect of the issue, Prof. Galbraith thinks that this proceeds from what in the United States is called 'copy book maxim'—neither a lender nor a borrower be. This cogent advice, he asserts, has not been followed by those who have won wealth. And for a developing country like India, this is not the necessary precept.

On the question of mounting service charges on foreign loans, which will make heavy inroads in the balance of payments position of India, Prof. Galbraith has to say this: "It is quite true that service charges on loans are increasing. In the current year (1960-61) they are Rs. 23 crores. In the second year of the Third Plan, according to some preliminary projections, they may reach a peak of Rs. 100 crores. But, save in the fiscal imagination, these are not a unique or a decisive element in the balance of payments. They must be covered. But so the growing payments for oil". Should the burden of repayment of foreign loans become too heavy, he is of the opinion that arrangement can always be sought at least on government loans, for extending the period of repayment. There is no crime in this, he says. It is a common commercial practice. Such extensions so far as inter-governmental loans are concerned might be easier to arrange than new borrowings.

FOREIGN AID AND ECONOMIC DEVELOPMENT

Growing countries, Prof. Galbraith asserts, have almost always borrowed. Even the USSR has frequently indicated its desire to do so. Foreign resources increase the pace of advance and provide capital equipment which is not available in the country. And this foreign assistance has not to be paid for from ordinary foreign exchange earnings, but from its own earnings. Since this claims only a part of the return on suitable investment, there is a net gain from the transaction. In the last century, private capital nourished development of many a country. At present it confines itself certainly in some professedly socialistic countries to a rather narrow range of oil, mineral and marketing activities, combined on occasions with promises of future wonder that have a rather low cash value. Government-sponsored capital movements have accordingly taken the place of private capital movements. Whether good or bad, this is the modern form of capital movement. It is here to stay and must now be regarded as perfectly normal and natural. Prof. Galbraith thinks that there has been probably an improvement in the conscience of the richer nations since World War II. They have come to feel that they owe some responsibility for helping the poorer lands. This should be welcomed, encouraged, cherished and used. "So both government loans and government grants", he says, "should be considered a normal aspect in modern international relations. If the Indian Government by some false calculations or some misplaced morality fails to exploit them fully, it does a disservice to its own people, to other needful countries and perhaps to the souls of those who are impelled to provide the assistance."

The effort to make India independent of foreign assistance, Prof. Galbraith observes, needs to be distinguished from the effort to reduce dependence on imported capital goods. This, he says, is a natural and desirable consequence of industrial development.

Prof. Galbraith's observations in this note on what should be the size of a Plan are provocative indeed. "A Plan', he says, "is not only a projection of intentions and an assurance of internal consistency in what is attempted. It is also a goal. By its existence it stimulates effort and acts as a lodestone to accomplishment. The larger the goals, the larger the effort in mobilising resources and in getting them used... A big plan creates the need. Democracy being what it is in India and elsewhere, we can be sure that a Plan that produces no crisis is a Plan that is too small. The crisis brings the required effort." This is an observation obviously which goes to establish that a developing country has got to embark upon ambitious planning.

US POLICY ON PROVIDING AID

Can an ambitious Plan be executed? Prof. Galbraith's reply to this question would be in the affirmative. An ambitious Plan will call for increased foreign aid. So far as economic assistance from the US is concerned, he thinks it is matched to the size of the Plan and the crisis it produces. Says he, "The same considerations (as mentioned above in regard to the size of a Plan) hold in respect of foreign resources. In the case of the United States, the amount of foreign aid provided is not based on a refined calculation of what as a people we can forego from domestic consumption or what taxes we can pay, or on what spending we can afford without inflation. These matters are all raised in the foreign aid debates but for their orchestral not their economic effort. So far as any historical and arbitrary figure can be rationalised, the amount of foreign assistance voted by the US Congress is a consequence of the size of the request and the urgency of the need. But both the size of the request and the urgency of the need are related to the size of the Plan. If the Second Five-Year Plan (of India) had been smaller, the ensuing crisis would have been milder, the requests for aid would have been smaller and the pace of development would have been slower in a country where to many people it must already seem terribly slow. As it was in the last Plan, so it will be in the next. The amount of the aid will depend on the size

of the crisis. The United States Congress awards no prizes for modestly conceived and neatly executed Plans. Neither do other Governments for whose increasing participation we must hope".

Prof. Galbraith hopes that an increasing number of Indians would take a rational view on the role of foreign assistance in their economic development. And such a view, he opines, should not be concealed by double talks—by coupling defence of capital imports today with resounding promises of balances tomorrow. Aid, he adds, should not be defended today by arguments that will cause difficulty and misunderstanding a few years hence. Even the basic strategy of a Plan, which is that large size makes for large effort at home and establishes the basis for larger claims on foreign resources, should not be concealed.

RATIONALE OF INDIAN ECONOMIC ORGANIZATION

This is what Prof. Galbraith said in April last on the rationale of Indian economic organization.

"Returning to India after an absence of three years, I am impressed by the progress (this country has made) in many directions. I must confess I am also impressed by the lack of progress in working out a rationale of Indian economic institutions. This seems to me the most urgent problem that India now faces....The time has come when India must seriously consider the pattern and shape of its economic institutions. Matters that are now being regarded traditionally and piecemeal must, if this is possible, be viewed pragmatically and as a whole.

"The basic division in Indian economic institutions is between the public and the private sectors. This distinction is commonplace in everyday discussion as is the question of what industries and activities should be in the public sector. There is also a good deal of debate over co-operatives, small industries and other such issue. But there is very little public discussion of the organisation of the public sector. The decisive question is nationalisation. Once in public hands things will work out. The real issue, to which most attention is paid, is how to scrape together resources to establish or expand industries especially in the public sector and what the priorities should be.

POST OFFICE SOCIALISM

"I venture the view that the public sector has reached the point where its organisation requires a great deal of attention. India has a kind of post office socialism which is out of date and which is working far less well than it should and must. Even a fairly brief stay at the actual sites of the new steel mills reveals numerous faults and further difficulties that are on the way. Competent executives are frustrated and angry over the centralisation of purchasing, personnel and financial decision in New Delhi. These delays are a source of discouragement to the younger engineering and technical personnel who should be showing great enthusiasm. The result is poor morale where it should be high.

"Moreover, people in the field feel no responsibility for the next steps in the development, i.e. for the enlargement of these plants. Nor is there much concern over how the present ones, when they come in, can be operated at low cost and with satisfactory earnings. Expansion is a matter for New Delhi. Presumably the foreign engineers will be called on again. Nor is the economics of plants operation a local question although success or failure will be decided locally.

"The problem of earnings and investment in the public sector is especially urgent. Until now the most difficult problem in Indian planning has been where to get resources for investment. In a competently guided country like India—as distinct from most Middle-Eastern or Latin American countries—this, not administrative capacity, is the bottleneck. Everything turns, or seems to turn, on what can be mobilised in taxes and voluntary savings at home and what can be obtained in loans and grants from abroad.

"Obviously, a prime aim of India must be to plan its way out of reliance on such uncertain and exinguous sources of domestic savings. (Foreign resources present a somewhat different problem.) To give people income and then remove it by taxation, inflation or appeals to thrift is an inefficient and self-limiting procedure. In both the Capitalist and the Communist countries, investment is in very large measure from the earnings of the industrial enterprises. These accumulate surplus which becomes available either for their own expansion or elsewhere. The enterprise thus assumes responsibility for both the technical side of its own growth and improvement and also for getting the requisite resources.

FINANCE FOR FUTURE EXPANSION

"Something very like this must happen in India as all Indian economists recognise. Industrial plants must take on their full job which is to be efficient producers and to accumulate the surpluses which will provide for future expansion. It is very important that these surpluses be immediately identified with such further expansion. Otherwise, they may become the target of workers in the industry who can easily be persuaded that they have a privileged claim on them, and consumers may also insist on low prices as in the present case of rail passenger travel. The result will be small surplus (or none) and hence no resources from this source. That I have called post office socialism—public ownership that contents itself with avoidance of loss or a modest profit which it returns to the Treasury, will inevitably prove a stagnant form of economic organisation.

"The proper organisation of the great establishments is not the only problem of the public sector. There is also the task of generating effort and enthusiasm in small activities—those of the villages, extension blocks, cities and perhaps also the States. The need for this is well recognised and is, indeed, one of the recurring themes in Indian discussion. The best planning provides people with an opportunity for doing what is beyond the mind and even the imagination of the planners.

"But the things that arise here in the public sector —expanding local control over local public finances, the sponsorship and development of local industries, the organisation of volunteer labour effort, of co-operatives, the provision for a period of rural service by university graduates—have little relation to the problems of organising steel production or fertilizer manufacturing. They require a different organisation and, to a considerable extent, they call for a different type of mind. This type of public activity and enterprise will be blighted if it is too closely identified with ordinary large-scale industrial development.

NOT ONE PUBLIC SECTOR BUT THREE

"We may think, indeed, not of one 'public' sector but three. One sector is concerned with bringing totally new industries into existence. This has been the important sector so far—it has been creating such industries as electrical generation, fertilisers, iron and steel. The second sector, an outgrowth of the above, is concerned with the operation, expansion and regeneration of the existing industries and with providing capital for the establishment of new industries. Finally, there is the wholly different sector which seeks to develop local responsibility and the release of local energies.

"By way of making this more explicit, let me suggest in summary form, without extensive argument, what each sector involves. I hope this will not be taken as any sort of final suggestion but rather as a basis for discussion.

"(1) The three parts of the public sector may be denoted as follows: Sector A—Initiation; Sector B—Operation, Expansion and Financing; Sector C—Spontaneous Development.

"(2) The 'Initiation' sector will be concerned with the launching of 'entirely' new industries. This, as in the past, will be a ministerial function. However, this does not preclude the granting of more autonomy of effort than at present to companies developing new industries. And existing public firms should often be called upon to foster and develop new ones. Still initiation is a distinct function. It calls for decisions as to what and where and in the early stages of creation of an industry considerations of efficiency and earnings are not vital. It is getting things started which counts. This stage of initiation has principally characterised the industrial public sector in India up to this time. However, a new phase is rapidly approaching.

"(3) The 'Operation, Expansion and Financing' sector embraces those industries which are now fairly launched. While in the initiation sector a considerable measure of ministerial initiative and supervision may be necessary in the 'Operation, Expansion and Financing' sector ministerial supervision and intervention must shrink to a minimum. Civil service decision making is inevitably and properly slow and deliberate and demanding in quality. Operating decisions must be prompt and they need not always be right for most such decisions are reversible. So ministries have as their principal function selection of good managers supported by competent (though not powerful) boards and the provision of firm but workable rules by which the public enterprises shall live. (Covering, in particular, recruitment and labour relations, accounting and financial procedures and procurement policies. While the rules should effectively exclude dishonesty and favouritism, it should be remembered that excessive precautions can be very costly. Rules should be enforced not by advance clearances but by post-audit. Beyond this ministries must hold the companies responsible for results. To this end officials should never be members of the Boards. If they are, the autonomy of the enterprise will almost certainly be lost as the Board becomes a link in the civil service hierarchy. Parliamentarians must have clearly in mind that when they question individual decisions of companies they force ministries to protect themselves by asking for advance knowledge and approval of all decisions. This destroys the autonomy and hence the effectiveness of the public enterprise. And again, it must be stressed, the public enterprise must be free even to make mistakes for these are inevitable in efficiently rapid decision making.

ON WHAT DEPENDS SUCCESS?

"(4) The success of the 'Operation, Expansion and Financing' sector will be measured broadly by the efficiency of its operations—its ability to organise ample production at low cost and to sell at remunerative prices. (Control of prices is a separate chapter. To the largest possible extent they should also be under the control of the enterprise. Then prices will not be an excuse for low earnings. This decentralisation of price-making has been a major accomplishment of recent Yugoslav experience. However, there will be cases, electricity and doubtless steel are examples, where central or group price setting are inescapable.) This means that there will be earnings—profits—and this is the most important test of the effectiveness of the public enterprise. (As a measure of performance the USSR attaches about the same importance to profits as the US). Production is not the only task. The existing concern is also the logical agency to undertake expansion in its own line and even to bring into existence related industries. When it is efficiently organised for operation it will usually be efficiently organised for expansion. In any case it will be more effective for this than a wholly new, inexperienced and untested organisation.

"(5) Expansion and operation in this sector should be tied together by the financing function. When a firm is given an expansion target it should be asked to prepare a plan for financing it. This plan would have first claim on earning. It would come to the Government only for what would not be supplied from earnings. If the expansion schedule does not absorb all the planned earnings, these should be used to repay capital and thus become available for investment in other industries. A public development bank is a logical part of this sector.

"(6) These accounting procedures, which incidentally are also broadly common to capitalist and socialist countries, have the great virtue of keeping the essential character of the enterprises and their tasks in the public view. Thus if the enterprise is obliged to use its earnings for the planned expansion rather than return them to the Treasury their use for development will be clear to workers and consumers. They will be less likely to assert a privileged claim on the assumption that they are profits in the old sense. It will be seen that excessive wage or salary claims—or indeed any waster—is at cost to the nation's development.

"(7) Time does not allow me to comment on the 'Spontaneous Development' sector which I think has great possibilities. Development is not confined to the great industrial enterprises. As a growing body of opinion in India clearly realises, much must be done—always speaking of the public sector—in releasing the energies and efforts of local bodies and organisations. Community development is an important beginning, but I hazard the guess that opportunities here have scarcely been touched.

"(8) These are hurried comments. As I have observed they are intended more to provoke decision not answer questions. I have assumed that India has made a firm decision in favour of a public sector. But this decision is the beginning, not the end, of the discussion. In the old days the principal enemy of public enterprise was, no doubt, those who disapproved socialism. Now it is socialists themselves. For it is socialists who refuse to consider seriously the peculiar requirements of the modern productive enterprise, whether public or private; who decline to give it the autonomy it must have; who destroy it by meticulously passing on its decisions and thus forcing upon it an intolerable and unworkable centralisation; who decline to see that the organisation of public enterprises must keep pace with new conditions and new tasks; who are careless about the standards to which management of the enterprises must be held; and who, on occasion encourage workers and consumers to appropriate the surplus on which expansion and growth depend and without which there will be stagnation. Above all it is socialists who are responsible for the paralysing belief that success is a matter of faith, not works.

"In many parts of the world, including India there is in fact no real alternative to extensive public enterprise. And while public enterprise is often successful, the record is highly uneven. It is sufficiently imperfect so that no one concerned with the success of economic development can take it for granted."

NDC MEETING

The next meeting of the National Development Council will be held here on January 14 and 15. This meeting will finalise the Third Five-Year Plan, the

draft of which has been under discussion in recent months. As a result of the delibrations the Planning Commission has had with States' representatives, State Plans have been revised and financially upgraded by Rs. 300 crores. The State Governments have undertaken to find Rs. 200 crores out of this additional amount required to finance their Plans. The balance will be provided by the Centre.

The outlay on roads development is likely to be stepped up in the final draft of the Third Plan by at least Rs. 100 crores. This will be in addition to Rs. 120 crores earmarked for construction of strategic roads on the border. The final draft is also expected to contain larger allocations for the rehabilitation of displaced persons and development of agriculture. It will also provide for the Central Government's building programme.

FOREIGN ASSISTANCE AND COAL INDUSTRY

Foreign assistance, in a big way, has been offered to India to develop its coal industry during the Third Plan period, the countries offering aid being the United Kingdom, the United States of America, West Germany and France. This follows the visits to India of coal experts from these countries.

The British National Coal Board has offered to develop three underground deep coal mines, while the USA has offered to develop some open cast mines. West Germany has offered to put up and maintain a workshop for coal mining equipment. The French offer largely relates to technical assistance. Ten Indian engineers have already left for France for technical training.

IMPROVING WORKING OF RAILWAY WORKSHOPS

The West German Technical Mission which visited India sometime ago to study the working of railway workshops in this country and to suggest measures to improve their functioning, has recommended that workers for all important and well-paid jobs in these workshops must be picked according to the "choose and pick system". The principle of "promotion by seniority" must in this respect stand back.

The historical development of Indian railways and differences of gauge in various parts of the country, the report says, have led to the establishment of independent workshops in various regions. Lack of a supplying industry has further necessitated a degree of self-production of spare parts and tools in each workshop which is quite unusual in Europe. This organisation has to be efficaciously rationalised, if the aims of higher productivity are to be achieved. The Mission recommends rationalisation of railway workshops according to the new concept of "organisation and distribution of work", which is super-regional in its character and replaces the many-fold tasks of a workshop by a logical and economic concentration of similar work orders that can be executed on the conveyor after appropriate sorting.

The Mission feels that concentration of construction and repair work of passenger-stock bodies at some points will considerably improve the working of the railway workshops in this country and lead to economies in the running of the Indian railways system. In the opinion of the Mission, it is imperative that wooden bodies with metal sheeting are replaced by welded steel bodies as soon as possible.

The new construction and repair work of welded steel passenger-stock bodies, the Mission feels, can be entrusted to the Matunga workshop — which has large and suitable plants only partially utilised at present — in addition to the Integral Coach Factory at Perambur.

Based on its studies, the Mission entertains no doubt that if the recommendations offered by it are systematically carried out, the workshop service of Indian railways will play an important and valuable role in the country's struggle for productivity and a better standard of living of its people.

DIESELISATION OF RAILWAYS

The Railway Minister, Mr. Jagjiwan Ram, inaugurating the meeting of the reconstituted National Railway Users' Consultative Council, said that it was proposed to equip the railways with diesel and electric power to the extent of about 70 per cent of the additional needs of freight traffic during the Third Plan period. Steam traction would, however, continue for all other services.

Complete electrification of about 1,100 miles, including those where electrification programme is currently being executed, and doubling of about 1,600 miles of track were also contemplated, the Minister said. Other measures for improving line capacity, he added, would include remodelling of yards, opening of new crossing stations, providing of additional loops and introduction of centralised traffic control and automatic signalling.

AVOIDANCE OF DOUBLE TAXATION

The negotiations between the Governments of India and the United Kingdom on the question of evolving an agreement for avoidance of double taxation in the two countries have not yet fructified. It has not been possible to reach an agreement on all the points because the Governments of India and the United Kingdom hold different views on some of them. The main hurdle is said to be the taxation of profits of shipping companies.

PORTS DEVELOPMENT

Mr. Posthuma, Managing Director of the Port of Rotterdam, is in India at present on a six-week assignment under the auspices of the United Nations Technical Assistance Board. He will advise the Government of India on the following two issues:

(i) The project for establishing a subsidiary port in Calcutta region.

(ii) The dock modernisation scheme of Bombay Port Trust and other related plans.

BRIEFS

Thirteen haulage gears are under construction for Indian coal mines by the Carron Company of Falkirk, Scotland. They are 100-H.P. spur-geared, single-drum haulage machines, to be delivered to the Singareni Collieries, in Andhra Pradesh, early next year, at a cost of £4,000 each.

* * * *

The Union Government is negotiating with the P. & O. Group of Companies to obtain further reduction in the sale price of the Garden Reach Workshops and the Mazagon Docks Ltd., on the basis of the balance sheet for the year ending March 31, 1960.

* * * *

The Government has approved in principal the proposal of M|s. Sahu Jain Ltd. to set up a factory in Maharashtra, at an estimated cost of Rs. 10 crores, for the manufacture of newsprint from sugarcane bagasse.

* * * *

A boot manufacturing unit is being set up in the Harness and Saddlery Factory, Kanpur. The necessary equipment for it is being obtained from Czechoslovakia. Production is expected to start by the middle of 1961.

* * * *

Without taking into account receipts from foreign aid negotiated during the current year, the net foreign exchange requirements in the last year of the current Plan are estimated at Rs. 170 crores.

* * * *

The Government of India has decided to increase the cess on coal from 36 nP. per metric ton to 49.21 nP. per metric ton, with effect from January 1, 1960.

COMPANY AFFAIRS

THE ASSOCIATED CEMENT

While there was some improvement in gross profits of the Associated Cement Companies Ltd. during the year to July 31, 1960, the results of the year's operations were not very encouraging. This was so mainly because, despite technical improvement resulting in higher efficiency and production, costs have continued to rise steadily. The inflationary rise in prices generally, enhanced railway freight, increase in the rates of purchased power, higher incidence of wages and dearness allowances and the increasing burden of depreciation on account of the much higher cost of expansion and rehabilitation have been in the main contributory causes. The implementation of the recommendations of the Cement Wages Board would have increased the labour costs still further, but for the acceptance by Government of the view expressed by the Wage Board concerning the incapacity of the Cement Industry to bear this additional burden and the consequent need to neutralise it by an appropriate increase in the retention price. The directors have pointed out that unfortunately, in the process of computing the incidence of this higher labour cost per ton of cement, the installed "rated" capacity has been taken as the base instead of the actual production which was considerably lower. And this has been sought to be justified by Government by the mis-application of an erroneous principle enunciated by the Tariff Commission.

The Directors have added that only after repeated representations by the Company and by others engaged in the industry the Government has now referred the whole question of cement prices once again to the Tariff Commission. This means that Cement Industry will have to suffer without any redress not only the entire rise in costs which has already occurred since January 1958 but also the further rise which will undoubtedly occur until 1st July, 1961, when a new retention price will presumably become operative. Such unsympathetic attitude of Government in matters prejudicially affecting a major controlled industry is indeed frustrating.

Production of the Company during the year to July 31, 1960 though somewhat higher than in the previous year suffered for a variety of reasons. As indicated in the annual report by the Chairman curtailment of production for want of workable orders in the early months of the year, break-down of crushing machinery at one factory, shortage of Coal and general inadequacy of railway transport both for the carriage of raw materials inwards and the movement of cement outwards, were the main contributory causes. In the result, neither production nor despatches could attain the level of installed capacity.

The Company has paid considerable attention to the expansion schemes. The first stage of the modernisation and extension of the Kymore Works was completed early this year with the removal of certain initial difficulties experienced since April 1959, when the first of the two 500 tons-per-day Kilns went into production. The second phase of the extension has now completed with the lighting up of the second 500 tons-per-day Kiln in September 1960. As a result of this extension, the capacity of the factory has risen from 3.60 lakh tons to 5.73 lakh tons per annum. The extension of the Shahabad Works which raised its capacity from 4.00 lakh tons to 5.65 lakh tons per annum, was completed in June 1960.

The Directors have recommended the payment of a dividend for the year under review at the rate of Rs. 12 per share subject to deduction of tax at appropriate rates under the Finance Act, 1960.

MYSORE KIRLOSKAR

The Mysore Kirloskar Ltd. has continued to make good progress in the manufacture of its existing lines as well as new lines of Capstans and Turrets and the construction of a new separate building for the separate unit of Capstans and Turrets is also well in progress. During the year to June 30, 1960, the company made a profit of Rs. 12.64 lakhs after providing for taxes and depreciation etc. The Directors have proposed that distribution of dividend at the rate of 12 per cent on the paid up capital. A sum of Rs. 2 lakhs has been proposed to be separated towards dead redemption Fund, Rs. 3 lakhs towards replacement and rehabilitation reserve and Rs. 3 lakhs towards the general reserve. They have also proposed the payment of bonus for the year under review to all employees of the Company including the staff who were on the rolls of the Company during the year ending 30th June, 1960. The bonus to be paid will be equal to one-fourth of the basic earnings of an employee during the year under report. It will be paid before June 30, 1961 in suitable instalments and as desired by the State Government, a suitable portion of the Bonus due will be paid in the form of National Savings Plan Certificates.

Company Meetings

ASSAM SILLIMANITE LIMITED

Another Good Year

Upward Trend of Profits

Mr. S. M. Wahi's Statement

The following is the statement made by Mr. S. M. Wahi, Chairman, Assam Sillimanite Limited, at the Annual General Meeting of the Company held at Gauhati, Assam, on Monday, 19th December, 1960:

The Company has made some further progress during the past year, with production increased to 6,957 tons and transportation from the Mine reaching a figure of 7,107 tons. The improvement effected in the working of the Company has reflected itself in the profits being Rs. 3,18,488.09, available for disbursement. The shareholders get Rs. 1,80,000 less tax; Rs. 1,05,873 goes to Income-tax and Rs. 32,615.09 has been taken over to next year. On the basis of the above working results, the Board decided to declare an interim dividend of 6 per cent in October and this has been recommended to the shareholders to be approved as the final dividend for the year.

The Directors' Report and the Balance Sheet along with the Auditors' Report have been with you for some time and, with your permission, I shall take them as read.

THE MAIN REFRACTORY PLANT AT RAMGARH

You will, I am sure, want to know what progress has been made with regard to establishment of the Refractory Plant at Ramgarh, Bihar, to which I had referred in my speech last year. Due to the delay in the Government's approval of the Investment and Stock Option Agreements, the original deliveries of Plant and Machinery offered by the suppliers in Germany have been greatly altered. The phasing of the Project had to be redone on the basis of firm quotations and deliveries now offered for Plant and Machinery.

The revised Project would cost Rs. 81.23 lakhs for the First Stage and Rs. 47.60 lakhs for the Second Stage. In the First Stage 29,000 tons valued at Rs. 96.20 lakhs of finished high class refractory bricks and shapes mortars and mixes would be manufactured. On the basis of the present plans, orders for Plant and Machinery to be imported would be placed during January 1961. According to the deliveries stipulated, shipments could be expected by July 1962 and, after erection production should commence from October 1962. Thus in the financial year 1963 approximately 6 months working results would be reflected in an estimated production of finished products worth about Rs. 48.10 lakhs.

THE INITIAL REFRACTORY PROJECT

The working results of the financial year 1961 and 1962 would, therefore, reflect no gains from this new Project, while the investments and expenses would, of course, be there. The Directors had, therefore, decided to cover this interim gap by:

(a) establishing immediately a Refractory Plant at Ramgarh using indigenously procured Plant and Machinery, with an installed capacity of 5,000 to 6,000 tons;

(b) increasing production at the Mine by another 25 per cent over the existing figure of 7,000 tons, through further capital outlay on Plant and Machinery for mining;

(c) development of Fireclay deposits recently acquired in and around the vicinity of Ramgarh Project for own consumption and sale.

With these developments and forward planning, it is expected that the Company would be in a position to have the desired Profitability and Cash Flow during 1961 and 1962. It would, however, be quite a strain initially to develop these Projects from existing financial resources of the Company. The Initial Project would go into production from January 1961, producing 6,000 tons of Fireclay Bricks and Shapes for the industries in the vicinity.

You are aware of the need to gear our development to the dynamic requirements of the country. The Prosperity of this country is largely conditioned by the way it solves the problems of its major industries. There is a rapid expansion of the steel and other industries in the country both in the Public and Private Sectors and there is a gap between the installed capacity for refractories and the anticipated requirements in the Second and Third Five-Year Plan periods. The present installed capacity of refractories in India is 500,000 tons per annum approximately whereas the anticipated requirements by the end of the Second Five-Year Plan period alone are estimated at twice the present installed capacity. Imports of refractories are consuming a large chunk of foreign exchange of the country. With the big industrial development these requirements will continue to rise even beyond the one million ton target envisaged at the end of the Second Five-Year Plan.

EXPANSION OF MINING OPERATIONS

There is only one other point that I shall touch before I conclude. The Company's diversion in the field of industry should not be allowed to lessen its interest in covering the mining operations. The expansion which was planned in last year in respect of our mining operations has been undertaken at Sonapahar Mine and will be gradually extended to the areas in other States where we have received prospecting licenses and are obtaining the mining leases.

The personnel at the Mine with their hard work have made Sonapahar an excellent spot. Some good labour welfare work has also been done including the establishment of a fine children's school. With a pretty lake recently completed and with pineapple orchards along with other agricultural developments, Sonapahar is growing up to be an attractive spot for the people of the locality.

The Mine Manager with his enthusiasm for flying, has established a runway which has made Sonapahar approachable by air in 20 minutes flying time from Gauhati. A small aircraft recently acquired by the Company would prove extremely useful for prospecting and mapping new deposits in the hilly terrain around Sonapahar. A new life seems to be bubbling in this tribal area, hitherto disconnected from the rest of the World. Several such underdeveloped areas have to be developed in India and Sonapahar could easily be set as a good example. And in all this the unceasing efforts of the staff have to be appreciated.

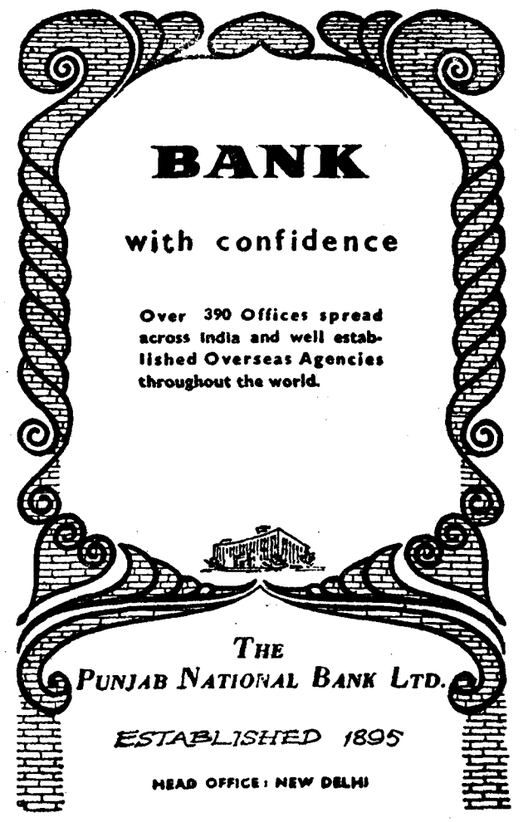
Note: This does not purport to be the proceedings of the Annual General Meeting which can be seen by any shareholder on request.

THE INDIAN IRON AND STEEL COMPANY LIMITED

The Annual General Meeting of the Indian Iron and Steel Co. Ltd., was held at the Registered Office of the Company on Thursday the 15th December, 1960. In supplement of his statement issued with the Accounts and Directors Report for the year ended 31st March, 1960, the Chairman, Sir Biren Mookerjee, said at the Meeting:

Gentlemen:

I have pleasure in welcoming you to this the Forty-third Ordinary General Meeting of the Company and with your permission will take the Notice calling the Meeting as read.



I must apologise for the delay that has this year again taken place in presentation of the Accounts. This, however, is due to no fault on the part of the Company but to the inordinate delay to which our claim for escalation of the steel retention prices has been subjected by Government. As I have explained in previous years, the amounts involved in these escalation claims are of such magnitude that your Directors have not felt it desirable that Accounts should be put forward other than on the basis of confirmed figures, and it was accordingly necessary to await official notification by Government of the increase in question which was not issued until the 10th November, 1960. It is a matter of concern to me that this delay which seems inseparable from all dealings with Government should occur. An essential of industrial management is that prompt decision should be taken on all matters that arise and as one contemplates the delay to which a simple matter like the adjustment of our retention prices in terms of a signed and sealed agreement can be subjected and the multifarious departmental references that appear to be involved, one cannot escape misgivings as more and more of the industry of the country passes into the hands of the public sector and control of the private sector becomes increasingly severe.

I am pleased to inform you that since the issue of my Statement accompanying the Report of your Directors, we have been able through the medium of conciliation proceedings to reach an agreement with the Labour Union on the matter of profit sharing bonus covering a period of four years commencing with the year 1959-60. The wrangling that has occurred each year in the past over the question of bonus has been most distracting both to the management and the workers alike and it is a matter for satisfaction that it has been possible now to negotiate a settlement of this difficult issue. The terms of the agreement will provide a minimum total distributable bonus of Rs. 46,80,000; Rs. 49,80,000; Rs. 53,30,000 and Rs. 56,80,000 for the four years involved, with a maximum for the respective years of Rs. 48,80,000; Rs. 52,30,000; Rs. 55,80,000 and Rs. 59,80,000.

In my Statement I dealt at some length with the present extremely difficult coal situation which confronts the country and urged that to meet the crisis Government should relax its ideological restrictions on the development of the private sector of the coal industry. I am glad to see that the necessity for this course of action has at last been appreciated and it now remains for an all out effort to be made to retrieve the situation in the shortest possible time. The development of collieries and the installation of coal washeries must, however of necessity, take some years and during this time the position as it affects the iron and steel industry will remain of the utmost seriousness. In these circumstances which prevent us from working up our expanded plant to its designed capacity, you will not I think expect of me an indication as to the financial prospects of the Company for the current or future years since the whole position as you will realise turns on the new steel retention prices to apply as from the 1st April, 1960 that are presently under negotiation with Government. I can only say that I am confident that a realistic view of the position will be taken by Government so that the Company may not be penalised on account of circumstances that are entirely outside its control.

On the subject of raw materials I must also mention the gravity of the situation that has been allowed to develop in regard to the availability of limestone of the quality required by the iron and steel industry. The danger of the position in the light of the large expansion of the industry was foreseen by your management some years ago and warning given to Government. At that time steps were taken by your Company to supplement and safeguard its own sources of supply. It is greatly to be hoped that the sanctity of contracts will be preserved and that those who had the prudence and foresight to realise the situation and to cover their position, will not be made to suffer for the shortcomings of others in this respect.

N.B.: This does not purport to be a report of the proceedings of the Annual General Meeting which will be sent to shareholders in due course.

Latest Crop Estimates 710

made available a fairly comprehensive study of the energy picture in which all the components were put together. "The Eastern Economist" had previously made separate calculations which were published in a Special Article in September 1958, and the Economic Intelligence Unit of the Indian Institute of Public Opinion, working on somewhat different projections, arrived at very similar results. All these estimates, so far as 1965-66 is concerned, provided a fairly consistent figure of 14 million tons. Sometimes, however, the figures as published need to be explained in order to show they are consistent. It is hoped that the explanations given here will show, in fact, that there is a general consensus of opinion that 14 million tons for all products is an appropriate figure, subject to certain contingencies which need to be mentioned.

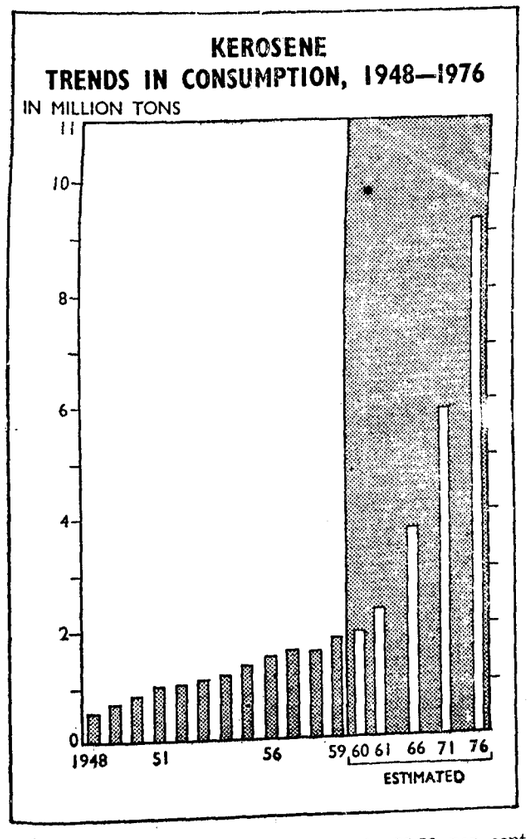
Obviously, the first and most important of these contingencies is the factor of supply. Demand, in a free market, can only be sustained and stimulated if supplies are readily available. So far as kerosene is concerned, that has not been the case in the last two or three years, and while the oil companies have been able, in their refining operations, to make a substantial contribution to the problem of imbalance between middle distillates and other products, it is not unlikely that the structure of India's demand will continue to lead to a surplus of gasoline from the refineries and a shortage of middle distillates. Obviously, this raises the question of how much of the supplies required can be met without foreign exchange payments. It would be foolish to ignore the point that from now on foreign exchange is a major bottleneck in India's international account for as long as it is worth while making projections.

It may, therefore, be that while the demand for oil in 1965-66 as set out in these pages, is about 14 million tons, the actual availability might be less and the country might be required to restrain consumption and consequent production in order to equate demand with what is supplied. The effect of this short fall in supply is not discussed in this Blue Supplement. It is believed that power situation enjoys a priority so large in the total context of India's Third Plan that the import of the necessary oil—always assuming that power and coal cannot be substantially increased—seems inescapable. In any case, the purpose of this Supplement is limited. It is to argue that the demand picture has been substantially misrepresented in the Third Plan's Draft Outline and needs immediate revision. The question of priorities has naturally to be the subject of a far more comprehensive study.

The Growth Pattern of Kerosene: 1948 to 1976

KEROSENE is the poor man's fuel or at least his light. It has been a stable and popular medium for lighting in the urban, semi-urban and rural areas. But its substantial demand emanates from the rural areas and it is bound to remain so for several decades to come, as there is little prospect of any alternative mode of energy supplanting kerosene there. Besides a medium for lighting, kerosene has come into increasing popularity as an agency for cooking fuel. But this type of use is restricted, by and large, to the urban and semi-urban areas and there, too, it has grown on a restricted scale. It would appear that alternative fuels like electricity and gas may claim an increasing share as cooking fuel media, but income increases will offset a fall in demand due to other fuels. This is already reflected in our experience since Independence.

The trends in the actual consumption of kerosene in India from 1948 onwards have been tabulated below:



Year	'000 Long Tons	Inc./Dec. over previous year
1948	560	—
1949	735	+31.3%
1950	885	+20.4%
1951	1,042	+17.7%
1952	1,048	+ 0.6%
1953	1,153	+10.0%
1954	1,221	+ 5.9%
1955	1,381	+13.1%
1956	1,500	+ 8.6%
1957	1,599	+ 6.6%
1958	1,583	— 1.0%
1959	1,824	+15.2%
1960 (Estimate) ..	1,916	+ 5.0%

Growing population and increasing incomes have combined to step up the demand for kerosene. Diversification in its use, however, has a negligible share in raising consumption. But the annual rates of growth as related to the previous year nave been quite erratic. They have varied between 31.3 per cent in 1949 and —1 per cent in 1958. Next to 1958, the year of lowest annual rate of growth was 1952. But different factors contributed to deflating the annual rate of growth in these two years. In 1952 it was the fall in agricultural incomes and in 1958 it was the imposition of a drastic import curb which put down the growth rates to the lowest points during the period covered. These two typical years illustrate how consumption of kerosene is liable to be affected by abnormal factors. But it would be reasonable to state as a general proposition that the growth of consumption of kerosene is largely influenced by the increases in incomes and improvement in standard of living which usually follows it.

The rural areas are the mainstay of demand for kerosene. There, kerosene is used in a substantial proportion for lighting. An analysis of rural demand for kerosene and the growth in agricultural incomes in the past years would show that there is a distinct correlation between the two. But one qualification must be added to this conclusion. It does not necessarily follow that a decline in agricultural incomes will cause a proportionate or near-proportionate fall in the demand for kerosene. This is for the simple reason that the per capita rural consumption of kerosene is low and the demand for it is inelastic.

A question is often posed how far rural electrification is likely to affect adversely the use of kerosene in the villages. In recent studies of growth trends in the demand for energy, it would appear that undue significance is attached to this factor. To put it in plain words, rural electrification is progressing at even much lower than the snail's space. Its impact on the demand for kerosene will be negligible, at least during the next 20 years, by which time we are expected to complete the phase of take-off.

As against the total number of 556,565 villages in this country, a mere 2,800 were electrified in 1951. The contribution of the First Plan to rural electrification was small, raising the number of villages electrified to 5,300. By the end of the Second Plan, as many as 15,900 villages will have been electrified, which shows an increase of 200 per cent in the number of villages electrified as against 89.29 per cent during the First Plan. The target for the Third Plan is 29,500 villages which assumes nearly 85.53 per cent increase. A liberal estimate may be made by assuming that by March 1975 something like 60,000 villages will be electrified. Even so, 15 years from now, only 60,000 villages out of a total of 556,565 villages will be electrified.

This numerical measurement of the progress of rural electrification is, to put it plainly, misleading. Rural electrification does not penetrate into the households and produce an impact on other forms of energy in the least, as compared to the consequence of its spread in the urban areas. It would be correct to state that rural electrification will give a fillip to its use for agricultural and industrial production by acting as a source of power, but it will not make any mentionable impression on lighting of villages. The effect of use of electricity as a source of power in the rural areas will be to raise the demand for kerosene in domestic consumption by raising rural incomes. A significant factor of limitation on the spread of electricity for lighting in the villages is the type of housing construction in vogue. It is very much ill-suited for it and it is unlikely to undergo any radical change in the foreseeable future.

In the urban and semi-urban areas the prospect seems to be that electricity will replace kerosene as a medium of domestic lighting because the entire number of cities and towns (with a population of above 5,000) will be electrified by the end of the Third Plan and only small areas of cities and towns will not be reached by electricity. In so far as cooking fuel is concerned, the likelihood is that kerosene will come into relatively larger demand than at present and electricity will get a comparatively smaller share. Already the mechanism of stoves for burning kerosene fuel is being simplified and the middle and lower-income groups are taking to it with increasing popularity in view of its convenience and the continuing shortage of residential accommodation. There are other alternative forms of energy available for use as cooking fuel, but their expansion seems to be marked out for very modest growth. Coking coal has at present gained wide use in some of the urban centres in Eastern and Northern India, but its future inadequacy in relation to the priority demand for steel and other industries indicates a retardation in its use as domestic fuel. LPG—bottled refinery gas—has appealed to the higher income groups although it is costly, but it is mostly confined to the refinery centres of Bombay and Visakhapatnam.

From the above trends in the consumption of kerosene and the competition from alternative modes of energy the following projection of the demand for it has been made. For the sake of convenience quinquennial periods have been taken for tracing the past and future growth.

Period	Quantity ('000 Tons)	Quinquennial percentage growth
1950	885	—
1955	1,381	+56.05
1960	1,916	+38.74
1961	2,360	—
1966	3,720	+57.63
1971	5,860	+57.53
1976	9,230	+57.51

A word of explanation about the obviously low rate of growth during the five-year period ending 1960 is necessary. This percentage rate of growth is the lowest recorded in the above periods. The major explanation for this low rate of increase is to be found in the fact that actual consumption (including estimate for 1960) shows a state of suppressed demand. The demand was suppressed because of the fluctuations in agricultural incomes and in the allocation of foreign exchange for import of kerosene in a scheme of somewhat austere rationing. These two factors are of uncertain recurrence. Taking into consideration that at least the behaviour of agricultural income may be erratic in some years, the quinquennial rate of growth has been estimated at the level around the rate of growth during 1951 to 1955.

The Growth Pattern of Gasoline Consumption: 1948-1960

[With Projections upto 1976]

IT IS now taken for granted that the present heavily rail-oriented transport economy will undergo substantial structural changes in the future when roadways open up the country faster than in the past and thus carry progressively larger proportions of the total traffic. The growth pattern of motor spirit is, therefore, contingent on the increasing number of petrol consuming vehicles on the road and their effective utilization. The consumption of motor spirit, which was of the order of 468,000 tons in 1948 went up to 807,000 tons in 1951. But

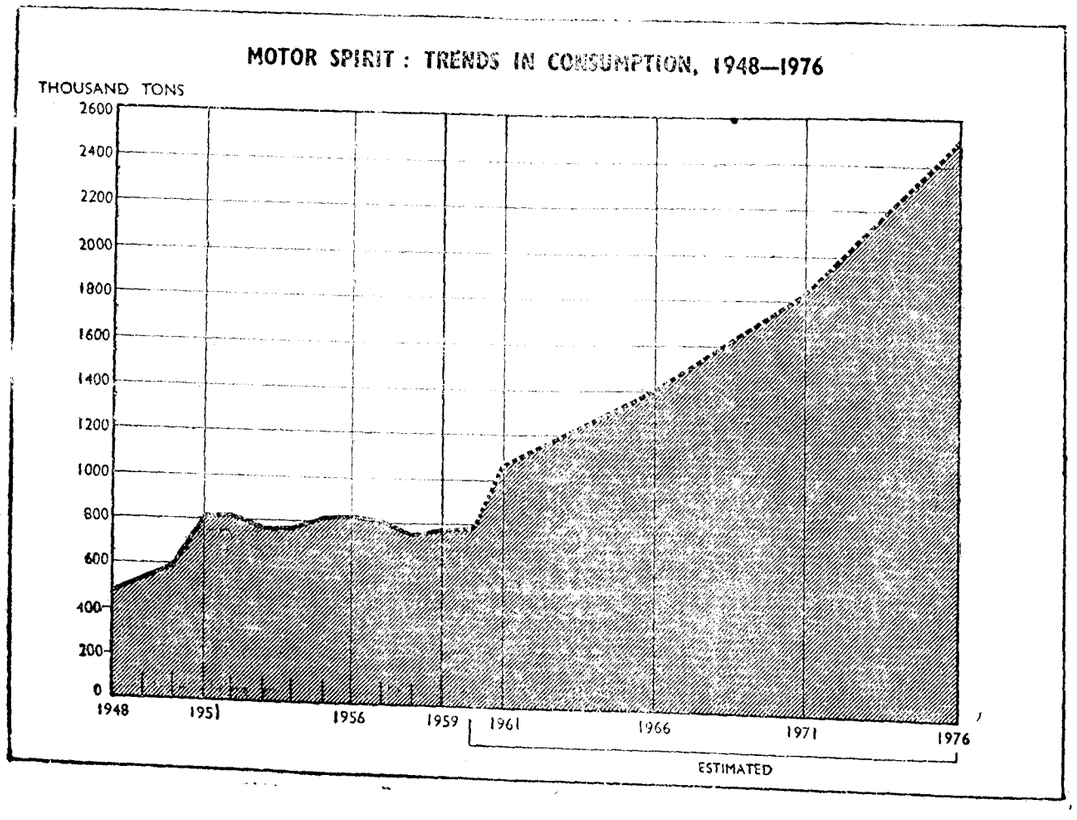
since then, consumption has been more or less stagnant and in fact declined during the last two or three years as shown in table below:

Year	Consumption ('000 tons)
1948	468
1949	539
1950	597
1951	807
1952	803
1953	765
1954	774
1955	807
1956	819
1957	809
1958	752
1959	765

This is attributed to the fact that there has been a swing to diesel power in the field of commercial transport during the last few years.

As regards future demand, there have been a number of estimates. According to the Economic Intelligence Unit of the Indian Institute of Public Opinion, consumption of motor spirit is estimated to be of the order of 1,070,000 tons in 1961 and the future demand as indicated below:

(Estimated)	('000 tons)
1960	786
1961	1,070
1966	1,400
1971	1,830
1976	2,500



According to another unofficial estimate, consumption of motor spirit is estimated to be just 950,000 tons by 1966. This is arrived at after taking into account the production of different motor vehicles and their estimated fuel consumption as shown below:

Cars/Jeeps/Taxis	451,000	tons
Buses/Trucks	390,000	,,
Motor Cycles/Auto rickshaws, etc.	95,000	,,
Total	945,000	,,

This is based on the assumption that the number of cars, jeeps and taxis by 1966 will be 410,040 buses, trucks 72,516 and motor cycles, autorickshaws, scooters, three-wheelers etc. 251,780 and their fuel consumption, respectively, will be 1.10 long tons per annum, 5.50 long tons and 0.34 long tons each. In making this estimate, however, new unit has not been taken of any major switch to petrol as opposed to high speed diesel oil vehicles. This is not unperceivable because with the widening imbalance that may develop between the output of, and demand for, motor spirit when the public sector refineries come on stream, it may become necessary that this major switch should take place.

According to the Planning Commission's estimates, motor spirit production from all the refineries, including the public sector refineries, by 1965 are expected to be 1,700,000 tons and estimated consumption 1,300,000 tons, leaving a surplus of 400,000 tons. The problem of disposal of this surplus is expected to become more and more difficult, especially when an all-round expansion of refining capacity is planned in the neighbouring countries. The Draft Outline of the Third Plan points out that a solution to the imbalance problem will have to be found by the adoption of technological measures to increase the production of middle distillates, appropriate fiscal measures which will retard the growth of consumption of high-speed diesel oil, and promoting the use of mixed fuels which will reduce the demand for H.S.D. and at the same time increase the offtake of gasoline.

Recently, in a study of 'Energy Demand,' the National Council of Applied Economic Research estimates the demand for petrol by 1965-66 at 1.6 million tons. This is based on the estimate of demand for petrol for passenger

and goods traffic on roads. This is given below:

DEMAND FOR PETROL FOR SELECTED VEHICLES: 1950-51—1975-76

(Mil. gallons)

Year	Motor Cars and taxis	Buses	Trucks	Total	Total (in mil. tons)
1950-51	39.75	65.66	123.69	228.75	0.736
1955-56	49.75	60.00	153.00	262.75	0.845
1960-61	65.75	80.00	202.00	347.75	1.120
1965-66	83.25	98.00	275.00	461.25	1.490
1970-71	114.75	106.00	386.00	606.75	1.960
1975-76	148.25	112.00	512.00	772.25	2.500

After adding a small proportion for miscellaneous vehicles, the estimate of total demand for petrol is given as follows:

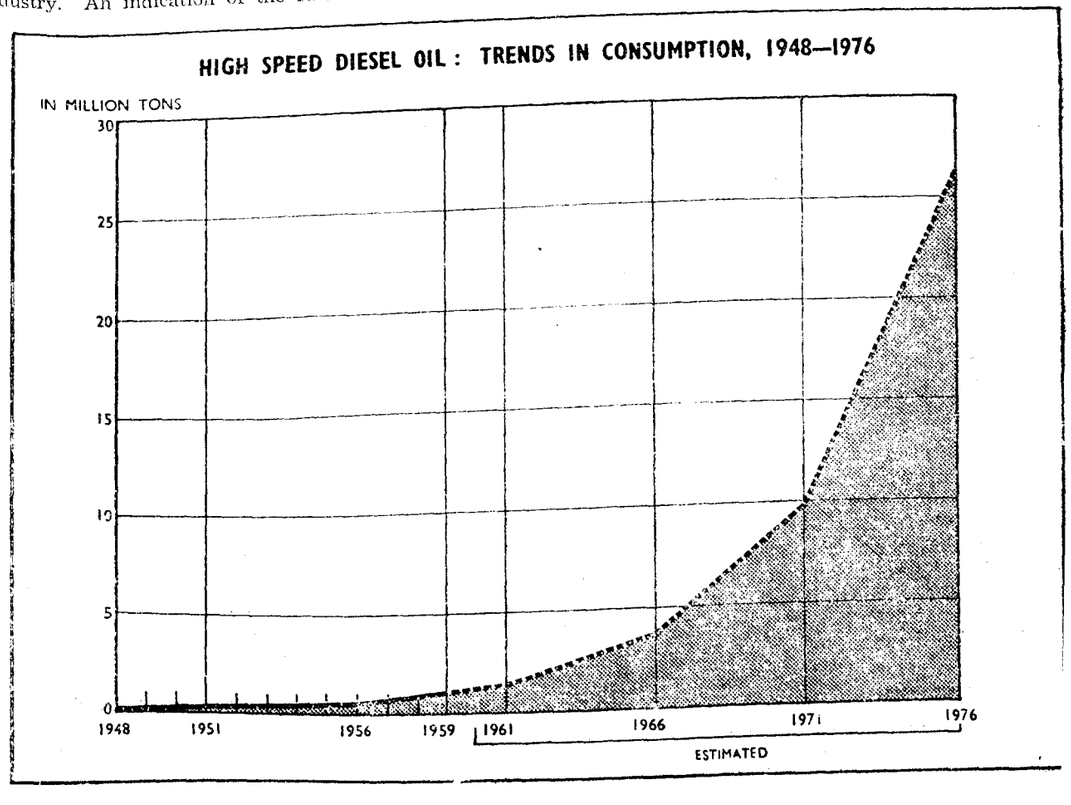
TOTAL DEMAND FOR PETROL: 1960-61—1975-76

(Mil. tons)

Year	Petrol
1960-61	1.232
1965-66	1.640
1970-71	2.156
1975-76	2.750

It would thus appear that the demand for motor spirit according to the different estimates given here may vary from 1 million tons to 1.6 million tons by 1965-66. It can, however, be safely presumed that any large-scale use of motor spirit will be counterbalanced by a fall in high-speed diesel oil.

The Growth Pattern of Diesel Consumption 1948-1960



[With Projections upto 1976]

The steep rise in the consumption of high speed diesel between 1948 and 1960 discloses the highest and a spectacular rate of growth amongst all fuels. During this interval of twelve years, consumption of high speed diesel multiplied almost 18 times. As against the total consumption of only 65,000 tons in 1948, consumption for 1960 is estimated to be as high as 1,185,000 tons. The table alongside indicates the percentage variations from year to year since 1948.

TABLE I

Year	Consumption in '000 tons	Percentage change
1948	65	
1949	157	+141.5
1950	182	+ 15.9
1951	267	+ 46.7
1952	256	— 4.1
1953	294	+ 14.8
1954	346	+ 17.7
1955	425	+ 22.8
1956	533	+ 25.4
1957	712	+ 33.6
1958	902	+ 26.8
1959	1046	+ 15.9
1960 (Est.)	1185	+ 13.3

High speed diesel is utilised mainly for commercial road transport. According to present estimates nearly three-fourths of the total consumption takes place in commercial road transport alone. The balance is utilized in agriculture, projects, rail traction and industry. An indication of the future level of demand

for high speed diesel can thus be obtained from the likely future growth in road transport.

There is no doubt that road transport is likely to rise sharply in India, both in the passenger and the goods fields. The pattern of growth in the advanced countries may be studied to forecast the likely growth in the Indian Union. In the U.K., Germany, U.S.A., etc., coal, minerals and heavy bulk commodities are mostly carried by rail while the finished goods are carried by road. In the case of finished goods, speed in movement from one place to another is of extreme importance. It would appear on an average road transport in India is almost three times speedier than rail transport and many big firms have "taken to the road" for movement of their finished goods, such as soaps and Vanaspati etc.

The table below gives the figures of total number of lorries and buses in use in India in 1958 and the share of diesel vehicles.

Table II

Dieselisation of lorries & buses in India 1958

	Total No. of vehicles	Diesel vehicles	Percentage of diesel to total
Buses	25,387	15,197	59.86
Lorries	58,765	17,402	29.62
Total	84,152	32,599	38.7

It will be seen that more than one-third of the buses and lorries are run on diesel. This is not an isolated phenomenon. In recent years there has been a world-wide trend towards dieselisation of road transport, the basic reason being the superiority of the diesel engine over the petrol engine in regard to performance. Moreover, the mileage completed by every gallon of diesel oil is nearly 40 per cent more than that carried by petrol.

The National Council of Applied Economic Research has made estimates in regard to the probable level of road traffic till 1975-76. These estimates are given in the table below.

Table III

Estimates of future road traffic

(Million tons)

	Local traffic	Feeder traffic	Long distance	Total
1960-61	..	120	10	130
1965-66	11	170	23	204
1970-71	34	229	71	334
1975-76	56	310	165	531

The estimated growth in road traffic during the next 15 years is likely to multiply four times, according to these estimates. For reasons of efficiency, the number of diesel trucks would rise at a much faster rate than petrol trucks. According to the NCAER the demand for petrol trucks is estimated to rise from 1,35,000 in 1960-61 to 3,63,000 trucks in 1975-76- a rise of less than 200% in 15 years—the growth in demand for diesel trucks may rise nearly 10 times from 45,400 in 1960-61 to 4,50,600 in 1975-76. This fact is brought out clearly in the table below.

Table IV

Estimate of Petrol and Diesel Trucks required during 1960-61 to 1975-76

	Diesel	Petrol	Total
1960-61	45.5	135.0	180.4
1965-66	65.0	195.6	299.6
1970-71	226.6	274.2	500.2
1975-76	480.6	362.6	843.2

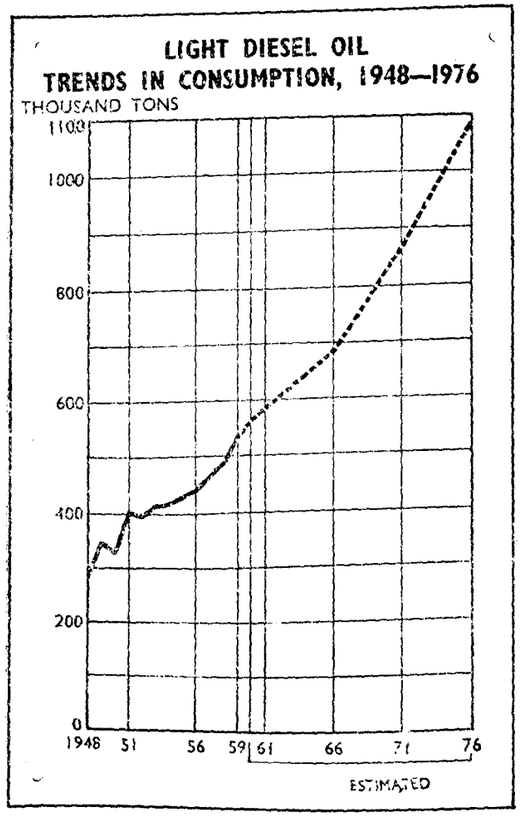
The official as well as non-official projections show wide divergence. In September 1958, the "Eastern Economist" forecast in a special article that the demand for high speed diesel oil in 1965 would be 3.73 million tons and would rise to 26.37 million tons in 1976. The draft outline of the Third Plan released a few weeks ago placed the demand for high speed diesel in 1965 at no more than 1.8 million tons. The National Council of Applied Economic Research also placed the demand for high speed diesel from road traffic alone at 1.5 million tons and if this is corrected to include the demand from other sectors, the total must be around 2 million tons. The National Council made these estimates in its publication "Demand for Energy in India" released early this year. In August, the National Council of Applied Research produced another publication "Dieselisation and Diesel Oil Taxation" and remarked about its own estimates as follows: "The figures of future demand are admittedly on the conservative side and to that extent under-state the position. According to another estimate, the demand for diesel oil from road transport by 1965-66 may prove to be some 30 per cent more than what has been assumed here."

The "Eastern Economist", however, estimates that the demand for diesel, if not damped by taxation, is likely to exceed all expectations based on current trends and is likely to reach the level of about 26 million tons in 1976, almost half of the total demand for petroleum products in that year. Despite the current load of taxation, it is believed that the demand would continue to rise in the manner outlined in the graph on the preceding page.

The Growth Pattern of Consumption of 'Other' Products: 1948-1975

TO trace the pattern of consumption in respect of 'other' products of petroleum like diesel oil, aviation fuel, furnace oil, lubricants, petroleum coke, light petroleum gas and light naphtha, it has to be kept in mind that though there is a marked increase in the consumption of all these items during the post-independence period, there is a considerable amount of variation in their respective rates of growth. For instance, while the consumption of light diesel oil doubled between 1958 and 1960, that of aviation fuel increased five-fold during the same period.

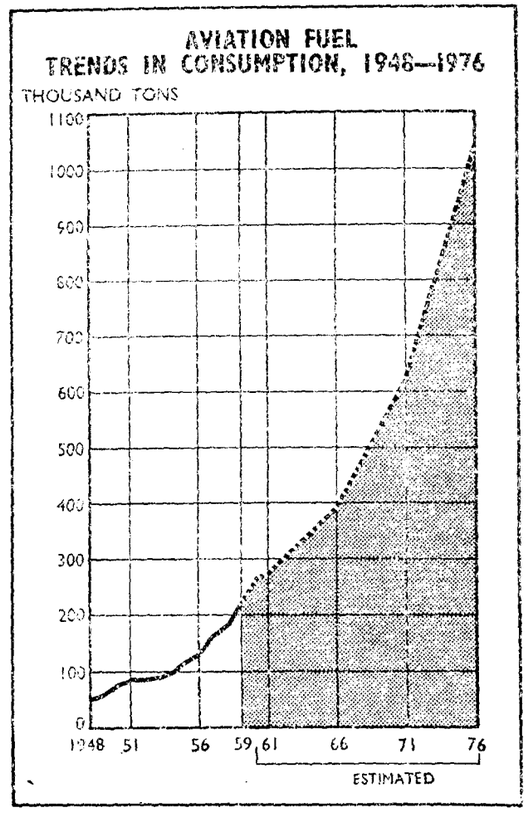
LIGHT DIESEL OIL



Broadly speaking, light diesel oil is used for driving stationary oil engines in thermal power stations and industrial undertakings in general. A considerable part of it, may be around 30 per cent, is consumed for water pumping in the mechanized agricultural farms. During the last two Plans there has been a marked trend towards increasing mechanisation of agriculture. Between 1951 and 1956, for instance, the oil engines with pumps for irrigation purposes increased by about 50 per cent. Similarly, during the Second Plan period there has been an additional increase of 30 per cent so that by 1960 such oil engines in use in the country are estimated in the vicinity of 170,000. While, according to certain estimates, the number of such engines in use would increase to 400,000 by 1976, it may not be wrong to assume that between 1960 and 1976 the consumption of light diesel on this score alone may double itself.

As indicated by the present pattern of consumption, about half of the total output of light diesel oil is consumed in industry. During the last few years not only has there been a rise in the industrial production through an expansion in the capacity of the existing industries but many new lines have also been initiated. All this expansion is bound to be accompanied by larger consumption of light diesel oil.

The estimate shown in the table below therefore, has been reached at taking into account the needs of light diesel oil in the sphere of agriculture, industry as well as in electric generation by 1976.



AVIATION FUELS

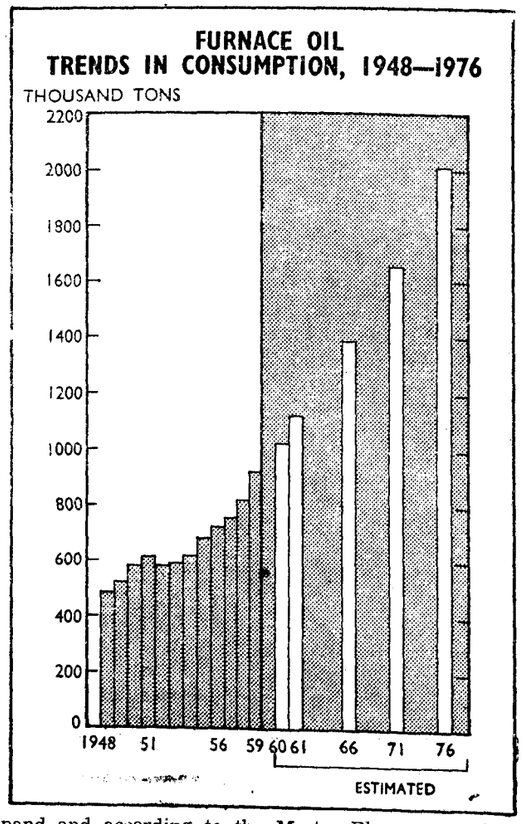
In line with the expanding air services, it was natural that the consumption of aviation fuel increased. As can be seen from the figures below, during the years 1948 to 1960 the consumption has increased five-fold from 49,000 tons to 263,000 tons. One important aspects of this growth in consumption during this period has been that while the consumption of gasoline has remained almost stationary, the rise has been most marked in the consumption of turbine fuel. Essentially this shift is due to the increasing change-over of the most of the airlines operating in this country to Turboprop and Turbojet aircraft. During the coming years it can reasonably be hoped that only the demand for turbine fuel will expand whereas that for gasoline in the field of aviation may decline. From the various estimates that exist in respect of the rise in general traffic in the country and taking into account the probable rise of the incomes during the years to come as well as the needs for efficiency in travel, the consumption of aviation fuel has been calculated at around 390,000 tons in 1965-66.

FURNACE OIL

The major part of furnace oil that is consumed in the industrial sector as an alternative to coal is technically called 600" Grade. It serves as fuel in places where it is not economical to carry coal. Moreover, there are certain industries like glass, ceramics and certain chemicals where its use as fuel is considered superior for other technical reasons. From the figures

given in the table below it is clear that there is a close correlation between its consumption and the general index of industrial production. Moreover, a study of regional distribution of furnace oil consumption reveals that about 50 per cent of it is supplied in Bombay region. The explanation is obvious; wherever the carriage of coal is costly, furnace oil is preferred.

For any projection in respect of furnace oil the index of industrial production should provide a fairly reliable basis. As has been assumed in the Draft of the Third Five-Year Plan, the index of industrial production (Base: 1951=100) is expected to reach by 1965-66 around 363 from 221 estimated for 1960-61. It is quite plausible that by 1976 the consumption of furnace oil should at least double itself from 1030,000 tons in 1960 to 2060,000 tons by 1976. The estimate may appear a little conservative but it may be remembered that industrial expansion only in the Bombay region is most effective for a rise in the consumption of furnace oil. As it is, Bombay region has already attained a high level of industrial growth the future demand may not be quite in line with the All-India Index of Industrial Production.



It may be added that in periods when shortage of coal posed a problem, as has been experienced in the past, furnace oil is bound to provide a convenient alternative.

LUBRICANTS

Mostly lubricants are consumed in the industrial sector as well as in the road transport. As is revealed in the trend of consumption of lubricants during the last ten years, it has followed the general pattern

industrial output. There have, however, been fairly wide fluctuations. For instance there has been a fall in consumption in 1958, an explanation of which can be found in the foreign exchange difficulties during that year.

Considering that the demand for lubricants is a function of industrial production and road transport, it is clear that any projection should take into consideration these two major factors. As has been pointed out earlier, the index of industrial production may touch the 360 level by 1966 and may even cross the 600 level by 1976. Similarly, road transport is sure to ex-

pand and according to the Master Plan prepared by the Chief Engineers of the State Governments, the road mileage may increase from 3.79 lakhs in 1960-61 to 6.57 lakh in 1975-76. The intensity of road transport is bound to be even more. The likely consumption of lubricants has, therefore, been estimated around 700,000 tons by 1975.

BITUMEN

Used essentially for road making, bitumen also serves as a useful purpose in hydraulic engineering works as well as in the production of water-proof roofing material. The trend of consumption during the last ten years shows that its demand has increased roughly five-fold. Taking into account that the mileage of surfaced road after 20 years is expected to be 2,52,000 against 1,44,000 expected to be at the end of 1961, it can easily be stated that the consumption of bitumen would more than double itself between 1960 and 1975. After considering the demand in other sectors too, the total consumption is estimated at 850,000 tons by 1975.

OTHER MINOR PRODUCTS

Petroleum coke is consumed mainly by the producers of electrodes for aluminium industries, also in the manufacture of calcium carbide, abrasives, artificial graphite and electric furnace resistors and lining. All these sections of industries belong to the group which is going to expand in the coming years. On that basis the demand has been calculated to reach a level of 100,000 tons by 1976.

Light naphtha and liquified petroleum gas are two other important components. While the former has not yet been marketed in the country it is likely to be used in the manufacture of fertilizers and chemical plants. Similarly, liquified petroleum gas which can be used as an alternative to kerosene and fuel wood should become popular in the years to come. Mostly its demand will depend on the changing habits of people who would like to replace fire wood which cannot be used in tidy kitchens. Thus the consumption of light naphtha and liquid petroleum gas are likely to be around 300,000 tons and 100,000 tons respectively by 1976.

Consumption of Certain Petroleum Products

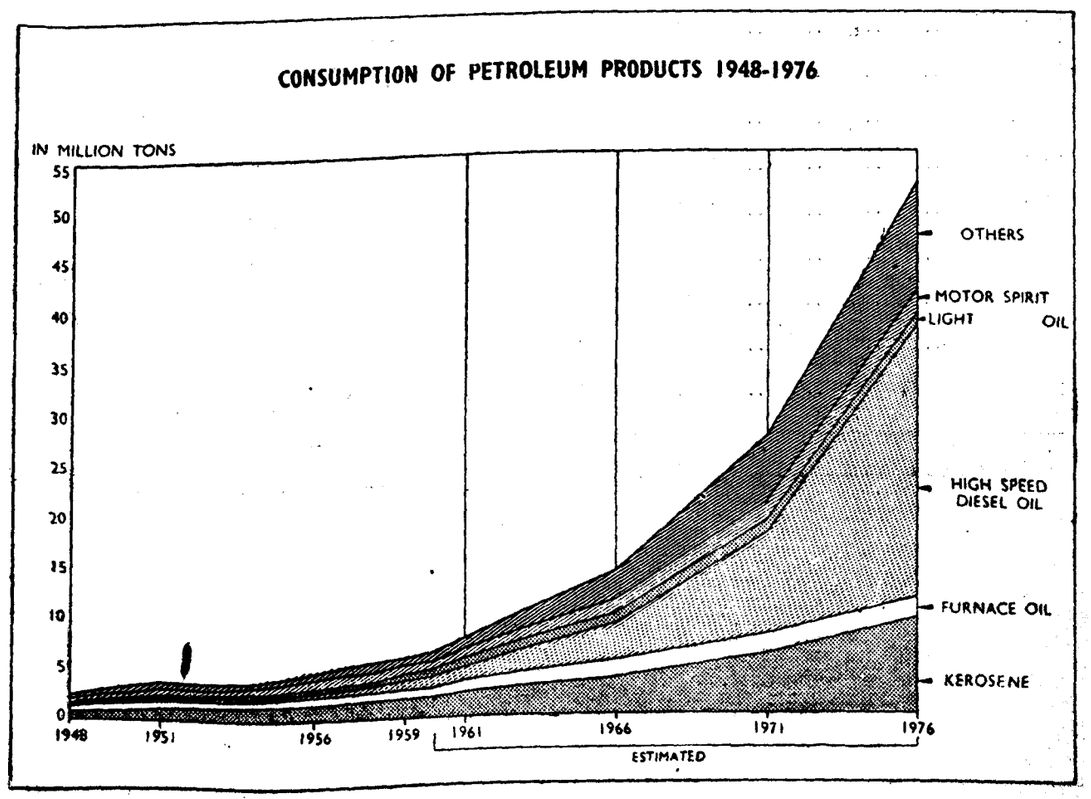
Estimates of Total Demand: 1948-49 to 1965-66

THE pattern of oil consumption in the Indian Union is available for eleven years with actuals up to the nd of 1959. But much of the detail has to be estimated, as accurate figures of the breakdown of consumption of each particular fuel are not generally published. However, import figures are available until the ear 1959 and the table below (Table I) shows the nport of petroleum products in these years under the eads Kerosene, Diesel Oils, Other Fuel Oils, Batching ils, other lubricating Oils, Motor Spirit, Petroleum other than motor spirit, Mineral Turpentine, Petroleum crude and partly refined, and 'Others'. The change in the structure of India's imports will be very evident from these figures. The imports of kerosene reached their peak of Rs. 28.67 crores in 1954-55 and have declined since then, except for a temporary rise in 1957-58. What has happened is that the coming of the refineries in 1956 has meant a rise in imports of crude of about Rs. 20 crores with a corresponding reduction of every component except diesel oil. Diesel oil, which has been particularly in short supply, has benefitted from the installation of refining capacity in the country, but the total demand has outstripped the rising refinery production until 1960. The broad picture is one of rates of very unequal rise, a picture of which was presented in "The Eastern Economist" estimates published on September 19, 1958, and which are given in Table II.

It will be seen that the total tonnage of all kinds has risen from 2.6 million tons in 1950 to an estimated 7.8 million tons in 1961. As against this estimate for 1961, demand for 1960 is now estimated at 7.5 million tons. It is not unlikely on this analogy that the figure of 14 million tons for 1965-66 is also a little below what will happen in fact.



The National Council of Applied Economic Research in its study 'Demand for Energy in India: 1960-1975' estimated the requirements for energy producing petroleum products at 10.28 million tons in 1965. The demand

TABLE I

IMPORTS OF PETROLEUM PRODUCTS INTO INDIA : 1949-59

(Rs. crores)

	1949-50	1950-51	1951-52	1952-53	1953-54	1954-55	1955-56	1956-57	1957-58	1958	1959

Petroleum, crude and partly refined ..	—	—	—	—	—	—	8.97	24.31	29.75	15.54	9.33
Others	1.13	0.70	1.07	1.12	1.29	1.35	2.55	0.07	4.72	1.17	0.86
Total:	53.63	55.14	70.85	77.06	84.80	83.00	54.95	73.19	108.03	75.84	77.95

for energy was worked out on many factors, including the use of petroleum coefficients' in industry and so on. Some of these figures will be noted elsewhere, but for the moment the significant point is the total demand which was presented as 10.28 million tons in 1965. The National Council study, however, was not primarily concerned with other petroleum products such as, lubricants, bitumen, naphtha, jute batching oil, solvents, turpentine, wax, refinery gas, and refinery boiler fuel. The estimate for these products for 1966 is approximately 4 million tons, so that the National Council estimate (worked out more on the basis of particular component than of the demand curves used in the current study) would come to 14.28 million tons.

The figure of 14 million tons has also been mentioned in official broadcasts and writings although it has not been specifically used in the Plans. One might argue that it is as near an agreed figure as it is possible to obtain when so many unknown and variable factors exist. What is significant at the present time is the fact that methods as widely different as the fitting of curves to the users of oil in various fields—transport, cooking, generation of power and industrial uses—should arrive so close to one another. This prima facie indicates that the element of controversy cannot be very large in estimating demand over the short period covered by the Third Five Year Plan. It is time, however, to turn to the detailed structure of this demand.

DEMAND OF PETROLEUM PRODUCTS: 1961 - 76

(Million tons)

	1961	1966	1971	1976
Motor Spirit	1.07	1.40	1.83	2.50

Reorientation of Techniques

A RAPID reorientation of management techniques has been under way for quite some time in the advanced industrialised countries. In its sweep it is bound to bring positive urgency for other countries also to adapt themselves to changing management policies. New tools are being forged to infuse dynamism in managements which are called upon to face a diversity of problems. In a sense, these tools may not be altogether new because they are not altogether of a very recent origin. But what gives them the character of novelty is the high degree of intensity with which they are now being incorporated in management techniques. Market research, consumer motivation studies, cost analysis and purchase policies may be mentioned as among the foremost in the techniques which managements have to assimilate if they have to keep themselves abreast of current changes in this era of ever-increasing competition. This Blue Supplement deals with the subject of aids to management from this vital angle.

Management as an integral and key factor in industrial and business operations is now passing through a transition and the challenges thrown by that transition are bound to make their impact on business and industry in the developing countries. As it is, these countries have not had enough time and maturity of experience to catch up with the standards of management in the industrially advanced countries even on the conventional pattern. Introduction of certain improvements in the processes of production or in the designs of products or in strengthening sales and publicity services will no longer make for the great gap between the levels of management in the developing countries and the advanced ones.

Continuous vigilance is the price of progressive management and although results of financial operations may give a heartening account of the progress of the firm or factory, management has to look ahead, anticipate problems and think in advance of introducing new processes and techniques in order to give fresh vitality to industry. It is because of this compelling necessity of constant vigilance and alertness to introduce progressive changes that management stands in need of sharp tools to enable it to perform its forward-looking function.

The articles in this Blue Supplement deal with some of the major aids to management and it is only necessary to emphasise here that, probably, in the order of priority, market research, cost analysis, and purchase policies demand first attention in under-developed countries. How urgent the creation of these aids for management has now become for India is quite apparent from the new challenge which has been thrown out to her export promotion drive. It is not only in the domestic market but also in the traditional and prospective export markets that India will have to launch an organised campaign of research into the changing trends of market demand. This conclusion has been too often repeated by our trade delegations and export promotion teams which have visited foreign countries—but with

little remedial action. This is only one instance to show how a sense of urgency must be brought to bear upon the problem of reorientating management techniques in this country.

Management can no longer be treated as a routine function to be performed by the senior executives. It is fast developing not only into an elaborate art but a well-grounded science. It is vital that the changing character of management more and more as an applied science should be fully appreciated in this country and sustained attention should be paid to sharpening the tools which will enable it to function efficiently in this age of progressive competition.

Aids for the Administrator*

By FRANK A. HELLER

Head of the Department of Management Studies, the Polytechnic, London.

A NINETEENTH-CENTURY writer once observed, 'Life is the art of drawing sufficient conclusions from insufficient premises', and the words can be applied to the life of most administrators, be they in business or elsewhere. It helps to explain the peculiar skills of the job and the infinite variety of irritations to which it can give rise. How can one draw sufficient conclusions from insufficient premises? Well, it could be done by lucky guesses, or by drawing on previous experience in similar circumstances, or by examining the premises carefully in an attempt to make their insufficiency less serious. After all, every time an opinion poll, or attitude survey is taken it is based on merely a sample of people. The sample may only be 2,000 out of a total population of several million; it could nevertheless be an adequate sample if it is carefully chosen.

The Administrator is always making choices often on very slender evidence when the consequences of different lines of action cannot be accurately predicted. But decide he must for indecision is one of the deadly sins of management.

Do we know enough about the process of administration to try to help people who have to make complex decisions under conditions of uncertainty? The answer, I think, must clearly be 'yes', although the help that is available is considerable in some fields and almost non-existent in others. This is a young subject and we have much to learn. Nevertheless, there is now a substantial body of experience, techniques and research findings which most administrators ought to have access to. This knowledge does not, of course, by itself produce administrators or ensure the efficient working of an organization. But it is a good start.

The kind of material that is available and what it can do, is shown in the case of business which has run into a crisis. The following history of a small firm making bicycles is imaginery, but its experiences are common to many other businesses. For many years there was a steadily expanding market for bicycles, including sports models, both at home and in other countries. Since 1950, however, sales had decreased first overseas and then at home. The shrinking market became increasingly competitive, there were several mergers and our small company was experiencing great difficulties. At this time it was taken over by a larger company which moved in a new top management team. The new management's first task was to analyse the situation. It looked at the economics of the market at home and abroad, investigated the production process, it studied the bicycle models in relation to consumer buying motives, the price structure of the firm and possible alternative outlets for the company's capital and other resources. In the course of this analysis they got to know the staff and could assess their strength and weaknesses.

At each step of this investigation the new top management could draw on a range of fairly well established procedures, among which the following could be mentioned.

1. **An economic market analysis at home and overseas:** This should lead to a forecast of likely demand.
2. **Work study investigation of a production process,** including inventory and stock control, factory layout, etc.
3. **Work study investigations of the administrative machinery** (particularly in offices) with a view to simplification.
4. **Cost analysis with a view to cost control.** This could be combined with an attempt to reduce variety and obtain standaridzation of sub-units Control methods would include standard costing and budget forecasts.
5. **Consumer motivation study:** To test brand name, colours, packaging and to discover the special attributes which bicycle owners like to apply to themselves and their sport.
6. **Analysis of staff attitudes and morale.**
7. **Analysis of the skills of workers and management.**

This list by no means exhausts the known possibilities but it can be seen that faulty decisions in one or more of these fields could easily be responsible for economic failure.

Let us take two examples. Our imaginary bicycle firm had seen its trade gradually decline over a period of years but it continued to produce more or less the same article in more or less the same way. It is true that some improvements in production methods and design had been introduced; aluminium and stainless steel had gradually replaced certain parts which were particularly likely to attract rust and the after-sales repair service section had been expanded.

During the period between 1949 and 1956 when this firm was struggling for its existence, three new products were coming on the market. One was a small motor which could be fitted to bicycles to make them semi-automatic; another was the Moped, a special bicycle with a stronger frame and larger tyres which was sold complete with a small motor. Finally, this period saw the rapid rise in imports of motor scooters from abroad.

These new articles did not have an immediate adverse effect on the firm since the scooters and, to a lesser extent, the Mopeds were sold to customers who had previously used motor cycles or had not used two-wheeled transport at all.

LOOKING AHEAD

Nevertheless, the company might have been very much more successful if it had helped to pioneer one of these three developments. This is one of the problems of assessing the efficiency of any organisation; one never knows how much more successful it would have been had it followed a different line of approach. It is a useful managerial exercise to think about alternative methods, products and designs even if the balance sheet shows a very satisfactory picture. Where the firm is obviously not successful, the need to scan the market for alternatives becomes even more important. Management must from time to time anticipate problems, look ahead to weigh up alternative uses of existing capital and exploit new technical processes.

The second example of possible wrong decisions concerns the skills of workers of management. Every firm consists of a mixture of people, some of whom are more suitable for the jobs they carry out than others. This is natural, but the trouble begins when one firm has more than its share of unsuitable people, or when these people occupy key positions. The standard method of selection is interviewing. Two main mistakes can be made; one is to assume that skilled interviewing is enough; it is not. Every job has different requirements and only careful job analysis will reveal the essential skill that is necessary to carry out a particular job. All effective selection procedures set out to match job requirements with personal skills. In our bicycle firm, senior management may have been chosen from among the best existing production people. This would work as long as the article sells largely because of its technical excellence. But it may well be that price policy, distribution arrangements, and skilful advertising are really the decisive factors.

UNRELIABLE JUDGMENTS

The second mistake is to assume that interviewing is easy, that it needs no preparation, only experience and an astute mind. Knowledge of certain classical experiments in interviewing soon dispels this unjustified optimism. In a famous experiment, 23 experienced interviewers interviewed 24 people and placed the candidates in order of merit. It was found that almost any candidate came very high on some expert's ranking and almost last on other's; the range of differences was startlingly wide. In practice, managers never submit their interview decisions to any experimental scrutiny and they may, therefore, never know how unreliable their judgments can be.

All this adds up to the possibility that the wrong people are in the right jobs or the right people are in the wrong jobs. How can jobs be wrong? For the purpose of this analysis a job is wrong if it is expected to do things that are not really important at a given time — for instance, spending a great deal of effort and money on detecting an increasing number of faulty articles during the final packaging stage instead of correcting the production process or machine tool to minimize errors.

These administrative problems can be discovered, by means of a suitable analysis, and remedial action taken. The necessary analysis can be done either by a business consultant or by a suitably qualified interested person inside the organization. Interest and willingness to be critical and to implement changes are of over-riding importance and this **must be present inside the firm**, even if it chooses to use an outside consultant.

Consultants are today an accepted part of the business scene, but it was not always so. Some years ago an administrator sourly observed, "a business consultant is a person who knows much less about your business than you do yourself, but who is prepared to advise you on how to run it, for a fee which your business could not possibly afford to pay even if it was run properly instead of according to his advice".

If an administrator has this attitude to consultants he will derive no benefit even if he is forced to employ them. Managers often have similarly hostile attitudes to people inside an organisation who produce new ideas or critical analysis. But it is the firms which welcome ideas of the right kind and accept change which successfully take advantage of opportunities as they arise to expand and prosper.

In part this is an educational problem and since education starts in childhood, it is not always easy to produce flexible minds in adults whose previous experience has not inclined them that way. It is, nevertheless, surprising how much a carefully devised training scheme can accomplish.

Some management training can best be carried out inside a firm. Thus a company course may acquaint people with the history and development of a given industry, with the company's own policy and organisation, budgetary control procedures, personnel policies, wage rates and likely future developments. These courses are often given by senior company officials with the help of the personnel and training manager.

PROBLEMS ARE UNIVERSAL

External courses at universities, technical colleges or residential training centres will usually confine themselves to the broader aspects of each subject, using examples from different industries to compare alternative solutions to similar problems. The course members themselves will be able to exchange experiences from their different backgrounds.

During a recent tour abroad I spent a few days in Calcutta and gave a lecture on 'Incentives'; a week later at the Thammasart University of Bangkok, I talked on 'Organization and Efficiency'. During the following four months I gave talks on various management subjects in **Australia, New Zealand** and America. In each case there were, of course, special considerations which gave rise to individual problems in the countries concerned. These special considerations were freely aired in discussion and it soon became clear that, despite them, the basic problems of management remained constant. The experience and research of industries in other countries was relevant to my hearers and techniques devised elsewhere could be applied, in most cases with only minor adjustments, to their administrative problem

Ten years ago I helped to organize one of the first management courses for railway executives. The industry told us firmly that we had to start from scratch because the railway industry was quite unlike any other industry — it had no roof over its head, all its activities were dispersed and it did not produce a commodity but a service. It took the teaching staff only two courses to discover that more than half of the administrative and human relations problems were extremely familiar to us from a large variety of other industries but it took us another three courses to convince the railway organizers of these courses that this was so. The truth is that we get psychologically very attached to our 'uniqueness' and resent the inference that we, or our problems, are 'commonplace'.

Administration is an art rather than a science. It is a process of planning, co-ordinating, decision-making and control. Control in this context means using various techniques which enable standards of performance. These comparisons are often in financial or statistical terms but this is not essential.

Although administration is an art it should be approached with a 'scientific mind'. That is, one should be systematic and analytical, preferring logic to emotion, and willing to use scientific findings wherever they apply.

A manager is primarily a man-manager and it is, therefore, appropriate that he should be influenced by the findings of psychology, sociology and social anthropology. These three disciplines plus a certain amount of inductive economics can be called the behavioural sciences because they try to understand and predict human behaviour.

There are several other scientific or analytical systems which administrators will increasingly turn to in the future, for example, Operations Research, which uses rigorous scientific methods in the analysis of business problems and seeks to reduce the 'rule of thumb' in executive decision making. Take the case of a firm which has plants in different parts of the country and whose processes require shipment of items in different stages of production. Substantial savings can be effected from a careful mathematical planning of commodity movements. Considerabily more difficult problems than this can now be handled by a variety of new statistical techniques.

The life of busy administrators could be made much more productive and a lot less wearing by seeking help in the right quarters.

Marketing Research as a Tool in Management

MARKETING Research has been described as a "brave new science" which acts as the radar for management decisions. It is a brilliant and versatile instrument for guiding management in finding out "what the customer wants". Research in marketing, however, cannot proceed unless the facts—the critical facts—are known. They are: the market or the markets to be explored, the characteristics of the product to be sold, the volume of output in relation to demand and the marketing strategy to be adopted.

The market for a particular product can be gauged by statistical analysis coupled with economic forecasting based on previous experience. If the product is new and has no past history, a properly planned consumer survey could be utilized for product research by incorporating intelligent questions regarding the attitude of the consumers to the product. The size of the market in the case of the particular product at the time of conducting the survey could also be obtained. For forecasting the course of future demand, the trend of the economy in general and of that component in particular would have to be examined to arrive at meaningful results. After all these basic facts are known, the marketing strategy consisting in advertising, distribution, pricing and methods of marketing can be easily evolved.

In recent years marketing research has assumed vital importance as a tool in the hand of management not only for launching new ventures but also for studying the consumer preferences, habits and attitudes in regard to products currently being manufactured. All over the world well-known business houses such as Uniliver, Philips, Union Carbide etc. have always pressed into service their marketing research wings in order to obtain fresh information about their products, old or new. Even in the Indian Union, greater interest is now being evinced by enterprising business houses to assess the size of the market in regard to their particular products. Some of them have, before venturing upon new lines, sought to assess the profitability of the new ventures before applying for a licence to start an enterprise. Gone are the days when an Indian industrialist would go in for a sizeable investment in industry only on the basis of hearsay. Now that scientific techniques are available for exploring the market through the marketing research organisations, more and more use is being made of these facilities.

The techniques of marketing research vary according to the demand of the situation. In the case of consumer products, the business firms are interested, in particular, in pushing up their sales. A usual way is to conduct a survey of a representative cross-section of society by obtaining a statistically random sample of the population. It may seem a stupendous job, interviewing a sample spread over such a vast area as the Indian sub-continent. But statisticians have evolved reliable techniques whereby even small samples can provide results with a reasonable margin of error and also with a sufficient degree of confidence. In the Indian Union, there are a small number of competent organisations which have specialised in this particular branch of research. The Marketing Research Corporation of India, established six years ago, is a pioneer organisation which has conducted surveys on behalf of a number of forward-looking firms such as Philips India Limited, Union Carbide Limited, D.C.M., The Metal Box Company of India Limited etc.

THE MARKETS OF THE SIXTIES IN INDIA

The problem of assessing the market potential in India over the next decade has become urgent in view of the powerful direction which consumer expenditure in relation to consumer durables in particular has taken in the Second Plan period. It is necessary for business firms to evolve a forward-looking sales policy which may multiply sales and pay many times more for the cost of evolving this policy. In fact, the dynamic manner in which the Indian economy has been rising in recent years has revealed tremendous possibilities of surplus beyond "necessities". It means that the discretionary component of the Indian Rupee will steadily increase during the next decade making greater pressure on the demand for durable goods. In the July issue of the Quarterly Economic Report of the Indian Institute of Public Opinion, a special long-term study of the changing pattern of Indian discretionary expenditure till 1971 has been made. In this study, estimates have been made of the discretionary expenditure in the rural and urban areas in various income groups. Discretionary expenditure here includes all residual consumer items after providing for essentials such as cereals, pulses, sugar, milk and milk products, other food items and clothing. It was discovered that the expenditure on essentials in the low income brackets was as high as 84 per cent. The remaining 16 per cent in this bracket leaves very little margin for applying "discretion" in expenditure on different items. It was also revealed that the element of discretion for expenditure in income increases only after all expenditure on essentials is reduced to at least 75 per cent. Only those families which have consumption expenditure split up in such a way that at least 25 per cent of the total disposable income is made available for expenditure on non-food items have some discretion in spending their money on commodities of their own choice. The results of this analysis are set out in Tables I, II and III. The total number of families in the urban areas at 6.1 million in 1950-51 with per capita annual disposable income of more than Rs. 290 will have increased their discretionary component from Rs. 435 crores in 1960-61 to Rs. 1183 crores in 1970-71. Similarly in the rural areas the number of families is likely to increase in the same period from 12.3 million to 17.1 million while the total discretionary component is likely to increase from Rs 973 crores to Rs. 1293 crores.

Thus, the rising markets of the sixties will put a great pressure not only on "necessities" but also on the "consumer durables" where the purchaser would freely operate his discretion. The rate of rise of 6 to 7 per cent on meat, eggs, tea etc. will certainly impose greater pressure than a rise of 7 to 10 per cent on the durables. This is due to the far greater base on which the necessities rest, as against the smaller base on which consumer durable consumption is built.

In the next 10 years, thus, the discretionary component of consumer expenditure is likely to increase from nearly Rs. 3000 crores to nearly Rs. 5000 crores which will certainly result in imparting new dimensions to the Indian market. The rural areas will benefit markedly in the major operation of rising standards and it is expected that the character of the dichotomy which now exists between rural and urban areas will vanish to a large extent.

OUR MARKETS ABROAD

Due to the extreme pressure on our foreign exchange reserves, it is necessary that attempts should be made to explore our markets abroad in an attempt to sell more of our goods. This is possible only if we can know fully regarding the prejudices and preferences of consumers in relation to Indian products in these markets. There is urgent need for seeking the assistance of experienced marketing research agencies in determing the various ways in which our sales in the foreign markets, particularly the Middle East and the South-East Asian countries, can be accelerated. Unless marketing surveys on scientific lines are conducted in these countries, it will not be possible to know whas the Indian products have failed to break through th markets. It is only experienced marketing research organisations which can evaluate the role of the right type of agents, the terms to be offered to them, and a number of other aspects about which information is vitally necessary for organising the sales programme. Perhaps, the Indian manufacturers who did suceed in the past in selling their products in these markets failed to follow up by finding out the nature of complaints of the consumers and did not give satisfaction to them. How far proper sales-service is essential in building up a strong market for Indian goods in the markets abroad needs to be evaluated. Broad generalisations will certainly not help in raising our exports. Thorough knowledge of markets in regard to particular products, the manner of packaging and the local prejudices etc. will have to be known before-hand for success in these markets. Marketing research abroad thus has a great role to play in promoting Indian exports. Certain amateurish attempts made at marketing research by the embassy staffs in some Middle East countries have brought forth reports which are conventional and therefore hardly calculated to prove of much practical utility to our export business.

Management Accounting

AMONG the many important tools of management, management accounting is one. It is a technique based on the concept of 'promise and performance' which seeks to show the way to maximum efficiency and also helps in achieving the greatest output at the lowest cost. In other words, what management accountancy requires is the preparation of a forecast or a budget followed by the recording of actuals which, when compared to the former, give the variations or deviations. These become the subject-matter of study for further appropriate and timely action with a view to achieving the objective. Management accounting consists of various elements, but its main characteristic is that it is a forward-looking approach rather than being just a backward looking philosophy. What it aims at is to provide a continuous supply of information concerning production and cost to the management on the basis of proper systems of recording, analysis, tabulation and interpretation of the relevant data relating to the working of an enterprise. It is also worth emphasizing that essentially the technique is one of expressing in economic terms the targets of the plan and also measuring performance at each stage so that corrective action can be taken in time.

The Council of the Institute of Chartered Accountants of India sponsored a Management Accounting Team to tour the United States and Canada in 1957, under the auspices of the Ford Foundation to study accounting methods and practices obtaining in these countries, with particular reference to developments in management accounting. This team, in its valuable report, has stressed that the technique of management accounting can be adopted with great advantage by companies and corporations both in the public and private sectors in this country. It has stressed that although in large industrial undertakings the system has to be more exhaustive and comprehensive, the basic approach to the problem would be about the same whether for a medium-sized organisation or a smaller one. An accountancy system, therefore, it says, would necessarily have to be adapted to the requirements of each individual case. It is ultimately, the underlying objectives and the means to achieve the same that matter more than the meticulous details of a system.

While trying to define management accountancy, it refers to the Productivity Report on Management Accountancy submitted by the Management Accounting Team of the Anglo-American Council of Productivity, which visited the United States during 1950, which says that 'management accounting is the presentation of accounting information in such a way as to assist the management in the creation of policy and in the day-to-day operation of an undertaking'. This would include accounting, costing and statistical information provided for the management at different levels. It is further deemed to include the technique of recording, marshalling and sifting of information by means of analytical and other accounting methods. From the information so collected, tabulated and analysed, the necessary conclusions would be drawn. Another and a more recently introduced function of accounting is the presentation of information with a view to tendering advice to the management regarding the course of action to be adopted.

Management accounting includes various elements like financial accounting, budgetary control, cost accounting, stores accounting and internal or management audit. Of these, budgeting is the most important because it is the pivot in any effective scheme of management accounting. It cannot therefore be considered a mere fashionable addition to management techniques but more as a dynamic concept that has stemmed in the last few decades from changes in the economic theory and behaviour of the individual firms. It has to be understood that success in business is no longer considered to arise merely from intelligent adaptation to economic change. On the other hand, individual firms are now becoming active arbiters of their own destinies and they are conscious of the fact that in choosing between alternatives of action, they are in a position collectively even to influence the economy. This is the basis of the deliberateness with which a firm today sets on its targets of performance.

The 'modus operandi' for the preparation of the budget would depend upon the organisational set-up of any particular business or industrial undertaking. The budget has to be built in clear and understandable terms, so that it may be possible to determine efficiency or otherwise with reference thereto. Again, as part of the operative function of a budget, consideration has to be given to measurement of performance on the implementation of the production plan. Unless it is possible to prepare a performance report in relation to the budget there may be no point in having a budget merely for the sake of having one. It is also to be remembered that to ensure that the budget is an effective tool of management and an active aid to operational efficiency, it has to be prepared in simple and understandable terms. The operator has to be assisted here to realise that the results expected of him are reasonable and that he would be given all reasonable facilities for securing the results expected of him. On the part of the management, they will also know what is being attempted through the budget and why it is being attempted. When either one or the other looks at the results and compares them with the original estimates, the causes of the differences can be understood.

Once the budget is agreed, it becomes a basis for operations and long-term commitments can then be made for finance, capital expenditure and personnel. When the budget period approaches, from the top management down to the lower rung of the ladder there will be an awareness of what is to be achieved and the urge to overcome any hurdles that might crop up on the way. The second aspect of budgetary control then goes into operation when indicators are set up to tell the management promptly and accurately how the business is faring. This requirement is fulfilled by an efficient system of reporting keyed to the budget statements. These reports will clearly show performance against budget variations, the reasons for the variations which are classified into controllable and non-controllable ones and the remedial action proposed or taken and the future outlook. It is then up to the management to take prompt action to prevent any adverse trends, concentrating on only those factors that are controllable within the business.

Again by fixing yardsticks of performance sector by sector within the organisation and then affording the means of judging achievement, budgetary control helps in the work of general management, for it helps decentralisation and delegation. Responsibility can, therefore, be fixed not in onerous detail, but in terms of particular goals within which the individual units or individual firms can exercise initiative with freedom and yet remain accountable for achievement or failure. In the opinion of the Management Accounting Team, on the basis of the experience gained from its study in America, a good scheme of budgeting and budgetary control would, on the one hand, enable the management at different levels of production to function more effectively without adversely affecting the interests of the owners and, on the other, the owners or the representatives would be able to retain adequately their control and powers of operation.

The state of accounting in under-developed countries usually depends upon the availability and background training of both management and accounting personnel, and varies with the type of the enterprise. It is, therefore, necessary that adequate steps should be taken for training enough number of persons in this branch of accounting. An efficient way of improving accounting in small-scale industries would be for interests in the same field to join in some co-operative or other associations and obtain the advice of specialists who could develop book-keeping and cost techniques on an industry basis. Alternatively, it may be worthwhile to establish a technical advisory service, for instance, in the form of a productivity or service management centre which would extend advice, among other things, on accounting techniques. This is a task, for example, that the National Productivity Council may be able to do with the help of its several branches. A more general measure consists in training, on the one hand, accountants and on the other educating managements to recognise the need for accounting data and to use such data for making policy decisions. It is also necessary that courses in accountancy in universities should be encouraged. It is obvious therefore that under-developed countries cannot rest content with old-fashioned and out-of-date accounting methods, but should take every opportunity to use the modern techniques and, in particular, the introduction of cost accounting and budgetary control should be encouraged. However, it may be necessary that in the initial stages the development of new techniques may have to take place slowly and in the simplest form possible to allow the accounting staffs to familiarise themselves with their operation and management personnel to learn how to interpret the data. But the fact remains that management accountancy has now come to stay and it is an essential part of any scheme aimed at increasing productivity.

The Exercise of Authority*

By JOHN. R. COLEMAN
Consultant, Ford Foundation, New Delhi

ON at least one point, most of the world's students of economic growth are in agreement: high level manpower for industry is likely to be one of the biggest bottlenecks in the newly developing nations. The sad truth is that, in nation after nation, there is simply not enough competent managerial talent ready to go to work. And, until this talent is developed in sufficient quality and quantity, the danger persists that all other resources in industry will be used at far less than their best level.

But the need to develop this talent in a country like India comes along at just that point in history when the whole world of management is most in ferment. Whether one looks in the United States, in West Germany, or in Russia, it is clear that old ideas of the way to get results in industry are giving way to new ideas at a rather startling rate. Any manager who develops his abilities on the basis of today's knowledge and then stops learning will find himself quickly left behind in the rush of events. The electronic computer is only one, albeit the most dramatic, symptom of this new age.

Even if it wanted to do so then, a developing nation could not import a fixed body of principles from another part of the world. Perhaps time lags are inevitable, and even desirable in some instances. But sooner or later the new ideas, no respectors of international boundary lines and customs offices, are likely to penetrate wherever industrialization goes.

It is well to recognize at once an old danger. Pseudo-science too easily passes for science in the early stages of systematic study of any field. So it is with the study of management. And here the evil is compounded by the fact that pseudo-science seems to be at least as exportable to the developing countries as does the slower developing science itself. An urge grows to turn out and to apply simple rules which give the surface appearance of being profound discoveries. Examples are legion: rigid rules about the proper span of control, about the authority-responsibility ratio, about line-staff relationships. However useful such rules may be in the particular cases where they were developed, there is seldom enough evidence to support their usefulness elsewhere. They become substitutes for thinking long and hard about the particular circumstances of one's own situation. It was a wise man who first said, "It isn't what I know that hurts me; it's what I know that simply isn't so that makes trouble."

But this danger can be avoided. Men in management can, if they so wish, combine a curiosity about new ideas with a deep scepticism about anything which smacks of an easy formula. They can build among their own numbers a professional association which sets out deliberately to promote the habit of learning from one another's experiences. And they can use these same associations to foster a critical re-examination of the ways in which they have been doing things over the years. A management association can, of course, deteriorate into a mere lobbying group, a protective society, or a club in which the members hear only what they have often heard and half believe. But, at the other pole, it offers the challenge of continuing education to keep its members abreast of the best thinking in their field.

The habit of thinking in a truly professional way about management problems might begin when an executive asks himself the question, "What are the aims of this enterprise?" To ask this question is to assume that the obvious answer, "To make profits," is insufficient. A thought process has begun in which it is likely that the complexity of today's business aims will soon emerge. The firm will then be seen not as a single-purpose organization but as a multi-purpose one, devoted to profits (without which the other aims may be lost too) but also to the personal goals of many individuals within it, to a certain reputation in the community, to a particular concept of optimum size and status in the future, and so on. The comment of Herbert A. Simon that business conduct needs to be understood less in the context of "maximizing" something and more in the context of "satisfying" (i.e., obtaining at least a minimum level of satisfaction on each of a number of goals) is rich with insight; it is a more difficult concept to work with than is the "maximizing" assumption, but one which is closer to real world behaviour.

One place where new thinking is bound to have an impact is on the question of how results are obtained in industry's pyramidal structure. Management in the newly developing nations is coming into positions of influence just when the biggest question are being asked elsewhere about how management does in fact establish and maintain its influence. Most past discussions on authority have focused their attention on the man who is presumed to be exercising it. Yet authority is effectively exercised only when subordinates accept it. This suggests that more attention needs to be paid to those

*Condensed from a lecture delivered at the Department of Business Management, Delhi School of Economics on October 25.

who are the recipients of orders. Why do they accept the orders?

"Rewards and punishments" was long a standard way of explaining authority; men were rewarded if they accepted orders and punished if they did not. But now the recognition is growing that there must be much more to the acceptance of authority than this. And it is well for some of the industrializing nations that this is so, for their laws and practices have severely restricted management's right to reward or punish. The forces of tradition and social approval have also played major roles in analyses of authority. But these too seem insufficient as explanations, particularly when industrialization has everywhere succeeded in breaking down many of the usages of the past and threatens to break down still more in the future. But perhaps a third motive for accepting authority, for all of the scant attention it has received, may yet prove to be the most important reason of all; a man may do another's bidding out of confidence in him, in his ability, his fairness, and his dedication. This basis of managerial authority may be most in harmony with all of the values held elsewhere in democratic, developed societies; it may be the only basis for the long run survival of a business community in anything like its present form.

The implications of this possibility for the development of management are clear. Tomorrow's manager may find little support for his position in either the circumstances of his birth or the forces of tradition. He may find himself with only limited ability to get results by either rewarding or punishing those under him. He may instead be challenged again and again to prove himself able to lead men whose eyes will be wide open and not blinded by past ways of doing thing or by fear. This will call for a far higher level of ability than anything we have yet demanded of industrial leaders. For to do things 'with' men, rather than 'to' men or 'for' men, is the hardest task of all.

Purchasing Policy

PURCHASING is the management tool that holds the greatest promise. However, it has been the most neglected of all the management tools. For example, if purchasing from abroad had been properly planned, there would not have arisen the extraordinary spectacle of plants purchased with the approval of the Government not being utilised anywhere near their capacity because of the lack of foreign exchange necessary to buy spare parts and raw materials for them. Had purchasing been used as a managerial tool, a careful allocation could have been made of the foreign exchange available in such a way that the entire licensed capacity could have been utilised. It is true that then the total installed capacity would have been less, but the percentage of installed (and imported) capacity that now has to lie idle because of lack of raw materials or spares would have been reduced.

Purchasing as a management tool is not a device. It is a systematic approach, requiring the co-ordination of a large number of activities. It is obvious that there is much scope for what is often called 'modern methods of scientific purchasing and materials-management' in our industrial sector, whether public or private. The nature of the approach is revealed by some of the questions every purchase manager has to ask himself:

Is the cost of the item proportionate to its usefulness?

Is anyone else buying it for less? If so, is it from another supplier?

Does it need all of its specifications?

Does a standard product exist which will perform the same function?

Could a useable part be made by a cheaper method? That is, is it being made by the correct manufacturing method considering the quantities required?

If imported, could it be made indigenously?

If it is being made indigenously at a distance, can it be made nearby?

Value analysis is only one of the functions that have to be performed by a Purchase Manager. Another is the best allocation of suppliers for items which have to be obtained from multiple points. For example, a company may require 'x' machines of different models. They may have to be obtained from 'y' manufacturers for which linear programming will give the best possible allocation. Materials-management and stores-inventory-control are other aspects that the Purchase Manager cannot overlook. Too little of inventory results in a stoppage of production; too much inventory may result in such heavy interest charges on the blocked capital that the company may run into a loss. This means one must know what minimum stocks have to be kept of at least the important items. Another point to be taken into consideration here is that spare parts are likely to cost less if an arrangement has been reached with the supplier at the time when the machinery itself is ordered.

A great deal of co-ordination is obviously necessary with the Production and Purchase departments. Only the Production Department can decide what its requirements are, and when it will require them. But knowledge, gained through the Purchase Department, of the prices and delivery-schedules of various items, will enable it and the Purchase Department to decide what changes to make, if any, in its production-schedule as well as in the design of the components. At Ford's, even the designing section comes under Purchase, for the cost of the materials used will ultimately effect the selling price. The cost of materials, on the average, usually accounts for about 60 per cent of the total cost in most industries. If a company can make a saving of 2 per cent—a modest goal—on the cost of materials, both by paying less and by decreasing its inventory-carrying-charges, the amount saved would be equal to that earned by a 17 per cent increase in sales.

All this explains why in most of the modern factories in India, the status and powers of the Head of the purchasing department are steadily rising. Businessmen are now beginning to realise the value of the services of outside specialists to help re-organise their purchasing and store-keeping department. There is, however, a limit to what an individual concern can do. For example, the vagaries of the railways force manufacturing concerns to keep excessively large inventories, especially of coal. There are innumerable reasonably skilled small entrepreneurs who can greatly extend their manufacturing capacity if they can get some of their components supplied with the blue-prints, and if necessary, with a certain amount of technical advice and supervision. An all-India body is obviously required. A certain amount of market research for purchasing would help all manufacturers to plan their purchasing more accurately and to tap new indigenous sources. Perhaps small-scale industries could then compete on their own merits. Lowered selling prices, brought about by economies in purchasing, should definitely strengthen India's position in the export market.

The Challenge Of Africa 1960

IN this Blue Supplement, "The Eastern Economist" attempts to gather together the essential threads for an understanding of the new position of the Continent of Africa in the context of India's international current political and economic relations. Such an evaluation is overdue, because very few Indian observers have recognized, or having recognized, correctly assessed the extent to which Africa has emerged as a major competitor of Asia in attracting the world's political and economic attention. So far as economic affairs are concerned, even the facts are confused. "The Eastern Economist" has, therefore, set out a careful study of African imports and exports as well as other essential elements in the economic picture, made by His Highness Jaya Chamaraja Wadiyar, Governor of Mysore. The central portion of the Supplement deals with the facts as set out in the new context of the opportunities that are provided in our international trade. It is hoped that the assessment of the diverse economies which are now presented for study and some comments on political and economic factors of growth in these new nations made here will be of value to readers of "The Eastern Economist".

One of the most striking results of the economic survey over the last eight years is contained in the table on page iii, which gives the pattern of growth in national income terms in the years 1952 to 1958. One has only to look at this pattern to recognise how powerfully the so-called politically backward countries can operate in the economic sphere. Thus the annual rate of per capita growth in Algeria was 11.6 per cent, in Morocco 7.2 per cent, in Uganda 4.8 per cent, in Kenya 4.6 per cent and in Belgian Congo 5.9 per cent—all figures substantially above those of the Indian Union. This by no means goes to justify colonialism any more than a high rate of economic progress in the People's Republic of China justifies the Communist system of administration there. But at least, if the test is economic growth alone, some of these colonial territories have a substantially better record to show than our own. Whether in freedom they will be able to maintain these rates need not here be asked. Most of these countries are potentially rich, and particularly in areas where oil has been discovered, there is no reason to suppose that backwardness is written deep in their economies.

It is hoped the study is suggestive as indicating that there are great opportunities for trading with the new independent African nations. Whether we trade or we do not, we must, however, take into account their competitive position both in relation to products in which Indian trade is involved, such as tea, coffee and ores, as well as in respect of opportunities that they provide for the development of economies other than our own. Enough appears, from the mere figures, to show that here is a challenge as well as an opportunity. It is hoped that this Blue Supplement will help to develop knowledge of the opportunity and thereby provide an answer to the challenge.

Emergent Africa

THE entire African continent is pulsating with a new political life and emerging into its own to take its rightful place as a continent of free nations. As recently as December 1951, there were only four sovereign states in Africa, namely, Egypt, Ethiopia, the Union of South Africa and Liberia. The end of the last war witnessed in Asia, in the first place, a spectacular process of the transformation of colonial countries into sovereign states. The impact of the post-war philosophy of political liberation could not but make itself felt on the continent of Africa. The process of the political liberation of Africa soon started with the achievement of independnce by Libya in December 1951 and Eritrea in September 1952, the latter having exercised the option to merge with Ethiopia.

Today Africa is a vast continent with as many as 47 sovereign states or colonies recognized virtually as separate countries, though some of them are too small in size and incapable of viability to sustain the free status on their own. Out of these, 4 states were already sovereign, but, between 1951 and 1959, 7 more were added to the comity of free nations. However, by any test, 1960 will stand out conspicuously as a great landmark in the political transformation of Africa. During this year 16 countries were elevated to the status of sovereign nations. There yet remain 20 countries which look forward to the emergence of freedom. In area as well as the multiplicity of the countries into which it is divided Africa is unique. In any event, Africa will remain the one continent with the greatest number of sovereign states, when the last vestige of colonialism fades away. This means, to look at the question from one important angle, that the voice of Africa in the counsels of the United Nations will make itself not only heard but felt. The stakes involved in this part of the world are high.

It is interesting to trace in brief the rapid developments in the last few years leading to the liberation of one country after another from the state of colonial dependence. These developments could conveniently be followed with reference to the colonial powers, which, on their part, showed an enlightened and commendable policy to hasten the process of elevating the African countries to political independence. France comes first in the order in the sense that the largest number of colonies to be freed belonged to her overseas empire. In 1956 Morocco and Tunisia were both given the free status in the month of March. In 1958 Guinea followed suit. But in the current calendar year there followed an exodus of countries being transformed from colonies to free states. They were Mauritania, Mali Federation, Ivory Coast, Togoland, Dahomey, Upper Volta, Niger, the Cameroons, Gaban, the Congo, Ubanji-Shari constituted into the Central African Republic, Chad and Madagascar which has assumed its new name of Malgache.

Britain has a shorter list to show at the present time and it is composed of Sudan in January 1956, Ghana in March 1957, and the following countries in the current year: Nigeria, Somalia (British Somaliland and Italian Somaliland opting for merger into one state). On the immediate list are Sierra Leone to achieve independence in April 1961 and British Cameroon which will have the option to hold a plebiscite in March 1961 to decide whether to join the Cameroon Republic or Nigeria, because of the compulsion of its tiny size. Belgium freed the Congo in July 1960. The remaining Belgian colony of Ruanda-Urundi has been promised internal autonomy in 1961, to be followed by independence as soon as practicable.

There remains a string of 20 present colonies awaiting independence. A majority of them belong to Britain. But the preliminaries for their liberation have been gone through or are nearly completed and it will be a matter of only some time before they too rise to freedom. They are Tanganyika, Nyasaland, Northern Rhodesia, Southern Rhodesia, Gambia, Kenya, and Uganda. Bechuanaland, Swaziland and Basutoland involve problems of territorial complexity with the Union of South Africa. French Somaliland and Algeria are the two French dependencies whose fate is to be decided. It is now common knowledge that the race-population problem and political pressures have made the solution of the Algerian question a tough problem for General de Gaulle contrary to his first expectation on the assumption of the presidency.

South-West Africa which was transferred from former German control to the mendate of the Union of South Africa is in the constitutional sense a separate entity, but it has been integrated with South Africa and it seems wishful to expect its separation from the Union, whatever the constitutional position. There then remain two colonial powers, Spain, which has her colonies of Spanish Sahara and Spanish Guinea, and, Portugal, which holds Portuguese Guinea, Angola and Mozambique. The admantine attitude of these two powers in regard to their dependent possessions is too well-known to allow any forecast as to when they would move in step with the new post-colonial era.

The balkanization of Africa on such an extensive scale is the tragic result of the arbitrary decisions taken by the European colonial powers three quarters of a century ago in 1885 at the Berlin International Conference. They proceeded on the unprincipled method of drawing frontiers across the map of Africa by mutual agreement without the least regard to considerations of terrain, and, what is profoundly important in the African context, of tribal identity. The result was that tribes which have a high sense of identity, solidarity, tradition and culture found themselves divided and placed under altogether separate and watertight colonial administrations. If the Congo has posed serious problems of threat to the republic's territorial integrity, sharp provincial differences and tribal hostility, it would be far less than fair to blame its nationals alone. Instances can be quoted among some other countries of Africa where the legacy of the Berlin Conference has left its bane.

Africans will need the fullest sympathy and cooperation of all other free nations in their post-independence task of fortifying the concept of nationhood in their respective states. In the wake of independence would necessarily arise the prompt problem of economic betterment and development which implies ambitious programmes. In any development programmes export-import trade problems have a fundamental place and some of them have been discussed elsewhere in this Supplement.

The Pattern of Growth of Selected African Ecnomics: 1950-58

IN most of the African countries, a dual society exists. The native African society centring round the village continues to operate in a primitive manner along with the super-imposition of the advanced European type of economy brought in by the European population. Whereas in the old villages the standard of living is extremely low and people live around the subsistence level, the colonies inhabited by the European population enjoy a reasonably high standard of living. Any overall study of the African countries will necessarily take both the elements into consideration and is likely to produce a picture which is misleading.

Out of about 47 countries which go to make up the African continent, some one dozen maintain national income statistics which could be analysed to determine the manner in which the economies of these countries have grown in the recent past. An attempt is made here to put all the available figures on a comparable basis in order to study the growth in the economies of these countries between 1950 and 1958. Statistics are available for only a dozen of these countries, but they contain nearly two-thirds of the total population of the African Continent.

Table I below sets out the national income (in national currencies) between particular years, mostly between 1950 and 1958, along with the computed annual rates of growth both on the national income and the per capita income scale. It will be seen that despite the continuous political unrest during the last seven years, Algeria shows the highest rate of growth in national income. These figures, however, have been distorted by the fact that they include expenditure on the French troops which have been in operation there. Next in the line are the Union of South Africa and the Congo Republic (formerly Belgian Congo) with an annual rate of growth of 10.3 and 9.6 per cent respectively. There is no doubt that the Union of South Africa has been a leader in economic development in the whole of the Continent and the present rate of progress is not at all surprising. In the case of Belgian Congo, however, it needs to be stated that the encouraging rate of growth is mostly under the impulse of Belgian investment and guidance. Unfortunately, the economic pyramid built up by the Belgian Government is fast turning into bits under the political uncertainties prevailing since the independence of this country in July this year. Kenya, Rhodesia and Nyasa-

THE PATTERN OF GROWTH IN NATIONAL AND PER CAPITA INCOME

1950 -- 1958

Country	Unit	National Income (in millions of national Currency)		Percentage change of (3) over (2)	Annual Rate of Growth in National Income	Annual Rate of Growth in Per Capita Income
	(1)	(2)	(3)	(4)	(5)	(6)
1. Algeria	New Franc	4,800* (1950)	10,000* (1957)	108.3	15.5	11.6
2. Belgian Congo	Franc	33,700* (1950)	59,580* (1958)	76.8	9.6	5.9
3. Former French West Africa	Franc	507,000* (1950)	644,000* (1956)	27.0	4.5	1.6
4. Ghana	Ghanian Pound	344* (1954)	361* (1958)	4.9	1.2	—0.3
5. Kenya	£	160 (a) (1954)	207(a) (1958)	29.4	7.4	4.6
6. Morocco	Franc	450,000* (1951)	766,000* (1958)	70.2	10.0	7.2
7. Nigeria	£	609* (1950)	842* (1956)	38.3	6.4	0.7
8. Rhodesia and Nyasaland (Federation)	£	328* (1954)	426* (1958)	29.9	7.5	4.3
9. Sudan	£	N.A.	284(b) (1955)	N.A.	N.A.	N.A.
10. Tanganyika	£	142 (b) (1954)	169(b) (1958)	19.0	4.8	3.0
11. Uganda	£	67 (c) (1950)	115(c) (1958)	71.6	9.0	4.8
12. Union of S. Africa	£ S.A.	1,116 (c) (1950)	2.034(c) (1958)	82.3	10.3	7.1
13. Egypt	£ E.	801 (c) (1950)	918(c) (1956)	14.6	2.4	nil

(b) G.D.P. at factor cost.
(c) N.D.P. at factor cost.

land also show encouraging rates of rise in national income ranging between 7 to 8 per cent per annum. The rest of the countries indicate rates of growth which are less than five per cent per annum.

In terms of per capita income, the picture is not cheerful. For example, between 1954 and 1958, Ghana registered a decline in growth. The rise in per capita income in the case of Nigeria at less than 1 per cent was also discouraging. Similar was the case with former French West Africa with an annual rate of growth at 1.6 per cent. The rates of growth in the case of other countries also get depressed because of the fast rate at which population in Africa has been rising.

It will be seen that more than half of the countries listed in this table show a rate of growth in national income which is higher than that of the average rate of growth registered in the Indian Union. India's first two Plans are expected to produce not more than 42 per cent increment in national income over a decade or a rise of nearly 4.2 per cent per annum. The percentage comparison, however, ceases to have much significance because of the extremely different conditions which prevail in the two countries. The African Continent with nine times the area of the Indian sub-continent has to feed 60 per cent of the population of the Indian Union. The figures of per capita income have mostly been raised by the large emigration of European population as well as European capital. The level of living in an average African family is far lower than the average living standard in an Indian agricultural family.

In per capita income terms, the African countries which rule lower than India are Uganda and Tanganyka. Kenya, Nigeria and Sudan indicate a level which is almost around the Indian level. All the others show per capita income which is higher than that prevailing in the Indian Union.

It is indeed encouraging to note that many of these countries are slowly enlarging the monetised sector of the economic structure. There is a distinct trend from subsistence production to production for sale. It is conceded that lack of technology in the past made progress very difficult, but now that most of the countries have attained independence or are likely to be independent within the next year or two, the face of the African Continent is likely to change swiftly. The "revolution of expectations" cannot fail to accelerate the growth of the economies of these countries and within the next few years the Indian Union will feel the pressure of African competition in the export of raw material. If the new wave of post-independence economic expansion brings about a change in the standard of living, India can expect to have a ready market for her engineering goods and machinery in these countries. If an imaginative policy is pursued from now on extending the size of the market for Indian goods in African countries, the Indo-African co-operation in matters of trade could be pushed up at a rising rate.

Recent Trends in Indo-African Trade

BY JAYA CHAMARAJA WADIYAR
Governor of Mysore

AFRICA is developing its own personality. Many new States are emerging in different parts of the continent and taking their place in the world community as sovereign and equal members. They have the capacity and the eagerness to play an important part in the economic as well as political spheres of international relations. The rich and varied resources of the vast continent offer a wide field for profitable exploitation. This work of development is now rightly in the hands of Africans themselves and is therefore certain to yield far greater results than those achieved in the old days of colonial rule by European powers. The young nations are in urgent need of mutually profitable economic relations with countries with a better established economy, a higher degree of industrialization and a longer experience of international trade.

Indo-African trade relationship reaches back into antiquity. In recent times there has been a substantial amount of Indian settlement, investment and commerce in African countries. We are endeavouring to foster harmonious diplomatic relations with the emerging nations. In the economic sphere we are developing intimate and mutually beneficial intercourse.

Our fast-developing economy and our programme of industrialization have created a new urgency for promotion of exports and a search for potential markets; and these, particularly with reference to goods like textiles, machinery and machine tools, can be found in the countries of Africa. The expansion of trade with Africa will also aid greatly the development of Indian shipping.

The development of active trade relations with Africa is, therefore, of the utmost importance to us at the present day. Not only that, but it demands the most urgent attention. Many new African nations are looking round for enlightened economic aid and there is consequently wide scope for both investment and commerce. Such opportunities are favourable and fully available only if time is taken by the forelock.

This article draws attention to some important trends in Indo-African trade relations in particular.

INDO-AFRICAN TRADE

The following table(1) shows India's imports from and exports to Africa side by side with her total imports and exports from 1951-52: (Jan-Dec.)

Year	Total Indian Imports	Imports from Africa	Total Indian Exports	Exports to Africa	Total Indian Foreign Trade(a)	Total Indo-Africa Trade	Percentage of (b) to (a)
	(In Crores of Rupees)						
1951-52	943	84	733	49	1676	132	7.5
1952-53	670	47	577	31	1247	80	6.4
1953-54	572	61	531	30	1103	91	8.1
1954-55	656	57	594	48	1250	106	8.4
1955-56	705	..	609	..	1314	..	..
1956-57	832	52	613	56	1445	108	7.0
1957-58	927	51	637	43	1564	94	6.0
1959	887	42*	623	29*	1510	71	4.7*

It is seen above that Indo-African trade accounts for about 7.5 per cent of the total foreign trade of India. How this percentage can be substantially increased is the present problem of urgent importance.

(1) a. India 1959.
b. Statistics relating to Foreign Trade and Navigation of India.
c. Journal of Trade and Industry: (July 1960.)

The general factors which favour larger trade between two countries are: (1) the size of the area and population of the two; (2) the rich variety of resources and the complementary nature of these resources to a considerable degree; (3) geographical nearness of the two areas; and (4) the trend of recent economic development in the two aras.

EGYPT

Egypt occupies an important place in the world's cotton textiles industry because she supplies high quality and long staple raw cotton to several manufacturing countries. During 1950-57 raw cotton constituted about 31% of Egypt's total annual exports. This shows to what extent the country depends on a single export commodity. Furthermore, exports taken as a whole form about 20 to 25% of Egypt's national output showing the dependence of the economy on the international market.

With a population of over 24 millions and with rising incomes, thanks to the rapid economic development of the country in recent years, Egypt promises to be a developing market. In the past India has had a highly adverse balance of trade with Egypt as the following table shows:—

INDO-EGYPTIAN TRADE (1)
(In Lakhs of Rupees)

Year	Exports from India to Egypt	Imports from Egypt to India	Balance of trade for India
1952	656	2014	—1358
1954	632	2503	—1871
1956	1106	1552	—446
1958	868	623	+245
1959	887	804	+83

Prior to 1957 the value of imports from Egypt was considerably greater than that of exports to Egypt, though even during those years there was a marked tendency to a decline in the value of the imports. During 1957-59 there has been a 'favourable balance of trade' for India, though it must be noted that during 1959 there has been a deterioration in the trade position from our point of view. Steps have to be taken to remedy this. The total volume of trade has to be maintained at a high level.

THE SUDAN

The Sudan has a population of about 10 million persons in an area of 9.7 lakhs of square miles. India has important trade relations with the Sudan, occupying the second place in respect of both exports and imports by that country, the first place being held by the U.K. The following table shows the trade between India and the Sudan from 1952-1959:—

Year.	Exports to the Sudan. (In lakhs of rupees)	Imports from the Sudan.
1952	755	353
1953	446	6830
1955	606	999
1956	800	1232
1959	1462	1067

It will be seen from this table that there has been no regular trend as regards imports and exports, but there have been big year-to-year variations in the value of trade. Over the period 1952-59 taken as a whole, however, the value of imports was almost double the value of exports, with the balance of trade highly adverse for India.

(1) Journal of Trade and Industry: June 1960.

Cotton accounts for about 64% of the Sudan's exports judged on the basis of figures for 1950-57. Other export items include gum-arabic, domnuts, groundnuts, sesame, cattle, sheep, hides and skins, cotton-seed, melon-seed and dura. India's imports from the Sudan consist largely of long-staple cotton. The major items of imports by the Sudan are cotton piece goods, artificial textiles, jute sacks, vehicles and transport equipment, machinery, sugar, tea, coffee, chemicals and pharmaceuticals.

In recent years the Sudan has been developing its own sugar and textiles industries, and India's exports of these commodities have shown a declining trend. To offset this decline and to overcome the highly adverse balance of trade with the Sudan, it is necessary to promote exports from our country of heavy and light engineering goods, agricultural machinery, electrical equipment and other manufactured goods for all of which the Sudan appears to offer a good market.

ETHIOPIA

Ethiopia with a population slightly less than that of Egypt, (20 millions as compared with the 24 millions of Egypt) is similar to Egypt in the dependence on a single export commodity, in this case, coffee. Sixty-one per cent of Ethiopia's exports consists of coffee. This perhaps explains why India's import trade with Ethiopia is negligible while the export side shows relatively good value as can be seen in the following table:

Year.	Exports to Ethiopia. (In Lakhs of Rupees)	Imports from Ethiopia.
1950-51	133	Negligible.
1952-53	32	Negligible.
1954-55	329	Negligible.
1955-56	376	Negligible.
1959	237	Negligible.

If the policy of diversification of exports, which Ethiopia, like many other African States, is pursuing, proves to be successful, it may be possible for India to obtain more of imports from that country.

GHANA

Ghana has a population of about 47 lakhs and has now one of the most important of the progressive African economies of the present day. For India the independence of Ghana seems to have brought about a favourable turn in the trend of import trade in particular as is shown by the following table:—

Year.	Exports to Ghana (In Lakhs of Rupees)	Imports from Ghana.
1950-51	112	1-74
1951-52	183	Negligible.
1953-54	141	Negligible.
1955-56	109	Negligible.
1959	115	51

Considering that cocoa is the principal export of Ghana (amounting to about 65% of the total), it is not surprising that our imports from Ghana have not been high. But the new trend which seems to have suddenly developed from 1958 with a relatively sizeable import from Ghana has to be closely watched and fostered. The exports to Ghana have been to the value of about 1 to 1.5 crores of rupees and have generally included chemicals, capital equipment and 'Miscellaneous.'

ALGERIA

Algeria has a population of about 96 lakhs of which over 10 lakhs are Europeans. It has a semi-diversified export pattern. The export of wine, citrus fruits, iron ore, phosphates and chemical fertilisers constitute about

54% of total exports taking the annual average of 1950-57. As regards Algeria's imports the bulk consists of consumer goods which account for about 55-58% of total imports. The relative importance of fuel and capital goods has shown an increase during the last decade indicating probably industrial and transport development. India's trade with Algeria, however, is quite small. The last decennial annual average value of exports to Algeria was about 10 to 12 lakhs of rupees while imports were only to the extent of a few thousands of rupees.

FRENCH EQUATORIAL AFRICA

Coffee, raw cotton, wood and wood products and diamonds are the principal exports of French Equatorial Africa. These four items on an average for 1950-57 accounted for about 79% of the total exports. But India's imports from this country are practically nil.

On the import side French Equatorial Africa shows a trend towards increase as regards capital goods, especially transport equipment, and building materials such as structural steel and cement. The import of articles required for energy and for consumption form the bulk of imports. Exports from India have neither been steady nor at a high level. The value of exports during the last decade ranges from less than Rs. 1 lakh in 1950-51 to about Rs. 17 lakhs in 1951-52.

The fact that these states have all had close economic ties has made it difficult for them to get an outside market. But now that most of this region is becoming independent it is worth India's while to try and capture some part at least of the market.

FRENCH WEST AFRICA

French West Africa has a population of about 19 millions. Its exports include chiefly coffee, cocoa, groundnuts and groundnut oil, oil-cakes, wood, palm kernels and bananas. The imports are largely consumers' goods, such as building materials and transport and capital equipment.

As for India's trade with French West Africa, imports are practically nil while exports have not been continuous. Only some years during the last decade like those 1953 to 1955 and 1958 showed exports of about 50 to 70 lakhs of rupees. Here too, independent States are coming into being, and it would be worth our while to acquire a market for some of our exports.

MOROCCO

Morocco has a population of about 1 crore. It has a few important export products like calcium phosphate, manganese ore, lead ore, wheat, barley, maize, citrus fruits, fresh tomatoes and fish. The imports comprise largely of consumer goods (about 55%); raw materials and semi-manufactures (21-25%); capital goods (declining from 21% in 1950 to 12% in 1957) and fuels (increasing from about 5% to 9%).

It is clear that our trade with this region in North Africa which has a variety of products on both the export and the import list and which has a population of nearly one crore can be at a rising level.

TUNISIA

Tunisia is about one-third of Morocco in area and in population, having an area of 48,000 square miles and a population of about 38 lakhs. It has, however, special export products like alfa, olive oil and phosphates which account for nearly 32% of its exports; a few others like zinc, iron ore, lead and lead alloys contribute about 21% of the total exports. The import structure of Tunisia is similar to that of Morocco, (a) consumer goods being the predominant category of imports, (b) capital goods showing a declining trend, and (c) fuels and raw materials and semi-manufactures recording a slight increase.

It can be seen from Tunisia's export pattern that the country has special products to export. It is highly desirable that our import trade should be expanded as much as possible. The decline in our exports to Tunisia, as seen in the figures for 1955-56 and 1958, should also receive remedial attention.

NIGERIA

Nigeria is one of the biggest African countries with a population of about 32 million and it has also been an important African export market for India. It is a country endowed with a variety of natural resources as the multi-commodity export structure shows. The following table* shows the variety of its exports:

Commodity.	Percentage of total exports.	
	1938.	Average for 50-57.
1. Cocoa beans.	16.6	21.8
2. Cotton.	2.6	5.1
3. Groundnuts	13.8	17.5
4. Palm kernels.	22.9	16.3
5. Rubber.	1.4	4.2
6. Timber.	1.1	2.2
7. Tin.	15.2	5.3
8. Groundnut Oil.	—	2.0
9. Palm Oil.	10.4	11.0
Total.	84.0	85.4

Though Nigeria has a diversified export structure, India has so far not imported much from this country as the following figures† show:—

Year.	Exports to Nigeria.	Imports from Nigeria.
	(In Lakhs of Rupees.)	
1953	301	29
1954	863	116
1956	735	17
1959	415	26

It can be seen from the above that the value of annual exports from India to Nigeria has been 7 to 8 crores of rupees except in 1959 which shows a sudden big fall. The value of imports has been very small, almost negligible on the whole.

Exports to Nigeria include textiles and other manufactures, chemicals and some capital goods. Now that Nigeria is free the time is propitious for undertaking an expansion of our trade with that country.

THE REPUBLIC OF CONGO

Situated in Central Africa, constituting about one-thirteenth of the continent in area and having a population of about 13 million, the Republic of Congo is also a very richly endowed African region having a variety of mineral, forest and agricultural resources and vast hydro-electric resources. But India's trade with the Congo has been relatively very small. The following table shows the value of imports from and exports to the Congo in recent years:

Years.	Exports from India.	Imports to India.
	(In Lakhs of Rupees.)	
1950-51	34	107
1952-53	38	205
1954-55	27	—
1955-56	19	141
1958	13	119
1959 (January to November)	10	149

The level of both exports and imports is very low compared to the total foreign trade of the Congo.

* E Co. Survey of Africa since 1950: p. 170.
† Journal of Trade and Industry: June 1960.

Import trade has not been steady either. Thus it may be said that in the trade of India with the Congo there is much to be explored.

A major part of the Congo's trade is with Belgium; the U.S.A. and the U.K. came next in importance. In the last ten years, two-fifths of the Congo's imports comprised of machinery, transport equipment and other capital goods; the remaining three-fifths being equally divided between two categories, viz: consumers' goods and raw materials. Now that the Congo is independent India must step up her trade with that region and explore further ways of advancing her claims as one of the premier industrial countries of Asia.

BRITISH EAST AFRICA:
Kenya, Uganda and Tanganyka

The three countries of what constituted British East Africa, viz. Kenya, Uganda and Tanganyka form an important trading region for India. The total population of this region is 20.2 million of which the Asian —chiefly Indian and Pakistani—population is about 3.4 lakhs.

The following table shows the trends in the import and export trade of Kenya, Uganda and Tanganyka from 1950-51 to 1959:

Year	KENYA		UGANDA		TANGANYKA	
	Exports from India	Imports to India	Exports from India	Imports to India	Exports from India	Imports to India
	(In Lakhs of Rupees)					
1950-51	638	1852	23	32	209	211
1951-52	883	1860	35	18	262	217
1952-53	654	2057	71	122	367	198
1953-54	600	1532	81	158	337	115
1954-55	678	1839	83	7	446	246
1955-56	603	2185	106	28	368	227
1957	779	935	—	—	—	—
1958	475	1150	73	177	240	280
1959	489	1163	60	64	277	330

The above table shows that India had generally a highly adverse balance of trade with Kenya and a small favourable balance of trade till 1957 with Tanganyka, while with Uganda there were great annual variations and over the period of nine years a slight adverse balance for India. From the total trade point of view Kenya has been very much more important than Uganda and Tanganyka.

The striking feature about Indo-Kenya Trade is the fact that the value of exports from India has been generally only about one-third of the value of India's imports from Kenya. This emphasises the urgency of taking special measures to promote exports to that country.

The level of imports and exports with Tanganyka, which is bigger both in area and population than Kenya, needs to be stepped up. Uganda which is less than half the area of Kenya, has almost the same size of population. Considering this along with the trade potentialities of Uganda, India's trade with Uganda must be said to be at a low level.

A further important fact which emerged from the above table is the recent deterioration in India's exports to all the three countries. For British East Africa as a whole, prior to 1957 India generally occupied the third place among the supplying countries, but in 1958 it had dropped to the fifth place while the total trade has gone on expanding. This decline in exports is particularly marked for Kenya and Tanganyka.

Both as regards exports and imports of British East Africa, the U.K. has a major share, having generally over 55 per cent of the total trade of the region. Japan, West Germany, and Persia have been close in their relative positions as suppliers. In fact, these countries are fast replacing India as exporters of important commodities.

In recent years, especially, East Africa has become a target of the manufacturing world. Indian goods have to compete with rival products. Efforts are needed, both official and non-official, to promote exports to British East Africa.

MOZAMBIQUE

India's import from the Portuguese African State of Mozambique are of some sizeable value. The following table shows the trade of India with Mozambique:

Year	Exports to Mozambique	Imports from Mozambique
	(In lakhs of Rupees)	
1950-51 ..	52	444
1952-53 ..	93	595
1955-56 ..	75	450
1959 ..	60	486

It can be seen that the value of India's imports from Mozambique has been generally 5 to 6 times greater than the value of exports to that country, A study of the export structure of Mozambique shows that it has several items on the export list. The chief of them are cotton, crude sugar, copra, cocoanut oil, cashew-nuts, sisal, tea and wood. These articles account for about 83 per cent of the total exports of Mozambique. In the imports of Mozambique, India's share of textiles is falling and that of machinery and vehicles increasing gradually.

THE FEDERATION OF RHODESIA AND NYASALAND

The Federation of Rhodesia and Nyasaland is a fairly big economic region with a total population of about 73 lakhs. This region is highly valuable as a source of copper and tobacco, which together contributed on an average during 1950-57 about 71 per cent to its annual exports.

The decreasing importance of (a) textile imports (from 12 per cent of the total imports in 1954 to 8 per cent in 1957), (b) food, beverage and tobacco (from 10 per cent to 8 per cent) and the increasing importance of the imports of (a) machinery and transport equipment (32 per cent to 36 per cent), (b) metal and metal manufactures (9 per cent to 11 per cent), (c) chemicals (7 per cent to 8 per cent) and (d) mineral fuels (4.6 per cent to 5.2 per cent) are among the chief features of the fast changing pattern of the composition of imports of Rhodesia and Nyasaland. Imports of basic materials account for a higher percentage (about 4 per cent) of total imports than the corresponding percentage for Tropical Africa as a whole (about 1 per cent). This reflects the comparatively larger manufacturing capacity of the Federation of Rhodesia and Nyasaland.

The trade of India with Rhodesia and Nyasaland is by no means considerable; but there are some significant changes in the trend of imports and exports in 1958 and 1959. The striking feature in the trends is the sudden spectacular increase in the value of im-

ports into India in 1958 and 1959 from both the Rhodesias and also a moderate increase from Nyasaland. A comparison with the high level trade of 1950-51 will prove instructive. India's imports in that year were: N. Rhodesia Rs. 169 lakhs, S. Rhodesia Rs. 32 lakhs and Nyasaland negligible. The corresponding figures for 1959 (Jan.-June) are: Rs. 572 lakhs, Rs. 419 lakhs and Rs. 29 lakhs respectively. On the other hand, exports to all the three regions from India showed a decline in 1958 and 1959. This decline needs further investigation with a view to taking appropriate measures not only to recover the lost ground but to developing the exports from India further.

ZANZIBAR AND PEMBA

Zanzibar and Pemba with a population of about 2.8 lakhs constitutes a small economic unit, but is relatively very important as a long-standing supplier of cloves, copra and coconut oil to India. The annual average value of imports for the last decade is roughly two crores of rupees. The chief imports of Zanzibar consist of food articles and manufactures including some capital goods. Indias share in these imports is quite small having been about 40 lakhs of rupees on an average per year during the last decade.

THE UNION OF SOUTH AFRICA

The Union of South Africa was among the foremost trading partners in Africa for India till about 1946. Since then, however, owing chiefly to the strained political relations, which culminated in the application of economic sanctions by pre-independence India to that country, the natural flow of trade has been choked up. Comparatively the volume of trade during the last decade has been so small as to be negligible. However, given a satisfactory solution to the problem of Indians in South Africa, there exist great potentialities for developing a sizeable trade with that important African region.

The Union of South Africa stands by itself and apart from the rest of Africa in certain respects. Its population comprises about 93 lakhs of Africans, 29 lakhs of Europeans, 4.2 lakhs of Asians and 12.8 lakhs of others, totalling about 139 lakhs of persons. It has a big area of 4.7 lakhs of square miles. Apart from these general features, it is the only case of an African country with its exports drawn from both extractive and manufacturing industries. It is the biggest single producer of gold.

From this brief note a few points emerge. In relation to many African countries, our trade balance is unfavourable and therefore an all-out effort is needed to redress this balance. We have to embark without delay on plans for obtaining new markets and improving existing ones in African countries. For this object it is worth considering the appointment of a high-powered commission to investigate and explore all possible prospects of expansion and development. A commission for this assignment stands in a category by itself. Once the process of political liberation is completed Africa will address itself to the task of rapid economic development in which expansion of trade, particularly of its import trade, will assume key significance.

The Pattern Of Competition

WHILE analysing the external trade patterns of India and the African countries, what strikes one most is the dual nature of competition which India is bound to face in the coming years. This duality of competition arises primarily from the political ties which some of the African countries retain with metropolitan European countries as well as from the underdeveloped nature of the two regions. The growing economies of African nations will provide increased buying capacity for their people and create enhanced demand for capital, semi-durable and consumer goods. India being in a position to supply a larger variety than before of these types of goods, will face competition in Africa from industrialised exporting countries, who, in addition, will enjoy varying degrees of advantages in African markets. Secondly, the African nations are emerging as the producers of primary goods like tea, cocoa, tobacco and ores, and will present a fairly serious challenge to Indian exporters of these commodities in various markets primarily in Europe and also in Asia and other regions of the world. It may, therefore, be quite interesting to assess the degree of seriousness of this dual competition with which India will be confronted.

A glance at the table in respect of Indian exports to African countries on page xii makes it clear that the total exports are falling year by year, so that from a total figure of Rs. 56.4 crores in 1957 exports dropped to Rs. 46.4 crores in 1959. In 1960 the figure may be still lower; for the first seven months it adds up to just Rs. 24.3 crores. Another table giving the details of composition of trade shows that year after year Indian cotton piece-goods are being ousted from all markets, especially Egypt, Kenya, Nigeria and Ethiopia. Similarly the exports of other manufactured items like leather goods, medicines and pharmaceutical products and machinery and transport equipment too have either fallen or have failed to register any increase.

Apparently, Indian exports are being ejected for various reasons. The first pressure comes from Asian exporters among whom Japan, China, Ceylon and Pakistan are major rivals. Japan has recovered completely from the damaging impact of the war. Being a nation whose prosperity is linked with external trade, Japan has been asserting its position in respect of the exports of textiles and engineering goods, which it can produce at comparatively advantageous rates and that too of better finish.

Communist China too has emerged to a potential Asian competitor and, having comparatively more strained relations with the Western countries, it has been concentrating on the markets in Asia and Africa. China has also the advantage of costs and can supply various products at cheap rates. Chinese tea, textiles and several other manufactured goods have, therefore, found favourable markets in Africa. In fact, the Chinese trade offensive has been of political significance too, because, having strained its relations with India and various other nations in Asia, China has continued its search for allies in Africa and has found a fairly favourable atmosphere. The Communist licence of arbitrary manipulation of export prices is, in the last resort, a strong weapon in competition.

Apart from Asian competitors, the constitution of the European Common Market poses fresh threats of competition. The Rome Treaty, signed in 1957, lays down that the "overseas countries and territories" associated with the Common Market countries are entitled to preferential markets which are open to metropolitan member states. The African overseas territories of the Common Market countries form the largest part of their colonial empire. So the French African dependencies will be entitled to imports into all the Six members at preferential tariffs which formerly they got only from France. German exports

to these dependencies, for instance, will now be treated at par with those of France. The lower intra-regional tariffs will apply to them. It is natural, therefore, that Indian manufacturer of goods, who will be denied this preferential treatment in their exports to African countries, would find it difficult to compete and the threat Indian exports will be priced out would be real.

Another important effect of the European Common Market on Africa has been that the countries which are "overseas territories and regions" of the Members have to give each other the most-favoured-nation treatment, so that a Common Market within Africa is being created. The already existing customs union in French Equatorial Africa and parts of French West Africa are a step towards the realisation of a Common Market in that region. Such an institution will naturally mean an elimination of Indian products in the face of the goods that could possibly be supplied by one African country to another. As a consequence of these above-mentioned measures, the trade of various African dependencies between themselves as well as with the Six European countries will significantly increase.

Apart from the competition in Africa as stated above, certain primary commodities like raw cotton, raw hides and skins, unwrought copper, tin, nickle, manganese ore, oilseeds, tobacco and tea which figure in the list of Indian exports to the Common Market countries will face competition from African producers. In this connection it may be pointed out that several African regions being the "overseas territories" of the Common Market countries, they will enjoy preferential treatment in their exports. The duties on some of the commodities are substantial and, therefore, Indian goods in the Common Market region are bound to suffer in competition. Although as yet tea is not being produced in any significant quantity in the countries associated with the Common Market, the imposition of an outer tariff duty at the higher rate of 35 per cent duty may encourage tea plantations in these preferential territories enjoying lower tariffs. Similarly, the proposed common tariff on unmanufactured tobacco is 30 per cent, on vegetable oils it is 9 per cent and on coffee it is 16 per cent. Thus it is clear that, in the European Market, Indian exporters will be at a comparative disadvantage in the competition from African producers.

Even beyond the Common Market territories there are certain commodities produced in Africa which are at present posing sufficient amount of competition to Indian producers. Proximity to Europe and consequent lowering of transport costs will be a positive advantage. In the case of tea, for instance, Kenya and Rhodesian Federation are competing with India in the U.K., the U.S.A. and Canada. Similarly, unmanufactured tobacco is being exported in significantly large quantities from Rhodesia to U.S.A. and Canada. Other commodities which compete with Indian products are manganese ore and coffee.

The emerging pattern of competition of a serious nature thus holds a potential threat of some set-back broadly to India's primary exports to the Common Market Six and exports of manufactured goods to the present African dependencies of the Common Market metropolitan countries.

Shorter Notes

GHANA'S FIVE-YEAR PLAN

TYPICAL of the effort the newly independent countries of Africa have to make to develop their economies is the Five-Year Plan of Ghana which came into operation on July 1, 1959, nearly two years after this country gained independence. The Plan is a bold one for an under-developed country having a population of about 50 lakhs, involving as it does an expenditure of £G 350 million (Rs. 466.67 crores) out of which a sum of £G 100 million is envisaged to be spent for the development of hydro-electric energy alone. Since raising of £G 350 million is apparently beyond the immediate means available to Ghana, a smaller programme of development has been drawn up to form the core of the Plan. This programme includes the more urgent projects and will cost £G 132 million, allocated as follows (£G million): Communications 28.7; Health, sanitation and water supplies 19.7; Industry and trade 15.4; Education 14.1; Agriculture and natural resources 10.4; Local and Regional Government 9.2; Housing 7.1; Electricity 7.0 The country having no known deposits of coal and having to depend on timber as the main source of fuel, the pride of place in the Ghana's Plan has been given to the development of hydro-electric power. The biggest hydro-electric project that is envisaged is the Volta River Project which will provide 600,000 kw of electrical energy, with an investment of nearly £G 55.7 million.

Ghana's current Plan is not the first one through which concerted effort is being made to develop the country. As far back as September 1951, the First Five-Year Plan of Ghana was launched. This Plan originally provided for an expenditure of £G 75 million but was later on expanded to involve an expenditure of £G 98.8 million. Upto June 30, 1957 a sum of £G 93.3 million had been spent as follows (in £G million): Roads 14.8; Education 12.9; Works 8.4; Railway 8.0; Tema Harbour 8.2; Agriculture 4.3; Health 4.6; Housing 4.75; Water 5.35: Tema township 3.4; Justice and local Government 3.0; Trade and industries 2.8; Defence 2.7; Interior 2.2. From July 1957 to June 1959, a consolidation programme was executed at a cost of nearly £G 47.8 million.

Among Ghana's industrial programmes, the most important one is the setting up of an aluminium smelter at Tema. This project will cost £G 35 million and when completed will produce 210,000 tons aluminium.

BRITISH SCHEME OF TECHNICAL AID TO ITS AFRICAN COLONIES

To enable its former colonies and existing dependencies in Africa to retain, till local talent is sufficiently trained, the services of the experienced staff—administrative, technical and professional—recruited in Britain or elsewhere overseas and serving in these territories, the United Kingdom Government has drawn up a scheme which it intends to put into effect on April 1 next year. The scheme will cost the British Government between £12,000,000 and £16,000,000 each year, and will remain operative for a period of 10 years in the first instance. Under the scheme, the British Government will re-imburse the Territorial Governments the full cost of the inducement allowance designed to attract and keep expatriate officers in service overseas, the full cost of education and allowances of the children of these officers and additional pension and gratuity which an officer would earn from his inducement allowance, half the cost of passage to and from his home country for an officer and his family and half the cost of compensation awarded to an officer for loss of career on premature retirement connected with the progress and independence of the country he serves. Provision is also made in the scheme for an annual visit to the officers serving in these territories by their children receiving education abroad. To ensure full loyalty of the foreign staff to the countries employing it, the British Government will not make any payments directly to these officers. The Territorial Governments which want to avail themselves of the facility provided by this scheme will have to sign a formal agreement with the United Kingdom Government.
