[redacted]'s the chimney of your friendship?
You see, you have at your service our flotilla of ships*
and twenty-eight scheduled sea routes.
That includes between the Far East and Oslo, Hamburg, Rotterdam
and Copenhagen . . . via our Maersk-Kawasaki Line international
friendship.
You also have roll-on/roll-off container service between
Australia and Japan . . . through another international
friendship, ESS Line.
And you have all-40-foot-container ships which ply the
Pacific directly between the U.S.A. and Hongkong and
Korea bypassing Japan.
That saves you five valuable days or more. Plus it helps emerging
nations emerge into the container age on their own.
International friendship is simple. Efficient shipping services . . .
that serve all countries.
Quickly. Safely. Economically.
Ships and friends anyone?

*Including scheduled liners, tramps, tankers and specialized ships to carry your special cargo like iron ore or automobiles.

June 24, 1972

Pity the pound

An early devaluation of sterling is still rather unlikely however sensible it seems. It is a mistake to support an overvalued parity by a 1 per cent rise in Bank rate, page 13. The continental Europeans, who are having difficulties in keeping their snake in its tunnel, may not be averse to a sterling devaluation soon, page 71. The stock market at 6 per cent, page 95.

Two years of Ted

Mr Heath may be disheartened at being farther away from changing the course of Britain's history than he was when he first got to No. 10, page 14.

The biggest dangers

Mechanical failure and human error are still bigger risks to air passengers than those hijackings, page 16. Security is really strict in eastern Europe, page 43.

It's a truce

The IRA Provisionals have called a truce. It is a real success for Mr Whitelaw's policy—but the talking is still not going to be easy, page 17.

Why not put it off?

The summit of the Ten planned for October is running into so many difficulties that it may be better to postpone it than risk a flop, page 15.

On to Miami

The Democratic nomination at Miami Beach is almost certainly Senator McGovern's after his triumph in New York. He must decide what to do with it, page 47.

Well oiled

British Petroleum has raised £360m, the biggest borrowing operation ever, to develop North Sea oil, page 95. France and Iraq have reached an agreement as expected, page 87.

Our annual special survey, after page 58.

European parliament

SIR—The suggestion (June 10th) of a peripatetic European parliament holding meetings in various capitals is supported by the experience of the North Atlantic Alliance, which has successfully been following this pattern for a number of years.

Last October's meeting was in Ottawa and this year's meeting will be in Bonn.—Yours faithfully, STRATHCONA
House of Lords, SW1

SIR—I was most interested in your article advocating a peripatetic European parliament (June 10th). From the viewpoint of the constituent members, especially the new members, Norway, Denmark, the Irish Republic and the United Kingdom, there is much to commend this idea as it would promote understanding in the countries concerned and help to induce people to begin to think as Europeans.

Strasbourg is certainly not the most satisfactory place for basing the European parliament. Your suggestion of a peripatetic parliament is obviously only a transitional arrangement, until it can be clearly established whether one of the capitals of the Ten is more convenient than the others for a permanent residence for the EEC parliament. Undoubtedly, the political secretariat must soon have a permanent base and this can, I think, be in Paris or Brussels or elsewhere. If eventually it is decided that one of the capitals of the EEC members, be it Paris or London or Brussels, should be chosen then there is no doubt that more valuable contacts would be made by MPs in those places than in Strasbourg.

It is, of course, already the practice of the Council of Europe to hold meetings of its various committees mainly in Paris, but also in the other member countries' capitals too. For example, the political affairs committee of the Council of Europe already makes it part of its policy to meet in the member countries, and in the past year or so it has met in Paris, Vienna, Ankara, Reykjavik, and next week will meet in The Hague. For myself, I think that none of us should be too precipitate on where the final home of the European parliament should be located. Therefore, I hope your suggestion for a European parliament meeting in various capitals will receive further consideration.

There is just one snag. While I think special sessions could be held between the European parliament and the parliament of the nation in whose capital the meeting was held, obviously this could not be considered a European parliament with Mr Foot, as you suggest, asking questions of the members, that is unless Mr Foot were also one of the 36 British delegates. But this snag could be solved by holding a joint session between the European parliament and the House of Commons which could only do good. This would also apply to other countries in whose capitals the European parliament might meet.—Yours faithfully, JOHN RODGERS
House of Commons, SW1

SIR—At the risk of casting myself as a "gung-ho" European of "the most parochial sort," excluded by your definition from the "best and busiest" of MPs, I would like to comment on one or two aspects of your excellent proposal for the sittings of the European parliament (June 10th). I am a member of the British delegation to the Council of Europe and WEU, which has played a key role in maintaining the British parliamentary pressure in Europe during a difficult time.

I do not believe that Strasbourg justifies the arrogance or remoteness which you attribute to it. The hospitality of that city to the European idea and cause, ever since Ernest Bevin is supposed to have chosen it as the site of the Council of Europe because of its "French cuisine and German helpings," has been real and lasting and the new £8m parliamentary building being built there will provide a worthy setting for any European legislature. What is urgently needed is a better airport and more regular services from the other European capitals. There is a great deal to be said for the location of the European parliament's permanent home in a city which does afford legislators some escape from the perpetual distractions of pressure groups, delegations, propaganda and publicity. I have heard far more considered, responsible and intelligent speeches in the Council of Europe than I have ever heard at Westminster.

That said, the committees of both WEU and the Council of Europe have set an example by meeting regularly in different countries as well as in Strasbourg. Meetings of the assembly or committees of the European parliament may arouse more interest than do the council and WEU, particularly as that parliament acquires power and responsibility, but in Britain, particularly, we should have to equip the House of Commons or a committee room with proper multilingual translation facilities.

More important is the general level of public and constituency support which is required if service in any European parliamentary capacity is not to require a degree of political self-sacrifice which most members are naturally reluctant to make. Service in Europe already increases, and that for the European parliament will further increase, the demands made on a member's time and energies. It conflicts inexorably and fundamentally with the "welfare-officer" concept of the MP. The pretence that any man can find the time to brief himself properly on the strategic problems facing a continent of 250m people and simultaneously act as a local housing appeals officer is one which will have to be abandoned.—Yours faithfully,
House of Commons, SW1 IAN LLOYD

SIR—A parliament of Europe touring the capital cities of the member states is a commendable idea (June 10th). The Times gives your idea its support, and presumably European integrationists in general will applaud the notion of the annual "parliamentary visitations." But, like the aeroplane, it will be a heavier-than-air machine that will take considerable velocity and propulsion to get it off the ground. The French lack of faith and interest in European parliamentary structures will make the idea even harder to get off the ground and no doubt they would prefer to keep the Euro-parliament in Strasbourg, well away from centres of political power. In Strasbourg it can play by itself, seen but not heard by the powerful politicians, who can stay at home to deal with issues on which they can bring their influence to bear, with concrete results.

Perhaps M. Pompidou, and even Mr Heath, might have no objection to a peripatetic assembly, were it to tour cities of remoteness akin to that of Strasbourg? Say Inverness, or Cork, or even the Isle of Man! A European parliament meeting in places like the Isle of Man would be reasonably remote from Brussels or Paris, both geographically and politically, and, indeed, an occasional "Euro-Tynwald" held on our open-air Parliament Field at St John's would add a bit of pomp and colourful ceremony to the whole touring theatre and would add a Gilbert-and-Sullivan touch that might suit both sides of the European integrationist fence for their own very different reasons!—Yours faithfully, D. K. KYME
Douglas, Isle of Man

McGovern on his way

SIR—As usual, *The Economist's* reporting and commentary on the United States is highly perceptive. But surely it is not necessary to denigrate Adlai Stevenson as "disappointing" and lacking in toughness, confidence and pragmatism in order to praise Senator McGovern (June 10th). All of us who were Governor Stevenson's passionate supporters in 1952 and 1956 were disappointed in Eisenhower's election. But we hardly considered the governor as "disappointing;" the loss was to a national hero who was able to exploit, in 1952, an unpopular war, charges of corrupt administration and (disgracefully) McCarthyism, and, in 1956, his incumbency, Governor Stevenson's forthright position on nuclear testing and the Suez crisis. Nor was Stevenson's record as governor of Illinois lacking in toughness, confidence and pragmatism. His main error lay in accepting President Truman's urging to run for the presidency, rather than seek re-election as governor. On the other hand, Truman's role in Stevenson's nomination is one of the many things for which Harry Truman deserves to be

SECOND CLASS POSTAGE FOR *THE ECONOMIST* PAID AT NEW YORK, N.Y
Published weekly every Saturday, fifty-two times a year in London, England.

MANAGEMENT APPOINTMENTS £7000 PA AND OVER

TEXTILES

GROUP MARKETING DIRECTOR

DESIGNATE

William Baird Textiles Ltd., a vertically integrated Group in the garment, fabric and yarn fields and selling predominantly to retail outlets in the UK, seeks a Marketing Director Designate who will play a leading part in doubling the present £25m. turnover within five years.

The successful candidate will be responsible to the Group Managing Director for the formulation of policy relating to merchandise, marketing and distribution, and for providing functional guidance and assistance to the company managing directors in their implementation of policy. The post will be London based.

The ideal candidate will be in the 30-40 age range, will have a garment strategical background (as opposed to detailed knowledge of one product group), will have a record of success in marketing and might have a basic discipline of economics, design or general industrial management. He will be presently earning at least £6,500 per year and could be earning considerably more. He will have the aptitude and ambition to progress beyond a marketing post.

Applications, giving full details of experience, salary progression and age should be sent to John Peace, Calver, Sheffield S30 1YE (Tel: Grindleford 30639).

No information will be disclosed without the candidate's consent.

JOHN PEACE

Management Organisation and Personnel Consultant

DIRECTOR-GENERAL

The Dairy Trade Federation

The UK dairy industry is big business providing approximately 2,700 million gallons of milk annually with the total retail value in the order of £1,000m. per year. The interests of the industry are safeguarded through the medium of the long established DTF. The Director-General will be responsible to the Council for the management of the Federation's business and for promoting the aims and objectives of the Federation with emphasis on commercial affairs and the furtherance of European co-operation through the EEC. Candidates, aged at least 35, will preferably possess a degree or be professionally qualified. They must be top level administrators and have experience at policy making level in the public or private sector. A good knowledge of French would be a decided advantage. Please write—in confidence—stating how each requirement is met to T. E. Platt reference S.45116.

at least £10,000

remembered with gratitude.—Yours faithfully, DICK NETZER
London, NW1

Can we learn from Chile?

SIR—Your new Chilean doctrine (June 17th) that democracy is possible only with "economic pluralism" has implications that you may not intend. Your reference to the "economic base" of right-wing parties and of the independent press is interestingly marxist in its integration of economic and political power. But it would be quite wrong to suggest that any political change, even if validated through the ballot box, must stop short of undermining the existing structure of economic power. This recalls the old taunts of communists to social democrats, and is very dangerous doctrine for the democratic process. Perhaps you intend to limit your doctrine to the need to prevent excess influence being exerted by any one faction on the press and other media. But this incontestable need is not easily reconciled with your hankering for "economic pluralism," the essence of which is to permit those who currently have economic power to exercise that power in pluralistic ways, among which the ownership and influencing of communications media have traditionally been rather prominent.—Yours faithfully, FRED HIRSCH
Oxford

Computers for commies

SIR—It is with considerable interest that I read the somewhat provocative item "Computers for commies" in your exquisite weekly (May 27th). As author of the just-published "Soviet Block Computer Industry and Market Study" for a group of subscribing Japanese, French and American data processing manufacturers (the British, I am sad to say, chose not to participate), and having spent a year researching the subject, I feel qualified to attempt to clarify a few points in your article.

It is too sweeping a statement to say the United States forbids its computer companies to trade with Russia. Many items are free to move and there is no general prohibition of trading with Russia just because you happen to be a computer maker. The announced objective is to keep at least a 10-year technology gap between the west and the Soviets, and it is in everybody's interest.

The 30 American manufacturers exhibiting in Moscow at "Computers 72" during Mr Nixon's visit can hardly be labelled "a politically discreet" exhibit exemplifying a "sudden change in policy." As a matter of fact, the exhibit was announced more than a year ago by INTEM, which stages many such events in the Soviet Union for the United States as well as many other European countries.

Even so all American firms are far behind your own ICL, accredited with the Soviet ministry of foreign trade, with real offices in Moscow, 14 Russian employees and a private telex to London.

There are more like 6,000 computers in the Soviet Union, not, as you suggest, only 4,000, and we estimate that almost 95 per cent are Soviet-built. Only a negligible number, about 100, are western machines, valued at about $67m, and more than half of this amount represents ICL equipment.

The largest systems in Russia are two ICL 1906As, six ICL System 4-50s, three ICL System 4-62s and two ICL System 4-70s installed at highly strategic places such as Gosplan, ministry of radio industry, a key defence complex ministry, ministry of foreign trade and nuclear research institutes, "commie" threat notwithstanding.

So far there is no comparable American, German or Japanese equipment anywhere in the Soviet block to match ICL's installations, even though some of these deals required a Nixon-Heath tête-à-tête. IBM, invited by the Soviets, refused to consider a joint venture for production of computer components in the Soviet Union.

The Soviets are truly behind, trapped by a series of planned economy automation targets requiring thousands of computers with no one knowing where these will come from. They have probably been forced to "go IBM compatible" in their computer industry because software and support for IBM equipment can be found and copied from 70 per cent of computer installations around the world. You can't blame them, for after all the Soviet Minsk series, most popular of Russian computers, is reportedly modelled after the British Elliott 803, so in a way you had your "chance" once too.—Yours faithfully,
BOHDAN O. SZUPROWICZ
President,
21st Century Research
North Bergen, New Jersey

Iranian trials

SIR—Your article "Secretly to death" (June 3rd) does not measure up to your standard of insight and precise reporting. Your correspondent's biased reporting seems to me to stem mainly from his irritation that he is not allowed to attend the political trials carried out in a closed military court in Teheran. The fact of the matter is that we do have a minute share of disturbed youths who, like their other counterparts throughout the world, are somehow or other burdened with a sense of failure and find life in this mechanised and economically-regimented world boring and unromantic. For a youth who is beset by his own insignificance and possesses a bizarre mind, it is a powerful antidote to condition himself to become a political assassin in search of a target or an urban guerrilla in search of a cause.

A cause could always be found. For an Iranian youth in search, the dead old Dr Mossadeq and his fossilised National Front could be as good a cause as any. Publicity, in whatever manner or colour, cheers those who are thus inclined, while lack of it is a deterrent. If Japan's press, along with the world's, had contained themselves and refused to report so profusely about the hijacking of a Japanese airliner to Korea by a terrorist group called the Red Army two years ago, the world would perhaps not have witnessed the absurd massacre in Tel Aviv airport.

A successive number of these youths, including a football star and several students, technicians and engineers, whose rehabilitation takes a shorter time because of their ability, are released. They often appear on television and talk about themselves and their experiences in order to save other youths from a similar temporary collapse of reason. But for those who have killed or dismembered innocent people with their bombs the prospects are grim, the military court is grim, and their luck is down and out, and your correspondent should forgive us if we couldn't care less for the "opinion abroad." If he, along with his other colleagues in Teheran, is barred from attending the closed trial it is not because we want to put those youths "secretly to death" but it is because a youth who has killed in order to be in the limelight should be denied the limelight.—Yours faithfully, Y. DEHNAVARD
Teheran

Hospital insurance

SIR—I was glad to see that you suggest (June 10th) that the Inland Revenue should review the tax concessions on insurance schemes which give cash payments for time spent in hospital. As has been pointed out in the medical journals, this kind of insurance puts the clinician into an undesirable position when making decisions about whether to admit or discharge individual patients.

It would indeed be a pity if, for lack of experience, we copied a pattern of insurance that is in the best interests of neither clinical medicine nor the economic delivery of health care.—Yours faithfully,
London, SE1 PETER DRAPER

Dentists

SIR—It is very misleading to state that a dentist's target income of £4,653 is net (June 17th). In fact this is totally untrue.

Premises may have to be bought and, although this saves high rents and value may appreciate, the initial capital usually has to be found from that portion of income which is left after tax has been paid. Capital also has to be found to fit out a surgery. An average surgery could very easily cost £3,000 at today's prices.

You, sir, would regard it as grotesque if you were asked to pay part of your personal income as a contribution towards the cost of the printing presses used for publishing *The Economist*. That, however, is exactly the arrangement under which dental practitioners run the NHS dental service.—Yours faithfully, HUGH CAPSTICK
Salisbury, Wiltshire

MANAGEMENT APPOINTMENTS £7000 PA AND OVER

CJA RECRUITMENT CONSULTANTS
35 New Broad Street, London, E.C.2. Tel. 01-588 3588

Outstanding opportunity offering potential for increasing responsibilities and a broader experience to a "prime mover"

CJA MIDDLE EAST

FINANCIAL CONTROLLER/ COMPANY SECRETARY

£9,000-£12,500 TAX FREE

LARGE SMELTING COMPLEX

Following promotion there is a vacancy calling for a qualified accountant (C.A., F.C.A., A.C.A. with company secretarial experience), aged 30-45, who has a minimum of 8 years' industrial experience part of which must have been gained in a general/financial management capacity in an overseas industrial organisation utilising modern management techniques (including computerisation). The successful candidate will be responsible to the General Manager of the new large complex due to reach full production by the end of this year. He will be required to develop existing controls and procedures and to institute further financial, administrative and data processing systems. Remuneration negotiable £9,000-£12,500 tax free, comprising basic salary, inducement premium, provident fund, free housing, disability and insurance scheme plus company car, leave passages, educational allowances and passages in accordance with best overseas employment practice. Applications in strict confidence, under reference FC3231/E, to the Managing Director:

CAMPBELL-JOHNSTON ASSOCIATES (MANAGEMENT RECRUITMENT CONSULTANTS) LTD.
35 New Bond Street, London, EC2M 1NH. Tel: 01-588 3588 or 01-638 0553

Training Board Director

Food, Drink & Tobacco Industries

The Food Drink and Tobacco Industry Training Board wishes to appoint a Director who will be responsible to the non-executive Chairman for general management of the Board's operations. The Director's job is to develop policies and objectives to meet the current and anticipated training needs of the industries within its scope, embracing 1¼ million employees; and to execute agreed plans effectively and economically with a staff which is currently around 140 and an annual budget of £700,000.

This appointment is being made at a time when the Board is preparing for the important new role envisaged for industrial training in the Government's proposals 'Training for the Future'. These proposals emphasise the continuing need to identify industrial training requirements and provide advisory services through training boards within the overall framework of a national training service. Success will depend in no small measure on encouraging adaptation to new requirements and on achieving effective personal communication and understanding with staff, Board members, the industries served, Government and other training bodies.

The man we appoint will have had several years' experience as a member of the board of directors in a forward looking company, ideally in a member industry; he will have had broad managerial experience which has included responsibility for training and personnel policies. A salary of around £10,000 is envisaged; other conditions of employment match those in consumer industry and include provision of a car and a contributory pension scheme with life assurance.

If you meet these requirements, then please write, in confidence, with details of your experience to:

John Mann, Chairman, Food Drink & Tobacco Industry Training Board, Leon House, High Street, Croydon CR9 3NT.

For further management appointments see page 5

The monarchy

SIR—I think your suggestion that the reaction to King Edward VIII's marital situation was peculiar to the 1930s was not accurate (June 3rd). I would suggest that the English crown has always involved inconvenient requirements. It would have been inconceivable for King George IV to get his crown and keep Mrs Fitzherbert too; the Glorious Revolution can be said to derive in part from the outcome of James II's marriage to Mary of Modena. Since both these kings lived in very worldly times, one can say that not much has changed in this century. In short, Englishmen always expect their kings to be very old-fashioned when it comes to breeding. Provincialism is nothing new.—Yours faithfully,

JOSEPH LOSOS
St Louis, Missouri

Unctad

SIR—I doubt if any economist from either the affluent society or the LDCs had any false hopes in regard to the results of Unctad III (May 27th). The absence of the fever from Algiers and the unifying influence of Prebisch apart, few LDCs place much confidence in the outcome of such forums. The developing world has come to realise the futility in seeking pious paper platitudes over the past two decades. The United Nations, whilst it may continue to serve as a forum for their voice, is a weak substitute for their hopes born in the 1950s.

At Geneva, as at New Delhi, the developed countries riding on the crest of business activity were wary of the almost united and businesslike approach presented by the so-called "Group of 77." Uncertainty on the international economic and political scene and the isolationist attitude, particularly in North America, combined with disunity in the developing world, ensured nonchalance both from advanced countries and the pacifists among the LDCs at Santiago. Clearly there is need to distinguish between the problems and needs of the poor and the miserably poor, or should I say between the underdeveloped and the takeable-off economies, but thanks to the efforts of some advanced countries, this dichotomy has been exploited fairly well! It is to be hoped that the developable economies will feed the advanced countries with some of their own medicine at Stockholm, much as we may condemn such techniques.

You state, "... we still do not know how to use aid funds to relieve grinding poverty with even a fraction of the efficiency they could have." True, the aid lobby has become the home of the unscientific, but is it right to suggest that the blame is in large measure due to the LDCs—the ground to be prepared to receive the seed? I also wonder what efficiency you have in mind when you refer to the fraction. The Pearson commission thought there was no excessive waste, mismanagement or corruption. Aid auditors opined that waste was reduced to levels that were no greater than in other public programmes (perhaps in developed countries). In fact one may say with more confidence that the rationale for aid has been thoroughly dishonest on the part of some major donors. That a large measure of blame for inefficiency lies in some of the donor countries is well established. The SDR-aid link you advocate, and which would be so welcome, would sever the chains of political control. Unfortunately, we have come to realise that such a link would be acceptable to neither the politicians nor the corporate organisations. Your optimism of hope from the final acts of general dishonesty on the SDR-aid link is, indeed, odd.

The term "aid" has been much exploited by politicians and governments, not to mention some corporations. Surely, it is time we began to define it in terms of what it really involves. Just as you make a distinction between silly and sensible commodity agreements (which some developing countries clamour for) we should define aid in terms of meaningful development programmes and those meant to salve people's conscience and the facade of politicians' internationalism. We should distinguish between aid and monetary flows data for propaganda purposes. The term has been sufficiently abused to exact the kind of general disenchantment of the taxpayers in the advanced world and the distrust with which the receiving countries scrutinise such aid.

International Keynesianism is a goal which we can confidently leave to future generations when the long-run inequalities between men and nations will take their toll, whatever that may be. For the present the LDCs would be better advised to fend for themselves and make those sacrifices which are in their own long-run interests. A process of up-by-the-bootstrings development is hard and long-drawn-out, yet it has advantages as compared to what has been the experience of so-called co-operation and partnership in development. There is no substitute for self-help.—Yours faithfully,

J. A. ROSARIO
Edmonton, Canada

SIR—May I congratulate you on your issue of May 27th dealing succinctly with Unctad III in Santiago and the Stockholm meeting on pollution, both meetings relatively distant from London but of global importance.

In Peru, a fairly typical undeveloped country, but one really trying to find a medium- to long-term solution, we face the undeniable fact that technological advances and advantages in developed countries, unless shared world-wide, must lead in not many years to technological starvation and human suffocation for the less developed nations. Peru, for example, after 300 years of imperial colonialism and 150 years of industrial colonialism, is now faced with a future of technological colonialism, despite its desire for national identity and independence.

On population growth may I say this? Dr Verhulst in 1838 expressed the theory that the resistance to (or rejection of?) the environment is proportionate to the square of the increase in the population, which implies an eventual levelling of the population at a fluctuating total. The latter has been predicted by the Ekistics Institute of Athens at a mean of 35 billion by the year 2060, without direct regard for the Verhulst theory. Perhaps the levelling of the figures of population for England enhances this prediction.

Miss Barbara Ward, the author of your articles on pollution, is, of course, a most active member of the Ekistics Institute and I was most interested to note her choice of the year 1984 for a rise in the threat of "revolt and anarchy." Here we predict for Lima an "unrestricted" rise (mathematical calculation) in the population to 12m in that year against 3m now, a saturation point partly based on water and partly on the Verhulst theory.

With a national average now of 28.5 per cent unemployed, there seem to be only three answers. 1. Miss Barbara Ward's prediction. 2. A painful and poverty-stricken proof of the Verhulst proposition. 3. More intelligent and international provision and application of aid in all its forms.—Yours faithfully,

JOHN A. D. LAWSON
Mayor
Chaclacayo, Peru

Railways

SIR—It has been drawn to my attention that in my letter which you were kind enough to print (June 3rd) the phrasing is such as to suggest that the exclusive bus lane on the 1935-built section of motorway is now 8ft wide. In fact the 32ft carriageway has been arranged to give three lanes of 10ft 8in each.—Yours faithfully,

LIONEL ALBERT
Northwood, Middlesex

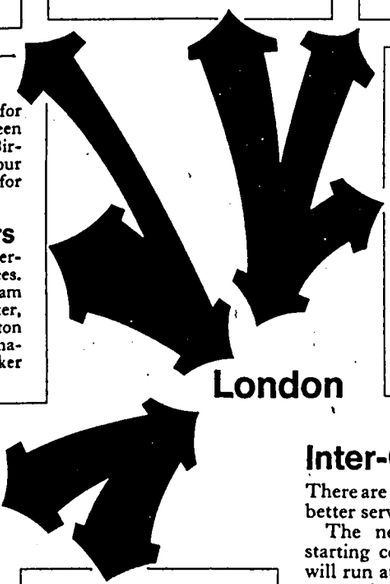
There's more going for you on Inter-City

More Inter-City trains are going your way more often and more quickly in 1972. Inter-City takes you clear of the traffic, centre-to-centre, in increasing speed and comfort—look at the improvements for this year alone.



Liverpool & Manchester
The most civilised way to travel across Britain today is by Inter-City. There are services from Euston to Liverpool at 0930, and from Liverpool to Euston at 1530. Fastest time to Liverpool and Manchester, 2 hours 30 minutes.

Scotland
Inter-City's London—Edinburgh services, six services by day, three by night. Fastest time: 5 hours 43 minutes. And to Aberdeen, the 'Aberdonian' is 31 minutes faster. Or there's the 'Night Aberdonian'—your crack sleeper service.

North East
Faster and more frequent between King's Cross and the North East. There are 15 trains a day to Newcastle, 13 to Darlington. Late service leaving London 1900 gets you to Darlington at 2217, Newcastle at 2256.

Birmingham
An Inter-City express leaves Euston for Birmingham every half-hour between 0740 and 2010. Homeward too: Birmingham to London every half-hour between 0645 and 1915. Fastest time for the 112 miles: just 90 minutes.

The cross-country runners
Birmingham is the focal point of Inter-City's replanned cross-country services. Travelling direct between Birmingham and Edinburgh, Newcastle, Manchester, Liverpool, Cardiff, Bristol, Southampton or Plymouth—to name just a few destinations up North or down South—is quicker and easier than ever.

Yorkshire & Humberside
Through services between London, Grimsby and Cleethorpes. And extra London—York expresses; there's the 0745, taking only 2 hours 25 minutes; or the late-nighters' 1900 departure. Also a fast, late service from York at 1911. The 1830 London—Hull express is a whole 40 minutes faster. And London—Sheffield takes only 2½ hours on the celebrated 'Master Cutler'.

Bristol and S. Wales
A faster, hourly service between London, Bristol and South Wales with additional trains in-between.
A new Inter-City station has been built at Bristol Parkway, near the M4, M5 junction, with a 'Dial-a-ride' connecting road service to certain neighbouring areas. On weekdays, 30 trains each way from Paddington to Temple Meads or Parkway. Fastest journey time 93 minutes.
Twenty trains each weekday each way between Paddington and Newport and Cardiff. The retimed South Wales Pullman gets to London before 1000, and a late express leaves Paddington at 2315 for Newport and Cardiff.

West Country
A faster, two-hourly service between Paddington and Torbay (saves up to 14 mins.), Plymouth (saves up to 22 mins.) and Penzance (saves up to 47 mins.). Extra services between Penzance and London, including the 'Golden Hind'. The 'Cornish Riviera Limited' takes only 5 hours 23 minutes between Paddington and Penzance.

Inter-City looks ahead
There are plans too, for even faster journeys, better services.
The new High Speed Diesel Train, starting commercial trials later this year, will run at up to 125 mph from 1975. The 150 mph Advanced Passenger Train, due for commercial service from 1978, could cut today's journey times by more than a third—closing the London—Edinburgh gap, for example, to 3 hours 40 minutes.
And soon, air-conditioning will be the rule on most services.
And we'll continue to improve the menus.
And continue to take care of your every comfort.
Inter-City is for people—people like you—and this principle is for tomorrow as for now. Whoever you are, wherever you're going, Inter-City is going your way.

Inter-City is for you
Take it in comfort

All other terminals in New York are bulging at the seams.

Ours still won't be crowded in 5 years' time.

The BOAC Terminal at Kennedy has been designed for the future. Which means it will be working well below capacity for years.

You can get through its immigration and customs and baggage areas so fast you'll normally find yourself standing on the sidewalk 15 minutes after you step off the plane.

No other terminal into New York comes near it.

And this is just one of many ways we lead across the Atlantic.

No other airline, for instance, flies direct to so many major U.S. cities. No other European airline offers you a choice of 80 flights a week to North America. And no other airline offers you a choice of flying 707 or VC10 or 747.

In fact no other airline in the world serves America better than BOAC. Not even the Americans.

We'll take good care of you.

BOAC

The Economist

June 24, 1972

£ A pity about the pound

This is not another crisis for sterling, but there are the signs of another missed opportunity for sterling. Britain's productive capacity is at present underutilised, and it is obvious that the best economic policy for 1972-73 would be one of export-led expansion. This would direct the re-employment of our resources into the industries where we would be most competitive during our first few years in the European Economic Community.

Unfortunately, after the recent bout of wage inflation, too few of our export prices are competitive at the present sterling exchange rate. Any expansion will therefore not be export-led, but import-inducing; this will cause a tiresome deterioration in the balance of payments in 1973. This deterioration will have nothing to do with Britain's entry into the EEC, but those who want to believe so will assume that it does.

There are two reasons why it is a mistake to dither in matters of exchange rate policy. First, any devaluation of sterling probably takes more than a year before its maximum effects in encouraging exports show up in the monthly trade returns. Secondly, an expected but delayed devaluation has a very bad interim effect on both imports and exports, because of the familiar "leads and lags." There is therefore a strong and logical argument for re-devaluing sterling at once. If the Government feels that it is politically necessary to keep inside a "snake" created by the European monetary agreement—and perhaps it is politically necessary, although the agreement is rather a silly one (see page 71)—its best course would be to lower sterling's central point in that snake back down to $2.40 again from this weekend.

Unhappily, the present conventional wisdom is that a currency should not accept devaluation until everybody can see that it is being forced into it. This is better than the conventional absurdity of 1963-67, under which it was supposed to be a matter of national honour to go on borrowing other people's money (and go on creating unemployment) in order to show how gutsy you were in refusing to accept a devaluation which everybody could see was being forced upon you. The present convention apparently merely inhibits Mr Heath (although not Mr Nixon) from resorting to a deliberate devaluation when it would be a desirable and timely act of national policy, while the old convention forbad devaluation even when Mr Callaghan's acceptance of that ban was a disaster.

This is the essence of today's nuisance. The speculation on the markets does not look like being strong enough to force an early devaluation of the pound against even a half-hearted manning of the defences. In the years up to 1967 it was obvious that sterling would eventually fall from $2.80 to at least $2.40. Now nobody is supposing that the rate will drop from this week's $2.58½ to below a central rate of $2.40; indeed, if sterling were given a new central rate of $2.40, it would float up to near the top of what would then become the permitted range above it. When a small fall of this kind is the most that is feared, speculation against the pound can be countered by rather small (but undesirable) changes in interest rates. This is what Thursday's 1 per cent rise in Bank rate was.

Was Denis a menace?

Mr Denis Healey told the Commons on Monday: "I do not see devaluation being delayed beyond this July or August." Since he became shadow Chancellor of the Exchequer, it has been clear that there are rather a lot of things in economic affairs that Mr Healey does not see. The two main effects of his statement were:

(1) To trigger a brief bout of speculation that brought the pound down again to the level where the German and other central banks were supporting it under the European monetary agreement, with D-marks and other currencies that the Bank of England will have to repay.

(2) To make the British Government—including especially a Mr Heath who now bears towards Mr Healey a fury which the City will unfortunately mirror—more determined than ever to try to avoid for a while a devaluation that is in fact avoidable for a while, although it is already marginally desirable.

Both of these effects are a pity.

Not many happy returns

Mr Heath has fallen back at the end of his first two years. But he is still the best bet in the horse race

This week Mr Heath began his third year as Prime Minister. Such anniversaries are rarely very meaningful politically, and this one is no great exception. Indeed, a far more significant date has been conveniently overlooked. Three years ago last Sunday, Mr Wilson and his government abjectly surrendered to the trade unions on industrial reform, and it is at least arguable that the country's present industrial and economic difficulties are due as much to what happened on that lamentable day as any act or omission of Mr Heath's since. That is not to offer a blanket excuse to Mr Heath and his Government for their failings, but neither is it something which should be overlooked by those who have been handing Mr Heath more kicks than ha'pence on his anniversary.

Yet the fact remains that many of Mr Heath's supporters have been more inclined to send get-well-soon cards than congratulations this week. If Mr Heath thinks that judgment is unfair he has only himself to blame. He set higher criteria by which he wished to be judged than any of his immediate predecessors, for he deliberately set out, in his own words in 1970, to "change the course of history of this nation—nothing less." He cannot, and probably would not, therefore, complain that whenever his achievements are considered they must be viewed in relation to so formidable a target. Mr Heath himself would not regard that target as being attained simply by his success in Europe, however much it can be said that it is doubtful if that mission could be accomplished in present circumstances by any other Tory politician.

When he came to office Mr Heath seemed to know the way: the essence of the British economic sickness was the country's illusion that it was up to the Government—and not the people themselves—to solve Britain's economic problems. His refusal to intervene directly, to halt wage inflation by bringing in an incomes policy, was justified as a means towards shattering that illusion, as were all the other social measures which had the left and the soft-centre bleating about Mr Heath destroying the consensus politics of a generation. Many of those measures were not popular; they could not be. But just at the moment when there seemed a real possibility that the measures might be beginning to be understood, although not immediately approved, the Government lost its nerve on unemployment. With its subvention to Upper Clyde Shipbuilders and its total reversal on aid to the regions it turned, at a stroke, from trying to force the country to face up to economic realities to boasting that it was offering it a bigger and softer option than ever.

There can be no doubt that is what the country wanted to hear, but it is not quite what many people hoped the Heath Government would be all about. And even the political advantages of that reversal may be rather dubious, for it has made the ending of free milk and school meals and the raising of council rents look less parts of a tough but coherent policy and rather more like class vindictiveness. Mr Heath and his colleagues can justifiably point to a whole range of new social benefits which objectively answer many of these accusations. But that does not alter the fact that there is more uncertainty now about the Government's basic objectives and the means it intends to use to achieve them than when it first came to power.

And there is, perhaps, even more uncertainty about Mr Heath himself. In two years he has proved that he is not the obstinate, inflexible man who was incapable of changing his mind that he was made out to be in the first months of his premiership. That has not been altogether a bad thing: some of his radical reversals —Ulster is a particular example—have been courageous. There must, indeed, still be hope that he will yet change his mind on the need for an incomes policy; from being something which the country had to work out for itself the case against such a policy is now that it "did not work under Labour." Mr Heath has also reversed his rigid views on exchange rates—a welcome advance. But the fact remains that when governments start shedding their convictions they rapidly become less convincing, and it is only Mr Heath's own personality which has so far headed-off very damaging talk of a credibility gap.

Enter the pragmatist

It is difficult to see how Mr Heath can make a dramatic advance between now and the next general election towards getting fundamental changes in British attitudes or the nature of our society. The evidence is that, to the relief of many of his colleagues—and almost all the top civil servants—he has settled for the lesser objective of being the most pragmatic Tory prime minister of all time. If that is true it would not necessarily be a calamity but it would be disappointing. It would also be depressing because it would be taken as further evidence that if the country is not yet ungovernable it is at least basically unreformable.

There is already enough support for that view. Change has always been a minority cause. The trite old saying that politics is the art of the possible is more than ever being interpreted as being the art of the acceptable, and for far too many the acceptable is that which causes the least upheaval. Those few politicians who do attempt radical policies very soon discover, and lament, how very limited are a minister's—or a government's—powers to shape events. There is a good deal of truth in that, but the real scapegoats are not those who are most often blamed. Of course the institutions of power—the political parties, the civil service, the City, the employers, the unions and so on—are basically conservative. But the biggest obstacle to change in this country is the one which the politicians can least acknowledge: it is the inertia of the British public.

Mr Heath's promise that he would be the external force which would change that state was one of his qualifications for office. He is still the most likely man to succeed, if anyone can. But it is difficult to argue that he has not wavered in the past few months, and it would not be surprising if he himself has become disheartened. For what has been apparent in all the recent industrial disputes is that the British people have not simply failed to respond to the exhortations of Mr Heath and his colleagues but they have been indifferent to their own best economic interests. For all the smokescreen now being laid by the employers and the unions with their talk of voluntary, independent arbitration, if the inflationary slide is not stopped it must come to a statutory incomes policy in the end. That means another, distasteful reversal of policy for him. But he has shown he realises that there are times when that is what politics is about.

Better it had never been born?

Even apart from President Pompidou's "doubts," there are several good reasons for putting off Europe's October summit

It may yet be that someone, somehow, can salvage the European summit. This is supposed to be held in Paris in the third week of October to celebrate and prepare for the entry of Britain, Ireland, Denmark and Norway into the common market in January. But it has to be said that the odds against a summit happening in October have widened every day during the past few weeks—and this despite the fact that Mr Heath, for one, wants it to take place. Herr Willy Brandt, for another, sees the summit, like the Munich Olympics, as a nice curtain-raiser for a likely German election campaign—a way of proving his west European credentials when the charge against him in that election will be that he has prejudiced Europe's unity in the west during his three years in office by facing Germany so steadfastly to the east.

This issue, to hold the new Europe's summit in October or to put it off, may now have to be settled before or during Herr Brandt's next regular meeting with President Pompidou, which is due to take place in Bonn in 10 days' time. It was M. Pompidou who first called the summit, in the aftermath of the monetary row with America last year. And it is M. Pompidou who has now cast doubt on the whole affair. The French president has his reasons for what he has done. The unconvincing result of his referendum on British entry in April has hurt him politically and M. Pompidou does not relish another defeat, in the form of a failed October summit in Paris, during the run-up to a French national assembly election which he must call late this year or early next. M. Pompidou is not alone in his pessimism. It is shared by the Dutch. They, like the French, are conscious of how strongly they will be at odds with France come October over Europe's institutions; they believe, as Holland's foreign minister said in Paris on Tuesday, that the whole matter might best be postponed until next spring.

Why might the summit turn out to be a flop? The clouds over sterling, first, are clouds over Europe's infant attempt at achieving monetary union. They may be heavier by October. Next, the summit is timed to take place a fortnight before the American presidential election. The Europeans will be hard put to it to define their best approach on either money or defence to an America whose president might soon afterwards possibly be called McGovern. That Germany too will probably be holding elections soon after October might seem to matter less. Herr Barzel, or whoever leads Germany's Christian Democrats into the next election, will not be any less in favour of strengthening Europe than Herr Brandt is. But ahead of their respective national elections the fact will remain that neither Herr Brandt nor President Pompidou will feel able to give Europe the kind of political shove that the two of them successfully competed with each other to give at the Hague summit of the Six in 1969.

The new boy isn't ready

Britain too is not really prepared for a summit. Mr Heath knows very clearly, more clearly possibly than any of his European opposite numbers, what he would like from a uniting Europe. But in the present atmosphere of European doubt, and with the enabling bill in parliament still not out of the wood, Britain is, under Mr Heath's own instructions, playing to the hilt its role as Europe's new boy. Britain is consciously leaving other Europeans to make the running. The same, only more so, goes for the Scandinavians. Denmark and Norway will both be barely rid of their entry referendums by the time the summit in Paris is due. Until Mr Heath travelled to Copenhagen two weeks ago the Danes and Norwegians had done little thinking of any sort about what they might expect from a summit; and although Mr Heath has managed to stiffen Mr Krag's backbone, this resolve will not survive the period of bickering—notably over where to put the so-called "political secretariat"—which the run-up to the summit is increasingly turning into.

Such a slate of reasons against holding the summit in October has to be set against two reasons which may be found in favour of going through with it after all. The first is that calling off the summit without an adequate pretext, and in the face of French bullying reminiscent of 1965, would itself do damage to Europe—as much

damage in some people's judgment, though not *The Economist's*, as going through with it and discovering that it was a flop. The other is that it is the habit of the European community to make progress through crisis. Only by thoroughly muddling everything up in advance has the common market ever been able to manufacture a decent midnight compromise. A funny way to run a continent. But that, if M. Pompidou and Herr Brandt do decide to go ahead with Europe's October jamboree, is the only way anything much will have a chance of coming out of it. The doubt is whether it could be enough to justify even trying.

The real dangers in flying

Hijacking is an unnecessary and growing menace to air travel—but the greatest dangers are still mechanical and human

The Federal Bureau of Investigation picked up a shoe-shop owner from Beacon, near New York, on Wednesday and accused him not only of hoaxing the Cunard company with threats to blow up the *QE2* in mid-Atlantic, but also of attempting to get $350,000 from American Airlines in a similar way. Airlines that have meekly paid over enormous sums under similar bomb threats have been berated by that section of public —and airline—opinion that thought they ought to have taken a tougher line and hang the risk to passengers. But if the FBI really has the culprit it means that, apart from a black American and his girl who appear to be still enjoying life in Algeria on a $500,000 ransom from Western Airlines, only one man is actually known to have extorted money from an airline and got away with it. He, unfortunately, was the first hijacker to try this technique and the FBI must bitterly regret that he became a minor folk-hero. But his imitators have been singularly unsuccessful.

Probably a score of aircraft have been sabotaged in flight. The Palestinians have been accused of starting the practice (although they have always denied responsibility for the bombs that blew up one jet in mid-air and almost succeeded in blowing up another). There have often been political motives : the bomb that blew up a British European Airways Comet over the Mediterranean in 1967 was almost certainly intended for General Grivas. But some bombs have been put on aircraft for sheer spite. Others have been murders planned to collect insurance money. But hijacking remains more of a nuisance than a serious, regular threat to the life and safety of passengers, and one that is better dealt with by the police on the ground than by the airlines themselves. The FBI's success in dealing with the wave of extortion demands in the past 12 months confirms that. Whether, therefore, the pilots of most of Europe's airlines correctly judged public opinion when they came out on strike on Monday in protest against hijacking is open to question. The most that can be said is that it may help to secure next time a total boycott of airports in countries like Algeria and the Lebanon which give hijackers easy refuge.

The pilots do have leverage. They have, before now, done much to initiate negotiations for the release of hijacked aircraft and their crews. The irony on Monday was that the strike shut, among other places, Israel's Lod airport, but the Arab airports remained open for business. Nevertheless, the strike did coincide with the most positive steps taken so far by the United Nations to get countries to agree at least to prosecute hijackers, or risk expulsion from the International Civil Aviation Organisation. Expulsion from Icao would not greatly upset those Arab countries that prefer to treat hijackers as heroes ; there are companies which would, for a fee, provide most of the technical services that the Arabs now get through membership of Icao. The amount of air traffic that goes through all but Beirut airport is so small that even a total boycott might not be much more than a minor irritant—which the Russians would be the first to help to soothe.

The pilots' strike began only a few hours after a British European Airways Trident had crashed on take-off, almost within sight of Heathrow, and while the public was still getting over two bad crashes in south-east Asia. The BEA casualty list of 118 made it the worst air accident in British history. The Government has now said that the public inquiry into the causes is unlikely to be held until the autumn. But Mr Michael Heseltine, the aerospace minister, had already declared that preliminary examination of the aircraft's flight recorder showed that the flaps on the leading edge of the wing were in the wrong position for that stage of the flight and for the speed at which the aircraft was flying.

The questions to be answered

It will take the rest of the summer to discover whether the fault lay primarily in the aircraft or with the crew. Trident flying is largely a matter of instruments, and the crew takes over only when it is uneasy about what is happening. But just because it relies so largely on automation, the key controls on the Trident are triplicated and each of the three systems has its own independent source of power. The autopilot was, anyway, suddenly disconnected as the crew seems to have realised that something was wrong.

So far nothing conclusive has emerged about the state of the Trident's engines at the moment it crashed. Eye-witness reports are notorious for inaccuracy, but a common thread, repeated by many of the motorists who were on or near the Staines by-pass as the aircraft came down, was how relatively little noise it was making.

When an aircraft stalls, as the Trident did, it does so because its speed is too low, and the instinctive reaction of pilots in such circumstances is to reach for the engine throttles and all but push them through the floor in an attempt to get more power. It happens to be a characteristic of jets, like the Trident, that have rear engines and high T-shaped tails (as the VC-10, Boeing 727 and a host of other rear-engined aircraft do) that if their nose does go up at a certain angle, the controls placed high on the top of the T cannot get sufficient bite on the aircraft to level it out again, no matter how the engines labour.

The Trident has the same Spey engines as the BAC 111, and it is not long since a One Eleven owned by a German charter airline crashed on an autobahn just after take-off with a sudden loss of engine power. The fault lay with the fuel, but some people consider the Spey a less forgiving engine than most jets. Until there is an official explanation for the reason why the Trident's Spey engines were apparently not on full power at the moment of Sunday's crash, it will remain a complicated accident.

The Provos call a truce

If the IRA Provisionals want a ceasefire that is good news, but Ulster's Catholics now need to seek reconciliation, not just with Mr Whitelaw, but with their million Protestant neighbours

The ceasefire called by the IRA Provisionals in Northern Ireland, provided it is observed by all of them, is a most encouraging development, and is a major justification of Mr Willie Whitelaw's policies and perseverance. However, such a truce, such a recognition of Catholic war-weariness, does not mean of itself that Ulster's troubles can be settled round Mr Whitelaw's conference table this summer. Deep divisions exist among the IRA leadership, even on the merits of a short truce, and Protestant opinion will continue to believe that the gunmen and bombers will be ready to start up again, particularly in Belfast where the IRA doubts have been strongest. That may be being too pessimistic. Even so, the Protestants themselves profess not to be weary at all and insist on the elimination of the IRA no-go areas in Londonderry before they will be satisfied.

Mr Whitelaw's achievement in the past weeks has been to postpone such sectarian warfare and to have gone some way in breaking the political deadlock. It is true that the Social Democratic and Labour party persists in its refusal to enter any discussions on Ulster's future until the end of internment. But two of its leaders, Mr John Hume and Mr Paddy Devlin, recognised the value of talking with Mr Whitelaw again this week—and of acting as emissaries for the Provisionals. The Government's granting of special privileges to 130 Catholic and Protestant inmates of the Crumlin road jail, who claim the dubious status of political prisoners although convicted by due process of law, brought an end to a 36-day hunger strike and stopped the Provisionals claiming any more martyrs to their cause. But, more than that, Mr Whitelaw's gesture suggests that he will now move with alacrity to release all the remaining internees and close down Long Kesh.

That would be a new political situation with a vengeance. But if it happens Ulster's Catholics cannot expect any further conciliatory moves from the Secretary of State unless they can give him something a good deal more substantial in return than peace petitions. There is still a dangerous gulf between Mr Whitelaw's administration and the Protestant community. Any formal amnesty for all those IRA men who have terrorised Ulster for the past two years, or too sudden a phasing-out of the army from the streets, would certainly risk a Protestant backlash.

The Catholics have to convince, not just Mr Whitelaw, but their Protestant neighbours. First, the 22,000 Catholic rent and rate strikers should stop that bit of civil disobedience at once, although there are bound to be recriminations over the responsibility for the £1½m of arrears that have accumulated since last August. Second, the Catholics living in "Free Derry" must make some visible return to Northern Ireland. The barricades around the Bogside and Creggan must come down. Agreement may be reached on a limited presence by army patrols. An indigenous community police force, under Mr Whitelaw's authority, might provide at least a semblance of the rule of law. Nothing less has much hope of assuaging Protestant anger and frustration.

The electoral test

Third, all the Catholic parties in Ulster should participate in the autumn elections, under proportional representation, for the new district councils. This will have to include both wings of Sinn Fein. It would provide a useful test of their support. Fourth, Catholics should agree to holding a plebiscite on the border issue, which Mr Faulkner urged on Mr Whitelaw again this week. The result is a foregone conclusion, but it would provide an extra safeguard to the Protestants, who still refuse to accept the Secretary of State's good faith. And, lastly, all those Catholic politicians who are willing to join a conference on the north's future government must be prepared to accept that there can be no end to partition in the foreseeable future. If the Provisionals drop their demand for unity at all costs they should not be debarred from the talks.

At the moment, no common ground exists between Protestants and Catholics. It may take months of talks to find any at all, and there are many people in Ulster who do not have the patience for that. But sensible men in the north and the south (and that includes Mr Lynch) now realise that unification can only come through a reconciliation of the two communities in Ulster and cannot be imposed in any other way. The chief hope now is that enough IRA sympathisers realise that too.

BRITAIN

Rebels on the rack

Taverne: told to go

When a Member of Parliament is rejected by the constituents who once elected him he can have no real ground for complaint; when it happens at general elections it is called democracy in action. But around two-thirds of all parliamentary seats are either safe Tory or safe Labour, and MPs for those seats are not so much elected by their constituents as made by adoption by the local party whose seat it is. When a party withdraws its support—and thus the seat—from such an MP it is a distasteful business, whatever one's views of the merits of the MP, largely because it is an unpleasant reminder of how relatively few people do, in fact, determine the composition of the House of Commons.

On the face of it, 125 men and women, at the most, decide who should be Lincoln's MP. For on Monday Mr Dick Taverne was asked—in fact ordered—to retire as Lincoln's MP by a vote of 75 to 50 at a special delegate meeting of the general management committee of the Lincoln Labour party. Mr Taverne, a friend and follower of Mr Roy Jenkins, is to appeal to Labour's national executive committee to override the vote. That will put the left-wing members of that committee, who used to advocate tolerance on such matters when their friends were in similar trouble, on the spot, and there would be a good deal of relief in the parliamentary Labour party if the NEC did just that.

It would, indeed, be deplorable if Mr Taverne were to be kicked out of the Commons because of his moderate politics generally and his far from moderate courage on the common market issue in particular. At the very least he is entitled to have what has so far been denied him by his local officers—the opportunity to have his case discussed by the whole constituency Labour party. It is difficult to see how justice can otherwise even seem to be done. For if it is left to the NEC to override the local party and order his readoption, it would simply mean that Mr Taverne's effective constituency will have shrunk from 125 Labour members in Lincoln to fewer than 30 Labour members in London.

Mr Ronald Bell is in very similar difficulties. He, too, is a common market rebel, although as he is a Tory he is as consistently anti-market as Mr Taverne is pro. Mr Bell's constituency of South Buckinghamshire has been redistributed out of existence, but the new constituency of Beaconsfield is largely made up of his old constituents. Mr Bell also has not got quite so many of his local party against him as Mr Taverne: last Saturday he split the vote 50-50 at the executive council's adoption meeting, and the issue now goes before all members of the local Tory association at a special meeting on July 17th. Mr Bell can have no objection to that procedure.

Mr Taverne is not the only Labour pro-market man in trouble. A few Labour MPs whose constituencies remain intact could still have their local parties turn against them—on Saturday the party's East Midlands regional council condemned the 69 who voted with the Government on Europe last October—and those pro-market MPs who have lost their seats are finding it difficult to get readopted elsewhere. This could well have an effect on voting on the committee stage of the European Communities Bill. Most leading Labour marketeers are still confident that the bill will get through eventually because enough Labour MPs will vote their convictions in a crunch. But they are far less sure now that there will be enough to save the bill from going through committee unamended. All that would do would be to save the Government a few weeks' parliamentary time. And that is not even worth a Tory's political career.

Criminal law

Silence in court

The head of a police force has a more than academic interest in seeing those he believes guilty of crime convicted in the courts. But Mr Robert Mark, the metropolitan police commissioner, is far from alone in his concern—expressed in a lecture on Tuesday to the Royal Society of Medicine—that too many criminals are being acquitted and are being acquitted because the rules, framed in the past to protect the innocent from wrongful conviction, are now operating too heavily on the side of the guilty. The judiciary and lawyers may be said generally to share that feeling. Set against the fact of rising figures for crime, and particularly for crimes of violence, the argument for some redressing of the balance is bound to be persuasive.

Mr Mark is most concerned about deliberate crime, in planned robberies and burglaries sometimes involving the

Rolex watches: guaranteed touched by human hand.

The only hands placed on many watches today are the two that tell you the time.

Which very often means they don't tell the time as well as they should.

We at Rolex, on the other hand, believe that men-craftsmen-put watches together better than machines.

So we use machines where precision engineering is called for.

And where craftsmanship is called for, then we use craftsmen.

It's because so much of the work is done by hand that each Rolex takes over a year to make.

And, at the end of that year, most of them aren't watches at all.

They're Chronometers.

But, before we are allowed to call one of our watches a 'chronometer,' we pay for it to undergo 15 days and nights of punishment at the hands of one of the Swiss Institutes for Official Chronometer Tests.

Here, they will lock it in an oven, clamp it in a refrigerator, suspend it in iron racks in various wrist positions: testing its accuracy each day, searching for the slightest deviation.

We've won nearly half the chronometer certificates ever awarded, even though we're responsible for a mere fraction of the annual production of Swiss watches.

To protect this superb Perpetual rotor self-winding movement, we carve a virtually indestructible Oyster case out of one solid block of surgical stainless steel, or 18ct. gold.

Then, after 162 separate operations have made this seamless case complete, we fit into it a Rolex-Patented Twinlock Winding Crown.

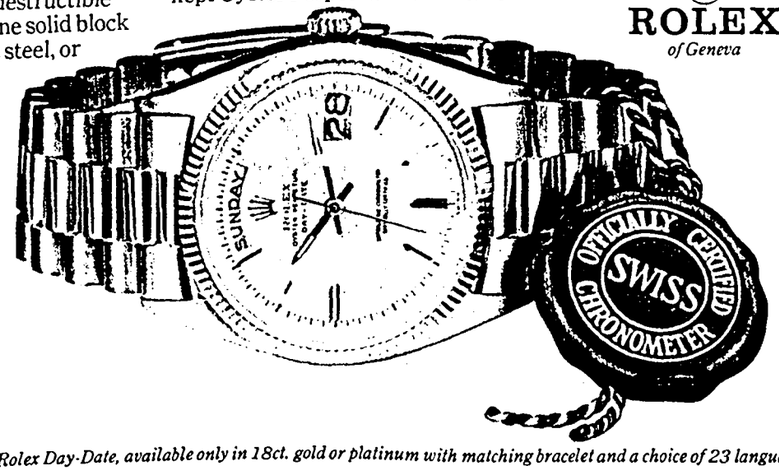
The Twinlock Crown functions rather like a submarine hatch; it actually screws down onto the Oyster case. To make this possible, we have to carry out no less than 38 minutely precise operations.

Apart from allowing us to guarantee our watches waterproof to incredible depths, the formidable combination of seamless Oyster case and Twinlock Crown have also kept Oyster Perpetual movements safe under the most trying circumstances.

Here, for example, is a quote from just one of the hundreds of letters we have on file in Geneva. "...recently an accident happened and my Rolex fell into a gas furnace in our factory.

The average temperature in that oven was about 650° Celsius. I did not expect very much of the watch when I managed to get it out of the furnace. To my great surprise, however, it was still running and the only damage done was a slight deformation of the glass window."

Letters like this make our craftsmen feel very proud.



They're also rather proud of the fact that Rolex watches are worn by many of the world's leading Heads of State, and by men like World Champion Jackie Stewart, Sir Francis Chichester and explorer Haroun Tazieff.

These men get a great deal of satisfaction out of owning what they consider to be the best watch in the world.

Almost as much as our craftsmen get out of making one.

Owning one is almost as satisfying as making one.

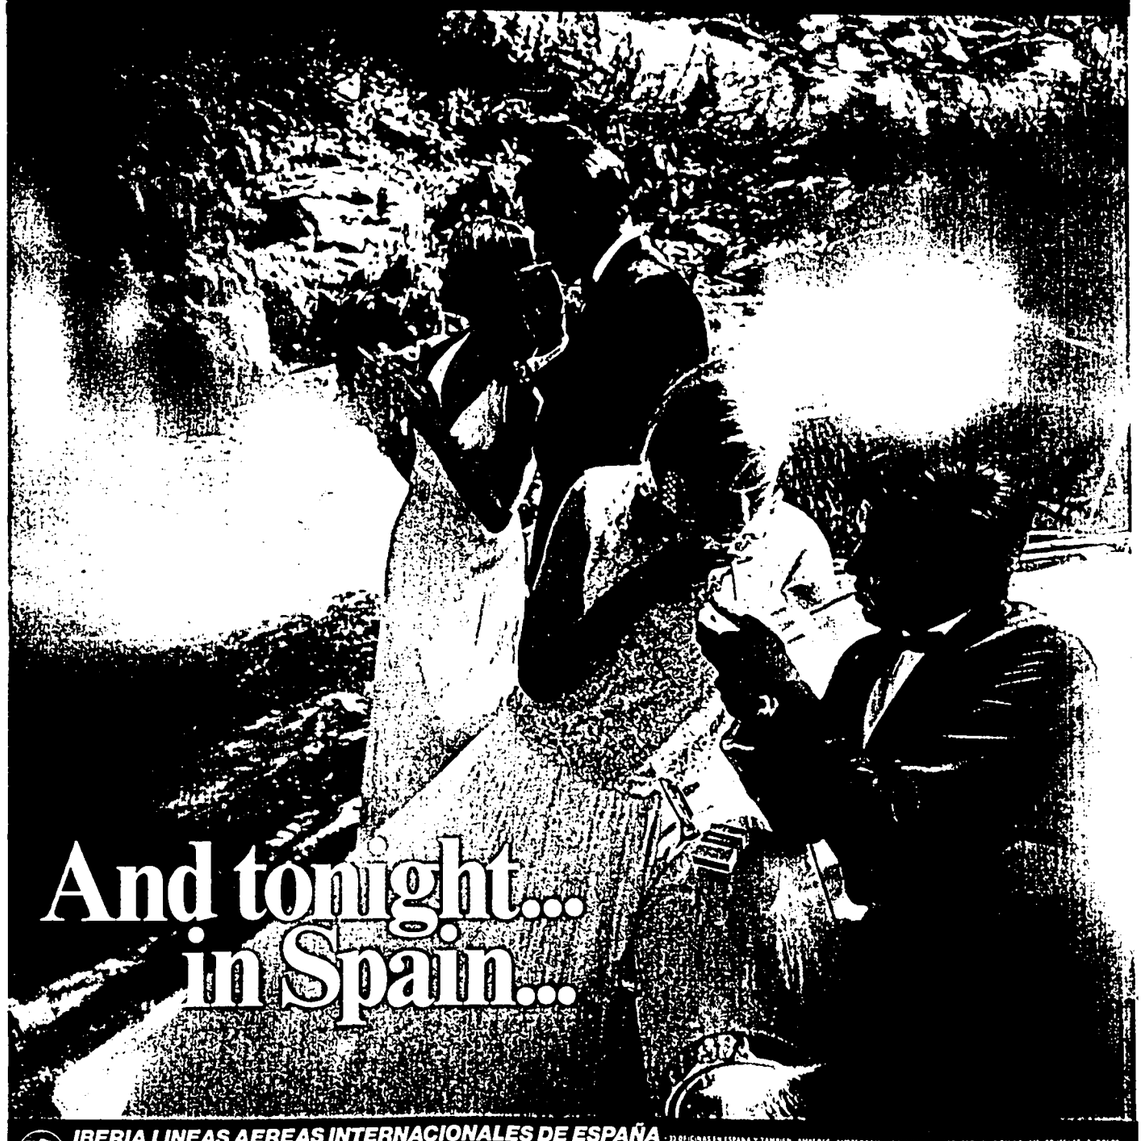
There will be people dining in gardens, by the sea, by candlelight... people all over the world, who have made Spain the place for those who understand the art of living !



At IBERIA we know them well, they are among our most faithful passengers. Since their first flight with us, we have taken care of everything for them. You could join them too.

Consider, Spain, via IBERIA, is only one or two hours away from any of the main European airports. And, at IBERIA we have a world of exclusive information, catering for every taste. And of course, we know Spain better than anyone else. Remember, every single IBERIA transcontinental flight takes you to Spain, where each of the four seasons has its own special charm.

Today, start planning your next trip to Spain.

IBERIA
gives wings to your dreams

And tonight...
in Spain...

Mark : too many getting off

use of weapons, which has risen disproportionately. According to the police commissioner, not only does the deliberate wrongdoer enjoy a comparative freedom from arrest—in other words he is more likely to get away with his crime—but he also stands a good chance of being set free even if he is caught, provided he denies his guilt and is tried by jury. Something like half of all those who plead not guilty and face trial by jury are acquitted. Yet, claims Mr Mark, it is precisely in those cases where the sifting by police and prosecution has been most meticulous to make sure that, before a trial is held, there is some really solid evidence of guilt. The English judicial system, he concludes, is

> effective only for dealing with the compliant—the weak, the stupid, the illiterate and the spontaneous wrongdoers who comprise the vast majority of cases. It is ineffective to an alarming and harmful extent in dealing with the non-compliant—those who set out to break the law and are able, by experience or through advice, to exploit its weaknesses.

The commissioner believes that "artificial procedural safeguards" are hampering the search for truth which ought to be the aim of police investigation and of the trial. He wants to see an end to the historic right of silence, the right to say nothing in defence, to offer no explanation. That is a reform recommended also by two Conservative lawyers, Mr Petre Crowder and Mr Ivan Lawrence, in a pamphlet published last week.* They would do this by amending certain parts of the judges' rules which stand as a guide to the police in crime investigations. They would change the wording of the caution, cutting out the advice to a suspect that he need not say anything. They propose too that both the prosecution and the judge (who often already exercise this privilege) should be free to comment adversely upon an accused's refusal to answer police questions or give an early explanation of his innocence, and upon his refusal to give evidence at his trial.

The authors offer certain protections in return, the chief of which, but seemingly the least practicable, is for the institution of examining magistrates. Immediately a person had been arrested, he would be brought before an examining magistrate. Only if he agreed before the magistrate that he had made any statement alleged by the police would the statement be admissible evidence at his trial—a compensatory safeguard which could well make the work of the police even more difficult. The practicability of this reform depends upon the availability of enough people possessing the "necessary unimpeachable authority" to act as magistrates. Laymen, it appears, though fit to sit on a bench and judge their fellow men, would not be up to the job ; and there are fewer than 50 stipendaries in the whole country.

The unease about the present system is becoming common enough and influential enough to suggest that reform is on the way. But the question of principle remains. Is it really true that juries these days are so much better educated and so much more sophisticated that an inarticulate person, or one who makes a bad impression despite his innocence, should not still be protected by the right to keep quiet—the advice which a good defence lawyer may often give his client ?

*The conviction of the guilty. *Conservative Political Centre*. 20p.

Mental hospitals

From the inside

Hospitals for the mentally ill have come in for a good deal of investigation in recent months. Last September, four top people from the National Association for Mental Health spent three days in the guise of patients in different hospitals to try to assess them from that angle. In February came the report of the committee of inquiry into Whittingham Hospital, near Preston, which made—or ought to have made—mental hospital authorities all over the country look at themselves to see if the conditions it exposed could happen with them. Now the King's Fund has pioneered a method of finding out how these hospitals are seen by patients—real patients—actually in them.

The report* of this investigation follows a similar one, published towards the end of 1969, on patients' views of general hospitals. But in the earlier study the patients had been, or were about to be, discharged. In this survey of nine mental hospitals the patients whose views were obtained (strictly anonymously) were still in the wards, and 44 per cent of them had been in hospital for five years or longer. So it is not surprising that the general picture is less favourable than in the earlier survey. Nevertheless, over half of all the patients said they liked their stay in hospital very much or in most ways, and it was the short-stay ones who were rather more critical, probably because they tend to be younger. Had the older patients been more fairly represented among those sampled, the proportion expressing general satisfaction would have been much higher, because (some would say) they have become institutionalised or because (to put it more kindly) for all its faults the hospital is their home and their main fear is to lose its security by being discharged.

On particular aspects of life in a mental hospital, the patients were not noticeably critical of their physical surroundings, but they tended to complain of boredom and of noise. The only other topic to arouse comparable criticism was the lack of medical attention ; depending on the hospital, between a third and a half of the patients complained that the doctors did not tell them enough about their illness—though they did not appear to mind that many of the doctors were foreign. On the other hand the range of criticism of nursing care—a hospital's most vulnerable spot—was only from 4-16 per cent.

The King's Fund is now undertaking a similar survey of patients in psychiatric units in general hospitals where it is official policy for the bulk of psychiatry to be undertaken in the future. But the old mental hospitals will be with us for a long time yet, and one hopes that they will take up the King's Fund's suggestion that they should find out what their patients think of them in the same way. If an even simpler questionnaire could be compiled for the very old, surveys of this sort, though they could not replace the somewhat inquisitorial

*Psychiatric hospitals viewed by their patients. *King Edward's Hospital Fund for London*. £1.

Hospital Advisory Service, would be a valuable supplement to it—and much less resented because they would be self-critical, undertaken by staff and patients aware of one another's problems, instead of an outsider's view.

Official Solicitor

Parens patriae

The thickets of the law conceal no more legal animals of the species of the Official Solicitor, who leapt into the news last week by intervening in the Chobham Farm case. He is unique. There is, of course, the Queen's Proctor, who is concerned with divorce cases: but his work has been much reduced by the introduction of divorce by consent, because he spent a good deal of time investigating cases of collusion. He is, anyway, more of a policeman than a good fairy; but the children in divorce cases may well be the concern of the Official Solicitor. There is also the Public Trustee. But he was invented at the beginning of this century merely so that there should be a super-reliable gentleman available to those setting up trusts: and it was recommended this year that his office should be merged with the Official Solicitor's.

The Official Solicitor, at present Mr Norman Turner, is not the Government's lawyer: that is the job of the Treasury Solicitor (and of the Treasury "devil" he briefs). He has no judicial function, unlike the similar-sounding Official Referees, who are in fact specialist judges. There is the Court of Protection to look after the affairs and estates of people of unsound mind; but representing them in the high court is also one of the Official Solicitor's concerns. Because of the increasing amount of litigation involving children, and the increased possibility that people in mental hospitals may be cured and re-emerge, the Official Solicitor's workload is increasing.

The present office was created in 1875, out of a far more ancient and very different office of the court involving the supervision of suitors' funds. The Official Solicitor is now concerned with some 11,000 cases a year: but the bulk of these involve people who are refused bail, of whom he must be notified. Then, as last week demonstrated, he is concerned with people committed for contempt, both criminal (where they are committed for a fixed period as a punishment—for, say, abusing the judge) and civil (where they are committed to make them

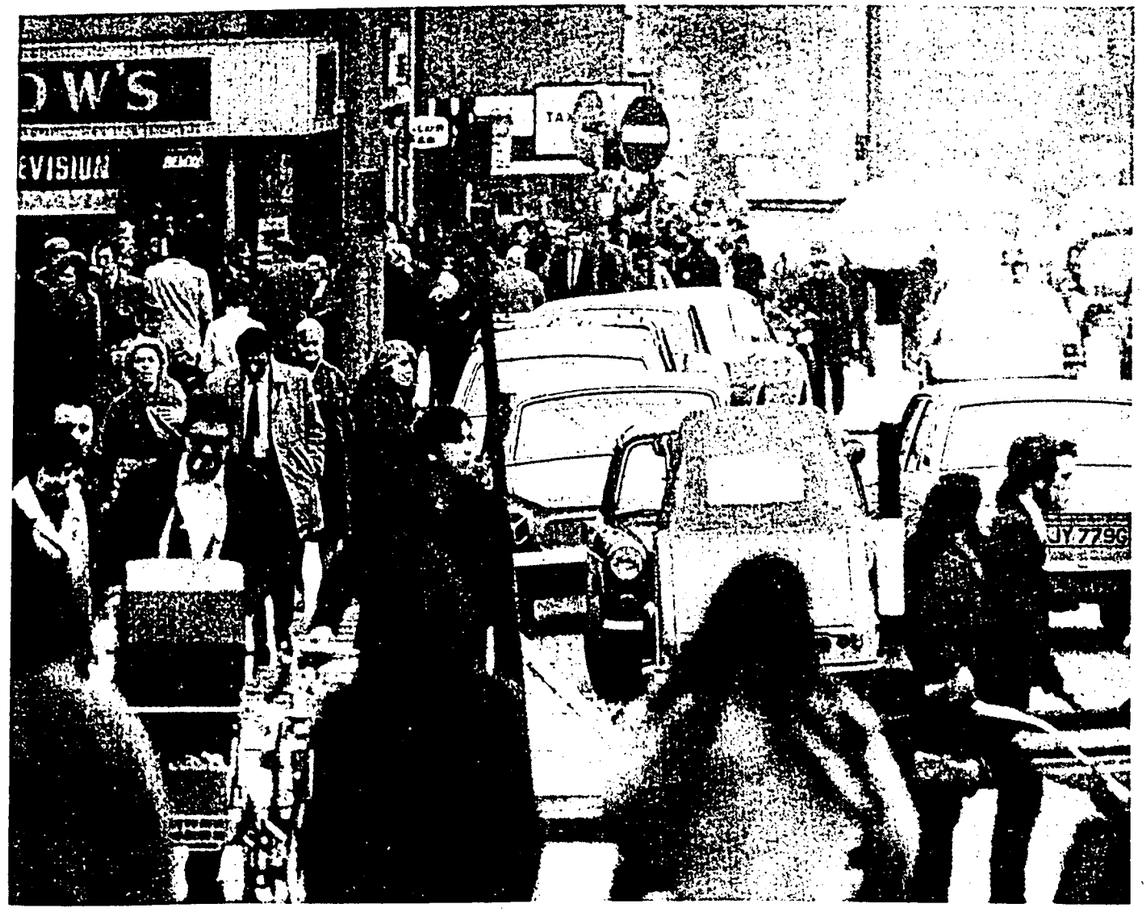
Turner: unique watchdog

comply with a court order, as Messrs Steer, Turner and Williams so nearly were). In 1971, the Official Solicitor had 180 cases of committal for contempt on his books.

He must act a good deal on his own initiative (though under standing orders laid down by the Lord Chancellor). In many cases he is asked by a high court judge to help the court; in others he may simply be informed that a case is going on that may concern him. In the Court of Appeal on Monday, Lord Denning went to great pains to explain how the Official Solicitor came to be involved in the Chobham Farm case: he had been invited to instruct counsel as "amicus curiae" by the secretary of the Industrial Relations Court. Though any adult of sound mind can refuse legal representation, the Official Solicitor does not require the defendants' permission. Usually, he acts to help those who cannot help themselves: but the job of *parens patriae* covers those who won't, too.

Race relations

Under inspection?



When the Race Relations Board received its present powers in 1968 everyone said that change would be gradual and could not depend on the law alone. All the same, it seemed disappointing when, after the first dramatic effect on discrimination in advertising and public premises, the law appeared to be making but small inroads in employment and housing. In the past year, as its annual report for 1971-72 shows, the board has done better with what it has got, in the sense that there is more chance of a complaint leading to a finding of discrimination and more chance of monetary redress for the victim. But complaints continued to fall: 917 were registered in the year compared with 1,024 the year before. And in the main field, employment, only 16 per cent of the findings showed discrimination, although the rate went up to over 50 per cent where the board had initiated the case itself rather than waiting for somebody to make a formal complaint.

This experience has encouraged the board, under its new chairman Sir Geoffrey Wilson, to make a bid to get away from reliance mainly on individual cases. It wants to get more at the core of the problem in which, as its previous report said, "racial discrimination in employment needs to be seen primarily not in terms of active discrimination against individuals but in terms of acceptance or tolerance by everybody, including coloured workers, of employment situations in which equality of opportunity is consciously or unconsciously denied." And the same goes for some housing and other situations. Practices which suit everybody at first—eg, ethnic work groups—are likely to be harmful if perpetuated. And (the report could have added) at a time when the coloured minority groups in Britain are showing increasing signs of defensive withdrawal, the initiative cannot be expected from them.

What the board seeks are powers, which it compares with those of the factory inspectorate, to enable it to go into a factory, or housing estate for that matter, and find out whether blacks have equal chances. If illegal discrimination were suspected it would be investigated in the usual way; otherwise the board would be able to recommend changes designed to prevent discrimination in future. This would work only if it had the power to summon witnesses and demand documents, so far not available to the board in its ordinary work.

Wilson: expanding watchdog?

The people of Bletchley are running out of town.

It's a race against time: in the next five years or so, the number of people coming into Bletchley to shop and do business is expected to double.

(This is because Bletchley is within the designated area for the new Milton Keynes city development.)

But Bletchley (in collaboration with Milton Keynes) is planning ahead. Well before the influx reaches its peak the town centre will have been redeveloped.

The new centre will be ready in 1974: and it's vitally important that this date is met. (Take another look at that picture!)

To make sure that it is met, Bletchley Urban District Council is using a computer throughout all stages of planning, development and implementation. Already its use has saved many months' delay.

What the computer does is help coordinate the activities of the multidisciplinary committee responsible for the new centre. Using critical path analysis techniques, the computer analyses week by week, the proposals-and reports-of each working group. And indicates whether these dovetail in a way compatible with the 1974 completion date.

The computer is saving time. And money.

But to us at IBM, the Bletchley redevelopment means even more than that. Not merely because one of our computers is playing a part. But because it is demonstrating how even smaller local authorities can make use of the most advanced management techniques and tools. And because it is yet another example of what we think computers are all about: helping make life in the community a little better for all of us.

IBM United Kingdom Limited 389 Chiswick High Road, London W4

ALLIED BREWERIES LIMITED

INTERIM ANNOUNCEMENT OF PROFIT AND DIVIDEND

FOR THE 32 WEEKS ENDED 6TH MAY 1972

The results for the 32 weeks ended 6th May 1972 based on unaudited figures prepared for management purposes, with the comparable results for the previous year, are shown below:—

	32 weeks ended 6 May 1972	8 May 1971
	£000's	£000's
Turnover	277,762	250,046
Trading Surplus before Depreciation	37,368	32,196
Deduct: Depreciation	6,818	5,952
Trading Profit	30,550	26,244
Add: Investment and other Income	3,162	1,479
	33,712	27,723
Deduct: Interest Payable	5,788	4,936
	27,924	22,787
Add: Share of profits less losses of Associated Companies	345	328
Profit before Taxation	28,269	23,115
Deduct: Taxation	11,284	9,177
	16,985	13,938
Deduct: Minority Interests	160	94
Preference Dividends (32 weeks, gross)	361	361
Profit attributable to Ordinary and Deferred Ordinary Shareholders of Allied Breweries Limited	16,464	13,483
Earnings per Ordinary Share ranking for dividend	4.03p	3.35p

Notes:

1. The results include the profits of The Aylesbury Brewery Company Limited for the nine months ended 31st March 1972, with adjustment to the profits of the corresponding period last year.
2. Charges for repairs are now spread evenly throughout the year and last year's figures have been adjusted accordingly.
3. The profits of Associated Companies have been included in both periods to the extent attributable to the Group.
4. Franked investment income has been grossed up in respect of underlying Corporation Tax at 40% and the Corporation Tax charge increased accordingly. Investment income from the holding in Trust Houses Forte Limited and interest on the cost thereof have been included to the extent of 32 weeks' proportion of the anticipated figures for the whole year. The investment income has increased largely as a result of the holding in Trust Houses Forte Limited.

Sales, Earnings and Capital Investment

The 32 week period reflects increased sales of the Group's national brands in the home market, increased export sales and increased trading in the overseas companies, with consequential improvements in profits.

The Group subscribed to the Confederation of British Industry's undertaking on prices for the year ending 31st July 1972 but continues, with industry in general, to be faced with the problems of substantially increased costs.

The programme of capital expenditure in the industrial and licensed estate has continued at a high level and has been financed from cash resources generated in the Group.

Interim Dividend on Ordinary Shares

For the current financial year ending 30th September 1972 an interim dividend on the Ordinary Shares of 1p per share (equivalent, after the capitalisation issue of 1 for 2 shares, to 1½p per share as paid in 1971) less income tax, will be paid on 7th September 1972 to those shareholders whose names are on the register on the 21st July 1972. The interim dividend, which will amount to £4,090,000 gross (last year £4,026,000) has been maintained at last year's level in view of the proposed transitional provisions covering the change in the system of Corporation Tax.

It is intended that the final dividend for the year will reflect the increase in the year's earnings.

It may be asked whether the board is really the best body for this very wide-ranging function, and whether by tying the work to the idea of discrimination (whether actual or potential) it is not still too limiting. On the other hand there would be much duplication saved, especially if the board continues to develop its present powers of independent investigation of suspected discrimination. The immediate political chances look slight, but might be improved by avoiding the appearance of a new kind of pro-black bureaucracy. If he does not go as far as the board would like, Mr Maudling should certainly meet its wish to see the worst compromises of the 1968 act repealed—those which permit segregation in merchant seamen's quarters and (though rarely invoked) allow discrimination in the interests of "racial balance" in employment. He, and Mr Maurice Macmillan, should also no longer give individual industries a first and worse than ineffective bite at about one-fifth of complaints concerning employment.

The Thames

Midsummer sirens

Low water on a neap tide on midsummer's day should have been—given some midsummer weather—the Thames's very lowest moment of the year. That is precisely why the Ministry of Agriculture's flood room chose 3 pm on Wednesday for a simulation exercise in what to do if there ever was serious danger of a flood in London: everyone could be quite, quite sure that it wasn't for real. The chain of responsibility is unbelievably complex, but the ministry, the Greater London Council and Scotland Yard have been going through the routine on the quiet for years, particularly with the vulnerable London underground, and on Wednesday morning, unknown to tube passengers, the train controller pretended to go through the emergency motions yet again. Of course, he gets warning from the flood room long before the general public; there is a shortlist of 150 riverside institutions and authorities (the boroughs of course, and also the Shell building and the Tate Gallery) that get a special call. But at 3 pm Scotland Yard received the special message to sound off London's sirens for two minutes. (Ironically, the signal is the old "all clear.") These have been tested only once since the war, in 1966; never in the postwar period have they been used for a purpose.

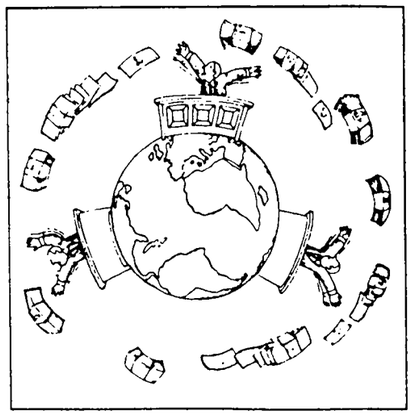
Are they ever likely to be used in earnest? The flood room is manned about 25 times a year, but starts issuing warnings (based on an early warning system which gives notice of the dangerous storm surges in the North Sea) only about two or three times a year. The combination of surge and tide reaches Southend, where there is a more precise warning system, over an hour before London Bridge; that is about the moment when the sirens would be sounded. The water has not reached the level of London's embankment since 1953; but the historical progression in freak tides is upwards, as the height of the average high tide at London Bridge is rising by about 3 ft a century. The GLC has now completed about 90 per cent of an interim scheme to raise the level of the embankment by 6 ft right along its stretch of the river; but it is now seriously embarked on a far more grandiose scheme to protect London. Also on midsummer's day, its private Thames Barrier and Flood Prevention Bill received a second reading in the House of Lords.

The GLC can raise banks under its land drainage powers: but it needs extra authority to close a navigable waterway. In fact, it will be able to close only part of the Thames at a time, building the barrier in two halves: otherwise it would bring river traffic to a halt and silt up the river. The cost of the barrier, including work on downstream tributaries and banks, is expected to be some £78m. Work will start next spring, and is expected to be completed for the 1978 autumn flood season; it is anybody's guess whether the sirens will have to wail a serious warning before then.

Museum

Gin and tonic

Victorian philanthropists regarded museums not just as improving to the mind or somewhere to take the kids on a rainy day, but also as a means to divert the working man from the demon drink. The Bethnal Green Museum, which this week celebrated its centenary, was founded in just such a spirit. Since its pompous opening by the future Edward VII, a handful of other local museums were started in similarly unfashionable parts of London. But Bethnal Green was the first and, with its now excellent collection, remains the best known.



The Brompton Boiler of Bethnal Green

The museum came to Bethnal Green almost by accident. It was originally one of the three "Brompton Boilers"—the temporary steel and glass constructions which housed the South Kensington Museum, later named the Victoria and Albert Museum. When the present V and A was built the temporary structures were offered around London but only the East End took the offer seriously. Local worthies drummed up £20,000 to re-erect it and then went cap in hand to the Treasury which agreed to finance its normal running through the V and A.

Siting a museum in the East End was a novelty indeed. The commemorative exhibition shows a whole page from the Daily Telegraph describing the opening ceremony and devoting many paragraphs to comments on the "most melancholy bodily deformations in the crowd." The silk weavers of Spitalfields, proud descendants of the Huguenots who had fallen on hard times after the industrial revolution, were affronted both by press comments and the stares of the gentry who wheeled down from the West End.

Today, some 2,300 people a week visit the museum. Many have particular interests in the decorative arts and costume. But many more are children who come to see the superb collection of dolls' houses and toys. Throughout the summer holidays and at weekends local children come to painting classes, puppet shows, story telling and so on. Seeing what the museum has done for Bethnal Green, it seems a pity that the other Brompton Boilers failed to find good resting-places.

"Cash in orbit has been holding down the profits of exporters long enough!"

Money is spiraling in toward your office from customers in half a dozen different countries.

Fine.

Except that by the time all the problems of different currencies and different forms and procedures are sorted out—not to mention postal and bank clearance delays—it could be weeks before you get the *use* of your money.

Some exporters have small fortunes just floating around the world.

But even one day of unnecessary float time is extravagantly wasteful with today's high interest rates.

How can you get your cash out of orbit and into some gainful employment?

Talk to American Express International Banking Corporation.

We have an International Money Transfer System that can slash float time from weeks to just a day or two. Possibly even to *same-day* payment.

Here's how it works. We will arrange to have your customer's remittance channeled through his nearest American Express International Banking Corporation branch or office. (And there's bound to be one nearby. We have 49 branches and offices of subsidiaries in 18 countries.)

Our worldwide communications network takes it from there. Within a day or two, the remittance can be cleared and credited to your account in your city. For you to use.

We'll tailor an International Money Transfer System to fit the specific requirements of your company. Just one phone call can start it working for you.

Which brings us to our philosophy of international banking. We don't think it's enough just to help you do business. We want to help you do it profitably.

American Express International Banking Corporation

American Express International Banking Corporation has 48 branches and subsidiaries handling all types of banking transactions all over the world. We're in these major financial centers: Amsterdam, Athens (2), Basle, Bombay, Brussels, Calcutta, Cannes, Chittagong, Copenhagen, Dacca, Djakarta, Düsseldorf, Florence, Frankfurt, Geneva, The Hague, Hamburg, Heidelberg, Hong Kong, Karachi, Kowloon (2), Lahore, Lausanne, London, Lucerne, Lugano, Milan, Monte Carlo, Munich, Naples, New Delhi, Nice, Okinawa (2), Paris (2), Piraeus, Rome, Rotterdam, Salonica, Taipei, Tokyo, Venice (2), Vienna, Zurich. International Headquarters: 65 Broadway, New York, New York.

THE WORLD *International Report*

On a clear day in Peking you still may not see Hanoi

Kissinger proposes, but who disposes?

There has been as much talk in the past week about the imminent outbreak of peace in Vietnam as there was six weeks ago, after the fall of Quang Tri, about the imminent victory of the North Vietnamese army; and with as much, or as little, justification in the known facts. The known facts are that President Podgorny of the Soviet Union was in Hanoi for three days at the end of last week for discussions which the Soviet news agency described as "frank," a word that usually means there was some disagreement, and which the North Vietnamese reported with studied coolness; that the man who superintends North Vietnam's side of the peace talks, Mr Le Duc Tho, went to Peking at the weekend; and that Mr Henry Kissinger arrived in Peking on Monday for four days on a supposedly "periodic" visit. The result of all these criss-crossings is that North Vietnam is probably feeling more friendless than it has ever felt before. But that does not necessarily mean it is ready to negotiate a peace settlement that would end the fighting once and for all.

The likelihood is that President Podgorny told the North Vietnamese that, although the Soviet government would still like to see them win, it was not prepared to break the American blockade of their ports, and it could not guarantee to get the oil and other supplies they need through China instead. Mr Kissinger has presumably been asking the Chinese not to open up their ports and railways to Soviet supplies bound for North Vietnam, and not to send an army of Chinese engineers to repair North Vietnam's railways.

If Mr Kissinger gets what he wants, the consequence will be that, for as long as President Nixon keeps up the mining and the bombing, North Vietnam will be deprived of much of the oil and weapons its army requires for the conventional war it is fighting at the moment; and there is nothing to make Mr Nixon call off the mining and bombing unless American public opinion obliges him to. Unless it does so fairly soon the North Vietnamese will pretty certainly have to suspend their current offensive in the central and southern parts of South Vietnam when their stockpiles of ammunition begin to run out. They might even be forced out of the captured province of Quang Tri in the far north.

The Americans hope that this prospect will persuade North Vietnam's leaders to end the war—either by accepting a formal, supervised, ceasefire, or by agreeing that the National Liberation Front should submit its political claims to an election in South Vietnam, along something like the lines of the one President Thieu has already proposed. The Russians, and even the Chinese, might be willing to settle for this; last week Chou En-lai commended to a group of visiting Americans the way President Eisenhower wound up the Korean war in 1953—which, as it happens, was by a formal, supervised, armistice that has kept South Korea non-communist ever since. But the North Vietnamese would probably regard either of these solutions as tantamount to defeat. And there are two other ways they can try to deal with the situation.

One is to try to persuade Mr Nixon to accept, not peace, but a truce: an unsupervised ceasefire, of indefinite length, during which Mr Nixon would halt the bombing in the north, and call off the blockade; and perhaps remove the remaining American troops from the south, in return for getting the American prisoners back and getting Vietnam out of the headlines before the November election. The other is to reject any agreement, in the belief that they can go on enduring the blockade and the bombing and still get just enough supplies through to the south to keep up a campaign of sporadic guerrilla attacks. Either way, North Vietnam's aim would be to hold on in the hope of Mr McGovern being elected in November or Mr Nixon just giving up the war in despair afterwards.

The fact is that the superpower diplomacy of the past year—the American exploitation of China's fear of Russia, and of Russia's desire for American economic aid—may have deprived North Vietnam of much of the support it used to get from its two great friends. But it is still the North Vietnamese themselves who will take the decision whether or not, even so, to go on fighting; and the only thing coming out of Hanoi so far is silence.

Can they get Quang Tri back?

FROM OUR SAIGON CORRESPONDENT

The judgment in Saigon is that the North Vietnamese are not yet interested in negotiating a definitive peace settlement. But enough is happening to convince many people that North Vietnam is in sufficient trouble to accept a limited agreement fairly soon cover-

ing such matters as a bombing halt and the withdrawal of American forces in return for the release of American prisoners. It would prefer to avoid a ceasefire at least until its army can register more substantial gains on the battlefield. But President Podgorny's statement in Calcutta that peace talks will soon be resumed has strengthened the already growing belief in Saigon that some kind of breakthrough is near.

It was against this background that President Thieu announced on Monday a three-month military campaign to regain the territory lost since the communist offensive began on March 30th. Firmly rejecting any "leopard spot" solution—which would cede control of certain areas to the communists—Mr Thieu asserted that "Quang Tri can be recaptured." There are also a few districts in Binh Dinh province, in the middle of the country, and some small areas elsewhere that he would like to see restored to Saigon's control before any negotiations get off the ground.

For political reasons the recapture of Quang Tri, in particular, is very important for Mr Thieu, but it is not going to be easy. The South Vietnamese army has weathered the storm of the past 12 weeks fairly well, and morale is rising; and very soon, if not already, the full impact of the American blockade and bombing of North Vietnam must be felt by the communist troops in Quang Tri, who are directly dependent on day-to-day supplies from the north. However, the determined reaction of the North Vietnamese to recent probes into Quang Tri by South Vietnamese marines shows that they will fight for every inch of the province.

The South Vietnamese will have massive air support but the northerners have heavy guns so well dug in that they are virtually impossible to knock out. It will be a costly campaign for both sides. There are few civilians left in the province, and most of the towns are rubble already. And anyway the recapture of Quang Tri would not greatly reduce the threat to Hué, which comes mainly from the south-west rather than the north. Indeed, it might even weaken Hué's defences by over-extending the South Vietnamese forces in the area.

With the siege of An Loc now all but over—a major military and political setback for the communists—the Saigon command hopes that several thousand of its troops will be freed for use elsewhere. But a new cause of worry is the movement of sizeable numbers of North Vietnamese into northern areas of the Mekong delta, possibly with the aim of cutting Route 4 running south from Saigon. However, they have already suffered a good many casualties in Kien Tuong province, and there is not much evidence of support from the local population.

Although it is realised that there may still be major attacks on Hué and Kontum, there is an atmosphere of confidence throughout the country now that contrasts markedly with the sinking feeling of a few weeks ago. The air of crisis is dissipating—and, with it, President Thieu's chances of obtaining the wide special powers he had hoped parliament would delegate to him for dealing with the emergency. The result could be the non-enactment of important economic reforms, and an early resumption of the futile political bickering that was tacitly called off when the offensive began. Mr Thieu has failed to rally any significant new political support around him, as he could easily have done. He thus leaves himself more vulnerable to being dumped if the situation should again deteriorate.

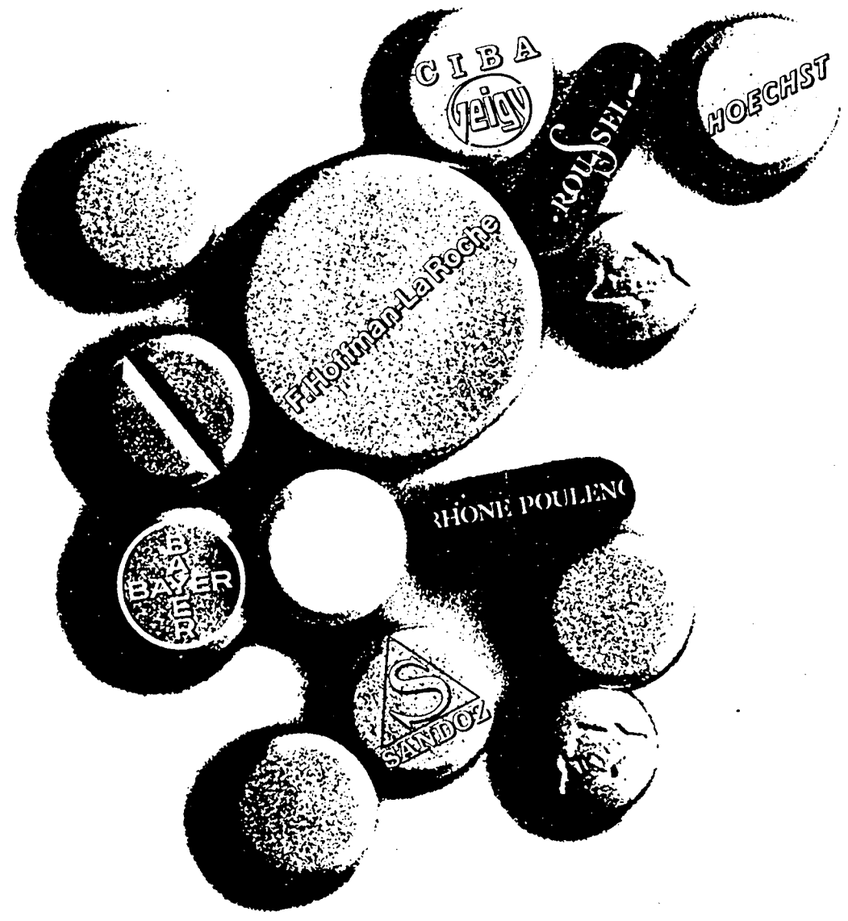
The Stockholm conference

The Chinese foiled

FROM A SPECIAL CORRESPONDENT
Stockholm

"When a man knows he is to be hanged in a fortnight," said the great Dr Johnson, "it concentrates his mind wonderfully." Whatever the cause, some marvellous concentration did occur in the closing sessions of the two-week United Nations conference on the environment which ended in Stockholm on June 17th.

By virtually unanimous votes, with only a few abstentions, the national delegations passed the proposed declaration on the environment and the score of detailed points in the action plan which had been prepared for the conference in advance. They also proposed a permanent secretariat for the environment within the United Nations system, with a small independent fund of £40m to be spent on environmental projects over the next five years. All these resolutions must now go to the UN's General Assembly for ratification in the autumn. But the high level of consensus achieved at Stockholm sends them on their way with an almost wholly unexpected degree of momentum. After two weeks of apparently interminable oratory on highly charged political subjects—the Vietnam war, apartheid and a massive Chinese effort to stall the whole declaration and replace it by a standard denunciation of imperialism—the delegations voted together.



Quality not quantity for Mrs Gandhi

The declaration includes the vital acceptance of national responsibility for locally caused pollution that does damage to other states. The action plan is not all relatively innocuous data-collecting and monitoring. It includes provisions for a comprehensive international ban on dumping toxic wastes in the oceans, for tightening up international law on oil pollution at sea, for a 10-year moratorium on commercial whaling, for the preservation of important "ecosystems"—forests, river basins, wetlands—and for the establishment of genetic banks to conserve plant and animal species threatened with extinction. The conference has not only voted for a secretariat and a fund. It has also voted to give them some concrete and substantial tasks.

How did the concentration of minds come about? It had, of course, something to do with the strict limits of time set on the proceedings. The Unctad conference at Santiago earlier this year sprawled along for six weeks, emptying itself and its delegations of vital capacity as it crawled through interminable sessions. A new Parkinson's Law may be in the making—that the output of any international conference is in inverse proportion to the amount of time it is allowed to cover. A new international code of conference behaviour might also be evolved by which national delegations make available in written form the long, detailed and laudatory accounts of their own domestic policies and raise in, say, 10 minutes the issues of substance they wish to discuss. The Stockholm conference's secretariat is reported to have reduced by two-thirds the documentation originally proposed to it.

But the fact that the Stockholm conference got anywhere at all was not simply a matter of time and

Who will cure most European headaches in 1980?

Even if you are not directly interested in the pharmaceutical industry, the prospect of intense competition within a given industry on an international basis, is a prospect of general interest to the business man. More and more, as Europe integrates, we shall see such battles, while the national giants of various industries integrate amongst themselves. And it is important for the European-minded businessman to be able to predict the outcome of such contests. They affect his future, directly or indirectly.

Within national boundaries the detailed information which a man needs, to form his business decisions, may be found in his chosen daily newspaper. But how about the *international* information – the birdseye view of a particular industry, taking in the whole of Europe and the world? The Financial Times does not claim to be able to tell you more about your own country's business than your country's own leading journals. It does claim, however, to tell you more about other countries' businesses – from pharmaceuticals to steel, from cars to crops – than you may find in any other daily newspaper. It also claims a very high degree of accuracy, detail and political impartiality.

Perhaps these are some of the reasons why, according to a recent survey*, 41% of senior management throughout Europe already rate it essential reading, and why more and more international companies find it an important advertising medium. **If you would like to judge the Financial Times for yourself by letting us send you or any of your executives free copies each day for two weeks, †please complete the coupon and send it to us.**

management. The delegations discovered that they did in fact share at least one common issue—the vulnerability of the planet they have to share. The really profound rift had been expected to appear between developed and developing states, and this indeed is what the Chinese, reopening the discussion on the declaration and pinning all blame for pollution and exploitation on imperialism, had hoped to exploit and deepen. But they had no success.

Among delegations from the industrialised states there was no tendency to deny that appalling poverty in shanty-town unemployment is a desperate form of pollution. This openness was matched on the side of the developing states by the insight that it might be pure folly for any pre-technological society to end up with a Manhattan or a Tokyo bay if it could possibly do otherwise ; Japan's official and totally uninhibited catalogue of its own pollutionary evils helped there.

The double perception stilled some of the fears that developed states, on the excuse of saving the biosphere, were simply trying to prevent developing states from reaching ultimate—if pollutive—technological felicity. On the contrary, the feeling began to gather strength that the rich had made appalling mistakes which the poor might yet avoid. Mrs Gandhi, the only visiting prime minister, spoke of what unchecked population growth and purely material expansion could do to destroy the quality of life. The Chinese intervention fell into perspective as simply playing politics with human survival. The Chinese took the hint, and although they objected strongly to part of the declaration, especially a section on ending nuclear tests, they did not block acceptance at the final vote.

Italy

Will the centre hold?

FROM OUR ROME CORRESPONDENT

Signor Andreotti may have succeeded in putting together the government of his choice in Italy after all. Since the Socialists refused to join a five-party coalition with the Liberals he has fallen back on a four-party combination without the Socialists, but declares that the government is open to them should they later decide to join. The Christian Democrats, the Social Democrats, the Liberals and the Republicans can together muster 331 votes out of 630 in the lower house. In the senate this

It's yes, in spite of Saragat

coalition has a majority of five. To its right are the 56 deputies and 26 senators of the neo-fascists, who are spoiling for a chance to get a foot in the door ; to its left are the Socialists and the Communists.

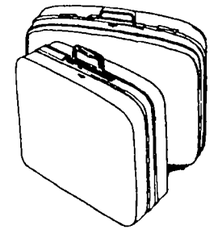
But the real weakness of the scheme lies in the fact that nearly a third of the Christian Democrat party itself dislikes it. The party's three left-wing factions, headed by the foreign minister Signor Moro, voted against it in the party executive. Signor Moro declares openly that an alliance which substitutes the Liberals for the Socialists is a step back to the old pre-1963 *centrismo* and will close the door for years to come to collaboration with the Socialists while opening it to dangerous infiltrations from the neo-fascist right. Signor Moro may refuse to sit in such a government. So may the minister of labour, Signor Donat Cattin, and other members of his faction.

Signor Forlani, the party secretary, has assured the leaders of the other parties that there will be no disloyalty from his left-wingers. Be that as it may, the opposition of the Christian Democrat party's three left-wing factions is the pretext used by the Republican party for not entering the government. But it has pledged itself to give its support in parliament. This ambivalence caused irritation among the prospective allies and put the Social Democrats in an awkward position. But most of the party was in favour of joining the coalition and although Signor Saragat, the leader, was against it the party agreed on Wednesday to come in.

The veteran Socialist party leader Signor Nenni has declared that the projected government will be even weaker politically in the country than it is in parliament. The new government, Signor Nenni insists, will not be able to mediate between workers and employers in the autumn when wage contracts for over 4m workers are to be negotiated. The Socialists regard the proposed government as one that will "ignore the workers" and intend to oppose it from the outset. When the unions' demands come forward in the autumn they will do so even more heartily—that is, if the government survives until then.

The subcontinent

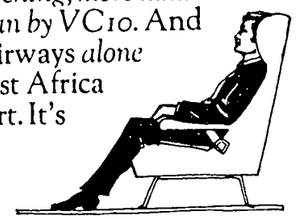
It'll take more than one meeting



The subcontinental summit that opens in Simla next Wednesday will almost certainly have to be the first of a series. The Indians regard it as inconceivable that the Pakistanis' complicated conflicts with India, let alone with Bangladesh, can be resolved at one go. Mr Bhutto may still come up with an eleventh-hour recognition of Bangladesh—perhaps at the mass rally he has arranged for Monday. If he does, then Sheikh Mujib could join the talks and negotiations could begin on the central question of the prisoners of war. If he does not, then the summit is unlikely to produce much more than atmospherics.

Mrs Gandhi may well make some gesture to strengthen the peace lobby in Pakistan. India has already promised to return another 200 wounded prisoners next week. Mrs Gandhi might go a step further by releasing the relatively few prisoners captured on the western front. She might also try to persuade Bangladesh to agree to the release of 1,600 civilians among the 93,000 Pakistanis held in India. But the Bengalis would undoubtedly demand a quid pro quo from Mr Bhutto in the form of the repatriation of Bengalis from Pakistan.

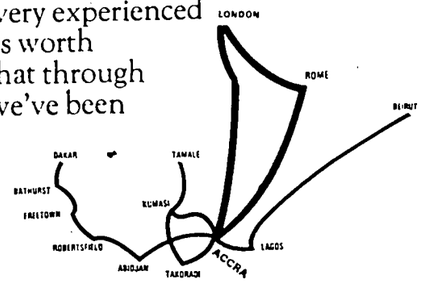
One issue which will not be allowed to cloud the summit, at least in its initial stages, is the Bengali plan to try some 1,500 Pakistani prisoners for war crimes. Mrs Gandhi made this clear in a press conference in Stockholm last week when she denied reports that the prisoners were about to be delivered to Dacca. This week Sheikh Mujib insisted again that he has every intention of going ahead with the trials. But officials have indicated that there might be room for flexibility on timing and numbers. Trials of local collaborators have already begun in



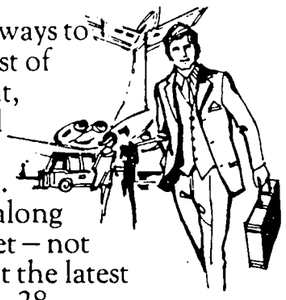
With all the competition around how come Ghana Airways are still on top?

Well, the fact is, if you are going to West Africa, there are some solid reasons why you should travel on Ghana Airways.

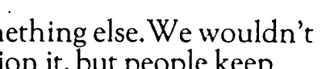
To start with every-one of our flights departs from London-Heathrow Airport. If you are bound for Accra, why travel to Surrey first.



Then, we fly the best planes. *There is no faster, more leg-stretching, more luxurious way to get to Accra than by* VC10. And remember Ghana Airways *alone* flies the VC10 to West Africa from London Airport. It's still a favourite aircraft with every passenger we meet.



With new airlines springing up every month, Ghana Airways is getting to be one of the veterans. *To our way of thinking, this is a major plus.* It's eleven years since we first took to the air, and eleven years is a long time in the history of passenger flight.



It means we are a very experienced airline. With very experienced crews. And it's worth mentioning that through all the years we've been operating, *we've kept an unblemished international flying record.*

There are other ways to get to the West Coast of Africa, of course. But, before you go ahead and choose one, pause for a moment. Ghana Airways fly along the West Coast by jet – not any old jet either but the latest Fokker Fellowship – 28.

If your destination lies inside Ghana, nothing could be easier. There is a super internal service, bus stop-style, by Hawker Siddely 748 prop jets.

There's something else. We wouldn't bother to mention it, but people keep mentioning it to us. It's the nature of the service aboard every Ghana Airways aircraft. *When a Ghanaian hostess says 'Welcome', she really means it.* It isn't a matter of training, either. You can't instil genuine warmth into a stewardess by training. In our case, we're lucky. It's a national characteristic.

Did we say there were other ways to get to West Africa? Could we suggest you do yourself a favour? Forget them.

Ghana ★ Airways

We make new friends on every flight.

HAMMERSON

Statement by the Chairman, Mr. Sydney Mason

In his review for the year to 31st December, 1971, Mr. Sydney Mason, Chairman of The Hammerson Property and Investment Trust Limited, makes the following points:

RESULTS:

Group profits before taxation have increased from £1,962,029 in 1970 to £2,257,132 in 1971 and net profit available for distribution has doubled from £538,078 to £1,076,515. The Directors recommend a dividend of 25% which, after taking into account the 1-for-1 scrip issue during the year, doubles the dividend rate when compared with the previous year.

ASSETS:

Our property assets at cost at the end of 1971 had increased to some £135 million compared with £115 million for the previous year and the cost of our total property assets including commitments amounted to £168 million.

INVESTMENT PORTFOLIO:

Our fully completed investment portfolio by the end of 1971 had increased to a total of some £50 million at cost and in the opinion of the joint managing directors had a value at the time when we considered the properties to be fully developed of some £90 million giving a surplus (after minority interests) of some £32 million.

THE FUTURE:

The excellent results now shown in the accounts represent the culmination of our efforts during the 1960's and having reached this very significant landmark in the Company's affairs we now have to progress into the future. I look forward to the continued growth of the Company over the next decade which will arise not only from new acquisitions and the completion of developments which are in the pipeline but also from the improvement in income which will flow from our current investment portfolio throughout the world which – I should emphasise in these frenetic take-over days – has been created by our own efforts and from our own resources and not by the dilution of the highly geared equity capital of the Company.

THE HAMMERSON PROPERTY & INVESTMENT TRUST LIMITED

Brown Shipley expansion brings increased profits and earnings

Salient features from Mr. Ion Garnett-Orme's statement.

Results

The Consolidated Net Profit for the year 1971/72 increased from £573,000 to £745,000. Earnings per share rose from 24p to 30p. This is the largest increase in profit and earnings in a single year since the Company was formed. These results reflect significant expansion in most areas of our business.

The banking subsidiary achieved a net profit, after tax, of £650,000, which is an improvement of 35% on the previous year's figures.

A Final Dividend of 10% is recommended to make a total for the year of 17% (1970/71—15%).

Merrill Lynch-Brown Shipley Bank Limited

An agreement has been reached with Merrill Lynch, Pierce, Fenner & Smith International Limited to join with them in the formation of a new bank to be based in London. This new entity, called Merrill Lynch-Brown Shipley Bank Ltd., will start operations early this Autumn and will conduct a general banking business designed to broaden the scope of the international financial services currently provided by each party.

Prospects

So far this year the progress shown in the Accounts is being well maintained. However, the economic climate and financial scene can and often does change very rapidly so that it would be unwise for me to forecast at this stage the final results for our current year. Nevertheless I am confident that the Management and Staff of the Group will take full advantage of any opportunities which may arise.

Year ended 31st March	1968	1969	1970	1971	1972
Total Gross Assets	£75.1m	£79.2m	£83.2m	£89.2m	**£100.6m**
Net Profit after Tax	£0.43m	£0.51m	£0.58m	£0.57m	**£0.75m**
Earnings per share	18p	21p	24p	24p	**30p**
Rate of Dividend	12%	12.42%	15%	15%	**17%**

But the surrender did not end a 25-year crusade

Bangladesh, but the government is deliberately playing them down. At least one of the defendants has been sentenced to death and a politician charged with participating in the by-elections to replace the proscribed Awami League received six months' hard labour.

Indians and Pakistanis alone could theoretically agree to leave the territories each captured from the other during last December's war. But even this may not be possible, because it is linked with the ticklish problem of Kashmir. India has been demanding that the ceasefire line in Kashmir be "rationalised" to reduce security problems for both countries, but Pakistan stands by the UN Security Council resolution of December 21st calling for a return to positions "which fully respect the ceasefire line." India retorts that this line has been permanently changed by the war and consequently UN authority over it has lapsed.

Mr Bhutto has indicated that he is not yet ready for substantive negotiations on Kashmir. He is edging toward the position that self-determination for Kashmir can be won only by the Kashmiris themselves, thus dissociating Pakistan from the struggle. But this is a long way from signing away claims to Kashmir that have fuelled a 25-year crusade. Still, some formula might be found to allow military disengagement along the agreed international frontier and the current ceasefire lines in Kashmir and elsewhere. This would not bring the confrontation to an end, but it would reduce the risk of new border incidents.

This week's most encouraging augury for a serious summit was India's non-reaction to the increase in Pakistan's defence budget announced last weekend (though one explanation for the silence in New Delhi is that Mrs Gandhi was out of town). This year Pakistan will allocate 10 per cent more for defence than the undivided country did in its last budget. Since the rupee was devalued by 57 per cent last month, making foreign arms twice as expensive, the rise will come nowhere near providing a similar level of armament—unless Pakistan's foreign friends fill the gap. Saudi Arabia and Libya are thought to have offered help. And Mr Nixon is expected to authorise $60m in long-term loans for industrial spare parts and raw materials later this month, although American military aid remains suspended.

Mr Bhutto is thought to want a smaller army equipped with greater firepower, in the hope that he can save money without sacrificing military capability. But he evidently does not feel strong enough to cut down the army now. So the new budget may represent a holding operation. It is a significant reflection on his priorities—and perhaps also on the prospects for a lasting peace settlement—that not only has the share of defence in the country's reduced gnp gone up from 5 per cent in 1970-71 to 9 per cent today, but it is higher than the total allocation for economic development.

Sri Lanka

Still no money, still no jobs

FROM OUR COLOMBO CORRESPONDENT

"A new constitution is no magic wand," the prime minister, Mrs Bandaranaike, told her people last week as Sri Lanka, once Ceylon, sank a bit deeper into its chronic economic crisis. A team from the International Monetary Fund is in Colombo studying the economy and the government's plans for it. But neither expert eye nor microscope is needed to see the huge hole in this year's budget.

An unfinanced gap of 400m rupees was not the finance minister's doing. Despite his trotskyist past, Mr Perera has always played good housekeeper entrusted with a bare cupboard. His budget was almost perfectly balanced until backbenchers forced him to withdraw many of his revenue proposals, such as an increase in sugar and flour prices. After the bloody insurrection of April, 1971, no member of parliament was prepared to court more unpopularity to satisfy Mr Perera's taste for economic order.

The IMF wants Sri Lanka to devalue now, although it is polite enough to ask merely for "meaningful steps." Mr Perera has given it a firm no and prefers instead to put a charge on the free ration of 2 lb of rice a month. But after failing to persuade backbenchers to take a sugar-coated pill he is not likely to make them swallow bitter rice. A further pruning of imports is a predictable answer to the foreign exchange deficit of 200m rupees which has been budgeted for this year. But this will mean more consumer shortages and industrialists threatening retrenchment. And unemployment, now standing at 12 per cent, is the government's persistent nightmare.

It was the perennial shortage of jobs, particularly for the thousands who are turned out every year by Sri Lanka's free education system, that helped to set off last year's revolt. Two weeks ago there was a chilling reminder of this continuing threat to political stability when 80 prisoners, captured during the insurrection, escaped from three camps in different parts of the island. Only a few have been retaken.

The jailbreak offered a dramatic background to the trial which opened on June 12th before a newly established tribunal called the criminal justice commission. Of the 41 people charged as leaders of the proscribed

People's Liberation Front, only four are known to the public. They are Mr Rohana Wijeweera, allegedly the chief of the operation and a graduate of Moscow's Lumumba university, Mr Susil Siriwardena, a senior civil servant and Oxford graduate, Mr Mahinda Wijesekera, a former student president, and Mr Samuel Bandaranayake, a former member of parliament and cousin of the prime minister's late husband. If these four men were typical of the insurgents, then the revolt was, as suspected, a movement by educated young men with a rural background, frustrated by an unproductive economic system and seeking to unseat the westernised élite that runs it. The formal trial which opens in six weeks' time may provide some answers.

Japan

Where have all the flowers gone?

FROM A CORRESPONDENT IN TOKYO

The hero of a Kabuki play goes off stage on a *hana-michi*, or "flowered exit." When he resigned last Saturday the Japanese prime minister, Eisaku Sato, claimed that he was ending his record 7½-year term with an ideal *hana-michi*, since only the day before he had defeated a no-confidence motion in parliament. In fact, he trampled all over the flowers in his path. Normally a master of public relations—to belie his conservative image he appeared in a tinted shirt and wide necktie—Mr Sato suddenly lost his temper with the press. "I want to speak to the people directly," he declared in full view of television cameras. "I hate biased newspapers very much. So please, you reporters, go away."

Apart from the bad press this predictably received, Mr Sato's retirement speech was an anti-climax. He restated his reluctance to jump on the China bandwagon and insisted again that Japan must maintain its alliance with the United States. When he sat down Mr Sato had tears in his eyes. But moments later he was smiling as much as his long-suffering colleagues and looking forward to taking over the role of the elder statesman which has so much prestige in Japan. As a symbol of this intention, he boarded a bullet train on Tuesday for Yamaguchi prefecture, his home constituency in western Honshu, to spend three days of prayer at the graves of his ancestors. For the past century this area has been a breeding ground of wise old statesmen.

A tear at the end of term

Mr Sato's colleagues continued their manoeuvring for the succession, and the trade minister, Mr Tanaka, is still gaining on his main rival, the foreign minister, Mr Fukuda. Although Mr Sato himself has implicitly supported Mr Fukuda, Mr Tanaka has the support of more than half of the sizeable Sato faction as well as many younger members of the other factions in the Liberal Democratic party. He is also reported to have worked out a deal with the other two candidates, Mr Ohira and Mr Miki, who are expected to trail behind on the first ballot. A fifth potential candidate, the flamboyant former defence chief, Mr Nakasone, stepped down this week, improving Mr Tanaka's chances still further. Mr Nakasone had been urged to run by Mr Fukuda's supporters, who calculated that he would take first-ballot votes away from Mr Tanaka. The remaining four candidates will battle it out until July 5th, when the Liberal Democratic party holds its nominating convention.

Chile

Papering over the cracks

No one should underrate President Salvador Allende's gifts as a political fixer. They have helped him to survive the worst cabinet crisis that he has so far had to face. For the moment he has managed to please both the Communists and the Socialists, whose feud was threatening to tear his left-wing coalition apart a couple of weeks ago. On the face of it, the Socialists did best in the cabinet reshuffle announced on June 17th. They now have six jobs instead of four, whereas the Communists still have only three and the Radicals (who now represent only the pro-marxist rump of what was once an important liberal party) have dropped back to two.

The Communists did get two of the things they have been pressing for over the past month : the sacking of Sr Pedro Vuskovic, the minister of the economy, and a renewed attempt to pursue a dialogue with the opposition Christian Democrats. Yet it would be very rash indeed to conclude from this that Sr Allende has now made up his mind to pursue what the Communists want—a "middle strategy" that would involve slowing down the state takeover of private industries and taking tougher action against the would-be guerrillas of the Movement of the Revolutionary Left.

Sr Vuskovic—who used to be on excellent terms with the Communists until they got cold feet when they saw that his programme had helped to create the biggest balance of payments deficit in Chilean history—has been replaced by another horse from the same stable. Like Sr Vuskovic, the new minister of the economy, the Socialist Carlos Matus, is a marxist ideologue with a Harvard degree and close links with the UN's Economic Commission for Latin America. He has worked closely with Sr Vuskovic in the past (and collaborated with him in writing a book on economic development) and is likely to follow the same line in the future. So is another young Socialist with a similar background—Sr Jorge Arrate, who was made minister of mines.

The appointment of a very sober and straitlaced Communist deputy, Sr Orlando Millas, as minister of finance may provide some sort of counterweight to the strong lobby of Socialist extremists in the economic ministries. But Sr Vuskovic will still be there in the background pulling strings. He has popped up again as the vice-president (under Sr Allende) of the executive economic council, a job that will make him a kind of super-minister with the role of banging the heads of the economic ministers and corporation heads together.

So what has really changed? Well, one of the faces missing from the new cabinet is that of General Pedro Palacios, the army engineer who was formerly minister of mines. The general is said to have stepped down because he had ceased to believe that the participation of the armed forces in government was "positive" at this

stage. This may be further proof of the reluctance of the army chiefs to let themselves become too closely identified with a government caught up in an economic crisis. It is doubtful whether Chile's cabinet reshuffle will settle anything. Once again, Sr Allende has resorted to political horse-trading instead of making a fundamental choice of strategy.

The Mediterranean

Nobody here but us locals

FROM OUR CAIRO CORRESPONDENT

The Mediterranean as a sea of peace is a beautiful thought. Its keenest proponents, from among the 17 littoral nations, with their total population of 250m, think beyond the obvious local conflict between Israel and the Arabs to ways and means of cleansing Mare Nostrum of the American and Soviet fleets and of the fear, symbolised by those fleets, of a superpower conflict. The most stalwart champion of this idea is Jugoslavia ; President Tito has served two public reminders recently that with a European security conference in the offing the Mediterranean countries had better make their voices heard. And Presidents Boumedienne of Algeria and Bourguiba of Tunisia, meeting in Algiers at the end of May, have formally called for a Mediterranean conference.

There has been talk of a preparatory committee which should convene some time before the worldwide foreign ministers' conference of non-aligned states that is scheduled for Georgetown, Guyana, in August. But the prospective participants are not at all sure what their Mediterranean conference should be about or, indeed, who should be there. The original Jugoslav idea was for a meeting limited to Jugoslavia, the seven Arab littoral states, Malta and Cyprus ; the emphasis was heavily on non-alignment, and Jugoslavia's particular concern was with the proximity of the Russian fleet to its own shores.

The stress on non-alignment has been eroded by a number of things, not least Egypt's treaty of friendship with Russia. The Egyptians gave evasive answers to Jugoslavia's foreign minister, Mr Mirko Tepavac, when he was in Cairo a couple of months ago promoting the idea of a conference. Although agreeing with the idea in principle, they claimed that the American Sixth Fleet should not be equated with the Soviet Union's naval presence. So the Egyptians go along with the Algerians in arguing that the most useful function of such a conference would be to look for means of tightening the political and economic links between the European Economic Community and the Arab countries on the Mediterranean's southern shore.

All this has led to a new, and singularly clumsy, formula to define eligibility. The conference would not be non-aligned but would include those Mediterranean countries that are "not involved in blocks." This opens the way for attendance by France and Spain. Italy, Greece and Turkey are barred by their membership of Nato. Albania is excluded, perhaps on the pretext of its ties with China. And nobody has suggested that the Israelis should be invited to sit round a table with the Arabs.

The Jugoslavs claim that, when they brought the matter up with the French, they found "an identity of view." The idea may still be too nebulous to arouse strong interest in Paris, but the French are clearly not dismissing it out of hand. They might even, one day, take the show over—and get it going. But none of this need worry either the Americans or the Russians ; the conference, if or when it takes place, has no power to sweep their fleets out of the Mediterranean and, indeed, may not even be talking of such things.

Egypt

Publish and be damned?

The column Mr Mohammed Hussanein Heikal writes each Friday for al Ahram, the Cairo daily newspaper he edits, has long served the purpose of a weekly policy statement—with the added benefit that, since it is not an official policy statement, it ties nobody down. When policy changes, so does the tenor of Mr Heikal's comments ; when there is no policy, and there has been virtually no Egyptian foreign policy for the past nine months or so, Mr Heikal is reduced to wordy meanderings. But his latest contribution, on June 16th, was incisive : the no peace, no war vacuum in which Egypt exists, wrote Mr Heikal, is a "crime" that benefits Israel alone ; unless it is soon broken, the credibility of Egypt's leaders, let alone that of their Soviet allies, will be destroyed.

If, that is, there is still credibility there for the destruction. Egyptians

Heikal says it aloud

have long been saying privately what Mr Heikal has now published, and at their demonstrations in January the students from Cairo university said it publicly. The puzzle is why Mr Heikal has now joined the chorus that points out that the emperor has no clothes. The most dramatic explanation is that Mr Heikal, having inside information that a change in Egypt's leadership is coming sooner rather than later, is making a bid to keep himself on the winning side. The least dramatic is that some sensible person, probably Mr Heikal himself, decided that if people were to see their own depressing, and mildly seditious, thoughts set down in semi-official guise it might take the edge off their potentially dangerous frustration.

In between these two theories a number of personal factors obtrude. Although Mr Heikal's writing shifts with the times, it has never shifted as far as the Russians would like and they have always suspected him as a major influence on the other side. But the suggestion in his article that Russian military aid to Egypt is useless or, at the best, inadequate steps over previous self-censored limits, although it faithfully reflects the exasperation of Egyptians inside and outside the government. Two senior foreign ministry officials were suspended for the far milder reservations that they expressed about the Soviet Union at an al Ahram seminar on the Nixon-Brezhnev summit. Mr Heikal, drawing swords with the foreign minister, Mr Murad Ghalib, had undertaken to get

NOW FERRANTI HELP IT RESPOND EVEN FASTER

In Birmingham, Ferranti have just installed one of the world's most advanced Computer Command & Control systems, for use by the police. The computer stores all information on police resources available, and it is constantly updated by incoming reports from sub-divisions and patrols. Uses include statistical analyses of crime, car response times, periods of peak and slack demand for police services–all leading to more efficient management of the police.

resources are available in that locality. It also alerts the sub-divisional station, via its Ferranti display.

Every Central Control officer has the facility for instant access by radio to every Birmingham police patrol—mobile or on foot—and also to emergency services like ambulance and fire brigade. Officers at either Headquarters or sub-divisional stations can thus take necessary steps to handle the emergency. As the computer is constantly updated, they can follow each other's actions on their displays. It maintains records of all emergencies and of action taken, and provides daily printed summaries.

The Ferranti Argus 500 computer is linked to TV type displays with keyboards, at the Central Control Room and at each of twelve sub-divisional stations. When you dial 999 for the police in Birmingham, you are connected to Central Control. The officer who answers keys in name, address and complaint, using a standard format for rapid entry of the information. The computer immediately does two things. It tells the officer, on his display, what

Ferranti Command & Control systems are standard for new Royal Navy ships. Ferranti inertial navigators guide the RAF's Phantoms and Harriers. Ferranti simulators help train air traffic controllers at major international airports.

In automation, electronics and electricity supply, Ferranti are among the world leaders.

Is CONFUSION when a MIXED added to FEAR RISK fire erupts?

Sir Frederick Delve's advice can help you.

Sir Frederick Delve ? Who's he ?
In 1933, when 31, he commanded the Croydon Fire Brigade and was the youngest Chief Fire Officer in Great Britain. After the early wartime raids on London he was seconded to the Home Office to assist in the planning of the National Fire Service. He became Deputy Inspector-in-Chief of the NFS, and later Chief Regional Fire Officer of the London Civil Defence (NFS) Region.

But the war's been over for ages. Has he rested on his laurels ever since ?
Not likely ! After the war, his leadership brought added glory to the London Fire Brigade, the largest and most advanced in the world.

And now ?
Isn't that enough ? Now, you might think he'd be content to enjoy his retirement, but not so. As a director, he takes an active interest in Nu-Swift International Ltd., the fire extinguisher manufacturers of Elland, Yorkshire. It was in this capacity that he agreed to talk to me about Nu-Swift Multi-Purpose Dry Powder Extinguishers.

Sir Frederick Delve, C.B.E., M.I.FireE.

Sir Frederick Delve explains why Nu-Swift Stored-Pressure Multi-Purpose Dry Powder Extinguishers kill, with startling rapidity, all except a few unusual types of fire, namely those involving live electrical equipment above 1,000 volts, carbon disulphide, and flammable metals such as magnesium and uranium.

Reported by Marjory Crowther

" Sir Frederick," I began, " your firm have been putting out fires with Nu-Swift Extinguishers for many years. But now you have brought out a new range. Why ? What is the difference between these and earlier models ? "

The *mixed risk* challenge

His answer was straight to the point. " The difference is that, as the name implies, Multi-Purpose Extinguishers will put out several types of fire. Because of this, they will also deal effectively with most *mixed* risks. You know what that means ? "

" Well," I countered, " naturally I know what mixed normally means. I mix ingredients for a cake, or I pick a mixed bunch of flowers from my garden."

" Precisely," commented Sir Frederick. " Those are both good analogies. A fire, too, can have several ingredients, either intermingled as in a cake, or with various risks side by side as in a bunch of flowers. So for years the search has gone on for an extinguisher which can safely and efficiently deal with these mixtures. We don't talk about ingredients in a fire though, we talk about classes of risk."

" And they all need different types of extinguisher ? " I asked.

The Multi-Purpose answer

" They *did* require different types of extinguisher," he corrected. " But not any more. Now we have Multi-Purpose Dry Powder Extinguishers. Mind you, BCE Dry Powder Extinguishers, among others in the Nu-Swift range, will put out certain mixtures, such as flammable liquids and electrical risks. The big problem has been to develop an extinguisher which while still dealing efficiently with these fires, would also be effective on most Class A fires."

" Class A risks are wood and paper ? " I volunteered.

" That's right, and things like textile-fabrics, hay and straw," he answered, " Water has always been used to put out this type of fire. For a pure Class A risk water should still be used, indeed for a deep-seated fire such as in a bale of wool or a truss of hay, *must* be used, because of its flowing properties and its ability to penetrate deeply into the burning or smouldering material."

" But water is not suitable for other classes of fire, such as petrol ? " I queried.

" The relatively small amount in an extinguisher could even make them worse. You may have noticed that I said we had been looking for an extinguisher which would *safely* extinguish different classes of fire ? After all, it's no use putting out a fire if you could kill yourself in the process, is it ? Water on some flammable liquid fires could create an explosive situation, in more ways than one ! "

I considered what I had been told, then asked, " May we re-cap ? On the one hand we have water, which will put out wood, for instance, but not petrol. On the other hand we have BCE powder and other extinguishing agents which will put out petrol etc., but not wood."

" That's perhaps an over-simplification," said Sir Frederick, " but broadly speaking, you've got the idea. Right then, that's the problem, and the answer is ' Multi-A ' Powder in Nu-Swift Multi-Purpose Dry Powder Extinguishers."

The proof of the pudding

" I'm sorry to be sceptical," I ventured, " but I can't see why you can put out a wood fire with one kind of powder and not with another."

" Don't apologize," said my mentor kindly, " I agree it does take a lot of believing. What would convince you ? "

" Well," I said hesitantly, " What would *really* convince me would be to put out a fire myself, but I don't think I could."

" *Of course* you could," he laughed, " You know, it wouldn't be you putting the fire out, it would be the extinguisher. Will you be a sport and try ? "

" All right," I said, feeling like Daniel being led to the lions' den. Almost too quickly for me, arrangements were completed, and we made our way to the demonstration ground.

There my fire confronted me. It looked a little like a model of a block of flats surrounded by a wide moat of paraffin, but I was told that the wooden structure was commonly known as a crib. 126 pieces of wood were used to build the crib, and the tray in which it stood on four bricks contained 5 gallons (23 litres) of paraffin.

A 12 kg (26 lb.) Multi-Purpose Dry Powder Extinguisher, Model 1826X, was put into my suddenly nerveless hands, but I was told not to operate it until given the word. Then ½ a pint (¼ litre) of petrol was poured over the crib and a lighted match was thrown on. Whoosh ! Up the flames shot but *still I was not allowed to attack*. A minute and a half passed, which seemed like an hour to me, with the flames leaping up 10 to 12 feet (3-3.7 metres) in front of me, and clouds of smoke billowing into the air. By now the timber was well alight, as well as the paraffin.

" Now ! " the command was given at last. " Will the thing work ? "

I wondered as I pressed the knob, and of course it did. Immediately the powder cloud hit the fire my nervous fears evaporated, and I wielded my extinguisher with confidence. Nor was the confidence misplaced.

Incredibly, *in only three seconds* the worst of the flames were subdued. Now I found myself, without waiting for instructions, moving round the fire and attacking the burning wood from all sides, and also sweeping the flames from the blazing liquid. Then came the great moment when the last remnant of fire disappeared under the powder's onslaught, and I was left with plenty of powder still in the extinguisher. But that was not all. To my surprise, the charred wood was cool enough for me to hold in my bare hands.

" Well done ! " exclaimed Sir Frederick, but I couldn't accept praise that should rightly go to the extinguisher. " Marvellous, marvellous ! " I enthused. " It's as you said—it's the extinguisher that puts out the fire, not the operator. But tell me, *why* will this extinguisher put out a wood fire while the earlier powder models will not ? "

The how and why of ' Multi-A ' powder

" Because the basic constituents of the powder are quite different," he answered. " Forgive me if I seem to be lecturing, but the best way to bring out the *difference* between the two types of powder is to explain first how they are *alike*.

" This is in their effect on Classes B and C fires (flammable liquids and gases). Such fires continue to blaze because of a chain reaction from one burning molecule to the next. Dry Powder Extinguishers interrupt this chain reaction by projecting into the flame myriads of fine particles. These particles, to put it simply, prevent sufficient oxygen from combining with the combustible material to support fire."

" And this does not apply to fires involving wood, etc. ? " I asked.

" Yes, partly it does," replied Sir Frederick. " That is why BCE powder *appears* to extinguish Class A fires. Indeed it often *will* extinguish *surface* Class A fires or, in other words, fires caught in the very early stages before there are any hot embers. In Class A fires, however, there are two different types of combustion."

How does wood burn ?

" Let's think about the wooden crib fire you extinguished. When wood is heated, it gives off gases. At first it is these that burn, and not the solid wood itself. Powder extinguishes these burning gases in much the same way as it extinguishes Classes B and C fires. But there is another element in a Class A fire, and that is the glowing solid carbon residue. This you can perhaps think of as very hot charcoal embers.

" Now, on reaching the fire, ' Multi-A ' powder forms a coating (or crust) round the red-hot embers, and so ' seals ' the surfaces."

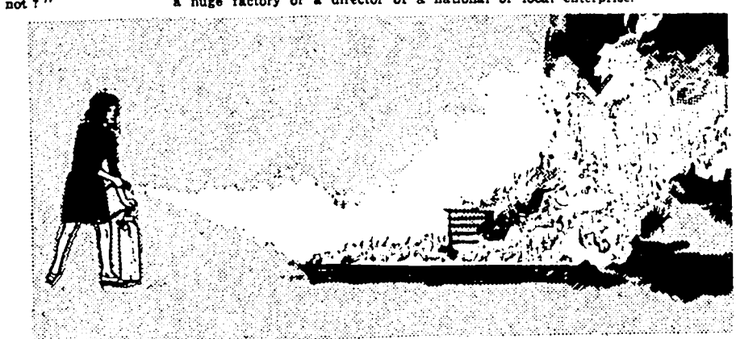
Effect of encrustation

" You're with me so far ? " he asked.

" Oh yes," I assured him, " that's quite easy to understand."

" Right," he continued, " now let's consider what this means in terms of fire extinguishment. The coating of ' Multi-A ' powder extinguishes the glowing embers by physical and chemical reactions. As a result, the formation of flammable gases is stopped, so that no flames re-appear after the discharge of powder finishes.

" This ability to seal the wood surfaces is not possessed by BCE powders, so that flammable gases continue to be evolved. When discharge of the powder is arrested, these flammable gases can be re-ignited by the hot embers. As a result, a fire which appears to be out can flare up again and quickly become as bad as before, or worse.



" Believe me, if you are likely to experience fires involving mixed risks, you can't do better than to install Multi-Purpose Dry Powder Extinguishers."

Powder not harmful

" I do agree," I said, " but answer one last question. If, when I used the extinguisher, I had misdirected the powder and scored a bull's-eye on you, would it have harmed you ? "

" Well, I wouldn't welcome a mouthful," chuckled Sir Frederick, " but no, the powder is not harmful. Naturally if you got some in your eye, you would wash it out, as you would any foreign body. If you swallowed some, well, you clean your teeth, don't you ? The chief ingredient of ' Multi-A ' powder is also present in toothpaste. And, in fact, in several foods."

" That's very reassuring," I told him, " as is the whole Multi-Purpose story. I now feel that I have the answer to any fire fighting problem I am likely to encounter. House and car fires are my chief risks, but I'm sure I should feel the same whatever the size or nature of my fire risk, even if I were an industrialist responsible for a huge factory or a director of a national or local enterprise."

The powder cloud from Model 1826 smashes into the flames and kills the fire in 15 seconds.

SCOTTISH INDUSTRIAL ESTATES CORPORATION ACT AS AGENTS OF THE DEPARTMENT OF TRADE AND INDUSTRY

cii

COMPAGNIE INTERNATIONALE POUR L'INFORMATIQUE

68, route de Versailles, (78) Louveciennes, Tel. 951.86.00

IT'S ABOUT TIME WE GOT INTRODUCED!

Who are we? Cii is the French computer manufacturer. In the past five years, Cii, backed by major industrial groups such as Thomson, C.G.E. and Schneider, has devoted considerable R & D resources as well as large-scale industrial investments to the launching of new series.

PRODUCTS:
Cii offers a comprehensive range of general-purpose computers featuring advanced technology and software, as well as highly competitive costs (Iris 45, Iris 50, Iris 60 and Iris 80), thus Cii has an efficient solution for E.D.P. requirements of all firms, whatever their size. In automation and process-control applications, Cii's leading position has been confirmed by the commercial breakthrough of Mitra 15 mini-computer.

ORGANIZATION:
Cii has developed specialized teams providing an all-level efficient service and illustrating the fact that a good computer solves a lot more problems than it raises.

MARKETING:
Our rising sales in France have been accompanied by even greater progress abroad; thus, from '70 to '71, our exports have doubled, mainly with private users. These co-ordinated efforts have proved to be fruitful. They made possible co-operation agreements with other manufacturers and granted license agreements both in Europe and U.S.A.
Today, Cii ranks as a full partner in the world's computer industry, and its name, Compagnie Internationale pour l'Informatique, is well deserved.

the two men reinstated. And in this he is expected to be successful. At the same time he may have drawn on to his own head the full fire of Moscow's demand for exemplary retribution.

Whatever his motive, and it could be more courageous than it is fashionable to credit him with, Mr Heikal has expressed the truth as most Egyptians see it. It is equally in line with Egypt's present frustrations that he diagnosed the disease without prescribing the cure.

Ethiopia

Traveller from an antique land

It is 37 years since Emperor Haile Selassie paid Britain the compliment of seeking refuge here after the Italian occupation of Ethiopia. He has been here again this week, and went to the Garter service at Windsor on Monday. His country has changed a great deal in a third of a century, but the problem of making sure of a smooth succession when he leaves the scene is still unsolved.

Ethiopia's economy is at last picking up; it has built up a friendly relationship with both east and west that is almost unique; and it remains at the centre of inter-African affairs. But the emperor himself concentrates too exclusively on foreign affairs, including the sessions of the Organisation of African Unity and the recent meeting of the United Nations' Security Council in Addis Ababa. He is overmuch abroad—12 foreign visits in the past year alone, whereas Queen Elizabeth has been content with 25 state visits during her 20-year reign.

So long as the emperor is in full possession of his faculties, these prolonged absences will not endanger the regime. In the attempted coup of 1960 it was the army, not the pampered Imperial Guard, that safeguarded the throne, and the army maintains that support for the time being. But there are other risks. Last year a daring attempt was made by Eritrean dissidents to run a railway truck loaded with dynamite into the Massawa docks when the emperor was on a tour of inspection there. Then a rotor blade came off a helicopter with Haile Selassie and the heir to the throne on board as it took off during a heavy hailstorm; luckily neither was hurt.

Although he has been asked to be more careful of himself—and to refrain from taking the crown prince with him in precarious vehicles—the emperor continues the practice. He also makes little preparation for something going wrong when he is out of the country. If father and son had perished on March 15th last year the succession to the throne, and indeed quite possibly the integrity of the state, would have been in jeopardy. Although the emperor has designated the crown prince as his heir it would not necessarily follow that the latter's son would step into his shoes.

Wrap up warm when you visit England

It can also be asked whether Haile Selassie gives enough attention to the country's domestic problems. He must know that many of his ministers are widely regarded as a corrupt clique. He certainly realises the seething frustration among younger Ethiopians over the continuance in power of the "old gang." The lower house of parliament has on occasion successfully opposed bills passed to it for rubber-stamping; but that is not progress, it is merely the prevention of retrogression in what should be a much more rapidly advancing country. Worse, the impression is given that Haile Selassie regards the Ethiopia that is so much his creation as a plaything to be discarded at his death. He has adapted himself to the needs of his country before—the length of his rule, and his great prestige, are evidence of that—and the question is whether he will be able to do it again.

Questions like this are increasingly being voiced in Ethiopia and among friends of Ethiopia abroad who wonder whether Haile Selassie indeed regards the present system as adequate. There is little provision for its evolution. Yet it is certain that it is not a system which could be long maintained under a successor not having the emperor's immense, and very personal, prestige—at least not without a major change in the supporting cast which will be needed to govern the country under his successor.

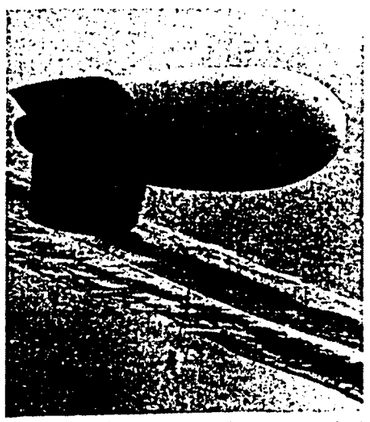
No Pole vault

FROM OUR EAST EUROPE CORRESPONDENT

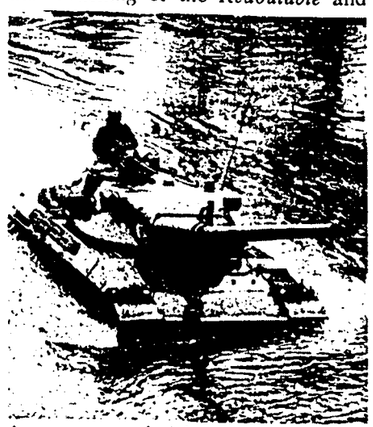
It can be argued that the Poles have a rather special interest in preventing hijacking and that, no doubt, is why they are rather good at it. This correspondent recently made three internal flights on the Polish airline Lot. One was the day after last month's massacre at Lydda airport, another a day after some Czech hijackers had shot and killed a plane's captain in mid-flight. Rarely, since violence invaded the world of civil aviation, has your correspondent felt safer.

It is astonishing how rapidly 100 passengers can get in and out of an Ilyushin 18 airliner when unencumbered by handbags, briefcases, miscellaneous parcels, folding baby-carts, bottles of whisky, dog baskets and the other impedimenta that normally clutter up aircraft cabins. Tickets are issued only on production of an identity card or—for foreigners—a passport and, as a crosscheck, bear both the traveller's name and his date of birth. All hand baggage is labelled and stowed neatly and securely in wire cages. Women are given paper carriers in which to put their "essentials" before surrendering their handbags. Tickets and identity documents are then checked several times before boarding, and passengers pass uninterrupted—unless the bell suddenly starts clanging—through an electronic booth.

As an extra insurance most flights have a large cabin crew; and the Ilyushin 18 from Wroclaw to Warsaw carried a flight deck crew of five men, some of whom may have been pilots under route instruction, but others of whom were clearly there to deter attacks on the aircraft commander. On my flight in an Antonov 24B from Warsaw to Szczecin the stewardess had no means of communicating with the cockpit. This is probably why there is no known case of a genuine political refugee—as distinct from wanted criminals, tax evaders and nuts—choosing hijacking as a means of escape from Poland.



France and the bomb



The real price of Mururoa

Since midnight on Monday all ships and aircraft have been warned to stay very clear of Mururoa atoll in the Pacific, where France says it means to go ahead with its nuclear tests despite all the protests. The delay seems to have been caused by a Canadian yacht that has deliberately sailed into the danger zone, and some Australians who plan to parachute into the area. But the French minister of the environment called the resolution sponsored by New Zealand and Peru at the Stockholm conference which condemned nuclear tests "a waste of the conference's time." French officials claim that the explosions will be small and clean, and it is true that a small weapon exploded high enough creates little radioactivity. But then France badly needs tests, clean or dirty, to develop a thermonuclear warhead—without which its nuclear deterrent, the *force de dissuasion*, remains markedly incomplete.

France has one nuclear submarine in service at the moment, the *Redoutable*, but it carries fission weapons, not thermonuclear ones. The range of its missiles is so short that it has to sail some way east of Brest (as far as Norway or the eastern Mediterranean) before it can be really in range of Russia. The present French missiles travel only 1,560 miles; even when this is stretched to nearly 1,900 in the next three submarines to be built it will still be short of the 3,000-mile range of Britain's latest Polaris missiles. The aim is to have five *Redoutable*-class submarines in service by 1978, each with the slightly longer-range missiles and with thermonuclear warheads. Hence these tests. Until then, the deterrent will depend largely on 18 land-based missiles in Upper Provence, which even in their imitation-American silos are highly vulnerable, and 36 nuclear-armed Mirage IVA jets. Since the Mirages are dependent on refuelling in mid-flight very few could get through to Russia.

The French seem to have overcome most of the problems associated with a nuclear submarine force. They have apparently mastered the inertial guidance system (which does not need to refer to any external source and therefore mitigates the risk of detection) and are on the verge of setting up workable very low frequency command and control links at Rosnay in central France and Pencran next to Brest. The trouble is that France's submarine force may not arrive in regular service—that is, with enough vessels to enable at least one to be on patrol all the time—until the late 1970s, when they will be becoming obsolete. It is unlikely that France will keep to its theoretical timetable of three submarines in service by the end of 1974. It was nearly five years between the launching of the *Redoutable* and its first operational patrol in January this year—from which it returned suspiciously early.

If your nuclear tests, and costs, go ballooning your army is left looking pretty wet

Squeezing the services

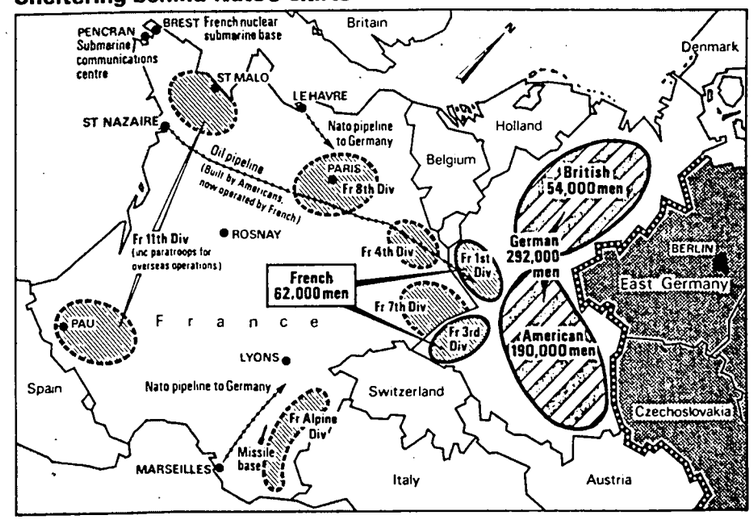
The remarkable thing about the French nuclear deterrent is how all the costs of developing it from scratch have been paid for in defence budgets which have formed a steadily declining proportion of the national income. Between 1967 and 1970 France's defence budgets have shrunk from 5 per cent to 4 per cent of its gross national product. This year the figure is down to 3.15 per cent of gnp, which is equivalent to just under 4 per cent on the British method of calculation. The capital and operating costs of the nuclear deterrent, although lower than they were, still eat up an enormous slice of the total defence budget—nearly a fifth in 1971, compared with less than a thirtieth in Britain's case. But then Britain bought American and paid its nuclear bill earlier in the 1960s.

The real sufferers in France's drive towards nuclear independence have been its conventional forces. M. Michel Debré, France's defence minister and standard-bearer of much that de Gaulle stood for, has made savings by trying to peg wages and reduce the number of regulars in uniform. But it has proved less politically damaging to spread the jam thinner and slow down the issue of modern equipment to all three services. For instance, the first Loi-Programme for the army—its five-year defence plan for 1960-65—budgeted for five mechanised divisions. The second, for 1965-70, admitted that only three divisions could be fully modernised and of those only two are as yet properly equipped. This has left the French army, the largest in western Europe, badly underequipped. The main French battle tanks, the AMX-30s, are as good as any. But there are too few of them; the west Germans have three times as many tanks, and the British army in Germany alone has as many as the entire French army.

The navy and air force have not fared much better. Two years ago the navy's chief of staff, Admiral Patou, resigned in protest at the raw deal the navy was getting, apart from those nuclear submarines. The air force has less cause for complaint, but some officers still claim that export orders for aircraft get priority over their own requirements.

Yet the services seem determined not to take these financial constraints lying down. This year the navy has produced a plan which would give it two aircraft-

carriers, two helicopter-carriers and some 30 frigates by 1987. That is the sort of multi-role force the British navy has been fighting a losing battle to keep. Astonishingly, in such an un-seaminded nation, the government has accepted the navy's plan; and it is hard to see how M. Debré can fail to accept equally ambitious plans from the army and air force. So the idea of paring defence spending down to 3 per cent of gnp by 1975 looks unreal.



The protected anachronism

France is the only nuclear country left which still believes in massive nuclear retaliation. It has little patience with the Nato doctrine of flexible response. The French view has moderated since the middle 1960s, when General Ailleret enunciated the strategy of *tous azimuts* —"defence against all points of the compass," meaning America as much as Russia. That high-water mark of gaullist nuclear policy has been described as "more spleen than strategy." France now admits that it does not have enough missiles, and the missiles do not have enough range, to direct its nuclear policy towards both America and Russia even if it wanted to. And it is now equipping itself with the Pluton tactical nuclear missile, which should theoretically make its nuclear strategy more flexible—although the reason for Pluton seems to be as much to give the French army a piece of the action as to give the French president more time to reflect before firing his strategic nuclear weapons.

The irony is that France can afford this all-or-nothing line because, although it scorns Nato, it can none the less shelter behind Nato's front line in Germany. It can therefore argue, as General Ailleret put it, that "the conventional forces—infantry, air force, tanks, artillery—of a nuclear army have no other job but to cover, take advantage of and bring to a conclusion atomic battles." They are not designed, as the Nato forces are, to fight off the first attack and so provide a delay during which an attacker can be persuaded by the nuclear deterrent to think better of what he is doing.

Mopping up for the nuclear force is also one of the main tasks expected of France's exceptionally large territorial army—the body known as the Défence Opérationelle du Territoire (DOT). France differs from most other European countries in having a large number of regular troops, 61,000, organised in military districts inside France itself. The district commanders work closely with the prefects—the

Sheltering behind Nato's skirts

local representatives of the central government—and other elements of the civil power, notably the 63,000-strong gendarmerie. And this is only a skeleton which can be fleshed out by mobilisation.

French forces have not been integrated with Nato's since de Gaulle withdrew from the military side of the alliance in 1966. But France never completely broke off contacts with Shape (Supreme Headquarters Allied Powers Europe). There is still a French military liaison mission. And France still plays a part in 10 Nato agencies. The most important are Nato's air early warning system, without which the French Mirages and land missiles would be caught napping; the operation of oil pipelines which run across France to Nato forces in Germany; and the Nato anti-submarine warfare research centre at La Spezia in Italy. Three Nato agencies still have their headquarters on French soil. At one time it looked as if the French were going to be sticky about granting overflying rights to Nato aircraft. But now flights are cleared almost as a formality on a yearly basis.

The French attitude to Nato remains selective. But the number of exercises held in conjunction with Nato has increased, largely as a result of representations made to de Gaulle by the French chiefs of staff after the invasion of Czechoslovakia in 1968. In last summer's French manoeuvres the air forces of six Nato countries represented the "enemy" and the French air force defended the country against them. French admirals have actually commanded joint Nato exercises in the Mediterranean. The navy was the first of the French services to be withdrawn from Nato, in 1959, because it was the one that drew least attention; now it is proving the easiest one to put back for the same reason. There is a continuing two-way flow of information between the French navy in the western Mediterranean and the American Sixth Fleet and other Nato units. Last November the American, British, Dutch and Italian navies took part in amphibious landings on France's Corsica.

Joint manoeuvres on land are still a trickier business. But the two French divisions in Germany do discreet exercises with the Americans. The links between local commanders are very strong, and the more that can be done together without having to get permission from M. Debré's office in Paris the better French officers like it.

Nato lacks two things from France. One is a public commitment to fight if Nato fights. The other is the ability to use French forces to plug weak spots in Nato's front line. France's two divisions in Germany could, with advantage to Nato, be moved farther east and farther north to where British forces have the flat north German plain to defend. But that would probably mean complete French reintegration into Nato. And, whether M. Debré or someone else is defence minister, that still looks very unlikely. France is interested only in its own defence.

When it's important to you to know what's happening internationally, you want to know while it's important.

Today, when the President of the United States or other leading world figure makes a move, it very often has global implications.

And an impact on investments everywhere.

So if you're at all involved in money or securities markets, you really can't do without an international bank.

Like the Bank of New York.

And because our involvement with international business goes back almost two centuries, we have a good deal of experience to offer.

Our full-service London office, working closely with our Head Office on Wall Street and correspondent banks in almost every major country, keeps a constant eye on important international events and their effect on the business scene.

So when it's important to you to know what's happening internationally the Bank of New York will tell you—while it's important. Just the way we've always done—since 1784.

The Bank of New York: The bank that manages money.

London Office 147 Leadenhall Street. London E.C.3 Telephone: 283-5011 Telex 884501/884502
Cables Lonbankone. London E.C.3. Main Office 48 Wall Street. New York. N.Y. 10015

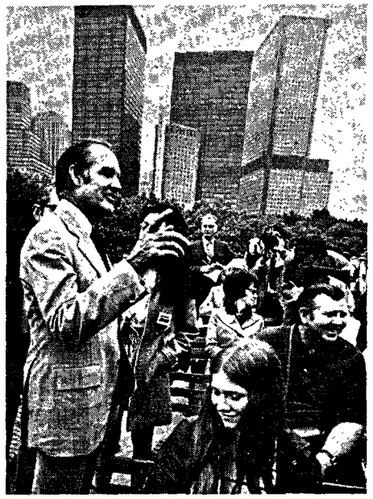
ELECTION '72

McGovern's next task

Washington, DC

Senator George McGovern wound up the Democratic party's series of presidential primary elections with a sweeping victory on Tuesday in New York State. On this occasion he was not confronting Senator Humphrey in any direct way, but in some big and middle-sized towns he did have to fight the entrenched Democratic party machines and he defeated them almost everywhere. In Buffalo, for instance, the local leader is Mr Joe Crangle, who is also Democratic chairman for the state. The candidates for delegate who were put on the ballot by Mr Crangle were pledged long ago to vote for Senator Muskie at the national convention if they were elected, though little was said about Mr Muskie in the primary campaigns. Their advantage was that they were the well-known names in local politics, while the McGovern candidates were not. Mr Crangle's machine failed to get out the vote and his candidates were beaten. Mr McGovern's staff is now seeking a reconciliation with Mr Crangle, whose support will be needed against Mr Nixon in the general election in the autumn. Only in Albany did the local machine prevail against Mr McGovern.



The result is that, out of the 237 candidates for delegate to the national convention who were pledged to Mr McGovern, 226 were elected. The state Democratic committee meets this weekend to choose another 30 delegates to complete New York's total of 278, the largest delegation to the convention. It is likely that Mr McGovern will get not less than 25 of those, making perhaps 251 from New York instead of the 200 or so that most people expected. With New York included, a conservative calculation of his pledged delegate strength now comes to 1,320 and a fraction. The magic number, the majority of votes at the convention, is 1,509 and he is, at the very outside, 189 short of it: a few small state conventions may narrow the gap a little more this weekend. It is hard to see how Mr McGovern can fail to be nominated on the first ballot at Miami Beach on July 12th.

At roughly this point in the Democratic presidential campaign four years ago the first challenger to the established party leadership, Senator Eugene McCarthy, had collected about 600 delegates, or half the number that Senator McGovern now has. The second challenger, Senator Robert Kennedy, had been shot dead. The nomination went to the then Vice President, Mr Hubert Humphrey, who had not fought any primary elections at all but whom the party establishment supported.

Where the party's establishment—the Democratic state chairman, the governors and mayors and members of Congress—were able to stop Mr McCarthy they have, almost to a certainty, failed to stop Mr McGovern. In part this is because Mr McGovern's determination to get the nomination, and if humanly possible the Presidency, is enormously greater than was Senator McCarthy's. The McCarthy insurgents pointed the way in 1968 and not merely by the manner in which they mobilised for work in the precincts in the primary campaigns. They also showed how a determined group could take over a party meeting or a local convention. The McGovern insurgents have done the same thing in a vastly more systematic way.

Mr McGovern was chairman of the commission to reform the party's rules which was called into existence by the Democratic convention in 1968. Under his guidance the commission ruled out many time-honoured dodges by which the party's elders had been accustomed to maintain continuity. Mr McGovern was personally determined that the reforms should be far-reaching: "I do not ever again want to see a convention like the one in 1968," he said. The commission's report came out in February, 1970, and the Democratic National Committee made it the basis for the 1972 convention—the basis, that is, on which the legitimacy of delegates can be challenged. One ground for challenge, the failure of a delegation to reflect reasonably closely, by race, age and sex, the composition of the party's voters in the state from which the delegation comes, was ruled invalid by a federal court this week in respect of Mayor Daley's contingent of the Illinois delegation. A higher court then reversed the first court's ruling but the litigation is not over.

Mr McGovern's preparations for running for the Presidency began not long after he relinquished the chairmanship of the reform commission, but not many people then thought of him as a formidable candidate or anticipated what followed. In the event his supporters have used the McGovern rules to remove control of the national convention from the men who have usually exercised it, the party leaders

The winner

in the states and cities.

While it is a little early to say what the composition of the convention will be after all the credentials challenges have been fought out, it looks as if about four-fifths of the delegates will be attending a national party convention for the first time. Another effect is that state governors, senators, congressmen and mayors will be found sitting comfortably in the guest galleries instead of being packed onto the floor of the hall. The trade unions, which so often do so much of the actual work for a Democratic presidential candidate, are also going to be underrepresented at the convention.

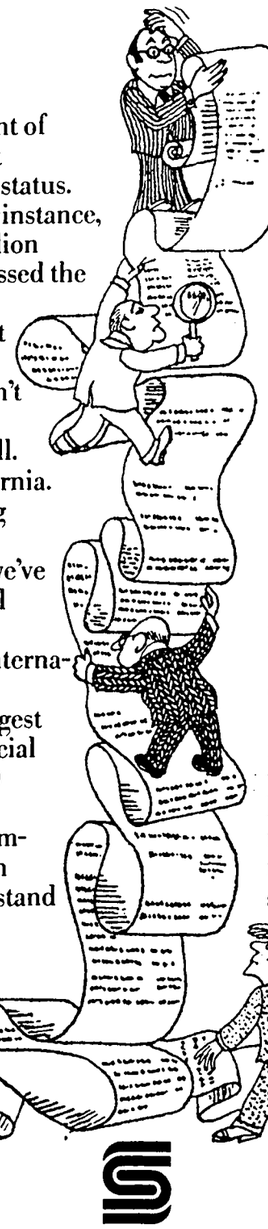
While the right to choose among presidential candidates has thus shifted to realms untrod by professional political feet, much of the power and influence over the conduct of public business, and possibly over the outcome of the presidential contest in the autumn, remain where they always were—in Congress, in the law offices and banks, in governors' mansions, state capitols and city halls, in the hands of those same middle-aged white males whom the McGovern rules have put out of fashion.

Mr McGovern, a quiet man himself, could not have got where he is without a lot of china being broken, but now he has to damp down the uproar and soothe the bruised feelings if his party's nomination is to be worth having. As he found when he interrupted his campaign in California to visit the Democratic governors at a meeting in Houston, Texas, bruised feelings find their outward expression in fears that he will bring electoral disaster on the entire Democratic party in November and in derisive questioning of the policies that he is associated with. Some of these are not exactly his policies but there are legitimate grounds for question in the arithmetic of his scheme for an income supplement and in the solidity of the budget savings which he proposes—$28 billion a year in income tax reforms, $32 billion in defence cuts —to pay for his social improvements.

Mr McGovern has said often enough that his policies are not graven in stone and of course they are not. The exception is the termination of any further American part in the war in Indochina, on which he refuses to budge a millimetre. If, however, he shows too easy a readiness to compromise on his domestic policies he runs two kinds of risk. Solid men like Senator Muskie, who has some delegates whom Mr McGovern would like to see on his side, and Governor Gilligan of Ohio, who is a natural McGovern supporter still pessimistically holding aloof, are liable to conclude that he is a lightweight without real opinions. Young enthusiasts and intellectual sympathisers are exposed to the fear that the quality that inspires their devotion, the quality of being different from ordinary politicians, may prove illusory as Mr McGovern comes closer to grasping power. So a large task of reconciling opposites looms up before him. To suppose that he has not anticipated it would be to underrate his entire performance so far, but large the task certainly is.

Senator Edward Kennedy introduced a surprise into the Democratic contest last week by conceding to the correspondent of the Boston Globe that he might indeed consider being the candidate for Vice President with Mr McGovern as the presidential candidate. However, he has now once again denied flatly that he will be a candidate for any office this year. And when Mr McGovern gets the nomination he will make his own decision about whom he wants as an associate. The name of Kennedy would bring him a compelling popular appeal, hard to resist. Governor Reubin Askew of Florida has often been mentioned as the kind of alternative choice that would reassure the older voters and give Mr McGovern a fighting chance in the southern states. He is unlikely to choose a nonentity who could be guaranteed not to offer him competition. He has no need to fear a rival.

Waiting for God



Once it was music which brought the young out in their thousands. Now it is God. Last week over 100,000 ardent crusaders swarmed into Texas for a week of festivities which were a cross between a boy scout jamboree, a rock festival and a revivalist meeting. The faithful, almost entirely white, middle-class schoolchildren and students, came to learn how to convert the whole world to Jesus by 1980. For this they paid $25 each to attend seminars on such subjects as sexual morality and "how to live with your parents," to hear a star cast of preachers which included the Reverend Billy Graham, to cheer and yell slogans for Jesus—"two bits, four bits, six bits, a dollar. All for Jesus stand up and holler"—and to listen to rock music played by the Armageddon Experience. It was all good clean fun. There were no drugs and no violence and the Dallas police were happy to find that for a change the young regarded them as friends and potential converts rather than as pigs.

Explo '72—the name was chosen to suggest a spiritual explosion—was the biggest evangelical training camp ever held in America. It was a highly efficient, well-planned and well-financed occasion. Mr Bill Bright, a businessman from California who founded an organisation called Campus Crusade 20 years ago, has been planning the festival for three years; it has cost $2.7m. But Mr Bright has still more ambitious plans. He hopes to increase his staff of 2,000 to 10,000 by 1976. By then he wants 5m volunteers in his Great Commission Army and to have crusade missions in all countries of the world. Everyone who attended the rally is now expected to recruit five more crusaders.

The Jesus Movement, which is the name for the sudden interest in Christianity among the young, has surfaced in numerous different forms. The very respectable, short-haired enthusiasts who gathered at Dallas were at pains to dissociate themselves from the long-haired, unconventional Jesus Freaks and Children of God; many of these, substituting God for drugs, have dropped out of university or have run away from home. But the new fundamentalists have much in common. In contrast to the traditional churches, most of which are actively involved in current social and political problems, the newcomers have withdrawn into their own spiritual isolation. Rather than worry about the war in Vietnam, racial tensions or poverty, they quote chunks of the Bible, clock up large numbers of conversions and wait enthusiastically for the Second Coming.

You won't find our biggest asset on our balance sheet

One glance at our statement of condition will tell you a lot about Security Pacific Bank's financial status.

Over the last three years, for instance, we've shown a growth of three billion dollars. And in 1971 our assets passed the nine billion dollar mark.

But the one thing you most need to know about a bank is the one thing a column of figures won't show you.

Its most valuable asset of all. Experience. We got ours in California. One of the world's fastest-growing economies.

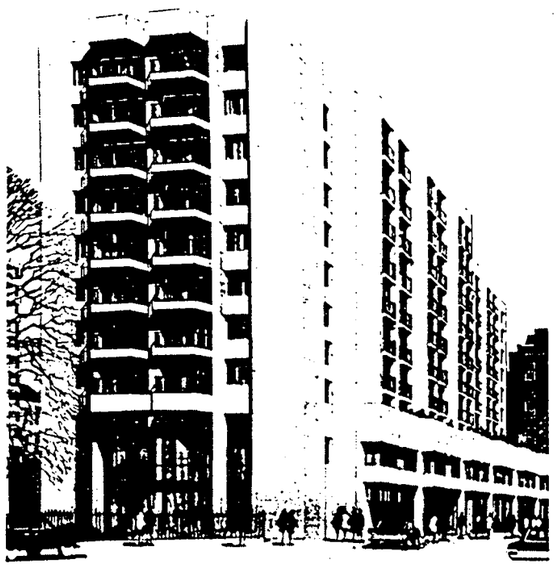
For over a hundred years we've followed California's phenomenal expansion, in every aspect of its economic life, from industry to international trade. And we've grown ourselves. To be one of the ten largest banks within the USA. And financial partner to 90 of America's top 100 corporations.

So when it comes to medium-term Euro-currency loans we're in a rather special position to understand your problems. Because we know about expansion. At first hand.

Although our head office is in Los Angeles, our international network covers the most important financial centres of the world, from the Far East to Australia, from South America to Europe. Last year alone we opened five new offices outside the USA.

Each one of our international offices has a working inside knowledge of the economic climate of its own country. But it also carries through the imaginative approach to banking that California's dynamic economy has taught us.

When you do business with us, for instance, we act fast. Because we know that any delay in drawing up a contract may mean loss of opportunities and money for you.



And once we've arranged financing we'll continue to counsel with you. To make sure you get the best possible return on your investment. Because when you borrow money from us, you're borrowing something special.

Our most valuable asset of all. Our hard-earned experience.

SECURITY PACIFIC BANK
OUR EXPERIENCE IS SOMETHING SPECIAL

Security Pacific National Bank: Head Office, Los Angeles. San Francisco. San Diego. London. Frankfurt. Paris. Brussels. Mexico City. São Paulo. Tokyo. Hong Kong. Sydney. Security Pacific International Bank, New York. Affiliates: Tricontinental Corporation Ltd., Melbourne. Western American Bank (Europe) Ltd., London. The Bank of Canton Ltd., Hong Kong, with branches in Bangkok, Kuala Lumpur, Singapore, plus subsidiary in Macao.

Business can be a pleasure in Park Lane.

The Inn on the Park – one of London's newest luxury hotels could provide a truly memorable setting for your next sales conference or company meeting. At the fashionable end of Park Lane, with its own car park, the 'Inn' has three luxurious air-conditioned conference rooms, seating from 40-400 as required. Every business facility can be provided, from closed circuit TV to secretarial services . . . and incidentally the best cuisine in the business. All the bedrooms are large and superbly furnished and some of the executive suites are positively palatial.
Today, more and more companies are finding these suites ideal for holding intimate business meetings and for entertaining. In such surroundings business indeed becomes a pleasure.

Bugged politics

It is a scandal to warm the heart of any Democrat. Five men have been caught red-handed trying to fit eavesdropping devices into the Washington headquarters of the Democratic party. All five have connections either with the Republican party, the Central Intelligence Agency or the band of Cuban exiles who spend their time plotting to overthrow Dr Fidel Castro. One of the five, Mr James McCord, is an ex-CIA agent who was engaged as the chief security consultant to the Republican party's Committee to Re-elect the President. The committee is headed by Mr John Mitchell, the former Attorney General who is a close friend of President Nixon's. Mr McCord has now been dismissed from his post. Two of the others caught in the raid are thought to have had dealings with Mr Howard Hunt, another ex-CIA man who has worked as a part-time consultant to a White House aide. It is guessed that Mr Hunt may have been acting as a link between the Nixon Administration and the anti-Castro Cubans in Miami.

Mr Lawrence O'Brien, the Democratic party's chairman, has filed a \$1m suit against the Republicans' presidential campaign committee for invasion of privacy and violation of civil rights and of wire-tapping laws. In defence of the Republicans Mr Mitchell has said that the men were not operating with his consent. The chairman of the Republican party has deplored the action. The President's press secretary has denounced what he called "a third-rate burglary attempt." Meanwhile the five have chosen to stay in prison where they cannot be questioned although, judging by the money that was found in their hotel rooms, they could well afford to pay the low bail that has been set.

According to those who know about wire-tapping, it is not uncommon for candidates who are up for election to bug the offices of their rivals. The experts also say that, if the Republicans wanted to discover the Democrats' secrets, there were more effective ways of doing so. The five were caught with equipment which went out of use in the 1950s. Furthermore it was a job which one person could have handled. It has now been suggested that the men were in fact removing bugs which they had planted earlier.

Senator McGovern sees the episode as the logical result of the Administration's widespread use of wire-taps. But this week the practice had a setback. The Supreme Court ruled that it was unconstitutional to tap wires of those suspected of domestic subversive activity without first obtaining a court order. Only the suspicion of a foreign threat to the national security or the possibility of serious, organised crime justifies wire-tapping without court permission.

Democrats against Nixon : 9

ELECTION '72
Unique Chisholm

Washington, DC

Most humble of the Democratic presidential candidates in the material trappings of a political campaign, Representative Shirley Chisholm of New York is the proudest in spirit. "I am the only one who is unique," she said at a time when the field was more crowded than it is now, "they all look alike to me—all white and all male." Her scorn for Democratic leaders of the conventional stripe does not stop at their sex and colour. She elaborates with a cutting tongue, contemptuous of the etiquette that usually inhibits leading members of the same party from abusing each other in public.

When Mrs Chisholm addressed the National Press Club in Washington in April, an appearance which was a huge success, she said of Senator Muskie and Senator Humphrey, who then were, or appeared to be, the leading contenders: "Talked out, played out, worn out—neither man any longer has the attention of the electorate." Her audacious dismissal was quickly shown to be not altogether unfounded as far as Mr Muskie was concerned. For the less quenchable Mr Humphrey she had a special word:

> A fatally flawed relic of the old days . . . distinguished today mainly by the gift of compressing the largest amount of words into the smallest amount of thought.

Her scorn is perfectly sincere. Her self-esteem is intact. When she explains her qualifications for the Presidency to the modest crowds that turn out for her campaign meetings, as she often does at length, this does not seem to reflect any need for reassurance. Knowing how universally it is accepted that the American electorate would never vote for a black or a woman (and she is both), she is "out to repudiate the ridiculous notion." That is what her candidacy is primarily for. It does, however, have a second, more concrete purpose: to gather a sufficient body of delegates committed to herself to give her some power at the Democratic National Convention next month, power which she wants to ensure that the black interest gets attention. A hundred delegates, she thinks, would serve the purpose, but she only has about 30 so far and few, if any, more to come.

Her colour does not guarantee her the support of other black politicians or of black leaders generally. Male chauvinism is even more firmly entrenched in the black community than in American society generally. In Congress Mrs Chisholm has always gone her own way without much heed to anybody, including the black Representatives who repaid her by offering no encouragement to her candidacy. The National Black Coalition has not given her any support either. The thing about black male politicians, she has said, is that they are no different from white ones.

Thus Mrs Chisholm needs all the self-confidence with which she is so well endowed. Her ample stock of self-reliance can perhaps be understood by looking at how far she has gone already. Her parents came from Barbados to Brooklyn, where she was born in 1924; she did well enough in the New York school system to get scholarships and go to Brooklyn College and Columbia University. The hardest part of her life was finding employment as a black professional woman, but she became a nursery-school teacher and then a consultant on day care for young children to the New York City Board of Education. A series of audacious revolts against the black political machine in the Bedford-Stuyvesant section of the city and then against the borough, district and state Democratic party organisations got her first into the New York State

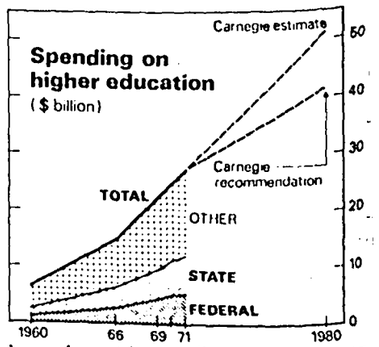
Assembly and, in 1968, into the House of Representatives in Washington. There have been, and are, women congressmen and black congressmen, but Mrs Chisholm is the first black woman in Congress.

As such she was something of a social lion before she became a presidential candidate and her record of attendance at the House of Representatives leaves something to be desired. When there she has voted and spoken as a somewhat idiosyncratic liberal—a root-and-branch opponent of the Administration's policy in Indochina, a champion not only of Negroes but also of other minority groups (she has an adequate command of Spanish), of more generous relief programmes for the poor and of women's rights, including the right to abortion; the prevailing laws restricting abortion she characterises as "compulsory pregnancy." Slim, angular but not unfeminine, and neither pretty nor ugly, she is not indifferent to vanities and has taken to dressing rather well. Mr Chisholm, a Negro of Jamaican origin to whom she is happily married, is not trotted out for display as the wives of the male candidates are; he takes no visible part in her campaign.

Busing in and out

Judge Roth of Detroit is not a man to be deterred by trends. Just eight days after a federal appeals court in Richmond, Virginia, ruled that schools in predominantly white suburbs did not have to exchange pupils with those in the dominantly black central city, in order to achieve racial equality, Mr Roth went ahead and ordered for Detroit the most far-reaching plan of this type contemplated anywhere in the United States. In March the judge had ruled that busing children around the entire metropolitan region was the only way to bring racial integration to the schools of Detroit. And now he has set a planning group to work out the details of achieving his goal: the "complete and final desegregation" of Detroit's schools by September, 1973.

The Roth order and the plan which emerges are certain to be challenged in the courts. The higher education bill just passed by Congress contains a controversial amendment stipulating that no court-ordered busing need be carried out until all appeals have been exhausted or until the bill itself expires in 1974. President Nixon wants Congress to pass laws halting such busing even more firmly. And in Michigan itself, ordinarily a liberal Democratic state, the unpopularity of busing in the interests of racial equality led to the victory of Alabama's conservative governor, Mr George Wallace, in the state's presidential primary election.



What Judge Roth envisages is a massive exchange of pupils, including even the youngest who attend school only half a day, and teachers as well, among Detroit and its 53 suburban districts. His intention is that the average school anywhere in the metropolitan area would have blacks comprising about 25 per cent of the student body and 10 per cent of the teaching staff. He believes that the length of the average bus journey to achieve this ratio would be around 40 minutes each way and that the burden of travelling should be shared by both blacks and whites.

Riding buses to school is by no means uncommon in the Detroit area, the judge observed; "the greatest change is the direction of the buses." But that is just what white suburban homeowners cannot accept—the transporting of their children back to the tensions and blight of the city which they moved to the suburbs to escape.

Grants at last

The protracted and bitter row about school busing has obscured the fact that Congress has dramatically improved and expanded federal aid to colleges and universities and to their students. The higher education bill, two years in preparation, finally overcome its last hurdle when the House of Representatives passed it this month. The bill has been called, without exaggeration, the most important piece of educational legislation since Congress created the "land-grant" colleges, the forerunners of many of the state universities, in 1861. The size of the funds —about $19 billion over three years—which have been authorised is not the least important part of the bill although Congress is likely to be less generous when the time comes actually to appropriate the money.

There are two major novelties in the bill. One is the provision, for the first time, of direct grants of money to colleges and universities to spend as they see fit. The other is the adoption of a system of guaranteed annual grants for all students, similar to that used in Britain. This will be the first time that the federal government has made money available in such a clear-cut form that any student, no matter

how low his family's income, can expect to have a university education if he meets the academic qualifications for a place.

The college community which has worked for this legislation for several years is not, however, entirely overjoyed. The specific formula for institutional aid laid down by the bill directs that 45 per cent of the money be shared among institutions on the basis of the number of federally assisted students that they have. Another 45 per cent is to be shared out on the basis of the total federal aid to students at the institution and the remaining 10 per cent according to the numbers of graduate students. What the universities had wanted was a direct grant based on their total enrolment. The bill's formula could compel universities to discriminate against the middle-class student and take in a preponderance of poor in order to increase their share of federal aid. Also the fact that the annual student grant will be reduced for students whose families can help with their expenses and that it will be taken away entirely from those with family incomes over $13,000 a year may also encourage the trend which worries many universities—the polarisation of their students into the very rich and the very poor.

Looking to the future, last week the Carnegie Commission on Higher Education delivered some harsh truths about university finances. If spending continues to grow in the 1970s as it did during the 1960s, the annual expenditure on colleges and universities will reach nearly $51 billion by 1980, nearly double the present amount. The commission recommended flatly that the rate of spending on higher education be reduced by 20 per cent in order not to consume an excessive share of the gross national product. The commission's recommendations were also succinct: an average university course of three, not four, years; a fuller working week for

academic staffs; the elimination of students who attend university only reluctantly; and a moratorium on new doctoral programmes to end the current glut of PhDs. Even with these cuts the commission found that current aid from the federal government would have to increase fourfold by 1980.

Monetarists' gain

Washington, DC

In a world of increasingly arcane groups and concepts expressed in initials, the addition of a new one cannot be welcome. But RPD may mark a significant evolution in the conduct of monetary policy—certainly in America, and eventually in other countries. RPD is the shorthand that the Federal Reserve Board, the central bank, uses to describe the newest refinement in its long search for a good operating "target" to enable it to do better what it has always been supposed to do: govern the growth of the nation's supply of money, however defined. The initials are derived from the longer name of the target: reserves available to support private deposits, excluding government and inter-bank deposits. This did not even exist as a concept, let alone in a statistical series, until early this year.

Apart from the discount rate (the interest charged by Federal Reserve banks on loans to member banks), which is largely psychological in its effect, the central bank's only real weapon is the supply—or contraction of—"reserves" in the private banking system. Over any extended period, the amount of reserves governs the growth of the total supply of money and bank credit. But from week to week, or even month to month, the Fed has found it very difficult to know just how to operate (buying or selling government securities) to achieve its own monetary goals. In the last half of last year, for example, the Fed wanted to slow the growth of its money supply and the other monetary "aggregates"; but, as it turned out, there was a virtual halt to growth, which the central bank never intended.

The new RPD operating target—aimed at better control of the "real world" aggregates of total bank deposits—was adopted in secrecy last February. Recently officials have become more free in discussing what is involved. Three main things can be said:

1. The new system has proved technically feasible, at least so far. In effect, it is a complex refinement of the instructions to the "manager of the open market account" in New York—who is similar to, but not identical with, the "government broker" in Britain. He now knows a little more precisely than before what he is supposed to do: namely, to achieve a specified percentage range of growth of RPD.

2. RPD is an almost natural outcome of the slow swing in emphasis in the Federal Reserve toward controlling monetary aggregates rather than interest rates. It is simply a more precise way of controlling the aggregates and it has been adopted in full awareness of the monetary paradox that controlling aggregates necessarily involves permitting more fluctuation of short-term interest rates than under the old system.

3. This refinement by no means involves a conversion of the Federal Reserve Board to the purely monetarist theories of the school headed by Professor Milton Friedman. In particular, it does not mean abdication of discretion. Although Mr Friedman, somewhat despairingly, has long urged that the Fed simply select as a target a reasonable rate of growth for the money supply and stick to it indefinitely regardless of the business cycle, a high official of the central bank said the other day that "adopting RPD is a long way from adopting a fixed rule." Indeed, the manager of the open market account can even deviate from his target if interest rates fluctuate too sharply. It is still a world of men and not of mathematics.

None the less, RPD represents a further gain for the monetarist view, in that it is based on the desire to control the aggregates better. With due humility, Federal Reserve officials, including the chairman, Dr Arthur Burns, have made the tentative judgment that the new system may help them avoid the unintended and destabilising swings in the money supply that have often characterised the recent past.

Court plays ball

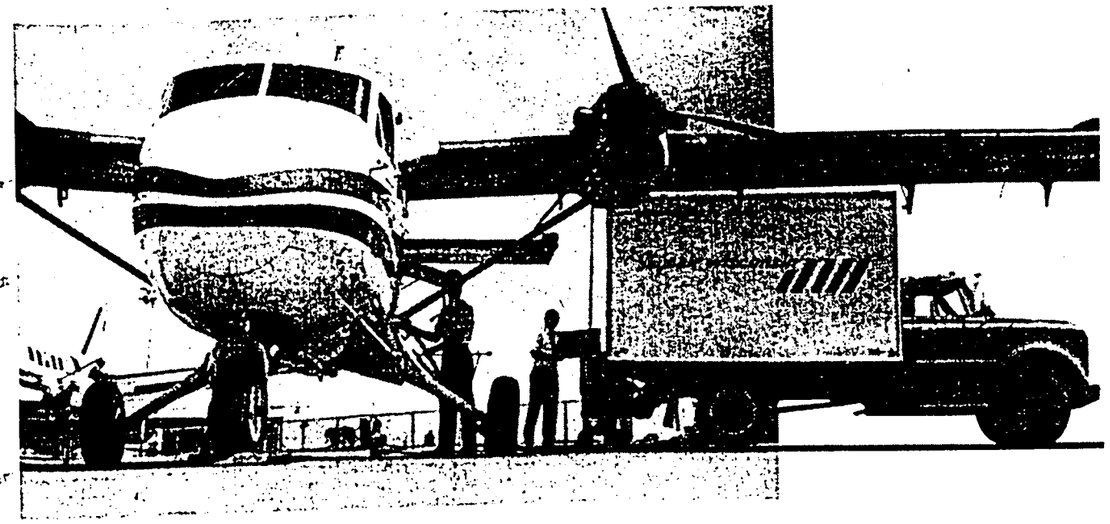
Washington, DC

If there was ever any doubt that baseball enjoys a special affection among Americans of every stripe the Supreme Court has settled the matter. Candidly acknowledging that the sport's exclusive exemption from the anti-trust laws is an anomaly and an aberration, the Court none the less sustained baseball's ironclad "reserve system" and threw out a suit brought by Mr Curt Flood, a one-time star outfielder who was upset when the St Louis Cardinals traded him in 1969 to the Philadelphia Phillies.

Mr Flood had some powerful support in his attempt to modify baseball's standard contract, which binds a player to the team that owns him. His suit for $3.1m in damages was supported by the players' union and the appeal was argued in the Court by one of its former Justices, Mr Arthur Goldberg. They contended that, even if Justice Oliver Wendell Holmes was correct in 1922 when he established baseball's exemption from the anti-trust laws, the sport's subsequent financial growth, the switches of teams from one city to another and the mounting revenues from radio and television provided irrefutable evidence that today baseball is a business in interstate commerce and thus subject to these laws.

Much of this was accepted and conceded by Justice Harry Blackmun, who delivered the 5 to 3 decision. But five decades of tradition and the undeniable affection that the sport commands overcame logic and legalisms. Mr Blackmun sprinkled his opinion with the names of stars. He quoted poems by sportswriters and he referred readers of the court's opinion to the baseball encyclopedia and other writings on the sport.

Since Congress has also been unwilling to expose baseball to anti-trust laws, any change in the special economic status of the sport will have to be made by negotiation between the owners of the baseball teams and the players' union. Not having the law to fear, the owners are unlikely to be very yielding.



Sporting slaves

The Twin Otter. It's not a pretty plane. But its convertibility means "off" hours are profit hours for Air Wisconsin. And that's beautiful.

Air Wisconsin shows what good management can do with a good airplane. When two of its four Twin Otters finish the day's commuter service, they are converted in 15 minutes to cargo planes. From 9:25 p.m. to 6.40 a.m. they fly cargo runs. And by 8:00 a.m. they resume passenger service.

The Twin Otter. With PT6A-27 turbines that enjoy TBO approvals up to 6200 hours. Air Wisconsin has the world's highest flight hour experience with this plane—and maybe the world's most enthusiastic endorsement for it, too.

Its dependability meant only one hour's technical delay in a whole year of Norwegian operations.

Widerøe's Flyveselskap A/S began using the Twin Otter in 1968 to serve four single-strip STOL airports along Norway's rugged and windy west coast. They flew it 12 hours a day, 6 days a week—and had only a single one-hour delay for technical reasons in its entire first year. Had flight cancellations due to weather on only three days.

Now they have five Twin Otters in service—and the government has ten operational STOLports and five more planned, bringing essential air service to small communities high above the Arctic Circle.

Its STOLability means humanitarian aid and economic health for Afghanistan's mountain communities.

Afghanistan has no railroads, no navigable waterways. And most interior roads are unimproved since the days of Marco Polo. Many communities can only be reached by camel, helicopter or STOL aircraft.

With their STOL capabilities, and PT6A-27 turbo-props for hot and high operations, the first two Twin Otters here proved invaluable in bringing medical and technical aid to isolated mountain villages. That's why two more Twin Otters arrived during 1971.

Sports brief

Jack goes dormie two

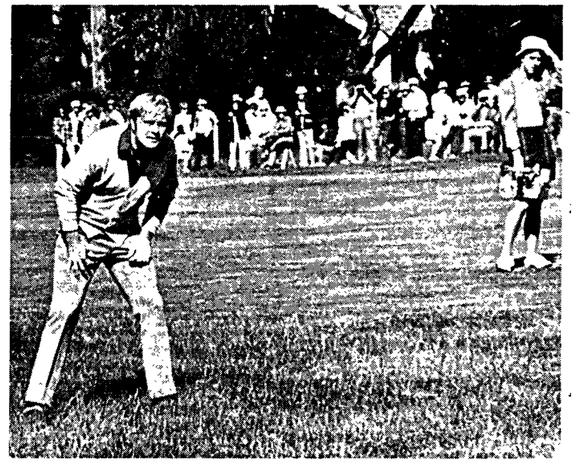
Pebble Beach, California

Jack Nicklaus won the 72nd American Open Golf Championship on Sunday on the picturesque but difficult Pebble Beach course After his victory in the Masters tournament in April, this gives him the first two steps in his quest for a sweep of golf's four major tournaments: a feat so far accomplished only by the late Bobby Jones, golf's golden boy of the 1920s (and two of Bobby Jones's tournaments were amateur ones).

It can be argued that this latest victory stemmed as much from the awe with which Nicklaus's fellow golfers regard him as it did from his playing, which was decidedly shaky in places. As in the Masters, Nicklaus's competitors fell away from him just at those times when a surge from one of them would have put him under great pressure. His winning score of 290 for the 72 holes, two more than par, was unimpressive, even allowing for the unfavourable conditions.

The course conquers

From another point of view, the real star of this tournament was the course itself. It defeated all the players. Lying jewel-like along the cliff-tops of a rugged stretch of coastline, the Pebble Beach course has always been famed for giving away little and punishing mistakes severely; there are a number of holes where a wild shot can easily wind up on the beach. Last week, however, the course inflicted most damage with more mundane hazards : narrow fairways that demanded precise tee shots; long, thick rough that grabbed and twisted clubheads attempting to cut through it, and thus sprayed recovery shots in all directions; numerous bunkers filled with new, loose sand that prevented the players from pitching their shots as near the pin as they can from the bunkers at most courses; small greens that played at different speeds because the wind dried them out differently; and a sea breeze that on the final day grew so strong that a regatta scheduled to be held in the bay below had to be cancelled.



The course, which many experts rate as the best in America, was always made for a stern test; and the tension that always accompanies a major championship did not make the going easier. But this was never an electrifying contest, much more a slow war of attrition.

First three rounds

After the first day of play Nicklaus and five other players were tied for the lead at one under the par of 72. Forty-nine of the starting field of 150 were within five shots of the leaders, but it was significant that nearly a third of the field could not manage to break 80. Two unfortunate gentlemen wound up with 88, this bringing great delight to world-wide warrens of rabbits.

After the second day, six players were still tied for the lead, but at this point there were only 19 others within five shots. Some of the first-round leaders disappeared without ceremony. Orville Moody, the 1969 American Open champion, shared the lead with a 71 on the first day, but soared to a 77 on the second day and a 79 on the third. Only a few players charged back, most notably Arnold Palmer; he reminded his army of fans of old times when he shot a 68 on his second round after taking 77 shots on the first day. Lanny Wadkins, the 22-year-old former American amateur champion who is enjoying an unusually successful rookie year on the professional tour, also carved out a 68 after a poor first round; but, for perhaps the first time in his young and confident life, he collapsed badly under pressure to a 79 in the third round.

After this third round, Nicklaus was clear of the field by one shot with an even-par 216. There were only nine golfers within five shots of him, but five of these were within two shots. The close pursuers included at least three players of repute : Arnold Palmer, Lee Trevino (winner of both the American and British Opens last year), and Bruce Crampton (a tough tournament pro from Australia). At least one of these could be expected to have a go at Nicklaus in the final round, forcing the great man to gamble with his shots on this unforgiving golf course.

Nicklaus dominates

Crampton is toughly professional

Opportunities fluffed

But they didn't. In the final round all the other players quickly dropped shots to par. Before the first nine holes were finished, Nicklaus led everyone by several shots. Then, on the 10th, Nicklaus himself fluffed badly. Struck by a gust of wind as he was taking his backswing and thrown off balance, he sliced his drive on to the beach. The ball was plugged in the sand, and Nicklaus opted to take a penalty stroke and drop his ball in the rough. The 10th is 436 yards long; Nicklaus was still a long way from the green, but he now had a good lie and he decided to gamble. He hit a three iron.

The gamble was unsuccessful. Nicklaus pushed the ball out again, but down a bank and into new rough. This meant he was lying three, and was still short of the green on a par four hole. He popped the ball on the green on his next shot, but he still needed two putts to get down thankfully for two strokes over par.

Trevino, at this point lying four strokes behind Nicklaus, had a golden opportunity to apply pressure. He was on the green of the 10th hole in two with a long putt for a birdie; this would have allowed him to make up three strokes. Even two-putting would have moved him to within two shots of Jack Nicklaus.

It was typical of the whole tournament that at this possible turning point Trevino, normally an excellent putter, simply collapsed. He hit a weak approach putt 8 ft short of the hole. He then missed his second putt, and got a five. Nicklaus was now two over par for the tournament, but Trevino was five over. The best of the other contenders, playing ahead of Nicklaus and Trevino, were four over.

Missing from 18 in

Nicklaus was still wobbly. He might have succumbed to pressure if any had been brought to bear. He played the 11th hole well; but on the short 205-yard 12th he hit an overly strong three iron that pitched on the green, took one bounce, and came to rest in the deep rough behind. Nicklaus chopped at the ball with his sand wedge, popped it into the air, but not far enough to clear the rough. He then put the ball 7 ft from the pin, and sank the putt; but he had lost another stroke to par. On the next hole, he hooked his drive on to a dirt roadway that runs behind the left rough. Despite the barest of lies, he made a fine recovery shot and saved his par. On the next hole, he sliced his ball into the rough; but another fine recovery shot, followed by a good approach shot, allowed him to score a birdie on this long par-five hole. That made him the Open champion, and his shakiness disappeared. On the long par-three 17th hole, with a strong wind blowing in from the ocean just behind the green, he struck a one-iron so perfectly that the ball actually hit the flagstick. It bounced only a few inches away for a tap-in birdie. Nicklaus was then so confident that on the 18th, which runs for 540 yards along the rocky shoreline, he missed a putt that could not have been more than 18 in long. This would have given him a par for the hole, but he already had plenty of shots to spare. He finished three shots ahead of Crampton, who took second place.

Not to worry

While Nicklaus was wavering, his opponents were melting. Trevino played some bad shots and missed more putts. Palmer and Crampton and the other players up ahead continued to lose strokes to par. Whenever Nicklaus asked about the scores of his opponents, he never had anything to worry about. There was a feeling of fatalism overhanging the tournament, and Crampton expressed it almost openly in the interview tent after the presentation ceremony. He said he was proud to finish second to Nicklaus. Asked if there had been a turning point in his own final round, he said that he did not think so; he could point to many places throughout the tournament where he could have saved three strokes, but he did not think his doing so would have affected the outcome. If he had played better, then Nicklaus would have done so too.

Could Big Jack possibly ask for a more accommodating opponent? Nicklaus must now hope that he can continue to hold his magic spell over his competitors through the British Open (to be played at Muirfield, outside Edinburgh, next month) and the American Professional Golfers' Association Championship (to be played in August at a course outside Detroit). Arnold Palmer said on Sunday that since Nicklaus has now won two of the major championships, the pressure on him will increase. At Pebble Beach this sounded like the opposite of the truth. With such momentum going for Nicklaus, his opponents seemed to feel that nothing can stop him now. So long as they feel that way, probably nothing will.

Who will challenge?

Trevino was one opponent who had a good excuse for his dull finish. Suffering from pneumonia, he had been confined to a hospital bed until two days before the tournament; he was still obviously ill and was heroic to play as well as he did. After his round on Thursday, Trevino went to bed and slept for 20 hours. He swallowed pills throughout the tournament, and complained that his legs were so weak that he was having difficulty getting the ball into the air. If Trevino is in good shape for the British Open and the PGA, Nicklaus's chances of winning these two tournaments may be considerably reduced. Trevino, while expressing the greatest respect for Nicklaus's game, feels he can beat Nicklaus when the chips are down. Indeed, he has already done so. Last year he defeated Nicklaus in a play-off for the American Open championship.

Palmer is not quite dead either. His 68 on the second day of this tournament proved that, but his putting is still inconsistent. He could not mount a charge on the final day after Nicklaus had faltered on the 10th hole, although he realised that the kind of fast finish that brought him such fame when he was in his prime was just what was called for. Of the two other superstars of yesterday, Gary Player was a little off form, but his pluck might yet move him back into the centre of things; while Billy Casper finished 10 strokes behind Nicklaus. Casper looked better than he has for some time, but he has been in a slump for two years now and it is doubtful if he is out of it yet. Tony Jacklin was the only British player competing in the American Open this year. His finishing score of 307, 17 strokes behind Nicklaus, was hardly encouraging, especially as he shot an 83 on the final day; but Jacklin is playing better than he is scoring. He usually plays well in the British Open and might do so at Muirfield.

Trevino had pneumonia . . .

Palmer is still living . . .

Casper was yesterday's hero . . .

. . .Wadkins may be tomorrow's

the computer and insurance

Only the mournful tolling of the Lutine Bell or the thundering horses of the fire brigade disturbed the tranquillity of the Victorian underwriter. For Marine and Fire were his only risks apart from some simple Life Assurance business.

Modern insurance is as complex, diverse and specialised as the modern technology it underwrites. The insurer of the 1970's is constantly assessing and accepting new risks whose immensity would have staggered his forefathers. The leading offices number their policies in millions . . . exert a major influence in the City by the size and pattern of their investments . . . and process daily more information than was handled in a year when a clerk was hired for the excellence of his copperplate handwriting.

Naturally, the computer is the modern insurer's indispensable ally . . . to shoulder a huge burden of paperwork and actuarial calculation . . . to store, retrieve, manipulate and communicate the vast volumes of data that are the lifeblood of an industry dedicated to the service of the individual and supported by the shrewd deployment of funds.

Predictably, the men who live by balancing aggressive enterprise against risk choose Univac computer systems. Univac hardware for advanced design, combined with proved reliability and superior performance in relation to cost. They choose Univac software for flexibility coupled with dependability . . . Univac know-how in the communications, on-line and real-time processing that are of growing significance in a fast-moving international service industry . . . and the many Univac no-charge fringe benefits like on-site support and package programs that minimise the time, cost and effort of getting sophisticated applications smoothly operational.

This all adds up to an exceptionally attractive proposal. It doesn't need an actuary to deduce that there is no substitute for successful experience.

Insurance 1972 The Economist a survey

1971. The best year of our life.

Once again, the Prudential has declared bigger bonuses.

Indeed, it's the best year we've ever had, with record bonus additions for people who hold Prudential with-profits policies.

If you're fortunate enough to be one of them, your policies will already have shared in our increased profits.

But even if you're not insured with us, this gives you a pretty good idea of the strength and prosperity you get with the Prudential.

In fact, this is a good moment to consider some of the other forms of insurance we can offer you.

For example, our **Pru-Plus** ten-year savings plan is a high-yield investment that can earn you as much as 12% per annum equivalent gross interest.

Our **Motor insurance** provides you with an on-the-spot 24-hour Recommended Motor Repairers Service which includes a six months' guarantee on any repairs we pay for on your car.

And then there's **Home insurance.** We know for a fact that an alarming number of households are insured for only a fraction of their present value. And many just aren't insured at all. With Prudential property insurance you can insure your home and everything in it for only a few pounds a year.

In fact, you can insure more or less anything with the Prudential. And knowing you're insured with an insurance company that has bigger assets than any other in this country could make your life better in more than one way.

If you'd like to know more about us, post the coupon today.

Even when the fire's over you can still get your fingers burnt.

A fire doesn't just destroy property. It burns time. Time to rebuild. Time to replace.

It destroys your livelihood. And burns out the security of your family.

In fact it can take weeks, months, often years until you're in a position to rebuild or re-equip your premises. Time without income.

A Phoenix Loss of Profits Policy will put you back in business immediately. Because it takes over where ordinary fire insurance leaves off.

But it's not only after a business fire that you can get your fingers burnt. If your home and contents are not properly covered by insurance you could be left out in the cold.

Phoenix have also created a simple insurance 'package' to protect your home and contents from fire. As well as from theft and other perils. It's called Homeguard. It's a flexible policy, that allows you to choose the type of package you require. The Phoenix will combine it into one policy with one premium.

So come and talk to your broker. Or direct to us at the Phoenix. And do it before things become too hot to handle.

PHOENIX ASSURANCE

PHOENIX ASSURANCE CO LTD, DEPT CS, 4/5 KING WILLIAM STREET, LONDON EC4P 4H

Fun and games at Lloyd's today. But what about tomorrow ?

Everybody's centre

London has long been the headquarters of up to a dozen multinational insurance companies, and the place where risks are insured by Lloyd's underwriters on behalf of some 5,000 rich British subjects. But to remain the hub of world insurance it must concentrate on being a centre for everybody to use. A mechanism to match up the needs of insurers and customers on the global level, rather than a shop where British insurance is sold

The money's rolling in all right. In the last two or three weeks Lloyd's names have been getting their cheques from their underwriting agents for the 1969 underwriting year. And most of them are happily convinced that it was worth sticking out those lean years in order to enjoy today's pickings and the even fatter ones promised for 1970 and 1971. Shareholders in insurance companies have also been delighted by the size of 1971's upturn.

Because insurance is a cyclical business, competition alone will ensure that this new-found prosperity will not last. All the more reason, then, for insurance men to give a little thought to London's long-term future. Herr Horst Jannott, managing director of the Munich Reinsurance company struck the right note when speaking to the Insurance Institute of London in March. His thesis was that for the world insurance industry to function properly it must have a single centre, or turntable, or primus inter pares, even though there may exist other lesser centres, and national markets. This role, he gladly recognised, is already performed by London. Further, insurance companies and institutions elsewhere have every interest in enhancing this role of London, and strengthening it, if they are to be able to meet the challenges that lie ahead of them. All this, of course, was music to the ears of those London insurance men who heard his address, or heard about it afterwards. What they may not have remembered though is that he also said :

> This . . . centre . . . cannot be the exclusive matter of one national market. This world centre must rather be open to all who earnestly want to participate in the solving of insurance problems which cannot be solved on national markets . . . (eg) the pollution of our environments. . . .

In other words London has a responsibility not only to set standards and generally keep its house in order : it must also be open.

In the seventeenth century London was not only a place where a shipowner or merchant could come and insure his ship or goods : it was also a place where he himself could share in the underwriting if he chose. Later came the companies ; the underwriters became semi-institutionalised into Lloyd's. The companies (through their branches and agents) and Lloyd's (through its brokers) reached out into all the corners of the earth for business, and the business duly came to London, with the risks carried by British citizens and British companies. London, in fact, had ceased to be a centre for insurance It had become a base. As a base it still does very nicely. The invisible earnings generated by insurance exceed those generated by all the rest of the City, banking and the much-famed Eurodollar market included. But its future does not lie as a base. It has got to go back to being a centre, a place where insurance companies from all over the world will need to have a foothold at least, and where more and

Jannott : telling London what to do

more of the big risks will be brought to be covered. In fact, the tide is already flowing in this direction: London is already becoming relatively more important as an insurance market, and less so as a place where multinational insurance companies happen to have their headquarters. There are three reasons for this shift.

The first is the multiplying size and scale of risk, a subject that worries insurers and obsesses reinsurers (see page 22). Apart from a few coronaries and ulcers, its main consequences are mergers between companies, a greater need for reinsurance (on which Lloyd's has always been strong) and a greater need to split risks up between companies and other underwriters (ie Lloyd's). It is true that other countries have mechanisms for doing this. Where brokers exist, as in France and Holland, risks can be broked between several companies. Similarly, the general agent system achieves the same result in both these countries: the general agent underwrites, with wide-ranging freedom of action, on behalf of a handful of local and foreign companies. German companies have a well-established habit of sharing the big risks among themselves. But it remains true that the London market's "slip" system knocks all these into a cocked hat, for smoothness of operation.

The second reason is that there is now a good chance that the common market's harmonised insurance rules will be a good deal more liberal in one vital respect than had originally seemed likely: namely, the freedom to sell insurance across frontiers (see page 14). In practice this means a much greater freedom for British and other brokers to pick up business and place it in London, not just because London rates are cheaper (lately they have certainly not been), but because London offers a greater flexibility of types of cover than does the continent. Why ? Partly because because it has always operated globally, partly because brokers (who have an obvious incentive to discover new types of insurance needs of their clients) have always called the tune, but partly too because the continental insurer (except in Holland and Belgium) has always been hamstrung not only by rigid collective tariffs of his own making, but by the need to clear with the supervisory authorities not only his premium rates but also policy wordings and conditions.

The third reason is that foreign insurance companies from now on will increasingly come to London in order to pick up business here. In theory they always could. But it was never easy in practice. And continental insurers (apart from the Swiss) tended to be preoccupied with their own closely regulated and inflexible markets, while American insurers, their own market fragmented and subject to oppressive regulation by 50 states, never had the resources or the will to move on to the international level. But now in the past year or two American insurers—as was predictable—have stepped up their activity in Europe, eyeing the multinational companies but also paradoxically, in order to pick up American business in London that they would never see back home. American reinsurers are also active here. In reinsurance an important new tendency is for the so-called professional reinsurance companies (ie, those who do nothing else) like the Munich Re, the Swiss Re and the Mercantile and General, to make increasing use of brokers, especially in London, as a means of getting business, alongside the direct selling (to insurance companies) on which they have traditionally relied exclusively.

When it comes to direct insurance, too, European companies are coming to realise that things are at last going to change in their protected home markets, and that one good bet in the long term will be to set up shop in London. Here as a sign of the times Lloyd's now admits foreigners as underwriting "names." And, as Herr Jannott reminded his audience, the discussions about "corporate membership," to enable companies to belong to Lloyd's,

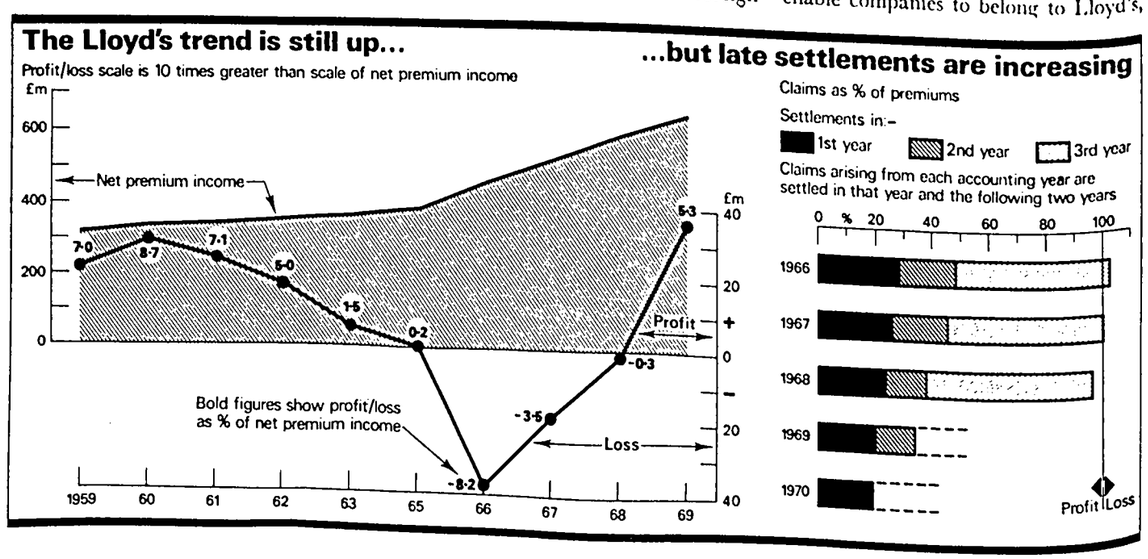
are being followed on the continent with great interest. And well they may; what better way in to the London market ? Lastly, with the formation of national insurance and reinsurance companies (see page 30) in more and more of the underdeveloped countries, these companies will not be content with merely reinsuring in London or elsewhere for ever ; they will want to take back other business—of a different type from their own stuff—and they know where to get it. The IRB (Instituto de Resseguros do Brasil), Brazil's state reinsurance company, has set up shop in London this summer.

So in the long run British insurance will sustain and increase its preeminence in the world by strengthening and improving itself as an insurance centre : as a place where companies of all nationalities operate, and where the big risks are placed—rather than as a base for multinational insurers to operate. That means it really is not worth expending too much energy in the losing battle against less developed countries that are determined to kick us out (see page 30). It means a fiasco like the V & G affair must never occur again ; and since the Government appears unlikely to do much to prevent it (see page 37), there is a strong case for the setting up of an Insurance Council with the aim of developing the role of London as an insurance centre, and in which representation could be given to the companies (the BIA), the brokers, Lloyd's, foreign companies operating in London, plus informed outsiders (eg, from the Committee on Invisible Exports, insurance academics) who could prevent the body relapsing into possible spells of smugness and insensitivity to outside opinion.

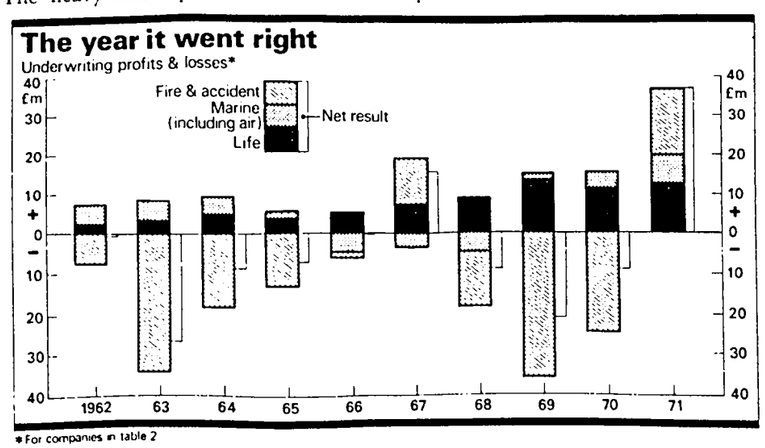
It means an end to the petty restrictions against outsiders—like those operated by the company marine underwriters' club, the Institute of London Underwriters. And it means that brokers must take more care than they now do to ensure that the old pals networks, with which the City is riddled, do not operate discriminatorily against outsiders and newcomers. There is no reason why a Ruritanian insurance company should have to write only bad risks for the first 50 years after it sets up in London, before being let in on the good ones. (Equally it cannot expect to be offered only good ones from Day 1.)

The same can happen on reinsurance. When the reinsurers all lost money around the time of Hurricane Betsy and the market contracted, brokers were only too glad to give part of the business to the Ruritanian National Reinsurance companies of this world, all anxious to break into quality reinsurance business to get something back for what they place in London. Now that the reinsurance market has expanded again, there are mutterings that brokers are merely saying "Sorry, I can place it all with the chaps now, thank you very much, and goodbye."

Churchill, reputedly, was apt to attribute Britain's strength and influence in the world to the fact that it lay where three vital political circles intersected: Europe, the Empire, (ie, a major segment of the Afro-Asian world) and the English-speaking Atlantic partnership. Just the same combination of factors—along with its inherited skills and capital—ought to enable London to become the world's insurance market, in the seventeenth century sense, and thus find a new role to compensate for the fact that British insurance companies can no longer go off and set up agencies through friendly merchants in Bangalore, or insure a new railway in Bulgaria.

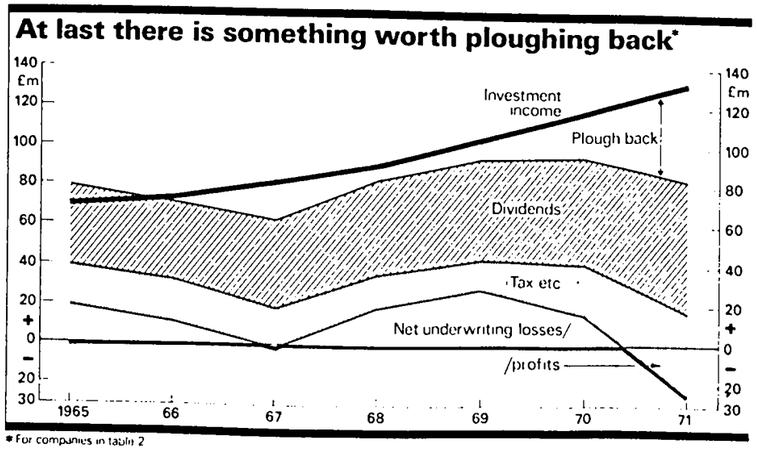


Underwriting comes right



After two traumatic years, underwriting went comfortably into the black last year. The prospect is for even more goodies this year when the pay-off from the transformation of British motor insurance after the demise of the Vehicle and General begins to show up in figures. Insurers have learnt to live with inflation, at least at current rates.

Table 1 (on page 10) shows how impressive the turnround has been for the composite insurers listed there who, between them, lost £55m on non-life underwriting during 1969 and 1970. And the continuously falling expense ratio shows they have also become more efficient. But, of course, experience has varied according to the type of business.



Losses were still being made on British motor business in 1971, though on nothing like the colossal scale of the preceding years. The BIA member companies' total loss was £25.5m (or 8.6 per cent of premiums) against £31.3m (or 14.5 per cent) in 1970. The heavy and repeated increases in rates from February, 1971, onwards, which begin to bite only as policies come up for renewal, ought to mean a break-even or better on motor underwriting this year. But even if motor underwriters at Lloyd's and in the companies resist the temptation to plunge into another cycle of rate-cutting, it is by no means certain that companies are pushing up their rates fast enough to keep pace with inflation at the particularly vicious rate at which it hits motor insurers (see page 34).

In America the motor insurance recovery has already made its mark on the figures. It is the result, not of an ebbing of competition among insurers, but of an easing-up by state insurance commissioners who now—under the file-and-use system—allow insurers to raise premium rates and then justify them afterwards rather than engage in a long process of justification on the basis of historic figures of claims costs that, even without accelerating inflation, became steadily more out-of-date. The success of the Massachusetts experiment in no-fault insurance has led to a big drop in claims costs which in turn has

*For companies in table 2

* For companies in table 2

prompted the insurance commissioner to order a cut in motor premiums rates (see page 41). Unfortunately no such miracle could be worked on motor insurance in Britain. Lawyers' fees here are only a fraction of the lush rewards that can be earned in America. Thanks to the health service the injured motorist here does not face the nightmare of crippling hospital bills (and arguing over who should pay them); comprehensive motor insurance is rare in America, though bought by three motorists out of four in Britain; and under a no-fault system British drivers now enjoying no-claims discounts would lose them.

As regards British **property insurance,** fire wastage in Britain seems to have levelled off. Although there was a jump last year, from £111m to £129m, Ulster damage (recoverable from the Ulster authorities) was responsible for a good part of it and the 1970 figure itself showed a £9m drop on 1969. Apparently the stream of fire protection exhortation and the successive increases in fire rates since 1963 (heavily loaded as they are towards the badly protected risk), have combined to reverse the spiralling wastage rate. For how long? **Household insurance** passed quietly through its first year free from a tariff with none of the competitive rate-cutting that occurred when the motor tariff went, but with modest improvements in the cover and packaging of household policies here and there.

Theft in Britain cost BIA members £21m last year, a tiny rise of 3 per cent on 1970. Burglaries from business premises actually fell 10 per cent in money terms, or perhaps 20 per cent if inflation is allowed for. This drop could reflect an improvement in security arrangements in industry and commerce. Equally it could reflect a redirection of effort by burglary gangs towards more inviting households, where theft losses last year were some 10 per cent up.

BIA members emerged from 1971 with a modest underwriting profit on their property insurance account (including home and overseas, fire and theft). For the future, underwriters are meeting an increasing tendency for owners of business premises to opt for self-insurance if the fire and theft risk is a good one ("well-protected," in the jargon) and demand insurance or reinsurance cover for big losses. Some insurers have already started to complain that they cannot afford to lose big chunks of premium income in this way: their expense ratio would be hit and they would have less of a cushion of regular premium income to enable them to absorb the big catastrophes, when these occur, which they would still be covering. But the job of insurers is to meet the needs of their customers, rather than expect their customers to pander to their own convenience by buying more insurance than they need.

More **ships** went down in 1971 than in 1970 and the cost of ship repairs continued to rise faster than costs in general. The English Channel continues to be a headache and will doubtless go on plaguing insurers until a one-way system can be instituted and enforced. Container traffic continues to produce more claims than had been hoped for, a fall in pilfering being offset by a rise in damage through badly packed containers or the occasional container being lost over the side, with damage most marked when containers are stowed on deck. As expected, the outcome for the 1969 underwriting account, closed last December, was a definite improvement on 1968. And 1970 will probably be better still. But 1971 will probably show a levelling-off.

Aviation has been a money-spinner for some years. The arrival of the jumbo jets brought a handsome increase in premiums, without, so far, a single crash. There are now some 150 jumbos among the 4,000 jets in airline service. But the sheer profitability of air insurance lately has attracted several new companies and Lloyd's members into

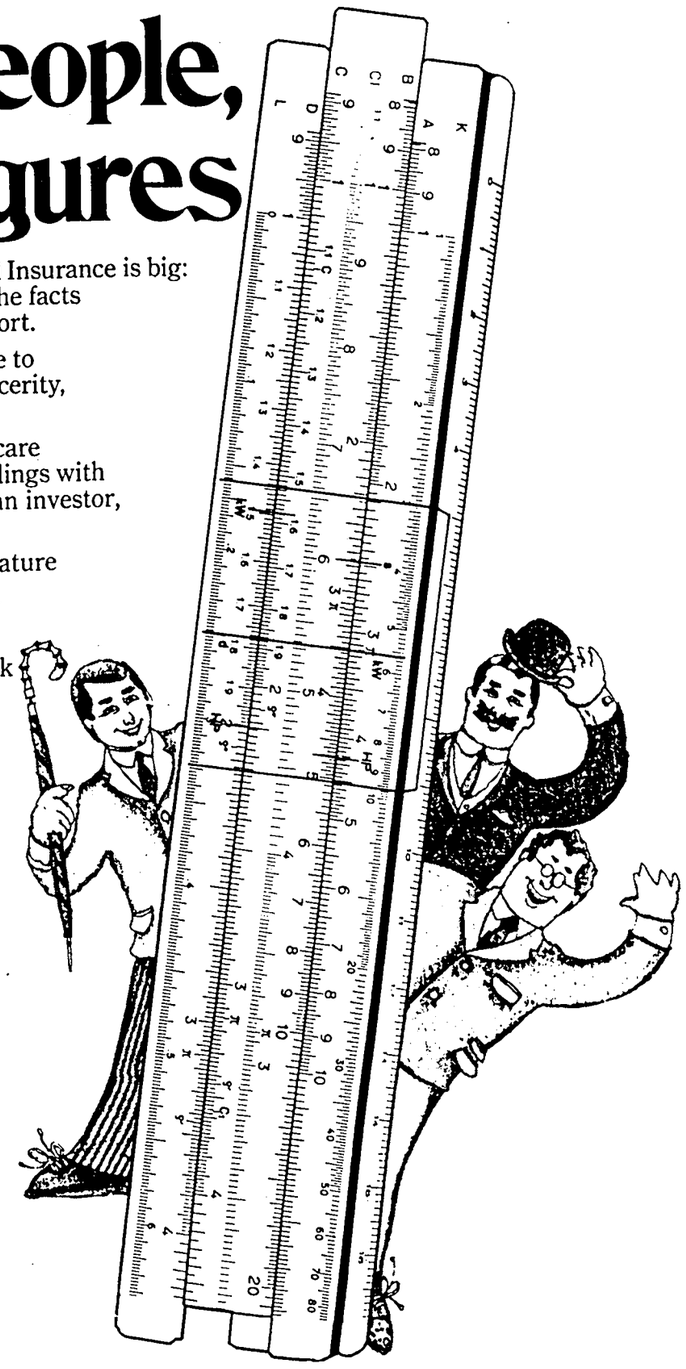
Royal is people, not just figures

You know well enough that Royal Insurance is big: no need for a slide-rule to prove it—the facts and figures are all in the Annual Report.

But with all our bigness, we'd like to make a simple human point in all sincerity, and just leave the thought with you.



Royal Insurance is people—who care about people. And whether your dealings with Royal are as an insured, a broker or an investor, you'd be hard put not to notice this.

You'll see in virtually all our literature the words "Royal Insurance looks after you fast"—a human statement if ever there was one. Above all, we believe that the insured wants a quick settlement of his claims, the broker a speedy response to his queries.

And with Royal, this is just what they do get. So think of Royal not in terms of company figures, but of real live people.

You'll like us better that way.

ROYAL INSURANCE looks after you fast

Half a million pounds a day

£500,000 paid out in claims every working day. That's the measure of the size and strength of General Accident. An indication of its great financial resources built up over the past 86 years. General Accident is one of Britain's largest insurance organisations, with specialist companies and specialist departments covering the whole field of insurance and life assurance, offering complete protection, providing complete security.

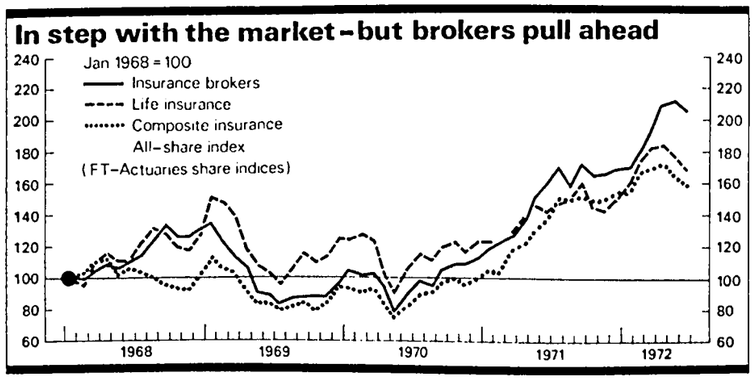
the field, including, rather oddly, some American life assurance companies (initially as reinsurers but now even more surprisingly as direct writers). Rates have, therefore, been tumbling across the board and, in direct defiance of gloomy forecasts, there is now a disruptive surplus of capacity. The result is not just that underwriters are getting little opportunity to build up reserves in preparation for future crashes—including jumbo crashes at $100m a time or more if negligence can be shown. There is a strong fear that when there is a crash, or perhaps a run of them, the new underwriters will vanish from the market as suddenly as they have entered it; the remaining insurers will cut back their commitments and charge much higher rates for doing even that. If the market then manages to continue to cover fully all the jet airliners then in service it will do so only at the price of a sudden and massive jump in premium rates. This in turn will knock airline costs for six—a subject that has already begun to worry some of them.

Two-thirds of British companies' non-life business comes from **overseas**, principally America. American business last year was free from major hurricanes, motor insurance was profitable and American companies were recording spectacular underwriting profits, a pattern reflected in the results of those British companies with big American interests: the Royal, the Commercial Union, and the General Accident. By and large, business in developing countries has been profitable, which means that Indian non-life insurance—now on the point of being nationalised—will be missed. Life assurance there was nationalised several years back. Business from the white Commonwealth and South Africa varies. But continental Europe is a regular money-loser, partly because British companies tend to be able to participate in the usually unprofitable industrial fire and liability business but find it hard to break into the more lucrative personal insurances, which are sold through full-time agents in each town or village, each serving one company alone, and enjoying commission rates a good deal higher than is normal in Britain. One German company recently tried to enter this sector of the French business but got nowhere, at some cost.



The charts on pages 9 and 10 illustrate the sharp changes in the figures already referred to in Table 1. Points to note are how little of their investment income insurance companies have been able to plough back until last year; and how the repeated underwriting losses have acted as a drag on the growth of dividends, which have risen only about 60 per cent since 1965, while investment income has nearly doubled.

The companies in Table 2 now enjoy solvency margins several times as high as the minima required by law (of 10 per cent of premium income). True, the minima will rise slightly when Britain adopts the likely EEC rules on solvency margins. Even so, the companies will still have an enormous cushion. In fact, there seems little justification for the common belief that they may soon need to raise fresh capital. Their premium income (Table 1) has expanded by £892m since 1965. On the British rules this increase would require an addition to free reserves of £89m to back it. In fact, the addition to free reserves from ploughed-back profits alone has been £98m over this period; and on top of that the companies have had large but unmeasurable capital gains on their investments. Yet 1965-71 is widely believed to be a period in which free reserves were run down in relation to premium income. Now, thanks to 1971, they have been

augmented to a degree greater than that required by law. True, in relation to premium incomes, solvency margins of these companies have fallen. But only because they were so extraordinarily high in the first place. In short, the big insurance companies now have ample scope for more liberal dividend policies. This is certainly what investors will be hoping for, rather than ambitious and dubious plans for insurance companies to turn themselves into financial conglomerates, including entry into fields in which they have no expertise at all.

This survey a year ago was overcautious both in its forecasts of 1971 underwriting results, and the prospects for composite insurance shares. These shares have, in fact, risen 24 per cent since June, 1971, only slightly less than the FT-Actuaries all-share index. What is fairly sure is that the new-found underwriting profits will not last for more than another year or two, at most. With non-life insurance the emergence of profits tends to generate enough competition to throw the business into loss. And the next four years may have more hurricanes, big air crashes and perhaps pollution claims and even earthquakes than the last four have had. So underwriting profits will almost certainly follow their usual cyclical pattern, peaking out this year or next, with a downturn to follow. If, by any chance, inflation in Britain and America should slow down, the composites should benefit handsomely. But vice versa.

Europe opens up

When our last insurance survey was published a year ago the European commission was just beginning to take a line on one crucial segment of insurance harmonisation: the so-called freedom of services, meaning the freedom for an insurer in one country to sell insurance in another through an agent or broker, without having an establishment of his own there. Now that line has come more sharply into focus.

As usual, the commission started by asking experts to rough out a community policy. Unfortunately in insurance the experts are the insurance companies and insurance supervisory bodies in the member countries. And in France, Germany and Italy, insurance companies are much more tightly restricted than in Britain over such matters as policy conditions, premium rates and investments. As a corollary, foreign insurers without a local establishment may operate on a limited basis only, or not at all. Supervisory bodies in these countries naturally insist that such restrictions are necessary. And local insurance companies (as in other industries) argue, and no doubt sincerely believe, that much suffering would result from unregulated blasts of competition from other countries, even if some of it took the form of Lloyd's underwriters selling types of cover that local insurers may not sell.

So it is easy to guess what sort of advice the commission got from its experts. The first draft—which was quickly rejected—virtually banned freedom of insurance services altogether. Even the second, more liberal, version "stupefied" one senior commission official and followed the first into the dustbin. So in July, 1970, Dr Theodore Vogelaar, the director-general in charge of harmonisation, redefined just what the common market for insurance is supposed to be all about. Since harmonised regulations will soon be in force, laying down how member countries regulate insurers in their countries, there can then be no logical reason, he said, for preventing any of these insurers from offering insurance in other member countries.

Even more heartening, a working paper from the commission, which began to circulate late last year, propogates what might be termed the Mance thesis. The much-respected chairman of Lloyd's, Sir Henry Mance, has argued on several occasions that a distinction should be made in the regulations according to whether the insured is a major company, which can be presumed capable of taking care of itself, or private individuals (including farmers and small firms) who need, and should get, further protection.

The commission's paper argues this point strongly. Transport insurance, for instance, enters into transport costs in a big way, and it is clearly an absurdity for transport insurers to be fettered by internal community frontiers. More to the point, perhaps, international competition has a stimulating and fertilising effect on the insurance industry, helping to improve coverage, as well as boosting the capacity of the insurance market.

The commission is clearly determined to achieve freedom of services for transport and major risks. It has also solved most of the technical problems that lie in the way. National laws about liquidation of insurance

Vogelaar: chief harmoniser

This survey was edited and partly written by Alan Parker

These 5 investment plans make Abbey Life the pacemakers of the industry

You should find out about them before making your next financial move

Abbey Property Bonds

You can invest any sum upwards from £100 in the Abbey Property Bond Fund. This Fund has now grown to over £100,000,000 with 50,000 bondholders. Size is very important because it means that our Fund can buy the most valuable properties; properties costing £5,000,000 or more which most other funds can't afford. Another point; as the fund has continued to grow, we've continued to improve the bonds. For instance, in the last year we have reduced our deduction for Capital Gains Tax, improved withdrawal facilities, introduced a guarantee and a unique conversion option.

Abbey Equity Bonds

Alternatively, any amount from £100 will bring you into the Abbey Equity Bond Fund – one of the largest Life Assurance Funds in existence. This fund gives you the potentially high return associated with equities, but offers in addition the exceptional security of a widely diversified portfolio. The guarantee and conversion option mentioned above are of particular relevance in the fluctuating conditions of the equity market.

Abbey Selective Bonds

Or, if you have £250 or more to invest and you want a balance between the growth potential of equity funds and the rock-solid security of property bonds—you can choose our Selective Bond Fund. This fund invests your single premium one third in the Abbey Equity Bond Fund, one third in the Abbey Property Bond Fund and leaves the remaining third to be allocated between the two funds to obtain the maximum benefits dictated by our analysis of market conditions. Again all the new improvements described earlier apply to this bond.

Abbey Investment Annuity Bond

This investment plan is a personal pension scheme linked to the Abbey Pension Bond Funds with unique flexibility as to when and how you make your contributions, how your money is invested and what form of pension you will enjoy. You can invest up to £1,500 or 15% of your income, every penny of which is tax deductible. And, when you retire, you could get back the net cost of the plan as a tax free capital sum.

The Abbey 10+ Bond

The Abbey 10+ Bond is a highly flexible plan linked to life assurance, designed specifically for the surtax payer. The aim of the plan is to create a tax efficient fund which, after you have contributed for ten years, will be completely free of all income tax, surtax and personal liability to capital gains tax. Special features of the plan include a choice of life cover, investment flexibility between the Abbey Bond Funds already decribed and easily calculable cash-in value.

Your best man for life

Mance gets his way

companies and taxation of insurance premiums need to be co-ordinated. On the other hand, laws of insurance contracts do not need to be harmonised: the policy will simply say which country's law will apply (eg, where an Italian is insuring his factory at Lloyd's), or, if it is silent, the law applicable will be the insurer's.

But the commission will have a tough fight to get a directive embodying this sort of thinking through the Council of Ministers, although the task is not hopeless. The French government, in particular, seems less restrictive than it did. And, thanks partly to the outcry in German industry about soaring fire insurance premium rates (page 33), Bonn, too, has become more open-minded, though the supervisory authorities in Berlin are still fighting a rearguard action. Fortunately, the commission is in no hurry. Next year the British and the other new members will join the council and throw in their weight. So the directive is unlikely to appear before then.

Worryingly for the British, the equally important directive about "establishment" is at a more advanced stage. This directive harmonises the rules that will govern insurance companies having an establishment in member countries. Although a good deal more liberal than most national regulations, this directive is more restrictive than London would like. A British company operating through a subsidiary in Germany would need to localise "technical reserves" in Germany, based on the size of its premium income there. These technical reserves are supposed to match the insurer's unexpired premiums and outstanding claims on the business in question. On top of this, an EEC insurer would also need to maintain somewhere in the EEC a "solvency margin," that is to say, a surplus of assets over these technical reserves, calculated on a formula linked to his total EEC premium income and claims.

Insurers in outside countries would also have to keep solvency margins for their business inside the EEC. This cuts across one of the main contentions of British insurers operating abroad, which is that although they don't mind, but don't like, having to keep their technical reserves invested locally around the world, they must be able to keep their free reserves where they like. With Britain inside the EEC, of course, insurers would remain free to keep their solvency margins for EEC business in London. But they are afraid that other countries might then demand that British companies must keep solvency margins (and maybe big ones) localised too. The countries that leap to mind here are those American states still relatively liberal in this respect, Australia, and those developing countries that have not yet driven out foreign insurers.

Apart from Holland, present EEC members are not too worried by this because their insurance companies do little business outside the EEC. Britain, however, is vitally concerned, and protested to the EEC that the establishment directive ought not to be rushed through into law until Britain had a chance to have a proper say. Fortunately, last summer, Belgium put a stop to discussion about it in the council, because it was re-thinking its whole attitude to insurance regulation. But signs that its objection might now be lifted has induced London to invoke the consultation procedure (applicable during the interim period until Britain is a full member) to get the British arguments discussed. All Britain is demanding is the right for an individual member state to be "flexible" about making insurers from third countries deposit their technical reserves in that state and their solvency margins in the EEC, as regards business they do in that state, so that London would be able to be "flexible" towards insurers from outside the EEC operating in Britain, if it so chose.

On balance, the battle between the liberals (the British, the Dutch, the commission) and the retrictionists, has moved in the liberals' favour in the past year. It will continue to rumble for some time yet, especially when the commission issues its directive on freedom of services and as work proceeds on the even more fraught question of life assurance (where the once liberal Belgians have now prevented a takeover of a local life insurance company by the, British, Equity and Law).

Where is life assurance going ?

When the press started throwing brickbats at property bonds two years ago it was little realised that the whole mode of operation of the life assurance industry would start to be questioned in consequence. Critics of property bonds seemed to think they were discussing an upstart investment medium, on a par perhaps with offshore funds. The possible pitfalls of property bond policies were well-known: the inevitably subjective nature of the periodic valuations of the property portfolio, the problems that would arise if any fund (or all funds together) began to contract and unload property on to the market, the possibility of fund managers frantically having to invest massive inflows of new funds and so buying unsuitable or over-valued properties and so on. So the Scott committee was set up in February, 1971, with narrow terms of reference, aimed at possible hazards and abuses of property bond life policies and, for good measure, unit-linked policies.

But once the committee's work got under way, property bond managers were quick to make the point that just the same questions can be asked about life assurance policies as a whole, even those of the conventional type. Do not ordinary life offices share out the goodies between their policyholders on a basis even more arbitrary than by merely valuing a portfolio of property every month and apportioning the notional gains between policyholders? What would happen to ordinary life offices if they suddenly began to suffer a net outflow of funds for once? Don't they, too, ransack the market for new investments for their burgeoning funds, even though some of these later prove to be unsuitable or overvalued when they were bought? Are their selling

methods beyond reproach ?

Momentarily it was hoped that the Scott committee would gently widen its terms of reference and study the whole network of regulations governing life assurance in all its forms. Unfortunately it has chosen not to do so. Yet with the collapse of the Vehicle and General and the narrow escape of its life subsidiary from being embroiled, even the traditionalists in the industry concede that such a study is urgently needed. What has been demonstrated beyond doubt is the futility of trying to study segments of the life assurance industry in isolation from each other.

Thus although the big changes of the 1960s and the 1970s, which followed after Save and Prosper got its first unit-linked policy off the ground in 1963, were virtually all initiated by life offices on the fringe, they have affected the whole scene. In the first place, life assurance has been transformed from a traditional service industry, set in its ways, into a hotbed of aggressive competition, with a proliferation of new schemes and gimmicks aimed at particular investment and tax needs. Newcomers enter overnight and the traditional point of contact with the public—the part-time agent—is being by-passed.

Secondly has come the realisation that the life assurance policy is suitable for far wider and diverse investment needs than used to be thought. Indeed, because of the various tax reliefs, and the fact that it is less severely controlled than media like shares or unit trusts, it offers positive advantages, quite apart from the protection against premature death.

Thirdly, it has been found that life assurance salesmen, suitably trained, can sell complicated and varied policies, especially if likely customers can be pinpointed in advance or pinpoint themselves by replying to cut-out newspaper advertisements. Even the Prudential is experimenting with a few of its life assurance collectors to see if they can be trained to sell a wider range of policies.

But most big long-established life offices have not jumped to it. They have continued to bask in the unrelenting and impressive overall growth, 10 to 12 per cent a year, of the whole business. While not neglecting to set up their own versions, belatedly, they have tended to dismiss even unit-linked policies as merely a sales device by unit trust managers to exploit the tax reliefs on life policies. Nevertheless, they have come up with a few innovations of their own. Retirement annuity bonds, for instance, are partly responsible for the fact that single premium policies accounted for 39 per cent of all new life premiums in 1971. It is an embarrassing fact that these lump sum policies are not much bought to provide for old age, but for the high post-tax return they offer for 5, 10, 15 or so years, and their modest surtax advantages. More adaptable versions of the conventional life policy have also been appearing, notably the London Life's flexible whole life policy, under which the bulk of the benefits can be taken whenever the policyholder chooses (or as a pension), and which is drawn up like a contractual savings plan.

But what most life offices have not yet grasped is that both the growing overlap between life assurance and investment and the revolution in selling methods still have a long way farther to go. Unit-linked policies may already account for 30 per cent of current life premiums, but demand for them is bound to grow further. They are more suited to the principal investment need of today: protection against

Effective Gross Annual Yield	13.5%	14.0%	13.8%	12.3%

The net outlay and yield figures assume that income tax was paid at the appropriate standard rates. All figures relate to policies effected in the U.K.

These are the kind of results Standard Life with profits policyholders enjoy—with life cover in addition.

Standard Life is Britain's largest mutual life assurance company, a company built on outstanding investment expertise which has provided a bonus payment record unrivalled by any other company.

For the year ended 15th November 1971 REVERSIONARY BONUS rates were £3.50% on the sum assured and £5.00% on attaching bonuses.

In addition, Standard Life, since 1963, have been paying Special Claims Bonus on claims by death or maturity. The amounts of these claims bonuses vary according to the year of issue of the maturing policy, but as an example of the effect of these bonuses, the amount paid in 1972 on the policy effected in 1947 (in the above table) includes a claim bonus of £679.

Standard Life
ASSURANCE COMPANY

Established 1825. Assets exceed £900,000,000.
Head Office: 3 George Street, Edinburgh.
Branches throughout the United Kingdom and the Republic of Ireland.

How can an insurance company make its contribution to economic progress without jeopardizing its financial stability?

By insuring large or special risks in the following branches:
Life, Accident, Third Party Risks, Fire, Business Interruption, Surety, Marine, Engineering etc.

By taking out reinsurance with the "Swiss Re"

The "Swiss Re" helps insurance companies throughout the world to play an even more important role in their respective national economies. It offers cover capacity and international experience and is working on the future problems of insurance.

Swiss Reinsurance Company, Zürich
Swiss Reinsurance Company (U.K.) Ltd., London

inflation. They also offer considerable scope for further refinement. There is no need for the policy to be tied exclusively to equities (as in the original schemes), or to commercial property (as with property bonds). The policy can be linked to a mixed portfolio of equities, property, gilts and mortgages. Either the fund managers can be given discretion to vary the mix as conditions change; or the policyholder himself can have the right to say how much of each premium should be split between an equity fund, a property fund, etc, all run by the same group of managers—the concept, in fact, popularised by Mr Mark Weinberg's Hambro Life.

So out of the germ of the unit-linked policy has come the "managed fund." The premiums go not into a unit trust, which is bound by unit trust regulations, but into a special fund managed by the life office, or into several funds managed in proportions decided by the policyholder himself. But one distinguishing feature of all these schemes remains: the running and eventual value of the policy is clearly and rigorously linked to the investment performance of the fund or funds concerned. The investor gets exactly his slice of the cake, no more and no less.

With the conventional policy, of course, there is no such link and its value depends on arbitrary decisions by the life office about how much of the surplus should be dished out to policyholders as bonuses. But by paying terminal bonuses, life offices have shifted their conventional policies a step towards the "link" concept. Because terminal bonuses are only added on to a policy when it matures, life offices can be much more generous with them; they do not have to worry (as they worry with reversionary bonuses) that a future fall in the

Weinberg, still pace-setting

market might mean that they have guaranteed to pay a future bonus bigger than they can then afford.

Even so, the essential feature of arbitrariness still remains: the life office can pay whatever terminal bonus it likes, too little—or even too much (in which case other policyholders whose policies are not maturing suffer). Only the London and Manchester's system seeks to avoid this arbitrariness: its terminal bonus is intended to give the policyholder the average return on all L and M funds throughout the lifetime of the policy.

Some life offices have also been experimenting with managed funds. The Phoenix has recently produced one as modern as anyone else's. The Scottish Widows' (copied this month by the Legal and General) has a managed fund for pension funds which do not want to buy insurance policies to meet their future pensions commitment (reckoning they can perfectly well make their own forecasts of mortality and interest rates, thank you), but do want to subcontract the investment side of it. The Scottish Widows' also offers policies linked to a special equity fund under its own management, dubbed the "investor" policy.

These innovations are exceptional. Life offices have made no conspicuous efforts to offer their services as presumed investment experts to a wider market than the conventional policyholder (apart from a few unit-linked policies, sometimes, but not always, with the investment management provided by themselves). Perhaps because they are run by actuaries (with their compound interest and death-risk orientation), they have not muscled into the investment trust business, the unit trust business, property bonds or offshore funds, to say nothing of the fancier tax-minimising investment devices. And they have been slow to recognise and exploit new selling methods.

The traditional life offices have always relied on the part-time agent (solicitor, accountant, building society manager) for the bulk of their business. Yet these agents now look like being squeezed between direct salesmanship (newspaper ads plus visits by a full-time salesman) and high-powered brokerage firms specialising in life assurance with brand new networks of their own sales teams.

Meanwhile, the whole business of selling life assurance is becoming almost unfathomably complicated. Because of this, and because salesmanship has become increasingly aggressive, there is a growing need for tighter regulation of selling methods involved. This, indeed, has been a constantly recurring theme in the evidence to the Scott committee.

Registration of life assurance brokers and agents is certain to come sooner or later. It may appear in the common market's harmonised insurance rules, for both life and non-life insurance, whether Britain has acted first or not.

(a) UK insurance companies in the British Insurance Association and friendly societies which do life business (excluding overseas branches and subsidiaries), together with the UK business of Commonwealth life offices in the BIA. (b) Including £9m invested in unit trusts in 1970 and £10m in 1971 shown separately for the first time in 1970.

Registration would probably be followed by the setting of minimum qualifications and standards of competence, as is already done in Holland. Advertising would also be regulated more closely. So would commissions. And life offices would probably have to disclose market values of their investments (although this information is useless on its own ; what is equally important is how the liabilities of the life office are valued, a job that only the actuary can do or even understand).

The consequences of this caution, not to say inertia, on the part of the traditional life office will not be manifest tomorrow. But they will be crucial in the long-term. Mr Weinberg, speaking to the Insurance and Actuarial Society of Glasgow last November—forecast that the life offices as now known will virtually disappear, to be superseded by financial conglomerates—offering the full range of savings, investment, lending and life assurance services—within 15 years. Although that time span might seem a little short, in view of the entrenched positions of the heavyweights in the business today, his view, surprisingly, is widely shared among insurance men. If it is correct, the life offices are worse placed to be the masters of the new and emerging monsters than they were ten years ago. Unless they develop some taste for innovation fairly quickly, they cannot hope, at best, to be more than junior partners in the new conglomerates.

Reinsurance for the future

"I am sure you will agree with me that the future of insurance—worldwide—is bleak. Increasingly governments will nationalise it or regulate it and subordinate it to the supposed national interest. I would not put my children into insurance today." "Ah, yes. But would you put them into reinsurance?" "Hm. That's another matter."

This pessimist is biased: he is a reinsurer himself. But there is a lot in what he says. He might have added that the ever multiplying amount an insurer can lose today in one single catastrophe will also serve to ensure a buoyant demand from insurers for the specialist and esoteric services of their reinsurance colleagues. In the developing countries, where direct insurance is being nationalised or pushed into the hands of (regulated) local companies, the national companies need reinsurance in a way that the previous direct insurers, the Commercial Union, the Guardian and the rest, never did because of their size and international spread. In Europe, from what can be dimly discerned of the future EEC insurance regulations, reinsurers will remain free to offer their services across frontiers, while direct insurers will be subjected to all manner of impediments (see page 14), just as direct writers are variously regulated by individual states in America. Already reinsurers have started to exert a new and unaccustomed influence on the whole insurance scene, from the setting of premium rates to risk classification and "risk protection" (ie, steps by the insured to reduce the risk of loss). Reinsurance is the field of the future.

It is also a field in which London has effective competition from the continent. This is partly an historical legacy of the sheer size and comprehensiveness of the British direct writing companies themselves, and of the smoothness of London's Lloyd's/company/broker system, which allows risks to be split between several insurers without any of them having to resort to reinsurance, or not much. The big companies doing purely reinsurance are the Swiss Reinsurance Company in Zurich, and the Munich Reinsurance Company of roughly equal size (net premiums of about £250m in 1970), but very different character: the Swiss Re getting business from all over the world, while the Munich Re, despite a creditable recovery overseas since the war, still getting two-thirds of its business from German insurers. The General Re, the American Re and the Employers' Re (all American) are less than half the size. The Mercantile and General (by far the biggest professional reinsurer in Britain), is about one quarter.

Reinsurers will pay a slice of that

These professional reinsurers get business direct, by sending their salesmen knocking on the doors of insurance companies all over the world. In parallel with their operations are the energetic activities of the London brokers bringing some £500m a year of reinsurance to Lloyd's underwriters, the big British direct writing companies with reinsurance departments active on the marine and aviation side but doing little fire or liability, and a large, and very elastic, fringe of smaller specialist insurance companies, of varying national origin, that jump on to the reinsurance bandwagon when things are going smoothly, and jump off when they turn sour, or, more usually, a year or two afterwards. Brokers guess that the marine reinsurance they handle in the London market (which excludes what the Swiss Re and other professionals pick up direct) is split roughly 50:50 between Lloyd's and the companies ; on non-marine business the position is more obscure, as well as variable (as the fringe companies get in and out). What does seem true is that Lloyd's has a strong grip on the fire reinsurance placed in London by American companies.

For 100 years insurance students have had drummed into them that the reinsurer follows the fortunes of the direct writer, on whom he relies for the setting of premium rates and the selection of risks. But this idea took a hard knock in the 1960s, at least up to 1967. In those years, when there was over-capacity in the British and American markets, reinsurers suffered much more than the direct writers. For the old (and still the main) sort of reinsurance treaty, the proportional treaty, the premium and the claims are apportioned between the direct writer and the reinsurer. But in order to get his cut of the business, the reinsurer also has to pay a commission to the direct writer, to cover his presumed share of the administration, selling and commission expenses. But these rates of commission are variable ; when reinsurers are keen to get business, up they go. And since these periods are—by definition—periods of over-capacity in

Legal & General's new Build-Up Plan brings 'with profits' house purchase within reach of the middle-income man!

Mr. X, aged 35, earns £2,500
Mortgage: £5,000, 25 years, interest 8% p.a.
Method: ordinary repayment of interest plus capital
Average net monthly cost: £32·62*

Mr. Y, also 35, also earns £2,500
Mortgage: £5,000, 25 years, interest 8% p.a.
Method: *L & G's new Build-Up Plan* for endowment house purchase
Constant net monthly cost: £31·80*

What a breakthrough! Thanks to Legal & General's new Build-Up Plan, Mr. Y can now benefit from a with-profits endowment house-purchase contract, yet his monthly outlay compares favourably with Mr. X's, who is repaying straight interest plus capital.

The Legal & General Build-Up Plan uses a with-profits endowment policy, but the sum assured, instead of being 100% of the loan, is only part. For instance, in the above example, only 50% of a 25-year mortgage. At the end of the term the difference will be made up out of the accumulated bonuses; and assuming the bonuses continue at current levels, the borrower will receive a very useful cash sum.

There is a 25% safety margin in case bonuses drop from their current rate. Also the policy guarantees that the loan will be fully covered in the event of the borrower's death.

No doubt about it, the L & G Build-Up Plan is going to appeal to a lot of people who normally might not be able to afford a with-profits endowment scheme. That's why many building societies have already welcomed it. And that's why you owe it to yourself to find out more. Call your local L & G office or write direct to:

Legal & General

Legal & General Assurance Society Ltd., Temple Court, 11 Queen Victoria Street, London, EC4N 4TP.

* *Based on present tax rates*

THE MERCANTILE AND GENERAL REINSURANCE COMPANY LTD

Record new business figures reported by Life Division

In his Statement, circulated with the Annual Report for 1971, Mr. H. K. Goschen, Chairman of The Mercantile & General Reinsurance Company Limited, reported record new business figures for the Life Division. As a result of the triennial valuation it has been possible to transfer £1,500,000 to Profit and Loss Account from this Division. Mr. Goschen also said "We are also able to take £500,000 from the Marine and Aviation Account whilst still maintaining a strong position. Unfortunately, however, the results of our Fire and Miscellaneous Accounts have again necessitated transfers from Profit and Loss. However, there are at least some welcome signs of recovery in the business of our General Branch Division. This is encouraging after so long a period of poor results, even though we cannot be satisfied by any means that we have stabilised the situation in all underwriting areas. Nor can we yet afford to relax our efforts for in that particular area traditionally regarded as the bread and butter of our business, the Fire and Miscellaneous Proportional Account, the out-turn is very disappointing.

It is essential that an international reinsurance company underwriting substantial risks should have adequate and flexible reserves to meet all possible adverse circumstances. Unfortunately, in the past few years we have been called upon to demonstrate our ability to deal with these circumstances by drawing on our inner reserves. The transfers from Life and Marine and Aviation have enabled us to reverse this trend and we have been able to strengthen both our published and inner reserves as shown in the Profit and Loss Account after, of course, having made provision for technical reserves on a conservative basis.

Life

New Life sums assured written by the M & G Group in 1971 were £610,000,000 (£537,000,000 in 1970). New business in the United Kingdom and Eire amounted to £324,000,000 (£282,000,000 in 1970). Business written through our Overseas branches and subsidiary again accounted for about 40% of our total production. The world-wide Life Premium Income was £15,600,000 compared with £14,000,000 in 1970.

Business written in the Continuous Disability Account again increased, the premium income at £1,900,000 being some 20% higher than that of the previous year.

General

The need for considerably improved profit margins in General Branch operations must be more widely recognised if a soundly based reinsurance market for this business is to prosper. The uncertainties of underwriting are greater than they were and the quality of information which we receive on major risks has not improved. This lack of means to bring the reinsurance of major risks of many descriptions under proper control remains one of our basic problems.

Two years ago there was much talk of insufficient capacity and lack of facilities for handling major risks. Today the position is very largely reversed and an excess of capacity in some areas, notably Marine and Aviation, is now bringing about a reduction in rates which we observe with some misgiving.

We are concerned too at the demands already being made upon us for increased terms in markets where after several years of poor figures one year's result has shown a marked improvement. There is still a need for wider recognition that reinsurers should be allowed to accumulate from the better years the reserves they need for the lean ones that always follow.

Fire

We recognise the difficulties that persist in the direct insurance of industrial fire risks. We want to play our part in bringing this important class of business under proper control. Our Fire business in the United Kingdom was satisfactory in 1971, helped by the general increase in premium rates. Elsewhere the worst territories were the highly developed countries of Europe, especially Germany and Scandinavia. We welcome and are watching closely the remedial measures being taken there.

Motor

The premium rates for Motor business in the United Kingdom have been raised now to a level where both insurers and reinsurers should find themselves in a substantially improved position. But in an inflationary situation, the cost of repairs, court awards for personal injuries and the other factors that affect the claims situation, will not stand still and one must foresee the necessity for further rate increases.

Marine and Aviation

The Marine and Aviation account has grown rapidly in recent years. On the Marine side, there was an increase in rates following the poor results a few years back. The present trend of our account is satisfactory, but we are apprehensive about the continuing rising cost of hull repairs. Another problem concerns the high insured values of super tankers and such sophisticated vessels as natural gas carriers. It is much to be hoped that the rates of premium in this most competitive market remain adequate.

In Aviation, our satisfactory experience over the past few years reflects the experience of the aviation market as a whole. The first few years of operation of the wide-bodied jets have, fortunately, been satisfactory for underwriters but we wonder if enough attention has been given to the extraordinary fluctuations to which a modern aviation insurance account must remain vulnerable.

Investment

During 1971 the greater part of the new money arising in the U.K. was invested in equities and property, which now amounts to just over 50 per cent of our total funds.

Overseas we increased our equity holdings in North America, Australia and New Zealand, South Africa and Europe and commenced investment in three new territories, Japan, Hong Kong and Singapore, all of which performed well."

Head Office: Moorfields House, Moorfields, London EC2Y 9AL.

the market, reinsurance commission rates go up in just the times when competition is narrowing or eliminating what underwriting profits there are. Conversely, when the cycle enters its up-phase, with a shortage of market capacity—such as in Britain and America from 1967 to 1971—brokers find it harder to place risks, premium rates tighten, and the direct writers themselves find it harder to get reinsurance. Not only does the whole business become more profitable, for both insurers and reinsurers, but falling rates of reinsurance commission ensure that reinsurers do particularly well.

So proportional reinsurance enjoyed a spell of profitability in 1967-71. But it may now already be on the downswing again. Reinsurers are chasing proportional business; commission rates are edging up. In the other type of reinsurance, excess of loss reinsurance (see next article), the same tendency has been evident—though in a more dramatic form.

Where the buck stops

Under excess-of-loss treaties, the reinsurer's interest is quite different from the direct writer's. What he does is to insure the peak claims. For any claim arising on, say, the underwriter's North American fire book, the deal might be that the direct writer pays the first $25,000 of any claim and the reinsurer any excess. For this, he sets his own premium rate (unlike the proportional reinsurer); but even so, in some of the past few years excess-of-loss reinsurers have been having a far less happy time than direct writers.

The reasons are simple. Advancing technology means big claims come to represent a larger share of the total. In addition, inflation means excess points become too low. So the reinsurer suddenly finds himself paying a much bigger proportion of the total claims than he bargained for. In the late 1960s inflation in Britain and America speeded up, the incidence of really big fires rose and the excess-of-loss reinsurers carried the can. So although proportional reinsurance was looking up by about 1968, on excess-of-loss business recovery has been more patchy.

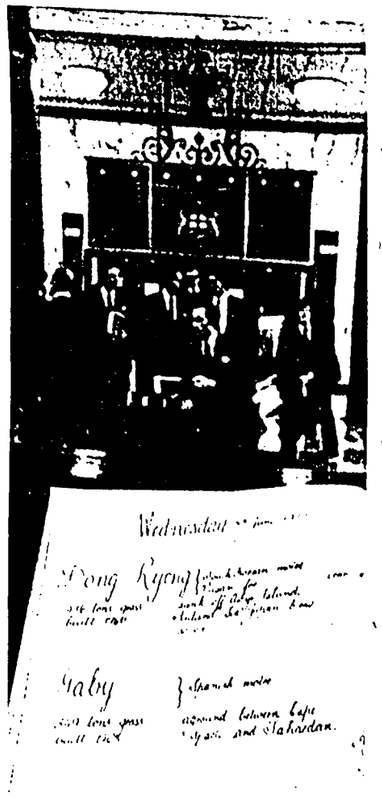
But business written this year and last will probably prove profitable. Inflation at 5-10 per cent is now allowed for when premiums are set, as also are the growing delays before big liability and marine claims are settled. On excess-of-loss motor reinsurance (which applies only to big injury claims, which can now exceed £50,000 a time in Britain) reinsurers have started to use an excess point (ie, the $25,000 in the illustration above), pegged to a suitable inflation index.

These underwriting improvements and refinements are important because it is the excess-of-loss side of the business that is growing the faster and will continue to do so.

Indeed reinsurers are often surprised that it has not grown more quickly. One reason is that traditionally, especially on the continent, the raison d'être of a reinsurer was merely to add to the capacity of the insurance market rather than to protect the insurer against catastrophe losses. This still holds in Germany. Because the supervisory authorities make German insurance companies keep such high solvency margins (see page 33), motor insurers have to cede huge chunks of their motor insurance to reinsurers, by means of proportional treaties. In almost any other country, proportional motor reinsurance has disappeared as it makes little sense. Assuming the insurer is not short of capacity, all he needs is protection against the big claims, and this he would get by excess-of-loss reinsurance. But in all countries, insurance companies are used to working with proportional reinsurance in fire and marine fields, and have been slow to make the logical switch to excess-of-loss.

There are other reasons why the switch has been slow. Where the basic premium rate structure is weak (as up to 1967 in marine and fire), direct writers cannot afford to pay the right rates for reinsuring their excesses of loss. So they don't, and get proportional reinsurance instead. Moreover, even the reinsurers themselves have mixed feelings about excess-of-loss business. Lloyd's underwriters like it: they prefer the freedom to fix the rate (which they don't have with the proportional business); they don't have the same kind of long-standing links with insurance companies as the professional reinsurance companies (although the placing brokers may do). But the professional reinsurance companies are not so sure. The Munich Re, in particular, is used to working with German insurance companies (especially the Allianz, Germany's biggest fire insurer, with which it has cross shareholdings of 25 per cent), and this cosy partnership relationship is obviously more suited to proportional business than excess-of-loss, where there is more of a buyer-seller relationship. It is typical that the German reinsurance companies now take part in the discussions between the insurance companies themselves about what premiums should be charged, rather than forcing them to charge adequate rates by market forces alone. What is more, reinsurance companies everywhere seem occasionally uncertain about the right method to fix excess-of loss premiums. With inflation and

More goes up in one go



Neave : let's see what we're in for

the multiplying scale of risk, they are in constant danger of coming badly unstuck.

Yet is is precisely because of this growing riskiness that the need for excess-of-loss reinsurance will grow. Take plastics. Everybody knows that plastics factories are bad risks. What has now been painfully realised is that almost any factory of any size has a good deal of PVC around somewhere and burning PVC means hydrochloric acid fumes all over the place, which corrode metal in the structure of the building, machinery, and, nastiest of all, the computer, resulting not only in huge material damage, but business interruption claims (eg, if the production process was controlled by the computer) of several times the size. Box girder bridges are another illustration of how insurers (and, even more, reinsurers) had no idea of the sort of risk they were underwriting. Similarly with injury claims : for those designing buildings, evolving new drugs, etc, the range of possibilities of things that might go wrong is so vast, and so expensive to explore thoroughly, that, beyond a certain point, the contractor or manufacturer must just rely on his insurance. This, in turn, means that the reinsurer (which is where the buck stops) must turn himself into an expert on obscure hazards so that the premium he levies gives the necessary incentive to the manufacturer to carry out all feasible research.

One welcome sign of the times is that the insurance on the Olympic Stadium at Munich was negotiated while the project was still at the drawing-board stage. But generally reinsurers nowadays need a very different expertise from what they did in the past. It is not surprising, therefore, that the more outspoken of them, like Mr Julius Neave of the Mercantile and General, have been reiterating the need for joint action to get big new hazards studied jointly and properly classified, rather as the Lloyd's Register has long done with ships. This line of argument is convincing. The insurance industry will not be able to cope with the shadowy but threatening new challenges that modern technology will present, unless it can rely on a viable reinsurance market. But the initiative will probably have to come from the reinsurers themselves.

Lloyd's knows, you know

Japan stays shut

Tokyo

If past form is anything to go on, Japan will overtake America in sheer size of gross national product in the closing years of this century. So, although there is no immediate prospect that the Japanese insurance market will ever have the importance that the American one does, it would be a brave man who would stake much on it not becoming so in due course. In the meantime, like Japan itself 100 years ago, its insurance market today is still largely closed to foreigners and the Japanese insurance industry itself sells little overseas. But in other respects it is a microcosm of the economy : in its links with the big industrial groups, in its continuous dialogue with the government, in its gradual, though so far meaningless, relaxation of discrimination against foreign interests, and, above all, in its discipline.

Predictably the non-life market operates a tariff, covering the whole of the market, which is approved by the Ministry of Finance. Commissions also are standardised. To the man in the street insurance is sold through agents. There are no brokers ; in fact they are specifically disallowed by law. So competition has a muted and appropriately Japanese form. Big risks are shared between the big companies by means of reciprocal reinsurance, but with surpluses reinsured in London.

But although approval is needed before the industry changes its tariffs or policy conditions, in practice this has been forthcoming when necessary and Japanese insurance has been consistently profitable. When motor insurance turned sour in the late 1960s, partly because of a jump in crashes by taxis and dump trucks, insurance companies persuaded the Ministry of Finance to allow a 50 per cent increase in premiums. A special pool was also instituted for special risks. As a percentage of premiums motor underwriting losses had risen from 4.7 per cent in 1965 to 9.4 per cent in 1969. That was followed, however, by a profit of 6.3 per cent of premiums in 1970, even though the new rates had been effective for only part of that year. So sharp an increase in rates (50 per cent) as occurred in 1970 would have been hard to get past the state insurance commissioners in America ; and the recent jumps of this order in London came about only after much more serious underwriting losses on motor business than Japan has experienced. Japanese insurers are keenly aware of the dangers of letting premium rates get out of line in an economy where money gnp is growing at 15 per cent a year. But, equally clearly, competition between insurers in no way prevented the rate adjustment, as it would have done in many other countries.

Japanese discipline applies not only to its insurance market, but also to the way its industry is run. A £50m petro-

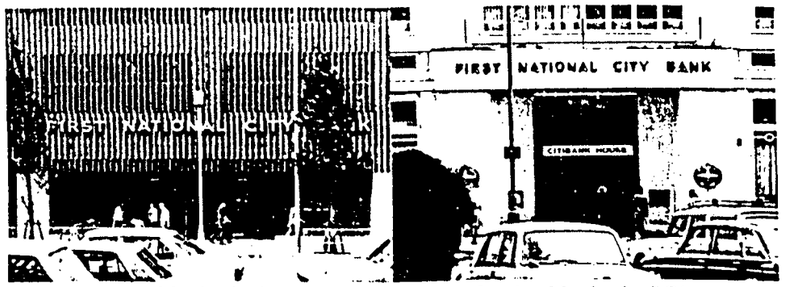
MOST COMPANIES HAVE A PENSION PLAN.

IF YOUR CLIENTS ARE SELF EMPLOYED, THEY HAVE TO LOOK AFTER THEMSELVES.

The Scottish Widows Personal Pension Schemes are an ideal way for self-employed people to guarantee themselves a worthwhile pension on retirement.

They're one of the best methods of saving for the future while at the same time taking full advantage of important tax concessions.

As a result of the 1971 Finance Act, self-employed people can put aside up to £1,500 per annum towards their pensions. These contributions, eligible for tax relief at the highest rate of tax paid, are accumulated in a tax-free fund to provide a pension and a tax-free cash sum. And we've just revised our rates to make our plans even better. For instance, if a man of 34 took out a non-profit contract with an annual contribution of only £250 (less than £175 after tax relief at the standard rate) he would at 65 receive a guaranteed pension of £1,614 p.a. *plus* a completely tax-free cash sum of £4,842. With profits contracts are available too.



These facts, coupled with Scottish Widows proven investment expertise, make our Personal Pension Schemes some of the most attractive on the market.

If you'd like more details about our revised pension schemes, simply drop us a line.

The Citibank Insurance Claim: we collect and pay out in 86 countries.

Tokyo, Monday April 24.
Debit ¥794,500,000.

London, Monday April 24.
Credit £1,000,000.

In fact, we can claim even more. With 800 branches and affiliates, we have the biggest international banking network in the world.

Because we're in almost every country you can think of, our payment of claims and collection of premiums is fast. (A lot faster than if we were just based in London.)

It doesn't stop there. Having collected your money for you, we do our best to make it grow.

Take, for instance, the Citibank same day transfer service. It reduces interest costs on loans, and increases earnings on deposits.

Perhaps you don't want to be parted from your money for long. In that case, we can offer you very attractive interest rates on short term deposits in sterling, U.S. and Canadian dollars, and most other major currencies.

Or say you want to deal in the North American Bond market. We're in constant touch with both the U.S. and Canadian markets. So if you buy or sell at 3 pm, we get you the market's opening price.

We also handle letters of credit to cover losses and act as reserve deposits. And we specialise in the establishment and management of U.S. Trust Funds, as well as Eurocurrency loans to finance portfolio investment.

Stafford Crane and his team at Citibank deal with nothing but the banking requirements of insurance people.

Have a talk with him soon. It's nice to have a big bank on your side.

FIRST NATIONAL CITY BANK

chemical complex is cared for in Japan like a sacred imperial treasure. White lines are drawn all over the plant, safety zones established, interminable fire drills carried out, and every regulation checked over and over again. Disasters, of course, will occur. Earthquakes, in particular, are a lurking menace. But the Japanese safety record is outstanding. That is why reinsurers abroad fight to get their hands on Japanese fire reinsurance treaties.

Japanese isolationism, however, has had one other predictable consequence: life assurance is relatively underdeveloped. Most life assurance contracts are of the conventional with-profits endowment type. Equity-linked and property bond policies, which have had such spectacular growth in Britain, are not allowed. But the authorities are in the process of revamping the whole life assurance set-up. Early next year the finance ministry is expected to give approval to equity and property linked policies. This ought to give a boost to life assurance as a medium in Japan. Shares and property have been appreciating handsomely in Japan recently: shares by 35 per cent in six months. Yet life assurance companies are restricted to holding no more than 30 per cent of their assets in equities and 20 per cent in property.

The pensions business also has a peculiarly Japanese flavour. The state pension is low—£12.50 a month—though shortly to be doubled. In consequence, company pension schemes are extensive, run by trust banks and insurance companies on behalf of employers, with the banks holding about 60 per cent of the business. But so far companies have shown little inclination to run their own funds.

The structure of the insurance industry reflects the structure of the rest of Japanese industry. There are 21 companies. Each of the big ones is linked to one of the major Zaibatsu groups of industrial and commercial companies. On the non-life side the picture is this:

Mitsubishi group—Tokyo Marine
Mitsui group—Taisho Marine and Fire
Fuji-Yasuda group—Yasuda Fire
Hitachi-Nissan group—Nissan Fire
Sumitomo group—Sumitomo Marine

Intra-group contracts are drawn up on a commercial basis, with special provision made for exceptional risks. Since almost all lines have so far been profitable, the insurance companies in the big groups are happy to accept all the business offered to them. Similarly, the members of the families have, in theory, a power to place their insurances outside the group; but in practice, not least because of inter-company and intra-group shareholdings, priority is given to the insurance company in the family.

It is this habit that has given insurers abroad only a tiny cut of the Japanese marine insurance business, even though the Japanese are now the biggest shipowners in the world. Every ship is insured in Japan. The authorities stress that shipowners are free to insure elsewhere. In practice, however, the contract would need approval from the Ministry of Finance, which, in turn, would require to be convinced that the shipowner could not get cover in Japan. This has not happened so far and is unlikely to in the future. Insurance companies are, anyway, among the top 10 shareholders in almost all Japanese shipping companies and for several years these companies paid no dividends. "Giri," the Japanese sense of obligation, is therefore involved. In the meantime, the reinsurance need is considerable, and is, of course, largely met in London, where all Japanese insurance companies are familiar clients of the big City brokers.

But the Japanese complain that reinsurers make too little allowance for the high quality of Japanese fire and marine business, that rates go up just because experience deteriorates in Europe and America. The Japanese insurance companies are, therefore, always studying the possibility of "increasing capacity in certain lines," notably tanker reinsurance. "A lot of tankers have exploded," one Japanese insurance man complained, "none of them was Japanese-owned, but they want us to pay higher rates just the same." But whether or not the London reinsurance underwriters do well out of Japan, the brokers certainly do: Japan probably accounts for 5-10 per cent of all reinsurance business now reaching London. For the direct writing companies, however, Japan is stickier.

The 31 foreign insurance companies operating in Japan have only a 1 or 2 per cent share of the market. They have combined to form groups, of which the British Insurance Group is the largest with 12 members. Nor, despite discreet pressure from foreign insurance interests, is there much prospect of liberalisation in the future for all the hot-air talked about it. For the moment the best hope of foreign insurers is to offer reinsurance.

Conversely Japanese insurers have hardly set foot overseas so far. Premiums earned overseas in 1970 totalled only £10m. Many of them have branch offices in America, London, on the continent, and in south-east Asia and south and central America. But only in Singapore and Indonesia do Japanese insurers regard themselves as being among the dozen or so most active companies. The reason is plain. Where Japanese business is expanding steadily, as in south-east Asia, it is easy for Japanese insurers to move in. Latin America (particularly Brazil) is another region where Japanese business penetration promises to grow fast. In theory, therefore, British, American and continental insurers hoping for a slice of the Japanese cake may use this growing Japanese activity overseas as a bargaining counter. But they may be disappointed. To take only one example, although Swiss insurers operate globally, no foreign insurers have found it easy to break into the Swiss domestic insurance market.

The chances are that the Japanese will eventually become net exporters of insurance. If their companies could be encouraged to add to the capacity of the London market that would be something.

After Santiago

At the third United Nations Conference on Trade and Development, held at Santiago in April and May, more attention was paid to insurance than at Unctad II, at Delhi four years ago. The Group of 77 started off with a draft resolution that went beyond earlier discussions. Britain and most of the other western countries registered strong objections to a number of the provisions, including those saying that:

—member countries should all adopt a standardised system of insurance statistics.

—in developing countries, local industries (even if foreign-owned) should insure with local insurers wherever possible.

—that all insurers operating in developing countries should be made to invest their technical reserves (ie, provisions for unexpired premiums and outstanding claims) in the countries where the premiums arise; loans guaranteed by the governments should be regarded as suitable investments as regards security, liquidity and so on.

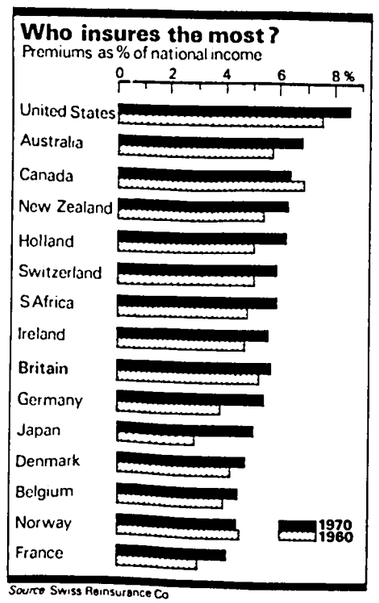
—where goods are supplied to a developing country as part of an aid programme, the transit insurance (ie, sea, rail, etc.) should be placed with the local insurer.

—donor countries should not specify that the insurance on local projects forming part of their aid programme should be placed with their own insurance companies (even if their motive is purely to ensure security).

Opposition from the developed countries at Santiago led to a compromise resolution. Even so the British, on instructions from London, alone abstained, and voted against the three paragraphs that said:

—local insurers should be favoured in developing countries.

—technical reserves should be invested locally.



—direct investors in developing countries should use local insurers wherever possible.

Having more extensive overseas insurance interests than any other developed nation, Britain has once again ended up as chief opponent of the endeavours of the developing countries to run their own insurance.

Does it matter? Superficially, perhaps not. Resolutions passed at Unctad conferences usually have little impact on what happens in the real world outside. What they do, however, and what the surrounding discussions also do, is to influence the climate of opinion in the developing countries, and, to some degree, in the developed countries too.

For insurance this is important. The developing countries have it within their own hands to implement the three points that Britain voted against in the final draft. But, as it happens, developing countries do not automatically obey what Unctad recommends, any more than developed countries do. They have, for instance, been slow to force foreign insurers to keep their technical reserves localised, even though Unctad has been talking about this for eight years. What may have done harm, however, is the impression of Britain fighting a last ditch battle in defence of economic interests inherited from colonial days. For this clumsiness the Government itself appears responsible, unlike the situation in 1964, when it was the British insurers who made themselves unpopular by taking a blinkered and intransigent line and were even given to occasional mutterings about HMG "selling us down the river."

For British insurers are beginning to recognise that they have been fighting a losing battle. It is useless for them to insist that freedom of insurance (ie, freedom for the British insurers' agencies and branch offices to operate as they please) is a vital prerequisite for economic wellbeing when continental Europe and Japan are flourishing, with tightly regulated domestic insurance industries, partly or totally closed to foreigners. The natural response from the developing countries has been to build up their own insurance industries, behind the insurance equivalent of tariffs, ie, rules that favour local insurers and hamper foreign ones. Indeed, it is surprising that these rules have not been more severe than they have. True, the standard of insurance service (ie, cost, administrative efficiency, and security) probably falls, but this is the exact parallel with what happens when a developing country puts restrictions on imports: the local stuff is not so good, if indeed there is any at all.

Source Swiss Reinsurance Co

The British have meanwhile been doing conspicuously little to help the emergence of local insurance interests (apart from the useful work done by the Chartered Insurance Institute in training local personnel). The result in numerous Asian and African countries (India is the latest) has been that insurance has just been nationalised outright and British insurers have been kicked out altogether, without compensation or a residue of goodwill. The local population is then almost certainly less well-served than it would be by a vigorous home-grown private insurance industry.

This is important, because London has a vital interest in what happens in these markets once the Royal, the Commercial Union, the Phoenix and the rest are ejected, or cut down to size there. One big composite company in London reports a big recent increase in its business from abroad that is not placed in the traditional way—through the local branch or agent—but comes, probably through a broker, direct to the London head office. These are the risks that are too big or tricky for the local companies to handle, nationalised or not.

Nationalisation or the evolution of a local industry also means far more reinsurance, for obvious reasons. London ought to hog the lion's share of this. Unfortunately, because the big British companies are too often identified with the rearguard action to preserve their direct writing interests in these countries, they are usually on the wrong foot to pick up the reinsurance that comes afterwards. The Swiss Re and the Munich Re are renowned for being much quicker on the draw. The interest of the London market is that there should be an active local industry, state-owned or not, that will sell insurance vigorously, and so

ESTATE DUTY & TAXATION

For prompt service and impartial advice on this extremely complex subject consult Hogg Robinson & Gardner Mountain. Our reputation is well known to both the accountancy and legal professions as leading advisors in this field.

Should you be interested in our services please write, or telephone, to make an appointment.

Our Estate Duty Department has recently published a booklet entitled "A Practical Approach to Estate Duty & Taxation Problems" which contains much useful information of value to Solicitors, Accountants and Stockbrokers. A limited number of copies are still available at 50p and may be obtained on application.

What has an insurance broker got that you haven't?

He has an expert knowledge of the whole insurance market which only comes with years of experience on top of a thorough training. He is the only person from whom you can get independent insurance advice.

When you use the services of a CIB broker, as we hope you will if you don't already, this expertise shows itself in the way he constantly watches over your interests.

When choosing a policy, he watches the small print for you – and finds the fewest exclusions for the lowest premium available.

When deciding what policies you need, he will cast a thorough eye over all your company's activities and arrive at the most complete cover at the lowest market cost.

And when you have occasion to make a claim, he will watch your interests like a hawk, and will bend his brain to get you the best possible settlement.

Get a CIB broker to run an eye over your insurances, and to recommend improvements.

If you'd like a list of CIB member companies, just ring 01-588 4387 and ask for one.

The British insurance market is the best in the world. But it presents a maze-like complexity to one who doesn't know his way around.

Through this baffling labyrinth, a CIB broker is just the guide you need.

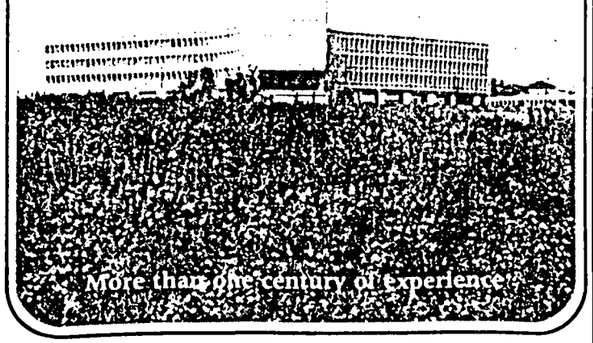
A Spanish Insurance Group with an European outlook

From the prestigious pages of The Economist, we send our cordial greetings to the insurance world.

Our friends know that our Group, within the Spanish market, has a very definite personality.

- it is one of the oldest (Catalana was founded in 1864.)
- it is third in premium volume
- it is a pioneer in the application of informatica to insurance
- it is one of the most advanced in the introduction of modern managing techniques.

*



In 1971, and as a step further in our decentralization plans and development, we have put in force two important realizations:

- a new Central Headquarters located in the Barcelona outskirts, they were planned thinking of the greatest possible comfort for our human potential.
- a new and powerful IBM computer 370/145 with teleprocess, which is the first of its kind in Spain.

*

In 1971 we reached a premium volume over a thousand six hundred millions of pesetas.
The capital and reserves of the Group reached on December 31/1971, the figure of two thousand five hundred fifty millions of pesetas.

Grupo Asegurador CATALANA/ OCCIDENTE

"YUGOSLAVIA" INSURANCE AND REINSURANCE COMPANY

Knez Mihajlova 6/11 Belgrade
Telephone: 621355
Telex: GENDOZ 11334

In accordance with the Statute enacted on May 12, 1971 this Company deals with the following businesses:

1) Insurance and co-insurance of persons, properties, transport and credits.
2) Insurance and reinsurance in this country and abroad.
3) Agency and other services for home and foreign insurance companies.
4) Insurance of earthquake risks.
5) Study and participation in preventive and repressive measures in insurance and co-operation with State Authorities and other organisations interested in the realisation of these measures.
6) "Yugoslavia" does business concerned with other activities through which damages are lessened and avoided.
7) "Yugoslavia" also does other businesses which are foreseen in the Statute and by the decisions of the Assembly as its sphere of action.

The Company was founded by the merger of the Republic Insurance Communities of Srbija and Crna Gora, with twenty-seven insurance companies in and out of the six Socialist Republics of Yugoslavia and two of the autonomous districts, forming together the Yugoslav Community of Insurance to carry out the 1967 reform of insurance. The company was established on December 12, 1967.

The founders of the Company included many of the largest enterprises and banks in Yugoslavia. The Company is made up of 101 business units throughout the country, situated in the largest towns and economic areas, thus making it the only insurance company with real character and importance in Yugoslavia.

"Yugoslavia" has good business and partnership relations with over 300 insurance companies throughout the world. It employs 1,575 people, of whom 305 are concerned with contracting insurance. In addition, there are 1,030 agents working in the field on a commission basis.

In the financial years up to now, this company has consistently realised complete solvency and liquidity.

"Yugoslavia" has made business arrangements with 28 Yugoslav banks.

Almost all the giants of the Yugoslav economy have entrusted to and have successfully done insurance business with this Company.

More than 2,000,000 citizens of Yugoslavia are supplied with policies by the Insurance and Reinsurance Company "Yugoslavia," covering life insurance, accidents, house implements and furniture, cars etc.

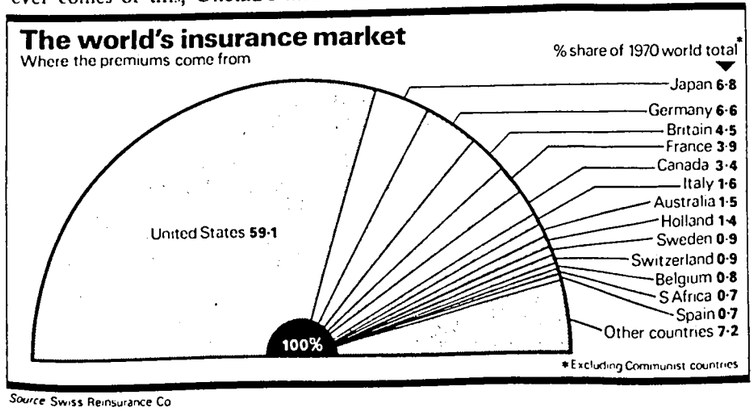
increase the amount of surplus business that comes to London (or New York, Zurich or Munich), either as direct business through brokers to the companies and Lloyd's, or as reinsurance, because the capacity of the local companies is not big enough to keep it.

That is why the move of the IRB, the Brazilian state reinsurance company, to set up shop in London is encouraging. Brazilian rules require local insurance companies to reinsure specified proportions of their business with the IRB. The growing tendency is for national reinsurance concerns like the IRB to try to spread their risks further by reinsuring among themselves. This is the solution that Unctad recommends (incidentally. Unctad has never advocated nationalisation of insurance). However, it is fraught with problems. The reinsurance would work through a regional pool, or a jointly-owned company. But there is endless scope for argument about the terms on which the pool or company should accept reinsurance from the different participating countries, as well as for national jealousies including fears that the strongest member country would do best out of the scheme: Kenya in East Africa, Singapore in the Pacific Basin, and so on. Just as with the airlines' abortive plan for a joint insurance scheme, London will need to be only moderately clever to lure the business here instead. Regional reinsurance pools, in fact, are probably a dead duck.

Nevertheless, the Chinese were unexpectedly active at Santiago, offering to exchange reinsurance with all less developed countries, and exhorting them to steer clear of the machinations of the imperialists (ie, America), the running dogs (ie, Britain and France), and "the other superpower" in the insurance field. Whatever comes of this, Unctad's insurance work now moves back to the soberer atmosphere of the Unctad secretariat in Geneva, where insurance, along with other invisibles, falls into the domain of the formidable Mr W. R. Malinowski. Mr Malinowski, a skilful and provocative Pole, has now established himself as the demon-king in the folklore of British insurance. Haranguing the representatives of the rich countries like an irate schoolmaster, denouncing the supposed colonial mentality of British insurance men, Mr Malinowski has done much to convince British insurance men that Unctad bodes nothing for them but ill.

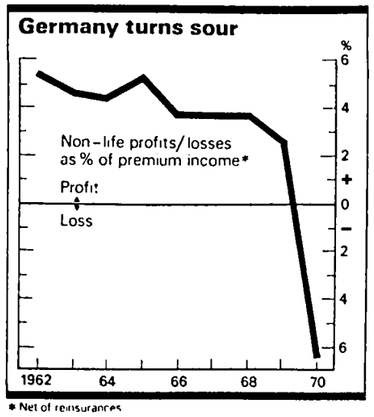
This impression is false. The Unctad secretariat has done much to quench the wilder fantasies about insurance in the minds of many developing countries, such as the idea that it means a massive outflow of foreign exchange in the shape of premiums (while claims are apt to be overlooked). It has helped to focus attention on the help that can be given to developing countries in setting up proper systems for regulating and supervising insurance industries, compiling proper statistics, and building up local expertise. Once set up, local insurance industries are obviously capable of underwriting most of the small scale personal and simple insurance risks, while the big ones go on to the world market. It is this basic pattern that the Unctad secretariat (as distinct from politicians in conferences) has sought to encourage. British insurers could still do themselves a good turn by encouraging it too.

The demon-king



Germany hits problems

British insurance companies now trying to muscle in on the continent have two choices. They can either (a) try to build up in Holland, or Belgium (ie, the countries sharing the relatively liberal British approach to the business), or (b) they can go for one of the two big markets, France or Germany.

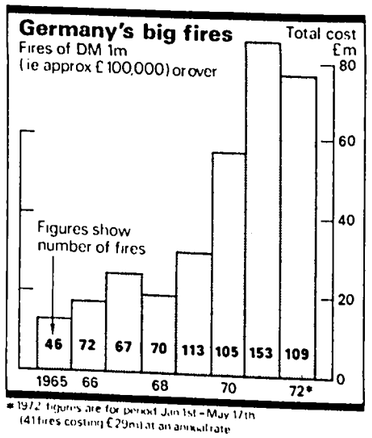


Germany is far the most important market in Europe (see chart below). But things have now come unstuck there in the industry in a big way. Abysmal underwriting results have made their mark on the British offices' 1971 figures, even though their stake there is tiny. German fire insurance has been passing through the same problems that hit British insurers about five years ago and the Americans ten years ago. Fire wastage has suddenly but persistently leapt ahead far more quickly than has the money gnp. So fire premium rates, although based on money values, have become seriously inadequate.

The increased fire risk of modern buildings (ie, the damage resulting from a single fire) is the main factor. Two-thirds of the premiums of German fire insurers in 1970 were absorbed by big fires (over DM 1m or £100,000 each). The chart on page 34 shows how these fires have risen in number and cost since 1965. Admittedly, it gives a slightly exaggerated picture of the deterioration, because of inflation. Even so, the trend is clear enough. 1971 was regarded at the time as exceptionally bad—one fire alone, at Linde-AEG, cost as much as £22m. But the 1972 figures look just as bad. Premium rates

The world's insurance market
Where the premiums come from

Source Swiss Reinsurance Co



for industrial fires have virtually doubled since 1966; even so, insurers reckon that another 10 to 25 per cent is still needed and that another loss will materialise in 1972. Not surprisingly, Germany's equivalent of the Confederation of British Industry has kicked up a fuss about the size and frequency of the increases, and has not been mollifed by being told that German fire insurance rates are low compared with those of other industrialised countries.

Tariff increases are expected to induce German firms to become more fire-protection minded, helped by the efforts of the Allianz and other leading companies. But they have also allowed several smaller companies, including some American ones, to start writing selectively, charging the officially approved traiff rates (though sometimes with special discounts), but picking only the better risks within each category, and so leaving the big companies with a below-average mix.

German insurers are also losing money on so-called simple insurances (houses, shops and farms), which have traditionally produced profits in the past. The problem here is also familiar to British insurers: as inflation speeds up, householders and other small policyholders tend to become underinsured because they forget, or refuse, to raise the sums assured. In theory, if a house is 20 per cent underinsured, the insurer can disallow 20 per cent of any claim, no matter how small. In practice, it is impossible to prove this for small-scale insurances. At the same time the excess ("you pay the first DM100 or whatever, of every claim") on each policy becomes eroded by inflation, and the insurer finds himself, in effect, paying an ever higher proportion of each claim. For simple insurances German insurers have the appalling handicap that they must give policies that run for five or sometimes ten years. Rates of premium cannot be raised, meanwhile, even though the incidence of risk may rise during this period. What insurers have done, however, is to take measures against under-insurance. Although the supervisory authorities needed some persuading, insurers now have permission to raise automatically a householder's sum assured in line with inflation unless the policyholder protests (which few do).

Motor insurance rates have also been pushed up repeatedly in Germany. As in Britain, the problem is not a rise in the number of accidents, but the soaring costs of injury awards and of labour-intensive motor repairs. Insurers hopefully demanded rate increases of no less than 39 per cent on January 1, 1971, to allow for inflation including that expected for 1971: the government allowed 25 per cent, with another 17 per cent to come in August. In the event, there was less inflation than insurers had feared, and motor insurance that year was in a much healthier condition than expected. When they appear the 1971 figures will probably show that the turnround on motor went some way to offset the deterioration on fire business, though not enough to swing non-life underwriting back into overall profit. This is fine, but a price has been paid.

The government has started to jib at carrying the political odium for approving rate increases, when it has no real control over insurers or their efficiency. If they ask for a rate rise, brandishing figures showing increases in claims and costs, Bonn has to agree. So it has been toying with the idea of

setting motor rates free: A special study by a professor at Mainz University concluded, as would be agreed in Britain and Holland, that it is perfectly possible for the government to safeguard policyholders' security by simply controlling insurers' solvency margins properly, without any need to control premium rates too; and that in the long run the price of motor insurance to the policyholder would be just the same as if rates were officially controlled.

Bonn would probably have been glad to bow out of being nominally responsible for motor insurance rates. But German insurers were terrified by the prospect. They would then be held directly responsible (which would make them vulnerable politically). And worse, competition would break out and they might find it harder to get rate increases when they needed them. So that hot potato has been dropped.

Motor is in gear

For once British motor insurance is in gear. The business is close to breaking even for the first time since 1968, after underwriting losses which amounted to £26m in 1971 and £31m the year before

So ends a traumatic ten years that began with the appearance of the Vehicle and General on the scene in 1961. The new company's low premiums initially attracted the better drivers who had been paying too much under the outmoded and rigid tariff charged by the big companies. However, the V and G grew far too fast and the average quality of its business declined. We now know, too, that its directors deluded themselves, as well as the public, the British Insurance Association and the then Board of Trade, by making inadequate provision for their future claims and so—in published figures—exaggerated their success.

Even so, the V and G's activities—supplemented by more prudent and selective rate-cutting by other non-tariff offices and Lloyd's underwriters—caused the tariff offices' share of the business to shrink to well under half the total. And it was probably the worse half. Apart from the youthful sports car demons who got their cover at cut rates from Fire Auto and Marine and the other unsound cut-price com-

BRITAIN into EUROPE

Britain no longer has to choose between the continent of Europe and the open sea. It needs both. And the continent of Europe needs Britain and the open seas it will bring into Europe with it.

The Economist has prepared a 52-page booklet on the detailed and broad implications of British entry. It does not hide the many doubts; it answers them. This booklet is based on updated versions of the dozen widely read briefs published in The Economist between 24 April and 10 July 1971.

Rates for reprints from The Economist
Inland and surface mail 30p, airmail 45p (US$1·25).
Postage is included.

BRIEF BOOKS

This background series of 28-page briefs, illustrated with maps, charts and photographs, looks at some current world problems and isolates the real issues.

They all wanted to underwrite more of it

panies that flourished momentarily in the mid-1960s, the tariff companies had found themselves left with the poorer risks. Yet modifying the tariff to meet the challenge from the non-tariff operators proved (eg, in 1966) a lengthy and laborious business, resulting in a new tariff of ludicrous complexity that nevertheless failed to lure back the better drivers. Tariff company underwriters began to itch to go it alone.

So the tariff was scrapped at the end of 1968. The tariff offices fell over themselves to attract back the better drivers. It rapidly became obvious that everyone was going to lose money in the scramble: both the price-cutters and those who stayed aloof but thereby lost business—much of it good business. Cynics have since suggested that losing money was the whole idea, on the view that the big companies could sensibly inflict a few years of losses on everybody as the price for putting the V and G—by then the country's second largest motor insurer—out of business. In this scenario the V and G would go into the red, its volatile share price would slump, and it and its dynamic Mr Anthony Hunt would be taken over by one or other of the tariff offices.

This did not happen. The price-cutting war happened to coincide with a smart acceleration of inflation from 6 per cent to 10 per cent a year. So the losses proved much larger than anybody had expected. There was also a stock exchange slump which halved the value of the V and G's free reserves. And even without the speed-up in inflation, it would soon have become apparent that V and G had been systematically, though probably inadvertently, underproviding for its claims.

So the V and G crashed, rather loudly, in February, 1971. Scarcely a single one of the next few days was free from an announcement by one company after another of premium rate increases across the board (even for the much vaunted good drivers) of quite staggering size: 25 per cent, 30 per cent, 35 per cent. These were followed by a further round of increases, sometimes within 12 months. Some motorists found themselves paying increases of 50 per cent on renewal. One company (the Sun Alliance and London) having rashly promised not to increase premiums for two years, has now had to raise them 62 per cent in one go. Another company raised its rates three times in 12 months. Some companies will now only give cover for six months at a time, or charge above the odds for an extension to 12 months.

Motor insurance has been brought back to a sound basis. But is this really any achievement by the big companies? It has been bought at huge cost: shareholders' losses totalled £71m in 1969-71 with figures swollen by the £4m-£5m paid by insurers through the Motor Insurers Bureau for the V and G's third party claims, the £1m levied from BIA members for the V and G's unpaid passenger claims, and the £2m paid out by the whole market for last resort claims involving two-car crashes, where the V and G driver was partly to blame. In addition, the cost of the restoration of commonsense must also be deemed to include: the losses made by Lloyd's underwriters on British motor insurance, the considerable losses which have been passed on to the reinsurance market, all the unpaid claims of Vehicle and General policyholders and the unexpired proportions of their running policy premiums.

Throughout most of the 1960s underwriters were telling each other that the V and G could not last. If they were so sure, it seems absurd for them to have thrown away such vast sums to correct a situation that was bound to correct itself anyway. Why did they not just scrap the tariff as soon as it had become clear that it had become a hindrance, say about 1964, and then individually concentrate on getting their premium rates right?

The answer is in three parts. First, some of them undoubtedly did want to bring the V and G to its knees. Secondly, 50 years of underwriting with a fixed tariff meant that many tariff offices had forgotten how to write motor insurance, beyond the rejection of obviously bad risks; they were unused to deciding how to subdivide the risks and set premium rates. Thirdly, motor insurance has its own built-in disadvantages which may mean it will always lose money. The next article looks at the future of motor insurance.

But where is it going?

"Half of all advertising expenditure is wasted," said Lord Leverhulme, "only you don't know which half." Half of all motor risks, too, are bad: they are going to cost you money whatever premiums you charge. Only you don't know which half.

But you do have some idea: the driver's record, the type of car he drives, and, above all, his age are the key influences. In making allowances, however, for these and other less important factors, the aim is merely to graduate the premiums accordingly. You assume that other insurers will behave in the same way, and that you will all—as under the tariff—charge roughly similar premiums and get a roughly balanced mix of business. This balance is essential. You are still going to lose money on your bad risks, because you cannot spot them in advance, and a single injury claim can now cost you £50,000. You need the good risks to pay for them.

This system is fine until somebody starts writing selectively and refusing to take the non-A1 risks at any price, or takes them only at higher prices than the market is charging. This is what the V and G and several other non-tariff offices were doing. But had the tariff offices just sat idly while the V and G captured a comfortable 10 per cent of the growing market and then settled down to charge normal rates, that large slice of the business containing a disproportionate share of the good risks would have ended up permanently with the V and G. It was the same

fear that impelled one company after another to enter the headlong pursuit of the good driver when the tariff ended in 1968, the fear of perhaps a drop in claims of 5 per cent (ignoring inflation) but a loss of premium income of 10 or 20 per cent.

For the moment, the problem has vanished. Insurers are too busy trying to get their rates up fast enough to keep pace with inflation.

But they are also making profits. And this means two things. First, competition will reassert itself sooner than the market now thinks. It only needs one insurer to make conspicuous efforts to attract the better driver and the whole cycle will begin again. And this process could begin within 12 months. It might be sooner were it not for the fact that the place where it usually starts—the Lloyd's market—happens to have its hands too full at present absorbing the influx of new risks that came in the wake of the V and G affair. The companies, too, have powerful compulsions to increase their motor business, even though it is certain to produce underwriting losses over the years as a whole. It is also the easiest sort of insurance for newcomers to enter: most of the claims are small, the big ones can be reinsured; the business moves easily from one insurer to another and motor insurance needs little insurance expertise.

Yet the big companies cannot afford to see their business contract. They are the prisoners of their existing scale of operation, their office and agency networks, branch staff, head office size, computers: a reduction in business leads to a higher expense ratio. Above all, motor insurance is a door into other types of business, just as the personal account is for a clearing bank.

So competition will return. When it does, policyholders will again be exposed to the risk of a company going bust, through, for instance, underestimating the pace of motor insurance inflation. In the next general election campaign, say in 1974, the Labour party will remind them of this. Much may therefore be heard of the Labour party's plan for state motor insurance (see also below), not only because it may have some electoral appeal but because it may also be one device for heading off pressures from the Labour left for nationalisation of banking, insurance and building societies.

The Tories will need a reply to all this. Their present plan seems to be to extend the Motor Insurers' Bureau to all categories of motor insurance risk from the third party (and from this year passenger) injury it now covers, and which has usually represented about one-third of the premium. If this is what Mr John Davies, the Secretary for Trade and Industry, meant when he talked about safeguards for policyholders in liquidation in the V and G report debate on May 1st, it makes sense. Motor insurers would then have to fork out to meet all the motor claims of an insurer who went bust, instead of just the third party and passenger injury ones. But does he intend to be as bold as this?

Is it so bad abroad?

Even now motor insurance is cheaper in Britain than in any other developed country. A premium (before no-claims discount) of £90 in London compares with £120 in Hamburg, £130 in Brussels and £202 in New York.

The reason is that most foreign markets operate a tariff system that has not been under constant attack from a batch of outsiders holding 30 per cent or more of the market, as used to happen in Britain. It usually covers the whole market and is agreed with the authorities. The foreign insurer may not be allowed to write a selective portfolio, and has little incentive to keep repair and other costs down. He knows the authorities will only allow rates to go up if insurers collectively show a small loss. Even when government approval is secured this is no defence against a furious outcry from the public when rates are increased, as recent experience in Switzerland has shown. All in all, in Europe and most of the states of America, a tariff covering the whole of the market and requiring official approval has meant costly insurance for the motorist, and small but regular losses for insurers, who, however, have the benefit of the investment

(a) Provision for unexpired risks and unpaid claims. (b) Before charging £2.6m to reserve for extreme weather losses. (c) Before crediting £11.5m from investment reserve to cover increased cost of claims from pre-1971 business. (d) Before crediting £2.5m from retained profits for increased cost of motor claims from pre-1971 business. (e) Including marine account not shown separately. (f) Including commission. (g) Net of commission.

Scottish Amicable don't just change—they innovate.

NEW POLICY

Now the Flexidowment Plan

What is it? This new plan is what every person considering life assurance has always dreamed about but until recently could not obtain. It is now available in the form of a with profits policy payable at age 65 or previous death with GUARANTEED CASH SUMS plus bonuses available AS AND WHEN REQUIRED once ten annual premiums have been paid.

How is this done? The Flexidowment Plan is made up of units. A separate policy is issued for each unit and each unit may be dealt with quite independently of any other. Thus, the policyholder can decide during the course of the Plan when he wishes each individual unit to be cashed provided only that the date chosen is at least 10 years after effecting that unit and not later than his 65th birthday.

What does a unit cost? Each unit costs £1 per month.

What Benefits does a unit provide? For the answer to this question and the many others that you may have please apply to our nearest Branch. Its number is shown in your telephone directory, or write or telephone:

income that results.

The alternative line of approach is socialised motor insurance. In New Zealand, for instance, you buy your third party injury motor insurance at the post office with your driving licence. So far, needless to say, the state has lost money on the scheme. This has not deterred the socialist New Democratic Party in Manitoba from setting up a state-run motor insurance corporation : nor has the fact that Canadian insurers have generally made a loss since 1945. Indeed, the political impetus for the Manitoba scheme has been drawn from precisely the efforts of Canadian insurers to end losses and get their rates straight.

For British insurers the lesson is that state motor insurance will probably come anyway some day (and once the state gets into the insurance business it probably won't stop at third party motor). What will hasten that day will be any lingering fears of insolvency of insurers or any suspicion of overcharging, collective rate-fixing or arbitrariness in premium rating. Here the sudden massive jumps in rates have made a bad impression, although it would have been worse still if the British motorist had not briefly been convinced (by the V and G affair and the rate-cutting that preceded it) that he was getting his motor insurance too cheaply. The old tariff system—which combined the maximum bad publicity for rate increases with the minimum flexibility in rating—was little better. What with luck may now evolve may be a new set-up where insurers shift their rates regularly but in small jumps, where their rates tend to be roughly in line with each other, but are determined individually, and where the more enterprising are quick to cut the rate for any category of driver who is being notably overcharged, but do not keep trying to grab a bigger share of the good risks at sub-market rates.

No-fault makes little progress

New York

Efforts to introduce "no-fault" systems in many states of America this year have generated considerable sound and fury in state legislatures. But present indications are that they will signify little. Of the 35 states that have tried to enact no-fault laws of any description this year, only three look like reaching the statute books, in addition to the seven that already had them in force.

"No-fault" means that no effort is made to apportion the blame when a motor accident occurs. This means that the usual system of adversary law suits must be restricted or eliminated. Instead motorists are given rights of claim against their own insurance companies. In this way they can claim back medical and hospital bills, loss of income, funeral expenses and other tangible dollar benefits. The various proposals set an upper limit on the amount that may be claimed, ranging from $2,000 to $50,000.

The proponents of no-fault are a large and articulate section of the population, including state legislators, government officials, journalists and commentators, academics and teachers. They argue that the victims of motor accidents now suffer badly from the legal battles—often bitter and protracted—over fault, and that victims should be reimbursed for their economic loss as quickly and painlessly as possible.

The present system, they claim, has resulted in court congestion, high insurance premiums, and a distorted and unpredictable pattern of benefits to victims ; and it benefits nobody except lawyers, whose fees, normally based on "results," slice deeply into awards and settlements to victims, sometimes absorbing 50 per cent of them.

Needless to say, opponents of the change consist of the embattled legal profession itself, especially those members of the bar specialising in motor liability legislation. The lawyers are aghast at the vicious threat to the common law rights of the American citizen to sue for damage he has suffered, and argue that no-fault is a fraud and a deception. They claim that it is not enough for motorists to be compensated for economic losses, as under no-fault. They should receive "general damages" (otherwise known as pain and suffering) too.

The no-fault supporters attack this argument as bogus, saying that what the motorist really wants is prompt reimbursement for his dollar losses, rather than taking a chance on finding a sympathetic jury keen to give away the dollars of rich insurance companies, but at the price of years of waiting without funds, anxiety over the outcome, legal costs and huge lawyers' fees.

Nevertheless, the argument over pain and suffering has been pushed strongly enough to force the adoption of compromise no-fault plans. Under these a motorist would retain his right to sue for pain and suffering.

Delaware, Oregon and South Dakota operate no-fault schemes that allow the motorist to claim against his own insurance company for economic losses, but still leave him free to sue for pain and suffering if he pleases. The no-fault proponents say these are spurious no-fault laws. Trial lawyers, needless to say, regard them as the ideal solution, allowing prompt reimbursement of economic losses, while preserving legal rights intact. Massachusetts and Florida allow pain and suffering claims to be lodged in certain circumstances : eg, in the case of Massachusetts, when the victim has suffered medical expenses of $500 or more. In both states the new laws have been highly popular, claims have been cut, insurance premium rates reduced. But trial lawyers in Massachusetts, which had the first scheme, complain that their income has been cut, some practices endangered, and that the public is being victimised.

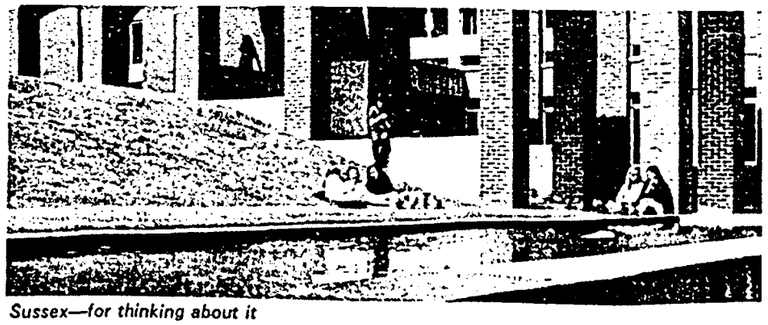
In New York a bitter struggle centred on Senator Bernard Gordon's plan to enact a no-fault law with pain and suffering claims restricted to those having suffered $5,000 medical expenses or more, which would have ruled out all but a few rich claimants. But early in 1972 a law in Illinois was declared unconstitutional—on the ground that it would discriminate against the poor—even though its "threshold" of medical expenses was as low as $500.

So Senator Gordon agreed to extend the right to sue also to cases where the victim had suffered death, dismemberment or significant disfigurement. Even so, and despite the backing of Governor Nelson Rockefeller, the bill did not make the statute book. However, although the advocates of no-fault have suffered several disappointments in the state legislatures this year, there is hope yet.

The Nixon Administration is supporting a draft bill now before the Senate which would require the states to introduce no-fault legislation, and with provision for pain and suffering claims to be lodged only when medical and economic losses exceed $100,000. If this bill survives the violent opposition it will certainly provoke, no-fault will be a reality by 1974, virtually throughout America.

Make insurance academic

Although there are four university chairs financed by the banks and six other banking chairs in British universities, insurance has yet to establish its first chair. For an industry which provides half the invisible exports of the City some explanation is needed.



Insurance is not without university links. Sussex University has a Centre for Insurance Studies financed by the British Insurance Association which, in its five years of existence, has sponsored a dozen research projects and organised a top-level European insurance seminar (April, 1971) which was very highly regarded by leading European insurers. Nottingham University this year has 16 students taking the insurance option in the BA degree in Industrial Economics. Some research has taken place at Stirling and one or two other universities. There are signs that this sparse catalogue is on the verge of expansion. At the City university Mr Hugh Cockerell has been appointed senior research fellow in insurance studies, after a distinguished 25 years spent as secretary to the Chartered Insurance Institute (CII). He has now come up with plans for an optional subject, "insurance and risk management," to be included in an MSc course of the graduate business centre there.

But even with this development and probably one or two other advances the university links of British insurance are paltry compared with their international counterparts. In the United States well over 100 universities teach insurance. On the continent it is commonplace to find insurance taught as a university subject. Even in a small country like Norway there are professors of insurance at Bergen University and two insurance professors at the University of Oslo.

Why is Britain out of step? Paradoxically the prime cause is the success of Victorian insurance men in founding a highly efficient insurance educational system — the present Chartered Insurance Institute. In the 19th century lectures on insurance were regularly given at the University of London but with the formation of the Insurance Institute of London in 1907 they were discontinued. The Chartered Insurance Institute now has over 50,000 members, nearly half of them diploma holders. The 6,500 fellows have mastered the technical intricacies of insurance after some five years of study (mostly in the evenings or more recently through schemes of daytime release). And even if the pass rate is low (41 per cent last year), British insurance men have an international reputation of technical accomplishment. Not surprisingly then some insurance men argue that there is no need for radical change. Others taking a different view, arguing :

Even admitting that British insurance is the most successful in the world, this is not solely or even mainly an achievement of the present generation. It merely reflects its success in maintaining the predominant position painstakingly built up by its predecessors over the past two centuries—helped incidentally by European 19th century instability and the setback to American insurers during the civil war. The underwriting upsets of the past few years disclosed a weakness at what should have been insurers' strongest point—financial forecasts—and a surprising failure to recognise the revolutionary changes needed in insurance practice to take account of inflation. True, the British Insurance Association finally commissioned Professor E. Victor Morgan and his Economists' Advisory Group to study the problem last year. But any forceful economist could surely have analysed the problem and suggested remedies years earlier.

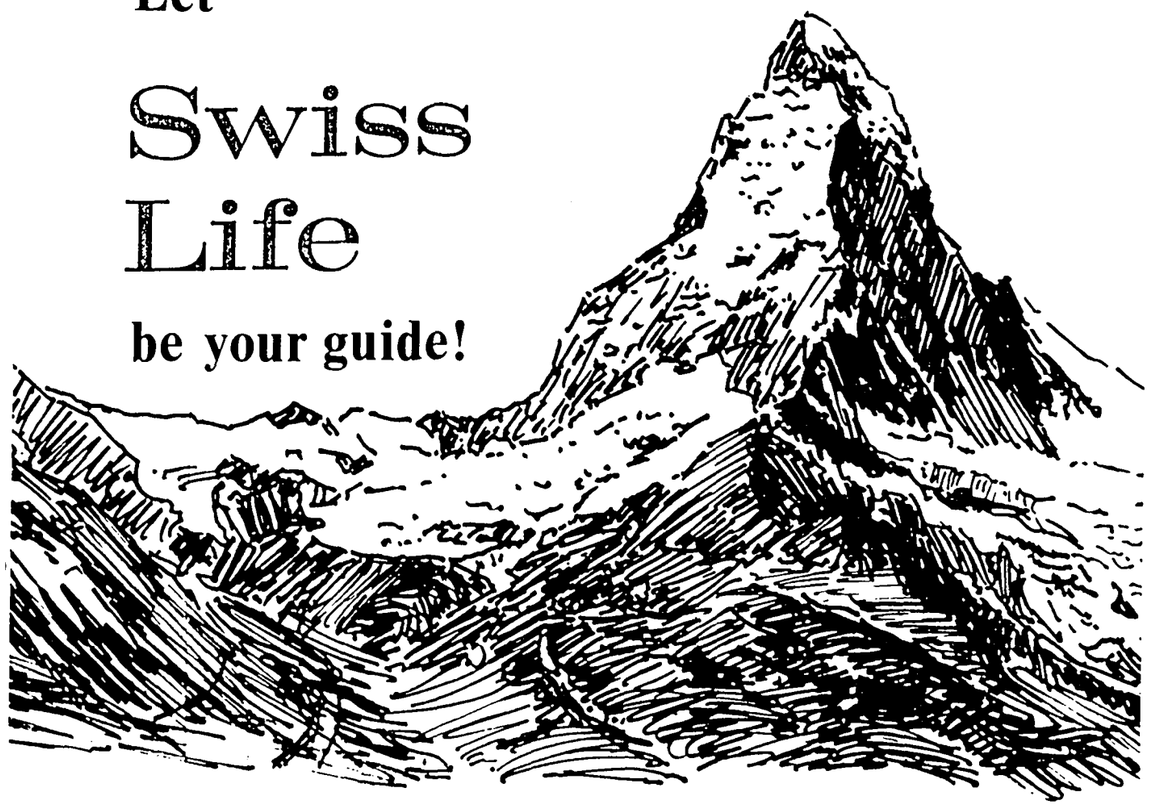
As the number of university students grows, fewer and fewer brighter school-

Sussex—for thinking about it

The CII—for teaching it

leavers take jobs straight from school. Back in 1967 Mr W. Horrigan, then lecturer in Insurance at Nottingham University, wrote : "Certainly the efforts of the accountancy profession in establishing academic contact are being rewarded. This can be judged from the number of students applying for places in industrial economics who indicate that accountancy is likely to become their career after graduation. Rarely, if ever, is there any motivation towards insurance."

Not only does insurance need its fair share of university talent but wider benefits would flow from getting insurance firmly established in the universities It would enable broader and longer-range problems to be examined and discussed.



Besides the impact of inflation, these might include : the evolution of reinsurance in a global context ; the effect of European integration on insurance ; the balance of payments implications of insurance, especially as regards the developing countries ; the interactions between life assurance and savings in the economy, and between life assurance and flows of funds in the economy, and (in future perhaps) on the flows of funds between EEC member countries ; the scope for no-fault and other radical changes in the motor insurance set-up.

Many of these lines of study involve insurance plus one other separate field. Pursuing them would therefore mean that insurance would be studied in a much wider social and economic context, and it would lead to cross-fertilisation with other disciplines. It is high time that insurance came to be recognised as a subject deserving study and thought for its own sake, and as part of the wider scheme of things.

Let

Swiss Life

be your guide!

The Master Cover Contract, a concept developed by Swiss Life over ten years ago, is ideally suited to be your guide to efficiently coordinating and funding group life and pension plans throughout Europe on a multi-national basis. This umbrella agreement offers the following important advantages to international companies:

1. Multi-national experience rating
2. Portability of pensions
3. Centralized administration and reporting
4. Liberal underwriting provisions
5. More flexible contract

We're the company with experience. Let Swiss Life be your guide!

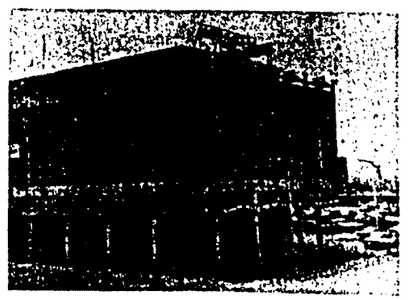
Cheaper life insurance for people who don't smoke.



The Scottish Mutual Assurance Society offer new policy holders a reward for not smoking. They recognise the fact that non-smokers are a better insurance risk. Your reward takes the form of reduced premiums, so its size depends on your policy. For example, with a £6,000 mortgage taken out over 25 years you would save £108 on the premiums for a life endowment policy. Similarly on a whole life policy for £5,000, taken out over the same period, you would save £90. So, if you're a non-smoker, why not cash in on your willpower? Ask your Insurance Broker for full details of Scottish Mutual policies and the special non-smoker's discount, or write to us direct.

Going into Europe will cost you nothing

Because we've kept our space rates low to satisfy advertisers who only seem to want to sell to the British.

Unfairly perhaps this has made THE ECONOMIST too competitive for other international media in Europe.*

What's more, it's making a handsome present of our European and other overseas readership to those advertisers for whom the UK is an important market but who also sell elsewhere.

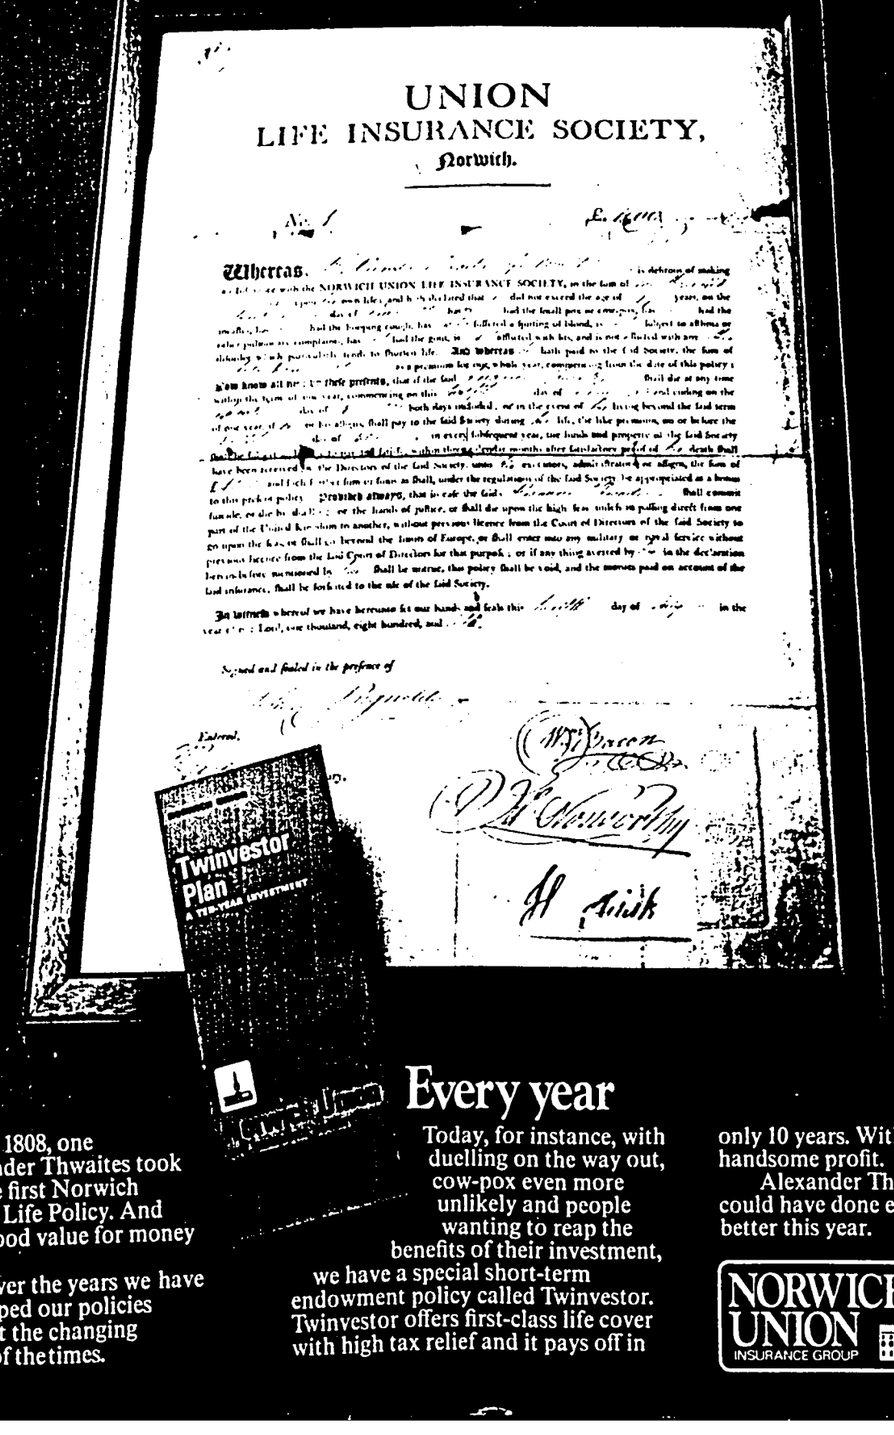
Such advertisers benefit because THE ECONOMIST'S circulation amongst the world's influential businessmen is as select as the market it serves. We cannot easily, like other international media with their more catholic circulations, break ours up into geographical regions to sell off in lots.

Anyway businessmen travel so much these days that one must surely begin to see the whole world as their realm and conclude that one of the safest means of reaching them through advertising is by using a medium which can be bought both at home and abroad.

Advertise in THE ECONOMIST then and you only pay for our excellent coverage of influential UK businessmen – wonderful value at £360 for a whole page – but you also get the most efficient coverage* of influential businessmen in Europe (and some pretty useful attention elsewhere).

If our space rates are too low to be fair to our international competition, not just in the UK but in Europe as well – that needn't worry you.

Buy THE ECONOMIST'S British management readers wherever they are at the moment you want to reach them – at home or abroad – and going into Europe, or any other country in the world for that matter, will cost you nothing.



*"Influential European Attitudes to International Business" done for Newsweek, 1971.

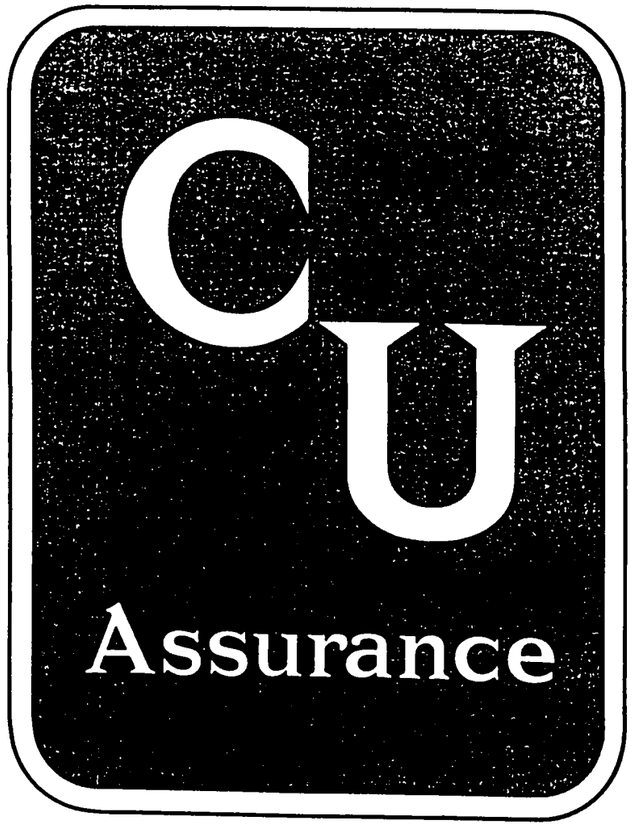
For Businessmen

The Economist

The Norwich Way

is to come up with the policy of the year

In 1808, one Alexander Thwaites took out the first Norwich Union Life Policy. And very good value for money it was.



Over the years we have developed our policies to meet the changing needs of the times.

Every year

Today, for instance, with duelling on the way out, cow-pox even more unlikely and people wanting to reap the benefits of their investment, we have a special short-term endowment policy called Twinvestor. Twinvestor offers first-class life cover with high tax relief and it pays off in only 10 years. With a very handsome profit.

Alexander Thwaites, you could have done even better this year.

NORWICH UNION
INSURANCE GROUP

400 branches in the UK and worldwide coverage

The big advantage of dealing with Commercial Union is that they are always on the spot. In the UK alone there are 400 branches. And the whole of Western Europe is covered by a network of companies in the Group. Not to mention other countries of the world.

This means that if you do international business you can deal through fewer channels with people who know you and know your needs.

The result is a saving in time and trouble and very often of cost too.

Whether your business is active in the UK only or in other countries also it would pay you to see how Commercial Union could help.

Books

Little big man

LORD JOHN RUSSELL
By John Prest.
Macmillan. 558 pages. £5.95.

The literature on Russell is extraordinarily meagre for a statesman who was twice prime minister and the primary author of the great Reform Act of 1832. This book therefore bears an aggravated weight of responsibility. Mr Prest is perhaps rather too conscious of this. He seems to be poised uneasily between the desire for a thorough job of rehabilitation and a rather despairing lack of conviction as to whether such a rehabilitation is desirable, let alone possible. Before Russell died, as Mr Prest says, he had thrown away a great reputation, and done it, moreover, "in such a way that no one has ever been able to restore it since." What distinguishes above all this worthy and laborious book is an entire absence of any claims or pretentions to have restored Russell's reputation. Consequently it is informed throughout by a certain air of defeat. "Nobody," again says Mr Prest, "who wishes to raise Lord John in the eyes of posterity will dwell long upon his tenure of the Foreign Office from 1859 to 1865." And accordingly the reader is spared as much as possible of those painful scenes of international farce and fiasco culminating in Poland and the Danish duchies.

Yet one wonders whether the reader must thus necessarily get the worst of both worlds. To be sure this is essentially a biography; but it is political biography. And the best way, in fact, of redeeming Russell—for example, over this episode in foreign policy—would perhaps be to have worried less about the *brutta figura* cut by Russell and to have concentrated more on explaining how it could have come about that a man of such obvious intelligence should have found himself conducting such an obviously unintelligent policy. This in turn would require a full understanding of how that policy came to acquire orthodox or "national" status; which possibly would take a biographer of Russell fairly far afield, but which is the only convincing way of showing how Russell came to be Palmerston's prisoner. Mr Prest is right to insist on the tragic aspect of this: Russell, the man of large and noble ideas, eclipsed by Palmerston, a man who stood for nothing, who represented nothing. Precisely because Russell was a man who felt himself to be the embodiment of ideas and principles, the best approach for his purposes will be from the issues to the man, rather than, in the more orthodox biographical way, from the man to the issues. This is true equally of events where Russell comes out at his best. Over the reform issue, the biographer of Russell would serve his subject best by contributing substantially to the current historical debate about the assumptions underlying franchise reform in relation to attitudes about legitimacy and prerogatives of political leadership in early nineteenth-century England.

Mr Prest's general recourse, and where he is at his best, is in constantly reminding us of how dogged Russell was by inimical circumstance. By the dramatic sacrifice of his party in 1846, Peel cornered any credit and reputation to be had on the domestic "progressive" market. Hence at the very moment of first becoming prime minister Russell was overshadowed by his fallen rival. Then, no sooner had Peel died in 1850 than Russell passed into the shadow cast by another rival more favoured by fortune. Palmerston eventually trumped Russell for the Liberal leadership by exploiting the cheap popularity to be coined out of a blusteringly assertive foreign policy. Only with Palmerston's death in 1865 was Russell able to get a little political sunshine again, but by now it was too late. Already the shadow of Gladstone was coming before him to portend greater events than Russell could comprehend; and even Russell's last stroke for a second Reform Bill was filched from him by the adroit and unscrupulous Disraeli in 1866.

Russell: irretrievable reputation

Unquestionably John Russell had cause for a sense of generalised injustice, of not getting the credit and deserts to which his ideals and his merits gave him fair claim. This ill-fortune has dogged him since. Compared with the vast literatures of Peel and Palmerston studies, the printed Russelliana consists merely of the official life by Spencer Walpole, itself vitiated by Russell's second wife and widow, Fanny Elliot (whom Walpole referred to as "the Influence"). Two editions of his correspondence have been badly or haphazardly edited. Of Victorian prime ministers only Aberdeen and Derby have fared somewhat as badly. They, after all, were Tories and reactionaries in an age of Liberal dominance; and of all the standard-bearers leading the march into what Liberals assumed was to be their new world in the 1820s and 1830s none was more ideologically confident than "Glorious John." No cause of liberty and advance, excepting civil service reform and the ballot, found him wanting. Especially, Russell's devotion to the cause of justice for Ireland gives this book a curiously topical air; all the more poignantly so, perhaps, for the ultimate collapse of Russell's "appeasement" hopes and expectations.

It is of the essence of Mr Prest's book that Russell was largely to blame for his own discomfiture. There were of course factors beyond his responsibility or control. He was a seven-month child and never recovered from this initial handicap. In his prime Russell stood under 5ft 5in and weighed eight stone. He had the grace to shrug off this littleness with jokes: he writes of returning to his political tasks "like a dwarf refresh'd." But it rankled all the same and had important consequences on his temper and behaviour. Historically such things are far from insignificant. It was quite important for Russia that Nicholas II was a small man whose father and grandfather and

uncles were all big men. In Nicholas's case it led to timidity and henpeckedness ; in John Russell's case it led to a peppery chip-on-the-shoulder disposition as well as henpeckedness. Above all, Russell was a Russell, and bore from birth as the younger son of the brother and heir of the fifth Duke of Bedford an inescapable inheritance which cursed as well as blessed.

Russell's essential fault was to compound rather than reduce these inherited dispositions. Seduced by a Scottish education, he fell all too readily into the intoxicating intellectual traps of the new era of ideology. He was quite unnecessarily dogmatic and he misread important problems. He swallowed political economy whole, with bad consequences for Ireland in the years of the famine ; at the same time ideological dogmatism made him contemptuous of financial affairs and budgets, which is where Peel scored heavily at his expense. Cuttings from *The Economist* could not make up for this.

Russell handled people badly. Proud and insensitive, his notoriously short letters offended even close friends. He had an altogether excessive respect for the opinions of his father and his elder brother, who repaid this deference with stinginess, and by forcing the indignant Queen Victoria to provide Russell with a decent country house to live in. Above all, Russell was culpably weak with his wife's relations, the ineffable Elliots, led by the egregious Minto. These are the areas where Mr Prest is at his best. One understands very well why and how Russell was in many ways his own worst enemy. But the larger issues at the heart of the painful contrast between the high hopes of the 1830s and the demeaningly spoiling antics of the 1850s remain too much in the background ; Russell deserves a fuller exploration of them.

Between Georges

THE ROYAL GRIFFIN
By John Walters.
Jarrolds. 232 pages. £2.50.

This biography of Frederick, Prince of Wales (1707-51), is enjoyable light reading with no apparatus of footnotes and no pretensions to scholarship. Students seeking enlightenment on the obscurities of Georgian politics will seek it in vain here, but readers who are content to know about the social life of the upper crust, with special reference to the royal family, will not

Frederick failed to reign

be disappointed.

Born in Hanover, the great-great-great-grandson of James I, Frederick was placed, by the vagaries of international affairs and of English party politics, in the direct line of succession to the throne. His grandfather and father, George I and George II, and his son and grandsons, George III, George IV and William IV, all achieved that succession. Frederick's untimely death deprived him of the prize, and left his reputation to the mercies of government pamphleteers and gossip writers. These depicted him as an unfilial and —worse—ineffective intriguer in opposition politics. In fact the heir in each generation of the house of Hanover intrigued similarly, constituting a "reversionary interest" at the centre of the opposition of the day. Only Frederick failed to reign and thus live down his early transgressions against authority. Mr Walters reminds us that the prince's political papers were burnt by his family at his death, but it is worth pointing out that the papers of his confidant, the Earl of Egmont, now repose in the British Museum and throw a good deal of light on Frederick's political activities.

Interest naturally centres on the prince's personal qualities. He is treated sympathetically by Mr Walters, and indeed his contribution to British institutions, as a result of his personal interests, compares favourably with that of some of his near relations. A keen amateur botanist, he was responsible for bringing the "curious" collection in the garden of Kew House into the possession of the royal family, to form the basis of the world's greatest botanical garden. A romantic with a penchant (unfulfilled) for runaway marriage, he was also an idealist who wanted to clean up and, if possible, destroy the party politics of his day by uniting the best of the Tories and Whigs under himself. Whether he would have succeeded in this object any better than his son did is questionable ; his idealism simply made him a confederate of opposition adventurers like Bolingbroke or fellow-romantics like Bute. Frederick's ideals were his chief legacy to his son George, the boy who brooded on his father's political objectives and tried in due course to put them into practice.

Radical puritans

THE WORLD TURNED UPSIDE DOWN
By Christopher Hill.
Maurice Temple Smith. 353 pages. £5.

SEVENTEENTH-CENTURY ECONOMIC DOCUMENTS
Edited by Joan Thirsk and J. P. Cooper.
Clarendon Press : Oxford University Press. 871 pages. £8.

"Only in our own day, with the beginnings of the widespread rejection of the protestant ethic . . . can we grasp the vastness of the achievement of those who initially imposed it." The Master of Balliol has for many years been writing with ever-widening perception about the social implications of puritanism. Here he is concerned with puritans who, in the moment of triumph, moved towards a greater revolution, "rejecting private property for communism, religion for a rationalistic and materialistic pantheism . . . asceticism for the unashamed enjoyment of the good things of the flesh. . . ."

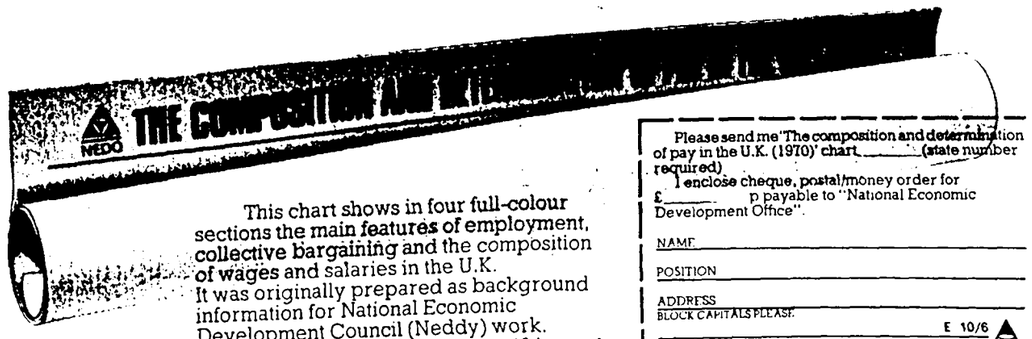
Levellers, advocating democracy within a "capitalist society", and Quakers of the later passive style are firmly separated from Diggers, Ranters, Seekers and the writers and preachers who escaped completely from the assumptions of governments and churches. They came from, or attached themselves to, the poor—the "masterless men" of cities, moorlands and woodlands rather than stable agrarian communities. They were young, confident and certain that nothing was too sacred to overturn. A meticulously organised, balanced and comprehensive study of such men would of course have enormous value, but, happily, "The World Turned Upside Down" is none of these things. It ranges from extravagant enthusiasm to intense historical argument, and incorporates

some of Dr Hill's most profound statements yet about the seventeenth-century revolution as a whole. The chapters on "Sin and Hell" and "Life against Death" contain arguments about the connections of the state and the changing economy with protestantism that make some of Tawney's (and some of the earlier Hill's) look crude in comparison. More surprisingly, the "mechanic preachers" throw light on what is perhaps the biggest problem in current seventeenth-century studies —how astrology, alchemy, and prophecy as well as puritan faith were compatible with, and indeed contributed to, the emergence of modern science. As always, Dr Hill brings to life characters most of us have heard of dimly or not at all : Samuel Fisher, who when devotion to every word of the bible was at its height not only produced textual criticism of the scriptures but made it accessible to the unlearned ; John Warr, the most uncompromising enemy of a legal system designed to enable the rich to oppress the poor ; Abiezer Coppe, whose splendidly uninhibited denunciations deserve fuller quotation.

There are a few traces in the book of high-speed production ; and of course there are the sins in which Dr Hill always delights, such as his placing at the head of a long list of names that demonstrate the "cultural impact of the North and West" of John Donne, "separated by at least one generation from a Welsh forebear." But the quotations are as magnificent as ever in their range and aptness. One wonders whether there is anything left in the output of Giles Calvert and his rival printers of the 1640s and 1650s that Dr Hill has not read and cited. Certainly no one has demonstrated more cogently how literary sources can break the barriers that even now keep the poor in the background of history. But for most historians the raw material is still largely the less inspiring masses of paper left over from the activities of government and management. The large collection of economic documents which Mrs Thirsk and Mr Cooper have produced (primarily to give Oxford undergraduates a long-needed seventeenth-century equivalent of the three volumes by Tawney and Power on the Tudor period) combine the activities of the state and the great merchants and industrialists with a wide and varied view of the troubles and interests of ordinary men. It could be seen as a salutary counterbalance to revolutionary enthusiasm ; for one could skim through most of its sections without noticing that there had been a civil war at all.

Old world plague

THE GREAT WINE BLIGHT
By George Ordish.
Dent. 237 pages. £2.75.



No one knows for certain who brought the phylloxera to Europe, though there was a good deal of mud-slinging at importers of American vines once its source became known. But the earliest importers, Mr Ordish makes clear, were guiltless : it was not until the railway and the steamship expedited the journey that an infected cutting would survive long enough to be planted in Europe. So the pest did not spread until the 1860s : but by 1880 it had covered most of France's major

America's kiss of life

wine-producing areas ; by 1890 it had reached Champagne ; in Germany it is still spreading. *Phylloxera vastatrix*, one botanist called it ; since he was not the first to give it a Latin name, that is not its proper botanical title—but it is much the most apt. The phylloxera destroyed 40 per cent of France's vines : some of the vineyards were never replanted, much as English wine-growing was ended not by an unsuccessful struggle with the climate but by that earlier nineteenth-century plague, the mildew.

Eventually, 80 per cent of the wine-growing areas were replanted with American roots, the cure that was adopted once any number of bizarre and expensive remedies had failed or at best proved to be stop-gap measures : flooding the vineyards, injecting gas into the soil, surrounding

the vine with sand. Even replanting was a tricky business: not all American vines are phylloxera-resistant; not all American vines will suffer the different soil of France. Then, a European stock had to be grafted on: most American vines produce a wine whose taste is usually and accurately described as "foxy." Mr Ordish is very good and clear on the botanical family history of the vine, and on the nasty little pest (one of the greenfly tribe) itself. He worked on pest control in the French vineyards himself as a young man, and his description of the dying vine, with its rotten roots and flushed leaves (the parallels with the fashionable human ailment, consumption, caused the phylloxera to be nicknamed the *étisie* when it first appeared) are quite passionate. He gets busy with figures, too, substantiating the famous judgment that the phylloxera cost France more than twice as much as the war indemnity it was forced to pay to Prussia.

Mr Ordish's book is a slight jumble, as a formidable and fascinating amount of information is packed into digestible chapters, but he possesses understanding, shrewdness and a quaint wit. And unlike some of his fellow entomologists, he does not discuss wine as if it was some kind of protein-building animal fodder: he does seem to remember what it tastes like.

Ad hominid

A long report on a new batch of semi-human fossils excavated in the Lake Rudolf area of Kenya, which appeared in the scientific journal Nature at the beginning of this month, is going to require the rewriting of most of the standard textbook descriptions of man's origins. The idea that some of the early apes evolved into hominids, or near-men, developing by smooth progression into recognisable human beings in the (geologically speaking) relatively short space of between 3m and 4m years had always struck a number of scientists as suspiciously tidy for such a messy old crone as nature, who tends to be prodigal with species and who, to judge from fossil remains, was experimenting with a whole variety of hominids simultaneously before discarding the rest in favour of what became homo sapiens. The Kenya finds show that at least two recognisable breeds of hominid co-existed there between 1m and 2½m years ago—each probably regarding the other as a species of sub-human troll.

Anyone who wants to get up to date with theories that argue man and ape

A family likeness?

developed quite separately, in a process that has been going on not for 3m, but for at least 35m years, will find them in Björn Kurtén's **Not From The Apes** (Gollancz, £1.75). This is a good read for anyone who wants a change from the standard detective story. But whether to take all Mr Kurtén's arguments at their face value must be a matter of taste. Herbert Wendt's **From Ape to Adam** (Thames and Hudson, £3.50) which is a more pedestrian, more turgidly translated and so, inevitably, a less entertaining account of developing theories of evolution, is something of a corrective; it shows how often, and how violently, theories thought proved beyond doubt have had to be discarded.

Man-hominid emerges here as a predatory, meat-eating cannibal and in his later development as a big, clever, good-looking and probably quite cultured brute. Since then the human race has degenerated physically and perhaps mentally too. A few of the old, stone-age ways still survive among primitive groups and these have been collected by Carleton S. Coon in **The Hunting Peoples** (Jonathan Cape, £3.95), an extraordinary mixture of field-craft, folk-lore, myths, magic and some quite effective herbal medicine, ranging from eskimo to aborigine.

Cost-effective Chamberlain

DIPLOMACY OF ILLUSION
By Keith Middlemas.
Weidenfeld and Nicolson. 510 pages. £4.75.

Mr Middlemas gives a new twist to the familiar, depressing story of Anglo-German relations in the late 1930s.

English people over 50 cannot forget the outline of the tale. He, though still far from 50, knows more about it than most of us can remember; for he has worked through the newly opened cabinet, defence and diplomatic documents to discover the details. His publishers suggest that he has used "the full range of the archives," which of course he has not; he says himself that secret service papers were unavailable to him. His dealings with the secret data that he says the cabinet handled would command more confidence if he did not place a colonel at the air ministry, and had not got the security and intelligence services somewhat muddled up.

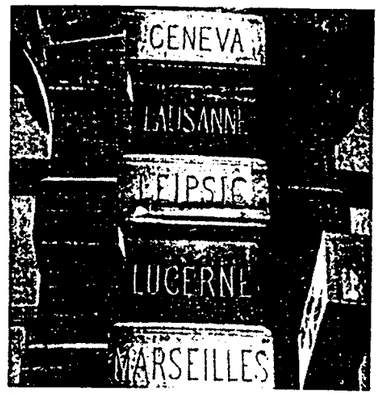
Readers of the life of Baldwin by Mr Middlemas and Dr Barnes will have anticipated slips of this kind. And they do not much matter. On the well-worn paths of diplomatic history, Mr Middlemas treads with some assurance. He has several discoveries to impart; and he does appreciate, as diplomatic historians writing 40 years ago did not, the connection between armaments and foreign policy. On his very first page, he says that "Knowledge of Czech, Polish, Italian and Jugoslav sources has become, for the historian of international affairs, a necessary supplement to the better-known British, German and American documents." But he does not use them himself; he relies largely on British official papers, as befits his sub-title: "The British Government and Germany, 1937-39."

It is curious to find the retrospective historian settling for a view put forward at the time of the Munich crisis, and denied by Neville Chamberlain's apologists: that Chamberlain set up "a rigid satrapy" in Downing Street, insisted on running foreign affairs in his own way and brought to them the obtuseness of a man brought up in business, not diplomacy. The leitmotif of the first half of this book is that Chamberlain kept British armaments low, and made no attempt to assert British authority against the visible nazi peril, because to do otherwise would be too expensive: the accountancy of cost-effectiveness invoked to doom a continent. The author then describes the Berchtesgaden-Godesberg-Munich meetings, by which time:

> Continued appeasement had the effect of reinforcing the German belief that Britain and France were far gone in the slough of bourgeois decadence. The time was well past when Hitler desired anything that Britain could offer.

London pride

CROSSING LONDON'S RIVER
By John Pudney.
Dent. 186 pages. £3.50.



LONDON'S HISTORIC RAILWAY STATIONS
By John Betjeman.
John Murray. 126 pages. £3.50.

A LONDON STEEPLECHASE
By R. G. Ellen.
City Press. 178 pages. £3.

Mr Pudney's should take precedence of these three books: London is there because of the river, the "strong brown God" of T. S. Eliot's fancy. Or rather, it is there because the river had to be crossed: ferries, fords and eventually a bridge fixed the importance of the marshy land along these first tidal stretches of the Thames. The history of the early wooden bridge is sketchy in the extreme. But its Roman function was quite clear: London was a staging-post, its bridge a link in the network of Roman roads, a function that was curiously lost in the construction of the Victorian network of railways. Then, London became a place to get from or to, but not through. Not all the Victorians were so short-sighted: Brunel, Mr Pudney tells us, planned a terminal for the Great Western Railway near Vauxhall Bridge, convenient for the railway systems of the south. But Paddington, close to the original terminal of the Great Western, was the final choice.

Paddington is, Sir John Betjeman believes, admirably well-planned: he writes with enthusiasm of both "the only London terminal without an exterior" and the company: "Before the advent of nationalisation and the gradual breaking of its spirit the Great Western was the best railway in the world." Sir John is particularly adept at distilling such spirit, and perhaps best of all on the obscurest old termini—the "mutilated masterpieces" such as Holborn Viaduct, Cannon Street and Blackfriars, the old St Paul's terminus. On the walls of this confusing complex of underground and old railway stations are engraved the names of the farthest destinations of the South-East and Chatham Railway ("deadly" enemy of the London, Brighton and South Coast line): Bremen and Brindisi, Leipzig and Lucerne.

Sir John believes that looking at railway stations can be as diverting as looking at old churches: both, in the end, are conducive to fallen arches and a crick in the neck, but anyone on the hunt for London's myriad half-hidden churches could do no better than take

Try Victoria, dear

Mr Ellen's guide with them. Mr Ellen, who bears the antique title of Master of the Parish Clerks' Company, has produced an invaluable survey of the 150 living and demolished churches of the City and adjacent parishes. Only 39 still survive in the City, and many of these have an uncertain future. Mr Ellen provides notes on each, whether destroyed or still standing, and his knowledge of old London is profound. Here stood St Margaret Moses, at the corner of Pissinge Alley; there St John Horseleydown, built after the fire under the Fifty New Churches Act of 1711 to relieve the pressure on existing parish churches. That sounds ironic now, but St John is as defunct as the purpose for which it was built, a victim of the second world war.

WHEN THE OFF-SHORE RIG MAKES THE STRIKE...

IT'S NEWS YOU WANT TO SHOUT IN SECRET.

The world will learn in its own good time. But certain people need to know at once. What is needed is fast, controlled, person-to-person contact – anywhere, any time.

Cable and Wireless have the system to match the situation. Everything from satellite communications, telephone and telegraph to your own private circuit for voice or data transmission under strictest security.

Nation to nation, ship to shore, Cable and Wireless are the communications experts.

To get in touch with people in the way which suits you best, first get in touch with us. We have the system, and the experience, to match your needs.

The Cable and Wireless Group of Companies and Associates with offices around the world.
Head Office: Mercury House, Theobalds Road, London WC1X 8RX.

CABLE & WIRELESS
THE BIG LINK

Together, we chose a Rover 3½ litre.

"The governor thinks I like to get my head under a bonnet that means business.

But the truth is, I never even have to think about her.

Power-assisted steering so I can park in the city with one finger on the wheel.

Thick leather armchair, which makes long waits something to look forward to.

And she's so quiet I can hear him snore at top speed.

He doesn't know it, but we got it to prove that a chauffeur's lot is an easy one."

"Forbes, interested as ever in my image, must have thought she'd be a suitable symbol of my promotion.

Well, it is the finest bit of four-wheeled prestige I've sat in what with its wood-panelled interior and noiseless grace.

But he doesn't know about my weekend secret.

Just let me get at that wheel and a 184 bhp engine with servo assisted brakes to show that this company can impress all sorts of company.

Besides, it must be pretty good value for money, for the firm to let me have a chauffeur."

Rover

The Rover Company Limited, Solihull, Warwickshire.

There'll always be an England.

Even though things are changing.
Up till now, it's been almost impossible to break into the U.S.A. process engineering market.

Now Power-Gas, the London-based international organisation, has secured contracts for the design of plants for methanol, formaldehyde, hydrogen and synthetic natural gas. In the face of severe competition from experienced U.S. firms.

To prove what a big step this is, Power-Gas has been awarded the Queen's Award to Industry for 1972 for export achievement.

And that's just a starting point. There'll be no resting on our laurels. We intend to go on extending our activities there, and elsewhere throughout the world.

So, wherever you operate, whatever your plant needs, Power-Gas are definitely the people to call.

Business Brief

European chemicals: still struggling

The European chemical industry, in the doldrums for at least two years, is showing signs of picking up. At least, prices for the worst-hit products—plastics, polyesters, synthetic textiles—have ceased to fall. But the industry is not really over the hump. Profits have not recovered yet, and investment plans for this year and next are well down. It may take until 1974 or even 1975 to put it all together again.

What went wrong? Virtually all the troubles can be traced back to the vast overcapacity generated by heavy investment in the second half of the 1960s, when the industry was riding on the crest of a boom. Output in western Europe was going up by an average of 10% a year; in Britain, which was losing ground to its western European competitors, growth was rather below this, but at 7% a year still increasing at nearly twice the rate for manufacturing industry as a whole.

This was not the only reason why investment went ahead at such a breakneck pace. From 1970 on, chemical manufacturers were faced with inflation at rates well above anything they had seen since the second world war. Their way of coping was to seek the large economies of scale that improvement in plant design was opening up. This meant building bigger plants than sales prospects alone could justify and inviting all the delays and running-in problems associated with projects on this scale.

A few voices in the industry were raised against it, usually from the finance directors' departments, but were brushed aside. The size of a basic ethylene plant rose in this period from 100,000 tons a year to 500,000 tons. The hunt, therefore, was on for new products to use the huge new tonnage of basic chemicals and for still cheaper production methods.

By now most plants are so large that there is little more to be gained from making them bigger still. One huge additional plant coming on stream now would batter prices still further. Inflation has been having its effect on plant costs at a time when, because of the already large surplus of capacity, prices cannot be raised to compensate for the extra investment costs.

The search for new, cheaper processes is also becoming progressively less rewarding for large sectors of the industry. The cost of research and development has been rising so sharply, and the chances of discovering a really new and revolutionary product or production method have become relatively so slim, that most companies have cut back drastically on their research spending. Only in drugs—where new products are vital to the industry—has there been no paring down in the laboratories.

Investment in chemicals has always followed a cycle, but the present trough is particularly deep because the preceding peak was above average. The industry's marketing has also been remarkably inflexible. Its attempts to find new outlets for existing products have been less than successful. The plastics makers' onslaught on some of the market now held by steel has made less headway than expected. Steel users are a conservative lot, not easily persuaded to switch to substitutes, and the chemical industry was not all that effective a persuader. But slow inroads are being made: plastics now appear in anything from car grilles to watch gearwheels.

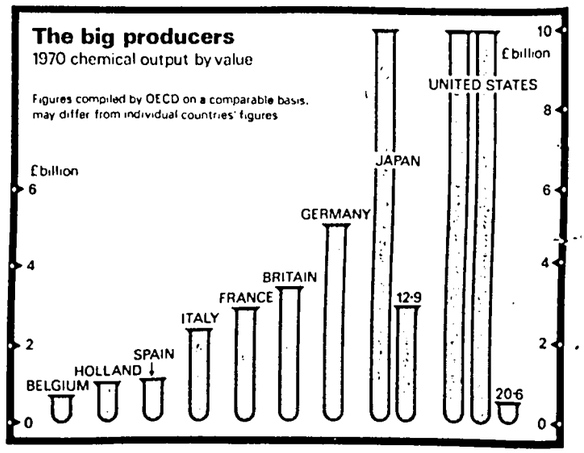
There was a time when chemical manufacturers could protect their profits by buying up their customers, so guaranteeing themselves sales outlets. But this game has lost its popularity, partly because it turned out that chemical expertise was of little help with the engineering problems of plastics fabricators, partly because most chemical companies no longer have enough spare cash to make such acquisitions. There is more talk now of backward integration, in which engineering companies buy their way into plastic moulding or set up their own extrusion plants.

Still thinking big

The plastics section of the chemical industry will now be hard put to reach its target of passing world consumption of steel in sheer bulk by 1980 and in weight by 1985 (plastics weigh appreciably less than steel), but on the continent the industry is still thinking big.

Only British manufacturers, once they saw the slump coming, seem to have opted out of this push. Shell Chemicals delayed a large part of its £200m Carrington petrochemical complex near Manchester (including two polyethylene plastics plants) by at least three years. Some people in the industry think that by doing this Shell will miss the boat twice over, because the market will have picked up before the extensions are on stream. The recent large-scale additions to capacity at Baglan Bay by BP Chemicals and at Grangemouth by Bakelite Xylonite were both sanctioned before the slump; and, although they may be embarrassing now, they put these companies in a position to cream what there is off the market before Shell is ready to move.

The fertiliser and pesticide markets have been hit round the world by the environmentalists. Even so, world sales of pesticides have doubled over the past five years, and the market, already worth £1.5 billion last year, should increase considerably again this year. The banning of DDT in America should not affect sales too disastrously because it applies only to home consumption, not to exports. Half the world production of DDT is bought by the World Health Organisation, which spends £25m a year on it.



Environment lobby or not, pesticides are expected to continue to sell well. A quarter of the crops sown in Europe, a third of those in North America and Australasia and 42% of those in Africa are lost to pests and disease, and without an element of chemical protection it is reckoned that losses would account for about half of all crops. Hence the industry is confident sales will keep up. The only other products that can expect a similar boom are drugs.

Even so, drugs have their troubles just like the rest of the industry; mostly markedly so in France, where since 1968 the number of pharmaceutical firms has dropped from about 1,000 to only 400. This slimming-down has been part of a massive restructuring of the domestic chemicals industry in France into much larger units over the past three years. The emergence of Rhône-Poulenc and Pechiney-Ugine Kuhlmann are two examples. The expected improvement in profits has yet to materialise, but should happen over the next three years when the mergers have had time to pay off. A measure of aid and protection from the French government is favouring domestic manufacturers, and foreign companies are virtually debarred from buying up any of the multitude of small drug firms still surviving.

Europe's league table

1971 turnover	£m
Hoechst	1,547
ICI	1,524

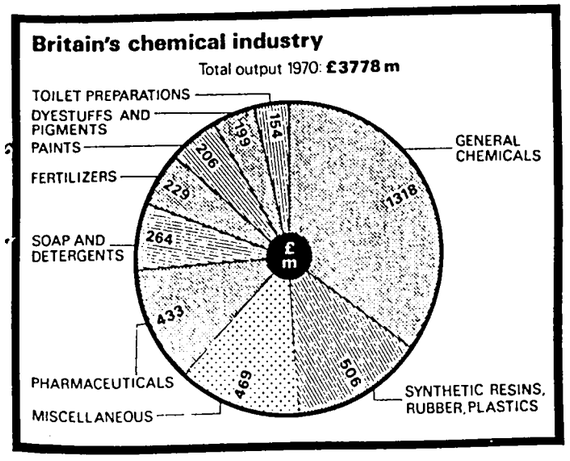
*1970. †Chemicals only

France races on



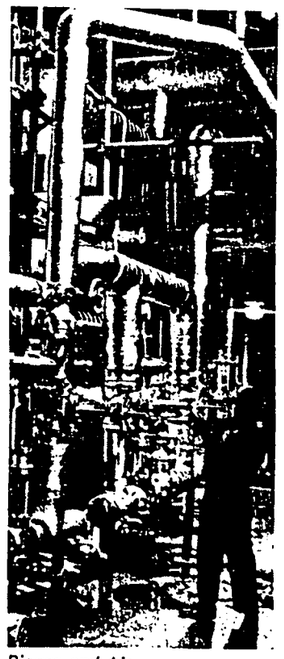
Unlike Britain, a heavy investment programme is now in progress in the French chemical industry, in which the government has a 10% stake: Rhône-Poulenc alone is planning to spend £460m in the three years to 1973. The object is partly to make up for lost time; the French got rather left out of the massive investment boom in world chemicals in the late 1960s. The French are anxious to improve the performance of their companies, which have been overshadowed by the expansion of foreign chemical companies in France. Foreign-owned firms now account for as much as 30% of the French industry. France is also a net importer of chemicals, while Germany exports more than twice as many chemicals as it imports, and Britain at least 40% more.

Other countries are not overly sympathetic towards France's investment programme. They reckon that the French industry has put up a better performance over the past two years than the official figures indicate. The French have a way of collecting production statistics by weight, rather than value, which does not reflect improvements in profitability. Even so, the French companies did not have a brilliant 1971. After only 18 months of the current five-year plan for the industry, the forecast annual growth rate of over 12% has been revised downwards to 10%, and a further cutback at the end of this year seems on the cards.

The Italians have even bigger problems. There the government, through its many holding companies and through its stake in Montedison, controls 50% of the industry, but does not seem to know what to do with its powers. At one point it looked as though Montedison was to be used as a vehicle for rationalising the industry; the appointment of Signor Eugenio Cefis from ENI as head of Montedison was seen as the first step. But Signor Cefis has been showing remarkable independence in the running of his affairs.

He is believed to have made a direct approach to the Italian government for aid amounting to £1.2 billion to offset immediate losses on chemicals, adding the rider that if the group is to be saved then the government must either take over the company's old, inefficient plants or compensate Montedison for running them as a social service. He has also gone to the international capital market, through his newly-established Montedison Holding Company in Switzerland.

The current round of pay negotiations will inevitably bring problems for Montedison. The smaller, independent Italian companies find it easier to digest wage increases. Both their plant and their management techniques are very much more modern than Montedison's. They have also steered clear of the most depressed sections of the industry, while Montedison seems determined to gain the lion's share of the European synthetic fibres market, currently the most depressed of the lot. Unless the Japanese can be dissuaded from flooding this market with imports, the future for synthetic fibres looks even bleaker than the present. Some form of international co-operation—such as a joint plan for future capital investment—is now urgently needed if the fibres market is not to bankrupt itself, but this might run up against EEC cartel legislation as well as against American anti-trust laws.



German worries

West German chemicals, too, have taken a knock in the past two years, but in its annual report published last week the industry sounds a more buoyant note for this year. Profits, which dropped by 30% in 1970 and by a further 10% last year, are now looking up again. The current year will still see an investment trough, but things should get better after that. What is still worrying the Germans is export profitability after the D-mark's upvaluation. Germany is the world's leading exporter of drugs, and is second only to the United States on total chemicals exports (although Japan may be about to overtake it). Exports take up more than a third of turnover. Yet many firms reckon that their export business was in the red last year.

The weak spots are the organic chemicals—plastics, chemical fibres and fertilisers—all areas where international competition is fairly murderous. In fertilisers particularly, German home production and exports are now dropping and imports are taking their place. The bulk of imported fertilisers comes from eastern Europe, which is selling them off cheaply in exchange for hard currency. British manufacturers, mainly ICI and Fisons, also intend to expand their share of the German market as demand slackens at home, as it is expected to when the British Government phases out the fertiliser subsidy after joining the EEC.

The German chemical industry has been among the quickest to respond to agitation about pollution. In 1970, the chemical industry spent about £74m on pollution control. Germany now has very strict laws, helicopters inspect chemical plants from the air to see if they are polluting rivers, and land to serve a writ if they are. If this is the sort of bill chemical industries will eventually have to face in other countries, as their pollution controls catch up with Germany's, the date for a return to profitability should perhaps be pushed off another year or so. In Britain, Mr Peter Walker, Secretary of State for the Environment, has forecast capital expenditure of £1.3 billion over the next five years in sewage disposal and plant for treating liquid industrial waste. Industry will pay indirectly for this, and chemical companies for much of it.

Bigger and bigger

DUNLOP

The Chairman reviews progress of the Dunlop-Pirelli Union

Extracts from the Chairman, Sir Reay Geddes' speech at the 73rd Annual General Meeting of the Company in London on June 19th.

"Despite a number of unfavourable factors, not least the lack of real growth in the economy, there was a significant turn-round in the fortunes of the Company in the United Kingdom last year.

Timing of the Union

"As shareholders will know, 1971 did not prove to be a favourable period for the Union's first year of operations in Italy.

"We were not just looking to the present or even to the immediate future. Our sights covered not just the next few years but the decades beyond. A decision was necessary because the opportunity was there. It may well not have recurred.

Current Initiatives

"In Europe in recent years we have invested heavily in new production facilities in advance of rising tyre demand.

"Outside Europe, further expansion is planned with over a third of our capital spending in the next three years taking place overseas. This does not, in any sense, imply that we are neglecting the home countries of the Union; it does however reflect the fact that growth elsewhere will require additional investment to ensure that no opportunities are missed.

"Currently, the most exciting technical development is the 'Total Mobility Tyre' which was demonstrated to the European press and vehicle manufacturers early this year and created an immediate response. Although it was initiated by Dunlop, it has increasingly a Pirelli technical contribution based on parallel work they had in hand. And with the Union's worldwide relationship with major vehicle manufacturers, we hope to exploit this important safety feature more effectively than either partner could have achieved separately.

Progress of the Union

"The first advantage we foresaw was that together the two groups could use their existing resources more effectively by obtaining the benefits of larger scale. The consequent economies in supply and gains from common services being benefits which each partner would have been unable to achieve without the Union. The most immediate and tangible gain has been in joint purchasing and in the streamlining of our buying operations.

"Secondly, we believed that the joint capacity to innovate and exploit the results of research and development would be improved by co-ordinating the research programmes and utilising the separate skills and flairs of each partner.

"A small research policy group has been set up to advise on the major priorities for research and development within the Union, and to ensure that we are making the best uses of our men and facilities.

"The third potential advantage of the Union was the complementary nature of its geographical operations.

"Europe is the heartland of the Union and will remain so. Faster growth in Brazil, Mexico and Greece has helped to offset the downturn in two major Dunlop areas of activity – India and South Africa – whilst increasing returns from Dunlop's operations in Nigeria, Malaysia and Zambia have helped to offset more difficult trading conditions in Argentina and Turkey.

"Fourthly, it was foreseen that the greater product range would mitigate the cyclical fluctuations affecting particular products. For Dunlop shareholders, the major change was the inclusion of the important Pirelli cable sector which accounts for about a fifth of the Union's total activities. With the increasing demand for electricity generation and transmission on the one hand and the increasingly sophisticated telecommunication needs on the other, the cables business is growing profitably round the world. In a year when some major overseas tyre markets had mixed experience, cables brought a degree of underlying stability to Union activity and profitability.

Future Progress

"To sum up, in many areas progress has been faster and relationships easier than we had dared hope. This, I suggest, reflects great credit on all the parties concerned, in view of the difficulties facing the Union in its inaugural year. There is more to do: much more. But the Union is now in a more competitive posture and in the last 18 months we have, I believe, laid sound foundations for the future."

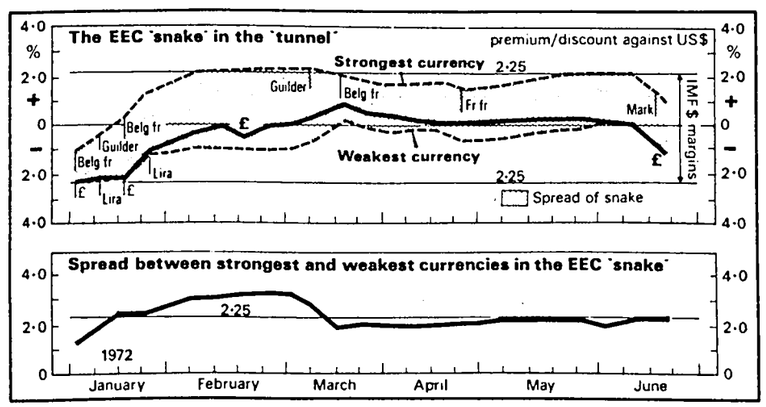
Dunlop Holdings Limited

BUSINESS

Can the snake escape ?

If Britain's community partners have to continue to support the pound for long, a small devaluation might seem a better alternative to them

Central bankers of the enlarged European Economic Community are busily trying to prove, not least to themselves, that the European monetary union (Emu) will work. Emu was the chick born on April 24th when the Six brought into operation an experimental procedure to halve the possible divergence between any two of their currencies from that generally permitted for other currencies. The four candidate members of the EEC (Britain, Ireland, Norway, Denmark) came in shortly afterwards. Until last week the participating currencies had all remained snugly within their community band, without help from central bankers. Then the poor battered pound set Emu its first test, and it came out of it looking rather tattered. That is probably one reason why the Bank of England tried to shore sterling up by raising Bank rate to 6 per cent on Thursday—although, in the event, the exchange markets seemed little impressed.



Our chart shows what Emu is supposed to do. Under the Smithsonian agreement of last December rates for most currencies are allowed to fluctuate between margins of $2\frac{1}{4}$ per cent on either side of their parities against the dollar, so that the rate between any two can vary by $4\frac{1}{2}$ per cent from their cross-parity. Under Emu, EEC countries are committed to seeing that the rates between any two of their own currencies will not diverge from their cross-parities by more than $2\frac{1}{4}$ per cent. The effect is the "snake" (a community band of $2\frac{1}{4}$ per cent) within the "tunnel" (the total $4\frac{1}{2}$ per cent range of fluctuation).

In practice, the snake has never been narrower than 2 per cent (ie, the margin between the strongest and weakest member currencies has never been less than 2 per cent) ; and sterling has been consistently in the lower half of the band.

Until late on Wednesday, even at its weakest during this past week, sterling had been only 0.8 per cent below its own central rate ; but it had to be supported there to prevent it piercing the snake's skin, since the strongest EEC currencies were about $1\frac{1}{2}$ per cent above their parities. Under the Smithsonian agreement the pound could have fallen to just below $\$2.54\frac{3}{4}$, but Emu required it this week to be artificially supported at around $\$2.58\frac{1}{2}$, thus making British exports nearly $1\frac{1}{2}$ per cent more expensive than they needed to be. The sensitivity of the situation was revealed in late dealings on Wednesday after the European central banks had left the market : selling from New York sent quotations in London down to $\$2.57\frac{3}{4}$. The snake had come out of its skin. It got back into it when the Europeans came in again on Thursday morning. But by then their task was to hold sterling at a lower level, 1.2 per cent below its central rate. The snake was still in its skin only because the strongest currency, the D-mark, was no more than 1.0 per cent above its central rate. Presumably it had been weakened

Emu on trial

It's hard to get a test at two months' old. Probably no one foresaw the pound running into trouble quite as soon as it has done this week. But it is a seasonally weak time for sterling anyway.

by the bagfuls of D-marks the Germans were having to unload on the market to buy sterling.

Emu did not formally break down on Wednesday. When the central bankers drew up the rules for their new game, they agreed to play it only during hours. When the Europeans closed their doors at 4 pm on Wednesday, the whistle blew, even although New York was open and went on selling sterling. Obviously this adds another twist of speculation to Emu's complicated rules of intervention.

Emu's rule is that intervention at the limits of the community band must take place in community currencies. (Theoretically, intervention can also take place in dollars when the entire snake shifts up or down to the point when a currency reaches its official dollar buying or selling rates at the limits of the tunnel, but sterling has not yet done so.) Instead of the Bank of England having to buy sterling with dollars, as it used to do when the pound came under pressure, the central banks of the community countries whose currencies have at one time or another been at the top of the band this week (Germany, France, Belgium, Holland and Norway) have had to use their own currencies to support the pound, and all five were actively doing so on Thursday. Britain will have to pay these European central banks back on the next settlement day at the end of July. (Theoretically, settlement comes at the end of the month following the one in which the value of the deal is agreed, and this occurs a few days after the deal itself).

The settlement will be made in a package of assets—gold, SDRs, currencies—apportioned according to the proportions in which they are held in the borrowing country's reserves. Britain has a lot of dollars in its reserves, and will therefore shell out a high proportion of dollars in its repayment package. The Germans and French will be unhappy about adding still more to their stockpile of inconvertible dollars, just as the British should be unhappy at having their exchange rate again artificially propped up with borrowed money. If the pressure on sterling continues, and Britain's community partners have to continue to support it to any extent, some of them might not view unfavourably a small devaluation of the pound.

Out of court

The Government appears wholly at a loss to know what its next move on the wages front should be

The Government had hoped that in the Industrial Relations Act it had a means of moderating wage demands in the public sector, but it now recognises it has nothing of the sort. This has left the cabinet at a loss to know what to do next. The Confederation of British Industry obviously thinks the Government has lost its way too, because the CBI is trying to do its own deal on wages and conciliation over the Government's head. As the law rolls majestically through a series of test cases, it may end by introducing some much-needed discipline into British labour relations. But the Government now has no such hopes on wages. Civil servants have consistently opposed any attempts to reform trade union legislation on the ground that the law could never be made to work, especially on short-term economic ends. But all that means is that the direction of the economic policy of the country is something only governments can do, and it cannot be shuffled off on to the shoulders of judges. It does not follow that either attempts at reform or the Industrial Relations Act itself are doomed to fail just because judges may take decisions that upset ministerial applecarts.

Two major decisions by the National Industrial Relations Court have now been reversed by Lord Denning on appeal. One reversed the NIRC's decision that trade unions are legally responsible for the actions of their shop stewards, but as it has now gone to the House of Lords, the outcome remains open. It may need several test cases to clear this point because the rule books of some unions are more specific about the functions and powers of shop stewards than others are. But Lord Denning's second decision has led Sir John Donaldson to make important alterations in the NIRC's procedure.

From the outset, one of Sir John's difficulties has been the refusal of trade unions to attend court hearings, for which Mr Vic Feather at the TUC must bear his share of the blame since he ordered the unions to boycott the court. This led Mr Jack Jones, whose Transport and General Workers Union was getting fined for contempt of court, to demand that the TUC should pay all fines incurred by obeying TUC orders. The ban has now been lifted and union officials have been appearing to put their unions' case. But individual shop stewards have not, and the law of contempt being what it is, this left Sir John no option but to order arrest. That was how he found himself in the position last Friday of instructing the tipstaff to collect the three leaders of the dockers' picket outside Chobham Farm container depot.

When the Official Solicitor emerged from the shadows to put the case to the appeal court that the dockers should have put for themselves, arguing that arrest was too serious a matter to go by default, Lord Denning and his colleagues immediately ruled there was not enough evidence to justify putting the pickets even temporarily in jail. Sir John has now taken this argument the logical next step, and asked the Official Solicitor to send a barrister to his own court to perform the same function of amicus curiae there.

The Chobham Farm blacking resolved itself on Thursday in the worst possible way. The depot is going to take on 40 dockers that it does not want, bringing its staff up to 100. The management was making what it could of the rout, saying that when it could work normally again it would actually need that number of men.

Were that so, why did it not take them on before? And was it necessary to make life even more difficult for other container depots by agreeing that Chobham Farm should in future be classified as "dock work?" The price of peace is high.

There is a widespread fear that the pickets who have spent the past six weeks outside Chobham Farm will now move on to their next target, which is expected to be Dagenham Cold Store. Several other container depots are still being blacked in other parts of the country, three of them involved in the question, now in the House of Lords, of union responsibility for shop stewards. But, from the comments that Sir John was making on Wednesday, he hopes that his own discussions will clear up how far pickets can go before what they do becomes "unfair."

Many of Sir John's, and the Government's, difficulties come from the fact that unions have refused to register under the Act. Registration was automatic, gave great legal protection and considerable tax advantages. All this, it was thought, would give unions an incentive to stay on the register, and at the outset there were signs that some of them might. But pressure from the TUC proved too strong; one union after another deregistered, although it is probably costing the union movement as a whole £6m a year in lost tax concessions. The penalty for not staying on the register, the fact that an unregistered union cannot call a strike without laying itself open to prosecution and a fine, has proved a paper tiger because, as experience in the NIRC has shown, there may prove to be a host of legal loopholes through which the court's strong arm can be avoided. It has, however, meant that the court has found itself clamping down on men for doing what, if their union were registered, would be perfectly legal and straightforward.

What cannot, however, be avoided either under this Industrial Relations Act or the much-watered-down version produced earlier by Mrs Barbara Castle, is the fact that if unions or shop stewards or anyone else within the court's reach either disobey or ignore it, they are guilty of contempt of court. And the ultimate penalty for disobeying a court order is jail. There are many who would wish that in the industrial court it were not. But, as the law stands, there are going to be martyrs whom not even the Official Solicitor will be able to save.

The Government's hopes for a gradual reform of the unions which would bring the moderates to the top, and so lead to more rational wage bargaining, have been dashed. Because unions have refused to stay on the register, their rules are not subject to scrutiny by the special registrar, who could have pressed for reforms on pain of being removed from the register. This would have taken a long time anyway: the reform of industrial relations is a slow process, and if the present Act follows the pattern of earlier reforms in America and Sweden there will be some years of upheaval and violent union resentment before the law shakes down.

During Britain's running-in period, all kinds of conciliation procedures designed to keep wage bargaining out of the NIRC—and as merrily inflationary as ever—will be, and are being, put forward by the TUC, by the Confederation of British Industry and even, unofficially, by parts of Whitehall. None of this will help the Government with a raft of inflationary wage settlements in electricity, coal, the railways, local government and the rest behind it, and more claims coming up in the autumn. The nationalised industries are being subsidised now to the tune of 1 per cent of the country's gross national product. Because their goods and services are being sold below cost, from steel to coal and railway seats, the nationalised industries are distorting the pattern of demand, and the Government's only way out of this must be through a sharp rise in prices and an equally sharp cut in manpower. The Prime Minister had the chairmen of all the nationalised industries round to No. 10 on Tuesday evening, to give them a rough run-down.

Price rises are difficult to engineer under the CBI's price freeze, but the signs are growing that when the freeze is renewed next month, as it looks like being, the new arrangements will be as full of holes as a sieve. Prices will be kept to within 5 per cent across the board, allowing the prices of some products to rise sharply, provided the average can be shown to be within 5 per cent. The agreement looks like being for no more than an initial three months, in place of the expected six—ie, until shortly after the TUC meets in September—and will ignore all past increases made in the preceding 12 months, so that a company could raise its prices on July 1st by 5 per cent, while the present freeze is in effect, and then again by 5 per cent on August 1st, when the new freeze begins. The first nationalised industry to take advantage of this is going to be steel, now losing £100m a year and under an obligation to go into the EEC on January 1st on a profit-making, unsubsidised basis.

Even under these conditions, the nationalised industries will need to shed large numbers of men after the sort of wage increases they have just handed out. Ministers no longer pretend, as they did immediately after the miners' strike, that the coal industry will stay at its present size. But, if cuts are carried through, there will be anguished complaints from those ministers who do not have to foot the subsidy bill but who do carry responsibility for any rise in the rate of unemployment. Unemployment is now politically more quiescent, but it would not take much to stir it into life.

Malaysia, Singapore, Brunei

MALAYSIA is gathering strength internationally and showing particular interest in Europe. The flow of foreign loans and investment is gaining momentum. In SINGAPORE, the rapid growth continues. When should it be curtailed—and how? The latest QER analyses the situations in Malaysia, Singapore and Brunei.

Bearing with the Japanese

Unjustified squeals from British industrialists will not help the Government to persuade the Japanese to open their lucrative home market

The leaders of the Japanese ball-bearing industry who visited London this week for trade talks were at first amazed by the demands of the British. By the time they left, they were extremely angry. On the back of the strong warnings that Mr John Davies, Secretary of State for Trade and Industry, made during his visit to Japan three weeks ago, the British bearing manufacturers had grown in bravery. It is believed they asked the Japanese to cut sales in Britain by a half and gave them until the end of July to produce an answer. If they are not satisfied, they will be back pounding on Mr Davies's door; demanding that action is taken in September when the British Government re-opens talks in Tokyo. They hope Mr Davies will exercise the safeguard clause either in Gatt or the Anglo-Japanese trade treaty.

There seems little likelihood of the Japanese coming up with any offer at all. In broad terms, the Japanese hardly seem to be disrupting the market: they supply 6 per cent of the £100m a year of sales of bearings in Britain. But, in the usual Japanese way, they have concentrated on one sector. They have won around 15 per cent of the market for small single row ball bearings up to 70mm in diameter, used mainly in small fractional horse power electric motors of the kind that crop up in vacuum cleaners and the like, and here they have won around 80 per cent of the total British market.

Since production of these small, high-volume, mass-produced bearings helps a manufacturer to spread his overheads, the Japanese invasion is deeply resented. Instead of taking the warning when it was first on the wall—and doing something about it by investing in new and competitive plant—British manufacturers waited until they were overtaken. Now they are screaming for big daddy in Whitehall to hold their hands. They are probably right when they say that the present prospect of profits from making a new investment in small standard bearing plant is slight. But it is questionable, to say the least, whether this was true five years ago.

The Japanese also visited France and Germany this month. Although the Japanese are making even greater inroads there than in Britain, the continental manufacturers are trying to get back on to an equal footing by investing. SKF, for example, is putting over £50m a year into recovering its competitive position.

The British makers of bearings claim that they are losing their market because of price-cutting. Manufacturers of small electric motors could tell them that this is not true. They were initially attracted to buying Japanese bearings by a combination of price and availability when British service was appalling. They then found that Japanese bearings were of a higher quality and ran quieter, so that fewer of their motors were rejected because they ran noisily. Mr Davies would face a real outcry from the domestic appliance industry if he cut off its supply of Japanese bearings, and manufacturers would do everything possible to get round any import restrictions.

Other British industries may have better cases for protection than bearings. One is the chemicals industry, although a large part of its present difficulties can be put down to world over-capacity. The electronics industry has long faced Asian competition: in the calculator field, absolute domination. It should by now have learned to live with it. Japanese fork lift trucks are a third cheaper than British, but the Japanese truck is designed for a short life, where the British truck will go on for years.

A lot of the unemployment that British industry, and particularly the bearings industry, is blaming on Japan has nothing to do with the Japanese at all, and Mr Davies no doubt knows it. But he may wish to use the noisy British lobby as a means of making Japan open its home market more to British competition.

Key indicators: British economy

Unemployment
Much more than seasonal drop in June.

Earnings
Sharp rise in April, perhaps due in part to increased overtime as industry continued its recovery from the February disruptions.

National income
GDP, seasonally adjusted, down 2.1% in real terms between fourth quarter 1971 and first quarter this year, but figures upset by miners' strike.

	Month	Index 1963=100	Percentage change on previous month	three months	one year
Industrial production*	April	127.7	+0.9	+2.3	+2.4
employment*	March	141.6	−0.4	−0.2	−5.7

Why manage a pension fund portfolio by yourself when National Westminster has a department that does nothing else? If you're running an office and a pension fund, one of them's going to suffer. And if the pension fund suffers, a lot of people suffer. So, if you'd like our experience working on your pension fund portfolio, call Michael Corlett, 01-606 6060, extension 3413. And listen to the voice of experience.

National Westminster Bank

Westdeutsche Landesbank Girozentrale

A Growing Force in International Banking

* balance sheet total £ 5,017 millions * business volume £ 7,842 millions

Highlights of the Year under Review

The balance sheet total of Westdeutsche Landesbank increased in 1971 by £ 383 millions to £ 5,017 millions, while the volume of business rose by £ 515 millions to £ 7,842 millions.

Stimulating Economic Growth... Short, Medium and Long-term Credit

The total of short and medium-term loans to Bank customers rose by £ 107 millions to £ 503 millions, while long-term credit to commerce and industry remained steady at £ 491 millions. Loans were made primarily to companies engaged in the production of ferrous and non-ferrous metals, electronics, engineering, communications, and transport companies.

Record results were achieved with mortgage loans for new housing development. Municipal financing also continued to play an important role.

Professional Advice for every Kind of Investment... Stocks, Bonds, Fund Certificates

The experience available to every customer at the Westdeutsche Landesbank, backed by a huge reserve of information, forms a solid foundation for clear investment decisions.

Sales of investment and real estate certificates increased sharply, while share and bond business also expanded considerably. Foreign share dealings almost doubled as a result of favourable market trends in the USA and Great Britain.

A Top Address... in the World of Underwriting

In 1971 Westdeutsche Landesbank strengthened its underwriting position. It participated in the management groups of 22 international issues, including six DM issues as leading manager. The Bank acted as underwriter in 146 international DM and foreign currency issues and also played a role in the selling group or in the private placement of another 21 foreign currency issues.

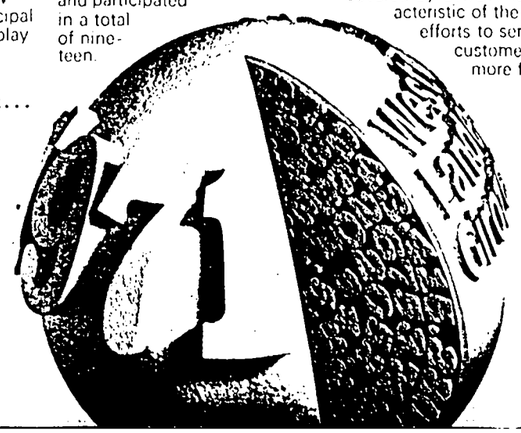
The Bank was co-manager in three domestic issues and participated in a total of nineteen.

A Growing Force... in Foreign Trade

The Bank's export credit business expanded considerably during the year under review, aided by its ability to offer long-term credit at fixed interest rates for the period required from its own resources.

The upward trends in commercial foreign business continued, while clearing, documentary and letter of credit business all increased strongly.

The Westdeutsche Landesbank is a partner in the ORION banking group in London, together with other leading names in the World of finance: The Chase Manhattan Bank N.A., New York, Credito Italiano S.p.A., Mailand, Mitsubishi Bank, Tokyo, National Westminster Bank Ltd., London, The Royal Bank of Canada, Montreal.
Close cooperation with these partner banks beyond the areas covered by ORION is characteristic of the Bank's efforts to serve its customers even more fully.



A Dynamic Bank – Clearing Institute for an Entire Banking Network...

The Westdeutsche Landesbank, clearing centre for an entire network of savings banks, is at the heart of financial movements. The Bank's advanced electronic equipment is used to automate normal bank business and to build complex information systems as aids to decision making at the highest level.

...with Well-versed Staff

The Bank's customers are served quickly and efficiently by almost 7,000 employees whose average age is 34 years. Continuous training programmes are particularly important for the Westdeutsche Landesbank and its employees.

You ought to know more about this Bank and its subsidiaries. Please write for the summarised annual report for 1971 to: Westdeutsche Landesbank Girozentrale, Abteilung Kommunikation, D-4000 Düsseldorf, Friedrichstraße 56, West Germany.

Westdeutsche Landesbank Girozentrale Düsseldorf · Münster

a growing force in international banking

Wherever you choose to do business, Wells Fargo Bank is there to help.

Europe, Latin America, the Far East; our global network of branches, affiliates, and representative offices—including our new, wholly-owned merchant bank in London, Wells Fargo Ltd.— are strategically located to offer all the banking services you require, wherever you require them. All, backed by the strength of $7 billion in assets and the knowledge gained through 120 years experience.

In addition, Wells Fargo makes it a point to maintain close working relationships with banking, government and corporate interests all over the world in order to serve you better wherever you choose to do business.

If you're there, we're there: Auckland, Buenos Aires, Bogotá, Caracas, Dubai, Hong Kong, Lima, London, Los Angeles, Luxembourg, Managua, Manila, Mexico City, Miami, Nassau, New York, Panama City, San Francisco, San Salvador, São Paulo, Sydney, Taipei, Tokyo.

News from a Big Swiss Bank

Credit Suisse continued to enjoy a gratifying volume of business during the first quarter of 1972. The accelerating pace of economic activity in industrial nations provided an important stimulus to the bank with its worldwide operations.

Our Stockorama: Electronically transmitted and displayed stock market quotations of international blue chips

Total assets increased by 3% to over SFr. 32,000 million

Deposits increased by SFr. 731 million, with those from other—mostly foreign—banks accounting for SFr. 672 million. Client deposits were up SFr. 59 million. Time deposits declined by 1,100 million francs, reflecting a reduction in trust accounts and lower interest rates which prompted depositors to shift their funds to other accounts. Thus, deposits in savings books, private and salary accounts increased by 293 million francs, medium-term notes by 308 million and checking accounts by over 500 million.

Credit demand continued strong. Simultaneously, our deposits with other banks rose by 10% to 15,700 million francs, while our cash position maintained the high level of 2,500 million.

A shift in foreign operations

The monetary realignment concluded in Washington last year and the high liquidity prevailing in the international financial markets during the first months of this year have resulted in a certain change of climate in foreign operations. Nevertheless, our international business—traditionally a significant part of our activity—increased substantially, with greatly expanded volume in foreign exchange, underwriting and investment operations.

Our new branch offices in London and Nassau commenced operations and a Representative Office was opened in Tokyo. Thus, including its three subsidiaries in New York, Montreal and Nassau, Credit Suisse now has 17 foreign facilities and more than 90 branches in Switzerland.

Share capital increased to 450 million francs

As a result of the March capital stock issue, Credit Suisse's share capital now amounts to SFr. 450 million and its open reserves to more than 1,000 million francs. The bank's own funds thus total 1,473 million francs.

Tradition and Dynamism since 1856

Founded in 1856, Credit Suisse is a big Swiss bank. Backed by long tradition, yet dynamic and forward looking in its approach, it will continue to offer its clients throughout the world the type of imaginative and innovating service which has lead to its international standing and reputation.

CREDIT SUISSE
the right partner

Head office: Paradeplatz 8, 8021 Zurich

BUSINESS *Britain*

More jobs, but more inflation too

Thursday's rise in Bank rate to 6 per cent was really meant to help to relieve the pressure on sterling, although the Bank of England half-pretended that it wasn't—with the result that the rise had little effect there. But it comes at a time when domestic reflation is picking up some steam.

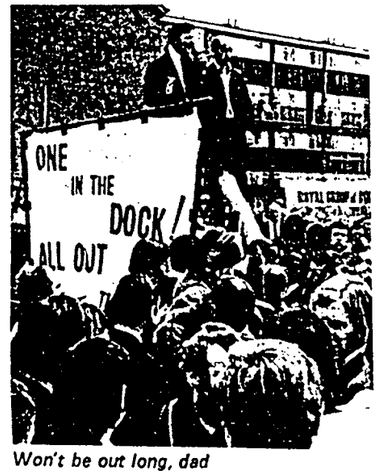
The most cheering economic news is the continued drop in unemployment. There is now no doubt that the jobless total is falling more sharply than would be expected seasonally and that at long last some new jobs are being created in Britain. The drop of 29,000 in the Department of Employment's track indicator (the seasonally adjusted wholly unemployed) may look small beside May's fall of 63,000, but last month's figure was inflated by a rush of labour recruitment that had been postponed during, and in the aftermath of, the power cuts last February. It is to be hoped the underlying rate of improvement is accelerating: between January and May it averaged only 11,000 a month. Helped by the usual seasonal hirings, the total out of work in Great Britain and Northern Ireland was down on June 12th to 833,000 from 1,024,000 on January 10th.

Unfortunately, the new recruitment over these past five months has been unevenly spread, both geographically and industrially. On a seasonally adjusted measure, unemployment in Northern Ireland has scarcely changed, and that in north-west England, the west midlands and Scotland has come down much less than average. The biggest improvement has been in East Anglia. From what manufacturers have told the Confederation of British Industry, new manufacturing jobs have been created mainly in household consumer durables. The motor industry and the food industry still seem to be shedding labour.

The big threat comes from wage inflation. The latest figure of average earnings, for April, shows a jump of over 2 per cent in a month and 4 per cent in the space of three months. It would be nice to think that April's earnings owed much to an unusual amount of overtime as people tried to make up for the power cuts in February, but they probably didn't because manufacturing output was marginally down in the month.

Docks

Can the respite last?



The four-day unofficial strike by most of Britain's dockers ended on Tuesday, causing little delay to the 200 ships affected. But the threat of an official dock strike remains, and will be averted only if the Aldington-Jones committee, investigating dockland's unemployment, can come up with proposals acceptable to the unions by July 26th.

The committee should be helped by the natural pick-up in trade during the summer, which should provide work for many of the 2,000 dockers now drawing fallback pay and forming the strongest core in favour of a strike. Summer holidays will also damp enthusiasm for striking. There even appears to be a growing feeling that the militants may have lost their chance of keeping up a solid front. Many of the smaller ports, aware that a prolonged strike would put them permanently out of business, are treading a softer line.

But the strike is still a strong possibility. It would only take renewed action by the National Industrial Relations Court to give the militants the martyrs they need. The calling-off of the Chobham Farm blacking after a mass meeting at the Royal group of docks on Thursday has momentarily lowered the temperature, but another large employer going out of business, as Southern Stevedores did this month, could start the unrest all over again. It was alarm over Southern Stevedores that first precipitated the strike threat.

In the longer term a strike will not be avoided until the dockers themselves begin to tackle the problem of unemployment more realistically. The unions have failed to tell the dockers quite how large the necessary redundancies must be over the next few years, and so every rise in unemployment is immediately taken as an employers' betrayal. Much of the present dispute has been over whether dockers should stuff containers, but nobody has mentioned that even if they do win this battle only about 500 jobs can be saved.

No matter what agreement is worked out in the next few weeks, the number of registered dockers in Britain will have to fall from the current 40,000 to about 32,000 by 1975. Half of this drop will be absorbed by natural wastage and dockers near retirement taking large severance

Won't be out long, dad

payments, but for the other 4,000 not even a successful strike this summer can win a reprieve. Nearly all these 4,000 lost jobs will be concentrated in London and Hull, neither of which can afford to pay the £8m extra in golden handshakes that could help industrial peace. But it will probably not be long before the employers go cap in hand to the Government with persuasive arguments that it should meet the bill.

Steel

Hope for Melchett

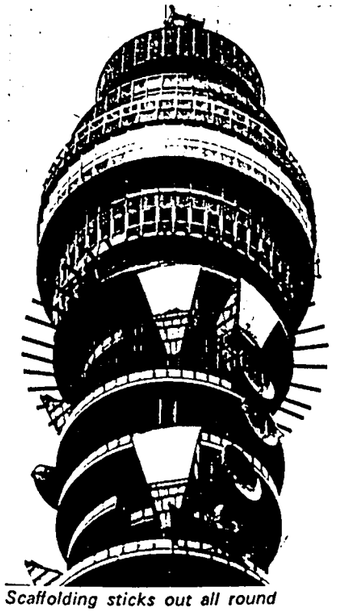
The Government is easing the way for the British Steel Corporation to become more commercial. BSC is being encouraged to go on with its slimming exercise at a rate that would have been unthinkable while unemployment was still rising. It expects to be allowed to raise some prices quite appreciably, by well over the past 12 months' 5 per cent limit. And in two years' time it will have stopped making uneconomic steel in Manchester: 4,350 jobs are being cut out at Irlam. There is not much chance of replacing these jobs with anything but a mini-mill employing 400-500 men, and even that is more likely to be built at Shelton Iron and Steel.

Equally fundamental cuts are being made in Scotland, where 7,500 jobs are due to go. The old open hearth steelmaking at four works—Dalzell, Lanarkshire, Clydebridge and Cylde Iron—is to end. These plants will then become finishing plants for the basic steel made at Ravenscraig. To cope with the extra demand, the existing £35m scheme to increase oxygen steelmaking there from 1.5m to 2.5m ingot tons is to be further increased to over 3m ingot tons. Including allowance for inflation, the price for this expansion is now £60m. But that did not prevent a howl going up locally for government money to keep the obsolete plants open, on the model that Upper Clyde's shipbuilders are deemed to have set.

The Government's apparent approval of the way BSC has been tackling its cost-cutting programme holds out a better hope for the industry getting its way with the strategic investment review it is just about to complete. When the Government announced its review last month, there was a wide bracket for BSC's possible capacity by 1980: between 26m and 38m ingot tons. Then, apparently, the Government tended to think BSC would be likely to be aiming at the bottom end of the range, which would have given little room for any major projects. Now the prospects look more hopeful for Lord Melchett.

It is still unlikely that there will be a massive greenfield project put in hand in BSC's next investment phase. But if there were, Scotland is coming out as the current favourite. If the Scots do get it, the plant would probably be located at Hunterston, where BSC is going ahead with a £26m ore terminal. Without a bigger steel expansion than that now proposed for Ravenscraig, the Hunterston terminal could only be justified by being used as a transhipment terminal for steelworks on Teesside and at Immingham. What the Scots will get is more likely to be a mini-mill, largely as a sop to the local lobby. This plant would be based on a mixed feed of raw materials, the usual scrap steel and preproduced iron ore.

The most likely choice of development comes back to Teesside, despite its relative distance from the motor industry, which would be the main customer for any new strip mill. A 10m ingot ton plant there would, with other minor developments, push BSC well on towards the upper end of its capacity range by 1980. If the Government grows cautious again, the most likely second best is an expansion of Port Talbot. This leaves the Cheshire-Lancashire area out in the cold. The most it seems likely to get now is that mini-mill at Shelton.



The Post Office Tower regrets . . .

Scaffolding has now gone up around the 30ft hole blown in the Post Office Tower's public viewing gallery last November. At the Angry Brigade trial at the Central Criminal Court this month one witness was told not to describe the explosive used. The damage has proved worse than first thought and is proving exceptionally difficult to repair. Because of the tower's construction, a hollow reinforced concrete shaft from which the individual floors are cantilevered, there was no progressive collapse on the Ronan point pattern and only three floors were damaged: the 31st, which was wrecked when the bomb went off, and the two immediately above it.

Even so, at 477ft up, reconstruction presents a completely new engineering problem, with no precedents to go on. Work—which is being carried out by the Department of the Environment—began early this year after several months' deliberation on the best method, and has progressed at only a snail's pace since. The blast did not just rip off the external cladding, but damaged the concrete floor, changing the stressing. When the tower was first built, a climbing crane went up with it to assemble each floor in turn. But the only way to get anything up or down the tower now is by two small lifts and a narrow emergency staircase.

Because of these problems, the post office now thinks work is unlikely to be finished this year; and the cost may reach £150,000.

When the repairs are done, the observation floors will be closed indefinitely to the public. Since the tower opened in 1965, the post office had been doing brisk business with viewers from the top; at an admission charge of 20p, and up to 1m visitors a year, the tower brought in a small but welcome profit. Small crowds of hopeful tourists still have to be turned away from the tower, although tourist boards have been asked to spread the word that it is closed. The post office wants to keep its options about reopening the gallery, but does not see how it can cope with the security risk of 3,000 visitors a day in the foreseeable future. However, the revolving restaurant just above the viewing platforms, run by the Butlin's organisation, reopened shortly after the blast. It seats only 120 people, who can be supervised by the staff. There is nothing to stop anyone who really wants to see the view from the top of the tower—except the prices.

Scaffolding sticks out all round

EVER READY®

BATTERY MANUFACTURERS AND ENGINEERS

Record Sales

The following are extracts from the review by the Chairman, Mr. L. W. Orchard, to Shareholders for the year ended 26th February 1972

Lawrence W. Orchard, Chairman and Chief Executive

The Annual General Meeting of The Ever Ready Company (Great Britain) Limited will be held at Ever Ready House, London N.20, on the 11th July 1972 at 12 noon.

"On your behalf I wish to thank especially all those members of our management at home and abroad who by their skill and hard work have aided us in the conduct of our affairs during this last year. I get a little tired of the continual sniping by various 'experts' at the abilities and skills of management. Management's job is concerned primarily with people and as such management has to manage and supervise people in the creation of wealth and the provision of various services for the benefit of the community as a whole. As a whole they do fulfil those functions reasonably well, which is more than can be said of most of their critics.

There is always room for management improvement and probably the fundamental problem facing management at any time has been that of adequate and effective communication with people at every level. In Ever Ready we are far from perfect, but to the extent that we have been successful, we can look back on the last year as one when our affairs were not marred by any major industrial dispute.

The miners' strike in January/February 1972, which in turn triggered off substantial power cuts during the last two weeks in February and the first two weeks in March, caused a temporary diminution in our production and left us with only relatively small stocks in the pipeline and an overstocked position at retail level when the power cuts terminated.

We can at least take pride in the fact that Ever Ready did not let down the British public, and broadly speaking there was an adequacy of supply of batteries and torches everywhere in the country.

In spite of a very modest slowing down of inflation in the economy during the last few months, one has to face the fact that governmental policies in the U.K. to date have not worked to curb effectively the continuing inflationary trend. Harnessing inflation is no easy problem, but it is essential that we do curb by some means the rapid inflation that we have suffered in the last few years.

Unless everybody is prepared to modify their demands for their share of the economic cake, the options available to the British people are fast receding and we have to face up to the possibility of some form of governmental control both on prices and on salaries and wages – a prospect we do not welcome.

Forecasting is a dangerous pastime in these inflationary days and the start to our new financial year has been unexciting. If we achieve our budgets, and I see no reason currently why we should not, next year's result should be satisfactory."

Comparative Financial Results

	1972 £000's	1971 £000's
Net Sales to third parties	£60,102	£50,201
Group Profit before Taxation	£8,653	£6,945
Taxation	£3,523	£2,958

Guinness Mahon Merchant Bankers

The following is the statement by the Chairman of Guinness Mahon Holdings Limited, Mr. James Guinness, which has been circulated with the report and accounts for the year ended 12th April, 1972.

Group profit for the year after taxation and transfer to contingency reserves is £451,229 compared with £360,499 for the previous year. This represents a useful increase over last year and reflects generally improved performance.

Your directors recommend a final dividend of 8 per cent. which, together with the interim dividend of 4½ per cent. paid in January 1972, makes a total of 12½ per cent. for the year as compared with dividends totalling 11 per cent. paid last year.

During the year solid progress was made by the group and we have planned further expansion in our activities requiring the use of more capital and long-term funds. As a result of an offer made in December 1971 your company acquired the whole of the share capital of Sceptre Investment Trust, a trust managed by Guinness Mahon. The offer involved the issue of 800,000 Ordinary Shares of 25p each in the company and £2,200,000 nominal amount of 6 per cent. Convertible Subordinated Unsecured Loan Stock 1998/2003. The investments owned by Sceptre at the time of acquisition have been realised and the funds of over £3 million thus made available have broadened the base of our banking business. This is already evident to some extent in the balance sheet as at 12th April, 1972.

Since the end of the financial year we have arranged to take an unsecured loan from the Sun Life Assurance Society of £3 million at 9 per cent. per annum repayable at par between 1993 and 1995. The proceeds of this loan will be used for investment opportunities as they occur.

It was announced on 16th May that Guinness Mahon had agreed to accept an offer of over £1 million cash for its 26.9 per cent interest in the management company of the Target Group of Unit Trusts. This realises a substantial profit over original cost and the net proceeds will be employed in our business.

Guinness & Mahon in Dublin has again had a successful year and has continued to expand its business. To support this expansion we have increased our investment in the company by £250,000 as a result of which the existing issued share capital of £1 million is fully paid.

Guinness Mahon (Zürich) is our wholly-owned banking subsidiary incorporated in 1970 in Switzerland. The company has progressed during the year and contributed to the profits of the group.

The Wogau group which trades successfully with the USSR is developing new interests in international trading in commodities, capital and semi-manufactured goods, and in importing and distribution within the UK.

The additional equity and long-term funds now available to the whole group enables us to develop existing activities and seek new investment opportunities. These will be mainly within the merchant banking field at home and in Europe and will widen the services to clients.

I am glad to report that Sir Richard Clarke, KCB, OBE, has accepted an invitation to join the board and I am sure that his wide experience will be of great value to us in the future.

The staff has given us their loyal co-operation in what has been a year of consolidation and preparation for the future and we are most grateful to them.

3 Gracechurch Street, London, EC3V 0DP

Machine tools

No fun at this fair

The machine tool industry put a brave face on its desperate situation at the opening of its annual show at Olympia, London, this week. When the Government eventually releases the industry's statistics for the first quarter of this year (probably next week) they are expected to show that the work in hand is equivalent to less than five months' average output. In an industry where it takes an average of about four months to turn an order round (and often much longer), that is nearly starving to death.

Most people now expect Britain's capital investment to rise quite sharply after about next spring, but there is no sign of British industry placing its orders now to get a place in the queue. When the rush comes the machine tool industry may be unable to give adequate delivery dates, and a lot of the orders will go abroad.

The industry is denying this: the whole of the capital goods end of British manufacturing maintains that it is running so far below capacity that it could cope with almost any amount of orders thrown at it. Just the same, the Secretary of State for Trade and Industry, Mr John Davies, would do better to persuade the Treasury to remove the disincentive to this year's investment caused by next year's promise of corporation tax changes (ie, by saying that industry can take its depreciation allowances in any year it wants).

Otherwise, the machine tool industry will soon face further plant closures and redundancies. The slimming that has happened so far and some that is likely to come (like Alfred Herbert's belated transfer of its grinding machine business from Altrincham to Coventry) will improve the industry's health. But after a certain stage slimming can do permanent damage. In these circumstances, the industry's little Neddy sounds rather fatuously optimistic about prospects for British machine tool companies in the common market.

In its report* the Neddy says it believes that the inevitable increase in EEC imports here will be offset by a continuation of the recent growth of British machine tool exports to the common market countries. Those exports were boosted because British firms could promise quicker delivery, while the west German industry had overfull order books. Worryingly, the product analysis in the report shows that Britain does best on lower value machines like drills and lathes. With higher value machines—like metalforming plant, gear cutters and numerically controlled tools—Britain is likely to be vulnerable to competition.

*British machine tools in Europe. *NEDO*. £1 net.

Top pay

Who gets it?

It's jam time all round for people in top jobs. The Boyle review committee's recommendations on pay for top civil servants, judges, chairmen of nationalised industries and senior army officers, expected on Friday, are likely to be that all these gentlemen should have considerable increases; after all, the last review was three years ago. One hotly tipped beneficiary is Mr Richard Marsh, chairman of British Rail, who at the moment is getting £20,000 a year. Mr Derek Ezra, of the National Coal Board, is in the same position. Lord Melchett, of British Steel, is already earning £25,000 so perhaps there will be no more for him. But the Lord Chief Justice, Lord Widgery, now on £16,750, may have his pay upped to £20,000. And senior civil servants, now getting between £9,000 and £15,000, will almost certainly be given an extra whack—although it will be argued that in terms of immunity from the sack, pension arrangements and relative shelter from the rat-race they are really not doing too badly.

The private sector weighed in this week with the news of a 22 per cent increase for Lord Kearton, chairman of Courtaulds, which brings his pay for last year to £36,732—not bad, but still not a patch on Sir David Barran, of Shell, whose last known salary (he retires next week) was £76,705, or Mr Owen Aisher of Marley Tiles, who got £62,000 after waiving another £102,000 due to him. There are about three dozen British chairmen whose identifiable pay is more than £30,000 a year. Still, compared with America's Marlon Brando, who stands to net nearly £2m from his latest film, "The Godfather," this is just kid's stuff.

Associated Industrial Consultants, who are now busy processing the returns from the 1972 vintage of their annual executive salary survey, reckon that pay in top jobs has again gone up by 8-10 per cent over the past year, after about 10 per cent in each of the preceding two years. If these estimates are confirmed, managing directors in the top bracket—companies with a turnover of over £100m a year—now get paid, on average, about £23,000 a year; but those in a £10m-£20m turnover company get an average of £12,500 only. There will be bonus payments and fringe benefits like company cars on top of this, but, perhaps surprisingly in a country where the effective tax rate on earned incomes of £20,000 is over 50 per cent, these extras are a fairly small proportion of the total, and not considered all that important.

There are still only a very few people in these vertiginous earnings brackets—which is why really punitive rates of surtax on high incomes do not collect much money. In 1969-70, the latest year for which figures are available, there were about 47,000 earned incomes over £10,000 a year (the vast majority very near that figure), and some 43,000 investment incomes above that limit. In the same year, only 8,000 people had incomes of over £20,000 a year, of which probably the majority came from investments. But, after tax, only 1,000 people had more than £10,000 to play with.

Services

Set by mistake

Has productivity been growing faster in the service industries than in the goods industries? According to a report* commissioned by the National Economic Development Office and

*The measurement and interpretation of service output changes. By Anthony D. Smith. *NEDO*.

Don't underrate her

carried out by Mr Anthony D. Smith, it has. Official figures still say that productivity in the goods sector improved by 1.1 per cent a year more than services between 1951 and 1966. On Mr Smith's basis, the differential was 0.2 per cent in favour of services. In other words, Mr James Callaghan and Dr Nicholas Kaldor introduced selective employment tax in 1966 on a false premise.

The root of the mistake lies in the difficulty of measuring production in the service industries. One common method has been to use employment series as proxy indicators of real output. Under this system there is no possibility of tracing any improvement in labour productivity, which may have been why Dr Kaldor thought there was so little. Mr Smith recommends a system of measuring economic rather than physical output. In other words, the change in real output in any given sector is weighted with the relative price change rather than absolute price changes. In this way purely inflationary price changes are eliminated and relative usefulness or satisfaction comes into play.

Air traffic

Our bad luck

In a state of barely concealed panic the Government has turned to America's Federal Aviation Administration and International Business Machines to resolve its hideous air traffic control problems in the south of England now that its own system has failed. The new Civil Aviation Authority is to adapt an American system for British use. At £25m over the next six years, it will still be only half a solution, and just possibly no solution at all. All it will do is give British industry time to develop an all-British system for the 1980s.

The computers to be supplied by IBM will cost £6m ; the programmes to control the computers will be supplied, free, by the FAA. About £20m will be spent in Britain on additional equipment and services, with £4m estimated for adaptations, £6m for extending the basic system in the south of England, £5m to provide coverage of Scotland and the oceanic area west of England and £1.5m for over-flying aircraft in the upper air space. The balance will be spent on studies into the needs of the 1980s.

The computer complex consists of seven machines from a relatively old IBM range. Larger, new computers exist which can process data at up to six times the speed of the ones being bought. But the British have lost interest in speed, since the first job of the system will be simply to work on aircraft flight plans. This is something that should have been on computers back in 1969, but now the equipment will not even be installed until 1975, and the history of muddled planning does not arouse confidence in the ability to meet even this.

Eurocontrol examined this IBM air traffic control system and decided against it. It opted for the bigger, faster IBMs which allowed Eurocontrol to get by with fewer machines and fewer problems of linking them up. Britain is a member of Eurocontrol, and presumably voted for this choice. How come we've settled for something less at home?

Vat

No smugglers, please

The value-added tax sections of the Finance Bill have passed the committee stage largely unamended. The Government's one concession on Vat's scope is to reconsider whether children's shoes should be freed from Vat. This is a tribute to the new green paper approach to tax reform, which means the Government listens to industrial and political lobbies before drafting legislation. In fact, the only area where the Government conceded a raft of amendments—over how to enforce and collect the tax—was one that had not been discussed before but had been modelled on traditional Customs and Excise powers.

The Government accepted amendments restraining the right of the Customs to reopen an assessment more than six years after the event in case of suspected fraud and the like ; and removing it where the trader has died. It also accepted that a security in return for the reclaim of tax on purchases, where there is doubt, should not have to exceed the tax reclaimed. The Labour members got assurances about the amount of records that will have to be kept, particularly by small traders. Before the report stage of the bill, the Government will look again at some of the Tory amendments ; the critics, in fact, get much of what they wanted.

In the course of the argument Mr Terence Higgins, Financial Secretary to the Treasury, revealed that there would be about two dozen Vat tribunals around the country. The chairmen will probably be paid about the same as the chairmen of the industrial tribunals—£6,850.

Two leading backbench Tories, Mr Peter Hordern and Mr Peter Trew, voted with Labour to amend the Customs' proposed powers of entry and search. They wanted the Customs officer to get permission from one of the Vat tribunals, instead of a justice of the peace, as specified in the bill. This would ensure that a trader is given notice of the proposed entry and search, and would rule out the search of individuals. The latter is provided for in the bill, and, like some of the other provisions, seems to make more sense with traditional Customs taxes, which reach effective rates as high as 700 per cent for gin and whisky, rather than a 10 per cent Vat. Labour was defeated over an amendment to prevent the introduction of a new and undesirable principle into English law : that where a person's conduct "must have involved" the commission of a crime he may be found guilty, fined and imprisoned, "whether or not the particulars of that offence or those offences are known."

At £5.50 a seat, the first of British Rail's trips in a real steam puffer train was packed out last Saturday. The engine cost £15,000 to restore, provided by a society of steam train fanciers. British Rail hired out carriages and crew. And 4,000 train-spotters paid 10p each for platform tickets.

BUSINESS *International*

Always glad to oblige

Paris pours oil on troubled Kirkuk

The visit of Mr Saddam Hussein to Paris last weekend produced the outline agreement between Iraq and France that had been widely expected. France accepted the offer from the Iraqi vice-president to maintain the flow of oil to the Compagnie Française des Pétroles, even though no formula has yet appeared for compensating CFP and its partners in the Iraq Petroleum Company for the nationalisation of the Kirkuk oilfields.

The agreement raises more questions than it answers. CFP will be entitled to buy oil, for 10 years, equal to its 23.75 per cent share in IPC's capital. This formula is designed to avoid suspicion that it is buying oil which legally belongs to its partners. In theory, CFP could buy about 14m tons a year. In practice, it is unlikely to take as much as this, even though CFP relies far more heavily than its IPC partners (Shell, British Petroleum and Standard Oil of New Jersey) on Kirkuk. The price will be the same as before nationalisation, which could prove expensive for the French since it was because the price of Kirkuk oil was high in comparison with the Gulf that IPC cut back production from its full capacity level of 57m tons a year, and so precipitated the row that led to nationalisation.

The fact is that both sides needed the deal to cool tempers. The Organisation of Petroleum Exporting Countries has threatened to prevent IPC members from replacing their Kirkuk production with other sources. This is an idle threat. The much-shrunk Kirkuk offtake is small enough to be replaced elsewhere without attracting any Opec member's notice. The companies, having perhaps overplayed their hand before nationalisation, are now well aware that Iraq is already hard pressed to find alternative buyers. They are therefore in a mood to turn a blind eye to any small scale sales the Iraqis might trumpet around, just as they have placidly acquiesced in the Iraqi deal with the French. For what the Paris talks have done is to set mediation into motion, which might finally lead to the settlement that both IPC and Opec openly want.

Should mediation fail, CFP will be under no commitment to take its share of Kirkuk oil, though it may find it politic to take some. But if any agreement is reached it will be a crucial precedent for future talks on the participation issue ; the latest of which, in London last weekend, stalled once again. In the long run the Kirkuk nationalisation and the restrained reactions to it in the west show clearly the way the wind is blowing, as too does the ostentatious announcement this week from ENI, the Italian state-owned oil and gas concern, that it is to step up its purchases of Iraqi oil. The Italians are no longer alone in their views that western oil companies will eventually have to confine themselves to refining and marketing, leaving extraction and exploration to the producing countries, and helping out only on a contract basis. As this not-so-distant day approaches, the governments of the consuming countries will increasingly have to stand up for their oil users (as the Italian government—through ENI—has always done) rather than having the oil companies fight their battles for them.

Australian gas

Laughing

Sydney

A month ago Australia's reserves of natural gas were officially estimated at 45,000 billion cubic feet : twice the amount that had been forecast in 1970. Now, reports of new strikes off the north-west coast suggest that this estimate may have to be doubled. There are rumours that an inter-

Continued on page 91

Sir Kenneth Keith

Philip Hill Investment Trust Limited

The Annual General Meeting of Philip Hill Investment Trust Limited will be held on 5th July, in London. The following is the circulated statement of the Chairman, Sir Kenneth Keith:

The Past Year The past financial year saw a substantial rise in the level of the U.K. Stock Market, the F.T. Actuaries All Share Index rising by 52½%, in marked contrast with the modest increase in the level of the New York Stock Market. In the latter, the Standard & Poor's Composite Index, adjusted for differences in the exchange rate and the dollar premium, rose by only 5 per cent.
Gross revenue for the year amounted to £3,880,000, an increase of £106,000 over that for the previous year. There was a welcome reduction in the interest rates on our dollar loans, and a small taxation charge resulting from the lower unfranked income and the receipt of some old arrears of double taxation relief. These factors resulted in an improvement in net earnings of £272,000 to £2,931,000. This improvement enables us to recommend a final dividend of 3·5p per share, making a total distribution for the year of 6p per share (24 per cent) compared with 5·625p per share (22½ per cent) for the previous year.

Investments Gross assets of the Trust at 31st March 1972, including investments at valuation, after deducting current liabilities but before deducting prior charges, amounted to £124,761,000. The net asset value of the Ordinary shares, deducting prior charges at par, was 241½p per share, compared with 158½p per share a year ago. This represents an increase of 52 per cent during the past financial year. I give, as usual, some details of our larger holdings. At 31st March 1972 we had quoted equity holdings worth over £1 million in each of the following thirteen companies (in order of market value). There were only eight holdings in this bracket a year ago.

Hill Samuel Group Ltd.
Beecham Group Ltd.
Bass Charrington Ltd.
Eagle Star Insurance Co. Ltd.
Land Securities Investment Trust Ltd.
General Electric Co. Ltd.
Sears Holdings Ltd.
Shell Transport & Trading Co. Ltd.
Thorn Electrical Industries Ltd.
Whitbread & Co. Ltd.
United Dominions Trust Ltd.
United Drapery Stores Ltd.
Metropolitan Estate & Property Corporation Ltd.

At 31st March 1972 we had quoted equity holdings worth between £500,000 and £1,000,000 in each of the following thirty companies (in order of market value). There were twenty-one companies in this bracket a year ago.

Great Universal Stores Ltd.
General and Commercial Investment Trust, Ltd.
London & Overseas Freighters Ltd.
Imperial Chemical Industries Ltd.
Rio Tinto-Zinc Corporation Ltd.
Burmah Oil Co. Ltd.
City and International Trust Ltd.
Standard & Chartered Banking Group Ltd.
Imperial Continental Gas Association
Wm. Cory & Son, Ltd.
London Merchant Securities Ltd.
Courtaulds Ltd.
General Consolidated Investment Trust Ltd.
Artagen Properties Ltd.
Watney Mann Ltd.
Moorgate Investment Co. Ltd.
Aaronson Bros. Ltd.
Debenhams Ltd.
Distillers Co. Ltd.
Edger Investments Ltd.
Hill Samuel Overseas Fund S.A.
Consolidated Gold Fields Ltd.
John I. Jacobs & Co. Ltd.
Pearl Assurance Co. Ltd.
Royal Insurance Co. Ltd.
Allied Breweries Ltd.
Australia & New Zealand Banking Group Ltd.
Phoenix Assurance Co. Ltd.
Standard Oil Co. (New Jersey)
Rank Organisation Ltd.

At 31st March 1972 we had holdings in 81 other quoted companies (compared with 42 a year earlier) each worth between £200,000 and £500,000.
The above mentioned 124 companies account for 74 per cent of the total portfolio. This compares with holdings in 71 companies accounting for 60 per cent of the total a year earlier.

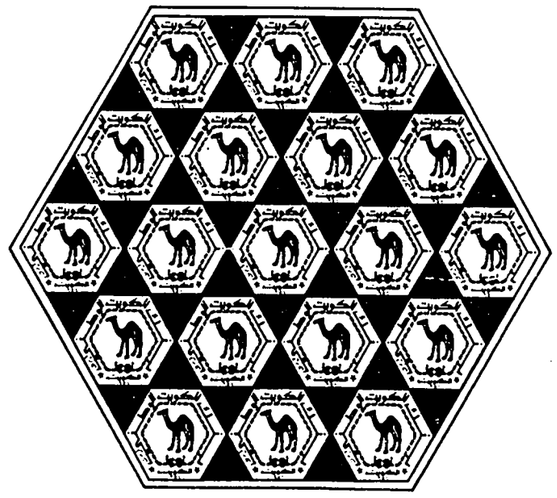
Shareholders may be interested to know that we have made a small investment, viz a 43 per cent stake, in North Sea Oil and Gas Company Limited, which has a 5% interest in the Numac/Siebens Consortium. This Consortium has recently been allocated a licence for block No. 9/4 in the North Sea.

Increase of Capital I refer later in my report to our feelings concerning the current year and in this connection, the Directors recommend that shareholders should approve the proposed increase in the authorised capital from £15,000,000 to £17,500,000. If our views on the progress of the economy of the United Kingdom do materialise, the Trust would then be well placed to raise further capital for investment and the situation will be kept under review.

Borrowing Powers At a meeting of the Debenture Stockholders on 8th May 1972, it was agreed to modify certain clauses in the Trust Deeds dealing with our borrowing powers in relation to the floating charge securing the Debenture Stock.

Currency Borrowings In addition to our existing Eurodollar loans, we negotiated in January a loan of 10 million Swiss francs and invested the proceeds in North American securities.
Since the end of the year we have negotiated with Hill Samuel & Co. Ltd. a multi-currency loan for a term of five years with options for the Trust to repay earlier if it so wishes. In the first instance the new loan has been drawn partly in Swiss francs and partly in Eurodollars, together equivalent at current rates of exchange to US $7½ million. The proceeds have been used for additional investment in North American securities.
Our total currency borrowings at current rates of exchange are now equivalent to £5·8 million.

Management Mr. Brian Whitmee who has been managing director of the Trust since September 1967 and has been responsible for the management of the Trust's investments since 1950, resigned from that office with effect from 1st May. I would like to pay a very sincere tribute to Mr. Whitmee, whose skill and judgment have been largely responsible for the remarkable growth of the Trust during this period. I am happy to be able to report that he remains as a Vice-Chairman and that his wise advice will continue to be available to us.
Mr. Whitmee has been succeeded by Mr. Bryan Basset whom I would like to welcome and who, I am sure, will prove to be a worthy successor to Mr. Whitmee.



Current Year We welcome the changes in connection with Investment Trust Capital Gains Tax announced in this year's Finance Bill; at the same time we were disappointed that the 25% surrender of the dollar premium was not removed.
The economy is still proving slow to respond to the various stimulatory measures which the Government has introduced. But recent indications suggest that there are now clearer prospects of its doing so. The trend in wage settlements was moving in an encouraging direction until the miners' settlement. If the downward trend can be restored, and with profits recovering from their troughs of the past few years, the industrial outlook should become more satisfactory. I should therefore be disappointed if, as far as the Trust's revenue is concerned, we do not see an increase for the current year so that the new higher level of dividend should at least be maintained.

Copies of the accounts may be obtained from the Secretary at 100 Wood Street, London, EC2P 2AJ.

Continued from page 87

national consortium, headed by Burmah Oil, has just discovered an extra 45,000 billion cubic feet of gas, after drilling only 16 wells on the continental shelf.

Australia now has three times the reserves of natural gas so far discovered in the British sector of the North Sea. Since many of the strikes are in inaccessible areas it will be many years before all of them are fully contributing to the nation's economy. But all the major Australian cities will be supplied with natural gas from the less remote fields by 1975, although Australia's total industrial and domestic demand is expected to be only 1,800 billion cubic feet over the next decade. Australia could therefore use its resources to the full only if it was willing to bring in a lot of foreign capital to develop the fields and pipelines, and to start exporting the gas to Japan and the United States. There is nationalist opposition to this. At present there is a total embargo on exports of liquefied natural gas. The rule is likely to be lifted soon for sales from the very remote fields, but there are growing political complaints that Australia's natural resources are under foreign control.

The sums required to develop the fields, however, are far beyond the reach of the domestic capital market. The present guess is that £920m would have to be spent on pipelines, ships and liquefying plant before the fields on the north-west shelf could be brought into production. Australia's other big find, the strike of 10,000 billion cubic feet at Palm Valley in central Australia, by the American company Magellan Oil, would cost another £330m to develop. Unless there is a big inflow of foreign capital it seems less likely to be exploited now that gas is being found in increasing concentration on the continental shelf.

But the oil companies are proceeding undeterred with plans to sell their first cargoes of liquefied natural gas by 1977, and a consortium of Japanese customers has already declared its hopes of taking an equity stake in the north-west shelf gas. Although gas has only a 2 per cent share of the Japanese energy market, the Japanese government is anxious to win a foothold in Australian resources, and so reduce its dependency on Middle East oil. Similarly, America is haunted by the prophecy that before 1980 it will be having to import 12,000 billion cubic feet of gas a year ; it, too, will be urging quick development.

German coal

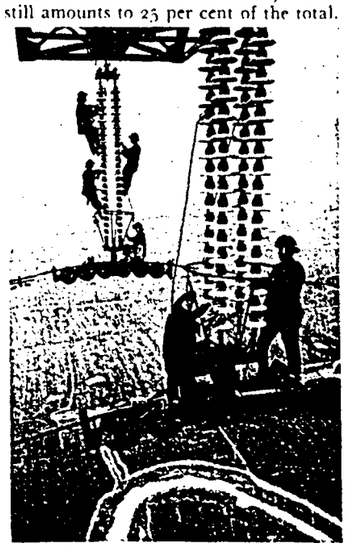
Coalition

Hamburg

Ruhrkohle, the umbrella company which covers the vast bulk of Germany's coal production, is almost certainly in for yet another drastic slimming cure. Only last month a large-scale rescue operation was mounted by Ruhrkohle itself, the federal government and the regional government for North Rhine Westphalia, the banks and the steel companies, to save Ruhrkohle from financial collapse. The compromise arrived at then was plainly no more than a holding operation.

The latest crisis, earlier this week, has been over wages. The miners asked for a 9 per cent rise plus improved holidays, against the employers' offer of 5¼ per cent, and threatened a strike to get it. Both sides knew that the company could afford neither, but the miners felt they should not be made to carry Ruhrkohle's financial problems. Predictably (Germany has not had a miners' strike since the last war), the regional government ended the deadlock by arbitration just ahead of the strike ballot. The miners got a 7 per cent rise.

But the head of the North Rhine Westphalia government, Herr Kühn, dropped a strong hint that the settlement would speed up pit closures. And experts now reckon that over the next few years 30,000 jobs will be lost, reducing the labour force to 150,000. The trouble is that Ruhrkohle's costs are still too high : its coal sells at about 25 per cent more than American imports. And there are still too many uneconomic pits working. Yet Germany can neither afford to dispense suddenly



Mao thinks growth

The People's Republic of China claims that its economic growth is twice as fast as that of the rest of the world put together and almost three times that of the developed capitalist countries. Where, of course, this leaves it in the world income league is anyone's guess. But these official figures from Peking, printed in the United Nations World Economic Survey for 1971, are the first official guide to China's economic progress for years, even if they need to be taken with extreme caution as many are probably little more than a gleam in the eye.

The figures show that China boosted both its industrial and agricultural output by 10 per cent last year. Agricultural development, still regarded as the foundation of China's economy, has been pushed forward with an economic plan concentrating on soil improvement, proper use of fertiliser, irrigation, farm mechanisation and field management. China reports that fertiliser supply was up by 13 per cent last year and that insecticides were made cheaper and more plentiful. Bad weather in 1971, however, held down the growth in grain output to 2.5 per cent : despite production of 246 million tons, large-scale imports from Canada were still required. Other farm products must have been substantially more plentiful to raise total agricultural production by 10 per cent.

Industrial figures are sketchy and probably hide the weakest points in China's economy. China is concentrating on iron and steel production. Crude steel output rose 18 per cent last year and is now at 21m tons, which puts China between France and Italy in the world league table. Otherwise China has been keen to establish small and medium-sized mines and factories based on local supplies and labour. The survey shows that 60 per cent of the country's fertiliser output and 40 per cent of its cement production come from local plants. It is, however, now self-sufficient in oil.

China's only reported slowdown in 1971 was in foreign trade, where the 10 per cent growth rate of recent years slowed to under 5 per cent. The year's total turnover of both imports and exports amounted to $4.5 billion, about 20 per cent of which is done with Japan and this grew at a good 10 per cent clip. There was also some increase in trade with the Soviet block, which still amounts to 25 per cent of the total.

All going swingingly

with 180,000 miners, nor does it want to become entirely dependent on imported energy.

This is why the privately-owned pits were joined together into Ruhrkohle three years ago, with the help of large chunks of public money. But since then Ruhrkohle has gone from bad to worse. In its first year of operation in 1969 it lost £15m ; by 1970 losses had mounted to £46m. Last year's results have not been published yet, but were alarming enough for the company to declare itself in financial crisis early this year. As a result, subsidies totalling over £400m to 1975 were agreed last month, as well as credit facilities of £120m. But the commitment may not end there. The cost of the wage increase, for one, can almost certainly not be borne by the company and will require further state help. Meanwhile, Ruhrkohle has 10m tons of unsold coal stocks on its hands —just about the same amount as was imported from abroad in 1971.

Marine pollution

Slick ideas

Shipbuilders are delighted with a new American plan for preventing oil slicks. It could nearly double the demand for oil tankers, and cure the orders problems in the world's shipyards for the rest of the decade. The proposal, which was being discussed at this week's meeting of the powerful Inter-Governmental Maritime Consultative Organisation, is that each tanker should have two sets of tanks: one for carrying the oil, the other for water ballast on the return journey. At the moment ballast is stored in oil tanks which are still sticky with oil. When the seawater is pumped out it is mixed with a small but unavoidable oil slick.

Separate ballast tanks would bring extra business to shipbuilders and steel producers at the expense of the oil companies and shipowners. The American plan will be stiffly resisted by the British, French and Japanese who are still cross at last year's directive from IMCO (the United Nations agency for world shipping) which limited the size of individual tanks within a ship. Supertankers are to be partitioned so that the whole cargo does not spill in a collision. This seems a good idea, but it will prove expensive.

In the hope of stopping the latest American plan from being rammed through some large oil importers are pressing for alternative measures. The British are suggesting that oil spills could be reduced if the water ballast and oil were allowed to separate naturally, with only the pure seawater pumped out from the bottom. The oil sludge from the surface would then be piped to special disposal tanks onshore. This scheme would be a fraction of the cost of segregated ballast, and would catch a higher proportion of oil slicks.

Tanker operators have slowly begun to realise that the political fuss their oil slicks have caused is not going to pass with time. Despite the outcry of the past few years, oil pollution around Britain's coastline increased by about 30 per cent in 1971, even with very much stiffer penalties. But tankers are bearing the brunt of the blame for a problem that is only partly their fault : they are responsible for only about 10 per cent of marine oil pollution. The Stockholm conference on the environment has agreed to a British suggestion for a worldwide convention on dumping at sea which might get at the other 90 per cent of the culprits.

EEC

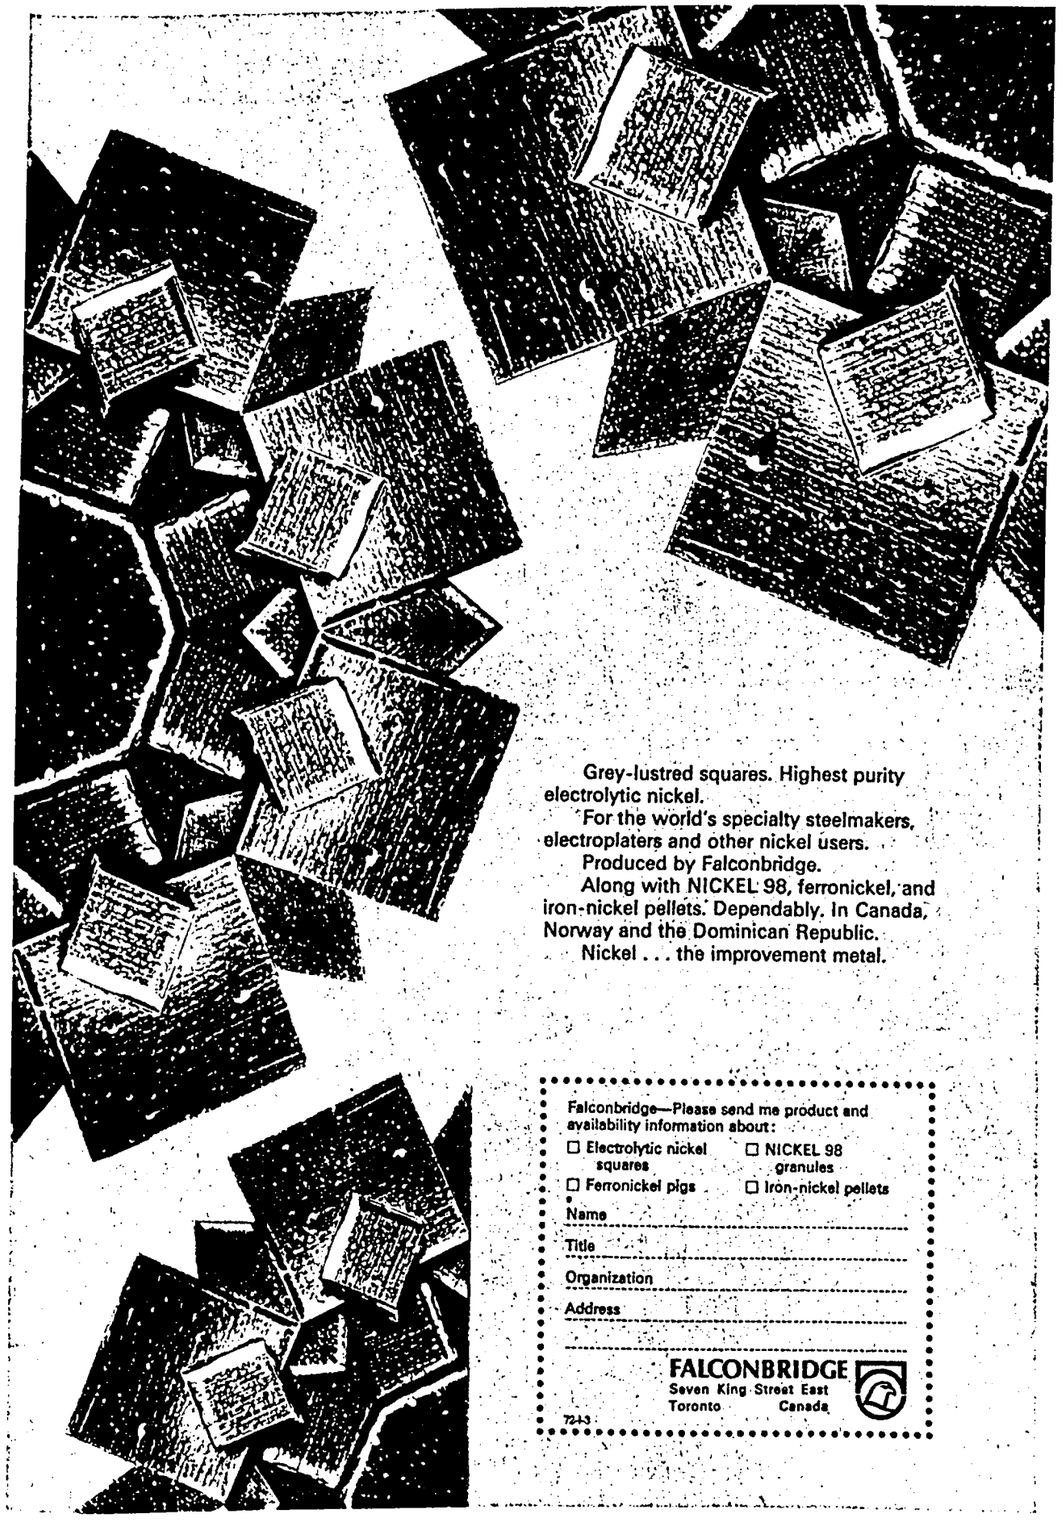
Dabbling in science

Brussels

The EEC commission is using the lull before the planned European summit to put as many proposals for the future development of the community on the table as possible: a tactic that is likely to infuriate the French and bog down the meeting in detail. The latest piece of commission jostling is its proposal that research and development should come under the EEC's authority (a point on which the Treaty of Rome is silent) with a provisional budget of £50m a year for the next three years.

Apart from wiping the dust off an earlier commission document of November, 1970, which has remained untouched, there is an immediate practical reason for bringing up the community's role in R&D now: a decision must be taken before the end of the year on the future of the Euratom joint research centre. Since Euratom was merged into the EEC in 1967, the Six have been unable to agree on what sort of research programme it should be following, and development has been jogging along on an ad hoc basis from year to year.

Last December the ministers were able to suggest that the joint research centre should concentrate on fundamental and public service research, leaving the development of nuclear reactors to private industry. The commission has now agreed to cut back about 400 research jobs at the centre if it can win in return a more comprehensive EEC science programme. Signor Altiero Spinelli, the commissioner responsible for science, has warned the Six that if its proposals are rejected, the commission will throw the problem back into the political arena. The staff from Ispra, the biggest and most vulnerable of the EEC research establishments, went on strike last week against the proposals.



The British Government will look at the commission's proposals in the light of the review of national research programmes being carried out at home by Lord Rothschild, which means that, together with the French, it will try to stop the commission dabbling in science. The Secretary of State for Trade and Industry, Mr John Davies, emphasised in Brussels last week the British preference for concrete projects based on real and identified requests from users, whether from industry, agriculture or government, rather than a broad European R&D programme. He also made clear that the British Government had little interest in Euratom's future. Only a comprehensive community policy for energy, including oil and natural gas, is likely to find much appeal outside Brussels.

Key indicators: world commodity prices

Cottoning on
Prospects of a good cotton crop in the United States and Russia will send world prices sliding from their highest level since the war. The Liverpool cotton index, at 35 cents a lb, was already 12 per cent down on its recent peak because India's and Pakistan's cotton harvests were better than expected. If the larger crops of the northern hemisphere now come up to forecast, prices will fall far further.

Grey-lustred squares. Highest purity electrolytic nickel.
For the world's specialty steelmakers, electroplaters and other nickel users.
Produced by Falconbridge.
Along with NICKEL 98, ferronickel, and iron-nickel pellets. Dependably. In Canada, Norway and the Dominican Republic.
Nickel . . . the improvement metal.

Falconbridge—Please send me product and availability information about:
☐ Electrolytic nickel squares ☐ NICKEL 98 granules
☐ Ferronickel pigs ☐ Iron-nickel pellets

In Buenos Aires, Argentina. A great new Sheraton Hotel opens this month.

The largest and newest hotel in Argentina.
The Buenos Aires-Sheraton makes it happen right in the heart of this sophisticated South American city. Close to all the museums, theatres and major government facilities, and the longest shopping mall in the world, famous Florida Street.

800 comfortable air conditioned guest rooms all with private baths. Outdoor pool and tennis courts. Health club and sauna. Dine in our speciality restaurant. Then make a great evening happen in the discotheque or in the rooftop bar and lounge with a commanding view of the city.

For reservations at the great new Buenos Aires-Sheraton or any Sheraton in the world, in the United Kingdom, ask operator for Freefone 2067.

Or have your travel agent call for you.

Tokai is the capital of Japan.

When you get acquainted with Tokai Bank, you'll necessarily become acquainted with Japan's Tokaido Megalopolis. That's where Tokai Bank maintains the lion's share of its over 200 domestic offices.

The Tokaido megalopolis in the heart of Japan, with Tokyo on the northern end and Osaka on the south, is an industrial/financial/shipping region unparalleled in any other country. It is as if New York, Pittsburgh, Chicago, Detroit, Birmingham and Southern California were all located within 400 miles of each other.

Not only did Tokai Bank get its name from the Tokaido region, it's also where we get our capital. We are most active in the most active part of Japan.

Which is a fine thing for you to remember the next time you have dealings in Japan. We know Tokaido like no other bank. Which means we know Japanese business like no other bank.

BUSINESS *Investment*

Six per cent had been discounted

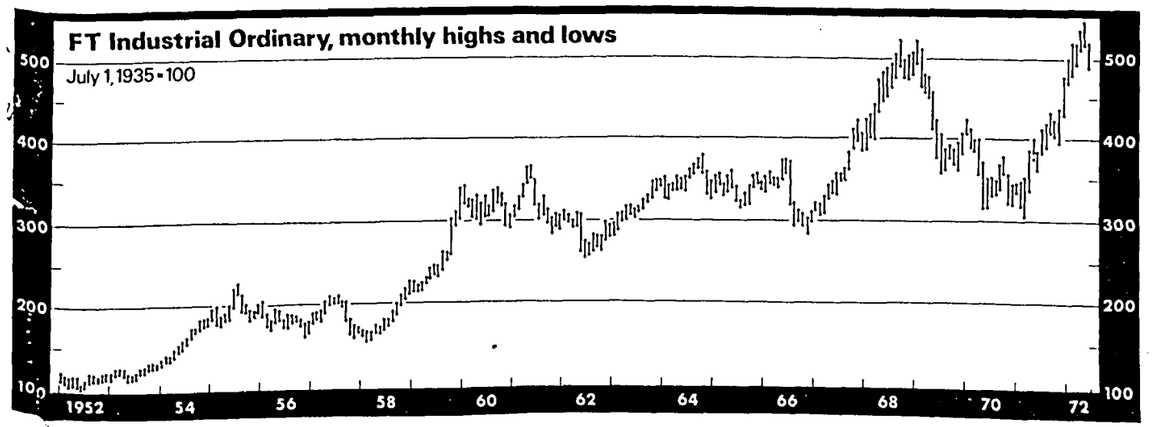
On Thursday Bank rate was raised from 5% to 6%, but the market remained curiously calm. Perhaps one reason was that the display system kept breaking down, so that no one knew what the latest prices were. Another was that quite a number of people had deserted their trading posts for the rival attractions of Ascot and the Test Match. Talk about a possible sterling devaluation and accelerating inflation has kept buyers away, but it has not yet caused sellers to come forth. On extremely light trading, the Financial Times industrial ordinary index fell 2.2 points on the day to 491.7. Leading stocks were marked down a few pence on the Bank rate news, but the general attitude was that the change was expected. Since the beginning of the year, the yield in the gilt-edged market on shorts (under five years) has continuously edged up from the 4.20-6.20% range to 5.60-6.40%. The hike in Bank rate simply followed this rise in market rates. All of it, and a bit more, had already been discounted.

Money supply is still roaring ahead, at an annual rate of 23% in the three months to mid-May. Obviously, there would be a sharp setback to both equities and gilts if the rise in Bank rate meant that the authorities were going deliberately to tighten the purse-strings at last. But most people think that this is unlikely.

British Petroleum

Mostest, firstest

On the day that Bank rate went up, British Petroleum announced that it has arranged to borrow £360m to finance almost the entire estimated cost of developing its Forties Field in the North Sea. This is the largest amount of money ever raised in one go by a company in this country. More significantly, for the first time in Britain the American technique of "production financing" is being used. The cash will be repaid out of the flow of revenues when the fields go into production at the end of 1974. If all goes well, the loans should be paid off by 1982. If, for any reason, the flow of revenue slows, then so will repayments. The money will be drawn on as required, and the interest rate will be an undisclosed amount above the London and New York interbank rates. BP estimates that only 60% of the oil revenues will be needed for servicing the debt. This implies that it is expecting gross revenues of £600m. What that means in terms of net profits is anyone's guess. The market responded to the news by doing no more than keep BP's price unchanged at 516p.



The banks concerned, who are putting up the cash, are being led by a unique troika of Lazard Brothers, National Westminster (the London clearing bank) and Morgan Guaranty Trust of New York.

Wall Street

Cool summer

New York

A cautious Wall Street continues to defy the prophets. Despite the expectation that the next few weeks should see an outpouring of favourable second quarter company earnings as the economic recovery continues, and new hints this week of Vietnam peace, the Dow Jones industrial average has edged up only slightly. Its 951.61 at mid-week was

back again to its level of early June, but still 2 per cent off its May 26th high this year—and still 4½ per cent off its all-time record reached over six years ago, in February, 1966.

What is worrying investors? They say inflation: Americans get neurotic when their consumer price index goes up, as it did last month, by 0.3 per cent, modest by most other standards. They are concerned over Vietnam (when hopes are not fluttering as this week), Senator McGovern's soak-the-rich views on taxation, the failure of mutual funds to attract fresh money —and, right now, the spectre of a possible further devaluation of the pound that could lead to a new bout of international monetary instability. The market has also watched with some misgivings as domestic interest rates —short range and longer-term— have started to creep up again. This firming of rates reflects both the economic pick-up and the fact that the monetary authorities have grown just a bit more stingy with the supply of funds. Tighter money has a cooling effect on the market's ardour.

Investors' wariness is evident in their avoidance of stocks such as machinery and steels, at the very time when such cyclical shares should be benefiting from economic expansion. Instead, they continue to be attracted to the growth glamour stocks. Leading the pack among the glamours this past week was **Polaroid,** which early in the week netted a gain of something over six points to $131 on the strength of a report in Time magazine on its latest forthcoming instant camera, the SX-70. Other glamours posting strong advances were **Avon Products** and **Schlumberger.** On the other hand, real estate investments trusts (REITS) were hard hit following a report that the Federal Reserve Board is planning a broad inquiry into possible conflicts of interest involved in bank sponsorship of such companies. The Fed denied that it had anything so all-embracing in mind, but REITS stayed soft.

Beer

Spinners and winners

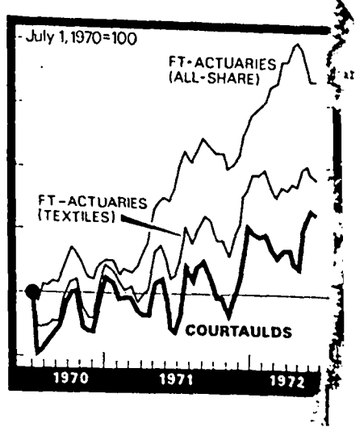
Ascot lasts only a week, but the battle between **Watney Mann** and **Grand Metropolitan Hotels** will have been 16 times as long as that by its scheduled close on June 30th. The result should be a victory for Watney—but until the institutions have shown their hands, which will be kept firmly up their sleeves until the last hour, no one can be certain. At a GMH share price of 240p, the bid is now worth £435m. That is a great prop to the Watney share price at 247p, now far above what it would have reached under its own steam. Since Mr Maxwell Joseph and his powerful friends are still buying Watney shares in the market (and their own GMH shares too), the innocent bystanding shareholder should now take the opportunity of selling out of both companies. Unlike Ascot he can delay his betting until the best horse has won, and then go back to the paddock for a second look after the race is over.

It is not only takeover battles that are keeping brewers among the strongest section of the stock exchange. **Allied Breweries'** half-term results show a jump in pre-tax profits of 22%. But the market should perhaps regard a fizz of this kind with increasing political caution. Most of the industry's spectacular results have come from pushing up retail pr since the Tories removed all con on beer in 1970. A new round price increases is now likely t autumn. As Mr James Prior, t Minister of Agriculture, is comi under heavy pressure to stem risi food prices (and beer is given twice the weighting of beef in the cost of living index), there is a risk that the brewers will be asked or forced to hold their prices down. How badly this could affect prices is seen from the **Arthur Guinness** results. Half-year profits with only two weeks of an extra 1p on the pint were only marginally up. A full year of the new price should bring in £2.5m.

Courtaulds and tax

Thus far—no farther

In a little noticed clause tacked on t the Finance Bill, the Government proposing to stamp out the property shuffle tax manoeuvre recently use to good effect by Courtaulds. Luckil for Lord Kearton, the section will n be retrospective.



The trick was to use three compan in a group to make transactions in t group's industrial buildings. The effe is to concentrate the buildings' writin off allowances into one year inste of over their lifetime. Company owns the building and leases it ov a long period (say 999 years company B. A then has the right flow of lease payments for 999 ye and the right to full possession of building at the end of the perio the so-called reversionary right. right is virtually worthless.

The tax rules say that if reversionary right is sold to compa

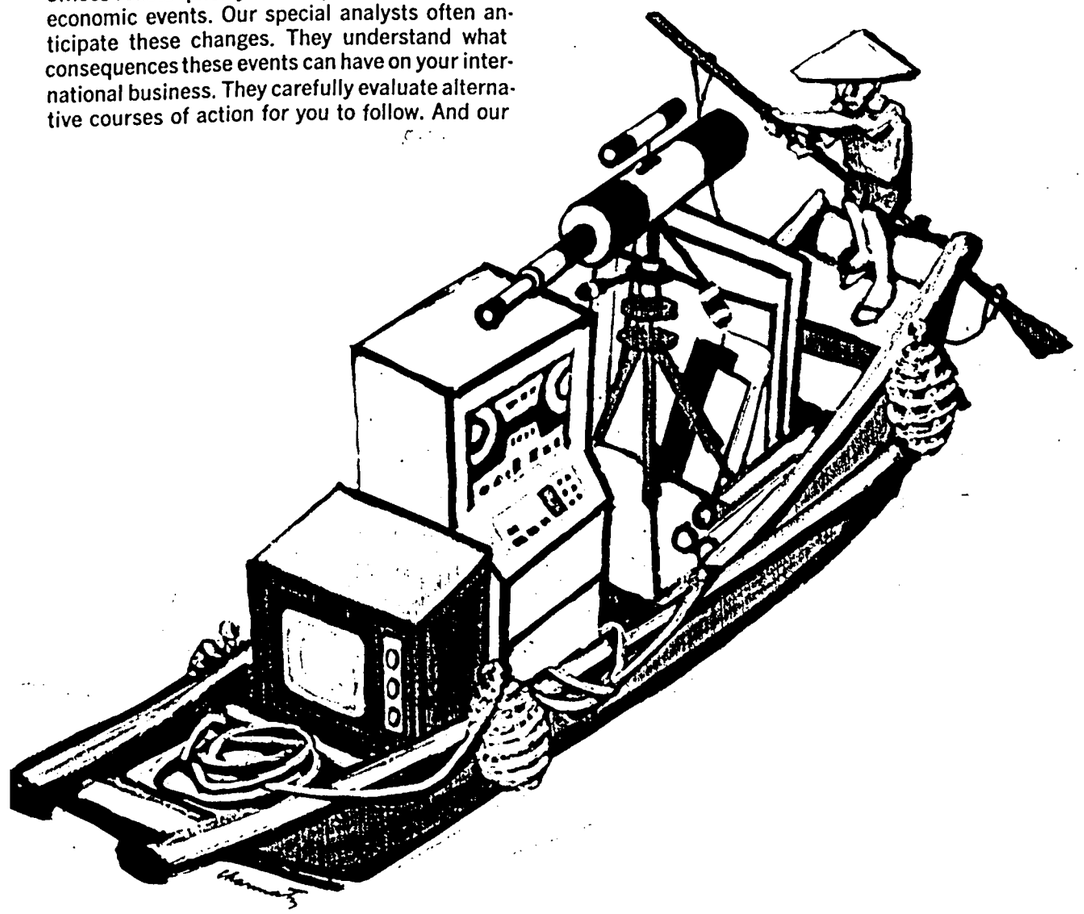
What can your banker tell you about industrial expansion in Hong Kong?

Can he tell you how the labor market is affected by the industrial expansion? Can he explain the need for Hong Kong's switch from entrepôt trader to industrial exporter of electronics, plastics, and optical goods? Can he tell you how this diversification will influence its trade balance? How it will affect its domestic economic growth? And external payment position?

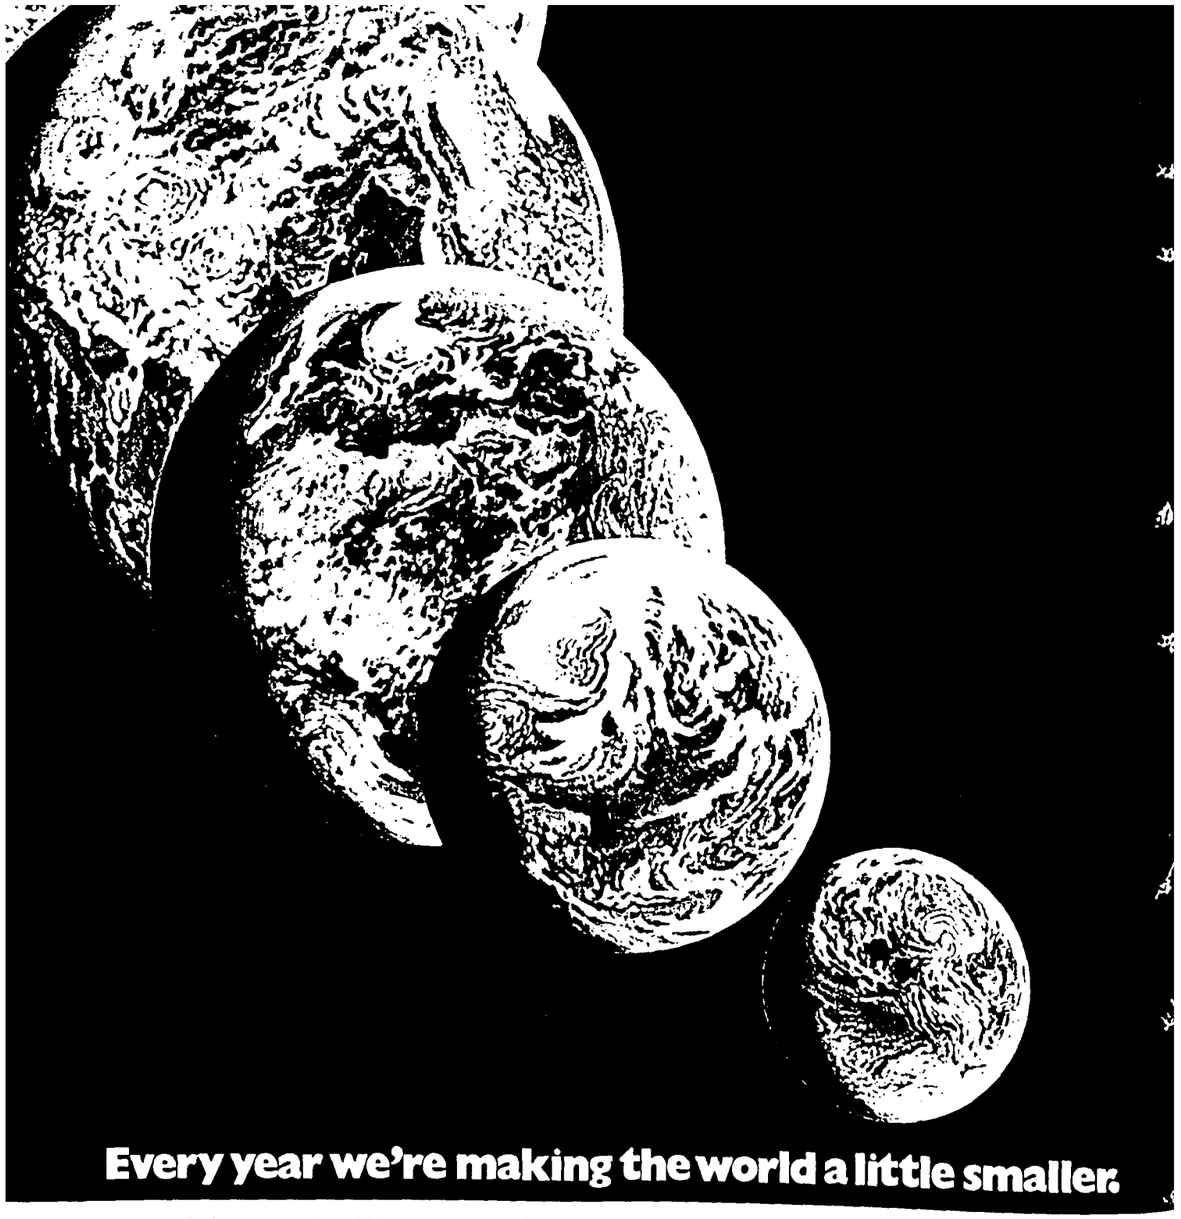
A Chaseman can.

Can your banker tell you how regionalism could spur intra-area cooperation? How it could expand the effective market area? The integration of the financial markets? Can he tell you how it will affect your company?

A Chaseman can.



Chase Manhattan's huge worldwide network of branches, associated banks and representative offices reacts quickly to unexpected political and economic events. Our special analysts often anticipate these changes. They understand what consequences these events can have on your international business. They carefully evaluate alternative courses of action for you to follow. And our sophisticated communications network loses little time executing your decisions.



When you want to do business on a multinational scale in the Far East—or anywhere else in the world—speak to Chase first.

Chevron

Warning to brokers

Kuala Lumpur

A firm of stockbrokers in Singapore has been found guilty of committing a criminal offence by advising a client to buy shares in a company that turned out to be worthless. Since the prevention of fraud provisions here are similar to those in Britain, the case may have a moral for British stockbrokers and professional advisers, too.

The stockbrokers, Fraser and Company, and one director were found guilty of having made reckless statements in connection with the shares of Singapore Traction Company—a leading bus company—and of inducing clients to buy shares in it. They were fined £5,000, even though no dishonesty was involved.

Fraser sent out a circular to 3,000 people last November, saying that, although STC was in difficulties, the value of the bus depots was £2.8m—giving the shares a net asset value of $S1.10, against the share price of 80 cents (to which it had risen from 30 cents over the preceding weeks). Within hours Fraser had to issue a correction. STC had only nine acres of land, and not 25 acres as Fraser thought. Further, Fraser had extrapolated the latest value by a rough rule-of-thumb multiplier for Singapore land values without realising that the initial valuation had itself been based on development value rather than cost. In the view of the judge, inadequate efforts had been made to check the facts.

The other point at issue was to establish that the plaintiff, Mr Shen Yuan Pai, a rich Brunei engineer, had been "induced" to buy the shares. The defence claimed that when someone wants to buy shares—and Mr Shen often wanted to—then he cannot be said to have been induced to buy a certain share. And, anyway, Mr Shen had given Fraser a fair amount of discretion over what to buy for him. But the judge reckoned that if Mr Shen went in to talk about his account and came out having ordered STC shares, then he had indeed been induced to buy them. STC shares are no longer quoted on the Singapore and Malaysian stock exchanges, having fallen to 6 cents before being suspended.

(also in the group) the difference between the sale price and the unwritten-down cost of the building is a capital loss. This can be set against profit for tax purposes, thus allowing the company to get the whole depreciation of the building immediately instead of at 4% a year.

The anomaly is that the main asset that A created by making the lease was not the reversionary right, but the right to the income. If the value of this were to be counted as a capital gain, it would exactly cancel out the loss on the sale of the reversionary right, making the whole device useless. The skill of Courtaulds and the others was in devising a legal form for the transaction that avoided this and other dangers. Rather than sniping at these various legal forms specifically—a useless procedure because the avoiders always keep one jump ahead—the Government has adopted a broader brush approach by saying that all tax advantages arising from subtle transactions in industrial buildings between companies in a group be removed.

The unused part of these allowances and normal capital allowances, together with those on future investments, will keep Courtaulds's effective tax rate below the full rate for some years. It has £29½m of capital allowances to carry forward, and £28m of tax provided for but not paid in the tax equalisation account. Because this account is only there as a precaution against years when an above-normal tax rate has to be paid, no further contribution to it has been made. So those analysts who are notionally subjecting the profit to a full tax charge to derive a p/e of 19 are being over-cautious. At 153p the p/e is in a much more reasonable range of 13-15.

Insider trading

What did they know about ITT?

New York

Poor old **International Telephone and Telegraph** is having a roman candle of a year. One of the briefer outbursts has been on insider trading. On June 16th, ITT and two of its senior officers were charged by the Securities and Exchange Commission with selling shares while allegedly privy to inside information about the impending settlement of the anti-trust case (the one that went all the way up to Mr Kleindienst, who forgot and then remembered about it at the Senate hearings into the matter). ITT had loudly proclaimed its intention to fight the anti-trust suit. But it signed a consent decree to get rid of $1 billion of assets rather than part with its cash-rich Hartford Fire Insurance subsidiary, and the share price slumped $7 on the news. The SEC often insists that those who have profited from insider knowledge should pay over the benefits—but when the case was settled, on Wednesday, all the defendants had to do was accept an injunction forbidding them from being naughty again, which they did while denying that they had been naughty in the first place. However, there are 10 private suits for damages still waiting in the wings.

The other matter raised, and settled, at the same time was the one involving the prestigious investment bank of Lazard Frères and Mediobanca, the Italian bank. They were accused, with ITT, of not disclosing details of the negotiations with the Justice Department at the time they made a distribution of ITT shares. Again the defendants do not reckon to have broken a highly technical law, but the SEC believes it has established the principle that details of such negotiations are to be included in the prospectus of a company.

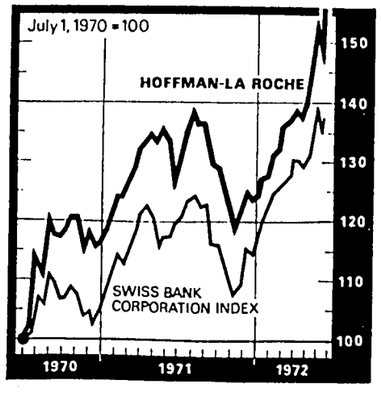
A certain amount of dust has thus risen up to cloud Lazard Frères, newly ensconced in its chic midtown quarters at One Rockefeller Plaza, far from the dowdy old offices in Wall Street, and the whole issue of insider dealing and conflicts of interest is clouding it too. Lazard has been accused by an aide of Mr Ralph Nader of selling wads of ITT stock before the anti-trust settlement was announced. If so what did the investment banking side know? Should it have passed the knowledge on to the brokerage side?

At least the SEC is genuinely worried about insider dealing. In Britain few people are. No one knows how much insider trading goes on. The kind of "my cousin in X tells me . . ." pub talk is likely to be as wrong as it is unimportant, but a great many people do have access to privileged information about companies that could be turned to profit on the stock market. Such misuse of confidentiality is clearly unethical, but it is not illegal: a recent report by Justice*, however, proposes a radical change in the law to make it so.

The proposal is that those who have sold shares to an insider should have the same rights of action as in cases

* 25p from *Justice*, 12 Crane Court, Fleet Street, London, EC4.

of deliberate non-disclosure of material information, such as a car buyer has against a dealer who paints over the cracks in the chassis. Further, certain kinds of share deals—like short sales or quick in-and-out transactions—should be forbidden to insiders, on the ground that this is almost bound to be a speculation on the market reaction to a piece of news. And all dealings by insiders would be a criminal offence if they are in possession of information which would substantially affect the share price if generally known.



The objection to bringing the law into this area of morality is that insider dealings would be hard to police, especially as the report wants a very wide definition of insider, and that it would be difficult to assess what insider information was capable of having a big effect on the share price. And the serious insiders would cover their tracks by using the nominee services of a foreign bank. However, in spite of all the objections, the American experience shows that the law should be there to deal with the few who abuse their position (and are caught) pour encourager les autres.

F. Hoffman-La Roche

Not for plebs

Zurich

F. Hoffman-La Roche of Basle is believed to be the largest pharmaceutical company in the world. Nobody is quite sure because it pursues its affairs, and hides its figures, with legendary secrecy. It last went to the capital market in 1920 and there is no prospect of it going again in the foreseeable future. It publishes no turnover figures whatever. The net profit figures, which it does produce once a year, are meaningless. The company has repaid the outstanding value of its shares, so they are not real shares anyway.

The company recently announced an unchanged Swiss Fr500 dividend, and a net profit increased to £6.6m from £6m in 1970. Real profits even of the parent company are probably 15 times the figure given. Some analysts estimate true earnings per share for the current year at around Swiss Fr12,000, about 15% higher than last year. The stock market quotation for the "bons de jouissance" which the company issues—not quite the same as shares, and without voting rights—is about Swiss Fr222,400, or £22,000. This makes them the highest-priced shares in the world. Despite (or perhaps because of) this, analysts will recommend the shares as a good buy any day, but instances of them actually changing hands are comparatively few. The market in Hoffroche is really to be found in the "baby" shares; they are a tenth part of the "bons de jouissance," and are traded at a tenth of the price of father. If you have over £2,000 to spare for a gilded pig completely obscured in a poke, it might be worth buying one.

Offshore funds

IOS casts fainter shadows

For the third year running **IOS's** auditors have declined to approve its exceedingly bleak accounts. They cite the unknown quantity of contingent liabilities. The company has eight major legal actions in train in the United States and Canada plus others in Switzerland; the American Treasury alone is after $75m from IOS and its ex-king, Mr Bernie Cornfeld. The accounts show that IOS's current liabilities were $17m at the end of December—more than double current assets of $8.2m. Shareholders' equity has collapsed from nearly $100m in the company's heyday to $14.4m—below the par value of the shares. A block of 18,200 preferred shares was sold last week in Switzerland for the equivalent of one cent a share.

IOS's losses in 1971 were naturally down from the almost incredible $60.3m in 1970 to $10.5m, but less than half the income was in hard cash. The current president, Mr Milton Meissner, said that an irreducible core of operating costs could be reached soon. True, a lot of income-earning assets were removed from the picture last year. Most of the banking assets were spun off into one Bahamian holding company, **International Bancorp,** and a mixed bag of insurance, real estate and other assets went into another, **Value Capital.** Shares in both were distributed to shareholders as dividends.

Shareholders in **USIF, Real Estate** must be thanking their lucky stars that they have been so successfully rescued from the brink of disaster. The luck was that Gramco, the management company, had chosen the Trust Corporation of Bahamas as the custodian trustee for the fund. The trustees have done their job well, with the help of Lehman Bros, the New York investment bank. Gramco has been booted out and the managers are now the Arlen Realty and Development Corporation, the largest property developer in the United States. Vickers da Costa, the London stockbrokers, is so impressed with the changes that it recommends purchase of USIF, Real Estate at current prices.

Offshore funds are gaining a new lease of life as the shadow of IOS recedes. Quite a few new funds have emerged in the last month or so—no fewer than seven from one group, Barclaytrust Frontier Management, which is jointly owned by Barclays Bank and stockbrokers Joseph Sebag. Most of the new funds are not generalists, but are being produced in response to a specific investor demand.

A good example is Ivory and Sime's new **Viking Resources International** fund; it has been launched because European investors were attracted by the North Sea specialisation of the group's **Viking Resources** investment trust launched in March. Ironically, the prospect of just this sort of European interest in British investment management played an important part in bringing reform of the capital gains tax rules for British-based trusts in the budget. This substantially reduced the advantage of offshore funds, but the Europeans want a special Viking to avoid investing in sterling.

The innovating **Anchor Gilt-Edged** fund provides a tax-free way for foreigners to buy a managed fixed-interest fund. It is based in Jersey, which is becoming increasingly important as a European offshore haven. Triumph Investment Trust has based its new **Triumph Oceanic International** in Jersey, while Barclaytrust has gone the whole hog with special trusts for Guernsey and Jersey residents feeding a third fund for the wider market. Barclays manages around £1 billion of investment portfolios, and reckons that offshore funds are a good way to get some international diversification for them.

These securities were offered and sold outside the United States. This announcement appears as a matter of record.

COMPANY STATEMENT

ANIC

Legal headquarters : **Palermo, Sicily, 216, via Mariano Stabile**

Executive offices : **San Donato Milanese (Milan, Italy)**

Capital : 113,500,000,000 lire

Register Tribunal of Palermo n. 10454

THE ANIC ANNUAL REPORT FOR 1971

At the regular stockholders' meeting on April 27, 1972, the 1971 Annual Report and Balance Sheet of ANIC S.p.A., a company of the ENI Group, were approved, with a no profit and no loss balance after drawing 10,174,721,710 lire from the Fondo Investimenti nel Mezzogiorno (Fund for Investment in Southern Italy).

The Annual Report emphasized the fact that operations were substantially effected by the adverse general economic situation to which prolonged abstentions from work caused by union agitation were added. These phenomena caused contraction in the growth of productive and commercial operations in spite of efforts to keep negative effects within bounds. Investment outlays in various sectors for improving products to meet the increasing exigencies of the market, and for updating plants with the most advanced technological processes, were of little avail in improving the generally unsatisfactory results of 1971.

On one hand sales reached 186,000 million (more than 9% higher than 1970) but on the other, the principal operating costs increased considerably. In particular, the cost of employment rose 29% (10% for increase in personnel and 19% for higher pay). In addition there were losses in productive potential due to delays in deliveries of equipment and materials for new plant and because of work stoppages (estimated at about 11,000 million lire). Therefore to make possible a writeoff of 21,000 million lire for depreciation the amount of 10,175 million was drawn from the Fund for Investments in the "Mezzogiorno."

Although less than looked forward to from planned new plant completions scheduled for the year, there were increases in production of special polymers (+20%) and resins (+12%). Specially notable were the increases in fibre production (+81%) due to expanded productive capacity of the Pisticci plant, and in "miscellaneous chemicals" (+58%) thanks to the opening of new chlorine, caustic soda and dichloroethane plants at Gela. Fertilizer production increased slightly (+1%). However, production was inferior to 1970 for SBR and CIS synthetic rubbers (−3%) due to absenteeism at the Ravenna plant early in the year and later to the necessity for adapting production to availabilities of raw materials. Cement production fell 9% due to the unfavourable state of the building trade.

The volume of sales of fertilizers fell 8%, although the value of billings remained at about last year's level. Positive results were shown for resins and special polymers with an increase in volume of sales (9%) and invoicing (more than 5%). Sales of fibres increased 70% and the relative billings 42%. High levels were reached in chemical product sales (70%) but cement sales were off 11%.

In the petroleum sector, the amount of crude treated by the Sannazzaro and Gela refineries was 6% less mainly due to lower demand.

The total 1971 sales of ANIC, the parent company, was 186,000 million lire against 169,000 million in 1970. Consolidated ANIC Group sales in Italy reached 226,000 million against the 210,000 million of 1970. Parent company investments in property plant and equipment came to 82,000 million lire and about 68% of these were in the southern "Mezzogiorno" area. Of this amount 90% was in the chemical sector and 10% in refining. Total consolidated investments of the ANIC Group in Italy were 139,000 million, equal to more than ⅓ of the investments of the entire Italian chemical industry.

In the chemical sector in 1971, the caustic soda-chlorine, dichloroethane and polypropylene units at Gela went into operation. Work was completed for expanding production of low density polyethylene and also completed was construction work on the third acrylonitrile line.

At the Ravenna chemical complex, work continued on construction of the isoprene and polyisoprene units. Work also progressed for increasing production of the SBR rubber in emulsion plant and mechanical assembling continued for the SBR-in-solution plant. Expansion work on the CIS polybutadiene plant is now in an advanced stage. The ABS resin plant is being expanded. Detailed plans have been finished and mechanical assembling of the mixed C4 hydrogenation unit for SBR-in-solution production continued. Basic engineering of a mixed C4 hydrogenation unit began for the butadiene extraction plant. The new plant for production of polybutadiene latex is now in the planning stage.

At Pisticci the second polyester polymerization unit for production of continuous filament and top went into operation as well as the polyester yarn texturization unit. Equipment assembly has been completed for production of dicomponent polyacrylic fibre. The methylacrylate production plant went into operation last September. Detailed plans are now well advanced for the third polyester fibre polymerization line and the main long-term delivery equipment has been ordered. Equipment has also been ordered for expansion of the polyester yarn draw-twisting unit. At the end of 1971 mechanical assembly of equipment was being carried out for expanding capacity of two of the three acrylic fibre lines.

At Monte Sant'Angelo, near Manfredonia, work has been completed on various sections of the ammonia plant and start up operations have begun. Mechanical assemblage on the urea plant has been completed.

In regard to the petroleum sector, work was completed at the Sannazzaro refinery on increased crude and finished product storage capacity. Research and engineering continued for a new primary distillation unit and other relative units for raising total crude capacity to 10 million tons a year.

At the Gela refinery, a plant for treating gasoline coming from the ethylene steam cracker went into operation as did the aromatic extraction unit expansion.

Employment by the Company at the end of 1971 totalled 12,448 persons, 1,272 more than in 1970. At the same date 15,791 persons were working for the entire ANIC group. More than half of this employment was in the southern "Mezzogiorno" area.

Plans for the future of traditional fields of production include : consolidating and reinforcing the Group's primary European position in elastomer capabilities through expansion of SBR and polybutadiene rubber capacities, initiation of production of polyisoprene and consolidation of plastic materials types of elastomers. In addition, consolidatoin of plastic materials and fibre capabilities will be continued through integration of present production with more technologically advanced products as demanded by markets. Also planned is the updating of fertilizer production processing systems.

The future investment programme also contemplates expansion by the ANIC group into production of primary and secondary fine chemicals such as : additives and auxiliary products for industrial processing (specially for rubbers and plastics), products for use in pollution abatement systems, basic products for animal feed mixtures.

Under study are projects for producing polyelectrolytes, ammines, fatty acids, food acidulants, basic and coagent compounds for detergents. Many of these products fit into the ENI group programme for eliminating pollution and protecting the environment.

In collaboration with BP, ANIC is currently settling details for building what is presently to be the world's largest (100,000 tons a year) synthetic protein plant, to be located in Sardinia. In the field of plastic product fabricating, plants are planned for the regions of Umbria and Sicily to transform about 35,000 tons per year of ANIC resins into consumer articles.

APPOINTMENTS

Victoria University of Wellington

NEW ZEALAND

Senior Lecturer/ Lecturer in Economic History

Applications are invited for the above-mentioned post. Teaching areas include modern British economic history, New Zealand economic history, international economic history since about 1850, and comparative economic growth. Wellington offers outstanding opportunities for research of all types in the economic history of New Zealand and the Pacific area. A generous leave scheme makes it entirely possible to continue research interests related to other areas. Photographic aids and computing facilities are readily available.

Salary : Lecturers—$NZ5589–$7149 ; Senior Lecturers—$NZ7278–$8519 then $NZ8839–$9358. Superannuation available on an FSSU basis. An allowance is made towards travel and removal expenses.

Further particulars and application procedure available from the Association of Commonwealth Universities (Appts), 36 Gordon Square, London WC1H 0PF (Tel : 01-387 8572).

Applications close on *15 August 1972.*

Discussion Centre for the European Community

The Foreign and Commonwealth Office invites applications for two senior posts on the directing staff of the new European Discussion Centre and of Wilton Park at Wiston House, Steyning, Sussex :

i. *Director of Programmes*

The Director, who will be a Deputy to the Warden, will be responsible for the planning of conferences and for the arrangements of participation in them. The successful candidate will have a record of great organising and administrative ability ; he will also have expert knowledge of European history, politics, organisation and personalities. It would be helpful if he spoke or at least understood French and German.

ii. *Director of Studies*

The Director, who will be a Deputy to the Warden, will be responsible as chairman of sessions for the successful execution of each conference programme ; he will be involved in the chairing of plenary sessions and group discussions, and in the non-structured parts of each conference. The successful candidate will have practical experience of Chairmanship, and knowledge of politics, economics and international relations. He must be able to understand French and German easily and to make himself understood in these languages.

Appointment would in the first instance be for a tour of duty of 2 or 3 years. Existing membership of FSSU can be continued. The full range of duties will be explained in interview. Salary in the range £4922–£5564 according to qualifications. Applications to the Warden, European Discussion Centre, Wilton Park, Wiston House, Steyning, Sussex, BN4 3DZ not later than 7 July.

APPOINTMENTS

University of Manchester

Temporary Lecturer in Economics

Applications invited for these posts, tenable during session 1972-3. Salary range p.a. £1,641-£3,852. Particulars and application forms, returnable by July 3rd, from the Registrar, The University, Manchester M13 9PL. Quote ref : 106/72/E.

Hertfordshire County Council

EDUCATION COMMITTEE

Administrative Assistant— Buildings and Statistics

Applications invited from young men or women aged under 35 with good educational background who already have or would be interested in furthering their career by studing for a qualification either in statistics or in social science. Facilities could be provided for training. The duties of the post will include work with the collection, analysis and presentation of statistics and administration work related to the education building programme. Salary on grade A.P.II/III £1,395-£1,932 with starting point related to age, experience and ability.

Apply to the County Education Officer (Ref. AFS/346), County Hall, Hertford, giving details of age, education, experience and the names of two referees by 30th June.

Australian National University

Senior Lecturer/Lecturer in Sociology

Applications are invited for appointment to a new post of Senior Lecturer or Lecturer in Sociology in the Faculty of Arts. The appointee will be required to take up duty in 1973.

Applicants must have qualified at the Ph.D. level and should be prepared to teach one of the core courses in principles, theory or methods of sociology and to develop advanced work in one of the substantive areas such as urban ecology, demography, medical sociology and complex organisation. Applicants with interests in other areas are also welcome to apply.

Salary on appointment will be in accordance with qualifications and experience within the ranges : senior lecturer $A9619 x $323—$A11234 per annum : lecturer $A6804 x $369—$A9387 per annum.

The University provides reasonable travel and removal expenses and assistance with housing for an appointee from outside Canberra. Superannuation is on the FSSU pattern with supplementary benefits. Financial assistance towards study leave is also available.

Further information and the forms which should accompany an application may be obtained from the Association of Commonwealth Universities (Appts), 36 Gordon Square, London WC1H 0PF (Tel : 01-387 8572).

Applications close on *7 August 1972.*

THE SHIRLEY INSTITUTE, a large textile research organisation has a vacancy for an

ECONOMIST or BUSINESS SCIENTIST

with a lively mind. The ability to contribute to and become fully involved in multi discipline research projects is essential. A knowledge of the scope and structure of the Textile Industry would be an advantage.

Apply : Personnel Section, SHIRLEY INSTITUTE, Didsbury, Manchester M20 8RX.

CHAIRMAN'S STATEMENT

ARBUTHNOT LATHAM

Record Profit and Increased Dividend

Extracts from the Statement made by Mr. J. F. Prideaux OBE, Chairman of Arbuthnot Latham Holdings Limited.

Results

The group has had a successful year with profits of £527,566 after tax and after transfers to inner reserves, compared with £333,681 for last year. The main growth has come from the banking group, which achieved an increase of 82%. A final dividend of 5½% on the increased ordinary capital is recommended. This makes a total distribution of 9.35% which compares with the equivalent paid last year of 7.69%.

Loan Capital

With further expansion in mind, £2¼ million was raised at the end of the year in the form of sterling convertible loan stock offered to ordinary shareholders and of dollar convertible loan notes subscribed by The Philadelphia National Bank and by Banque Worms. The paid-up capital of the banking subsidiary, Arbuthnot Latham & Co., Ltd. has been increased by £1 million, and the dollars raised will assist in the expansion of international business.

Banking

There has been steady progress in the main areas of corporate finance, international banking and domestic banking, whilst the investment division has been helped by the acquisition of the Abacus Unit Trust Management Company and total funds under management have increased considerably. It is satisfactory that the Abacus Growth Fund and the Abacus Income Fund are among the top performers of comparable unit trusts.

Finance and Overseas

In this country the group has acquired over 20% of Western Credit Holdings Ltd. and in Australia, a rather larger percentage stake in Trade Credits Ltd., who specialize in property finance. These new investments are complementary to the shareholding in Hamilton Leasing Ltd. with whom the group has been associated for eight years. In south east Asia, Chartered Merchant Bankers Ltd., Singapore, in whom a 34% stake is held, have made good progress.

Insurance

Our insurance broking subsidiary, Arbuthnot Insurance Services Ltd., was able to report a materially higher profit. Golding Adam Brothers (Insurance Brokers) Ltd. has made a marked improvement in its trading position.

Trading

All the five trading subsidiaries reported good results for the year and they made useful contributions to group profits.

Future

For the future, competition will continue to be keen, but there will be fresh opportunities to be taken, and we look forward to the coming years with confidence.

The Annual General Meeting will be held at 37 Queen Street, London E.C.4 on Friday 14th July, 1972 at 12.30 p.m. Copies of the Report and Accounts can be obtained from the Secretary, 37 Queen Street, London EC4R 1BY

APPOINTMENTS

TRADE ASSOCIATION EXECUTIVE £5000

The Compound Animal Feeding Stuff Manufacturers National Association (CAFMNA) seeks an Executive Officer/Secretary to be responsible for the administration of the Association and to assist the Director-General in all matters of policy. Preferred age 30–40. Salary negotiable up to £5000. Pension. Location London.

The successful candidate must be capable of negotiating with public and industrial bodies. He will be progressive in outlook and have the ability to create opportunities for the industry. A degree or professional qualification desirable. Prospect of promotion to Director-General within five years. (SC.650).

Please write briefly and in confidence to the Managing Director, Executive Appointments Limited, 78 Wigmore Street, London W.1, quoting reference. No identities divulged without permission.

University of Newcastle

NEW SOUTH WALES

Lectureships in Economics

Applications are invited for two positions of Lecturer in the Department of Economics.

The University would particularly welcome applications from persons who have special interests and university teaching experience in one of the following fields :

ECONOMIC HISTORY
MACROECONOMICS
ECONOMIC DEVELOPMENT

It is expected that one of the two appointments will be made in the field of Economic History.

Salary range for the position is $A6,697–$A9,286 and commencing salary will depend on the qualifications and experience of the successful applicant.

Further information regarding the position may be obtained from Professor B. L. Johns, Head of the Department, in the University. The conditions of appointment including superannuation, study leave, housing scheme, method of application and other particulars, may be obtained from the Association of Commonwealth Universities (Appts), 36 Gordon Square, London WC1H 0PF (Tel : 01-387 8572).

Applications close *29 July 1972.*

University of the Witwatersrand, Johannesburg

GRADUATE SCHOOL OF BUSINESS ADMINISTRATION

Chair of Management Accounting

The incumbent of the post will be encouraged to undertake a reasonable amount of private consulting work.

The salary scale is R9900 x 300—R12,000.

Pension and medical aid facilities, and housing subsidy are available and a vacation savings bonus is payable annually in terms of Government regulations.

The successful applicant will be required to assume duty as soon as possible on a date to be negotiated.

Intending applicants are advised to obtain a copy of the information sheet relating to this post from the Registrar, University of the Witwatersrand, Jan Smuts Avenue, Johannesburg, or from the Association of Commonwealth Universities (Appts), 36 Gordon Square, London WC1H 0PF.

Applications should be lodged not later than *31 August 1972.*

CHAIRMAN'S STATEMENT

ENGLISH CALICO

LIMITED

Highlights from 1971/72 Annual Report and Review of the Chairman, Mr. Neville Butterworth.

- Profit before taxation was £9,587,000 against £8,170,000.
- Sales to third parties were £163 millions – an increase of £11 millions.
- Export sales rose 18% to £18,822,000.
- Trading profit increased 12% to £11,913,000.
- Investment in new building and equipment was £6,458,000.

	1971/72 £	1970/71 £

Marketing Vacancies

Automobile Parts Industry
Research Analyst
Experienced Marketing/ Planning Analyst
Marketing Analyst

(a) RESEARCH ANALYST

Sound ability to structure gather and process world wide Sales and Marketing information using statistical analysis techniques to define market potentials, share figures and trends.

(b) EXPERIENCED MARKETING PLANNING ANALYST

Will carry out marketing study exercises embracing all aspects of the mix. This position will be of interest to men who are following a career in Marketing and who wish to accept a position of responsibility, where the ability to display a high degree of self reliance and initiative is considered essential.

(c) MARKETING ANALYST

Two young men, preferably graduates with a background in Economics, Engineering or Finance are required to assist with marketing work outlined above. The ability to perform clear logical analysis and a flair for written/verbal communication is necessary. The positions offer excellent career possibilities.

Applicants for positions (a) and (b) should preferably have had experience in the Automobile or Automobile parts industry.

Attractive starting salaries are associated with these positions and fringe benefits include participation in the Company's Profit Sharing Scheme and Pension/Life Assurance Plan.

Applications should be clearly marked with job title and should detail age, qualifications, experience and salary progression. (Closing date for applications—14th July 1972).

AUTOMOTIVE PRODUCTS GROUP

J. C. Coad,
Personnel Manager,
AUTOMOTIVE PRODUCTS CO. LTD.,
BANBURY, OXON.

APPOINTMENTS

University of Bradford

MANAGEMENT CENTRE

Research Assistant in the Marketing of Financial Services

A vacancy exists for a Research Assistant to work in this area. The appointment is initially for a year, with the possibility of extension. Applications are invited from candidates with good honours degrees or any equivalent professional qualification.

The post is tenable from 1 October 1972 and any appointment will be made on the scale £1242 to £2037. Further details and application forms (returnable by 31 July 1972) obtainable from the Registrar, Ref. MA/RA/MFS/M, University of Bradford, Yorkshire, BD7 1DP.

Informal enquiries may be made to Professor Gordon Wills or Mr James Mann at the Management Centre, University of Bradford, Tel : 0274 42299.

National and Local Government Officers Association

Trainee Assistant Organising Officers/District Officers

Applications are invited from suitable persons for training and instruction in service conditions work, leading to appointment as either Assistant Organising Officer at Headquarters in London or District Officer in one of the Districts of the Association. On completion of the course, trainees will be expected to accept either appointment as offered according to staffing requirements at that time.

There are six vacancies.

Applicants should have the normal minimum educational qualifications, i.e.

(a) GCE at Ordinary level in at least 5 subjects including English (or English Language or English Literature) ;
(b) passes in at least 3 subjects, of which at least two must be at Advanced level ; English (or English Language or English Literature) to be one of the subjects at either level in each case ;
(c) acceptable equivalent alternative qualifications.

Candidates will be selected according to natural ability or aptitude for the trade union (service conditions) work in the Association, and while no age limit is stipulated, the posts are regarded as being intended for younger entrants.

The period of training will last for approximately 15 months, and will take place at Headquarters in London and in several of the Districts of the Association. Successful applicants must therefore be prepared to live away from their homes for all or a part of the period of their training. During periods spent away from home, appropriate lodging allowances will be paid.

The salary offered is in accordance with Grade AP IV (at present £1,932-£2,199 but being reviewed) plus a Weighting allowance of £144 whilst training in London.

Applications should be made to the General Secretary on the official form, a copy of which and particulars of the appointments can be obtained on request from the General Secretary, NALGO House, 8 Harewood Row, London, NW1 6SQ.

The University of Manchester Institute of Science and Technology

Research Fellowship in the International Business Unit (Ref : MS/92/AD)

This Unit is an integral part of the Department of Management Sciences, which has a multi-disciplinary staff of forty, under the Chairmanship of Professor Roland Smith.

A numerate social scientist is sought to conduct investigations in considerable depth into aspects of the decision-making process of multinational firms.

The person appointed will be a member of a growing team of researchers under the leadership of Dr. Michael Z. Brooke. He is likely to have had experience of research in one of the social sciences with business experience preferably in a multinational firm. However, this does not rule out candidates with other international experience. A willingness to travel and an ability to talk to senior business executives is essential. Some ability in foreign languages would be helpful.

The Research Fellowship will be supported by a grant from the S.S.R.C., and travelling expenses, secretarial services, and computer facilities will be provided. He will be expected to make a major contribution to knowledge in the area selected.

The appointment will be for an initial period of two years but may be renewed on an annual basis.

The salary is negotiable around £2,500 per annum plus F.S.S.U.

Requests for application forms quoting reference number should be made to the Registrar, U.M.I.S.T., P.O. Box No. 88, Sackville Street, Manchester, M60 1QD. Completed forms to be returned not later than 19th July, 1972.

University of Strathclyde
School of Business and Administration

DEPARTMENT OF ACCOUNTANCY

Senior Lecturer

Applications are invited for the post of Senior Lecturer in Accountancy from suitably qualified applicants.

The successful applicant will have preferably, both a University Degree (either a good Honours 1st Degree or a Higher Degree) and a professional qualification in Accountancy. He will be expected to contribute to the Higher Degree courses which the Department is currently developing within the Scottish Business School and should be prepared to assist in the organisation of research within the Department. Preference will be given to candidates who have a special interest in either the behavioural or quantitative aspects of Accountancy.

Salary scale £3,852-£4,734 with F.S.S.U. benefits.

Application forms and further particulars (quoting 31/72) can be obtained from The Registrar, University of Strathclyde, 204 George Street, Glasgow G1 1XW with whom applications should be lodged by 7th July 1972.

MONOPOLIES COMMISSION

Senior Economic Adviser

£5175 – £6475 (under review)

The Senior Economic Adviser will head the Commission's staff of 5 economists. Their main functions are : to give day-to-day advice on current monopoly and merger questions ; and to carry out longer term research work of direct relevance to the responsibilities of the Commission (e.g. 2 current projects are an investigation into the economies of scale in manufacturing industry and a general enquiry into parallel pricing).

They work in a separate unit but have close working relations with the Commission's administrators and accountants and with the Department of Trade and Industry. Close contacts are also maintained with economists working in the appropriate field in universities and elsewhere.

Candidates, aged at least 34 (at least 32 if exceptionally well qualified), must be economists of standing and have a sound knowledge of micro-economic theory and of industrial organisation, a thorough command of statistical techniques and a good understanding of econometric methods of investigation (though they need not be skilled practitioners in this field). A good honours or higher degree in economics or a closely related subject is normally required.

Starting salary could be above the minimum of the scale shown. Appointment could be on an established basis or for a period. *Whilst the Monopolies Commission is not strictly part of the Civil Service, the terms of employment are similar, in most respects, to those of civil servants.*

Full details of this appointment may be obtained by writing to the **Civil Service Commission, Alencon Link, Basingstoke, Hants.**, or telephoning BASINGSTOKE 29222, ext. 500 or LONDON 01-839 1696 (24-hour "Ansafone" service) quoting reference A(2)/623/S. Closing date 17th July 1972.

APPOINTMENTS

University College Cork

DEPARTMENT OF ECONOMICS

Full-time Appointments

The Governing Body invites applications for a maximum of two full-time posts as College Lecturer / Assistant Lecturer / Assistant in the Department of Economics. Each appointment will be made at one of the levels mentioned according to the qualifications and experience of the successful candidates.

The salary scales are : College Lecturer : £2,895 x £105—£3,420 p.a. ; Assistant Lecturer : £2,220 x £105—£2,745 p.a. ; Assistant : £1,860 x £105—£2,070 p.a.

Before submitting applications intending candidates should obtain from the undersigned further details of the posts together with details of the application requirements.

The latest date for the receipt of applications is *1 p.m. on Friday, 14 July 1972.*

JOHN P. TEEGAN,
Acting Secretary of the College.

University of Glasgow

DEPARTMENT OF SOCIAL AND ECONOMIC RESEARCH

Temporary Lecturer in Applied Economics

Applications are invited for the above post. The successful candidate will work with a small team involved in an SSRC financed research project on Small Area Employment Forecasting due to start in October, 1972. Applicants should possess a good Honours degree in Economics or be expecting to graduate this year. A knowledge of statistical methods would be an advantage.

The appointment will be for three years commencing 1st October, 1972. The salary will be within the range £1641 to £1935 per annum, of the Lecturers' scale of £1641 to £3852 per annum. F.S.S.U.

Applications (eight copies) should be lodged not later than 23rd June, 1972, with the undersigned, from whom further particulars may be obtained.

In reply please quote Ref. No. 3199 U.

ROBT. T. HUTCHESON
Secretary of the University Court.

University of Birmingham

INSTITUTE OF LOCAL GOVERNMENT STUDIES

Lecturer or Senior Lecturer

A vacancy exists for a lecturer or senior lecturer from 1st January 1973, for two years and with possibility of extension, for advanced short courses (17 weeks) on management administration for senior overseas administrators. Relevant qualifications include knowledge of basic management disciplines (e.g. Personnel Management, Corporate Planning) in the field of urban local government and financial administration. Practical experience in developing countries would be an advantage.

Salary : Senior Lecturer : £3852-£4734 plus F.S.S.U. ; Lecturer : £1641-£3852 plus F.S.S.U.

Applications (3 copies) naming three referees by 14th July 1972 to Assistant Registrar (C), University of Birmingham, Box 363, Birmingham B15 2TT, from whom further particulars and application forms should be obtained. Please quote reference C/059/E.

University College of North Wales, Bangor

DEPARTMENT OF AGRICULTURE

APPLICATIONS ARE INVITED FOR THE POST OF

Lecturer in Agricultural Economics

The successful applicant will participate in the teaching of the honours degree in Agriculture with Agricultural Economics. Candidates should have qualifications in Agricultural Economics or Economics, some post-graduate experience, and preferably a special interest in overseas development and/or marketing.

Salary will be on the scale £1,641-£3,999, and the initial salary will depend upon qualifications, experience and age.

Further particulars of this post may be obtained from the Secretary and Registrar and applications (two copies), giving details of age, qualifications and experience, should be sent to reach the Secretary and Registrar by 11th July, 1972.

Discussion Centre for the European Community

Academic Staff

The Foreign and Commonwealth Office invites applications for two posts on the academic staff of the European Discussion Centre at Wiston House, Steyning, Sussex, which arranges discussions on European policy and international relations amongst leading personalities from the member countries of the enlarged Community. Practical experience in politics, economics and international relations or teaching experience in these fields is required. Language requirement for one post : fluent German with good knowledge of French : for the other—fluent French with good knowledge of German. Appointment would in the first instance be for a tour of duty of 2 or 3 years. Existing membership of FSSU can be continued. The full range of duties will be explained in interview. Salary in the range £3478-£4708, according to qualifications. Applications to the Warden, European Discussion Centre at Wiston House, Steyning, Sussex, BN4 3DZ not later than 7 July.

University of Birmingham

CENTRE FOR RUSSIAN AND EAST EUROPEAN STUDIES

Research Associate

Applications are invited from candidates with an accurate reading knowledge of Russian and a good knowledge of Soviet economics. The person appointed will be responsible to the Centre Director for abstracting and collating information from the Soviet press on the organisation and economics of Soviet science and technology, and on Soviet industrialisation.

The appointment, from 1st October 1972, will be for one year in the first instance.

Salary scale : £1320-£1935 plus FSSU.

Further particulars from the Assistant Registrar (RS), University of Birmingham, P.O. Box 363, Birmingham B15 2TT, to whom applications (five copies) including names of three referees, should be sent by 14th July 1972. Please quote reference RM2.

Senior Posts in Government Administration for those with a record of Success

Success will have come in industry, commerce, the public services or a profession. Those who have achieved it will be experienced in administration or management or be able to demonstrate marked ability in those fields. They need not be graduates but the intellectual standard is high and preference may be given to those who have also had experience of direct relevance to the work of Government Departments.

These are the qualifications, along with a a capacity for critical analysis, judgement and an aptitude for hard work and responsibility, needed by Principals in the Home Civil Service. They are involved in the exacting business of advising Ministers on the formulation of government policy, carrying out government programmes and managing and organising the work of their departments. The wide scope of the work provides considerable challenge for those with real talent who like to be kept at full stretch and who can find a great deal of job satisfaction from being at the centre of influence, deeply involved in important issues affecting the entire nation.

These posts are mainly in London but there may be one or two elsewhere, e.g. in Edinburgh and Cardiff.

Starting salary (Inner London) is £3653 (more if qualifications/experience warrant it) rising to £4883. However, as applicants will be judged as much on their future potential as on their present achievements, the successful candidates can expect to be promoted in due course to Assistant Secretary level (up to £6475—under review) or higher still.

Candidates should be at least 28 (or exceptionally 26) and under 52 on 1 August 1972.

There is a non-contributory pension scheme.

For details and application form (to be returned by 4 August 1972) write to Civil Service Commission, Alencon Link, Basingstoke, Hants, or telephone BASINGSTOKE 29222 ext. 500 or LONDON 01-839 1696 (24 hour 'Ansafone' service), quoting A/651/2.

APPOINTMENTS

Research Posts in Government

If you are interested in the procurement, analysis and evaluation of information there are vacancies for Assistant Research Officers (normally under 28 years of age) in the following government departments :

Ministry of Defence—about 6 posts (London)

The work, under the Defence Intelligence Staff, concerns the interpretation of economic, topographical, and scientific information about certain foreign countries. It includes studies of economic organisation, finance, trade, civil and defence industries, raw materials, agriculture and labour.

Home Office—2 posts (London and Manchester)

The work involves a broad field of studies including the administration of justice and race relations, the causes and prevention of crime, and the treatment of offenders. Research is multi-disciplinary, and includes both descriptive and empirical studies.

QUALIFICATIONS : Normally a degree with 1st or 2nd class honours, or post-graduate degree, in an appropriate subject. Final year students may apply. Fuller details of acceptable qualifications and experience will be supplied on aplication.

The inner London salary scale is £1530-£2476 (£175 less in Manchester). Starting salary may be above the minimum. Promotion prospects. Non-contributory pension scheme.

Other vacancies may arise in these and other departments.

For full details and an application form (to be returned by 14 July 1972), write to Civil Service Commission, Alencon Link, Basingstoke, Hants, or telephone BASINGSTOKE 29222 ext 500 or LONDON 01-839 1696 (24 hour "Ansafone" service). Please quote A(2)/613.

AGRICULTURAL MARKETING RESEARCH

AN FORAS TALUNTAIS

(The Agricultural Institute)

Invites applications for the above post in its Agricultural Marketing Department, Dublin. The appointee will be concerned with studies of the home and export trades and will have opportunities for association with leading research workers in Ireland and abroad. Modern research, including computer facilities, are available. Appointment up to and including Senior Research Officer level (salary scale : £3069 x £104—£3693 x £21—£3714) depending on qualifications and experience. Marriage and children's allowances, non-contributory pension scheme and provisions for widows' and orphans' pensions. Special pension arrangements can be made for an FSSU member or a member of a suitably insured pension scheme.

ESSENTIAL : Honours University Degree or equivalent, in Economics, Commerce, Agricultural Economics or Agricultural Science.

DESIRABLE : Post-graduate training in agricultural marketing.

Application forms and further particulars obtainable from the Director, An Foras Taluntais, 33 Merrion Road, Dublin, 4, Ireland. (Tel 693222.)

Latest date for receipt of completed application forms : 12 July, 1972.

Applications will be treated with the strictest confidence and employers will not be contacted without prior permission.

University of Liverpool

DEPARTMENT OF ECONOMIC HISTORY

Applications are invited for the post of Lecturer in the Department of Economic History. Preference will be given to candidates with an interest in 19th Century Economic History, both British and European.

Initial salary within the range £1641-£3852 per annum according to qualifications and experience.

Applications, together with the names of three referees, should be received not later than 6th July, 1972 by the Registrar, The University, P.O. Box 147, Liverpool L69 3BX, from whom further particulars may be obtained. Quote ref. RV/E/13907.

APPOINTMENT WANTED

FELLOWSHIP

University of Manchester

Shell Fellowship for Research in Economics

Shell International Petroleum Company Limited invites applications for a two-year Research Fellowship in Economics to be held in the University of Manchester. Starting salary will be in the range £1,400-£2,200 according to age, qualifications and experience, and the employer's contribution to F.S.S.U. will also be paid. The recipient will be expected to pursue research on an agreed topic within the following broad area :

Money and Financial Institutions (including Monetary Theory, Monetary Institutions, Monetary History, International Monetary Relations, Capital Markets and Corporate Finance.)

Preference will be given to applicants whose proposed research is relevant to the British economy.

Application is open to candidates of any nationality who have demonstrated research ability during at least one post-graduate year. Further information and application forms may be obtained from the Registrar, Victoria University of Manchester, Oxford Road, Manchester, M13 9PL, and be returned not later than Monday 10th July, 1972.

BUSINESS NOTICE

INTERNATIONAL INVESTMENT COUNSELLING

Execution of Tactics

Your international investment *Tactics* concern your short term approach to investment. Are you selling aggressive stocks and replacing them with conservative issues; are you emphasizing or de-emphasizing any one country on the basis of economic or currency outlook; or are you adjusting capital gain taxes if you are subject to them?

At Lionel D. Edie International, our Economic Research, United States Security Research, and Foreign Security Research are combined in an effort to improve your investment *Tactics.*

Our Senior Counsellor assigned to your portfolio won't wait to have you bring up these problems – he will initiate *Tactics* to shelter you against security risk – against economic or currency risk – against taxes.

He has the time to advise you on *Policy – Strategy – Tactics* and bring them all to bear on your portfolio investment performance.

If you would like more information contact Edouard Iselin, our Executive Vice President in Geneva. He will be glad to discuss services, fees and answer any questions you may have.

RUMIANCA S.p.A.

Capital Lit. 45,247,895,000

ORDINARY AND EXTRAORDINARY MEETING OF SHAREHOLDERS

The ordinary and extraordinary meeting of Rumianca was held in Turin on April 28th 1972 and was attended by seventy-five shareholders representing in person or by proxy 36,270,129 shares (80% of the issued capital).

The Chairman Dr. Renato Gualino, told those present of Rumianca's results attained during the business year ended December 31st 1971 and the plans for expansion in connection with the new plants authorized by CIPE which will become operative in the near future. Dr. Gualino went on "The political and economic events in Italy and abroad during 1971 cannot be actually considered more reassuring than those which marked 1970 even if we have witnessed new relations between West and East, Great Britain's entry into the Common Market and the recovered international monetary equilibrium towards the end of the year.

As far as the Italian chemical industry is concerned, costs have shown a continuous tendency to increase more rapidly than productivity. In the meanwhile sales prices have not risen on the average. This has been also due to the economic stagnation which has compromised sales. For these reasons costs have taken up a larger quota of proceeds cutting down possibilities of depreciation, return on capital and new investments.

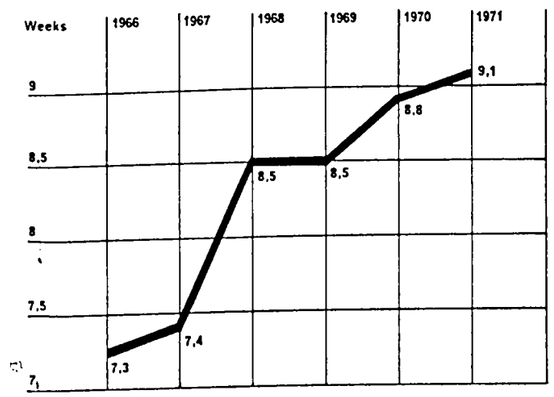
Rumianca faces this situation firmly in order to offset the negative results and aims to the rapid realization of the new plants authorized by CIPE which will allow a greater economic possibility of depreciation, return on capital and new investments through a high reduction of the incidence of production costs on overall sales. In the last days of October 1971 our Sardinian associates have been in a position to execute the contracts with IMI, CIS and Icipu in connection with the loan (47,650 million lire) relating to the investing 'excerpts' authorized by CIPE in July 1970 (79,000 million lire in addition to deposits).

We are now swiftly carrying out these investments previously authorized by CIPE and financed in 1969 with the difficult but not impossible aim of completing them within the first six months of 1974.

Our other initiatives, totalling 400,000 million lire, which you previously approved, directed to the diversification of products and divided into three separate programmes: short, medium and long run are still under examination by CIPE, whom we press continuously in order to avoid that the decisions of this interministerial programming body are limited to the year 1975, as it is in its mind. It is in fact necessary that CIPE takes into account the subsequent investments after 1975 as it is essential for technical, financial and trade unions requirements to outline company programmes for a long period of time. It is particularly important to know, as soon as possible, which plants we will have to build up after 1975. Without this knowledge we shall not be able to plan our new research work and we shall risk to make useless our research work currently under way. We present you hereforth a study on the development of our labour cost from 1966 to 1971 in the following tables.

Rumianca and associated companies in Sardinia

Total personnel costs 1st Table
(workers + employees + executives)



Year	(1) Personnel on 31th December of each financial year	(2) Contractual hours paid per week (per employee)	(3) Weekly Working hours actually carried out (per employee)	(4) Total costs (Lire x 1000)	(5) Consolidated turnover (Lire x 1000)
1966	2.680	44.44	38.27	5.601.000	25.086.000
1967	2.724	43.56	37.40	6.271.000	28.353.000
1968	2.526	43.40	36.38	6.363.000	33.155.000
1969	2.546	42.94	35.92	6.890.000	40.920.000
1970	2.696	41.76	34.69	9.450.000	43.200.000
1971	2.622	40.30	33.29	10.700.000	46.922.000

Index 2nd Table

Year	(6) Ratio personnel costs/ turnover (*)	(7) Turnover index	(8) Personnel cost index/ hour	(9) Sale prices index (*)	(10) Cost of living index
1966	22.3	100	100	100	100
1967	22.1	113	107	99	101,97
1968	19.2	132	118	98	103.27
1969	16.8	163	133	118	106,18
1970	21.9	172	176	115	111,57
1971	22.8	187	201	110	119,30

(*) products for agriculture excluded

Contractual weeks not worked (holidays, rest days during the week, absence from work) 3rd Table

The reading of these three tables leads us to the following considerations:

1) The average number of employees has remained almost unchanged (whereas marketable products have risen from 300,000 metric tons in 1966 to over 450,000 metric tons in 1971).

2) The overall labour cost has more than doubled. It includes pension and health contributions, legal deductions and allocations for the staff liquidation fund (in 1971 respectively 29.72%, 4.84%, 5.91% of the overall cost).

3) Until 1969 the increasing productivity of our Group due to our continuous work of modernization and automation of our plants offset the increasing labour cost. In 1970 and 1971 by contrast labour cost increased more rapidly than productivity (see table 2nd (6), (7), (8)).

4) Sales prices, with the exception of 1969, have been low. Sales have therefore increased particularly as a result of the increased quantity of productions in our plants.

5) Paid weeks without attendance in 1971 have amounted to 9.1 per year (cutting down the number of work days to 214 per year) of these weeks 3.9 refer to holidays and festivities during the weeks and 5.2 to absenteeism.

Absenteeism is a very worrying tendency for its dimensions. Furthermore it causes a remarkable inequality of treatment between those who indulge in absenteeism (in our plant of Cagliari for instance 40% of the personnel) and those who try to reduce their absences at the most (the remaining 60%).

6) As compared with the increase of labour cost per hour, whose index number has risen from 100 in 1966 to 201 in 1971 (and 252 if we refer only to workers in our Cagliari plant) the cost of living has marked a lower increase: in fact its index number has risen from 100 in 1966 to 119.3 in 1971. The difference between the two figures shows an improvement in our personnel's purchasing power and particularly of our workers in the South.

We believe we have done our duty of industrialists in making use of every resource in continuous works of improvement and modernization of the existing plants to increase productivity. We must however assure the capital a fair return. In these last years unfortunately no return has been attained. It is therefore necessary to reduce the incidence of costs on sales and we feel confident we will attain this result by means of the investments currently under way. During 1972 we will proceed with the scheduled programme of concentrating our activities and those of our associates in Sardinia to form a single Sardinian company. All our investments in Sardinia will be made through this new big enterprise under the name of RUMIANCA SUD. Through the economic results of this company we intend to give you the most tangible satisfactions. Rumianca Sud will end its business year on June 30th of each year in order to allow Rumianca to include the economic result in its own balance which closes on December 31st.

1971 ended up with results not very different from those marked in 1970 in spite of the recorded remarkable increase of production costs. Rumianca's turnover was 41,044 million lire compared with 40,272 million lire in 1970 and that of Rumianca with its associates was 50,203 million lire as against 47,254 million lire in 1970 with an increase of 1.92% and 6.24% respectively.

The Group's Profit and Loss account has shown a surplus of 1,715 million lire before depreciation. We propose you to close the 1971 business year with 1,183 million lire as loss (as against 1,358 million lire in 1970) after an overall depreciation of 3,671 million lire of which 1,250 million lire for Rumianca itself and 2,421 million lire for our associates.

In 1971 we continued developing our research work with expenses of over 650 million lire. Within the limits of provisions decided by the Government in this field, CIPE has approved and financed the second programme of Rumianca aiming to the research of active principles for Agriculture which will imply expenses of about two billion lire over four years. In the meantime in connection with the first programme authorized by CIPE last year, a pilot-plant has become operative. The decentralized agronomical research laboratories will become operative very soon in Piedmont, Tuscany, Sardinia and Calabria to give Rumianca the possibility of testing, in different environment conditions, the various active principle under study."

Then the Chairman proposed, during the extraordinary meeting, the approval of a Bond issue and the modification of some articles of partnership.

Once the discussion had been opened Dr. Franco Micucci Cecchi asked for further explanations particularly on the future developments of the company.

Dr. Gualino after summarizing Rumianca's programme for the '70s which involves investments for over 600 billion lire, replied to all speakers at some length, then the Report, the Balance Sheet, the Profit and Loss account for 1971, the proposal of balancing losses of the year of 1,182,803,139 lire using the ordinary reserve and the modification of articles of partnership nr. 3, 4, 14, 17, 19, 20 were put to the vote and approved unanimously.

Then the meeting unanimously fixed at 9 the number of directors for 1972 and gave the Board of directors the mandate to manage the Bond issue for an overall amount of 15 billion lire. Regulations and conditions relating to this bond issue will be made known in due time.

A BETTER YEAR FOR THE BRITISH TRANSPORT DOCKS BOARD

Salient points from the Annual Report and Accounts for 1971

Receipts were up by £6½m. in spite of a fall in coal shipments, reduced imports of iron ore and lower petroleum traffics.

The financial outturn, a profit before interest of £7.6m., achieved the objective for the year, a return of 5.6% on assets, compared with 3.5% in 1970. The longer term objective is to raise this to 9% by 1975. The Board make provision for depreciation on a replacement cost basis.

Encouraging features of the year were an increase of one million tons in exports of manufactured goods further growth in unit load traffic and the introduction of several new services.

At the ports serious losses continued to be incurred at Hull where interruptions of services contributed to loss of trade and at Garston which suffered from diminished coal traffic and industrial disputes. The largest profits were earned at Southampton (£0.5m. against a deficit of £0.9m. the previous year) and at Newport (£0.7m.) where there was a remarkable recovery from the four months' enforced closure for lock reconstruction in 1970. At Port Talbot, terminal losses on closure of the old docks offset improvements resulting from the first full year's operation of the new tidal harbour.

Capital expenditure totalling £11¼m. included expenditure on additional capacity at the Southampton Western Docks container terminal and the first container crane at Hull. Other projects approved during the year included additional roll-on/roll-off terminals at Hull which will bring to 15 the total of these terminals at the Board's ports.

The Chairman, *Sir Humphrey Browne, commenting on the result for the year said that the overall improvement had been encouraging. The Board were concentrating on increasing efficiency. However, future prospects depended mainly on reliability of service. If there could be freedom from interruptions of working at the ports, the outlook for the future would be promising.*

The British Transport Docks Board Annual Report and Accounts 1971 is published by Her Majesty's Stationery Office at £1.10

Summary of Accounts

	1971 £ million	1970 £ million
Gross Revenue	40.3	33.6
Operating Profit before Depreciation	11.3	7.9
Profit before Interest	7.6	4.6

MOULINEX

The Annual General Meeting held on the 27th May 1972 under the Chairmanship of of Mr. MANTELET, Chairman and General Manager, approved the recommendations submitted by the Board.

The dividend, fixed at 18 Francs plus tax credit of 9 Francs compared with 15 and 7,50 Francs respectively during the previous year, will be paid on the 12th June 1972 (coupon No 16).

The Extraordinary General Meeting, which followed on the ordinary meeting, authorised the Board to proceed with the increase of share capital to be allocated to the "Staff Participation Reserve Mutual Investment Fund."

This capital increase is distinct from the capitalisation issue of so many bonus shares for 1 bonus share per 5 old shares held (ranking for dividend on 1st January 1972).

ITALSIDER S.p.A.

Financial Year 1971 Report of the Annual General Meeting of Shareholders April 27, 1972

Finsider Group

The Annual General Meeting of ITALSIDER S.p.A. was held in Genoa on April 27, 1972, at the Head Office in Via Corsica 4 under the chairmanship of Cav. del Lav. Dott. Ing. Mario Marchesi.

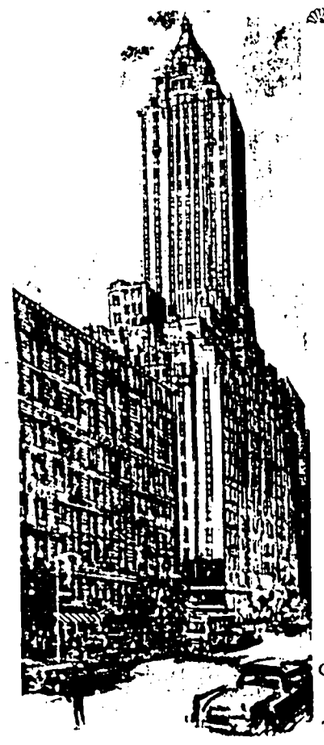
Shareholders present represented in person or by proxy 221,081,279 shares, or 84% of the Company's capital.

The Report of the Board of Directors read by the Vice-President and a Director appointed by the Company Dott. Enrico Redaelli Spreafico, stressed that, besides the market crisis and the increase in costs of raw materials and labour, which have affected all steel firms, other causes have made the 1971 financial year for ITALSIDER more difficult. In fact, production was hindered and harmed by the strikes, particularly by the workers of the said contracting firms. Furthermore, the consequences from the strikes of preceding years affected the efficiency of the plants, especially certain blast-furnaces, in a way which led to an unforeseen stoppage with set-backs in the programme for the whole cycle. The Financial year developed in difficult conditions with the necessity of maintaining the activities of the existing plants and at the same time constructing, starting and introducing into the cycle, those new ones, which consitute per se a technical undertaking and a very considerable construction effort.

ITALSIDER's balance sheet for 1971 closed with a loss of Lit. 28,700 million after depreciation of Lit. 58,500 million as in the preceding year, in spite of the disincorporation of the Piombino firm transferred to the new company Acciaierie di Piombino (the Piombino Steelworks) to whose capital Fiat and Italsider participate jointly.

In 1971 ITALSIDER produced 7,951,000 tons of steel, one million tons more steel than planned. As regards commercial activities, the Company has led an intense campaign to meet with foreign competition on the national market and to increase exports.

The trade unions were very active in carrying out the new grouping of staff.



Within the IRI-Finsider plans set out in provision of the increase which will occur on a medium- and long-term basis for the consumption of steel products, ITALSIDER is carrying out an imposing programme for plants, of which the centre at Taranto—which should have a production of approximately 10.5 million tons of steel per year—represents the essential nucleus.

The imposing plant developments being carried out and planned and the organisation for the improvement of the Company's efficiency—the Report of the Board of Directors stresses—will certainly speed up a better future for the Company.

After the reading of the Report many questions were asked by the shareholders to which the Chairman Ing. Marchesi replied.

The Meeting then approved the Report presented by the Board of Directors and by the trade unions, the Balance Sheet and the Profit and Loss Account at December 31, 1971.

The Meeting then re-appointed to the Board of Directors Dott. Luigi Pittaluga who was also re-elected as Director delegate of the Board which met immediately after the Meeting.

NEW YORK'S

HOTEL CARLYLE

Accommodations for transient and residential occupancy. The Carlyle offers the full panoply of services associated with internationally-known hotels of its calibre. Three superb restaurants.

Madison Avenue at 76th St.

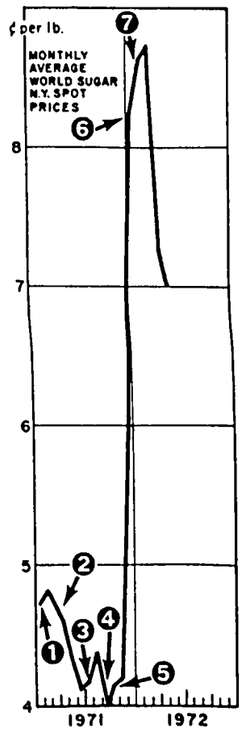
FIDUCIAIRE CFA TREUHAND

(after reading the CFA Report)



for solid reasons — you might decide to incorporate in Switzerland

The well established economy of Switzerland and its ancient and well defined body of laws does not offer romantic or exotic attractions. Its tax level can, however, be considered moderate by modern standards and is designed to provide a solid structure, giving legitimate financial incentive to growth — personal and corporate, income and capital. Low taxes are only one of the incentives offered by Switzerland's stable economy ● Its stable political and economic climate and its conservative business tradition make it a reliable home for the preservation of capital and for the employment of capital in the industrial endeavors of other countries, and in real estate, bond, equity and precious metal markets, and the like ● Your interests may best be served by incorporating in Switzerland for the custody or exploitation of any type of asset, fortune or form of endeavor, for the purpose of expanding into the Common Market, or for the general conduct of multi-national trade ● Many thousands who have discovered this have already established their enterprises in what has become the favorite canton of Zug — only 18 miles from the city of Zurich — where the Corporate Fiduciary AG is in the business of serving you on a personal or corporate basis in the pursuit of objects mentioned above. Mail coupon for our Report «Switzerland as your corporate base», without any obligations.

CORPORATE FIDUCIARY AG

SUGAR

Recommendations of:

1. **Jan. 1971** — Sell on near term advance. Weakness will follow.
2. **March-April 1971** — Broad downward trend. Buying opportunity around mid-year.
3. **July 1971** — Expect selling on approach to 4.5¢.
4. **Aug.-Sept. 1971** — Only moderate further weakness. Add to purchases on weakness. Long term trend up. Maintain long positions.
5. **Oct.-Nov. 1971** — Long term trend up. Maintain long position.
6. **Jan. 1972** — New highs expected first quarter 1972 followed by downward trend in second quarter. (this advice was first given in Aug. 1971.)
7. **Feb. 1972** — Significant price depression in March.

For over a quarter of a century, our basic research has enabled us to anticipate well in advance a major reversal in the price trend. It is indicative of the commodity work performed by us for many large corporations in industrial and agricultural commodities.

39th Year World Wide Service

HOR PHAG combines the resources of five interdependent companies who manufacture and distribute pharmaceuticals in over 50 countries. Horphag also engages in research ranging from molecular biology to the use of flavans.

Each Horphag vitality pill, known the world over as

OKASA

(OR VITOKASAN IN FRANCE)

contains five vitamins, seven minerals and nine elements.

Horphag helps pharmaceutical industries in many developing countries to establish formulae that suit the needs of their particular areas.

We fly farther.
To Boston. Chicago. Philadelphia.
Los Angeles. Montreal. Anchorage.
A lot of things in America happen here. Here in New York. Which is why we have four flights a day. And why we offer you direct connections from all over Europe, via Germany. But New York isn't everything. That's reason enough for us to fly daily to Chicago, Boston and Philadelphia. And five times a week to Montreal. Four times a week to Los Angeles and Anchorage.

BRITISH INFORMATION SERVICES (INDIA)
150-A, MOUNT ROAD, MADRAS 2.

June 17, 1972

Steamroller coming

Mr Heath is proclaiming loudly that he will not institute a statutory incomes policy, but he is eventually going to have to do so under some other name. The proposals that might work, page 13. The dreadful mess in the docks, page 69, and in industrial relations after the Court of Appeal's judgment and with threats of both anarchy and Tolpuddle martyrdom around, page 75.

More bad news

Britain has got the timing of its investment cycle wrong, page 72; the latest trade figures are awful, page 78; and there is no sign of international monetary reform, page 81.

The clue from Chile

The communists in President Allende's government have turned against the extreme left—but it's instructive to see why, page 18.

Ah, well, back to Paris

The expectations of disaster in Vietnam after the fall of Quang Tri have been confounded, and North Vietnam is sending its negotiator Xuan Thuy back to the Paris talks "with new directives." What they could be, page 15. The evidence that air power is working after all, page 38. Which may be one reason why Henry Kissinger is going back to Peking on Monday, page 41.

Goodbye to one Japan

The departure of Mr Sato will mean the end of an era in Japan. The next one is going to need some careful handling, page 17.

Rail subsidies

The American Congress has just voted a huge subsidy for its passenger trains, page 66. The British Government will have to do the same for British Rail and the other nationalised industries since it will not let them put up prices or sack men, page 76.

the decision-making process for international monetary reform, or on the transfer of technology, or on restrictive practices of multinational corporations, or on insurance and tourism, or on the action programme for the least developed countries, to mention only a few. The statement that aid to the least developed countries will be "badly used" is as unwarranted and unfounded as the accompanying assertion that the sums involved will be "sizeable." The treatment of the proposed link between SDRs and aid is slightly more reasonable, but even here the issue is thoroughly confused by the reference to "introducing international liquidity into the takeable-off [sic] Argentinas and Malaysias and possibly even Indonesias." The point here, of course, is that it is not additional liquidity that is proposed for these countries, but additional long-term development finance.

The failures of Unctad III should, of course, also be discussed, and there is no question of your right to sum up the conference as a failure if that is the way it appears to you. But the frivolity and irrelevance of the writing make it impossible for any fair-minded reader to judge your conclusions for himself.—Yours faithfully,

S. DELL
Director,
New York Unctad Financing Division

Ecodoom

SIR—Your report of Professor Beckerman's inaugural lecture at University College, London, is much appreciated here. The Club of Rome's "Limits to Growth" is another example of computer output being taken as gospel by people who should know better. On your publication date (June 3rd) I discussed the report in my class in operations research. My own views were similar to those of Professor Beckerman but my presentation was not as witty. "Limits to Growth" (and "World Dynamics") is a sequel to the extension of Professor J. W. Forrester's "Industrial Dynamics" and "Urban Dynamics" (both MIT Press). For several years I have sought, and sought in vain, practical successful examples of the differential equation methods espoused in these "Dynamic" works. I expect to see a new report "Galactic Dynamics" before I find a reliable working example to discuss with confidence in class.

The models in this series can only be treated as models, learning tools and ways of examining interactions. When the model builders lose their sense of perspective and the model becomes the real world (for example, the coefficients are only incidental) we end up with reports like "Limits to Growth." I hope that Professor Beckerman's address receives the same press coverage as the reports of the Club of Rome.—Yours faithfully,

ERNEST KOENIGSBERG
University of California, Berkeley

SIR—Your article "Bye bye, baby boom" (May 27th) needs some qualification.

It attempted, very sensibly, to debunk some of the wilder assertions of the doomwatchers, but it repeated many of their errors. Trends in population growth have been extrapolated upwards by the doomwatchers on the assumption that they would continue for ever. Your article predicted a declining population with even less justification, extrapolating downwards from some very short-term trends.

The social and economic factors which influence the number and spacing of children in families are complex. In industrial countries, with a tradition of limiting family size, the birth rate has increased in periods of prosperity. In recent years the *connection* has been less clear, perhaps because most people have been able to absorb short-term financial setbacks without reducing their standards of living. Professor Abercrombie's suggestion that the present fall in birth rate *may* owe something to particularly high and protracted unemployment seems quite plausible. It *may* also be connected with the increased cost and scarcity of housing in the last couple of years. Like unemployment, this is unlikely to remain in its present acute state for long.

It is too easy to assume that there will be an automatic fall in the birth rate because of the spread of sex education and of effective contraception. Effective contraception means that people can choose their family size; it does not necessarily mean that they will want fewer children. The recent "Family Intentions" survey (Woolf M, 1971, HMSO) showed that the average "ideal" family size was 2.5 under present conditions, and 3.4 if money worries disappeared. Little good evidence yet exists to link such stated intentions with actual family size, but this is no reason for completely ignoring the report.

It is often thought that fertility is associated with social class in a simple way, the example of the less fertile middle classes being gradually copied by the more fertile working class. In fact, although the middle classes are the more effective birth-controllers, the last two censuses have shown that their fertility is rising. Fashion may be important here. Also, as people become increasingly rich, they may cross an economic threshold which allows them to afford extra children, as it allows them to afford a second house or a second car. If the whole country becomes richer, then more and more people will cross this threshold, which would increase the birth rate.

If the general availability of effective contraception really reduces unwanted births then it might be expected to have its most striking effect on the number of illegitimate babies. Instead, these have increased both in absolute numbers and as a proportion of all live births since 1953, following a pattern quite different from general fertility. This has taken place despite the increasing popularity of marriage and a younger average age at marriage.

There are a number of other points. A stationary population does not necessarily mean that the proportion of old people rapidly increases. This is only true in populations of very high fertility, certainly not in ours. In a country like Britain, irregularities in the present age structure of the population are just as important in controlling the age structure of the future population as any imaginable variation in our one-half per cent growth rate.

It is also inaccurate to suggest that the drop in the Japanese birth rate was entirely unforeseen. In fact, it was the planned result of a government policy. Its success had nothing to do with the Japanese being able to afford contraception. It was largely due to changes in the law to allow easy abortions.

I would like to know which government plans are based on "assumptions about an explosive growth in population." Education Planning Paper No. 2 *(HMSO, 1970)*, for example, states that only a relatively small part" of the projected increase in higher education in the 1970s will be due to an increase in the total number of eighteen-year-olds. It is also difficult to see how a population growth rate of one-half per cent per year can be called "explosive."—Yours faithfully,

London, WC1 D. A. COLEMAN

SIR—While the recent decline in the birth rate is to be welcomed, demographers would be more than a little surprised by your suggestion (May 27th) that Britain may reach a state of "zero population growth" next year. This assumes that the birth rate (with no net gain or loss from migration) will continue to fall, by approximately 25 per cent, to a point at which it (16.0 per 1,000 in 1971) no longer exceeds the death rate (11.6 per 1,000 in 1971) and that thereafter both will remain permanently in balance.

Japan, South Korea

The Japanese economy is regaining momentum, but the latest QER argues that its acceleration will be relatively slow. It examines business fears of a new revaluation, and looks at the prospects for South Korea.

MANAGEMENT APPOINTMENTS £7000 PA AND OVER

London Based

Senior Representative

International Investment/Merchant Banking

We are seeking a truly outstanding individual to establish, staff and direct an investment/merchant banking office in London, with responsibility for developing and servicing United Kingdom, British Commonwealth and Sterling Area clientele of our firm.

We are a foremost international investment banking and brokerage firm.

The individual we seek will have a thorough understanding of the London money markets and of the operations and financial services provided by U.K. banks and multinational banking houses located in London. In addition, he will have had intensive experience (which may have been obtained as a senior representative of an investment/merchant banker or as a senior financial representative of a substantial international company) with all aspects of public offerings and private placements in the international capital markets. Experience with mergers and acquisitions is desirable but not essential.

Compensation, an equity interest in our firm and other arrangements will be tailored to attract the outstanding individual we are seeking.

Please send letter or resumé in full confidence to:

BOX 2503

OECD ORGANISATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT **PARIS**

Senior vacancies in the

DEPARTMENT OF ECONOMICS AND STATISTICS

The Department's main function is to service inter-governmental committees concerned with general economic policies, both short and long term.

HEAD OF MONETARY STUDIES DIVISION (vacant September 1972)

The Division analyses, for the Economic Policy Committee and its Working Party No. 3, domestic monetary policies of Member countries and long and short-term international capital movements. Its current work includes a series of special studies of the internal and external impact of monetary policy in selected Member countries.

DEPUTY DIRECTOR: COUNTRY STUDIES AND ECONOMIC PROSPECTS BRANCH

(vacant January 1973)

The Branch is responsible for analysis of cyclical and medium-term developments in Member countries. In its function as secretariat to the Economic Development and Review Committee it prepares, for publication, an annual Economic Survey on each country. It also prepares and publishes the twice-yearly *Economic Outlook*.

Only nationals of Member countries with excellent academic qualifications and directly relevant experience in national or international academic, research or government institutions and a record of proven ability to contribute actively to the work of the post applied for will be considered. Fluency in either English or French is indispensable, as well as working knowledge of the other. Tax-free remuneration including allowances will be at least 100,000 French francs per annum (married non-resident).

Appointment to either vacancy could be postponed until early 1973 for suitable candidates.

Applications, accompanied by detailed curricula vitae and specifying "Economics," should be addressed to Personnel Division, OECD, 2 rue André Pascal, Paris, 16è.

For further management appointments see page 5

The crude birth rate is subject to considerable cyclical fluctuations and has no close correlation with the growth of population in this country over the past few decades. Professional population projections are based on detailed factual data on the "starting population" and assumptions of interrelated long-term trends in mortality, migration and fertility; in forecasting the latter alone it is necessary to consider the age and rate of marriage, the ratio of males to females, the age structure of the population and child-bearing intentions and realisations.

The stabilisation to which you refer would by definition imply a radical change in attitudes towards family building, ie, a reduction of the average completed family not merely to the present replacement size of 2.1 children, but to a lower level of approximately 1.7-1.8 (Clowes/Winstanley computer exercises) to compensate for the increasing absolute number of women entering the fertile age range and the probability of declining mortality in coming years. The "Family Intentions" survey, published by the Office of Population Censuses and Surveys last year, revealed that the average family size desired and realistically attainable by women in this country is 2.5 children, and that "without financial constraints" this rises to 3.5. A change of attitudes of this magnitude without any apparent reason is inconceivable.

We now appear to be experiencing a situation similar to that of the 1930s, when adverse economic conditions caused prospective parents to postpone child-bearing "until things got better." The falling birth rate even led to fears of a *decline in population*. At no time, however, did births fall to the same level as deaths and the historical trend of natural increase remained uninterrupted. Professor Abercrombie's *ascription* of today's downward trend to widespread unemployment (and, I would add, severe housing shortages) is borne out by past experience. Your own assertion that it is due to better "birth control technology" is not—similar declines have occurred during periods when only the most primitive means of birth control could have been used.

Meanwhile, our numbers are still increasing by over 100,000 per annum. It does not need an ecologist to explain why no increase, however small, is sustainable in the long run.—Yours faithfully,

London, W2 ROSAMUND McDOUGALL

Rhodesia and Nigeria

SIR—You are entitled to your critical—and in the main uncharitable—views concerning Rhodesian government policy, but surely your commitment to criticism behoves you to be scrupulously accurate. In your article "The husk of a policy" (May 27th), it is asserted that General Gowon "harbours strong resentment over the Rhodesian government's part in fanning the flames of Nigeria's civil war."

The Rhodesian government neither took any initiatives in regard to the civil war nor did it take sides. We are a relatively small country over 2,000 miles from Nigeria, and never by word or deed did the Rhodesian government identify itself with a conflict which, we recognise, was an internal matter for the Nigerian government.—Yours faithfully, S. F. BRICE

Deputy Secretary for Foreign Affairs

Salisbury, Rhodesia

The Wankie disaster

SIR—The Wankie disaster was not the worst mining disaster for a decade (June 10th): the one at Miike, Japan, in 1963 was (458 killed). The 1942 disaster in China and that in 1960 in South Africa were not the only mining accidents to exceed that at Wankie; apart from Miike, there were Courrières, France, 1906 (1,100 killed), Senghenydd, Wales, 1913 (439 killed), and Grimberg, west Germany, 1946 (439 killed). The disaster in China was not caused by subsidence, massive or otherwise; it was an explosion. Natural gas cannot ignite spontaneously in a mine; it needs to be ignited by something else.

Miners killed in explosions mainly die from carbon monoxide poisoning, some from injuries brought about by the blast, relatively few from intense heat.—Yours faithfully, HERBERT EISNER

Buxton, Derbyshire

The Quebec strike

SIR—In your article on Quebec's civil service strike and its aftermath (May 20th), you mention that the "common front's" leaders were refused support by their own executives. It would only be fair to mention that the vote taken among the strikers at the time was, by a reasonable margin, in favour of refusing to obey the back-to-work legislation in spite of the severe penalty clauses attached to it. Since the vote was badly organised and the participation insufficient, the leaders decided to recommend obedience This does not quite fit into the picture of union leaders endeavouring to lure their members down the revolutionary garden path.—Yours faithfully, BRUCE MONTADOR

Montreal, Quebec

Where Pakistan was

SIR—Mr Noorani (Letters, May 27th) seems to have his history completely mixed up. The Pakistani army was stationed on Pakistan's own soil and engaged in the task of defending the territorial integrity of Pakistan against a combined internal insurrection and foreign aggression. The analogy with "collaboration in the countries occupied by Hitler" is a complete travesty of historical facts. I cannot also believe that Mr Noorani is not aware that nothing else than Indian armed intervention could have ever brought the so-called Bangladesh into existence. The whole Indian nation has itself paid tributes to Mrs Indira Gandhi for this achievement.—Yours faithfully,

Kuala Lumpur ABU HASHIM

Blood sports

SIR—Thank you for your article on the bill to prohibit hare coursing (May 6th). But I should like, as a council member of the National Society for the Abolition of Cruel Sports, to correct a few errors.

First, the abolitionist cause has by no means "passed its peak." The *bill* has been deliberately obstructed, not defeated. In 1970 it was voted on for the first time since 1925, owing to its having been made a government bill. I am surprised that you do not realise that private members bills can be obstructed and prevented from coming to a vote by a few opponents.

If the Labour government had not resigned in June, 1970, the bill would have gone to the Lords. As this was prevented by the general election, we are grateful to Lady Bacon for testing opinion in the Lords.

Secondly, you appear to believe that coursing is a method of keeping down hares. But it is freely admitted that hares are preserved for coursing and that they are often imported from wild districts for the purpose.

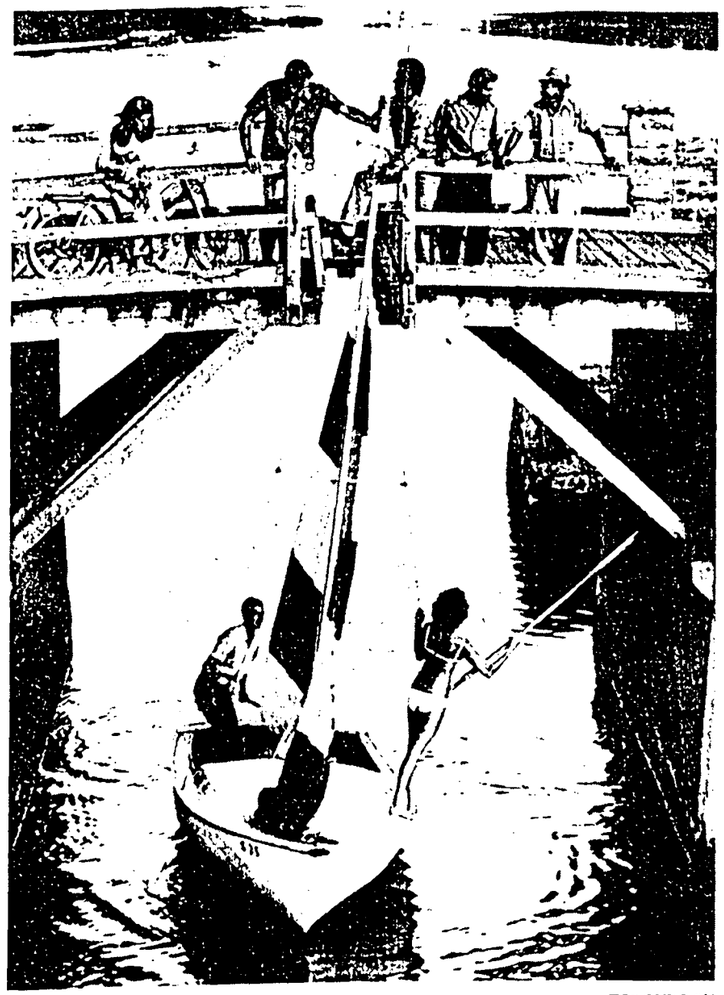
Thirdly, the fact that the sport receives more working-class support than the more expensive blood sports, like fox-hunting, is a help, not a hindrance, to its abolition.

In 1835, when bull-baiting and bear-baiting, mainly the sports of the rural working-class, were made illegal, it was pointed out that the blood sports of the rich also deserved abolition. But in those days we did not pretend to be democratic, so the rural working-classes were deprived of these enjoyments. Nowadays we do pretend to be democratic, but we know well enough that the richer classes have more power and influence than the rest. That being so, it is only common-sense to begin with the less aristocratic blood sports.

Whether, as claimed vociferously by opponents of the bill, the abolition of coursing would lead to the abolition of the various kinds of hunting, only time will show. I only hope they are right.—Yours faithfully, M. C. C. CHAPMAN

Oxford

Vat



SIR—We should consider the dangers of increasing the price of children's shoes by putting Vat on them. Handicapped children and their parents would be particularly hit by such a sudden price increase. They wear shoes out more quickly than non-handicapped children because their disability sometimes causes them to drag their feet. They also need stronger or particular types of shoes, which again makes them more expensive. Why should children who already have many problems caused by their handicaps also become the special victims of this spiralling price increase?—Yours faithfully,

SHIRLEY AUGUSTUS

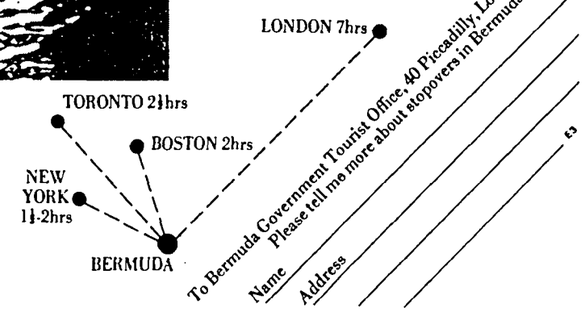
Invalid Children's Aid Association

London, SW1

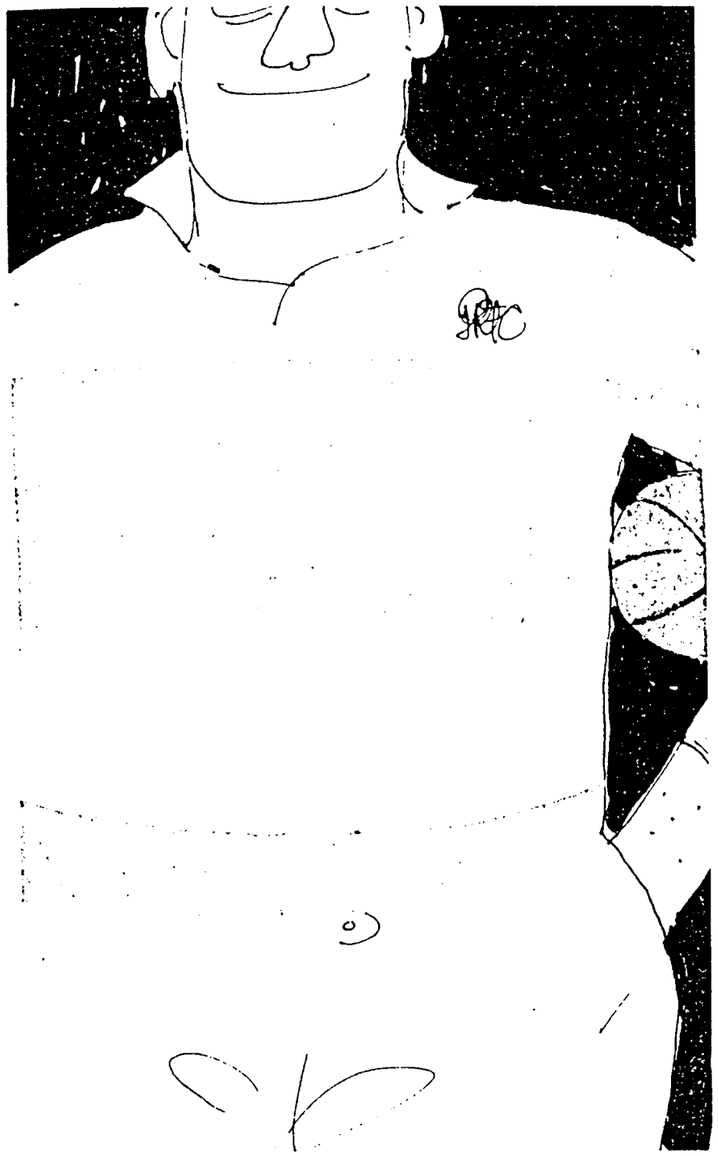
Next time you go across Brooklyn Bridge, try Somerset Bridge on the way back.

Call in at Bermuda on your way back from the USA or Canada.

Unwind in a world where everything's small. A world of warmth and colour and tranquillity.



Where the most plentiful thing is time.



This delightful little cluster of coral islands is a mere 2 hours or less from New York and Boston, and 2½ hours from Toronto.

There are daily flights. And you pay little or no extra fare.

Relax awhile. Then continue on to London – little more than seven hours away.

Bermuda. Another world.

Christopher Robin

Dear little chap he was; just like the original. But he grew, and suddenly the name was no longer apposite. The same thing happened to Flight Refuelling. That's all we did at first, but we got so good at it we looked for fresh fields to conquer. One thing led to another and now refuelling in flight is only a small part of our activities, though we are still far and away the biggest people in the business. We could change the name but the reputation of the company stands so high that it would be akin to erasing the hall mark from a piece of silver. On the whole we think we prefer to stick with the name and suffer the laughs, when people pick up one of our electronic devices and ask us when it was last refuelled in flight.

PROPERTY

More than an office

World Trade Centre London

Phase One of this exciting new development now to let in units of 200 square feet and up!

Europe House, and what it offers companies in international trade today.

- Central position, only minutes' walk from the heart of the City
- Easy access, by road or public transport – either by bus or tube (Circle or District Lines).
- Prestige accommodation on 6 floors.
- Air conditioning
- A luxurious standard of appointment throughout all reception and public areas.
- Spectacular outlook over the new yacht harbour, Japanese Garden, Tower of London & Royal Mint.
- Shared facilities to save space and money for smaller firms.
- Multilingual secretarial service on tap.
- Shared duplicating and telex facilities
- Conference rooms, for hire by the half-day.
- Exhibition area of 6,000 square feet, available to tenants.
- Parking and a chauffeur's room.
- A message-taking service.
- Possession in June 1972.
- Nearby luxury unfurnished apartments in Ivory House, one of London's historic waterfront buildings, (ready in June 1973).

The World Trade Centre London – what it is, and what it will be.

Now being developed at St. Katharine-by-the-Tower, the World Trade Centre will include a million-square-foot business complex. Plans include trading floors, a multilingual secretariat, commercial, banking and shipping facilities and a sophisticated communications network. An 836-bedroom hotel will be completed in 1973 together with a conference centre and residential developments.

The Economist

June 17, 1972

The steamroller is coming

Sir Max Beerbohm once described a final demand note from a tailor to a powerful client as being in the tone of a man approaching on his knees but waving his fist. The Conservative Government has adopted the same approach to the trade unions in the formulation of its incomes policy, and the posture does not work. Its failure was sealed this week with a surrender to the railwaymen which will really give them a 14 per cent rise in their weekly earnings from now on, sweetened by a £2¼m bribe for taking the rise in a form which kindly pretends to a muddled public that it is not quite as much as that.

It is necessary to keep on repeating how large a crisis this is. There is a galloping rot in any society where threats of trade union force can set in train this rate of inflation, which, if generalised, will cause the value of the pound to depreciate below the value of the penny during the average adult's lifetime. The railway union leaders, who are supposed to be among the most moderate union leaders in the country, must know that the first sufferers from their actions are the old. Although state old age pensions go up broadly in line with rising prices, continuance of the present inflation rate must render most private pensions progressively worthless.

The second main victims will be those who will now become unemployed. A statistical study by two Cambridge economists, Messrs Barker and Woodward, in the latest National Institute Economic Review, suggests that each time a group of trade union leaders push up the going rate of wage inflation by an extra 1 per cent they may, in the absence of yet further demand-reflationary action by the Government, be arranging for employment to drop by over 300,000. The railway union leaders have probably raised the going rate of wage inflation by an extra 3 per cent. The extra unemployment will be partly created by a squeeze on investment (which already looks awful, see page 72), but mainly through a worsening of the balance of payments; the cost inflation will show itself first in an increasing uncompetitiveness of British exports and of British goods sold in competition with imports.

That deteriorating balance of payments is now going to be made much worse by the crisis in the docks. As Lord Denning himself said in his frightening judgment in the Court of Appeal this week: "Only a few years ago goods for export or import were handled up to a dozen times; now they are handled only once at each end." The economic implication for an island of 55m people, which lives by trading, is that in this swiftly changing world it will be as menaced as a carthorse on a motorway if it tarries in old export-import methods that can be up to 12 times as expensive as anybody else's. Certainly, there should be (and are) generous redundancy and fall-back terms for any of the nation's small corps of 40,000 dockers who can fortunately be freed by this technological progress from their pretty antiquated and unpleasant jobs. But the Court of Appeal's ruling this week was that even an unregistered trade union (ie, one whose rules are subject to no vetting) cannot be sued if the shop stewards who are its agents block any of the new methods even by unlawful means.

Waiting for a payments crisis

The port employers on Tuesday brought forth a slightly more inflationary offer to the dockers (see page 69), and dock delegates on Wednesday agreed to postpone a national dock strike for six weeks; while they were meeting to debate this, three-quarters of the nation's dockers took the day off—and this sort of thing will continue all summer. There could not have been a worse moment for a court judgment to have expedited a rule of Luddite anarchy at the ports. Both the short-term and the long-term effects on exports may be very serious indeed.

One way of meeting these crises would be by the "natural self-correcting" mechanism of just allowing the number of unemployed to mount. No doubt this would cut demand for imports and slow wage inflation in the end. At present levels of unemployment, this passive

policy would be economically, socially and humanly wrong. Since it would also be politically disastrous, the Government is most likely to resort to the alternative policy. This will be (a) eventually to meet the balance of payments crisis by devaluing the pound ; and (b) eventually to slow wage inflation by a statutory incomes policy while calling it something else.

Since the Government believes in sudden sinking rather than placid floating, the eventual devaluation will probably be to another nominally fixed exchange rate. The experience of 1967 suggests that a devaluation to a new fixed rate takes just over a year to work through to the balance of payments. Perhaps an upvaluation, like sterling's ill-timed rise to over $2.60 last December, does the same ; if so, 1973's payments outturn may indeed be ghastly. This provides a doubly obvious case for hurrying the devaluation forward. Through at least three dreary years down to 1967 the Bank of England sold all the foreign exchange it could borrow in order to try to keep the sterling exchange rate inappropriately high. One might expect that it would now be willing to do the much easier reverse : namely, deliberately to buy foreign exchange with sterling in order to help get the exchange rate down to around $2.40 again. But no such moves are afoot.

Four ways to freeze

This week has also seen a torrent of protestations from ministers that they do not intend to resort to a statutory incomes policy. These loud words of denial are quite usual even from prime ministers about six months before they eat them. One argument this week has been that Labour's freeze in 1966 was obeyed by the trade unions because they subconsciously did not want to ditch Mr Wilson, while they super-consciously do want to ditch Mr Heath. This is merely to say that another freeze would have to be backed by fiscal weapons, such as a 100 per cent tax on all centrally bargained wage increases above the new statutory maximum. Another argument is that Labour's incomes policy in 1966-68 merely delayed wage claims, and that they came forth in a pent-up flood immediately the policy ended. Historically, this is not true ; the surge of claims immediately after the death of the policy was lower than the surge today. Anyway, the answer is that any new mechanisms should be intended to be permanent. Four possibilities are worth mentioning :

(a) *The Economist* has suggested a short-term wage freeze, followed by a period when the Government would decree a maximum (say 6 per cent a year) above which centrally bargained wage increases must not rise. If any worker got, say, a 7 per cent rise, then he should automatically have to pay the extra 1 per cent as an additional surcharge on his weekly national insurance contribution. No worker would then get any personal gain from any centrally bargained increase above 6 per cent. In later years the norm could be moved up or down from 6 per cent ; and the 100 per cent surcharge on all increases above the norm could be replaced by a graduated surcharge, reaching 100 per cent only on Wilberforce-size settlements.

(b) Alternatively, a large extra tax might be laid on employers who pay above-the-norm settlements, instead of on the weekly national insurance contributions of the workers who get them. This has a lot of disadvantages, and no economic advantages, compared with (a) ; but it has some supporters in Whitehall, where it is wrongly thought that the trade unions might not mind it so much.

(c) If the idea is to bring the Trades Union Congress into the act, then the best method might be to work out how much money would be involved in, say, a 6 per cent rise in centrally bargained wage increases among union members. Suppose it would be £900m in a year. Then the TUC could be asked to decide how the £900m be shared out ; any group of union members getting more than 6 per cent would then have to be balanced by an equal number getting less.

(d) The establishment of joint employers-cum-TUC conciliation bodies would be grossly inflationary, even if outside consumers' representatives (like Lord Wilberforce ?) were on them. This scheme, which the CBI and the TUC are going to discuss next Wednesday, would make sense only if they were told to work under some overall ceiling, such as the £900m mentioned above. Then any claims for rises above 6 per cent would have to be agreed by them ; and any such above-the-norm increases would take away money available to meet even below-the-old-norm claims by other unions later. Thus the more than £37m a year given this week to railwaymen is over £20m more than they should have got under any reasonable norm. In this system (d), any conciliation body recommending it would have had to say that this pre-empted over 2 per cent of other unions' share of the £900m fund, so that thenceforth any claims above 5.8 or perhaps 5.9 per cent would have to be vetted through the machinery. If the whole £900m had been used up, there could be no more centrally bargained wage rises that year. This would make inflationary awards by the conciliation board properly unpopular with other workers.

Quids pro quo ?

The purpose of an incomes policy is to counter the monopoly element in central trade union bargaining. There should not therefore be any ban on individual wage or salary increases that were not enforced through collective bargaining pressure, and the logical quid pro quo on the prices front would really and merely be methods to enforce competition, such as already exist under monopolies and restrictive trade practices legislation. But no doubt, if any of the above schemes for a 6 per cent wage norm were brought in, the Confederation of British Industry would continue its vetting of any price increases by its members of over 5 per cent a year ; indeed, the CBI would then be wise to say that it would work to keep the average rise in prices declared by its members to around or below 3 per cent.

It has been suggested that the Government should also postpone the fair rents act, now due to come into effect in October. The purpose of the fair rents act is that better-off tenants in council flats and houses should pay something more like the market rent. At present their rents are subsidised partly by taxpayers and ratepayers (including poorer people living in less good privately rented accommodation, who will at last get rebates under the new act), and partly by the homeless and ill-housed (because subsidising of sitting tenants in council houses and flats leads to gross underutilisation of existing housing space). It will be totally illogical if one of the TUC's "prices" for co-operation in any incomes policy is that better-off council tenants should continue to be subsidised by these groups. But if the TUC offered to accept any of the four economically enforceable suggestions above, the Government would swallow almost any illogicality as eagerly as it has swallowed so many of its other words. What the Government really must not do is to postpone the fair rents act, or undertake any other crawling, just in order to wring promises about promises and talks about talks out of the TUC. The TUC leaders signed Mr George Brown's declaration of intent seven and a half years ago, and did not keep it. They promised to curb strikes in return for Mr Harold Wilson's abandonment of his trade union reform act, and they did not keep that promise either. In the absence of automatically enforceable safeguards, such as under one of the schemes suggested above, any promise by the TUC, however well-intentioned, should be regarded as not worth the paper it is not yet written on.

It didn't fall to bits

North Vietnam's Xuan Thuy is going back to Paris with fresh instructions because South Vietnam has disobligingly refused to collapse

The prophets of the last quarter of an hour have got it wrong again in Indochina ; but this time it is the South Vietnamese who have gone on fighting longer, and better, than almost anyone expected. The leader of North Vietnam's delegation to the peace talks, Mr Xuan Thuy, said this week that he will soon be returning to Paris "with new directives." To be sure, Mr Thuy's government was simultaneously declaring that it would not change its policy until final victory had been won. There is nothing to prove that Mr Thuy's new directives will be new enough to bring an agreement within sight, or that the North Vietnamese army is incapable of pulling itself together for another major attack. And yet it does begin to look as if the balance of advantage may have changed fairly radically in the past month. Eleven weeks after the start of North Vietnam's offensive, and seven weeks after the fall of Quang Tri, the victory that seemed to be within the grasp of General Giap's troops has failed to materialise ; and the result for North Vietnam could be distinctly worse than just another drawn battle.

The unlikely happened

This is what Mr Kissinger will presumably be telling the Chinese in Peking on Monday. After the collapse at Quang Tri this paper said that the situation could be saved only if three apparently unlikely things happened:

> if the South Vietnamese army resists the instinct to panic,
> if the Americans find a way to make air power tell after all, if the North Vietnamese army has exhausted itself in this offensive as much as the calculations had said any ordinary army ought to have.

It may be that all three of those things have happened after all. No major South Vietnamese unit has broken since the 22nd division lost the hills west of Kontum at the end of April and the 3rd division came to pieces at Quang Tri on May 1st ; indeed, the men caught inside An Loc and Kontum have fought a great deal better than most people thought they would. It is American air power that has mined North Vietnam's ports, and cut the two railways linking it with China, and caused a large part of the North Vietnamese army's casualties in the south. And the North Vietnamese have still not been able to take Kontum, or prevent the relief of An Loc, or organise an assault on Hué. In fact, the most important development of this year's fighting may be that the North Vietnamese attack has actually helped to create something like a genuine South Vietnamese sense of national identity. No doubt it is a fragile thing : perhaps it is really little more than a coalition of people united by their shared dislike of communism and of the idea of being run from Hanoi. But if it holds together it could be a major new factor in the war.

The result is that North Vietnam has little to show for 11 weeks' fighting except one province capital in the far north, which it may not be able to hold, and a stretch of almost empty hill country along the western border. On the other side of the account it has had to accept the shutting down of virtually all its supplies from the outside world, except what it can get past the bombers by road and in small boats slipping along the coast from China. The blockade is much more damaging than it would have been at an earlier stage of the war, because North Vietnam is now relying largely on its own regular army to do the fighting in the south. And that in turn makes it easier for President Nixon to keep the blockade going. North Vietnam has been obliged to use its own army because the Vietcong cannot win the war alone, but by using its own army it has made the war look much more like a straight north-versus-south fight, and has therefore made American public opinion readier to tolerate the bombing of the north.

This toleration will not continue for ever. But Mr Nixon has probably got several more weeks in which he

can send the bombers in at a rate of 200 or more a day. And it looks as if it will take even longer than that for Russia and China to agree on a way of getting any significant amount of supplies through by the overland route. Prince Sihanouk told an American journalist in Peking last week that the Chinese were still refusing to let Russian ships into their ports because "they fear an attack from the Soviet Union more than they do one from America." The will of North Vietnam's leaders to continue the war may be unchanged, but the evidence is that their ability to keep it going in its present form, with their own army, is being severely damaged.

Three ways for Thuy to play it

There are three different things that Mr Thuy might do to deal with this changed situation when he gets back to the Paris talks. First, he could agree to discuss the terms that Mr Nixon laid down on May 8th—the day he announced the mining—for calling off the blockade and the bombing. The trouble with this is not just that Mr Nixon's terms require North Vietnam to hand over its American prisoners and accept a supervised ceasefire in Cambodia and Laos as well as Vietnam. It also seems increasingly unlikely that Mr Nixon would be willing to let the ceasefire begin before the North Vietnamese got out of even the relatively small part of South Vietnam they occupy at the moment. The South Vietnamese foreign minister, who was reported a week ago to have said that he would let them stay in Quang Tri, has now denied that he said anything of the sort. Unless it turns out that the South Vietnamese are incapable of recapturing Quang Tri, Mr Nixon is not likely to have a row with his allies about something as important to them as this. So North Vietnam would in effect be told to confine its troops to its own territory, plus parts of eastern Laos and northern Cambodia, and let an international team of inspectors check that they stayed there. No doubt the North Vietnamese are willing to pay a fairly handsome price to stop the blockade and the bombing, and they have had some experience in the art of diddling international inspectorates. Even so, they may not be willing to pay that sort of price.

Anyway, a ceasefire would do nothing about the question of who runs the government in Saigon. So the second thing Mr Thuy might do would be to come up with a new offer for a political settlement. He said this week that it was "for the people to decide" whether South Vietnam should have a communist government or a non-communist one. On the face of it, that looks similar enough to President Thieu's proposal. Mr Thieu is willing to resign from the presidency of South Vietnam a month before an election in which the National Liberation Front could take part, and which it could help to supervise. The difficulty is that at the moment the communists are still demanding not only the removal before the election of Mr Thieu and his "military apparatus" —which could mean the whole present command structure of the army and the police—but also their replacement by a so-called coalition which would not be required to hold the election by any specified date and would certainly rig the election, when it was held, in the communists' favour. The North Vietnamese will have to drop that demand if there is to be any hope of an agreement. Of course, there may be room for compromise about how long before the election Mr Thieu should stand down. But Mr Nixon is bound to say that any reasonable definition of letting the people decide means that elections fix governments, not the other way round.

The third possibility is that Mr Thuy is not going back to Paris with any serious expectation of reaching an agreement, but really in order to buy time. His instructions may be to try to get the Americans to call off the bombing of the north—or, more realistically, to do less of it—in return for an informal, unsupervised, truce in the south. The idea would be to enable the North Vietnamese to get through the next few months without too much damage in the hope that in November the American electorate will present them with a President McGovern. After all, North Vietnam's leaders know that the election of Mr McGovern would give them a free hand throughout Indochina; their main newspaper, Nhan Dan, gave him a little encomium on Monday.

On balance, this is the likeliest course for Mr Thuy to follow when the peace talks get going again. But even this one has its difficulties. The Russians, who believe in betting on favourites, are probably telling the North Vietnamese that in fact Mr Nixon is almost certain to be re-elected in November. The North Vietnamese know that, if the Russians are right, a refusal to settle the war now would expose them to several more months of blockade and bombing, even if the Americans agreed to cut down the bombing a bit, and that at the end of it they would be no nearer solving their basic problem. If Mr Nixon gets a second term he will be able to answer another North Vietnamese attack next year exactly as he answered this one. And North Vietnam cannot even console itself with the thought that its current offensive has left the Vietcong guerrillas in the south in a notably stronger position than before. The Vietcong have played a subordinate role in this year's fighting. They have temporarily occupied a few towns; they have killed some officials; they have reminded the local people that they are still around the place. But they were rebuked by the North Vietnamese last month for not taking a large enough part in the fight. And the fact that they came out of hiding at all means that they have exposed themselves much more dangerously to the revenge of Saigon if they now lose the protection of North Vietnam's regulars.

If the surprise doesn't come this time

The last paragraph of any article on Indochina should start with a sentence saying that North Vietnam is always capable of surprising the United States. Certainly there is nothing in the present situation that leaves Hanoi entirely without resources. Mr Nixon and Mr Thieu have done better than they expected in the past month, but they have not done that well. And yet it does seem that North Vietnam has failed to achieve what it set out to achieve on Good Friday, and that in the attempt it has had to pay a much higher price than it expected. That is why the "new directives" for Mr Thuy could mean rather more than such words have meant in the past.

A new sort of Japan

The departure of Eisaku Sato will mark the end of 27 years of Japanese history. Does the next Japan have to be nuclear?

Mr Kissinger was a year too late in getting to Japan last weekend. In June, 1971, with his considerable diplomatic skill and a confidential word of warning about Mr Nixon's projected trip to Peking and the impending American import surcharge, he might have managed to avert a drastic deterioration in the very special relationship between Washington and Tokyo. But this was not the way the White House chose to handle either the Peking bombshell or the Japanese. So when Mr Kissinger finally made his twice-postponed "private" visit at the weekend his mission was not to negotiate so much as to calm and charm the Japanese into a readiness for reconciliation.

Both Mr Kissinger and his Japanese hosts admitted that the very real differences between them which came to the surface during the past year are still a long way from being resolved. The only concrete accomplishment of the trip was the scheduling of another round of bilateral trade talks in July. But this was not a time for decision-making in Tokyo, anyway. Mr Kissinger was probably the last important foreign visitor to call on Mr Eisaku Sato in the prime ministerial office. This weekend, after the Diet ends its spring session, Mr Sato is expected to announce his resignation. When he does, the postwar era of American-Japanese relations will have come to an end.

Mr Sato, like seven Japanese prime ministers before him, based his prestige as well as his foreign policy on his intimacy with the White House. He reached the peak of his power in November, 1969, when he could argue that his policy had been justified by Mr Nixon's promise to return Okinawa and the lesser Ryukyu islands to Japan; a few weeks later the Japanese electorate rewarded him with a resounding election victory. The Okinawa pledge was finally redeemed on May 15th this year. But it was not the moment of triumph Mr Sato had expected. Because of the series of blows from Washington—the announcement of the Peking visit and the import surcharge last summer, swiftly followed by the entanglement of Japan in the Americans' ill-fated effort to keep Taiwan in the United Nations—both Mr Sato and his America policy stood discredited. A Japanese opinion poll in April put popular support for Mr Sato's government at only 21 per cent. After seven and a half years in office, the longest tenure of any postwar prime minister, Mr Sato had to go.

The decline in Mr Sato's prestige may well affect the choice of his successor. Although the selection of the Liberal Democratic party president (which is tantamount to election as prime minister in Japan's effectively one-party system) is a complicated business, the incumbent prime minister has nearly always been able to engineer the victory of his candidate. Yet Mr Sato's man, the foreign minister, Mr Fukuda, is no longer considered by the Japanese press to be the leading contender, precisely because of his identification with Mr Sato and Mr Sato's identification with Mr Nixon. Neither the current favourite, Mr Tanaka, nor any of the other three candidates can be called anti-American. The swing in Japanese politics over the past year has not gone that far. But whoever is selected at the party congress next month will be required to redefine Japan's relationship with the United States.

The one point on which virtually all Japanese and Americans agree, in principle anyway, is that the Japanese-American alliance must become more of a partnership; Vice President Agnew talked at the ceremony for the return of Okinawa about the need for "a balanced relationship." No one has yet drawn up a model partnership agreement; both the Japanese government and Mr Nixon have probably looked no farther than the current troubles. But any such contract would have to include the liberalisation of Japan's restrictions on imports and foreign investment, for which the Americans have been pressing so hard, and some form of increased Japanese contribution to America's military and political effort in Asia.

The easy bit

The economic part of the hassle should be the easiest part for any new Japanese prime minister to resolve. Every visiting minister to Tokyo from the rest of the free world is always asking the Japanese please to restrain their exports to his own home market; Britain's Mr John Davies was there two weeks ago, at a time when Japan's own trade figures for May were showing Japanese exports to Britain to be more than double those of May a year ago. After these visits, the Japanese government, acting along the old-boy network, asks industries please to go slower; the stronger industries wax cross with the government, and the weaker industries comply. The way to stop these rows is for Japan to be more willing to upvalue the yen: thus making its exports more expensive, and diverting more of its soaring gross national product from trading overseas to more essential (but, at present exchange rates, less profitable) tasks at home. A growing proportion of Japan's economic establishment agrees with this, but, until he has been selected, no aspirant to the leadership of Japan's business-dominated Liberal Democratic party is going to say so.

The political and military problem is much more difficult to resolve. Japan has already assumed responsibility for its own conventional defence. There is little more it could do militarily to help the Americans short of expanding its activities beyond its own territory or

taking over its own defence entirely by going nuclear. These are the very things that, for the moment, just about all non-Japanese and most Japanese want to avoid. So a more suitable outlet for Japanese energy and resources will have to be found for the immediate future: probably as a donor of greatly increased sums of economic aid, particularly in south-east Asia.

Making them feel at home

There is one central flaw in this or any scheme for a new relationship between America and Japan. It is the character of the Japanese. Many Japan-watchers have serious doubts about whether this island country, with its history of isolation, its hierarchical society and its lack of shared values with the west, or with any other nation for that matter, can ever enter into an alliance based on equality. Even such a steady advocate of American-Japanese friendship as Professor Reischauer, the former American ambassador, has expressed concern about Japan's capacity to make this transition. He says Japan may not be able to move "from a sense of dependence on the United States (and some fear of being inferior) to an ability to accept the United States as an interdependent equal." The consequences of Japan's failure to do so, as Professor Reischauer sees it, could be an American withdrawal from the alliance and from east Asia. And Japan's likeliest reaction to this would be to take up the nuclear option.

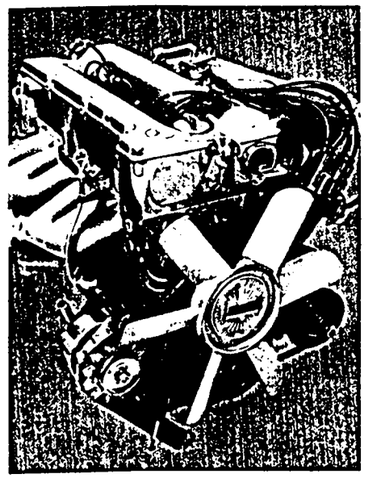
Going nuclear is the last thing that Russia and China want Japan to do, and it would shatter Japan's present hope of establishing good relations with both its communist neighbours. But this kind of logical calculation rarely determines national policy when issues of national security and national status are involved. The alternative to a nuclear Japan is to make a continuing alliance with America more attractive. But, as many commentators have argued, the strains of a one-to-one relationship can be absorbed much more easily in a group. And Japan's demand for status can also be more readily satisfied in a larger context—for example, by being awarded the permanent seat it has been seeking on the United Nations' Security Council. The Europeans, and others who are feeling the impact of the world's third largest and fastest growing economy, already have a stake in Japan's integration into their economic and political clubs. Their help will be needed as the United States and Japan set out to plot a new place for the rising sun.

Can we learn from Chile?

The Chilean communists are telling President Allende to look to the middle of the road, but that doesn't prove they've gone democratic

The members of the Chilean cabinet handed in their cards this week, leaving President Salvador Allende with the problem of finding a new administration that would be acceptable to the diverse forces within his left-wing coalition. Chile's marxist experiment is foundering, partly because the government's hell-for-leather rush to take over private business interests has contributed to a major economic crisis, and partly because of the bitter rivalry between those who want a sober transition to socialism and those who crave the blood and guts of revolution. What happens in Chile matters to the outside world not just because 10m people and a long tradition of constitutional rule are at stake, but because Chile has become a kind of laboratory for the relationship between communist parties and democracy.

It was Chile, after all, that gave the world the novel spectacle of a freely elected marxist government back in 1970, even if Sr Allende's Popular Unity coalition came past the finishing post with only just over a third of the votes. And now the tactics of the Chilean communists have raised some fundamental questions about the extent to which it is possible to look upon similar parties in western Europe as potentially democratic forces. They are said to have persuaded Sr Allende to make a move at the end of last month that, on the face of it, is very hard to reconcile with his left-wing political base and his plans for redistributing wealth and creating a centrally planned economy. At the end of May, on their suggestion, Sr Allende is said to have offered five cabinet posts to members of the armed forces. Since a senior army officer, General Palacios, is already minister of mining, this would have looked very curious indeed.

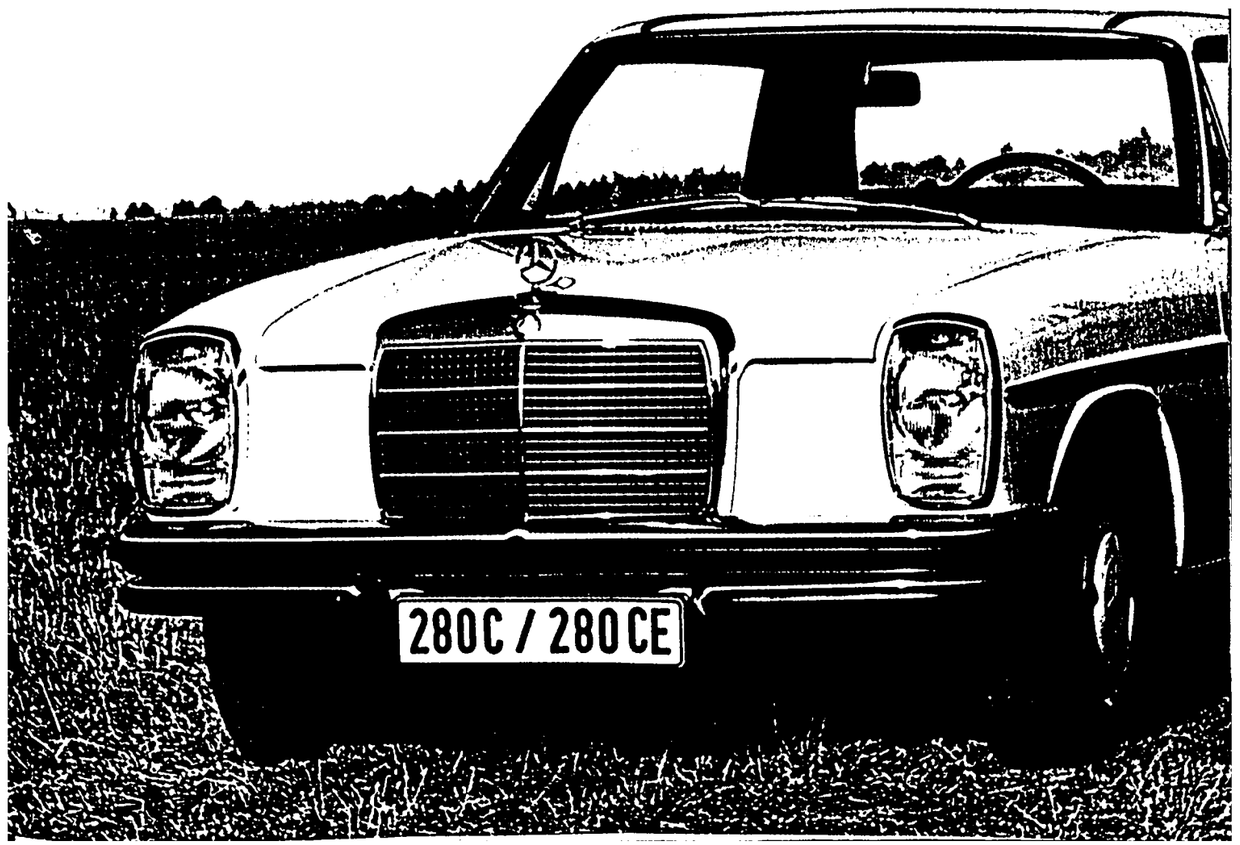


As it turned out, the commander-in-chief rejected the offer. Although Sr Allende may have hoped to win back some shreds of middle-class support by bringing in the men in uniform, the generals were shrewd enough to see that they could not have chosen a worse moment to get deeply involved in government after a half-century of political neutrality. Even the official statistics—which are almost certainly a gross underestimate of the real situation—show that the rate of inflation over the first five months of this year was around 25 per cent. The outlook for the rest of the year is very bleak, and many independent economists predict either runaway inflation or a system of formal rationing, as well as a balance-of-payments deficit even more whopping than last year's record figure. The generals have no wish to be identified with the government's economic blunders.

But the fact that the Chilean communists seem to have looked to the army to bail them out leads to some interesting thoughts about the evolution of such parties in general. The communist party of Sr Luis Corvalán is renowned both for its uncritical fidelity to the Russians and for its political opportunism. The issues that have torn apart the communist world—the stalinist purges and Khrushchev's attack on Stalin, the Russian invasions of

New personalities

Modern power-units with their rapid acceleration enable the fast, courteous driver to move swiftly and safely through today's congested traffic.



Mercedes-Benz now complete their smaller bodied range with four new cars with completely new engines. The 280, 280 E, 280 C and the 280 CE are now at the top of this group. Naturally, these cars have safety features which enable their extra power to be used with complete safety.

New twin-overhead camshaft engine.

The new 2.8 litre, twin-overhead camshaft engine is one of the most advanced designs in production anywhere in the world. In relation to its performance fuel consumption is extremely favourable. Its top speed will satisfy demanding drivers.

Mercedes-Benz 280 E and 280 CE, 185 h.p. DIN (210 h.p. SAE), electronically-metered fuel-injection system, 0–60 mph in 9.9 seconds.

Modern transport is rather more than doing what comes naturally.

If everyone took a cue from Nature and carried their own, there'd be no need for a modern transport industry.

Nowadays, however, transport is not that simple.

The introduction of the operator's licence; increasing restrictions and legislation; the degree of capital investment involved; the need for specialised personnel; they all add up to the fact that, more and more, transport and distribution is a matter for the specialist.

That's where we come in. With a fleet of 10,000 vehicles, many of them with special bodies to suit the products they carry. And with the optimum number of really professional drivers – fully trained, not just behind the driving wheel, but in the specific needs of each customer within the context of his own particular market.

Because we've always taken the line that the transport should fit the need: and not the other way round.

Which is why we're continually developing new and specialised services, in addition to the more standard General Haulage and Contract Hire.

A new distribution concept, for example, which virtually eliminates local stockholding and the capital and operating costs involved.

Dockside Express, which allows your vehicles to unload at a consolidation point before the docks themselves: and then arranges the streamlined consignment of their goods to the appropriate ship.

Nightpac, a night-time delivery service for retailers.

To say nothing of containerisation and any other kind of unitization you care to think of.

As part of the largest transport and distribution organization in Europe, we maintain our position not just by having more resources than anyone else. But by anticipating needs – and doing something about them – faster than anyone else.

Instead of carrying your own products, it might be worth considering how we could carry them for you. You'll find that our understanding of requirements and capacity to fulfil them is second only to Nature's.

British Road Services Limited,
Northway House, High Rd.,

British Road Services Limited

At the top of the successful 200-250 C range, Mercedes-Benz now introduce four new models, the 280, 280 E, 280 C and the 280 CE, all with new engines.

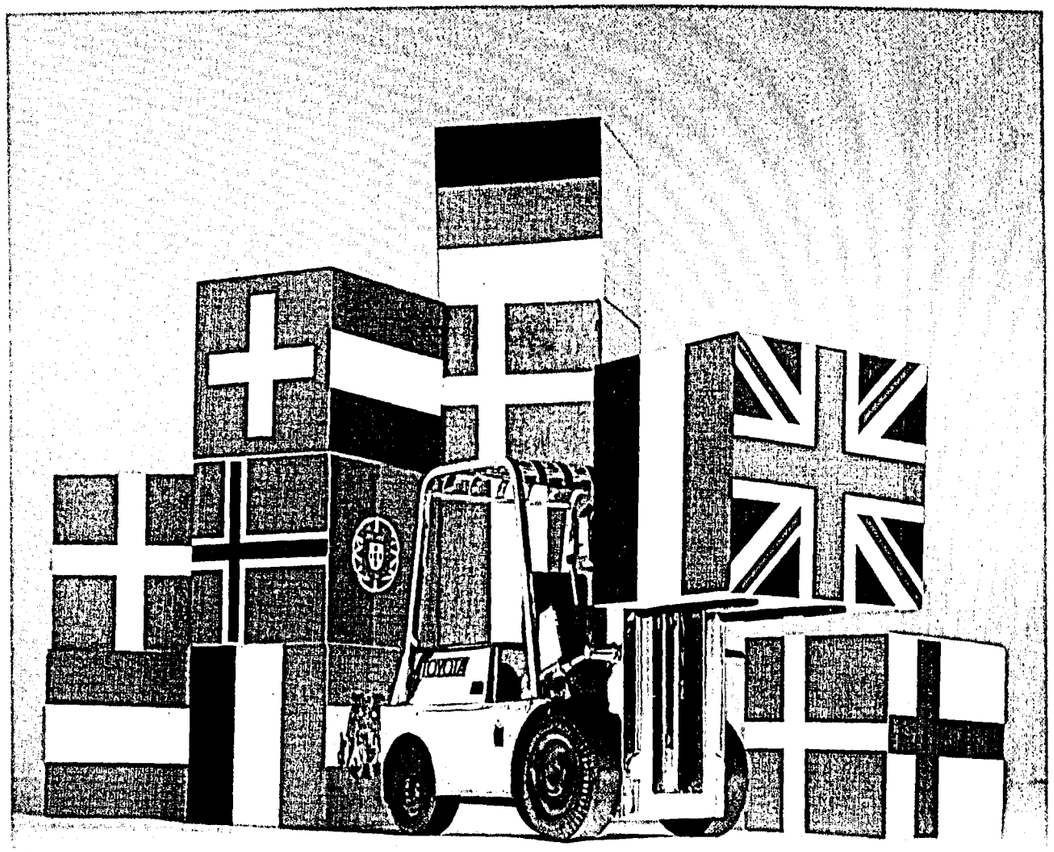
Mercedes-Benz 280 and 280 C, 160 h.p. DIN (180 h.p. SAE), dual compound down-draught carburettor, 0 – 60 mph in 10.6 seconds.

Harnessing the engine power is more important than the power itself, so the models have more powerful brakes and wider tyres. Fuel tank capacity is 17 gallons.

There are also changes in the cars of the whole range: additional exterior safety colours, improved interior finish, extra position on wiper switch for interval operation. Headlamp washers as an optional extra on some models.

The current Mercedes-Benz range:

	200 D	280 S
	220 D	280 SE
	200	280 SE 3.5
	220	280 SEL 3.5
	230	300 SEL 3.5
	250	300 SEL 6.3
	250 C	350 SL
New	280	350 SLC
New	280 E	600
New	280 C	600 Pullman
New	280 CE	



The range available varies in some countries to suit local requirements.

Mercedes-Benz

Talking about Mercedes-Benz is thinking about safety.

Handling The Best.

All over the world, in factories, warehouses, at airports
and on piers the finest goods are being handled
by Toyota industrial vehicles. One might very well ask,
why this increasing trust? At Toyota we think we have the answer.
First off we have very big ears. An international network of distributors,
sales offices, service centers and representatives who keep us on top of
the changing problems faced by the industrial community.
Then through our vast research and development facilities we begin to
plan whatever is needed. And whether it's an improvement or breakthrough
it doesn't leave the factory until we can prove to ourselves
it works. That means passing through the most critical testing
procedures in the industrial vehicle business.
All these added up come to the Toyota spirit. Innovating and exacting.
Tempered by the awareness that before you put your goods in our
hands, we have to put ourselves in your hands.

Hungary and Czechoslovakia, the repression of intellectual dissent in the Soviet Union—have not troubled the provincial calm of the Chilean party. And the Latin American communist parties in general have been very flexible once the scent of power has reached their nostrils. Apart from the odd deviation during the 1960s, when the example of the Cuban revolution aroused hopes of similar uprisings throughout the continent, Latin America's communists have pursued "united front" tactics since 1935.

Why they looked to the army

The Chilean communists' motives for turning to the army at this stage are fairly clear. To begin with, they are just as jealous of the rival appeal of the new left as their cousins in France and Italy are. The Chilean communists have been fighting a running battle with the would-be guerrillas of the Movement of the Revolutionary Left (Mir) and their sympathisers within Sr Allende's own Socialist party ever since the Popular Unity coalition came to power. And they have a special reason for fearing the consequences of being outflanked on the left. The reasonable men among the communist leadership in Chile have become increasingly worried about the possibility of a civil war or a military putsch.

They have watched the emergence of armed vigilante groups on the right, and a new mood of resistance among the middle class in response to illegal land seizures and the persistent shortages of food and consumer goods. They now seem to have decided that the immediate need is to reorganise the administration, slow down the pace of nationalisation, and make gestures designed to conciliate moderate opinion and restore confidence among private investors. This means several things : tougher action against the wild men on the left who have been taking up arms and seizing farms and building lots ; a new economic policy with the stress on pumping new money into industry and raising production instead of on wage rises and state takeovers ; and a dialogue with the Christian Democratic party designed to drive a wedge into the opposition. The shape of Sr Allende's next cabinet will show whether or not the communists have managed to get their point across. One of the things to look for will be whether Sr Pedro Vuskovic, the minister of the economy, will keep his job. Although he has always worked closely with the communist party, his former friends now seem inclined to use him as a scapegoat for their own bunders.

Some outsiders, comparing the caution of Chile's communist leaders with the conservative image that M. Marchais and Signor Berlinguer have been trying to fashion for their parties in France and Italy, will be tempted to conclude that the orthodox communists have ceased to be a revolutionary force and that their new tactics are not incompatible with western models of parliamentary democracy. After all, Signor Berlinguer has attacked Italy's left-wing extremists as "that great Barnum's circus," and the French communists recently said they were ready to respect the principle of the rotation of power in a democracy.

Certainly these are practical men ; and by questioning the idea of revolution in an industrial society they are merely accepting the realities of modern power. But their democratic credentials are still suspect. Every communist leader knows that Lenin said that the basic question of a socialist revolution is the question of power. It is power that is at stake, and the value of democracy as a political system is not something that any orthodox communist would waste time discussing. The question is simply whether communist parties can win power by conventional means. Those who are tempted to conclude that, if they can, the communist parties of the 1970s will be reliable partners afterwards should read a document the Soviet party's Institute of Marxism-Leninism made public earlier this year. Entitled "The Falsifiers of the Theory of Scientific Communism," it outlined a programme for the seizure of total power by communist parties following united front tactics :

> Having once acquired political power, the working class implements the liquidation of the private ownership of the means of production. . . . Historical experience shows that this inevitably leads to the elimination of class antagonisms. . . . As a result, under socialism there remains no ground for the existence of any opposition parties counterbalancing the communist party.

This approach was followed to the letter by the communist party in Chile, working with Sr Vuskovic. The government's plans to assume direct state control of 80 per cent of industrial production do not just amount to a death-warrant for private enterprise; they are designed to undermine the economic bases of the opposition parties and the independent press.

The necessary basis of democracy

What has happened in Chile under Sr Allende's government suggests that, in the long term, political democracy is inconceivable without economic pluralism. The fact that Chile's communists seem ready to postpone their aim of consolidating their power by taking over private property has a great deal to do with their instinct for self-preservation. They know perfectly well that public opinion is running strongly against the government. They see the need to buy time. The behaviour of Sr Corvalán and his supporters does show that, under some conditions, the communists can emerge as a party of reason and order. It is even conceivable that, if civil war should erupt in Chile in the near future, the communists would take sides with the army against the extreme left.

But, having said all that, it is vital to remember that, to the extent that the communist parties succeed in making themselves look respectable, their chances of using the instruments of democracy in order to destroy the system from within increase rather than diminish. Chile is still the only place where a marxist government has won power through the ballot-box. The results of Chile's marxist experiment so far will hardly encourage western voters to adopt the same formula. And although the Chilean communist party is for the moment curiously isolated on the right of Sr Allende's government, its tactics are not proof that, once having come into power by an election, a communist party will be ready to leave by the same door—unless the only apparent alternative is to be thrown out of the window.

BRITAIN

Common market: it's just one hurdle after another

The Government had another narrow majority in the House of Commons on Wednesday evening, but, on the other hand, it also got over another major hurdle in the passage of the European Communities Bill. Clause 2, which gives the general power to implement the obligations of the Brussels treaties and is regarded as the guts of the bill, was passed by 296 to 288. The voting followed a very similar pattern to previous narrow majorities on the bill: 17 Tories voted against and 8 abstained, which led to the usual plaint from Labour's anti-marketeers that the Liberals and their own pro-market men had saved the Government once again.

The bill has seven more parliamentary days allotted for its committee stage, and as it is going through a committee of the whole House it will not require a report stage if it goes through unamended. The anti-marketeers claim that it is the desire to avoid a report stage rather than an overpowering belief that the bill is perfectly drafted which is behind the Government's refusal to accept any amendments to the bill so far. If just one minor amendment were made, or carried, in committee it would open up a flood of amendments on all other clauses on report, and the Government is naturally anxious to avoid the delay that would cause. But if the bill can get by without defeat in committee it should be out of the Commons by mid-July. No doubt there will be more cliff-hanging divisions to come before the bill is through, but it would not be surprising if many Labour anti-marketeers now began to lose whatever zest they might once have had for the fight. Everyone is getting a bit tired rather early this year, and although Mr Wilson called it a "filthy bill" on Wednesday evening he seems to have accepted the inevitable and is now looking to his own—and his party's—political problems which will arise when it is through.

Wilson: his hurdle to come

Mr Wilson's address to the miners of Nottinghamshire last Saturday sought to head off the danger that this year's annual party conference might commit the next Labour government to a policy of complete withdrawal from the common market. There is little doubt that the left could force that through the conference if it put its mind to it, but it would also put Mr Wilson himself in a very considerable spot if it did. For if the parliamentary Labour party did not then refuse to follow the conference line, the pro-marketeers from Mr Roy Jenkins down would be in an intolerable position. Mr Wilson would find himself faced either with a disastrous splitting away of many of his best MPs or a conflict between the PLP and the party conference.

In return for the left not using its power to push him into that choice, Mr Wilson is offering a harmless commitment to renegotiate the terms with the EEC and to hold a referendum. As the left remembers only too well how Mr Wilson once committed a future Labour government to renegotiate the terms of the Nassau agreement on Polaris submarines, there is no question of it being conned this time. Rather, it is whether the left will enjoy getting its way on every other issue so much that it is prepared to swallow the face-saving formula to please Mr Michael Foot and those of his friends who do genuinely believe it would be disastrous to drive the Jenkinsites out of the party. Certainly, the evidence that Mr Wilson is prepared to fight that battle pleased all Labour's pro-market MPs this week. What pleased the more cynical (or realistic) among them even more was the reflection that, in the present state of his leadership, Mr Wilson was hardly likely to fight the battle unless he was already assured of victory. Which big union leader has given the nod?

Enoch Powell

On loyalty

Viewed objectively, Mr Enoch Powell may seem a pretty dead duck in British politics. On the issues where he once made the headlines and the running—immigration, economic policies, anti-common market—he has been outflanked or overshadowed. The circumstances in which the Tory party, or the nation, might conceivably turn to him for leadership become more and more remote. But Mr Powell retains his immense capacity to get his erstwhile colleagues all steamed up, and some of his speeches are—in that most condemnatory of Tory ministerial phrases—as "unhelpful" as ever. And he is never more unhelpful to the Government than when he goes to Ulster.

Mr Powell visits the province rather more often than most Westminster MPs, but he makes no pretence that they are fact finding tours. He goes there to preach the gospel of British nationality, and if the British have got rather bored with that speech it, not unnaturally, still goes down like a bomb with the Ulster Unionists. He

Powell: nationality's the thing

was at it again at a Unionist rally in Banbridge, Co. Down, attended by Mr Brian Faulkner and Mr William Craig, last weekend. There is no public evidence that Mr Powell has ever regretted anything that he has said; but Mr Faulkner might yet regret that both men seem to have got carried away last Saturday.

Mr Powell began with an encomium on loyalty:

> Loyalty, like unity, is one of the simple things. Loyalty, like unity, is by its nature total. Nobody ever heard of partial loyalty, any more than of partial unity. You either have it, or you have it not.

Mr Powell has it not when it comes to his party's policies on Ulster. Anyone who believed that Mr Heath's initiative on Ulster was designed to preserve the union and protect the loyal was "remarkably, dangerously naive." Mr Heath's marching orders to Mr Whitelaw were, according to Mr Powell:

> Willie, for God's sake go and put a stop to that squalid nuisance in Northern Ireland, at least for the time being. . . . Just tidy it away old chap, never mind how, provided you do it as quietly as possible.

How naive can you get if you do not believe that such words coming from a man who is regarded—in Ulster at least—as a responsible Westminster politician are not also dangerous? But it is no surprise that Mr Powell got a good hand, as they say, from the 3,000 or more loyalists present, for he gave credence to the very suspicions of the British Government's policies which the Ulster extremists are most anxious to foster.

It is said that Mr Faulkner did not seem a very happy man when he left the meeting. It may be that Mr Faulkner may have been remembering that after Mr Powell's speech he had heard himself saying:

> Ted Heath has done something. He has done something that was only achieved, I believe, by about three other men before. One of them was Hitler, one of them was Mussolini and the other Stalin. He has done something which only dictators can do.

Mr Faulkner might have got away with that absurd indiscretion, for the newspapers did not report it, if Granada Television's cameras had not been present. As it was his words went out to millions of British viewers in the "World In Action" programme on Monday night. If the two men had deliberately set out to lose friends in the Tory party for the Unionist cause they could hardly have done a more effective day's work.

Ulster

The talking is now beginning

Mr Whitelaw has had another interesting week. On Tuesday—at his invitation—three masked men drove up to Stormont Castle, took off their disguises when they were past the waiting journalists, and revealed themselves to the secretary of state as senior members of the Ulster Defence Association. After 90 minutes of talk with Mr Whitelaw they drove off in the same fashion as they had arrived, and that evening the security council of the UDA announced that it had postponed for two weeks the extremists' threat to make Protestant areas as no-go as the Bogside and Creggan. The makeshift barricades which the UDA had erected and dismantled over the past four weekends would have been made permanent on Friday night or Saturday.

The UDA said it had received certain assurances from Mr Whitelaw which it could not discuss. Those assurances might not have amounted to much more than Mr Whitelaw reiterating that he would not treat with the Provisional IRA or go soft on the gunmen. He was able to back up his words with public action on Tuesday when he rejected out of hand the Provisionals' offer of safe conduct into "Free Derry" to discuss the IRA's peace plan. Mr Whitelaw made it plain once more that he has no intention of discussing anything with the IRA while it is bombing and murdering innocent civilians and killing British soldiers.

If genuine, the offer to Mr Whitelaw was made in a fashion most likely to provoke the Unionist majority. Mr Sian MacStiofain, the Provisionals' chief of staff, announced it at a press conference in a community centre in the IRA enclave of Brandywell. The conference was televised, and the sight of four of the most wanted IRA leaders appearing before the television cameras with immunity was regarded by many Unionists as a deliberate affront.

Mr Whitelaw was expected to agree to three conditions before he came to the Bogside (or anywhere else if the Provisionals were given safe passage) for preliminary discussions. These were for an end to arrests, no more arms searches, and a cessation of what the Provisional leaders called "harassment" of the Roman Catholic population by the security forces. Mr MacStiofain said that if Mr Whitelaw rejected the proposal the violence would continue, and he claimed that the Provisionals were stronger in men, arms and resources than at any time since 1921. Such braggadocio made no impression on Stormont Castle. The Government believes that the Provisionals are now in a position of political weakness in the face of an increasingly resentful Catholic community, which seeks an end to the offensive operations of the IRA.

The absence of the usual pre-condition in the Provisionals' peace offer—that internment must end before any talks could take place—gave the Social Democratic and Labour party the excuse to drop that condition from its own terms. So on Thursday, Mr Hume and Mr Devlin of the SDLP met the secretary of state formally for the first time. As Mr Faulkner had also talked briefly with him the previous day—and arranged a longer meeting for next week—Mr Whitelaw was encouraged to tell the Commons on Thursday that he planned to hold talks which he hoped would lead to a conference on the political future of Ulster, and that this autumn's local elections there would be on the basis of proportional representation. He was also prepared to consider an early plebiscite on the border if that was desired. Events might at last be moving to some purpose in Ulster.

Housing

Buying with Amery

Mr Julian Amery this week threw down a challenge to the new Labour councils on that prickly old subject, council house sales. A circular urges councils to use their powers to sell to sitting tenants; indeed, it says that they

have a duty to satisfy home-owning aspirations. The Government, of course, not only wants to increase home ownership to well over the present 50 per cent, but also wants to reduce the size of the public sector, which is about 30 per cent of the national stock. To prevent this, many Labour councils have put the brakes on the booming council house sales policy of their Tory predecessors (17,000 were sold last year after the Government lifted Labour's restrictions in 1970, and 7,000 in the first quarter of 1972). But, under present legislation, councils cannot be forced to sell ; and compulsion would introduce as much bitterness between Whitehall and town halls, and with more justification, than the controversial Housing Finance Bill.

The effect of that bill, intentionally, will be to make home ownership more attractive to better-off council tenants as rents rise. But the housing market is in no state to bear any extra demand at the lower end ; hence Mr Amery's anxiety to help tenants to become house owners and stay put. They get a lot of help : up to 20 per cent discount on valuation provided they sell back to the council at the original price plus improvements if they move within five years. And valuations are often well below the going price for comparable private houses.

To insist on this kind of handout to better-off council tenants—scarcely a group with first priority in social terms—begs a question : is an insistence on cheap sales not just as doctrinaire as a total ban on selling them at all ? Sales can have a useful social role in raising the status of housing estates. If the houses were sold at market prices, they could also bring in more money which could be put to work in providing more council housing for those who most need it. That would be the best way of helping poor, badly housed families who can suffer if sales are so extensive that a council has far fewer vacancies and less scope for shifting tenants from one type of council house to another. More flexibility in the use of council housing is generally what is needed.

Actors

Stage struck

As if the London theatre had not got enough to worry about—and theatre owners always think they have too much—the actors are now threatening to go out on strike. At their annual meeting last Sunday, members of Equity, the actors' union, voted overwhelmingly in favour of a motion calling for strike action and the formation of a fighting fund if the Society of West End Theatre Managers, representing their employers, turns down their pay claim.

The claim, submitted last November, demands a minimum wage of £30 a week for both rehearsal and performance time, two weeks paid holiday a year and sickness pay at full rate for three weeks a year and half rate for a further three. The SWETM (which actors pronounce "sweat'em") has offered to raise the present minimum of £18 a week for performances and £12 for rehearsals to £25 and £20 respectively by the end of this year and £1 above that for each of the next five years.

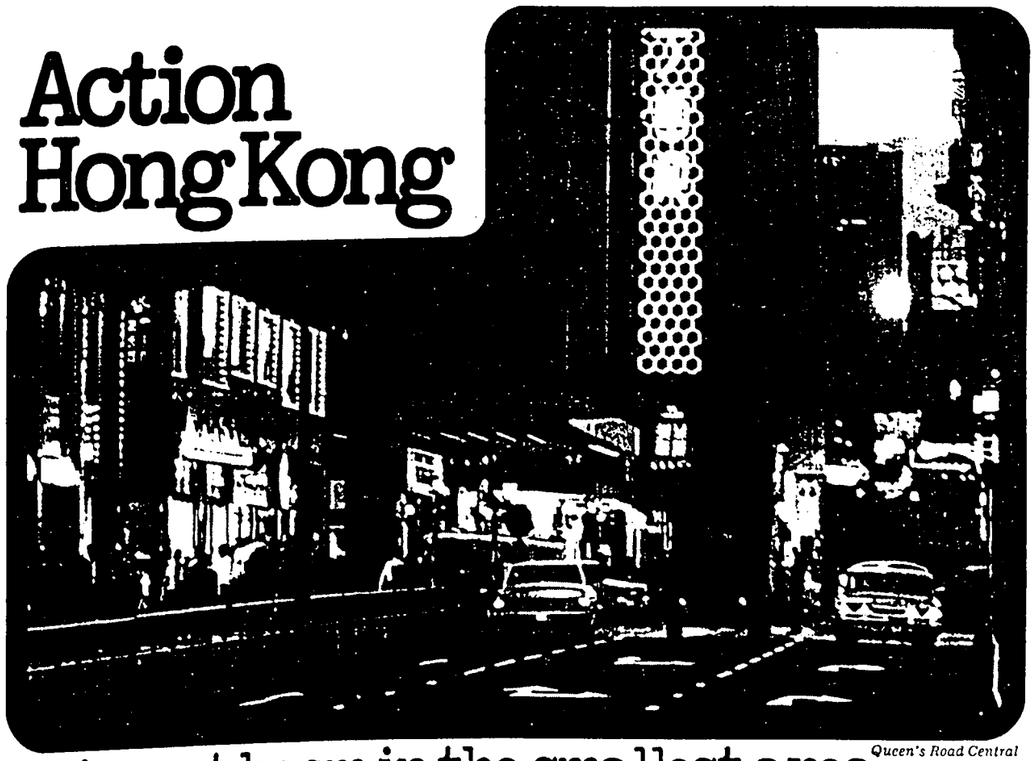
West End actors have never struck before. If they were to do so this time—their next meeting with SWETM has not been fixed—they would probably refuse to renew contracts rather than just break them, for a producer might find it well worth his while to sue a wealthy star. If the claim were conceded, it would not much affect straight plays as their smallish casts are nearly all on over £30 a week already ; though any change in rehearsal pay—at the moment an actor contracted to perform at over £75 a week does not get any—could prove quite a burden. The real sufferers would be impresarios like Mr Harold Fielding who put on musicals with casts of often around 80 people which require a lot of rehearsing.

Actors' pay claims in London have a tradition of lasting interminably. But perhaps the employers might be less intransigent if they did not feel financially threatened from other quarters. The theatre has always lived in dread of tax. The entertainment tax—which at one time took as much as 38 per cent of box office receipts—left the theatre at a very low ebb by the time it was repealed in 1957. Since then, the theatre has got on its feet again and also managed to talk itself out of selective employment tax and purchase tax. But its chances of getting out of the 10 per cent Vat do not look so bright, as the Government is plainly anxious not to create too many precedents to encourage other would-be special cases.

There is also a threat from the developers and planners. Six theatres are currently at risk : five face demolition if the Covent Garden scheme goes ahead and one, the Criterion, if the Piccadilly Mark 4 scheme, announced last month, is approved.

Teeth

Something to bite on



Digging holes and filling them in again has long been recognised as a good way of creating employment, and dentists have also found it pretty profitable—the "target average net income" of a practitioner in the general dental service, after he has paid his expenses, is £4,653 a year. But now some dentists are asking for a more constructive approach to their work. The holes need not be dug, they say, because the caries, which demands this treatment, ought to be and could be prevented in the first place.

This is the theme of a report ("The Mouth—Who Cares ?") from the British Dental Health Foundation, a body whose membership is open to, besides dentists, ancillary workers, technicians and the dental industry—which has presumably provided the bulk of the funds to get the foundation launched. As the report points out, the deplorable state of British teeth is well documented : more than one in three of the adult population of England and Wales have no natural teeth of their own ; between 70 and 83 per cent (according to the region) of five-year-olds, and 85-95 per cent of 12-year-olds, need fillings or extractions. The cause of dental decay is also well known and so, too, is the way to prevent it. But little is done. The purpose of the new foundation is to put pressure on all concerned to get more done.

Its difficulty is that it has to fight a battle on so many fronts at once. It is financially not worth while for dentists to undertake preventive work ; in any case, they can justifiably point out that they have to try to reduce the huge pool of untreated caries in the population at large before they can embark on prevention. Also, the health service charge for dental treatment works against early and regular visits.

Since their parents have false teeth, children grow up to accept that they too will lose theirs. So the foundation is undoubtedly right to emphasise in its campaign the cosmetic importance of good natural teeth. If young people could be persuaded of the contribution these make to their sex appeal—and of the contribution bad ones make to halitosis—they should become more receptive to dental education and preventive dentistry and more likely to pass on their lesson to their own children.

Action Hong Kong

Queen's Road Central

Biggest boom in the smallest area. Find out about your opportunities with the Hongkong Bank Group.

Hong Kong offers the most astonishing economic story in the world. A minute colony with no raw materials to speak of, an obvious shortage of land, and a population that has more than doubled in the last twenty years. Yet their budgets have been in surplus for most of the last decade. Per capita income is third only to Japan in Asia.

Industrialisation is just over 20 years old and is expanding rapidly. The opportunities for foreign companies are there. By the end of 1970 there were 696 foreign companies registered in Hong Kong.

Have *you* looked at your company's prospects in the Colony? The Hongkong Bank Group can offer you the authoritative and expert advice that you will need in this and 35 other countries. A 16 page booklet has been prepared, summarising the economic conditions in Hong Kong. Send for a free copy now—and be briefed by the experts.

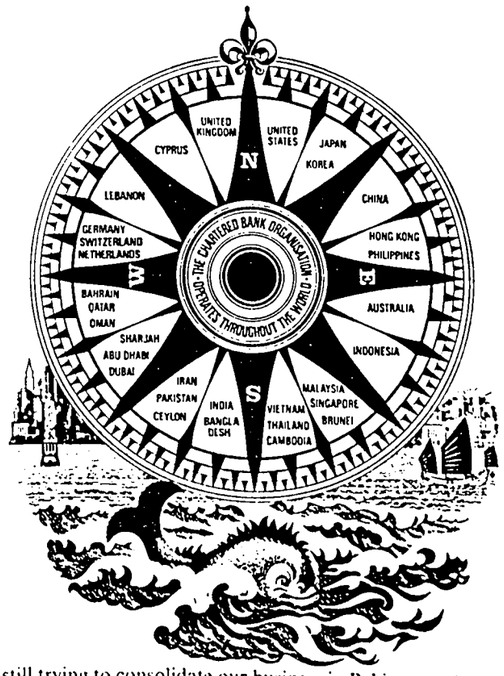
The Chartered Bank

Points to the East but spans the world with branches in over 30 territories



The one hundred and eighteenth Annual General Meeting will be held on 4th July, 1972 at 38 Bishopsgate, London, EC2N 4AH.

The following are extracts from the Statement by the chairman, Mr. W. G. Pullen, which has been circulated with the report and accounts for the year 1971.

Our branch system runs for the main part through the Middle East, the Indian sub-continent, South East Asia and the Far East and the last twelve months have seen adjustments in the Gulf, war between India and Pakistan, war continuing in Vietnam and an economic setback in Japan; all of which had a disturbing effect on world trade and business generally. Added to this was the international currency crisis and the realignment of parities following the devaluation of the United States dollar, which affected in one way or another every country in which we operate, and all these events add up to an exciting but very difficult year's banking. Fortunately the spread of our soundly based business stood us in good stead and we were able successfully to overcome any local dislocation and our results for the year were very satisfactory in the circumstances.

As an overseas bank operating in over thirty countries and committed heavily in international trade as well as local banking we have always realised that we had to accept reasonable risks if we were to serve our customers and the countries in which we were established but the behaviour of the exchange rates up to President Nixon's statement of 15th August, and their subsequent movements until the realignment of the parities on 18th December, acutely stressed the inherent dangers. By anticipating events we were able to avoid losses in a situation in which some countries were not certain up to the last minute what precise action they would take in respect of their currencies relative to the devaluation of the United States dollar. It is by no means clear that settled rates have finally been established; in fact if our own Chancellor of the Exchequer's budget statement is typical of today's thought then more frequent changes are likely to occur in future if parities are not to be so resolutely defended when they inhibit growth. As a British bank our concern must be primarily with sterling and any weakness of that currency could cause immense difficulties for us if we are not allowed freedom to hedge in other currencies. Uncertainty already exists in many of the countries of the sterling area regarding the extent and terms on which they will be allowed to retain their balances in sterling once the United Kingdom enters the EEC. It is assumed that the guarantees against devaluation of sterling given by the U.K. government to those countries keeping the major portion of their reserves in sterling will not be renewed and our interest, like theirs, is what will happen to the sterling area and what freedom will we have to operate in world currencies.

Mention has been made of the Indo-Pakistan war, which caused great anxiety at the time in respect of our staff in the many areas affected. Luckily all came through safely but the aftermath of the war has posed many problems and we are

still trying to consolidate our business in Pakistan and to re-establish our branches in Bangladesh, and at the same time settle cross-claims by both governments. Libya's pre-occupation with its leadership of the Arab world has meant that no attention has been given to claims for nationalisation compensation and we have received no payments for our holding and funds in the Commercial Bank of Libya. Burma too is typically silent on its obligations. At home continued progress has been made in working closer with our friends The Standard Bank and during the year both banks combined their Euro-currency operations in the International Division of Standard and Chartered Banking Group Limited, which as a result has become one of the largest and most competitive trading banks in London. Our pleasant and successful relationship with Sir Julian Hodge and his associates continues and I welcome this opportunity of congratulating them on their outstanding performance.

This Year's Accounts

A comparison of the figures appearing in the accounts with those published last year is rendered difficult by the changes in accounting procedures mentioned in the Report of the Directors. In addition, during 1971 the assets and liabilities of our International Banking Division in London were transferred to the Standard and Chartered Banking Group Limited. In these circumstances it is pleasing to note that the consolidated balance sheet figures, including acceptances, guarantees, etc., have increased to the record total of £1,076 millions and that deposits, in comparison with the revised figures for 1970, have increased by £20 millions and advances by £43 millions. Had the international business referred to above remained in our own books our deposits would have shown a 16% growth over those of the previous year. Capital and reserves, which were shown at £34 millions in the consolidated balance sheet for 1970, have been increased to £59 millions by the transfer of inner reserves and the addition of retained profits.

Copies of the full text of the Statement may be obtained from the Secretary of The Chartered Bank at 38 Bishopsgate, London, EC2N 4AH.

THE WORLD *International Report*

It isn't only Jews Russia is letting go now

FROM OUR SPECIAL CORRESPONDENT *Rome*

The Russians are starting to let some of their non-Jewish dissidents leave the Soviet Union, as well as Jews who want to go to Israel. This major new development seems to have had its experimental origin some time back, in 1966, when the Soviet authorities took the unprecedented step of allowing Valeri Tarsis—a writer, and one of the most outspoken critics of the Soviet regime—to leave the country. Although his visa was good for only three months, neither Mr Tarsis nor his government had entertained any notion that he would return to a country which he had openly branded as "fascist." Within three days of his arrival in London, he was stripped of his Soviet citizenship and declared a traitor, and mentally ill to boot. Mr Tarsis asked for political asylum, and then settled down to a quiet life on the shore of Lake Geneva. In retrospect, that decision seems to have been a test case.

Soon after Mr Tarsis's departure the brilliant Soviet mathematician, philosopher and poet, Alexander Yesenin-Volpin, told a western correspondent that when he had asked for an exit visa he was hauled away to a lunatic asylum. Now, however, the situation has altered. Taking advantage of the increased exodus of Jews from Russia, a number of political dissidents whose links with the zionist movement are tenuous at best (a few have Jewish or half-Jewish wives) have asked for and received permission to leave the country. A few of them have settled in Israel. Others have opted for western Europe or the United States. Within the past two months Rome has become one of the centres of the new Russian emigration. Among the recent arrivals are Yuri Shtein, a film director and one of the members of the group for the defence of civil rights in the Soviet Union that was organised in 1968. Another is the writer and linguist Yuri Glazov, who was thrown out of his job four years ago after signing a number of protests against judicial malpractices in Russia. The deeply religious painter Yuri Titov is yet another.

And on June 9th the group was joined by its most illustrious recruit yet—Alexander Yesenin-Volpin, released at last after his previous failure to get out. In a crowded Roman restaurant, surrounded by happy, shining faces, Mr Volpin declaimed some of the revolutionary verse he had written in a Soviet prison back in 1949, and dedicated himself, along with his enthusiastic friends, to the furtherance of the struggle for human rights in the Soviet Union.

The significance of what seems to be the formation of a foreign outpost of the Russian democratic movement is not yet clear. The Soviet government may have borrowed a leaf from the tsars as well as from Lenin, who permitted his ideological adversaries to leave Russia, but it is far from extending this policy to all anti-regime intellectuals who are ready to apply for exit visas. Nor should it be assumed that the majority of Russia's dissidents wish to emigrate. By and large, those who have come out, or would like to, feel that their effectiveness inside the country has been virtually destroyed as a result of continuous repression and harassment. But their energies have not been sapped, nor do they wish to sink into obscurity, as Mr Tarsis did.

Within the past few weeks, for instance, they have engaged in a campaign on behalf of the 40-year-old writer Vladimir Maximov, the author of a remarkable novel, "The Seven Days of Creation," published by a Russian emigré journal in Germany,

Yesenin-Volpin makes it at last
By permission of Peter Reddaway

and soon to appear in a number of translations in Europe, the United States and Asia. In poor health, and under threat of official reprisals, Mr Maximov has now had his cause taken up—as a result of the efforts of his friends in Rome—by a number of distinguished Italian writers, including Ignazio Silone, Elena Croce and Giancarlo Vigorelli. Last week, when some of Yuri Titov's paintings arrived from Russia, most of them irreparably damaged by sulphuric acid, the group issued a statement which denounced this as an act of political vandalism. Plans are also afoot to publish a series of books and possibly a magazine that would keep western public opinion informed of the struggle for human rights in the Soviet Union.

What impact will the departure of some of the leading dissidents have on their friends and colleagues in Russia? Clearly the Soviet authorities look forward not only to the eventual fading of news about Mr Volpin and his group but also to the demoralising effect of their departure on the dwindling ranks of the dissident communities in Moscow and Leningrad. But Mr Volpin has no such fears. "The growth of

public opinion in Russia," he said in Rome last Saturday, "cannot be stopped: for every single individual leaving the Soviet Union, two new ones will come up. Our friends know that we had no choice but to leave and that we shall continue our struggle as vigorously outside as we did inside the Soviet Union."

Although a few of the other recent arrivals concede that their departure has caused dismay among some of the remaining dissidents, the chances are that Mr Volpin's prediction will prove to be right. The struggle in the Soviet Union is nurtured by forces stronger than the leadership provided by a few individuals. Lenin's activities in London and Geneva 60 years ago did not bring about the downfall of the tsarist regime, but often proved invaluable to his comrades at home. What with modern communications, an increasingly alert western public opinion, and a marked sensitivity to it on the part of the Soviet regime, the role of individuals such as Mr Volpin is bound to grow. In the end Mr Brezhnev may well find his newest tactic of "getting rid of the troublemakers" more of a mistake than a blessing.

The Stockholm conference

It got a bit polluted

The Stockholm conference on the environment has established one thing clearly enough: the world's worst pollutant is, and always has been, politics. This fact of life emerged as a flood of proposals, counter-proposals and amendments poured from the separate committees in the second week of the conference. They covered everything from imperialism, colonialism, war and aggression to racialism, apartheid and national sovereignty.

Well ahead in the league of political spoilers at the conference was China. Starting with a long tirade against the United States last week, the Chinese delegation followed this up with an equally ferocious attack on the superpowers for aggressive policies of war and environmental pollution. With Russia boycotting the conference it was not surprising that China should seize the opportunity to lead the third world constituency among the 114 delegations, although the vehemence of the Chinese attacks clearly took even the American delegation by surprise.

In his resolution accusing the superpowers of polluting the environment,

China's Chen Hai-fen fans the flames

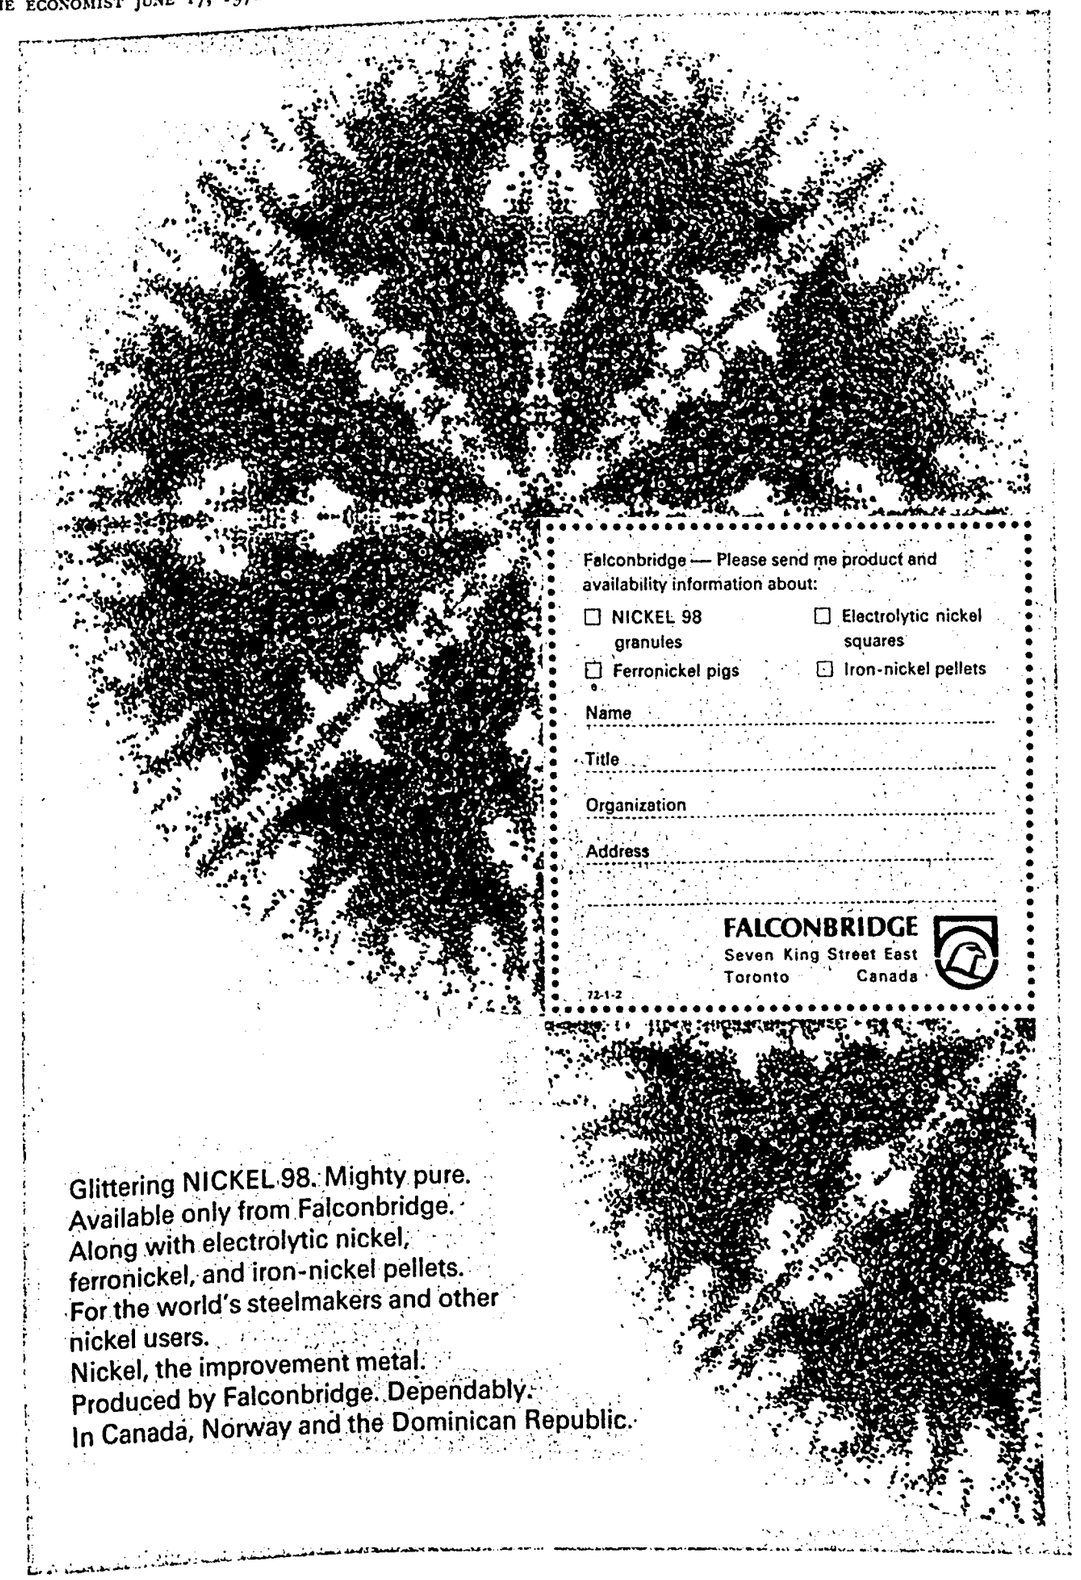
the leader of the Chinese delegation added the careful rider that "no reference should be made in this connection to countries which need armaments for self-defence or national liberation." By an odd coincidence the Stockholm Peace Research Institute—which has no connection with the environment conference—published its 1972 yearbook on world armaments the following day. This showed that 15 countries are now at "near nuclear" potential, with India singled out as the most advanced. The Chinese delegation did not say whether India is to be included in the special category of those who need nuclear weapons purely for self-defence.

On the resolution dealing with the world population explosion the Chinese delegation declared that "plunder, aggression and war are the real causes of over-population problems." Sex, too, presumably, although this does not fit neatly into maoist rhetoric. Nevertheless, many of the delegations were clearly impressed by the Chinese claim that even though China's population has grown from 500m to 700m in 25 years nobody in China is starving or unemployed.

As the conference approached its final plenary session this week there were desperate attempts to rescue a resolution on protection of the environment from the political morass of the earlier meetings. But, having learned the hard way that political resolutions at environment conferences get you nowhere, the more hard-headed delegates concentrated on getting some form of world body organised for monitoring environmental hazards. It was agreed that a 48-member council, financed partly by the United Nations and partly by the voluntary $100m environment fund, should be set up. When it is established, the new council will provide a monitoring system for the five subject areas chosen for the Stockholm conference—human settlements, natural resources, pollutants, environmental issues and development.

There will be plenty of disagreement when it comes to designing policies for dealing with the reports it sends in, especially in the development field. The nettle that must be grasped is what sanctions, if any, the council will possess in order to push recommendations through the barriers of national self-interest. The conference did not spell this out.

As proposals and amendments multiplied among the committees the Stockholm conference risked the ecological irony of being buried beneath the three tons of paper and newsprint that it spawned each day. If another conference on the environment takes place the organisers will have to consider a tight ban on all explicitly political resolutions. If critics then argue—as Professor Barry Commoner argued at Stockholm—that such a decision is itself a political one, there is an obvious answer. The Stockholm conference showed beyond doubt that when discussions on the environment get snarled up with political resolutions, national interest inevitably prevails over any wider considerations.



France

Adieu, méfiance?

FROM A CORRESPONDENT IN FRANCE

Like Napoleon I, Napoleon III and Pétain, Charles de Gaulle was exasperated by the French people and came near to despising them. "When I'm gone," he told Jean Mauriac and others, "everything will be adrift. France will be a swamp." Even though de Gaulle's successor is now displaying some of his predecessor's talent for annoying his fellow-Europeans, France has indeed changed in the three years since Georges Pompidou was elected president on June 15, 1969. "We have better things to do," M. Pompidou said the other day, "than try to rival the very great powers." Even when playing to the gaullist gallery, he has tried to educate it.

As the frippery and obsessions of latter-day gaullism have withered away, Marianne has reacquired human features. People are again more important than generalisations. Uni-

forms are no longer sacred vestments ; the police have been told to cool it ; the secret services are at the cleaners. There is less tension in the air and much more freedom on television and the radio. There is greater self-confidence—national, regional and individual—and therefore less pettiness, quibbling and arrogance. Europeanness is fashionable ; paranoia is now a matter for medical rather than political science.

These points bear stressing because many foreigners, including many francophiles, gave France up as hopeless in the late 1950s, so nauseous was the wave of chauvinism and xenophobia then sweeping the country. The complexes bred by such humiliations as the 1940 defeat, Dien Bien Phu, the Algerian uprising and the collapse of the Fourth Republic—systematically exploited by politicians like Michel Debré—were mainly responsible. Concluding a gloomy report on France in *The Economist* of February 20, 1960, this correspondent wrote :

> Some satisfaction in Algeria, a diplomatic coup or two, and a major technological triumph on the H-bomb or sputnik level will be necessary to soothe the complexes on which the plotters and demagogues thrive and restore to gallocentricity its more genial characteristics.

De Gaulle ended the Algerian war, although not in the way his followers had hoped ; his nineteenth-century nationalism produced an occasional diplomatic coup for much the same reason as a model-T Ford will turn heads at Le Mans ; and he reaped the technological harvest sown by the planning, investment and educational expansion of the Fourth Republic. French complexes nagged less ; prosperity brought its especial balm ; and the 1968 explosion blew away some political as well as academic cobwebs.

Of the thousands of students who in May, 1968, defied the riot police and chanted "We are all German Jews," most are now pillars of the consumer society they affected to despise ; but it is hard to imagine them reverting to chauvinism and xenophobia. Their younger brothers and sisters are enthusiastically European. A middle-aged history teacher who makes an anti-German remark will draw moans and perhaps protests from his pupils. A well-documented history book now working its way into secondary schools asserts that Joan of Arc was not burned by the English but married and lived to the age of 41.

Even the French language is receiving something of a liberation from the academicians and latinists who have never really forgiven Rabelais. Less grammar and Latin are taught in schools. Le Monde has dropped its nitpicking feature *La défense de la langue Française*. The runaway best-seller of the past two years has been San Antonio, who writes with Joycean verve, stands grammar on its head and peppers his prose with slang and English.

French papers no longer try to prove that French humanism is morally superior to soulless technological societies like the United States. French anti-Americanism has usually been nine-tenths envy, and nobody envies an America saddled with Vietnam and plagued with problems of race, crime and drugs that make Pigalle look like a Quaker picnic. Anyway, France has gone technological itself now.

For Britain there is even sympathy. Seen from here, Britain seems to be in the same posture as France in the middle 1950s—teetering on the brink of Europe, industrial modernisation and bewildering new perspectives, and wishing itself back in the steam age. French institutions cracked under the strain, exacerbated as it was by the Algerian turmoil. Britain, happily, has stronger institutions and no Algeria (well, not quite) ; and few Frenchmen seriously expect Britain to funk it and bunker down in nationalist mediocrity. One senses an upsurge of almost affectionate interest in British institutions, books, films and consumer goods. Even small-town shops are beginning to stock such English exotica as jigsaw puzzles and (God help France) bottled salad-dressing.

Let aggression be dissipated playing boules

Prosperity becomes the French—as, indeed, it does most civilised people. The average Frenchman not only possesses more material goods than most Europeans, he eats better food, takes longer holidays and has better social and educational services. His children attend school on average from 4 to 17. He feels more secure, and is less touchy, more relaxed and more expansive, than he was in the late 1950s.

La méfiance—once a very French characteristic—is waning. Helpfulness is in. Parisians, like Londoners and New Yorkers, are often too busy commuting to bother about their fellow men ; but outside the capital, and one or two other backwaters, good manners and old-fashioned niceness are becoming the norm. Here are a few personal experiences.

A parcel of books I was mailing to England was too heavy. So two of the post office's four counter-clerks (all pleasant young women) dashed off behind the scenes in search of paper and string. Then they repacked my books in two parcels, wrapped and addressed them, and apologised for keeping me waiting.

Carless in a strange town on a wet day, I went into a grocery and telephoned for a taxi to take me to the station. Ten minutes later I was still waiting for it in the doorway of the store. The grocer came out, asked : "What time is your train ?"—and drove me to the station himself, refusing payment.

We were driving to Spain two days before Christmas. In a small market town my wife was tempted to buy a turkey, since French poultry is usually better than Spanish. But most of our travelling money was in pesetas, and the butcher didn't want a cheque. He

didn't know us but he said: "It doesn't matter. Pay me on your way back." "But we'll be away three or four weeks." "That's all right," he said.

It was misty, I was listening to the news, and I failed to halt at a checkpoint set up to catch smugglers in a frontier zone. A gendarme whistled, overtook me, and became incandescent when he discovered that I was travelling with neither identity card nor driving licence nor *carte grise* (car-ownership certificate). He had never before encountered so brazen an offender. His sergeant came to my rescue when he learned that I was English. "English people are always careless about such things," he said. "Carry on, *monsieur. Bon voyage!*"

"*Ce sera le marais,*" de Gaulle predicted. One can only wish there were more such swamps.

Germany

Very well. But how and when?

The west German political parties at last appear to have agreed on something—that the only way out of the present parliamentary impasse is a general election. The Social Democrats and their coalition partners, the Free Democrats, came to this conclusion during the long wrangle in the Bundestag in April and May over the ratification of the Moscow and Warsaw treaties. At that time the opposition clung to the hope that it could unseat the chancellor, Herr Brandt, through a constructive vote of no-confidence and get its own leader, Herr Barzel, elected in his place. But this week the Christian Democratic Union decided that it would not be in the opposition's interests to try this procedure again. It failed in April through at least two defections from its own ranks, and the attempt did not seem popular with public opinion.

But although the opposition has come round to the government's view that an early election is necessary, it is determined to rub Herr Brandt's nose in the mud before the voters have their say. Herr Barzel has therefore rejected Herr Brandt's proposal that there should be an all-party agreement to dissolve parliament and go to the polls. He insists that Herr Brandt should either resign or be defeated in an ordinary vote of no-confidence (which, unlike a constructive vote, merely obliges a chancellor to resign but does not at the same time provide a replacement), thus admitting that his policies have failed.

Herr Brandt will almost certainly not resign, but his party could abstain in a confidence vote and thus make it clear that this was purely a device to allow parliament to be dissolved. The summer recess starts on June 23rd, and the Bundestag will not meet again until September 18th. If the chancellor calls for and loses a vote of confidence then, the election would have to be held within two months. It will suit the government parties to fight it out as soon as possible, while the popularity of the treaties with Russia and Poland is still working in their favour. And if the Olympic games in Munich, which close on September 10th, go off without major hitches the government may pick up a few extra votes.

One small worry will have faded from the chancellor's mind. The former Social Democratic deputy from Bavaria, Herr Günther Müller, who now sits in the Bundestag as an independent, failed to make much impression on the Munich voters in the municipal elections on June 11th. In his bid for the post of mayor he received only 2.5 per cent of the votes and the official Social Democratic candidate won easily. It is unlikely that much more will be heard of his movement, Social Democrats 1972, which was formed to challenge the left-wing influence within the Bavarian section of the party.

Ireland

It's the Irish in them

FROM OUR DUBLIN CORRESPONDENT

Just as everything seemed to be going his way, Mr Jack Lynch, the Irish prime minister, has now suddenly come head on against a new and unexpected political challenge. The two opposition parties, Fine Gael and Labour, were thought to be disunited and in disarray. This week, against all expectation, they began moves to form a coalition government, if they are in a position to do so, after the next general election.

At the past three elections Labour has refused Fine Gael's advances. And only three weeks ago Mr Liam Cosgrave, the Fine Gael leader, was talking in a way that seemed to rule out the possibility of a coalition. At his party's general congress he was scathing about Labour and its policies and indicated that it would have to put its house in order before any deal could be made. But the left wing of Fine

Corish has changed his mind

Gael has been pressing very hard for a coalition deal with Labour as the only chance of getting Fianna Fáil out of office. Mr Lynch now has 69 seats in parliament against a combined Fine Gael-Labour total of 68, with six independents and one vacant seat.

In announcing his change of mind, Mr Brendan Corish, the Labour leader, ruled out mere support for a minority Fianna Fáil or Fine Gael government. He offered to negotiate a part in a coalition government on terms which would implement the basic elements of Labour policy on full employment, price control, housing, expansion of health and social services, industrial democracy and modernisation of agriculture. Mr Cosgrave immediately welcomed the move, which he said changed the political climate dramatically. He claimed that his party had long been committed to the policies referred to by Mr Corish.

That is stretching it quite a bit. It is difficult to visualise a permanent or even long-term coalition between parties whose extremes are at opposite poles of the political spectrum. But a cabinet selected from the best front-benchers of both parties could be a distinct improvement on the present government. And the real prospect of power for the first time in more than 15 years should be tempting enough to smooth, for a time at least, the substantial differences between the two parties.

Mr Lynch has until 1974 before he has to go to the country. The signs were that he did not plan to do so before June, 1973. But the new challenge may convince him that he would be wise to have an election soon, while he is at the height of his popularity in the party and in the country, rather than wait for the opposition's newfound unity to mature.

B4700 Systems...B3700 Systems...B2700 Systems...MCP V

Burroughs announces three powerful computer series and a fifth major advance in system software

Important news for every user of medium-scale computer systems. Burroughs 700 Systems family is expanding, with—

More powerful and productive computer systems

The B4700 Series: Five additional models with up to 100% more input/output potential than current models...

The B3700 Series: Four new models based on the B4700's proven design . . . with up to 70% more data processing power than Burroughs widely used B3500 systems . . .

The B2700 Series: Three models that extend B2500/B3500 series advanced concepts to an even broader price-and-performance range.

These outstanding systems offer you—

- "Instant maturity"—they accept B2500/B3500 application programs, developed and perfected over six years, and execute them at optimum performance levels.
- Economical, modular expansion within a series, and from one series to another, without reprograming or even recompilation.
- A comprehensive library of program products for major savings in program development time and related costs.
- Powerful FORTRAN, COBOL and BASIC compilers . . . plus advanced software for remote job entry, data communications and data base management.
- Automatic multiprograming under MCP control . . . system self-regulation . . . virtual memory . . . dynamic allocation of resources . . . and other results-oriented features developed and proven by Burroughs.
- Parallel multiprograming and shared disk file processing.
- Data communications processors for greater efficiency and line-handling capacity.
- Powerful terminal systems for application in business, industry, finance and government.

A more powerful and productive master control program

Tests indicate that MCP V increases throughput performance 10 to 20% both for new systems and currently installed systems. MCP V is now available for *every* Burroughs medium system. Based on more than six years' successful field experience, MCP V confirms Burroughs leadership in control program technology.

Burroughs puts you ahead with cost/effective systems that do more and cost less to install, program and use . . . keeps you ahead with systems that keep on doing more and costing less as they expand to meet growth and change in your data processing operations.

cii

COMPAGNIE INTERNATIONALE POUR L'INFORMATIQUE

68, route de Versailles, (78) Louveciennes. Tel. 951.86.00

IT'S ABOUT TIME WE GOT INTRODUCED!

Who are we? Cii is the French computer manufacturer. In the past five years, Cii, backed by major industrial groups such as Thomson, C.G.E. and Schneider, has devoted considerable R & D resources as well as large-scale industrial investments to the launching of new series.

PRODUCTS:
Cii offers a comprehensive range of general-purpose computers featuring advanced technology and software, as well as highly competitive costs (Iris 45, Iris 50, Iris 60 and Iris 80), thus Cii has an efficient solution for E.D.P. requirements of all firms, whatever their size.
In automation and process-control applications, Cii's leading position has been confirmed by the commercial breakthrough of Mitra 15 mini-computer.

ORGANIZATION:
Cii has developed specialized teams providing an all-level efficient service and illustrating the fact that a good computer solves a lot more problems than it raises.

MARKETING:
Our rising sales in France have been accompanied by even greater progress abroad ; thus, from '70 to '71, our exports have doubled, mainly with private users. These co-ordinated efforts have proved to be fruitful. They made possible co-operation agreements with other manufacturers and granted license agreements both in Europe and U.S.A.
Today, Cii ranks as a full partner in the world's computer industry, and its name, Compagnie Internationale pour l'Informatique, is well deserved.

South Africa

Back to Boerehaat

FROM OUR SOUTH AFRICA CORRESPONDENT

As police continued to batter anti-apartheid students into bruised submission this week, it became apparent that this was more than just another repressive incident. It was the culmination of a chain of events, linking back through the campaign against English-speakers, police raids and the trial of the Anglican Dean of Johannesburg, which indicates that the government is undertaking a fundamental shift of direction. In short, it means that the prime minister, Mr John Vorster, has abandoned his brief experiment with *verligte* (enlightened) policies. He has swung hard over to the right and is heading now on a course of unvarnished domination and authoritarianism.

Within a year the whole atmosphere of South Africa has changed. In the southern winter of 1971 all was optimism and there was an exciting whiff of change in the air. Dialogue was the in-thing and two bold instances of it set the whole country abuzz: a large multiracial conference at a specially integrated airport hotel outside Johannesburg, and the remarkable visit last August by President Banda of Malawi, which literally swept white South Africans off their feet. There was talk of talks with Ghana and the Ivory Coast, and the foreign minister flew to Madagascar to sign a trade pact. With the launching of Zululand under the outspoken Chief Gatsha Buthelezi, even some of the most sceptical liberals began to think things might really be on the move at last, and that when Mr Vorster spoke of "multinationalism" it was really a cunning politician's euphemism for multiracialism.

But all that seems very remote now as the police unleash their stormtrooper campaign to a chorus of approval from the Nationalist government, the party press and especially Mr Vorster himself. What caused the change, it seems, was the fact that the government began losing seats to the opposition United party. Nine had fallen at the general election of April, 1970, but this did not cause any immediate alarm. The Nationalists were inclined to dismiss it as a temporary setback due to complacency after nearly a quarter of a century in power. When more fell at the provincial elections later that year they began to sit up and take notice.

It doesn't exactly help to get them loved

But the real crunch came with a by-election last April when there was a 12.6 per cent swing to the United party in the safe Nationalist seat of Brakpan, cutting it to a marginal. This threw the Nationalist party leadership into a turmoil of self-recrimination, especially as the analyses indicated that the swing had been caused not so much by any attraction towards the United party as by disillusionment with the Nationalists.

It was soon to become apparent what conclusion all this self-examination had reached. With another by-election test looming in the farming area of Oudtshoorn, the Nationalists reverted to the most primeval of all their tactics — a campaign raising the ancient cry that the English-speaking community was guilty of *Boerehaat*—literally, hating the Boers. The tactic paid off handsomely, with the Nationalists scoring a big increase in their Oudtshoorn majority. This was the decisive event that confirmed Mr Vorster on his new course.

The tone of speeches in parliament reflected the change of tack. *Verligte* speakers faded into the background and *verkramptes* (the diehards) moved to the fore. Attacks on the lone Progressive, Mrs Helen Suzman, became markedly sharper and more menacing. Significantly, Mr P. W. Botha, leader of the Nationalist party in the Cape —traditionally the base of its more liberal wing—stood out prominently in the *Boerehaat* campaign. All mention of the outward-looking policy ceased.

Then came the drive to subdue the protesting students, and the prime minister's personal approval of the violence used. "If the police had not acted in this way, then I would have been personally disappointed in them," he said after the first baton charge when students were beaten up and chased into the nave of St George's Anglican cathedral in Capetown on June 2nd. More baton charges followed there and in Johannesburg. All outdoor assemblies have been banned throughout most of the country and a total of nearly 600 students has been arrested. It has all amounted to a massive demonstration of authoritative toughness, giving sharp definition to the new image the government wants to project.

But the reasons for this change run deeper than a mere electoral tactic. It is basically an authoritarian response to the government's crumbling situation. On all sides its policies are running into trouble. The bantustan (homelands) policy is failing to separate the races physically to any appreciable extent and instead is simply providing political platforms for some uncomfortably outspoken African leaders. The Coloured Council—the forum for those of mixed blood—likewise has become a focus of dissent. The movement towards a common front of all non-white groups is growing rapidly. The economy is being stifled by industrial apartheid.

In other words, apartheid is approaching a crisis point at which it must either be transformed or be more harshly held in place by sheer force. The *verligte* experiment represented an attempt to begin a process of gradual adaptation. But the grassroots resistance it encountered in the party, and its electoral risks, appear to have frightened the leadership into switching to the alternative. It is a switch that bodes ill for the prospects of peaceful change in South Africa.

Vietnam

The bombing takes its toll

FROM OUR SAIGON CORRESPONDENT

It now seems clear that the American blockade and bombardment of North Vietnam are seriously affecting its capacity to nourish the offensive in the south. Intelligence sources in Saigon say the blockade has been completely successful in stopping arms shipments to North Vietnamese ports, although small boats are still bringing in some supplies from China along the coast. The railway lines from China are impassable after the destruction of more than 30 bridges and tunnels, and the line south from Hanoi is also out of action. Several of North Vietnam's major oil depots have been severely damaged, and a number of truck repair and maintenance yards have been destroyed. As for the roads, however, American air force officers say that the North Vietnamese are still able to fill in the craters and repair the bridges fairly quickly.

Several power stations supplying plants connected with the war effort have been put out of action, including the big new Lang Chi hydroelectric station 63 miles north-west of Hanoi. North Vietnam has acknowledged that the bombing has caused severe economic problems, and it claims that many civilians have been killed and hospitals and schools hit.

The Americans deny this, and produce photographs showing that their new bombs guided by laser beams and television hit their targets with great accuracy. In the attack on the Lang Chi power plant, for example, bombs were steered through the roof of the generator house without damaging the dam and spillway only 100 yards off. The B-52 attack on oil facilities near Haiphong was also a precision job. The American argument is that at least some of the hospitals and schools that have been damaged have been hit by the falling Sam missiles and anti-aircraft shells sent up by the North Vietnamese themselves. Of the 1,400 Sams launched since March 30th, only 16 have scored hits. The South Vietnamese who were accidentally bombed with napalm last week were victims not of an American but of a South Vietnamese error.

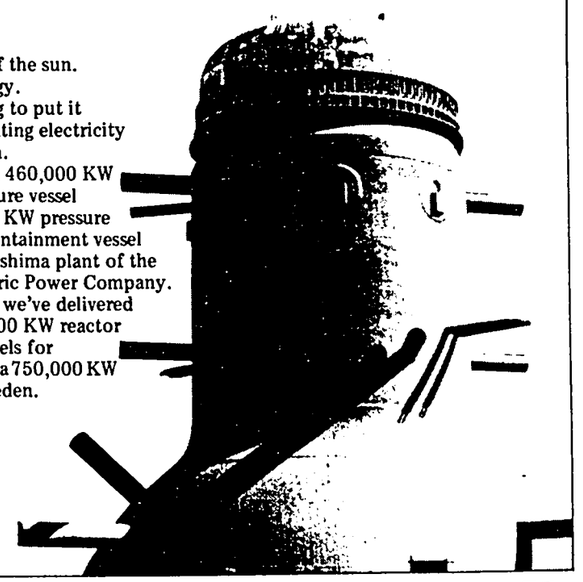
Precision in the north . . .

. . . and inaccuracy in the south

The Americans claim that they have inflicted as much damage on North Vietnam's war potential in the past two months as during any 12-month period of the 1965-68 bombing. This has been achieved with far fewer sorties and a much lower tonnage of explosives because of the new bombs. In the earlier campaign, for example, the Americans sent 1,000 sorties against the Thanh Hoa railway bridge and lost 30 planes—but failed to knock out the bridge. On May 13th this year the bridge was destroyed at the first attempt without the loss of an aircraft.

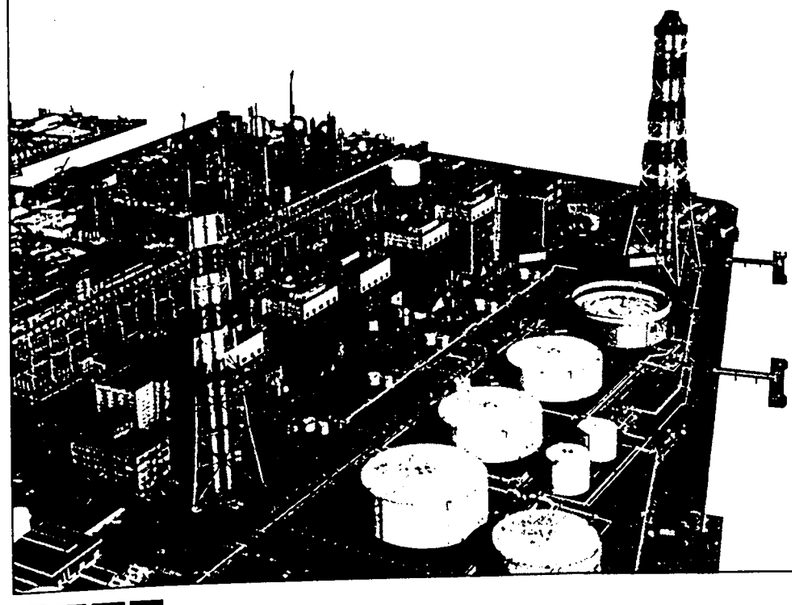
Intelligence sources say the oil shortage is beginning to affect supplies to communist troops in the Quang Tri and Hué battle zone. But the Kontum and An Loc fronts are little affected because they had ample supplies before the blockade began. Anyway, the current lull in the south is not attributed to supply difficulties. It may be due in

John Paul Vann



When John Paul Vann was serving as an American military adviser in the Mekong delta 10 years ago he saw things that his superiors did not want to know—notably that the communists were gaining strength and that the South Vietnamese army was in deep trouble. His perceptive and detailed reports to General Harkins in Saigon ended up in the wastepaper basket, but through friends like David Halberstam of the New York Times he was able to warn the American public where the situation was leading. His prospects of promotion were ruined, and he retired from the army in 1963 to lecture on Vietnam.

But to the dismay of the doves Mr Vann did not join the anti-war movement. Although he continued to criticise the way things were being done in Vietnam he still argued for continued American support. And in 1965 he himself returned to Vietnam as a civilian adviser, still outspoken about the excessive use of artillery and bombing, but with a deep personal commitment to help to win a war which he believed was still winnable—and worth winning.

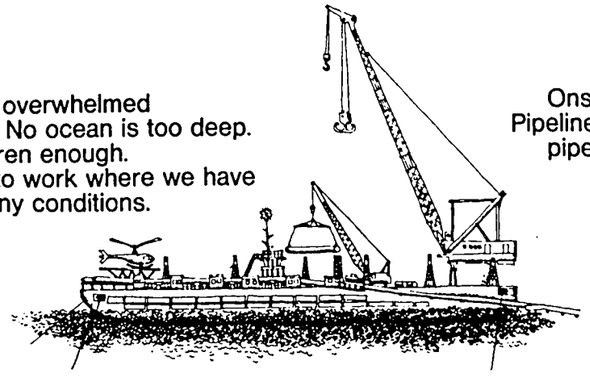


In his most recent post as senior adviser in the 2nd military region, the area including the central highlands, Mr Vann masterminded the defence of Kontum. His energy and courage became legendary. He slept in insecure hamlets to find out what was going on, and when American advisers were trapped in the fall of Tan Canh he took his own helicopter in under heavy fire to rescue them. On June 9th, a few miles outside Kontum, his helicopter was shot down in flames and Mr Vann became the highest American official to die in the Vietnam war. Tributes came from the White House and President Thieu—and, in a way, from Hanoi: there were special awards to the North Vietnamese troops who shot him down.

Although an exceptional man, Mr Vann did represent a type of American found in many parts of Vietnam—the official who has returned voluntarily to undertake a hazardous assignment in the provinces. To some extent these men are lured by the challenge. But many of them share Mr Vann's feeling of identification with the South Vietnamese, and a sense of duty to help them win through.

The power of the sun.
Atomic energy.
IHI is helping to put it
to use generating electricity
here on earth.
We've built a 460,000 KW
atomic pressure vessel
and 780,000 KW pressure
vessel and containment vessel
for the Fukushima plant of the
Tokyo Electric Power Company.
And abroad, we've delivered
two 1,100,000 KW reactor
pressure vessels for
the U.S. and a 750,000 KW
vessel in Sweden.

The Earth. Whatever helps people span it, develop it, live on it, IHI is involved in it.



The earth gives us coal, oil, natural gas and water to convert into electrical energy. And to help meet the increasing demand for electric power, IHI is building larger capacity, higher temperature and higher pressure boilers. Recently, IHI has manufactured a 1,950 t/h super critical pressure boiler for the Tokyo Electric Power Company. IHI has also received orders for another 1,950 t/h super critical pressure boiler for the Tokyo Electric Power Company and a 1,780 t/h one for the Kansai Electric Power Company.

Saipem can make it easier.**

part to the heavy casualties sustained by North Vietnamese units. But there is evidence that reserve forces are now being brought in. The focus of the offensive may now shift to the Mekong delta. It is known that the communists have increased the number of troops infiltrating into the area.

America and China

Kissinger rides again

There are some logical reasons why Mr Henry Kissinger should be off to Peking again, and some bizarre but just credible theories. The coolest explanation for his pre-announced departure on what sounds like a slow boat to China—he arrives on Monday—is that the Chinese want to know what Mr Brezhnev and Mr Nixon said to each other in Moscow last month and have summoned Mr Kissinger to tell them. And while he is there he can conveniently fill them in on his conversations with the Japanese last weekend (see page 17).

A higher-temperature explanation of Wednesday's surprise announcement is that the Chinese called for Mr Kissinger to give them reassurances about the limits of the American bombing of North Vietnam. Only two days earlier the Chinese foreign ministry had issued a statement asserting that the Americans had "steadily expanded the sphere of bombing up to areas close to the Chinese-Vietnamese border" and that this action was "threatening the security of China." The last time China used that phrase about its security was when the South Vietnamese army went into Laos in February, 1971. But China took no action then, and the Americans are not sending ground troops into North Vietnam now.

The White House press secretary, Mr Ziegler, told newsmen that Mr Kissinger's five-day visit had been agreed upon within the past month and its date fixed "in the last 10 days." This piece of news opens up the possibility that it was the Americans rather than the Chinese who initiated the visit, and not only to reassure the Chinese that their border was safe. The reappearance of Mr Kissinger in Peking while the outcome of the current North Vietnamese offensive is still undecided may be part of the American psychological warfare campaign to undermine North Vietnam's faith in its allies. The Russians may be hoping to exploit this "collusion" between Peking and Washington by sending their president, Mr Podgorny, to Hanoi. But then Mr Podgorny himself was clinking glasses with Mr Nixon in Moscow last month.

The most improbable explanation of the Kissinger trip rests on the slender evidence of a report in a Hongkong newspaper on Tuesday that communist cadres had been alerted for "a serious statement about the health of Chairman Mao." Any foreigner, and Mr Kissinger above all, would be the unlikeliest of deathbed companions for Mao Tse-tung. But it is just remotely conceivable that in the throes of a succession struggle within China one side would try to play the American card. The impossible has happened in China before.

India

Lefter than thou

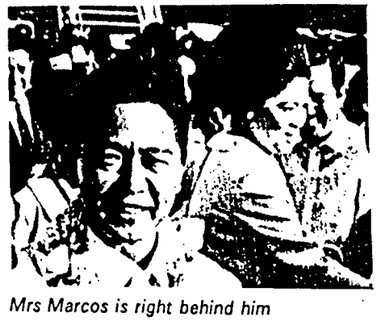
FROM OUR INDIA CORRESPONDENT

The radicals in India's Congress party who united to expel its right-wing leaders three years ago are now at each other's throats. Former socialists are piqued by the preference Mrs Gandhi has shown to former communists. These ex-communists include one cabinet minister, Mr Mohan Kumaramangalam, several junior ministers, the most important of the party's three general secretaries, and the new chief minister of Orissa. Only one job, that of a junior minister, has gone to a former socialist.

Mr Chandrashekhar, the best known member of the ex-socialist group, expressed his growing disenchantment with the ex-communists in a recent article in the magazine Young India, in which he accused them of operating as a clique with the eventual aim of capturing the Congress party apparatus. He is also irked by their claim that they enjoy the confidence of the prime minister because they alone are loyal to Congress ideology. These sharp comments reflect growing differences over policies. Although they make common cause on the subject of land reform, Mr Chandrashekhar and his friends believe that Mrs Gandhi's government lacks the will to honour the party's pledges to curb monopolies.

The former communists have their reservations, too. But the curious thing is that their current emphasis is on speeding up economic growth rather than on a battle about the ownership of industry. They argue that productive forces should be allowed to grow because growth alone can meet the immediate problems of inflation and unemployment. This pragmatism suits Mrs Gandhi. But it has provoked indignant comments from Mr Kumaramangalam's old communist colleagues as well as from Mr Chandrashekhar's friends. This is an important reason why the prime minister is increasingly angry with the former socialists. She suspects that they are interested more in headlines than in radicalism.

Philippines



They won't believe the lady

FROM OUR CORRESPONDENT IN MANILA

Was ever a president so persistently and rudely abused as Mr Marcos of the Philippines ? It seems he can do nothing right and nothing he says is believed. Last week the chairman of the convention now drawing up a new constitution demanded that the president should give him a document of renunciation solemnly vowing that neither he, his wife nor his near relations would seek to be chief executive of the Philippines after 1973, when the next election is due.

The president's riposte was that he had already made many public statements clearly declaring that neither he nor his wife had any political ambitions beyond their current term in Malacanang Palace. Since no one has accepted them at face value, what use would a document of renunciation be ? The immediate result, of course, was to intensify the belief that Mr Marcos is dodging the issue.

The president and his wife have bought themselves an old colonial mansion on the Pasig river and are furnishing it to serve as a town house for their retirement. But the publicity given to this move convinced their critics that it was another confidence trick. Short of quitting the job right now, or slitting their own throats, nothing they say or do will make people believe that they have no intention of perpetuating their power.

Mrs Marcos is right behind him

The suspicion, however, centres not so much on the president as on his wife. It is the possibility that she might turn her good looks, and her delight at being a public figure, to her own political advantage that seems to strike terror in people's hearts. A first lady must play second fiddle. In the feudal Philippines there is no sentimentality attached to a rags-to-riches social climb, and Mrs Marcos's elevation from barrio beauty to first lady is considered an offence against social order.

Africa

Don't forget Burundi

This year's summit meeting of the Organisation of African Unity, which opened in Morocco's capital Rabat on Monday, has shown rather more unity than most of its predecessors. The main issues under discussion have concerned the struggle for the white-ruled territories in the south, and the perennial problem in the Middle East. On Wednesday the OAU passed resolutions increasing its financial contribution to the southern guerrilla movements by a half and supporting Egypt's position against Israel. The record number of 20 heads of state attending the meeting testifies to the calm of most of the continent. Only one country, Malawi, is boycotting the conference.

Malawi's absence marks the death of its brainchild, dialogue with South Africa. The dialogue issue, which dominated last year's meeting, has suffered several reverses since then. Although President Houphouët-Boigny of the Ivory Coast remains well disposed to the idea, he has avoided the subject since the rejection of his proposals at least year's conference. Lesotho has hardened its attitude considerably. So, publicly at least, has the new government in Madagascar. The military regime in Ghana which seized power in January is forthrightly opposed to it. If not dead, the issue has entered a phase of prolonged suspended animation.

But the guerrilla movements opposed to white rule in the south seem to be gathering a bit of momentum. The most important event, if it is put into effect, was the announcement last week that two of the Angolan guerrilla movements have decided to sink their differences and unite in opposition to the Portuguese. The Zambian-based Popular Movement for the Liberation of Angola (MPLA) and the Zaïre-based National Front for the Liberation of Angola (FNLA) have gone their separate ways for several years. Not only have they spurned co-operation; the MPLA has even been denied the use of Zaïrian territory as a base for its operations.

Zaïre's President Mobutu has preferred to harbour only the near-dormant FNLA, whose lack of bloodlust has conveniently posed no threat to discreet improvements in relations between Portugal and Zaïre. Guerrilla movements the world over show a stronger tendency to divide than to unite, so the reported rapprochement may come to nothing. But if President Mobutu now allows MPLA guerrillas to infiltrate into Angolan territory across Zaïre's border the Portuguese might be faced with a more serious war on a wider front.

For several years OAU meetings were overshadowed by the horrors of the Nigerian civil war. This year there is another tragedy in Africa—the massacres in Burundi—yet at mid-week there had been no debate on the matter at the conference. The danger is that sensitivity about the internal affairs of member states could prevent the OAU from doing what it can to contain the slaughter—which is now thought to have claimed more than 100,000 lives—and to send assistance to those who are still living. It is bad enough that the events have been all but overlooked by most of the world; they certainly should not pass unnoticed in Africa itself.

Zambia

Let them wear crackers

FROM OUR LUSAKA CORRESPONDENT

Having watched its foreign exchange evaporating for 18 months, the Zambian government has taken drastic action to curb imports and try to prevent a further slide in the reserves. The immediate result has been to disrupt commerce and industry. A month of haphazard import controls has so exasperated local businessmen that they have warned the government that the regulations could lead to the closure of factories and a wave of unemployment. Few businessmen question the need for import controls, but the apparently indiscriminate methods in which these have been applied have made the business community doubt whether the government knows what it is doing.

Applications for imported goods which were obviously essential have been rejected. Some applications, once approved, have been subsequently cancelled and firms have found themselves unable to claim goods which have actually arrived in the country even though they have already been paid for. The government's trade department has turned down an application by one company to import 150 tons of insecticide needed to help the veterinary department's programme to eradicate the deadly tsetse fly. Applications for hospital equipment and spares for copper mining machinery have also been rejected. One firm was refused permission to import women's brassieres, yet on the same day it received a permit to buy Christmas crackers. Even more bewildering was the trade department's rejection of applications to import goods from China at a time when the government was trying to coerce businessmen to buy Chinese goods to meet its commitments under the Tan-Zam railway agreement.

The import muddle is likely to be a temporary one. But its cause, dwindling foreign exchange, will be more difficult to overcome. The reserves, which stood at £18gm in January, 1971, have now fallen to about £59m. Although the government's own economists gave warning 18 months ago that major restrictions would have to be introduced, little was done until this year—and then in such a rush that it produced, in the words of one prominent businessman, "ineffable chaos."

The reserves are still reasonably high but there is as yet no sign that the decline has been halted. The main problem is that the government is trying to carry out an extensive development programme at a time when the world market price of copper—which accounts for 95 per cent of Zambia's exports—has slumped. In addition, Zambia has been buying quantities of defence equipment. The business community has been urging the government to allow the importation of more goods from South Africa; these are both cheaper and more readily available. President Kaunda's administration is reluctant to become too heavily dependent on the white south. Nevertheless, there has been some easing of restrictions on South African goods. Although Zambia's economy remains basically healthy, the country must still face a long period of financial stringency.

THE BIG LINK

We made the airlines a long-range promise. Now we're making good on it:

the intercontinental DC-10.

We promised airlines a DC-10 for every route from 173 to 5,270 n.m. Domestic DC-10s are already fulfilling their part of our promise. Now we're building the first of our Intercontinental tri-jets. ☐ We've given them higher-thrust turbofans from Pratt & Whitney and General Electric. Their wingspans are longer. And we've added fuel capacity for nonstop flights exceeding 5,210 n.m. They also have a centreline landing gear to share the gross takeoff weight of 555,000 lbs. ☐ They retain all the features that make DC-10s the best DCs yet: true wide-cabin comforts, with seating for 270 to 345 passengers; spacious baggage and cargo compartments; and operating economies for low seat-mile cost. Exceptional flight and control characteristics make DC-10s immediate favourites with pilots. And quieter, smoke-free takeoffs and landings make DC-10s welcome wherever they go. McDonnell Douglas DC-10s – domestic or intercontinental, passenger or convertible freighter. It's the family of jets for the future.

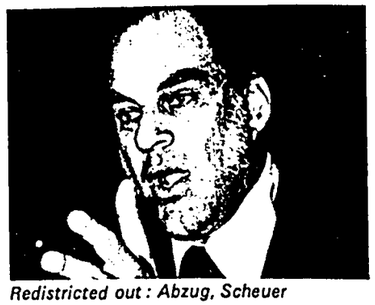
One man, one vote rolls on

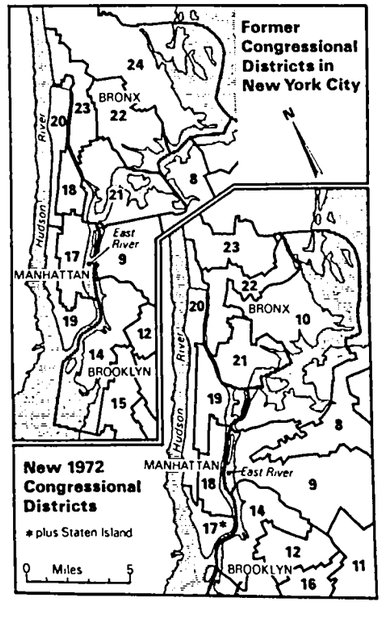
What has been called the "reapportionment revolution" has been rolling on for nearly a year in the United States and is now almost complete. This autumn, for the first time, members of the House of Representatives will all be elected from districts which satisfy the Supreme Court's insistence that each man's vote must be worth as much as another's, that is, that within each state every congressional district must be equal in population to every other one. Not until 1981, after the next census, will the state legislatures have the duty (it is often a pleasure as well) of again redrawing constituency boundaries for elections to Congress and the legislatures.

The one man, one vote requirement, first laid down in 1964 and later made more exacting, is supposed to guarantee fair representation. But many feel that it is only a first step toward a goal which will not be reached as long as party majorities in the state legislatures and partisan state judges can draw the boundaries as they like without meeting standards of compactness and respect for communities. Indeed, the insistence on numerical equality provides justification of a sort for the bizarrely shaped districts—one is described as resembling a snake with stomach-ache—which can be so rewarding politically.



One Representative who is sure that she has been victimised by a male-dominated legislature is Mrs Bella Abzug, a freshman Democrat who is a crusader for peace and women's rights. Her 19th district in lower Manhattan simply disappeared when the Republican majority in the New York State Legislature redrew district boundaries this spring with the help of conservative Democrats. Her constituents were divided up among those of three male Democrats. Mrs Abzug will be fighting the only liberal among them, Representative William Ryan, next week for the Democratic nomination in his enlarged 20th district. Republicans and conservative Democrats are enjoying the sight of these two liberals at each other's throats. They are not unique, even in New York City. Up in the Bronx Representatives James Scheuer and Jonathan Bingham, both liberals, are pitted against each other in the new 22nd district, while Mr Allard Loewenstein, whose former district was flooded with Republicans, is trying to get back into Congress by taking on the veteran conservative, Representative John Rooney, in Brooklyn's 14th district.

The danger to incumbents is plainest in the states where population did not grow as rapidly as the average between 1960 and 1970 and which, as a result, are losing Representatives : New York (two), Pennsylvania (two) and seven smaller states (one each). But this is only the beginning. The days when movements of population within a state could be disregarded went out of the window in 1964 also.



If redistricting (as redistribution of seats is called) were done nationally, each of the 435 Congressmen, ideally, would represent 467,000 people. As it is done state by state, fairly wide variations from this mean will persist. But within states variations from the ideal are allowed to be only slight. California (which, incidentally, is gaining five seats) will never again be able to have one district with 500,000 more people in it than are in its smallest district. Florida had inequities nearly as gross. And most of the states have experienced uneven growth and heavy internal migration, much of it towards the suburbs and a good deal of it away from the centres of urban areas. The expansion of the suburbs offered the Republicans an opportunity, but one which they could not always seize because they controlled fewer state governments than the Democrats.

The law courts have been doing

Redistricted out : Abzug, Scheuer

brisk business, either because the states were unable to produce a plan in time (as in Illinois and California) or because their plans were challenged as discriminatory. In Texas a court has imposed a solution which would result in the state's first urban-dominated delegation to Congress. In Georgia Negroes appealed against a redrawing of districts which would split Atlanta's black community, postponing the time when the city could send a Negro to Congress.

"One man, one vote" has not eliminated the old Adam in most politicians. The ancient art of gerrymandering—the shaping of districts to serve the designs of those in power—still flourishes. Mrs Abzug is not the only victim. The Democrats in Virginia paired Republicans in two constituencies, leading Representative Poff (who earlier this year turned down a chance to sit on the Supreme Court) to give up his political career.

Other good men have been faced with hard choices. In West Virginia Mr Ken Hechler, long a vigorous critic of the state's main industry, coal, was forced out of his own district and, to stay in Congress, had to take on and defeat one of his Democratic colleagues. In Illinois the Republicans have played the same trick on another liberal Democrat, Mr Abner Mikva. Put in the same inner-city constituency as a black Democrat, he decided to chance his luck in a suburban area. Mr Mikva said that he could not risk depriving Chicago, which has a huge Negro population, of one of its two black Congressmen. But the real risk may have been that Mr Mikva would lose the fight.

Partisanship is not always in the ascendant. There is often a fellow feeling among incumbents. In Illinois, where the congressional delegation is evenly split between Democrats and Republicans, its members suggested a redistricting plan which would have kept them all safe. But this was set aside for a "remap" (ordered by a Republican-dominated court) which comes close to guaranteeing the Republicans three new seats.

Sometimes parties punish their own members who do not hew the party line. In Maryland Representative Sarbanes, who beat his local Democrat organisation two years ago, was given a giant-killing job ; he was put in the same district as Representative Garmatz, the powerful Democratic chairman of the Merchant Marine Committee in the House of Representatives. But providence stepped in. Mr Garmatz stunned everyone by deciding to retire. In Massachusetts Mrs Louise Day Hicks has not been so lucky ; she has lost the most loyal Boston sections of her district and has been given, instead, suburbs where her narrow views are less popular.

Some of the black Representatives feared that similar fates awaited them. But the state legislatures have done nothing so foolish. Indeed, in Houston, Texas, a largely black congressional district has been created specially for Mrs Barbara Jordan, a Negro who is now in the state legislature.

The excesses of gerrymandering which have accompanied the full application of the rule of one man, one vote ought to spur Congress to pass legislation, which has been hanging about for years, requiring election districts to be compact and contiguous and to try to follow community lines. But the political rewards in gerrymandering are so important to both parties that it may have to be left to the Supreme Court to complete the reapportionment revolution.

Justice filled

At last President Nixon has an Attorney General again after the bitterest and most drawn-out battle over a cabinet appointment that anyone can remember. Mr Richard Kleindienst was nominated to head the Department of Justice last February, when Mr John Mitchell left to run Mr Nixon's campaign for re-election. While Democratic Senators had little sympathy with Mr Kleindienst's conservative philosophy and strict approach to questions of law and order, they felt that a President should be allowed to exercise his own judgment when choosing his close advisers. Therefore the nomination was about to be confirmed, with comparatively little difficulty, when Mr Jack Anderson, the columnist, alleged that Mr Kleindienst, while Deputy Attorney General, had been concerned in the out-of-court settlement of an anti-trust case against the International Telephone and Telegraph Corporation ; this was supposedly linked with a large contribution from the company towards the expenses of the coming Republican party convention. ITT naturally denied that there was any such link and Mr Kleindienst, insisting that he had not been involved in the settlement (negotiated by the anti-trust division of the Department of Justice), requested the Senate Judiciary Committee to hold further hearings on his nomination.

These left many questions unanswered, both about ITT and about Mr Kleindienst, but the committee decided that there was no proof of wrong-doing to justify turning down the nomination. Last week the Senate agreed, after a long but desultory debate. Senator Edward Kennedy led the handful of liberal Democrats who continued to argue, with the backing of the Washington Post, that the public could not be expected to have confidence in the enforcement of the law if it was in the hands of Mr Kleindienst. But only 19 Democrats voted against him in the end ; among the 26 who joined 38 Republicans to approve the appointment were probably some who hope that, as Attorney General, Mr Kleindienst will give them some more sticks to beat the President with in the coming election campaign.

Kleindienst confirmed

Senator Kennedy and his friends will have a chance to bring up the ITT affair again when hearings open on this week's nomination of Mr Thomas Kauper to head the anti-trust division of the department. But they will not be able to get very far since Mr Kauper was not in the government at that time. He comes from the University of Michigan ; only 36 years old, he is highly respected in his field. He is likely to have a fairly free hand in it, since his official boss, Mr Kleindienst, would obviously be wise to give anti-trust matters a wide berth.

ELECTION '72

Jersey unbossed

Newark, New Jersey

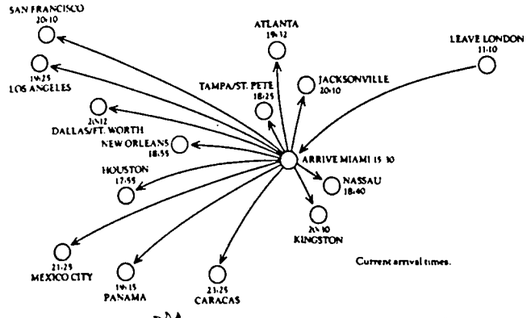
Last week's primary election in New Jersey was overshadowed by the contest in California on the same day. But the election of 109 Democratic delegates from this heavily populated area to the party's national convention was of considerable importance. Senator

I'm Karen. Now I have the only daily 747's from London to the Sunshine States of America. Fly me.

I've got a lot going for you to Miami and the Sunshine States of America, with the only daily nonstop flights from London and our own kind of personal service. And a lot from Miami: I've got great connections to all of Florida, New Orleans, Houston, California, the Caribbean; you name it. Then fly it.

And right now I have the nice convenience of the only daily 747's to Miami. Pick the day you want to go. Then go.

And the beautiful luxury of the great 747, with more cabin room than any airliner in the sky today.

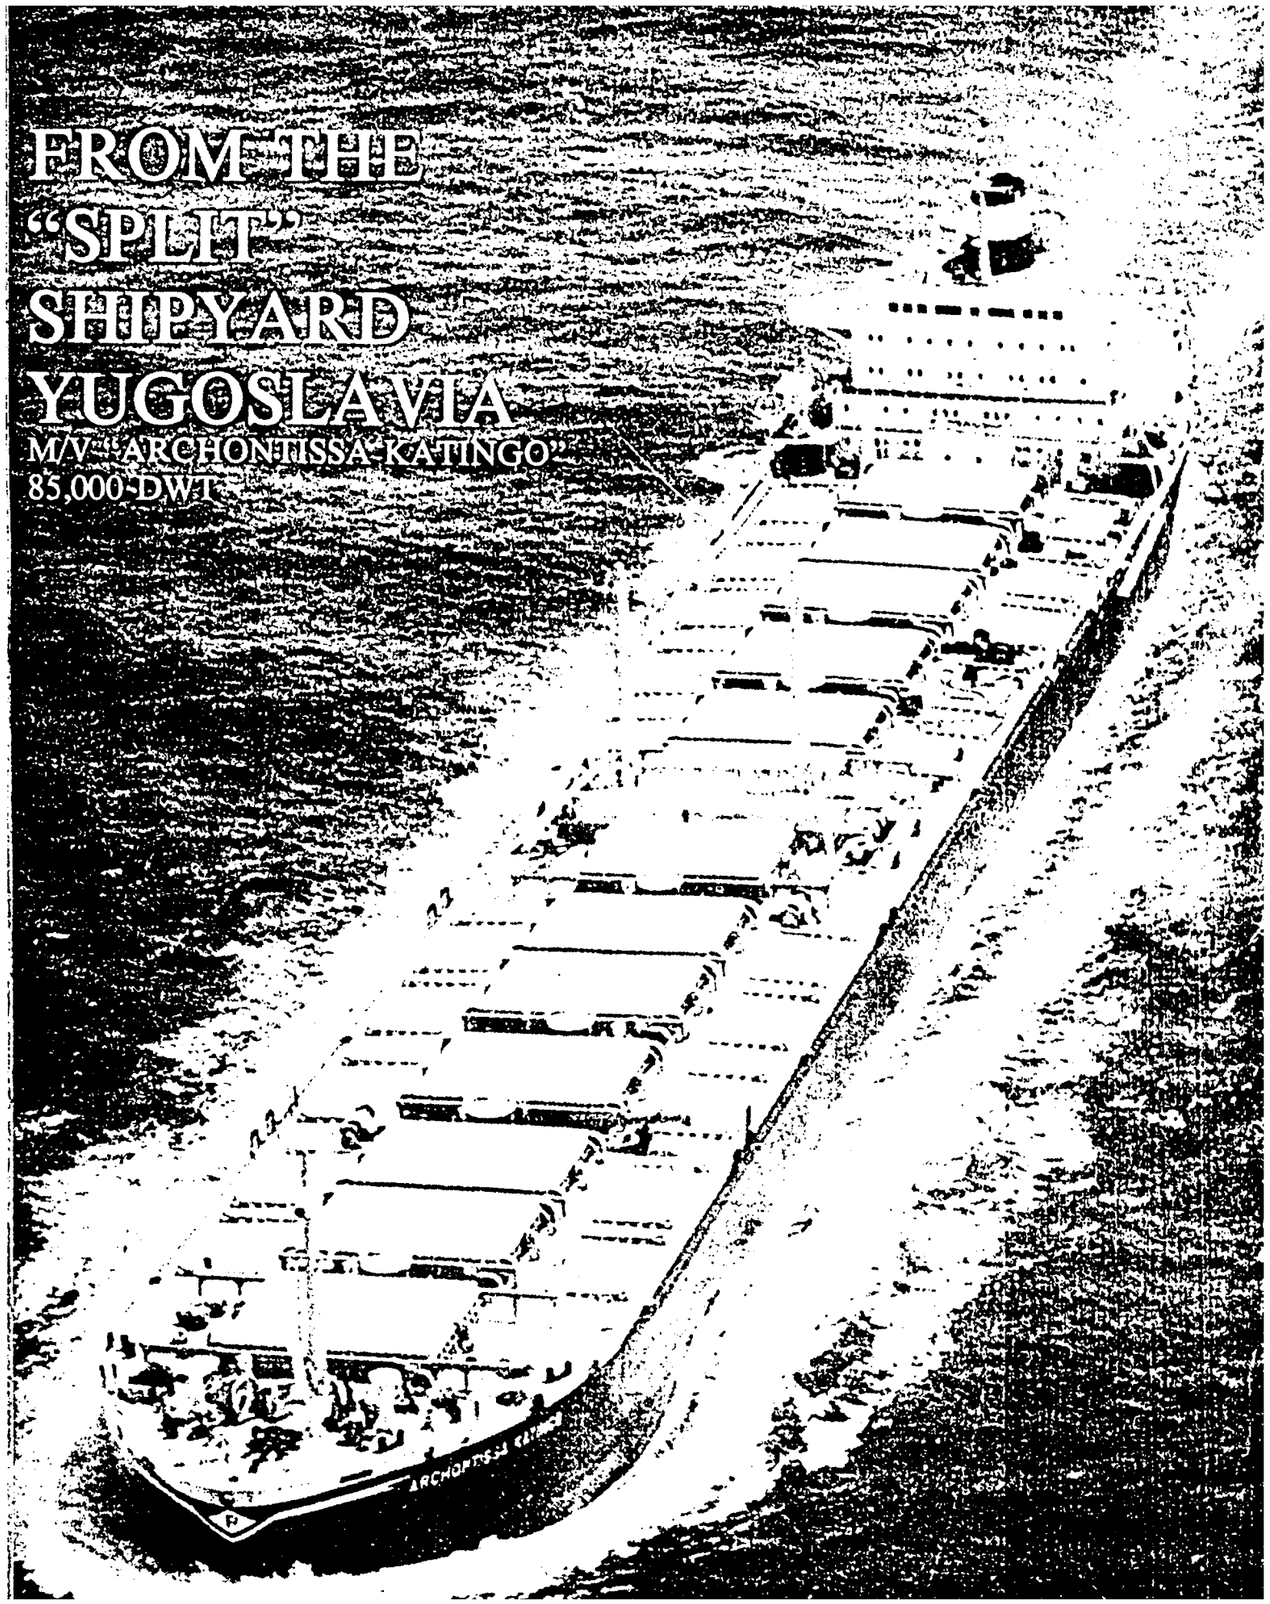


And the 747 extras en route: first-run movies,* multi-channelled audio entertainment and our international gourmet cuisine.

And a refreshing kind of personal service, person-to-person.

Give it a go, won't you? Fly my daily 747's to the Sunshine States of America.

Telephone National Airlines direct, or ring up your travel agent. Tell him Karen sent you.



Fly Karen. Fly National Airlines.

National Airlines, 81 Piccadilly, London W.1. (Reservations: 01-629 8272)

*Movies and stereo by In-Flight Motion Pictures, Inc. Available at nominal charge.

National honours American Express, Barclaycard, Carte Blanche, Diners Club, UATP and cash.

McGovern, gaining his first victory in a northern industrial state, won 71 of the delegates. Only 10 went to Senator Hubert Humphrey and the remaining 28 are uncommitted.

In New Jersey the McGovern workers had two aims. They had to collect enough delegates to boost their candidate's chance of getting the party's nomination in Miami. They had also to convince their critics within the party that Mr McGovern could carry the state against the Republicans in November should he become the nominee (in 1968 the Republican presidential candidate won New Jersey by a margin of only 68,000 votes).

This meant defeating, but not antagonising, delegates put up by the old-style party bosses, most of whom are the antithesis of the McGovern faithful. Even though the Senator's sweep in the primary indicates that the old machines are no longer as powerful as before in New Jersey, their failure to support their party's candidate could still prevent the Democrats winning the state in November. But when it comes to practical politics the McGovern workers showed that they were no naive idealists. They stressed to the delegates pledged to other candidates that, win or lose on June 6th, the important thing was to work together for victory in November.

New Jersey was ideal territory for Senator Humphrey. It is a state where organised labour is strong, where there is a large black population and where the party's machines were working in his favour. But Mr Humphrey's organisation was badly run and inept. While the top labour leaders in the state wanted to endorse him their followers were not so enthusiastic. Some 22 of the delegates pledged to Senator McGovern were trade union officials.

Mr Humphrey also lost standing in the Negro community when Mr Kenneth Gibson, the black mayor of Newark, a dilapidated city where Negroes make up over half the population, backed his opponent. Mr Gibson's support came only a week before the primary and, while he campaigned hard for Senator McGovern in the last four days, his decision was probably too late to affect the outcome of the election in Newark, where Mr McGovern's delegates were opposed by those favoured by the Democratic organisation with all its powers of patronage. But even in Newark McGovern delegates did not lose by nearly so large a margin as is usual for those who run against the bosses.

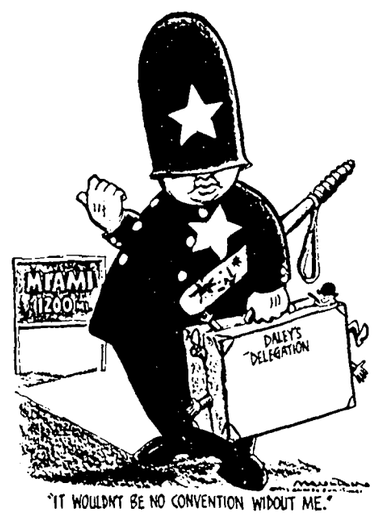
ELECTION '72

Democrats delegate

With only one of this year's 24 primary elections still to come, in New York next Tuesday, the Democrats are now also completing the process by which delegates to their presidential convention (at Miami Beach on July 10th) are chosen in the states that do not have primaries. This year, however, both methods are subject to new rules laid down after the shambles at the last convention in Chicago in 1968. These regulations were drawn up by a committee headed by Senator McGovern before he became a presidential candidate. They are designed to give Democrats at all levels, from the grass roots up, a voice in the choice of delegates to the national convention and to ensure that each state delegation shall be roughly representative of the various groups of voters in that state—young people, women, blacks and so on. The confusion to which this attempt to put new life into the party is giving rise, as it is tried out for the first time, is illustrated in the following reports.

1. Shaken kingmaker

FROM A CORRESPONDENT IN CHICAGO



For nearly two decades Chicago's mayor and Democratic boss, Mr Richard Daley, has prized his national reputation as a kingmaker when his party's presidential candidates are chosen. But in 1972 his position is in doubt. Not only has Senator George McGovern accumulated so much support in primary elections that he appears to be almost certain of nomination on the first ballot at the Democratic convention, but suddenly, to his fury, Mr Daley has also found his own traditional place as chairman of the big delegation from Illinois being challenged.

An insurgent group, headed by a Chicago alderman, Mr William Singer, hauled Mr Daley before an examiner appointed by the Democratic National Committee, Mr Cecil Poole, a black San Franciscan lawyer. The charges were that the mayor had violated the party's new rules which say that an organisation, such as Mr Daley's tightly-run Illinois machine, cannot pick its own people to run for delegate, that they must be chosen openly and that the structure of a delegation must reflect the demography of a state.

In the primary on March 21st a slate of 58 delegates chosen by Mayor Daley was elected from in and around Chicago; they were committed to no particular candidate at the convention, although it was widely assumed that Senator Edmund Muskie of Maine was the mayor's choice. Behind this apparent neutrality was Mr Daley's feeling that the large industrial states in the north, the "breadbasket" of Democratic votes, should be free to manoeuvre at the convention, exercising traditional influence not only on the selection of a presidential candidate but on the party's platform and the nomination of the vice-presidential candidate as well.

However, the Daley issue has put Mr McGovern in a tight spot. If he supported the challenge by the insurgents, he would alienate Mayor Daley, whose help he needs badly in the general election campaign in the autumn against President Nixon. The result has been a flurry of telephone calls and visits to Chicago by Mr McGovern's chief aides. They say, in effect, that they do not back the challenge and presume that the Daley delegates have been fairly elected. On the other hand, if Mr McGovern is not to lose his liberal support he must be at least neutral in this intra-party battle; so he will let the Democratic machinery decide where justice lies.

Mr Poole has three choices open to him. He could rule that there were no violations of party guidelines in the selection of delegates. (This course is unlikely, since the evidence presented

"IT WOULDNT BE NO CONVENTION WIDOUT ME."

to him shows that the Daley organisation did in fact back individual candidates and, what is more, blacks, women and younger voters are inadequately represented.) He might also rule that there was widespread flouting of the rules. This, too, is unlikely, because if he takes too strong a position, Illinois, with a large delegation, may find itself without a voice at the convention, with no time to re-elect or reappoint a new delegation.

What is most likely is that Mr Poole and the party chieftains will find that irregularities did indeed occur, but that there is no need to create a major upset by questioning the legitimacy of the delegation from Illinois. Indeed, they will probably point out that the rules and procedures are very new and should perhaps be modified in future.

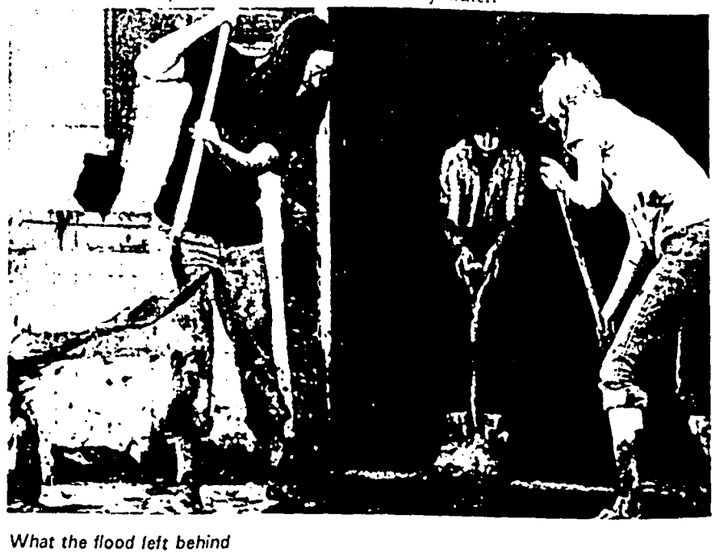
Moreover, by the time the Democratic credentials committee makes its report on the Illinois delegation, it is quite possible that Mayor Daley will have moved his slate of 59 delegates into the McGovern camp, thereby giving the South Dakota Senator more than enough votes to be nominated on the first ballot. Such a move would preserve Mr Daley's image as a kingmaker and would also cut the ground out from under his Illinois challengers, most of whom back Mr McGovern anyway.

2. Open party

FROM A CORRESPONDENT IN MINNESOTA

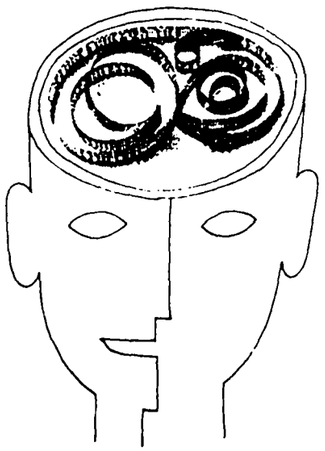
The Democratic state convention in Rochester, Minnesota, split between loyalists for the state's Senator Hubert Humphrey and a liberal coalition mostly for Senator George McGovern, was a victim not of the old closed politics but of the new open ones. It was open at both ends and in the middle. The new rules invited in an amorphous contingent of militant females, old radicals, party regulars who wanted to support Mr McGovern and those, students especially, who had been suckled on the politics of confrontation, demonstration and endless talk.

The Democratic Farmer-Labour party, to use the official name of the state Democratic party, boasts of a moderate populist heritage and of a freedom from bosses, Senator Humphrey included. Its traditionalists had a majority at the convention and had stipulated that any proposal must achieve at least 55 per cent of the votes if it were to be included in the party's platform (its formal set of election policies). None the less, the liberal coalition managed to win endorsement for such extreme planks in the platform as the legalisation of marijuana and hashish, unconditional amnesty for evaders of conscription and approval of marriages between homosexuals. At one point, when the party officials rammed through a recess, in the hope of finishing the platform in the party's state committee later, the liberal coalition staged a demonstration, shouting "No, no, no, no, no." The recess stood but they won extra time for more debate.



The next day police showed up but stayed off the convention floor while other controversial planks, such as the repeal of abortion laws, were shunted

Rapid disaster



Last week Rapid City, South Dakota, a small, pleasant town of 43,000 people, suffered the worst flood to have occurred in the United States for 35 years. So great was the devastation and the disruption of communications that the exact death toll may not be known for some days if ever; it looks as if about 200 people lost their lives and well over 100 others are still missing. About 3,000 more are homeless; broken houses, caravans and motor cars lie jumbled together like discarded toys.

Although there has been an interesting suggestion that an experiment in cloud-seeding conducted by the South Dakota School of Mines and Technology over the Black Hills on the day of the flood might have caused the disaster, the more probable cause was a freakish combination of weather conditions. Rain-laden clouds hung over the Black Hills (noted for the carvings of faces of presidents on Mount Rushmore) instead of drifting eastward, while releasing 10 inches of rain in 24 hours on the area. The unprecedented deluge of water rushed down through the dry canyons and small creeks leading from the hills into Canyon Lake, formed by a dam, above Rapid City. Amazingly the dam held up to the first roll of water, which went on to flood the town, but several hours later there came another. By then the dam's spillways were clogged with debris and its earthen supports gave way. In Rapid City, many people were stranded overnight on floating rooftops and blazing fires were fed by ruptured gas and electricity lines. The entire water supply was unusable for several days after.

President Nixon quickly declared Rapid City and its surroundings a disaster area. What that means in actual practice is that those made homeless will be able to have rent-free accommodation, probably in government-provided caravans, for a year. It also means that surplus food and food stamps for free food have been sent into the area by the federal government. Other sources of federal assistance which have also become available to Rapid City are the clean-up services of the Army's Corps of Engineers and the money-lending facilities of the Small Business Administration and the Farmers Home Administration. This will be especially important as only a tiny fraction of the losses to private property, estimated at $56m, will be covered by insurance which seldom provides compensation for damage done by water.

What the flood left behind

aside or modified. The Humphrey loyalists talked of Sodom and Gomorrah and of dopers, fairies and lesbians. A movement began among candidates for the state legislature and professional party workers to disavow or ignore the radical planks. Bitter traditionalists from rural areas and from trade unions complained that the bearded long-haired zealots did not give a damn about whether candidates got elected, while those in the coalition insisted that they must pursue principle and work for change.

The coalition was angry that the Humphrey delegates to the Democratic national convention at Miami Beach refused to put one of the coalition's members on the national credentials committee. They threatened to sit out the coming campaign in Minnesota except for Senator Walter Mondale's race for re-election. This could wreck hopes that for the first time the Democrats might win control of both the state's legislative chambers. As for the allegiance of the Minnesota delegates who will go to Miami, they are split with 33 for Mr Humphrey, 19 for Mr McGovern, eight for Representative Shirley Chisholm and four uncommitted. The big question is whether Minnesota is a sign of the conflict to come at Miami Beach. Hereabouts people say yes.

3. Holding together

San Antonio, Texas

The Democrats of Texas can thank Mr Dolph Briscoe for the fact that their party did not tear itself to pieces at its state convention this week. Even so it was a close run thing. Mr Briscoe, a wealthy banker and rancher, who is the Democrats' candidate for the governorship, is a man of impeccable conservative views. But he realises that, with a scandal-stained Democratic state administration and Mr McGovern as the party's probable presidential candidate, it is going to require a serious effort to keep Texas firmly in Democratic hands. So this week, aided by his formidable and ambitious wife, he made a determined attempt to prevent a major split with the McGovern forces. This could have had the most dangerous consequences for his own campaign in November; conservative Democrats in Texas remember all too clearly what happened in 1960 when the liberals voted in protest against one of their men and Mr John Tower became the first Republican Senator from Texas since post-Civil War days.

Initially the McGovern men were both hostile and suspicious. Mr Briscoe was known to be an opponent of Mr McGovern and he had just defeated a most able and attractive liberal, Mrs Frances Farenthold, in the contest for the Democratic gubernatorial nomination. However, his obvious honesty won them over and they agreed that there would be no walk-outs from the convention as long as they were treated fairly by the platform. Mr McGovern's lieutenants put it a little differently when addressing their troops at a packed eve-of-convention rally: "We're not going to walk out and let the bastards take our seats." These rather unfraternal sentiments were received rapturously.

The McGovern rally was more of a three-hour emotional orgasm than a political meeting. But the rally, though important as a demonstration of support for Mr McGovern, was more significant than this. For the first time the liberals evidently believe that they can wield effective power within the Democratic party of Texas. "It is all due to that great man, Senator McGovern, and his party reforms," said one of the Chicano (Mexican-American) leaders, in a moving little speech. And of course it is. Texas now has to send a truly representative delegation to the national convention or risk having it unseated. To the Democratic old guard it was a painful business and they demonstrated their distaste by going as far as they dared in order to frustrate the reforms.

For two days the party's credentials committee listened to a series of over 40 challenges to the composition of some of the delegations to the state convention. These ranged from the protest of one elderly man against "that man Milton Williams who's been raising his hound dogs on my land" to the rather more substantial grounds that a number of the Wallace-dominated delegations had been constituted in clear defiance of the guidelines—either because they had no blacks or Chicanos or too few, or because they had used a small majority to freeze out all the McGovern supporters. But the old guard was in the majority on the credentials committee and most of the objections were turned down flat.

However, ultimately the challenges made only a marginal amount of difference. On a straw poll of all the delegates, the state convention voted very nearly as predicted, 33 per cent (1,270 votes) for Mr Wallace, 28 per cent (1,061) for Mr McGovern, 16 per cent (613 votes) for Mr Humphrey—who came to the convention to campaign, 22 per cent (846 votes) uncommitted and 1 per cent for the others.

For Mr McGovern it was a most impressive performance in a state of the Old Confederacy. He picked up another 34 delegates on his way to obtaining the presidential nomination and the fact that Mr Briscoe succeeded, but only just, in preventing a massive schism in his party means that the Democrats now stand a reasonable chance of holding on to power in Texas.

Bomber Lavelle

To its list of revelations about the war in Vietnam the New York Times can now add the case of General John Lavelle. In direct violation of the Administration's policy during the first three months of this year General Lavelle sanctioned 20 bombing raids on military targets in North Vietnam. Then in order to cover up the nature of the raids, it is alleged that he submitted reports to his seniors which classified the missions as "protective reactions," the only type of defensive bombing which was authorised by Washington at the time. It was not until April that President Nixon ordered a resumption of the full-scale bombings of the North. General Lavelle, who as head of the Seventh Air Force was responsible for all the combat missions in south-east Asia, was dismissed from his job in April and last month became the first senior general in recent history to be demoted on retirement.

The reason for General Lavelle's departure was not explained until a Congressman from New York and the New York Times started to make inquiries. Now in testimony before a congressional committee the general has taken the full responsibility for the unauthorised missions and for the false reports. What has also been revealed by the testimony is that, while General Lavelle failed to get any official authorisation for what he considered was a justified response to a dangerous build-up of North Vietnamese forces, he was clearly under the impressions that his seniors in Saigon knew what was going on and deliberately took his reports at face value. Certainly it seems curious that his raids were allowed to continue unquestioned for three months before he was dismissed from his post. At the time the Administration, which was engaged in secret talks with the North Vietnamese, was denying repeated accusations from Hanoi that American aircraft were continuing to bomb the North.

Continuous Growth and Increasing Number of Restaurants in Europe

Number 1 in France for restaurants on motorways and shopping centres, the Jacques Borel International Group also holds the leading position in that country for restaurant coupons and in Continental Europe for the institutional food business.

RESULTS

The growth of Jacques Borel, which has been extremely rapid in the past 13 years (average annual sales increase for this period=46%—average annual profits increase=44%) continued in 1971. Consolidated turnover in 1971 amounted to Frs. 217,169,000 compared with Frs. 149,540,000 in 1970 (a progression of 45.2%).

Trading profits, after amortisation and before taxation, amounted to Frs. 13,407,000 against Frs. 11,167,000 in 1970 (+20.1%).

The 1970 Frs. 5.25 dividend was raised to Frs. 8.25 (+57%).

The share price illustrates this development : the price of a Jacques Borel International share increased from Frs. 185 the average price for December 1970, to Frs. 396 in December 1971. On April 28, 1972, it reached Frs. 900.

STRUCTURE

Jacques Borel International, whose main shareholders are the American Group W. R. Grace & Co. and M. Jacques Borel, holds the majority shareholding of several specialised subsidiaries, the main ones being :

—Générale de Restauration en France (98.8% shareholding)

—Ticket-Restaurant (88% shareholding)

—Société Francaise des Drugstores : Drug West (75% shareholding)

—S.E.O.R.I.M. (97% shareholding), engineering hotels and restaurants and S.C.A.P.A. (97% shareholding, the Group's wholesaler).

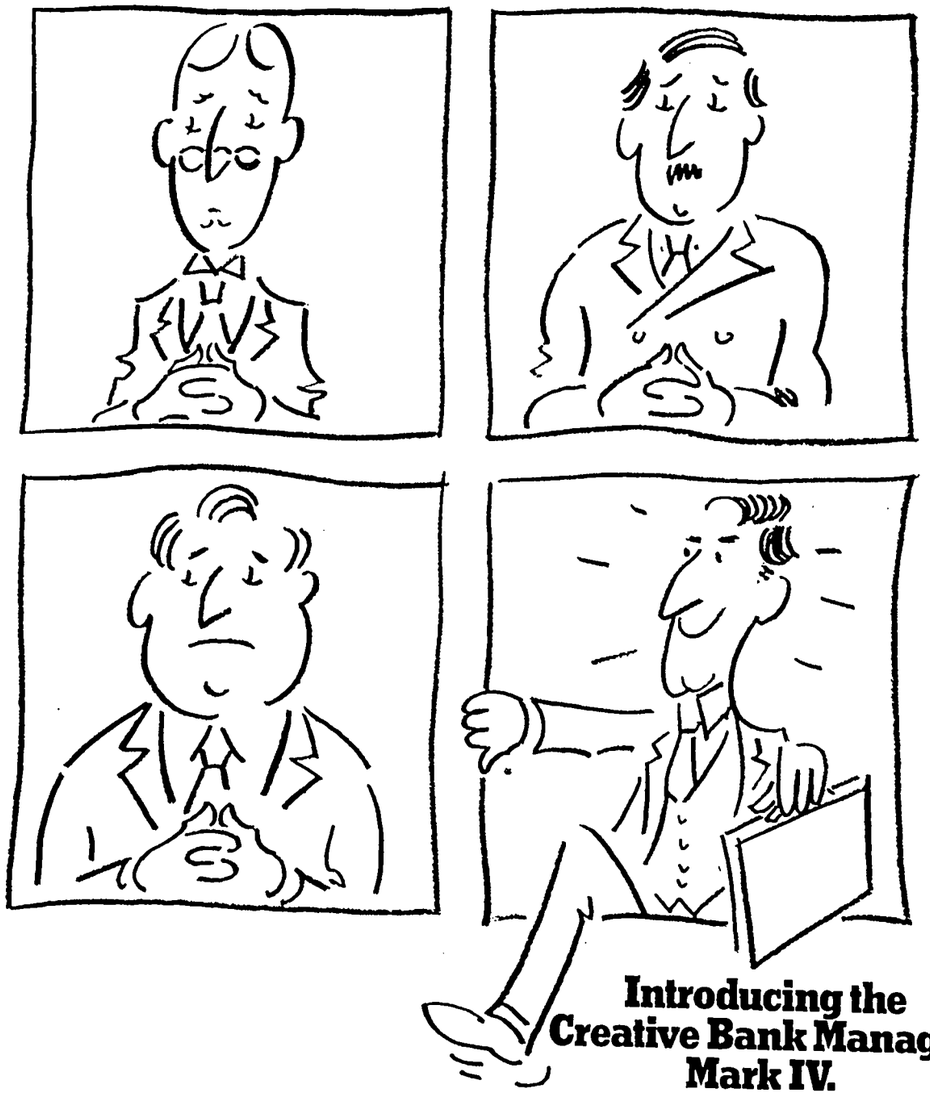
RECENT DEVELOPMENTS

The 1971 and 1972 years marked an important stage in the development of the Company which gained the leading position in France for restaurants on motorways and which set the basis of its foreign development.

In France, Jacques Borel notably gained the licence for most of the restaurants on the Rhône-Alpes (320 Kms), Paris-Poitiers, Paris-Le Mans motorways, with an option in the hotel trade ; in this field, the Group obtained the licence for the hotel at the new Roissy-en France Airport.

Abroad, Jacques Borel International set up :

—in Spain, the "General de Restaurantes" specialised in the management of restaurants and bars on the motorways and the "Société Hotels Jacques Borel."



—in Germany, the "Jacques Borel Gastronomie und Hotel GmbH" (Dusseldorf) which is opening notably a restaurant to seat 200 in the Olympia shopping centre in Munich.

—in Italy, the company took control of "Ge-Me-Az Cusin Alimentari," the second largest company in institutional food business in Continental Europe, whilst in Belgium, sales of another subsidiary of the Group, the "Société Générale Belge de Restauration," developed its sales very rapidly.

The Jacques Borel International Company, which is negotiating in order to acquire other restaurants abroad, estimates that 25% of its sales in 1972 will be made outside France.

FINANCIAL TRANSACTIONS

The Group's investment programme will be financed partly by autofinancing and partly by use of the financial market. Since May 23, 1972, the Company has proceeded to a capital increase from Frs. 40,481,500 to Frs. 45,541,600 by the issue of 50,601 new shares Frs. 100 face value to be subscribed in cash, at Frs. 650 each. At the same date, the shares were quoted on the official list of the Paris Stock Exchange.

Introducing the Creative Bank Manager Mark IV.

Mk I. Prewar model, but fashionable until the early fifties. Chief function : to represent stability in a changing world. Most admired quality : unflappable passivity. Quite a few still about.

Mk II. Fifties model. Not many styling changes, but war service had introduced some modifications under the bonnet. Greater readiness to look forward, less talent for passivity ; but still lack of affinity with the go-getting businessman. Main function : to sit among the mahogany and say 'no' politely.

Mk III. Never became universally available. Barclays development work produced several unorthodox models—and caused anxiety by housing some of them in light, glass-walled branches. These unfortified branches were generally condemned by all except their staff and customers.

The engineers of Barclays' future were seen to be implementing a three point philosophy :

1. all banks need not be the same.

2. initiative in a manager is not a sin.

3. in the successful bank of the future, the manager will need to show inventiveness and imagination on behalf of his customers.

Pundits regarded this philosophy as eccentric and even dangerous.

Mk IV. The current model. Some examples elsewhere, but chiefly concentrated in Barclays. Styling hardly matters ; drive is paramount. Accepts innovation as fashionable, even habitual. Evidently a product of the company which launched Barclaycard ; which was first to lower its lending rate ; which runs one of the most successful banks in America.

Chief function : financial problem-solver, equipped with an enormous range of options and services.

The Barclays fleet consists of Mk III and Mk IV models only, and the Mk IIIs are being converted.

If you or your company are currently dealing with a Mk I or a Mk II, you are almost certainly at the wrong bank. However well-polished the earlier model may be, and however affectionate you may feel about him, he is unlikely to give you the performance you need today.

Could we suggest a test drive ? Call on your nearest Barclays manager—you'll find that he's in business, too.

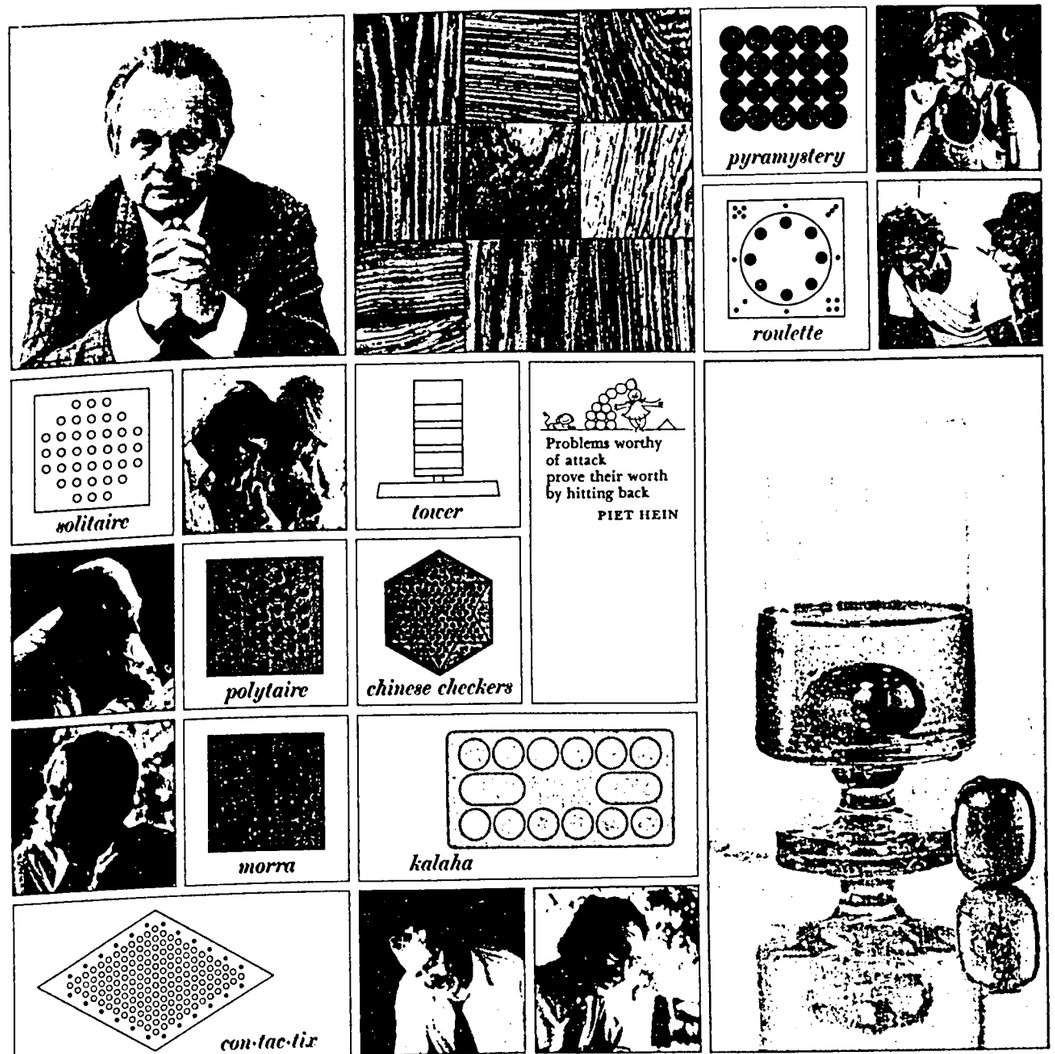
Telecommunication helps people to do lots of things quicker and better



Telecommunication lets people and machines get the very best out of each other. It provides a fast and reliable exchange of information. It promotes the safety of international communication between peoples and places. In fact, to put it quite simply, telecommunication is making our world a better world.
There are 12,000 Philips specialists working today on the telecommunication of tomorrow. They work all over the world, because even national communication problems have to be solved first on a multi-national basis.
Some people refer to Philips as one of the best telecommunication specialists in the world today. We probably are. And we intend to be the best in the business in the world tomorrow.

N.V. Philips' Telecommunicatie Industrie, P.O. Box 32, Hilversum The Netherlands.

Books

The chrysalid years

VIRGINIA WOOLF: A BIOGRAPHY: VOLUME I, 1882-1912
By Quentin Bell.
The Hogarth Press. 247 pages. £3.

Professor Bell's biography of his aunt has been awaited with pleasure but also with anxiety. Brought up in the profoundly influencing atmosphere of Bloomsbury, would he be able to look at his own family objectively? He has succeeded, and this fascinating and admirably written book passes the most difficult test: it stands up to the masterly autobiography by Leonard Woolf, who encouraged him to undertake the task. It is rather short; letters are quoted sparingly. The author does not shrink from personal judgment on people and actions, but disclaims any intention to assess Virginia Woolf's writings. (The question hardly arises in the first volume, by the end of which she was working on "The Voyage Out," but had published nothing but book reviews.) From personal knowledge and unpublished documents Professor Bell gives a far fuller account of her life than anything yet available. This volume covers her first 30 years, up to the point when she agreed to marry Leonard Woolf—"the wisest decision of her life," as Professor Bell says in his closing words.

Virginia Woolf was always close to her friends and her family, most of all to her equally beautiful but totally different sister Vanessa Bell; the two were complementary and devoted to each other. At this stage, before Virginia Stephen's marriage, the book is almost a dual biography of the two sisters. Virginia was immensely intelligent, sensitive, uncertain of her emotions, drifting at times, always aware of her liability to periods of insanity, devoted to writing but always —as readers of "A Writer's Diary" already know—finding it torturingly difficult. In a letter of 1911 she wrote:

> I could not write, all the devils came out—hairy black ones. To be 29 and unmarried—to be a failure—Childless—insane too, no writer.

Vanessa was the opposite in every way: an artist, sensible, sensual, knowing her way and following it—and always an

Virginia Woolf: late developer

immense support to her sister.

The first stage is the best known to the public, thanks to "To the Lighthouse": life with their self-tortured and torturing father. His death was a relief, and the two sisters and their brothers sets up the celebrated menage in Bloomsbury, where they got to know Thoby Stephen's intellectual friends from Cambridge. Thereafter, the story of the set was one of successive liberations: from their more stuffy relatives; from many contemporary conventions; from restrictions first on what one could say and later on what one could do. To understand this last, one has to know who was in love with whom as what time: this Professor Bell sets out with an admirable mixture of frankness and discretion.

In many respects, and most in the field of action, Virginia Stephen stood apart from the rest. Professor Bell quotes her as saying, later on, that she was a "sexual coward," and he gives reasons for this. Emotionally she was a late developer, and it needed Leonard Woolf's return from Ceylon to break the spell. Their marriage changed everything, and Professor Bell is right to break the work in half at this point.

The story so far gives a curious double impression. The background is of her friends and family, immensely vigorous, original, moving rapidly from stage to stage of development and liberation; while she, though one of the most brilliant and exciting of them all, was emotionally a chrysalis and, as a writer, still at the first stage of development, with no novel yet completed. One waits with excitement for the second volume, due in the autumn.

The man, not the legend

NASSER
By Anthony Nutting.
Constable. 492 pages. £3.95.

You have got to be keen to welcome another book on Nasser. Have courage: Sir Anthony Nutting's warts-and-all portrait of the Arab hero whose mistakes were as catastrophic as his achievements were monumental is by no means the same old stuff dredged up again. Or at least a lot of it isn't. Avoiding stodginess (not a footnote to be seen) without falling into the opposite peril of trivialisation, Sir Anthony bases his account on his own knowledge of Nasser and on the opinions and memories of Nasser's closest associates. And the picture that emerges makes the paradoxes of the Nasser legend even more strange and curious.

The book is written within the framework of familiar conclusions: Nasser's overwhelming contribution to Egypt and to the Arab world was the restoration of a sense of dignity and national pride. But why, one wonders, was it Gamal Abdul Nasser's role to bring so inestimable a gift? He knew nothing of Arab countries or charateristics outside Egypt: he had never even been to Syria when he allowed a group of Syrian officers to unite their country with his, and his subsequent heavy-handedness showed that he learnt little when he did go. When he committed his army to the Yemeni revolutionaries, he read up on the country that was to become what he called his Vietnam by borrowing an out-of-date economic report from the files of the American embassy.

Ignorance led to failure and failure fed the suspicion that was Nasser's "besetting sin and principal weakness." Sir Anthony presents a sharp portrait of him in the months following Syria's breakaway in 1961: deeply hurt, suspecting everybody, quarrelling with old friends who hinted their criticism, he withdrew into "a protective cocoon of yesmen." It was this moody, bitter man, involved in virulent disputes with

Nutting and friend, 1954

almost every other Arab ruler, and in the middle of one of his tempestuous rows with Khrushchev, who sought friends among the non-aligned leaders of Africa and Asia. But one by one these friendships broke or the non-aligned were swept away.

Sir Anthony Nutting provides illuminating background to present Russian-Egyptian relations by his description of the rough passage of earlier years. Then, as now, the Egyptians asked for more and were rebuffed. There is the incident of Khrushchev's telegram to Nasser during the Suez-Sinai affair in 1956: this told Nasser that Russia could do nothing to help him and advised him to make peace as quickly as possible with Britain and France. Fearing the effect of this telegram on the morale of those around him (his commander-in-chief, Field-Marshal Amer, was already, apparently, in a state of total nervous collapse), Nasser hid it in his safe, saying nothing to anyone. He revealed it only in 1960 as an answer to the Syrians who were advocating an immediate attack on Israel and arguing that Russia would help them out.

The author takes the generally accepted point of view that Nasser had no intention of fighting Israel when he allowed himself to be trapped by the events of May, 1967. He goes further by arguing, without excusing Nasser his folly, that Israel had deliberately set the trap. Working from the assumption that activists in the Israeli government and army were determined on a long-planned showdown with Nasser, he argues that everything, including deliberate leaks to the Russians about Israel's plans to invade Syria, was part of a huge man-trap into which Nasser well and truly blundered.

Talking to Nasser 36 hours before the six-day war broke over his head, Anthony Nutting found him in a dream world, treating 1967 as if it were 1956 all over again and believing that if he kept his nerve nothing would be lost. Everything was lost. Except, that is, Nasser's own legend. But this admirable book is about the man, not the legend.

Harsh hindsight

VICTORS' JUSTICE
By Richard H. Minear.
Princeton University Press; London: Oxford University Press. 245 pages. £3.75.

Mr Minear's object is to re-examine the proceedings of the International Military Tribunal which met in Tokyo between 1946 and 1948 and tried 28 of Japan's wartime leaders. His concern is to "demolish the credibility of the Tokyo trial and its verdict" on two grounds: he exposes the shaky basis in international law on which its findings rested and its procedural flaws; he upholds on historical grounds the case which the tribunal dismissed—that self-defence played an important role in Japan's actions throughout the prewar period. While denying that he holds a brief for General Tojo and his fellow-defendants, he claims to "hold a brief for justice, even to enemies" and insists that Tokyo justice was "victors' justice." On a broader plane, he concludes that we should henceforth reject the idea of trials after war, except for conventional war crimes. These arguments are presented clearly, incisively and persuasively.

It is when Mr Minear professes to be challenging the prevailing image of the Tokyo trial that he is less plausible. He writes for an American audience and it may be that Americans have viewed the Tokyo trial less critically than those in Japan or abroad. Certainly in Britain it has long been accepted as victors' justice. It was in Britain that the petition in favour of foreign minister Shigemitsu secured its major backing from those who were convinced that a glaring injustice had been done. Perhaps British opinion was also swayed by the dissenting judgment of Justice Pal which was so damaging to the findings of the tribunal as a whole. This book is, therefore, likely to be regarded here as less novel and less iconoclastic than the claims made for it would suggest.

While the Tokyo trial had many shortcomings, some of the author's complaints are harsh. He emphasises that the judges set out to present in their 1053-page "Findings of Fact" a version of prewar Japanese history and that their account has since been considerably eroded by historians. Certainly much material has become available since 1948 which makes substantial revision of the judges' version necessary. But it has to be said in defence of the judges that they held their hearings in an atmosphere of great anti-Japanese animus and adopted an interpretation which seemed to fit the evidence and was widely accepted at the time. A truer picture of the Tokyo tribunal would have emerged if the book had compared its workings with those of the local war crimes tribunals which were simultaneously operating in territories like China and the Philippines, which had been occupied by Japan. There is no doubt that the Tokyo tribunal was more judicial and judicious. But, should we become too smug over the standards of allied justice, Mr Minear's book is a valuable corrective.

Yale talk

AFTERNOON ON THE POTOMAC?
By Roy Jenkins.
Yale University Press. 60 pages. £1.50.

It can be dangerous for politicians, even the most intelligent of them, to attempt great brevity. This tiny volume consists of three lectures delivered by Mr Jenkins at Yale last December, consisting respectively of 17, 18 and 16 rather small pages. Their theme is the relationship between economic power and political power; their argument appears to be that the United States has been experiencing at the beginning of the 1970s what Britain experienced in the 1960s—"the British crisis, writ large, and in a still more acute form."

This is a fairly considerable over-simplification. Mr Jenkins probably exaggerates the importance of Britain's economic weakness as a cause of the British retraction towards Europe at the end of the 1960s. The cost of British military operations outside Europe never became really unsupportable; it was a marginal extra burden upon an economy that had gone badly wrong for other reasons, and it could have been sustained without great difficulty if those other reasons had been put right. The real cause of the change of British policy is to be found elsewhere, in the realm of political will. The result is that when Mr Jenkins tries to transfer his supposed British pattern to the American scene he runs into difficulties.

His account of the likely new relationship between the dollar and the world's other currencies after last August's crisis is, as might be expected, impeccable. It is when he turns from the monetary relationship to the military and political one that he suddenly goes curiously out of focus. That the American position in the world is going to be different from what it was in the 1950s and early 1960s is now part of the conventional wisdom. But then that is at least as much a result of the growth of Russian and Chinese power, which is an autonomous development, as it is of America's economic problems. And Mr Jenkins has little to offer on the shape of the new political relationship between America and the rest of us except the rather unhelpful phrase "primus inter pares" and a rhetorical flourish about the American tent no longer being sited quite "on the very top of the highest hill." In fact, the political relationship will depend as much on that matter of will as on economic considerations. It could still be quite early afternoon on the Potomac.

Jenkins: wrong time of day?

Fairly filial

TOLSTOY MY FATHER: REMINISCENCES
By Ilya Tolstoy.
Peter Owen. 322 pages. £3.50.

It is tempting, but perhaps unfair, to compare Maxim Gorky's brilliant memoir of Tolstoy with this loving but also rather too blandly written book of reminiscences by one of Tolstoy's sons. Gorky, who saw a good deal of Tolstoy in 1901 and 1902, was clearly bowled over by this "cruel old rationalist" who nevertheless "resembled God." He did not always enjoy his talks with the old wizard who talked so profoundly and well on anything, from dreams to French literature and the Jews, and liked best of all talking about peasants, women

Christopher Tugendhat

THE MULTINATIONALS

Winner of a 1972 McKinsey Foundation Book Award for a book which 'most clearly merits the attention of top management.'

'His main purpose has been to describe why the multinationals emerged and how they function. His informative, fair and very readable book does this most successfully.' *Colin Jones, Financial Times*
'An interesting, indeed remarkable book on a question of increasing urgency.' *Thomas Balogh, New Statesman* £3.25

Graham Turner

Winner of the 1972 John Player Award for British Management Journalism

Author of THE LEYLAND PAPERS

'Graham Turner . . . has done well in unravelling the intricacies and the sheer brutality of the boardroom revolutions which led up to the creation of the British Leyland Motor Corporation.' *George Oliver, The Economist*
'No enterprising, ambitious man . . . can afford to miss it.' *Lord Robens, Spectator* £2.75

EYRE & SPOTTISWOODE

and God. But he could talk to Tolstoy as an equal, entering the old man's mind; the son, Ilya, is always at a distance and somehow remains outside.

His reminiscences were first published in Russian in 1913, shortly after Tolstoy's dramatic and still puzzling death at a railway station. They give a nicely rounded portrait of the family, and of Tolstoy himself in his family context. The Tolstoys used to play a game called "postbox" in their family home in Yasnaya Polyana. During the week, every member of the family would drop unsigned bits of poetry, notes and jottings into a box standing by the grandfather clock. The box was opened on Sundays; contributions were read aloud, without attribution to authors. But everybody must have known immediately who wrote this pretty little riddle: "Why is a sanitary barrel like a society lady?—Both are taken out at night."

No much is left to the sons of the great except the opportunity of having the last word. Ilya makes it pretty clear how tricky it was to live with a man like Tolstoy, torn by his own inner problems and doubts—artistic, religious, moral and philosophical. The last chapters on the end of Tolstoy's life are very good, and rise to the drama of the occasion. This may not be the greatest book on Tolstoy, but as an affectionate and truthful family portrait of a giant it remains well worth reading.

Corporate Goliath

AMERICA, INC.
By Morton Mintz and Jerry S. Cohen.
Pitman. 444 pages. £3.50.

This is a study of the gigantic industrial and financial complex that "owns and operates the United States"—in the opinion of the authors, one a well-known investigative reporter, the other an expert in anti-trust matters. It is also a study of the factors that underlie at least some of the frustrations that are now being expressed politically in votes for Senator McGovern and Governor Wallace and have underlain similar populist movements in the past: the resentment of the little man against bigness, against centralisation, against lack of personal contact and against the power of money, whether in government or in business.

The story is not a new one; the book itself is evidence of that since it consists largely of case studies of the ramifications of corporate power and corporate irresponsibility, as told in evidence before congressional hearings or in press reports. These scattered sources are brought together into a surprisingly entertaining book, although a very one-sided one.

What is new is the extent to which the concentration of American industry in a few hands had been increased by the conglomerate mergers, uniting in one huge corporation a cross-section of activities that are entirely unrelated to each other. This concentration is increased by the financial domination exercised by big institutional shareholders, notably the banks, through their trust funds. What is also new is the growing public awareness of all this, fostered by Mr Ralph Nader with his attacks on the automobile manufacturers, on the food industry, on the government regulatory agencies and on practically every other manifestation of the establishment. The impact of Mr Nader, and of the many groups linked with him, on the Congress, the Administration and the industrial giants themselves is already far from negligible. But it is only a tiny foretaste of what the American business community is likely to go through should Mr McGovern be elected President next November.

Pot-pourri

USES OF MARIJUANA
By Solomon H. Snyder.
Oxford University Press. 127 pages. £2.70.

It is worth noting that Dr Snyder, who is professor of psychiatry and of pharmacology at the Johns Hopkins school of medicine, calls his book "Uses of Marijuana" and does not prejudge the issue by adding "and Abuses." This is a sensible, completely objective and concise account of marijuana, covering the history of its use, its effects on behaviour as measured by careful experiments, its alleged dangers, present research into THC—tetrahydrocannabinol, its psychoactive substance which has been isolated and synthesised—and the "legal turmoil" over the drug. The book is very well written, with flashes of humour.

Most of Professor Snyder's account is restricted to the variety of cannabis that is used—and widely used—in the United States. But the uninformed will find in this book a useful summary of all the varieties—marijuana, dagga, kif, bhang, ganja, charas and hashish—of how they are prepared and consumed and of their comparative potency. To

Some people also smoke pot

make the last two the resin, which contains almost all the THC in the hemp plant (*Cannabis sativa*), is scraped from the top leaves and pressed into blocks. They are, therefore, much more powerful than marijuana, which is prepared from the leaves and stem of the plant.

Much of the information has, of course, been published before, in official reports and scientific papers—though not so readably and without the excellent photographs. A recent example was the report published in January, 1969, of Britain's advisory committee on drug dependence, which was violently condemned by both the then home secretary and his shadow. Perhaps they, and others who shared their views, might change their minds on reading Professor Snyder's account of American research into the effects of marijuana. He even suggests that pharmacological research into THC may yield a useful drug for some conditions, so that after a generation of near-hysteria cannabis may win back its ancient medicinal use.

Phelps's law

INFLATION POLICY AND UNEMPLOYMENT THEORY
By Edmund S. Phelps.
Macmillan. 350 pages. £5.25.

The Phillips curve, showing a relationship between a greater rate of inflation and a lower level of unemployment (and vice versa), was originally put forward by its inventor as an empirical generalisation. It then

gradually acquired the status of a law in the minds of many economists until they began to notice that stagflation had made it look silly. But a number of economic theorists, led by Professor Phelps, have recently developed a more sophisticated approach. He suggests, as a rough approximation, that when the rate of inflation matches people's expectations there will be equilibrium, and that the equilibrium level of unemployment will be the same whatever that rate of inflation is. But in the short run, if the actual rate of inflation is different from what was expected, there will be a temporary, disequilibrium, Phillips curve type of relationship. Thus unemployment will be low when the actual rate of inflation exceeds the expected rate and vice versa. It is the difference between them which matters, not the level of either regarded separately.

The foundations of this theory are presented in the first part of the book. They involve getting away from the idea that wages would instantaneously adjust so as to equate supply and demand even in labour markets without collective bargaining. Markets would behave like that only if everybody in them knew everything about what was going on in them. But ignorance requires people to search for information and search takes time. Thus a theory of frictional unemployment and of changes in wages and unemployment as a function of the degree of disequilibrium is built up. It is an interesting and worthwhile development.

Professor Phelps's argument that all the social and organisational factors in wage determination leave relatively unaffected the nature of the relationship between unexpected inflation and unemployment, despite their obvious effects on the level of unemployment, is less satisfactory. His discussion may fit American circumstances but seems very remote from the hard realities of the British wage scene.

The next third of the book is described as a cost-benefit analysis of inflation. It consistently and carefully distinguishes expected from unanticipated inflation, and "efficiency" effects from distributional effects. But it is an essay rather than a manual, despite the author's hope of "having an early policy impact." The central point is that, all things considered, zero inflation may not be best.

The last third of the book is unavoidably the most highbrow and there can be few central bankers who will master it. It is clear, from what was said earlier about this being the economics of disequilibrium and changes through time, that the nature of optimal inflation policy which forms the subject is an exercise in control theory. The twin difficulties which arise from the author's attempt to use prose rather than mathematics and from the complexity of a modern economy make the going rather hard. At one point, six whole pages are required to spell out the nature and simplifications of an "illustrative" model. Things get a little easier again in the chapter on international ramifications right at the end.

Euromix

THE EUROPEANS: WHO ARE WE?
By Richard Mayne.
Weidenfeld and Nicolson. 206 pages. £2.

Dr Richard Mayne is the most readable of Euromaths—learned, curious about everything and above all tolerant about the way the European debate keeps shifting its ground. He is also, as a writer of books, pamphlets and articles, too prolific for his own good. Earlier efforts by Dr Mayne have been among the best on the subject. But this book is something of a bran tub of Europeanism into which a multitude of European bits and pieces have been put for visitors to dig out. The book starts by defining for Europeans their own prehistoric identity—how the land mass came to be where it is—followed by a long exercise into the realms of ethnography and anthropology as they concern Europeans. It is not often that such subjects are discussed as easily and humorously. But by way of expeditions to San Marino, Liechtenstein and Monte Carlo the discussion finally winds its way to the role of the common market, and, in particular, of the Brussels Commission, in all this. This institution is discussed sympathetically; the author draws on his own experiences at one time as one of its more expert members. But one turns the last page not terribly sure how or why one has reached it.

Eurolengo: The Language for Europe by Leslie Jones (Oriel Press, £1). Yes, it's another esperanto, with every "eurolengo" word copyrighted in advance. "Ferar un apel de telefon is tres fasil." If it were a bit funnier it might make a good spoof. But it is not easy to see earnest businessmen learning the 50 lessons and word lists of Mr Jones's book: they would spend the time better learning French.

International Interest Rate War
Eric Chalmers
This book seeks to allocate blame for the rising level of international rates during the sixties by an assessment of the general economic and monetary policies pursued in Britain, America and West Germany.
£4.95

Research and Innovation in the Modern Corporation
Edwin Mansfield, John Rapoport, Jerome Schnee, Samuel Wagner and Michael Hamburger
For a decade and a half, economists have been engaged in an intensive effort to expand our knowledge of how new processes and products are invented, commercialised, and accepted. This volume adds significantly to our understanding of the economic effects of technological change, placing most emphasis on the individual firm and its attempt to develop and apply new technology.
£4.95

Inflation Policy and Unemployment Theory
Edmund S. Phelps
This is the first monograph to take a cost-benefit approach to monetary planning. It views a reduction of inflation by monetary means as a social investment and argues that such an investment ought to be subjected to the cost-benefit test. The analysis that follows integrates the modern microtheory of unemployment into the theory of optimal inflation.
£5.25

Macmillan

Business Brief

Amtrak: on the subsidy trail

Passenger rail services in the United States are hopelessly in the red, but on Wednesday Congress finally authorised further massive financial support. The railways will now almost certainly get the proposed $225m in federal grants and an increase to $200m in their government-guaranteed borrowing ceiling—even though there is little chance that the loans will ever be repaid.

The funds will go to Amtrak—official title, the "National Passenger Railroad Corporation"—which a year ago took over inter-city passenger services from 20 different railroad companies. Amtrak was given a generous financial send-off with a $40m federal grant, a $100m federally guaranteed loan, and $200m in payments from railroad companies (who were glad to get rid of their passenger trains and concentrate on more profitable freight traffic).

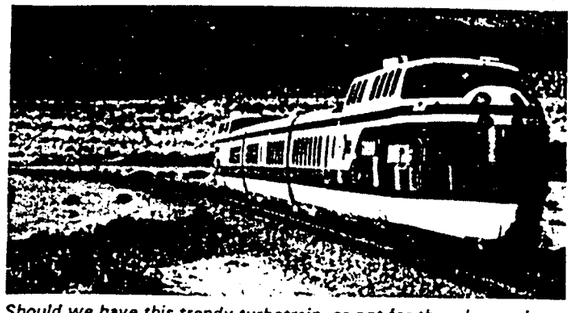
After its initial backing, Amtrak was supposed to become self-supporting. But last autumn, its president, Mr Roger Lewis, a former head of General Dynamics, asked for another $170m to keep it going until mid-1973. The House of Representatives approved this. The Senate went one better. Feeling benevolent towards public transport, it voted $270m, which may be the first time a part-nationalised industry got a bigger subsidy than it asked for. The $225m now being proposed is a compromise settlement.

There are many reasons why the Administration wants to keep passenger trains running. A fifth of the population of the United States is concentrated in the north-east on 2% of the total land area. In this region, road traffic between towns is expected to rise 65% during the 1970s. There is resistance from environmentalists to more road spending and to building new airports, which would not have to be faced if the extra passengers all went by rail. A report on the transport needs of the region, published last autumn after almost a decade of research, suggested faster trains as the best way to meet the demand.

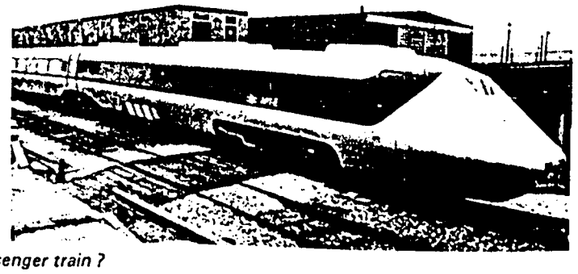
But the railroads' present share of passenger traffic is minute: somewhere between 1% and 2% of passenger-miles. Although Europe and Japan are optimistic about the prospects for long-distance rail travel, their estimates are not really relevant to much of the United States. Even in Europe, rail enthusiasts do not expect to compete significantly with the airlines beyond distances of 400 miles; while, for distances below that, they are looking to trains much faster than those in use today, involving large capital outlays on both trains and track.

In terms of American distances, 400 miles is a low limit, except in a few areas like the north-east corridor. Even Boston to Washington is 443 miles. The American tracks were laid at a time when people travelled from one city centre to another. Now much of the traffic wants to go from one suburb to another. Compared with air travel, rail is too slow. Compared with private car or bus, it is too inflexible and too expensive; where it is competing with a good freeway system, it is also often too slow.

All these factors contributed to American rail passenger services' thundering loss of $200m in their last year of private ownership. The year before that, losses had been an even more catastrophic $500m. Only one of the services taken over by Amtrak was making money—the 150 mph Metroliner between New York and Washington. In its first year Amtrak has cut losses to $150m, and expects to knock off another $25m this year. But in the next two years the new company's expenses will still be double its operating revenue. On a number of routes Amtrak is losing several times what it is collecting in fares. Half the trains run by its predecessors have already been axed. Further cuts will now be politically difficult in view of the continued congressional subsidy. Meanwhile, as the bus industry is quick to point out, it would sometimes be cheaper to close the rail services down and give passengers a free bus ticket.



Congress thinks the management of passenger trains in private hands has been so poor that it is worth giving a nearly nationalised system a chance. Amtrak is trying to justify this confidence in the following ways:



● It is cutting costs. One major saving has been to consolidate reservation systems and terminals. The five terminals in Chicago, costing $55m, are being cut to one. However, rationalisation of the train services themselves is hampered by lack of information on the users. Also, many items of expenditure are outside Amtrak's control, since it is still hiring personnel and equipment from private railroad companies.

● It is adopting a more flexible pricing policy. Amtrak has been given pricing freedom although American trains normally operate under a panoply of price controls which are a hangover from the nineteenth century when the railroads had a transport monopoly. In one experiment, Amtrak cut the rail fare from New York to Boston to make it comparable with bus fares. This led to a jump of 75% in traffic over the previous month and 20% over the previous year. The bus companies resent this policy; they argue that subsidies give the railroads an unfair advantage. But to Amtrak it makes commercial sense to distinguish between different classes of passenger, as the airlines are trying to do. Last month Amtrak announced a major revamp of fares, with prices generally reduced in the east and raised in the west.

● It is trying to expand its package holiday business. Leisure travellers on the airlines are increasing faster than business customers: these people could be sensitive to the right pricing policy by railroads.

● It is trying to improve on cleanliness, courtesy and information services—which its complaints mail shows to be its biggest sticking points with its customers. Morale of both passengers and crew has been improved by a $6m introduction of new uniforms, hot pants for girls and striped trousers for men. Small luxuries like linen towels and flowers in some dining cars help provide the personal service the airlines have already capitalised on.

Should we have this trendy turbotrain, or opt for the advanced passenger train?

They said it wasn't going to be like this any more

● Changes in booking systems are helping customers. Previously there were virtually no interchange facilities between airlines and railroads, so it was difficult for a passenger to switch to rail for a particularly beautiful stretch of country. Booking a journey which involved several railroad companies could be very complicated. There were 150 different timetables covering what are now the Amtrak services. In Amtrak's single timetable the number of symbols has been cut from 88 in a typical train schedule to under 10. There used not even to be credit card facilities for rail travel; this was an extraordinary omission in a country where cash has almost been superseded for large payments. Arrangements with car rental companies are also being improved.

● Amtrak is trying to cash in on people's romantic nostalgia for the railways by keeping on some of the services which gave American railways a great reputation throughout the world. There is the Empire Builder from Chicago to Seattle through mountains and snow, with wildlife along the track; the Coast Daylight and Coast Starlight between Los Angeles and San Francisco, running between the mountains and the sea; the Super Chief from Chicago to Los Angeles (which almost breaks even) and the Broadway Limited to New York.

Trains in the west tend to be in better shape than those in the east, largely because the carriers were less run down financially, and had been better maintained. The service from Boston to New York used until recently to operate with 35-year-old carriages. The aim now is to transfer under-utilised western equipment to the east, including the famous dome cars with their panoramic views.

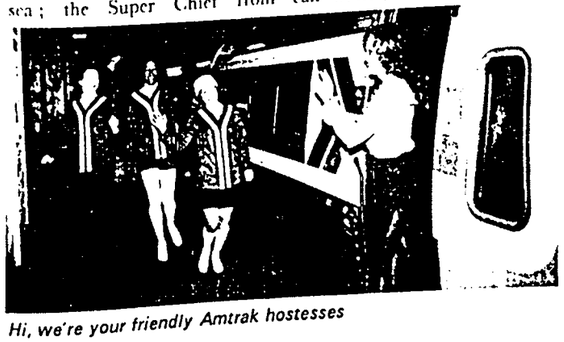
● Amtrak is going for some quite bold experiments with a greater variety of services and furnishing on rail cars, in some ways returning to the grand railway era of luxury lounges. The first refurbished cars are now out of the workshops; they are being introduced on the Florida Special, with an eye on the expanding leisure market, especially to the new Disneyland. The journey includes complimentary champagne, coffee, and orange juice, colour television, and two types of film. Another trial balloon is the luxury couchette with its own shower, on the lines of a hotel bedroom. This is priced to compete with an airline-ticket-plus-hotel.

Success will depend on the reliability of service. American trains have a bad record, especially in the cold American winter, but Amtrak seems to be getting more punctual.

Since Amtrak had only a rough idea of how much dead wood it was taking on a year ago, it can hardly be blamed for going back to Congress so soon for more money. Even when it has got its new handout, three major worries will remain unresolved.

Three big problems

One is its relationship with the railroads whose track it is using. When Amtrak was put together, this question had to be dealt with in a hurry, without properly sorting out the enormous accounting problems of allocating joint track costs. Even British Rail is still fraught with problems on this score; it has never, for example, felt able to break down its profit/loss between passengers and freight. For a railroad like Amtrak, which does not own a single mile of rail, the problems are that much worse.



Amtrak's arrangements with the railroads are recognised as being unsatisfactory to all parties. They must be renegotiated by June, 1973, and some agreement reached on the split between fixed and variable costs. Although there are some hopeful signs (a compromise has just been struck with Penn Central), most railroads are probably losing money on the present deal. This leaves them with no incentive to provide Amtrak with an efficient service. Metroliner cannot achieve its maximum speed on much of the track that it is using. Yet if Amtrak pays more to the railroads, it will slide further in the red.

The second issue is how to increase train speeds. This is vital if they are to attract more customers. Metroliner's traffic has been rising by 30% a year, so there is a potential market.

Should the United States develop the Metroliner and the 170 mph turbotrain (which has been given a lot of publicity, but of which only two have been built so far, partly because they cannot reach their maximum speeds on American track)? Or should it develop its own version of the 155 mph British Rail "advanced passenger train," with its improved cornering and braking properties on existing track? The "advanced passenger train" would need redesigning for the United States, where safety regulations are more stringent and rail cars wider.

The money now being agreed by Congress will provide funds for investment. But faster speeds will make the conflict of interest between passengers and freight even bigger: schedules will then have to be arranged to keep freight trains out of the passenger trains' way. Depressingly, some experts think speeds of 250-300 mph will be needed to make surface travel over distances of more than 400 miles really competitive with air. Technologically, that is several years and billions of dollars away.

The third big issue is how many routes Amtrak should maintain. If he has to keep loss-making services going for social reasons, Amtrak's president wants direct subsidies for them—like British Rail gets. But he should beware of having too many. The Americans have already followed the European precedent by dropping their objections to public ownership and subsidies for the railways. But they may be in danger of allowing nostalgia for the good old railroads to go too far in diverting passengers from buses to trains. In the long run, buses are almost certainly cheaper and more flexible, and can cope with higher traffic densities. The experimental bus now being evolved to run on railway tracks may be one promising hybrid for the future.

Hi, we're your friendly Amtrak hostesses

If it makes staff happier, why doesn't everyone use it?

People get set in their ways. So it's not surprising some staff are worried at the thought of changing to metric. But experience shows that most staff who have changed prefer the new system.

The metric system is simple. That's why so many companies, big and small, are making the change. Already much of Britain's engineering production is metric.

Which is good sense when you consider that 86% of world trade is between countries that have chosen the metric system.

Metric working has already simplified things like design, production, paperwork and storage for many British firms.

If you are responsible for the future of your company start thinking about metrication.

Many are already benefiting from the changeover.

Business is ten times simpler in metric.

Please place my company on your mailing list for regular publications and send me "Going Metric— Check List for Managers."

Red faces in the docks

Although the dockers voted officially on Wednesday to postpone their threatened strike for six weeks, the militants may still close several ports.

The discussion was quiet and orderly at Transport House on Wednesday, until the motion was passed 49-32 in favour of a six-week postponement of the national dock strike. Then 100 militants swarmed out from the Marquis of Granby pub across the road, joined the men waiting outside the meeting, and poured out a barrage of abuse against the official union leaders. These militants are no fringe element in the docks. In port after port they have had unanimous support at mass meetings for container blacking. In London, Liverpool, Southampton, Manchester and Hull they have won votes in favour of a strike from next Monday. This will probably be endorsed by the partly marxist National Shop Stewards Committee, when meeting in Hull on Saturday.

The heat generated after Wednesday's vote is rarely seen in modern labour relations. For almost half an hour the union leaders sat silent on the platform in front of militants baying for their blood. There were threats to bomb Transport House and to burn the houses of Mr Jack Jones, general secretary of the Transport and General Workers' Union, and Mr Tim O'Leary, chief of the TGWU docks section. Between the many obscenities the men shouted that endless committees had failed to find them jobs ; the employers had failed to honour their promises ; jobs had been taken from under their noses by property developers ; some of their members had been out of work for years, and they were not going to wait another six weeks. The leaders were called scabs and leeches, words normally reserved by militant dockers to describe traitors to the cause. There were threats of physical violence. After two hours there were still some militants in the building, notably two smooth young men in leather jackets advocating " true socialism " as the remedy.

The Government has been bringing pressure on the employers to buy the dockers off. It has some power, because the Minister for Transport Industries, Mr John Peyton, has a say in decisions on investment in the ports. Negotiations have largely switched from the usual employer-docker council, the National Joint Council, to the emergency committee under the joint chairmanship of Lord Aldington, chairman of the Port of London Authority, who has the Government's ear, and Mr Jones. Some of the employers feel their hands are being forced by this committee. Mr Jones is likely to make public any offer made to him by those employers who are in the committee, and so put the rest on the spot. They feel there is a danger of offering too much too soon, as British Rail did with the railwaymen. Their fear is deepened by experience. What they offer Mr Jones and Mr O'Leary tends to be expanded in the retelling to the dockers, which again commits them further than they

They had strong views . . .

about Tim O'Leary

want. There have been some threats of resignation among the employers.

The Aldington-Jones committee has been working hard to find solutions. Monday evening's session lasted seven hours. As a result, improved terms were offered to the dockers at Tuesday's meeting of the National Joint Council. They did not seem exorbitant: they would cost the employers an extra £1m a year at the very most. Beside the extra week's holiday and increased fallback pay already offered to the men, there were two extra enticements: another £500 severance pay to those on the temporarily unattached register who voluntarily leave the docks making the maximum £2,830 ; and a £50-a-head disturbance payment to the men on the register. Severance pay has been eagerly taken up by quite large numbers of London dockers.

The dockers were also told that the committee unanimously accepts that those dockers now on the unattached register—where they would get £23 a week under the terms now offered by the employers—should be offered work if they want it. This is a bold decision, which may be hard to translate into practice. The decision lies in the committee's charitable view—charitable to dockers, that is—of the conflicting reports about what each side has agreed in years gone by.

The dockers have appeared to accept the inevitability of new technology and a rundown of jobs ; they have also accepted all kinds of individual container contracts, including a deal with the roal hauliers to let them stuff containers. At the same time they believe they extracted promises from the employers that every docker would have a job in the industry for life, if he wanted it. Whether getting £23 a week for doing nothing, and being able to take other work outside the docks as well, counts as a job is a matter of heated debate. The dockers have broken so many promises themselves that the employers can be forgiven for occasionally bending the rules. They have, in any case, gone to considerable lengths to make jobs where none exist, and have recently been carrying 14 per cent more men than they needed, on full pay—in addition to those temporarily unattached to any employer, and drawing fallback pay.

The Labour government allowed the threat of nationalisation to drag on right through its term of office. This weakened management at the docks. The present Government failed to appreciate, on taking office, just how far militancy had thrived on the confusion. It failed to make the simmering labour problems in the docks its first priority ; it concentrated on financial reorganisation, very successfully, as the National Ports Council annual report, published on Thursday, shows.

Meanwhile the militants have been gaining power. Decasualisation of port labour, which was supposed to give dockers a new sense of responsibility, played into the militants' hands. It created the need for shop stewards, into which positions the militants moved largely unopposed. At the same time Mr Jones allowed the TGWU's rule that communists could not hold office to be abolished.

Container blacking shows how easily the dockers can be whipped up into a storm about nothing, because the number of container-stuffing jobs that the dockers could conceivably do is small. On Monday, in the first action of its kind, one group of union men won an order from the National Industrial Relations Court to stop dockers picketing their container depot at Chobham Farm in east London. This is the largest depot of its kind in Europe, but apparently only 63 of its jobs could be done by dockers. This has triggered off a fresh row as the pickets refused to obey the injunction or turn up at the NIRC (see page 75). The total number of container-stuffing jobs that might conceivably be done by dockers in the country as a whole is only a few hundred. But 20,000 docker jobs are likely to disappear by the end of the decade.

One ironic twist is that containers have been as big a financial disaster to shipping companies as to dockers, and have even hurt the finances of some of the big ports. The shipping lines and ports are still investing in containers, and have orders for them stretching several years ahead. Containers have failed to lower transport costs ; all the savings have been given away in wages. But they have kept the rate of inflation below what it would otherwise have been. There may be a move to other methods of modernising cargo-handling. The use of pallets, which is favoured by the Scandinavians, is one which produces big savings over conventional methods without causing such disruption to employment.

Corporation tax takeovers

Unless the Government changes corporation tax while there is still time, it could find that it has triggered a spate of takeovers for that most undesirable of all reasons, tax avoidance

Consolidated Gold Fields is bidding for the Amey Group. British-American Tobacco and Imperial Tobacco are reputed to be discussing possible merger terms. The hoary old rumour of Rio Tinto-Zinc's interest in English China Clays is going the rounds again. And why ? Largely because each of the bidders would, if successful, be in a position to make a big saving under the new corporation tax. Each of them has an incentive to escape from a pattern where the lion's share of its income comes from abroad. The Government could and should alter this silly incentive when the relevant clauses of the Finance Bill come up in committee during the next few weeks. Takeovers motivated by tax avoidance are the least desirable of all. This accidental quirk of an otherwise greatly improved form of corporation tax could produce some bizarre couplings.

Where the nonsense gets in

Treatment of £100 of profit under the new corporation tax

	Profit earned in Britain		Profit earned abroad	
	Dividend	Retention	Dividend	Retention
British corporation tax, 50%	£28½	£50	—	—
Foreign tax, eg 55%	—	—	£55	£55
Gross dividend :	£71½	—	£45	—
of which—ACT	£21½	—	£13½	—
—net dividend	£50	—	£31½	—
Retention	—	£50	—	£45

The reason is simple. Under the new arrangements, pre-tax profits from abroad will always be worth more to a company if they can be ploughed back into the business than if they have to be paid out in dividends. The ideal will become a business that earns enough in the British market to cover dividends and enough from overseas to pay for its new investment. If the ratio tips in a way that leaves you getting too little from Britain, there is a powerful motive to go out and buy any business making the right size of profits to cover your dividends and its own. The stock market has begun to worry about a wave of artificial takeovers in the next couple of years. So should the Government. There would probably be nothing basically objectionable if Shell, or any other oil company, were to take over Tesco or Grand Metropolitan Hotels ; but there would be nothing particularly desirable about it either.

Mr Barber rightly decided to change corporation tax so as to bring the tax burden on profits paid out as dividends down into line with that on profits ploughed back into the business. His aim was to stimulate the capital market and make it easier for companies to raise money for profitable new investment. The means devised to get round the difficulty of dividends paying both corporation tax and income tax was to charge a flat 50 per cent corporation tax on all earnings and then distribute dividends net of tax. But the dividend will be grossed up by the simultaneous payment of three-sevenths of it to the inland revenue as "advance corporation tax" (ACT). To a net dividend of £50 will be added £21.43 of ACT to make a total gross dividend of £71.43. ACT will serve the purpose of income tax on £71.43 at next year's basic rate of 30 per cent. When corporation tax falls due, another £28.57 will be paid on the £100 profit used to provide the £50 dividend, bringing the total tax up to 50 per cent. If, however, the £100 is ploughed back, then a straight £50 will be paid when corporation tax falls due. The table shows how this works out.

The catch comes in the way foreign income is treated under double tax rules. These are supposed to allow relief of foreign tax against corporation tax but not against income tax on dividends. This is where the Government tries to have its cake and eat it. Although it calls ACT corporation tax, it intends to treat it for double tax purposes as if ACT were income tax, and allow relief only on the £28.57. So a company that uses its foreign income as dividend will end up paying something like £13.50 more tax than if its £100 had been retained in the business and got the full 50 per cent relief. (This is on the assumption that foreign tax works out at 55 per cent ; the table shows how the figures break down.) For big companies with large overseas and small home earnings, it amounts to a 13½ per cent surtax on very large sums.

When the Government taxes the profit earned in Britain by foreign companies, it will drop the pretext—indeed, indignantly deny any suggestion—that ACT is income tax under another name. It will insist that it is an integral part of corporation tax. There is a reason for this : by mutual agreement income tax on dividends between countries is often waived under double tax treaties. By denying that ACT here has anything to do with income tax, the Treasury will save itself £25m a year. The Chancellor must be hoping that American double tax negotiators will not notice that what he is saying to foreign companies who take money out of the country is the opposite of what he is saying to British companies who bring money in.

The Government expects ACT paid on foreign earnings of British companies to bring in £100m a year. This is probably a huge overestimate. Companies are going to use all their ingenuity to get round it. A Bats-Imps merger, with maintained dividends for Imps shareholders, could save £3m-£4m a year. A few more deals on this scale would rapidly whittle down the expected £100m. This, after all, is what companies pay their accountants to do. The deals would also create mayhem in the corporate structure of British industry and send some share analysts to an early grave while they tried to work out company earnings in the meantime.

The simplest and fairest solution is to treat ACT as corporation tax throughout, and to allow foreign tax relief. This would put the Government in a much stronger negotiating posture with the notoriously tough double tax negotiators of the United States Administration. Most important of all, it would stop a potential flood of nonsense mergers.

Complaint upheld

The Press Council has upheld the complaint of Mr P. Grier, 17 Brinsworth Close, Twickenham, over figures on Scottish housing subsidies that appeared in the issue of September 11th, 1971. Mr Grier said that to describe the subsidies as having exceeded £200m in the previous year gave a grossly exaggerated and unfair impression when this figure reflected the consolidated current and capital expenditure on housing in Scotland by the public sector, while the annual subsidies were running in 1969-70 at £33m. He also said that it overlooked other forms of help given to owner-occupiers. A correction was published on November 13th, together with an explanation that some of the grants would not necessarily be paid until 1973. Mr Grier complained to the Press Council that the correction was "contemptible." The Press Council's adjudication was :

> In the Press Council's opinion the complainant was justified in criticising the housing subsidy figure published in *The Economist* as giving a grossly exaggerated and unfair impression. The correction which was eventually published was inadequate. The complaint is upheld.

They still won't invest

Manufacturers are still delaying investment decisions. They may delay them until next year, and then have to buy imported machines

Although some of Britain's largest manufacturers and most people in the distributive trades have increased their plans for new investment since the budget, the bulk of manufacturing firms have apparently done just the opposite. The Department of Trade and Industry says that prospects are even bleaker now than at the time of its previous sounding last November and December. Manufacturing investment this year looks like being 3 per cent less, in real terms, than 1971's already depressed level, which itself was 7 per cent below the level reached in 1970.

This hardly seems to make sense. It certainly contrasts with the optimism coming out of the Confederation of British Industry's own inquiries. But the CBI probably has a preponderance of large and more optimistic firms. Industrialists are citing a baffling range of excuses for not investing : ranging from squeezed profits, higher material costs to unused capacity. An increasing number point to the unfortunate effect of the change in corporation tax, which provides a positive disincentive to spend on new plant before the start of their new tax year. Waiting will bring a gain of up to 10 per cent of the value of the investment.

In addition, the ending of Set and the change to Vat will inject a once-and-for-all £485m into the corporate purse in the second quarter of next year. About £330m of this will come from collected Vat and car tax not passed on to the Government until the end of each period, and £155m from the refund of the "forced loan" that industry made to the Government through Set. On top of this, the benefit of the tax change itself will be £60m a quarter.

All this could produce a massive jump in industrial investment in the middle of next year: perhaps a jump which British producers of capital goods will be unable to meet. The effect on the import bill could be disastrous. It becomes all the more important, therefore, to bring forward some of that potential investment. This could be helped by the first reliable signs of an increase in industrial activity. The steel industry has been turning out more ; some of its extra production has been going into rebuilding stocks, for which there is plenty of scope. Even the engineering industry's Neddy now expects a slow increase in home orders during this year and a sharp jump next, although the machine tool sector is still shedding labour.

Unfortunately, the nearer the heavy end of industry, the greater the gloom. Capital spending by the steel industry is only offsetting the worst of the downturn for some other parts of the process plant industry. The Government is pushing the electrical generating industry, to go ahead with orders for new generating plant that it does not want yet (see page 80). A much better government move would be to say that "free depreciation" means that companies can take their 100 per cent allowance when they want (ie, against next year's corporation tax, even if they invest this year).

Most of British industry is still being too ostrich-like. The wage inflation of the past few years makes it all the more imperative to look for capital-intensive ways of producing. The increase in productivity through streamlining and redundancies has given it a vital springboard. The more adventurous of British firms are in the process of investing in common market countries ; but, curiously, they are not seeing their chances in the home market. It will be a tragedy if Britain goes into the community on the crest of a consumer boom but understocked and under-invested. Our new industrial partners will then gobble up far too much of the British market.

Key indicators: British economy

Industrial production
Total output (which includes construction) moved up to a record level in April. But manufacturing output fell back slightly.

Trade
Deficit of £43m in May, the average for the year so far. But invisibles still in surplus of £50m a month.

Investment
Fall of 1 per cent in manufacturing investment between fourth quarter 1971 and first quarter this year : no change in investment by distributive and service industries.

	Month	Index 1963=100	Percentage change on previous month	three months	one year
Industrial production*	April	127.7	+0.9	+2.3	+2.4
employment*	March	88.8	−0.4	−0.2	−5.7
productivity*	March	141.6	+12.2	+1.7	+8.7
Export trade*‡	May	146	nil	−2	−3
Eng'g orders on hand*	December	114	nil	−2½	−9
Retail trade*	April	114.5	+1.5	+1.1	+3.2
Unemployment*	May	164.8	−7.0	−5.0	+15.5
Average earnings*	March	196.0	na	+3.6	+10.4
Retail prices	April	156.2	+0.9	+1.8	+6.3
Export prices	March	150	+1½	+1½	+8½
Import prices	March	135	+½	+1½	+5

*Export trade, retail trade, engineering order books: in volume terms (value at constant prices). Unemployment: wholly unemployed excluding school-leavers; latest rate 3.6 per cent. *Seasonally adjusted ‡Provisional*

From exporting our products and services around the world to building the runways and airport terminals to fly them from.
And at roof level we really spread ourselves.
Not only in Britain where we put the roof on just about every type of building, but overseas too - we export a wide range of roofing materials. And asphalt from our mines in France and Switzerland ends up on European roofs.
We're on top of the job everywhere.
And just to show we can land the big ones we've recently completed a jumbo-jet apron at Bahrain Airport.

Tarmac
THE MEANS AND THE END
Tarmac Group, Wolverhampton, England.

CHARTER CONSOLIDATED LIMITED

Points from the statement by the chairman Mr. S. Spiro

Consolidated profits before taxation amounted to £17,645,000. Last year's figure, adjusted to take account of adoption of the Institutes of Chartered Accountants' recommendations on the incorporation of associated companies' undistributed profits or losses, was £20,200,000.
The figures for the two years are not strictly comparable because of some exceptional items. This year we received £3,147,000 less in dividend income from Zambian Anglo American due in the greater part to the receipt last year of special terminal dividends consequent upon the restructuring of the copper mining companies to provide a 51 per cent interest for the Zambian government. Included this year is an amount of £1,010,000 reflecting losses of SOMIMA which is treated as having commenced trading although a commercial rate of production has not yet been reached.
Profits from realizations amounted to £3,445,000 compared with £1,104,000 last year. Despite difficult trading conditions for industry Cape Asbestos achieved a satisfactory increase in profits from £2,528,000 to £3,098,000.
Our results, in conditions of substantially lower metal prices, can thus be looked upon as not unsatisfactory and a reflection of our wide spread of investments.
The stock exchange price index for mining finance shares, in which general category the greater part of our quoted investments lies, was at much the same level at the end of our accounting year as it was at the beginning, and the net asset value at 31st March, 1972 was £294,587,000 equivalent to 281p per share, compared with 277p per share previously. Our net assets in liquid form at the end of the year amounted to £26 million.

Investment changes

Arrangements were completed during the year for a merger between Thos Barlow & Sons and Rand Mines and the opportunity has been taken to effect a reorganisation of some of Charter's important investments in conjunction with Anglo American Corporation group and Barlow Rand.
We are glad to be able to participate in a rationalization of the platinum industry. The platinum market has been affected by the general down-turn in economic activity but we believe that this metal will be utilised increasingly in the future.
We are very pleased that Charter has been able to obtain a major participation in the diamond business.

Legislation

We greatly welcome the changes which have been introduced by the government in the reform of the taxation structure and the overseas investment insurance scheme but it is a matter of regret that the discrimination against overseas income which has borne foreign taxes will continue when this income is utilized for the purpose of paying dividends.

Prospecting and mining

Charter has pursued its development as a mining finance company. We are engaged in extensive prospecting operations in many countries with the object of expanding our mining interests, and we continue to seek and to examine possible new business projects.

Zaire

We have been much encouraged by the results obtained from Zaire (formerly Congo Kinshasa) where we are participating with the government of Zaire and international partners in a consortium company, Société Minière de Tenke-Fungurume, to which we provide technical and administrative services. From intensive exploration and investigations at Tenke-Fungurume near Likasi in Shaba province (formerly Katanga) probable and indicated reserves delineated in seven deposits amounted to 20 million metric tons grading 6.2 per cent copper and 0.40 per ton cobalt. Inferred reserves in these and other deposits are estimated at a further 14.8 million metric tons.
The geological environment and metallurgy are technically highly complex and some time will be required before a full assessment of the project can be made.

Somima

The build-up to full production of copper concentrates at Akjoujt has been seriously delayed and is now only likely to be reached towards the end of 1972. Although the effectiveness of the TORCO process in treating the Akjoujt ore has been amply demonstrated, a series of defects have emerged in the functioning of the treatment plant which have called for modifications and replacement of equipment.
We are confident that the engineering problems will be resolved, but it will not be possible to assess fully the economic prospects of the project at different copper price levels until the modifications are complete and full production has been reached.

Malaysia

Results from tin operations have been encouraging. Although the nature of some of the operations leads to wide fluctuations in individual performances, particularly in the case of Ayer Hitam, the trend has been for an increase in production and profits.

Cleveland Potash

Overall good progress has been maintained at the Cleveland Potash mine in Yorkshire which is jointly owned with ICI. We are suffering some delays in the construction of the treatment plant and in shaft sinking at depth. Some deferment of the initial commissioning of the mine is likely but it is still anticipated that production will commence in mid-1973.

North Sea oil

A significant development in our exploration activities during the past year has been Charter's direct participation in offshore oil exploration in the UK sector of the North Sea. Charter is a major partner in a joint venture with Home Oil of Canada, which will act as operator, Oil & Gas Enterprises (N.S.), and Canadian Industrial Gas (U.K.). On the basis of the seismic and other information available we submitted an application to the Department of Trade and Industry and our consortium was awarded two blocks. Detailed seismic work is now being carried out and it is hoped that drilling will commence in early 1974 or as soon as suitable equipment becomes available.

Industrial

Charter's principal industrial subsidiary, Cape Asbestos, had a significantly better trading year in spite of difficult conditions.
Charter's other industrial subsidiaries also showed a combined improvement in earnings.

Prospects

Whilst our earnings are much influenced by the level of metal prices, particularly copper, our investments in mining finance companies combine growth prospects with a wide spread of revenue producing interests. In the short term we do not look for any dramatic improvement in metal prices but we do not anticipate any significant worsening and are reasonably confident of a mildly upward trend in the medium term. The comparatively small scale operation under difficult conditions at SOMIMA is particularly sensitive to the price of copper. Drilling results at Tenke-Fungurume in Zaire are encouraging but in any event it would be some years before any mining project could be brought to fruition. Cleveland Potash should prove a satisfactory profit earner in due course. Meanwhile our mining finance investments, incorporating important interests in gold, have now been further strengthened by the rationalization of platinum interests and by our substantial new investment in the diamond business.

Copies of the annual report and accounts and chairman's statement can be obtained from 40 Holborn Viaduct, EC1P 1AJ, or from Kent House, Station Road, Ashford, Kent.
The seventh annual general meeting of Charter Consolidated Limited will be held at Winchester House, 100 Old Broad Street, London EC2N 1BE on Tuesday, 11th July, 1972 at 12 noon.

BUSINESS *Britain*

Sir John at Tolpuddle

Whatever he may have felt about the way that the Court of Appeal had disagreed on Tuesday with his reading of the Industrial Relations Act, Sir John Donaldson continued on Wednesday to make his own case law. He threatened to jail those shop stewards in the London docks who had continued to black lorries in defiance of a National Industrial Relations Court order, unless they appeared in his court on Thursday to explain—or, alternatively, in the Appeal Court by 2 p.m. on Friday. They turned down the first alternative and were picketing as usual on Thursday. Their public statements —backed by votes to strike in their support in London and Liverpool— did not seem to indicate that they would be at the Appeal Court either, although that court is much more in their union's good books since it allowed its appeal on Tuesday.

That Court of Appeal decision is liable to have a profound effect on everyone's view of the act. Sir John Donaldson had ruled that unions must discipline their own shop stewards, and could not escape the court's displeasure by pleading that men would not do what they were told. This ruling had shown some signs of having effect. Officials of the Transport and General Workers Union had been trying to get blacking ended in the docks by arguing that it was not worth the drain on the union's funds, which was expected to go well above the £55,000 of fines already imposed.

Framers of the act had hoped that such fines would eventually force the unions to debar from membership those who disobeyed union officialdom by constantly calling unofficial strikes. One of the cornerstone assumptions of the act had been that it would then become possible for employers themselves to sack wildcat shop stewards, after they had been deprived of membership in their own unions. The shock on Tuesday, when Lord Denning gave his ruling that the union need not be responsible for unlawful actions of shop stewards, was therefore considerable.

The worry after the Appeal judgment is that employers have few effective sanctions against unofficial strike action if they cannot take the guardians of the unions' large official funds to court. Employers can still take the individual stewards there, but without any hope of getting substantial damages and at the risk of making martyrs. The NIRC has no qualms about this, but jail is nothing like as effective (or, frankly, as desirable) a sanction as large fines on a union.

The judgment does not mean that unions can never be taken to court when their local officers break the law. In many cases, unions back their shop stewards, and so become responsible for their actions. Few unions have the same complex internal political splits as the TGWU, which made the Court of Appeal decide that there were limits to Mr Jack Jones's power. In Mr Hugh Scanlon's Amalgamated Union of Engineering Workers the rules say that strike action has to be backed by the district committee, which means that, if such a strike is unfair, then the union can be penalised.

One of the aims of the Industrial Relations Act was to make registered unions alter their rules so that it would become clear who could call strikes. The hope had been that unregistered unions would find that many of the strikes called by their members were unlawful and rendered them liable to fines upon their funds, so that the incentive to register would be considerable. Now the Appeal judgment makes the penalties for being unregistered much less severe.

Ministers would like Tuesday's decision to go to the House of Lords. But an appeal does not rest with the Government. It rests with the haulage companies: Heatons, Craddocks and Panalpina. The first two are small, and have already suffered heavily both from the blacking and from the costs of fighting court actions in support of what at least some ministers thought that they and Parliament had laid down in their own act. They may not want to risk the costs of a further appeal. But Panalpina is bigger and may fight on if it thinks there is chance of success.

Alan, Vic and Bernie ; to Tolpuddle by way of Chobham Farm ?

Railways

Bad day's work

The Government is now facing the biggest decisions on the railways since Lord Beeching produced his original plan for cutting them back to size. British Rail should be pared down to as few as four or five main lines. Mr Richard Marsh, the chairman, gave warning of cuts on Tuesday after he had paid up a further £2m to get the railway unions to call off their third threatened go slow. The total cost of this week's wage settlement is now £37.2m, and this year the railways may lose, on one count, around £270m. This is equal to nearly half their turnover. The loss counts in £60m of subsidies for lines kept open because the Government wants them to be ; £27m which is the cost of keeping within the Confederation of British Industry's price freeze ; and £150m knocked off the industry's debt by the 1968 Transport Act. Rail experts think the finances of BR are going to get worse, not better, in the next three or four years.

The scope for both price rises and cost-cutting on the existing railway network is limited. Any cuts will have to be severe. The lesson of Lord Beeching's economies was that weeding out unprofitable routes creates a vicious circle, since it reduces traffic on the rest of the system, and makes still more lines uneconomic. Railways are an anachronism in a small country in a motorway age. Apart from a few fast, dense routes, public transport is cheaper by bus—cheaper still if some of the old railway lines were used for special bus tracks.

The Government is unlikely to agree to this, even though many of the railwaymen could be found jobs on the buses. The more likely policy is one of more subsidies, plus some cuts in services to save the Government's and Mr Marsh's face.

Nationalised prices

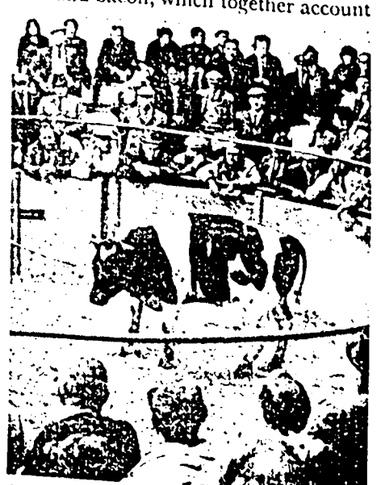
Someone pays

The biggest constraint on railway fares is the Government's tacit undertaking to see that the nationalised industries conform to whatever price freeze the Confederation of British Industry gets agreed. The nationalised industries have been particularly badly hit by the freeze, and their combined losses are running at a sum that must represent around 1 per cent of the country's gnp and is equal to 10 per cent of their combined turnover.

A number of increases have slipped through, notably the 7½ per cent on the price of coal which will pay £60m towards the miners' £117m settlement, leaving the rest to be met, once again, by subsidies. But the National Institute of Economic and Social Research calculated last summer that goods covered by the CBI's freeze made up one third of the retail price index, and, of that one third, half was accounted for by the nationalised industries. The effectiveness of the freeze depends on the nationalised industries conforming to it.

CBI members, wriggling uneasily under a political commitment to renew the freeze that they would much rather not honour, blame the Government's inability to control rents, house prices, fares, beef prices and whatever else they can think of, for the size of the wage demands they are now facing. This, they say, is making it difficult to know whether they can renew the freeze even for another six months (their settlements, none the less, are well below those of the nationalised industries). It is therefore tactically impossible for the Government to attempt to pass on the inflationary wage settlements it has agreed in the nationalised industries to the consumer.

But this is still the only way of bringing home to the public what these settlements cost. They are now pushing even potentially profitable businesses into the red ; the post office has fallen short of its relatively modest financial target—of 10 per cent on telecommunications and 2 per cent on the postal services—by a margin of £180m over the five-year accounting period, and the postal services, which should on this basis have shown an accumulated profit of £45m by then, are losing nearly that much every 12 months.



Ministers are now beginning to worry what will happen to nationalised industry prices when the freeze does end, probably early next year. To allow prices to jump up sharply then, as soon as the restraint ends, would produce an alarming increase in both the cost of living and in industrial costs just at the time when Britain is going into the EEC. However, the EEC does not, officially, allow industries to be subsidised, although it has had to accept that in practice large numbers of them are. Britain's nationalised industries would not be in quite so bad a way if they were allowed to cut unprofitable operations and unnecessary men; this applies particularly to the British Steel Corporation which has had to give two years' notice of closure of the foundry iron blast furnaces at Stanton, employing 1,500 men who are unlikely to get other jobs in the industry. But the Government will not sanction any rationalisation that is likely to lead to unemployment within the next 18 months. So the industries are in a trap where they can neither increase prices nor cut staff in order to meet the wage increases that the Government has obliged them to pay.

It is probable that the true loss on the nationalised industries is still being understated. Mr D. B. Myddelton, who took the Gas Council's accounts apart two years ago, has applied the same analysis to all the nationalised industries in the spring issue of the Institute of Chartered Accountants quarterly research bulletin. He calculated that they all understated their fixed assets and depreciation charges by a margin of 25 per cent over a 20-year period from 1951. On an adjusted basis, an apparent 2.8 per cent return a year on assets averaging £6.7 billion becomes a return of less than 1 per cent on assets of nearly £13 billion. He reckons that the accumulated loss of all the nationalised industries to 1970 is not the £2 billion shown in their conventional accounts, but, in real terms, something well over £8 billion. Whatever the figures will show when Mr Myddelton gets round to adding on current losses, the current rate of subsidy now must be running at least at £500m a year.

Food prices

Still beefing

The cost of living index has moved sharply up this month : bread, beef, beer and bacon, which together account

Bidding was brisk, and foreign

Points from the Review of 1971 by the Chairman Mr. John MacConochie

"A period of transition"

- Deterioration in profitability from ship operating responsible for losses of £1.76 million
- Ancillary shipping and non-shipping activities increased their profit contribution
- Decision to reduce materially the Group's dependence on liner trades fully vindicated—benefits becoming apparent in 1972
- Group profits in the first quarter of 1972 showing a distinct improvement
- Final dividend of 10% on the ordinary stock recommended—same as last year

Copies of the Report and Accounts are available from the Secretary Furness Withy & Co Limited 105 Fenchurch Street London EC3M 5HH

for 9 per cent of the index, all cost more. It can be small relief to Mr James Prior, Minister of Agriculture, that in the last few days beef prices have begun to retreat from their recent scarifying levels, since most of the fall in price has not come from more supplies but a boycott of butchers' shops. Sales of beef have been as much as a fifth down this week as shoppers changed to poultry and lamb, forcing up their retail price in turn. Although the surge in meat prices is already halted, and cattle auction prices are coming down, the political damage has been done: since the election food prices have risen by 17 per cent.

The extra ½p on a loaf of bread will go less noticed since bread has lagged behind the recent round of price increases. Nonetheless, the average family will pay 2½p more a week.

More embarrassing for the Government is the 1p that some brewers are threatening to put on a pint of beer; the British public spends twice as much on beer as on beef. Since all price controls were removed in 1970 and brewers have been able to fix their own prices, 3p has been added to the cost of a pint. Much of this has gone directly into the brewers' profits; brewery shares have been among the star performers on the stock market, rising by 118 per cent in the past 15 months as profits have soared.

Last week's 10 per cent increase in wholesale bacon prices is only now beginning to work through to the shops. This rise is even more open to political criticism as Mr Prior has recently cut back subsidies to bacon curers. The bacon market is carefully divided up between British producers and importers. To stop prices from rising, it is only necessary to allow in more bacon, principally from Denmark where it is cheaper to produce. British pig men and bacon curers have recently been enjoying such a boom market that the European producers have been complaining about being kept away. If Mr Prior wants to see prices come down again he has only to let in a breeze of competition.

Economy

Trade gaping

The trade figures are bad. The deficit in May was the fifth in a row. Its size, £43m, equalled the average of the previous four months. As the January to April figures had been distorted by the effects of the miners' strike, there had been hope that they were untypical. That hope has now been dashed. If there were no further deterioration, Britain would run a visible trade deficit of £500m this year, little short of the £562m registered in the devaluation year of 1967. That would be a good deal worse than the National Institute of Economic and Social Research forecast only last week: it was thinking in terms of a deficit of rather less than £200m. But the larger figure could be a more realistic reflection of the fact that the relative price advantage secured for British exports by 1967's devaluation has now been lost entirely.

That is not to say, of course, that all the good effects of devaluation have spent themselves. In 1967, invisible earnings brought in only £254m—and covered, therefore, less than half the visible deficit. Last year invisibles earned £635m. They can be expected to repeat that performance, or nearly so, this year. If visible trade deteriorates no further Britain should still run a small total surplus on current account. The worry is that the trade figures might worsen in the second half of this year as the consumer boom gets under way and if economic growth accelerates. Indeed, if it does not, Britain will almost certainly not be getting the growth it wants.

The rapidity with which British trade can deteriorate should never come as a surprise, but it is still very disturbing. Exports in May were about 4 per cent lower in value than they had been last autumn: imports were 10 per cent higher. There have been lower deliveries to most sterling area markets, especially to Australia, New Zealand and South Africa. Imports of nearly all kinds, except food, have risen quite sharply; indeed, imports of cars and trucks, which now make up almost one-sixth of all imports of finished manufactures, have risen by as much as 15 per cent over the past few months alone. Home demand for cars has been high; home supplies, against a background of industrial disputes, inadequate. This pattern may be repeated in other industries as consumers feel the full impact of the March budget in their pockets. It could also apply to capital goods when investment picks up.

Scotland

Highlands' fling

Life is looking up in the highlands, according to a very cheerful

Business is booming, so they tell me

report published on Tuesday by the Highlands and Islands Development Board. Unemployment has not risen much over the last year. Investment almost doubled between 1970 and 1971. The fishing industry has had a record year, and so has tourism. And the impact of the North Sea oil industry is yet to come.

The board reckons that oil could have a "remarkably beneficial effect on trade and employment," starting with the building of drilling platforms in sites around the Moray Firth. By the end of this year, these alone should make a sizeable dent in the region's unemployment, which is still running at 9.3 per cent. Down in Aberdeen, the oil industry is expanding rapidly. The North East Scotland Development Authority announced this week that over 100 firms had now moved into Aberdeen, with two more setting up each week. As yet, the highlands has not had much of a share in oil's backup industries, but they should develop over the next few years, particularly in Shetland and Orkney. Much depends on how actively British companies are prepared to bid for the work.

There is no better indication of the reversal of the region's economic fortunes than the turnaround in migration. In every decade since the 1830s, the population of the region has dropped. Over the last decade, it has actually risen, mainly since 1966. Migration has been tiny compared with the rest of Scotland.

The fishing industry, which is still one of the main providers of jobs, is doing nicely with more boats, bigger catches and higher prices. The herring catch last year was 52 per cent up on five years before. Tourism had a record 1971 and there are plans for another major skiing resort on the Aviemore model at Ben Wyvis, where the snow is said to be more reliable.

There may even be rich mineral deposits in the mountains. Several min-

Another record year of growth

Extracts from Sir John Keswick's Statement to the Stockholders of Jardine, Matheson & Co., Ltd.

Profits
The 1971 results were another record for the Company. This is the tenth successive year in which growth, on a compounded basis, has averaged 20% per annum. The consolidated trading profit before tax was HK$72.1 million (£4.95m.), compared with HK$56.8 million (£3.9m.) for 1970. The net profit after taxation was increased by 25% to HK$57.7 million (£3.96m.). Dividends total HK$1.20 per stock unit (8.2p). After adjustment for the capitalisation issue of two million new shares in 1971, this compares with the equivalent of HK$0.95 per stock unit for 1970 (6.5p). The Board are also recommending a scrip issue on the basis of one for five and expect to maintain the same rate of dividend on the increased capital.

Loan Finance
In 1971, the Company for the first time in its history sought long term finance and raised US$15 million on the Euro-dollar market on satisfactory terms.

Hong Kong
1971 was another year of steady progress for the Hong Kong economy. Exports, including re-exports, were up by 12.6% – while imports improved by 15%. Tourist figures remained at much the same level. Real estate prices and stock market levels reached new peaks. Financial activity was high. Hong Kong is becoming an increasingly important regional financial centre.
The Company's activities produced substantially better results. Trading and services departments generally achieved satisfactory growth and several new acquisitions usefully contributed to earnings. During the year the Lombard Insurance Co., Ltd. became a subsidiary. The shipowning subsidiary, The Indo-China Steam Navigation Co., Ltd., showed better profits.
Good progress and growth was achieved in the financial services activities. Empire Finance Co., Ltd., and Jardine Fleming & Co., Ltd, both recorded very satisfactory earnings in the fields of finance, investment management and corporate finance.
The policy of planning to maximise the return on the Company's valuable Hong Kong real estate was continued. The Excelsior Hotel owned by an associated company, East Point Hotels Ltd., will open by the end of 1972, and a new joint real estate enterprise with The Hong Kong Land Co., Ltd., was completed. Other projects are in the construction or planning stages.

Singapore, Malaysia, Thailand and Indonesia
Following a reorganisation programme and senior management changes, Jardine Waugh Ltd., produced considerably improved results. The 50% interest in Guthrie Waugh Berhad was sold which will release funds for diversification into other fields. A representative office has been opened in Indonesia.

Japan
The Japanese economy had a difficult year in 1971 caused by uncertainty over the parity of the Yen. Against this background our subsidiary, Jardine, Matheson & Co., (Japan) Ltd., had an average year. Whilst raw material imports were cut back consumer goods marketing activities recorded substantial increases in turnover.

United Kingdom
Matheson & Co., Ltd.'s important shipowning activities were inevitably affected by the major recession in the world freight market. Insurance and financial services activities produced improved results.
The forwarding, air freight and transport subsidiaries progressed satisfactorily.

Australia
Jardine Matheson & Co. (Australia) Pty. Ltd. made further progress and net earnings showed a substantial increase. Real estate developments in North Sydney continued to be the principal activity of the Company with projects under construction valued at over A$50 million (£22.8m.).
Other interests in the trading, transport and industrial fields operated satisfactorily overall. The holding in the transport group, Fleetways (Holdings) Ltd., was increased. The Australian Flag vehicle deck container ship, "Matthew Flinders", produced satisfactory results in its first year of operations.

Pacific
Our South Pacific interests are expanding. Investments include a substantial minority stake (40%) in the leading Fiji tourist and travel group, Hunts Holdings Ltd., a small interest in a tourist resort development in Fiji and a holding in the Cook Islands Trading Corporation.

U.S.A.
Jardine Matheson Inc.'s development programme is under way. Four initial investments were made in real estate, building materials, tourist services and computer components.

Future Prospects
Your Company is strongly entrenched in Hong Kong and, under the unique business climate, it has been possible to achieve a well above average growth of earnings and a strong cash flow. As a result, expansion has been achieved without going to stockholders for new equity capital. This policy will continue in the immediate future. It is expected that new projects and investments both in the Eastern region and in the more industrialised and developed areas will increasingly contribute to earnings.
Our 1972 first quarter results are ahead of the same period last year and, subject to no unforeseen circumstances, the Company can look forward to another good year's trading.

£ Millions	1971	1970	1969	1968	1967
Net Profits after tax	4.0	3.2	2.6	1.9	1.4
Dividends	1.8	1.4	1.2	0.8	0.6
Stockholders' funds	21.2	17.8	14.1	12.5	11.4
Adjusted earnings per stock unit	18.0p	14.4p	12.0p	8.5p	6.3p

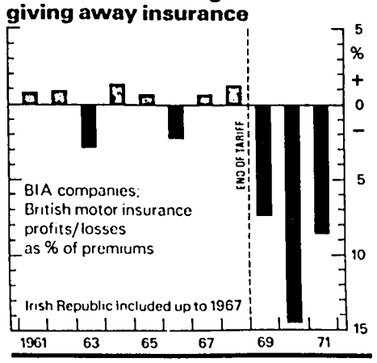
ing firms are prospecting. There is uranium in Orkney, not very good, and probably copper, zinc, lead and a host of other goodies deep in the mainland mountains. But whether the highlanders will want to allow massive mining development remains to be seen. Left to themselves they probably will.

Electricity

Job-saving orders



Under pressure from the Government, the electricity industry is to order the generators for the Ince B power station within the next two weeks. In order to protect up to 3,000-4,000 Tyneside jobs at Reyrolle Parsons and Clarke Chapman, plus the many subcontractors involved, the Government has agreed to pay the £10m-£12m interest charges the Central Electricity Generating Board will face if it brings orders for the station forward. It could now be completed by 1977 or so, even though CEGB's market forecast suggests it will not be needed until 1980.

Reyrolle Parsons is expected to get the £20m-£21m order for two 660MW turbo-generators and is negotiating for other work on the switchgear and transformers. Clarke Chapman should get the contract for the oil-fired boilers. Reyrolle Parsons has been hard-pressed since the CEGB delayed ordering the £250m Sizewell B nuclear power station 18 months ago. In April, the group announced an £8¼m loss for last year.

This is another case of jobs before the nationalised industries' finances. In 1970-71, the electricity industry as a whole announced a £56m loss. The loss for 1971-72 is expected to be £24-£26m. Yet the Government is believed to be urging that other projects be brought forward.

When the electricity industry holds its regular meeting with the heavy plant suppliers in the next few days there will be several projects on the agenda. Among them : an extension to the Drax coal fired power station ; two 500MW sets for Littlebrook ; two 660MW sets for Peterhead in Scotland and another of the same size at the Inverkip station, also in Scotland. Reyrolle Parsons is hoping that a considerable part of this business will be coming its way. The progress payments would be useful, to say the least, and so would the boost to confidence. On the buggins turn principle that has been used to divide CEGB work between it and GEC, Reyrolle Parsons feels it has a case.

Motor underwriting – giving away insurance

Insurance

Motors lose money

British motorists are still getting their motor insurance on the cheap, despite the thumping increases in premium rates virtually all of them had to pay when their policies last came up for renewal. Last year was not quite such a bad year for the insurance companies as 1970. But before allowing for their investment income, the companies lost £25.5m on their British motor underwriting, on a premium income of £296m. This total premium income ran 37 per cent above the 1970 level (although the number of vehicles on the road rose only 3 per cent), reflecting the heavy rate increases. There were 6½ per cent more claims, and each claim cost on average 14 per cent more, making 20 per cent in all. This ought to have allowed the companies to just about break even on their vastly increased premium income. They did not, so it is fair to guess that much or even most of the £25.5m loss actually represented the run-off from 1970. Because inflation speeded up so sharply in 1969-70 the provisions in companies' balance sheets at December, 1970, were nothing like enough to meet the claims then outstanding but not settled.

So the 1971 figures are certainly distorted by special factors (another of them being the sums the companies have had to cough up for their share of the Vehicle and General's claims). But even if these are ignored, and it is assumed that claims will leap another 20 per cent this year, then in order to break even the companies would need to boost their premium income in 1972 by no more than 25 per cent—which is roughly the size of the rate increases that have recently been asked. There will still be some of the benefit of last year's increases to come, too.

It is, therefore, not entirely clear why the companies are forecasting yet another loss on motor insurance this year, though of nearer 4 per cent of premiums this time. Does one assume that the provisions last December were inadequate once again ? Whatever the answer, motor insurance continues cheap by international standards. Latest estimates show that a premium of £90 in London (before no-claims discount) compares with £120 (Hamburg), or £202 (New York).

Chemicals

We're number one

The chemical industry may look a bit sick just now, but the plant builders have not had it so good for a long time. According to the annual survey compiled by the magazine, Chemical Age, the value of export contracts for chemical plant is 12½ per cent up on a year ago. In real terms, after allowing for inflation, it is probably about 7 per cent. The number of contracts is down slightly but the value up from £4.8 billion to £5.4 billion.

More significantly, western Europe has increased its share of investment in new plant, despite its existing excess of capacity. It will now take a third of the world export total. The Far Eastern market has come up from fourth to second place but will still only account for 16 per cent. North America is the toughest market to penetrate and accounts for less than 6 per cent of the export market.

American companies continue to dominate in western Europe as they do in the rest of the world ; their European orders are valued at £921m. But British firms have shown the biggest gains, increasing their value of orders from £84m to £287m to move ahead of west Germany.

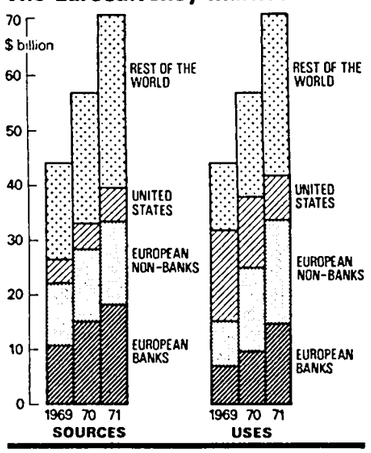
Over the world as a whole British companies are also doing rather better than most. Among the top 20 contractors, Power-Gas has now got the largest export order book, with a value of £284m, compared with £201m a year ago. Humphreys & Glasgow slips in at the end of the top 20 by pushing its order book up from £27m to £95m. The biggest jump of all was recorded by the American Foster Wheeler, up from £183m to £271m. The distribution of export orders shows some major changes. Latin America is in a slump. Eastern Europe, however, is moving into the market with orders for £746m worth of plant outstanding last year.

BUSINESS *International*

High summer for monetary non-reform

The next annual meeting of the International Monetary Fund is only a matter of two working months and one holiday month away—it starts on September 25th—and yet the much-discussed reform of the world monetary system is still as far away as ever. So a last-minute endeavour to shake something out of the bag started on Tuesday when the deputies of the Group of Ten met in Paris, under the chairmanship of the Bank of Italy's Dr Rinaldo Ossola.

France seems to have yielded, at least in spirit, to the American request to link monetary and trade issues, and the Group of Twenty negotiating forum will probably get its mandate towards the end of July. But still it is only procedure, and not the substance of reform, that has been debated. No agreement was reached in Paris on the desirable size of the new allocation of special drawing rights (SDRs) due on January 1st. Dr Ossola is on record as wanting only two-year, instead of three-year, allocations ; he thinks they should be small ones, perhaps amounting to no more than $750m a year, instead of this year's $3 billion.



World money is a game in which the players seem always to be one move behind. Central bankers have just met in Basle to receive the annual report of the Bank for International Settlements. This takes to task the United States for not devaluing sooner and the Bretton Woods rules for not enforcing parity adjustments on the surplus countries. Piously, the report says it is to be hoped that :

> parity adjustments, even with the help of an interval of temporary floating, will be looked upon less as a sin and more as a contribution to achieving such basic objectives as sustainable full employment and the maintenance of freedom in trade and payments. Of course, some changes in parities in the past have given rise to acute internal political difficulties. But have these not been due in large measure to oft-reiterated assertions by the authorities themselves, in situations of transparent fundamental disequilibrium, that the currency would never be devalued or revalued, as the case might be ? Is it not possible instead for statesmen to guide public opinion to see the advantages of restoring the exchange parity to equilibrium, and in the process to make life less uncomfortable for themselves ?

These are fine, sensible sentiments. And it is a matter for flabbergasted admiration by anybody who has reported international monetary events over the past decade that the spokesmen of what is really the central bankers' own central bank can utter them without blushing. Central bankers may say that their hands and tongues have always been tied by their political masters. But which of them in private or public showed such enlightenment over exchange rates in the mid-1960s ? And which, to be really nasty, is now publicly pressing with sufficient strength for the obviously desirable upvaluation of the Japanese yen or for a bringing forward in good time of what is eventually going to have to be a devaluation of sterling back to $2.40 again ?

The real lesson of the BIS report is the importance of not being earnest about what central bankers or politicians say. This is why it was silly that the part of the BIS report that hit the headlines was the predictable reiteration of its request for the restoration of dollar convertibility, and its assertion that gold must remain the numeraire of the international monetary system ; the BIS has always been opposed to the British plan which would substitute SDRs. Strangely, the slide in the gold price in London in the early part of this week was reversed by this news.

The Eurocurrency market

It has kept over the $60 an ounce mark since. The dollar has solemnly weakened against most major currencies, including even against sterling, on what dealers call "nervousness" over the international monetary outlook. Yet really the BIS's reportage on this was lucidly non-committal. "There are to be discussions of further changes in the system," it said, "but it is as yet not clear what they may be."

Euromarkets ride on

On surer ground, the Bank for International Settlements reviews developments in the Eurodollar market. Despite the dramatic disappearance of demand for Eurodollars from American banks, the Eurocurrency market continued to expand strongly throughout 1971, by $14 billion to $71 billion. Within this total the dollar component rose by only $8 billion to $54 billion.

Many people feared that a dollar crisis, such as occurred last year, might lead to a run on the Eurodollar market, but nothing of the sort happened. Naturally, shaken confidence in the dollar did lead at times to a demand for Eurodollar funds for conversion

into other currencies—notably, of course, into D-marks—but the BIS found less evidence of this kind of activity than it had expected.

There were large increases in lending last year to Latin America, eastern Europe and Japan. Borrowers there were attracted by low Eurocurrency interest rates. The Bahamas and Bermuda were also among the new borrowers. London is still by far the largest single dealing centre, but its total share in the Eurocurrency market dropped to 45 per cent from 50 per cent two years before. This was largely because London's real predominance is in Eurodollars, and dealings in non-dollar currencies have been becoming more important.

Concorde

Cold feet

The British and French governments will have to make what they can of messages reaching them that Pan American is increasingly reluctant to take up its options on Concorde—and would in any case not want delivery until the aircraft had been in service with other airlines for at least two years. On the present timetable that could mean 1976-77. Pan American is one of at least three American airlines now convinced that, even with every seat filled, and at fares substantially above today's first class levels, Concorde cannot be flown without a subsidy. Mr Nixon's Administration is certainly not going to provide them with one. The British Government, which has promised the British Overseas Airways Corporation all kinds of capital reconstruction and tax-free loans in lieu of subsidy, has not so far offered one. So where does this leave the Americans ?

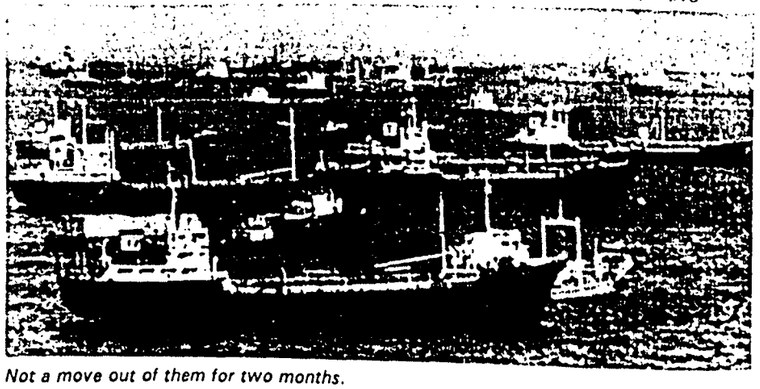
Even before Pan American suffered its financial collapse and several more or less violent changes of management, American airlines had been aware that both BOAC and Air France could demand subsidies in return for flying Concorde. They had expected to be offered some concessions, probably in the form of price cuts or special credit terms, which would mean that they were not flying against subsidised competition. But it would be wrong to interpret the warning rumblings coming out of Pan American only as kite flying. In the days when it was making profits, Pan American had, like Trans World Airlines, privately made up its mind that first class traffic was too important to be left to the Europeans. It had decided that, if the worst happened and Concorde went into service, it would buy a few. Their operating losses would be subsidised by profits from ordinary jet services. This is still the TWA view, because TWA, although it lost more money in a single year than Pan American has ever done, has now been out of the red for more than a year. There are some profits out of which a limited number of TWA Concordes—and the emphasis is on limited—could be subsidised.

Pan American, however, will still lose money this year and probably next. Its bankers are unusually patient, but will not continue indefinitely so. Requests for huge additional sums to finance Concorde purchases, with no prospect of profit at the end of them, will not be kindly received. If the British and French governments therefore push Pan American to take up its Concorde options, the management could refuse. It would need eight aircraft to provide a supersonic service in the Atlantic and on the Pacific, where it might be up against Qantas and the Japanese. This is a lot of money.

Correction : The circulation of the Sydney Morning Herald, cited in *The Economist* last week, should have been 280,000.

Japan

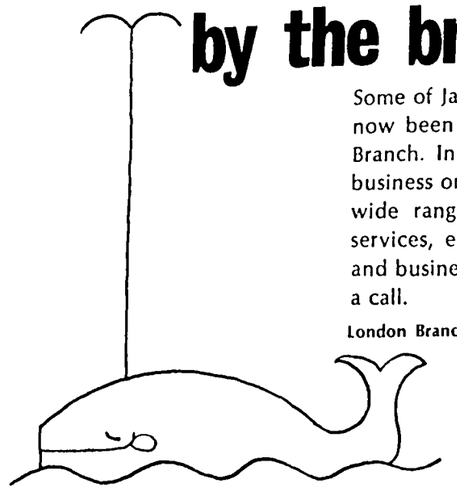
Blown off course?



Tokyo

For two months 160,000 Japanese seamen have been on strike, tying up 1,150 ships (half of the country's entire merchant fleet) in the worst industrial dispute Japan has faced for a decade. Although the strike is supposed to have cost Japanese shipowners £19m, the damage to the country's trade has so far been unexpectedly slight. During the next month, however, it must begin to hurt.

Worst hit is the oil industry. A hundred tankers are lying offshore with nearly 10m tons of crude aboard. So far the national reserves of oil, which are enough to keep the economy running at full pace for 20 days, have been kept well up to scratch by deliveries from foreign tankers. In the last seamen's strike in 1965 shortage of petroleum threatened to cripple industry. The seamen had thought this could be their strongest bargaining card. But most of industry remains oblivious of the strike, and is merely running down stocks that had previously grown to excessive levels. Even exports have been little affected. About 15,000 cars are waiting for shipment at Yokohama, but this has coincided neatly with a temporary set back in new export orders.



The seamen are asking for an extra £6.60 a week, even though their current pay of £34.80 a week is pitched a massive 44 per cent ahead of the average wage in manufacturing industry. But they would probably accept far less. They are not really bickering about wages ; their main demands are for better access to their families and more compensation for accidents at sea. On these issues the shipowners have refused to budge.

One hope for the outside world is that the strike may impede the government's protectionist plan to increase the share of Japanese trade carried in nationally registered ships. It is therefore a setback for Japan's already troubled shipbuilding industry. At present, 44 per cent of Japan's imports and 38 per cent of exports are carried in Japanese ships. Before the strike the government planned to raise these figures to 54 per cent and 50 per cent respectively by 1975. The

Not a move out of them for two months.

We aren't worried by the brain drain

Some of Japan's best brains in international finance have now been transferred to England to staff IBJ's London Branch. Internationally-oriented financial institutions and business organizations can now take advantage of IBJ's wide range of banking, consulting and coordinating services, especially in fields related to Japanese industry and business. Next time you have a brain-wave, give us a call.

MACHINE TOOL INTERNATIONAL

This exhibition is vitally important to thousands in British Industry

For far too long the mechanical engineering sector of British Industry has 'made do' with old and obsolescent machine tools while its major overseas competitors have pursued policies of planned replacement.
Investment in new machine tools is therefore the real answer to the growing competitive conditions of today and tomorrow.
MACHINE TOOL INTERNATIONAL '72 will be the most comprehensive display of machine tools anywhere in the world, with exhibits from virtually every producing country. It will be your best opportunity to see much that is new and improved in production equipment and techniques, to meet the people who can answer your questions, show you how to get higher productivity at lower cost and reduce the problems of skilled labour.
Your visit to MACHINE TOOL INTERNATIONAL '72 could revolutionise your competitiveness and profitability over the next decade. You *must* come – and so should your production staff!

MACHINE TOOL INTERNATIONAL '72
OLYMPIA LONDON
JUNE 21-JULY 1
09·00 hrs to 18·00 hrs
(Sunday 11.00 to 17.00 hrs.
Ticketholders only)

Organised
by The Machine Tool Trades Association.

Trade with Australia and New Zealand can be very good business indeed.

What's stopping you?

"If I had a contact there . . . someone on the spot." We're on the spot. In fact, we've more than 1,500 offices there. And we'll help you with vital information, from wages and price levels to economic growth and population trends.

"I'm having difficulty in finding customers . . ." With our wide business contacts we could provide you with introductions—as well as with preliminary or in-depth marketing surveys.

"Where do I start?" We can tell you—and later when you decide to go, we can get you there, quickly and efficiently. Our travel service—ANZ Travel—will take care of all your arrangements, from start to finish.

You may be interested in any one of these services, or all of them—whatever the case, we will send you further details. Just write to us on your company letterhead.

seamen's union says that this programme is meaningless unless wages are raised sufficiently to attract more sailors.

Normally, Japan has a domestic coastal traffic of about 1,000 small ships. Most of these are now halted. The seamen are also counting on the fact that imports of raw materials account for 80 per cent of the nation's needs. As stocks continue to fall, they expect the government to force a compromise.

EEC competition

Under the counter

Brussels

The European commission in Brussels has long brooded over the problem of how to bring subsidised industries under the common rules of competition without offending member governments. This week it decided to rein in two of Europe's biggest state-controlled financial institutions: the French Institut de Développement Industriel and the Belgian Société Nationale d'Investissement. These two now join the two Italian giants, Istituto Mobiliare Italiano and Gestione e Partecipazione Industriale in having to submit periodic reports to the commission which will then judge whether they are within the rules.

The EEC rules on subsidies make a clear distinction between aids for regional development and assistance to particular flagging sectors of industry. Both are regularly monitored. But there have never been any clear cut rules on how government-backed financial institutions (like the old British Industrial Reorganisation Corporation) should be allowed to operate. The commission rightly suspects that many of these are fronts behind which unfair assistance is given to industries. Interest-free government funds and government financed mergers are, the commission argues, as much a form of aid to the private sector as those capital grants or tax privileges not necessarily permitted under the EEC rules.

But the commission realises that it is on difficult political ground. The sovereignty of state enterprise is specifically safeguarded in the Treaty of Rome. So with an eye on the British Government's intervention at Upper Clyde Shipbuilders and Rolls-Royce, the commission is at last daring to be critical of the kind of support where the state guarantees a company's credit by a massive injection of funds disguised as equity participation. As the commission's rules on competition gather courage, public enterprises like the British Steel Corporation or the French Elf-Erap oil group will probably be brought under closer community scrutiny.

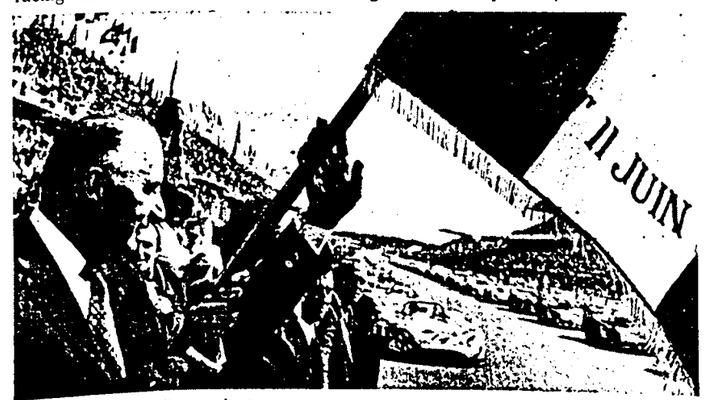
The fight against this, however, will be strong and led principally by Italy. The commission has still not dared tackle the three Italian state holding companies, ENI, IRI and EFIM which between them control nearly 40 per cent of the 220 largest companies quoted on the Italian stock exchange. All three get tax privileges plus interest-free government loans which are not always repaid.

Wool

Fashion and profit

Only last year wool prices were bumping along at the lowest levels for 30 years; the clip off the sheep's back had been finally beaten by synthetic fibres and there was not a glimmer of optimism in the industry. Today, with the Australian wool season finishing at the end of June, prices are soaring, stocks are cleared and consumption is rising again. Wool has returned to fashion.

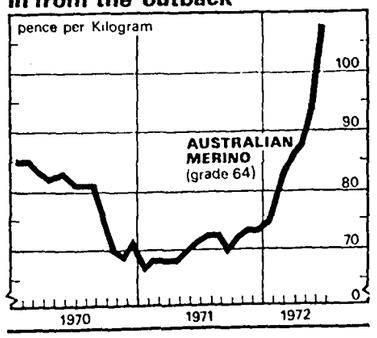
The effect on the Australian economy has been startling. The wool clip still earns about 12 per cent of



If you want to win, change the rules

The French were determined to win the Le Mans 24-hour endurance race this year. When the flag fell at 4 pm last Sunday, they had done so for the first time in 22 years. The Matra team achieved all it set out to do. French patriotism was boosted by carefully arranging that a French driver was in the hot seat when it came to the finish.

A change in racing rules, after heavy French lobbying, had cut the maximum engine size to 3 litres. This gave Matra its chance by ruling out the more reliable, larger-engined, German Porsches and Italian Ferraris which had ruled the circuit before. Matra poured a massive amount of money into making its smaller, high speed engines reliable, so that they could keep up 10,000 revolutions a minute throughout the whole 24 hours. The team ran three private 24-hour races to make sure. Matra can afford this sort of effort. When M. Georges Pompidou was prime minister the French government put up a fund of £500,000 to develop a competitive car-racing team. Last weekend he was at the circuit to wave his favourites on their way.



The importance of Le Mans is the publicity it gets right across Europe. The ballyhoo, the speed and the tragedies (this year, the death of that long-time favourite Jo Bonnier) ensure that most people will at least hear the result. Le Mans generates the same public interest as the Monte Carlo and East African Safari rallies, although in theory it is merely one more event in the world sports car championship. Whether the publicity sticks is more doubtful. Who, outside the experts, remembers that Ferrari has won all the eight previous championship races?

The French have set great store on the prestige of winning their national sporting events, but not just to satisfy national pride. The French motor industry has increased the number of cars exported by 87 per cent since 1969; exports now account for a third of its production. Although Matra makes only a specialist sports car (sold through a deal with Chrysler's Simca subsidiary) the whole industry should gain from the publicity.

Heads we won, tails you lost

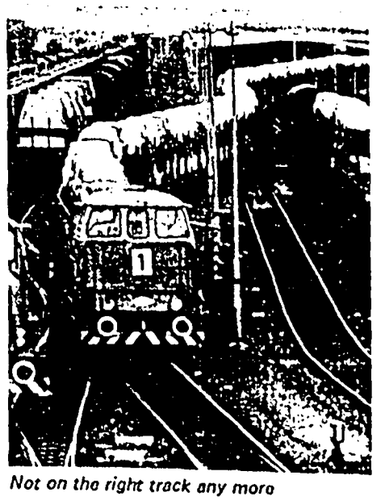
In from the outback

economy has been startling. The wool clip still earns about 12 per cent of Australia's exports and this year sales should reach £240m, only 15 per cent short of all Australia's sales of metal ore. The outback farmer, little seen recently, is now coming to town with money to spend on new equipment and to make investments on the stock exchange.

The dramatic 61 per cent price rise in wool over the past year has been largely caused by a big drop in Australia's sheep population. Many farmers have packed in during the past few years of low prices, and droughts have killed off whole flocks of sheep that were being raised in areas of marginal fertility. With 11m fewer sheep, Australian wool production is 7 per cent down on the huge surpluses of 1971. At the same time the Latin American wool clip has fallen back and consumer demand, particularly from Japan, has climbed an unexpected 6 per cent.

During the past year the Australian Wool Commission has reduced its stocks from 950,000 bales to 50,000. Since it was founded in the bleak days of 1970 to buy up wool at auctions and steady the market price, the commission has been the object of unending political attack. But it has now managed to emerge not only with a profit but with most of the credit for saving Australia's wool industry. The commission, however, is as surprised as its critics that it has been able to offload its massive stocks. By these sales it has been able to stop the wool price from rising unrealistically and checked what could otherwise have been a swing back to synthetics. Its reward came this week in the form of a recommendation to amalgamate it with the highly respectable Australian Wool Board, into a single authority responsible for the whole wool clip. New Zealand is now setting up a marketing corporation too.

German cars



That sinking feeling

Hamburg

For the first time in its postwar history Volkswagen has found itself ousted from the number one position among Germany's car makers. In the first quarter of this year its domestic sales dropped to 110,000 cars, while Opel, the German subsidiary of General Motors, sold 116,000. VW's total domestic sales this year are now expected to drop 10-15 per cent compared with 1971. Exports could do even worse.

In a normal year VW sells more cars in the United States than in Germany. But 1972 is not a normal year. In the first five months, American sales have plummeted 22 per cent from last year. Detroit seems to have hit on the right formula for its own mini cars at last, and Japanese imports are reaching the east coast in increasing numbers. At Wolfsburg, the company's principal plant, it is now reckoned that VW sales in the United States may be down by 100,000 this year. Together with the domestic setbacks, last year's total sales of 2.35m cars could be cut by as much as 200,000 in 1972.

The outlook for profits is even less promising. In this, VW is not alone among German car manufacturers: Daimler-Benz this week reported a 16 per cent drop in profits in 1971, although on an increased turnover. But VW saw its 1971 profits dwindle to next to nothing, and may go into the red this year. By this autumn it will have cut its labour force by 15,000 in the space of a year, to 120,000. The latest of these cuts, 6,000 men, was announced last week. Up to now, nobody has actually been sacked, but men near retirement age are being persuaded to go early.

Not on the right track any more

At the heart of VW's troubles is the public's growing disenchantment with its main product, the Beetle. The only possible parallel is with Ford's trauma when nobody wanted any more Model Ts. In Wolfsburg, the writing has been on the wall since 1965. But the scramble for new models which followed the death of VW's first managing director, Professor Heinrich Nordhoff, in 1968, produced only an uneconomic proliferation of indifferent cars. Now that VW owns Audi-NSU, the company makes no fewer than eight different ranges.

Herr Rudolf Leiding, who last year took over from Professor Nordhoff's successor, Herr Kurt Lotz, plans to cut this number down. The talk in Wolfsburg now is of "standardised units." Of the models in production, only the Beetle and the Transporter will survive. The single future model range, to be developed from the Audi, will reach from mini car to 2-litre limousine. But Herr Leiding will be keeping an eye on costs. While Herr Lotz had planned to spend over £1 billion on capital investment to 1975, the new purse strings allow only £800m.

Key indicators: world commodity prices

A lemon
A world glut of citrus fruit is rapidly developing, according to the Food and Agricultural Organisation. With large national plans to expand orange and grapefruit orchards coming to fruit, surpluses are piling up. Import prices have hardly moved for 20 years and are now likely to go lower, while consumers are already eating as much fruit as can be expected.

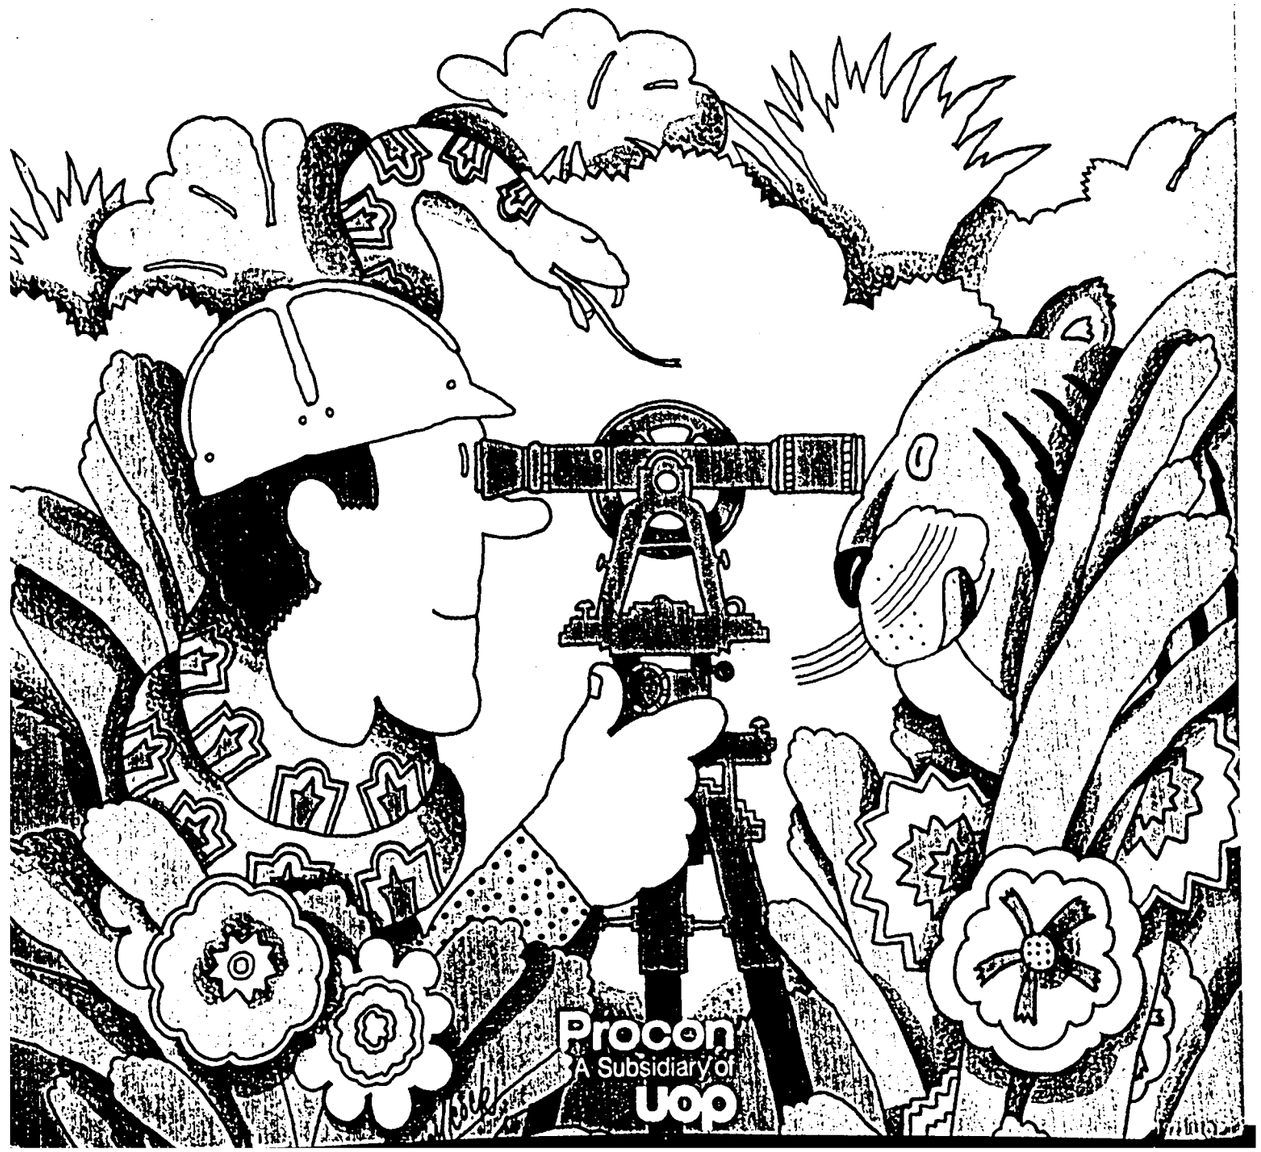
You name it. Procon will build it. Anywhere. We're equally at home in the shadows of Gibraltar or in the heart of Thailand's tiger country.

Pictured (right) is a $25-million addition completed in 1970 for Thai Oil Refinery Company, Ltd., at Sriracha, Thailand. Procon also engineered and constructed the original refinery, which came on stream in 1964. Both projects were masterpieces of international cooperation, assembling people, equipment and materials from many parts of the globe.

This TORC refinery is a prime example of Procon's total service capabilities and world-wide scope. In addition to process design, engineering, procurement and construction, Procon provides valuable assistance in financing, business analyses and complete services for environmental control.



At Procon, "total services" means total commitment to your project's success, anywhere in the world.

All services of Procon Incorporated are available through the European marketing staff at Procon (Great Britain) Limited, Greater London House, Hampstead Road, London N.W. 1, England, or any of Procon's other offices, world-wide: Bangkok, Des Plaines (Chicago), Houston, Kogarah (Sydney), Los Angeles, Madrid, Makati (Manila), New York, Paris, Pleasant Hill (San Francisco), Rio de Janeiro, Rotterdam, Sao Paulo Seoul, Singapore and Tulsa.

Part of TORC refinery designed and constructed by Procon near Bangkok.

Procon
tames the tough ones, anywhere.

NATIONS DO NOT MOVE FORWARD ON BACKWARD METHODS

We respect the man with a load on his back. He is a symbol of honest labor.

But there are, you will agree, far more efficient ways to move essential materials.

Throughout the world, whole industries are suffering because of obsolete handling methods.

It need not be so. And our company is proof of this truth.

Helping people and nations move their materials is only one part of our company's business, but a part in which we are world leaders.

To convey minerals over mountains, for example, we build massive conveyor systems.

To transport coal to the crushers, grain to the granaries, raw materials to the refineries, or foods to the factories, we engineer ingenious bulk handling systems.

We manufacture machines to put products into packages, load the packages into containers, and automatically stack the containers on pallets.

We design and build automated warehousing systems, including equipment to sort and stock products, then gather them when orders need filling.

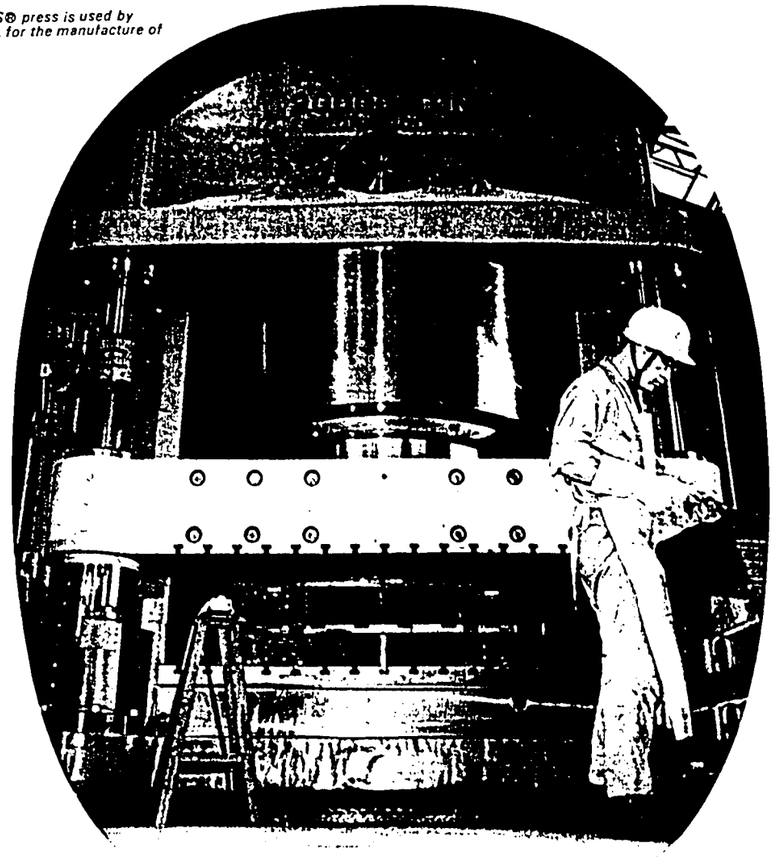
We build mobile cranes that will handle anything from small products to steel for heavy construction.

We even manufacture pumps to move oil, water, and chemicals.

Our company has innovated many of the ideas which are propelling nations, regions, and industries into a new age in materials handling.

And we offer those ideas to the entire world.

FMC has offices in principal cities throughout the world. To learn more about this versatile company, please write for our booklet, "Achievements."



fmc CORPORATION ®

FMC CORPORATION

A VERY USEFUL COMPANY

This 20,000-ton QUINTUS® press is used by Hisaka Seisakusho, Japan, for the manufacture of heat-exchanger plates.

This is ASEA in industry

The unique high-pressure QUINTUS press is just one of ASEA's developments for industry. This is used in, for example, the new ASEA-STORA Process for making high-speed tool steels.

ASEA can also supply every conceivable type of drive from a simple a.c. motor with starter to a complete integrated system designed to give optimum production results. About 200 thyristor-controlled drives have been ordered for rolling mills.

We have solved many intricate problems in different areas. We want to tackle yours, too. To serve your needs, ASEA have 40,000 employees, factories in nine countries, sales offices and agents in over 70 countries.

That is ASEA.

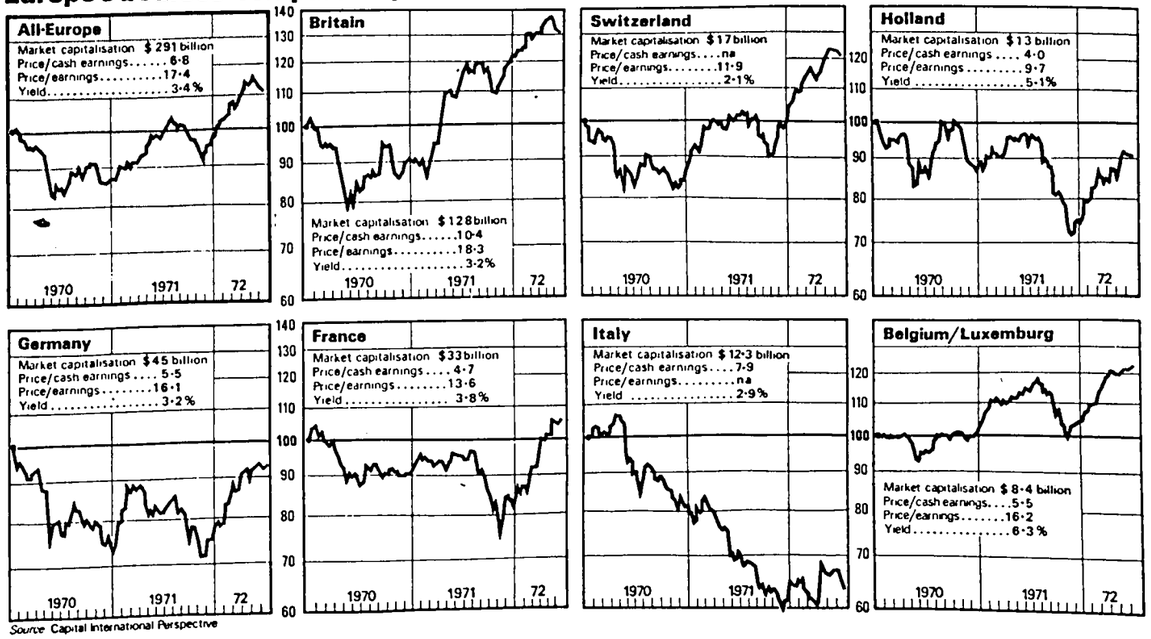
BUSINESS *Investment*

Bourses in blossom



Paris

In the whole of 1971, British investment trusts spent only £22m buying foreign shares. In just the first three months of 1972, they have spent 2½ times as much—and a big slice of that has gone to the stock markets of continental Europe. Even unit trusts, traditionally much more home-bound, forked out £5m compared with £6m throughout 1971. The figures for insurance companies and pension funds, when available, are sure to show the same outgoing trend. The advertisements for European trusts—and for analysts speaking European languages—confirm the impression that investors, encouraged by brokers, are plumping for the European common stock markets. The banks and brokers on the receiving end, in Paris or Zurich or Amsterdam or wherever, are unanimous that British interest has helped spark the revival in their markets, and has fuelled the rises since.

The major continental markets, with the exception of Italy, are in an unaccustomed bull phase. Though the rises since the bear bottoms of November, of around 20-30%, are not much greater than the 25% notched up in Britain, there are good technical reasons why the bull markets in Europe should continue for longer than here.

Over the next few years, the price/earnings ratio will become internationalised. The average p/e for the continent is 15; that for Britain 20. Britain's price/cash earnings ratio is twice as high as the EEC's. They will have to move closer into line—and will be pressed into doing so by a greater institutional involvement in stock markets, and the greater professionalisation of investment that should go with it. The EEC is under-pension funded, and under-insured, and under-unit trusted. In France, the fonds communs de placement, created under General de Gaulle's policy of participation, are growing at the rate of something like £100m a year; the money is invested in the stock market directly, or indirectly through SICAVs (unit trusts). In the medium-term, the economic outlook for France and Germany is good, fair for the Netherlands, somewhat uncertain for Belgium, and very uncertain for Italy. In the short-term, there is every prospect that the flow of funds from Britain will carry on, as more and more institutions hedge their bets on the toppiness of

Europe's bourses compared log scale, Jan 1, 1970 = 100

Source Capital International Perspective

the London market ; and this flow should in turn, encourage the others.

The right approach for the investor is probably to go for industries rather than countries, and companies rather than industries. Investors in France tend to be parochial, and in Italy they have to be ; but the others now move their funds fairly actively within Europe and outside it, so that the markets are subjected to influences other than purely domestic ones. The rise in the Netherlands owes less to the prospects for the economy, which is suffering badly from the English disease of high inflation and unemployment, than to the attractions of the international companies there to British and German investors.

But as far as markets are concerned, France and Germany are likely to share the honours for the rest of the year. The shake-out in Germany caused by the over-pessimistic fears of recession still leaves plenty of room for sharp increases, and France offers the attraction of a fast-growing economy. An added bull point is that the French finance ministry has taken the challenge of the London market seriously, and is determined to push through the reforms announced in May. The individually responsible agents de change will be encouraged to merge, and form companies, and raise fresh capital. They will then be able to become specialists (act like jobbers) and this will put greater depth into the market. They will also be allowed to trade outside the ridiculously limited official opening hours.

Three sectors look interesting in Paris. Consumer shares, notably **Carrefour,** have risen dramatically. But, in view of an astonishing growth rate, some are still on reasonable prospective p/es: **Casino** on a p/e of 26 at Fr 1800, and **Prénatal** on a p/e of 15 at Fr 279. France and Belgium already have the imputation system that Britain will be moving on to next year, and the p/es are calculated on earnings which underestimate the dividend paying capacity compared with other countries (ie the p/es are higher for a given level of profits). Building and construction have been given a boost by special credits, and the Sixth Plan calls for a big building programme. Companies like **Dumez** will benefit from the expansion in road-building, and **Poclain,** the finely managed excavator-makers, will benefit generally. Telecommunications is an industry which needs a massive infrastructure investment and **Téléphone Ericsson** (a quoted subsidiary of the Swedish company) is on a cheap p/e of 24, at Fr 1092—at least compared with **Le Matériel Téléphonique,** on one of 42 at Fr 2480. As a good spec there is an investment trust affiliate of the Crédit Lyonnais called **Sofinex,** one of whose investments, in **Application des Gaz** which makes those calor gas comforts for campers, is worth as much as Sofinex's entire market capitalisation. Paris—and the other bourses of the EEC—still have plenty of bargains for shoppers.

Capital very international

Geneva

The Chase Manhattan Bank has all but signed its deal to buy half of Capital International, the Geneva-based fund management and research group ; approval by the Federal Reserve Board is awaited. The Chase, like many other banks and financial advisers, is faced with a growing demand for fund management on an international scale.

Capital International was started by the United States fund management organisation, the Capital Group, in 1964 to provide basic research on companies and markets outside the United States. It now manages Capital Italia, which has to have half its assets in Italy, and Capital International, an offshore fund. Though dragged down by the Italian market, Capital Italia outperformed most other comparable funds, and provides the Italians with at least half a chance of escaping the domestic market. The offshore fund, which is sold through White, Weld, has gone up 34% between its inception in January, 1970, and March, 1972, which is a fair performance. But it is perhaps most remarkable for the quality of the information disclosed in the statements sent to fundholders : comparison of the fund's performance with the markets in 16 countries ; cost and value of all holdings ; and a full account of transactions in the quarter.

The philosophy guiding the company's research effort and fund management is to regard the world as its oyster. Markets are monitored by country indices which have been specially constructed to provide a uniform basis of comparison (we have used them for our chart on page 91), and there are indices for industries which ignore national boundaries. These indices, and the performance of their constituent companies, are published in Capital International Perspective*.

Institutional fund management is a growth industry on the continent of Europe. More and more companies are having to start funded pension funds, and the existing funds and insurance companies are becoming increasingly equity conscious. And, as the memory of IOS recedes, the small investor might be tempted back into offshore funds. However, it is more likely that he will buy a domestically-registered and controlled mutual fund that has international management. It is quite on the cards that the Chase, in combination with local banks, will market funds whose portfolios were managed by Capital International.

*Available from 15, rue du Cendrier, CH-1201 Geneva, Switzerland. Swiss Francs 1,080 per year.

London market

Down, up, side

There was every reason to expect the market to fall : gloomy prognostications for the balance of payments ; bad news about industrial investment ; the big hole drilled by the appeal court into the bucket of the Government's industrial relations policy ; and the growing realisation that if a prices and incomes policy is ruled out as a method of curbing inflation, devaluation becomes a near-certainty. Perhaps, remembering the bullish market that followed the last devaluation, this, last is, after all, a bull point. In any case, having started the week at 503.7, the Financial Times index of industrial ordinary shares then went through a gentle peregrination : up a little on Monday, down on Tuesday, up on Wednesday, and then plummeted on Thursday to 490.0 at the close.

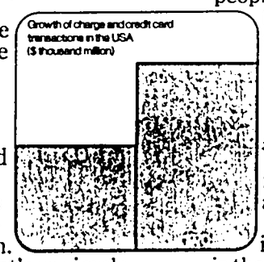
The market has decided that a little sitting and waiting and profit-taking is now in order, but that there is more to come from this bull. After all, the companies are still turning in good results. **Grand Metropolitan Hotels** managed a convincing rise of 34% at the half-way stage, while the last offer document in its bid for **Watney Mann** was expecting 28% for the year. So the share price, at 245p, has a firm base to withstand the higher offer that GMH will soon be announcing. It may be the clincher—and the result has to be known by the takeover panel's set date of July 4th. But Watney has a thirst for independence, and has done a good job in putting its case across. Since there is no strong case for a merger, shareholders should vote against—unless the offer is sufficiently ridiculously high to make a refusal illogical.

The Watney bid has played its

Access. It was bound to happen.

From October this year, a major new credit system will be operating in Britain.

Its name is Access.



Access has been jointly developed by three of the biggest banks in the country: Lloyds, Midland and the National Westminster.

And it's being introduced at a time when credit is becoming accepted by the majority of people as the modern way of managing their personal and domestic affairs.

The new money.

American experience shows that charge and credit cards have had a remarkable growth record in recent years.

And Access is a similar kind of system geared to the needs of today's business and today's consumers in Britain.

A system that's so simple and so easy to use that it won't be very long before almost everyone begins to wonder how they ever managed without it.

What you stand to gain.

Initially Access will aim to have around 3,000,000 cardholders. We know that because they bank with the big three banks.

This will make Access the biggest credit card operation in the UK, bar none.

And since Access will generate, right from the start, more than £300,000,000 of additional spending power for these people, it's a scheme that will obviously stimulate sales.

Sales that could be yours.

What makes Access different.

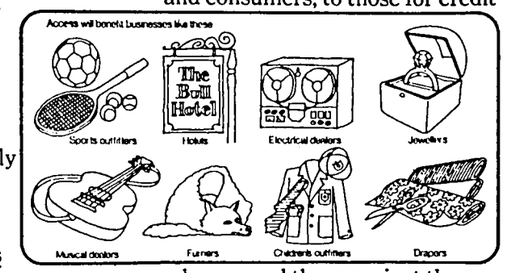
As a scheme itself, Access is as simple in operation as any other credit card system.

In fact, the only operating difference in the scheme is the way in which Access sales vouchers are redeemed. When they're paid into Lloyds, Midland or National Westminster, they're treated as cash—the discount is paid in arrears. So your cash flow is improved.

But whereas Access differs only slightly in actual operation, it is much bigger than any other credit system operating in this country.

And in the credit market, to be bigger is to be better.

How we know we've got it right.



Before we finalised our plans for Access we talked to retailers and consumers; to those for credit schemes and those against them.

We talked in depth and at great length.

We talked until we were sure that we'd got something that was going to be welcomed and used.

And that people thought that the time was right.

They did. And it is.

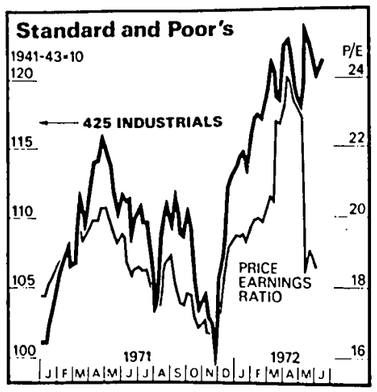
part in keeping a certain excitement in the market, and the excitement is important to the small investor. The chart, based partly on a study by brokers Fielding, Newson-Smith, shows that the volume of trading has been outpacing the rise in the broad-based Financial Times-Actuaries all-share index, but that a declining proportion of this turnover is from the institutions. One obvious danger in having an institution-dominated market is that there may be too few view-takers around; and greater unanimity creates sharper falls and a more volatile market. But there is another danger in having the small investor dominating the trading—that there is too much mindless speculation and the prices of shares move drastically without any change in the fundamentals. A close look at the chart suggests that there is a connection, although a mild one, between the drop in the proportion of trading done by the institutions and peaks in the market. Perhaps there is some connection between the failure of the market to go anywhere much except sideways and its success in attracting back the small investors. If they went home, then the market would take a tumble.

Wall Street



Sums are so bracing

New York

Wall Street has been busy with sums lately, seeking to recapture via sharpened numerical correlations its earlier, but now somewhat tempered, optimism over how much longer and further the market's rise can be expected to go in step with the expanding economy. As if on cue in recent days, a rash of analyses in brokers' letters to clients and in fly-sheets from independent investment services has been pounding out one main argument: after-tax corporate profits are almost certain to grow by about 15% this year and to continue to do well in 1973. So the market at present levels may still be noticeably underpriced.

Some analysts, for example, expect the shares in Standard and Poor's index of 425 industrial stocks to post weighted composite earnings of $7 per share in 1973, up from $6.50 anticipated for this year. The S and P index stood at 121.32 at midweek, and was therefore capitalising 1973's expected earnings at 17 times, while running at a multiple of 21 times its actual earnings of $5.71 for 1971. To bring the S and P multiple for 1973 back up towards 21, say the optimists, the index should rise by 20% or more.

A similar analysis of the 30 blue chips making up the Dow Jones industrial average shows the Dow, at its midweek level of 946.79, priced at only 14 times next year's estimated earnings. If the Dow simply returns to the average 17 times of recent years, it would soar up through the thus far elusive

1,000 barrier, and get close to 1,100.

Admittedly, all of this is counting next year's anticipated improvement in earnings before it is hatched. Even if the economy continues to surge ahead as vigorously as expected, corporate profits in 1973 could still have their wings clipped by further stiffening of price controls or an increase in taxes. A "phase three" in price controls and a hoist in taxes are regarded as quite possible even if President Nixon returns to the White House, and Wall Street is much more terrified of McGovernment. It is these worries that have made themselves felt in the market decline of recent weeks, but Wednesday's sharp rally owed something to the newly fashionable sunny arithmetic.

SECTOR ANALYSIS

Food for thought

Food retailing shares have rocketed up by 74% over the past year while the Financial Times-Actuaries all-share index has risen 30%. A year ago the sector was under-rated. Then the market gradually realised that retailers benefited from the Confederation of British Industry's price limitation—but were not subject to it; and that food retailing should be the first sector to emerge with cream over its face after the budget's (supposed) banquet for consumers. **Tesco's** 20% profits rise, to £16.5m, demonstrates the continued profitability in selling groceries with some diversification into non-foods—and the p/e of 22 at 78p is by no means dear.

The brutal fact for the housewife is that the ruthless grocers of Britain have managed to protect and even improve their margins on fairly static trading. Except for beef, price increases are accepted in the name of decimalisation, or Set, or the common market, or just plain inflation. So the retailers have added on a few pence here and there; now they are hoping for a boost in volume, too.

Longer-term, the outlook is more dodgy. The independents and the co-ops are fighting hard to hang on to their half of the grocery business—which is not growing. And the multiples will have to face the challenge of the discount stores: the hypermarkets, using massive out-of-town, or even in-town, stores of 50,000 square feet or more where prices are cut across a wide board; and the knock-down discounter offering a limited range of dry goods very cheaply, and working off gross margins of 11%-12%. The famous British example is **Kwik Save Discount.** When, and only when, this trend is established here, along the pattern of the United States and much of the continent, there will be a resurgence of the convenience stores. Before then a lot of High Street shops will be very unprofitable.

The groups to watch are those which are taking these trends into account. And they are being watched. **Associated Dairies,** whose ASDA operation is well ahead of the hypermarket game, is on a p/e of 44 at 400p—but on the prospective forecast profits of £3.5m, that comes down to 33. Kwik Save, on a multiple of 32 at 380p, is more vulnerable to competition, but has found a good formula.

Tesco remains a solid bet. It is clear where it is going next: out of town and bigger. Some 15 hypermarket sites are being negotiated; three 40,000 square foot in-town giants have just received planning permission. The Home 'N' Wear departments—household goods and clothes—are making a useful contribution to turnover, but the company is shy about disclosing the progress made. Apart from the Sainsbury chain, Tesco is still not facing much extra competition as an operator of conventional supermarkets on a nationwide scale.

Though it is impossible to disentangle the Fine Fare chain from the rest of **Associated British Foods,** it would not appear to be posing any more of a threat than it used to. Where Allied Suppliers will go under the **Cavenham Foods** banner is anybody's guess; almost certainly out of all those High Street shops into larger ones, and it is a long way behind the game. **International Stores,** though it had an impressive rise of 67% in profits for the first half of the year, is less inspiring in the longer run.

Among the regional groups **F. J. Wallis** continues to stand out as a neat and well-run organisation. Based solidly in the fleshpots of the south-east and with a big stake in fresh foods (less threat from the discounters when and if they penetrate its stronghold) it is on a fully-valued p/e of 27 at 126p. Up in the north **Lennons Supermarket** has a prospective rating more like 15 than its historic 29. But investors should not ignore its vulnerable position in the heartland of the discounters.

RUBBER TRENDS

They like it their way

issues of shares they are offered. Foreigners are finding themselves far down the list of priorities. Representations have been made to the ministry of finance about dilution of earnings, dilution of share stakes and the sheer unfairness of it all. Most of the complaints have been met with polite disinterest. One company, Yamaha Motor, has recently made a rights issue at a price midway between market price and par. So they can do it if they try, but most Japanese think their system is a cheap and convenient way of raising cash.

They say they do not want foreign investment anyway, because they have too much foreign exchange; they certainly do not want to encourage foreign takeover bids. In the Japanese business ethic, shareholders' rights do not loom large. Ties of friendship and obligation between companies and banks count for much more. There will come a time when, with a show of good neighbourliness, foreign institutional investors are offered an early bite at new issues again. Cynics say this will probably be at the beginning of the next bear market.

Japanese investment

Honourable placing

Some of the growing band of London institutions investing in Japan are now complaining like bulls with sore heads about Japan's system for new share issues. Rights issues are unknown in Japan; Tokyo does not have a mechanism for trading in rights anyway. Instead, blocks of shares at no particular proportion to existing capital are placed in friendly institutional hands—at discounts that are usually 10%-15%, but can legally range up to 20%.

Until recently big overseas shareholders counted as friends. But now that bull fever is raising the market ever higher, Japanese domestic institutions will take all the considerable new

CHAIRMEN'S STATEMENTS

British Isles & General Investment Trust Ltd.

INCREASED DIVIDEND

Sir Denys Lowson, Bt., the Chairman presided at the Thirty-fifth Annual General Meeting of the British Isles and General Investment Trust Ltd., which was held in London on June 7th. In the course of his remarks he said:

The Gross Revenue for the year to January 31st, 1972, amounted to £272,977 compared with £261,537 the previous year. An interim dividend of 8 per cent and a second interim dividend of 15 per cent (in lieu of a final) has been paid making 23 per cent for the year against 22 per cent last year and represents the fifth successive increase. This will leave £237,737 to be carried forward, against £220,518 brought in.

The market value of the investments at January 31 last amounted to £7,364,381 which exceeds the book cost by 259.7 per cent. The net asset value of the 25p ordinary shares amounted to 194p which is a rise of 40.5 per cent on the previous year.

Based on the valuation as at January 31st last the geographical distribution of the investments was as follows: The United Kingdom 77.99 per cent; the Commonwealth (excluding Canada) 6.05 per cent; U.S.A. and Canada 13.81 per cent; and South Africa and elsewhere 2.15 per cent; while as regards categories 1.74 per cent is in Debentures and Unsecured Notes; 1.37 per cent in Preference Stocks; and 96.89 per cent in Ordinary and Deferred Ordinary Stocks and Shares.

General Conditions

The year 1971 was a record one for this country's Balance of Payments. The visible balance or the difference between exports and imports amounted to £297 million in this country's favour, which was the highest ever recorded and only the fourth year of surplus since the last war. Invisible exports which in the past have also been of great help to our Balance of Payments continued to perform well with a total surplus for 1971 of £655 million. As a result the Current Account balance at £952 million was also a record for the United Kingdom and an improvement of £341 million over the previous year. Indications are that the current year will be less favourable and a deficit on current trade account of as much as £150 million is possible, but this will be offset by invisibles of approximately £650 million. The increase in disposable incomes will tend to increase imports and, due to the higher rate of inflation in this country than elsewhere, our exports may not remain as competitive as in the past. World trade is expected to increase by approximately 7 per cent in 1972 as compared with 3 per cent to 4 per cent for this country. Inflation remains the main problem and until this is solved our exports will continue to suffer from the loss of price competitiveness.

As regards our own company the year has started satisfactorily and our revenue to date shows some increase. We hope that when we meet again in twelve months' time we will be able to produce a satisfactory report.

The Report and Accounts were unanimously adopted and the proceedings terminated with a warm vote of thanks to the Chairman, Sir Denys Lowson, Directors and Staff.

BUNZL PULP & PAPER LTD

The 32nd Annual General Meeting of Bunzl Pulp & Paper Ltd was held on 13th June at the Great Eastern Hotel, London, EC2. The following is a summary from the Statement by Mr G. G. Bunzl, the Chairman, circulated with the Report and Accounts for the year ended 31st December 1971.

Turnover in 1971 increased by £5,008,000 to £62,878,000 but trading profit decreased from £5,416,000 to £5,169,000 largely as a result of adverse trading conditions in Austria. There was a 79% increase in the profit from associates. In line with last October's forecast group profit before taxation declined from £5,535,000 to £5,423,000. Profit after taxation decreased from £2,574,000 to £2,407,000.

A final dividend of 2.24p per share is proposed making a total for the year of 4.48p, the same as 1970.

Sales by the **Filter Division** showed a welcome increase and profits as a whole increased in line; demand is increasing for novel filters developed by the Filtrona Group and for multiple filters which are our speciality.

The **Paper Sales Division** had a difficult year and the results were adversely affected by the dollar devaluation. Turnover and profitability improved in the second half and it is expected that the 1972 results will be the same as 1971.

Despite worldwide over-production of paper and converted goods the **Fay Division** had a good year increasing the distribution of its branded disposables in its many markets, special efforts being made in Europe; it is expected that progress will be maintained in 1972.

In a year of difficult trading conditions and rising costs the **Industrial Division** as a whole produced improved results, some companies faring better than others. The outlook for this Division is promising.

Last year's unfavourable forecast for the **Bunzl & Biach Division, Austria** has unfortunately proved correct, and the substantial losses made by the paper-making and converting departments were not offset by the good results from the Non-Woven department. There are now signs of improvement but recovery is likely to be slow.

In spite of the difficulties in Austria and the adverse effects of the February power cuts in the UK, results for 1972 to date show an improvement over the corresponding period for 1971. It is expected that this trend will continue and, unless unpredictable factors intervene, the results for 1972 will be better than those for 1971.

SUMMARY OF RESULTS

	1971	1970
	£000	£000
Net Assets employed	30,727	28,373
Turnover	62,878	57,870
Profit before taxation	5,423	5,535
Earnings for Shareholders	2,407	2,574
Ordinary dividends – gross ..	1,172	1,140
– per share ..	4.48p	4.48p
Earnings per share	9.2p	10.4p

APPOINTMENTS

Oxford Management Centre

Research Fellow to work with Rosemary Stewart on S S R C. supported project "Behavioural Classification of Managers' Jobs." Desirable qualifications: Good Degree, experience of social research and knowledge of industry. Two years from October 1st. Salary £3,000-£3,200. Details from The Administrator, The Oxford Centre for Management Studies, Kennington, Oxford, OX1 5NY.

Ulster: The New University

Chair in West European Studies

Applications are invited for appointment to a Chair in West European Studies within the School of Humanities of the University. This is a new appointment and it will be made from a date to be arranged with the chosen candidate.

Salary will be within the professorial range (minimum £4,850) with F.S.S.U.

Further particulars may be obtained from The Registrar, The New University of Ulster, Coleraine, Northern Ireland, to whom applications, including the names and addresses of three referees should be sent not later than Friday, 14th July, 1972 (quoting Ref: 72/78).

COMPANY STATEMENT

Thyssen-Bornemisza Group doubles profit

According to the Annual Report, the 1971 financial year was very important for the development of the Group.

1. The profit was doubled.
2. The own liquidity was improved by Dfl. 40 million.
3. Steps were taken to secure further expansion.

This gives the Thyssen-Bornemisza Group the opportunity to continue its expansion according to plan in 1972 and in subsequent years.

The Group aims at a spread of capital and risk. New fields of business are to be entered, in addition to the current activities: shipbuilding, shipping, harbour activities, transport and sale of natural gas, and light engineering. The Group is interested, in particular, in consumer-oriented and international activities.

Some salient figures of the Thyssen-Bornemisza Group.

The University of Manchester

FACULTY OF ECONOMIC AND SOCIAL STUDIES

Research Section

Applications are invited from good honours graduates or students expecting to graduate this year for posts of Research Associate or Research Assistant in Economics. One post will be attached to the SSRC Inflation Research Programme and the other to the Department of Economics. Salary range p.a. Research Associate—£1,641-£2,092; Research Assistant, £1,269-£1,329. Appointment initially for one year, but renewable. Duties commence October 1st, 1972. Particulars and application forms (returnable by July 1st) from the Registrar, The University, Manchester, M13 9PL. Quote ref: 101/72/E. Please state for which post you are applying.

Staffordshire County Council

County Planning and Development Department

Senior Group Leader
Reference No. 36.
(S.O.1/P.O.1A—£2,283 to £3,180 per annum)

Applications are invited for the above post in the Research and Industry Section of the Department. The Section is responsible for research on a wide range of economic and social topics. It has a major role in the preparation of the County Structure Plan in the field of population, Employment, Industry and Shopping.

The post will carry special responsibility for Population and Employment studies and forecasts and related needs, (e.g. Shopping). Applicants should have considerable experience in conducting research projects, evaluating statistical data, and in the preparation of reports.

The commencing salary for the successful applicant will be at any point on any of the grades commensurate with age, qualifications and experience.

Applications (no forms) giving details of age, education, qualifications, present and previous appointments, experience, present salary, and the names and addresses of two persons to whom reference may be made, should be sent to J. H. Barratt, County Planning and Development Officer, Martin Street, Stafford, by not later than 26th June, 1972.

Relationship to any member or senior officer of the County Council must be disclosed

APPOINTMENTS

Leicestershire County Planning Department

Senior Planning Officer (Research and Data)

Leicestershire is a progressive planning authority and is currently preparing its Structure Plan. The Research and Data Section is being expanded to cater more fully with the process of monitoring and evaluation associated with the Structure Plan, and to extend the Department's information system. The person appointed to this new post will be next to the Section Head and will have an opportunity to develop, test and introduce new techniques within a practical context.

Applicants should be appropriately qualified and have some good research experience and possess sound statistical knowledge.

Salary within the group grade A.P.5/S.O.1/S.O.2 £2,199 to £2,457/£2,913-£3,075, depending upon qualifications and experience.

Application forms, obtainable from the County Planning Officer, County Hall, Glenfield, Leicester LE3 8RH, to be submitted before 26th June 1972.

University of Manchester

Temporary Lecturer in Economics

Applications invited for these posts, tenable during session 1972-3. Salary range p.a. £1,641-£3,852. Particulars and application forms, returnable by July 3rd, from the Registrar, The University, Manchester M13 9PL. Quote ref : 106/72/E.

University College Cardiff

ECONOMICS DEPARTMENT, MANPOWER RESEARCH UNIT

Research Fellow and Research Assistants

Applications are invited for a Research Fellow and two Research Assistants to work in a research team on cost-benefit studies of industrial training (mainly craft apprentice and supervisor/management). Salaries : Fellow : in the range £1841 to £2982 with F.S.S.U. benefits ; Research Assistant : £1220 p.a. The appointments are for one or two years in the first instance. Closing date, Friday, June 30th, 1972. Further particulars obtainable from Professor Brinley Thomas, P.O. Box 78, University College, Cardiff, CF1 1XL, to whom applications, with names of two referees, should be sent.

CHAIRMAN'S STATEMENT

Mr. Chobei Takeda VI, President, Takeda Chemical Industries, Ltd.

Takeda Chemical Industries, Ltd.

Takeda 武田薬品工業株式会社

Report by Mr. Chobei Takeda VI, President, for the six months ended 31st March, 1972.

The depressed Japanese economy showed signs of recovery as a result of the successive reductions of the official discount rate enforced since last year and the easier conditions in the money market. However, the re-appearance of international currency problems culminating in multilateral currency adjustments last December again lowered the economic barometer and business fell into a more severe recession.

This adverse economic situation had its effects on our business and we experienced general difficulties throughout all our operations. In the pharmaceutical field, increasing attention has been paid to the use of drugs by the medical profession and plans are under way for a substantial revision of the health insurance system and for a complete re-examination of drug efficacy. Competition in the pharmaceutical industry continued to be intense.

Although the Company has continued all possible efforts, sales, partly for seasonal reasons, totalled only ¥85,400 million, or roughly the same as that of the previous term. We regret that the Company's profit for this period dropped to ¥3,521 million, or about ¥1,182 million less than that of the previous term, due in part to increased competition and consequent softening of prices of drugs for medical treatment, and also to the increase in labour and depreciation costs as well as the unfavourable influence of the revaluation of the yen upon our exports.

Of our pharmaceutical lines, our cold remedy "Hi-Benza" sold well through seasonal factors and sales of the anti-inflammatory and anti-tumefacient enzyme "Dazen" also increased. However, as a result of the price reduction under the health insurance system and seasonal decreases of vitamin preparations, total pharmaceutical sales represented only a marginal improvement over the previous term. As for food products, sales of our vitamin C enriched beverage "Plussy" decreased for seasonal reasons, but sales of flavouring agent "Ee-Chee-Ban" and "Takeda's Dashi", beef-flavoured and bonito-flavoured seasonings, showed steady increases.

Production and sales of industrial chemicals, such as activated carbon, plastics and resins, were generally satisfactory. Sales of agricultural chemicals largely surpassed our original estimates even though it was not the peak period. Sales of animal health products were also expanding steadily.

Although our export sales decreased, partly because of the effect of the yen revaluation, we are exerting further efforts to develop the overseas market for products other than pharmaceuticals. Our overseas subsidiaries are making smooth progress.

By utilizing part of the proceeds raised by the last new share issue, we have extended the facilities of our Central Research Laboratories in order to expand and consolidate our research activities. A notable achievement is that we developed a new manufacturing process for citric acid and exported this technology abroad.

With regard to our plant facilities, construction of TDI (tolylene di-isocyanate) production facilities in the Kashima plant was completed in December last year as scheduled, and the facilities for study of the safety of pharmaceuticals in the biological research laboratory of the Takatsuki branch were also completed during this term. The expansion of the production capacity for the active substance "Padan", a new agricultural insecticide against rice stem borers, is proceeding on target and the construction of manufacturing facilities for the active substance "Balidamycin", a new fungicide against rice sheath blight, also started during this period.

Conversion of our U.S. dollar convertible debentures into common stock continued and by the end of the term debentures totalling over ¥3,683 million ($10,232,000), about 68% of the original issue amount of ¥5,400 million ($15,000,000), had been converted into common stock. Thus our capital stock at the end of the term was just over ¥24,415 million.

The above is a summary of our business. The economic environment both in the domestic and international markets is expected to be more severe in the future, but we are determined to further intensify our efforts to develop new technology, reinforce sales networks, rationalise production and increase the efficiency in all aspects of our operation by means of a policy of sound management.

We wish to express our hearty thanks for your co-operation and ask sincerely for the continuance of your support and patronage.

APPOINTMENTS

University of Stirling

M.Sc. in Economics

The Department of Economics offers a 1 year taught M.Sc. course, including economic theory and quantitative methods as compulsory courses and a range of optional courses in the economics of organisational behaviour, business behaviour and public policy, monetary economics, public finance, topics in quantitative techniques and methods and accounting. The successful candidate will be required to work closely with Professor Smith on a variety of projects and will also be expected to pursue his own research interests for submission to a higher degree.

The appointment will be for three years at a salary of £1,326 per annum rising to £1,392 after one year. F.S.S.U.

Requests for application forms quoting Reference number, should be made to the Registrar, The University of Manchester, Institute of Science and Technology, Sackville Street, Manchester, M60 1QD, to whom completed forms should be returned by 7th July, 1972.

CHAIRMAN'S STATEMENT

Steel Brothers Holdings Limited

Earnings and 18½% Dividend Maintained

The abridged statement of the Chairman, Mr. J. H. Gaunt reads:

The group net profits after tax, applicable to Ordinary Shareholders, total £382,518. There was an increase of profitability in most areas, particularly in Canada and the Middle East, but a substantial reduction in income from Pakistan and Western Australia.

During the years 1967/71 we have invested some £3,500,000 in new ventures at home and overseas largely in light engineering and service industries.

OVERSEAS INVESTMENTS:

In Australia; steeply rising costs meant a difficult year. Premwire Metal Industries Pty. Ltd. made a satisfactory contribution to Group profits. Steel Brothers (Perth) Pty. Ltd. in Western Australia suffered badly from depressed activities but hopes to break even in 1972.

In Canada; our subsidiary at the end of 1971 acquired control of Black Bros. Ltd., wholesalers of industrial equipment, electrical supplies and hardware.

In 1972 our Canadian company has purchased the North West Industrial Products Division and the Production Division of The Winnipeg Supply & Fuel Co. Ltd. which adds Canadian £4,292,000 (1,676,532) to its operating assets, and it also acquired the 50% of Forden Concrete, now named Steel Brothers Concrete Ltd., which it did not previously own. The outlook for Canada is for a turnover of some £10 million and further improved results from all operations.

In East Africa; the overall results showed substantial improvement from nearly all divisions, but particularly from Uganda. Prospects continue favourable.

In Malaysia; we have acquired an interest in the management of a small Company manufacturing brake and clutch linings.

In the Middle East; Spinney's (1948) Ltd., made a much increased contribution towards Group profits. The Company is benefiting from the higher level of consumer demand due to the increase in oil revenue in the producing countries.

In Pakistan; the political and military events in the former territory of East Pakistan hampered the final closure of our Chittagong office. It is hoped to close activities completely in what is now Bangladesh by the middle of 1972. In West Pakistan our trading operations from Karachi continue to be profitable although now on a much reduced scale. The effect of the May 1972 devaluation has been fully provided for in 1971 Accounts. We hope to have a reasonable although reduced continuing income from Pakistan.

In West Germany; our operations continue to prosper. A new rice mill has been built for the production of Uncle Ben's Rice for the Common Market area.

UNITED KINGDOM INVESTMENTS:

Becorit (G.B.) Ltd., had a useful profit in 1971. Export sales in particular were up, which trend is expected to continue.

H. G. Sanders & Son Ltd., made a satisfactory contribution. There should be another satisfactory result from this efficient unit in 1972.

Leonard Smith (Engineers) Ltd., now has two operating Companies Leonard Smith (Engineers) Limited and Asme Vessels Limited. A major reorganisation is in progress.

Spire Homes Ltd., made a useful contribution, although not as much as we had hoped. 1972 prospects look good.

Insurance Group; Cayzer, Steel Brothers Holdings Ltd., our joint venture in Insurance Broking with The British & Commonwealth Shipping Company Ltd., completed its first full trading year with a reasonable profit. We expect significant growth in both brokerage and profit in 1972. A small broking firm has recently been acquired near Manchester. We have also completed a substantial investment in an Insurance Agency Group which operates in Singapore, Malaysia and Hong Kong.

For tax reasons it could be of significant benefit to increase our income arising in this country, particularly in the engineering field. We are therefore keeping our eyes open for further growth opportunities in the United Kingdom.

FUTURE:

We are optimistic about our overall prospects for 1972.

The Annual General Meeting will be held on 6th July.

A copy of the Report and Accounts for 1971 can be obtained from the Secretary, Steel Brothers Holdings Limited, Sondes Place, Dorking, Surrey, RH4 3EF.

APPOINTMENTS

ASHRIDGE
Management Research Unit

Applications are invited for a

POST OFFICE RESEARCH FELLOWSHIP

tenable at Ashridge for a two or three year period commencing in September 1972.

The Post Office Research Fellow, who should preferably have a degree in one of the behavioural sciences or a related subject and/or practical experience in industrial relations or personnel management, will conduct an industrial relations project within the Postal Business.

The Ashridge Management Research Unit currently consists of thirteen professional staff, with technical and secretarial support, and conducts studies in a number of industrial and organisational issues. Encouragement is given to read for higher degrees. Full data-processing facilities are available.

Career opportunities may be available both in the Post Office and the Ashridge Research Unit. The starting salary will be in the region of £3,650 p.a. Further details and application forms are available from:

Bernard Barry,
Director of Research,
Ashridge Management College,
Berkhamsted, Hertfordshire.
Telephone: Little Gaddesden 3491 (STD Code 044 284).

Post Office employees who are interested in this vacancy should contact:

Mr. A. E. J. Arno,
Postal Headquarters, PPD/PPI.1,
St. Alphage House,
Fore Street,
London EC2Y 5XA.

For further appointments see pages 96 to 103

CHAIRMAN'S STATEMENT

1912-1972

THE PROPERTY AND REVERSIONARY INVESTMENT CORPORATION LTD.

Extracts from the Report for the year to 31 March, 1972, and from the Statement of the Chairman Mr Alfred Rubens, F.R.I.C.S.

The Company's sixtieth anniversary coincides with a **RECORD PROFIT** of £420,550 after tax.

THE DIVIDEND of 19% proposed compares with 15% for the previous year.

FUTURE PROSPECTS are excellent.

The **PROPERTY REVALUATION** to be made during the current year should show a large surplus.

Copies of the report and accounts may obtained from the Secretary of the Company at Albany House, Petty France, London, SW1H 9EE.

DERBY COUNTY BOROUGH

DEPARTMENT OF PLANNING

There are immediate vacancies for the following two posts in my Department:

Central Area Planner

A qualified Planner and/or Architect to be responsible for the co-ordination of development proposals, traffic and environmental management schemes and conservation area policies in the Town Centre. I am looking for someone who can make a positive contribution to the improvement of the built environment in Derby.

Statistician/Economist

A Statistician, Economist or Town Planner with experience of quantitative forecasting and analysis techniques preferably in a planning context.

Both are Senior Assistant Planning Officers posts on SO Grade 2 (£2,766-£3,075). Applications, giving full details of qualifications and experience, by letter please, to the: Director of Planning, Department of Planning, The Council House, Corporation Street, Derby DE1 2FP.
Closing date: 26th June 1972.

BUSINESS NOTICE

INTERNATIONAL INVESTMENT COUNSELLING

Formulating a Strategy

Your international investment *Strategy* concerns the degree to which you are invested; the degree of investment in each country; and the degree of risk or protection in each investment.

At Lionel D. Edie International, we have the tools to assist you in these decisions. Our Economic and Security Research is excellent – *AND* we will assign a Senior Counsellor with ample time to interpret and apply this information to your portfolio.

Your tax *Strategy* is important too. Do you, for example, hold United States equities subject to withholding when you could own Euro-dollar convertible bonds at little or no conversion premium – get 2 to 3 times the income and – no withholding?

We would like to help you establish your investment *Policy*, formulate your *Strategy*, and apply them toward the successful management of your international investments.

If you would like more information contact Edouard Iselin, our Executive Vice President in Geneva. He will be glad to discuss services, fees and answer any questions you may have.

Lionel D. Edie International, Ltd.

economist-

Ministry of Trade and Industry

A post in ZAMBIA offers these benefits: lovely climate; great sights; wider professional scope; good salaries; guaranteed accommodation; fares paid and generous baggage allowance – and an opportunity to help in the building of a rapidly developing nation.

Qualifications: Candidates must be in possession of a degree in Economics or its equivalent with some practical experience in trade imports and exports promotion.

Duties: To advise the Ministry on matters relating to sources of supply for imports and to study export possibilities for Zambia's trade with other countries particularly the East African community. He will be required to advise the Ministry in the formulation of trade, industrial and export promotion policy.

If the successful candidates are British, they may be eligible for an inducement allowance payable by the British Government.

Please apply by sending full personal and professional details to: Appointments Officer (K), Zambia High Commission, 7/11 Cavendish Place, London W1.

ZAMBIA

Economist

The Automobile Association is seeking an Economist to join a team in the Operations Planning Department dealing with long range planning and forecasting for the Road and Technical Services. Initially the position is at Leicester Square but relocation to Basingstoke, Hampshire, will take place in 1973. Candidates must be graduates with experience in economic planning or related fields. Starting salary will not be less than £1824 per annum plus £135 per annum London Weighting Allowance. Conditions of service include four weeks annual holiday and a contributory pension fund.
To apply please write for a Personnel Selection Form quoting reference number A40 to :
Mr. G. H. Richards,
Personnel Officer,
Administration, HO,
Automobile Association,
Fanum House,
Leicester Square,
London WC 2H 7LY.

International Planned
Parenthood Federation

Management Accountants

Challenging opportunities to work internationally with a multi-million pound organisation working to increase family planning knowledge and services, and combating the problems of excessive population growth rates.

Management Accounting

is a developing function operated from Central Office providing expert advice on all aspects of financial administration to regional offices and associations in countries throughout the world. Each Management Accountant is assigned a region and countries, being responsible for the examination/interpretation of budgets/reports/accounts ; review of financial procedures and programme progress ; preparation of management reports ; assisting in consolidation of financial information ; advising on O & M problems ; undertaking special assignments and advising on a wide range of problems.

The Federation's international activities are expanding rapidly (1972 Budget £10 million) and these appointments offer considerable scope to men able to work with energy and tact on their own initiative.

Applicants should preferably have overseas experience and the ability to project their personalities and communicate advice to various levels of management. There is no age limit and these appointments could interest mature men qualified by experience. They should be prepared for considerable and continuing overseas travelling with up to 60% of each year spent on visits and trips of up to 6 weeks' duration.

Salaries are internationally competitive and other benefits include contributory pension scheme, free life assurance, medical plan, good travel allowances, etc.

Comprehensive career history and salary details should be sent to the Controller, IPPF Central Office, 18/20 Lower Regent Street, London, SW1. Applications welcome from the UK and Overseas

INTERNATIONAL PLANNED PARENTHOOD FEDERATION

BUSINESS

WILL THE COMPETITION MOVE IN IF I MOVE OUT ?

If you're thinking of moving your firm out of town, don't take any risks. Move to an Expanding Town. For full information call our 24 hour Ansafone service on 01-633 7494 or 7595 now. Or write to the Industrial Centre, GLC Valuation and Estates Dept. (EC/C) County Hall, London SE1 7PB.

The University of Sussex

Lecturer in Economics

Applications are invited for a post of Lecturer in Economics in the School of Social Sciences with effect from 1st October 1972. Applicants should have an interest in one or more of the following fields : econometrics, statistics, industrial economics, international trade, social policy. There is also the possibility of a temporary lectureship becoming available. Salary in the scale £1,641-£3,852 per annum.

Further particulars and application forms, returnable by 10th July 1972, are available from the Establishment Section, Arts Building, University of Sussex, Falmer, Brighton BN1 9QN (telephone Brighton 66755, ext 663) quoting ref 892/3.

APPOINTMENT

Strategic Planning

We have a vacancy for an ECONOMIST in our Central London Headquarters.

The work covers a wide range of economic and planning studies, including helping to identify the main issues likely to face the Board and contributing to the preparation and integration of the Board's individual plans. The scope and pace of the work are demanding, calling for a high degree of both creative and analytical ability, as well as the capacity to communicate clearly and sensitively across disciplines.

Candidates should possess a degree, preferably in Economics or some related subject, and have recent appropriate industrial or postgraduate experience.

Salary range: £2430–£3312 p.a. inc., according to qualifications and experience.

Applications stating full relevant details and present salary to the Personnel Officer (Headquarters), Central Electricity Generating Board, Sudbury House, 15 Newgate Street, London EC1A 7AU, **by 30 June 1972.**

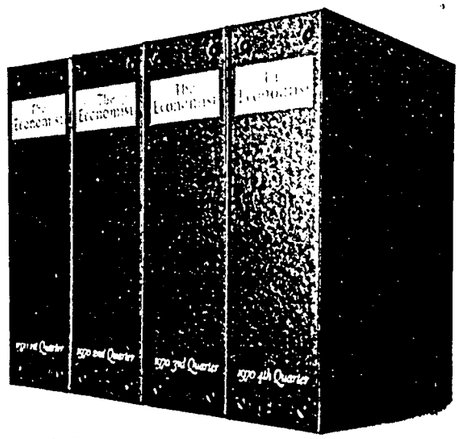
What's new about Term Loans?

We've been making them for over 30 years. By 1935, The First National Bank of Chicago was already making term loans to many of America's major companies. Since then, we've loaned thousands of millions of dollars in virtually every currency there is, making big differences to all types of companies all over the world. And naturally, our expertise is available to you right here in London. We have experienced people waiting to arrange your financial needs. So, when you need Pounds, Dollars or any other currency whether for revolving credits, multicurrency lines, or standby facilities, contact us.

Take advantage of our experience.



Contact Mr. Gordon Sapstead, Deputy General Manager, The First National Bank of Chicago, 1 Royal Exchange Buildings, Cornhill, London E.C.3. Or phone 01-283 2010.

The Economist

Binding cases

Binding cases for The Economist are available from Easibind Ltd. The binders (see illustration) are covered in strong black leather cloth with a black leatherette lining. The spine, which is specially reinforced, is embossed in gold and red. Each binder holds 13 issues of the main edition or 18 issues of the air edition, with quarterly indices. The cost per binder, post free throughout the world, is £1.25 (US $3.50). Orders, stating clearly which edition, the years required and enclosing payment, should be sent, NOT to The Economist, but to

EASIBIND LIMITED (Dept. E) Eardley House, 4 Uxbridge Street, Kensington, London W8 *Telephone:* 01-727 0686 (3 lines).

Copies of the quarterly indices (£2.50 pa) are available only from The Economist, 25 St. James's Street, London SW1A 1HG.

FIDUCIARE CFA THE HAND

(after reading the CFA Report)

for solid reasons — you might decide to incorporate in Switzerland

The well established economy of Switzerland and its ancient and well defined body of laws does not offer romantic or exotic attractions. Its tax level can, however, be considered moderate by modern standards and is designed to provide a solid structure, giving legitimate financial incentive to growth — personal and corporate, income and capital. Low taxes are only one of the incentives offered by Switzerland's stable economy ● Its stable political and economic climate and its conservative business tradition make it a reliable home for the preservation of capital and for the employment of capital in the industrial endeavors of other countries, and in real estate, bond, equity and precious metal markets, and the like ● Your interests may best be served by incorporating in Switzerland for the custody or exploitation of any type of asset, fortune or form of endeavor, for the purpose of expanding into the Common Market, or for the general conduct of multi-national trade ● Many thousands who have discovered this have already established their enterprises in what has become the favorite canton of Zug — only 18 miles from the city of Zurich — where the Corporate Fiduciary AG is in the business of serving you on a personal or corporate basis in the pursuit of objects mentioned above. Mail coupon for our Report «Switzerland as your corporate base», without any obligations.

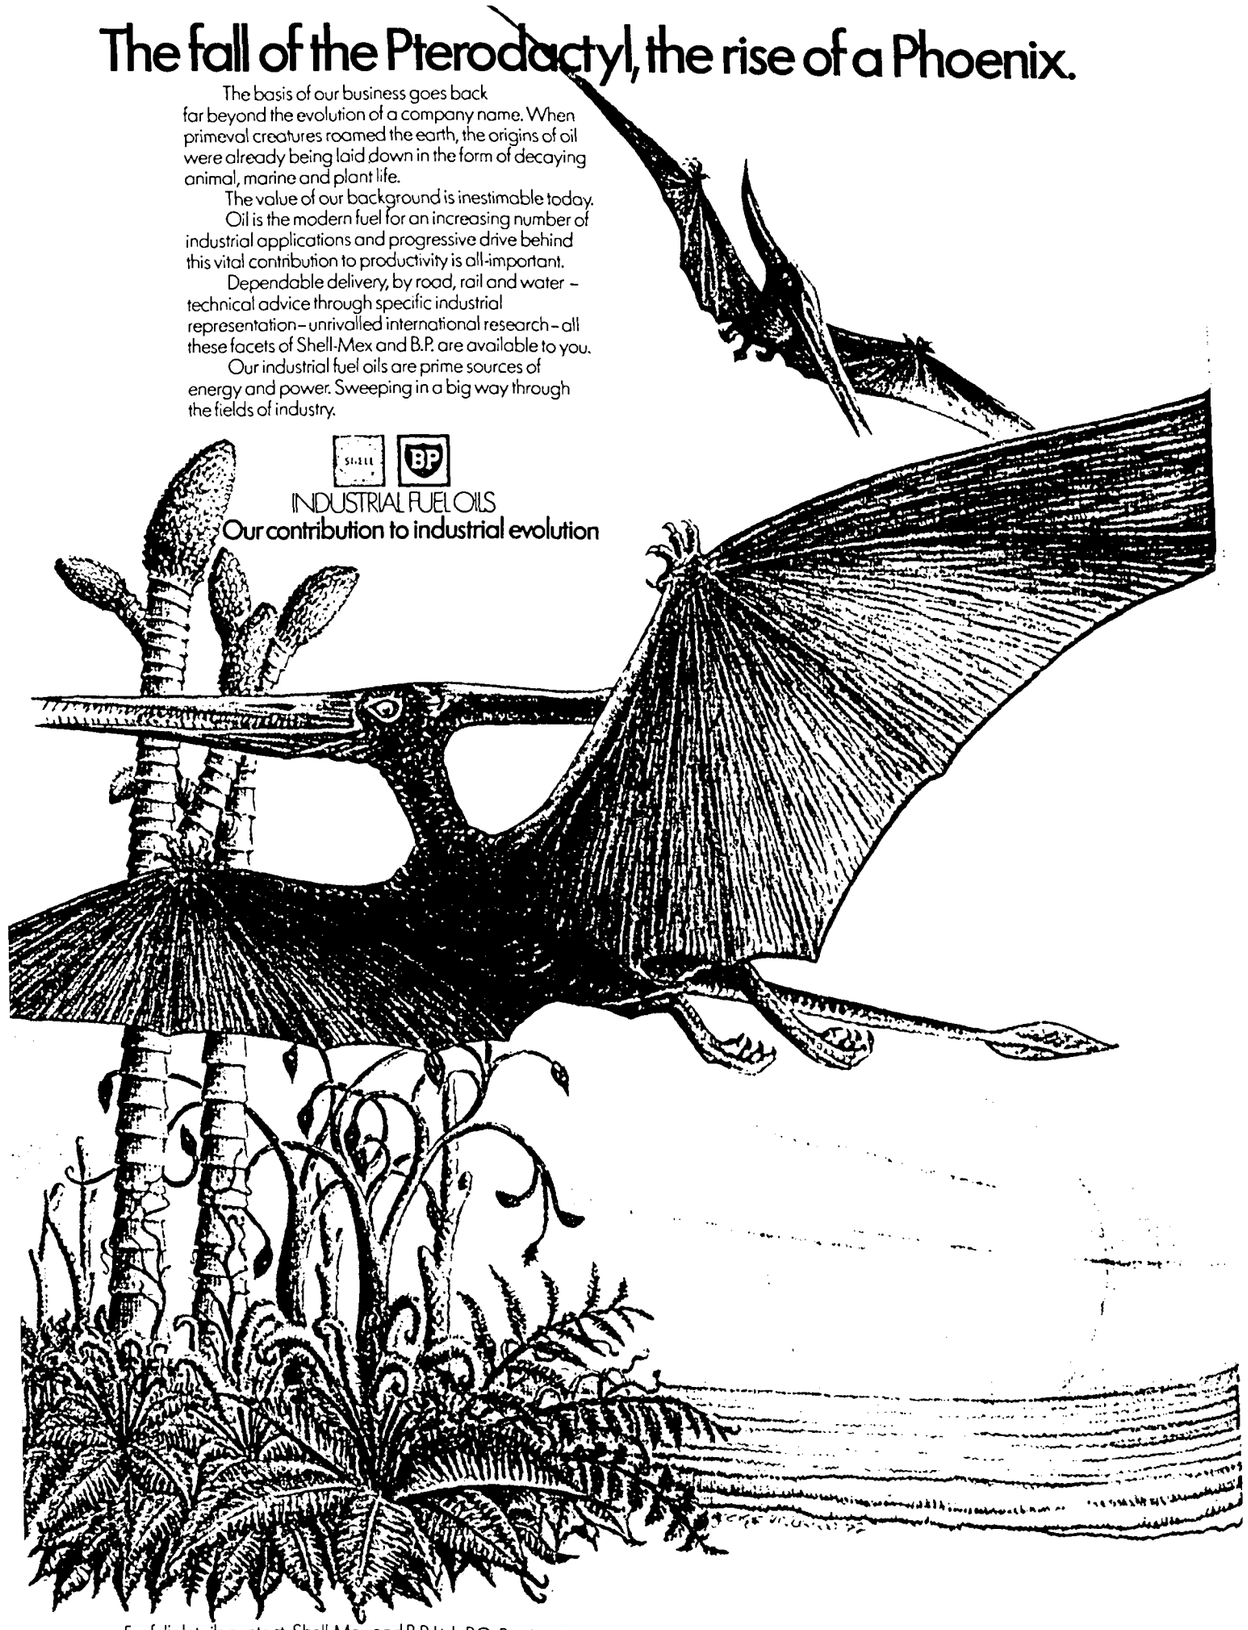
The fall of the Pterodactyl, the rise of a Phoenix.

The basis of our business goes back far beyond the evolution of a company name. When primeval creatures roamed the earth, the origins of oil were already being laid down in the form of decaying animal, marine and plant life.

The value of our background is inestimable today.

Oil is the modern fuel for an increasing number of industrial applications and progressive drive behind this vital contribution to productivity is all-important.



Dependable delivery, by road, rail and water – technical advice through specific industrial representation – unrivalled international research – all these facets of Shell-Mex and B.P. are available to you.

Our industrial fuel oils are prime sources of energy and power. Sweeping in a big way through the fields of industry.

SHELL BP

INDUSTRIAL FUEL OILS

It's still a battlefield

The agreements Mr Nixon has reached with Mr Brezhnev in Moscow show how the cold war is changing its shape. But the underlying conflict will continue as long as the Soviet Union's beliefs require it to, page 11. The Lithuanians know that Russian policy hasn't changed enough for them, pages 12 and 38. The shape of a Russian-American missile deal, page 33, and space link-up, page 34. Why the Russians want American cash, page 37.

Just keeping on

It may just be worth while for Sir Alec to keep sanctions on Rhodesia, but not because they'll do much to help Rhodesia's blacks, page 14.

Have cash, will travel

The railways are in the red and don't know how to get out of it, page 92. The Channel tunnel's coming in from the cold, page 88. And, oh yes, BOAC's ordered £115m worth of Concordes, page 115.

Inflation's worse

Even in the unlikely event that manufacturers do renew their price freeze, it won't stop inflation going on getting worse, page 91. Wage rises for steelworkers and teachers, page 111. What the Government should have told the railwaymen, page 112.

Willie's reward?

Mr Whitelaw's policy looks in better shape now, but it still needs reinforcing by more of Ulster's Catholics—and Protestants, too, page 15. The happening in the Bogside, page 25. And Mr Lynch in Dublin has taken a step forward himself, page 47.

Planet earth

Barbara Ward reports on the world environmental conference at Stockholm where some believe in eco-doom but rich and poor disagree on what to do about it, pages 66-76. They didn't agree much at Unctad either, page 18. Britain will be at Stockholm, page 30, having shattered some of the experts by already nearly reaching zero population growth, page 93.

Computer industry

SIR—Under a recently-announced Department of Trade and Industry contract award of £2m to ICL, it was stated that the large majority of this money will go to the ICL software subsidiary Dataskil. There have been reports in the national and technical press that the independent software organisations are seriously concerned about what they call unfair subsidised competition.

If we consider the publicised Government hardware (machines) procurement policy—which is, buy ICL—the contract award apparently makes sense; indeed one alleged ICL statement reported in the national press says that most of the funds will be directed into producing "systems" (that is, combinations of machinery and programmes) rather than just software. The difficulty of separating the machines from the programmes, using crude terminology, is evidenced from the fact that the DTI will tax the future sales of machines arising from the developments, with a levy designed to recoup their investment.

Now there are two significant points which flow from these considerations. The first concerns the development of "systems." I believe that it is wrong to say "we have these machines, now develop systems around them." What British industry, commerce and government should be saying is "develop the information systems that we need and provide the most suitable equipment to process them." These are wholly different approaches. It will be, of course, that many of the systems which industry and commerce require will be satisfied by ICL equipment. In the case of government procurement it has been stated that they must. Clearly, however, industry and commerce must seek cost-effective computing first. One fast-developing situation is where computer users are "mixing" equipment from several manufacturers, and this is to be expected since no manufacturer—including IBM—can produce the incredible range of peripheral equipment now available to users. Of course, the main manufacturers do not like it. There are problems of interface and maintenance responsibility—but they are by no means insurmountable and, indeed, mixed systems are often highly cost-effective.

My second point concerns government software procurement. The ICL development contract is more than all of the software contracts placed last year by government (£1.5m) and as such has considerable impact on the software market. Although this problem of software procurement is complicated, it is not insoluble. One solution is to announce a policy officially supporting Dataskil—on examination, however, there are serious faults present in terms of applications and equipment experience and capacity with such a policy. The nature of software is such that it needs to be technically efficient, widely applicable and cost-effective. These qualities require government to establish a procurement policy which is orientated towards open tendering and the spread of development opportunities. Furthermore, an open tender policy—perhaps with some pre-qualification criteria—seems to satisfy both the "sponsorship" interest of the DTI and the "commercial" interest of the new Central Computing Authority which seeks to procure the most cost-effective computing. The experience so gained can then be put to work for the economy as a whole, irrespective of its equipment supply, so that British business and government can gain in effectiveness.—Yours faithfully, ALAN BENJAMIN

Harrow on the Hill, Middlesex

Air traffic control

SIR—I am most anxious to correct some of the inaccuracies in the article on the current air traffic control situation (May 20th).

In 1966 a contract was awarded to Marconi as one element of the Mediator system against a vague specification for a flight plan processing system with limited facilities. It took nearly three years of discussion, involving some 80 formal meetings between Marconi and various government departments, to reach a definitive specification. This has not been an uncommon experience, on both sides of the Atlantic, for systems of this complexity.

The final specification called for more facilities than the available computer storage could provide, by some 20 per cent. Marconi then offered three options to fit the system within available storage, and the customer made a conscious decision to accept restriction of the system to middle air space. Marconi also prepared proposals to add more powerful Marconi computers to provide the full service called for in the final definitive specification and, in addition, to extend the facilities substantially.

The present situation is that the middle air space system is fully proven and working to specification and has a demonstrated reliability expressed as a "down time" of less than 30 seconds in five years—a unique achievement in the world. The Marconi proposals for improvement and extension have lain on the table without action since January, 1971. It is totally untrue to suggest that either the equipment or the system has failed to work, nor has anyone suggested at any time that the computers "will have to be thrown away." The cost figures mentioned are totally unrealistic.

At the same time, no one with knowledge of the problems involved could believe for a moment the suggestion that an American, or indeed any other, company could provide and commission an operational system of this capability tailored to the United Kingdom airspace in 18 months.—Yours faithfully,

J. W. SUTHERLAND
Managing director, Marconi
Chelmsford Radar Systems, Ltd.

Power policy

SIR—You have suggested that a hard look at British power policy is overdue. It is.

We have more natural gas available than we know what to do with. The supply was restricted originally because the Gas Council made use of its (unintended!) monopoly power to insist on a low price at which it was hardly economic for the oil companies to bring it ashore, and then proceeded to pump through its leaky mains to supply domestic consumers. This is not the best use for this excellent fuel, but was dictated by the Gas Council's antipathy to the electric supply industry. This phase is now over and gas is becoming freely available to industry to burn instead of imported oil or uneconomic coal.

Natural gas, largely methane, is of limited value as a chemical starting point, but is a splendid non-polluting fuel for power generation. To burn it under conventional power station boilers is a way of using it, but not the most efficient.

In some new installations, such as the Alba complex at Bahrain, power is generated by gas turbines running on natural gas. In earlier American power plants for aluminium reduction Nordberg radial gas engines have been used; these are cheap and efficient but the unit size is small for central power stations. The advantages of using natural gas in an internal combustion cycle are striking. There is little atmospheric pollution. There is no need for the large quantities of cooling water which make an external combustion station so unsightly or which cause river pollution through deoxygenation. There is no need for the economically ludicrous business of dragging coal in trains to power stations, grinding it up, and blowing a dirty exhaust through tall stacks.

Gas turbine stations require a minimum of manpower. The fuel comes in through a pipeline, entailing no labour. The exhaust, depending on the gas, is normally free of sulphur. Turbine stations can be built quickly and, within a wide margin, their efficiency is unaffected by size.

Doubt has been expressed as to the reliability of gas turbines under continuous operation. This is misplaced. We trust our lives to highly stressed turbines on planes. A moderately stressed turbine can be made as reliable as any other power station equipment. The giant steam power stations of the generating board (surely the last gasp of the steam engine) have not proved models of reliability.

It can be said that this is a stop-gap measure and that nuclear power will soon take a larger share of the energy field. The

Finance Director

for a prestigious and long established City finance and merchanting house with extensive overseas interests and a number of industrial subsidiaries in the United Kingdom.

• ADVICE on financial strategy coupled with functional responsibility for finance and accounting activities are the principal features of the initial role. This will be followed by direct involvement in the further development of City interests and a broadening responsibility for these and other Group activities.

• THE DEMAND is for a man of high calibre capable of grasping the complexities of a highly diversified group and with the creative flair to plan its expansion.

• COMMERCIAL judgement buttressed by professional skills, practical knowledge of finance management in commerce and industry and a close acquaintance with the City and its institutions are mandatory requirements. Ideally these will have been acquired through experience in a substantial commercial organisation and service with a leading Merchant Bank.

• TERMS and incentives to match the man and what he can justify are negotiable with a salary into five figures which could include an overseas connotation. There will be an opportunity to accumulate personal capital. Preferred age mid-thirties to mid-forties.

Write in complete confidence to Sir Peter Youens as adviser to the firm.

JOHN TYZACK & PARTNERS
LIMITED
10 HALLAM STREET • LONDON W1N 6DJ

sad fact is that in spite of (or perhaps because of) an enormous Government intrusion in this field, we have in the United Kingdom no nuclear power system which works well. Technical arrogance inhibits us from buying American plants which do work well and can be built reasonably quickly.—Yours faithfully,

Colchester, Essex W. H. DIMSDALE

Mail survey

SIR—May I add a point to your interesting note (May 13th) on our survey for the post office. It is not surprising that you found it "hard to see" why the method of measurement used should make any material difference: our techniques are often difficult for the layman to follow. But the difference is important and, for a better understanding of the criticism of the post office, perhaps your readers might find it worth an explanation.

The two possible methods are:

(1) Simulation: the injection into the mail of trial letters posted specially for this purpose.
(2) Monitoring: the recording and measurement of normal mail flows.

In theory, both methods are equally acceptable provided the mail concerned is a representative sample of all mail. It is this provision which causes the problem. There is a bewildering variety of types of mail, first and second class, posted at all hours of the day, at post offices and post boxes, stamped or franked to and from businesses and homes, travelling short, medium and long distances.

To simulate mail flows, it is necessary not only to devise a model sample, but also to arrange both posting and checking on arrival at a representative sample of posting places and addresses. None of the earlier and widely publicised surveys attempted to do this.

With the monitoring technique, once a representative sample of addresses has been selected, everything else falls automatically into place. By definition, the sample addresses will receive (within calculable margins) a representative sample of mail with the correct proportion of failures and successes. That is not to say that accurate simulation is impossible, only that it is much less cost-effective and, on the scale required, likely to be prohibitively expensive.—Yours faithfully,

HUMPHREY TAYLOR

London, W1 Opinion Research Centre

Shipyards

SIR—Your article on shipyards (May 13th) is very pertinent at a time when the British yards are agitating for restrictive grants to be paid to British owners who are prepared to build in the United Kingdom.

The argument goes roughly that all the millions pumped into the yards are thrown away unless further millions are injected as an inducement to persuade British owners to order. This seems a most ominous cycle to be caught up in, and it comes at a time when the very last thing the shipping industry needs is to add its already monstrous glut of new building on to the worst freight market since the war. This over-supply of ships appears likely to continue to be a serious problem for a number of years.

The policies of the French and American governments towards their maritime industries are being held out as logical for our own Government, even though in recent years these policies were denounced as protective and restrictive.

The stage seems to be about to be set for indefinite government involvement in the shipping industry, as well as in shipbuilding. The shipping industry needs to be encouraged in its independent efforts to maintain and develop its tenuous position in the bulk and other trades where it is doing its best to compete against extremely powerful and well-managed Greek and Norwegian flag fleets. In few other industries are freedom of manoeuvre and flexibility of response so important as in ship-owning. The competition is fierce and international, and any policy which blunts British owners' competitive edge by distorting their freedom is all too likely to stifle these new initiatives.—Yours faithfully, D. H. GAULT

London, EC2

Unit trusts

SIR—Public confidence in unit trusts, severely shaken in the 1969-71 Great Bear Market, appears now to be slowly returning.

One wonders, though, with what justification. For those, like myself, who hold that bad management, not the Great Bear himself, was responsible for the trusts' poor performance, there is food for thought in the recently announced results of White Drummond, parent company of the M & G unit trust group.

How is it, we are bound to ask, that this non-public company in which, alas, I am unable to invest, has been able to nearly treble its profits (£274,000 to £744,000) in the latest six-month period, in such striking contrast to the lack-lustre showing of so many of the funds themselves?

One of them, the M & G Fund of Investment Trusts, rose 14.6 per cent in the three-year period April, 1969-May, 1972. In the same period the (unmanaged) Financial Times industrial share index rose by 30.4 per cent. Many other unit trusts which I had the misfortune to hold (until recently) did no better.

May I, through the courtesy of your columns, invite a comment from Mr Palamountain, the managing director of M & G. He has argued (*The Economist*, Letters, January 29th), understandably though unconvincingly, that no fault whatever attaches to his, and other trusts', managements.

Would he not agree that M & G's much vaunted investment expertise stands in need of somewhat wider application?—Yours faithfully, KEITH CARTER

Sevenoaks, Kent

Dissent on Development

SIR—Your reviewer of my book "Dissent on Development" (May 13th) writes: "In some ways the most interesting part of this book is the balanced review by Professor Harry Johnson, which, after detailed analysis, endorses some (though not all) of Professor Bauer's own views."

There is no review by Professor Johnson in my book—how could there be? This might appear a slip of the pen were it not that there are twenty lines on what your reviewer thinks Professor Johnson has written in my book.

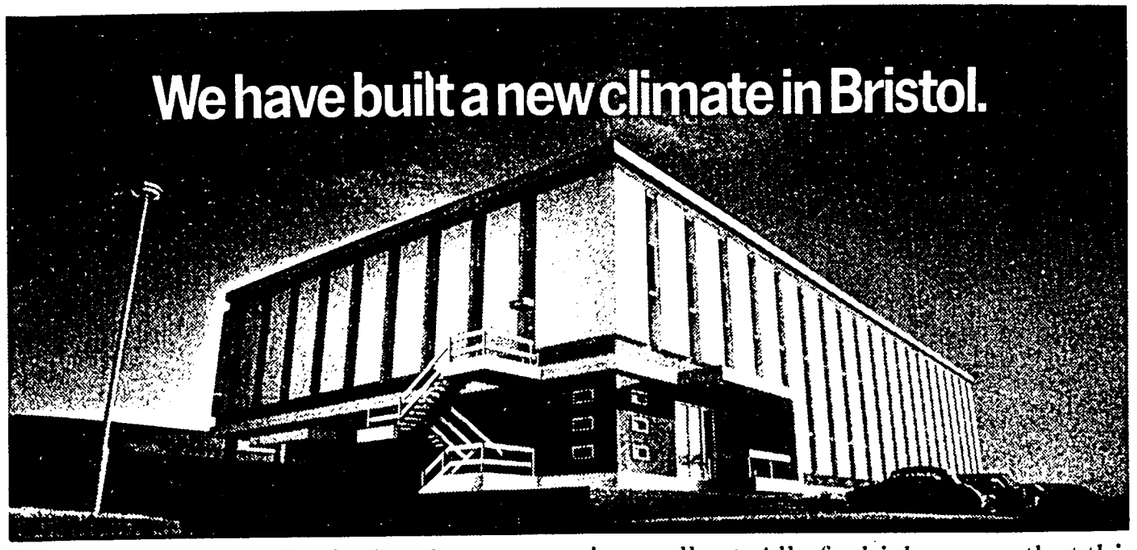
Other parts of the review suggest unfamiliarity with the book's contents, though not so obviously as this passage.—Yours faithfully, P. T. BAUER

London, WC2

Hijacking

SIR—I would suggest that you do not go far enough in your distinction between the kind of hijacking that is close to guerrilla warfare and the other recent spate of hijackings in which the object has been frank extortion (May 13th).

In the first place, I would maintain that guerrilla warfare represents military activity of irregular forces against the regular military forces of an occupying power, for example, and not the hijacking of a passenger aircraft full of innocent civilians in order to extort a political price, with very little danger to the hijackers unless they are foolish enough to land in Israel.



Secondly, you do not mention the political, financial and military support given to the Arab terrorist organisations by Arab governments, and the possibility of putting an end to such piratical activities by exercising pressure on such Arab governments. It is the failure of governments and international airlines to exercise any sort of pressure on Arab governments since the first hijacking of an El Al plane to Algiers in 1968, that has encouraged the terrorist organisations to continue with their crimes.—Yours faithfully, RALPH STERN

Holon, Israel

The Biharis

SIR—The general humanitarian sentiments contained in "The swept-aside people" (May 13th) are commendable except to those who were the victims of the combined bestiality of the Pakistani army and their Bihari allies. The memory of the nine-month "night of long knives" is too fresh in their minds for that to happen. How many Europeans in the countries occupied by Hitler were inclined to forgive the Germans at the end of the second world war? Surely it is not unusual that the Bengalis feel the same way?

You talk of appealing to the three

This is the new district headquarters of the South Western Electricity Board at Avonbank, Bristol.

It was completed in July 1971.

And it's the latest example of IED: Integrated Environmental Design.

Which is what makes it a little different from most other new office buildings.

Integrated Environmental Design means planning the building as a whole from the start, including the internal climate.

The outside is designed to reduce heat loss in the winter and heat gain in the summer to the minimum.

The building is air conditioned.

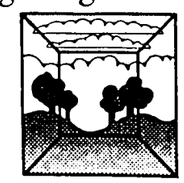
It uses recovered heat.

That is, the heat from people, lights and machines provides most of the heat required for the comfort of the occupants.

The thermal efficiency of the building shell is such that the internal heating plant is not required until the outside temperature falls below −4°C.

The lighting, at a level of 1,000 lux, is excellent. All of which means that this building provides the ideal working climate all year round.

And the people in it find they work better and more efficiently because they are more comfortable.



The new Avonbank Offices, covering 5,264 square metres, cost £479,000 to build.

Running costs are likely to be less than for a conventional air conditioned building. And Avonbank was completed on time and within the budget.

There are now more than 33 IED buildings being built or completed in Britain.

As you can see from our photograph, IED produces a well-mannered building.

Architects, consulting engineers and the qualified staff at your Electricity Board will tell you more about how IED is applied to a new building project.

Integrated Environmental Design

The Electricity Council, England & Wales.

leaders. While no one can disagree that President Bhutto owes something more than expressions of concern to the Biharis, the fact is that no one in history has had any use for collaborators once they have served their purpose.

Do you seriously believe that Sheikh Mujib can persuade his people to accept the Biharis as their brothers? This is about as realistic as expecting Israel to accept a large colony of former members of the Gestapo and the SS! And why should Mrs Gandhi add to the population of India a considerable number of aliens who are never likely to be assimilated into or be loyal to India? Besides, Mrs Gandhi did not bisect Pakistan: the sole credit for this belongs to General Yahya Khan.—Yours faithfully, F. S. NOORANI
Bombay

Law and order in Sri Lanka

SIR—Your Colombo correspondent (April 8th) does not think fit to inform your readers what the agitation against the Criminal Justice Commissions Bill (under whose procedures persons suspected of offences in connection with the April, 1971, insurrection will be tried) was really about.

Your correspondent refers to the fact that the commissions to be set up under the bill will have "extraordinary subpoena powers" (to which nobody objected), but he does not mention the fact that the ordinary rules of procedure and laws of evidence will be inoperative, that confessions will be admissible as evidence under whatever circumstances and to whomever they were made (that is, even if they were extorted by the police), and that an accomplice's confession can be used against an accused person even if the accomplice repudiates this confession in his evidence before the commission.

Your correspondent's account of the agitation against the bill ("communist-sponsored agitation . . . has also been joined by civil rights organisations and left-wing trade unions") is equally partial and distorted. The civil rights movement, which led the agitation, consists largely of politically-uncommitted professional men, intellectuals and religious leaders; and among the numerous statements condemning the bill was one issued jointly by the heads of the three Christian churches in Sri Lanka—the Roman Catholic cardinal, the Anglican bishop of Colombo and the chairman of the Methodist synod.—Yours faithfully, V. ANANDA KUMARA

Canada

SIR—Your Montreal correspondent is a trifle unseemly, and dangerously premature, in his rejoicing at the obscenely modest programme unveiled by the Liberal government to deal with the excessive foreign ownership of Canadian industry (May 6th). In sum, a takeover review board is to be established to determine whether proposed takeovers of Canadian industry are in the national interest, or opposed to it, and to approve or disallow them accordingly. This is the equivalent to a cancer surgeon determining whether individual cancers are beneficial or injurious to the health of his patients, and then ruling on whether to remove them or give them his blessing. There is no such thing as a foreign takeover with redeeming economic benefit.

Takeovers of all kinds should be banned, especially since capital inflows serve to push up the value of our currency, and a review board should be created to oversee the operations of foreign-owned firms, empowered to place them under trusteeship when their conduct is contrary to the provable national interest. Foreign-owned firms are under mandate from their parent firms as to which markets to enter, a fact which severely limits exports of manufactured goods, and import the vast bulk of their technology from their head offices, which has left Canada with a sizeable surplus of engineers and scientists with no prospects of productive employment in their chosen careers.

Sweden has a higher per capita income than Canada's precisely because it has shown the sound logic to bar foreign control of its industry, and Japan has achieved a gross national product $150 billion higher than Canada's, although a scant 15 years ago it was smaller than Canada's, precisely because the Japanese have been prudent enough to exclude foreign capital, and all the costs that it entails. The success of these and other nations, and the contrast with Canadian conditions, is not being lost on Canadians. The elimination of external control is the precondition of economic wellbeing, and without it all other plans come to nothing.

Your correspondent errs in his assumption that all Canadians cherish the ambition of being the Guatemala of North America, and lack the discernment to recognise that foreign ownership is a rose that is all thorns and no bloom. Canada will soon lose the distinction of being the only major western power which is an importer on balance of capital, and a debtor nation. The joke in execrable taste which the national government is trying to palm off as a foreign ownership policy has as little future as it has substance. The Canadian people are ready for rich, red meat rather than thin gruel.—Yours faithfully,
EDWARD CARRIGAN
Toronto

British hotels

SIR—If tourists are to be attracted away from the main centres (May 13th), the registration of British hotels must be accompanied by a feeling of responsibility to assist in finding accommodation.

If I arrive in a small American town late at night, the motels clearly indicate by an outside sign whether or not they have a vacancy. If full, the owner willingly calls neighbouring motels and towns in an effort to arrange accommodation. They would consider failure to assist a slur upon the hospitality of their town.

Compare this with the "It's not my job" look of blank amazement usually received from English hotel receptionists when similar assistance is requested.—Yours faithfully, P. T. MOORE
Los Angeles

South Africa

SIR—Are Chief Matanzima's demands for more land (April 22nd) the best thing for his people or is he motivated by political expediency?

A visit to the Transkei reveals bad gully erosion getting worse, overstocking, lack of machinery, lack of fencing, few farm dams, very little fodder conservation, poor crops. Would more land add to an already bad situation of soil mining? Your statement on the black Africans' land, "and this generally the poorest," is incorrect when applied to the Transkei. Its 16,500 square miles—as large as Denmark—have a kind climate. Three-quarters of the territory have more than 30 inches of rain per year, no part less than 20 inches, in an area of the world where 24 inches is the minimum required for successful dry-land cultivation. The Transkei carries about 1.3m head of cattle, 2.5m sheep and 1.25 goats. With better fodder conservation, the beasts carried could be doubled.

Modern farming is a disciplined scientific management exercise. The Transkei's need is capital for machinery, nitrogenous and other fertilisers, fencing to control erosion and enable fodder conservation, farm dams for water harvesting, sound advice on farming techniques and management, and an acceptance of the above by the Xhosa people. With your influence, can't something be got moving more quickly to help these people?—Yours faithfully, FRANK ROBINSON
Templestowe, Australia

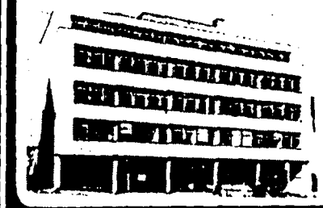
PROPERTY

STRAITS TRADING BUILDING SINGAPORE

Reservations are now being accepted for accommodation in a major development in Battery Road—the heart of Singapore's commercial, banking and shipping district.

Opening in September this year, the building comprises a lower ground floor restaurant, a three-floor shopping complex and an 18-floor tower block of spacious offices.

Developers are a well-known tin smelting and investment company, who will themselves occupy part of the building.



Further information may be obtained from:

Only two airlines have their own terminal into New York.

One tries to cope with over 100 flights a day.

One copes easily with less than 20.

The other airline's terminal has to cope with dozens of domestic flights every day. Ours handles international flights alone.

The result is that you can get through the BOAC terminal's immigration and customs and baggage areas so fast you'll normally find yourself standing on the sidewalk 15 minutes after you step off the plane.

No other terminal into New York comes near it.

And this is just one of many ways we lead across the Atlantic.

No other airline, for instance, flies direct to so many major U.S. cities.

No other European airline offers you a choice of 80 flights a week to North America.

And no other airline offers you a choice of flying 707 or VC10 or 747.

In fact no other airline in the world serves America better than BOAC. Not even the Americans.

We'll take good care of you.

BOAC

May 27, 1972

It's still a battlefield

There is a lesson to be learned from the fact that the first things the Americans and the Russians were able to put pen to paper about in Moscow this week were an agreement about research into pollution, and another about heart disease and cancer. They are equally opposed to the prospect of dying of a heart attack ; neither of them can make an alliance with cancer ; they are both prepared to admit that the world in which the forces of marxism and pluralism are in conflict with each other will be all the better, whoever wins, for being kept relatively free of industrial muck. They then followed this up with an agreement that will help their astronauts to rescue each other if they find themselves stuck in the emptiness of space, and they were expected to wind up with a mutually convenient deal to confirm their equality at the top of the nuclear ladder. Where their interests coincide, they can agree. This does not mean that their interests will go on coinciding for ever, or even for very far.

The Washington Post has pointed out that May 22nd, the day President Nixon arrived in Moscow this week, was exactly 25 years after the day President Truman signed the bill which provided aid to Greece and Turkey in 1947 in order to help them resist what Mr Truman called "the march of communism." To its credit, the Washington Post resisted the temptation to see this neat coincidence as the end of a cycle. There are other people who have not resisted the temptation. Mr Nixon's arrival in Moscow, like his arrival in Peking in February, has been seized upon as a reason for believing that the long confrontation between the two opposing systems of ideas is about to be wound up : for hoping that the past quarter of a century has been a curious mistake, and that that volume of history can now be closed.

It is worth remembering that people of the same hopeful temperament were saying much the same kind of thing before the summit meeting at Geneva in 1955, and before the one in Paris in 1960—the one Khrushchev walked out of after Gary Powers was shot down near Sverdlovsk —and before the meeting between Kennedy and Khrushchev in Vienna in 1961. The fallacy of the approaching last act has been endemic to a certain cast of mind in the west for two-thirds of the past 25 years. It is partly the result of a natural reluctance to go on living with the cold war, and paying taxes for armaments, and watching them being used on television, into an apparently endless future. It is partly the result of a misreading of the particular historical experience of the west in the eighteenth century, which was a period when limited disputes really were settled by limited wars and normal relations could be resumed between the contestants soon afterwards. It may even be partly because of a lingering belief that marxism might have something to offer if only it could get over the aberration of stalinism.

Whatever the causes, it is not a fallacy that is shared by the people who make policy in the communist countries. For them, with probably the single exception of President Tito, the confrontation between their system of ideas and the liberal system is something that will go on for a very long time. They do not agree that it can be ended either by the convergence of the two systems, or by a permanent division of the world between the systems. They may change their minds some day ; but until they do the only choice open to the rest of us is either to accept their view of history, or to shape our policy to meet it.

The three changes in the cold war

Of course, the confrontation changes its shape from time to time ; it has never been conducted entirely without tacitly accepted rules, and there come moments when it seems possible to make the rules a little more precise. That is why Mr Nixon is in Moscow this week. Three things have happened over the past few years which have changed the shape of the cold war, even though they have not abolished it ; two of them are probably permanent changes in the situation, and it is not yet clear whether the other is permanent or temporary.

The first is the fact that the Soviet Union has now devoted enough of its limited economic strength to nuclear

weapons to reach a position of nuclear equality with the United States. This has given the two great powers an equal interest in trying to prevent anybody else who does not have nuclear arms at the moment from getting hold of them in the future; and both of them have an interest in limiting the size of their own missile armouries, partly in order to persuade other countries to go on honouring the 1968 non-proliferation treaty (see page 33). The second is the growing realisation of the Soviet leaders that they probably cannot do anything that will make their economy work efficiently enough to catch up with the United States in the foreseeable future. They had very little success with the limited decentralisation scheme of the mid-1960s—the so-called Libermann reforms—and they are not likely to have much more with the computerised recentralisation they are trying now. Anybody inclined to take Soviet statistics at their face value should read the recent articles by Mr David Bonavia, the expelled Moscow correspondent of The Times. The probability is that in many fields of economic activity the gap between the Soviet Union and the advanced capitalist countries is getting wider, not narrower. Mr Brezhnev, unlike Khrushchev, seems to be willing to recognise this economic weakness as a fact of life. It is why he does not want to spend even more on defence, and why he would like to buy American technology and machinery on what amounts to a long-term credit arrangement (see page 37), and possibly even pay a political price for doing so.

These are the two new factors that are probably here to stay. The third, which may or may not be permanent, is the fact that the United States and Russia have both had reason lately to be distracted from the sort of relationship they had settled down into a few years ago. The Americans have got to recover from the psychological damage they have done to themselves in the Vietnam war. Mr Nixon believes that the recovery can be made, and that the United States may even be on the road back to its normal self-confidence by 1976. He may be over-optimistic, but the point is that his programme for persuading the Americans to stop picking at their scars requires at least a temporary period of calm in America's relations with both Russia and China. The Russians, for their part, have got their unsolved quarrel with China. Quite possibly they reckon that they can come to terms with the men who take over power in Peking after Chairman Mao dies. That may be over-optimistic, too; but it means that while they are waiting for Mao to die they do not want to be involved in a two-front confrontation against both the Americans and the Chinese. On both these counts, as well as the longer-term considerations, it was predictable that Mr Brezhnev and Mr Nixon would be looking for a spell of relative peace and quiet.

So long as the difference seems important

All these things have their effect on the way the two systems conduct their disagreement: they make possible an accommodation here, an alliance of convenience there, even a general suspension of hostilities when it is equally convenient to both sides. But this is a matter of means, not of the end itself. The quarrel of principle which lies at the root of the cold war will continue so long as the difference between the ideas which the two sides represent seems important enough to both of them to justify its continuation. That will not be for ever: after all, most Catholics and most Protestants no longer feel so much urgency about their particular disagreement. But it is worth saying, in the week of the first visit by an American president to the capital of the Soviet Union, that there is no evidence that the ideological war of the twentieth century is ready to follow the wars of religion into history just yet. Those who think it is might usefully read what the March issue of Kommunist, the main organ of Soviet ideology, has to say about "the imminent process of the replacement of capitalism by socialism," and the part the communist movement has to play in bringing about the completion of that process. So long as that remains the formal position of the leaders of the Soviet Union, the formal position of those who do not accept communism has to be that they will oppose it. Mr Nixon's trip to Moscow, although it will achieve several desirable things, is only one more chapter in the book.

Bad days in Kaunas

Mr Brezhnev may be looking pretty cheerful this week, but the growing unrest among his non-Russian subjects must be worrying him

All this week Mr Brezhnev has worn the look of a man with a song in his heart who might at any time break into a dance for the benefit of his American guests, if only he were not so laden with gravitas. The Soviet Union's leader has some good reasons for looking pleased. To begin with, he can count himself a luckier man than Mr Nixon, who faces an election this year and has a messy foreign war on his hands. Mr Brezhnev came to the negotiating table armed with a unanimous endorsement by his party's central committee of his foreign policy. There was, according to the record, not even a murmur of dissent at last week's meeting. True, Mr Shelest, one of the hardliners who might have made carping noises, had apparently needed to be chastened. He has been deprived of the power base that his position as party boss in the Ukraine gave him, and tucked away in one of the Soviet government's innumerable vice-premierships. And Mr Brezhnev has also accepted the

hard-as-nails Mr Ponomarev as an alternate politburo member, presumably in order to reassure the old guard. These adjustments, however, seem to have sufficed to reinforce the leader's primacy. If Mr Brezhnev had been worrying about his hold on power last month, as some people thought he was, he can probably tell himself, and Mr Nixon, that he has come through smiling.

The rest of the view is fine

Of course, looked at in broad daylight, Mr Brezhnev's policies have hardly been a series of unqualified triumphs. But the ratification of the treaties with Russia and Poland by the west German parliament may be counted as a bright feather in his cap. No Soviet leader since the end of the war, not even Stalin, had been able to get those Germans who can act independently to sign a piece of paper saying in effect that Russia's postwar conquests are here to stay. Mr Brezhnev was able to achieve this without unduly alarming the communist rulers of east Germany—unlike Khrushchev, whose reckless flirtation with Herr Erhard in 1964 was one of the things that brought about his overthrow later that year. And outside Europe, in the Middle East and Asia, Mr Brezhnev has been doing better than his colourful predecessor, who might have particularly envied his successor's ability to flex his naval muscles in the Mediterranean and the Indian Ocean. Admittedly China, under Mao Tse-tung, remains an implacable adversary, but at least it now seems possible to keep the quarrel at a fairly low temperature against the day when the Russians might make a deal with Mao's successors.

At home, too, Mr Brezhnev seems to have managed so far to avoid offending too many powerful people at the same time. He is proving a better moderator of conflicting interests than Khrushchev was. Many members of Russia's military-industrial complex probably have doubts about the present attempt to ease the lot of the Soviet consumer, even though heavy industry still gets the lion's share of all new investments. There must have been some shaking of heads in places where Soviet marshals gather when women's underwear was for the first time mentioned in a central committee resolution in October. But Mr Brezhnev has the instructive example of the Polish riots of December, 1970, as a powerful answer to these critics' objections to his concessions to the consumer, which are anyway still very modest concessions. Soviet agriculture, another of Khrushchev's botched jobs, is still not producing enough to feed the country, which is what makes an American grain deal so important to Mr Brezhnev. But at least he has done something to improve the condition of the average collective-farm worker, and he has thus staved off trouble from that direction.

There is, however, one decidedly ominous cloud on Mr Brezhnev's otherwise calm-looking horizon. It is the increasingly vocal dissent of his non-Russian subjects. Last week's riot in Kaunas (see page 38), the second largest town in the Baltic republic of Lithuania that Stalin annexed in 1940, may not have appeared very impressive by comparison with, say, the embittered violence of some of America's various protest movements. But it should not be forgotten that even the mildest expression of dissent is severely penalised in the Soviet Union, so that any outburst of real violence there reveals an acute intensity of desperation. And the Lithuanian riots were only the tip of a nationalist iceberg whose size nobody knows exactly.

The Lithuanian, Ukrainian and other non-Russian dissenters who are starting to raise their heads represent a special danger to Mr Brezhnev. They have long resented the fig-leaf of Soviet "federalism," which totally fails to conceal a tightly centralised state with a strong bias in favour of Russian interests. But they have been too frightened, and perhaps too resigned to permanent subjection, to act. Now the remarkable achievement of the Russian Jews in making their plight known, and giving their masters so much trouble that many thousands have been allowed to emigrate to Israel, has clearly had a profound impact on the non-Russian peoples of the Soviet Union. For a long time it had only been the Tartars and a few Ukrainians who were prepared to stick their necks out. Now more of the discontented nationalities are stirring.

All this has put Mr Brezhnev on the spot. He cannot concede any kind of genuine autonomy to the various non-Russian peoples, because this would introduce an element of pluralism in a political system that now rests on the monopoly of power in the hands of one group. Such a concession would, moreover, set his Russian subjects clamouring for similar political rights, with more vociferousness than the limited number of dissenters among them are already doing. Of course, there are still many Russians who would be willing to help Moscow stamp out unrest among other nationalities who might threaten the unity of the sprawling empire that was built up by the Russians over so many centuries. But the Russians now number less than a half of the Soviet Union's population, whose other components have been multiplying faster than they have. That is why Soviet propaganda daily denounces "bourgeois nationalism" as "one of the most dangerous enemies of socialism."

The dynamite could appeal to China

Moscow radio is wrong when it attacks the west for allegedly regarding this non-Russian nationalism as the "dynamite which will blow up socialism and marxist-leninist ideology from within." Many responsible people in the west would probably prefer to see peaceful evolution within an intact Soviet Union rather than face the fearful uncertainties that its disintegration into a host of mutually hostile states would unleash. But there may well be people in China (which happens to control parts of several peoples who are also represented in the Soviet national kaleidoscope) who think otherwise. No wonder Moscow is anxiously looking at what the Ukrainian nationalists and the Chinese are saying about one another. China's European mouthpiece, the Albanian press, was quick to hail the news of the trouble in Lithuania as evidence of a struggle against "Russian chauvinism." Mr Brezhnev's cheerful smile this week may conceal some very troubled thoughts about last week's message from Kaunas.

The husk of a policy

Sir Alec is left with the hope that something will turn up, someday, somehow, in Rhodesia

Lord Pearce says in his report on the acceptability of last November's Anglo-Rhodesian settlement proposals that he is satisfied that the terms were adequately understood by the great majority of those who gave him their opinions. It has been apparent for some months that the Pearce commission could only report a rejection of the proposals, and this has now been done unequivocally in a document of more than 200 pages. The settlement was unmistakably turned down by Rhodesia's blacks. They have probably made a mistake, in their own interests, in doing so. The settlement would at least have offered them the possibility of majority rule in the distant future, and meanwhile it would have made it harder for the whites to impose full South African-style apartheid on them. But the fifth of Sir Alec Douglas-Home's five principles said that any settlement should be acceptable to the people of Rhodesia as a whole. That cannot be disregarded.

The settlement agreed upon last November between Sir Alec and Mr Ian Smith cannot now be implemented. That course of action would be impossible for Sir Alec, the originator and most constant invoker of the five principles. But Sir Alec still had a number of different things he could do in the light of the collapse of his settlement. They fell into the two broad categories of publicly accepting Mr Smith's victory, or refusing to accept it.

Within the first category Sir Alec had a choice between lifting sanctions and recognising the Smith regime, renouncing British sovereignty over Rhodesia, and lifting sanctions but withholding recognition. Any of these three courses would have had the effect of giving Mr Smith within a relatively short time what he has always wanted—Britain's recognition of the continued white domination of Rhodesia. The unilateral declaration of independence in 1965 would have been justified ; and so would the six-and-a-half-year battle with a hostile world.

Within the second category fall the possibilities of maintaining sanctions, attempting to tighten them, and negotiating a new settlement. Sir Alec showed in his statement to the House of Commons on Tuesday that he has chosen to soldier on ; that sanctions, including the Beira patrol, will be maintained ; and that further negotiations are not ruled out. There was in fact nothing else that Sir Alec, being the man he is, was ever very likely to do in the circumstances. British policy towards Rhodesia since 1965, if not before, has been based on the assertion of Britain's responsibility for the future of Rhodesia's blacks. It was, as two British governments have now learned to their cost, responsibility without power. But it has motivated the actions of successive British governments. Had it been otherwise, had Britain had the interests of the whites exclusively at heart, independence would have been granted long since.

The main reason why the blacks rejected the settlement, according to Lord Pearce, was their distrust of Mr Smith's government. Even though they appreciated what they stood to gain under the settlement, they chose to reject it rather than give legitimacy to Mr Smith's regime. To the extent that this choice was consciously taken in the knowledge of its implications it showed that Rhodesia's blacks value the withholding of legitimacy from the regime more highly than the benefits they stood to gain. It is hard to argue that it is the business of anybody else to override their judgment. But an attempt will be made to do so—certainly in October at the Tory party conference, and probably also in November when the vote on the orders in council for the renewal of sanctions against Rhodesia comes before Parliament. Some of the arguments that will be heard then will carry considerable force.

The argument against sanctions

It will be pointed out that sanctions have failed to bring down the regime. As time goes by, they become more difficult to enforce because the willingness to do so increasingly evaporates. Their usefulness as a bargaining counter is valid only if there is to be another attempt at a settlement—which at the moment looks unlikely. So the only purpose served in maintaining them, it will be argued, is the punishment of Mr Smith and his white supporters. It is true that a sanctions policy whose only purpose is punishment is not worth pursuing. The only counter-argument lies in the hope that the continuation of sanctions might yet bring Mr Smith to offer something better. Sanctions have failed to bring down the regime, but they have not been without effect. They have distorted Rhodesia's development ; they have led to a grave shortage of foreign exchange ; and they have restrained the flow of white immigrants. If the removal of these penalties still seems important enough to Mr Smith, amid what is, by most standards, a continuing economic boom (see page 104), it is impossible to rule out entirely another attempt at a negotiated settlement with Britain. This week the Nixon Administration decided to throw its weight behind an attempt to persuade the Senate to reimpose the chrome embargo. Sanctions remain useful as a bargaining counter so long as more talks are not ruled out.

But the probability is that at best a future British government is going to find itself negotiating a new settlement with a white Rhodesian leader, and that on past form the next settlement will be even more unfavourable to the blacks than the last. It must also be accepted that all those governments which have been so reluctant to make their citizens comply with sanctions over the past few years are going to be even more unwilling to help now. It really is unlikely that anyone can flog life into that dying horse. The Government's decision to persist with sanctions, in spite of this, is presumably prompted by a mixture of faint hope and hard calculation. It must hope that things will somehow change in Rhodesia and that some new factor will emerge which will put pressure on Mr Smith to settle more favourably. But calculation probably plays the major part. Sanctions, at a direct cost to the Exchequer of £4m a year, are not a great expense to Britain. It is true that there is the cost to the balance of payments arising out of trade forgone. It is hard to guess what this amounts to—although British industrialists talk expansively about it. It might be about £35m a year. It is certainly less than what Britain might lose if some Commonwealth countries, and particularly the African ones, retaliated against a removal of sanctions.

Of these, Nigeria must loom largest in British calculations. Nigeria is black Africa's richest and most populous country ; Britain's investment there, particularly in the oil industry, is far greater than it is in Rhodesia. Nor are the Nigerians indifferent to what happens in Rhodesia. Their leader, General Gowon, harbours strong resentment over the Rhodesian government's part in fanning the flames of Nigeria's civil war. At the same time he is anxious that Nigeria should emerge as the unrivalled leader of black Africa, and he undoubtedly sees the Rhodesian issue as a suitable one on which to take a strong line, which might involve retaliation against British trade and investment. That is why Mr Richard Wood, the Minister for Overseas Development, went to Lagos last week.

The Government has also had to make calculations about its support in the United Nations and the House of Commons. The difficulty about the UN is that all the resolutions on mandatory sanctions over the years have been put forward by Britain ; the Government would be in an embarrassing position were it openly to disregard them. To some right-wing Tories the embarrassment would certainly seem worth incurring. Mr Heath has annoyed his right wing on a number of issues in recent months, from Ireland to lame ducks, and he cannot afford to antagonise it indefinitely. But his left wing would also take exception to a decision to drop sanctions. Come November, he will probably reflect that the right has in the last resort no other resting-place but the Tory party, whereas the left would certainly find itself in temporary coalition with the Liberal and Labour parties on Rhodesia.

The new factor

These may have been the main considerations entertained by Mr Heath and Sir Alec in deciding what to do about the Pearce report. But they should not be the only ones. There is now in Rhodesia a coherent and unified black opposition which cannot be ignored. Bishop Abel Muzorewa's African National Council is disciplined, moderate and non-violent. At the moment. But it could well become unmanageable, extreme and violent. That would be the worst possible development.

The ANC is now calling for a constitutional conference in which Mr Smith's government, the British Government and the blacks would take part. So, in a sense, was Sir Alec when he said on Tuesday that "the next stage must be discussions inside Rhodesia between the various racial groups." If this can be achieved there will be no problem in getting the British Government to join the discussions. The blacks have declared themselves in favour of a dialogue. If they are rejected by the whites they may or may not turn to violence: they have reason enough to do so, even if the history of other African guerrilla movements is unlikely to encourage them. But the overriding consideration of any government concerned with Rhodesia at this time should not be the hope that the Rhodesian problem can be solved at a stroke. It should be to encourage discussions between the races and so to minimise the likelihood of violence. The greatest danger of continuing the sanctions policy may be its tendency to foster the belief among blacks that Britain will one day deliver them from Mr Smith. It will not. But it may continue to exert just enough pressure on the white Rhodesians to make them realise that everyone stands to gain by talking to each other.

A reward for persistence?

Mr Whitelaw's policies look in better shape than they did, even if the happening in the Bogside needs reinforcing by more Catholics. And there is a job for the Protestants too

Free Derry's stirrings in disenchantment with the IRA may have come in the nick of time for Mr Willie Whitelaw ; and then, again, they may not. That people in the Bogside and Creggan have begun to say they have suffered enough, that their priest has declared they want to live in peace with their Protestant brothers, and that the division between the official and provisional wings of the IRA in Londonderry has widened, may all mean a new mood there. It may even be more lasting than the natural disgust at the IRA's murder of a Bogside boy who had gone home on leave from his British army unit in Germany. But there has been Catholic disgust at the IRA's work before, and it has only needed an army bullet to cut down a Catholic, gunman or not, for the IRA to recapture the communal loyalty. The Protestants in Northern Ireland who see no good at all in Mr Whitelaw's policy will want to hear of the early dismantling of the Derry barricades before they will believe that anything

much has changed. And that dismantling will be harder to get. It may require a political price that the Protestants will hate. And even if Mr Whitelaw were to pay it, it may not be in time to stop the Protestant armed bands from escalating their demonstrations into a new crisis.

If that escalation happens, Mr Whitelaw will be in an almost total dilemma. The Protestant majority is nervous and resentful ; so it is insisting on the army giving the IRA a beating, and argues that the right time is now, when the Catholics are getting war-weary. Despite what many of the Bogsiders are saying, the IRA is still likely to go on operating in Belfast, Londonderry and elsewhere with sufficient Catholic protection. If it does, many Protestants will be increasingly tolerant of the Ulster Defence Association's efforts to set up local no-go areas, and will be incensed whenever the army shoots any Protestant gunmen in clearing their barricades away ; they will be tolerant, too, of whatever Protestant bombers and gunmen and the Tartan gangs and the rest do to Catholics. That, naturally, is what the IRA wants to happen. It is telling the Catholics that it is worthwhile keeping up the violence because the strategy is now leading to the increasing separation of the British Government, British opinion and the British army from the Protestants. If the UDA would only take out some Catholic homes, either because it is inflamed by some IRA bomb attack that is even bloodier than usual, or because it prefers fighting Catholics to fighting the army, then the IRA will be restored once more as the only protector of the Catholic streets. It will be back, that is, to the morning after Bloody Sunday ; and the Protestants will not only have lost their Stormont, they will have lost much of their remaining British support.

The Whitelaw commission

Mr Whitelaw is doing all he can to capitalise on the Bogside happening. Just as it looked as if he was getting nowhere, he has had a reward for his persistence. Now even the announcement of his new advisory commission on Thursday, after a week's delay, looks a useful stroke. He has got a good list of Catholic worthies together, and the Protestant ones, although less impressive, are about as good as could be expected. The Unionists, of course, will have nothing to do with the commission but the Social Democratic and Labour party will be very sensible if it does (see page 26), and if it actually does that will help Mr Whitelaw too. If the SDLP ends the rent strike that it has encouraged it would be a major step in isolating the IRA and reassuring the more moderate Protestants, and it would make the Unionist prophets of doom look a trifle silly. But it is very doubtful if it would do much to reintegrate Free Derry with the rest of the province.

The people who run Free Derry would feel uncomfortably isolated if the rest of Northern Ireland seemed to be taking firm steps back to normality, but even if much of the province were prepared to give Mr Whitelaw a fair chance (and that is still a large assumption) most Catholics would make everything conditional on the ending of internment. That is what the women of the Bogside have asked for in their plan for a truce. Mr Whitelaw might be glad to release more of the interned in return for a three-month truce and the ending of the barricades, but the Protestant militants, and the Protestant politicians who encourage them, are very unlikely to accept an arrangement that put hardcore IRA men back on the streets. A deal is not impossible : but it depends on what, at any one moment, Catholic opinion would regard as a sufficient earnest of the ending of internment and what the Protestants would swallow for the prospect that the IRA could be steadily divorced from the Catholic community.

The Protestant interest

Such a test of political judgment, if it were ever a reality, would not be an easy one, although Mr Whitelaw might very readily prefer it to going on banging his head against the unyielding walls of tribal prejudice. What can stand being emphasised now is that Mr Whitelaw retains great trust at Westminster and throughout Britain as the right man to judge, as fairly as any man can, what would be the best arrangement for most of the people of Northern Ireland. There are politicians in Northern Ireland who suppose that Mr Whitelaw can be undermined. That is not so, or certainly is not so today. Indeed, Mr Whitelaw is probably better placed politically with the Conservative party in the country than he was even a week ago. There has been the happening in Derry, evanescent or not ; there has been a firmer statement of intent by Mr Lynch in Dublin than he has made before about the private armies in the republic ; and, perhaps most important of all, British television audiences have seen the men of the UDA on their screens for the first time, a sight not recommended to encourage them to go on thinking of Protestant Ulstermen as part of their own society.

The majority of Protestants in Northern Ireland will say that they have nothing to do with the UDA or the Tartans or anything like them, and that, if one day they had to go along with what the UDA is doing, they would not care what British opinion thought anyway. That may be so, or it may not. It may be that parts of the Protestant community are now so bemused by what the likes of Mr Craig have told them that they do believe they can go it alone, that it does not matter any longer what people in London think of them. But there are many others who know perfectly well that the economic future of their province, their standard of social welfare and even (although they may not say it) their best guarantee of being able to decide for themselves whether or not they will ever be part of a united Ireland depend on the continued sympathy of enough people in Britain to ensure that no future government feels able to wash its hands of them. Mr Faulkner, Northern Ireland's last prime minister, and many of his cabinet colleagues know this better than anyone. They are still the natural leaders of the Protestant majority, and they are men who, however much they may argue that they know best how to cope with Mr Craig now, lived through the past years politically and intellectually opposed to much of what Mr Craig is proposing. They may feel that they can make common cause with Mr Craig in demanding the return of the old Stormont. But even if they do not expect

GOING INTO EUROPE ?

(or thinking about it ?)

PARIS 1972—the new business quarter at La Défense

Then think about Inter G and the services we offer:

- MARKETING AND MARKET STUDIES
- LICENSING AND DISTRIBUTION ARRANGEMENTS
- ACQUISITIONS AND MERGERS
- PROFESSIONAL SERVICES
- TURNKEY PROJECTS

Inter G is international, interdisciplinary and completely independent. Our headquarters are in Paris and we have been established in Europe for over 25 years so we know what we're talking about. Ventures can be assessed for economic, technical and operational feasibility and since our resources allow complete projects to be undertaken within the group, there is no loss of time or control.

We can advise you where and when to operate *and provide your premises*, who to sell to *and find business associates*, how to raise finance *and negotiate it for you*. For problem solving contact Inter G.

a British government to concede full integration, do they really expect Stormont to be returned to them ? They may scorn the British interest in what seems to be happening among the Catholics now. But is not any glimmer of common sense in Londonderry to be welcomed ? They may have little reason to love Mr Heath or Mr Whitelaw. But they are men who know the price that every day's encouragement of the Protestant militants can ultimately exact from the whole Protestant community. They are men who have been sorely tried, and who feel they have been sorely tried, but their responsibility did not end with direct rule. When other people are seen to be working for moderation they ought not to be caught despairing or malingering.

The undoing of Unctad

It should now be possible to help to spark development among about one-third of the world's very poor 2¼ billion people. But the Santiago conference muffed it

The third United Nations Conference on Trade and Development ended in Chile in the early hours of last Sunday morning : with a final thick dose of syrup poured over the diet of gall and wormwood, in a mood of resigned acceptance of meagre results. It was a disappointing conference: an example of how an assembly that could be of great good to the world is damaged by a lack of thought among rich countries before the event, a lack of commonsense by poor countries during it, a total concentration on emollient communiqué-drafting towards the end of it, and the absence of any real plan for a follow-through.

The great hope for Unctad, ever since its unexpectedly promising birth in 1964, has been that it might emerge as a forum for introducing intelligent "systems approaches" into the two great, but really rather separate, remaining world economic problems of aid and development. There has been no luck with the first, with introducing what one might call reasoned "international welfare policies." It is appalling that we still do not know how to use aid funds to relieve grinding poverty with even a fraction of the efficiency they could have. But we don't, partly because the world's aid lobby has become the home of the unscientific. Until we have prepared the ground to receive the seed, it had better be realised that although 2.3 billion of the world's 3.6 billion people are miserably poor, participants at giant world conferences are fooling their constituents if they pretend that the passage of paper resolutions can help at least 1½ billion of them.

Rules for the developable

However, there is now a corpus of knowledge on how to spark an economic take-off among perhaps 800m of them. This is where conferences like Unctad can help ; and where Unctads I and II in 1964 and 1968 did much better than all the cynics had expected, chiefly because those preparing for them had grasped the salient points. A big bottleneck is that, in the years just before its breakthrough point, while its inefficient infant industries are being built up, a developable country is likely to have a large current balance of payments deficit. If during that period a developable country is very short of foreign exchange, it will feel it has to impose all sorts of controls. These then divert internal manufacturing production to goods kept out by the controls (ie, to goods which the local country cannot really make) ; they encourage corruption and hyper-inflation and real estate speculation ; they put the country on to the vicious circle of raging stagflation instead of the virtuous circle of economic growth.

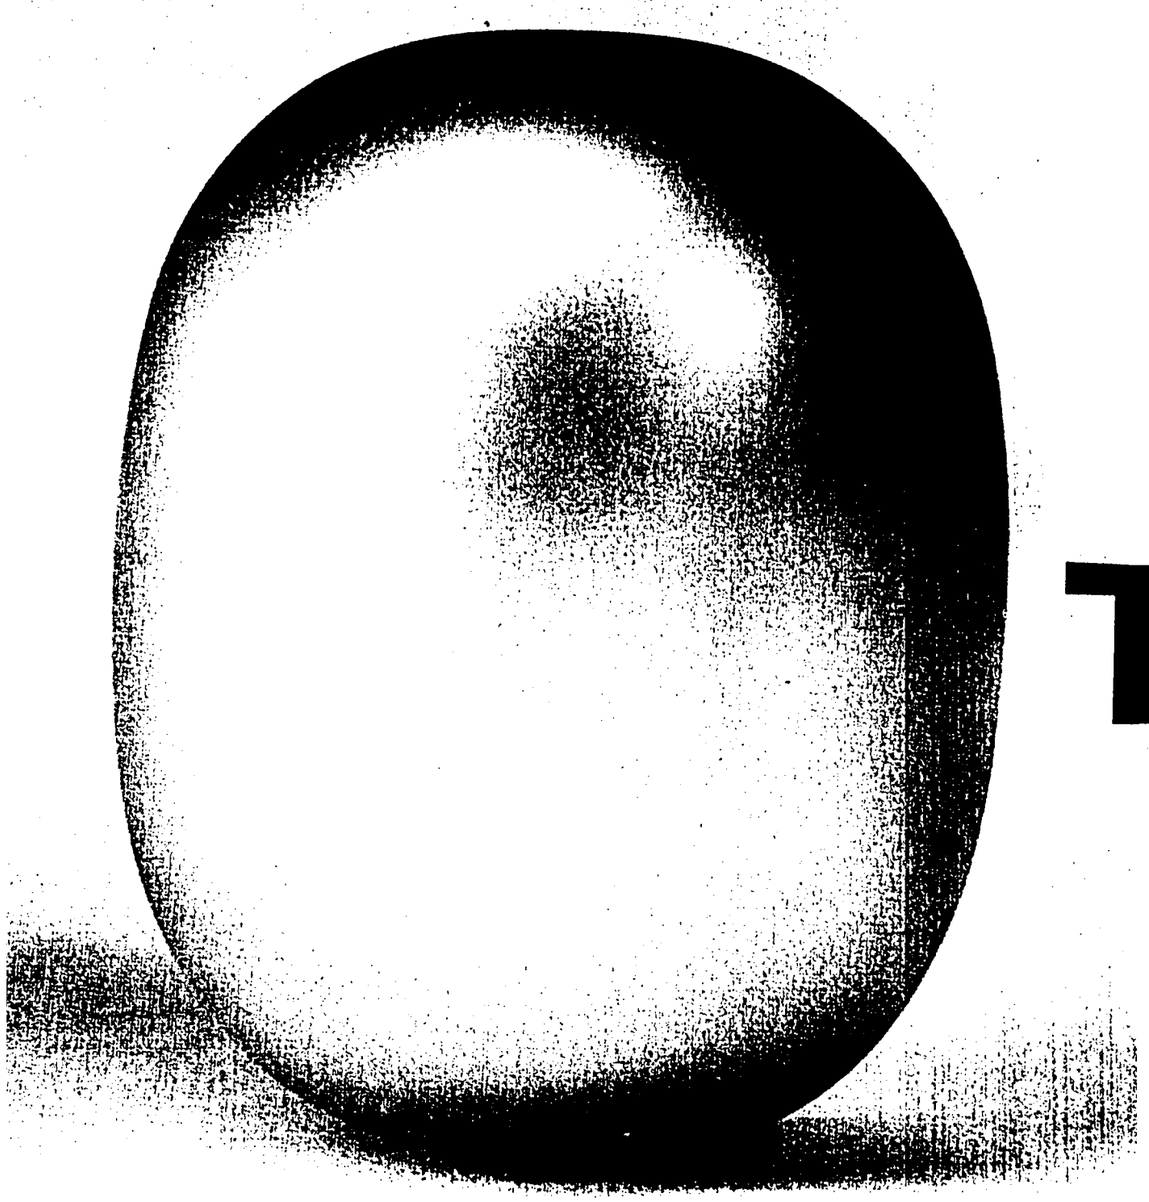
Under an unreformed world trading system a country can at present probably break through to the virtuous circle only if it has large current foreign exchange receipts from some fortunate geographical bonanza such as tourism (Mexico and Spain) or oil (Iran), or if it has a clever government which is nominally socialist but actually encourages a marvellously greedy business ethic (Singapore and Mexico again), or if it has an undemocratic right-wing government which nevertheless lasts long enough, while also strangely staying efficient enough, to give multinational companies a hope that it might provide a firm economic base (which is very difficult but now seems to have been achieved by Brazil —which last year zoomed into a real growth rate of 11 per cent, bigger than Japan's—Hongkong, Taiwan, possibly South Korea, Iran again, Spain again, maybe soon some French African countries and Mr Smith's Rhodesia if Sir Alec Douglas-Home is not careful).

The achievements of Unctads I and II in 1964 and 1968 were to put some mechanisms in place that should help this process along even in countries that do not have these geographic advantages or political warts. In particular, the idea was then accepted of some "generalised tariff preferences" on poor countries' exports of some manufactured goods to rich countries ; these were exactly the right sort of development economics to encourage. A major hope for Unctad III in the past six weeks had been that it would seize the opportunity offered by coming talks on world monetary reform to tie some concept of pump-priming for the developable to the special drawing rights at the International Monetary Fund. The IMF—which would be rather a good arbiter in this matter, unlikely to favour the merely spendthrift but also not the merely fascist —could then nurse developable countries through the deficit-ridden pre-take-off period. Thanks to SDRs, it could do so with funds that would not have to be voted

It takes, on average, 15 years training to become a BEA Captain.

In good hands.

When you fly BEA, we can't guarantee that you'll meet your Captain. In fact, the chances are that you won't.



Not because the Captain is uninterested in his passengers. On the contrary, the well-being of his passengers is the Captain's prime concern. And the best contribution, he believes, that he can make to that well-being, is to stay in the cockpit, giving his full personal attention to every last detail of the flight.

But just occasionally – though nowhere near as often as he would like – the Captain may hand over to his First Officer, come out of the cockpit, and meet some of his passengers personally. That gives him a lot of pleasure.

To judge from our picture, it often gives our passengers a lot of pleasure, too.

BEA

Your Captain wishes you a pleasant flight.

This is ASEA

Just as the superellipse is the perfect solution to the never ending conflict between the square and the circle, so is ASEA the solution to your ever changing problems. Technicians throughout the world actively engaged in high-voltage transmission, high-pressure production engineering, thyristor technology, etc., know what ASEA stands for.

We have solved many intricate problems in different areas. We want to tackle yours, too. To serve your needs, ASEA have 40,000 employees, factories in nine countries, sales offices and agents in over 70 countries.
That is ASEA.
Headquarters: S-721 83 Västerås, Sweden Telex 4720

ASEA

In a year's time, this will be a Rolex.

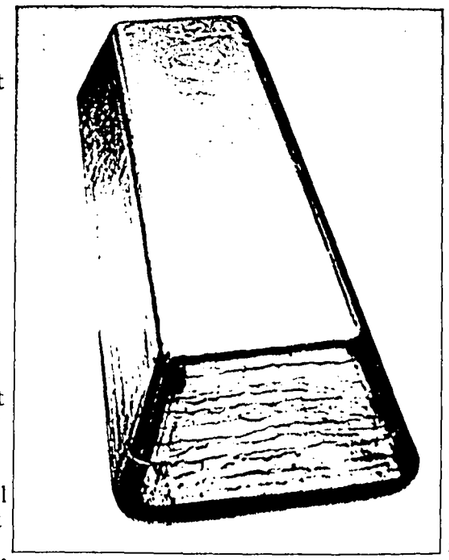
At the moment, this is a solid block of gold.

In about a year's time, our craftsmen will have fashioned it into a Rolex Oyster Perpetual Chronometer.

Obviously, it takes quite a lot to turn a solid block of gold into a watch.

And as there's a fair chance you might eventually buy this watch, you may like to know how it was made.

Firstly, we'll take this block, and carve an indestructible Oyster case from it.



Then, into this case, we will fit a hand-tuned rotor self-winding movement which we call the Perpetual.

This Perpetual movement will be so precise that we'll pay for it to undergo tests lasting 15 days and nights at the hands of one of the Swiss Institutes for Official Chronometer Tests.

Having placed it in ovens and locked it in refrigerators, hung it in various wrist positions in iron racks, and tested its accuracy on every one of the 15 days and nights, they will award it their carefully guarded title of 'Chronometer.'

Screwed down onto the Oyster case (exactly like a submarine hatch) will be the Rolex-patented Twinlock Winding Crown.

This combination of indestructible Oyster case and Twinlock Crown will enable us to guarantee the Rolex Oyster waterproof to incredible depths.

Swiss gold ingot. (Métaux Précieux S. A., Neuchâtel)

To demonstrate just what we mean: we clamped a special experimental Rolex Oyster to the outside of Prof. Jacques Piccard's bathyscaph 'Trieste'. It then submerged to a depth of nearly 7 miles beneath the Pacific, where the Rolex was subjected to a pressure of over 6 tons per square inch.

Both the Rolex and Prof. Piccard were working perfectly when the 'Trieste' surfaced again.

Next we'll take as much time and trouble with the matching 18ct gold bracelet.

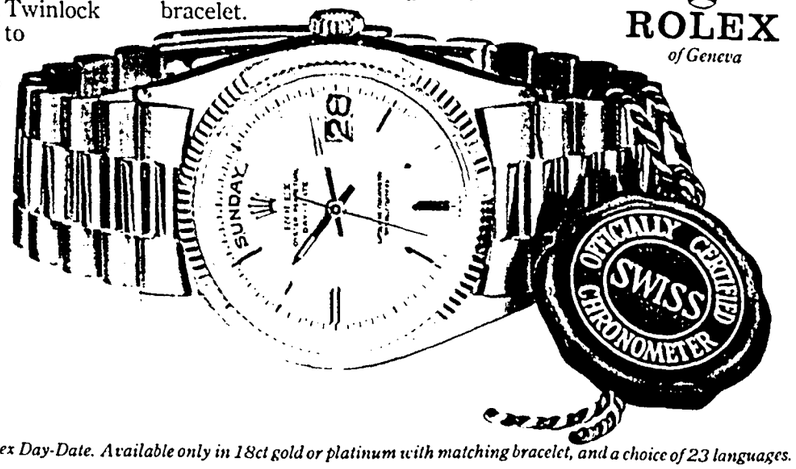
Like most of the work that goes into the creation of our watches, the bracelet will also be fashioned almost entirely by hand.

And on the clasp of the bracelet, you'll recognise the Rolex Crown.

So will other people.

They will also recognise the distinctive Oyster case that used to be a block of gold.

Our craftsmen take a great deal of trouble to turn a block of gold into what Rolex owners call the best watch in the world.



And Rolex owners include men like Lord Hunt (the conqueror of Everest), Sir Francis Chichester (who relied on his Rolex to help him navigate during his historic solo voyage around the world), and World Champion, Jackie Stewart.

Owning a Rolex gives them a great deal of satisfaction.

Almost as much as it gives our craftsmen, who spend their lives making certain that each Rolex they make is a superb example of their craft.

Owning one is almost as satisfying as making one.

ROLEX
of Geneva

Pictured: the Rolex Day-Date. Available only in 18ct gold or platinum with matching bracelet, and a choice of 23 languages.

by rich countries' congresses, a thoroughly sensible type of international Keynesianism of the sort that *The Economist* has advocated for many years.

Other hopes for Unctad III were that it might tackle some problems about reception of multinational corporations and about fair and unfair protectionism in respect of shipping and insurance. Inevitably, Unctad's secretariat also wanted to encourage commodity schemes, which can temporarily and artificially keep up the prices of some of the raw materials and tropical foodstuffs that so many poorer countries export. There have to be doubts about these, because if the price of Ghana's cocoa is artificially inflated every country from the Congo to the Caribbean will start producing unsaleable mountains of the stuff; but Unctad might have been a forum for distinguishing sensible commodity schemes from silly ones.

Unfortunately, the first tragedy for Unctad III was that no rich countries did much constructive thinking before the event. The second was the decision to hold it in Dr Allende's Chile. It was hoped that this looked like an imaginative political gesture. But an early result was that a lot of the reasoning intellectuals in the poorer countries' economic establishments felt that they did not really want to go, while a lot of their colleagues who were excitable marxists eagerly accepted a free trip to see the failing new communist Utopia.

A mood of black comedy

The 3,000 delegates from 146 countries therefore assembled on April 13th in a plush new hall in Santiago, and soon found themselves in an atmosphere which did not accord with high-powered, efficiency-seeking, systematically-analytical discussion of development problems at all.

A lot of the simultaneous translating and microphoning did not work. Some of the Chilean and other marxist journalists said that the mining of Haiphong was so much the most important event in the world that Unctad must have a special debate on it; otherwise they would strike and stop the outward telex so that the world would not hear what was being said at Unctad (which most delegates from the rich countries thought, by this time, was an excellent idea). The Russians and their satellites walked out whenever delegates from governments like South Vietnam spoke; since one of the pleas from a South Vietnamese delegate was for immediate encouragement of tourism to his country, they missed a good sick laugh. The Group of 77 (the poor countries) and Group B (the rich countries) had drawn up opposing resolutions on practically everything, and it was supposed that one function of the conference would be to narrow the gaps between them. However, on the vital resolution on SDRs the Americans at one stage gave the impression of retreating even from the Group B resolution. This may have been quite largely the fault of the chairman on the day; but the Americans' views on world money reform bore some of the worst signs of the gutsy anti-intellectualism of the Connally era. By last week a mood of very black comedy had settled on Santiago. Some poor countries suggested that delegates should stay on for further discussions past the scheduled closing date; but the United Nations, which was footing the bill, said most certainly not.

In the last hours, as is usual at these conferences, a new bridging process began. A lot of the rich countries began to vote for compromise resolutions, while saying that they would not really accept them: eg, to vote for aid resolutions while indicating that they would not actually make the money available. The insufficiently perfidious British, who by this time were represented only by civil servants not authorised to breach previous instructions, therefore ended with the least liberal voting record of the conference, although during it they had been one of the more liberal rich voices.

Sticks and stones, but broken bones?

Oddly, there may be some grounds for hope from the final acts of general dishonesty. The ultimate resolution on SDRs does talk about considering the "possibility of a link between SDRs and aid" in the context of world monetary reform. A high priority should be to try to get some meat on to this bone, and to urge this insistently on the new American Secretary of the Treasury, Mr George Shultz. The French voted liberally throughout Unctad III, including on SDRs, usually even without adding the rider that they didn't mean it; the *inspecteurs de finance* may be back in command over the gaullists on international financial affairs. The group of poorer countries now includes a powerful, sophisticated and fast-developing country in Brazil; the influence of the sillier African countries in the group is impeded because so many of their governments are plotting coups d'etat against each other; the group of least-developed and least-known countries, to whom it is becoming fashionable to offer sizeable sums of what will be badly-used aid, may emerge as a conservative voting force.

The greatest damage to international development nowadays is done by those who infuriate the financial establishments (and egg on the deluded poor) by saying that even the maddest proposals made by the poor countries should be accepted by the rich countries just because the poor countries make them. The second greatest damage is done by the financial establishments who come to regard all proposals for international development as ipso facto irresponsible. The prayer one had uttered for Unctad III was that it would avoid exacerbating both groups of extremists, and progress with injecting reasoning power into the great crusade: especially on development by international Keynesianism, because the techniques for introducing international liquidity into the takeable-off Argentinas and Malaysias and possibly even Indonesias via SDRs should not be very hard.

Unfortunately, nobody is saying that Unctad III did this. Those who left Santiago in the middle of last week said that it plunged the whole debate disastrously into the destructive chasm between the silliest poor and the blindest rich. Those who stayed to the less bitter end last Sunday morning are saying merely, and more cheerfully, that this mis-staged farce at Santiago did not really matter.

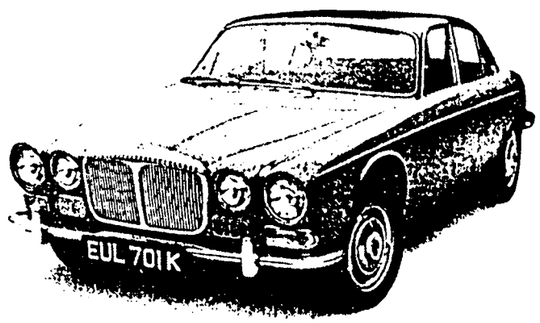
1962 Philip Hardwick's famous Euston Arch, described as a "grand but simple portico," demolished.

1966 Union Jack flies again on tea trays, vests, mugs and bedspreads.

1967 Once proud holder of the Blue Riband, S.S. Queen Mary, taken to Long Beach, California; becomes a floating conference centre.

1968 London Bridge follows her, block by block, to the Arizona desert; now straddles the Colorado River (also specially moved for the occasion).

1969 Falsetto pop singer Tiny Tim trills his way through "There'll always be an England."



1970 "Catch My Soul," rock operatic version of Othello, is staged at Camden Town's Round House.

1972 At 00.10 a.m. on the first of May, Brighton Belle—an "anachronism"—pulls into Brighton for the last time. Her successor will be an ordinary train with a buffet car.

Thank heavens, some things are still sacred.

If the present system of values is leaving you sadly disillusioned, a trip in a Daimler Sovereign might help you smile again.

Because you'll discover that, as ever, nothing can touch a Daimler.

BRITAIN

If they know where they are, they don't all know where they're going

The way the two major parties have been contemplating their political navels recently has led some of the more excitable elements in both to hope or fear that there might be some substance in the talk that Mr Heath is planning an early general election after all. At the end of last week the Labour shadow cabinet and the party's national executive committee held a joint session lasting five hours to take a preliminary look at the first 40,000-word-long draft of a possible election manifesto. And on Monday Mr Heath summoned the real cabinet to Chequers for a day's think-in (complete with Lord Rothschild's think tank) on future policy. Of course, the timing of the next election must always play a part in any party's discussions on strategy; but the reason for both the Government and the Labour party to review their policies at this time is their pressing need to sort themselves out.

The Labour party has not held the monopoly in political somersaulting since the general election, but when a government amends, adapts or reverses policies it must, by the very nature of things, put other policies in their place. The Chequers gathering was, therefore, basically designed to assess where recent shifts in the Government's policies had left it in relation to the targets laid down by Mr Heath when he took office. The Labour party is conducting a very different sort of exercise. Having abandoned most of the major policies which were unpopular with the party's militants when pursued in office, the Labour leaders must now find something to put in their place. On the evidence so far, Mr Wilson and his colleagues are going to find it difficult to fill that vacuum with a policy statement which will satisfy the militants and seem reasonably credible to the rest of the country.

Inevitably, the Labour party in opposition is always going to sound far more left-wing than it acts in government. But the most depressing thing about the draft policy statement, "Priorities in Government: Labour's aims for Britain," on which the party is now working, is not that all its ideas are left-wing but that they are all old, tatty left-wing ideas. From a wealth tax to the abolition of private education, from a tight control of prices to a free and easy approach to wages, from the public ownership of banks and insurance to the creation of a state holding company to take over practically anything, they are all ideas which have been around and around when the party has been in opposition only to be abandoned when it is confronted with the realities of government.

It was hardly surprising that at last Friday's meeting Mr Wilson—notwithstanding his suggestion that the party should also consider the nationalisation of urban building land—should have led the parliamentarians' demand that the programme should be costed before it was offered to the public. And even Mr Wedgwood Benn, this year's party chairman, was moved to observe that "we must not make it look too easy"—which is about as near as he will ever get to condemning any policy popular with the party's rank and file.

The dilemma sensible Labour politicians face is that "Priorities in Government" is the sort of fundamentalist thinking which will go down well with the left-wing trade union leaders and most of the constituency delegates who will attend the annual conference. It just might, therefore, give them such a happy week at Blackpool adopting it that they will not get round to splitting the party disastrously with a demand that the next Labour government should withdraw from the common market. Thus the temptation is to embrace it as a document which will get the party safely through another difficult week, and hope that the country will be allowed to forget most of it before the next general election. If it does, the draft will have served some useful political purpose. But it will have done nothing to prepare or fit the Labour party to be the next government of this country.

Ulster

Catholic challenge to the IRA

Five women from the Bogside and Creggan went to Stormont Castle in Belfast on Wednesday night to meet Mr Willie Whitelaw, the secretary of state, for a discussion on ending the violence in the no-go areas. Earlier, encouraged by their priest, women in Free Derry had berated the IRA Officials for torturing and then murdering a young Bogsider on leave from his British army unit on the Rhine. Yet, as one IRA man said: "These people forget easily and by next week

Willie's welcome visitors

they won't be able to remember his name." He had a point. The outcry in March among Catholics in Belfast's Andersonstown district over the killing of a mother of 10 by the IRA in a gun battle with the army lasted little more than a weekend.

Nevertheless, there are signs that the responsible leaders of the Social Democratic and Labour party now want to test their strength as the elected spokesmen of Ulster's half-million Catholics. They have been discussing the possibility of issuing a kind of ultimatum to both wings of the IRA to call a halt within a fortnight to their urban terrorism. If the terrorists refused to agree to such a demand, as they most certainly would, then the SDLP would threaten to begin political talks with Mr Whitelaw's administration. This would mean that the party was no longer prepared to stick inflexibly to its demand for all internees to be either released or charged with specific offences as a precondition for co-operation with Mr Whitelaw, though they would probably still demand some preliminary assurances from him. Ever since last August, the SDLP leaders have withstood persistent attempts, particularly by Mr Jim Callaghan and the Labour party, to get them around the conference table. But now they realise that the gunmen are just not interested in seeing the release of all the internees, for that would deprive Officials and Provisionals alike of an emotional issue on which they have captured a great deal of support.

The SDLP would probably also call on all those councillors and public figures who walked out of Ulster's council chambers last August to return to their posts. This would be nothing more than a symbolic gesture, because Ulster goes to the polls in October to elect members to the new district councils. But it would provide some encouragement to other disaffected Catholics, particularly if the SDLP threw support behind the advisory commission. Some SDLP leaders are anxious, too, for an end to the ten-month-old rent and rate strike. Over 22,000 tenants are still withholding payments and arrears have now mounted to over £1½m, even though 15,000-20,000 families are having what they owe deducted from state benefits. But a call to start paying rent again is not likely to increase the SDLP's popularity.

Mr Gerry Fitt seems to have got his quarrelsome colleagues to agree for the moment on a common approach, even if Mr John Hume and Mr Austin Currie do hanker after an all-Ireland solution for the north's crisis. Certainly the SDLP leaders have met more often in conclave this week than at any time since the imposition of direct rule two months ago. It is also significant that Mr Fitt and his colleagues have talked at length with Protestant clergymen from the Shankill this week on ways of reaching some inter-communal understanding. But last weekend's confrontation between the army and the Ulster Defence Association in the temporary no-go area the UDA tried to create in Belfast's Willowfield district suggested that the Protestants are in earnest. So did Sunday's rioting in the Shankill. The SDLP may have been prompted to act too late.

All sorts of republicanism

Ulster's Roman Catholic militants are still numerous, well armed and in an uncompromising mood:

IRA Provisionals. Founded November, 1969, as breakaway group in protest against mainline IRA adoption of marxist and quasi-constitutionalist programme. Old-style Irish republican nationalists of physical force tradition; few political ideas. Aim: a Gaelic Catholic united Ireland. HQ: Dublin. Political leader, Mr Rori O'Bradaigh; army chief, Mr Sean MacStiofain. Before internment in the north last August, Provos strong throughout Belfast and Londonderry working-class Catholic districts. Command structure decimated by army in Belfast except in Andersonstown. Now, under Mr Seamus Twomey's northern command, bent on complete destruction of Ulster economy and provocation of Protestant counter-terrorism. Estimated at 150 hardcore gunmen and bombers, nearly 2,000 active backers. Some 13,000 joined in the Provo Easter march in Belfast. Minimum demands for ceasefire remain those of March 10th—abolition of Stormont (not just prorogation); withdrawal of troops from streets prior to their departure from the north; release and amnesty for all convicted as well as unconvicted political prisoners.

IRA Officials. Mainstream IRA before 1970 violence. Until internment, strong only in Lower Falls and Markets areas of Belfast. Initially anti-terrorist, but in past year aped Provo ways. Aim: a Gaelic Socialist united Ireland. Seeks rapprochement with Protestants. Threatens social revolution in south against Mr Lynch and his "gombeens" (Irish for usurers). HQ: Dublin. Political leader, Mr Tomas MacGiolla; army chief, Mr Cathal Goulding. In north, powerful in Belfast's Turf Lodge and Ballymurphy areas; stronger than Provos in Free Derry. Ceasefire demands similar to Provos'. Critical of Catholic church. Pious claim to practise violence only as "defence and retaliation in a responsible manner, aiming at all times at the agents and symbols of domination and oppression" no more than a smokescreen to cover wide-ranging terrorism.

Civil Rights Association. Now almost moribund after rapid recovery last autumn in the anti-internment campaign to 1968-69 heights. Responsible for illegal marches in Londonderry and Newry earlier this year. Denounced Government's initiative, but puny support for its marches since March 24th. Active in civil disobedience campaign. All but one of its 14-strong executive either Irish Communist party or Official IRA members.

Northern Resistance Movement. Provos' front equivalent to CRA. Founded last November. Derisory support.

Catholic Ex-Servicemen's Association. Independent of either wing of IRA. Strong only in Ardoyne and Andersonstown areas of Belfast. Claims 15,000 supporters for its mainly vigilante street patrol work. Probably not more than 2,000 activists.

In Britain, Irish republicanism is mainly organised in the **Anti-Internment League**—an umbrella organisation to cover 15 diverse groups, notably the left-wing **Clann na h'Eireann** and the **Irish Solidarity Campaign.** Not more than 3,000 activists in million-strong Irish-born Catholic community.

Family property

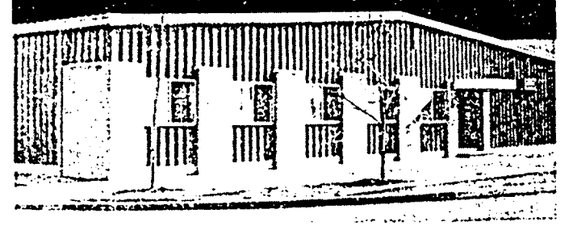
What's yours is mine

The ramifications of family property law show the Law Commission at its best but also at its most perplexed, because this is a field where it is reluctant to make up society's mind for it. A matrimonial property act was passed hot on the heels of the divorce reform act, but it was some thing of a stopgap measure, designed to give judges freedom to transfer property from one party to another at the end of a marriage. In October, 1971, the Law Commission published an exceedingly thorough and lucid working paper which examined possible wholesale reforms: in particular the idea of a "community of property," familiar in European law

Quality in an age of change

FAMOUS GROUSE SCOTCH WHISKY

For the true connoisseur, the first taste gives unusual satisfaction and arouses considerable interest. The mellow character of carefully-aged Whiskies reflecting our blending skill belies mass production. Compare it neat with any other Whisky—the really sure way to make a test. The difference is unmistakable. Famous Grouse Scotch Whisky—with a century and a half of family experience behind it.



Matthew Gloag & Son Ltd., Perth, Scotland. Established 1800

-industry is getting at us...

WE'RE PLEASED TO SAY

BECAUSE WE'RE EASY TO GET TO

Alastair Bilton, the Development Officer for The Scottish Borders Development Area gets many requests for all sorts of information from industrialists who are planning expansion.

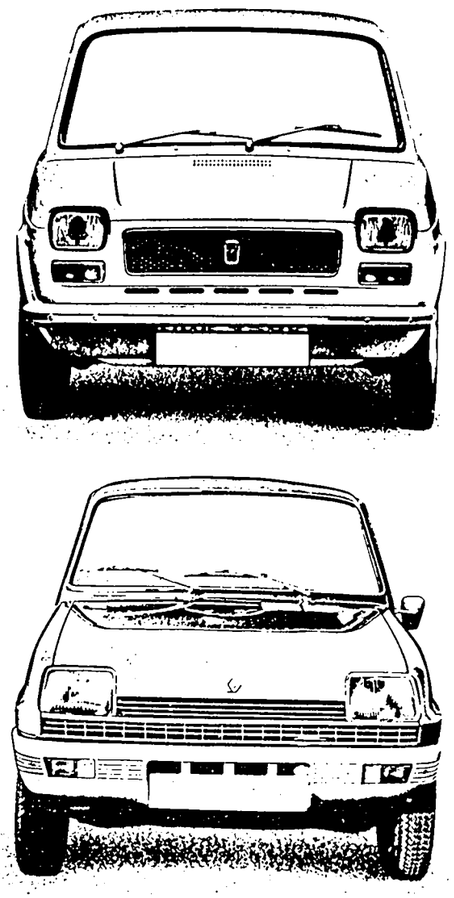
The majority already know that the basic factors, leading to expansion in The Scottish Borders, are right —

— it's a Development Area with attendant Grants, Loans, Tax Allowances
— it has excellent lines of communication by road rail air and sea to the home and overseas markets
— it offers male and female labour availability
— being in Scotland it has first class education and housing.

IMPORTANT — but is it enough?

"Industrialists are also interested in the environmental intangibles — the quality and loyalty of the people — the history of labour relations — the countryside and leisure pursuits — the overall effect of the area. I can only invite industrialists to come and see for themselves.

SEEING IS BELIEVING — they come, they stay, they profit, they expand.



You're welcome to come and join them."

Who will win the Great European Sales Race?

In spite of casualties and mergers, Europe's motor industry still numbers quite a lot of powerful contenders. But how will they look in 1975? In 1980? Who will still be with us? Who will have disappeared? Predictions of this kind, in relation to any industry or product field, are not easy. Yet the ability to make predictions with some degree of accuracy and intelligence is necessary to success in any business. As Europe develops it becomes increasingly important for the businessman to be able to make such forecasts on an international basis, free from local bias. The Financial Times does not claim to tell you more about other countries' business than those countries' own leading journals. It does however claim both a greater scope and a greater depth of *international* business news and comment than any other daily newspaper. It also claims a very high degree of accuracy and impartiality. Perhaps this is why, according to a recent survey*, 41% of senior management throughout Europe already rate it essential reading, and why more and more international companies find it an important advertising medium. **If you would like to judge the Financial Times for yourself by letting us send you or any of your executives free copies each day for two weeks†, please complete the coupon and send it to us.**

but alien to English law. The commission wished to test public opinion: a detailed and complicated public opinion survey carried out for it by the Government Social Survey has now been published.

This technique has its limitations. It is extremely hard to extract intelligent reactions to laws on inheritance and intestacy when only a minute fraction of the interviewees have the remotest idea what these are. (Only 24 per cent of husbands, and 10 per cent of wives, had made a will: even among the professional and managerial classes, neither husband nor wife were found to have made a will in over half of the interviews.) The survey did provide evidence of the very low level of most people's assets: the survey team urges that any reform of the laws of intestacy should be framed with this in mind. The single most important piece of property is of course the matrimonial home; and the researchers were also, perhaps more fruitfully, testing attitudes to the distribution of property at the end of a marriage.

The interviewees appeared to believe strongly that the family house belonged to them both: over 90 per cent of both husbands and wives believed that the home and its contents should legally be jointly owned. (Ironically, the percentages, among both men and women, were much lower among the divorced or separated.) Rather more concrete evidence is provided by the statistics of interviewees whose houses were in joint names. Only a small minority of those who rented their homes had joint agreements. But over half of owner-occupiers had their houses in joint names, and a breakdown of these according to the year their house was acquired showed a rapid increase in joint ownership in the 1960s.

Three-quarters of those who held their homes jointly said they did so to ensure automatic transfer on death or to avoid death duties: and many of them, whether they knew it or not, were merely doing what a judge would now do for them if their marriages broke down. But this does provide evidence to support a general trend in both case and statute law. Interestingly, attitudes to the distribution of property did not seem to depend on whether the wife had been earning or not. But there was one remarkable inconsistency: only a minority believed that, even if the wife had money of her own, she should be responsible for mortgage payments if the husband failed to keep them up.

Supplementary benefit

Sick before single

The Committee on One-Parent Families, chaired by Mr Morris Finer QC, should seize on the latest product of the social security department's researchers: a comparative survey of families on supplementary benefit, published on Thursday*. Since the field-work began at much the same time as the committee was set up—three years ago—it is a fair guess that it has been waiting on the results. They provide the most pertinent evidence yet on the special circumstances of this group, for whom there has recently been a lot of lobbying for a special social security benefit.

The results do not provide evidence of the numbers of poor one-parent families. By no means all claim supplementary benefit and such evidence is extremely scanty. The department's last estimating exercise, based on the family expenditure survey, provided some complicated guesses as to the number of children of two-parent families living below the poverty line, but the number of fatherless families in the sample was too small to be statistically respectable. Nor, since this new survey was not based on a random sample, does it provide evidence of the circumstances of those on supplementary benefit compared with the rest of the population. What the researchers did, in picking their interviewees from the supplementary benefit rolls, was to "match" one-parent and two-parent families with like numbers of children, so that the survey would yield comparisons between the different groups of claimants with children to provide for.

Its general conclusion is important: that there is no significant difference, among recipients of supplementary benefit, between the material circumstances of families with and without fathers. Indeed, a higher proportion of two-parent families involved—where the father was either unemployed or sick—had incomes which did not meet their basic needs (defined as equal to the basic benefit rate plus the actual cost of the family's housing). The wage-stop was a good deal to blame: its impact has since been much reduced by the introduction of the family income supplement. There were, surprisingly, similar proportions of one and two-parent families in local authority housing; though there was a tendency for single mothers to be put in less good housing, this possibly reflected a deliberate policy to put them in the flats with lowest rents.

*Families Receiving Supplementary Benefit. *HMSO*, £1

Circumstantial evidence for Finer

Comparisons were complicated by a wide divergence between the various groups of fatherless families. Widows and divorced women were (comparatively) better off, with a modest accumulation of possessions, than separated wives and unmarried mothers, whose circumstances were markedly similar. Widows, as one might expect, were the best off financially: this shows the effect of the disregard of part of the widowed mother's allowance. What this report shows up most clearly is the wide variation in the circumstances of one-parent families, even among the very poor. It does make plain the need for specialised help—with child-minding, obviously, and with house repairs.

But the survey provides little evidence to support the demand for a special allowance for one-parent families; one could make out a better case for an increase in supplementary benefit for families with a sick breadwinner, for whom the report provokes the greatest sympathy. While they appeared to have more material possessions (fridges, irons, televisions and so on) than other groups they were also the most in debt. And though a tiny minority had special dietary allowances, for some reason the researchers could not fathom they received markedly fewer special grants for exceptional needs than any other group. Another solution would be a sharp increase in the long-term addition, which would go to all families on supplementary benefit for over two years and therefore, on this evidence, would give most help to unmarried mothers and the families of the sick.

Mental health

When the shouting is done

The two elderly women who have spent their adult lives in hospital, allegedly because, long ago, they had each had an illegitimate baby, have been the occasion of a press furore. But one thing should be made clear. They were not committed to a mental deficiency hospital as "moral defectives." That term is defined in the Mental Deficiency Act of 1913 as persons displaying from an early age "some permanent mental defect coupled with strong vicious or criminal propensities on which punishment has had little or no deterrent effect." Is it kind to suggest that these words could have been applied to the unmarried mothers of Dewsbury ?

They were in fact admitted to a mental deficiency hospital after being ascertained as feebleminded. But feeblemindedness, or indeed any grade of mental deficiency, was not of itself grounds for taking action under the 1913 act. A mentally defective person became "subject to be dealt with" if his parent or guardian petitioned the local authority with the support of medical certificates or if, among other things, he was neglected, abandoned, cruelly treated or without visible means of support. The criteria were social rather than medical. Disowned by their families, living on the rates, expecting illegitimate babies and feebleminded, the Dewsbury women (if this is indeed their case history) could certainly be described from the standpoint of the 1920s as subject to be dealt with under the 1913 act. So too were many other women in similar circumstances.

The act was not intended to be punitive—though doubtless it could be so manipulated by the unscrupulous. Its framers, like the royal commission of 1904-08, on whose report it was based, were very conscious of the civil liberty issue, and it contained safeguards. But the reformers believed that liberty was a myth for many mental defectives, who might be pitifully neglected or subject to exploitation. They were also concerned for the future of the babies whom the promiscuous defectives produced, especially as "national efficiency" was in the air and the quality of the national stock was said by the new science of genetics to be threatened by the multiplication of defectives.

To put the matter beyond doubt the Mental Health Act of 1959 expressly excluded promiscuity or other immoral conduct as sufficient reason for a person to be dealt with under it. All but nine of the 520 patients in the hospital where the Dewsbury women lived are there informally. They themselves had been made informal patients. Such patients can leave hospital at any time—provided they have somewhere to go to. If the rather exaggerated clamour caused by these cases stirs up local authorities to provide more community homes and hostels it will have been worth while. The danger is that too much emphasis on "people who should not be in hospital," whether mentally ill, mentally handicapped or old, may make hospitals reluctant to accept them, or to discharge them too soon, before community provision is adequate. The plight of the helpless may then be as wretched as was that of many mental defectives before the 1913 act was passed.

Environment

A land fit for nymphs

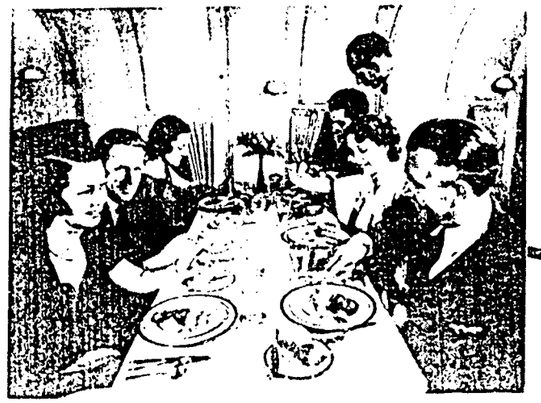
The reports prepared for the Stockholm conference on the human environment by the various working parties set up by Mr Peter Walker contain the expected hotch-potch of ideas, good, bad and merely obvious. The one on the role of voluntary workers and youth, prepared by a suitably youthful team under Mr Dennis Stevenson*, gets to grips with some of the possibilities, though not the dangers, of pressure-group democracy and direct participation. It does not take a cynic to be wary of the idea that government should pay outside groups to criticise it, although there is certainly room for clarification of the charitable status issue. As usual, some of the good ideas actually in practice on things like cleaning up the environment and educating people about it look the most promising.

A nymph, by Lord Snowdon, arises from the cover of the report† by Lady Dartmouth and her team on the human habitat. And squalor, it would appear, is banished from this green and pleasant land for there is not a hint of it in 214 charmingly illustrated pages—which leave one wondering just what the fuss is all about. True,

*50 million volunteers. *HMSO*, £1
†How do you want to live? *HMSO*, £1.80

Dartmouth: how's your habitat ?

the team's members had a hopeless job in trying to assess public opinion (ie, anyone who cared to get in touch with them) on the human habitat, whatever that is. But did no one tell them what it was like to live in a slum or on the edge of a motorway ?



The text is full of sensible views expressed by nice people in atrocious words like pedestrianisation. The first recommendation is that "there should be a specific universal and named procedure to give local publicity to all planning proposals beyond the merely trivial." Hear, hear. *The Economist's* habitat is about to be polluted by a vast office block on the other side of St James's Park, but only MPs are being allowed to see and judge the model of it.

Parliamentary constituencies

Exit Dame Pat

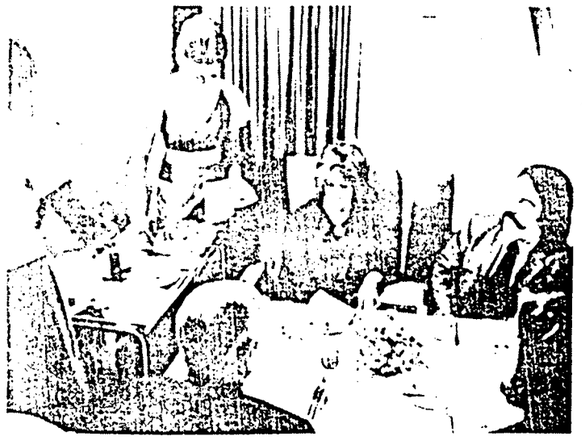
There was never much hope that the choice of a Tory candidate for the safe new seat of Bexley-Sidcup would be made without some hard feelings—and so it has proved. Both Mr Heath and Dame Patricia Hornsby-Smith, whose own neighbouring constituencies have been made extremely vulnerable by the redrawing of boundaries, had loyal supporters campaigning for them. Now Dame Patricia, who would certainly have liked the seat, has had to stand aside to leave the way open for the Prime Minister. It would be a pity if she were to be missing from the next Parliament. But it is natural that Mr Heath, who has maintained a dignified but eloquent silence throughout and has turned down offers of other safe seats, should not want to move.

Pan Am introduce the first-ever First Class dining room

The China Clipper was a Martin M130 with a cruising speed of 130 mph; she was one of three owned by Pan Am. She could seat 32 passengers—only 15 to 20 on long journeys. With a range of 2,400 miles, she was Pan Am's first long-distance aircraft.

In 1936, when 'Gone with the Wind' first hit the bookstalls like a hurricane and William Powell starred in the glassy, glittering 'Great Ziegfeld,' the Pan Am China Clipper flew with the first-ever flying dining room.

Pan Am first served food on board in 1929. In 1935, galleys were installed and the first hot meals served. A dining room came next.



It was small but well appointed, like a lift in the Waldorf Astoria, and it seated fifteen diners very comfortably while still leaving the lone steward room to manoeuvre.

After 35 years Pan Am have another aircraft big enough to carry a dining room again.

The 747 travels at 625 mph with a range of 6,700 miles. Unfortunately there cannot be a dining room on board to accommodate all the thirty-eight First Class passengers. Just ten can use the dining room, so far.

Perhaps it should all be one big dining room, but till that day, should you decide that you want to be a pioneer too, please remember to book your table early.

...again.

Suddenly, you're (dining) somewhere else.

THE WORLD

Nixon in Moscow

Brezhnev has more missiles, but Nixon's got all those extra warheads to keep him happy

From the Finland Station, a missile pact—just in time

The man who wasn't there played a dramatic part during the first days of Mr Nixon's stay in Russia ; and there were two of him. Mr Smith and Mr Semyonov, the American and Soviet negotiators in the two-power strategic arms limitation talks (Salt), were not in Moscow when the President arrived on Monday. The Salt men stayed in Helsinki and pursued their discreet business there. But word went round that, later in the week, Mr Smith and Mr Semyonov were expected to bob up in Moscow and deliver, amid trumpet blasts and flashes of coloured fire, an arms control agreement whose signing could provide a fitting climax for the encounter at the summit. Tuesday's announcement of a Russo-American plan for joint action against heart disease seemed a medically apt preliminary for the outcome of a long-drawn-out cliffhanger.

The forecasts that this week would see the conclusion of the superpowers' first agreement to curb their nuclear arms race had mostly presupposed that the Salt men would have a package neatly tied up before the Moscow talks began—or that they would by then have isolated one or two outstanding issues that could be resolved only between their chiefs. Few people had expected to see Mr Smith and Mr Semyonov still doing their thing in Helsinki after Mr Nixon had already spent many hours deep in discussion in the Kremlin.

The explanation could be that the two negotiators in the Finnish capital had both been instructed to hold out until the last possible moment on the remaining disputed points, so that their masters, facing each other in Moscow (only an hour's flying time away), could each convey the implicit warning: "You need this deal just as badly as I do." Clearly, each side does need it, if not equally ; and each knows that the other needs it, and (in Mr Peter Ustinov's kind of terms) it knows that the other knows that it needs it itself. Mr Brezhnev's motives for seeking an arms control pact may be somewhat less electoral, and somewhat more economic, than Mr Nixon's, but the calculation is clear on both sides.

The shape of a possible deal has been determined by a series of curious twists in the evolution of nuclear weaponry. Recent years have seen, first, the Americans proposing simple "freezes" and the Russians, being then far behind in nuclear capability, saying no. Then Russia inaugurated the era of anti-ballistic missiles (ABMs), and answered American protests that this meant opening a can of hideously expensive worms and imperilling the whole idea of a stable balance of deterrents by contending that ABMs were harmless defensive things that therefore needed no curbing. But, by the time the Salt talks began, Russia's great nuclear leap forward had brought it within sight of parity in offensive weaponry, with a further potential advantage in the shape of its huge SS-9 missiles, and with its lead in ABMs still retained. It switched abruptly to the contention that ABMs were the only things that needed curbing.

Last May the two sides apparently reached a compromise. Under this, Russia agreed to discuss offensive missiles as well as ABMs, while the Americans accepted the idea of an ABM curb being solemnised in treaty form and accompanied only by a less formal initial understanding about limitations on other missiles.

One recent report about the Americans' proposals for the ABM treaty said that they wanted each side to be limited to 200 launchers, of which 100 would protect the capital city and the other 100 would guard an intercontinental missile complex (Russia already has, and is apparently enlarging, an ABM system around Moscow ; the first American one, now building, is hard by a complex of Minutemen offensive missiles in North Dakota). A Soviet preference for setting the limit at a single 100-launcher ABM system may have been one of the factors delaying the conclusion of the Helsinki talks. An opaque White House statement on May 1st about "a major advance" involving "a broadening of the scope of an offensive freeze" was interpreted to mean that Russia had at

last accepted the American point that such a freeze ought to include submarine-launched missiles. But even the latest pre-Moscow reports indicated that there was still some difficulty over the initial duration of the proposed treaty, and over the question of guarantees that reconnaissance satellites should be allowed to do their job as the only means of verifying compliance with the two-power agreement.

A "freeze" on offensive missile strength, as apparently contemplated, would permit each side to complete certain developments that are already in train; thus, Russia could install intercontinental missiles (ICBMs) in the 90-odd launching silos that it has recently built. There would be no restriction on the equipping of existing missiles with multiple warheads, including the independently targetable types (Mirvs); and the Americans could, as long as they respected the agreed ceilings, replace some or all of their missile-launching submarines with the longer-range vessels provided for in their newly announced Undersea Long-range Missile System (Ulms), now renamed Trident. It would appear that the freeze would leave the two sides roughly balanced in submarine-launched missiles, of which America now has 656; Russia would be allowed to complete construction that brought its numbers up from around 500 to perhaps 700. On land, Russia might have about 1,600 ICBMs to America's 1,054. But the Americans' lead in Mirvs would mean that they retained an overall superiority in numbers of warheads (both land-based and sea-based), with a total of 5,700 to something like 2,500 for Russia.

Space was a bonus

The deal on space flights that was signed on Wednesday was the joker that the Americans had taken to Moscow with them, which could always be played if the arms control talks failed completely, or if they were only partly successful. In that event, the space agreement would allow something to be salvaged from the wreck, and if the arms talks went well the agreement would be an added bonus. Although Russian doctors are in America now, discussing joint work on space medicine, the idea of a joint Russian-American space mission is one that has been mainly pushed by the

One Russian nose to nose with one American inside a bit of an Apollo

Americans, with the Russians apparently saying yes.

It involves the Russians launching one of their big, unmanned Salyut space stations in mid-1975 and then sending up a Russian crew by separate rocket to man it in orbit. The next day the Americans would launch an Apollo rocket, dock it with Salyut, and the two crews would move in and out of each other's space craft before parting to go their separate ways. There are technical problems about the sort of air lock that would have to be set up between the two space craft, for Russian and American astronauts work in different atmospheres and at different pressures. When men travel regularly into space, there is much to be said for standardising docking attachments so that Russians could rescue Americans in trouble and vice versa, and a joint flight on these lines would certainly do this. But apart from promoting Soviet-American togetherness, it is difficult to see it doing much else.

It's the gas that matters

The other foregone conclusion of Mr Nixon's visit was that America and Russia would agree to do more of what they do least of at present: trade.

The trade drive is not the upshot of newfound affection between America and Russia. In the past two years each has started to see that there is more that they could be doing together than anyone thought. America, whose wealth was built on being a self-sufficient storehouse of minerals, has been running short of almost everything. Oil and gas, in particular, are increasingly scarce in America and increasingly expensive to get out of the ground. The Russians have huge amounts of both, but have never been as clever as the Americans at digging them out and carrying them to market. Which explains why two groups from Texas, drillers and pipeline layers, have lately visited the oilfields of Siberia and the gas fields of Tyumen in the north.

It is the sheer size of Russia's gas fields which interests the Americans. At present reckoning there are at least 34 fields which each contain more than the 3,000 billion cubic feet required to make a gas field interesting on a commercial scale, and these include half a dozen fields described as "supergiants." But the prospects are still unclear at present, and will remain so for some time. The American oil lobby has bent only slowly to America's need for imported energy, even before having to stomach this latest notion that America might now make itself dependent on Soviet Russia. It may prove hard to pipe gas from the harsh areas of Tyumen and then land it by tanker on the eastern seaboard of America for the 85 cents per thousand cubic feet that America has recently started paying for liquefied natural gas from Algeria. An investment of $3 billion at current costs would be needed just to build the queue of refrigerated tankers needed to keep a constant supply of liquefied gas coming in.

Last winter Russia ordered, out of the blue, $150m of animal feed-grains from America, and the present Russian plan is to place a 10-year contract for feed-grains with the United States. This would be a boon for the Americans, who have a perennial problem in disposing of or holding down their maize production, whereas Russia badly needs feed to help to revolutionise its livestock production for an increasingly

There's always been a quick brain under this

NOW FERRANTI HELP IT RESPOND EVEN FASTER

In Birmingham, Ferranti have just installed one of the world's most advanced Computer Command & Control systems, for use by the police. The computer stores all information on police resources available, and it is constantly updated by incoming reports from sub-divisions and patrols. Uses include statistical analyses of crime, car response times, periods of peak and slack demand for police services–all leading to more efficient management of the police.

The Ferranti Argus 500 computer is linked to TV type displays with keyboards, at the Central Control Room and at each of twelve sub-divisional stations. When you dial 999 for the police in Birmingham, you are connected to Central Control. The officer who answers keys in name, address and complaint, using a standard format for rapid entry of the information. The computer immediately does two things. It tells the officer, on his display, what resources are available in that locality. It also alerts the sub-divisional station, via its Ferranti display.

Every Central Control officer has the facility for instant access by radio to every Birmingham police patrol—mobile or on foot—and also to emergency services like ambulance and fire brigade. Officers at either Headquarters or sub-divisional stations can thus take necessary steps to handle the emergency. As the computer is constantly updated, they can follow each other's actions on their displays. It maintains records of all emergencies and of action taken, and provides daily printed summaries.

Ferranti Command & Control systems are standard for new Royal Navy ships. Ferranti inertial navigators guide the RAF's Phantoms and Harriers. Ferranti simulators help train air traffic controllers at major international airports.

In automation, electronics and electricity supply, Ferranti are among the world leaders.

A QUIZ

20 questions for keeping a commuter's cool.

1 "And have they fixed the where and when?
And shall Trelawney die?
Here's twenty-thousand Cornishmen
will know the reason why!"
Who was Trelawney?

2 July 3rd – August 11th are "the dog-days". Why?

3 Roughly, what is the shortest distance between Land's End and John O'Groats: 610 miles, 870 miles or 1,040 miles?

4 Which English company is the largest exporter of natural raw materials, in terms of value?

5 How many gallons of beer in a "standard barrel": 36, 40 or 54?

6 "On the coast of Coromandel,
Where the early pumpkins blow . . ."
Where's Coromandel?

7 Which is the busiest port, per foot of quay, in Britain?

8 What does the abbreviation F.L.S. stand for?

9 Who, or what, is "Wheal Anna"?

10 When was the English Channel first crossed by air: 1784, 1874 or 1909?

11 Which is the parent rock of china clay: granite, sandstone or basalt?

12 "I pledge myself to a new deal for the American people".
"We demand that big business give the people a square deal".
Both are quotations from a Roosevelt.
Which quotation belongs to which man?

13 Why is 'bone' china so called?

14 Who is said to have invented the famous Willow Pattern legend: Josiah Wedgwood, Thomas Turner or Mao Tse Tung?

15 Which footballer won a record number of England caps, married a singer and managed Arsenal?

16 What does the abbreviation D.O.R.A. stand for?

17 Who is Head of State of the U.S.S.R.?

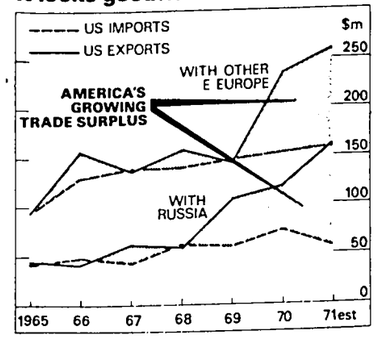
18 You are only allowed to hold 1000 units of the current issue of National Savings Certificates. True or false?

19 What do the Cornish and Breton languages have in common?

20 Legend has it that a foreign nation traded for tin with Cornwall long before the Romans came to Rye. Were the traders the Carthaginians; the Phoenicians; or General Motors, U.S.A?

Answers.

1: Bishop of Bristol, imprisoned by James II in 1688. 2: the Romans believed that Sirius, "the dog-star", added its heat to that of the sun. 3: 610 miles. 4: English China Clays. The world's largest single producers of china and ball clays, exporting over 75% of total production. 5: 36 gallons of beer constitute a "standard barrel" on which duty is chargeable according to specific gravity of contents. 6: the East Coast of India. 7: Par Harbour, the ECC port in Cornwall. 8: "Fellow of the Linnaean Society". 9: one of the disused tin-workings of West Cornwall. 10: 1784, by an unmanned hot air balloon. 11: granite. 12: the first was said by Franklin D. Roosevelt, on July 2nd 1932. The second was written by Theodore Roosevelt in his autobiography, 1913. 13: approximately 50% of its constituent material is calcined cattle-bone. The remainder is made up of china clay and felspar. 14: Tom Turner. Look him up. 15: Billy Wright. 16: "Defence of the Realm Act". 17: Podgorny, Chairman of the Presidium of the Supreme Soviet. 18: true. 19: both are Celtic, pre-Romance languages — like Welsh and Gaelic. 20: the Carthaginians, so legend has it. And who are we to argue?



This quiz is brought to you by ECC in the interests of happier commuting, less boring advertising, and a staggeringly high awareness of our company and all its works.

It looks good...

US exports to Russia

...until you look closer

And Russia's cows don't run on gas

meat-hungry people. If the plans for a gas deal go ahead fast enough, it is likely that Russian gas will be used to pay for American grain on the bartering system pioneered by Russia in its commerce with its east European allies and in its twin deals to buy gas itself in the south from Iran and Afghanistan.

Finding the cash to pay for it

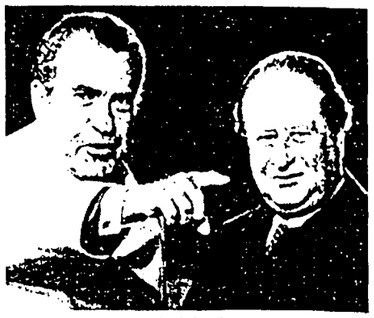
The irony of all this is to find the two most advanced aerospace technologies in the world engaged in swapping such earthy, unprocessed commodities as gas and corn on the cob. But there are good reasons for this. Much in fact depends on the gas side of the deal, because without it the prospects of the Russians finding the foreign exchange resources to bump up their minuscule imports from America will not be good. American exports to Russia and its east European friends have been growing fast but are still tiny (see the charts); America's exports to Russia are only a fraction of both France's and Britain's.

Partly this is because Russia has little to pay with. Partly it is that past American administrations have not opened the necessary coffers of credit to Russia. Partly it is because American dockers have, until they were ticked off by President Nixon, refused to handle Russian ships. Partly it is because Russia does not enjoy equal American tariff treatment with the rest of the world (and to change this now Mr Nixon will have to get Congress to agree). Mostly it is because the Defence Department has swamped the Departments of Commerce and State in Washington whenever American computer and machinery makers have applied for licences to sell equipment to Russia.

The Defence Department has long thrown its weight about by invoking the strict letter of strategic embargoes on selling hardware to Russia. It has done this both inside America and through the Cocom committee of Nato. In 1970 it blocked Ford from taking part in the $1.5 billion Kama river truck plant project, and later the Mack truck company had difficulty with contacts for the same project. But last autumn the White House began overruling the Pentagon, since when Defence Department objections to granting licences to supply the Kama river project have been felled like ninepins. Against the Defence Department's advice the Russians were recently able to buy $5m worth of Honeywell computers. Russia needs sophisticated hardware—chemical and engineering plant, electronics and computers—the chief sellers of which, Britain, France, Italy and Japan, may henceforth find the going harder now that American and German industry will have more political doors open to the east than before.

Indeed, that much vaunted Russian and east European market may dry up surprisingly quickly among too many competing suppliers if the wherewithal is not found to pay for what the communist Europeans undoubtedly want to have. A big gas supply contract would ease matters, particularly if supplemented by similar agreements to supply the west with copper and other available Russian minerals. So also would American credit. The question is whether the United States is willing to supply the very large amount of credit that would probably be needed.

A first sign of how the credit issue will be handled may come with an agreement on settling the $10.8 billion lend-lease debt owed by Russia since the war. The Soviet Union's position is that it paid its share of the bill for defeating Hitler in Russian blood some 30 years ago, and it has so far offered only $300m in cash to call it quits. Before Mr Nixon's arrival in Moscow, the Americans had scaled their demands down to $800m. But it has not gone unnoticed that as a primary producer of gold Russia might solve many of its payment problems if America would simply agree to a mammoth increase in the dollar price of gold—a solution which would also ease the west's own international monetary problems in the short term, but which would wreck the more enlightened monetary order, largely dispensing with gold, which monetary theologians in Washington and elsewhere have spent years trying to create.



Take your seats for Stockholm

When Mr Nixon reached Moscow on Monday, only two clouds of any size still lay over his visit. One was Vietnam. The other was Russia's role in the latest attempt by east Germany to manoeuvre its way into an agency of the United Nations. Three days before Mr Nixon's arrival in Moscow, the World Health Organisation had decided once again to postpone a

decision on east Germany's application for membership. This repetition of a familiar rite would at first sight seem unlikely to cause much of a stir in Geneva, where it happened, let alone in Moscow. But, this year, more was involved than the question whether east Germany would make any headway in its hitherto fruitless attempts to win a toehold in the United Nations system.

On June 5th in Stockholm the first full-scale world conference on the environment is due to open (see page 66). All states that are members of the UN or of its agencies have been invited ; this includes west Germany, which is a member of all the agencies, although not of the UN itself. East Germany has rejected non-voting status and demanded full participation. Russia has announced that it will boycott the conference if its east German protégés are not admitted there. If the WHO had granted them membership last week they would automatically have been invited to Stockholm and there would be no more reason for a Russian boycott—apart from the naughty thought, which has not unnaturally sprung to many minds, that the Russians might be glad to have a pretext for staying away from a conference at which they were liable to face nasty questions about their own pollution.

When the Russians announced their boycott threat, China promptly said that it would take part in the Stockholm conference, regardless. This blew a hole in the Russians' hope that their absence would lead all the third-world countries to stay away from a gathering that could be depicted as lopsided. But at that stage it was widely thought that the boycott threat was primarily a lever with which the Russians expected to get east Germany launched into a UN orbit by way of the WHO. The total silence which was their reaction to last week's news from Geneva suggested that they might be hoping that even at this late stage somebody, somewhere, would get them off their hook. Mr Tage Erlander, the former Swedish prime minister who is chairman of the host committee in Stockholm, voiced the hope that east Germany would accept non-voting participation after all. It may already have been quietly urged to do so by a Soviet Union which has realised that, having itself just signed an "environment agreement" with Mr Nixon, and with the eastern treaties just ratified by the west German parliament, this would not be the best moment to put on a display of Soviet intransigence and pettiness.

Is that your son, Kreisky ?

Ah, youth

FROM OUR EAST EUROPE CORRESPONDENT

Austria, during a decade of contagious militant protest, has earned itself a curious reputation among visitors for being "dull," and Austrian youth for being "unenterprising," meaning that they haven't ruined the universities. The visit of President Nixon to Salzburg at the weekend gave the Austrian chancellor, Herr Bruno Kreisky, an admirable opportunity to show off his country's demo control and to deliver himself of a salutary little homily on modern democratic practice.

The Austrian communist party, in conjunction with sundry left-wing anti-Vietnam war groups and with help from the west German communist party and some Iranian students, had mounted a 5,000-strong protest march against the Nixon visit. For the most part it was legal, well-controlled and, apart from a flurry of banners and slogans describing Mr Nixon as a "murderer" and advocating "Vietcong to Saigon," unexceptionable. What got the Austrian security police rattled was the attempt by an illegal group of protesters, including the chancellor's son, Peter Kreisky, to dodge the police and occupy the runway at Salzburg airport less than an hour before President Nixon's arrival. The police chief pleaded with them in vain before calling in an impressive phalanx of reinforcements to settle matters.

Some Austrians, not attuned to the finer points of riot control, seemed disturbed by the despatch with which the police acted. Some Americans found it odd that Peter Kreisky should have been among the ringleaders. The chancellor briskly told one inquiring American correspondent that a 28-year-old man, whoever his father may be, has the right to hold his own political opinions and to demonstrate "within the limits of the law."

Lithuania protests

FROM A CORRESPONDENT

It is a common western view that, apart from the Soviet Jews, only small groups of intellectuals dare to show their discontent by public demonstrations in Russia. But on May 18th and 19th, just before Mr Nixon's arrival in Moscow, thousands of youths went on a rampage through the streets of Kaunas, a major city of the Soviet republic of Lithuania, and they were not all Jews and intellectuals. The rioters lit fires, fought with the police and the army and paratroopers who had been flown in to quell them and shouted such slogans as "Freedom for Lithuania." The trouble came after the funeral of a young worker, Roman Kalanta, who had set himself on fire five days before as a protest against Soviet policies in his homeland.

There have been major riots in the Soviet Union before this. In June, 1962, thousands of workers, housewives and students took to the streets in the Russian city of Novocherkassk in protest against food prices ; a week-long series of violent clashes with party officials and police followed. On that occasion the authorities decided, as they did in Kaunas last week, not to use local troops but to bring men in from other parts of the Soviet Union. And there have been other protests and strikes since then.

But the magnitude of the Kaunas riots was extraordinary. It is difficult to determine the extent to which religious as distinct from purely nationalist grievances played a part, but if the trial of the young Lithuanian sailor, Simas Kudirka, held in May, 1971, is any guide, the two are probably closely intertwined. Tried for his attempted escape from the Soviet Union, Mr Kudirka bitterly attacked the Soviet authorities for their suppression of his people's cultural and national rights, and at the same time pointedly asked permission, if he was sentenced to death, for a priest to administer the last rites, as he was "a deeply devout Catholic."

In recent months a number of Catholic priests have been brought to trial in Lithuania for no more than teaching the catechism to the children of their parishioners. Numerous protests have been made to the authorities which show that the protesters speak both as Catholics and as Lithuanians. They are really protesting against the relentless Sovietisation of a country that was forcibly absorbed by its neighbour little more than 30 years ago.

TWA's AMBASSADOR SERVICE.

SAME PRICE AS OTHER AIRLINES' ECONOMY SERVICE.

We must admit that other airlines could offer you something like TWA's Ambassador Service.

All we did was see what our competitors were giving in terms of comfort, meals, entertainment and ground services.

Then worked all year to give you something better.

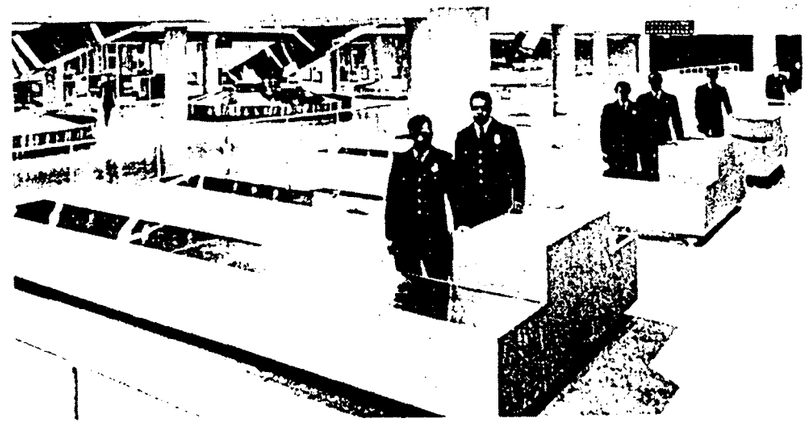
Sometimes this cost a fortune (we ripped out the insides of all our 707's and renewed everything from the floor up).

Sometimes this cost a little more trouble (offering a choice of three meals in economy rather than no choice).

And sometimes it cost nothing but a little thought (no-smoking sections, for example).

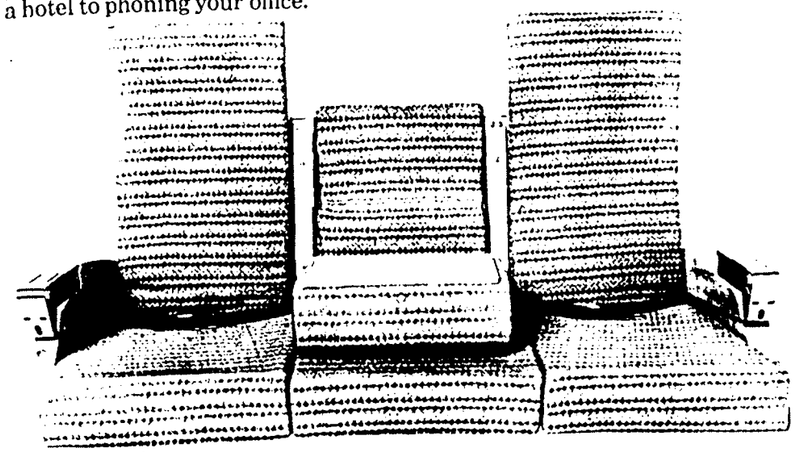
Next time you fly to America, ask your travel agent to book you a TWA Ambassador flight.

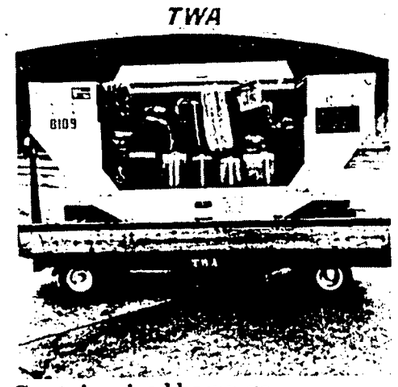
On a 707 or 747.



If it isn't considerably better than the service other airlines offer you, fly back with one of them.

They all charge the same as TWA's new Ambassador Service.





The Ground Ambassador.
Whatever your problems, he'll help you from booking a car to getting a hotel to phoning your office.

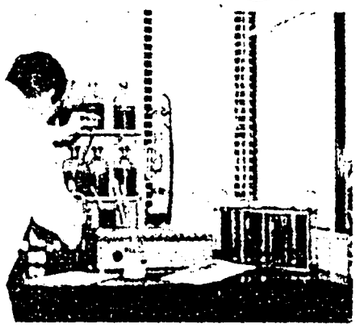
TWA's new terminal in New York.
For TWA passengers only. It has its own customs and immigration facilities. Most airlines still share one old terminal.

Twin Seats in economy.
Only TWA gives you this twin seat on 707's in economy. It can be three across, or if the plane's not full, two across or even a couch.

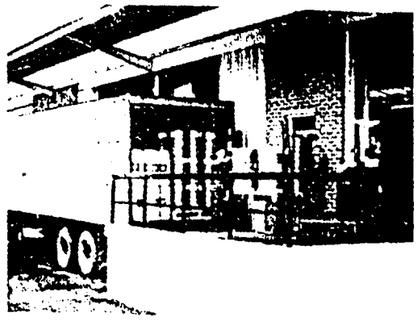
Containerized baggage.
Quite simply, it is the quickest way of handling your baggage.
Only TWA has this on every flight.

Choice of three to five meals.
Only TWA offers you a choice of three meals in economy, five in first class.

Choice of films.
TWA offers you a choice of films (one for adults, one for everybody).*
Most airlines still show one, or none.

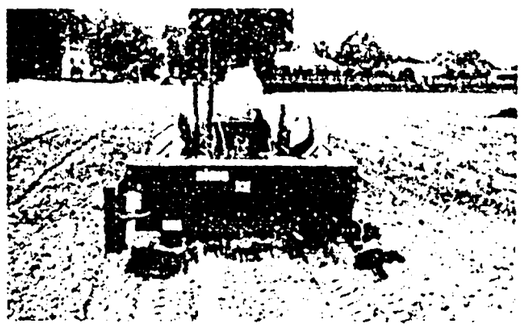


TWA



TWA's AMBASSADOR SERVICE 160 FLIGHTS A WEEK FROM EUROPE TO AMERICA.

*IATA requires us to make a nominal charge for in-flight entertainment And for alcoholic beverages in economy class.

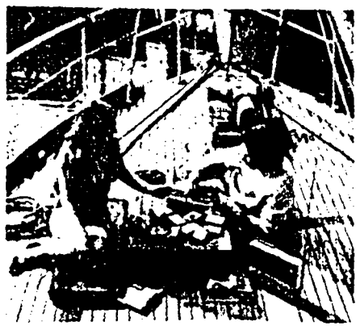


BASF

If you have trouble in pronouncing our name — don't try, just spell it out — BASF, one of the largest companies in the world. Although you may not have heard of us, our products are well known. It is almost certain that each day every man, woman and child in this country will benefit from the use of materials developed and manufactured by BASF. Products technologically advanced to make industry more efficient and more profitable, products designed to make life easier and more enjoyable.

part of your way of life

Behind the 5,000 and more BASF products used in practically every form of manufacture, is an outstanding and reliable technical and commercial service looking after our customers and protecting the consumers' interest.



at home, at work, at play

BASF have a significant influence on living standards, and are part of your way of life.

INDUSTRY GROWS IN SCOTLAND

Scotland has the factories—S.I.E.C. has already built 28,000,000 sq. ft. of modern, well-designed production space for 400 expanding companies and more units are under construction.
Scotland also has the labour, the power supplies, the communications, the recreational facilities—and the expertise gained from years of satisfying manufacturers demands.
Very substantial Government financial concessions are available in most areas.
Visit us and discover the benefits for yourself.

SCOTTISH INDUSTRIAL ESTATES CORPORATION ACT AS AGENTS OF THE DEPARTMENT OF TRADE AND INDUSTRY

Ocean Steam Ship reports...

"Subject to political, financial and industrial uncertainties and excluding the possible effects of the offer for Cory, profits of the Group before taxation should approach £8 million for the current trading year compared with £7.2 million in 1971."

J. Lindsay Alexander, Chairman

Poised for Expansion

- ✳ Increase in Final Dividend
- ✳ Significant improvement in trading profits
- ✳ £10 million Singapore office block development
- ✳ Overall profit for OCL forecast in 1973/74
- ✳ First supertanker "Titan" shows good profitability
- ✳ Panocean's specialised tanker and storage service fulfils expectations
- ✳ Worldwide energy market provides major opportunities for liquid natural gas and offshore supply vessel programme now being developed
- ✳ Worldwide airfreight network (MSAS) in improved market position
- ✳ Build up of Repcon's container repair services progresses

SUMMARY OF RESULTS—1971

	1971 £'000	1970 £'000
Turnover	82,856	71,336
Profit before taxation and special items	7,235	6,694
Profit after taxation but before special items	6,778	6,449
Special items	5,561	—
Group Profit after taxation attributable to stockholders	12,339	6,449
Profit per 25p unit of stock, excluding special items	9.99p	9.50p
Dividends per 25p unit of stock	7.5p	7p

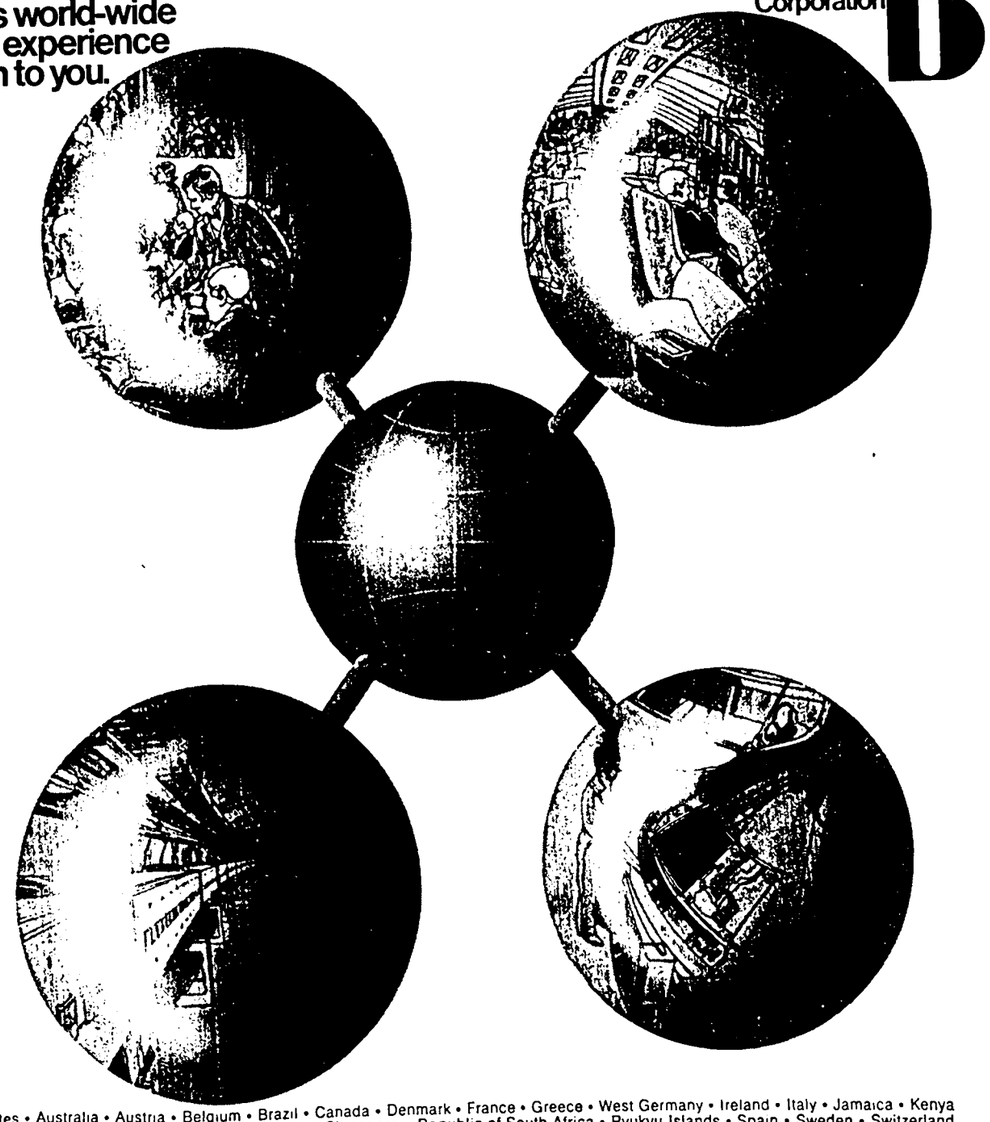
Notes:
(1) Special items relate to net surplus arising on containersation of the Far East Trade, including sale of Holt's Wharf, Hong Kong.
(2) The comparative figures for 1970 have been adjusted to include the Group's share of profits and losses of associated companies, which are included for the first time in the Group's 1971 results.

Copies of the full Report and Statement by the Chairman, J. Lindsay Alexander, can be obtained from the Secretary, The Ocean Steam Ship Co. Ltd., India Buildings, Liverpool L2 0RB

A molecule is constructed from a variety of elements. So are we.

We're a worldwide supplier of sanitation systems to the finest hotel, restaurant and airline kitchens.

We manufacture products for the metal finishing industry. Everything from simple detergents to sophisticated chemicals that cleaned the critical vacuum chambers of the world's largest atom smasher.



We are in the sanitation business. Food processing facilities throughout the world look to us for complete sanitation systems—chemicals and equipment.

Let Diversey show you what our growing world of chemicals can do for improving your business. Write for your copy of the 1971 Annual Report. The Diversey Corporation, 100 West Monroe St., Chicago, IL. 60603, U.S.A., or European Service Office, 23 Upper Grosvenor St., London W1, England.

THE WORLD *International Report*

How Jack actually moved a foot forward and didn't fall

FROM OUR DUBLIN CORRESPONDENT

Mr Jack Lynch's fabian tactics have once again worked well for him. With the public mood in the Irish republic now swinging heavily against the continued violence in Northern Ireland, the prime minister has taken the first of what may be a series of anti-IRA measures. This is an emergency law, rushed through parliament on Wednesday, to legalise the transfer from civil to military custody of convicted persons or prisoners on remand. He has again stressed that he has no intention of setting up military courts. But his justice minister, Mr O'Malley, has now said that the government is actively considering the introduction of special courts. These would be presided over by three judges without a jury ; they would have no military officers.

The new law was made necessary by the riot last week in Dublin's Mountjoy prison. Forty republican prisoners seized cell keys and, after freeing the other prisoners, went on a rampage through the prison, pretty nearly wrecking it. Because of the extensive damage, some 180 prisoners had to be sent to other centres, including the Curragh military detention centre. It was here, although in a different section, that internees were held in the 1940s and 1950s. Inevitably, some critics saw the new law as a form of backdoor internment. Even some of its supporters suspected the government's intentions and viewed it as a severer form of repression than the circumstances demanded.

A number of opposition deputies, both Fine Gael and Labour, objected to the rush to get the law through, the absence of a time limit for its operation, and the designation of the Curragh detention centre as a prison. But some observers saw the new move as the government's attempt to stave off a possible coalition between Fine Gael and Labour. The Labour party was strongly divided on the bill and was obliged to adopt the face-saving expedient of a free vote.

The new law is hardly the long-awaited tough action against the IRA. But it will test public reactions to possible tougher moves in the future. It has already checked the opposition's criticism of the government's apparent inaction against the IRA. In his speech on Monday, Mr Lynch borrowed heavily from what Mr Cosgrave, the Fine Gael leader, had been saying over the weekend. There was the same condemnation of agitators fighting for a philosophy alien to the Irish people, and masquerading under what Mr Cosgrave called "the spurious mantle of adopted patriotism."

But mantles are hard to come by. "Unity is the most divisive word in Irish politics today," said one political commentator after last weekend's annual congress of Fine Gael, the main opposition party. The banner over the Cork city hall platform, which read "Fine Gael: a united party for a united country," bore out his point. Although the congress revealed a new and hopeful spirit in the 4,000 delegates, who scented for the first time in years the possibility of power, it also brought into the open the leadership crisis which has long been festering in the party.

In an unscripted outburst at the end of his presidential address, the party's leader, Mr Liam Cosgrave, attacked a recent public opinion poll which rated him as a less effective leader than other potential candidates. Those who commissioned the poll, he said, could "give back the 30 pieces of silver." He and others who had worked selflessly for years had made it possible for others to come into Fine Gael "and squeak and bleat about something they themselves could not achieve." Such vehemence and venom from Mr Cosgrave, who is normally a mild-mannered speaker, received rapturous applause from the floor. But on the platform faces were glum.

Don't you like it at Mountjoy ?

Mr Cosgrave's announcement to his rivals that he will not give up without a fight may seriously reduce the likelihood of his party putting up a true challenge to Mr Lynch's Fianna Fáil party, which has been in office for 34 of the past 40 years, the last 14 of them in a row. Given the conservative nature of Irish politics and the proportional representation system which makes violent swings almost impossible, two conditions would seem essential for a change of government.

The first is a commitment by Fine Gael and Labour that they will form a coalition government on an agreed policy. Although they fought on opposite sides in this month's EEC referendum campaign, there are large areas of agreement between the two parties, especially on social policies. Previous Labour-Fine Gael coalitions in 1948-51 and 1954-57 worked well enough. And today the differences between the two parties have decreased ; Fine Gael has moved to the left and the Labour party is beginning to recognise that doctrin-

aire socialism is not for the Irish.

The second requirement is an acceptable and effective leader. Mr Cosgrave is solid and responsible but, as his speech made abundantly clear, he is unsympathetic to Labour and suspicious of any association with it. His line is that Fine Gael will put up enough candidates in a general election to be returned as a government. Any other approach, Mr Cosgrave says, is chicken-hearted defeatism.

Some of the most senior members of the party, including Mr O'Higgins, the deputy leader, and Mr Garret FitzGerald, the shadow minister for finance, are pressing for an early pact with Labour. So are the young Turks who have recently been appointed to the party's front bench. But most of the old guard is antagonistic to the idea of a pre-election deal, and, indeed, unhappy at the thought of any association with a socialist party. Mr Cosgrave might yet, with difficulty, be persuaded to change his mind and accept the coalition. If he does not, the challenge to his leadership will probably be pushed to a showdown.

But the challengers have no obvious rival to put forward. Mr O'Higgins, who lost narrowly to Mr De Valera in the 1966 presidential election and is the obvious Fine Gael choice for a contest next year, is the only likely candidate. But although he would certainly accept the position if he were drafted, he is unlikely to push for it. Mr Garret FitzGerald is admired for his intelligence and drive, but is considered by some to be lacking in consistent good judgment. Mr Declan Costello, the left-wing architect of the party's social welfare policies, resigned from the parliamentary party and will have to wait for the next general election to make a comeback.

France

He can still fall

"If he judges it useful." Thus the French cabinet hedged its approval of M. Chaban-Delmas's move to seek a vote of confidence in the national assembly. He did, and it was. On Wednesday the prime minister, by 368 votes to 96, won a majority almost as convincing as those he got in three previous votes of confidence since he became prime minister in 1969. It was a personal victory, for M. Chaban-Delmas has been under fire from all directions for his failure to take action over the series of recent political and corruption scandals.

Chaban still has to watch his step

The prime minister's good vote does not commit President Pompidou to keeping him on. But M. Chaban-Delmas's spirited defence of his policies was made with a clear eye on the coming elections. His talk of the need for a more humane and just society, and at the same time of the need for law and order, was just the stuff for the gaullist rank and file, which duly gave him a standing ovation.

All the same, M. Chaban-Delmas will have to assume that he is still walking on eggshells. He sounded unconvincing when he claimed that the government had not been slow in stamping on corruption, merely scrupulous. Just how sensitive the gaullists are on this count was shown by their reaction to a pun made by M. Ballanger, the leader of the Communist deputies. All he said was that the government majority did not seem to have *encaissé* (which can mean either to take account of or to cash in on) the results of the referendum. But the gaullists all stomped out.

The gaullists are also worried that their traditional areas of support may be ebbing away. Or so the way they reacted to last week's debate on the grievances of small businessmen, artisans and the self-employed would imply. M. Chaban-Delmas had difficulty last week in getting his party to reject an opposition motion to grant amnesty to three members of the small businessmen's union, now in prison for acts of violence. Bowing to the electoral fears of its party, the government has conceded the demands of the self-employed to have the same pensions and taxation rates as wage earners and to put restrictions on non-union labour. In fact, the gaullists have little to fear from the disunited opposition. But should things go wrong M. Chaban-Delmas is still the obvious scapegoat.

EEC

Get thee to an institution

The six members of the common market and the four applicant nations start chasing each other around a tree again this Friday in Luxemburg. There the foreign ministers of the Ten are supposed to start preparing for the summit meeting of their heads of government in Paris next October. This will include discussions on a possible European security conference. But there is no doubt that the main item on the agenda in Luxemburg, as in Paris, will be the question of Europe's future institutions.

Nine of those present seem sure to make a first, unsuccessful, attempt to dissuade France from insisting on the setting up of a permanent secretariat in Paris to service these political meetings. The others want the secretariat put in Brussels, where it belongs, next to the existing executive institutions of the EEC. So France and its partners will have to find some face-saver which will enable France to agree to their wishes about the secretariat in October. The best one would be to make Paris the seat of a central banking committee to co-ordinate the handling of the new scheme to hold Europe's currency values close to each other.

More bold, and so more unlikely, would be a move of the barely functioning European parliament from its inaccessible home in Strasbourg to Paris as part of a plan to beef up the parliament into something that matters. It might even be that if Paris were to become its home the French would agree to have the parliament elected; at present its members are appointed from among members of national

Why you're going to see a lot of Bluebirds this summer.

Nissan Datsun make a lot of motor cars. Enough to make the company the 5th largest manufacturer in the world.

But to stay in the big league Datsun know they have to make their good cars even better.

The new Bluebirds are testimony to how well they do it.

Already more than 1,500,000 of the original Bluebirds have been sold in 120 countries. And the basic Bluebird engine powers some 3,000,000 various Datsun vehicles.

From this enormous amount of automotive manufacturing experience comes a new generation of Bluebirds. The best Bluebirds yet.

Let's start with the 1972 engines; an advanced o.h.c. design with alloy head and compound carburettor; it comes in 1600cc and 1800cc forms. And with three million units behind it there's a long reliable future in front of it.

The 1600 unit produces 100 b.h.p. (S.A.E.) that'll let you do up to 100 m.p.h., the 1800 unit 105 b.h.p. (S.A.E.) up to 105 m.p.h. and the 180 SSS coupe 115 b.h.p. (S.A.E.) up to 110 m.p.h. Around the up-to-date engine is very up-to-date coachwork. Styled by the wind tunnel and not simply by the marketing men.

So the new Bluebirds turn heads and not stomachs. And as Datsun like to keep their customers, the new cars are built with safety very much in mind. Which is why the Bluebird's passenger compartment is immensely strong and crush resistant.

Then there are other safety features such as the carefully placed petrol tank, the burst proof locks, the collapsible steering column, power assisted twin circuit brakes with anti-lock valves, and anti-glare dash.

So the new Bluebirds are not only more powerful and better designed than before, but set entirely new standards in motoring safety.

And if that isn't enough to send you rapidly to one of Datsun's 185 British dealers, there is something extra. Quite a lot extra.

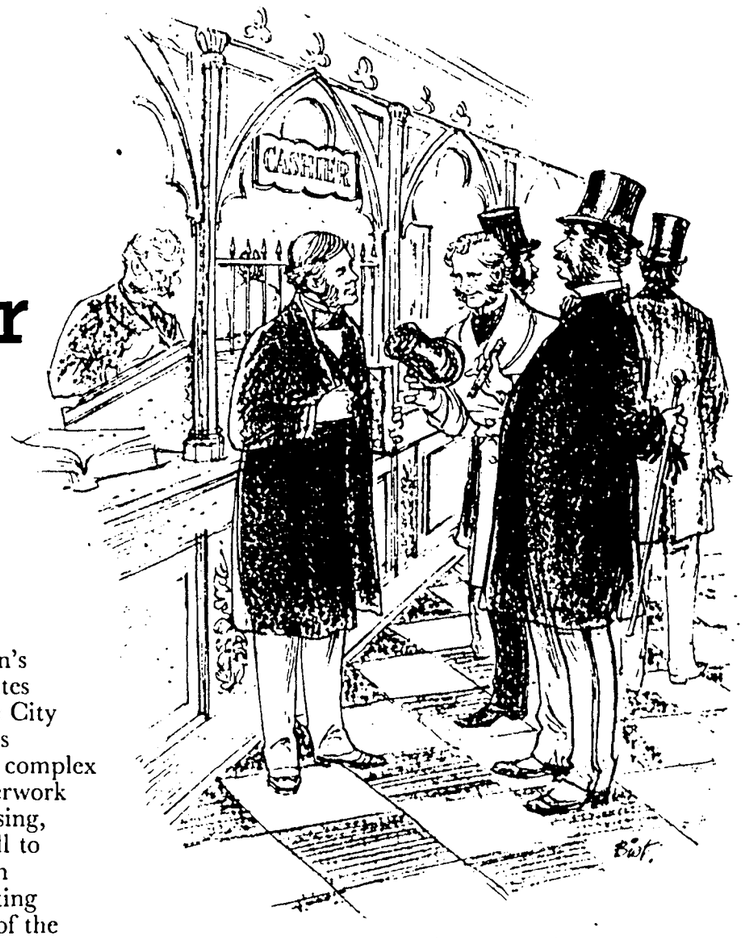
Because standard features on the Bluebirds include front disc brakes, 3-speed fresh air/heater, 2-speed wipers, electric washer, steering lock, reversing lights, handbrake warning light, trip meter, radial tyres, clock, fully reclining seats, hazard warning lights, headlamp flasher, padded armrest/door pulls all round and thief proof locks.

On the 1800 models you get even more; like front seat headrests, a heated rear window, and a radio.

Now you have an idea why you'll be seeing a lot of Bluebirds in the country this summer.

Datsun Bluebird 160B
Available as a standard 4-door saloon (without a clock or radial tyres) from £1,154.31 inc. P.T., 4-door saloon deluxe (illustrated) from £1,240.10 inc. P.T., and 4-door saloon deluxe automatic. From £1,409.27 inc. P.T., 1600 cc's, max. bhp 100 (S.A.E.), 100 mph.

Datsun Bluebird 180B SSS Coupe
Hardtop Super Sports Coupe available in manual or automatic. 1800 cc's, max bhp 115 (S.A.E.), 110 mph. From £1,498.69 inc. P.T.



Datsun Bluebird 180B
Available as a 4-door saloon deluxe (illustrated), and 4-door saloon deluxe automatic. 1800 cc's max bhp 105 (S.A.E.), 105 mph. From £1,358.52 inc P.T.

DATSUN

A PRODUCT OF THE NISSAN MOTOR CO.

the computer and finance

Today, as in the past, a gentleman's word remains the bond that initiates many financial transactions in the City of London. But everything else has changed. Dealings are daily more complex and far-reaching, supporting paperwork more voluminous, time more pressing, the Square Mile itself far too small to encompass the activities of modern financial institutions. So the counting house and the messenger services of the Victorians are fast yielding to the computer room and the data transmission network.

This change, for hundreds of the world's shrewdest men, automatically spells Univac. Wherever money is bought and sold, from London to New York, from Tokyo to Zurich . . . in joint stock and merchant banks, savings institutions and building societies, stock exchanges and brokers' offices, discount and factoring houses . . . in the specialised computer bureaux that serve the financial community, Univac computer systems are the nerve centres.

In a world where fractions of a penny count, Univac's superior performance in relation to cost is a real benefit. Where time is money, Univac's acknowledged lead in real-time and on-line processing, in communications handling, is too important to be ignored. When cool calculation is a way of life, Univac hardware and software reliability, generous on-site support without extra cost, time and effort-saving financial package programs, add up to an impressive sum of credits.

When the money men are using their own resources, it is no wonder they so often come to Univac. For they, better than most, know there is no substitute for successful experience.

SPERRY RAND

UNIVAC
PROFIT FROM EXPERIENCE

UNIVAC Division Sperry Rand Ltd., 160 Euston Road, London N.W.1 **01-387 0911**

parliaments. The good burghers of Strasbourg have inconveniently started building a new home for the parliament, so it may be harder still for the French to thwart a sensitive group of voters on their eastern borders.

The Ten also have to start finding a way out of the plan for member states to appoint specifically European ministers—a notion which embarrassingly caught the public imagination last year. Most of the Ten, who were originally taken with it, now concede this to be a bad idea. European ministers would have less weight in national cabinets, where it matters, than do the foreign and other departmental ministers who now meet to make common market decisions on the council of ministers in Brussels. The best scheme might be to have deputy foreign ministers to double up for departmental ministers when the latter are needed in Brussels.

Lastly, the ten foreign ministers will be trying to find out whom each of the others intends to recommend as members of the newly appointed European commission next year. All eyes will be on Britain. Mr Heath's present intention is to appoint two prominent politicians, one from each major party, as Britain's two members. The snag is that Britain's ambassador in Paris, Sir Christopher Soames, who has first refusal on the Tory side, is waiting to see whether he can get a Tory seat in the House of Commons —and presumably a seat in the cabinet —instead. Until this is resolved it is not certain whom Mr Heath will appoint, so the other nine member states will have to wait.

Iraq

Profits or politics?

FROM OUR LEVANT CORRESPONDENT

It is all a conspiracy, say the Iraqis. During April and May, the Iraq Petroleum Company slashed by half the oil that flows by pipeline from northern Iraq to terminals on the east Mediterranean. It is all a matter of profits, says the company. The combination of the high prices Iraq has imposed on its short-haul oil, low tanker freight rates, and a general reduction in demand, partly due to a mild European winter, has made it much cheaper to send Iraqi oil from the Gulf oil fields around the Cape to Europe than from the east Mediterranean outlets. And to establish its good faith IPC has continued to export at full capacity from its profitable oilfields in southern Iraq.

The Iraqis brush this argument aside because they cannot afford to accept it. If the company maintains its Mediterranean exports at this level for the rest of the year Iraq would lose about a third of its oil revenue—and for Iraq, unlike some of the other Arab oil-producing countries, this would amount to near-catastrophe. To dramatise its predicament, the government has applied a stern austerity programme.

Sheer need apart, the Iraqis contend that the argument is not primarily about profits. They argue that whereas Aramco, the American oil company that exports Saudi Arabian oil by pipeline to the Mediterranean, has also reduced its volume, it has not done so to anything like the same extent. They also question the sequence of events: during those mild winter months IPC actually increased its Mediterranean flow to full capacity after an earlier and smaller reduction in the autumn. The Iraqis claim that the company, by turning the tap off and on and off again, is deliberately subjecting them to a series of financial bumps which has little to do with profitability.

Relations between government and company were bad enough even before this latest crisis; negotiations on no fewer than 17 disputed issues broke down in February. The Iraqis contend that IPC is harassing them because they went ahead and developed, with Russian help, the nationalised oilfield at North Rumailah; last month the first oil from this field went off in the general direction of eastern Europe. Although the company's managing director has vigorously denied any such suggestion of political motivation, the Iraqis called on Tuesday for a special meeting of the Organisation of Petroleum Exporting Countries to support them in their fight.

On its own, the Iraqi government has already delivered a two-pronged counter-attack. The oil minister, Mr Sadum Hamadi, has said that if the company does not increase its production it should relinquish part or all of its northern oilfields. And the regime has given the company until May 31st to do three things: resume production at maximum capacity, work out a definite long-term production programme, and make a positive response to the other demands made by the Iraqis during the recent negotiations.

This is fighting talk. But there could be hope in the second point. The Iraqis may be saying that if the company shows goodwill by resuming full production for a time, a steady long-term level could then be negotiated. Maybe.

Vietnam

The week the blows went wide

FROM OUR SAIGON CORRESPONDENT

The North Vietnamese launched a number of raids towards Hué and Kontum this week, but they seemed to be having difficulty in getting themselves ready for an all-out attack. On both Sunday and Monday they attempted to cross the My Chanh river, which forms the northern defence line for Hué, and both times they were beaten back with heavy casualties. It is reported that some North Vietnamese units broke and fled in disorder as they came under fire from the air and from artillery.

At first, the size of these attacks seemed to indicate that this was the opening of the long-expected assault on Hué. But it soon became clear that they were designed only to push back the South Vietnamese defence lines so that the communists' big 130-mm guns could be brought within range of the city. In this they failed. To the west of Hué, too, aggressive patrolling by troops of the South Vietnamese 1st division has prevented the North Vietnamese from establishing artillery positions which could provide cover for their intended attack.

On Wednesday South Vietnamese marines again went behind the communist lines in Quang Tri province, apparently in the hope of trapping the force which had been trying to break through the My Chanh line. This was the marines' second such foray in 10 days, and involved two landings, one from American landing-craft and the other from American

A family mourns for a victim at Hué

helicopters. Several battalions took part, against a target area slightly north of Quang Tri city. If they do nothing else, such operations work wonders for morale in the south. One measure of rising morale is the fact that thousands of people from Hué who fled south three weeks ago are now returning, despite official advice that it would be better if they stayed away for the time being.

However, there is every sign that the North Vietnamese still have their sights set on Hué as the most glittering prize they can expect this year's offensive to yield. A regiment of North Vietnam's 325thC division came across the demilitarised zone last weekend into Quang Tri province, to join the 304th and 308th divisions which are already there and the 324thB division in the mountains west of Hué. According to some reports, the 304th and 308th divisions have suffered so much from air attacks that they may have been merged into a single unit. The two thrusts against the My Chanh line earlier this week—in broad daylight, and under ideal conditions for air power to help the defenders—also cost the North Vietnamese heavily. In three days, it is claimed, they lost at least 500 men killed and about 30 tanks.

In Saigon it is not thought likely that the communists have deliberately postponed the big attack until after Mr Nixon's visit to Moscow. But it is generally agreed that they made a major mistake in failing to press full-speed towards Hué immediately after the fall of Quang Tri nearly a month ago. At that time they could probably have overrun the old imperial city with little difficulty. The presumption is that, because of General Giap's predilection for meticulous planning and logistical preparation, the North Vietnamese lack the flexibility to cash in on unexpected opportunities.

Farther south, in the central highlands, there is frank puzzlement about the North Vietnamese tactics around Kontum, which has been expecting a major assault for more than two weeks. And farther south still the saga of An Loc has dragged on through yet another week, the seventh. The South Vietnamese units in the town were still holding out on Thursday, and the communists seemed to have turned their main attention to preventing the relief column getting through. The relief of An Loc has been a long, costly and bungled operation. But if and when it is completed it will be greeted with elation in Saigon.

Taiwan

The lad gets his chance

Taiwan, unlike China, has never had a succession problem. For years it has been clear that the power of Chiang Kai-shek would some day pass to his elder son, Chiang Ching-kuo. The only uncertainties were how long the hardy old generalissimo would cling to his post and what republican fig-leaf would cover the monarchical transfer. Two months ago 85-year-old Chiang accepted his fifth six-year term as Taiwan's president and from all appearances he intends to carry on until the end. But last weekend he finally bequeathed his son a title from which, one day, he can step into power.

Chiang Ching-kuo is now prime minister. At 62, he has been a long time reaching this job, mainly because of his father's reluctance to share power with anyone (the previous incumbent, who remains vice-president, Mr C. K. Yen, is a colourless technocrat) but probably also because of the hatred he aroused as head of Taiwan's extremely efficient secret police. His years as a student in Russia during the 1930s are also cause for popular suspicion. Rumours that he is negotiating secretly with the communists periodically circulate in Taiwan, especially among the native Taiwanese.

But nowadays such rumours reflect Taiwanese distrust of all mainlanders rather than their feelings about the younger Chiang in particular. Chiang Ching-kuo has altered his public image considerably over the past few years, notably since he became deputy prime minister in 1969 and assumed the chairmanship of several key economic agencies. He is still no economic expert but he chose the right people and he listened well. On several major disputes, he allied himself with liberals against the fossilised ideologues.

As director of the China Youth Corps, a strictly orthodox party organisation, Chiang Ching-kuo has recently made some speeches to students which sound remarkably liberal in the authoritarian atmosphere of Taiwan. He has urged them to speak freely and stressed progress rather than stability. Many of the young intellectuals who despised Chiang Ching-kuo a few years ago now believe that he is Taiwan's best hope for reform.

The ruling Kuomintang party has been talking about reform for some

Chiang junior listens well

time now, especially since the shock of the detente between Peking and Washington. But so far its pledges to bring new blood into party and government have amounted to little more than window-dressing. The one reform that promises to make any difference at all is a plan to hold elections for 70 new seats in Taiwan's 424-seat parliament next winter. The last full election was held on the China mainland 24 years ago and the standard party line has always been that no fresh elections can be held before the mainland is recovered. The new plan does not alter that resolution—Chiang Kai-shek still vows to lead the invading forces—but it is a discernible crack in the wall.

The next test of the government's reforming intentions will be the shape of the new cabinet. For the first time a Taiwanese is expected to be chosen for a major cabinet post, or even a deputy premiership. The likeliest candidate is Mr Henry Kao, an independent politician who has been mayor of Taipei since 1964. A year ago, Mr Kao's Taiwanese supporters would probably have opposed his joining the cabinet as a "sell-out." But since Taiwan's expulsion from the United Nations, both Taiwanese and mainlanders have been showing more interest in co-operation between the two communities.

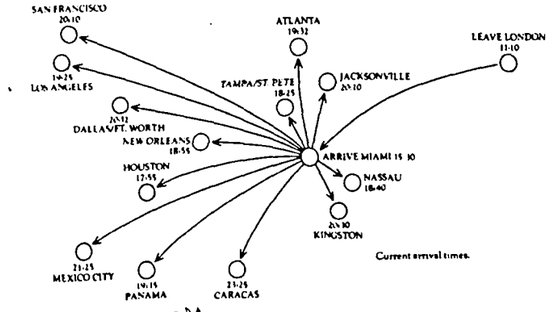
Chiang Ching-kuo himself will be only partly responsible for his new cabinet. Decision-making power still belongs to his father and the old man is evidently not ready to part with it yet. But, although Chiang Kai-shek is not known to be ill, he is noticeably frailer than he was a year ago and is expected to delegate progressively more authority to his son. Then the real Chiang Ching-kuo will have to stand up.

I'm Karen. Now I have the only daily 747's from London to the Sunshine States of America. Fly me.

I've got a lot going for you to Miami and the Sunshine States of America, with the only daily nonstop flights from London and our own kind of personal service. And a lot from Miami: I've got great connections to all of Florida, New Orleans, Houston, California, the Caribbean; you name it. Then fly it.

And right now I have the nice convenience of the only daily 747's to Miami. Pick the day you want to go. Then go.

And the beautiful luxury of the great 747, with more cabin room than any airliner in the sky today.



And the 747 extras en route: first-run movies,* multi-channelled audio entertainment and our international gourmet cuisine.

And a refreshing kind of personal service, person-to-person.

Give it a go, won't you? Fly my daily 747's to the Sunshine States of America.

Telephone National Airlines direct, or ring up your travel agent. Tell him Karen sent you.

THE WORLD

American Survey

Nixon moves them on: Weinberger to OMB, Shultz to Treasury, Connally to ?

Shultz's taxing task

Washington, DC

Mr George Shultz will be taking office as Secretary of the Treasury, to succeed Mr John Connally, at a time when the United States government faces no important decisions on economic policy in the near future. In fact, in an imperfect world things are going swimmingly whatever the Democrats in Congress may say. The brisk expansion of the economy is now confirmed by all the indicators; for example, industrial production has risen in every month since August and the April rise, a full 1 per cent, was the largest yet. During the eight months the annual rate of increase has been just under 8 per cent—vigorous but not yet dangerously boomlike. What is more, all this is occurring with no help at all from two important sectors of the economy: foreign trade and the accumulation of stocks, both of which were a negative force on total production in the first quarter. Mr Herbert Stein, chairman of the President's Council of Economic Advisers, reflects the views of most economists when he says that these factors are likely to become positive rather than negative before long. While unemployment remains high, at 5.9 per cent of the labour force, it is bound to drift downward as the expansion proceeds.

The news is also better on the inflation front. For two consecutive months the index of consumer prices has shown only very small increases of two-tenths of 1 per cent, thanks in good part to the end of last winter's very steep rise in food prices. Wholesale industrial prices, still apparently reflecting the "bulge" that was bound to occur after the three-month freeze on wages and prices last autumn, continue to rise at an unacceptable rate; but the April increase of three-tenths of 1 per cent was a little less than in the preceding months.

More important for the longer run, there is now increasing evidence that wage controls are working. A potential crisis was averted when the dockers on the west coast decided against a strike in protest at the Pay Board's decision to reduce the very large settlement that they had negotiated. A lesser reduction was ordered for the dockers on the east and Gulf coasts and they may still strike, but this is regarded as unlikely. Meanwhile, the Pay Board has been successful in keeping newly negotiated contracts (the longshore settlements were really hangovers from 1971) well within its ceiling of 5.5 per cent, though it is true that there are few major labour contracts due for negotiation this year. From November through April, average wages rose rapidly, pushed up by the post-freeze situation and certain perimtted retroactive payments; but from now on the pace should moderate.

Price controls, too, are apparently having some effect without distorting markets or preventing a good rise in profits. The controls are aimed at profit margins, which are not allowed to rise above the average of the best two of the past three years. A relatively small number of companies have found that, thanks to a rising volume of sales, their profit margins have been higher than expected and they have been required to roll back prices. This frightened Wall Street for a while, but at bottom nothing in the rules will prevent total dollar profits from increasing strongly this year. The first quarter showed a rise of 10.4 per cent over the like period a year ago, to a record level, before taxes, of $91.6 billion. The controls may keep prices a little below what they would otherwise have been but the key to success remains on the wage side where so far results are heartening.

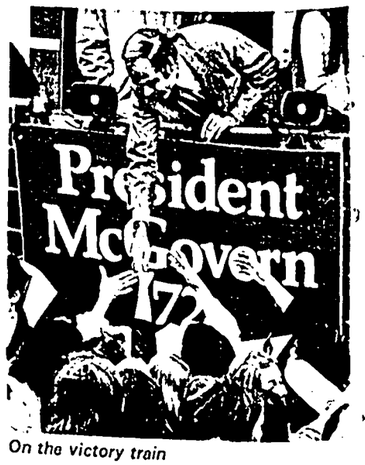
Even on the international currency front Mr Shultz appears to face no urgent decisions. Once the negotiating "forum"—presumably the new "Group of 20"—is formally put in place by a vote of the governors of the International Monetary Fund, the American government will have to

have a negotiating position ready. But, in spite of a seeming disagreement earlier this month between Mr Arthur Burns, chairman of the Federal Reserve Board, and Mr Paul Volcker, the Under Secretary of the Treasury, there is a good degree of consensus in Washington on fundamental points.

Mr Shultz, an academic economist with a "Chicago school" background, is a natural believer in the greatest possible flexibility of exchange rates—and also in the greatest possible freedom of trade. And he is likely to share the view of his predecessor, Mr John Connally, which is also backed by Mr Burns, that a reformed monetary system must find ways of exerting as much, or almost as much, pressure on surplus countries to revalue as on deficit countries to devalue. This may be difficult to negotiate, but there is no trouble finding agreement on the point within the American government.

It is in the somewhat longer run that Mr Shultz faces his major problems and they involve the dangerous state of the federal budget. Hardly anyone is bemoaning any more the large deficit in the current 1972 fiscal year ending on June 30th, at a time when the economy still needs stimulus. It is fiscal years 1973 and 1974 (the next budget), and afterward, that are causing concern. Mr Shultz is a firm believer in the theory that, to avert excess demand as the economy moves toward full employment, budget expenditures should not be allowed to exceed "full employment revenues"—a concept that permits deficits at times of less than full employment, but deficits that narrow and then disappear as full employment is reached. However, this will be hard to accomplish.

A brilliant and lengthy study* just produced by a team of experts at the Brookings Institution under Mr Charles Schultze, a former director of the budget in the last Democratic Administration, has concluded:



> In summary, the projection shows that over the next two years, from fiscal 1973 to fiscal 1975, expenditures under existing and currently proposed (by the Administration) programmes are likely to run substantially ahead of full employment revenues.

The entire growth in revenues over the next five years, Mr Schultze concludes, "is already fully committed" and for the next two years "it is overcommitted." If this year Congress approves only the President's proposals and no more, the study finds, spending in fiscal 1975 will be $300 billion (compared to about $235 billion in the current year) and will exceed full-employment revenues by $17 billion.

The inescapable conclusion appears to be that taxes must be increased and this at a time when Americans are apparently going through something akin to a "tax revolt." Mr Connally insisted to the last that a tax increase was not inevitable, that the huge prospective growth of government spending could somehow be averted. But Mr Schultze knows a good deal more about the budget than Mr Connally—and this is true of the other Mr Shultz, too, who from his present position in the White House was in charge of the last budget. The cry of the Democrats, of course, is "tax reform," also known as "closing loopholes." Senator McGovern talks of raising more than $15 billion in this fashion if he becomes President. But, while his figures may be accurate, the chances of actually achieving any such sum by his proposed changes in the tax law are negligible, certainly in the short run. Congress simply does not work that way and most of the really large revenue-raising taxes would hit not only the "fat cats" but millions of ordinary taxpayers with middle and upper-middle incomes.

Adding to the general budgetary problem is the unpredictability and uncontrollability of Congress, whose underlying proclivity is to spend more rather than less, though there could be some reductions imposed by Congress in defence spending. Mr Shultz will regard his mission as having failed if he presides over a renewal of demand inflation as a result of large budget deficits in a booming economy—perhaps as early as next year—but he is fully aware of how difficult the task will be to prevent precisely that. He is, however, committed (or so it appears) to stay at the Treasury and to do his very considerable best—provided, of course, that Mr Nixon is re-elected President in November.

On the victory train

ELECTION '72
McGovern goes on

Senator McGovern's momentum keeps building up. He won both of the Democratic primary elections held on Tuesday: in tiny Rhode Island, an indstrial state on the Atlantic coast, and in larger, more rural Oregon on the Pacific. In Colorado and Utah, where delegates to the Democratic nominating convention are chosen at party meetings, Mr McGovern's supporters are now well placed to dominate the final choices. No less important to the Senator's chances of the nomination are three endorsements which came as he approached the vital Californian primary on June 6th.

Mexican-Americans are a force to be reckoned with in that state and at the weekend Mr Cesar Chavez, their best-known leader, ranged himself beside Mr McGovern. Negroes are important there, too, and it will help the Senator from South Dakota, who admits that he has made little impact on the black community, to have the endorsement of Mrs Coretta King, Martin Luther King Jr's widow. Finally on Monday, Senator Eugene McCarthy, a touchy rival for the votes of students and anti-war Democrats who cost Mr McGovern a victory in Ohio and who is also on the California ballot, urged his supporters in California to vote for the South Dakotan. This might make the difference between victory and defeat.

From Oregon, where there was virtually no opposition to Mr McGovern, *our special correspondent reports:*

No one stood the slightest chance of stopping Senator George McGovern in Oregon and on Tuesday night his organisation duly turned in almost precisely the result that it had predicted privately. A vote of 50 per cent in the Democratic primary was perfectly satisfactory for Mr McGovern, given the fact that there were 11 names on the ballot. But as, with the exception of Mrs Patsy Mink, no other candidate campaigned personally in the state, the Oregon result is not likely to have a decisive impact on the Californian

25th May, 1972.

primary. Senator Humphrey was certainly wise to stay away; he came in a very poor third and there is little reason to believe that he would have done a great deal better if he had campaigned in the state.

Certainly Governor Wallace did better than had been expected in a state where busing to school is not even remotely an issue. To some extent this may have been due to a fairly powerful last-minute advertising campaign on television but by itself this hardly explains the 20 per cent of the votes which he won. As in Wisconsin the overwhelming majority of Democrats wanted to cast their votes for anti-establishment candidates; this time seven in every 10 did so.

It is not only the Democrats who have to take this development seriously. In Oregon, again as in Wisconsin, there was evidence not only of a taxpayers' revolt, but of a growing mood of deep disenchantment among large sections of the electorate. In Oregon the voters not only tossed out virtually every bond issue and other proposition put to them on the ballot which had any financial implications, but they also cast heavy votes against constitutional amendments which had broad-based bipartisan support.

At no stage did Mr McGovern's powerful organisation think that he was in any trouble. But his staff had one nasty moment when their own pollsters warned them that there was evidence that Senator Edward Kennedy, whose name had been put on the ballot against his wishes by the Republican Secretary of State, was going to get a disturbingly high vote. It was believed, moreover, that this was going to be largely at Mr McGovern's expense. But after some fairly frantic appeals from the McGovern staff, Mr Kennedy wrote letters to a number of Oregon newspapers appealing to people not to vote for him and they followed his advice.

The inevitability of Mr McGovern's victory lowered the level of public interest in its outcome. He was fortunate in that a vigorous battle for the Democratic nomination for the United States Senate seat at present held by a Republican, Mr Mark Hatfield, and a closely fought contest for Mayor of Portland brought out large numbers of Democratic voters who might otherwise have stayed away. Mr McGovern must have been delighted with the outcome of both races. In the Senate contest that prickly old dove, former Senator Wayne Morse, scored a fairly comfortable victory over his adversary, Mr Robert Duncan, despite the fact that Mr Morse was 71 years old and opposed by most newspapers in the state. The next Mayor of Portland will be a gifted young liberal Democrat, Mr Neil Goldschmidt, who created a powerful local organisation of his own. Indeed so strongly did it compete with Mr McGovern's men for volunteers that a number of unofficial deals were arranged so that the same groups should canvass for both candidates.

ELECTION '72

Where after Wallace?

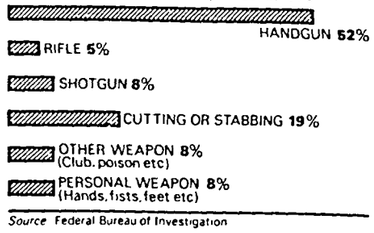
By last week Governor Wallace of Alabama had amassed the largest popular vote—3.3m in all—of any Democratic candidate who had entered the party's primary elections. But, as his own campaign organisation was relatively weak, in many of the states where he won the popular preference vote there were not enough delegates committed to him to fill all the convention places that he earned. As a result, many delegates who loathe Mr Wallace's views will be going to the Democratic convention at Miami Beach in July ostensibly obliged to support him on one or two ballots. Senator McGovern has now instructed those of his supporters who have been supposedly elected as Wallace delegates to keep to their commitment. Moreover, he wants to help Mr Wallace's people to make their views heard when the Democratic platform committee drafts the party's policies.

Mr McGovern is not entirely selfless. As the architect of the party's reformed rules, he must be seen to insist that they are carried out, even if the beneficiary is the conservative Mr Wallace. And as Mr McGovern expects to go into the convention assured of more than 1,300 of the 1,509 votes needed for the nomination, he can afford to wait a ballot or two in the interests of fairness—or he might win on the first ballot even without the Wallace delegates. What is really on his mind now is how, if he is the Democratic presidential candidate, he can pick up the votes of the Wallace supporters all around the country in the November general election. Already Mr McGovern has begun to tell audiences that he and Governor Wallace are, in their different ways, both saying "we are fed up with things as they are."

What Mr Wallace can make of his substantial national following depends on the extent of his recovery. He has another bout of surgery to undergo. Not until it is over will doctors be able to say how much of an invalid he will be for the rest of his life. Permanent paralysis is not certain, but probable. Mr Wallace is said to want to go to the convention in a wheelchair. But his aides and his attractive wife, who will make speeches for him, may be leaning toward over-optimism about his prospects in order to keep his political backing intact. It does seem that, bedridden or not, Governor Wallace will have the power to decide where to shift his support when—as is inevitable—another Democrat gets the nomination. If he withdrew completely, both Senators Humphrey and McGovern would benefit, with Mr McGovern having the edge. If Mr Wallace wanted to run as a third-party candidate, he would hurt President Nixon, by syphoning off some conservative Republican votes. Or Mr Wallace might throw his support to Mr Nixon, whose conservative views he shares and who was good enough to visit him in hospital.

Not even four secret servicemen could save him

Gun in the hand



There is stoicism, or despair, in the United States about preventing armed attacks on political figures. The National Commission on the Causes and Prevention of Violence reported in 1968 that there were 24m hand guns (pistols and revolvers) in the United States. About 2.5m new hand guns are made domestically or assembled from imported parts every year. And one does not need a hand gun—a small concealable weapon—to commit a successful assassination. It was a rifle, fired from a fair distance, that brought down President Kennedy.

After the double assassinations (Robert Kennedy, Martin Luther King) of 1968, Congress did pass a feeble gun control act. It forbids the selling of guns by post, it restricts imports of small guns and it requires the registration of people who buy guns and ammunition. Yet what good the new law has done is hard to see. The federal secret service agents who guard the President, Vice President, their families and prominent presidential candidates were able to trace the purchase of the gun that shot Governor Wallace within 10 minutes after he fell to the ground. But that hardly mattered as they had captured the gunman anyway—Mr Arthur Bremer being, like most assassins, a confused nondescript misfit whose motives, insofar as he had any, were to gain attention and to be punished. And nothing in the 1968 law prevented Mr Bremer, whom police had caught carrying a revolver last October, from buying another.

So unpopular is gun control that even now neither Mr Wallace nor his supporters have called for it. Mr Wallace has always opposed such restrictions and President Nixon has avoided endorsing them. In the wake of the Wallace shooting, the Senate Judiciary Committee has approved a bill to forbid the public sale of cheap short-barrelled hand guns but it is unlikely to pass through Congress. The strength of the national belief in the constitutional right of a citizen to bear arms will probably prevail once again.

As for modifying the behaviour of candidates, that seems to be out of the question too. Mr Nixon did call upon Secret Service agents to provide constant guard for Senator Edward Kennedy, although he is not an announced presidential candidate, right after the Wallace shooting. He also extended the same protection to two other declared candidates, Mrs Shirley Chisholm and Mr Wilbur Mills, although their campaigns are hardly conducted with the kind of publicity that enabled Mr Bremer to trail Mr Wallace until he found the right moment to strike. But then Mr Nixon himself swiftly demonstrated his own lack of fear by plunging unexpectedly into a crowd. No candidate wants to be seen to be afraid.

Murder by type of weapon used, 1970

Source Federal Bureau of Investigation

Who's radical?

FROM A SPECIAL CORRESPONDENT

The notion that a man can be convicted only by an unanimous jury was a well-settled principle of American law by the eighteenth century. However, it was not explicitly guaranteed by the federal Constitution and now it has fallen victim to the rightward drift of the American Supreme Court. A year ago a ruling that a "substantial majority" is sufficient to convict would probably have been impossible. Justice Hugo Black, the champion of the jury system, sat on the Court. Over a judicial lifetime he had brought about acceptance of the view that the key constitutional safeguards in the Bill of Rights must be observed with equal diligence in federal and state courts. On several occasions the Supreme Court had upheld the need for unanimity to obtain federal convictions. The same would apply at the state level, although the Court had never ruled on this precise point.

But Mr Black, and Justice John Harlan, are gone and there are two Nixon men in their places, Justices Lewis Powell and William Rehnquist. Together with the two earlier Nixon appointees, Chief Justice Warren Burger and Justice Harry Blackmun, and a prosecution-minded holdover from the Kennedy era, Justice Byron White, they formed the five to four majority that concluded that unanimous verdicts by juries in state trials are not constitutionally necessary. Mr Powell, moreover, signalled an edging away from the Black doctrine that the 14th Amendment, securing equal rights to all citizens, channels the federal guarantees in the Bill of Rights in precisely the same form to the states. While supplying the critical fifth vote Mr Powell opined that the Amendment leaves the states free to experiment, to depart, if they wish, from the federal model. Justice William Douglas, Black's "law partner" over 30 years, complained in an angry dissenting opinion that this kind of thinking opens "a veritable Pandora's box" that could dilute all sorts of constitutional rights.

At the moment, only four of the 50 states, Louisiana, Oregon, Oklahoma and Montana, authorise criminal convictions by less than unanimous vote. The Supreme Court's ruling is likely to encourage others. Meanwhile, unanimous jury trials remain required in federal courts, and also in civil cases, but the states are free to abandon unanimity if they wish. Two years ago, the Court smashed another tradition and held that juries may be smaller than the customary 12. Taking the two rulings together, Justice Douglas said that he could foresee the day when a three-member jury would send a defendant to prison by a vote of two to one and the Supreme Court would affirm the judgment.

The Court's changing mood and personnel also stripped balky witnesses before grand juries of a portion of their protection against prosecution. For more than 60 years, a witness summoned before federal and most state grand juries could be compelled to testify only if he was afforded broad immunity; he could not be prosecuted for any offence about which he was forced to speak. Congress changed the federal law in 1970 and some of the states followed this example. The immunity was limited; only the unwilling witness's testimony and "leads" from it could not be used against him at a trial. Led by Justice Powell, the court concluded five to two that no more than that is commanded by the Fifth Amendment's guarantee against self-incrimination.

There is no little irony in the developments. The law is being changed by judges with an advertised devotion to tradition and "strict construction" of the Constitution. It is they who are being called "radical" by Justice Douglas, supposedly the most radical member of the innovative court of the 1960s.

Some new contracts

Humphreys & Glasgow is designing and building a 20,000 BPSD refinery for the Government of the Republic of Togo at Lome. This joint venture with William Press & Son Ltd. is valued at over £10 million.

Humphreys & Glasgow is the main contractor for a new Antibiotics Production project valued at £12 million for the Beecham Pharmaceutical Division at Irvine.

Humphreys & Glasgow's **Melbourne Office** is acting as consultant to the Australian Paper Manufacturers for their new $10 million project at Gippsland.

Humphreys & Glasgow and Humphreys & Glasgow Consultants Private Ltd., Bombay, together are building a 1,200 tons per day Urea Plant and off-sites for Indian Farmers Fertiliser Corporation Limited at Kalol. The contract is valued at about £14 million.

Humphreys & Glasgow is building a 15,000 BPSD Kerosene Sweetening Unit for Texaco at their Pembroke refinery.

Humphreys & Glasgow's **Sydney Office** is building a new soft drinks complex for Associated Products & Distribution Pty. Ltd. at Perth. The contract includes canning, bottling, warehousing and distribution facilities and is worth $3.6 million.

Stalled bus

Michigan, the only northern state whose Democrats have lined up behind Governor Wallace in the party's primary elections, is historically liberal; it is the home of the United Automobile Workers' union which, under the leadership of Walter Reuther, was in the forefront of the battle for Negro rights. But Michigan is also one of the few northern states which has been brought face-to-face with court-ordered "busings" of children to schools outside their neighbourhoods in order to lessen racial isolation. In Pontiac some 9,000 schoolchildren are already being bused while in Detroit a federal judge has found the local school authorities guilty of deliberate racial discrimination; he seems prepared to require the busing of children throughout the metropolitan area.

With white parents fiercely determined that their children should not be forced to attend inferior schools in the black ghetto, the situation was tailor-made for the Governor of Alabama who once "stood in the school-house door" to prevent racial integration. Even Senator McGovern, who continued to insist that court orders for busing must be obeyed, conceded that some lower courts might have gone too far and explained that he did not favour busing if it meant sending children to inferior schools. This qualification has for some months been the refuge of Senator Hubert Humphrey, whose embarrassment is all the greater since his most loyal support comes from blacks who remember his earlier stands for racial justice. But the blue-collar workers of Michigan, often of eastern European descent, preferred Mr Wallace's forthright stand. Even UAW officials could not hold their members in line; half of them are believed to have voted for the Governor.

Detroit is one of the cities (others are Denver and Richmond) which President Nixon had in mind in March when he urged Congress to impose a temporary moratorium on any more busing while it considered what long-term limits to place on its use by the courts. But the President's own bills are languishing in committee. If Detroit and other cities are reprieved, it will be because the Senate and the House of Representatives attached anti-busing amendments to the $21 billion authorisation for higher education which, among many other things, provides urgently needed federal

Protest march on Washington

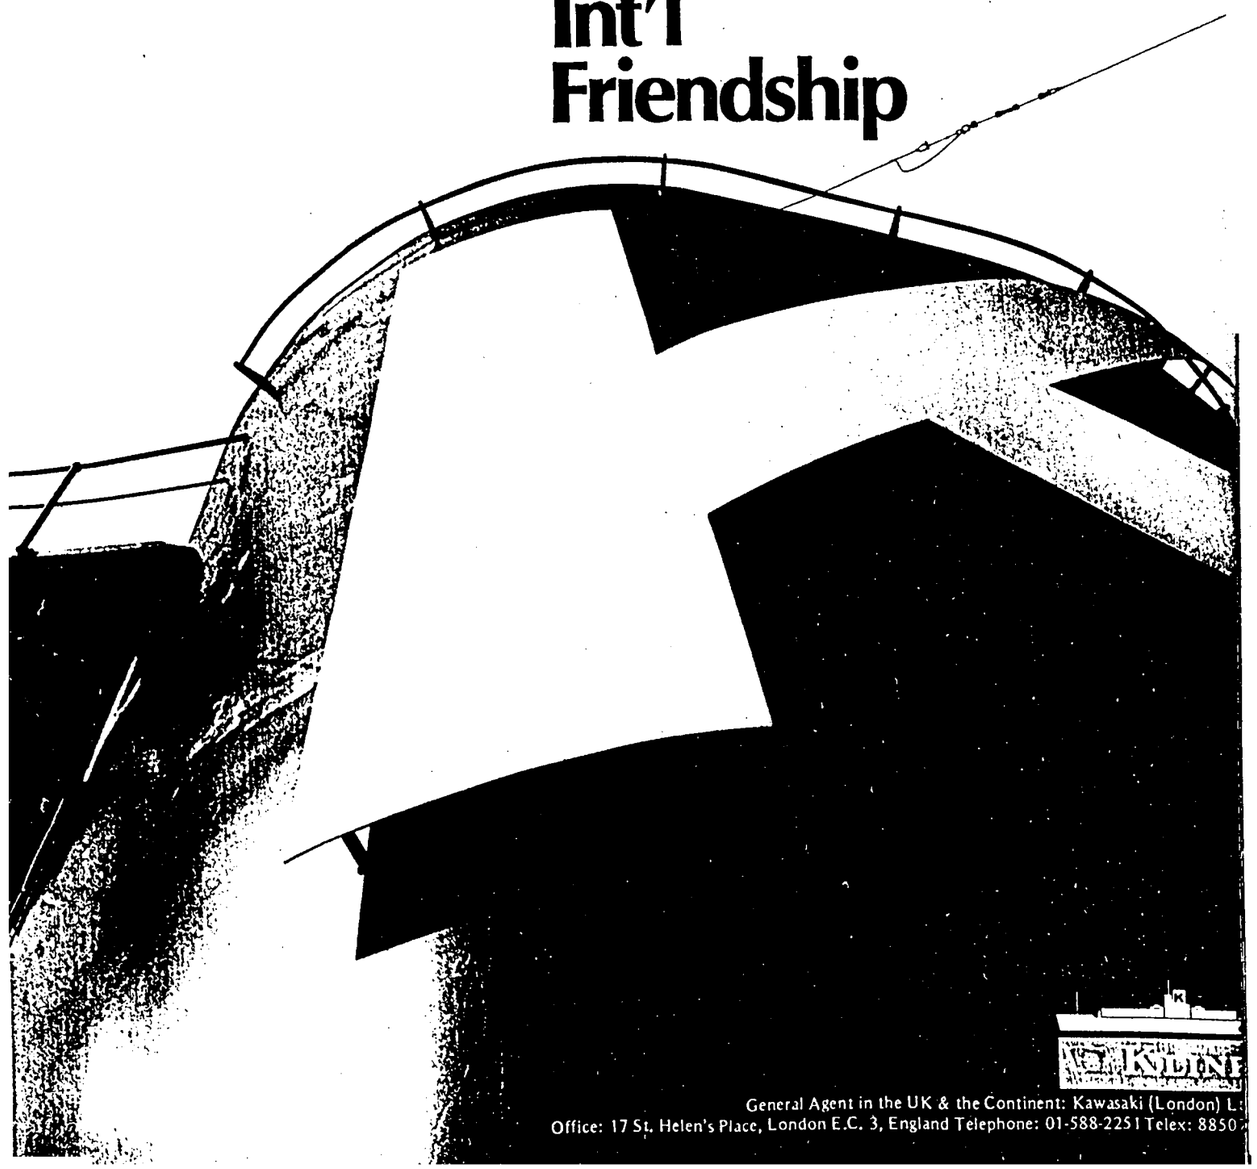
funds for private colleges.

Conferees from the two houses succeeded only last week in reconciling the sweeping House restrictions on busing with the milder restraints voted by the Senate, and then only by very narrow votes. They agreed that until January 1, 1974, busing "to achieve racial balance" (something which the Supreme Court has never sanctioned) should not go into effect until all appeals have been exhausted; at present, busing ordered by a lower federal court goes into effect immediately. In many respects the compromise fell far short of the House's demands, on which it had twice ordered its conferees to stand firm. The question now is whether the House will climb down, even to save the education bill which the Senate approved on Wednesday. If it does, President Nixon fears that his own more far-reaching proposals will lose much support.

Herald's end

Boston is to lose the newspaper that for many years was the best known in New England and the only one that proper Boston Republicans could bear to read. The 125-year-old Herald-Traveler is expected to publish its last edition on June 4th. Its assets, good name and modern plant have been bought, subject to approval by the Herald's shareholders, by the Boston Record-American, the flashy tabloid owned by the Hearst newspaper chain. The Herald's collapse leaves Boston, which had nine daily papers 30 years ago, with three: the Record, the Christian Science Monitor and the Boston Globe.

The Herald's case is full of irony. The paper collapsed because the Federal Communications Commission refused to renew the licence for its television station, WHDH-TV, which has broadcast on Channel 5 since 1957. As the Herald lost subscribers in recent years to the increasingly vigorous and liberal Boston Globe, which was fortified by successful morning and afternoon papers, it depended more and more on the profits from its television station to keep going. Yet the long legal battle to hold on to Channel 5 was one of the principal causes of the decline in the Herald's finances.



What is almost ludicrous is the way that the FCC's good intentions have misfired. The commission, which awards radio and television broadcasting licences on a three-year basis, refused in 1962 to give WHDH-TV a full licence renewal because the paper's proprietor, an arch-Republican, was accused of attempting to influence the commission. In 1969 the FCC, then dominated by Democrats and goaded by Mr Nicholas Johnson, the commissioner who was conducting a crusade against the "media barons," refused to renew even the temporary licence on the grounds that the Herald's owners already controlled a newspaper and a radio station as well as a television station. The commission awarded a new group, Boston Broadcasters Inc, the licence to broadcast on Channel 5. The legal battles continued in the courts until March 19th this year when the Herald lost its appeal to the Supreme Court. The Herald then closed its Washington bureau and sacked the executive dining room chef; last week the sale to Hearst was announced. Thus, in trying to create a greater number of sources of news for the public, the FCC has succeeded only in extinguishing one of them.

The interesting question is how the Record will remake itself. It has announced that it will become a full-size paper. Whether it will take on any of the Herald's staff or intellectual quality is not known. However, the Record has tried in recent years to shed its reputation as a "scandal sheet." Its front pages have become less sensational and this year, at the cost of a large fraction of its circulation, it stopped printing the daily "number"—the long figure showing the daily Treasury balance on which a great deal of illegal betting is based. Conceivably Boston could have a new strong conservative paper as a result but the Record would have to go through a major conversion, dropping some of its reactionary columnists, before it could acquire the stature of the Herald in its prime.

That is the chimney of your friendship.
You see, you have at your service our flotilla of ships*
and twenty-eight scheduled sea routes.
That includes between the Far East and Oslo, Hamburg, Rotterdam and Copenhagen . . . via our Maersk-Kawasaki Line international friendship.
You also have roll-on/roll-off container service between Australia and Japan . . . through another international friendship, ESS Line.
And you have all-40-foot-container ships which ply the Pacific directly between the U.S.A. and Hongkong and Korea bypassing Japan.
That saves you five valuable days or more. Plus it helps emerging nations emerge into the container age on their own.
International friendship is simple. Efficient shipping services . . . that serve all countries.
Quickly. Safely. Economically.
Ships and friends anyone?

*Including scheduled liners, tramps, tankers and specialized ships to carry your special cargo like iron ore or automobiles.

Int'l Friendship

General Agent in the UK & the Continent: Kawasaki (London) L
Office: 17 St. Helen's Place, London E.C. 3, England Telephone: 01-588-2251 Telex: 8850

GTE, 730 Third Avenue, New York, N.Y. 10017, U.S.A.

If you're scattered all over the map, we'll help you pull yourself together.

Mountains, rivers and deserts don't mean a thing to us. Our GTE International subsidiary hops across them in microseconds with microwaves.

Which means we can bring together a whole nation or nations. Or help make a business out of a lot of branch operations.

In 1950, we established the first microwave television link in Europe.

Recently we linked Greece and Italy across the 53-mile Strait of Otranto, enabling Greece to receive international TV programs for the first time. Next, we'll bring Turkey and Bulgaria together.

In Iran we're one of a four-company consortium building the largest microwave network ever assembled under a single contract. This 8700-mile system will have 500 stations and cover some of the roughest desert and mountain terrain on earth.

In Venezuela we built a microwave system for television and long-distance telephone, crossing plains, tropical jungle and the Andes mountains. Several stations are over 14,000 feet above sea level.

In Indonesia we built the microwave system for their national television network. And in Mexico our system was used to transmit the 1968 Olympic games.

Much of our work is industrial.

We've installed telecommunication and control networks for power companies in Canada and Brazil. For oil companies in Nigeria, Venezuela and Colombia. For railroads in Canada and Mexico. We built one of the longest microwave systems in South America for an oil pipeline crossing Argentina.

In all, GTE International has supplied telecommunications systems in more than 60 countries throughout the world.

We're also strong in satellite communications. We've constructed earth stations in Alaska, Nigeria, Thailand, Chile, Venezuela and the Philippines and provided equipment to some 20 other nations.

Wherever we go we train local people to maintain and operate the networks after we're gone.

If you're in government communications, pipelines, power, oil, broadcasting, railroads or any other organization that's spread all over the map, we'll help you get it all together.

The first thing to do is get together with us.

THE WORLD

Pollution

The end of an epoch?

If, in 1572, the amiable but ineffectual King of Sweden, Johan II, had invited his fellow monarchs to Stockholm to take stock of the future and of their ability to manage it with a modicum of rationality, it is fairly certain that none of them would have come. But if they had, one topic would have thrust aside all others—how to end, or alternatively, how to win, the religious wars that were threatening the stability of nearly every European state and, through maritime rivalries, extending the struggle across the globe.

Yet an observer of genius, watching the monarchs with their counsellors and scientists and hangers-on, might have caught hints and foreshadowings of the forces which would, within a century, make the religious issue largely irrelevant. He would have noticed the degree to which the religious quarrel itself turned much more on frontiers and territories and loyalty to the prince than upon matters of strict orthodoxy. Modern all-inclusive national sovereignty was taking shape beneath the supposedly religious power struggle.

It is possible, too, that Queen Elizabeth's delegation might have included a young adventurer by name of Francis Drake, representing new global economic interests which, within a few decades, were to set up East India companies in Britain and in Holland, foreshadowing the modern dominance of the market, the growth of a world-wide trading system and the explosion of European colonialism and settlement.

Neither Francis Bacon nor Galileo Galilei would have been quite old enough to attend as scientific advisers, but the ideas that nourished them—unbounded curiosity, confidence in experiment, the overriding emphasis placed on exact measurement by such pioneers of the scientific method as Kepler or Leonardo da Vinci—were entering the savant's study and preparing their impact upon world affairs.

But all this lay below the surface. Any Stockholm conference held in 1572 would have seen as its task to control and revitalise what we now know to have been an incurably disintegrating medieval society—of feudal power, agricultural subsistence and technological primacy. By 1572, a new order was already struggling to be born. The three master forces of the modern world—nationalism, economic growth, and scientific discovery—were stirring and beginning to seek intellectual and institutional form. Singly and in mutually self-reinforcing combinations, they were to run away with human society in the next four centuries, going on to create our present heady achievements—a world society of nations, unparalleled though uneven wealth and the ultimate scientific conquest of atomic structure and nuclear power.

To most of the men of 1972, these certainties stand as securely as ever. Nationalism is the dominant principle of the post-colonial age. To reach the economic standards of the already wealthy states is a world-wide drive and their desire for further growth seems unabated. Science has scored its most spectacular triumphs in the past two decades, finger printing the most distant stars and putting men on the moon. For many of the participants at the Stockholm conference, the large certitudes of nationhood, material plenty and high technology will be as much a part of their basic thought as were feudal order, rural life and all-pervasive religion for the men of 1572.

Yet there could be, at Stockholm in 1972 as in the Europe of 1572, the first hints of failure in social consensus, the first stirrings of new needs and perceptions, the unclear but undeniable harbingers of a new age. In fact, those responsible for preparing the Stockholm agenda have already felt some premonitory signs of these new possibilities—and new divisions.

When, four or five years ago, the conference was conceived, largely as a result of Swedish efforts, the expectation was that it would reflect and stimulate a growing but still limited interest in the localised deterioration, via smog and water pollution, of the environment of developed states, particularly of their urban sectors, and of shared resources such as seas and air space. There was also concern about the threat to areas of unique natural beauty or niches of irreplaceable species increasingly encroached on by careless technological man. The issues looked decently manageable within the customary framework of intergovernmental agreements, anti-pollutive technologies and perhaps some redirections in the use of future—and growing—resources.

Manhattan: the old order of growth

This commentary was written by Barbara Ward.

Limits to growth

Since then, one might almost say that world interest and world concern have blown up in the face of the conference's preparatory efforts. The passion of those involved, the dismay of those who did not know they were, the growing flood of equal and opposite information and, above all, the relentless increase in the scale and interconnections of the issues have imposed on the conference the curious risk of being at once a storm centre and an anticlimax. It is too bold for some participants, especially governments in developed states, many of whom wish to see an agenda which reflects what they took to be the original, rather specific concerns of the conference.

But this approach appears irresponsibly tame to the really embattled spirits among the citizenry. They are no longer talking of rising national income or scientific breakthroughs. They ask whether the planet's natural resources and life support systems can stand much longer the unbounded economic and technical strains that are being placed upon them. Populations freed to grow by medical science and, extrapolated in exponential growth (a constant rate of increase at compound interest), could be increasing by a billion a year by the time of Thomas Malthus's tercentenary. Equally extrapolated, the demand for energy and goods needed to satisfy such populations could, it is argued, push the planet past the point of no return in terms of soil and mineral exhaustion. The basic biological resources of air and water and even man's genetic stock could be at risk if thermal, radioactive and other pollutions were to pass thresholds of damage that permanently disrupt nature's powers of self-regeneration.

Almost every month a new report* appears insisting that only zero growth in population and a radical check to economic expansion can save the world from catastrophe. Words such as "eco-doom" have entered the modern vocabulary in less than half a decade.

But the shock waves from such reports appearing in wealthy states have changed and sharpened reactions among developing countries. At first, their governments tended to see in Stockholm yet another rich man's fad. If developed countries wished to stop the pollution for which they were overwhelmingly responsible, good luck to them. But now the mood has changed. The sudden violent warnings from the rich that there are strict limits to the planet's carrying capacity do not seem, to observers in developing lands, to have been accompanied by much emphasis on the need for lower rates of economic growth in wealthy societies. This has set in motion the fear that Stockholm may mark the beginnings of pressure upon poorer countries to hold back their own economic development in the name of "environmental preservation" and drastically limit their own numbers so that the rich may continue to have an earth worth inheriting.

This fear has been trenchantly summarised by the Brazilian delegate to the Stockholm conference:

> An implicit assumption underlying plans for the Stockholm conference has been that, given the present demographic magnitudes and distribution in the world and given the present patterns of consumption of natural resources and of emission of pollutants by the developed countries, the world cannot afford the economic development of the underdeveloped countries along the lines followed by the presently developed ones. If the three-fourths of mankind represented by underdeveloped countries were to squander natural resources at the same rate (in per capita terms) as, for example, the United States or the western European countries, there would

The Stockholm conference

The UN Conference on the Human Environment will open in Stockholm on June 5th. The secretary-general of the conference is Mr Maurice Strong, formerly head of the Canadian Aid Agency, CIDA. A preparatory committee made up of representatives of 27 governments has met four times to consider the evolving agenda, and intergovernmental working parties have discussed matters of substance, such as soils, marine pollution and monitoring systems.

The conference agenda comprises six subjects, and the conference itself will be divided into three committees, each of which will discuss two subjects. The subjects are:

Committee I: "The planning and management of human settlements for environmental quality" and "Educational, informational, social and cultural aspects of environment issues."

Committee II: "The environmental aspects of natural resources management" and "Development and the environment."

Committee III: "Identification and control of pollutants and nuisances of broad international significance" and "International organisational implications of action proposals."

The work is being pursued on three levels. Level I consists of an attempt to suggest a general conceptual framework for Stockholm and is embodied in a book, "Only One Earth," to be published in ten languages on the eve of the conference. A hundred and fifty people from all round the world were invited to join a panel to assist in the preparations for this book, and a hundred agreed to serve. The authors are Dr René Dubos and the writer of this commentary. Level II consists of choosing the most important issues on which to start work. These will be embodied in proposals for projects, for bodies to undertake them and for their funding. Level III takes up concrete advances that could be made at once and will consist of draft conventions, agreements and voluntary standards which can be settled in principle at Stockholm itself.

Other intergovernmental meetings, convened by the UN's regional commissions, have been held in Asia, Africa, the Middle East and Latin America. The Economic Commission for Europe

Where it's at

—which began to study the environmental issue somewhat earlier—has coordinated its work with that of the UN secretariat and the other commissions. There have also been some ad hoc meetings of specialised groups to consider technical problems. One was organised by Scope, the Scientific Committee on Problems of the Environment, set up by the International Council of Scientific Unions.

They need growth, but not more people

not be enough oxygen to go around and there would not be enough metal for industry, while, on the other hand, there would be so much carbon, sulphur and nitrogen dioxide that mankind would be pushed toward extinction.

As a result of this line of reasoning, three basic measures are being proposed: (1) explicitly, the control of population growth in underdeveloped countries; (2) implicitly, a ceiling on the development of underdeveloped countries; and (3) explicitly, a reduction of the emission of major pollutants by developed countries. What this scheme obviously lacks in logical symmetry—if not acceptability—is a fourth measure: that overpopulated countries reduce their own demographic numbers and, if necessary, their industrial "predation" upon nature so as to reduce their claim upon the natural resources of underdeveloped countries.*

In concrete terms, the next American baby will make 500 times more claims on the earth's resources than any child born in India or Chad or Mongolia. It should therefore be the first target for zero population growth. Similarly, the United States which, with 6 per cent of the world's peoples, consumes at least 35 per cent of the world's resources, has the prime duty to stop expanding and, if possible, do a little disgorging as well.

In all this there is clearly the makings of a disruptive confrontation between developed and developing nations, one side defending its existing predominance, the other stating deeply felt and largely unrealisable counter-claims. In a curious way both sides are appealing to an extra-national principle while making no effort to modify their own sovereign claims. The rich appeal for restraint in development because the planetary biosphere could be in danger. The poor reject controls and delays because they pin planetary responsibility on the rich. Both sides sense instinctively that nationalism is no longer the full answer and a new planetary imperative is beginning to emerge. But neither will accept that aspect of universalism that offends its own parochial interests. If the mood recalls the intransigence and side-taking of earlier theological debates, the comparison is not entirely misleading. Ambassador Ozorio has wryly observed :

> Plans for the Stockholm conference are marked by what might be called the "Calvinistic" attitude that the developed countries have demonstrated, by their development, a special right to salvation and perpetuation, thus passing on to the more numerous underdeveloped peoples the responsibilty for creating the necessary space on earth.

In fact, given this potential bitterness in side-taking, one may even conjecture that the Soviet Union's hesitations about even attending the Stockholm conference may not turn solely on the issue whether east Germany is or is not permitted to attend. Russia is developed, white, ex-colonial and in control of massive resources in thinly populated regions. The presence of China at the conference could mean that these characteristics would not go unmentioned in any incipient lining up of the needy versus the largely satisfied states.

* "Development and Environment." The Founex Report (Statement by Ambassador Ozorio de Almeida). *Carnegie Endowment for International Peace*, 1972.

Limits to extrapolation

There is no easy way of side-tracking or resolving the risk of confrontation, for instance, by turning to different canons of certitude. The other two great creative forces of the modern age—science and economic expansion—are also involved in difficult tasks and controversies of self-discovery. They do not speak with certainty about the possible planetary predicament of over-population, over-use of resources and over-pollution.

In fact, they often speak with precisely opposite voices. Economists, in particular, to whom, it seems, ecologists very rarely talk, tend to dismiss the whole idea of "overrun and collapse" by the middle of the 21st century because it is based upon the technique of geometrically projecting numbers, technologies, resource use and pollution unchanged into the future. And, the economists argue, this is exactly what does not happen. There always are changes. Scarcities bring about modifications in price; these stimulate the appearance of substitutes or the discovery of new reserves and also bring about unpredictable swings in the pattern of demand. Any supposedly iron law of exponentially diminishing supply has yet to be discovered.

Appropriately enough, iron is itself an interesting instance of this fact. Between 1900 and 1910 the annual increase in the production of iron ore in the United States was 7.8 per cent. This would mean doubling output every 8.9 years. Since 1900 there have been eight doubling times. Production should therefore be 256 times greater. In fact it has only increased threefold. More efficient use and a vast shift to alternatives upset the trend by a factor of almost 100 in only 70 years.

Moreover, economists are themselves beginning to move away from any simple-mindedly total reliance on market signals. There is a growing realisation of the multiple side-effects of thrusting growth. In theory, "external diseconomies"—upstream insecticides killing downstream fish—have long been recognised. Now the impact of the long postwar, energy-devouring, effluent-creating consumer boom is forcing a wide variety of diseconomies to the centre of public attention. When this occurs, public regulations, government action and expenditure can upset the most accurately programmed extrapolations.

The British Investment Trust Limited

The 83rd Annual General Meeting of The British Investment Trust Limited will be held on 12th June, 1972, at 46 Castle Street, Edinburgh.

The following are extracts from the Report of the Directors for the year to 31st March 1972:

Highlights	1972	1971
Total Revenue	£3,568,000	£3,410,000
Available for Ordinary Shareholders	£2,157,000	£2,043,000
Earned on Ordinary Capital	15.97%	15.13%
Ordinary Dividend	15½%	14⅛%
Total Assets	£134,190,000	£96,854,000
Valuation of Investments	£128,124,000	£91,707,000
Valuation of Properties	£6,608,000	£5,355,000
Net Assets	£113,803,000	£80,943,000
Net Asset Value per Ordinary Share	206½p	146p
Net Asset Value per Ordinary Share assuming full conversion of the Convertible Debenture Stocks	192p	143p

Revenue

The Total Revenue for the year showed an increase of £158,000 over the previous year. Revenue from short-term deposits was considerably reduced from the levels experienced last year due to the decline in interest rates. However, it was decided as a temporary measure to take advantage of the more attractive yields available in the Gilt-edged market. There was a satisfactory increase in United Kingdom dividends and a full year's revenue from the properties which were purchased at the end of 1970. In addition there was some revenue from the proceeds of the Convertible Debenture Issue made in November 1971.

The Directors propose to pay a final dividend of 8⅛% making with the interim of 7% a total of 15⅛%. In accordance with their practice of maintaining a fairly close relationship between the interim and final payments, the Directors intend to declare in October 1972 an interim dividend of 7⅛% for the year to 31st March 1973.

Valuation

The Valuation of Investments (excluding properties) increased by £36,417,000, although account should be taken of the £7,700,000 raised by the Convertible Debenture Issue in the latter part of the year. The United Kingdom performance has been very satisfactory and has fully participated in the upward trend in the market. In North America, where there was a relatively modest stock market performance and a devaluation of the U.S. Dollar, the investments have outperformed the market indices.

The Valuation of Properties showed an increase of £1,253,000.

The Net Asset Value increased by 41½% during the year to 206½p of which 14½p represents the dollar premium.

The Portfolio

The most important change in the distribution of investments during the year was a substantial increase in the Financial sector. This increase was mainly in the United Kingdom and reflects not only the investment of a large part of the new issue proceeds but also the strong upward movement of share prices during the period.

Despite the performance of the North American markets during the year, many of our investments there continue to show excellent growth.

There has been a substantial reduction during the year in the percentage of the portfolio represented by investments in North America. This does not indicate any change of policy on the part of the Board, but is due entirely to the very strong relative performance of the United Kingdom market, the investment in this country of the whole proceeds of the new issue and the devaluation of the dollar. In fact the dollar value of our North American investments, excluding the premium, has increased by over 10% since last year and now stands at $83,000,000.

New Issue

In November 1971 there was a rights issue of Convertible Debenture Stock. The net proceeds of £7,700,000 had been largely invested in United Kingdom equities by 31st March 1972. These investments are already showing good appreciation and will materially increase our franked revenue in the current year.

Future Prospects

The prospects for dividend increases from many of the U.K. holdings is encouraging. Only modest growth of revenue is expected in the short-term from the United States owing to the current dividend limitation policy, although there should be scope for increased dividends in due course. Overall further earnings progress is expected in the current year.

As far as capital is concerned, in the United Kingdom, the Board believe that the Financial and Consumer sectors, which together make up 68% of the portfolio, will continue to show superior performance in the current year.

The economic recovery in the U.S.A. continues to gather pace and the Board is confident that the North American portfolio, which is largely concentrated in selected growth industries, will continue to produce good capital appreciation.

As regards other countries, the Board look for steady long-term growth from the Japanese economy and it is their intention to increase the investment in that country in the coming year. Hong Kong remains an area of rapid growth and the policy of concentrating on the leading companies in the Far East has proved highly rewarding.

The Board welcomes the decision announced in the Budget that the programme of voluntary restraint on investment in Australia and South Africa has been lifted.

Copies of the Annual Report & Accounts can be obtained from
The Secretary, The British Investment Trust Limited, 46, Castle Street, Edinburgh, EH2 3BR.

Public authorities can lay down standards of non-pollutive behaviour and exact fines or "effluent charges" on industries which fail to conform. Then the inducements are there for them to internalise their costs by inventing less pollutive technology. Often when they do so, they will find that what was thought to be waste is a valuable by-product. German and Dutch municipalities turn sewage into fertiliser. Some steel plants recover usable sulphuric acid from their pickling liquor. It is only if air and water are treated as "free goods"—which they may well cease to be quite soon—that we are condemned to exponential growth of effluents. Give them a price based upon public standards and they can be brought under control.

Even that most relentless of current pressures—population growth suddenly spurting upward as death rates fall precipitously all round the world—is not irrevocably exponential. A survey of young women conducted in the United States in 1955 showed the average of their wishes to be for 3.2 children. A survey in 1971 produced an average of only 2.4 children. This is at least within sight of zero growth. There is a high general correlation between modernisation, urbanisation, industrialisation and education (for women as well as men) and declining birth rates. It is not irrational to argue that societies, as they modernise, can get themselves out of the trap of exponentially growing population.

Nor should we forget more heroic visions, not only of postponing collapse, but of achieving future plenty. Family incomes of $250,000 a year in developed lands and a massive transfer, by way of multinational corporations, of manufacturing industry to raise living standards in the planet's poor "South" can be predicted by extrapolation for the middle of the next century. Above all, the tremendous freedom to mobilise energy and manipulate matter conferred on man by his mastery of the atom* leads some scientists to postulate* a future in which the planet can comfortably carry 20 billion people at current American living standards simply by using virtually limitless resources of atomic energy, water, air and the minerals locked up in common rock.

Don't dump detergents!

All in all, the argument runs, we are moving not to a world of scarcity, but to a new era of scientific abundance opening up to technological man as his energy systems repeat on earth, with Promethean audacity, the fusion process at the core of the sun, as he manipulates the ultimate stuff of nature by molecular welding and turns all wastes back into recombinable elements by use of the "fusion torch."

Are we then to conclude that eco-doom is being trundled off stage and that both developed and developing peoples can look forward to a secure future of high technological felicity?

Uncertainties in science

To promise so much is precisely to miss the fundamental intellectual revolutions—and hence confusions—of our time. Science and economics do not in fact come up with clear cut answers. Nearly all the forecasts of unlimited energy and ultimate abundance are based upon science's traditional and powerful methodology, by which the materials under study are reduced to "discrete objects" or ultimate elements, taken out of the continuum of nature in which they normally operate, submitted to measurement to test their behaviour and then made to repeat that behaviour in controlled laboratory conditions.

At the core of the process is, of course, a steadily increasing mastery of energy and the harnessing of all its forms—heat, compressed steam, electricity, nuclear power—to human research and use. In a sense, the whole process is one of power—the power to isolate the bits of nature that seem useful to man and to set them to work with increasing inputs of energy. It is Francis Bacon's dream of knowledge developed "for the benefit and use of man, for the relief of man's estate" and no philosopher would have rejoiced more heartily than he over the number of hours of backbreaking labour, incurable pain and persistent ill-health that have been banished in the process.

But the nature that is separated and conquered is still the same nature that obstinately continues to operate within a seamless web of interconnections and dependencies. For each of man's actions and interventions, for each stone flung violently into the pond, there are widening circles of disturbance, and as the stone grows larger and the pond does not increase the impact becomes more severe and potentially more damaging.

These interdependent aspects of nature are, in essence, what ecology is all about. It is the study not of the single thrust, but of the ramifications. Inevitably it lacks the grand simplicity of master strokes in physics or chemistry. It cannot, by definition, study "discrete objects" since its whole purpose is to put them back in their conditioned and conditioning environment. This involves an overlapping of disciplines, tentative methodology, a considerable uncertainty of results. There are more cries of warning than statements of fact, more controversies than comfortable agreements. There can, it seems, be almost as much angry debate about the amount of hydrocarbons the oceans can store as about the quantity of angels upon a pinhead. Yet the fact remains that man cannot act in the natural order without multiple effects. The more violently he acts, the more widespread and potentially disruptive those effects can be. And although nature has extraordinary capacities of self-cure and self-renewal, natural systems have at times been submitted to such overload that they have irretrievably broken down. Similar catastrophies can recur and it is precisely here that exponential projections seem most ominous.

If, for instance, water hyacinths on a reservoir are spreading at a geometrical rate, you can clean the water quite simply when you are still at the 2, 4, 8 stage of their advance. But let the situation ride. Then, when 32 turns to 68 or 68 to 136 in one doubling time, the hyacinths may, depending on the size of the reservoir, have stifled it, by absorbing all its dissolved oxygen. It will have become irrevocably anaerobic, stinking and useless to man or beast.

The whole human species shares and uses two enormous but limited reser-

* Alvin Weinberg in The Bulletin of Atomic Scientists, June, 1970.

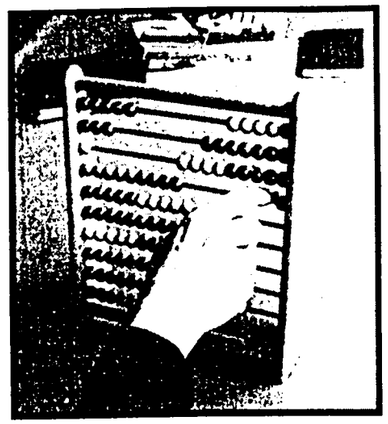
Prophets of eco-doom

voirs—the atmosphere and the oceans. On these two ultimate supporters of all terrestrial life the activities of technical man impinge with steadily widening effect. But we do not know whether the rates of intervention are exponential. We do not know whether there are thresholds of irreversible damage and, if so, at which point human society looks like beginning to approach them.

To cite only a couple of examples of this fateful ignorance, scientists know that the steady burning of fossil fuels is releasing more and more CO_2 into the air. Carbon dioxide catches the sun's radiations and transmits them back to earth rather as closed car windows admit radiant heat and trap it inside. Normally, the atmosphere only contains about .03 per cent of carbon dioxide. Recently CO_2 seems to have been increasing by 0.2 per cent a year. This is no immediate problem. But over the next decades there could be a cumulative effect. But what effect? At this point begins the ignorance. First, we do not know where all the CO_2 goes—to the plants, to the oceans, to the atmosphere? Could an unnoticed redistribution speed up the concentration in the air? If so, could heating up increase and even reach the critical level of 2 deg. Cent. which presages a melting of the polar ice caps? Still we do not know. Yet the answer might entail the submergence of such centres of pollution as New York or Leningrad—a drastic environmental solution not widely recommended by even the most convinced ecologist.

Or take the oceans. They are the ultimate sump of all nature's detritus. On their surface minute phytoplankton produce a quarter of the planet's oxygen. In their estuarine waters fish spawn and move out to every sea. Tides and currents carry all kinds of wastes—from run-off nitrogen fertiliser to old World War I canisters of mustard gas. Much of this movement is uncharted. The ocean depths are unexplored. Carrying capacity is unknown. The distribution of long-lived pollutants like the chlorinated hydrocarbons can only be guessed at. Much seems to have been absorbed in unidentified natural sinks. Yet DDT turns up, in high concentrations, in whales bred near Greenland. Once again, scientists do not doubt the growing impact. They simply do not know how large or small the storage areas are. In this, as with a hundred other pollutants, we have no precise knowledge of points of no return or of the degree to which the oceans' spawning grounds, surface life, storage capacity, and even, in some areas, dissolved oxygen are being variously affected. Parts of the Baltic are becoming anaerobic. The Mediterranean is deteriorating. As closed seas, they are special, but, ultimately, the oceans have no outlet pipe for wastes. Overload is conceptionally possible. Are we moving towards it? We do not know.*

Since the sum of these scientific uncertainties suggests a measure of caution in the future use man seeks to make of the biosphere, it does nothing to resolve the arguments of conflicting interest between developed and developing states. We cannot evade the possibility of confrontations by using science as the escape hatch. It is simply not possible to disprove the possibility that the pollution and resource exhaustion already practised by western man may, if carried on by everybody, push the shared planet some way towards a critical threshold of over-use. If this is the case, who is to stop developing—the rich or the poor? Who has the power to make the decision? Chiefly, the rich.



*The most complete and objective account of the whole range of environmental risks is to be found in "To Live on Earth," by Sterling Brubaker, *Johns Hopkins Press* for Resources for the Future, Inc., 1972.

The economics of deprivation

Economic answers are equally uncertain. It is true that growing scarcities bring price rises which induce new discoveries and substitutions. It is also true that public regulations compelling industries to internalise costs and lessen pollution are beginning to proliferate. These changes can falsify predictions of pollutional doom and resource exhaustion by the middle of the next century. But they do not necessarily take the strain off the poor nations' efforts of development.

Here we encounter another destabilising aspect of the all-out pursuit of economic growth. It has no built-in tendency to redistribute the surpluses and tends on the contrary to skew still further the patterns of income it creates. If, with most accessible mineral deposits exhausted, with technology becoming steadily more capital-intensive, with real price increases needed to cover anti-pollutive costs, the whole process of development becomes more expensive just as the poorer nations embark on it, traditional economic practice gives them little hope of alleviation.

Inside already developed national societies a great array of social and institutional innovations—taxation, welfare, social insurance, trade unions, public education and housing—have somewhat corrected the market system's innate tendency to favour the already rich. In the planet at large no such policies or institutions are fully at work. Three-quarters of the world's resources continue to flow to a quarter of the people. They also have their hands on the levers of power—whether they are large-scale national companies, multinational corporations, research institutes or central planning ministries. Without more forceful arrangements for sharing resources and skills, "trickle down" economics are not likely to meet the basic needs of 3

If working in tens is so easy, why don't we always do it?

A good question, especially if you run your own business. Because you'll know how important simple operating techniques are to business efficiency. And metrication leads to just that.

The metric system is simple. That's why so many companies, big and small, are making the change. Already much of Britain's engineering production is metric.

Which is good sense when you consider that 86% of world trade is between countries that have chosen the metric system.

Metric working has already simplified things like design, production, paperwork and storage for many British firms.

If you are responsible for the future of your company start thinking about metrication.

Many are already benefiting from the changeover.

Business is ten times simpler in metric.

THE HOUSE OF
SANDEMAN

PORT • SHERRY • CAPA NEGRA BRANDY

Extracts from the Chairman's Statement and Accounts to be presented at the Annual General Meeting on 16th June, 1972.

The Group has had a good year with an increase in profits despite the difficulties experienced by our French Subsidiary Company.

Overseas Markets
As expected we had a very substantial increase in sales in Holland, making it our largest market.

Germany also made the expected progress and throughout nearly every export market we have gone ahead.

Europe continues to show the greatest growth and potential and I feel that the time will come when we shall make faster progress in the U.S.A.

It is interesting to note that Spain already has a trading agreement with the E.E.C. and under this Sherry is given favourable treatment.

Portugal is negotiating a trade agreement with the E.E.C. and it seems almost certain that Port will be included.

In France we achieved record sales but due to exceptional expenses there was a loss of £52,000. In addition a provision of £172,000 against losses on termination of an agency business in France has been made and this we are in the course of litigating. The management of the French Company has been re-organised and the company should trade profitably in 1972.

Home Trade
We again progressed in 1971 and there would seem every likelihood that we will increase sales further in 1972.

The trading activities of our Scottish Company have been curtailed and the reduction in stock and the sale of properties will improve the cash position of the Group by a total in excess of £500,000.

Production
Sandeman & Ca. Lda., Oporto, Portugal. Shipments from Portugal were once again a record. Much modernisation and mechanisation has taken place and for the time being we are undoubtedly over the hump on capital expenditure. The 1970 vintage produced excellent wines and we have declared and are shipping 1970 as a Vintage.

Sandeman Hermanos y Cia, Jerez, Spain. Shipments from Spain to various markets throughout the world were again the best ever as were profits. In 1971 a new Bodega for our Capa Negra Brandy was built. The rate at which our Sherry business is expanding will undoubtedly necessitate the building of a further Bodega during 1973.

The Consolidated Accounts for the year ended 31st December, 1971 (including attributable profits of Associated Companies) show

	1971	1970
	£	£
Profit before Taxation	1,101,317	839,810
Profit after Taxation	744,369	547,959
Profit after Taxation & Extraordinary items	597,875	581,959
Dividends—Preference	23,101	23,101
Ordinary	(17%) 317,475	(15%) 280,125

Geo. G. Sandeman Sons & Co., Ltd

billion poor people by 1980, of 5½ billion by 2000. The most dangerous threshold may not be the exhaustion of resources, pollution and rising population pressure by 2050. It may be the exhaustion of popular patience and the rising pressure of revolt and anarchy by 1984.

Framing an agenda

The preparations for Stockholm could hardly take account of all these tumultuous stirrings under the surface of the modern order. Yet it can be argued that the conference has the chance of setting in motion a unique process of mediation. The central problem is, after all, whether sovereign nations can, in the name of their own economic self-interest, destroy the intricate webs and life support systems of planetary life. If it can be shown that they can do so, in inescapable physical fact, then the assumptions upon which modern man's habits of policy and power have been based, must be challenged.

Probably the most important act at Stockholm will therefore be to take firm decisions on the item concerning the "identification and control of pollutants of broad international significance." This implies a wholly new scientific effort to track down and monitor the multiple impacts of human intervention on the planet's natural systems. Fortunately for human society, this need coincides with the development of a very large range of new technologies and instruments of research capable of monitoring the process. Computers, space satellites, earth scanners, infra-red photography are not much more than a decade or so old. Yet they make it possible to envisage the establishment of a kind of co-operative, international, scientific "Earthwatch." Such a sustained survey, based upon research stations and ships and machines scattered over the face of the earth and in space beyond our planet, could begin to give men the precise knowledge they need not so much of "discrete objects" and single thrusts of activity, but of the interconnectedness and subtle interactions of the sum of all their interventions.

Within such a system of monitoring, it also makes sense to work for intergovernmental conventions to control such well-known pollutants as the voiding of oil bilges, washing off long lasting pesticides or the secret disposal of toxic substances. Violations will show up on radar screens and delinquent behaviour can be pinpointed by satellites.

It is also possible that two of the other items for discussion—"planning and management of human settlements for environmental quality" and "environmental aspects of natural resource management"—will encourage a new, more sophisticated approach to the old driving single-minded pursuit of economic growth. On the side of developed nations, the conference can initiate and encourage the essential dialogue of economists with ecologists and take advantage of their new readiness to consider "external diseconomies" and realise the instabilities inherent in radically unjust and distorted patterns of distribution.

The conference can also encourage the signs of a search to redefine economic growth itself in order to set it in its entire social context and see it not as an undifferentiated set of "goods and services" but as a balance between gross national goods and gross national "bads"—a concept which could end such ludicrous calculations as that of including in the gross national product doctors' bills incurred for bronchitis while leaving out the air pollution which caused the bronchitis in the first place. Moreover, any assessment of human "goods," particularly in the all too often noisy, ugly, filthy cities of the developed world, suggests the need for a growing emphasis on man's less consumptive needs—more space, more education, more art, more well-constructed neighbourhoods, more parks, more beauty—most of which, unlike the often blatantly obsolescing goods of the recent consumer revolution, are capable of providing large expansions of income, employment and satisfaction without polluting a stream or putting a single particulate in the air. The concept of growth as enhancement, not growth as clutter, is at least beginning to provide a terrain where economists and ecologists can meet. Stockholm can sharpen and extend the exchange of ideas.

Moreover, by suggesting that developed nations may not be intending to continue in a blind and dogged pursuit of ever more materially consumptive and environmentally disruptive economic growth, the new questions raised by economists provide some hope of lessening the poor countries' fear that their development will be retarded in the name of the world's general ecological balance. Admittedly, more thrifty and less consumptive growth could, in the short run, disrupt raw material markets and would require off-setting capital flows. But it would also guarantee the survival in developing lands of their own mineral reefs and reserves against the day when new methods of recycling and more effective anti-pollutional technology would have been invented for their use. As Dr Ignacy Sachs* commented, after the preparatory Founex Conference on Development and Environment, modernising countries do not have to follow slavishly the patterns of past developers: "This view loses sight of the only real advantage of latecomers, namely the ability to learn from the experiences and errors of others." To build environmental disasters into their structures in the name of economic growth just when developed states are beginning to try to get rid of them would be folly indeed. There will be all kinds of less pollutive models to follow soon. Nowhere is this potential advantage clearer than in city building. Wise planning, control over land acquisition and the prevention of speculation can permit much greater urban amenity even in communities that are still poor. At the same time decentralisation of urban-industrial centres as practised, for instance, in Poland or Rumania, can be introduced in the very early days of modernisation or at least used

We shall fight it on the beaches

*The Founex Report, op cit., p.74.

to check the spreading growth of existing metropolises.

However, the chance that these more hopeful and co-operative economic approaches will begin to surface at Stockholm turns on the handling of the item on "development and the environment." After all, the possible reassessments of growth, the possible redefinitions of amenity, the chance of lesser strain upon man's fragile biosphere and vulnerable eco-systems all lie in the future. What lies in the present is the fact of vastly uneven wealth distributed through a system of nations which owe no specific loyalty to a wider commonwealth. Among them the richest command concentrated power, still aim at 3 per cent growth rates and tolerate a total disproportion in the distribution of the planet's "goods" and opportunities.

It has not gone unnoticed that, in some developed countries, a sudden interest in ecology has coincided with an equal setback to the interest in development assistance. Airs and oceans may be universal and interdependent, but biospheric interdependence has yet to be translated into any sense of planetary responsibility that transcends the national interest. The flow of resources from rich to poor states is stuck fast at about $6 billion a year and falling in value under the impact of inflation. Yet it is manifestly less than enough to stimulate the poor nations' struggle against the most basic form of environmental degradation—which is extreme poverty, protein deficiency, shanty-town dwelling and unemployment for a rising percentage of the world's peoples.

If, on top of these insufficiencies, the rich nations' environmental concern turns into demands for environmental controls which delay development projects among the poor, slow down basic growth or even make all developmental activities more expensive, then confrontation will be the inevitable result. If, on the contrary, Stockholm marks a renewal of the realisation that development—and increased assistance to development—are the first need in the poorest lands, that they alone provide the context for successful family planning and alone can bring to the mass of people the diets, schooling and opportunity of a truly human environment, then confrontation can give way to dialogue, dialogue to planning, and planning to the first sketch of a strategy to achieve a humane and lasting balance between development and environment for all the peoples of planet earth.

Earth Day: an attempt to educate

Institutions for survival

No one supposes that the Stockholm conference can do more than touch the fringes of the vast issues underlying its two-week agenda. At the most, a few conventions on controlling pollutants and setting standards will be prepared. Hopefully the first steps will be taken to set up the world-wide monitoring systems of the Earthwatch. The essential point is that the discussions should continue and the issues be followed up after "the captains and the kings depart." Stockholm can be a "moment of truth," a point in time where the arrogant certainties of an epoch that is dying begin to give way to new forces striving to find expression and effective influence.

If this possibility is to be realised, two things are necessary. The first, to be discussed under the last item on the agenda, is the establishment of an institution—a secretariat, a permanent committee—with the mandate to carry on the Stockholm initiatives with governments, with the international agencies and with the public at large. The secretariat requires a separate fund in order to function efficiently and independently. Happily, the United States has given the lead in proposing an initial sum of $100m for the first five years and has offered to cover 40 per cent of the figure. Such a secretariat, commanding its own resources, could see to it that no immediately worthwhile proposal is lost and that the task of evolving a longer-term strategy continues.

But possibly the largest task will lie in the field of education at all levels in the realities of the new environmental imperative. This need is also to be considered during the fortnight, and the sheer scale of the issue may seem daunting to some of the delegations. How can a thing so vast, various, dispersed, uncertain, contradictory and often totally unidentifiable become the subject matter of effective education? Between car shredders and space satellites, between soil erosion and particulate emissions, between shanty-towns and DDT, where are the threads and consistencies? To turn "environment" into a curriculum at any level—from primary classes to advanced schools of management—is the equivalent of telling everyone to study everything. It cannot be done.

Yet there is an inner consistency to the work at Stockholm. It lies in adding to the three main thrusts and certainties that have dominated the world since 1572—science, economic growth and the autonomous nation—the dimension of interdependence and of inescapable interconnection. In essence, it means adding to the incomparable power of measuring and controlling separate phenomena the devoted study of all the links and dependences, the thresholds, the living reactions of natural things in their environmental continuum. In economics, it means counting in the external effects of all transactions and situating the market where it must always belong—in the centre of a fully human society with needs and dreams and ideals which go beyond the daily transactions of corner-store or supermarket. In political life, it means seeing the nation not as wholly "sovereign" but as a partner in the wider association of a planetary society whose bio-physical structure and interdependence make it inescapably one, a society which demands not exploitation but respect and love, if it is to continue—above all, in the nuclear age—to carry human life on earth.

In short, the deepest meaning of Stockholm is to begin, after 400 years of splendid but increasingly dangerous and divisive separations, to recognise the necessity, the inescapable reality of the unities of our planetary existence. As E. M. Forster once put it, with his customary modesty: "Only connect." It is not a bad motto for a humanity that must hope and can learn to survive.

Personal Pension Policy from Standard Life

Standard Life's new Personal Pension Policy has been carefully designed for maximum flexibility to meet your client's individual pension needs.

Moreover, it is backed by the investment expertise of Britain's largest mutual life office with an outstanding reputation for "with profit" business.

What better recommendation can you have?

REMEMBER In certain circumstances it may be possible to pay a premium now and claim tax relief from last year's earnings.

Standard Life
ASSURANCE COMPANY

Established 1825. Assets exceed £900,000,000.
Head Office: 3 George Street, Edinburgh.
Branches throughout the United Kingdom.

THE THOMSON ORGANISATION LIMITED

1971 turned out very much as we had forecast, with our newspapers having a difficult year but our diversified interests showing improvements. Performance in 1971 was adversely influenced by the general economic conditions, the level of unemployment and industrial disputes and disturbances. We estimate the total direct costs at £970,000 in pre-tax profits. The postal strike alone is conservatively estimated to have cost us some £600,000 in pre-tax profits with additional and extremely severe indirect effects on certain parts of our business.

Nevertheless, turnover continued to rise and although pre-tax trading profits were below the 1970 level, there was a marked recovery in the second half-year. Turnover in 1971 was increased over 1970 by £14,443,000 to £109,669,000. Trading profits of established activities for the second half-year stood at £4,370,000 compared with profits of £2,800,000 in the first half. Pre-tax trading profits at £5,542,000 were £1,100,000 below the 1970 figure, almost all of which is accounted for by the effects of industrial disputes and disturbances. Final net profits after tax, minority interests and special items increased from £3,695,000 in 1970 to £4,001,000 in 1971. (Neither year includes anything relating to *The Times*.)

We have passed through a period of consolidation and we have eased many of our financial constraints. A series of definitive actions has been planned aimed at releasing significant sums of cash to undertake new developments. These various initiatives will, together with our own bank facilities, create the financial resources needed for the next stage of development and diversification. Existing operating groups are now strongly organised into well-managed companies capable of exploiting the growth potential which exists within each of them and we are now moving positively into our next stage of growth.

Through Thomson Scottish Associates, The Thomson Organisation is now involved in the exploration for mineral resources in the North Sea. In conjunction with Anglo-Continental Investment and Finance Co Limited, we have entered the field of insurance by acquiring a one-third share in the old-established firm of H. G. Poland and Sons. We have created Thomson Land and Properties Limited to administer profitably our own growing property interests and to develop new ones. Thomson Publications Limited have acquired Juniper Journals in this country, a group of leading mining papers in South Africa and have acquired a one-third interest in the trade and technical and the specialised publishing divisions of Bertelsmann AG to form Bertelsmann-Thomson Informations GmbH.

The improvement in the Company's trading which occurred towards the end of last year is continuing into 1972. As the economy continues to grow, we anticipate significant profit improvements in Thomson Travel Holdings, Thomson Publications and Thomson Yellow Pages.

Books

Keeping up with the Joneses

THE CHILDREN OF PRIDE
Edited by Robert Manson Myers.
Yale University Press. 1,870 pages. £6.95.

Oh for a beaker full of the warm South! Here it is, full and overflowing; nearly 2,000 pages, over a million words and 5 lb avoirdupois. Even the most avid addict of "Gone With The Wind" could hardly ask for more. It should now be apparent why the South lost the war. It was too busy writing letters.

There are in this volume some 1,200 letters, covering the years 1854 to 1868. They have been selected from a total of approximately 6,000 by a merciful editor concerned to spare his readers the full impact of Southern epistolary zeal. The result will still leave most victims stunned. And when it is realised that this is the correspondence of a single family—or perhaps it would be fairer to say a single clan—the offspring and relations of the Rev. Dr Charles Colcock Jones, Presbyterian pastor and plantation owner, of Liberty County, Georgia, it will become apparent what a remarkable specimen it constitutes of intra-familial communication at the time and pious custody of family records afterwards.

But though remarkable in these respects the mutual exchanges of the Joneses cannot honestly be said to be remarkable in themselves. Like some Victorian three-decker they sustain our interest, if at all, by the sheer weight of their narrative rather than by the brilliance of the writing, the drama of the incidents or the personality of the participants. The Joneses are not a wholly typical Southern family. Headed by a patriarchal divine, whose ill-health debars him from academic preferment in the seminaries of the South, the family is more professional than truly agrarian. One son becomes a lawyer, another a medico: their father so far departs from the planter norm as to dissuade them from allowing plantation management to get in the way of their professions. Yet if not

Dr Jones: epistles to the Georgians

typical planters, the Joneses are typical of the better class of Southern gentlemen, reared in piety and in good works, liberal within their station, blind to most that lies beyond it.

The onset of the war does not make the Joneses more interesting, nor does it afford any of them a very large public role. But it brings, of course, a certain inescapable drama in its train. There is a graphic picture of the First Manassas and a lively account of the hurried evacuation of their island home in the face of Yankee raiding parties from the sea. But in general the Joneses do not so much go to war as have the war come to them. The undoubted highlight of these years is the long and vivid 20-odd page account of how Sherman's march through Georgia appeared to the handful of women and negroes left defenceless in its path.

But for the most part the appeal of this massive volume lies in the very ordinariness of its peacetime narrative and the gradual attrition of normality, confidence and eventually hope itself under the increasing weight of war. Its appeal is built into its subject, the burden of exhaustion, defeat and impoverishment, offset by family affection and a determination to survive.

To the social historian "The Children of Pride" will be a gold mine. It is full of revelations upon the Peculiar Institution, Southern mores and ideology, the home front in wartime (and a fair amount of the battlefront too). Unfortunately the gold exists, not in a broad seam, but in dust that has to be panned for. The ordinary reader is likely to find such panning hard work, though there will be those for whom the familiar themes of Confederate life can never be exhausted. For the rest, the letters lack the concentrated political meat of the Toombs, Stephens and Cobb correspondence, while they cannot rival the peculiar charm of the diary of that most appealing of Southern heroines, Mary Boykin Chestnut.

The topography of Dulness

GRUB STREET
By Pat Rogers.
Methuen. 448 pages. £5.50.

Grub Street was within the "liveries" of the City of London: outside its walls, but within its jurisdiction—just about. It was in Cripplegate ward, by Bedlam and the noxious Moorfields: its name derived from a refuse ditch alongside. Like the "artery of Dulness," the Fleet ditch, its physical features provided the Scriblerians with a material symbolism for their denunciation of Dunces, just as the vice that flourished in poverty and disease provided them with a moral symbolism for what they regarded as literary prostitution.

The name became both a generalised title for a locality and a metaphor for a kind of writing: it became hard to distinguish whether a "Grub Street scribbler" was a judgment on the writer or on his address. It is easy to see Grub Street as an eighteenth-century Fleet Street, packed with bread-and-butter writers and broadsheet publishers, but in fact precious little is known about its inhabitants at that date. And, as Dr Rogers points out, those who used it as a term of abuse were hardly familiar with the area: Pope went seldom into the City, and cannot have made many excursions into Cripplegate. The alternative is to forget that Grub Street was a real place at all: but that is to lose so much of the meaning of the wealth of topographical allusion in Augustan satire.

So argues Dr Rogers in this excellent book: he walks down the labyrinth of myth, metaphor and city slum with a certain step and every evidence of intellectual satisfaction. He starts from the unfamiliar end of the ball of string, not seeking to extract a picture of the

city from Augustan literature but to inform an understanding of it by providing "a route map to explore the comedy of Grub Street." He extracts the maximum information from the evidence: it is a brilliant piece of detection, for Grub Street no longer exists.

After the second world war, the area was chosen for study as "the largest single devastated area in the City of London." Grub Street now lies under the Barbican: only some 80 yards of Milton Street, as it was soberly renamed in the nineteenth century (after its developer, Dr Rogers believes, not the poet), survive to the north. The nearest one can get to the rest is on the underground out of Moorgate station. Superficially, one can regret this: the metaphor of Grub Street has been turned on its head, into an expression of sympathy for the depressed author, the literary underdog. But the street itself is no loss: it would have taken more than sensitive restoration to make it an attractive relic of Augustan England. Pope and his fellow-critics of Dulness, of scribblers, of literary journeymen, did not create its reputation: rather they used the bad name it already had. At last, Dr Rogers writes:

> . . . the Cripplegate region has outlived its poverty and ugliness. It has taken a couple of centuries longer to do so than Grub Street did to lay its own, metaphoric, ghost.

Back to stage two

GEORGE THE THIRD
By Stanley Ayling.
Collins. 510 pages. £4.50.

For a monarch who is often regarded as dull and ordinary in his abilities and ideas, George III has enjoyed a surprising variety of reputations. To the American schoolchild he is portrayed in innumerable textbooks, even today, as a sinister tyrant, intent only upon reducing a loyal people to obedience to his will. A milder version of this view was found in this country in the "Whig" interpretation of the struggles in which George was involved, an interpretation which until 40 years ago had almost unquestioned ascendancy in respectable historical writings. In this version, George was trained from earliest youth to be the "real ruler" over all his people, regardless of changes which had occurred since the revolution of 1688 in the position of the monarchy. In his efforts to carry out his destined task, so ran this version, the king clashed with the Whig upholders of the constitution and finally, during the administration of the younger Pitt, succumbed to them.

Whig history was succeeded in the 1930s by an apparently entirely new interpretation (though actually Sir Herbert Butterfield has shown that it was largely a rehash of an old one) put forward by the late Sir Lewis Namier. For Namier, George III was not a tyrant or even a disrupter of the constitution, but simply a conscientious neurotic who attempted to assert royal rights which had never been revoked, either in 1688 or at any other time. In the 1950s the late Richard Pares's "George III and the Politicians" and Butterfield's "George III and the Historians" pioneered the currently accepted interpretation, which takes its stand somewhere between the rival Whig and Namierite orthodoxies. If the Whig view was based upon the propaganda of George's political opponents, Butterfield pointed out, the Namierite one derived from that of George's supporters; if the King did not infringe constitutional law, Pares and others argued, he certainly infringed the constitutional practices of the late eighteenth century.

With so wide a variety of interpretative matter to choose from, a new biography of George could contribute much to our understanding of the period. Mr Stanley Ayling's attempt, despite the readability of nearly 500 packed pages of text, is not very satisfactory. The likely criticism of professional historians, that it is based almost entirely on printed works, is less important than those which can be laid against its interpretation: it takes its stand on stage two of the development, the Namierite version. The shibboleths of the school are duly repeated: when contemporaries spoke of public opinion, we are told, the meaning was "limited and exclusive"; political parties were unknown "in any modern sense of the term"; the right of the king to choose his own leading minister was "incontestable."

Not, however, that Mr Ayling accepts the full Namierite position on George himself; Freudian analysis of the king's states of mind gives way to the more recent medical views of Messrs Macalpine and Hunter, who diagnosed his trouble as porphyria, a physical illness which can induce symptoms akin to mental instability. And the fears of George's Whig opponents that his favourite, Lord Bute, continued to advise the king even after leaving office in 1763 are shown to be not entirely without foundation. But the author's own assessment of the opposition case

George III: needing modern treatment

is not always impartial, as his vocabulary shows when he refers to Charles James Fox's friends as "cronies" and his speeches as "tirades." If a corrective to the Whig interpretation were needed at this time, Mr Ayling's elegant work would be useful. As it is, there is still room for a modern biographical treatment of George III.

From militarism to madness

THE SWORD AND THE SCEPTRE: VOLUMES I AND II
By Gerhard Ritter.
Allen Lane, The Penguin Press. 338 pages each. £6.50 a volume.
THE MYTH OF THE MASTER RACE
By Robert Cecil.
Batsford. 276 pages. £3.

It is impossible to translate the original title of the late Professor Ritter's excellent work, "Staatskunst und Kriegshardwerk," into an English one simultaneously manageable and adequate. "The Sword and the Sceptre" (reinforced with the same subtitle as that of the German edition, namely "The Problem of Militarism in Germany") is somebody's brave shot at it. The able translator of the original text, Herr Heinz Norden, essays at one point "The Art of Statesmanship and the Craft of War." Yet in an "afterword" to the third and fourth German editions of volume one Professor Ritter half regrets he ever used "the vague and equivocal" word militarism in the subtitle at all.

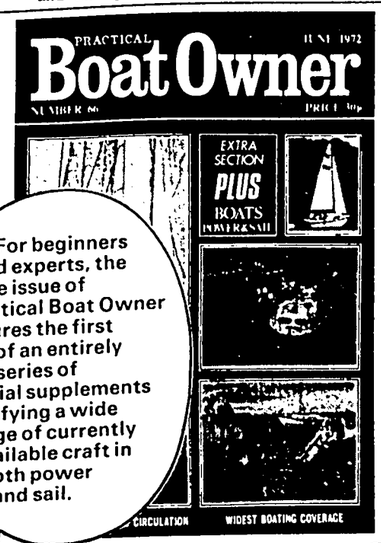
The trouble is that Professor Ritter's theme is and will be for ever profoundly controversial. His conclusions provoked, and still provoke, passionate disputation among German-speaking professional historians, and will do so again among members of the Anglo-Saxon genus, to whom this opportunity is now given to read him in full. In the professor's own words:

> This book is the fruit of the upheavals, in soul and mind, of the second world war. . . . What were the historical elements that allowed our people to become abject followers of a militarist more extreme than the world had ever known, a maniacal personality that made the good name of Germany the horror and bogy of Europe?

That is a prodigious question; and Professor Ritter took immense pains to try to answer it. He was already setting about it in 1941. Not content with the printed sources with which he was duly familiar he went to Berlin and Potsdam in 1942 and 1943 in order to consult the Hohenzollern family archives, the Secret Prussian State Archives, the army archives and other recondite papers. His research proved to be invaluable, since much of this material was later destroyed. But the professor's scholarship has never been seriously in question. It is his Olympian vision of events that has set the cat among Clio's more opinionated pigeons.

The first of these handsomely produced and impeccably documented volumes deals exhaustively, yet always readably, with the rise of Prussia and the concomitant friction and compromises between soldiers, statesmen, diplomats and officious kings. Delayed by the author's many other commitments, the second volume, which is devoted to "The European Powers and the Wilhelminian Empire, 1890-1914," followed as late as 1960. In his last sentence, writing of the outbreak of war in 1914 and its terrible consequences for the German people, the professor remarks: "Just how terrible it was will be shown in the next volume of this work." This is yet to be translated.

Anyone who reads all that Professor Ritter had to say must acquit him in the end of the charge of having whitewashed Prussian militarism. But as the professor sadly points out, it is one of the great paradoxes of history that eventually Hitler did make the army abjectly subject to civilian authority:



> . . . since Hitler, nominally a civilian, was actually the archmilitarist incarnate, the life of Germany was militarised through and through in the utmost measure, and German policy took on a radically aggressive character beyond the dreams of even the Prussian soldier kings.

Rosenberg: singularly muddled

One of the civilians with whose ideological help Hitler sought to justify the Wehrmacht's invasion of Russia was Alfred Rosenberg; and we can be grateful to Mr Robert Cecil, reader in contemporary German history at Reading university, for having composed the first full biography of Rosenberg in the English language. It was Hitler's

EXTRA!
8 PAGE SUPPLEMENT ON BOATS FOR EVERYONE!

For beginners and experts, the June issue of Practical Boat Owner features the first part of an entirely new series of special supplements clarifying a wide range of currently available craft in both power and sail.

With special notes, assessments, pictures, drawings, prices and dimensions, the series is the first of its kind we've ever published. Each supplement—virtually a mini-magazine on its own—will be part of an ever-growing source of information for everyone buying or looking for a new boat—large or small.
Thinking of a dinghy, a sloop, a cabin cruiser, or a low-cost runabout for family pottering? Then get in at the beginning. Start with Number One of this outstanding series.
Specially produced, bound into your copy of *Practical Boat Owner*, it comes to you at no extra cost.

ALSO IN THE JUNE ISSUE:
Making a speedometer—Scottish Coastal Series—Along the Whisky Run . . . Inland Waterways Series . . . Making your own sails.

PRACTICAL Boat Owner
Britain's biggest-selling boating magazine NOW at your newsagents 30p

old associate Rosenberg whom he commissioned in March, 1941, to draw up a blueprint for the administration and political configuration of the territories that he anticipated would fall into German hands that coming summer and autumn. It was Rosenberg who defined the common aim in a directive to his Reich Commissioners in the east as being "to free the Reich for centuries to come from the pressure of Great Russia."

Rosenberg was hanged at Nuremberg. He was a singularly muddled man, inhabiting for the most part a world of excessive fantasy, peopled menacingly by Slavs and Jews. Mr Cecil writes of Rosenberg as a "classic example" of a man who had frankly contemplated a brutal fate for large groups of his fellow creatures but, unlike some fellow Nazis, shrank from carrying out his lethal programme when he was given the opportunity to do so.

So far, so good

THE CHILDREN ON THE HILL
By Michael Deakin.
Deutsch. 125 pages. £1.45.

This book would give any parent an inferiority complex. Maria (names have been invented so as to protect the family's privacy) makes do with four hours' sleep so that she can do her housework at night and have the whole day to devote to her "process" of bringing up her four children. The process is obviously highly individual, but based on the Montessori system: Maria, whose own Italian childhood appears to have been beastly, was determined that her children should be brought up free from the pressures of violence, fear or jealousy. The parents —or at least Maria—are constantly available. They do not make regulations for their own convenience; they let their children do what they want to do (even when it means playing the same record non-stop for two days or throwing a rattle out of the pram every five seconds). When film cameras came to their home, a cameraman told Paul, aged five, that he was naughty when he spilt some paint: the child did not understand the word or even the idea.

Utter self-sacrifice is noble, and in it, as Mr Deakin and countless religious philosophers before him have pointed out, there is release. But it cannot be expected of all parents that they should not answer the doorbell when teaching their children, should make no house rules to protect their sleep or their carpets and should never fail to answer every maddening question. Nor should they be made to feel guilty when they do so. But Maria and her husband are not smug pediatricians laying down uncomfortable law for other luckless people to follow: they practised without preaching. And the understanding they reached, rather than the results, is worthy of dissemination.

Other parents are, of course, most likely to feel guilty not because they make arbitrary rules but because Maria's children are prodigies. Christian, at 11, was enjoying university-level mathematics. Adam, at 7, won—easily—a national piano-playing competition open to all under the age of 18. The remaining two children are still very young, though they are both obviously ahead of their age.

This, in turn, provides the conscience-stricken parent with the most altruistic of criticisms. No television, no comics, no sheriff's gun-battles made the eldest a fish out of water in his village school: he hated it. Precocity creates its own handicap: youth. But success, "getting ahead," is not what the process is supposed to be about: mathematics and music are just the children's methods of self-expression.

The process also purports to have provided these children with a moral development as advanced as their precocity in other spheres. Mr Deakin quotes the children's reactions to their difficulties, which certainly seem to be amazingly penetrating and well-balanced. But how deep is it all ingrained? Can it withstand, or make up for, the injustices and conformity of the outside world? Even Mr Deakin is not completely starry-eyed: he knows his can be only an interim report on what may well be an unnatural phenomenon. "As the man said when he fell from a ten-storey building: 'So far—so good.'"

Model ally

THE DOOMED DEMOCRACY
By Vera Olivova.
Sidgwick and Jackson. 276 pages. £4.50.

Hitler hated Czechoslovakia with the passionate intensity of a frustrated pan-German from Austria who had never forgiven President Masaryk for incorporating 3.5m Sudeten Germans into his new state in 1918. After some hesitation, it had been agreed at Versailles that the Sudetenland should go to Czechoslovakia to give the new state a better strategic frontier with Germany. Some prophetic voices, like that of the dissident Czech Social Democrat, Bohumir Smeral, warned against this. Even before 1914, Smeral had said that to restore the historic Czech state with a third of its German population would be a "highly risky gamble with the very existence of the Czech people." Of course this huge German minority might not have proved to be Czechoslovakia's Trojan horse if it had not been for Hitler: relations between the Prague government and Weimar Germany were very good. But the economic slump of the early 1930s hit the industrialised Sudetenland harder than other parts of Czechoslovakia. It provided extra anti-Prague votes for Henlein.

Worse still, these Sudeten Germans provided Hitler with a sort of moral excuse for putting pressure on Czechoslovakia. They also, according to Dr Olivova, provided Czechoslovakia's friends in the west, Britain and France, with an excuse not to come to its defence. Dr Olivova, whose marxist bias hardly shows at all, is a trifle hard on Chamberlain when she states that Czechoslovakia was a "mere pawn on the world's chess board" and that its defence had become

The crumbled defences of Czech democracy

"an embarrassment to its partners." Perhaps one of the lessons of what happened in Europe in 1938 and 1939 is that if it does not want to be squeezed out in that world chess game, a small nation should not be a model, helpful ally like Czechoslovakia, but a bit of a bloody nuisance. Dr Olivova, perhaps understandably, does not share this viewpoint. Ironically, it seems to have been borne out by her country's tragic experience with another power 30 years later. But her book is a gripping account of central Europe's only functioning democracy between the wars.

Natural resources?

EXISTENTIALISM
By John Macquarrie.
Hutchinson. 264 pages. £5.

This addition to Hutchinson's very useful "Theological Resources" series merits a place in the set both because of the influence existentialist thought has had on many recent theologians and because of the use made of it by Professor Macquarrie himself in his "Principles of Christian Theology," where he sets out to construct a new type of natural theology and give a new context for the meaning of theological language. The book gives a very clear introduction to the subject. Its method is first to characterise the general approach, and then to dwell on themes which have been central to those thinkers who can be roughly characterised as existentialists. Rather than take each main exponent in turn, Macquarrie picks one or other as characteristic for a specific topic, and then relates others to him. No one could make Heidegger easy to follow, but the author comes as near as possible with a series of writers who are not concerned with neat classifications but are struggling to put into words the depths of personal human experience.

Professor Macquarrie gives some assessment throughout, and ends with a short evaluation. He sees the chief weakness in the sphere of ethics: their concentration on the individual makes existentialist thinkers ignore the interrelation of groups, and their intense concentration on the formal aspects of personal authentic choice gives no guidance as to what one might choose or why. One may also doubt whether existentialism by itself provides an adequate language for theology, for all the insights it gives into certain aspects of reality. It has the inestimable advantage over philosophies of nature of examining reality as it affects man; but its concentration on the personal self, with a comparative neglect of ethical, historical and scientific values, weakens its power to express the meaning of reality as a whole.

Assembled left

RADICAL POLITICAL ECONOMY
By Howard Sherman.
Harper and Row. 447 pages. £5.85.

This is an attempt, perhaps the first, "to gather into a unified whole all the contributions toward political economy of the recent outpouring of new left, radical and nondogmatic marxist thought." Since its author is a competent economist and an obviously open-minded person, the attempt is very welcome. Without agreeing that the cure for underdevelopment is socialism or that profits are unjustified, one still wants to know what recent radical writings have contributed to our understanding of the world.

The answer, sadly, is not very much. Professor Sherman certainly deals with important problems and ably expresses marxist, though also democratic and egalitarian, attitudes to them. But neither those who share nor those who have chosen to reject his attitudes to poverty, pollution, imperialism, racialism and so on will find that they learn much. This is really a textbook addressed to the young. For them, and particularly if they are Americans, it provides an admirable mixture of left-wing description, analysis and invitation to argument. They will regard as penetrating and idealistic what their elders would brand as naive. To treat the evolution of capitalism, its functioning, the socialist movement, the workings of the socialist states and communism (in the marxist sense) in a way which allows for the interaction of economic, political and social phenomena all in one introductory book is a task which would compel a certain amount of simplification on the part of any author.

Small world

ANTIQUES IN MINIATURE
By Katherine Morrison McClinton.
Barrie and Jenkins. 192 pages. £3.50.

Miniatures, Miss McClinton points out, come in all sorts of sizes. She aims to concentrate on the in-betweens—too large for dolls' houses and too small for children—which are usually the finest, the rarest and the most expensive. That might explain why one of the most beautiful and famous antique dolls' houses in England—at Nostell Priory in Yorkshire, with furniture by the young Chippendale—is accorded only a brief mention. This omission is disappointing, as many of the pieces illustrated are in fact under six inches high. But otherwise the choice of illustrations is quite admirable: an astonishing variety of chairs and chests, a tiny roll-top desk, a rather larger Sheraton sideboard some 20 inches wide and a fine set of Hepplewhite dining-room pieces only three inches high. This book was originally published in America, as is immediately apparent from its spelling and its terminology (highboy, secretary) and there is perhaps too great an emphasis on American furniture. But Dutch and English cabinet-makers are well-represented.

Cabinet-makers put together a good deal of miniature furniture as samples. Silversmiths, porcelain factories and potteries were less likely to do so, but some fine miniatures are illustrated: a Staffordshire dinner service, a Meissen clock under two inches high and of course the famous Nuremberg kitchens stocked with miniature pieces of pewter. Silver toys—coaches and soldiers—were made on the continent in the sixteenth and seventeenth centuries and the fashion spread to England: but there the miniatures were usually copies of domestic silver. There are some particularly good photographs of miniatures side-by-side with almost identical full size teapots, sugar sifters and tankards.

Antique silver, for humans and Lilliputians

5 CENTURIES OF PROGRESSIVE BANKING

De Neuflize, Schlumberger, Mallet — Bank Mees & Hope N.V.

The negotiations that were announced some time ago between Bank Mees & Hope N.V. and De Neuflize, Schlumberger, Mallet have resulted in an agreement under which BMH takes a 28% participation in the capital of De Neuflize, Schlumberger, Mallet S.A., the holding company of the NSM Group.

This operation, which is subject to the approval of the authorities concerned, will be realised in two phases :

Bank Mees & Hope will at once acquire a 16% interest in NSM, S.A., mainly through the subscription to a capital increase reserved to BMH. At the same time, BMH will subscribe to an issue of convertible debentures which, after complete conversion, will ensure BMH of the remaining portion of its capital participation.

The major part of the funds so received, i.e. about Fr. Frs. 30 million, will be applied to further develop the activities of the Banque de Neuflize, Schlumberger, Mallet.

It is envisaged that eventually NSM may take a participation in the capital of its Netherlands partner.

Messrs H. L. Guldemond and Dr W. Van de Wardt, General Managers of Bank Mees & Hope N.V., will become members of the Conseils d'Administration of the holding company and of the Banque de Neuflize, Schlumberger, Mallet. Besides, a close co-operation will be brought about between the various departments and services of the two banks. The following additional particulars are given to the above press release.

As a result of the placement of new shares, the capital of the holding company de Neuflize, Schlumberger, Mallet S.A., now amounting to Fr. Frs. 70 million, will be raised to Fr. Frs. 80 million. In addition, Bank Mees & Hope N.V. will acquire about Fr. Frs. 2.6 million nominal of shares already outstanding. In both instances, the price at which the transaction is concluded amounts to Fr. Frs. 250 per share of Fr. Frs. 200 nominal.

The issue of convertible debentures amounts to Fr. Frs. 15 million of which Fr. Frs. 14 million is placed at par with Bank Mees & Hope. The remaining debentures are placed with Delbruck & Co., with whom NSM has cross participations of about 7% each.

The loan carries a coupon of 6¾% and can, as from 1st July, 1973, at all times be converted into ordinary shares, when Fr. Frs. 200 nominal debentures, together with a cash payment of Fr. Frs. 50, will give the right to acquire one share of nominal Fr. Frs. 200 NSM, S.A. The period of the loan is 8 years at most, and redemptions will be made in four equal instalments, the first of which falls due on the 1st July, 1977.

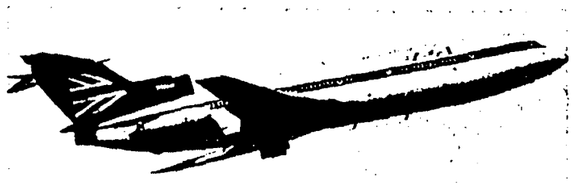
Business Brief

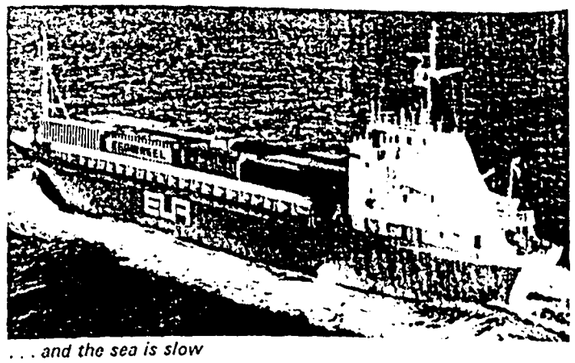
Take a tube to Europe

The Channel tunnel looks like being built. The latest report on its feasibility is due to be handed over to the French and British governments. The enthusiasm of both governments and the private participants who will put up the risk capital has been rising. But more needs to be decided than the mere construction of the tunnel. To maximise the return on the investment—perhaps to justify it at all—advantage must be taken of the higher train speeds of the new railway age. That needs agreement on huge inland rail investments between the British, the French, the Belgians and possibly the Germans and the Dutch too; and co-operation between European railways has not been encouraging. It could be a stumbling block.



The cost of the project therefore looks like being well above the £300m that has been the talking point for some time. That figure would build the tunnel, but the necessary extra rail investment inland could add anything up to 30 per cent. If, however, the tunnel is not built, the shipping industry will have to find £400m for ships for the growing sea trade across the Channel.

As for the construction of the tunnel itself, the figure of around £300m for a 32-mile tunnel is roughly comparable with the £10m a mile on the Victoria Line of the London underground and the first stage of the Fleet Line, London Transport's next large investment. Tunnel costs vary enormously, depending on what terrain is being tunnelled through, and the risk of water seepage and other calamities. The Channel tunnel will go through chalk virtually all the way, which is thought to be easy going.

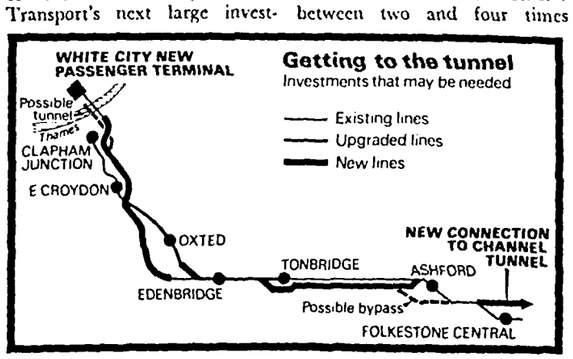


Tunnel builders are continually talking of breakthroughs in technology—it is significant that the French have been spending four times as much on research as the British—but progress in bringing the cost down is slow. Before going ahead with the whole tunnel short stretches are likely to be built on either side of the Channel to see just how fast it can be done.

Although the road lobby is still pressing for a bridge, a tunnel is the more likely choice. It is much cheaper and would not interfere with shipping, although, until a replacement for the internal combustion engine is found, there will be no chance of driving cars through it. Fumes raise too many dangers. An immersed tunnel (ie, one built in section and lowered into a trench on the seabed) has been ruled out in favour of a bored tunnel, again at least partly in order not to interrupt shipping.

If the British Government decides to go ahead, then it probably ought not to go ahead with its plans for a third London airport at Foulness. The one is not a direct substitute for the other: between two and four times as many passengers are expected through Foulness in the 1990s as the tunnel will be carrying by then. But they are the sort of passengers most likely to switch from air to surface transport; two-thirds of the 16m people who went through Heathrow last year were merely on short hops to and from the continent, and if they can cut out the miseries of the sea crossing a large number will be tempted to do what they did when the rail service to Manchester spectacularly improved a few years back—go by train.

Flying's expensive . . .



. . . and the sea is slow

The financial incentive to switch will be there. The single air fare to Paris now is more than £14. For the rail journey by the tunnel to Paris, a fare of around £8.50 seems likely. The Government arrives at its most recent estimates of the possible traffic through Foulness only by assuming that the number of aircraft using Heathrow and Gatwick is deliberately held down in order to force them out to Foulness. But if sizeable numbers of passengers prefer to go to the continent by tunnel, rather than to traipse out to the Essex marshes, and if the increasing use of quieter jets reduces the restrictions on the use of airports at night, can Mr Peter Walker justify spending what looks now like well over £600m on an airport with only two runways (not the original four)?

Passengers are now expected to produce by far the biggest revenue (probably twice that from freight) when the tunnel opens, at the earliest in 1979. But there is a wide variation between high and low estimates, depending on the back-up investment inland. With no investment beyond that on the tunnel itself, passengers could not exceed 4m a year, because commuters have tied up all the rest of the available capacity on the Southern Region of British Rail.

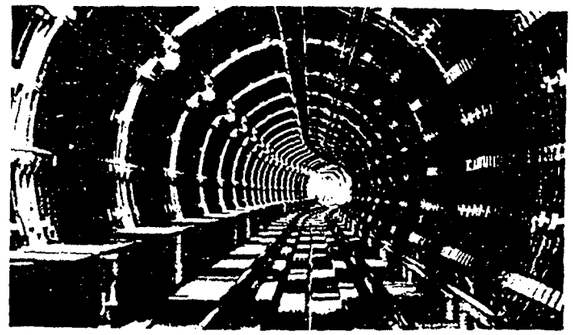
How much traffic?

The 4m would be only 500,000 more than the number crossing the Channel by the sea route now, and would not justify the cost of the tunnel. But with a small extra investment, to provide extra capacity on the Southern Region and a journey time of 4 hours from London to Paris, the number would be 5m, and the more investment inland the better the numbers would be. Clipping another quarter of an hour off the time, bringing it down to 3¾ hours, would bring the estimate up to nearly 7m passengers, and the cost, over and above the tunnel itself, to £30m; what the railways call an intermediate journey time of 3 hours would produce 10m passengers a year, and, using the advanced passenger train (the 155 mph train being developed by British Rail, which can corner 50% faster than existing trains), there would be an estimated 17m passengers.

Correction: The estimates given for earnings in the north and south of Ireland in last week's Business Brief were not strictly comparable. The averages for men only in late 1971 were £28.91 a week in the north, and £28.07 in the south.

These guesses assume that the airlines will not cut their fares, and that proved true of British European Airways on the London-Manchester route, where British Rail now has 85% of the market. Increased rail speeds are making trains competitive with air in Europe over distances up to 250 miles, another example being Paris to Brussels, where almost 90% of the traffic now goes by rail. The faster speeds being talked about—187 mph in France, where 200 mph has actually been done in trials—might make rail competitive over distances of up to 500 miles. The low air fares charged on really competitive routes in the United States suggests, though, that sooner or later the airlines will have to cut fares to meet the competition.

The tunnel will have less flexibility than air on some of its pricing. The fare per mile from London to Brussels is higher than from London to Amsterdam, although Brussels is nearer, because those visiting Brussels are nearly all the captive business market, but the cheap fare to Amsterdam is intended to attract tourists. The tunnel trains will have to pass through Brussels on their way to Amsterdam, and so can hardly charge a higher fare for a shorter journey.



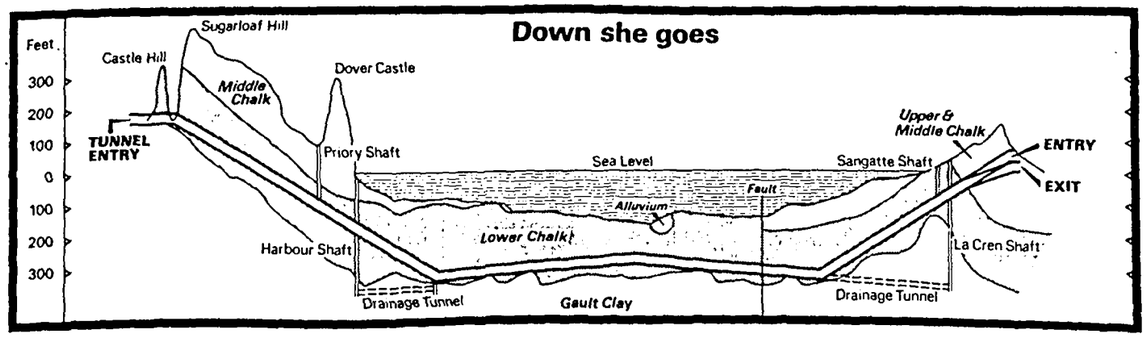
On the other hand, trains may become attractive on charter holiday routes. The railways think the price could be highly competitive, and many passengers might prefer an overnight couchette to the agony of a 4 am flight from fogbound Gatwick. Highly successful charter trains run now from northern Germany to Bavaria and Italy, while in the United States couchettes to Florida, complete with shower, are making a comeback. Sometimes a train could get nearer the tourist's destination.

Freight traffic is less susceptible to changes in speed, and the probable tonnage through the tunnel is currently put at 5m tons a year, twice the present rail-sea traffic. This could still be well off the mark, however, since sea freight rates are notoriously complicated, and it is almost impossible to find what people are really paying. Of course, northern France around Calais is not an important market, compared with the industrial belt from the Dutch ports up the Rhine into Germany, and many freight customers will prefer to ship to low countries' ports, and then by barge along the Rhine.

Where to?

Of the traffic coming into Britain by the tunnel, about half will be destined for the London area, largely perishables in special wagons. The rest will consist almost entirely of containers and bulk cargoes, reflecting the demise of the wagon-load. The development of this business will depend on the co-operation that can be reached between European railways and customs officials.

This co-operation will also be needed to promote passenger traffic. One important issue is the timing and priority of French railway investment. The French want to lay a new rail down from Paris to Lyons, which would be straight all the way, allowing speeds of 187 mph. This has been the French railways' pet project for some time, and is vital if they are to fend off competition from the French aerotrain, which should be capable of much faster speeds than any steel-wheel-on-steel-rail. At the same time there are plans for a Y-shaped junction and extra track to speed trains coming out of the continental end of the tunnel to Paris and to Brussels—and from Brussels on to Holland and Germany. Should this new track be for passengers only, which would cut journey times, or should freight be taken into account?



You tunnel away and it comes out like this

On the British side of the tunnel an investment of £50m-£80m is talked of to clip 15 to 20 minutes off the journey to the English coast. This includes several new stretches of track, and a terminal at White City to ease congestion at Victoria. But the distance from London to the coast is half that from the French coast to Paris, and the British may feel it is not worth improving their stretch of the route unless the French do the same to theirs.

Similar difficulties lie in wait over the question of gauges, couplings, signalling, and so on—all involving thorny questions about who is to pay for them. Though the route to the new Nine Elms-Covent Garden site might be improved to take continental wagons, these larger wagons are unlikely to be able to travel beyond London to the midlands and north. Some European countries might resist building special wagons just to travel on British Rail. Another necessity is to instal the optimum in signalling from the start, because the cost of changing over to more sophisticated signals the faster trains will require would be substantial.

Between 10% and 30% of the cost of the tunnel is to be equity-financed, with the remainder taking the form of loans backed by government guarantee. Channel Tunnel Investments, the former Channel Tunnel Company, whose shares yo-yo with every rumour about the tunnel, is one of about 20 companies in what is known as the private group. This group is led by Rio Tinto-Zinc on the British side and by Situmer on the French side. They have just submitted a reappraisal to the two governments. All in all, their studies have shown the tunnel project may be much broader in scope than initially expected, but that the extra revenue could justify the cost.

It's going to be a nicer day at the office.

The office can never have quite the appeal of your club. But it's constantly becoming a more enjoyable and rewarding place to spend your days, 9 to 5.

Improved management techniques and advances in office equipment are daily reducing the grind and tedium that could turn the most dedicated of us into clock watchers.

Look at one example. The improvements in that simple, frustrating and expensive procedure of getting something typed. Improvements brought about by the introduction of IBM's advanced office products.

A typical system employing these products allows your girl to type any item on a simple machine without becoming upset about making mistakes. If she makes a mistake or if she needs to make corrections or amendments she simply overtypes (no erasing!) because the whole draft is being recorded onto a magnetic card or tape. When everybody's happy with the draft she just presses a button on the machine and the item is typed out automatically. No more slaving over the perfect final copy: the machine does it all.

Such systems mean that your secretary can produce a first class job every time – in about a quarter of the time – and is free to devote more time to more interesting and useful duties.

These new office products can offer any office a system (we call it the IBM Word Processing System) which will not only lift efficiency. It will also increase job satisfaction and involvement and reduce frustration throughout the company.

And that's why we feel an IBM Word Processing System is more than just an office improvement. It is a working example of how advanced technology can be applied to make life a little better for all of us.

BUSINESS

Inflation's still getting worse

Britain's retail prices rose by nearly 1 per cent in April alone—and there's much more to come yet

When Mr Barber cut purchase tax in his budget on March 21st, he reduced the British cost of living by 0.5 per cent. Yet in the following month it rose by close on 1 per cent. It did so even though some important foods, notably milk, eggs and tomatoes, as well as goods bearing the higher rates of purchase tax, went down. Without these reductions, in fact, the index of retail prices would have risen by nearly 2 per cent last month.

One must quickly explain that April is a bad month for the index ; indeed, in the past few years, the worst. This is because it has to take in the lumpy annual rises in local rates and council rents. When last year there were also increased charges for school meals and milk, with none of this April's offsetting reductions, the rise was an astonishing 2.1 per cent in the one month. This time the April index suffered from an extra penny on the pint for some beers, and an unseasonal 10 per cent rise in coal prices as a direct consequence of the miners' strike. Even so, in April of both this year and last the main thrust came from rates and rents. Since Mr Heath's Government came into power, local rates have risen by 27 per cent and council rents by 18 per cent. A policy of fairer costing and you-pay-for-what-you-get is in direct conflict, in the short term anyway, with efforts to curb price inflation. And since the measure of retail prices includes indirect taxes—of which rates are one form—but not direct taxes, the Government's policy of shifting away from direct to indirect taxation results in a recorded increase in the cost of living, even though the individual may be the better-off for the change.

Because of the exceptionally steep rise in April, 1971, the increase in the cost of living over the latest 12 months, which is the most commonly quoted measure of the prices pace, has narrowed to 6.3 per cent. But ministers will be ill-advised if they start chirping about this. There is no evidence that inflation in Britain is any longer abating. On the contrary, it seems to be accelerating again.

The disturbing pointer to that is the Department of Employment's most trendy—and, to be fair, most useful—price indicator. After the exclusion of seasonal foods from the retail price index, this measures the changes (expressed at annual rates) in successive six-month periods. The resulting figure in the six months to May, 1971, was 11.7 per cent ; it then declined smoothly until it reached 5.2 per cent in the six months to January, 1972. But the tide has now turned and the indicator has moved upwards, to 6.2 per cent in the six months to April, 1972.

This has been happening while the Confederation of British Industry is still keeping its members to its 5 per

cent limit for price rises. The Government still hopes the CBI will prolong some sort of restraint after July, but its chances recede as industry sees that wage inflation is under way again. In any case, what the CBI can do has only a limited effect on retail prices as a whole. Manufacturers' prices are not the main villain.

Our table illustrates this point. It groups the categories of goods and services which make up the official index according to their price increases over (1) the past 10 years and (2) the past year. The thick line across the table indicates the average price increase over each period: nearly 60 per cent over 10 years and 6.3 per cent over one year. So above-the-line entries indicate above-the-average increases, below-the-line entries are the bargains.

Over the 10 years three categories have more than doubled in price: publications, coal and fares. All three had more than average rises in the past year. Some foods went up even more. With one notable exception, the 10-year leaders—publications, foods, rent, rates, fares, coal, electricity and postal charges—are also the one-year leaders. The one exception is the post office tariff, which the Government has managed to hold down in the past year because it beat the postmen's strike. Again with one exception, all nationalised industries directly serving consumers have had above-average price rises in the past decade. The exception has been the gas industry, which has been the beneficiary from natural gas and from the fast expanding central heating market.

By contrast, most manufactured non-food goods have had more modest increases: not only in the past year under the influence of the CBI's price freeze, but over the 10 years. The cost of motoring, which includes the purchase of cars as well as running costs, rose by only a third; the prices of television and household appliances by no more than a fifth—and some are down in the past twelve months.

The conclusion is simple. Unless the Government can hold wage increases in public services, the cost of living will continue to rise, even if the prices of manufactured goods are frozen. This will become even more true as Britain moves even closer to a service economy. The CBI's restraint on prices undoubtedly helped in the successful curbing of price inflation in the second half of last year. Wage inflation was also being dampened in these months, helped by the fact that something was seen to be being done about prices. But then came the surrender to the miners.

The latest statistics show that Britain is now inflating faster than any of its main competitors, with the possible exception of Holland. Mr Heath's Government cannot for much longer hope to pass the buck for its lack of an incomes policy on to industry. It really must face up to having a mind of its own. As Mr Nixon could turn round in his tracks and admit the need for a wage freeze, and win electoral popularity for doing so, there is room for Mr Heath to manoeuvre.

It's red again

The railways are bankrupt once more, and seem to be pretty bankrupt of ideas for extricating themselves from the red

British Rail's annual report, published on Wednesday, confirmed a £15m loss in 1971, and as the losses are likely to get steadily bigger, so the railways will be asking for more and more subsidies. The Transport Act, 1968, steered through the House of Commons largely by Mr Richard Marsh, now British Rail's chairman, gave the railways a new chance to get in the black by wiping out £150m a year of debt payments, and offering a subsidy of another £60m a year for unprofitable services. In return BR was not to resort to deficit financing, which is just what it is doing now.

The downhill slide could be predicted even in the first two years under the new Act, when the railways reported profits of £15m in 1969 and £9.5m in 1970. In each year, £10m of this was capital grant from the Government, which probably should not have turned up in the profit and loss figures at all. Anyway, just to break even was not going to be enough to cover investment and savings for a rainy day. Last year BR had such a rainy day, with the economic recession hitting bulk traffic like coal and steel, which is the profitable side of freight business, and also even the lucrative inter-city passenger trade. Then the price freeze, introduced last July as part of the Government's deal with the Confederation of British Industry, knocked British Rail's only hope of pulling itself into a better financial shape. What it needed was to continue the trend towards selective price increases (only about 3 per cent of freight traffic goes by the published schedules now).

British Rail should be lobbying the Government for some freedom to raise its prices selectively again, even if the total across the system is kept within 5 per cent. It would be better than nothing. But Mr Marsh maintains in his report that the railways are not as other businesses, and so cannot hope to make a profit. However, recession and the price freeze hit a lot of other industries, too, and there is more that the railways could do to help themselves. Given some recovery in the economy, if there is some gradual relaxation in the CBI's freeze, at least another £50m a year in revenue should go British Rail's way without much extra effort.

But BR should also show more enterprise in tapping new markets. There is a number of small investments in new railway lines that could bring extra traffic into the system. It is generally true in transport that supply creates demand, though that depends on the kind of supply provided, and nostalgically hanging on to marginally profitable traffic often hinders the promotion of growth markets. There are also all kinds of economies in operating costs that could be achieved: by automation, by greater utilisation of rolling stock (freight wagons travel only 3,000 miles a year, whereas lorries do around 10,000 miles), and by selective cuts in services.

Traffic that pays: long distance expresses and bulk freight

And doesn't: commuters

BR does not use its railway assets for enough non-railway ventures. Property development is still slow, although everyone knows it has been easier to make money in property than anything else, and BR is one of the country's largest landowners. Stations ought to be great centres of commercial activity, but the annual report reveals that there are only about 250 of them with refreshment rooms, let alone more imaginative sales outlets which might attract railway business into the bargain.

British Rail has been making progress, albeit slowly, on many fronts, and it is disappointing that with one year's setback it should give an impression of losing heart so readily and return to the old pleas for bigger and bigger subsidies. To cut its freight business in half would add only 1½ per cent to traffic on the roads, so relatively insignificant have the railways become in the national transport scene.

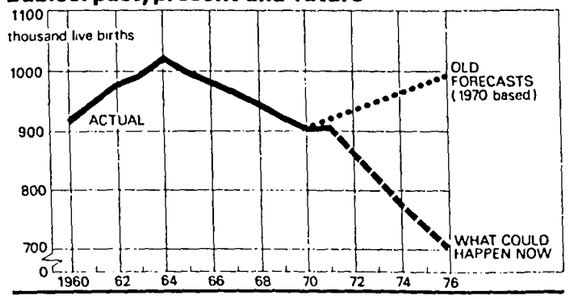
As for passengers, the average distance travelled is only 20 miles, and many of such journeys can be done much more flexibly, more cheaply and within the same time by bus: that is, as long as the buses have an exclusive right to the track, which closing rail tracks would give them. One rather sub-standard bus lane from New Jersey into New York has been managing 25,000 passengers an hour, all with seats. This is as many as can get seats on a single underground track, and twice that number could be achieved by bus with extra investment. The New York Port Authority Bus Terminal handles more passengers than Grand Central Station.

The motorway network is going to boost bus traffic enormously. Since the M4 was extended in December, the National Bus Company has operated a bus service from London to Bristol which takes only a few minutes longer than the train. Coach fares are about half rail fares. The NBC has a virtual monopoly of the inter-city bus business, which is only worth about £10m a year at present and is scattered among many individual subsidiaries. But the new chairman intends to create a national system under a single management. In the United States the inter-city bus business is far more important than rail traffic, although the larger distances should be in rail's favour. The American bus companies attribute much of their success to the freeway system.

Bye bye, baby boom

The birth rate in Britain, which had been falling only very slowly, is now coming down with a bump. What's happened?

When prophecies of doom reach a point of hysteria the hysteria itself creates, sometimes usefully, the changes in technology, attitudes and market incentives that lead to over-correction. The outcry against increasing the world's population has been resounding now for about a decade, and will be heard very loudly at the United Nations Conference on the Human Environment in Stockholm next week. Simultaneously, it has been revealed that births in Britain so far this year have been 8 or 9 per cent lower than had been expected, after falling 1 or 2 per cent below previous expectations for some years.



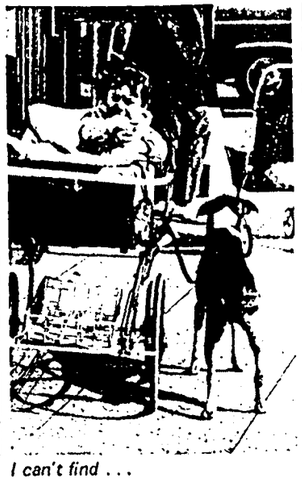
Until the past few months it had been conventional to say that Britain was most unlikely to reach a state of "zero population growth" in this century, but now the signs are that it may reach it next year. All over the developed world girls born in the postwar baby bulge of 1947-50 are at a peak fertility age of 21-25. It is soon going to be discovered that they are breeding less than was originally forecast, although this has been disguised in most countries' figures by the once-for-all factor of the trend towards earlier cohabitation.

Will a drop in births during the 1970s really be so surprising? During the hysteria of the 1960s the growth in birth control technology and changes in attitude have been bigger than any of us would have forecast 10 years ago: the pill, posher abortion clinics, a much higher technology of birth control information, far earlier and more specific sex education, the inculcation of knowledge into even the stupidest and youngest couple of how not to make babies, more than tacit support by governments, new attitudes among Roman Catholic laity (despite their church), and above all replacement of the ethic of don't-talk-about-sex by do-talk-first-about-contraception. Sadly, the troubles of the generation gap, partly caused by the sheer numbers of the boisterous while the postwar baby bulge was passing through teenage, have made some people think that rearing children is not the fun that it is.

Among the working classes the period when a child was an earning asset, from age 15 to about 20, has been shortened by longer schooling, by earlier home-leaving and the evolvement of high spending among the young. It is usual for demographers to say that these trends will not stop a continuing and disastrous increase of population in poorer countries, especially when the children saved during the huge drop in infant mortality rates in the 1950s and 1960s reach reproductive age. But they should note the dramatic, sudden and totally unforecast halving of Japan's birth rate between the late 1940s and early 1950s. It came when the Japanese could first afford contraceptives, because they were moving through a stage of gnp per head at about one-fifth the present Japanese level—which is just about what many developing countries should reach during the present decade. Even in countries like Mexico, where the population is rising at around 4 per cent a year, the size of families has often been halved in a generation, particularly among city types.

If births do drop worldwide, the first results will seem good. Then there will be the worry that a dearth of births in, say 1978-98 will cause a missing cohort of one age group of workers through the next forty years. In a

Babies: past, present and future



thoughtful article in the Daily Mail this week Professor Michael Abercrombie, a member of Mr Heath's advisory council on population, was quoted as ascribing Britain's recent fall in birth rate (probably wrongly) to unemployment, but he went on:

> . . . if this fall in birth-rate continues at this level, then a different set of calculations will have to enter into our discussions. For the fear will then be: are we going to watch our population dwindle away? And this problem will have to be examined with as much urgency as the original prospect of over-population.

Some might say this with rather more urgency because, as long as great tracts of the world, and even of the British Isles, stand empty, there is always somewhere for the surplus to find room. But there is no such easy solution to the difficulties raised for an industrial country like Britain by a rapidly ageing population, which is the prospect that we could face if the birth rate continues its present downward trend for too long. With people retiring earlier and living longer, the purchasing power of their pensions depends on there being a young, active working population to support them. Automation can, up to a point, close the gap. But a lot of the Government's plans, which are still based on assumptions about an explosive growth in population, will need to be looked at again. And so, perhaps, may its immigration policy. These are problems that no one has needed to consider seriously since the 1930s.

With fewer of us being born . . .

I can't find . . .

cii
COMPAGNIE INTERNATIONALE POUR L'INFORMATIQUE
68, route de Versailles, (78) Louveciennes. Tel. 951.86.00

IT'S ABOUT TIME WE GOT INTRODUCED!

Who are we? Cii is the French computer manufacturer. In the past five years, Cii, backed by major industrial groups such as Thomson, C.G.E. and Schneider, has devoted considerable R & D resources as well as large-scale industrial investments to the launching of new series.

PRODUCTS:
Cii offers a comprehensive range of general-purpose computers featuring advanced technology and software, as well as highly competitive costs (Iris 45, Iris 50, Iris 60 and Iris 80), thus Cii has an efficient solution for E.D.P. requirements of all firms, whatever their size. In automation and process-control applications, Cii's leading position has been confirmed by the commercial breakthrough of Mitra 15 mini-computer.

ORGANIZATION:
Cii has developed specialized teams providing an all-level efficient service and illustrating the fact that a good computer solves a lot more problems than it raises.

MARKETING:
Our rising sales in France have been accompanied by even greater progress abroad; thus, from '70 to '71, our exports have doubled, mainly with private users. These co-ordinated efforts have proved to be fruitful. They made possible co-operation agreements with other manufacturers and granted license agreements both in Europe and U.S.A.
Today, Cii ranks as a full partner in the world's computer industry, and its name, Compagnie Internationale pour l'Informatique, is well deserved.

Don't write off Northern Ireland.

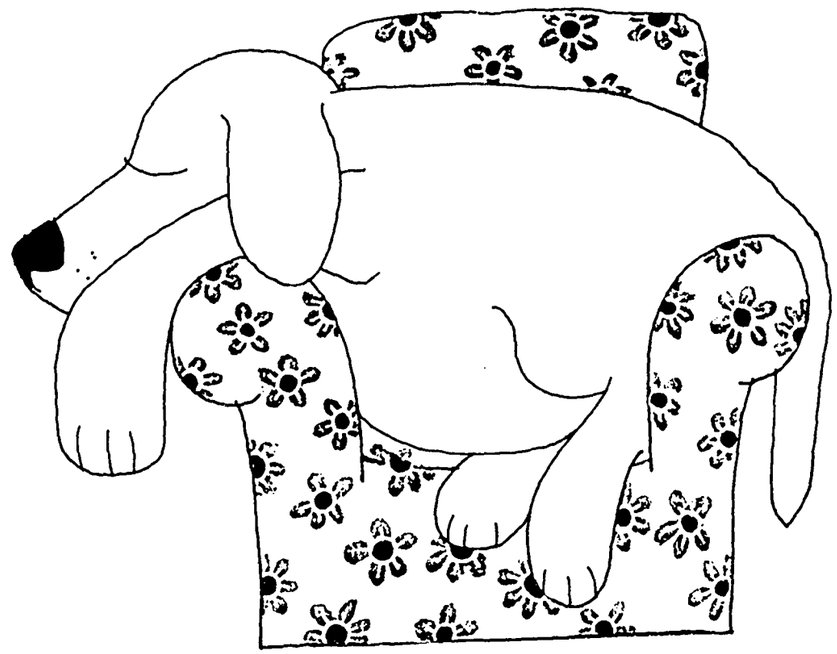
Progress is being made in a most important area.

Every day tens of thousands of Northern Ireland Protestants and Roman Catholics work together, and, as the record shows, work hard.

In the two years 1970 and 1971 manufacturing output rose 13% (1970: 7.2%–1971: 6.1%).

Productivity in 1971 was up 6.7%.

In 1971 the number of days lost per 1,000 workers because of manufacturing disputes was less than one third of the national average.



Last year (1971) 7,000 new manufacturing jobs were negotiated in Northern Ireland, largely through the expansion of established firms. This level of job creation, one of the highest ever recorded in Northern Ireland in the course of a single year, was achieved despite the 1971 investment trend in Europe.

These are sound reasons for expecting expansion to continue–so long as industrialists and businessmen continue to look behind the headlines and into Northern Ireland's industrial record.

MINISTRY OF COMMERCE FOR NORTHERN IRELAND

Fido

You know how it is? You get him when he's just a bundle of fur and you give him a name. How were you to know he'd grow the size of a Shetland pony? Something like that happened to Flight Refuelling. At first that's all we did. We refuelled aircraft in flight. We pioneered it and we are still the world's experts. We could have rested on our laurels but we didn't. We moved into other fields, fields as diverse as electronics and nuclear engineering. Now the bundle of fur we called Flight Refuelling is quite a small part of our activities; albeit an important part. The name is misleading. We could change it but we don't think we will. So when you want a contaminometer or a flexible coupling, or any of the many things we make, and discover the best people to approach are Flight Refuelling Limited, don't be surprised. Just remember Fido when he was eight weeks old.

The ORION Insurance Company Limited

Extracts from the Chairman's Statement for 1971

The forty-second Annual General Meeting of the Company will be held on 14 June in London. The following are summarised extracts from the Statement by the Chairman, Mr. Lucas John Ralli:

It was with great regret that we received the resignation of our Chairman, the Rt. Hon. the Lord Boyd-Carpenter who was required to relinquish his directorship of the Company upon taking up his appointment as full-time Chairman of the Civil Aviation Authority on 1 April 1972. He takes with him our gratitude for his valuable services to the Company and our good wishes in his new appointment.

On the 9 June 1971 Sir Richard Clarke KCB, OBE accepted an invitation to join the Board. His wide knowledge and experience will be of great value to us.

The year under review has not been without its problems but the Consolidated Accounts reflect the successful progress that has been made.

Combined Marine and Aviation Account

The slight reduction of premium income is due to the revaluation of the US Dollar which had the effect of reducing income by some £400,000, and to the increase of some £275,000 in the cost of run off reinsurance.

From the balance resulting on assessment of the 1968 and 1969 underwriting years at 31 December 1971 a transfer of £800,000 has been made to Profit and Loss Account.

1970 Account is confidently expected to produce a profit on assessment at 31 December 1972.

Marine Account

The Marine Account continues to develop satisfactorily both as to spread of business and profitability despite the adverse factors affecting international marine insurance.

Considerably increased competition for business is being experienced following the development of a general view that the London Market has achieved a profitable basis.

A full realisation of the effects of the inflationary trend, of the ever present possibility of a repetition of the 1969 pattern of very large tanker losses and that the improvement in results from containerised cargoes may well be only temporary should lead to a more sober assessment of the factors involved.

The demand for cover for very large units continues to exercise the market. The liquid gas carrier is the latest in the series of large and specialised vessels which add further to the danger of unbalancing a portfolio as it is quite possible that cover for values of up to $100 million will be required.

It is vital to create adequate reserves from underwriting profits if these challenges are to be met adequately. Without sufficient resolution to correct any inadequacy of rating the Marine market could soon return to the period of unprofitability of recent past years.

Aviation

1969 Underwriting Account closed with a satisfactory profit and the open years of account are showing good progress.

The continued good record on major scheduled airlines has given rise to more intense competition, which includes the United States life companies who have entered the field in a substantial way. The experience coupled with the competition have caused a severe reduction in rates on airline business, and the same reductions have carried through to small aircraft business where they certainly are not justified.

Non-Marine (London and Special Reinsurance Accounts)

The overall reduction in premium income entered in the year is a further reflection of the measures taken to improve the content of both these accounts. The satisfactory development of the 1969, 1970 and 1971 Underwriting Accounts to date appears now to confirm the correctness of these measures.

Fire Accident and Miscellaneous Insurance (UK and Overseas)

The improving trend in the part of the Home Fire Account which was continued resulted in a small surplus.

A larger volume of Motor business was accepted in the UK during 1971 which together with rate increases implemented during that year resulted in a much higher premium income. Although motor business is now showing an improving trend, it has still not achieved profitability and with inflation continuing to be a serious problem the Company decided to introduce further increases in motor premium rates on 1 May 1972.

Overseas, the net result of our much reduced operations was a small loss.

Investments

The gross consolidated investment income for 1971 at £1,305,000 represents a rise of 8%. If the Dollar content of both 1970 and 1971 investment income were to be valued at the rate applied to 1971 income, namely $2.55 to the £1, the comparative rise would amount to 12½%.

Total invested assets of £21,375,000 were £6,416,000 greater than at the end of the previous year.

The surplus of market values over balance sheet values increased significantly in 1971 and has continued to improve in 1972.

✲ ✲ ✲

The Directors consider that the results justify the payment of an increased dividend, and accordingly they are recommending a final dividend of 18½% to make a total dividend for the year 1971 of 26% (1970—22½%).

From balances available the opportunity has been taken to provide additional reserves to all trading accounts over and above those held to cover expected future claims, and the General Reserve has also been increased. Despite the problems which are affecting all insurefs, your Company is in a strong position to accept the challenges and to continue to move ahead.

At the Annual General Meeting, proposals will be put to shareholders that, having regard to the development of the business during the last few years and the strong reserve position, the issued share capital be increased to £2,500,000 by capitalising part of the reserves and that each £1 share be subdivided into two shares of 50p.

Copies of the full Report, Accounts and Chairman's Statement can be obtained on application to the Secretary at 70/72 King William Street, London EC4N 7BT

Gifts that create goodwill every day

The Economist Desk and Pocket Diaries, beautifully made, absolutely practical, unique reference books, make splendid gifts for even the most difficult to please. They can be lastingly identified with your company.

The covers can be gold-blocked with your company emblem and your customers' or business associates' names or initials.

Your own publicity or special information pages can be bound in.

Just give us your list and we will gift-wrap each diary, enclose your personal card, and send it anywhere in the world. For colour brochure, prices and quantity discounts, send this coupon to:

Raymond Coles, The Economist Diary Division,
25 St. James's Street, London SW1A 1HG
Tel: 01-930 5155. Telex: 24344

Please send me The Economist Diary Company Gift Brochure.

Tarmac's continuing story of record results

- Group pre-tax profit up £1·654 million
- Earnings per share show 35·2 per cent increase
- Roadstone Divisjon's pre-tax profits rise 21 per cent
- Better profits for Construction Division
- "Substantial recovery" by Bitumen Products Division—pre-tax profits more than double
- Engineering Division has difficult year, but main loss makers are sold
- Limmer acquisition will mean considerable new outlets for Group's resources
- Tarmac Group to make further progress in 1972

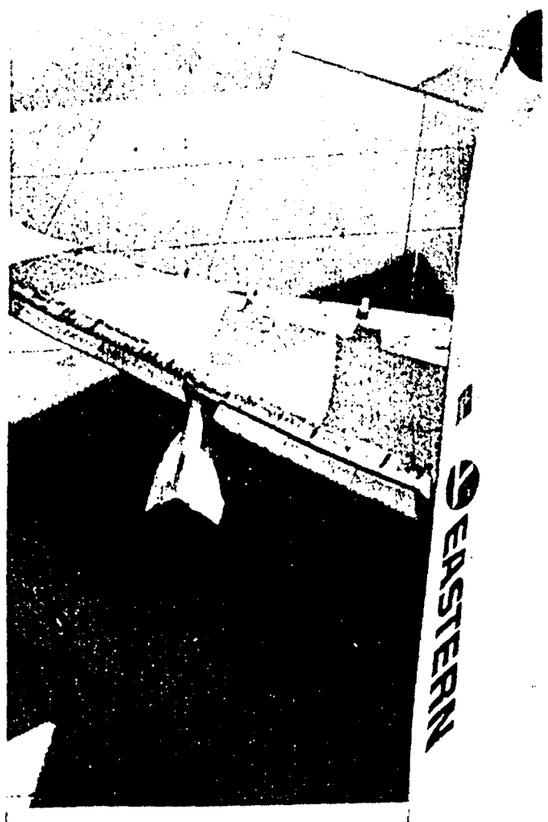
Extracts from the Address by The President Brian H. Malyon at the Annual General Meeting — 23 May 1972

A subject which is largely domestic to brokers but certainly affects the whole market, can be summed up in the word *standards*. Every business has to fight to get established and struggle to improve its position. Insurance brokers are no exception. Our forebears who founded the Corporation saw this very clearly and they saw that it was only by setting and maintaining the highest standards that they would win acceptance, first in the insurance industry and later, in the wider fields of government and commerce. I really do believe, provided this course is followed with good judgement, that we have no cause to alter it, nor should we fail to recognise that it has brought us to our present position and steered us through some very difficult episodes.



But, having won recognition and having established a position, one is wise to consolidate standards with a view to meeting future challenges and changes. For almost as long as I have been connected with the Corporation the problem of consolidation has faced us and various courses of action have in turn been considered and rejected. A lot of the present difficulty centres round, not so much our position in the market, but our position with our worldwide public and the unfortunate lack of copyright to the title 'insurance broker'.

It is in the field of innovation that the broker does his best work and makes his greatest contribution. Innovation, except on rare occasions, is not always the result of new ideas but the application of a fresh mind to established principles. And it is certainly not the broker alone who can produce the technical innovations. It is the freedom of the brokers working within the framework of the total market that can most likely produce the breakthrough. So if market procedures for the great mass of regular insurance business can be rationalised to the extent which I believe possible, then not only shall brokers have a more positive climate in which to work but there will be a better division of management time.

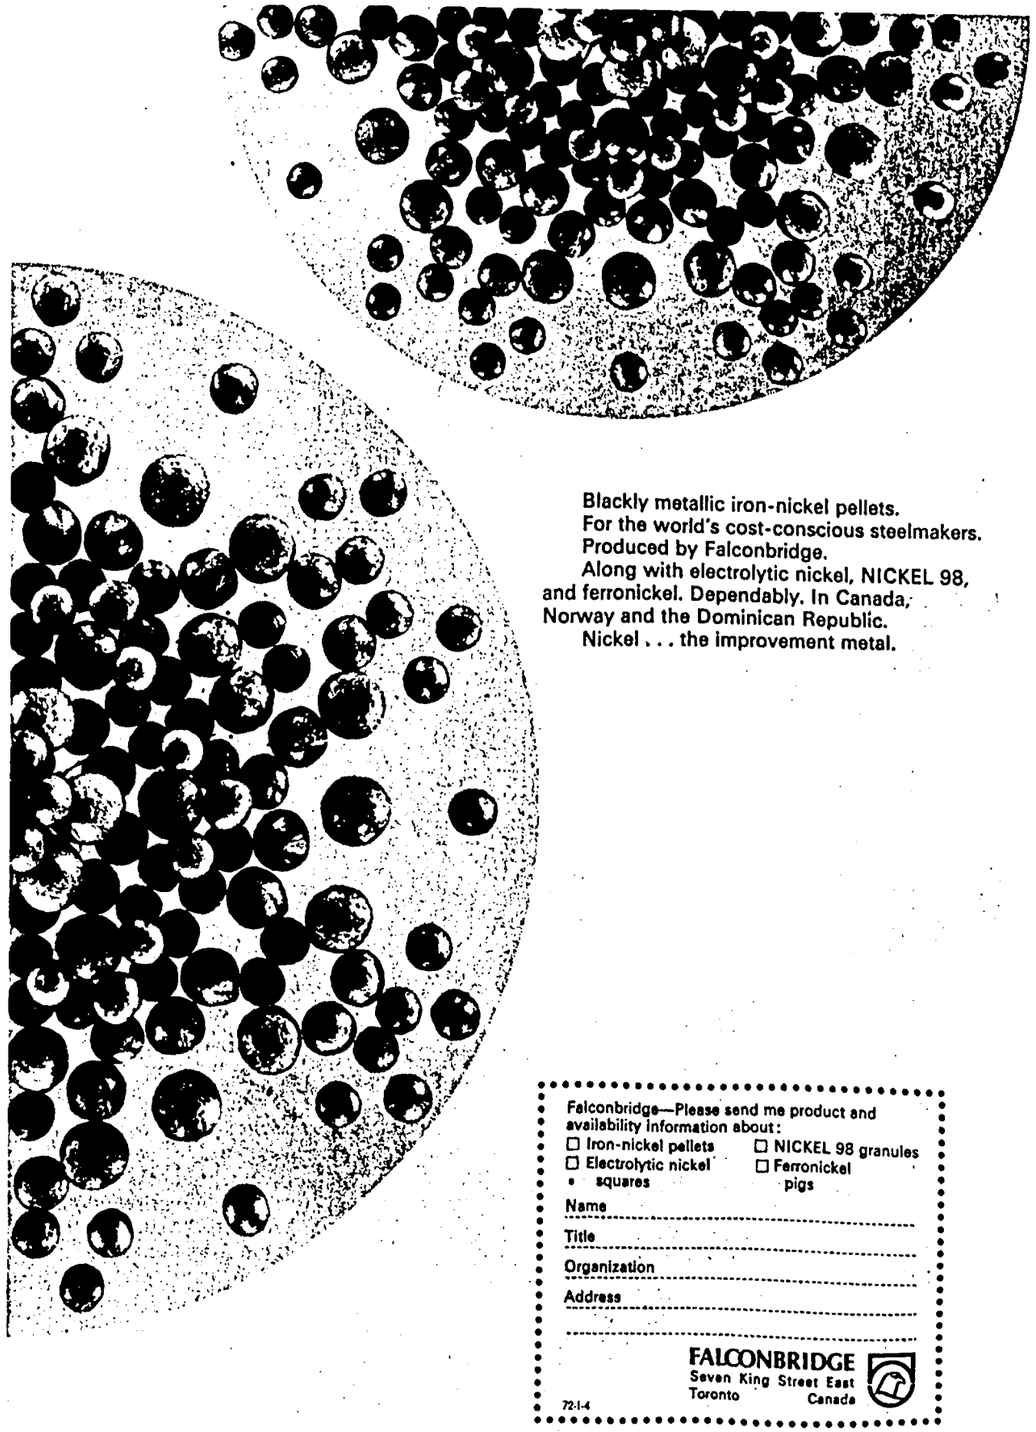
Lockheed just delivered the first six Rolls-Royce engines to Eastern and TWA.

Those engines made our TriStar the quietest jetliner in the world. (The U.S.A.'s Federal Aviation Administration has made it official. The TriStar is the quietest jetliner now flying.)

That's why two of the biggest airlines in the world ordered it. They wanted to get people off the ground with a minimum of noise.



And that's just what the RB.211 engine does. It has fewer moving, noise-making parts. Noise is designed out of the engine. Not just muffled out.

The L-1011 will take off with more than twice the thrust of older jets. And with less than half the annoying jet noise. That's documented by acoustical annoyance studies published in U.S. Government reports.

Eastern and TWA aren't the only leading airlines with orders in for the TriStar. Air Canada, Delta and PSA have ordered it, too. And so has Court Line, the British tour carrier.

Thanks to Rolls-Royce, airports will be quieter all over the world.

The world's quietest jetliner. The Lockheed L-1011 TriStar.

Blackly metallic iron-nickel pellets.
For the world's cost-conscious steelmakers.
Produced by Falconbridge.
Along with electrolytic nickel, NICKEL 98,
and ferronickel. Dependably. In Canada,
Norway and the Dominican Republic.
Nickel . . . the improvement metal.

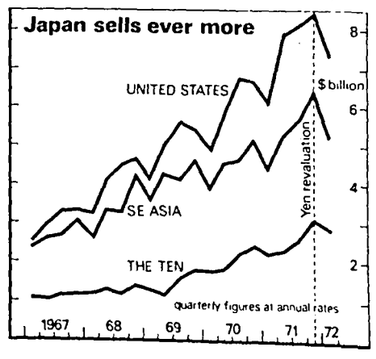
BUSINESS *International*

The Japanese say it again. But can they really turn off those exports?

The Japanese arrived at Wednesday's opening of the three-day ministerial meeting in Paris of the Organisation for Economic Co-operation and Development as if they had flown in on angels' wings. Tucked underneath their arms was a new 7-point programme, hurriedly given Japanese government approval, which ostensibly aims at bringing a "more orderly marketing" (ie, reductions) of Japan's exports and a boost to its imports. This, they hoped, would allay the rising indignation of the Europeans and Americans over Japanese trading practices (ie, export resourcefulness and competitiveness). It is galling everyone else that Japan still piles up huge trade surpluses despite the yen upvaluation.

Unfortunately for the Japanese the other 22 member-countries of the OECD had heard it all before. This 7-point Japanese programme is actually rather vaguer than the previous 8-point Japanese programme which it replaces but which was never energetically implemented (May 6th, page 106). The intent is said to be to reduce Japan's official reserve holdings from their $16.5 billion to below $10 billion, but by when nobody has said.

No doubt, the Japanese government will try to do something to stimulate capital outflows and discourage inflows (ie, it will help to finance Japanese economic imperialism, while keeping foreign multinational corporations out of Japan). One of the two positive steps announced this week was that the government will make loans totalling nearly $3 billion, at 3 per cent interest, to Japanese firms that undertake overseas exploration for oil and other natural resources. The other was that the Bank of Japan will require a 25 per cent reserve requirement on funds deposited after June 1st by foreigners in free yen accounts with commercial banks in Japan.



But if the government tries to trim 1972's visible trade surplus—which still looks as if it might reach very close to last year's $8½ billion—it will face strong resistance from businessmen. Carmakers and electronics manufacturers, for instance, have so far successfully undermined any government moves towards quota systems to regulate their exports. The government is talking about untying some of Japan's overseas aid, but there are howls of protest from industrialists to whom no business is like tied aid business. Japanese businessmen think that the best way to stop the export surplus is to inflate the domestic economy; they are asking for a large supplementary budget to pump money into the economy, accompanied by cuts in taxation. Academics are in favour of another upvaluation of the yen; a leading economic research institute has just proposed about a 5 per cent upvaluation of the yen next spring. Both government and businessmen growl unitedly at this.

From Tokyo to Paris

Some of the steam was taken out of this week's meeting by Mr John Connally's disappearance from the American Treasury. His successor, Mr George Shultz, has not yet taken over, and the American delegation was headed by Mr John Irwin, number two in the State Department. But it included Mr William Eberle, President Nixon's top trade negotiator, who has just come back, apparently empty-handed, from a visit to Tokyo. This is not an encouraging sign for Mr John Davies, Britain's trade minister, who goes to Japan next week, taking with him the complaints of British manufacturers who are suffering from a switch in the Japanese export drive, particularly in colour television sets, from the German market to Britain. Mr Davies may have to settle for more trade meetings with the Japanese this summer, which is all Mr Eberle seems to have got.

The trade war is not just being fought by the rest against Japan. Europeans are concerned at mounting evidence of American protectionism. The Americans say they are merely kicking against Japanese practices, particularly in electronic products: but if they impose countervailing duties, European exports will also be hit.

The ministers gathered in Paris this week avoided the danger of grouping themselves into three defiantly opposing trading blocks, but partly because they were also arguing about something else. A lot of their debate was taken up with procedural questions related to future negotiations on trade and monetary reforms. The OECD wants to be responsible for the co-ordination of any such reforms. The multiplicity of international organisations now concerned is likely to make considerable confusion even worse confounded. Somebody has to suggest soon that some institutions should be shut out. The Japanese, who are only just beginning to feel their strength in these forums, could be the ones to say it.

C. E. Heath & Co. Limited

Statement by the Chairman, Mr. D. H. Erlebach

The sixty-third annual general meeting of C. E. Heath & Co. Limited will be held at 11 a.m. on 26th June 1972 at Winchester House, 100 Old Broad Street, London, E.C.2. The following is the full text of the statement made by the Chairman, Mr. D. H. Erlebach, which has been circulated with the Directors' Report and Accounts for the fifteen months ended 31st March 1972.

THE PAST YEAR'S TRADING. The most satisfactory aspect of the past year has been the increase in broking profits. Very little of this increase is attributable to the acquisition of new subsidiaries and the figures represent a considerable advance on 1970. This improvement applied over all the operating companies, indicating progress throughout our broking operations.

Although a good level was achieved, the underwriting profit commission earned did not reach parity with last year's result. Nevertheless, the percentage of profit on the 1969 underwriting account (on which the 1971-72 profit commission is earned) was almost identical with that earned on the 1968 account. However, the premium income expressed in sterling was somewhat reduced as a result of dollar devaluation and, consequently, the total earnings were similarly affected.

Investment income and interest were, as anticipated, less than in 1970. The reduction is almost entirely due to the lower interest rates obtaining during the period under review. The market valuation of the investment portfolio at the 31st March, 1972, shows an excellent appreciation of £1,114,000 over book values and our thanks are due to Messrs. Brown, Shipley & Co. Limited for their skill and advice in this connection.

PROSPECTS. I feel that we are now organised to deal with a further expansion on the broking side and a number of opportunities are presenting themselves to us. In spite of the fact that world markets are becoming considerably more competitive, I am confident that your Company will maintain its share of any increase that is available.

On the underwriting side, the open years of 1970 and 1971 continue to show the favourable trends previously reported and it is reasonable to expect a continuing benefit from the underwriting operations. The 1972 underwriting account is, of course, in its early stages and no real trend has yet emerged. Further, we expect the Australian underwriting agencies to make an increased contribution in the current year.

Present indications are that investment income should be maintained at something very close to the 1971-72 level and, if interest rates move in our favour, it is possible that a small increase may be forthcoming.

DIRECTORS. Following the sale of Excess Insurance Company Limited's holding in your Company, Mr. H. G. Jago resigned from the Board on the 31st July, 1971. We are very grateful to him for his help and advice during his period of office.
Messrs. J. M. Couper-Johnston, R. W. Fielding and J. R. Mikami joined the Board on the 1st May, 1972, and propositions for their re-election will be submitted to you at the Annual General Meeting.

STAFF. I would like to express my gratitude to the staff who have, through their hard work and loyal support, enabled us to present to you such a satisfactory position for the Company.

RECORD OF INCOME AND PROFITS FOR THE FIVE YEARS 1967-1972

	1971-72 £'000	1970 £'000	1969 £'000	1968 £'000	1967 £'000
Income					
Brokerage	**3,307**	2,725	2,644	2,497	2,356
Underwriting Commission	**403**	429	9	20	11
Underwriting Fees and expenses recovered	**939**	630	422	429	347
Investment income and interest	**494**	540	471	387	361
	5,143	4,324	3,546	3,333	3,075
Operating profit	**1,580**	1,358	990	977	944
Other income less expenditure	**96**	(115)	(89)	(15)	(19)
Profit before tax	**1,676**	1,243	901	962	925
Profit after tax	**954**	713	486	532	461
Earnings per share	**14.9p**	11.1p	7.6p	8.3p	7.2p
Gross dividends per share	**10.0p**	7.4p	6.7p	6.7p	6.5p
Dividend cover	**1.5**	1.5	1.1	1.2	1.1

The above mentioned figures do not include extraordinary items and have been adjusted, where appropriate, to take account of the Staff Trust Fund reorganisation, repayment of the preference share capital and corporation tax relief on franked investment income. For 1967 to 1970 the figures are for each twelve months period ending 31st December. For 1971-1972 the figures are for the twelve months ending 31st March 1972.

CEH

tapes. These the Americans have brought with them. Some companies like Mohawk Data Systems are showing advanced equipment for preparing data for computers.

European companies have some reason to be cross that the Americans have allowed this range of technology to be available to the Russians, despite the Nato embargo on such technological trade with the communist countries. Russia's massive demand for computers is not a market that the Europeans can afford to neglect once the Americans have dodged under the accepted rules. American companies are, on the whole, markedly reluctant to talk about what they are doing in Moscow this week. But they should no longer be allowed to try to stop European computer companies from going flat out for all the iron curtain trade they can get.

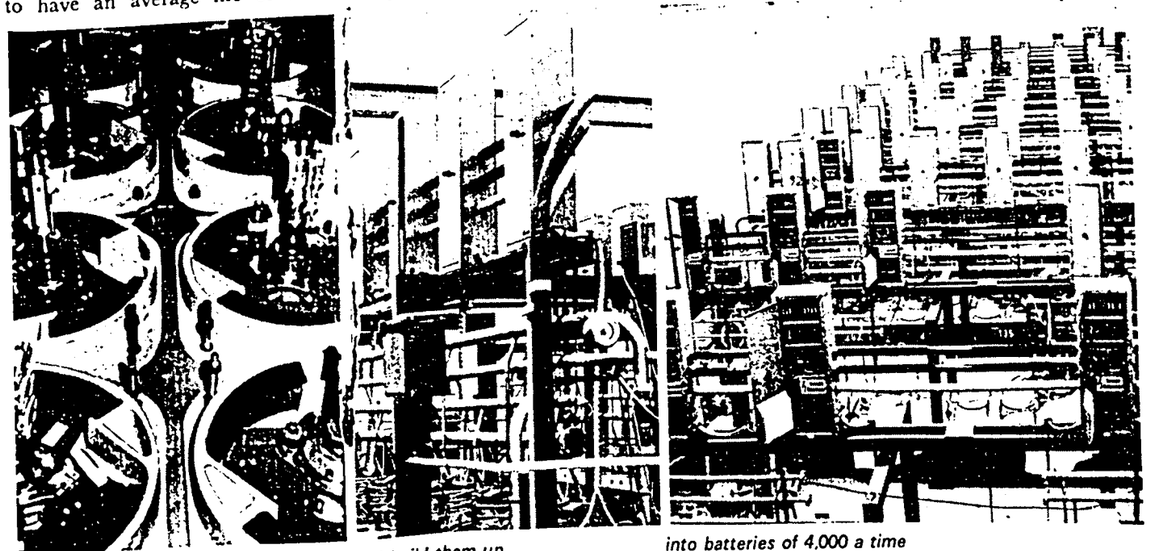
Gas centrifuges

Lucky seven

There is increasingly good news about the German, British and Dutch project for developing gas centrifuges to enrich uranium, in place of the present huge separation plants. Scepticism about whether the fast-spinning centrifuges would have an economic life is not as strong as it was. The photographs on this page show, in more detail than it is usually possible to get, what the equipment is beginning to look like. The little spinning pots and their bearings are now expected to have an average life of at least seven years, and no one is seriously interested in their lasting any longer. As a production unit will probably consist of banks of up to 4,000 of these pots spinning simultaneously, a short working life and a high rate of replacement would not only have wrecked the economics of the centrifuge process; they would have raised serious difficulties about establishing manufacturing facilities to turn out the spares fast enough.

Britain and Europe are expected to have 90,000 megawatts of nuclear generating plant running by 1980, 17.5 per cent of total generating capacity. If all the fuel for this has to come from America, as it would have to if Europe did not build its own separation plant, the balance of payments implications would be alarming, and the political implications even more so. Europe would need enrichment capacity of the order of 8,000-9,000 tons of separative work units (ie, plant capable of separating this tonnage of uranium a year). The German, British and Dutch tripartite company Urenco (Uranium Enrichment Company) now plans to have enough centrifuges installed by 1980 to handle 3,000 tons of separative work units annually. The balance will come from America for a while, but Urenco will gradually build up its capacity.

The French still want Europe to adopt the gaseous diffusion method: the process developed by the Americans and later by the British, and on which the French have spent huge amounts at their Pierrelatte plant to produce heavily enriched uranium for bombs. But the French have never been able to answer criticisms that gaseous diffusion eats up too much electrical power to be economical in an area such as Europe where electricity is dear. Gaseous diffusion also requires huge amounts of water for cooling, and the nuclear power plants themselves already look like using up all available coolant water.



Urenco still faces thorny decisions. Construction of a £20m plant, with a capacity of 300 tons of separative work units a year, should begin in 1973; but a site has not yet been agreed upon. The idea of having two plants, one in Britain and one in Holland, has been dropped. The choice comes down to Britain or Holland; world opinion probably would not tolerate such a plant in Germany, even though the lightly enriched uranium it produces could not be used for bombs. A common design for the centrifuges must also be hammered out eventually. But the initial 300-ton plant could be built using several types, if friction among the three countries prevents agreement being reached soon.

EEC lorries

Axle weighting

Brussels

Transport has always been the Cinderella of the common policies provided for in the Treaty of Rome. Last week's provisional agreement on the maximum weights and measures of goods vehicles has accordingly been

You take the individual centrifuges, and build them up into batteries of 4,000 a time

hailed as a breakthrough by the Six, even if the implementation of the agreement has been put off until 1980 for international traffic and 1985 for domestic. That the Six want a ministerial meeting with Britain on the question—the first meeting since the consultation procedure for new members was introduced last November—shows that London is still very unhappy about it all. Indeed, as the British Minister for Transport Industries, Mr John Peyton, announced on Wednesday, if the agreement goes through as it stands he will ban lorries with axle weights above the present British maximum from trunk routes, and so effectively keep them out.

In community terms the newly-agreed maximum axle weight of 11 tons represents a compromise between the present 10 tons applied by the Netherlands, Germany and Italy (and Britain and Ireland) and the 13 tons permitted in France, Belgium and Luxemburg (though Belgium and Luxemburg were planning to reduce the limit to 10 tons). Equally, the proposed maximum overall weight of 40 tons is a compromise between the current maximum of 38 tons in France, Germany and Belgium and the 50-ton limit allowed by the Dutch, though of course it is much higher than the 32 tons of Britain and Ireland.

The economic argument in favour of the lower axle weights is largely a question of increased road maintenance costs. The deterioration of the road surface increases exponentially with the increase in axle weight. According to studies carried out in America, an increase in the maximum permissible axle weights from 10 to 13 tons would increase road wear by 190 per cent and an increase to 11.5 tons (the original compromise formula proposed by the commission) by 70 per cent.

The decision to delay the introduction of the new weights until the end of the decade was a concession to the French, who pointed out that Berliet lorries have an axle weight of 13 tons and will have to be redesigned with —as is now agreed—financial aid from the French taxpayer to help it do so. It is by no means certain, of course, that the agreement will actually be adopted by the EEC. There are still various technical reservations to be ironed out, while the Germans, whose motorway network takes heavy punishment from international long-distance through traffic, may have second thoughts about accepting the increase to 11 tons. So the Six may yet put off a decision until Britain is in—when the common transport policy will have to be reviewed anyway.

Aluminium

Just keep rolling

An embarrassing and unusual fight has broken out in public between two former friends: the giant North American aluminium producers Alcoa and Alcan. Alcoa has persuaded the American government that aluminium is being dumped across the border from Canada at unreal prices. Alcan denies it. The fight, which comes shortly after President Nixon's visit to Canada in an attempt to soothe that country's growing economic nationalism, now promises to be bitter.

Alcan has begun diverting more of its aluminium production to the United States as its European smelters start to come on stream. Canadian sales of aluminium to America zoomed by 30 per cent last year to 440,000 tons even though industrial demand was way down. Alcan has $500m invested in plant in the United States but not enough to use all the ingot available. Alcoa, which used to own Alcan before anti-trust rules broke the company in two, has therefore suddenly found its own backyard threatened.

There is also the delicate question of price. Alcoa, in common with other American producers like Kaiser, wants to push up prices as the economy recovers. But Alcan, which usually sells at a slight discount in the American market, is keeping prices back. The Administration, anxious to avoid a quarrel with Canada, is in a quandary.

The industry has nominally set its price at 25 cents a lb; nobody, however, is getting as much. Even if prices harden, profits evaporate in the massive electricity bill that it takes to turn bauxite into the finished product. The race is to discover a new smelting technique that can cut down this bill. In the past 20 years the amount of power required has been halved. For purely scientific reasons, it is usually said that it can hardly go lower. But there is a good deal of talk in Alcoa's laboratories of new processes that might, after another year's work, find a way round this problem of high electricity consumption. Such a process would rock the aluminium industry. Rumours of it have already done so.

The obvious way out is to use some other raw material than bauxite. Alcoa, which is now spending $35m a year on research, has been talking about this with the American Administration. America has almost no bauxite reserves, although the mineral is abundant enough: much of it in Australia and the developing world. If Alcoa was to make aluminium from any of the three raw materials that it is currently playing with—clay, oil shale or, the favourite, orthosite—it would be quite a shock to world trade.

Banca Nazionale Dell'Agricoltura SpA

In our issue of February 19, 1972, we published an item concerning the Banca Nazionale Dell'Agricoltura SpA (BNA) and stated that it had been taken over.

This item was published in good faith and also in the light of well publicised negotiations regarding some of the BNA's share capital. We are now informed that no transfer of any part of the Bank's share capital took place. We are happy to clarify the situation.

It has also been suggested that the item contained the implication that not all the assets of BNA were first class investments. We are assured and accept the asssurance that BNA possesses only first class investments and we apologise if any contrary impression was conveyed.

Key indicators: world commodity prices

Coffee cantata

The world's most important commodity pact, the International Coffee Agreement, is on the rocks. After months of haggling over the coffee price after dollar devaluation and over global export quotas, producers and consumers have broken off talks. At a time when other raw material producers are trying to create new pacts, this new quarrel between the rich and the developing world is likely to remain bitter.

Taylor Woodrow Golden Jubilee... another year of record achievement.

The 37th Annual General Meeting of Taylor Woodrow Ltd. will be held in London on 12th June, 1972.

The following are extracts from the Statement by the Chairman, Mr. Frank Taylor, circulated with the Report and Accounts.

It gives me great personal pleasure to record that our team has again been honoured by receiving the Queen's Award to Industry. It has been conferred this year upon Taylor Woodrow International Ltd. in recognition of outstanding export achievement.

As the year under review was also the 50th Anniversary since the foundations of your company were laid, it is an added pleasure for me to report a not unsatisfactory profit for the year and indeed it was a record profit for the eleventh consecutive year. You will, I hope, agree with me that it is yet again a great achievement and a wonderful tribute to the efforts of thousands of loyal and devoted men and women of different nationalities who make up our Taylor Woodrow Team.

Accounts

The turnover of the Company and its subsidiaries was £121 million for 1971, an increase of 25% over the figure of £97 million for 1970. Overseas turnover in 1971 represented approximately 24% of the total (1970 – 20%), of which the main contributors were Australia and the Far East 9%, Canada 4%, Europe 3% and other areas 8%. The Group's share of the turnover of associated companies was £16 million for 1971 compared with £11 million for 1970.

The profit of the Company and its subsidiaries before depreciation and taxation was £9,035,086 compared with £6,358,338 for 1970. After providing for depreciation, the profit for the year amounted to £5,884,397, an increase of 36% over the amount of £4,320,970 for 1970.

After providing for taxation, deducting profits attributable to minority shareholders and providing for the losses of associated companies the net profit for 1971 was £2,940,243 compared with £2,172,008 for the previous year.

An interim dividend of 1.875p per share (less tax) was paid in September, 1971 on the share capital then in issue. In November, 1971 the capital was increased by a one-for-five bonus issue and your Board now recommends a final dividend of 4.125p per share (less tax) to be paid on 13th June, 1972, on the capital as increased. These dividends for the year are equivalent to 5.69p per share (less tax) on the increased capital compared with 5.0p per share for the previous year after adjustment for the bonus issue.

Good industrial relations continue to be an outstanding need for the future development and prosperity of our country – a goal which will be reached only when all sections of industry realise they have a common interest at heart. Inflation is, as we all know, a real and menacing problem that affects us all. It will require almost superhuman efforts of everyone concerned if it is to be contained – by industry and suppliers keeping prices down to an absolute minimum and by a wise and responsible attitude to wage claims by the Trade Unions. It is most important and essential to remember what really counts is the true value of money and what that money will buy.

It now seems that our country is to join the European Economic Community and I am confident that this will provide British construction and property development companies with ample opportunities for profitable business on their own account or in partnership with local companies. In the property development and housing fields we are already operating in Belgium, France and Majorca, and I believe we have much expertise to offer, gained over many years from our activities at home, in North America, Australia and elsewhere in the world. Europe is an exciting challenge and various sections of our Group are now engaged in searching for suitable profitable activities in this greater market.

Highlights of our Golden Jubilee Year

✳ The 50th Anniversary of the founding of Taylor Woodrow was celebrated by yet another year of record profits.

✳ Turnover was also the highest in the Company's history.

✳ H.R.H. Prince Charles visited the Royal Arms opencast coal site on November 1 during his South Wales tour.

✳ H.R.H. Princess Anne officially inaugurated the B.B.C.'s Midland headquarters at Edgbaston on November 10.

✳ Monarch Investments Limited, our principal Canadian subsidiary, also celebrated its Golden Jubilee.

✳ Taylor Woodrow (Australia) Pty. Limited purchased an interest in E. A. Watts Holdings Limited, one of Australia's largest building companies.

✳ Work began in May on the £15½m. contract for the first phase of Nottingham University Hospital and Medical School, one of the largest contracts of its kind.

✳ A further berth was handed over in September, exactly six months ahead of schedule, at East Lagoon, Singapore (the first feeder berth had been handed over ahead of schedule in 1970).

✳ In September work commenced on the construction of breakwaters for the multi-million pound Brighton Marina project.

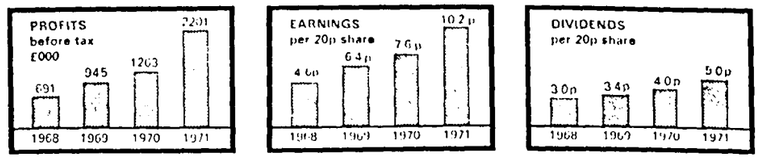
Taylor Woodrow International Ltd



TAYLOR WOODROW

The World-wide Team of Engineers, Constructors and Developers

INTERNATIONAL FINANCE AND INVESTMENT GROUP

Report record profits and sustained growth

- Group pre-tax profits reach record £2·2m.
- Earnings per 20p share at 10·2p increase for fourth successive year
- Final dividend of 3·6p per share proposed, making total for year of 5·0p (4·0p)
- Board have confidence in the continuing growth and profitability of the Group
- Group now poised for further expansion both by the financing of international trade – mostly the movement of goods between countries – and by investment in the equity capital of companies believed to have attractive profit potential

BANCO DI NAPOLI

Founded in 1539

Head Office : Naples, Italy

Balance sheet at 31 December, 1971

The Annual General Meeting of the General Council of Banco di Napoli was held on April 28, 1972.

The volume of Deposits, Savings Accounts, and Current Accounts at December 31, 1971 amounted to Lire 2,558,516,381,063 which represents an increase of 10.91 per cent over the 1970 figures.

Net profits reached the figure of Lire 1,751,740,171. After distribution, the capital and reserves of Banco di Napoli amount to Lire 60,938,478,297.

Board of Directors—Chairman: Mr. Stanislao Fusco; *Vice-Chairman:* Mr. Roberto Laviano; *General Manager:* Prof. Salvatore Guidotti.

BUSINESS *Britain*

North Sea oil ought to be our jam

The Government's decision to commission a consultants' report on how British industry can get a respectable share of the North Sea oil and natural gas construction business would have been a good idea had someone thought of it a few years ago. As it is, British business is doing a fine job supplying coffee and cigarettes to the oil roughnecks who man the drilling platforms but, with a few exceptions, the contracts for sophisticated services and equipment are going to American companies.

They have the advantage, thanks to a large domestic oil industry, of being well-established, but it is hardly a secret that much of British industry has shown a lamentable lack of initiative in latching on to the North Sea bonanza. The Government should be applauded for finally facing up to the situation, but then it must share the blame too. It still insists on grossly underestimating in public the amount of oil in the North Sea, standing by estimates of a possible annual production rate of 75m-100m tons by 1980, although many experts think a highly conservative estimate now would be 150m tons by that time from British waters alone. This would be one and a half times Britain's current yearly oil consumption and, though we would have to be good neighbours and share oil production with Europe, it should save the country between £900m and £1 billion of foreign exchange.

Even on the Government's archaic estimates, there is £350m-£450m worth of business to be done annually in North Sea exploration and production by the late 1970s. What proportion of this will go to British-owned companies? The present trends are not encouraging. A Japanese company won the contract to supply pipe for the underwater part of the pipeline from British Petroleum's huge Forties field. Americans are expected to dominate pipe-laying activities in the North Sea.

The Government's plan to dish out large chunks of cash to British companies interested in carrying out research and development work on underwater technology sounds better than it is, though oilmen admit new techniques are needed to explore and exploit the deeper waters of the North Sea. But companies starting from scratch are unlikely to develop anything soon enough to reap much of the business. The Government would do better to put pressure on American companies to license their techniques to British industry or, at second best, enter into joint ventures with British companies. This is happening to a small extent now but the Government should have the leverage to force through many more such deals. That is now the only way for British companies to get in on the action quickly, and after a few years of working with American companies they would be in a position to strike out on their own, not only for business in the North Sea but for business anywhere. There would be no shortage of potential customers: if there is one thing that is certain in the petroleum industry, it is that the search for oil and natural gas will intensify as the years go by.

Smith: he settled first

Wages

Steelmen melt away

Steel union leaders decided this week not to wait for the outcome of the rail dispute. The whale followed the minnow in accepting terms from the British Steel Corporation, to BSC's pleasure and surprise. When BSC first offered the unions 9 per cent, Mr Dai Davies of the Iron and Steel Trades Confederation did not want to do a deal before the railwaymen. But when Mr Hector Smith, the leader of the 14,000-strong National Union of Blastfurnacemen, who went on strike last year, accepted a bigger offer from BSC, Mr Davies followed suit. No one will say just what the new offer is worth, but it may be more than is being admitted. One estimate puts it at 10.5 per cent. But since the lowest-paid steelmen will get a massive 19 per cent, the average could be well over 11 per cent. Local productivity bonus schemes tend to add a whack on top of any national deal.

On Monday, the teachers learned that the arbitration tribunal had awarded them 9.6 per cent rises. This is well below what the railwaymen are likely to get, but Lord Pearson's tribunal should have awarded the teachers no more than the 7 per cent they turned down. If a tribunal always hands out a compromise figure between the union demand and the employers' offer, the union has an obvious incentive to demand more next time. In some forms of arbitration in America, the arbitrators can opt for either the employers' offer or the unions' claim, but must not split the difference; this encourages responsibility in framing offers and claims, while Lord Pearson discourages it.

There are no other major public sector wage deals pending other than the railways. But building unions,

representing 800,000 workers, are still pressing their ludicrous claim for a 50 per cent rise in basic rates. The employers have offered around 10 per cent. The unions gave strike notice on Thursday for a shutdown from June 26th, muttering the while about possibly making the strikes selective. But when the engineers tried these tactics in Manchester, the results were not impressive. However, since building profits are at an all-time high, the unions reckon they can squeeze a bit more yet.

Ball bearings

Imports create friction

One of the more difficult negotiations that the Secretary of State for Trade and Industry, Mr John Davies, will have to undertake on his Japanese visit will concern the rising tide of ball bearing exports from Japan to Britain. Last weekend 1,500 redundancies were announced by Britain's largest bearing firm, Ransome Hoffman and Pollard, after warnings as far back as January. To some extent the announcement and the linking of it with Japanese imports were done for effect. The redundancies were inevitable because of the low demand at home, and it can be argued that they should have come earlier as part of the shakeup of this offspring of the Industrial Reorganisation Corporation. Certainly, the Japanese have taken business away from RHP, notably in third markets like South Africa ; and Mr Davies showed some signs of sympathising on Thursday with British complaints about what they were doing here.

Japanese bearing sales in Britain, in common with Japanese sales in all other major industrialised countries, are concentrated in the large volume types of small standard bearings. Three-quarters of the imports into Britain in 1971 were in this category, and the Japanese now control the major part of the market in the 10-30 millimetre size range. In the whole small bearing field in Britain, up to 70mm diameter, it is estimated that the Japanese now have 40 per cent of total sales. What makes British manufacturers so mad is that a large slice of the remainder are so-called specials, wanted only in less profitable small batches.

It is easy to get the British industry on the raw by pointing out that the Japanese have virtually taken over the supply of bearings for the lucrative fractional horse-power electric motor field—used in consumer durables like refrigerators, one bit of the economy that is moving ahead respectably. The British say it is much more difficult to make high-quality bearings in small quantities than in long production runs. Yet their own investment in high-volume production lines has been slow, to say the least : RHP's first such line for small standard bearings is not due on stream for 12 months.

Mr Davies has to assess what the Japanese really want. Are they deliberately going all out to dominate one sector of bearings in order to disrupt the total market, which is what the

Railways : it should have been said

The ballot on the railways was held this week, and voting papers had to be back by Saturday. The Chancellor, Mr Anthony Barber, said in a speech this week that "we must mobilise the nation to resist inflation." But the Government made no such effort. Ministers have scrupulously avoided suggesting to the railwaymen how they should vote, chiefly for fear that ministers would lose some face if the railwaymen then rejected their advice. The interests of every person in the country will be seriously damaged if inflation is now pushed beyond the 10 per cent per annum mark. But nobody spoke in this vein, and poor Mr Wilson at a railway union conference on Wednesday felt he had to go to the limit the other way. We show below the sort of advertisement which should have been addressed to the railwaymen.

Railwaymen :

You are being asked by your union leaders to vote to resume "industrial action" —ie, to go back again to *being bullied* by union militants all through your working day—in order to get British Rail to backdate your 14 per cent wage increase from June 1st to May 1st. Even if you won "total victory" in this claim, you would only get a single sum less than five times 14 per cent of one week's basic wage—ie, less than £20 for many of you—in one single pay packet some weeks after your industrial action stops. It is now right to tell you :

(1) Even if you resume industrial action, you are not going to get that lump sum of £20. If we can manage it, not ever. You may not believe this. But you should believe that you most certainly will not get it until long after you have lost much more than £20 in missed overtime and other pay. In any new go-slow you will lose more than £20 very quickly, because British Rail is going to send home without pay any workers-to-rule who flagrantly break their contracts—as about half of you did last time—and it is going to remove the guaranteed week from those for whom there is no work when particular trains are not running.

(2) The effect of the go-slow is to infuriate the railways' customers, turn the country against the railwaymen's case (see all the public opinion polls), increase British Rail's large losses, make sizeable future unemployment among railwaymen quite inevitable, and earn a reputation for railwaymen of trying to hold the country to ransom. The 14 per cent-a-year increase you are already going to get compares with a 2½ per cent increase in national production last year. Wage increases of this sort can only be paid for by over 10 per cent a year inflation (which means that all prices double every seven years), and the reason why you are now going to be resisted is that it is vital for Britain of both today and tomorrow (and especially for your children's Britain) that somebody should now stop your union leaders' policy of trying to fasten on the British people a higher rate of inflation even than that.

(3) In its knowledge of the above facts, one of the three railway unions wanted to accept the present offer. The individual leaders of the other two really wanted to, but were afraid of their totally unrepresentative militants (like the paid-up communist who is London area organiser of ASLEF). The union leaders then spent large sums of your money to plead before a court that you should not be asked whether you wanted to take industrial action or not. If you vote "yes" this time, ballots will be put out of fashion ; and you will be ordered into more and more strikes, without a by-your-leave.

If you do thus vote "yes" you will be voting to lose money for yourselves, and fix more inflation and real hardship on the country, in order to save the faces of your union "leaders," so that they can go on having their bottoms kicked by union sub-bosses whom they cannot control. If you doubt this, ask everybody you meet travelling on the railway tomorrow what they think. Then vote :

yes ☐ **no** ☒

"... profits for 1972 are likely to be around the 1970 level and thereafter poised to continue the previous upward trend."

Sir Val Duncan

Chairman and Chief Executive, at the Annual General Meeting, 17 May, 1972

1971 Results
The Group operating profit was £65·8 million compared with £79·1 million the year before, and after tax profits attributable to RTZ shareholders were £19 million – £27 million in 1970. The average price of copper in 1971 was some 25% below copper prices in 1970.
1971 was an active year of growing business and developments within RTZ, and it is a paradox that lower metal prices over which we have no control should produce this first decline in profits, notwithstanding greater business done than ever before.

Avonmouth
I should like to say a good deal about the overall position regarding this plant, but the Windeyer Committee, set up by the Government to consider plant hygiene, has not yet reported and it would be improper for me to comment at this stage. Though mistakes have been made at Avonmouth, I feel confident that the Windeyer Committee will report this matter in its proper perspective.
Subject to consideration of the implications of the findings of the Windeyer Committee, CRA, through its subsidiary, Australian Mining & Smelting, expect to take over the ownership of Avonmouth on a written down basis during the course of this year. In the RTZ accounts for 1971, we have taken the conservative decision to write off the capital relative to Avonmouth.
In the meantime, Avonmouth – with the concurrence of the Windeyer Committee – has just re-started its operations and preliminary reports are satisfactory.

Churchill Falls
The first electric power has been generated this year and fed into the Eastern Canadian grid.
After 1975 we should expect dividends to start flowing to shareholders.

U.K. Exploration
There is mineralisation at Coed-y-Brenin and your company has been studying this to see whether there are conditions under which it might be reasonable to put forward a proposition for its development which would probably involve the utilisation of around one half of one per cent of the Snowdonia National Park.
Bearing in mind the certainty of very heavy extra costs involved in the protection of an area of natural beauty, I am not at all sure at present as to whether this deposit could prove viable. There is I believe a duty on the part of mining companies to proceed sufficiently far with paper plans to find out whether all the factors involved can reasonably be harmonised in the national interest. It is not in the end for a mining company to determine the national interest; that should arise out of the normal democratic processes, including public debate; but it would be irresponsible for a mining company to put forward plans if they did not feel there was even a *prima facie* case for public consideration.
The situation therefore is that we have not yet reached the stage where we think there is a *prima facie* case. If we conclude there is not, that so far as RTZ is concerned is the end of the matter. If we conclude that there is, then we would proceed to open up the subject with the planning and other authorities in the normal manner.
I must add, however, that we in RTZ have undertaken to abide by the findings of the Zuckerman Commission and this is an important qualification to anything I have to say on this matter. As a mining company with strong conservationist convictions you can rest assured that we will spare no pains in trying to assess this problem sensitively as well as economically.

Finance Bill Proposals
Since 1965, companies with overseas investments have suffered severely by a measure of double taxation not in operation before that date. With other corporations we have made representations to the Chancellor for mitigation of this manifest inequity. I would hope the Government will reconsider the value to the country of overseas investments and remove the U.K. tax inhibitions from which they suffer.

Outlook for 1972
As regards the outlook for 1972, it is obvious that the price of copper is very important in making any assessment. Perhaps the best I can say at present is that subject to any unforeseen circumstances – and based on present commodity price levels – the profits for 1972 are likely to be around the 1970 level and thereafter poised to continue the previous upward trend.

Copies of Sir Val Duncan's full Speech, and the Annual Report for 1971, may be obtained from The Registrar, RTZ, Austral House, Basinghall Avenue, London EC2V 5ES, or The Secretary, 6 St. James's Square, London SW1Y 4LD.

RTZ The Rio Tinto-Zinc Corporation Limited

GUARDIAN ROYAL EXCHANGE ASSURANCE

From Lt.-Col. C. P. Dawnay's Review

We anticipated at the time of the merger that with two companies of the size and complexity of the Guardian and the Royal Exchange it would take us three years to integrate our operations completely and this has proved to be the case. A merger is never a simple operation, with the problems of changes in management and underwriting methods in all the areas in which we transact our business. It does not always lead to immediate profitability, but if it is well handled it should lay the foundations for future growth and long-term prospects. I am confident this is the case for Guardian Royal Exchange.

Results for 1971

The principal items in the accounts are :–

		£'000
Premiums written :		
Fire, Accident, Marine and Aviation	..	236,223
Transfers to Profit and Loss Account :		
Fire, Accident, Marine and Aviation	..	929
Life	..	1,993
Investment income	18,018	
Less: Interest payable	2,748	
		15,270
		18,192
Less: Pensions, Minority interests, etc.	..	3,829
Profit for the year before taxation		14,363
Less: Taxation		3,479
Profit after taxation		10,884

Our earnings per share have increased from 11.6p to 14.2p and we are recommending a final dividend of 5p (4.5p in 1970).

Home

In our Home operations we increased our premium income by 29%. Our Fire experience has been more favourable but we have found it necessary to apply a further increase in our Motor rates from the 1st January. On the Accident account we made a modest profit.

Overseas

Our Overseas business on the Fire, Accident and Motor Accounts showed an increase of over 14%. Whilst we had satisfactory Fire results from the majority of our interests world-wide these were off-set by heavy losses in Germany and Canada. In Motor we nearly achieved break-even position and the Miscellaneous Accident produced favourable results.

Life

It is pleasing to be able to report a striking increase in the total of new world-wide business in the first year following the complete rationalisation of our Life operations. Our net new sums assured were £845m. compared with £674m. in 1970.

Prospects

Insurance is an industry where we offer a fixed price contract at the beginning of a period of insurance without knowing the cost factors which may well affect the liabilities under the contract when we are called on to pay claims at sometimes a much later date. For this reason it is not easy for any Chairman in the industry accurately to predict the underwriting prospects for the future. However, we should over a period show steadily increased earnings per share and therefore increased dividends to our shareholders.

Our success depends very largely on our ability to recruit and train staff of the right calibre for our work, to develop their skills and to reward them for their contribution to our results. As always, I send the staff both Home and Overseas the warmest thanks of myself and the Directors for their work in the past year.

British makers seem to believe ? Do they really sell at the amazing 20-30 per cent discounts—and more—that are quoted again and again, even though they are often working in association with British producers or distributors ? If they do, it is an amazing waste of potential profits.

Concorde

Five sold already

The British and French governments had long been expected to order, when it suited them, their national airlines to sign on for Concorde, and it happened to suit Mr Heath to bring the British Overseas Airways Corporation to the dotted line on Thursday, before Concorde was to be sent off on a mainly British-directed sales drive in the Far East. The French government, which has no major selling campaign on its hands at the moment, was able to let Air France off the hook for a little longer.

The number of aircraft, five (at £21½m each) is dictated by the manufacturers' convenience rather than by BOAC's. Concorde is now talked of as an aircraft for the first-class market only, and three Concordes would be sufficient to take all the first-class passengers carried by all airlines on the North Atlantic last year. Mr Fred Corfield, who until the Government reshuffle was the minister in charge of Concorde, recently put probable sales at 30, which was the figure going round Whitehall while he was there. How ministers reconcile a figure as small as this with the £1 billion that it will take to develop the aircraft has never been explained. Concorde's latest redesign involves modifications to the air intakes that, like so much else, are proving more extensive and more expensive than ministers were first told.

Concorde's tepid reception by the major airlines is because of the fares they may have to charge unless they are prepared to subsidise their supersonic services out of revenue. Mr Michael Heseltine, when he announced the BOAC order in the Commons, also said that the capital of the British Airways Board, the holding company for the two air corporations, would be reconstructed so that a rising proportion of their Treasury capital would pay not a fixed, but a fluctuating equity dividend, which opens the door plainly enough for BOAC to trim or pass that dividend whenever costs become intolerable. This is, presumably, the price BOAC extracted for its Concorde order.

The rule of thumb is that a Concorde ticket should cost one-third more than the ordinary first-class service in order to break even. First-class flights now cost 50-100 per cent more than economy tickets but the International Air Transport Association's iron front on fares has begun to crumble and prices are beginning to break. This week the Government, or rather its new Civil Aviation Authority, allowed BOAC to go ahead with a new, £196 fare to Australia, without waiting any longer either for Iata to approve it, or, indeed, decide what to do about fares to other points along the Far East routes that are going to be affected by it. The Australians, who are already selling the new tickets, had not even bothered to ask for Iata's views.

These tickets represent a reduction of about a third, which is the sort of cut that should be feasible on most routes for any well-run airline. It is not as low as the rates offered on charter flights which, on the North Atlantic, are generally only one-quarter the normal economy fare. But if a reduction of a third becomes standard, then a Concorde ticket, which might now cost rather more than twice the normal economy ticket, would be costing three times as much by the time BOAC puts the aircraft into service.

Vat

Triple on car hire

Car-hire firms will find that the value-added tax is more like a cascade tax for them. To avoid this they will need changes both in the Finance Bill during the committee stage and in the Customs and Excise department's intentions as expressed in the Vat white paper about the orders to be made under the bill. The white paper says that tax on business purchases of cars is to be disallowed as a Vat deduction, which is an attempt to get at firms that provide cars as a staff perk. But it is particularly bad for car-hire firms. The Vat on the cost of the car will not be rebated, and Vat will be charged on the car-hire charges. It will be assessed on the part that represents the cost of the car, thus double-taxing it, and on the part that represents the Vat on the cost of the car.

On top of this, the sale of second-hand ex-hire cars will probably not attract the relief in clause 14 of the bill that will allow certain second-hand sales to be charged on the dealer's mark-up only. In general, Vat applies

Key indicators: British economy

Retail prices
Sharp rise in April despite purchase tax cuts

Employment
Down again in March

Cars

Export trade, retail trade, engineering order books: in volume terms (value at constant prices). Unemployment: wholly unemployed excluding school-leavers; latest rate 3.6 per cent.
**Seasonally adjusted ‡Provisional*

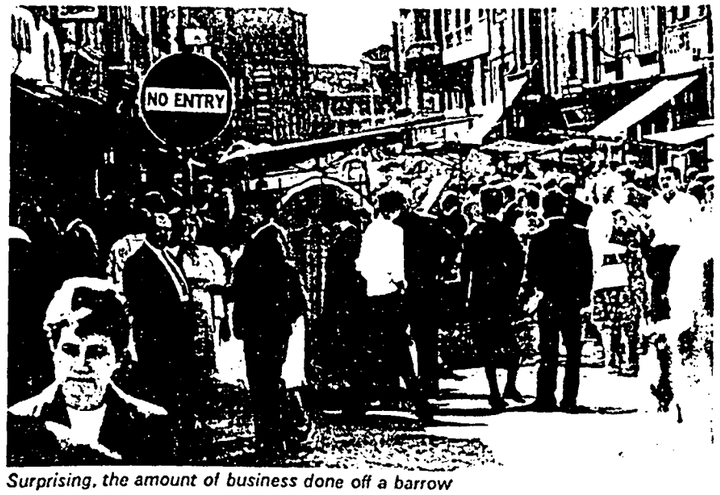
to the full value of second-hand sales, but, in response to the protests of secondhand dealers who deal with the public and not just other traders (particularly art and second-hand car dealers), clause 14 was put in the bill. But it appears only to enable the Vat base to be reduced to the mark-up, instead of the full value of the sale, "where no tax was chargeable on a previous supply of the goods." In a sale by a car-hire firm to a dealer, all transactions over the car will be taxable, so it will not be possible to apply clause 14. This means that where, for instance, a car-hire firm sells one of its cars to a dealer for £500, and the dealer resells it for £550, the tax due from the dealer will be £55, instead of the £5 he would pay if he had bought the car from a member of the public. So the dealer will offer less.

There are two ways out. One is to allow such purchases where the business is a car-hirer, which would open the way to numerous anomalies—not to mention avoidance. The other is not to disallow car purchases at all—as previously suggested in *The Economist* (December 25, 1971). All private motoring in company cars is caught for income tax purposes now by the Inland Revenue. These assessments should be used for Vat, and a 10 per cent rate charged before they are added to income. The refusal of the Customs to do this is an example of the kind of nonsense that could be avoided by merging it with the Inland Revenue.

Down among the barrows

Barrow boys handle one-third of all fruit and vegetable sales in some parts of the country, and they probably do at least 2 per cent of the entire retail trade in Britain. Since many consumer goods are either too bulky or too highly priced to be sold off market stalls—£20 per item seems to be about the upper limit—this suggests that street traders do a much higher proportion of business in the goods that they can handle than they are usually given credit for, and certainly enough for manufacturers and wholesalers to take barrow boys seriously.

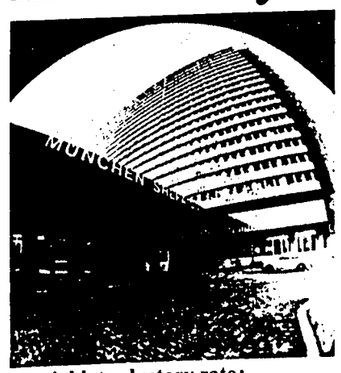
Because the established shops hate them, the barrow boys' volume of trading, backed up by evident customer-loyalty, has been played down, and three investigators from the marketing division of London University's Wye College have had a rough time even to find out how many barrow boys there are*. They put the number of market stalls in Britain at 86,612. Roughly one-third of these are under cover and the rest stand in the open in market squares, along street curbs, in car parks, or on pieces of waste land. Some of these markets are open on only one day a week, which explains why there are fewer traders than there are stalls. The researchers' guess is 57,276 dealers, many of whom do a day's business and then move on to the next market.



The profits from a street trader's licence cannot be bad, because some licences change hands for several thousand pounds. This suggests that local authorities do not provide anything like enough room for stalls and barrows, and that they interfere too much with the sort of trade that the stalls may handle even when they do. The survey attributes this to pressure from the local shopkeepers, who usually bulk large on local councils and persuade them to keep the number of licences down in areas where people obviously like this form of shopping. When Leicester considered redeveloping a street market on a valuable site in the town centre, the conclusion was that the market gave the best return.

London, Lancashire and Yorkshire between them account for nearly half Britain's street trading. In Lancashire well over one-third of fruit and vegetables are sold in this way. In fashionable parts of London some councils that planned to withdraw licences of individual barrow boys have been forced to change their minds by the flood of petitions from well-heeled residents. London's barrow boys are a class of street trader on their own, and they cater for a large population of commuters. The suburban housewife, on the contrary, does not like them, and there are few street markets in the London suburbs. Distribution may have something to do with it, although the survey does not explore this very far. But it does point out that one of the strengths of the London barrow boy is his nearness to the wholesale markets, where he can pick up job lots and still maintain quality.

Market stalls are probably on the increase. There has been a spurt of private markets recently, particularly in holiday resorts along the south coast. Of nearly 800 street markets in Britain, only 135 are privately-owned, the majority of them being in London and the south-east. But they are already doing 11½ per cent of all market business, and if local authorities continue to restrict licences, the private markets are bound to grow. Rules about hygiene and food handling have driven virtually all the meat and fish stalls off the streets and into the covered municipal markets that abound in Yorkshire and Lancashire. The trouble, as the Wye College inquiry sees it, is that so many local authorities want their markets to make a profit.



In France, street markets are deliberately encouraged, even if this means subsidising their running, because they are a valuable way of introducing an element of competition. The stalls provide a service that the shops refuse to give. A little more of this attitude in Britain would probably be no bad thing. But it is not as easy as that. Some new glass-and-formica covered markets are thriving in Liverpool and Sheffield, but Ipswich is having a disastrous time with its new market and has had to cut rents severely in an attempt to let the stalls.

*Retail Stall Markets in Great Britain. By J. H. Kirk, P. G. Ellis and J. R. Medland. *Wye College*. £1.

Surprising, the amount of business done off a barrow

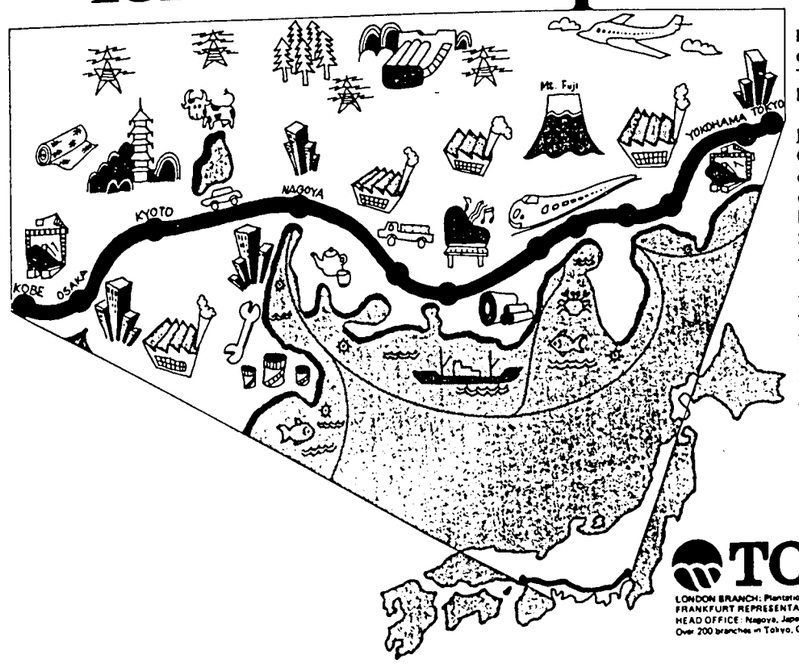
The Sheraton-Munich Hotel makes an exciting visit happen in Germany.

Special introductory rate: Single room from £7.22*

*15% service and 11% tax included. Based on 60 DM, current exchange rate. Subject to change without notice.

When you're in Germany, stay at the new 22-storey Sheraton-Munich Hotel. Only 10 minutes by car from the International Airport and downtown.

Relax in the sauna and health club. Let our valet service and room service wait on you. Work up an appetite in the year-round swimming pool. Enjoy a taste of the country in the Bavarian speciality restaurant and adjoining beer garden. Then make a great evening happen in Munich's newest night club.



For reservations at the Sheraton-Munich or at any Sheraton in the world, call your nearest Sheraton Reservation Office. Or have your travel agent call for you.

Tokai is the capital of Japan.

When you get acquainted with Tokai Bank, you'll necessarily become acquainted with Japan's Tokaido Megalopolis. That's where Tokai Bank maintains the lion's share of its over 200 domestic offices.

The Tokaido megalopolis in the heart of Japan, with Tokyo on the northern end and Osaka on the south, is an industrial/financial/shipping region unparalleled in any other country. It is as if New York, Pittsburgh, Chicago, Detroit, Birmingham and Southern California were all located within 400 miles of each other.

Not only did Tokai Bank get its name from the Tokaido region, it's also where we get our capital. We are most active in the most active part of Japan.

Which is a fine thing for you to remember the next time you have dealings in Japan. We know Tokaido like no other bank. Which means we know Japanese business like no other bank.

The Mann with the gong ?

The biggest bid spectacle of the year has now moved into 3-D. On Thursday the **Rank Organisation** launched its expected counter-bid for **Watney Mann**; Watney Mann unexpectedly turned it down; and **Grand Metropolitan Hotels** sat and thought what to do next. Now that the season is hotting up, perhaps some other names will come and vie for a place at the top of the merger bill. After all, logic has little enough to do with the show. Rank claims that the extension into brewing accords with the policy of developing its leisure interests. Leisure is a conveniently broad category of activities, and the tobacco companies could easily claim the same rationale for a brewery bid. In fact, beer and fags make a much more compelling story than beer and duplicators and movies.

The Rank bid is reckoned to be worth around £450m, and is launched by a company with a market capitalisation of £750m, three times larger than GMH. The size matters. Rank has been able to offer a higher price, and more equity (although voteless) than GMH, and claims that there will be no dilution of existing Rank earnings—which presupposes an implicit forecast of Rank profits of around 25%. The stated value of the bid is 290p, taking Rank "A" ordinary shares at £10.50, but they have slipped back to £9.80. Watney shares have remained obstinately below the bid price, at 258p, and GMH, which is now being valued, with a sigh of relief, on a failed bid basis, has risen to 263p.

Rank trading profits	1967 £000	1971 £000
Films	5,440	6,128
Dancing, bingo, bowling	786	1,505
Motorports, restaurants	− 124	62
Manufacturing	895	1,052
Other	− 403	1,491
	6,594	10,238
less central costs	579	646
	6,015	9,592
Share of Rank-Xerox pre-tax profit	7,300*	29,187

*Estimate

The curiosity of the price movements is such that both the Rank and the GMH bids are now within sight of the 270p range. The reaction of Wall Street, where Rank has many shareholders, to the attempt at diversification is awaited with interest. In the United States breweries are not regarded as much of a growth sector, and heavy selling would push the value of the Rank bid even further down leaving GMH very much in the running —though Rank has more financial scope to upstage GMH if it wants to in a later act.

Financial considerations aside, Rank reckons that its marketing expertise, and its international strength, will help it to exploit the Watney potential. Looking at the record of the Rank Organisation outside Xerox, that is questionable. Film activities—production, exhibition, processing and the studios—still provide the bulk of the non-Xerox profits, and the other leisure areas have not flourished greatly; hotels are making a meagre profit after years in the red.

Anyway, as the latest defence document from Watney Mann makes clear, the company is fully aware of its potential. The document pulls no punches and sticks Watney directors' necks right out into 1973 with a profits forecast 16 months ahead. Having already forecast a rise of 27% for the current year, Watney sees another 24% to £35m in 1973—a figure in line with the expectations of GMH. As an added inducement for the shareholders to remain as loyal as the workers, there is a scrip issue and a dividend increase. Shareholders in Watney should stick around until the battle ends, and then sell out sharply, whoever wins.

ICI and Courtaulds

Tweedledumb and Tweedledee

The three months' figures for Imperial Chemical Industries and the year's figures for Courtaulds both came out on Thursday. ICI's pre-tax profits were fully in line with the chairman's gloomy warnings, and the disappointing £21m compares with £41m a year ago. To be fair, one should add back £5m from the miners' strike, £2m for redundancy payments, and something for depreciation which has leapt up by £6m to £36m. The share price had been drooping in anticipation but rose by 10p to 279p when the figures reached the stock exchange.

Of several headaches, the one of migraine proportion was, and remains, the world slump in the prices of man-made fibres. There is still precious little sign of any firming, and ICI will not look like a recovery stock until demand starts picking up substantially. The Japanese fibre companies, partly responsible for the oversupply, have themselves been hit, and the six leading producers have reported falling sales and profits and have even cut dividends.

That makes the Courtaulds results shine by comparison and shows the wisdom of having integrated fibre-making and fibre-using. Luckily, Courtaulds still has a long way to go in its polyester production—and even further since the bomb blasts at the Irish plant —and so it has been protected from the most dramatic of all fibre price falls. Unlike most of British industry, Courtaulds has not been able to push prices up much, and so the slight profits increase to £45.5m is a creditable performance. The most outstanding item in the profit and loss account is the

If your company's international banking needs go beyond the commonplace, consider Morgan Guaranty

Consider, for example, the whole problem of expanding your company's operation into another country. Should you buy an existing company or start from scratch? If you decide to acquire a company, how do you analyze its current value? What's the best way to finance this acquisition in relation to (a) the exchange control regulations of the country as well as your own, (b) the economic and investment climate there, and (c) the location of your available capital? Will you develop a foreign-exchange exposure problem? Would a joint-venture partnership be more advantageous?

These are just some of the many complex questions on which you must make a judgment. Morgan Guaranty, with years of experience in international banking, is uniquely qualified to help you make these judgments. In fact, we've been in international banking since the 1860's when J. Pierpont Morgan started

in New York with close ties in London and Paris.

Today, our broad range of special services for corporate customers around the world includes foreign exchange, arranging loans in "exotic" as well as major currencies, lease financing, and custom-tailored international money management systems.

Whatever your banking needs, consider Morgan Guaranty. You'll be in good company. Our experts in international banking already are helping 96 of the world's 100 largest corporations solve their financial problems.

MORGAN GUARANTY TRUST COMPANY, 23 Wall Street, New York, N. Y. 10015; in London: 33 Lombard Street, E.C. 3; 31 Berkeley Square, W. 1 • OTHER BANKING OFFICES: Paris, Brussels, Antwerp, Frankfurt, Dusseldorf, Munich, Zurich, Milan and Rome (Banca Morgan Vonwiller), Tokyo, Nassau • REPRESENTATIVE OFFICES: Madrid, Beirut, Sydney, Hong Kong, São Paulo, Caracas • ASSOCIATED FINANCIAL INSTITUTIONS in 31 countries around the world • Member, Federal Deposit Insurance Corporation • Incorporated with limited liability in the U.S.A.

Morgan Guaranty - the corporate bank

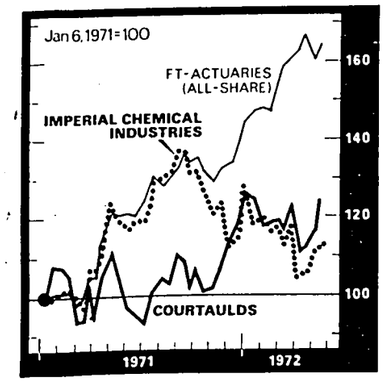
Breaking fresh ground is nothing new to Europe's greatest international bank.

Vila (est. pop. 3,400; 1,200 miles N.E. of Brisbane; main port and business centre of the New Hebrides) is fast acquiring a special significance in the world of international business – as an off-shore investment base for the growing economies of Australia and the Far East.

And, since Barclays International aims to offer an on-the-spot service to meet the demands of finance, commerce and industry wherever they appear, we recently opened our newest branch there.

It is this kind of ambitious spirit that has given us more overseas offices than any other bank in the world: over 1,700 with our associates and subsidiaries.

It has also given us hard-won experience and skill in *every* side of international banking – whether it be corporate financing abroad, administrative and financial help for importers and exporters, or large-scale currency and investment operations.



Our initiative, experience and ability are three good reasons for you to get in touch with us, to find out how we can put our international services to work for you.

You may never need us in Vila. But Barclays International is a whole world of banking.

And it's yours for the asking.

BARCLAYS International

Head Office: 54 Lombard Street, London EC3P 3AH

tax charge, a mere £5.7m against £15.6m, thanks to some intelligent shuffling around of assets in the group and the benefit of the investment incentives. It looks almost too good to be true, and when the accountants have formulated some standard principles for dealing with such tax bonanzas, changes in presentation might be necessary. But the addition to cash resources will be useful. If spending power finally gets through to the manufacturers of consumer goods, Courtaulds will be in a good position to bump the profits up again. The market, realising this, marked the shares up 15p to 163p.

Wall Street

Our non-mutual friends

New York

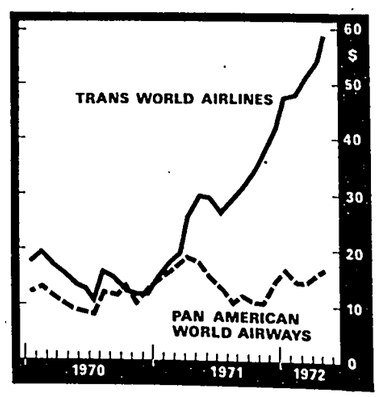
Whatever the ultimate outcome of American-Soviet summitry, Wall Street did not hesitate to beam its approval. While President Nixon was still en route to Moscow, the Dow Jones industrial average rallied by a total of over 20 points, erasing over half the loss incurfed since the mid-April outbreak of new Vietnam hostilities. Although the rally was subsequently slowed by profit-taking, the Dow at mid-week closed at 965.46, up over 24 points from the previous Wednesday.

The market held its gain, moreover, despite the disclosure—which has sometimes had a devastating effect in the past—that mutual fund shareholders again cashed in more shares than they purchased (the latest figures are for April). The funds have been plagued on and off over the past year by net redemptions. The reasons seem to be that many contractual plans taken out for 10 years are currently expiring, there are fewer firms at present engaged solely in selling fund shares, and many holders have been baling out in the generally rising market in past months as soon as share prices reached levels at which they had been initially purchased.

Net redemptions in April rose to a record level of $250m, up from the previous record of $194m the month before. And partly as a result of sizeable payouts, the ratio of cash to total assets dwindled to 4.8%, the lowest in nearly seven years.

The spectre of the decline of the mutual fund industry no longer holds the terror it once did for the market. The reason is that while the industry still accounts for the greatest dollar amount of purchases and sales among institutional investors on the New York stock exchange, private non-insured pension funds (principally corporate trusts managed by banks) have been gaining rapidly in market impact. Last year, the mutual funds registered $42.7 billion in total transactions, up 30% from the year before. But the volume of the non-insured pension funds in the same period rose 50% to $34.4 billion. The pension funds' holdings of shares have actually exceeded those of the mutual funds from the early 1960s, and the gap, if anything, has been widening lately at an accelerating clip: at the end of 1971 pension funds had $79.3 billion invested on the New York stock exchange against $51.4 billion for the open-end and closed-end mutual funds.

Airlines



Pan Am's dumps

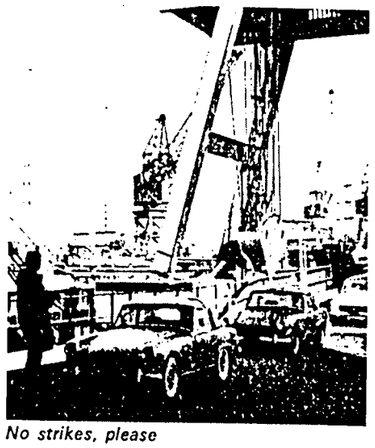
There are six new faces in the Pan American World Airways management team, recruited mainly from other airlines and expressly charged with getting Pan Am out of the red. It is unlikely that they will succeed in doing so much before 1974. They have taken over a depressed and demoralised airline in which the successive losses of the past three years have run at $28.9m, $48.4m and $45.5m. The accounts now show that the heavy cash drain has been stemmed by one windfall (the repayment of deposits on the cancelled American supersonic transport) and one property sale-and-leaseback which have improved working capital by $70m. Even the company talks about it being doubtful whether the airline could break even this year. It almost certainly will not, and might not next year either.

There seems to be something much more seriously wrong than the traffic slump through which all airlines have been going. Pan American's loads in 1971 were nearly 56%, and they were nearly 60% the year before. This is high by airline standards. **Swissair** sold only 52% of its seats last year but turned in a net profit of more than $10m, its highest in 10 years. It may not look all that big a figure, but Swissair is a relatively small airline, with a revenue of about $3½m compared with Pan American's $1.2 billion. And since air fares are quoted in American dollars, the revaluation of the Swiss franc 12 months ago clipped $6m off net profit.

American airlines with their huge resources can carry several years of losses, but bankers and shareholders become understandably restive if these losses go on when others are making profits. In 1970, **Trans World Airlines** made a net loss of $63½m, which was larger than anything Pan American has ever lost within so short a period. But TWA turned in a net profit of $3.3m last year. Without the Hilton hotel profits this could not have been done, but Pan American has its profitable hotel chain too. The significant thing about TWA's turnround was not so much its speed, although that was spectacular enough, as the fact that it was done on passenger loads of less than 50%, substantially below those of Pan American.

The two airlines had much the same operating revenue, of just over $1 billion last year, and TWA's operating costs were actually the higher. The real difference between the two is that TWA's financing is under much better control. It may be luck that concentrated the bulk of TWA's capital outlay in 1969 and 1970 while Pan American was still taking delivery of

Boeing 747s last year. But Pan American's gearing is now about 66%, or about a half higher than the average for American industry. There was a breathtaking period earlier this year while its bankers considered whether or not to renegotiate the $270m revolving credit. They did, but under "much more restrictive" conditions.



With no new aircraft to purchase, Pan American can live again, if not very comfortably, while the new management settles in under a new chairman. But if it is then asked to firm up its Concorde orders, and start making progress payments towards them, things could look sticky. The share prices of the two airlines show how the market has read the omens. But Pan American is a good spec for anyone who thinks it has sunk so low that it can only move up—and who is prepared to wait until 1974 to see it happen.

British Leyland

Tomorrow and tomorrow . . .

The British Leyland Motor Corporation should earn £100m profit by 1975. That is the rosy forecast of a special report published this week by J. and A. Scrimgeour, the stockbrokers. It expects a 17% drop in earnings this year. But earnings should double in 1973 and soar again in 1974 and 1975.

This assumes that the demand for cars in Britain will not ease up as it did in 1965-70, when there was nil growth in the car market. The Scrimgeour argument is that there is a lot of pent-up demand, and the Government is unlikely to clamp down on credit as it used to, having accepted the Crowther report recommendations.

No strikes, please

The main area for profit growth, highlighted by Scrimgeour, is further rationalisation. The report predicts extra profits of £15m-£20m from improved labour relations, £30m from cheaper designs and £20m-£30m from improved manufacturing methods. Add to this a new top quality management team, mainly taken from Ford, and a tough pricing policy and you get those £100m profits.

The problem is that the City has heard it all before. Take the labour relations situation, which is so crucial. Despite promises of a better tomorrow, the strikes do not seem to cease. In fact, some progress is being made by slowly switching from a piecework payment system to measured daywork. This cuts down dramatically on disputes and also ensures steadier production. Strikes have dropped at plants where daywork payment has been introduced. At Cowley, for example, only 9,000 man-hours were lost in the year after daywork came in, against 5½m the year before. Some 68% of men in the Austin-Morris division are now on daywork, and this could reach 100% by the year's end.

This switch suggests that the endless pinprick strikes will be replaced by occasional mammoth strikes that Detroit knows so well. Most car firms prefer it that way. However, British Leyland has suffered even more from outside strikes than from internal ones. Its new policy of double and even triple-sourcing makes it less vulnerable to the strikes from component makers that hit it so badly in 1970. But the miners' strike cost BLMC some £8m in lost profits, and a railway strike would hit it badly again.

The interim results, due next month, will be grim. The shares are still a speculative buy. Those £100m profits may never be realised. But the possibility is there, and as such the shares at 38p, on what would be a prospective p/e ratio of 4 for 1975, seem excessively cheap.

London quiet, but Wall Street shows its approval of the Moscow talks. Tokyo goes to new high.

Stock prices and yields are on pages 137 and 138

SECTOR ANALYSIS

Which to go for?

The London market is in the mature stage of a bull market, when an astonishing number of people ring up their brokers and say they have just borrowed £15,000 from the bank and want to know where to put it. They do not usually talk in terms of individual companies; but they like to cast their eyes over the horizon and ask about golds, or financials, or property or construction.

There are three things to get right about investment timing: the market, the sector and the individual company. The market is the most important. There are some periods when it is better to go liquid. London has not reached that. The next thing to look at is the sector, and *The Economist* will, from time to time, take a particular slug of the market and examine it closely. This week we look at the "whole sector approach."

The theory behind it is simple. The economy may grow (or decline), but some industries in it grow faster than average, for all kinds of reasons including: the way that demand on an aggregated level flows down to particular groups of industries; long-term shifts in the structure of the economy (such as that from manufacturing to the service industries); technological progress which transforms the prospects for a particular industry (harder

Matthews Wrightson Holdings Limited

Insurance Broking · Lloyd's Underwriting Shipping · Air Broking · Land Use

FURTHER EXPANSION IN 1971:
all sides of the business contributed

Some points from the Statement of the Chairman, John Eldridge

Group Profits. Pre-tax profits have risen by 28% to £2.01m. compared with last year's figure of £1.57m. adjusted to take into account the acquisition of Bray Gibb.

Insurance Broking. Bray Gibb Wrightson had a most successful year in spite of the increased costs incurred in order to obtain for the future the full benefits of the merger with Bray Gibb. By international standards the company is now one of the major insurance broking firms.

Ship Broking. Galbraith Wrightson again produced substantially increased profits in 1971. There has, however, been a severe reduction in shipping activity and freight rates and there is no sign of a recovery yet. Nevertheless, the company is in a favourable position to exploit opportunities and to react rapidly to market changes.

Insurance Underwriting. Improved results at Lloyd's on the 1968 account has meant increased earnings for Matthews Wrightson Pulbrook in 1971. A further substantial rise is expected in 1972.

Land Use. The Group's forestry management has been widened in the past year and increased profits have resulted. A new company, Fountain Farming, extends these services to investors in agriculture.

Air Broking. Instone Air Transport had a very busy and successful year.

Outlook. By 1973, the expansion of the other sectors of the Group should produce a satisfactory advance in profits even if the shipping recession continues, but in 1972 the decline in income from shipping activities could more than offset the growth from other sources.

†*as adjusted for July 1971 Scrip issue.*

- The much larger proportionate increase in net profit than in sales was accomplished partly by a small overall increase in profit margins but just as much by a strict control over operating costs.
- There is a tendency in many retail organisations to cope with mounting operating expenses by reducing the numbers of staff and resorting to various forms and degrees of self service. We ourselves do not believe in this policy. We are trying to create a situation in all our stores where every customer can obtain personal service at every counter in the business, including the food counters, and we are employing new techniques to make that service more effective and more efficient.
- The year marks the largest increase in volume ever achieved by the textile departments. The food department has continued to make steady progress, while restaurants have been exceptionally busy throughout the year and made a very significant contribution to profit.
- We believe that, with the improvements taking place in the quality and range of our merchandise and its presentation in the stores, the higher turnover will include a satisfactory increase in unit sales and that shareholders can look to the future with confidence.

The Gill & Duffus Group carries on an international business as merchants, brokers and processors of a wide range of primary commodities.

SUBSIDIARY COMPANIES IN:

U.S.A. · CANADA · BRAZIL · FRANCE

to find an example of that) ; the resistance of some kinds of companies to inflation (such as property companies) ; and the influence of government aid (shipbuilding).

Awkwardly, the groups into which the Financial Times-Actuaries indices are arranged do not always easily mesh with the categorisations of industry. The indices are built up of companies, and companies are likely to be spread across many industry subgroups. Some sectors are homogeneous —like oils, breweries, mining finance. Others are not, like engineering. Moreover, market sentiment is not a reflection of what is going on so much as a statement of belief of what will be going on. Thus the market thought that engineering was a recovery sector, but too far in advance of any evidence.

Since the beginning of 1972, some of the rise has been given up.

The chart shows how sub-groups have done since the 1971 market low on the all-share index: measured first to the beginning of the year, and then to May 19th, to illustrate how much of the rise has come in the past four months. Practically all of them have continued running as strongly through 1972 as they did in 1971.

Which have run out of steam ? The argument that those showing the highest gains have least to offer is not necessarily true. Many City pros are shaking their heads at the impossible task of running a factory through inflation and industrial disputes, and are still firmly convinced that the financials are the best and safest sectors. But they need to be watched carefully ; the sectors that rise fastest in the bull market tend to fall first in the bear market. Newspapers and publishing, and contracting and construction, do not seem to have much more going for them. In recent weeks the latter sector has stopped outperforming the market.

At present, the sectors which have risen least are being tipped round the City for the ride to the end of the bull market. This is a natural tendency when the investor with a borrowed £15,000 rings up and asks for a bargain. So oils and mining finance are moving strongly, especially as the latter has had the added momentum of the recent gold rush. This is a movement to be wary of ; jumping into speculative stocks in a mature bull market is not usually wise. But, among topical tips in the consumer sectors, food retailing and tobacco still look attractive.

Critics of the sector approach say, quite rightly, that the performances of individual companies in a sector vary far more than the sector averages compared with the market. But in the United States it has been calculated that 10% of the rise in a share can be traced to the influence of being in a sector favoured by the market ; and Mr Michael Hoare of Phillips and Drew has calculated an equivalent figure for Britain of about 20%. Two warnings. First, the heavier the industry, the harder the sector approach is to apply. Secondly, in some sectors the difference between good and bad managements shows up in the profits much more strongly than in others. The companies in textiles, shipbuilding and light electricals have a much greater diversity of performance than breweries, banks and investment trusts.

Shareholder power

No ! No ! Patiño !

British minority shareholders in **Consolidated Tin Smelters,** and two other companies controlled by the Patiño family through Patiño NV, have something to grouse about. CTS made a loss in 1971 of £1m ; its subsidiary, **British Amalgamated Metal Investments,** lost £615,000 before special items ; and BAMI's subsidiary, **Amalgamated Metal Corporation,** lost £1m. And the minority shareholders in CTS were denied the opportunity of a let-out takeover by **Ralli International** at 300p last November when the Patiño family said no. The shares are now 188p.

Mr Erskine Carter, the chief executive of Patiño NV tells shareholders that CTS made a profit for the first four months of the year (against the losses of last year). If the Patiños have the pride to make the effort, they could pull the company round to justify a share price for CTS of 300p, making it an interesting speculation. But perhaps they won't, or can't.

Gilts

Bear not there

The gilt-edged market has been heading down all May. The pessimists are saying that the bull market in gilts has ended. The optimists are pointing out that the gilts market of 1972 is a new experimental one. The government broker is no longer standing by to keep the market orderly, and so any change in sentiment was bound to lead to a more dramatic shift in prices than in the good old days.

The immediate bears of gilts have a poor argument. They must demonstrate that yields over the 9% mark are unattractive and that the Government is now willing to see long rates creep up even further. The only evidence for the latter was a piece of rather inept timing by the government broker. Even though one tap stock was not being sold very readily, he opened up two other ones.

The latest Bank of England figures show the money supply still increasing at 20% a year. The Government will try to slow this, but it will try to slow inflation too. With yields on gilts now showing an almost clear 6% gap over equities, jobbers should recover their nerves.

CHAIRMAN'S STATEMENT

CO-OPERATIVE INSURANCE SOCIETY LIMITED

C.I.S. LIFE POLICYHOLDERS SHARE

£25 MILLION

At the 104th Annual General Meeting of the Co-operative Insurance Society Limited held in Manchester on 24th May, 1972, Mr. H. A. Toogood, Chairman, reported:

I am pleased to be able to begin my review of the Society's operations during the past year by reporting a premium income of over £100 million and a further increase in the profits distributed in both the life and non-life branches. For the first time, the profits distributed to the life policyholders have exceeded £25 million. Our thanks are due to all members of our staff who have helped to achieve this progress.

Before I come to a detailed account of the Society's progress last year, I would like to make some comments about matters that affect the whole of the insurance industry in this country and which therefore are of concern to the Society and its policyholders.

Further insurance legislation is under consideration by the Government. As I said in my report last year, it is my view that the present legislation, if acted upon early enough, can protect non-life policyholders. It appears, however, that there are sometimes difficulties in deciding at what point of time the power given by this legislation should be used, and there is therefore a case for improving it on the lines indicated by the Secretary of State to the House of Commons on 1st May, although care will be necessary to ensure that any further legislative safeguards do not unreasonably restrict the freedom of insurance companies to transact their business in the way they consider best suited to the needs of their policyholders.

Whilst legislation on the lines suggested by the Minister, provided it is not too restrictive, may well be helpful, the same can certainly not be said of the suggestions from other quarters that legislation should require the insurance industry to guarantee in whole or in part the losses suffered by policyholders in an insurance company which fails. The C.I.S. was established in order to provide insurance facilities on a co-operative and mutual basis at minimum cost to policyholders, consistent with absolute security. We have transacted insurance on sound lines for over 100 years so that we now provide insurance facilities for one-sixth of the households of this country, and a high proportion of our policyholders are naturally amongst the lower income groups. It would be grossly wrong if the C.I.S.—which means C.I.S. policyholders—was required to cover deficiencies arising from the recklessness of another insurance company.

I also drew attention in my report last year to the need for further legislation to safeguard the interests of life assurance policyholders. Life assurance is much the biggest item of personal saving in this country for many millions of people, and the life assurance funds of the insurance companies are therefore very large.

These life assurance funds are invested widely and form one of the most important sources of capital for industry on which the economic life of this country depends. The freedom to invest this money widely has been one of the strengths of British life assurance and the main reason why life assurance policies give such a good return to policyholders—and, moreover, a return which in the overwhelming majority of British life offices has been combined with complete security.

It is therefore of the greatest importance that this freedom of investment should not be restricted more than is absolutely necessary. However, during recent years many new life assurance companies have been set up or existing life assurance companies purchased by organisations unconnected with life assurance. If in such a case the parent organisation gets into financial difficulties then the position of the life assurance policyholders could be imperilled, especially if a substantial part of the funds of the life office has been borrowed by the parent organisation. Under the present law there is nothing to prevent such borrowings.

Legislation is therefore needed to prohibit the investment of life assurance funds, except with stringent safeguards, in other organisations under the same control, and also to prevent the "milking" of life assurance funds by the charging of unreasonable management fees by associated organisations, or by the payment of excessive dividends to shareholers out of moneys which should be retained within the life assurance fund for the benefit of policyholders. I sincerely hope that legislation covering these points will be included in the insurance legislation which the Secretary of State has at present under consideration.

In the Finance bill now before Parliament it is proposed as part of the changes in personal taxation to charge individuals (except for those with high incomes or high capital gains) tax at 30% on the interest or dividends from their investments and tax at 15% on capital gains. If, however, individuals invest through the medium of a life assurance policy it is proposed that the insurance company should have to pay tax at 37½% on the interest or dividend income from many of their investments (and at 30% on the dividend income from the remainder) and tax at 30% on capital gains. It would, in my view, be deplorable if this is passed into law in the present form because it would have the effect of levying tax on a small saver—who may not even be liable to income tax as an individual—at a substantially heavier rate than the tax levied on a person with sufficient income to be able to invest direct on the Stock Exchange or through the medium of a unit trust. It does not seem to have been sufficiently realised that life assurance, and especially industrial life assurance, is much the biggest medium of saving for people in low income groups. I sincerely hope that these provisions in the Finance Bill will be altered before the Bill is carried into law so that justice can be done to those who save through the medium of life assurance policies.

Investments

At the end of the year, the total assets of the Society amounted to £595 million as compared with £554 million at the end of 1970. Of this increase of £41 million, £6 million is due to the writing-up of the value of the investments in ordinary shares to which I shall refer later, and £3 million arises from loan arrangements that we entered into during the year to add to our investments overseas.

In the investment field the main feature of 1971 was the large increase in market prices of stock exchange securities that took place during the year. All types of securities shared in this recovery, the increase being particularly marked in ordinary shares where the rise in prices was about twice as big as amongst British Government and other fixed-interest securities, and where, at the end of the year, the price level, measured by the broadly-based indices, was at its highest ever. One effect of this large rise in prices is that the excess of the market values of our assets over their values shown in the balance sheet is at a record high level, despite the substantial writing-up of the balance sheet values that has taken place over recent years.

Our concern about the high rate of inflation and the need in the investment of the funds to try to maintain the real value of the long-term savings of our life assurance policyholders has again led us to concentrate our investments during the year in ordinary shares and property, including, as already mentioned, some addition to our overseas portfolios of ordinary shares. We did not entirely neglect the fixed-interest market, but the additions to our holdings of British Government securities were to a large extent offset by reductions in debentures and loan stocks, where throughout the year prices were high in relation to the prices of British Government securities. The increase in mortgages was entirely due to commitments under long-standing arrangements.

CHAIRMAN'S STATEMENT

After allowing for the effect of the writing-up of the value of investments, the gross rate of interest earned on the life assurance funds has fallen by 0.05 per cent to 6.90 per cent. The fall in the interest rate was due mainly to the heavy emphasis on ordinary shares, where the commencing dividend yield is materially lower than the return being achieved on the existing assets, but where there is the expectation of growth of dividends in future.

Life

On 15th February 1971, the country changed officially to decimal currency. The Society had planned for this over many years and the transition went very smoothly indeed, although our staff were involved in a certain amount of non-productive work in the early part of the year, mainly in connection with small Industrial Section policies. Despite this 1971 was a record year for new business. In the Ordinary Section the annual premium income on new assurances was £4.3 million, securing new sums assured, including the capital value of income benefits, of £259 million. In the Industrial Section the new annual premium income was £6.1 million and the new sums assured £145 million. These figures are considerably higher than those for 1970, when the dispute with our agents depressed our new business production, and the figures for new business in the first quarter of 1972 indicate that we should reach new all-time records this year.

The rates of reversionary bonus declared in the Ordinary Section (£3.40 per cent for assurances and £5.25 per cent for annuities) and in the Industrial Section (£2.15 per cent on the main tables) are the same as last year. I am pleased to announce that the rates of terminal bonus declared on policies becoming claims by death or maturity before the next bonus declaration takes effect have been substantially increased. In the Ordinary Section the terminal bonus varies from £0.30 per cent of the participating sum assured for assurance policies with 4 complete years' premiums due and paid to £56.50 per cent for policies with 44 or more complete years' premiums due and paid. In the Industrial Section the terminal bonus under the main tables varies from £0.20 per cent to £45.00 per cent. In order to cover the cost of the terminal bonuses now declared, the value of our investments has been written-up by £6 million, of which £2.5 million has been transferred to the Ordinary Life Fund, £3.3 million to the Industrial Life Fund and the balance to the Collective Life Fund and the Profit and Loss Account.

Motor

The increase in premium income from £13.7 million to £18.2 million was due to the increases in rates during 1970 and 1971 and also to an increase in the volume of motor insurance underwritten. In my report in 1970 I indicated that the Society was not prepared to enter into competition for motor insurance at inadequate rates. Now that premiums are related more realistically to the heavy liabilities undertaken by motor insurers, the Society is extending its motor insurance account through the medium of our 7,000 Home Service agents. Our statistics, built up over a period of years, enable us to calculate premiums with more precision than hitherto and thus to achieve greater fairness as between one policyholder and another.

With the continuing increase in wages and salaries it is inevitable that the cost of repairing damaged motor vehicles will rise, awards to injured third parties will increase and, despite the use of modern management techniques, the expenses of administering the business will become more difficult to contain. The introduction of V.A.T. in 1973 will lead to an additional cost on repairs to vehicles. The comparatively mild weather experienced in 1971 led to a slight fall in the frequency of accidents and consequently the overall cost of claims. It would, however, be unwise to regard 1971 as a normal year, and a return to more typical weather conditions could lead to a claims frequency on a higher level.

Taking all these factors into account an increase in motor insurance premiums later this year is inevitable. The Society will continue its policy of providing cover to the private motorist at rates justified by statistical information and taking into account the paramount necessity of complete security for its policyholders.

The underwriting loss on the Motor insurance in 1971 was £440,000, and after taking into account interest earnings, the net loss of £5,000 has been covered by a transfer from the profit and loss account.

Property

The premium income in this account increased from £8.0 million in 1970 to £8.40 million in 1971. Householders' insurance and domestic fire insurance forms a large part of this account and in the absence of abnormal weather conditions a satisfactory result was achieved. In previous reports I have stressed the importance of fire prevention and the need for managements to become involved in ensuring that adequate steps are taken to minimise the outbreak of fire. I am pleased to report that in 1971 our experience in industrial and commercial fire insurance has been satisfactory and that the serious fires which occurred in 1969 and 1970 were not repeated. I sincerely hope that the vigilance of the managements will continue and that, where appropriate, approved sprinkler installations will be introduced, thereby reducing the risk of extensive fire damage and consequently the cost of insurance cover.

Losses arising from theft continue at an alarming rate both in domestic and commercial properties and owners would be well advised to check regularly the security of their premises with a view to effecting improvements and thus helping to combat criminal activities. With the continuing increase in values it is imperative that sums insured are kept up to date to avoid inadequate protection in the event of a serious loss.

Other Classes of Non-Life Business

The premium income from the remaining classes of non-life insurances increased from £3.2 million to £3.5 million.

The results were generally satisfactory apart from Liability insurance where an underwriting loss was sustained. Increased wages and salaries are reflected in the higher cost of claims settlements and an increase in premium rates will be necessary to bring the account into profitability. The Employer's Liability (Compulsory Insurance) Act came into effect on 1st January, 1972, and although most employers already held this cover prior to the implementation of the Act, it is too early to judge the effect of the Act on the cost of operations.

United States of America

The Rochdale Insurance Company (our wholly-owned American subsidiary) which undertakes reinsurance in the United States, benefited from the improved underwriting results generally experienced and the policyholders' surplus was increased by $1 million.

Profit & Loss Account, Reserves, Distribution of Profit

After taking interest earnings into account and providing for taxation on the non-life business, the net surplus in the Profit & Loss Account amounted to £1,524,000 (compared with £594,000 in 1970), which, together with the transfer of £218,000 from the Investment Reserve Account, has produced a disposable surplus of £1,742,000.

In order to maintain our reserves at an adequate level in relation to our premium income we have transferred £1,080,000 to the General Business Reserve, which now stands at £6,080,000. The dividend to Co-operative Societies on the non-life premiums paid by them for their own insurances remains unchanged at 17½p per £1 of premium.

Board Changes

On 30th June 1971, Mr. S. J. D. Dawson retired from the Board and was replaced by Mr. J. S. Greig, and on 9th November 1971, Mr. G. L. Armitage relinquished several appointments, including his directorship of the C.I.S., in order to devote more time to his remaining duties. He was replaced by Mr. K. A. Noble. Our best thanks go to Messrs. Armitage and Dawson for their services to the Society and we welcome the return to the Board of Messrs. Greig and Noble.

Conclusion

During 1971 the most serious factor influencing our operations has been the continuance of a high rate of inflation. Notwithstanding a useful rise in new business and increased premium rates in Motor and Employer's Liability insurance, costs have continued to rise proportionately more rapidly than premium income. There can be little doubt that the effect of inflation was one of the fundamental reasons for the very high wage claim submitted on behalf of our Chief and Branch office staffs, which led to a period of industrial action in late 1971 and early 1972. The dispute was eventually settled when the majority of the staff accepted the Society's offer. In resisting the claim the C.I.S. Board were looking at the overall interests of the Society, that is, the interests of our policyholders and of all sections of our staff.

We feel, particularly as the Directors of a co-operative organisation, it is important that we should continue both to sell policies which are fairly priced, and to pay fair wages to our staff for the work done. I hope that even in these difficult times we shall be able to reach negotiated settlements which do justice to the various sections of our staff, but there has to be a recognition by all of us the simple truth that it is only by the twin factors of improving efficiency throughout the Society and expanding the premium income that the earnings of the staff can increase without adding to the costs that have to be borne by the policyholders.

I am pleased, therefore, to be able to report the continuing co-operation of our field staff at all levels in the rearrangement of agencies and in other measures designed to improve our efficiency, and also that the new business production is now progressing to a more satisfactory level.

If we continue to work together in this way and to maintain the present momentum in expanding the Society's business, we can all of us, policyholders and staff alike, face the future with confidence.

The report and accounts were adopted.

APPOINTMENTS

University of Edinburgh

DEPARTMENT OF ACCOUNTANCY AND FINANCE

Applications are invited for for the post of LECTURER in this Department. The appointee will contribute to undergraduate courses and have opportunities for furthering his personal research interests.

Salary scale : £1,641-£3,999 per annum, together with superannuation benefits.

Applications, by letter (two copies) together with the names of two referees, should be sent to the Secretary to the University, Old College, South Bridge, Edinburgh, EH8 9YL, from whom further particulars may also be obtained. The closing date for applications is 14th July 1972. Please quote reference 1044.

University of Durham

DEPARTMENT OF ECONOMICS

Applications are invited for the post of TEMPORARY LECTURER IN ECONOMICS specialising in either econometrics or economic statistics for appointment for 1 year only from 1st September, 1972.

Salary on the scale £1641-£3999, plus F.S.S.U. benefits.

Further particulars from the Registrar and Secretary, Old Shire Hall, Durham, DH1 3HP, to whom applications (3 copies), naming three referees, should be sent by 16th June, 1972.

Heriot-Watt University, Edinburgh

DEPARTMENT OF ECONOMICS

Lectureship in Business Economics

Applications are invited for a lectureship in Business Economics. The person appointed will be expected to teach applied microeconomics to students enrolled for the B.A. degree in Business Organisation and to teach and undertake research in Business Economics in the Department of Economics.

Salary will be on the scale £1,641 to £3,999 per annum. F.S.S.U.

Further particulars and application form may be obtained from the Secretary, Heriot-Watt University, Chambers Street, Edinburgh, EH1 1HX, with whom applications should be lodged *not* later than Friday, 16th June, 1972. Please quote reference 32/1/3047.

University of Essex

Directorship of the S.S.R.C. Survey Archive

Applications are invited from suitably qualified applicants for the Directorship of the S.S.R.C. Survey Archive at the University from 1st October, 1972, or as soon as possible thereafter. Duties will include actively encouraging the deposit and use of data in the Archive by social scientists and some teaching in the University in social studies or computing or both.

Appointment will be to the University's academic staff and will, depending on the qualifications of the person appointed, be at *Readership* (£3,852 to £4,734) or Professorial level; the appointment may carry tenure until retiring age or may be initially for five years. Further particulars from the Registrar, (Room 6.014), University of Essex, Wivenhoe Park, Colchester, CO4 3SQ, to whom applications (ten copies) should be sent by 26th June, 1972.

For further appointments see pages 5, 128 to 135

CHAIRMAN'S STATEMENT

COURAGE

In his circulated statement, Mr. R. H. Courage, Chairman of Courage Limited, reports:

- Group beer sales growth again exceeded the average increase for the industry as a whole, the continuing gain in the Free Trade market being particularly satisfactory.
- Sale of Courage Tavern was extended to cover the North of England, and made highly satisfactory progress. Courage Light Ale became established as a leading national brand and 'take-home' favourite. Harp Lager sales continued their strong growth.
- Record wine and spirit turnover and profits achieved by Charles Kinloch & Co and by the Arthur Cooper off-licences.
- Production and distribution system further improved.
- Anchor Hotels and Acorn Hotels continued their development programmes and increased their profits.
- Earnings per share have increased from 3.5p for 1966 to 7.5p for 1972, representing a compound annual growth rate of 13.5%.
- Continuation of growth is foreseen in current year and increased dividend of 17% expected to be maintained on the enlarged share capital.

Summarised Group Results

	1971/72	1970/71 Estimated Annual Basis
Turnover	£171,027,000	£152,725,000
Profit before tax	£14,813,000	£12,696,000
Profit after tax	£8,887,000	£7,552,000
Earned per Ordinary Share	7.5p (30%)	6.38p(25.5%)
Interim and proposed final dividends per Share	4.25p (17%)	3.75p (15%)
Ordinary share scrip issue proposed	1 for 10	—

Copies of the report and accounts and accompanying Chairman's Statement may be obtained on request from The Secretary of the Company, Anchor Terrace, Southwark Bridge, London, S.E.1.

CHAIRMAN'S STATEMENT

BTR 1971 Further Growth

Mr. D. L. Nicolson, Chairman, reports

Further growth in sales and earnings per share.
Expansion and rationalisation plans implemented.
Continuing progress expected.

Summary of Results

	1971 £M	1970 % Change
External sales	50.41	+33
Earnings for year	1.88	+39
Earnings per share	7.3p	+21

BTR LIMITED

Silvertown House, Vincent Square, London, SW1P 2PL

APPOINTMENTS

economist

English Calico Ltd is a major textile manufacturing and marketing group working on a world-wide basis. Other interests include departmental store trading, multiple retailing, printing, packaging and paper making.

The Group is now seeking the services of an economist to join a small Head Office team working on group forward strategy, with particular reference to marketing and commercial implications.

The duties are stimulating and largely non-repetitive requiring a high standard of analytical and interpretative skill and needing a large measure of initiative.

The successful candidate will probably have had several years' experience in this type of activity with minimal supervision. A degree in Economics or a related discipline is necessary for this appointment which will lead to wider opportunities within the Group.

Salary and related benefits will be commensurate with the importance of the post.

Applications with career history should be posted to:

Group Appointments Manager,
English Calico Ltd.,
56 Oxford Street,
Manchester M60 1HJ.

International Planned Parenthood Federation

Two Assistant Information Officers

Latin America and Middle/Far East

to work in the Information Section of the Information and Education Department based in London as part of a small team providing a quick reference information retrieval system on the work of the IPPF, with particular responsibility for the appropriate geographical area in order to assist Central Office field and programme staff, other institutions and agencies. The work includes the review, processing and synthesising of a wide variety of incoming information, preparation of periodic reports, handling internal and external enquiries for reference background material, statistical and other data and information on programmes. The AIO will maintain personal contact with staff members visiting IPPF personnel and other visitors in order to keep abreast of current developments. Membership of the team requires responsibility, accuracy, imagination and initiative to contribute to a rapidly developing field of activity. The person appointed to the Latin American post will have a reading knowledge of Spanish and writing ability would be a strong asset. Working experience in the developing countries would be an advantage. Salary £1,500 p.a. minimum subject to qualifications and experience; plus luncheon vouchers and valuable fringe benefits.

Apply in writing giving full details of qualifications and previous experience, including names of two referees to:

Office Manager,
IPPF,
18-20 Lower Regent Street,
London SW1.

IPPF is a non-governmental organisation consisting of family planning associations or agencies in 100 countries. There are about 95 professional, technical and support staff of 14 nationalities at Central Office in London

INTERNATIONAL PLANNED PARENTHOOD FEDERATION

P.P.B.S.

CORPORATE PLANNING AND RESEARCH

Two key posts are vacant in the Council's multi-disciplinary team responsible to the Chief Executive for Corporate Planning. In conjunction with Heads of Services, this central group is responsible for the development and operation of this management system.

Corporate Planning (P.P.B.S.) is a new and rapidly growing field. It involves:

Specifying objectives
Research and analysis of problems and needs
Evaluation of alternative policies
Preparation of 4-year corporate plan and budget
Setting of targets to be achieved
Monitoring progress against targets and objectives

Both posts offer practical experience in an advanced application of this system in a progressive authority. The system is already in operation, but much remains to be done to refine the planning process and to research important issues.

SENIOR PROGRAMME PLANNER

(£3,387—£3,837)

This post requires someone with demonstrated ability to work successfully with many professions in preparing plans and implementation programmes. Under the Programme Planning Manager he will be responsible for refining and co-ordinating the planning process, and monitoring progress towards objectives. The person appointed will be either professionally qualified or a graduate. His background can be any field where his practical ability has been demonstrated. Experience in the public sector will be useful but not essential.

SENIOR RESEARCH OFFICER

(£3,078—£3,495)

An important function of this central team is research and analysis into planning issues spanning the breadth of the Council's services. This involves surveys to assess needs and problems, the development of alternative plan policies and the use of advanced techniques for analysis.

The Senior Research Officer will join three Research Officers, all graduates, already in post; will be responsible for research assignments in the central group; will be involved in research elsewhere in the Council; and will foster links with universities and other local authorities.

The person appointed will have a good honours degree, will be well qualified in his field and have a background of practical research. Local Government experience is not important.

Over 5 weeks' leave, staff restaurant, removal expenses and mortgage facilities in approved cases.

Application forms from the Chief Executive and Town Clerk, Town Hall, Woolwich SE18 6PW. (Telephone 01-854 8888 ext. 227.) Closing date: 9th June.

LONDON BOROUGH OF GREENWICH

APPOINTMENTS

University of Durham

COMPUTER UNIT

invites applications from a
Social Scientist

to encourage new and improved computer applications in social sciences. The vacancy is for a PROGRAMMING ADVISER from 1 October 1972 in the salary range: £1641-£3558 per annum, and affords ample opportunities for original research using the 1-megabyte 360/67 time-sharing computer. Further particulars and application forms (returnable by 26 June 1972) can be obtained from the Registrar and Secretary, Old Shire Hall, Durham, DH1 3HP.

The University of Lancaster

Two Lectureships in Marketing

Applications are invited for two posts of Lecturer in the Department of Marketing. The required fields of specialisation are research methods, with special emphasis on consumer market research; and behavioural studies, with special emphasis on the psychology of consumer behaviour. Initial salary, according to qualifications and experience, on the scale £1641-£3999 with FSSU membership.

Further details may be obtained (quoting reference L.673/D) from the Deputy Secretary and Establishment Officer, University House, Bailrigg, Lancaster, to whom applications (five copies) including the names of three referees, should be sent not later than 30 June 1972.

KUWAIT AIRWAYS CORPORATION

Kuwait Airways Corporation has a vacancy for a

PLANNING DIRECTOR in Kuwait

Applicants must have the following qualifications:

1. University Degree in Economics or Planning
2. Minimum experience of 6 years in the airline industry.

Interested applicants may submit their detailed applications to: **Personnel Manager, Kuwait Airways Corporation, PO Box 394, Kuwait.**

IRELAND

STATISTICIANS

There are 3 vacancies for Statisticians in the Central Statistics Office at present. Further vacancies may be filled from this competition.

Starting salary (at present under review) in the range **£1,624 to £2,254** a year (married man) or **£1,624 to £2,109** a year (single man or woman). Subject to certain conditions Statisticians may be granted special additional increments after completion of three years' and six years' service.

Non-contributory pension scheme. Widows and Orphans pensions scheme.

Essential:
(I) An Honours University Degree in Mathematics or Mathematical Physics, or Mathematical Statistics; **or**

(II) An Honours University Degree in Economics **and** satisfactory evidence of having shown in your educational course a special aptitude for Mathematics; **or**

(III) An Honours Degree in any Faculty, **and** satisfactory evidence of having shown in your educational course a special aptitude for Mathematics **and** of having had experience in practical statistical work.

Persons who expect to qualify in 1972 are eligible.
Upper age limit: 35 years.

Closing date: 7th June, 1972

For application forms and further details write (on a postcard) to The Secretary, Civil Service Commission, 45 Upper O'Connell Street, Dublin 1.

City of London Polytechnic

DEPARTMENT OF ECONOMICS, MANAGEMENT AND MARKETING

Research Assistant in Marketing

Applications are invited from graduates with a good Honours Degree in Economics or Business Studies to work on an investigation into the relationship between price competition, incentive promotions and advertising.
Some business experience would be desirable. Applications will however also be considered from students taking their final examinations this year.
The person appointed will be required to undertake 6 hours teaching per week and will be expected to register for a higher degree.
Salary: £1,200 x £50(2)—£1,300 p.a.
The appointment will be available from 1st September 1972. Applications should be made to Head of Economics, Management and Marketing Department, City of London Polytechnic, School of Business Studies, 84 Moorgate, EC2M 6SQ.
Closing date for applications is 19 June 1972.

University of New South Wales

Lecturer—
Agricultural Geography

SCHOOL OF GEOGRAPHY

Salary: $A6697 range $A9286 per annum. Commencing salary according to qualifications and experience.

To commence duty in 1973. Applicants should preferably have interests in agricultural economics or rural settlement. Qualifications in agricultural economics or agricultural science acceptable if allied with experience in geographical analysis. Experience in applied geography or quantitative analysis advantageous.

Details of appointment, including superannuation, study leave and housing scheme, may be obtained from the Secretary-General, Association of Commonwealth Universities (Appts), 36 Gordon Square, London WC1H 0PF (Tel: 01-387 8572).

Applications close in Australia and London on 19 June 1972.

University of Waikato

HAMILTON, NEW ZEALAND

Academic Appointments for 1973

The University of Waikato invites applications for the positions listed below all of which are to be available from 1 February 1973. The schools of study system in the University promotes strong contacts between related subjects. The development of postgraduate work, and research is encouraged.

ACCOUNTANCY: two positions are available as *senior lecturer*, *lecturer*, or *junior lecturer* for persons with suitable academic qualifications and interests in (a) information systems and quantitative techniques or (b) management accounting, or (c) accounting theory.

BUSINESS ADMINISTRATION: one position is available as *senior lecturer*, *lecturer* or *junior lecturer* for a position with suitable academic qualifications and interests in (a) analytical techniques or (b) marketing, or (c) production administration, or (d) business policy.

Salaries are currently as follows: Junior Lecturer—a scale $NZ3899-$NZ4940: Lecturer—a scale $NZ5589-$NZ7149: Senior Lecturer—a scale $NZ7278-$NZ8579-$NZ9358.

The conditions of appointment, details of the procedure for application, and in some cases, further particulars of the vacancies, are available from the Registrar at any University in New Zealand, and from the Secretary-General, Association of Commonwealth Universities (Appts), 36 Gordon Square, London WC1H 0PF (Tel: 01-387 8572).

Applications close on *15 July 1972*.

University of Cape Town

Senior Lecturer and Lecturer in Business Finance

DEPARTMENT OF BUSINESS SCIENCE

Applications are invited for appointments as Senior Lecturer and Lecturer in the Department of Business Science. It is hoped to fill the vacant positions as soon as possible in the current academic year.

Applicants should have good academic qualifications and relevant business, teaching or research experience in Business Finance. A strong background in Economics is essential and ability to participate in the teaching of other areas of Business Administration, such as Business Policy, Organisation Theory, Economic Statistics, Marketing, Operational Research, etc., would be an advantage.

The Department of Business Science conducts general courses for the degrees of Bachelor of Business Science (4 years of study) and Bachelor of Commerce (3 years). Specialised courses at the honours level are provided for B.Bus Sc. students in the final year. These presently include Business Finance, Economic Statistics, Personnel, Marketing and Statistics and Operational Research. The successful applicant will be expected to participate in the general courses and in special field courses in Business Finance. The applicants will also be required to supervise postgraduate students undertaking research for the degree of Master of Business Science and Doctor of Philosophy.

The salary scale applicable to the post of Senior Lecturer is R6,300 x 300 — R8,100 per annum, and that to the post of Lecturer is R4,800 x 300 — R6,900 per annum. The commencing salary will be determined in accordance with the qualifications and experience of the person appointed.

Applications should give full particulars of age, marital status, academic qualifications, publications and research interests, together with the names and addresses of at least two referees (preferably persons with knowledge of the applicant's academic qualifications and experience) whom the University may consult.

Two copies of the application should reach the Secretary-General, Association of Commonwealth Universities (Appts), 36 Gordon Square, London WC1H 0PF (from whom memoranda giving the conditions of service, including transport expenses on appointment, and information on the work of the Department may be obtained) not later than *15 July 1972*. A third copy of the application with a medical certificate should be sent direct by airmail to the Registrar, University of Cape Town, Private Bag, Rondebosch, Cape Town, South Africa, by the same date.

The University reserves the right to appoint a person other than one of the applicants or to make no appointment.

APPOINTMENTS

University of Reading

Professorship of Economics

In the near future the University will invite applications for a Professorship of Economics which will become vacant when Professor J. H. Dunning takes over a Professorship of International Investment and Business Studies. There will be no restriction on the field of interest of candidates, although other things being equal it would be desirable for applicants to have interests in the general area of public sector/environmental economics.

Persons who are interested are invited to write to the Registrar, (Room 208, Whiteknights House), The University, Whiteknights, Reading, RG6 2AH, so that he may send them further information when it is available.

Committee on Invisible Exports

Research Assistant

Applications are invited for the post of Research Assistant to the Committee on Invisible Exports. The Committee has a continuing programme of research into problems relating to the foreign earnings of Britain's service industries.

Applicants should have at least *an Honours* Degree in Economics, and preferably a post-graduate qualification or research experience. Competence in international trade and finance is particularly relevant. Salary will be in the range of £1,500-2,000 a year, *depending on* experience and qualifications.

Candidates should send full details of curriculum vitae to the Director, Committee on Invisible Exports, 18th Floor, 23, Fenchurch Street, London EC3M 3DD.

Government of the North-Western State of Nigeria

MINISTRY OF NATURAL RESOURCES

Applications are invited from suitably qualified candidates for appointment as:

STATISTICIAN

Qualifications: A good degree in Economics with at least 2-5 years experience in the organisation of Field data collecting and processing.
Duties: Arrange orderly compilation of all existing Ministry data for use as Bench Marks. Organise proper collections of field data on all projects and to carry out an economic analysis on all projects.
Salary: Scale AY1 £N1008 to £N2117 with enhanced entry point according to qualifications and experience plus 20% Contract addition.
Note: £N1=£1.17 sterling. Income tax it at Nigerian rates and these are substantially lower than those prevailing in the United Kingdom.

OTHER CONDITIONS OF SERVICE

(i) Inducement addition of £300 per annum.
(ii) Partially furnished accommodation at a low rental of 8½% of basic salary is provided.
(iii) A tax-free gratuity of £N100 to £N300 per annum depending on basic salary.
(iv) Free outward and return passages at completion of tour for officer; wife and children passage allowance up to £N230 per tour.
(v) Loan to purchase a car and allowance for running it.
(vi) Leave at the rate of 5 to 7 days for each completed month's service.
(vii) In addition, a tax-free supplementation may be paid to UK citizens.

Further information and application forms may be obtained quoting ref. NWS/8/72.

Brief Books order form

This background series of 28-page briefs, illustrated with maps, charts and photographs, looks at some current world problems and isolates the real issues.

The next 40 years
The survey "The Future of International Business," which appeared in The Economist dated January 22, has been republished as a 48-page booklet. Norman Macrae, the deputy editor of The Economist, has tried to turn himself into a futurologist. He has forced himself to make the best forecast he can of a logical course for international trends and organisation in 1972-2012 and especially 1972-1992. He has come up with some highly unconventional views.

Industrial Relations—Britain's battle for reform
Industrial Relations in Britain today is still a hotbed of political controversy. The Industrial Relations Act is a landmark in the battle for reform, but the argument does not end there. How do British Unions work and did they need reform ? How will the new Act work ? What problems does it leave unsolved ?

APPOINTMENTS

University of Cambridge

Librarian-Secretary of the Faculty of Economics and Politics

The Appointments Committee of the Faculty of Economics and Politics wish to appoint a Librarian-Secretary of the Faculty to take office as from 1st October, 1972. The appointment will probably be for five years in the first instance.

Candidates should have an Honours degree (not necessarily in Economics). The main requirement for the post is administrative ability including the ability to take charge of the staff of the Faculty Office. Some experience of library work would be an advantage but professional qualifications in Librarianship are not necessary.

The pensionable stipend of the post is £1,811 a year, rising by eleven annual increments to £3,264. The starting salary on the scale of stipends will depend on age and experience.

Further particulars can be obtained from the Librarian-Secretary, Economics Building, Sidgwick Avenue, Cambridge, to whom application (nine copies) should be sent so as to reach her not later than 28th June. Candidates should give particulars of their qualifications and the names of two referees

University of St Andrews

DEPARTMENT OF ECONOMICS

Applications are invited for the ESMEE FAIRBAIRN LECTURESHIP in BUSINESS FINANCE, tenable initially for five years from 1 October 1972. Salary scale £1641-£3999, starting salary not exceeding £2823. F.S.S.U. Applications, with the names of three referees should be lodged by 3 June 1972 with the Deputy Secretary of the University, College Gate, St. Andrews, from whom further particulars may be obtained.

The Queen's University of Belfast

Lectureship in Economics

This post is tenable from 1st October 1972 or such other date as may be arranged. The appointment may be subject to a period of probation up to three years in duration. Initial placing, which will depend on experience and qualifications, will be made at one of the first three points on the Lecturers' scale £1,641 x £147 (2) - £1,935 rising to £3,852 (extended to £3,999 from 1st October 1973). Applications should be received by 12th June 1972. Further particulars may be obtained from The Senior Assistant Secretary (Personnel), The Queen's University of Belfast, BT7 1NN, Northern Ireland (Please quote ref. 72/E).

The British Institute of Recorded Sound (the national archive of sound recordings) proposes to appoint an Assistant Director to act as Deputy to the Director with special responsibility for administration including finance. Salary in the range £3000-3500. Pensionable. Applications should be addressed to the Director, BIRS, 29 Exhibition Road, London, SW7.

Portsmouth Polytechnic

Department of Business Studies

Applications are invited from graduates with appropriate professional qualifications and experience for the following full-time appointments :

1. SENIOR LECTURER and
2. LECTURER GRADE I OR II

IN MARKETING AND BUSINESS SUBJECTS

Salary scales : Senior Lecturer £3,131-£3,495 per annum (bar point)—£3,768 extended maximum ; Lecturer Grade II £2,355-£3,033 per annum ; Lecturer Grade I £1,500-£2,687 per annum.

Application forms and further particulars may be obtained from the Staff Officer, Portsmouth Polytechnic, Ravelin House, Alexandra Road, Portsmouth PO1 2QQ, to whom completed applications should be returned by 12th June, 1972. Please quote reference C15.

"BBC requires PROGRAMME ORGANISER for its EASTERN SERVICE in London to plan, organise, and exercise day to day editorial responsibility over a wide range of programmes in Bengali and perhaps other output to South Asia ; to stimulate programme ideas and production standards for these broadcasts ; and to control and co-ordinate the duties of staff concerned with the translation and broadcasting of news and comment and with the building of magazine and feature programmes.

Essential Qualifications : informed interest in international affairs with particular reference to South Asia and close knowledge of developments in Britain of special significance to the region. Sense of news values and proven organising ability. Imagination, tact and good educational background. Ability to work decisively and effectively under pressure. Recent first-hand experience of South Asia and knowledge of the Bengali language, though not essential, would be an advantage. Experience in planning and production of broadcast programmes, or as a writer or journalist, highly desirable. Preferred age : 30-45.

Salary £3,105 p.a. (may be higher if qualifications exceptional) x £152 to £3,915 p.a. max. (grade currently under review), plus £180 p.a. Non-Day Working Allowance.

Write or telephone now for application form (enclosing addressed foolscap envelope and quoting reference 72/G.189 Ect) to Appointments Department, BBC, London W1A 1AA. Tel. 01-580 4468 Ext. 4619."

BUSINESS NOTICES

GOVERNMENT OF KENYA
Feasibility study for a Central Tourist Accommodation Registry or Central Booking Office

The Ministry of Tourism and Wildlife plans to call for tenders for a feasibility study to be prepared for a self-financing Central Tourist Accommodation Registry or Central Booking Office, hereafter referred to as Central Booking or Accommodation Registry System. The objectives of the study will be :

1. (a) To obtain returns of beds sold and unsold per day by the various hotels and lodges, and to sell on behalf of these establishments any residual beds ;
   (b) From the returns mentioned above, to assist the Government to keep better track of foreign exchange earnings ; and
   (c) To harmonise and regulate terms and conditions of hotel bookings and cancellations practice.
2. The consultants' study will be concerned with the following :
   (a) To examine the country's existing laws as they relate to booking contracts and to recommend what, if any, rules and regulations should be made in support of the central booking or accommodation registry system to permit it to discharge its responsibilities as efficiently as possible ;
   (b) To demonstrate how each of the objectives in (1) above can be achieved ;
   (c) To advise on the appropriate organisational structure of the central booking office and to detail the institutional set-up ;
   (d) To provide a report on the mechanics of the central booking or accommodation registry system, with particular reference to communications between the system and hotels and lodges.
   (e) To work out a budget for the central booking or accommodation registry system on the basis of a self-financing organisation under the Kenya Tourist Development Corporation ; and
   (f) To identify and report on the inter-relationship between the central booking or accommodation registry system and the travel trade in general in the field of travel contracts, commissions, etc.
3. Consultants interested in being considered to undertake the said study are requested to submit a detailed application which should include the following :
   (a) Name of firm and location of head office ;
   (b) Description of the organisation of the firm and its associates ; and
   (c) Details of previous experience and/or feasibility studies of similar nature undertaken.
4. Applicants should also :
   (a) comment on the terms of reference and suggeset any amendments considered necessary ;
   (b) provide a schedule showing timing of the study and earliest date at which they expect to complete the study, and
   (c) provide, in a separately sealed envelope, an approximation of the fees to be charged, the schedule for payment and itemisation of costs. Plans and budgets for the proposed study should be based on the assumption that consultants shall arrange their own transportation, accommodation, local staffing, office space, etc.
5. Applications, marked CENTRAL BOOKING OR ACCOMMODATION REGISTRY SYSTEM, should be addressed to : Permanent Secretary, Ministry of Tourism and Wildlife, P.O. Box 30027, Nairobi, Kenya, with a copy to : General Manager, Kenya Tourist Development Corporation, P.O. Box 42013, Nairobi, Kenya, to arrive not later than the 24th June, 1972.

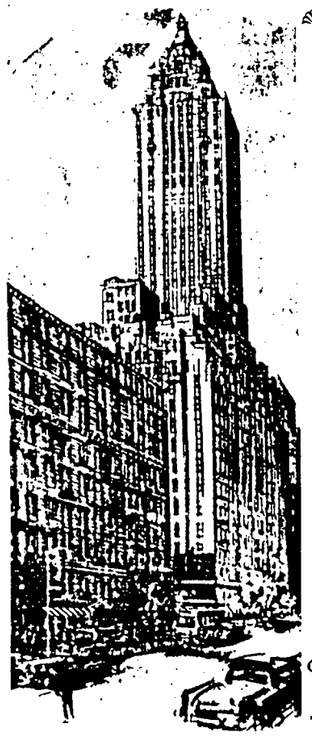
AN ANNOUNCEMENT

Energoprojekt completes Kafue Gorge Project in Zambia

The Kafue Gorge Hydroelectric Power Project in Zambia, completed on time by the Yugoslav Company Energoprojekt and its Subcontractors, has been put into commercial operation.

At the beginning of April 1972, the fourth and final generating unit of the Hydroelectric Power Project Kafue was put into operation in Zambia, this being a completion of the gigantic power project on the River Kafue, about 100 kms from the capital, Lusaka.

Against very hard international competition, Energoprojekt, a Yugoslav Contracting Company with a large international reputation, was awarded construction of HPP Kafue in 1968. Work on this vast project, which included electromechanical erection works commenced in November 1968, and went on for three and a half years. This represents a unique world record ; not only because of the volume and variety of work but also because of the conditions under which the works were carried out.



Such results were possible only with mass application of modern mechanical plant and organisation, the application of new techniques and with the co-operation of Energoprojekt as the Main Contractor and its Subcontractors.
Some data :

- The earth rock-filled dam—height 56m.
- The headrace tunnel—length about 10kms.
- Tailrace tunnel—length 1,400m.
- The underground Machinery Hall—134m x 15m and height 30m.
- Four turbines each with the rated output of 150MW.

The sponsor of this Project was the Ministry of Transport, Power and Communications of the Republic of Zambia. The Consultants and the Engineer of this project was SWECO. Swedish Consulting Group. The project as well as contracted quantities were altered during the construction period. The Consultants considerably changed the amount of excavations on dam and spillway, so that the excavations actually undertaken were two and a half times greater than those originally contracted.

The second stage anticipates erection of two more generating units of the same capacity as the previous ones, so that the total installed capacity on completion will amount to 900MW. The civil works for the new units are already completed.

for solid reasons — you might decide to incorporate in Switzerland

The well established economy of Switzerland and its ancient and well defined body of laws does not offer romantic or exotic attractions. Its tax level can, however, be considered moderate by modern standards and is designed to provide a solid structure, giving legitimate financial incentive to growth — personal and corporate, income and capital. Low taxes are only one of the incentives offered by Switzerland's stable economy ● Its stable political and economic climate and its conservative business tradition make it a reliable home for the preservation of capital and for the employment of capital in the industrial endeavors of other countries, and in real estate, bond, equity and precious metal markets, and the like ● Your interests may best be served by incorporating in Switzerland for the custody or exploitation of any type of asset, fortune or form of endeavor, for the purpose of expanding into the Common Market, or for the general conduct of multi-national trade ● Many thousands who have discovered this have already established their enterprises in what has become the favorite canton of Zug — only 18 miles from the city of Zurich — where the Corporate Fiduciary AG is in the business of serving you on a personal or corporate basis in the pursuit of objects mentioned above. Mail coupon for our Report «Switzerland as your corporate base», without any obligations.

Banking on Brezhnev

Mr Nixon is staking his whole relationship with Russia on mining the waters off Haiphong. If the Russians value the relationship as much as he thinks they do it might, just possibly, work, page 11. What the Americans hope the blockade will do, page 31. The pleasure in Saigon and the balance on the battlefronts, page 32. The dilemma in Peking, page 33.

The Nixon plan to dissuade the North Vietnamese from having another round has got the Democrats in Washington in two minds, page 55. In the primaries Governor Wallace is running well in the border states, page 56, but the Democrat now showing greatest potential is Senator McGovern, the winner in Nebraska, page 58.

Shooting it out

The Israelis rescued all the passengers of the hijacked airliner at Lydda and killed or captured the hijackers, but five passengers were shot in the process—which is why most governments, and all airlines, prefer the kid-glove treatment, page 109.

Voting for Europe

Ireland's prime minister, Mr Jack Lynch, has won a crushing victory against his anti-marketeers, page 48.

To the buffers

The right policy for the Government in the rail dispute is that Mr Macmillan should make it quite clear to the railwaymen that a go-slow will lose them money instead of gain it. A ballot would have been better after this point sinks in, page 13. The railway negotiations, page 94; the tussles in the docks and in the industrial court, page 103.

Still on the knife's edge

Nobody—Willy Brandt, Rainer Barzel or the Russians—comes very well out of the confusion that left the Ostpolitik debate stuck for another week, page 15. A bungled job in Bonn, page 37.

The forgotten ones

Who'll remember the Biharis?, page 14.

Same again in Italy

So the Italian parties did all that running about to stay in the same place, pages 38 and 47.

Ireland

SIR—In "What is Willie up to?" (April 29th) you quite properly and fairly spelt out the apparent options facing Mr Heath and Mr Whitelaw. These were the eventual handing over of the province to Eire, the carving out of an independent Ulster Protestant state and finally the complete integration of Ulster into Britain.

In my opinion, however, in Irish politics the reality is always much more elusive than the sum of the parts and I believe that the Westminster solution is more imaginative, positive and subtle than has been appreciated. The key to the problem is the acceptance by Mr Heath and his advisers that the unique religious divisions in Ulster, which have led to an overriding obsession with the border issue, make traditional parliamentary democracy irrelevant and unworkable. In this situation where compromise is unthinkable a Protestant theocracy is just as unpalatable to Catholics today as, presumably, despite all possible manipulation with electoral boundaries, a Catholic theocracy would be to Protestants in 30 years' time.

Against this background the intention of holding referendums to determine the future of the border will be the first and most vital step towards the new future all sections of the community desire. The fact that this previously was exclusively under parliamentary control at Stormont prevented the development of an acceptable, progressive and efficient parliamentary institution. In fact, both communities have suffered for 50 years from a constitutional compromise, which encouraged sectarianism and direct action rather than a constructive and effective democratic parliamentary system.

Given that the future of the border is removed directly from Stormont, we can then review impartially electoral boundaries and, from the basis of unquestioned fairness in electoral representation, candidates will be selected who have the appropriate policies to solve pressing economic and social needs. In this context the border will remain, and present politicians and parties will remain, only if this challenge is effectively met.

Unionism, for example, will probably emerge as a genuine right-wing Conservative party, the Alliance as an orthodox Liberal movement and those sections of the left that are willing could combine to form a constitutional but radical alternative.

A non-sectarian Ireland could then emerge from the economic and social pressures exerted from a free, prosperous and united Protestant and Catholic Ulster. With religion relegated to a non-political role, a united Ireland could then be a dignified and acceptable possibility and Catholics and Protestants could enjoy their birthright. Logically from this situation federation with England, Scotland and Wales would be probable, necessary and welcome.

Let us hope the British public has the patience and generosity, the Ulster people the tolerance and good sense, and the Eire government the integrity and courage to back Mr Whitelaw.—Yours faithfully,

Co Antrim M. H. STEVENS

SIR—I think there is a fourth distinct policy option in Northern Ireland to be added to the three which you discuss in "What is Willie up to?" (April 29th). I also think that this policy is more realistic than any of the others, because, mirabile dictu, it offers to both communities so much of what they really want.

It is to set Northern Ireland apart from both Britain and the Irish Republic by making it an Anglo-Irish condominium with a system of dual nationality, which would enable members of both communities to exercise the nationality of their choice.

Though the dispute has a clear territorial aspect (and obviously territorial adjustments, perhaps at a later stage, must not be excluded), it is even more a nationality issue, and on a point of this nature virtually no community in the world has ever been known to budge. In an Anglo-Irish condominium Union Jacks and Irish tricolours would both fly: either on all public buildings, or else predominantly in the respective areas. Police and military forces would be composed of both British and Republic of Ireland personnel. Ideally, both elements would patrol the whole territory.

The condominium would remain "integrated" with Britain in one respect only: economically. Residents in the republic would not have access to condominium or British social services.

This solution guarantees the Protestants continued British nationality and the Union Jack. It allows the nationalists to be legally what they already are in their hearts, namely Irish citizens. No solution failing to recognise or to give satisfaction on the nationality question has any hope of lasting success.—Yours faithfully,

London, SW1 WILLIAM STODDART

Indochina

SIR—You say in "The burnt-out place" (May 6th) that the evidence of what has happened in almost every war since 1940 has been that when aircraft meet infantry and tanks, they win. With respect, this is not so.

The evidence is that when two forces of infantry and tanks fight and only one is supported by air power the additional arm is usually decisive. The heresy which you, sir, appear to embrace is to think that air power can win battles—other than in the air—on its own, without need of the other arms. Generations of airmen with a vested interest in this proposition have preached it, from Billy Mitchell and Trenchard, through Chennault down to some American air strategists of today. To politicians who wanted to hold outposts of empire or who want now to fight wars against communist aggressors without committing large ground forces, the theory has always been deeply attractive. But, as the latest Vietnamese disasters demonstrate, it never works. To win you have to get down on the ground and fight it out, as the survivors of Iwojima, the Korean battles or any other desperate contest can testify. The Vietnam experience will have confirmed—not confounded—the assumptions of most other countries' military powers.—Yours faithfully,

London, EC2 ANTHONY RUDD

SIR—I am astonished at the lack of candour of certain of our political leaders throughout the free world in explaining to their constituents the meaning of collective security and the vital service which the United States has been and is performing in fulfilment of guarantees within that system in what has been going on in south-east Asia at least since February, 1962. We see and hear nothing but criticism and condemnation of the United States despite the fact that western Europe in general, and the United Kingdom, depend for their own safety and survival on the collective security system and American fulfilment of guarantees to Nato.

The collective security system was erected after the second world war to deal with the kind of problem which arose between 1931 and 1945, during the course of which small nation-states too weak to defend themselves were left to go it alone in face of the threat of, or actual, attack upon them by greater powers. Ethiopia and Albania come to mind. Manchuria and the *Anschluss* with Austria, not to say the shameful abandonment of Czechoslovakia, also come to mind. These events led not to peace but rather to world war, the ultimate result of which was the death of more than 55m people and the destruction of much of western Europe. To prevent this ever happening again collective security was created, rooted in the principle that "an attack upon one shall be an attack upon all." Until recently this system has succeeded in preventing world war for 27 years and in Lebanon, Korea and Berlin, not to say Vietnam, has fulfilled its purposes. Now suddenly there are those who wish to abandon the successful system, to do away with it and return to the failures of 1931, 1935 and 1938. That cannot bring peace. Has tormented mankind learned nothing from two world wars?

The United Kingdom has, as western Europe has, a vital stake in the success of the defence of Laos, Cambodia and South Vietnam. If the United States fails in Indochina to fulfil its guarantees under the Manila treaty of September 8, 1954,

MANAGEMENT APPOINTMENTS £7000 PA AND OVER

Foreign Investment

• ACCOUNTABILITY in this senior appointment is to the Board of a Merchant Bank, one of the foremost in the City, for investment decision and performance of a rapidly expanding portfolio of international investments.

• THE TASK will be to identify investment opportunity and build new business.

• CRITICAL requirements are: experience in depth of the European and foreign securities markets; specialist knowledge of foreign investment practices; fluency in French or German.

• REMUNERATION is negotiable but the base salary is unlikely to be less than £7,000. It could be much more for special accomplishment in this field.

Write in complete confidence to A. Barker as adviser to the bank.

JOHN TYZACK & PARTNERS LIMITED

10 HALLAM STREET · LONDON W1N 6DJ

Manager

INTERNATIONAL BANK

LONDON

One of Europe's leading Banks seeks a Manager for its London Branch. The ideal candidate will be 40/50 with substantial experience in the City and the International Banking field. He will be concerned with the effective administration of well established wholesale banking.

The appointment requires an Internationalist outlook of the highest integrity. In addition to English, a knowledge of one or more Continental languages would be useful but is not essential. Salary and other benefits will be negotiated on an attractive scale to suit a man of the right calibre.

All applications will be treated in strict confidence and no information will be disclosed to our Client without permission. For further information please write or telephone us, the Bank's advisers on this appointment, addressing your queries to R. M. Marshall (01-828 4976).

Urwick, Orr & Partners Limited

can anyone believe that it will fulfil guarantees under Nato? Would Nato remain credible? The British people had best now begin looking again at these matters, and call upon their leaders in government for some meaningful explanation of the issues involved.—Yours faithfully, H. READ MCGRATH
Los Angeles

Inflation

SIR—Your article "Stand or deliver" (May 6th) is surely rather optimistic. As soon as a 10 per cent inflation becomes the target, everyone will discount it. It will fail as a stimulant (as all drugs do in the end). We shall have more stagnation and calls for "reflation." The speed will increase. Another circle will be completed. The velocity of the price-rise will climb continually in geometrical progression, but rather exponentially.

For some time it may be possible to conceal this from the public, but not for too long. Finally, there must be a flight from money, a reversion to barter and the use of foreign currencies. In a country dependent wholly on imports this would produce an interesting situation.

I cannot agree that this sort of crisis would require a right-wing government. It seems to me that the only people able to cope would be our trade union leaders armed with (temporary) dictatorial powers. Who else could control the hungry and rioting unemployed?

It won't be too long now.—Yours faithfully, JOHN H. WEDGWOOD
London, WC2

Strike ballots

SIR—It is inaccurate to say, as you did (April 29th), that American union members support their leader's actions when a secret ballot is taken because they have been kept well-informed of the reasons for the actions. The secret ballot, required by law only when a strike has been enjoined on grounds of a national emergency, does not encourage American union leaders to be more candid with, or representative of, their members; it is an aberration of little utility, since those goals are accomplished by other features of American labour law.

The vote on whether to accept the employer's last offer is taken if no settlement is reached 75 days after the no-strike injunction is granted; regardless of the vote's outcome, the injunction must be dissolved on the 80th day when the men are once again able to strike. The men therefore realise, whether or not they have been kept fully informed by the leadership, that a negative vote is likely to force a higher offer from the employer, who will then be facing, once again, a credible strike threat. They, in any event, thereby do no harm to their union's bargaining position, since it is still possible for the leadership to settle on the rejected terms if no better offer can be obtained after the strike, or its threat, is renewed.

A vote for the employer's offer is regarded as an attack on the existence of the union itself, since it encourages management in the future to deal directly with the men, bypassing the union's role as the exclusive agent in the collective bargaining process. The check on arbitrary union leadership is contained in provisions ensuring that the union chosen is representative of the men and in guarantees of the rights of union democracy.—Yours faithfully, DONAL F. HOLWAY

Saving

SIR—I find it difficult to accept either the Prime Minister's interpretation of increased savings as "an affirmation of faith in the future" or your "spectre of a rainy day" (April 29th). Market research constantly shows that only a very small proportion of saving is for a vague distant future; the vast majority of it is for specific purchase in a near future—a house, car, holidays. That is, it is consumer credit in reverse.

The choice between consumer credit and saving to spend is sometimes voluntary, based either on old-fashioned prejudice against borrowing, or new-found realisation of the high cost of personal loans and hire purchase. In other cases, the decision to save is forced on people who find it difficult to get credit. This may explain the increase in savings in heavy unemployment areas, for some credit controllers become wary of a whole district, and make their fences higher there, even for those who are in steady employment.

One wonders whether all this deferred spending is good for the economy. Does it postpone expansion to a time when the reverse may be needed?—Yours faithfully, E. J. ORNSTIEN
London, W1

Euroentry

SIR—Is it not excessively paradoxical to suggest that in the European community (the euphemism EEC is now out of date) Parliament could have "more influence on the decisions taken in Brussels than it now has on many decisions taken in Whitehall" (May 6th)?

Every decision taken in Whitehall is resultant on parliamentary legislation, and such decisions may, if members wish, be overturned by them. By contrast, the community is supranational and need not, in many cases, listen to parliamentary representations, and even where it does we would be in a small minority. If Parliament cannot even keep us out, can assurances of its future role in a community dedicated to "an ever-closer union" be anything but soothing syrup directed at those parliamentarians who have not already followed Mr Jenkins's lead and abandoned Westminster for Brussels or Strasbourg?—Yours faithfully, G. J. A. STERN
London, N6

SIR—When Europe agrees some day on a common currency and is casting about to decide whose image to put on its most commonly used coin or piece of paper money, let it consider the one person common to all of Europe, its first great poet, Homer.—Yours faithfully, DANIEL SOLER
O'Hare, Illinois

Hungary

SIR—A factual error has crept into your long and interesting report on Hungary (April 22nd). The number of Hungarians living in Czechoslovakia is not 100,000 but well over 600,000; official 1970 figures put it at 573,000. Also, it is only fair to point out that while "potential irredentist feeling" could exist in almost any European country vis-à-vis a neighbour who speaks a different language and has different traditions, there is remarkably little resentment in Hungary towards those countries where the Hungarian minority is well treated and enjoys (at least on paper) equal civil rights (for instance, Jugoslavia). The amazingly strong reappearance of national conflicts in central Europe cannot be separated from the mistreatment of national minorities, from the infringement of their human rights which, in my opinion, certainly include the right to use freely one's mother tongue both in speech and writing.—Yours faithfully, GEORGE GÖMÖRI
Cambridge

Piccadilly Circus

SIR—"Good-bye Piccadilly, Farewell Leicester Square"—thus ran the marching song of the old British army. It concludes: "my heart's right there." But hardly with the architectural and planning foetus of the future Piccadilly Circus as now presented pictorially to their descendants (May 6th).—Yours faithfully, JOHN NORTH
London, SW1

MANAGEMENT APPOINTMENTS £7000 PA AND OVER

BUREAU VAN DE KIEFT N.V.
Management Consultants
Recruiting • Mergers

For and on behalf of one of our clients, a

MULTINATIONAL BANK

based in London but with world wide ramifications, we are seeking - in strictest confidence - an experienced

INTERNATIONAL BANKER

to take charge of and develop its business in the Netherlands.

The successful candidate will have wide experience of banking in Holland and of wholesale and investment banking internationally, and must be capable of expanding the business in the face of keen international competition. Additionally, he will require the ability to manage an existing young and thrusting team.

The candidate is likely to be aged between 40 and 50 and will possess a good command of foreign languages. Success in this position should lead to promotion to wider responsibility elsewhere in the Group.

The starting salary will interest men currently earning the equivalent of £ 10.000 p.a. Fringe benefits include membership of an excellent non-contributory pension scheme.

Those interested are requested to apply, preferably in writing, to Mr. A. A. Kimball, Bureau van de Kieft N.V., Herengracht 414, Amsterdam. Tel.: 020 - 66838. Complete confidence will be guaranteed. No enquiries will be made nor will our clients be contacted without prior consent of the applicant.*

BVK

Group Management Services

• THIS career appointment is in the top financial management of a well known British manufacturer of consumer products for world wide markets.

• THE task is to develop and manage an integrated world wide management information system; to co-ordinate accounting and reporting practices throughout the group; to control and extend the application of E.D.P. techniques for accounting and operational purposes.

• A PROFESSIONALLY qualified accountant is required, well versed in this field. The career will have been developed in the financial centre of a large industrial or commercial enterprise.

• STARTING salary is unlikely to be less than £7,000.

• THE preference is for a man in his mid 30's. Prospects are bright and there are attractive fringe benefits. Location is in the South East.

Write in complete confidence to P. T. Prentice as adviser to the group.

For a bank manager he indulges in some pretty unbanklike activities.

Like saying 'yes' rather more frequently than he says 'no'—which means he has a positive attitude to any problems facing you in your business.

Your Barclays manager won't present you with a long, forbidding face that makes you wonder why you ever thought of going to see him.

Instead, he'll tell you that Barclays offer an enormous range of services—142 at the last count! He can advise you about the ones which best suit your needs—from medium-terms loans to insurance programmes, leasing to pension schemes.

Call on your nearest Barclays manager—you'll find that he's in business too.

Only our terminal in New York, can get you from seat to street in 15 minutes.

The BOAC Terminal at Kennedy has been designed for the future. Which means it will be working well below capacity for years.

You can get through its immigration and customs and baggage areas so fast you'll normally find yourself standing on the sidewalk 15 minutes after you step off the plane.

No other terminal into New York comes near it.

And this is just one of many ways we lead across the Atlantic.

No other airline, for instance, flies direct to so many major U.S. cities.

No other European airline offers you a choice of 80 flights a week to North America. And no other airline offers you a choice of flying 707 or VC10 or 747.

In fact no other airline in the world serves America better than BOAC. Not even the Americans.

We'll take good care of you.

BOAC

Banking on Brezhnev

It is a gamble : a calculated one, and not an impossible one, but a gamble. President Nixon has now added the hopes he attaches to his relationship with the Soviet Union to all the other capital he has committed to the Vietnam war. It has improved the chances that he may yet succeed in doing what he wants to do in Vietnam, although the improvement is very far from a decisive one ; but he knows that if he fails the failure will be all the greater.

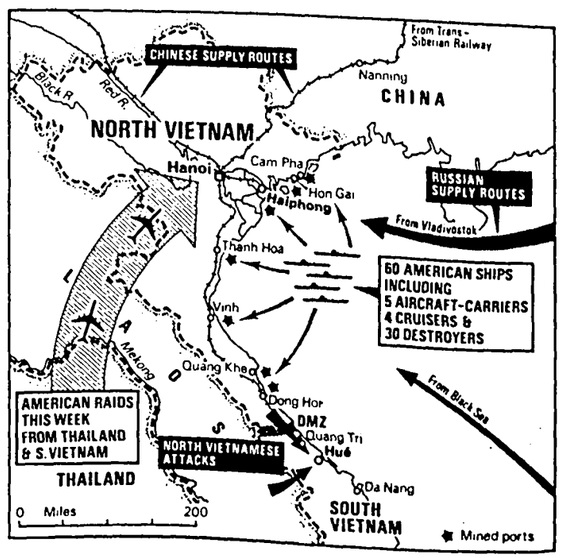
There were three ways in which the Soviet Union could respond to the blockade of North Vietnam that Mr Nixon announced on Monday. It could show that it intended, by one means or another, to beat the blockade. It could make it clear that it did not propose to challenge the blockade, except by making the most of the loopholes that can be found in it, but then tell Mr Nixon that it would do no further business with him on any other subject while the mining continues. Or it could take no action at all. That would mean that the Russians had accepted the limitation the blockade imposes on the flow of arms to the North Vietnamese, and that they were prepared to carry on with the rest of their relationship with the United States as if nothing had happened.

The limits on the Russian response

It has been almost as difficult a decision for Mr Brezhnev as the order to lay the mines around North Vietnam was for Mr Nixon. This week Mr Brezhnev has had to face the possible failure of two major parts of his foreign policy : the treaty with Germany (see page 15), and his determination that his North Vietnamese allies should win their war. His own position could be in danger if he gets it wrong on both fronts. But at noon on Thursday, when the mechanism that activates the American mines came into action, it seemed plain that he was not going to choose the first, and most dangerous, of the courses open to him. At least one of the Soviet ships heading for Haiphong had changed course; some of the vessels inside Haiphong had sailed out ; and it has been left to the North Vietnamese to say that they will do their best to clear the mines away. The Russians have yet to confirm that Mr Nixon will still be welcome in Moscow on May 22nd, and that the negotiations they intended to have with him then can still proceed. But they may have accepted the fact of the blockade.

In fact, there are not all that many things that the Russians can do about it. They cannot sweep the mines up as fast as American aircraft can lay new ones, unless they send their own air force into North Vietnam to keep the Americans away from the harbours. They do not have the sort of naval force in that part of the world that could beat the Americans in a naval action on the blockade perimeter. They might hope to get the United States to call the mining operation off if they could retaliate in another part of the world, but it is not easy to see where they could retaliate successfully : the one obvious place where they command the necessary local superiority of power is central Europe, and Mr Brezhnev's whole European policy depends on persuading the west Europeans that he no longer wishes to use his military superiority there. It is partly like the Cuba missile crisis of 10 years ago. The Russians have spent a lot of money on their armed services since then, but they are still weaker than the Americans where it matters. They may try to slip the occasional ship through the patrols, and test their latest mine-evading devices in the process. They may put in the most important equipment by air. They can ask the Chinese to let the rest of the Russian-made arms come in through China instead, but the Chinese have not been very co-operative about that in the past, and although they cannot afford to make North Vietnam their enemy for ever they also do not want to see a victorious North Vietnam sweep the whole of Indochina into the Soviet sphere of influence; China is in a box too. The Russians may have to reckon that they cannot substantially break, or evade, the blockade itself.

What they could still do is to say that they will not negotiate with the Americans about anything else so long as the blockade continues. But even this involves at least as many problems for the Russians as it does for



the Americans. It is true that Mr Nixon has invested a good deal of political capital in his negotiations with the Soviet Union. He wants a missile agreement. He would like to persuade Senator Mansfield and his friends that there is still at least a theoretical possibility of mutual troop cuts in Europe, to stop them insisting on a unilateral American one. Above all, he wants Mr Brezhnev's signature on some sort of agreement—almost any piece of paper would do—to help him get re-elected in November. This is what Mr Nixon is putting at risk. But the United States, as distinct from Mr Nixon himself, stands to lose less from a complete breakdown of the negotiations than the Soviet Union does. The Russians need American co-operation to get the sort of settlement they are hoping for in Europe, because the west Europeans want to know that the Americans will underwrite it. They want to avoid a continuation of the missile race, which they can afford even less than the United States can. They do not want to face the loss of the economic and technological aid they had eventually been hoping to get from America if things went well.

Nixon's two major concessions

The truth of the matter is that the Soviet Union, with its weaker economy, and its unsolved problem with China, has an even bigger stake in Mr Nixon's "era of negotiation" than the United States has. That is what Mr Nixon was counting on to persuade Mr Brezhnev to help him to get out of Vietnam without losing the war. And it is why Mr Brezhnev might still prefer not to ignore the other half of what Mr Nixon said on Monday night. The President's announcement of the blockade of North Vietnam was accompanied by two important concessions. The North Vietnamese are now being told that if they accept a supervised ceasefire, and release their American prisoners, they will not only get the blockade called off ; they will also get all the remaining American troops out of Vietnam within four months, and they need not even pull back from the territory their army has captured since March 31st. For almost anybody but the North Vietnamese, that would be a very tempting offer. They know they have got the better of South Vietnam's army in the past six weeks, and that American air power has not given the South Vietnamese as much help as it was expected to. They are within striking distance of Hué and Kontum, and they know how ineffective that ceasefire would probably turn out to be if they renewed the attack next year when the last American had left the country. It does not amount to the certainty of victory next time round, but it comes fairly close to it.

The trouble is that the North Vietnamese prefer certainties ; they have not accepted a compromise since 1954, even one that leans as much their way as this, and they will very likely say that they have no intention of accepting one now. If they do insist on fighting on, the Russians may have to tell them that they must do it with the diminished supply of weapons they will be getting from now on. And that brings everything back to the question that made Mr Nixon act on Monday, which is the question about the staying power of the South Vietnamese army. The weakness of Mr Nixon's present course of action is that, at best, it depends upon South Vietnam's ability to hold out for another three weeks, or two months, or even longer ; no one knows just how many weeks' supply of tanks and anti-aircraft missiles and how much petrol the North Vietnamese still have hoarded away. And at the worst it assumes that the South Vietnamese will be able to withstand another attack after this year's monsoon, when the Americans' ability to help them may be limited to what can be provided from outside Indochina, and when the attackers will start with the substantial psychological advantage that this year's fighting has given them. Of course, if Mr Nixon can make the blockade stick that will presumably have some effect on North Vietnam's self-confidence too. But this remains a battle between a very good army, even if that very good army now has to operate on a shorter logistical rein than it had hoped, and a largely mediocre one which has already taken a worse battering than it expected this year. In the end most wars go to the better army. It depends on just how tight that rein is.

But there is one other thing to be taken into account, and it may be the most important of all. Mr Nixon has risked his presidency by what he did on Monday. He knew it would cost him a lot of votes in November if the Russians obliged him to back down from the blockade, or even if they accepted the blockade but cancelled the other business they have been working on with his government ; if they did it humiliatingly enough, he might not even still be the Republican candidate in November. He is taking the risk because he believes that the survival of South Vietnam justifies it, and because he realises that staying on calling terms with Mr Brezhnev might not save him in November, anyway, if he sat motionless while South Vietnam was defeated. That is why he has thrown his relationship with the Soviet Union into the stakes, and why he is hoping that Mr

Brezhnev values that relationship enough.

It is really a gamble on Mr Brezhnev's assessment of the United States. Perhaps Mr Brezhnev does think that for the sake of his own policies he should not snap off the links he has built up with the Nixon government over the past three years. But Mr Nixon may be wrong about this, as he was wrong about what the North Vietnamese have been able to do in the past six weeks. Mr Brezhnev may reckon that, in an election year, he has got the United States in a trap. He may believe that the Americans are so tired and dispirited and confused that they will accept a communist victory in Vietnam and still insist that their government should do business with the Russians about the other things the Russians want to talk about ; that they will either insist that Mr Nixon should do it, or elect someone who will. The Russians may even be working on the idea of having a President McGovern eight months from now ; and Mr McGovern is still doing pretty well (see page 58). It is, at bottom, an argument about the meaning of that slippery word "coexistence." Mr Nixon says that coexistence is incompatible with Russian help for the forcible expansion of communist power of the sort North Vietnam is attempting. Mr Brezhnev believes he can have his wars of national liberation and still keep his relations with the United States undamaged. If Mr Brezhnev can make his definition prevail, and get an American president, Mr Nixon or someone else, to agree that it has prevailed, we shall be living in a very different sort of world. It really is a lot more than Vietnam that is at issue.

To the buffers

With good management the call for a ballot might enable Mr Macmillan to beat the railway go-slow, but surrender seems to be being arranged in the docks

The country should have one overriding hope, interest and objective in the rail dispute. It is that the railwaymen should not get a penny more than they have already been offered. Preferably, a stoppage now should cause them to get less.

The crucial point is that the current offer—which is better described as 14 per cent a year rather than 12½ per cent in the first financial year, as is being advertised—is at a level to put Britain, whose annual economic growth rate is unlikely to exceed 4 per cent, back on to a compound rate of price inflation of over 10 per cent per annum. As we said last week, this compound rate would mean more than a hundredfold rise in the cost of living over an average person's working life. We are being driven towards a Weimar situation where a pound at the beginning of your career will be worth less than a penny during your retirement.

The names are always the same. The biggest damage to Britain in recent weeks has again been wrought by London Transport, which has embarrassed British Rail by buying off the workers on London's underground trains ; London Transport's industrial relations director, active in this surrender, is Mr Jim Mortimer, who was one of Lord Wilberforce's two co-signatories to last year's disastrous report on electricity wages. After that Wilberforce report in 1971, the Government temporarily recovered some grip over inflation only because the postmen's strike ran into a bloody nose. After the Wilberforce report on the miners in 1972 something of the same sort has been needed.

The one advantage of the rail dispute is that the unions have now been sufficiently silly to make it seem rather easy for British Rail and the Government to give them just such a bump from the buffers. How to do it ? The Government was half-right to ask the industrial court to call a secret ballot of all railwaymen on whether they will flout their union, but it would have been better to have a hotting-up period first. Consider the situation on Thursday evening.

As the court's first cooling-off period is ended, the railwaymen's go-slow was due to start again after midnight. The railway unions would be carrying out any such go-slow simply on the issue that British Rail's inflationary offer must be paid from May 1st instead of June 5th. The difference seems to be a lump sum of only between £10 and £25 for each railwayman, and many of them will lose more than that in overtime payments during quite a brief period of go-slow. They would thereby be cutting off their own noses in order to spite rail passengers' faces, and rail passengers' faces that would be growing increasingly angry. It would have been wiser to delay a ballot call for a few days until some of the sense of futility and public anger had become more manifest, but the important need now is that during the balloting the prospect before those who are voting should be made clear.

A hiding to much less than nothing

If the railwaymen vote yes in any such ballot, they should get that payment. But if they vote no, it should be made quite plain that they still will not get back pay for before June 5th anyway. In that event, they would presumably start another go-slow. In any new go-slow their loss of more than the £10-£25 for which they are fighting should be speeded by suspending without pay all those whose interpretation of a "work to rule" really breaks the rules quite flagrantly, as well as by sending home (and removing the guaranteed week from) those railwaymen who have no work to do because their colleagues' go-slow has made their work impossible. In addition, the new wages certainly should not be paid even on June 5th if a go-slow is still in

progress then. Since a cooling-off period for a ballot would presumably postpone even the start of another go-slow to around or after that period, the railwaymen would then be interrupting services in a way that interrupted a previously-promised payment to themselves—which would not be at all sensible.

Many people will complain that this is altogether too vicious an advocacy of a planned putting in of the boot. They will say it is particularly deplorable because the kick would be against so moderate a trade union leader as the railwaymen's Sir Sidney Greene, director of the Bank of England, pillar of the establishment and regarded as the sort of moderate trade union leader whom the Government needs to keep on its side. The answer to this has to be quite frank. The object of everyone today should be to save Britain from the way to Weimar; it should not be to save Sir Sidney's face. If he is now clumsily crashing into the buffers in a way that might make him look a fool before his members, like the postmen's Mr Tom Jackson last year, the Government should not lift a hand to help him. This determination is the more justifiable because these "moderate" railway union leaders had signed an agreement that they would go to arbitration before taking industrial action, and barefacedly broke it; because the whole trade union establishment had said that the miners' wage award would be regarded as a special case and should not be used as a precedent for raising all awards, but within weeks Sir Sidney and his colleagues most certainly have so used it; and because the railways are a declining industry which is bound to increase its own unemployment even by the present inflationary offer, let alone by any bigger award.

What is true is that the story in the docks is much worse than on the railways, but the probability is that there will be a more disgraceful surrender there. Most of Britain's ports have already paid once for agreements with the trade unions about container traffic. Parts of the agreements were paid for in higher wages to dockers, parts in the present provisions whereby dockers can be made redundant only if they wish to be.

Danegeld becomes a habit

Shop stewards at some ports violated these agreements by keeping out certain container lorries, according to a system that deserves closer examination than it has generally got. When these blackings were declared by the industrial court to be an unfair industrial practice, public opinion began to say sympathetically that these troubles arose because the dockers were fearful of redundancy, even though they have in fact been given guarantees against any redundancy they do not want. The dockers were thereby encouraged to give notice that they will call a national dock strike at the beginning of June unless they are allowed to sell at a still higher price all over again what they have been handsomely paid for already. At Liverpool they were given yet another extra instalment this week.

The cases before the industrial court have had some advantage in drawing attention to what is going on, and making it less likely that the Transport and General Workers' Union can follow for ever its recent policy of preferring not to know what is happening within its own organisation. But the story of Britain's eager surrender to dockers' breaches of contract—and the fantasies which much of the press weaves in order to excuse it—mirrors in microcosm much of what is most wrong in the country.

The swept-aside people

Somebody had better take up the Biharis of Bangladesh, because none of the politicians in their part of the world will

The Biharis of Bangladesh suffer from one affliction worse than the polluted, congested, panic-stricken misery in which they now live: they are utterly friendless. "What is to become of us?" a young Bihari asked a Times correspondent last week. "Pakistan will not have us, India will not have us and we will be either liquidated or starved to death here." There is no reassuring answer for the frightened young man. His description of the plight of more than a million non-Bengalis in Bangladesh was all too accurate. And, as conditions in Bangladesh's ghettoes worsen every day, the binding of this wound of war looks more and more remote.

A British mission led by Mr David Ennals visited the subcontinent last week to search for solutions to the Bihari problem. After interviews with Mr Bhutto and Sheikh Mujib, Mr Ennals concluded that the proposal most frequently mooted—a mass transfer of the Biharis to Pakistan—is unworkable. The only hope for the non-Bengali community, as he sees it, lies in integration in Bangladesh.

The chief reason for pessimism about a population transfer remains Mr Bhutto's unwillingness, despite his frequent outcries about the mistreatment of the Biharis, to admit any sizeable proportion of them into Pakistan. The Pakistani president implied to Mr Ennals that a limited number might be acceptable; and the mission is now pressing for the removal to Pakistan of up to 250,000 Biharis, the first to be selected on the basis of family ties with Pakistan. This is the largest number, in the view of Mr Ennals's team, that can be absorbed peacefully; a greater migration, it argues, would only result in shifting the whole problem to Pakistan, where the Biharis would find themselves once again a despised minority, enclosed by walls of hostility, without the hope of employment or permanent settlement. This prophecy has already been fulfilled in a camp outside Karachi where 10,000 Biharis who managed to escape from Bangladesh at the end of last year's war are living in circumstances allegedly worse than those of their compatriots in Bangladesh.

The positive side of the argument for assimilating the Biharis in Bangladesh rests on some wishful thinking about human forgiveness and an assurance from Sheikh Mujib, contradicted by some inflammatory rhetoric last weekend, that he would personally guarantee their safety. The mission did see one example of peaceful coexistence in action—in the town of Saidpur, where a co-operation committee consisting of leaders of both communities was handling communal problems. But there was a special reason for this unique success: in Saidpur Bengalis are the minority, outnumbered by the Biharis three to one.

For most of the Biharis in Bangladesh, surrounded as they are by an overwhelming majority of Bengalis, the immediate prospects are grim. Sheikh Mujib let the Ennals mission know that he has no intention of cancelling the trials of people who collaborated with the Pakistani administration, which have already begun, or the war crimes trials of Pakistanis which are due shortly. This paper recently argued that there might be some justification for holding the trials to expurgate the bitterness and hatred left over from the war. But in the current atmosphere of witchhunts and bloodbaths the trials seem likely only to inflame these very feelings. The Biharis who are held collectively guilty of collaborating with the Pakistani army will inevitably be the primary target of incensed Bengali fanatics. And there is no reason to expect that the Bangladeshi police will provide them with any more effective protection than they did three weeks ago when several hundred Biharis were murdered on the outskirts of Dacca, or two months ago when more than a thousand are said to have been killed near Khulna.

It is the very real risk of another round of mass slaughter which confounds the case for the integration of the Biharis in Bangladesh and makes a large-scale population transfer, for all its difficulties, seem the better alternative. The catch is that, like the Biharis themselves, this plan has no friends. So indifferent is the Bangladeshi government to the fate of the Biharis that it is not even prepared to bargain for their removal to Pakistan. Sheikh Mujib often refers to his readiness to exchange them for the 400,000 Bengalis stranded in Pakistan. But this seems to be no more than a throwaway line to support his insistence that innocent civilians cannot be traded off for guilty soldiers—that is, in his view, the 94,000 Pakistani prisoners of war. The Bangladeshi leader knows that he will get his Bengalis back anyway, since Mr Bhutto is holding them only as hostages for the prisoners.

The three to appeal to

Putting the Biharis on the agenda of a Bhutto-Mujib meeting was one objective of the Ennals group; and to the extent that it focused attention on the desperate conditions in the Dacca ghettoes it has helped to make the problem difficult to ignore. But the full weight of governments will have to be thrown behind its appeal if three obdurate leaders are to be persuaded to change their minds. Sheikh Mujib obviously bears a major responsibility for the Biharis and, come what may, he will have to make a place for a good many of them in his new state. But President Bhutto also owes something more than expressions of concern to this community whose loyal support for Pakistan landed them where they are today. And Mrs Gandhi, who justified her bisection of Pakistan by humanitarian outrage at the slaughter of Bengalis, needs reminding of that humanitarianism now.

If Pakistan has managed to support 400,000 Bengalis it can hardly argue that once the Bengalis go the same number of Biharis would be an unsupportable burden. And if India could give temporary refuge to 10m Bengalis it can surely assimilate some thousands of Biharis in their former home. This is the argument that foreign governments should be pressing on the three leaders of the subcontinent, reinforced with offers of resettlement aid.

Another week on the knife's edge

It's more pain for Willy Brandt, and the Russians haven't helped to put him out of his misery

It is still one of the great cliffhangers of the year. The suspense had already gripped Bonn before the Bundestag embarked on Wednesday on its long-delayed debate on the ratification of the treaties that Herr Brandt concluded with Russia and Poland in 1970. When the debate was then abruptly broken off until next Wednesday (our special correspondent reports on page 37), many participants and observers alike were left with the feeling that the uncertainty could not go on for ever. It seemed as if, after tying the girl to the tracks in a remarkably leisurely way, the villain had flagged the train to a halt just before it reached her. The world can resume biting its fingernails next Wednesday.

The world cannot be blamed if it finds the German crisis baffling. After all, Germany is the country where the word Realpolitik was invented. This word implies something more than a mere macchiavellian dislike of idealism; it also suggests a frank acceptance of the less pleasant realities of life. On the face of things it might seem that the Bundestag faced, this week, a mass of

realities that were bound to influence it in the direction of ratifying the eastern treaties. Not only is the Oder-Neisse line one reality and Germany's partition another. West Germany's politicians also faced the fact that ratification of the treaties was desired by a clear majority of their electorate (according to the latest opinion polls), by President Nixon as well as by Mr Brezhnev, and even, it appeared, by Herr Rainer Barzel, the leader of the opposition in the Bundestag, as well as by the chancellor, Herr Willy Brandt. In these respects at least, Herr Brandt's Ostpolitik seemed to correspond to Realpolitik fairly precisely.

The days of Unfug

Yet the fact remains that the Brandt coalition's majority in the lower house of the west German parliament is now wafer-thin and liable to vanish altogether, while the process of treaty ratification is further complicated by the government's minority position in the Bundesrat, the upper house. There is also the fact that the issue of the eastern treaties has aroused passions among Germans of an intensity such as the British experienced during the 1956 Suez crisis. Supporters and opponents of ratification, however moderately they state their views, have found themselves promptly damned respectively as "reds" and "blacks." It has been particularly ironic that Herr Barzel, who was hailed by many of the hardliners in the Christian Democratic Union when he won the party's leadership last year because they saw him as a bonny fighter who would give the chancellor a hard time, has now found himself denounced by the same people for his efforts to establish some common ground with Herr Brandt.

The fact is that Realpolitik is not the only German political term appropriate to the involved situation that has developed. There is also the word *Unfug*, which can mean either nonsense or deliberate mischief-making. Unfug got into circulation in Bonn last week when Herr Gerhard Schröder, the former foreign minister who last year lost the contest for leadership of the Christian Democratic Union, was reported to have used the word in reference to some of the tactics employed over the eastern treaties by Herr Barzel—the man who had beaten him in the leadership contest. Herr Schröder may not be the obvious man to go to for an objective critique of Herr Barzel's tactics. But, more broadly, it does seem that there has been quite a lot of Unfug about in Germany these past few weeks.

If the opposition has shown itself reluctant to face up to some of the harsher realities of the German situation, the government too must be judged to have overlooked certain realities. Herr Brandt and his colleagues in the coalition do not seem to have taken seriously enough the doubts and reservations about the treaties that had been voiced long ago by some members of the Free Democratic party, the coalition's smaller element. The government not only seemed over-confident that its own ranks would hold, and therefore failed to handle the likely defectors with enough sympathy. It also failed to undertake discussions with the opposition in good time, before its own majority evaporated. And it can hardly be said to have shown much skill in handling the strange sequence of events on Tuesday, when it first allowed the word to go round that the Russians had raised serious objections to the draft resolution that had been agreed between all the parties in Bonn, and then declared that Moscow had only queried a few small points, which had been explained to its satisfaction.

The joint resolution covered all the points about the treaties that had been questioned by the opposition's leadership—as distinct from the hardliners among the opposition's ranks, who do not want to see the treaties go through at all. Given these gains, Herr Barzel had only one further requirement on Wednesday. He wanted enough time to let the facts sink in, and thus to avert a damaging split in the Christian Democratic and Christian Social ranks. He got his extra time—after Herr Brandt had taken the edge off the impatience of some of the more ardent spirits among his own Social Democrats by getting the Bundestag debate started, and had also given them a salutary demonstration of the weakness of the coalition's position, in the shape of the tied vote that only just prevented the opposition from blocking the opening of the debate on Wednesday morning. By the middle of next week it may be possible to reach a satisfactory outcome of this long quarrel.

It was significant that Wednesday morning's tied vote on the opposition's call to cancel the debate was one in which the Berlin representatives' votes counted, as they do in all such procedural matters. Since west Berlin is a Social Democratic stronghold, the fact that Herr Brandt, its former mayor, could not even muster a majority at all suggested that the coalition's solidarity was still crumbling. Herr Barzel, however, has as good reason as Herr Brandt to fear that he cannot carry a united following with him any longer if the question of the treaties is not finally settled within a week or so. And Herr Barzel would like to get it settled so that he can confront the government over its domestic policies, where it is much more vulnerable. So there are real reasons to hope for a compromise now.

How the Russians could help

But much may still depend on what the Russians say and do during the next few days. Probably the best thing they can do to help to get the treaties ratified is to shut up. And indeed silence may come easier to them since the leadership in Moscow does not seem to be of one mind on the issue as it now stands. Its tactics have hitherto given an oddly uneven impression. By conceding, as the ratification debate drew near, several points that it might easily have offered to Herr Brandt when the 1970 Moscow treaty was being negotiated, it has encouraged the Bonn opposition to argue that still more could be squeezed out of Moscow. By insisting that last year's Berlin agreement could not be implemented until the 1970 treaties had been ratified in Bonn, and by a variety of more devious manoeuvrings, the Russians have fuelled the suspicions that already existed about the genuineness of their desire for more normal relations with Germany—and with the western world as a whole.

Until you can hold your meetings on the runway, you're going to need an Avis car.

A plane will fly you from one airport to another. But no further.

That's when you're going to need an Avis car. Just give your nearest Avis office a call before you go. Your car will be waiting when you land there. Thoroughly checked 43 ways and ready to go.

A smart new Hillman or any other car you choose from our wide range. It will take you straight to your meeting. All the way.

Then use your Avis car for as long as you like. And before you fly back call at the Avis desk in the airport and drop the keys in.

It's as easy as that.

And no other car rental company offers service as good as ours, or tries as hard as we do.

Avis-we rent cars

BRITAIN

The swing is slightly Tory, but the seats go Labour

Labour has duly taken control of the bulk of Britain's major town halls. It is only the benches of Tory aldermen, and the fact that Greater London and the counties have not polled since the general election, that have prevented Labour from winning quite the same dominance of the country's local government as the Tories won in 1969.

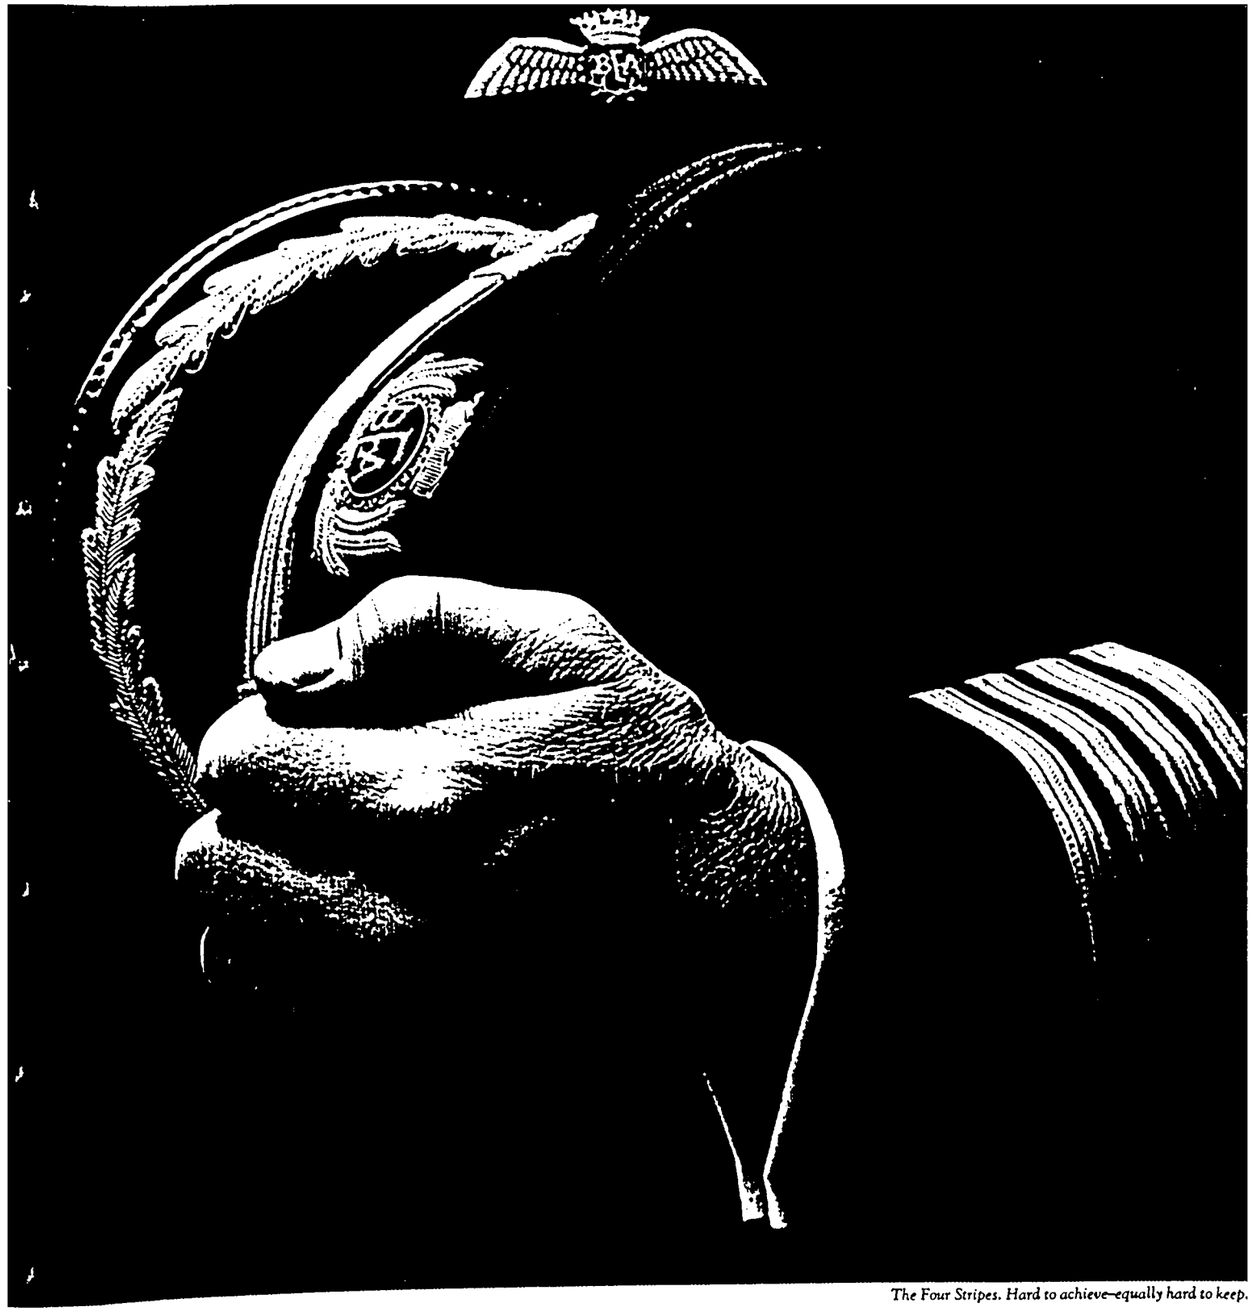
The average swing to the Tories since last May was 3.4 per cent, representing a recovery of nearly one-third of the losses in votes suffered between May, 1970, and May, 1971. It was lowest in the regions which have been hit most by unemployment—Wales (1.4), Scotland (0.7) and England north of a line from Morecambe Bay to the river Wear (2.1). But if this supports the view that local election swings reflect the Government's handling of the economy, examination of voting in wards with large numbers of council houses refutes the widely-held belief that Labour was mobilising council tenant support against the Housing Finance Bill. Indeed there is more psephological evidence to support the claim by local Tory leaders in Manchester that on council estates they did rather well out of Labour's refusal to honour arrangements for selling houses to tenants made before Labour took control in 1971.

Kingston's Lamont: only 1.9% against

If the relationship between municipal and parliamentary voting is working now as it has in the past this sort of Conservative recovery on their nadir last year equates with a swing against the Government since the general election of about 6 per cent. This is close enough to the average of the swings in the two parliamentary by-elections, Kingston-upon-Thames and Southwark, which also polled last week. However, such an average distorts the very striking difference between them. The Conservatives held Kingston with a drop in turnout of 16.5 per cent and a swing against them since the general election of only 1.9 per cent; Labour held Southwark with a drop in turnout of 16.1 per cent and a swing of 11.1 per cent. The lesson may be that in safe seats with a large change in the level of turnout, the conventional swing is distorted by the greater tendency of the supporters of the minority party to stay at home.

Given that a Conservative swing in votes since last year took place in most towns—but rarely topped 5 per cent—the Labour sweep of control was almost precisely what it should have been. Of the 57 towns with populations over 100,000, Labour held its 15, took the four out of the five without overall majorities and all the 16 listed in *The Economist* three weeks ago as going Labour unless the pro-Tory swing was over 5 per cent. However, the Conservatives will be grateful for the evidence that they have recovered some ground from last year, and in Huddersfield they held their overall majority through a recovery double the national average.

Of the towns marginal on swings of up to 5 per cent, the Conservatives just held Southampton and York, Labour took Reading and almost took Ipswich and Oxford. The Tories also lost two Black Country boroughs which should have been held on the national swing: Walsall (to Labour on two maverick wards) and Wolverhampton (a tie on a tiny borough-wide swing to Labour). Apart from personal voting in two Walsall wards and the local swings in Huddersfield and Wolverhampton, there was no tangible reward for the records of the out-going Conservative administrations or the programmes of the attacking Labour shadow-administrations. The rules of the triennial retirement game, together with the relative unpopularity of Mr Wilson in 1969 and Mr Heath in 1972, decided that the large cities should move from 37 Tory, 15 Labour and 5 where no party had control to 37 Labour, 15 Tory and 5 no control.



This breakdown understates Labour's position. Labour would control eight more cities (listed below) if aldermen were not taken into account, and Huddersfield would slip from Tory control.

	Councillors Con	Lab	Other	Aldermen Con	Lab	Other

PR: People's Representative (ex-Labour)

Aldermen are to enjoy just two more years of such intense municipal political significance before Mr Poter Walker consigns them to history. In the meantime some of these councils could slide over to Labour during the next two years. The filling of any vacancies on the aldermanic bench will be in the hands of the councillors, and already the resignation of a Tory alderman in Oxford has given Labour a chance to strengthen its commanding position,

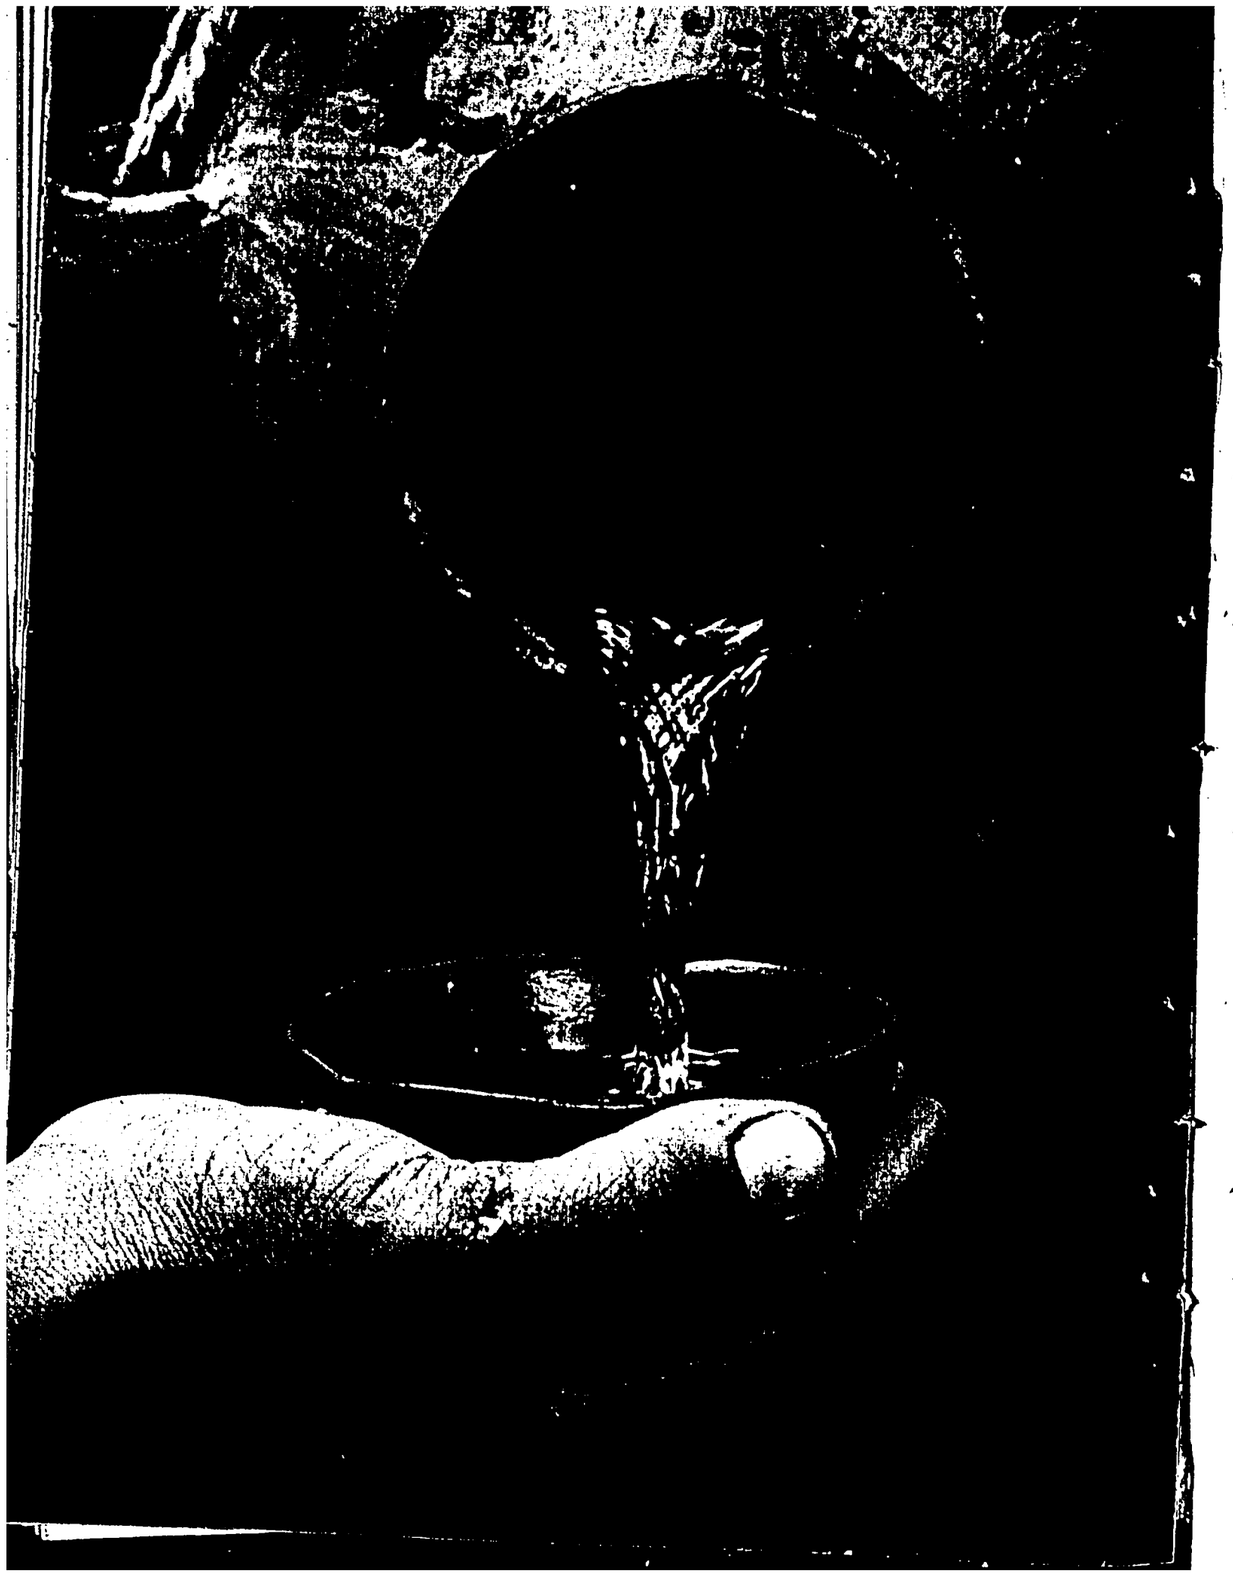
The Four Stripes. Hard to achieve–equally hard to keep.

Your Captain wishes you a pleasant flight.

To most people, a BEA Captain is a friendly voice over the aircraft address system.

But there's a few things your Captain has to do before he speaks to you. Let's take them in order.

First, he has to spend two years at flying school, followed by six months at the BEA Training School, where he 'flies' 80 hours on the Flight Simulator. Then he begins service–as a Second Officer. About four years later, he'll be a First Officer.



Nine or ten years after *that*–if he's really good, and we don't make it easy–he can become a BEA Captain.

Before each take-off from London, he has a 30-minute briefing and passes it on to his crew. He's responsible for exhaustive checks of the plane and personnel–164 dials in the Trident cockpit alone. He takes off.

Only then can your Captain say: 'Ladies and Gentlemen, this is your Captain, wishing you all a very pleasant flight'.

BEA

Your Captain wishes you a pleasant flight.

SOME PEOPLE BUY WATER BY THE CUP

In arid regions the water-vendor is a familiar tradesman.

A coin for a cup. Scarcity makes water a precious commodity. Don't be careless with it.

There *are* careless people, though — people who live where water is so plentiful that they've taken it for granted. Let it run to waste. Polluted it. Mismanaged it.

The needs are urgent. Where water is scarce, it must be provided. Where endangered, it must be rescued.

Water needs to be managed as expertly as money, or homes, or businesses.

Helping regions and nations harness, conserve, and protect their water resources is a very important part of our company's business.

We have engineered vast irrigation projects that have brought major areas of desert land into fertile cultivation.

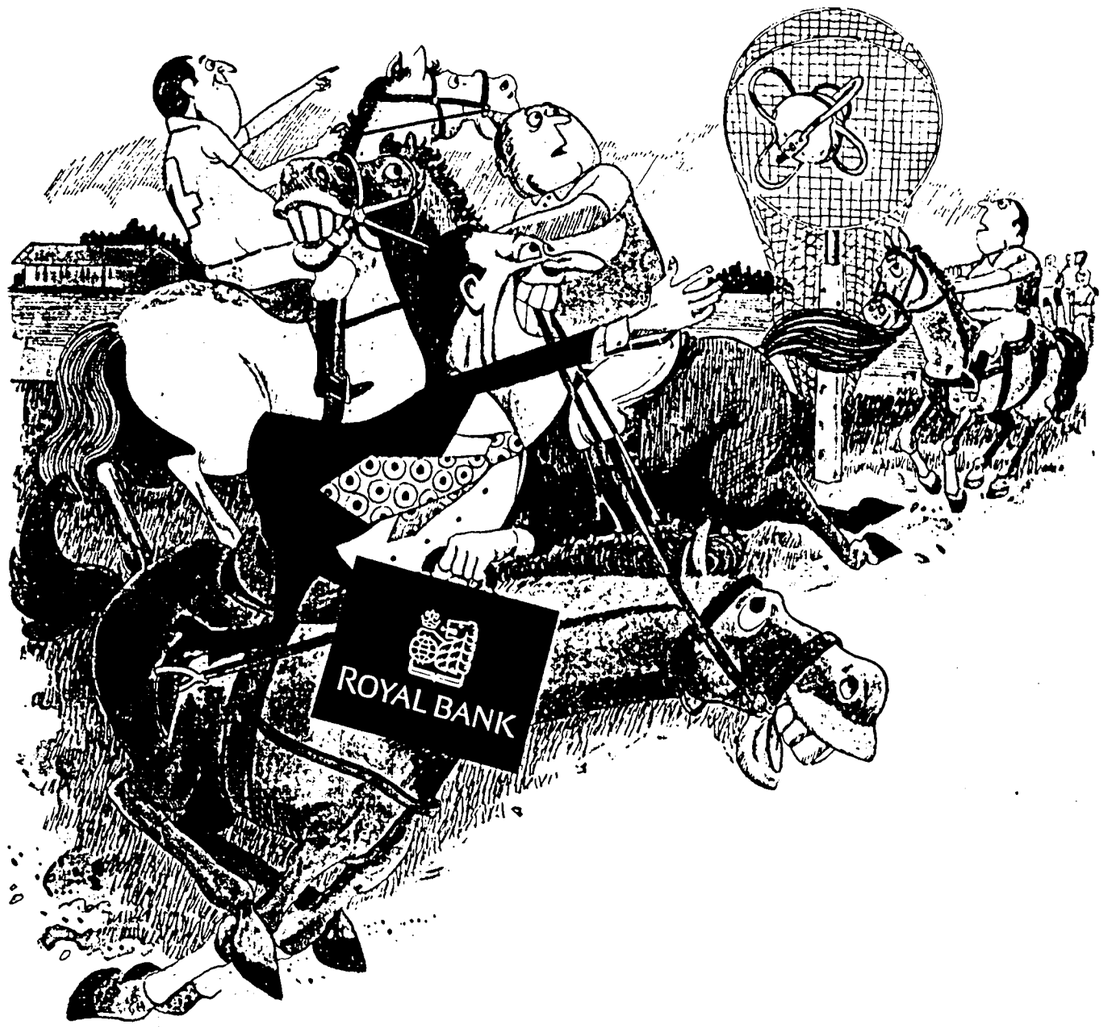
We design and build waste treatment systems to process the sewage of a small community, a sizeable town, or a city of millions of people. And, in the process, make wastewater re-usable.

We manufacture pumps that can irrigate a farm, a golf course, a municipal park, or, indeed, an entire province. Pumps to put out fires. Or to move millions of gallons of water in giant flood control projects.

We also build treatment systems to reclaim water at industrial plants, refineries, and factories.

We think water deserves a high priority on the human scale.

And our kind of technology can be very useful to those who agree.



FMC has offices in principal cities throughout the world. To learn more about this versatile company, please write for our booklet, "Achievements."

Key to table :
The left-hand side of this page down to York lists all urban authorities with a population of more than 100,000; the remainder (Barnsley onwards) are those between 50,000 and 100,000 where every ward was contested this year. In authorities marked **a** the Conservative column refers to a local anti-socialist party; in those marked **b** the votes cast for Conservative-backed Progressives or Independents (or the Liverpool Protestant party) are included with the Conservatives.

Italicised figures in the first three columns indicate that the party concerned had a contested candidate in every ward. The fourth column shows votes cast for all other groups and for independents. The only groups to poll over 10% anywhere were Ratepayers and Residents groups in Basildon (12.9), Cheadle (18.1), Havant (20.5) and Swansea (14.2); Householders in Kirkby (10.5); the Communist party in Motherwell (11.5), the SNP in East Kilbride (19.1) and former Conservative-backed Progressives in Edinburgh (17.0) and Citizens in Barnsley (20.1).

The last two columns show the swing to Conservative (plus sign) or to Labour (minus sign) since the 1970 and 1971 municipal elections. Swing is calculated on the votes cast for the two main parties in wards fought by both parties in both years. A dagger (†) indicates that less than half the wards were comparable on this basis.

Continued from page 18

and in York two Conservative aldermen at odds with their party group may make Tory control uncertain.

Turnout was a little down on last year but still higher than in 1970. The Scottish National party (despite the Stirling by-election) lost votes; Plaid Cymru (perhaps because of Merthyr) held its small vote. The vote for the anti-immigration campaign in Bradford dropped to 11 per cent in the wards it fought (15 per cent last year), but the National Front polled 8 per cent in the wards it fought in Leicester.

The Liberals had ups and downs but overall—for the first time in the 1970s—it was just more up than down. Their total vote was up 2.5 per cent on last year. The votes cast in the towns in our table in the wards where all three parties fought both years were:

	1971		1972	
Cons	246,435	37.7%	242,892	38.7%
Labour	271,750	41.5%	237,613	37.9%
Liberal	127,525	19.5%	138,284	22.0%
Others	8,476	1.3%	8,732	1.4%

The Liberal bridgehead in Liverpool was extended into Labour territory and Liberal councillors who had captured once safe Labour wards in Birmingham, Leeds and Sheffield when Labour was at its nadir did well to hold their seats this year. That was a break in the usual pattern of Liberals' winning seats from the unpopular party only to lose them when it becomes popular again.

Labour party

Roy's weird IRI

Mr Roy Jenkins delivered the second of his "think-speeches" about Labour's future policy to a miners' conference at Blackpool last weekend. It was on a real subject in regional unemployment, but reached a mainly bogus conclusion. This was a pity, because the start of it was again so attractive. Mr Jenkins looked back in well-documented anger as he hammered home how intolerable it is that unemployment in northern Britain has greatly exceeded the national average for nearly 50 years, and then analysed most of the right reasons (apart from bloody-minded trade unionism) why we have never checked the vicious circle by diversifying out of the regions' declining shipbuilding and coal. He looked forward in striking warning that we may be making the same mistakes all over again, by not realising that manufacturing is now likely to decline in favour of services, so that "even such a traditionally prosperous area as the

Jenkins: wrong way down the M1

West Midlands may be at the beginning of transition to depression precisely because it is over-dependent on manufacturing." It is a dreadful portent for the future that "over two-fifths of the office floor space in England and Wales is in Greater London." Mr Jenkins therefore made a very strong case for one of his two suggested solutions: namely, a sustained regional employment premium that should be broadened to include the service industries and not merely (indeed, not mainly) manufacturing.

However, he was also right to say that some more "deep-seated" changes will be needed to back this up. That is why *The Economist* is, quite seriously, in favour of Britain preparing now to move the seat of government north from London, because the site of central government is the growing magnet for so many firms' head offices. Unfortunately, Mr Jenkins is too much part of the club of London-loving MPs and top civil servants to tell them that it is they who should be directed north to the Yorkshire moors. So his suggested "deep-seated" remedy was the shallowest and corniest of the lot: a "state-holding company," supported by a "regional development bank," which would establish a lot of nationalised industrial concerns in the regions from scratch.

Mr Jenkins's comparisons with Italy's IRI and ENI are misleading. Italy and some other continental countries have not got capital markets, largely because capitalists there hide their funds away from tax collectors, formerly in mattresses and now in Swiss banks. The state therefore has to create capital investment to equal the idle or hidden savings; although it has a wider field to choose from, the recent record in Italy has been rather bad. In Britain we do have a capital market, which searches for what the City regards as the most profitable commercial investments. A British IRI would therefore establish in the regions, probably on City advice, the marginal ventures that the City had decided were probably not quite viable, those that would most probably go bust.

This would not be a "deep-seated" recipe for regional regeneration. Roy Jenkins's many friends may say that he had a political need to look leftish at this time, and that this is as harmless a way as any. That misses the most important point. To many in the great centre of British politics his is by far the most appealing voice in the political wilderness, calling on the country to prepare and make straight the way back to a politics of radical relevance. When he suggests that the best bulldozing technology for that road-preparation will be a stampede of white elephants down the M1, he makes his sophisticates' crusade look a farce.

Council rents

Who's laughing?

Labour MPs seemed to enjoy themselves on Monday night—to judge by the noise they made—during the third reading of the Housing Finance Bill. Their target was the housing minister, Mr Julian Amery, whom they accused of a big climb-down because of the amendments he had made to his bill during the committee stage. But those concessions, which must mean that many fewer council tenants will find themselves paying a £1 a week more in rent from October, are bound also to take much of the steam out of Labour's own campaign against the bill.

Much of the controversy has been the product of confusion over just how much more council tenants would have to pay in rents. The Government's intention is that all tenants living in council property should pay "fair rents"—calculated theoretically upon market values less the scarcity factor, and roughly comparable with registered unfurnished private rents. There are to be means-tested rebates for poorer tenants and the minister has always recognised that increases, to bring existing rents up to the fair rent level, should be phased. But the bill did provide that there should be an interim rise of £1 in council rents from next October (or smaller ones for councils which will have already made some increase in 1972-73).

The Labour attack has concentrated on both the ultimate as well as the

The Reliance E-Link Crossbar Exchange We're ready to deliver

Crossbar is now available.
We're all set to deliver.
Built for E-Link, the fastest 'phone on the desk – Crossbar is built for speed.
It has to be fast.
It is fast.
No um's and ah's while the exchange yawns your number through. Crossbar doesn't let you down along the line.
1-2-3-'Good morning, sir!'
Crossbar shoots the number straight through. Instantly!
And reliably!
Crossbar is more than a pretty pace – its reliable. That's proven reliability!
And Crossbar takes up a lot less floor-space.
Combine Crossbar with E-Link, and the fastest 'phone on the desk is even faster.

And the Reliance E-Link Crossbar Exchange is available right now.
On Reliance rental.
We're ready to deliver.
Get the facts in front of you.
Clip the coupon to your letterhead, and post it off to us today.

What are IBM doing in this historic British house? Making British history.

Hursley Park, Hampshire has a history that goes back to the Cromwells. But it added another piece of history three years ago.

For here – now the home of IBM's biggest development laboratory outside the USA – one of the world's most advanced computer systems was born. The IBM System/370 Model 135. And it was conceived, designed and developed by British engineers.

Early last year, manufacturing of the Model 135 began at Havant (also in Hampshire) where it is being built at a new plant employing around 1000 people.

Havant, though only recently established, is already one of Britain's leading manufacturing centres for computer systems. (In addition to the 135, it also produces the important Model 165.)

Hampshire is only one of our centres of activity. There's a major plant at Greenock which is producing data entry equipment, terminals, display units, computers and optical character readers. And which employs some 2,000 people.

Between them these British plants had delivered exports approaching £50m. in 1971.

There's a point to all these statistics. Because all this activity is bringing wealth to Britain.

And not only economic wealth: projects like the Model 135 are placing British computer technology and knowhow among the most advanced in the world.

And that's the sort of wealth you can't measure.

IBM

IBM United Kingdom Limited, 389 Chiswick High Road, London, W.4.

imminent rise in council rents, alleging that on average they would double—hotly disputed by the Government—and that the £1 rise in October would bring hardship to many people. During the committee stage, Mr Amery was persuaded that what tenants are already paying in some parts of the country is already so near to a fair rent that the £1 a week rise would drive them over the top—and that would push their council landlords into the needless complication of dishing out large refunds. The minister cited the example of Birmingham, which estimates that average increases of only 35p would bring the city's rents up to the likely fair rent level. He had already made a concession in committee to any council which reckoned that, by imposing the £1 interim increase, over 10 per cent of its tenants would be paying more than a fair rent. He went a step farther and reduced that figure to 2 per cent: those councils will be able to charge less than the £1 increase.

It was only last week, on the final day of the report stage, that the Opposition realised the extent to which this might eat into the arithmetic of the bill, which depends upon rents rising to match subsidy reductions. For, as Mr Crosland pointed out on Monday, if Birmingham qualified for that exemption, what about the Greater London Council? In how many London boroughs and provincial cities has the steadily rising trend of council rents already brought them within £1 of fair rents?

Proper questions—but where do they leave those Labour councils which have been threatening to refuse to impose the £1 a week increases? After last week's election victories, Sheffield took the lead in calling together the Labour leaders of 50 cities and towns to a meeting next month to co-ordinate resistance to the bill. This is an issue which has split some local Labour parties. Its exploitation during the council elections seems to have had little or no effect upon voting. Nationally, the party is doing its best to douse the fire. When the effects of the Government's amendments to the bill are fully appreciated, the campaign will probably fizzle out altogether.

Amery: giving tenants a hand

Education

What's the percentage?

The rate at which education expenditure is increasing is beginning to frighten all serious politicians, and even those who clamour for expansion without ever running the risk of having to put their policies into practice. On Tuesday, a conference on educational costs, organised by the Council for Educational Advance, was given estimates of what sort of money will be needed in future and what it is realistic to expect.

Mr Howard Glennerster, of the London School of Economics, argued that a programme which allowed for the most commonly canvassed reforms to be carried out by 1980 would require an increase in the education budget, in real terms, of 5.4 per cent per annum. Mr John Hill, chairman of the Tories' education committee, reckoned that an annual increase of 5 per cent would do no more than allow for the continuation of existing Government policies. Then there was Mrs Shirley Williams, shadow home secretary and an ex-minister of state at the education department, declaring that it would be unreasonable to hope for an annual rate of increase in education expenditure of much over 4 per cent a year. Since the most recent white paper on government expenditure allows for the education budget to rise by only 3.8 per cent per annum over the next few years, Mr Hill's argument sounded decidedly pessimistic; but it is also probably true that Mr Glennerster is unduly optimistic about what could be done for 5.4 per cent, and that Mrs Williams, who did at least list the reforms in her order of priority, would not be able to get very far down the list.

Mrs Williams put an expansion in the educational priority areas programme highest on her list. She would like to see the proportion of primary schools involved go up from the present 4 per cent to the 10 per cent originally suggested in the Plowden report; Mr Glennerster costed this at around £63m a year. Mr Hill did not speak for the Secretary of State for Education, Mrs Thatcher, but it looks as though the Tories will move on from their preoccupation with primary schools to meet some of the groundswell of agitation for more nursery schooling. Mr Glennerster costed a full nursery school programme at around £65m a year, but did not allow for any fees; the Tories are likely to toy with this idea, which was recommended by a minority of the Plowden committee.

Second on her list, Mrs Williams placed the expansion of further education—including compulsory block release, for which she would lay the cost on industry, and, third, a limited amount of nursery education. She also put, most forcefully, the argument that there is a "multiplier" effect in education: concentrate resources on any one area and you tend to increase the demand for more or better education somewhere else in the sector. That has the advantage of being a superior-sounding argument against the Government's primary school programme, but Mrs Williams is, of course, quite right. And if the Tories needed any proof that education is a bottomless pit they provided it themselves this week, with the announcement that although, when they started on their primary rebuilding programme, they believed there were some 3,000 pre-1903 schools that local education authorities wished to replace, the figure has now escalated to well over 6,000.

Racing

Here come the fillies

Kempton Park, one of the country's more obnoxious racecourses, became the first to run a women's race under Jockey Club rules, and the second to hold a morning meeting, on Cup final day. This acknowledged that racing is now part of showbiz, although (since it relies even more on gambling to survive) a more pertinent innovation was the decision by Joe Coral, the bookmaking firm, that it would start subsidising on-course customers by paying part of their price of entry. Still, the jockettes (officially, lady riders) were decorative enough, even if that was all some of them proved to be when they got on their horse's back.

They emerged from their makeshift

Lady riders : losing the pretty way

changing room to warm applause, and a small boy, suitably prompted, cried : "Good luck, ladies." Those more dubious of the experiment, chiefly of advancing years, were heard to murmur darkly : "I only hope there isn't a ghastly accident." There wasn't. Since the girls were used to riding work in all weathers, point-to-points and eventing, even Kempton at its worst had no terrors for most of them. As expected, success went to a rank outsider, who turned out to be the likeable Miss Meriel Tufnell, riding her mother's horse, Scorched Earth, which had never run under Jockey Club rules either. The odds for those perspicacious enough to pick this team were 50 to 1. Miss Tufnell modestly accepted fame, and she and her two nearest rivals got bouquets ; the sponsoring firm, Goya, got publicity for its cosmetics ; privileged racegoers got a free bubblebath packet ; and the bookies took a packet. So nearly everyone (except Arsenal supporters) voted the day a rousing, daring, here-to-stay success.

Cohabitation

Night watchmen

The Supplementary Benefits Commission is again being berated about the "cohabitation" rule. What is at issue is the regulation by which a single woman in receipt of supplementary benefit has it withdrawn if she is found to be "cohabiting." The commission does not distinguish between common-law and legal marriages, so that a man can claim supplementary benefit for his dependants without a marriage certificate ; the corollary is that a "cohabiting" woman cannot claim benefit in her own right. Otherwise, the commission pointed out in a white paper published last year in a vain attempt to end the criticism, unmarried couples would be treated more favourably than married ones.

One contentious issue is the definition of cohabitation ; the other is the way in which a case is established. Checking on suspected cases takes up, Sir Keith Joseph told the House of Commons on Tuesday, "only" just over a third of the time of the commission's special investigators ; these suspects represent a minute fraction of the commission's beneficiaries. In 1970, some 9,000 suspected cohabitations or fictitious desertions were investigated and in rather over 4,000 benefit was withdrawn. The 1971 white paper covered 11 pages with an attempt to define what the commission understood by cohabitation, but this still did not amount to a full text of the instructions issued to the investigators. Parts of these have leaked into the press over the years, but Sir Keith Joseph still refuses to publish them because, as he frankly told the Commons, that would make things too easy for those out to defraud the commission.

What has emerged does not serve to make the definition any clearer. The commission stressed last year that it was not just on the lookout for a sexual relationship, but this still appears to be the most important element and it is easy to see why : it is extraordinarily hard to prove that a man is actually providing financial support for a claimant and not too difficult to prove that he spends, say, four nights a week with her. An important element in any case is declared to be public acknowledgment of the union (the essence of common-law marriage) : but proof of that entails questioning of neighbours or putting trick questions to the claimant, which is not a very savoury business.

It will be interesting to see what the report from the Committee into Abuse of Social Security Benefits, due later this summer, has to say on the matter. The worry now is that since a man is, of course, under no duty to support his cohabitee (though if he fathered any of her children he has an obligation to support them), a woman who loses her benefit loses her security, and most of the women involved are living from hand to mouth. Last week, Sir Keith Joseph made an important concession : some benefit may be paid for four weeks after the commission decides that a beneficiary is cohabiting. That should give time either to appeal or to decide the companion is not worth the loss of income. It was a very fair decision, but it has not ended the indignity—or the criticism.

Births

No rebound

Ever since the birth rate began to fall so sharply from its 1964 level—catching out the extrapolating statisticians who plan for maternity hospitals, primary schools and the like—another upswing was predicted to be just around the corner : after all, the postwar baby "bulge" should have been coming up to its child-bearing peak. At last, at the beginning of 1971, it looked as if the rate really had begun to rise again. But the final figure for the full year, published on Tuesday, is just as low as that for 1970. The number of births was nearly 100,000 below the total for 1964.

Has the birth rate then settled at a new, low level ? It would not, after all, be particularly low compared with the rest of western Europe (always excluding Italy and Spain). The rise in abortions obviously takes its toll, but the number of illegitimate births has shown only a modest decline over the past five years. The live birth rate has also been boosted by a slight but steady decrease in still-births, which in 1971 fell under 10,000 for the first time ever. An up-to-date calculation of fertility rates must depend on a full analysis of the census ; the most recent figures still show, on the one hand, a sharp increase in births to teenagers—the rate has, depressingly, more than doubled since the early 1950s—and, on the other, a steady decrease in births to women over 20.

Why you're going to see a lot of Bluebirds this summer.

Nissan Datsun make a lot of motor cars. Enough to make the company the 5th largest manufacturer in the world.

But to stay in the big league Datsun know they have to make their good cars even better.

The new Bluebirds are testimony to how well they do it.

Already more than 1,500,000 of the original Bluebirds have been sold in 120 countries. And the basic Bluebird engine powers some 3,000,000 various Datsun vehicles.

From this enormous amount of automotive manufacturing experience comes a new generation of Bluebirds. The best Bluebirds yet.

Let's start with the 1972 engines; an advanced o.h.c. design with alloy head and compound carburettor; it comes in 1600cc and 1800cc forms. And with three million units behind it there's a long reliable future in front of it.

The 1600 unit produces 100 b.h.p. (S.A.E.) that'll let you do up to 100 m.p.h., the 1800 unit 105 b.h.p. (S.A.E.) up to 105 m.p.h. and the 180 SSS coupe 115 b.h.p. (S.A.E.) up to 110 m.p.h. Around the up-to-date engine is very up-to-date coachwork. Styled by the wind tunnel and not simply by the marketing men.

So the new Bluebirds turn heads and not stomachs. And as Datsun like to keep their customers, the new cars are built with safety very much in mind. Which is why the Bluebird's passenger compartment is immensely strong and crush resistant.

Then there are other safety features such as the carefully placed petrol tank, the burst proof locks, the collapsible steering column, power assisted twin circuit brakes with anti-lock valves, and anti-glare dash.

So the new Bluebirds are not only more powerful and better designed than before, but set entirely new standards in motoring safety.

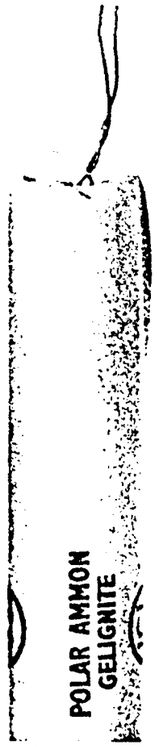
And if that isn't enough to send you rapidly to one of Datsun's 185 British dealers, there is something extra. Quite a lot extra.

Because standard features on the Bluebirds include front disc brakes, 3-speed fresh air/heater, 2-speed wipers, electric washer, steering lock, reversing lights, handbrake warning light, trip meter, radial tyres, clock, fully reclining seats, hazard warning lights, headlamp flasher, padded armrest/door pulls all round and thief proof locks.

On the 1800 models you get even more; like front seat headrests, a heated rear window, and a radio.

Now you have an idea why you'll be seeing a lot of Bluebirds in the country this summer.

Datsun 160B
Available as a standard 4-door saloon, 4-door saloon deluxe (illustrated), and 4-door saloon deluxe automatic. 1600 cc's, max bhp 100 (S.A.E.), 100 mph. From £1,154.31 inc. P.T.



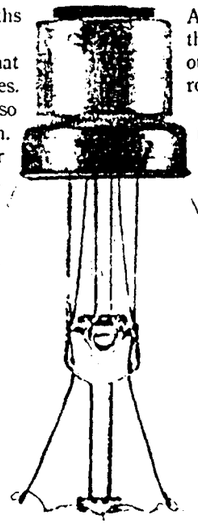
Datsun 180B SSS Coupe
Hardtop Super Sports Coupe available in manual or automatic. 1800 cc's, max bhp 115 (S.A.E.) 110 mph. From £1,498.69 inc. P.T.

Datsun 180B
Available as a 4-door saloon deluxe (illustrated), and 4-door saloon deluxe automatic. 1800 cc's max bhp 100 (S.A.E.), 105 mph. From £1,358.52 inc. P.T.

DATSUN

For a complete list of Datsun UK dealers, please, write to Datsun House, Brighton Rd., Worthing, Sussex.

A PRODUCT OF THE NISSAN MOTOR CO.



It sometimes takes a big bang before they see the light

To start with, let's explode a few myths about Tarmac.

Hands up all those who think we just lay that 'black stuff' on roads. We do. In vast quantities.

Hands up all those who think we also build motorways and factories. Right again.

In fact you'd probably have to work for Tarmac to know the full story.

About the industrial cutting tools we make, the homes we build, the stainless steel we stock, our bitumen refineries, timber business, road haulage, our fuel oil distribution service.

So when we work on a project like a power station we're equipped for everything from the first blast of rock to the time when the lights go on.

Tarmac

THE MEANS AND THE END

TARMAC GROUP, WOLVERHAMPTON, ENGLAND

THE WORLD

Vietnam

The Seventh Fleet's planes are almost all Nixon has left, and he's using them

But how about the trans-Siberian express?

It is not exactly like the blockade of Cuba during the missile crisis in 1962. One of the differences is that when you drop mines into a harbour, they stay there until a ship runs over them or a minesweeper scrapes them away or a built-in device (which the Americans hasten to say they have put in) turns them into floating chunks of scrap metal. In a way, a naval blockade is more flexible: the power that mounts it can decide whether or not to stand down in the face of a possible skirmish on the high seas with ships flying a different flag. It now becomes a matter of chance whether or not a Russian ship will bump up against an American mine and set off an international crisis. Of course, the Russians may decide to stay well away. But reports that Russian minesweepers and minehunters (which use sonar devices to locate the mines) are already steaming south from Vladivostok mean that it is too soon to set aside the possibility of just such an accident.

There are more immediate questions to be answered about President Nixon's kind of blockade. North Vietnam's successes in the present offensive in the south depend directly on the military hardware donated by the Russians. Will the blockade stop the flow of Russian and Chinese supplies that enable North Vietnam to wage the war and to make up for its losses of agricultural produce during last year's floods? And will it have any immediate impact on the current military campaign in South Vietnam? The North Vietnamese get about three-quarters of their foreign aid from the Soviet Union and eastern Europe, and most of it is transported by ships operating out of Vladivostok and the Black Sea ports. At the beginning of the year, some 25 Russian boats were operating daily on the Vladivostok-Haiphong route.

The Russians are also sending some small arms and foodstuffs down the trans-Siberian railway and through China. Although Chinese hostility has made this a fairly unreliable way of getting Russian supplies through to Hanoi, the flow seems to have increased slightly in recent months under an agreement that allows teams of North Vietnamese railwaymen to meet Russian trains at the border and guide them through China. Most Chinese aid to North Vietnam, naturally, is channelled through the two railway lines (Hanoi-Nanning and Hanoi-Kunming) and the eight roads that cross the border. In 1969 military advisers told Mr Nixon's National Security Council that the communists were capable of moving up to 16,000 tons a day down these roads and railways into North Vietnam—which means that the mining of ports or a naval blockade would not sever the whole of North Vietnam's lifeline, unless the Russians and the Chinese stopped any sort of co-operation with each other.

The tactics that the Americans adopted this week took this into account. Concentrated bombing strikes will be flown against the land links between North Vietnam and China. But it is impossible to guarantee their effectiveness, since it has been estimated that it might require up to 6,000 bombing sorties a month to seal the border—if the Chinese are still willing to lend an army of engineers to the North Vietnamese, as they did during the American bombing raids between 1965 and 1968.

The mining of the ports is likely to show more immediate results. Within two hours of Mr Nixon's statement on Monday, American naval planes had mined Haiphong harbour and six other ports in North Vietnam: Hon Gai and Cam Pha (from which anthracite, one of the country's few significant exports, is shipped), Quang Khe, Dong Hoi, Than Hoa and Vinh. Topography makes Haiphong harbour particularly vulnerable to mining, since the loading area is located on the narrow, sandy Cua Cam river. There were about 36 vessels at Haiphong when the mines were dropped, a third of them

One who didn't survive at Quang Tri

Russian. They were given three "daylight periods" in which to make their escape before the mines were activated by automatic timing devices on Thursday, and some of them, including a Russian one, made good their getaway.

The Americans appear to have used a combination of pressure mines, triggered off by the increased pressure of water under a passing ship, acoustic mines, set off by noise, and magnetic mines. They contained a "sterilisation" mechanism that would switch them off after a fixed period. Taking care of North Vietnam's seven major ports, of course, does not put paid to all seaborne traffic. The Chinese may resort to light coastal vessels to carry supplies south from the port of Chankiang. That would confront Mr Nixon with the problem of whether or not to carry out his threat to take the "appropriate measures within the internal and claimed territorial waters of North Vietnam" to stop seaborne supplies getting through.

Even if the Americans could make their blockade 100 per cent effective through the combination of mining, bombing and naval patrolling, the Russians might still just conceivably resort to a spectacular airlift. And it is doubtful whether the blockade will have any direct impact on the course of the current campaign in South Vietnam. The communists are said to have amassed enough fuel and ammunition around An Loc to last them for a month. There is thought to be a stockpile of between six and eight weeks' supplies of fuel inside North Vietnam itself, although the North Vietnamese divisions operating around Quang Tri are probably being supplied on a week-to-week basis. They are the most vulnerable to any sudden interruption in the flow. Although the North Vietnamese became more dependent on imports of Russian flour after last year's floods, their troops in the south tend to live by foraging or by bringing in crops from Cambodia and Laos.

The American blockade and the renewed bombing of rail depots and supply dumps around Haiphong on Wednesday should certainly affect the capacity of the Vietnamese communists to launch future offensives. It will mean that they will have to push harder in the south to achieve their goals before they run short of the fuel and ammunition they need to keep their sophisticated Strella rockets and T-54 tanks and heavy guns running. But, for the moment, the battle is still on the ground, and well on the southern side of the demilitarised zone.

Thieu's last stand

FROM OUR SAIGON CORRESPONDENT

The American blockade had President Thieu's full and enthusiastic endorsement, perhaps more for political than for purely military reasons. The South Vietnamese—both hawks and doves—have always tended to criticise the United States for failing to use its full military might against the North Vietnamese, a course which would risk a showdown with Russia. Now they feel that Mr Nixon's move probably comes too late but at least serves to prove that the Americans are not going to cut and run. Tamer measures at this point might have given Mr Thieu's opponents a pretext to move against him. Instead, the American blockade has helped to strengthen his position.

A week ago, after the fall of Quang Tri and Tan Canh, morale was running very low and criticism of Mr Thieu's leadership was becoming increasingly audible in political and military circles. After the sacking of two generals on the northern front and the appointment of the country's best commander, General Truong, to the defence of Hué, things looked a little brighter. But there were still doubts about whether Mr Thieu was strong enough to sort out the squabbles and breaches of discipline within the military command that partly explained the rout of the 3rd division.

Many people felt, for example, that there was a need to replace the commander of the second military region, General Ngo Dzu, before the impending battle for Kontum. There are obvious political risks in sacking corps commanders, who are regional overlords in every sense. The fact that Mr Thieu replaced General Dzu on Wednesday was a sign of his own increased authority and confidence after Mr Nixon's speech. More reshuffling of senior officers is expected to follow.

The tensions and frictions which had developed in the officer corps even before the communist offensive, and which culminated in the sacking of General Vy, the defence minister, just before Easter, are now thought to be on the wane—partly because of reviving confidence in Mr Thieu's leadership. There is plenty of speculation about conspiracies among displaced generals, but with firm American backing for Mr Thieu as the constitutional leader, and a growing appreciation of the need for unity, a coup does not yet appear to be on the cards. If the military situation deteriorates badly, of course, things may look different.

Mr Thieu went on television a few hours after Mr Nixon's speech, and bitterly attacked commanders who had made mistakes on the battlefield. He asked parliament for sweeping powers to handle the present emergency. The lower house responded by drafting a bill that gave him power to rule by decree for six months, and a state of martial law came into effect at midnight on Wednesday. The emergency measures will include increased mobilisation, new taxes to raise cash for the increased defence budget, and tighter censorship of the local press. It is expected that the American Congress will also be asked for more money.

Mr Thieu has still made little or no attempt to build bridges to his political opponents in a bid for at least temporary solidarity against the communists. Characteristically, he waits for others to come to him. For the moment his critics seem to be practising self-restraint in the face of the North Vietnamese challenge.

It all depends on Hué

The relative lull in the fighting inside South Vietnam that followed the fall of Quang Tri and the collapse of the 3rd division was broken this week by renewed communist offensives in the central highlands and around An Loc. As the North Vietnamese edged in towards Kontum from the north and the west, battles flared around the flanking firebases, and the outpost of Po Lei Kleng to the west of the city

How it looked when the North Vietnamese came into Quang Tri

was reported to have been overrun on Tuesday morning.

Farther east, in the coastal province of Binh Dinh, which is an old Vietcong stronghold, the communists set up a "revolutionary administration" and attacked the important airfield of Phu Cat, 10 miles to the north of the provincial capital of Qui Nhon. A direct attack on a major town in this part of the country would stretch South Vietnam's army still further, although it is being helped here by the 25,000 tough South Korean troops that are posted in the region.

Meanwhile the North Vietnamese made yet another tank assault on the city of An Loc, besieged for several weeks, and hand-to-hand fighting inside the town was reported on Thursday. President Thieu has been steeling himself to face a possible attack on Saigon itself in the near future. When he declared martial law and the call-up of all 18-year-old youths this week, he also instructed the residents of Saigon to look to their own defences by building trenches and other fortifications.

But the most important battle is shaping up around Hué. It is not just that Hué, as the former royal capital and a city of 300,000, has a very great symbolic importance. It is that both sides have committed some of their best forces to the struggle for the city. When the North Vietnamese army paper Nhan Dan claimed recently that "all categories" of South Vietnamese troops "had been defeated on all types of battlefield," it was rather overstating its case. The troops of the 3rd division who were routed at Quang Tri and later ran amok in the marketplace of Hué belong to a unit that was hastily tacked together last June. Many of its 8,000 men were raw recruits, stragglers or captured deserters. The troops that are guarding Hué are among the finest that South Vietnam possesses—the crack 1st division and the marines, as well as infantry reinforcements brought up from the Mekong delta. The man who has just been appointed to command them, General Ngo Quang Truong, is one of the most respected figures in the Saigon high command.

This is not to say that General Truong will hold out against the four communist divisions moving in on Hué from the north and west in a pincer movement. But he has a fighting chance, especially if the weather stays clear enough for the American bombers to make a few effective hits. If the North Vietnamese do smash the 1st division, on the other hand, it is hard to see how the South Vietnamese army could hold them back anywhere else.

There are two things that still seem to be working in favour of the South Vietnamese, despite their demoralising reverses. One is time. The North Vietnamese seem to be running seriously behind schedule, especially if this really is meant to be an all-or-nothing assault designed to topple the Saigon government and make them the masters of the country. The rains are coming, and the blockade of North Vietnam may have considerable delayed effect. The other factor is public response inside South Vietnam. In areas like Binh Dinh, where the Vietcong have been active since the war with the French and have never been really defeated, it has been relatively easy to reconstruct a communist administration and kill the government's supporters. The same system applied to Quang Tri or other occupied towns has amounted to nothing more than military occupation with an ideological leavening. Communist appeals to the people of Hué to rise up "regardless of their class, religion or politics" and "struggle for the overthrow of the Thieu clique" have not found much of an audience so far. The battle depends on the regulars.

Peking waits

Mr Nixon has created a serious dilemma for the Chinese. Their problem lies not so much in the obstruction of Chinese aid to the North Vietnamese, although the intensified bombing of railway lines will certainly do that. China has coped with this kind of interdiction before by sending 20,000 engineering troops to repair the lines as quickly as they were damaged. And it may well take such action again. Bombing has never been able to cut off overland traffic altogether. So China can count on getting much of its military supplies through.

What must worry the Chinese more are the pressures that will arise from the mining of Haiphong harbour. If the Russians decide against running the blockade their only alternative, to maintain their influence in Hanoi, is to apply to China for permission to send an increased volume of supplies by rail across China. The Chinese have had several disputes with the Russians about this traffic in the past and they are probably keeping it down to a minimum. But if they refuse the Russian request now, they will run the risk of straining further their relations with Hanoi.

China's attitude towards North Vietnam has always been somewhat schizophrenic. Its desire to see a "people's war" triumph has been tempered by a reluctance to see the North Vietnamese extend their influence, perhaps at the expense of China's own, throughout the region. The Chinese will sacrifice the North Vietnamese when their national interests demand it—as they did a few months ago by welcoming Mr Nixon to Peking. But it is highly unlikely that the Chinese went so far then as to make Mr Nixon any promises about diminishing their aid or persuading North Vietnam to stop fighting.

Since the announcement of Mr Nixon's visit to China, the North Vietnamese have made their displeasure known; and they have been seen to move closer to the Russians. But the Chinese cannot afford to abandon their stake in Hanoi altogether; a hostile North Vietnam allied to Russia would be the most serious breach in the wall of friendly states which the Chinese hope to build up around their borders. So China may swallow its distaste for co-operating with the Russians, to some extent, in order to preserve its lines to Hanoi.

The impact of Mr Nixon's moves on Chinese-American relations will depend

largely on how close to the Chinese border American bombers fly. On Thursday the People's Daily denounced Mr Nixon's actions as "flagrant provocations." But its language was more restrained than during the South Vietnamese attack into Laos in 1971, when the Chinese thought the attackers might approach their border.

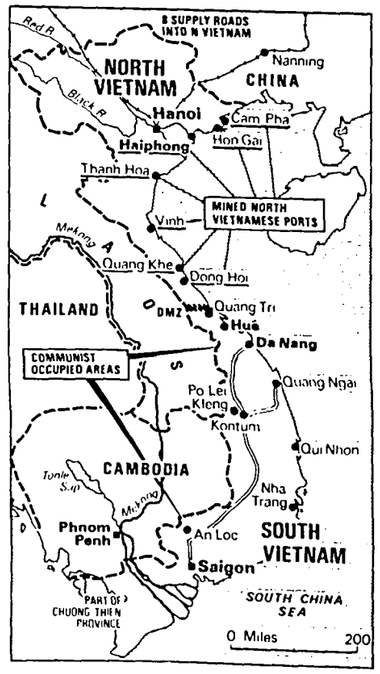
The Russian armourers

It was a mounting stream of heavy Russian equipment that enabled the men in Hanoi to launch their present offensive in South Vietnam. Tanks, heavy artillery and anti-aircraft weapons are the three kinds of hardware that the Americans would most like to prevent the Russians sending to North Vietnam.

It is the T-54 tank, the second most recent Russian development in this field, that has given the North Vietnamese advance its muscle and mobility. A substantial number moved down the Ho Chi Minh trail (no mean feat in itself) in time to take part in the battle for An Loc, and more T-54s led the preceding attack across the so-called demilitarised zone in the north. In artillery, the North Vietnamese have a decided superiority over the South Vietnamese with the 130 mm gun. But it is their anti-aircraft weapons that have produced the biggest surprise.

Going by past experience, one would have thought that the North Vietnamese attack, without any air cover at all, would have proved very vulnerable to American bombing. The communists have over 6,000 anti-aircraft guns, but not all of these are easily mobile and not many of those could hit a fast-moving Phantom jet. There has been a large increase in the number of surface-to-air (Sam) missiles during the past year, in particular in the north. Sam launchers are difficult things to move, but there is apparently already one Sam site in the newly captured province of Quang Tri. Nevertheless, the North Vietnamese do not appear to have the more recent Sam-3s, which the Egyptians have, and which can counter the more accurate low-level bombers.

But one anti-aircraft weapon has been used against the Americans in Vietnam with telling effect. At least one helicopter has been shot down by a new missile nicknamed "Strella." This is apparently a hand-held missile which is fired at a helicopter like a bazooka. Because it is both wire-guided and heat-seeking—in other words, it homes on the heat of an aircraft engine—it can be fired in the general direction of a helicopter with the near certainty of hitting it. It has been called the SA-7. But it is unlikely to be part of the Sam series, which are all two-stage rockets mounted on trucks. It is more probably an ingenious conversion of the Swatter anti-tank missile. Whatever its origin, the light, handy and simple Strella seems ideal for the North Vietnamese against the vast numbers of helicopters used by the Americans and South Vietnamese. It has probably been used only once. But it has already had its effect. Helicopters are now flying dangerously low and spotter planes higher —with less accuracy in pinpointing targets. One aim of the American blockade is to make sure it is not used very often again.



The fable of Kien Hoa

FROM OUR SAIGON CORRESPONDENT

If some high American official were to declare publicly that the Mekong delta remains unaffected by the offensive farther north, the press corps would be down there within hours calling him a liar. But when Mrs Binh, the National Liberation Front's negotiator in Paris, says in a press interview that most of Kien Hoa province has been taken over by revolutionary committees, she knows there is not much risk that the press will be so impolite as to challenge her assertion. This is how Vietnam myths become enshrined as facts.

Kien Hoa province, or Ben Tre as it is called by the communists, used to be a Vietcong stronghold in the delta. In 1967 the communists openly controlled two-thirds of the villages there. As the second largest rural province in the country, it provided them with much manpower, money and rice. But since 1969 the picture has changed. The government's pacification programme has spread to every hamlet —including the one where Russian cameramen once came to film faked battle scenes for a movie called "The Great Wave of the Mekong."

Mrs Binh herself has family connections with Kien Hoa, and is known to have been there on a visit around 1969. Last week, in an interview with the French communist newspaper l'Humanité, she was at pains to show that the communists were now back in control. In the district of Truc Giang, she said, the population had established a people's administration, and almost all other district centres in the province had done likewise.

In fact no such thing has happened. The defence outpost at Truc Giang was attacked on March 22nd by North Vietnamese and a few local guerrillas, but the fight was over in less than two hours and the local district chief, dressed in shorts and steel helmet, seemed very much in command as the enemy withdrew. In the district of Ba Tri, a communist battalion tried to mount an attack on April 24th, but was unable to carry out its assignment because it ran short of ammunition and did not receive the co-operation it expected. The whole province remains firmly under government control.

In Kien Hoa, as in other delta provinces, there has certainly been a jump in guerrilla activity since early April. But the only immediate danger is in the two provinces of An Xuyen and Chuong Thien, next door to the old communist base area in the U Minh forest. Things are bound to get worse. But during the current offensive it has almost seemed that the Vietcong in the delta have been under orders to keep their heads down. At any rate, Mrs Binh's account of "powerful uprisings" in Kien Hoa contains about as much truth as her repeated assertion that there are no North Vietnamese in South Vietnam.

A consumer-durable should be as durable as the consumer.

In the jargon of marketing, a "consumer-durable" means something that people buy and expect to last.

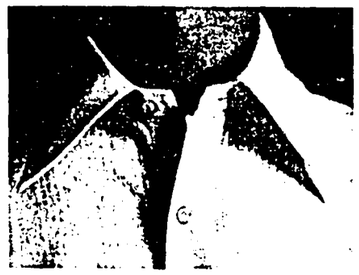
The trouble is that some durables aren't. The cooker that leaves your food nice and cold. The toy that is child's play to break.

TI believes that durables must live up to their name. Consumers, on the other hand, don't have to.

Tube Investments is a very large and diverse engineering group: large and diverse enough to make Churchill machine tools, Creda cookers, Ascot water heaters and Raleigh bicycles. 40% of the TI group is actively concerned with consumer goods. Some are made by TI overseas; many more are exported.

All of them are *good* goods. Shared research gives TI a technological edge that is not misused.

TI's attitude—and it's found at every level—stems from two basic beliefs.



One is that any business owes a responsibility to its employees and investors. They have every right to a fair return.

The other is that any business owes a responsibility to its customers. They have every right to a fair deal.

The one thing TI has never planned is obsolescence.

Advanced engineering.

How to tell a good hotel laundry from a bad hotel laundry.

A good hotel laundry means no missing buttons. Ever.

A really good one will spot loose buttons and sew them on for you. And you don't even have to ask.

And probably the best laundries in the world are staffed with people who understand your needs.

People who know that harried businessmen like yourself often need things on a moment's notice — and are entitled to get them. People who care just a little more. So you'll never find a frayed collar, an undone seam, a seamy job.

How do we know so much about perfection? Well, you could say we wrote the book.

See, we have 63 great hotels around the world, and each is subject to over 800 checks from our Quality Control Manual, several times a year.

Checks on laundries, bellmen, banquets, blankets — just about every hotel service you could name. And if any hotel fails so much as one light bulb, somebody's got to answer for it.

Granted, that's a pretty fussy way to run a hotel. Let alone 63 of them. But we have our reasons.

One, we think a great hotel is — or should be — the absolute cream of the industry crop. Everything should run smoothly, from the biggest corporate banquet right down to the smallest collar button.

Two, we believe in doing things with style and grace and elegance. That's why our lobbies are Louis XVI or solid onyx or straight out of some South Sea Paradise. Our moods, menus, and ambience will all let you know you've arrived.

And you know you're in for some pretty special treatment. Or our name (and reputation) isn't Inter Continental.

For reservations, call Inter-Continental Hotels or your travel agent.

Inter-Continental Hotels. How to tell the good hotels in:

THE WORLD *International Report*

Barzel and Brandt have another week to look at each other

A bungled job in Bonn

FROM OUR SPECIAL CORRESPONDENT *Bonn*

West Germany's politicians have once again stepped back from the brink. Their leaders decided on Wednesday evening, after six hours of debate in the Bundestag, to postpone a decision on the Warsaw and Moscow treaties until next Wednesday. After so many days of excitement and tension, of commissions, summit meetings, deadlines and assurances of ratification, the German people must be regarding the whole affair much as a cook does her collapsed soufflé.

The simple truth is that Herr Willy Brandt and his government did not want to risk losing the ratification vote, and the opposition leader, Herr Barzel, had made it quite clear that unless the government gave his party more time for thought it would oppose ratification. In his second speech, on Wednesday afternoon, the chancellor said that the opposition had already had two years to think the treaties over. The situation, he claimed, was exactly the same on Wednesday as it had been on Tuesday, when a joint resolution interpreting the treaties had been approved by both government and opposition, and he could see no need for further delay. But he suggested a short pause for talks, and during this pause the six-day adjournment was agreed. Herr Brandt then had to persuade those in his party who saw political advantage in risking a defeat that this was the right course. But it is Herr Barzel who has to use the adjournment to hold his own party together; and its right-wing and refugee elements, who have totally opposed the treaties, will take some persuading.

Nobody has emerged as a victor from this week's contest. The two sides both look distinctly bruised. The opposition has had some grounds for unease but it has probably played them up in its attempts to gain time. The government has not fully explained just what were the Russian doubts that caused the last-minute crisis, nor how these doubts were apparently resolved so speedily.

The debate on the treaties finally began shortly after 10 o'clock on Wednesday morning—the deadline set by the chancellor last week. But it only just succeeded in getting off the ground. Although the opposition had agreed on Tuesday afternoon to have both the debate and the vote the following day, the first thing it did on Wednesday morning was to put down a motion that the ratification debate be removed from the Bundestag's agenda. The mood of thankful relief that followed Tuesday morning's all-party agreement on the wording of the joint resolution setting out the west German interpretation of the treaties had been shattered by a bombshell that fell at 6 pm. It was then learnt that the Russians had raised objections to two points in the resolution.

Since the Russian ambassador in Bonn, Mr Valentin Falin, had attended the Tuesday morning meeting between the party leaders, and had raised no objections then, the news was a blow indeed. But not to many members of the Christian Democrat opposition who were at that moment closeted in a party meeting trying to decide whether to vote for the treaties after all. The hardliners were jubilant. It would mean that it would be the Russians who had said no to the treaties, and not the west German opposition.

But it was not to be so simple. After a three-hour meeting with Mr Falin, the head of the chancellor's office, Herr Horst Ehmke, declared at midnight on Tuesday that the Soviet government had not been raising objections after all, but had merely sought some clarification, which had been given and accepted. The foreign minister, Herr Scheel, immediately wrote to Herr Barzel to explain it all away, and Herr Barzel himself saw Mr Falin early on Wednesday morning. But the damage had been done. Herr Barzel said he was not fully satisfied, and his party attempted to get the debate postponed.

It nearly succeeded. The vote, in which the Berlin representatives took part, was tied with 259 for each side. This was a rude shock for the chancellor, since the predominantly Social Democrat Berliners should have given

him a majority of two: it boded ill for the result of the vote on the treaties themselves. Baron von Kühlmann-Stumm, the Free Democrat who is against the treaties, was one defector, and the other was believed to be a Social Democrat from Munich, Herr Müller, who is in the middle of a row with his local party. His gesture of independence was not expected to extend to voting against the treaties.

The government's insistence that the debate should begin on Wednesday had been surprising in view of the fact that its chances of getting the treaties through seemed so slim. This attitude did much to dissipate the goodwill created during the past week through the all-party negotiations. In his speech on Wednesday afternoon Herr Barzel did not oppose the treaties, but said that unless the government agreed to postpone the vote his party would vote against ratification.

The main point raised by the Russians on Tuesday had concerned a sentence in the resolution which stated that the treaties did not create any legal basis for the existing frontiers. In his letter to Herr Barzel, Herr Scheel explained that this referred to the Warsaw treaty. West Germany had not made any comment on the legal basis of Poland's western frontiers but had agreed that the Oder-Neisse line would not be questioned as the western frontier as long as the federal republic existed. Herr Scheel said that Mr Falin had agreed to accept this.

The points in the resolution cover all the opposition's reservations about the treaties. They say that the treaties are elements in the modus vivendi which the federal republic wants to create with its neighbours; they do not prejudice a settlement for Germany under a peace treaty; they do not affect the right of self-determination; they do not contradict the policy of the peaceful re-establishment of national unity in a European framework; they do not affect the rights and responsibilities of the four powers either for Germany as a whole or for Berlin. The resolution underlines west Germany's place in the Atlantic alliance, its aim of European unity, and its assumption that Russia and the communist countries will co-operate with the EEC. It reaffirms the federal republic's ties with west Berlin, and says that it is "taken for granted" that the principles of relaxing tension and of good neighbourliness between the two Germanies will be applied in full to the people and the institutions of the two parts of Germany.

Italy

The centre held

The real victors of Italy's general election on Sunday and Monday were the Christian Democrats, the mainstay of every coalition since the war. But the successes of the far right, though less dramatic than many observers had expected a month or so ago, were a disquieting sign of a rising right-wing protest vote. The increased strength of Signor Almirante's Italian Social Movement (MSI) in parliament may be an incentive to the Christian Democrats to pursue the possibility of a coalition of "centre" parties embracing the Liberals as an alternative to the centre-left formula of the past decade.

But our Rome correspondent writes that the paradox of this election is that the Christian Democrat party, which has made a brilliant recovery on a centre platform strongly orientated to the right, will find it hard to construct a moderate centre-right government as an alternative to the old centre-left coalition because of the heavy losses suffered by the Liberals. The Liberals lost 10 of their 31 seats in the chamber and half of their 16 seats in the senate. On paper, a centre-right alignment of Christian Democrats, Liberals, Republicans and Social Democrats has a majority of 16 in the chamber of deputies. But that is not enough to govern comfortably in this multiparty system.

The success of the Christian Democrats is outstanding. The party has completely recovered from the landslide it suffered at the local elections last June. A few months ago it looked near to splitting; today it is unassailable. Its position is all the stronger because it no longer needs to fear the divorce issue. In both houses, thanks to the increase of the neo-fascist MSI representation, there is now a majority against divorce.

Within the Christian Democrat party, the position of the prime minister, Signor Andreotti, appears greatly enhanced. His handling of a difficult situation as prime minister of a government defeated in parliament has been able and discreet, and his electoral campaign on a conservative but anti-fascist platform has certainly been highly effective. The Christian Democrat party owes its success to him, to its secretary, Signor Forlani, and to the minister of the interior, Signor Rumor, whose handling of the police during the election campaign undoubtedly contributed to restoring confidence in the

Smoothly...
that's how we carry your cargo

We at KLM give your cargo that little extra in personalized attention and care.

That's how we have become big as a freight carrier far beyond the borders of our country.

That's how we gained our reputation as experts in worldwide cargo handling.

Add KLM to your distribution system, and we'll become a reliable part of your product.

KLM CARGO

1951–10/- per sq. ft.*

1958–15/- per sq. ft.*

1965–65/- per sq. ft.*

1972–£7 per sq. ft.*

*Typical rents for prestige office blocks in Central London.

Is all your profit going into your London Landlord's pocket?

All over post-war London, tenants were happily signing long leases.

Hardly noticing that in the smallest small type were two ominous words: Rent Reviews.

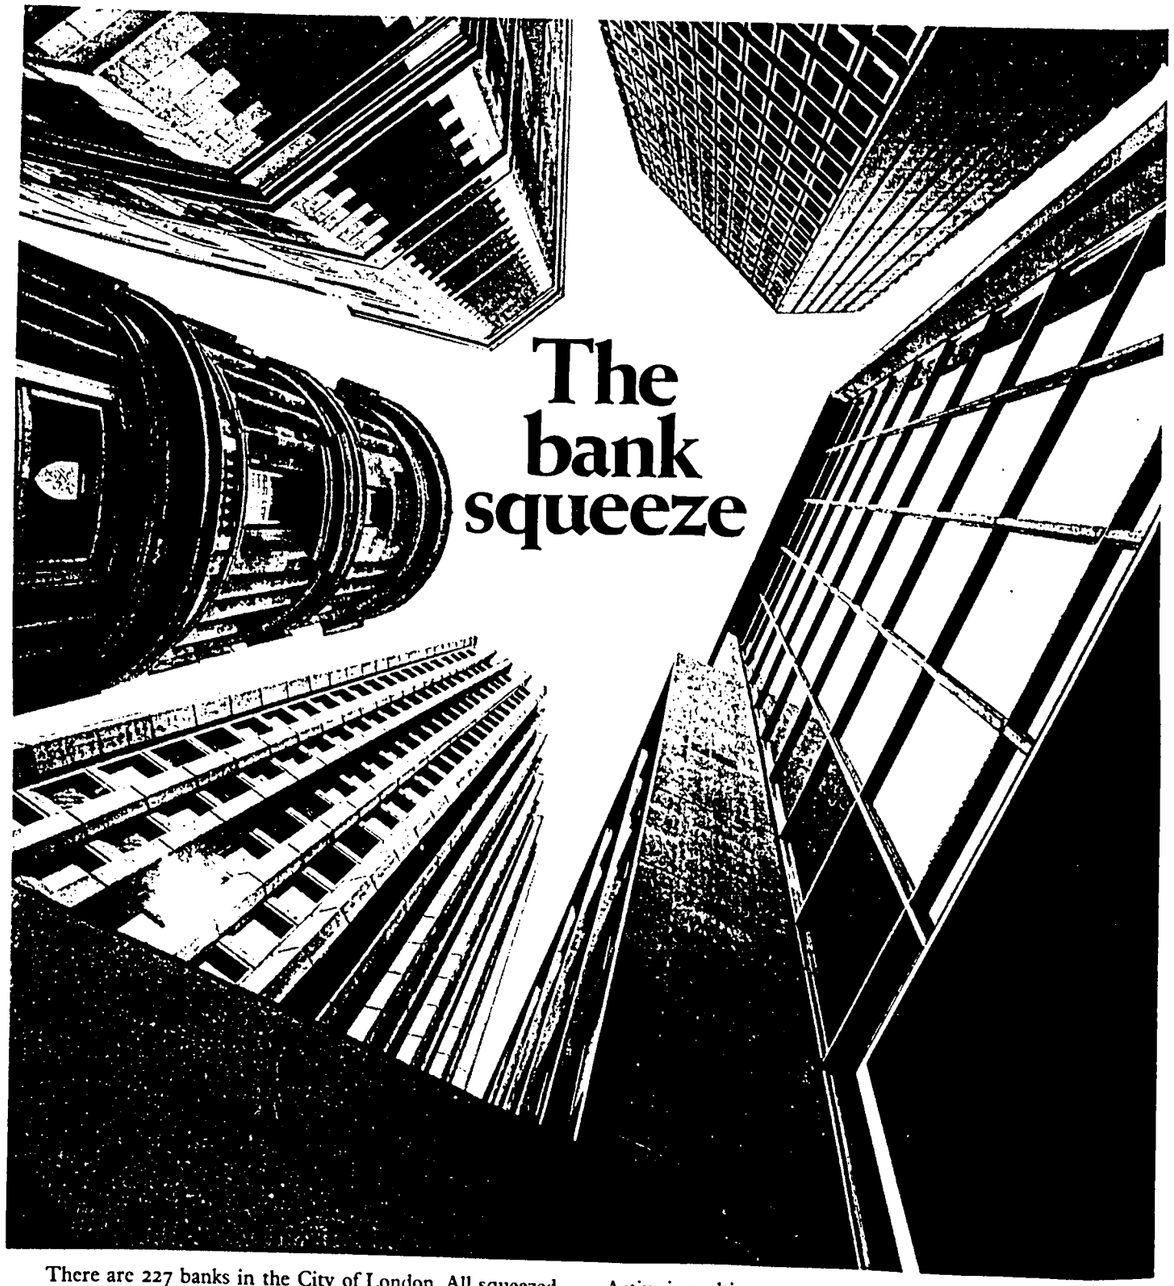
Over the years these two words have taken a wicked toll. (Just look at the rents for the building shown above).

This year's rent reviews are among the cruellest ever.

In the past few months a number of firms have come in to tell us about rents that are going up 3 or 4 times.

And since a London office worker has, on average, 120 sq. ft. to live in, that's a lot of extra money to find.

On a hundred man office staff you may be paying £100,000 over the odds. (But, even a short ride out of London, you can save thousands of pounds).



Out of London you'll find high rents are £3.50. We can show you good premises for 70p.

Come in and talk about your business needs with us and we'll help you find some places to look over.

We'll tell you about rent, communications, staff housing, salaries and anything else you want to know.

And we'll help make moving offices smoother than moving house.

The Location of Offices Bureau.

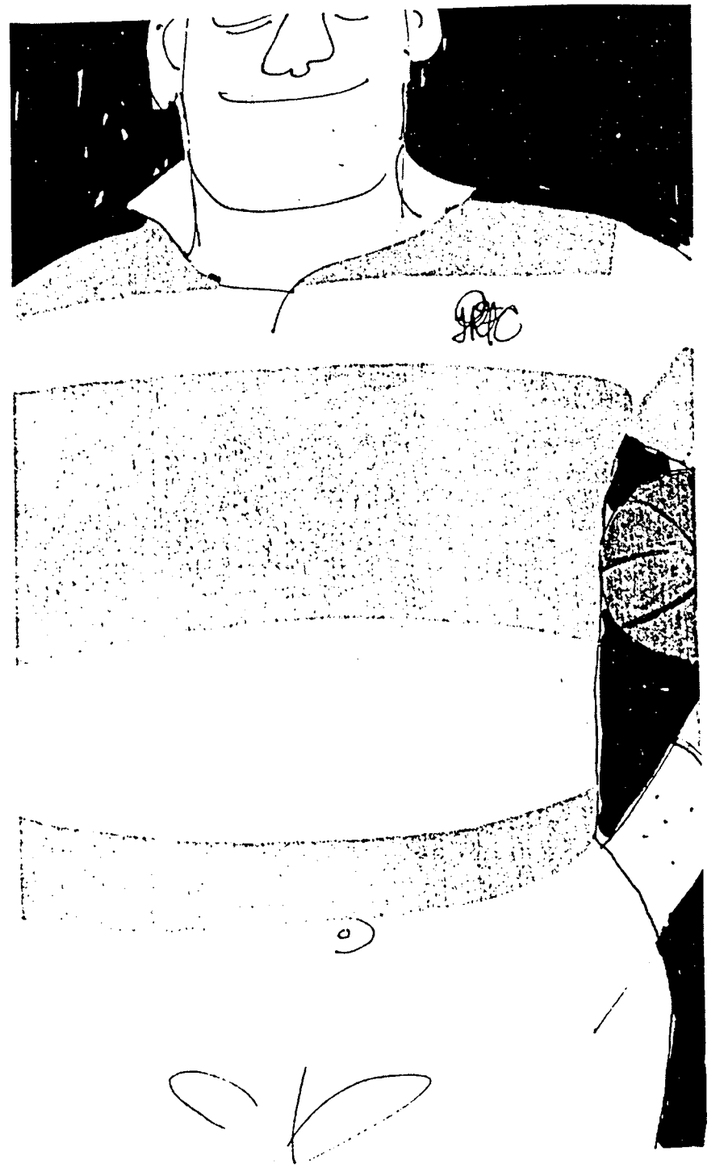
The bank squeeze



There are 227 banks in the City of London. All squeezed into one square mile. Big banks, medium-sized banks, small banks. British banks, European banks, American banks and Oriental banks. Old ones with long traditions, new ones with short traditions.

At Irving Trust we feel you ought to know where we fit in. We are a commercial bank offering full international services. Active in multi-currency loans. At our London Branch you deal directly with international specialists *and* get access to the facilities of our Wall Street headquarters.

But the nicest thing about us is our size – nearly $1 billion in deposits in London. We are big enough to give you international service yet small enough to give you personal attention.

Let Irving be your *personal* guide to international banking.

Dear little chap he was; just like the original. But he grew, and suddenly the name was no longer apposite. The same thing happened to Flight Refuelling. That's all we did at first, but we got so good at it we looked for fresh fields to conquer. One thing led to another and now refuelling in flight is only a small part of our activities, though we are still far and away the biggest people in the business. We could change the name but the reputation of the company stands so high that it would be akin to erasing the hall mark from a piece of silver. On the whole we think we prefer to stick with the name and suffer the laughs, when people pick up one of our electronic devices and ask us when it was last refuelled in flight.

Most people would work better if you treated them like machines.

All computers are air conditioned. They have to be, or they wouldn't work effectively.

Now consider your body as a machine. It's constantly giving off heat and water, in the form of sweat.

They combine in the air to make it hot, humid and uncomfortable.

Which means that your body has to work harder to keep cool. So you get tired.

And your work suffers.

Now consider how air conditioning deals with the problem. It changes the air constantly.

Hot air is drawn out and cooled and mixed with fresh air as required.

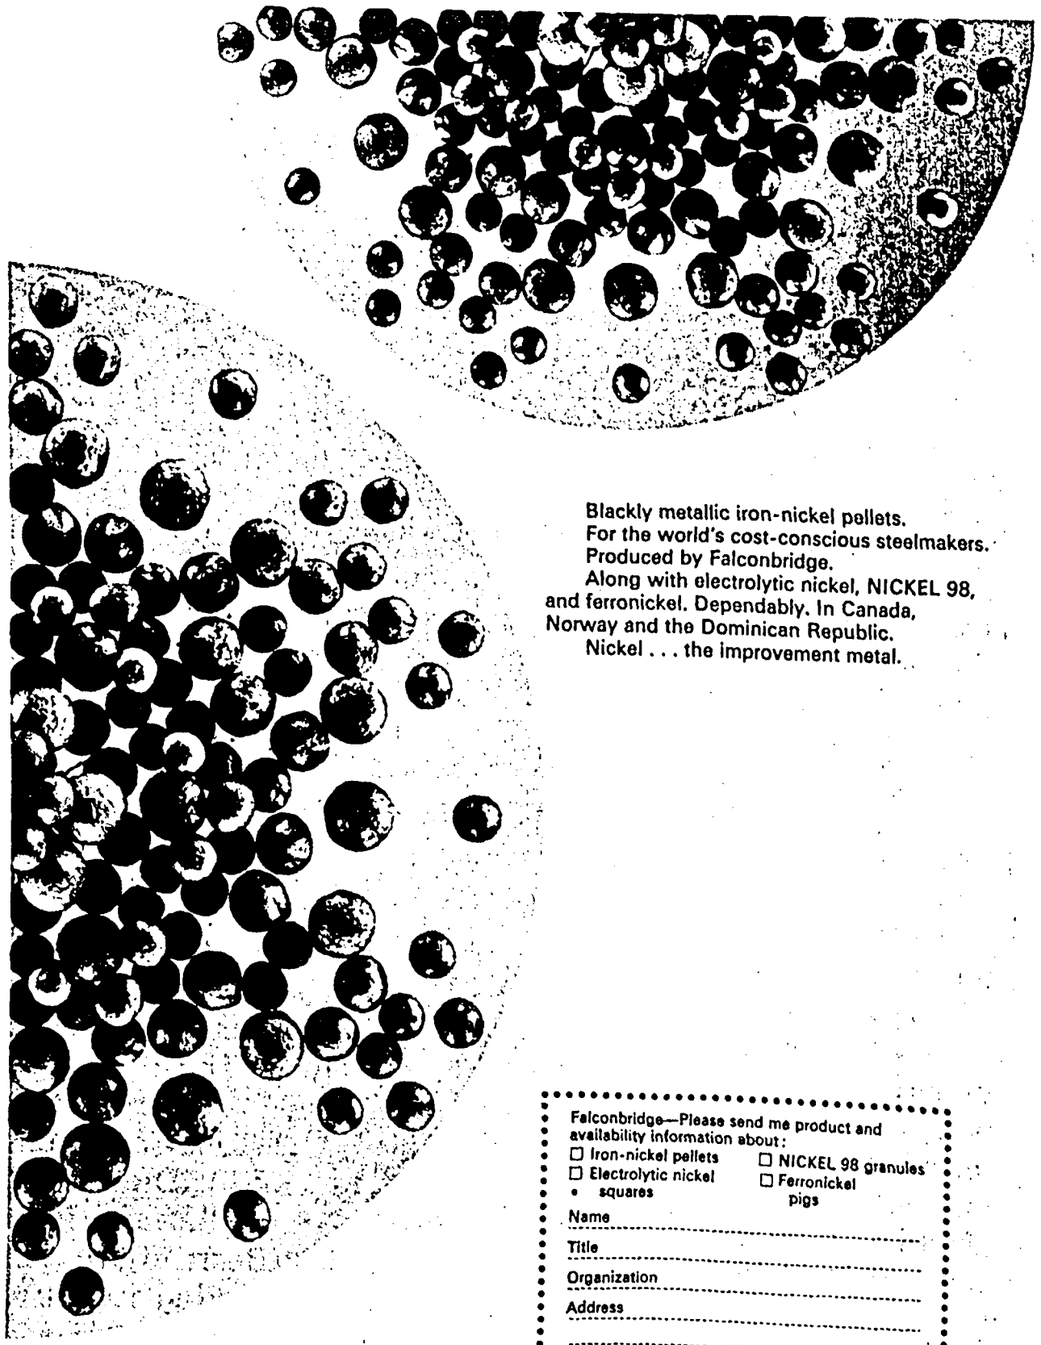
De-humidified to take out some of the moisture.

And filtered to take out the smoke and dirt.

Then it's fed back, so it's always clean and fresh. Your body will find this a great comfort.

Leaving your mind free to get on with its work.

You can buy air conditioning in packaged systems which are easy to install in existing buildings, and keep down prices.



And you'll find that people, like machines, work better when they're well looked after.

If you'd like to know more, phone or write to Bernard Hough, The Air Conditioning Advisory Bureau, 2 Charing Cross, London SW1A 2DR. Telephone: 01-839 7182. He'll arrange for your Electricity Board to give you any information and advice you want.

And help you to get a free estimate of the equipment you need, and the cost.

WE ARE AIR CONDITIONED FOR YOUR COMFORT

ability of the government to maintain order without oppression.

Among the nine factions that make up the Christian Democrat party, the moderate centre groups that follow Signors Rumor, Piccoli, Andreotti, Taviani and Fanfani are the real victors of this campaign. But the party's left wing still bases its hopes on the belief that a centre-right coalition will not prove tenable and that the need to revert to the old centre-left formula will play into its hands. This does not mean that a return to the alignment with the Socialists can be easy or swift. The Socialist party lost one seat in the chamber of deputies and two in the senate, but did better than the Social Democrats.

The Social Democrat party is enraged and bitterly divided. Its former secretary, Signor Ferri, blames Signor Saragat and the present secretary, Signor Tanassi, for losing the party the support of the floating anti-communist vote. It seems likely that the party will have to hold an extraordinary congress before it can sort out its future line. The Socialists and Christian Democrats also intend to hold their national congresses this autumn and there is a general feeling that no stable government can be set up before then. Italy is probably heading for some interim solution, possibly under Signor Andreotti or Signor Rumor. The idea of a fresh election next year is already in the air.

No trumpets on the left

FROM OUR SPECIAL CORRESPONDENT

Milan

The Italian left is hydra-headed, and any general conclusions about its electoral performance need to be qualified instantly. The far left suffered some sharp reverses. In the senate elections, where Signor Berlinguer's Communist party was in alliance with the more extreme Proletarian Socialists (PSIUP), it slipped back badly, losing nine seats. By contrast, the Communists' performance in the lower house, where they stood alone, was marginally better than in 1968. The PSIUP ended up with no seats at all in the chamber of deputies. The rejection of left-wing extremism by the Italian voters was confirmed elsewhere in the returns. Signor Pintor's Manifesto group—a radical splinter from the orthodox Communists—was all but eliminated, with only 0.7 per cent of the vote.

Signor Berlinguer has been at pains to stress Communist respectability; the party included law and order in its campaign platform. The aim was to convince voters that the party can be trusted in government. The Communists argue, not unfairly, that the way they run municipal administrations in the northern "red belt" of Emilia-Romagna is proof of their capacity to govern. Certainly these towns are relatively free of corruption. All the same a Christian Democrat-Communist alliance seems a remoter possibility at this stage than it has done for some time.

The right-wing protest vote

Rome

The party that chalked up the most dramatic gains in the Italian election was Signor Almirante's MSI. The MSI and its monarchist allies doubled their number of seats in the senate and increased their representation in the lower house from 30 seats to 56. The party's success is still more striking when one looks at the regional results. In Rome, for example, its share of the vote went up from less than 5 per cent in 1968 to more than 18 per cent, and it also polled strongly in the south.

All the same, it seems that the MSI is condemned to remain an outcast, in the sense that none of the centre parties is prepared to enter into an alliance with it. It may be that the neo-fascists have already passed their peak. Their new popularity partly hinged on the gut reaction of small businessmen and farmers to a series of controversial laws on land rents and housing and to an economic recession that produced a wave of bankruptcies among small concerns last year. But anyone who watched Signor Almirante's last electoral rally in the Piazza Navona in Rome on the night of May 5th would also have been struck by the number of young people that his movement has attracted. That may suggest that in Italy, at least, the rebellion of the young can be manipulated by the right as well as the left.

The MSI's strategy is still based on the assumption that, as a newly elected senator put it, "we can force the Christian Democrats to choose between us and the Communists." The results of the elections seem to show that most Italian voters refuse to accept the necessity of such a choice. The question that an outsider is bound to ask is to what extent Signor Almirante

Almirante's still an outcast

stands for the same things as Mussolini. He told this correspondent that he regards Mussolini's brand of fascism as "a historical phenomenon that has passed away with a different age." He talks of introducing an American-style presidency, and of expanding parliament to include "corporative" representatives of business and labour.

Signor Almirante's studied moderacy in public has helped to change the image of his party and to make it a little more palatable to conservative voters who want stronger government but not the heirs of Mussolini. The adhesion of Admiral Gino Birindelli, the former Nato commander, who waged a particularly vigorous electoral campaign, also helped enormously. But he was only one among a galaxy of senior officers among the MSI candidates. The others included General Giovanni de Lorenzo (formerly the chief of military intelligence), three or four other generals, and Admiral Carafa d'Andria. They also included Lieutenant Sandro Saccucci, the former paratroop subaltern who was accused of being embroiled in a conspiracy to overthrow the state in 1970. Signor Saccucci, like Signor Pino Rauti, the journalist accused of organising bomb attacks in Milan in 1969, is very popular with the fanatics among the MSI.

So far, Signor Almirante has kept them on a very tight leash, understanding that his long-term political hopes depend on establishing a "respectable" and democratic image. If he seems even less likely than Signor Berlinguer to get himself into a coalition government in the near future, he can at least console himself with the thought that the swing to his party in last year's municipal elections was one of the things that pushed the Christian Democrats farther to the right.

Ireland

It's a great big yes for Europe

FROM OUR DUBLIN CORRESPONDENT

In a high poll the Irish voted by about 5 to 1 for entry into the common market on Wednesday. Although this handsome majority was a fine victory for the prime minister, Mr Jack Lynch, it had been clear all along that if Britain were to join Ireland would have to follow suit. The farm vote was almost solidly for entry and many waverers were put off by the extremism of some of the main anti-common-market groups, notably Sinn Fein, the political wing of the IRA. But the size of the majority, even in working class districts which had been expected to vote against the proposal, showed that the Irish people had faith in the European idea. It may also have encouraged any ideas Mr Lynch has been maturing about another election.

Whom will the Irish send to Brussels as their representative on the common market commission? The most likely candidate at the moment is Mr Patrick Hillery, the foreign minister. It was he, with a strong team of civil servants, who conducted the successful negotiations on entry. More important, it was he, almost single-handed, who carried the public campaign in favour of membership at a time when most of the other ministers in Mr Lynch's government were keeping their heads down.

But Mr Hillery may not want the job. He is a strong contender for the prime ministership if Mr Lynch should want to go. And with a general election on the cards within a year and a presidential election due before June, 1973, Mr Lynch could seek to "go up to the (Phoenix) Park," where the president occupies the quondam viceregal lodge. But, despite his air of tired resignation, Mr Lynch has a growing liking for his job, and the ups and downs of the past few years have developed in him a surer and increasingly relaxed touch. Unless the internal situation deteriorates unexpectedly because of developments in Northern Ireland, Mr Lynch looks like leading his party, Fianna Fáil, to another electoral victory next time.

It looks like 5 to 1

Mr Hillery will wait until the last possible moment before making up his mind. He is well to the right of Mr Lynch in terms of republicanism and would be an almost certain choice to lead the party if there were a major crisis over the northern situation. He would not want to be on the sidelines in Brussels while a contest for the leadership was afoot in Dublin.

Another man strongly tipped for the commissioner's job is Mr Erskine Childers, the deputy prime minister. Whether Mr Childers, who is 66, would want to take on a four-year stint in Brussels is uncertain. As minister for health in recent years, he has shown himself energetic and forceful, pushing through a radical revision of the country's health service against strong opposition. Mr Lynch might be tempted to let him go in favour of a younger man. But his backbenchers are woefully short of talent and Mr Childers might ill be spared. There is also the possibility that Fianna Fáil might lose Mr Childers's seat in a by-election, which could precipitate a general election because Mr Lynch's parliamentary position is too shaky to suffer further erosion.

If the political situation keeps Mr Hillery and Mr Childers in Dublin, Mr T. K. Whitaker, the governor of the central bank, might find his arm being gently twisted to encourage him to pack his bags. Mr Whitaker has a high reputation in Ireland. His first and second Programmes for Economic Development, beginning in 1959, provided the impetus for Ireland's recent economic expansion. No civil servant in recent years has had a comparable influence on Irish life. But Mr Whitaker is believed to be reluctant to leave the sheltered corridors of the central bank. An appeal to his patriotism might be needed to get him to go.

Another possible starter for the Brussels job is the Fine Gael deputy, Mr Garret FitzGerald. A champion of the common market from the earliest days, he has done much to swing his party behind the government on the issue. Mr Lynch might want to show his gratitude by offering him the Brussels post, particularly when such generosity would remove from the Dáil one of its most skilful speakers and most persistent questioners. But Mr FitzGerald was only recently appointed shadow minister for finance, which clearly marks him as a likely heir-apparent to the party leadership. Like Mr Hillery, he might not want to bury himself in Brussels, however great his commitment to Europe, while there is the possibility of a leadership crisis in the party. But if the worst comes to the worst Mr Lynch can always offer the job to a member of his present cabinet. His problem here might be an embarras de richesses.

Jugoslavia

Softly, softly catchee Croat

This week's expulsion from the communist party of the four former Croat leaders whom President Tito dismissed from office last December may seem a mild fate. But it may not be the end of the story. They could still be brought to court after the trials, which are now expected to take place in July, of a group of Zagreb student leaders and intellectuals accused of "counter-revolutionary nationalism." A Croatian central committee report published on Monday accuses the four who were expelled this week—Mr Tripalo, Mrs Dabcevic-Kucar, Mr Pirker and Mr Koprtla—of having actively collaborated with the arrested men in the formation of a Croatian "mass national movement," in which the communist party would have been only one of the elements.

It is easy to see why President Tito is putting off the final reckoning with the Croatian dissidents which he says he wants. First, he may not want to spoil his 80th birthday which is on May 25th. More important, he probably does not want to make the position of the new party leaders in Croatia more difficult than it already is. The deposed leaders, especially Mr Tripalo and Mrs Dabcevic-Kucar, still seem to be popular. The new leaders have been unable to gain popularity by making material concessions to the population, because Croatia's economic situation has not allowed it.

Last week the Croatian government

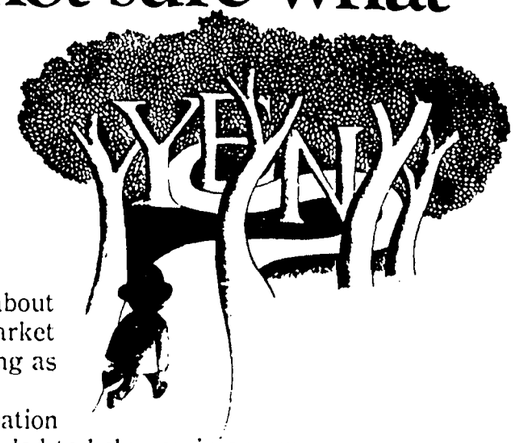
COMPAGNIE INTERNATIONALE POUR L'INFORMATIQUE

68, route de Versailles. (78) Louveciennes. Tel. 951.86.00

IT'S ABOUT TIME WE GOT INTRODUCED!

Who are we? Cii is the French computer manufacturer. In the past five years, Cii, backed by major industrial groups such as Thomson, C.G.E. and Schneider, has devoted considerable R & D resources as well as large-scale industrial investments to the launching of new series.

PRODUCTS:
Cii offers a comprehensive range of general-purpose computers featuring advanced technology and software, as well as highly competitive costs (Iris 45, Iris 50, Iris 60 and Iris 80), thus Cii has an efficient solution for E.D.P. requirements of all firms, whatever their size. In automation and process-control applications, Cii's leading position has been confirmed by the commercial breakthrough of Mitra 15 mini-computer.



ORGANIZATION:
Cii has developed specialized teams providing an all-level efficient service and illustrating the fact that a good computer solves a lot more problems than it raises.

MARKETING:
Our rising sales in France have been accompanied by even greater progress abroad; thus, from '70 to '71, our exports have doubled, mainly with private users. These co-ordinated efforts have proved to be fruitful. They made possible co-operation agreements with other manufacturers and granted license agreements both in Europe and U.S.A.
Today, Cii ranks as a full partner in the world's computer industry, and its name, Compagnie Internationale pour l'Informatique, is well deserved.

We'll answer all your questions about Yen. Even if you're not sure what your questions should be.

Don't feel badly if you don't know much about Yen. Because the international money market has never been as complicated and confusing as it is today.

That's why you need as much information about Yen as you can get. And we'll be glad to help you in any way we can.

We're Sumitomo Bank. One of Japan's biggest. We have branches in cities around the world. And **fifty** years experience in international transactions. Which puts us in a pretty good position to assist you.

We'll give you all the background information on Yen. Then we'll tell you about such things as Yen finance, Yen quotations, Yen accounts and Yen transactions. And we'll do more than just tell you about them. If you want us to, we'll handle them for you.

And then we'll go a few steps further than that. If you'd like, we'll help you borrow Yen. We'll help you open a business in Japan. Or establish a joint venture. And if you're already doing business in Japan, we'll help you do more.

In short, we'll do everything for you that we've done for our domestic clients for years.

So please contact the Sumitomo Bank nearest you. If you have a million questions about Yen. Or if you can't even think of one.

The Sumitomo Bank Ltd.

announced that the federal government's stabilisation programme had had only a "limited effect" in Croatia. Firms are suffering from a serious shortage of cash and are frequently unable to pay the workers' wages. This is likely to get worse, as the new measures to stop credits to firms in debt are enforced. And delays in the implementation of the compromise agreement on the allocation of foreign currency earnings—a hot political issue in Croatia—are causing a lot of grumbling too.

But perhaps the most important reason for President Tito's relatively soft tactics in Croatia may lie in the delicate political situation in Serbia, where relations between the Serbs and the strong Albanian minority appear to have deteriorated in the past few months. President Tito's strong condemnation of Serbian nationalism in a speech in Uzice in western Serbia last Sunday suggests that he may now be increasingly looking upon Serbia as Jugoslavia's next problem republic.

Turkey

Ismet Pasha's last curtain?

For Turkey, as for other parts of the world, the past week has been one of turmoil. The hijacking of an Ankara-bound airliner in Sofia by Turkish terrorists (see page 109) was quickly followed by a wave of terrorist incidents in Ankara and Istanbul, coinciding roughly with the execution last Saturday of three leading members of the People's Liberation Army, who had been sentenced to death several months previously. Despite some protests, this studied act of retribution seems to have had the endorsement of most Turks.

All this has been an unpropitious backdrop for Mr Urguplu's efforts to form a non-party (or, as the Turks put it, above-party) government to carry through essential reforms. Mr Urguplu's difficulties have been compounded by the split in the ranks of the reformist Republican People's party, and the resignation of the 87-year-old Mr Ismet Inonu from its leadership. But the rift in the Republican party has been obvious for more than a year; if it disintegrates into irreconcilable factions, the right-wing Justice party led by the former prime minister, Mr Suleiman Demirel, may coast home at next year's general election.

Much will depend on the tactics adopted by Mr Inonu's rival in the

Inonu compounds the problems

Republican party, Mr Bulent Ecevit, who last year resigned from the post of party secretary in protest at the army's suspension of party government and the imposition of quasi-military rule. Mr Ecevit may push for the leadership, or choose to bide his time. The issue may be resolved when the party meets on Sunday. Meanwhile Mr Urguplu, with the army breathing down his neck, has to form a national administration as soon as possible. He can hardly do this without Republican backing. Amid all the manoeuvrings of the past few days, one thing should not be overlooked: the octogenarian Ismet Pasha announced his resignation from the party leadership—but not his retirement from politics.

Okinawa

A sober homecoming

FROM A CORRESPONDENT IN OKINAWA

The small island of Okinawa has loomed large in Japanese minds because it has remained under American administration for 21 years after the 1951 peace treaty restored autonomy to the rest of Japan. This anomalous situation will change at midnight on Sunday when the Ryukyu island chain including Okinawa is returned to Japanese jurisdiction. Under provisions of the mutual security treaty with America, the enormous complex of American bases on Okinawa will remain largely intact. But, as in mainland Japan, the United States will no longer be able to store nuclear weapons on these bases or launch combat operations from them without prior approval from Tokyo.

As Okinawa loses its special status and becomes one of the 47 prefectures in a highly centralised government, its people are fearful that the Japanese bureaucracy will give them short shrift. "The Americans were an easier enemy," says Mr Takeyoshi Zakimifi, one of Okinawa's leading civil servants. "They brought in democracy and we used it against them." Okinawans are also being reminded by the revival of old atrocity stories about their bad treatment by the Japanese during the long battle for the island in 1945.

Still, the sense of realism that has sustained Okinawa throughout its battered history is slowly regaining the upper hand. The first to catch on were a small number of businessmen, mainly building contractors, who have close ties with the local American forces and the local branch of Japan's ruling Liberal Democratic party. Once opposed to reversion, this group now realises that it will have more influence in Tokyo than the moderate and left-wing politicians who are more popular with the voters.

The public is slowly giving the Japanese credit for their economic plans, which call for making the island less dependent on the military bases. Under American rule, with the bases occupying about a quarter of the land, the rest of the economy became a honky-tonk, pseudo-urban sprawl of bars, massage parlours and motor repair shops. Okinawa's per capita income is still under $1,000 a year (about 40 per cent lower than the Japanese average). The trouble is that in the wake of last year's currency realignment almost all conversation on the island turns on the sudden and painful adjustment to a yen-based economy. In theory, Okinawa's dollar assets are now worth 16.9 per cent less than they were worth a year ago. Tokyo has promised to exchange cash and deposits registered last October at the old rate of 360 yen to the dollar, but all other conversion transactions are up in the air, including wages.

Since revaluation the prices of Japanese goods have risen steadily. But reversion will bring an enormous increase in government spending, first for roads, power and water, and later for factory sites. Although Okinawans grumble that rich, arrogant Japanese have already bought up the best tourist beaches on the western side of the island, they admit in the next breath that Japanese investment is better than none at all. The Okinawans have become resigned to reversion.

West Bank

New faces

FROM OUR ISRAEL CORRESPONDENT

Politics were absent from the West Bank's municipal elections, which were completed when the southern towns voted on May 2nd. The burden of the campaign both in the south and in the north (which voted on March 28th) was: "We can get more for you from the Israeli military government." The difference was that in the south more voters were prepared to gamble on new men. The northern towns tended to re-elect their incumbent councillors; the southern vote brought in more new faces, including lawyers and teachers.

The turnout, which averaged 85 per cent, was a record—although, since the elections were held under Jordanian law, the voters were limited to male property-owners, or around 10 per cent of the population. In all, 315 candidates competed for the 175 council seats. The northern election was threatened when candidates for Nablus, the largest town in the West Bank, withdrew under pressure from the Palestine guerrilla movement. But the Israeli military authorities, led by Mr Dayan, countered with stronger pressure than the guerrillas were able to apply, and the mayor of Nablus and most of his council were re-elected. The polling there, as elsewhere, passed off without incident.

In Hebron, the largest southern town, and Salfit, a small northern town, the existing councils were returned unopposed. In the north, the new councils have already taken office; in the south, they will start functioning on May 17th. The men who won most votes will not necessarily become the mayors. The Jordanian practice was to appoint the mayors from Amman; now, each council will choose its own mayor. In Ramallah, near Jerusalem, the biggest vote-getter, Mr Karim Halef, has won the council's endorsement; he is a 35-year-old district attorney who served under Jordan but is not thought to be a supporter of King Hussein. However, in Beit Sahur, a suburb of Bethlehem, where a Moslem, Mr Awad al Hindi, won the most votes from a largely Christian population, the council is expected to nominate the man who came sixth. And in Bethlehem itself a local schoolteacher, Mr Abu Hamud Aziza, running on an independent ticket, drew more votes than candidates of the town's influential merchant families.

The successful councillors are of all political colours, including communists, though all abstained from urging their views during the campaign. The new Ramallah council includes a communist, a supporter of King Hussein, and a left-wing nationalist who champions the idea of a Palestinian entity. The elections are a blow to the guerrilla movement, which had described their prevention as a matter of life or death. The Jordanian regime, which had also at first attempted to prevent them being held, is presenting them, after the event, as a victory for the king over the guerrillas. In fact, the elections loosen the remaining allegiance of the West Bank to the Hashemite throne. They may also represent the twilight of Jerusalem's Arab leaders who once dominated the West Bank; the exclusion of east Jerusalem was never mentioned in the campaign.

The future of the West Bank is as cloudy as ever. But the election showed that the West Bankers are now seeking as active a role as possible in their own affairs, even though they can look no farther than local government. They will be demanding more of their new mayors and councils. The Israeli authorities are committed to encouraging this but insist that the initiative must come from the councils. The key question is whether the new men, most of whom are unknown quantities to the Israelis, will be given broader powers than their predecessors and thus be allowed, eventually, to evolve into national leaders.

Bethlehem's voters showed their independence

India

Big is bad

Mrs Gandhi is out to cut India's largest newspapers down to size. Last month the government ordered that all papers be limited to 10 pages a day. Two of the most influential English-language papers, the Times of India and the Hindustan Times, obtained a temporary reprieve two weeks ago by petitioning the supreme court with a claim that the order contravened the right of free expression and was aimed at undermining the viability of major newspapers. The case will be heard in July. Meanwhile the government is searching for new ways of curbing the giants of the press.

The official justification for the 10-page limit is the newsprint shortage and the need to save foreign exchange. India lost a major newsprint supplier last December when America suspended its aid shipments. But, as the Madras journalists' union recently pointed out, that supply could easily be replaced in a rupee deal with the Soviet Union, which is one of the world's leading newsprint exporters. And the government was evidently unconcerned about conserving newsprint when it simultaneously offered smaller newspapers the opportunity to increase their size.

One reason for the government's vendetta against the big papers is that most of the major dailies in India have links with the country's biggest business houses; this gives the conflict ideological overtones. Another is that some of the big papers were sharply critical of Mrs Gandhi in the past, particularly during her struggle with the old party bosses. (Hardly any papers are saying her nay these days.)

Last August the government tried to break the businessmen's control of the press through a bill which limited shares in the equity of newspaper companies with circulations higher than 15,000 to 5 per cent for individuals and 10 per cent for firms. It also restricted the voting rights of individual shareholders to 0.5 per cent of capital, the rest to be held by a public trustee appointed by the government. The bill was ecstatically welcomed by journalists and other newspaper employees because of the provision for election of half the members of newspaper boards by the newspaper staffs. But Mrs Gandhi had second thoughts after critics pointed out that this might result in turning control of the press over to the communists who dominate the unions.

Journalists are now opposing the 10-page order as fervently as they supported the bill for workers' control; they realise that the affected dailies will have to undertake drastic economies which may mean a wage freeze, if not cuts in staff. They are advocating instead a proposal which was first put forward by a press commission in the 1950s to help smaller newspapers by making bigger papers more expensive. The government was forced to drop this plan when it ran into constitutional hurdles, and it may well be forced to drop the 10-page limit, for similar reasons. But Mrs Gandhi has not given up yet; the draft bill is now being reviewed by a cabinet committee, while another group is investigating newspaper economics with the aim of finding weak links in the newspaper chains.

Burundi

He went home

"Last night, April 29th, the eve of April 30th this year, I mean today, a great tragedy befell Burundi." With these words Bujumbura radio broke the news that in an attempted coup against the government of Colonel Michel Micombero fighting had broken out in several parts of the country and the king, Mwami Ntare V, had been killed. The fighting has continued over the past fortnight and many refugees have fled into the neighbouring states to the west and east, Zaïre and Tanzania. Zaïre has promised to send troops to help quell the rebellion, but their arrival has not been confirmed. Reports speak of more than 10,000 dead and up to a million homeless.

The immediate cause of the uprising seems to have been President Micombero's dismissal of certain senior party officials and the entire cabinet. But this in turn seems to have been set off by the return of King Ntare after an exile of six years in west Germany. He had been given assurances by Colonel Micombero, but the president may have thought that the young king was returning to rally dissidents, for he was immediately put in prison, where he died. He had ruled for four months in 1966, after usurping his father's throne, before being turned out by Colonel Micombero.

Since the king's death the fighting appears to have been rather aimless—a visiting Tanzanian politician was killed in the south last week—but motivated in part by tribalism. Some 85 per cent of the 3½m people of Burundi are Hutu, but their traditional masters have been Tutsi, like Colonel Micombero. The Hutu majority was represented in some of the seven governments that followed one another between independence in 1962 and the colonel's coup in 1966, but its influence was never more than momentary. Colonel Micombero's regime has maintained the Tutsi domination, but its enemies are probably not confined to the Hutu.

Rhodesia

Preparing for Pearce

The publication of Lord Pearce's report on the acceptability of the Anglo-Rhodesian settlement proposals is expected just before or just after Parliament's Whitsun recess at the end of the month. Mr Ian Smith has been bracing his supporters for the consequences of a negative finding. On Monday he spoke of the likelihood of an intensification of the sanctions campaign in that event and, having described Lord Pearce's efforts in Rhodesia as "a complete and utter farce," he declared that there could be no further negotiations with the British.

The same thought has been in the minds of the leaders of Rhodesia's multiracial Centre party, who came to lobby the British Government last week. They were anxious that the settlement should be implemented even in the face of its rejection by the blacks. But another delegation from Rhodesia, this one representing the anti-settlement African National Council, reiterated its strong opposition to the proposals. Lord Pearce's report, completed last week, is now being studied by the cabinet. Its publication is expected to be accompanied by a Government statement on future policy towards Rhodesia.

Cuba

The cool approach to travel

Few political leaders in Latin America feel comfortable taking long trips abroad for fear of what might be brewing back home. Many indeed take their military chiefs with them to keep them out of mischief. So it is a sign of confidence that Cuba's Fidel Castro has this week been touring west and north Africa at the start of a two-month trip which will take him all over eastern Europe and finally to Moscow at the end of June.

Before leaving Havana, Dr Castro remarked: "For several years none of us would have thought of leaving the country for so long. But now the revolution is made." Not that it was political opposition that kept him at home between 1964 and 1971, for he has been in no real danger of being overthrown from within for some years. In any event his faithful brother Raul has been left behind—strategically placed as minister of the armed forces.

But the trip does show that the prime minister is no longer in direct charge of the economy. This is probably a good thing. One of Cuba's difficulties has been that of combining Dr Castro's highly personal style of government with the methodical needs of communist centralised planning. His tendency to make spontaneous improvisations to the plans from the back of a jeep made forward planning hazardous.

The new sharing of control may be the result of Russian pressure. The Russians are known to blame Cuba's low productivity on Dr Castro's ideological enthusiasm for moral incentives—exhortations to work for non-material rewards. The fact that there are now more consumer goods on the market may mean that some of Dr Castro's subordinates, more amenable to Russian thinking, are exerting their influence on the running of the economy. This year's sugar harvest is again well below target. But the main cause seems to be drought, not inefficiency.

All these securities having been sold, this announcement appears as a matter of record only.

THE WORLD

American Survey

Nixon, Laird : just how decisive ?

Moscow takes second place

Washington, DC

President Johnson turned down the idea of mining the entrances to the North Vietnamese ports and when it came up again in 1969 President Nixon turned it down himself. Both seem to have concluded, on a balance of the arguments, that the probable efficacy of the scheme was too limited to justify its diplomatic risks. Now that President Nixon has done it after all, and has announced it as if it were "decisive military action to end the war" (his words on television on Monday night), there is still no great confidence that it will do the trick. Dr Henry Kissinger conceded on Tuesday that this week's step would not directly affect the battle of the next three weeks. But, he said, "it could affect and should affect the next round."

From his point of view and Mr Nixon's, the best possible effect would be to persuade the North Vietnamese to decide against having another round at all. In one breath Mr Nixon has threatened them with more rigorous naval and air warfare if they go on and has tried to tempt them with better terms if they stop. Thus the American demand that the invaders in the northern province of South Vietnam should withdraw across the demilitarised zone has been dropped. Mr Nixon offers to stop all acts of force throughout Indochina once he gets his prisoners back and a cease-fire goes into effect. He has shortened the period allowed for American withdrawal from six months to four.

Suppose the North Vietnamese were to fight their present campaign to a conclusion in, say, early June and end up with important areas of South Vietnamese territory in their hands. They could then start releasing the American prisoners and accept an internationally supervised cease-fire. This need not take them long. President Nixon would then have four months to take his remaining troops out and one can imagine him discharging this obligation with some alacrity to get it completed by election day, November 7th. Not only South Vietnam but also Cambodia and Laos would be left, in effect, partitioned. The communists would have achieved not all their war aims, to be sure, but a handsome instalment of them.

The prospect that they will take this course does not seem to be rated very high by the Administration, but it is enough to make President Nixon's political opponents pensive. The war has become a prime election issue after all. Mr Nixon as good as admitted on Monday that, without the new American naval measures, South Vietnam would fall to the communists. There is mileage to be made out of the discrepancy between this admission and some of his past statements. In April of last year, for instance, he said "I can report that Vietnamisation has succeeded" and not three weeks ago, on television, he fetched out a report from General Abrams to the effect that "the enemy will fail in its desperate gamble to impose a communist regime on South Vietnam."

This kind of opportunity is too tempting to be left alone by the Democratic candidates. But the election campaign is young and they still cannot be sure that Mr Nixon will not, after all, extricate himself and confront them in the autumn with at least the appearance of a miraculous success. Senator Humphrey, still busy establishing his credentials as an opponent of the war, spoke of the "unpredictable danger" of Mr Nixon's latest step. Senator McGovern called it "reckless, unnecessary and unworkable." Both hastened back from campaigning against each other in Nebraska to join the other Democratic Senators in a party meeting where the prevailing sentiment was gloom.

The Democratic meeting adopted a resolution "disapproving the escalation of the war," but this is a far cry from a resolution of the full Senate and even that would have no practical result. The Democrats also voted, by 35 to 8, in favour of a modified

version of the Case-Church amendment which would cut off funds for the conduct of war in Indochina within four months of the release of the American prisoners. To have any effect this would have to be passed first by the full Senate and then by the House of Representatives, which has never yet mustered a majority to interfere with the conduct of any war by any President. But, should the Case-Church amendment ever get through Congress, President Nixon could sign it cheerfully since it fits exactly the sequence of actions which he has proposed to the North Vietnamese.

In weighing, and deciding to accept, the risk that the mining of the Vietnamese ports might cause the Soviet government to put off his now imminent visit to Moscow, President Nixon evidently considered what the real purpose of the visit was. One purpose, to offer a reassurance that his reconciliation with Peking was not an anti-Soviet move, was served by simply showing willingness to go. The other purpose, to appear before the American public as the man in charge of America's global destiny at a time when the Democrats are fighting over their next presidential candidate, would have been ill-served anyway if he had had to turn up in Moscow as a President tamely accepting defeat at the hands of an obstreperous Soviet ally in south-east Asia.

The real current business of Soviet-American relations—trade, co-operation in space, even strategic arms limitation—does not require Mr Nixon's attendance in Moscow. On balancing up the matters of substance and the cosmetic value of a visit, Mr Nixon concluded that the decision might just as well be left in Soviet hands.

ELECTION '72

Wallace's borderland

FROM OUR SPECIAL CORRESPONDENT

Faced with a choice between Senator Hubert Humphrey and Governor George Wallace as their only alternatives in the Democratic contest for the presidential nomination, it seemed clear that the voters in West Virginia would come down in favour of the well-known and well-tried senator. But even there Mr Wallace managed to get his foot in the door and he did so without even trying. He received 33

Tennessee—or a quarter of it—votes

per cent of the votes to Mr Humphrey's 67 per cent.

West Virginia was so far down on Mr Wallace's list of priorities that he cancelled his only visit to the state—after he had kept a loyal crowd of supporters waiting in eager anticipation for over two hours. But Mr Humphrey and Mr Wallace were only two among hundreds running for every conceivable office in West Virginia, from Congressman to Governor to County Sheriff. The ballot was so long and complicated that there was considerable confusion and delay at the voting booths.

But the votes that Mr Wallace managed to pick up in the popularity contest did him little good. In the separate election for the state's 35 delegates to the convention at Miami Beach only two delegates supporting Mr Wallace were running. Here the fight was between candidates supporting Mr Humphrey, Senator Edmund Muskie or Senator George McGovern, neither of whom were entered in the separate presidential preference contest, and a long list of uncommitted delegates. But in this section of the primary election confusion reigned supreme. The voters were confronted with a long list of names which bore no indication as to which presidential candidate the delegate would choose when convention time came; under the state law there is no rule which binds a delegate to any candidate.

The candidates, including Senator McGovern (who has been scrupulous in other states about giving young people, women and Negroes a fair chance), decided that there was only one way to make any sense of this confusion—to persuade respected and well-known people to run as delegates. In this way they would attract votes because of their names and only accidentally because they supported a particular candidate. It was not exactly the way to play the game under the new rules which were designed to make the Democratic convention more democratic. But the system in force in West Virginia, a state which has never been known for the purity of its politics in the past, left little alternative.

Any candidate might be forgiven for losing sight of the issues when faced with the intricacies of the electoral process. But at least Mr McGovern's team emerged with constructive suggestions on the major concern in West Virginia—coal mining. His delegates included some of the most formidable names in the fight for more stringent health and safety regulations in the mines, against corruption in the mine workers' union and against strip mining, an appallingly ugly way of extracting coal from the hillsides.

If Mr Wallace took a back seat in West Virginia he was well in the front in two races farther south, in Tennessee and North Carolina which were both holding their first presidential primaries. In Tennessee the voters chose him as their easy favourite for the Democratic nomination. But his overwhelming victory, with 68 per cent of the vote, was robbed of much of its significance. None of the other 10 candidates who were on the ballot opposed him actively and only about a quarter of the registered voters in the state bothered to turn out; Mr Wallace's majority may well have been bolstered by Republicans who were allowed to cross over and cast their ballots in the Democratic primary. It is not even certain that he will get all the votes of the state's 49 delegates to the presidential convention. They will be chosen locally during the coming month; although they are officially required by state law to vote for the winner of the presidential preference poll on at least the first ballot, some of the potential delegates have already hinted that they will not vote for Mr Wallace.

North Carolina was a much tougher prospect for him. By the end of the final week before the election on May 6th Mr Terry Sanford, the president of Duke University and a former governor of the state, seemed to have Mr Wallace on the run. Mr Sanford looked quietly confident as he moved from county to county asking the people not to send a message to Washington—this is Mr Wallace's

favourite slogan—but to send Mr Sanford. But in the end he only managed to pull in 37 per cent of the vote compared with 50 per cent for Mr Wallace. This seemed to give him 27 delegates, with 37 for Mr Wallace.

Mr Sanford started too late on his mission to prove to the rest of the country that the south could produce a progressive and constructive candidate as an alternative to Mr Wallace; he only got into the race two months ago. One of Mr Sanford's main difficulties was to unite the liberal vote under his banner. Senator Muskie did not drop out of the primary contests until 10 days before North Carolina's voters went to the polls. On top of this Mr Sanford had to contend with Mrs Shirley Chisholm who campaigned hard among the 22 per cent of the electorate that is black—and won a remarkable 8 per cent of the votes.

But perhaps the greatest handicap of all was that for a long time even his friends did not think that Mr Sanford was a serious presidential candidate in his own right. They thought that he was nothing more than a stand-in for Senator Hubert Humphrey, a man whom he has helped many times in the past, or that he had real designs only on the Vice Presidency. With a defeat in his own state behind him Mr Sanford's political chances look dim. But he still hopes that a deadlocked convention may turn to his new face.

ELECTION '72

Conservatives' radical?

Wealthy suburbanites and conservative working-men who have been supporting Senator McGovern would desert him in droves if they realised how extremely left-wing his policies really are. This view, held by some analysts, makes Republicans lick their chops at the prospect that Mr McGovern, now in the lead, may capture the Democratic presidential nomination. But it was a Democrat, Senator Jackson, in the days before he dropped out of the race, who accused Mr McGovern of extremist views. Campaigning in Nebraska—a sparsely populated, farming state—Mr Jackson charged the Senator from neighbouring South Dakota with planning to wreck the country's defences. Other conservative groups both inside and outside the state chimed in; an advertisement in the archdiocesan newspaper in Omaha asked Roman Catholics (a large minority in the state) if they wanted a candidate who favoured abortion on demand, legalised marijuana and amnesty for draft-dodgers and deserters.

These are minor issues, but they arouse strong emotions. Senator McGovern spent a great deal of time in the closing days of the campaign setting the record straight: he considers that abortion law should be left to the states; he does not advocate legalisation of marijuana at this time but he does feel that no one should be sent to prison for smoking or possessing it; he believes in amnesty for draft-resisters after the war is over (so did Lincoln), but not for deserters. Senator McGovern went on to win 41 per cent of the votes in the popularity race to Senator Humphrey's 35 per cent and Governor Wallace's 13 per cent. But Mr McGovern should have done better after his nine-month cultivation of Nebraska; he was saved by the votes of farmers and students.

For a candidate long thought of as having one issue—the war in Vietnam—Senator McGovern now has an extraordinarily comprehensive programme to turn America around. It deals with more fundamental questions than amnesty and abortion. He wants to cut military spending from $76 billion a year to $55 billion by 1975, cheerfully scrapping anti-ballistic missiles, aircraft carriers and Titan missiles which he thinks are not needed for defence of the United States. He would also redistribute income and wealth drastically.

The Senator says that he would cut taxes for people with small incomes, introduce a negative income tax to provide the poor with a minimum income and multiply federal outlays for education by about six times. To pay for all this, taxes on families with more than $12,000 a year would go up; on income above $50,000 a year taxation would become close to confiscatory. The familiar tax "loopholes" for the rich would simply lose their relevance. There would be heavier taxes for business and much larger levies on capital gains and inheritances.

If Mr McGovern were to become President some of these ideas would probably have to be modified. But even if he wanted to, Senator McGovern would find it hard to dilute them in a race against the President: his image as a man of principle is his greatest attraction to the voters.

The latest count of how the leading contenders for the presidential nomination are doing in terms of votes at the Democratic convention in July:

McGovern	314
Humphrey	236
Wallace	207
Muskie	127½
Various others	76
Uncommitted	202

1,509 votes are needed to elect a nominee.

This calculation is by Congressional Quarterly; other sources offer slightly different versions. It covers the first 12 of the 23 primary elections and the position in those states where the process of choosing delegates by other methods has been completed. The results of the voting for delegates in this week's primaries in West Virginia and Nebraska are not included.

Press besieged

New York

In spite of their soaring earnings America's newspapers and television stations are in an uncomfortable state of beleaguerment. Officials of the Nixon Administration, led by the Vice President, Mr Spiro Agnew, are continuing their barrage against the allegedly anti-conservative bias of the press, especially against the major television networks and the most important newspapers. Meanwhile, an increasing number of working newsmen—and women—have been attacking the press for its hide-bound ways. The reading and viewing public, moreover, is reported to be distrustful of the diet of news available; the press as well as the government is suffering from a credibility gap.

The latest skirmish in what has become a definite siege resulted when Pulitzer prizes, journalism's most coveted and publicised awards, were presented to the New York Times for its publication of the Pentagon papers on the Vietnam war and to Mr Jack Anderson, the columnist, for his disclosure of top secret documents on the India-Pakistan war. Most journalists and publishers considered these particular Pulitzers amply justified as recognition of journalistic enterprise, but some of the trustees of Columbia University, who sanction the prizes, expressed "reservations about the timeliness and suitability" of the awards, presumably those made to Mr Anderson and to the Times. In many other circles the propriety of bestowing prizes for the publication of purloined papers is being questioned.

Pulitzer winners: NYTimesmen and Jack Anderson

The press, of course, insists that the publication was in the public interest, but predictably Mr Agnew regarded the Pulitzers as fresh provocation. He was echoed this week by Mr John Erlichman, the White House's expert on domestic affairs. At the same time, Mr Erlichman denied that the Administration was stepping up its offensive against the press even though Mr Patrick Buchanan, another White House aide, had earlier described the prizes as "atrocious" and warned the major television networks that action might be taken if they did not provide greater access to conservative opinion in news broadcasts.

Relations between the government and the press have never run smoothly in the United States. But the conflict has deepened and intensified in recent years as the press has expanded its coverage of the war in Vietnam, the turmoil on the campuses, the campaigns against polluters of the environment, the multiple claims of minority and extremist groups. This increasingly critical approach has led to retaliation by the Nixon Administration that has gone far beyond Mr Agnew's alliterative broadsides. It has employed subpoenas in an attempt to get newspaper and television journalists to divulge confidential information and sources and it has carried out an investigation of Mr Daniel Schorr, a television critic, ostensibly to discover if he was suited for a government job. The Administration's most threatening action, though, was its unprecedented lawsuits to halt publication of the Pentagon papers; the press considered this to be an attack on the cherished First Amendment to the Constitution which guarantees freedom to report and to publish.

For its part the Administration believes that the press is irresponsible if not disloyal. Mr Nixon, who promised that his would be an open Administration, has revealed his own displeasure by playing favourites, deliberately excluding representatives of newspapers that he considers unfriendly from off-the-record briefings, a tactic resorted to by previous occupants of the White House. His aides are even more open, at least in their hostility. They are convinced that the Washington press corps, many of whose members enjoy incomes and status far more elevated than journalists elsewhere, is made up of liberal ideologists instinctively opposed to Mr Nixon's personality and policies.

But the press, like the country, is not monolithic. To be sure, the New York Times and the Washington Post, the two most influential papers with politicians and journalists, are distinctly liberal. But a sizeable majority of the American Newspaper Publishers Association, which has just held its annual convention in New York, is solidly Republican. Fully 80 per cent of the country's newspapers, possessing 75 per cent of total circulation, endorsed Mr Nixon's presidential candidacy in 1968 (if they took a political position and most did) and continue to favour him. Publishers stubbornly resist government attacks as an intrusion on the freedom of the press. But critics, not all of them in Mr Nixon's camp, are perturbed about the growing concentration of press power—and are questioning whether freedom can flourish without competition. Half of the country's newspapers (with 60 per cent of the circulation) are now controlled by chains; only six cities in the United States have competing evening newspapers and only three competing morning papers; with newspapers investing heavily in both radio and television stations, the power of the press is substantial.

Relations between government and press are rougher than they used to be, but only partly because of the Administration's strenuous efforts to win support for its policies. Certainly, Mr Nixon's claim to openness is debatable. He seeks exposure for his views but without the risks of letting people pry into them; for example, he has held comparatively few televised news conferences but has pre-empted prime time in the evening on network television for prepared speeches more frequently than any of his predecessors. Even so, his aides complain bitterly that commentators following his addresses have a habit of engaging in "instant analysis" that damages his impact on the public.

Even if these commentaries are really rather tame, there is no doubt that the press is more conscious of its role as an adversary. During the cold war and the early days of the conflict in Vietnam, the press corps supported government policies loyally, especially in foreign and military affairs. Newsmen acted as conduits for government leaks, frequently of highly classified information, and dutifully reported the official line as related in handouts and briefings. The failure of the press to demonstrate its independence and initiative has been made apparent by investigators like Mr I. F. Stone, who ran his own irreverent newsletter, Mr Seymour Hersh, who uncovered the My Lai atrocities, and Mr Ralph Nader. Aware of its own past lapses the press is now much more sceptical and enterprising in its coverage. Many newspapers have adopted the Nader technique of assigning teams to report critically on the goings-on in Washington's labyrinthine bureaucracy. But the more aggressive journalism now being practised often encourages advocacy rather than objectivity and many of the "new" journalists make use of fictional devices, sacrificing accuracy for effect.

Given the changing nature of journalism and the growing pressure of government criticism, it is not surprising that publishers and newsmen are devoting more time to examining their purposes and performance. Over the past few years a sizeable number of journalism reviews, financed by newsmen and philanthropic foundations, have been established as critics of the press. Although most favour "advocacy" journalism, they have drawn attention to the abuses—and the lapses—of the press. Meanwhile,

efforts are being made to create press councils modelled after the British prototype ; the first statewide press council has just been created in Minnesota and others may follow.

The press would prefer to be left alone and unfettered. But a change may be forced by governmental harassment, documented in a recent foundation report that detailed instances of dubious subpoenas, policemen posing as journalists and journalists working for law enforcement agencies, and by public discontent over sensationalised coverage of violence. The press can be expected to win widespread support for its resistance to pressure from the government, but it is as vulnerable as other institutions if it does not demonstrate its responsiveness to the reading and viewing public. Unless the public is given some form of access to the press for the airing of grievances, press freedom will be under pressure.

ELECTION '72

Republicans change coasts

FROM A CORRESPONDENT IN MIAMI

The Governor of Florida promised hundreds of policemen. The federal government offered marshals and, if necessary, troops. The city manager wished aloud for an even larger security force and a proposal for an elite, thousand-man anti-riot squad won sympathy in Washington. With the question of security thus dealt with, the Miami Beach City Council invited the Republican party last week to renominate President Nixon under its August sun. Miami Beach emerged as the sole, and somewhat reluctant, suitor of the Republicans (the vote to invite them was 4-3) after San Diego, in California, lost the convention.

Apart from the dread of hostile demonstrations, the Republicans feared that the San Diego Arena would not be ready for them in time ; it was proving excessively costly as well. The city's hotels were insufficient (and largely non-union). And San Diego, fairly or not, was tarred with the brush of the long congressional investigation into the part played in financing the convention by the International Telephone and Telegraph Corporation. From the President's point of view Miami is just as convenient ; he has a home in Florida as well as one in southern California. As for San Diego, which was never quite sure that it wanted the convention at the height of its tourist season, the parting is no great sorrow.

The Democrats meet in the same convention hall six weeks earlier. By comparison with their tumult, the Republican affair promises to be as cut and dried as yesterday's white bread. On one night the Republicans will nominate Mr Nixon, probably by acclamation, and on the next they will confirm his choice for Vice President—probably Mr Spiro Agnew again.

The real drama of the Republican convention is likely to take place in the streets outside. That is why, with the nightmare of the 1968 Democratic convention in Chicago still fresh in peoples' minds, a major party had trouble finding a home for the first time in American political history. It had been feared that as many as 250,000 demonstrators might turn up at San Diego, which is close enough to Los Angeles to make the number conceivable. Miami Beach, which is distant from other major centres of population, may attract between 50,000 and 100,000. But it is an island connected to the mainland by causeways which can be closed easily.

No one really knows what to expect. How many demonstrators will come for the Democratic convention in July ? Will they just stay on in Miami for the six weeks between the conventions, to have their numbers swollen as the Republicans gather ? Where will the youthful thousands sleep ? How much violence will they bring with them ? Scrambling for the money, the men and the equipment to police the conventions, the local leaders, who are generally enlightened, are determined that Miami Beach will not become a second Chicago. But no one can guarantee that their efforts will succeed.

Police chief and city manager

Is health ill ?

The guardians of America's health have some headaches themselves. Health is only one of the three great concerns of the unwieldy Department of Health, Education and Welfare (it spends more money than the Defence Department) and over 100 liberal Democrats are backing a bill to split off the health component. The Democrats do not expect to pass this bill until next year but more imminent perils surround the Food and Drug Administration, the agency in HEW which is responsible for the purity of America's food and the safety and effectiveness of its medicines.

Spokesmen for the consumer, including associates of Mr Ralph Nader, and a number of members of Congress feel that the FDA and its associated divisions are too weak, too slack and far too close to the industries which they are supposed to regulate to do a good job of protecting Americans from contaminated food and ineffective medicines. Senator Magnuson is sponsoring a bill to dismantle FDA and transfer its powers and responsibilities for consumer protection to a new, independent agency ; in March the Senate Commerce Committee gave the bill overwhelming bipartisan approval.

One thing has angered Congress recently : the discovery that for years the Division of Biologics Standards, a unit of the National Institutes of Health, allowed pharmaceutical firms to market millions of doses of influenza vaccine which it knew to be useless. Nearly half of America's food-processing firms, which FDA is supposed to police, are said to be insanitary. In another case, a lawsuit under the Freedom of Information Act was needed to open FDA's files and show that FDA was allowing food processors to employ a dangerous preservative, although its use had been banned.

All the activity on behalf of the consumer is sharpening FDA's attitude toward industry ; pharmaceutical manufacturers were told recently in public by the agency's head, Dr Edwards, that they would no longer be allowed to sell products with little or no merit. The cap seemed to fit producers of a number of pain-killers —which studies by the National Academy of Sciences and the Mayo clinic have found to be inferior to simple aspirin.

The Nixon Administration opposes any splitting up of HEW, but it has gone some way to meet the critics'

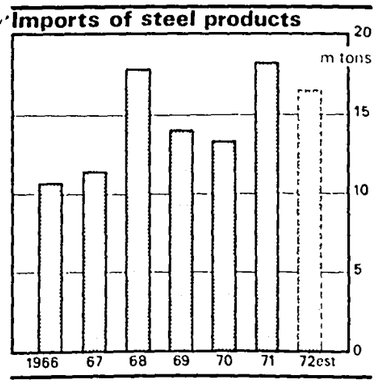
complaints. FDA is to be given more money, more staff, more independence and more powers. And FDA, over vigorous objections from industry, is proposing to open up to 90 per cent of its files to public inspection, reserving only the right to keep secret information which firms can prove would affect their competitive position.



Trade-offs

The growing protectionist sentiment in the United States has produced some results. Steel manufacturers in western Europe and Japan have agreed to restrain their exports of steel to the United States in the next three years. They did so grudgingly, largely out of a fear that Congress might actually pass some of the harsh proposals to restrict trade that organised labour and some Congressmen are supporting.

The new steel agreement extends and enlarges one that existed for the three past years, the by-product of the threat of an American steel strike in 1968 which caused American imports of steel to be unusually high. This time Britain is included among the signers, along with the common market countries. The agreement with Japan was made separately. Under the new terms, the eight countries involved will reduce their agreed limit on the annual growth of exports of steel to the United States from the former 5 per cent to 2.5 per cent. There is to be extra protection given to American manufacturers on the West Coast (who are most affected by Japanese imports) and for those who make specialised steel. There are also to be restrictions on the exporters' ability to juggle the individual limits on different categories of product in order to ship more of the highly priced, better grades of steel to the United States.

But old and new, the agreements are only voluntary. Last year the record-breaking 18.3m tons of foreign steel sold to America was nearly 3m tons over the agreed quotas and accounted for 18 per cent of domestic consumption. This happened because American steel buyers, then facing another threatened strike in the domestic steel industry, placed extra orders abroad to be on the safe side. The strike never materialised, but President Nixon's 10 per cent surcharge on imports did. Foreign steel manufacturers therefore felt little guilt at exceeding their quotas for they held that the President had broken his part of the bargain. Now the Europeans have insisted that the new arrangement will become invalid if the United States makes any unilateral changes in the steel import rules. Assuming that will not happen, American imports of steel should fall by about 11 per cent this year.

Imports of steel products

The new agreements are hardly in keeping with the professed American philosophy of encouraging freer trade. Common market officials are unhappy about them; so are the Japanese. The American negotiator himself conceded that, if such a pact were arranged among domestic steel producers, it would violate American anti-trust laws. But all sides accept that the United States is getting tough in its trade policy. The intensification of anti-dumping actions, directed particularly but not only at Japan, is proof of that. Last month the Treasury announced that foreign goods whose export prices do not reflect revised currency values would be investigated under suspicion of being dumped (sold abroad more cheaply than at home). The Tariff Commission, acting on cases referred by the Treasury, has recently made judgments against fish netting, large transformers, asbestos-cement pipe and sulphur. According to Mr Eugene Rossides, the Treasury's assistant secretary in charge of trade policy, enforcement will become even stricter because "our foreign friends" still maintain too many barriers against American exports.

Abortive politics

President Nixon's antipathy to abortion has led him to reject the advice given by his own commission on population growth and to interfere in the internal affairs of New York State. The President managed to thank the commission for the hard work that it had put in over two years, examining the problems of population and the American future; but in the same breath he criticised some of its major recommendations. Mr Nixon declared that he found abortion an "unacceptable" form of population control. Moreover, he disapproves of giving teenagers help with contraception, for "such measures would do nothing to preserve and strengthen close family relationships." This is not the first time that Mr Nixon has dismissed the findings of a commission that he has appointed to look into controversial social matters; he did not like the advice that he got on marijuana or pornography either. But his emotional pronouncements this month made it clear, as does Senator McGovern's experience in Nebraska (see page 58), that abortion will be a political issue in the election campaign to come.

What the Population Commission recommended, among other things, was that other states adopt versions of New York's abortion law, the most liberal in the country. But a fierce campaign in New York has persuaded the lower chamber of the legislature to vote for repeal of the law, which permits abortions on demand for women until the 24th week of pregnancy. The advocates of repeal, including the Roman Catholic hierarchy and several organisations using the label of "right-to-life," want the state to revert to its nineteenth century statute which permitted abortion only when a mother's life was in danger.

Governor Nelson Rockefeller is firmly against repeal. He would like the law revised, to limit abortions on demand to the first 18 weeks of pregnancy, but he has sworn to veto an outright repeal, if the state senate should also pass it. Because the vote is bound to be close and because legislative time is short, there seems little likelihood that the legislature could muster sufficient votes to over-ride a veto.

Why then did Mr Nixon write a letter to Cardinal Cooke, the leader of the repeal campaign being conducted by the archdiocese of New York City, saying that "I would personally like to associate myself with the convictions you deeply feel and eloquently express"? Even the President acknowledged that his intervention was unorthodox by mentioning in his letter that the matter lay outside federal jurisdiction. The New York Times said that it would be hard to find another example of "a President openly working through a particular church to influence the action of a state government."

Foreign exchange has been a businessman's headache long enough!

Let's not kid ourselves.

When dealing with so many foreign exchange regulations and problems, no bank can wave a magic wand and make all your headaches vanish.

But we believe a bank can—and should—do everything in its power to help.

We do.

We have branches and offices of subsidiaries (48 to be exact) all over the world to keep us abreast of local market information and regulations.

16th century woodcut by Hans Baldung suggests that foreign exchange was a headache even 500 years ago.

And Cenfex—our network of foreign exchange desks in major money capitals—allows us to handle transactions efficiently. With instant access to the varying rates, we can produce the most attractive exchange rates for our clients.

But we do considerably *more* than this.

We'll sit down with you. And listen.

And really try to iron out your own particular problems.

If it's a time of monetary unrest, for instance, and you ask us to evaluate your risks, we'll show you all the alternatives open to you. Then let you decide which suits your own business condition best.

We might even suggest you *not* exchange your funds at current rates. Or give you alternate banking methods which will do the same job as an exchange of funds, at less cost to you.

We might not be able to *end* all the headaches of foreign exchange.

But we'll do all in our power to ease the pain.

American Express International Banking Corporation

American Express International Banking Corporation has 48 branches and subsidiaries handling all types of banking transactions all over the world. We're in these major financial centers: Amsterdam, Athens (2), Basle, Bombay, Brussels, Calcutta, Cannes, Chittagong, Copenhagen, Dacca, Djakarta, Düsseldorf, Florence, Frankfurt, Geneva, The Hague, Hamburg, Heidelberg, Hong Kong, Karachi, Kowloon (2), Lahore, Lausanne, London, Lucerne, Lugano, Milan, Monte Carlo, Munich, Naples, New Delhi, Nice, Okinawa (2), Paris (2), Piraeus, Rome, Rotterdam, Salonica, Taipei, Tokyo, Venice (2), Vienna, Zurich. International Headquarters: 65 Broadway, New York, New York.

BANK OF GREECE

ANNUAL REPORT FOR 1971

Sustained high rate of economic growth and monetary stability

The Governor of the Bank of Greece, Mr. Demetrius Galanis, presented his annual report to the shareholders of the Bank on 24th April 1972.

The main fact emerging from the Governor's report is that, in 1971, the economy kept up a high rate of growth for the third consecutive year, which was combined with favourable developments in the determinants of monetary equilibrium.

A summary of the Governor's report follows :

1. NATIONAL INCOME AND PRODUCTION

Over the past few years there has been a continuous high rate of fixed capital accumulation, which has expanded the economy's production capacity. This, in conjunction with growing demand, made it possible for economic activity to keep increasing at a high rate in 1971. This development is reflected in the growth of gross national income at constant prices, which is estimated by the National Statistical Service of Greece at 7.3 per cent. Since the rates for 1969 and 1970 were 7.7 and 7.5 per cent respectively, the three-year average corresponds fully to the target rate set in the five-year plan for 1968-72 (7.5-8.5 per cent).

A special feature of economic developments during 1971 was that a high rate of growth was realised in spite of slacker economic growth abroad and a marked deceleration of the rate of increase in agricultural income at home. The rate of growth of national income in 1971 was in fact higher than in any of the EEC and OECD countries. Moreover, a further development worth noting was the improvement in the composition of national income, which corroborates the economy's steady progress towards the required changes in the structure of its productive capacity. In fact, the rapid growth of income from the industrial sector resulted in raising its share in national income to 31.7 per cent last year, from 28.4 per cent in 1967.

According to NSSG estimates, income from secondary production increased by 9.4 per cent last year, compared with 7.9 per cent in 1970 and 11 per cent in 1969; industrial production in particular increased at practically the same high rate as in the previous two years (1971: +9.8 per cent; 1970: +10.9 per cent; 1969: +11.3 per cent). The recovery of building activity and strong foreign demand for industrial products, except metals, accounted substantially for the continued rapid industrial growth in 1971. In this respect, the slowdown of agricultural income growth and the fall of foreign demand for basic metals (e.g. nickel iron), no matter how substantial they have been; only counteracted the growth of industrial output to a limited extent, the latter having been sustained by other sources of demand. This achievement stems from the rapid growth of production facilities and the introduction of advanced technology, and is highly significant as far as the international competitiveness of Greek industry is concerned.

2. GROSS EXPENDITURE OF THE ECONOMY

According to NSSG estimates, the gross expenditure of the economy increased by 7 per cent last year, compared with 6.6 per cent in 1970. Even more significant is the fact that there was a further improvement in the composition of expenditure and especially in the structure of investment. Such improvements stemmed from investment rising at a faster rate than consumption and from differentiations in the sectoral growth rates of investment. In both instances, rate differentiation was in line with economic development targets.

As estimated by the NSSG, total gross fixed capital formation increased at a higher rate than in 1970 (+8.7 per cent against +6.9 per cent). This increase came mainly from the rapid expansion of public investment (+17.1 per cent against +12.4 per cent in 1970) and to a lesser extent from private investment, although the latter increased faster than in 1970 (+5.1 per cent against +4.7 per cent). It should be noted in this respect that, in recent years, changes in the growth rate of private investment were basically determined by investment in buildings, which has shown variations in both direction and intensity.

Following these developments, the ratio for fixed capital formation to gross expenditure and to GNP kept up its steady growth record of recent years by showing a further improvement in 1971, when it rose to levels conforming to patterns of investment behaviour in countries at an advanced stage in their economic development process. This is evident from a comparison of last year's investment-expenditure ratio with that of 1965 (24.7 and 19.7 per cent respectively). A similar picture emerges when we compare the investment-GNP ratios for 1971 and 1965, which were 26.6 and 22 per cent respectively.

Apart from the favourable structural developments in gross expenditure, a further improvement in terms of the allocation of available resources was seen last year in the composition of private investment. This was due to the slow growth rate of investment in housing, whereas the more productive categories of investment, especially that in industry, have been keeping up a high rate of expansion.

In view of the further substantial increase in imports of machinery and equipment and in long-term industrial credit for fixed assets, it seems that a high growth rate has prevailed in industrial investment. The fact that investment in industry has been increasing at a high rate throughout the last three years underscores the reforms that are taking place in the required direction as regards the set-up of the economy's productive capacity.

During the year under review consumption increased at a lower rate than investment (+6.2 per cent). This was mainly due to private consumption, which grew at a slightly slower pace than in 1970.

3. PRICES

Domestic prices rose last year at virtually the same rate as in 1970; during 1971, the consumer price index rose by 3 per cent, compared with 3.7 and 2.2 per cent respectively in 1970 and 1969. The wholesale price index rose faster, namely by 4.6 per cent last year, against 2.6 per cent in 1970 and 3.9 per cent in 1969. Last year's price changes were caused basically by the same factors that brought about the slight acceleration in price movements in 1970, namely imported inflation and shortages in the supply of some domestic agricultural products, owing to autonomous factors.

Although increased demand was partly responsible for the slight rise in the domestic price level, the main inflationary pressure came from factors related to the cost of marketed products.

Over the first four years of the current five-year economic development plan and in spite of the slight acceleration of the last two years, the average annual increase in the consumer price index was almost equal to the 2 per cent rate anticipated by the plan. Last year, the index in question rose less than the respective indices of all OECD countries.

4. BALANCE OF PAYMENTS

The main developments in the economy's foreign sector last year were an increased trade deficit and the further substantial improvement in the balance on invisibles, which led to a relatively better balance on current account. Under the effect of a considerable increase in invisible earnings and larger capital inflow, total foreign exchange earnings exceeded the corresponding payments substantially. This resulted in a spectacular rise of the country's foreign exchange reserves, which amounted to $502.8(1) million at the end of 1971, against $310.1 million at the end of 1970. These amounts include Greece's gold tranche with the International Monetary Fund, equivalent to $34.5(1) million. It is noteworthy that foreign exchange reserves have kept increasing this year as well.

In 1971, the trade deficit increased because of the continuing growth of imports and the virtual standstill in exports, owing to special reasons. Imports were influenced mainly by rapid economic development and the rise in incomes and rose at a high rate which, however, was well below that of the previous year (+13.6 against +19.6 per cent). The low rate of increase in exports (+2.1 per cent) was caused chiefly by the suspension of nickel iron exports following the sharp drop in world prices. Nevertheless, exports of other products, especially industrial ones, expanded at a satisfactory rate. Considering the generally adverse conditions that prevailed in international markets last year, the fact that exports of dynamic products maintained their high rate of increase points to the efforts being made to promote exports by providing the necessary incentives and organisation.

A substantially larger proportion of the increased trade deficit was offset by net invisible earnings, which recorded an impressive increase in absolute terms but also a very considerable acceleration in their rate of growth (+39.7 against +23.5 per cent in 1970). In fact, having almost doubled in amount over the last three years, invisible earnings rose to $940.6 million, thereby improving their share in offsetting the trade deficit from 62.1 per cent in 1970 to 72.3 per cent in 1971. Although all categories of invisible earnings increased at high rates, the most impressive performance was seen in earnings from tourism, which went up by 57.7 per cent against 29.5 per cent in 1970. High growth rates were also noted in earnings from emigrants' remittances (+33.5 per cent), as well as in earnings from shipping (+28.4 per cent), in spite of a recession in the international freight market.

Last year's significant increase in invisible earnings overcompensated for the deterioration in the balance of trade and brought about the improvement seen in the balance on current account, whose deficit was reduced by about 12 per cent to $361.6 million against $410.4 million in 1970. This deficit was more than offset by the larger influx of foreign capital, which contributed to the impressive increase in the country's foreign exchange reserves.

These favourable movements in the balance of payments took place in spite of the acute international monetary crisis that lasted for most of the year under review. This crisis had certain positive as well as negative effects on the Greek balance of payments, the most important of which was the expansionary impulse given to invisible earnings. The economy of Greece emerged from the crisis and the concomitant realignment in currency parities with a stronger position in terms of the competitiveness of the country's foreign trade.

5. MONETARY AND CREDIT DEVELOPMENTS

The ratio of total liquid assets (currency circulation, deposits, bonds etc) to disposable private income rose to an estimated 77.3 per cent last year, compared with 71.3 per cent in 1970, 67.3 per cent in 1969, 57.3 per cent in 1966 and 46.1 per cent in 1961. The secular rising trend in liquidity and its recent acceleration are normal developments related to structural changes, the most important of which are the economy's rapidly increasing wealth, the supply conditions for other assets which compete with the liquid ones and the prevailing favourable psychological climate. Nevertheless, it must be pointed out that the rapid increase in liquidity renders the economy more sensitive to psychological factors and less responsive to monetary policy.

In contrast with the rapid rise in total liquid assets and their ratio to disposable private income, currency circulation—at average annual levels—increased between 1970 and 1971 at a lower rate again than for gross national income at current prices. This implies that the demand for currency showed a further decrease last year, whereas the demand for other liquid assets, especially savings deposits, accelerated, due mainly to the expansion of banking services and the increased importance of financial criteria in choosing among various forms of liquid wealth.

More analytically relevant developments are as follows :

Currency circulation, which is in Greece the major item in total money supply, increased by Dr. 4,128 million or 10.6 per cent in 1971, against Dr. 3,438 million or 9.7 per cent in 1970. Private deposits increased by Dr. 27,106 million or 27.2 per cent in 1971, compared with Dr. 19,642 million or 24.6 per cent in 1970 and Dr. 14,061 million or 21.4 per cent in 1969. As a percentage of disposable private income, the increase in deposits rose to 11.1 per cent against 8.8 per cent in 1970 and 7 per cent in 1969. The main stimulus for this large increase came from savings and time deposits, which grew by 28.1 per cent last year, compared with 25.4 per cent in 1970. The rapid growth of deposits made it possible to finance a larger amount of investment and productive activity out of sound sources. During the year under review, total bank credit increased by Dr. 28,427 million or 21.2 per cent against Dr. 23,386 million or 21.1 per cent in 1970 and Dr. 19,181 million or 20.9 per cent in 1969. Last year's increase in bank credit corresponds to 11.5 per cent of national income at current prices, compared with 10.5 per cent in 1970 and 9.6 per cent in 1969. The private sector of the economy absorbed 88.7 per cent of the total credit expansion in 1971. Although bank credit increased rapidly in all sectors of the economy, the rate was particularly high in the manufacturing sector, where it rose to 24.5 per cent against 21 and 17.1 per cent respectively in 1970 and 1969. Over half (57 per cent) of the overall increase in bank credit last year referred to long-term financing for fixed assets. The growth rate of long-term credit was 24.9 per cent in 1971, compared with 27.9 per cent in 1970 and 30.4 per cent in 1969. A further slight acceleration was noted in short-term credit for working capital, which grew by 18.8 per cent last year, against 18.3 and 14.7 per cent respectively in 1970 and 1969.

6. PUBLIC FINANCE

In 1971 the public sector made an increased contribution to economic development through the realisation of a larger amount of investment, which was financed in part out of the surplus in the ordinary government budget.

The end of the year under review was marked by a series of tax reforms reflecting major readjustments in fiscal policy. These reforms have three main aims; to rationalise tax revenue, to improve the operations of public organisations, and make development incentives more effective.

7. PROSPECTS OF THE GREEK ECONOMY DURING THE CURRENT YEAR

Optimism regarding a high rate of economic and investment activity during the current year is based on expansionary trends in crucial sectors of production and expenditure as well as in basic determinants of demand, such as the larger public investment programme, dynamic foreign demand for services as well as industrial products, and the accelerating recovery of building activity. A further strongly expansionary factor, which is also significant in respect of structural improvements, is represented by private investment prospects. In fact, investment activity in the private sector is expected to be larger in amount and improved in structure; several firms have announced their intention to undertake large-scale business ventures, mainly with the participation of foreign equity capital. These ventures will be attempted in the highly development-oriented sectors of manufacturing (metallurgy, oil refining, aircraft repairs, construction of heavy vehicles etc), shipbuilding and a number of dynamic agricultural activities.

Further highly encouraging evidence is provided by the expansionary trends set up in basic categories of invisible earnings, especially those from tourism, which has become a major and constantly expanding source of foreign exchange. Together with other reliable indications, these trends support the expectation of a further large increase in total invisible earnings during the current year, which will strengthen the economy's ability to finance the increasing imports generated by the accelerating growth of production and investment activity.

The excellent climate of business optimism and confidence, sound consumer behaviour and the circumspect policy followed in the fiscal and monetary sector form a favourable environment for the maintenance of monetary equilibrium. The continuing growth of private savings and the increasing flow of a large part of them into the banking system greatly facilitates the implementation of an easy credit policy. It goes without saying, however, that an expansionary monetary and credit policy can only be stretched to the limits imposed by the need to safeguard monetary stability.

The importance of maintaining monetary stability in the long run is evident. Steady and sustained economic and social progress presupposes accelerated income growth and extensive structural reforms in the economy. These can only be achieved, however, on the basis of a strong monetary and foreign exchange position founded on unshakable confidence in the stability and favourable prospects of the Greek economy. These conditions were established over the past few years, were further strengthened in 1971 and are expected to continue unchanged in the current year.

(1) At $35 per ounce of gold.

Don't write off Northern Ireland.

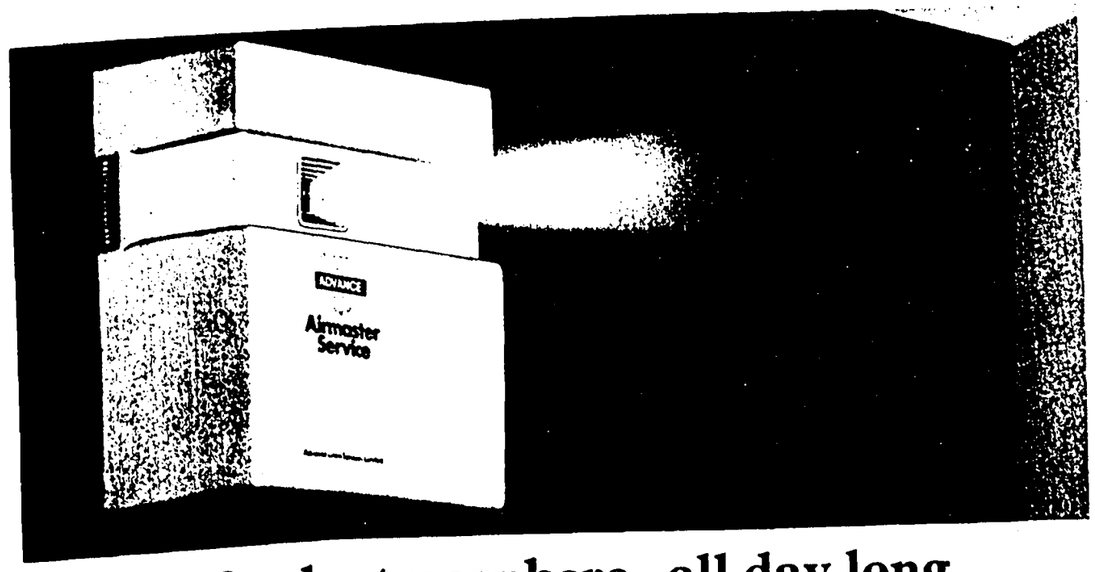
Progress is being made in a most important area.

Every day tens of thousands of Northern Ireland Protestants and Roman Catholics work together, and, as the record shows, work hard.

In the two years 1970 and 1971 manufacturing output rose 13% (1970: 7.2%–1971: 6.1%).

Productivity in 1971 was up 6.7%.

In 1971 the number of days lost per 1,000 workers because of manufacturing disputes was less than one third of the national average.



Last year (1971) 7,000 new manufacturing jobs were negotiated in Northern Ireland, largely through the expansion of established firms. This level of job creation, one of the highest ever recorded in Northern Ireland in the course of a single year, was achieved despite the 1971 investment trend in Europe.

These are sound reasons for expecting expansion to continue–so long as industrialists and businessmen continue to look behind the headlines and into Northern Ireland's industrial record.

The Advance Airmaster Service

A fresh atmosphere–all day long

The Airmaster Service keeps the air fresh, sweet and a pleasure to breathe – in offices, reception areas, meeting rooms, kitchens, changing rooms, toilets and many other places.

Every fifteen minutes, strategically sited Airmaster units inject a metered spray of ultra-fine aerosol mist into the air that you and your staff breathe. There are aerosols for a variety of needs: a specially formulated toilet freshener, an odour neutralizer, air fresheners, a sanitizer to control airborne bacteria, a safe and highly effective insecticide.

Toilet Freshener | Odour Neutralizer | Air Fresheners | Air Sanitizer | Insecticide

Advance call regularly each month to re-load your Airmasters and replace the batteries when necessary.

The Advance Airmaster Service is aimed at making life pleasanter and healthier and raising staff morale at minimum cost. Like Towelmaster and other Advance services, there's no capital expenditure involved. Just a single weekly charge that covers everything.

So send the coupon for full information. Use the Freepost address without a stamp – breathe fresh air all day long.

Please send me full information on the Advance Airmaster Service.

Extract from the report of the Directors

We are pleased to be able to report profits before tax of £6,518,000, showing an increase of £1,829,000 or 39 per cent. on last year. The major part of these profits is earned by the main subsidiary company, W.H. Smith & Son Ltd.

During the year we made continued progress in the development of the retail side of our business, and sales through our shops and bookstalls showed an increase of 15.5 per cent. over the previous year. Improved margins and efficient control of expenses contributed towards increased profits.

On the wholesale side our news sales continue to expand and turnover advanced by just under 13 per cent.

In the current year our retail expansion programme will provide us with 76,000 sq. ft. of additional selling space: taking into account closures, the net increase will be just over 8 per cent.

Capital expenditure during 1972/73 will approximate £6 million of which £3.685 million has already been sanctioned by the Board.

Books

Genesis

CHANCE AND NECESSITY
By Jacques Monod.
Collins. 187 pages. £1.75.

Even the most cautious reviewer, however nervous of debasing the currency of adjectives, must sometimes use the word great. This is a great book, sinewy, lucid and intelligible, alike to the non-scientist and the novice in philosophy. The translation is excellent, and the publisher's only error—a serious one—is the failure to provide an index. But beware. The brevity of this book is no guide to the time it takes to read rewardingly.

Professor Monod is a molecular biologist who has won a Nobel prize for his work on protein synthesis. The advances in molecular biology of the last 20 years—the discovery of the structure of DNA (the double helix), the cracking of the genetic code, the solution of the mechanism of protein synthesis—all establish a microscopic basis for the theory of evolution. Professor Monod has ransacked them for clues to a solution of the fundamental epistemological contradiction in biology : " the cornerstone of the scientific method is the postulate that nature is objective." Scientists seek prior causes of the phenomena they study and deny that true knowledge can be gained by interpreting natural events in terms of purposes, goals or strivings—" final causes." Objects are not supposed to be decision-makers. Yet objective study of living organisms obliges us to recognise their teleonomic (Monod's word for purposive or " project-serving ") character, and to admit that both in structure and performance they decide on and pursue a purpose.

Monod : protein lives

The core of the book is a masterly summary of protein chemistry. Here Professor Monod describes the significance of the allosteric enzyme proteins. Their reactions used to be described as automatic and predictable. Now, it is accepted that they can recognise, choose and discriminate :

> When analysed at the microscopic—the molecular—level, these performances appear wholly interpretable in terms of specific chemical interactions, electively assured, freely chosen and organised by regulatory proteins. And it is in the structure of these molecules that one must see the ultimate source of the autonomy, or, more precisely, the self-determination that characterises living beings in their behaviour.

In Professor Monod's scheme, therefore, the boundary of what is alive has been pushed back several orders of magnitude from its usual place among the viruses to certain types of single protein molecules.

Teleonomic structures and performances are served by protein. Genetic stability, " invariance," is linked to the nucleic acids. So, says Professor Monod :

> We shall define the essential teleonomic project as consisting in the transmission from generation to generation of the invariance-content characteristic of the species.

The conclusion is necessarily pessimistic : " evolution is not a property of living beings, since it stems from the very imperfections of the conserving mechanism." Chance mutations emerge as teleonomic failures.

For all its intellectual richness, this book is not free of self-contradictions. Scientists and ordinary readers are more likely to be impressed by Professor Monod's arguments than are philosophers. He certainly handles them roughly. Vitalists (including Bergson), animists (among whom he includes Teilhard de Chardin) and certain doctrines of marxism are shown to be mistaken. Holistic theories are dismissed in a paragraph. But at the same time as he is rejecting the idea of the miraculous as applied to life he freely uses " final cause " verbs : recognising, discriminating, choosing, electing. Nor will methodologists be convinced that these concepts, appropriate enough to man, can be used in the same sense when applied to the functions of a single protein molecule. But then they are now not acceptable even as explanations of human behaviour to men like Professor Skinner ; philosophers, psychologists and scientists will buzz round this honey-pot of a dilemma for a long time to come.

Private places

MURGATREUD'S EMPIRE
By Bamber Gascoigne.
Cape. 192 pages. £1.75.
THE TENANTS
By Bernard Malamud.
Eyre Methuen. 230 pages. £1.95.
THE DISTANT LAUGHTER
By Bryan Forbes.
Collins. 287 pages. £1.80.
TRISTAN
By Hervé Bazin, translated by Derek Coltman.
Hodder and Stoughton. 315 pages. £2.50.

There is a spice of " Black Mischief " about Mr Gascoigne's first novel. Just a pinch : Murgatreud would have been incomprehensible to Waugh, and is hard going even now. Mr Gascoigne has a strong line in transliteration, and the international white trash esperanto thumps along in multi-syllable wordblocks. But when Murgatreud, Manning and O'Halloran find themselves in the cooking pot, Mr Gascoigne dispatches them in true Waugh style : the cliché is refreshed with a highly intelligent blend of the ludicrous and the macabre. This is a genuinely amusing book, with a plot that actually unfolds, as Murgatreud crashes into Manning and O'Halloran's faded, private, colonial world to create an export industry out of the native pygmies' phallic symbols. Mr Gascoigne peddles no message, he is not out to shock, and when he is crude he is always funny —very, very funny.

It is hard on fiction readers to assume that their needs, as well as the writer's, have been adequately met by writing a book about writing the book they are reading—unless the writer happens to be Mr Bernard Malamud. His novel of the private and mutual struggles of Harry Lesser (white, Jewish, trad,

Four in hand : Gascoigne, Malamud, Forbes and Bazin

slow) and Willie Spearmint (black, angry, impatient) towards their disparately conceived goals switches on more lights than any reader has the right to expect.

Lesser sits in secure tenure of the last inhabited apartment of a derelict block awaiting demolition, contemptuously defying his suffering landlord and gradually, very gradually, approaching the end of the novel he has been writing for 10 years and in which he hopes to discover his own secrets. And that, in the beginning, is the full extent of his involvement with life. Very soon Willie's working squattership in the empty next-door apartment drags him, against his will, into real relationships and situations with which his clever writing about their imagined counterparts has not fitted him to cope. "The Tenants" is about the gulf between action and imagination : but also, much more importantly, it is a paradigmatic discussion of a particular society in a particular phase and of the impotence of the liberal ethic in that place and time.

Beside such excellence, it is a temptation to be dismissive about much other new fiction, including Mr Bryan Forbes's first novel (which is not about writing a first novel but about making an umpteenth film in the teeth of the film industry's ungovernable appetite for the blood, bones and souls of those who serve it). But that would be as unjust as the contemptuous treatment Forbes's films have reached from highbrow critics. In terms of their own limited and perfectly respectable aspirations, Mr Bryan Forbes's films have been almost wholly successful, and one can talk about "The Distant Laughter" in almost exactly those terms : it is no masterpiece, but it will give widespread pleasure. One has to put up with lapses and longeurs—notably the didactically adjectival opening and the failure of the central characters ever to come properly into focus—but there is plenty of good story-telling and some bitchy splendours.

A private place of quite another nature, the island of Tristan da Cunha, is the subject of M. Hervé Bazin's documentary novel. A straightforward account of the volcanic eruption on the island, with fictional names and characters assigned to the population evacuated and later returned by the British, this book purports to explore the touching of "natural" and "civilised" societies. It suffers grievously from its timing, for it is not long since the same material was treated more factually and challengingly by Mr Peter Munch in "Crisis in Utopia" (*The Economist*, September 11, 1971) ; but in any case there is not a great deal to be learned from it.

Underdeveloped antithesis

DISSENT ON DEVELOPMENT
By P. T. Bauer.
Weidenfeld and Nicolson. 550 pages. £4.75.

Development economics has for years been one of the more fashionable fields. The academic reapers, in their universities and institutes, have latched on to the good cause of the impoverished millions in the underdeveloped three-quarters of the world, berated their own countries for being responsible and reiterated in chorus a series of remedies that thinly disguise their own political views. This suspicious unanimity of diagnosis is now coming under increasing attack, not just from hardliners who make a virtue out of self-help and neo-maoists who, ignoring Mr Robert McNamara's speech at the Unctad conference last month, will doubtless continue to attack the World Bank and development aid as instruments of international capitalism. A growing squad of awkward economists is questioning the whole net of conceptions and prescriptions of the development economics industry. Professor Bauer is one of its longest-standing, most profound and vociferous members.

This book is a diatribe—or a set of similar diatribes—hurled at the "spurious consensus." The first element of this consensus is that underdeveloped countries—defined as all countries except those which are developed—share a common set of characteristics, principally poverty. This poverty is said to be self-perpetuating. Its causes are allowed to include accident, but are also rooted in colonialism and, more recently, in the mere existence of a batch of much richer countries. The prescription is aid (preferably soft, untied, and channelled through multilateral agencies), state control or ownership of local manufacturing industries, state control over external economic relations (currency and trade), and the abolition of landlordism.

Professor Bauer rejects the basic distinction, arguing that the poor in fact display no common characteristic. He believes the degree of poverty is exaggerated by the methods of calculation. He insists that there is no evidence that poverty is self-perpetuating. Not only were the rich themselves poor once, but there are numerous instances of quite respectable economic progress by "poor" countries in the nineteenth and twentieth centuries, not least in Latin America, but also in Malaya and parts of west Africa. Colonialism and exposure to rich countries are not to blame for the poverty : Liberia and Ethiopia, for instance, are among the poorest African countries. Aid, he argues (on empirical evidence), provides no guarantee of material advancement, and in many ways stimulates forces likely to obstruct it. It extends the area of economic activity of the state, encourages uneconomic investment and discourages local sources of savings.

Unfortunately, Professor Bauer's book does not consist of a statement of the case supported by detailed analysis. It is a compendium of edited and extended articles. There is therefore repetition of the same a priori arguments, supported by the same rather limited number of examples. As such it is a hard read. It is also open to criticism ad hominem. The case against colonialism, for instance, can easily be made a priori (the fate of the Indian textile industry provides a supporting example). The case for aid can also be argued a priori, with South Korea and Taiwan as examples. The

dispute over underdeveloped countries' terms of trade (have they, or have they not, *deteriorated*?) also needs more detailed attention than it gets from Professor Bauer, or for that matter from Unctad. And the arguments in favour of more extensive state economic activity need to be studied, at least; here they are just dismissed with a mention of the sole and sorry example of Russia and eastern Europe. In some ways the most interesting part of this book is the balanced review by Professor Harry Johnson, which, after detailed analysis, endorses some (though not all) of Professor Bauer's own views. Professor Johnson concludes that what the underdeveloped countries need above all is better access to the markets of the rich countries (which might pay compensation to their own industries that suffer in consequence), or as a second best which is in fact now being partially realised, commodity agreements and preferences for manufactured goods in rich countries' markets. But he also argues not for less aid, but for more. The crucial and often unacceptable string he attaches is a demand for better assurances that this aid will, in fact, be used productively.

Mind-reading

THE GREAT TREK
By Oliver Ransford.
John Murray. 260 pages. £3.50.

STUDENT PERSPECTIVES ON SOUTH AFRICA
Edited by Hendrik W. van der Merwe and David Welsh.
Rex Collings. 230 pages. £1.50.

For all the ties between the two countries, there are enormous barriers impeding understanding between the people of South Africa and the people of Britain. To some extent this is the fault of South Africa's political system: perhaps it is partly the fault of the common language, English, which (as Bernard Shaw remarked of Britain and America) has served to keep us apart. But it is also a language problem that has prevented the foreigner from truly understanding the Afrikaner. Few of those who make it their business to criticise South Africa really know what makes the Afrikaner tick. They may have spent months or years in his country but still not be able to speak his language, Afrikaans. In South Africa, in defiance of Marx, political power has not been captured by the masters of the economy—the English-speakers—but by their subordinates in matters financial and economic—the Afrikaners. Without a knowledge of their ugly tongue access to huge areas of great importance—from the Nationalist press to the government itself—must be incomplete.

Mr Ransford's book, "The Great Trek," is not (for those who were by now becoming nervous) written in Afrikaans. Nor is it a sociological study of present-day Afrikanerdom. It is a straightforward, readable account of that extraordinary migration of Boers from the Cape Colony across the Orange River to what is now Natal, the Orange Free State and the Transvaal. No new sources have been used and no new incidents or events are brought to light. But Mr Ransford has deviated from the usual approach of concentrating on the events in Natal by emphasising instead the occupation of the high veld, on which, he rightly says, "was bred the Afrikaner nationalism which plays so large a part in African politics today." The merit of Mr Ransford's work is that for those who speak no Afrikaans, it gives some insight into the Afrikaner mind.

Equally remote from most foreigners' understanding are the minds of South Africa's blacks. As black extremism follows white extremism, they are getting even more so. "Student Perspectives on South Africa" is of enormous value in drawing attention to the writings and thinking of the rising generation of South African politicians, both black and white. The black contributors are the most interesting; they break with the conventional African acceptance of multi-racialism, and are embarking now on a period of "black awareness" which has something in common with north American black power. Mr Seymour Lipset argues in the preface that "this book may be of more importance than the myriad literature about the French 'events' of May, 1968, or the activities of the American movement in the 1960s." He is probably exaggerating, but its importance is beyond doubt. This book does more to make clear the new complexion of the growing anger and resentment of South Africa's blacks than any yet published. One quotation from Mr Barney Pityana helps to make this clear:

> Many people would prefer to be colour-blind; to them skin pigmentation is merely an accident of creation. To us it is something much more fundamental: it is a synonym for subjection, an identification for the disinherited, the discarded people and the wretched of the earth.

Anyone who believes that South Africa's blacks are either too unsophisticated or too contented to cause trouble should read this book.

Vegkop, 1836: Voortrekkers' victory

Animal farm

The only swan fit to eat, according to Peter Scott (**The Swans**, by Peter Scott and the Wildfowl Trust, Michael Joseph, £4.20) is a really young one. After October or November, they grow progressively coarser and tougher. It is Scott the professional naturalist speaking, in a tone that is both cooler and more erudite than Scott the professional nature lobbyist and fund-raiser. But outside ballet school, swans have a tough dignity that discourages sentimentality, and a self-reliance that begins inside the egg, where the cygnet develops a spike on the end of its bill sharp enough to allow it to hammer its way out of the shell.

Swans consort in legend mainly with the beautiful people: kings, queens, gods, chieftains, Buddha and the like—but cats have had no such luck. They were associated for centuries with the devil and, except in Egypt, abominable cruelties were perpetrated on them. Mr Edward Hyams describes in **Animals in the Service of Man** (Dent, £2.95) how

Camera fodder ?

even in the seventeenth century they were being walled up alive in buildings, burnt alive and ritually slaughtered in Lent. He puts this down to a case of guilt by association, for the cat walks by night and its fur gives off sparks. On the other hand, Mr Hyams is baffled why such a smelly, stupid and unattractive beast as a camel should have been generally so highly-valued when the range of jobs it can do better than other beasts is so specialised and narrow. Past-master of the pleasant, read-a-few-pages-before-going-to-sleep book, he puzzles in a mildly scholarly way over whether the Aztecs as well as the Romans domesticated snails, and concludes that they probably did, since it would have been hard to collect enough in the wild to feed the 1,000 people who regularly ate in the palaces.

But how does one classify Joy Adamson's **Pippa's Challenge** (Collins and Harvill Press, £2.75)? There is no doubt that she is a remarkable woman, that her ability to handle awkward and dangerous animals is something quite out of the ordinary—her interests have switched from lions to cheetahs—that her courage and fortitude are great and her photographs outstanding. But she is also incurably sentimental in the way of Englishwomen with their dogs, and nothing conveys this so plainly as her attempts to keep alive a cheetah with a broken leg, against the advice of vets who wanted to put the beast out of its pain. It died, in any case, horribly.

But the man who did more to change attitudes to wildlife than any other individual is Dr Bernhard Grzimek, director of the Frankfurt Zoo. His **Animal Life Encyclopedia, Volume 10: Mammals I** (Van Nostrand, £10.75 in 1972, thereafter £12) is the first volume to appear of a 13-volume series he is editing covering the whole animal kingdom from worms to birds. It bears his unmistakable stamp of authority as well as his eye for a picture; the greater gliding possum in mid-flight against a blue sky is a sight few will see outside these pages because they are one of the animals which, like koala bears, have too eccentric a diet (mainly the leaves and flowers of eucalyptus) to live in zoos. This volume's mammals are mainly marsupials and monkeys, and it has more to say about them than merely describing their habits. Kangaroo numbers, according to Dr Grzimek, who wrote this chapter himself, were once kept down by the aborigines, who lived off them. But the Europeans killed or sold off the aborigines and now the kangaroos go into pet food at the rate of 10,000 a week—133 kangaroos to the ton because only the hindquarters are used. Like Mr Peter Scott, who accepts philosophically that the only objection to killing whooping swans is the risk of hitting one of the rare trumpeter swans instead, Dr Grzimek accepts the need to keep the numbers down; what he does regret is the waste of all that flavoursome kangaroo meat that should be in butchers' shops and not in doggies' feeding bowls.

Deflated myths

THE LAND QUESTION AND THE IRISH ECONOMY, 1870-1903
By Barbara Lewis Solow.
Harvard University Press; London: Oxford University Press. 257 pages. £4.

AN ECONOMIC HISTORY OF IRELAND SINCE 1660
By L. M. Cullen.
Batsford. 208 pages. £2.

Unfounded myths about the past can have a baneful influence on the policies of subsequent generations. One such myth was that Irish agricultural production languished in the nineteenth century because of a wicked land tenure system which allowed landlords to exploit tenants. If a tenant sought to improve his land, so the story goes, an avaricious landlord responded by increasing his rent or evicting him without compensation. From 1870, successive British governments sought to remedy this situation. Tenants were guaranteed compensation for improvements and rents were controlled.

Mrs Solow challenges this accepted version. The tenants were never in a position to improve their land; their record after compensation for improvements was guaranteed was poor. If a peasant proprietorship had come into existence, as J. S. Mill had advocated, farmers could perhaps have found capital to improve their land and increase production. But landlords were rarely tyrannical; they tended to adopt an easy-going approach rather than risk assassination. They tolerated uneconomic holdings which made their estates unprofitable. This institutionalised unprofitability prevented an inflow of capital which was needed to finance improvements and so raise production. With rent control, all improvements ceased and production actually declined; rents remained static while agricultural incomes rose. In the late nineteenth century, while the Danes were doubling agricultural output to cope with declining world prices, the Irish were conducting disputes about the proportion of a stagnant output which should go in rent. As a contemporary observer put it: "They look to some political machinery or result to give them what their own industry should provide." Eventually, in 1903, the landlords were bought out. In Mrs Solow's words, "The prize was great; so was the cost."

Dr Cullen's book is altogether admirable. The emphasis of Irish history is generally too political. An economic history of this quality and readability is a most valuable antidote. He challenges the popular and influential nationalist myth that the union with Britain in 1800 destroyed Irish industry. He also makes clear the industrial predominance of Belfast in pre-independence Ireland. It is difficult to escape the conclusion that Ulster might have thrived better as the only part of an industrialising independent Ireland with a real industrial tradition than as a backwater (whose main industries of shipbuilding and linen were declining) of the British economy (whose centre of gravity was shifting to the south-east).

Dr Cullen endorses Mrs Solow's apologia for the Irish landlords. From both these books there emerges the extraordinary toughness of the Irish tenant farmers, who throughout the nineteenth century consistently improved their position at the expense of labourers and landlords. As a class, the tenant farmers were tenacious; but they lacked the vision or generosity for great things. Their descendants rule the new Ireland and their ethos has, for better or worse, determined the quality of its life.

The higher pessimism

JOURNALISM AND GOVERNMENT
By John Whale.
Macmillan. 120 pages. £2.25.

This is Mr Whale's second book on the communications industry and, like the first, it comes high in the ranks of informed pessimism. The first was published as he left Independent television ; this one comes after he has made his mark in the Sunday Times's coverage of Northern Ireland. It is impossible to think of anyone simply with a television news background making the same imprint in written journalism as Mr Whale has done, and that is only one of the reasons why what he says is well worth reading and digesting. The others are that he thinks hard, writes pointedly and writes of those things that he knows about : Ireland, the lobby system, television. It is a list that might make anyone pessimistic.

He is principally concerned at what he calls "the movement against reason" and what journalists should be doing to resist it. His scepticism is compelling, especially about new fads. "A data bank," he declares, "is no more than a public library on skates." And he knows his politicians, those vanity banks, and their fallibilities all too well. That is to say, just as well as he knows his journalists and what is wrong and vain and fallible about them. He can also be very commonsensical : the fashionable remedies for the sicknesses of the press, as an industry, do not persuade him. He sees through the proposals of how the state might help with printing machines and subsidies, and doubts if workers' control really can mean workers' control, or, if it does, if it can do much good.

So it seems that there is no commercial or institutional change that can rescue the press and the word to Mr Whale's satisfaction. His chief answer is to try to reform the journalists. He may very well be right : it is hard enough to be optimistic about the future of much of the press in the face of the intelleotual and commercial challenges to it. But Mr Whale does tend to push things a little far. Thus he can find barely a good word to say for competition in the media, allowing only that "it may be an antidote to the grosser forms of idleness."

The one exception to that which he gives is that BBC television was forced to "throw in moving pictures with their news" after ITN began in 1955. That is one way of looking at it. Another is that the whole BBC approach to news, and especially news gathering, was changed qualitatively ; and in the light of what Mr Whale says about passivity towards establishments and institutions he might not think that change too bad if he admitted it. Nor does he seem very clear about what he would put in competition's place : he knows the alternatives too well. Still, it is a book for journalists to read, and if necessary bridle at where they like. The more bridling they do, the more they probably need to read Mr Whale.

Old New York

EDITH WHARTON : A WOMAN IN HER TIME
By Louis Auchincloss.
Michael Joseph. 191 pages. £3.

Mr Auchincloss has a gift of measure which would have delighted Edith Wharton. Not for him the vast scholarly biographies which roll their stately way off the American presses. This is a beautiful book and even briefer than it seems : almost every page carries its evocative photograph of Mrs Wharton herself, her houses, her gardens (she was a passionate perfectionist where both were concerned), her regrettable husband, her dogs, her friends, her friends' houses, her grave and even the Pyrenees which gave this inveterate traveller such delight. But there is not a footnote in sight.

Like her great friend, Henry James, Edith Wharton was an expatriate for most of her adult life but her literary capital consisted mainly of the fashionable society of New York and Newport in which she had been brought up. The precision and delicacy with which she recreated its arbitrary standards, its foibles, its cruelties and its vulnerability to the new millionaires is one of the abiding joys of literature. But she was too demanding intellectually to be satisfied with life in such a society and in her frequent trips abroad she found the literary stimulus and companionship for which she ached among men such as James, the critic Percy Lubbock, Howard Sturgis and Robert Norton. By 1910 she had settled permanently in France and by 1913 she had divorced her increasingly ailing, increasingly impossible husband. Mr Auchincloss tells the story with a welcome brevity and detachment. In Paris she had with her her lifelong American friend and mentor, Walter Berry ; Mr Auchincloss considers, and dismisses, the widely held view that she and Berry were lovers. Whatever the relationship, the heroes of her books, usually stilted, hollow men, suggest that something was lacking.

Edith : portrait of a lady

The war saw Edith Wharton throw herself almost too emotionally into the service of France ; when it was over she continued to write about an America which had changed almost beyond recognition. For admirers of her gifts this is a melancholy period ; Mr Auchincloss suggests that the need for money may explain her ceaseless, sometimes embarrassingly misguided labour. Even her once-adequate fortune was no longer sufficient to sustain the state in which she liked to live and entertain. In Mr Auchincloss's view she redeemed herself, however, by creating Vance Weston in "Hudson River Bracketed" : a vision, he suggests, of the novelist which she might have been without the impediments of her sex, background and preoccupations with the details of daily life. But should we then have had "The House of Mirth," or "The Age of Innocence" ?

Set for revolution

WITHOUT MARX OR JESUS
By Jean-François Revel.
MacGibbon and Kee. 281 pages. £2.50.

THE POLITICS OF REVOLUTION
By Harvey Wheeler.
Martin Robertson. 316 pages. £3.50.

These are books to make bourgeois flesh creep out in the Middle West. M. Revel starts off with a sweeping statement : "The revolution of the twentieth century will take place in the United States. And it has already begun."

Earlier this year Mr Wheeler, a senior fellow at the Centre for the study of Democratic Institutions in California, suggested the same thing in his much more academic and tortuous book. These two authors' revolutionary aims are not so very different : a sweeping away of the nation-state, an end to waste of natural resources, a fairer share-out for all and an end to war. Both believe Europe to be dead, and America's young radicals the main hope.

But the resemblance ends there. Where Mr Wheeler ranges conscientiously among the philosophers and the founding fathers, M. Revel sends up a firework display. His book comes complete with its own review—a trenchant "afterword" by Miss Mary McCarthy. As she says, M. Revel is really a brilliant pamphleteer, an enfant terrible who loves to shock by turning conventional wisdom on its head. He is primarily concerned to expose French complacency and ignorance and the conspiracy in France between the left and the right to maintain the status quo. His invective is splendid. But his America, she argues, is as imaginary as the country of the Houyhnhnms.

This is not quite fair to M. Revel. Though he makes a few trifling mistakes of fact, his general thesis that American society is sympathetic to revolution (by which he does not necessarily mean blood upon the barricades) is quite convincing. Americans embrace change and look to the future, not the past. Compared with other societies, theirs provides the freedom revolutionaries need ; the courts are great defenders of liberty. A behavioural revolution is already virtually complete. The Free Speech Movement at Berkeley launched a thousand imitators. Freedom of information is unrivalled. But, disappointingly, this is where M. Revel stops. Neither he nor Mr Wheeler can say, in practical terms, just how the revolution which they desire is to come about.

Indian file

INDIAN POLITICAL THINKING
By A. Appadorai.
Oxford University Press. 215 pages. £1.10 paperbound.

Dr Appadorai is particularly fitted by his academic specialism and his participation in Indian public life to accomplish the task he has set himself in this book : to survey Indian political thought from the British crown's assumption of direct rule over India in 1857 to the death of independent India's first prime minister, Jawaharlal Nehru, in 1964. The volume is scholarly and lucid, based on a forthcoming collection of documents illustrating the same topic. Its aim—an introductory survey—is acknowledged to be limited. As such it will appeal to the student of political thought and Indian history. For the general reader its interest lies in its exposition of the thought of prominent figures like Nehru, Gandhi and Vinoba Bhave, whose ideas and actions have had repercussions far outside their homeland. It is also, by implication, a case study of the perennial problem of the interaction of political events and ideas.

Nehru, 1946 : time for thought

Indian political thought was until 1947 moulded by the circumstances of imperial rule and emergent nationalism. Few thinkers produced anything approaching a coherent political theory : most of them were practising politicians and their pronouncements were generally a reaction to immediate events and pressures. The problems which demanded their attention (and which take up the first part of this survey) were the value and role of imperial rule. Since Indians expected and welcomed the British raj as a long-term edifice in India, they discussed the desirable basis of its strength and the extent to which it should interfere in the lives of the people, particularly in questions of social reform. As the political tide swung in favour of self-government so political thought concentrated on the reasons for that aim and the knotty problem of the methods to be adopted in its pursuit—constitutional agitation, terrorism, non-co-operation or a blend of these options. Meanwhile the need for united action against the alien ruler forced Indians to consider the factors forming national consciousness, particularly the role of religion, as the tragedy of the Hindu-Moslem division unfolded. After independence Indian thinkers turned to topics which had concerned them only marginally before.

The second part of the book deals with this reorientation of political thinking. The superiority of democracy (very variously defined) over other forms of government was barely disputed. But there has been much discussion and disagreement about the environment in which democracy is viable, the role of the state in relation to society and the individual, and the rights and duties of the individual.

Dr Appadorai stresses that modern Indian political thought is a blend from Indian and western sources. Often there was little that was original in Indian thinking, and western ideas were merely adapted to suit Indian circumstances ; sometimes, as in the case of marxism, there was no grafting of the western on to an eastern stock. However, in certain significant areas Indian political thinkers do seem to have broken new ground, particularly in Gandhi's now famous concept of *satyagraha,* non-violent passive resistance, and in the ideal of *sarvodaya,* "the welfare of all", as envisaged by Gandhi and elaborated by Bhave and J. P. Narayan. These are some of the key topics which the author believes deserve more attention.

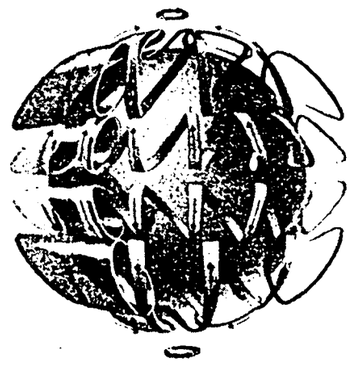
Conchie

A CACKHANDED WAR
By Edward Blishen.
Thames and Hudson. 230 pages. £2.

Mr Edward Blishen was a conscientious objector in the second world war, neither suffering the martyrdom nor receiving the sympathy of posterity that was meted out to those who refused to fight in the first. His worst fate seems to have been as a henpecked handyman at a girls' hostel. Men have joined up to avoid less, but it hardly amounts to victimisation, and Mr Blishen does not for a moment pretend it did : when he was cross-examined by the objectors' tribunal in an air-raid shelter under the Strand, he was quite surprised to be addressed as "Mr" : "there was a part of me that would have dismissed myself far more brusquely."

Mr Blishen has an outstanding ability to draw characters, quickly and easily ; it has already been well displayed in "This Right Soft Lot," the best of his books about teaching, but

it is here used to advantage on his fellow conchies. This is not so much an autobiography as a muddle of firsthand experiences. Among one batch of objectors, he writes, was a Quaker: "the most normal looking of us all." The rest of them "were first-generation objectors, and some very queer reasoning had gone on among us: but Billy was secure in the traditions of his non-conformity."



Mr Blishen was, naturally, jeered at by soldiers; a fellow-objector spent his life looking for insults; the old witch of a landlady breathed contempt: but it was his own adolescent mind that inflicted any torture. This is a young man's book, a difficult feat to achieve in middle age. The sexuality, the emotion, the self-doubt, the self-obsession are all adolescent. Mr Blishen was 19 when the war broke out; he writes at the end that had he been "two or three years older when it all began, I *think* I could *not* have been a pacifist. I should then perhaps have been able to accept the grim logic of the case. . . ." But he was young, and strongest in his uncertain mind was "all that literature of disgust I'd read, bitter fruit of the Great War . . . the horror of it, the rejection it expressed, had run in my veins." The strangest thing is that he has been able to make such a detached yet self-revealing book out of a freakish decision of his youth that took him into a lay-by of history.

Global spread

THE ATLAS OF THE EARTH
Edited by Tony Loftas.
Mitchell Beazley/George Philip. 448 pages. £13.95 during 1972.

When a book costs nearly 5p a page, as this one does, critical admiration has to be tempered by the very real question of whether it gives value for money. Admittedly, the pages are very large indeed. But even in these days, nearly £14 is a great deal to lay out on an atlas unless it stands in a class of its own. Getting the bad news over first, for the second half of its length this book does not. Its maps, even with the inclusion of such refinements as national parks and rainfall patterns for most of the big cities of the world and quite a lot of the small ones are clean, competent cartography of a thoroughly familiar kind. It is for the first half of the book that you pay the money.

This is where the interest lies. Not even a genius could satisfactorily encapsulate the whole history of the evolution of matter into half a dozen

Some maps have atmosphere

coloured spreads. But people who want the whole history read books. If, on the other hand, you merely want to check quickly on the depth to which the sun's ultra-violet rays penetrate the earth's atmosphere; where bronchitis does most damage in Britain; what animals are on the verge of extinction and how the chain of pollution works, there is a great deal to be said for finding this in one place. The currently fashionable bias towards ecology is marked; but this is a much pleasanter way of keeping abreast of it than through the even more biased and infinitely more boring books that pour out on the subject.

Papal statesmanship

THE LANDS OF ST PETER
By Peter Partner.
Eyre Methuen. 488 pages. £6.50.

Throughout the middle ages, the impact of the Italian territories which came under the direct temporal rule of the papacy on the operations of the institution as a whole has been a cause of scandal both to contemporaries and to subsequent commentators. By producing a conspectus of the whole history of the papal state from its origins to the middle of the fifteenth century, Dr Partner has provided English readers with much material for deciding whether that sense of scandal was justified. His own conclusion is moderate: that the violently adverse judgments of historians of a generation or so ago must be rejected, and the position of the papal state considered only as part of the wider unity of the church. It is a useful corrective, as is the realisation, most clearly delineated here, that the papal states originally fulfilled a kind of charitable function, supplying food to a Rome for which the popes had assumed responsibility in the decadence of imperial power. Yet Dr Partner records continuous criticism of the papal states: from those of Arnulf of Brescia in the twelfth century, through the demands that papal income should be used for the relief of the poor rather than the raising of armies, to the exhausted cries for peace in the late fourteenth century. They leave one with an uneasy feeling that the overall psychological effect of the pope's lands was disastrous for medieval Europe.

For a great deal of the book, the history of the lands themselves is inextricably intertwined with that of the temporal power, so that the narrative slides into a simple account of the political activities of the papacy in Italy. That is little more than a chronicle of wars. But the story is told with such clarity and command, backed up with such formidable erudition, that the book is both fascinating and a real contribution to knowledge. If the style is occasionally a little flat, and the sheer concentration of material somewhat daunting, these are minor defects. More serious is a lack of analysis in the treatment of the later history of the states, where sources for it are available. One could wish for a more detailed description of the actual government of the states in the fourteenth and fifteenth centuries, and of their legal and their financial arrangements.

Some points, however, emerge with great force. There is the repeated tendency for the popes to be forced to appease secular powers, feudalists or signori, in order to retain control. The role of Innocent III as the true founder of the papal state as such is highlighted, as is the work of Martin V and Eugenius IV in preserving it after the threat of the great schism. Some conventional wisdom on the papal states comes in for close examination, not least the universal acclaim for the work of Cardinal Albornoz. Repeatedly, Dr Partner's shrewd and sound judgments force one to think again about casually accepted assumptions. The illustrations, although pleasing in themselves, do not add much to the text, but there are some useful maps, and most helpful summary lists of events and reigns. The book is unusually attractively presented, although marred by an irritatingly large number of misprints. But that is a minor and depressingly common flaw.

Short list

Inflation and the Unions by Gottfried Haberler, Michael Parkin and Henry Smith (Institute of Economic Affairs, £1). The principal essayist, Professor Haberler, is contemptuous of the standard types of incomes policy and contends that the only solution is to attack the source of the problem, the unions' monopoly position. He wants to see the removal of all union privileges. Minimum wage laws should be repealed, welfare subsidies to strikers should be ended and unions should be financially responsible for damage caused by illegal strikes. (Sadly, the new Industrial Relations Act receives no more than a footnote.) He refers to *The Economist's* idea that inflationary wage increases should be taxed away by higher national insurance contributions by employees, agreeing that such a policy would indeed remove any incentive to ask, or strike, for larger wage increases, but arguing that such a measure would be equivalent to a wage freeze and would only be justified in an acute crisis. The real question is whether such distortions would be more or less than those that are caused by the nearly-unfettered use of union bargaining power.

Competition and the Corporate Society by Nigel Harris (Methuen, £3.75). In economic matters, the conflict between liberalism and what Dr Harris calls "corporatism" has since the war been almost exclusively located in the Conservative party. This is partly because a socialist economy involves a corporate state by definition; and partly because the Conservative party inherits the conflict along with Whig and Tory traditions. Dr Harris's account of the conflict shows most of all, however, the unimportance of doctrine for the Conservatives in government.

Social Change in Industrial Society by Thomas C. Cochran (Allen and Unwin, £2.90 clothbound, £1.50 paperbound). More and more in the United States, Professor Cochran tells us, younger historians are searching for the mechanisms of social change—if only because the torrent of facts threatens otherwise to engulf them. His own search has taken him to the behavioural sciences and in this work he applies the concepts of role-players and role-sets to the immense social changes in the United States during the twentieth century. These concepts seem most rewarding when applied to the business corporation, an institution with which the author, as a business historian, is particularly familiar; but they also provide interesting insights as he examines child-rearing, education, the decline of hierarchical authority and the dilemmas of the young.

Man's World, Woman's Place by Elizabeth Janeway (Michael Joseph, £2.50). Mrs Janeway, the well-known American novelist, makes a sensitive and scholarly investigation of the deep-rooted conviction that women ought to be sequestered in their homes. Mrs Janeway's husband, the equally well-known adviser to businessmen, tells the man and woman in the street (not Wall Street) how to survive financially in America's current economic emergency. Each section of **What Shall I do with my Money?** (Michael Joseph, £2.75) —on cash, property, stocks and so on —is followed by a question-and-answer session which has little relevance for the un-American reader. But the special introduction to the British edition advises investment managers in London, for whom Mr Janeway has the highest regard, on how this country might escape the worst of the threatened crisis of "deflationary nationalism," brought on, in his view, by the mistaken policies, political and economic, of his own country.

The Strategy of Takeovers by Anthony Vice (McGraw-Hill, £3). In the long term, the merger of two consumer-orientated, complementary businesses must make sense. So writes Mr Vice in his analysis of the Cadbury-Schweppes merger, one of nine case studies. This kind of simplistic and uncritical assumption runs right the way through the book. Although he explains the chronology of each takeover and who had lunch with whom and where, there is no attempt to analyse either whether the supposed reasons for each takeover were the real motives, or whether any have worked out as hoped.

The Middle East: Temple of Janus by Desmond Stewart (Hamish Hamilton, £4). In November, 1869, the Khedive Ishmail welcomed European royalty for the opening of the Suez canal: in October, 1970, when President Nasser died, the canal had been closed for three years. Mr Desmond Stewart takes these dates as the starting and ending points for his account of the events of the intervening 100 years. The history which Mr Stewart recounts in a vivid, colourful and immensely readable style is enlivened by long digressions into the backgrounds and personalities of the men who fashioned it. A worthwhile book for the general reader.

The Arabian Peninsula edited by Derek Hopwood (Allen and Unwin, £4.25). The eighth in the series "Studies on Modern Asia and Africa" is a useful anthology of historical developments, present problems and future prospects for the countries which form the Arabian peninsula. Three articles on the state of Oman give a particularly valuable insight into one of the most backward of the peninsula's states and Mr Frank Stoakes's piece on the social and political changes being brought about in the smaller Gulf states provides essential knowledge for anyone contemplating dealings in this area. Mr Yusif A. Sayigh contributes his thoughts on the ways the oil-rich states might use their revenues to increase the prospects of future stability and benefit all the people of the peninsula. The rulers would do well to note his ideas.

A History of OPEC by Fuad Rouhani (Pall Mall, £7.25) is a history of the organisation through which the Arabs are presenting most of their demands and as the author is a former secretary-general of OPEC the book naturally tends to favour the oil-producing countries. This is useful if only because so many western books, consciously or unconsciously, favour the giant oil companies. **Alaskan Oil: Costs and Supply** edited by M. A. Adelman (Praeger, $10.75), in presenting many of the economic criteria used in assessing the oil reserves of the North Slope of Alaska, describes the fundamentals used to appraise oil finds everywhere. **Oil: A study of Wartime Policy and Administration** by D. J. Payton-Smith (HMSO, £6.75) will probably only appeal to specialists; but many of the considerations that were important in those years still are.

African Liberation Movements by Richard Gibson (Oxford University Press for the Institute of Race Relations, £3.50). This is a useful, concise handbook to Africa's liberation movements which, however shambolic, still look like the most powerful force for change in white-ruled Africa. Mr Gibson, who is sympathetic to the aims of most of the nationalist organisations that he discusses, is sufficiently objective to be critical and realistic in his assessment of their failings and achievements. His book is valuable for that, and for its guidance through the morass of acronyms and initials from ANC to Zapu.

ISTITUTO DI CREDITO PER LE IMPRESE DI PUBBLICA UTILITÀ

I.C.I.P.U.

AN ITALIAN PUBLIC STATUTORY CREDIT INSTITUTE WITH HEADQUARTERS IN ROME, VIA QUINTINO SELLA, 2.
FULLY-PAID CAPITAL : LIT. 21.000 MILLION
RESERVE FUNDS : LIT. 48.864 MILLION

During financial year 1971 :
—the Istituto di Credito per le Imprese di Pubblica Utilità granted loans totalling Lit. 344 billion, comprising domestic loans for Lit. 301 billion, foreign loans for Lit. 26 billion and financing of export credits for Lit. 17 billion;
—the loans to enterprises located in Southern Italy were increased by 207 per cent in resp. of 1970, totalling Lit. 182 billion;
—Bonds for Lit. 277 billion, for DM 100 million were issued and a DM 50 million loan and two advances withdrawn from credit institutes for smaller amounts were obtained;
—After appropriation of Lit. 4.700 million to Special Contingency Fund, the financial year 1971 closed with a net profit of Lit. 2.993 million, of which Lit. 827 million was allocated to Reserve Funds.

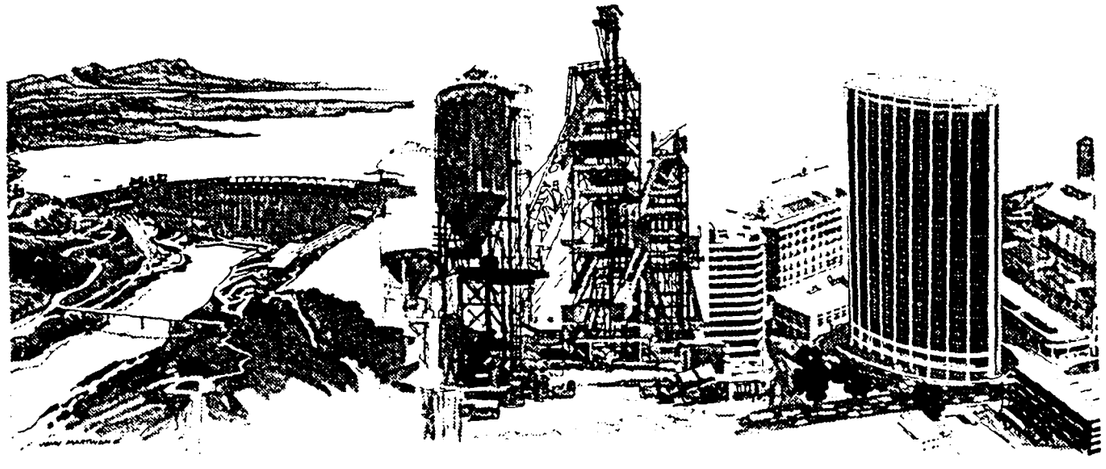
Union Corporation Chairman, Mr C.B.Anderson, reports to shareholders

During the year Mr. T. P. Stratten asked to be relieved of the Chairmanship of your company and the Board decided that I should take his place and also retire from the post of Managing Director. Mr. E. Pavitt was appointed in my stead.

ACCOUNTS The Consolidated Profit after tax for the year ended 31st December 1971 amounted to R14,618,000, or 29 cents per share, compared with R12,589,000, or 25 cents per share, in 1970. Dividends declared were increased by 1 cent to 13 cents per share. Since the year end there has been a recovery in market values and the market value of the quoted investments has risen from R156,435,000 at 31st December 1971 to R182,090,000 at 28th April, 1972, an increase of some 16 per cent.

EXPLORATION During 1971 we maintained a vigorous exploration programme, the main target being as previously Southern Africa. We are continuing overseas exploration, particularly in Australia.



GOLD Revenue earned by gold mines administered by our Group in 1971 increased by approximately R6 million over the 1970 figure. The higher earnings have continued in the first quarter of 1972 and the interim dividends paid in March this year by Group gold mines have been increased.

PLATINUM The supply of platinum exceeded demand throughout 1971. Impala made use of this period to improve its mining and refining operations and to lower costs of production. Additional plant has been installed and the company is well placed to increase production rapidly.

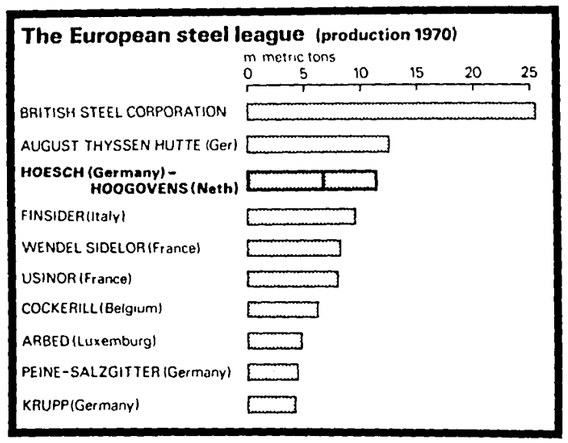
CAPITAL & COUNTIES The total value of properties held by this company has increased to over £120 million. The company has an ambitious development programme both in the United Kingdom and overseas, particularly in Australia.

AUSTRALIA Union Corporation, in association with Bay Hall Trust and Hambros Bank, was successful in obtaining a majority holding in Cudgen RZ and an 8 per cent interest in its subsidiary, Consolidated Rutile. This investment will be a useful addition to the Corporation's activities.

Union Corporation Group

Business Brief

The steel merger Britain missed



The shareholders of the German steel firm, Hoesch, will be asked on Wednesday to approve the terms of the link with the Dutch steel company, Koninklijke Nederlandsche Hoogovens en Staalfabrieken, the company with the reputation of being the best managed and most profitable steelmaker in Europe. The British Steel Corporation once dreamt about merging with Hoogovens, but it did not wake up in time.

The merger of the two continental companies will enable them together to press ahead with the construction of a giant new steelworks suitable for the 1980s. By contrast, although British Steel is twice as big as the new combine, the British Government seems to have no similar ambitions (page 89).

If Hoesch's shareholders vote yes, the merged company will be the third largest steelmaker in Europe, after British Steel and August Thyssen Hütte, with an annual capacity of 11m tons. It is still far from being in the Japanese or American class, but it will be Europe's first truly international steel firm.

Hoesch's links with Hoogovens go back to 1966, when Hoesch merged with the other steel producer in Dortmund, Dortmund Hörder Hüttenunion, in which Hoogovens had a big minority stake; Hoogovens, therefore, ended up with 14.5% of Hoesch. Since then, there has been small-scale co-operation between the two. But there was some sound logic for a full merger.

Hoogovens operates an integrated steelworks on the coast at Ijmuiden, near Amsterdam. It has deep water access for bulk ore carriers and is not tied to high cost domestic coal (as the German producers are, getting subsidies that are quite inadequate to compensate for it). Hoogovens, therefore, has an enviable low-cost operation. But its space to expand is limited. By contrast, the German producers are close to their markets: Thyssen, Hoesch and Krupp in the Ruhr; Klöckner at Bremen for north Germany; Peine-Salzgitter to the east, near Volkswagen; and the producers in the Saar for the south (although this is less convenient, and competition from Luxemburg, Belgian, French and Italian producers has bitten there recently). So the idea was for a combination of Hoogovens to concentrate—gradually—on crude steel production, the German partner to concentrate on the re-rolling, platemaking, etc, and the intermediate product being shifted between the two preferably (because cheaply) by water.

The choice of partner quickly reduced itself to Hoesch. Salzgitter and Klöckner were thought to be in the wrong places; Krupp is only partially a steel company and is still only gradually adapting from its feudal past; and Thyssen was out because of being so much bigger than Hoogovens. Yet on closer inspection a tie-up with Hoesch looked anything but simple. Hoesch's home town, Dortmund, had already lost control of its own well-known brewery to outside interests, so a foreign link for Hoesch, its other major employer, needed careful handling. Downgrading it to a mere re-roller was not on. Nor, on the other hand, was the Dutch government, which owns 29% of the shares of Hoogovens (for practical purposes, the entire Dutch steel industry), at all keen for its firm to become dependent on a foreign manufacturer.

Expansion

However, by 1970 a much more powerful argument for the merger had presented itself. Because of the limited scope for expansion at Ijmuiden (capacity could probably be expanded, by piecemeal additions, from the present 5-6m tons a year to about 8m), and the fact that the plant was not getting any younger, a brand new coastal works would eventually have to be built. But calculations of the minimum economic size of this were constantly being revised upwards: 2m tons, 4½m tons, and now 10m tons. Such a huge addition to capacity in one go would be a major burden. It would be only partially used in the early years. The burden needed to be shared with a partner. Here again Hoesch was the obvious candidate; not so much because scope for expansion at Dortmund was also limited (though this was true up to a point), but because its location 30 miles from the Rhine would increasingly tell against it in competition with Thyssen and Krupp, both conveniently sited on the river.

Despite the arguments in favour, the first plan for a full-scale merger in 1970 soon ran into heavy weather. Hoesch is bigger than Hoogovens; their respective turnovers last year were £656m and £256m, largely because Hoesch does much more manufacturing of finished steel products. But it is much the less profitable: its profits in 1970-71 were £6.8m and Hoogovens's £14m. Besides, Hoogovens already owned 14.5% of Hoesch. So the original idea was for a combined company owned 60:40 between Hoogovens and Hoesch shareholders. But Herr Willy Ochel, chairman of the Hoesch supervisory board and former managing director, came out against this idea, for reasons that never became entirely clear, although the fact that he had played a leading role in the rebuilding of the German steel industry after the war may have made a difference. The German trade unions opposed the deal too, suspecting a possible loss or dilution of the considerable power they now enjoy at Hoesch where, as in all German coal and steel companies, they occupy half the seats on the supervisory board.

However, it so happened that Herr Ochel retired, to be succeeded by the awesome figure of Herr Hermann Abs of the Deutsche Bank, who threw his weight behind Hoesch's pushful managing director, Herr Friedrich Harders, who had pressed for the merger from the start. The problem of union control was solved by an ingenious formula, of the kind fast setting the pattern for cross-frontier mergers between European companies: that is, a 50:50 partnership between twin holding companies, on the lines of Unilever, Agfa-Gevaert, and Dunlop-Pirelli.

With Hoesch-Hoogovens, the holding companies will be the two present companies, but they will transfer their assets to a central holding company called Estel. This will be registered under Dutch law, and its offices will be sited midway between the two companies, at Arnhem in Holland, not far from the German border. Profits will go 50:50 to the two holding companies, but Hoogovens, of course, will also get 14.5% of the Hoesch holding company dividends. A minor segment of the Hoogovens assets will be kept out of the merger, so Hoogovens shareholders will end up with about 60% of the combined profits—as its managing director, Mr P. L. Justman Jacob, had advocated throughout.

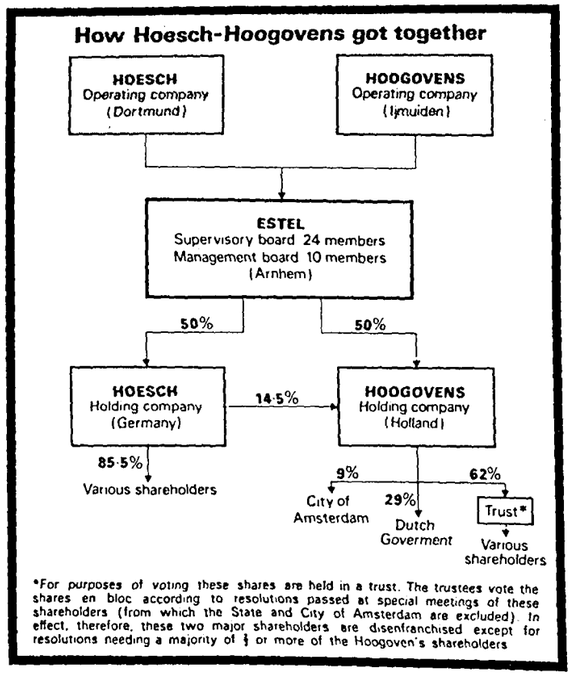
Hoesch's Abs: subtle

Hoogovens's Jacob: tough

The subtlety of the board and management set-up, which German trade unions have been persuaded to accept, bears the Abs touch. Estel will have a board of 24 members, with Herr Abs and Mr J. H. Loudon (ex-chairman of Royal Dutch) as co-chairmen. Of the 12 German members, four will represent shareholders, four the German trade unions, and there will be four neutrals, of whom two will be chosen by the German trade unions. On the Dutch side, four will be chosen by shareholders, four by the works council (not by trade unions, since Dutch law forbids this), two by the state, and there will be two other neutrals, independent steel experts of standing who are acceptable to both sides. The model also owes something to the draft European company statute worked out by the Brussels commission (although this is not acceptable to all EEC members themselves), as well as to the need to reconcile the conflicting demands of the German unions and Mr Justman Jacob.

On the management board of Estel the Dutch have driven a much harder bargain. Although there will be five members from each side, Mr Justman Jacob will be the first chairman; his successor will be another Dutchman, and so on until all five of the initial Dutch members of the board have retired. Only then will the succession be open equally to Germans and Dutch alike. By then, however, the two parts of the company are expected to have fused inextricably. In this way the Dutch have made sure that during the crucial intermediate period of growing together it is their voice that will be decisive. The insistence on this point appears to owe little to chauvinism, or to uneasiness in The Hague about control of Hoogovens passing over the border, but to a belief that Hoogovens's management methods are more "American" and more suited to an international company. On this point it would seem that Herr Harders has generously given way, and Herr Abs (whose influence will remain considerable) has evidently been convinced. The Hoesch shareholders may have something to say on this. Whether they will carry this to the point of voting against Herr Abs's advice is another matter.

Steel slump



Once the merger is signed and sealed, the combined business will have to grapple with the state of the European steel market. The problem is most acute in Germany, where the proportion of the domestic market taken by imports rose from 25% when the D-mark was floated last May to 37% at the end of last year. A 10% drop in output last year cut Hoesch's profits by 75% and German steel production is expected to fall again in the current steel year (to September). At Hoogovens—which is less tied to the German market—output and turnover were maintained but costs rose sharply, cutting profits by 27% last year.

In the medium term a plan for integration will have to be devised. In principle Hoesch needs to replace its out-of-date and dirty open hearth steel converters with oxygen plant, and has already decided to go ahead with a new oxygen steel plant. But this raises the ticklish question of whether the new converters ought to be at Ijmuiden or Dortmund. The Dutch have been discreetly urging that the project should be postponed until the German steel market has picked up again. Perhaps wisely, Dr Harders has pushed ahead. Basic decisions on who makes what and which plant goes where will probably not be easy to integrate until the two sides have had time to grow together. More immediately, however, scope exists for integration on the purchasing side (40% of the costs of finished steel are made up by purchases of materials and other goods), and on product ranges, which now overlap.

In the longer term the combined group will be better placed to diversify into other metals than either partner alone. Hoogovens already has small interests in nickel exploration (in Indonesia) and aluminium. But most important of all will be the decision about a big new steelworks. Hoogovens's original plan was for an integrated plant at Maasvlakte, on reclaimed land in the Rhine delta, which would in effect be an extension of the existing Europoort complex out into the sea.

Paradoxically, the Rotterdam City authorities had been unsuccessfully badgering Hoogovens to come to the area for years until they produced the Maasvlakte site; but now, under intense pressure from environmentalists, the project has had to be shelved. Hoogovens and Hoesch have also developed their own doubts about the idea: is the landward communications system and other infrastructure adequate? Will the Rotterdam area be able to provide the labour force needed for a 10m ton plant (the smaller versions considered earlier were quite another matter)? Officially the city authorities are busy trying to reduce the pollution from the existing complex to an acceptable level, and will then review the Maasvlakte proposal. Hoogovens is lying low about the whole business hoping, probably, that the pollution row may blow over; it has not found any suitable alternative deepwater site on the Dutch coast. But it and Hoesch have been discussing bringing in another steelmaker (almost certainly Thyssen) to share in the project with them, if and when it happens.

The merger at least looks like creating a more unified management structure than at Agfa-Gevaert or Dunlop-Pirelli. But the deal has also shown once again that cross-frontier mergers between European companies are virtually impossible unless there is a 50:50 partnership, in the early stages anyway. And that the already severe problems are only compounded by the problem, peculiar to Germany, of worker participation. Neither of these headaches will be avoided by the proposed new statute for a European company registered under special EEC law.

*For purposes of voting these shares are held in a trust. The trustees vote the shares en bloc according to resolutions passed at special meetings of these shareholders (from which the State and City of Amsterdam are excluded). In effect, therefore, these two major shareholders are disenfranchised except for resolutions needing a majority of ⅔ or more of the Hoogoven's shareholders

SUN ALLIANCE & LONDON
INSURANCE GROUP

The following are extracts from the circulated statement of the Chairman, Lord Aldington

The past year has shown that the improvement started several years ago is continuing strongly and the vigorous way in which the problems of the more difficult areas of our business have been tackled proves that our progressive targets for underwriting results are attainable.
The net profit after tax is £14,186,000, compared with £8,258,000 for 1970. This gives earnings per share of 38·64p compared with 23·66p in 1970 and the Directors have decided to declare a final dividend of 10½%, making a total of 18½% against 16½% for 1970.
The profit before taxation rose by £7m. Of this just under £5m is due to the significant improvement in underwriting results. Looking to the future we can take some encouragement from the fact that although by no means all sections of the Fire and Accident account are yet profitable, there has been improvement in virtually all of them.
Costs of the failure of the Vehicle & General and other companies have now been fully reserved, and we have made a substantial additional contribution to the Pension Fund to help to meet the strain which arises from the sharp general increase in salaries due to inflation.
On the 1st June, 1971 Mr. Richard Fleming retired and I was elected to succeed him. The results for 1971, and the further improvement which we look forward to over the next few years will I hope be some reward to him and at the same time an expression of our thanks.
Lord Howard de Walden retired and we are grateful for his help and advice during 24 years as a director.
Sir Roy Matthews, who retired in March 1972, had been a Director of Companies now within the Group for many years. No Insurance Company could have been served better in its property investment business than we have been by Sir Roy.

Home Fire
Fire wastage figures increased again in 1971, but the results of our business were most satisfactory. As in 1970, there were no abnormal weather losses.

Home Accident
Our results were very much better than in 1970 and, although this account did not close with a profit, there are indications that it is now beginning to operate on a profitable basis.

Home Motor
Vigorous steps in 1970 led to a significant improvement in 1971, although we were still in deficit. We shall continue to watch premium rates very carefully to see that they are sufficient to cope with the facts of Motor insurance business.

Life
New business in the United Kingdom showed the largest increase which the Group has yet had and our overseas business has been proceeding as planned.
Retirement Plan which we launched in 1971 to meet the growing market in small pension schemes and our new Personal Pension Policy on a "with profits" basis are both proving successful.
The investment experience was very satisfactory, market values rose substantially and several increases have been made in the rate of our Capital Bonus. Real Property continues to form a growing part of the Life assets and the yield on the Fund rose from 7·03% to 7·29%.

Reinsurance
Despite unfavourable experience in certain European countries, particularly Germany and Scandinavia, the results show some considerable improvement and the overall underwriting loss has been reduced to a marginal figure. Further improvement is expected.

Engineering
All activities of the National Vulcan are now fully integrated and there was considerable improvement in the results after the disappointment of recent years.

Marine and Aviation
The transfer of £1m. relates to the 1969 account, the run off of which has produced a modest profit. However, repair costs have continued to increase. It would be a sign of weakness and not of strength of purpose for the Marine insurance market to refuse to face up to the realities of these sharply increasing repair costs.
The Aviation account has been profitable and some new insurers have entered this market. Severe competition has developed and a cautious approach to underwriting is now very necessary.
The Fund now stands at 146·2% of premium income, compared with 138·1% in 1970.

Overseas
In the United States the overall profit on the U.S. statutory basis amounted to $6,732,000, compared with $801,000 in 1970. This splendid result has been largely due to a remarkable improvement in the Fire and Casualty field which showed a profit of $3,143,000, compared with a loss of $1,088,000 in 1970. The Marine and Aviation account continues to show favourable results.
In South Africa and a number of other overseas territories our results have been good, but in some major areas, for example, Australia, Canada, Germany and New Zealand, we had underwriting losses.

Investment
The flow of new money ran at an exceptionally high level and, whilst the return on new investment has been lower than in 1970, the increase in our investment income in the General Funds at £1·6m. is larger than we had expected, and we are very pleased with the way our property interests are growing.
Excess of market values of Stock Exchange securities over book values in the General Funds was £61·3m. compared with £33·1m. last year and in the Life Funds £84·8m. against £36·7m.

Conclusion
There has been real improvement in 1971 but there is still considerable room for further progress. Competition through efficiency and innovation is welcome to us but perhaps I may add that if this competition is to serve the interests of those who want security and service, it must not take the form of unsound rates and imprudent terms with disregard of the need to build up reserves.
In facing this competition, we can look with confidence to our Management and Staff, backed up by many loyal and vigorous Brokers and Agents, and the results of 1971 will be some reward to all of them. We have, I believe, maintained and developed the really good understanding and co-operation between Board, Management and Staff which has long been one of the Group's greatest strengths and I am proud to express your thanks as well as my own to all who have contributed to the heartening results of 1971.
The Annual General Meeting of Sun Alliance and London Insurance Limited will be held on 31st May, 1972, at the Head Office, Bartholomew Lane, London, E.C.2.

SUMMARY OF RESULTS	1971 £000	1970 £000
Fire, Accident and Marine Premium Income	183,857	159,175
Underwriting Transfers:		
Fire and Accident	4,392	374
Marine	1,000	100
Long-term Insurance Profits	692	650
Investment Income	13,326	11,705
Other Income, including Trustee Fees	136	109
	19,546	12,938
Less		
6½% Unsecured Loan Stock Interest	141	563
PROFIT BEFORE TAXATION	19,405	12,375
Less		
U.K. and Overseas Taxation	5,130	4,136
	14,275	8,239
Less		
Minority Shareholders' Interest	89	(Cr.) 19

GROSS COST OF DIVIDEND	6,792	5,758
PROFIT RETAINED	7,394	2,500

BUSINESS

Now it's a steel contraction plan

The Government's depressing, but long-considered, view of the British Steel Corporation is that it will not make profits and should not expand

It appears to have taken a joint committee of the Government and the British Steel Corporation one year to agree on the steel demand that is likely to prevail in 1980, given an average growth rate of the British economy in this decade of just 3½ per cent a year (and that is depressing enough). They seem to be unable to agree on anything else. The Government thinks British Steel will never be able to make sufficient profit to justify going for the major expansion needed to retain its present market share. It also expects the corporation to lose some of its present share of exports. BSC, obviously, thinks it will do much better in the next 8-10 years.

The forecast that emerged from all those hours of debate was no surprise. There was a margin of 25 per cent between the highest and lowest estimate of the size of market the industry should be geared for by 1980. The Government's estimate leans toward a cautious 28m tons, and BSC's toward an optimistic 36m. With 3½ per cent growth, steel consumption in Britain would rise to somewhere over 23m tons of finished steel, which would require a capacity of somewhere around 34m ingot tons. On past performance, that would mean the corporation's share would be around 31m ingot tons. BSC is asking for a margin above this because it plans to increase its export business, which in this depressed year is running at the equivalent of 5m ingot tons. So, if the Government is right, BSC's future is one of a sharply decreasing share of both home and export markets. The slack would be taken up in the main by imports.

So far as its investment plans go, BSC can forget at the bottom end of that range any thought of a greenfield, brownfield or even sky-blue-pink development. There just is no room. When it has finished facelifting the more venerable plants it acquired on nationalisation, its nominal net capacity if all the wholly uneconomic plants are closed comes to around 25m tons. However, if the Government insists on these being kept open as an act of social policy (which it is certainly doing now), there is barely room to build more than a couple of mini-mills in Scotland.

The Government apparently has no confidence in the abilities of the corporation ever to make money. It has been considerably shaken by the massive losses of around £100m a year for last year and this (although this year's results may look a little better) and is refusing to accept the management's excuses for them. It will not concede the argument that steel has been under price restraint ever since nationalisation and working with tired plant. Ministers now suspect that it has been a characteristic of the British steel industry, even when in private hands, that whenever it was faced with price restraints in any form its automatic reaction was to under-invest. Now that BSC would like to invest, the Government appears to think that the industry will be unable to show a reasonable return on the money.

There is no sign of any apparent willingness to consider the argument popular in the industry that, given new plant, British Steel might be as competitive as anyone else, especially with its relative commercial freedom to set prices once Britain is in the common market. The Government is reluctant to consider the sort of major investment programme which could cost as much as £2 billion between now and 1980, and for which the corporation has blueprints in plenty. This attitude might change if Lord Melchett and his colleagues can convince ministers that they really do possess drive and business ability. But what was very obvious this week was both sides' reluctance to commit themselves to the sort of detailed investment plan into which they would be strapped much in the way that the electricity industry got tied to its atomic programme—with disastrous results.

But playing by ear can be carried too far. There is

Where the money goes

	Modern capacity	Cost at 1972 prices
	m tons	£m
Modernising in hand		
Anchor, Scunthorpe	5	250
Lackenby, Teesside	3.25	43
Port Talbot, south Wales	3	83.5
Llanwern, south Wales	3.50	90
Ravenscraig, Scotland	3	50-60
Brownfield site (not approved yet)		
Redcar	6-8	800
Greenfield sites (for 1985 or beyond)		
Hunterston		
Merseyside		
Humberside		
The Wash	12-15	1,200-1,500

room within the estimated spread of output for a brown, if not a greenfield, site of perhaps 6-8 tons provided that something higher than the rock bottom figure for sales is accepted. The corporation favours Redcar on the north-east coast and has just got the Government's sanction for a major new blastfurnace in the area to serve the Lackenby basic oxygen steel plant near Teesside. It will inevitably go alongside the Redcar ore terminal now in the process of being built. When BSC's board makes its mind up to go ahead with this £150m project, it lays the way for the brownfield development there which is already planned in considerable detail. The one flaw in BSC's plan for this location for such a big steelworks is that it would need a big steel consuming process to go with it, probably a hot strip mill. The market for that product is much farther from Teesside than it is from, say, south Wales or Shotton. But it is still a good deal nearer than if the development went to Hunterston.

The Government may not see as big a steel industry for Britain as the corporation would like, but without a fairly steady pace of development the industry will have no market at all, and it is reaching one of those watersheds now where, unless the next stage of development is cleared fairly soon, Britain will be importing raw steel for finishing on outdated mills in the probable boom of 1979-80 just as it did in 1969-70. And after that the import bill for steel would just go on increasing.

This may not necessarily be a bad thing ; a case can be made for saying that steel is not the kind of industry in which Britain should be tying up resources in the 1970s. But this ignores the fact that steel industries on the continent make money, and some of them make it pretty efficiently (see page 86) with fewer natural advantages that Britain appears to have. Of the 20 possible sites for a new, deepwater steel complex in Europe, 11 are in Britain and looked at enviously by some European producers. That the Government apparently sees no point in developing any of them suggests that it has no confidence in the ability of the corporation's present management to do the developing. Yet it has only just renewed the contracts of some of the key members.

What rooms at the inns?

Britain is probably the only country with a big tourist industry but still no central register to guide visitors about where to stay. It urgently needs one

The English Tourist Board's scheme for a register of every tourist bed in the country, from the Ritz to the last caravan site, reflects a good many of the complaints that visitors (and not only tourists) have been making about British hotels: not least of which are the difficulty of finding them and their habit of raising prices to frantic late visitors who then have a choice of either paying up or sleeping in the park. The board wants all prices listed in its register, and at least some form of voluntary classification to warn clients how hard the bed might be when they find it.

It has never been clear why British hotels and boarding houses have been so reluctant to register. Provision for registration was written into the 1969 Development of Tourism Act, and all that is needed is an Order in Council to bring it into effect. That order has never been made. The Government felt it had done enough by establishing the four tourist boards: one, the British Tourist Authority, to get the foreign visitors in, and the other three to see there are amenities for them in England, Scotland and Wales once they get here—and for the locals, who outnumber foreign visitors five to one. It has been content to let the boards run the whole business, noting with satisfaction the mounting quantities of foreign exchange which tourism brings. A working party from the BTA was asked to look into registration, but its report last September was inconclusive.

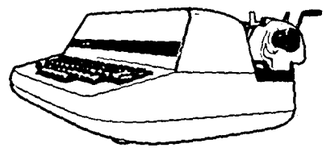
The English Tourist Board—which deals with the bulk of tourists in Britain—got bored of waiting, but feelers put out to the responsible minister (Mr Anthony Grant, at the Department of Trade and Industry) produced little more than amiable expressions of interest. So last summer the ETB commissioned from McLintock Mann and Whinney Murray, the consultants, a report on whether compulsory registration was desirable in Britain ; and, if so, what system should be adopted.

It had expected some opposition from the establishment. Only last July Lord Geddes, president of the British Hotels, Caterers and Restaurants Association, slammed the call for registration as "bureaucratic nonsense." If he was then expressing a majority view, the ETB's energetic chairman, Sir Mark Henig, must have made a lot of conversions. It is now said that in principle virtually everyone in the trade favours the idea of compulsory registration, whether by previously held conviction or after persuasion from the ETB.

No one knows how many hotels there are in Britain ; it could be as many as 35,000, but only a third of this number is listed in any of the guidebooks. No one guidebook features all the listed hotels. The five largest guides contain 6,500 hotels, but only a tenth appear in all five. Further down the line—for motels, guest houses and boarding houses—information shades through the increasingly patchy to the non-existent. Most European countries operate some form of registration system, either compulsorily or voluntarily—but with arm-twisting. Foreign tour operators find the British vacuum of information infuriating. They cannot find out which hotels will accept group bookings and give other facilities ; and this country must lose a lot of potential package-tourists in consequence.

Why have British hotels and guest houses been so chary of registration ? The big groups just kept aloof. Smaller businesses were probably afraid about how much

OEM



stands for the best in Office and Electronic Machines

ADLER

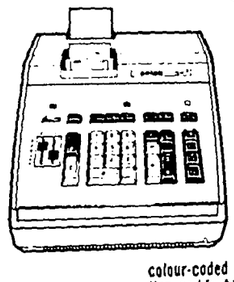
CITIZEN

OEM are the distributors for Adler & Citizen machines. Typewriters, Adding machines, Calculators. And complete accounting systems.

Whether you buy or lease your Adler or Citizen machines, the name of OEM is your assurance or quality and reliability.

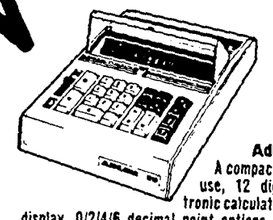
Adler Electric 21D
Incorporates a redesigned keyboard for maximum speed and featherlight touch. Dual carbon/fabric ribbon with fingertip control. The essential machine for every personal secretary and typing pool.

Citizen 310
The world's fastest and smoothest mechanical multiplier. Operates at 360 rpm, lists 10 columns and totals 11. Auto-total key, overflow safety lock, minus multiplication, easy operation. Still the most inexpensive method of doing simple calculations.



LOOK AT THESE EXAMPLES FROM THE OEM ADLER & CITIZEN RANGES

Adler Universal 390
Precision built for years of trouble-free use. Features include quick-feed paper injector/ejector; speedily interchangeable carriages.



Citizen 100L
Accurate, speedy and easy to use, this electronic desk-top calculator is the latest from the famous Citizen range. The 100L is built to solve most complicated mathematical operations. With constant key.

Adler 1414P
Electronic desk-top calculator with control tape. The colour-coded keyboard enables easy operation, and fast 14-digit capacity, three methods of round/off, automatic percentage, memory, exchange function and many other features.

GO TO YOUR LOCAL DEALER OR WRITE TO OEM for full details of all the Adler & Citizen business machines.

Adler 1210
A compact, easy to use, 12 digit electronic calculator. Visual display, 0/2/4/6 decimal point options, constant key, overflow up to 23 digit answers, single memory. Suitable for a wide range of commerce and general calculations.

OEM OFFICE & ELECTRONIC MACHINES LIMITED
140/154 Borough High Street, London SE1 1LH. Tel: 01-407 3191. Telex 887349

We now have a far stronger base for earnings and the effects of this should be increasingly shown in the future

Burmah Oil reports on 1971, and its hopes for the future.

Turnover is up and so are trading profits in a year that has been particularly difficult for the oil industry as a whole.

Income from trading and trade investments at £30.7 million showed an increase of 10% over 1970 compared with an increase of 9½% in the previous year. Profit on trading contributed £19 million of this, an increase of 24% over 1970.

Development policy

Since 1959 we have sought to achieve a better balance in the Group's operations, which has involved moves into new geographical and product areas.

Burmah-Castrol Europe, the North American companies and the non-oil companies, particularly Halfords and Burmah Industrial Products, are providing an important part of the Group's income.

The delay in completion of our Ellesmere Port refinery has continued to mask the growth from other trading activities in the U.K. However, the fuel units are now on stream, and the rationalisation of the refinery and manufacturing operations of Burmah-Castrol in the U.K. will be largely completed during 1972.

We now have a far stronger base for earnings and the effects of this should be increasingly shown in the future.

Exploration

Additional cash flows from acquisitions have enabled us to increase expenditure on exploration and there have been additions to oil and gas reserves in USA, Canada and India.

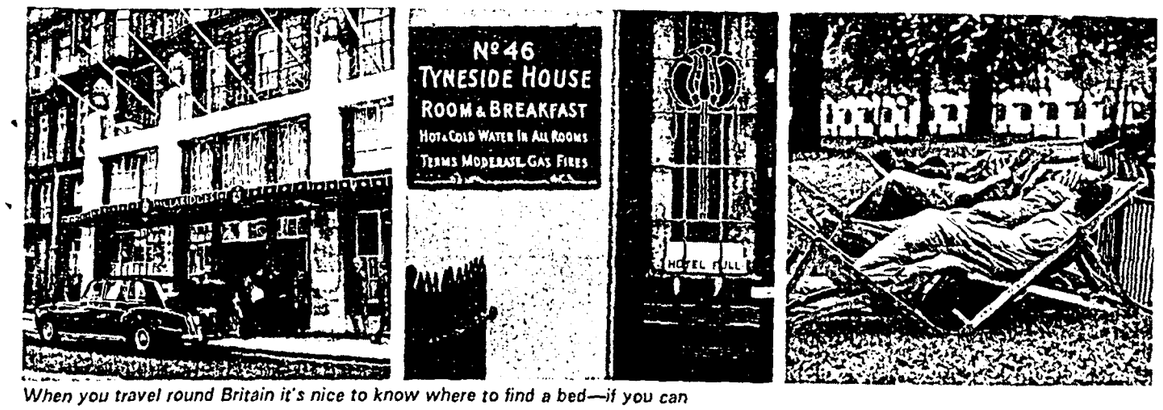
Our Australian exploration company has made a number of very large gas and condensate discoveries in a concession area larger than the entire British sector of the North Sea.

In partnership with other companies we have been granted an exploration licence over three geologically well-situated blocks in Scottish waters of the North Sea.

Some financial highlights

	1971 £000's	1970 £000's
Turnover	355,950	316,498
Profit on trading (less depreciation)	19,063	15,244
Income from trade investments and associated companies	11,613	12,624
Dividends from BP	17,111	17,637
Profit before tax	40,043	40,148
Profit available to the Group	29,528	29,003
Gross dividends: Ordinary stock		
1971 16½p per £1 unit stock	22,182	
1970 16¼p per £1 unit stock		21,845
Earnings per ordinary stock unit	20.93p	20.55p

Future prospects



We now have in prospect a number of significant investment opportunities and, in the spread of our interests in what is inevitably one of the world's great growth industries, we have good reason to look to the future with confidence.

In the first quarter of 1972 group sales have increased: the effect on profitability of depressed prices for middle distillates and fuel oil is being largely offset by emphasis on specialisation within the oil industry and diversification into non-oil activities.

If you would like further information about Burmah Oil, or would like to receive a copy of our Annual Report, please write to the address below.

When you travel round Britain it's nice to know where to find a bed—if you can

information would get back to the tax inspectors. Some saw registration as the thin end of the wedge of government controls, particularly on prices. The introduction of price controls is improbable, but compulsory registration may catch hoteliers under the Trade Descriptions Act if their establishments do not measure up to the details their brochures have given. If the proposals for compulsory price notification get through, it will be a major reassurance for many visitors.

In addition, small-scale hoteliers should gain greatly from the more efficient marketing that an up-to-date register would provide. The ETB is proposing a very simple system, with registrations going through local post offices, and to be held on a central computer, at an annual fee of £3 per establishment. Since it wants to include absolutely everyone, down to the last camping site, there might be as many as a quarter of a million entries—a massive operation. But it is hoped that the registration fee alone should enable the scheme to break even in five years; well before that, revenue will be earned from guidebooks compiled from computer printouts of the register.

The Scottish Tourist Board is in broad agreement with the proposals, but the Welsh want modifications. The Welsh agree with compulsory registration—although they have been running a voluntary system since 1967 to which they reckon to have got a 95 per cent response—but would like to see this tied to minimum standards. They are anxious to avoid giving any impression of official sanction to the seamy end of the market, such as tourist bedrooms that are used as chicken houses in the winter; but, if she meets the minimum standards, they would like to include even the landlady who rents out her front room for a few weeks a year. The Welsh do not like the idea of price lists, claiming that they have never had any problem with late-night or peak-season hotel gazumping. And they reckon that registration should be free, because advertising in guidebooks could cover expenses.

The ETB thinks that if the trade can agree on details during the summer, the Order in Council could be laid during the autumn. Registration could then start next year, and the information would be available to users in 1974. None too soon: the growth rates of foreign tourists coming to Britain are already dwindling, and London may soon have a glut of hotels.

Key indicators: British economy

Retail trade
Some recovery in March from low February level; but sales by durable goods shops down, probably because of holding-off by consumers before the budget.

Consumer credit
New credit extended in the first quarter was £561m, slightly below the levels of the last two quarters of 1971.

Overseas trade
Deficit of £53m in April. Bad results partly blamed on after-effects of miners' strike.

	Month	Index 1963=100	Percentage change on previous month	three months	one year
Industrial production*	February	111.9	−10.2	−10.6	−9.6

BUSINESS *Britain*

Going for the ballot

The Government, after some hesitation and several cabinet meetings, telephoned the National Industrial Relations Court at 6 pm on Thursday evening to ask for a ballot of all railwaymen on British Rail's last offer. This was to give any railwayman not actually earning £20.50 a week the extra money from May 1st (there are not many of them), leaving the rest to wait until June.

The 14-day cooling-off period had passed with the railway union leaders as determined as ever not to budge from their full wage demand, and they decided on Tuesday to start the work-to-rule all over again on Thursday midnight. British Rail cancelled most of its commuter trains running after 10 pm, in preparation for the go-slow which, up to the time the Government had asked for a ballot, had shown every sign of starting at midnight.

The request to call a ballot is a major gamble for the Government. If the railwaymen vote against the latest offer, some impact of the Industrial Relations Act will be lost. If, however, a vote goes the other way, it will be a signal victory for the Government and will help to undermine the militant leaders in every other union.

If all three unions had been registered they could have run the ballot themselves, but only the white collar Transport Salaried Staffs' Association has signed up. So the job will be given to the Commission on Industrial Relations, which has had 200,000 ballot forms and three envelopes for each form ready for some time. The ballot could take about 16-17 days to complete. In the meantime, there would be another cooling-off period. Should the ballot go in favour of the offer, the unions would not be legally compelled to accept it, but it is presumed that they probably would.

If a work-to-rule does resume, its effects will be less serious than they would have been before the cooling-off began. The power stations, which could have been the railwaymen's trump card, as they were for the miners, are no longer as vulnerable. They already have coal stocks that would last nine weeks at normal load.
