Tobacco Export

(A Monthly Bulletin)

Vol. XI — No. 3

OCTOBER 1972

Bulgaria:

Bulgaria rose to a position of eminence in the world tobacco situation during the 1960's by becoming the foremost exporter of cigarettes. In line with the upward trend in cigarette manufacture, Bulgaria's output of tobacco products had expanded by 29 per cent in 1969. Despite an increase in the area planted with tobacco in Bulgaria in 1969, however, a smaller average yield (about 750 pounds per acre) meant that total production was significantly lower than in the previous year. In 1970 both area and production are reported to have shown little change.

East Africa:

The African countries of Tanzania, Uganda, Malawi and Zambia have taken steps during the past several years to increase tobacco production. Main emphasis has been on flue-cured and burley and to a lesser extent, fire-cured types.

Of the four countries, Malawi is first in tobacco production. In the 1969-70 season, 89 growers produced 10.3 million pounds of flue-cured on 9,800 acres. Burley production weighed in at 12.5 million pounds in 1970, a 64 per cent increase over 1969. Production

of sun-air cured tobacco in 1969-70 was 4.1 million pounds, produced by 7,760 growers on some 13,500 acres. Fire-cured tobacco production in 1969-70, from 59,300-acres and 40,124 growers was 22 million pounds.

Tanzania is the second largest producer and exporter. Total tobacco production averaged 5.6 million pounds during the 1960-64 period and reached about 27.7 million pounds in 1970. Flue-cured production increased from an average 3.5 million pounds in 1960-64 to 19.5 million pounds in 1970, an average growth of about 30 per cent per year.

Tobacco production in Zambia in 1968 was 14.7 million pounds. During the 1960-64 period, flue-cured made up about 87 percent of the total tobacco produced, and burley accounted for most of the balance. Out of the total 12.8 million pounds, produced in 1970 flue-cured production was 11.5 million pounds and burley about 1.3 million.

In Uganda, production of flue-cured began to increase in 1968, while the production of fire-cured tobacco decreased. Total production of fire-cured was only a little over 3-million pounds in 1970; flue-cured production was about 8 million pounds.

South America:

South American tobacco-producing countries have strengthened their positions in the world market as the result of a decade of growth. Tobacco acreages have been increased and new factories have been erected to meet some of the demand for tobacco products at home and overseas. The four big South American tobacco producers are Brazil, Argentina, Paraguay and Colombia.

South America currently produces about 56 per cent of South American tobacco output.

It nearly doubled its production of U.S. Virginia-type flue-cured tobacco from 1968 to 1969 and again from 1969 to 1970. The total 1970 crop is 437.6 million pounds. The 1971 crop is expected to be 15 percent larger some 503 million pounds.

Argentina, second largest producing country in South America, has boosted its output of flue-cured tobacco from 35.3 million pounds in 1965 to 51 million in 1970. During the same period, Argentina's burley production was expanded from 5.5 million pounds to 16.5 million pounds. Its total 1970 tobacco production was 139.8 million pounds from 147,000 acres.

Colombia and Paraguay hold third and fourth positions. Colombia has increased its tobacco production by 2 million pounds per year since 1958 to a high of 97 million pounds in 1970. Paraguay has increased tobacco production, primarily of dark air-cured and bright sun-cured tobacco, by an average of 4-million pounds per year since 1958 to a total of 57-million pounds in 1970.

In the decade of the 1970's South America's four major producing countries are expected to expand their production and export programmes. There is a strong likelihood that South America will become the third largest exporting region in the world after North America and Asia.

Expansion in exports will probably be in the flue-cured and burley types of tobacco with major efforts being made to obtain a larger share of the market in the European Community and in other European countries.

Soviet Union:

The Soviet Union is the world's fourth largest producer of tobacco and ranks among

the foremost consuming countries. The area under tobacco in the middle year of the 1960's expanded significantly, as did leaf production; comparing the first and second halves of the decade, yields were also higher, but they showed no growth in the last five years. About four-fifth of the tobacco in recent years has been comprised of oriental leaf and most of the remainder has been dark air-cured (mahorka), although around 10 million pounds of cigar leaf has also been produced. Relevant data for the years 1967-1970 are as follows:

	1967	1968	1969	1970
Area (thousand acres)	434	435	437	440
Production (Million lbs)	573	575	551	573
Yield (lb per acre)	1,320	1,320	1,258	1,303

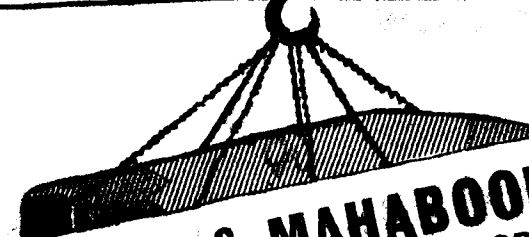

Yugoslavia:

Tobacco is still an important crop for Yugoslavia, though its significance has been slightly reduced in recent years. Both area and production expanded markedly in the first two decades after the war but more recently the planted area declined. Production dropped sharply in 1968 and while subsequently there has been a recovery, the levels of the mid-1960's have not been regained. Yields too, revived somewhat, but in general they remained low. Over two-thirds of total production now consists of oriental tobacco, one-fifth is flue-cured and the remainder is dark air-cured. Output of flue-cured tobacco expanded considerably in recent years and is expected to increase further in association with the production of lighter, milder cigarettes.

Prospects for Tobacco Trade Between U.S.A. & China

U.S. tobacco and tobacco products may again be shipped to mainland China - once a major market for U.S. leaf - following President Nixon's decision on June 10, 1971, which ended a 21-year embargo on trade between the two countries. Tobacco was one of the products approved for trade which now require only an open general export licence.

Many U.S. tobacco men wonder if China could resume its importance as a market for U.S. leaf: just over four decades ago that country was the second largest importer of U.S. leaf tobacco, taking an annual average of 135 million pounds from 1928 to 1931.

Trade was reduced during the late thirties, to about 50-million to 60-million pounds

annually, as Chinese cigarette factories replaced U.S. leaf with cheaper, domestically-produced tobacco. The price differential was aggravated by import duties and taxes. During the 1937-38 season, the average price for Chinese flue-cured leaf for factory-made cigarettes was about U.S. \$0.085 per pound, compared with 16 cents for U.S. flue-cured.

Trade continued to decline during the forties, when U.S. leaf exports to China averaged about 23 million pounds annually, and tobacco products averaged less than 500,000 pounds annually except in 1946 when they reached 4.4 million pounds and in 1947 when they totalled 2.4 million. All U.S. Mainland China trade was embargoed in 1950.

China's tobacco industry has grown in the past two decades. It is now the world's second largest producer of tobacco, exceeded only by the United States.

Total production has risen from an annual average of 1.3 billion pounds in the late thirties to an estimated 1.75 billion pounds in 1971.

Flue-cured leaf is by far the most important type of tobacco produced in China. Production began in 1916 from seed and culture methods introduced from the United States and reached 200 million pounds in the late thirties ; it currently is estimated at about 1.0 billion pounds - just short of the 1971 U.S. production of nearly 1.08 billion pounds.

The relative importance of flue-cured leaf in China's tobacco production can be seen by comparing production in 1937 and 1971. In 1937, when total tobacco production was 1.3 billion pounds, flue-cured leaf accounted for only 13 percent of production while light and dark sun-cured leaf accounted for 47 percent and cigar-type leaf, 40 percent. By 1971, when total production reached 1.75 billion pounds, flue-cured leaf reached 59 percent of production while sun-cured dropped to 26 percent and cigar leaf, to 15 percent.

This shift in production is a result of the growing popularity of cigarettes made from light tobaccos. During the thirties an estimated 80 percent of china's tobacco was used in pipes, 15 percent in cigarettes, and 4 percent in snuff ; now over one-half is used in 400 billion cigarettes produced annually.

In some recent years China has exported over 60 million pounds of flue-cured leaf,

according to the limited available data. Exports are mostly low quality, low nicotine leaf which sells for an average of about 25 U.S. cents per pound. Major buyers are West Germany and Singapore.

However, the United States could become an importer of Chinese tobacco since the President decided to permit imports to enter the United States from China under a general licence. Any U.S. tobacco imports from China will be subject to the tariff rates (35 cents per pound for unstemmed cigarette leaf) generally applicable to goods from most Communist countries. This compares with a U.S. tariff rate of 12.75 cents per pound on such flue-cured leaf imported from countries which receive the "most favoured nation" treatment.

The fact that China is now an exporter of tobacco does not mean that it will not import tobacco. Many countries, including the United States, are both exporters and importers, largely because of differences in types and qualities of various tobaccos. These vary widely throughout the world and most users prefer some blend of foreign and domestic tobacco.

At present, China imports small quantities of leaf tobacco and cigarettes from Albania. Government policy has emphasised exports in order to obtain the hard currency needed for the nation's further development.

The extent of future U.S. tobacco shipment to China will depend on several factors :

The priority China assigns to production or import of high quality cigarettes ;

10.6.1972
16.10.72
(11.11.72)

The recognition accorded to People's Republic of China by official United States ;

The extent to which China may become eligible for U.S. Government trade programmes.

The status given to China as an importer under U.S. law.

The willingness of the U.S. Government to conduct two-way trade in tobacco with China.

Perhaps the most important factor for U.S. sales of tobacco to China will be the way in which China's leaders plan to spend the nation's hard currency. Per capita incomes are relatively low (US\$ 125) compared with those of many Western nations and, since the State is the only trading agency in the country, the Government will decide what goods will be imported.

If China does encourage imports of U.S. tobacco, the potential market will be influenced by at least two important factors. On one hand, imports from the United States will be limited because per capita income is low compared with that of most buyers of U.S. tobacco. On the other hand, China's 800 million people represent a vast potential market.

For example, current annual per capita consumption is about 2 pounds - compared with 7 to 8 pounds in the United States. Thus, even modest gains in per capita consumption would represent large quantities of tobacco. If Chinese consumption were to increase by one pound per capita, the increase in demand would exceed the total level of

loan holding of U.S. flue-cured leaf (70 million pounds); if consumption were to increase by 1½ pounds per capita, this increase would exceed the loan holdings of U.S. cigarette leaf (1.1 billion pounds).

However, short-term U.S. exports of tobacco to China probably will be small and rise very gradually. It is not possible to put numbers on this market potential. In the long run the tobacco export potential will depend to a large extent upon the political, commercial, and financial policy of the Government of the People's Republic of China.

TOBACCO AND THE IMPORTANCE OF RESEARCH

The production of Indian tobacco must be geared to meet the changing demands of highly competitive international markets. To achieve this, we need constant research to evolve new strains of tobacco suitable for Indian conditions and to develop cultivation in new areas.

Indian Leaf Tobacco Development Company is the only leaf tobacco company to have established a comprehensive Research and Development Laboratory as far back as 40 years ago. Research, covering all aspects of the tobacco crop, will account for Rs. 16 lakhs this year. Cigarette research on consumer preferences, packaging and other materials is carried out by ILTD's sister company, India Tobacco Company Ltd.

Manned by highly qualified scientists and agronomists, the ILTD Research Laboratory has several achievements to its credit. Two of the preferred export varieties grown in Andhra today — Spl. FCV and '6/03' — were evolved by ILTD. Plant breeding is only one of its many functions. The Research Laboratory also assists farmers in scientific production of tobacco by providing soil and water testing, advice on fertilisers, pest control and curing methods. The benefits to the farmer are reflected in improved qualities and increased yields, consequently leading to a rise in his standard of living.

The application of scientific cultivation practices — a systematic programme of crop rotation — has also resulted in higher yields of other food crops grown by the farmer.

AT ILTD, RESEARCH MEANS
TOBACCO DEVELOPMENT

INDIAN LEAF TOBACCO DEVELOPMENT CO. LTD

Extract from the report of India's Commercial Representatives abroad

United Kingdom (May 1972)

India is maintaining its improved performance this year. A quantity of 639,262 lbs of tobacco with a value of £ 188,000 was imported into the U.K. from India. There was no import from Pakistan during the month. New tobacco countries particularly Brazil and Republic of Korea have made serious inroads into the U.K. market. By the end of the month, the total import from the Republic of Korea for this year has come to almost double that of India. It has been reported that Rhodesia has become cheap producer of top quality tobacco leaf and it would pose a major threat to other tobacco exporters once sanctions are finally removed or eroded.

The Imperial Chemical Industries are reported to be going into full scale commercial production of a synthetic smoking material in the course of a few months. The ICI Chairman said that he could not tell the difference between cigarettes containing the material and those without it. No positive health claims are being made about the product. ICI have spent nearly four million pounds sterling on research into finding a material which can be blended into cigarettes to reduce health hazards.

United Kingdom (June 1972)

In the case of import of tobacco also, India's performance this year so far has been very satisfactory. As against an import of 7,401,898 lbs with a value of £ 2,381,000 for the period upto May 1971, the import from India this year for the corresponding period has been 9,395,751 lbs with a value of £ 2,634,000. Pakistan was also able to improve her exports. Imports from Pakistan were 301,880 lbs with a value of £ 78,000 as against 221,349 lbs with a value of £ 56,000

for the corresponding period last year. The import from Brazil was double the quantity for the previous year. U.S.A. and Canada continued to dominate the market.

Withdrawals of tobacco for manufacturing purposes from bonded stocks in the U.K. in April 1972 were 23.894 million lbs which is slightly lower than the quantity for the previous month this year. Out of this 3.492 million lbs were Indian tobacco. A quantity of 4.184 million lbs of manufactured tobacco was exported by the U.K. during April which included 0.471 million lbs of Indian origin. The total bonded stock at the end of month was 388.034 million lbs. of tobacco out of which 49.972 million related to India.

In respect of Rhodesia the U.K. Government accepted the Pearce Commission verdict that Africans were not in favour of accepting the new political reforms offered to them by Mr. Smith's Government. But in Salisbury Mr. Smith rejected the Pearce Commission findings as naive and said that since Britain was not prepared to implement the proposals his Administration would continue to govern. The sanctions against Rhodesia will continue and there is no likelihood of Rhodesian tobacco entering the U.K. market openly in the near future. The British Foreign Secretary Sir Douglas Home said in Parliament that U.K. was the only country who had been keeping the sanctions and every month U.K. had drawn the attention of the U.N. to breaches of sanctions, but no one took the slightest notice of it all.

Lebanon—1971

In 1971, about 7,928 hectares were licenced for growing tobacco by the Tobacco State Monopoly and it is estimated that the total produce for that year amounts to about 8,500 tons worth about L.L. 49 million, registering an increase of about L.L. 7.8 million over the 1970 figure.

However, on the marketing front the authorities have encountered some difficulties since the State Monopoly that buys the produce at subsidized prices is also responsible for marketing the surplus after meeting the needs of its tobacco factory - 3,776,653 kg. of tobacco were exported in 1971 against 3,063,050 kg. in 1970.

On the other hand, the new policy followed by the authorities of reducing taxes on foreign tobacco in order to prevent its smuggling into the country has resulted in a big shift in demand by consumers from local tobacco to foreign one.

Burmas: (July 1972)

It has been reported that over 200,000 viss of virginia tobacco has been exported so far since October 1971 and the Myanma Export

Import Corporation plans to export 100,000 viss more before the year is out. The People's Cigarette factories will turn out 3,000 million cigarettes this year to meet the domestic requirements as well as for export. Burmas cigarettes with filter tips proved fairly popular with smokers at the international fairs and exports of filter-tipped Duyas to Nepal began last year. Indonesia and some other countries have asked for samples of Burmese cigarettes.

The People's Cigarette Factories plan to manufacture about 60 million filter-tipped Duyas a month (double the present output) beginning 1st October 1972 to meet increasing local demand for this popular brand.

Libya (August 1972)

It is important for Indian firms desiring to participate in various tenders in Libya to get themselves registered with the Central Tendering Authority or with some Ministry.

It creates problems when they are not so registered in securing tender documents. The various firms, both in public and private sector often ask Embassy to secure tender documents for them whose cost they later reimburse. The Embassy is always willing to assist them as it has done in so many cases.

But, of late, according to their new regulations, participating firms are required to be registered first with some Government authority before they can be issued with tender documents.

When they are not so registered, they have to act through an accredited agent who purchases the documents on their behalf. Embassy has, therefore, always recommended that both for facilities as well as for promotion, it is best for Indian firms to appoint agents here.

Now more and more agents are coming forward who are willing to be appointed agents for well-known firms whose products they can promote. Such agents could also get the firm registered with the right authority.

Sub-contractors Prospects: Attention of Indian firms is also drawn to the fact that the Embassy sends information even about local tenders because foreign firms can participate in them indirectly through the principal Libyan firm which usually lacks the wherewithal, know-how, material, equipment, etc. to carry out the work.

They secure the contract but entrust the sub-contract to other firms. Indian firms should, therefore, intimate and initiate their interest in such tenders also, even if the notice be short. A number of firms of other countries have so secured sub-tender work.

Tender Notices: Embassy has also started sending tender notices on the very day they issue by airmail to the list of organisations, in addition to Government. This is in order to save time and allow a longer notice.

The list of organisations include all EPCs concerned, FIEO, FICCI, EPI, ICPP, IIFT, STC, DGCI & S, MFT, IEA, EAI, IMC NIDC etc. If any others would like to be included in the list, they would be welcome to let the Embassy know. It is however,

requested that the Federation or Organisation should inform the concerned members quickly to give them as long a time as possible to consider participation.

Notice Period: It is true that at times even for international tenders, notice is not as long as it should be or that our would-be participants take too long to make up their minds or that they receive or get to know of the notices late or that they do not secure the tender documents in time.

So, very often our tenderers ask for extension of closing date. Such extensions are generally considered if other firms also apply - not an appeal just from Indian firms. We have, however, succeeded in obtaining such extensions in a few cases, but it would be better to abide by the closing date to avoid difficulties.

We have given all this advice at some length in view of the increasing number of tenders being put out nowadays from various Ministries and Government Organisations. The percentage of our participation in such tenders is still small, though it is growing.

News & Notes

The Tobacco Control Commission's official estimate on June 1 was that the season will produce a total crop of 67.45 million pounds, more than two-fifths of which (28 million pounds) will be fire-cured.

After the United States, Malawi is the world's largest producer of fire-cured tobacco. Although production is up from last year, prices are down. The average price for fire-cured is currently running at about U.S. \$0.07 per pound below last year's all-time high average of \$0.45 per pound.

The State-backed Tobacco Industry Control Board, based in Pretoria, Transvaal, has asked the Government to increase the duty on all imported cigarettes from 205 cents a 1000 to 305 cents. The application is particularly aimed at Rhodesian cigarettes which sell about 120 million a month in South Africa.

The increased duty would work out at an extra 2 cents on a packet of 20. Should the application succeed, it would eliminate most of the 105 cents per 1000 preferential rebate allowed for tobacco imports from Rhodesia and Malawi.

Spain is expected to continue its large tobacco imports in the foreseeable future. Self-sufficiency in tobacco is not likely since Spain imports about half its tobacco. Recurring attacks of blue mold plus rising costs of

production make tobacco cultivation less profitable to the Spanish farmers.

The National Tobacco Growing Agency regulates the area and production of tobacco in Spain.

(Source: : Tobacco New York,
July 7, 1972)

Cigarette output in the United States during 1972 is expected to show a gain of four per cent in quantity and three per cent in value over 1971, the U.S. Department of Commerce reports. In its just-released annual publication, "U.S. Industrial outlook" the Government department points out that cigarette production this year over last year will see output growing to 590 billion units worth \$3.6 billion.

China's tobacco industry has grown in the past two decades to where it is now the second largest producer of tobacco - exceeded only by the United States. According to Dr. Hugh C. Kiger of the Tobacco Division of the U.S. Foreign Agricultural Service China's total production has risen from an annual average of 1.3 billion pounds in the late 1930's to an estimated 1.75 billion pounds last year. States Dr. Kiger: "Flue-cured leaf is by far the most important type of tobacco produced in China - reaching 200

million pounds in the late thirties ; it currently is estimated at about one billion pounds - just short of the 1971 U.S. production ”.

The Philippines' cigars are among the products of the country listed by its Board of Investments as having good export possibilities to the European Economic Community market.

(Source : Tobacco Reporter - June 1972)

* * *

Approximately 8 million pounds of Hicks/Va 45 sun-cured and burley tobaccos grown by the Banco Agrícola in Mexico during the 1970-1971 period remain unsold. Various foreign buyers have inspected these stocks stored in Nayarit, but to date there have been no sales. Since both the storage and interest charges are adding up on this non-redried leaf, the Government hopes to make some sales in the near future to local manufacturers. This stocks situation somewhat clouds the otherwise sunny situation in the Mexican leaf production sector this year.

(Source : Tobacco New york June 9, 1972)

Nearly one out of every three Koreans smoke, making the nation one of the largest cigarette smoking locations in the world. Latest figures from the Office of the Monopoly show that Korea has 9.4 million smokers of whom no less than 1.7 million are women. In terms of age group, Korea's heaviest smokers are in their 30s, and this group accounts for nearly one-fourth of all the Korean smokers. Close behind, at 24.1 per cent of the smoking population, are those in their 20s.

Teen-agers account for 1.4 per cent of the smokers, indicating that the number of smokers among the young soars when they reach college age. Those 60 or over belonged to a definite minority, making up 12.2 per cent of the total. However women smokers are concentrated in the 60s or over age group, which represent 37.8 per cent of all women smokers. In terms of cigarette consumption, each smoker smoked an average of 14 cigarettes a day last year. The consumed cigarettes numbered nearly five billion and smokers spent more than 82 billion won (\$8.2 billion U.S.) to support the smoking habit.

The Philippines' virginia tobacco output this year is expected to drop by 27 per cent from the 34 million kilograms registered in 1971 to 25 million kilograms this year. Cause of the decline, according to informed sources are the low prices of leaf which have forced many growers to shift to food production... The Philippines Bureau of Plant Industry has embarked on a massive production of hybrid seeds of wrapper tobacco to bolster its efforts to increase wrapper leaf production in seven leaf-growing provinces of the Philippines - Abra, La Union, Ilocos Sur, Ilocos Norte, Pangasinan, Isabela and Cagayan. The hybrids give an average yield of 1200 kilograms per hectare compared to the old varieties' average yield of only 900 kilograms per hectare.

A Peking Radio broadcast monitored in Hong Kong said recently that the Foreign

Trade Council of the People's Republic of China is drafting a cigarette export promotion-programme designed to improve Chinese cigarette quality and production with the end in view of making them acceptable in the world cigarette market.

* * *

The year 1972 is one of a challenge for the tobacco industry of Pakistan. The industry has been deprived of 60 percent of its market in the eastern wing of the country. Compared with the bumper crop of 75 million pounds last year flue cured output for 1972 is now being estimated at 18 million pounds.

(Source : Tobacco International weekly May 12, 1972)

The Council for International Economic Cooperation and Development of Taiwan has set up a trade representative's office in Frankfurt, West Germany, to serve as coordination centre for all Taiwanese Government representatives in Europe connected with foreign investments in Taiwan and with Taiwan's trade investments. The office is headed by Lu Ling-shih, until recently executive secretary of the foreign and overseas Chinese Investment Screening Committee of the Taiwanese Ministry of Economic Affairs. The tobacco industry has hailed the setting up of the trade office in Frankfurt as a boon to Taiwan's tobacco

trade with West Germany. Per capita cigarette consumption in Taiwan is more than 100 percent higher than that in Mainland China, according to a Hong Kong daily. Taiwanese smokers are free to smoke any brand they wish, while those in Mainland China are restricted to certain brands.

**Relax !
have a Charminar**

Get that toasted taste
of pure tobaccos.

CHARMINAR taste makes it
India's largest-selling cigarette!
