At any rate, if a work-to-rule lasts longer than 18 days, the railwaymen would lose more in overtime pay than they would get if their claim is granted in full. If British Rail's chairman, Mr Richard Marsh, took the bit between his teeth and ordered a lockout, it would only take five days for the railwaymen to lose money this year even if their claim was met in full.

Although Mr Marsh has done a first-class public relations job throughout the dispute, he seems to have allowed a howler to appear in British Rail's advertising. When BR was sticking to its original offer of 11 per cent, it placed advertisements claiming that this offer would add £4 to the average pay packet of a railwayman and £5 to that of a driver. But if that were true the offer would have been worth 14 per cent, and the Jarratt offer even more. So it was little wonder that the National Union of Railwaymen also bought advertising space to say that such an offer would suit them nicely. All the unions have made increasing use of press advertising since the postmen first tried it in their strike last year. But it didn't help the postmen much.

NUR executive : facing the music

London Transport

Service pays

London Transport's annual report, published Thursday, shows why the executive felt able to give in so readily to the railway unions' wage demands and pay the full 14 per cent to its men on the underground from the beginning of this month—instead of keeping in line with British Rail's offer. The fall in the number of passengers on London Transport is slowing down and business is looking up. Though so far this year the fall has been a little higher than in 1971, the loss caused by January's steep fare increase was less than expected. This is because, believe it or not, London Transport has been offering a more regular service : normally, public transport companies cut their service when they raise prices, so of course the passengers shy away. Further price increases are now promised to pay for the higher wages.

If it makes designing simpler, why isn't everyone doing it?

Some things are so obvious that it's possible to overlook them entirely. But if you run your own business and you are looking for more efficiency then you can't really afford to overlook the benefits of going metric.

The metric system is simple. That's why so many companies, big and small, are making the change. Already much of Britain's engineering production is metric.

Which is good sense when you consider that 86% of world trade is between countries that have chosen the metric system.

Metric working has already simplified things like design, production, paperwork and storage for many British firms.

If you are responsible for the future of your company start thinking about metrication.

Many are already benefiting from the changeover.

Business is ten times simpler in metric.

Please place my company on your mailing list for regular publications and send me "Going Metric—Check List for Managers."

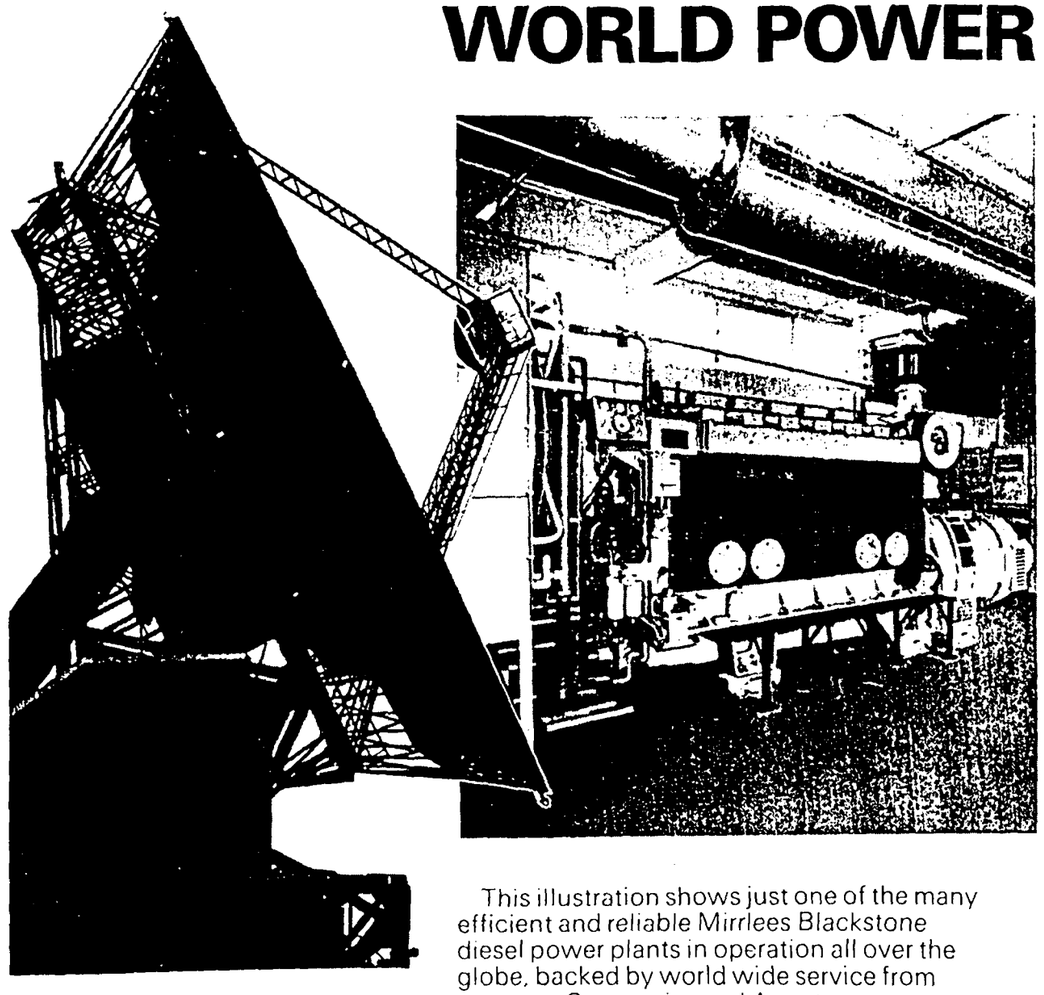
Bank of Montreal in Japan 10 years.

Bank of Montreal is celebrating its tenth anniversary in Japan. Though we were the first Canadian bank to establish ourselves there, our history of helping Japanese businessmen dates back even further. As a matter of fact, all the way back to 1886, when we opened a branch in Vancouver, Canada's Pacific seaport, to serving the flourishing tea trade with Yokohama.



But enough of history. We're in business to help you here and now. With offices in Tokyo. And in Hong Kong. Offices staffed with international banking professionals who can help you capitalize on world-wide opportunities.

Call on Peter Blanar in Tokyo. Hal Hartmann in Hong Kong. Bill Hill in Melbourne. Lin Boynton in San Francisco. Bank of Montreal has over $10,000,000,000 in assets, and 19,000 people in 1,100 offices across Canada and throughout the world. These innovative bankers are standing by. To make the next ten years bigger and better for everybody. Starting right now.

WORLD POWER

Goonhilly Satellite Earth Station has earned an impressive list of 'firsts' for the British Post Office, transmitting and receiving, via satellite, telecommunications and television programmes from many parts of the world. Reliability is better than 99.9% and power supplies are safeguarded by six Mirrlees Blackstone automatic start ERS6 alternator sets each producing 346 kW.

Photograph by courtesy of the Post Office

This illustration shows just one of the many efficient and reliable Mirrlees Blackstone diesel power plants in operation all over the globe, backed by world wide service from overseas Companies and Agents.
K & K Major ranges now have well over three million horsepower from over 1,500 engines in service and more than 7,000 'E' type engines have been installed.

We can supply and engineer complete power stations for operation almost anywhere.
Our experience as a supplier of world-wide power is well worth exploiting.

Diesel engines from 180 to 10 000 bhp
Generating sets from 120 to 7000 kW

Don't let them give you the slip!

Senior management and other important people have a habit of taking off around the world – fast and frequently

To be sure of reaching them you'll need to place your advertisement so that it can travel with them – or meet them on arrival.

If you have confined your campaign to 'local' media you'll certainly miss some important members of your target audience tomorrow – how many did you miss today?

You'll often find THE ECONOMIST in the briefcases of the business jet set and they'll find that it's available in most first class cabins – one of the many valuable passenger services provided by leading airlines.

Journey's end? Well as you probably already know THE ECONOMIST is sold in every country in the world – except Albania.

The people you are after may have to pay for their travel but your advertisement can follow them free. When you buy space in THE ECONOMIST you only pay for the circulation in the UK – £360 for a whole page – so space for your advertisement in those very valuable copies that travelling businessmen read in other countries won't cost you anything.

Be sure of reaching E·M businessmen • wherever they are at the moment you want to reach them – at home or abroad – through THE ECONOMIST.

• The E·M (Economist Magdan) Business man is a person with real status within a company in such that he is invariably involved in the decision making process affecting important corporate purchases and management policies.
(The Economist Magdan Businessman Readership Survey 1971)

For Businessmen

Without Steel Tubes, how would your motor car run?

Of the thousand and one parts that go to make up the motor car, some of the most important are precision steel tubes. Prop shafts, for example, bearings, steering column assemblies and brake lines.

As the largest producers of precision steel tube in the world, we've got the resources to take on anything any customer can give us, and meet the kind of specialist order that other companies can't.

And because our division is cellular (i.e. composed of 26 beady-eyed, entrepreneurial companies) we reckon we're able to offer specialised workmanship and encyclopædic research resources as well as the stockholding facilities of a giant.

We offer all this to the motor industry in Europe and throughout the world.

If you think this kind of set-up could do extraordinary and wonderful things for your company, or simply a sound job rather more rapidly than anybody else, get in touch with Paul Standing our Commercial Director.

Competition for research on small firms

DTI TO AWARD £2,000

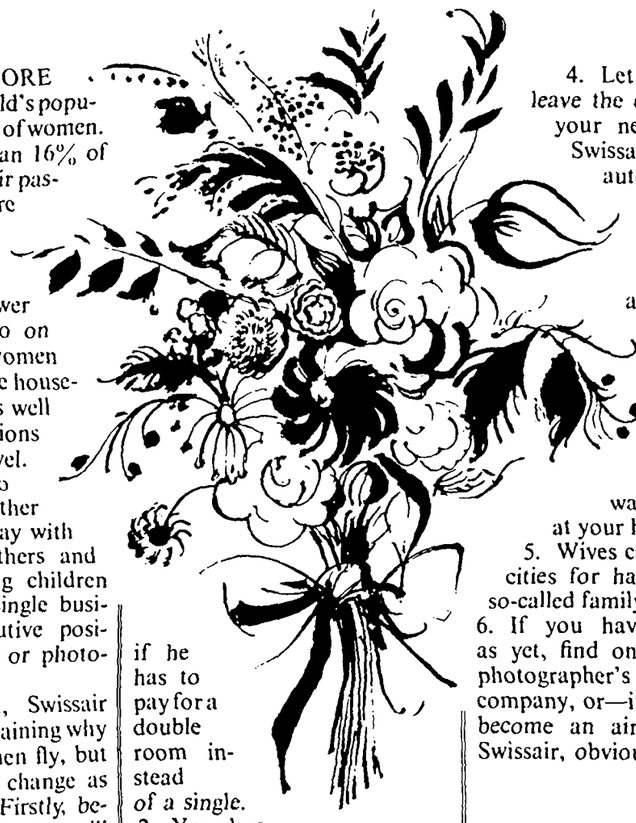
The Department of Trade and Industry announces an open competition for a research grant of £2,000 to be awarded to the best proposal for a six months research project. The research may examine any aspect of the operation, management or exporting activities of small firms in any sector(s) of trade or industry.

Applications are invited from suitably qualified individuals in any walk of life (except Civil Servants) who are currently resident in the United Kingdom.

The successful applicant will be responsible for carrying out the research and for submitting a report to the Department within six months of the commencement of the research, which must have been started by 30th November, 1972. Closing date for entries to the competition is 3rd July, 1972.

Full details and application forms can be obtained from the Department of Trade and Industry, Small Firms Division (2), Room 245, Abel House, John Islip Street, London, S.W.1, telephone 01-834 4422, Ext. 361 or 14.

Conventions have to be convened. But not just anywhere. Take Vienna.



Why is Vienna renowned for successful conferences? Perhaps because of all that experience dating back to the Congress of Vienna in 1814. Or perhaps because Vienna knows how to arrange conferences with atmosphere, how to make life smoother for organisers and participants alike? After all, Vienna is host to a host of conferences – a thousand a year or so. Those contented delegates cannot all be wrong.

Let's convene our next convention in Vienna

{Women come to see. And likewise to be seen.}
Ovid, Ars amandi

Swissair thinks it's high time we saw more women aboard our planes.

SOMETHING MORE than half the world's population is made up of women.

But rather less than 16% of the 4.5 million Swissair passengers in a year are women.

Now of course there's a logical explanation for this: Fewer women than men go on business trips. And women who have jobs and are housewives and mothers as well naturally prefer positions that don't call for travel.

So the women who travel by plane are either wives flying on holiday with their husbands, mothers and grandmothers visiting children and grandchildren, single businesswomen in executive positions, film actresses, or photographers' models.

Actually, though, Swissair isn't interested in explaining why fewer women than men fly, but in bringing about a change as quickly as possible. Firstly, because then more passengers will be flying. Secondly, because women enjoy flying too. Third, because then the men will enjoy flying much more.

So here are a few hints for women who would like to fly more often:

1. Your husband's expense account is hardly burdened at all if he has to pay for a double room instead of a single.

2. Your husband might spend more in a strange city alone than your ticket would cost.

3. You can take the children along. They cost almost nothing extra up to two years of age; through to 12, half fare.

4. Let your husband leave the car at home on your next holiday, fly Swissair, and hire an automobile at your destination. In fact there are some very reasonable package arrangements with hotel and everything. Drop in at the next Swissair or IATA travel agent, and wave the folders at your husband.

5. Wives can go to certain cities for half price on the so-called family plan.

6. If you have no husband as yet, find one or become a photographer's model, start a company, or—if you're Swiss—become an air hostess. With Swissair, obviously.

Lonely Hearts

We are a group of well-preserved, lively DC-8s, DC-9s, DC-10s, Coronados, and Jumbo-Jets, looking for ladies of any age who would be welcome passengers sharing the heights and depths of our flights to happiness. Contact through Swissair and IATA travel agencies. Absolute discretion assured.

Highlights of the Year 1971

	1971	1970
Capital, published reserves and unappropriated profit	£7,830,271	£6,729,043
Current, deposit and other accounts	£106,334,199	£80,656,094
Group profit before taxation	£2,509,355	£2,044,986

Extracts from the annual statement to shareholders by the Chairman, Mr. A. D. Chesterfield, C.B.E.

The Common Market has already brought to its members increased prosperity and greater growth. We look forward to sharing in the increased opportunities which joining the European Community will undoubtedly provide. In this connection we have formed an International Mergers Service with the participation of leading banks and institutions in Europe and in the U.S.A.

The International Department enjoyed an extremely active twelve months arranging and participating in transactions in 22 countries. In spite of greatly increased competition, the profits of the department were substantially in excess of those for 1970.

The Investment Department gained many new clients during the year and the funds under management at the year end were well in excess of any previous figure. In the Corporate Finance Department, in addition to arranging financing and acquisitions for many existing customers, four new issues were sponsored, all of which were well received by the investing public.

The substantial improvement in our results is gratifying. All departments of the bank have been busy.

Continued from page 94

Despite the improvement so far under Sir Richard Way's chairmanship, London Transport still has no reason to be complacent. It shies from any radical change in service to meet the rapidly changing pattern of demand : its current minibus experiment has only four buses. Recently a private operator took over a route discontinued by the Midland Red, and turned it into a successful minibus operation, which shows in which direction bus services should be heading. London Transport is also still dragging its feet over marketing itself properly, although a report it prepared as a consultant to the American Department of Transportation was devoted chiefly to marketing.

Rightly, the annual report points to the need to stagger hours of work. The decline in blue-collar jobs in London means the rush-hour peak is becoming ever more acute. A go-slow on the underground would have been a nice test of commuter habits, as it was on the railways. Southern Region's morning peak runs from 7-10 a.m., but two-thirds of that traffic is concentrated into 60 minutes. The same happens on the buses and tubes. The cost of providing enough capacity for the peaks (which will be empty the rest of the day) can exceed £20 a week per passenger. In the week when the railways were last working to rule, commuters were asked to stagger their working hours ; and they are now being asked to do so again. But the peaks will never disappear entirely. The only way that London Transport can learn to live with them is by asking its staff to work more flexible hours. Now it has to maintain two separate sets of crews for the morning and evening peaks, which could easily be worked by one lot of men. Hence the inevitability of further rises in fares ; they could hit buses, where 80 per cent of the costs are labour, very hard.

Dockers

Backdoor takeover

The dockers and their employers have not met since 28 days' notice of a national dock strike was given nine days ago. A settlement looks impossible, unless the Government cares to step in and mete out the subsidies it gave the shipyards. That may be just what the dockers are after. Mr Maurice Macmillan has been active trying to reach a compromise over

Walk out at Seaforth—and back again

who is going to stuff containers. The Seaforth container dispute was settled in Liverpool on Wednesday by the employers there offering a lot more money. But containers are only a small part of the dockers' demands.

The other demands, a doubling of the fallback pay when the dockers are temporarily not needed and an increase in holidays to four weeks a year, are ones that most employers simply cannot afford to meet. If they increase their charges, they will force more shipowners to use containers. A large number of employers are in danger of going out of business anyway. Pushing more of them over the brink could achieve by the backdoor what nationalisation of the ports, scotched at the last minute by the Conservative victory in the general election, was supposed to do by the frontdoor : place all the dockers under one employer, the Government.

The syndicalist influence is stronger than ever in the docks now, and the usual people are cashing in. There has been a marked increase in the number of visits to the docks from the King Street headquarters of the Communist Party, and some previously inarticulate shop stewards have suddenly learned an unwanted eloquence. One disturbing sign is that many dockers in the meat trade, who had responded to appeals to raise productivity to normal levels, have found black marks on their doors ; this has naturally terrified their families.

Mr Jack Jones, general secretary of the Transport and General Workers' Union, has long been an advocate of workers' control. His chief docks official, Mr Tim O'Leary, argued wryly on Wednesday

> I'm an admirer of the old Macmillan, who saw it was not a bad thing to have a few healthy bankruptcies.

Leaving the Government to step in, presumably ? Mr Jones is having some trouble with the haulage members of his union, who do not want their jobs taken away by the dockers' demands.

At the court

Friday's verdict

The National Industrial Relations Court has put off until Friday morning the decision on how far it will hold trade unions legally responsible for the actions of their shop stewards. The unions themselves recognise this as vital and, having originally boycotted the court, their lawyers were much in evidence this week.

The hearings were yet another round in the dispute in the Mersey docks. The two haulage firms, Heatons and Craddocks, were claiming yet again that the Transport and General Workers' Union was in contempt of court because TGWU shop stewards in the docks were still organising the blacking of lorries in defiance of the court's order. On the two previous occasions when the TGWU was accused of contempt it was fined £5,000 and £50,000.

This week the TGWU's lawyers pleaded that the union had told its shop stewards in the docks to stop the blacking, and could not be held to be in contempt if the stewards did not take its advice. Moreover, they pleaded that if the union were to discipline or sack the stewards this would not halt the blacking but would deprive the union of what influence it now had in the docks. They also claimed that, since the shop steward system was introduced in the docks, the number of strikes has dropped.

But Mr Richard Yorke, QC, counsel for the two haulage firms, pointed out that the union had restricted itself to advising, whereas on other occasions when union rules were disobeyed it had taken disciplinary action at once, and severely. He also claimed that the Mersey union official sat in on the shop stewards' committee and had said that he was 100 per cent behind the shop stewards' actions.

The outcome will make legal history. If the court accepts the union's argument, employers may find it harder to sue unions for unofficial strikes, and

might have to concentrate on taking individual shop stewards to court—as two container firms did on Thursday. Panalpina (Northern) and Panalpina (Services), based at Hull, named a shop steward from the docks ; they got a temporary injunction to stop the blacking until the court gives its judgment on Monday.

Now that the ban on unions appearing before the court has been lifted by the TUC, simply because the size of the fine on the TGWU made it inevitable, the main rumbling has continued to be on whether or not to register. By a margin of less than 1 per cent, Mr Clive Jenkins's Association of Scientific, Technical and Managerial Staffs failed to get the two-thirds majority needed to take the union off the register, so it stays on. Mr Jenkins was quick to claim that the union would go on behaving as if it were deregistered. But that will not impress other unions, since ASTMS will get all the basic advantages of deregistration, such as tax relief, limitation on damages and freedom to strike without fear of court action. And Mr Jenkins is waiting to hear the verdict on Monday of his—and the country's—first case of a man claiming under the new act to have been wrongfully dismissed.

A protest movement has also been growing within the National Union of Journalists, which had decided to deregister. Since a ballot of NUJ members gave a clear majority for registration, it is hardly surprising that 29 NUJ branches have demanded a recall of the NUJ conference which voted to reverse the ballot decision. Like many unions, the NUJ conference represents militants more than membership.

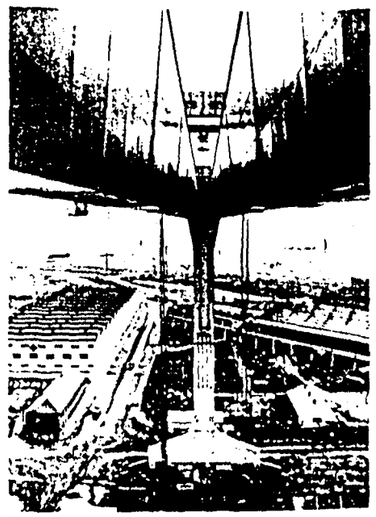
Post office

Image-polishing

Hopes are rising in the post office that the Government will agree to write off its accumulated deficit—now standing at £114m—in the autumn ; if the Government does not, another sharp rise in the charges for letters must come. Losses on the postal service have been running as high as £73m a year ; another loss was almost certainly made in the financial year just ended.

But in other ways the postal service is beginning to look in rather better shape. The Opinion Research Centre has just completed a 50,000-letter survey for the post office. It showed that 92 per cent of first-class letters were delivered by the next day. Other surveys, carried out by consumer organisations, have shown nothing like these results : they have reported only 82-84 per cent of 3p letters arriving on time.

ORC's sample was much bigger than those of the less favourable surveys, and its investigation is said to have been conducted more "scientifically," which will ruffle some feathers. It was, as it happens, carried out on actual mail rather than by the deliberate posting of trial letters—although it is hard to see why this should have made a material difference. Greatly encouraged, the post office expects to get the success rate up eventually to 95 per cent. But with more than 10 billion letters a year, this still means more than 0.5m late letters.



Shipyards

Gimme, gimme

The Government's help to shipbuilding is leading to claims for similar treatment elsewhere. Now the shipyards' suppliers are asking for it. They point out, accurately, that the Government is subsidising the builders for work that the suppliers have actually done. The builders are to get a 10 per cent subsidy on this year's turnover, largely a sop to those good firms that stayed out of trouble ; but two-thirds of that turnover is bought in from outside, so in effect the subsidy for the builders is a third of the added value of their work, almost as much as in American shipbuilding.

The irony is that a subsidy to suppliers might not be that much help. If it is given, their men might demand an inordinately large pay rise. The expectations of the shipyard workers were raised so much by subsidies that they may now turn down as too small the 30 per cent pay increase over two years that they have been offered.

The Government's aid, probably totalling £200m, will still not set the industry on its feet. The £49m investment in Harland and Wolff, announced a week ago, will increase the yard's throughput to that of the modern yards in Japan and elsewhere in the Far East, but the number of workers to be employed is two or three times what it would be in Japan, and at higher wages. Steel prices are lower in Japan, and so are the prices of a lot of other marine equipment. If Harland and Wolff is supposed to be Britain's most modern yard, what hope is there for the others ?

Belfast, emulating Japan

Other shipbuilding nations are losing their patience with Britain's subsidy programme, which is jeopardising attempts to keep down international subsidies, the only measure that will cure the permanent over-capacity of the industry. The common market is trying to get Japan to cut back on its investment programme, but the Japanese, with their eye on the British, are not having any of it. Yet forecasts of over-capacity are getting worse, not better. On Tuesday Britain's biggest builder, Swan Hunter, predicted gaps in its order book next year. Even the Japanese are quoting prices at which they will make a loss.

It might be better, though heretical, to pay people not to work than pay them to build ships nobody wants. To make British shipbuilding competitive would probably cost the temporary loss of 50,000 jobs. The £4,000-a-head subsidy being paid to keep them in work could be generous severance pay, and would make the long-term prospect for both employment and real wages better.

Aid for regions

Blank cheque

The Government's Industry Bill, promised at the time of the budget, was published on Thursday afternoon. It amounts to the Government asking Parliament to write it a blank cheque to give money to industries in trouble : whether they are in the sick regions, where two-fifths of the population live, or outside them. The Commons is none

Recovery – and confident of further progress

"Thanks are due to management and all staff for a very special effort in 1971"
—Chairman

Peter Robinson,
Managing Director

Extracts from the review of the Chairman, Sir Charles Hardie:

I am pleased to report that the planned recovery continued at an accelerated rate in the second half of 1971. Your Directors feel justified in recommending a dividend for 1971 on the ordinary shares of 5 per cent.

The turnround is highlighted by the movement in profit before interest and taxation from a break-even point in 1970 to a profit of £3·6 million in 1971. Interest charges have been reduced by £269,000. The result is a pre-tax profit of £1·48 million.

The Printing companies showed a significant improvement in the second half of the year. I am happy to report that the Packaging and Paper Group also made considerable progress in the second half following the effects of the postal strike in the first half. The Publishing Divisions began to trade profitably towards the end of 1971, and ILSC is operating profitably.

Particular attention has been paid during 1971 to the question of liquidity. Net current assets have improved by over £6 million. Credit balances at the bank total £2·9 million against a large overdraft of £3 million in the previous year . . . these improvements augur well for a reduction in future interest charges.

1972 has started well. It is disappointing that the results for the first half of 1972 will be influenced by the power cuts which cost the Corporation £400,000. The Board recognises that the profit recovery in 1971 still leaves the return on shareholders funds at an unacceptable level. I believe that planned recovery which started last year will continue and your Board is confident of making further progress in 1972.

The British Printing Corporation Limited

too happy about this trend towards subsidising private industry. A sub-committee of the Select Committee on Expenditure is writing its first report on the subject now, under the chairmanship of Mr William Rodgers. But the Government feels it has no better solution to regional unemployment than the pumping of money into areas where no sensible entrepreneur would invest his own cash.

Ulster was being dealt with separately on Thursday. Mr Willie Whitelaw announced that he was revising the scheme, which died when the Stormont parliament was wound up, for a special finance corporation with an initial grant of £50m to spend in the province. But for the rest of the country, the whole armoury has been brought into action : the special help for shipbuilders described in the previous note ; another £300m added on to the revolving credits available to British shipowners who buy their ships here, bringing the total up to £1 billion ; 20 per cent grants for plant and buildings, rising to 22 per cent in special development areas (Glasgow is an obvious example). The whole package will cost something like £200m-£250m a year for the regions alone, with provision for what could be another £75m a year by the mid-1970s for industries in trouble outside them.

This recognises that industries do not have to be in the development areas and in specially depressed regions *before they run into trouble*. Some of the industries already promised government help and plainly much in need of rescue, like machine tools, have their factories in normally prosperous areas. The machine tool industry has been promised around £10m of help from the Government in the form of special orders, but the Bill makes no specific reference to it. This kind of help is covered by the general umbrella that the bill spreads over the shorn lambs of industry. But their problems are specific, local and usually to do with errors of management. The big problem worrying the Government is unemployment in the regions. It is likely to get worse.

One pointer was the National Coal Board's announcement that it would cut its white-collar staff by 10 per cent in the coming year ; it could cut off 3,000 jobs. Regional headquarters are going to be merged in Wales and in Scotland. The board says that it is merely trimming its tail down to the size of its much smaller industry, with 150 pits shut since 1967, but the arithmetic makes it look as if more pit closures are planned. Assurances were foolishly given at the end of the miners' strike that no men would be put out of work, but girls in offices apparently do not count. Anyway, these assurances cannot last. Once the board has caught up with the backlog of orders accumulated during the strike, which will take it to the end of this year, it will start looking at its heaviest loss-makers among the pits with an eye to closing them ; a lot are in Wales and Scotland. The Government does not see its regional plans having any visible effect on employment within the life of this Parliament, but it may have to work very hard even to keep things as they are.

Economy

Keeping Tony waiting

It seemed like old times. Thursday brought the news that Britain had an overseas trade deficit in April of £53m. This followed a deficit of £81m in March and one of £33m in February. But nobody tore their hair, and sterling did not take a battering in the exchanges. The figures have been confused by the miners' strike, and although it may be stretching things to blame the strike for the lowness of Britain's exports in April (£748m compared with £770m or so last summer), the possibility is there. More to the point, even though the visible trade deficit averaged £55m a month between February and April, invisibles brought in over £50m a month (much more than in the pre-devaluation days), or so the Treasury thinks. So Britain's current overseas account was still roughly in balance in the past three months. Even so, all the signs are that exports are levelling off and imports rising. The good times may be over for British trade.

But it is still the domestic economy that is Mr Barber's chief concern. The Treasury, in its mid-month assessment, confirms that domestic output in the first three months of the year was lower than in the second half of 1971. Again, this can be blamed on the power cuts —and on consumers holding back before the budget. But if this week's retail trade figures for March prove anything, it is that the Chancellor was well advised to go for a massive dose of reflation. Shoppers spent only 0.9 per cent more in the January-March quarter than in the previous three months (after allowing for seasonal variations) ; and this meant they actually purchased 0.7 per cent less. The buying of durables kept up, but that of food went down 1½ per cent. Consumers' hesitancy in these months is confirmed by the pattern of hire purchase — 2 per cent less in the first quarter of this year than in the Christmas quarter. Nor is there much evidence of a decisive upswing in spending over the past few weeks. The public still seems to be waiting, although quite for what no one knows, and that goes for Mr Barber too.

Computers

ICL taps America

The quickest and surest way for the Government to put International Computers on its feet—which it is going to have to do soon, anyway, to the tune of many millions of pounds—would be to put up the money for it to buy a large American computer business and thus get into the world market by the back door. Since this is something that Whitehall is apparently not prepared to contemplate, ICL is doing the next best thing and buying American executives by the brace. It is only two years since Mr Saul Steinberg, the American whiz kid who founded Leasco, outraged much of the British establishment by suggesting that a man with American experience be brought in to head ICL. When the outcry had died down, ICL did just that last February and quietly appointed Mr Thomas Hudson, a former executive of its arch-rival, International Business Machines, as chairman.

On Thursday Mr Hudson took this further by appointing Mr Geoffrey Cross as managing director. Mr Cross, who until Wednesday had been working for Univac, was born in Britain but has spent the last 14 years mostly in America, and is now an American citizen. His predecessor, the battle-scarred Mr Arthur Humphreys, moves into the more peaceful reaches of the deputy chairmanship.

Mr Cross at least appears to think like an American computer executive. He said on Thursday that if he had been working for ICL at the time when the RCA Corp (formerly Radio Corporation of America) announced its withdrawal from the computer business, he would have advised buying RCA's computer division. Many people, as it happens, wondered at the time why ICL didn't. The company which did was Univac.

The 70 Reviews of the 'QER service'

Every quarter THE ECONOMIST INTELLIGENCE UNIT publishes 70 completely separate Economic Reviews (QERs). Together the QERs cover 150 different countries and provide an incomparable world-wide service of business and economic data backed by practical comment and statistical analysis.

An annual subscription to one review of the 'QER Service' costs £15 (US $40), airmail postage £2 (US $5) per review.
Generous discounts are offered to subscribers to more than five reviews – over 40 per cent for all 70.

When to shoot to kill

Not how one hijacker thought it would end

The shoot-out at Lydda airport on Tuesday afternoon between Israeli troops and four armed Palestinians holding 100 people hostage in a hijacked Sabena airliner was beautifully planned and executed by the Israelis and, in its way, was wholly successful. The two Palestinian men are dead and one of the girls with them is seriously injured; the other girl is under arrest. But five passengers were shot and one of them is critically ill.

There may have been no other way to thwart the hijackers and save the lives of those on board, but the casualty list explains why most western governments are reluctant to use force when innocent lives are at risk. The Americans have shot and killed several hijackers, but only when most other people were out of harm's way. The Palestinians regard themselves as in a state of war with Israel—and that probably encouraged the Israeli authorities to storm the aircraft in the way they did. But it is not an example other governments should necessarily follow.

There is a clear distinction between the kind of hijacking that is close to guerrilla warfare and the other, recent spate of hijackings in which the object has been frank extortion. In the Arab hijackings the men are generally prepared to shoot it out without mercy or regard for civilian life. But the extortioners are bargaining lives for money, and, however much the hijacker may demand, it is hard to argue, as the former-astronaut-turned-airline-executive, Mr Frank Borman, seemed to be doing after a hijacking at Dulles airport at the weekend, that the chief aim of the authorities should be to execute the criminal. So airlines, with a wry face, pay up on demand, knowing that by doing so they will encourage a spate of imitators but knowing also that, to date, only three hijack attempts have got away with the money. But it is three too many.

Once an armed man, or a man who merely claims to be armed, is on board an aircraft, there is little that anyone can do but agree to whatever he asks. As the majority of hijackers are mildly deranged, it is safer to humour than to antagonise them, and the same holds for political refugees too. The first-ever reported hijacking, in 1930, was carried out by Peruvian refugees fleeing the country, and since then there have been regular waves of anti-communists leaving eastern Europe, left-wing sympathisers going to Cuba, and Latin Americans going almost anywhere.

In all, there have been getting on for 350 hijackings, with a peak of some 70 reached in 1969 alone. The rate went down after airport precautions were tightened, and last year the Americans were congratulating themselves on stopping 14 out of an estimated 25 attempted hijackings in the United States. The world total was probably not much more than 30 in 1971, although estimates are difficult to reconcile. But now all that has changed.

There have been at least 21 hijackings so far this year; they are listed on page 111. They include the usual measure of loonies, but there has been an alarming increase in armed hold-ups. This follows the first-ever successful parachuting of a hijacker out of an aircraft, ransom in hand, which took place over Denver last November. To the fury of the American authorities he—or the writer of a letter on the I-have-only-six-months-to-live theme claiming to be him—became a folk hero, sparking off a host of imitations and a rash of interviews in which airline staff and others gave away most of the secret methods used to detect hijackers before they get on board. In more ways than one, the American authorities are exceedingly annoyed with the airlines because the rate of hijacking could

Marine Midland's new Paris branch is not hard to find.

Marine Midland has just opened a new branch at 17 Place Vendôme, an address well known to both American and European businessmen. Now we can offer your business complete banking service.

Including: Local currency or Eurodollar financing. French franc or dollar-deposit accounts. Introductions to local businessmen and Government officials. Remittances in all free-world currency. Foreign-exchange transactions. Facts on taxes, labor, credit and investments. As well as import-export opportunities. The kind of help only a Full-Service bank can give you.

Marine Midland Bank—New York is the largest bank in the $9-billion Marine Midland banking system with 274 offices in 177 cities and towns throughout New York.

When you're in Paris, drop in and visit André J. Plagnol and Aimé P. Ferzan, vice presidents, at our new address (Tel. 742-5397).

Marine Midland can steer your business on a profitable course.

Charles Hill of Bristol

Future trend encouraging

In his statement to shareholders, contained in the Annual Report and Accounts for the year ended 31st December 1971, Mr. Richard Hill, Chairman, referred to the changes in the size and shape of the Group which have continued unabated. The largest gave Bibby Line Limited a 51% controlling interest in Bristol City Line. The strength of the company's present position is very largely due to the terms of this Agreement and the 1971 accounts have been drawn up to reflect its impact. The £1,200,000 received will be applied as additional working capital for the Group, particularly in the section dealing with Civil Engineering and Property Development.

The profit for the Group in 1971 of £519,069 after special items and having accounted for depreciation of £536,619 is much better than seemed likely at one time. The sum attributable to Ordinary shareholders is substantial. Even after providing for the larger dividend we thus have a useful addition to our Group Reserves.

If the results of the subsidiaries, in respect of which the controlling interests have been sold were excluded, the remainder of the Group achieved a record trading profit in 1971 of £313,753 against £160,170 in 1970 and this trend is most encouraging for the future. There seems no reason to expect an unsuccessful year for the Group in 1972.

SHIPSHAPE AND BRISTOL FASHION

CHARLES HILL OF BRISTOL LIMITED
Albion Dockyard, Bristol BS1 6UY.

The tally this year

	What they wanted	What happened
January		
Punjab	Pakistan military spotter plane hijacked to India	Pilot shot and killed by hijacker
San Francisco	Two Negroes hijack jet	Land in Cuba
Dallas	Hijacker demands $1m ransom	Arrested
Las Vegas	Hijacker demands $50,000 ransom	Arrested after parachute drop
Poughkeepsie	Hijacker demands $200,000	Shot dead
Kennedy airport	Hijacker demands $300,000 and release of, among others, Angela Davis	Shot and wounded
Amman	Palestinian hijacks Jordan jet	Arrested
February		
Aden	Five Palestinians hold Lufthansa jet	German government pays $5m ransom
March		
Miami	Two hijackers shoot and injure pilot and mechanic of small seaplane	Land in Cuba
Rome	Woman hijacks jet to Munich	Arrested
April		
Jakarta	Hijacker on Indonesian plane	Shot dead
Denver	Hijacker demands $500,000 ransom	Arrested after parachute drop
San Diego	Hijacker demands $500,000 ransom	Arrested
Los Angeles	Hijacker demands television time to plead case of Mexican-American poor	Arrested
Geneva	Hijacker demands to land in Rome to see Pope	Arrested
Palm Beach	Hijacker demands $500,000 ransom	Arrested
Prague	Two hijackers shoot and injure co-pilot	Political asylum in west Germany
May		
Bulgaria	Four hijackers on Turkish airliner demand release of Turkish political prisoners	Granted political asylum
Dulles airport	Hijacker demands $300,000 ransom	Parachutes over Honduras
Salt Lake City	Hijacker seizes plane	Landed in Cuba
Vienna	Four Palestinians hijack jet to Lydda. Demand release of 300 Palestinians under arrest in Israel	Two shot dead, one injured, one arrested

become negligible if the right precautions were taken.

But nowhere in the world, except in countries like Israel exposed to special risks, are airlines willing to take the sort of steps needed. The airlines carry something like 350m passengers a year, which they could not possibly do if each passenger were properly scrutinised before boarding. In America, President Nixon has now made these precautions mandatory on the airlines, with some remarkable results. During three weeks in February, when special measures were in force, the sky marshals picked up 1,000 suspicious people and stopped 189, or nearly 20 per cent, from joining their flight. They arrested a total of 203, of whom 70 were carrying guns and other weapons, and they removed 1,457 "potentially dangerous articles" which ranged all the way from scissors to arrowheads.

Yet, barely a month later, three separate airlines let hijackers board who ought to have been detected by any of the screening methods meant to be in use. The airlines have tacitly decided that the occasional hijacking is preferable to losing public goodwill.

Japan

It's shunto-time

Tokyo

Now is the season of the shunto, or spring wage struggle, in which the Japanese unions wrest what they can from their employers. This year, in the face of a recession that has cut the Japanese growth rate to 5 per cent in real terms, the unions are asking for a 15 per cent rise in basic pay, which by Japanese standards looks wildly inflationary. Each year the Japanese unions select a target industry on which they focus their wage demands and apply the settlement they get across the board. This year the railways were chosen and, after a short struggle, the workers have been awarded 15 per cent, an extra £3 a week on basic pay.

Now the seamen are trying to get the same, according to the accepted practice, but their employers are holding firm. The result is a go-slow which is gradually throttling the flow of goods through Japanese ports. Some crews are on full strike, and on Tuesday 79 ships were stuck in port. Another 430 vessels, used on the local coastal routes, were being worked at half speed with nobody turning up for night duty.

If Japanese industry generally comes to accept the 15 per cent wage rise, average cash earnings will be close to £30 a week, plus all sorts of traditional fringe benefits thrown in. In the wealthier industries men's earnings are already closer to £50 a week. If it were not for huge increases in productivity, stimulated by the massive investment of the past 20 years, wages of this sort would be rapidly pricing Japan out of its most successful markets. To date, however, productivity has outstripped the wage settlements, although in the textile industry Japan is already too pricey for its Far Eastern competitors.

The unions are expected to get their way, but not too easily. Although the rate of wage increases has been pushed down from last year's 17 per cent, the current settlements are, in the opinion of most Japanese businessmen, especially inflationary when the long-term growth rate seems to be slowing.

Gold

All go

After gold touched an astronomic $54 an ounce on Tuesday in London, anyone with half a memory might well assume another judgment day for world currencies was on hand. But this time the gold-buyers are not looking at it as international money. Indeed, the latest and most dramatic jump in the price has come in a week that started with the formal declaration of the new exchange rate of the American dollar, which revalues monetary gold at $38 an ounce in place of $35. And yet this change, which Mr John Connally, America's Secretary of the Treasury, kicked against so hard for so long, caused not a flicker of interest in the gold markets, although it destroys one of the old arguments of traditional gold hoarders that any change in the official price, when it came, would be a hefty one, probably not stopping short of doubling.

So why has the free market price risen 50 per cent in under two years and all of 10 per cent in the past two weeks? The quick answer is that gold has become a commodity to be bought and sold like any other, with buyers now foreseeing future demands

Hardly a hurdle, John

for its industrial use (which is chiefly in jewellery) outstripping supply. But the biggest factor in the recent price upsurge has been a sudden shortage of new supply : in the first three months of this year South Africa produced 600,000 ounces less than in the same months last year. Since South Africa has reported a slight increase in its reserves, there is the sneaking suspicion that some of the shortage in the market might have been deliberate. Whether that was so or not, with industrial demand now normally taking up most of new production, it needs only a small reduction in supply, especially when it is coupled with a small increase in demand, to rock the price. And political uncertainties in Germany and Italy, as well as in south-east Asia, did bring in that extra marginal buying.

What will happen to the price next ? Dealers are wary about the short term after such a steep climb, but there are a lot of longer-term bulls around. Some have a direct interest in being so : for instance, Consolidated Gold Fields, in a new report, argues that the growing gap between the quantity of gold used for fabrication and new mine production will have to be brought into balance by a rise in the gold price to about $85 an ounce by 1980. At least one London bullion dealer was prepared to go to $100, and sooner.

But how can the British or American citizen, forbidden by law from holding private stocks of gold, benefit from all this bullish talk ? Buying equity in gold shares (which have already risen on average by 45 per cent since the start of the year) is the only answer unless he is prepared to try the Indian trick of buying his wife some hefty gold jewellery. Gold shares, however, are extremely sensitive to any fall in the free market price, and in the short term, therefore, are best avoided. If the price remains near its present level, however, most South African mines will be making record profits.

The real gainers from the present boom are both governments and individuals with large hoards of gold. Curiously, the higher price of gold will probably encourage them to increase their holdings rather than take their profits.

Air fares

Ice cracking

With much creaking and grinding, the system of fixed international air fares is beginning to crack up like an icefloe in thaw. On Thursday and Friday, the International Air Transport Association was meeting, reluctantly and under protest, to rubber-stamp a decision taken independently by the British and Australian airlines to cut fares between their two countries from the present £317 one-way to a more reasonable £196. Under normal conditions, every airline along the Far East route would have expected a say in settling these fares. But times have not been normal for two years or more ; with charter airlines walking away with the cream of the business and all its growth, scheduled operators like the British Overseas Airways Corporation are in open revolt against a system that allows other, stuffier airlines to continue to exercise a veto over the fares it shall charge.

They came no stuffier than Australia's Qantas until BOAC lost patience last year and began to run services (under the fancy name of "exempt charters") to such places along the route to Australia as Singapore and Kuala Lumpur for £85 one-way (the timetables still show the standard fare as £233). From there, it was possible to pick up a scheduled flight for the last leg of the trip to Australia and show a sizeable saving. Within the year, Qantas's nerve had broken, and the new rates are the result. They, too, will have a fancy name that fools no one. But they raise the whole issue of what will happen to other fares along the route, to Tokyo, for example, where the one-way fare is more than £297. Wise travellers destined for Japan will book themselves to Sydney on a flight that refuels at Tokyo and simply walk off the aircraft when it stops there, saving themselves £100.

A move to loosen fares is also taking place on the North Atlantic. A meeting in July is intended to bring scheduled fares down to levels where they can compete better with charter rates of around £40, and sometimes as low as £20 one-way. Not many people expect that it will ; and if it does not Aer Lingus, for one, is making contingency plans for a special low scheduled fare across the Atlantic from Ireland. The idea that was once anathema to many airlines, of a cut price for tickets booked three to six months in advance, is much less unpopular than it was because it looks like the only acceptable alternative to the present system of selling charter tickets to "clubs," most of which are now wholly fictitious. But there is going to be a fight here between the Europeans, who want to make the cheap fares as difficult to buy as possible, and the British who want to make them easy.

The point to watch is the British brief against setting these Early Bird rates at any fixed level. The intention is to allow the travel agent who retails them to charge whatever he thinks the market will bear, and tickets will vary in price from agent to agent. This will be a wildly unpopular proposal, but it could be the beginning of the end of air fares as they have been known since the war.

Key indicators: world commodity prices

Sisal's soaring

After years in the doldrums sisal suddenly spurted 10% this week to £97 a ton. The rise has been caused by droughts in East Africa which have substantially reduced the expected crop. At these prices, sisal, which is used mainly for binder twine, becomes uncompetitive with synthetics. Producers therefore will get no benefit, only long term loss.

STORA KOPPARBERG

Increased steel production. Lower pulp shipments

The Swedish steel, forest and power company Stora Kopparberg, parent company of Stora Kopparberg Ltd., London and Stora Steel Ltd., Lye, held its G.M. in Falun on May 10th. The following are details of the report presented by the Board of Directors.

Market trends

In 1971 steel production in Sweden amounted to 5.27 million metric tons (4 per cent less than in 1970), of which so-called specialty steel accounted for 1.41 million tons, a decrease of 10 per cent. Steel exports totalled 1.35 million tons valued at Skr 2,560 million. Specialty steels accounted for 35 per cent of the volume, but 70 per cent of the value, of these exports. Swedish mills supplied 2.1 million tons of the commercial steel delivered in their home market, with 1.5 million tons coming from foreign suppliers. Sweden's production of specialty steels, 60 per cent of which was exported, was valued at approximately Skr 3,000 million. Imports of specialty steel increased, mainly due to a sharp rise in deliveries of stainless steel from Japan.

There was an ample supply of raw materials and prices declined. Stora Kopparberg's coke requirements were covered at successively lower prices. Alloy prices declined and toward the end of the year nickel could be purchased at prices substantially below official quotations.

Production capacity in the pulp exporting countries exceeded market demand by about 25 per cent, necessitating cutbacks in production. Despite this, mill inventories rose in all the producing countries. Prices for pulp qualities produced by Stora Kopparberg were steady throughout the year. Since, however, practically all sales are made in dollars, pulp producers incurred substantial losses as a result of changes in dollar exchange rates.

Newsprint production capacity also exceeded demand. While the excess was not as striking as in the case of pulp, some restrictions on production were necessary. Certain minor price increases could be posted for newsprint as well as for magazine paper, fine paper and board.

Steel production

Stora Kopparberg's production of iron ore concentrates totalled 937,000 tons (in 1970: 894,000 tons).

Output at the Domnarvet steelworks reached the million-ton mark, 6 per cent higher than 1970. This included 55,000 tons of hire-rolling. Sheet and plate accounted for 65 per cent of the output.

In a memorandum to the Franchise Board for Environment Protection the Domnarvet Works outlined a comprehensive program for eliminating air and water pollutants. The total cost of the measures to be taken during the next few years is estimated at Skr 35 million. Much of the equipment to be used in this program has already been ordered.

In view of the growing demand for shaped steel used in the construction industry, it has been decided to install a second production line for galvanized and plastic-coated steel at Domnarvet.

There was substantial interest in the new segregation-free powder steel produced at Söderfors on a pilot scale during 1971. Due to delays in the delivery of certain equipment parts, full scale production of the new steel could not get under way until early in 1972.

Forest products

Favourable felling and logging conditions resulted in lower than estimated costs for timber from Company forests and also led to large offerings of contract timber. Fellings in Company forests produced 1,760 million cubic metres and fellings of purchased standing timber accounted for an additional 368,000 cubic metres. The yield from Company forests was equal to 4.1 cubic metres per hectare.

Shipments of newsprint and magazine paper totalled 345,000 tons, an increase of 7 per cent. Shipments of fine paper and board combined totalled 59,900 tons, 9 per cent lower than in 1970. Pulp deliveries amounted to 295,400 tons, a decrease of 16 per cent compared with the preceding year.

New pinewood debarking facilities and equipment for treating and storing wood chips were installed in the sulphite plant at Skutskär. Additional equipment for the manufacture of fluff pulp was also installed and production of this item was increased. Small-scale production of non-woven fabric was carried out throughout the year at Grycksbo and the machinery for large-scale production of this fabric was placed in service at Ställdalen early in 1972.

Power

Hydroelectric power produced by the Company during 1971 amounted to 2,280 MkWh or 80 per cent of a normal year's production.

The Company's deliveries of power to its own plants increased 2.7 per cent to 1,860 MkWh. External deliveries on fixed contracts totalled 890 MkWh, an increase of 19 per cent. Thermal power generated in wholly or partially owned companies amounted to 760 MkWh.

Stora Kopparberg will have a 6 per cent interest, entitling it to 100,000 kW, in the new nuclear power plant being constructed at Forsmark on the Swedish east coast.

Condensed Group Report

France

Growing twinges

France has relaxed certain foreign exchange controls. Overseas services such as transport and insurance can now, like imported goods, be paid for in the more advantageous commercial francs instead of financial francs. But the dual exchange-control system remains and will do so, according to the finance minister, M. Valéry Giscard d'Estaing, until "a reasonable degree of convertibility" is restored in international payments. This particular relaxation probably does little more than legalise the inevitable leakage between the two markets but, in addition, individual French people can now transfer francs up to £11,500 abroad for property buying, take £40 (instead of £4) on a day-trip to, say, Britain, carry franc travellers' cheques, and, in a number of other ways, spend more freely abroad. And French firms can invest up to £75,000 a year abroad without permit. On the other side of the coin, you should not expect a welcome on the mat should you try to invest in France, despite M. Giscard d'Estaing's call for an open-door Paris bourse; still, French policy towards inward capital movements has become a little more liberal of late.

It all shows the restoration of confidence in the French economy. This had been upset by the threat from German competition when the D-mark came out so lightly from the December currency realignment. However, French exports have continued to rise at 13 per cent a year in value and, although imports are running neck-and-neck, there is not much to worry about. France has reserves of $8.5 billion (or, rather, in 1972 parlance, 7.8 billion SDRs), one-fifth higher than Britain's.

The dual market

The French, however, like to make a fine point of their economic growth rate slipping further away from the sixth plan's target of 6 per cent; this year, they say, it could be down to 5 per cent and, after all, only 5½ per cent was averaged in the past three years. That still looks astronomical, of course, to most other western countries, and is indeed a continuing reflection of the success of the 1969 franc devaluation which so dramatically and quickly sent French exports soaring—at first in textbook style, at the expense of consumption. Now consumer spending is brisk again, growing, in real terms, about 5 per cent a year.

But France does have some worries. Unemployment, although unrealistically measured, has certainly gone up sharply in the past year and looks like going up some more. Consumer prices, likewise on a limited index, are still rising at an annual 5½ per cent despite the government's contracts to hold increases for manufactured goods to 1½ per cent over a six-month period. There has been stiff opposition to the price controls, which are blamed by industrialists for the modesty of the planned increase —only 1 or 2 per cent—in their real capital spending this year. It is against this background that the government has started drawing up its autumn budget. Higher public investment and still more encouragement to private investment should be the prescription. But policy has not been adventurous.

Leviathan and dodo

How many whales are there? The International Whaling Commission, which is due to meet in London next month, really ought to try to find out. For years now, conservationists have said that the massive blue whale is faced with extinction; they think its numbers have dwindled to a mere 1,000, so few that in the vastness of the oceans a pair is unlikely to meet. The journal New Scientist has recently attacked this view; it claims that the world population of blue whales is growing at 5 per cent a year and now totals 6,000. Mr Anthony Stodart, the minister responsible for fishing, claims there are 10,000; and the Japanese, the major whale hunters, confidently estimate that there are nearly twice as many as that.

The last blue one to be caught

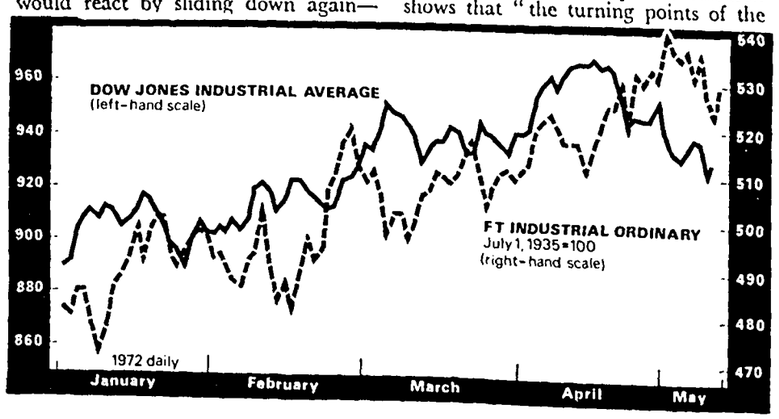
For the blue whale, all this is academic. There has been a ban on hunting this, the world's largest animal, since 1965. There is little that man can do now except feel guilty for past sins. The blue whale will most probably edge its way back; but it will be at least 50 years before the oceans' population equals the catch of the 1930 season alone, when nearly 30,000 were slaughtered.

The conservationists' concern should not be over the blue, grey, right or hump back whales which are no longer caught. It should be over those species like the fin and sperm whales that are still hunted. Although the Whaling Commission fixes quotas on the permissible catch each year, these are based on the tenuous idea of a sustainable yield: the number of whales that can be killed without depleting the population. With statistics of even the 100-ton blue whale based on guesswork—angled to suit any particular view—this method is no guarantee that the less exciting whale species are not being fished to extinction at the moment.

Every year around 40,000 whales are caught: the great majority by Japan and Russia, the only countries still to operate factory ships. The Whaling Commission admits that the quotas that it has alloted these countries in the past have been excessive, that stocks have been depleted, and that the catch should be cut further. This needs international pressure. The United States has recently banned imports of all products made from the endangered species, but this will not help them much. Most of the Russian and Japanese catch is used domestically for pet food, low quality cosmetics and fertilisers. Both countries are likely to attempt to keep their present high quotas at next month's meeting, although a total ban on whale fishing would not cause them the smallest real economic embarrassment.

BUSINESS *Investment*

The markets push aside the Nixon mines



President Nixon's counter-attack against North Vietnam hit the world's main stock markets hard. On Tuesday Wall Street's Dow Jones index fell 12.7 points and London's Financial Times industrial ordinary share index dropped 9.3 points. But on Wednesday the Dow moved up 5.9 points to 931, and in the early hours of trading on Thursday was making firm noises. In London, too, the initial nervousness soon passed away, and after another fall of 4.4 on Wednesday, the index started to climb on Thursday, closing at 529.3, little more than 1% away from Monday's 536.2.

Wall Streeters are entirely fed up with the war. It has been around for so long that the news has to be of world war proportions to make a permanent dent in the firm, bullish trend of stock prices and the economy. With a healthy cynicism, as soon as prices were marked down because of the heavy bombing and the mining of Haiphong, the fund managers leapt in to pick up bargains. If the Nixon visit to Moscow were to be called off, or if a Russian ship stepped on a mine, then the market would react by sliding down again—and the buyers would again take the opportunity of taking on board some cut-price stocks.

Far more relevant is the threat to the continuing uptrend of corporate profits of the well-publicised actions that the Price Commission is taking against companies which are breaking its guidelines, and its refusal to grant price increases to major corporations. But the underlying growth of productivity should enable the companies to turn in higher profits even within the price limits. And there is also a basic scepticism about the practical power of bureaucracy to regulate profits.

The prime influences on the markets remain the growth in money supply, the growth in corporate profits and confidence in the economy (in that order), and all three indicators continue to point in the right direction in New York—and to a lesser extent in London.

Much the most important influence on London, we think, is the growth of the money supply—and support for this view comes in a further analysis from W. Greenwell, the brokers. Their empirical research shows that "the turning points of the growth in the money supply have always preceded the turning points of the equity index." The Bank of England now produces monthly figures of money supply, but a month behind. A further report from Greenwell, on how to monitor changes in monetary aggregates, is promised. In the meantime, the old water-diviners are still saying London's bull market has some way to go, Nixon or no Nixon.

Australian takeover

Bolte from the blue

Sydney

The Australian business scene has been shaken up by the row over the frustrated takeover bid for the country's domestic airline, **Ansett Transport Industries**. The airline was built up by Sir Reginald Ansett, a rugged, self-made man whose road to the top included several takeovers of rivals. Now, however, Sir Reginald himself has proved vulnerable. His company, in which he has only a minor shareholding, attracted the attention of the fast-growing **Thomas Nationwide Transport** (TNT). Having first bought two large parcels of Ansett shares, which gave it a quarter of the equity, TNT made an offer for the rest (in TNT shares or shares plus cash).

Sir Reginald tried to defend himself by a variety of devices, ranging from a dividend increase to a telegram to his employees appealing for support. But his efforts seemed unlikely to succeed because the market ranked TNT shares a better growth prospect than the rather static Ansett. Salvation for him, or at least the postponement of his defeat, came in the surprising shape of Sir Henry Bolte, the nearly permanent (since 1955) Liberal premier of Victoria, where the Ansett company is registered. Sir Henry introduced a bill to freeze the takeover for at least six months pending its investigation by a Victorian parliamentary committee. TNT promptly dropped its bid in disgust, after which Ansett shares jumped

DE BEERS CONSOLIDATED MINES LIMITED

Incorporated in the Republic of South Africa

Points from Mr. H. F. Oppenheimer's Statement

Total sales by the Central Selling Organisation at R446.4 million were R68 million, or 18 per cent higher than in 1970, due to the considerable improvement in sales of gem diamonds. Nevertheless diamond stocks at 31st December amounted, at cost, to R219 million which is R35 million higher than at the end of 1970. Our subsidiary, The Diamond Corporation, continued to buy large quantities of diamonds, with the object of maintaining market stability, from sources outside our Group, and indeed last year these purchases were, for special reasons, at an unusually high level.

The net consolidated profit for the year attributable to De Beers was R102 million. This figure includes the profits of our subsidiaries concerned with sea and foreshore mining, which have been consolidated for the first time. The comparative profit for 1970, adjusted accordingly, was R79 million, so that the increase in the Group profit attributable to De Beers was R23 million, or 29 per cent. A final dividend of 10 cents per deferred share was declared, making a total dividend distribution of 15 cents per share, which is one cent higher than in 1970. As a result of the re-alignment of currencies a surplus of R7 981 000 arose, mainly in respect of cash held outside South Africa against our normal commitments when the rand was devalued last December. In order to provide against the possibility of loss arising from further currency fluctuations, R5.7 million of this surplus was transferred direct to a capital reserve and has not been treated as a profit in the accounts. Shareholders will recall the different circumstances in 1967 when a substantial loss was incurred as a result of sterling devaluation and charged against current profits for the year.

During 1971 a new long-term mining plan was adopted for the four Kimberley mines. This plan, which envisages the operation at any one time of only three out of the four mines, is designed to maintain output at the lowest unit cost and to prolong the lives of these old mines for as long as possible.

While the total tonnage from the Kimberley mines was maintained at about the same level as in 1970, there was a considerable reduction in the carats produced on account of falling grades. As I pointed out in my statement last year this is unavoidable and must be expected. In these circumstances it is pleasing to be able to report that sampling at Wesselton indicates that this mine has a rather longer life before it than had previously been estimated, and the mining programme in Kimberley will be adjusted accordingly.

Production from the Finsch mine at 2 222 995 carats was lower by 373 033 carats than in 1970. This was on account of certain road construction work in the open pit which made it necessary to mine in lower grade areas to a greater extent. The grade has now returned to normal.

In Namaqualand the new mining policy to which I referred in my last statement was carried further during the year. The objective was to reduce the production of small stones which have been in oversupply and to increase the output of larger stones, with particular reference to the requirements of the South African cutting industry. For this reason operations at Koingnaas and Langhoogte were suspended in April and at Dreyers Pan mining was stopped in May so that the plant could treat gravels from the northern reserves of Annex Kleinzee. The effect was a reduction in the carats produced from 636 871 carats in 1970 to 505 191 carats in 1971 and an increase in the average size of stone produced from 0.51 carats in 1970 to 0.94 carats in the second half of last year.

The Jagersfontein mine ceased operations in May, after 100 years of life, and was replaced by Koffiefontein which has been re-opened and started production in August.

At the Premier mine production continued normally and prospecting has indicated improved grades at depth and an exceptionally long potential life. However, a considerable part of the stones produced are small and of poor quality and on account of market conditions have had to be stocked.

At The Consolidated Diamond Mines of South West Africa experimental mining to the west of the existing workings has revealed a much higher grade and average stone size than had been anticipated. This western block may prove to be an important source of comparatively large diamonds. Mining is, however, rendered difficult by heavy overburden and potential water problems due to the proximity of the sea and the fact that the bedrock is below sea level. Techniques are being developed to cope with these difficulties. During the year mining operations were continued with improved efficiency. The caratage produced increased slightly and the average stone size rose from 0.76 carats to 0.88 carats.

At the Orapa mine in Botswana the pilot plant ceased operations in June and the main plant was brought into production. During the year a total of 821 914 carats were produced and this year we are planning to treat approximately 2.3 million metric tons for a production of 2.4 million carats.

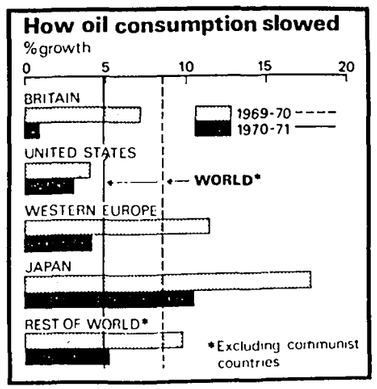
Gem sales this year have been running at a high level with demand in the United States improving and consumption in Japan, Germany and certain other countries continuing to increase. However, there is still a substantial over-production of smaller rough diamonds which results in considerable stocks continuing to be held by the Central Selling Organisation. Selling and marketing measures are being taken to remedy this situation and some success is being achieved.

We are expecting that total gem and industrial sales for the first half of this year will show a substantial increase over the same period of last year, after allowing for price increases and devaluations. This certainly shows a very satisfactory improvement in the market but I must again warn shareholders not to draw unwarranted conclusions from these sales. There are many other factors which affect De Beers profits and it is not possible to make even approximately accurate estimates on the basis of the Central Selling Organisation sales figures alone.

Copies of this statement and of the annual report and accounts are obtainable from the London office of the company at 40 Holborn Viaduct, EC1P 1AJ, or from the United Kingdom office of the Share Transfer Secretaries, Charter Consolidated Limited, Kent House, Station Road, Ashford, Kent.

The Eighty-fourth annual general meeting of De Beers Consolidated Mines Limited will be held on 6th June, 1972 at the head office of the company in Kimberley, South Africa.

back on the stock exchange. Although Sir Henry has sought to justify his actions on various grounds of public interest, many of his critics (and in his long reign he has accumulated many) see it as a blatant bit of political cronyism and of Melbourne's parochialism, TNT being based in the despised Sydney.



The serious issue raised is Sir Henry's assertion of state rights against the notion that Australia is a single legal entity, at least so far as company law is concerned. All states have separate company laws, but most people had assumed that it was unthinkable for a state government to use its power in such an arbitrary way. The question now is whether the federal prime minister, Mr McMahon, will rise to the occasion by defending Canberra's authority. A decision by the supreme court last year appears to give him clear authority to exert federal control over the activities of corporations. But in his year of office he has not yet won a reputation for decisive action.

The Ansett affair is one of a number of factors that have taken the steam out of what looked like a bull market a few weeks ago. Prices recently have been drifting in most sections—apart from a few takeover situations that investors still think have a chance of going ahead.

Oil companies

Fossilising fuels

Poor results had been expected from **Shell** in its first quarter. In the event, with profits down from £113m to £73m, they were not as bad as had been expected. The price even managed a light rise to 317p. **Burmah Oil** moved up in sympathy, to 428p. That is the trouble with Burmah. It

is always being moved sympathetically with Shell, in which it has an investment worth £58m, and with **British Petroleum**, where its 23% stake is worth £425m. Try as it may to become a major company in its own right, and it has tried rather more sensibly than it is generally given credit for, the trading profits of £28m hardly get reflected in the share price.

So the problem for Burmah is still how to get shed of BP, without paying a huge bill for capital gains tax or upsetting BP too much. It could find a way to pass the shares on to its shareholders, but it thinks it has the talents to use its big company status to get bigger and deeper in oil. One outside possibility is some sort of a deal between Burmah and the Iranians. Iran wants to find a downstream outlet for its crude, and perhaps "do a sort of Sohio" (ie, buy shares in some big European company with payment in crude oil). How the deal could be structured so that BP (which has 40% of the Iranian concession) would be satisfied, and Burmah could get rid of the shares in BP (to the Iranians, who might relish a large equity stake in BP) in return for crude, and Iran get the marketing outlets in Burmah, stokes the imagination.

Insurance companies

Compositive and negative

Insurance shares as a group now stand at three times their prices at the bottom of the trough in 1965, with most of the rise having come in the past two years. On a long view, composite insurance shares still look a better bet than industrial shares: they have built-in inflation protection, an international spread of business, and an unquestionable growth potential. Even if there is an earthquake in Tokyo, it will probably be the reinsurance companies and Lloyd's syndicates that will end up carrying much of the loss. One in California would be another matter.

The arguments against buying composite shares are: that insurance brokers' shares are an even better bet, offering all the attractions of the business and none of the risk (but none of the assets either); that insurance share prices move in big cycles as the underlying trend of earnings is subject to huge swings; and that they are now overbought. The mere reappearance of underwriting profits will lead to new outbreaks of competition on rates both in Britain and in America, and with insurance claims inflating at 10% a year the result will be another spell of huge losses.

But the financial sector is the market's darling and, for those who want to buy, six of the eight composites have now reported (one other is a mutual and the **Guardian Royal Exchange** report is yet to come). They will all produce better British motor underwriting figures in 1972, thanks to massive rate increases. This will benefit **Eagle Star** (p/e of 24 at 587p) and **General Accident** (p/e of 14 at 203p) relatively the most, as big motor insurers, and also **Sun Alliance and London** (p/e of 17 at 616p), because its rate increase was big and late. American business is now going spectacularly well, which should help the **Royal** (p/e of 17 at 439p), **Commercial Union** (p/e of 20 at 240p) and General Accident most, although the first quarter figures from the Royal, announced this week showed a disappointing deterioration; the Commercial Union figures, by contrast, showed continued improvement.

Key indicators: world bourses

Nixon knocks the markets, but bargain-hunters soon appear in Wall Street and London. Milan shows relief at undramatic general election results.

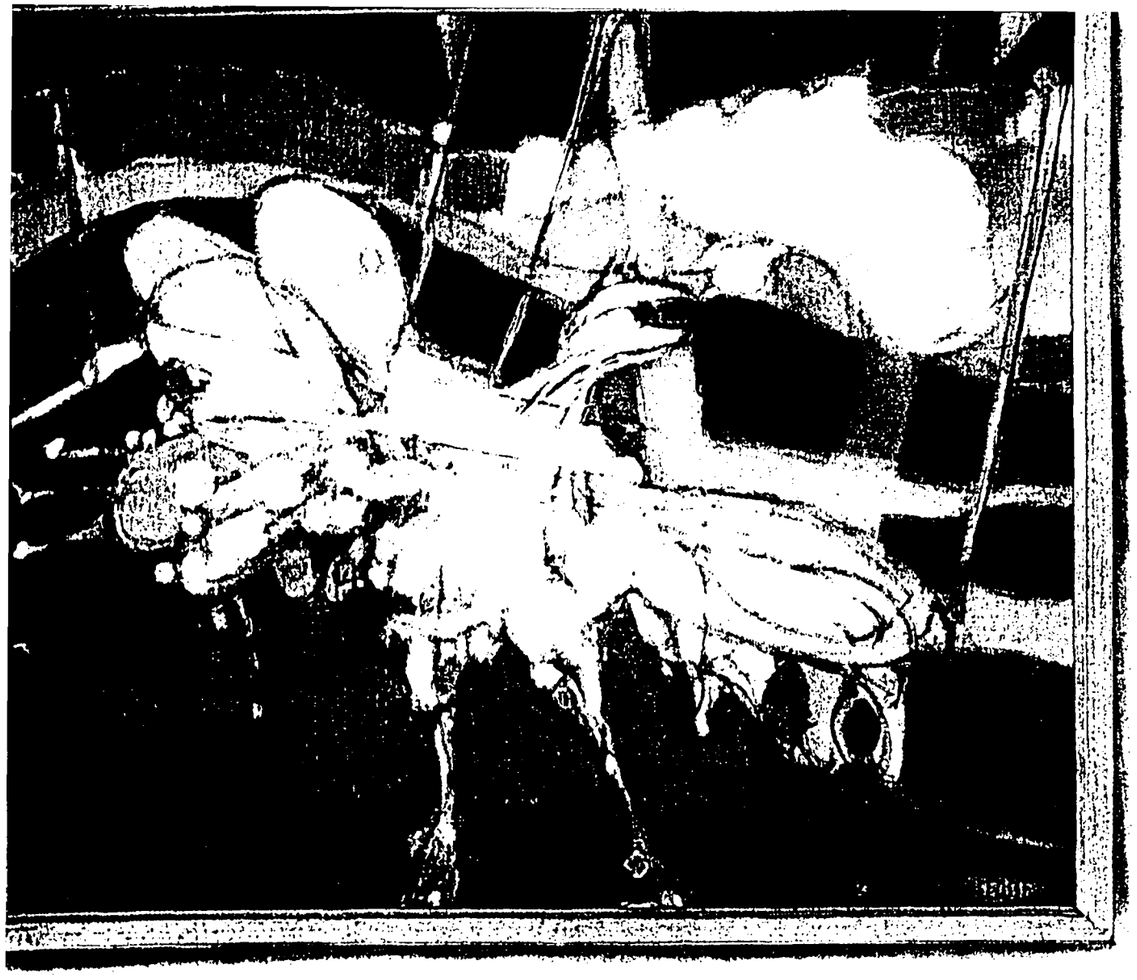
From blast furnace to blast-off— Kawasaki (space-age) Steel

Here's further proof that for sheer versatility nothing beats good old steel:—

Japan's second space satellite was blasted into orbit on February 16, 1971. The outer shells of all three booster chambers were fabricated of Kawasaki's ultra-high-tensile-strength maraging steel, with a remarkable tensile strength of 200 kg/mm². They were formed at the company's Chiba Works from special alloy steel with 18% nickel content refined by electric-arc furnace at the Hyogo Works.



In order to form it into cylindrical shapes the steel in the first stage had to be soft and ductile. Then to be strong enough to withstand the tremendous pressure of blast-off, it had to be made as tough as possible. This was accomplished by a special aging—maraging—process that dramatically increases its tensile strength almost double.

Technology like that is what keeps Kawasaki ahead in steel.

Kawasaki: proud to produce some of the finest steels in the world for the space age.

the fastest growing name in steel

"Fiction merging with reality.
Such is my vision of the Concorde flight simulator, which instantaneously fictionalises true flight.
Here, the genius of man has given life to a fantastic robot. It is this I have symbolised in my painting."
–F. DEFOSSEZ, FRENCH ARTIST

If you need a crew-training flight simulator that precisely duplicates the behaviour of any type of aircraft, from a hovering helicopter to a Mach 2 jet transport, come to ITT. France's Sud Aviation did, for the Anglo-French supersonic Concorde programme.

In France and 126 other countries, ITT provides products and services ranging from computer-based electronic telephone systems to home television sets.
International Telephone and Telegraph Corporation, European Headquarters, ITT Europe Inc., Boulevard de l'Empereur 11, B-1000 Brussels, Belgium.
In the UK, ITT telecommunications and electronics companies include: ITT KB, Standard Telecommunication Laboratories, ITT Semiconductors, ITT Creed and, serving Britain's communications needs for 88 years
STANDARD TELEPHONES AND CABLES

ITT

Why First National City Travelers Checks are your financial passport to the world.

They're honored everywhere. They're refundable if lost or stolen at more than 32,000 banks around the world. That's more than any other travelers check. And they're always good—there's no expiration date. So if you plan to travel anywhere, including the United States, whether for business or pleasure ask for them by name. They're sold at banks everywhere.

First National City Travelers Checks
Your financial passport to the world

But Commercial Union comes bottom on the yardstick of underwriting and life profits as a percentage of premium income—half that of General Accident, which in turn is lower than Sun Alliance. The last two look the better bets.

Japanese market

Speculating on calculation

Tokyo

The Tokyo stock market simply refuses to drop back despite the almost unbroken rise of 50% from last autumn. There was some modest profit-taking last month, but since then the market has swiftly risen again, and the new stock exchange index on Wednesday, at 250.19, was close to its all-time high. Talk of a further cut in the official discount rate had swamped all worries about the course of the Vietnam war.

Given the rise in the market, it is not easy to recommend stocks to buy. The trading companies, for instance, which became so popular early in the year, have almost doubled since then, and are no longer exciting. The construction stocks have moved less, but it is being borne in on the investing public that the heavies—**Taisei, Kajima, Shimizu**—may not reap massive profits even if promises of a massive increase in public spending are fulfilled.

What investors are looking for is a stock which will benefit from the swift acceleration from a 5% growth rate (in real terms) to the 10% one that is expected by the spring of 1973. Rapid expansion will once again underline the endemic labour shortage in Japan and business efficiency will be the cry. Hence a view that office machinery, and makers of smaller computers, are in line for big new orders.

The best of the Japanese computer companies is **Fujitsu,** which has recently taken over—though all the polite talk is of a merger—the computer division of **Hitachi,** the biggest of the Japanese electrical giants. Fujitsu was priced at Y300 at midweek, far below its previous record in 1971-72 of Y490. The company's strength lies in communications and business information rather than in sheer calculating power: thus it is out of the **IBM** nexus, or at least not sitting in IBM's path. And at a p/e of 18 it is close to the market average, comparing favourably with IBM (comparing p/e ratios between Japan and America is a new fashion in Tokyo). Earnings are not expected to rise in the next year or so, however, and the argument for Fujitsu is a gut feeling that so long as wages continue to rise at 15% a year in Japan, an awful lot of business machines are going to be needed.

British Lion

The last small picture company show

The share price of the newly requoted British Lion has remained obstinately above the 135p of the cash underwritten offer by **Barclay Securities.** It has been as high as 175p, but has now come down to 146p. Since there is no chance of a counter-bid, a lot of people obviously reckon that it is worth paying to stay with British Lion and get the direct benefit of the company doctoring at which Barclay's Mr John Bentley is rather adept. The directors of British Lion have already pledged the 53% of the equity that they control, and Barclay has said that it wants the quote maintained. It could also be worth staying a minority shareholder in a company that could become the receptacle for some of Barclay's other interests. Outdoor advertising, making a fairly steady £1m, would provide a useful counterpoint to the inevitably fluctuating earnings from the film industry.

Barclay will have to stay involved in the film industry. The justification for the £5.5m being offered for a company whose latest interim profits were all of £3,000 lies largely in the property redevelopment potential of the 60 acres of British Lion's Shepperton studios, which could be worth as much as £4m if sold for housing. But the casting vote on Shepperton's fate is held in the one special share owned by the National Film Finance Corporation, so that, as Mr Heath, then Secretary of State for Industry, said in 1964: "No purchaser of British Lion shares can strip it of its assets or do anything but continue to operate it as a going concern."

But Mr Heath also said that the interest in Shepperton could be disposed of in "defined circumstances." These are that Shepperton could only be operated at a loss, or that some alternative arrangement could be made. Shepperton is making a big loss—for the past six months it has been operating at just over 15% of capacity—and a very logical alternative arrangement does present itself. There are too many studios in Britain, given the trend to making movies on location, and precious little money has been spent on making Shepperton efficient and modern. What British Lion could do is to form a joint company with the **Rank Organisation** to operate Rank's extremely well-equipped studios at Pinewood, and to give some guarantee of employment there to the 350 technicians who are paid, but not working, at Shepperton. What the NFFC would also, no doubt, insist on is a commitment by British Lion to stay in film production. Provided a film production company is run in a sane way it can make anything from a small loss to a huge profit. Since the NFFC has, this week, been given another £1m of finance by the Government to add to the £3m it raised in the City, there is another British party around to share the risks. As it happens, the first film the NFFC is to back with its new funds is a British Lion production.

British Lion product : loving kiss

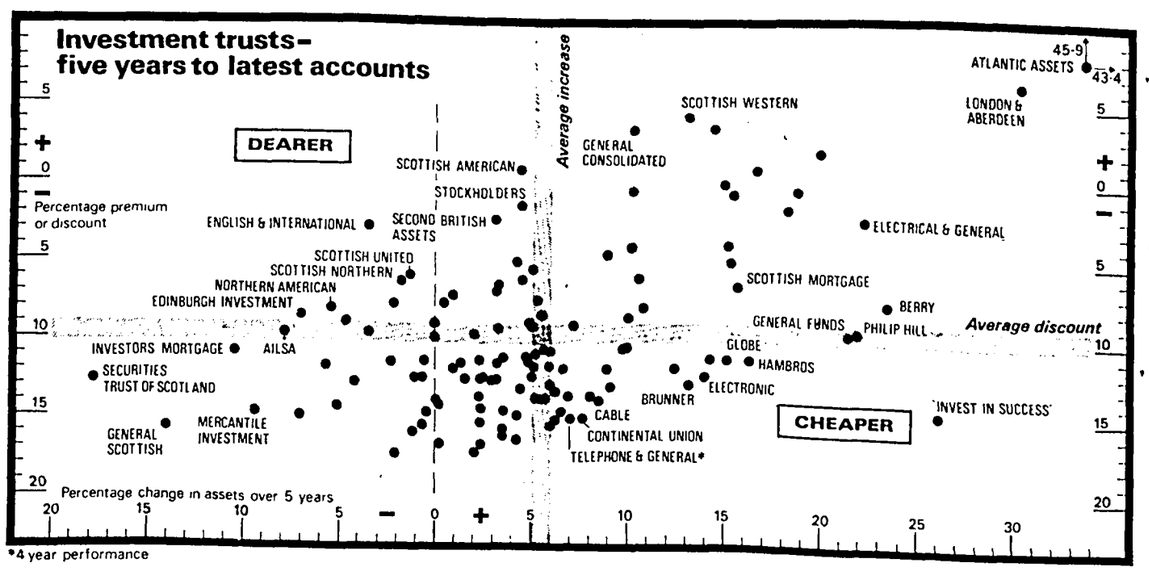
Besides Shepperton, British Lion has two other things to offer Barclay. One is the library of films, in the books at nothing, but making profits from television sales at about £200,000 per year; the other is Pearl and Dean, in the advertising films business, making around £300,000, and well-suited to some existing Barclay activities. Barclay Securities itself, which has fallen from 252p to 210p in recent weeks, seems to be suffering from a growing backlash against Slater, Walker satellites. But the difference between Barclay and the others is that the profits are all hard industrial earnings, not paper-chasing profits, and the share price has solid asset backing. So the thing to do is to buy both Barclay and British Lion.

Investment trusts

Much less of a muchness

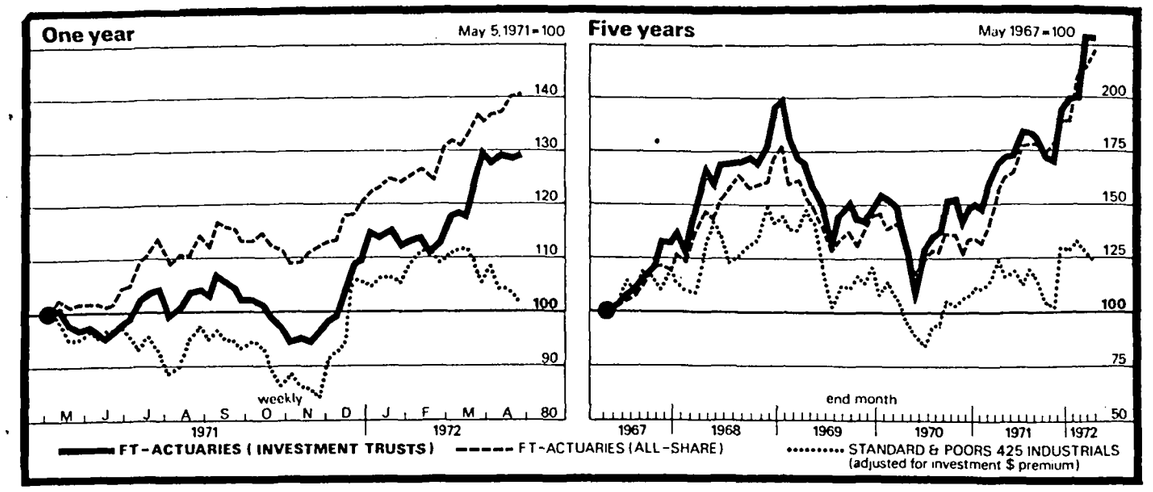
The investment trust market has moved in the past few months from boredom to euphoria through doubt and back to boredom. The Financial Times index of investment trust shares bounded up 8.3% in March on the strength of hoped-for budget concessions which were largely fulfilled. It marked time during April as the rest of the market moved up, and now seems to be slinking back.

The slippage is not a sign of nervousness, but of satiety. In March things went too far too fast, with the average discount dropping as low as 7% at one time. This was a sell signal to the vast weight of institutional money which dominates the investment trust market. Money earmarked for investment in trusts was soaked up in the remarkable spate of new ones. New issuers cashed in on a market mood which at first sent some trusts off with almost unheard-of over subscriptions and premiums on their first day out. But seven new appearances in two months—including the two £20m European heavyweights from John Govett and N. M. Rothschild and Sons—were a bit much; and the £12m issue by **Scottish Eastern** announced last week put the cap on it. The FT trust index fell back to 221 (compared with a 1972 high of 245.8) and the average discount came back to around 11%.



The budget cuts the trusts' capital gains tax from 30% to 15% on realised gains, and gives investors a 15% tax credit on profits made when the shares are sold. This should lead to a more exciting investment trust market and attract new investors, and give the trusts themselves greater freedom to pursue active and ambitious policies. There will also be greater demand for unit trusts that invest in investment trusts, like Save and Prosper's £170m **Investment Trust Units.** The budget has turned them into the equivalent of gross funds freed from capital gains tax; this should, in theory, make their style a lot less cramped. The net result should eventually be greater diversity in trust performance. Far more attention will need to be paid to management skills; the numerous trusts that still give scant information about their portfolios should start reviewing their policies, or else they will lose customers.

Our usual quarterly tables opposite already show some pretty startling deviations from the norm; once again the statistics are provided by brokers Wood, Mackenzie, but the comments are ours. The most spectacular feature is the colossal premium enjoyed by **Atlantic Assets,** which stands at the top of our table for five-year growth and sits misleadingly at the bottom of that for one year's performance. This premium reflects some soundly based confidence that there is more to Atlantic's assets than meets the eye. About 25% of the trust's portfolio is now held in unquoted securities—including a 26% stake in Britain's biggest unit trust group, Save and Prosper, which is currently enjoying the fortunes of that industry and diversifying into pension fund management and European mutual funds. Atlantic is also the sole owner of a busy bee merchant bank, Edward Bates, which has produced some sucessful issues in the past year (including its own investment trust, **Viking Resources**); appropriate to its Scots parentage, it is also getting well dug into North Sea oil prospecting. The managers, Ivory and Sime, are debating how they should most appropriately value these goodies in their annual statement in June.



At the top of the one-year table is the astonishing 95% growth of Slater Walker's Flag. Its above-average discount reflects mixed feelings about the Slater formula for success in fund management, but it is a good bandwagon to be on when it is rolling. No one could criticise the managers' market timing, which contributed much to the near-doubling over the year. A more active market might grant it a higher rating.

At second place in the one-year table, **Throgmorton Trust** has totally dispelled a hitherto dismal image by a series of deals with insurance companies in which it got a bargain basinful of small companies and special situations in exchange for shares in the trust. The rating also reflects the greater respect now shown to the managers, Keyser Ullmann, as a dynamic (and large) merchant bank.

The prize for volatile group recovery goes to the trusts in the Drayton Group, helped by the recovery of the mining finance stocks like Lonrho and Consolidated Gold Fields, which the group has held through thick and thin; and the good performance of other favourites common to them all, like Associated Newspapers. The self-regenerating process has been aided by the funds' holdings in each other. This is another good bandwagon to be on in the good days and off in the bad ones—and investors should be prepared to do quite a lot more hopping on and off in future.

COMPANY STATEMENT

Wilmot Breeden

Record sales and earnings

Improvements in operating efficiency

1971 Results	1971	1970
	£'000	£'000
Group net assets	21,195	19,277
Sales	44,401	36,311
Profit before taxation	3,213	2,212
Taxation	1,359	974
Ordinary dividend	727	623
Retained Profits including release from provision for losses on Rolls-Royce contracts less corporation tax	1,127	67

Three principal factors contributed to these results. First, great improvements in operating efficiency were achieved in the UK motor component sector. Second, our French company produced higher profits. Third, profits of Wilmot Breeden (Truflo) Limited were very good. As a consequence, in the UK motor components sector stock in trade has been reduced and less factory space is required to produce the same physical output. The space released can be used for expansion, or it can be sold to reduce capital employed.

Closer liaison has been established between the UK motor components sector and the French company. This will improve the commercial potential of the group within the enlarged Common Market.

Better use is being made of funds employed, stocks and debtors being lower in relation to sales. These changes, together with improved cash flow, reduced the UK bank overdraft from £2,361 M at the end of 1970 to £747,000. This has been further reduced in 1972.

The financial strength of the company has improved, the total external debt being reduced from 54% of shareholders' funds to 42%. Cash facilities of overseas companies exceed all debt outside the UK.

In 1972, the miners' strike in February resulted in a loss of profit of about £200,000, but it should be another good year. There have been wage and other cost increases, and the final outcome will depend on the extent to which these can be offset by further cost savings and price increases.

The above information is condensed from the Annual Report considered at the Annual General Meeting held in Birmingham on 10th May 1972. Copies are available from the Group Secretary's office, Goodman Street, Birmingham B1 2SX.

Wilmot Breeden (Holdings) Limited

DIVIDEND NOTICE

FALCONBRIDGE

DIVIDEND Number 112

Notice is hereby given that a quarterly dividend of Fifty Cents (50¢) per share has been declared by the Board of Directors of Falconbridge Nickel Mines Limited, payable in Canadian funds on May 31, 1972 to shareholders of record at the close of business on May 5, 1972.

By Order of the Board
G. T. N. Woodrooffe
Secretary

Toronto, Canada
April 20, 1972

CHAIRMAN'S STATEMENT

Telephone Rentals LIMITED
Incorporating
DICTOGRAPH TELEPHONES LIMITED
OPERATING TR SERVICES

Points from Mr.W.Stuart Philcox's Statement

Group Profits after Depreciation but before Taxation were £5,651,382 (£5,245,390). These profits are, once again, a record and 1971 is the 15th consecutive year in which we have shown an increase. In view of the market conditions experienced in 1971 I think it can be claimed that the Company has come through a trying period exceptionally well.

The Directors recommend a final Dividend of 23% making 33% for the year (1970—30%). A 1-for-2 scrip issue is also proposed.

In the United Kingdom, business taken on rental during 1971 exceeded, by a relatively small margin, our previous highest figures secured in 1970, six of the individual months being record months in their own right. P.A.B.X. business taken during the year established new records and our share of the market increased in spite of strong foreign and home competition.

Electro-Rentals had another very successful year and the results from Grampian Reproducers were reasonably satisfactory in the conditions prevailing. Difficulties affected our subsidiaries in Canada and South Africa but new records were achieved by the companies in Australia, France and the Republic of Ireland.

Future Prospects: there has been a marked upsurge in the amount of business secured during the first four months of 1972 and new all-time records have been established. Although it is difficult to estimate what adverse effects continuing inflation, aggravated by industrial unrest, are likely to have on Industry and Commerce, I anticipate that the Company will, as usual, continue to make steady progress and that 1972 will be another successful year.

As previously announced, the Company has entered the Data Communciations field and is very well placed to take advantage of the potential inherent in this highly specialised market.

APPOINTMENTS

Economic Statisticians

for the new age of government statistics

To work closely with administrators and economists in congenial, multi-disciplinary professional atmosphere. Scope to develop own ideas and methods. Access to unrivalled body of statistical data and sources.

Department of Trade and Industry

We are looking for a dynamic young executive, with several years of experience, preferably in the consumer goods area and meeting the following qualifications:

☐ a solid professional background in general accounting, cost accounting, and internal audit ☐ experience in banking and treasury operations ☐ previous experience in the supervision of a small team ☐ English mother tongue and languages an asset. Excellent career opportunities, an attractive salary and appropriate fringe benefits are the remuneration of this very challenging opportunity.

Applications in English with curriculum vitae, expected salary and photograph, should be addressed to:
Manager of Personnel Philip Morris Europe S.A.
7, avenue de Tivoli, 1007 LAUSANNE - Switzerland.

APPOINTMENTS

THE
INTERNATIONAL MONETARY FUND

WITH HEADQUARTERS IN WASHINGTON, D.C.

has a career opening for a

REVISER-TRANSLATOR

Candidates must have English as their mother tongue, must be proficient in the German and Scandinavian languages and be familiar with the terminology of modern macroeconomics in the above languages. Candidates should have several years of working experience as translators and should be able to translate independently economic documents into English. A degree in economics would be an advantage and familiarity with monetary theory, public finance and international trade would be particularly valuable.

Salary will be commensurate with age, qualifications and experience. The salary for a reviser-translator with proven ability could be up to $20,800 per annum, net of income tax.

The Fund offers generous fringe benefits, including annual leave, family allowances, health insurance, paid home leave every two years, pension scheme, group life insurance and education allowances.

Candidates who meet the above requirements are invited to submit a curriculum vitae, including details of their professional career, to the

Director of Personnel
International Monetary Fund
19th and H Streets, N.W.
Washington, D.C. 20431
U.S.A.

The selected candidate will be based in Washington, D.C.

Fourah Bay College

UNIVERSITY OF SIERRA LEONE

Applications are invited for appointment to the following positions tenable from October 1972 :

LECTURESHIPS IN (a) Economics (at least 2) ; (b) Education ; (c) English (at least 2) ; (d) French ; (e) Philosophy.

Salary scale : Le 2,400-Le 4,740 p.a. (Le 2=£1 sterling). The British Expatriates Supplementation Scheme is unlikely to be applied to these appointments. F.S.S.U. Family passages ; various allowances ; regular overseas leave. Detailed applications (6 copies) naming 3 referees by 30 May 1972 to Inter-University Council, 90/91 Tottenham Court Road, London, W1P 0DT, from whom particulars are available.

University of Cambridge

University Assistant Lectureship in the Faculty of Economics and Politics

The Appointments Committee of the Faculty of Economics and Politics hope soon to be in a position to appoint a University Assistant Lecturer in economic statistics. The successful applicant will also be expected to take part in teaching elementary mathematics if so requested. The appointment will be subject to the Statutes and Ordinances of the University, and will be for three years in the first instance, with the possibility of re-appointment for two years and of promotion to a Lectureship if a vacancy occurs. The maximum tenure of a University Assistant Lectureship is five years. The successful candidates will be expected to take up his duties on 1 October 1972.

The pensionable stipends of University teaching officers are under review. The proposed pensionable scale of stipends for a University Assistant Lecturer is £1,788 a year, rising by annual increments of £147 to £2,346 or, if the person appointed is ordinarily resident in College, £1,689 a year, rising by annual increments of £147 to £2,277.

The pensionable stipend of a University Assistant Lecturer is subject to deduction on account of a Fellowship of a College with dividend, and also on account of certain other College emoluments. The General Board, if the Appointments Committee so recommend that the place of a University Assistant Lecturer on the scale of stipends on appointment shall be above the minimum. Information about the reimbursement of removal expenses and for persons resident outside the United Kingdom, travelling expenses may be obtained from the Secretary of the Appointments Committee.

Applications (nine copies) including a curriculum vitae and the names of not more than three referees, should be sent as soon as possible, and in any case not later than 31 May, 1972, to the Secretary of the Appointments Committee, Faculty of Economics and Politics, Sidgwick Avenue, Cambridge CB2 9DD.

APPOINTMENTS

To work closely with administrators and economists in congenial, multi-disciplinary professional atmosphere. Scope to develop own ideas and methods. Access to unrivalled body of statistical data and sources.

Statisticians
for the new age of government statistics

Home Office

Please quote ref C/051/G.

University of Otago

DUNEDIN, NEW ZEALAND

Visiting Appointments in Economics

The University of Otago is interested in appointing one or more visiting lecturers or professors in the Department of Economics. The period of appointment would be for not less than two terms (normally commencing about late February) and appointments for longer periods would be desirable.

No particular field is specified but, as the Department is a small one, it is desirable for an appointee to be able to teach a number of topics.

Contracts will be negotiated individually but in general return fares will be paid and a monthly salary based on current academic scales (Lecturer range—$NZ5,589 to $9,358 per annum).

Applicants should be able or expect to be able to arrange secondment from their present posts.

Further particulars are available from the Secretary-General, Association of Commonwealth Universities (Appts), 36 Gordon Square, London WC1H 0PF (Tel : 01-387 8572), or from the Registrar of the University.

Applications close in New Zealand and London on *30 June 1972.*

University of Otago

DUNEDIN, NEW ZEALAND

Lecturer or Senior Lecturer in Accounting

Applications are invited for the post of Lecturer or Senior Lecturer in Accounting, who should preferably have interests in Financial Accounting. The appointee will contribute to Commerce courses at undergraduate and postgraduate levels, and will have opportunities for consulting work and for interesting personal research within the developing New Zealand environment.

Salary Scales
Lecturer : $NZ5,589-$7,149 per annum ; Senior Lecturer : $NZ7,278-$9,358 per annum with a bar at $8,579 per annum.

Salary scales are subject to both triennial review and interim cost-of-living adjustments. Within scales progression to the grade maximum is by automatic annual increment.

Further particulars are available from the Secretary-General, Association of Commonwealth Universities (Appts), 36 Gordon Square, London WC1H 0PF (Tel : 01-387 8572), or from the Registrar of the University.

Applications close in New Zealand and London on *15 June 1972.*

APPOINTMENTS

Voluntary Service Overseas

Director

The Council of V.S.O. is looking for a successor to the present Director, Douglas Whiting, who is retiring in 1973.

V.S.O. recruits, trains and looks after volunteers who assist developing countries in response to specific requests. Projects cover a wide range of development work, both rural and urban, with social, economic and technical aspects. This calls for volunteers with a wide variety of skills and educational, professional or technical qualifications.

The Director is responsible for co-ordinating the various departments through which he manages V.S.O. In addition he represents the Council in all its contacts with organisations at national and international level concerned with volunteers. This involves a good deal of travelling, committee work and public speaking.

The appointment will be for between five and ten years at a starting salary of not less than £4,500 p.a.

Applications will be handled in confidence. Initial letters enclosing a full curriculum vitae should be addressed to the consultant :

M. J. Graham-Jones,
The Faculties Partnership,
26 Grosvenor Gardens,
London S.W.1.

UNIVERSITEIT VAN AMSTERDAM

Europa Instituut
The International Course on European Integration needs an

ECONOMIST

Applicant will be offered the position of tutor in the economic Section of the post-graduate Course on European Integration.

The Course is taught in the English language. Applicant must have a thorough knowledge of the economic aspects of European Integration.

Salary will be according to the University's standards.

Send applications to **Mr Robert Adolfs,**
ICEI Executive Secretary, Europa Instituut,
Herengracht 508, Amsterdam, the Netherlands.

National Economic Development Office

NEDO

ECONOMIC DIRECTOR

Applications are invited for the post of Economic Director in the National Economic Development Office.

The Office is concerned both with general questions relating to the management and growth of the economy and with the contribution made to economic growth by specific sectors of industry. The Economic Director gives professional guidance to the economist staff within the Office and directly advises the Director General on all economic matters. The post calls for a capacity to respond intellectually to new ideas combined with an ability to form a balanced and reasoned judgment on current issues. High academic qualifications, research experience and experience of working for or with public or quasi-public bodies and in industry are desirable.

The appointment is normally made for two years ; salary £6925 per annum (under review) ; FSSU.

Applications giving details of age, academic qualifications, publications and professional experience together with the names of three referees should be sent not later than 31 May 1972 to :

Mr P N Odell
National Economic Development Office
Millbank Tower
Millbank
London SW1P 4QX

London School of Economics

UNIVERSITY OF LONDON

Applications are invited for appointment from 1 June 1972, or as soon thereafter as possible, to a Senior Research Officership and a Research Officership in the Centre for Urban Economics at the London School of Economics in connection with a project on the economics of labour markets in London. Candidates should be trained economists and able to handle data ; preference will be given to those experienced in research in labour economics. The appointments will be for two years, and will be on the salary scale for Senior Research Officers at £2,229 x £141-£2,376 x £150-£2,676 x £147-£2,970 : efficiency bar : £3,117 x £147-£3,411 a year plus £162 a year London Allowance, and for Research Officers of £1,641 x £147-£2,082 a year plus £162 a year London Allowance, with superannuation benefits. In assessing the starting salary, consideration will be given to qualifications, age, and experience.

Applications should be received not later than 23 May 1972 by the Administrative Officer (Room H.610), The London School of Economics and Political Science (TE/13), Houghton Street, London WC2A 2AE, from whom application forms should be obtained.

University of York

INSTITUTE OF SOCIAL AND ECONOMIC RESEARCH

Research Fellowship in Economics

Applications are invited from graduates in economics for a 2-year research fellowship tenable at the Institute from July 1972 or as early as possible thereafter.

The person appointed will be expected to work within the general framework of the Public Sector Research Programme financed by the Social Science Research Council, and more specifically on studies of : (a) the efficiency of the nationalised industries ; and (b) the economics of government contracting.

Salary scale £1,326 to £2,676. Starting salary according to age and experience.

Six copies of applications, naming three referees, should be sent by 2 June 1972, to the Registrar, University of York, Heslington, York, YO1 5DD, from whom particulars may be obtained. Please quote reference number 12/7024(a).

For further appointments see pages 5, 126 to 134

FULL-TIME TRADE UNION ORGANISER

An Organiser is required by the National Union of Bank Employees to work principally in the London area but who may be required to work elsewhere from time to time. The successful applicant will be responsible for the efficient organisation of NUBE members and the recruitment of new members. Previous experience in this type of employment would be an advantage. Commencing salary £1,686 p.a. plus £150 London Allowance. A motor car will be provided. Good holidays and conditions of service. Official application forms available from :

NUBE, Queens House, 2 Holly Road,
Twickenham, TW1 4EL.

Completed application forms to be returned to NUBE not later than 31st May, 1972.

DERBY COUNTY BOROUGH

DEPARTMENT OF PLANNING

Senior Assistant Planning Officer

There is a vacancy for a Senior Assistant Planning Officer on S.O. Grade 1 (£2,367-£2,766).

Statistician/Economist—Structure Plan Section

to make a substantial contribution to the preparation of the Derby Structure Plan. The successful applicant should be a statistician, economist or town planner with wide experience of quantitative forecasting and analysis techniques, preferably in a planning context.

Appointment within the grade will depend on qualifications and experience.

Application form and job description from : Director of Planning, Department of Planning, The Council House, Corporation Street, Derby, DE1 2FP.

Closing date 9th June, 1972.

APPOINTMENTS

University of Cambridge

Assistant in Research in the Faculty of Economics and Politics : Notice

The Faculty Board of Economics and Politics will shortly proceed to the appointment of an Assistant in Research whose duties will be to assist the teaching staff of the Faculty with statistical work and to organise and take statistics classes for undergraduates. Applicants should possess either an honours degree in Economics with some training in statistics or appropriate statistical experience in a government office or other organization. The appointment will be subject to the Statutes and Ordinances of the University and will be for two years in the first instance ; the person appointed will be required to enter upon the duties of the office as from 1 October 1972. Re-appointments may be made for periods not exceeding five years at a time.

The pensionable stipends of holders of University posts are under review. The present pensionable scale of stipends of an Assistant in Research is £1,347 a year, rising by annual increments as follows : by £144 to £1,491, by £138 to £1,767 and by £135 to £1,902. The stipend is subject to reduction if the person appointed is a Fellow of a College with dividend or holds a substantial College administrative office.

Further particulars can be obtained from the Secretary of the Faculty Board of Economics and Politics, Sidgwick Avenue, Cambridge CB2 9DD, to whom candidates should send their applications, including the names of two referees, so as to arrive as soon as possible but not later than 19th May, 1972.

THE INTERNATIONAL MONETARY FUND

WITH HEADQUARTERS IN WASHINGTON, D.C.

has career openings for

TRANSLATORS AND REVISERS

Candidates must have French as their mother tongue, must be proficient in the English language and be familiar with the terminology of modern macroeconomics in both French and English. Candidates should have several years of working experience as translators and should be able to translate independently economic documents into French. A degree in economics would be an advantage and familiarity with monetary theory, public finance and international trade would be particularly valuable.

Salaries will be commensurate with age, qualifications, and experience. The range for translators with proven ability will be up to $17,100 and for appointees with experience in revision it will be up to $20,800 per annum, net of income tax. The possibility exists of rapid advancement for appointees who demonstrate outstanding keenness and ability.

The Fund offers generous fringe benefits, including annual leave, family allowances, health insurance, paid home leave every two years, pension scheme, group life insurance and education allowances.

Candidates who meet the above requirements are invited to submit a curriculum vitae, including details of their professional career, to the

Director of Personnel
International Monetary Fund
19th and H Streets, N.W.
Washington, D.C. 20431
U.S.A.

The selected candidates will be based in Washington, D.C.

39th Year World Wide Service

SNIA VISCOSA

Società per Azioni—Head Office : Via Montebello, 18, Milan

Capital : Lit. 64,107,750,000

Annual General Meeting of 28th April, 1972

The Company's Annual General Meeting was held under the chairmanship of Avv. Luigi Santa Maria. World production of chemical fibres rose by 10.3 per cent as against 5.1 per cent in 1970. Italian output rose by 14.5 per cent compared with a fall of 3.9 per cent in 1970. Production capacity remained stable for artificial fibres but increased appreciably for synthetic fibres.

Sales to outside customers totalled Lit. 229,200 m. as against Lit. 202,600 m. in the previous year, an increase of 13.4 per cent. Including trading within the Group totalling Lit. 26,300 m., the Company's overall trade figure for 1971 amounted to Lit. 256,100 m. Sales to outside customers by the Group, including associated companies both in Italy and abroad, totalled Lit. 368,300 m. as against Lit. 345,300 m. in the previous year.

The Textile Division's business suffered from the world surplus in the production of synthetic fibres. Sales by volume rose by 19.5 per cent compared with a fall of 13.5 per cent in 1970. In terms of value, however, sales rose by no more than 15.8 per cent, mainly because of the steady fall in the prices of synthetic fibres.

The business of the Chemical Division, the Engineering Division, the Defence and Aerospace Division as well as of sundry enterprises was fairly satisfactory having regard to the general economic situation in Italy.

The report of the Board of Directors closes with certain condlusive remarks which clarify the reasons why trading results were unsatisfactory. These were mostly circumstances unconnected with production. The fall in earnings was international in character even if it made itself felt more seriously in Italy.

The drop in prices, particularly noticeable as far as synthetic fibres were concerned, was due to the grave crisis caused by excess production capacity. This was due to huge new plants coming into service at the same time as a result of a policy of vertical integration carried out by some of the most important chemical companies in Western Europe in order to find outlets for their huge output of petrochemicals.

The report ends by saying: "To overcome this situation with all the other circumstances beyond our control, it is necessary to branch out in various directions : at home we must continue to follow, and indeed strengthen, the most advanced trends of technological research, applying to our plants such improvements as help to increase productivity and to improve product quality. The possibility of rationalising our business through co-ordination with the Montecatini-Edison Group is bound to contribute materially to putting production in the whole sector on a better footing.

At international level the reality of a unified European market requires an effort to establish uniformity of trends and language among European producers, thus promoting a development that is both co-ordinated and adjusted to the future consumption of chemical fibres envisaged for the Common Market by 1980, when it is expected to account for around 70 per cent of the consumption of the main textile fibres.

In this context we are planning an increase in synthetic fibres in due course, even in partial substitution of cellulosic fibres; a further diversification in chemicals and engineering, and organisational improvements in the fields of production and marketing in order to be ready to contribute to the economic recovery of our country that we all hope for."

Finally the report comments on the various items of the balance sheet for the year. Depreciation set aside in the balance sheet totalled Lit. 15,500 m. after utilising the balance of profits equivalent to Lit. 854 m. brought forward from previous years, and apart from the credit balances of Lit. 6,283 m. in respect of monetary revaluation.

A bank

You can bank on the man-on-the-spot®

Our World-wide Services. Industrialists trading with North America naturally think of the Bank of America as a good bank to use. And, of course, they are perfectly right. But, in fact, our home ground is the whole wide world, and we are as familiar with the globe as you are with your own back garden.

If you wish to improve or to expand your operations abroad or if you're entering the international field for the first time, we have a man-on-the-spot right where you need him. He will give you every banking service that you require. He knows local businessmen, bankers and government officials, economic conditions and trade regulations. He will be glad to advise you about foreign exchange and currency, and will provide you with business introductions.

And yet, for all our size and the impressive range of services that we offer, you will find us friendly and understanding people for whom no trouble is too much.

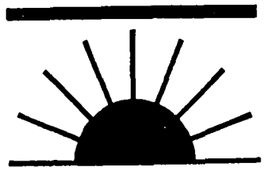
Volume 243 Number 6715



The burnt-out place

Air power failed at Quang Tri, and the superb North Vietnamese army may now be unstoppable. It is as wrong to believe that military efficiency means political superiority as it will be to think that the consequences of American failure in Vietnam will be felt only in Vietnam, page 11. The day the 3rd division broke and ran, page 39. President Nixon plods on with his negotiations with the Russians anyway, page 55.

Italian logic

The more Italians vote for change on Sunday by looking to Signor Almirante's far-right MSI, the likelier they are to get the same old sort of government, page 16.

Ever-rising yen

A six-page report from the spot on why there is talk in Tokyo about another yen revaluation, page 101.

Stand or deliver?

The Government is not winning its battle with the unions, but is retreating at a rate that threatens to bring us back to annual 10 per cent inflation. Everybody is politely ignoring the serious social implications of this, page 13.

The railwaymen haggled over another step towards their wage target, plus bankruptcy, page 77. The fight in court, page 84, and the dockers' threat to strike against redundancies when they are guaranteed against all but voluntary redundancies anyway, page 87.

Industry still won't invest because it's afraid of all that wage inflation coming along, page 83. But the London stock market stays perky, page 111.

Amazing grace

Whatever the anti-marketeers say, the parliamentary debate on joining Europe is already won. What MPs should really be doing now, page 15. Labour enjoyed the good news in the local elections, page 31.

Capital investment

SIR—Mr E. M. Worley's two arguments for investing in plant and equipment now rather than next year are of course perfectly valid (Letters, April 29th). Delivery times tend to be shorter in slack periods than when demand is high. At the moment, too, money is relatively plentiful and interest rates seem unlikely to fall much further.

However, this does not mean that the benefit derived from capital allowances on equipment bought during the current fiscal year will not be any less than that derived from capital allowances on equipment bought after March 31, 1973. Because of the introduction of an imputation system in April next year, a piece of machinery bought now will make a tax loss from which its owner will derive benefit at the existing 40 per cent rate of tax. However, as soon as the machine begins to generate net taxable income in 1973, the owner will be taxed on that income at the new and higher imputation rate. As a result, the machine bought now will have to generate substantially more cash than its counterpart bought next year if its owner is to make the same return on capital employed.

The Chancellor's 100 per cent first-year allowance is a welcome investment incentive, in theory. So far as the fiscal year 1972-73 is concerned, it is not an incentive; if anything, it is the reverse. Mr Worley may feel that in spite of this he would rather invest now than next year. All in all he may or may not be right, but it would merely mean that in his view other considerations outweighed the way the Chancellor is discriminating against investment in plant and machinery before April 1, 1973.—Yours faithfully,

London, SW7 CRANBORNE

Labour's course

SIR—You said (April 22nd) that "the Labour party went through with the Commons farce of demanding a general election," and went on to talk of the defeatist mood of the party, implying that it does not want an election because it shares your view that Mr Heath would win.

I don't know to whom you talk at Westminster, but I am one Labour MP who believes that if Mr Heath were rash enough to go to the country, even at the present time, he would lose. The earliest date he could choose is the autumn—an election in the near future isn't on—because the housing bill and the EEC bill are not yet law. By the autumn council rents will have gone up in most areas, house prices will have climbed to new record levels, other prices will have risen still further, and unemployment will still be very high. Industrial relations will be even more of a shambles and the lower paid will be in a state of smouldering resentment.

The Prime Minister's broken promises on prices and unemployment, as well as his total breach of faith with electors on the common market, may have been forgotten or cynically suppressed by newspaper editors, but they will be remembered in the constituencies. Despite all the smooth doubletalk from people like you the majority of electors continue to believe that the Government is paying too high a price for entry into Europe and in betraying British democratic institutions into the bargain. Many electors will not overlook either the Government's broken pledges to the people of Rhodesia and the third world.

Visit the constituencies some time and you will find that Mr Wilson's determination to maintain the unity of the Labour party has been rewarded by success. Political journalists report his speeches but hardly ever report the enthusiasm with which his audiences receive him.

The party would indeed be split from top to bottom if we had listened to your advice on the common market or the Industrial Relations Bill or rents or on anything else, and the breach would be total and permanent. The Labour party would be ruined. Perhaps this is what you would like, but those of us who believe that after less than two years of Tory reaction the people of Britain have had more than enough of government by guile and guillotine have no other home than the Labour party.—Yours faithfully,

WILLIAM HAMLING

House of Commons, SW1

British Caledonian

SIR—On two counts it is too early to assess the impact that British Caledonian has had on British air traffic in 1971.

The first is that traffic data about British airlines' performance last year is not yet available. Secondly, "instant benefit" from the new airline was not suggested by the Edwards committee, the previous or the present governments, all of whom supported the formation of BCAL. Indeed, the route transfer package was completed only five months ago.

Mr R. M. Bale (Letters, April 22nd) may be unaware of the recommendation by the Edwards committee that British Caledonian should take over a very few former nationalised corporation routes in order to provide a sound platform from which a third British flag carrier could develop.

The need for such a new force in British aviation is undeniable since British airlines' share of world international scheduled services fell from 11.2 per cent to 9.3 per cent between 1967 and 1970 and the British share of scheduled traffic to and from the United Kingdom dropped from 50.3 per cent to 45.9 per cent over the same period.

The route transfers, including West Africa, have enabled British Caledonian to demonstrate to the air licensing authorities its fitness to operate on the highly competitive North Atlantic route. It is between London-New York and London-Los Angeles in particular where the decline in the British share of scheduled traffic has shown most markedly in recent years. The Air Transport Licensing Board said that they were granting British Caledonian a licence because they believed "that there would be a net gain for British civil aviation." The ability to contribute to British air transport in this way is the real significance of the transfer to BCAL of the West African and two other routes.

Clearly BCAL's impact on British civil aviation and the British share of world markets must be judged on a long-term basis. And in due course judged our performance will be.

In the meantime we have introduced new promotional fares, increased frequencies on many routes and, we believe, raised general standards of service.—Yours faithfully,

JOHN DE LA HAYE

Deputy managing director,
British Caledonian Airways

Gatwick airport

A Bangladesh sacking

SIR—My attention has been drawn to your report on Bangladesh, "Between cloud nine and revolution" (April 1st). It has reference to my name as the principal secretary to the prime minister.

I want to make it clear that I was not sacked by Yahya Khan for corruption. I (along with all the other accused officers) was compulsorily retired from service by Yahya Khan as chief martial law administrator without assigning any reason after the withdrawal of the so-called "Agartala conspiracy case" (State vs Sheikh Mujibur Rahman and others). This case was started in 1967 by Ayub Khan against our prime minister, Sheikh Mujibur Rahman, and others on charges of "conspiracy to raise war against Pakistan with a view to making east Pakistan an independent sovereign state." I was falsely and illegally implicated in this case while I was holding a senior executive job under the government of Pakistan.

Yahya Khan's order retiring me compulsorily from the civil service of Pakistan was not even covered by any existing martial law regulation.—Yours faithfully,

RUHUL QUDDUS

MANAGEMENT APPOINTMENTS £7000 PA AND OVER

FAR EAST SHIPYARD DEVELOPMENT

Opportunities in SHIPBUILDING MANAGEMENT

A & P Appledore (London) Limited is advising on the recruitment of senior managerial personnel as part of a comprehensive Technical Assistance Agreement covering the construction of a new Shipyard in the Far East. The $70,000,000 shipyard is ultra modern in concept, and designed for the series production of V.L.C.C.s.

The organisation structure of the Shipyard is divided into three main divisions: Production, Finance, and Administration. Each division has a number of departments and areas.

The company wishes to employ the most able and best qualified men, regardless of age or nationality, and invites applications for the following senior posts.

PRODUCTION DIVISION

DIRECTOR OF PRODUCTION
Ref HY-01
Salary scale up to £19,000 p.a. *(inc. gratuity) TAX FREE*

Bulman House, Regent Centre, Newcastle upon Tyne NE3 3NG

Managing Director

PRECISION ENGINEERING

to take charge of a well known and successful company producing precision engineered components for the aircraft, petrochemical and process industries. Turnover approaches £7 million with 1,200 employees.

• RESPONSIBILITY is to the board for all aspects of general management and profitability, with emphasis on developing existing EEC subsidiaries and world markets.

• AN experienced chief executive is required with a record of creative business achievement in directing a comparable engineering enterprise. Career progression is likely to have stemmed from a good engineering degree, or professional qualification.

• AGE under 50. Remuneration is negotiable in the region of £10,000, but could be substantially more for outstanding ability and particularly relevant experience.

Write in complete confidence to K. R. C. Slater as adviser to the company

Wasp notion. The term was, I take it, originally applied to North American Protestants of English descent. Mr Finlay extends it, apparently, to include Ulster and Scotch Protestants; and, perhaps, by way of honorary inclusion, north American Protestants of German and Scandinavian origin, with the Boers thrown in for good measure. Surely, many people of these groupings would resent being classified as Anglo-Saxon. In fact, Wasp is simply a superficial, emotive term, which dissolves on analysis. And Mr Finlay should know that, to the anthropologist, there is no "British race."

Negroes, French Canadians, and Ulster Catholics are not fighting against a mythical Wasp conspiracy, possessed of self-conscious rectitude, which these minorities are out to besmirch, if not destroy. No, they are simply complaining of discrimination on the irrelevant grounds of race, or nationality, or religion; and, with some historical justification, they think that what is denied to reason will be conceded to force.—Yours faithfully,
Omagh, Co. Tyrone EDWARD WINTERS

Textiles

SIR—In your comments on the British textile industry (April 29th) you make the bald statement that: "The objection to protection is that it leads to higher prices for the consumer." A far more serious objection is that it destroys the earning power of textile workers in poor countries. Textiles is one of the very few industries in which poor countries can already offer a serious challenge to their rich counterparts. As a result, textiles have often been excluded from such limited "generalised" systems of preferences as have yet been implemented.

The British Government's readiness to protect its textile industry has already been quoted as a precedent for extra trade barriers by the British Footwear Manufacturers' Federation, and no doubt there are other industries eager to profit from similar discrimination.

Textiles also provide a good indicator of how the British Government is likely to adjust our trading arrangements upon our admission to the EEC. We hear increasingly of the need for "harmonisation" and the necessity of "seeking parity" with the most protectionist members of the existing block.

If this trend continues, the poor countries of the world will have every justification for concluding that the rich countries intend to relegate them to the production of raw materials while reserving for themselves a monopoly of the manufacturing industries which produce a steadily increasing proportion of the world's wealth.—Yours faithfully,
London, W10 FRANCIS PRIDEAUX

Ceylon

An increase in crime has provoked fear of another rebellion and communist criticism of policies may lead to a government break-up. The serious foreign exchange situation accompanied by falling output, consumption and investment and rising prices and wages presents a bleak picture. An analysis of the current situation and outlook is given in our latest QER on Ceylon.

Box-girder blues

SIR—King Box Girder is most certainly dead—of old age and a short terminal illness of public hysteria, so often fatal in such cases (April 29th).

We can no longer afford to build with minimum weight and minimum cost as the main criteria, nor can we afford to build without compassion for, or understanding of, the interests of the workers who erect these great designs.

Society must hasten the search for early-warning methods of appraising the non-standard structure, and create immunisation vaccines against the fatal overreaction. Engineers are not optimistic that this will be done quickly enough to save that grand old man Plate Girder, who has served so well since the 1890s.

But it is not only engineering that suffers. The United Kingdom pays for years to come when its expertise is made to look ridiculous; the box-girder fiasco of today is the steelworkers' lay-off of three years' time.

So do not grieve too long that this great revolutionary bridge form is dead. Long live the next revolutionary bridge form. But please get us a constitution that will enable him to grow old gracefully, and hand over peacefully to his successor.—Yours faithfully,
London, NW11 GORDON M. ROSE

Africa

SIR—Mr Frank Robinson states (Letters, March 25th): "There are to the north other countries that are independent. But what does this mean?" He goes on to say Mr Kapwepwe of Zambia was beaten up by President Kaunda's young supporters.

What does all this mean indeed? It means that in every country under the sun—whether developing or advanced—there are people of both sexes who would like to take the law into their own hands. And this has nothing so far to do with the country's civilisation or its democracy.

I was in England for nearly seven years. During this period, both Houses of Parliament passed the obnoxious act on homosexuality. In many parts of England now small schoolgirls are being raped, women are being sexually assaulted and killed. Even boys are assaulted mercilessly. Would Mr Robinson say England is a backward nation, simply because of these attacks? Would he also say that there is no democracy in England?

Mr Robinson is an Australian. No doubt he would report in favour of his kith and kin in Rhodesia.—Yours faithfully,
Accra, Ghana L. AGYEI-GYANE

A lost generation

SIR—I am 78, my wife is 74 and a semi-invalid. Here are our "facts of life." Total income, £15.50 per week. We live in a cold basement bed-sitter with no central heating, and basements can be like ice houses, particularly when one is no longer young. Heating, therefore, comes to between £2.50 and £3 per week. We have to carry hot water bottles about when it is very cold, or go to bed. Our rent is £5.25. We have therefore about £7.75 for food, laundry etc. With great care and with extreme frugality we get enough to eat, but we can never have a holiday or afford new clothes, neither can we afford any amusements.

We just exist, we do not live, and there are thousands like us, and it is for these helpless and inarticulate victims of modern society that I write. Am I indignant at the way we are treated? Of course I am. We are a not wanted, a lost generation. Does society think that because we are over three score years and ten we no longer have any pride of person or self-respect? We do not want charity, but at least a decent standard of living. Many of us served in two world wars. What for?

Since I am not making a personal appeal, I trust, sir, that my name may be kept confidential but every word I say may be proved if need be. I just hope that what I have written will help to awaken society's conscience to a social and human scandal, the plight of thousands who have no pressure group to fight for them.—Yours faithfully, S.M.
London, W8

Israel

SIR—The cost of living in Israel is rising, but not as much as 300 per cent since 1967, as stated in your report (March 18th). The correct figure would be about 30 per cent, similar to the rise of cost of living in Britain during the same period.—Yours faithfully,
Jerusalem F. DOTHAN

Trade unions

SIR—Heavens, how good it is to read an article as clear and courageous as your first article (April 29th). Bravo!—Yours faithfully,
London, SW3 JAMES R. H. HUTCHISON

MANAGEMENT APPOINTMENTS £7000 PA AND OVER

WEST MIDLANDS PASSENGER TRANSPORT AUTHORITY

APPOINTMENT OF

DIRECTOR OF LABOUR AND STAFF RELATIONS,

West Midlands Passenger Transport Executive

The West Midlands Passenger Transport Executive comprises the Director General and three Directors who, in addition to their Corporate duties and responsibilities are functionally responsible respectively for Finance, Operations, and Labour and Staff Relations. The present Director of Labour and Staff Relations will be retiring towards the end of this year and the Authority are seeking a successor.
The Corporate responsibilities attaching to the post are those laid upon the Executive by the Transport Act, 1968, and subsequent Orders mainly to establish and maintain an integrated public passenger transport system throughout the Authority's Area.
The functional responsibilities attaching to the post comprise all matters relating to employment, both individual and collective, and including direct negotiations with Trades Unions.
The Executive employs some 8,000 people covering a wide range of occupations. The number is likely to increase if proposed legislation regarding Local Government is implemented.
The Authority are seeking a person, preferably not over 50, with a wide knowledge and experience of industrial relations.
The salary will be within a scale, commencing at not less than £7,500 per annum depending on experience and ability. Suitable provision for pension will be made including, if appropriate, arrangements as a contributory employee under the Local Government Superannuation Acts.
Detailed applications, with the names and addresses of two referees, to be sent by 31st May, 1972, in envelopes marked "Confidential" to Mr. T. H. Parkinson, DL, LL.B., Secretary, West Midlands Passenger Transport Authority, The Council House, Birmingham B1 1BB, from whom further information may be obtained on request.

Head Office

Project Evaluation

The British Steel Corporation requires a senior manager to be responsible to the Director of Corporate Planning for the evaluation of major investment projects. He will be in charge of two teams evaluating projects ranging from £10 million to over £200 million.

Applicants should have several years experience of project evaluation in large organisations, and be capable of developing project appraisal techniques to deal with the particular problems of the Steel Corporation, including methods of analysing systems effects. He must work with an inter-disciplinary staff and be able to communicate new ideas effectively to all levels of management.

The successful applicant will probably have an economics degree and/or accounting qualification.

The post carries considerable responsibility and will be remunerated accordingly.

Write for application form, quoting reference number H.O.86, to:

Head of Management Appointments and Development,
BRITISH STEEL CORPORATION,
33, Grosvenor Place,
London, SWIX 7JG.

BUREAU VAN DE KIEFT N.V.
Management Consultants
Recruiting • Mergers

For and on behalf of one of our clients, a

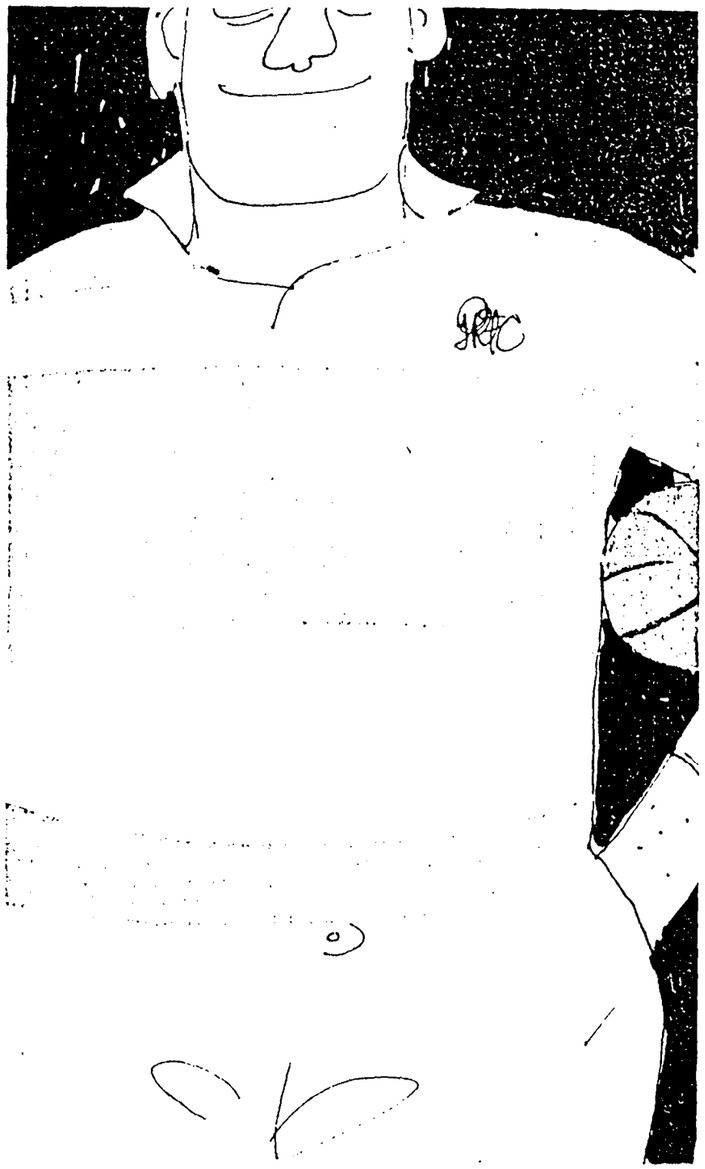
MULTINATIONAL BANK

based in London but with world wide ramifications, we are seeking - in strictest confidence - an experienced

INTERNATIONAL BANKER

to take charge of and develop its business in the Netherlands.

The successful candidate will have wide experience of banking in Holland and of wholesale and investment banking internationally, and must be capable of expanding the business in the face of keen international competition. Additionally, he will require the ability to manage an existing young and thrusting team.



The candidate is likely to be aged between 40 and 50 and will possess a good command of foreign languages. Success in this position should lead to promotion to wider responsibility elsewhere in the Group.

The starting salary will interest men currently earning the equivalent of £ 10.000 p.a. Fringe benefits include membership of an excellent non-contributory pension scheme.

Those interested are requested to apply, preferably in writing, to Mr. A. A. Kimball, Bureau van de Kieft N.V., Herengracht 414, Amsterdam. Tel.: 020 - 66838. Complete confidence will be guaranteed. No enquiries will be made nor will our clients be contacted without prior consent of the applicant.*

Christopher Robin

Dear little chap he was; just like the original. But he grew, and suddenly the name was no longer apposite. The same thing happened to Flight Refuelling. That's all we did at first, but we got so good at it we looked for fresh fields to conquer. One thing led to another and now refuelling in flight is only a small part of our activities, though we are still far and away the biggest people in the business. We could change the name but the reputation of the company stands so high that it would be akin to erasing the hall mark from a piece of silver. On the whole we think we prefer to stick with the name and suffer the laughs, when people pick up one of our electronic devices and ask us when it was last refuelled in flight.

Not a negative answer but a positive approach to the complexities of today's property world. Planning, valuation/investment, and management are the three principal elements in this vital and highly sophisticated field. From established independent firms of chartered surveyors this comprehensive service is becoming much sought after by business management as an integral part of their planning for the future.

Management

Modern property management has progressed far from simply the collection of rents and supervision of repairs. Whilst these aspects are still the basic groundwork of property management, the brief of an independent firm today extends from the management of each individual client's holding as an investment portfolio, to the constant review of the performance being obtained from the assets, as well as preparing and implementing schemes for the improvement of the holding within the client's own investment objectives.

The burnt-out place

It fell to Pitt in 1805, after the best army of its time had beaten the numerically superior combined forces of Britain's two main continental allies at Austerlitz, to say that people might as well roll up the map of Europe for the next ten years. There comes a moment, as it did then in the war against Napoleon, when there is apparently no appeal against the facts of the battlefield. That moment has not yet come in Indochina: there are still things that might be done to catch the downward slide of events, if the South Vietnamese army resists the instinct to panic, if the Americans find a way to make air power tell after all, if the North Vietnamese army has exhausted itself in this offensive as much as the calculations had said any ordinary army ought to have exhausted itself. But it needs all of these relatively unlikely things to happen for the situation to be saved. If they do not, the collapse of the 3rd division at Quang Tri on Monday looks very like a turning point. It is a turning point because Quang Tri is the capital of a province, and President Thieu has made the holding of such capitals the test of success or defeat in this battle; because it may have opened the way to Hué, and beyond Hué to where the North Vietnamese and the Vietcong have been moving out of the central highlands towards the sea; and because the 3rd division's rout puts some of South Vietnam's better fighting units in danger. On all these counts, unless those unlikely things can be made to happen, General Giap's army is showing that it is thoroughly the master of Indochina.

The soldiers beat the planes

This time the failure is not a failure of American will. Of course, the North Vietnamese might never have got across the Cua Viet river if the Americans were still willing to keep any sort of fighting army in the country. But they are not: that battle of the American will was fought and lost in 1968. This time the failure is in Vietnam, and it is one that is going to affect very many people.

The North Vietnamese won at Quang Tri because they beat air power. It never seemed very likely, once the Americans had taken their ground troops out of the war, that the South Vietnamese army would be good enough by 1972 to fight both the Vietcong and the North Vietnamese at the same time on its own. It had to show that it could keep the Vietcong under control, and it has done that successfully enough for the past three years; but the necessary margin of assistance against an attack across the borders by North Vietnam's regulars was to be provided by American air power. That was the core of President Nixon's policy. On the evidence of what has happened in almost every war since 1940 when aircraft have met infantry and tanks in more or less open country, it should have worked. It did not work at Quang Tri. Either the North Vietnamese have found a way of moving an army across country that makes it less vulnerable to air attack—as after 1918 the infantry had to find a way of moving that made them less vulnerable to machine-guns—or they have been able to carry so many anti-aircraft guns with them, and use them so effectively, that the planes have been held at arm's length. Either way, it is not only the Americans' assumptions that have been upset; so have those of most other countries' military planners.

General Giap may now do either of two things, if in fact his army is not brought to a halt by its own losses. He may try to roll on to the total defeat of the South Vietnamese army so that his friends would be in power in Saigon by the end of the summer. He has said in his essay "People's War, People's Victory" that he believes the war will end in a climactic military victory, and the way the opposing armies are disposed around Kontum and An Loc may make him think that two more hammer-blows there would put that victory in his grasp. The only job left for the diplomats then would be to ratify the rubble. But an attempt to finish the war off now would mean prolonging his gamble on the ineffectiveness of air power, and it would also mean he was taking the extra risk of what Mr Nixon might do against North Vietnam itself if he were faced with the prospect of total

humiliation in election year. So it is at least as likely that General Giap will content himself with the alternative, which is to try to take Kontum, and perhaps Hué, and then stop while the politicians in Washington and Saigon digest the consequences of this May's fighting.

The aim of giving them this pause for reflection would not necessarily be to make Mr Nixon and Mr Thieu accept the "provisional coalition" government in Saigon that the communists want to put in place of the Thieu cabinet. That would amount to unconditional surrender, and it will probably need an unconditional military defeat to bring it about. It might be enough for North Vietnam's leaders if they could get Mr Nixon to agree to withdraw the last of his troops from the country in return for a ceasefire and handing over their few hundred American prisoners. It might even satisfy them if Mr Thieu changed his own peace terms—he has offered to resign a month before an election in which the National Liberation Front would take part, and which it would help to supervise—by resigning, say, six months before election day. And even if they got neither of those things they may very likely be prepared to wait until next year for the attempt at a final knock-out. They would know they have badly damaged the South Vietnamese army ; they would have got the Vietcong back into some towns and villages, for a few weeks at least ; above all, they would have got their army across the border. The border is important to the leaders in Hanoi because they want to deny that North Vietnam and South Vietnam are two separate countries ; one of the main purposes of this Easter's offensive was to apply an eraser to it.

The facts for the record

If this is really the prospect before Le Duan and Truong Chinh and General Giap, it is not easy to see how a non-communist republic is going to survive in South Vietnam, or how Mr Nixon is going to make good his promise last week that he would not let it be defeated. The only instrument left to the United States is air power and if that fails his policy fails with it. It is a bleak accounting, and there are only two things to be set on the other side of the ledger. Yet those two things are worth saying.

The first is that the fighting of April and May has been predominantly and unmistakably a battle between the organised armies of two states. The war has always been something more than a civil war between two groups of South Vietnamese, and it looks less like one now than it has ever done. Of course, the local guerrillas of the Vietcong who survived the defeat of 1968 have come out of their hidden camps to take part in this offensive, and they have captured a number of towns in the centre of the country and probably some in the Mekong delta too. But their part has been a subsidiary one, and it would not have been possible at all if the North Vietnamese regulars had not marched across the border. The argument for the original American intervention in 1965 was that over the previous five years North Vietnam had consistently been giving the Vietcong enough help, including towards the end the help of organised military units, to make the difference between winning and losing, and that if this northern-backed revolution had succeeded it would have set up the sort of government a majority of South Vietnamese did not want. That was the argument in 1965, and the events of the past month have done nothing to damage it. North Vietnam has had to send almost its whole army in to win, but by sending its army in it has destroyed its own propaganda about the nature of the war.

The defeated are not always wrong

It is even possible that this may have some effect on what happens next. It gives Mr Nixon a little more freedom of action : some of his critics in the Senate have said that an overt North Vietnamese invasion makes it a different sort of war, and the opinion polls show that so far a majority of Americans support the renewed bombing of North Vietnam. The trouble is that there is so little Mr Nixon can do, apart from hoping that the tactical bombing will start to work, unless he attacks North Vietnam on a scale that would probably turn opinion back against him and might not even change the course of the battle in the south. The open intervention of General Giap's army has also caused a problem for the National Liberation Front, by drawing attention to its dependence on North Vietnam. That will not help the Front to win any extra support. Perhaps that is why North Vietnam's chief negotiator at the Paris talks said on Sunday that he did not propose to set up a communist government in Saigon. All one can say about that is that if the sort of coalition he wants did not lead to a communist government within three or four years it would be the first time in the history of such communist-sponsored coalitions that the dog had failed to wag the tail.

But the odds are that none of this is going to make much difference, and that in the end the one sentence which sums up the war will be that the better army beat the worse one. It will then be said that the greater efficiency of the North Vietnamese army proves that it is the vehicle of a superior political idea. It does not. The British have seen too many of their friends in rout, at Caporetto in 1917, on the Meuse in 1940, even their own army in March, 1918, to confuse morale with politics. The efficiency of a country's armed services is no measure of the desirability of its political system ; if it were, Hitler would have had the most desirable political system of the mid-twentieth century. It is not even a measure of the popularity of the system among the men actually serving in the forces ; the press-ganged seamen of the superbly efficient British navy that stopped Napoleon were not admirers of Pitt. Of course, there are people who believe that the Vietnamese communists represent the forces of liberalism and enlightenment in south-east Asia today, just as there were people in Britain 170 years ago who believed that Napoleon represented the forces of liberalism and enlightenment in Europe. The comparison can be left to stand. The communists today, like Napoleon then, have their origins in a genuine belief in social justice ; but like Napoleon they have also created a system of power that inevitably slides into dictatorship and thereby corrupts the original idea.

The other thing that needs to be said is about the part the Russians are playing in this crisis. Pretty clearly the Americans had hoped that the Soviet Union would be willing to discourage North Vietnam from launching a major offensive this year, in the belief that this would make the Americans more accommodating in other matters—in the missile talks, in the next stage of the European negotiations, in providing credit for the technology Russia wants to buy from the west. After all, Mr Nixon's visit to China and the removal of Taiwan from the United Nations seem to have made the Chinese a bit more amenable. The Americans must have hoped that it would work the same way with Russia. It has not. The Russians have provided North Vietnam with the weapons that made this offensive possible, including the essential anti-aircraft guns, and let it use them.

No doubt they have measured the risk that Mr Nixon may now refuse to come across with his side of the assumed bargain. But they may reckon that with the election campaign already beginning, and with the expectations he has built up in American minds about his visit to Moscow, he will have no choice but to proceed with the agenda as if Vietnam did not exist : they can get Vietnam and still get the other things they want too. And they may be right, if the hint that Mr Nixon's spokesman dropped about the missile talks on Monday is anything to go by. The Russians do not often gamble, but they may be playing it the gambler's way this time, and if it works they may even try it somewhere else. If they are right, Mr Nixon may be faced with more than the failure of his Vietnam policy. He may also have to contemplate the failure of the United States as a power capable of operating a coherent worldwide policy towards the Soviet Union, a policy which balances events in Europe with those in Asia and Latin America and Africa, and insists on the principle of give and take, and requires an accounting at the end of the day. There is no other country in the non-communist world that can do that, if the United States cannot. It may not be only the map of Vietnam that is beginning to be rolled up.

Stand or deliver?

The constant surrenders to the trade unions are now driving Britain into a much graver social crisis than the Government will admit

There are at least four battles involved in the present struggle between the public interest of the British people and certain trade union leaders. In descending order of importance, they are a battle to uphold the rule of law ; a battle against protection rackets ; a battle against the sort of inflation that is bound greatly to increase unemployment and ruin many people in their old age ; and a much less vital, because possibly hopeless, battle to maintain some sense in the present Government's economic policy. Maybe the local election results confirm that a majority of Britons want to contract out of the last of these battles, but every citizen does now have to think where he stands in the first three.

The battle to uphold the rule of law is now at a serious stage. As long ago as March 23rd, a court ordered that certain lorries should be allowed to fulfil their contracts at Mersey docks ; but local officials of Britain's largest union (the transport union, TGWU) are still stopping them from coming through the gates. The court has also ordered that a section of Britain's second largest union (the engineers' union, the AUEW) should stop intimidating and threatening members of another union at a Tyneside engineering works ; but the relevant section of the AUEW has passed a formal motion saying that it will not take a blind bit of notice. Mr Jack Jones, the leader of the TGWU, has paid a fine with his members' money, but his counsel said on Wednesday that he thought it would be most tactless for him to take action against the lawbreakers in his union, and he is being given until next Tuesday to explain why. This is being called in the press a tough enforcement of the Industrial Relations Act.

There are occasions in British history when it is right for some Hampden or Pym to make sacrifices and to defy an unjust law. It is difficult to see how this can possibly be called such a case. So far, it is the victims of the offence who are making the sacrifices, with firms in danger of closing down; the perpetrators of the offence have not yet been in any way hit in their own pockets, persons or powers. There are contracts for certain container traffic to pass through Mersey docks, and local union stewards are discriminating about which small firms cannot operate in it. This power for local union bosses to discriminate arbitrarily between firms is hugely undesirable. It is the fertile breeding ground from which spring so many of the protection rackets that so disgrace British industry today.

Whose hand on the power to black ?

It should be a rooted principle of any reform of industrial relations in this country that powers to black particular firms should only be in responsible hands at the centre of the unions concerned, and even then they should be subjected to very close scrutiny. Mr Jones says that it is very unfair that the central office of his union should be fined for his local officials' contempt of court, because his executive has had no control over it. This is precisely the complaint that democrats should enter against Mr Jones.

The danger now is that the desirable reforms in union structures may not be forced through because the Government wants the union leaders to turn up to

Downing Street tea parties. When the order against the Mersey stewards of the TGWU was made in March, Sir John Donaldson said that this was because they were inducing Heaton's lorries to break their contracts, and that "the exception in section 96 in favour of a trade union or action on its behalf does not apply because the transport union is not a registered trade union." The original idea of the act was that unions would be driven by judgments like this into registering, and that when they registered they would be required to operate in a respectable way on pain of otherwise being de-registered again. The dangerous trend in Government opinion could be to welcome any unions that come on to the register (on the ground that this gives the Government a political victory), and then to leave the way that registered unions run some of their dirtiest affairs completely unreformed.

The most popular argument of the peacemakers now is that there are two separate issues in the docks disputes: respect for the law, and the problem of container traffic. It is said that this last problem needs to be met by some agreement which will still the legitimate worries of the docker about insecurity of employment, which will provide him with a guaranteed job and will ensure that he can be hit only by voluntary redundancies and then only with especially generous redundancy pay. There is only one trouble about these unimpeachable sentiments. They have already been fulfilled. Container traffic has been introduced into the ports only after long haggling and careful agreements on precisely these points. The TGWU's threat to call a national dock strike in order to wring a new agreement on container traffic is a device to try to raise the price of the sale of the right to operate a restrictive practice that they were supposed to have sold once already. The Secretary for Employment, Mr Maurice Macmillan, met Mr Jones on Wednesday in order to negotiate about buying this pup from him at a higher price all over again.

A penny for your retirement

Any such new agreement on container traffic should therefore be seen for what it is: another government surrender to inflation, like the one that British Rail could not quite get accepted by its own workers on Thursday afternoon. Where are we going?

At the beginning of this year, before the Wilberforce award to the miners, most wage claims were being settled in both private and public industry at around 7 or 8 per cent. Since Wilberforce, the going rate for wage surrenders has risen to over 10 per cent. On Thursday there were signs the railways might eventually raise the going figure to 13 or 14 per cent. If Britain is stuck in this sort of annual wage inflation, at a time when the long-term trend for annual increases in productivity cannot be over 3 or 4 per cent, the presumption is that we will be stuck with about 10 per cent price inflation a year.

Under that rate of price inflation, because of the rules of compound interest, prices will double every seven years. In an average working lifetime of just under 50 years, there would be seven such doublings. This means that, by the end of your working lifetime, prices would be about 128 times higher than at the beginning of it—ie, each pound in your pocket at the beginning of your working life would be worth less than 1p by the time you retired. Most people in this country are saving through some sort of occupational pension scheme, on the assumption that they will have a higher income during most of their retirement than the bare minimum provided by the state old age pension. With the sort of inflation into which we are sinking now, any such assumption becomes rubbish.

A lot of other economic and political assumptions become rubbish too. All practical experience—from southern Latin America to the Weimar republic—suggests that countries which sink for long into this sort of double-figure inflation also sink into huge unemployment, social upheaval and a disastrous realignment of traditional political battle lines.

The rot before the stop

This is why *The Economist* does not believe that Britain will sink into this sort of inflation for long. Some steps will eventually be taken to pull us out of the mire. The longer they are delayed, the more unpleasant they will eventually be: in terms of unemployment, political swings (which in Britain are now more likely to be to the rather nasty right than to the rather nasty left), genuinely illiberal laws against unions, the lot. This is where the country is being inexorably driven by the establishment forces for inflation: forces which range up from Lord Wilberforce, up through television news announcers (who were again this week prefacing intimations of a railway surrender with the usual fatuities about "hopeful signs in the railway dispute"), up to foolish trade union leaders and ministers themselves.

There had at one time been hope that a Labour government might stop this rot, but in 1969 Mr Wilson ran away. There had at one time been hope that this Government's initial distinctive approach might work, but that distinctive approach has been ditched. The crutches are out for all the lame ducks. The nationalised industries were at first asked to resist inflationary wage claims, but have now nearly all been subsidised to give way. The coal board is not being allowed to pay for Wilberforce by closing any more of the one-half of its pits that are making losses; the railways will not be allowed to pay for this week's probable surrender by closing any more of the disused lines to nowhere; the hugely-overmanned British Steel Corporation will follow the railways with an inflationary award, and will not be allowed to sack a single typist. Workers in Britain's uneconomic—and government-subsidised—shipbuilding yards were given a 30 per cent wage increase, over two years, on Wednesday. As one industrialist in Scotland privately put it this week: "While the row was going on at Upper Clyde, our workers said that the militants there were all layabouts; but the week after UCS was bought off our chaps naturally struck for more money too." This is not the sort of report that ministers are hearing at Westminster. But it is what is happening in the country.

Amazing grace

Now that the Commons is likely to pass the Europe bill in good order, something like divine intervention is needed to get the anti-marketeers to see the useful job they ought to do

The high water mark of parliamentary opposition to the European Communities Bill was reached on Tuesday evening when the Commons passed the Government's timetable motion with a majority of 11. Technically that vote did nothing to ensure that the bill will be passed, and the next day the Government's majority dropped to 6 and 4 on two amendments. But now that the Commons has voted both for the bill in principle and to limit its committee stage, it is inconceivable that it will not be passed—and in good time at that. The bill faces no great difficulty in the Lords, and in substance the European debate is all over bar the further damage it might yet inflict on British politics.

Of course, there will always be a group of anti-marketeers, with Mr Foot and Mr Powell in the van, who will never accept that Britain will join the EEC until the bill becomes an act; even then many anti-marketeers—Labour and Tory—will try to persuade the Labour party to commit itself to withdraw from Europe when it next forms a government. But the majority of Labour MPs, however sincere their opposition, have come to terms with the fact that they cannot overturn Parliament's decision on the principle of joining the market; the significance of Tuesday's vote is that they must now come to terms with the fact that they cannot obstruct that decision by procedural tactics either. It is too much to expect that they will now repudiate the hysterical anti-market leadership of Mr Foot and Mr Shore and the maverick activities of Mr Wedgwood Benn, but it is surely time for them to reflect on where acquiescence in that leadership is leading them.

The damage the Labour party has already inflicted on itself by its anti-market somersaults is immense. The Tory party, on the other hand, is coming through the debate relatively unscathed. The 15 or so diehard Tory anti-marketeers certainly have a following among Tory workers and voters in the country. But there are two aspects of that following which seem to have escaped Labour strategists, and particularly the masterminds who join forces with the Tory anti-marketeers in the Commons so readily. In so far as Tory rank and file anti-marketeers have a range it is from the right to the ultra-right of the party, and not only is that a minority of the party it is a minority which has nowhere else to go at a general election. And because it is the most militant section of the party it will not cussedly sit at home on polling day in order to watch a Labour victory being declared on the telly. Mr Heath is in no danger of losing a single vote from those people.

Almost the exact opposite is true of the Labour party. As a result of its common market antics it has lost a highly respected deputy leader and two of its best shadow cabinet members. Its leader's own authority and integrity are under continuous and injurious challenge to the point where, this week, even men like Mr Christopher Mayhew let it be known openly that they are considering standing against Mr Wilson in the autumn to allow opposition to him to be expressed in a secret ballot. But even more damaging is the cynicism which the party's official tactics have engendered, not simply among the electorate but within the parliamentary party itself. And the point about those party workers and Labour voters who have been offended by that cynicism is that they do have places to go at a general election: if they cannot bring themselves to cross straight to the Tories they can always express their respect for integrity in politics by voting for Mr Thorpe.

It is true that that is not how the left wing and the others who have brought the Labour party to its present plight see it. They believe, not only sincerely but as a matter of self-congratulation, that the anti-Europe line has helped to re-establish the party's fundamental power base with the trade unions. Up to a point they are right. As the most powerful unions are under left-wing leadership it is hardly surprising that those union leaders are happier when the political leadership of the Labour party adopts a left-wing stance as well. But where is that leading the party? Labour leaders are coming closer together with the left-wing union leaders at precisely the moment when the opinion polls show the public (which, of course, includes trade unionists) is becoming both increasingly anti-union and pro-market. For example, the Harris poll in the Daily Express on Monday confirmed that more people are now in favour of joining Europe than against it.

Acting the fool

If the viability and credibility of the alternative government were not matters of the utmost importance to the working of the British political system, the Labour party would simply be something for hilarity. It is certainly ridiculous even within its own ideological terms. Take the talks between the party and union leaders which are now being held to find some form of words which both sides can agree will pass as an industrial relations/incomes policy in the next election manifesto. The left wing is pushing Mr Wilson to accept Mr Jack Jones's scheme for wages to be settled by conciliation machinery totally independent of any government. In the great appeasement which is now going on it seems that as Mr Jones thinks he is on the left everything he says must be good left-wing philosophy. But if the Labour party commits itself to run no interference on wages when next in government, it will be abandoning not only Nye Bevan's target of capturing the commanding heights of the economy but also Mr Frank Cousins's

later concept of the planned growth of wages. In fact what has happened is that opportunism and left-wing pressure have combined to bring the relationship between the party and the unions to resemble nothing so much as two drowning men clutching at each other's throats.

On the common market issue, at least, the parliamentary Labour party now has the opportunity to do something better than tread water. It would be very foolish if it did not grasp that opportunity. The apparently easy way out—and therefore, unfortunately, the one most likely to be accepted—would be for Labour MPs to continue, in dwindling numbers and diminishing enthusiasm, to oppose the Europe bill in the Commons in the hope that when it is passed the left in the PLP and the unions will let the issue die and not face the parliamentary party with a conference commitment to withdraw from the EEC. It is a forlorn hope, indeed, that Mr Foot, Mr Shore and their friends will let the issue die, but at least it would put off the need to think about anything very fundamental for a couple of months. What Labour MPs should do is to take this opportunity of recognising that Britain is going to join the market on January 1, 1973, come what may, and instead of trying to obstruct, wreck or threaten to withdraw from that commitment do all in their power to make it work.

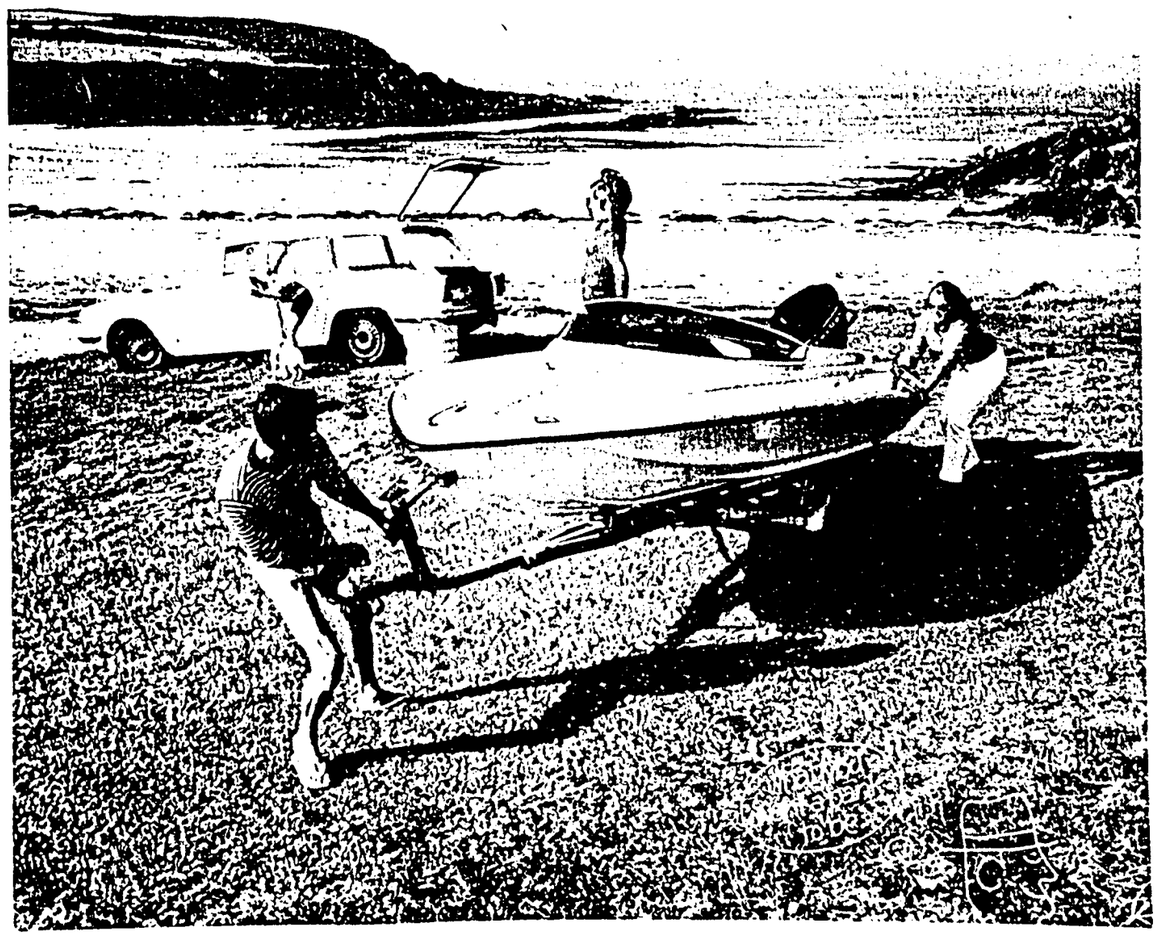
Parliament's real test

What that means is simply this : the Labour party should accept the Government's offer to consider the ways in which Parliament can monitor the activities of the EEC bureaucracy in Brussels and have its voice in the vital decisions which will be made there. That is the test of the sovereignty of Parliament from now on, and it is claptrap for the opponents of the European Communities Bill to argue, as they did on Tuesday, that that is what they have been trying to do. Certainly they have been trying to amend the bill in order to impose parliamentary procedures on all decisions taken in Brussels before such decisions can take effect in Britain ; but as they know that is impossible under the treaty all they have been doing, however eloquently constitutional their language, is trying to obstruct the passage of the bill. That objective is now an absurdity, but the need to devise parliamentary procedures whereby the British people, through Parliament, can influence the decisions in Brussels before they are taken—and thus become binding—remains as important as ever.

If there is one condemnation that can be made of Mr Foot, Mr Powell and their friends it is that they have succeeded in making the country indifferent to the very considerable changes in parliamentary practices which will be required when Britain is a full member of the EEC. When Mr Powell, for example, laments the passing from Parliament of the power to levy taxes the response of the country is more likely to be a guffaw than a worried frown : so far as the electorate is concerned the Chancellor of the Exchequer decides the taxes on budget day and that's that. The country has heard too many MPs deploring for too long that Parliament has no real control over the executive to believe that it has any to defend. What the country is not aware of is that MPs could, and the Government is eager that they should, devise procedures whereby Parliament has in fact more influence on the decisions taken in Brussels than it now has on many decisions taken in Whitehall. That machinery cannot be included in the present bill. Perhaps it should have been. And certainly whatever machinery is devised will make great demands on the time of many MPs of all parties. But if it is difficult it is also one of the most urgent tasks now facing Parliament, and any MP who turns his back on it has no claim to be regarded as a good parliamentarian.

Going round in circles

If Signor Almirante's right-wingers are the main gainers in Italy's election on Sunday the likeliest result is that the government will go back to where it started



No one really expects that the general election in Italy on Sunday will produce a stable government or help to resolve the country's social and economic problems. All the brave words and fluttering banners over the past few weeks have not even done very much to define those problems. Most Italian parties have handled their electoral campaigns as exercises in negative propaganda. The Socialists got an Australian public relations man to show them how to daub a Hitler moustache on a photograph of Signor Almirante, the leader of the far-right Italian Social Movement (MSI). The MSI slogan-writers invented syllogisms to persuade the conservative voter that by switching his vote from the Christian Democrats to themselves he would "cast a vote against communism."

There was plenty of vague talk about more housing, more jobs, and regional development, and plenty of politicians, including the "men of order" in the Communist party, ready to rattle imaginary sabres at left-wing extremists. But one of the few party leaders who really came to grips with the duties of a future government was Signor La Malfa of the Republicans, who attacked the nepotism and sins of omission of Italy's overpadded bureaucracy and insisted on the need for a government that could contain labour unrest and restore confidence to private investors. Those are the two immediate problems for the next government of Italy : how to get the petty clerks and department chiefs to start spending the £6 billion or so that they are holding in the form of money voted by parliament for various

WILLIAMS & GLYN'S BANK

projects but still unspent, and how to tackle the unions when 5m workers in 57 industries start putting in their claims for new collective wage agreements this autumn. If the elections on Sunday fail to produce a strong coalition, Italy is in for a long hot autumn of labour unrest that may rival 1969, against the background of last year's economic legacy—a growth rate of under 1 per cent, and a wave of bankruptcies among small businesses. These are the conditions in which political extremists flourish. It is also a situation in which appeals for strong government cease to sound hollow.

During the 1960s (the decade of centre-left government) it was possible, despite a serious economic recession after 1963, to argue that the Italians were capable of keeping up a high growth rate without having effective government. But more and more people became fed up with the inaction of a coalition in which the Socialists and the Christian Democrats often seemed to cancel each other out, and which appeared to lack the energy or the will to shake up the bureaucracy or drag the economy out of a process of gradual decline. The centre-left idea, of course, seemed hopeful—even noble—at the beginning. It was backed by the Americans as an alternative to communism that also held out the possibility of reform. Today, many of its founders (including Signor La Malfa and Signor Fanfani, the Christian Democrat who is one possible prime minister after Sunday) have rejected it on the basis of its record. The question is whether there is any viable alternative.

The centre-right idea shimmers

The possibility that leaps to the eye is that the Liberal party, in opposition for a decade, might join the Christian Democrats, the Republicans and the Social Democrats after the election in what its leaders now like to call a "centre" coalition. The Liberal party is composed of a small band of highly cultured, well travelled men who would find themselves very much at home on the liberal side of the Conservative party in Britain. They are anti-marxist, but not as reactionary as the left likes to make out, and their electoral programme contains a list of concrete social reforms. Arithmetically, such a coalition would have been practicable within the old parliament, although it might have been blocked by the left-wingers inside the Christian Democrat and Social Democrat parties. But it is doubtful whether the Liberals will keep their 16 seats in the senate and 31 seats in the chamber of deputies after the election. Of all the parties, they are the most vulnerable to the rival enticements of the MSI.

The MSI is the party to watch on Sunday, not just because the revival of its fortunes, more than a quarter of a century after Mussolini's fall, demonstrates the continuing appeal of the far right in Italy, but because, paradoxically, a large vote for it would probably sabotage the chances of a centre-right coalition. When Signor Malagodi of the Liberals says that his party stands at the "centre of the centre," and when the Christian Democrats bemoan the "rival extremisms," their motives are clear. They are frightened that the MSI will fulfil its hope of doubling its representation in parliament at their expense. It is generally agreed that the Christian Democrats have won back some of their restless conservative supporters by casting loose from the Socialists and by cracking down on criminals and political extremists. Signor Rumor, to most people's surprise, has figured over the past few weeks as a pretty tough minister of the interior.

But the MSI has been running a shrewd campaign, parading respected military men like Admiral Birindelli on the platform alongside flexible political showmen like Signor Tedeschi, the editor of Il Borghese, and Signor Almirante himself. Admiral Birindelli, whom both the Social Democrats and the Liberals might have liked as a candidate, can speak for the kind of MSI voter who is not burdened with nostalgia for Mussolini but wants strong government and a boost for private enterprise. Unlike some of his colleagues in the party, the admiral wants a presidential system modelled on that of France. Through the adhesion of such men the MSI may have started to look a bit more "respectable."

If the MSI really gets 40 or 50 seats in the election, the Christian Democrats will have three possibilities. They can try to form a minority centre-right government dependent on the backing of the MSI on major issues (it is inconceivable that the MSI could actually join a coalition). The objection to that is that when Signor Tambroni tried to operate a Christian Democratic government with MSI tolerance in 1960, he was forced to resign by a series of Communist-instigated strikes. Second, they can return to the centre-left formula—and despite all the Socialists' deathless prose about a "more advanced equilibrium" (which seems to mean coalition with the Communists) few people doubt that the support of the Socialists could be bought back at a price. Or they can hold new elections, which could be just as inconclusive as the first lot.

To sum up the electoral situation in this way is to leave several factors out of the equation. The obvious one is the Communist party, which issued a studiously moderate electoral programme in which it claimed, for example, that it is ready to work within the EEC and that it would not make withdrawal from Nato a precondition for joining a coalition. But although the Socialists are talking a great deal about joining up with the Communists, there is markedly less sympathy for the idea among Christian Democrats than there was before last June, when the MSI made its first show of strength in the municipal elections.

But the dawn never comes

If the MSI's successes this time thwart the chances of a centre-right coalition, and the Communists are kept out of the next government, Italy will probably find itself landed yet again with an unsteady centre-left cabinet. It is easy to see why many Italians are dissatisfied with a system that never seems to produce a government with a clear mandate. It is this restlessness that explains the rising protest vote on both the left and the right. The situation was summed up by the man who said that there are so many cocks in Italy that the country will never see the dawn. The Italians know how to elect a parliament, but not how to elect a government.

The insurance game-how Charterhouse can help you cover your risks.

We think that minimising the risks and maximising the rewards is what business is all about.

So part of our service at Charterhouse is to help businessmen at both.

Most people know that we offer a very full financial service. Not everybody knows that this includes an international insurance broking service through a network of companies in the U.K. and overseas.

With our particular interest in the business world we have a rather special approach to insurance. We try to do three things for our clients. First, to pinpoint the areas where the risks lie. Then to make those risks as small as possible. Finally, to ensure that those risks which cannot otherwise be eliminated are fully covered at the most competitive rates.

We'll cover you against virtually any misfortune, from your salesmen damaging their cars to a customer going broke. Fire and accident insurance, life, pensions and mortgages, marine and aviation, reinsurance and credit insurance–all come within our scope. And if you do have a claim, we'll see that you get prompt and fair settlement.

If you think we can help you cover your risks, call Michael Levete of Charterhouse Finance Corporation at 01-248 3999.

Or if you are in the Midlands ring Ralph Sammell at 021-236 4936.

Charterhouse

The Charterhouse Group Limited, 1 Paternoster Row, St. Pauls, London, EC4P 4HP.

The distinctive design of the game board and pieces, as well as the registered trade mark MONOPOLY are the trade marks of John Waddington Limited for their Property Trading Board Game and are used with their permission without sponsorship of the Charterhouse Group Limited, or its services

Mr. John King reports

BABCOCK & WILCOX LIMITED

Pre-tax profits 28% higher

Earnings per share more than doubled

Scrip issue - shares to be split

A one for ten scrip issue and the sub-division of each £1 of Ordinary Stock into four shares of 25p each is proposed.

Group Management

Babcock & Wilcox Ltd. is now involved in a wide range of activities. A new management structure has accordingly been built around five distinct product divisions in the U.K. and each of these, together with the International Division, is in the charge of a Divisional Managing Director and controlled by Babcock & Wilcox Management Ltd. whose Board is vested with the responsibility for directing the trading operations of the Group. The object of this reorganisation is to ensure growth and to encourage the maximum degree of divisional profitability.

Babcock & Wilcox (Operations) Ltd.

The order book at the end of the year was satisfactory in total, but it covers a long forward period and the necessary intake of short-term work was not as good as we expected. This was a reflection of the general downturn in business activity for capital projects and, in company with many other firms in the engineering sector, substantial redundancies had to be declared during the year. As a result of these influences the trading position for the year was somewhat below expectations.

Other UK Subsidiaries

Although there was a loss for the year as a whole in Muir-Hill Ltd. it was at a reduced level and there should be a good future for their products. Babcock-Moxey Ltd. was brought to profit and should make an improving and favourable contribution to Group results.
Major companies in the Construction Equipment Division - Blaw Knox Ltd., Winget Ltd. and Slater & England Ltd. - have improved upon their previous performances and are expected to consolidate this advance in the current year. Bailey Meters & Controls Ltd. continued to progress and have a record order book.

Overseas Subsidiaries

Both Babcock & Wilcox Australia Ltd. and Babcock & Wilcox of Africa (Pty.) Ltd. have suffered from the depressed economy in their respective countries. The need to accommodate the Australian company's resources to reduced demand is clearly identified and positive measures are being taken to correct the present imbalance in the organisation. The diversification brought about in the past in the African company has enabled it to meet the varying demand and its performance in 1971 can be regarded as satisfactory. Following the management action taken, Babcock & Wilcox de Mexico S.A. de C.V. traded profitably in 1971 on the basis of a good order intake in 1970.

General Review

The Group occupies a major role in the industrial development of Great Britain and its products and services are sold to almost every territory in the world.

In our wide range of business there are many hazards. The record of the past year shows an improvement, nevertheless I am sure that Stockholders are well aware of the many problems which have arisen in recent months and which are common to other companies in heavy engineering - labour relations, power cuts, the uncertainty of the future load requirements of the Central Electricity Generating Board and a reluctance of the U.K. economy to react to the incentives provided by the Government. In such circumstances, forecasting cannot be precise, but we do have an advantage in the significant degree of diversification that has been brought about to even out the risks of business in the short-term. Looking ahead, we can see that as the increased profitability that we expect from the Divisions emerges, we will be able to make further investment appropriate to the overall development and concept of this Group.

The 73rd Annual General Meeting will be held on 19th May 1972 at Confederation of British Industry, 21, Tothill Street, London, S.W.1.

FINANCIAL RESULTS IN BRIEF

	1969	1970	1971
	£000	£000	£000
Turnover	103,553	110,586	128,094
Profit before taxation	2,071	3,144	4,013
Taxation	1,581	1,626	1,417
Profit after taxation	490	1,518	2,596
Ordinary dividend	10%	10%	10½%
Dividend cover	0.05	1.1	2.3
Return on funds employed	5.8%	8.4%	9.5%
Earnings per £1 Ordinary Stock	0.5p	11.6p	24.2p

A copy of the Chairman's full Statement and the Report and Accounts for 1971 can be obtained from the Secretary, Cleveland House, St. James's Square, London, SW1Y 4LN.

S. Pearson & Son, Limited

"We have continued our policy of improving the quality and profitability of our existing assets and seeking expansion both by acquisition and by internal development."

The following are extracts from Lord Cowdray's Statement circulated with the Report and Accounts:

Progress and Development In 1971 S. Pearson & Son made further progress in consolidating recent acquisitions and in developing the Group's businesses. The year saw two major purchases; first, we acquired all the shares in The Penguin Publishing Company not previously owned by Pearson Longman and we then exchanged these shares for additional shares in Pearson Longman, thereby increasing our holding in the latter company to 63·6%. Secondly, we offered to buy Doulton & Co., and although this purchase was not completed until after the end of the year under review, it was a development of considerable strategic importance for the company.
Our profit forecasts have been exceeded despite the many uncertainties which have affected the economic climate, particularly in Britain. While I believe we are well placed as a Group to take the opportunities which arise for our companies, one of our principal concerns at present is to ensure that our planning and organisation match the challenge of continually changing conditions.

Profits of the Year The total profits of the Group before taxation in 1971 were £17,243,000, against £14,666,000 in 1970 and the profits before taxation attributable to the Company, after excluding minority interests and pre-acquisition profits, were £11,898,000 against £9,331,000.

Banking and Financial Services Business in all departments of Lazard Brothers continued to increase during the year. Deposits increased by 17%; foreign business was more active and profitable in the fields both of Euro-currency loans and of foreign exchange dealing; and finance under E.C.G.D. guarantee rose during the year by £100 million.
While progress was made towards the integration of the companies that now form the Bain Dawes Group few of the benefits of integration were obtained during the year. However, the business continued to expand although profits were slightly lower owing to reorganisation expenses. Prospects for the current year look favourable.

Investment Trusts At 31st December, 1971 the portfolios of Whitehall Trust and Minden Investment Trust, both substantially United Kingdom securities, were together valued at approximately £22·2 million.

Newspapers and Publishing Pearson Longman have extended further into the educational field through the purchase of Wills & Hepworth, publishers of the well-known Ladybird series of children's books. Longman Penguin contributed pre-tax profits significantly above last year's results. *The Financial Times* showed a small decrease in profit, although good progress was made in the Business Enterprises division. Westminster Press produced a 19% increase in pre-tax profits. We consider the outlook for Pearson Longman as a whole to be good.

Industrial and Commercial Interests Spearshaft Industrial Group had a successful year, increasing their profits before tax from £1,646,000 to £2,081,000. Allied Glass Merchants achieved profits of £824,000 and Allied English Potteries £712,000 before tax. Peck Engineering Group made £589,000.
As I have already said, since the year end Pearsons completed an agreed offer for Doulton. In our view the combination of the tableware businesses of Doulton and A.E.P. will create a better balanced and more profitable enterprise. In addition, we foresee benefits to the respective industrial activities of both Doulton and S.I.G. by putting them under one management. Doulton will become the main holding company for Pearsons' industrial interests in this country.

North American Interests Midhurst Corporation's principal asset is its holding of Ashland Oil Inc. Convertible Preferred Stock.
It is our intention to widen the scope of our activities in the United States. As a start in this direction, in January 1972, Midhurst concluded an agreement with Wilsey Bennett Company, a California-based company engaged in pharmaceutical distribution, food manufacture and real estate development.

Conclusion We have continued our policy of improving the quality and profitability of our existing assets and seeking expansion both by acquisition and by internal development. Our progress in 1971 demonstrates the successful efforts of all in the Group.

Copies of the Report and Accounts may be obtained from Lloyds Bank Registrar's Department, The Causeway, Goring-by-Sea, Worthing, Sussex.

Pearson Longman

Dividend increase justified by current trading and future prospects

From the Statement of the Chairman, Mr. R. P. T. Gibson.

In the twelve months since I last reported to shareholders we have suffered the loss of two colleagues on the boards of companies associated with Pearson Longman. Mr. T. S. G. Hunter died last December and Lord Crowther in February of this year. Geoffrey Crowther was the chief architect of the success of *The Economist* during and after the war till he retired as editor in 1957. He became chairman in 1963. Of all that he achieved in his distinguished career nothing meant more to him than *The Economist*, and we mourn his tragically early death. Jim Hunter had spent nearly all his working life with the *Financial Times*, and his father was editor of the paper before the last war. He himself became deputy editor in 1950, general manager in 1957 and subsequently a director of the company. He retired from the board only a few weeks before his death. He played a most important part in the development of the paper and in bringing it to the pre-eminent position it holds today, and our debt to him is very great.

The Year's Trading

The audited accounts for the year ended on 31st December 1971 show group profits after tax of £3,623,000, after deducting minority interests of £36,000.

Turning to the consolidated balance sheet, the considerable increase in the book value of fixed assets stems mainly from a decision to revalue the leasehold property at Bracken House, London. This was professionally valued at £7,250,000 as against the book figure of £1,651,569. Of the surplus so arising, £1,500,000 has been taken to tax equalisation account as a provision against the potential gains tax liability, and the balance, £4,098,431, has been placed to capital reserve.

A further credit to capital reserve of £12,466,331 derives from a decision to revalue our investment in The Penguin Publishing Company at the market price of its shares immediately before the announcement of the Scheme of Arrangement which led to this company becoming our wholly-owned subsidiary on 28th October 1971.

Dividend

After maintaining ordinary share dividends at 20 per cent for each of the last three years we have thought it right to suggest an increase in the final dividend for 1971 to give 22 per cent for the year. We consider this justified by current trading and by future prospects.

The Financial Times

The trading profit of the *Financial Times* for 1971 was £1,064,000, a decrease of £64,000 on last year despite an increase in selling price to 6p from July, 1971 and further increases in advertisement rates. The principal causes were increasing costs and the lower volume of advertising resulting from the generally depressed level of the national economy.

For so difficult a year as 1971 the result is not unsatisfactory and is, in fact, higher than we budgeted. It is also encouraging to be able to report that the price increase did not affect sales, which continued to rise most satisfactorily, nor did the advertising rate increase appear to reduce our share of this market.

During the year, work was completed on a sixth unit for each of our three rotary newspaper presses and the first *Financial Times* with more than forty pages was published on 31st August 1971. We can now produce papers of up to forty-eight pages when necessary.

The business enterprises division, to which I referred last year, made very good progress in 1971 and returned a profit of £84,000.

Subsidiaries of the *Financial Times* returned varying results during the year. *The Banker* increased its profit mainly due to the successful trading of its new Research Unit. *History Today* also achieved better results than in 1970. The results of *Apollo*, however, were depressed by reduced activity in the art market, particularly in the U.S.A., and the *Antiques Yearbooks* were likewise adversely affected.

Of those companies in which the *Financial Times* has an interest, one of the most successful is Throgmorton Publications which publishes the *Investors Chronicle* and which we own jointly with the International Publishing Corporation. I would particularly like to draw attention to the distinguished contribution to the success of the *Investors Chronicle* made by the new editor, Mr. Andreas Whittam Smith. The company has recently acquired the monthly journal *Money Management and Unitholder*.

We have a 40 per cent interest in Industrial and Trade Fairs Holdings which had a below average year mainly due to the cyclical nature of this business. In March 1971, the company acquired the business and undertaking of Iliffe Exhibitions and in December the goodwill of the exhibitions owned by Industrial Exhibitions.

The Financial Times received The Queen's Award to Industry for Export Achievement in 1971, the first newspaper ever to receive the award.

As a result of these acquisitions we have increased our permanent investment in this company by some £332,000 to £397,000. The company is expecting improved results for 1972.

Management Today, in which we have a 25 per cent interest, also had a disappointing year partly due to the increase in postal charges which bear particularly heavily on publications of this kind.

The Economist had a good year but this was to some extent counterbalanced by a poor year for The Economist Intelligence Unit. We are most fortunate that Mr. Evelyn de Rothschild has accepted appointment as Lord Crowther's successor as chairman of *The Economist*. As mentioned last year, Mr. Ian Trafford became managing director of *The Economist* in July, 1971 and chairman of The Economist Intelligence Unit.

Westminster Press

Turning to Westminster Press, it is satisfactory to report that in a year in which there was a general lack of business confidence in the economy, a high level of unemployment, and a seven weeks' postal strike, the profits of our regional newspapers rose by 19 per cent to £2,114,000. This result reflects management's success in containing costs, since turnover increased by only 9 per cent.

The sales of our papers continued to recover from the effect of cover price increases imposed mainly in 1970 and to a lesser extent during the first half of 1971.

Perhaps the most gratifying development during the year has been the remarkable progress of our new evening paper covering Basildon and Southend – the *Evening Echo*. Profits for the business as a whole at £200,000 in 1971 compared with a loss of £50,000 in 1970 – an achievement which reflects great credit on all concerned.

Generally the year was a difficult one for all our papers with salaries and wages still rising.

The year has seen the government proposals to introduce local commercial radio starting in 1973. We envisage that stations set up for areas with a population of over a quarter of a million are likely to be viable, and if the areas covered correspond to the marketing areas served by local newspapers the stations could have an adverse effect on local advertisement revenues. In the light of this we plan to apply to participate in stations covering such areas.

I reported last year on the results of our associated company, the Birmingham Post & Mail Group in which we have a major investment. Their financial year to 30th June 1971 was a disappointing one with pre-tax profits at £1,041,970, showing a drop of approximately £240,000 on the previous year, but the maintained dividend was well covered. There is no doubt that business activity will revive in the Midlands area and when this occurs it will be reflected in the improved profitability of the Birmingham company.

Longman Penguin

We bought out the minority interest in The Penguin Publishing Company during 1971. We have also decided to integrate the service functions of Longman and Penguin and in February of this year we renamed the company, which now controls our main book publishing activities, Longman Penguin.

As an important step towards the greater integration of Longman and Penguin we decided to combine their warehouse, distribution and allied services. After detailed research, Bury St. Edmunds was chosen as the best available area for this operation. Planning has begun and work should start early in 1973 with a view to transferring the present warehouses to Bury St. Edmunds in 1975.

A further move towards integration was the amalgamation of Longman's general publishing division with Penguin's general hardcover publishing company, Allen Lane The Penguin Press.

I now refer separately to the two companies and to Wills & Hepworth which was brought into the group near the end of 1971.

Longman

Sales of £12,200,000 showed a very satisfactory increase of 17 per cent over last year.

In our general list, the publication of Basil Boothroyd's biography of the Duke of Edinburgh, *Philip, An Informal Biography*, was the outstanding success of the year.

The Longman Young Books imprint made an important contribution to the group and is achieving a steadily increasing share of the quality children's book market.

University publishing was futher rationalised during the year and promotional efforts in this field were increased. There was a satisfactory rise in sales to technical colleges both at home and abroad.

Home schools sales continued to grow steadily. While our share of this market has increased we have been able to keep our costs relatively stable.

World sales of our English language teaching division improved by 19 per cent.

Penguin

For Penguin too 1971 was a year of satisfactory progress. Sales increased by 16 per cent to £8,162,000 and profits before taxation rose from £966,000 in 1970 to £1,119,000 in 1971.

Once again a feature of the year's sales was an increase of nearly one million copies in the number of Puffins sold. The Annual Puffin promotion which takes place in March of each year resulted in 1971 in the sale of an additional half million books. The Puffin Club continued to attract many new members and there are now over seventy thousand.

Another feature of the year was the remarkable number of books on our list which formed the basis for films first shown in 1971. Titles which benefited substantially from co-operation with the film companies included, *The Railway Children*, *Death in Venice*, *The Devils of Loudun*, *The Go-Between* and *Bedknobs and Broomsticks*.

Co-operation with the television companies is also increasingly significant in terms of the sales it brings. We are already enjoying the sales resulting from the British Broadcasting Corporation's presentation of *Clochemerle* and in the Autumn the B.B.C. will launch a major production of *War and Peace*.

Wills & Hepworth

Sales for the nine months to 31st December 1971 amounted to £1,306,000 against £1,453,000 for the full year to 31st March 1971. Profits before tax were £389,500 for the nine months and £362,000 for the year respectively. The former compares with a merger forecast of £475,000 for the year to 31st March 1972.

The number of Ladybird titles now in print exceeds three hundred.

The *Key Words Reading Scheme*, first published in 1964, has now sold more than twenty-two million copies and sales continue to grow.

Conclusion

The outlook for our group as a whole is good. Our book companies forecast increases in sales and profits for 1972. Present indications are that these should be achieved but our ability to handle increasing costs without pricing ourselves out of the market will be vital.

So far as the newspapers are concerned, the all important factor is the state of the British economy on which advertising revenue so much depends. We cannot expect substantial increases in revenue until the economic health of the country improves and meanwhile we have to face heavy increases in salary and wage costs this year as a result of current wages negotiations and agreements. Nevertheless, when the economy does improve the effect on our newspaper profits should be immediate.

Highlights from the 1971 Report

Sales	£53,531,000
Profit before taxation	7,027,000
Taxation	2,999,000
Minorities	36,000
Pre-acquisition profits	220,000
Extraordinary items	149,000
Attributable	3,623,000
Preference dividends	32,000
Ordinary dividends	2,266,000
Retained	1,325,000

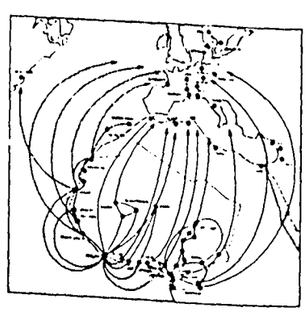
Our jets don't move any faster.

Our passengers do.

Our passengers are a step ahead of the rest. They're taking the lead in the development of a rich, expanding, wide-open continent: Africa.



To Africa, from Africa and within Africa, they fly Air Afrique. The only airline with the size and speed they want.

Like 84 flights a week. To 34 African cities. And every flight has one thing in common. Efficient, courteous, unobtrusive service.

Which we mean to expand still further. For instance, we're just about to introduce the first three giant DC10's the continent has ever seen.

At Air Afrique, we can't afford to hang around.

Nor can our passengers.

Without Steel Tubes, BP, Esso, Gulf, ICI and Shell would have a little problem.

Through steel tubes the petro-chemical industries are able to make full use of crude oil. That black stuff that comes out of the ground is changed, thanks to our steel tubes, into fertilisers, textiles, petrol and a thousand other crucial contributions to modern life.

As the largest producers of precision steel tube in the world, we've got the resources to take on anything any customer can give us, and meet the kind of specialist order that other companies can't.

And because our division is cellular (i.e. composed of 26 beady-eyed, entrepreneurial companies) we reckon we're able to offer specialised workmanship and encyclopædic research resources as well as the stockholding facilities of a giant.

We offer all this to the petro-chemical industry in Europe and throughout the world.

If you think this kind of set-up could do extraordinary and wonderful things for your company, or simply a sound job rather more rapidly than anybody else, get in touch with Paul Standing our Commercial Director.

Steel Tube Division

Closing a 12,000 mile gap.

There you are in the U.K.

And here we are, Australia's biggest company.

With 12,000 miles between us.

From that distance, can you really get a feeling about us?

We hope so.

For both our sakes, it's important that you do.

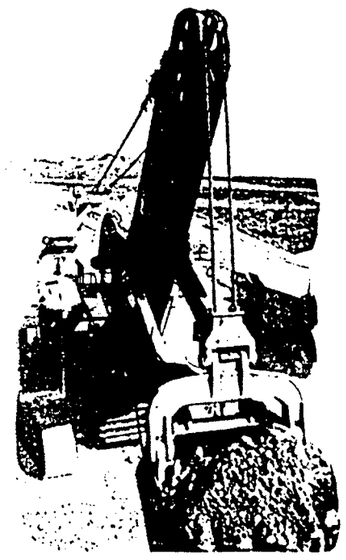
Because to deal confidently with any company, you have to know that they're big and stable enough to be effective.

Especially when they're 12,000 miles away.

For that reason, we've prepared some information that you will find reassuring and possibly surprising.

It will certainly let you sleep well at night when you deal with Australian industry.

Last year, BHP paid out £Stg. 117 million in wages.



That isn't a boast.

It is simply an indication of the magnitude of our operation.

At this moment, BHP employs 56,000 people.

And thousands more work in industries allied with ours.

So much for our size. This is what we do with it.

Mining.

This is where the company really started in 1885.

Last year, we produced 27 million tons of ironstone, coal, limestone, manganese and dolomite.

And a constant programme of geological exploration is increasing already vast proven reserves.

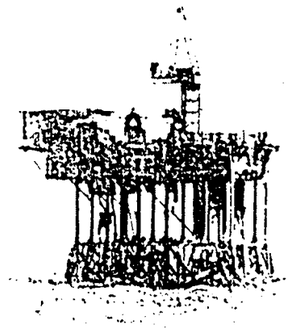
All this, you will no doubt agree, is very healthy indeed. In fact, it makes BHP one of the world's great mining companies.

Steelmaking.

Naturally, with the access we have to enormous supplies of high grade ore, our steelmaking activities are equally well developed.

Since 1915, BHP has been Australia's steelmaker.

Today, BHP operates four iron and steel works.



If you visited them you would be pleased to note how we utilize highly advanced technology and equipment.

Last year, in our four iron and steelworks, we produced just under 7 million tons of raw steel, which ranks BHP 13th among free world producers.

And in mid-1972, a £Stg.163 million expansion will come onstream at Port Kembla, Australia's largest steelworks, boosting total capacity to 9 million tons.

This output satisfies Australia's total steel needs with enough capacity to fulfil hefty export orders.

And each year, that capacity grows.

Oil and gas.

Until 1969, Australia imported 90% of its petroleum requirements.

Over the last 3 years, a dramatic change has taken place.

60% of this country's total petroleum requirements now comes from Australian fields.

BHP and Esso found oil and gas under the turbulent waters of Bass Strait.

1,600 million barrels of oil and 9.5 trillion cubic feet of natural gas.

It cost the partnership £Stg. 180 million to explore and develop, but the calculated risk paid off.

And the search continues.

Shipbuilding.

BHP's shipbuilding activities date back to only 1911.

Yet since that time, BHP has built 52 vessels — 12 for the company's own fleet, now totalling 18 ships.

This year we'll launch 53, 54 and 55, including a 78,000 dwt. ore carrier.

All built, naturally enough, with BHP steel.

Each year, the fleet transports some 12 million tons of raw materials to our works.

Our fleet may not worry Mr. Onassis.

But then, we make more steel than he does.

Research and exploration.

A company like BHP leans heavily on it.

Some 600 people, including 150 scientific staff, are engaged in research and development at our two major research laboratories and at the Works laboratories in each of the steelmaking plants.

BHP's mineral exploration team numbers over 70.

It is, in fact, one of Australia's largest group of geologists and geophysicists.

Investment.

Over the past ten years, BHP has ploughed back over £Stg.604 million in new plant and equipment.

Over that same period, the company has paid out £Stg.109 million to its 183,000 shareholders.

And perhaps most important of all, is our investment in brainpower.

At this moment, we have just under 6,000 of our people receiving specialised training and higher education.

We intend to be here for a long time.

Record New Business Increased Bonuses

The 148th Annual General Meeting of the **Clerical, Medical & General Life Assurance Society** was held on the 3rd May, 1972. The following are extracts from the statement which was made by the Chairman, The Rt. Hon. Lord Geddes, K.B.E., in moving the adoption of the report and accounts.

"New sums assured amounted to £116 millions, compared with £91 millions for 1970, and new Deferred Annuities, under both personal and pension contracts, to more than £7·4 millions (1970—£5·4 millions). New annual premiums were 29% higher than for the previous year.

Rising prices on the U.K. and other Stock Exchanges have led to the market value of stock exchange securities at the end of 1971 standing £37 millions above the value shown in the balance sheet, against £16 millions a year earlier. This increase is after increasing the balance sheet value by £7·5 millions transferred from investment reserve in connection with the current bonus, and taking more than £3·5 millions realised profits to revenue. Had it not been for these adjustments the margin would have stood at £48 millions.

After setting aside valuation reserves, the surplus available enables us to declare compound reversionary bonuses at the rate of £4·50% per annum on full profit policies in the New Series in respect of the three-year period 1969-1971. In the case of Old Series policies, the calculation of the new bonus is based on the amount of the premium and the class of policy, and no direct comparison with the New Series can be made. It can be stated, however, that the new bonuses declared this year, whether Old Series or New Series, show a substantial increase over those declared three years ago.

It has been the Society's practice at recent declarations of bonus to write up the balance sheet values of investments in recognition of market appreciation. The purpose of this is to ensure that policy-holders receive bonus additions to their policies which reflect the success of the Society's investment performance. Furthermore, it is our practice to pay terminal bonuses on policies becoming claims, thereby recognising additional appreciation over and above the writing-up in the accounts at the time of the claim. As from the beginning of this year these terminal bonuses are being paid at the rate of £0·75% of the sum assured for each completed year the policy has been in force subject to a maximum of £30% of the sum assured.

Once again, as at the last Bonus declaration three years ago, there has been added to pension funds deposited with the Society 6% of the sum standing to the credit of the fund at the end of 1968, or at the end of 1971 if smaller. This is in addition to the normal deposit interest paid year by year, which itself is at a rate reflecting the return from the Society's invested funds."

Pan Am introduce the first-ever First Class dining room

The China Clipper was a Martin M130 with a cruising speed of 130 mph; she was one of three owned by Pan Am. She could seat 32 passengers—only 15 to 20 on long journeys. With a range of 2,400 miles, she was Pan Am's first long-distance aircraft.

In 1936, when 'Gone with the Wind' first hit the bookstalls like a hurricane and William Powell starred in the glassy, glittering 'Great Ziegfeld,' the Pan Am China Clipper flew with the first-ever flying dining room.

Pan Am first served food on board in 1929. In 1935, galleys were installed and the first hot meals served. A dining room came next.

It was small but well appointed, like a lift in the Waldorf Astoria, and it seated fifteen diners very comfortably while still leaving the lone steward room to manoeuvre.

...again.

After 35 years Pan Am have another aircraft big enough to carry a dining room again.

The 747 travels at 625 mph with a range of 6,700 miles. Unfortunately there cannot be a dining room on board to accommodate all the thirty-eight First Class passengers. Just ten can use the dining room, so far.

Perhaps it should all be one big dining room, but till that day, should you decide that you want to be a pioneer too, please remember to book your table early.

Suddenly, you're (dining) somewhere else.

BRITAIN

Local elections: the Labour bandwagon starts rolling

Polling for the major cities of England and Wales outside London took place on Thursday, and the votes were being counted after *The Economist* went to press. Labour had gone into the polls in a jubilant mood following the Scottish burgh elections on Tuesday. In Scotland, Labour made massive gains in terms of seats for the third consecutive year, which was only to be expected, and the swing in votes from last May's elections was of the order of only 1 per cent to the Tories —which was well short of the pro-Tory swing of 7 per cent which the opinion polls had been showing for Britain as a whole. The Tories were hoping that this year might see a repetition of 1963 and 1966, when the Scottish burghs were no pointer to the way England voted. Nevertheless, Labour now controls something like three-quarters of all burgh councils in Scotland where party politics count.

Labour missed capturing control of Edinburgh for the first time, which would have required a 7.6 per cent swing to it from last May. Labour, in fact, gained five seats to make it the largest party on the council, but with the right (Conservatives and Progressives) retaining 30, plus one, non-socialist independent, the Liberals now have the balance of power in Scotland's capital. They gained one seat to bring their total to five. The Tories must be relieved that Labour did not win control, but there is a difficult year ahead for Edinburgh's politicians. Only the Liberals are likely to enjoy it. But Labour gained consolation by winning Greenock (from the Liberals), Dunfermline, Johnstone, Falkirk and Stirling.

In Glasgow, where Labour re-established control last year, another 13 seats were won to provide the party with an unprecedented majority of 79-32. But the battle for the right-wing vote between the Conservatives and the Progressives moved decisively in the Tories' favour. In Glasgow, the Progressives are now virtually extinguished, and in Edinburgh their position is very shaky indeed. This will work to the Tories' advantage when the first elections for the new regional and district councils take place in 1974.

Tuesday's results confirmed that the Scottish Nationalist party is no great rival to the two major parties. The SNP lost a further 15 seats, bringing its total losses in three years to around 120. Labour gained Stirling, which was a Nationalist stronghold, and the SNP had only slight revenge in taking one seat from Labour in Cumbernauld new town, where the SNP's majority is now 16-5. The SNP is no longer a force in the cities, and it lost its last remaining seat in Glasgow.

There were no local elections in London this year, but some indication of the trends in the capital may be deduced from two parliamentary by-elections which also polled on Thursday. At Kingston-upon-Thames, the Tories were defending a 25 per cent majority, while at Southwark Labour had a majority of 39.2 per cent at the general election. Ignoring Labour's most recent by-election victory at Merthyr Tydfil, whose peculiar circumstances make any calculation of swing invalid, last year saw the only Tory loss, at Bromsgrove in May, where the swing to Labour was 10.1 per cent; two further large swings to Labour were recorded in Hayes and Harlington—16.5 per cent—and Widnes—11.4 per cent. They were both safe Labour seats. In the last by-election of 1971, at Macclesfield in October, the Tories just managed to hang on to the seat in face of a swing to Labour of 8.4 per cent.

Ramsey: let down

Churches

Let no man put together

The Church of England's vote on union with the Methodists was a test of its new system of synodal government as well as of its goodwill. Goodwill was needed from the minority: when the Anglicans first voted on the scheme, in 1969, there was a clear majority in favour of unity. But while the Methodists (voting at the same time) came out 77 per cent in favour, the Anglican vote fell short of the required 75 per cent. On Wednesday, it fell even farther short. This second rebuff to the Methodists was a retreat from ecumenism, a denial of a harmony that is already achieved in many parishes and a blow to the Archbishop of Canterbury, Dr Michael Ramsey. The Anglican church has led the Methodists up the garden path.

In 1969, the voting was restricted to the clergy, the members of the two convocations of Canterbury and York. Since then, the authority of these two bodies has been vested in the new General Synod, consisting of the diocesan bishops, a house of clergy and a house of laity. An overall vote of 75 per cent was still required: but only two-thirds of the members of any

individual house had to be in favour. The bishops' vote was never in doubt ; more than three-quarters of them voted for union in 1969, and the majority was even higher this time. But in 1969 barely two-thirds of the clergy were in favour, and a similar vote taken at about the same time among the laity showed only 52 per cent in favour of the scheme.

Dr Ramsey had been told it would be a miracle if the motion gained a sufficient majority. It was not forthcoming. This time, just under two-thirds of the clergy voted in favour ; among the laity the proportion was slightly lower still. The overall synodal vote in favour was 66 per cent. The minority prevailed again. There will not be another chance for this scheme. The Methodists will no doubt turn more to the other Free Churches, though local co-operation will, or should, continue. As so often in church affairs, the structure and the theory will lag behind reality.

The General Synod was still being asked to approve only stage one of the reunion scheme, which involved inter-communion and mutual recognition of ministries. The sticking-point has always been the service of reconciliation: did it entail the reordination of the Methodists, or not ? A decently obscure compromise had been worked out and accepted by the Methodists with commendable generosity ; they were to have been "commissioned," a vague term to which the Archbishop of Canterbury had had the good sense not to attach any theological definition. Much of the credit for the Church of England's slow trundle towards church unity must go to the Archbishop, who deserved better from his church than he received on Wednesday. As he said afterwards, the hard core of the opposition was simply opposed to change. Of course, as Lord Fisher (who is generally credited with making the first move towards the Free Churches in 1946) has pointed out this week, a programme of organic unification of Christian churches must be a more forced resolution of diversity than gradual intercommunion—the only hope at present of ecumenism between Roman Catholic and Protestant churches. But there is already more doctrinal diversity among Anglicans than between them and the Methodists. As the Bishop of Kingston, the Rt Rev. Hugh Montefiore, pointed out with customary crispness on Monday, if the Church of England can't merge with the Methodists, it can't merge with anyone.

Ulster

Willie's worries

Mr Willie Whitelaw, Northern Ireland's secretary of state, has no immediate intention of being diverted from his policy of conciliation towards the Roman Catholic community by the persistent Unionist calls for tougher army action, particularly against the "no go" areas of Londonderry which are under the control of the IRA gunmen. No let-up has come in the gradual phasing out of internment without trial, despite the continuing violence on the streets. So far 204 men have been released from custody, 152 of them internees. And Magilligan camp was closed down this week. The remaining 727 men held under the Special Powers Act (575 internees and 152 detainees) are all at Long Kesh camp.

Mr Whitelaw has issued no new internment orders since he took office six weeks ago and only 19 men have been detained under the Special Powers Act. Unionist critics claim that many of the released internees come from category A of the hard core suspects and are not merely small fry. It is even suggested that two of them have been re-arrested for street rioting. But the hope now is that the gunmen and bombers (if they do not just fade away, as Mr John Hume believes they will) might actually be brought to trial through due process of law in open court before witnesses and juries. Since January, the police have arrested and brought charges against 39 people for serious offences ranging from murder and armed robbery to tarring and feathering.

Ulster's economy is also a worry. Lord Kearton, chairman of Courtaulds, put on a brave face this week and expressed confidence in Ulster after a bomb attack on his company's £13m polyester plant at Carrickfergus which killed one man and injured another eight. It seems that "only" £1m worth of damage was done to the factory and none of the 1,400 workers is going to lose his job. Such an explosion in one of Ulster's new growth industries can scarcely help, however, to restore lost business confidence about the province's future.

Since last July, 130 firms have suffered some bomb damage, and eight of them have closed down, throwing 609 people on the long dole queues, while a further 15, employing 450 people, have not yet resumed production. In 1971, a record 7,200 jobs were created in Ulster, mainly in established firms. This year, the outlook is bleak. Only 782 jobs have been created in the past four months, and 615 of those were in existing factories. On Thursday, Mr Whitelaw told the Commons that £35m would be poured into the Harland and Wolff shipyard to provide an extra 4,000 jobs. High insurance costs and the expense of providing security are serious handicaps to Ulster business. Over the past two years, £16m has been paid out in compensation for malicious damage to property. In Londonderry alone, the total claim for bomb damage for the past eight months has now reached £6m and claims are averaging 85 a week. Mr Whitelaw has also done something this week to aid Ulster's traders, who are faced with slumping sales and high rate demands. They are to get 75 per cent grants to help them pay their rate bills in Belfast, Newry and Londonderry, if they can prove that their financial plight is due to the IRA bomb campaign.

Mr Whitelaw must be concerned, too, with the recent outbreak of Protestant hooliganism in east Belfast near the shipyards. Tartans—sectarian skinheads—have attacked the police and shops in frustration at what they see as the Government's support for the Catholic minority. These blue-denimed thugs in bovver boots have not been encouraged to show much self-restraint by the bellicose antics of some of their elders in the Vanguard movement. Mr Bill Craig's London rally turned into a complete washout, but it did draw the support of the extremist National Front. The trouble is that the Unionists are in great disarray. A political vacuum is being created among Ulster's Protestants who are divided between the Faulkner forces, Vanguard and Mr Paisley's Democratic Unionists.

Craig: saying it with flowers

PLA Port of London Authority

Highlights from the Annual Report and the Statement by the Chairman, Lord Aldington

- **Profit of £169,000 achieved - the first year in which the PLA has made a profit since 1966.**
- **Total reserves increased from £51,000,000 to £57,000,000.**
- **Capital liabilities reduced by over £4,000,000.**
- **Unit load traffic of the whole port rose by 53% and container traffic of the PLA docks by 52%.**
- "There is nowhere with better land communications to large centres of population and industry than the Port of London. The purpose of the proposals for a deep sea oil terminal and a deep sea and short sea container port at Maplin is to ensure that the Port of London is able to bring these excellent land communications to the most modern type of ship. Riverside berths and wharves, the upper enclosed docks as well as Tilbury, will continue to meet the needs of ships and craft that want them.

The strong marketing effort by the P.L.A. management quickly made good the loss of the United States Lines to Tilbury container berths, which handled in all 2 million tons of cargo in 1971 compared with 1·3 million tons in 1970. In recent months, we have attracted to Tilbury the Comar Line (that carry Ford's traffic) and new services of Hapag-Lloyd and Combi Line. The threats to London's competitiveness do not come from any geographic disadvantage or from management or equipment inefficiency. They come from the fear that the Port of London might price itself out of the port market; or might as a result of bad industrial relations prove unreliable. It is true that charges have been increased, and for good reasons. But these new charges are not uncompetitive with ports generally, and some of the competing ports on the Continent have the advantages of dredging and other subsidies. Charges will continue to be kept under careful review, so that the costs, the real costs of efficient operation, are fully recovered. These charges are not the only item by which shippers and shipowners judge a port: speed and efficiency of operation are others, and reliability probably the most important. We need to foster the reputation for continuous round-the-clock working at the container berths at Tilbury and of uninterrupted two-shift working elsewhere. Such a reputation will do more to safeguard the careers of those working in the P.L.A. than anything else."

Summary of Accounts

for the year ended 31st December 1971

REVENUE ACCOUNT for the year ended 31st December 1971	£000	£000	1970 £000
TOTAL OPERATING REVENUE		36,132	31,327
OPERATING PROFIT BEFORE DEPRECIATION		6,732	4,316
Provision for depreciation	2,298		2,346
Less Proportion of port modernisation and investment grants	230		201
		2,068	2,145
OPERATING PROFIT		4,664	2,171
Investment income		758	936
PROFIT BEFORE INTEREST		5,422	3,107
Interest charges (see note)		5,253	3,848
PROFIT (1970 LOSS) for year		169	Dr.741
EXCEPTIONAL ITEMS			
Add			
Profit on sale of Head Office, Trinity Square, E.C.3	7,186		—
Profits less losses on withdrawal, disposal and reinstatement of other fixed assets	81		Dr.879
Profits less losses on sale of investments and discount on port stock purchased for extinction	56		49
	7,323		Dr.830
Deduct			
Severance and terminal leave payments less amounts recoverable under the Redundancy Payments Act 1965	1,799		1,252
		5,524	Dr.2,082
NET ADDITION TO RESERVES (1970 REDUCTION)		5,693	Dr.2,823

BALANCE SHEET at 31st December 1971	£000	£000	1970 £000
CAPITAL EMPLOYED			
FIXED ASSETS less depreciation		120,266	124,124
INVESTMENTS		10,222	9,953
CURRENT ASSETS	17,406		11,918
Less CURRENT LIABILITIES	14,378		14,585
NET CURRENT ASSETS (1970 LIABILITIES)		3,028	Cr.2,667

REPRESENTED BY			
CAPITAL LIABILITIES		76,053	80,206
RESERVES		49,219	43,380
PORT MODERNISATION AND INVESTMENT GRANTS not yet credited to revenue		7,319	7,011
INSURANCE FUND		1,200	1,160
		133,791	131,757
Less DISCOUNT AND EXPENSES ON ISSUE OF PORT STOCK at cost, less amounts written off		275	347
		133,516	131,410

ALDINGTON, *Chairman*
J. D. PRESLAND, *Financial Controller*

NOTE: Interest charges for 1971 include transfer to restore reserves of £146,000 (1970 transfer from reserves £1,323,000).

The report of the auditors on the published accounts of the Authority is shown below:—

REPORT OF THE AUDITORS

As auditors appointed under Section 59 of the Port of London Act 1968 we report that, in our opinion, the accounts set out on pages 23 to 32 give a true and fair view of the state of the Authority's affairs at 31st December 1971, and of the result for the year ended on that date and with the additional information on pages 3, 9 and 13 on which we express no opinion comply with the Statutory Harbour Undertakings (Form of Accounts, etc.) (General) Regulations 1969.

Deloitte & Co. Chartered Accountants, London.
28th April 1972.

Published by the Port of London Authority under Section 8(3) of the Port of London Act 1968. R. F. GINGELL, Secretary. 3rd May 1972

Copies of the Annual Report and Accounts can be obtained, free of charge, from the Secretary, Port of London Authority, Trinity Square, London, EC3P 3BX.

Crowd safety

Move along there

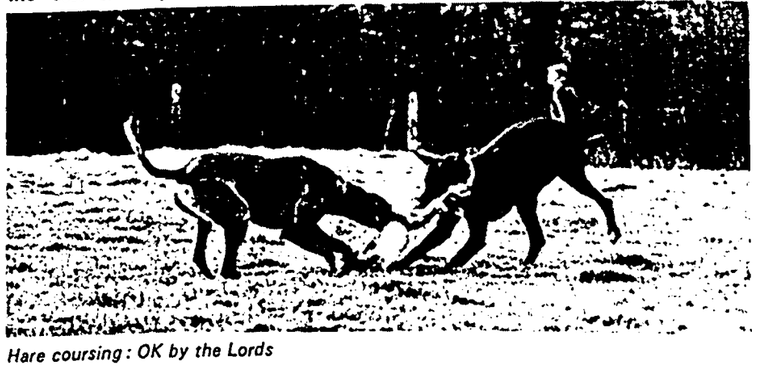
The accident at Ibrox Park, Glasgow, last year, when 66 football fans died added tragic emphasis to what was already evident to many people: that the arrangements for the safety of crowds at such big—and not so big—sporting events should be subject to more systematic and professional scrutiny. Now Lord Wheatley, after a most thorough inquiry, has published a report (*HMSO*, 24p), which the Government has immediately endorsed, in which he reaches the only acceptable conclusion that sports grounds ought to be licensed annually by local authorities. The licensing system Lord Wheatley recommends would cover all soccer, rugby league and rugby union grounds where people pay to go in, with the exception of those which can hold fewer than 10,000 spectators and have no "structural accommodation such as stands" for them.

In making that recommendation, Lord Wheatley's report is following similar ones of 1924 and 1946 after the disasters at Wembley and Bolton. Yet until now the law has been quite inadequate and systems of control have been voluntary and far from satisfactory, with the national football associations of England, Scotland and Wales asking clubs to provide certificates each year saying their grounds have been inspected and found in order. But there has been no assurance that the person carrying out the inspection was specially qualified to do so, and no defined criteria of what is or is not safe.

If Lord Wheatley's proposals were followed, licensing powers would be given, under the reformed local government structure, to the new top tier authorities, because they would have a wider range of experts and there would be a better chance of achieving uniform standards. He accepts the insistence of the football authorities on a right of appeal, but prefers a special appeal tribunal to a court of law or a minister. All that makes good sense, as does his suggestion that, if a particular part of a ground were considered unsafe, there would be no necessity to close the whole ground.

The tone of the report throughout is a reasonable one, stressing the paramount interest of protecting spectators while acknowledging sympathetically the difficulties some clubs may find themselves in if licensing is introduced. To help such clubs he has proposed that licensing be brought in by phases, starting with all international grounds and those of the bigger English and Scottish football league clubs and working through to the tiddlers. A technical group has produced a useful report setting out specifications for staircases, terracing, crush barriers, turnstiles, exits and so on, as guidelines to help clubs put their grounds in order before applying for licences.

What Lord Wheatley has not done is yield to the argument that because some of the more lowly football league clubs may be too poor to bring their grounds up to standard he ought to recommend Government aid to them as part of his package. That, he rightly says, is no business of his. The football authorities make the plea that, because football is a national sport, the death of some of those impoverished clubs "would be a tragedy." Tragedy or not—and that is questionable—it is probably inevitable, anyway. Given the way the professional game is organised and now evolving, there will not be room for all of them. But if the leagues and the FAs feel genuine concern for their survival, it is up to them to be a bit more generous in spreading their own money around.



Blood sports

Hunted hares

Hares make a dreadful noise when wounded : a persistent, uncomfortably human scream. *It is not surprising* that a bill to abolish live hare coursing has been a hardy annual since 1925 (when it actually got right through to a third reading). But, curiously, it has seldom received much attention in the Lords: perhaps because their lordships are well aware that it would be illogical to ban coursing—which kills a mere 600 or so hares a year—while all but the best shots probably cause hares as much suffering as greyhounds, and many more hares are killed on shoots than in coursing. (And what about foxes?) But on Tuesday it was brought to their attention by Lady Bacon, who was doing her best to make up for the passage of elections and governments by reintroducing a bill to which she gave her support at the Home Office. The Labour government did, in fact, introduce a bill banning coursing itself in 1970: its passage was frustrated by the general election.

Oddly enough, it looks as if the abolitionist cause has now passed its peak. The Scott Henderson inquiry on cruelty to animals, which reported in 1951, was ambiguous on the subject of hare coursing: it could hardly bring itself to commend the sport, but neither did it condemn it. Less attractive pests are allowed to suffer much worse fates (what about rat poison?); no one could prevent private coursing (and why should they, when no one tries to prevent cats catching mice?). And a sport which enjoys rural working-class support (not forgetting the miners, whose sport it is traditionally supposed to be) is a target that neither party aims at with particular pleasure.

It was remarkable, therefore, that the abolitionists succeeded in getting a 133 Commons majority in favour of the second reading of the bill in 1970. The success has not been repeated. In February, the latest private member's bill ground dismally to a halt in the House of Commons. And Lady Bacon got precious little joy out of the House of Lords, despite the moderately helpful support of Lords Soper, Hoy and Blyton, the backing of the Royal Society for the Prevention of Cruelty to Animals and the various leagues against blood sports, and stern quotes from a resolution of the Anglican Church Assembly. Coursing is, their lordships accurately pointed out, a healthy, outdoor sport. Well, the hare gets some exercise.

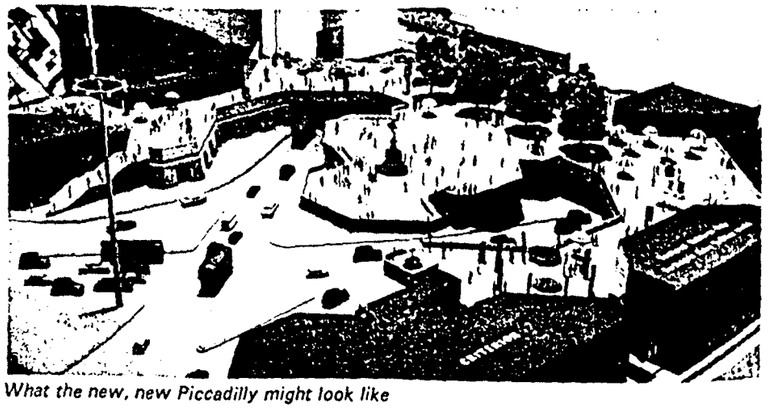
Hare coursing: OK by the Lords

Housing land

Aid to translation

Nothing that Mr Peter Walker said in the House of Commons on Thursday last week will have any immediate effect on land or house prices. Compulsive property buying as a symptom of inflation will continue, and house prices will zoom on until they bump at last against building society barriers, or meet an increased supply. There is some hope on both counts: funds are no longer flowing quite so fast into the building societies, and private house starts in March were 79 per cent higher than a year earlier.

But Mr Walker had to say something in face of Labour attacks in a very sensitive area, and to his credit he was not panicked into a hasty dismantling of planning controls. (Mr Graham Page's kite on this subject proves to have been a decoy duck.) What he produced was £80m of loan sanction for local authorities to buy land in the next two years so that they can put in the services (for which more credit will be given in advance of housing need) and sell within three years of purchase for immediate private development. They will be encouraged to use compulsory purchase against sticky owners. The public burden will be reduced by capitalisation of interest in the first five years.



At present prices, £80m would buy only about four months' supply of land in south-east England, and it has to be spread round other pressure points, too. But the principle matters, and local authorities have wanted something like this for some time. In Buckinghamshire, a similar system already exists on a small scale. Land needed for the expansion of Buckingham is being bought by a company, formed jointly by town and county, at a low fixed price. It will then be serviced, sold to developers, and 75 per cent of the profit returned to the original owners.

The sensible aim of Mr Walker's strategy is to smooth and speed the translation of building land on a planner's map into houses for sale, and to do so in the context of regional priorities—so presumably the £80m will be allocated very selectively. The so-called Domesday book of planning permissions to be kept in future by local councils will help, too. So will the Government's other card, the new towns which, in the south east, are to be asked to plan another 5,000 acres of building land by 1975—enough for about 150,000 people. That must mean extending their boundaries, in some instances into unwilling counties.

Piccadilly

Eros's new pad

Scarcely a good word has been said for Piccadilly Mark 4, the £105m scheme unveiled by Westminster City Council this week, though in fact it is a great improvement, in design terms, on the bulky 1968 version. But, of course, it bears no resemblance to the scruffy, sleazy eastern sector of the Circus which now has so many defenders. That may not matter, but what is fatal is the flaw built into all Piccadilly plans since 1963—the government ruling that there must be space for a 50 per cent traffic increase. The extra road space has to be compensated for by a cluster of relatively tall blocks (highest 246 feet) which are to include 544,420 square feet of offices (88 per cent more than at present) as well as two hotels, one with 500 bedrooms, the other with 400. This is far too much in terms of congestion and of declared policies on office and hotel location, though Mr Peter Walker has already given interim office development permission to enable the three developers concerned to go ahead with planning applications. Westminster council has been criticised for reaching a compromise with one of the developers, Land Securities, by trading the planning option of office building on a site in Victoria Street in return for an hotel rather than offices in Piccadilly. But more such deals may be due if the whole scheme is to be reduced to a scale which makes sense of the site in all its aspects. So many issues are raised that a public inquiry is surely unavoidable.

What the new, new Piccadilly might look like

Conveyancing

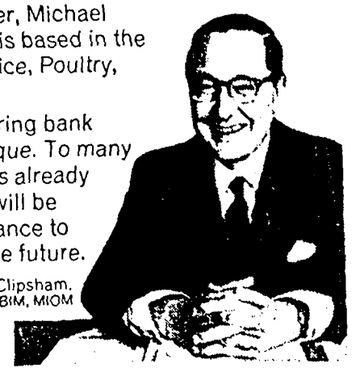
Price for the job

The much-criticised scale fees for conveyancing are to be abolished. After months of argument with the solicitors, the Lord Chancellor has abandoned his original idea of modified scale charges for houses costing under £10,000, and now intends to do away with the scale entirely. This alternative is preferred by the Law Society, perhaps because of the possible embarrassment of cost-based conveyancing on expensive houses proving cheaper than the scale for less expensive ones. The new system will, of course, expose the buyers of some cheap houses to higher fees than at present, because the basis of the charge will be for actual work done, which, in awkward deals, can be heavy. But solicitors will still have to take into account "the amount at stake and the importance of the matter to the client."

What was most under attack, from the prices and incomes board, the Monopolies Commission and others, was not so much the scale itself, as the rule forbidding solicitors to undercut it. The PIB survey showed conveyancing to be immensely profitable, far more so than was required to subsidise unprofitable work. A year's more galloping house inflation has underlined that, and pushed the Government into action. How soon lower charges will emerge is another matter. Solicitors will still be forbidden to advertise a cheaper service. Consumers are unused to shopping around, and it may take a few appeals to the Law Society, or even to the courts, to establish what is a reasonable charge. The next logical step is to tackle the solicitors' monopoly in conveyancing—to let others compete with them.

You are short of finance
You are going public
You plan to expand
You're merging or taking over
You're starting a business
You're wondering about the EEC
You're setting up abroad
You have foreign currency problems
You need instalment credit
You're uncertain about insurance
You need leasing facilities
You require factoring or invoice discounting

The turning points.



Only the Midland has a Finance Management Team to see you through.

There are occasions in the life of every business, *large or small*, when financial arrangements must move in a new direction.

This is when the best financial advice, assistance and management are essential. And it is for these occasions that the Midland Bank, alone amongst the major clearing banks, operates its Finance Management Service.

Details of the facilities of the Midland Bank Group can be discussed with a member of the Team, all of whom are highly trained, experienced men who have already held management appointments in the Midland Bank. Each is available to companies to provide a complete finance management service, and can be contacted through the appropriate Regional Director, your Midland Manager, or through the Team's leader, Michael Clipsham—who is based in the Bank's Head Office, Poultry, London.

As a clearing bank service, it is unique. To many businesses it has already proved itself. It will be of great significance to many more in the future.

Mr. Michael Clipsham, TD, FCIS FIB, AMBIM, MIOM
leader of the Finance Management Team

THE WORLD *International Report*

The day the 3rd division broke and ran

FROM OUR SAIGON CORRESPONDENT

The gloom that descended over South Vietnam this week was almost as palpable as the gathering monsoon thunderclouds. The main reason was the loss of Quang Tri, the first province capital to fall to the North Vietnamese in the five-week-old offensive. But the malaise had set in before that. It was evident not only among Saigon officials but also in the provinces and in the armed forces. The earlier feeling of hope, even confidence, that the offensive would soon be over was fading fast, as the North Vietnamese kept hammering away at South Vietnam's defences. The decline in morale is considered to be an even more serious problem than the loss of Quang Tri.

The fall of Quang Tri was not unexpected. In a way, the mysterious thing is why it was not overrun in the first days of the North Vietnamese offensive when the south's defences were momentarily in complete disarray. Since then creditable attempts had been made to consolidate the defence line through Dong Ha, but when the Dong Ha garrison was forced to withdraw last weekend under a new attack it was only a matter of time before Quang Tri fell.

Even so, the speed with which the communists encircled Quang Tri with tanks and infantry took commanders by surprise, and when the decision was taken to withdraw rather than defend the city the troops and civilian refugees found themselves running a gauntlet of communist ambushes along the road to Hué, 35 miles farther south. Some units, notably the South Vietnamese marines, held together but many soldiers of the 3rd division discarded their uniforms and tried to join the refugee column.

There was chaos in Hué, where the population was swollen to twice its normal size by the refugee influx, and North Vietnamese units were reported grouping only a dozen miles away for an attack that could come at any time. The population of Hué, which showed signs of rallying to the government in the early days of the offensive, was packing its bags. Most government officials had disappeared by the middle of this week, mindful of the massacre of civilians by the communists in Hué during the Tet offensive in 1968. Reports had already streamed in from areas captured by the North Vietnamese of how local officials had been executed. In Bong Son, in the coastal province of Binh Dinh, about 70 officials were said to have been shot and strung up by the heels.

The businesslike and ruthless way in which communist administrations have taken over the areas "liberated" by the North Vietnamese indicates clearly that they firmly intend to hold on to these regions. In addition to liquidating former officials, policemen and other so-called "tyrants," they have drafted almost all available manpower for either military service or forced labour. Tape-recordings have been made, for propaganda purposes, of captured village chiefs and military officers supposedly urging the people to support the communists. At the same time an intensive propaganda drive is being carried out, based on a recently announced 10-point plan to win over members of the armed forces, police and civil service by offering them a complete "amnesty."

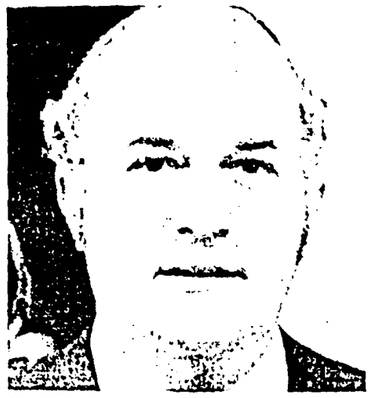
There is little evidence as yet, however, of significant voluntary defections to the communists. Probably several thousand armed men of one kind or another ranging from main-force soldiers to hamlet militiamen have been captured so far by the North Vietnamese, and some may have subsequently offered their services to the communists. But there are no confirmed reports of military units switching sides, although communist radio broadcasts claim that this has happened. In some parts of the country, such as the old revolutionary stronghold of Binh Dinh, hamlets have made their own "uprisings" against government control. Usually these have occurred where clandestine communist cells have long been in real control.

Even if the morale of South Vietnam's army cracks, it is doubtful whether large-scale defections would take place. Desertions, however, are already a problem and will become

You take your bags, and if you can your guns, when the line breaks

a bigger one. Perhaps the trouble with the South Vietnamese soldier is not that he lacks motivation, as the critics usually say, but that he lacks confidence in his superiors. But President Thieu's preference for politically reliable generals rather than militarily competent ones is now showing the expected results, and many soldiers on the northern front have joined the refugees. The object is not to fight against the government, but to avoid getting killed.

President Thieu's personal conduct of the war is coming under increasing fire in military and political circles. His bypassing of the joint general staff is a particular cause of friction. On Tuesday he sacked the two generals mainly responsible for the failure in the north and sent General Truong, an officer with a high military reputation, north from the delta. But it may be too late to save Hué, and Kontum in the central highlands looks virtually indefensible now that the communists have placed their artillery on the surrounding hills.



Everyone has obviously been shaken, not just by the seemingly total commitment of North Vietnam's army to the current drive but by the extraordinary range and quantity of equipment used by the communists. There were the tanks (a few of which were American ones captured from the South Vietnamese in earlier engagements), the artillery and the rockets. This week's nasty surprise was the appearance of Russian-made Strella heat-seeking missiles for use against helicopters and low-level bombers. The Strella is light and can be operated easily in the field by an individual soldier. It has long been a subject of speculation why the Russians never supplied the missile to the Vietnamese communists earlier on. The fact that they have done so at this stage seems to suggest that the Russians have decided to throw more of their weight behind North Vietnam's drive for military victory.

West Germany

Finding a way around it

FROM OUR SPECIAL CORRESPONDENT IN BONN

The search for a way out of the political deadlock that has brought parliament to a standstill in Bonn and threatens the ratification of the Moscow and Warsaw treaties has kept west Germans on tenterhooks for a week. The crisis reached its height on Wednesday, when the party leaders spent

Barzel wants his footnotes

the day beginning another attempt to find a formula which would allow parliament to ratify the treaties. On Thursday morning, over a glass of beer together in parliament's self-service cafeteria, Herr Brandt and the opposition leader, Herr Barzel, decided that the ratification debate should begin on Tuesday.

Three committees, each of 10 members of parliament, were set up on Wednesday evening to examine the opposition's major reservations about the treaties. The difficult problem of what sort of response the Russians should be asked to make to a declaration by the west German parliament, however, was left to Herr Brandt and Herr Barzel themselves. Although the chances for inter-party agreement seemed brighter on Wednesday evening, the sticking point could still be Herr Barzel's insistence on a positive Russian response. The Soviet ambassador to Bonn, Mr Valentin Falin, met Herr Ehmke, the head of the chancellor's office, on Tuesday.

Agreement between the parties remains a necessity. If Baron von Kühlmann-Stumm, the Free Democrat who has expressed deep reservations about the treaties, votes with the opposition the result—barring other defections—will be a tie with both sides getting 248 votes. Both Herr Brandt and his foreign minister, Herr Scheel, have said they are confident that the treaties will get through, but they must be relying on the support of at least one member of the opposition. It could happen: the attempt by Herr Barzel to overthrow the chancellor last Thursday seems to have been frustrated by a Christian Democrat voting with the government. That vote was secret, but the vote on the treaties is open, and it will be a brave man who crosses to the other side to rescue Herr Brandt's Ostpolitik.

Negotiations between the party leaders, which began with a long meeting last Friday and continued on Wednesday, centred on the proposition that parliament should approve an all-party declaration on the treaties. The points that the opposition insisted should be included were a firm statement that west Germany is committed to the west; that it looks forward to political unity with its fellow members of the European community; and that the treaties do not prejudice the rights of Germans to self-determination and unity. The Christian Democrats also want it made clear that the treaties should lead to more freedom of movement between east and west Germany (see the next article), and are not a substitute for a real peace treaty. Herr Barzel has said that his party insists that such a declaration should be accepted in Moscow and Warsaw as legally binding on both sides.

Herr Brandt has not been objecting to some such declaration, but he is believed to have told Herr Barzel that his government rules out any direct approach to the Russians and that he is not prepared to allow the treaties to be kept from parliament beyond Tuesday. The international timetable, he has said, does not allow further delay. The first date in his mind is Mr Nixon's Moscow visit, scheduled for May 22nd. The opposition sees no need for hurry but Herr Brandt feels there is political advantage to be gained from pressing on with the issue now, and if necessary facing a showdown in parliament.

The latest public opinion poll, published on Wednesday, showed 52 per cent of the voters to be in favour of immediate ratification, and 50 per cent as wanting to see Herr Brandt as the next chancellor if elections take place. The threat of an election on the issue of the government's whole policy towards its eastern neighbours is Herr Brandt's strongest card in his confrontation with Herr Barzel. The Christian Democrats know that an election fought on this issue would spell defeat for them. It was for this reason that Herr Barzel challenged Herr Brandt last Thursday before the vote on the treaties: he wants neither the national nor the international odium of having blocked the treaties.

The government feels that Herr Barzel has got himself into an impossible position. He wants the treaties ratified yet he is under strong pressure from the right wing of his own party and from his deputy, Herr Strauss, who

leads the Bavarian Christian Social Union, to oppose them. For this reason there were high hopes that this week's meeting would bring some agreement, even if Herr Strauss took an independent line to keep his own party happy.

But in fact no party wants a general election to be held now. The Social Democrats have been unnerved by the results of last month's Baden-Württemberg election ; the Free Democrats know they will suffer ; and the Christian Democrats know they have small chance of winning if the treaties have not been ratified. The earliest date for elections would be the end of June and by that time the summer holidays will have started. No party likes the idea of a low poll. There is the further complication of the parliamentary pension system. If parliament is dissolved before next spring a large number of members will not reach a higher category of pension. So they are all for battling on, deadlock or not.

East Germany

The price of being separate

FROM OUR SPECIAL CORRESPONDENT

East German leaders may be addressing soft words to the west these days, but at home there is no softening of their hard policy of *Abgrenzung*, strict demarcation from the west. When Herr Erich Honecker, the east German party leader, gave an interview to the party paper Neues Deutschland last week he floated the idea that the two German states could not merely coexist *(Nebeneinander)* but live together *(Miteinander)*. But even if the transport treaty between east and west Germany which was announced on April 26th, the very eve of the Bundestag vote on Herr Brandt's future, is eventually implemented, the living together will remain rather one-sided.

The treaty, which will be initialled and then published in a few weeks' time provided Herr Brandt manages to get the treaties with Russia and Poland ratified in the Bundestag, is said provide for easier travel by west Germans into east Germany. But east Germans will apparently travel the other way only "on urgent family business." Asked at a press conference last week when tourists and other private individuals would be allowed to go to the west, Herr Kohl, the east German negotiator, replied that conditions in west Germany did not permit this yet. The east Germans claim that there still exists a danger of "job-enticement," of east Germans being lured to west Germany by the prospect of higher living standards there. All this means that one of the quiet hopes pinned to the present process of rapprochement with the east—a genuine two-way flow of people—is not a serious proposition yet.

But what of the two-way flow of ideas ? Only a few days after Herr Honecker's Neues Deutschland interview one of his politburo colleagues, Herr Grünberg, said that a policy of coexistence must on no account lead to an abatement of the ideological struggle against imperialism : indeed, it must be accompanied by a sharpening of the ideological confrontation.

It looks very much as if the east German leaders are trying to reimpose striot ideological discipline on their party and the country. For months the official magazine for party propagandists, Neuer Weg, has been warning its readers against such heresies as pluralism, social democracy and convergence—the theory that capitalism and communism will eventually come together as industrial societies advance. Cultural and other exchanges will also probably be kept within striotly controlled bounds. And western papers are not likely to be on sale in east Germany for some time to come—although east Germans can and do watch west German television and listen to western radio stations.

There are other signs that, far from wanting to loosen the reins, the east German leaders are pulling them tighter. One of the groups that has felt this lately has been the Lutheran church, which has found itself under increasing pressure. Last week its synod, acting under strong government pressure, voted to sever its last formal links with the Lutheran church in west Germany. The other people to feel the reins drawing tight are east Germany's private businessmen, quite a few of whom have been allowed to survive until now under strictly controlled conditions. There are hundreds of private building, textile and service firms and in Leipzig there is even a private bank. These are now to be nationalised.

Honecker has ideas about living together

The policy of *Abgrenzung* is not all negative. Higher pensions and better general welfare provisions, especially for working mothers and people with young families, were announced last week. Nearly £730m is to be spent between now and 1975 on these improved social services. In addition the authorities proudly announced last week that over 7 per cent more consumer goods and foodstuffs were available to the public in the first three months of this year than in the corresponding period last year. Herr Honecker is clearly trying to keep his people from causing trouble by giving them material concessions. He is doing so more flexibly and intelligently than did his predecessor, Herr Ulbricht. But the price he is still asking his country to pay is *Abgrenzung*.

Italy

The voices above the cacophony

FROM OUR ROME CORRESPONDENT

On Sunday some 32m Italians will elect the sixth parliament of the republic. For the first time since 1953 there is a chance of more than a marginal shift of votes. At the last general election the Christian Democrats polled 12.4m votes, the Communists 8.5m, the Socialists and Social Democrats together (they are now apart) 4.6m. In the local elections last June the Christian Democrats lost appreciably to the far-right Italian Social Movement (MSI) in several parts of the country.

This shift and its political consequences have dominated the present election campaign. The Christian Democrat leaders reacted by deciding at all costs to stop the haemorrhage on their right. The first step had been taken in December when a new president was elected with the votes of the centre, the right and the Republican party, which has recently developed an anti-socialist bias through its campaign for an incomes policy. After that the centre-left coalition, which had governed Italy with increasing

Berlinguer's one of the big three

difficulty for 10 years, ground to a halt. The Republicans pulled out of the majority for the declared purpose of forcing a general election a year ahead of schedule. The present election therefore hinges on the issue of whether another centre-left government with the Socialists is possible or not.

Of the eight political parties and two smaller groups—the Manifesto and the Catholic Labour Movement, both of which are standing for the first time—only three declare unequivocally that the Socialists must stay out. The MSI on the right, the Liberals in the centre and the trotskyist Socialist Party of Proletarian Unity on the left all maintain that the centre-left formula has failed and must be put aside. The other parties continue to perch uncomfortably on the centre-left fence. The Christian Democrats and the Republicans are ready to get off on the right; the Socialists, reluctantly, on the left. The Communists would prefer the Socialists to stay in government to keep the door open for their own entry. The Social Democrats are so torn between the alternatives that the party, much weakened by its internal division, looks near to a split.

In this situation none of the old centre-left parties has been able to put over a straightforward, intelligible campaign. With so much to be tackled in Italy none of the parties has sought to associate itself with any simple concrete programme. Most of them talk vaguely about housing, schools and hospitals and industry for the south but none of them is asking for votes in order to do things. They just want to prevent other terrible things from happening.

Thus the Christian Democrats, who have chosen the hardly inspiring slogan, "Forward to the Centre," ask for more votes to help them keep both the MSI and the Communists at bay, the MSI is asking for votes to confound the Communists, and the Socialists want votes to confound the MSI. The Catholic Labour Movement wants votes to restrain the Christian Democrats, and the Manifesto wants votes to confuse the Communists. The Communists ask for votes to confound the forces of reaction and prevent the right in general from passing anti-strike laws and imposing order at the expense of the workers.

The desire for order—which is prompted by the violence of left-wing and right-wing terrorists, as well as by common criminals, hippies, students, drug addicts and rebellious workers—features largely in the campaigning of the Christian Democrats, Liberals, Republicans and Social Democrats, and naturally has pride of place in the programme of the MSI. Against this the left-wing parties from the Socialists to the Manifesto cry out against the abuses of the police and the magistracy, the harassment of the anarchists—Signor Valpreda, in his third year of prison awaiting trial, is a candidate for the Manifesto—and the many cases of more or less arbitrary detention.

Christian Democrats, Social Democrats and Republicans make common cause in accusing the Socialists of destroying the centre-left coalition by their propaganda in favour of a "more advanced political balance." This unhappy slogan of the Socialists, whose imprecise language makes translation almost impossible, has been the main theme of the election propaganda of all four parties of the old centre-left.

The Socialists themselves defend their slogan with various and sometimes contradictory interpretations. On the party's left Signor Riccardo Lombardi says it means an alignment which must include the Communists in the majority, if not in government. Signor Nenni, on the right, says it simply means that Communist votes must be used if necessary to pass the reforms. Signor Giolitti, even farther to the right, says that even if the Socialists and Communists together had a clear majority the Socialists would not form a popular front alliance and go into government without the Christian Democrats and the other democratic parties. The Communist party itself is not asking for votes to turn the Christian Democrats out of government. Its leader, Signor Berlinguer, has chosen the difficult long-term strategy of asking to share responsibility with the Christian Democrats.

Signor Forlani, the Christian Democrat secretary, is making a belated and valiant attempt to cultivate a milder, more popular image of his party. But the leading figures of this election campaign are Signor Fanfani on the Catholic side, Signor Berlinguer for the Communists and Signor Almirante—who is riding the crest of his wave—for the "national right." It is these three men's voices, over and above the cacophony of the propaganda, which will attract votes to their respective parties. With Signor Nenni now a disputed father figure, the Socialists have no one to set up against them.

EEC

How not to make a parliament

The latest study on Europe by the Federal Trust* concerns the so-called European Parliament, currently situated in Strasbourg. The study includes a sensible restatement by the former Foreign Secretary, Mr Michael Stewart, of the "Stewart plan" for direct elections of British Members of Parliament to Strasbourg after Britain joins the European communities next January. This comes as a preamble to a less convincing theory expounded by Mr Christopher Irwin of how the Strasbourg assembly might finally come to be elected on a pan-European basis.

The 142 members of the present Strasbourg assembly are nominated along national party lines from among existing parliamentarians sitting in the national capitals. The present system is much the best one for putting national and European interests together in one place—or it would be if only the European assembly itself had been given from the outset a real job to do in the life of the European community. Unfortunately it has not. The result of Strasbourg's powerlessness is a running campaign to implement Article 138 of the Treaty of Rome, which calls for direct elections to the assembly "in accordance with a uniform procedure" among all member states. This campaign has little to do with reality, for it confuses the cosmetic change of electing men to Strasbourg with the much more important precondition of giving them something to do when they get there.

Mr Irwin's suggestions compound

*Electing the European Parliament. *Federal Trust*. 25p.

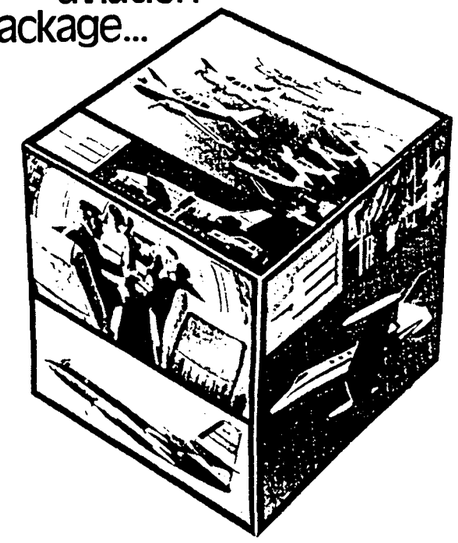
Action Indonesia

Rice harvest

With the world's fifth largest population the country is making up for lost time. Explore it now—with the Hongkong Bank Group.

Since 1966, Indonesia has taken some impressive steps forward. Price inflation has been reduced from an impossible 650% per annum in 1966 to 8% per annum in 1970. The current Five-Year Plan envisages that the equivalent of about half the country's annual income to investment and the target of 5% annual growth is the aim.

As a sign of returning confidence in the country, foreign capital has been flowing into Indonesia. Current emphasis is on agriculture and the industries which service it, understandably in a country where 75% of the population are employed on the land. But Indonesia is also rich in minerals – nickel, tin, bauxite and oil. Textiles, electricity, paper and transportation are earmarked for dramatic growth. With a population of about 120 million, Indonesia must offer tremendous possibilities for future trade.



The Hongkong Bank Group are in Djakarta and have branches in 35 other countries. They know about these possibilities and have packaged the facts into a concise 16 page economic summary of the Indonesian scene. Write for your copy now – and be briefed by the experts.

There is more inside this aviation package...

Eagle Aircraft Services Limited wraps up everything needed when you own or operate aircraft in one aviation package. From the time you think of acquiring an aircraft to the time you decide to replace it, we will take care of all the problems. We are UK distributors for the famous Beech range of light and executive aircraft and UK, Germany and Switzerland distributors for the four-engined JetStar corporate transport. We will work out the best way for you to buy, lease or hire precisely the aircraft you need. Prepare detailed operational cost analyses, flight plans. Organise finance and insurance. Equip and furnish your aircraft. Recruit flight and operational staff. Act as your own operations division. Service and repair your aircraft, supply spares. Ferry an aircraft anywhere in the world. Act as brokers when the time comes to sell. And, if you aren't ready to buy or lease, we can provide expertly crewed and equipped aircraft for your personal use whenever you want them.

Eagle Flying Services Limited operates a modern charter fleet of Beech aircraft which give all the prestige and convenience of corporate aircraft use without the full involvement of ownership or operation. This company is also UK distributor for the superb Learjet corporate jet. Together, this company and the three Divisions of Eagle Aircraft Services Limited provide you with the most complete and comprehensive aviation package you will find anywhere in Europe.

this error. It is rightly assumed that Britain's democratic tradition has something to offer parliamentary life in Strasbourg. But Mr Irwin suggests that Strasbourg members be elected by a transferable vote system from candidates on regional lists, topped up by proportional allocation of 100 extra seats to those parties which fail to secure as many seats as their proportion of the total vote entitles them to. This would help to persuade Europe's political parties to group together, for Strasbourg purposes, into European parties across national lines. Were Britain to push for such a scheme it would be advocating the precise opposite of the system based on working parliamentary majorities which tends to make Westminster a better unit than the Bundestag in Bonn.

Fortunately both Mr Heath and Herr Brandt oppose this way of doing it. Even the recent Vedel report on institutions, made for the Brussels commission, recognised the importance of giving Strasbourg the sort of negative powers over community policies which might start to make it mean something. The important thing here would be to concentrate Strasbourg's vetting power on the decisions of the council of ministers, rather than on the powers of the Brussels commission, which matter less. Once this were done, a scheme such as Mr Stewart's would be very valuable.

Mr Stewart points out, as Sir Tufton Beamish has, that Westminster MPs are going to have precious little time to give to Strasbourg unless they mean to be nonentities in both places. He therefore suggests that most of Britain's 36 representatives for Strasbourg should be elected regionally alongside ordinary Westminster MPs at normal general elections. Most important of all, they should vote in both places. There are practical snags to such a plan, but in principle it is the best one yet for marrying national party politics with what needs to be done at a European level.

France

Behind the screens

French television programmes may be dull, but what goes into their making proves fascinating. The Office de Radiodiffusion et Télévision Française (ORTF), which is a government monopoly, has just come under a double broadside for corruption. Last week a 239-page report from a senate commission of inquiry revealed that its employees have been accepting bribes from public relations firms for plugging products. This week the national assembly's commission on the ORTF confirmed the accusations.

Since 1969 there have been official advertising spots on ORTF's two channels. These amounted to two minutes a day to begin with, but the figure is now 19 minutes. This is enormously less than the 50-60 minutes a day that the British Independent Television Authority allots for advertising. However, the French have discovered that there is more than one way to advertise. According to the two reports producers have been plugging products, cameramen have been letting their cameras linger over brand names on studio sets, and executives have been representing paid publicity as documentary films—in return for direct or indirect rewards.

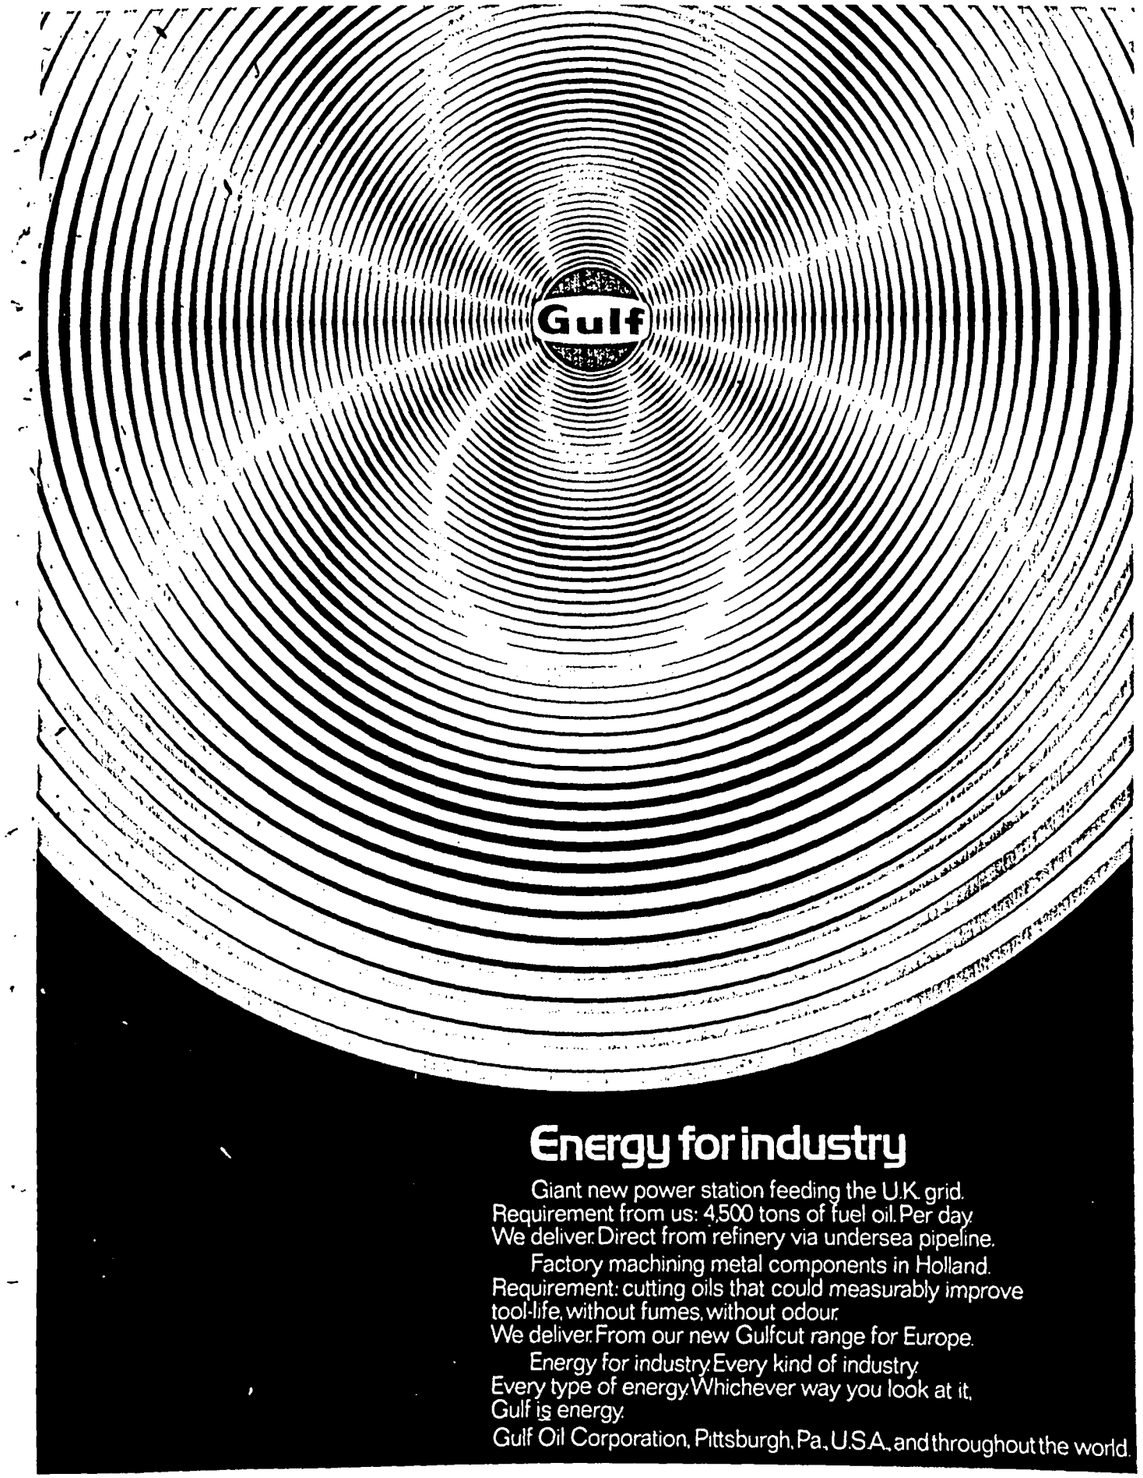
No heads have rolled yet. Nor are they likely to. The general assumption is that ORTF must put its own house in order. But its chief is stoutly defending his subordinates and complaining of a witch hunt. The parliamentary commissions themselves are more concerned with institutional reforms. But the whole affair reopens the question of the monopoly. Would not the temptation for advertisers to use underhand methods disappear with commercial competition ?

Ireland

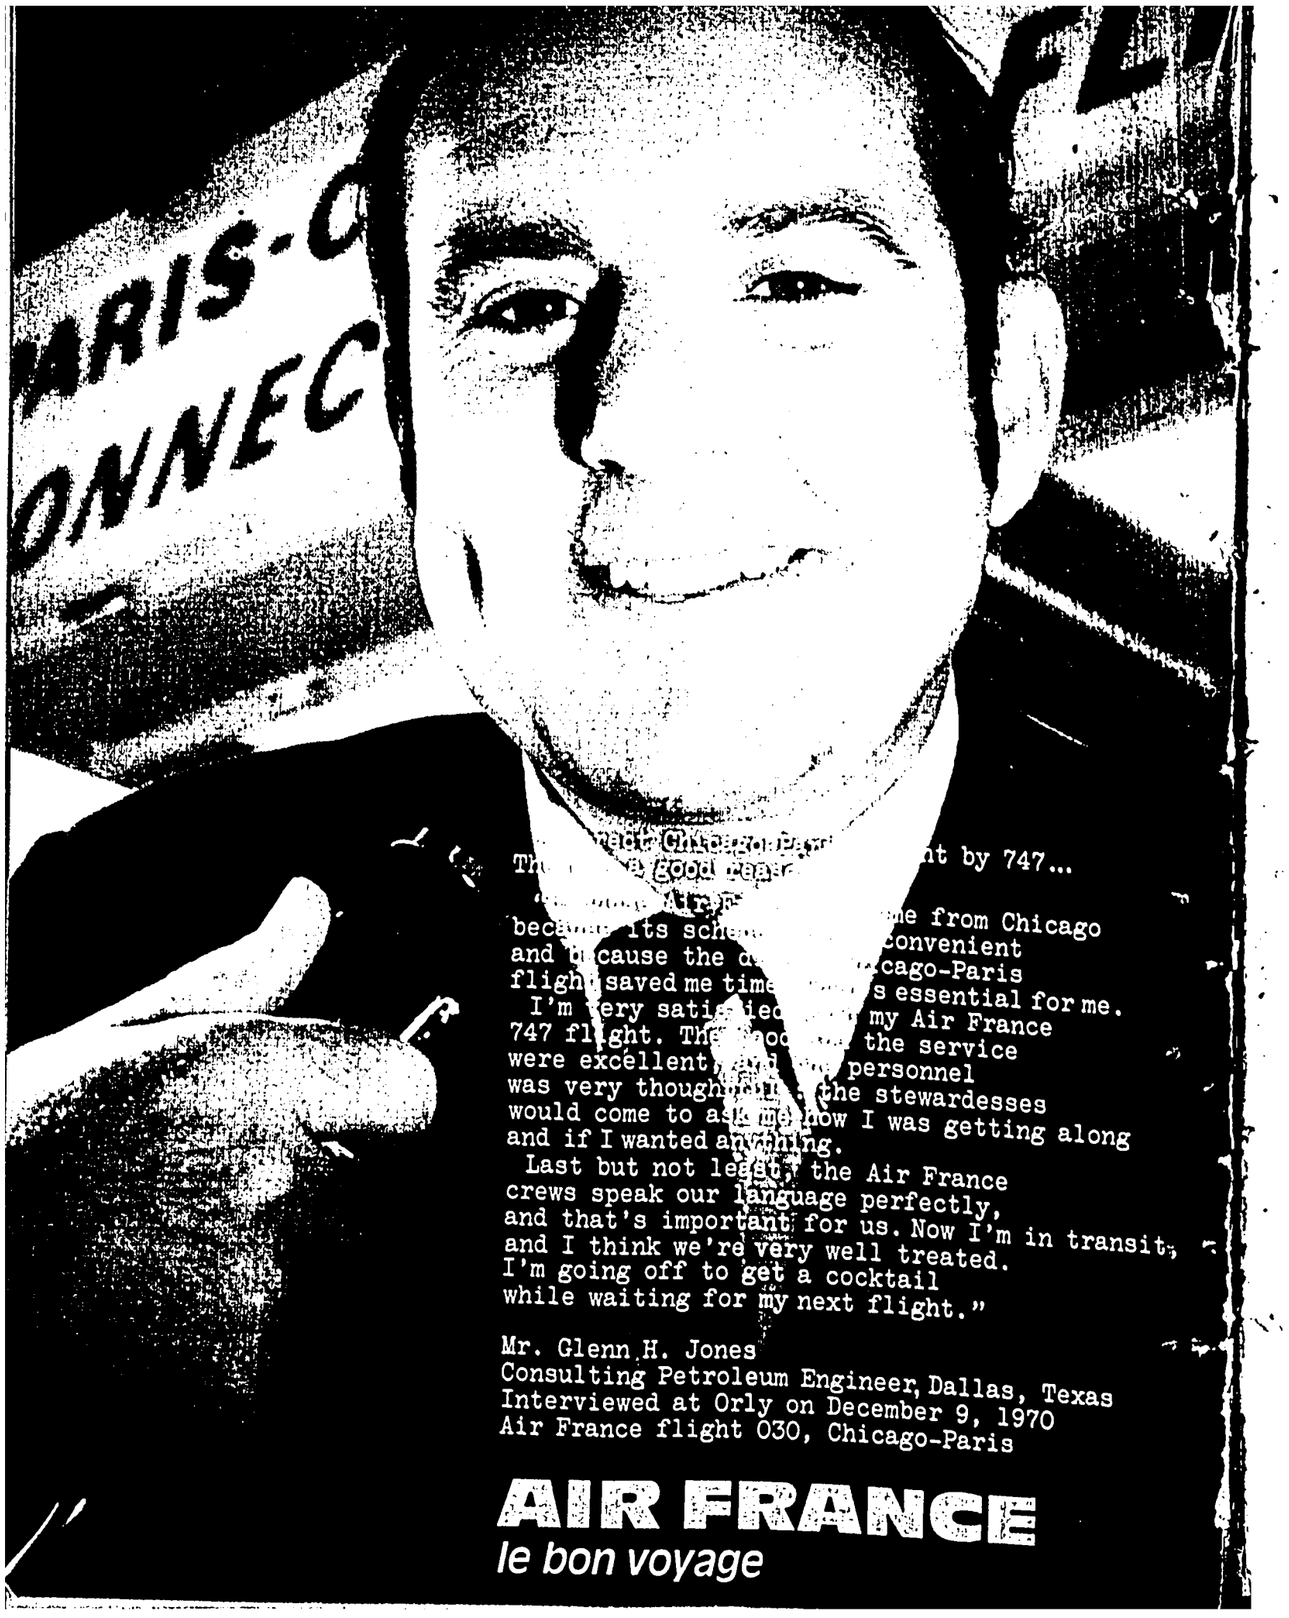
Two steps

FROM OUR DUBLIN CORRESPONDENT

The pace of political developments in the Republic of Ireland, almost stationary since direct rule for Northern Ireland was introduced at the end of March, is beginning to speed up. Last week's visit to London by Mr Hillery, the Irish foreign minister, was followed this week by clear indications that the prime minister, Mr Lynch, is thinking of what he can do to help to get things moving again.



The first step is the setting up of an all-party committee to consider all aspects of Irish reunification. The committee's terms of reference and composition were announced on Thursday. The second step is towards a tougher line against the IRA. The government has made no secret of its disappointment at the failure of the ordinary processes of law to secure conviction of the many people recently charged with membership of the proscribed IRA, unauthorised possession of arms and similar offences. Internment of suspects seems impossible in present circumstances and Mr Lynch will probably opt for special courts.



Lynch is paying out rope

Such courts are provided for by the Offences against the State Act passed in 1939. They operated in Ireland throughout the second world war, when nearly 900 people came before them. They were revived, though far less actively, in 1956 and again in 1961-62. During the war army officers often took part in the proceedings, but when the courts were brought back afterwards only qualified legal representatives were chosen. The government is permitted to set up the special courts if it declares by proclamation that the ordinary courts are inadequate for the effective administration of justice and the preservation of peace and order. Mr Lynch and his minister for justice, Mr O'Malley, may be tempted to take this step. But they would probably prefer to act in the wake of some overt IRA action which would be regarded generally as endangering the present slow progress to peace in Northern Ireland.

In giving a go-ahead to the constitutional committee at this stage, Mr Lynch is acting against his own better judgment. He believes that majority opinion in the republic is against any changes in the constitution which would permit divorce or be interpreted as making Ireland into a secular state. But he also knows that public opinion in the republic demands evidence of progress towards Irish reunification. A constitutional committee answers this demand in its suggestion that unity is on the way. However, a liberal minority in the republic wants a revised or new constitution regardless of relations with the north. Mr Lynch's dilemma is to provide just enough rope to suggest progress but not enough to let the committee go too far too fast.

Iceland

First call for Rogers

The squeaky wheel duly gets its grease. Iceland, on Wednesday, got a visit by the American Secretary of State. Mr Rogers was starting out on a brisk week's travelling around seven capitals, and facing encounters with Mr Heath, Herr Brandt, M. Pompidou, the Pope, the Grand Duke of Luxemburg, Mr Luns of Nato and Mr Mansholt of the EEC, to name but a few ; but he made Reykjavik his first port of call, and his talks with Iceland's president, prime minister and foreign minister involved something more than mere civilities. Nor was fish the sole dish.

The 200,000 Icelanders are now —and not for the first time—in the odd position of being America's allies in Nato while being ruled by a government that includes their communist party. As they have no armed forces, their main contribution to the Atlantic alliance consists of their permitting the Americans to maintain the Keflavik air base, which is a very handy place from which to watch Russian naval movements in northern waters. But the government formed after last June's elections in Iceland has asked the Americans to go.

In those elections, the coalition of conservatives and socialists that had held office for 12 years was cut down from 32 to only 28 seats in the 60-member Althing. A swing to the left brought back to power a coalition similar to that of 1956-58, with the Progressives (primarily a farmers' party) partnered by the communist People's Alliance and, this time, by the Liberal Left, a group that broke away from the orthodox communists in 1970. The Liberal Left leader, Mr Hannibal Valdimarsson, the 69-year-old enfant terrible of Icelandic politics who heads the trade union federation as well as being minister of communications and social affairs, has pursued his usual rather wayward course since taking office; but he remains committed—so far as Mr Valdimarsson can ever be said to be committed—to the goal of getting the Americans out of Keflavik.

Last month, after a good deal of wrangling, the government accepted an American offer to finance the lengthening of Keflavik's second runway. It seems to recognise the unwisdom of forcing the air base issue with the Americans just when Iceland is coming to grips over fishing limits

Agustsson's deadline is 1975

with both the Germans and the British. (On April 14th Britain lodged an application with the International Court to contest the proposed 50-mile line.) Both the prime minister, Mr Olafur Johannesson, and the foreign minister, Mr Einar Agustsson, are moderate men. They have not even started to hold serious negotiations about an American withdrawal from Keflavik, and their only stated aim is that of arranging a withdrawal before Iceland's next general elections, which are due in 1975. But one can see why Mr Rogers thought this would be a good moment to dab a little lubricant on Nato's fifteenth and smallest wheel. Just a dab.

East-west

Looking both ways

Last year the Russians concentrated their military effort on the north-west and south-east corners of their empire. The northern fleet based on Murmansk has become the largest of the four Russian fleets, and Russia now has over a quarter of its army on the Chinese border: so says the International Institute for Strategic Studies, which published its "Strategic Survey for 1971" this week.

Russia's steady naval expansion in the north has been overshadowed by its more recent, but much smaller, forays into the Mediterranean and the Indian Ocean. It took Iceland's threat to kick the Americans out of Keflavik to recall Nato's attention to the north. But the IISS survey claims that the way that Russian exercises have spread far into the Norwegian Sea shows that Russia may now look on the Greenland-Iceland-Scotland line as its forward naval zone. The northern fleet has 165 submarines, including 20 of the 35 Y-class nuclear missile submarines, which are being built at the rate of 10 a year.

Last year was the first time that Russia deployed more troops on its 5,800-mile border with China than the 31 divisions it maintains in eastern Europe. Three years ago it had 15 divisions on the border; now it has 44. Presumably some of these extra troops are new units, but most of them are probably drawn from the 96 divisions based in Russia. They are reported to be armed with nuclear weapons and to have more firepower and mobility than their Chinese counterparts.

The Chinese themselves are clearly moving beyond the stage of the early 1960s of just imitating Russian technology. Since April, 1971, they have been producing Chinese-designed Mach 2 fighter planes at the rate of 10 a month. On the nuclear side, a small number of intermediate-range missiles have apparently become operational. With a possible range of 2,500 miles, these could reach the Urals, India or south-east Asia. It is also possible that an intercontinental missile has been tested in the Sinkiang desert. But the long awaited oceanic testing of that missile has not occurred, although a ship with the necessary tracking equipment has been prepared.

Egypt

Bombast for the unfaithful

What is this "reasonable time" within which President Sadat said in Alexandria on May Day the Russians would supply Egypt with the necessary strength to liberate its occupied land? The likely answer is that Mr Sadat, no less than the Russians, is looking well into the future. Indeed, in the same speech, the Egyptian president spoke of a joint Egyptian-Libyan-Syrian strategy that would be applied "generation after generation" until the Arabs were ready to confront the Israelis. But if Mr Sadat has within himself such steadiness of purpose, he does not credit his people with similar quality.

This leads him to fight what he calls a campaign of despair with the sort of bombast that must surely nourish the despair of the intelligent. On May Day he repeated earlier oratory by announcing Egypt's willingness to sacrifice a million dead—though this time he said that Israel too would be

forced to make an equal sacrifice. A week before, in a speech celebrating the birth of Mohammed, he almost unbelievably trapped himself yet again within the confines of a deadline: God willing, he said, Egypt would have its land back in a year's time and the Israelis would be returned to the "abasement and submissiveness" decreed for them. Egyptian officials are now trying to explain that their president did not intend this to be taken literally: on a feast day, they say, people like to hear something nice.

President Sadat brought back from his two-day visit to Moscow Russia's formal recognition that the frustrations blocking a political settlement give the Arabs "every reason to make use of other means" to recover their land. The question is whether, and when, the Russians are prepared to help Egypt make these other means effective. Seeing the ungrateful Egyptians becoming daily more hostile towards them, the Russians may be attempting to stop the drift by promising the superior type of equipment, in particular better tanks and better guns, that would gradually lessen, or check, the growing qualitative military imbalance between Egypt and Israel. But it is a mighty long step from this to arriving at a situation in which Egypt would match, let alone have the edge over, Israel's military potential.

Anti-Russian sentiment in Egypt has become loosely marshalled in the form of opposition to the prime minister, Mr Aziz Sidki. After President Sadat's pre-emptive coup against Mr Ali Sabri and other left-wingers in May a year ago the Egyptian right was making most of the running. Now, having obtained an important new lease of political life,

adat can't put a cloak on his words

the right, or rather a disparate grouping of liberal, right-wing and religious factions, is demanding more and expressing its dissatisfaction at not getting it in attacks on the prime minister. Opposition to Mr Sidki is strong in parliament, in the party and, more important, among senior officers.

It is safer to attack the prime minister than the president. But Mr Sadat, recognising that the opposition is basically aimed at himself, has been going out of his way to defend his prime minister's policies, insist on Egypt's continuing socialism and reprove the rebellious right. Mr Sidki is disliked both on personal grounds and because he is thought to threaten the interests of private business. Efforts by private employers to foil government instructions to pay more money to their workers led to large-scale street demonstrations last month; these were dealt with roughly by the security forces, but Mr Sidki then intervened personally and forced the employers to comply. Yet the true motives of the anti-Sidki campaign go deeper. The prime minister is a convenient scapegoat for those who want to escape from ever-growing dependence on Russia, for those who would try for a deal with Israel even if it means concessions on territory—and for those who hold that it is time for Sadat to go.

The subcontinent

It wasn't as good as it seemed

Clouds of euphoria surrounded the mountain-top meetings between India and Pakistan last week. India's emissary, Mr D. P. Dhar, emerged from an unscheduled session with Pakistan's president, Mr Bhutto, to exclaim, "I have never had a more constructive and frank discussion." Sunday's joint statement described the four-day talks as "cordial" and announced agreement on a summit conference to be held in New Delhi next month. Western reporters came away convinced that the major barriers to a subcontinental settlement had been negotiated away. But in the clear light of New Delhi this week scepticism reasserted itself.

One prop for last weekend's optimism already seems to have collapsed. This was the Rawalpindi report that Mr Dhar had persuaded Sheikh Mujib to join Mrs Gandhi and Mr Bhutto at the conference table. The presence of the Bangladeshi leader would be essential if the meeting were to result in the release of the 93,000 Pakistani prisoners of war, since India insists that the prisoners are held jointly by India and Bangladesh. It would also be a dramatic concession by Sheikh Mujib since he has maintained all along that he would not sit down with Mr Bhutto before his new state was formally recognised by Pakistan. Last week the Pakistanis said that prior recognition was out of the question. And this week both Indians and Bengalis were saying that a Mujib stand-down was simply not on.

Sheikh Mujib is said to be equally adamant about his controversial plan to stage war crimes trials in Dacca. While the Indians and Pakistanis were working out their agreement, the Bangladeshi government published a list of 99 Pakistani officers and 1,400 soldiers who will be charged with genocide and lesser crimes. Some of the more prominent accused, including the former president, Yahya Khan, and the present chief of staff, Tikka Khan, are now in Pakistan and will be tried in absentia. The great majority, however, are in Indian custody. Last March Mrs Gandhi promised Sheikh Mujib to hand the prisoners over for trial and she has not publicly withdrawn that promise. But Mr Dhar apparently assured the Pakistanis that India will spend the next month trying to change Sheikh Mujib's mind.

The Bangladeshi leader clearly retains the power to throw a spanner into the delicate works of the Gandhi-Bhutto meeting. But even where the issues are strictly bilateral, last week's agreement rests on shaky ground. Although Kashmir is believed to have made it on to the agenda, the positions of the two sides on this 25-year-old dispute have not narrowed at all. Indians suspect that Mr Bhutto's strategy now is to stall for time on the assumption that, with increasing international pressure for the release of prisoners and withdrawal from occupied territories, India's leverage is diminishing daily.

China

The good earth

FROM OUR HONGKONG CORRESPONDENT

Echoes of the "back to the farm" sequel to the disastrous great leap forward of the late 1950s are now being heard on the winds of all monitored provincial radio broadcasts from China. The old 1962 priorities are being restated: agriculture first, light industry second, heavy industry third.

You can get the news anywhere.

Now, find out what the news means from the Harris Sound of Business.

Every month, hear a 30-minute summary and interpretation of news affecting business, by Harris economists Dr. Beryl W. Sprinkel and Dr. Herbert E. Neil, Jr., as they field questions from CBS financial news editor Larry Butler.

Hear these practical, working economists translate current events into the kind of insights you need right now.

The Harris Sound of Business comes to you monthly in tape cassettes with printed summaries. The 12-month program includes a quality Bell & Howell Player/Recorder at a special, reduced price. It also includes a handsome, 12-cassette album for storing your tapes. The cost of the total program is just $141.65. Or, you can subscribe to the tapes and printed summaries alone for $100 per year.

There has been no politburo pronouncement as there was after the great leap became the great retreat. But the current words bring a haunting memory.

"Only when agriculture is developed can more raw materials for light industry and a wider market for heavy industry be provided," says a typical broadcast from Anhwei province. The local radio condemned "some persons" for drawing too much labour from the rural areas and arbitrarily diverting capital, equipment and materials allocated for agriculture. "This practice is wrong," it explained, "because it puts too much emphasis on heavy industry."

This return to agricultural consolidation was foreshadowed by price adjustments at the end of last year which allowed China's farmers to buy more cheaply and sell more rewardingly—cuts in the cost of chemical fertiliser, kerosene, diesel oil and harvesting machinery, and increased state purchasing prices for sugar cane, peanuts and oil-bearing crops. Incentives have been redirected to the good earth, and not just for rice and grain. After 10 years of concentrating almost exclusively on grain production and attacking peasants for shifting to more profitable crops, the Chinese government is finally acknowledging that these crops too are valuable to the state. And it has recently given its seal of approval by an article in the party paper Red Flag to another controversial source of peasant profit—that hardy perennial, the private plot.

Chile

Campus politics

No one takes elections more seriously than the Chileans, and the results of last week's polling at the university of Chile came as a body-blow to President Salvador Allende. The 82,000 academics, students and employees who turned out on April 27th were voting on three things: the rector, the governing council, and differing concepts of what a university is supposed to be about. The University Front, representing the Christian Democrats, the Nationalists and other opposition groups, claimed that it was defending the idea of a "critical, pluralistic and democratic campus," and the ruling Popular Unity alliance insisted on the need for a "militant" university working closely with the government. The extremist Movement of the Revolutionary Left (Mir) went further

Allende's not counting chickens

and denounced the pursuit of academic objectivity as "a wild-goose chase that appeals to petty bourgeois parvenues." But what was at stake was rather more than academic freedom, since the university runs television and radio stations, and disposes of about 3.5 per cent of the national budget.

The pluralists appear to have won out. Sr Edgardo Boeninger, who used to be head of the budget under the Frei government and had served as rector for a year in the teeth of opposition from a left-wing majority on the university council, pulled in about 52 per cent of the votes. His supporters also won 54 of the seats on the 100-member council. Sr Felipe Herrera, the Popular Unity candidate, got less than 44 per cent of the votes—a double disappointment for his backers, since Sr Herrera, who had served as minister of finance in the conservative government of Ibáñez, was picked in order to attract the centre vote.

No one was very surprised that Sr Andres Pascal Allende, the Mir's candidate, trailed behind with 3.4 per cent of the votes—even though he is the president's nephew—or that the maoist, Sr Luis Vitale, only got a few hundred votes. But both of them have now insisted that they are going to have their way despite the election results, and the Mir has sworn to bring about the overthrow *(derrota)* of Sr Boeninger by creating "chaos" on campus. For his part, Sr Allende studiously ignored the university election in his May Day speech. The results will not make him any more confident about his chances in the referendum that he has once again hinted he is ready to hold.

Spain

May Day was a mouse

FROM OUR SPAIN CORRESPONDENT

May Day is a public holiday in Spain as in most other European countries—but with one of those Spanish differences. The Franco regime has dedicated it not to labour in general but to Saint Joseph the Worker, and when demonstrations occur it is the authorities who do much of the demonstrating.

This year, as usual, illegal left-wing movements urged their supporters to gather at key points in Madrid, Barcelona and other major cities. And this time it was thought there would be a major confrontation. But there were probably as many armed policemen as demonstrating workers and students in sight, and the secret police gave its customary May Day patronage to bars in working-class quarters. In Madrid left-wing students were clubbed by the police when they unfurled red flags. Yet a smaller but equally illegal demonstration organised by the right-wing Warriors of Christ the King, which applauded the army and police, was, unsurprisingly, allowed to take place. A peaceful gathering in El Ferrol, General Franco's birthplace, recalling the shooting of two local workers by the police in March, urged "no more bloodshed." It was rapidly dispersed.

Police control of the streets was never seriously challenged. Even communist workers seemed less combative than they were a year or two ago. This is partly because just over 2 per cent of the labour force, a relatively high rate for Spain, is unemployed, which means that more people are worried about holding down jobs. But it is also a result of last autumn's strikes in Madrid and Barcelona, when three workers were shot, and other more recent industrial conflicts.

The police are following a tough line, confident of the total backing of their officers. One of the major political events of the winter was the appointment of the ultra-right-wing General Carlos Iniesta as director-general of the Guardia Civil, the armed gendarmerie, with its own intelligence network, which is represented in even the smallest village. No fewer than 11 ministers braved a cold February breeze to attend General Iniesta's taking-over ceremony. No one was left in doubt that the general is now a power in the land.

NEW ZEALAND

The scope broadens

"Manufacturing now a rapidly expanding sector..." Contribution to national wealth has huge potential..."

This is a new New Zealand, adjusting confidently to a world of changing market needs. Thinking afresh. Broadening all the time.

We know because we are there, well placed to help you keep abreast of things. Export? Investment?

Call us when you need us.

Isn't it time your schoolboy French left school?

At Linguarama, we teach grown up French. The kind which deals with hotel bookings, car hire, plane reservations, cash reports and phone calls. The sort of thing you never had to bother with at school.

Our TOTAL IMPACT course, for example, leaves out the flowers and the birds, the plumes and the tantes and concentrates instead on teaching you the essentials of a world business language in the shortest possible time.

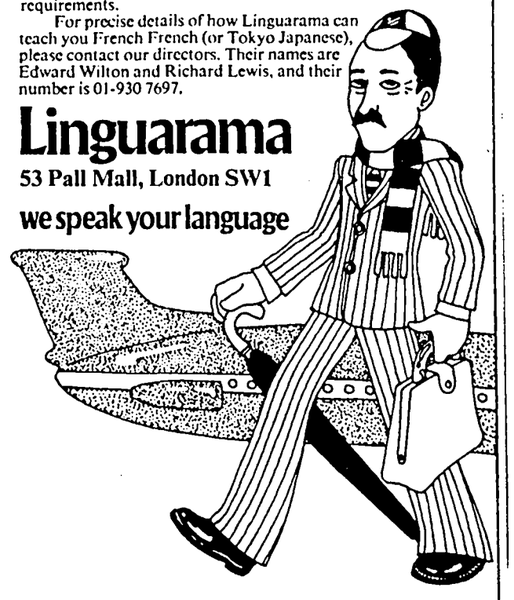
This very high intensity method – for French, English, German, Japanese, Spanish, Italian, Arabic and Indonesian – will naturally demand your full-time attention.

But if business is too pressing, you can take an intensive part-time course at our Pall Mall headquarters. And you can arrange your sessions any day of the week that suits you.

Whichever type of instruction you choose, the basic advantages remain the same.

Timetables are completely flexible. You can change, postpone or cancel your lessons – just as you would with your doctor or dentist.

Our staff are all highly qualified foreign nationals with considerable teaching experience.



Teaching is by the Direct Method. This is person-to-person instruction using the language you are learning *exclusively* from start to finish.

Regular reports on students' progress are issued when required.

The vocabulary of the course is semi-commercial and will be tailored in private to suit your particular requirements.

For precise details of how Linguarama can teach you French French (or Tokyo Japanese), please contact our directors. Their names are Edward Wilton and Richard Lewis, and their number is 01-930 7697.

Moscow with a pinch of Salt

Washington, DC

Both in Washington and in Moscow the governments have declared that any agreements that may come out of President Nixon's planned visit to the Soviet Union will in no way be at the expense of their respective allies. The fact that North Vietnam and South Vietnam, an ally of the Soviet Union and an ally of the United States, are engaged in a fight which may be to the death, and that each of the two great powers has been blaming the other for officiously meddling in the struggle, seems not only to limit the area of harmony which President Nixon and Mr Brezhnev can expect to open up when they meet on May 22nd, but also to expose their meeting to a hazard. Both of them, however, have been showing themselves determined not to let the flare-up of the Vietnam war wreck their summit meeting if they can prevent it.

Since they both earnestly want the meeting, it has to be presumed that they both want it to be a success and their best prospect of success lies in an agreement on strategic arms limitation (Salt). This week the White House announced "a major advance" in the Salt talks, on the basis of which President Nixon's negotiator, Mr Gerard Smith, was returning to Helsinki with new instructions ; the President, it was said, was confident that the Soviet negotiator would get new instructions, too. The hope is that an agreement can be put into final form in Helsinki in time for a signing ceremony when the President is in Moscow.

What it seems to amount to is that the Russians have agreed to extend the limitation on offensive nuclear armaments to include missile-firing submarines as well as the other systems of delivering nuclear warheads. On the basis of a rule-of-thumb freeze of offensive weapons systems at their present quantities, the Americans have been able to agree to a freeze of defensive (anti-ballistic missile) nuclear systems which would give each side probably two sites each (a relative gain for the Russians).

The substantial meaning of an agreement on these lines, if this is how it turns out, is limited by the omission of any qualitative limitations. Both sides would be able to go on installing multiple warheads ; the Americans would not be precluded from replacing their existing missile-firing submarines with the improved Ulms submarine system, so long as the numbers in the fleet were kept the same ; the old B-52 bomber could be replaced with the projected advanced bomber, and so on. The strategic arms race would not, in fact, have been stopped. The expectation is that this year's agreement will contain some kind of a pledge to go on seeking qualitative limitations, so that the Salt talks will continue as the well-established international institution which they have become.

While it is the most substantial thing Mr Nixon can hope to bring home from his trip to Moscow, the Salt agreement does therefore look like being more of a joint political gesture, a pledge of better relations to come, than anything else. Apparently the two sides can still contemplate such a joint gesture at a time when the Soviet Union is acting as armourer for the North Vietnamese attack and when American air power is being used with increasing weight to stop the Soviet supplies reaching the battle in South Vietnam. But if, as most people suppose, there is a taoit understanding to keep Vietnam aside from the main area of American-Soviet relations, it can presumably only be sustained within limits.

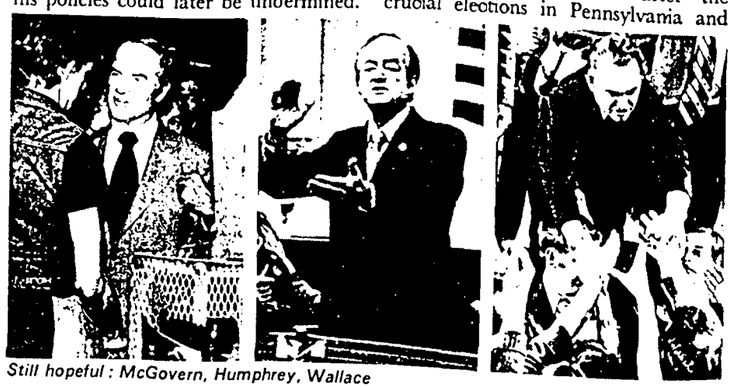
Mr Nixon could hardly have been more absolute or more personal in his refusal to permit a communist conquest of South Vietnam than he was last Sunday : " We are prepared to use our military and naval strength against military targets throughout North Vietnam." In short, the better the communists do on the ground, the heavier and wider-ranging will be the American retaliation from the air and from

Arms and the men : Kissinger faces Rogers, Nixon, Laird

the sea and the greater the strain on Mr Nixon's understanding with Mr Brezhnev. Thus, while the preparations of Mr Nixon and his staff for the visit to Moscow go forward diligently, the conditions in which it is to take place appear to be in other hands.

As part of the preparations the Secretary of State, Mr Rogers, set off on a tour of consultations in the European capitals. Mr Rogers's itinerary was drawn up to get him to Bonn on Sunday night, in the expectation that the Bundestag would by then have voted to ratify the west German treaties with the Soviet Union and Poland and that the future of the west German government would by then be reasonably clear. Neither expectation was quite assured by the time he set out.

In the early days of Herr Brandt's Ostpolitik, President Nixon and Dr Kissinger used to express misgivings at the thought of individual allies negotiating separately with the Soviet Union on matters of, to some extent, common concern. But by now the ratification of the German-Soviet and German-Polish treaties would be welcomed ; only a desire to avoid annoying Herr Brand's opponent, Herr Barzel, and becoming involved in German politics has prevented the Administration saying so out loud.



The Administration does, however, want the protocol signed and completed which will put into force last year's four-power agreement on Berlin. It accepts that, as the Russians have made plain, there will be no Berlin protocol until the German-Soviet and German-Polish treaties have been ratified. A further period of delay and uncertainty about the German treaties would hold a lot of things up. As Mr Nixon's last foreign policy report to Congress said in February, "when the Berlin accord comes into force with the signing of the four-power protocol, this will unlock a diplomatic process."

About the sequence of this process Mr Nixon and Mr Brezhnev will not automatically agree, since the Russians will want to start with a European security conference while the United States and a consensus of the North Atlantic powers would rather put first talks on mutual and balanced reductions in forces. But that is not necessarily a sticking-point. The sticking-points are that the United States will not contemplate a European security conference until the Berlin protocol has been signed, while the Russians will not sign the protocol until the parliament in Bonn has ratified the German treaties.

As usual, the Administration is in need of ammunition to fight off the next onslaught of those forces in the Senate, led by Senator Mansfield, that press for a unilateral reduction of the American troops in Germany. A definite prospect of talks on mutual and balanced force reductions between the Atlantic alliance and the Warsaw pact would provide that ammunition. President Nixon did his best to conjure up such a prospect in December, when he told the Senate of his expectation that the Russians would be receiving Signor Brosio as the emissary of the North Atlantic Treaty Organisation to discuss mutual reductions in forces.

But he never got to Moscow, the Russians never having given him any encouragement. This month in Moscow might see President Nixon offering an alternative method of starting the preparation of the talks on force reduction. Mr Nixon's dilemma on this front is that naturally he wants his visit to the Soviet Union to be a demonstrable success ; nobody wants a failure, especially in an election year. But he is aware of the danger that a conspicuous, if superficial, success might generate what in the Administration is called euphoria (the fashionable word for fatuous optimism) and that, in such a mood, the arguments of the Senators for sweeping unilateral cuts in the American forces in Europe might be more difficult than ever to resist.

One great thing about conspicuous negotiations with foreign powers is that opposition politicians cannot compete with the man in charge in this regard. Without doubt Mr Nixon needs this advantage and is prepared to use it in Moscow as he did in Peking, but he is also concerned that his efforts should produce a result of some serious value. Unavoidably, he is concerned also not to use a foreign journey merely to create such illusions of triumph that his policies could later be undermined.

Still hopeful : McGovern, Humphrey, Wallace

ELECTION '72

Little help to Humphrey

FROM A CORRESPONDENT IN CLEVELAND

It was only a month ago, just after his victory in Wisconsin, that Senator George McGovern of South Dakota decided to enter in earnest last Tuesday's election in Ohio. There Democrats chose among delegates to their party's presidential convention next July, according to the candidates whom they promised to support. There was already a cadre of seasoned political workers in Ohio, professionals who had been active in statewide and national campaigns. But the national McGovern headquarters, plagued by a shortage of money and staff, had put no workers into Ohio, even though Senator Hubert Humphrey of Minnesota, the former Vice President, had 23 people in the state known as the " mother of presidents."

Before Wisconsin, Ohio, even though it was the sixth largest state in the union, had been considered a risky business for the South Dakotan, who at that time had shown little ability to attract working-class white voters and Negroes. Such voters, and also trade unionists and elderly people, had been targets of Humphrey campaigning for 25 years and were in large measure the beneficiaries of the far-reaching social legislation which Mr Humphrey had backed in the Senate. So Ohio, an industrial state where such groups dominate the Democratic electorate, looked a bleak prospect for Mr McGovern's neo-populist brand of campaigning.

The decision to make a major effort in the state was made after the crucial elections in Pennsylvania and

All of these securities having been sold, this announcement appears as a matter of record only.

BANCO DI ROMA

Capital and Reserves: Lit. 56,300,000,000
International Partners: Commerzbank and Credit Lyonnais

Ordinary and Extraordinary Meeting held on 21st April, 1972.

The Meeting of the Shareholders of Banco di Roma, held under the Chairmanship of Avv. Vittorino Veronese, approved the Balance Sheet as at December 31, 1971, the relative Profit and Loss Account and the distribution of the Profits.

The Report points out the wise policy carried out by the Bank as to the rates of interest paid to depositors and charged to borrowers, aiming at maintaining the necessary proportion between costs and earnings.

The document, after hinting at the efforts of the Bank in studying and carrying into effect more advanced techniques in its banking organisation, points out the expansion of the Bank's operational network in Italy through the acquisition of majority participations in a few local banks. In fact, in 1971 the Bank acquired participations that, although indirectly, have increased by twenty the number of its branches.

Besides such expansion in Italy, the Bank has enlarged its organisation abroad through the opening of Representative Offices in Tokyo, Singapore, Mexico City, Sydney and, recently, Johannesburg, and the transformation into an "Agency" of the Representative Office in San Francisco, thus becoming the first Italian Bank to operate in the State of California.

Emphasis must be put on the ever increasing expansion of the affiliated Banks abroad, and on the satisfactory results achieved by the Bank's various participations. Of particular importance are the success of the "Rominvest" Fund and the increase of the activity as tax collectors, an organisation that as at December 31, 1971 consisted of 13 District Offices and 3 consortium Agencies with a total yearly inflow of tax dues of about 23 billion lire.

After the customary allocations for depreciations and provisions, the Net Profit amounted to Lit. 4,604,402,153 (against Lit. 4,503,586,077 in 1970). The Meeting decided therefore to allocate Lit. 1,200 million to Reserves, thus increased to Lit. 16,300,000,000, to distribute a dividend of 8½ per cent and to carry forward the balance of over Lit. 38 million.

The dividend is payable from April 24, 1972 at all branches of the Bank in Italy.

The Meeting appointed a new Director, Prof. Pasquale Saraceno, whose office will last as long as the term of the whole Board of Directors, and the Auditors' Committee for the three-year period 1972-74, composed of Prof. Tancredi Bianchi (President), Dott. Gastone Brusadelli, Prof. Vittorio Marrama, Dott. Fausto Persegani, Rag. Andrea Stella (auditors), Dott. Giuseppe Cricenia, Dott. Costantino Zubbani (deputy auditors).

The Extraordinary Meeting approved the amendments to Articles 1, 2, 4, 5, 7, 8, 14, 24, 27, 28, 29, 30, 31, 32, 33 and 36 of the Memorandum and Articles of Association.

The Board of Directors in a subsequent Meeting reappointed Avv. Vittorino Veronese as Chairman, Dott. Massimo Spada as Deputy Chairman and Avv. Giovanni Guidi as Secretary to the Board.

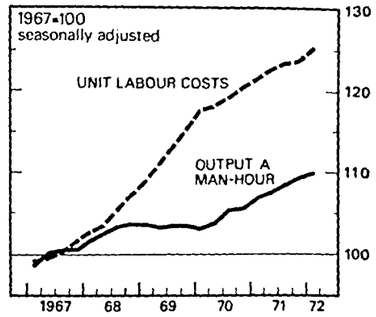
Managing Directors are Dott. Danilo Ciulli and Prof. Ferdinando Ventriglia.

Massachusetts, on the theory that in Ohio Mr Humphrey and Senator Edmund Muskie of Maine would divide the votes of Democrats from the centre and the right. When Mr Muskie withdrew from further primary campaigning, this seemed to leave the field open to Mr Humphrey.

But after his startling successes on April 25th in the two eastern states, both of which are more liberal than is Middle-American Ohio, Mr McGovern switched his strategy. He began to move closer to the political centre and warned those of his followers who burned with a hard liberal flame that he was ready to "deal" with the Democratic party's "power-brokers" and with middle-road and even conservative political and labour leaders. At the same time he increased his campaign in areas of Ohio which Mr Humphrey believed were safely his.

Mr McGovern was well received among blacks, elderly citizens and union members, especially those known as "Cosmos," second-generation American citizens of east, south and central European stock. Mr McGovern was also making inroads into the young working-class men and women who had not gone to college to become alienated and frustrated but had instead gone to work on the dehumanised assembly lines and in smoke-polluted factories. There they had equally become alienated and frustrated, angry at an establishment, from unions to company management to policemen to politicians, in which they felt they had no voice.

Also on the Ohio ballot and campaigning actively was Senator Henry Jackson of Washington State, a conservative trying to pick up some of those voters who might have supported Governor George Wallace of Alabama had he chosen to run in Ohio. Mr Jackson withdrew from active campaigning after receiving under 10 per cent of the votes. Former Senator Eugene McCarthy, a Democratic presidential contender in 1968, was on the ballot but did not campaign visibly. Mr Muskie remained as well and did about the same as Mr Jackson. This was due largely to his major ally in Ohio, Governor John Gilligan, a tall redheaded liberal who knows how to use both the English language and a strong political organisation.



Voting irregularities in the Cleveland metropolitan area, the state's largest centre of population, snarled the counting Tuesday night and sent Mr Humphrey and Mr McGovern into fits. But by Thursday morning, when 89 per cent of the votes were tallied, Mr Humphrey had 41 per cent of the statewide vote for "at large" delegates and Mr McGovern 39 per cent. These figures are not likely to change much. Thus Mr Humphrey gets the 38 "at large" delegates and is the winner, but it is not a famous victory. In the election of the remaining delegates, district by district, Mr McGovern did much better.

Mr Humphrey comes out of the election with a probable total of 76 delegates to Mr McGovern's 64. Mr Humphrey was hurt by two "favourite sons," particularly by Mr Carl Stokes, Cleveland's black mayor, who carried off the nine delegates of a big black district. Even so, it is Mr Humphrey who has the more reason to be disappointed, since he achieved only the minimum that he needed to maintain his national momentum as a candidate.

The Senator from South Dakota had more reason to crow. Mr McGovern showed that he could win in a relatively conservative state and could make inroads into Mr Humphrey's traditional areas of support. In addition, in the primary on the same day in neighbouring Indiana, which is largely conservative, Mr Humphrey won 47 per cent of the votes but Governor Wallace, the only other contender, came close with 42 per cent. This meant that the former Vice President had been whipsawed from the left and right by Mr McGovern and Mr Wallace.

One man, one hour

The sharp rise in the cost of labour during the first quarter of 1972 came as a fresh reminder that inflation is by no means under control. Labour costs rose by 6.3 per cent at an annual rate, according to the Department of Labour's statistics, based on the hourly compensation and the hourly output of the country's work force. Although some rise had been expected as wages went up with the ending of the wage-price freeze of late last year, the news was worrying all the same. The higher the costs of production go, the harder the Price Commission will find it to compel business and industry to hold their prices down. Moreover, the quarterly increase in hourly output, or productivity, was only 2.1 per cent at an annual rate in the private sector. There are suspicions that this is a general trend, influenced less by fluctuations of the business cycle than by a new, deep-seated rejection by the young of the traditional American faith in hard work.

The trend which disturbs the Nixon Administration showed up in the period from 1965 to 1970. Before then, productivity had grown annually since the second world war by an average of around 3 per cent, helped by the increasing automation of farm work. But in the late 1960s productivity grew more sluggishly at around 2 per cent; the years 1969 and 1970 were particularly poor. Although last year productivity grew at the promising rate of 3.6 per cent and this year could be even better, these gains may be temporary reflections of the current business recovery and in any event are small help if workers' wages rise even faster. American goods will still be too costly to meet foreign competition.

Some economists, dismissing the current anxiety about the changing national character, say that there are identifiable economic factors to explain the apparent decline in American efficiency. There has been a cut-back in spending on research and development. The peak of gains from new agricultural methods has been passed. Many younger (and therefore less experienced and productive workers) have entered the labour force; so too have married women who often take part-time jobs. There has also been the shift of workers from jobs in industry to jobs in services or government where hourly output is harder to measure.

But the Secretary of Commerce, Mr Peterson, and President Nixon himself believe that a new "anti-work ethic" may have taken hold. They want a national crusade to be launched, both by labour and management, to lessen the boredom and to increase the morale and job security of workers. Mr Peterson told the Joint Economic Committee of Congress that American manufacturers in recent years had "the worst record of any major power in the world in productivity" and that, unless it is improved, the United States

will not only lose its position in world trade but be unable to satisfy the basic hopes of its citizens for a decent life.

One thing businessmen can do unilaterally to increase productivity is to invest in new equipment and they are doing that wholeheartedly. The latest survey by the McGraw-Hill department of economics shows that this year's capital spending is reaching boom proportions sooner than was expected a few months ago. The amount of investment now planned for new plant and machinery in 1972 is $92.9 billion, an increase of 14 per cent over last year and the biggest rise since 1966.

Pale protest

Vietcong flags have flown at rallies and have been carried by marchers in American cities but the protest against the renewed bombing of North Vietnam has been only a ripple compared with the great waves of 1969 and 1970. Much of the steam has gone out of the anti-war movement. Fewer Americans are being conscripted and few are being killed ; Mr Nixon has decided to return to the negotiating table ; it looks as though North Vietnam may be winning. But in addition there is a new mood at the colleges.

Hardly had the bombing been resumed before the heads of nine big private institutions in the east made it plain that they abominated the war as much as the students did. But the presidents drew the line at demonstrations which disrupted the universities or coerced other people. In both respects their stand has been popular with students and staff. Many students are now showing a distaste for violent confrontations and a determination to be allowed to get on with their studies ; they are also more sceptical than they used to be about how much demonstrations accomplish.

At Columbia University, where there was such bitter warfare between the students and the police in 1968 and 1970, violence has not been avoided completely, but this was because of an error of judgment by the president, Dr William McGill. When a tiny, leaderless minority of the students seized several university buildings, he called in the police to clear them out—against the advice of the mayor, Mr Lindsay, and of the police authorities. There was a scuffle which left 12 people injured and Dr McGill in a state of shock : he asked the police to leave.

For the next few days, classes were held in the open air, in cafeterias and dormitories, even in a nearby bar. But by the end of the week an outraged "majority coalition" of students had been formed and had reclaimed two of the buildings. It also threatened to sue the administrators for dereliction of duty if action were not taken immediately to clear the rest. Action duly followed ; the sitters-in, who had decided that resistance was not productive, went out the nearest windows as the university's own security men broke in. There had been no vandalism.

No doubt student feeling could flare up if President Nixon were to carry out his unspecified threats to bring the war home to North Vietnam. But at present most students, if they are not actively supporting Senator McGovern, seem content to let Congress provide the opposition to the war. Last week it took a big step. In the House of Representatives, where hawkish views could once be counted upon to prevail, the Democratic majority voted by over two to one to denounce Mr Nixon's "dangerous escalation" of the war and to bring forward a bill setting a date for complete withdrawal.

McGill could have saved his breath

ELECTION '72

District's choice

The District of Columbia's vote for a Democratic candidate for President will go to a "favourite son," the man who represents it as a non-voting delegate to the House of Representatives. Not that Mr Walter Fauntroy, a black politician, expects to win the presidential nomination. But he will be in control of Washington, DC's 15-vote delegation to the national convention at Miami Beach in July and will remain uncommitted until he and his followers determine which candidate best represents the interests of blacks and of the federal capital, which still lacks self-government and remains under the thumb of Congress.

For refusing to ally himself with any of the major candidates, Mr Fauntroy was accused of building a personal political machine of the very kind that the Democrats are trying to eliminate through national reform of their party. None the less, the District's Democrats, who outnumber Republicans by about six to one, chose to support the Fauntroy slate of delegates. They could have elected, if they had wished, a delegation put together by the DC Democratic Reform Committee which was unofficially pledged to give votes both to Senator George McGovern and to Representative Shirley Chisholm. None of the front-running Democratic contenders campaigned within the national capital. Apparently they respected Mr Fauntroy's charges that doing so would alienate black voters.

There are Republican voters in Washington, DC, also—34,000 of them, about half of whom live in the affluent white section west of Rock Creek Park. They did not express a presidential choice either, for a delegation pledged to President Nixon was declared ineligible by the elections board when a large number of signatures on nominating petitions appeared to have been forged. Delegates to the national convention will be picked by the local Rupublican committee.

But the Republicans voted out their incumbent national committeeman, Mr Carl Shipley, putting in his place Mr Robert Carter, an experienced

The Board of Directors of the Cassa di Risparmio V.E., under the Chairmanship of Prof. Ferdinando Stagno d'Alcontres, in the meeting of the 27th March 1972, has approved the Balance Sheet for 1971.

The activities carried on by the Cassa di Risparmio V.E. and by the joined Land Credit Administration have been illustrated by the Chairman and by the General Manager Avv. Giuseppe Trapani with exhaustive analysis which testified fairly satisfactory business results.

The Balance Sheet showed a total net profit of Lit. 1685 million, with an increase of 14.30% in comparison with 1970, to be ascribed for an amount of Lit. 649 million to the general banking activities and for an amount of Lit. 1036 million to the Land Credit Administration.

The deposits increased by 22.69% and reached the level of over 644 billion lire; the obligations, with a remarkable increase of 39.06% reached 93 billion lire, 523 billion lire with an increase of 408 billion lire in comparison with the previous business year.

The administration of Land Credit achieved during the year the considerable increase of about 36% rising from 104.2 billion lire to 141.3 billion lire.

The network of the Cassa di Risparmio branches developed by the opening of five new branches and, at the end of 1971, consisted of 219 branches.

SOCIETE GENERALE DE BANQUE

Activities and Results in 1971

Société Générale de Banque, Belgium's largest bank, have just published their annual report which was submitted to the General Assembly of Shareholders on 25th April, 1972.

Balance-sheet as of 31st December, 1971, shows further expansion of the bank's resources. Total assets and total liabilities amount to BF 259,278,069,952 against BF 231,723,708,776 in 1970.

Deposits and current accounts total BF 156,850,712,282, a BF 20,000 million increase over the 1970 figures. Cash certificates amount to BF 10,289,878,000 against BF 8,385,796,000 in 1970. Due to banks and subsidiaries are up from BF 51,000 million to BF 54,000 million.

Credit restrictions imposed by Banque Nationale de Belgique were curbed early in 1971 and finally lifted in September, as a result of which, the bank was able to make a larger contribution to the financing of private undertakings. Loans of all types extended by the bank were availed of as of December, 1971, to the extent of BF 113,300 million against BF 98,500 million in 1970.

Government and government organization bonds exceed BF 79,000 million, or 10,000 million more than in 1970.

Net profit for the year amounts to BF 1,134,368,868, incorporating BF 143,760,916 resulting from adjustments of value of part of the shares of the bank's New York affiliates Adding BF 160,878,598 brought forward distributable profit amounts to BF 1,295,247,466. Net profit per share amounts to BF 276 against BF 265 in 1970.

It was proposed to the General Assembly to pay, after providing for a 20% withholding tax, a net dividend of BF 147 to the holders of the 4,109,156 shares representing the stock capital of the bank. For the preceding year, the dividend per share amounted to BF 140 nett, or a rise by 5% from one year to the other.

In 1971, Société Générale de Bank expanded recently introduced services and took further moves to offer customers new services likely to meet their requirements either of a private or a professional nature.

In addition to facilities placed at the disposal of companies in credit and finance of imports or exports, the bank also devised a scheme aimed at assisting companies to cope with management problems, known as the "Sigma" model which provides financial engineering services to help corporate customers in determining the best plans for financing their expansion.

In 1971, the Government and government organisations raised funds in the capital market to the extent of BF 147,000 million through 11 bond issues, in the management of which the bank participated actively. On the other hand, the bank participated in several issues on behalf of corporate customers or international organizations.

The bank's operations in the international market expanded further, in spite of widespread monetary uncertainty and the slackening of business conditions. This expansion was based on a larger number of multinational customers, on the increasingly dense network of correspondents abroad and new ventures which ensure now a 117 unit coverage of the overseas market in 23 countries.

As in previous years, the bank provided full support for the finance of Belgium's external trade. In the short-term financing of imports and exports, the outstanding acceptances on December 31, 1971, were BF 17,600 million, which compares with BF 13,500 million a year earlier. The increase on the year was thus 30% and the figure represents 38% of the total acceptances of Belgian banks.

In the medium term financing of the Belgian export trade, the bank entered into new framework agreements to finance the supply of capital goods to Algeria, Mexico and Rumania. These arrangements are additional to those with twenty-one other countries into which the bank had entered in earlier years. It also provided finance for several important Belgian works contracts and equipment supplies, providing credit directly to the foreign buyers. Projects financed in this way included an electrolytic zinc plant and the manufacture of electrical material in Mexico, an oil tanker in Great Britain and the fitting out of a bauxite mine in Guinea, to a total value of BF 1,700 million. The bank again gave considerable support to the Creditexport finance pool, in which its participation has been raised to BF 6,500 million representing half the funds made available to this organization by the commercial banks and a quarter of the entire pool.

There was a material growth in the activities of Bondtrade as a market place for dealings in international bonds.

The salient fact of the year was the decision by Bondtrade to make no further transactions in convertible bonds for their own account. They continue nevertheless with the execution of orders passed to them and publish the prices at which transactions took place.

Co-operation with the member banks of European Banks International Company (EBIC) was further evidenced by the opening of a joint representative office in Toronto. On the other hand the genuine European character of EBIC was reinforced by the admittance of two new partners, namely Société Générale (France) and Creditanstalt Bankverein, Vienna, who number among the largest banking organizations in their respective countries.

Republican politician who had secured the local committee's endorsement. Although the District's voters were generally lethargic about this primary election, both parties went through internal struggles because much more was at stake. The District of Columbia seems at last to be on the way to being granted home rule as well as full voting representation in Congress. Then those in control of the local political organisations will be well placed to propose candidates for municipal and national office.

ITT forever?

After one of the longest hearings ever held into the fitness of a presidential appointee, the Senate Judiciary Committee voted last week, for the second time, to recommend the confirmation of Mr Richard Kleindienst to succeed Mr John Mitchell as Attorney General. But this time the vote was not unanimous as it was two months ago, before Mr Jack Anderson, the columnist, charged that Mr Kleindienst, when he was Deputy Attorney General, had lied when he denied that he had had any connection with an anti-trust settlement favourable to the International Telephone and Telegraph Corporation; allegedly this was a payoff for ITT's help in financing the Republican presidential convention, then due to be held at San Diego. Last week four liberal Democrats voted against Mr Kleindienst and promised to raise on the Senate floor the points on which they felt that the evidence given the committee had been evasive or contradictory.

They were bitterly disappointed by the testimony of Mr Peter Flanigan, the White House's liaison with the business community, which they had hoped would show that the judgment of the Justice Department's anti-trust specialists had been overruled. The White House had backed down and allowed Mr Flanigan to testify in spite of its earlier insistence that this would be an invasion of "executive privilege." Had he not appeared, Senator Ervin was threatening to block the nomination; "executive privilege" is an old and continuing bone of contention. But all that emerged from Mr Flanigan's testimony, which was restricted severely by the White House, was that he had indeed spoken briefly to Mr Kleindienst about the ITT case on three occasions. Mr Kleindienst, recalled to the stand, could not remember any of these "insignificant" exchanges.

Kleindienst faces more flak

Four Democrats on the committee voted with the Republican minority but two of them, Senator Hart, a leading liberal, and Senator Byrd, the deputy leader in the Senate, let it be known that they might change their minds after the Senate debate. This is certain to be prolonged. In the end, the nomination seems likely to be approved, if only on the unflattering ground that the President is entitled to his own choice for the Justice Department. But even if the liberals cannot stop the nomination, they will keep alive the issue of the Administration's cosy relations with big business.

This anyone could have predicted. What must have come as an unexpected blow to the Administration and to ITT was the insistence of Senator Mathias that the committee's interest in ITT was not exhausted. Mr Mathias is a liberal Republican who has been a thorn in the Administration's side before now. He toed the party line on the nomination but he feels that the question of improper pressure by ITT cannot be shelved—even by moving the Republican convention from San Diego, now a city of unhappy associations, to Miami Beach.

FBI comes home

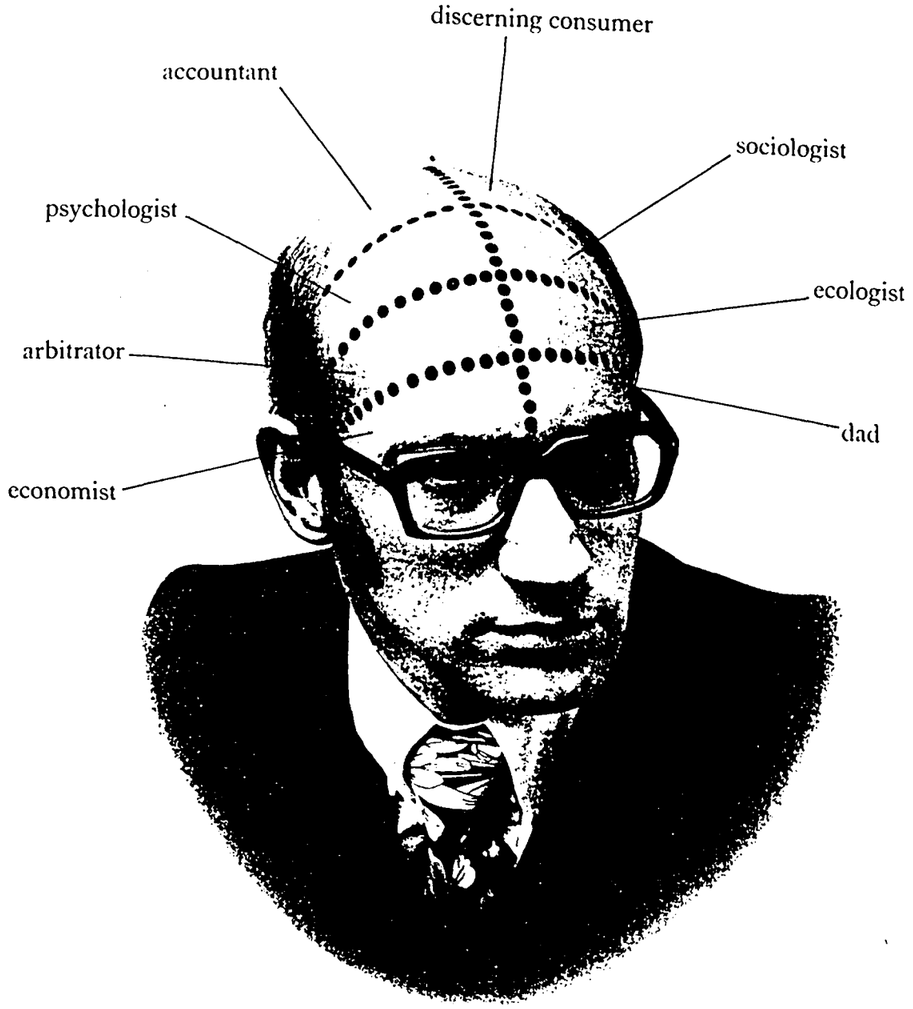
Washington, DC

Most indestructible of bureaucrats, J. Edgar Hoover made himself into a folk-hero and the Federal Bureau of Investigation into an independent fiefdom which its nominal master, the Attorney General, found it wise not to meddle with. No President ever had the nerve to ask him to retire, so he died on Monday night still in office at 77. Eulogies and marks of respect do not alter the fact that any President would feel bound to use the occasion to get the FBI back within the normal chain of administrative authority.

President Nixon lost no time at all: the decision to put Mr L. Patrick Gray in charge was announced on Wednesday. He had been chosen to succeed Mr Kleindienst as Deputy Attorney General but, with Mr Kleindienst's appointment to head the Department of Justice still hanging fire in the Senate, the President decided to make Mr Gray, instead, acting director of the FBI until the end of November. An acting appointment needs no confirmation by the Senate, though a permanent appointment would. By November 8th Mr Nixon will know whether he is to have a second presidential term: if he wins, he will be able to choose his own men once more in a reasonable confidence that the Democratic majority, chastened, will confirm his choices without undue questioning. Questioning, not so much of the nominee as of the whole field of habits and activities of the FBI, would almost certainly have followed if Mr Nixon had made a permanent appointment just now.

Mr Gray is a calm, quiet, thorough, hardworking man in his middle fifties who spent 20 years as a naval officer, some time in private law practice and some time again in political service to Mr Nixon, whose staff he joined in 1960. As Assistant Attorney General in charge of the civil division of the Justice Department he has spoken and worked in several causes close to the President's heart.

He was entrusted with the court aspects of the attempt to control the May Day demonstration in Washington last year. He has spoken in defence of Mr Nixon's economic policy against Mr George Meany and the trade unions and he celebrated Law Day in Los Angeles with a speech not about the law but about the bias and inaccuracies of the television news networks, the New York Times and the Washington Post. First and foremost Mr Gray is a loyal political servant of Mr Nixon. He is, however, free of the rhetorical habits that make other members of the Justice Department team obnoxious to Democrats and liberals. He can also be relied on, if anyone can, not to continue the Hoover tradition of maintaining the FBI as a separate branch of the government.



SWEDISH KNOW HOW

SAAB-SCANIA

Saab-Scania, a technological leader, manufacturing advanced aircraft, space equipment, avionics, cars, buses, trucks, computers, numerical control systems, valves, process instruments, marine automation equipment — and a lot more besides.

Saab-Scania is a Swedish company, the largest in Scandinavia engaged in advanced technical development, with the resources and know-how to create better products for now and the future. Saab-Scania is a name to remember.

Saab-Scania, Sweden: Aerospace Division, Automotive Division, Computer and Electronics Division and the Nordarmatur Division.

The Departmental Head

The Sunday Times Business News caters for the businessman with more intelligence than time. Because it gives him exactly what he wants every week. The broad picture of *everything* which is likely to affect his business –not purely City news, but an interpretation of world affairs and their bearing on his commercial scene.

So, by the same token, The Sunday Times Business News is where your advertising will be most effective. It's where our readers are accustomed to absorbing as much information as possible. So your advertisements will be seen and considered as a part of this whole. And will reach him where more specialised publications may not.

Profits made easy

THE NAKED MANAGER
Unveiled by Robert Heller.
Barrie and Jenkins. 246 pages. £2.50.

Many readers of his fortnightly column in the Observer, and all connoisseurs of his editorship of Management Today, will know Mr Bob Heller as the wittiest and most realistic of British commentators on business management, an activity which he thinks probably does not exist. These qualities of wit and realism sometimes clash in a volume that consists quite largely of about a thousand examples of how awful both British and American business decision-makers are. Unsurprisingly, some of his examples are unfair. But this is still a darling book which can (and should) be read with deep pain and profit by all those in the profession it lampoons, with interest by many investors, and for fun by everybody without a thin skin.

Mr Heller's basic rule of thumb—a digit on which he is very keen—is that nearly all good management is merely an expression of one great idea. Whenever a company boasts of its own managerial excellence, sell the shares ; or, if you own the firm, fire the boss. The worst sort of merger fanatic is the one who says that "in buying a company we are buying management as a primary asset." This means that he is spending good money on the entirely evanescent. Of course, you can't buy managers—because the better managers can, and often do, walk out.

In most markets only two producers plus one specialist will usually make money. Generally, therefore, a big company will do best if it sticks to one basic area where it is lord of the market. If it should discover bright aggressive entrepreneurs in its midst, it will make more money by encouraging these rarities to go into business for themselves—while keeping a slice of the equity for the good old firm. It takes a very bright manager to make a merger into a success, and a very bright manager should usually be too bright to try.

If you do have to take a decision for expansion, go for "fail-safe" projects where even if there is disaster you will break even ; there are a surprising lot of these around. But, generally, the best way to make money for your company in both Britain and America just now is to stop losing it. In almost any company you will find that 20 per cent of customers account for 80 per cent of turnover, 20 per cent of components account for 80 per cent of cost, 20 per cent of executives do 80 per cent of the really profitable work. Remembering this, you should have one clear policy towards unprofitable operations : close them—starting with those where, according to the anguished cries of the incumbents, prosperity is just around the corner (because these will be the most plausible liars). Don't pray to the good god Mammon for a new product, but for one that will become very old. Possibly, half the products on world markets in a decade's time will be "new," but, equally, half of them will be antique, and within that half the great fortunes and returns on capital will be made.

It follows that the sound stock market investor should go only for conglomerates that are hatchet men : the sorts which tyrannise their managers into raising return on capital from 10 to 15 per cent, but point out that, while the hardest way of doing this is to raise profits by half, the easier way will usually be by reducing capital employed by one-third. Unfortunately, conglomerates and diversifiers of the other—or expansionary—sort were bid up in bull markets because if Wonder Company A buys Wonder Company B with money borrowed at fixed interest, any margin between B's profits and the interest paid comes through as a straight, juicy increment in company A's earnings per share. If you are a clever speculator, you can sometimes ride along profitably on this money illusion, provided you remember to get out before it is struck down by nemesis : in the form of a realisation that firms with the biggest debts do not make the most profits in the long term. You will often get a breathing space for departure because many tycoons go on fooling quite a lot of the investment establishment (such as the insurance companies) almost as long as they do go on fooling themselves. The American bull markets have been even more brilliant than British ones in developing that strange animal "the perpetually loss-making potential growth star"—like one hot Wall Street tip, an electronic tape firm, which had lost money for 14 successive years.

Heller : do it to the other chap

Within your own company, listen to what your competitors say about you and your products. Eight times out of 10 it is more accurate, as well as much cheaper, than the findings of a management consultant. Never believe your own advertising (after all, nobody else does) or your own PR (even if everybody else does). Discontent is the divine aid of good management, and all knowledge is the result of inquisitiveness. Unfortunately, experience is another name for ceasing to be inquisitive—for ceasing to ask, because the answer has been prejudged. Therefore, a firm should always get rid of experienced managers. The chief executive ought to be preparing to hand over to a nominated successor by the age of 60, and on or before his 65th birthday make quite sure that you clear out the old buzzard for good. While he is in office, however, let him be a buzzard. The most profitable firms are often run by neo-Nazis, even although their malevolent dictatorship usually has to be balanced by high pay to those they hire and so frequently fire. One big company, which has multiplied its investors' fortunes tenfold over the past decade, has been run by an inhuman demon who has :

> surrounded himself with well-paid weaklings who periodically had to be fired for their weakness. Over a long-drawn-out dismissal, the boss would sadistically strip the victim of his last vestiges of self-respect. Rebuking a man violently and cruelly in front of others never fails to demolish the current target and soften up later victims.

This is a most efficient way to run one's business, but would be most inefficient if applied to oneself.

Goodbye, Norman Rockwell

DECLINE AND FALL
By Otto Friedrich.
Michael Joseph. 511 pages. £5.

THE FAMILY
By Ed Sanders.
Hart-Davis. 412 pages. £2.50.

Once upon a time, and it seemed real at the time, Americans believed that they were a friendly, small-town folk whose lack of sophistication was balanced by a faith in human goodness and the social justice of the free enterprise system. For proof, they pinned on their walls the paintings Mr Norman Rockwell did for the covers of the Saturday Evening Post, a cheerful weekly magazine which, every American schoolchild learned, was founded by Benjamin Franklin. Those days have gone. So has the Post. It died in 1969. In that year, too, Miss Sharon Tate and some friends were brutally murdered in California and today there are undoubtedly more Americans who have heard of the murderer, Mr Charles Manson, than of Mr Rockwell. The American self-image now recognises strains of horror.

What went wrong? These two books by American investigative journalists address the same question. Mr Friedrich, who was the Post's managing editor in its last years, recounts the boardroom wranglings of the 1960s. It was clear in 1961 that the Post was out-of-tune with urban America. But various attempts to liven it up failed and lost the Curtis Publishing Company of Philadelphia millions of dollars. The final blow was the decision, by the Post's fourth new president in eight years, to drop about half the Post's subscribers against their will, in order to pare down the list to a definable and affluent group attractive to advertisers. Mr Friedrich believes that with better financial management the Post could have survived ; he believes that, because of its age, the magazine deserved to live. Watching the spectacle, Mr Friedrich became disillusioned with the American competitive economic system which let a national institution disappear because of one man's fear of losing his investment.

But Mr Friedrich dismisses too lightly the possibility that the Post died of blandness. In spite of its high circulation (more than 6.5m before paring) the Post never got in step with postwar America. And to read Mr Sanders's chronicle of the Manson family and how it grew, one realises that the world of Saturday Evening Post and Norman Rockwell was always unreal. America was never the baked-beans-supper, town-meeting land that the Post suggested : it had not abolished senseless cruelty or violence.

Manson : the American nightmare

There needed to be a book about the Tate murders ; they have lodged themselves in everyone's consciousness, no matter what care has been taken to avoid reading the details. They took place in southern California, and they happened—by gross coincidence—in the home of Mr Roman Polanski, the film producer who has served up mixtures of witchcraft, infant deformity, sex and sadism on the cinema screen.

Mr Sanders helps to satisfy the curiosity that the crime and the subsequent trial stimulated. He follows Manson from an early stint in prison in 1955 to the period in the autumn of 1969 when he and his miserable crew were hiding out in the desert. He does shed some light on the relation between murderer and victims ; Manson was a show-business hanger-on, among other things, and for a time cultivated the sons and daughters of the film industry's famous. But Mr Sanders does not find the causal link. There are plenty of deviant communes, full of drugs and occult nastiness. There are few bands of marauding assassins.

This is a well researched book, badly written. It is a pity that Mr Sanders chooses such strange vocabulary and syntax (when he discovers something that may have influenced Manson towards his murder-kick, he identifies it as a "sleazo-input"). At times the book is almost incoherent. But it is also compulsive, repulsive reading, and careful to the point of reticence about the actual descriptions of sex or murder. It is not in any sense pornography.

Justice as fairness

A THEORY OF JUSTICE
By John Rawls.
Clarendon Press: Oxford University Press. 622 pages. £5.

The currently dominant view of justice is mainly utilitarian, with intuitionist qualifications. As an alternative to this, Professor Rawls develops a theory which belongs to the social contract tradition of Locke, Rousseau and Kant. His primary concern is with principles which determine the basic structure of a society. His central idea is that these will be just if they are ones which rational men would have contractually accepted if they had been choosing principles behind a "veil of ignorance," that is, with each not knowing anything about his own abilities or assets or about the position in society which he will actually occupy.

This leads first to the general conception that "All social values . . . are to be distributed equally unless an unequal distribution . . . is to everyone's advantage," and then to two special principles, the first that "Each person is to have an equal right to the most extensive total system of equal basic liberties compatible with a similar system of liberty for all," the second that "Social and economic inequalities are to be arranged so that they are both . . . to the greatest benefit of the least advantaged . . . and attached to positions open to all [with] fair equality of opportunity."

Professor Rawls starts with abstract principles and hypothetical situations, but gradually feeds in complicating realities. He examines first the principles that would regulate a society in which everyone acted justly, and only later considers what to do about injustice. And although his starting point is an admittedly imaginary contract subject to highly artificial constraints, he eventually reaches the questions of the limits to majority rule, the toleration of intolerance, and the justification of civil disobedience.

This notion of "justice as fairness" has been propounded by Professor Rawls in articles that have been much discussed by philosophers, who will welcome this full-scale exposition. Though he makes no claim to originality, no one can deny the freshness and ingenuity with which he develops his ideas or the breadth and balance of his discussion. The book is, indeed, too long. Precautions against objections, replies to them, and adjustments to meet them result in a lot of repetition, and a rather laboured style is an obstacle to comprehension. But this is a very interesting and important work.

The author's aim is not to analyse an existing concept of justice, but to propose a concept which will be acceptable, and which will be recognised as implicit in constitutional democracy. So the main substantive issues concern the acceptability of the central idea and the transitions from this to the "general conception," to the two "special principles," and thence to more detailed applications. Taking the transitions first, one can question whether a rational man, choosing behind the "veil of ignorance," really would prefer Rawls's solution—a society which maximises the advantage of the worst-off individual—to one which maximises average utility. The argument on this issue is the core of the book. Would it not be reasonable to gamble on the society which gave one the highest "expectation" of happiness ? Professor Rawls's reply criticises the assignment (implicit in this objection) of prior probabilities by the principle of indifference, and appeals to our reluctance to take risks with our descendants' prospects ; but neither point carries conviction.

It is said to be a merit of "justice as fairness" that it is a better basis than utilitarianism for the defence of liberty. Rawls gives the first of his special principles priority over the second, and he seems therefore to be saying that restrictions or inequalities of liberty can be justified only if they are for the sake of liberty itself : freedom is not to be sacrificed to other advantages. But the argument that justifies this rests on the view that freedom becomes more important than material amenities once a certain level of well-being is reached. The priority of the first principle, though an ultimate goal, is conditional, not absolute.

His theory is exposed to attack from two sides. The adherent of average utility will say that the conclusion is more egalitarian than the starting-point should allow. Others will find it not egalitarian enough. It provides a schema for the justification of inequalities—even unequal liberties at some times, and unequal wealth at all—which may well seem unfair even if from behind the veil of ignorance it would be reasonable to accept a society that included them. And, unlike his forerunners in the contractual tradition, Rawls cannot say that what happens is fair because everyone has (explicitly or implicitly) agreed to it : his contract is purely hypothetical.

A wayward life

THE SADDEST STORY
By Arthur Mizener.
Bodley Head. 639 pages. £5.

Ford Madox Ford intended the brilliant book for which he is best known, "The Good Soldier," to be called "The Saddest Story." He recognised it to have been produced by "a concatenation of circumstances of a rather purposeless and wayward life." He always regretted the change of title forced on him by his publisher, who believed that the original would have made the book unsaleable when it appeared in the middle of the first world war. The title has been resurrected, appropriately, for the story of Ford's own chaotic life.

It is interesting to speculate what Ford's reputation might have been if, like his contemporary E. M. Forster, he had written only a few books and stopped after the best. Yet restraint, artistic, emotional or financial, was not in Ford's character. He wrote 81 books in a life which he began as Ford Hermann Hueffer in Surrey in 1873, and ended as Ford Madox Ford in France in 1939. He abandoned too many women ; he talked too much ; ran up too many debts ; kept altering his name and creating confusion about his nationality. This confusion arose when he lived for a time in Germany, pretending to his mistress, Violet Hunt, and even to himself, that he was in the process of adopting the German nationality of his ancestors in order to secure the divorce which his wife, Elsie, refused him in his native Britain. The whole scandal—which had even landed him in Brixton prison for a few days—was one of the many reasons for which Ford was never liked, never admired, and never, in truth, awarded his proper place in English literature.

1915 : the good soldier ?

This careful biography by the American scholar, Mr Arthur Mizener, who is the author of a major work on the life of F. Scott Fitzgerald, should help to restore the balance. Taking a historical rather than a psychological approach, Mr Mizener traces the uncertain path of Ford's career. He chronicles, rather than explains, the mysterious 10-year collaboration with Conrad.

Mr Mizener shows how Ford exercised a major influence on English and American literature with the founding of his two under-appreciated journals—the English Review and the Transatlantic Review. He also makes clear—with no attempt at editorialising—that for a vain, conservative, vacillating man, Ford was astonishingly generous in recognising literary talent as great or greater than his own—notably in Ezra Pound, D. H. Lawrence and Hemingway.

At times one becomes impatient with

Eliot Janeway

What Shall I Do With My Money?

A special analysis of the economic situation with sections on personal finance, cash, property, stock and shares. In his introduction Mr Janeway describes the differences—and similarities—between the British and American economies, investment conditions and stock markets.
£2.75

Michael Joseph

the book's sobriety. Episodes of what was virtually unbearable anguish (Ford suffered several nervous breakdowns) are described with a scholarly piling of fact upon fact. There are no crescendos in this biography but, to be fair, we have Ford's own work as a chronicle of his emotional life. Mr Mizener has made an invaluable contribution to literary history and there will be few scholars who will not appreciate the appendix in which he discusses in detail the lesser-known works of this perplexing, but great, novelist.

At the bottom of the garden

NARCOTIC PLANTS
By William Emboden.
Studio Vista. 168 pages. £2.80.

THE DRUG MAKERS
By William Breckon.
Eyre Methuen. 222 pages. £3.50.

Come into the garden, Maud, and let us both get high on catmint and periwinkle, fennel and belladonna. Hand-in-hand, we will become nutmeg junkies and I will promise you the kick of amphetamines, the liberation of cannabis and the visions of lsd. And if you are alive at the end of it, we will travel the earth in search of still wilder sensations to be found in trees, flowers, leaves and fungi. On second thoughts, pour me a gin, dear, while I see if there are any cigarettes in the house. For I have learned from Dr William Emboden what every jungle simpleton knows, that while there's no kick like the nature kick, you have to know where to look.

It takes a botanist and a scholar of Dr Emboden's calibre to track down some of the most mind-bending plants that make cannabis and the opium poppy seem almost innocuous, and to include photographs, paintings and drawings of almost all of them, although a few remain hard to identify. The Indian tribes of central and Latin America used extracts from the teuvetli tree to drug sacrificial victims to the point where they were reduced to passive zombies who nevertheless still had sufficient muscular co-ordination to climb hundreds of steps to the high altars. But most of the narcotic plants that grow in America and across Asia and Africa are known, and sometimes still used, by the locals. They include the fly agaric mushroom, and a number of puff-balls which have attracted much attention among other

Mandrake : a trip on root

writers.

Europe, however, went through a period when its increasingly sophisticated, urbanised citizens were ashamed of the remedies of the past, when the same drug served as stimulant, sedative, aphrodisiac, abortion-inducer and general cure-all, and they erased much of the record. Only socially acceptable drugs of the alcohol-tea-coffee-cocoa-tobacco variety continued to be used enthusiastically, although some potent herb teas still appear as pain killers in Russian pharmacopoeias. For its other stimulants, tranquillisers and pain-killers, the west has turned increasingly to synthetic drugs, upon which a highly controversial industry has been built.

Mr William Breckon's book deals mainly with the British side of drug manufacture and the industry's regular skirmishes with the govenment. He is not unsympathetic with the better manufacturers, though he takes a few well-earned swipes at their selling methods. It is a low-keyed, sensible account of the administrative and political problems of men whose lives have never been disturbed by the shriek of a mandrake ; who would be hard to convince that chocolate was an aphrodisiac and who would never, never drink beer made by spitting chewed corn into a common bowl. Yet some of the most potent drugs known to them can be extracted, in high concentrations, from the plants on Dr Emboden's list.

Programmed President

COURAGE AND HESITATION : INSIDE THE NIXON ADMINISTRATION
By Allen Drury.
Michael Joseph. 317 pages. £3.25.

For three months just over a year ago Mr Allen Drury went back to political reporting from his more recent success as a political novelist. But this time his reporting was handed to him on a plate. He was given the run of the White House and had full co-operation in his research from everyone there, including the President—with the sole (and odd) exception of the President's press secretary. The result is an amalgam of chatty comment and verbatim interviews with the White House staff, the Nixon family and a number of people in government and Congress who were closely connected with the President. It is a revealing account of how the most demanding job in the world is being managed on behalf of the present incumbent.

Mr Drury's verdict is that it is being over-managed, so that the personality and humanity of Mr Nixon are obscured from the public. Partly this is the fault of the news media, which have never given Mr Nixon a fair chance ; Mr Drury's book can hardly have pleased his old colleagues. Partly of course the fault is the President's ; he seems to lack the confidence and drive needed to break through the barriers that inevitably surround him. But mainly, in Mr Drury's opinion, the blame rests on Mr Nixon's staff, able, dedicated but lacking experience of Washington and of government and tactlessly cocksure that they are doing the best that anyone could for their President. Mr Drury offers some suggestions about how they, and Mr Nixon, might do better, particularly by following up the many constructive and innovatory proposals that have got nowhere and by showing more sympathy for Congressmen's problems and prejudices.

The book is most enjoyable, at least for anyone who already has a working knowledge of how the American system of government is set up, and it is less superficial than it seems at first glance. But it is a pity that British readers are not being given an opportunity to progress to another and much more penetrating study of "Nixon in the White House" by Messrs Evans and Novak, which came out in the United States at about the same time.

Watched pot?

THE NEW ZEALANDER
By Anthony Trollope, edited by N. John Hall.
Clarendon Press : Oxford University Press. 271 pages. £3.

ANTHONY TROLLOPE AND HIS CONTEMPORARIES
By David Skilton.
Longman. 184 pages. £2.50.

It is a sign of Trollope's steadily rising reputation that a full-length manuscript of his, rejected when he offered it to Longman's in 1855 and never subsequently published, should now be exhumed, edited and offered to the general public, less as a literary curiosity than as an intrinsically interesting book. "The New Zealander" is not a work of fiction, but a tract for the times, of the same order as Carlyle's "Latter-Day Pamphlets." Trollope thought those fulminations exaggerated in their pessimism, but his own study of mid-Victorian England is coloured by misgivings about its future. The title derives from Macaulay's prognostication that a New Zealander would one day sketch the ruins of St Paul's from a broken arch of London Bridge ; and Doré's engraving, reproduced in this volume, catches Macaulay's apocalyptic note quite brilliantly. Trollope, however, was not cut out, temperamentally, to be a prophet of doom ; his satire is pretty mild and predictable, and his rhetorical passages, especially his exhortations, are all too reminiscent of Carlyle's bombast. The book was no doubt meant as a pot-boiler, though as it was not accepted it can hardly rank as one. Trollope wrote it as a mature man, and his judgments on current social trends are based on shrewd observation. Students of his work will be glad to have so substantial a chunk of new material ; but it is worth noting that Trollope himself never so much as mentioned it in his autobiography.

Doré's apocalypse

Mr Skilton's study, "Anthony Trollope and his Contemporaries," takes its useful place among a number of recent critical commentaries on the novelist. It pays particular attention to the conventions of Victorian fiction, imposed by the quite explicit demands of serious-minded middle-class readers. The problems posed by these expectations involved other authors besides Trollope, but Mr Skilton concentrates on him because, though he had his detractors among the critics, he achieved such outstanding popularity.

Vat books

Guides to the value-added tax are falling like autumn leaves—to the surprise of no one, despite the season. One way of deciding which to buy is by price. And on this score Mr Hugh Mainprice's **Vat : A Concise Guide** (Vat Planning and Publications, 45p) wins hands down. He was working on the Vat legislation in the Customs and Excise department until March, and goes as far as is possible at this stage—the legislation provides for most of the details to be filled in later in the summer. But most of them have been mulled over in the Customs, and some have been tried out on the interested parties. Naturally, Mr Mainprice was privy to those discussions, and this shows in his book : for instance, the three possible schemes that the Customs has in mind to make life easier for retailers are described.

Professor Wheatcroft's **Value Added Tax** (Cassell, £1.80) claims to be no more than a "short book"—a "first instalment." He proposes a longer and more definite book "after the legislation is passed," and, no doubt, after the necessary orders and regulations have been made. This first bite goes a little deeper than Mr Mainprice's in informal discussion of the tax and how it works. It is doubtful whether Professor Wheatcroft is entirely accurate in his understanding of some of the legislation. For instance, he thinks that perhaps a theft from a business would count as a taxable supply from the business to the thief—particularly if the thief was discovered and successfully sued for damages—otherwise tax could be avoided by arranged theft followed by arranged compensation. But under its general provisions Vat only applies to supplies "in the course of a business," which can hardly apply to a robbery. The loophole that bothers Professor Wheatcroft is less than life-size ; it would involve an uncomfortably large risk of criminal prosecution.

Butterworth's **Value Added Tax and The Bill Explained** (£1.70) has a text of the bill together with short textual notes by that publisher's editorial staff. This will have to be revised in the late summer. It has an explanation of the tax by Mr Jeffery English. Professor Alan Tait's **Value Added Tax** (McGraw-Hill, £3.60) is more of an economic guide to Vat, with extensive coverage of European versions of the tax. (It was written before the budget.) Its strength and its weakness are that it covers quite briefly the theoretical ground that has been comprehensively covered in the standard textbooks on public finance and the value-added tax, such as those by Professor Carl Schoup. It is more up to date than most of these, but on the facts it will soon be out of date itself.

Meanwhile Mr D. S. Buchanan of the Department of Trade and Industry's library has performed an invaluable service by compiling for Aslib a bibliography on Vat (**Value Added : the tax and the concept**, 75p), which gives sources of information and lists books under five headings.

Business Brief

The common market's backyard

When Britain goes into Europe next year it will be joining a trading block which stretches in many products from Finland to the borders of South Africa, with outposts in the three main oceans. This is the result of a proliferation of preferential trading agreements made by the Six which has caused much irritation in Washington and Geneva.

Two factors triggered off the growth of this network: the preferences which already existed between certain European countries, notably France, and their former colonies were inherited by the EEC; and the sheer impact of the common market on world trade put pressure on some of the EEC's trading partners, notably round the Mediterranean, to try to get inside the common external tariff. The importance of the EEC to these countries can be gauged from the fact that the original 18 African associates do nearly 80% of their trade with the Six and the community's Mediterranean partners about 50%. The non-applicant Efta countries do about half their trade with the Ten.

Pride of place in the European "commonwealth" goes to the 18 associated African states, known as the EAMA (Etats Africains et Malgache Associés). The French insisted on associate status for their African territories before accepting the Treaty of Rome. The list of beneficiaries was then extended to include the Belgian Congo and Ruanda-Burundi, Italian Somaliland and Dutch New Guinea. When the original convention ran out in 1963, most of the beneficiaries had become independent states but they all agreed to continue the association on the basis of the Yaoundé convention. This was renegotiated in 1969.

Watch those Israeli oranges roll in

Under the agreement, separate free trade areas have been set up between the EEC and each of the associated states. But the associates are free to impose revenue duties on imports from the EEC so long as they do not discriminate between or against the Six. In practice the 18 (except Zaire—the former Belgian Congo) give preference to industrial goods from the EEC. In return they get free access to the EEC market for their commodity exports (except for goods directly competing with European produce, like sugar and vegetable oils), and financial aid through the European Development Fund and European Investment Bank. The association is controlled by an elaborate set of institutions, with strictly equal representation of Europeans and Africans, except for the EDF, which is directly controlled by the Brussels commission.

Assessments of the Yaoundé association have ranged all the way from condemnation as a subtle form of neo-colonialism (particularly by English-speaking Africans) to praise as a model relationship between industrialised and developing countries. But for the 18 EAMA countries themselves it is essentially a bread-and-butter issue. They reckon they have more to gain from their association with the EEC than from the United Nations and the multilateral agencies where their influence is negligible. In terms of aid received per head they have done almost twice as well as the British Commonwealth African states.

Trade

On the trade side, however, the EAMA are less happy. The Yaoundé convention has not protected them against a progressive worsening in their terms of trade—indeed the 14 former French colonies had to give up guaranteed export prices on the French market and settle for the far lower world prices. In addition, the Six twice reduced their tariffs on the major tropical commodities (coffee and cocoa) under pressure from other developing countries. And Germany and the Netherlands continue to import their coffee and bananas from their traditional suppliers in Latin America. Further, the return from the Yaoundé preferences has been reduced by the introduction last year of generalised preferences on industrial exports by all developing countries.

Under the agreement reached between Britain and the Six, no fewer than 20 Commonwealth countries will be offered the choice between association on the same basis as the present EAMA, a separate (preferential) association agreement or a simple (non-preferential) trade agreement. If all or most of the eligible Commonwealth countries were included in the Yaoundé association, existing trade preferences would become so diluted as to be virtually meaningless for certain commodities, such as cocoa, where Nigeria and Ghana account for 70% of world production. Ironically, the EAMA may benefit from a vague condition of British entry eventually won for the sugar growers of the West Indies and Mauritius—when the time comes to renegotiate Yaoundé, the interests of countries which are particularly dependent on the export of a single commodity will be borne specially in mind. The present African associates of the EEC hope to use this phrase for their own benefit as well. The commission is currently studying whether the Commonwealth sugar agreement under which Britain provides guaranteed export markets at fixed prices might be taken over, when it runs out in 1974, by the enlarged EEC and extended to other products. The EAMA are pressing very hard for their present privileges to be maintained when the convention comes up for renewal in 1975. But in the long run the EEC may find the pressure to extend such privileges to non-EAMA developing countries irresistible.

Such a move would virtually reduce the scope of the association to the European Development Fund. Under the present convention the EAMA will receive $1 billion over five years. The eligible Commonwealth countries have a combined population of over 100m, compared with 70m for the present EAMA. So the enlarged community would have to find around $3 billion if the present associates were to continue on the same amount of aid per head in real terms. But neither the Africans nor the EEC commission are very optimistic about the chances of getting the Ten to cough up.

The Six started negotiating association agreements with Nigeria and the East African community (Kenya, Uganda and Tanzania) as far back as 1963, after the breakdown of the first round of negotiations for the enlargement of the EEC. The resulting Arusha agreement with the three East African countries was subsequently renegotiated and came into effect at the beginning of last year. It established reciprocal trade preferences, but of a more limited scope than under the Yaoundé convention. Free access to the EEC market was limited by tariff quotas to protect the EAMA, and the reverse preferences covered barely a sixth of EEC exports. A proposal by the three East African countries to include aid as well was dropped when it threatened to jeopardise the negotiations.

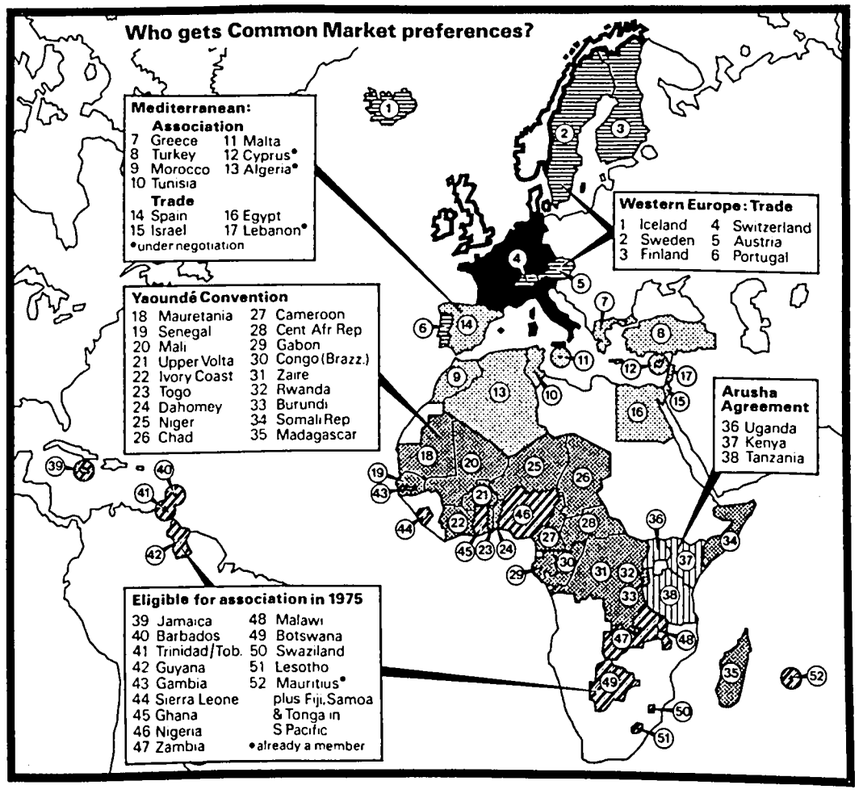
While the Yaoundé association grew naturally out of the Treaty of Rome, the evolvement of preferential agreements with the Mediterranean countries came as something of a surprise to the community—except for the North African countries which had special relations with France. The EEC's policy in this area was handicapped by the need to preserve a diplomatic balance between Greece and Turkey, between Spain and Israel, between Israel, Egypt and the Lebanon, and between Morocco, Tunisia and Algeria. There were further complications because most of the Mediterranean countries are mainly interested in exporting agricultural products (wine, olive oil, citrus fruit, tomatoes, etc) which compete directly with Italian produce inside the EEC.

Mediterranean

Of the Mediterranean associates, Greece was the first off the mark in 1962, closely followed by Turkey in 1964. The agreements for both countries provided for a customs union and ultimately full membership once the two countries' economies have caught up with the Six. In addition to financial aid through the European Investment Bank, the two countries got the benefit of the reduction of EEC industrial tariffs but were allowed to spread their own tariff reductions over 12 to 22 years, according to the products.

The Greeks received slightly better terms than the Turks, but their agreement has worked less well in practice. Against their hopes, they were not allowed in on the common agricultural policy (the Turks too were merely given ad hoc preferences on the principal agricultural exports). The association was virtually frozen after Greece's 1967 coup d'etat, although the tariff-cutting continued as planned so that the only practical effect was a block on any further loans by the European Investment Bank. The association with Turkey has developed normally and has so far been unaffected by its troubled domestic political scene.

The next two applicants for association, Spain and Israel, were not so lucky. Although both started knocking on the Brussels door in the early 1960s, they had to wait for admission until 1970 because of opposition from Italy (for economic reasons) and from the French and Dutch (for political reasons). After much haggling, both countries were finally offered a preferential trade agreement which fell short of a full customs union or a free trade area.



The French, as a quid pro quo for the agreement with Israel, pressed for a commitment to negotiate similar agreements with Egypt and the Lebanon. Talks began in 1970 but were held up for over a year by a dispute over the non-discrimination clause in the draft agreement which might conflict with the Arab league's boycott of firms trading with Israel. The agreements are expected to come into force next year but their economic impact will be very limited. Most of Egypt's exports already enter the EEC duty-free, and the Six have refused to make any concession on rice. However, agreement with Egypt could open the way for applications by other Arab countries, including Syria and Libya.

The three Maghreb countries may also end up with some form of association. Morocco and Tunisia were eligible under the Treaty of Rome although they preferred to wait until 1969 with their applications. The two countries now have free entry to the EEC market for their industrial exports, and also preferential treatment for certain agricultural products. Negotiations for financial and technical help may start soon. Algeria could prove to be more difficult, particularly over wine (which the French want to keep out), and the recruitment of migrant workers.

Malta and Cyprus, too, have decided to jump on the bandwagon. The association agreement with Malta came into operation last year, and provides for the establishment of a customs union in two stages; Malta's premier, Mr Dom Mintoff, has already asked for a revision to include financial aid and agriculture. Talks started last January for a similar agreement with Cyprus which is also pressing for bigger concessions on agriculture.

Negotiations are also under way with the remaining Efta countries which will result in industrial free trade in western Europe. This time round, the EEC has only offered simple trade agreements rather than the preferential association held out in the last round of negotiations in 1961-63. Even so, their economic significance will be greater than the agreements with the community's southern neighbours.

The common market's preferential system is still a bone of contention between Brussels and Washington. However, it now looks as though the United States has dropped its former outright opposition, and is expecting the multilateral negotiations due to begin next year in Gatt to deal with the threat of discrimination against American exports. The trade preferences between the EEC and its African and Mediterranean partners can be justified by the Six as a move towards fairer treatment for the developing countries by the industrialised powers. And the Americans are in a poor bargaining position until they implement the Unctad recommendations on general preferences for the developing countries' industrial exports.

National and Commercial Banking Group Limited.

Preliminary Announcement of results for the six months ended 31st March 1972.

The directors have authorised payment of the dividends for the half-year ended 31 March, 1972 on the 11% cumulative preference shares at 5½% and on the 5½% cumulative preference shares at 2¾%. The directors have also declared an interim dividend, on account of the year ending 30 September, 1972, on the ordinary shares of 2.5p per share (1971—2.125p per share).

The above dividends will be payable, less income tax, to those shareholders on the register at the close of business on 11 May, 1972. The preference dividends will be paid on 31 May and the ordinary dividend on 8 June.
The following table summarises the results :

	6 months ended 31 March 1972 (unaudited)	6 months ended 31 March 1971 (unaudited)	12 months ended 30 September 1971
	£000s	£000s	£000s
Profit before taxation and the additional provision			
The Group (note 1)	10,926	8,745	20,206
Associated companies (note 2)	2,675	1,961	3,952
	13,601	10,706	24,158
Taxation thereon, including corporation tax at 40%			
The Group	(4,383)	(3,508)	(7,726)
Associated companies	(1,033)	(770)	(1,570)
	8,185	6,428	14,862
Additional provision for bad and doubtful debts, less taxation relief	—	—	(480)
Profit after taxation	8,185	6,428	14,382
Preference dividends (gross)	(39)	(39)	(77)
Profit attributable to the ordinary shareholders of National and Commercial Banking Group Limited	8,146	6,389	14,305
Ordinary dividend (gross)	(2,810)	(2,388)	(5,282)
Retained profit	5,336	4,001	9,023

Notes
1 In arriving at the group profit for the six months ended 31 March 1972 the accounting policies, which were fully described in the 1971 annual accounts, have been applied.
2 For the six months ended 31 March 1972 the Group's appropriate share of profits of associated companies has been calculated by reference to results for the six months ended 30 September 1971 for Lloyds and Scottish Limited and for the six months ended 31 December 1971 for Associated Securities Limited and Yorkshire Bank Limited.

The unaudited profit before taxation for the six months to 31st March, 1972 amounts to £13,601,000. The level of group earnings in the second half of last year, to which I referred in my annual statement in November, has been maintained.

The increase in the attributable profits of associated companies compared with the corresponding period last year arises, firstly, from the Royal Bank of Scotland's larger investment in Associated Securities Limited and, secondly, from the significant improvement in the Lloyds and Scottish published results for the second half of their financial year.

Initial adjustment to the new system of competition and credit control has proceeded smoothly in the recent conditions of easy credit. However, against the background of current economic uncertainties at home and abroad it is unwise to forecast the effect of these arrangements on the level of profit for the full year.

The Board intends that the final dividend for the current financial year should not be less than was paid last year at 2.575p per share. In expressing this intention the Board have in mind, amongst other considerations, the effect of the proposed reform of Corporation Tax incorporating the imputation principle.

27th April, 1972.

J. O. Blair-Cunynghame, Chairman.

BUSINESS

The unnecessary railways

The higher the wage settlement the railway unions finally get, the more uneconomic does it become to keep the British Rail network at its present size

The horse-trading began again on Thursday, with Sir Sidney Greene pulling his usual lugubrious face and talking about being "pessimistic" when offered what looked like a 14 per cent rise—almost everything that the unions wanted. It could cost British Rail well over £39m a year.

What BR was proposing to the unions on Thursday was the 12½ per cent suggested as a last-ditch measure by Mr Alex Jarratt, the arbitrator, on April 16th just before the unions started their work-to-rule, plus another 1 per cent found by offering a minimum basic wage of £20 from next month, instead of from next year, as Mr Jarratt had proposed. The unions asked for the rise to be brought forward to this month ; British Rail refused, and the two sides parted on Thursday night on visibly bad terms. The dispute between them now is over who saves face and who loses : the offer remains worth 14 per cent whether it is paid from this month or next, but in British Rail's books it will look closer to the original 12½ per cent if it can be put off to June instead of starting now at the beginning of the railway year. The unions know this and their obstinacy is tied to a determination not to help the Government's surrender to look less than it is.

What Mr Richard Marsh should do now is to announce that he will put up all fares and charges by 6 per cent immediately to pay for it. In fact, Mr Marsh may have to put up his charges by a great deal more, because he is getting a £27m subsidy from the Government this year (in addition to his other subsidies) for keeping fares inside the Confederation of British Industry's 5 per cent price freeze, which is due to end in July.

Perhaps the country wants its railwaymen to be paid more, as it wanted its miners, and is prepared to subsidise them as living symbols of the merrie England fast vanishing along with the Brighton Belle. But, if so, the cost should be brought home to those who use the railways by demonstrating immediately in the fares what this form of generosity is going to cost. Because relatively few people do still use the railways (less than one-tenth of all passenger travel and one-fifth of freight), the alternative is to question very seriously whether we need anything like the railway network that we have.

On his appointment as chairman of British Rail last year, Mr Marsh looked as if he was going to apply the financial discipline towards the railways that he was noted for as Minister of Transport. In practice, he has chiefly taken up the environmental rumblings of his predecessors, and used his political skill to articulate them better. Although a former politician may be impressed by the way the vocal middle class has taken up the environmental campaign, he should not bank on it helping him particularly.

Society is growing impatient with the car, but still prefers it to any alternative form of transport. The private car, which up to a few years ago was the greatest symbol of mass consumption, is blamed now for air pollution and for being the largest single cause of death between the ages of 15 and 35. Car owners and the vast industry behind them are depicted as increasingly selfish. But the problems are not as simple as is suggested by those who advocate banning cars and lorries, and subsidising railways instead. Take the argument for transferring freight from the roads to British Rail : most of the congestion, pollution, noise and everything else caused by lorries is inside cities, and not between them—the lorries have to be in the cities anyway. British Rail does have a future in freight, in the growing bulk carriage business, not in the bits and pieces of wagonloads that it continues to chase after.

Passengers are a similar story. British Rail has an expanding inter-city traffic, and one that is fairly insensitive to price increases. This could carry much of whatever wage settlement is finally struck. But the development of this traffic is handicapped by the conflicting claims of other, less profitable activities. What too many managers of public transport forget is that they are catering for a volatile and increasingly affluent market, and that the secret is to improve the service, and probably the prices too, rather than use subsidies to keep down the prices of the kind of service that a dwindling number want.

The railways themselves have found that in Japan, Germany and France, as well as Britain, they can carry more passengers at higher prices if they improve speeds. A cheap but poor service which does not meet the demands of an affluent society does not win passengers ; they prefer to stay at home, to do business by telephone—or take to the roads.

that only two years ago, when the two French companies were talking about a merger between themselves, the commission warned that it might try to stop this by invoking one of the innumerable articles in the Treaty of Rome that gave it powers to check monopoly. The merger fell through of its own accord so the threat never had to be put to the test, but if their efforts to salvage Glaverbel bring the two closer together, what is Brussels going to do ? Show whether it has muscle ?

The rate at which mergers are proceeding in European industry makes a test case desirable, if only so that everyone knows where he stands. Until now, with the possible exception of International Business Machines, there have been precious few companies that were so big in Europe that they were in a position to dominate the EEC market, but that may not necessarily be true for much longer, and if a company does acquire what looks like dangerous economic power, then the competition directorate in the commission believes that under article 86 of the Rome treaty it can break them up. But no one really knows ; the one time the commission has tried to use this power, against Continental Can, still waits on a ruling from the court of justice. Obviously, what the commission would like is the sort of power that the Department of Trade and Industry has in Britain to clear mergers before they actually take place, using guidelines that vary with the circumstances. What it has got instead is the sort of vigorously defined legal power of the American Anti-trust Division, without America's body of anti-trust case law. The result is that a large section of European industry believes this part of the commission's powers to be a dead letter and is going to be hugely surprised if a test case proves otherwise.

No one doubts, on the other hand, the commission's growing powers over restrictive agreements (article 85), which it has used with diligence, wading through more than 35,000 restrictive agreements between EEC firms in 10 years. All but 5,000 of these dealt with exclusive dealerships, and the commission got a ruling in the court of justice that these could not be exclusive any longer. In other words, a distributor who has rights to a company's goods in one country can sell them in another EEC country even though another man already has an exclusive franchise there. The agreements have each to be worked through in turn, and the entry of Britain and the other newcomers means a fresh raft to be looked at. The commission has not yet chanced its arm on drugs, cosmetics and cars, but it has begun to put pressure on both BMW and Citroen. There is also the whole jungle of patent and licence agreements to be hacked through, some of which are blatantly restrictive. But the court has already ruled that in the record business the holder of an exclusive copyright under German law may not stop records from being reimported from France into Germany, and the same sort of ruling has been given over a disputed trademark.

The commission has also read the riot act on the type of restrictive agreement that the British Restrictive Practices Court has long specialised in. A group of cement producers was forced to scrap a joint selling organisation in Holland, while some vegetable canners in France were allowed to keep their sales organisation in Germany because individually they were too small to export without it. Feathers flew when Brussels moved against the dyestuffs divisions of the big chemical companies, complaining that they were price-fixing, and that they were doing this in collusion with Imperial Chemical Industries and (Swiss) Ciba-Geigy, whose local subsidiaries were taking orders from their parent companies outside the EEC. If this charge sticks in the court, the companies will be liable to individual fines of up to $50,000 ; the fine on Commercial Solvents and its Italian subsidiary may be $1m if the monopoly charge is proved.

The commission is drawing directly on American experience. It will have to move soon against the big fibre producers, who have already been fined by the German cartel office for price-fixing, and when they come to the commission to file a " collective information agreement " they are not likely to be handled gently. It is the same sort of American precedent that guided the commission's attack on Continental Can, but this may not have been the best ground on which to test its so far untried powers against mergers. There is no disputing the strength of Continental Can's position in the German market for food cans and lids, or the fact that the Dutch company it bought up has 100 per cent of the Benelux market for meat and fish cans and half the market for tinplate caps. But the two companies had never competed ; they had both stayed out of the other's market, so a merger between them could hardly reduce what had never existed. What the commission pleaded, in standard American fashion, was that it reduced any potential for competition there might have been had the two companies ever been tempted to slug it out. Not that they were likely to : the Dutch company was already Continental Can's licensee in Benelux, and the merger seemed specifically planned to stop the commission for jumping on this as a restrictive practice. There is a new director-general in charge of competition, Herr Willy Schlieder, who looks set for a trust-busting career. But the commission might wish for a clearer test case with fewer loose ends. The trials of the Glaverbel glass business might provide it.

Handling The Best.

All over the world, in factories, warehouses, at airports
and on piers the finest goods are being handled
by Toyota industrial vehicles. One might very well ask,
why this increasing trust? At Toyota we think we have the answer.
First off we have very big ears. An international network of distributors,
sales offices, service centers and representatives who keep us on top of
the changing problems faced by the industrial community.
Then through our vast research and development facilities we begin to
plan whatever is needed. And whether it's an improvement or breakthrough
it doesn't leave the factory until we can prove to ourselves
it works. That means passing through the most critical testing
procedures in the industrial vehicle business.
All these added up come to the Toyota spirit. Innovating and exacting.
Tempered by the awareness that before you put your goods in our
hands, we have to put ourselves in your hands.

Industry won't invest

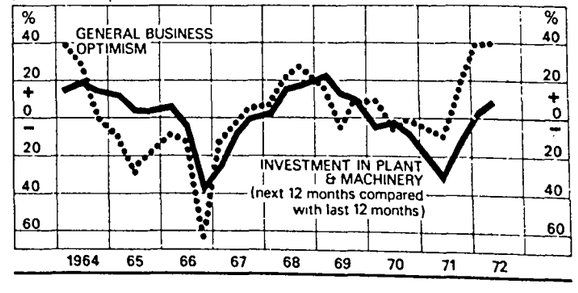
The latest poll of how British businessmen see their prospects is encouraging on most points, but gloomy on the two most important ones : investment and inflation

Mr Barber's billion pounds of tax reliefs in March were supposed to galvanise British management into a big rethink of its investment needs. The Confederation of British Industry's latest opinion poll, taken in the first two to three weeks of April, unfortunately shows that they did no such thing. Indeed, they seem to have dampened, rather than excited, the tempo of investment confidence.

True, this new quarterly survey shows that 37 per cent of firms now expect to increase their spending on plant and machinery in the coming 12 months, against a depressingly large 28 per cent who still expect to decrease theirs. The positive balance of 9 per cent is certainly larger than January's 3 per cent ; but if the budget had done no more than keep going the rate of improvement in the second half of last year (see chart), Mr Barber could have hoped for a positive balance of 18 per cent.

There are two probable explanations of why he has not got it. First, some businessmen have cottoned on to the fact that, if clause 65 of the Finance Bill goes through, all their investment this year will be depreciated at 40 per cent, while the profit from it will be taxed at 50 per cent. This gives them a most undesirable incentive to postpone some of their replacement spending until 1973-74. When *The Economist* last discussed this problem (April 15th, page 68), we did not speculate on how much postponement might result : but we now guess that in manufacturing alone it could be of the order of £150m, or 6-7 per cent, in the financial year 1972-73. The Government surely must rectify this absurd disincentive to investment which the Treasury may have let into the Finance Bill by mistake, and indeed Mr Barber said on Wednesday that he was looking at it.

It is much less likely that the Government will dispel the other blanket over investment. The CBI says that "cost inflation must constitute the major qualification on optimism," and that "it is unrealistic to expect firms to hold prices in the face of ever-increasing wage costs." Of course, some of this is special pleading. Naturally, every manufacturer, when questioned, tends to say that his costs are rising and that he is near-killing himself to keep his prices down. Admittedly, answers to the CBI's questions about wages and prices are likely to be particularly bent this time to justify industry's rejection of a second bout of price restraint. But this survey confirms again that there really is a huge worry about escalating wage costs and narrowing profit margins, and no confidence that business activity is gaining enough momentum to counteract them.



Four out of five firms, an historically high number, answering the CBI's quiz still say that shortage of orders or sales will hold back their output in the coming months. Two out of three say they are still working below capacity. As would be expected, it is in the capital goods sector and among the larger firms (the ICIs of this world) that underutilisation is most marked. It is only the smaller firms who expect to add to their labour forces in the coming months ; the big firms are still trimming theirs even though they see a big rise in new orders in the coming months.

Although there seems to be more general optimism around in business circles than at any time since 1964 (see chart), there are therefore some very worrying features in the CBI's survey. On past experience, it suggests that this year's investment in new plant and machinery in Britain may be about 12 per cent more, in real terms, than in 1971. Unfortunately, as investment was so depressed last year, that will make it a mere 3 per cent higher, at least as far as manufacturing goes, than in 1970. Some industries—including organic chemicals, plastics, agricultural machinery, shipbuilding, paper and printing—are scaling down their investment, and quite drastically, even compared with 1971. And again with investment it is the smaller companies who tend to be most bullish.

The CBI's next survey will come out just too late to affect its decision on whether or not to renew its price pledge when it expires at the end of July. Before the railways dispute, a renewal at least until December, and at least in some form, seemed likely. But many CBI members are now saying that any attempt to hold down their price rises again to an annual maximum of 5 per cent would spell disaster for their profit margins. These margins had been built up before the price freeze started last July ; but are now, manufacturers say, beginning to be eroded again.

In addition, more and more firms are building into their outlooks a three-week period of labour trouble a year : whether they flag it as a potential strike, go-slow or work-to-rule. The main lesson from this week's survey is that fears of inflation are now interfering with investment. If industry sees 10 per cent inflation ahead, it will not invest—even though that investment might be recouped more quickly at tomorrow's prices. Inflation is making industry, as well as individuals, insecure.

But optimistic about what?
Balances of 'ups' over 'downs'

BUSINESS *Britain*

Jack paid until it hurt, but Clive wants his money

Mr Jack Jones paid his £55,000 fine to Bow Street magistrates' court on Tuesday and then demanded that the Trades Union Congress should pay him back. By a vote of 16 to eight the TUC hastily agreed that "the movement should accept a measure of financial responsibility," although it has not yet decided how much. If it had refused, Mr Jones had intimated he would not pay his transport union's affiliation fees to the TUC of over £120,000. Should he carry out this threat, the TUC would be bound to chuck out the Transport and General Workers' Union and so deprive itself of its biggest member. The TUC's compromise was understandable, but Mr Jones has not made himself beloved among his colleagues who are leaders of smaller and poorer unions. Opposition to the Jones-Scanlon policy of total non-co-operation with the Industrial Relations Act has been growing in recent weeks.

Mr Jones did, however, swallow his pride on Tuesday and allowed his union to be represented at the National Industrial Relations Court when Heatons, the Merseyside transport firm, again claimed that the union was still in contempt of court. The union got an adjournment so that it had time to collect evidence. The nub is whether the union is now in the clear, since it has told its shop stewards to stop the blacking, or whether it must disown the stewards to the extent of throwing them out. If the court decides, as it did before, that mere advice to the shop stewards by the union is not enough, it may levy yet another and even larger fine.

As the TUC will pay some of Mr Jones's £55,000, will it lay itself open to paying every fine incurred by any union from now on ? Apart from anything else, the TUC has little spare cash. It may try to mount a face-saving operation, paying the fine and arguing that it was a once-off business which cannot recur. Its argument will presumably be that it need not stump up for anybody else because on Monday it made a formal decision to agree to unions turning up at the NIRC.

More significant than the TUC's back-pedalling was the expected vote by the 330,000-strong Union of Shop, Distributive and Allied Workers in favour of registration. By itself the vote does not mean a lot. But Mr Clive Jenkins's union, the Association of Scientific, Technical and Managerial Staffs, may follow suit.

ASTMS is one of the unions that is stuck with a rule that says it must be registered. In order to change this, it needs a two-thirds majority. However, at last year's conference a motion in favour of deregistering was carried by only 68,000 to 66,000. So there is every chance that there will not be a two-thirds majority in favour of leaving the register. This could be just enough to start a bandwagon going and persuade other moderate unions like the National Union of General and Municipal Workers to change their minds once more in favour of registering. Non-registering is costing the unions £6m a year in lost tax rebates.

Whether or not ASTMS registers, Mr Jenkins has been busy taking advantage of the Industrial Relations Act. On Wednesday an industrial tribunal in London heard him plead one of the first cases under the unfair sackings section of the act. Mr Jenkins claimed that one of his members had been sacked by Burroughs Machines because he was an ASTMS organiser. If the tribunal agrees, it would award handsome compensation. Its decision has been postponed until Monday. Mr Jenkins has plenty more cases of this kind.

Shopworkers register,

Jones pays,

Jenkins collects ?

Government research

Too overawed to think

If the Government had expected MPs to support its draft plans to tighten control over the ways some of the big government-financed research councils spend their money, Thursday's report by the Select Committee on Science and Technology (Cmnd 237) will have disillusioned it. The committee seems to have been overwhelmed by the appearance before it of so many eminent scientists bent solely on the task of discrediting the scheme to control

FIAT S.p.A. TURIN, ITALY

Annual General Meeting

The Annual General Meeting and Extraordinary Meeting of FIAT shareholders was held on April 28, 1972, in Turin under the Chairmanship of Mr. Giovanni Agnelli and in the presence of the Board of Directors and the Auditing Committee.

After mentioning that Italy was on the eve of a general election which was being held earlier than expected, Mr. Agnelli said there was hope that this would produce greater clarity in politics and in the economy, hence a more balanced production recovery and a better utilization of plant capacity.

The chairman then announced the results for 1971 which were as follows :

Total FIAT sales (including OM and Autobianchi) totalled 1,820 thousand million lire (£1,201,320,132), compared with 1,712 thousand million lire (£1,130,033,000) in 1970. Exports totalled 646 thousand million lire (£426,402,640), compared with 626 thousand million lire (£410,000,000) in 1970.

Motor vehicles sold totalled 1,586,253 FIAT, OM and Autobianchi units compared with 1,550,616 units in 1970. Of this total 619,081 units were exported in 1971. In addition about 450,000 motor vehicles were built under FIAT licence in various countries—roughly the same number as in 1970.

Tractors sold : A total of 41,939 tractors were sold compared with 50,423 in 1970. 21,291 of these were exported. In addition about 30,000 tractors were built under FIAT licence—roughly the same number as in 1970.

Iron and Steel : The equivalent of 1,950,000 ingot tons were converted into steel compared with 2,150,000 tons in 1970.

Other Products sales : totalled 160.12 thousand million lire (£105,700,000) compared with 196.6 thousand million lire (£129,000,000) in 1970. (The 1971 figures do not take account of production by the Fiat Aero Division for the Aeritalia Company, amounting to 23.67 thousand million lire (£15,600,000).)

Fiat Group Employees (including OM and Autobianchi): 182,501 persons (of whom 146,319 were factory workers and 36,182 office staff, not including those who moved over to Aeritalia).

The total number of working hours lost in 1971 as a result of strikes was around 3,250,000. This, coupled with labour unrest at supplier companies, caused a production shortage of over 160,000 vehicles.

The 1971 financial year closed with a trading profit of 15,512,212,070 lire (£10.2 million) after allowing 141 thousand million lire (£93 million) for depreciation. The Board of Directors recommended a dividend payment of 120 lire (8p) per share (of which an interim payment of 45 lire (3p) was made during the financial year) by withdrawing 20,720,471,110 lire (£13.6 million) from taxed reserves, to supplement the net trading profit shown in the balance sheet.

The Chairman's Report underlined the main activities of the Company during 1971 : the introduction of the 127, 128 Rally and 128 Coupé models plus the new saloon and coupé versions of the 130 ; the work going on towards the completion of the new plants in Southern Italy ; the increased production at the Volga plant with a daily output now of 800 cars ; the new agreement signed with the Polish Government ; an important investment programme in Latin America ; the signing of the integrated Labour agreement on August 5, 1971 ; and the re-organization of the company structure.

The Report then referred to the Italian and international situation. On the Italian aspect, it pointed out that Italy, because of the current stagnation in its process of development, was the country which showed the greatest signs of weakness in the present economic phase of the European Community.

However, the Report continued, a few signs that pick-up in production might be on the way did appear towards the end of 1971. Any fuller recovery was however limited to a return to normal working conditions in the factories and to price restraint.

The Report finally surveyed the results of the Company's non-automotive production, such as trucks and tractors, rail rolling stock, large diesel engines, aviation and space activities, steel, nuclear energy, machine tools, supplementary products and related activities, plus public works and welfare schemes.

PEARL
ASSURANCE
COMPANY LIMITED

Chairman:
MR S. C. McINTYRE, M.B.E., F.C.I.S.
Year ending 31st December, 1971

TOTAL ASSETS £627 million
GROSS INCOME £136.4 million
Total Payments to Policy Holders £67.0 million

INVESTMENTS
Total assets show an increase of £37.5 million including £5.3 million net write up of asset values. Gross yield on the combined life funds was £7.8 per cent.

LIFE BRANCHES
Total sums assured and bonuses in force amounted to £1,740 million and total annuities per annum to £12.3 million. New business amounted to £277,752,000 sums assured and to £2,257,000 per annum annuities, subject to new annual premiums of £11,539,000 and to single premiums and considerations of £6,197,000.

LIFE BONUSES
ORDINARY BRANCH—£11,841,000 has been applied to provide bonuses for policyholders. Reversionary bonuses at the following rates are applicable to United Kingdom participating policies for each £100 of sum assured or annuity.

	Assurances and deferred annuities other than those in the pension business fund	"Self-employed" and other deferred annuities in the pension business fund
Policies issued in 1967 to 1971 ...	£3.35	£3.75
1966 and earlier ... (provided no bonuses surrendered)	£3.60	£4.00

In addition terminal bonuses have been declared on United Kingdom policies that become claims by death or maturity or by commencement of deferred annuity on or after 1st May, 1972 and before 1st May, 1973.

INDUSTRIAL BRANCH—£13,645,000 has been applied to provide bonuses for policyholders. Reversionary bonuses on the following scales are applicable to policies subject to a monthly premium of 4s. or a weekly premium of 1s. (as originally expressed in the policy) and in proportion for policies subject to other premiums.

Policies issued in	Endowment Assurances	Whole life Assurances
1957 to 1965 ...	£1.56	£2.16
1952 to 1956 ...	£2.28	£2.88
1947 to 1951 ...	£3.00	£3.60
1946 and earlier ...	£3.72	£4.32

In addition terminal bonuses have been declared on certain policies that become claims by death or maturity on or after 24th April, 1972 and before 23rd April, 1973.

NON-LIFE BRANCH
In this Branch the premium income was £16,293,348.
Chief Office: High Holborn, London, WC1V 7EB.

Bestobell

Earnings up 50%

PROFIT
Group net profit for 1971 was £2,214,715 compared with £1,742,144 last year. This represents an increase of 27% which is considered satisfactory in view of the prevailing economic climate in the U.K. and the principal overseas territories where the Group operates.

EARNINGS & DIVIDEND
Earnings per share increased from 8.58p to 13p and a dividend of 8.5p (34%) is recommended compared with 7.5p (30%) last year.

SALES
Sales increased from £28.4m to £33.7m with a net margin of 6.6% which is the same as last year.

UNITED KINGDOM
Net profit attributable to operations in the U.K. increased by 12%. This was due to a substantial improvement from chemical and consumer products companies which more than offset a reduction in the profit from the engineering divisions.

EUROPE
The overall contribution by the European companies is relatively small but it represents steady growth in turnover and profit.

OVERSEAS
Profit of overseas companies rose by 19% with increased contributions from all territories with the exception of Australia and North America.

PROSPECTS
Mainly due to conditions in Australia and Africa appreciable growth from the Overseas Companies cannot be expected this year. Prospects in the U.K. are difficult to assess at present. However, it is anticipated that on balance 1972 will see a gradual revival of confidence and on this assumption an increase in overall Group profit is expected.

	1967 £'000	1968 £'000	1969 £'000	1970 £'000	1971 £'000

Bestobell Limited SLOUGH, BUCKS

their spending drawn up by that other equally eminent scientist, Lord Rothschild. Lord Rothschild said last autumn, in a paper that the Government then backed, that some of the research councils were spending their considerable funds to no practical benefit to anyone but themselves. He thought this was particularly true of the agricultural, medical and environment research councils and suggested that in future, apart from an allocation for pure research that would continue to be spent at their own discretion, they should only undertake work that had been specifically commissioned by a government department.

An attempt was made to soften these strictures by wrapping them up in phrases about the "customer-contractor" relationship, but no one mistook Lord Rothschild's meaning, and the scientific establishment in consequence took mass umbrage, whether its members were directly affected or not. The universities, which were not involved in any way, were, nevertheless, afraid that if the free-spending powers of the research councils were curbed the flow of the councils' funds to them would be curbed too. So when the select committee decided to inquire what the row was about, the mandarins reported in force to defend the status quo.

> The committee did get evidence of concern in some quarters that the research councils were not fully in touch with immediate problems . . . the Agricultural Research Council were criticised in several quarters for their remoteness from farmers and growers and their over-emphasis on "academic" rather than applied research,

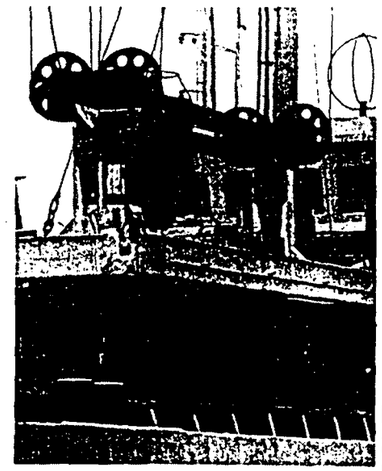
and much the same was said about the Medical Research Council. The council dealing with the environment said blandly that the sort of fire-

Dock one, carry one

The dockers, rather to their surprise, gave 28 days' notice of a strike on Thursday, unless their container dispute is settled favourably for them. But they know, like their employers, that there is little either of them can do to discover who packed—and, still less, who will unpack—the containers that roll in and out of the docks, or where the packing and unpacking goes on. Unless, that is, the lorry drivers are in cahoots with the dockers' shop stewards—as they are in Liverpool, but not in other ports like London. So what the dockers want before the 28 days are up is the offer of some formula that will leave them with a feeling that they have hit back at the enemy. Such a formula is likely to mean more money for someone: probably for those dockers whose jobs run down and leave them on their £20 a week fallback pay. This is a prospect facing another 1,500 men in London when one of the stevedoring firms closes next month.

The docks dispute has grown from small beginnings about who is going to pack a tiny fraction of the containers passing through the ports. But it has exposed three sensitive nerves. One is the rivalry within the Transport and General Workers' Union; another is concern about unemployment in the docks; and the third is ill feeling about the Industrial Relations Act.

Mr Jack Jones of the TGWU likes to boast that he used to be a Mersey docker, but the men say he worked a crane on the upper river, and that he has never done the dirty jobs in the hold of a ship. In this proud trade, you practically have to have worked alongside Ben Tillett to gain their respect. Mr Jones's philosophy is one of devolution of responsibility. In practice, this has meant loss of control.



The militants say that the official leadership has sold them short. Militancy has paid off, with dockers in one port averaging £73 a week take-home pay. But there are also divisions between the militants, especially between Liverpool and the extremists of London and Southampton, who usually lead the country. The present dispute has given Merseysiders one of their rather rare chances to call the tune.

It is important to remember in all these disputes that no docker can actually be sacked. He can, however, be reduced to fallback pay or become voluntarily redundant on generous severence pay that was raised only six weeks ago to £2,300. There has been quite a rush to accept the new terms; in London alone by 870 dockers in these six weeks.

This is partly because London seems to face redundancy—or at least a reversion to fallback pay—in dockland that looks worse and worse as new estimates come in. Liverpool, so the theory goes, is insisting on co-operation from London in return for future help with London's unemployment problem. The Merseysiders seem much more worked up about container stuffing than Londoners. But that may just be because they fear unemployment too: although the forecasts say Mersey dockers will keep their jobs, it is much worse to be unemployed in Liverpool than London.

More than four-fifth of containers are packed at the factories. There has never been any argument about them, although Mr Jones was talking about wanting all the business on Wednesday—again an idle threat, since that would take a lot of jobs away from the non-dock part of his union. The fight has been about containers packed in lorry depots, away from the factories.

Until one of the employers decided to take them to court, the Mersey dockers had been canvassing voluntary assurances from road haulage companies that they would not pack containers; with an occasional sniff of blackmail in the form of blacklegging a lorry or two. Now the blacking is supposed to be complete on the com-

You can hardly see anyone around

panies who have taken the TGWU to court.

In London blacking has been hard to enforce. There is no way of telling on the dockside which containers are going to be unstuffed at one of the critical depots. With an increasing number of lorries radio-controlled, the manager can give one destination to the driver while he is in the docks, and another once he is outside. This week one group of containers in London got blacked by mistake. In Liverpool, however, the blacking is more effective, since the dockers have the co-operation of some of the lorry drivers.

The issue of who should pack containers is an old one. In the 1960s a committee was formed which proposed that any depot within five miles of the Thames should be counted as part of dockland. The port employers agreed, but pretty pointlessly: they had no power to enforce the agreement on their customers, the employers of the lorry drivers.

brigade action most people want to see when the environment is threatened was not its job at all. But the committee lacked the nerve to go the whole way with Lord Rothschild and say that it was time that control over the spending of some of the councils' money (by no means all of it) was put in the hands of those government departments that wanted work done.

Instead, the committee hedged, temporised and tut-tutted about the need to put more people on the governing bodies and to publish fuller annual reports. Lest this sounded too much like criticism the committee recommended that the councils get more money for yet more headquarters staff —although Lord Rothschild had put the finger on the funds already spent in administration and the staggering number of committees the councils proliferated.

The committee asked the Government for yet another white paper on the functions of research, for a minister in charge of research, and for another science policy committee. It evaded whenever and wherever it could the unpleasant prospect raised by Lord Rothschild that this country is not getting value for its science spending. The committee could have decided that he was wrong, but it did not do that either. It seemed too overawed to have any opinions at all.

Steel

Back to base

The Government is to act through the Industrial Development Executive to prevent the regions from being hit when British steel prices go over to the common market system at the end of the year. (Special arrangements will have to be made for Ulster, technically outside the IDE.) From next January, the British practice of averaging transport costs over the whole country so that all users pay the same price will not be allowed any more. Under EEC rules, users have to pay in full for transport costed from a range of published basing points, and it is just bad luck for steel users far from one.

So manufacturers in places like Plymouth, northern Scotland or Ulster could have been faced with paying more for steel than their competitors in the Midlands. But apparently the Government is prepared to face the inevitable charge that it is subsidising British industry to see this does not happen. The British Steel Corporation had already intended to use a loophole in the EEC rules, covering "non-comparable" deals, to average the price paid for steel by companies with several plants, like Ford at Halewood and Dagenham. The same system would be used for British Leyland and Chrysler to cope with their Scottish plants. And it is possible that there could be a return to fixed-price steel contracts for shipbuilders, mainly to cover Harland and Wolff's difficulties in Belfast. Here BSC faces the probability of serious undercutting by Japanese steel plate, possibly imported through Scandinavia. Rather than make use of another common market rule that allows "aligning down" to a lower competing price with its depressing effects on profits, BSC is reconsidering long-term contracts, even though it lost £15m on them two years ago. The contracts would most likely be tied to an individual ship.

The corporation has attempted to reduce the room for competitors to slip under its new prices by bending the EEC rules a little. It is to use two systems of basing points, depending on the product. Where it has more than one steel mill making a type of steel, as with strip, BSC has the nod from the commission to use more than one basing point. For others, like the major part of alloy and stainless steels, there will be just one basing point. The location of the single basing points has been decided on a balance of transport costs between the mill and the users.

There is still a mass of detail to be sorted out. A working party has been set up to establish a reliable cost index for sea transport. The community has not been faced with the wide variety of port charges, for example. BSC, too, has yet to settle just what prices it will be charging under the new system. They will depend on what happens to the CBI initiative after July, but the industry is looking forward to the greater commercial freedom it will have under community rules. It would be too much to expect the Government not to keep its fingers in this pie, but with steel demand rising, there may be chances of profit-making.

Insurance

Shutting the stable door

Belatedly, the House of Commons on Monday got around to debating the report of the tribunal of inquiry into the affair of the Vehicle and General Insurance company. Predictably much of the—fairly thoughtful—debate revolved around two related questions. Had the principle of ministerial responsibility been eroded because blame for the fiasco was laid so uncontrovertibly at the door of three civil servants, and especially one of them? How desirable are tribunals of this kind anyway? The most important point, however, was the portent for the future. And it was bad.

The Secretary of State for Trade and Industry, Mr John Davies, ran briefly through the list of the tribunal's recommendations. From this it emerged that the insurance supervisory section of the DTI has had its staff doubled and that specialists may be recruited to help. The law on supervision is to be tightened up. But it became only too obvious that insurance supervision will continue to be the job of the DTI alone. The British Insurance Association has evidently told Mr Davies that it wants no part in it. This is regrettable. The best course would be for insurance supervision to be handled by a semi-autonomous agency, like the take-over panel, with which the insurance industry could then be associated with in some way. Three MPs (two of them insurance men and one a former junior minister at the DTI) urged this in the debate.

It would be a help if everybody stopped talking about the BIA as though it were the industry. As it was quick to plead when the V and G folded, it is nothing more than a trade association for most of the companies in the business. Lloyd's, the brokers and many specialist companies lie outside it. The brokers might well have more to contribute to any supervisory body than the companies; they certainly have as much to lose—in terms of overseas business—when the standing of the London market is knocked by an affair like the V and G.

As a new Tory MP, Mr Robert McCrindle, a life assurance broker, pointed out, it is on the life assurance side that any tightening of the law is most needed. Non-life insurance companies are already made to produce run-off statements which show whether a company is making enough provision for its outstanding claims, and which the V and G repeatedly failed to produce when asked. Combined with a supervisory body that was close to the industry—and that was not paralysed by civil service procedures, buck-passing and prevarication—this ought to be enough to enable the fools and wide boys of non-life insurance to be spotted.

Clive Holdings Limited

Announcing the highest profits in the Company's history, the Directors propose:

A total ordinary dividend increased from 20% to 32½%, which will be maintained on the capital to be increased by a scrip issue of one new share for every five shares held.

A sub-division of each £1 ordinary share into 5 ordinary shares of 20p each.

	March 31st 1972	March 31st 1971
Profit after tax and a substantial transfer to contingency reserve.	£ 1,510,549	£ 782,276
Preference Dividend	32,500	32,500
Total Ordinary Dividend	519,600	318,000
Amount written off excess cost of shares in subsidiaries*	411,695	—
Transfer to General Reserve	300,000	250,000

**The balance of excess cost of shares in subsidiaries has been written off contingencies reserve still leaving the reserve very substantially higher than last year.*

A complete money service.

General Accident profits more than doubled in record year

The eighty-sixth Annual General Meeting will be held on 24th May, 1972, at Perth. The following is an extract from a statement by The Rt. Hon. the Lord Polwarth, T.D., D.L., C.A., who was Chairman of the Corporation until his appointment as Minister of State Scottish Office in April, 1972.

A year ago, announcing improved results, I looked forward to the future with cautious optimism. That optimism has been more than *borne out* by our 1971 performance, a record in almost every respect in the Corporation's history. Profits before taxation rose from £7,356,000 to £18,446,000. General Business underwriting shows an improvement of £9,814,000, and this, against a background of severe inflation, the worst enemy of the insurer, in those countries where the vast majority of our business is written. We have also had to contend during 1971 with the effects of civil strife in Northern Ireland and with a devaluation of the world's major currency: the latter reduced, in terms of sterling, our very substantial earnings from the United States of America. In these circumstances it is all the more gratifying to have produced a profit available to shareholders more than doubled at £14,834,000.

RESERVES

We continue our policy of maintaining strong inner reserves available to meet the contingencies which, though normally infrequent, are inseparable from our business. The major transactions dealt with through these reserves during 1971 were:

(1) The adjustment to sterling values of our net assets overseas, consequent upon currency realignment:

(2) A transfer, net of taxation, of £3,688,000 to Pension Fund Provisions, arising from the need to make further funding of the deficits therein.

(3) A credit of £6,125,000 being that part of the amount released from USA unearned premium reserves which was not transferred to General Reserve.

Retained earnings in 1971 amounted to £7,941,000—a record for the Corporation—and disclosed Capital and Reserves now total £56,704,000, of which £15m is represented by Goodwill. Although this "tangible" is backed by our very valuable life assurance interests, it is normally disregarded in considering an insurance company's assets: on that basis, our disclosed net assets represent less than 20% of current premium income. Furthermore, in the United Kingdom, adverse underwriting together with the cost of servicing loan capital and paying dividends has led to a disproportionate reduction in shareholders' funds invested at home as compared with overseas. To correct this maldistribution and to provide a strong base for growth the Directors decided to raise approximately £35m by way of rights issue to Ordinary Shareholders. An announcement to this effect was made on 24th *March, 1972 and the issue of two new shares (at a price of 175p* each) for every 11 shares held was successfully underwritten on 29th March.

INVESTMENTS

During the year, the book value of our invested assets increased from £522m to £569m. In 1971 the investment climate in most of the main countries of the world was dominated by the problems of inflation and unemployment and by the international currency *crisis resulting from the huge deficit in the United States* balance of payments. In the United Kingdom inflation continued at an uncomfortably high level, but in spite of almost negligible growth in industrial production, the market for ordinary shares rose strongly while that for fixed interest securities also improved, favoured by a general easing of interest rates. As will be seen from the balance sheets, in the Life Funds virtually the whole increase in book value of investments was divided between fixed interest securities and ordinary stocks in roughly equal proportions (approximately £9m and £8m respectively). In the Non-Life insurance funds the increase in fixed interest securities was more marked—about £19m against £7.5m in ordinary stocks.

At 31st December, 1971 the excess of market over book values of non-life investments, excluding investment reserves, amounted to £61,400,000 compared with £36,900,000 at 31st December, 1970. In a period of two years this "appreciation" has now increased by 130%. This is satisfactory: but on the Stock Markets what goes up can come down, and interesting though these figures may be to our shareholders, I still believe it is in their interest to confine them to my statement rather than import them to our Balance Sheets.

World Headquarters, General Buildings, Perth, Scotland

William Baird

TEXTILES • INDUSTRIAL • MINING • INVESTMENT

The results for 1971 were generally in line with expectations, a significant increase in operating profits being offset to a considerable extent by a return to a more normal charge for taxation.

Against a not especially helpful background considerable further progress was made with the policy of building up those parts of the Group not directly related to the mining operation in Sierra Leone. In the Textile and Industrial divisions, a useful degree of internal growth was supplemented by acquisitions costing in total some £4.25m. After paying for these, available resources remain strong enough for the Group's activities to be further extended as suitable opportunities can be created.

RESULTS IN BRIEF

	1971	1970
	£m.	
Group Net Assets	31.3	30.1
Profit before Taxation	2.3	1.7
Profit attributable to Ordinary Stock	1.6	1.4
Dividends	1.2 (11%)	1.2 (11%)

The Chairman, Mr. S. A. Field, concludes his Statement for 1971 as follows:

"Results for the first quarter of 1972 have been adversely affected by industrial action. This has borne heavily on Textiles and Industrial. The leeway cannot be made up by the half-year, but if the Government's efforts to stimulate demand are successful, the progress of the Group should be strongly resumed in the latter part of 1972 and into 1973."

Copies of William Baird & Company Limited's Report and Accounts can be obtained from the Company's Registrars, 105 St. Vincent Street, Glasgow G2 5EG.

A SYMBOL OF FAMILY SECURITY FOR OVER A CENTURY

REFUGE FOR LIFE & GENERAL INSURANCES

The Annual General Meeting of the Company was held at the Chief Office in Manchester on 27th April 1972

The Chairman, Mr. M. Wilcock Holgate, M.A., in a statement submitted with the Report and Accounts for 1971, reported that in the Life Branches new policies were issued during the year assuring benefits aggregating some £90 millions, at annual premiums of £4,305,000 and single premiums of £880,000. The total premium income of the year was nearly £31 millions, and payments to policyholders amounted to over £27 millions, including £13 millions in respect of endowment benefits.

The premium income of the Company's subsidiary, the Federated Employers' Insurance Association Ltd., which conducts most classes of insurance business other than Life, was £5,262,000.

INVESTMENTS

The assets of £283 millions shown in the Balance Sheets include £85 millions in British National and Local Government Securities, £66 millions in Debentures, Loans and Preference Shares, £68 millions in Ordinary Shares, £35 millions in Mortgages and loans on policies, and £21 millions in property. The total investment income, before tax, was over £19 millions.

BONUSES TO POLICYHOLDERS

In the Ordinary Branch, £5.9 millions was allocated to holders of with profits policies to provide a reversionary bonus at the rate of £3.70 per cent on the sum assured or annuity for the year 1971, and a terminal bonus at a rate depending on the year of entry up to a maximum of £30 per cent on the sum assured.

In the Industrial Branch, £4.9 millions was allocated to policyholders, and a reversionary bonus at the rate of £2.40 per cent on the sum assured has been granted on premium paying policies which were in force on 1st January 1972, subject to completion of one year's premium payments.

REFUGE ASSURANCE COMPANY LIMITED

Drugs

It's cheap, too

A new antibiotic from Beecham could give the company temporary world domination of the antibiotic market, if it works. A variant of Beecham's existing penicillins, the drug is directly aimed at large parts of the market which now use the tetracyclines, long an American monopoly, and cephalosporins, made by Beecham's great rival, Glaxo. For infections of the respiratory and urinary tracts it is claimed to be much more effective than the tetracyclines, as well as cheaper: on a normal daily dosage basis the comparative prices work out at 12½p for Beecham's penicillin, 16p for its new Anoxil, and over 50p for tetracycline. But tetracycline profits are huge, and the price war that may follow will be one for giants.

At present, the world market for pharmaceuticals is valued at £1.2 billion. Antibiotics are its largest single sector, and Beecham's particular penicillin alone accounts for more than £100m. Beecham gets slightly more than half of this. Anoxil is expected to be at least as big a money spinner, but this time the company will attempt to keep the lion's share of the revenue for as long as it can. Any intending licensee will have to be prepared to offer a really good product in a cross-licensing arrangement rather than just straight royalty payments.

New drug breakthroughs have been rare recently; the profits they show depend on the number of complaints they treat and the tightness of the patents. Beecham is in the clear on the first score, but every drug company in the antibiotic business will now be trying to find a way round the patents. This usually takes a year or so, but in a few rare developments—like tetracycline—the inventing company has enjoyed its monopoly, and its monopoly profits, to the end of the patent's legal life.

Management consultants

Axe hits axemen

The term management consultant is so often a euphemism for hatchet man that few tears will be shed because 13 per cent of British management consultants lost their jobs last year. The sackings reflected the smaller market for consultants' services. Demand, which had been rising at an annual rate of 10 to 15 per cent, actually dropped. Consultancy spending is one of the first items that get the chop when companies want to economise, and, as many firms are no longer as enthusiastic about consultants as they were in the early 1960s, this may have accentuated the drop.

The slump in Britain came the year after an even more massive cutback in the United States, where demand fell by 25 per cent and many consultants went broke. But the annual report of the British Management Consultants Association, published on Wednesday, does point out that foreign demand for British consultants has rocketed by 60 per cent in the past two years. If we cannot run our own industry properly, we are presumably expert at running everyone else's.

Who can get excited, besides British managers themselves, about complaints that British industry pays its executives too little? One answer is that some researchers in Brussels can. A new report* from there on the pay of British managers suggests that, while they are not starving, their salaries are not enough to appeal to the young tigers that industry needs.

The chief executive of a British company with annual sales under £2.5m gets, on average, around £8,000 a year, including his bonus; if he runs a company with a turnover of over £25m, he will be paid nearer £18,000. His company secretary's pay would be, respectively, £3,800 and £7,500; his export manager's about £3,100 and £6,000. Over half the companies questioned give regular rises, usually once a year, to keep pace with inflation but in 1971 the average for upper management was only 7½-8 per cent—which fell some way short of doing this, especially in after-tax income. However, merit increases—which over 90 per cent of the companies gave to the majority of their managers—added another 6-7½ per cent on average.

Other perks, including incentive and bonus schemes, are used by about a third of the companies; profit sharing plans (17 per cent); and stock or stock options (15 per cent of companies questioned). Nearly 90 per cent provided cars for at least some managers, with the majority paying running costs as well. Just possibly, if management consultants had looked more closely at these aspects of industry, fewer would now be out of jobs.

Canada won't buy itself back

Montreal

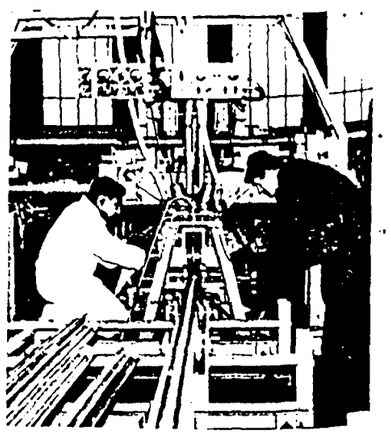
The Trudeau government's long-awaited policy statement on foreign investment in Canada turned out to be more a takeover code of conduct for foreign investors than any far-reaching or radical proposal to get back Canadian industry. The government will bring in early legislation to empower the Department of Industry, Trade and Commerce to screen any planned takeover by foreign investors of Canadian-owned corporations with assets of more than Can$250,000 (£96,000) or annual sales higher than Can$3m (£1.2m).

The legislation will not be retrospective and will not apply to new investments by foreign corporations in Canada or to the expansion of existing foreign-owned companies. It will be restricted to the takeover of Canadian corporations by foreign interests, and only those which can be shown to be of significant benefit to Canada will be approved. The basic criteria will centre on the economic effects on Canada—including employment—how much Canadian participation is foreseen, the effect of the change in ownership on competition and whether Canada will benefit from the takeover either technically or in productivity. The policy statement adds that any takeover of a Canadian firm by a foreign corporation must also be shown to be compatible with Canada's particular social and economic priorities. The legislation will also cover foreign acquisitions of foreign-owned corporations, when, for example, an American company wants to sell out to a British bidder.

Reaction has been mixed. The economic nationalists are aghast at what they consider the moderation of the government's proposals which, as they point out, will do nothing to "buy back" Canadian manufacturing industry, about 60 per cent of which is foreign-owned, mainly by Americans. They argue that having so much Canadian industry controlled from south of the border means Canada loses the power to solve its own special problems, like its 6 per cent unemployment rate, environmental issues and satisfying Quebec's aspirations.

The middle-of-the-road proposal reflects the government's basic belief that when Canadians are faced with the choice of more economic nationalism or prosperity they will choose to prosper, especially in a year like 1972 when a federal election is likely to be called. And the hard fact remains that it will take a lot to break the Canadian investor of his habit of turning to Wall Street for his investments rather than to local companies.

European labour



Italians, keep out

Milan

The European Economic Community is designed to achieve free movement of labour, among other things. So it has, and in the process some unexpected problems have arisen. Free movement has amounted to a flow of Italians from the south to France, Benelux and, above all, Germany. Yet since last autumn the Italians have been complaining that Germany allegedly gives preference to immigrant workers from third countries over EEC members (that is, Italy). The grumbling has risen to a crescendo in which, with the Italian elections due this weekend, Signor Carlo Donat-Cattin, the minister of labour, has threatened to haul the west Germans before the community Court of Justice.

It was, as it happens, rising prosperity in Italy, combined with a temporary exhaustion of reserves of labour on the farms, that induced the Germans to switch their recruiting in the 1960s to other countries. Now they are not particularly keen to make a switch back. The supply of Italians might again dry up, once Italy's economy picks up. The unemployed Italian worker is quite likely to have had an industrial job already, to be used to high wages, to belong to a trade union and to vote communist.

Naturally this is not the official German argument. The Germans have produced figures showing that the recruitment of Italians has actually risen in recent years: 402,000 Italians now work in Germany compared with 228,000 in 1968. They complain that they cannot get Italians with the necessary skills and qualifications. The skilled Italian worker may well prefer to sit out the recession, which his government is regularly telling him is nearly over, rather than emigrate. And Italians nowadays may be less ready to hump hods of bricks, drill roads, wash dishes, clean shoes and make beds in a foreign country miles from their families than they were 15 years ago, or than Turks and the rest are now. Nor is it correct to assume that the rest consists entirely of raw labour. Ruhrkohle has a sizeable Turkish contingent, many of whom

Foreigners must stick together

IRAQ-NORTH RUMAILA

Announcement by Basrah Petroleum Company Limited

By Law 80 of 1961, the Iraq Government purported to deprive Iraq Petroleum Company Limited, Mosul Petroleum Company Limited and Basrah Petroleum Company Limited (which are British Companies) of the greater part of their respective concession areas in Iraq. This action constituted a breach by the Iraq Government of its Agreements with the Companies.

The Companies immediately called upon the Iraq Government to settle the dispute by arbitration in accordance with the Agreements. This call has been repeated subsequently on numerous occasions, but the Government has failed to implement the arbitration procedures. Nor has any compensation been paid to the Companies; and no provision has been made by the Iraq Government for the future assessment or payment of compensation. The British Government has lodged appropriate protests with the Iraq Government.

This conduct of the Iraq Government is a breach of International Law and such wrongful acts are incapable of depriving the Companies of their rights under the relevant Agreements.

The dispute remains unsolved despite numerous attempts to settle it by negotiations.

The Government of Iraq and the Iraq National Oil Company (INOC) have announced that INOC has commenced the export from Fao of crude oil extracted by INOC from the North Rumaila field. This field lies within the concession area granted to Basrah Petroleum Company in its Convention of 29th July 1938.

Basrah Petroleum Company has written to the Iraq Government protesting at this further violation of its rights and repeating its request for arbitration. In its letter the Company makes it clear that its rights remain those contained in its Convention and subsequent Agreements with the Government.

Accordingly, the attention of all those who may in any way be concerned is drawn to the continued existence of the rights of the Basrah Petroleum Company. Any oil shipped from Fao will in fact be oil which has been extracted from the area covered by the Company's Convention of 29th July 1938. The Company will, therefore, take such legal steps as it may consider necessary or desirable to protect all its rights, including especially its title to any such oil.

The shareholders' meeting has furthermore:
—allotted Lit. 1,000,000,000 to increasing the reserve;
—fixed the dividend for the financial year 1971 at Lit. 42.50 for every share of Lit. 500 nominal value.

were miners in Turkey.

Recruitment of Turks or Jugoslavs is still a government-to-government affair: a German employer can simply arrange through official channels for a consignment of 200 Turks, and he knows they will be kept in order by their own government. Because there is free movement of labour within the Six, he cannot place similar bulk orders for Italians, who are expected to find their own jobs. Although the Italian government sounds angry, part of it is for the voters and part is the accumulation of bargaining counters to be played for what Italy really does want (and, with British support, may get), which is community cash for the Mezzogiorno.

Apollo 16

Not in the book

The first boxes of moon rock to be opened since Apollo 16 landed have given scientists a bit of a shock. They have had time only for a quick look at about 14 lb of rock brought back in the first four boxes before these were whisked away for radio-active testing; a small solar flare occurred while the astronauts were on the moon and a few boxes were rushed to the laboratories ahead of the rest to see whether any effects could be detected. But that look was enough to show that the rocks were not made up of simple moon crust but were a jumbled amalgam of almost every kind of formation that has been found at any time on the moon: soil, crust, molten rock, all conglomerated together in the surface and boulders of the Cayley Plains in a way that scientists describe as "very complex."

This puts the latest conventional theory about the moon in some trouble. It said that the mountains and highlands were formed when the moon first cooled down and have stayed that way ever since, except for the occasional meteor or volcano. The plains, on the other hand, were churned over repeatedly in great molten flows of lava. The theory may still hold for the moon as a whole, but it is obvious from that first, quick glimpse of Apollo 16 rocks that it is not true of the Cayley area. It looks very much as if this particular spot was worked over by some cataclysm after the original formation of the highlands and it will take a great deal of work in the laboratories to get any idea of what it could have been. The great error made by the National Aeronautics and Space Administration is to ban all discussion of issues like these until the scientists have the answers and can produce them with some assurance. But by then all conceivable public interest has evaporated. And Nasa wonders why Americans are bored with the moon.

Trade talks

Wait for us

The Americans have given the European commission in Brussels the uneasy feeling that they want to slow down preparations for the next round of world trade talks. When Mr Nathaniel Samuels, who is about to leave his job as American Under-Secretary of State for Economic Affairs, and Mr William Eberle, President Nixon's special trade negotiator, had had their say in Brussels last Friday there were expressions of satisfaction all round, but what stuck in the memory was Mr Samuels's recitation of all the objections to an early meeting: America's balance of payments problems, unemployment, protectionist sentiment and, above all, the approaching presidential election. In other words, late in 1973 or even early 1974 would suit Washington. Preparatory work at the General Agreement on Tariffs and Trade for the talks (variously described as the Nixon round and, by the Japanese, the Japan round) is well ahead and, despite the far greater range of subjects that will be considered than in the Kennedy round, ought to enable talks to start early next year.

The Americans continue to bang away at the allegedly unfair effects of the enlargement of the EEC, the free trade treaties with the neutrals, the common agricultural policy, and so on. The Nixon Administration cannot be expected to do much to resist pressure for anti-dumping measures, and for restraints—voluntary or otherwise—on other countries' exports, until the election is safely out of the way. Indeed, this week the Europeans were attacked by American members of the World Bank for the reverse preferences they enjoy in certain associated developing countries (see page 74), which gives them an advantage over the Americans in competition for projects being financed with World Bank cash.

What the Brussels talks did achieve was a new working relationship between the Brussels commission and the Nixon Administration; that is a conspicuous achievement for Mr Samuels and the EEC commissioner for external relations and trade, Mr Ralf Dahrendorf. What this adds up to is sitting down together and working out the subjects and policies that the commission can reckon to sell to its member governments and the Administration can get past Congress. This will be all the more valuable when the talks finally do get started.

Malta

Taxed haven

It is not Malta's new budget that means the end of its life as a tax haven, but the kites the prime minister, Mr Mintoff, flew before it. Before the budget, settlers in Malta who had investment income of over £1,400 were able to pay income tax at the concessionary rate of only 2½p in the £1, with no surtax and with a special £500 personal allowance; for a married couple the total personal allowance was £1,040. Although they will still pay no surtax and keep their allowances, the settlers have been told the 2½p rate is to be abolished in favour of a new, as yet undeclared, scale of income tax. The ordinary scale is at rates from 10 per cent on the first £200 of taxable income up to 32½ per cent on taxable income over £900. The special new scale for settlers is expected to raise £400,000; or £100 from each, since there are about 4,000 of them.

This is hardly ferocious beside the heavy increases in indirect taxes. But it was preceded by a couple of proposals made to test reactions. The first, on March 2nd, was that new settlers would need an income of £4,000 instead of £1,400, be 60 years old, and pay full Maltese income tax and surtax.

Flag down, taxes up

which would remove the attraction of Malta as a tax haven, although it would remain a sunny spot for retirement, with lower tax rates, and probably a lower cost of living, than Britain. This proposal is still in the air. When reactions have been tested a decision will be made.

The other proposal, made last week before the budget, was that foreign residents should pay a levy for a permanent residence permit as an alternative to higher taxes. But the British Residents' Association preferred to pay higher taxes instead. Hence the budget proposal. The main lesson that has been learned by settlers and potential settlers is that Malta's policy is highly uncertain. Since retired people value security, the remaining tax concessions are unlikely to tempt many new settlers even if the March 2nd proposals are not adopted. Mr Mintoff has caused maximum anxiety for minimum revenue.

Compensation

Washington gives

Although the nationalisation of American interests in Chile by the marxist government of President Salvador Allende has hit the headlines, in many ways he is merely following in the footsteps of the left-wing military government in Peru. Dr Allende's success in refinancing Chile's debts represents a considerable climbdown by Washington, which may be connected with Washington's dealings with Peru. Chile has undertaken to pay compensation for the nationalised copper companies "in accordance with international and Chilean law." International law is vague on this point, and Chilean law will therefore apply. This Dr Allende has scrupulously observed.

Meanwhile negotiations with Peru on compensation for the 1968 nationalisation of the International Petroleum Company (owned by Esso) have broken down. IPC enjoyed an extraordinarily privileged status in Peru. But on nationalisation Peru—like Dr Allende since—passed a law requiring the allegedly excess profits earned in the past to be set off against the compensation. President Nixon, on taking office, ruled that aid should not be cut off automatically. Nevertheless new aid dropped to a trickle, and, most important, American mining companies became unable to get funds from the Export-Import Bank for Peruvian projects.

By December, Wall Street bankers were freely predicting that the deadlock was about to be broken, with Peru making a token compensation payment in return for renewed Washington backing for Peruvian development. Some of Peru's generals apparently were ready to do a deal. But there was a leak, followed—presumably—by a huge row behind the scenes in Lima and then by angry denials that talks had even taken place.

The State Department, the Treasury and a strong lobby of American business interests had pressed hard for a settlement partly to enable the Administration to hold its tough line on Chile. But the kind of settlement Washington wanted may have been a non-starter in Peru's present political mood. More important, Lima holds the trumps. Although Peru has adopted the fairly stiff foreign investment rules agreed between the members of the Andean Pact (though not ratified by Colombia) American companies—other than Anaconda—are keen to get in on the Peruvian mining scene. More important, the Peruvian National Oil Company has struck oil in a big way in the upper Amazon basin. The company has signed service contracts with seven oil companies, including British Petroleum and Occidental, under which the companies would exploit the oil and be paid in crude—all despite the rumbling dispute over IPC. All this may have helped Washington to ease its hard line on Chile.

Ghana

The debt battle

The Ghanaian government has now set up a debt office. Its task will be to sift through all Ghana's commercial debts to see if any others should be singled out for repudiation beside the medium-term debts (of £13½m) to four British companies on which the new government has already turned its thumbs down. What Colonel Acheampong's government is really after are debts on which he thinks Ghana may have been taken for a ride.

The suspicion is that during the Nkrumah period several commercial debts fell into this category, but debts run up under the succeeding government of Dr Kofi Busia are also under review. Even those that survive study may still have to be renegotiated. Ghanaian spokesmen have talked vaguely about putting them retrospectively on to International Development Association terms (50 year repayment with minimal interest). Needless to say, the British Export Credits Guarantee Department, and corresponding bodies in other developed countries, which will bear the brunt of this onslaught, have suspended cover for new exports.

All Ghana's official debt to foreign governments and agencies like the World Bank will be repaid in full, although some doubt seems to centre on the extra interest that was added on to these debts when they were phased out after Nkrumah's fall. But the real argument behind the scenes between Ghana and western governments is on medium-term suppliers' credits ($294m) and short-term debt ($286m), the bulk of which is 180-day export credits that have been a compulsory condition of all exports to Ghana for some time.

Since export credit cover came off, Ghana's imports have dropped sharply. The new government has launched an energetic grow-our-own-food campaign, with officials getting out into the country to exhort farmers to extend their planting (and switch from cocoa), and sometimes doing it themselves. The problem will be giving sufficient motivation to farmers without raising the town prices of foodstuffs. So far there has been no evidence of manufacturing grinding to a halt for lack of essential imports, but stocks will not last for ever.

Key indicators: world commodity prices

Zipping along

After touching a 20-year high last week zinc prices on the London Metal Exchange came back marginally to £150 a ton. The United States, the largest producer, expects to have mined all its own zinc in 30 years. It is this shortage—rather than a surge in world demand—that has pushed the American selling price up to 19 cents a lb. European producers are likely to raise prices soon.

CAPE ASBESTOS

Substantially improved results in 1971

Salient points from the Statement by the Chairman, Mr. R. H. Dent:

- Turnover increased to £50.2m from £45.7m in 1970
- Profits before tax increased by 22½% to £3,098,000
- Earnings of 10.8p per share the highest so far achieved
- Ordinary dividend increased by 2½% to 30%

The improvement in U.K. profits reflects the measures taken to reduce costs and increase output.

At the mines, earnings remained at about the same level as in the previous year. Further growth in turnover and profits expected in 1972.

France

Our very own

Paris

After the fracas over Algerian oil the French government is more anxious than ever to diversify its sources of key raw materials. This is behind the plans to step up mineral exploration around the world and to stockpile key ores by the Groupement d'Importation et de Répartition des Métaux, a government agency. An official list of what should be stocked and in what quantity is being drawn up.

The government particularly wants companies now involved with exploration or with other metals—like Pechiney-Ugine-Kuhlmann—to start looking for new copper deposits in a big way. PUK only narrowly missed being awarded the contract for the major new Iranian project at Sarcheshomeh, mainly because President Pompidou snubbed the Shah and refused to attend his mammoth party last year. Almost all copper is imported now from firms over which the French have no control; the government would like one-quarter to one-third of the country's copper requirements to be in French hands from exploration right through to refining. Help will be given to industry in negotiations with the countries where exploration would probably be carried out. Canada and Australia top the list; being politically stable, they top everyone's.

Nickel is the next priority. In spite of the present world glut the government may encourage the opening up of deposits in New Caledonia, where the Société Nationale des Pétroles d'Aquitaine may acquire an interest. PUK itself has recently signed an agreement for a £130m nickel mining deal there although the Société le Nickel has long dominated local nickel production.

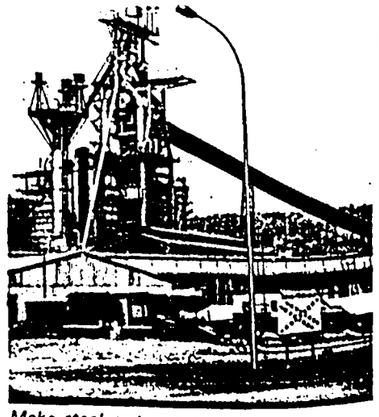
Ini's in everything

Barcelona

The Spanish government has made its final selection of the companies that will participate in the £100m refinery at Tarragona, which will process Spain's new offshore oil finds. Rio Tinto-Zinc's Spanish affiliate got 40 per cent, in partnership with Spanish banks. But it was known well in advance that 60 per cent would go to the Instituto Nacional de Industria, Spain's giant state holding company, thus fulfilling Ini's ambition to move into oil in a big way.

Ini is General Franco's personal creation, established in 1941 on the advice of an old and trusted friend, Sr Antonio Suanzes, a naval engineer of character and ideas who is believed, whether in or out of government, to have been the chief influence on economic policy for nearly 20 years. Sr Suanzes became the first president of Ini and built it up to what it is today.

In 1941, the Spanish economy was ruined by the civil war and reconstruction was made difficult by wartime shortages. Ini's function was to move in where private enterprise was put off by heavy capital costs or a low rate of profit, particularly in the defence industries.



By the end of 1970 Ini had direct, and mainly majority, holdings in 67 companies (and indirect ones in another 93) with capital of £762m.

Ini controls over 30 per cent of electricity output and nearly 30 per cent of the refineries, nearly 40 per cent of steel, nearly 60 per cent of aluminium, over 30 per cent of nitrogenous fertilisers, nearly 60 per cent of private cars (mainly through Seat) and 30 per cent of air passenger traffic (Iberia). It employs some 200,000 people, or 1.4 per cent of the working population. Its 1970 sales (approximately £1 billion) accounted for 3½ per cent of the gross national product and 10 per cent of the gross industrial product.

It can boast that it was responsible for the remarkable growth of Spanish industrial production in the 1940s. But it has all been done at huge cost. From 1941 to 1970 the total investments of Ini's companies amounted to around £2½ billion. It has established some well-managed companies; in others there has been faulty planning and mismanagement, and a general tendency to extravagance and over-staffing.

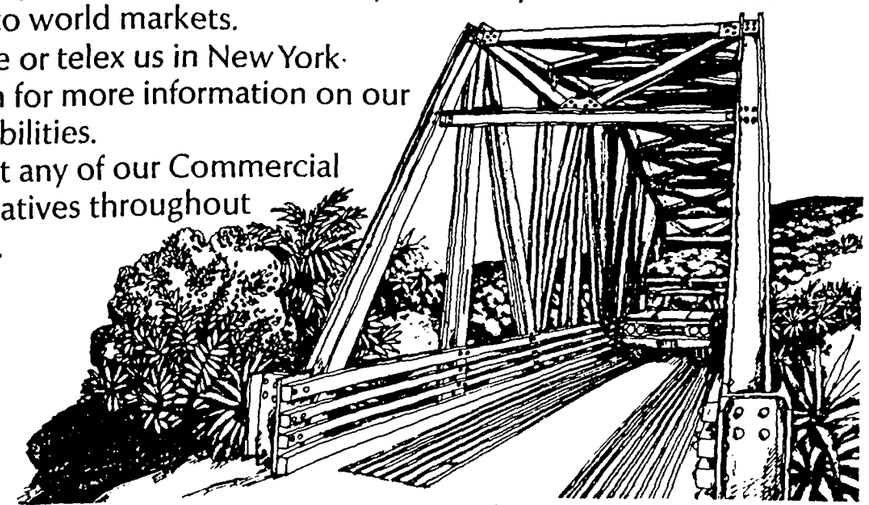
Perhaps the worst example is Intelhorce (Industrias Textiles del Gaudalhorce), which was founded in 1957 to improve the chronic unemployment in the Malaga area. The idea of starting a large new textile mill was in itself unfortunate when the traditional Spanish cotton industry had been depressed for years; but on top of this the mill was badly designed and managed, there were long production delays, and it has made persistent losses, although it is apparently now being put on a sounder basis. Intelhorce is also an example of the far-from-stimulating effect that Ini has generally had on private industry. When Ini proposes to enter a new sector, other people tend to be held back by a variety of official obstacles. Since no one knows what sector Ini will enter next, the effect has been to inhibit private investment rather than encourage it.

The methods of financing Ini have varied. Until 1957 funds came from state grants. In 1958 these were substituted by credits from the Bank of Spain, but this system lasted for only a year. From 1959 until 1970 it was required to issue long-term (25-year) debentures, convertible into shares of Ini companies. By 1970 it had received £155m in government grants and £546m from debentures. The rate of interest on the debentures is not generous and they are forced on the savings institutions, which in 1969 took over 95 per cent of them. Because of the low profitability of the Ini group as a whole, the service of this huge debt makes it impossible for it to plough back profits.

Make steel, not money

The government has now decided to provide new capital in the form of a grant and to meet losses of companies that Ini is required to support for national reasons and which cannot be expected to pay—the outstanding example being the coal-mining company Hunosa, which has made enormous losses. But it has also said that in future, unlike in the past, Ini must render clear accounts.

In 1970 Senor Claudio Boada, the Catalan industrialist, who had put Altos Hornos de Vizcaya, the Bilbao steelworks, on its feet again, was appointed president of Ini. He has begun reorganisation, amalgamating or closing a number of companies, and has strikingly improved the supply of information to the public.



We deliver steel bridges. But we are more than a steel company.

Bridges are just one of the many things the United States Steel International companies have to offer. We can offer not only the widest range of steels but iron ore, manganese, industrial and agricultural chemicals, cements, plastics and much more.

The United States Steel International companies are trading and construction companies that can supply you with product engineering and research services with products ranging from raw materials to fabricated steel.

When a bridge was needed to provide access to Compañia Azucarera Hondureña, S.A., a new sugar mill in Honduras, Central America, the two engineers involved ordered a 60-meter thru-truss highway bridge from United States Steel International, Ltd. The bridge was later named Puente Roberto Fasquelle. The bridge was ordered right out of our brochure, "Steel Highway Bridges," and shipped—without a single sales representative's call. You may not need a mail-order bridge, but we can assure you of the same prompt, dependable service. For 67 years USS products have been supplied to world markets.

Write or telex us in New York or London for more information on our total capabilities.
Or contact any of our Commercial Representatives throughout the world.

USS TRADEMARK **United States Steel International*** ...a world of products and services.

BUSINESS *Japan*

The ever-rising yen

The question in Tokyo nowadays is when, rather than whether, the yen will break right through its new ceiling. Our special correspondent in Japan reports :

But what's it worth in your pocket ?

Can the leopard change its spots ? It is a nice question when it comes to Japan's economy, the miracle built up on exporting. For long enough, Japan's industrial partners have urged it to reduce its gargantuan surpluses on overseas payments by liberalising import policies, reducing tariffs, dismantling quotas, giving aid, investing overseas and so on. But, for the most part, the Japanese government was deaf, preferring to tighten up foreign exchange controls to prevent the inflow of funds, rather than encourage outflows. Not until last year did it think seriously about a deliberate shift of emphasis in planning away from exports and private investment in export industries to new priorities for aid and overseas investment, as well as government-led spending on social capital. Yet, despite this shift and last December's 16.9 per cent yen revaluation, which brought howls of rage from businessmen here, Japan's exports so far this year have been more than a fifth higher than in the same months of 1971 in dollar terms (if only 5 per cent up in yen).

Japanese businessmen, who found an increasing excess capacity at their factories after the country's longest postwar boom came to an end in the late summer of 1970, were clearly not interested in new theories about social priorities, but in old-fashioned remedies. The more they suffered, the more they stepped up their export drives. So the trade surplus stays just as high as ever, the gold and foreign exchange reserves continue to pile up uselessly, and the yen still looks cheap.

When a prime minister makes reassuring noises about the stability of his country's exchange rate, it can be assumed that stability is the one thing it lacks. The fascinating point about the assurance from Mr Eisaku Sato that there will be no second yen upvaluation in the "foreseeable future" is that he first felt it necessary to say it only a month after the Washington currency agreement had made Japan accept a bigger upvaluation than it wanted. Not surprisingly, speculation in Tokyo's financial circles has not died away.

The official view is that the new exchange rate for the yen is roughly right, and, given time, the government's new priorities will work to bring Japan's overseas accounts into balance. But when ? Even if the economy rebounds to the 10 per cent growth of the 1960s the government's scenario could take four years to work out, if it ever does. Last year overseas earnings exceeded expenditures by 20 per cent, a yawning gap to close even if imports were to bound up by 20 per cent a year, while the growth in exports was halved to about 10 per cent. Japan may not be able to buy the time to test the theory. The extent of the recent pressure on the dollar, even in Tokyo's tight market, and the reappearance of longer-term export contracts in which Japanese companies are incorporating their own private "crawling pegs," based on an annual upvaluation of the yen by as much as 2¼ per cent, are significant pointers.

The Japanese government naturally does not reprimand the nation's dedicated exporters. For the present state of nerves over the yen the Americans are held largely to blame. The hardening in American interest rates is seen as welcome, but late. And there is bitter disappointment that Mr John Connally, America's Secretary of the Treasury, has not yet made any hard promises, or even proposals, on dollar convertibility.

But Tokyo officials are living in hope that it will all work out in the end. On European currencies, some say the French will see the Germans do not float again. This is not a view that everyone shares. More than one influential banker here read the common market's decision to narrow the bands of fluctuation among their own currencies, which was started last week, as a prelude to a joint float of European currencies against the dollar.

No one would be willing to bet that the yen could hold its link to the dollar then, although the Ministry of Finance might be tempted to try. If the world were to fragment into trading and currency blocks—not an idea welcome in Tokyo—Japan thinks that it, along with Australia, would have to slot into the dollar block. But it seems highly unlikely that it could do so without floating first. One top banker puts the chance of the yen's getting through to 1973 without a float at less than 10 per cent.

While waiting on European or American initiatives on currencies, the Japanese authorities are finding their own room for defensive manoeuvre limited. Exchange controls have been tightened. All sorts of ideas, some

practical, some not, are being canvassed to whittle some of the fat from the country's out-sized reserves of $16.7 billion by the end of March. The government has its own, somewhat fluid, 8-point programme. Outsiders, too, are in on the act. But none of these really tackles the root problem, Japan's continuing show of strength on trading account. Only a much more rapid upswing in domestic demand than now seems likely could bite into this year's surplus.

There are proponents of a more aggressive reflationary policy, within as well as outside the government. But their argument has got bogged down in a curious mishmash of indecision, doctrinal and legal barriers to "real" deficit financing, the political infighting and manoeuvring of an election year (and one which should see Mr Sato step down), and, amazingly, even orthodox fears of inflation. Japan's unique consultative structure of decision-making has enormous strengths, as the country's postwar success record has proved time and time again. But it may work less smoothly in a period of high external pressure and rapid change. The next few months will tell.

The surplus that won't go away

If there is a somewhat frenetic preoccupation in Tokyo with the reserves, it is for a very simple reason: without some very cunning footwork, Japan's prospective surplus on overseas accounts will push the reserve kitty over $20 billion before 1972 is out. And the $20 billion mark, rightly or wrongly, is considered the psychological breaking-point for the yen.

Awkwardly, although it is now eight months since the yen was floated in August and 4½ months since it was formally revalued, Japan's exports, as we have already seen, look as buoyant as ever, while imports are only 10 per cent up on last year in dollar terms (and down 7 per cent in yen). No doubt the prolonged "recession" (in Japanese language) at home accounts for much of the trade gap. A peculiar reluctance to lay off labour and a big debt problem make the big Japanese companies unusually quick to push exports as hard as they can, in order to keep their plant going in the face of sluggish home demand. Certainly the import bill has been dampened by the recession—more than half of it is still for raw materials and semi-finished goods. Nor has it helped to encourage imports that distributors have managed to gobble up the lion's share of the windfall gains of revaluation. Indeed, a highly embarrassed Ministry of International Trade and Industry has been bringing pressure on them at least to bring down the retail prices of items like whisky. Altogether, Miti reckons that prices of imported goods have come down just 7 per cent since August.

But, even on fairly optimistic assumptions both about the pace of domestic recovery and the competitive climate abroad, Japan's trade surplus in fiscal 1972 (year ending March, 1973) could match, or even exceed, the $8½ billion of the fiscal year just ended. And this despite a 10 to 11 per cent rise in exports in dollar terms, which implies a distinct levelling-out of sales abroad in terms of the yen.

Admittedly, the forecasts do not allow for recent moves by the Bank of Japan and the Ministry of Finance to encourage imports by making finance for them easier. In early March, the central bank decided to accept industrial bills for imports of finished products for rediscount, and from April 1st it has extended its preferential loans, making them sufficient to cover 50 per cent of total funds needed for imports in place of the former 30 per cent, so reducing the degree of dependence on foreign banks for import funds. Moreover, as part of the government's 8-point programme, up to $360m (in dollars) will be deposited with foreign exchange banks to enable them to make 1-year dollar loans to importers stockpiling specified non-ferrous metals, at rates marginally below the 6½ per cent charged for the 4-month usance credits ordinarily available. Miti's original proposal, to offer importers closer to $600m, at rates linked to American treasury bill rates, directly from the reserves, might have been an irresistible incentive to smelters. But the final proposal, hedged around with no-export provisions, is less likely to make a big bite in the trade figures.

The bill for services from overseas will rise; and so should net transfers. The reversion of Okinawa on May 15th will also depress the overseas accounts. Indeed, in the government's original guesstimates on how the overseas accounts will go, the entry of Okinawa into the reckoning accounted for much of the $800m reduction then expected in Japan's current account surplus in fiscal 1972. Nonetheless, it now seems all too likely that the current surplus for the year that has just begun will again exceed $6 billion. Small wonder that the Japanese are desperately looking for bigger offsets in other accounts.

What's to be done about it?

If the government is determined not to unpeg the yen again, there are only three policies left to it: to step up the outflows of Japanese capital; to lock out speculative inflows of foreign funds; or, faute de mieux, to try to keep part of the gains out of the reserves (plans such as those to decentralise foreign exchange holdings and to invest more of the government's kitty in long-term foreign bonds would meet this window-dressing criterion).

Most conventional devices to encourage larger outflows of long-term capital have already been employed. Earlier restrictions on Japanese investment overseas in securities, real estate and plant have been almost entirely eliminated. It is true that in Japan there is almost always a catch to any liberalisation measure: in this instance, permission is still required for

substantial direct investment abroad, although at present it is virtually automatic. By the autumn it is hoped that a government scheme will be set up to provide insurance against longer-term foreign exchange risks—although, of course, to the extent that such a scheme induces higher outflows of long-term export credits, it will also produce an eventual commensurate increase in exports. The first tentative steps have been taken towards opening up Tokyo's domestic capital market, such as it is, to foreign borrowers. The World Bank and the Asian Development Bank had been admitted as early as 1970, and only in March the Bank of Japan lent the World Bank $325m, the largest single borrowing in the World Bank's history. But now foreign governments are also being allowed into the queue. Mexico has already been given the go-ahead for a modest $10m yen issue. Agreement on Australia's request for an issue equivalent to almost $30m has been reached in principle.

But the trouble is that at this stage in its development the Tokyo market can handle no more than one, relatively modest, issue a month. Even more worrying to the authorities than the practical and legal problems of opening up the market are the indications that many would-be borrowers have objectives quite out of keeping with Tokyo's. The Japanese would like borrowers to come to the market to get yen for conversion into dollars to finance purchases of goods elsewhere. But Australia, for one, has bluntly indicated that it wants to sit on the bulk of the yen acquired. No doubt a compromise with Australia will be reached. However, if Japan would eventually like to see the yen used more as a trading currency, it most emphatically does not want to see it used as a reserve currency. Hence the restriction on foreign purchases of unlisted bonds and debentures and short-term government securities, and the rejection of requests by several south-east Asian countries that they be allowed to accumulate some yen reserves. As so many others before them, the Japanese are suddenly coming up against the difficulties in separating the two roles of their currency.

It's no joke keeping up with stock prices

Needless to say, there is no shortage of less orthodox suggestions of how to step up capital outflows. Miti has been pushing for a "foreign currency investment and loan fund" to lend dollars from the reserves to companies investing abroad. Some business circles have even suggested the outright purchase of Papua and New Guinea. But such notions do not find much favour at the Ministry of Finance.

In the short run, the most powerful incentive to capital outflows would come from pressure on the commercial banks to repay their New York and Eurodollar borrowings. Such borrowings amount to $5 billion-$7 billion, the bulk of it in trade financing from New York banks. The Japanese banks themselves, understandably, are less than keen ; a draconian rundown of such credits would wreak havoc with their correspondent relationships with American banks. So far the authorities have trod warily. At the end of February they deposited some $200m (in dollars) and in March a further $400m with the commercial banks, at interest rates pitched attractively marginally below comparable 3-month money rates abroad, to induce the banks to begin repaying such foreign borrowings. At mid-March the banks had evidently repaid roughly half the February amount, although the recent hardening of American interest rates may since have speeded the process. Even repayments of $100m-$200m a month, if continued, would rapidly add up to the target of $1.8 billion-$2.0 billion. The Ministry of Finance and the Bank of Japan can force that pace if they

Major foreign exchange controls

Restrictions on foreign borrowing by companies :

- Permission is required to float bonds abroad. In the three years to March, 1971, 30 such issues amounted to $574m. With two exceptions, no foreign issues have been allowed since, and the ban will continue through fiscal 1972.
- Short-term "impact loans" from foreign banks have been banned since September, 1968.
- Impact loans of over one year in maturity have been regulated since the autumn of 1970, broadly with a view to at least preventing any net increase in the total outstanding.

Restrictions on bank guarantees :

- The granting of bank guarantees to resident or overseas affiliated firms to enable them to borrow from overseas offices of Japanese banks or foreign banks requires permission, rarely given. (There is a lower limit under which permission is not required, but this is set so low that normally a bank guarantee would not be needed anyway.)

Restrictions on the transactions of foreign exchange banks :

- Restrictions are placed on the banks' "open" positions, both on the volume of foreign exchange oversold and the volume overbought. A check is now kept on average monthly positions.
- A minimum (and variable) proportion of certain of the foreign currency liabilities of the banks must be matched by liquid foreign currency assets.
- Limitations are placed on the banks' *short-term* borrowings from abroad ; such borrowings cannot exceed the sum of the banks' spot sold positions less their call loans plus their "free yen" deposits. (Free yen deposits are freely convertible non-resident deposits of yen.)
- Since February, 1968, each bank has had an effective ceiling placed on its conversions into yen of funds borrowed abroad (under the so-called informal Yen Tenkan regulation). Since March 1st further conversions have been virtually banned.

Advance payments for exports :

- The prohibition placed on advance payments for exports (exceeding $10,000), first imposed in August of last year and removed only on January 6th, was slapped back on February 25th.

Other still more severe and specific emergency controls on foreign exchange transactions (such as the freezing at their August 27th level of the outstanding total of the banks' free yen deposits), which had been imposed last summer, were lifted in two rounds of liberalisation, on December 21, 1971, and January 6, 1972, and have not yet been reimposed.

choose.

As for speculative inflows of capital, the defence here has been a retreat back into exchange controls, more effective in Japan than in most, more open, European markets. The retreat has not been complete. But the major step, the prohibition of advance payments for exports, has been taken —indeed, the pressures on the yen in the exchange market in Tokyo had built up to such a pitch by February 24th that the authorities had little real choice.

To outsiders, the obvious loophole to all this is the lack of any mechanism to keep foreign would-be hedgers out of the Tokyo stock market. By February foreign purchases of corporate securities had once again begun to exceed sales, if only by a modest $22m, while purchases of Japanese public and corporate debentures by foreigners topped sales by $30m. However, given the recent rapid rise in the Tokyo stock index, this problem may take care of itself. Certainly the Ministry of Finance thinks that prices have gone far too high. It can only hope that foreign investors may agree, but there is no indication yet that they do.

There is no proposal so far to adopt the German system of guard deposits to discourage company borrowing from foreign banks. Japan's own controls here are already quite tight. Companies need permission for such "impact loans," directly from the government or from the foreign exchange banks acting as its agents. And, while there is no formal, published quota on such finance, a shrewd guess would put the informal ceiling at no more than $30m a month, a figure that would certainly not permit any growth in the total outstanding. No doubt it would be less cumbersome and more foolproof to get domestic interest rates down to a point that would wipe out the still-operative interest rate incentive for Japanese borrowers to look abroad. But that is another problem.

Why not drop interest rates?

The strongest argument for a further downward twist in Japan's interest rates, particularly in long-term ones, has nothing to do with international affairs : it is the additional underpinning it would give to business at home. No one expects, in present conditions, that lower borrowing costs would directly induce much additional investment. But they would lighten the peculiarly heavy debt burden of Japanese companies, which, even in more buoyant times, is equivalent to 5 per cent of their sales, against roughly ½ per cent for American companies. Nor would a reduction in the interest costs involved in the government's new dash into bond flotations be unwelcome.

The monetary authorities are well aware of all this. The Bank of Japan's discount rate has been cut five times

The 8-point programme

This is not one tidy, agreed package but rather a list of ideas being kicked around and argued about among various ministries. It should not be confused with tighter exchange controls, a separate matter.

Here are the eight points and their objects :

- Placing of dollar funds from foreign exchange special accounts with foreign banks to enable them to repay their overseas borrowing. Object : a real reduction in the reserves.
- Setting aside of more funds from foreign exchange special accounts for investment in long-term foreign government paper. Some money, put at $100m in February, has already been placed in German bonds. Candidates for purchase now include medium and long-term American government bonds. Object : apparent reserve reduction, higher returns and, possibly, some diversification. (Investments with maturities of longer than one year are not counted in official reserves.)
- Placing of dollar deposits with foreign exchange banks to finance more liberal usance credits for importers willing to stockpile basic raw materials, such as non-ferrous ores. Object: conversion of idle reserves into higher imports (a form of reserve diversification, or hedge, at that) and reassurance of key foreign suppliers. A more far-reaching form of stockpile financing from the reserves pushed by Miti seems to have been vetoed by the Ministry of Finance for the present.
- Establishing a government insurance scheme to cover part of the foreign exchange risk involved in overseas investment or the extension of long-term trade credits denominated in foreign currencies. Object : to facilitate long-term capital outflows. The German system is being studied. Arguments over who should bear how much risk, the government or the premium-payer, remain to be resolved. Legislation would be required.
- "Decentralising" of foreign exchange holdings. Under current regulations—the revision of which is expected to be implemented shortly—resident firms and individuals are required to sell any foreign exchange they earn to foreign exchange banks and other authorised agents for the reserves within one month (although trading companies are allowed six months). Under the new regime they will be allowed to open foreign currency accounts with banks. Existing restrictions on the level of foreign exchange holdings of the banks and their conversion into yen will not be affected, however. Interest rates will be pitched to match corresponding foreign rates; the (higher) Japanese deposit rates will not apply. Transfers between residents' and non-residents' accounts will be prohibited. Object : in the short run, apparent reserve reduction; in the longer run, laying some of the ground work for the transformation of Tokyo into an international money market.
- Requiring banks to deposit part of their funds derived from borrowing abroad with the Bank of Japan. The authorities will have power to enforce higher, variable requirements if, as expected, relevant legislation on reserve requirements now passed by the upper house of the Diet, gets through the lower house.
- Further lowering of interest rates to discourage capital inflows.
- Establishing a foreign currency investment and loan fund to enable the government to lend freely to companies (or itself to use reserves) for investment in desirable overseas projects, such as resource development. Since companies could borrow (rather than "buy" with yen counterpart funds) the exchange needed, such investments would not be inhibited by considerations of foreign exchange risk. Object: to convert idle reserves into long-term capital outflows. Probably a non-starter for legal and doctrinal reasons.

HAWKER SIDDELEY

The 1971 Annual Report, which will be posted to shareholders on 26th May, 1972, will include the following comments in the Directors' Report:—

Trading Results

The total Group net profit for 1971, after taxation and minority interests, amounts to £12.4m (1970: £8.1m), which comprises :—

	1971 £m	1970 £m
Group excluding Hawker Siddeley Canada	11.9	7.6
Hawker Siddeley Canada	0.5	0.5
	12.4	8.1

and the amount of the total Group net profit dealt with in the accounts of the parent company, Hawker Siddeley Group Limited, is £7.1m (1970: £7.9m).

Trading profits of the Group excluding Hawker Siddeley Canada amount to £24.7m (1970: £17.0m), which are analysed as follows :—

	1971 £m	1970 £m
Aerospace engineering	11.0	5.6
Electrical engineering	7.8	5.7
Mechanical engineering and Metals	5.9	5.7
	24.7	17.0

Exceptional Items

The significant changes in world currency parities which took place in 1971 give rise to an adjustment on the conversion into sterling of the book amount of overseas interests of the Group.

This is reflected in a net charge of £1.6m shown separately in the profit and loss account as "Exceptional Items" which mainly relates to this accounting adjustment, reduced by the release by Hawker Siddeley Canada of the balance of a provision for special costs and losses no longer required. This charge does not form part of the trading result for 1971.

Financing

Bank loans, overdrafts and acceptance credits of the Group excluding Hawker Siddeley Canada amounted to £15.9m at 31st December, 1971 (1970: £39.9m), and balances in hand amounted to £13.2m (1970: £1.2m). Net bank borrowings accordingly amounted to £2.7m at 31st December, 1971 (1970: £38.7m).

Net bank borrowings of Hawker Siddeley Canada were £3.5m at 31st December, 1971 (1970: £3.1m).

Comments

The year 1971 and the early part of 1972 has been a period dominated by hesitant markets, inflation, currency exchange difficulties and many demands for heavy wage increases, wherever the company operates throughout the world. In the U.K. the various measures taken to reflate the economy did not produce any notable impact on our markets — there are now some signs of improvement.

Trading in mechanical engineering products generally has been below capacity during the period under review, though our companies working in this area achieved a result in aggregate slightly better than last year.

Our electrical sector has been more buoyant in terms of trading and profitability, in spite of rather brittle markets, particularly at home. Exports in this area did well, off-setting the duller home demand. The 1972 Queen's Award to Industry for export achievement in electrical goods was conferred.

The aerospace sector shows a much improved result compared with 1970. Both Hawker Siddeley Dynamics Limited and The de Havilland Aircraft of Canada Limited, which each had a poor year in 1970, did considerably better in 1971, but forward loading in de Havilland Canada remains a cause for concern. Hawker Siddeley Aviation Limited achieved increased turnover and profitability, although there is still depression in the world demand for civil aircraft. Contracts have been placed with the Group in the U.K. for a new training aircraft project and a new missile project both of which have good long term prospects.

Hawker Siddeley Canada (59% participation) made a marginally lower contribution to the Group profitability than in the previous year, reflecting the effects of the Nixon economic measures, depression in the woodlands industry and industrial unrest; prospects now appear to be improving. In Australia economic conditions were not helpful and our companies generally had a difficult year, though we remained particularly successful in power station work.

Looking to the future, the Group's overall position will be greatly influenced by whether world trading conditions improve, and in the U.K. by the effect on the economy of the conflicting pressures which are so notable a feature of the current scene, and by the extent to which Government budgetary policy proves effective. The Directors feel that the Group is in a sound position and well placed to benefit from more confident trading conditions.

Financial Highlights

	1971 £m	1970 £m
1. **Sales**		
Group excluding Hawker Siddeley Canada	410	379
Hawker Siddeley Canada	62	75
	472	454
2. **Direct Exports** (included in Sales)	95	90
3. **Profit after Taxation** and minority interests		
Group excluding Hawker Siddeley Canada	11.9	7.6
Hawker Siddeley Canada	0.5	0.5
Net profit attributable to the shareholders	12.4	8.1
4. **Earnings per Ordinary Share**	25.2p	16.4p
5. **Rate of Ordinary Dividend**	15%	13%

Interim Dividend of 6% paid 7th January, 1972.
Proposed Final Dividend of 9% to be paid on 23rd June, 1972.

Annual General Meeting—The Dorchester Hotel, Park Lane, London, W1A 2HJ, 21st June, 1972 at 12 noon.

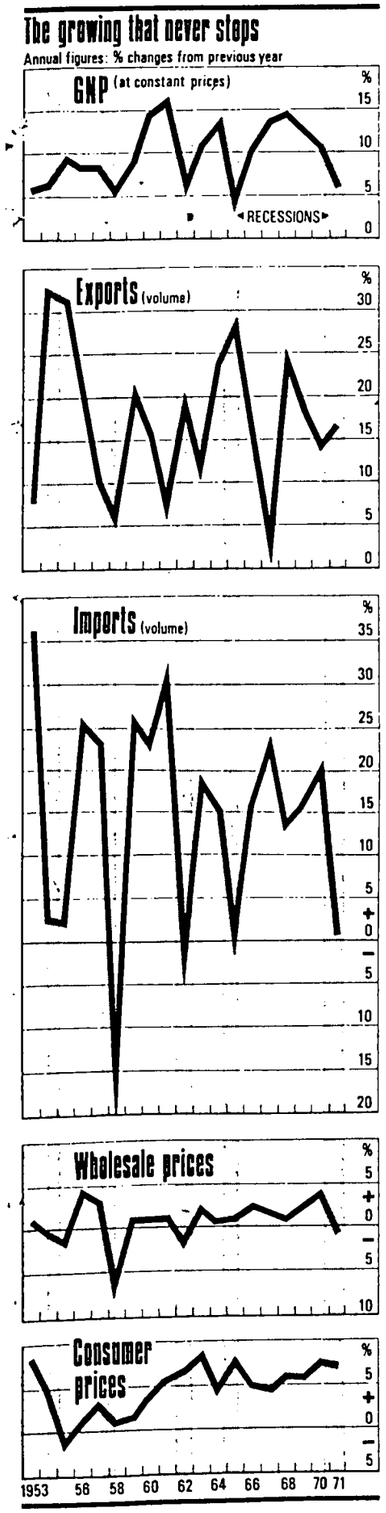
since the autumn of 1970, altogether by 1½ per cent, to a postwar low of 4¾ per cent. The economy is awash in liquidity as a result of the falling-off in company demand for investment funds and the massive influx of dollar funds into Tokyo, particularly since last summer. Two offshoots have been the unusual reduction in the number of bankruptcies and the contribution of idle company funds to the stock market boom. By the end of December commercial bank borrowings from the Bank of Japan, which had still topped $7.7 billion in January, 1971, had been completely unwound—a dramatic change with longer-term implications for monetary management, pointing to a greater reliance on reserve requirements and open market operations as instruments of control.

Market interest rates have fallen in response—the call money rate precipitously, from 8 per cent in early 1971, to just 5 per cent. But the average lending rate of all banks had come down by only a more modest 0.3 per cent to 7.4 per cent by January, although that of the more powerful and competitive city banks had dipped closer to 7 per cent. Moreover, the prime rate on term loans had stuck at 8.2 per cent before coming down to 8 per cent last month. Some further reductions are expected. But the Bank of Japan has, so far, been resisting pressure for a sixth reduction in its discount rate, even though, on April 7th, Miti's Mr Kakuei Tanaka said in public that it should come down by a further 0.5 per cent to 4.25 per cent.

The limitation on any aggressive engineering of further reductions in lending rates is the obdurate opposition of the Ministry of Posts and Telecommunications, backed by an inflation-conscious public opinion, to lowering its rates on postal savings at a time when the highest rate, 6 per cent on 1½-year deposits, is barely able to keep pace with the rise in consumer prices. It is a strong argument in an election year. Yet, while deposit rates are pegged, many of Japan's smaller financial institutions are in serious straits. Their main source of funds is local personal deposits with an effective price tag of 7 per cent (including high handling costs). So lending to the call money market, their main outlet, is loss business. Until the internal quarrel with the postal authorities is resolved, the interest rate policy of the monetary authorities will probably remain inhibited by the fear of unleashing failures among the small institutions.

Growing again

When Japan talks of a recession, it is saying that annual growth in its real gross national product has dropped to 5 per cent (see chart, page 6). On that most un-British definition, Japan has been used to short, sharp recessions, triggered and easily unwound chiefly by deliberate monetary policy. None of the postwar recessions until this one lasted more than 10-12 months. The current recession has now entered its 21st month, and the timing and strength of the upturn is still in doubt, although an increasing number of businessmen in Tokyo are now saying that recovery could be well under way by the summer. Mr Tadashi Sasaki, the central bank governor, recently reported that the current decline had come to an end but that it would be premature to say that the tide had begun to rise.



This time round the slowdown has been reinforced by the tailing-off of investment and near-saturation of markets, not only at home but also abroad, for many of the consumer durables that were among the growth leaders of the 1960s; and by last year's upheavals in exchange rates. In short, this has not just been another stocks cycle—though a rebuilding of these should provide a major underpinning to recovery in the months ahead. Private investment has been held back not by lack of funds but by hard-core overcapacity in major sectors such as steel and chemicals, and by uncertainty over the medium-term outlook for demand—not least overseas. It could revive with a whoosh. But Japan's pace of recovery will remain unusually sensitive to further external shocks.

That said, this has been very much a Japanese recession, that is hardly a recession at all. Growth in real gnp in 1971 was about 6.1 per cent according to the first reckoning ; the gain for the fiscal year ended in March could be somewhat lower, but not all that much lower. The labour market has eased. For the first time in years, there are fewer jobs on offer than jobseekers ; the 0.4 per cent growth in employment in 1971 was the lowest recorded ; and pressure on wages has lessened (settlements in the spring round of negotiations seem to be around 13-14 per cent, against nearly 17 per cent last year). For once smaller companies have been able to recruit some of the school-leavers normally snapped up by their larger rivals. But there has been no real shake-out of labour. In part this reflects the reluctance of employers, particularly large corporations, to break the gentlemen's rules of "lifetime employment." Still, observing the social niceties has not yet become unbearably painful. Easy money has at least seen to that.

None the less, in a $250 billion economy with the high growth (and debt) gearing of Japan, the abrupt drop in annual growth rates—from over 10 per cent in the long boom years to 1970 to less than half by the second half of 1971—has hurt. The margin of unused capacity in manufacturing industry may have approached the high of 25 per cent touched in the 1965 recession. A recent survey of 386 listed companies by the Nihon Keizai newspaper suggested that company pre-tax profits dropped a further 11.4 per cent in the six months to March, after having fallen 13.7 per cent in the previous half-year.

Growth and the balance of payments : fiscal years, April-March

	Weight in total 1970/71 %	1970/71 outturn	1971/72 provisional	1972/73 forecast
		% change from previous year		
Domestic growth : (at constant 1965 prices)				
Private consumption	49.6	+ 7.8	+ 7½	+ 6½
Government spending :				
current	7.0	+ 7.5	+ 8½	+ 6
capital (incl. stocks)	8.7	+10.7	+21½	+25
Private investment :				
plant and equipment	22.8	+11.7	+ ½	+ 3
housing	6.0	+ 7.6	+ 5½	+12
stocks	4.6	+24.7	−60	+40
Exports	13.5	+16.5	+16	+ 3
Imports	12.2	+18.1	− ½	+ 5½
Real gnp	100.0	+ 9.5	+ 6	+ 8
Balance of payments : ($ billion)				
Trade balance		4.5	8.6	8.8
exports		19.9	24.8	27.2
imports		−15.4	−16.2	−18.4
Services and transfers		− 2.1	− 2.1	− 2.4
Current balance		2.4	6.5	6.4
Balance on long-term capital		− 1.3	− 1.8	− 2.5
Basic balance		1.1	4.7	3.9
Short-term capital and omissions		0.9	3.3	
Total balance		2.0	8.0	

But what about private investment in plant and equipment ? All the surveys of manufacturers' plans point to a further decline, for the second year running. This would be an unprecedented retrenchement. However, non-manufacturing concerns and smaller firms are expected to spend considerably more this year. And the money being disbursed on public works is beginning to percolate into the orderbooks of the larger private companies. In the end, the plant and equipment expenditure of private companies could rise by 3 per cent in fiscal 1972, compared with 1971's bare 0.5 per cent.

Add it all up and the guess, in the table, is that the Japanese economy will grow by 8 per cent in real terms in the fiscal year which began on April 1st. This guess is shared by the optimists in Japan, although it is just below the stargazing of the authoritative Japan Economic Research Centre (Jerc) which has plumped for 8½ per cent. Other forecasters, private and official, would place the growth rate anywhere within a 6-8 per cent range, with the annual rate rising from 4-6 per cent in the first half of the year to 8-9 per cent in the second half.

To side with the optimists in Tokyo is usually to come out right. This time round one cannot be so sure. It will not be easy to find growth leaders to replace the earlier high-flyers like colour television sets, air conditioners and cars. Indeed, one danger is that the need to do so has not fully sunk in at the boardroom level. Certainly the current aggressive output and export plans of the automobile makers, their refusal to accept voluntary restrictions on their exports and the breakdown in the long negotiations between Ford and Toyo Kogyo, are ominous pointers.

In the short term the answer to any signs that the optimists are wrong should be easy : another supplementary budget, including substantial tax cuts. But there are considerable political and parliamentary hurdles. The row over defence expenditure has delayed this year's initial budget for weeks on end. If Mr Sato steps down after the reversion of Okinawa, his successor could call an extraordinary session and then go to the country on a popular supplementary budget. But Mr Sato may hold on longer.

Nor is that the only snag. There are legal and doctrinal problems : bonds are supposed to be issued only to raise money for public works and related projects, not for "deficit financing," and the Diet would have to authorise an increase in the bond ceiling. And then there are those who would shy from more reflation for fear of pushing up consumer prices, already rising at 6 per cent a year. However, the fact that consumer prices have continued to rise while wholesale and export prices have been falling steadily is more a symptom of the relative inefficiency of the long-neglected and protected distributive sector than of underlying inflationary pressure. Japanese-style stagflation is not the same as British-style stagflation. Not yet. To allow a sensible policy to come unstuck on fears about consumer prices would be silly, even in an election year.

Yet one comes back to the question, can the leopard change its spots ? Tokyo will resist to the last ditch the suggestion that it should anticipate the troubles of renewed uncertainty about exchange rates and unpeg the yen before it is forced to do so. But this may prove a mistake.

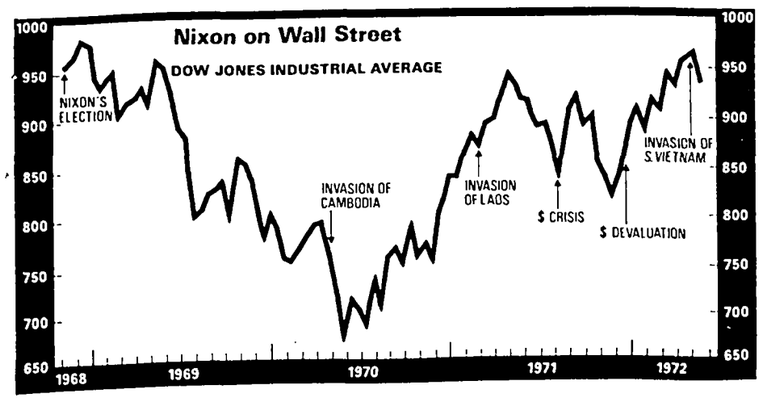
BUSINESS *Investment*



Wall Street beckons, but who wants to leave London ?

With every reverse on the distant plains of South Vietnam prices on Wall Street come tumbling down. As the bad war news flooded in this week the Dow Jones dropped 20 points on three consecutive days, closing on Wednesday at 933. On Wednesday morning a rumour that a seven-day ceasefire was being negotiated in Paris had prices instantly and strongly rallying. But the news was false and down went the Big Board.

This is the time for the foreign investor who has missed out on the Street's recent rise to buy into American stocks. For, despite tough threats from the Price Commission to limit corporate profits further by rolling back prices, doubts about the economy's recovery have evaporated. Corporate profits for the first quarter of the year are now almost all in : they are good and promise to be better in the next quarter. Factory orders for durable goods are well up and business, uncertain of its own recovery even a month ago, has now made up its mind that the future is rosy. Communists, even in the streets of Saigon, will not upset that : the American corporation is in for a good run. The present weakness in Wall Street comes only from a temporary lull in institutional investment and a slight feeling of guilt from the individual who feels that he should not invest at a time when his country looks like suffering its first military defeat. The British investor, with the dollar premium down to only 22%, should feel no such restraint.

In London neither Wall Street's tumble, the docks row, nor even the Stock Exchange's final concession to allow women on to the floor could hold down the Financial Times ordinary index, which reached a record high on Monday of 540.3, and had lost only marginally at Thursday's close of 537.5. With the money supply increasing at an annual rate of 18%, new cash is still flooding into equities.

Much of the money is searching after new issues. The government broker who regulates the flow has his timetable filled until August, which will mean a steady flow until then of five new floats a week. In this bumper time oversubscriptions are reaching ridiculous levels. One company last month, **Lighting and Leisure**, was oversubscribed 193 times, and the average is around 45 times. Investment trusts which normally get a strong reception and fall quickly to a discount have been cashing in on the market mood. Ten major trusts have been floated this year and most of them have gone to instant premiums.

Motors

Tin Lizzy bargains

New York

The canny faithful on Wall Street are now out and about looking for bargains after the market's recent decline. With the three biggest motor manufacturers reporting their first quarter figures last week, the search should not be hard. The motor industry, long spurned as safe but dull, is enjoying a year of surging profits ; but its stock prices are still bumping along in disrepute.

The **Chrysler Corporation** has just reported tripled earnings in its first quarter, and analysts expect earnings for the year to double to $3.50 a share. At $34, it is on a very cheap p/e of 10, and at a time when Wall Street is still blessing burnt-out growth stocks with ratings of 40. Chrysler has had a tough two-year slog of feeble profits and cut dividends, and is therefore regarded as an improbable-looking go-go stock ; it is a better buy for being so.

The motor industry is in for a good year : car production is forecast at something like 5% above last year, and almost back to the 9.3m vehicles put together in 1965. Manufacturers are being helped by the dollar's devaluation, which has undermined price competition from the Japanese and Germans. The new breed of small American cars, the General Motors Vega and Ford Pinto, are now selling well. This should help to win back the 15% slice of the domestic market that importers had captured by last year, and 1972 may well see an average 10% growth in American car manufacturers' earnings. This suggests that the average motor industry share is on

The motor that's the mostest

a prospective p/e of under 11, considerably below the traditional range of 12 to 15. Earnings should be further boosted by a spate of truck sales; truck deliveries are expected to be 2.5m, 25% up on last year.

The Street's main fear about the car industry now is that it may be bitten by the new set of teeth shown by the Price Commission, which has said that companies announcing dramatically improved results must pay for them by price cuts. The commission's yardstick is that companies' profits on sales must not rise above those achieved in the best two years of 1968, 1969 and 1970. This is a formula under which Ford would be most vunerable, and Chrysler least.

Poor **Ford,** which controls a third of the American market, has suffered a number of other much-publicised setbacks, including widespread price reductions last week, dramatic recalls of a record number of cars with mechanical faults, and pursuit by the Justice Department for alleged collusion with General Motors. The stock is therefore $10 down from its recent high of $77. Since analysts are predicting that Ford's earnings should increase from $6.18 a share to $7.25, it is now looking cheap.

The third and biggest of Detroit's big three, **General Motors,** still has one-half of the American car market under its belt. It will show a smaller gain in profits than Ford or Chrysler in 1972, and will probably not recover the premium it has traditionally enjoyed over its rivals. Although it has the highest rating of the three, the shares are not expensive at $78. But its competitors are cheaper.

European breweries

Learning

Germans are the second heaviest, and certainly the most idiosyncratic, beer drinkers in the world. So fond are they of their local brew that it takes 1,800 breweries to produce the 1,980m gallons drunk in Germany each year. Yet beneath the traditional froth, some radical changes are taking place.

The leading Bavarian bank, the **Bayerische Hypotheken-und-Wechsel-Bank,** has announced a new deal which will effectively give it control of the largest concentration of brewing interests in Europe. The Hypo-Bank has acquired a majority stake in the **Dortmunder Union-Brauerei,** which, with its subsidiaries, brews 120m gallons a year. This, together with the Hypo-Bank's other interests, including a stake in **Löwenbrau,** will give it a 17% share of the market. This makes it almost half as big again as **Bass Charrington** and the number three in Europe, **Allied Breweries.**

The massive consolidation of breweries in Britain over the past decade has shown how spectacularly size becomes profit. Dortmunder, therefore, at DM440 a share, looks like a stock with plenty of growth ahead as the scope for rationalisation and new acquisitions is great.

The Hypo-Bank's move gives it a clear lead over its main German rivals **Reemtsma-Cigaretten Fabriken** and the **Oetker** food group. Over the past few years these three groups have been buying as many breweries as they can, with the pace initially dominated by Reemtsma, which was anxious to find a major area of diversification outside its traditional tobacco market.

But the Reemtsma expansion ran into trouble when it failed to obtain more than 26% of Dortmunder. Eighteen months ago a large packet of shares came to the Hypo-Bank through another bank which had an investment in one of Dortmunder's subsidiaries, and this gave the Hypo-Bank its commanding 38%. Reemtsma could do little but negotiate the best terms for a tactical withdrawal. What these terms are no one knows, but it is presumed they give Reemtsma the main outside interest in another of the large German breweries, the **Hannen-Brauerei,** and lots of cash.

What all the groups are trying to achieve is a national organisation with a single management that can make beer in really large breweries (the average brewery in Germany produces only 1m gallons, about one-seventh of its British counterpart). But with backroom bank dealing and no national stock market on which to acquire and consolidate smaller breweries, the process will be longer than in Britain; now is the time, therefore, for the British breweries to expand further in Europe. The next thing to come is national brands. Oetker tried at the top end of the market with its Prinz-Brau, and failed expensively. Meanwhile the little breweries are becoming more amenable to co-operation. The Deutsche Brau-Kooperation ties up 34 breweries, with about 9% of the market between them.

Precious metals

Gleaming

It has been another shining week for gold with the London free market price at a record $50.50 an ounce—just 25% up since the start of the year. Most of the recent rise in the bullion price has been in a very thin and spasmodic market, but one almost entirely without sellers. The demand for gold shares and gold mining finance houses, however, has been growing increasingly. Despite a 38% improvement in the Financial Times gold share index during the past four months, investors in Wall Street and Europe continue to flock into gold equities. The speculator might find this excuse enough to buy these stocks even though recent financial results from the mines have shown that costs have eaten into new profits.

The sudden rise in gold last week stole the headlines from some strange speculation in platinum shares. In the past three weeks **Potgietersrust Platinum,** the major partner in the Rustenburg mine that produces 70% of the free world's platinum, went up 25p to 132p. The two other partners, **Waterval** and **Union,** both put on 49%. The immediate excuse was a report that the American Administration had been inquiring whether South Africa could produce 2m ounces of platinum by 1976, supposedly to meet the American motor industry's requirements for platinum catalysts in exhaust control. But, despite constant rumours from the platinum lobbies, no American manufacturer has yet decided on the use of platinum.

Last summer, amid a blaze of speculation that platinum would be adopted, its free market price rose suddenly and then, when Ford announced it was using the catalyst only experimentally and only in California, flopped back again. Although the free market failed to respond to last week's news and kept the price firmly around £39 an ounce, the stock market's memory seems somewhat shorter. Despite massive cutbacks in Rustenburg's production, platinum is likely to be in over-supply for another five years, and even then the traditional suppliers will have to compete not only with Russia's massive sales but with the development of new mines like those of Impala and **Lonrho.** While it is certain that the price of Potgietersrust Platinum will return nearer to its old high of 376p, it will be a long slog and not one founded on rumours.

The price of silver, the most widely held of the free precious metals, has also a long haul to recover its old heights, but in the past week it has climbed back to 159 cents an ounce, the best level since the dollar's float. Nonetheless, silver remains about the worst investment that a commodity speculator could have made in the past four years, and in the United States, at least, there are so many private investors longing to get out of their silver losses and safely back into equities that there can be little improvement in the price without it being cut back by immediate selling.

Stock exchange rules

A loophole

A brave attempt to assert the rights of shareholders was squashed on Wednesday. This issue was the recent deal between **George Wimpey,** the building firm, and **Oldham Estates,** Mr Harry Hyams's property group. Wimpey has held a 40% stake in Oldham for some time, but has drawn little income from it because of Mr Hyams's policy of keeping properties, like the Centrepoint block, empty. Although the value of the stake rocketed up, Wimpey grew increasingly hungry for a spot of cash.

Three weeks ago, Wimpey made a deal with Mr Hyams to sell to him most of the holding in return for £32m. The decision to sell the Oldham holding was sensible; the manner of doing so was not. Since Mr Hyams is a director of Wimpey, it was doubly important that any deal was not only fair, but seen to be fair. Not only was the deal made at a price lower than most of the City expected, but shareholders were given no information to judge for themselves.

At Wednesday's meeting, Sir Godfrey Mitchell, Wimpey's chairman, agreed he was wrong, but said he had not had the Oldham properties valued independently because it would be expensive. It may be costly to give shareholders the facts, but that is the obligation of a public company. Some shareholders turned up the stock exchange rulebook, but to no avail. Although it lays down that a company which sells a large property or property company must produce a valuation if the value has risen over 20% since acquisition, it does not cover a sale of shares.

It was left to a small firm of stockbrokers, Sandelson & Co, to take up the cudgels. It tried to drum up a counterbid, but time was too short, so it applied to the high court to get a postponement of Wednesday's meeting. The court turned this down. Another action to stop the charitable trusts (set up by the current chairman and controlling 42% of Wimpey) from backing the deal also failed.

So the deal went through by 43 votes to 26 on Wednesday. But the rebel shareholders should not leave it there. Wimpey, like many other companies, has a poor record on disclosing information. City institutions are equally culpable for being too fearful of using their power of challenging boards of directors. If institutions are not ready to give a lead, what hope is there for the private shareholder?

Retailing

Hard sell

British Home Stores has put mighty **Marks and Spencer** temporarily in the shade. Although both have suffered from a poor patch in the clothing trade, BHS, with some 60% stake in it compared with Marks's 70%, has come out on top. Indeed, BHS has produced a startling 40% rise in pre-tax profits in the year to April 1st, taking them to £9.5m, on sales up 15% to £83m. Marks, over the same period, managed only a 7% rise in pre-tax profits.

It is an appropriate flourish to round off the six-year career as managing director of BHS's Mr K. Mackenzie. During his time BHS has cunningly pared back the conventional lines and pushed ahead in products like home-lighting and millinery (surprisingly, it is now Britain's largest supplier of both). Diversification paid hands down last year when demand was more buoyant for household goods and high margin cosmetics than for clothes. BHS also coined good profits on the restaurants it runs in over half its 95 stores.

BHS's margins rose 4.3 points to 13.7% in the second half of the year and this must reflect a relaxation in price containment. So BHS's price leeway in 1973 is likely to be less than Marks's; some of last year's spectacular profit has been snitched from current trading. But 1973 looks bright for both BHS and Marks. Clothing sales must pick up eventually. The market rates this future highly, selling both Marks and BHS on a p/e of 28. This looks justified. But while Marks will maintain its steady acceleration, BHS can hardly be expected to improve on this past year's growth. This counts against it as a current market purchase. And Marks emerges again with the look of the better longer-run investment.

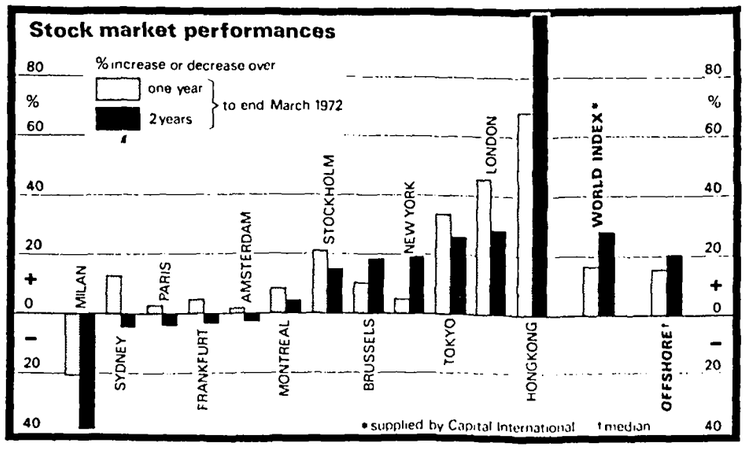
Offshore funds

Some are more international than others

The Nixon Administration will probably send legislation to Congress in a few weeks' time to allow onshore offshore funds. Such animals—called foreign portfolio sales corporations—would allow foreign investors to buy mutual funds regulated by the Securities and Exchange Commission, but having substantial, although not complete, freedom from American taxation (from capital gains and estate tax and perhaps from withholding tax). This way was first proposed in an SEC institutional investor study last year, and an SEC intergovernment agency task force has now largely completed the detailed work. With the pressure of legislation going through Congress before the election, there is not much hope of the laws being passed in this session, but they almost certainly will be on the statute books next year.

Whether existing offshore funds would come ashore depends on how they evaluate the trade-off between SEC protection as a selling point and the payment of a certain amount of taxation. The memory of IOS has blighted the prospects of offshore funds sold to the public on a retail basis, and the trend has been away from such sales towards providing a method of international investment for institutions and for rich individuals. The funds for which we show performance figures (the statistics are provided by Seiden and de Cuevas International, the subsidiary of the New York brokerage house) are all, to the best of our knowledge, audited—and the fundholders in them should have little to worry about from the fact that they operate in an unregulated vacuum. But if fund managements again want to go after the mass low-tax paying market, then the new American offshore funds might prove very attractive.



The American market is still the most popular one with international investors, and many funds are set up to invest there. In fact, since so many funds aim to invest in a particular geographical area and do not intend to use the theoretical freedom to invest internationally, we have tried to arrange our tables this time by segregating funds into four categories (some funds, admittedly, have been difficult to classify).

The most spectacular performance is by the funds committed to Japan and other Far East countries (mainly Hongkong, Singapore and Malaysia). The markets and currency realignments have been with them and they have nearly all beaten the relevant indices, more or less handsomely. The American specialists inevitably show up unfavourably with the best of the international funds because of Wall Street's less ebullient performance compared with either London or Tokyo. But far more funds concentrating on the United States have beaten their market than roving ones have beaten the averages of their markets.

Few American funds can be described as high flyers over the past two years, apart from the **Buttress Apollo Fund**. The larger **Frobisher Fund**, in which London brokers Cazenove have a big hand in investment management, stands out for consistently strong performance. It benefited from a courageous early move back into the market; it was fully invested by June, 1970. And subsequently it got things right in the smaller-league growth companies whose performance has led Wall Street up, as it has done in London. Frobisher's managers now hope to repeat the performance in Europe, where 20% of the fund is invested. The nasty fate of **Neuwirth International** highlights how fund management gets harder as the funds get bigger. The fund's excellent performance in 1970 was when it was less than $1m, but the absorption of a couple of funds bumped it up to $7m and pushed down performance to the worst on our listing.

The top "international" funds over the periods involved are naturally enough those which have invested heavily in Britain. The terms of reference of **M&G Island** and **New Court Overseas** commit them to predominantly British investment (so they are not strictly international). They do not show a particularly good performance against the Financial Times Actuaries all-share index. Rather more impressive is the **Slater Walker International Fund**, whose concentration on Britain in 1971 reflects a positive change of tactics after some grim experiences in Japan and Australia which still dim the longer-term figure. The fund's policy not only reflects the firm's bullish view of the British market last year but also a decision to get back to familiar territory. The managers have not, however, remained Britain-bound and now have 30% in Canada and a 10% holding in Europe which will increase.

The Far Eastern investment fraternity has acquired much expertise, in particular the partnership of Jardine Matheson, the Hongkong trading company, and Robert Fleming, the London merchant bank, with brokers W. I. Carr also in the background. Apart from the funds shown in the tables, the Jardine Fleming label applies to a

number of smaller funds which have also performed well. **Jardine Eastern Trust**, formed last February, has grown remarkably in this short time and strikes a novel note by investing purely in the Singapore and Malaysian markets. The **Save & Prosper Sterling Fund** has 11% of its portfolio invested there, though this fund is not managed by Robert Fleming, who manage many of the S&P funds, but by Ivory & Sime. The Singapore market has risen about 50% in the past year, so Eastern Trust's rise of 125% is something of a triumph. Its managers' long-term outlook for the market remains enthusiastic: there is the substantial oil exploration activity in the Straits of Malacca, the encouragement of foreign capital to Singapore, and the general growth of an industrial infrastructure in Malaya and Indonesia. In the short term, however, some marking time is expected.

The Far Eastern grouping also includes several funds with the unusual brief to invest in countries around the Pacific Ocean—the United States and Australia as well as the Far East. The knack here is getting the timing right; and yet the greater freedom of movement these funds have allowed themselves has not invariably paid off. It has for **Fidelity Pacific** but less well for **Transpacific** and **Pacific Seaboard**, whose mistake seems to have been a fit of nerves over Japanese prospects last year and premature enthusiasm for the United States.

As usual, the most dismal performers on our lists are those funds stuck with a problematical specialisation and unwilling or unable to get out of it. **First Investors Mining and Petroleum** stays bottom of the bunch. Other disappointments are again the most diversified funds of the lot—the "funds of funds"—whose job is to judge the expertise of fund managements and back them. The results scarcely justify an extra layer of management fees.

Offshore and overseas funds performances

CHAIRMAN'S STATEMENT

THE ROYAL LONDON MUTUAL INSURANCE SOCIETY LIMITED

RECORD RATES OF BONUS

Mr. E. H. Haynes on implications of Common Market

THE FOLLOWING is an extract from the statement by the Chairman, Mr. E. H. HAYNES, F.I.A., who presided at the 111th Annual General Meeting of the Royal London Mutual Insurance Society Limited which was held on 25th April at Royal London House, Finsbury Square, London, EC2A 1DP.

A result of the unsettled conditions of the past year or two has been a return to public favour of the more conventional methods of saving and from this our own business has benefited substantially. The year ended 31st December, 1971 marked the completion of another triennium for the Society. The growth of the Society's business during this period can be seen from the following table.

Ordinary Branch

Year	No. of New Policies	New Sums Assured £	New Annual Premium Income £
1968	22,638	38,869,000	1,064,000
1969	24,191	42,418,000	1,239,000
1970	25,367	46,745,000	1,406,000
1971	25,746	53,789,000	1,597,000

Industrial Branch

Year	No. of New Policies	New Sums Assured £	New Annual Premium Income £
1968	218,035	33,182,000	1,776,000
1969	223,154	36,562,000	1,979,000
1970	219,725	39,465,000	2,171,000
1971	193,920	40,854,000	2,231,000

In terms of premium income the Ordinary Branch new business written in 1971 showed an increase of over 50% compared with 1968; indeed, the new premium income has more than doubled since 1966. These are very impressive results which reflect the attractions of our policies in a very competitive market and the success of our sales staff in promoting them.

Although the increase in the Industrial Branch new premium income over the triennium was 25%, a figure achieved against a background of radical reorganisation, it is a disappointment to the Board that the momentum achieved in 1969 and 1970 was not repeated in 1971. I am pleased to say that the results so far this year indicate a renewed upsurge in our Industrial Branch production.

Changes of Tax System

It is becoming almost a habit for me to refer to new problems which face us in respect of new or prospective legislation. This year is no exception. The list is formidable. Revision of Corporation Tax, Value Added Tax, entry into the Common Market, all these are demanding our attention.

It was only six years ago that taxation bases underwent a complete change with the introduction of Corporation Tax. Now another major revision of the tax system has been announced.

I welcome these new proposals since the likely rates of tax should result in a reduction in the Society's tax liability, to the benefit of our policyholders. There is however one aspect of the new system affecting Life Offices which merits careful consideration.

It would be a new departure for Life Offices to suffer tax on investment income reserved for policyholders at a rate higher than the basic rate of personal income tax.

The argument of the supporters of Value Added Tax is that this new form of tax is broadly based and is therefore a good revenue raiser. Although there may also be other factors operating in favour of this method of taxation it is not yet generally appreciated that this new system will introduce a vast amount of unproductive work into business organisations in this country. It is already recognised that Her Majesty's Customs and Excise will require a large additional staff to administer this tax. This will only be the tip of the iceberg. Hidden beneath the surface will be the staff required by the business and trading concerns throughout the country who will first have to master the intricacies of the new tax and then operate the new procedures.

Common Market

Our forthcoming entry into the European Economic Community will of course have far reaching implications for us all.

We have been accustomed in this country to conducting our life assurance business in an atmosphere of "freedom with publicity." We have been able to invest our funds to the best possible advantage of our policyholders without restriction, the only constraint being the self-imposed one of the need to ensure the security of the funds entrusted to our care. At the same time, our high professional standards, developed over a long period, have ensured that the absence of statutory controls on the bases used for the valuation of Life Fund liabilities has not detracted from the security afforded to our policyholders. In contrast, in many European countries considerable restrictions exist on both investment of funds and on the valuation of liabilities.

It will be necessary to achieve some degree of harmonisation of the legislation of the various countries in the enlarged community but I would strongly deplore any move to lessen the freedom on which depends the very favourable benefits paid to our policyholders.

Record Bonuses

In the past few years the marked fluctuations in the price of ordinary shares, the variation in yield obtained on gilt-edged stocks and the rapid rise in property values have presented an ever changing problem to be analysed by our Investment Managers. The advice given to the Board by our Investment Managers has enabled the Board to follow a successful investment policy. As a result the valuations carried out by the Actuary as at December 31, 1971, have shown a substantial surplus in both branches. These valuations have been carried out on a very stringent basis to ensure the greatest degree of security for our policyholders and yet the surpluses that have emerged have enabled the Directors to declare the highest bonuses in the history of the Society.

At the end of 1970 the value of equity shares was relatively low and the Board, following the principle that capital profits should be evened out over the years, maintained the previous special final bonus. Now that market values have improved the Board have decided to take credit for a proportion of our capital appreciation by writing up the book value of the Ordinary Branch investments by £6,000,000 and of the Industrial Branch investments by £17,500,000 and transferring these sums to the corresponding Life Funds. As a result of this the Board have been able to extend the scope of the Special Final Bonus in both Branches.

Ordinary Branch

A simple Reversionary Bonus has been allotted to fully-participating policies at the rate of £4.00 per cent. in respect of the year 1969, £4.20 per cent. in respect of the year 1970 and £4.40 per cent. in respect of the year 1971.

The transfer into the Life Fund resulting from the writing up of assets in this Branch has enabled the Board to allow until further notice a Special Final Bonus at the rate of £1.50 per cent. of the Sum Assured and attaching Reversionary Bonus (including the Reversionary Bonus allotted for the three years ended 31st December, 1971) in respect of each year in force as a participating policy prior to 1969, on participating policies which become claims by death or maturity. This Special Final Bonus will be limited to a maximum of £49.50 per cent.

Interim Bonus will be payable during the ensuing year at the rate of £4.40 per cent. per annum subject to withdrawal or modification by the Directors at any time without notice.

Industrial Branch

A Reversionary Bonus has been allotted on the Sum Assured (exclusive of any previous Bonus additions) payable on death or maturity of endowment under policies (other than Double Endowment or Child's Endowment) on which premiums were being paid on the valuation date, at the rate of £2.60 per cent. in respect of the completed calendar year 1969, £2.80 per cent. in respect of the completed calendar year 1970 and £3.00 per cent. in respect of the completed calendar year 1971. On Double Endowment policies the Reversionary Bonus will be at the foregoing rates reduced by 50p per cent. in each of the three years.

As was the case in the Ordinary Branch the sum transferred to the Life Fund as a result of writing up the assets has enabled the Board to make an improved allocation of Special Final Bonus. Accordingly a Special Final Bonus at the rate of £1.40 per cent. per annum of the Sum Assured and attaching Reversionary Bonuses (including the Reversionary Bonus allotted for the triennium ended 31st December, 1971) in respect of completed calendar years prior to the 1st January, 1969, will be allowed until further notice on premium-paying policies which become claims by death or maturity subject to a maximum additional bonus of £46.20 per cent.

General Branch

The premium income for this Branch in 1971 was £2,322,000, an increase of £357,000.

The total income of the Society during 1971 was £43,899,000. The total funds at the end of the year amounted to £287,018,000, an increase of £32,025,000. The benefits paid to policyholders amounted to £22,821,000.

The report and accounts were unanimously adopted.

NIGERIA HIGH COMMISSION,
9 Northumberland Avenue,
London, WC2N 5BX.

CHAIRMAN'S STATEMENT

youghal carpets

Steady and significant progress maintained

- Pre-tax profits increased from £796,930 excluding £109,581 for revaluation of patterns to £1,024,911. Final dividend of 27% recommended making 42% for the year (1970 39%). A 1-for-3 scrip issue also proposed.
- Over the past nine years there has been a steady and significant improvement in profits and earnings per share have risen from 2·5p to 14·8p after adjusting for Scrip and Rights issues.
- Trading conditions during the year were generally satisfactory and overall sales increased by 18% to £12,332,000. As a whole, good progress and high activity was achieved.
- In the opening months of 1972 sales and orders are ahead in all plants and the Group looks forward to a further year's successful trading.
- It is believed that entry into the E.E.C. will provide tremendous opportunities for the Group. It is hoped at an early date to make a significant move in the direction of a foothold on the European Continent.

Copies of the Report and Accounts are available from the Secretary, Youghal Carpets (Holdings) Limited, 1 South Mall, Cork, Ireland.

APPOINTMENTS

LONDON GRADUATE SCHOOL OF BUSINESS STUDIES

Lecturer in Marketing

Ideally we are looking for someone who has had formal training in business administration as well as significant industrial experience. The successful applicant will be expected to teach executives and graduates, to design and carry through his own research, to participate in programme administration, and to engage *actively in consulting*. The salary scale for the lecturer grade is currently £1,641 to £3,999, plus a London Allowance of £162.

Applications should include a summary of facts about the applicant's education and experience and be addressed to

Professor K. Simmonds,
London Graduate School of Business Studies,
Sussex Place,
Regent's Park,
London NW1 4SA.

CHAIRMAN'S STATEMENT

EARNINGS PER SHARE	4.0p	3.6p	2.4p*

*1969 adjusted for Scrip issue

1971 proved to be yet another record year for the Group despite the poor industrial climate that prevailed throughout the year. Furthermore, the improvements that have taken place in our organisations and our major developments enable us to view the future with reinforced confidence and enthusiasm. The benefits arising from the acquisition of Wild Barfield Limited and its subsidiary companies only affected 1971 for the last 50 days of the year whereas 1972 will feel the advantages for a full year. The current year will benefit to some extent from several schemes that are only now coming to fruition and from the acquisition of Darnall Limited.

The upturn in demand for engineering products has been slow to develop and the first two months of 1972 were adversely affected by the miners' strike. However, the general outlook is improving and all Divisions of the Group entered 1972 with healthy order books along with the capacity to take advantage of better trading conditions to ensure continued growth in the current year. The Group is selling an increasing volume of goods abroad and these sales are expected to expand further in 1972 and subsequent years.

D. D. E. VIVIAN, *Chairman*

SENIOR ENGINEERING GROUP LIMITED,
SENIOR HOUSE, 21, DERBY ROAD, WATFORD

THE LONDON GRADUATE SCHOOL OF BUSINESS STUDIES

Lectureships in Accounting and Finance

The London Business School invites applications for two lectureships in accounting and finance to be filled in the autumn of 1972. The holder of one of these posts will be expected to teach courses in financial statements on the M.Sc. Programme and the other to teach management accounting on the same programme. Both should also be capable of teaching other aspects of financial control and show a keen interest in developing this field along modern lines.

The School is also interested in appointing a lecturer, or possibly a senior lecturer, in CORPORATE FINANCIAL MANAGEMENT. The holder would be expected to teach courses on the M.Sc. Programme and on executive programmes. He should show some positive evidence of his interest in research in some aspect of the subject.

Application forms can be obtained from Professor H. B. Rose:
The London Business School,
Sussex Place,
Regent's Park,
London, NW1 4SA.

LECTURERS — ECONOMICS

Lecturer/Senior Lecturer

The London Business School requires a Lecturer or Senior Lecturer in Economics, with main interests in the practical applications of micro-economics to business problems. Experience in business is most desirable. The appointment would be for three to five years initially.

Lecturer

The School also requires a Lecturer in Economics for a two year period, who may be less experienced in business. The holder of this post would spend part of his time engaged in case development. Those appointed will be encouraged to undertake some consultancy work.

Salaries for these posts will be in the ranges:
Lecturer—£1641-£3999, plus L.A. of £162.
Senior Lecturer—£3852-£4734, plus L.A. of £162.

Membership of the F.S.S.U. as usual applies. For further particulars, please reply to:

Chairman, Economics Department,
London Business School,
Sussex Place,
Regent's Park,
London NW1 4SA.

APPOINTMENTS

Stevenage Development Corporation

Assistant Research Officer £1644-£2199

An Assistant Research Officer is required in the Social Relations Department of this New Town Development Corporation. The Department is responsible for social and economic research and advice to the Corporation on the social aspects of planning and community development.

Applications are invited from economists or other social science graduates with relevant experience. An interest in the application of research techniques to problems of town planning and development would be required.

Further details may be obtained from the Senior Administrative Officer, Stevenage Development Corporation, Swingate House, Danestrete, Stevenage, Herts., to whom applications should be sent not later than 31st May, 1972.

University of Keele

Lecturer in International Relations

Applications are invited for the post of Lecturer in International Relations in Department of Politics. Salary in scale £1,641-£3,999 per annum. Application forms and further particulars may be obtained from the Registrar, The University, Keele, Staffs. ST5 5BG, to whom they should be returned not later than 26th May, 1972.

University of Auckland
NEW ZEALAND

Chair in Economics

Applications are invited for the above-mentioned Chair from candidates with appropriate academic qualifications and professional and research experience in any of the major fields of Economics, particularly Economic History or Economic Theory.

Two of the three established Chairs are held by Professor C. A Blyth and Professor G P. Brase. The advertised position is to replace Professor A. R. Bergstrom who has recently taken up a Chair in the United Kingdom.

Professorial salaries are at present established within the range $NZ11,698-$14,947 p.a. having regard to the qualifications of the successful candidate. In the case of new members of staff coming from overseas, the current practice is to pay salaries from an approved departure date.

Further particulars and information about superannuation, travel and removal expenses and application procedure available from the Association of Commonwealth Universities (Appts), 36 Gordon Square, London WC1H 0PF (Tel: 01-387 8572).

Applications close on *5 June 1972.*

University of Cape Town

Senior Lecturer/Lecturer in Economic History

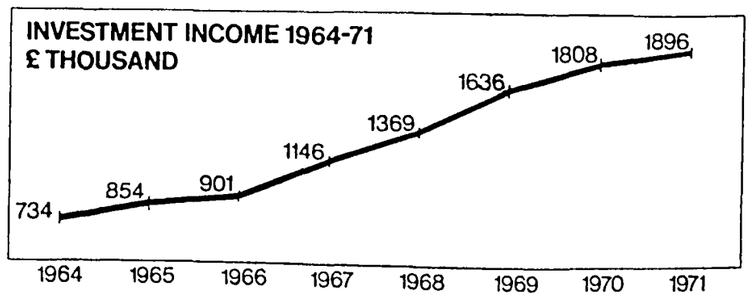
Applications are invited from candidates with good academic qualifications and experience in Economic History. Special qualifications in African Economic History and/or Economic History of Developing Countries would be an additional recommendation, in view of the institution of a special course in African Economic History and a link-up between the teaching of Economic History, Comparative Economic Systems and Development Economics.

The salary scales are:

Senior Lecturer R6,300 x 300-6,100 per annum; Lecturer R4,800 x 300-6,900 per annum.

In addition a vacation bonus is payable in accordance with Treasury regulations. The starting salary will be determined in accordance with the qualifications and experience of the person(s) appointed.

Applicants should state their age, nationality, marital status, academic qualifications, publications and special interests, and should give the names and addresses of at least two referees, preferably those able to evaluate the applicant's academic merit.



Two copies of the application should reach the Secretary-General, Association of Commonwealth Universities (Appts), 36 Gordon Square, London WC1H 0PF (from whom memoranda giving the conditions of service, including transport expenses on appointment, and information on the work of the Department may be obtained) not later than *15 June 1972.* A third copy of the certificate, should be sent direct by airmail to the Registrar, University of Cape Town, Private Bag, Rondebosch, Cape Town, South Africa, by the same date.

The University reserves the right to appoint a person other than one of the applicants or to make no appointment.

CHAIRMAN'S STATEMENT

Artagen Properties Limited

	1967	1968	1969	1970	1971
Net rental income	£775,402	£948,461	£1,213,348	£1,388,939	£1,543,151

Earnings per 25p share	2¼p	2¼p	3¼p	3¾p	4½p
Market value of properties			£24·2m	£26·95m	£32·3m
Net asset value per 25p share				105½p	118p

Points from the Statement by the Chairman, Mr. D. E. Webb, F.C.A., at the 105th Annual General Meeting on April 26th 1972:—

Progress continued in 1971. An office development in Wolverhampton was started and others in Melbourne and Brussels will start in 1972. New development sites and industrial purchases were made and the total expenditure made, committed and authorised amounted to £11,000,000. The dividend was raised to 14% and £166,264 placed to revenue reserve. Capital reserves rose by £442,876. Between the 5th April 1965 and the 5th April 1972 the share price increased by 467%.

Copies of the Report and Accounts for 1971 may be obtained from the Secretary at: 160 Brompton Road, London, SW3 1HS.

APPOINTMENTS

University of Liverpool

Lecturer in the Department of Economics

Applications are invited for the post of Lecturer in the Department of Economics tenable from 1 October, 1972. Preference will be given to applicants with major interests in either economic theory, mathematical economics or econometrics, although specialists in any main areas of economics will be considered. The initial salary will be within the range of £1,641-£1,935 per annum, according to qualifications and experience, on a scale rising to £3,999 per annum.

Applications, together with the names of three referees, should be received not later than 22 May, 1972, by the Registrar, The University, P.O. Box 147, Liverpool L69 3BX, from whom further particulars may be obtained. Quote ref. RV/E/13847.

The Royal University of Malta

Applications are invited for the following posts:
(a) CHAIR OF ECONOMICS
(b) CHAIR OF PHYSICS
(c) LECTURER IN ENGLISH LANGUAGE, with a special interest in Linguistic and language laboratory techniques
(d) LECTURER IN CHEMISTRY. A Physical Chemist or Physical/Inorganic Chemist is required
(e) LECTURER IN MATHEMATICS. Specialism required is functional analysis.

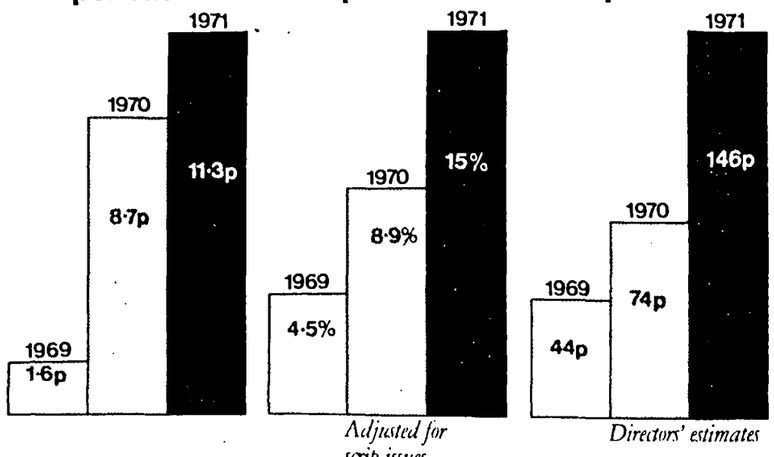
Appointees to posts at (a), (b) (d) and (e) will be required to lecture to students pursuing studies in degree courses; and selected applicants to the other posts will be required to lecture to Junior College and/or degree students. They will also be expected to work in the research field of the respective department. Salary scales: Chair £3,465-£4,015 p.a. Lecturer £1,870-£2,640 p.a. (including overseas allowance).
Also, a cost-of-living increase of 75p per week is paid. FSSU. Passages provided for appointee, wife and children under 15 years of age, up to a maximum of £75 per head on appointment and final termination of contract. Detailed applications (6 copies) naming 3 referees by 26 May 1972 to Inter-University Council, 90/91, Tottenham Court Road, London W1P 0DT, from whom particulars are available.

University of Auckland
NEW ZEALAND

Senior Lectureships/ Lectureships in Economics

Applications for the above-mentioned posts will be welcomed from candidates in any of the recognised branches of economics, including in particular Economic History and Monetary Theory.
The present salary scale for a Senior Lecturer is $NZ7,278 rising to $8,379 p.a. In exceptional cases the Council may extend this scale up to $9,358. For a lecturer the scale is $NZ5,589 rising to $7,149 p.a. Commencing salary within the appropriate scale will be determined in accordance with qualifications and experience. In the case of new members of staff coming from overseas, the current practice is to pay salaries from an approved departure date.
Further particulars and information about superannuation, travel and removal expenses and application procedure available from the Association of Commonwealth Universities (Appts), 36 Gordon Square, London WC1H 0PF (Tel: 01-387 8572).
Applications close on *5 June 1972.*

London School of Economics
(UNIVERSITY OF LONDON)



Research Officership, Department of Geography

Applications are invited for immediate appointment to a Research Officership in the Department of Geography, in connection with a project investigating the suitability of fitting two-dimensional mathematical functions to various spatial data series in order to achieve transformation from one area system to another. The project, sponsored by the Department of Environment, has been set up to assess the possibility of using such procedures for obtaining comparable data over space and time for planning purposes. The appointment is open to graduates in mathematics, statistics, econometrics or operational research and preference will be given to candidates with some postgraduate training and computer programming experience. The appointment will be for 10 months' duration and will be on the salary scale for Research Officers of £1641 x £147—£2082 a year plus £162 a year London Allowance. In assessing the starting salary consideration will be given to age, qualifications, and experience. Applications should be received not later than 22nd May, 1972 by the Administrative Officer (Room H610), The London School of Economics and Political Science (TE/6), Houghton Street, London, WC2A 2AE, from which application forms should be obtained.

APPOINTMENTS

Econometrician

Power-Gas Limited, international process and engineering contractors to the chemical, petro-chemical, oil, gas and non-ferrous metallurgical industries, wish to appoint a qualified economist or statistician within their central Market Information Services Department in London.

Responsible to the Head of the Department, he or she will be concerned with long and short-term market evaluations and the quantitative analysis of factors affecting future process plant investment to determine market opportunities in existing and new fields of operation. It is possible there will be involvement with overseas affiliate companies.

Aged under 30, applicants must have two to three years' experience in the application of statistics to industrial marketing operations and planning, and preferably have some knowledge of the chemical or petro-chemical industry.

This is a new appointment and one in which there will be every opportunity to contribute substantially to the future growth of the Company. A working knowledge of German would be useful but is not essential.

Salary and conditions of service are first-class and assistance will be given with relocation expenses where appropriate.

Please write in confidence giving full personal and career details to the Personnel Manager, Power-Gas Limited, 8, Baker Street, London W1M 1DA.

APPOINTMENTS

Economists and an O.R. Analyst

Posts in the newly formed Civil Aviation Authority

Last month the Civil Aviation Authority was established as a public authority outside the Civil Service. Its main tasks are the regulation and forward planning of the air transport industry; the licensing of air services; the control of the airworthiness of aircraft; the planning of the future pattern of airports; and the operation of the National Air Traffic Control Services.

The ECONOMIST posts—there are six of these—offer work that lies mainly in the micro rather than macro-economic field. Applicants will need to be well versed in the principles of industrial economics, and able to apply them to a wide range of novel problems. A specialised knowledge in one or more of the following areas would prove particularly useful, pricing, cartel and regulation theory and practice, transport modelling techniques; O.R. techniques; a branch of applied science or engineering.

Available posts with salary scales (including London allowance): Senior Economic Adviser, £5,175—£6,475*; Economic Adviser (2) £3,653—£4,883; Senior Economic Assistant, £2,476—£2,984; and Economic Assistant (2) £1,530—£2,325. The level of appointment depends on qualifications and experience.

**The Senior Economic Adviser salary scale is currently under review.*

The SENIOR O.R. ANALYST post is within the Directorate of Operational Research and Analysis. The work will be concerned primarily with system modelling problems of operational safety and with the design and analysis of aircraft noise surveys. Applicants will need several years O.R. or related experience, and a thorough knowledge of applied statistics and probability theory.

Salary scale £3,653—£4,883 including London allowance.

Write for an application form and full details, stating the post that interests you, to: The Civil Aviation Authority, Personnel Branch, Room 513, 129 Kingsway, London WC2B 6NN. Please quote reference no. EJ 67/080/C. *Completed application forms must be returned by 25th May.*

How our man-on-the-spot® in Madrid paved the way for an automobile firm.

When a large European automobile company needed some electrical parts for a new model car, its representative had just three hours to reach an agreement with a Spanish supplier.

That's when the man-on-the-spot from our Madrid representative office stepped in and showed the car company a thing or two about speed. He met the customer at the airport. Rushed him through Madrid's famous traffic. Saw that he got together with the Spanish manufacturer. Stood by while a tentative supply agreement was reached. Got him back to the airport in time to catch his plane home.

Our man helped arrange a $2 million multi-currency loan to the parts supplier. And he also arranged for export collections, foreign exchange and payment.

A Bank of America man-on-the-spot can help you do business abroad, too. With the facilities of the world's largest bank at his fingertips, he's a good man to know in almost any enterprise. Contact him through your local office of Bank of America. A big automobile company likes his style. So will you.

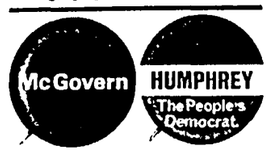
I'm calling

The Government's call for public support against the railwaymen has brought an early success for the Industrial Relations Act, but it is no more than a first step in the essential process of bringing Britain's unions under the rule of law—and the Government still needs to be resolute, page 15.

One almost cut off

Willy Brandt survived as west Germany's chancellor on Thursday by a margin of two, and his eastern policy is still open to criticism, page 17.

One wrong number



President Pompidou miscalculated in France's referendum on Sunday, which is a dent in his reputation as Europe's cunningest politician, page 19.

One line busy

Italy isn't talking to anybody until it has its election on May 7th, and discovers how strong its far right has become, page 34.

Willie's province

Mr Whitelaw is wooing the Catholics to little effect so far, and the Protestants are getting more and more worried. There are three possible policies if things go on going wrong, page 20.

George and Hubert

The divided Democratic party has two new front-runners in the race for the presidency, page 49. A Kennedy in the wings, page 53. Mr Nixon has plenty of trouble himself over Vietnam, pages 31, 32 and 50.

After splashdown

With only one more moon flight left, Apollo 16 is not the breakthrough that it might have been had the Americans really been planning to develop the moon, page 78.

Taxes without tears

It's bad enough having to pay them, so let's at least make tax collecting easier by putting everything together under a single new Board of Taxation, page 80.

About turn

What have Britain's armed forces got that isn't tied down in Germany or Ulster, and what's their job? A survey after page 60.

Price restraint

SIR—Your commentary on the CBI's price restraint policy (April 22nd) gives a misleading, and in parts untruthful, account of a serious issue.

The reasons why the CBI decided to defer for three months any decision on an extension of price restraint beyond July 31st were twofold—first, because by the end of that time it should be possible for industry to form a better assessment of the early effects of the budget measures on the economy; but second, and more important, because a continuance of price restraint must be conditional on a greater degree of moderation in pay claims and pay settlements.

These reasons were clearly spelled out at our press conference and in our press release following the CBI council's meeting on April 19th; and they were elaborated in a speech I made in Cambridge the following day. Both in our press release and in my speech it was made clear that the CBI was deeply concerned to play its part in securing a further reduction in the rate of inflation, and that if there were a good prospect of trade union response there would be a widespread willingness among the CBI members to sustain a further period of price restraint beyond July 31st next.

For reasons that I cannot fathom you elected to ignore this latter consideration. You further suggest that we have proposed (presumably to the Government) "splitting the difference": "if industry agreed to sign on for another six months, the Government should then agree to a slow thaw for the next six." No such proposal has been made. You also imply that there was some kind of pre-budget compact between the Government and us under which in return for substantial tax concessions to industry we would keep price restraint going until mid-1973. There is no truth in that either.

You refer to profitability. Yes, it has improved in some sectors of industry—as indeed it badly needed to improve. But you fail to take into account the acute threat to profitability in other sectors, particularly engineering, of extortionate pay pressures backed in some instances by industrial action, or the general risk of an upward twist in pay pressures following the coal mining and rail disputes.

All in all, you do scant justice either to the difficulties facing industrial management at this time or to the CBI's endeavour to take a positive and constructive line in the continuing fight against inflation.—Yours faithfully,

London, SW1 JOHN PARTRIDGE

Violence

SIR—It was extremely heartening to read your article, "A term to violence" (April 8th). I was glad that you twice reaffirmed that "democracy is a matter for the ballot box." My mail shows that there exists an extraordinary number of educated people who regard the secret and universal franchise as a minor and perhaps even an expendable part of the democratic process. I am still being assured that classic Athens was a democracy, in spite of the disfranchisement not only of the slaves and the foreign residents but also of the women. It has also been seriously claimed that the United Kingdom was a democracy "after 1832." May I suggest that it was not a complete democracy until Baldwin brought in the flappers' vote in 1928?

I urge this partly because I believe it to be true, but also because it counters the stirring and emotive argument I hear so often, which runs: "Our forefathers fought for their freedom: their violence paid off, and we shall fight, too." Granted. Those tough forefathers (and foremothers) defied the law. They did so to establish a democratic process suitable to this country, including universal franchise by secret ballot, free speech, majority rule, and representative parliamentary government.

We have now had this desirable process for some 40 years, and we are already in danger of losing it by allowing the rule of law, which alone sustains it, to be eroded by illegal violence and intimidation.—Yours faithfully,

JOHN CHAPMAN
Deputy director,
London, WC2 Freedom under Law

SIR—Mr Norman Moss (Letters, April 15th) includes among causes of violence "the vastness and complexity of our society, which makes it difficult for the ordinary member to feel that he can affect it or have any say in its administration." It is, indeed, unfortunate that this idea persists, because it lends attractiveness to the instant demonstration as a means of solving problems.

It is a pity that young people are not taught how to seek out, and take part in the proceedings of, the immense variety of small groups which work to improve society in less dramatic but more solidly effective ways. To cite just one example, in the Conservative party there are small discussion groups of members all over the country. These groups report their opinions on political topics, and the reports are studied in summary by the minister concerned with the subject. Constituency opinion exerts a very real force for political change, as anyone who has worked in these groups will know.

One does not have to be rich, erudite, or powerful to play an effective part in forming opinion within a group: neither is youth any bar to effective expression. The more intelligent people who wish to work effectively for social change have realised that the instant demonstration has become such a blatant sham as to be entirely counterproductive.—Yours faithfully,

DAVID SOMERSET
London, W2

SIR—May I give Mr Beale (Letters, April 15th) a short lesson in political philosophy? Democracy is a system in which members of a community have the right (or duty?) to attempt to persuade their fellows by peaceful means that a particular policy or course of action is desirable. Mr Beale seems to forget this. Having rejected, quite rightly, any attempt to impose policies on an unwilling population, he goes on to assume that any policy or action which does not fall into this category (including presumably democratic action) is evasive or negative. Really, Mr Beale, if you reject dictatorship and democracy, what do you want?—Yours faithfully,

MICHAEL COPLAND
Cookham, Berks

Capital investment

SIR—Your article on "How not to depreciate" (April 15th) appears to assume that most investment decisions are made by taxation accountants whose primary interest is the finest interpretation of year-to-year taxation and allowances changes. This is just not so—it is only at the extreme margin that differences between the 40 per cent and 50 per cent corporation tax rates will affect investment decisions in terms of the allowances receivable to the extent postulated in your article.

What concern industrialists like myself are (1) the market for the goods to be made, and (2) the profit and cash flow attainable from their sale.

The Chancellor's measures, together with other Government moves, have been designed to raise confidence in the future and thereby the level of industrial activity. With our entry into the European Economic Community and the run-up to a general election occurring simultaneously, many people, including myself, believe that demand will push steadily upwards over the next two to three years—in fact we are probably at the beginning of a real boom in our economy.

The present time is most favourable for investment because (1) capital goods are relatively cheap as demand has been low and deliveries offered at this time are short, and (2) money is also cheap and readily available.

In any case, the 50 per cent corporation tax rate for 1973-74 is only indicative and the resulting rate could be lower. Probably, the only real effect of the 1973 potential change will be that some marginal delivery times/invoice dates could be adjusted at the last moment in order to maximise taxation allowances. Further, what partly matters is to get more demand into the capital goods industries and this again would occur with effect from receipt of orders and not post delivery dates.

MANAGEMENT APPOINTMENTS £7000 PA AND OVER

Top Managers for Europe

Barclays Bank International Limited seeks top managers for its European operations. The following qualifications are essential:

A sound knowledge of current corporate banking etc;

a good knowledge of French and/or another European language;

first-hand experience of working in Belgium, Holland, France, Germany or other European country.

Salary will be according to age and experience. Applications from nationals of all countries will be considered. Write with brief details of career, qualifications, etc, to J. A. Smith, Staff Manager, at 54 Lombard Street, London EC3P 3AH.

BARCLAYS International

International Commodities

• A WELL established City firm of commodity traders is seeking an additional executive.

• FAMILIARITY with the commodity business is required.

• AGE in the 30s. Terms are for discussion but total remuneration is unlikely to be less than £7,000 including a bonus. Higher rewards are possible for particularly relevant qualifications or experience.

Write in complete confidence
to Dr. W. M. Dixon
as adviser to the company.

JOHN TYZACK & PARTNERS
LIMITED
10 HALLAM STREET · LONDON W1N 6DJ

New Zealand Wool Marketing Corporation

Chief Executive

Applications are invited by the Wool Marketing Corporation Establishment Company Limited from outstanding businessmen to become the first Chief Executive of a proposed New Zealand Wool Marketing Corporation. The Establishment Company is to recommend the most desirable form of Corporation to market New Zealand wool. Sales of New Zealand wool in world markets currently exceed $200 million annually

The proposed Corporation would be directly or indirectly involved in all aspects of wool marketing. These would include wool handling and preparation for sale, transport negotiation and wool selling. The Chief Executive must be a top line businessman with ability to handle international marketing problems and conduct negotiations at high levels. He needs to have outstanding initiative and leadership qualities and be a highly capable administrator. Desirably he should be aged between 30 and 50. Salary and appropriate benefits will be sufficiently attractive to interest senior executives of international corporations. Naturally, negotiations will be open on this issue.

Applicants are assured that every application will be considered personally by the Chairman of the Establishment Company and will be treated as strictly confidential. Comprehensive applications, which are to be passed to the Chairman at his request, should be addressed in the first instance quoting reference GM26/4461/E to

PA Management Consultants Ltd.,
Personnel Services
Division, Hyde Park
House, Knightsbridge,
London SW1X 7LE.

PA

Head Office

Project Evaluation

The British Steel Corporation requires a senior manager to be responsible to the Director of Corporate Planning for the evaluation of major investment projects. He will be in charge of two teams evaluating projects ranging from £10 million to over £200 million.

Applicants should have several years experience of project evaluation in large organisations, and be capable of developing project appraisal techniques to deal with the particular problems of the Steel Corporation, including methods of analysing systems effects. He must work with an interdisciplinary staff and be able to communicate new ideas effectively to all levels of management.

The successful applicant will probably have an economics degree and/or accounting qualification.

The post carries considerable responsibility and will be remunerated accordingly.

Write for application form, quoting reference number H.O.77, to:

Head of Management Appointments and Development,
BRITISH STEEL CORPORATION,
33, Grosvenor Place,
London, SWIX 7JG.

I consider the Government's proposals to be realistic and likely to bring the required results.—Yours faithfully,
West Bromwich E. M. WORLEY

Inflaccounting

SIR—In the table accompanying your article on inflaccounting (April 8th), the tax charge remains the same even though the adjusted profits have fallen. Would it not awaken the Government to the effects of inflation if the tax payable by companies was also reduced?—Yours faithfully,
Scarborough, Yorkshire W. ARMSTRONG

Ireland

SIR—May I make the following suggestions for solving the Irish question by the introduction of legal practices that are common in the neighbouring democratic countries of western Europe:

(1) Citizens of the Republic of Ireland should be made aliens under British law. What other state allows the citizens of another country uncontrolled entry and voting rights?

(2) "Community schools," attended by Catholic and Protestant children, should be introduced, if necessary by holding a referendum to ascertain the views of the population. This presupposes that subsidies to Catholic schools will cease. This has been successfully accomplished in the Federal Republic of Germany despite the opposition of the Catholic church.

(3) Civil servants and local government employees should be required to take an oath of loyalty to the constitution.

(4) The police should be armed and given the authority to shoot at escaping suspects just as in other western European countries.

(5) If registration of one's place of residence were introduced (as in the rest of Europe), this would aid the police in their inquiries and bail could then be refused to accused persons not having a permanent place of residence.

(6) Similarly, the introduction of an identity card would make police investigation easier.

(7) Prosecutions in court should be conducted by members of a public prosecutor's office, just as in other countries. As these would be civil servants, they could not cripple the machinery of justice by refusing to act for the Crown (as some Catholic lawyers did in Northern Ireland).

(8) Pre-trial investigations could be carried out under the supervision of an examining judge in chambers, while the accused is detained on remand. This would obviate the need for emergency laws in Northern Ireland, as under this system (used by our European neighbours), it may take years to conduct investigations and bring an accused person to trial.

You have often been critical of the "muddle through" attitude in Britain, but has there to be civil war before a thorough look is taken at Britain's constitution and legal framework?—Yours faithfully, D. GIBBONS
Bavaria

SIR—I wish Mr D. W. Mountain (Letters, April 8th) would explain how, in the "overwhelmingly Catholic" counties of Fermanagh and Tyrone, at the general election of June, 1970, for the Westminster seat taking in most of those counties, the votes for the candidate adverse to partition exceeded the Unionist vote by only 1,450 out of just under 64,000 votes cast.

As for Londonderry and its county, the Unionist had a majority of just under 5,000 votes over all opposition in 1970. By what rule does this constitute a case for including Londonderry in the republic?—Yours faithfully,
Ripley, Surrey DESMOND FITZPATRICK

Ecology

SIR—If this letter is published it will probably be headed "Ecology." This does not bother me since I understand that while *The Economist* may be prepared to swallow ecology it might strain at theology in its correspondence columns. But surely this is what the neo-Aristotelians and neo-Thomists are on about? The world is finite. The end of all things is at hand. This is nothing new. It is today's version of the memento mori without which no self-respecting hermit's cell was adequately furnished.

One can infer from the death's head that the only rational way of behaviour is to eat, drink and be merry. But there are others who will be grateful to the contemporary school of environmentalists for their timely reminder that it remains equally rational to promote a more equal distribution of the world's goods while there is yet time. The concept is ethically neutral. We make of it what we will.—Yours faithfully, L. W. NORWOOD
Welwyn Garden City

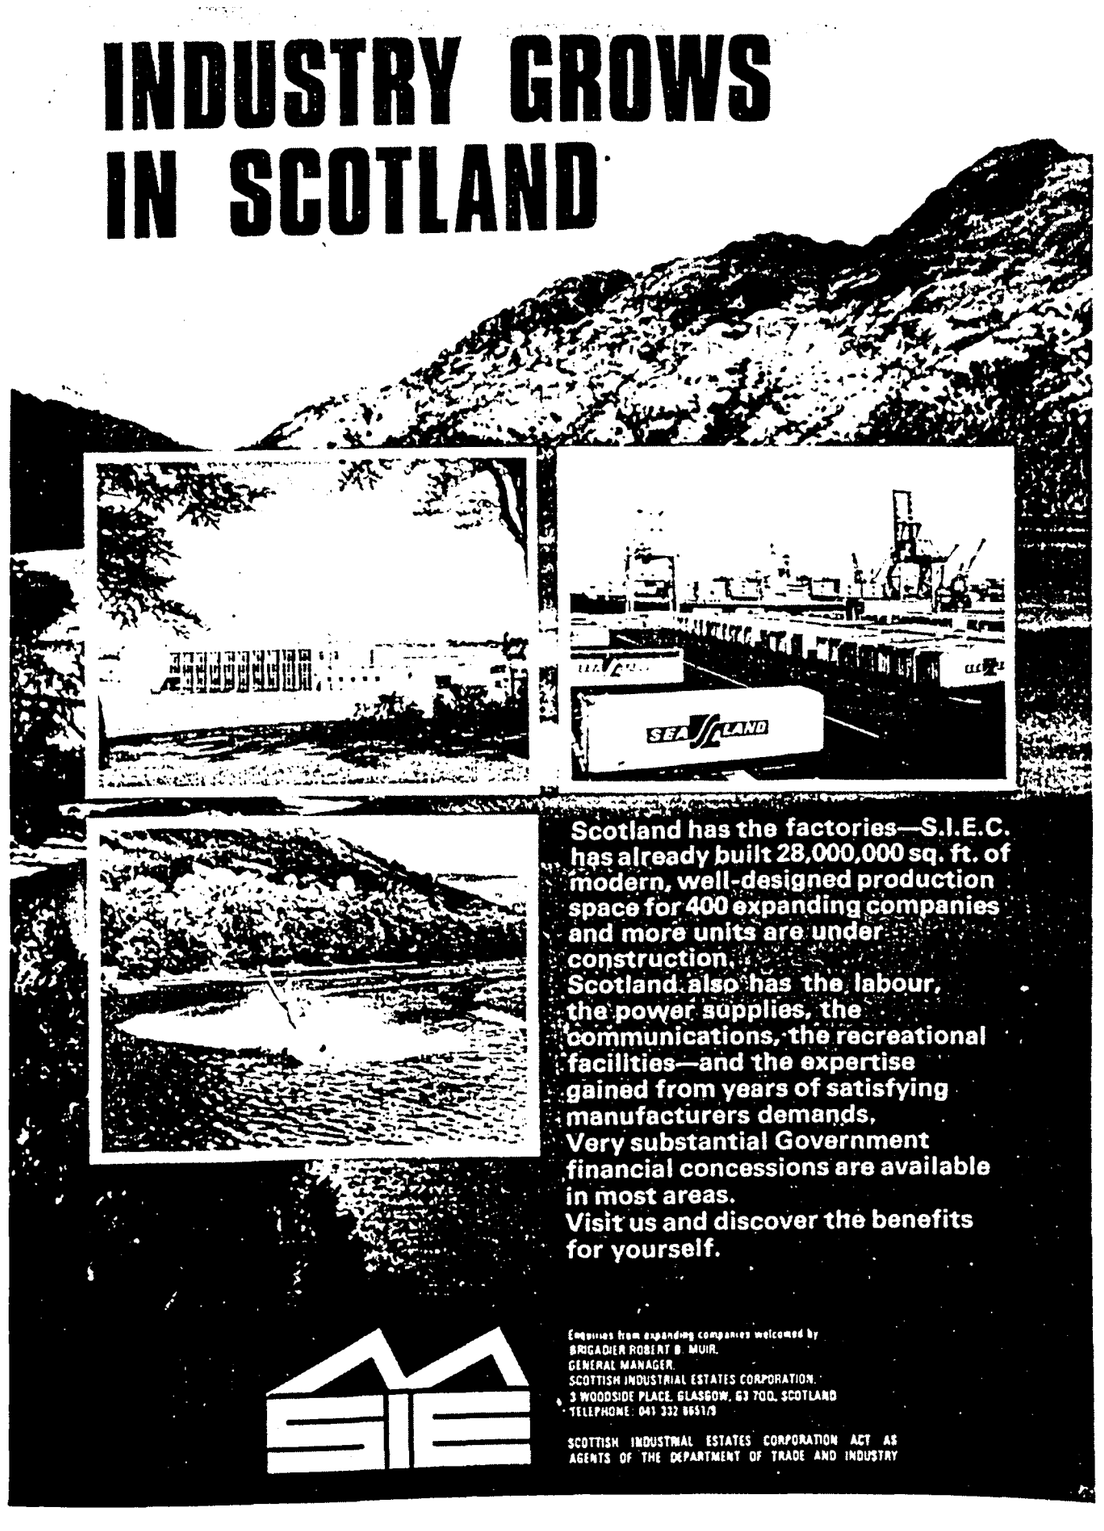
National parks

SIR—You describe the Government's proposed arrangements for the administration of national parks as "a happy mean" (March 25th), falling presumably somewhere between the independent planning authorities on the Peak Park model on the one hand, and the county council committees, which are the current norm for most of the parks, on the other.

Yet, as you state, the Peak has "become a model authority for conservationists" with "enough autonomy to flex its muscles" and "has certainly justified its existence."

If all this is true, would it not be right to give all national parks the same form of administration? The Government's refusal to do so leads us to think that the arrangements they do propose are not "a happy mean" so much as a concession to the county councils association.—Yours faithfully, CHRISTOPHER HALL
London, W1

Vietnam



SIR—You contend (April 8th) that the current North Vietnamese offensive has "pushed hardest and risked the most" since the Tet offensive of February, 1968. As an American civilian who worked in South Vietnam from 1968 to 1970, allow me the observation that the communist offensive of May, 1968, was militarily larger and a more direct attack on South Vietnam's major population centres than the more heralded Tet offensive. And their more decisive defeat in May largely explains the communists' reduced level of operations in the past four years.—Yours faithfully, DOUGLAS C. JONES
Minneapolis, Minnesota

Nationalism and communism

SIR—Unfortunately I have not had the opportunity of reading the article to which Mr R. K. Kindersley of Oxford refers in his letter (February 19th).

Nationalism in the Ukraine was supported by the old Russian generals during the civil war in Russia. Among those who helped the Red Army against General Wrangel were Ukrainian troops, quite apart from the fact that a great number of Red Army soldiers were Ukrainians. The real Ukrainian nationalists had to choose between war with Russia without any sufficient western support and peace with Russia even at a heavy price.

I think Mr Kindersley looks at the problem of nationalism and liberalism too simply. The question is more complicated than he can imagine.—Yours faithfully,
Sofia ILIA MIHAILOV

Espresso by BEA.

Every week, this summer, BEA flies to 7 Italian destinations from London Heathrow, with up to 61 flights, all of them non-stop. We take you by Trident, with our first-class Sovereign Service on most flights.

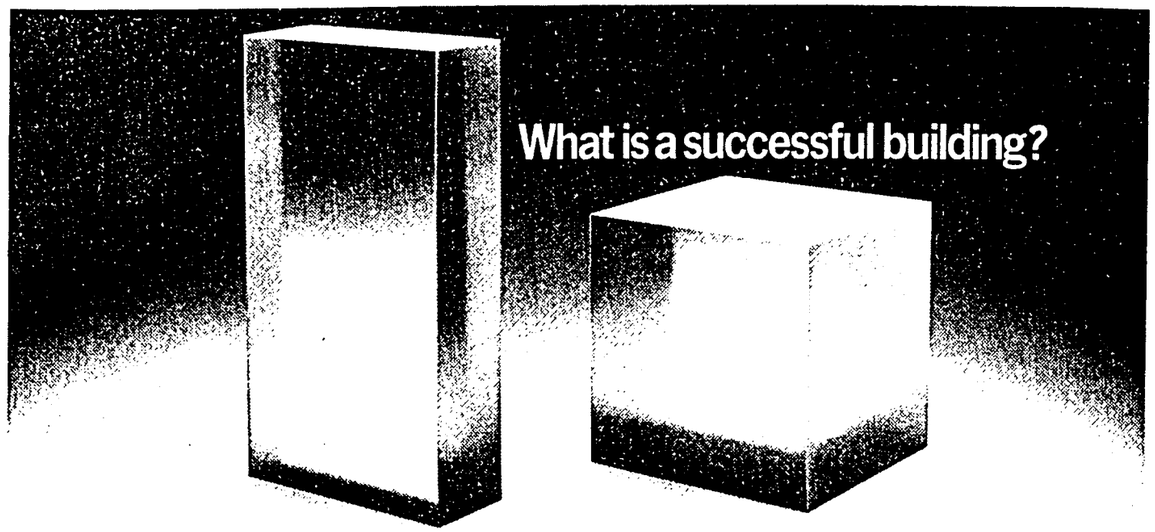
Rome.
3 daily flights (including Trident Three) departing London Heathrow 1035, 1345 and 1735.

Venice.
4 flights every week increasing to 5 from June 1st. Departing from London Heathrow at 1025.

Cagliari.
Weekly flight from May 1st, the only non-stop service.

Milan.
Trident Three flights twice daily departing London Heathrow at 1015 and 1415. Also 3 night services every week.

Pisa/Florence.
2 flights every week increasing to 3 from June 1st.



Naples.
Daily flights departing London Heathrow 0930 – the only non-stop service. Also weekly night service.

Turin.
3 flights every week departing London Heathrow 1050 on Mondays, Fridays and Sundays.

THE BIG LINK

Without Steel Tubes, Britain would have one long black out.

Apart from a specialist or two, few know of our contribution to the power industry.

Yet without us, there wouldn't be a power industry as we know it. We make tubular products without which nuclear and conventional energy would be no more than a bright idea.

As the largest producers of precision steel tube in the world, we've got the resources to take on anything any customer can give us, and meet the kind of specialist order that other companies can't.

And because our division is cellular (i.e. composed of 26 beady-eyed, entrepreneurial companies) we reckon we're able to offer specialized workmanship and encyclopædic research resources as well as the stock-holding facilities of a giant.

We offer all this to the power industry in Europe and throughout the world.

If you think this kind of set-up could do extraordinary and wonderful things for your company, or simply a sound job rather more rapidly than anybody else, get in touch with Paul Standing our Commercial Director.

Trade Indemnity Company Limited

Record level of new business – Progress maintained in an exacting year

The 54th Annual General Meeting of Trade Indemnity Company Limited will be held on Thursday May 18th in London.

The following is an extract from the circulated statement of the Chairman, Mr. F. E. P. Sandilands, C.B.E.

Accounts. The events of 1971 in the world of commerce and industry could not fail to have their repercussions on a company whose business is primarily concerned with the consequence of losses from bankruptcies and liquidations. The failure of Rolls-Royce Limited, followed by that of Upper Clyde Shipbuilders Limited and the less-publicised but important insolvency of Lines Brothers Limited, made substantial demands on the company and its reinsurers. In these circumstances, your directors are glad now to submit accounts showing that your company has maintained its progress.

Gross premium earnings during 1971 amounted to £5,442,111 and exceeded those for 1970 by 18.9 per cent. The company's retention of premium after reinsurance and brokerage deductions was £2,082,083, an increase on the previous year of 28.1 per cent. However, gross claim payments at £3,178,413, not unexpectedly, showed a bigger increase amounting to £1,098,904 on the previous year. Our share of these payments, net of reinsurance recoveries, was £643,334 compared with £522,373 for the previous year. The inflationary trend which contributed to this more severe claims position also affected our management expenses, which rose by £269,717 to £1,095,584.

The 1969 underwriting account, to which part of the Rolls-Royce losses attached, closed at 31st December 1971 with a credit balance of £228,695, which has been transferred to the profit and loss account. The credit balance on this account is £47,191 less than that of the preceding year.

The 1970 underwriting account has had to bear the major brunt of the spectacular losses to which I have referred, as well as others of importance in the wool and building trades. I mentioned these last year but it was not then possible to quantify or even to know of all losses that would affect the 1970 underwriting account and, as a precautionary measure, £50,000 was transferred to its credit from the profit and loss account. The prospect is that in the final outcome this will prove to have been unnecessary. The present balance on the account of £492,258, which includes the £50,000 previously mentioned, is better by £53,636 than the corresponding balance on 1969 underwriting account a year ago. While there are hopes of recoveries from the realisation of Rolls-Royce Limited and other estates, no credit has been taken in the company's accounts for these recoveries.

Premium earnings on the 1971 underwriting account are running at 14.4 per cent above the 1970 level. This is partly attributable to increased premium rates, partly to new business and partly to the inflationary tendencies that continued throughout the year. The balance on the account of £175,817 compares with £170,052 (which includes the transfer of £50,000) on the 1970 underwriting account at the end of its first year. I am hopeful that we may see some abatement in the volume of claims and that this will result in a better outcome to this account than we have experienced in the recent past.

The profit and loss account, to which the underwriting profit from the 1969 underwriting account of £228,695 has been transferred (1970—£275,886), is also credited with franked investment income of £39,490 and interest and other income £84,822. The total credited to profit and loss account is thus £353,007, against which is debited corporation tax of £138,000, leaving a balance of £215,007 to be carried down. The addition of £343,219 brought forward from last year gives a disposable balance of profit of £558,226, compared with £623,219 at the end of 1970. Your directors recommend the payment of a dividend at the same rate as last year, namely 30 per cent at a gross cost of £180,000.

Australia. Conditions in Australia, following the collapse of the mining share boom, have not made our operations in that Dominion any easier. In 1971 premium income increased satisfactorily by 30 per cent to £280,000 and claims have been fairly moderate but management expenses, as in the United Kingdom, have continued to escalate.

General. In my statement a year ago I explained how the revival in consumer expenditure had produced a marked effect on our own figures in the latter half of 1970. The higher purchasing power of the public, which was further boosted by the relaxations announced in the March Budget and in the Chancellor's 'July package', continued to exercise a major influence on our business in 1971. Despite this, there was little evidence at the year-end, either in national figures or in our own experience, that the effects of higher consumption had worked their way back beyond the consumer-orientated industries into the investment goods sector. Indeed, even today, industries such as machine tools, steel and heavy engineering still find themselves in a generally depressed condition.

As in the previous year, these developments were reflected mainly in our claims and collection experience. In brief, 1971 was a year of fewer, but substantially larger, failures. I have already referred in my comments on the accounts to the sharp increase in the value of claims paid in 1971. However, this rise in value concealed a fall of almost 26 per cent in the number of failures notified to the company. On our collection side, the trade pattern was very much the same as for failures. There was a fall of nearly 17·per cent in the total of cases notified to the company for collection and a drop of 9 per cent in their value.

The major insolvencies named in my opening remarks, together with many other somewhat smaller failures which occurred in the course of last year, led to a high demand for our cover and to a record level of new business put on to our books in 1971. Rolls-Royce, Upper Clyde and Lines Brothers held an obvious and a special message for engineering and its associated industries and, inevitably, it was in this sector that a large part of the new business was added. However, companies in a wide range of other trades and industries were not slow to realise the dangers of involvement in a major failure and they, too, sought credit insurance protection for the first time last year.

New business and higher prices led to an increase of more than 11 per cent in our turnover of insured transactions in 1971, when total business underwritten in London and Melbourne amounted to £3,545m. Of this, nearly £300m involved risks on buyers domiciled outside the United Kingdom, the main areas, apart from Australia, being North America and Western Europe.

Britain's signature of the Treaty of Accession to the Community this January brought home to many businessmen the imminence of our entry into Europe. Your company already underwrites a large volume of business on European buyers, particularly those of the 'Six', and we shall take every opportunity of expanding our turnover in this area. Through our membership of the International Credit Insurance Association we have excellent sources of credit information in each of the countries of the Community and the flow of status enquiries is already growing noticeably. This, I might add, is taking place in both directions, with enquiries similarly being made of us on behalf of European exporters who are developing their sales to the United Kingdom and are insured with ICIA or Berne Union members.

The Outlook. The past year has seen stagnation in many parts of the economy, with a resultant waste of national resources in terms of both capital and manpower. The growth of the Company's business over this period has been impressive, but it has owed very little to any underlying growth in manufacturing output. Looking ahead, in addition to a continued improvement in consumer expenditure we shall, I trust, see a revival in due course at the heavier end of industry. Whilst the effects of higher consumption can further ease our lot on the claims and collection side of our activities, the growth of insured turnover and premium income should not be dependent, as in recent years, on new business effort and rising prices alone but must be based, in addition, on a positive expansion of national production.

The Economist

April 29, 1972

Under one law

This is a crucial moment in Britain's social history. It requires firm handling and an absence of angry hysterics. It also requires frank recognition of some home truths, which is a process at which the British are very bad. The key point is that during the past two decades British trade unions have served the whole British people very badly. During that period the average British trade union official has not merely been in an unproductive job, but actually in an anti-productive one. The main net product of the recent life's work of Mr Feather, Mr Jones, Mr Scanlon and their colleagues has been to cause a diminution, below what would otherwise have been achieved, in the real standard of living of almost every British man, woman and child—and especially of the poorest Britons, such as old age pensioners.

The main purpose of going through a little temporary discomfort by resisting the unions now must be to reform this absurd state of affairs. Economically, the slowing of Britain's growth caused either directly by the trade unions' restrictive practices, or indirectly by squeezes made necessary by their cost-push inflation, must in the past two decades have robbed from the average wage earner a much larger sum than has been gained for him by any small net redistribution of our retarded national income that the unions have brought about. Politically, the union leaders in the past decade have pushed what should be the more progressive of Britain's two main political parties towards a reactionary protectionism in industrial affairs, and have intermittently tried to prod it towards the lunatic left in international affairs. The parliamentary Labour party, through both Mr Gaitskell's and Mr Wilson's day, has bravely resisted the prodding on foreign affairs but has too often felt obliged to respond to the protectionist push, thus giving the British electorate a choice only between two domestically conservative parties which both basically regard industrial change as their enemy. Administratively, the muddle in which the unions have sunk the management of their own affairs has been the worst feature of all—or at least it was the worst until in the past few weeks some trade unionists have started to pretend that they do not have to obey the law.

The reason for this decline of British trade unionism has not been any original sin among either ordinary or leading British trade unionists. It has come about because even a band of archangels and geniuses could not properly operate a supposedly democratic organisation if it is not subjected to the checks and balances on which any effective democratic system must depend. In the lower ranks of "elected" union officialdom (delegates to union conferences, shop stewards, etc) there is not a natural democratic check, because most people very sensibly do not want to spend their spare time on such chores. Anybody sufficiently ambitious to pick up local union power can therefore generally get it. Politically, this leads to a heavy over-representation in shop stewards' committees of communists and others who would not win even 3 per cent of the vote in ordinary democratic elections. More important, there is over-representation of those who are willing to break their promises and their contracts without a moment's compunction, who resort to threats, force, bullying tactics and some individual intimidation in order to bolster protection rackets that are mainly in protection of their own power but are sometimes more corrupt even than that. One of the two checks that a democracy should impose on this dangerous situation is a tight legal supervision over it, exercised both through the law of the land and through the enforcement of union rule books.

Not war-war, nor jaw-jaw, but law-law

Neither check has been in fashion in Britain in recent years. Until last year, the law was kept out of the trade unions' many messes because politicians were too scared to put it in. Union rule books are not enforced by union leaders, except that condign punishment is meted out to a few idiosyncratic people who do not take part in strikes with which they disagree; no discipline is exerted against those who equally break union rules by initiating unofficial and breach-of-contract strikes, and far too little against those who run even the worst rackets. The other

check against uneconomic actions, offences and illiberalism by shop stewards should be resistance by employers, led by the public sector. Instead, the public sector has generally led by running away.

By the mid-1960s it was therefore clear that the problem would need to be tackled either by cajoling union leaders to take up their proper job of advancing living standards instead of reducing them, or by introducing new laws as a check and balance on a trade union movement that is now often utterly out of hand. The path of co-operation was tried during the Labour government when Mr George Woodcock and other union leaders signed a "declaration of intent" that they would seek to keep down wage claims to equal the rise in national productivity, but then promptly supported wage claims demanding three times as much; and when Mr Vic Feather and other trade union leaders bought off Mrs Barbara Castle's proposed law by "a solemn and binding undertaking" to try to reduce strikes, but then felt obliged to allow both strikes and inflation to double. There was therefore an overwhelming democratic case for last year's Industrial Relations Act, even although it was much less stringent than it should have been.

Cooling is not the crunch

The past two weeks have seen the two opening tests of this very mild act. The less important one was the cooling-off order against the railway unions which had broken their pledged word not to disrupt railway traffic in support of a pay claim until that claim had been through all stages including compulsory arbitration. The unions' argument that they were not disrupting traffic by a work-to-rule (even although it caused half the trains in Southern England not to run) was indicative only of the sheer deception, especially self-deception, that has now become orthodox in British trade union affairs. By Tuesday, after some initial flouting on the Southern Region, the court's order—which some people had said would be resisted to the end—was being obeyed in the proper British manner.

Unfortunately, cooling-off orders are probably the least useful tools provided by the new act. They can offer as big an incentive to the Government to cobble together inflationary awards while they last as they offer to the unions to reach reasonable settlements during them. They are most worth while when there is some mechanism that can be used during the cool-off to stop the strike without further inflation: which leads to consideration of the weapon that was not used.

Civil servants at the Department of Employment last week persuaded Mr Macmillan not to call a secret ballot of railwaymen on whether to settle now. Officials observed that secret ballots in America usually support official union action. This is because American unions are professional bodies which research among their members before calling for action, which have a definite purpose behind such action, and which deploy public relations departments to explain that purpose to their members during a strike. This is very different from the average trade union conscript into a British strike. The railwaymen of Britain are not in nature separate from the rest of the ordinary people of Britain, who told the National Opinion Poll in Tuesday's Daily Mail that 43 per cent thought that Mr Heath's Government was not tough enough towards trade unions, 33 per cent thought the Government's attitude about right, and only 18 per cent thought it too tough.

Brinkmanship without reform?

However, the much more serious test of Britain's decent democratic life is the blacking by Liverpool dockers of container lorries sent in by certain small family firms, which the dockers are preparing to drive out of business. If Heatons and the other family firms were driven out of business, they would earn a place in the liberal and social history of Britain's resistance to bullies beside that of the Tolpuddle martyrs. But this is a sort of martyrdom which the Government and society simply must not allow to occur. A group of dockers—who have rendered part of their own industry uneconomic by their restrictive practices, high wage demands and notorious pilfering—is trying to black a competitive form of packing which is more efficient and more difficult to pilfer from. The court has twice declared the blacking to be illegal, and imposed £55,000 of fines on Mr Jack Jones's Transport and General Workers' Union; but the blacking was still going on this week. Mr Jones says that his members' action is not his fault, but he has not disciplined or dismissed from membership those who are organising it, as he would discipline anybody who disobeyed strike calls.

The frightening point is that this protection racket in the docks might temporarily be a legal action if the TGWU was a registered union. This illustrates the second danger now. The Government is pleased that the unions are beginning to discontinue some of their boycott of the act. If more of the unions start to register, the Government will be delighted. But it will actually be better for the country if some of the more obstructive unions are silly enough to remain unregistered for a while, so that the bigger sticks can be used against them. The only real purpose of getting unions on to the register is so that their internal rules can gradually be amended into more respectable form, on pain of a threat of de-registration again; some of the worst unions could not afford to have a registrar examining the way in which some of their officials run their affairs, which is one reason why they are staying unregistered.

The Government should keep sight of this sole object of registration. It should not desert from that object by one whit in order to make things easier for those who give it the propaganda victory of joining the club. The purpose of the pain which the public is suffering now is to bring about trade union reform. It is not just to increase the number of trade union leaders who are willing to talk to Conservative ministers at No. 10 Downing Street. After Wednesday's tea party there it was announced that Mr Heath, admittedly in guarded terms, had agreed to study a Trades Union Congress proposal for establishing an "independent conciliation service" that would seek to bring about even more instant inflationary settlement of industrial disputes. The path to all our present hell has been paved with precisely such bad conventions.

The one who almost fell

Willy Brandt survived on Thursday by the skin of two teeth, but his tiny majority does not remove the doubts about his eastern policy

It slipped through Rainer Barzel's fingers, as he himself quite possibly feared it would. The Christian Democrats' motion to remove Willy Brandt from the chancellorship, and put Herr Barzel there instead, failed on Thursday by a margin of two votes to get the absolute majority of 249 in the Bundestag that the German constitution requires. It would not have been a comfortable chancellorship even if Herr Barzel had picked up those extra two votes. He would have acquired the government of a divided country on the strength of the German equivalent of the defection from Mr Heath's backbenches of four assorted Ulster Unionists and obscure Tory anti-marketeers. It would have been an unstable achievement: you can do many things with defectors, as you can with bayonets, but you cannot count on sitting on them. But it is likely to be even more uncomfortable for Herr Barzel that he has failed. The decision to try the coup against Herr Brandt was taken against the judgment of some senior Christian Democrats, including perhaps his own. It brought out trade unionists on strike in several German towns on Wednesday. It probably makes it harder for him to rally the votes he wants in order to defeat Herr Brandt's treaty with Russia. And if he fails in that his leadership of the party could well be in danger.

The charge of miscalculation that will be made against him is based on the hard fact of Thursday's vote, and it is no reply for him to say that his bid for the chancellorship was entirely constitutional, and that it reflected a real division of opinion in Germany on a matter of fundamental importance. Yet in fact, if Herr Barzel had made it, the result would by no means have been as unwelcome in Germany as some accounts have made it seem. The evidence of public opinion, such as it is, suggests that the Brandt government is not as popular as Herr Brandt himself continues to be.

Why Barzel tried it

Of course, it is not mainly dislike of Herr Brandt's eastern policy that has put the wind of public opinion back into the Christian Democrats' sails. The opinion polls continue to show that a majority of west Germans, like a majority of other people elsewhere, believe in something called a "relaxation of tensions" as a policy in itself, which can be brought about without getting down to the problems that cause the tensions, and that a majority of them support Herr Brandt's treaty with the Russians as the tranquilliser that produces painless relaxation. Herr Brandt still has that going for him. It was things much closer to home that gave the Christian Democrats those extra votes in Baden-Württemberg on Sunday (see page 32), and made them think they could very likely win a general election.

The increase in the German cost of living is running at little more than half the rocketing British rate, but even that is unfamiliar enough to seem outrageous to many Germans, and it has been enough to make the government shelve several of the reforms it promised to the voters in the 1969 election. It does not help the Social Democrats to point out that their inflation is no worse than the inflation in most other western countries: housewives are not international statisticians. And on the other two domestic issues in Germany—the near-recession of last year, and the law-and-order issue—the Social Democrats have probably suffered because they are Social Democrats. A Christian Democratic government would probably have been quicker to reinflate away from the recession because it would not have been so nervous of being accused of financial irresponsibility by its opposition. And the party of liberal good intentions is always under a handicap when it faces urban guerrillas and student toughs: too many of its own younger members have a sneaking sympathy for the revolutionaries, and too many of the nervous middle-aged majority have stopped believing that liberal good intentions are the way to deal with the problem anyway.

But if it was these things that tempted the Christian Democrats' executive into making their challenge to Herr Brandt—even pushing Herr Barzel into it against his own preference, according to some stories—it is foreign policy that remains the central issue between the parties. The opposition to Herr Brandt's Ostpolitik has always been stronger in parliament than it has been in the country as a whole. The majority of the defectors the Christian Democrats counted on to make the difference between success and failure on Thursday were led to think of defecting by their worries about eastern policy. Those who actually turned against the government when it came to the vote may have been glad to do so in the week of the budget debate, on a subject where they could be surer that public opinion was flowing their way, rather than wait for next Thursday's vote on the ratification of the treaties with Russia and Poland; but it was the Ostpolitik, more than anything else, they were striking at when they voted.

This is the one matter in German politics that revolves around a major question of principle. And if Herr Barzel had actually bulldozed his way into the chancellorship this week—or if he still succeeds in beating Herr Brandt in the votes on the treaties—it is the one matter which would make it necessary for Germany's allies to re-examine their own policies. The Christian Democrats are just as committed to the search for unity in western Europe as Herr Brandt is, and their apostasy on eastern policy makes them all the more anxious to demonstrate that they are. Herr Strauss might be a bit more nationalist

than Herr Schiller has been in manipulating the exchange rate of the D-mark to Germany's advantage, but even here his instinct to win a nationalist point would be held in check by his perfectly genuine belief in the need for western solidarity. There is nothing else in a change of government in Bonn that need cause concern to Germany's allies. It is the Ostpolitik the argument is about.

The fog-making words

And the trouble with the Ostpolitik is that the original aims of a new policy towards eastern Europe have been distorted by the rhetoric Herr Brandt has allowed to accumulate around his own particular version of that policy. It should have been made a rule, from the moment when a new approach to the Russians first seemed possible, that such words as "detente" and "relaxation of tensions" should be outlawed from the discussion. They are fog-making words, because they encourage people to think that tensions have an existence of their own, separate from the conflicts of interest that give rise to the tensions. That is why the Russians like these words, and use them so much, but it should also have been a reason why other people should have avoided using them. If there is to be a real change for the better in the relationship between the two parts of Europe, it is necessary to treat the problem as something more serious than an overtight violin string.

This means that the search for an accommodation with the communist part of Europe has to take into account two things that the Russians and most people in the west have in common, although there is an important qualification even about one of these. It also has to take into account two things which they very conspicuously do not have in common.

One thing that the communist Europeans and most western governments would agree about is that there is something to be gained by more economic co-operation between them ; although in the west the amount to be gained looks much smaller than the communists sometimes claim (see page 46). The other is that both sides might as well come out and say publicly that the political systems that have grown up in the two parts of Europe since 1945 are not going to be changed by force ; the important qualification here being that a lot of people in the west do not want to say this in a way that rules out the eventual reunification of Germany if that is what a majority of east Germans continue to want. But from this point on the interests of the two sides diverge. The Russian interest, it is quite clear, is to weaken the links between the United States and western Europe, and to encourage the west Europeans to cut down their defence spending, so that the Soviet Union will become unmistakably the predominant power in Europe. The western interest is to help the smaller countries of eastern Europe to get more freedom from the Russians so that, even though they remain communist, they will be better places to live in. No doubt these two aims are almost mirror-images of each other. The one difference is the difference between what most west Europeans feel about having the Americans around, and what most east Europeans feel about the Russians.

The criticism that Herr Brandt has exposed himself to is that, starting from the things most people would agree about, he has gone beyond them in two ways. He has moved a good deal closer to accepting the permanent, enforced division of Germany than many Germans would like—for instance, by agreeing to that Russian word *nyerushimi,* which means something very close to "unchangeable," in the references to Europe's frontiers in his treaty with the Soviet Union. And he has probably made it easier than he need have done for the Russians to pursue their aim of detaching America from Europe in the next stage of the negotiations. By helping to get the west caught on the hook of the "security conference" the Russians have been dangling in front of it for so long, he has made it possible for the Soviet Union to hope that this next stage will take place in just the sort of forum it wants.

The objection to the security conference is that at best it will be a bore, a sort of mini-United Nations Assembly in which tired politicians exchange tireder platitudes, and at worst it could be something more dangerous. It will not be easy at such a conference for the western countries to raise the sort of subject they want to talk about—freer travel for east Europeans, for example—because it is unlikely that any of the smaller east European countries would risk Russia's anger by agreeing to put it on the agenda. It will be much easier, the western countries being the undisciplined lot they fortunately are, for the Russians to raise the subjects they want. If the conference became an annual affair, as the Russians seem to want it to be, it could become a sort of neon sign erected over the middle of Europe, flashing out the Soviet advertisement "Peace ! Peace !" at regular intervals, long before the conditions of genuine peace have been established.

The argument's about the means, not the end

It should be, and is, the aim of any rational western policy to pursue a reconciliation with the communist part of Europe ; that is a word that does mean something. The signing of a written agreement with the Russians about the security of west Berlin, in place of the informal understanding that has kept the peace there for the past 10 years, is a desirable part of such a policy. So would be a series of meetings at which several countries at a time, east and west of the dividing line, could get down to practical negotiations about the things that actually could benefit all of them: more trade, easier frontiers to cross, the knitting together of electricity grids, perhaps even some mutual disarmament. If there were no Ostpolitik it would be necessary to invent one. The risk in the one that Herr Brandt happens to have invented is that it may have paid too high a price, too early, in German hopes of self-determination, and accepted a machinery of negotiation that is a better vehicle for Russian propaganda than for the settlement of real problems. Herr Brandt remains at the wheel of the Ostpolitik as a result of Thursday's vote ; but the direction in which it should be steered is still a matter of primary interest to people outside Germany.

The one who only skidded

It was his own fault that President Pompidou took something of a tumble on Sunday, but he did himself no lasting damage

President Pompidou slipped on a banana skin on Sunday. His referendum on Europe sounded a brilliant idea when it was first announced : a question which most Frenchmen would reply yes to, and one which would divide the opposition. Throughout the campaign the second of these hopes was amply fulfilled, as the Communists and Socialists spat like alley cats at each other. Yet the outcome was much worse for M. Pompidou than the opinion polls or anyone else had foreseen. Almost 40 per cent of the electorate stayed at home—the highest figure in French history—and, still less expected, another 7 per cent, though they voted, voted neither way. Just 36 per cent of French voters ultimately answered yes to the expanded Europe M. Pompidou was offering as a bait.

Two conclusions cannot be drawn from these figures. One is that it was any kind of rejection of Britain or of Europe. It was not. An opinion poll today would probably show rather more opposition than two months ago to what the Communist party represented as the Europe of the bankers. But it would still probably show a good two-thirds of Frenchmen in favour. Some of the noes, and most of the abstentions, were a vote against M. Pompidou, his government and his policies. This, essentially, was what he was seeking approval for, and it was this, essentially, that the Communists campaigned against and the Socialists and others refused to support. And in part the noes and abstentions were also a vote against the whole referendum gimmick. Ask a silly question, and you can expect, from Frenchmen perhaps even more than other men, a silly answer. There were many voters who would have judged M. Pompidou's question a perfectly sensible one in the autumn of 1969, but who saw no reason why, for patently electoral reasons, they should be asked to give their approval to a policy long since accepted, and known to be accepted.

The danger is inside

The other conclusion is rather less obvious. Neither M. Pompidou nor the parliamentary majority that backs him has suffered a fatal blow. The pavement is never as hard as at the moment you hit it. M. Pompidou has got a bruise where he sat down but there is no evidence he has suffered anything that could prevent this able and agile politician from picking himself up again. The contradictions between Socialists and Communists remain. As M. Pompidou's supporters cruelly pointed out during the campaign, how credible is a joint programme of government—even if they ever agree on one—between two parties that fall to blows the moment a major item of foreign policy is brought before them ?

But the referendum does indeed serve one sharp warning to the government. It would take several lines to list the scandals—most of them genuine scandals—that have surrounded its past 12 months with a distinct whiff of greasy palms. Two ministers have come under attacks that elsewhere might well have caused their superiors to ask whether they proposed to bring a libel action, and if not why not. Anyone who read a recent court judgment involving a junior minister and a matter of planning permission could well wonder not that he offered his resignation but that, even just 10 days before the referendum, it was not accepted. Yet the most symptomatic affair was one where corruption has not been alleged, that of M. Chaban-Delmas, indelibly labelled as the prime minister who, however legally, "paid no income tax." That hurt the prime minister's party, and it made many people bring up a deeper criticism: that too much of the benefits of France's very remarkable economic progress has gone to people who were already doing very nicely anyway. It has in fact stuck to a great many other hands as well: France, for instance, appears to have more cars, per head, than anywhere else in Europe. Yet the feeling that too many members of the government have been acting as if they did not have to take public opinion into account has gone so far that if any alternative government were in sight there is little doubt that the widespread time-for-a-change feeling would have this one in desperate trouble.

It has only a year to prove that it can change. Although he was its principal victim, President Pompidou can be expected to draw the conclusions for internal policy of his referendum that backfired. But what conclusions will he draw for Europe ? The charge that he asked his electorate to approve the future perspectives of the common market without saying what they were is a thin one : he has said quite a lot in the past nine months. He could nevertheless profitably say it again, and louder. He could not, on Sunday's evidence, profitably change it much. He has no mandate to rush forward into swifter

How the other ones went

M. Pompidou has not actually lost a referendum—as de Gaulle did in 1969—but he has fared worse than his predecessor did in the four previous ones. In round figures, M. Pompidou on Sunday pulled in only 10.5m yes votes against 5m noes and 13.6m abstentions and blank or spoiled ballots. This compares with the following yes-to-no figures, with abstentions, blanks, etc. in brackets, on the earlier occasions (figures for metropolitan France only) :

1. September, 1958, on the constitution of de Gaulle's new **Fifth Republic** : 17.7m to 4.6m (4.3m).

2. January, 1961, and April, 1962, both on the **Algerian settlement** : 15.2m to 5m (7m), and 17.5m to 1.8m (7.7m).

3. October, 1962, on the **popular election of the president** : 12.8m to 7.9m (6.8m).

4. April, 1969, when de Gaulle made a referendum on **regional and senate reform** into a personal vote of confidence : 10.5m to 11.9m (6.2m).

Even in 1969 de Gaulle got 36.7 per cent of the registered electorate to vote yes : on Sunday M. Pompidou got only 36.1 per cent of it.

European integration. Yet neither variety of the nationalist drums that both he and the Communist party beat during the campaign brought much obvious reward: the no votes, 17 per cent of the electorate, were only fractionally more than the Communist candidate got during the last presidential election. M. Pompidou has no reason to hang back.

His European partners, when they turn up for the Paris summit meeting in October, might not be too sorry to find him—although there is no great likelihood that they will—a little bit chastened. The theory that France more or less single-handed both built today's common market and brought Britain into it is not self-evident to everybody. Nor is the conclusion that Paris is its natural political capital. M. Pompidou, a president elected for seven years, has institutional, political and, let it be said, intellectual reasons for standing slightly higher than his partners. He would be easier to work with if Sunday's skid on his own banana skin has made him, and more obviously his subordinates, less aware of it. And Mr Heath, having found the same banana skin under his feet, could be pardoned if on Sunday night he experienced one brief moment of *Schadenfreude*.

Yet only one. Speaking European is still something less than natural for the British, for all the efforts Whitehall and Westminster are making to learn. The understanding that has grown up between Mr Heath and M. Pompidou since 1970 has brought Britain some notable benefits and can bring more. It can also bring benefits to Europe, provided both men, neither known for his humility, remember that they are in a community of 10 states, not two or even three. In that respect the other states of Europe—especially the smaller ones, but perhaps split Germany as well—can be pardoned if they too felt a certain *Schadenfreude* and it went on just a little longer.

What is Willie up to?

Mr Whitelaw cannot be said to have failed yet in Ulster, but the demands to know what British policy is really driving at are growing. There is still a choice if the Government wants to make one

Despite his disappointments, Mr Willie Whitelaw is still trying to win Catholic hearts and minds in Northern Ireland, a war in which the army (and Mr Brian Faulkner's government) signally failed. Many people believe, and many Protestants in Ulster actually hope, that Mr Whitelaw will fail too. The first month of direct rule has not brought an effective split between the IRA and the Catholic population; there have been brave, or bravish, words from Archbishop Conway, Mr John Hume and some of the women of Andersonstown, but the IRA's ability to operate in the province has not been visibly diminished. Mr Whitelaw has great patience, and he has not run out of opportunities to appease: he is steadily letting out the interned, he has now lifted the ban on marches, he has granted an amnesty to those, including Miss Bernadette Devlin, who have marched despite the law. He has made it clearer than clear that he does not want to send the troops into the Bogside and the Creggan estate to put down the republicans, gunmen or otherwise, who are in control there. But an increasing number of people fear that he is not going to get anywhere with the Catholics, whatever he does.

The quickest thing in Ireland is the disappearing moment of hope: it would be absurd to conclude, anywhere else in western Europe, that Mr Whitelaw's policy was doomed to failure after just a month, but in Ulster the idea has an awful plausibility. Mr Lynch's government in Dublin has barely responded to the Heath initiative; the Social Democratic and Labour party in the north believes that its constituency wants peace but it has failed to rally it; the young men of the IRA have won more time and tolerance from the Catholic community for their pursuit of a united Ireland; and the spread of communal rioting into new areas seems to have begun. It is entirely probable that neither Mr Heath nor Mr Whitelaw knows yet what their policy is really aiming at. It could actually be much nearer to what Senator McGovern and Senator Kennedy want than they realise. It could be totally different. But the Government now gives the appearance of operating without particular regard for a number of Protestant susceptibilities: it seems to believe, and it may be right in believing, that the Protestants have no real fight in them whatever it does. But it is not just Mr Faulkner's ministers who think that Mr Whitelaw, wittingly or unwittingly, is following a policy that will lead to such a deterioration of relations between the communities that Northern Ireland could end up in an unmanageable confusion in which Britain would find itself powerless.

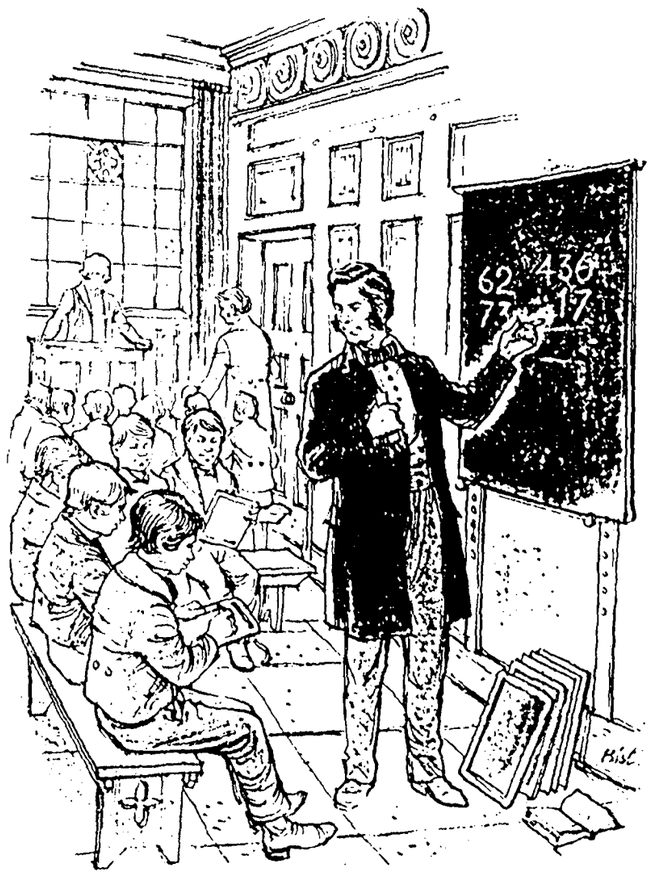
The solution the Protestants fear

Mr Heath and Mr Whitelaw have three policies open to them, and although they are stoutly resisting the demands to clarify what they mean to do, they had better be prepared for trouble before very long. Many Protestants are now convinced that the Government is actively working for the solution in which they will be handed over, by hook or by crook, to the republic. This policy requires the Government to resist any thought of integrating Northern Ireland with the three countries of Britain; it requires action by Mr Lynch to liberalise his constitution; it also probably requires the British taxpayer to subsidise social security benefits in the new Ireland both north and south. The Protestants believe that, even if the Government is not following this policy deliberately, the eventual deterioration in Northern Ireland will be so great that this Government or a future one will wash its hands of it all and be upheld by the British public in that decision. That might mean a civil war in Ireland, but it would be one for which the Protestants would be poorly organised. It goes without saying that it is what the IRA's strategy is aiming at; and the IRA has succeeded up to now. That is why Northern Ireland's Catholics still sympathise with the gunmen and bombers and Mr Lynch still tolerates them on his side of the border.

Between independence and integration

The second possible policy for the Government is to wash its hands of Northern Ireland in such a way that a coherent Protestant community would have the real opportunity of carving out a state for itself, much as the Israelis did in 1948. This still looks very fanciful both politically and economically, but it is much on the lines that Mr Bill Craig hankers after. Some Conservatives in Britain might consider this a less dishonourable way of getting rid of the Ulstermen than any other. But Mr Craig has not made the headway he would have liked since direct rule because of two things. First, too many Protestants have business interests to go along with the idea of a sort of Rhodesia on the edge of Europe, with no British support to call on, disliked by the international consensus and under constant guerrilla attack from the south. Second, most Protestants think their best course is to work for full integration with Britain (and they believe they have paid their way for that in both war and taxation), will go on hoping for it, and will still not believe it when the Government refuses anything of the kind. Mr Craig is confident that enough Unionists will become so disillusioned with Mr Heath and Mr Whitelaw that his hour will come, but it still seems a good way off.

The third British policy is precisely what Mr Faulkner, the Rev. Ian Paisley and a majority of Protestant Ulstermen do now want: to be taken on as full citizens of the United Kingdom. They believe there never will be another parliament at Stormont and that the first recognition of that will be when the hints start coming that the year of direct rule is to be extended. So they see their best chance of escaping both Mr Lynch and Mr Craig as being taken on the strength as British, not Irish. The way in which Mr Heath shies from this one whenever it is put to him is pretty eloquent, but the cause may not be entirely hopeless inside his party. If, indeed, Mr Faulkner had sat on in No. 10 a month ago and not emerged before announcing that he had applied for full union, he might have got a majority of Tory MPs putting their names to just such a resolution; the Conservative conference could yet find more voices raised in this cause on Ulster than for backing Mr Smith's Rhodesia.



The trouble for the Government is that it knows full integration would never be tolerated by Ulster's Catholics or by any government in Dublin. But the Unionists have begun to insist on a straight answer to their question, just as the white Algerians kept on putting the identical question to de Gaulle. There is, of course, one difference: the Ulster Protestants are still a majority in what has been their province. They could be even more of a majority. The British Government may, or may not, have decided that the casualties which a reoccupation of the Bogside and Creggan would entail are politically unacceptable. But if Mr Whitelaw's mission does not make remarkable progress in the coming weeks, it is increasingly hard to see these areas ever returning voluntarily to the United Kingdom. The day could conceivably come when, if the Catholic community had put itself totally out of court, the casualty list in the Bogside might be politically acceptable. But that is not what Mr Heath or Mr Whitelaw are at all anxious to spell out.

So if the Government is prepared to cede territory to the republic (although whether the Bogside would accept Mr Lynch's police is another matter), its first referendum in Northern Ireland might include some form of local option: that is, that areas contiguous to the republic could opt to join it, even although the majority of the population of Northern Ireland did not. This would very likely reduce the Catholic proportion of the population in the new province to little over 20 per cent, an appreciably more manageable proposition. It would, however, leave the Catholics in Belfast, an unassimilable enclave. It would then have to be considered if they should be offered the prospect of settling in the south, and being provided with new homes and jobs at the joint expense of the British and Irish governments. No British government would like such an approach, but if circumstances were to force a resort to integration, a change in the border and the resettlement of some parts of both the Protestant and Catholic communities would almost certainly have to accompany it.

The least Lynch can do

De Gaulle never answered the white Algerians openly until it was too late for them. Mr Heath will not be so fortunate: the time is approaching when the Government will have to take a first view of Mr Whitelaw's chances of success. The arguments for letting him go on as he is will almost certainly carry the day. But the Government will not be able to duck the debate in the party for ever. It ought not to duck, either, the problem of its relations with Mr Lynch. The British nationalist calls begun by Mr Powell have rather more support than the Government is acknowledging. They will get louder if Mr Lynch goes on doing nothing very particular. If the Government's idea is not to quarrel with the republic but to appease it, then some arrangement will need to be reached which actually sustains the concept that Britain and Ireland have, and need to have, a special relationship. The only common ground that looks at all promising is the economic relationship of the two islands, especially after their joint entry into the common market. Once Mr Lynch has got his referendum out of the way, he would do a lot for himself in Britain (and in the business community in Northern Ireland) if he were to start talking and working again for the common economic interests of Ireland, north and south, and Britain. No new tie, however small, should be neglected now. Every connection of self-interest and remaining respect will be needed between Britain and Ireland in the months ahead if the storm is to be ridden out.

the computer and education

Victorian teachers generally made their students learn by rote and outlawed scepticism. Modern teachers recognise it is their job to awaken minds—a far more demanding task.

There is no substitute for the skilled teacher. Which is why the computer plays an increasingly significant role—in education, in research, in administration, within universities, technical colleges, training establishments and schools.

For the computer is the educator's most effective complement and ally. It is a tool of unrivalled power for the exploration of creative ideas, the pursuit, recording and retrieval of knowledge, the processing of the huge volume of calculation so often involved in modern research. Equally vital, it assumes a vast burden of essential administrative tasks that otherwise so prodigally pre-empt valuable human and financial resources.

To educators, Univac makes sense. It offers outstandingly versatile and reliable hardware, extensive and well-proven software. Univac cost/performance is unrivalled—and there is no extra charge for on-site systems support. Univac expertise in communications, real-time, on-line and remote batch processing is especially relevant in education. Because one system can serve innumerable departments through any type of terminal—and still leave capacity for a big load of batch work. So naturally, more and more educators choose Univac. In 1971 alone, three European universities ordered the new UNIVAC 1110 system. And there are some 40 other powerful Univac computers installed or on order at universities from Sydney to Helsinki, from Salt Lake City to Zagreb.

Educators recognise that Univac experience allied to their own skill and knowledge is an unbeatable combination. Because there is no substitute for successful experience.

BRITAIN

The Labour party sells itself Short

With the minimum of fuss or surprise, Mr Ted Short has been elected deputy leader of the Labour party, filling the vacancy created by Mr Roy Jenkins's resignation. In the second ballot, the results of which were announced on Tuesday evening, Mr Short romped home against Mr Michael Foot by 145 votes to 116. As was expected, most of the 61 votes collected last week by Mr Tony Crosland went to Mr Short, who picked up 34 against Mr Foot's 6, while 21—presumably believing they had not been given much of a choice—did not vote this week.

It is said that votes cast for the deputy leader are no indication of what might happen in a leadership election, and precedent supports the argument. But Mr Short would be less than human if he were not quietly elated by the fact that he got five votes more than Mr Jenkins did last year; if he makes a success of the deputy leadership—which basically means if he does not upset anybody very much—it would not be surprising if he came to see himself as a possible "unity candidate" if Mr Wilson decided to call it quits in a year or so. The fact that Mr Short at 59 is three years older than Mr Wilson might, in those circumstances, work in his favour, for a sizeable section of the parliamentary Labour party might well then be looking for a stopgap leader. And he would probably do that job rather better than, say, Mr Callaghan.

Short: romped home

This week's result has also been seen as marking a decline in Mr Foot's position in the party: he dropped 10 votes compared with his total against Mr Jenkins last year. In a sense that is true, for Mr Foot's conduct of Labour's official anti-market battle on the floor of the Commons—and in particular his readiness to collaborate with Mr Enoch Powell and his friends—has not enhanced his standing with Labour MPs. But then, Mr Foot owes his present inflated status in the parliamentary party to the common market issue. On a straight left-right-and-centre vote in the party Mr Foot would come nowhere near his present figures.

Metropolitan police

End of an empire?

The new boss who intends to make changes is wise to make them quickly, and that is a maxim the new commissioner of the metropolitan police, Mr Robert Mark, has followed. Mr Mark took over only last week, but during the past few months since his appointment was first announced there have been rumblings—and one or two senior resignations—within the metropolitan force. The rumblings, at any rate, are now proved to have been justified, in so far as the changes Mr Mark introduced this week are every bit as sweeping and radical as some feared and others hoped they would be.

The purpose of the reforms is twofold: to increase the efficiency of the metropolitan police and to counter public disquiet about the force. Most of that unease concerns the activities of individual detectives against whom there have been allegations of corruption; two men were recenty convicted and sent to prison. No police force is without its own villains, but the temptations and the opportunities for corruption in the metropolitan force have been magnified by the existence of the CID as, in effect, a private empire. Once a man was accepted into the plainclothes branch he could reckon to stay there for the rest of his working life. Men who showed themselves skilled at particular sorts of detective work were likely to be kept in one spot for long stretches. Not surprisingly, the CID men looked upon themselves as an elite and looked down upon their uniformed colleagues as a lesser breed.

From now on the force will no longer be composed of coppers and detectives but simply policemen. There will be much more switching in and out of uniform, much more variety of experience. The work of crime detection will come much more directly under a unified control. Most significantly, the 23 divisional commanders will be responsible for dealing with all crime in their divisions. Theoretically, that has been so since 1968 but, in practice, a division's detective chief superintendent has bypassed his uniformed commander and dealt directly with the four CID area commanders at Scotland Yard. Those area commanders—who heard at very short notice this week that they were being switched around—may have felt a sense of demotion, especially when they were told they were to work in future under the direction of four uniformed deputy assistant commissioners. Some feelings of resistance and resentment within the CID will be understandable. The compensation for these changes is that they open up wider career prospects—for all policemen, and not just the detectives who form 15 per cent of the total force.

The setting up of a new department, operating 24 hours a day, to deal with complaints against the police is a positive step which could do much to ease

Mark: reforming cop

the kinds of suspicion which have accompanied the drawn-out, secret investigations of the past. Yet the new branch will still be staffed by policemen, and the commissioner would earn even more applause if he were to devise some means of independent participation in its investigations.

The reputation of the metropolitan police has become somewhat tarnished lately. CID men have been in the habit of blaming this upon the inferior quality of the man in uniform. If this were ever justified in the past, the detectives who presently find themselves wearing uniform will have a splendid chance of improving the image of the force. But, in fact, no one who has seen other police forces in other countries at work will doubt that London still has much to be thankful for. The policeman who goes wrong is still very much the exception and that, considering the pressures and the difficulties under which the police operate in the capital, is tribute enough.

Lancaster

Red rose

It is depressing that Mr Charles Carter, vice-chancellor of Lancaster university and for many years a by-word for good industrial relations, consultative government and all the other skills now necessary to university administration, should have run into the same sort of sticky squabble that swamped Sir Walter Adams at the London School of Economics and Dr Albert Sloman at Essex: his only comfort must be that since his university is outside south-east England he has suffered less publicity.

The stand he has taken with his student body is on unassailable ground: from time immemorial students have ducked lectures and skimped their work, but if they elevate this to an act of policy they can hardly expect the university to disregard this and go on handing out public money to them. Mr Carter is plain-spoken but by no means inflexible; by mid-week a good number of students had been allowed to collect their grants for the summer term without first signing the undertaking he had proposed, which remained as a sort of Damocletian sword. And Mr Carter has sensibly welcomed the appointment of the Labour chairman of Blackburn education committee, Mr Tom Taylor, who has been involved with the university for many years, to inquire into the dispute. Neither move dissuaded the students from deciding to reimpose the lecture boycott on Wednesday night.

The battles among the staff of the university's English department, which is at least one of the roots of the students' action, is outside Mr Taylor's terms of reference. The case-history of the dismissed lecturer, Dr David Craig (who appears to be able to call on a remarkable degree of student support) is tediously intricate, stuffed with personal jealousies, academic squabbles and other "incidents" which serve to make one wonder why on earth, if he gets on so badly with the head of his department, he should want to stay at Lancaster at all. The dossier prepared by the Council for Academic Freedom contains a good deal of evidence from both sides. The result is so full of misunderstandings and contradictory recollections as to make one despair of academia and does not inspire sympathy for Dr Craig.

The most important element in the dispute is the report of the external examiner on last summer's final examinations for Dr Craig's modern literature course. The papers:

> revealed a strong and disturbing tendency to give stereotyped answers and to use a restricted range of source material . . . clear evidence of an undue orientation in the teaching towards political rather than literary themes and of uncritical acceptance by students of particular doctrines.

Particular candidates were "unduly favoured by particular examiners." In a small university, like Lancaster, where all too many students are examined by their own lecturers, there is always the danger that the external examiners will read too few scripts and accept internal verdicts far too readily. When they do exert themselves, everyone—including Dr Craig—must accept their criticisms.

Housing

Defying the bill

Rent allowances for furnished tenants came a step nearer when Mr Julian Amery said on Monday that they would be introduced once a workable scheme could be agreed with the local authorities (who are willing in principle)—but not before April, 1973, at the earliest. Amendments which would have incorporated them at the report stage of the Housing Finance Bill were defeated. The bill remains substantially unchanged from its original form, and Labour's opposition to the principal of charging "fair rents" to council tenants has shifted from Parliament to the municipalities, where it has become a main plank for the local elections. But most local Labour parties are still unsure how far to carry their campaign and many are split on the issue. It may be quite enough for election purposes to play up the council rent increases which must take place on October 1st, in the first stage towards fair rents, without actually refusing to implement them when it comes to the point. Sanctions are heavy: a council acting illegally against the provisions of the bill, once enacted, would risk a takeover of housing functions by the central government's housing commissioner, the withdrawal of subsidies, and fines on individual councillors and officers of up to £400.

The Labour groups of Liverpool and Birmingham, who are expected to gain control next week (see page 26), have voted to defy fair rents, but in England only a few other, small councils have gone so far. There is an interesting situation in London, where elections are not due this year, but where Labour already holds 21 boroughs. At least five of these Labour groups have said they will not carry out the statutory rent increases, and one, Greenwich, has a council resolution to that effect.

While councils are rightly hesitant to take illegal action, legal avoidance of another aspect of the bill is already widespread among both Tory and Labour councils. That is the obligation to pay rent surpluses to the Exchequer, which after certain allowances will keep half. Ways of sopping up surpluses to avoid this range from a trust fund for council estate amenities (Coventry), to special programmes of council house repairs and repayment to the rates of past expenditure which could be attributable to the housing revenue account.

The Lion is good company to East and Central Africa

If you're going to Kenya, Uganda, Zambia or The Seychelles* take the British Caledonian Lion to Nairobi, Kampala, Lusaka (via Tunis), Victoria (Seychelles). British Caledonian serve these important centres with regular scheduled flights. All by VC10 jets. Fly BCAL's Interjet from Edinburgh, Belfast or Glasgow to London Airport Gatwick, or check in at BCAL's Central London Air Terminal at Victoria Station with its fast rail-link to Gatwick.

Tell your Travel Agent to catch you a BCAL Lion to East and Central Africa.

*From 4th July.

BRITISH CALEDONIAN go places in style

Local elections

Control of the cities

The Tories are now a little more hopeful about the outcome of next week's local elections (Scotland polls on Tuesday, English and Welsh boroughs on Thursday, and the districts from Thursday to the following Wednesday). Provided that attention is focused on the way the votes go, rather than the seats, the Tories may get some comfort from the results after all, for this week's National Opinion Poll in the Daily Mail has confirmed the recent pro-Government trend, and put the Labour lead at only 2 per cent. But the ruling Tory groups in almost all of Britain's biggest cities must be bracing themselves for loss of power. Labour now controls only 4 of the 15 largest provincial cities (see table) ; next week it should almost certainly control at least 12.

The table shows the outcome, in terms of the ruling party's majority, of two projections from last year. The column showing the outcome of a 6 to 8 per cent swing to Conservatives is the one to watch, for the opinion polls indicate that there has been a 7 per cent swing to the Government since last May's municipal voting. Local variations and the odd personal vote for a retiring councillor may affect those figures a little. But if the party majorities in those towns next week are clearly more favourable to Labour than given in the table, the Opposition will be doing better than its current opinion poll rating ; if the Tories keep Labour majorities below these projected figures, the opinion polls may be underestimating the Government's present strength.

But the critical swing column shows just what the local Tory leaders are up against. The critical swing compared with May, 1971, is the best result for the Conservatives in the key marginal ward which would nevertheless produce a Labour majority on the city council. In eight cities, swings well into double figures are required—results which are pretty inconceivable. Take Bradford, for example, which looks the city where Labour is most likely to falter. There, Labour must keep the pro-Tory swing to 8.8 per cent to be sure of a majority, but because of a couple of Liberals the Conservatives would still need a far larger swing—18.7 per cent—to retain their own majority. However, for the next two years a few cities (Cardiff, Newcastle-on-Tyne and some smaller boroughs) will probably stay Tory controlled because of earlier abuses of the aldermanic system.

Edinburgh is the city most affected by party splits and minority parties. Whereas in Aberdeen, Dundee and Glasgow the old Progressives have more or less peacefully given way to out-and-out Conservatives, a clash between the two parties in two Edinburgh wards could decide control. Last June the Liberals gained Corstorphine ward by 1,914 to 1,704 Progressive and 1,221 Conservative. Yet Corstorphine's one retiring Progressive councillor is being challenged by the Tories. If, as seems fairly likely, Liberals win the balance of power in Edinburgh it could be on this dispute. But Labour, which has never controlled Edinburgh, might just make it—the Progressives are challenging one Conservative councillor in Colinton where last year a similar split brought Labour within 93 votes of victory.

Elsewhere the Liberals are reducing their national effort yet again, although they are challenging for control of Barnstaple (in Mr Thorpe's constituency) for the first time. In Liverpool Liberals talk optimistically of holding the balance of power which they now almost have. But, as the table shows, it will be surprising if Labour does not win a clear majority.

	Present composition					Party majority		
City	Cons & Allies	Labour	Liberal	Others	Now	6-8% swing to Cons	No swing	Critical swing
Birmingham	53+27	58+10	6+2	–	Con 4	Lab 20-24	Lab 28	12.8% to Con

Liverpool	Con 50+28 Prot 4	57+12	9	–	C & P 4	Lab 16-18	Lab 22	15.1% to Con
Manchester	18+6	81+27	–	–	Lab 84	Lab 74	Lab 84	NA
Nottingham	27+9	27+8	–	+1	Con Mayor	Lab 14	Lab 16	18.9% to Con
Sheffield	23+4	57+23	1	–	Lab 52	Lab 62-64	Lab 64	NA
Teesside	Con 33+20 Ind 3+1	42+5	–	–	C & I 10	Lab 12-14	Lab 16	16.8% to Con

Present composition is broken down in each party into councillors followed by aldermen. Vacancies being filled this May are assigned to the defending party ; the Labour total in Liverpool includes one council seat to be filled later at a by-election.

A library for the world

Since its beginnings in 1896 the British Library of Political and Economic Science—better known as the London School of Economics library—has grown at a phenomenal rate. The reason why is clear. When Sidney and Beatrice Webb founded it a year after the LSE itself, there was no good British library for the study of social, economic and political science. So it followed that the library became the obvious repository for many great collections—such as that of the Royal Economic Society and the material assembled by the Webbs for their studies of trade unionism—and it has since constantly expanded to meet the needs of the teachers and students at the school.

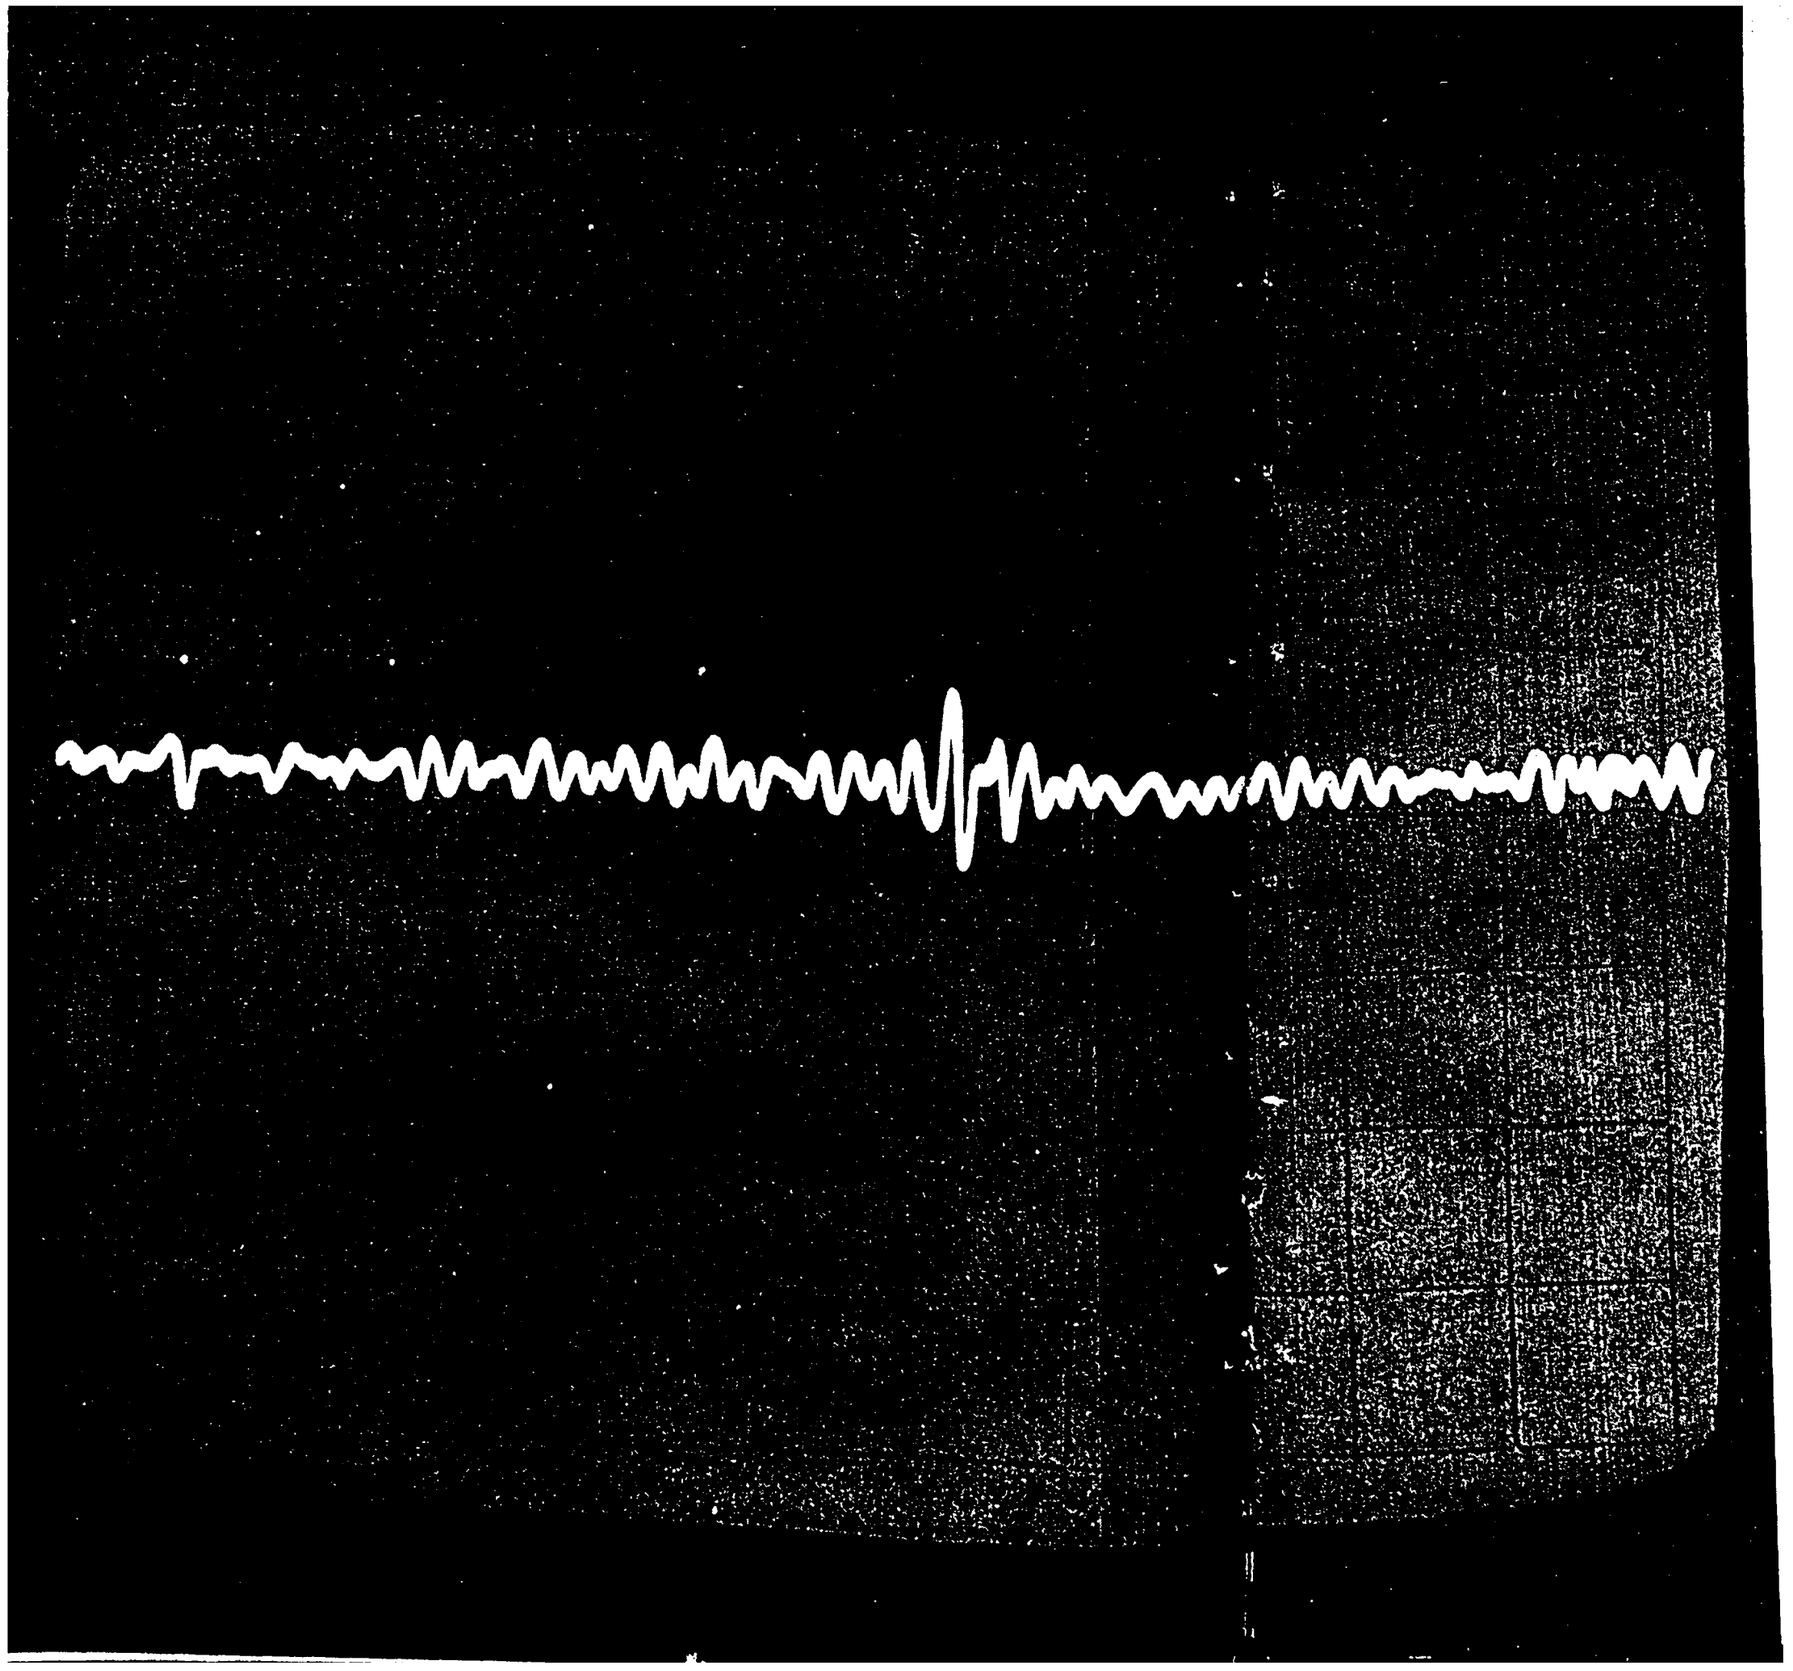
With well over 2m items it is now the largest library in the world devoted exclusively to the social sciences. Its bound volumes (12,000 in 1902 and 70,000 in 1913) now number 575,000. One enormous source of increase is government publications from most important countries ; the library received 5,800 such documents last year, plus a further 2.5 tons of documents from the United States alone.

This wealth has, not surprisingly, created staggering problems of space. Only about 70,000 books are actually displayed on open shelves, all the rest being kept in a rabbit warren of rooms in the bowels of the school. The overcrowding is such that as new books come in less-used ones are sent off to a repository at Egham, Surrey. All this means that it often takes time for the panting library staff to dig out the required volume, and its task is not helped by the absence of lifts—a sorry state for what the recent Dainton committee on national libraries recognised as the biggest specialist collection in London.

But space difficulties are not confined to books. The library is the main laboratory of LSE's 1,000 graduate students, besides its undergraduates. As a national library it is also extensively used by academics and businessmen as well as by politicians, the civil service and the press. Many more outsiders would, no doubt, use its facilities but find the sight of chairless students, reduced to studying on the floor during part of the term, a little daunting.

Now the governing body is in the throes of preparing to launch an appeal for the grand sum of £2.5m towards a new library. This decision was precipitated by an amazing stroke of luck when W. H. Smith and Son, the booksellers and stationers, decided to sell their headquarters and distributing centre at Strand House, bang next door to the LSE. Strand House has not only the advantage of proximity, it is also built to house books and so has the specially strengthened floors which libraries need if the weight of books is not to break through the floorboards. With 158,000 sq ft of usable floor space, Strand House could take nearly twice as many readers as the present library and, almost more important, provide quick accessibility to books by using all the most modern cataloguing methods. More books could be grouped by subject matter on open shelves. This transformation would, according to Lord Robbins, chairman of the LSE governors, make it " the most splendid centre for research, study and information, not just for the common market, but for the English-speaking world."

But it could be quite a haul before this dream is realised. The actual cost of buying Strand House is £3.78m, of which London University, with the approval of the University Grants Committee, is paying £1.98m to purchase the actual building. Over and above this, £1.8m must be found to buy the site and at least another £0.7m to convert the building. The deadline of October, 1973, has been set for raising the £1.8m. At the moment businesses and foundations are being approached both in Britain and abroad, particularly in the United States ; about half of the school's post-graduate students have always been from abroad. By the autumn the school hopes to have a sizeable sum before approaching as many of its 40,000 alumni as it can track down. And there are some most impressive names among them.



When it comes to fund-raising in Britain, however, the LSE does come up against some difficulties. For although its name is highly respected and opens all doors in most foreign countries, its image in Britain is something different. In fact, in some quarters and by some perfectly intelligent businessmen, the school is regarded as a hotbed of communism, a simplistic view, particularly considering how many reputable moderate and right-wing economists the school has fostered in its time.

Target £2.5m

Being founded by the Webbs, the school was understandably associated with the Fabian movement. But the red-hot image dates first from the years between the wars when Harold Laski taught there (side by side, incidentally, with such opposing stalwarts as Friedrich Hayek, Frank Paish and Arnold Plant), and that image has been resuscitated in another way by a series of student demos and sit-ins in the past five years or so. Not that the demos were particularly dramatic by the standards set later at other British universities. But they had the notoriety of being the first and, as the school sits at the end of Fleet Street, every disturbance was played up in the national press.

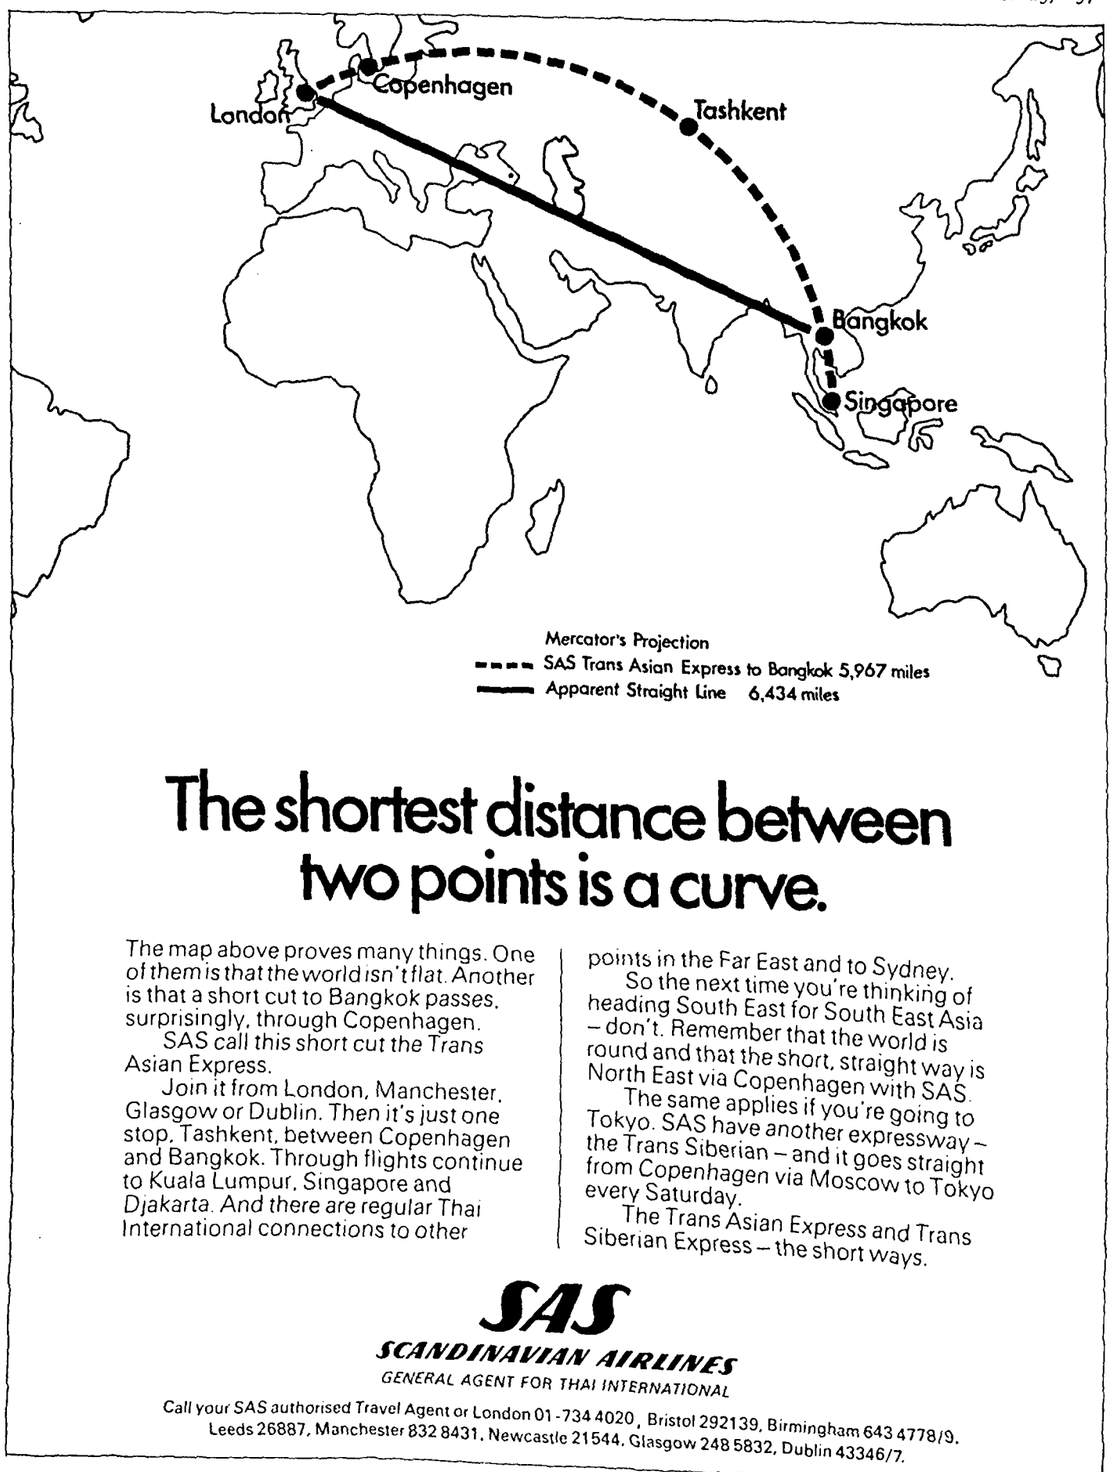
The school's governors are very aware of this, and in their appeal are stressing the national and international importance of the library to scholars all over the world. They have the backing of a glittering list of sponsors, among them Mr Heath, Mr Wilson and Mr Thorpe, top civil servants like Sir Douglas Allen at the Treasury, businessmen like Sir Arnold Weinstock, academics like Sir Isaiah Berlin and Sir Roy Harrod, and many foreign dignitaries, including Dr Arthur Burns, chairman of the board of governors of the Federal Reserve System in America, the Canadian prime minister, Mr Trudeau, and so on. This is by far the biggest appeal the school has ever launched, but with so much at stake it would be a national setback, echoing far outside LSE, if it were to fall short of its target.

The quietest distance between two points

One measure of a perfect bearing is its capacity to run in silence—tested and proved to exacting standards on the most sophisticated equipment.

And even by these standards we make silent bearings.

It's a difficult operation involving honing and super-finishing, paying close attention to every detail, utilising the latest technological developments to ensure that every component part conforms to the rigorous standards we have set ourselves.



The result : silent bearings which are of a quality unrivalled by those manufactured anywhere else in the world.

Ransome Hoffmann Pollard Limited, P.O. Box 7, Chelmsford CM1 1PU, Essex

Aerospace Bearings Division	General Bearings Division	Transmission Bearings Division
Stonehouse, Glos	Chelmsford, Essex	Ferrybridge, Yorks

rhp means bearings

The shortest distance between two points is a curve.

The map above proves many things. One of them is that the world isn't flat. Another is that a short cut to Bangkok passes, surprisingly, through Copenhagen.

SAS call this short cut the Trans Asian Express.

Join it from London, Manchester, Glasgow or Dublin. Then it's just one stop, Tashkent, between Copenhagen and Bangkok. Through flights continue to Kuala Lumpur, Singapore and Djakarta. And there are regular Thai International connections to other points in the Far East and to Sydney.

So the next time you're thinking of heading South East for South East Asia – don't. Remember that the world is round and that the short, straight way is North East via Copenhagen with SAS.

The same applies if you're going to Tokyo. SAS have another expressway – the Trans Siberian – and it goes straight from Copenhagen via Moscow to Tokyo every Saturday.

The Trans Asian Express and Trans Siberian Express – the short ways.

THE WORLD *International Report*

Why keep a dog and bark yourself?

That maestro of the well timed tantrum, the late Nikita Khrushchev, staged a spectacular one in 1960 that enabled him to cancel a four-power summit and a visit to Russia by President Eisenhower—two fixtures that had become particularly embarrassing to the Soviet leader because of the way his row with Mao was hotting up. Mr Brezhnev, who is not so good at staging tantrums, and Mr Kosygin, who is quite hopeless at it, must be thanking their marxist gods that their current script does not call for them to try to imitate Khrushchev. He was capable of acting the furious injured innocent in 1960 even when filled with secret joy at the fact that his generals had at last found out how to stop those pesky American U-2s flying across Russia. The men who deposed him in 1964 could at least put up a better excuse than his if they now wished to get out of entertaining Mr Nixon, whose bombers have, after all, been making Haiphong harbour rather hot for Soviet shipping; but they have bottled up their anger so easily that one gets the idea that there was no fizz in it anyway.

They have, of course, gone through the motions of organising a show of spontaneous Soviet popular indignation at the bombing of the Haiphong and Hanoi areas, but a listener to Russia's domestic broadcasts this week might have been excused for wondering which side Moscow thought the Americans were on in the conflict in south-east Asia. The Soviet commentators found remarkably little to say about Vietnam, but they found time to announce that salesmen from Boeing had arrived in China, and to suggest that Mao might intend to buy some B-52 bombers. And official Moscow was as discreet as official Washington during Mr Kissinger's visit to the Soviet capital from April 20th to 24th. That visit was the forerunner to a broadcast to the American nation on Wednesday night (see page 52) in which President Nixon said that he would go on withdrawing troops from Vietnam, though at a slower rate, while the bombing of the north would also continue. And the Americans and North Vietnamese agreed to reconvene on Thursday the Paris peace talks.

If the present offensive had been more swiftly successful, the Russians might have thumped their chests a bit louder. The sight of the North Vietnamese losing so many of the tanks that Moscow had provided must have been a disappointment to them, particularly because Hanoi's discovery of the limited value in this war of heavy Soviet weaponry is a point in China's favour in the continuing Chinese-Soviet contest for influence in Indochina. But anyway it hardly seems necessary to search for subtle reasons for the Russians' decision to play the role of non-barking dog at this stage. "Why keep a dog and bark yourself?" is more their slogan. They equipped North Vietnam for this major offensive. They are not now in a position to give Hanoi orders; but they could have hindered its launching of this attack and they chose not to do so.

The Chinese-Soviet quarrel, which in 1960 made Khrushchev find an excuse for not receiving Eisenhower in Moscow, in 1972 obliges Mr Brezhnev and Mr Kosygin to receive Mr Nixon. But they naturally want to negotiate with him from a position of strength, if they can shape one. The word "linkage" may have become fashionable only in the Kissinger era, but the concept is as old as diplomacy; and if the Americans have thoughts of offering Russia deals over arms control, "European security," or whatever, in exchange for helping Mr Nixon to extricate himself from Vietnam with dignity and win his election, the Soviet leaders for their part must want him to arrive in Moscow on May 22nd in a mood to make concessions—for which purpose Vietnam is their best available lever.

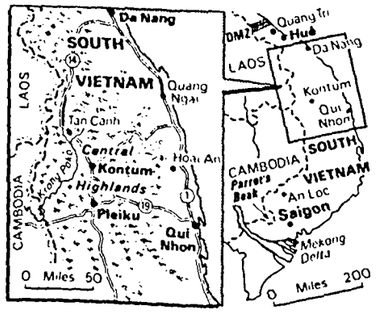
They may still hope that by the time he arrives the North Vietnamese will already have reduced Saigon to terrified paralysis and destroyed Mr Nixon's hopes of strolling triumphantly into a second term as the man who got America out of the war without letting the communists win it. But anyway—unless the North Vietnamese lose during May the ground they have gained during April—the Russians have a barrel to get Mr Nixon over.

If only Nixon had anti-war protesters as tidy as this back home

Into the midriff

FROM OUR SAIGON CORRESPONDENT

Everyone knew it was coming, yet it still caught them unawares. The North Vietnamese build-up for a drive against Kontum had been under surveillance and B-52 bombardment for many weeks, and softening-up attacks by communist units against South Vietnamese fire-bases were a clear signal that the third front of the current offensive was about to be opened. Yet last Monday, when Hanoi's tanks rumbled out of the mountains and down the road into the 22nd division's forward headquarters at Tan Canh, the defenders were still taken by surprise. Not a very good performance.



After the fall of Tan Canh an assortment of South Vietnamese rangers, airborne troops and infantry hastily threw up a new defence line behind the swollen river farther south, hoping to stem the North Vietnamese advance towards Kontum city. In their assault on Tan Canh, the North Vietnamese unveiled another nasty addition to their armoury of sophisticated heavy weapons: a deadly accurate rocket, guided by a mile-long wire trailing in its wake, which devastated the command post of the 22nd division's headquarters. The attacking force is also believed to have four armoured battalions in the area. With a total of 80 tanks, of which only a quarter were used in the Tan Canh operation, communist strength around Kontum is put at some 15,000 troops, including heavy artillery and sapper units. The South Vietnamese forces were clearly outnumbered after the earlier withdrawal of some units to reinforce the defences of Saigon.

The communists had planned and executed their attack well. Strategic roads leading into the highlands were cut, thus preventing the arrival of South Vietnamese supply convoys. Then the North Vietnamese forced the evacuation of a string of fire-bases on Rocket Ridge, which stands between Kontum and the borders of Laos, Cambodia and South Vietnam where the North Vietnamese were massing. To add to the surprise, they bypassed several other government positions and swept straight into Tan Canh. According to instructions to the communist forces broadcast over Radio Hanoi, the objective of the Kontum offensive is to trap government units and prevent them escaping.

It all sounds vaguely like Dien Bien Phu 18 years ago, and no doubt the comparison will be thoroughly laboured in the days ahead, with encouragement from Hanoi, which hopes the parallel will be complete. But Kontum is not Dien Bien Phu. Even if the provincial capital does fall, which is quite on the cards, it need not be the end for South Vietnam. It has always been regarded as difficult to defend, and apart from the fact that it is a provincial seat there is little point in wasting good units of the South Vietnamese army defending it against impossible odds. Still, President Thieu seems rigidly determined not to lose a single provincial capital, and he may thus play right into the communist trap. American advisers give Kontum an even chance, provided the weather lets air power into the area.

On Wednesday the communists renewed their attacks against Quang Tri in the far north, and on Thursday mortars brought down from the hills to the north-west were firing into it. Last weekend the besieged provincial capital of An Loc, 60 miles north of Saigon, came under renewed assault and exceptionally heavy bombardment. By the middle of this week the South Vietnamese commander there believed the worst was over. Defence chiefs in Saigon, however, were concerned about North Vietnamese gains in the Parrot's Beak salient of Cambodia, which extended the communist front north-west of Saigon to about 100 miles in length. A tank column was spotted for the first time trying to penetrate the Mekong delta west of Saigon.

The failure of intelligence agencies to give warning of how many North Vietnamese tanks were deployed along South Vietnam's borders has cast some doubt on intelligence estimates of overall communist capabilities, notably the assessment that the North Vietnamese cannot sustain their present drive for more than about a month. The crucial question remains. Just what more do the communists have stashed away in their border sanctuaries that the electronic sensors did not sense?

Germany

The wind from the south

The challenge to Willy Brandt's government this week would almost certainly not have taken place had his Social Democratic party and its Free Democrat partners fared better at Sunday's elections in Baden-Württemberg. Baden-Württemberg was a singularly unpromising ground for Herr Brandt to meet the challenge of Herr Rainer Barzel, the pugnacious Christian Democrat leader. The Baden-Württembergers tend to be prosperous, conservative people who like to vote for straightforward right-wing parties like the Christian Democrats or right-wing liberals among the Free Democrats.

As the table on page 34 shows, the Social Democrats' slice of the vote has remained fairly constant over the past 12 years at just over a third—with the exception of the rather disastrous 1968 election. The Free Democrats felt the benefit of being out of power just then and picked up, but generally over the past decade they have been in a decline. Last Sunday they ended with just over half of their share of 1968. The Christian Democrats may have gained some votes this time through the abstention of the extreme right-wing National Democrats. But at least some of their extra votes must have come from the other parties and from younger voters. Why?

The Ostpolitik issue may have been the main reason, but in a roundabout way. Herr Brandt and his colleagues put the emphasis of their campaign on this issue because the opinion polls suggested that the majority of west Germans are in favour of policies that are likely to lead to a relaxation of tension in Europe. But Herr Barzel's campaigning on such issues as tax reform, inflation, regional policy, crime in the cities and unrest at the universities seems to have brought in the actual votes. The Christian Democrats may have been helped by the last-minute publication in some papers of the purported extracts from the 1970 negotiations with the Russians—one of which, for instance, quotes the chief German negotiator, Herr Egon Bahr, as comparing west Germany's relationship with east Germany with its relationship with west Berlin.

But even if those extracts did not in the end frighten the public as much as the perpetrators of the leak had hoped, they seem to have provided new

A unique way of seeing each other's point of view.

You wouldn't think it was easy or comfortable, would you?

But some managers and workers have managed to twist themselves into a position where the chances of them seeing eye to eye are remote.

The trouble is that over the years we've frozen into these stiff-necked positions. So that some managers see workers as easily swayed by extremists, always after more money and less work. And some workers see management as exploiters who won't budge an inch unless compelled by drastic action.

It takes an effort sometimes to see the other man's point of view. It also takes time, imagination and good-will.

But we've got to do it. If we succeed, Britain has a very big future. If we fail, we'll all be in trouble.

It may take a bit of a wrench, but it's time we started showing our foreign competitors that we've got our heads screwed on the right way.

Work together and we'll make it together

Percentage shares in Baden-Württemberg

	1972	1968	1964	1960
Christian Democrats	53.0	44.2	46.2	39.5
Social Democrats	37.5	29.0	37.3	35.3
Free Democrats	8.9	14.4	13.1	15.8
National Democrats	—	9.8	—	—
Communists	0.5	—	—	—
Others	0.1	2.6	3.4	9.4

ammunition for the government's critics within its own ranks. Explaining his resignation from the Free Democrats last Sunday, Herr Wilhelm Helms claimed that he was appalled by the government's amateurish approach to the negotiations with the communists. In the end it was that resignation rather than the Baden-Württemberg election that started this week's scramble in Bonn.

The mechanism which helps west German politicians sort out who is the ultimate winner of a head-on confrontation like the one in the Bundestag on Thursday is not at all simple. Article 67 of the constitution lays down that no chancellor defeated in the Bundestag can be dismissed by the president of the republic until the Bundestag has elected his successor by an absolute majority. This is to encourage those who want to change the government to act with a greater sense of responsibility than the politicians did in the years before Hitler.

Article 68 of the constitution makes it difficult for the chancellor to order a dissolution of the federal parliament—something that a British prime minister, for example, can do entirely at his own discretion. The Germans do not seem to want to trust their chancellors to that extent. So article 68 lays down that a dissolution can be ordered by the president, at the chancellor's suggestion, only if a motion of confidence in the chancellor has been rejected by the Bundestag and if a successor has not been elected—in other words, when there is a total parliamentary deadlock that can seemingly be resolved only by a general election. But if, within 21 days of the motion being put, a successor to the chancellor should get the necessary majority, that right to dissolution lapses automatically. Provisions like those explain some of this week's elaborate manoeuvres in Bonn.

Italy

Challenge from the far right

The main question-mark hanging over Italy's general election on May 7th is the extent of support for the Italian Social Movement (MSI). In 1968, with 1.4m votes and 24 seats in the chamber of deputies, this extreme right-wing party—often labelled neo-fascist—represented 4.4 per cent of the votes. This set the party back from the 5.1 per cent it got in 1963 to its level in 1958. But in local elections last year, under the leadership of Signor Giorgio Almirante, the party made substantial gains, mainly at the expense of the Christian Democrats.

There are several reasons why the MSI has increased its appeal over the past four years. Chief among them is the urbane personality of Signor Almirante, who first rose to public prominence as a fascist in the 1940s. His chief aim has been to make the MSI appear a safe, respectable party. The appearance of respectability has been greatly strengthened by the addition of Admiral Gino Birindelli—formerly a Nato naval commander in southern Europe—to the party's ranks. But Signor Almirante, by linking up with the Monarchists for the election, has also increased the strength of the party machine.

In general Signor Almirante has shown a great capacity to appeal to right-wing extremists while presenting a very plausible image to the bourgeois discontents who feel that the Christian Democrats can no longer protect them from anarchists, insatiable unions, turbulent students, disobedient children, rapacious officials, bad drivers, thieves, robbers, hippies and similar *canaille*. The self-styled National Right—the MSI and the Monarchists—is a reaction to 10 years of inefficient centre-left government during which the democratic parties have frightened the middle classes and disgusted the workers by "threatening" reforms which they had neither the strength nor the will to apply. The financial and moral support which the middle strata of the business community once gave to the Liberals and later to the Christian Democrats now goes to the MSI.

In particular, the MSI, with its election platform entirely devoted to the problem of restoring order and authority, appeals to the smaller industrialists of northern Italy who find it hard to survive the unions' wage claims, and are terrified by the new aspect of the workers' demands. And the fact that the three major trade union federations have made progress, albeit with much difficulty, towards their promised unification is another factor which causes part of the industrial world to support Signor Almirante.

Greece

The sixth could be harder

FROM OUR SPECIAL CORRESPONDENT IN ATHENS

It was not the happiest of birthdays for the Greek government. Nor did the fifth anniversary of Mr Papadopoulos's revolution bring much joy to the Greeks last Friday. The confident expectations that the country's ruler would mark the occasion by announcing a further relaxation of martial law, an amnesty for at least some of the 270 political prisoners or even the first steps towards his often promised democracy were unfulfilled. Instead the Greeks were told that they had the best of all possible worlds: Greece was an oasis in a troubled world because it was governed in a manner geared to its national needs.

While the nation's leaders were giving thanks in Athens cathedral some 100 Athenian students defied the ban on outdoor demonstrations, chanted for freedom and democracy and sang songs by Mr Nikis Theodorakis. All Theodorakis's works are still prohibited. The police quickly broke up the party and arrested 15 people—who were later released.

But the real blight on the anniversary celebrations was the Mangakis affair. Professor George-Alexander Mangakis, a world authority on penal law, was sentenced to 18 years' imprisonment in April, 1970, for sedition and handling explosives. On April 15th an Athens court suspended the sentence for eight months on health grounds. That same evening Professor Mangakis and his wife were driven to the American air base outside Athens and, seen off by the west German ambassador to Greece, Herr Limbourg, boarded a private German plane for Germany. So far, so good. The event seemed to be the happy outcome of a secret arrangement between the Greek and German governments on the same lines as the agreement between M. Servan-Schreiber and Mr Papadopoulos in April, 1970, which resulted in the release of Mr Theodorakis.

But that was before Mr Pattakos, the first deputy prime minister, stepped in. On April 18th he accused both American and German officials of "an unprecedented act of gangsterism" in organising the escape of a political prisoner. The unfortunate Herr Limbourg suffered a heart attack and the Greek government demanded that he

It takes, on average, 15 years training to become a BEA Captai

In good hands.

When you fly BEA, we can't guarantee that you'll meet your Captain. In fact, the chances are that you won't.

Not because the Captain is uninterested in his passengers. On the contrary, the well-being of his passengers is the Captain's prime concern. And the best contribution, he believes, that he can make to that well-being, is to stay in the cockpit, giving his full personal attention to every last detail of the flight.

But just occasionally – though nowhere near as often as he would like – when everything's going smoothly, the Captain can hand over to his First Officer, come out of the cockpit, and meet some of his passengers personally. That gives him a lot of pleasure.

To judge from our picture, it often gives our passengers a lot of pleasure, too.

BEA

Your Captain wishes you a pleasant flight.

The new Ford Granada: built to take on the best in Europe.

They certainly know how to build performance saloons on the Continent.

And any British car that challenges them has got to meet them on their own terms. Nobody's going to buy British just because there's a Union Jack on the bonnet.

This philosophy has produced the Granada, a new car built by Ford to match the European competition in terms of looks, engineering and performance.

Mechanically, the Ford Granada is a very sophisticated car, embodying engineering and safety features which are not only relevant to today's motoring but have been specifically designed to meet all anticipated developments and regulations for years to come.

The fully independent suspension, for example, was designed to achieve outstanding handling and road holding characteristics, and is mounted direct to the body on rubber insulators to reduce noise and vibration.

The responsive rack and pinion steering system incorporates a safety tested collapsible column.

As for the engine itself, you can choose between the 106 m.p.h. V6 2·5 litre (0-60 in 10·8 seconds) and the 113 m.p.h. V6 3·0 litre (0-60 in 9 seconds flat).* Both are well matched by a self-adjusting, servo-assisted dual-line braking system.

The Granada's looks, as you can see, are as handsome as its performance.

But there's more to styling than mere good looks. Every line has been functionally designed to minimise overall dimensions while providing a spaciously proportioned interior.

The result: leg room, elbow room, and head room on a scale unmatched by any car in the Granada's class.

There are two Granada models, the Granada and the Granada GXL.

Features such as fully reclining front seats, face level 'Aeroflow' ventilation, individual rear seats and colour keyed cut pile carpeting are fitted as standard in both models. Which is what you would expect in a car of this quality.

The GXL has in addition such items as power steering, automatic transmission, a vinyl top with a sliding sun roof, all round tinted glass, and a radio with dual speakers.

But, if the Ford Granada can take on European performance saloons for looks, engineering and comfort, in one respect it falls short. It can't match their prices.

The Ford Granada is not a cheap car. Far from it. But, line for line, and feature for feature, it's better value than anything in its class.

Several hundred pounds worth of better value.

*Ford computed figures (manual transmission)

GRANADA PRICES START AT £1 642 INCLUDING PURCHASE TAX AND DELIVERY TO YOUR FORD DEALER EXCLUDING N IRELAND
THE CAR SHOWN IS A GRANADA 3000 GXL AND COSTS £2 031 SEAT BELTS AND LICENCE PLATES ON THE GRANADA AT EXTRA COST AND LICENCE PLATES ON THE GRANADA GXL AT EXTRA COST

There are many good reasons why a JAL 747 Garden Jet is different from all the other Jumbos.

Here are twelve of them.

The interior of our 747 Garden Jet has been described as 'Serene' and 'Breathtaking'. But for all its difference and original décor, for JAL that's not the most important feature.

For us, service has, and always will be more important than anything else. And service on a JAL flight means our own very special hostesses.

They, above all, personify the gracious hospitality that is Japan at its most pleasing. Their simple elegance, gentle femininity and inborn desire to please, are the main reasons why JAL has the reputation for having the most delightful in-flight service in the world.

They are the reason why JAL carries more passengers over the Pole to Tokyo than any other airline.

They are the reason why JAL has jumped from No 14 to No 6 in the world airline league in six years.

They are the reason why in only 11 months, just four of our Garden Jets carried more than 200,000 passengers across the Pacific.

And now, similar 747 Garden Jets are flying from Europe to Tokyo. Fly with JAL and you'll find twelve memorable reasons that will make flying a pleasure again.

JAL

What can your banker tell you about Britain and the Common Market?

Can he tell you what advantages and disadvantages Britain can anticipate? Can he tell you what long-term gains all Europe can expect? Can he tell you the immediate effects on the pound sterling and the U.S. dollar conditions?

A Chaseman can.

Can your banker explain the significance of British accession to the Treaties of Rome by the mid-1970's? Can he tell you what acceptance of the common agricultural policy (CAP) will mean to international trade? Can he anticipate the reaction in the United States? In the U.S.S.R.?

A Chaseman can.

Chase Manhattan's huge worldwide network of branches, associated banks and representative offices reacts quickly to unexpected political and economic events. Our special analysts often anticipate these changes. They understand what consequences these events can have on your international business. They carefully evaluate alternative courses of action for you to follow. And our sophisticated communications network loses little time executing your decisions.

When you want to *do* business on a multinational scale in Europe—or anywhere else in the world—speak to Chase first.

be recalled to Bonn. The result is that Greek-German relations, which stood a chance of being improved by Professor Mangakis's release, have taken a turn for the worse and Mr Papadopoulos's ability to conduct any diplomatic dealings adroitly must again be questioned.

Mr Pattakos had some reason to be irked, since as recently as on April 14th he was telling his fellow Cretans that before the revolution foreign ambassadors had only to wiggle their little fingers to make a Greek government fall. Now they could wiggle their whole bodies and nothing would happen. But just why the deputy prime minister kicked up a fuss remains a mystery. All that is clear is that Herr Limbourg would never have acted as he did unless both the German and Greek governments had agreed that Professor Mangakis could leave.

Whatever Mr Pattakos may say about the reassertion of Greek sovereignty Greece still needs friends, particularly in western Europe. The virtual freezing of Greece's treaty of association with the European common market has deprived the Greek regime of badly needed long-term loans from the European Development Bank and has prevented the gradual harmonisation of Greece's agricultural policy with that of the Six. Greece is due to become a full member of the EEC by 1984. It cannot afford to shrug off the implications of failing to achieve this goal. The need to restore its badly damaged reputation in Europe is but one of the pressures on Mr Papadopoulos to make some move on his political front.

Another could be the mood of the Greeks. It is not in the Greeks' temperament to tolerate inaction: they thrive on movement and change. Over the past five years the majority of Greeks have reaped considerable material advantages; acquisitiveness is a new facet of Greek society. This, the regime trusts, is changing the thirst for movement into a desire for stability. But boredom with Mr Papadopoulos and his professedly transient regime can generate hostility.

Which way can Mr Papadopoulos move? His own 1968 constitution, which envisaged a strong executive, a weak parliament, a figurehead monarch and the army keeping a watchful eye on the touchline, looks more and more unworkable in view of the hostility of King Constantine and almost all the former politicians. Many constitutional difficulties stand in the way of legally changing Greece into a republic; nor is it by any means certain that Mr Papadopoulos could muster a majority of the country to back him against the king. There is much speculation that Mr Papadopoulos may be forced to stage another coup—this time against his own constitution—and declare the country a republic overnight.

Mr Papadopoulos keeps his own counsel. Even those closest to him have little idea of the ways of his mind. But unless he makes some fairly dramatic move before he celebrates his sixth year of power he may find it getting harder to hold his country together.

Finland

Forever Urho

While ministries rise and fall in Helsinki, President Urho Kekkonen goes on for ever, or thereabouts. Mr Kekkonen has been installed at the presidential palace ever since 1956, and although he is now in his 72nd year he clearly has no intention of ending his career when his third six-year term expires in 1974.

In Finland the presidency is a serious business. Philosophical Finns may shrug off their long succession of disappointing experiences with unstable coalitions, minority governments, and caretaker (or "president's") ministries; but the shadow of 1974 already looms across the land. In January, after parliamentary elections had left the balance between the parties in much the same unsatisfactory state as before, the question of what to do about 1974 was publicly broached even before any serious attempt was made to form a new government. The visible broaching was done by Mr Ahti Karjalainen, the former prime minister who has been closely associated with the president during his years as a Centre party leader. It was widely assumed that he was acting for Mr Kekkonen when he suggested that all the parties should consider the idea of extending the president's term beyond 1974.

On April 18th Mr Kekkonen seemed to confirm this belief when he formally announced that, in response to many appeals, he would be willing to retain the presidency after 1974 if a majority of the electorate agreed. Mr Kekkonen made it clear he would not be willing to be a candidate in an ordinary presidential election; he would have to be "drafted," which means that the constitution would have to be amended or at least reinterpreted. The idea of this kind of constitutional gimmickry disturbs many

He's still going strong

Finns, however much they appreciate Mr Kekkonen's diplomatic skill and his services as a safety-net at times of political instability.

The Social Democrats have in Mr Mauno Koivisto, who was prime minister from 1968 to 1970 and is now deputy prime minister and finance minister, a known candidate for the presidency who, according to a recent opinion poll, enjoys wider popularity than Mr Kekkonen. The president has not previously faced such a formidable challenger as Mr Koivisto, and evidently he would rather not do so in 1974.

Rumania

Towards the fold?

President Ceausescu's latest party purge, announced last week, suggests a further bid to play down Rumania's differences with Russia. Some of the dismissals look reasonably straightforward: two provincial party bosses, for instance, have been sacked on charges of corruption. The Bucharest party chief, Mr Dumitru Popa, also sacked, is accused more vaguely of "serious shortcomings." That too could mean corruption but there have been suggestions that Mr Popa incurred the president's displeasure by his failure to improve the supply of consumer goods in Bucharest. Even in Rumania, rigid in economic matters compared with some other east European countries, consumer satisfaction is now taken very seriously.

The most significant change is not a sacking but a shift: Mr Paul Niculescu-Mizil, who was the president's close adviser on relations with other communist parties, has been made a vice-premier. Mr Ceausescu

has explained this as a move aimed at strengthening the government. It must in fact be demotion. There have been reports that Mr Niculescu-Mizil had become an impediment to Rumania's improvement of relations with Russia and east European countries, including Hungary. He played a prominent part in the development of Rumania's relations with China and may have become embarrassingly exposed in inter-party polemics : last July it was he personally who replied to a Hungarian attack on Mr Ceausescu's trip to China.

But even if the president is trimming his sails, there is nothing to suggest that he has abandoned his insistence on Rumania's right to independent action. His invitation to Mrs Golda Meir to visit Bucharest is confirmation of this. Maybe he is hoping, for reasons of his own, to act as some kind of mediator in the Arab-Israeli conflict. On the other hand it is always possible that he is exploring future relations between Israel and the communist countries with full, though discreet, Russian support. Mrs Meir's visit may supply some clues to Russian, as well as Rumanian, intentions.

Ireland

Europe's next referendum

FROM OUR DUBLIN CORRESPONDENT

On May 10th the Republic of Ireland will give judgment by a referendum on its government's decision to take the country into the European common market. The ruling party, Fianna Fáil, has had its task made easier by the fact that the main opposition party, Fine Gael, is supporting entry, although it is critical of the terms that have been negotiated. The only other party represented in the Dáil, the Labour party, is officially opposed to entry and would prefer association or a trade agreement with the European Economic Community, but many of its leading members are pro-European. The main anti-market campaign is being carried on by the two wings of Sinn Fein (the political branch of the IRA), the Irish Congress of Trade Unions, and some minor protest groups.

The government has avoided the difficulties that might arise from an attempt to amend individual articles of the constitution, especially those that relate to the jurisdiction of the state and the sovereignty of parliament, by framing one comprehensive amendment. This says sweepingly that no provision of the constitution shall

FitzGerald lends lustre to Fine Gael

invalidate any law or measure made necessary by the obligations of belonging to the common market, or "prevents laws enacted, acts done or measures adopted by the communities, or institutions thereof, from having the force of law in the state."

The referendum campaign has been spotty and muted. Perhaps, after 11 years of argument, most people have made up their minds. The majority attitude seems to be that entry is the lesser of two evils, that it offers some positive advantages, and that if Britain goes in Ireland has little choice but to follow.

The opponents of entry argue that entry means that 30,000 to 35,000 industrial jobs will be lost ; that several industries, including clothing, food, leather, paper, engineering and meat exports, will be seriously harmed or ruined ; and that small farmers will be put off the land. They add the familiar complaints that food prices will be sharply increased, the sovereignty of parliament reduced, and Irish culture undermined. They also say that if both the republic and the United Kingdom join, the Irish border will be made permanent and aspirations for Irish reunification will become futile. Some of these arguments, emotionally expressed, could be particularly effective if British-Irish relations deteriorated again to the nadir they reached with the burning of the British embassy in Dublin in February.

The pro-market campaign, which began by concentrating on the economic advantages of membership, has had to change its approach to counter the anti-marketeers' arguments. A short-term loss of 30,000 jobs is now said to be inevitable whether Ireland joins or not, but it is claimed that entry will mean a net gain of 50,000 jobs by the end of 1978. Living costs are expected to go up by only about 1 per cent each year. The fear voiced about loss of sovereignty is met by the argument that Ireland's real power to determine its future will be enhanced, not diminished, by entry ; whereas for the republic to remain outside, while Britain went in, would make the division of Ireland permanent.

A big majority in the referendum could tempt Mr Lynch to go to the country in June. A general election is anyway almost certain within 12 to 15 months (the last one was in June, 1969) and, with a tricky time in Anglo-Irish relations ahead, Mr Lynch would like to obtain a more solid parliamentary position. Certainly Mr Liam Cosgrave, the leader of Fine Gael, is taking no chances. He has decided that this is the time to get rid of his frontbench dead wood, and he has brought into his shadow cabinet several younger and more liberal backbenchers.

In the reshuffle Mr Garret FitzGerald has become the party spokesman on finance. Energetic and liberal, Mr FitzGerald is associated with a more socialist-inclined position than Fine Gael traditionally represents. Among those promoted from the back benches are such active newcomers to politics as Mr John Bruton (agriculture) and Mr Patrick Cooney (justice). For the first time in years, Fine Gael now looks like an alternative government. Its front bench appears more impressive than the mediocre cabinet Mr Lynch had to put together after four of his ministers had been sacked or resigned during the 1970 arms smuggling scandal.

Burma

U Nu bows out

After 10 years of military dictatorship, Burma now has the trappings of civil government. On April 20th all but one of the senior members of the ruling Revolutionary Council gave up their military ranks and General Ne Win took the title of prime minister. On Sunday a draft constitution providing for an elected People's Congress was announced.

But this looks no more than a cosmetic job; it is largely just a shedding of uniforms. Nor will there necessarily be anything very democratic about the single-party People's Congress. It is true that Ne Win's

Don't write off Northern Ireland.

Progress is being made in a most important area.

Every day tens of thousands of Northern Ireland Protestants and Roman Catholics work together, and, as the record shows, work hard.

In the two years 1970 and 1971 manufacturing output rose 13% (1970: 7.2%–1971: 6.1%).

Productivity in 1971 was up 6.7%.

In 1971 the number of days lost per 1,000 workers because of manufacturing disputes was less than one third of the national average.

Last year (1971) 7,000 new manufacturing jobs were negotiated in Northern Ireland, largely through the expansion of established firms. This level of job creation, one of the highest ever recorded in Northern Ireland in the course of a single year, was achieved despite the 1971 investment trend in Europe.

These are sound reasons for expecting expansion to continue–so long as industrialists and businessmen continue to look behind the headlines and into Northern Ireland's industrial record.

MINISTRY OF COMMERCE FOR NORTHERN IRELAND

cii

COMPAGNIE INTERNATIONALE POUR L'INFORMATIQUE

68, route de Versailles. (78) Louveciennes. Tel. 951 86 00

IT'S ABOUT TIME WE GOT INTRODUCED!

Who are we? Cii is the French computer manufacturer. In the past five years, Cii, backed by major industrial groups such as Thomson, C.G.E. and Schneider, has devoted considerable R & D resources as well as large-scale industrial investments to the launching of new series.

PRODUCTS:
Cii offers a comprehensive range of general-purpose computers featuring advanced technology and software, as well as highly competitive costs (Iris 45, Iris 50, Iris 60 and Iris 80), thus Cii has an efficient solution for E.D.P. requirements of all firms, whatever their size.
In automation and process-control applications, Cii's leading position has been confirmed by the commercial breakthrough of Mitra 15 mini-computer.

ORGANIZATION:
Cii has developed specialized teams providing an all-level efficient service and illustrating the fact that a good computer solves a lot more problems than it raises.

MARKETING:
Our rising sales in France have been accompanied by even greater progress abroad ; thus, from '70 to '71, our exports have doubled, mainly with private users. These co-ordinated efforts have proved to be fruitful. They made possible co-operation agreements with other manufacturers and granted license agreements both in Europe and U.S.A.
Today, Cii ranks as a full partner in the world's computer industry, and its name, Compagnie Internationale pour l'Informatique, is well deserved.

Nu's left—with the stuffing

Burmese Socialist Programme party has been vastly expanded since the time, only two years ago, when it numbered 18,000 out of a population of 28m. But the party still seems wedded to the army. When the party congress first elected its central committee last summer 120 out of 150 seats went to soldiers.

The new constitution tinkers with Burma's most pressing problem : that of its ethnic minorities—almost a third of the population—which have been warring against the lowland Burmese since independence in 1948. Three new states are created for the Mons, Chins and Arakanese, and the constitution lays down that there should be "no exploitation of one national group by another." But the states do not get any real autonomy.

It was the right moment to tackle the minorities problem. The Chinese-backed "White Flag" communists have in the past stirred the minorities to revolt, in particular the Kachins in the north-east near the Chinese border. But since Ne Win's cordial visit to Peking last summer Chinese support has become less obtrusive. With promises of autonomy the former prime minister U Nu found some support among the Mons and Karens near the Thai border for his revolt against the man who toppled him in 1962. But on April 7th he resigned from the National United Liberation Front, saying that he could not accept that "the right to self-determination of the nationalities includes the right to join or withdraw from the union."

U Nu was too pacifist a Buddhist to become another Fidel Castro. But his resignation will take the stuffing out of a revolt which was not going very well. Bridges were blown and trains ambushed. Yet the rebels could hold no towns, and their greatest threat to Rangoon came in the form of leaflets dropped by air—ironically on the very day that U Nu threw in the towel. But until Ne Win hands out more autonomy, Burma will never be completely rebel-free.

Egypt

Fighting sleep

President Sadat cannot be charged with lassitude. To fight the "induced sleep" which Mr Hassanein Heikal, the editor of Al Ahram, says is enveloping the Arab-Israeli conflict he spent a couple of weeks talking hard to his own people and has now zoomed off to Moscow for a word with Russia's leaders before they greet President Nixon next month. While it is generally expected that the Middle East will rate low on the Russian-American agenda, the Egyptians are deeply suspicious lest the two powers reach some sort of deal limiting the supply of arms to the area, thus ensuring that the sleep continues undisturbed.

Since the Russians are already withholding the long-range aircraft and ground-to-ground missiles that might enable Egypt to wake things up, it seems improbable that Mr Nixon's visit to Moscow will make much difference either way. And even less likely that Mr Sadat's visit will. After his last two trips to Moscow, in October and February, the Egyptians made sure that it was general knowledge that he had asked for, and been refused, such weapons. The suggestion that he is now making a third bid seems for domestic consumption : the continuing restlessness in Egypt prods him into showing that he is at least still trying.

The publication on Tuesday of a laconic comment by Mr Sadat that Egypt was getting French and British weapons through a third source seems similarly directed. The president could hardly suppose that this disclosure would push the Russians into doing what they do not want to do; indeed, he said himself that he could not crack a whip at the Russians. It is entirely possible that Libya may be passing on some of the Mirage-3s that it is getting from France, but these are not the magic machines that the Egyptians believe would make everything different. A trickle of western supplies, supplied directly and indirectly, may help to delude the Egyptians into feeling that they are not dependent on Russia ; against this must be set the estimate, published in Cairo at the end of last month, that Russian military aid to Egypt is currently running at the rate of around £2m a day.

President Sadat, like Nasser before him, speaks with a multitude of voices at one and the same time. His recent "explanations" to the Egyptian public hold at least three contradictory messages : Russia, however imperfect, is Egypt's only true friend; America, however heinous its present offences, could yet find a friend in Egypt if it would come to its rescue; since neither major power will recover Egypt's territory for it, Egyptians must seek pan-Arab self-sufficiency. This third message, however little it means in immediate terms, is the one that is delivered, and received, most gladly.

China

Service with a smile and style

When the Red Guards set out to purge China of all things bourgeois in 1966, their first targets were the mod styles in clothing and hair-dos which young Chinese had picked up from their compatriots in Hongkong. Would-be hippies were shorn in the streets of Peking and tight trousers and brightly coloured shirts were stripped off their backs in the name of revolution. This puritan fury subsided after a few months but the drab look remained the required fashion in China. Now, six years later, revolution is being redefined again and variety has been ruled a legitimate and even a desirable spice in Chinese life.

Diversity will continue to have its limits. The paper Red Flag's April issue made this clear, saying that "strange clothes" and "ridiculous hair styles" are still out. But by advocating new and varied forms of clothing, restaurant food and portrait photography, the party journal seemed to be promising the Chinese consumer greater freedom of choice than he has had since 1956. The new policy was announced in the context of a plea for the rehabilitation of the service trades. It is not service that is bourgeois, Red Flag argued, but rather the attitude of despising service work. The journal called for a new effort to give the workers, peasants and soldiers their due by extending shop hours and expanding the range of goods and services.

This drive for variety follows another recent Chinese campaign to improve the lot of the consumer by raising the quality of Chinese goods. Newspapers have been insisting that quantity is no longer enough ; the state plan specifies quality targets as well. To make sure these are fulfilled the press has advocated a strict inspection system in factories and that classic Madison Avenue gimmick, the money-back guarantee.

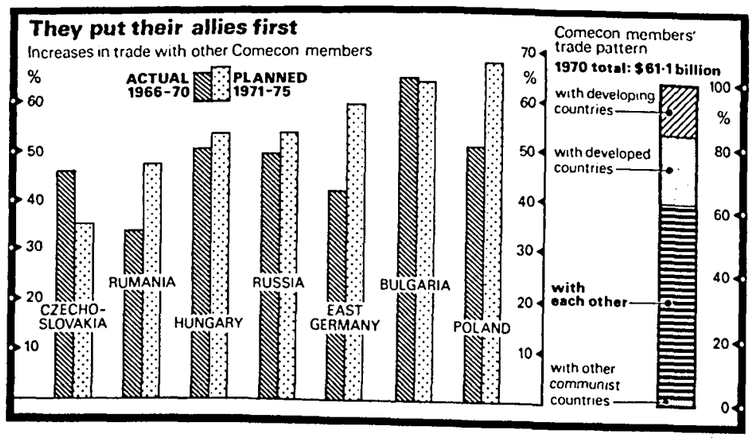
East-West trade

Why the trickle isn't likely to become a mighty rush

Russia's Izvestia spoke almost kindly about the European Economic Community last weekend, and in west Germany Herr Schiller has been urging businessmen to make the most of the new opportunities that he sees now opening up in eastern Europe. For months now the Russians have been dropping big hints about future business deals with west Germany and other EEC countries. Not everybody agrees with Herr Schiller and the Russians. There are those who argue that west European traders cannot expect many rich pickings in the communist east. How do things in fact stand between the two groups centred respectively on Brussels and Moscow, and what is the outlook for business between them ?

In 1970 the European community's trade with Russia and the other members of Comecon was worth only $5,800m out of its total external trade of $90,800m. But this east European 6.4 per cent share in EEC trade represented a considerable increase from the 4 per cent recorded in 1958. Between 1958 and 1970 the EEC group's imports from eastern Europe rose by 300 per cent, while its imports from the rest of the world rose by only 180 per cent. The corresponding increases in EEC exports were 385 and 181 per cent. EEC-Comecon trade has been growing at an average annual rate of 12 per cent.

As officials in Brussels point out, Switzerland is still a bigger trading partner for the EEC than the whole of eastern Europe. But Comecon trade is no longer merely marginal for the community. In 1970 the east Europeans bought more EEC goods than Latin America, which in 1958 had taken three times as much of these goods as the eastern group did. It is equally significant that the Comecon members' trade with the EEC has been growing faster than their total foreign trade, or their trade among themselves.



Manufactures represent only 30 per cent, and machines only 5 per cent, of EEC imports from the Comecon area. The proportion of these imports made up of such primary products as meat, timber, oil and coal actually increased between 1958 and 1970. Until recently, the EEC had a deficit in its trade with Russia and a (smaller) surplus in its trade with other Comecon members. Since 1968 the deficit with Russia has been reduced, and the surplus with the rest of the Comecon has been increased, so that the EEC now runs a sizeable overall surplus in this eastern trade.

Analysts of east-west trade in west Berlin and elsewhere are now predicting that the annual growth of EEC-Comecon trade will average only between 7 and 9 per cent in the 1970s, as against the 1960s' 12 per cent. Western experts regard all the east European economic plans for the 1971-75 period as reflecting the decision taken by the Soviet leaders, after their invasion of Czechoslovakia in 1968, to speed up the economic integration of the whole region as a means of strengthening their grip on it. Earlier this month Mr Konstantin Katushev, a secretary of the Soviet Communist party's central committee, stated quite plainly that economic and political union is the goal of the present integration process in eastern Europe. The plans for 1971-75 provide that Russia's trade with the rest of Comecon is to increase by more than 50 per cent. Total intra-Comecon trade is to increase by 68 per cent and to reach a value of 205,000m roubles, of which 77,000m will represent Russia's trade with its associates.

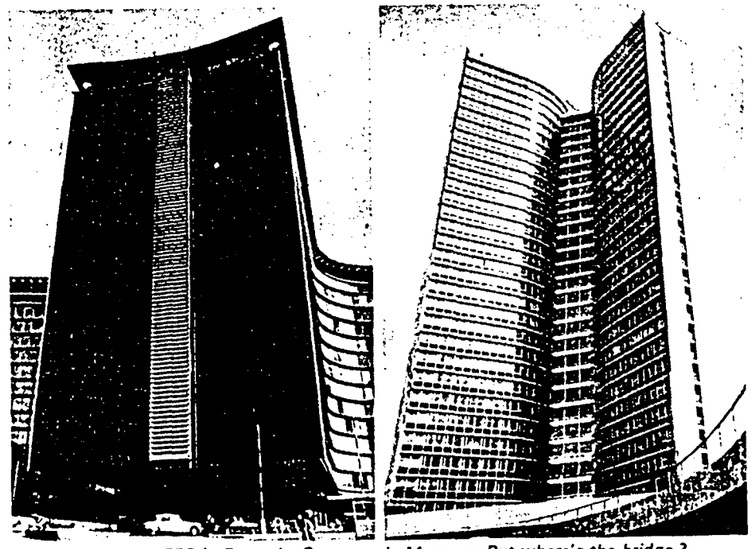
East Germany, which is now in a sense Russia's industrial workshop, did 67 per cent of its total 1971 trade with other communist countries, and 40 per cent with Russia alone. First-hand observation in east Germany tends to support the statistical indications that even its most enterprising industrial concerns will be too busy meeting eastern orders to accept many new ones from the west during the next few years. And this is broadly true of the rest of eastern Europe too. The communist governments will occasionally place "emergency" orders in the west for items needed to plug unforeseen holes in their planned programmes ; but they will always give preference to deals with other Comecon countries.

Spokesmen for these governments still claim, as they always have done, that the only real brake on the growth of EEC-Comecon trade is the "discriminatory" trade policies pursued by the west Europeans. They cite the EEC's refusal to grant most-favoured-nation status to most of the east European countries ; the quotas on imports of farm produce, textiles, leather and other east European products ; and the embargo system operated by Nato since the early 1950s in order to deny the communist regimes free access to certain strategic materials and equipment—although this system has now been drastically reduced in scope.

The communists have complained that the EEC members' decision that their European commission shall handle all trade negotiations with other countries after January 1, 1973, amounts to an attempt to bully weaker trade partners by wielding the combined power of the community against them, as if the members of the Comecon were a row of sitting ducks to be picked off individually. But officials in Brussels point out that a constantly

rising number of concessions has in fact been made to the east Europeans both by the EEC's present members and by such applicants for membership as Britain. Anyway, it is already normal practice for the European commission to be asked to approve the final text of any trade agreement made by an EEC member with a non-member state. The new Russian-west German trade agreement which was initialled in Moscow two weeks ago will have to be vetted by the European commission just like any other. The view in Brussels is that the question of official recognition of the community by the communist governments is an issue that Russia has been trying to exploit for political purposes.

Nobody in Brussels expects that east-west trade will really suffer if, despite Mr Brezhnev's recent conciliatory remarks, Russia and its partners fail to come through with a formal recognition of the EEC in time for the deadline on January 1st. Most of the east-west trade agreements in Europe, including Britain's, still have a few years to run. And Mr Brezhnev now seems to be indicating that Russia may be about to abandon its familiar line of denouncing the EEC as being merely Nato's economic arm—although some western officials suspect that he may want to do a deal in which the west would be asked, in turn, to accord recognition to Comecon as a supranational organisation.



Mr Brezhnev may himself have been under some pressure from Russia's partners in Comecon. The Poles and Hungarians have long wanted to revise their arrangements for exporting textiles to EEC countries, and they may well have been pressing for a recognition of the community that would enable them to start negotiations on these matters. Of course, the European commission would feel that its status had been enhanced by an east European recognition of the EEC. But most experts in Brussels think that the future of east-west trade in Europe is anyway not greatly dependent on the growth of the straightforward "conventional" trade that will be controlled by the commission after January 1st. They believe that a really big increase could arise only if the kind of close industrial and financial co-operation that western companies already practise so abundantly among themselves were extended to eastern Europe. Such co-operation is at the present time outside the scope of the commission in Brussels.

The industrial co-operation that does already exist between EEC and Comecon countries has been achieved mainly through the sale of licences—which are then paid for out of the consequent new production. Joint ventures, such as the Jugoslavs now undertake together with western firms, are barred elsewhere in eastern Europe on ideological grounds. Even the more limited forms of industrial co-operation such as joint marketing arrangements require substantial amounts of capital which the east Europeans cannot provide. If the western countries really want to enlarge their eastern trade to any great extent, they will have to place generous credits at the disposal of their communist partners. And they will have to be satisfied with deferred payments, or deliveries in kind of things the Russians have, such as natural gas, raw materials, foodstuffs, furs and diamonds.

Moreover, the financing of deals as large as those that the Russians now seem to want will call for financial resources that may be beyond the means of western Europe's industrialists and bankers unless they group themselves into teams as big as the consortium of 16 banks that recently granted a five-year loan of $60m to the Comecon investment bank. Earlier this year that bank had obtained an $11m credit from France's Crédit Lyonnais. The communists now seem confident that west European firms and groups, backed by their own governments, will come through with more and more such credits. They argue that the west Europeans will be driven to do this by increasing American and Japanese competition in the Soviet and east European markets. These communist spokesmen predict that President Nixon's Moscow visit next month will lead to a big upsurge of Russian-American trade from a mere £80m last year to a figure many times larger in the near future.

There is, however, some reason for scepticism here. Last year the west German government substantially increased its export credit guarantee facilities, but a good part of these facilities remained unused. And the biggest difficulty of all, which may well prevent any western capitalists from expanding their trade with Comecon in a really big way, lies within the communist economic system itself.

The Comecon members still have no convertible currency, and are not expected to get one in the 1970s. They have come nowhere near resolving their present arbitrary system of costing and pricing by a more rational one. Only the introduction of such a rational system, and of free convertibility, could enable them to emerge into the world market as fully active participants. There are signs that the 20-year integration programme that was adopted last year represents an attempt to bring about a rationalisation of the communist system along these lines. But for the time being most of the Comecon countries are unlikely to be able to produce really competitively for world markets, and until they can do so there is no prospect of any really impressive growth in Europe's east-west trade.

The rival citadels, EEC in Brussels, Comecon in Moscow. But where's the bridge ?

All these securities have been sold. This announcement appears as a matter of record.

ELECTION 72

Only the fittest Democrats survive

Washington, DC

While April is too soon for predictions of the situation of the Democratic party in July, the primary elections in Massachusetts and Pennsylvania this week have made the outlines of the contest for the presidential nomination clearer. Senator Muskie was the loser in both, getting 22 per cent of the Democratic vote in Massachusetts and 21 per cent in Pennsylvania. Neither percentage was a disaster in itself. But these are both states (and big ones) where two months ago, before Mr Muskie's inadequacy as a campaigner became manifest in the New Hampshire election, he had the support of most of the party establishment and could apparently count on being the winner. In Pennsylvania he came fourth this week, in Massachusetts he managed to be second.

Even Mr Muskie's second place in Massachusetts looks poor by the side of Senator George McGovern's extraordinary performance in picking up more than half the total votes cast. In Pennsylvania Mr Muskie came well behind Senator Humphrey and Governor Wallace and narrowly behind Senator McGovern. In the election of delegates to the Democratic nominating convention next July, Mr Muskie got only 29 in Pennsylvania to Mr McGovern's 37 and Mr Humphrey's 57. Mr McGovern got all the delegates in Massachusetts, so that his total from various processes of selection is now, at 197½, just about twice the number committed to Mr Muskie.

So it was no great surprise when Mr Muskie announced, in a press conference on Thursday morning, that he would withdraw from active participation in the remaining presidential primaries. "I have no choice," he said. "I have not got the money." His original promise to run in the first eight primaries had proved, he said, a mistake. He had spread himself too thin and this had produced diminishing results and diminishing resources—presumably of staff as well as money. He did not say so but it is understood that he had been warned that he was going to do badly next week in Ohio, a state which looked, not long ago, solid and unassailable.

Senator Muskie has not declared himself out of the running. He still hopes to be available at the convention if there is a deadlock and he is not discouraging the support of delegates who have already been chosen to vote for him. They are free to do as they think best. His name will still be on the ballot in some states. But if Senator Muskie still cherishes some hope, it is not widely shared. His admitted failure so far, together with his decision not to go on fighting, makes it only barely conceivable that he could be nominated in July.

Senator Muskie was the man of the Democratic centre who set out to be the unifier. But that other old centrist, Senator Humphrey, exuberant, tireless, never failing to say what his listeners want to hear, showed that he could out-campaign Mr Muskie for the vote of the centre. Mr McGovern, where he concentrates his effort as he did in Massachusetts this week, is able to mobilise the party's liberals and populists on a scale never hinted at by his persistently dismal showings in the national opinion polls.

No doubt the emerging alignment of Democratic strengths will suffer more disturbances from the non-Democratic master showman, Mr George Wallace; there may be one coming in the Indiana primary election next week, on the same day as the Ohio primary.

Two principal factions and their champions are, however, now visible. Mr McGovern expressed it in his victory speech (the term, for once, is thoroughly appropriate) in Boston on Tuesday night: "those who hold the banner of memory and those who choose the adventure of hope." Or, as Mr Humphrey put it in Philadelphia on the same night, he (Mr Humphrey) believed that he could now claim to represent his party's "vital progressive centre." If this alignment persists until July, it may still turn out that neither can command a majoriy of the delegates at the nominating convention. If so, and if neither can form the necessary alliances and combinations to prevail, the turn of others will come. For the present, the field is thinning out at a spectacular pace.

Happy McGoverns applaud a helper—and a symbol; Robert Kennedy's daughter

Profitable woes

How can profits be restrained when the economy is expanding? The Nixon Administration has that problem to worry about as it congratulates itself on the strong economic growth achieved in the first quarter of 1972. The gross national product rose at an annual rate of 11.8 per cent in the first three months of the year and corporate profits were 12 per cent higher than in the first quarter of 1971 (which admittedly had been exceptionally weak). But the Administration's assertion that its economic policies are on the right track has been shaken by the fact that prices rose sharply too.

The first quarter's inflation, measured by how much of the increase in the output of goods and services reflects merely a rise in prices, was 6.2 per cent at an annual rate, more than treble

ELECTION '72

At last, Hubert has a victory

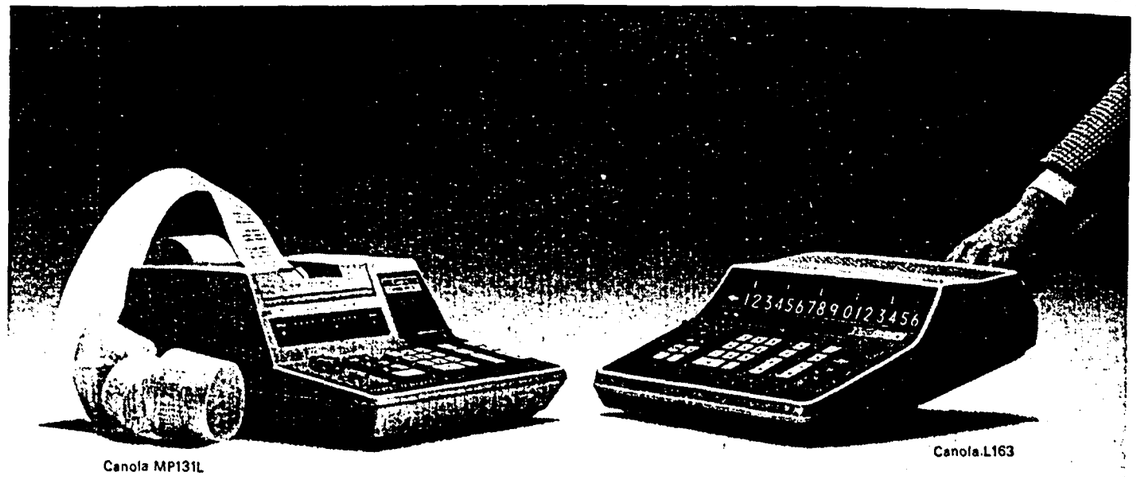
FROM OUR SPECIAL CORRESPONDENT IN PENNSYLVANIA

Senator Hubert Humphrey campaigned hard and long in Pennsylvania and on Tuesday his exertions were rewarded: he won the first victory of his career in a presidential primary election in a major state, being the preferred candidate of 25 per cent of the Democrats who went to the polls. He came in just ahead of Governor George Wallace, Senator Edmund Muskie and Senator George McGovern, all of whom had 20 per cent or just over of the ballot. Senator Henry Jackson, who did not campaign in the state, came last with 3 per cent.

Mr Humphrey's victory was well deserved but it was not won lightly. Of all the candidates listed on the ballot he spent the most time in the state. He flew backwards and forwards all week long from Philadelphia to Pittsburgh. He tramped the steel centres of Allentown and Bethlehem and the depressed coal-mining areas of the south west. He touched down in the state capital, Harrisburg, to deliver a challenge to the Governor, Mr Milton Shapp, who supported Senator Muskie. He shook hands with everyone within reach, made long speeches and confessed with great feeling to anyone who would listen that his past policies on the war in Vietnam had been wrong. Apart from a few noisy students at the University of Pennsylvania Mr Humphrey had few enemies in the state and he was able to rely on the support of old friends—trade unionists, old age pensioners, Jews and Negroes (the population of Philadelphia is almost one-third black).

This year Mr Humphrey, the favourite of the party politicians in 1968, is campaigning as "the people's candidate." It was Mr Muskie who found himself running as the candidate of the Democratic machine in Pennsylvania. Governor Shapp came into office in 1970 as a reformer but in the eyes of many voters he has since become just another Democratic boss. Nor did the support of Mr Peter Camiel, the head of the Democratic organisation in Philadelphia, do Mr Muskie much good. Such clout as Mr Camiel might have wielded to get the party faithful out to vote was undermined when the Democratic Mayor, Mr Frank Rizzo, a tough ex-policeman who controls a large number of jobs in the city, said that he was keeping out of the Democratic fight and would vote for President Nixon in November.

If the state organisation failed Senator Muskie so did his own staff. He has been damaged badly by splits and feuds among his workers and by a lack of careful planning. In Pittsburgh he arrived at a steel mill to shake hands with workers after they had gone off their shift. He issued a prepared statement about his fight against black lung disease at a coal-mine where the incidence of the disease was low. He said that he would concentrate his efforts on Pennsylvania but he spent a great deal of time outside the state in Massachusetts and Ohio.



The Democratic primary in Pennsylvania was thought of at first as a test of strength between Senators Humphrey and Muskie. But by the middle of the final week's campaigning it had become a four-way race with Senator George McGovern and Governor George Wallace. Few people gave the two Georges much of a chance at the outset and both had decided to bypass the state to spend their time and money elsewhere. But both reckoned without the rapid decline of Senator Muskie. Mr McGovern had also reckoned without the dedication and enthusiasm of his volunteer force of campaigners and delegates within the state and Mr Wallace without the frustration of the blue-collar workers in a state where unemployment is 14 per cent of the labour force in some places.

By Monday of this week Senator McGovern considered that things were safe enough in Massachusetts and that his chances were good enough in Pennsylvania for him to spend the last day before the election there. He attacked the war in Vietnam (to jubilant cheers), the machine politicians in the state, high taxes and unemployment. He just had time to introduce Miss Kathleen Kennedy, the eldest daughter of the late Robert Kennedy, and then was off again in his chartered aircraft to the next stop. Mr McGovern was in an enviable position. To win even a small number of votes and delegates would have been considered a success for him.

The campaign was surprisingly low-keyed and old-fashioned. Short television commercials and computerised telephone banks to contact the voters were out of favour. Voters now seem to like the personal touch more than the electronic image. But all the candidates were also trying to save money and so preferred to rely on local politicians, trade unions and young volunteers to get the voters out.

Canola MP131L Canola L163

Lightweight Heavyweights from Canon

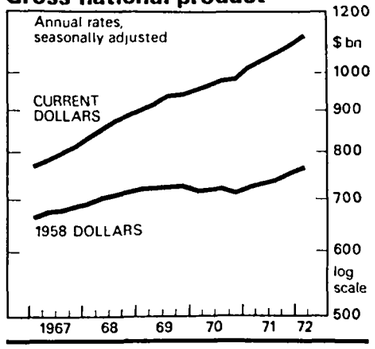
Canon builds adding-machine simplicity into its newest electronic desktop calculator

If calculators sound complicated but adding machines don't, what you're looking for is the new 1-memory desktop printing calculator, the Canola MP131L. Along with easy repeat addition using a double-size plus key, Canon offers other great new conveniences.

Economy, with a printout system that uses ordinary paper. Easy printout identification in two colors: black for positive, red for negative numbers. A special sign-change key for easier negative-number calculations. Non-add key for reference numbers and dates. Total and sub-total key. Entry-digit indicator.

Other Canola "L" Series designed for true desk-to-desktop portability

Canon has used all of its precision techniques to design high-powered non-printing models, the L163, L162A, L161, and L141, in its distinguished Canola "L" Series whose size, weight and carrying handles guarantee carefree carryability.



These accommodating brains vary in versatility, from 14 to 16 digits with one to two memory banks. Best of all, they move around, they get used, they return your investment in no time at all. Especially the most popular 12-digit, 1-memory model Canola L121. See these and other models at your dealer's and choose the model most suitable for your business needs.

All from Canon, the master of calculator design.

Gross national product

that of the fourth quarter last year and more than double the rate that the Administration hopes to achieve by the end of the year. The Administration believes, however, that the bulge in prices in early 1972 was the inevitable temporary result of the ending of the three-month freeze on prices and wages in November and that the rate of increase is now subsiding. There were some cheerful statistics to support this view: in March the consumer price index, seasonally adjusted, did not show any rise at all for the first time since the end of 1966 and the trend of wholesale prices was also encouraging.

The contradictory picture presented by the first quarter's figures intensifies the pressure on the national Price Commission. Its chairman, Mr Jackson Grayson, used the news to warn companies which are increasing their profits as a percentage of sales that the commission will order them to reduce their prices. Those whose profit margins exceed the commission's guidelines will be penalised and may even be asked to refund money to customers if the commission finds that they have been guilty of charging too much. The commission, somewhat uncertainly, is trying to take a tougher line with large companies. Only a fortnight ago it ordered two to lower prices specifically because of their excess profits. Now it has denied Ford Motor Company permission to raise prices on certain products and it has prevented the country's railways from charging the increased rates for freight that the Interstate Commerce Commission had approved.

The Price Commission's performance will be closely watched in the next few months. Both Senator William Proxmire, the Democratic chairman of Congress's Joint Economic Committee, and Mr George Meany, head of the national trade union federation, think that the commission's attempt to control prices has been a flop so far. Certainly the great leap in food prices in February and the rise in telephone and electricity rates are much more real in the public's mind than the new statistical evidence that the worst of inflation may be coming to an end. (The Administration is putting special pressure on supermarkets and the shoe industry to hold down prices.)

Rolling back prices and curbing profit margins on the promised scale will not be easy. The commission already concedes that a substantial proportion of the country's largest companies may be exceeding their permitted limits. And if the current business expansion continues and wage increases are held down to the Administration's desired average of 5.5 per cent, many companies may find themselves inadvertently bumping up against the profit margin ceiling. Some steel companies, seeing that about to happen, have announced voluntarily that they will not raise the price of steel at least until January.

Vietnam puzzle

Washington, DC

President Nixon's television and radio report on Vietnam on Wednesday night was only one episode, the most public one, in a week of intense activity in foreign policy: it may be that there are other episodes yet to be disclosed. The President had an obligation to make a public statement this week, arising out of the words that he used in his last announcement of plans for withdrawing troops from Vietnam in January; he said then that he would make a further announcement before May 1st. What he has announced is a further reduction in the force level from 69,000 to 49,000 by July 1st.

This looks bold, given that the South Vietnamese military position is as beleaguered as it now is. It is true that the Americans have already, for political purposes, abandoned any direct infantry role: still, the pledge to withdraw 20,000 men looks like a rash avowal of confidence, unless some approach is also being prepared toward a political disentanglement from the war. Mr Nixon in his broadcast gave no hint of any such approach. Instead, he took his stand on a report from the American commander, General Abrams, to the effect that the South Vietnamese were in the process of demonstrating their ability to defend themselves, and

> if we continue to provide air and sea support, the enemy will fail in its desperate gamble to impose a communist regime on South Vietnam.

The simple explanation, that President Nixon really believes that his air power and his sea power will see him through, may indeed be the true one. Dr Henry Kissinger seemed to confirm this in his briefing of correspondents on Wednesday night, just before the President went on the air.

A day earlier the White House had announced that the United States and South Vietnam were ready to resume the peace talks in Paris, broken off last month by President Nixon. Dr Kissinger said that the communist invasion of South Vietnam would be the first item on the agenda in the resumed talks and, he said, it would not be merely a question of the halting of the communist offensive, but one of pulling the communist troops back to their own territory.

These are confident noises indeed, but what do they mean? There is ample evidence of the Administration's willingness to continue to use air power and sea power in great quantities, but none of any substantial basis for confidence that air and sea power can in fact perform the tactical mission entrusted to them. An alternative would be to use air and sea power not tactically but as a means of intimidating the opponent. There have also been plenty of hints that this might be done—but the signs of its being contemplated in earnest are not there, rather the contrary.

To go back a little farther, the announcement of readiness to resume the Paris talks followed one day after Dr Kissinger's return from a secret visit of four days to Moscow to prepare for President Nixon's visit there on May 22nd. A connection has to be assumed between the two events. Dr Kissinger denied that the President's trip had actually been endangered by the tension arising from the flare-up of the war in Indochina. But that relations with Moscow are in a delicate state is not denied. Nor is it denied that Vietnam figured in Dr Kissinger's talks.

One simple offering that Dr Kissinger could make to the Russians was a resumption of the talks with North Vietnam. To do it without any reduction of the level of hostile rhetoric or any hint of a new or even modified diplomatic position may have appeared as sound tactics. To do all this while doggedly placating the American public with yet another slice of troop withdrawals is something else again: the North Vietnamese may reasonably be puzzled. The puzzle seems to need a piece that is still missing.

More Lockheeds

Is Congress about to call a halt to the soaring costs of defence procurement? Even old friends of the armed services are beginning to say that the defence of the United States may be jeopardised by "stratospheric" demands from contractors. Examples before Congress concern two big naval suppliers, the Grumman Corporation and Litton Industries, Inc., which wish to be released, as the Lockheed Aircraft Corporation was last year, from fixed-price contracts which are pinching them. Neither has asked for the kind of loan guarantee which saved Lockheed from bankruptcy but, in Grumman's case at least, such a solution would not be inconceivable.

Grumman's chairman has told a Senate subcommittee that the company cannot fulfil the rest of its $2.4 billion contract to supply the navy with 313 F-14 fighters and that, if it is held to its terms, it will have to shut down its big aerospace subsidiary which employs 20,000 defence workers on Long Island. This subsidiary has lost $65m on the contract so far and stands to lose over $100m on the next batch of 48 fighters which Congress is being asked to authorise. The firm, which says that its chief banker is reconsidering its line of credit, estimates that it needs $500m more to complete the whole contract; the excuse is the sizzling pace of inflation since 1968, when the contract was signed, and the slide in the company's other defence business. (In fact defence procurement is set to start rising again next year.)

Even if the navy were inclined to let Grumman off the hook the subcommittee seems likely to refuse. Its chairman, Senator Cannon, asked sharp questions about why Grumman cut its bid just before the contract was awarded and wants to attach strings to the new authorisation which would give the navy no leeway for retroactive generosity. Another test of Congress's new mood will come over Litton's contracts to build five (originally nine) LHAs (helicopter carriers) and 30 destroyers at its new, highly automated shipyard at Pascagoula, Mississippi. This case is particularly intriguing because the head of the Senate Armed Services Committee, Senator Stennis of Mississippi, can be counted on to fight for his state's interests.

The contract for the LHAs had to be reopened because the navy cut the number to be built and Litton has seized the chance to demand an increase of $400m in its billion dollar contract, a jump that one member of the Armed Services Committee of the House of Representatives has called "outrageous." The committee is holding up the whole defence procurement authorisation to examine this audacity. The cost for each ship would be raised to $250m from an original estimate of $153m. Litton, moreover, is 19 months behind schedule already on the LHAs and its competitors are suggesting that the destroyers may suffer the same fate. The yard has not even completed any of the four merchant vessels which were due to be built first. It blames labour troubles, the unfamiliarity with shipbuilding of managers brought in from aerospace work and a hurricane. Without some relief on the LHA contract Litton's cash flow may be hit severely in the autumn. Until then the company is paid on a cost basis but afterwards it will be paid according to its progress; so far it has done about 25 per cent of the work and received half of the total payments.

ELECTION '72

Democrats against Nixon: 8

Survivor Kennedy?

FROM A SPECIAL CORRESPONDENT

The limited speaking schedule of Senator Edward Kennedy of Massachusetts expanded greatly last weekend with engagements in three highly conservative states—Arkansas, South Carolina and Indiana—and an address to the meeting of the Americans for Democratic Action in Washington. He was triumphant everywhere, delighting the conservative Democrats of South Carolina and the liberals of the ADA equally. For those who see the Kennedy family engaged in a clandestine, conspiratorial scheme to secure the 1972 Democratic nomination for the presidency, Mr Kennedy's display of his wide acceptability fitted in neatly. Because he has not participated in the bruising primary contests his political attractiveness is undamaged by any wounds of battle. Thus, so the theory goes, he is in a perfect position to be awarded the nomination if no active candidate, as now seems quite possible, enters the party's convention at Miami Beach in July with the support of anything approaching the 1,509 delegates needed to nominate.

The analysis is, however, faulty on two counts. First, every indication is that there is no Kennedy conspiracy and that Mr Kennedy genuinely does not want to run this year. Second, the appearance of a great Kennedy consensus inside the Democratic party is an illusion that would disappear once he entered the lists actively. Those politicians who have talked privately with Mr Kennedy are usually stunned by the force of his protestations against running for President. He is chillingly frank about his fear that he will be the third Kennedy brother to be assassinated and dwells on his obligation to the many children of his dead brothers. One important figure in the Chicago Democratic organisation who had been privately encouraging a Kennedy-for-President movement ceased such talk abruptly after a recent conversation with Mr Kennedy.

Among closer friends, Mr Kennedy also reveals that he has no illusions that the still untold story of what happened at Chappaquiddick in the summer of 1969 has been forgotten. He has no desire to see the speculations of amateur investigators and philosophical discourses on the morality and ethics of Ted Kennedy take precedence in the campaign of 1972 over discussions of President Nixon's Administration. Accordingly, while he will not absolutely close the door against accepting a nomination offered him by the Democratic convention, he makes clear that he certainly does not want it.

To some Democratic politicians, however, these protestations only lend enchantment. Mayor Richard Daley of Chicago, while maintaining public silence, speaks for a great many when he says privately that only Mr Kennedy has the national appeal to defeat Mr Nixon and that only Mr Kennedy can bridge the differences within the party. But such Kennedyphiles obscure a great many other Democratic politicians who view the possibility of Mr Kennedy being drafted at Miami Beach with the deepest concern. For example, Mr Peter Camiel, the tough leader of the regular Democratic organisation in Philadelphia, feels that Mr Daley and other Kennedy enthusiasts are being led by panic over the dismal performance of the active candidates into

fatal error. Once nominated, Mr Camiel believes, Senator Kennedy's silence on the events at Chappaquiddick would make him an easy target for the Republicans. Roman Catholic matrons would desert their Democratic loyalties to oppose Mr Kennedy on moral grounds.

There are also more general doubts about Mr Kennedy's temperament and ability to function under stress. His legislative performance has not been reassuring. The Senator has fits of energy and skill, as shown by his sponsorship of the measure to give 18-year-olds the vote, but he also has intervals of almost self-indulgent inactivity. Even his friends and admirers wonder whether he is, at the age of 40, emotionally ready for the demands of the Presidency.

Moreover, Mr Kennedy has shown no interest in striking compromises between antithetical positions or in harmonising the discordant views within his party. Increasingly, when a choice of position has to be made on a basic issue, he has been taking the stand farthest to the left—on Vietnam, disarmament, health insurance, tax reform and amnesty for evaders of conscription. On questions of foreign policy, such as Bangladesh and Northern Ireland, he has inclined to leap in feet first without much care for diplomatic niceties. A few experienced Kennedy-watchers see this lack of caution as proof positive that he has no intention of running for the Presidency. But it may just be that Mr Kennedy is a considerably more radical politician than his brother John and even than his brother Robert. If nominated he might not be willing to back away from positions taken before he became a candidate.

A basic contradiction can therefore be perceived in the support that exists for Mr Kennedy as a potential candidate. A great many "regular" Democrats who declare themselves ready to fight to the bitter end against what they consider the radicalism of Senator George McGovern also manage to support Senator Kennedy with enthusiasm, even though his recorded views are no whit more moderate than those of Mr McGovern. They can close their eyes to Mr Kennedy's policies in the belief that he is a winner, perhaps the only winner that the party can field against Mr Nixon. Conceivably the Democratic convention will choose him as the party's candidate, in spite of his refusal to seek the nomination and perhaps even if he is out of the country in July. But if it does, Mr Kennedy would embark on the campaign against Mr Nixon without having put his views, his abilities or his character under the scrutiny that they would have had to undergo had he sought the nomination actively.

Humbled McGraw

New York

The troubles of McGraw-Hill Inc never seem to cease. Recently this publishing firm was duped in the Howard Hughes affair, accused of plagiarism in connection with a book about an Indian chief and suffered additional embarrassment when one of its editors was alleged to have taken a loan or a kickback from two authors. The tangible costs of these mishaps may not be significant but they have hurt the company's reputation and the price of its shares on Wall Street. Its competitors, including many small, privately-owned publishing houses, are quietly gloating over McGraw-Hill's difficulties which, they feel, are a consequence of its excessive diversification and of an overwhelming desire for quick profits.

McGraw-Hill's problems typify some of the prevailing trends in American publishing. The industry has almost doubled its income in the past 10 years and has been increasing its output of book titles at almost the same rate. But more and more sales are concentrated in big publishing houses that are tied to major corporations. Some 15 firms are responsible for half of all sales, with perhaps 10 times that number sharing the remainder.

One of the giants is McGraw-Hill, but its publishing strength is in technical and text books. Its trade books (for the general reader) are a minor division in the company's multiple operations, which include business magazines, television stations, educational materials and financial services (Standard and Poor's). In recent years McGraw-Hill's earnings have declined because the federal government's financial aid for education has been held down, affecting sales of textbooks, and because the economic recession has hurt both advertising and demand, particularly in the specialised fields for which the company caters. Since McGraw-Hill is a profit-minded company, the pressure has been on each of its units to cut costs and improve performance. The trade book division, which is big in terms of most private publishing houses but comparatively undistinguished, engaged a number of new editors who were determined to be aggressive in acquiring authors and manuscripts. With McGraw-Hill's financial backing, they were in a position to challenge other major companies in the business, owned by the Radio Corporation of America, Time Inc and a handful of conglomerate firms.

In some respects book publishing remains a cottage industry, particularly where trade books are concerned. It is possible for a small house to do well on the basis of one or two titles. But the economics of publishing have been changing because of technological advances and the participation of major corporations. Huge amounts of money are now required to attract authors with well-known names, to gain space in bookshops and for promotion. Yet a single best seller can still provide an enormous boost to profits through ancillary sales to magazines, film producers, foreign publishers and paperback companies. So it is not surprising that McGraw-Hill went to extreme lengths to get Mr Clifford Irving's manuscript of Mr Howard Hughes's "autobiography" which had all the earmarks of a publishing bonanza.

Instead of big profits the company faces a loss—although that will be minimal because of insurance and possible restitution by Mr Irving. But the blow to McGraw-Hill's prestige is incalculable. The firm has reduced its list of new trade books and is much less likely to engage in high risk competitive bidding in future. Its experience does not, however, mean a slowing down in the transformation of book

In 1971 IU topped $1 billion in sales and increased earnings per share 37%.

In 1971 net income of International Utilities climbed to $50 million, or $3.28 a share. A record 37% gain coming on the heels of a record 33% increase in 1970.

IU's sales and revenues topped the $1.1 billion mark—an 11% increase over 1970. And our annual common dividend was raised to $1.40—the 27th consecutive year we've increased it.

Since we began moving into higher growth businesses in 1962, our earnings have increased at a compound rate of 15.3% a year. Our dividends have grown at a rate of 7.7% a year.

In 1971 all five of IU's operating groups (Land Transportation, Ocean Shipping, Utilities, Industrials, Agriculture/Land Development) reported improvement in both sales and earnings. And the outlook is good for continued growth.

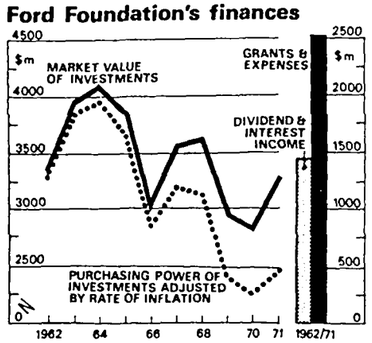
John M. Seabrook, Chairman and President, sums it up this way: "Our objective continues to be to increase earnings per share 15% a year. And 1972 looks like another record year."

More facts and figures about IU are available in our 1971 annual report to investors. For a copy, write to A.D. Southern, Vice President-Corporate Affairs, International Utilities Corporation, The Wilmington Tower, Wilmington, Delaware 19801. U.S.A.

IU

IU

A balanced company diversified in land transportation, ocean shipping, utilities, industrial products & services, and agriculture & land development.



publishing from an occupation for gentlemen to a big business dominated by profit-minded corporate executives. The possible rewards are so great that companies with funds and marketing expertise are likely to continue their quest for promising properties and fashionable "non-books." While a publisher like McGraw-Hill can still come a cropper occasionally, the real losers are serious authors whose works languish in obscurity and the reading public, which is being fed an increasing amount of trash.

What Ford can afford

In the ten years to 1971, the Ford Foundation, America's leading philanthropic institution, spent $1 billion more than it earned from dividends and interest. To cover the deficit, the foundation has eaten continually into its capital and has disposed of chunks of its assets. These were, in most years, sold at a loss, adding up to a cumulative loss over the ten years of $115m. The gain in other assets has kept the value of the investments at the same level in January, 1972, as in 1965-66, $3.4 billion—equal in dollar terms, but obviously not in real terms.

It is not surprising therefore that for 1971 the report of the president, Mr McGeorge Bundy, should be devoted to an analysis of the foundation's basic financial position. The conclusion is that "for the immediate future a continued policy of budgetary austerity is our only prudent choice." In the first 15 years of the foundation's existence, from 1950 to 1965, the problem was how to spend. Since then the widening of the foundation's objectives, and the squeeze of inflation, have brought the opposite problem: how not to spend. Of course there is the alternative of continuing to eat capital—to meet the needs of today in preference to those of tomorrow. But the foundation has chosen to survive; in 1967 grants were cut drastically, by $100m, to $262m. By 1971, expenditure was down to $225m —although the cash outflow, including payments to meet earlier commitments, was at a higher level than that.

Ford Foundation's finances

The foundation has been forced to clarify its financial approach and the transition from open-handed generosity to careful and prudent husbandry has not been painless. The investment performance in the past was just a bit better than mediocre; there is now a team of securities analysts, bond specialists and property experts. The present objective of the management is to maximise total long-term return —of income and capital growth—and the accounts are presented in a way that highlights this aspect. It is hoped to sustain earning assets at not less than $3.3 billion, and to spend no more than $225m a year—implying a net return of 6.8 per cent on the assets.

The Tax Reform Act of 1969, designed to curb the use of foundations to avoid taxes, now levies a tax of 4 per cent on net income and realised gains, creating a tax bill of $9.4m for the foundation in 1971 and more next year. And the holding of Ford Motor Company shares has to be reduced from 17 per cent of that company's equity to 2 per cent by 1979. In 1971 5 per cent was sold off, bringing in $349m, and reducing the Ford element in the foundation's portfolio to 38 per cent (it was 63 per cent in 1963). One method of unloading is to swap shares with other foundations, a process which Ford has begun in a $20m deal with the Kresge Foundation.

Reporter power

FROM A CORRESPONDENT IN NEW YORK

A new kind of power movement was conceived at the first A. J. Liebling counter-convention early this week. This was a gathering at the Martin Luther King Labour Centre on the west side of New York City which was designed to upstage the American Newspaper Publishers' Association's annual meeting across town at the Waldorf Astoria Hotel. While the publishers searched their balance sheets, the reporters searched their souls in intense panel discussions. They confessed to some shortcomings but most of the time they castigated editors, publishers and the structure of journalism for mortal sins.

Bitching is endemic among journalists. What is new is the idea that a rising ferment among younger people in the profession, including women and blacks who are particularly antagonistic to white, middle-class, middle-aged male editors, can be channelled as the old-timers' griping never could. It even seems that this may be done independently of ideology and perhaps outside the journalists' trade union, the American Newspaper Guild.

That most of those who spoke out sounded radical did not upset the convention's liberal sponsor, New York City's journalism review. The review, the best of its kind in the country, is called MORE (a play on the journalistic code for continuing copy on to the next page) and it named the counter-convention in honour of the late A. J. Liebling who invented press criticism as a literary form in the New Yorker magazine. MORE easily got the help of dozens of well-known writers such as Mr Tom Wicker, Mr Gore Vidal and Mr Abbie Hoffman and attracted an attendance of more than a thousand to its sessions, as well as considerable publicity.

A committee was formed to plan the next counter-convention on the basis of a manifesto that is expected to demand for journalists the freedom to do the best work possible plus the right to have a voice in how their news organisations are run. A chance to do one's best hardly seems radical. But there is a widespread frustration over journalism's superficial, truncated and trite practices. A chance to change all that could be radical. One suggestion made was that the journalist should be given true professional status: maximum trust, minimum editing plus all the time needed. Another avenue of reform may be found in journalism reviews, in which editors and publishers can be criticised; the dozen regional ones that exist already are to be represented in the new movement's committee.

Giving journalists a direct voice in decision-making poses a tougher question, however. It is unprecedented in the United States. Traditionally the Newspaper Guild has taken no interest in the area of management and some of the speakers at the convention dismissed the guild as fuddy-duddy and ineffective. However, the Chicago chapter has made demands that would, if granted, put them deep into management's preserve. Moreover, the guild's national president attended the counter-convention and is a member of its planning committee. He contended that only the power of a trade union to bargain collectively could make a reporter's voice heard in management.

If it makes staff happier, why doesn't everyone use it?

People get set in their ways. So it's not surprising some staff are worried at the thought of changing to metric. But experience shows that most staff who have changed prefer the new system.

The metric system is simple. That's why so many companies, big and small, are making the change. Already much of Britain's engineering production is metric.

Which is good sense when you consider that 86% of world trade is between countries that have chosen the metric system.

Metric working has already simplified things like design, production, paperwork and storage for many British firms.

If you are responsible for the future of your company start thinking about metrication.

Many are already benefiting from the changeover.

Business is ten times simpler in metric.

Please place my company on your mailing list for regular publications and send me "Going Metric – Check List for Managers."

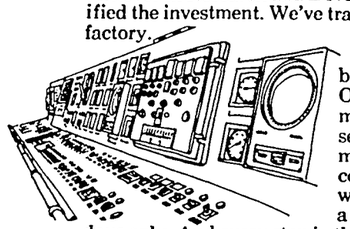
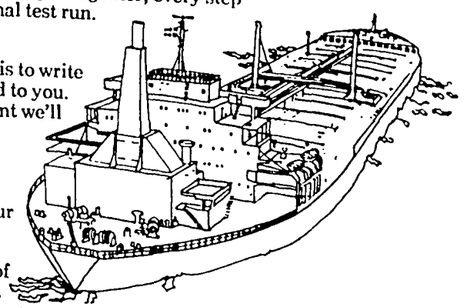
Today's decisions tomorrow's ships.

The ships that will be built.
In 1976 you might ask us to build a 600,000-ton tanker, or — more likely — a 355,000 tonner.



Size is something we know about, because in 1971 we supplied the British, French and Swedish merchant marines with the biggest ships they'd ever ordered. They are today's ships; we built them yesterday.

At the moment we're building a series of twenty VLCC's, or Very Large Crude Carriers, dead-weight 255,000 tons a piece. During the next few years we expect quite a few orders for ULCC's, or Ultra Large Crude Carriers, and for LNG tankers twice the size of the biggest ones afloat today built here at Kockums. You'll be shipping 120,000 cubic meters, or more, of liquefied natural gas in one ship.



Whatever the size, we've already thought of everything you're liable to need; we're ready to build tomorrow's ships today.

The way to build them.
If you want to go on building ships you have to realize that there's always a better way to build them. So we invest two per cent of our turnover in Research and Development, and the return has justified the investment. We've transformed a shipyard into a ship-factory.

We've turned the "art" of ship-building into a rational science. Our engineers have developed new methods for handling the giant steel sections that are the backbone of a modern ship. We've streamlined construction techniques to the point where we can build and deliver a 255,000-ton VLCC in 130 working days only. And every step in the production of our ships is guided by a special computer system that we put together; every step from the drawing boards to the final test run.

The cost of building them.
One of the few things we can't do is to write out a price-tag before we've talked to you. When you've told us what you want we'll make you a competitive offer, and we'll stick to it. But that's not all we'll stick to. We guarantee a delivery date for every ship we build, and there's a good chance that your ship will be delivered earlier. All seven of the twenty VLCC's built so far have been delivered ahead of time, some of them months ahead.

You probably think that any ship-builder should be able to do that; we think so too.

The battlefield workhorse of the seventies

THE WESTLAND LYNX designed from the outset with all the qualities required of a general purpose army support helicopter . . . reliability, robustness, simpler and cheaper maintenance, high performance and high manoeuvrability and control response.

The new, advanced design rotor system, gives the Lynx a high degree of evasive manoeuvrability at low level, in all weathers, over difficult terrain.

Produced jointly by Westland and Aérospatiale for the Armed Forces of Britain and France, the Lynx has high speed capability which makes it particularly suitable for the following roles.

■ **Troop transport**
Gives high speed mobility

■ **Air to ground strike**
A wide variety of anti-tank missiles can be carried

■ **Logistic support**
External freight hook gives logistic load support capability

■ **Reconnaissance**
Fitted with all weather navigation system and surveillance aids

■ **Airborne command post**
Capacity for extensive communications equipment

■ **Casualty evacuation**
Roomy cabin allows easy stretcher installation

Partners in European Co-operation

About turn

When sterling was devalued in November, 1967, the seal, it seemed, had been finally set on 300 years of imperial soldiering. Devaluation was followed, in almost indecent haste, by the Labour government's decision to withdraw all the British forces from Malaysia, Singapore and the Gulf. As had happened so often before, the desire to save money on defence overrode every other consideration.

After taking office, the Conservative government duly completed the withdrawal from the Gulf, though it neither dissociated itself entirely from the fighting in the Dhofar nor failed to continue to build up Masirah as an air staging post for the far eastern route. Honouring an election pledge, it also kept a handful of troops, ships and aircraft in Singapore which, together with Australian and New Zealand forces, make up the Anzuk contingent.

That was the right sort of gesture for Britain to make to its friends in south-east Asia. But, in making it, neither the Prime Minister, Mr Edward Heath, nor the Secretary of State for Defence, Lord Carrington, greatly altered the European orientation of British defence policy bequeathed to them by their predecessors, Mr Harold Wilson and Mr Denis Healey. Knocking on the gate of the common market, they had no wish to do so. And neither, for somewhat different reasons, did the armed forces themselves.

How long British troops will remain in Singapore is anyone's guess. It depends at least as much on the attitude of the governments of Malaysia, Singapore, Australia and New Zealand as on the future course of British politics. Complete withdrawal of the British garrison from south-east Asia is now a matter of dogma in the Labour party. More sensibly, the Conservatives are prepared to let the spool of time unwind.

So, at first, was Mr Healey. But keeping troops in Singapore for just a few years was not a matter for which he was prepared to go to the political stake after devaluation. He ate his own promises without much evident distaste. Instead, he chose to fight in the cabinet for the retention of an order to buy the American swing-wing F 111s, arguing that these aircraft had a role to play in European defence. Since then he, but not the RAF, has repudiated this fight as being the worst decision he made while in office.

Mr Healey came to another, more momentous decision in May, 1968. Then, quite suddenly, he announced that the whole of 3rd Division (made up of three air-portable brigades), the Parachute Brigade (now made up of three battalions, of which one fights simply as an infantry unit), the 22nd Special Air Service (SAS) Regiment (which usually finds itself concerned with the more shadowy nooks and crannies of foreign policy), and 38 Group of the RAF (with its aircraft and helicopters) were being earmarked for assignment to Nato's Supreme

Allied Commander Europe (Saceur) and the Royal Marine commandos (complete with their amphibious ships and helicopters) to the Supreme Allied Commander Atlantic (Saclant). These formations, together with Britain's contribution to the Allied Command Europe Mobile Force (AMF), make up Britain's strategic reserve forces and are the subject of this survey.

Nato's fire brigade

These are the forces which Britain keeps standing by in this country for all sorts of emergencies. Once, above all else, they were a fire brigade for use outside Europe. There was some desultory interest in what they might be able to contribute to European defence, but until 1968 this was very much a secondary consideration. Since then, they have executed an about turn. Nowadays, their primary task is unequivocally European—a firm priority that neither the advent of a Conservative government nor the claims of Ulster has altered.

From Saceur's point of view these forces are part of Nato's strategic reserve, just as the American divisions stationed in the United States are. But there are two important differences. First, the British forces can be deployed more quickly than their American counterparts. Second, as they carry their own equipment with them and do not stockpile it in central Europe (as the American divisions do), they can be used on a greater variety of tasks in a greater number of places in Europe than the American reserve divisions. So, in a sense, they have become Saceur's fire brigade—a job well suited to a well-trained and all-regular force.

Yet, when this switch in roles was announced, it caused little stir. At the time, it seemed to be nothing more than an epilogue to the withdrawal from the Indian Ocean. Its significance was further muffled by the brave, anticipatory noises sounded on Mr Healey's bugle about the Bersatu Padu exercise—which, in the event, proved at great cost what no one in their right mind had ever doubted: that Britain had enough aircraft to lift a brigade group out to Singapore and Malaysia in a matter of days.

Through the swing-doors

But the reversal in roles does matter. It means that these forces can justify their existence only if, over and above anything they may be called upon to do outside Europe, they prove to everyone's satisfaction—the taxpayer's as much as the politician's—that they have an important part to play in the defence of western Europe. It was politically expedient for the Labour government to announce the switch in roles when it did, for at that time Mr Wilson was not taking General de Gaulle's veto on Britain's application to join the common market as a final answer while Mr Healey was beginning to toy with the idea of a European defence caucus within Nato.

The new initiative was not, however, entirely political in origin, for the senior commanders of the armed forces were also pushing their way through the swing-doors to Europe. Their eagerness to do so was not due to their traditional habit of obedience to political decisions but to a combination of realism and fear. Realism told them that the long and sometimes bloody retreat from empire was, to all intents and purposes, over; that nostalgia, like political gratitude, was short-lived; and that it was no longer possible to justify the continued existence of lightly equipped, air-mobile forces simply on the back of past triumphs or failures. Fear told them that unless a European role for these forces were found quickly, then much of what had been so carefully nurtured in the past would be an obvious victim in the next round of cuts in defence spending. Such cuts, however remote they may seem now, did not look all that far distant in 1968.

So, for differing reasons, everyone was content to jump on the European bandwagon. But they did so with two reservations in the back of their minds. The first was that these strategic reserve forces were only earmarked for assignment to Saceur. These forces, therefore, remain under British command and can be and are used on national tasks. But the plain fact is that in a European crisis Saceur plans to use these forces and, in such an event, his wishes and commands would be paramount.

The second reservation was that these forces were offered to Saceur as they were currently equipped and organised. They were and still are, in essence, infantry forces that can be moved quickly from one place to another by air. Because they do not carry their infantry around in armoured personnel carriers (APCs) and because they lack the tank and artillery support of a division in BAOR, they are not forces which can be committed, willy-nilly, to a fluid, quick-moving armoured battle.

ALL CAPS FIT

Ferranti capability in data handling and weapon control systems is equally applicable to land, sea and air forces. The FM1600 series of digital computers is already established with the Royal Navy as the basis for action information and fire control systems in ships and submarines.

The rugged military specification, compactness and flexibility of the FM1600 series also make them ideal computers for command/control applications with land and air forces. Ferranti design systems around these computers to perform whatever action information, data processing and weapon control functions are required.

Ferranti have been making digital systems for more than 20 years and have first hand knowledge of the services' needs and problems in the field of data handling and weapon control. Ferranti technology keeps pace with rapidly changing conditions and tactical developments, and planning for tomorrow's requirements is an everyday concern.

Turtles without shells

Much of this survey will be concerned with what role such forces can play in Europe. So it has to address itself to three questions. First do these forces have a political value in the sense of making a worthwhile contribution to the solidarity of the Nato alliance ? What, second, is their strategic value ? Nato's current strategy of flexible response extends backwards, as it were, from the winning of time in conventional warfare before tactical nuclear weapons are used to the idea that before the first shot is fired armed forces should be deployed and arrayed as a deterrent to any threat of aggression. Has Britain's strategic reserve, donning the helmets of Saceur's fire brigade, a particular function to play in this phase of crisis management ? Third, what is its military value—for an armed force without any real thump will deter no one ?

The last question is, in many ways, the most difficult to answer. The concept of air mobility—quick movement to distant parts of the world—shaped the equipment and thinking of the strategic reserve forces. Their original raison d'être was to take part in limited war against comparatively unsophisticated opposition. So they are only lightly supported by tanks and artillery and they can move round the battlefield only in helicopters and soft-skinned vehicles or on foot. The Land-Rover is their typical vehicle, not the APC. But the tank is still regarded, not least by the Russians, as the king of European warfare. Can these forces still give a good account of themselves in a war which is never likely to be fought—the third and last European war—but which, if it occurred, would be the most intense for just a few days that the world has ever witnessed ?

At the best they could only impose delay on an armoured thrust and, against such opposition, they might seem to be like turtles without shells. Yet, because they appear like that, they have no choice but to continue to experiment with the use of helicopters and with anti-tank and anti-aircraft weapons of all kinds. Paradoxically, this is where the potential strength of these forces lies, for it is these new means of tactical mobility and these new weapons which in a decade or so may change the face of land warfare.

In the meantime, such forces have to be given tasks in Europe suited to their equipment, training and temperament. And that is exactly what Britain's and Nato's military planners have been seeking to define since Mr Healey reversed the priorities in 1968. They have not produced 100 per cent shockproof answers, but they have written plans and established guidelines which make good sense. And, all the time, temptation beckoned. Why not, they must have asked themselves in their blackest moments, scrap the idea of air mobility and turn 3rd Division at least into another adjunct of BAOR ?

Sensibly, they resisted that temptation. It cut across too many grains of military thinking. First, it would have narrowed Saceur's options on how and where to use his reserves. Second, it would simply have paid homage to the obvious, ignoring the fact that political and military aggression often follows the unexpected, indirect line of approach. Third, it would have run counter to the tenet of British defence policy which says that forces must be kept in being which are prepared and trained to combat, both inside and outside Europe, all the differing degrees of violence—ranging from civil riots, through urban and countryside guerrilla insurgency and limited war in distant places, to the European Armageddon. The essential feature of any strategic reserve is that it must be versatile and flexible, not simply in the way it moves around the place but in the way it trains and thinks. Otherwise, it quickly degenerates into a tactical reserve, useful for only one specific purpose.

Down draught

Europe is not the world

Britain's armed forces still train and exercise in more distant places, ranging from the cold of northern Norway to the humidity of the Malayan rain forests, than any of their European counterparts. It is part of a tradition. It is also an article of faith: these forces must, it is said, keep their hands in—just in case. They must be and must seem to be, it is further argued, versatile. Versatility is, indeed, the badge of long-service regular troops. They have to wear it to make up for their lack of numbers.

There is a lot to be said for that creed and it is never likely to disappear altogether from British military thinking. But, even ignoring for the moment the claims made by Ulster on the deployment and training of the strategic reserve, signs are accumulating that the emphasis in training is shifting more towards Nato and Europe. That is as it should be, given the current defence priorities.

The number of battalions and companies going through the jungle warfare school in Johore (now run by the Malaysian army) and the time they will spend there will be less than was thought necessary only a couple of years ago. Desert training is hardly likely to figure so prominently as it did now that the troops have been withdrawn from the Gulf as well as Libya. Amphibious exercises out in the Indian Ocean and the Caribbean will be rarer. The old ideas about joint warfare in remote corners of the world will never quite die. But, like old soldiers, they are fading away.

Training, in the end, is a reflection of contingency planning. The files of the strategic reserve now bulge with European plans. But, outside Europe, the plans centre either on internal security duties in the few overseas territories still under British rule (such as, for instance, Hongkong) or on the evacuation of British nationals from various parts of the world (which, if the going got really rough, might require the deployment of a protecting force up to a brigade in size). Much of this planning is inevitably concerned with air lifts and twice recently—peacefully in Malta and more hair-raisingly at Dacca airport—Air Support Command of the RAF has shown what can be done.

This survey was written by Gordon Lee

Whether the Anzuk partners will draw up a plan for the movement of reinforcements from this country to Malaysia and Singapore must remain at this moment in the realm of speculation. But, plans or no plans, it is still mandatory upon the strategic reserve that it must be prepared at short notice to move a brigade group of 5,000 men or so outside Europe and sustain it in limited war operations for not less than a year. (If such a brigade were to be deployed overseas on internal security duties, it could be kept in the field longer—for the simple reason that this would be basically an infantry, rather than an all-arms, task requiring a lighter scale of equipment and stocks.) Today, even with 14,000 troops or so in Ulster, the strategic reserve could still gather such a brigade together and get the men, as opposed to the heavy equipment that has to be moved by sea, out by air very quickly.

But, even if the number of battalions in Ulster were to be reduced, the deployment of a brigade group outside Europe appears to be the limit of Britain's ambitions. That, indeed, is all that is asked of the strategic reserve except that at the same time it should also be able to deploy an infantry battalion with some artillery and engineer support elsewhere outside Europe. Apart from internal security

The call of the jungle is getting fainter

duties in British administered territories, such troops would be deployed only at the invitation of another country and would form part of an allied force. Inside Europe, the use of the strategic reserve is tied to a formal military alliance. Outside Europe, its use is governed by less formal political understandings and any call on its services looks remote. Nevertheless, these forces must retain some ability, though less than they did in the past, to operate outside Europe—for aggression can and does pop up at odd places at odd times.

Signposts in Ulster

Ulster has demonstrated once again the old, old lesson that the armed forces must be quick on their feet and ready to adapt themselves to differing types and degrees of violence wherever these may occur. It is not the purpose of this survey to discuss how well or how badly the army is doing its job in Northern Ireland, only to note some of its more general effects on Britain's military capabilities. The first of these is that the constant rotation of infantry battalions and other units acting as infantry through the northern Irish mill puts a strain on manpower resources which is only just about bearable. If there are four units from BAOR carrying out their four-month tours in Ulster, there are probably five or six from the strategic reserve. Nowadays, some battalions get no more than a seven-month break between tours.

Even so, it would not be particularly difficult to gather together a brigade for operations outside Europe. But if a military crisis occurred in Europe, many battalions would have to be withdrawn from Northern Ireland to make both BAOR and the strategic reserve up to strength. Moreover, because the intervals between tours of duty in Ulster are so short and other commitments are so various, battalions have had little time for as much individual training as they would wish. Sufficient unit training is even harder to arrange.

As a result, little is being done to practice all the various arms—infantry, armour, artillery, engineers, signals and so on—in working together. Brigade and divisional staffs still run plenty of command exercises without troops, but it is quite possible these days for a lieutenant-colonel to complete his period in command of a battalion with

It's not often like this in Belfast

little or no experience of working together with the tanks and the gunners on full-scale exercises. His vision of warfare becomes blinkered, possibly as narrow and confined as the slum streets of Belfast. Last year, for instance, a brigade exercise by 3rd Division had to be cobbled together by calling on battalions which did not belong to the brigade and which just happened to be available. This year a massive reinforcement exercise planned for northern Germany that would have involved BAOR, 3rd Division and some of the volunteer reserves has had to be cancelled.

A tour in Ulster does provide some compensations. It does sharpen up basic infantry skills and soldierly qualities like leadership and discipline. Most units leave the province in better shape, more finely honed, than when they arrived. Some have returned from their first tour in Ulster with rather a different set of junior NCOs. But Ulster, like all other small wars, is no preparation for the big one—and the army knows it.

Ulster has proved to the army, at least, how politically sensitive it must be in all its actions ; how more needs to be done about the gathering of intelligence ; and how soldiers, not simply infantrymen, must be trained in riot control and street-skirmishing. If it is to live up to its name, the strategic reserve will have to shoulder such burdens. They are not by any means new, for the army's history is punctuated with "actions in aid of the civil power." But, today, they have an added urgency. Or, at least, that is the fashionable thing to say.

Something like Ulster, many soldiers argue, could happen elsewhere—even in western Europe. It is the job of local police and military forces to operate against urban guerrillas. But it is possible to envisage a situation in western Europe when, with local forces tied down in urban conflict, other Nato troops might have to be deployed to counter a complementary threat of external intervention. That is an added reason why it is not a waste of time for Britain or Nato to devote so much energy to deciding where and how the strategic reserve might have to be used in Europe.

Fighting against shadows

Military planning can be as tiring as shadow boxing—and far less profitable when the planners prepare for the wrong sort of fight. But Nato's plans do provide something more than guidelines for mobilisation, movement and tactics. They establish procedures and time-tables as well. And as the planners, aided these days by computers, fit their jigsaws together, they soon spot where the gaps are.

The gaps in Nato's defences—in, for instance, the number of men, tanks and aircraft—are often so obvious that much of the planning has the air of making do with what happens to be available. That is unavoidable when every defence ministry in the West has to economise. The need for economy runs counter to the obligation placed on the planners to prepare for the worst possible case. For Nato, that takes the form of a reinforced Russian assault on the central front in Germany accompanied by subsidiary threats or attacks the length and breadth of Europe, from the North Cape to the Caucasus. For many people, such an all-embracing war appears to lie beyond the bounds of reality, let alone possibility. Yet, if the Nato allies failed to prepare against such an eventuality—and were seen by the Warsaw pact powers to be so failing—then the whole theory of graduated deterrence, entrusted initially to conventional forces, would fall to the ground.

If, moreover, preparations are geared to such a war, then, in theory at least, smaller threats or attacks should be that much easier to deter, stifle or contain. The cement of the Nato alliance is that an attack on one partner is an attack on all. That is how it should be. But it means that all the military plans in Nato move rapidly and inexorably towards general mobilisation throughout the alliance. In the plans drawn up by Nato, it always seems to be the really big one, the grand slam. General mobilisation day (M-day) always looms large.

M-day appears to be a simple concept. But it is not. Such powers as the United States, west Germany and Britain might well mobilise together on the same day ; but other members of the Nato alliance might decide to delay their mobilisation. That, in turn, could impede the movement of military forces within Nato. So, as far as this survey is concerned, M-day refers to the day on which Britain would mobilise and it ignores the possibility that not all the Nato partners would mobilise together. One result of this grey uncertainty is that too little attention is being paid to smaller, subtler or more muddled threats, which might, for example, be designed to chip individual countries away from their allegiance to Nato.

Yet it is exactly in such circumstances that the deployment of troops from the strategic reserves of Britain and the United States could have their greatest effect—in an open demonstration of political and military solidarity. That much is so plain to the member-countries of Nato that they are eager to have a lien on the use of Britain's

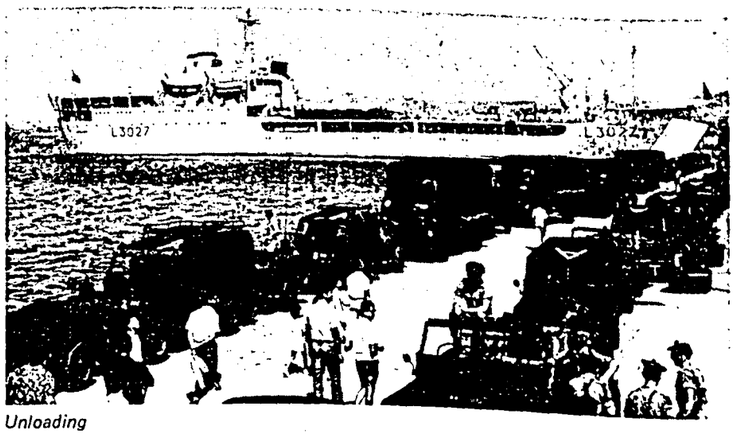
Night life

Scorpion

The first member of a new family of tracked armoured fighting vehicles developed for world wide use, Scorpion is highly manoeuvrable and capable of working in almost any terrain under all possible climatic conditions. It mounts a 76mm gun in a 360° traverse turret. The other variants include : anti-tank guided weapon vehicle, armoured personnel carrier, armoured command vehicle, armoured ambulance, armoured recovery vehicle and the Rarden 30mm cannon version.

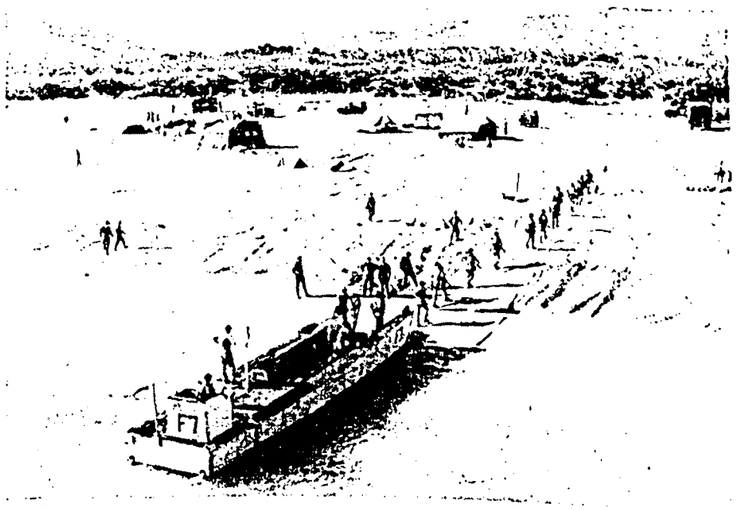
BRITISH LEYLAND **Alvis**

ALVIS LIMITED · COVENTRY · ENGLAND



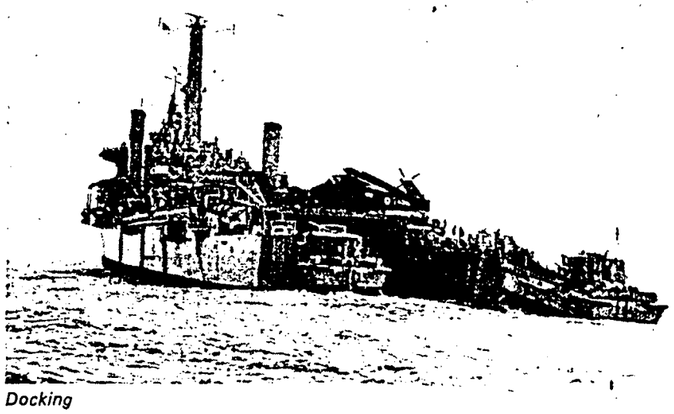
strategic reserve, even though some of them are not prepared to say categorically in advance that they would actually exercise the option open to them. But from a British viewpoint, the answer to the first question posed in this survey is satisfactory: less spectacularly, the strategic reserve forces are as much a part of Britain's political commitment to Nato and western Europe as BAOR is. But that leaves the two other questions about their military effectiveness still open.

The function of such forces is to deter and, if that fails, to delay. So their ability to move quickly by air and sea to the spot where they are needed is as important as their fighting qualities when they get there. Indeed, for three of the four forces (that is the commandos, the AMF and 3rd Division with supporting aircraft) the assumption behind all the planning is that they would be deployed in a period of a political tension before any shots were fired or in a phase of aggression so limited that it would not affect their deployment (which is tantamount to saying they could be moved without being much shot at). The fourth element—the Joint Airborne Task Force (Jatfor) of which the Parachute Brigade is a major part—would only make a parachute assault after hostilities had broken out.



The speed of the various deployments is governed by the number of aircraft and ships available and by the amount of war stocks (ammunition and the like) which the soldiers have to take with them. These factors also dictate the sequence in which the deployments would occur. As will be seen in more detail later, 3rd Division could not be moved in full until the AMF (and probably the commandos as well) had been deployed, while the aircraft to permit a parachute landing would not become available until after the complete deployment of 3rd Division had been achieved. So long as defence spending is kept on a tight rein—as for good, sound reasons it may well continue to be—then these are inescapable facts which Britain and Nato have to accept, however much they may regret them.

The amphibians



Of all the forces in the strategic reserve, apparently the most self-contained are the Royal Marine commandos. There are four of them, now backed by their own logistic regiment. One of them is specially trained and equipped for Arctic warfare (in which, incidentally, hovercraft

Unloading

Landing

Docking

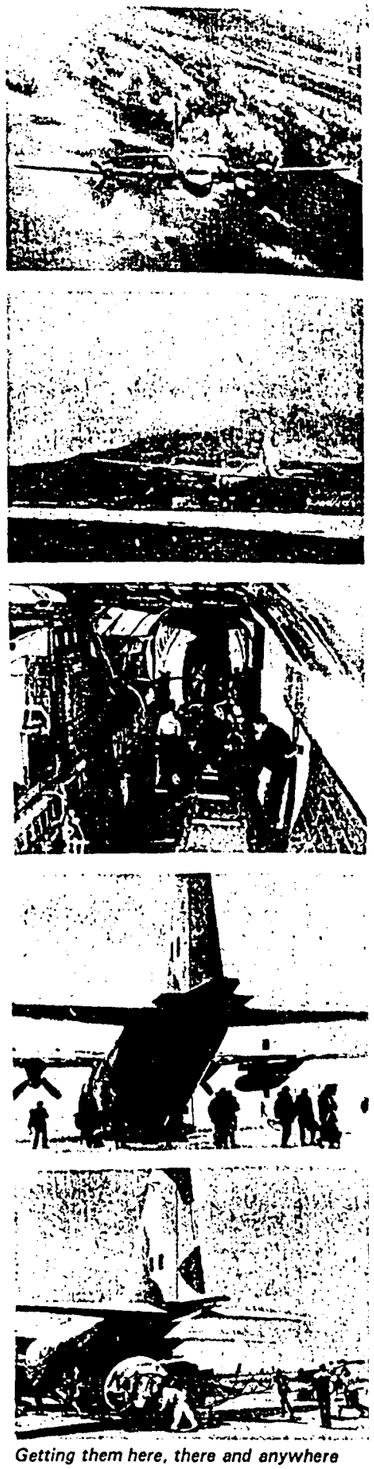
may at last find a role as a military means of transport). Supported by artillery batteries of 105 mm pack-howitzers, engineer troops, REME workshops and the like, the commandos can be carried by the two commando carriers (*Bulwark* and *Albion*, of which one will be replaced by the *Hermes* after its refit) and by the two assault ships (*Fearless* and *Intrepid*).

In an assault, the commandos can be either landed directly from the sea on the beaches or flown in close to their fighting positions by helicopters. Currently the commandos use Wessex helicopters but they may get Sea Kings, with their bigger lifting capacity, later in this decade. Their experience in the use of helicopters is second to none in Britain's armed forces.

In operations, the commandos and their carriers would be protected by a fleet of naval vessels, at least until the beachhead was firmly established. In normal circumstances, this fleet would include aircraft carriers to provide air cover for the fleet and air support in the initial stages of the landing. So the amphibious forces seem to make up a complete packet and to have the power to operate independently for a short time. But the commandos would be faced with serious logistic problems once the supporting fleet withdrew.

In very many ways this amphibious packet was the ideal force for use in limited confrontations and wars outside Europe, where opposition in the air and on or under the sea could be expected to be light. One day they may have to take this job up again. But, to justify their existence, they now have to find a role in European waters where, once the shooting started, naval and air attacks could be expected to be heavy.

This imposes severe constraints on their mode of operations. First, there are only a few areas where they could be usefully deployed: northern Norway (particularly if an isolated threat developed against it); the Baltic approaches (as a counter to Russia's own amphibious forces); and the Mediterranean. Second, they could operate in these areas only as part of an allied task force, acting jointly with American carriers and marines. With Britain's aircraft carrier, the *Ark Royal*, going out of service later in this decade, the commandos will become entirely dependent on American aircraft carriers for air support unless the through deck cruisers which the Royal Navy proposes to build do, indeed, carry Harrier aircraft. Third, the job of getting a comparatively few troops ashore does require the support of quite a large array of naval vessels. So, almost invariably, the amphibious forces would have to be moved, though not necessarily landed, before the shooting starts. In a period of political tension the commandos would be used to make a show of force. Indeed, they might be said to be trailing their coats.



That is undoubtedly their most useful function in Nato, especially if an isolated threat were to develop on the northern or southern flanks. It provides another shot in Nato's locker. But these amphibious forces, with their mass of ships, are very much open to attack by other ships, submarines and aircraft. They would have to do an awful lot to defend themselves while seeking to get the equivalent of a few, though admittedly first class, infantry battallions ashore for a very limited number of days of operations.

So, looking to the future, there must be at least some question not about the technical expertise of the commandos but about the concept of amphibious warfare in a European setting. Possibly, in time, fewer resources will be devoted to this specialised technique. This, presumably, will show itself first in the amount of time ordinary army units devote to amphibious training and second in the decisions to be taken about the future of the commando carriers and assault ships. Once the *Hermes* is converted, will either the *Bulwark* or the *Albion* be kept in service? Will the *Intrepid* replace the frigates used as training ships at Dartmouth? That would not signal the end of the amphibious concept (for the *Intrepid* could be re-activated as an assault ship in next to no time) but it would be a sign that amphibious warfare was being given a lower priority.

Ultimately, that might raise a question about the future of the commandos themselves. These are first-rate troops which no country would ever dare to throw on the scrapheap. But, capitalising on their helicopter skills, the Royal Marines may in time have to give rather more thought to the air and rather less to the sea.

Air lift

The marines would get there by sea. The other men of the strategic reserve with their lighter items of equipment and stocks would go by air. That is the job for Air Support Command, which later this year is to be amalgamated with Strike Command. It has many peacetime tasks to perform and it is, of course, the prime agent for moving men and supplies to trouble spots out-

Getting them here, there and anywhere

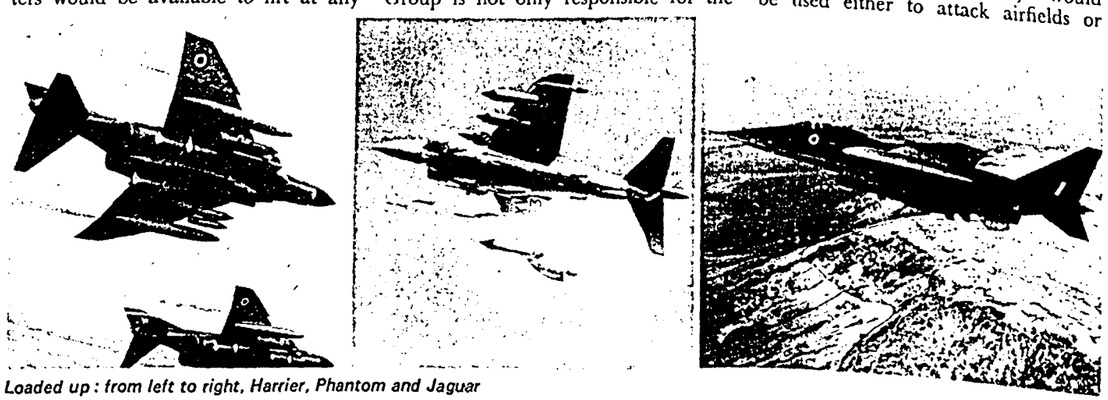
side Europe. It is always one of the busiest and most efficient commands in the RAF and its relations with the army are close and cordial.

For operations in Europe, its first job would be to get the troops and supplies of the strategic reserve there by normal route flying to conventional airfields. To do so, it can call on about 100 jet or turbo-jet transport planes—including VC 10, Britannia, Belfast, Comet and Hercules aircraft—and in intensive operations it would probably have at any one time a working force of around 80 aircraft. It could, for example, lift a brigade of 3rd Division (though with only a limited degree of logistic backing and without tanks and heavier equipment, which would have to go by sea) to anywhere in Europe in less than a week.

Once that strategic job was completed, some of the aircraft would be switched to tactical transport support, involving either some form of air dropping or the use of airstrips. Some of the aircraft would be used to re-supply the troops on the ground. But at this stage the first task of the Hercules aircraft would be to support the airborne forces. In addition, a small number of Andovers would be used for short-range logistic support. Such aircraft, with their light load and short range but good take-off and landing capability, would be much better suited to operations on the flanks than in central Europe. It would, in fact, make a great deal of sense if these aircraft were replaced by medium-lift helicopters (such as the Chinook or the Sikorsky SH53).

Much of the immediate tactical logistic support would be provided by the Wessex and Puma helicopters of 38 Group. If 3rd Division were deployed as a whole, this could mean in practice that enough helicopters would be available to lift at any one time about 450 men. (If the division were split, as it could well be, then the helicopter force would have to be divided as well.)

After their initial deployment the Andovers would, however, come under Saceur's command and he could use them as he thought fit—and that might not mean in direct support of 3rd Division. The other transport aircraft would remain throughout under national command. But, as well as air-lifting the strategic reserve forces, they might be given other tasks to perform for Nato. These include support for Britain's nuclear strike forces ; participation in a Berlin air lift ; and some help in reinforcing BAOR, though this particular task would be performed largely by civil aircraft. There are insufficient aircraft within Air Support Command to take on all these jobs at once. There would be a conflict of priorities. That largely explains why 3rd Division would not be deployed until after the AMF was in the field and why the airborne forces may not come into the picture until after hostilities had broken out.



This fleet of transport aircraft and helicopters still has plenty of life in it. The problem of replacement is not urgent, but it will crop up towards the end of this decade and involve the RAF in a big order—though plainly the politicians will not be prepared to fork out the money until the high cost multi role combat aircraft (MRCA) is in service. Then, possibly, two new types of aircraft will be needed : one to replace that sturdy workhorse, the Hercules ; and the other to replace the jet transports—where some derivation from the Airbus, with rear loading for example, might fit the bill.

Offensive support

As part of Air Support Command, 38 Group is not only responsible for the Wessex and Puma squadrons but for one squadron of Harriers and three squadrons of Phantoms (with two specialising in ground attack and one in reconnaissance). These squadrons provide the offensive air support for the strategic reserve. Because of the time and trouble spent in the past on joint warfare operations outside Europe, the ground and air forces of this reserve are more tightly knitted together than any other part of Britain's armed forces. In particular, methods of calling for air support from the ground have been practised and perfected and, indeed, are even better articulated than they are in BAOR.

The Harriers of 38 Group would deploy with the AMF—an obviously sensible decision in view of the performance of this jump-jet but one which would give rise to a host of operational difficulties if the AMF went to northern Norway rather than, say, Denmark. The Phantoms would go with 3rd Division (again splitting, like the helicopters, if the division were divided between two theatres of operation). Once, however, the squadrons were deployed, they would come under the operational control of the local Nato tactical air commander. So, quite possibly, they might be used on tasks other than the immediate support of the ground forces with which they trained in peacetime. That is not so strange as it may appear at first sight, for the local air commander must concern himself with the whole of the battlefield not just one corner of it.

There has, moreover, been quite a shift in air tactics. The use of aircraft as flying artillery in very close support of ground troops is only really practical in conditions of air supremacy. Today, such tactics would not be feasible in conditions of air inferiority in, say, Germany or Denmark. Rather, the aircraft, flying low, would be used either to attack airfields or

Loaded up : from left to right, Harrier, Phantom and Jaguar

Why the U.S. Marines are sold on the Harrier.

With the Hawker Siddeley Harrier now on the USMC inventory and entering service, it's well worth taking a look at what persuaded the Marines to go for it.

With its Rolls-Royce Pegasus vectored thrust engine, the Harrier is the world's first fixed-wing operational V/STOL fighter. It's got the unique advantage of being independent of prepared runways. And it can operate from small clearings or any ship with a helicopter landing platform.

So the Marines now have a fighter ideally suited to their amphibious assault role. With its flexibility, the Harrier can provide the close air support and air defence during landing operations that proves very handy indeed. Its ability to operate from rough and difficult sites means it can be used ashore much earlier than conventional jet fighters.

By employing it closer to the battle area, the battle commander can get fuller support for his strategies. Reduce reaction time. And use it to deliver more punch, more often, because of the short flying distances.

And the Harrier's punch *is* pretty impressive. It can deliver 8,000 lb. at over 600 knots, striking at a first pass. Thanks to Ferranti FE 541 Navigation and Attack System.

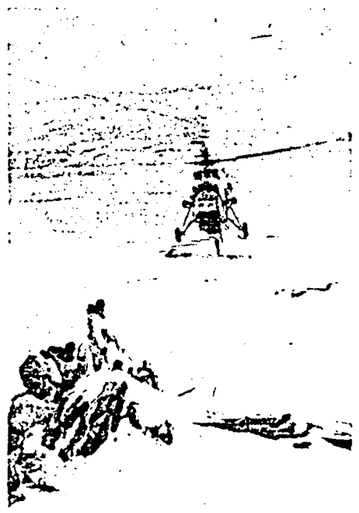
This is the kind of impressive line up that prompted the Marines to take a closer look. And with all the good things the Harrier's got going for it, the next step didn't take too long.

They reached for their requisition pads. And ordered.

HAWKER SIDDELEY AVIATION

Kingston upon Thames, England

Hawker Siddeley Group supplies mechanical, electrical and aerospace equipment with world-wide sales and service.



such targets as armoured concentrations beyond the range of the army's artillery weapons. Such attacks might have to be made at night as well as by day and it is noteworthy that the Phantom squadrons of 38 Group have been among the pioneers in the techniques of night attack.

The aircraft currently in service are well suited to this indirect support role and the Jaguar, which will replace the Phantom in the middle of this decade, has been designed with this mode of operations very much in mind. The aircraft will do—especially if the MRCA proves a success. But the RAF is already beginning to think ahead towards the type of aircraft that should eventually replace the Jaguars and Harriers. Currently its thinking appears to be veering towards a good number of relatively cheap, ground attack aircraft rather than to a smaller number of highly sophisticated, all-weather ones.

What is more immediately worrying is the quality of the ground attack weapons which the aircraft carry. Broadly, the aircraft are up-to-date but the weapons are not. As the emphasis has swung away from tactical nuclear weapons to conventional bombs and rockets, it is plain that yet more thrust should be given to the development of the latter. Lay-down bombs, which can be safely dropped from a low altitude, are now in service ; but they could be improved. So are cluster bombs (which engage tanks by scattering small bombs or mines in their path) ; but here, too, more needs to be done. For many years, too, the RAF has had air-to-ground rockets ; but new ones need to be developed which can be fired without the aircraft pulling up to such a height that it is exposed more nakedly than it should be to artillery or missile attacks from the ground.

International brigade

If a threat developed on the northern or southern flanks of Nato, the first force to take the field would almost certainly be the Allied Command Europe Mobile Force (AMF)—with possibly the amphibious forces taking up their position off-shore at the same time. The AMF consists of land and air units, assigned to Saceur at seven days' notice, selected from Belgium, Britain, Canada, west Germany, Italy, Luxemburg, the Netherlands and the United States. Of all the Nato allies, Britain makes the biggest contribution to the AMF—a fact much in keeping with its historical interest in the indirect approach to warfare. That contribution includes the Harrier squadron and a few Wessex helicopters from 38 Group, an infantry battalion (currently the Royal Scots), an artillery battery, an armoured reconnaissance squadron, an engineer troop, a logistic battalion and other supporting units.

Out in the cold

The land element of the AMF has a permanent headquarters and the plan is that it should gather its forces together and deploy them in a matter of days. It is an instant-reaction force. So its deployment requires a heavily concentrated air-lift which, in turn, helps to explain why it would almost certainly be the first of Nato's forces to be moved—possibly well before M-day.

Its function is, of course, to demonstrate solidarity—one for all and all for one—if any attempt were made to coerce one of Nato's outlying allies on the flanks of Europe. It is so organised that it could deploy a brigade group on either the northern or southern flank. So the brigade has been given a primary and a secondary task. As far as the British contribution is concerned, the primary role is in the north, and the troops assigned to it are trained and equipped for Arctic warfare. But in certain circumstances the brigade might be called upon to deploy in the south, for example in Greece or Turkey. In some of these areas the amphibious forces might also be lending a hand and so might 3rd Division and the airborne forces.

As the overriding purpose of the AMF is to deter through a demonstration of international solidarity, it has to be very much at Saceur's beck and call. Inevitably, its deployment will take precedent over any other. But it is an international force which would be rather hastily stitched together and its deterrent value might well have to be buttressed by the movement of other forces. Which is where perhaps, but not certainly, 3rd Division comes in.

The heart of the matter

If the balloon started to go up throughout Europe, every subordinate commander in Nato would start clamouring for 3rd Division. Only Saceur could decide between the competing claims. He might decide to commit the division in full to either the central or the northern region of Allied Command Europe. Or he might decide to deploy two of its brigades in northern Germany and the other, for example, in Greece. If the division were so divided, then the Phantom squadrons of 38 Group would probably be split in a similar two-to-one ratio and the Wessex helicopters would go to Germany and the Pumas out to the flanks with the single brigade (where the tactical mobility they provide produces the greatest benefit). Saceur has thus a fair range of options. But all are tied to M-day and, as it were, to the big show. Outwardly at least, little attention would seem to have been paid to the smaller, more isolated threat that might require a less grandiose response.

Even if and when M-day dawned, Saceur would want to delay his decision where to deploy 3rd Division until the last possible moment, so as to be able to judge where the major military threats would develop. But it always takes time to move men and supplies (particularly to Nato's southern flank) and any delay in Saceur's decision would run counter to the political desire and the logistic need to get the division rolling forward into position as quickly as possible. The inescapable facts are that Saceur could not delay his decision for very long and that he would have to make it in time to allow the division to deploy before the shooting started.

In making his decision, Saceur would also have to take into account the characteristics of this air-portable, lightweight infantry division. It is made up of three brigades, each with three infantry battalions. BAOR has three divisions, each with two brigades, and has 14 infantry battalions in all, compared with as many as nine in 3rd Division.

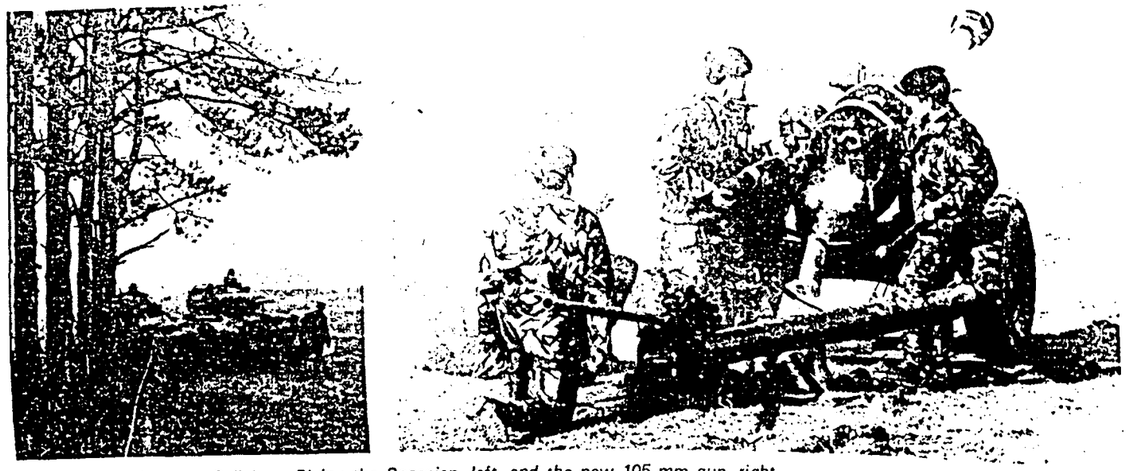
The world's most advanced V/STOL strike aircraft directed by INAS the world's most effective Nav/Attack system

Ferranti INAS is in service with the Harriers of the Royal Air Force and the United States Marine Corps.

Ferranti INAS maximises the tactical effectiveness of HARRIER by directing the pilot in navigation to the target, finding the target and striking it with a variety of weapons. Based on the Ferranti Miniature Inertial Platform, INAS, together with the Head-up Display, is a fully self-contained navigation and weapon-aiming system of proven accuracy. It is non-radiating and independent of external aids.

System Flexibility
In both the Navigation and Attack modes Ferranti INAS offers a flexibility essential to the fast reaction rôle of the Harrier.

Navigation
INAS constantly displays present position together with steering signals to any selected destination and allows complete freedom of manoeuvre. A dynamic pictorial presentation of the navigation situation is displayed on the projected moving map.



Attack
Fundamental emphasis is on the ability to find and strike any target at first pass with minimal exposure to counter measures. Precise target indication, essential for close support, extends this ability even to inconspicuous targets from low level in a variety of attack modes.

Cost Effectiveness
Extensive Ferranti experience, together with prolonged flight testing has demonstrated that Ferranti INAS dramatically improves 'first-strike' effectiveness. Any specified objective within the aircraft's range and weapon capabilities can therefore be achieved in a reduced number of sorties, with a corresponding reduction in costs. INAS therefore greatly increases the Harrier's overall effectiveness as a weapons system.

System Reliability
Emphasis has also been placed on system reliability and ease of maintenance in order to minimise logistic support demands in Harrier off-base operations. System defects are diagnosed to unit level by built-in test procedures applied each time the system is used.

INAS is the latest in a long line of achievements that have made Ferranti one of the most important international names in advanced avionics.

Putting on a show on Salisbury Plain: the Scorpion, left, and the new 105 mm gun, right

Heavy in infantry, 3rd Division is light in armour. It has only one tank regiment (which will soon be replacing its Centurions with Chieftains) and, before any reservists are called up, only one armoured reconnaissance regiment (whose Saladin armoured cars and Ferret scout cars will soon be replaced by the lightly armoured Scorpion tracked reconnaissance vehicles, armed with a 76 mm gun, and the Fox scout cars, armed with the 30 mm Rarden cannon for use against APCs). For reconnaissance, the division also has its own aviation regiment of four squadrons of Sioux and Scout helicopters. Some of the heavier Scout helicopters are armed with wire-guided anti-tank missiles.

The division is comparatively poorly off in artillery. It has three light regiments of 105 mm pack-howitzers, which in the next few years will be re-equipped with the new and sturdier British gun of the same calibre but with a much improved range. But it has only one medium regiment (armed with that very old stalwart, the 5.5 inch gun, which later in the decade will be replaced by the towed version of the Anglo-German 155 mm gun that is now being developed). It also has one light air defence regiment (which is now replacing its old-fashioned Bofors guns with the Rapier Sam system). Lastly, it needs to be noted that the division has no tactical nuclear weapons of its own.

Engineering support is provided by two regiments. They are not so much concerned with bridging (though they have the medium girder bridges for short crossings) as with the speed with which they can lay mines (where the issue of bar mines should help them), make demolitions and, with explosives and mechanical aids, dig trenches, gun-pits and the like.

By normal Nato standards the division is short of tanks and artillery. It is very much an infantry outfit. It has a few long-range anti-tank weapons: the French wire-guided SS 11 missiles mounted on helicopters and the British wire-guided Swingfire missiles mounted on vehicles. But largely it would have to rely on the medium- and short-range anti-tank weapons of its infantry battalions, such as the Vigilant, the Wombat, the Carl Gustav and the American M 72 one-shot rockets, and on the extensive use of mines.

So the division would have to fight in close or broken country and, above all, it would have to dig in. It would have to fight a relatively static battle, with its armoured cars initially providing a covering screen. It would have to draw the opposing forces on to its infantry positions and it would have to rely on its ability to dig in to protect itself from being plastered by artillery and aircraft. In northern Germany, for instance, it might well find itself dug in away from the BAOR divisions but providing a pivot about which a fluid battle of tanks and APC-carried infantry could swirl. But in Germany it could only hope to delay an armoured thrust, not defeat it. It would, moreover, almost certainly have to fight where it was put, for though it can move by road the division has no APCs to give it cross-country mobility. Indeed, for any form of cross-country mobility, either of men or supplies, the division would have to look to the helicopters of 38 Group.

The burden of supply

The composition of 3rd Division and the limitations of its fighting qualities are dictated by the fact that it was and still is designed to be carried by air. By the same token, it is supposed to be a quick-reaction force. For limited war operations outside Europe, that is certainly true, for in such circumstances there is little immediate need for tanks or other heavy items of equipment or for substantial stocks of ammunition and the like. But in Europe the division would need all those things. And that carries a severe logistic penalty, for the tanks, the heavier equipment and the division's heavier transport vehicles have to be moved by sea.

The division could deploy one of its brigades to one of Nato's flanks in about a week. But it could do so only without its tanks, heavy vehicles and the like. It would, moreover, be able to carry only limited amounts of ammunition and other supplies with it, which in intensive fighting would be quickly exhausted. Further, in such circumstances the brigade would have to be deployed very close to its logistic base. But this could be managed by using only the division's own resources.

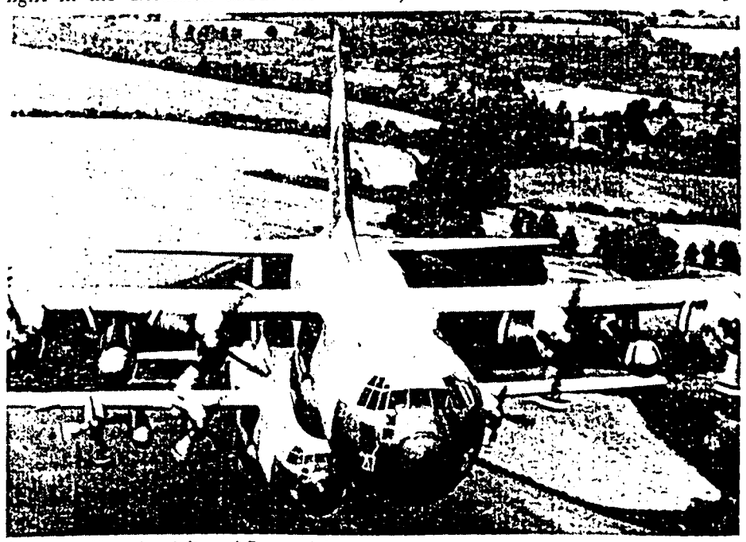
To deploy the division with its tanks and the full requirements of war stocks demanded by Saceur would take between two and three weeks (and probably a little longer if one of the brigades were sent to the southern flank). But the crux of the matter is that this deployment could be achieved only after the T & AVR reservists required for the division's logistic support had been called up. So, to be fully effective, 3rd Division would have to wait for M-day.

That knocks quite a large dent in its image as a quick-reaction force. Its deterrent value would be enhanced if methods could be found, first, to support the movement of a single brigade (as a show of force against, say, an isolated threat) with a bigger slice of war stocks and, second, to permit the deployment of the full division before general mobilisation had been decreed. Local stockpiling would not be the answer, for, with so many possible areas of deployment, it would be costly both in money and to some extent in men. And, plainly, it would be wrong to tie a flexible instrument of policy such as the strategic reserve down to a particular locality, a particular stockpile.

Rather, the answer seems to lie in a less hidebound approach. If more regular logistic troops could be earmarked for 3rd Division's use (though not necessarily brought within its establishment) the movement of a single brigade on a decent war footing would be that much easier and effective. If, further, mobilisation procedures were overhauled so that, through a partial call-up, 3rd Division in its full logistic trim could be got moving before M-day, Nato's ability to respond to a political crisis in Europe would be enhanced, for then it would have another bid to make before jumping to the grand slam.

The Paras

For a good number of years there has been plenty of heat but not much light in the discussion about the role that Nato's parachute battalions, acting as paratroopers and not as top class infantry, might play in Europe. At one time, some people toyed with the idea of small sabotage parties dropped behind the enemy lines. But this clearly is more of a job for the SAS with its clandestine skills and now that Britain alone of the Nato allies has committed its special forces to Saceur this is presumably the sort of task that the regular 22nd SAS regiment would be given to do.



Today's concept is that the paratroopers should be dropped in allied territory or in an area recently overrun by the enemy, so as to seize points of entry (such as ports or airfields), to regain vital ground, to hold defiles, to delay enemy columns or to counter enemy airborne assaults. They might well be dropped after the shooting had started, because the transport aircraft would be unlikely to be available until then. So the paratroopers would be used in a defensive role and the time and, to some extent, the place of their employment would be dictated by the enemy's movements. They could not be used effectively on the central front (except as straightforward infantry of the line). So they are earmarked for the flanks: Norway (though not in its far north in winter); Denmark; Italy; Greece; and European and Asiatic Turkey.

On the southern flank they would operate as part of a combined airborne task force, along with paratroopers from other countries, including the United States. They would be dropped by the Hercules aircraft of Air Support Command and, as new landing platforms have been developed, their supplies could be dropped from much the same low altitude as the men themselves. But the number of British aircraft available means that only one British parachute battalion group could be dropped at a time.

Such an operation is still feasible, even with the big stream of aircraft it entails, so long as the aircraft are carefully routed. It would be more feasible still if the aircraft were fitted with electronic equipment to keep formation in bad weather conditions and if the parachute force had some blind-dropping capability. Neither, at the moment, is on the horizon.

Economist April 29

there's VALUE IN ADDO THINKING

Just as the amphibious idea requires a good number of ships to get small forces ashore, the para concept requires a good number of aircraft to get a few men on the ground and to keep them supplied for just a few days. So, as with the amphibious forces, there must be questions about the continuing validity of a parachute assault. Perhaps, like the Royal Marines, the Parachute Brigade should turn its thoughts more towards helicopters.

Two bites at the cherry

Britain takes two bites at the cherry in retaining forces trained and equipped to fight both inside and outside Europe. But that sensible policy exacts a penalty: the forces of the strategic reserve can never be perfect instruments for European warfare. Any attempt to make them so, the orthodox argue, would require them to be re-equipped with tanks and APCs and that would ruin their ability to move quickly by air.

So, always, the strategic reserve will be something of a compromise. Like British defence policy itself, it will be somewhat fuzzy and imprecise. Nothing more than a qualified "Yes" can ever, in these circumstances, be the answer to the two questions posed earlier in this survey about the strategic and tactical value of these forces *within* Nato. But to argue that Britain should prepare only to fight in Europe and then to fight only one sort of war there is both dangerous and false.

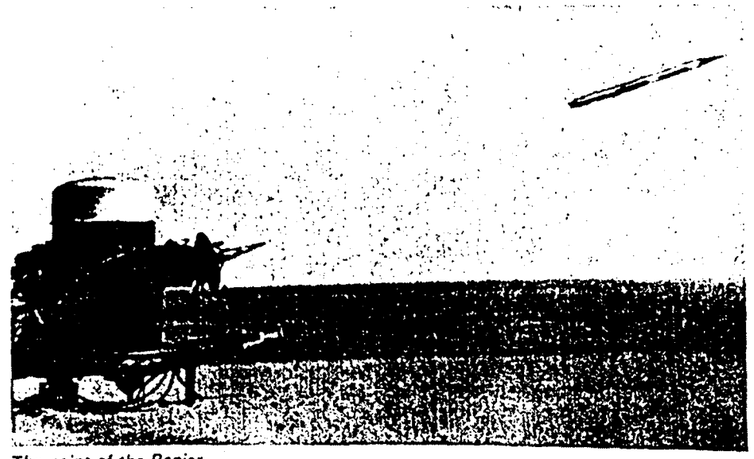
Rather, what should be done is to seek to improve the strategic reserve's ability to fight in Europe, as much on its flanks as on the central front, without seriously damaging its capacity to fight elsewhere. That is already happening with the weapons coming into service with the strategic reserve (that is on the tactical level). It is by no means so clear that it will happen with mobilisation and deployment (that is on the strategic level). To these two concluding themes, this survey must now turn.

Now thrive the armourers

For Europe, the three great weaknesses of the strategic reserve are: inadequate defences against attacks by low flying aircraft; an old fashioned mix of anti-tank weapons; and a lack of tactical mobility on the battlefield. The first two are common to the British armed forces as a whole and, indeed, to many other Nato armies as well. The third is only really relevant to air-portable formations. But change, evolutionary rather than revolutionary in its character, is in the air. So much so that today's poor cousins of European warfare may find themselves in a few years' time promoted from sitting below the salt to the high table of war.

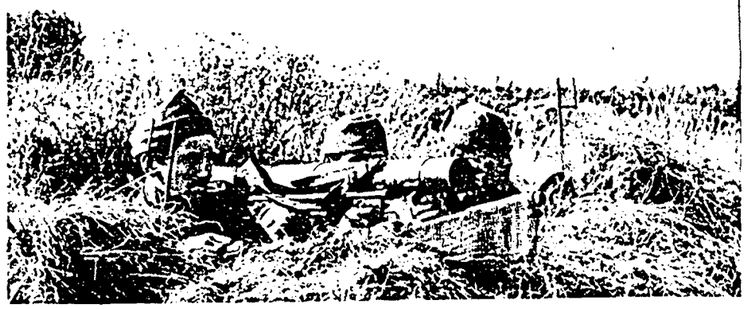
Fire curtains

To guard themselves against attacks by fast, low flying aircraft, the Russians have adopted a solution appropriate to a big army which is likely to be protected by the umbrella of air superiority: 23 mm cannons, with a range of less than 4,000 metres, which are mounted on armoured vehicles that advance with the tanks. In a fluid, quick-moving battle, these cannons are more of a menace than the Russian Sam systems (which are better suited for the area defence of airfields, base dumps and the like). Typically, the British have concentrated upon a solution appropriate to a small army which would have to fight in conditions of air inferiority: a combination of Rapier missile batteries and hand-held Blowpipe missiles.



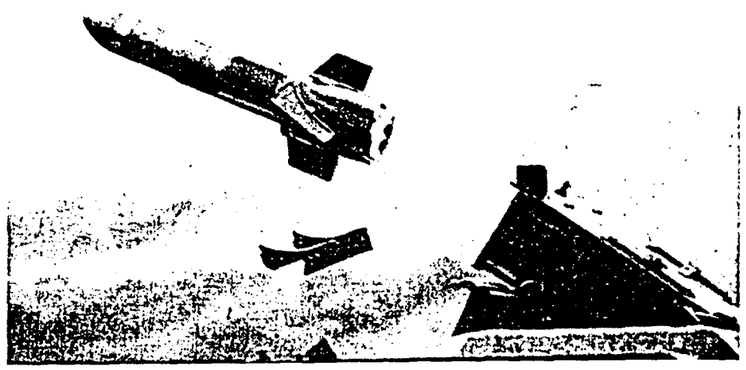
Rapier is a good system, capable of further development. It relies on optical tracking and automatic guidance. It is light and easy to move around by aircraft, helicopters and Land-Rovers. It is economical in manpower. It is both accurate and lethal. It has a goodish range. It is well enough proved to get the Americans seriously interested in it. And, of course, it is expensive.

At the moment it is a fair weather weapon. But radar tracking equipment is being developed to enable the missiles to be fired at night or in thick, cloudy weather. How long this phase of development will last is not clear, but, with luck, the British army should be properly equipped with a mixture of fair weather and blind-fire Rapier missiles—at a guess in the obvious proportion of two-to-one—by the middle of this decade.



The missiles, like all Sam systems, will provide area defence. A regiment of them should provide adequate, though not airtight, defence for, say, the three brigades of 3rd Division concentrated in their battlefield positions. In such a divisional area, however, there is a need for point defence against sudden, surprise attacks by marauding aircraft. Something more than machine-guns are required to protect, say, a command post, an infantry battalion or an artillery battery against such raids. Again by the middle of this decade, this will be provided by hand-held Blowpipe missiles. These rely on optical tracking and manual steering and have a range similar to that of the Russian cannon. The combination of these two systems should give both BAOR and the strategic reserve better protection against attacks by low flying aircraft. That welcome state of affairs is not before time.

Hitting back



In this century at least, the tank is never likely to become a museum

The point of the Rapier

Going out, the Carl Gustav

Coming in, the Swingfire

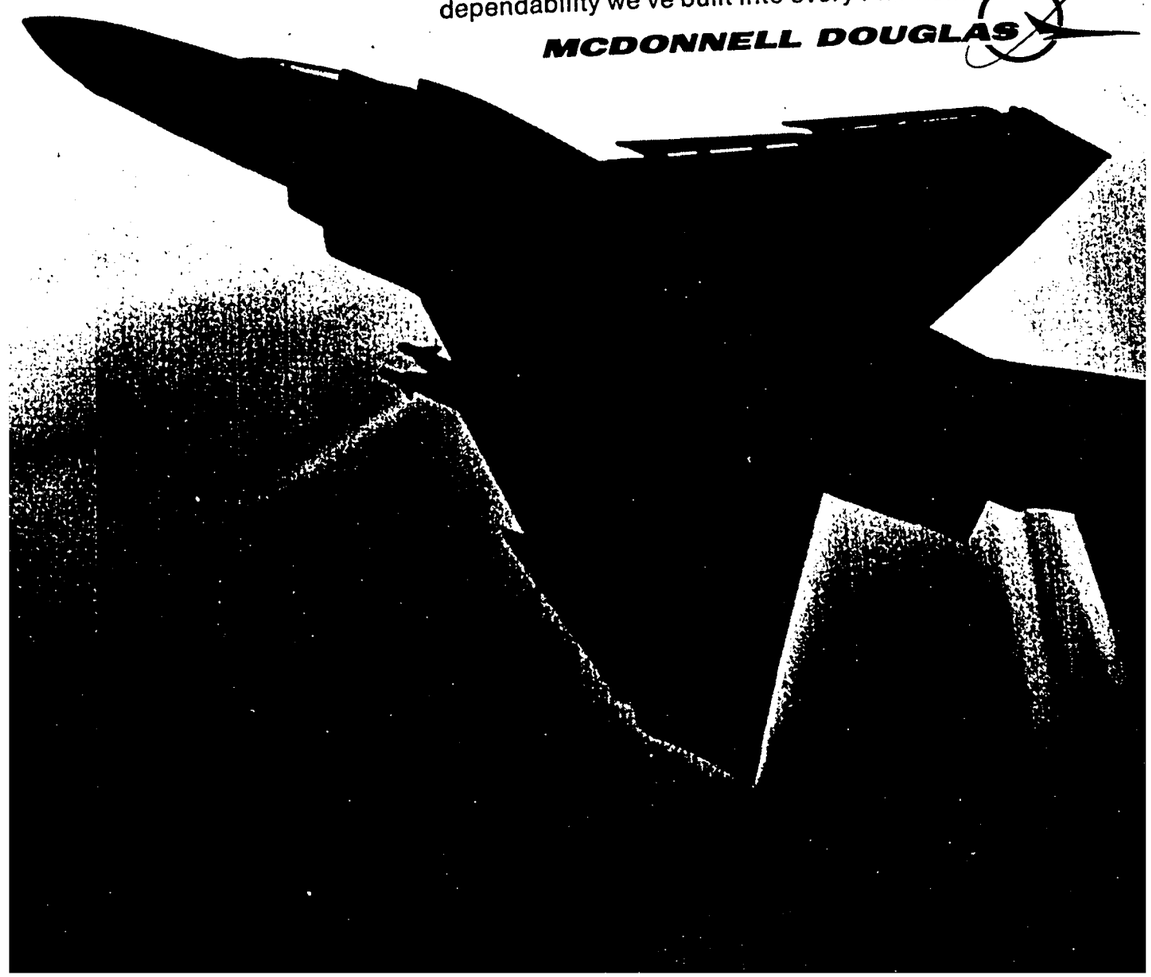
piece. For armies throughout the world, it will remain indispensable. But the technical development curve for the tank is flattening out, while that for anti-tank weapons is still rising sharply. Within, perhaps, as little as ten years' time the tank will no longer be the monarch of all it surveys on the European battlefield.

Liddell Hart's famous three-to-one ratio of preponderance for an attack to succeed will soon have to be revised, upwards. One reason for this is the introduction of wire-guided anti-tank missiles capable of engaging tanks up to a range of 4,000 metres. This is the range of the Swingfire, produced by the British Aircraft Corporation. Sensibly, the British army has decided to plump for a common family of Swingfire missiles. Mounted on APCs and other vehicles, these missiles are already in service with the armoured regiments of BAOR and the strategic reserve. They can be controlled by an operator some distance away from the launch vehicle. So, too, will Beeswing, which has a wider arc of fire than APC-mounted Swingfire and which can be fired either from a vehicle or the ground. These missiles will be issued within the next few years to the infantry battalions, to replace the shorter-ranged Vigilant. Finally, to replace the French SS. 11, now mounted on some of the army's Scout helicopters, a modified version of Swingfire will be strapped on to the new army helicopter, the Lynx.

The art of engaging tanks from a helicopter armed with wire-guided missiles is more than well advanced. It is firmly established. The helicopter is at least as expensive to buy and to maintain in the field as a tank. But the helicopters are needed, in any case, for reconnaissance and it makes good sense to give some of them an additional ability to kill tanks. It would make much less sense, however, if these helicopters came to be regarded solely as tank-destroyers.

Swingfire has its rivals, especially when it comes to mounting the missiles on helicopters. The two principal ones are the Franco-German Hot and the American Tow systems. Swingfire has a longer range than either, but a slower time of flight. It appears to demand a higher degree of skill from the gunner. But it does not require the helicopter to fly on a straight course or to remain hovering while the missile is in flight, as the other two systems do.

The anti-tank helicopter is here to stay. But it must be used correctly. Helicopters are very vulnerable to ground fire, so that they must not be sent off hunting, like wolf packs, across enemy-held ground. They must wait for the tanks to make their move and then stalk them from behind buildings, trees, hedgerows, hillocks and haystacks. In all it is a crafty, dodgy business. Swingfire fits this concept and it makes sense to use the same system in the air as on the ground. But there are already some soldiers—and not all of them are to be found in the Army Air Corps—who argue that eventually helicopters alone should be responsible for wire-guided missiles because this is the best way of capitalising on their long range.



The next step in their argument is that probably the worst gap of all in the anti-tank armoury is to be found in the lack of weapons capable of engaging tanks at their own normal gun range (that is, around the 2,000 metre mark and under). The answer, they now say with even more conviction than they did even a couple of years ago, can be found in the development of a high velocity anti-tank gun mounted in an armoured, self-propelled vehicle with a much lighter weight and a much lower silhouette than a tank. That may well have to wait on the development of a new gun, common to the tank and the anti-tank vehicle. But, with its usual love of initials, the British army is already talking longingly about Spat (self-propelled anti-tank) and Apspat (air-portable self-propelled anti-tank) weapons. For the armoured brigades of BAOR, some form of Spat to replace the short-ranged Wombats of the infantry battalions looks highly probable.

But Apspat might not be the right answer for the strategic reserve forces. They, too, have to think ahead to the time when not only the Wombat but the hand-held Carl Gustav weapons will have to be replaced. For them the ideal solution would appear to lie in a weapon not much bigger than the Carl Gustav which can easily be carried and fired by an infantryman and which can engage tanks between ranges of, say, 100 metres and 1,500 metres. Direct firing over short ranges presents no problem ; but some form of terminal

The Phantom with leading edge slats... gives fighter pilots a greater edge.

F-4 Phantoms have given fighter pilots the edge wherever they've engaged hostile aircraft in air-to-air combat. Now there is a Phantom with greater superiority than ever before. □ It's an F-4 with extendible leading edge slats to give the Phantom faster, tighter turning for combat manoeuvring, plus significantly improved stability and handling qualities throughout the full flight regime. The slats reduce drag at high angles of attack, and increase tracking time on target. □ The F-4 now has greater energy manoeuvrability, plus all the toughness and dependability we've built into every Phantom

MCDONNELL DOUGLAS

guidance is required to hit a tank at long ones.

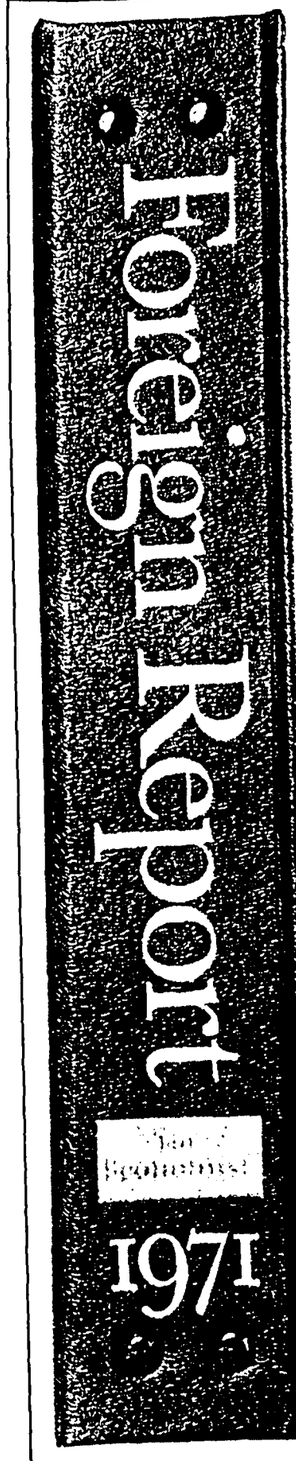
Such weapons are, in fact, now being actively developed. Their cost is higher than a high velocity gun (which always retains the inherent advantage of being able to use a variety of ammunition) but lower than a wire-guided missile. At the moment, there are two rival forms of terminal guidance, one using infra-red techniques and the other laser beams. The French Milan and the American Dragon rely on infra-red tracking while the Atlas, which is being jointly developed by the British Aircraft Corporation and Fabrique Nationale of Belgium, uses laser beams. It would be wrong at this stage of development to come to a definitive decision between the respective merits of these two systems. But, for the British forces at least, Atlas would appear to have a lot to commend it—not least because infra-red guided missiles can be distracted from their targets by other sources of heat, such as burning buildings and vehicles and even the sun.

Swingfire, Spat and Atlas for BAOR, Swingfire and Atlas for the strategic reserve would be a formidable combination of weapons. But they will have to be good enough to last in service well into the 1980s. By then, yet another anti-tank weapon system should also be deployed: field artillery rockets. These are the land equivalent of the cluster bombs dropped by aircraft, which seek to disable tanks by scattering small bombs or mines in their path. Their great advantage is that they have at least the range of a modern medium or heavy artillery gun, so they can be used to engage tanks in the rear areas long before the tanks can come into action. The divisions of BAOR would have to be the first to get them. But, now that the commitment to European defence is so strong, it would be wrong not to issue them eventually to 3rd Division, especially if some light-weight types could be developed which could be carried in support helicopters.

Sky warriors

It is easy enough to move troops quickly by aircraft. But once the troops of the strategic reserve are deployed in their battle positions, they have very little tactical mobility. At the best, they would be tied to the roads. At the worst, they would have to fight where they were put. Yet, even in the rear and flank areas where the brigades of 3rd Division would be stationed, the need to move a battalion or even a brigade up to 50 kms or so could easily arise, though more probably on the southern or northern flanks of Nato than on the central front.

The reasons for such a move are many. Among them are: the blocking of an armoured thrust in an unexpected area; the reinforcement of a threatened battalion or brigade; and dealing with enemy forces landed by helicopters or dropped by parachute. The move would have to start at short notice and it would have to be completed quickly so as to give the infantry battalions time either to dig in or to site their anti-tank weapons.



Support helicopters like the Puma and medium-lift helicopters like the Chinook or the Sikorsky CH-53 would seem to provide the obvious means. But Britain has no medium-lift helicopters (though it most certainly should have, if only to support the Harriers or to shift tactical nuclear missiles around). Nor does it have enough support helicopters to make the concept of a helicopter-borne brigade really feasible, for such a brigade would need the continuing support of about 60 Wessex and Puma helicopters.

Whether Britain should devote what few helicopters it has to air cavalry experiments and whether, more alarmingly to the economisers, it should buy more helicopters are matters of fierce controversy. So fierce, indeed, that there are very few men to be found standing in the middle between the ardent enthusiasts and the distinctly cool. The argument is somewhat reminiscent of the one in the late 1920s and early 1930s about the future of tanks, when the enthusiasts ruined their own chance of success by pushing too hard and those who were obstructive turned out in the end to be fools. Just as then, there do not appear to be sufficient hard and fast facts on which to come to a judgment. The report of a seminar by the Royal United Services Institute on the use of the helicopter in the land battle (available from the institute at £1) shows how many words have been spent and how few decisions have been taken.

American experience in Vietnam is a shaky guideline. There, helicopters have been used in all sorts of roles, except the anti-tank one, on a grand, if not grandiose, scale. Many of them have been destroyed by ground fire, but none of them have been subject to aircraft attacks. In Europe, the situation would be completely reversed. The danger of ground fire would largely be avoided by routing the helicopters over friendly territory (that is the rear areas of the battlefield), but that would still leave them exposed to aircraft attacks. No one really knows how vulnerable helicopters are to such attacks. There have been some guesses, but nothing more. But, plainly, helicopters carrying troops and their supplies would have to fly stealthily—and, preferably, by night, which would immediately add to the cost because of the navigation equipment required. Their crews, moreover, would have to be trained to put the men and their equipment down very close to the tactical positions that had to be defended—a precise art that only the Royal Marines and their helicopter pilots have really practised, although the

BORLETTI

Fuses for all applications: ground, sea, air

Borletti was established in 1896 to manufacture high precision mechanical products and its Ordnance Division has since developed a wide range of timing devices and fuses for artillery shells, rockets, airborne bombs, land and sea mines and demolition charges. In the past years Borletti was assigned some of the most important fuse contracts under the U.S. Off Shore Procurement programme.

Most NATO and SEATO Services are equipped with Borletti fuses and timing devices.

Manufacturing facilities include up-dated high precision machinery, automatic assembly machines and full X-Ray services for inspection requirements.

Italian Army Inspection teams are permanently stationed at the Borletti Ordnance Plants.

army and the RAF are now taking an intensive interest in such tactics and extensive trials are being carried out.

In all, the idea of ferrying troops around the battlefield by helicopter looks a tall order. Yet, however badly they frame their arguments, the instinct of those who push the idea seems to be sound. Helicopters are open to attacks from the air; but so are vehicles on the road. Helicopters are costly to buy and to run; but so are tanks. Helicopters impose yet another logistic burden; but so, too, do many modern weapons of war. And, above all, there is something very odd in the argument that boosts the merits of strategically mobile forces but then denies these very forces the means of tactical mobility. It would be folly if the army and the RAF were to cancel the large scale exercise with helicopters planned for this summer. It would be even greater folly if, say, through silly rows about who should man what, the helicopter in the 1970s were to suffer the same fate in the British forces as the tank in the 1930s.

Managing better

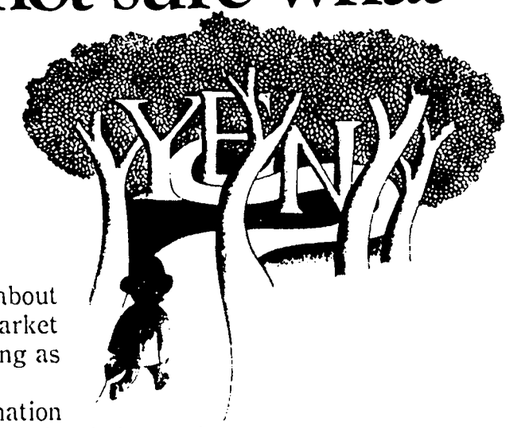
As the years wind slowly by, to the usual accompaniment of grouses and grumbles from the armed services, new weapons will add to the effectiveness of the strategic reserve forces more, perhaps, than they will add to that of BAOR, simply because these forces have more lost ground to make up. These weapons and the men who would use them would give a good account of themselves in battle—so long as they were kept away from the heart of the armoured dogfight. On that score, Britain and Nato can rest reasonably content. The plans drawn up for these forces are not foolish. They take full account of the limitations. They are realistic in recognising both what such troops could do in battle and what constraints will continue to be imposed on defence spending.

The new weapons will come in slowly, ever so slowly. But when it comes to questions of tactical mobility it would be fair to predict—though not to hope—that little in fact will alter. Because it is so expensive, the helicopter will be written down, though not completely written off, as being untried and unorthodox. Yet another opportunity will then be missed, for once it is more openly recognised than it is now that the value of amphibious and parachute warfare is diminishing Britain, by buying more support helicopters, could create another brigade in addition to those which already make up the strategic reserve. Tactically mobile, such a brigade would be manna to those who recognise the need for deterrents elsewhere in Nato than on the central front and who carry the idea of political flexibility in a crisis in Europe right through to the organisation of Nato's armed forces.

As Nato's plans already recognise, the best, indeed perhaps the only, way to make use of an air-mobile strategic reserve is for its men to make a display of force, a demonstration of solidarity, well before any frontiers are crossed and the shooting starts. This is all part of the process of crisis management. And the skill with which such a process, up to and including the deployment of troops, is conducted may be even more important tomorrow than it is today. First because, either through negotiations or unilaterally, Nato's forces in Europe may be reduced in size in the years to come. Second because no one is going to be so foolish as to bash through the central front (unless its defences are reduced to a shambles) if the chance to make smaller gains by more indirect means presents itself. And then, before the shots are fired and before even the nuclear consequences are consciously reckoned, it will be troops that can be flown in quickly, rather than homeland or garrison troops, which will show whether Nato as an international alliance really has got muscles.

There would, however, be little point in flying troops out except in their full fighting and logistic trim, for their deterrent value is measured by the punch they can deliver, the delay they can impose. But, as was seen earlier, it is just not possible to achieve such a state of readiness in 3rd Division until general mobilisation has been declared.

Too much within Nato, not merely within the British contribution, is tied to M-day. If M-day ever dawned, would it have the same fateful consequences as mobilisation did in 1914, when once the machine started to clank the politicians found themselves unable to stop it grinding forward to war? Is there not some room for an intermediate stage between the peacetime deployment of Nato's forces and full-scale mobilisation? If Nato clings, as it should, to a strategy of flexible response, then surely that strategy should be applied as much in the weeks before the battle as in the battle itself.



Here, Britain has a chance to show the rest of Nato the way. It would be neither difficult nor costly to devise techniques for partial mobilisation that would bring 3rd Division up to its full fighting strength before reinforcements had to be called up and flown out to BAOR. That would form another rung in the ladder of response.

Nato is now somewhat stiff in its joints. At its worst, it is hag-ridden by a Maginot Line obsession about M-day and the central front in Germany. It needs to be more supple, perhaps more unorthodox, in its movements and responses. And within the strategic reserve forces of Britain and the United States it could well have one of the means of rejuvenation at hand.

Norway today, perhaps Greece tomorrow

We'll answer all your questions about Yen. Even if you're not sure what your questions should be.

Don't feel badly if you don't know much about Yen. Because the international money market has never been as complicated and confusing as it is today.

That's why you need as much information about Yen as you can get. And we'll be glad to help you in any way we can.

We're Sumitomo Bank. One of Japan's biggest. We have branches in cities around the world. And forty years experience in international transactions. Which puts us in a pretty good position to assist you.

We'll give you all the background information on Yen. Then we'll tell you about such things as Yen finance, Yen quotations, Yen accounts and Yen transactions. And we'll do more than just tell you about them. If you want us to, we'll handle them for you.

And then we'll go a few steps further than that. If you'd like, we'll help you borrow Yen. We'll help you open a business in Japan. Or establish a joint venture. And if you're already doing business in Japan, we'll help you do more.

In short, we'll do everything for you that we've done for our domestic clients for years.

So please contact the Sumitomo Bank nearest you. If you have a million questions about Yen. Or if you can't even think of one.

Prudential

Increased profits and bonuses for 1971

Points from the annual statement of the Chairman, Mr. K. A. Usherwood.

* We are equipping the company to continue to develop its business by a continuing re-appraisal of the services offered, the way we sell them and the efficiency of their administration.
* Further progress from our already substantial overseas business expected.
* Ordinary Branch new annual premiums for individual business in the United Kingdom increased by nearly 30%—the highest rate for many years.
* A limited issue of deferred annuity bonds attracted over £13 millions of single premiums in less than three weeks.
* Industrial Branch new annual premiums slightly higher. Despite the collection of premiums at frequent intervals, the benefits given in this branch bear comparison with those available for the same size of premium in the Ordinary Branch.
* Rate of reversionary bonus increased to 3.30% in the Ordinary Branch and maintained at 2.60% in the Industrial Branch. Rates of terminal bonuses increased in both Branches.
* General Branch premium income increased by 20%. The underwriting profit of £1,478,000 compares with a loss of £260,000 for the previous year. In the United Kingdom the increases in premium rates greatly reduced the loss on motor business, and in other accounts a good profit was achieved overall.
* We are concerned that a great proportion of our private policy holders are under-insured to a serious degree and that so many homes carry no insurance on the household goods and furniture.
* Total net dividends 3.60p per share as against 3.20p per share for previous year.

REVIEW OF RESULTS

(Life and General Branches)	1971 £m	1970 £m
New annual premium income (Life Branches)	43·7	39·1
Total premium income and considerations ...	347·2	309·1
Investment income	157·8	148·9
Balance sheet value of assets	2475·3	2295·0
Market value of assets	3383·5	2690·9
Equivalent gross dividend per share	5·88p	5·31p

THE PRUDENTIAL ASSURANCE COMPANY LIMITED

DELTA METAL

"We remain confident that we shall continue to grow"

Lord Verulam

	PROFIT BEFORE TAX	NET PROFIT BEFORE DIVIDENDS
1971	£14,878,000	£8,110,000
1970	£12,149,000	£6,870,000

Not including figures for Midland Electric Manufacturing Co. Ltd., acquired Dec. 1971

- Ordinary Dividend up for third year running. Now 20% - 1970 18%.
- Earnings per Ordinary Share up again. Now 8.5p - 1970 7.1p.
- Return on Capital Employed up. Now 16.5% - 1970 14.9%.
- Ordinary Dividend cover improved. Now 1.8 times - 1970 1.7 times.
- Property re-valuation surplus of £8.7 million.
- Reserves further strengthened—still no goodwill in Balance Sheet.
- Exports and Overseas activities now about one-third of our total sales.
- U.K. sales of finished products and components rose to 52% from 45%. Inclusion of MEM will further improve this trend.

The Annual Report and Accounts will gladly be supplied on written request to the Secretary of The Delta Metal Company Limited at 1, Kingsway, London, W.C.2.

Books

1915: the flag was passing out of Redmond's hands

The infusible nation

THE GREEN FLAG
By Robert Kee.
Weidenfeld and Nicolson. 877 pages. £5.95.

Modern Irish nationalism has always been a sectional movement. It is true that it has roots in the colonial nationalism of the Ascendancy parliament of the eighteenth century and in the Jacobin republicanism of the Ulster Presbyterians who rebelled in 1798. It is also true that its leaders have often been Protestant, English in descent or aristocratic, and its philosophers have spoken of uniting all Irishmen against the English foe. None the less in practical terms it has been the movement of one section—the majority section—of the Irish people against those whom ancestry, religion, education, social conservatism or minority fears made loyal to the British connection. It thus divided Irish society and conspired with economic non-development and religious sectarianism to preserve the rigid divisions inherited from history.

Irish nationalism has its historic roots in the tribal resistance of the Gaelic Irish to the English invaders from the twelfth century onwards. They clung tenaciously to their language and customs and waged incessant war on the invader. After the reformation, this struggle assumed a religious aspect when the suppression of Catholicism became part of British government policy. The bulk of the Gael and most of the earlier English settlers in Ireland remained loyal to the "Old Faith." As Catholics they supported the Stuarts and were deprived of all civil rights by the penal laws of the eighteenth century. The story of Irish nationalism is essentially the struggle of the descendants of these people to reassert their national identity. In the early part of the nineteenth century this struggle was linked with the abolition of the penal laws; in the later half it was linked with the agrarian struggle to wrest ownership of the land from the landlords. But even after these tangible grievances were *removed* nationalism survived as an independent force. The real tragedy of Ireland is that its two communities and cultures were never welded into one nation. Its legacy is sectarian strife in the north and a monolithic republic in the south which, for all its easy-going amiability, has really succeeded only in assimilating the Catholic nationalist part of the Irish heritage.

Mr Kee has written a lucid and well-researched account of Irish nationalist movements from the late eighteenth century to the Anglo-Irish Treaty of 1921. It should serve as a useful starting-point for those who seek to understand the historical background of modern Ireland, even if most of the factual material has already been covered by more specialist works. Historians will still go to Professor Lyons's "Ireland Since the Famine" for broad historical analysis. Mr Kee underrates the independent emotional force of nationalism in the minds of the majority of Irishmen which gave such an irrational dimension to the Irish question and made it incomprehensible to the English. It was not just land-hunger and was not to be assuaged by agrarian reform or old age pensions or any beneficent measures taken by British governments. In any circumstances it would probably have precluded a final settlement short of full independence, such was the depth of nationalist feeling.

The most valuable part of the book is the account of the years following the 1916 rising. This is largely based on a thorough examination of contemporary newspaper material. Here the author has broken new ground. He shows that the bulk of nationalist opinion condemned the killings carried out by the IRA from 1919 onwards. It was only when the British government unleased British terrorism that the IRA began to enjoy widespread support and people wanted to be rid of British rule at any cost. Eventually in 1921 the British government had to sit down to negotiate with the men of violence. These in turn got the credit for the measure of independence granted, although it was little in advance of what could have been achieved by constitutional means. This hallowed the tradition of violence in Irish life; it divided Ireland irreparably, both territorially and socially, and produced a republic at times more concerned with nationalist symbols than the real business of economic development and social reform. Succeeding generations have paid the penalty.

Before the Boyne

THE NAVAL SIDE OF KING WILLIAM'S WAR
By Edward R. Powley.
Adam and Charles Black. 392 pages. £4.20.

Nothing would have surprised the amiable author of this book more than the timing of its publication. He provides the most detailed, if not the most dramatic, account of the Siege of

Londonderry which has yet appeared, and some of the remarks which he quotes might just as well have been made in 1972 as in 1689:

> Since I was born I never saw a town of so little Strength to Rout an Army with so many generals against it. The walls are not touched, the Houses generally broke down by Bombs.

So wrote Kirke, colonel of the notorious Lambs, when he relieved the town.

The relevance of the narrative is remarkable. While William III looked towards Europe and neglected his back door in Ireland, another notable Protestant cleric organised the defence of the city against Catholic armies to create the myth which has sustained Orangemen over the past 300 years. As Sir Arthur Bryant says in his introduction, William was a reluctant "liberator" of Ireland because he was solely interested in the prosecution of the war against France. The book covers only the first 20 months of the war, ending somewhat arbitrarily before the Battle of the Boyne.

Unfortunately, is it a jumble of details. The tortuous style, with a predeliction for strings of parenthetical clauses, prevents the reader from seeing the wood for the trees. This book has, in fact, all the merits and defects of a doctoral dissertation, though the reader is spared the apparatus of scholarship, which is tucked away.

The late Edward Powley was an admirable example of the amateur historian. His first book on the part played by the navy in the Glorious Revolution remains the standard work. Some 40 years later, after a lifetime of school teaching, he produced this continuation of the story. He was a meticulous scholar and also the successful creator of the Cromwell Museum at Huntingdon and the Samuel Pepys Society in London. Would that his literary ability had equalled his historical enthusiasm.

William : incidental liberator

Comings and goings

EGYPT : IMPERIALISM AND REVOLUTION

By Jacques Berque, translated by Jean Stewart.
Faber. 736 pages. £15.

As a writer of latter-day Arab social history Professor Berque has few rivals in his own country, France, or elsewhere. Thanks to his gifted translator, his portrait in depth of Egypt comes over in English with the same stunning freshness as the original work. The period observed is the rise and decline of British power in Egypt, culminating on that fearful Saturday in January, 1952, when 700 buildings in Cairo were burnt down by rioting crowds.

Some readers may regret that, having been taken so far through so many pages, they are not allowed a glimpse of the fully realised revolution in Nasser's hands. But this book is more concerned with the symptoms than the fulfilment—with the revolutionary impulse that an alien presence fosters. What emerges clearly is that whenever great violence broke out—whether in 1919, fanned by Zaghlul's exhilarating nationalism, or later in the 1930s and 1950s—it was never, as the British liked to think, just the work of mindless mobs incited by political hotheads. There was always a countrywide convulsion, embracing every class of Egyptian from workers and students to *ulama* and civil servants, and reverberating through the villages. In 1919 the little village of Zifta "existed as an autonomous republic for several weeks behind its mud walls."

Professor Berque describes his work as an essay ; and in form, if not size, it is. The historical narrative and economic analyses are interspersed with meditative chapters that occasionally break out of their chronological order. Reflections on the Arabi revolt, the prelude to British occupation, precede an account of how it came about. A similar inversion, the comment preceding the record, applies to Zaghlul's arrest. Cross-references would help the less initiated reader. Later, there is a tendency to accept too readily the current Egyptian version. The statement that Egypt bore "the brunt of the assault" in the 1948 war in Palestine will not do. Egypt got the tail end of it, certainly, but through leaving too much to others at the start. One may also question whether Egypt entered that war with quite the anti-colonial passion that is nowadays popularly ascribed to it. It suffered its own confusions—among them quite a kindly attitude to its own Jewish population—and went to war, surely, in a spirit of noblesse oblige. But these leanings toward local legend are a minor flaw in an otherwise fine evocation of an ancient Islamic country, eager to acquire western knowhow, but not to have it forced down its throat.

There are splendid descriptions of Cairo and Alexandria as they were in the nineteenth century and as they became under new layers of rich foreign residents. The details of rural life are beautifully sketched in. Studies of village characters who rose to positions of civic eminence are reminders that Egypt was evolving socially under its own impetus and was not just a sparring circle of nationalist politicians, stiff-necked British and palace hangers-on. The writer has steeped himself in Egypt, lived there and walked and talked himself down the less well-known paths of its history, drawing on rich, untapped sources—family papers, company reports, unpublished memoirs, British, French and Egyptian archives. Not least are his cullings from Egypt's own poets and novelists, who write with such vivid imagery and often reflect their times more faithfully than do diarists and press reporters.

Counter-intelligence

NETWORK

By Heinz Höhne and Hermann Zolling.
Secker and Warburg. 381 pages. £3.50.

It is in the nature of things that a democratic state's secret intelligence service cannot please all its citizens all the time ; and, notwithstanding what other states do, there are always quixotic innocents who would dispense altogether with the apparatus of spies and spying. Should the secret service go to work thoroughly it is charged with anti-democratic conduct. Should it be easy-going it is scolded and mocked for any nasty knock that may have taken the government by surprise. Remember the outburst of indignation at the failings of the Central Intelligence Agency that followed the humiliation of the Bay of Pigs ?

Before they came to power in Bonn, the west German Social Democrats rebuked General Gehlen's Federal Intelligence Service for superfluous snooping and uncontrollable mischief-making in general, perpetrated in the name of combating communist subversion. But as federal chancellor, Herr Brandt asked : "What do we have our

Gehlen : poacher or gamekeeper ?

information services for ? Why did no one tell me anything ? " when, only a fortnight after he had signed the non-aggression treaty with Poland in Warsaw in December, 1970, his co-signatory was ousted from office in unexpectedly tumultuous circumstances.

To be fair to General Gehlen's many critics, the first of their objections was by no means far-fetched. That was that the Federal Intelligence Service, whose allotted field of operations was abroad (mainly east of the Elbe) was poaching ambitiously on the home ground reserved for the Office for the Protection of the Federal Constitution. But they also argued that General Gehlen seemed to be bent simultaneously on accumulating secret personal power on a scale harmful to the workings of democracy. In the process, they say, he enlisted the help of several gentlemen who had learned their trade under Himmler and Heydrich. Herr Höhne and the late Hermann Zolling write for the most part convincingly and enthrallingly of Gehlen's rise, ascendancy, and decline. Their book is composed largely of a series of articles that were published originally in the iconoclastic news magazine Der Spiegel. They are so well informed that it is surprising that no action has been taken since under the German equivalent of the Official Secrets Act. In the authors' index to sources there are repeated references to official reports and diaries now "in private ownership."

Critical as they are of the Federal Intelligence Service, the authors acknowledge its indispensability "so long as the insulated social systems of the east close their doors to a world eager for detente, so long as the federal government in the clear interests of west Germany must seek to discover other countries' secrets in order to protect itself against surprises." But they recommend that the service should set geographical priorities for gathering intelligence, limiting general reporting as a rule to areas and subjects not dealt with by west German diplomatic representatives.

Second-class sisters

CAROLINE MURAT

By Joan Bear.
Collins. 319 pages. £3.50.

It is difficult to take Napoleon's empire seriously, when one considers his relatives. Just as it is sobering to think of Napoleon's unusual energy and ability in redrawing the map of Europe in order to elevate his brothers into kings, so is it revealing to see how his family behaved during their years of power and prosperity. He had three sisters and when he declared himself emperor in 1804, they discovered that they got no titles at all, whilst their brothers became imperial highnesses and their sisters-in-law became princesses. The youngest, Caroline, who had married the brave and dashing General Murat, remained plain Madame Murat, and at the great banquet which celebrated the proclamation of the empire, she could not restrain her tears or conceal her anger.

She eventually forced her brother to confer the titles of imperial princesses on the three sisters, but even this was to create further difficulties. The etiquette of the new court had been carefully established and an elderly page who had served under the Bourbons had advised on how things should be done. Consequently, when the Princess Caroline Murat went into a particular salon, her husband found that he could not accompany her because that salon was reserved for "the Princes and Princesses of the Blood."

There is a great deal to be learned about this empire from studying the Bonaparte clan, and Mrs Joan Bear has carefully put together this life of Caroline. Intrigue and jealousy were the most obvious characteristics of the Bonapartes, and Caroline, who was more courageous and clear-sighted than most, was determined to protect her own interests. Since her husband had served Napoleon well, she was particularly ambitious ; since he could be foolish and headstrong, she was frequently uneasy and she learned how to navigate among the Talleyrands and Metternichs whose influence she respected. Money was always an important subject and when the Murats

Caroline : family at war

were made King and Queen of Naples, Caroline did not hesitate to ask for 16m francs in compensation, since their kingdom was so poor.

Mrs Bear has written historical novels, and perhaps she was determined not to overdo the drama and the colour of this biography. She has omitted many well-known anecdotes. On controversial questions, such as the disagreements between Caroline and her husband, or on how the Murats deserted Napoleon in 1814, she writes sensibly. But it is a melancholy story.

Tax Havens & Offshore Funds

E·I·U

QER Special No.8

The traditional image of the tax haven as a sun-soaked paradise for millionaires has given way in the past twenty years before the increasingly important role they have come to play in the development of multinational companies. Most important, tax havens have provided a favourable basis for the development of a whole new concept of investment in the form of offshore mutual funds. This QER Special compresses into 76 pages a wealth of detail about how they operate and what they have to offer.

A single copy of the QER Special No 8 is £3.25 (US$7.80). Airmail postage £0 40 (US$0.90) extra Cash with order.

Half a decade

GREECE UNDER MILITARY RULE
Edited by Richard Clogg and George Yannopoulos.
Secker and Warburg. 294 pages. £3.

INSIDE THE COLONELS' GREECE
By "Athenian," translated by Richard Clogg.
Chatto and Windus. 215 pages. £2.50.

When on April 21, 1967, the Greeks woke up to find that their army had overnight overthrown the government, arrested the leading politicians and proclaimed a revolution they were too stunned to react. When they realised that they were in for a dose of authoritarian government the majority shrugged its shoulders : the politicians had made a mess of running the country and a farce of parliament—perhaps the soldiers would do better. But even in those early days the ousted politicians, the intellectuals and the disestablished establishment understood that there would be no easy way back to democratic government, although few of them believed that the essentially military regime could last for long in face of the hostility of western Europe and, hopefully, of the United States.

But today, five years after he organised the coup d'etat, the former colonel, George Papadopoulos, is still firmly in the saddle. However much the Greek intellectual élite may despise the man, however bored the Greek people may be with his uninspired, uninspiring and often inept leadership, he is a man to be reckoned with, a phenomenon to be taken seriously. "Greece under Military Rule," a collection of 13 essays, the majority written by Greeks living in Athens or abroad, is a timely study of the impact of five years of Mr Papadopoulos's rule on the people, the institutions, economy and culture of his country.

Papadopoulos : still in the picture

The writers do not speak with a common voice but they are linked in their total opposition to the type of regime the Greek army has imposed on the country and to its policies. Their views have added weight since they eschew such emotive and inaccurate phrases as "fascist" and "totalitarian" to describe the regime, but their arguments lose persuasiveness because they do not examine the state of Greek institutions before 1967 altogether frankly.

The regime may, as the writers charge, be imposing solutions with the aim of stifling potential threats to its own existence, but they could admit that something needed to be done about the powers of the monarch, the trade union structure, the centralisation of government and industry, the press and the social security system. The admitted fact that the resistance organisations within Greece and abroad have still failed to gain the support of the mass of the Greeks says a good deal about Greece before the coup.

The anonymous author of "Inside the Colonels' Greece" covers much the same ground as the 13 essayists but his book suffers by appearing in English two years after it was written. The most valuable chapter is an examination of the 1968 constitution, which, if and when it is ever fully implemented, will give Greece a very limited form of democracy and confirm the armed forces as the final arbitrators in Greek political life. "Athenian's" assessment and analysis of the past and present is sober and well documented but his hope that western Europe and the United States will somehow rid Greece of the colonels seems over-optimistic today.

The last detail

LANCASTRIAN KINGS AND LOLLARD KNIGHTS
By K. B. McFarlane.
Clarendon Press : Oxford University Press. 261 pages. £2.75.

This is a splendid book, and a fitting reminder how great a historian Bruce McFarlane was. It falls into two parts : a re-examination of the career and political motivation of Henry IV, with a vivid little character-sketch of his successor as a pendant, and an investigation of the activities and interconnections of the group of knights at Richard II's court who can be shown to have had sympathies with Wycliffe and his followers. The two themes are linked chiefly in time, and cover only a small segment of the life of the politically active classes in England, yet in his treatment of them McFarlane contrived to convey an impression of the life of the court as a whole.

The outstanding quality of the book is that it makes information derived from most detailed and technical scholarship not only accessible but comprehensible and vitally interesting to the widest possible readership. No recent medievalist was more skilled than McFarlane in torturing record evidence to force it to reveal more than it was ever intended to. But the detailed knowledge so acquired is fitted into broad patterns of argument so clearly and in such vigorous prose that it never fails to hold the attention. There are some excellent examples of the process here : the household accounts of Henry IV are mined for the smallest hints of his personality, and the "namierisation" of the Lollard knights throws up a series of vignettes of "a group of retired army officers."

Strangely enough, the new evidence on which McFarlane drew served more than once to re-establish older theories about the period. True, he demolished altogether Stubbs's picture of Henry IV as a self-conscious constitutionalist, and replaced it with a far more convincing account of his struggles with his council, which established him in the main line of medieval kingship, and he also demonstrated that the Lollardry of the court was no mere hangover from John of Gaunt's flirtation with Wycliffe. But at the same time he saw Richard II as a man driven by the desire for revenge, and Henry V as the *preux chevalier* of early fifteenth-century England to a point which is almost Shakespearian. In fact, in his estimate of Henry V his judgment, for once, faltered. His exaltation of Henry was a natural reaction to the excessive demythologising of some recent historians ; but to describe him as "the greatest man who ever ruled England" is unjust to other monarchs whose achievements in the demanding arts of law-making and law-enforcement greatly excelled that Henry's.

Inevitably, a posthumous publication such as this arouses regrets, above all that its author never had the satisfaction of seeing it in print. For McFarlane's audience, however, there may be advantages. His one great failing as a scholar was excessive caution, and it is possible that we hear more of his authentic voice in this book than he himself would have permitted. His editors have served him tactfully and well, and the tone and excitement of his lectures have not been lost. He knew his period so well that his lightest speculation had more authority than the most confident assertions of many other historians.

Rule books

The first major action under the Industrial Relations Act was last week's order for a cooling-off period on the railways. But the literature on the new act is already becoming prolific. The Department of Employment and the Industrial Society have both published a variety of short booklets, for those lacking the stamina for a full-length book. But there is plenty of choice. Curiously, the simplest and most practical guide to the act is the TUC's **Handbook on the Industrial Relations Act** (50p). It is particularly handy because it suggests how unionists may be able to avoid being affected by various provisions. This knowledge will no doubt help trade unions, and management even more so.

The **Times Guide to the Industrial Relations Act** by Innis Macbeath (Times Newspapers, £2.50) subtitled "Workers, managers and the law in Britain," is the best full-length book on the subject. Mr Macbeath goes out of his way to avoid jargon, and indeed includes an appendix which translates a lot of the vocabulary of industrial relations. The style is crisp and critical. **An Employer's Guide to The Industrial Relations Act** by Peter Paterson (Kogan Page, £1.80) comes a close second, but it is less detailed and less interpretative.

The book for lawyers is **Industrial Relations** by R. J. Harvey (Butterworth, £5.75). All the members of the National Industrial Relations Court had a copy close at hand during last week's hearing of the railway dispute. Hardly a bedside reader, it is certain to become a bible for budding industrial relations lawyers. One of the problems is that much of the Industrial Relations Act remains an unknown quantity until amplified by case law. So much of this literature may be quickly outdated. For example, according to the TUC guide, a work-to-rule is unlikely to be counted as "irregular industrial action." But last week the court's decision to impose a cooling-off period clearly assumes that the railwaymen's work-to-rule did count as just that. So Butterworth is publishing regular service supplements to Mr Harvey's book.

Facts from the Newsweek International 1971 Readership Survey.

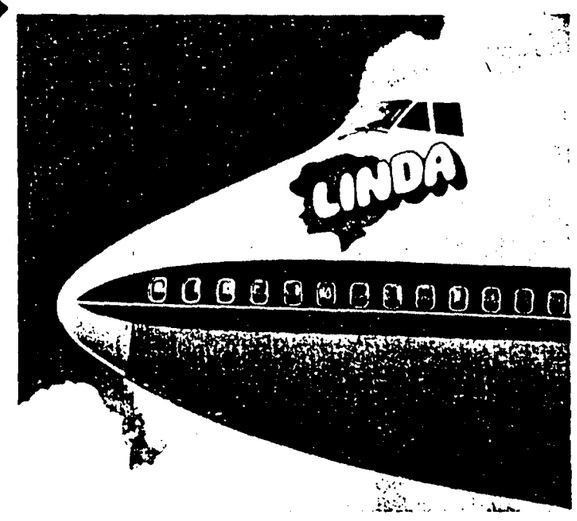
Sir Hubert Newton, Hon.M.A. (Keele), reports:–

"Record Level of Activity" "Total Assets now exceed £360m"

The Year 1971 was characterised by a high level of activity in both savings and home-loan mortgages. Once again the results achieved constitute a record. The total amount received during the financial year from members and depositors was £105,000,000. All reasonable requests for home-loans were met without difficulty. Advances of £66,000,000, for this purpose, were £23,500,000 higher than for 1970.

The Accounts. Total Assets increased during the year by £50,000,000 to £349,000,000, a growth of some 17%. In view of the substantial funds received the Directors decided to repay the Government Loan of approximately £1,600,000. Reserves of £17,000,000 (including a Taxation Reserve of £1,700,000) are now approximately 5% of Total Assets. The total Membership of the Society is now 412,000.

Development. Four new Branch Offices were opened during 1971. Eight more are planned to open in 1972. Improvements continue to be made at some existing Branch Offices. The Society now has 116 Branch Offices. During the year a number of improvements were made to the computer system and it is hoped that an even better service can be provided for the Society's investors and borrowers.



Mergers. During 1971 the Engagements of the following Building Societies were transferred to us: The Wearside (Sunderland); Tunstall (Stoke-on-Trent); Queen Anne (Barnstaple) and The New Homes (Twickenham). Your Board invites similar minded Societies to discuss merger proposals with them at any time without obligation. The year 1972, so far, has added further to our Total Assets which now exceed £360,000,000.

Scottish Widows new sums assured in 1971 over £300m– an increase of over 20%

The 158th Stated Annual Meeting of the Scottish Widows' Fund & Life Assurance Society will be held at 9 St. Andrew Square, Edinburgh on Tuesday 2nd May, 1972.

The following are extracts from the statement by the Chairman, Mr. A. I. Mackenzie, C.A., published in advance of the meeting.

New Business

The new sums assured in 1971 exceeded £300m. for the first time and the new annual premiums of over £9¼m. are again a record; these represent increases of 20% and 24% respectively on the corresponding figures for 1970. An even more important figure from the point of view of national savings is the Society's premium income and this has increased in 1971 by nearly £6m. to over £43m.

Rate of Interest

The gross rate of interest earned on our funds last year was 7.93% compared with 7.75% in 1970 and this is a satisfactory increase bearing in mind that part of our new money was invested in ordinary shares. The yield on these is usually less than that on long-term British Government Securities and for most of the year the reverse yield gap was of the order of 5%. This is a reflection of the fear of continuing inflation – a feature which constantly occupies the attention of the Directors and which affects the Society adversely in another area, that of expenses. Economy of operation is now even more important if we are to continue to show good results for our with profits policyholders and I am glad to say that the combination of improved computer systems and increased productivity has enabled us to contain within reasonable limits the rise in the ratio of commission and expenses to premium income. For 1971 the ratio was 14.8% compared with 14.1% for 1970. This is in spite of the substantial rise in new business which tends to increase the expense ratio in that special initial expenses have to be incurred in putting the new business on the books.

Investment Reserves

Both fixed interest and ordinary share prices have appreciated substantially over the year and this is reflected in the rise in the Investment Reserves from £33m. to £124m. While it is desirable that for the information of the members we should continue to show in the Balance Sheet the market values of our assets, this large rise over such a short period emphasises the desirability in the interests of continuity of neutralising by the use of our Investment Reserves the effect on the life fund of variations in market prices.

Bonus Declaration

A full investigation of the Society's position and a distribution of surplus was made at the end of the triennium 1969/71. This investigation has enabled the Directors to declare a record bonus of 4.25% on existing sums assured and vested bonuses, thus enhancing the Society's reputation for outstanding results. Increases have also been made in the bonus for with profits group pension schemes and a special non-recurring cash bonus has been declared on premiums paid under such schemes for scheme years 1969/71 as a corollary to the introduction of improved chargeable premium rates as from 1st January 1972. It also has been possible to improve the scales of terminal bonuses for both ordinary business and group pension schemes for the first half of 1972 and the rates are now higher than ever before. The valuation shows that the Society's position is immensely strong.

The Investor Policy

Our Investor Policy continues to be a very successful contract and the fund now amounts to about £2m. The unit value at 31st December 1971 was 232.5p compared with 168.3p a year earlier; this increase of 38.1% represents a satisfactory outcome compared with a rise of 36.4% in the Financial Times Actuaries All-Share Index adjusted for capital gains liability and reinvestment of net income. At the end of the year the fund was invested entirely in convertible debentures and ordinary shares and no fixed interest securities were held in it.

Pensions Management (SWF) Limited

The units of Pensions Management (SWF) Limited have also satisfactorily increased in value over the year from 101.96p to 138.75p – an increase of 36.1%. The fund has expanded rapidly and now amounts to about £15m. an increase of £6¼m. during the year. Almost all the new money was invested in ordinary shares including a small proportion in the USA and by the end of the year 65% of the fund was invested in equities and convertible stocks compared with 50% at the beginning of the year.

Investments

So far as our main life assurance and annuity fund is concerned, a comparison of our holdings at the end of 1971 with those of 1970 is misleading as an indication of the way in which new money has been invested. The differences in the figures are due to changes in prices over the year as well as the investment of new funds. In fact about £42m. was invested in 1971 and of this £29m. was invested in fixed interest securities, £10m. in equities and convertible stocks and £3m. in property. Our holding of ordinary and convertible stocks and property now amounts to 48% of the assets compared with 45% a year ago.

Pension Business

The Government's policy on the future of national pensions was fully set out in the White Paper "Strategy for Pensions" which was published in September 1971. This has resolved much of the uncertainty which has handicapped pension provision over the past few years and there has recently been an increasing interest shown by employers in providing pensions for their employees. We look forward to playing our full part in advising and assisting employers in the changes there will inevitably have to be over the next few years in the pattern of pension provision. We also welcome the new provisions introduced by the Finance Act 1971 for pensions for the self-employed and for those without other pension provision. The increased premium limits now allowed and the possibility of commuting at retirement part of the pension in exchange for a tax-free lump sum make these personal pension arrangements very attractive and we have recently revised our contracts so that the full benefit of these new features can be obtained.

Future Outlook

The results of the past triennium have demonstrated the success of our investment policy and the quality of our management and we are confident that in the future we shall be able to continue to give satisfaction to our members and to provide an efficient service over the whole of the life assurance and pension fields.

Shell-Mex and B.P. are pleased to be associated with drink.

Chivas Brothers, blenders of the connoisseur's whisky Chivas Regal, are one of our most valued and appreciated clients.

Until recently, they used anthracite to dry their green malt. Now they use hot air (mixed with peat smoke to give the product its characteristic flavour) produced by Butane – one of Shell-Mex and B.P.'s Liquefied Petroleum Gases.

Chivas went over to malt drying with Butane in January 1970.

This new system gives complete independence from possibly fluctuating supplies, cleaner working areas and the opportunity for more profitable production.

The potential field of application for Butane, and its companion Propane, is unlimited. Their unique and versatile properties can make a major contribution to industrial efficiency.

Chivas and LPG go well together.

We'd like to mix with you too.

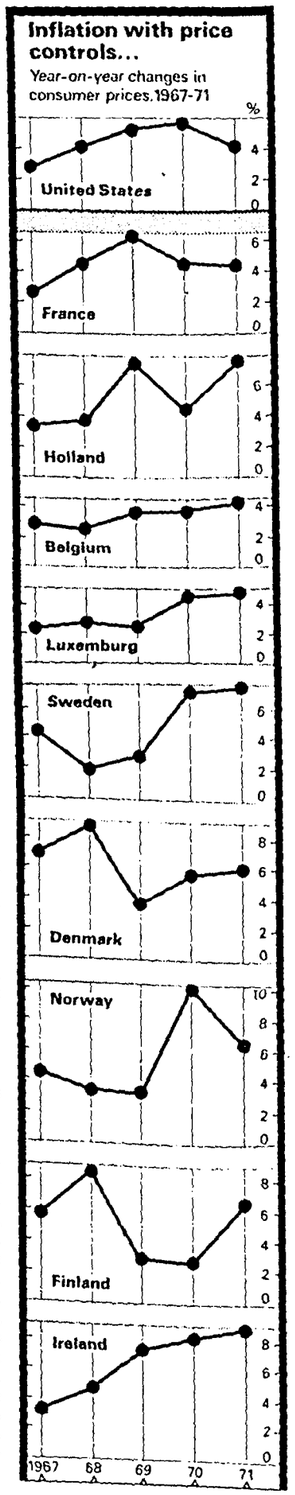
The power behind today's big names

Business Brief

Do price controls work?

Faced with inflation they have been unable to control, more and more governments in the past few years have resorted to some form of prices policy. The pace has been set by the most conservative administrations, especially those who originally said that they would introduce no such thing. The most dramatic example was the Nixon Administration, which turned round in its tracks last summer and introduced a three months' freeze on prices and wages, before setting up the watchdog mechanism still in existence. Attempts at statutory control have been made by liberal or conservative governments as far apart as Canada and New Zealand, but the great proliferation has been in Europe. The German Ifo economic research institute* recently counted a dozen European countries which imposed statutory price freezes or controls during 1970-71; most of the rest, including Britain, have also introduced prices policies, but not with mandatory powers.

The usual excuse for these price controls is that it will be impossible to operate even a voluntary incomes policy unless the unions believe that they are in effect. The big danger behind them is that they might reduce profit margins below the economic level, and cause an investment recession.



The major European country with the longest experience of a statutory prices policy is **France**. The last *contrat anti-hausse* ran from mid-September last year to the middle of March, based on a frame agreement between the government and the employers to keep the rise in manufacturers' prices down to 1.5% during those six months. This was more or less achieved for manufacturers' prices (which always are the easiest prices to keep down), but total French consumer prices rose by more than the projected 2% in this period; in February alone they went up by 0.6%.

In the longer term, French policies can hardly be called a wild success. Although there have been price controls of one kind or another since 1939, French inflation rates have almost invariably run ahead of most of the rest of Europe. The strategy since the devaluation of the franc in 1969 has been to agree price freezes or limits for a period of from three months to a year for particular industries or products, usually with some government quid pro quo in the form of a freeze on state industries—coal, electricity, railways and so on. Sometimes there has also been a moratorium on planned tax increases. Industrialists generally wait till the price freeze for their particular product has run out, and then slap on what price increases they need to restore their profit margins. Because of the widespread system of linking wage increases to the cost-of-living index and the high level of recent wage settlements in France, that usually adds up to quite a whack. When the last agreement ran out in mid-March, the patronat (the employers' organisation) pressed for an end to the controls, on the grounds that industry's capital investment was suffering while agriculture and services, which remained outside the control system, were getting away scot-free. The government eased up on small firms and heavy exporters, but for the bulk of French industry the controls stayed put.

Holland, caught in a particularly heavy bout of inflation from 1969 onwards after a long period of relative stability, brought in a general prices freeze from November, 1970; it was originally designed to last only till March, 1971, but was eventually extended to last August. The government was empowered to stop any price rises which could not be justified by higher import prices and other exogenous factors. It said higher wage costs would not be treated as an acceptable reason. But wages, spurred by index-linking, went up very much faster than the government had expected. The supervision machinery for the price freeze did not work. Price rises accelerated to an annual rate of over 10% in the second quarter of 1971. There has been some moderation since, but inflation this year is still expected to be much worse than before the freeze was imposed.

Belgium's experience with price controls may, at first sight, look happier. A quasi-freeze was brought in from November, 1970, and was relaxed at the end of last May. Industry had to give notice of, and seek to justify, any price increases during this period. As a general rule, firms were made to wait three months before a planned increase could be implemented. The exercise was more of a fail-safe device than an emergency measure. Before its introduction there had been no unusual pressures on either wages or prices; indeed in late 1970, just before the controls came in, there was actually a marked slowdown in the rate of inflation. After the introduction of the controls, prices went up quite a bit faster in the early part of 1971, but they stabilised later in the year (when the controls were relaxed). Belgium's rate of inflation is still among the lowest in western Europe. **Luxemburg** is so heavily tied up with Belgium's economy that it had little option but to follow the Belgians' lead. It had a slightly different timetable, and marginally higher inflation rates, but the general result was the same.

The whole of Scandinavia has recently been dosed with price controls. **Sweden** had a complete price stop imposed on food in August, 1970, followed, two months later, by a much more comprehensive freeze covering three-quarters of all consumer goods and services. Vat was increased in January, 1971. In 1970 Sweden's prices had risen by nearly twice the long-term average of 4% a year. In the first half of 1971, the price stop probably did serve to limit price increases largely to those resulting from a higher Vat and higher farm prices,

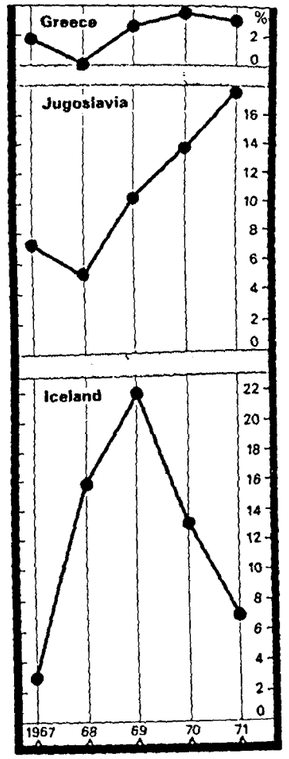
*Preisdirigismen in Europa. *Ifo-Schnelldienst*, March 22, 1972. Munich.

but inflation picked up again in the second half of last year and the controls have been gradually relaxed. The gloomy outlook for 1972 is for wage rises of around 10%, another hitch in agricultural prices, a shorter working week for many workers, and dearer imports because of last year's devaluation. The government is now relying on a price control law which compels the 3,000 biggest firms to report any price changes to it. There have already been hints that another freeze may be imposed if this system does not work, which it won't.

Denmark also imposed a near-total price freeze from the autumn of 1970 to the spring of last year; the only increases supposed to be allowed were those made necessary by more expensive imported raw materials. This was followed by a price control law, to run until next spring, which permits price rises only so far as they compensate for increases in raw material costs, negotiated wage increases (including the extra costs caused by index linking), transport costs and a few other listed items. There was an initial slowdown following the price freeze, but inflation has now bounded back up. Wage increases in 1972 have been running well ahead of productivity; the enforcement of the price controls has been very patchy; the link between wages and the cost-of-living index may have made the wage-price spiral endemic.

Norway introduced a price stop in November, 1970, after a year in which prices had risen by over 10%. It did achieve a slowdown in 1971, but 1970 had been a year in which Norway had made an especially large switch from direct to indirect taxation; Norway was one of several countries which said that its price controls were meant to help to compensate for the introduction of a Vat in early 1970 (which is a peculiar form of economic reasoning indeed). Its 1970-71 price freeze has been followed by a price control law—to run indefinitely—which stipulates prior notice of any planned price increases and a full explanation to the authorities.

Finland has operated a kind of multilateral bargaining system ever since its massive devaluation in 1967. (Austria has a similar, though less formalised, system.) At first Finland's round-table agreements—where the government, central bank, employers and unions worked out guidelines for prices and incomes—seemed to work remarkably well. After stabilisation agreements which allowed for wages increases of 4% a year, and which wisely abolished the pre-devaluation system of linking wages to the cost of living, Finland's rate of price inflation dropped to below 3% a year. But in 1971, after extended strikes between January and March, wages went above the agreed guidelines; the rate of price inflation then more than doubled. At the end of last month the government pushed through legislation, which will last until next March, to keep a close watch over prices and rents.



Ireland has had comprehensive price controls since October, 1970, and a special price control commission since last September. This has not stopped prices going up just as fast as across the water in **Britain**, where the Government still does not believe in a formal system of price control but is pushing very hard to have the informal CBI initiative renewed. **Jugoslavia** has had two successive price freezes since October, 1970; in theory they are still in force, but the theory does not seem very watertight—Jugoslavia's prices rose by over 17% in 1971. **Iceland** has been lucky with its price stop (which ran out last summer): it coincided with a period of exceptional economic growth which absorbed most of 1971's wage increases. It checked Iceland's previous huge inflation for a period, but prices will rise again this year. **Greece** has been trying to enforce price controls since last summer, but amid the colonels' usual administrative delays; Greek data nowadays are dubious.

Just wait till you see the price tag

In **America**, the success of phase two is still in the balance. The latest figures—an annual rate of inflation of over 6%, in the first quarter, against a long-term target of 2½%—look fairly bleak, even allowing for a backlash after the end of the freeze last November.

As a general rule, the more urgent the need to control inflation, the less successful price controls seem to be. The occasions when they seem to work—as in Belgium in 1970-71—are often occasions when they were not really needed anyway. If trade union monopoly bargaining power is checked by an incomes policy—as in Finland in 1967-71—price stabilisation can follow for a while. Smaller countries, with more internal feedback, are more likely to be able to enforce price controls than large ones. Perhaps law-abiding countries like Britain can enforce them more successfully for a while also; this may be a great disadvantage if the result is to cause so large a cut in profit margins that there is then an investment recession. In large and less-law-abiding countries like France, which has a longstanding tradition of price controls and a permanent staff of 2,000 to enforce them, the statistics suggest that the controls are mainly a traditional French farce. There is sometimes a pause while each period of controls lasts, but then a race to catch up when the controls come off.

BUSINESS

The pound in a new straitjacket

The first step to set European Monetary Union going was taken on Monday. It won't help Britain

After all the fuss in getting it to the starting post, Emu's quiet debut on Monday seemed out of keeping. But the formal initiation of the common market's scheme to keep its currencies within a narrow band in the foreign exchanges required no action whatsoever: the currencies were already within that band. The Belgian franc may have had to be sold last Friday, before the club joined up, to get it into the new "snake in the tunnel." But since then, up to Thursday anyway, there has been no need of central bank intervention.

Under the club's rules, the range between the strongest and weakest spot rates of European Economic Community currencies must be no more than 2¼ per cent in terms of deviation from the new central rates; this is just half the maximum 4½ per cent deviation accepted by most countries last December. Since the middle of March, the EEC range has been for the most part only about 2 per cent: with, as this week, the German mark, French and Belgian francs about 1½ per cent above their central rates, and the Italian lira ½ per cent below its central rate.

However, the Euroband is not a non-event—as, unhappily, Britain may be forced to realise. The pound will join the new club as soon as the Bank of England is wired up to the hot line between the common market central banks, which could be by next Monday. On present form, the pound will be in the lower half of the Euroband. It was only just nosing above its central rate this week. In the next year it seems almost certain that Britain's balance of payments will deteriorate, which should normally cause the pound to head downwards compared with the strongest European currency, the mark. Emu would not have been brought into being if the foreign exchange markets had not been in one of their rather rare periods of currency non-crisis. Unfortunately, this calm will not last. It owes too much to special circumstances.

The first of these is the highly undesirable degree to which European countries and Japan were forced earlier this year to resort to exchange controls. These are already threatening multinational business, and must be relaxed in due course. A more recent factor has been that short-term interest rates have continued to rise in the United States, while rates in key European countries have continued to decline. But some interest rate policies are already being unduly influenced by the international scene. Eventually domestic requirements have got to take over. It will need only a slight reversal of present interest rate differentials to affect immediately the cross-rates between the dollar and European currencies.

It is therefore not a jeremiad, but a commonsense precaution, to say that the time must be envisaged, and maybe not so far ahead, when the pound, together with the lira, will be trying to drop through the floor of the Euroband and the D-mark will be trying to rise through its ceiling. What will happen then? The new rules will require the central banks of the top and bottom currencies in the Euroband to take the main responsibility for keeping their currencies within the band. In our scenario, therefore, the Bundesbank will have to buy sterling, and the Bank of England will have to sell D-marks. But if pressures persisted, there would surely come a limit to the extent to which the Bundesbank would be prepared to stack up reserves of sterling, or lire, or whatever the least desirable European currencies were. The Germans would then presumably start to ask the British and Italians please to deflate their economies. No doubt Mr Barber will say that he would have no intention of acceding to any such request. The intention is that if currencies do break out of the Euroband the new system of multi-currency intervention would merely be replaced by the old one: the central bank of the strong currency would go over to buying dollars and the central bank of the weak currency to selling dollars. But there would be some awkwardnesses on the way, especially if the Bundesbank still did not want dollars.

Some soothing voices in the City this week were mewing that Emu is just another Epu. This is not true. The old European Payments Union (Epu) was set up in 1950, in the age of inconvertibility, as a financial clearing arrangement between European countries so that they could hack away their previous web of bilateral accounting. Settlement of net payments positions was made through the Bank for International Settlements, partly in gold and partly in credit. Under the new Emu system, there will be monthly bilateral settlements between the central banks concerned. The debtor country will have to cough up reserves in a mixture on a pro rata basis: that is to say, in the proportions in which it holds

the various reserve assets. It will not be allowed just to repay in surplus dollars. Of course, if it has not got reserves, it will have to borrow them from its partners —or from the International Monetary Fund now that a way has been found for Britain to repay its debts to that institution, so providing a new, automatic lifeline of £292m. But borrowers tend to lose some independence in domestic economic policy. There really are going to be unnecessary discomforts for Britain if sterling shows a propensity to be at the bottom of a Euroband fully extended to 2¼ per cent. It is true that this new Euroband will still be wider than European margins under the old world currency system that broke down last August ; but that will be little consolation when non-European currencies are enjoying the 4½ per cent global dollar band.

One aspect of this week's move is all too familiar. Once again central bankers are ranging themselves into a collective group for the main purpose of defending "stability" in exchange rates. Most of them honestly think that it is another step towards European unity. In reality it is a step away from that goal. In order to bring about the "calm" in exchange markets, which they saw was necessary before they could cram their "snake into the tunnel," most European countries in recent months have imposed capital controls. Now the controls will probably have to be intensified each time the snake starts to wriggle out of the tunnel, as it will constantly be trying to do. Yet a control-free capital market is one of the things that "European unity" ought to mean. Instead, central bankers seem to think European unity will be better served by creating an artificial forum in which they themselves will have to meet together far more frequently, because they will be trying to keep exchange rates at an unnatural level.

Yet, oddly, one of the reasons why Britain has meekly accepted Emu is that it thinks that this more frequent forum will be a good thing. The inauguration of the EEC's new currency regime this week was thought sufficiently important to be marked by an informal two-day meeting of its finance ministers and central bankers in Rome. Britain's top two, Mr Barber and Sir Leslie O'Brien, joined in it ; and were apparently pleased at some of the subsidiary decisions that were taken. The Europeans have fallen in line with the American wish that negotiations over a revised world monetary system should be conducted in a Group of Twenty (including representatives from the developing world) rather than in the Group of Ten industrial countries which have resolved such issues in the past decade. Mr Barber is still playing the role of leading reformist : he has invited his fellow finance ministers in the enlarged EEC to talks in London in June or July. Although there is no sign that the ministers have any common view about what needs to be done, this will no doubt be a pleasant jamboree ; but the putting of sterling into a straitjacket seems a pretty high price to have paid for it.

Waiting for the last Apollo

The parachutes opened, the helicopters took off from the carrier decks, and three more men came safely back from the moon on Thursday evening. It will happen, with luck, once again this year—and then what?

Seeping into the American consciousness is the realisation that by the end of this year the last Apollo will have gone to the moon and—God willing—come safely back, and that will be an end of it for the next 15-20 years. A groundswell of regret for the moon the Americans are about to lose showed itself for the first time when the Apollo 16 astronauts took off and more people turned up to see them go than had ever gone to the Cape before, even for the first moon flight just under three years ago. Admittedly the launch was on a Sunday, and a fine spring one at that, but it attracted a crowd equal to half of 1 per cent of the entire population of the United States.

While Apollo 16 was still on its way, something of the same spirit seeped into a Congress whose customary attitude to space now fluctuates between the indifferent and the openly hostile, and both the Senate and the House of Representatives approved the Administration's plan to follow the Apollo programme with one for a space shuttle with only the few obligatory grumbles.

Regrets are too late now. But Apollo 16's mission—which was not, and had never promised to be, scientifically very interesting—was an outstanding technical triumph because it demonstrated repeatedly during the 12 days of flight, and even before them when the rocket was giving trouble on the ground, that big enough safety margins had been built into all the key apparatus to make it possible to go to the moon, work on the moon, and come back again from the moon with equipment a good deal less than 100 per cent perfect. The fear about space flight had been that unless every one of several million components functioned as planned, men's lives would be put at risk. Apollo 13, limping back with a gash in its side that would have crashed an aeroplane, demonstrated that the rockets were tougher than they looked, but that might have been a lucky fluke. Apollo 16, with faults and hitches in some of its most vital systems, proved that it was not.

The crew fell over repeatedly on the moon ; bits fell off their lunar rover ; their navigating system failed on the moon's surface—all things that once had been expected to kill them. Even their orange juice produced results that the more delicately-minded at the National Aeronautics and Space Administration have erased from the transcripts. But they splashed down just the same on Thursday with 218lb of moon rocks (net of their bags), something like 1,700 photographs, and a growing volume of evidence that the moon is a place where man can live and work if he chooses to.

By now, the Americans have brought back 500lb of moon rock, or getting on for a quarter of a ton. Only about 80lb of it has been distributed, which leaves a huge stockpile on which scientists can work during the years when the Americans will not go back to the moon again. But it is not clear whether the rocks have that much more to tell. In spite of the belief that ran through the United States Geological Survey, but not through the more experienced geologists at Nasa, that the Cayley region might turn out to be volcanic, it proved to be very like the Fra Mauro region where Apollo 14 landed ; Nasa's geologists would have been astonished if it had proved any different.

The guesses made when Apollo 11 brought the first moon rock back have been increasingly borne out on subsequent flights: that the moon was formed out of a molten mass in which the lighter materials, the alumina silicates and the like, floated to the surface and formed a crust as the moon cooled. The mountains and highlands are still formed out of this crust, but a second, violent melting process occurred later inside the moon, which churned up the heavier materials that had sunk inside it and these poured out in great, molten floods that now form the moon's plains. This process explains why the old highlands and mountains are so much less dense than the plains, and why a good deal of radioactivity is detected in the plains, usually by the command module pilot orbiting alone while the two other astronauts are on the ground. Lieut-Commander Ken Mattingly picked up a good deal of this when he was alone in orbit in Caspar while Captain John Young and Lieut-Colonel Charles Duke were on the surface with Orion. In the five Apollo flights to date, the Apollo 16 mission has probably gone furthest to confirm this model.

But of what importance is it, if the Americans are not going back to the moon again ? Their flights have made it necessary to re-write the text books, and if December's Apollo 17 flight, the last, confirms that there have been relatively recent volcanoes on the moon—which is what pictures of the proposed landing site suggest—that re-writing will be really drastic. But useful though that may be to scientists, to posterity and to children now at school, it does not justify the $25 billion effort that the Americans put into landing on the moon, nor does it warrant risking the lives of 21 men of great intelligence and skill.

The justification for going to the moon was to find out if men could stand on its surface, and having stood there, live there. In a crowded world, a new frontier was being opened up. The physical strains have proved considerable, but, whatever the Apollo 16 crew may have thought about their orange juice, the potassium added to it made it possible for them work for stretches of up to seven hours on the moon's surface. Earlier astronauts, who had not received the potassium treatment, had not had sufficient stamina to do that. The tiny size of the lunar module, and the limited stores it could carry, make it look as if the Americans could never have planned to stay on the moon for more than the three days that Orion was there, given their present equipment. To have done more would have needed bigger rockets—like the monster that the Russians are building without, apparently, being able to launch it.

But this is not necessarily so. From the time when Apollo 12 made its pinpoint landing in 1969, it was clear that unmanned Apollo rockets packed with stores could be fired to the moon to land more or less beside the site chosen for the astronauts. If the Americans had taken the decision to experiment in this way at the time, before the Apollo production lines were broken up and the teams dispersed to the four corners of the United States, then they might by now be planning for small, scientific stations which could be periodically visited as stations in the Antarctic are visited now. But the opportunity has been rejected.

There is only one more Apollo in a state fit to carry men to the moon. The Americans have shortened their horizons, and trimmed their vision to the relatively mundane business of building an orbiting space station round the earth and the shuttle that will ferry people up and down to it. This is a plan that has enthusiastic, if undercover, military backing for the most obvious of military reasons. And, in time, it will form a launching base for flights again to the moon. But the stages that the Americans must go through before they reach that position are slow and expensive: first, the shuttle ; then the permanent space station ; and finally the moon-ship which will be ferried up, assembled at the station, and then launched for the moon and eventually to Mars. Optimists think this could be done within 15 years, but at the present pace 20-25 looks more likely. Only spectacular Russian progress in building moon bases is likely to spark off the kind of crash programme that put the Americans on the moon at all. But the Russians have their own problems.

Rock collecting went well . . .

. . . and most of the experiments . . .

. . . but at times you had us dead scared

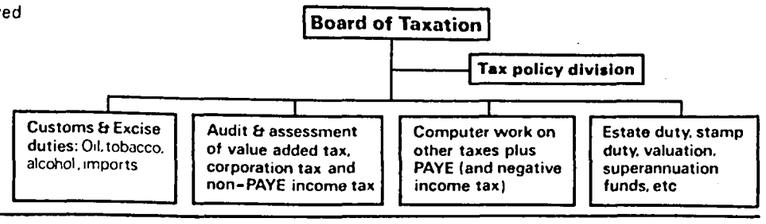
Let's have a taxes board

The Government is doing much to reform the tax system, but a good deal less to modernise the way it is administered. Here is one of the changes it could make

Since the Wilson government faced a near-revolt inside the Inland Revenue because it was introducing too many new taxes in the mid-1960s and introducing them too fast, successive Chancellors of the Exchequer have taken the precaution of arranging for their new taxes to be collected by more docile departments. There is a case now for saying that the process has gone too far, and that the entire system of tax collection should be rethought from the beginning and reorganised, probably under a single Board of Taxation.

Two developments make the rethink urgent. The most immediate is the introduction of value-added tax. The Inland Revenue has been by-passed here, just as it was when the Wilson government introduced selective employment tax and arranged for it to be collected at first by the old Ministry of Labour and then by what is now the Department of Health and Social Security. Vat is to be collected by the Customs and Excise. But it is quite unlike any of the excise duties that the Customs has collected before, including the purchase tax it is replacing. Vat has much more in common with both the corporation tax and income tax collected by the Inland Revenue. In a practical sense, it would be easier, and take several thousand fewer men, if the Inland Revenue collected it.

If this were the only anomaly, it would not necessarily be desirable to reorganise the traditional system of tax administration in this country to correct it. But behind Vat there looms the even bigger question of negative income tax. If a system of negative income tax is eventually introduced, to replace a raft of the present social security benefits, it will create links between social security and pay-as-you-earn income tax. The system will be anything but easy to administer, and the case is strong for setting it up as a special division of its own, based on the Inland Revenue's Paye computer network.

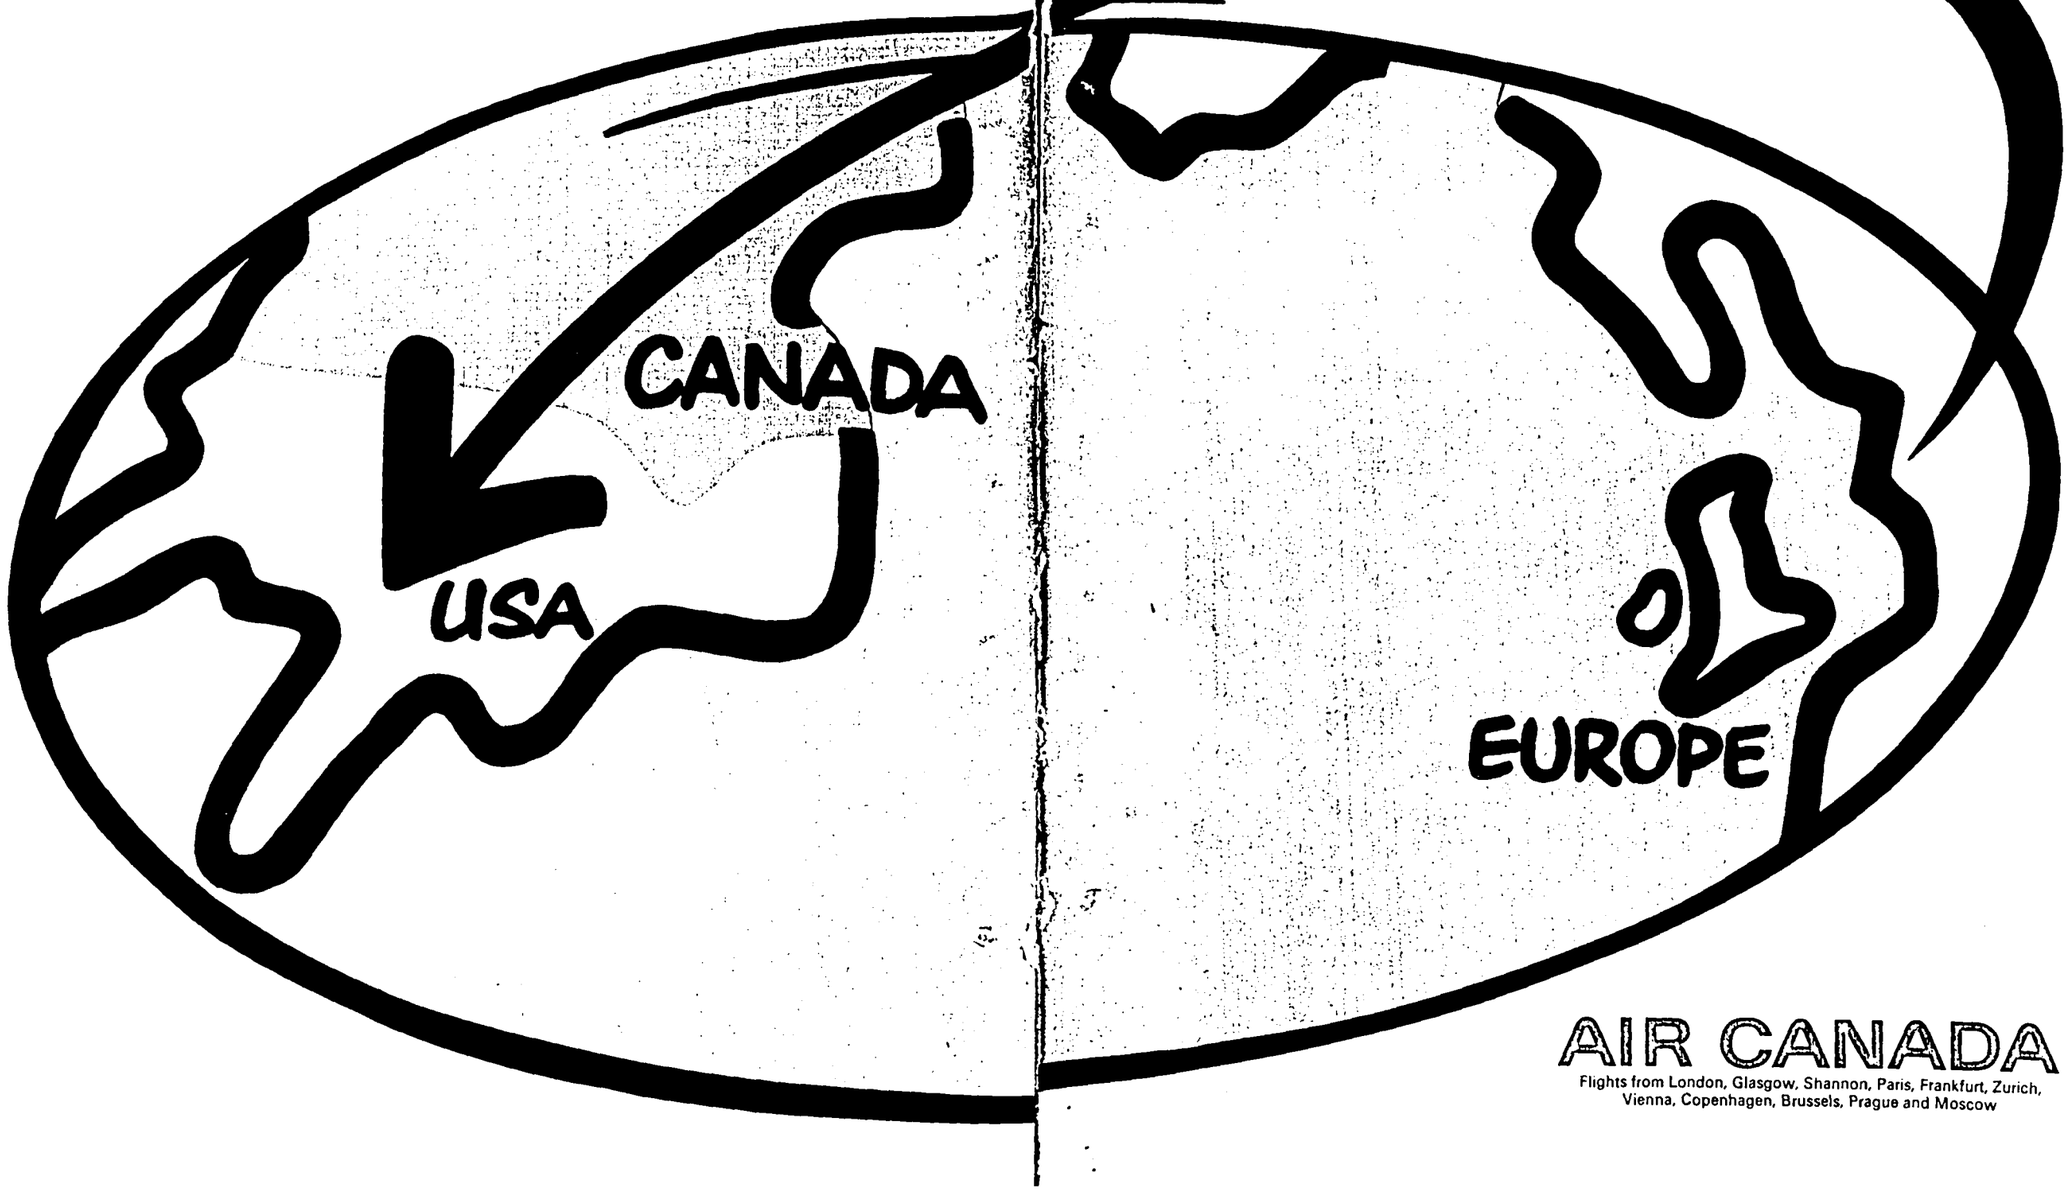


Then the rest of the tax system could be rationalised into three further divisions. The first would deal with all other income tax, with corporation tax, capital gains and Vat. The second would concentrate on the excise and other duties traditionally collected by Customs and Excise. The third would deal with estate duty and the rest. All four would then come under a single Board of Taxation in the way shown in the diagram.

Both the present tax-collecting departments, Inland Revenue and Customs, will deny the need to combine Vat with corporation and other income taxes. But they have already given the game away in the current Finance Bill. This has a clause (No. 116) which allows the two departments for the first time to exchange information on tax matters. The Customs says this is for convenience and will rarely be used. But it is significant that the sort of information that has to be given in order to check that the right Vat is paid is more or less that needed to assess corporation tax and company income tax. The amount of Vat due in any quarter will be arrived at by subtracting expenses from sales. With the single exception of wages, which can be charged against profits but not against Vat, the same data are needed by both. What is the point of doing the collecting twice over?

Capital spending will be treated differently under Vat and under other company taxation. But, once again, the same sets of figures will have to be produced twice: ie, bills showing that equipment has been bought. In theory, there is one fundamental difference: that Vat will be self-assessed while company taxes are not. But in practice, for many years now, company taxes have been as good as self-assessed under one of those tacit agreements between industry and the Inland Revenue. The Government is thinking anyway about officially introducing self-assessment for all. In America, where it is used universally, it produces the sorts of savings that allow American tax inspectors to get through three times more work per head than British.

Whitehall will have one last objection. If the various revenue departments are going to be given powers to exchange information among themselves, is it really necessary to go to the length of merging them? Such a merger, it will be explained, would cause much inconvenience and upset, because it would be bound to be read as a downgrading of the proud and efficient Customs and Excise. The answer here is that the merger really is necessary if the convenience of the taxpayer counts for anything. Vat is bound to be an irritant, particularly to all those traders who have never paid purchase tax. If the checking of Vat returns is put in the hands of the corporation and income tax assessors with whom they already have to deal, businesses will be spared the vast inconvenience and considerable cost of having to provide separate Vat checks as well. And, to judge from the sorts of penalties that the Customs has demanded for Vat offenders, the Inland Revenue's men are likely to be a good deal more tactful.



Who does what now	Numbers employed
Customs & Excise	**17,949**
Oil, tobacco, drink	8,911
Ports & airports	3,595
Headquarters	3,443
Purchase tax	2,000
Inland Revenue	**69,000**
Paye	30,000
Corp tax, other income tax, etc	24,500
Estate duty, etc	14,500

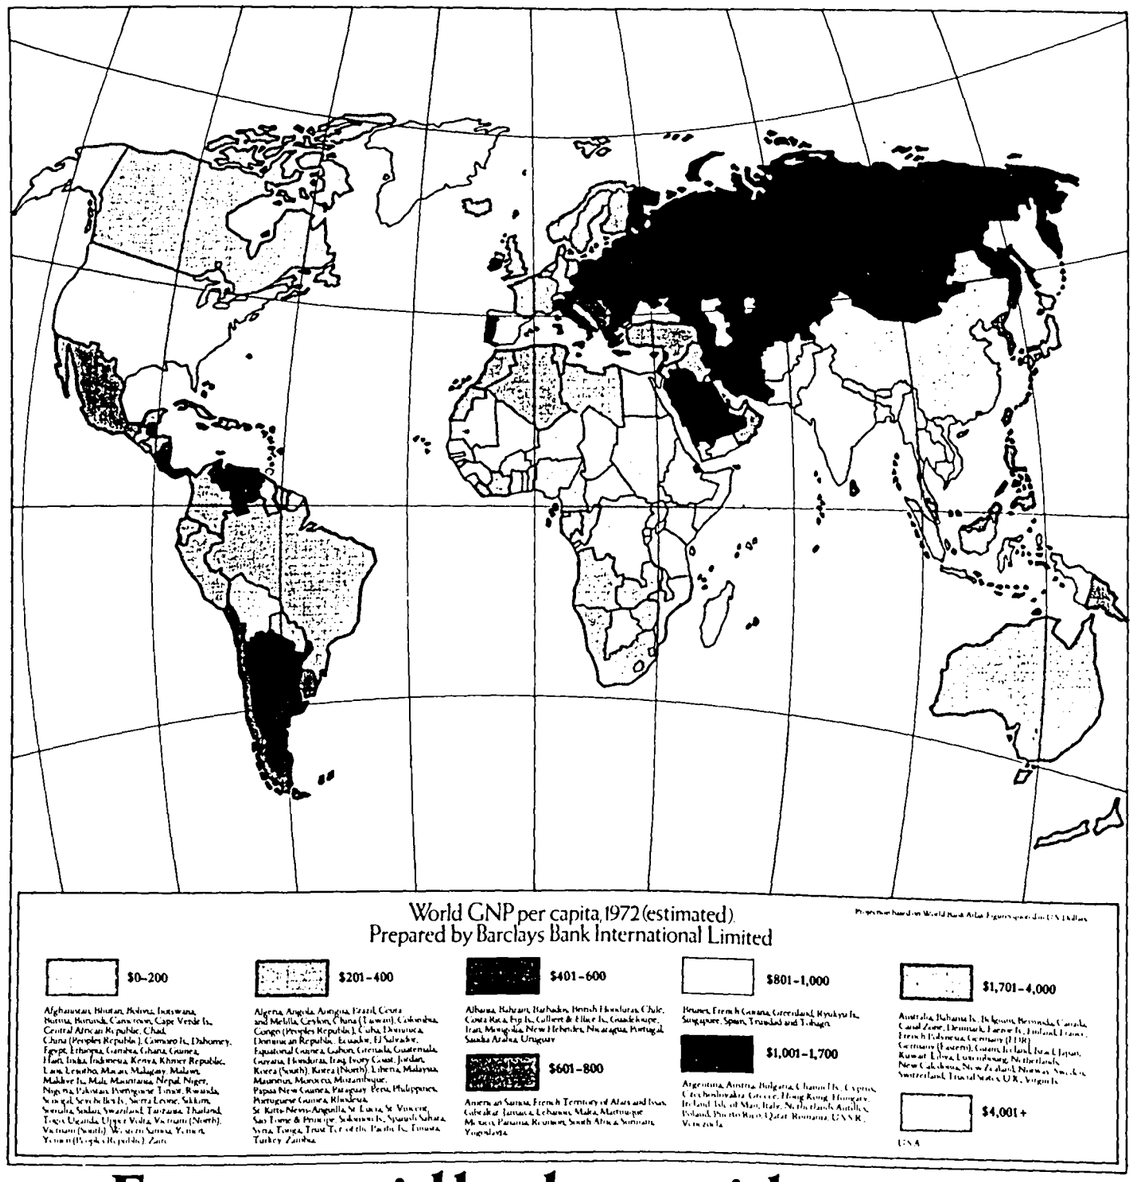
Fly the difference



The difference is people. Our people who believe that our airline should be whatever you need whenever you need it. With a word in your own language; a friendly smile, a helping hand.

That's the difference.
And it happens anywhere you meet us.

But don't take our word for it, just because of our reputation for reliability.

Test us. Try us.
Fly the difference.

KLM

From a special bank, a special viewpoint.

You may never need to know about Gross National Product per Capita, even when you are planning or doing business abroad. (Although it can be a novel way of looking at the world for new opportunities.)

But as Britain's first international bank, our business is to be fully informed on the world business scene. And because we know the value of taking the occasional unorthodox viewpoint, we're constantly researching, testing and questioning everybody else's accepted ideas.

With the result that whatever your international business problem, we're likely to have an original solution to it.

Together with new ideas, we can offer you an exceptional standard of service.

Since we have more overseas offices than any other bank in the world (over 1,700 with our associates and subsidiaries) we can often do in one neat operation what it has usually taken a whole team of banks to transact – saving the customer time, trouble and money.

With our major resources and comprehensive experience, we can offer customers a complete service in *all* departments of international banking: from currency exchange to financial backing abroad, and from key introductions to documentary help with shipping.

But our thinking hasn't stopped there.

We are already in most of the world's major growth areas and are planning expansion into even more. (Our recent success in the tough banking market of the USA encourages us to hope that we'll do well anywhere.)

And we intend to be in the future what we have been in the past – a bank that anticipates customers' needs and problems, and is always qualified and willing to solve them.

We invite you to get the specialists' view from Barclays International. Barclays International is a world of banking.

BARCLAYS

Hugh thunders, Jack delays, Vic compromises and the railways cool it

It was easy for Mr Hugh Scanlon and his engineers to declaim against the Trade Union Congress and Mr Vic Feather on Thursday because they were contributing to the "speedy, large-scale erosion of trade union rights" by advising unions to turn up at the industrial relations court in future. Mr Scanlon is in no danger at the moment of being called before the court; he is not likely to be served with a cooling-off order as the railwaymen were, nor yet with a £55,000 fine for contempt of court as Mr Jack Jones has been on behalf of the Transport and General Workers' Union. That leaves him free to thunder from the sidelines for all he is worth.

Mr Jones may be beginning to see it rather differently. His union has put off until Monday the agonising choice about whether to pay the fine with as good a grace at it can muster, or see the money deducted by the court from the TGWU's sequestered funds. Mr Jones may still be hoping that someone else—the TUC? a good fairy?—will pay it for him before sequestration has to happen. He said pointedly on Thursday that he felt that the burden of holding out against the law should be shared over the whole union movement, but the only immediate response was Mr Scanlon's, and that was not helpful.

It obviously changes a union's attitude to have felt the weight of the court's displeasure, but in the end does it make all that much difference to its pocket? The railways cooled off with remarkably little trouble after all the huffing and puffing over the weekend. By Monday the trains were back to normal everywhere except on the Southern Region, and even there the militant train drivers held out for no more than another day. The unions were unhappy, but all that they had lost was face; they were set to resume preliminary talks again on Friday with British Rail with a firm offer of a 12½ per cent wage increase under their belt. That might well go to 13 per cent as a reward for virtue alone.

The going rate for wage increases is leaping from around 8 per cent at Christmas to 12 per cent now, and the turnround is almost entirely because of the miners' 25 per cent. On Tuesday, the 750,000 builders and 67,000 steelmen both rejected 10 per cent offers. Recent deals of 10.6 per cent for 52,000 seamen and 11 per cent for 38,000 post office clerks are about the norm. British European Airways' ground staff, which had a one-day strike planned for Friday, settled for what BEA describes as 8 per cent, but it gives them another 10 per cent from October. This leaves BEA now with the problem of its pilots, 17 of whom were threatened with the sack on Thursday. But they are fighting about something more complicated than wages.

Many other workers, including the tube men, who have threatened to go-slow from Monday are specifically awaiting the outcome of the railway talks, and expect to get no less than the railwaymen.

The most hopeful omen, at the moment, is the continued failure of Mr Scanlon's lengthy assault on the Manchester engineering firms. A number of his troops now seem to be getting fed up with sitting-in or striking. On Monday, for example, 2,000 workers at Mather and Platt decided overwhelmingly to accept a wage offer, although the local union official argued strongly against it. Other sit-ins and strikes also ended this week.

The TUC's softening attitude does not mean that its policy of non-co-operation is finished yet. There is no sign of back-pedalling on registration. Although a significant minority of independent unions like the actors, the seamen and the bank employees are registering, no big unions have.

There is a chance that the Union of Shop, Distributive and Allied Workers (330,000 strong) will decide to register at next week's annual conference. But even if it does, the TUC is unlikely to shift its policy at its September congress. However, the policy of not providing union men to sit on industrial tribunals is not likely to last long. The first batch of cases under the unfair sackings section of the act will soon be heard by tribunals, and several union leaders are keen to be on hand.

We're in this together, Vic. Better play it cool, Jack

Bridges

Box-girder blues

The steel box-girder bridge, at least in anything like its present form, is dead. This was the implication of a long and highly technical discussion on such bridges at the Institution of Civil Engineers on Tuesday. Members of the Merrison committee, set up in December, 1970, to examine the basis of the design and the method of erection of steel box-girder bridges after the collapse of those at Milford Haven and Melbourne, told the meeting that they were aware of the possible economic effects of the rules that they hope to publish next year. They went on to promise that they will do their best to make them as simple as possible.

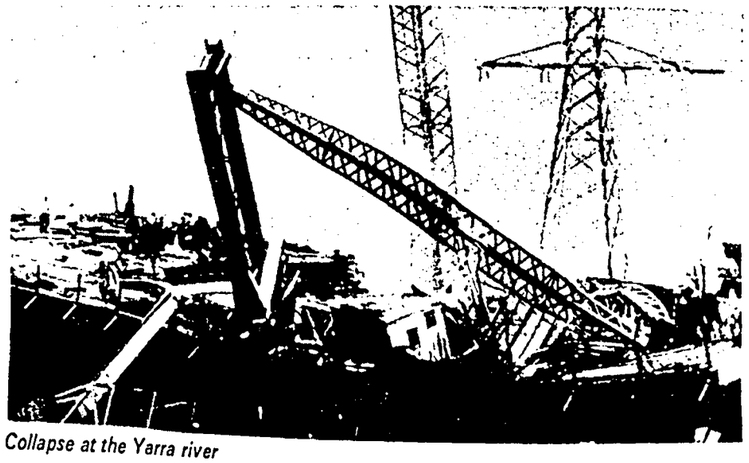
The cost of the mistakes by the construction industry is rising although the total bill for reappraising all the bridges and improving some of them is as difficult to quantify as the cost of the lane restrictions that still exist on some bridges. Box-girder bridges built to new specifications are bound to be too expensive over certain spans. Already designers and contractors are seeking other solutions.

The lowest tender for the A19 Teesside diversion, which includes a bridge with a span of 384ft, has reverted to the well-tried method of using plate girders. But even this has come under Merrison's appraisal rules. Engineers have run checks on plate-girder bridges only to find that some of them do not stand up to the criteria Merrison set in the interim report in September, 1971. Nevertheless, the costs of improving the plate girder design are much lower than improving the box-girder one.

Textiles

The old, familiar lobby

As shareholders of Carrington Viyella, one of Britain's largest textiles combines, trooped into their annual general meeting at the Dorchester Hotel on Wednesday, a small band of demonstrators protested outside against the textile industry's growing demands for protection (they might have bought some shares and asked a few questions at the meeting). The point they were making was that a company reporting a £6m profit (against £1m last year) could have no cause for complaint, and that with the Unctad meeting in Santiago still going on the British should be thinking of ways to help the developing countries rather than the reverse.



This time round the protectionist lobby is more powerful and better organised than ever before—and those that want to stand against it had better get a move on. The British Textile Employers' Association, under Mr Tom Normanton, a new Tory MP, has submitted a memorandum to the Department of Trade and Industry setting out the bargaining position it would like to see the Government take in the detailed EEC negotiations. The British Textile Confederation, chaired by Carrington Viyella's Mr Jan Lewando, is also working on a position paper; he impressed Conservative backbenchers at a meeting on Wednesday evening.

The common market does not have a textile policy, and as Britain's textile industry will be the largest in the EEC it expects to play a large part in formulating what that policy should be. The British have already joined Comitextiel, the European textiles' industries' association. It is just possible that the commission will have worked out its policy by the summer.

The objection to protection is that it leads to higher prices for the consumer. As a spokesman for the textile employers has said, foreigners are astonished by the cheapness of textile goods in British shops. Exactly. That is why they flood into Marks and Spencers by the coachloads. A by-product of the high level of import penetration into Britain is a textile industry which is probably as strong and efficient as anything on the continent of Europe, which is why the British industry can look forward to joining the EEC with confidence.

In the piece of special pleading sent to the DTI, the employers point to the difference between the 10 per cent that cotton textile imports take of the EEC's market and the equivalent of 28 per cent in Britain. The figure is a trifle misleading. Some European countries are very liberal—Germany and the Netherlands—and some are notoriously restrictionist—like France and Italy. And it is not all coincidence that the French and Italian industries are, in large part, hopelessly uncompetitive; Montecatini Edison, the Italian giant, lost all of £130m in 1971 as it battled to get reorganised and efficient.

Clearly Britain will not keep an open-door policy when other countries' doors are only slightly ajar. It can reasonably take action against dumping and unfair trading practices by others. But the right policy for the British Government is to exert its traditional liberalising influence in textiles on its European neighbours.

Collapse at the Yarra river

Shipbuilding

Name your price, Wayne

Mr Chris Chataway, the new Minister for Industrial Development, announced on Tuesday that he was putting another £3m on tap for Cammell Laird, the Merseyside shipbuilding group, which is now half owned by the Government. Then he began negotiations with Mr Wayne Harbin, president of Marathon, the Texas firm negotiating to buy the last remnant of Upper Clyde Shipbuilders, the Clydebank yard, for oil rig building.

Mr Harbin seemed to be having relatively little trouble in getting the £12m aid he wants from

ROYAL DUTCH PETROLEUM COMPANY

(N.V. Koninklijke Nederlandsche Petroleum Maatschappij)
Established at The Hague,
The Netherlands

FINAL DIVIDEND 1971

The General Meeting of Shareholders of Royal Dutch Petroleum Company held on 20th April, 1972 has decided to declare a total dividend for 1971 of N.fls. 7.25 (including the interim dividend of N.fls. 3.50 already made payable in September 1971) on each of the 134,018,522 outstanding ordinary shares, so that the dividend still to be made payable on these shares will amount to N.fls. 3.75.

A. On the Bearer Shares

(i) This final dividend will be payable against surrender of coupon No. 151 on or after 25th April, 1972 **at the offices of N. M. Rothschild & Sons Limited, New Court, St. Swithin's Lane, London EC4P 4DU** on business days between the hours of 11 a.m. and 2 p.m.

Payment will be made in sterling at the buying rate of exchange current in Amsterdam at 2 p.m. on 25th April, 1972 in the case of coupons presented on or before that date, or on the day of presentation in the case of coupons presented subsequently. In view of the fact that Netherlands guilder funds are being provided by the Company for payment of this dividend, the usual foreign exchange commission will be deducted from the sterling proceeds. Coupons must be accompanied by a presentation form, copies of which can be obtained from N. M. Rothschild & Sons Limited, and the face of each coupon must bear the stamp or other indication showing the name of the presenter. Lists of the definitive numbers of the share warrants from which the coupons have been detached need not be provided with the presentation form.

Coupons must be left for an appropriate period for examination and must be handed in personally. Coupons cannot be paid through the post.

In the case of shareholders not resident within the Scheduled Territories the paying agent may, at the request of the Authorised Depositary presenting the coupons, pay the dividend in a different currency. Information in this respect will be supplied by the paying agent upon request. From the gross dividend the Netherlands dividend tax of 25 per cent is to be deducted, except where coupons are presented on behalf of residents of France and the appropriate declaration Model A or B Fr. is provided.

Netherlands dividend tax at the reduced rate of 15 per cent will be deducted where:

(a) United Kingdom income tax has also been deducted;

(b) Coupons are presented on behalf of residents of the United States of America, Austria, Belgium, Canada, Denmark, Finland, Ireland, Japan, Luxembourg, Netherlands Antilles, Norway, Surinam, Sweden or West Germany, provided they lodge the declaration form No. 92 V.S., No. 92 OST, No. 92 B, No. 92 CAN, No. 92 DEN, No. 92 FIN, No. 92 IER, No. 92 JA, No. 92 LUX, No. 92 N.A., No. 92 NW, No. 92 SUR, No. 92 ZWE or No. 92 D respectively.

(ii) On 25th April, 1972 this final dividend will be paid to Depositaries admitted by Centrum voor Fondsenadministratie N.V., Amsterdam, on the shares whose dividend sheets were in their custody at the close of business on 20th April, 1972. Such payment will be made through the medium of N. M. Rothschild & Sons Limited, after receipt by them of a duly completed CF Dividend Claim Form.

Where appropriate, the usual affidavit certifying non-residence in the United Kingdom will also be required if payment is to be made without deduction of United Kingdom income tax.

Where under the double tax agreement between the United Kingdom and the Netherlands 15 per cent Netherlands dividend tax has been withheld, the 15 per cent Netherlands tax is allowable for a resident of the United Kingdom as a credit against the United Kingdom income tax payable in respect of the dividend. The deduction of United Kingdom income tax at the reduced rate of 23.75 per cent instead of at the Standard Rate of 38.75 per cent represents a provisional allowance of credit at the rate of 15 per cent.

B. On the Registered Shares registered in the United Kingdom Section of the Amsterdam Register

On 20th April, 1972 the sterling amount of the dividend will be fixed on the basis of the sterling/guilder rate of exchange current in Amsterdam on that date.

The record date will be 1st May, 1972; shareholders registered at the close of business on that date will be entitled to receive the dividend.

On or before 23rd May, 1972 dividend warrants will be posted by the transfer agent, Algemene Bank Nederland N.V., Amsterdam, to shareholders registered in their books on the record date.

From the dividend on the registered shares Netherlands dividend tax of 25 per cent has also to be deducted. Where under the relevant tax convention shareholders are entitled to a reduction of the Netherlands dividend tax, this can only be effected through a request for a full or partial refund of the tax withheld on the appropriate tax affidavit. A further announcement will be made as soon as possible after 20th April, 1972 giving the rate of exchange, the amount of the dividend in sterling per share and the amount of the 25 per cent Netherlands dividend tax in sterling per share.

21st April, 1972 **ROYAL DUTCH PETROLEUM COMPANY**

the Government. His main problem is really whether he can make a satisfactory agreement with the unions. The record of the Clydebank labour force is not calculated to inspire confidence in foreign investors.

Mr Chataway has been forced into more rescue operations at the shipyards before he knows the results of a review of the industry, which is one of the first tasks of his new department. The Government is already committed to giving £35m to Govan Shipbuilders to cover the losses of three of the old UCS yards, and to giving £50m across the industry in straight grants. But, on top of this, there are to be a variety of selective aids, including probably £14m for the Belfast shipbuilders, Harland and Wolff, although this has not yet been fixed.

With Government aid on such a scale, it is little wonder that shipbuilding shares have been roaring ahead on the stock market. But there is still no upturn in orders for new ships. On Wednesday the Shipbuilders' and Repairers' National Association published figures showing that the industry's total order book at the end of March stood at 237 vessels, worth £636m. A year ago the order book stood at 312 ships, worth £689m. It has been declining steadily ever since 1969.

Batteries

It's new and it works

The now-defunct Prices and Incomes Board was called on three times in four years to investigate the prices of batteries, both the car and the transistor-radio-cum-hearing-aid type. No one foresaw then that a new type of battery would be put on the market which would break some of the monopolies and near-monopolies that led to the complaints, but how one has, and by companies not in the battery business.

Given the right catalyst, the reaction of air (or the oxygen in it) on a zinc oxide will produce an electric current from a pack small enough to fit into a hearing aid, which is the ultimate test of a compact battery. The project has been nursed along by the National Research Development Corporation to the point where a joint company, Energy Conversion, has been formed with Guest, Keen and Nettlefold and British Ropes; the zinc-air batteries are now in production and being supplied for Multitone's pocket-paging system. The venture could hit the conventional mercury batteries really hard.

Whether it does or not depends on how many customers are prepared to pay 50 per cent more for a battery that is half the weight and has twice the life of a conventional one and keeps up a steady voltage virtually to the end of its life. Only a minority of battery buyers will be impressed by its ability to go on working at 20°C below freezing, when mercury batteries give up at freezing point, but among those who will are the military. The appeal to retailers is that the batteries do not lose power in store, as mercury batteries do; the zinc-air ones are sealed in plastic, to keep air away from the catalyst, and the power loss over a year in store is put at 10-15 per cent at most. This might make shopkeepers take to the new system more warmly than they do to most radically new products. The patent position is complicated; some American techniques are needed for part of the manufacturing process. But many companies have tried to develop a zinc-air battery and this is the first to go on sale.

Capital spending

Upturn coming?

The Confederation of British Industry is due to produce its latest poll of businessmen's investment intentions next week; with luck, it will show that January's more optimistic outlook for spending on plant and machinery has gathered momentum. There was one hopeful pointer this week that also suggested an upturn in plans for factory building. This was the news that in the January-March quarter industrial development certificates were approved for 20m sq ft of new factory space, the highest figure since the last quarter of 1970, and 29 per cent above the average for 1971. However, although in the past there has been some correlation between the issue of IDCs and fixed investment, it has usually been with a lag of over a year. So this would point to a general upturn in investment no earlier than the start of 1973.

There was not much joy in this week's news that the planned increases in spending by the steel and electricity industries will not be enough to lift Britain's capital spending on process plant this year above last year's £394m: indeed, it looks like being about £2m less and much of it will reflect completions of work started in

Key indicators: British economy

			Percentage change on		
	Month	Index 1963 = 100	previous month	three months	one year
Employment No sign of any improvement					
Industrial production*	February	111.9	−10.2	−10.6	−9.6
employment*	February	89.2	−0.6	−0.7	na
productivity*	February	125.4	−9.7	−10.0	na
Retail prices For the second month running the trend indicator (which excludes seasonal foods) suggests success in dampening inflation has come to an end					
Export trade*‡	March	143	−4½	−9	−8½

Import prices	February	134	− ½	+ ½	+5

Export trade, retail trade, engineering order books: in volume terms (value at constant prices). Unemployment: wholly unemployed excluding school-leavers: latest rate 3.9 per cent.
**Seasonally adjusted ‡Provisional*

previous years. The main culprit, of course, is the chemical industry, which is by far the largest customer for process plant: its forecast for this year is £145m, compared with £166m in 1971. Also, rephasing and cancellations have produced sharply reduced estimates for oil refinery requirements, down now to £54m from the over-optimistic £72m forecast of a year ago.

Interflora

More flower power

If they want to get a bloom boom going in Britain, where the annual £1 a head spent on flowers is half that in France and a quarter of what is spent in Germany, florists are going to have to do a bit more than the Interflora organisation's reiteration of its guarantee of satisfaction, about which it made much fuss this week and on which it will be spending £40,000 of its advertising revenue to promote. Where Interflora is vulnerable is that some of the 2,340 florists belonging to its telephone and telex network (about a third of the flower shops in the country) are ready to take advantage of the normal person's tendency to write effusive thank-yous for flowers obviously past their prime, and the organisation's system of spot checks is inadequate to deal with this. The new guarantee chits now being attached to every bunch delivered on an Interflora order invite complaints to the supplying florist, but is the 24-hour deadline really enough ?

Florists have the problems of most small retailers ; their turnover has been static at around £50m a year ; luckily for them, flower prices have been static too, but rents have been rising alarmingly. The only part of the business to show any growth is that handled through Interflora, where sales have doubled to £54m in the past decade and are expected to go up by 50 per cent between now and 1975. There is the nucleus here of the sort of bulk buying that has been the salvation of many small grocers ; Interflora has access to a computer for market research, and buys such things as overalls and wrappings in bulk. With a little initiative, it could do more to modernise the archaic marketing system of daily haggles over flower prices at dawn in the markets. But florists must then not let the image slip by delivering any more tired blooms or, as has been known, not delivering at all.

Who needs a guarantee ?

Monopolies Commission

Watch it, Rupert

An overblown report from the Monopolies Commission (*HMSO*, 24p) on Wednesday may have more to it than meets the eye. It dissects in lavish detail a proposal to transfer the ownership of four local weekly papers with a combined circulation of 62,000—hardly enough to worry anyone. However, the commission's real purpose may be to warn off several large newspaper chains which are believed to be eyeing the purchase of the Liverpool Daily Post, whose chairman, Sir Alec Jeans, died recently. The Post is in a strong position financially, but if it were up for sale it would prompt some serious questions about the control of the major provincial papers. Associated Newspapers and Mr Rupert Murdoch's News International Ltd are two of the groups reportedly interested in the Post. They have been served notice, indirectly, that the Government might prefer they were not.

Of the four small newspapers that the commission reports on, only one—the County Express, circulating in parts of Staffordshire and Worcestershire—sells more than the 25,000 copies which make a reference to the commission mandatory. However, the other three, the Kidderminster Shuttle, the Ludlow Advertiser and the Tenbury Wells Advertiser, are owned by companies which are all closely linked to the County Express. All four are now likely to become part of the Berrow's Organisation, which owns one daily and 21 weekly papers, including the Kidderminster Times, which is in competition with the Shuttle.

The four papers of the County Express group showed a 30.3 per cent return on trading capital in 1970-71. They could go on happily as they are but the present owners want to sell and think it best to sell to another newspaper publishing company. The commission feels it would be nice if they could be sold to someone other than Berrow's (which Mr Murdoch owns), but the transfer is not against the public interest.

Still, this small local deal gives the commission an excuse to tell the world at large that if present trends continue to bring more and more local newspapers into the control of a few large groups the Government "should consider whether it would be appropriate to arrange for a special inquiry." The Liverpool Daily Post is not the only name that comes to mind.

Savings

Fool's gold ?

"Whereas once people saved out of fear, today saving represents an affirmation of faith in the future." So said Mr Heath in his address on Tuesday to savings bank executives from many countries, who were holding their triennial jamboree in London this week. But how true is this of the British ? National savings in the year to end-March had a lot more bounce in them; investments went up by a net £735m, the highest increase ever, to reach an all-time record of just over £9.5 billion. The Prime Minister would no doubt like to see this as a vote of confidence in the Conservatives. Alas for him, savings chiefs and building society managers alike have recently noticed strong extra interest in areas with heavy unemployment: suggesting that the spectre of a rainy day is still a stronger incentive than the hope of a better tomorrow.

It is surprising that so much extra should have been saved in a year when the inflation rate advanced beyond 10 per cent. One or two longer-term schemes excepted, there was virtually no form of risk-free investment where the post-tax (indeed even the pre-tax) interest rate compensated for the loss in purchasing power. Yet savers are plainly alert to interest rate levels ; this was proved by the huge net gains in those savings channels where the rate has recently been improved, such as National Savings Certificates. But what pulled in £100m in the past year was the prospect of a £50,000 gamble on premium bonds.

Lex 1971 Profit £4·38m.
Earnings per Share 37% Up

Salient points from the statement by the Joint Chairmen for the year ending 31st December, 1971.

Results in Brief	**1971**	1970	
Turnover	**£111,325,000**	£85,016,000	**+30.9%**
Pre-tax Profits	**4,382,117**	2,445,488	**+78.4%**
Pre-tax Margin	**3.9%**	2.9%	**+34.5%**
Earnings per Share			
Basic	**9.15p**	6.69p	**+36.8%**
Diluted	**7.48p**	5.68p	**+31.7%**
Dividend per Share	**3.13p**	1.88p	**+66.7%**
Organic Growth	**46%**	37%	**+24.3%**

Consolidated Balance Sheet	**1971**	1970
Shareholders' Funds	**£25,392,481**	£10,810,858
Long and Medium Term Debt	**8,718,823**	9,500,088
Fixed Assets	**20,080,011**	11,871,637
Cash with Bankers and in hand	**1,002,281**	127,177
Bank Overdrafts	**2,560,771**	4,348,738

5 Years Growth
Compound Growth rate in Earnings per Share since 1967 :—
Basic 40.3% per annum
Fully diluted 33.4% per annum
Average organic growth since 1967—32.5% per annum.

On the first trading day of 1967 Lex ordinary shares were quoted in the Financial Times at eight shillings and nine pence (43¾p). Since that time there have been two bonus issues on a one for one basis. On 12th April, 1972 the Financial Times quoted Lex ordinary shares at 176p. On this basis, £100 invested in Lex ordinary shares in January, 1967 would now be worth £1,609 excluding dividends received.

1972 Trading
Results for the first quarter of 1972 are encouraging and despite the problems caused by the power dispute trading profits are currently well ahead of the same period of last year. All of our passenger car distributorships are experiencing a high level of demand which should be further stimulated by the measures included in the Budget. Initial results from the Carlton Tower have been most satisfactory with room occupancy 10% up on the same period of 1971.

Lex Service Group

THE EAST ASIATIC COMPANY LIMITED

(Aktieselskabet Det Østasiatiske Kompagni)
COPENHAGEN, DENMARK

The Annual General Meeting of THE EAST ASIATIC COMPANY LIMITED was held in Copenhagen on the Company's 75th Anniversary, Monday, 27th March, 1972, and the following are details of the Report as presented by the Board:

During 1971 no perceptible improvement took place in world market trends, and as a prolonged period was, furthermore, marked by the uncertain state of the foreign exchange market—which was only stabilised when a higher price for gold in terms of US-Dollars was fixed in December, combined with adjustments of exchange rates for a number of important currencies—the year under review must generally speaking be characterised as a difficult one for international trade.

One of the unfortunate consequences of this stagnation was the unusually low world market price level for raw materials, which had an adverse effect on the economy of several of the developing countries. It is hoped that this unfortunate state of affairs can be remedied, for instance by increased local processing of such raw materials.

At the same time a number of political crises in overseas countries remain unsolved, but the admission of the People's Republic of China into the United Nations did mark a significant contribution towards peaceful co-existence. The Company's endeavours of many years to enhance commercial relations with this enormous area thus gain a wider perspective.

Economic conditions in Denmark do unfortunately give cause for grave concern, unless the rising expenditure in the public sector is curtailed. Trading conditions have at the same time deteriorated and the competitive position of Danish exports has been adversely affected.

If the worst comes to the worst and Denmark does not join the European Common Market together with the United Kingdom, the future outlook is gloomy.

Within shipping, the rise in costs has far exceeded the modest increase in the rates of freight on the Company's routes. At the turn of the year there were some signs of an improvement in 1972, but transition to container transport is, as previously pointed out, costly.

FINANCIAL COMMENTS

In 1971 the Company's share capital was increased by kr.110 million to kr.280 million, partly through subscription of kr.51 million new shares at a price of 105 per cent, partly through issue of kr.51 million bonus shares to owners of old shares. In addition, the entire Danish staff of the Company had access to subscribe for kr.8 million new shares at a price of 105 per cent. Subscription took place from 19th April to 6th May, 1971, and was extremely satisfactorily received in spite of current economic conditions.

In connection with the increase of capital the Company takes pleasure in proposing new articles of association, introducing a share certificate system which will make it possible to issue only one certificate to each shareholder, irrespective of the number of shares. The proposal entails a considerable administrative simplification to the benefit of the shareholders and the Company alike.

The East Asiatic Company's Holding Company Ltd. has increased its share capital from kr.50 million to kr.80 million by subscription of kr.15 million new shares at a price of 105 per cent and simultaneous takeover of kr.15 million bonus shares in The East Asiatic Company, Ltd.

The turnover of the Company and its Overseas Branches amounted to kr.5,695 million or a total of kr.11,569 million, including subsidiaries, compared to kr.9,921 million in 1970.

SHIPPING DEPARTMENT

The general tendency towards larger joint sailing concentrations continued in 1971 and the Company participated in this development. The joint sailing agreement with AB Svenska Ostasiatiska Companiet, Gothenburg, and Wilh. Wilhelmsen, Oslo, on the Far Eastern service was thus extended to include the Dutch shipowners, Koninklijke Nedlloyd n.v., Rotterdam. Copenhagen will be the headquarters of this joint sailing arrangement with inauguration on 1st April, 1972, under the name of *ScanDutch*. The joint sailing arrangement on the Europe/Pacific Coast service between the Company and Blue Star Line, Ltd., London, has been extended to include the Swedish shipowners, Johnson Line.

As container transport gains ground new demands on marketing and inland transport are made. With a view to solving these problems effectively as far as Denmark is concerned, the Company and the Danish State Railways have together established *Allfreight Ltd.*, headquartered in Copenhagen.

As a natural link in the Company's considerable commercial and industrial development in West Africa, a new service with fortnightly sailings between Europe and West Africa and vice versa was inaugurated in October.

During 1971, shipping witnessed the heaviest increase in costs for many years, and prolonged port strikes—mainly on the North American east and west coasts—entailed great difficulties and losses, and this applied particularly to the regular liner services.

In September our Nakskov Shipyard delivered the first container vessel, m.s. "Falstria," which entered the Europe/Pacific Coast service. The favourable experience already gained fully meets the Company's expectations from this new type of transport. A sister ship, m.s. "Meonia," was launched in November and will enter the same service in April, 1972.

The two container vessels for the Far East service ordered from Burmeister & Wain, are expected to be ready for delivery in October, 1972 and March, 1973. These two vessels rate among the largest and fastest container vessels so far ordered by any shipowner.

Delivery of the considerable number of containers—of different types and sizes—necessitated by the introduction of container vessels has already commenced from manufacturers in Scandinavia, England, Austria, West Germany, France and Japan and is being financed under leasing arrangements.

The roll-on/roll-off vessel ordered for the Australia service from Eriksbergs Mek. Verkstads Aktiebolag, Gothenburg, is due for delivery in March, 1973.

Freight earnings amounted to kr.453 million, of which about 93 per cent were earned in foreign exchange as compared with kr.445 million and 89 per cent in 1970. The expenditure on bunkers has risen from kr.25 million in 1970 to kr.38 million in 1971, and wages amounted to kr.75 million against kr.68 million in 1970; as will appear from the accounts, profit before depreciation is down from kr.74 million in 1970 to kr.59 million in 1971.

At the end of 1971 the Company's fleet consisted of 29 conventional dry-cargo vessels with a total cargo capacity of 317,614 tons. The average age of these ships is 13 years and the book value is kr.516 per ton d.w. To this should be added one container vessel with a cargo capacity of 18,290 tons taken delivery of during 1971.

TRADE AND INDUSTRY

The Import Department has profitably participated in world trade, covering a wide range of raw materials. In keeping with the Company's policy of furthering establishment of industries in developing countries, the department's turnover of semimanufactures shows a marked increase.

In spite of unfavourable conditions in certain markets the Export Department can look back upon a year with great activity and favourable results. The department succeeded in placing considerable orders for account of Danish industrial firms, and the Company's business in machinery for the printing trade was extended into new markets and from additional suppliers. Trade with China was further enhanced.

The Wood Department continued its efforts in strengthening the Company's position in the international timber trade, but difficult market trends in this sector have restricted turnover as well as profits.

Danish industry encountered a difficult year which necessitated reorganisation of some of the Company's undertakings. This was, however, offset by other industrial operations so that the overall profit in 1971 shows an improvement compared with the previous year.

OVERSEAS BRANCHES

The Company's activities in THAILAND, headquartered in Bangkok, continued under rather adverse conditions owing to the somewhat stagnant economy of the country, but an improvement of the financial result as compared with the previous year was nevertheless achieved. Efforts are made to increase the import of various chemicals and paints, etc., as well as import of machinery within a wide field where the branch acts as sole agent for leading manufacturers. An increasing number of calls enabled the shipping department to improve its profits.

Bangkok is also the seat of our pharmaceutical factory, *Dumex Ltd.*, whose products are increasingly sold in spite of severe competition, as well as the subsidiaries, *Thai-Dan Corporation Ltd.*, which carries on an interesting business in various projects, and *The East Asiatic Company (Brokers) Ltd.* in which insurance activities are concentrated. *Thai Industrial Advancement Company Ltd.* looks after financing and administration of the hire purchase business of the Thailand organisation.

Thai Coconut Industries Ltd. in the southern part of Thailand, processes coconut fibre suitable for e.g. upholstery of seats for automobiles.

In VIETNAM accumulation of stocks has to some extent hampered the Saigon office's import business during the latter part of the year, resulting in a reduced profit compared with the previous year.

The SINGAPORE office's import business which particularly comprises printing machinery, has worked under somewhat more difficult conditions with smaller demand and consequent keener competition. The motor department, which handles sales of Vespa scooters, and sales of Dumex products are important contributors to earnings.

Export of hardwood registered a further increase so that the Company is now one of the largest shippers in the area.

The MALAYSIA organisation has branches in Kuala Lumpur, Penang, and Ipoh in West Malaysia, and in Kota Kinabalu and Kuching in East Malaysia (North Borneo). In the Sultanate of BRUNEI a sales office is, furthermore, maintained.

The financial result for the year was satisfactory, and this applies particularly to Kuala Lumpur where good yields have been obtained both in the import business, which among other items includes machinery for the printing trade and various Danish machinery plants, and in the industries situated in Kuala Lumpur: the *Vespa* assembly plant and the *Dumex* pharmaceutical plant. In cooperation with the Carlsberg breweries a third industrial plant, an 80,000 hectolitres brewery, has been built at Kuala Lumpur and bottling of the first beer commenced before the end of the year.

The Company's timber export from Port Kelang—formerly Port Swettenham—also registered an improvement in 1971. A further increase of the export of sawn as well as processed timber is expected to take place as a result of the cooperation which has already started with the Malaysian government in the Jengka Triangle forest concession.

Although it has become easier to obtain permission to visit BURMA, foreign firms are still not allowed to establish branches of their own in the country, and the interests of the Company are, therefore, looked after by a local representative. In this way it is still possible to take part in the export of teak and rice.

Export of automobiles, machinery, yarn, and textiles, etc., as well as import of timber, machinery, and agar-agar have all contributed to the good financial result of the Tokyo and Osaka offices in JAPAN. Towards the end of the year the Company, furthermore, acquired shares in a Japanese concern which imports machinery for the printing trade.

The HONG KONG branch also shows a most satisfactory financial result. Important bookings of cargo are made for the Far East/Europe shipping service which—as mentioned previously—is being augmented by the Dutch shipowners, Koninklijke Nedlloyd n.v., Rotterdam, under the name of *ScanDutch*. Hong Kong imports large quantities of beer and textile machinery, etc., and has an increasing turnover in Plumrose products.

Activities in connection with the Company's increasing business with CHINA are mainly carried out through the China Trade Departments at Head Office and in Hong Kong. Other of the Company's branches also take part in this effort.

The year under review has witnessed a sizeable increase in activities with regard to the Company's interests in China and at the regular Canton trade fairs the company has registered a constantly increasing turnover. On the buying side it is mainly a question of textiles, feedstuffs and other agricultural produce. On the selling side the Company represents many of the largest manufacturers in Denmark, Sweden, Germany and North America as well as a number of small industries.

In addition to the biannual Canton trade fairs, China is regularly visited by staff members from both Copenhagen and Hong Kong with a view to developing connections with the Government Corporations in Peking, Shanghai and elsewhere in China.

The Manila office in the PHILIPPINES participates in the export of hardwood logs to Europe. Import of copra and copra cake by the Head Office in Copenhagen has yielded a satisfactory result.

The Company's activities in INDONESIA were further consolidated during 1971, but the financial result was adversely affected by the devaluation of the Rupiah. The Djakarta office's main trading activity consists of import and distribution of printing machinery, office machines and insecticides, all under sole agency agreements with leading manufacturers within these fields.

The pharmaceutical factory, *P.T. Dumex* had a satisfactory year. Furthermore the *Vespa* assembly plant commenced production according to plan. The factory for producing paints and related products, which was established in cooperation with Sadolin & Holmblad Ltd., Copenhagen, and local interests, came into production during the year.

The forest concession, *Sumkal Timber Corporation*, situated on Sumatra showed a loss due to the low log prices obtainable in Japan.

In INDIA the Company has investments in *Turner, Hoare & Co. Ltd.*—an affiliate of the Mahindra & Mahindra concern—which is engaged in commerce and industry.

Having dealt with the Company's widespread interests on the Continents of Africa, America and Australasia, the Report continued:

The offices in LONDON, HAMBURG, GENOA and MILAN maintain lively business connections in various fields with the overseas branches.

RESULT AND DIVIDEND

Income for the year totalled Dkr.239,834,900. After meeting interest and financing expenses at Head Office, depreciation and expenses relative to the 1971 capital increase, the pre-tax profit amounted to Dkr.69,837,092. Taxation amounted to Dkr.14,040,016, and the net profit for the year totalled Dkr.55,797,076. With the balance brought forward of Dkr.14,000,167, the amount available for distribution is Dkr.69,797,243. This is to be distributed as follows: Dividend to Shareholders 12% of Dkr.280,000,000-Dkr.33,600,000; 1% Bonus on the occasion of the Company's 75th anniversary—Dkr.2,800,000; Bonus in conformity with the Articles of Association—Dkr.9,195,357. Allocations to: Extra Reserve Fund, Pension Fund, and Research and Development Fund —Dkr.10,000,000. Balance carried forward to next year—Dkr.14,201,886.

The Report and Accounts and Proposals presented by the Board were adopted.

And now, back to worrying about Germany's economy

Having survived Thursday's censure motion in the Bundestag by the skin of his teeth, Herr Willy Brandt can now get back to worrying not only about his Ostpolitik, but also the German economy. His party's poor showing in the state election in Baden-Württemberg last Sunday was attributable as much to recession and inflation as to fears about his foreign policy. His economics minister, Herr Karl Schiller, was wise enough not to visit the state at all during the election campaign.

The truth of the matter is that the Social Democrat government, like Mr Wilson's Labour government in Britain in 1964-67, has proved unable to reflate the economy because it is frightened of outraging the blundering conservative prejudices of the financial establishment. In Britain, the prejudice that frightened Mr Wilson into recession was the belief that devaluation meant dishonour. In Germany, Herr Schiller feels that he cannot offend against the illiterate gobbledygook in which so much of Germany's debate about budgetary policy is still conducted. Because Germany's economic slowdown has caused tax revenue to increase by less than was expected, the budget is in deficit. Because budget deficits in Germany are supposed to be unrespectable, Herr Schiller is not being allowed to carry through the cherished government spending programmes—some of them admittedly pretty silly—on which the Social Democrats had set their heart. Because spending programmes are having to be held back, Germany's economic recovery may be less rapid than it should be. The danger is not that of real recession, but of politically damaging—and economically unnecessary—stagflation. The irony is that the Christian Democrats might reflate faster. But one of the ways in which they might reflate is by trying to run a large balance of payments surplus, and keeping the exchange rate of the D-mark undervalued. This is why it is probably better for Britain's economic interests that Herr Schiller should be at the finance ministry than Herr Strauss—especially in the new Europe where the pound may be being put in the unnecessary straitjacket of the so-called European Monetary Union (see page 77).

Santiago

The political posturing that has dominated the first two weeks of the third United Nations Conference on Trade and Development is considered essential, partly for the audiences back home and partly to let the delegates create what they hope will be the right atmosphere for the more realistic discussions that will follow in committees. Whether anything of substance will emerge will not be apparent until the last few days in mid-May.

The rich countries are manifestly far from having an agreed position among themselves. The Americans are keeping out of sight, but various European countries have seized the occasion to commit themselves to the target for official development aid of 0.7 per cent of gnp, some of them by 1975 (Belgium, Holland, Norway, Sweden, Portugal). Austria has gone so far as to announce a target of 1 per cent. Predictably, some rich countries like Germany have said that much of the additional assistance will be concentrated on the hard-core of the 25 least-developed countries.

But the Europeans are defensive about pressures on them to cut back production of sugar, wheat, cereals, vegetable oil, rice and tobacco, all crops that could be grown equally well in the developing countries. France, in particular, has made much of its ideas for stabilising the commodity earnings of the developing countries as a plausible alternative, and has chosen this moment to announce that it will contribute to the tin buffer stock and the projected cocoa buffer stock, whatever other countries (ie, America) may do. Dr Sicco Mansholt, speaking for the common market commission, bravely offered the hope that the developing countries would gain better access to the EEC for their commodities in future, a view not shared by any of the member governments of the Six.

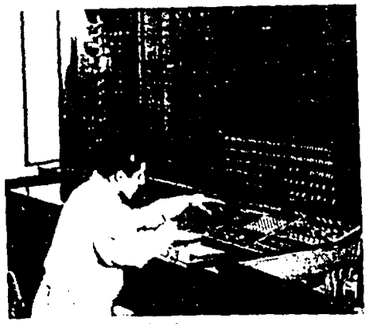
Monetary affairs have figured less prominently so far than had been expected. It has become clear that the rich countries now favour an informal link between SDRs and aid, by giving the developing countries a bigger share of future issues of SDRs. The managing director of the International Monetary Fund, Mr Pierre-Paul Schweitzer, suggested his own forum for the coming round of monetary reform talks. But Russia, China and others (supported also by Chile) are already pressing for a world monetary conference.

The Chinese—after a predictable speech last week—look like staying out of the developing countries' pressure group, the so-called group of 77. Their strenuous advocacy of self-reliance has embarrassed the 77 (who devote most of their public speeches to the need for more aid). The need to reach agreed compromises within the group would cramp the Chinese.

Not that the 77 are giving much sign of acting as a group. Behind the scenes rival factions are seeking to impose their own draft resolutions ; the hot issue of the least-developed has broken surface again ; and within the Latin American block itself Colombia, supported by other conservative countries, has been quarrelling with the more radical Peru and Chile.

EEC-Efta

A bit easier



Brussels

Sweden and Finland will get a slightly better deal under the revised mandate given to the European commission on Tuesday by the EEC council of ministers. The Six are being a little more flexible on the rules about the origin of goods, and on the list of sensitive products (for which a slower rate of tariff-cutting is proposed), but they were unable to agree on agricultural concessions.

What the Six have done goes some way on paper towards meeting Sweden's and Finland's objections, but does not amount to a modification of the community's basic position. The removal of tariffs will still take 12 years (not 10, as had been hoped for) and will still not be complete until 1985, that is to say seven years after the Efta countries will be expected to have removed tariffs on all industrial imports from the EEC. The only concessions by the Six are to drop the proposed initial three-year standstill and to introduce a duty-free quota for Britain, as suggested by the British Government, to offset the temporary rise in tariffs against Scandinavian paper.

Although the commission would like to help Finland, which will be hit hard by these restrictions, it has to take account of the reactions not only of the French paper industry but of the lobbying by the Americans and Canadians against anything that would put American exporters at an even greater disadvantage in European markets. As it is, the British papermakers have protested loudly at the duty-free quota for the Scandinavians, even though the Scandinavians already have duty-free access to Britain.

Once again agriculture was the stumbling-block. The original idea was to ask the Efta countries for concessions on agriculture in return for free access to the EEC market for their industry. This ploy was spiked by the neutrals' insistence on reciprocity for their own agricultural exports, which was unacceptable to France. The commission accordingly proposed to exclude agriculture entirely, except for Portugal which has always been recognised as a special case. This solution was then torpedoed by Italy, which has tied any concessions on Portuguese wine, citrus fruit and tomatoes (which compete directly with Italian produce) to similar concessions by other Efta countries.

Some people prefer imports

Electronics

Your embargo's slipping

It takes an electronics slump to make western governments change their minds about what sort of equipment may or may not be sold to communist countries. Ferranti has just been given an export licence by the Department of Trade and Industry to sell plant to Poland for making very advanced integrated circuits, something that would have been unthinkable even six months ago. All that remains now is for the Poles to confirm the order.

Sales of this kind as usually blocked by a committee of the western governments and Japan that sits in Paris but has no official existence. Its powers are said to be purely advisory, but any equipment that appears on the Cocom committee's list has virtually no chance of getting an export licence for sale to any communist country. While the American home market was booming, this hit European manufacturers more than it did the Americans, which caused a good deal of resentment and complaints of bias. A few companies, like International Computers, slugged it out with Cocom and made some sales in east Europe, but what has caused the recent sudden change in the climate is the fall in American demand for computers and advanced electronics. In Russia, plans provide for the installation of about 5,000 computers by 1975 ; the Soviet computer industry is more efficient than it was, but its machines are small and, although the computers turned out by the east Germans and Czechs are advanced by anyone's standards, they are relatively small too. American companies with lean order books want to get into this market, over Cocom's dead body if necessary. And they have made some headway. Honeywell has got approval for the sale of a huge computer system for banking, on the ground that it is a non-military installation even though very advanced. A team of nearly 30 electronics and computer men plans to go to Moscow during President Nixon's visit, and to put on a hurriedly improvised exhibition while he is there.

Money supply

Still in full flower

To the many people who ask plaintively whatever happened to the great American debate over the money supply, Mr Andy Brimmer, a member of the Federal Reserve Board, supplied his own answer on Monday. It is not news that he told an Oxford audience that it would be unwise to recast the conduct of monetary policy along the lines urged by Professor Milton Friedman. Mr Brimmer, and almost every other central banker for that matter, has said that many times before. But this time he included an analytical assessment of the Federal Reserve's monetary policy in the past two decades which, he believes, shows that its ability to alter policy in advance of the needs of the economy has improved. His evidence, one should add, stops short of the most recent developments, when the Fed has come under renewed attack.

Key indicators: world commodity prices

Quicksilver slithers

At $135 a flask (76lb) prices are at their lowest for many months. New supplies are coming on to the market at a time when stocks are already high and changes in various chemical processes are reducing the metal's importance in some industries. Prices could go even lower. Spain, Russia and Italy are the main suppliers; Turkey and Algeria—a new producer—stand to be hit too.

Extracts from the Statement by the Chairman, The Rt. Hon. Lord Latymer, at the 105th Annual General Meeting held in London on the 26th April, 1972.

Ottoman Bank

Incorporated in Turkey with Limited Liability

You are aware that the Bank operates under a Convention or agreement with the Turkish Government which can be terminated at the earliest in March, 1975, if two years' prior notice of intention to do so is duly given. If such notice is not given by either party to the agreement, the Convention remains in force, as does the two-year notice period.

You will recollect that I have in past years spoken of negotiations which have taken place between your Bank and American interests, for which Turkish approval was necessary, but these plans, which might have proved commercially successful, did not come to fruition.

For this reason, Monsieur Monick and I visited Ankara in November, 1971 to call on both the Prime Minister and the Minister of Finance, to discuss with them our affairs in Turkey. We were cordially received by both the Prime Minister and the Minister of Finance. The latter informed us that he he was unable to deal with our affairs until the Budget had been submitted and approved by the Turkish Parliament. We have lately been advised that this has been done.

We have every hope, therefore, that a second visit by Monsieur Monick and myself, as soon as this proves possible following recent Ministerial changes, will enable us to agree upon another solution to our problems.

I advised you last year of the changes made in the capital structure of Banque Ottomane (France), subsequent to which the name of the Bank was changed on 1st July, 1971, to Banque Grindlay Ottomane.

Turkey. The economy of Turkey has developed well in 1971, particularly in the agricultural sector.

The rate of increase of the Gross National Product, which was 5.5% last year, reached 9.2% according to provisional figures as at the end of November, 1971, compared with the average annual rate forecast by the Five-Year Plan of 7%.

Industry increased at the rate of 8.7% in 1971 compared with 2.5% in 1970. Output of electricity continues to increase. Total production, which was Kwh. 8,622 million in 1970, rose to Kwh. 9,790 million in 1971.

Work on the Bosphorus Bridge, of which the foundation stone was laid in February 1970, proceeded normally and it should be opened to traffic in 1973.

Tourism continues to be regarded as an important sector for the future. The number of foreign vistors continues to increase; 725,000 in 1970 to about 800,000 in 1971.

More than 500,000 workers left for abroad. Remittances of their savings amounted to $471,700,000 in 1971, compared with $272,900,000 in 1970. This progression has greatly increased the foreign currency Reserves of Turkey ($860,000,000 in March, 1972).

In 1971 exports totalled $676,600,000 and imports $1,170,800,000

The Draft Budget for 1972/73 totals (-for expenditure-) LTq 50,312,000,000 compared with LTq. 37,092,900,000

Balance Sheet. The Balance Sheet totals are up from £79.5 million in 1970 to £92.4 million due to an increase in current, deposit and other accounts, attributable principally to the expansion of our business in Turkey. Advances have also increased by £7.5 million but, of the other assets, Cash, Money at Call and Short Notice have together increased by nearly £5 million, which contributes to a satisfactory liquidity position.

Profit and Loss Account. The available profit for 1971, less profits awaiting transfer, plus remittances in respect of profits of previous years, amounts to £735,000 as against £891,000, i.e. a reduction of £156,000 compared with 1970.

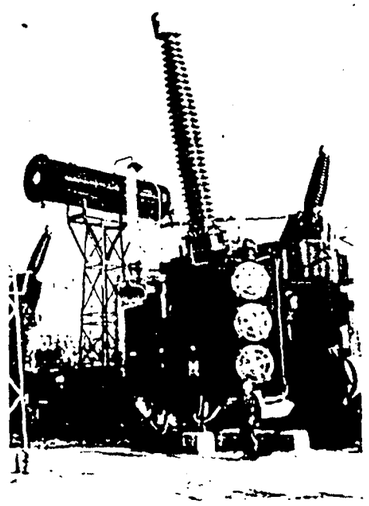
This decline in our profit was to be expected on account of the fall in interest rates during the latter part of 1971. Nevertheless your Committee have felt it wise to place £100,000 to reserve.

From the balance available, your Committee recommend that a dividend of £1.20 per share be paid, which will require £600,000. In conformity with Article 40 of the Statutes, payments will also be made to the holders of Founders Shares of £90.02 per whole share, requiring £19,444 and a similar amount to the Members of Committee, leaving £38,244 to be carried forward to next year.

Staff. I am sure that you would like me to thank all our staff on your behalf for their work during the year.

Copies of the Report and Accounts may be obtained from: The Secretary, Ottoman Bank, 2/3 Philpot Lane, London EC3M 8AQ.

But Mr Brimmer again argued that the sole target of monetary policy should never be just the money stock on any of its many definitions. The central bank should also take account of the behaviour of interest rates and credit conditions, and should recognise that the relationships between spending, interest rates, and money shift significantly according to the state of the economy. Friedmanites will say that this insistence that signposts are always changing is an excuse for not following any signposts at all. It is a bit suspicious that central bankers are usually anxious to play down the extent to which their actions can exert precise control over their domestic economy, while keen to increase their influence in international monetary affairs. Maybe they just don't like being caned. But Mr Brimmer has thrown in some new figures that will require analysis in the great debate.



Anti-dumping

Keep out!

Westinghouse Electric won its anti-dumping case against British, European and Japanese transformer manufacturers last week after two years of argument. During this time, while the case was first before the United States Treasury and then the Tariff Commission, no customs clearance for the transformers could be obtained. American anti-dumping procedures specialise in this kind of delay and American firms are suspected of using them as a protection device. Transformers are particularly sensitive. Because production cannot be mechanised, they take a lot of hand labour, and America's wage rates cripple the home industry.

But this is the first case in which a dumping charge has been made to stick on a product that is custom-built, as opposed to mass-produced. Proof of dumping is that the import is priced below its price in its own home market. But each transformer is unique, so how can this be proved?

This has not stopped the Americans from banning British transformers in the past under Buy American rules, but the customs has not thought fit to publish the method of elaborating the price/weight ratio by which it proved dumping. Yet this is the main bone of contention. One of the British companies hit looked at 12 different ways of comparing prices, and only two implied dumping. The Americans say that the dumping margins ranged all the way from 10 per cent to an extreme

You can't dump that here

46 per cent below home prices.

In order to levy dumping duties, the tariff commissioners must also be satisfied that "material injury" has been done to American industry. The 7 per cent of the market held by foreigners in the period Westinghouse was arguing about (1967-69) was held to be "more than adequate" to establish injury, even though it included the large share held by the Swedes, who were not included in the dumping charge. In fact, Westinghouse did discover particular segments of the market (defined geographically, or by type of user) where the market penetration was well above 7 per cent.

Public utilities in America will be far from pleased that their access to foreign supplies will now be curtailed, the more so as there is good reason to suspect that Westinghouse and General Electric may now move against switchgear and other heavy electrical products.

EEC

Regions on their minds

Brussels

The three-day conference on industry and society, organised in Venice last week by the EEC commission, went pretty well for British interests, but showed up the common market's present confusion over such issues as how to deal with inflation, with social and regional tensions and with the threat to the environment. The Colonna memorandum of 1970, which assumed that the essential purpose of the community's industrial policy was to stimulate the industrial development of the Six by helping firms to adapt to the continental dimensions of the common market, is now as dated as the Treaty of Rome.

What has changed is the attitude to economic growth, although few of the delegates, or for that matter few members of the commission, would go as far as the commission's new president, Dr Sicco Mansholt, in advocating a curtailment of growth. It was remarkable how many of the businessmen, economists and civil servants at Venice were prepared to agree that more priority should be given to the environment, to increased social expenditure and to a reduction in the growing disparity between the richer and poorer regions of the community. Instead of seizing the opportunity to preach on the advantages of cross-frontier mergers and co-operation which have been their theme song for the past few years, commission spokesmen tended to insist on the need for a fairer distribution of the fruits of growth.

In practical terms the conference achieved little. There seemed general agreement that to leave regional policy to the unhindered operation of market forces would lead to unacceptable congestion in some areas and even greater depopulation in others. But while the German rapporteur was unwilling to see the community do anything more than issue recommendations and publish information on investment opportunities in the declining regions, the British and Italian spokesmen, the chairman of the National Coal Board and the secretary-general of the communist trade unions, wanted cash payments by the community, with public enterprise being cast for the key role, at least as far as the Mezzogiorno is concerned. From the British point of view the most satisfactory result of the discussion was the recognition by the commission that the community's regional policy will have to be modified after British entry to take account of the problems of declining industries as well as of agriculture.

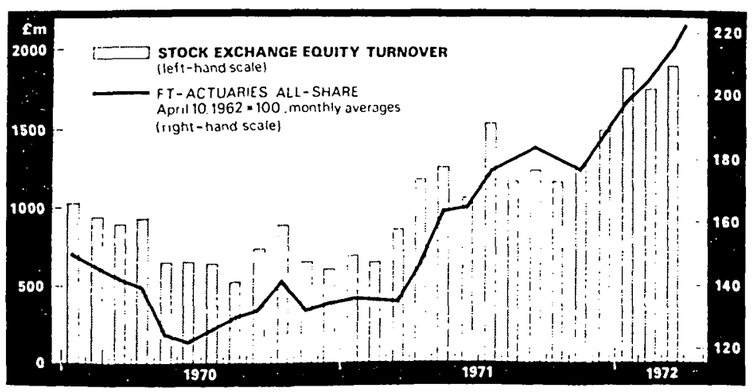
BUSINESS *Investment*

With a quaint device, the banquet vanishes



The 17 members of the Accepting Houses Committee, London's top merchant banks, are to go ahead and develop a computerised dealing market for large equity transactions. An existing computer software house, Computage, has been bought, and its name changed to Automated Real-Time Investment Exchange Limited—or Ariel. The shareholders of the company are the 17 accepting houses; the ones with substantial investment departments have large slices of the equity. The chairman is Mr Charles Clay, director-general of the Accepting Houses Committee; the managing director-designate is Mr Colin Leach of J. Henry Schroder Wagg; and the other directors are Mr Sidney Eburne of Morgan Grenfell, Mr Dennis Roberts of Lazard Brothers, and Mr Peter Nutting of Wm Brandt's. The authorised capital of the company is £200,000—and something like half that will have to to be spent on the initial stages of seting up the system.

The system will probably be closely modelled on Instinet, which has been operating in the United States for 2½ years, with a growing number of subscribers (see below), and Ariel is negotiating to buy the Instinet package. Even if the negotiations fall through, Ariel will go ahead on its own. All 200 or so institutions, the pension funds, insurance companies and charities, will be able to subscribe, and stockbrokers and jobbers will be invited to hook up as well, but the stock exchange rules would have to be altered to allow jobbers to deal in this way. The subscriber will have to pay a rental for the terminal and the post office line, costing at most £3,000 a year, and would have the benefit of commissions something like half those charged by stockbrokers.

The London stock market is being presented with an opportunity rather than a threat. Of the £15 billion a year in equities traded in London the institutions account for about 40%, or £6 billion. Of that, the bulk, perhaps £5 billion, is in large trades (over £50,000). Ariel will be lucky to get more than 5% of that business, and so the amount of equity turnover for which Ariel will be competing is around 1-2% of the total. Assuming that Ariel charges half the 0.6% commission levied by brokers on large trades, and gets £200m of business, it should be saving its institutional clients some £600,000 a year—and should itself be earning a revenue of £600,000 as well.

The Stock Exchange Council will be unhappy with this challenge to its hegemony, and the old arguments will be brought out to justify the stock market's pre-eminence. The volume of trading provides depth to the market, and competition among jobbers provides the best prices for the trades. Although the commissions charged may be fixed by a cartel, in return the stock exchange provides a certain measure of protection to investors, and brokers supply research to their clients.

But these are arguments for coming to terms with Ariel rather than objecting to it. What Ariel can introduce is a new technology to the central market, one which is far better adapted to the future pattern of trading than is the existing highly personal, geographical method of market-making. If Ariel uses Instinet, an electronic trading link could be established between Britain and America. It could also link up with European institutions and be a major step in confirming London as Europe's prime equity market.

Instinet

Fourth market

New York

The New York stock exchange is the first market, the regional exchanges are the second market, the over-the-counter market is the third. The 2½-year-old "fourth market" is Ariel's American predecessor. American brokers were once worried about it, but some now think that it may begin to wilt even in its young age. On this fourth market big institutional investors —banks, insurance companies and mutual funds—can trade securities directly among themselves, by-passing the brokers. The fourth market has a nationwide computer system that permits subscribing institutions to locate the opposite side of a bid or offer, and then to negotiate completion and con-

INVESTMENT MANAGERS: **N. M. ROTHSCHILD & SONS LIMITED**

INTRODUCTION

New Court European Trust Limited offers U.K. residents a means of investing in Europe through an investment trust quoted in London. Investors will receive the benefit of experienced and professional management of a diverse investment portfolio consisting mainly of securities in European companies.

INVESTMENT POLICY

The achievement of capital growth will be the principal objective of the Company's investment policy. The Company's portfolio will be concentrated on the securities of leading European companies. In addition, the Company intends to take advantage of opportunities to make investments in unquoted concerns, to undertake the acquisition of suitable European investment trusts and to benefit from short-term market fluctuations through the Company's investment dealing subsidiary.

Although the Directors intend to maintain the Company's European character, they will be prepared on occasions to invest outside Europe if changing conditions make this significantly more attractive.

The investment portfolio will be managed so as to enable the Company to qualify as an approved investment trust for tax purposes. In appropriate circumstances the Directors may introduce an element of gearing with the object of improving the capital growth of the Company's portfolio.

In order to mitigate the full impact of the investment currency requirements of U.K. exchange control regulations the Company is arranging foreign currency borrowings of approximately £16.5 million which will be invested in Europe. As security for these borrowings, £16.5 million will be invested in sterling term deposits and fixed interest securities. The balance of approximately £3 million, raised by the issue, will primarily be invested in North American companies.

The income required to pay the expenses of the Company and to service the foreign currency borrowings will allow the Company only to pay a small dividend initially. However, the Directors believe that the Company's income should grow as the investment portfolio appreciates in value thus enabling increased dividends to be paid in the future.

INVESTMENT MANAGERS

N. M. Rothschild & Sons Limited will manage the Company's portfolio. Rothschilds has wide experience in the field of portfolio investment through the management of substantial funds on behalf of investment and unit trusts, corporate pension funds, individuals and settlements.

Since its beginnings in the early nineteenth century, Rothschilds has been closely involved with Europe. In particular it has developed a close working relationship with the European banking institutions represented on the Board of the Company. Each of these institutions manages substantial investment portfolios and their portfolio managers and analysts meet on a regular basis to exchange investment views. The Company will in consequence be able to draw on the experience of a group of European professional advisers which has been working together for many years.

BANK LEUMI LE-ISRAEL B.M.

FIRST AND LARGEST BANK IN ISRAEL

240 BRANCHES OF THE GROUP IN ISRAEL—16 SUBSIDIARIES AND REPRESENTATIVE OFFICES THE WORLD OVER

Points from the Statement by the Chairman Dr. E. Lehmann

The 21st Annual General Meeting of the Bank, being the 70th since the establishment of the Anglo-Palestine Bank, was held in Tel-Aviv.

SEVENTIETH ANNIVERSARY

The Chairman, Dr. E. Lehmann, stated that 1971 had been a year of considerable growth and progress. The Bank enters its seventieth-anniversary year with total consolidated assets of IL13.3 billion—over £1.2 billion.

THE BANK LEUMI GROUP (consolidated figures)

	1971 IL million	Increase in 1971	£ million*
Total Assets	13,273	51%	1,240
Total Deposits	10,341	51%	996
Total Loans	4,705	29%	440
Capital Accounts	193	45%	18
Operating Earnings before income tax	84	41%	8

*Rate of exchange IL10.7=£1

NET INCOME UP 33%

Operating earnings of the Group, before tax, reached IL83.8 million (1970: IL59.4 million). Operating earnings of the Bank, before tax, reached IL56 million (1970: IL36.5 million). Net income of the Bank—after extraordinary income (expenditure) net—was IL27.9 million (1970: IL21 million)—an increase of 33%. The Board has appropriated IL10 million (1970: IL6 million) to General Reserve and IL9 million to inner reserve (1970: IL6 million) and recommends a final dividend of 8%, making a total of 15% for the year (1970: 15%). The Directors also proposed a rights issue of 1 for 4 to all existing shareholders and of 1 for every IL10 to the holders of IL25 million Convertible Capital Notes. The issue price to be determined by the Board.

AUTHORIZED CAPITAL INCREASED

An earlier Extraordinary General Meeting had resolved to increase the authorized share capital from IL100,000,000 to IL200,000,000.

CONTINUED INTERNATIONAL EXPANSION

The Group's international business has grown apace in 1971. The great increase in the Bank's foreign-currency deposits in Israel has permitted an appreciable increase in foreign-currency loans and in the business-ties with banking correspondents. The overseas banking subsidiaries, Anglo-Israel Bank in London and Cifico-Leumi Bank in Zurich and Geneva has shown satisfactory progress. First Israel Bank and Trust Company of New York shows in its third year a 69% rise in total assets to $214 million. In Paris a new subsidiary, Bank Leumi le-Israel (France) S.A. was established in partnership with Banque Rothschild S.A., Banque Louis Dreyfus & Cie, S.A. and the brothers Joseph, Marcel and Elie Nahmias. A Representative Office was opened in Hong Kong and another is shortly to be opened in Johannesburg.

ACQUISITION OF THE ARAB-ISRAEL BANK LTD. AND AGUDATH ISRAEL BANK LTD.

The rapid changes and the economic development in the Arab and Druze communities require more modern banking services. In 1971 the Bank further expanded its services to the Arab community by the acquisition of the Arab-Israel Bank Ltd. with its 18 branches in the Arab towns and villages. The Bank Leumi Group now operates 34 branches in service of the Arab communities in Israel and the Administrated Areas.
In January 1972 the Bank acquired Agudath Israel Bank Ltd. with 10 branches which have become branches of Bank Leumi.

ECONOMIC PROBLEMS AHEAD

In the second part of his address Dr. Lehmann reviewed events in 1971. The G.N.P. increased by 7%, while private consumption only rose by 4% or 1½% per capita. Public consumption remained unchanged, in real terms, mainly owing to a decrease in defence expenditure. Investment rose by 17½% as against 8% in 1970. However, the danger of inflation remained the central problem of Israel's economy in 1972 and he outlined proposals for combating it.

TOTAL CONSOLIDATED ASSETS

IL13,273,000,000
$3,152,000,000
£1,240,000,000

firmation of the trade via the wire network. All of its transactions are made under a blanket of anonymity, which has an obvious appeal to many investors.

The system, known as Instinet (for the privately-owned Institutional Network Corporation), has been operative since December, 1969. The institution that wishes to sell a large block of stock has the choice either of broadcasting its intentions or of feeding stock discreetly into the innards of the Instinet computer. A would-be buyer of the same stock either responds to the broadcast or manages to match up its bid with the offer in the computer's quiet confines. The two parties then dicker directly by tapping out messages through the system. When they have agreed on the scope and price of the transaction, they settle up through the Bank of New York, which is used by Instinet as its clearing agent. Throughout, they are known to each other only by number.

Instinet now has 46 subscribers, nearly double the number a year ago. They include a prestigious roster of leading New York, Illinois and Californian banks as well as some of the nation's largest investment and insurance companies. Two leading third-market securities firms are also Instinet members, namely Weeden of New York and J. S. Strauss of San Francisco.

Despite the impressive membership roll, the record number of shares that has changed hands through Instinet in any week has not topped ½m, compared with the total average weekly volume of 60m-70m shares on the NYSE. Its volume is therefore only about half that of two other automated systems that cater to institutional investors, namely Autex and the NYSE's own Block Automation System (BAS); brokers themselves use these two latter systems to declare their interest in buying or selling large blocks for themselves (or clients), and then consummate the deals through normal trading channels. Critics of Instinet (including the by-passed brokers most of all) contend that it has now outlived its usefulness. Its subscribers are charged about 30-35% of the old fixed commissions—but about the same as institutions may now expect to pay under the new regime of negotiated rates. From April 24th brokers must negotiate on orders over $300,000, instead of over $500,000 as before. But Instinet continues to thrive, despite everything that its denigrators can think of saying against it, and it now expects to have 70 subscribers by end-1972.

Wall Street

The Nixon effect

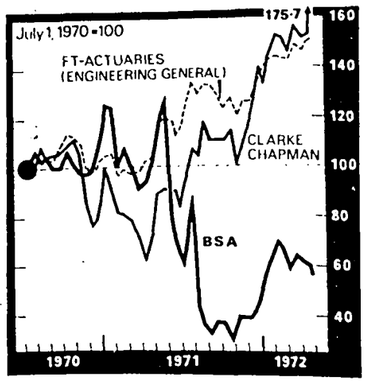
New York

A Wall Street phenomenon of recent years was tested again this week: the nice theory that stock prices usually go up in advance of a nationwide address by President Nixon, but tend to decline on the first opportunity after he has spoken. If, this time, the reactions were not as marked as usual, that is a hopeful sign that the Street may be learning to get its priorities right.

True to form, prices, which had been spinning down, stabilised on Wednesday to 946.9 on the Dow Jones before Mr Nixon took to the air at 10 o'clock that night to talk about Vietnam. The trading volume on the New York stock exchange expanded to 17.7m. The firming action was all the more welcome because it came after the Dow had suffered a loss of 17 points in the first two days of the week. That sudden change in tone had been attributed in part to investors' visible concern over reports of North Vietnamese military successes and in part to a widely publicised assertion by the Price Commission that it would require price rollbacks by some companies which had violated incomes policy guidelines. Mr Nixon's television talk, in which he pledged further troop withdrawals, serious resumption of the Paris peace talks but continued bombing of the north until the invasion halts, apparently did not affect the market all that much on Thursday: in the first hours of trading the index moved up a point or so to 948, but lost some of that later.

If the Street manages to focus again on the economy, it should like the steady flow of statistics from Washington, all telling happily of economic expansion.

Wednesday brought news of a further advance, for March, in the leading economic indicators. There seems no end to the reports of favourable March quarter corporate earnings. **Eastern Airlines**, for one, reported record earnings of $12.3m or 70 cents a share, compared with a deficit of $2.7m in the first quarter of 1971. The big winner was **Polaroid**, whose shares jumped $7¼ to close at $131 on Wednesday, following the company's announcement of a new system of instant colour photography. **Eastman Kodak** also was stronger after it announced that it would be making film for Polaroid cameras.



London market

Gathering force

The market has been testing higher levels, finding them good, taking profits, and then waiting for the next move up. It came on Thursday when the Financial Times industrial share index scored a new record, closing at 533.3.

There is nothing so nasty as a prices board in Britain yet. Instead, there is that pleasant feeling of being fed by a growing money supply, unquenched demand for equities by the institutions, a run of good profits results (British Printing Corporation, for instance, has just reported a pre-tax profit of £1.5m in 1971, compared with a loss of £2.4m last time) and a few plummy takeover rumours. The big takeover around, however, the one by **Grand Metropolitan Hotels** for **Watney Mann**, could very well be referred to the Monopolies Commission. On Thursday Watney Mann came out with its defence, which rests on an optimistic profits forecast of a rise of 27%.

Engineering has again been in the company news. **Clarke Chapman**, at the heavy boiler end, is now looking cheap on a p/e of 12 at 124p. But the **Birmingham Small Arms** company reported a half-year loss of £1.7m. The good news there is that last time round the loss was £2.9m and at this rate the company will eventually be back in the black. The board is not very confident, however, of that happening this year, for which the miners are accorded some of the blame; it is during the January to March period that the company works flat out making motorbikes to sell in the United States in the spring (two-thirds of sales go there). It is a pity that the company is not making the type of bikes that are selling best—the heavy 1,000 cc ones. The BSA range stops at 750 cc.

A good spec

Whisky galore

Scotch whisky sales are booming the world over. The latest figures out this week showed that exports to the three top markets are racing ahead : 46% higher than a year ago in the United States and around 90% up in France and Germany.

How can the private investor cash in on this boom directly ? According to the Warden Walker Worldwide Investment Company, if you invest in raw Scotch you can double your money in four years. After whisky is distilled, it is stored in bonded warehouses for three or four years while it matures. The idea is for the private investor to buy the whisky cheaply from a distillery, then sell it for a handsome capital gain later, after it has matured.

Warden Walker claims that investors who did this every year for the past 24 years would have averaged an annual profit of 34%. Neither stocks, shares nor property could match this. Many traditional Scotch brokers, who mainly act for the trade, are sceptical of these claims. They admit that vast capital gains are possible ; sometimes they have been as high as 400% within four years. But they point out that in some years, notably in 1964 and 1965, prices fell sharply. They also point out that holding and insurance costs mean that whisky prices must rise by about 20% over four years if the investor is just to break even. Any profit is treated as income, and is subject to income tax not capital gains tax. But even if you fail to make money on the whisky you can always drink it.

Funds

Rules for the game

A set of guideline rules for unit trusts, investment trusts and the like has now been approved by the council of the Organisation for Economic Co-operation and Development, and will be published in a few months. The council recommends member countries to review their existing fund legislation and to take the standard rules into account when making new laws—and to ensure that when foreign funds apply to sell in member countries they also follow the agreed rules. A body of rules agreed (with reservations) by Europe, the United States and Japan should help the internationalisation of the equities fund movement.

The 33 rules were drawn up by an OECD financial markets subcommittee which got to work after the IOS fiasco. They refer to " institutions for collective investment in equities," and among the more important points are :

- Funds should have prospectuses, approved by a supervisory authority, which state the general investment aims of the fund (eg, maximum capital growth) and broadly how these are to be achieved. The prospectuses should also give statistics of the size, performance and management expenses of the funds over the past three to five years.
- Every year the fund will have to publish a detailed list of securities held—as well as the fund's accounts and a statement on the growth of net asset values.
- The amount that funds can invest in any one company is limited —and not more than 15% of the assets can be in other funds.

Parts of these requirements would necessitate a slight change in British practice and legislation. But few of the others will cause any problems. Control over unit trusts is far advanced in Britain, and has been enhanced now that the industry's self-regulatory body, the Association of Unit Trust Managers, has attracted the M&G Group into its fold. The association looks as though it will be taking a tougher line in future. It now has power to call for financial information from its members.

Despite all these virtues, tax and foreign exchange considerations make the prospect of selling British unit trusts to European customers remote. Save and Prosper, the group with about a third of the British trust market, has decided to carve out lebensraum on the continent peacefully through alliances with native institutions. It has linked with no fewer than five local banks and an insurance company to form a Luxemburg-based management company, Interselex, to sell in the Benelux countries. Two funds were launched this week. They will, avoiding the current fad of all-Europe trusts (like Rothschild's new, well-connected one), invest internationally—under the guidance of Ivory and Sime, star advisers to the Save and Prosper group. Perhaps their efforts will warm stern European officialdom to British fund management. Save and Prosper spent two years setting the venture up.

Japanese market

Be car full

Tokyo

The Tokyo stock market has recently seen some profit-taking, after a dramatic rise in the first three months of the year. But the index was inching up again this week. It closed at 244.91 on Wednesday, not far below its record 250.13. Nothing can hold Tokyo stocks down, it seems, in this period of abundant internal money supply.

But will the favourites of the bull market, such as motor stocks, hold their ground ? **Toyota** and **Nissan**, the two car industry leaders, are still near to their record levels, closing on Wednesday at Y600 and Y480 respectively. Even they have been outshone by **Toyo Kogyo**, the rotary engine maker, now Y459 from a low in 1971 of Y140, on an ambitious p/e of 30. Motor stocks have been bid up partly because of booming exports. That boom has aroused opposition in America and Europe, and it will not be at all surprising if Japan's still unwilling motor chiefs have to restrain export increases in future, perhaps by voluntary controls. With Toyo Kogyo, the worries go deeper. Nobody denies the technological brilliance of its plant at Hiroshima, but everybody says that its marketing power is no match for that of its two bigger rivals. Its answer has been to put all its eggs in the rotary engine basket, developing the Wankel-licensed invention to a point of excellence in the last decade. The trouble is that, with its limited sales ability, it is being compelled to sell rotary engines for installation in cars made by another company—Toyota. And the profit on engine sales is small.

All Japanese export stocks—the big electricals like **Matsushita** as well as auto shares—were hit sharply, but briefly, by the Nixon shock of last August. One reason why they have recovered since is that Japan's export trade continues to boom, and its balance of payments continues in unmaintainable surplus. This will have to be corrected eventually, by another upvaluation of the yen or other means. On the whole, stocks of Japanese companies that sell in the Japanese home market seem a mainly better bet than the auto-makers.

Key indicators: world bourses

	Stock price indices Apr 26	1972 high	1972 low	Percentage change on one week	one month	one year	record high

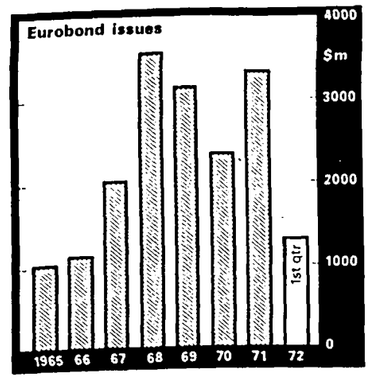
Sweden	347.5	350.9	308.7	+ 1.1	+ 3.3	+31.9	− 7.5

After a sharp rally London took a breather on Wednesday, only to go on to a new all-time record on Thursday. Wall Street overhung by Vietnam and Germany by politics.

Stock prices and yields are on pages 117 and 118



Eurobond market

Bigger—and better

Geneva

There are a lot of international bankers around nowadays. Some 450 of those active in the Eurobond market descended on Geneva last week for the third meeting of the Association of International Bond Dealers. One reason why there are so many is that the volume of trading in Eurobonds appears to be at least twice as large as anyone thought. It is now known that the market's two clearing systems are handling between them transactions worth upwards of $80m a day. Most market professionals had previously accepted $30m as the daily trading volume. Even if one knocks something off for the double counting from trades handled on both Morgan Guaranty's Euroclear and Luxemburg's Cedel, it is a substantial difference.

This removes one of the old anxieties about the Eurobond market :

that although the volume of new issues was large (see the chart), once they had been placed the secondary market did not really provide the liquidity for substantial dealings in them thereafter. Extrapolating very roughly from the newly released figures, it looks as though the annual turnover of the secondary market is something around $2 billion, which is a lot in anyone's currency. The AIBD wants to behave responsibly, and is talking about regularising the flow of new issues, at present totally unco-ordinated, to remove the frequent indigestion in the secondary market that happens when a rush of new issues looking for homes suddenly floods the telexes.

Farmland investment

Head for the hills

The rural property boom has as much steam behind it as the urban one—but the legal complications of getting investment benefit from it are much greater. After a long sort-out with solicitors, **Matthews Wrightson Holdings** has produced a farmland investment scheme hedged with more than just privet. A cool £25,000 (plus a 4% management charge) for a share in a group scheme or a "six-figure investment" (for a farm upwards of 500 acres) bring the investor the capital appreciation and the estate duty advantages of agricultural land ownership without seed and harvest-time worries. Estate duty relief amounts to 45% of the whole agricultural value of the land. The actual farming operation is carried out by another branch of Matthews Wrightson, Fountain Farming, which replaces the local farmer and his tractor by a manager with the support of all the latest mechanised equipment and horticultural knowhow.

The perks of the scheme are long-term, and the annual rent, amounting to 2½% of the initial investment before taxes and a ¼% management charge, is only nominal. But the type of land being acquired for the plan has appreciated fivefold over the past 20 years, and there is no reversal of the trend in sight.

Toys

Back to those good old days ?

The toymakers are happy again. In the Christmas bonanza sales shot up by 20%, and another 10% rise is predicted for this year. Add to this an average price rise in January of around 10% and the prospective profits are attracting attention back to the play-group.

Dunbee-Combex-Marx clocked up an 80% rise in pre-tax profits to £547,000, and yesterday's superstar, **Lesney Products,** weighed in with a £¾m profit against last year's £1.2m loss. Dunbee (on a p/e of 21 at 252p), along with **Airfix Industries** (p/e of 18 at 120p) and **Barclay Securities** (p/e of 26 at 245p), is now reaping the profits from the pieces picked up after the Lines Brothers crash. But the share prices of this trio are perhaps high enough.

Lesney is probably the most highly geared company in Britain ; above break-even point nearly all revenue goes through to profit since the marginal cost of producing a Matchbox car is negligible. That is why the share price is so shaky. The best guess is that Lesney will make £1¼m next year, which would put the shares, at 51p, on a prospective p/e of 18. But that forecast could be wrong by £1m either way. With optimism overflowing in the bull market, the shares could shoot up again. But widows and orphans should sell.

Now is the time to sell **Mettoy,** ahead of results due shortly, which may show another bad loss. It has not recovered like Lesney, although it has had the same problems with diecast cars. It also has liquidity problems.

Institutional investors steer clear of toy companies because most are relatively small. As a result there is less professional analysis than in other sectors, and this gives the small private investor an ideal opportunity to pick out tiddlers on low p/e ratios. **Rosedale Industries, Berwick Timpo, Cowan de Groot** and **J. W. Spear** are all on prospective p/e ratios of under 10. All look good.

COMPANY STATEMENT

PRELIMINARY RESULTS (subject to final audit)

	1971/72	1970/71
SALES	£324m	£296m
TRADING PROFITS	£'000s	£'000s
Footwear	17,467	15,030
Departmental stores	5,823	6,166
Engineering	9,915	7,333
Motor vehicle sales and service	1,325	779
Jewellery and miscellaneous	499	683
Sears Industries Inc. (USA)	2,835	2,783
	37,864	32,774
INTEREST	(5,475)	(5,480)
PROFITS BEFORE TAXATION	32,389	27,294
TAXATION THEREON	(14,001)	(12,108)
PROFITS AFTER TAXATION	18,388	15,186
Minority shareholders' interests	(1,223)	(1,230)
PROFITS FOR THE YEAR ATTRIBUTABLE TO SEARS HOLDINGS LIMITED	17,165	13,956
Preference dividends (gross)	(225)	(225)
ATTRIBUTABLE TO ORDINARY SHAREHOLDERS	16,940	13,731
PROPOSED ORDINARY DIVIDENDS (GROSS)	(8,746)	(7,289)
Taxation adjustments relating to prior years	437	1,029
ADDED TO RETAINED PROFITS	8,631	7,471
Earnings per share	9.7p	7.9p

The above figures do not include anything in respect of the trading results of William Hill Organization Limited, which became a subsidiary company with effect from December 29, 1971.

DIVIDEND

The Directors recommend a dividend of 5p per share (20%), less income tax, on the Ordinary and 'A' Ordinary shares in respect of the year ended January 31, 1972. (1970/71—Equivalent to 4⅛p per share (16½%) on capital as increased by the scrip issue in June 1971 of one 'A' Ordinary share for every two Ordinary or 'A' Ordinary shares.)

SCRIP ISSUE

The Directors also recommend a scrip issue of one fully paid 'A' Ordinary share for every four Ordinary or 'A' Ordinary shares held on May 19, 1972.

PROSPECTS

Trading for the current financial year to date is satisfactory. It will also have the benefit of a full year's profits from the William Hill Organization, which, for that group as constituted at the time of acquisition, were approximately £2.5m for the preceding 12 months. After charging interest (including interest on the 7½% Convertible Loan Stock issued in respect of the acquisition of William Hill Organization) it is hoped that, in the absence of unforeseen circumstances, Sears group profits before taxation for 1972/73 will reach £40m. On this basis the Board would intend to recommend a dividend of 5p per share on the capital as enlarged by the scrip issue, being an effective increase in the dividend of one-fourth.

TENDER

PREQUALIFICATION ANNOUNCEMENT

for the construction of the KATE buildings in Athens, Thessaloniki, Patras, Larissa and Heraklion

The Ministry of National Education and Religion intends to invite sealed tenders from building contractors from all member countries of the IBRD and Switzerland for the construction of five (5) Higher Technical Education Centres (KATE) in Greece.

The location and pre-estimated total construction cost per KATE are as follows:

Athens	70,000,000 Drachmas
Thessaloniki	90,000,000 Drachmas
Patras	50,000,000 Drachmas
Larissa	65,000,000 Drachmas
Heraklion	65,000,000 Drachmas

In order to proceed with the prequalification of building contractors, interested parties are invited to submit until 10th May 1972 to the Ministry of National Education and Religion—KATE Project Unit, 15 Mitropoleos Street, Athens, Greece, the necessary statements of intent, according to the written instructions obtainable from the above address.

The Project will be implemented according to the Greek laws. The cost of the project is partly covered by the proceeds of a loan agreed between the Hellenic State and the IBRD ratified by the Law No. 860/71.

Statements of intent could be made for one or more KATEs.

Development and Planning Division
THE ECONOMIST INTELLIGENCE UNIT LTD
Spencer House
27 St James's Place
London, SW1A 1NT

APPOINTMENTS

BRUNEL UNIVERSITY

DEPARTMENT OF ECONOMICS

RESEARCHER

The Department is one of several participating in a forecasting programme for an official agency enquiring into trends over the next five years in the building and civil engineering industry in the North and North West Planning Regions.

A young economist with a good first degree who wants to develop research experience and who is capable of statistical computation would be interested in joining this project. (An interest in Regional Economics would be advantageous). The person appointed would work to a programme involving collection, computation and assessment of data, some interviewing and the preparation of reports. This would take approximately half of the year's work, based at the University, which is situated near London, on the Metropolitan and Piccadilly Underground lines. The balance of the time would be spent in preparing for a higher degree, for which the forecast would provide the core of the dissertation. The whole programme is for 12 months, and it is hoped to begin as soon as possible, but not later than June 1972. Remuneration will be in the range £800 to £1,000 (plus expenses).

Please write for further details to Gavin Kennedy, Department of Economics, Brunel University, Uxbridge, Middlesex (or telephone Uxbridge 37188, extension 267).

Uppingham School

Master to teach ECONOMICS at the A level, preferably with some English. A player of games will be well received. Apply for details to Headmaster's Secretary, Uppingham School, Rutland, LE15 9QE.

New Zealand

University of Canterbury

University of Malaya

FACULTY OF ECONOMICS AND ADMINISTRATION

Chair in Analytical Economics

Applications are invited for the above-mentioned Chair.

There are no Departments in the Faculty and the programme of teaching is organised on an integrated basis among seven divisions : Accounting Division, Analytical Economics Division, Applied Economics Division, Business Administration Division, Public Administration Division, Rural Development Division and Statistics Division.

The Professor of Analytical Economics will be expected to organize courses in the field of Micro Economics at intermediate and advanced levels. Candidates should have high academic qualifications and wide experience in teaching and research. Candidates would be expected to have a grounding in mathematical bases of theoretical economics and be competent to do research in this field. Candidates would be expected to have at least ten years of teaching experience. Qualifications in mathematics would be an added advantage. Subject to academic suitability and experience, preference will be given to candidates competent in Bahasa Malaysia (Malay).

Emoluments : (approximate sterling equivalents at current exchange rates are :

(a) *Salary* : There is a range of basic salaries, to a point on which a Professor is appointed, depending on his qualifications and experience. These are : £2919, £3032, £3146, £3259, £3373, £3486, £3600, £3713 p.a.

(b) In addition a *Variable Allowance* is payable at present at the following rates : Minimum £243, maximum £649 p.a. calculated at 35% of basic salary.

(c) *Supplementary Housing Allowance* of £503 p.a.

Appointment may be made on a short-term contract at a salary higher than those indicated above.

Medical Benefits are provided under the Medical Services Scheme for the University.

Further particulars, details of superannuation and application forms are obtainable from the Association of Commonwealth Universities (Appts), 36 Gordon Square, London WC1H 0PF (Tel : 01-387 8572).

The closing date for the receipt of applications in Kuala Lumpur and London is *20 May 1972.*

Chief Economist

Hunting Technical Services, consultants in land and water resource development in developing countries overseas, invite applications from economists for a senior post based at their head office in Borehamwood, Herts.

Brighton Polytechnic

Director G. R. Hall, BSc, CEng, FRIC, FInstF.

COMPUTER MANAGER

Applications are invited from suitably qualified persons to fill the above post with a large organisation in Kenya. The present equipment comprises I.B.M. 360/30s.

In addition to being responsible for the efficient administration and functioning of the computer division, he will prepare overall plans and budgets for the division and promote the application of techniques and systems by user departments. Hardheadedness in assessing costs and benefits of present and future operations will be an essential characteristic.

The appointment will interest a mature computer professional, aged at least 30 years, but preference will be given to those who are 35 years of age and above and who have had several years' experience in line management of a similar installation, preferably in or associated with the aviation industry.

A four-year contract with very generous fringe and terminal benefits is contemplated for expatriate personnel. The basic salary attached to the post will be £3,500 per annum plus all applicable allowances. Expatriates will, in addition to all other allowances, be eligible for £1,000 per annum non-pensionable overseas addition and admissible perquisites.

Applications should be addressed to Voucher No 2439, Economist, before May 19, 1972.

A S C O

Pre-tax profits up from £22m to £28m. Earnings per share increase by 25%

"Your Board look forward with confidence to the continued progress of the Group both in the UK and overseas in 1972 and the future"

Chairman.

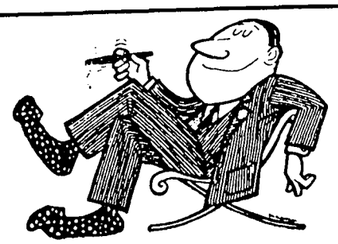
TRADING. The Group made further substantial progress, pre-tax profits increasing by 25·8% to £28m and after tax by 25·4% to £15m. Earnings per share at 11·59p were almost 25% up and the total dividend is increased to 7·75p (7p). The heavy capital expenditure of recent years benefited both UK and overseas trading and increasing costs were largely contained. Pre-tax return on capital employed improved from 14·7% to 16·2%.

OVERSEAS. Our overseas group with factories in 16 countries accounted, with our share of profits from Associated Companies, for 54·6% of operating profit. Total overseas profits were up by 12%—a new record.

EXPORTS. Direct exports to over 120 countries increased to £71m in value continuing the unbroken upward trend of many years.

UK CABLES GROUP accounted for 27·9% (27·8%) of total sales and 31% (19·5%) of operating profit—'a really splendid performance'.

UK METALS GROUP. Sales to outside customers accounted for 19·9% (21%) of total. Few problems in the copper field, a disappointing year in aluminium.



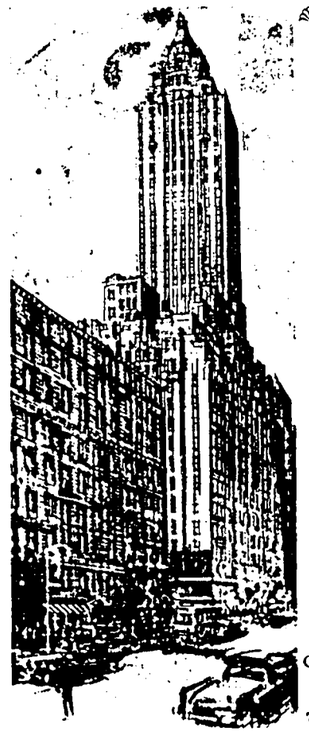
CONSTRUCTION—BALFOUR, BEATTY & CO., LTD. The Board look forward to a continuing upward trend in direct and indirect benefits from the integration of BICC and Balfour Beatty construction activities. Outstanding orders amount to some £100m—50% for overseas.

GENERAL CABLE CORPORATION. Earnings were maintained in a difficult year at 1970 level of $1·2 per share. Given the anticipated upsurge in the US economy earnings should show a substantial increase.

Copies of the full statement and the Directors' Report and Accounts may be obtained from the Secretary of the Company at P.O. Box No. 5, 21 Bloomsbury Street, London, WC1B 3QN. The 27th Annual General Meeting of British Insulated Callender's Cables Limited will be held at The Adelphi Hotel, Liverpool.

BICC

British Insulated Callender's Cables Limited constitutes the largest organisation in the world with complete facilities for research, manufacture and contracting in transmission and distribution of electric energy for power and communication purposes.



Use the London hotel that Londoners use.

The Portman Inter-Continental

Trust the local businessman to know a good thing when he has tried it. And in London it's The Portman that London executives use most frequently.
You'll find they entertain with us, recommend that their business associates stay with us and spend the night with us themselves after they've been out on the town. London is a great city – especially when you've a home to go to. Try The Portman for yourself.

PHOENIX
ASSURANCE COMPANY LIMITED

In total, a prosperous year

Summary of the Statement by the Chairman, Viscount De L'Isle, V.C., K.G., P.C., G.C.M.G., G.C.V.O., F.C.A., on the Directors' Report and Accounts for the year ended 31st December, 1971.

The substantial improvement in underwriting profits earned by the group in 1971 was due mainly to good results from the United States and the United Kingdom.

In total, it was a prosperous year for your company and in each of our major underwriting accounts, Fire and Accident, Marine and Aviation, and Long-term (Life) a profit was achieved.

We continued to expand our world-wide business.

In both life and non-life classes past records were broken. The net after-tax trading profit of £6,219,000 compares with £4,917,000 for the previous year.

DEVELOPMENTS WORLD-WIDE

Your company has acquired the Bradford & Pennine companies and we believe that after the reorganisation now in progress, these companies will help us to expand in a specialist field.

We have continued our policy of setting up local subsidiary companies wherever practicable to carry on our overseas business.

UNDERWRITING RESULTS—

Fire & Accident

World-wide premiums advanced by £7·5m to £95m. Australian figures have been excluded from the 1971 accounts following a change in procedures but will be included in 1972. As a consequence, the growth in premium is somewhat greater than would appear from the above figures. The improvement of underwriting experience, particularly at home and in the United States, has turned a world-wide underwriting loss of £982,000 in 1970 into a profit of £630,000.

1972
"for export achievement"

The HOME account has provided a profit of £939,000 (£530,000 in 1970) after providing for an underwriting loss on motor business. An increase of over 28% in premiums written, less reinsurances, has enabled the expense ratio to be reduced to 28·9% compared with 30·2% in 1970. In the UNITED STATES our share of the Continental pool has earned a profit of £462,000 in the fire and accident classes against a loss of £1,120,000 in 1970.

In CANADA the overall underwriting loss was £97,000 (£85,000 loss in 1970). In the GENERAL OVERSEAS sector a net loss was recorded of £674,000 (£307,000 loss in 1970).

Marine & Aviation

Marine business has continued to grow and a profit of £226,000 (£240,000 in 1970) was transferred.

Aviation premiums show a substantial increase and the account contributed £668,000 (£312,000 in 1970) to the year's profit.

Long-term Business

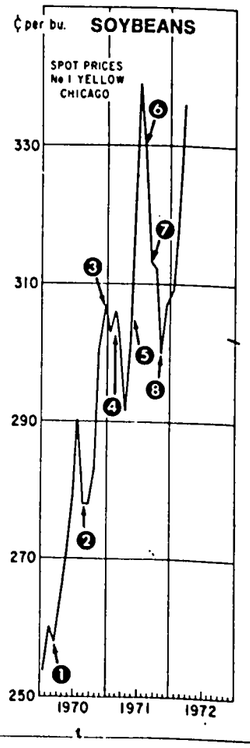
1971 was another year of vigorous expansion. In the United Kingdom new life sums assured increased by 44% from £210m to £302m. There was also a notable expansion in most overseas territories.

The profit on long-term business for the group after grossing up for tax amounted to £1,224,000.

PROFIT & LOSS ACCOUNT AND DIVIDEND

The group net profit amounted to £6,219,000 compared with £4,917,000 in 1970.

The directors recommend a final dividend of 5·5p per share, making a total distribution for the year of 9·5p per share, costing £3,818,000 (£3,416,000 in 1970).



Where Are SOYBEAN Prices Headed?
CORN
SUGAR
COCOA

Cable: ECONOGRAM Telephone: 212-697-1262
39th Year World Wide Service

¢ per bu. SOYBEANS
SPOT PRICES No 1 YELLOW CHICAGO

Recommendations of:
1. March 1970 — BUY.
2. August 1970 — BUY.
3. December 1970 — lower prices first quarter 1971.
4. February 1971 — make major commitments around 287 — 290.
5. June 1971 — prices above 340 soon.
6. August 1971 — BUY late October early November.
7. September 1971 — prices at 285 undervalued.
8. November 1971 — BUY. Significantly higher prices.

For over a quarter of a century, our basic research has enabled us to anticipate well in advance a major reversal in the price trend. It is indicative of the commodity work performed by us for many large corporations in industrial and agricultural commodities.

39th Year World Wide Service

Tokai is the capital of Japan.

When you get acquainted with Tokai Bank, you'll necessarily become acquainted with Japan's Tokaido Megalopolis. That's where Tokai Bank maintains the lion's share of its over 200 domestic offices.

The Tokaido megalopolis in the heart of Japan, with Tokyo on the northern end and Osaka on the south, is an industrial/financial/shipping region unparalleled in any other country. It is as if New York, Pittsburgh, Chicago, Detroit, Birmingham and Southern California were all located within 400 miles of each other.

Not only did Tokai Bank get its name from the Tokaido region, it's also where we get our capital. We are most active in the most active part of Japan.

Which is a fine thing for you to remember the next time you have dealings in Japan. We know Tokaido like no other bank. Which means we know Japanese business like no other bank.

TOKAI BANK
LONDON BRANCH Plantation House, Mincing Lane, London E.C.3 Tel. 01-623 1384/7

Easy rider.

The NEW FOER 12 fork lift truck range

Lansing Bagnall

Europe's largest maker of electric lift trucks

1969 1970 1971
THE QUEEN'S AWARD TO INDUSTRY

Are you sure your operators work at peak efficiency throughout their full eight hour shift? Put them on our new FOER 12 and they will.

Because when we designed the FOER 12 range of electric fork trucks we put the operator's needs right at the top of the list. To give him the smoothest, easiest ride ever.

Take a look at just ten of the new features of this new range:

- Ergonomically designed control layout
- Sprung seat
- Padded scuttle for safety
- Overhead guard standard
- Heavy duty motors and axles
- Fully rollered mast and fork carriage
- Electronic control on traction and hydraulics
- Easily adjusted forks
- Optional lighting
- Optional tilt and capacity indicators

Lease it, Rent it or Buy it.

To: D. G. Caswell, Home Sales Division, Lansing Bagnall Ltd., Kingsclere Road, Basingstoke, Hants. Tel: Basingstoke 3131.

Ticket to court

The Government had to use its new law once the railwaymen would stop for no one, not even an arbitrator. It is the old labour relations establishment that is chiefly responsible for the crisis, and if the unions are cooled off it should be choked off, page 11. The unions may regret one day that they boycotted the court, but their wage claim still has to be settled now, page 81.

The war's in the south

Mr Nixon's decision to bomb Haiphong is a retaliation for North Vietnamese aggression but cannot greatly affect the course of the struggle in South Vietnam, page 16. The tank battle at An Loc, page 39.

That Sunday in Derry

The Widgery report on the paratroopers' behaviour in Londonderry has not pleased those Catholics who had already made their minds up about it, but it should not please the army as much as it pretends either, page 63.

Tony's warning

Mr Crosland came bottom in Labour's deputy leadership election. But he served his party well, page 12.

Willy's in town

The world loves Herr Brandt, but back home in Bonn he faces a hard fight, page 14.

Say oui

President Pompidou has got his left-wing opposition on the run in his referendum on Britain's entry into Europe—which was the main idea anyway, page 31.

How badly hit?

How international sanctions have, and have not, affected the Rhodesian economy, page 43.

Ireland

SIR—I have just read your editorial, "Can Ulster forget?" (April 1st), and, like so many other journalistic and political commentaries from around the world on the subject of Ulster, it completely depresses me. I have yet to see in the world's news media, or hear from a responsible politician, any sympathy for the Protestant population of Northern Ireland, and yet they are the only people to emerge from the gory mess with any honour; and I have yet to hear or read any commentary that indicates that the commentator has any comprehension of the fundamental reasons for the trouble in Ulster.

I am continually mystified at the acceptance of the double standard of justice that is applied throughout the world towards Wasps (white, Anglo-Saxon Protestants) and non-Wasps. The double standard is accepted even by Wasps themselves, as if suffering from a massive guilt complex over their colonial past and indulging in self destruction as expiation. A non-Wasp can throw stones at, shoot at, murder, maim, kidnap, assassinate, steal from a Wasp and his behaviour is excused as the understandable reaction of a member of a poor, oppressed, discriminated-against minority. If the Wasp turns on his tormentor he is branded a fascist pig, an imperialist oppressor. American negroes, who are unquestionably guilty of savage murder, are hailed as heroic fighters against oppression by educated and supposedly intelligent people, white as well as black. It is reasonable for the French Canadians to agitate for the preservation of their language and "Frenchness", but if an Anglo-Saxon wants to retain his British heritage he is a colonial blimp.

The events of "Bloody Sunday" raised screams of rage around the world. The local branch of the Irish mafia organised a march on the British consulate in Toronto, the New York branch started a boycott of British goods, Ted Kennedy got up on his soapbox and spewed out invective about Britain's My Lai, and detailed pictures were spread across the newspapers and television screens. But when the IRA massacred and maimed women and children in the Abercorn restaurant atrocity, these self-righteous bigots remained silent.

Cardinal Conway, the spiritual leader of Ireland's Roman Catholics, has just called for an end to the violence: "What right have you [to Sean MacStiofain] to continue the campaign of violence against the unanimous voice of the Irish people?" At the same time he complained that if IRA violence had ceased after the British initiative four people would not have died. In the good Cardinal's Christian ethics, apparently, the IRA did have a mandate for the violence and murder before the British initiative. If the Irish Catholics, the Catholic church and the Lynch mob had not sheltered the IRA murderers, over 250 people would not have died. Such monumental hypocrisy is nauseating.

The IRA has been guilty of the most savage atrocities ever perpetrated by man against his fellow man, and the British Government has seen fit to come to terms with these savages at the expense of the democratic rights of an honourable segment of the British people. The British Government has an unenviable record of double-dealing in international affairs, and its perfidy was predictable. The depressing aspect is that the British people seem to condone the Government's action and for the sake of expediency have turned against their own kin.

There are no guts nor backbone left in the British race. The breed is dying, and Heath is about to hammer the last two nails into the coffin. Unfortunately, democracy will die with the people who developed it.—Yours faithfully,

Weston, Ontario GRANT FINLAY

Wages

SIR—Mr J. W. Stobart's letter (April 1st) raises the old chestnut of whether a miner is "worth" more or less than a teacher. Worth to whom? Surely a person's remuneration is simply what his employer has to provide to get him. No more (or the employer is increasing his costs unnecessarily) and no less (or the employee won't do the job). It's as simple as that. Arbitrary evaluations or comparisons, though interesting, are irrelevant.—Yours faithfully, J. P. HARPER

London, SW3

SIR—Mr J. W. Stobart's solution to the problem of comparative wage scales (Letters, April 1st) is a rational one, and indeed something very much like it has been in use within North American companies for at least 30 years, especially for office and professional personnel.

But a problem arises when wages are formally negotiated, and, more specifically, negotiated by union officials whose tenure may rest on their ability to produce, ie, to obtain higher wages for their constituents. If a job evaluation scheme were introduced, wages per se might not be the principal area of negotiation, but the operating features of the scheme might.

The miners might argue, with some justification, that Mr Stobart's system does not include a health hazard or danger factor, that this factor should have the highest weighting, and that mining is one of the most dangerous of occupations. The other side might argue, with equal justification, that Mr Stobart's plan does not include a mental effort factor, and that business managers, under constant mental strain, should receive top score on this one, to the detriment of the miners, on a relative measurement scale.

Most of the factors involved in job evaluation are a matter of judgment, with few being subject to quantitative measurement. The factoral weightings given, even by men of unquestioned good will, are therefore subjective in nature.

Job evaluation is certainly a logical approach to comparative wage scales, if one could assume the complete impartiality of the evaluators, and the gracious acceptance of their findings by the parties affected. But, as is evident, these are not easy assumptions to make.—Yours faithfully, EARL P. LIONS

Pully, Switzerland

At Harold's court

SIR—One of your reviewers (April 8th) has admirably identified reasons for the failure of economic advisers to government to achieve either a respectful audience or the complete implementation of their ideas. Many of your readers may have missed the full impact of his comment that "... the doctrine of the 'politically possible' castrates all progressive or original thought." But why is this so?

First, economic advisers, through their political interests or their seniority of contact with politicians, too often present schemes that they feel will have a high probability of being acceptable. They interpret their brief incorrectly and, may I add, irresponsibly. Rather than present a list of alternatives, the choice of which becomes the politicians' responsibility, they transform themselves into political spokesmen and after a while lack credibility and originality.

Secondly, this general lack of professional detachment too often results in an intolerance towards competing alternatives. When ideas come from the "independent" sector of academic economists they are portrayed as "politically unacceptable," and this label terminates the discussion.

Thirdly, where economic policies are adopted and subsequently become discredited or unpopular, it is common for the politicians to claim that the policy was unrealistic, inappropriate or incorrectly timed. When the academic economist works within a given political framework he invites this reaction and deserves to take the same public criticism and risk of unemployment as his political counterpart. But does he? No, he returns to the ivory tower of disillusionment or admits defeat in the face of complex circumstances.

When economic advisers to government believe in their professional competence perhaps they will also agree to subject their ideas to the uncertainty of the job market rather than the obfuscating tactics of the political arena. Do they deserve the inconsistent privilege of both political power and academic independence?—Yours faithfully, K. A. TUCKER

SECOND CLASS POSTAGE FOR *THE ECONOMIST* PAID AT NEW YORK, N.Y
Published weekly every Saturday, fifty-two times a year in London, England.

MANAGEMENT APPOINTMENTS £7000 PA AND OVER

Industrial Development Executive

REGIONAL INDUSTRIAL DIRECTORS

to advise on the allocation of selective aid **£8000 plus**

The Industrial Development Executive has recently been set up to implement government measures aimed at stimulating industrial and regional development. A strong regional organisation, based on the regional offices of the Department of Trade and Industry, will be an essential part of the new Executive in the assisted areas. This organisation will have a new, positive role and an important degree of devolved authority.

There are three appointments to be made, based on:

Leeds : Manchester

Newcastle-upon-Tyne

In each case, the Regional Industrial Director will have a key role to play in assessing local needs and advising the Regional Industrial Development Board on the selective aid programme. In tandem with his co-Regional Director (a Civil Service Under Secretary), he will exercise considerable authority in the allocation of assistance to projects in the area.

Specifically, his main responsibilities will be to:

- seek out potential candidates for grants, and evaluate applications for selective assistance in the region
- provide an expert view on the obstacles to industrial growth in the region, and on the steps necessary for promoting industrial expansion and modernisation
- ensure that industrial factors are given full weight in the overall planning in the region
- promote the region's industrial interests.

Candidates must have held a senior managerial position in industry or finance (ideally both); the ability to work with others in a team is essential, as is the individual ability to influence the thinking and decision-making of high-level management in a wide variety of industries.

Salary negotiable, but not less than £8000; the appointments can be either on secondment or on a short-term contract basis (probably two years in the first instance). Gratuity on completion of term; benefits include use of car.

Please write, quoting S.584 and enclosing a brief curriculum vitae, to: **J. A. Battersby, Room 106, Department of Trade and Industry, 1 Victoria St., London, S.W.1.**

Department of Trade and Industry

Space on this page is reserved for managerial appointments carrying salaries of £7,000 p.a. and above.

Other appointments are advertised in the regular classified section on pages 125 to 131.

Inquiries for space on this page and in the regular classified section are invited by:

The Classified Advertisement Manager,

Telephone 01-930 5155

Scotland

SIR—Your Scottish correspondent, in his report on the Scottish Labour party's conference, seems to have a myopic view of Scotland in Parliament (April 1st). He confuses economic decision-making and political devolution.

There is a deal of evidence that the next Labour government will set up institutions which will devolve investment decisions. Recently, the House of Commons debated a motion on such a topic put forward by Mr Edmund Dell, and Mr Bill Rodgers has introduced a bill for a Regional Development Corporation. Both have had the support of Scottish members. Further, on Tuesday, March 28th, Mr John Smith, MP for North Lanark, made his contribution by his ten minute rule bill.

In view of events across the Irish Sea, there can be few who would doubt the wisdom of endeavouring to cure Scotland's economic problems by a mere restructuring of political institutions. The Scottish electorate had before them in 1970 a variety of proposals for political devolution. These were resoundingly rejected by the "grass roots" and, while it is correct to be critical of Labour's policy between 1964-70, one should have sufficient judgment not to confuse a desire to do better with a wholesale opposition to the devices which Labour introduced. Perhaps your *correspondent should* have spent more time travelling out of Inverness to see some of the excellent work done by the Highlands and Islands Development Board, an instrument which Labour fashioned against enormous opposition from all quarters, and rather less in the "smoke-filled" corridors of power. Those who talk about the "grass roots" would do well to sample them.—Yours faithfully,

House of Commons DICK DOUGLAS

Textiles

SIR—I was most interested to read your article, "The world man-made fibre cartel" (April 8th), but your conclusions that the British textile industry should be able to stand on its own feet without further props may solve the textile problem by finally bankrupting the industry, and will only leave the same problem to be faced by other industries. There are many countries —Portugal is one—which are using exactly the same efficient machinery that we are using in Britain, and which are producing very much cheaper than us because the wages they pay are a fifth of the wages we pay.

This same problem is already arising with coloured television sets, and is most certainly going to arise with motor cars and many other *products*, and your solution, if we carried it through to its logical conclusion, would be to reduce the standard of the average British worker to the level of the cheapest competitor, or alternatively for anybody producing in the United Kingdom to export their plant to where the labour was the cheapest.

There has been gross over-production of synthetic fibres in the world as a whole, but there is no reason, surely, to allow ICI to be bankrupted on this count by forcing Britain to take the balance of textile fibres from many foreign countries, and particularly those supplies which the United States is no longer prepared to take from Japan. Many of these will come into this country through countries entitled to import duty and/or quota-free.—Yours faithfully, JOHN KNOX

Silsden, Yorkshire

Vat

SIR—The Customs and Excise officials present at the CBI seminar to which you refer (April 8th) took the opportunity to make certain points reflecting our present thinking which has updated material from the discussion papers. These were unfortunately not mentioned in the report. The main points are :

(a) You say that partially exempt traders will have to account for tax on an annual as well as a quarterly basis. We now think we can do the annual calculation for them.

(b) Retailers dealing in both standard rate and zero rate goods are said to have five different options. In fact, there are now three only, which should give an adequate range of choice.

(c) The draft return form, which accompanied a discussion paper, was prepared before the announcement that there would be only one rate of tax and no special treatment for capital goods. We will not now want as many different figures. There will be no reference to capital goods and the input section of Part 2 will be much simplified.—Yours faithfully,

CHRISTOPHER MOYLE
Chief information officer,
London, EC3 HM Customs and Excise

British Caledonian

SIR—British Caledonian has now completed its first year as the only permitted scheduled British airline passenger carrier on the various West African routes.

I would like British Caledonian's deputy managing director, Mr John De La Haye (Letters, October 30, 1971), to tell us, through your columns, by how much it has in this period helped to "gain for Britain an increasing, instead of a diminishing, share of world civil aviation markets."—Yours faithfully, R. M. BALE

Lagos

Sherlock Holmes

SIR—Referring to your scholarly review of the latest tributes to Sherlock Holmes (Books Survey, April 8th), may I recall that the first plaque in memory of The Master was erected and formally unveiled in 1953 near the main entrance to the Criterion hotel in Piccadilly, where (in 1881) young Stamford encountered Dr Watson by divinely ordained chance over a New Year hangover drink and took him along to meet Holmes (then 27). The plaque, an imposing product of heavy oak and the finest Sheffield steel, cost £66. It was humbly erected by the Baritsu Chapter of the Baker Street Irregulars, founded in Tokyo in 1948 and still flourishing. Two of its 25 founding members were the then prime minister, Shigeru Yoshida, and Count Makino.

After three years of honoured display, it was ravished from the wall on the early morning of Derby Day, 1956, by two or three men, who drove off in the direction of the Casino Royal. Scotland Yard's Lestrades weakly passed the buck to Savile Row, which I discovered, on two frustrated and angry personal visits, had dismissed the nocturnal smash-and-grab sacrilege as an unimportant students' prank. Seven years later, the plaque was mysteriously returned to Dr Colin Prestige of the Sherlock Holmes Society.

Where should it now be erected? Piccadilly and the Criterion change; but The Master happily remains immortal.—Yours faithfully, RICHARD HUGHES

Hongkong Chief Banto, Baritsu Chapter

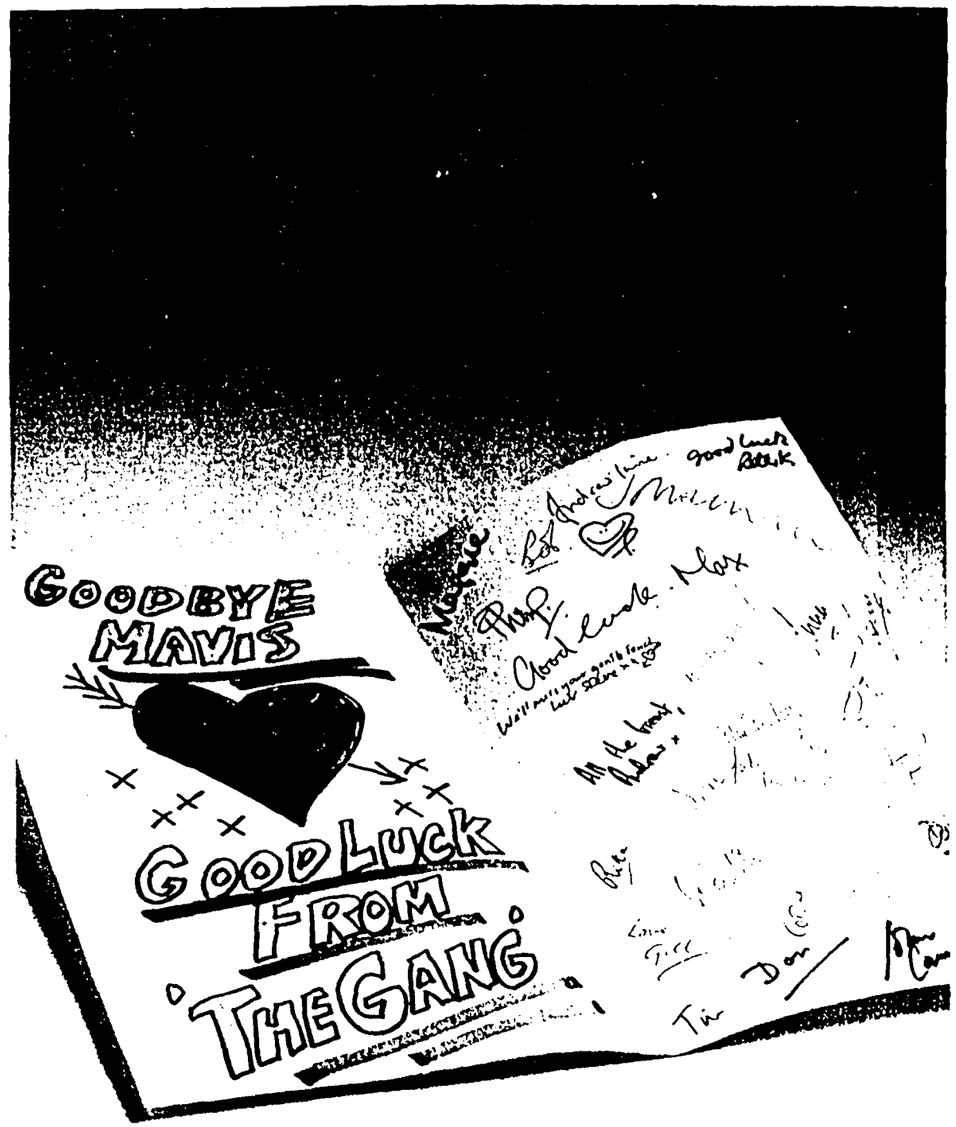
American medicine

SIR—Congressman Philip Crane writes from Washington (April 15th) that the United States has 300,000 medical doctors, which is on average one for every 640 persons, and boasts: "No other major nation in the world enjoys anything close to this ratio."

When President Nixon visits Moscow in the near future he will find that Russia averages one doctor for every 400 persons, the total in practice now being over 600,000.

Is it not time that American Congressmen troubled to find out the facts about that "other major nation"?—Yours faithfully, PAT SLOAN

Orpington, Kent



Centre to centre, it's quicker to Paris with a Lion on your tail

Catch the Golden Lion from London Airport, Gatwick, to Paris. British Caledonian's regular jet service, four times a day. And centre to centre, the fastest route you can take.

First, because you can check-in yourself and your luggage at BCAL's Central London Air Terminal at Victoria Station, with its fast rail-link to the airport. Secondly, because we land at Le Bourget, a quick eight miles by road to the Champs Elysées. And our times fit in with most business appointments.

Ask your Travel Agent for the Golden Lion Service to Paris.

BRITISH CALEDONIAN go places in style

Everytime you sign one of these it costs you £200.

On Friday afternoons all year round, your profit waves goodbye and walks out of the door.

In one year, 6 out of every 10 London secretaries will decide it's time to quit.

And every time someone leaves you, it costs £200 to replace them.

Two hundred pounds.

Meanwhile, you're paying £1,000 a head over the odds just for having offices in London.

And all the time it's getting worse.

This year's rent reviews are putting some rents of £2.50 a square foot up to an amazing £15.

We know a place where the grass is greener.

Where people stay with you longer.

Where they take off less time.

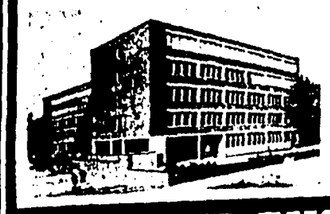
Where on a hundred man office you can save up to £100,000 on rent alone.

We'll talk to you about your business needs, and advise you about the best places to look over.

We'll tell you about rents, communications, staff, housing and anything else you want to know

And since we're independent, we'll tell you straight.

Try us. Move out your accounts department and let them work out just how much money you'll save.



And we'll show you how moving offices can be smoother than moving house.

The Location of Offices Bureau.
27 Chancery Lane, London WC2A 1NS Tel 01-405 2921.

Finance and banking in Ghana will never be the same again.

Because on March 15 the National Finance and Merchant Bank opened its doors for the first time.

The new bank is a co-operative venture, with the Government of Ghana, and National and Grindlays Bank as the major shareholders. And it will be offering the following services.

First, credit and hire-purchase facilities within Ghana itself.

Second, a full merchant and commercial banking service—together with consultancy services, and financial and administrative facilities for both importers and exporters.

If you're doing, or planning, business with Ghana, why not get in touch? And find out just what we can offer you.

National Finance and Merchant Bank Ltd.

Box No. 401, Liberty Avenue, Accra, Ghana.
Managing Director: Mr. George Hammond.
Or make contact through National and Grindlays Bank in London.
Phone: 01-626 0545. Telex: 885043-6.

Ticket to court

The railway unions ran slap into the Industrial Relations Act on Wednesday evening, and precious little public anguish was expended over their derailment. That it happened at all, for all their leaders' caution, is the measure both of the habitual negotiating behaviour of British unions under the system so much admired by the labour relations establishment, and of that establishment's sheer disbelief that the Government would have the nerve to implement the very law it had passed through Parliament. For that the Government, and past governments, must take a share of the blame.

The unions' best chance of complying with the 14-day cooling-off order by the industrial relations court, without admitting that they were doing anything of the kind, was to close with whatever packaging British Rail could be persuaded to put round the 12½ per cent wage rise the unions had already got for themselves. There were signs that this was what the labour relations establishment wanted to arrange on Thursday, but British Rail's chairman, Mr Dick Marsh, held to the view that the unions must be seen to be obeying the law before he could talk to them again; anyway, he said, he had no more money to offer.

So after a day of arguing the three unions decided on Thursday night to obey the court and call off the work-to-rule. The Government can be satisfied with its week's work. If, next time, a union chooses not to put the Solicitor-General to the trouble of addressing the beak, so much the better. If, next time, an employer recognises that the court and its powers really are there when a big union goes bulldozing ahead, there should be a better chance of getting settlements less absurdly inflationary than the railwaymen's 12½ per cent already is. No self-respecting union, naturally, will expect to find itself in precisely the railwaymen's predicament next time: that is, caught in quick succession condoning unofficial action in breach of an agreement to go through their industry's full negotiating procedure, then accepting a private arbitrator and rejecting his recommendation, and then taking official action in breach of their agreement—and all this without the sympathy of the public or the press. But the railwaymen could not believe that the old days and ways might be coming to an end.

They should know a little better now. They had to face the consequences of what would happen if they broke the law. They had to calculate whether or not the militants could suddenly be ordered to pull back for less than the full claim or would insist on breaking more law than the miners did. But, even more important, they had to take three political factors into account. First, they had to decide if they wanted to escalate the quarrel into one between the Trades Union Congress and the Heath Government that could be resolved only by the electorate. Second, they had to decide if, in any lesser conflict, they should rely on the strategy of Mr Jack Jones, who now faces £55,000 in fines for defying the court. Third, they had to decide what backing they were likely to get from the Labour party: since both Mr Wilson and Mr Callaghan, representing the cautious wing of the shadow cabinet, had insisted that the law had to be obeyed until it could be repealed, the augury for an electoral resolution seemed dim. What the unions generally now think of the Labour party's ability to get the Industrial Relations Act repealed in this decade is, of course, another matter.

Doing what comes naturally

The Heath Government believes, and Mr Barber has said so pointedly, that its responsibility is to carry out its economic policy and to fight for that policy, drawing public opinion in, when a sectional wage claim like the railwaymen's is utterly at odds with it. The unions were angered by Mr Barber because they depend on governments finding through taxation the wholly uneconomic top layer of wage settlements which the nationalised industries cannot meet through the price system. Some governments do this to avoid inconvenience which they believe public opinion will not accept, others when they are fearful of industrial breakdown and the collapse of the balance of payments. Last week the Heath Govern-

ment placed the needs of its economic policy above its fears of industrial breakdown. By last weekend this had put the unions in something of a quandary in trying to add to the 11 per cent that had already been conceded by Mr Marsh. But they did what came naturally.

They turned first to the labour relations establishment ; that is, to the Trades Union Congress, the civil servants, academics and journalists who are committed to the customary way of doing things in St James's Square, who believe sincerely that there is no other way of doing things in a complicated industrial society, and who are prepared to advise governments and the community to accept inflationary wage settlements by an arbitrator of some kind or other in preference to what governments, with sudden rushes of blood to the head, may occasionally insist is the public interest. This system, normally, suits the unions very well: it is pretty much what the TUC, dominated by Mr Jack Jones, wants the Labour party, the unions' political wing, to commit itself to unreservedly should it ever get into office again.

And so it came to pass that the unions were persuaded to take an arbitrator selected from the establishment's finest and best, that he gave them 1½ per cent more, that they then refused his award but, as usual, added the 1½ per cent to what they had already secured on the climb towards 16 per cent, so that the egregious Mr Vic Feather and other enthusiasts then took up the cry that only a narrow gap divided the two sides after all. Seemingly, according to Mr Feather's logic, another unsuccessful arbitrator would get another slice for the unions, and another another, and so on until the last one had Mr Heath handing over the 16 per cent in person, plus a glass of whisky all round in Downing Street.

The Government has exerted itself, but at some risk. It has put its act to the test sooner than it would have wished. It has no backup weapon against union recalcitrance except the threat of a general election, a threat that the Heath Government can make today with some credibility, but which Mr Wilson's government (like every other government) was less able to make for long stretches of its time in office. A beginning has been made, that is all. Ministers may reflect on what the mounting cost now is—and may yet become—of all the earlier advice of the labour relations establishment and especially of the first Wilberforce report over a year, and a million unemployed, ago.

Set for self-destruction

Mr Crosland came bottom in Labour's deputy leadership election. But he did the party a major service by standing, and explaining why

Like out-of-work actors, the Labour party has tried to give the impression this week of resting between engagements. Mr Wilson made two important appearances—on radio on Sunday and television on Monday—but his performances were not much noticed: those who did see him were undecided whether it was he or the BBC who came out of the television encounter with their reputations most diminished, or whether, indeed, it was possible for that to happen to either these days. But, like good troupers, most Labour MPs went through with the Commons farce of demanding a general election and/or a referendum before Britain joins the market, and were roundly defeated on Tuesday night. The anti-marketeers turned a bit nasty in the Commons on Wednesday, but the real Labour party show went on backstage with the ballot for a deputy leader.

To be continued

When the result of the first ballot was announced on Thursday evening it was no great surprise. Mr Tony Crosland, easily the most able of the three candidates, naturally came bottom, but with 61 votes. Mr Michael Foot, still the best parliamentarian that the Labour party has got when it does not matter very much, received 110 votes, which was 16 fewer than he got against Mr Jenkins last year. Mr Ted Short, being the least threat to any faction for future dominance of the party, just pipped Mr Foot at the top of the ballot with 111. The only question which had been in doubt was whether Mr Crosland would poll enough to make the top two go to a playoff next week. He achieved that very creditably, and it now looks as if Mr Short will be the next deputy leader of the Labour party. One would have to go back to Attlee before the war to find a Labour leader as colourless as Mr Short. Unfortunately, Mr Short is no Attlee in the making.

Mr Crosland returned from Japan to fight the deputy leadership election. At first sight that seems to have been one of the more unnecessary political journeys. But Mr Crosland did well to stand, and in particular his brief manifesto setting out his reason for doing so could be studied with some profit by the Labour party in the country. His statement gained him precious few votes among Labour MPs, who are either certain they always know the score or cling to the curious and outmoded belief that open canvassing by a candidate should somehow disqualify him for office in the party. Mr Short was given the nod by Mr Jenkins and most of the pro-marketeers, and most of the centre and right were behind him. Mr Foot could similarly rely on the left and most anti-marketeers to support him. But Mr Crosland did something more important than merely standing for office. For not only did he add his voice to those few senior Labour politicians who have the courage to express their dismay at the way the party is being led, he dragged into the open something which everyone at Westminster is only too aware of: the deep-grained defeatist mood of the Labour party.

Even Mr Jenkins in his resignation letter to Mr Wilson last week went through the ritual of assuring everyone that Labour would "very soon" be the government once again. That *is* not the way it seemed to most MPs on both sides of the Commons, even before Thursday's Gallup Poll in the Daily Telegraph, which found Labour's national lead had fallen to just 1 per cent. That poll merely confirmed the widespread belief that Mr Heath will win the next election whenever he cares to call it. In face of all the Government's political difficulties, that belief might seem wholly irrational. Objectively it is, but it exists because MPs on both sides have the daily evidence of the demoralised state of the Labour party before them. By bravely stating what is obvious at Westminster, that Labour is set "on a course of self-destructive madness" and that time is running out for it, Mr Crosland may have disabused some members of the party in the country of the comforting notion that it is only Mr Jenkins and his friends in the pro-market, capitalist press who regard the Labour party as being in deep trouble.

The left's illusion

The left wing of the party at Westminster, in the unions and in the constituency parties is anxious to foster that notion, and if Mr Wilson did not pander to it he would be conceding his own failure. But at least Mr Wilson does not go all the way with the left's weekly voice, Tribune, which flatly declared last week that: "The first and most important reason that a Labour MP is returned to Westminster is to do all in his power to defeat the Conservative Government." Mr Wilson is not prepared to do all in his power to defeat the Government. It is true that he is prepared to swallow such personally repugnant proposals as a referendum on the common market for that end, but just before Easter Mr Wilson "saved" Mr Heath by supporting the Government's Ulster initiative just as much as Mr Jenkins and his friends have ever saved the Government on the European issue.

Mr Wilson has said, and no one argues with him, that anyone who believes that the common market issue is more important than bringing down Mr Heath's Government is out of touch with the mood of the Labour party in the constituencies and trade unions. Mr Jenkins and his friends are well aware of that ; it is one of the reasons why they, too, went through the empty sham of voting for a general election before entry on Tuesday. But the greater danger does not lie in the marketeers misjudging the mood of the Labour party, it lies in the rank and file and the trade unionists being out of touch with the mood inside the parliamentary Labour party. Most Labour MPs may appear to have no stomach for any fight these days. They are certainly sick to death of the market issue and they would rather avoid than think about the problems of industrial relations or much else of importance that a Labour government would have to face. But the fact that Mr Wilson could not command a majority of Labour MPs at the parliamentary party meeting on the referendum, plus the combined votes of Mr Short and Mr Crosland in the deputy leadership election, suggests that while the moderate and right-wing majority of the PLP may not yet be ready to assert its old position in the party, there is still hope that it will not become the bound and gagged victim of the left, either.

But, as Mr Crosland said, time is running out. The parliamentary party is in a shambolic state and the only way the Labour whips could maintain a semblance of party discipline on Tuesday night was by abandoning any attempt to impose discipline at all. Thus, although the referendum amendment was defeated by 284 to 235, it is impossible to say just how many Labour MPs abstained, because many who would have done so did not know themselves whether they actually abstained or were marked as paired with an imaginary Tory by the Labour whips. That may be politics, but it is absurd. If the Labour party, both in Parliament and outside, thinks it can shamble on through the summer and autumn in that fashion it is mistaken.

There is talk of Mr Heath calling an early general election ; there is always talk of an early general election. Those who were bitten by asserting in 1969 that Mr Wilson would hardly risk an election before the autumn of 1970 at the earliest are not to be found now asserting that Mr Heath would not risk an election this year. But the possibility makes many Labour skins creep, for as there is very little chance that Mr Heath will be defeated on an issue of principle in the Commons, such a general election is only likely if the unions' confrontation with the Government and public escalates to the danger point of a breakdown in law and order ; in such an election Labour could be decimated.

Committed to withdraw from Europe

But even if the unions or the Government back away, or down, it will be no time for the sensible majority of Labour MPs to relax. From now on it is, inside the party, the run-up to the party conference at Blackpool in October, the time when individual unions start holding their annual conferences and constituency parties frame their resolutions. The militants will be exerting continuous pressure on the moderates, for the left wing of the party believes it has never had a better opportunity than now to dictate Labour's policies for years to come. Mr Foot, it is said, has no wish to drive the marketeers or the right wing out of the party. That is no doubt a fair assessment of his position ; but it is not shared by all his followers by any means, and even Mr Foot would deny that he has lost any of his old ambitions to replace moderate policies with the left-wing fundamentalist gospel. The push against the moderates will be across the whole spectrum of industrial, economic and social policies, but it will be particularly concentrated on the demand that the next Labour government should be committed to withdraw from the common market.

If that demand culminates in success at the conference, and it very well may, it will create havoc in the party. Those leading marketeers who did not follow Mr Jenkins last week committed themselves to resign their positions if the parliamentary party ever went against the principle of Britain's entry. Indeed, Mr Wilson promised them that he would never accept such a decision himself. But he is equally committed to holding the party together by

avoiding such confrontations, and he would be faced with the dilemma of breaking his word or changing his whole style of leadership. It might be thought that would not be much of a dilemma for Mr Wilson, but it is an even bet at this moment which way the parliamentary party would go in such a situation ; whatever it did, it could not avoid a damaging split. There are good reasons, if you are a Labour MP, to be a defeatist. What there is no excuse for is failing to recognise, along with Mr Crosland, that the party is now indeed set on a course of self-destruction.

The good German, in bad

The fact that the world seems to love Chancellor Willy Brandt does not make his problems back home in Bonn all that easy to solve

Everybody likes Herr Willy Brandt and wants to be nice to him—or so it appears from a glance around the present international scene. When the Queen invited him to be her guest at Windsor during his visit to Britain this week, there was scarcely a murmur of protest from even the most hardened anti-German protesters. Mr Heath's government, being well aware of its particular need to retain Herr Brandt's goodwill during the tricky period of the common market negotiations, has no intention of neglecting Bonn now because of its preoccupation with developing better relations with Paris ; and a Labour party in opposition is not going to let its own private agonies over the common market prevent it from demonstrating its affinities with the world's most important Social Democratic head of government. M. Pompidou may be no socialist but he prefers Herr Brandt's east European policies to those of the opposition in Bonn. The Nobel peace prize committee has given the chancellor's Ostpolitik its seal of approval. Mr Brezhnev has taken him boating in the Crimea, and the Poles have given him a welcome that few people could have expected to see a west German leader receive in Warsaw.

Outside Europe, too, the Brandt government's stock is high. West Germany is still America's respected partner in Atlanticism. It is no longer being reviled by Arabs for alleged favouritism to Israel. The African associates of the European community are appreciative of the German contribution to its pool of development funds. Bonn's relations with the third world as a whole are not now bedevilled by the former dogmatism of the Hallstein doctrine. At the Unctad meeting in Santiago Herr Schiller shone out last week as the spokesman for a government that actually proposed to offer the poorer countries easier loan terms at a time when the general trend was the other way.

Herr Brandt is an essentially pleasant man, but he must be occasionally surprised to find how many people outside Germany are well disposed toward him and his government. How different it is from the home life of a hard-pressed chancellor. His own party has no majority in the Bundestag and his coalition depends on the meagre and restive support of the small Free Democratic party, led by his foreign minister, Herr Scheel. Only a few weeks ago the Free Democrats were contemplating with horror the prospect that this weekend's election in Baden-Württemberg, one of their former strongholds, would bring about their elimination from the legislature of that south-western *Land*, for the signs were that they would not even get the 5 per cent of all votes that is the prescribed minimum for representation. And this glum scene was set against the background of the Christian Democratic opposition's unrelenting assaults on Herr Brandt's eastern policies. For a while last month it looked as if the government might easily lose the vote that is due to be held in the Bundestag on May 4th on the ratification of the treaties with Russia and Poland that he negotiated in 1970. There was even talk of a general election being held this year.

True, things have picked up since then. The Free Democrats now seem confident of getting at least the essential 5 per cent in the Baden-Württemberg poll. Even a moderately satisfactory result in that *Land* could help to steady the coalition's ranks in the Bundestag on the eve of the ratification debate. Last week Herr Brandt went so far as to claim, in a statement to Der Spiegel, that the ratification of the eastern treaties was in the bag. But even if that claim proves justified, was he not over-optimistic in making the further prediction that things would really begin to look up after the treaties had been ratified ? There are several reasons to expect that the coalition could still find itself running into heavy weather even if it does triumph on May 4th.

Where's that tax reform ?

The most important of these reasons, perhaps, is the government's conspicuous lack of success in managing the economy. Admittedly the recession has not materialised. But inflation has not been checked ; it is now running at an annual rate of 5.8 per cent. And in next week's budget debate the government will have to explain the fact that the budget deficit has increased by £324m to £880m, as well as the fact that Herr Schiller has not yet implemented the much-publicised tax reform that was one of the main pledges given in the 1969 general election campaign.

One of the obvious implications of the large budget deficit is that the government will have to postpone, or shelve for the time being, many of its projects in housing, health and education. For the inhabitants of such a prosperous region as Baden-Württemberg, which has been called Germany's California, the prospect of cutbacks in spending on social welfare may not be too daunting. But there are other issues that now worry even the most pros-

BOAC

perous members of the electorate. The most topical of these is the rising tide of lawlessness: Herr Brandt seems to have got the message here. He has promised to spend £17m more on public security next year, and last week he called officials from five major cities together for an urgent conference about ways of combating crime.

Some new blood might help

The coalition is also under strong pressure to do something about the situation in the universities, where, in the public mind, left-wing radicalism is coming to be identified with simple hooliganism. Herr Brandt's government treasures its liberal image and is particularly reluctant to alienate its own radical young supporters by undertaking the amendment of the existing law on university affairs. But it is also anxious now not to be branded as a government of inaction and ineffective liberalism. The chancellor's critics within his own party hold him personally responsible for failing to give a lead, and they particularly condemn his way of dealing with the young left-wingers whom they see capturing more and more positions at the party's grass-roots. Two weeks ago a leading radical created a sensation by defeating a moderate Brandt nominee in a local leadership contest in Munich.

Herr Brandt does not seem likely to give his government a brisk transfusion of new blood such as might be expected to occur in similar circumstances in Britain. He has a reputation, rather like Mr Nixon's, for almost fanatical loyalty to the colleagues he has already appointed. And the ousting of anybody as conspicuous as, say, Herr Schiller, who has undoubtedly become one of the most unpopular members of the ministry, could be damaging because it would be taken as an admission of the government's present weakness.

The most pointed criticism of the chancellor now to be heard in Bonn is that his heart is not really in the party battle: "Willy fancies himself as a Friedenskanzler—a peace chancellor—and his Nobel prize has turned his head a bit." His great problem now is that he faces in Herr Rainer Barzel a tough new opposition leader who dearly loves a party fight. All the chancellor's success internationally does not remove the need for him to turn his hand to the party political struggle. The Christian Democratic opposition feels that it has drawn blood and that, even if it loses the present fight over the eastern treaties, it now stands a good chance of winning next year's general elections. The danger that faces Herr Brandt is that an apparent triumphant climax to his Ostpolitik enterprise, with the successful ratification of the treaties next month, could be followed by painful anticlimax if the high hopes generated by his policy were even partially disappointed. Whichever way things go in the ratification debate, there will still be a rough path ahead for him.

The battle is on the ground

The bombing of Haiphong shows Mr Nixon is ready to go as far as American public opinion will let him, even if it won't decide the present fighting in South Vietnam

If the South Vietnamese hold their ground against the communists this year, it will not be because President Nixon sent the big bombers to Hanoi and Haiphong on Sunday. It will be because their own army, backed up by American air power inside South Vietnam, has at last acquired the nerve and the skill to take on the North Vietnamese. The bombing may or may not succeed in disrupting the northerners' supplies and thus postpone a future offensive ; it may or may not damage Mr Nixon's electoral hopes or his trip to Moscow next month ; it may or may not draw the Russians more directly into the war. But it will not affect the outcome of the present campaign. The communists have already decided on their throw: the latest reports suggest that another northern division is heading for South Vietnam, which would make a total of 12 of Hanoi's regular divisions south of the border. The North Vietnamese have stripped their own country of regular forces, leaving its defence to civilian militiamen and two fairly raw divisions. They are not going to pull their army back just because some trucks and pipelines have been blown up around their capital.

So what does Mr Nixon hope to gain from the bombing north of the twentieth parallel ? Partly, of course, this is simple retaliation for what most commentators have recognised to be a northern invasion of South Vietnam. Mr Nixon has shown that he is keeping all his options open, and Mr Laird, his Defence Secretary, and the State Department spokesmen drove that point home when they insisted that only two kinds of military action are ruled out in Vietnam: the reintroduction of American combat troops and the use of nuclear weapons. The reports suggest that the North Vietnamese anti-aircraft gunners were caught napping last Sunday, and that the American pilots scored some effective hits although it is uncertain how much damage was done to the underground fuel tanks that feed the pipelines running south.

The men in Hanoi must now be worried about the other possibilities for American counter-action on their side of the border. President Johnson never succeeded in blocking the stream of (predominantly Russian) war supplies they receive through Haiphong. Is Mr Nixon now considering going further, by mining the approaches to Haiphong, setting up a naval blockade, or systematically bombing the port area ? The last of these options could mean tremendous loss of civilian lives in a waterfront town where the dock areas merge with the residential districts and goods are loaded and unloaded in streets full of playing children. And any one of the three alternatives

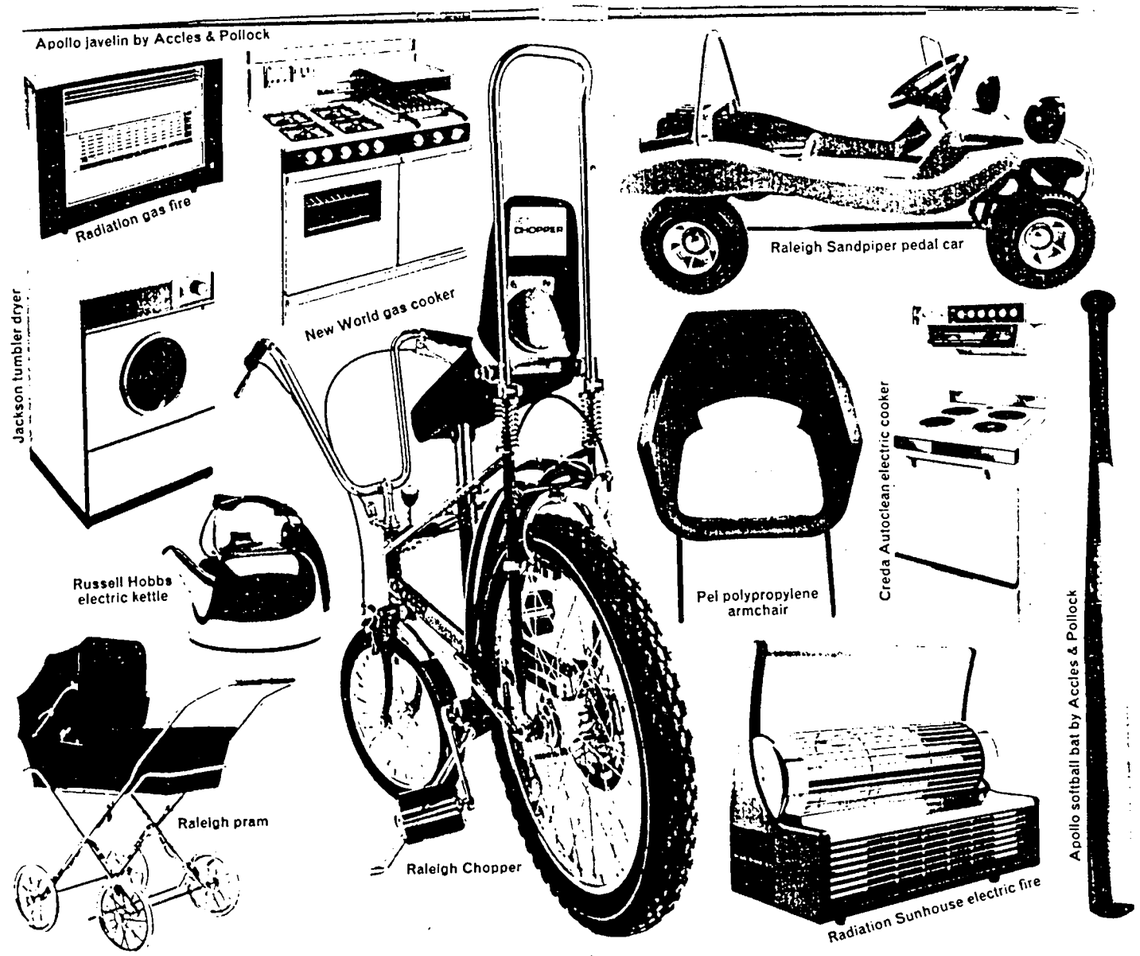
would involve the risk of direct confrontation with the Russians, either through the destruction of Russian merchant vessels in or near the harbour or through encounters between the Seventh Fleet and Russian blockade-runners on the high seas.

One also has to go back to basic questions about the cost-effectiveness of bombing in this kind of war. Certainly, if Mr Nixon is ruthless enough, he can choke off a good deal of the supplies available to the North Vietnamese for their war. But Mr Johnson learned the hard way that bombing is expensive in many senses. According to official estimates, for example, the bombing in 1965-66 cost the United States some $1.7 billion, while the damage it caused to North Vietnam was reckoned at only about $200m. The comparison, of course, is between the biggest economy in the world and a diminutive Asian rice-producer; but the supplies destroyed can be replaced by the Russians. And there is no real evidence that the earlier American bombing impaired the communists' morale. Some observers would argue that it strengthened the northerners' solidarity in the face of a common danger. This factor has to be carefully weighed at a time when evidence is appearing of something like war-weariness in the north.

Two schools of thought in Hanoi



But there is a general principle that one must keep in mind, even if one doubts the effectiveness of bombing the north. The North Vietnamese sent their regular forces into South Vietnam at Easter time in an invasion executed by conventional units. The South Vietnamese and their American allies can hardly be denied the right to hit back. Bombing areas close to Hanoi may not directly affect the outcome of this campaign, but it does show that Mr Nixon is determined to go on supporting South Vietnam with all the means that American public opinion will allow him. If the sequel to the bombing is a stalemate or a reversal for the communist forces in South Vietnam, there could be a crisis of confidence in Hanoi of a kind that has not been seen before. There might even be a messy power struggle between those who had advocated the Easter invasion (Truong Chinh and General Giap in particular) and those, like Le Duan, who would have preferred to conserve their resources through a strategy of "protracted war." More immediately, there is a very real possibility that South Vietnamese commando groups, backed up by American air power, will mount raids on a North Vietnam that, for the moment, is relatively unprotected.

The way the fighting has gone since the communist offensive began has not given the North Vietnamese much reason to congratulate themselves yet. They have been fought to a stalemate on the northern front, where they are still butting against the defence lines that the South Vietnamese have set up around the Bastogne firebase to protect the approaches to Hué. On the southern front, fighting continues around An Loc, 60 miles north of Saigon. Last week the communists succeeded in occupying about half of the town but the South Vietnamese were later able to claim that they had regained control. The 75-odd tanks that the North Vietnamese have been using around An Loc were badly chewed up by American air strikes early this week. But a South Vietnamese relieving force has been unable to get through to An Loc along Route 13, and the town is still directly menaced. A small provincial capital of dusty streets and rough huts, it has assumed unexpected importance since both sides have defined it as a prime target. President Thieu told his troops, when An Loc first came under fire, that it must be "held at all costs." Then Mrs Binh, the Vietcong spokesman in Paris, declared that it was going to be made the seat of a provisional revolutionary government.

The threat on new fronts

American advisers are still worried that the communists are about to move in strength on other fronts. There has been a steady rise in activity in the central highlands, where the North Vietnamese have overrun a paratroop base and are trying to sever communications; and rocket attacks are still being mounted in the delta and on the outskirts of major cities along the coast. But, for the North Vietnamese, the position is not encouraging. They must have hoped for some swift victories, in order to offset the vulnerability of all their guns and tanks to American bombing. Instead, at An Loc they have been caught up in what a British counter-insurgency expert calls a "meatgrinder," and they are making no headway in the north, where quite early in the campaign the South Vietnamese captured tanks that had simply run out of fuel. And time is running out. In a few weeks many of those Russian-made tanks and guns may get bogged down as the monsoon sets in. These are reasons why Mr Nixon can afford a cautious optimism about the progress of the campaign so far. But the men in Hanoi, having staked so much, will not be prepared to give up easily. They have gone on gobbling up villages in the highlands, and on Wednesday their tanks were reported with 35 miles of Saigon.

The Russians have not been getting particularly emotional about the bombing of Hanoi and Haiphong, and nobody seems to believe that Mr Nixon's trip to Moscow next month will fall through. On the contrary, Mr Nixon knows that the Russians would like to get agreements on technical aid and the supply of American equipment, and he in turn may hope to get an agreement, or an understanding, to the effect that they will stop supplying war material that would be used for aggressive purposes, although Mr Brezhnev is not very likely to put his signature on anything of the kind. True, the Russians protested on Monday about the damage they say the bombing caused to four of their merchant ships in Haiphong harbour. But not much ink was spilt in the formal exchange of notes. At home, Mr Nixon has probably been less impressed by the attempts of Senator McGovern and others to present the election as a contest between those who want to bomb Haiphong and those who want to get out of Vietnam altogether, than by Senator Humphrey's soft-shoe shuffle over the bombing issue. It is remarkable how much emotion goes out of the anti-war campaign in the United States once American conscripts stop getting killed.

The antique-collector's guide for 2072.

Cut this page out and keep it for your great-grandchildren. Better yet, buy some of the items shown, look after them properly, and leave instructions to sell in a hundred years.

The TI company trademark won't have worn off by then, and the price will be appropriately high ...

Tube Investments is a very large and diverse engineering group: large and diverse enough to make industrial electrical equipment and Jackson tumbler dryers, Accles & Pollock steel tube and Sturmey-Archer bicycle gears. 40% of the TI group is actively concerned with consumer goods. Some of them are made by TI overseas; many more are exported.

All of them are *good* goods. Shared research facilities give TI a technological edge that is not misused.

Another edge lies in a belief held at every level of management: a belief in two responsibilities.

The first is to employees and investors. They should all get a fair return.

The other is to customers. They should all get a better-than-fair product.

Which is how we came to be in the heirloom business.

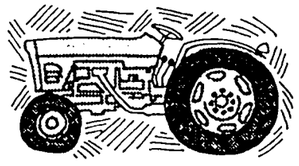
Advanced engineering.

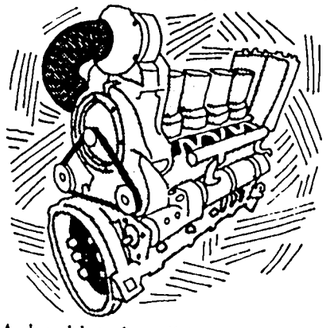


Money for the big import export deals

TKM can usually help. For TKM is the world's largest organisation specialising in the providing of short and extended term credit for the international movement of goods.

The period between the goods leaving the factory and the importer receiving payment from his customers is often a long one and locks up resources which could be more

profitably employed. TKM overcomes this problem by providing substantial lines of credit. Close analysis and a flexible approach enable TKM to solve most financing problems. The aim is to provide credit in line with the



commercial and cash flow requirements of a client's business.

The knowledge which TKM has gained in the financing of international business has given the Group a very special understanding of the needs of importers and exporters. It is knowledge based on over a century's practical experience. Today, with a turnover exceeding £330 million, TKM has 22 offices in fifteen countries and works closely with more than a hundred banks throughout the world.

HUNGARY — *A special report*

udapest has not lost all of its old look

The merriest barracks in eastern Europe

Welcome to the merriest barracks in astern Europe," chuckles the stockily-uilt, bespectacled young journalist nto his exquisitely-shaped china cup f that aromatic Budapest coffee so eloved by visitors from other com-nunist countries, especially Russia. The western visitor takes a deep breath, looks around him and gets down to work on his own private aiety-counter. The atmosphere in the liscreetly elegant Vörösmarty café right n the middle of Budapest is certainly ne of solid Edwardian comfort and espectability. The café's mainly niddle-aged guests behave with a kind f well-bred gentility which affects even the occasional bunch of young isitors in scruffy jeans and nondescript weaters (who, in any case, are prob-ably western students passing through Budapest). It is hard to resist the feel-ing that one is sitting somewhere along Vienna's Kärntnerstrasse rather than in a state-owned catering establish-ment of a country discreetly but firmly garrisoned by Russian troops.

A few hundred yards away, on the terrace of the ultra-modern American-style Duna Hotel, the illusion that one is in the heart of the charming ram-shackle Austro-Hungarian empire is stronger still. There, heavily-painted elderly ladies in twin-sets and pearls sound as if they are pulling absent friends' reputations to pieces, as they sip coffee and tuck into portion after portion of the Dobos layer cake. Elderly gentlemen, out exercising their dogs, stop briefly to kiss the ladies' hands and then hurry on, perhaps to those many night-watchman jobs where, as Buda-pest wits say, gentlemen watch over comrades who have been watching over them during the day.

The youngsters, refreshingly unvio-lent and unaggressive, go by and one hardly notices their presence, except when occasionally a bunch of young men roar down the pedestrian precinct in Vaci Utca on their roller-skates. The smoky chimneys of Csepel and Budapest's other industrial suburbs seem very far away. So does the idea of class struggle to create a classless communist society. "Is this communism?" asks the baffled London busi-nessman accompanying a group of even more uncomprehending Japanese.

Dangling the carrot

This genteel kidglove version of marxism, which indirectly owes to the late Mr Khrushchev its nickname of "goulash communism," was first hatched a decade and a half ago in the bleak days after the 1956 revolution, when a terribly wounded and sick-in-the-soul Hungary needed something to take its mind off its misery. First, it got lots of food which Mr Kadar bought in vast quantities with hurriedly provided Russian credits. Then in 1960-61 came the end of the systematic repression practised after the revolution. In December, 1961, Mr Kadar coined the famous slogan: "He who is not against us is for us." In 1962 he declared:

> We must not lose sight of the fact that a great number of people whose past and whose attitudes are *different from* ours, live in Hungary. They live in peace and work honestly. What should our attitude be towards them? Are we supposed to hold ourselves in a state of war against them? Why should we? They do nothing to hurt us. We have the intention of fighting only those who try to overthrow the power of the people.

There in a nutshell was the new tactic of intelligent pragmatic gradu-alism which found its culmination in 1968 in the so-called system of New Economic Management (NEM). Lenin was the first to recognise that it was advantageous to communist regimes to call in other groups like the peasants and the bourgeoisie as temporary allies to help in times of trouble. That was

the essence of his New Economic Policy (NEP) in 1921 which was designed to revive Russia's badly damaged economy by mobilising the businessman's and peasant's desire for material gain. Like Lenin, Mr Kadar and his colleagues have no intention of giving up their ultimate communist objectives, whatever those might now be. Certainly they have no intention of sharing their power with anyone else or giving up their ability to impose their views, by force if necessary, on the rest of the country if the country should once again become restive and rebellious.

So the stick is still there—and the will to use it. The road is still the same—for Hungary's regime and for all the others in Russia's orbit. It is supposed to lead to communism. So the visitor from the west is left in no doubt that the only debate is about how to make the journey on that road smoother and more comfortable for all, the leaders and the led, and to spare them from all upheavals and revolts like the one in east Germany in 1953, the one in Hungary in 1956 and the one in Poland in 1970. To put it bluntly, the debate among the politicians is about how to produce the right kinds of carrots with which to keep the people out of mischief.

Worldly-wise

Communist politicians, responsible Hungarians admit to their western visitors, are at last beginning to learn from their bourgeois counterparts in the west, who discovered a long time ago that an awful lot could be done without putting the ordinary man's back up provided wage packets get bigger, or, at the very least, do not buy less and less each month. From discreet smiles on those worldly-wise Hungarian faces which accompany deprecatory disavowals, it is possible to gather that Hungarian communists feel that they have been learning faster than most of their colleagues. If pressed, they will modestly admit to a paternal interest in the present general scramble to satisfy the consumer all over the Soviet block.

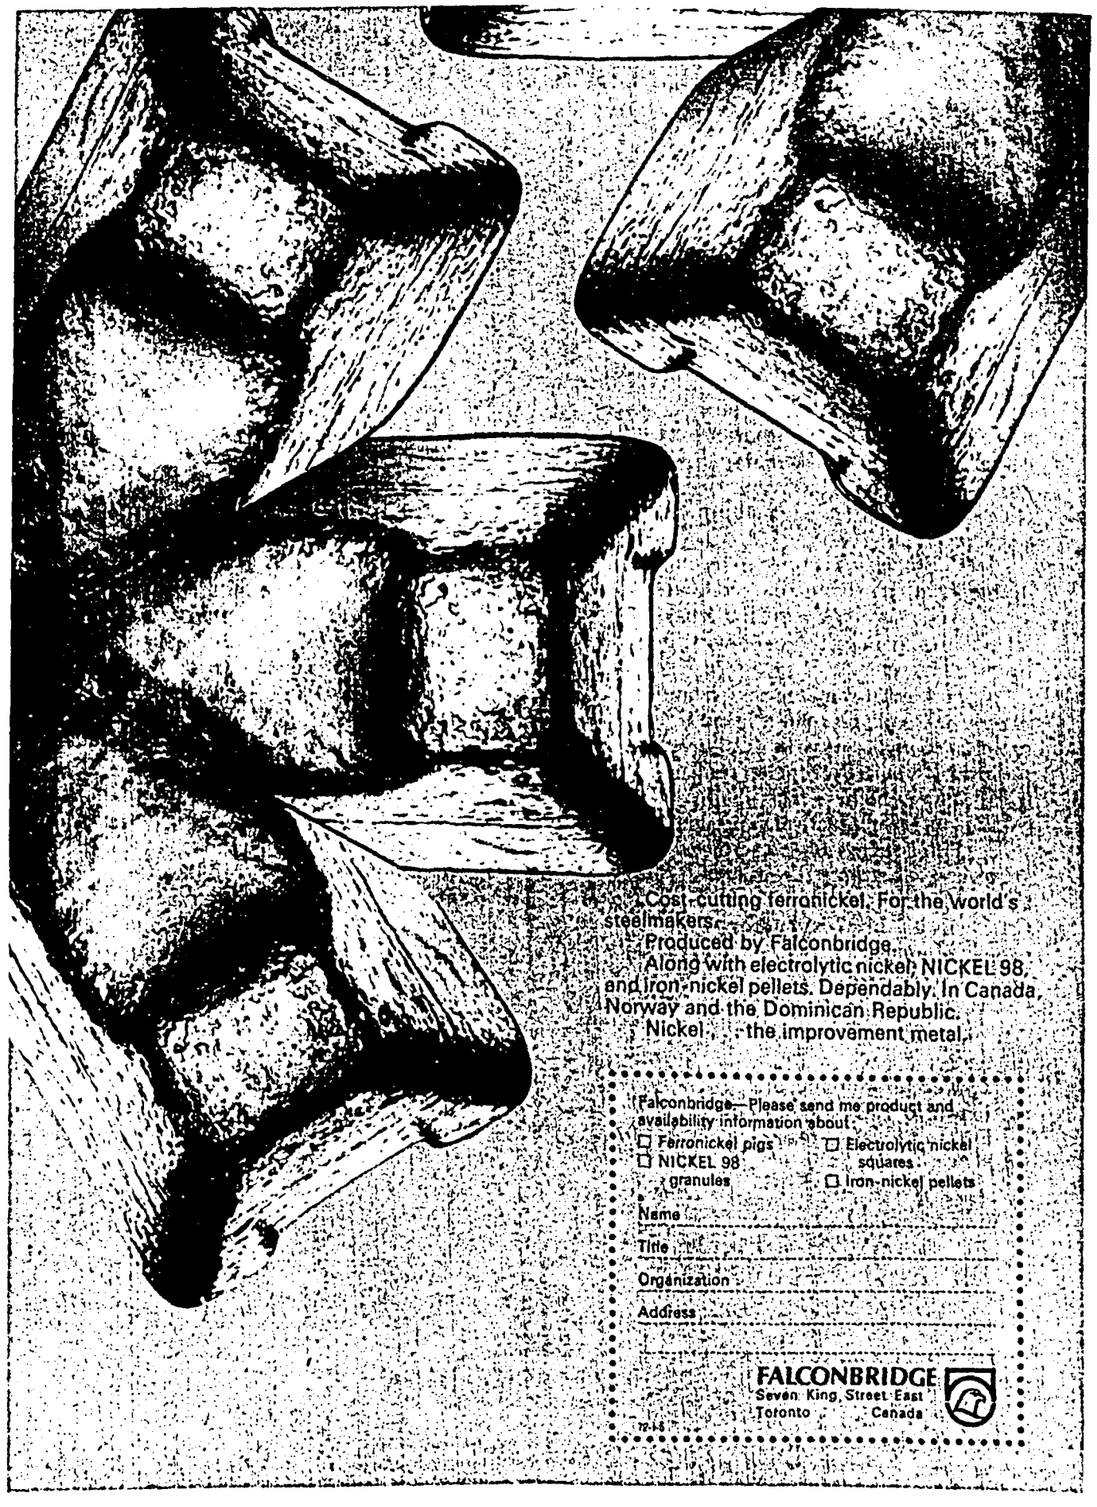
Hungarian communists are naturally flattered by the amount of respectful attention that their economic experiments command in the other countries of the Soviet block. But it is the praise

Labour has to be wooed

of the maverick reformers in Jugoslavia that pleases them most. When visiting Jugoslavs admit that they find in Hungary evidence of that quiet efficiency and competence which is all too often missing in their own, admittedly very different, system of "market socialism," the Hungarians simply beam.

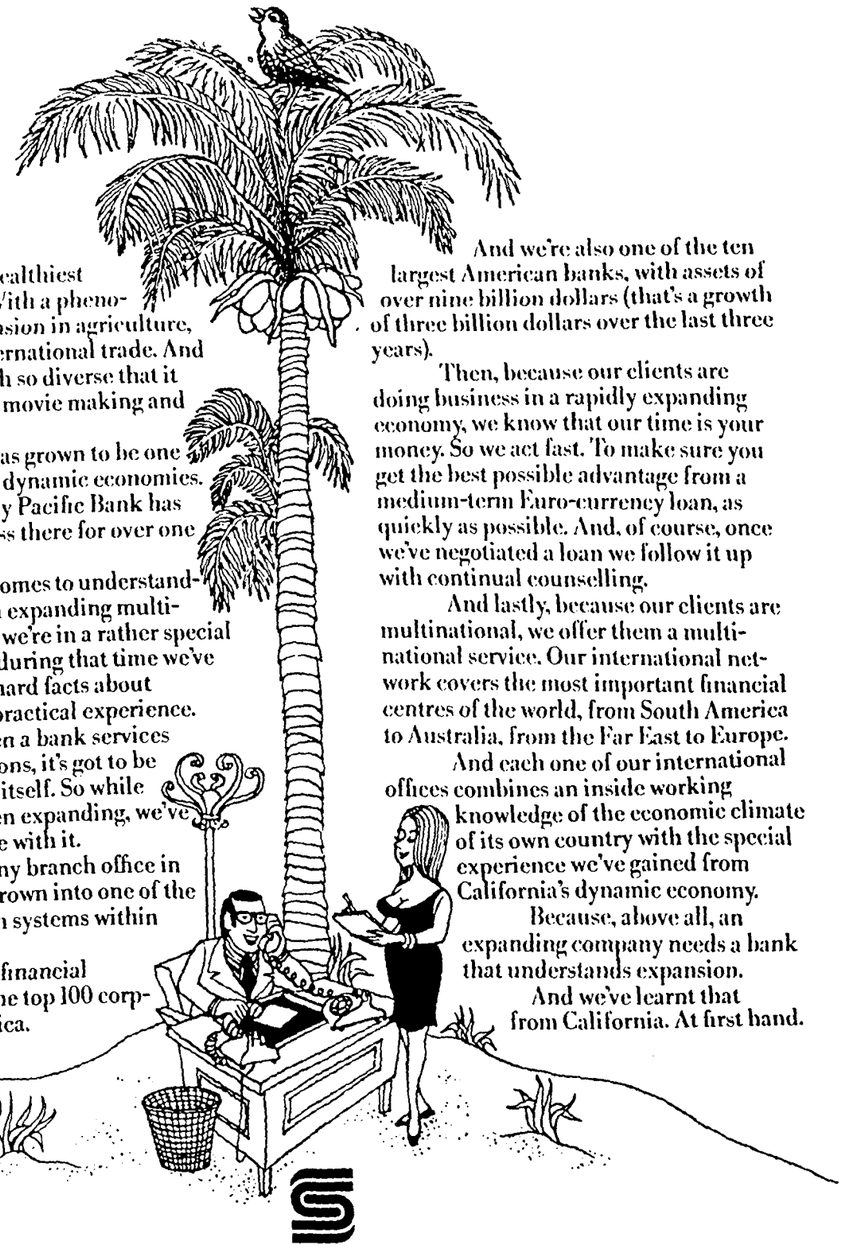
Criticism by visiting left-wingers from the west who see signs of creeping capitalism everywhere but particularly in the striking prosperity of the professional middle-classes do not worry the Hungarian leaders unduly. But similar critical reactions from within their own ranks are causing them concern. Some people in Hungary apparently look back on that early period of "socialist construction" after the second world war with deep nostalgia and compare it favourably with the pragmatic spirit of today. Some of the younger critics who feel that Hungary is becoming too bourgeois demonstrated their feelings last month on March 15th, the anniversary of the 1848 revolution.

But the leaders know that, unlike old dogmatists and younger idealistic ascetics, the vast majority of their fellow Hungarians would rather forget those stirring postwar years when the late Matyas Rakosi was cutting down his opponents, including those within his own communist party. And so Mr Kadar and his colleagues are not worried about comparisons with the past. What concerns them is whether the present is functioning.



The visitor from the west, relying on the evidence of his eyes and ears, can only say that in Hungary communism seems to be functioning rather more smoothly than in other Soviet block countries. (East Germany is an exception, not least because of its commercially and technologically advantageous links, through west Germany, with the common market.)

What is it that the Hungarians have really achieved? Since January 1, 1968, when with much trepidation they embarked on economic reform, they may fairly claim to have done quite a lot. They have scrapped detailed central plans for individual firms, whose managers now have to worry about profits rather than the old production norms, and have some incentive to do so. The whole price system has been streamlined, and a rapidly growing proportion of prices is being fixed freely in response to changing market conditions. The import policy has been liberalised: over 17 per cent of all consumer goods on the market last year came from abroad (a significant proportion of those came from the west). Many individual firms are free to trade directly with customers in the east and west alike.



Perhaps most important of all, the key problem of providing good managers is being tackled—with some success, as one can see from visits to really go-ahead firms like the Budapest telecommunications firm BHG, or the big optical firm MOM, also in Budapest, whose top managers and technical staff would probably be able to command the highest salaries in the west. On the other hand, officials admit that many managers of smaller and medium-sized concerns do not really measure up to western standards of management.

The reforms were carried through carefully. They avoided the pitfalls of excessive deflation and painful redundancies. Inflation has been held at bay, with prices rising at no more than 2-3 per cent a year since 1968 and with the gross national product going up steadily at an annual rate of 4-5 per cent at constant prices. This has been accomplished without the ferment of rising economic and political expectations which occurred both in Jugoslavia and Czechoslovakia. Here, certainly, the memories of the Hungarian rising in 1956 and, more immediately, the Russian occupation of Czechoslovakia acted as a powerful brake. The fact that the Hungarians started, as one of them commented, with no expectations after 1956 meant that they were grateful for small things. The Hungarians are realists. They may not love their leaders. They certainly do not hero-worship them. But they respect them.

This special report was written by Chris Cviic.

We graduated from one of the world's toughest business schools

California.

One of the wealthiest states in the USA. With a phenomenal rate of expansion in agriculture, commerce, and international trade. And an industrial growth so diverse that it comprehends both movie making and space projects.

California has grown to be one of the world's most dynamic economies.

And Security Pacific Bank has been doing business there for over one hundred years.

So when it comes to understanding the needs of an expanding multinational company we're in a rather special position. Because during that time we've learnt some good hard facts about expansion. From practical experience.

Firstly, when a bank services growing corporations, it's got to be alive and growing itself. So while California has been expanding, we've been keeping pace with it.

Our first tiny branch office in Los Angeles has grown into one of the two largest branch systems within the USA.

We're now financial partner to 90 of the top 100 corporations in America.

And we're also one of the ten largest American banks, with assets of over nine billion dollars (that's a growth of three billion dollars over the last three years).

Then, because our clients are doing business in a rapidly expanding economy, we know that our time is your money. So we act fast. To make sure you get the best possible advantage from a medium-term Euro-currency loan, as quickly as possible. And, of course, once we've negotiated a loan we follow it up with continual counselling.

And lastly, because our clients are multinational, we offer them a multinational service. Our international network covers the most important financial centres of the world, from South America to Australia, from the Far East to Europe.

And each one of our international offices combines an inside working knowledge of the economic climate of its own country with the special experience we've gained from California's dynamic economy.

Because, above all, an expanding company needs a bank that understands expansion.

And we've learnt that from California. At first hand.

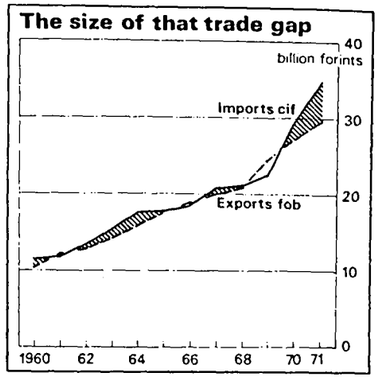
SECURITY PACIFIC BANK
OUR EXPERIENCE IS SOMETHING SPECIAL

Security Pacific National Bank: Head Office, Los Angeles. San Francisco, San Diego, London, Frankfurt, Paris, Brussels, Mexico City, São Paulo, Tokyo, Hong Kong, Sydney. Security Pacific International Bank, New York. Affiliated banks: Tricontinental Corporation Ltd., Melbourne, Western American Bank (Europe) Ltd., London. The Bank of Canton Ltd., Hong Kong, with branches in Bangkok, Kuala Lumpur, Singapore, plus subsidiary in Macao.

A cloud no bigger than a man's hand

Mr Kadar and his colleagues directly in charge of the economy have not been given a chance to rest on their modest laurels. Apart from Mr Kadar, the most influential men are: the party economics expert, Mr Reszö Nyers; the prime minister Mr Fock, a very able technocrat; and the two deputy prime ministers, Mr Matyas Timar and Mr Peter Valyi, who now represents Hungary in Comecon. Since the middle of last year they have been studiously watching small but dark clouds that have appeared on Hungary's economic horizon. These clouds have caused alarm, but not despondency. No sooner had the country started recovering from the effects of the disastrous 1970 floods than its trade gap widened alarmingly. Hungary ended 1971 substantially in the red (in contrast to 1970, when a surplus in the balance of payments was achieved for the first time in many years).

Last October, Mr Fock held an emergency meeting in Budapest with business leaders, planners and economic journalists. There he let rip. The country, he warned his somewhat dazed audience, had got itself into deep trouble and would have to work hard to get out of it. The main trouble, he explained, was the fantastically high rate of uncompleted investment projects, amounting to no less than 80 per cent of the whole year's investment outlays. Capital expenditure had increased twice as fast as the gross national product during 1969, he warned, and the country could not for long bear such a heavy burden. He singled out the building industry for much of the blame. Clearly what had happened was that, subject to comparatively loose controls, local managers had, as happened in Jugoslavia, taken the exhortation to invest in new capital projects so much to heart that when someone at the centre finally did the arithmetic it was discovered that the country as a whole was investing too heavily in relation to its means.



Mr Fock, perhaps feeling a little guilty about the lack of effective central controls, hinted that the government would not now hesitate to resort to unpopular administrative measures if really pressed, but that it would prefer to achieve the necessary cooling-down in the economy through fiscal and monetary policies. This stern sermon sent a shock-wave through Hungary. It led some commentators in the west to ask whether this was the end of Hungary's reforms. The answer is, apparently, not. The shock was meant to be salutary. The government has acted swiftly and on the whole effectively. Severe restrictions have been imposed on all new investment plans, so as to provide resources to complete those projects that remain unfinished. Of 19 major new projects in 1971, only 11 have been completed. In 1972, two major previously agreed projects have been postponed; one has been cancelled altogether.

As well as cutting its cloth to the barest minimum on new capital projects, the government has also, of course, had to tighten up on credit (for many firms' investment programmes in Hungary since 1968 depend not so much on the dictates of the central government as on the availability of bank loans). Until June, at least, the banks have been directed to give credit only on uncompleted or top priority investments. But such controls will take some time to bite with so many uncompleted development projects festooned around the country. The really bad thing about these investment delays is that projects may be obsolete by the time they are completed.

Valyi has reason to look over his shoulder

The size of that trade gap

The intention is to make life as uncomfortable as possible for the inefficient and irresponsible manager who could in the past always hope to be bailed out if he—or rather his investment planning—got into trouble. Life has in any case already been getting more difficult for such a man since the beginning of last year. Then the government made it plain that the budget deficit, arising mainly out of the cost of the floods in 1970, would affect subsidies paid to firms operating at a loss. It seems the government is putting this threat into practice, for subsidies are now being gradually reduced. Meanwhile the government has put up the prices of steel and some other key materials. The most important firms, especially those involved in co-operative arrangements with Comecon and western countries, will probably still get help. At least this seems to be the lesson that can be learnt from the way the government has treated the Veszprem factory which had been supplying parts for the Russian Fiat 124 car. It came unstuck last autumn. Apparently, it had been quoting prices which were too cheap. A loan of about £7m has been granted by the government to help it sort itself out by 1975. But such loans will be rare, quite simply because the money is not there.

Workers crack the whip

Just to keep the various industrial firms in production, the government has each year had to hand out enormous subsidies from the central exchequer. In fact, in 1970 these amounted to £442m, which was equivalent to over one-third of total investment outlays. Over and above these industrial handouts the government also subsidises some food prices. It is not going to cut these consumer subsidies but it wants to reduce the huge sums it spends on keeping industry operating. But, in trying to do so, it is hampered in all directions. Some of the government's inhibitions grow, of course, out of marxist dogma ; but some arise from hard facts.

One of these is the acute shortage of labour, which has reached such proportions that the government has been pleading with old age pensioners to return to work. Virtually all the married women who can work do so. But here the authorities are obliged to take into consideration another of Hungary's big problems, its low birth rate, which has left its population unchanged at 10m for a number of years. So working mothers are now encouraged to stay at home for a few years until they have brought up their babies to at least the kindergarten age. Some firms like the BHG telecommunications factory in Budapest, in which women make up 70 per cent of the labour force, even pay married women employees £7 a month to stay at home for three years and promise them their jobs back if they return then. Most of them apparently do. But until Hungary's birth rate goes up again there are simply no reserves of labour, with the result that the workers can shop around and chop and change their jobs. One worker in three in Budapest changes his or her job each year, and one person in five in Hungary as a whole.

Praying for credit

Despite this acute shortage of labour, which is forcing big firms out of Budapest into the regions, there is every sign that the labour force is being employed wastefully. "We could sack 50 per cent of our workers and still do the work," said a high-powered management specialist, "but the trouble is that our firms can only do that if they get the right amount of now ruinously expensive capital funds for investment in automated machinery." The present tough credit squeeze makes this difficult for all but the pampered firms—that is, those on the list of priority development projects, like petrochemicals, aluminium and computers. Only such firms can now hope to get good credits from the National Bank, which has just taken over the handling of all the firms' accounts (presumably to ensure better control) from the Development Bank, which now handles only big investments by the government and the local authorities. "We used to pray to the minister," says a leading Budapest manager, "but now we pray to the bank." And so many firms still find it cheaper to hang on to surplus labour than to venture into automation and mechanisation. One can see the results even in relatively go-ahead firms like the SZIM machine tool factory in Esztergom, where there is hardly any mechanical handling at all.

This shortage of capital is a serious problem for Hungary, a small country which derives 40 per cent of its income from foreign trade. In order to live it must sell, and what it sells has to be produced from most imported raw materials, for Hungary has no natural resources worth speaking of, except a little low-quality coal and bauxite. In order to sell, it must compete against many other better endowed countries. And particularly within the Comecon everybody is tight-fisted and wants to buy as cheaply as possible. To produce high-quality goods cheaply Hungarian factories simply must have modern machinery. But can Hungary carry through such a costly modernisation programme within the framework of the conservative Comecon ? The present rather more realistic long-term programme of economic integration within the Comecon is a step in the right direction, so far as the Hungarians are concerned. It seems to cater for functional co-operation on a firm-to-firm basis such as the Hungarians have been urging for years. But it does not yet go far enough towards Hungary's vital interest—full convertibility within the Comecon, which would enable Hungary to trade more easily with both the east and the west.

At least there is bauxite for these aluminium tubes

Finding the right balance

So long as Hungary is closely integrated into the Soviet block, which claims over two-thirds of Hungary's total trade, any increase in trade with the west will be relatively modest. The Hungarians are desperately anxious to increase their trade with the west. But what are their chances of exporting to the west this year 13 per cent more than last year, while importing from there not more than 5-6 per cent extra ?

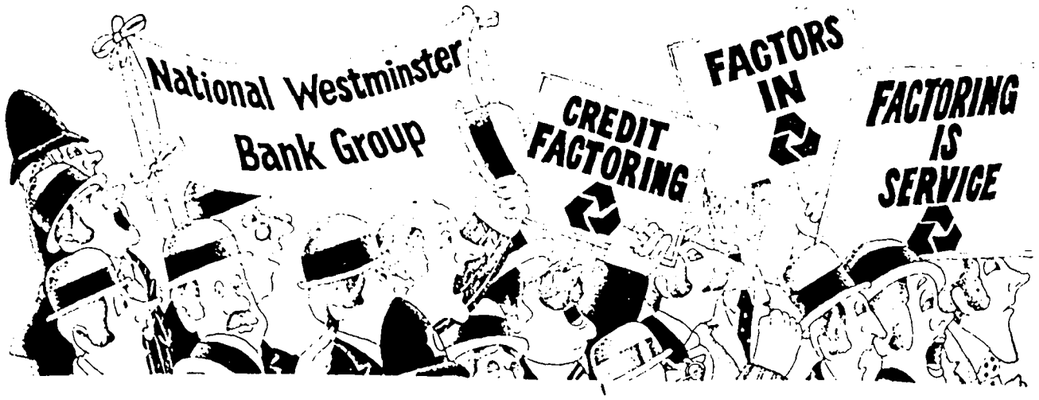
Some Hungarian firms, notably in engineering, machine tools, pharmaceuticals and chemicals, stand a good chance of boosting their exports. But what they want above all are various forms of industrial co-operation. The most popular is the acquisition of western licences. The Hungarians now have nearly 200 such agreements with western firms. They have even more with the east Europeans. But, unlike the Jugoslavs, the Hungarians have no plans to take part in joint ventures

Before you can ask any questions about doing business with Japan, you've got to decide who to ask.

And at the risk of sounding immodest, we'd like to suggest ourselves. We're DKB, Japan's largest bank. And we'll tell you anything you could possibly want to know about doing business anywhere in Japan.

DKB can do that better than any other bank. Because we have more offices than any other bank. Over 300 in all. So we've been able to gather facts and figures from every corner of Japan.

And we'll be glad to share that information with you. DKB will tell you all about general business conditions. Finance. Trade.



And if you'd like, we'll even arrange for you to meet potential business partners. In short, we'll do everything you'd expect a bank to do, and some things you might not expect.

If you think DKB can help you, please get in touch with our office nearest you. We're in London, Frankfurt and Düsseldorf. And if you look at the list on the bottom of this page, you'll see we're in a lot of other places too. Because you shouldn't have to go to the end of the Earth to ask questions about doing business in Japan.

NatWest would like to change your mind about factoring.

Too many people have still got the wrong idea about factoring: a survey commissioned by our subsidiary, Credit Factoring Ltd, proves the point.

To set matters straight, we'd like to stress that, in our view, factoring is more—much more—than a way of releasing money. Factoring must relieve the client of all sales accounting, provide credit management and give a 100% guarantee against bad debts. Offer, in a word, service. Credit Factoring Ltd operate this way. And, as the table below shows, it's the service aspect that people who use factoring find most important. It also shows that the more you know about factoring, the better you like it.

An elegant demonstration of the difference between ignorance and bliss.

The Pros and Cons of factoring, as seen by users and non-users.

Non-users		Users	
PROS	CONS	PROS	CONS
"You have fluid money to spend."	"Factoring is far too expensive. There is nothing to stop any self-respecting person going to the bank." "Factoring is additional expense to the firm. No extra income is gained by using one."	"I do not think the cost is much more and you gain in terms of service." "We expand by over 50% a year and factoring is for us." "If you quadruple your business you can carry it on without going for outside capital." "We are an expanding firm and Credit Factoring gives us a 100% guarantee against bad debts." "Factoring is good for the image. Customers feel you must be of some strength for them to take you on." "We have not had any redundancies - we have just run down our staff through normal wastage." "Credit Factoring would not do anything to upset the relationship between us and our customers." "We employ a credit factor for our export trade, which works exceedingly well. It is an advantage for the customers to pay in their own currency." "It is nice to know that the money will be in by a certain date. With the old system we had no idea when to expect payment." "The advantages are: regular cash flow, no bad debts, you know how much it is going to cost, and most importantly, if we didn't factor we would have to attract quick payment by offering discounts."	*
"I suppose if you had no liquid assets you would have to factor."			
"One of our suppliers uses factoring. It didn't imply to me that they were in financial difficulties. It was just to their convenience."			
"Factoring is a greater thing in export than in home selling because of the complications in exporting."			

*

The British Market Research Bureau Ltd, who conducted the survey, found that users of Credit Factoring Ltd were pleased with the service. Any National Westminster bank manager will be delighted to point the moral for you. Or, if you prefer, please write or telephone Christopher Blower of Credit Factoring at: Smith House, P.O. Box 50, Feltham, Middlesex. Telephone 01-890 1390.

THE WORLD *International Report*

Pompidou drums up a pretty loud oui

FROM OUR PARIS CORRESPONDENT

As France prepares to vote on Sunday in M. Pompidou's pre-electoral referendum, the French president has already guaranteed himself at least half a victory. His efforts to divide the left have succeeded beyond the wildest dreams of anyone who did not know the cynical dishonesty of the French Communist party.

The Socialists, who are basically in favour of the common market, rapidly decided after the announcement of the referendum last month that the answer for the left, and the only one on which it could unite, was to take no part in the president's private games. The Communists thereupon as rapidly decided to vote no, arguing quaintly that to say no in the referendum was to say no to the whole idea of staging it.

This week the two parties were still trading accusations and there is no doubt who has profited. The Communists have embarrassed M. François Mitterrand, the Socialist leader, with those of his friends who argued that pro-Europeans should vote with their convictions. More significantly, they have left his party effectively on the sidelines of what has become a real battle after all. This happens to suit not just the Communists but also the ruling party very nicely.

M. Pompidou has enormously raised the morale of his government and its party supporters which was crumbling only two months ago before rising prices, unemployment and the prime minister's tax misfortunes. It is no coincidence that M. Chaban-Delmas's personal popularity has recently shown a sharp upswing in the opinion polls.

Only Sunday's voting will show whether M. Pompidou has gained the other half of his victory, the massive yes he has been appealing for. The tests here are two: the number of "no" votes, backed by the Communists and a handful of gaullist diehards, and abstentions, backed by the Socialists, some fragments of the extreme left and right, some dissidents in M. Jean-Jacques Servan-Schreiber's Radical party, and, most significantly, the large army of Frenchmen who have better ways of spending an April Sunday.

For the noes, a fair guideline is the 21 per cent of the poll that the Communist candidate won in the first round of the 1969 presidential elections. The arithmetic of the abstentions is harder. The basic figures are the 21 per cent of the electorate who did not vote in that round in 1969 or the 19 per cent in the preceding referendum that ousted de Gaulle. But then the complexities begin.

The campaign has hardly excited the French public. In addition, opinion polls show that significant minorities disagree with the party they support. In the second round of the 1969 presidential elections the Communist advice to abstain does not seem to have prevented about a quarter of their voters from going to the polls. And the significant proportion of Communist voters who think the common market a good thing might well decide the easiest compromise on Sunday was to stay home or go picnicking.

Meanwhile the campaign, albeit unexciting, has been a real one. The communists have done their best to swing it back to bread and butter issues by talking of the Europe of the monopolies and quoting Mr Sicco Mansholt's now famous letter proposing a cutback in European economic development. Basically their theme is no to Pompidou and all he stands for, while the majority of the Radicals and other opposition yea-sayers have attempted to maintain a distinction, which their ballot papers will not show, between

He's found a timely umbrella

saying no to M. Pompidou and yes to Europe. The president himself has taken advantage of a conveniently reportable tour of Lorraine which has much to do with that region's economic woes and almost as much, one suspects, with the hope of squashing M. Servan-Schreiber there in next year's parliamentary elections.

For the British observer the campaign has been irritating. The old clichés have been trotted out. The French government's rediscovery of Europe under M. Pompidou has been described, again, as Britain's discovery of the same phenomenon. The foreign minister has let the federalists know that, given an unavoidable choice between federalism and letting in the anti-federal British, the former had to go.

This is all the permissible phraseology of a government which cannot admit that its predecessor was wrong. But, for those Europeans who discovered their continent rather sooner than General de Gaulle's former prime minister did, the campaign has been worse than irritating. The claims of President Pompidou's friends that he is strictly following the lines of de Gaulle's thought can be explained as aimed at

the diehards: the still lively M. Michel Debré, for instance, has had to give a gallant exhibition of how to ride two horses at once. But evidence coming, notably, from M. Pompidou himself, suggests that the claim might even be true. Not since the general's time has one heard so much about the grandeur of France and the suitable field a larger Europe could provide for it.

Turkey

Time to ponder

FROM A CORRESPONDENT

Istanbul

At each successive political crisis in Turkey it is immediately assumed, both here and abroad, that the army will step in and take over. But each time the Turks have succeeded in finding a compromise which has allowed the civilians to continue in office and the generals to remain in the background. The outcome of the current crisis, caused by the resignation of the prime minister, Mr Nihat Erim, on Monday, is expected to follow a similar pattern.

Mr Erim resigned because parliament and the political parties would not agree to his request that they should stop arguing between themselves and give his government the power to issue laws by decree. This was the only way he believed he could carry out the service chiefs' demands that the government restore law and order and put into effect agricultural and social reforms. President Sunay and the commanders regret his departure but they had no way of keeping him at his post.

The question the president and the forces chiefs of the National Security Council have to settle now is what sort of government is to be formed. Should it be another "above politics" administration such as Mr Erim led, or should it be a coalition government, formed either by the two major parties or alternatively by all the parties represented in parliament? President Sunay has time to ponder. The National Security Council does not meet until Saturday and since Sunday is a national holiday he need not start his consultations with the political leaders until Monday. Meanwhile the acting prime minister, Mr Ferit Melen, has said the government will continue to function normally and will introduce to parliament the bills that are ready, including the eagerly awaited and controversial land reform bill. The Turks, used to these upsets by now, do not seem particularly perturbed.

They have just taken in their stride

Melen will carry on governing

a visit from President Podgorny, even though both official and public opinion towards the Soviet Union provided an unfavourable climate. The Russians have been accused of fostering the activities of the Turkish urban guerrillas and of trying to subvert the Turkish regime. But the Turks were satisfied with the joint communiqué at the end of the visit. Both sides agreed that their territories should not be used for subversive activities against other nations and promised to respect each other's political and social system. This, when coupled with the Russian expression of opposition to the union of Cyprus with Greece, was seen as a clear gain.

Uruguay

Shooting it out

Uruguay's new president, Sr Juan Bordaberry, is confronting the Tupamaro guerrillas with more vigour than his predecessor, Sr Pacheco Areco. After the Tupamaros assassinated four people, including two policemen and a former under-secretary of the interior, at the end of last week, the police pinned the guerrillas down in a series of gun battles in Montevideo. In a spectacular shooting match on Monday seven people were killed after some of the terrorists sought refuge in a communist-run working men's club. According to some reports the founder and chief strategist of the Tupamaros, Sr Raul Sendic, was among the dead.

Now there are 35,000 security men scouring the capital in search of the guerrillas' bolt-holes where they are still holding several prominent Uruguayans as hostages, including Sr Homero Farino, editor of the conservative daily Acción. Sr Bordaberry has also managed to persuade congress to proclaim a state of "internal war" and grant him sweeping emergency powers for a period of 30 days—including the right to prosecute newspapers for publishing any news about the insurrection apart from official communiqués.

Sr Bordaberry's chances of putting paid to the Tupamaros depend on more than the balance of forces or his excellent relations with the neighbouring Brazilian regime. His predecessor was undermined by intrigues within his own party, a chronic economic crisis, and an outcry in congress against measures that were widely interpreted as "over-reaction" in a society with a long liberal tradition. Sr Bordaberry also suffers from a weak position in congress, where the members of his Colorado party hold only 41 of the 99 seats in the lower house and 14 of 31 seats in the senate. This year Uruguay's creditors will be presenting a bill for something like $300m, which can only be paid by new borrowing since exports will probably be worth less than $200m and there is a trade deficit. But Sr Bordaberry has tried to broaden the base of his government by bringing in conservatives from the Blanco party. There is a growing feeling in both traditional parties that they share an interest in cracking down on the Tupamaros.

Canada

A strike for separatists?

FROM OUR CANADA CORRESPONDENT

Eighteen months ago Quebec gasped at the brutal daring of a group of revolutionaries who kidnapped a British trade commissioner and strangled a provincial minister. This past week the province has creaked under a strike by 210,000 public service employees. Many people are seeing a political connection between the two crises.

There are no doubt strong reasons for some of the hospital employees and highway maintenance men to strike for higher wages; some blatant inequities have come to light. But the words used by some leaders of the "common front" of labour federations that is directing the strike sound little different from the political strategy that lay behind the kidnappings carried out in 1970 by the FLQ (Quebec Liberation Front). The tactics are obviously

Earning £5,000 a year is one thing. Getting some real capital together is another.

Achieving a high income level is very gratifying, but it doesn't necessarily follow that you have an adequate amount of capital at your disposal.

And yet it's essential to make some provision for the time, perhaps 10 or more years ahead, when your income level is bound to drop, probably quite sharply.

The Abbey Ten Plus Bond is one of the few investment plans that recognizes this simple fact of life.

Basically, the Ten Plus Bond is a savings scheme which, through the medium of life assurance, is designed specifically for the man with adequate disposable income, and with the prospect of sustaining this income and his premiums for a period of at least ten years. The Ten Plus Bond builds up a capital sum, with no tax liability on the eventual benefit, full tax relief on the contributions, and life assurance cover to protect your family while your investment is accumulating.

The tax benefits of the Ten Plus Bond are simply stated. First, you are entitled to claim income tax relief on your premiums.

And secondly, provided you have maintained payment of your premiums for at least 10 years, you will take the accrued benefit completely free of income tax, capital gains tax and surtax.

But perhaps the greatest attraction to the sophisticated investor is the Ten Plus Bond's unique flexibility. Several options are available, both as to where your money is invested and as to when you take the benefit of your investment.

You can, for example, allocate your investment to the Abbey Equity Bond Fund, to the Abbey Property Bond Fund, or to the Abbey Selective Bond Fund, or to a combination of any two, or to all three of these Funds. These multi-million pound funds provide the important combination of security and growth. If you pay annually, you can vary the allocation year by year. You can also switch your accumulated investment among the funds.

At the end of 10 years you have the option of cashing in your investment, or leaving it to accumulate free of tax, or continuing your contributions. Alternatively, you may take an annual withdrawal from your Bond as an income.

The specimen plan illustrated will show you how the Abbey Ten Plus Bond could develop for a man aged 44, prepared to invest £500 a year. (Naturally, it's impossible to predict exactly how any investment will perform, and the benefits projected here are subject to fluctuation, but they are based on estimates of a 5½% annual capital appreciation in the Abbey Selective Bond Fund and a net income yield of 2½%.)

The Abbey Ten Plus Bond will not appeal to every investor. It's not designed that way. But for the family man earning more than £5,000, and likely to remain at that income level for the next 10 to 15 years, it makes a lot of sense.

At the very least it deserves looking into.

This coupon will let you do just that.

Now
A man aged 45 next birthday contributes £500 each year, total investment £5,000, equivalent to £4,225 after tax relief. Continuing life cover is £6,000.

After 10 years
On the assumed growth rates he will receive £7,063.

Or after 15 years
He will receive £10,223.

Or after 20 years
He will receive £14,865.

Chancellor makes modernisation, expansion and development easier.

So does Taylor Woodrow.

As Britain's industry moves into an easier and more encouraging climate, with opportunities to expand and develop in new directions, Taylor Woodrow is ready to help.

Starting with feasibility studies and site location, its well-proven Integrated-Design-and-Construct operation, its world-wide experience and its record for completion on time and within budget ensures that your objectives will be achieved in the most effective and economic way.

You will enjoy the benefits of a close knit teamwork with highly skilled construction men who operate with computer-backed expertise in planning, programming, cash-flow analysis and cost control.

On many important projects, clients have had the advantages of these modern services. Why not you?

Whatever development you may have in mind, please do not hesitate to get in touch with R.G.Smith (Divisional Director, Marketing), Taylor Woodrow Construction Ltd., 345 Ruislip Road, Southall, Middlesex. Telephone: 01-578 2366; Telex: 24428.

TAYLOR WOODROW

The world-wide team of engineers, constructors and developers.

Bourassa plays it like last time

very different, but one of the leaders' aims seems to be much the same : the radicalising of Quebec's people so as to secure its separation from the rest of Canada. The Central Council of Montreal, to which 60,000 workers are affiliated, voted categorically on Sunday for Quebec's independence. It went on to re-elect by acclamation its president, Mr Michel Chartrand, who was one of the most prominent detainees in October, 1970.

At first sight all this might portend a swift increase of strength for Mr René Lévesque and his separatist Parti Québecois, which won 23 per cent of the votes in the 1970 provincial election. But although the party has just published a new economic manifesto that looks ahead to Quebec sovereignty and socialism, it has not made common cause with the labour leaders. Mr Lévesque was disgusted by the FLQ kidnappings, and he now seems embarrassed by the strike. On Sunday he called for a parliamentary commission to be brought into new negotiations and for the unions to suspend the strike.

His political instincts, which are strongly based on constitutionalism, may have served him well on both occasions. In January the ideologist of the FLQ, Mr Pierre Vallières, came out of hiding, denounced the tactics of violence, and joined the Parti Québecois. He even accepted temporary employment by the federal government, which showed itself equally broad-minded in giving him a job, for Mr Vallières is still on bail facing charges of counselling to kidnap and murder. And this week there have been several signs that the strike is becoming unpopular both with the general public and with some trade unionists.

Quebec's young premier, Mr Robert Bourassa, has faced both crises in much the same manner. He spent the first few days of the strike watching quietly and waiting for public opinion to become clear. As the union leaders failed to gather the support they had hoped for, the provincial government grew bolder and sought injunctions on workers in essential services, such as hospitals, to return to work. Mr Bourassa hopes, in the eventual bargaining, to scale down the cost of a wage settlement from $175m a year to about $80m.

His troubles are unlikely to end with such a settlement. These are hard times for basic Quebec industries such as textiles, pulp and paper; and Mr Bourassa's new emphasis on developing tourism calls for a costly infrastructure for which there is only one major source of funds—the federal government. He has avoided picking constitutional quarrels with Ottawa, while making gestures to Quebec nationalism such as dropping the parliamentary oath of allegiance to the Queen. In two years he has provided half of the 100,000 additional jobs that he promised in his 1970 election campaign; further advances must depend mainly on federal subsidies—and on a lessening of labour unrest. Recently Mr Bourassa looked wistfully back to Canada's centennial year, 1967, and remarked : "Federalism is more vulnerable than it was five years ago."

Gaza

Out you go

On Sunday Israel's chief of staff, General Elazar, told the cabinet that although his officers had exceeded their orders in ejecting Arab farmers from their land near Rafah in the southern part of the Gaza strip, none of this land would be returned. Last month, after protests from Mapam, the left-wing partner in Mrs Meir's coalition, it was announced that disciplinary measures would be taken against officers who had apparently bulldozed their way through more Arab property, and rendered homeless more Arab families, than they had been authorised to do. A committee, set up by General Dayan, who as minister of defence has overall authority in the occupied territories, criticised both the extent and the manner of recent "fencing operations." Even so, all the land now fenced off will be retained for Israeli settlement.

The Israeli authorities are not saying how much of the strip has been confiscated or how many families displaced; according to one Israeli newspaper it amounts to as much as a third of the strip's land area. The families, who were ousted from their houses and their land with no ceremony at all, are to be offered the choice between cash compensation and rehabilitation by the military government. Such rehabilitation is said to include the offer of new smallholdings but the best that most of the displaced Arabs can hope for is housing on the outskirts of the strip's overcrowded towns and refugee camps. A cabinet spokesman, tight-fisted with facts and figures, refused to say how much money had been allowed for these purposes. And no Israeli minister, it seems, raised the proposition that if it was wrong to drive the Arabs off their land in the first place, it is compounding the wrong to refuse now to let them return.

Lebanon

Twixt paunch and jowl

FROM OUR LEVANT CORRESPONDENT

The Lebanese general election, now at its halfway point, is a reminder that this country alone of all the Arab states (with the possible exception of Kuwait) remains faithful in its fashion to the principles if not to all the practices of parliamentary democracy. Yet perhaps the most hopeful aspect of these elections is the criticism that is being directed at them. The reaction of politically sophisticated Lebanese towards such elections has for many years ranged from tolerant exasperation to outright anger. This time the usual epithets, "a farce, a circus, a bazaar," are being used with an added edge of bitterness.

The performance is as odd as it has always been but an increasing number of the audience is now very fed up indeed. One cartoonist went so far as to depict a candidate ushering his supporters directly from a polling booth to a brothel. The Lebanese newspapers have made the point that at least half of the 400 candidates, for 99 seats, will be spending £20,000 apiece on election expenses, including what might be called voters' gratification. One village voter affirmed that for his family's votes he would be receiving an electric frying pan and a dozen bottles of soda pop. Such irregular expenditures are accepted here as a useful downward

A vote merely primes the parish pump

distribution every four years of probably ill-gotten gains. The Lebanese elector is even prepared to accept that his chosen representatives are not only buyers but are bought. Student slogans about the 99 thieves are not considered lese-majesty.

What the responsible Lebanese voter is really beginning to protest against is that in these elections he is given a selection between individual politicians but no real choice of policies. He can choose between the singularly unprepossessing portraits on an infinity of posters, but this, when one comes down to it, is a choice twixt paunch and jowl. This is why nearly half the Lebanese electorate does not exercise that right to vote for which it is envied in other Arab countries.

The factor that belittles the whole electoral process is the malign and all-pervasive influence of confessionalism, of politicised *religion*. Membership of parliament is divided strictly along religious lines. Even the parties with secular ideologies are in fact confessional: the power base of the socialists is the Druze community, the Syrian regionalists are largely Greek Orthodox, the Lebanese nationalists are Maronites, while even the communists are concentrated geographically in and around Tripoli which happens to be a Sunni Moslem area. Because educated young Lebanese are disgusted with the spectacle of their national affairs being reduced to the level of the parish, or rather patriarchal, pump, and because successive Lebanese parliaments have proved to be indolent and ineffective, few bother to stand for parliament and fewer still succeed. Largely because of this, the Lebanese respond wryly to the news that some misguided enthusiast was studying the possibility of applying the Lebanese system to Northern Ireland.

Jordan

Better than expected

FROM OUR LEVANT CORRESPONDENT

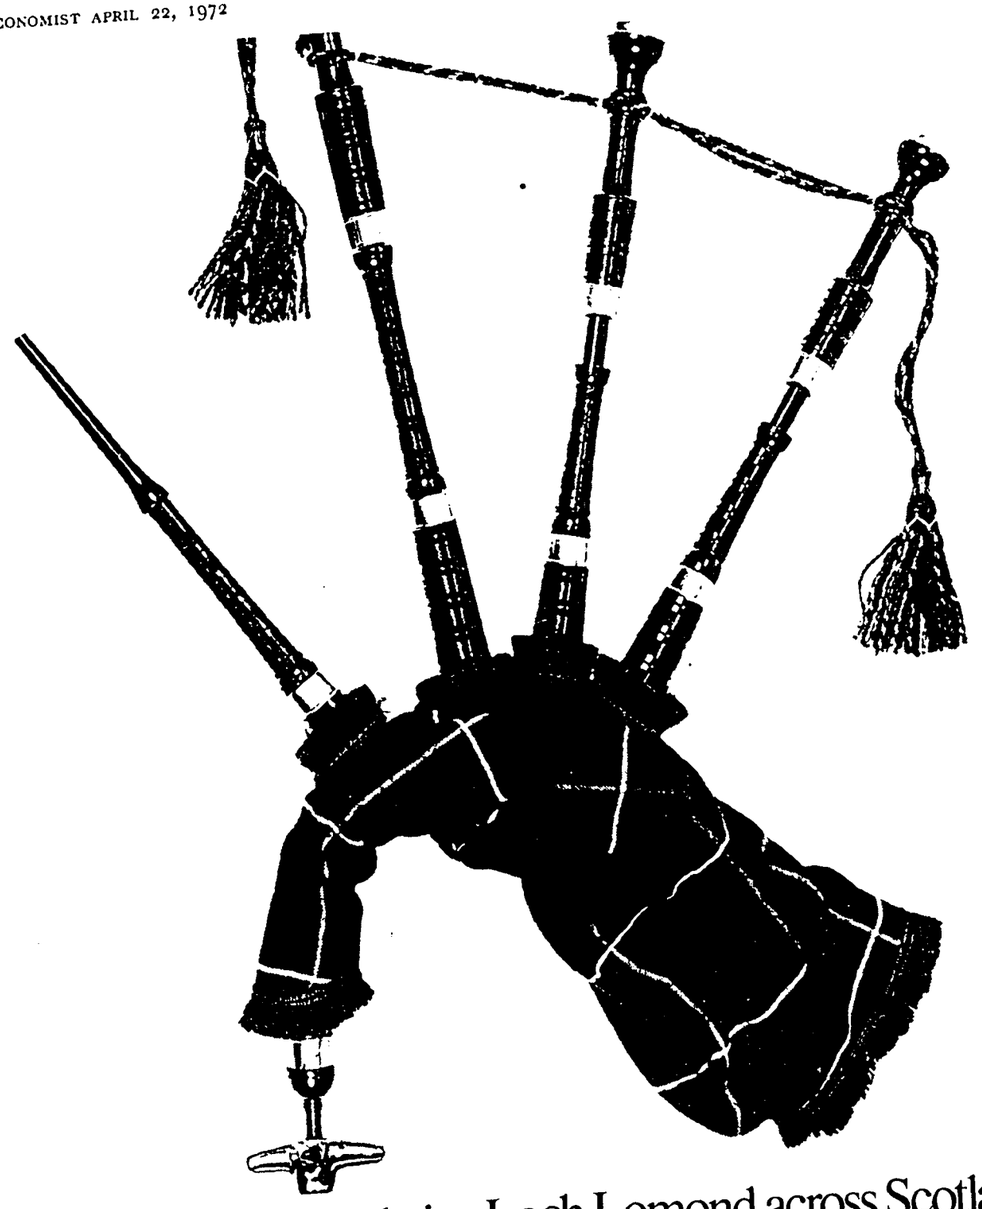
Those portentous words "economically viable" just do not apply to Jordan. There is every economic reason for Jordan to have gone down the drain of non-viability years ago, especially since the debacle of the 1967 war with Israel. Yet four years and three crises later the economy is struggling not just to keep afloat but to pick up its pre-1967 momentum: a struggle that testifies to the sinewy resilience of Jordanians and Palestinians.

Jordan has never been able to balance its books: domestic revenues have always just about matched defence expenditure alone. This year the gap between total expenditure and total receipts, including known subsidies from other governments, is about £45m. The gap has been steadily widening but each year it has been closed, a trifle mysteriously, by governments that do not wish their generosity to be known —and for this there is a political price to be paid.

Defence expenditure is not the only cause for this budgetary imbalance. Between 1966 and 1970 defence spending went up from 18m dinars to 35m dinars (the current value of a Jordanian dinar is about 90p). In the same period, the cost of civilian services increased from 14m dinars to 21m dinars and spending on development from 11m dinars to 28m dinars. The economy, within its peculiar framework, survived the 1967 defeat by Israel, and the loss of the West Bank, surprisingly well. Jordan's principal industries, phosphates, cement and petroleum products, are all situated on the East Bank and their production continued to rise in 1968 and 1969. So did the output of the main agricultural crops from both banks, since their export to traditional Arab markets continued across the bridges over the Jordan river.

The first decided dip was in 1970. This, which affected all sectors of the economy, was the result of the king's fight with the guerrillas. Syria closed its frontier to Jordanian goods, which cut off the northward flow of phosphates across Syria to Beirut and thence to Europe. This ban was relaxed earlier this month, but since it had already been discovered that the road haul to Beirut ate up most of the profit margin, Jordan's major outlet is now through its port at Aqaba to the Red Sea. Jordan has had to learn that the expanding and profitable markets for its phosphates are in India, east Africa, Japan and China—when it decides to recognise it. The principal sufferers from the selective Syrian blockade are the farmers on both banks of the Jordan. Most of them are Palestinians and the embargo was ostensibly imposed on their behalf.

Despite these misfortunes Jordan is pushing ahead steadily with the development of its industrial and agricultural infrastructure. Work proceeds on phosphate prospecting, the construction of a new phosphate railway link with Aqaba, and on the expansion of the port itself. Underground water resources are being explored. Most striking of all is the change that is now being made visibly in the Jordanian landscape by afforestation. And the length of new walls to prevent soil erosion is five times the distance from Amman to Baghdad. Soldiers have been put on this job and farmers are given food rations if they work on tree planting and terracing.



With the Jordanians eager to go ahead with every sort of development, from fisheries to housing and animal health, friendly governments and the United Nations are willing to supply both the exports and the finance. The UN has as many experts in Jordan as in all of huge Sudan. Even the number of tourists has crept up to half of what it was in 1966. But not the tourist revenue. Europeans are visiting Jordan again, but the Americans, more free-spending but more apprehensive, are staying away.

Southern Africa

Dr. Diederich's budget makes good use of the breathing space the economy has gained from devaluation. But the need for faster growth is leading to breaches in the apartheid doctrine on use of non-white labour. Short- and long-term consequences are examined in the latest QER.

How we helped pipe Loch Lomond across Scotland

Soon, when the citizens of Grangemouth want a taste of Loch Lomond they won't have to motor 50-odd miles. They'll turn on the tap.
Tarmac have laid a section of the pipeline that will bring their water supply from Loch Lomond. The same applies to public services throughout Britain. We either pipe them through or construct the dams, power stations, sub-stations and gas processing plants that provide them.
Sometimes our services to the public take an even more unexpected turn.
When part of the South Coast was losing ground to the English Channel, Tarmac was called in to shore it up.
So, whatever you're doing, turning a tap, flicking a switch, walking on a beach, Tarmac is part of living.

Pakistan

Lifting the lid

FROM OUR SPECIAL CORRESPONDENT

Mr Bhutto told Pakistanis in his first broadcast as president last December that he would not retain martial law one moment longer than was necessary. That moment came unexpectedly on April 14th, four months earlier than Mr Bhutto had intended.

Before he promised the national assembly that he would drop martial law if it accepted the interim constitution, Mr Bhutto was facing an increasingly dangerous alliance. Its unofficial leader was Khan Abdul Wali Khan, the Pathan chief and president of the National Awami party (NAP) which is the largest political group in the two minority provinces of the North-West Frontier and Baluchistan. Pakistanis used to identify Wali Khan only with the unpopular causes of an autonomous state of Pakthunistan and closer ties with Russia. But recently he has been gathering support from industrialists who have been hit by the government's nationalisation policy and, paradoxically, from militant workers in Karachi who are disenchanted with the practical effects of Mr Bhutto's socialist programme.

The common factor in all the discontent was opposition to martial law, which Pakistanis associate with national defeat and the excesses of Presidents Ayub and Yahya Khan. The longer martial law continued, the more people suspected that President Bhutto wanted to perpetuate the personal authoritarian rule of his predecessors. Rather than risk a wave of popular agitation, Mr Bhutto decided to back down. In the emotional atmosphere that followed his speech, Mr Bhutto won a unanimous vote of confidence from the assembly.

The interim constitution, which will be replaced by a permanent one if the national assembly can reach agreement on it when it meets again on August 14th, gives Mr Bhutto a five-year term of office. Until somebody emerges in his own party who has the weight and experience to stand up to him, the government of Pakistan is likely to continue as a one-man show. Mr Bhutto still has the right to retain in his own hands a powerful clutch of ministries and he has added to his already formidable array of posts the presidency of the national assembly. His administration is not accountable to the assembly and while the state of emergency, a hangover from the war, continues, he has wide powers to legislate for provincial and national affairs.

What Mr Bhutto has lost in giving up martial law is the right to issue fresh ordinances which cannot be challenged in the courts as well as to intern troublesome critics. The arrest of four newspaper editors under martial law regulations helped to swell the recent campaign against him. In drafting the new constitution he has also had to make concessions to the NAP which on paper put the administration of Baluchistan and the Frontier province in the NAP's hands while depriving it of the resources to operate without federal help.

The NAP remains suspicious about both Mr Bhutto and his constitution. But after getting him to retreat over martial law, they are not going to press their opposition to extremes. They hope to gain greater provincial autonomy and shape his reforms to suit their taste. After vainly trying to tempt them into the central government and land them with responsibility for policy, Mr Bhutto has now changed his tactics. On Tuesday he named Khan Qaiyum Khan, a Pathan who is a bitter opponent of Wali Khan, as his new minister for home affairs with responsibility for the tribal areas of the Frontier province. Mr Bhutto's intention is evidently to reduce the strength of the NAP by building up the opposition to them in their own territory.

Apart from the prisoners of war, Mr Bhutto's greatest problem now is the persistent threat of industrial anarchy. Over the past four months workers, incited by the promises of his own People's party, have been penning in managers to force concessions from them. As a result, some managers have simply stayed away from their factories. Foreign firms are beginning to think about leaving Pakistan.

A certain improvement in the economy can be expected once commodity aid and standby credits are resumed by the members of the Pakistan aid consortium. But before the consortium agrees to that and to a moratorium on debt repayments, it wants Mr Bhutto to accept a package that includes devaluation and tax reforms.

The immediate gain for Mr Bhutto from the vote of confidence is that he can enter peace talks with India strengthened by a display of national unity. He may now be able to negotiate with more flexibility. But the chances of an early breakthrough on substantive issues are not good.

Vietnam

It has cost both sides dear already

FROM OUR SAIGON CORRESPONDENT

South Vietnam's record of both setback and success in the new campaign was overshadowed this week by President Nixon's decision to bomb targets around Hanoi and Haiphong, and by the debate that followed. But Saigon's forces had surprised a good many people by the resistance they put up to the North Vietnamese attack on the provincial capital of An Loc, only 60 miles north of Saigon.

It was touch and go at an early stage. Last weekend the communists actually announced that An Loc had already been captured. When the tide turned a day or two later, the town was dotted with the hulks of Russian-made tanks, some with their crewmen chained to their seats. The communists are now thought to have lost about 50 tanks around An Loc, and 140 on the northern front, out of their total force of 400.

President Thieu ordered that An Loc be held at all costs. The cost was high for both sides, but particularly so for the communists, who suffered many losses under American bombardment. The extensive, perhaps profligate, use of tanks by the North Vietnamese had the defenders deeply worried until they discovered the effectiveness of their previously unused anti-tank weapons, and the obvious inexperience of the communist tank crews.

But the large relief column sent

Hanoi sent these soldiers south

from Saigon was trapped by the communists south of An Loc and performed poorly. North Vietnamese units were later seen moving farther south, and Saigon was expecting increased activity from within and without. Farther north, the expected communist offensive in coastal Binh Dinh province was under way, and on Wednesday a district headquarters there, Hoai An, was abandoned under heavy North Vietnamese attack. The road from the coast to the central highlands was cut, and Kontum was under heavy pressure.

The North Vietnamese are apparently planning to keep up their offensive for several more weeks, if not months. Their long-term strategy remains a matter of debate in Saigon. But captured orders indicate that the local Vietcong guerrillas in the south are not yet in a fit state to join Hanoi's regular forces in this offensive. They are being told to get themselves ready by the end of May, when the communists would hope to organise some sort of general uprising.

Haiti

Blood is only for export

FROM A CORRESPONDENT

One year after the death of President François "Papa Doc" Duvalier, Haiti is still the most hopelessly impoverished country in the western world. Most of the 5m inhabitants of this tiny, overcrowded black republic continue to live at subsistence level; disease is rife and illiteracy and unemployment are as high as ever. But there has been one important change: a marked decrease in political tension.

The key to this change is money—not so much the aid that has flowed into Haiti from the United States and international development agencies but rather the fact that Haiti's new leaders are essentially businessmen, and blood is bad for business.

Papa Doc's 20-year-old son, Jean-Claude, still reigns as president-for-life. But real power in Haiti is now wielded by a strange alliance of his mother, Simone, and a former leader of his father's infamous private army, the Tonton Macoute, Mr Luckner Cambronne, who is now de facto prime minister. His main interest is money and his business empire now includes the "quickie" divorce racket, which is attracting many Americans, the country's main tourist agency and only airline, and a company that sells Haitian blood to the United States.

He reigns rather than rules

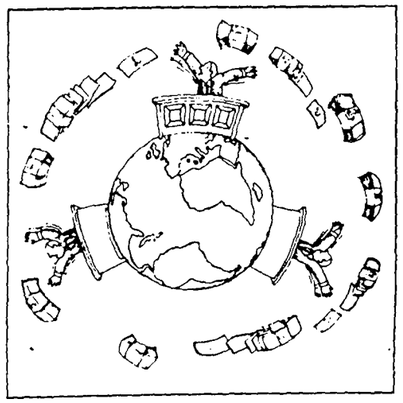
Mr Cambronne was quick to recognise the potential threat to the new regime posed by the regional bosses of the Tonton Macoute and, within weeks of Papa Doc's death, orders went out to the army to begin dismantling the Tonton apparatus. In its place, Mr Cambronne personally sponsored a new army battalion called Les Leopards. Since American military aid to Haiti is still suspended, Mr Cambronne employed a private group of Miami-based American veterans to equip and train the new battalion.

The effect—although perhaps not the motive—of these changes has been positive: the masses are no longer victims of indiscriminate terror, and for the first time in over a decade Haitians feel free to discuss politics and even to air cautious criticism of the regime. The tourist and light manufacturing industries in Port-au-Prince are booming. The bureaucracy is also being cranked up slowly, although corruption is still widespread and there is little reason to believe that the new emphasis on rural development is more than a slogan to attract foreign loans.

The portly "Baby Doc" is hardly even an interested observer of all these developments. He presides over cabinet meetings when he is not at the beach with his girl-friends. But in no sense does he govern. Six months ago, there was talk that he wanted to retire abroad; but now he appears to be enjoying the perks of power. There is speculation that soon he will hand over the government to a prime minister, presumably Mr Cambronne. But the Duvalierist era is still far from over.

South Africa

Rumblings from the bantustans



The choice for most black South Africans is a grim one: abject poverty in the cities, or abject poverty in the homelands. And although those blacks who have been given the responsibility of running the bantustans—the homelands where about half the black population of 15m lives—owe their position to an acceptance of apartheid, they are complaining ever more volubly at their miserable situation.

Last week it was the turn of Chief Kaiser Matanzima of the Transkei who spoke out more strongly than ever before, calling not merely for more land but for immediate talks on independence for the Transkei. He also made it clear that his disillusion with the government was growing fast, and it has since been alleged that he has issued a secret ultimatum that unless his territorial claims are met he will abandon apartheid and fight for multi-racialism and a universal franchise. His criticisms were echoed last week by Professor H. Ntsanwisi of the bantustan Gazankulu, who also demanded more land. On Wednesday the prime minister, Mr Vorster, rejected these demands, adding that Chief Matanzima was "wasting his time."

But the complaints are not unfair. The blacks, who constitute over 70 per cent of South Africa's population, have been allotted only 13.7 per cent of the land—and this generally the poorest. In 1954 it was estimated that the bantustans could then support about 1¾m people; today their population is over 7m. The factories in the bantustans provide only 4,700 jobs, which means that if the inhabitants are to find work they must go to neighbouring white "border areas" where there are now 73,750 jobs for Africans. Little wonder that malnutrition is common.

The picture is little better in the cities, where blacks are allowed to live while they are employed. It has been estimated that more than half the urban black population lives on or below the breadline. A recent study has shown that the average return on American capital in South Africa is 16.8 per cent, compared with a world average of 11.3 per cent. Some American companies are now giving more attention to the black wages paid by their subsidiaries in South Africa. British firms might well follow suit.

"Cash in orbit has been holding down the profits of exporters long enough!"

Money is spiraling in toward your office from customers in half a dozen different countries.

Fine.

Except that by the time all the problems of different currencies and different forms and procedures are sorted out—not to mention postal and bank clearance delays—it could be weeks before you get the *use* of your money.

Some exporters have small fortunes just floating around the world.

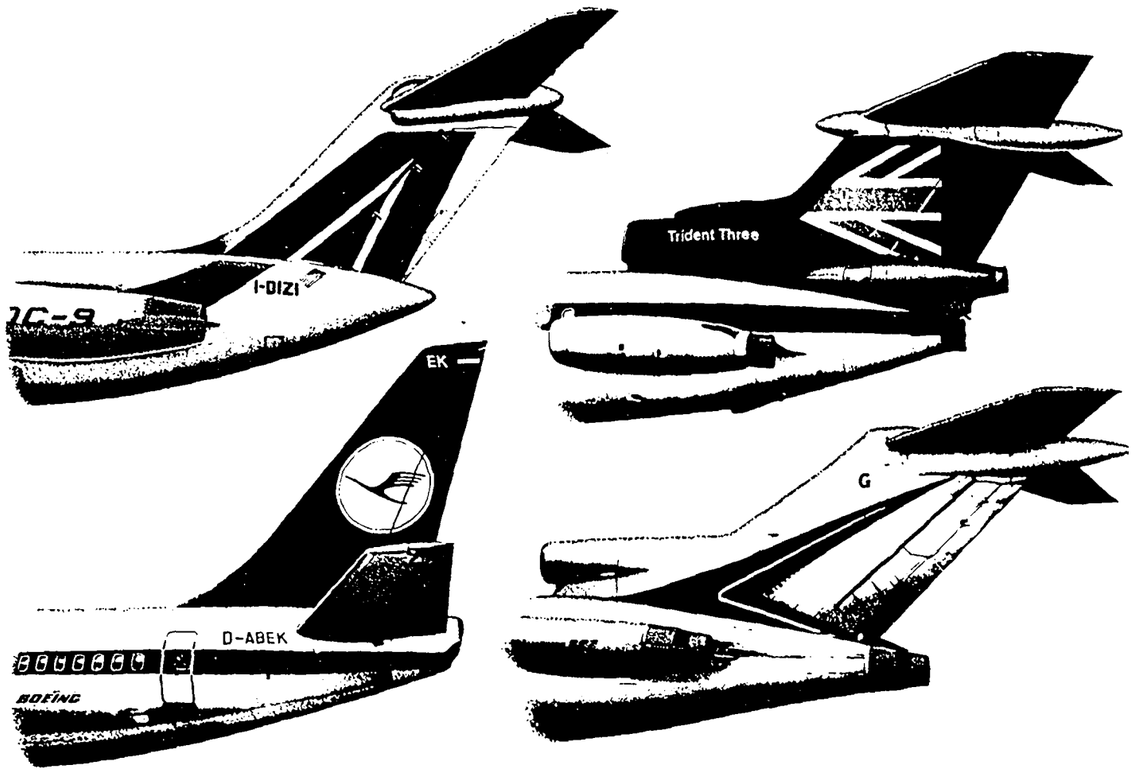
But even one day of unnecessary float time is extravagantly wasteful with today's high interest rates.

How can you get your cash out of orbit and into some gainful employment?

Talk to American Express International Banking Corporation.

We have an International Money Transfer System that can slash float time from weeks to just a day or two. Possibly even to *same-day* payment.

Here's how it works. We will arrange to have your customer's remittance channeled through his nearest American Express International Banking Corporation branch or office. (And there's bound to be one nearby. We have 49 branches and offices of subsidiaries in 18 countries.)



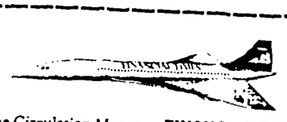
Our worldwide communications network takes it from there. Within a day or two, the remittance can be cleared and credited to your account in your city. For you to use.

We'll tailor an International Money Transfer System to fit the specific requirements of your company. Just one phone call can start it working for you.

Which brings us to our philosophy of international banking. We don't think it's enough just to help you do business. We want to help you do it profitably.

American Express International Banking Corporation

American Express International Banking Corporation has 48 branches and subsidiaries handling all types of banking transactions all over the world. We're in these major financial centers: Amsterdam, Athens (2), Basle, Bombay, Brussels, Calcutta, Cannes, Chittagong, Copenhagen, Dacca, Djakarta, Düsseldorf, Florence, Frankfurt, Geneva, The Hague, Hamburg, Heidelberg, Hong Kong, Karachi, Kowloon (2), Lahore, Lausanne, London, Lucerne, Lugano, Milan, Monte Carlo, Munich, Naples, New Delhi, Nice, Okinawa (2), Paris (2), Piraeus, Rome, Rotterdam, Salonica, Taipei, Tokyo, Venice (2), Vienna, Zurich. International Headquarters: 65 Broadway, New York, New York.



Will Europe have a national airline?

People tend to fly most by the airline of their own country. Partly this may be national loyalty; partly it may be convenience; partly habit. But which, of all the major European airlines, is most people's second choice? Which, forgetting timetables and national loyalties, would win the most passengers, given free competition in tomorrow's Europe?

Increasingly, as Europe integrates, will the businessman need to be able to answer such questions, make such predictions, in relation to many industries. As national frontiers become less distinct, so will national industries. And the answers to such questions are the stuff of which the future is made. Increasingly, in order to obtain the necessary information to answer such questions – international information free from local bias – Europe's businessmen are turning to the Financial Times as their second newspaper.

The Financial Times does not claim to be able to tell you more about other countries' business than those countries' own leading journals. It does claim, however, to tell you more about other countries' businesses than you may find in any other daily newspaper. It also claims a very high degree of accuracy, detail and political impartiality.

According to a recent survey, *41% of senior management throughout Europe already rate it essential reading, and more and more international companies find it an important advertising medium. **If you would like to judge the Financial Times for yourself by letting us send you or any of your executives free copies each day for two weeks, †please complete the coupon and send it to us.**

Rhodesia under sanctions

Uneven impact, uncertain outlook

FROM OUR SPECIAL CORRESPONDENT

Are Rhodesia's victories turning to dust? Just as Mr Ian Smith and his colleagues are bracing themselves for a negative report from Lord Pearce's commission on the acceptability of last November's settlement proposals, they are also threatened with a possible reversal of the American decision to lift the ban on chrome imports from Rhodesia. On Monday the Senate Foreign Relations Committee voted to reimpose the ban that Congress decided to lift last autumn; the Senate as a whole is now to reconsider it.

If the ban is reimposed it will be of little direct economic consequence to Rhodesia, which, despite sanctions, has always managed to sell its chrome with only a modicum of inconvenience. But the psychological effect will be great. Coming just a few days after the conviction in Vermont of four men and two companies for the "callous flouting" of American sanctions regulations, a reimposition will bring home to white Rhodesians the fact that their battle to end sanctions is by no means won. The Vermont case was only the second prosecution in America for the evasion of sanctions; it could easily have been dropped if the Americans had really wished to succour Mr Smith's illegal regime. Once it is realised that, contrary to the claims of Senator Harry Byrd and Congressman James Collins of Texas, the United States has ample chrome for its strategic needs, the white Rhodesians could find themselves back where they were a year ago.

From a purely economic point of view this might not matter very much. On Tuesday it was announced that Rhodesia's rate of growth of gross domestic product was 10 per cent in real terms last year. But very soon after the November settlement proposals has been announced, Salisbury's celebratory champagne glasses were set aside and the calculating machines were brought out; and it was then realised that, at least in the short run, Rhodesia would obtain little economic advantage from a settlement. The calculations were, in brief, as follows.

The only immediate benefits that Rhodesia could expect from a settlement were the sale of its stockpiled tobacco, the release of some blocked credits and the first instalments of the £50m that the British Government had promised to give over ten years for the development of the tribal trust lands. This total could hardly exceed £90m.

All that glisters isn't chrome

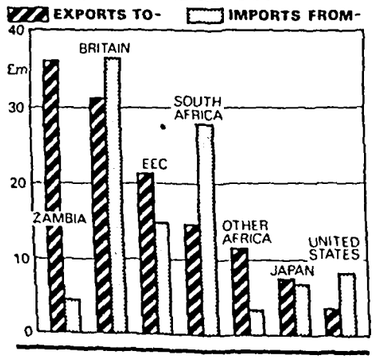
In return the Rhodesians found that they would have to pay a backlog of servicing on bond issues and British Government debt amounting to perhaps £100m, with possibly as much again to be paid in settlement of private interest, redemption arrears and other blocked payments. This would more than offset any short-term benefits to be gained from a settlement and—more important—it would also exacerbate the shortage of foreign exchange that is now the country's dominant economic problem.

This shortage is only partly attributable to sanctions. It has largely been caused by the fall in world base metal prices, and by the fact that Rhodesia's terms of trade deteriorated by 15 per cent between 1965, when Mr Smith unilaterally declared it independent, and 1970. But the international sanctions which have been applied have not greatly reduced the volume of Rhodesia's exports, with the important exception of tobacco.

The Smith government gives no breakdown of its trading figures, but some rough estimates may be made. Mineral exports in 1965 contributed 22 per cent of total exports of £169m. In 1970 their value had increased to perhaps £58m, accounting for almost 40 per cent of total exports. Rhodesia has not had much visible difficulty in selling its minerals, though they may have been sold at reduced prices.

In the case of chrome the two big companies, Foote Minerals and Union Carbide, have been in production without interruption since 1965, and their chrome has been sold to Germany, Japan, perhaps China, and, it has been alleged, to Russia, which has passed it on to America at a higher price. One of the ironies of the lifting of the American chrome embargo is that it has reduced the price of chrome—possibly to the extent that the Rhodesians may now be selling it direct to the Americans at a lower price than it was reaching previously.

Manufacturing exports have been sharply diminished in value. In 1965 they were worth £58m, but in 1970 they were probably between £29m and £34m. Production of manufacturers as a whole has greatly increased, but the bulk of it is now being consumed at home in order to reduce the need for imports. South Africa is certainly Rhodesia's best customer for manufactured goods, buying from it clothing, shoes, furniture and other labour-intensive products. But Rhodesian goods find their way to many other parts of the world.



Agriculture is undoubtedly the sector hit hardest by sanctions, though total exports of farm products, which stood at about £74m (including £55m from tobacco) in 1965, probably brought in about £58m in 1970 (including perhaps £23m from tobacco). Before 1965 Britain used to take about 30-40 per cent of the tobacco, but because this included much of the best quality leaf, sales to Britain accounted for some 60 per cent of the total tobacco earnings. Sanctions have closed this market, and although some Rhodesian tobacco still finds its way—sometimes undisguised—to the markets of western European countries, as well as to those of Greece and Japan, the government has had to stockpile enormous quantities and to engage in massive support operations for the tobacco farmers.

The size of the tobacco stockpile is one of Salisbury's most closely guarded secrets. Estimates range from 100m to 160m lbs. In recent years the annual crop has usually been about 132m lbs, for which the government has guaranteed the farmers a price of 13p per lb, but this season hopes of a settlement induced the government to increase the crop to 145m lbs (which still compares poorly with the 1965-66 target of 280m lbs). Usually only 80m-100m lbs of the annual crop is sold, and at an average price of only 8p-9p per lb. The government therefore suffers a loss on every bale sold.

Rhodesian farmers have been encouraged to diversify into other crops, but this policy has not been assisted by the low world price of maize, the most obvious alternative to tobacco. Two bumper maize crops in the past two years may establish Rhodesia as the record-holder for maize production per acre, but this will bring little comfort to the farmers, who face the prospect of prices so low that they will scarcely cover costs. Last year, however, Rhodesia did export some maize, notably £8m worth to Zambia. Most of its other farm exports, particularly of meat, go to South Africa, although some also go to the neighbouring Portuguese territories of Mozambique and Angola, and there is even a regular Constellation flight from Salisbury airport that takes fresh meat to Libreville in Gabon.

The country's exports find their way to most parts of the world, sometimes openly as being of Rhodesian origin, but more often with the aid of false manifests and bogus certificates of origin. For this purpose full co-operation is required and received from

Rhodesia's trade in 1965

the Portuguese and South Africans, through whose territories the vast majority of Rhodesia's exports pass. But the countries of ultimate destination often co-operate too.

There have only been about 10 convictions of sanctions breakers in Britain, and no more than as many again in the rest of the world. Britain and the Scandinavian countries seem to have been the most vigilant. Outside southern Africa, France, Germany, Japan—and, since the lifting of the chrome ban, America—have probably been the most flagrant violators of sanctions. Australia has also traded openly, and most European countries have cheated on sanctions to some extent. Switzerland, which is not a member of the United Nations, has openly continued to trade with Rhodesia, arguing that as a neutral state it could not subscribe to compulsory UN sanctions.

Imports have posed even less of a problem for Rhodesia than exports. The flow of crude oil to its Umtali refinery by pipeline from Beira in Mozambique has effectively been sealed off by the British naval patrol. As Mozambique has no refinery of its own and therefore no use for crude oil, Britain has been authorised by the UN Security Council to prevent all tankers carrying crude from unloading at Beira. But with this major exception, almost all Rhodesia's imports could be plausibly documented as being destined for South Africa or Mozambique, which makes it well nigh impossible to prevent them being re-exported to Rhodesia.

It is no wonder, therefore, that one can buy almost anything from Havana cigars to Citroen cars in Salisbury. Imported goods are in short supply and you are more likely to be offered a local substitute where one exists, but in general the only constraint on imports is the country's ability to pay for them, not its ability to contrive their arrival.

But sanctions have two very important economic effects upon Rhodesia, which have proved awkward enough to induce Mr Smith to go to the negotiating table last November, even if they did not prove awkward enough to induce him to make enough concessions to satisfy Rhodesia's Africans. The first effect is that they have pushed up the cost of trading very substantially. The small army of well-fed Portuguese and South African middlemen who provide forged bills of lading and bogus certificates of origin have been insisting on taking a cut of 10 or 15 per cent.

But a perhaps more important effect of sanctions has been Rhodesia's inability to raise loans on international money markets at *reasonable* rates. Gnomes from Zurich or Frankfurt have been happy to lend money to the Rhodesian government, but only for short periods and always at very high rates of interest. Mr Smith is not a good risk as long as he has a huge backlog of unpaid debts, the likelihood of a devaluation and a perpetual cloud of uncertainty hanging over his domain.

It is probably the hope of regaining free access to the world's money markets, more than anything else, that makes the idea of a settlement attractive to the Rhodesian government's economists, even though they are nervous about the possibly inflationary consequences of introducing any significant quantities of capital into the economy. But unless Rhodesia can raise foreign loans at reasonable rates of interest, its rate of growth is doomed to decline or, at best, to stagnate. There will not be enough foreign currency to service and expand the country's infrastructure, particularly the railways, nor will industry receive the foreign exchange allocations it so desperately wants for its own replacement needs. In these circumstances the country's long-term development is bound to suffer.

But Salisbury's politicians, as distinct from its economists, would like to see sanctions ended so that more whites could be encouraged to emigrate to Rhodesia to help prevent the present rapid deterioration of the racial imbalance, which is now one of 21 blacks to each white. And the vast majority of white Rhodesians would love to see an end to this major inconvenience to their daily lives. "We are sick of sanctions," they say. But not yet sick enough, it seems, to accept the obvious conditions for their removal.

Abridged Particulars

This advertisement is issued in compliance with the Regulations of the Council of the Stock Exchange, London, for the purpose of giving information to the Public with regard to Norsk Hydro a.s ("Norsk Hydro") and is not an invitation to any person to subscribe for or purchase any shares of Norsk Hydro. The Council of the Stock Exchange, London, has granted permission to deal in and for quotation for the whole of the issued Ordinary share capital of Norsk Hydro.

The present mean International Monetary Fund exchange rate is Norwegian Kroner ("N.Kr.") 17.3159 = £1 (Sterling).

Norsk Hydro a.s

SHARE CAPITAL
N.Kr. 394,011,720 represented by the following shares, all of which are issued and fully paid:—
25,002 Preference Shares of N.Kr. 180 each.
2,163,952 Ordinary Shares of N.Kr. 180 each.

Introduction arranged by Hambros Bank Limited

INTRODUCTION

Norsk Hydro was founded on 2nd December, 1905, to exploit cheap Norwegian water power by means of an original new process which, for the first time in the industrial history of the world, permitted the production of synthetic nitrogenous fertilisers.

In the first years of its existence Norsk Hydro developed the famous Birkeland/Eyde method and harnessed for its own use some of the most majestic waterfalls in Norway. These unique energy resources still remain an important part of Norsk Hydro's assets.

During the following years Norsk Hydro constantly broadened its energy basis, and also entered into other activities. During the 1930s, Norsk Hydro developed the world's first industrial production of heavy water.

Today, the main activities of Norsk Hydro are the production of many types of artificial fertilisers, chemicals and plastics, the electrolytic reduction and fabrication of aluminium and magnesium, the production of hydro-electric power, and more recently, participation in the search for and development of oil and gas from the North Sea and other areas, as well as refining and marketing of petroleum products.

From its head office in Oslo, Norsk Hydro now controls one of the largest industrial undertakings in Norway and the biggest chemical group in Scandinavia. Norsk Hydro and its subsidiaries ("the Group") together with Alnor Aluminium Norway A/S ("Alnor"), employ approximately 8,600 people, use about 12 per cent. of Norway's total electrical power output, account for approximately 9 per cent. of the country's oil consumption and products sold abroad represent 6 to 7 per cent. of Norway's total exports.

Before the Second World War Norsk Hydro was effectively controlled by French shareholders. After the war the Norwegian Government took over substantial German shareholdings and after subsequent purchases now owns 51.02 per cent. of the share capital. Nevertheless Norsk Hydro operates in every respect as an autonomous group.

FERTILISERS, CHEMICALS AND PLASTICS

The Group produces approximately 30 different chemical products, partly for direct sale and partly for incorporation in other products of the Group for ultimate sale. The most important of these are fertilisers and PVC resins and Norsk Hydro is currently one of the major producers of ammonia and fertilisers in Europe.

Other chemical products of the Group include methanol, nitric acid, chlorine, caustic soda, carbon dioxide, argon, neon and other rare gases and heavy water for use in nuclear reactors.

ALUMINIUM AND MAGNESIUM

It has been natural for Norsk Hydro to be interested in the light metals area because of the growth of consumption of these metals and because of the Group's strong position as a low cost electricity producer. The gradual change to petroleum products as a feedstock for ammonia has made certain quantities of electricity available for profitable long term utilisation in the production of light metals.

Norsk Hydro's main aluminium interests are conducted through a 51 per cent. owned associated company Alnor based on the island of Karmoy in Western Norway, which resulted in a joint venture commencing in 1963 with the American aluminium group, Harvey Aluminium Inc. of California. Alnor currently has an annual production of 105,000 tons of raw aluminium of which about 35,000 tons is sold in semi-fabricated form as sheets, extrusions and wire rod.

Norsk Hydro is currently the second largest producer of magnesium in the Western world with an annual capacity of 40,000 tons.

ELECTRIC POWER

Because of its natural features, Norway is ideally suited for the development and production of hydro-electric power.

Total power resources of the Group are approximately 7,700 million kWh a year, of which 4,900 million kWh is produced in power stations owned by the Group or associated companies and the rest bought on long term contracts on favourable terms.

OIL

Activities and Production in Norwegian North Sea

As a heavy user of energy and as Norway's largest consumer of oil products it was natural that Norsk Hydro should wish to participate in the exploration for oil and gas in Norwegian waters once the prospects in the North Sea were initially appreciated. Accordingly Norsk Hydro entered into participation arrangements with three French groups, Elf, Total and Aquitaine together with other partners, to form the Petronord group ("Petronord"). In 1965 Petronord was awarded production licences covering 12 blocks totalling 6,601 sq. kms. in the Norwegian sector of the North Sea ("the 1965 Licences"). Subsequently in 1969 Petronord was awarded additional licences ("the 1969 Licences") in respect of a further 4 blocks totalling 1,856 sq. kms.

Another major consortium to be successful in the 1965 awards was led by Philips Petroleum Company ("Philips"). In 1967 Petronord and the Philips Group entered into an Exchange Agreement whereby the Philips Group obtained a 20 per cent. interest in the 1965 Licences and Petronord obtained a corresponding 20 per cent. interest in the 11 blocks totalling 5,643 sq. kms. licensed to the Philips Group ("the Philips Licences").

Active exploration drilling took place both by Petronord and the Philips Group from 1967 onwards and in 1970 the first major commercial discovery on the "Ekofisk" structure was made on the Philips Licences. It was this discovery which really established the North Sea as prospectively being one of the world's major oil producing areas and in a short space of time other fields were found in the same area.

Following these arrangements Norsk Hydro at the end of 1970 had an interest, varying from 6.7 per cent. to 13.6 per cent., in 27 blocks totalling 14,100 sq. kms. in the Norwegian Sector of the North Sea. In 1971 blocks or part blocks covering a total of 3,537 sq. kms. were surrendered in accordance with the terms of the relevant licences. In 1972 the holders of the 1969 Licences acquired a 20 per cent. interest in Block 25/4 and Norsk Hydro's interest is 6.92 per cent. but would be reduced to 6.23 per cent. if the Norwegian Government exercised all its options. The Group plans to seek further awards in favourable areas as and when these are offered by the Norwegian Government.

Since its initial discovery the Ekofisk field has been further evaluated and the latest estimates of recoverable reserves from this field are 1,140 million barrels of crude oil and natural gas liquids and 100,000 million normal cubic metres of natural gas. In addition there are adjacent fields (West Ekofisk and Cod) also held under the Phillips Licences with estimated recoverable reserves of 567 million barrels of oil and natural gas liquids and 90,000 million normal cubic metres of natural gas. The Tor field, which is partly sited on the Phillips Licences and partly on a concession held by the Amoco Group, has reserves which are estimated at 128 million barrels of oil and natural gas liquids and 7,365 million normal cubic metres of natural gas.

In 1971 Petronord made a major gas discovery in a block 200 kilometres north-west of Haugesund held under the 1969 Licences on a structure now known as Frigg. Three exploratory wells have been drilled and a decision as to whether the field can be commercially developed is expected to be taken during the summer of 1972.

Exploration Activity in other areas

In line with its increasing international activity, Norsk Hydro has taken exploration interests in other areas, in particular offshore the United Kingdom.

The Group applied with others for U.K territory and in 1972 Licences were awarded to consortia in which Norsk Hydro has an interest.

In 1971 Norsk Hydro in a one third partnership with Continental Oil Company applied for exploration licences off the south coast of Sicily and it is anticipated that the results of this application will be announced soon.

Recently Norsk Hydro entered into an agreement with the Total Group, Texaco and Chevron to explore the Texaco/Chevron concessions covering an area of 3,328 sq. kms. on Spitzbergen. Norsk Hydro's interest is 7.36 per cent.

Norsk Hydro is also presently engaged with other international oil companies in seismic exploration off the West Coast of Greenland with a view to making an application for exploration acreage as and when that area is offered for licensing.

The prospects for development of oil and gas discoveries in which Norsk Hydro has an interest are promising in view of the political stability in the area and the close proximity to major and increasing markets. The Group's exploration activities have been successful to date and the Group holds licences covering areas which are considered to be attractive. The Group's policy is to increase its exploration interest in Norwegian territory and elsewhere.

Refining and Marketing

Norsk Hydro is in the process of developing a marketing organisation aimed mainly at the Scandinavian market. In order to secure a stable and economic supply of petroleum products for its large internal use and for these rapidly growing external sales, Norsk Hydro has decided to build an oil refinery near Bergen.

It is planned that the plant will be in operation by 1975 and it will have an initial capacity of 4 million tons of crude oil a year. Norsk Hydro has a 60 per cent. interest in the project, the balance belonging to Norsk Braendselolje A/S, a company owned equally by the BP Group and private Norwegian interests.

PROFITS AND TURNOVER

The accounts for the last five years to 30th June, 1971 show that turnover and other operating income of the Group has risen from N.Kr. 926.6 million to N.Kr. 1,219.7 million and that although the pattern has been irregular, profits before special items and taxation and special allocations have risen from N.Kr. 34.0 million to N.Kr. 58.8 million.

The Group's financial year ended 30th June, 1971 showed a decline over the previous year on the basis of the adjusted figures appearing in the Auditor's Report. This was mainly due to higher taxes on electricity, oil and other items in the second half year and unusually high costs of forward foreign exchange contracts which could not be fully compensated by higher prices.

CURRENT TRADING

It is at present too early accurately to forecast the results for the current financial year although profits before special items and taxation for the 6 months ended 31st December, 1971 as shown by unaudited accounts showed a fall of N.Kr. 36 million from N.Kr. 46 million to N.Kr. 10 million compared with the corresponding period of the previous year.

Although costs are beginning to stabilise, it must be expected that, as indicated in the interim statement, profits for the year to 30th June, 1972, will be considerably lower than last year. Part of the difficulties in the first six months were attributable to rebuilding and expansion of a major power plant which is now back in full production and to the current weak markets for light metals and plastics. The lower profits also reflect the substantial investments currently being made by the Group in oil exploration, marketing and building up the Group's oil organisation.

Although the Directors believe that the Group can expect the oil activities to contribute an increasing proportion of revenue and profit, it is still too early to predict the timing and amount of any benefit with any accuracy.

Merrill Lynch reports on its best year.

Three new records were set in 1971.

GROSS REVENUE reached $676 million – up 43 per cent from 1970.

NET PROFIT hit $70 million – up 72 per cent.

NET WORTH (assets minus liabilities) climbed to $393 million – up 40 per cent.

Those are the highlights of the 32nd annual report, just published.

It was a good start for Merrill Lynch's first year as a public company. (The first public stock offering was made on June 23, 1971.)

Some of the gains came from the general improvement in the economy and the stock market. But a lot of them came from management decisions made 3 years ago.

The move to diversity

In 1969 Merrill Lynch set out in a new direction – recognizing that the customer of the future would want to get more financial services from a single source. Here are some of the steps that were taken in the U.S.A. and through Merrill Lynch International:

...committed more resources to investment banking, both in the U.S.A. and internationally.

...acquired an investment counselling subsidiary (Lionel D. Edie & Co., Inc.) and a real estate financing subsidiary (Hubbard, Westervelt & Mottelay, Inc.).

...established an international investment counselling subsidiary Lionel D. Edie International Ltd.

...strengthened the ability to serve the individual investor. Partly by offering mutual funds. And partly by improving the handling of corporate and municipal bonds in odd lots.

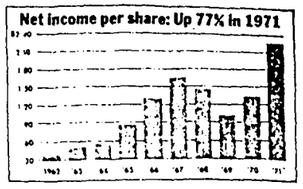
The results

In 1971, every ingredient in the new mixture showed a good gain over 1970.

Commission revenue went up by 57 per cent – to $361 million. But because of diversification, even that hefty figure came to little more than *half* of total revenue.

"Commission revenue" sounds like it might refer just to brokerage in listed securities. But a lot of it came from three other sources: brokerage in over-the-counter securities, commodity futures transactions, and mutual fund sales.

Another area of dramatic growth was investment banking, both in the U.S.A. and abroad. Income from underwritings was almost $63 million, up 33 per cent over 1970. At the same time, an industry record was set in corporate underwritings. Merrill Lynch managed or co-managed 220 corporate underwritings worth $10 billion.



The fastest growing part of the business is dealing in securities as a principal (rather than as a broker). Revenue from principal transactions in U.S. over-the-counter stocks, government, municipal and corporate bonds and in Eurodollar and other Euro Currency securities has grown almost 33 per cent a year for the last 10 years.

Merrill Lynch, Pierce, Fenner & Smith International Ltd., is a wholly-owned affiliate of Merrill Lynch, Pierce, Fenner & Smith Inc. The international company operates branches and subsidiaries in 29 cities in 19 countries throughout the world, serving the international customers of its parent corporation. Through its subsidiaries, it is actively engaged in the world commodity markets and in underwriting and distributing international securities.

Keeping ahead of the times

Merrill Lynch has never thought that sheer size is a substitute for leadership. Here are some of the new things accomplished last year:

- Sharply increased its business with institutions both in the United States and abroad.
- Set a company record by executing $2.2 billion worth of large blocks of stock.
- Offered international institutional customers a new block trading facility for European securities.
- Greatly expanded its Merrill Lynch International facilities for after-market trading of Eurodollar and other Euro Currency securities.
- Offered customers more diversity by moving into options (puts and calls).
- Devised and successfully marketed a new convertible Euro-security that allows U.S. Corporations to raise equity capital outside the U.S.
- Acted as managing underwriter for a new growth and income fund. Sold 90 per cent of the total offering.
- Established a commodity agency relationship in Singapore and became one of three major partners in an Australian Merchant Bank, PFCB Limited.

Things we won't change

Merrill Lynch is prepared to accept change and, in some cases, to cause it. But there are certain things that simply will not be changed.

Capital will always be managed conservatively. Every effort will be made to serve our customers well. Business will be conducted with all kinds of investors – including the smallest. We will always try to protect the interest of the individual investor.

That's our credo. We think it will grow in importance now that we belong to the public we serve.

Nature's distribution relies to a great extent on a system of hit and miss. For which Nature, in her mysterious way, duly makes allowances. Quantity, as a substitute for accuracy, ensures the continuation of the dandelion cycle, for instance.

As part of the largest transport and distribution organization in Europe, the sheer quantity of our resources is something of a parallel to Nature's abundance. But, in the modern commercial context, we have to operate those resources on the basis of tailored efficiency.

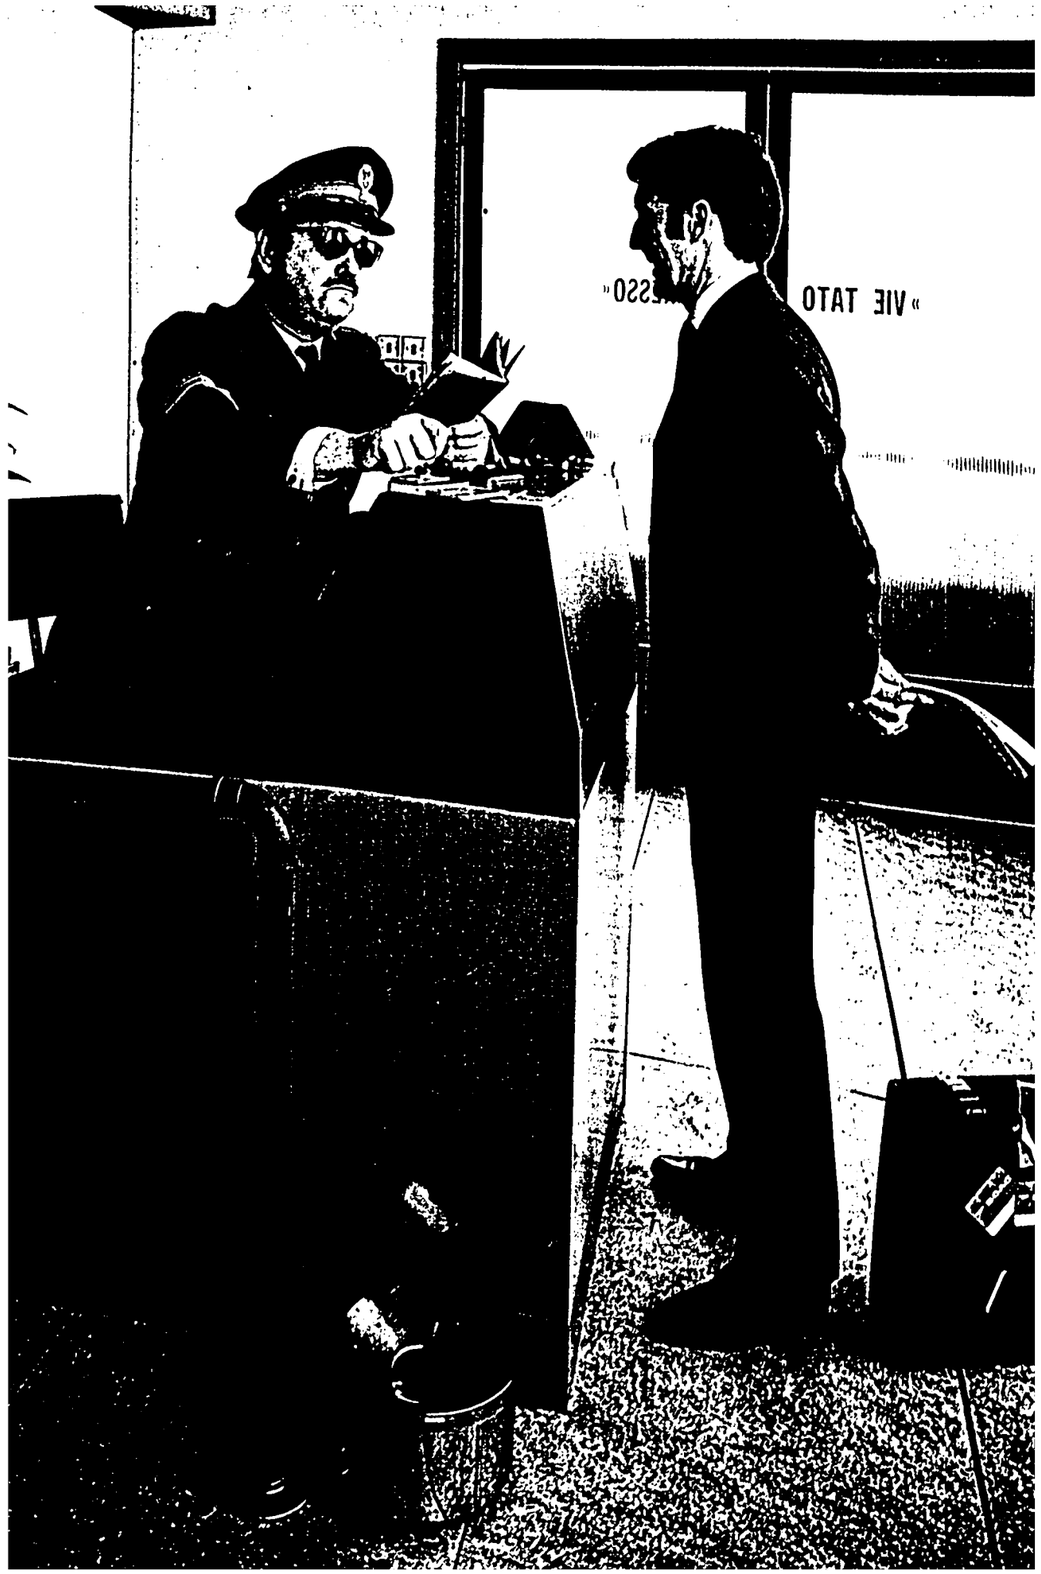
Tailored to the customer's needs, especially the level of service his products and markets demand.

Apart from those two factors, every distribution system is determined by a number of variables – two of the most important being the product characteristics and the distribution pattern.

Whether it's fish or timber or anything else. Whether it's going from field, forest, sea or any other raw material source to factory; from factory to factory; from production line to port or warehouse; from warehouse to shop.

Once we've analysed the requirements, we recommend a distribution system to match them.

According to the individual case, it could include all or any of the following: vehicles; warehousing; routing; handling equipment and systems; maintenance and servicing; administration.



As well as all the legal considerations – from insurance and licensing to regulation testing and payload restrictions.

With branches and depots all over Britain, we have all the personnel, hardware, range of services and experience to put each customer's distribution system on the road.

If you're involved in transport and distribution, you should certainly get to know more about us. You'll find that, although our way of doing things is more economical than Nature's, it's aimed at the same thing: growth. Your company's growth.

British Road Services Limited

Would you buy a £20,000 machine from a man about to leave the country?

If you would, tell us, what happens when that machine breaks down?

How can you call up someone who's chatting up a hostess 40,000 feet over the Atlantic?

When the machine breaks down, you'd better hope you bought it from a man who doesn't stray far from his phone.

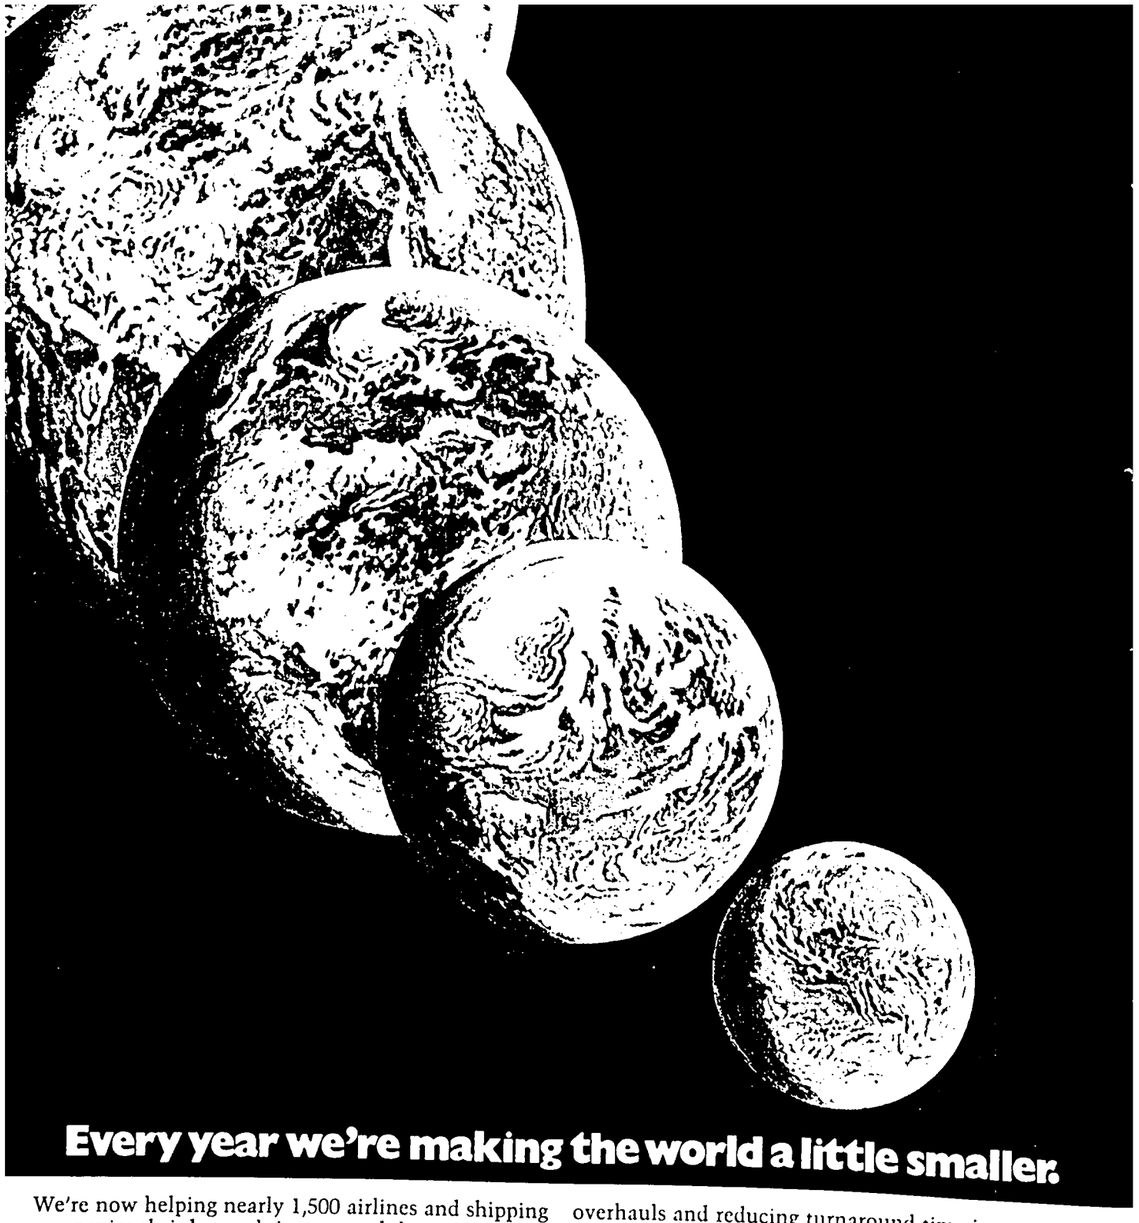
Or from your neighbourhood.

Now that sort of man's not so difficult to find in a big market, say, in Europe.

But a darn sight harder to get hold of in a place like Peru.

Unless you buy some compressed air equipment from Atlas Copco.

Our salesmen have just about the least thumbed passports in the business. Because they only sell in the neighbourhood where they live.



And they only live in neighbourhoods with plenty of compressed air centres to service machines.

And with 361 of these centres strategically placed around the world, there isn't far for them to travel.

So if you happen upon one of our salesmen abroad, tell him from us, 'Happy Holiday'.

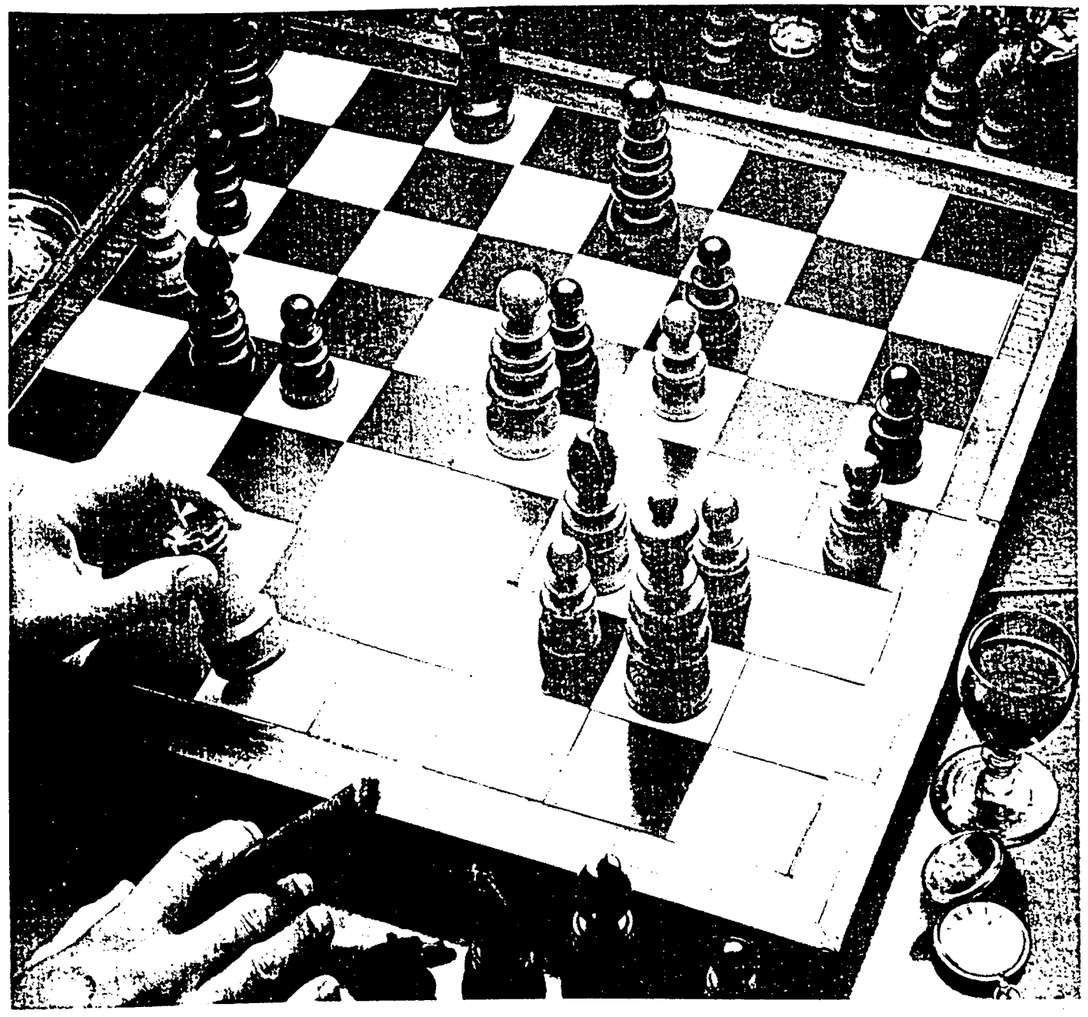
Atlas Copco

COMPRESSED AIR EQUIPMENT FOR MINING AND CONSTRUCTION PORTABLE AND STATIONARY AIR COMPRESSORS, AND AIR TOOLS FOR INDUSTRY.

Every year we're making the world a little smaller.

We're now helping nearly 1,500 airlines and shipping companies shrink travel time around the world:

Chevron aviation fuels, plus advanced new oils, greases and high-performance hydraulic fluids are increasing airline safety, and helping aircraft fly more hours to reduce operating costs.



Special Chevron marine lubrication and fueling programs are helping ships go further between overhauls and reducing turnaround time in port.

Our service network provides laboratory analysis of customers' fuels and lubricants nearly anywhere in the world. And there's more.

For further information on Chevron International and our services to airlines and shipping, write to Chevron International Oil Company, San Francisco, California 94105 USA.

In the investment game, Charterhouse can put you several moves ahead.

Successful investment management is an exercise in anticipating the future.

Charterhouse may immodestly claim to have a proven record of success in the long term investment of substantial sums of money. Company pension funds, universities, charities, private clients with funds of £75,000 or more – our clients include many nationally known names.

We believe that the ability to take a successful forward view in the management of investment funds requires two things.

Firstly, reliable information. The ability to deal in any market is a vital attribute of a modern investment house. At Charterhouse we deal on an international scale: our highly sophisticated communications system includes a satellite link with Wall St, and an on-line television relay to the Stock Exchange.

Secondly, a clear-cut strategy. We like to deal on a personal level with our clients. We agree on investment objectives – the type of investment and the return required. Then we manage the fund against these specific objectives on a day-to-day basis.

We see ourselves as specialists in the prompt identification of change and the exploitation of what such change implies.

If you think our particular expertise can help you, please contact Michael Levete of the Charterhouse Finance Corporation at 01-248 3999.

Or if you are in the Midlands ring Ralph Sammell at 021-236 4936.

THE WORLD *American Survey*

Making amends to Canada

Ottawa

Nixon's warmer up north

To be on bad terms with Canada looks bad: so President Nixon devoted himself in Ottawa from Thursday evening to Saturday morning last week to promoting the healing of those wounds in a once amiable relationship which were most raw, ugly and conspicuous. The dismissal of "mere atmospherics" as inconsequential, which characterises President Nixon's approach to the Soviet Union, does not apply to Canada and Mr Nixon conducted himself accordingly, revealing for once to a pleasantly surprised public a Nixon who was easy, relaxed, and—yes—warm. It worked well.

The Canadian prime minister, the stylish Mr Trudeau, shares with Mr Nixon an interest in avoiding ugliness in the relations between the two countries, although the two men have little else in common. When election time comes in Canada, as it soon will, and notwithstanding all that is said daily about the horrors of life with the American elephant, a reputation for getting on badly with the United States does a Canadian political leader no good. Mr Trudeau's government needs to be perceived as independent, but not as anti-American.

In a dashing attempt to reconcile these two requirements, Mr Trudeau returned from his visit to Washington in December with the news of what he called a "breakthrough": President Nixon had assured him that American policy did not require a permanent deficit in Canada's visible trade with the United States to balance a regular inflow of American investment capital. Only in Canada would this have been news, but Mr Trudeau made so much of it that he came under pressure to get President Nixon to say it again, in public. Mr Nixon did say it again, in his speech to the assembled members of the two houses of Parliament on April 14th, watched by the public on television, and he added:

> No self-respecting nation can or should accept the position that it should always be economically dependent on another nation.

One might think that such a proposition needed no denial, but in denying it Mr Nixon did the Canadian prime minister a good turn—which, no doubt, he will one day be privileged to repay. What led to this revealing incident was Mr Nixon's new economic policy, announced in August. Not only was the Canadian dollar subjected to an embarrassing upward pressure at a time when Canada's economy was slack and its unemployment high, but the trading community and public opinion also suffered the shock of finding that Canada's closeness to the United States did not protect it from the sudden surcharge on imports or from the discriminatory investment tax credit.

While these hardships ceased in December with the agreement at the Smithsonian Institution in Washington, and Canada even escaped with its currency still floating, a degree of pressure remained. Mr John Connally, in charge of Mr Nixon's foreign economic policy, was still seeking a shift of some $9 billion in America's trade balance. He got an agreement from Japan and another from the European community. But, according to the American figures, Canada accounts for $1.7 billion of Mr Connally's $9 billion and he wanted concessions on trade and payments policy from Ottawa. The negotiations to secure this broke down in February and are still at a standstill.

A part of the Canadian public was inclined to interpret these events as fresh evidence of an American policy of keeping the Canadian economy in a state of helotry. The Canadian government had to put up some resistance. Its own figures about the trade deficit and the payments flow were, in any event, quite different from the American figures, as they usually are. In addition, Mr Connally's way of conducting trade talks is something that Canadians found it hard to recognise as a negotiating technique at all.

They were being asked to rewrite the automobile agreement of 1965 in a way that dropped three safeguards inserted to protect the Canadian share of the motor industry, to increase the duty-free allowance for Canadian residents who go shopping in the neighbouring United States and to give up some preferences reserved to Canadian producers in the shared defence-production programme. None of these concessions, nor indeed all of them together, can be called extravagantly unreasonable. But the Canadian negotiators found it impossible to interest Mr Connally in any wishes that they might have. Mr Trudeau permitted himself to say on television that with friends like Mr Connally

one had no need of enemies. However, Mr Connally is still in charge and it looks very likely that the Canadian government will be negotiating with him again before very long.

Just when, the statements of both sides after Mr Nixon's visit leave obscure. Both governments have domestic politics to worry about. Mr Nixon's prospects of re-election in November do not depend on Canada in any way, but his Administration does feel that its chances of holding off protectionist pressure in Congress will be harmed if the Canadian talks produce nothing.

Mr Trudeau, unlike Mr Nixon, has some latitude to decide when his elections should be. A revised automobile agreement, involving at least a hypothetical loss of jobs for Canadians, would be no help to him in an election campaign. So the assumption is that the elections will come first—possibly not till the autumn—and the trade agreement later.

Apart from the customary review of the world scene, there were some other bilateral matters to be touched on. An agreement was signed by the two men for a joint effort to restore the water quality of the Great Lakes, beginning with the two which are the most terribly polluted, Ontario and Erie. The most definite step is a programme to improve the sewage works of municipalities draining into the lakes, with Canadian and American government money and some money from industry. But the agreement is vague on the question of what restrictions, if any, to impose on the use of phosphorus by the household detergent industry and the agreement is also being criticised for its financial inadequacy.

A subject on which neither government has been able to make up its mind yet is the future movement of oil and gas from Alaska and from the Canadian northwest. Mr Nixon has to decide whether to permit the big oil pipeline to be laid across Alaska to the Valdez terminal, whence tankers would carry it to refineries in Puget Sound, very close to Canadian coastal waters. The Canadians are uneasy at the prospect of a huge oil traffic in the sound, with the consequent risk of oil spills.

The Arctic energy question does not rest there. Canada, wrestling with its problem of identity, does not want to be dominated but it also does not like to be left out. The Alaska pipeline, as at present planned, looks like a way of bypassing Canada in the transport of oil. But the gas that will come up with the North Slope oil will need a market also and its most promising route would be up the Mackenzie river and across to the Great Lakes. The Canadian northwest has been giving thought to a development of the Mackenzie river which would include an Arctic port, a road, a gas pipeline and at some stage an oil pipeline as well. Obviously if President Nixon were to decide against the existing Alaska pipeline plan on environmental grounds, the Mackenzie valley scheme would be greatly accelerated. The resultant project would be not only vast but also complicated, involving presumably a development corporation, with the United States and Canadian governments and the oil and gas industries as partners.

This is what the Trudeau government is inclined to prefer. But it may well be too late now for the Alaska oil pipeline to be diverted. With the Alaska oil pipeline or without it, the Mackenzie valley development would also require huge new injections of investment capital, perhaps $10 billion, perhaps more, most of which could come only from the United States. A new round of Canadian introspection about foreign economic domination can hardly be avoided as the Mackenzie valley studies proceed.

30 days' war?

The Senate has sent President Nixon a sharp reminder that the Constitution gives Congress and not the President the power to declare war. Last week 68 Senators, Republicans as well as Democrats, hawks as well as doves, joined to pass a bill delineating for the first time which war-making powers belong to the legislative, and which to the executive, branches of the federal government. Only 16 Senators opposed the measure. No one expects such a forthright bill to be approved by the more conservative House of Representatives ; even if it were, Mr Nixon would certainly veto it. He considers it both unconstitutional and unwise. But ultimate passage into law matters less than the symbolic value of the bill. The President, and his successors, have been put on notice that American forces are never again to be committed to fighting long wars without congressional approval.

In essence, the war powers bill limits the President to sending American forces into combat in emergencies only—to respond to surprise attacks or to protect American citizens or forces

Stennis : constitutionalist hawk

caught in foreign hostilities, for example. But it forbids him from continuing combat for more than 30 days without the approval of Congress. The restrictions are intended to clarify the division of responsibilities set out in the Constitution, which says that Congress is to declare war and raise and support armies, while the President is to act as commander-in-chief. The bill specifically excludes the current war in Indochina from its provisions—an exemption requested by Senator John Stennis of Mississippi, chairman of the Armed Services Committee, a hawk, when he agreed to co-sponsor the bill. Senator Stennis, like the four Republican leaders who also voted for it, has been alarmed by what he interprets as the White House's usurpation of Congress's constitutional authority.

In a gesture directed more specifically at the current escalation of the war in Vietnam, the Senate Foreign Relations Committee voted this week to cut off money for all hostilities in Indochina after the end of the year, provided that all American prisoners of war were released. That proposal, tacked as an amendment on to a bill authorising money for the State Department, will be hotly contested on the Senate floor. It does not have the same bipartisan support which passed the war powers bill, for some of the Senate's firm anti-war Republicans have declined to criticise the Administration on its renewed bombing of Hanoi and Haiphong. Both houses of Congress have been engaged this week in a bitter argument about the escalation of the war. President Nixon is expected to give the country his assessment of the situation in a televised address next week.

This announcement appears as a matter of record only.

CONSOLIDATED ACTIVITIES OF BERGESEN D.Y. CONCERN

The activities of the Bergeson d.y. Concern in 1971 show sales of goods and services amounting to N.kr. 866 mill including sale of ship, but excluding investments and new building contracts.

The working surplus of the shipping companies excluding sale profit rose by kr. 8 mill to kr. 242 mill in spite of considerable rise in costs. Depreciations for taxation purposes including depreciation of sale profits amount to kr. 250 mill. One ship was sold during 1971. One ship—M/S "BERGE SIGLION"—71,500 t.dw.—was acquired and one new building—M/T "BERGE QUEEN"—230,400 t.dw.—was delivered.

The tanker fleet in commission thereby rose to 2,555,000 t.dw. with an average size of 160,000 t.dw. and an average ton/age of 3 years and 4 months.

After taking over M/T "BERGE SIGLION", the dry cargo group is operating seven ships totalling 552,000 t.dw. of which four offsore ships in joint ownership with foreign owners, in addition on a total of 668,000 t.dw. are time chartered. Thus the concern as of 1st January 1972 had a total of 3,735,000 t.dw. in operation.

The concern has new building contracts at fixed prices for four 225,000 tonners (oil/ore) with Uljanik, Yugoslavia (partly in joint ownership with foreign participants) four 280,000 tons tankers with Mitsui, Japan, and two 285,000 ton tankers with Odense Staalsk bvaerft, Denmark, totalling 2,530,000 t.dw. Three of the new buildings will be delivered in 1972, four in 1973 and three in 1974. All new buildings have been chartered for 5 years or more from delivery. The average of the fixed building prices are considerably below today's market price, and can thus absorb the change in currency values. Of the charter parties for the ships in operation, one expires at the end of 1972 the other ships' charter parties expires 1975-1983.

The total fleet including new buildings, excluding chartered ships, as pr 1st January, 1972—5,667,000 t.dw.

After long term investment liabilities, instalments on new buildings and instalments on loans are regulated, cash and bank deposits amounts to kr. 230 mill (as last year). The overdraft facilities are then not used. Based on investments, finance arrangements and freight contracts, the liquidity position will improve as the new buildings come into operation.

The concern takes part in oil operations through NOCO and NOCOTO.

During 1971 the fleet has operated very satisfactory with an average off hire of 6 days.

Dividends will be raised from 10% to 12% in A/S Sigmalm, from 40% to 50% (on the paid share capital) in Snefonn, and from 18% to 20% (on the said share capital) in Bergehus.

—FULL SPEED AHEAD—

Fed's dilemma

Washington, DC

Nearly all the indicators are now pointing clearly to a robust expansion of the American economy and this very fact is the major factor in a new dilemma for the Federal Reserve Board. Since early in 1970 the central bank has been struggling with the operational problems of attempting to create the desired growth in the money supply and other money and credit "aggregates": trying to select which is the right aggregate to control; being badgered by ultra-mathematical economists and unsophisticated Congressmen alike; dividing within itself on the technical issues involved. Now the board has a real problem.

The badly-burned American bond market—burned, that is, by six years of inflation and unpredictable gyrations in interest rates—is in one of its frightened phases. With doubts about the economic expansion dissipated effectively and with doubts about the success of the government's programme for controlling inflation revived, the herd is now rushing towards higher interest rates. This is a reflection of a familiar paradox: a strong economy means strong demand for credit, with no necessary addition to the supply. But the present situation is complicated by uncertainty about what the Fed is trying to do.

In recent days, the seers in the money market have had to cope with the following:

Publication of the Federal Reserve's deliberations of last January, in which a majority of the Open Market Committee, over vigorous dissent by three members, voted to pump new reserves into the banking system solely on the ground that the narrowly-defined money supply had failed to rise during the autumn.

Publication by the Federal Reserve Bank of New York of a highly technical analysis by Mr Alan Holmes, manager of the open market account, of how very hard it is to achieve whatever target for the monetary aggregates the open market committee may choose to select.

A sharp run-up in short-term interest rates, clearly with the concurrence of the Federal Reserve, following the troubles of the foreign exchange markets and new pressure on the dollar in the early spring.

An almost despairing speech by Mr Sherman Maisel, a leading intellectual on the Federal Reserve Board who is soon to leave it, saying that monetary policy has no business to be in the headlines or front-and-centre in economic considerations because, among other things, the costs of trying to regulate the economy by monetary means are much too high.

The problem now is, of course, that interest rates have been moving up at a time when the Federal Reserve, the President, the Secretary of the Treasury and Democratic party politicians of all stripes find this distasteful. If the Federal Reserve pumps in yet more money, long-term rates could well go higher as "inflationary expectations" are reinforced. If it pumps in less, they could go higher on the ground that the supply of credit is insufficient.

What this really says is that the problems of a central bank are always more difficult when the economy as a whole is doing better. It has been a long time since overheating was even a remotely distant concern for the United States. The involved techniques of how to create a given growth in the money supply, the "bank credit proxy" or other arcane measures of monetary policy, will remain important issues. But perhaps today's dilemma is the kind that the Federal Reserve should welcome.

Breaking the nets

What the American television audience sees on its screens in the evening is determined largely by what the three nation-wide commercial television networks choose to put out. Last week the Justice Department accused the

The Chinese are coming

The first fruits of President Nixon's visit to Peking have arrived in America. A team of top maoist ping-pong players flew into Detroit last week. They were applauded warmly as they displayed their invincibility and insisted diplomatically that friendship was more important than victory. In two weeks they will play in five cities and will be exposed to such capitalist delights as Disneyland (where Khrushchev was forbidden to set foot) and Williamsburg, Virginia, tactfully described as a symbol of the American revolution.

The cost of the tour is being met with money raised by the bourgeois National Committee for United States-China Relations and the host is the American Table Tennis Association; but the visitors are being supervised anxiously by the State Department, which has nightmares about some untoward incident. Already the team has been picketed by right-wing Christians and by Nationalist Chinese. Indeed, the security surrounding the Chinese is so intense that the "friendship between our two great peoples" to which President Nixon referred when they visited the White House has had little chance to flower.

Equally secure in their air-conditioned apartment, but more approachable, are the two young pandas, Hsing-hsing and Ling-ling, who have arrived at the National Zoo in Washington, to the bitter envy of every other zoo in the country. America has not had a panda since 1953; now there are even hopes that when they are old enough the pair may breed. This particular cultural exchange is shadowed, however, by the news that Milton and Matilda, the two young musk-oxen which were America's gift to the Peking Zoo, are ill with a rare skin disease; embarrassingly, they brought it with them.

Compared with the pandas, the news that the first American businessmen to be allowed into China for many years have arrived at the Canton trade fair is dull stuff. Most of those chosen for the honour by the Chinese represent small firms anxious to buy carpets, textiles and exotic foods. An exception to this rule is the Boeing Company, which is hoping to sell civilian jet aircraft to the Chinese, one of the few things that they are believed to want to import from abroad.

". . . And This J. Edgar Hoover Wants To Know If We're Members Of A Communist Or Communist-Front Organisation"

networks of exerting an illegal control over the business of writing and producing programmes of television entertainment for "prime time"—the hours in which viewing is at its peak. The department wants the networks to stop producing their own entertainment shows and involving themselves financially in shows produced by outsiders, whether advertisers, independent producers or the makers of full-length films. The present situation in which the networks have extensive investment in supposedly independent productions serves, in the department's view, to deny access to national television networks to producers with whom the networks have no financial ties. The department would allow the networks to retain the right to organise national schedules and to produce their own news, sports and public affairs programmes.

The three networks—the Columbia Broadcasting System, the National Broadcasting Company and the American Broadcasting Companies, Inc—were stunned by the suit. (A former subsidiary of CBS, Viacom, International, was also named as a defendant). They are already under a new restriction issued by the Federal Communications Commission which requires them to give up half an hour a day of prime time to local television stations in order to encourage greater diversity in programming. Moreover, the Justice Department has had this particular suit lying around for several years. Why was it sent to court now?

Several glib answers are circulating. One is that the department, embarrassed by the current scandal about its supposedly over-lenient treatment of the International Telephone and Telegraph Corporation, wants to polish its image as a vigorous prosecutor of anti-trust cases. Another is that the suit is the Administration's warning to the industry that its supposedly liberal Democratic television commentators had better provide fair coverage during the presidential campaign or the industry's powers will be trimmed. The real explanation seems to be that the department has finally decided to take action on a legitimate and important issue of monopolistic restraint of business but that it has done so at a most inopportune time.

The very appearance of the suit may have practical effects. The FCC may give up thoughts of relaxing its prime time restrictions on the networks. Another is that the networks will be very shy of entering into financial arrangements with outside producers. But neither the FCC nor the Justice Department can answer the major question that the whole controversy raises: how can independent producers invest the $250m or so required to develop a new programme without a guarantee that a national network will buy it?

Muskie's mistake?

FROM A CORRESPONDENT IN BOSTON

In a moment of candour recently, Mr Kevin White, the Mayor of Boston, suggested that if Senator Edmund Muskie were to lose in the Democratic primary elections in both Massachusetts and Pennsylvania next Tuesday, his candidacy for the presidential nomination would be "terminal." While the mayor confessed later that he "should have kept his mouth shut," the comment echoed the misgivings of many in the Democratic party's hierarchy in Massachusetts; they had endorsed the Senator from Maine as an early front-runner and are now feeling some embarrassment at their candidate's less-than-stunning showing in the early contests.

Maine was a political subdivision of Massachusetts in the first days of the Republic and only a few weeks ago this regional proximity worked to Mr Muskie's advantage. He was known and respected for his positions on issues affecting the economy and ecology of New England and was felt to have most of the Democratic regulars in his pocket. But even devoted Muskieites are showing exasperation at their man's tendency to take his neighbours for granted. Having forsaken the New Hampshire voters for those of Florida, Mr Muskie is now neglecting Massachusetts in the last week of the campaign to solicit support in Pennsylvania. Pennsylvania will send 80 more delegates than Massachusetts to the Democratic nominating convention in Miami in July and Mr Muskie is hoping to wrest some of these from Senator Humphrey on Tuesday. But in the effort he risks a falling away of support closer to home that could be far more serious in the long run than his lack-lustre showing in New Hampshire.

By contrast, Senator George McGovern of South Dakota has been devoting a great deal of time to Massachusetts, with evident results. A poll of voters' preferences conducted by a Boston newspaper showed Mr Muskie leading Senator Hubert Humphrey in February by a comfortable 46 per cent to 15 per cent, with Mr McGovern's 11 per cent in third place. Two months later, Mr Muskie had only 27 per cent of the same constituency, while Mr McGovern's following had risen to 38 per cent and Mr Humphrey's only two points, to 17 per cent. Moreover, Mr McGovern had become the favourite of voters under the age of 30 and over 65, those in both the highest and the lowest income groups and those who were "very sure" that they would vote next Tuesday.

One factor in the reversal could be the way in which the Senator from South Dakota speaks directly to issues, while Mr Muskie tends to hedge and ponder, seeking a broad middle ground. Like Governor George Wallace of Alabama (who is also on the ballot in Massachusetts but has made no appearances in the state), Mr McGovern is hoping to draw heavily on the working-class vote in communities like Lowell, Springfield and Fall River, where unemployment and inflation are very tangible issues indeed.

But unlike Mr Wallace Mr McGovern deals successfully with the economic effects of the Indochina war on the average worker, without soft-pedalling the moral effect on the country as a whole. While as yet innocent of charisma, he has the advantage of visibility and a certain plodding patience in widening his appeal to the rank-and-file. He is an obvious favourite of Boston's large population of college students but strives to free himself of the image of a one-issue candidate supported mainly by academic mandarins. At one of his frequent appearances at a construction site in Boston he clamped a

N.V. PHILIPS' GLOEILAMPENFABRIEKEN
EINDHOVEN

The Annual Report and Accounts of N.V. Philips' Gloeilampenfabrieken and the Holding Company (N.V. Gemeenschappelijk Bezit van Aandeelen Philips' Gloeilampenfabrieken) will shortly be available in their English translation. The Holding Company owns Fl. 1,242,415,000 ordinary shares of N.V. Philips' Gloeilampenfabrieken out of a total of Fl. 1,242,646,000 ordinary shares in issue.

The development of the Philips' Group as a whole over recent years is shown in a table published in the Annual Report from which the following figures have been extracted.

	1971	1971*	1970	1969	1968
	(*in millions of guilders*)				
Sales (excluding inter-company sales)	18,120	16,437	15,070	13,023	9,721
Increase on the preceding year	•	9%	16%	12%	12%
Trading Profit	1,315	1,161	1,280	1,354	1,121
As percentage of sales	7.3%	7.1%	8.5%	10.4%	11.5%
Net Profit	343	271	435	518	439
Per ordinary share of Fl. 10 (in guilders)†	2.49	1.91	3.29	4.09	3.86
Increase on the preceding year	–21%		–16%	19%	24%
Retained Profit	110		193	255	210
As percentage of net profit	32%	14%	44%	49%	48%
Dividend per ordinary share of Fl. 10 (in guilders)	1.60**		1.70**	1.90	1.80
Scrip Issue	—		—	10%	—
Net Worth	6,731		6,324	5,548	5,127
Long-term liabilities and provisions	6,406		5,324	3,411	3,070
Short-term liabilities and provisions	7,314		6,692	5,606	3,899
Current Assets	12,683		11,167	9,270	6,955
Ratio of current assets to short-term liabilities and provisions	1.7		1.7	1.7	1.8
Additions to property, plant and equipment	1,287		1,158	715	481
Depreciation of property, plant and equipment	835		608	549	461
Number of employees	367,000	339,000	359,000	339,000	257,000

*The figures in this column do not include the new consolidations as at 31st December, 1971, or reflect the changes in the principles of calculating profit. These figures are therefore comparable with those for 1970.

†Net profit after deducting distributions other than to ordinary shareholders.

**For 1971 shareholders may receive a distribution in the form of ordinary shares chargeable to Share Premium Account, free from Netherlands taxation, such that one ordinary share of Fl. 10 is distributed on 40 ordinary shares of Fl. 10 (36 in respect of 1970), or, at their option, a final dividend of Fl. 1·00 in cash (Fl. 1·10 in 1970).

Below is set out an Abridged Statement of the Consolidated Financial Position as at 31st December, 1971, combining the data of N.V. Philips' Gloeilampenfabrieken and the United States Philips Trust.

ABRIDGED STATEMENT OF CONSOLIDATED FINANCIAL POSITION AS AT 31st DECEMBER, 1971

(*in millions of guilders*)

Thomas Tilling Another successful year.

Summary of key points from Sir Geoffrey Eley's Review:

–The improvement over 1970 was dramatic.

–All industrial sectors of the Group save one contributed to the advance and 77% of the £6.1 million increase in profit before tax was contributed by our maintained interests.

–The total dividend recommended for the year is 21% compared with 18% in 1970. Results and prospects warrant a scrip issue of one for five ordinary shares.

–Capital expenditure amounted to £12.5 million and acquisitions for cash to £3 million yet there was an outflow of cash of only £2 million.

–Whilst it would not be prudent to rely on an equally dramatic increase in 1972, I remain confident about the future and next year expect to be able to give you another good report.

	Improvement 1971 over 1970	1971 £m.	1970 £m.	1969 £m.
Sales	+29%	319.7	247.2	189.6
Group profit before tax	+47%	19.0	12.9	10.3
Profit after tax attributable to Tilling shareholders	+66%	11.6*	7.0	5.0
Ordinary dividend		21%	18%	17%
Dividend cover (after full 40% tax charge)		2.0 times	1.6 times	1.2 times
Earnings per ordinary share (after full 40% tax charge)		8.5p	5.6p	4.3p
Return on average funds employed		18.0%	14.4%	13.9%

*Before provision for deferred taxation of £1.5m. (1970 £0.3m.)

THOMAS TILLING LIMITED

The Secretary (38), Thomas Tilling Limited, Crewe House, Curzon Street, LONDON W1Y 8AX.

worker's helmet on his head and called attention to his blue shirt, which he intends to "wear to the inauguration."

While the most powerful man in the Massachusetts Democratic party, Senator Edward Kennedy, has disqualified himself as a convention delegate and remained aloof from the primary contest, many of his close associates and those of his late brothers are actively working for Mr McGovern. If most of the state's 102 convention delegates are committed to the Senator from South Dakota, only Mr Kennedy, of all the state's Democratic leaders, stands to emerge without acute embarrassment.

Tax time

Not long ago the way America collects its income taxes was being held up as a model to benighted foreigners: the system was said to be so simple and efficient that little checking for fraud was needed. Now it appears that there may be quite a bit of fraud after all. And why? Because, it is said, over half of the taxpayers—mostly the least educated—find the tax form so complicated that they resort to commercial tax consultants. Some of these are fly-by-night "experts" who are incompetent; some advertise that they can obtain large refunds of tax—and do so by inventing false dependants; some even appropriate the refunds themselves.

The situation is not quite so black as Mr Connally, the Secretary of the Treasury, painted it at first when he said that a check in one region had shown that 97 per cent of the tax consultants had submitted fraudulent returns. Only 20 per cent of the cases involved deliberate fraud, as opposed to error, and the consultants investigated were already under suspicion.

Where error is concerned, not even the Internal Revenue Service is immune. The Wall Street Journal submitted a not very complicated tax return to five different IRS offices for advice and received five quite different answers. So it does not seem surprising that a private study for the IRS reported that there were parts of the tax form which only a college graduate could understand. Now the IRS is considering bringing back a short, simplified form for people whose only income comes from wages; it is estimated that about 30m of the 70m or so taxpayers could use it. Unfortunately, when it was available, few did so. In addition, at the end of last week IRS officials were working long hours to help taxpayers to fill out their forms—something which they have never done before.

Manpower is stretched very thin at the IRS, particularly now that it has the new job of enforcing price controls. Mr Connally's talk of millions more returns being audited needs to be taken with salt. Last year only 1.4m individual returns were checked and the goal this year is 2.1m. The service relies, instead, on well-publicised penalties for a few miscreants. Because of its shortage of manpower it feels that it could not undertake to license tax consultants, as some reformers have suggested. But it may ask Congress for power to run persistent wrong-doers out of business and to impose heavier fines for making out fraudulent returns. The new talk of fraud comes as Democratic campaigners for the Presidency are finding an overwhelming response to accusations that huge loopholes in the federal tax law benefit the well-off at the expense of the struggling little man. The case for reform looks stronger than ever, particularly if, as seems possible, federal tax rates have to be raised next year.

Barnes must save his own skin first

Lone star cloud

Texas is the only really large state which is not holding a presidential primary election this year. But the outcome of both the Democratic nominating convention in Miami Beach and of the presidential contest itself could be affected by the primary elections which Texas is holding in two weeks' time, to choose the party nominees for Governor, Senator and congressional seats. For what is at stake there, and then in the general elections in November, is the long-established but weakened control of conservative Democrats over Texas.

The Governor, Mr Preston Smith, who is running for re-election to a third term, has been involved in a banking scandal in which the Speaker of the State House of Representatives was convicted of accepting a bribe. The scandal has also touched, although not so closely, the Lieutenant Governor, Mr Ben Barnes, who is also seeking the Democratic nomination for Governor. By no means a reactionary, this young man—he is only 33—has long been regarded as the saving grace of the right wing of his party in Texas. But now he is fighting for his political life, against a large field led by two strong campaigners who are making much of the corruption issue. One of them, Ms Frances Farenthold, a liberal State Representative, has the advantage of being a woman.

In the Senate contest Texas's best-known liberal, ex-Senator Ralph Yarborough, is trying to make a come-back at the age of 68, pointing out that he comes from a long-lived family. His leading opponent is Mr Barefoot Sanders, a moderate who served in Washington during the Johnson days; whichever one gets the nomination, he will put up a strong challenge to the Republican Senator Mr Tower.

This year Texas is a key state in the presidential contest—Mr Nixon lost it by only 39,000 votes in 1968—and the campaign there will be one of the most important in the country. With the state's chief Democrat, ex-President Johnson, in poor health, with the next most important Democrat, ex-Governor Connally, a leading figure in the Republican Administration in Washington, with the remaining Democratic party officials smeared by a scandal and with the Democratic party itself divided, the Republicans ought to win "big" in Texas in November, for the first time in a century. But the Republicans are short on both organisation and attractive candidates. And there will be over a million new young voters on the rolls and also, if last winter's mayoral election in Houston is any guide, a greater participation by Negroes and Mexicans. They are not likely to vote for Republicans—or for conservative Democrats.

COLOGNE REINSURANCE COMPANY

(KÖLNISCHE RÜCKVERSICHERUNGS-GESELLSCHAFT)

COLOGNE

Established in 1846

Balance Sheet as at December 31st, 1970 (Summary)

ASSETS	*DM.*	*LIABILITIES*	*DM.*
Uncalled Capital	3,000,000,—	Capital Subscribed	16,000,000,—
Freehold Properties	11,231,503,31	Statutory Reserve	4,000,000,—
Mortgages	2,518,552,72	Free Reserve	7,300,000,—
Loans and Debentures	71,649,538,57	Free Special Reserve	3,000,000,—
Equalization Bonds	7,305,114,69	Reserve acc. to art. 6b of "EStG"	1,452,946,56
Share Holdings, Securities	218,829,738,71	Value Adjustments	566,942,95
Claims against Associated Companies	245,927,251,43	Policy and Annuity Reserves for Own Account	379,459,580,—
Claims against Non-Associated Companies	332,317,451,90	Unearned Premium for Own Account	98,031,432,33
Banks and Post Offices	19,669,44	Reserve for Outstanding Claims for Own Account	254,383,637,—
Cash on deposit and on current accounts	14,722,463,21	Other Reserves	7,695,493,19
Interest and Rent Accrued	3,457,433,38	Liabilities against Associated Companies	10,539,843,40
Inventory	298,747,87	Liabilities against Non-Associated Companies	126,972,986,10
Other Assets and Deferred Items	74,288,54	Other Liabilities	577,876,94
		Deferred Items	71,015,30
		Net Profit	1,300,000,—
	911,351,735,77		911,351,753,77
In 1969, the *Gross Premium Income* under the various Branches resulted in the following amounts :—			
Life	127,269,363,—		
Accidents, Third Party, Motor	199,926,572,—		
Marine	24,923,345,—		
Fire, Hail and General	109,344,199,—		
	461,463,479,—	*Distribution of Profit:* 10% dividend on DM 13 millions paid Share Capital	1,300,000,—

The *Company's Capital and Reserves* as at December 31st, 1970 amount to DM 764,000,000,—.

The complete Balance Sheet has been published in the "Bundesanzeiger."

All these bonds having been sold, this announcement appears as a matter of record only

BRITAIN

Derry made its mind up long before Widgery

Widgery : what should soldiers do ?

The Government's policy of conciliation in Ulster has run into trouble, and Lord Chief Justice Widgery's findings on how the paratroopers came to kill 13 men on the streets of Londonderry on January 30th have done nothing to help Mr Whitelaw. Mr Eddie McAteer, the old guard leader of the Nationalists, actually claimed that the report meant the end of the Secretary of State's mission. Both wings of the IRA denounced it as a whitewash. Predictably, Miss Bernadette Devlin called Lord Widgery the latest in "an ever-growing line of British establishment liars sent to slander and libel the people of Ireland." But those remarks were predictable: the events on that Sunday have already become yet another myth in Ireland's history.

Both the Government and the army say they are satisfied with Lord Widgery's findings. Lord Carrington, the defence minister, sees the report as a vindication of the paratroopers. Certainly Lord Widgery has dismissed the more fanciful accusations made in January. What happened, he says, was not an unprovoked or reckless attack, nor was it a ploy to flush out the 200 or so IRA gunmen who *control* the Bogside and Creggan. The soldiers did come under "ill-directed" fire before they shot back. Lord Widgery was impressed by the confident way in which the soldiers gave their evidence and stood up to hostile cross-examination. Apparently there was no "general breakdown of discipline." Some soldiers showed a "high sense of responsibility" that afternoon. But the report also makes some disquieting points, which will be picked up abroad as well as in Free Derry.

No proof exists that any of the 13 dead men or the wounded had been handling either a gun or a bomb when shot. Paraffin tests found traces of gelignite on the clothes of only two of them. Moreover, Lord Widgery talks of army shooting in Glenfada Park, where four men were killed "without justification," as bordering "on the reckless."

The report's terms of reference did not require Lord Widgery to pass any judgments, although it was intended to provide "an objective view of the events" so that "those who were concerned to form judgments would have a firm basis on which to reach their conclusions." But he does bring into serious question the wisdom of the army's decision on January 25th, accepted by "higher authority" (this remains unidentified in the report but was, in fact, Lord Carrington and not Mr Brian Faulkner), to send the troops into the Bogside to arrest demonstrators if the illegal civil rights march were to degenerate into hooliganism. No loss of life would have resulted if, after the stonethrowers had dispersed, the army had just reverted to its normal low key approach.

Lord Widgery is right to emphasise the anarchy which runs in most of Londonderry west of the river Foyle (although in the Commons on Wednesday Mr Heath said these no-go areas would not be tolerated much longer). Between August 1st and mid-February alone, 2,656 shots were fired at the army, along with 456 nail and gelignite bombs. And there were 225 explosions in the city, mainly in business premises. With this experience, it is difficult to understand why Brigadier MacLellan believed that his paratroopers would not come under fire from an IRA bastion like the Bogside if they were to go in to make arrests. That was bound to lead to a gun battle, with the likelihood of the loss of civilian lives. Lord Widgery does point out, too, that there had been no clear separation between the rioters and the marchers before the soldiers went into action.

But the report raises more fundamental questions. Lord Widgery expresses surprise that the yellow card of instructions—about when a soldier can fire—forbids warning shots. Every shot must be aimed at the person whom the soldier believes is using or is about to use a "firearm for offensive purposes." Yet it is often impossible, particularly in an urban guerrilla campaign such as that in Ulster, for a soldier to make an instantaneous distinction between, say, a stone thrower or a nail bomber, or between a man with a sub-machine gun and a photographer with a camera with telescopic lenses. Lord Widgery puts his finger on the dreadful dilemma of soldiers faced with gunmen close to innocent civilians:

> Either they must go all out for the gunmen, in which case the innocent suffer; or they must put the safety of the innocent first, in which case many gunmen will escape and the risk to themselves will be increased.

Lord Widgery very sensibly concludes that "the individual soldier ought not to have to bear the burden of deciding whether to open fire in the confusion such as prevailed on January 30th. In the conditions prevailing in Northern Ireland, however, this is often inescapable."

Local elections

Labour still to win

Next month will see the last of the annual elections for the soon-to-be-obsolete borough and district councils in England and Wales. Once these were primarily local contests over local issues and local personalities ; indeed, they still are in many small towns and rural areas. But in the main towns and boroughs these local elections are now generally regarded as performing two national political functions : a sort of low turnout opinion poll, and the opportunity for the opposition party at Westminster to take control of the major town halls as compensation for losing the general election. As 1969, when the seats up for election this year were last fought, marked the depth of the Labour government's unpopularity, the results this year are going to look particularly good for Labour.

Labour is bound is to gain something of the order of 1,000 seats in the borough elections. But the real measure of the changing popularity of the two main parties will be the swing in votes since last year's local elections. In the spring of 1971, unemployment was rising, inflation was rampant, the unions were mobilised against the Industrial Relations Bill and the country had recently suffered power cuts and a postal strike. In many areas, notably Scotland, inner London, Manchester and Merseyside, the Conservatives turned in their worst local election performance ever ; elsewhere it was little better than in 1945, their worst year. Only Tory aldermanic reserves and the 1969 stream of councillors prevented Labour from a massive takeover of the town halls. A swing compared with 1971 is, therefore, a swing on a pretty awful year for the Conservatives. The size of the swing to Conservative since last year (if there is one) will indicate whether or not there is any need to take seriously talk of a general election this year.

It will need to be a sizeable swing. One of 5 per cent would still leave Labour favourites to win an early general election (the maximum annual swing in local elections ever achieved by a Conservative government was in 1958-59, when it was a fraction over 5 per cent). One of 7½ per cent would, on past records, correlate with a level pegging general election, so the swing to Conservative would have to be nearer to 10 per cent before any Tories could bang the drum for a general election with much confidence.

But even a swing of 10 per cent to the Tories would still switch the bulk of the big cities to Labour. Labour now controls only a quarter of the local authorities with populations over 100,000 to the Tories' two-thirds. A swing of 10 per cent to Conservative will still give 13 councils, including the prizes of Birmingham, Bristol, Leeds, Liverpool and Teesside, to Labour, which is also bound to pick up four towns not controlled by any party. It will require a political miracle for Labour not to emerge as the party with a majority of the big cities in May ; such is the delayed effect of Labour's 1969 unpopularity working through the triennial system.

Opinion polls are turning the Tories' way, but it is unlikely they will move fast enough to stop a Labour landslide. A repetition of last year's voting would switch 20 big towns (21 including Oxford) from Conservative, which would divide the 57 such towns into 40 Labour to 14 Tory with 3 split. The really marginal boroughs are Ipswich, Reading, Southampton and York (where the Tories need small swings to save control) and Northampton, Walsall and Wolverhampton (where Labour needs small swings to take control). So the regular pattern of the national opposition party taking over control of most local government centres of power a couple of years after its national defeat is going to be repeated, come what may.

By-election

Look you

No one would grudge Plaid Cymru two cheers for its achievement in coming a very good second, only 3,710 votes behind Labour, in the Merthyr Tydfil by-election, but the nationalists would be silly to imagine that all Wales is now theirs for the taking. To begin with, they did not actually win Merthyr, and—as the Liberals could tell them—winning by-elections is the only thing that really matters for minority parties. Secondly, Merthyr's voters are a particularly independent-minded lot, who, at the general election, elected as an independent Labour MP, Mr S. O. Davies, the man who had been their member since 1934 and who had been cast out by the local Labour party to make way for a younger man. There was also considerable feeling in the town against the way Labour has been running the council. Plaid Cymru was the most effective protest vehicle.

That does not mean Labour has no need to worry. The new MP, Mr Ted Rowlands, was a former junior minister at the Welsh Office, but the margin of his victory in a seat which has traditionally given Labour a fat five-figure majority is something of a shaker. Whatever the cause—whether it be local resentment or reaction to Labour rifts nationally or a positive vote for more Welshness—it must disturb the complacency of those who have always assumed the Welsh valleys belonged to Labour almost as of right.

Political control of the big towns

Political control now, and after the May elections, in Britain's 57 provincial towns with 100,000 or more people.

Labour controls 15: Aberdeen, Blackburn, Dudley, Dundee, Glasgow, Hull, Manchester, Newport, Norwich, Oldham, St. Helens, Sheffield, Stoke-on-Trent, Swansea, Thurrock. They all stay Labour.

No control in 5: Birkenhead (Lib), Salford (Lib), Basildon (Ratepayers), South Shields* (council equally divided) will all be captured by Labour even if there is a swing of 20 per cent to Conservatives since 1971.

Havant and Waterloo (Ratepayers) stay no control.

Conservatives and allies* control 37

On a 15 per cent swing to Conservatives: Bristol*, Coventry, Leeds, Nottingham, Teesside, Warley and West Bromwich will go Labour, while Conservatives will lose control of Bradford (Lib), Edinburgh* (Lib), Oxford (Univ) and Reading (Lib).

On a 10 per cent swing to Conservatives: Birmingham, Bolton, Leicester, Liverpool*, Luton and Stockport will also go Labour.

On a 5 per cent swing to Conservatives: Bradford, Derby and Sunderland will also go Labour, while Conservatives will lose control of Huddersfield (Lib).

On no swing from 1971 : Ipswich, Reading, Southampton and York will also go Labour.

On a swing of 5 per cent to Labour: Northampton, Walsall* and Wolverhampton will go Labour while Conservatives will lose control of Poole (Lib and RA).

On a swing of 10 per cent to Labour: Cardiff, Edinburgh* and Newcastle will also go Labour. Conservatives should keep Blackpool, Bournemouth, Brighton, Plymouth, Portsmouth, Solihull, Southend and Torbay.

Notes
Towns where Conservatives control with local allies marked*.
Brackets after the no control town show the party holding the balance of power ; in Oxford the university elected members will probably hold the technical balance of power after the elections but Labour can take a majority of the political members on no swing from 1971.

Dons

Clocking in

British academics tend to anticipate damp squibs with the protest worthy of a nuclear threat. The universities were dragged kicking under the wing of the Public Accounts Committee: the much-prophesied destruction of academic freedom has so far amounted to the acceptance of a little accounting advice from the Comptroller and Auditor-General's helpful department. Then there was that report from the now defunct prices and incomes board, which had the temerity to suggest that a tiny proportion of dons' pay should be dependent on teaching ability ; that stirred up a hornets' nest, and came to nothing. Finally, the vice-chancellors' committee (et tu, Brute ?), which had been criticising as useless the University Grants Committee's efforts to distil the comparative costs of research, undergraduate and post-graduate teaching from the regular accounts, agreed to carry out a sample survey in 1969-70 of how dons spend their time. Those surveyed were asked to allocate their time, half-hour by half-hour, between external professional work, personal research, supervising research, two levels of teaching and "unallocable" internal work from 8 am to midnight for a week—in short, they were asked to keep a diary.

Naturally, there was a good number of irritable professorial letters to the newspapers. One can understand why: the details of any such survey must border on the ludicrous. That half-hour spent grumbling about Professor Bumbletwit's appointment—was that research or administration ? If a vital philosophical truth dawned on me in the bath, can I put that half-hour down to personal research ? And, as the vice-chancellors' cost analysis committee (chaired by Mr Charles Carter, of Lancaster) points out in its report*, published on Friday, there is a tendency for total working time to be "modestly overestimated." Mathematics dons were either the most honest or worked the shortest hours: their average working week was 45 hours, while those in medicine and (much more surprisingly) in the arts disciplines claimed a 54-hour week.

But the sample was satisfactorily large—partly because 11 university institutions asked that all their dons be surveyed as they were interested in the results for internal purposes. Nearly 8,000 dons were sent diaries, out of a total of just over 27,000 ; over 80 per cent returned their first in a usable condition, and just over 60 per cent completed three diaries for different types of weeks in the academic year. Needless to say, most took the opportunity given to comment on the survey: the report states blandly that scientists usually criticised the methodology and those in the arts the principle of the survey.

The most reliable results are probably those which show what proportion of their time dons spent on different activities, rather than the total number of hours: 37 per cent on undergraduate teaching, followed by 24 per cent on personal research. Surprisingly, this proportion diminishes as one goes up the academic hierarchy, with professors spending only 18 per cent of their time on personal research (though they spend as much again on external professional activities). Perhaps they're quicker workers.

*Report of an Inquiry into the Use of Academic Staff Time. 30p.

National theatre

Sweet prince?

The National Theatre board announced this week the appointment as director-designate of Mr Peter Hall, for nine years the very successful director of the Royal Shakespeare Company and, for a brief, unhappy period, artistic director of the Royal Opera House. This does not mean that Lord Olivier, the incumbent director, will leave before early 1974 : it is proper that the man who started the company at the Old Vic in 1963 should steer it into its majestic new home on the south bank of the Thames.

The National has started off this financial year well with 97 per cent attendances for "Jumpers" by Tom Stoppard and "Richard II." It certainly needs some success. The current publicity has caught it at the end of a bad period—lasting several years—during which many of its more talented actors like Robert Stephens and Maggie Smith (whose names, along with that of Albert Finney, had been bandied about as possible successors to Lord Olivier) have left, and many plays have been commercial, some might say also artistic, flops. The low point came during the company's extra season last summer at the New Theatre in the West End which, at a time when most commercial theatres were packed, often played to half-empty houses and made a substantial loss.

Some of the blame for this was put

Hall : objections overruled

down to a bad choice of plays and thus to Mr Kenneth Tynan, the theatre's literary adviser, who, it is said, has strong influence over Lord Olivier's selections. Mr Tynan has objected, along with Mr Michael Blakemore, a resident director, and Mr Frank Dunlop, director of the Young Vic, to the way Mr Hall was selected. Mr Hall's past record as a very literary-minded director suggests he will give less ear to artistic advice from others than did Lord Olivier, who is primarily an actor-manager.

Mr Hall's new operation is bound to be different, if only because it will be twice as big. The new theatre will have two auditoriums—seating 950 to 1,140—and the present establishment of 44 actors will be doubled. That raises the touchy question of provincial touring. At present the company's touring record is bad (four weeks last year and none planned for this) but Lord Olivier has always objected to breaking up his ensemble—an argument that lost weight when he was happy to divide the company between the Old Vic and the New Theatre. With twice as many actors, Mr Hall will have even less excuse.

Legal aid

Limited liability

The expansion of free legal services has been one of the most slow-moving social reforms of postwar Britain. It is easy to see why : the need for legal help is only spasmodic ; free help undoubtedly does encourage spurious litigation in already over-crowded courts ; and reform is expensive. But over 20 years a system has grown up

which at any rate makes it possible for the poor to get subsidised help to get a divorce or maintenance (the principle uses to which the legal aid scheme is put). And a well-supported scheme, put forward by the Law Society, which will make it possible to get proper help, up to the value of £25, in a dispute which does not immediately need to be taken to court, is at last enshrined in a Government bill now going through Parliament. But it is already coming under fire.

It has been a persistent criticism by the Child Poverty Action Group, among others, that legal aid does not extend to tribunals ; this was recommended by both the Rushcliffe committee in 1945 and the Franks committee in 1957. In the second reading debate on the Legal Advice and Assistance Bill it became clear that it would be possible for solicitors to give advice on how to make written representation to tribunals under the new £25 scheme, but this does not extend to representing their clients there. It is likely to be some time before this next major reform takes place.

There has also been criticism of the recovery provisions of the bill : solicitors' fees must come out of any property and so on that is recovered. That is, at worst, rough justice : the legally aided client will be in no worse a position than a richer litigant in deciding whether it is worth suing, and will risk less. More pertinently, the CPAG is beginning to agitate about the income limits. These are notoriously ungenerous and moreover vary between schemes. The limits for the existing legal advice scheme are a disposable income of £9.50 a week and savings of £125 ; for legal aid (or representation in court) the disposable income must be under £20 a week, but it is provided free only if income is under £6 a week.

The limit for the new scheme is fixed at the legal aid level (at that point a client will be expected to contribute up to £12), and if disposable income is below £11 he will have to pay nothing. But to make things even more complicated, the amount of income that is disregarded (for, say, each child) to arrive at the disposable income figure varies between legal aid and legal advice, and it is not yet clear which system will be slotted into the new scheme. For legal aid, the Supplementary Benefits Commission calculates eligibility (though the disregards are not as generous as for supplementary benefit itself) ; Sir Geoffrey Howe, the Solicitor General, has said that solicitors will calculate it for the new legal advice scheme, which should speed things up but will probably take up a good deal of solicitors' time and add to their bills. But it is to be hoped that this scheme will at least make them more enthusiastic about aiding poorer people ; part II of the bill, which allows for the setting up of special centres staffed by solicitors employed by the Law Society in poor areas (another much-requested reform), is to wait on part I ; it may not be implemented at all if the £25 scheme goes well.

Race relations

Tinker's reprieve

A heated meeting in London on Tuesday night led to the chairman of the council of the Institute of Race Relations, Mr Michael Caine, of Booker McConnell, saying he would resign. Several others, representing a majority on the council, are expected to follow. They wanted to sack the institute's director, Professor Hugh Tinker, and close the magazine, Race Today (see *The Economist*, April 1st), but the vote went against them.

Presumably, it will now be left to the minority remaining on the council to raise the money urgently needed to save the institute from bankruptcy. This has been predicted within six months and the defeated group held that the money would not be forthcoming without a new director and a return to a more sober, less partisan style at the institute. The majority of those members who bothered to vote evidently felt that the IRR was right to try to express the views of ordinary black people (although how far it has really done so is another matter). They also seemed to like Race Today well enough to give Professor Tinker more support than he might otherwise have received.

Cricket

Willow talk

A pessimist might view the prospect of this summer's fight for the ashes with all the excitement of a fisherman being offered a day out at the end of Wigan pier. The Australian cricketers arrived here this week with a record whose only comfort must be that it could not get worse. Of their last ten test matches, they have lost six and drawn four. And, despite their victory over there the winter before last, the Englishmen look something less than all-time greats. Their performances against Pakistan and India last summer were lamentable.

Chappell : ashes to dust ?

Then there are the two captains. The Australian, Ian Chappell, is said to display the audacity of an Errol Flynn beside his predecessor, Lawry, but then that is like taking Mr Duncan Sandys as a measurement of repartee. England's captain is almost certain to be Illingworth who, as everyone knows, brought home the ashes and any who dare to criticise him can expect summary execution. As a player who keeps his head down when all about him are losing their wickets, Illingworth is admirable. If he is not quite as couth as some of the gentlemen who have led England in the past, few people outside the Long Room at Lord's are likely to care. His professional skill and intelligence make him a formidable captain of his county, Leicestershire. But match him against an equally dour Australian, determined to save the game and hang the spectators—then the summer yawns in anticipation.

But pessimists are occasionally wrong. What with three one-day tests as well as the five five-day ones for the ashes, no fewer than four different competitions for the counties, and betting shops at some of the game's most famous grounds, it is clear that cricket is in the process of a peaceful revolution. Even the lordly ones of the MCC, the governors, are responding to demands for change, if somewhat arthritically. Both Illingworth and Chappell will go out knowing that they are carrying a considerable responsibility for the future of cricket itself. They will be more likely to serve the game well if they can treat the legendary ashes as something a shade less precious than the treasures of Tutankhamen.

"Give me one good reason for using an Avis credit card"

1 It saves paying a deposit when you rent an Avis car.

2 It means you don't pay cash when you bring it back.

3 It assures you of VIP treatment at every Avis desk, everywhere.

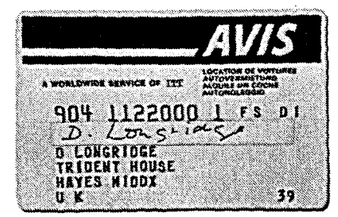
4 It saves you time when you rent an Avis car.

5 It saves you time when you bring it back.

6 It's accepted from Aberdeen to Zagreb.

7 It'll get you a smart new Hillman or any other car from our wide range, throughout the world.

One that's checked and ready to go.



8 It's easy to get one.

9 It's free.

10 We try harder to give you a better car rental service than anyone else.

If you could use an Avis credit card, write to the Managing Director, Avis Rent a Car Ltd, Trident House, Station Rd., Hayes, Middlesex, U.K., or collect an application form from your nearest Avis office.

If you've got one already, you've got a lot of good reasons for using it.

When you get a Chaseman in London, you get a Chaseman in France too...

wherever there's a market, there's a Chaseman.

When you're doing business abroad the next best thing to being there yourself is to have a Chaseman there. Chasemen in France, are Chasemen in their own elements – business and financial experts, who can give comprehensive coverage of France through the Paris and Lyons offices. And they are very much counterparts of Chasemen in London.

Think what competitive edge this can give you in your overseas business. You will be in close touch with all the banking and financial aspects, made aware of credit conditions, exchange regulations etc. by an expert in the French financial scene.

Because he's a Chaseman you'll get much more than purely financial advice. A Chaseman in France is one of a team of Chasemen throughout the world – an international figure concerned with world-wide problems. Like Chasemen all over the world, he's a businessman as well as a banker.

He'll provide contacts, report on the market, keep you in touch with the changing business background.

He has the experience, the knowledge and, most importantly, the backing of the Chase Manhattan Bank world-wide and all the specialist divisions in petroleum, shipping, aerospace, metals, textiles etc.

So if you're looking to France, or anywhere else, make sure of the financial side of the business first. Ring Andre Brand at Chase Manhattan in London on 01-600 6141.

You have a friend at Chase Manhattan.

The Chase Manhattan Bank, N.A. Woolgate House, Coleman Street, London EC2 and 1 Mount Street W1.

The Reliance E-Link Crossbar Exchange We're ready to deliver

Crossbar is now available.
We're all set to deliver.
Built for E-Link, the fastest 'phone on the desk – Crossbar is built for speed.
It has to be fast.
It is fast.
No um's and ah's while the exchange yawns your number through. Crossbar doesn't let you down along the line.
1-2-3-'Good morning, sir!'
Crossbar shoots the number straight through. Instantly!
And reliably!
Crossbar is more than a pretty pace – its reliable. That's proven reliability!
And Crossbar takes up a lot less floor-space.
Combine Crossbar with E-Link, and the fastest 'phone on the desk is even faster.

And the Reliance E-Link Crossbar Exchange is available right now.
On Reliance rental.
We're ready to deliver.
Get the facts in front of you.
Clip the coupon to your letterhead, and post it off to us today.

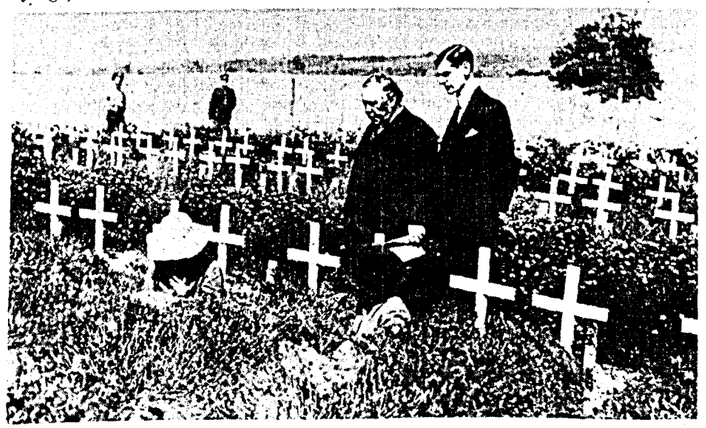
For fraud's sake



THE RISE AND FALL OF HORATIO BOTTOMLEY
By Alan Hyman.
Cassell. 320 pages. £3.

One of the most effective platform techniques of the greatest Victorian propagandist of atheism, Charles Bradlaugh, was to dare God to strike him dead. It is possibly the most plausible item of circumstantial evidence to support the widely-believed rumour that Bradlaugh was Horatio Bottomley's father that Horatio spent all his life daring society to strike him down. Audacity was unquestionably the keynote of his amazing career of fraud and demagogy between the 1880s and the 1920s.

Bottomley rarely took any trouble to conceal his motives or his methods. His total shamelessness was one of his greatest strengths, because with it he destroyed any links of commonly-shared attitudes and assumptions by which his victims and critics could get at him outside courts of law. And inside a court Bottomley was extremely formidable, admittedly the most accomplished lay lawyer of his day. After his first appearance in court, successfully defending himself against accusations which for anyone else would have been indefensible, the judge, Hawkins (later Lord Brampton), was so impressed that he congratulated Bottomley, urged him to take up a career at the bar, and sent Bottomley his wig and his notes of the case as a memento of the occasion.

That was undoubtedly a just tribute to Bottomley's sheer talent. The interesting thing about Bottomley is that he could without any doubt have become a millionaire and a success in the world of business and politics without fraud if he had wanted to. It was not, in other words, the case of a man being fraudulent as a necessary and unavoidable means to an end; being fraudulent was in itself of the essence, the end in itself. Given the choice, Bottomley would prefer dishonesty to honesty, even if it cost more trouble. Like kippers and champagne for breakfast, it became more than a habit; it became an integral part of the process of life.

Bottomley was thus a very special case of social pathology, by no means just curious, but important, particularly because he combined financial swindling on a colossal scale with phenomenally successful popular journalism. The strength of this book is that it does justice to Bottomley's John Bull, which appeared in 1906, the year he entered the House of Commons in the great Liberal landslide. And as a manipulator of words on the platform he was just as good. It was in the use of words that Bottomley's genius lay. That is why worldly success as such never particularly interested him except as the background for a flamboyant life-style. In his financial swindles Bottomley was usually rather clumsy and incompetent. He was always in the bankruptcy courts. His great war bonds swindle was essentially a matter of muddle. It proves to the hilt that with method and efficiency and even a touch of honesty he could have made much more than in fact he did. He liked seducing with words: seducing rich old men to hand over their fortunes to him; seducing juries to acquit him; seducing patriotic mobs in Trafalgar Square or the Albert Hall with the most shamelessly sentimental chauvinism that has ever been seriously and publically uttered in this country: seducing the semi-illiterate readership of a demagogic tabloid. For that matter, he liked seducing a harem of women. In other circumstances, Bottomley might have made the greatest of revivalist preachers. But to the putative son of Bradlaugh and the undoubted nephew of George Holyoake that was out of the question. His alternative choice was more entertaining and probably no more harmful. After being sentenced to penal servitude in 1922, Bottomley was noticed by the prison chaplain sewing mail-bags. "Ah, Bottomley, sewing?" "No, padre, reaping!"

France, 1917: from carnage, a swindle

Labour hero

SIMPSON THE OBSTETRICIAN
By Myrtle Simpson.
Gollancz. 304 pages. £3.50.

So much in this book sounds extraordinarily familiar. Professorial quarrels; doctors at odds with one another; students demonstrating and expressing their views on lecturers at the end of each year; frowns from the academic and medical establishment; claims of medical breakthroughs and counter-claims; above all, masculine pontifications on the exclusively feminine process of childbirth. James Young Simpson tended to be at the centre of every controversy.

His name is chiefly associated with the use of anaesthesia in childbirth. He did not discover either ether or chloroform; his claim to fame in this context is his resolve "to beat down all opposition, particularly that of the pious and sanctimonious men of his profession." He had long been dismayed by the fearful pain inflicted by surgeons operating in the days before anaesthesia: one of the most harrow-

ing documents in this book is a letter to Simpson in his support from a doctor who had had a limb amputated without it:

> The particular pangs are now forgotten but the black whirlwind of emotion, the horror of great darkness and the sense of desertion by God and man bordering close on despair, which swept through my mind and overwhelmed my heart, I can never forget, however gladly I would do so.

Like that poor Dr Wilson, Simpson realised that pain is not ennobling but humiliating, and dangerous because of the shock and exhaustion it can cause. Having learnt of the successful use of ether in surgery he quickly saw that it could relieve the indignities of childbirth.

The storm he evoked fully matched the controversy over the first heart transplant. But the news of medical advances could not be kept from the layman, even in the 1840s, and women patients voted with their feet. Simpson became successful and rich, *accoucheur* of society women as well as of the poor of Edinburgh's slums. But he did not restrict himself to obstetrics (or even to medicine, for he acquired renown in archaeology). He was always in the van of every new medical discovery, not so much an innovator himself as immensely quick to see the possibilities of a new idea, to test it and to apply it if it passed. He had sound views on medical education and on the design of hospitals, anticipating today's view that they should be built with the need for change always kept in mind. He championed women doctors. He saw that the best way to convince his opponents was by the use of statistics; he collected cases and compared mortality rates according to the type of treatment.

But if he was modern in much of his thought he was Victorian in his tireless enthusiasm and optimism. Today's Committee on Safety of Medicines he would probably have brushed aside as too cautious. He was also a typical head of the family. Mrs Simpson, who is married to a descendant, tells us that he enjoyed his offspring when they were infants but tended to ignore them as children. He remained a Christian, though his scientific background led him to question much of what was being preached.

Simpson the deliverer

For all his compassion towards his patients, Simpson does not emerge from this biography as a wholly likeable man, though the reader is most effectively involved in his story. Apart from fathering nine children (four died) he seems to have pretty well ignored his ineffectual wife, whom he proposed to and married in a hurry to strengthen his candidature for the chair of midwifery, it then (1839) being considered indelicate for a lady to consult an unmarried obstetrician. He was also unnecessarily quarrelsome. Mrs Simpson tends to gloss over his defects, and her biography has, besides a pedestrian beginning and a surplus of exclamation marks, some loose ends: for instance the identity of the two mysterious children whose keep Simpson (in one case) and his wife (in the other) were paying for remains hidden.

Psephos

GREEK AND ROMAN VOTING AND ELECTIONS

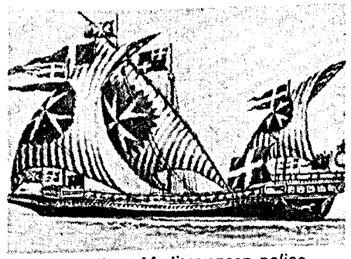
By E. S. Staveley.
Thames and Hudson. 271 pages. £4.

Everyone knows that the ancients voted incessantly, but few know much about how they did it. Dr Staveley rightly hopes that his book will be read as much by modern psephologists as by students of ancient history. They should indeed find it interesting, but they must be warned. The subject is one of surprising complication; the evidence is scrappy; and the doctors disagree. The book is hard going, from the nature of the subject.

Dr Staveley concentrates on Athens and Rome (with just a glance at the uninteresting and badly documented case of Sparta). The striking thing about this book, taken as a whole, is how widely each system varied from the other. The Athenians' was quite unlike anything that we know. The Athenians did three things: they voted in assemblies and juries; they drew lots; and every so often they ostracised, by a unique system of write-out voting. The amateur has heard most about ostracism (Dr Staveley tells us a lot more; little of it is certain except for the fascinating survival of *ostraca* with great names on them, such as Themistocles, Pericles and Aristides). One pauses with envy and fascination to think who would be ostracised first if we had the system here.

The real oddity of the Athenians was their delight, based on a radical passion for fair shares for all, in nominating officials by drawing lots, with every possible precaution against fraud and elaborate lot-drawing machines. Some of these have survived. To form a jury involved nine successive drawings of lots. This complexity, the absence of great personal wealth and the large size of the assemblies made corruption difficult; it does not seem to have been an important factor. But the most important officers, particularly generals (who came to dominate civil administration), were inevitably appointed by vote: one could not trust an army to a man chosen by lot.

The Romans' system was totally different, and a little closer to some of the worse modern ones. Their oddity was to decide most things by group votes. Each group voted separately, and the man who came out top in the majority of the groups won—but not without great elaborations, always weighted in favour of the nobles. The simplest and most effective mechanism of weighting was that the rich groups were smaller, more numerous and voted first. The votes were, of course, delivered by influence in the usual Roman style. The bias of the system and the strength of *clientela* meant that pure fraud, though certainly practised, was usually unnecessary.



The Greek style of voting was that of a town meeting crossed with a lottery; the Roman, in the absence of a party system, like a primary in a one-party state, heavily gerrymandered in favour of the wealthy. An American party boss could have worked it easily. He would have found Athens a harder nut to crack.

Marching as to war

THE MONKS OF WAR

By Desmond Seward.
Eyre Methuen. 346 pages. £4.95.

It is hard to think of a less edifying spectacle in medieval history than that of the expeditionary forces of western Europe slaughtering the entire population of Jerusalem in the name of Christianity, but there is perhaps one: the interrogation—meaning torture—

Maltese galley: Mediterranean police

and painful execution of members of the most militant of the military orders that were founded in the wake of that first crusade, on trumped-up charges of sexual and religious perversions, by the orders of a Christian king and his puppet pope. Not everyone is as convinced as Mr Seward of the Templars' innocence: he fairly quotes as distinguished an opponent as Sir Steven Runciman. But the ending of this order was even sorrier than its conception, because however horrific the deeds it perpetrated in the name of religion, in its heyday there was at least a consistency that bred phenomenal courage. When Christianity turned and rent the Templars, they lost even that, confessing in fear to crimes that they afterwards denied.

The Europeans who settled in Outremer—"colons," as Mr Seward calls them—acquired, along with the dress and medical skills of their opponents, the desire to treat as well as fight. They had to, to survive: for most of its existence the European settlement was no more than a string of coastal towns. The orders were born in Jerusalem: but their vows were stern and uncompromising. No member was allowed to ask for ransom (though some did), and when captured they were usually slaughtered. The military orders, the only regular troops, who garrisoned frontier forts, were as bellicose as any military establishment: much of the blame for the crusaders' defeat by Saladin at the Horns of Hattin can be laid at the door of the impetuous leaders of the orders. Not one of his opponents could hold a candle to Saladin for chivalry. But the military orders had their humane side. The Templars began as the "Poor Knights," in poverty and prayer, as "military Cistercians"—a police force to protect pilgrims. And the Hospitallers fulfilled a nursing vocation with skill and devotion: their militarisation took nearly a century.

The Hospitallers survived, in Malta, for centuries after the Templars or indeed after the Teutonic Knights, whose crusade in northern Europe is also charted by Mr Seward. The Templars were put down, the Teutonic Knights defeated and finally metamorphosed from monks into Lutherans. It is impossible to regret the disappearance of either, even without the twentieth-century parallels that make the story of the Teutonic Knights so distasteful. As Mr Seward points out, they were religious fanatics first and nationalists, or racists, only incidentally. Thus they did not achieve nazi canonisation; but the similarities are great.

Only the Spanish orders, the armies of the *reconquista*, achieved, in their own times and terms, success. The Hospitallers held Malta from the Moslems: the siege of 1565 is one of the best-told episodes in Mr Seward's history, and the courage displayed by the order can hardly fail to incite admiration. Its last tiny state was not toppled until the Napoleonic era, when it was a dictatorship of incredibly advanced benevolence, with the best medical services of the day and a welfare system that would still leave most advanced nations standing. Mr Seward is almost at his best on the later days of the military orders: he lacks the gift of clear exposition, and though his scholarship is great, his theme both interesting and hitherto largely unexplored and his judgment sound, the more compressed chapters are slightly unclear. But he does not lack perception. Bernard of Clairvaux, inspirer of the crusades and father of the orders, comes in for a good deal of criticism: but his achievement, or rather the orders', is spelt out. It was to channel feudal brigandage, to harness a pagan hero cult to Christianity so that while dangerous and destructive it was not directionless. The crusaders were land-hungry invaders, marching to hymns sung to old Roman marching tunes, indulging in indiscriminate slaughter along their way. The injection of monasticism added fanaticism to aggression—but also, at least, discipline.

witty author of "Evelina," who became a lady-in-waiting to Queen Charlotte. But it is not the youthful Fanny Burney whom we meet in these volumes. The letters and journals collected here date from 1791, when she was already nearly 40. After five years at court, she had returned to live with her father, the redoubtable musician Dr Charles Burney. She cannot have imagined that a husband was just over the horizon; but in the second of these two instalments we trace the progress of a lightning courtship, terminating in her marriage to the Chevalier d'Arblay. When they were beyond meeting distance, they wrote to one another in French, for his English was rudimentary. His letters, which she treasured along with the "themes" in English written under her tutelage when they were first acquainted, are reprinted here, and enable us to glimpse something of the charm and intelligence and integrity of this political exile. His prospects at the time of their marriage were bleak, and Dr Burney withheld his approval, but the two were blissfully happy together.

Eight more volumes are projected, covering nearly half a century, for Madame d'Arblay outlived her son as well as her husband, surviving until 1840. The second half of her life has not hitherto been nearly so well documented as the period when she was still Fanny Burney. If the two volumes under review are a fair indication of what is to come, there will be a great deal to please readers whose preferred method of entry into the historic past is through personal, informal records. Fanny Burney was a born chronicler and a letter-writer almost of genius. As long as her beloved sister Susan Phillips was living (most of the letters of 1791 and 1792 are addressed to her) she wrote without inhibition: warmly, amusingly, vividly, truthfully. In later years her journals perforce became less intimate, more consciously literary. She was, after all, a professional writer, and a very successful one.

Fanny Burney: half a century to go

As an old woman, Madame d'Arblay spent years going through her correspondence and journals, editing them for posterity. She was by no means the only Burney to write copiously or to keep the letters she received; there are over 1,000 letters extant written by her father to his vast acquaintance. Apparently Fanny discarded much that she considered ephemeral; but the pains she took to trim and tailor what she did preserve have given the present team of editors formidable difficulties to contend with. The texts published here have been reconstructed with the most scrupulous care. This edition is on a plane of scholarship far superior to any existing collection of Fanny Burney's letters and journals. The introduction and annotations are admirably helpful and the index in volume II covers all the material so far published.

World enough and time

THORNTON'S TEMPLE OF FLORA
Reproduced by Geoffrey Grigson.
Collins. 72 pages. £4.25.

THE LIVING CLOCKS
By Ritchie Ward.
Collins. 319 pages. £2.50.

Two water-lilies, stiff and wide-eyed as country children, with a mosque towering in the background, stare out of their plate: one of a spectacular, romantic series of flower engravings planned and commissioned by the rich, slightly dotty young Dr Robert Thornton, who beggared himself in the early part of the last century producing a series of otherwise wholly unmemorable botanical works. The camera has put an end to the kind of amiable nonsense that can send clouds scudding across the sky, and galleons reeling before the storm, without fluttering so much as a petal of the flowers beneath, and this flowery, bowery sentiment was scientifically disreputable even in Dr Thornton's time. But the fact remains that Robert Thornton, silly and trivial as he was, is remembered for his "Temple of Flora" when better men have been forgotten.

For a hundred years before Dr Thornton, men had puzzled over the habit among plants of folding their leaves at night, and opening them by day, and of sticking to their routine even in day-long total darkness. If and

Lilies: labouring after all?

when the public gets round to being interested in the in-built clocks that make plants close their leaves, cockroaches run at night, birds migrate halfway round the world and humans feel tired after a long flight, then Mr Ritchie Ward's book will become one of the standard references. If you want to know, step-by-step, the research that has been carried out, who did it, when they did it and their latest theories, that is all here. Until then, the crashing, soporific dullness of the book is likely to put off any casual reader.

Yet the subject is fascinating. The most bird-brained of migratory birds navigates by the stars, even when it has never migrated or been near another bird in its life, and is shut in a planetarium: except, of course, if it belongs to a species that prefers to navigate by the sun. The dimmest of plants set their internal clocks in such a way that they are not easily fooled by either artificial light or dark. After some quite revolting experiments on cockroaches, scientists have isolated the cells that control the clocks, although some still believe the accuracy of the time-keeping is influenced by circumstances and is not wholly self-contained. It's Mr Ward's secret how he managed to make it all such a drudge to read.

A new style

BATTLE FOR THE ENVIRONMENT
By Tony Aldous.
Fontana/Collins. 288 pages. 45p paperbound.

Battles occur where people choose to stand and fight, and this book is a handy account of the better-known set pieces of recent years in Britain where defenders of "amenity" have taken on public authorities—or where public

authorities have taken on each other. It is no accident that most of the examples, apart from national parks, are drawn from London and southern England, for this is where public amenity is most closely identified with organised middle-class private interests. As Mr Crosland has said, it looks different in Grimsby.

Some of the best examples in this book are in fact the work of thoughtful professional planners in the service of an enlightened public authority, because they show things being done, and for once being done right, rather than merely prevented. One such example is the reclamation of coal and pottery wastelands in Stoke-on-Trent, now turned into green hills and valleys, lakes and sports fields. Another is the management of weekend traffic in the Goyt Valley, part of the Peak District national park—visitors park their cars and take free mini-buses to walking places. On the other hand, there were no strong interests opposed to these pleasant achievements; over more momentous things like motorways and airports there will always be bitter conflicts, and it is this fact that has brought the environment right into the centre of traditional politics.

In a useful couple of chapters Mr Aldous sketches the background and structure of the new Department of the Environment, and the personalities and powers of its chief ministers. He can be accused of taking Mr Peter Walker, its supremo, rather too much on his own estimation. But there are signs that the existence of this huge department, which merges nearly all the powers of government affecting the environment, plus the political and organisational flair of the Secretary of State, really is producing a new style. One instance described here concerns the new regulations controlling heavy lorries. A national organisation, the Civic Trust, did an impressive job assembling evidence of damage done by heavy lorries collected by amenity societies all over the country (an example, incidentally, of how the motivation of such societies can be turned to wider use). This evidence was heeded, against the strong wishes of the haulage industry, as it would never have been under the old Ministry of Transport. On planning battles in general, Mr Aldous's advice seems to be: if you want the DoE to sit up and take notice, write in person to a minister, preferably by hand and misspelt. The book ends with some good ideas on the possible future development of the planning inquiry system.

The distaff side: two Jenny Marxes

Marx past

KARL MARX
By Werner Blumenberg.
New Left Books. 207 pages. £2.50 cloth, 85p paperbound.

MARXISM IN OUR TIME
By Isaac Deutscher.
Cape. 312 pages. £2.95.

One of the great sorrows of Karl Marx's misery-ridden life was the fact that he had no male heir. His wife Jenny had two sons, but both died very young. He could not recognise the illegitimate son, Freddy, that he had by Helene Demuth, who kept house for the Marxes for many years. Any publicity arising out of this episode would have seriously hurt the reputation of the already revered revolutionary sage and leader in mid-Victorian Europe. It would probably also have wrecked his marriage to the devoted but fanatically jealous Jenny.

After Marx's death, socialist leaders tried to suppress all evidence about Marx's illegitimate son, but a letter containing the facts and a confirmation by Engels eluded them. The letter, by a German lady socialist, is quoted in Herr Blumenberg's illustrated biography, a work of painstaking scholarship but nevertheless consciously aimed at a wide readership. Herr Blumenberg, a veteran German Social Democrat who was until his death in 1964 associated with the International Institute for Social Research in Amsterdam, was not himself a marxist. His detachment is in agreeable contrast to the hagiographical approach to the founder of "scientific socialism" practised not only by communist governments but by many western socialists as well. This warts-and-all approach to Marx seems to annoy the author of the preface to this translation, who would clearly have preferred a more "ideological" portrait, affirming Marx's validity and relevance to our own age and its problems.

That Marx's thought is as valid as ever is the contention of a series of Isaac Deutscher's posthumous essays, edited by his wife from notes, tape-recordings and other material. With his customary eloquence and vigour, the late author meets some of the central contradictions of marxist theory and practice head on. In the process he makes some remarkable jumps: he claims, for example, that America's involvement in Vietnam was responsible for the return to reactionary and oppressive policies in Russia after 1964. But it is all good fun, and his long interview on Stalin's suppression of the Polish Communist party still makes good reading. That interview shook the communist establishment in Poland after it was published in France in 1958. On the model of Mr Khrushchev's famous oration on a similar subject two years before, it became known as "Deutscher's secret speech."

ADAM & CHARLES BLACK

Nowhere man

NO NAME IN THE STREET
By James Baldwin.
Michael Joseph. 168 pages. £2.

The writing of this book was obviously a painful process. It took Mr James Baldwin from 1969 to 1971 to put these thoughts on paper. The period covers the assassination of Martin Luther King, the rise and fall of the Black Panthers, the chaotic courthouse scenes and the bloody prison riots. The book makes difficult reading. The narrative is interrupted constantly by rambling reflections. But two themes recur throughout the book ; the assassination and Baldwin's own frail attempts to get Tony Maynard, a black friend of his, out of prison. Mr Maynard is accused of murdering a marine in a street brawl in New York in 1967. Even Baldwin, for all his influence, is unable to find his way through the labyrinth of the American criminal system.

Baldwin writes as an exile. He is an outsider in the black world of Harlem where he grew up ; he is an outsider in the white world in Europe and in the African world of his voluntary exile, among the poverty-stricken Algerians in Paris. Even on his return to the United States he never quite seems to fit in with the civil rights movement, although he takes an active part in it. It was Mr Eldridge Cleaver who pointed out in a not very flattering but perceptive essay in his book "Soul on Ice" that Baldwin, one of the most revered and respected black writers of his time, was caught in a vacuum between the worlds of blacks and whites. As Baldwin himself writes, he became "the Great Black Hope of the Great White Father."

All the black names of America are here, like a list for some socio-political summit : Martin (Luther King), Malcolm (X), Huey (Newton), Bobby (Seale), Sammy (Davis Junior). And Baldwin is there with them, making speeches, raising money, marching, demonstrating. But he rarely manages to make these people come alive. They flit in and out of hotels, in and out of aeroplanes, on and off platforms. But where is the dedication, the commitment, or even the passion ?

There is, at least, poignancy. An old friend of Baldwin's from Harlem days telephones to ask if he can have the suit which Baldwin wore to Martin Luther King's funeral. It is almost new, but because of its associations Baldwin announced in a press interview that he could not wear it again. He writes of his friend :

> He couldn't afford to throw suits away—he couldn't, in short, afford my elegant despair. Martin was dead, but he was living, he needed a suit and—I was just his size.

Salted down

EUROPE AT RISK
By Alan Watson.
Harrap. 224 pages. £2.50.

Mr Alan Watson has written a classical book on Europe. His enthusiasms and hopes may have a slightly dated feel to them : he pretends to little of the sophistication and depth of knowledge of Mr Ian Davidson's "The Making of Europe" (*The Economist*, November 27, 1971), but this is nonetheless a readable and roughly accurate account of how Europe reached wherever it now is.

As a broadcaster, Mr Watson has a much larger audience, used to the very high standard of his questioning in economic and current affairs programmes, than will read his book. He has also been an academic. These qualities combine well with his founding faith in a liberal and federal Europe to compel the reader onwards. The more fastidious may weary of a style which abounds in superlatives. The somewhat baroque manner of Mr Watson's prose is least convincing at the moments when he is trying to conjure up in the reader's mind a Europe which was in truth never likely to exist.

The same build-up for what the author wished had happened, rather than what has, lands him in a rather muddled account of regionalism and the sovereignty of member states, and in a spectacular misapprehension of the balance between Germany's Ostpolitik and its continuing need under any government for an anchor in the west. It is a sign of Mr Watson's qualities that these defects only mar his book : he has a verve which those interesting themselves in Europe afresh, or even for the first time, will find attractive —if occasionally in need of a counteractive pinch of salt.

Common knowledge

For five years the Irish University Press has been discovering, sorting, editing and reprinting the British parliamentary papers of the nineteenth century. It has been a mammoth undertaking, whose completion has just been announced and should be welcomed. The House of Commons' library has a complete set of parliamentary papers, but only as far back as the fire of 1834 ; before that date even its files are incomplete, and IUP has had to hunt elsewhere for some of the earlier papers. It now reckons proudly that the verbiage of all the nineteenth-century reports of select committees, royal commissions and the like runs to some 4.5m pages, which have been thinned down to a mere 1,000 volumes with an average of 680 pages in each.

IUP appears to be so dazzled by its own remarkable achievement that it has been loosing off quiverfuls of statistics. The pages of a complete set would stretch for 134 miles end to end, or cover 11 acres. If one read the series continuously for 10 hours a day, it would take six years to get through. And piled on their sides, these fat green morocco-bound books would be 11 times the height of a double-decker bus. That, one would suppose, was enough to put off all but the most enthusiastic librarian ; but a sensible decision was made to publish them in subject sets, rather than in strict chronological order. Thus there are five volumes on elections (£190), four on animal health (£164.95), even three on the aborigines (£63.75), four on drunkenness, a huge bunch of 30 on the poor law (£1,012.50) and as many as 95 on the slave trade (£2,870.40). Even the embryonic income tax gets two (£65) and so indeed does decimal coinage (£52) ; monetary policy runs to 12 (£330.40) and industrial relations to a total of 44 (£1,600). The index alone runs to eight volumes (£210.40) ; and a complete set would cost some £27,000.

BOOKS THIS MONTH

WHO'S WHO IN SCIENCE IN EUROPE

The second edition of this standard guide includes some 40,000 west and east European scientists. Nearly 2,700 pages 11¼ in x 8¼ in (4 vols).

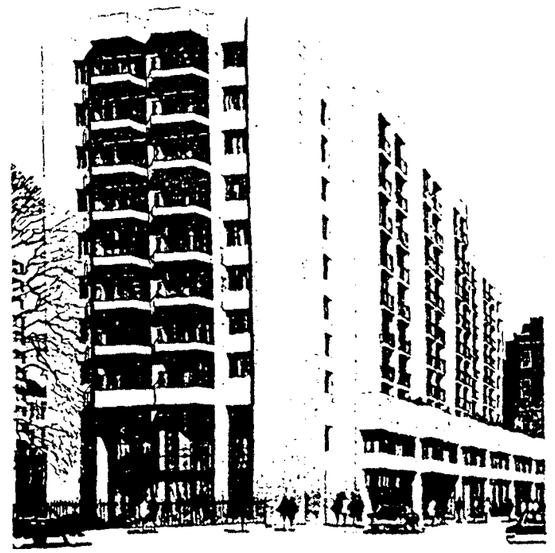
NIKKO

a name you can trust



An increasing number of foreign investors are currently turning their attention to the Japanese stock and bond market. And more and more of them are feeling the benefit of the services and guidance offered them by the NIKKO Securities Co. One of Japan's largest securities companies, NIKKO has over 50 years of experience in all fields of investment, brokerage and underwriting. With 86 branches in Japan and offices and subsidiaries throughout the world, NIKKO can help you place your stake in Japan's economic success story. Contact them soon.

Business can be a pleasure in Park Lane.

The Inn on the Park – one of London's newest luxury hotels could provide a truly memorable setting for your next sales conference or company meeting. At the fashionable end of Park Lane, with its own car park, the 'Inn' has three luxurious air-conditioned conference rooms, seating from 40-400 as required. Every business facility can be provided, from closed circuit TV to secretarial services . . . and incidentally the best cuisine in the business. All the bedrooms are large and superbly furnished and some of the executive suites are positively palatial.
Today, more and more companies are finding these suites ideal for holding intimate business meetings and for entertaining. In such surroundings business indeed becomes a pleasure.

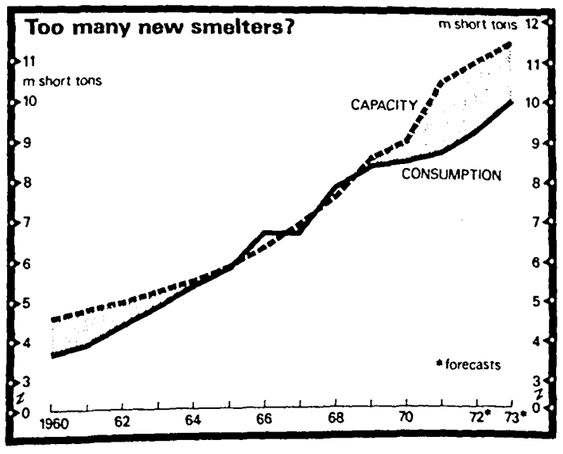
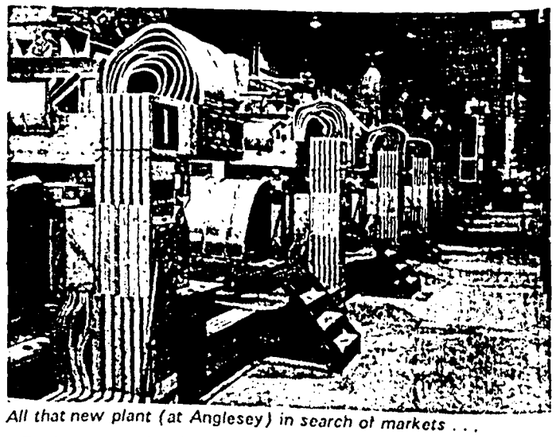
Business Brief



Aluminium: ending the glut



The world's aluminium bosses will be meeting in London next week, ostensibly to talk about statistics and technical matters (like the new OECD working party on aluminium), but really to see what they can do about the massive glut that has dogged the industry in the past few years and already caused production cutbacks and delays in commissioning new smelters.

The meeting may start in moderate optimism because demand has been picking up in the past few weeks. The Detroit motor industry started buying earlier than usual this year, and all demand seems to be running at a higher level. One or two major companies have run temporarily out of aluminium stocks. This has bolstered the industry's confidence, and some of its leaders are privately hoping for a hardening of prices by the end of the year. But that does not mean that selling at list prices will once again become the norm: virtually all high-volume aluminium products have been sold at some discount for the past two years. List prices merely put a ceiling on prices when the metal is scarce; at the moment they have little practical meaning.

The unprecedented surplus of capacity in the past two years has happened at the primary end of the business, where the aluminium is smelted from bauxite ore, and there are two main reasons for it: a worldwide fall in demand as America's recession spread to Europe, and a rash of new smelters, many in countries new to the industry. Virtually all of these new smelters have government subsidies of one form or another. The three new British smelters, given the go-ahead under the last Labour government to help Mr Wilson's balance-of-payments problems, are no exception. It does not help either that several of the new smelters in the business are owned or operated by companies outside the aluminium establishment.

The new smelters were planned in the second half of the 1960s when demand throughout the western world was running ahead of capacity and periodic famines of aluminium had to be made up by imports from communist countries. Further increases in consumption appeared to be inevitable. In OECD countries, the industry worked to a rule of thumb that said aluminium consumption went up twice as fast as national income. The 1960s confirmed this when the annual growth of gnp in OECD countries averaged 4%, and the demand for aluminium went up by 8% a year.

All that new plant (at Anglesey) in search of markets . . .

During 1970, the first of the new and expanded smelters started production, and (western) world output went up by 700,000 tons to 8.9m tons (totals in short tons throughout). But this was also the year when the bottom dropped out of the market. American consumption, which makes up over half the western total, fell by no less than 9%, which left the total only 1% up on the year before, at around 8.45m tons. This meant a surplus of nearly 500,000 tons. Demand in America picked up only moderately last year (4% up), and by then the downturn had reached Europe too. Apart from west Germany, all the EEC countries used less aluminium last year; in Britain the drop was 7%. Total consumption for last year is estimated at just under 8.7m tons.

But 16 new smelters had come on stream and a number of existing ones expanded considerably, jacking production up to 9.6m tons. Capacity went up much more, by a total of 16% in 1971, but the industry was running at only 80%-90% of capacity. It could be argued that even this reduction was too little and too late, but prolonged overcapacity was a novel problem. Earlier surpluses had usually led to price wars, with metal often changing hands at below cost price. East European primary producers, and Norwegian and Belgian makers of semi-fabricated products like sheet, led the way in price-cutting, but Germany has also been guilty of it, and continental producers say that ingots from British smelters could be bought at times for £200 a ton, or £10-£20 below production cost.

The industry is always reluctant to shut down smelters when demand is slack because it costs so much to start them up again. The residue of flux and unrefined ore left in the aluminium "pots" has to be dug out when they have cooled down, and the lining of carbon blocks replaced before they are started up again. The RTZ consortium's Anglesey smelter and British Aluminium's one at Invergordon, the first two of Britain's new smelters, went through this process after the miners' strike had shut them down. The third one, Alcan's at Lynemouth, Northumberland, was not far enough advanced to be affected, but is now starting to run in its first batch of pots on power from the national grid. Its own coal-fired power station will not be ready for some months.

Growing, growing

For all the new air of optimism, the glut could last well into 1973 even if consumption goes up at the hoped-for rate of 5% this year. New capacity to be added this year will take the total up to 11m tons, with a further 500,000 tons to come next year. Against this, consumption forecasts for this year are now between 9.1m and 9.3m tons. This means that stocks are in for another big rise.

By the end of this year the industry may find itself faced with the need to cut the average utilisation of smelters back to 75%. Even on the most optimistic assumptions, it is unlikely that demand will catch up before 1974. But the pressures to avoid a price war will be strong. The industry has recently been reporting a marked fall in profits; Reynolds has even shown some losses.

In the longer term, the outlook for aluminium is still rated good. Before the present hiccup in demand, the industry had expected to reach a primary capacity of 14.5m tons by 1975, and 20m tons by the end of the decade. To push up tonnages in the medium term, the industry is pinning its hopes on a number of new applications.

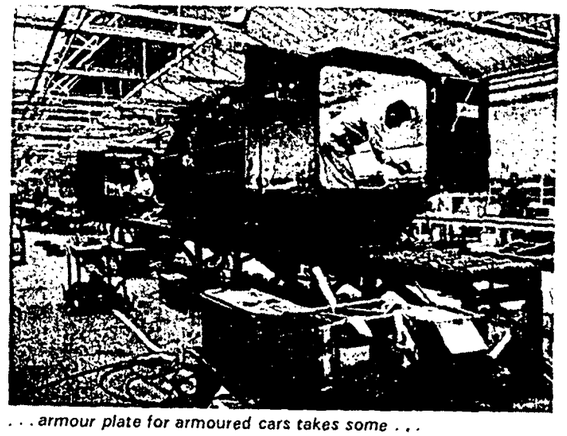
Aluminium's main selling points are its relatively high strength-to-weight ratio, useful for aircraft and lorries; its resistance to corrosion in certain alloys, which is important in packaging, building and boats; and its electrical conductivity which makes it a useful substitute for the much more expensive copper. Its conductivity is lower than copper's so a greater volume has to be used, but this is more than made up for by its lower price and weight. New applications are likely to concentrate on exploiting these properties.

Motor market

Top of the list is a much wider use in cars, where cost has up to now worked against aluminium. It could be helped by (a) the tightening-up of safety regulations which will make cars heavier because of extra built-in protection, and (b) the probable increase in engine size to compensate for the reduced efficiency of lead-free petrol—assuming the anti-lead campaign succeeds. The motor industry is looking hard at aluminium radiators, which have been tested for several years, and even aluminium body panels for mass production cars, in which Ford in America has shown some interest. Aluminium bodies have been restricted up to now to relatively high-priced cars. But there will be tough competition with the newer types of plastics for car bodies, because the chemical industry, too, is trying to find work for excess capacity.

Aluminium is both lighter than conventional cast iron for car engines and conducts heat better, which means that engines can be run at higher temperatures (and thus more efficiently) without overheating. Because of these advantages, aluminium has already been used for big and high performance engines, but these have tended to cost more than the conventional kind.

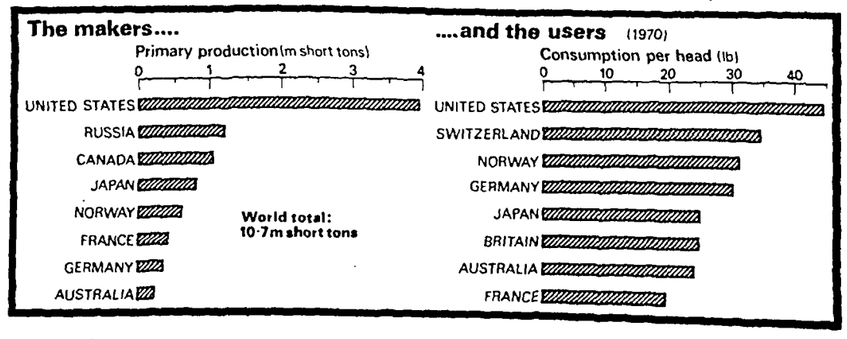
Reynolds Aluminium in America and British Aluminium, its associate, have been working on an "all aluminium" engine for many years. A special alloy containing a high proportion of silicon is used. The snag has been very rapid wear of the aluminium piston rubbing against the aluminium bore. Reynolds has now got round this by plating the piston with a minute thickness of iron.



General Motors is using aluminium engines in its Vega compact cars, and finds that the investment needed and the labour costs are lower than for a conventional engine. The main limitation is the cost of casting aluminium cylinder heads in quantity. The Vega uses a cast iron cylinder head which weighs more than the aluminium cylinder block. But there are signs that the technical problems of casting aluminium heads economically can be overcome.

Ford of Britain, too, is looking at aluminium engines, even though its iron founding technique is probably the most efficient of all the motor manufacturers. Its new racing engine for the Escort will be made of aluminium, with the pistons running in aluminium bores. In its laboratories Ford has an engine that eliminates the cylinder head altogether.

The common problem of aluminium cylinder heads for mass production is the need for inserts for valve guides and seats. It now looks as though research will eliminate the need for valve guides, but the prospect of lead-free petrol is likely to make valve seats even more necessary.



. . . but cans should take more

. . . armour plate for armoured cars takes some . . .

In other areas of transport, the aluminium industry is looking for ways of using up excess capacity for aircraft plate left over from the days of all-aluminium aircraft and big aircraft industries. The advanced passenger train will be using alloys developed from aircraft materials, and there should be an order soon for the plate to build the tanks of a big new liquid natural gas carrier. For the immediate future, the best bet in Britain looks the £3½m order for aluminium armour plate for the Alvis Scorpion light armoured car. Military vehicles will increasingly need to be air-lifted, which puts a premium on lightness. The Scorpion deal, and others that may follow, will provide a great deal of work for Alcan Booth's plate mills and for British Aluminium.

At the consumer end, aluminium foil has taken off after a £½m marketing operation by British Aluminium. Now Alcoa is hoping for a trial order for all-aluminium cans, with easy-open ends and an aluminium body. The cans' two big plus points are easy high-quality printing for expensive groceries and the like, and their reclamation value. The aluminium industry is hoping to win the nature lobby's support by pointing out that in America scrap aluminium fetches $200 a ton, against only $15 a ton for scrap glass.

There could be a major advance in the use of aluminium in the electrical industry over the next few years. A number of British electricity boards have approved a new aluminium cable, developed by Alpex, which can carry loads of up to 1 kv. This market is reckoned to be worth £10m. Other big potential applications are the telephone network and house wiring. There are still problems of detail, like corrosion and safety, but, assuming these can be overcome, the market is likely to take up 20,000 tons a year. But Britain will continue to lag behind in using aluminium in housebuilding. The British are more concerned with initial cost than with ease of maintenance, and prefer traditional materials like bricks and wood to anything that smacks of prefabrication.

'Successful employment of greater resources'

. . . LORD POLWARTH

The 276th Annual General Meeting of the Proprietors of the Bank of Scotland will be held on May 2nd within the Head Office, Edinburgh. The following is an extract from the statement by the immediate past Governor of the Bank, The Rt. Hon. Lord Polwarth, T.D., D.L., LL.D., D.LITT., D.UNIV., C.A.:—

Our Bank has now completed the first year in its enlarged form, following the merger of the Bank of Scotland and The British Linen Bank. In banking it was a year of fundamental change. The economic scene was dominated by continued inflation, with rising unemployment and sluggish business conditions. It is against this background that the Bank's results were achieved.

The Year's Results

The Group Profit before taxation amounted to £9,734,000, compared with £8,770,000 for the previous year, an increase of 11%. But for a special charge for retirement benefits, our pre-tax profit would have shown an increase of 14%. After taxation the profit has increased from £4,919,000 to £6,983,000.

This result has been achieved in the face of lower interest rates and increased costs, and is primarily due to the successful employment of the greater resources available to the parent bank and its subsidiaries.

North West Securities have expanded their operations particularly in the field of leasing. The Finance Company have been active in seizing opportunities outside the traditional banking sphere. Between them they have made a substantial contribution to the improved group profit.

Balance Sheet

Group deposits at £529 million are higher by £88 million—an increase of some 20%, while traditional banking deposits were on average 8% greater during the year.

Advances at £312 million and Hire Purchase lending of £32 million together show an increase of some £47 million or over 15%. Our lending under the fixed rate export and shipbuilding finance schemes increased by an average of £11 million, and amounted at the end of our year to some £40 million, with firm commitments of a further £50 million.

The investment portfolio increased by some £23 million, reflecting the disposition of part of our increased resources which have not as yet been taken up by lending.

Dividend

We feel that the results justify an increase in the dividend and we therefore recommend a final dividend of 11%, making 20% for the year, compared with 19% for the previous year.

Having referred to the introduction in September of the new arrangements for credit control, Lord Polwarth continued:

The Outlook

There are two simple parts to any financial assessment —revenue and costs.

In conditions of low interest rates, slack demand and recently of greater competition, we have shown that we can increase our income. If following the latest budgetary measures economic growth is restored and sustained, and if a return of confidence encourages industry to borrow more, then, other things being equal, there is no reason why we should not maintain or even improve on our past performance.

It is in the field of costs that our concern lies. Banking must inevitably be a labour intensive industry, and in our case salaries and charges for pensions account for 60% of our expenses. We are bound by agreements on salaries and other conditions negotiated by the Scottish Banks jointly with the organisations representing their employees. Where we can exercise control is in numbers of staff and here we can report a measure of success. In spite of substantial all-round expansion of the Bank's business during the year, staff numbers have remained virtually unchanged.

The range of services which we offer is impressive and is being widened as opportunities arise. The readiness of our Staff to respond to fresh challenges and adopt new methods means that we can face the problems and uncertainties of the future with confidence.

(Lord Polwarth's statement was prepared before his appointment as Minister of State, Scottish Office, and his consequent resignation as Governor of the Bank.)

BANK OF SCOTLAND

BUSINESS

Who's Waterloo?

Grudgingly, the railway unions accepted on Thursday night that the National Industrial Relations Court was not a papier-mâché Tory stage prop but a court of law with real powers. They agreed to the first cooling-off period ever ordered in Britain

Whether railwaymen would obey a back-to-normal order or not is something that remains to be seen ; some of the Southern Region's militant depots were voting on Thursday morning to come out on strike. But, at the end of the day, the moderates may chiefly have been regretting that they chose to boycott Sir John Donaldson's court on the day that it was making legal history. It will never be known now how the decision might have gone if the unions had turned up to argue that a work-to-rule is not a strike, and was therefore outside the court's jurisdiction because a man cannot be ordered to work overtime when it is not written into his actual working contract. Many unions had believed that they could make a detour around the man-trap in the act by going for most forms of industrial disruption short of an actual strike. The court served notice on them, on Wednesday, that they cannot, and a raft of British employers let out a sigh of relief.

Before the court's decision, many people believed that the verdict might go the other way. The Government itself was very unhappy about taking on the unions in a case it was not 100 per cent sure it could win, and it was nothing like as confident of this one as the public statements coming out of Whitehall made it appear. The Industrial Relations Act has plenty to say about strikes, but does not specifically deal with working to rule. No one could say for certain, until Sir John handed down his judgment on Wednesday evening, if working to rule came within the scope of the law at all. A major test of this kind was the last thing that the Government wanted. It could not afford a defeat in such a major clash with a big union, full in the public eye, and the new Secretary for Employment, Mr Maurice Macmillan, would have been relieved if the Trades Union Congress and Mr Vic Feather had pulled the right rabbit out of the hat for him. But in both the cabinet and the railway unions there were sterner counsels, and so the law took its course.

Geoffrey's quicker off the mark than Vic

The industrial relations court was again in action on Thursday, hearing the case of the Heaton and Craddock haulage companies whose container lorries have been persistently blacked by members of Mr Jack Jones's Transport and General Workers' Union in the Mersey docks. Once again, the unions may regret that they decided to boycott the court, because it had already fined the TGWU £5,000 for ignoring the injunction to lift the blacking, and on Thursday increased the damage by £50,000. The threat hangs over Mr Jones that all his union's assets may be sequestrated if he refuses to pay ; the fine can, of course, be paid for him, and may be by the TUC. But he could so easily have given the court the answer that local union officials have tried and failed to get the dockers to lift their ban, so that he could plead that the TGWU was in the clear and there could be no question of fines, sequestration or anything else.

Only one of the handful of employers in Manchester who are suffering from the gadfly attacks of Mr Hugh Scanlon's Amalgamated Engineering Union, with its sit-ins and small strikes, has yet gone to the court for protection ; the firm actually closed down shortly after. But the relative lack of success that the union is having, either in increasing the Manchester employers' wage offer, or in disrupting output at all significantly in the area, is beginning to sink home, among employers as well as unions. Mr Feather said this was a week that everyone

would live to regret. Some Manchester people are not so sure.

But when the general sense of surprised relief—and chagrin among the unions—has died down, there remains the fact that the railway union's pay claims are still on the table. It is not within the court's powers to order the unions to accept British Rail's offer ; all that it has done in practice is to see that for 14 days the negotiations are not carried out under the duress of a gradual grinding down of the country's entire railway system. The law provides for such a cooling-off period of up to 60 days ; the Government actually asked for only 21 and got 14, but it can go back for an extension if things still look sticky at the end of the fortnight. Will the cooling-off period work in getting a settlement ?

If the American experience is anything to go by, there is an even chance that the dispute will be settled before the cooling-off period comes to an end and less than a one in seven chance that industrial action will start up again even if it isn't. Britain is not America, but it is quite wrong of Labour spokesmen to say (as Mr Eric Heffer did on BBC radio on Wednesday night) that the system in America had been a total failure. What is more in doubt is the effectiveness of a compulsory ballot of union members, and Mr Macmillan significantly cooled towards that one as his advisers looked more closely at it.

In the railwaymen's claim, the gap between them and British Rail is now so narrow that it can be said that it would take very little in goodwill to close it. However, the trouble that has run through this particular dispute has been that the concessions have all come from British Rail, without one conciliatory gesture yet from the unions. Mr Dick Marsh has increased his original offer of 8 per cent by small stages to more than 11 per cent, and he agreed without demur to accept the 12½ per cent suggested by the arbitrator, Mr Alex Jarratt, on Sunday night. With bonus payments, this means a great deal more for some than it looks ; some train drivers now stand to get well over the 16 per cent that they demanded when they first went into the negotiations.

The unions rejected Mr Jarratt's offer out of hand, but they still assume that it is still available, to be used as the floor from which to start negotiations for whatever more they can wring out of Mr Marsh. They should not go some way towards placating them.

Mr Scanlon's object had been to pick the employers off one by one. Past experience gave him every reason to believe that this would not be difficult to do, and would lead in the end to much higher wages than anything that he could negotiate centrally with the federation. But in Manchester, at least, the employers have displayed a wholly uncharacteristic solidarity, and Mr Scanlon sounded worried when he gave a rallying call at his union's conference in Eastbourne on Monday and criticised some of his members for their lack of militancy. But it is difficult to be militant when no one is very interested, and the rail dispute has been hogging the headlines.

There are now 25,000 men involved in sit-ins and strikes in the Manchester area, but the employers hope either that they will be able to coax local shop stewards to accept moderate wage deals or Mr Scanlon will abandon his policy of selective assault and return to the national negotiating table. The second seems the more likely. However, things were not at all happy for British Leyland. Hardly a day passes without some British Leyland workers on strike, but this week 10,500 men struck out of a labour force of 169,000 and 1,000 cars were lost each day.

Other people's troubles

The engineers' pay claim is not going quite according to the Amalgamated Engineering Union's plan. For three weeks strikes and sit-ins have been erupting all over the Manchester area : the table lists those it has been possible to trace to date, but it may not necessarily be complete because some of the companies are very small. On Wednesday, the Engineering Employers' Federation decided the time had come to help some of them and a £1m fund was set up. Some employers had begun to grumble loudly about the federation's policy of forbidding its members to strike individual bargains with Mr Hugh Scanlon's men. The fund should

Standard Life again improve Bonus Record

REVERSIONARY BONUS
for the year ending 15th November 1971 £3.50% on basic sum assured plus £5.00% on attaching bonuses

INTERMEDIATE BONUS
at same rates as Reversionary Bonus

CLAIMS BONUS
again increased.

These results confirm our position at the top of the "performance" table and once more our policyholders will receive substantial increases in their benefits.

This is what really matters. It is not our style to make over-generous forecasts of what bonuses new policies might earn. Our concern is to provide the best possible results at the end of the day, and we do so at a consistently high level to give a performance record which is not beaten by any other company. Consider these results:—

Year in which policy for £1,000 was effected	Original Term	Amount paid in 1972
1932	40 years	£3,782
1942	30 years	£3,046
1952	20 years	£2,221
1962	10 years	£1,433

This kind of performance makes it easy for you to recommend Standard Life to your clients.

Standard Life
ASSURANCE COMPANY
Established 1825. Assets exceed £900,000,000.
Head Office: 3 George Street, Edinburgh.
Branches throughout the United Kingdom and the Republic of Ireland.

Reckitt & Colman

Sales up 11.1% Earnings up 17.0%

Extracts from the Statement by the Chairman, A. M. Mason.

Sales in 1971 at £192,920,000 were 11.1 per cent up on the previous year. Trading profit of £21,544,000 showed a 16.8 per cent rise, while profit before tax at £19,800,000 improved by 17.5 per cent over 1970. Earnings per share were 16.0p, an increase of 2.3p. Our overseas business accounted for 72 per cent of sales. The Board recommends a final dividend of 11 per cent, making a total of 19 per cent, compared with 17 per cent in 1970.

I am particularly encouraged by the fact that, while sales have increased at a rate somewhat better than last year, both profit before tax and also earnings have advanced at a considerably greater rate.

United Kingdom and Republic of Ireland

At £53,180,000 sales showed an increase over 1970 of 6.4 per cent. Much was done during 1971 in terms of rationalisation of fixed assets. Surplus land and certain of our depots and residential properties were sold, with the result that substantial cash was released. Sales of food, wine and soft drinks at £20,520,000 were 9.9 per cent above 1970 and profitability was greatly improved. 1971 was, unfortunately, not a buoyant year for household products in the UK, with sales at £12,470,000 being 2.5 per cent below the previous year. Sales of UK toiletries in 1971 of £8,710,000 showed a 4.1 per cent increase. Sales of pharmaceuticals, both ethical and non-ethical, at £6,560,000 showed a 10.6 per cent increase. Sales of industrial and other products in 1971 at £4,920,000 were 16.0 per cent ahead of the previous year.

Overseas

Sales in Continental Europe increased to £22,940,000, a rise on the previous year of 11.2 per cent, with household products still accounting for the greater part of the total. Trading profit in Europe showed a 15.7 per cent increase over 1970. Early in 1972 we acquired the Olivin business, whose toiletry sales in Europe amount to £10 million. We welcome the United Kingdom's impending entry into the European Community and believe that the opportunities offered by it will greatly enhance the Group's future in this sphere of its operations.

1971 was a greatly improved year for our North American business following the setback which it suffered during the previous year. Sales reached a record total of £50,760,000, an increase of 13.4 per cent, while trading profit showed a rise of 34.1 per cent. A major step has been taken in the decision to build a new production and distribution plant at Springfield, Missouri, at a cost of some £5 million.

In Latin America sales in 1971 of £14,970,000 were only marginally above those for the previous year.

Sales in Asia improved by 3.1 per cent to £6,930,000 but there was a decrease in trading profit.

Sales in Africa as a whole improved by 14.2 per cent to £18,170,000 with trading profit showing a satisfactory increase.

Sales in Australasia advanced from £20,710,000 to £25,970,000, an increase of 25.4 per cent. Trading profit was 43.4 per cent in advance of the previous year. Reckitt & Colman Australia Limited, in which Reckitt & Colman Limited, as the parent company, owns 70 per cent of the equity, achieved record sales and profit and thus greatly increased its strength and representation in its product fields.

Prospects

Our recently introduced Group Management Structure was designed to provide a sound base for taking full advantage of the opportunities which I am sure the seventies will offer. The results for 1971, coupled with our long term plans, enable me to feel that we have gone some appreciable way towards fulfilling our objectives. World-wide development of our major product groups has been gathering momentum and the results will manifest themselves with increasing profitability in the years ahead. We have made a good start to the decade. The aim of the Board is to ensure that shareholders, the majority of whom are long-term investors, have a strong and progressive investment. Of this and of the future I am confident.

The annual general meeting will be held at the Connaught Rooms, 15 Great Queen Street, London WC2 on Friday, 12th May, 1972, at 11.00 a.m. Copies of the annual report and accounts can be obtained from the Registrar, Reckitt & Colman Limited, PO Box No 22, Hull HU5 1SD.

SALIENT FEATURES	1971 £ million	1970 £ million

get anything. British Rail's last offer, before Mr Jarratt intervened, was generous (which was how the Prime Minister described it) then it has to be regarded as over-generous now that Mr Jarratt has added his extra on the top. Even so, if British industrial relations run true to form, the unions will expect a sweetener ; the public, which has up to now been behind the Government, may expect them to be offered it ; and in the end Mr Marsh might even be told to give it—so that Sir Sidney Greene, Mr Ray Buckton and Mr Percy Coldrick could go on maintaining the illusion that they are reasonable men, ready to do a deal on terms of all take and no give.

When he put the Government's case for a cooling-off period to the court, Sir Geoffrey Howe, the Solicitor-General, had to convince Sir John Donaldson that the present go-slow was having a disruptive effect on the economy, and he understandably laid it on with a trowel. He produced affidavits from two senior civil servants to vouch for the economic disruption, backed by Mr Buckton's own televised predictions that a work-to-rule would generate chaos. He stressed the vulnerability of those bulk commodities that go by rail : cement, steel, iron ore, chemicals, fertilisers and, most important of all, 80 per cent of power station coal and one-fifth of industry's fuel oil. And the crowds of commuters waiting for trains, fighting to get into trains, or finding ways of getting to work other than by train, made their own point.

What Sir Geoffrey did not think it necessary to add was that only 9 per cent of the country's passenger traffic and one-fifth of its freight still go by rail, and there is no practical difficulty about transferring most of this to the roads and the air. Coal would be the only serious problem, since some pits are geared to deliver their coal, and some power stations to accept theirs, only by rail. But, as Sir Geoffrey admitted, coal stocks at the power stations are now back to a published figure of six weeks' supply, although some of those who were most afraid of a showdown with the rail unions have doubted the reliability of this estimate because they do not believe that stocks could have built up so quickly after the miners' strike. The really vulnerable fuel this time round is oil ; on Sir Geoffrey's estimate, half industry would feel the effects of the go-slow within a fortnight.

On these arguments Sir Geoffrey got his cooling-off period. The court agreed with him that the railway rule book says that railwaymen "must make every effort to facilitate the working of the trains and minimise any avoidable delay" (rule 176), and it accepted that leaving passengers stranded miles from home fell some way short of this. However, in its first four days, the go-slow stopped equally short of bringing the country to a halt. A lot of people were inconvenienced, a few were distressed, some letters were late and by Thursday some coal supplies were held up. But it was not this that made the Government sufficiently willing for a settlement out of court that it agreed to the expedient of calling in Mr Jarratt and accepted in advance whatever he thought fit to advise. What all industry, from the Government and the Confederation of British Industry downwards, was almost too frightened to speak of, was a repetition of the sort of industrial blacking that took place towards the end of the miners' strike, should goods and passengers be switched on any scale to other forms of transport.

The airlines, therefore, made no attempt to put on extra flights for those passengers that the railwaymen left stranded at Euston station. The bus companies had coaches in their garages, but did not bring them out to run express services for commuters. They fell well below the standard of care for the community that public service industries should show. The congestion on the roads suggested that some goods must have been transferred from the railways, but it is obvious that life could have been made much easier for many people had the labour relations establishment been a little less afraid of its friends in the unions and a little more ready to test the goodwill and enterprise of the average lorry driver. It would have happened if there had been rather more faith in the strength of the Industrial Relations Act and of the law of the land, because this secondary blacking of goods transferred from one form of transport (or one source of supply) to another is now actionable under the act. Perhaps, after the court's decisions this week, there will be a little more faith and a good deal more courage next time.

The Irish go cannily

Instead of going all out for growth, as he probably should have done, Ireland's finance minister has been over-fearful of inflation

Ireland's finance minister, Mr George Colley, produced a budget on Wednesday that will improve social welfare benefits (including increases of between 50p and £1.95 in retirement pensions), take 50,000 people out of the income-tax net altogether by raising allowances, and put up, by a modest amount, agricultural subsidies for pigs, sheep and horticulture. His largesse will cost £26m in a full year, bringing the total expected expenditure to £650m. Not much to write home about, one would have thought, but it will get him into a budget deficit—usually taboo in Irish economics—of some £35m. And it was the first time in many years that taxes were not increased, a gesture Mr Colley described as his contribution to arresting the inflationary spiral.

The budget had a fairly favourable reception, although inevitably the farmers protested that their extra benefits, only £2¼m in a full year, were nowhere near enough, and the opposition parties insisted that the recourse to deficit budgeting only underlined the perilous state of the economy. However, some economists reckon that the

minister may have deliberately underestimated revenue and that the out-turn at the end of the year may be more evenly balanced than forecast.

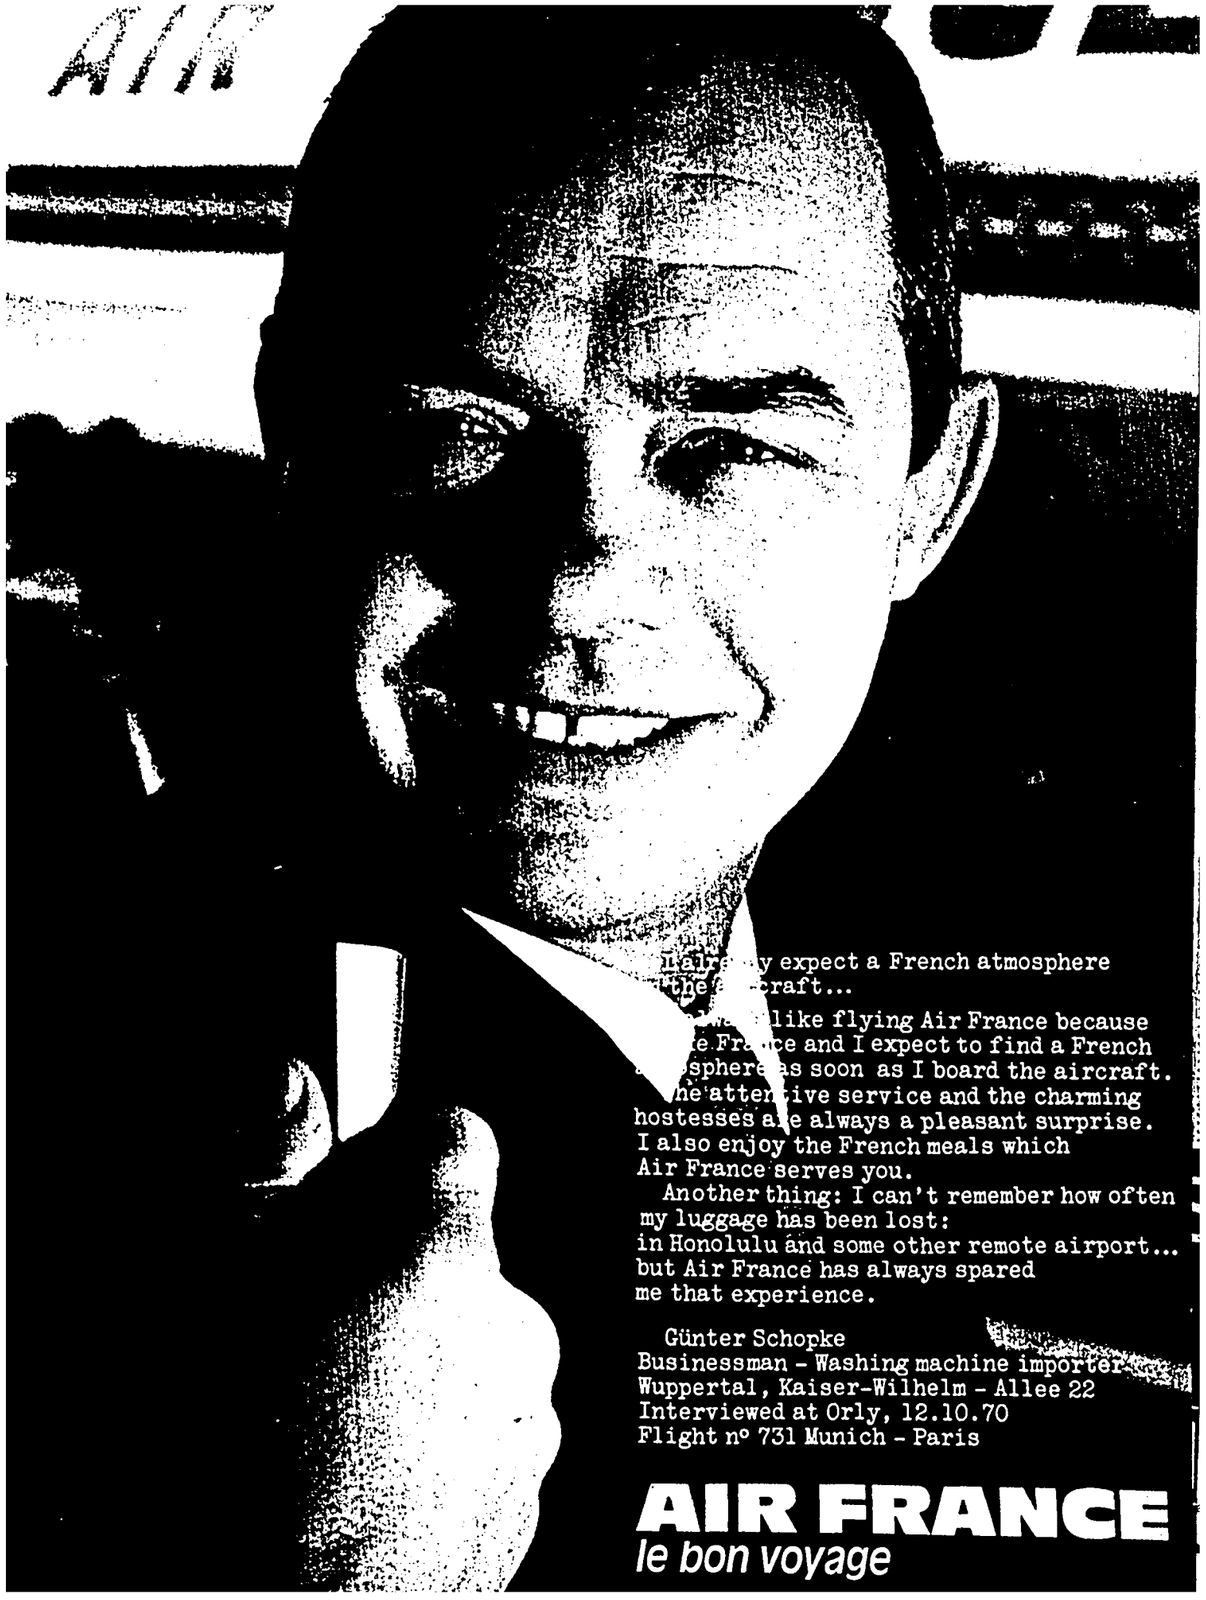
The big question is whether Mr Colley has been right not to go for a period of really fast expansion, of, say, 4 or 5 per cent a year, as an OECD report on the Irish economy, published on Monday, strongly urged him to do. Ireland's growth in the past couple of years has been a dismal 2 per cent a year, and, in the absence of any strong stimulus, this year will see little better—at best, 3 per cent. Because of this, unemployment in Ireland has been even heavier than usual, going beyond 8 per cent this winter, and slow to come down again. Perhaps as much as one-third of this will be blamed by Irishmen on Britain's own unemployment problem ; normally Irish workers escape redundancy at home by taking jobs in Britain until times get better. But there are structural problems, too. More than a quarter of the workforce is still on the land, and although new jobs are being created in grant-aided manufacturing industries, redundancies are high. Although between 8,000 and 8,500 new jobs should be created this year, between 4,000 and 4,500 old jobs will disappear.

Obviously what has stopped Mr Colley from pulling out all the stops is the fear of accelerating inflation. Over the past three years, Ireland has suffered worse cost and price rises—averaging 8 per cent a year in 1969-71—than almost any other industrial country. Unit labour costs have risen by 11½ per cent, which dwarfs even Britain's 8 per cent plus. The dread is that unless Ireland can curb its inflation, it will become uncompetitive in world markets and its already large trade gap will widen even farther.

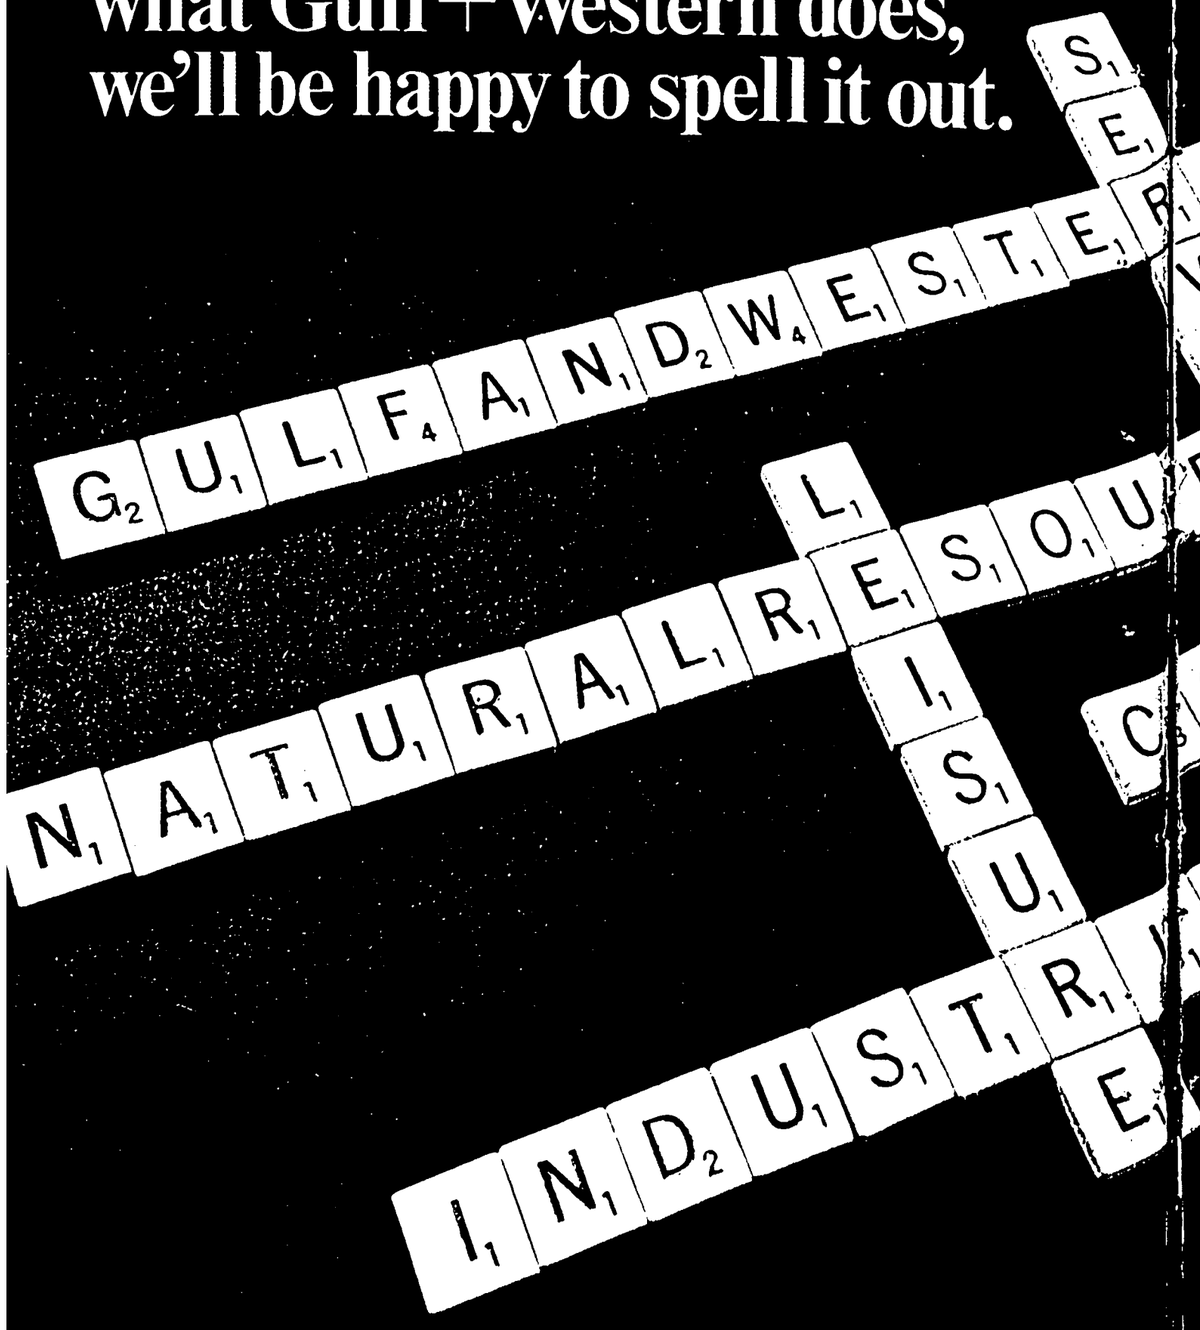
Unabated inflation is the one thing that could knock Ireland's growth chances in the EEC. With the referendum coming up on May 10th, this must have been very much in Mr Colley's mind. The Lynch government now seems convinced that the market will offer Ireland new opportunities to restructure its economy and get full employment. The official hope is that growth between 1970 and 1978 will average 5 per cent a year, and, since the start of the 1970s has been disappointing, the rate is clearly expected to accelerate later on. About 14,000 new jobs a year in industry and services are being looked for and, allowing for the drift from the land, a net 6,000 new jobs a year will be very much higher than in the 1960s. There will have to be changes in agricultural policy when Ireland is in the market. Pig, poultry and egg production is not expected to do brilliantly, and horticulture may suffer. But Ireland's agricultural mainstays—livestock and dairy produce—should thrive. All in all, Ireland is looking for a 30-40 per cent expansion in agricultural output by the end of the transition period; with higher EEC prices, the increase in value could be as much as 75 per cent. But all these glowing forecasts hinge on one assumption: that Ireland will be able to maintain its competitive position. The chances for this, at the moment, look less than even.

The Irish have tried hard to get some sort of prices and incomes policy going. A national prices commission, set up last October, has powers to supervise and investigate price changes, including retailing and services, as well as manufacturing, and delay price rises. Inflation has in fact slowed down marginally, from around 10 per cent early last year to nearer 8 per cent now, but how far even this small success is because of the commission's activities is hard to say. The voluntary national pay agreement concluded in 1970 will start to run out from the middle of this year and much depends on what will replace it. The last agreement, granting about 10 per cent in the first year and 4 per cent (plus an index-linking clause) in the second, was clearly inflationary, but preferable to the free-for-all that preceded it. The non-agricultural wage bill, up by 14 per cent last year, may go up by 12 per cent this year. Any new agreement will have to be less inflationary than this. The OECD suggests that if a voluntary agreement along these lines is not possible the government should impose statutory controls.

One bright spot is that labour relations have improved in the past year or two, after years when wage claims almost inevitably led to lengthy and damaging strikes. Under a new agreement, workers can now cross picket lines except in specially agreed situations. This seems to be working : last week's electricity strike, after initially crippling effects, has now been virtually defused because other workers have gone in to do the work of the 600 strikers.



But, when all is said, Ireland needs confidence and this week's budget is really a mouse. The OECD is not noted for a dash-for-freedom policy, but when it urges a country on to expansion that country ignores the advice at its own peril. An opportunity has been missed in Ireland this week.



They rang up to say the power was going off last weekend . . .

. . . so I took a few precautions

If you're puzzled about exactly what Gulf+Western does, we'll be happy to spell it out.

When you manage a corporation whose 1,700 plants and offices in 49 countries employ over 70,000 people—it's understandably hard to give a quick overview of your total operations.

But we think this "diagram" may help. It shows the five major fields of Gulf+Western's Stage II activity.

Within those five areas are some well-known corporate names. Under SERVICES, for example, there's Associates Corporation of North America—active in financing and a wide range of insurance programs. Under CONSUMER GOODS, you're probably familiar with our Consolidated Cigar subsidiary and many of its leading brands: Muriel, El Producto, and Dutch Masters cigars. Under LEISURE, our G+W operations include both Paramount Pictures and Famous Music Corporation.

However, our list of familiar names only goes so far. Unless you need forgings, pipe fittings, traffic safety systems, precision metal parts, or carloads of other things from automobile parts to zinc to components for home appliances—you might not know G+W's subsidiaries.

But think of this. Some 50% of our manufacturing operations go toward helping other companies whose products affect your life. The sugar in your coffee and the boxes your cereal is packaged in may have come from subsidiaries in both G+W's CONSUMER and NATURAL RESOURCES areas. The cans you see in your kitchen cupboard could have been shaped by presses from a G+W company in the INDUSTRIAL MARKETS area.

We look at it this way. G+W's Stage I was our period for developing a solid base of assets; now, in Stage II, we're serving the growing needs of five consumer and industrial areas. Today, either through our own products, or by helping other companies make their products, Gulf+Western is making life easier for millions. And more rewarding for its more than 100,000 stockholders.

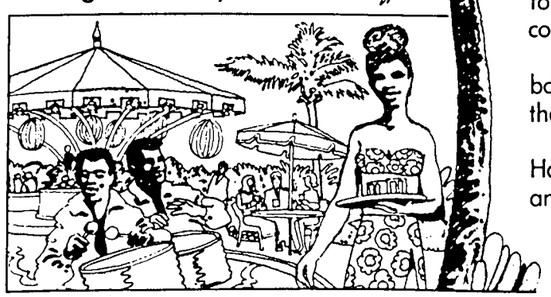
Learn more about G+W. For 1971 Annual Report, write: Dept. of Investor Relations, Gulf+Western Industries, Inc., 1 Gulf+Western Plaza, N.Y., N. Y. 10023

Gulf+Western
STAGE II

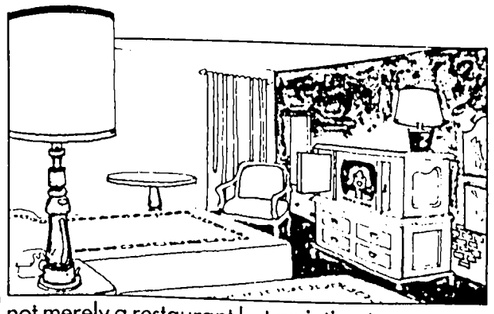
You don't pay for the extras at Skyline London.

Skyline London is much more than a hotel. And we have many things which you might consider extras. Yet, we charge no more than any other good hotel.

Let's see what you get for your money.



You get the extraordinary



Caribbean Patio–a full-size swimming pool and bar set in a huge indoor tropical garden amid giant palm trees and hundreds of exotic plants.

You get Diamond Lil's–a complete reconstruction of a saloon from the days of the Gold Rush. Every night except Sunday our own Diamond Lil keeps the place swinging with the help of a honky tonk piano and old-time banjos.

You get the Colony Room–

not merely a restaurant but an intimate, Edwardian styled dining room complete with dancing six nights a week and an adjoining cocktail bar.

You get Le Cafe Jardin–a French-type cafe where you can eat 24 hours a day.

And you get one of the best bedrooms in London. Each one is soundproofed and decorated in period style. Each has its own colour TV, bath, shower, extra-long bed and personal room thermostat.

You'll find everything you need at Skyline London. Shops, sauna, a bank–everything. And as we're just 2 minutes from London Airport, we have free regular transport to and from the hotel and in to the very heart of London. Write to us for a brochure or contact your local travel agent.

Skyline London also acts as a central booking office for Skyline Hotels all over the world.

Our address is, The Skyline Hotel, Bath Road, Hayes. Our telephone number is 01-759 2535 and our telex: 934254.

It's nice to find out you can get extras in a hotel. But it's even nicer when they're not extras.

SKYLINE LONDON (HEATHROW)

A world of difference

The Canadian Chain. Toronto, Ottawa, Montreal, Brockville, Kingston (Jamaica) and London (Heathrow)
(Park Tower, Knightsbridge, London. opening Spring 1973)

BANCA D'AMERICA E D'ITALIA

Joint-stock Company Head Office : Via Manzoni, 5, Milan

At the Annual General Meeting held on 6 April, 1972 the balance sheet as at 31 December, 1971 was adopted.

The facts and figures of the balance sheet and the report of the Board confirm that **the Bank has maintained its steady progress,** particularly in the last few years.

Business in 1971 was especially marked by :

1) an extension of the Bank's activities, both at home and abroad, so as to satisfy fully and with plentiful means the growing credit needs of manufacturers and traders :

2) flexibility, in step with changing market conditions, so as to assist customers in their many different requirements ;

3) a strong boost to all services, both traditional and of more recent date, such as :

"PRESTITEMPO" —personal loans, extended and diversified in many different ways in order to meet the needs of the "family sector," linked as they are with the demand for a wider range of goods and services ;

"BANKAMERICARD" —the most widely distributed bank credit card in the world, now also extensively used in Italy through a vast network of channels ;

4) a forward-looking policy in a world making steady and rapid progress: the bank for everybody, for every need, dynamic in action, in step with the times.

Capital	L.4,550,000,000
Reserves	L.6,650,000,000
Net Profit for the Year	L.1,576,869,891
Deposits	L.939,480,914,628
Investments (loans to customers, credits to banks, securities)	L.746,767,378,892

poised for recovery

- High level of activity in consumer products
- Poor demand from capital investment sector
- Record bicycle sales
- Excellent results from Domestic Appliance Division
- Improvement in Engineering Division profits continues
- Important new ventures in Europe
- Low demand frustrates Steel Tube, Aluminium and Machine Tool Divisions

TI Chairman, Lord Plowden, sums up:

"We had looked to 1972 as a year of recovery, but it would be unrealistic to expect other than poor results for the first half of the year . . . The measures announced in the Budget give further substantial stimulus to the United Kingdom economy. The effect on TI should be favourable, although it is too early to make a detailed assessment . . . When the long-delayed recovery takes place we shall be ready for it."

SUMMARY OF RESULTS 1971

External Sales	£366,597,000
Profit before Tax	£20,073,000
Taxation	£8,075,000
Net Profit attributable to TI	£10,675,000
Earnings per Share	30p

BUSINESS *Britain*

The CBI tries for a slow thaw

CBI's Partridge, Adamson : hoping

If the Government had not had more important things on its mind, it might by now be a little nettled at the Confederation of British Industry, particularly after the despairing compromise that the CBI put up on Wednesday, intended to give the Government an extension of the 5 per cent price freeze—which is otherwise due to expire in July—without causing a revolt among those CBI members who are refusing to sign on again.

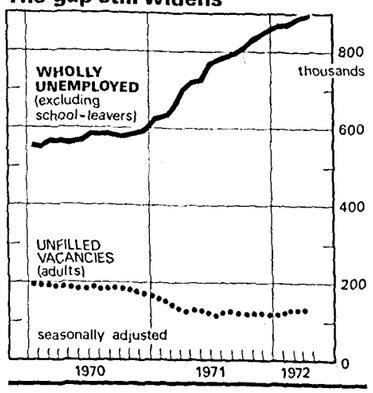
The original agreement was signed by 200 large companies. Unless the CBI can get approximately the same number to sign again, the undertaking will be as good as worthless. So it has proposed splitting the difference: if industry agrees to sign on for another six months, the Government should then agree to a slow thaw for the next six. Thus, by the middle of next summer the freeze would be a thing of the past, avoiding another round of awkward discussions when the Government again asks the CBI what it intends to do this time next year. The CBI seems to think that it can get an acceptable number of members to sign its plan. Otherwise its director-general, Mr Campbell Adamson, who can usually give points to a sheepdog when it comes to rounding up stragglers, will have to admit defeat.

Ministers feel he could be giving up too easily. Most firms' arguments against another year of keeping prices within 5 per cent chiefly reflect managements' dislike of being constrained by undertakings of any kind. The Government is under the plain impression that it struck a bargain with the CBI before the budget, under which, in return for substantial tax concessions for industry, the CBI would undertake to keep the freeze going until mid-1973, when the economy should be moving again and there would be no further need for it. The CBI had pointedly deferred any discussion about the future of the freeze until its members had seen what they were getting in the budget. Now, although pressed hard, they have twice voted to put a decision off until they see how the budget works, which will bring them to mid-June, or only days before the present undertaking runs out. The Government needed an undertaking this week to answer wage demands—like the railwaymen's—based on how inflation erodes present and future earnings. It certainly did not get it.

Companies that enthusiastically signed the original undertaking last July, also in return for sizeable concessions from the Government, have a variety of complaints. Some are merely over administrative points, although that does not make them any less irritating. Some accuse retailers of putting up prices with a fine disregard for the freeze, so that the substantial sacrifices being made by industry in keeping prices down are not being passed on to the consumer. The whole purpose of the exercise is, they suspect, being nullified at the shop counter. But the bulk of the complaints turn on the effect of the freeze on company profits.

This is a difficult argument to support when company profits as a whole have been rising at a rate of more than 15½ per cent, and the CBI knows it. There has been admitted hardship among companies that were either too public-spirited or just too slow to put their prices up in the first half of 1971, when everyone else was doing so, and who were then prevented from raising them by the freeze. But those who did put their prices up in the first half of 1971, which were the majority, have been showing better profits. But not, they argue, putting on the sackcloth and getting out the ashes, if their accounts are reworked on a basis that takes account of the effects of inflation. Then the crippling effects of the freeze show up.

Ministers can argue that the form in which British company accounts are published does not take account of inflation, so why should the Government be expected to? Industry must rest content with being judged on its public record; it cannot have one set of figures for fair weather and another for foul, and trot them out according to the circumstances. The Government has one powerful weapon in reserve. The nationalised industries were obliged to observe the 5 per cent freeze for the past nine months, so that the prices of gas, coal, electricity, road and rail transport and steel have all been more or less static during that time. As a result, at least five of them are having to be subsidised by the Government and three others are teetering on the borderline between profit and loss. What would industry do if their prices are let rip?



Still what it's all about

Neither the CBI nor anyone else could squeeze many trendy signs out of the past week's battery of economic indicators. The unemployment figures, released on Thursday, did suggest that in the three weeks after the budget (the count was on April 10th) unemployment may have stopped growing ; the track indicator (the seasonally adjusted wholly unemployed, excluding the temporarily stopped and school-leavers) had risen by only 4,000 since March 13th. But, then, it had also looked as if it might have been heading down in February, only to be followed by a fairly hefty rise in March, so caps should not be flung too high. And for the Government there is the embarrassment that the raw count still tops 1m when Northern Ireland is included. By comparison the small increase in jobs on offer notified to the employment exchanges is small beer.

For the rest, the indicators are either out-of-date or hopelessly messed up by the power cuts. The Department of Employment did not even attempt to provide a figure for average earnings in February. But, ding-dong, the arguments over price inflation continue ahead of this weekend's new figure. Mr Jim Prior, the Minister of Agriculture, tried his best to appease the Commons on Tuesday with an assurance that the rise in food prices was now slowing down, but he had to admit that in February they were up nearly 12 per cent on a year ago. Consumers have not been slow to react. A survey of the grocery trade by A. C. Nielsen shows that although the total turnover in 1971, at nearly £4 billion, was up 9 per cent on the year before, the extra was entirely because of price increases ; and in volume terms the total was almost certainly down—either because people just bought less food, or because they turned away from convenience foods to cheaper lines.

While these are average figures for the whole country and some of the more efficient multiples are clearly doing better than that, grocers as a group must be getting rather depressed. Over the past five years their trade has gone up by 35.4 per cent, yet all but 0.8 per cent of that went on higher prices : they are having to run very fast just to stand still. Yet, despite the price rises, staple foods are taking up a diminishing part of consumers' income. Back in 1961, the average worker had to work 59 minutes to buy a pound of tea, 11 minutes for a pound of bread and 36 minutes for a pound of butter. Last year, it took him only 34, 8 and 27 minutes.

The gap still widens

Do you sincerely want to work?

Counting the unemployed in a society might seem child's play. But two new papers* show it is nothing of the sort. Mr John Wood, deputy-director of the Institute of Economic Affairs, manages to snick 200,000 and more from the official figure of long-term male unemployment in Britain. Professor Maurice Peston, on the other hand, says the total figure provides a floor to the right number, but that its ceiling is some 600,000 higher ; that would put the true count today in the range 1m to 1.6m (not nearly 3m, as Mr Wilson claimed a fortnight ago).

The unemployment game, in fact, is an old one, but it is played only in politically sensitive times. When Mr George Brown, as he was then, ran the Department of Economic Affairs, he looked longingly at an estimate of 100,000-150,000 unemployable (the blind, the halt and the lame, and so on), but the Labour government never quite had the nerve to remove these people from the unemployment registers. Mr Wood revives the idea : he also thinks there might be 100,000 phoney registrations of people deliberately exploiting the system of social benefits. Another of his suggestions is that the jobless rate should be related to the total working population rather than just to employees : but doing so would cut it by only 0.1 or 0.2 percentage points, not big stuff.

On the other hand, Mr Wood is very sketchy about the other side of the picture, painted in by Mr Peston. The way Britain collects its unemployment figures, neat and quick as it is, excludes those people who were in employment before demand for their services fell, and may still be available for work, but who do not register because they are not eligible for benefit. The main category here is married women, but there are part-timers and others too. The best guess of the size of this under-recording seems to be that it is not as much as Mr Peston's possible 600,000 but about 400,000—100,000 men and 300,000 women.

Any politician can define unemployment to suit his purpose. But most other industrialised countries, including the United States, Canada, Germany and Japan, use household surveys to measure unemployment, sometimes in addition to a register, and so do tend to get a better idea of the availability for work. On an American definition, the British rate would be somewhere between 1 and 2 percentage points higher than it is—but probably still just short of the current American rate of 5.9 per cent. When Britain is inside the common market, it may well have to make more use of household surveys and periodic labour force surveys, in line with EEC practice.

That would suit both the latest critics of the unemployment register, for they both ask for more detailed information about unemployment—including occupation, age, duration and frequency of unemployment. Mr Peston has a sophisticated notion to weight the number of unemployed in different skilled and unskilled categories according to their economic worth, signified by relative wage rates. His point is that as total unemployment rises the proportion with administrative and professional qualifications rises, so that an increase in unemployment from 3 to 3.5 per cent is much more serious economically than one from 1.5 to 2 per cent.

But whereas Mr Wood quite erroneously argues that the problem is more the inability to direct available labour to where it is most wanted, rather than any general inadequacy of demand, Mr Peston says just the opposite : no improvements in the mechanism would have offset the deficient effective demand of the past few years. And that, obviously, is what Mr Barber thinks.

*"How Much Unemployed?" By John B. Wood. *Institute of Economic Affairs.* 60p. "Unemployment : Why We Need a New Measurement." By Maurice Peston. *Lloyds Bank Review.* April 1972.

Another good year for Legal & General shareholders and policyholders– increased dividend, a scrip issue and record bonuses.

Here are 5 highlights of the Chairman — Viscount Harcourt's statement:

Increased dividend
the total distribution for 1971 is 10.5p per share—£6.3 million—an increase of 14.75% on last year.

Scrip issue
one new 5p share will be issued for each 5p share held at the close of business on 24th April 1972 by capitalising £3 million.

Record bonuses
a total of £39.8 million is allocated to all classes of 'with profit' policyholders compared with £18 million in 1970.

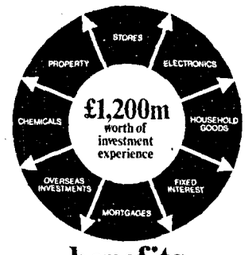
Capital appreciation
£34 million of the capital appreciation in the long term funds is allocated to shareholders and policyholders.

Premium income—U.K.
ordinary life premium income is up 25% on last year, and general business is up 45%.

During 1971 Legal & General has continued to expand ordinary life and general business in the U.K. This expansion can be seen in the figures quoted above. Pensions business still remains a very large proportion of our total business.

As the leading pensions office in the U.K., Legal & General welcomes the Government's declared aim in the White Paper 'Strategy for Pensions' but seeks an alternative 'recognition test' for exemption from the State reserve scheme.

New pensions contracts have been well received by the market and our Earnings-Related Pension Plan is in exactly the right form for the employer who wishes to apply for his scheme to be recognised.



Our subsidiary company Legal & General Assurance (Pensions Management) which runs the new managed fund contract has had a successful year with every prospect that 1972 will produce even more rapid growth.

The new unit trust, Legal & General-Tyndall Fund and a new company, Legal & General (Unit Assurance), formed to underwrite the life assurance element of the 'Stockbuilder' Plan, both made a promising start in their first year of operations.

The Society faces the future with great confidence. The planned expansion of general and ordinary life business, the success of our new pensions contracts and the improving climate which we expect for developing our pensions business, all point to a successful future.

Legal & General's prime objective is profitable growth.

Booker McConnell profits up 50% to over £7,000,000

A 50% increase in profits, to a new record of £7m, is the outstanding feature in the statement of Mr George Bishop, Chairman of Booker McConnell Limited.

This was attained by good results from every division, including, for the first time, a sizable contribution from the engineering interests.

The second outstanding feature of 1971 was that 40% of profits were earned in Britain. In 1972 the proportion should be higher.

The pace of acquisitions has increased, especially in food retailing and wholesaling. Expansion will be continued both by selective acquisitions and by internal growth.

The success achieved in the last two years is a fine stimulus to go all out in 1972.

Computers

Virtue's reward?

The easiest way for any country to protect its computer industry is to make certain that all the government orders possible go to the nationally-owned company. So the Department of Trade and Industry, when it announced earlier this year that in future most official contracts would be put up to tender, took a calculated risk that the damage this was bound to inflict on the only British-owned company, International Computers, and the size of subsidy it would have to be paid, would be offset by gains elsewhere. The risk is beginning to pay off in unexpected ways.

The first company to rise to the bait is the increasingly aggressive Honeywell group. Honeywell's Scottish factories turn out only small computers; the big machines are built in America. But government departments are interested mainly in big machines, and the chance of a slice of their business has been enough to decide Honeywell to switch some of its big computer output to Britain : deliveries from Scotland will start next summer. However, British business alone would not justify this sort of investment. To make the venture worthwhile, Honeywell has been obliged to scale up its Scottish plant to meet the whole of the export demand for its large computer—Japan apart.

There are other reasons why foreign computer manufacturers like to come to Britain; it is the only market that is not dominated by International Business Machines, and where other Americans can meet IBM on something like equal ground. It is a good jumping-off base for the common market. But Honeywell could as easily have decided to develop any of its factories inside the EEC: it has recently bought up all General Electric's European ventures. It was the prospect of British Government orders that tipped it, which must make the Government think seriously again about whether reserving its business for favoured domestic producers is the best way of encouraging investment in new technologies.

Vat

Return of the thumbscrew

A wholly justified roar of rage has gone up from the Bar Council and the Law Society over the powers and penalties that the Customs and Excise is demanding over the wretched traders who break the value-added tax rules. The Customs is not now seeking out smugglers. The duty on a bottle of whisky is about 700 per cent of its duty-free value ; it is about 500 per cent for tobacco. A stiff jail sentence may be necessary to prevent general evasion there. But Vat will be at the puny rate of 10 per cent and the powers that the department is demanding are wholly disproportionate.

These include authority for any customs officer to remove any document from a trader that bears on his taxable transactions without any special authority from, for example, the Vat tribunals which will be set up to deal with disputes about Vat. Drastic powers of search and entry are demanded. A justice of the peace who is satisfied that an

> offence in connection with the tax is being, has been or is about to be committed on any premises, or that evidence of the commission of such an offence is to be found there,

can authorise a customs officer to enter the premises, " if necessary by force," search them, remove anything he thinks may be relevant, and search anybody he thinks may be involved.

This is preposterous. It is also unnecessary. The Customs may have been worried by the scale on which wholesale evasions of Vat have recently been uncovered in France, but British Vat is simpler and at much lower rates than French Vat ; the incentive to swindle is much lower, and the Customs has power anyway to slap in an estimated assessment where it suspects false returns, which the trader must pay unless he can support a successful appeal against it. The Customs can demand any document it wants now without the need to break down the door.

Nor is there justification for other small meannesses like the option to hear appeals in public except in special circumstances. This is wrong : they should always be in private, because the information given at such hearings will always go further than the trader is bound to reveal under other statutes like the Companies Acts. And when it comes to paying assessments, why should the Customs and Excise follow a different practice from the Inland Revenue ? It is demanding that Vat assessments be paid on demand. But even the Inland Revenue does not demand prepayment before the hearing of an appeal. This part of the bill needs to be looked at again.

Key indicators: British economy

Unemployment
Up again, though not by much. And a few more jobs on offer.

Industrial production

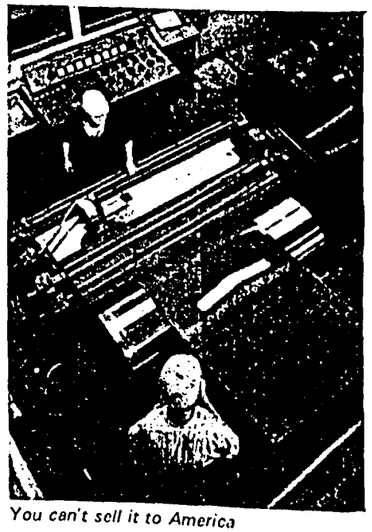
BUSINESS *International*

Sorry, it's only 2½ per cent for steel

Although the legal niceties have still to be tidied up, the outline of the deal between the steelmakers of the Six, plus Britain, and the United States has now emerged. The Americans have got their way in virtually every respect. Under the last three-year agreement, which expired in December, the European (but not the British) steelmakers voluntarily undertook to limit the growth of their steel exports to America to 5 per cent a year. When President Nixon's import surcharge was imposed, the Europeans demanded exemption for steel, on the ground that exports to America were restricted anyway. This was refused, so the voluntary restraint was abandoned with only a few months left to run.

The surcharge came off in December, to be replaced by an effective 12 per cent devaluation of the dollar in terms of European currencies. The Europeans' negotiator, M. Jacques Ferry, president of the French Chamber of Steel, complained in January that European producers had no more than 6 per cent of the American market, and that their competition in 1971 had not prevented American producers from raising their prices—already higher than the Europeans'—by 10 per cent. Nevertheless, these arguments have not prevented the Nixon Administration from imposing a "voluntary" limit on the growth of European steel exports to the United States of only 2½ per cent for each of the three years 1972-74.



All the Europeans have extracted in return is an understanding that this quota will be open to renegotiation if there is a fundamental change in the balance of the world steel market, and even this, everybody privately insists, is a let-out the Europeans would be reluctant to invoke. It might be applied if, for instance, the American boom goes better than expected; or if the Japanese should flood the European market with steel.

The Japanese have agreed to limit their steel exports to Europe (this was a precondition of the Europeans' undertaking to the Americans). But they gave little away: their exports to Britain and the Six will come down by only one-fifth from the inflated total for 1971; no restrictions will apply to their shipments to the rest of Europe, and figures for 1973 and 1974 have still to be agreed.

The European steelmakers were divided on whether the Nixon Administration really would have pressed ahead and imposed quotas if its demands had not been met. What united them, however, was a dislike of any disruption in world markets for a product as capital-intensive as steel. They see the present American policy as sheer protectionism, but they retain a yearning for an orderly world, with flexible agreements between gentlemen.

It is precisely this aspect that has alarmed the European commission in Brussels. Of course the Treaty of Paris does not require the European steel industry to compete in overseas markets, and is altogether laxer in its anti-cartelisation rules than the later Treaty of Rome. But if "voluntary" restraints are acceptable for steel, how long will it be before the American steel industry, or indeed the motor industry, starts to complain that the European steel quota is being bypassed by shipping steel to America in the form of cars? "Voluntary" restraints may spread from one industry to another, reducing next year's long-term world trade talks to a farce.

Anyway, the Six are planning for net exports of steel of 20m tons by 1975 (against about 10m tons in 1969-70, and less in 1971). Even then it is likely that Europe's existing plant will be working only at around 85 per cent of capacity by 1975, with the second stage of the Fos expansion, the Spanish Sagunto project and the Italians' expansion at Taranto to come.

You can't sell it to America

EEC regions

Mind my language

Brussels

The EEC commission is expected to announce shortly that Belgium's loi d'expansion economique which provides the legal basis for the country's system of regional aids will have to be modified to bring it into line with article 92 of the Treaty of Rome. A meeting between Mr Albert Borschette, the commissioner responsible for competition, and a delegation of Belgian ministers failed to agree, so the commission will now probably decide to invoke the formal machinery of the treaty.

The whole of Belgium falls within the so-called central region of the EEC, where special government investment incentives have been limited by agree-

Royal Insurance

Net profit exceeds £30 million

Sir Paul Chambers reviews all-round growth in 1971

The Annual General Meeting of the Royal Insurance Company Limited will be held on Wednesday, 10th May, in Liverpool.

The following are extracts from the statement by the Chairman, Sir Paul Chambers, which has been circulated to stockholders with the 126th Annual Report and Accounts.

Results and Dividend

1971 was an encouraging year; pre-tax profit was £10·7m. higher at £41·0m. and net profit increased from £22·3m. to £30·1m.

Premium income from general insurance business increased by 11·0% to £449·9m. and underwriting profits were earned in each of the major territorial divisions totalling £6·3m. compared with a loss of £1·4m. in 1970. Investment income increased by £3·1m. to £33·5m.

Following a valuation of the life fund for the triennium 1969/71 the Stockholders' Long-term Insurance profits have been maintained at £1·3m. per annum representing one year's allocation of the Stockholders' proportion of the distributed surplus grossed up by the underlying tax borne by the fund during the period. The amount of profit to be distributed following the three-year valuation is virtually the same as that for the previous five-year period.

The Directors recommend a final dividend of 9·5p per 25p stock unit which makes a total dividend of 15p (1970 13p) leaving £12·4m. for transfer to the General Reserve.

U.S.A.

Premiums in the U.S.A. rose by 9·8% to £234·0m. The underwriting profit of £0·6m. compared with a loss of £4·6m. in 1970. After taking into account investment income, the total operational profit before tax was a record £17·4m. against £10·6m. in 1970.

This improved result should be seen against a background of a generally healthy industry. Certain welcome developments have been taking place, particularly with regard to more flexible rating laws, although inflation is a continuing difficulty especially in the liability classes.

The success of President Nixon's prices and incomes policy could be of considerable importance to our industry and on balance, if successful, should be beneficial. The concept of 'No-fault' is likely to spread throughout the United States to the benefit of society and our industry, but it is desirable that this should be on a uniform basis.

United Kingdom and Republic of Ireland

Premium income increased by 11·1% to £81·5m. and the underwriting profit rose to £4·0m. (1970 £2·3m.).

Fire and consequential loss insurance was satisfactory although insurance covering bodily injury liabilities became more difficult. Premium rates for motor insurance have been too low to meet rapidly rising claims costs which increased by 20%. In addition, an amount of £1½m. has been provided as a result of the failure of the 'Vehicle & General' mainly to meet obligations under the Motor Insurers Bureau agreement.

There has been a deterioration in claims experience both in Northern Ireland and the Republic of Ireland.

Elsewhere Overseas

In Canada the underwriting result was a profit of £0·8m. as compared with £0·5m. in 1970. There was further steady growth of business in Australia and, despite the severe impact of cyclone 'Althea' in December, the long record of profitability was maintained.

In parts of Europe the results were still marred by major losses but there was a slight improvement over 1970. In February this year an agreement was entered into with one of the leading German insurance companies, 'Aachener und Münchener' for broadly based co-operation. Under the agreement 'Royal' will acquire a 10% share in the capital of the German company in exchange for the issue of 'Royal' stock. A reciprocal agreement has also been signed with an Italian company 'Societe Assicuratrice Industriale'.

In other parts of the world there was overall a satisfactory contribution to the Group profit.

Marine and Aviation

World-wide premium income increased by 12% to £27·8m. and the underwriting profit was £2·5m. (1970 £1·6m.). All the major territories produced a profit and most of them a higher one than in the previous year.

Investments

Investment income again increased satisfactorily in 1971. The benefits of the policy of investing a high proportion of our accruing funds in ordinary shares throughout the world are evident both by the increasing income from this source and by increasing the surplus of market values over balance sheet values. There has also been a benefit of the rise of prices of fixed-interest securities.

Life

Record new business was completed and further steps have been taken to expand our Life business.

Following the valuation of the long-term funds at the end of the year, bonuses have been declared for three years 1969/71. The rate for 'Royal' United Kingdom with profits assurance policies is £4·50% per annum compound and the rates for other classes have also been increased to record levels.

All of these securities having been sold, this announcement appears as a matter of record only.

ment among the Six and the commission to a maximum of 20 per cent of the cost of any project. The problem is not the size of the boosts to investment but the limits of the areas to benefit. The commission is insisting that these must be justified in terms of rates of unemployment or below-average incomes before giving its approval.

In practice, the commission is prepared to authorise virtually all the proposed development areas in the French-speaking south of the country with the exception of Tournai, but is determined to eliminate a number that exist now in the Flemish-speaking north. But while the commission is trying to establish objective criteria for regional help, the Belgian government is preoccupied with the need for a political balance between its two fractious communities. In a country where the budget of virtually every ministry is distributed in fixed proportions between Flanders, Wallonia and Brussels, it is clearly very hard for the government to accept that development areas should be concentrated almost exclusively in the French-speaking parts, however justified this might be economically. Hence the desperate attempt by the Belgian authorities to get a reprieve for some of the more sensitive development areas in the north.

Economically, the commission is almost certainly right. With its central position, a major international port in Antwerp, excellent communications and a well-educated but co-operative labour force, Flanders is one of the most attractive areas for new industrial investment in the common market—as the figures show—with or without investment aids. Wallonia, on the other hand, suffers from the same disadvantages as some of Britain's development areas: an ageing population, declining industries and a reputation for industrial strife. As Britain has also found, investment incentives alone will do little to improve a situation like that.

Chile's debts

Now it's ITT, too

The fact that President Salvador Allende announced that the Chilean assets of International Telephone and Telegraph are to be expropriated did not prevent Chile from striking a bargain, in the early hours of Thursday morning, with its principal creditors, known collectively as the Paris club, over debts that now stand at as much

We'll pay when we feel like it

as $3.7 billion.

Debt payments were suspended on November 9th, and the 12 creditors (America, Canada, Japan and nine European countries, including Spain) then asked to put $988m of this debt on to International Development Association terms retrospectively (ie, with a very low interest rate and prolonged repayment periods). This was refused. The Paris club then accepted an alternative proposal: that payments on these debts should remain in suspense until December, 1973. But disagreement continued on the rate and the terms on which repayments should be made after that, and even the latest deal applies only to repayments due this year.

There was also disagreement on two other points: one concerned the future management of the Chilean economy, it being no secret that, apart from the falling price of copper, much of Chile's trouble began with the wage increases and mismanagement that followed the nationalisation of the copper mines. But President Allende has refused to accept supervision by the International Monetary Fund under the stand-by procedures, saying that Chile will not jeopardise its sovereignty. However, much the same result seems to have been achieved indirectly, with the IMF acting only as technical adviser. The third disagreement centred on compensation for the copper companies, which the Americans wanted to be a precondition of any agreement. The Chileans argued that it was a matter to be settled by Chilean law and local courts. A conveniently ambiguous formula has now been adopted, that "just" compensation should be paid according to Chilean "and international" law, and this will presumably cover ITT too.

President Allende's problem is to avoid appearing to sacrifice his socialism to foreign bankers. The western countries' doubts are subtler. Argentina is waiting in the wings, also preparing to renegotiate debts, although payments are still being kept up. Ghana is in the process of repudiating some debts incurred to refinance those run up by Dr Nkrumah. Yet none of these three countries is poor, by developing country standards; Argentina is among the top three or four members of Unctad's Group of 77.

Other countries, like Mexico, have considerable debts but no problems about refinancing them regularly on normal terms. It is an over-simplification to assume that all developing countries are inexorably heading for mounting debt problems. But if countries like Chile suspect that it pays to run into payments problems, because hard debts can then easily be refinanced on soft terms—by loans that, on a change of regime, may have to be refinanced again on even softer terms—then the sufferers will be those countries that really need soft aid: India, Indonesia and Bangladesh.

French shops

Hypertax

Paris

France's social security system has many gaps. Numerous separate schemes exist for different categories of worker, varying in the size and range of benefits they give, but the self-employed on the whole fall outside the system altogether. Now something is to be done for the numerous, vocal and politically powerful shopkeepers. But because, in principle, social security in France is paid for almost wholly by charges on employers, and because small-scale retailing is supposedly so finely balanced on the borderline of profitability that it could not stand a levy on sales or profits to pay for pensions, the government has adopted a very

Liable to be pensioned off

French solution.

The pensions will be financed by a levy on large shops ; those of 400 sq metres or more will have to pay an annual tax of F15 (£1.14) per sq metre. Needless to say, the supermarket groups are appalled. Some hypermarkets exceed 2,500 sq metres, not including parking space, which may or may not be counted. Although supermarkets still account for less than 30 per cent of retail sales, their steady growth (with many of them on the outskirts of towns) reflects a definite change in French shopping habits.

But not all hypermarket and supermarket firms are as well-established or as profitable as Carrefour, which doubled its earnings last year, and there are protests that some of the newer companies may be forced out of business. The department stores, which have been going through a lean time, will mainly escape, as the levy will fall only on shops built within the past ten years. The public has become aware—or has been told—that it will pay in the end through higher food prices in supermarkets and a fine head of resentment is building up, ahead of the debate in the national assembly in a few weeks' time.

Spanish repairs

AA, RAC please note

Barcelona

The Spanish government has published a new decree controlling repairs in garages. Not before time. Growing agitation and frequent letters to the press about repair charges and bad work have been evident in the two years since complaints were first raised in the Cortes. There has also been pressure from the official trade unions. The main complaint has been about the practice of giving a blanket price for repairs, with no details, supposedly to save time and paperwork. Motorists are not convinced ; there has been a good deal of over-charging among the 15,000 repair garages.

Control will be a nightmare, but the new regulations are drastic. A list of the prices of spares and the average cost of labour must be given to the customer. No job may be accepted before the customer has signed an estimate, unless he agrees, in writing, to waive one. New problems that crop up during the work may not be dealt with without his written consent and a further estimate. When the job is finished a detailed bill must be presented. A complaints book must be available in official form. All spares must be new and have the manufacturer's imprint, unless the dealer is authorised to use secondhand ones, and so on. Blue plaques on the fronts of garages will show what types of work may be carried out : a wrench for mechanical repairs, a torch for electrical and a hammer for bodywork ones, together with numbers 1, 2 or 3 to indicate the garage's grading for each.

Repair shops may be closed down or fined for infringements, the fines ranging up to a ceiling of 5m pesetas (£30,000). Foreign motorists may still find it hard to judge the charges made, but they will at least be able to get a breakdown of the costs of the work, and have their old parts back if they want them.

Motor repairs are a source of irritation everywhere. But in Spain the car population has grown so rapidly that the garages have simply not been able to keep pace. Even so, it is going to take a mighty long time filling out all those forms, and writing those letters.

Singapore

Vietnam business

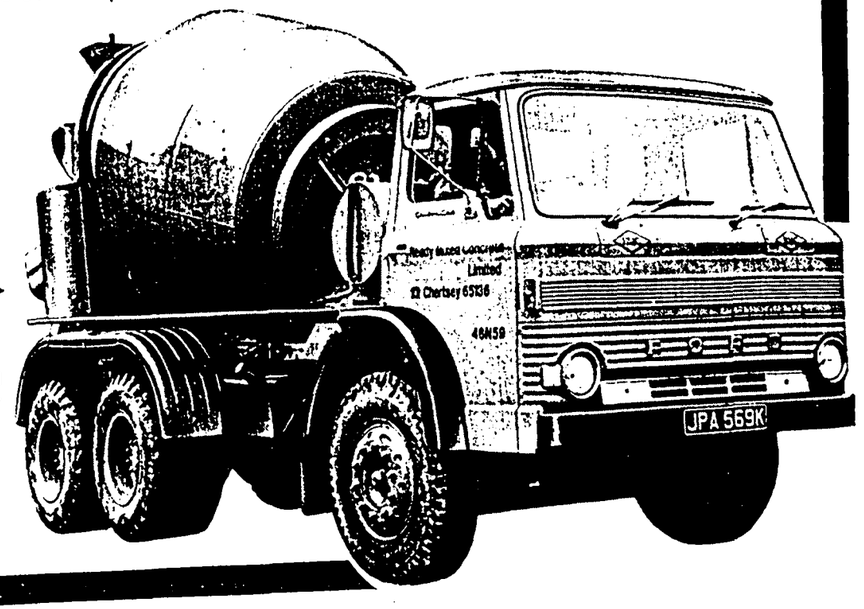
Kuala Lumpur

Singapore's trade as an entrepot has been declining, with one important exception. It has evolved into the major centre for the distribution of war surplus scrap from Vietnam, a business that has been transformed by the arrival of Usapori (the United States Army Procurement Office) from the Ryukyu Islands, a few months ago. Usapori's job is to sell off the leftovers of war, but in the process it has cut into a trade that has made many Singapore fortunes in the past.

Three or four years ago around 20 Singapore firms were buying "scrap" from Vietnam at about $30 a ton, much of it consisting of only partly-used equipment that could be resold at many times the purchase price. The trade was legal. And in due course the Singapore government moved into it through two shadowy firms : Norton (Private), Ltd, and the United Metals and Plant Company. In its heyday, Norton, employing 80 people at its major centre at the Vietnam coastal town Qui Nhon, would ship goods back to United Metal's huge scrapyard at Bedok, on Singapore's south-east shore.

But today, according to a local Chinese insider, "the Americans are getting smart." Usapori itself now runs two auctions, one for scrap and one for reusable equipment. When the first auctions were held in February, the revenue from equipment totalled over $150,000, with buyers coming from as far as France and California. Dump trucks fetched $10,000, or about half the price when new ; but they were exceptional. On average, prices worked out at about one-eighth of new. This continuing flow of quality secondhand goods is attributable to the curious budgeting of the American army, under which procurement allocations are fixed annually and allow for a high rate of loss. Frequently this means that much existing stock becomes surplus and has to be off-loaded. Repairs are hard to carry out in Vietnam, and it is often simpler to sell off the stuff and leave Singapore to repair it.

Now that the American and Singapore governments dominate the trade, only 10 private outlets in Singapore remain to run scrap out of Vietnam themselves, apart from the considerable illegal trade that continues to flourish via Hongkong. This consists largely of shellcases converted into palletised brass and copper, and sold off at less than half world market prices, probably at $120 a ton, with the buyer taking delivery at some offbeat rendezvous in Vietnam and bribing his own way out, which is no easy business.



Officially, the American government has sold no more than 1,000 tons of shellcases, yet, says one regular Vietnam hand, "Every guy has a few thousand tons for sale." The most lucrative trade of all is people. Sons of rich Vietnamese evading the draft will pay $5,000 or more for passage to Hongkong plus passport. For those operating within the law, the Bedok yard, now used by Usapori, is filling

Ready Mixed Concrete

Significant Expansion by Group

- **Group turnover £217,226,000 — up 32%**
- **Pre-tax profits £11,401,000 — up 63%**
- **Dividends up from 19·5% to 24%**
- **Earnings per share 9.2p — up 64%**
- **Continued expansion in U.K. of ready mixed concrete, sand and gravel extraction and builders merchanting activities.**
- **Re-development of worked-out mineral land for housing schemes and leisure areas continues apace.**
- **European investments continue to grow and generally to prosper.**

"The year 1971 produced a good increase in turnover and profit. Your Board believes that the continuing development of our operations at home and overseas, together with the increased activity in the United Kingdom to be expected from the latest Budget proposals, promise further satisfactory advances in the earnings of the Company in the current year." W. R. Northcott — Chairman.

RMC

Copies of the annual report and a brochure describing the many activities of the Group may be obtained from the Company Secretary, Ready Mixed Concrete Limited, RMC House, High St., Feltham, Middlesex. Tel: 01-890 1313.

so you'd like to convert a good income into solid capital?

Perhaps, like many prosperous men and women in business today, you have a good income now, but little or no capital for later use, or to provide for your family after your death.

You should read the LONDON LIFE booklet which describes a well-proved and outstandingly profitable way of converting income into capital. The many remarkable advantages include:

- income tax and estate duty advantages obtainable with no other policy
- a flexible saving period from 10 years to a virtually indefinite term
- benefits withdrawable at various stages, if desired, on terms guaranteed at the outset

The LONDON LIFE offers substantial advantages to its policyholders. It is a mutual Company, with no shareholders and all the profits shared by its Members. It pays no commission to brokers or agents. And the Honorary Committee of Reference includes many prominent business and professional men.

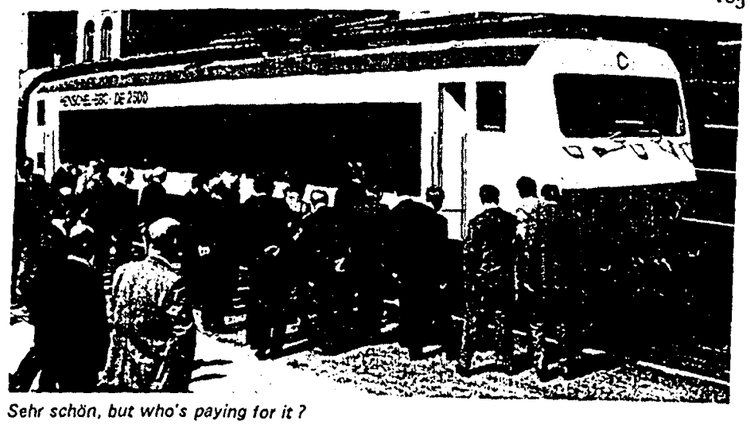
up ready for the May auction. Soon the auctions will be held monthly. Some bargains are still to be had in earthmoving equipment and the like. But nowadays the "scrap" is genuine.



German trains

Nein, danke

When the man picked for the hot spot as chairman of the German railway system decided at the last moment that he did not want it, the government was left with precious little time to find a replacement: in fact, the German transport minister, Herr Georg Leber, reckons that he has until next Tuesday to do it. The retiring president, Herr Heinz Oeftering, leaves in three weeks, and Herr Paul Hahnemann, the ex-sales chief of BMW and reputed to be a management whiz-kid, was appointed last month to take over from him. Herr Hahnemann has now had second thoughts; on closer examination, he may have decided that the task of getting the railways out of the red was just too daunting. Whatever his reasons, he backed out.

Herr Leber is said still to be debating whether to look for another outsider from industry, or to make the best of a bad job and appoint the next chairman from within the railways. Whoever takes the job will find the going tough. The railways have been in the red for years, but recently losses have been going up alarmingly, to £260m last year and probably £360m this year. The accumulated deficit now stands at £1.5 billion, interest payments alone exceed £180m.

There is no secret about the reasons why. The railways employ 400,000 people and wages make up 70 per cent of costs; the wage inflation of the past two years has therefore hit the system particularly hard. But the government would not allow fares to go up. Reluctantly, it has now conceded that the railways can raise

Sehr schön, but who's paying for it?

charges by up to 20 per cent without clearing it each time with Bonn, but the political pressure against any sizeable increase remains strong. Commuter fares did go up by 10 per cent in March, but this comes nowhere near to offsetting the higher costs.

Commuter services are particularly unprofitable because the cream of the business no longer goes by rail but drives itself to work in its own car. Yet the railways are obliged to keep services going for the benefit of the dwindling number of non-car owners. Then there are a number of branch lines, particularly near the east German border, that ought to be shut but are kept open because it would look politically bad to close them. The government pays a subsidy of sorts for operations that it considers socially necessary, but this year's subsidy of £300m is nowhere near the sum needed, and, as Herr Willy Brandt is heading for a massive budget deficit, he is unlikely to provide any more.

The government commissioned a study on the relative roles of rail and air within Germany this decade and was told as a result last month that another £1.2 billion should be invested in the railways. The railways' own investment programme, which includes a superfast train system running on a special track, comes to £3.5 billion to 1985, merely in fixed assets, and without making any allowance for the cost of new rolling stock. There is no hope of raising this kind of money unless the government provides most of it. Any new chairman will want to know how much it is prepared to put up.

Electric motors

Silenced

Utrecht

Prince Bernhard of the Netherlands opened SKF's new $15m European group laboratory at Jutphaas, near Utrecht, on Wednesday. Under the wraps there are various projects by which SKF is evolving more advanced applications for its basic bearings. The most notable—and touchy—of these is a new design of electric motor which cuts noise dramatically by mounting the bearings in the motor in a different way. Electric motors are one of the growth sectors of the market; so SKF is on to a good thing anyway. But the socially-conscious trade unions in Sweden have also been pressing hard for a reduction in factory noise (there are new British rules too). In SKF's own plants the new motors will be put to work in its massive grinding shops, where the standard motors now produce a noise of 100 decibels, which is enough to start permanent damage in human hearing within one day. The new design ought to cut this to 70 decibels, literally to a whisper.

The touchy question is that the motors would be ideal for submarines, for which the actual—and desired—levels of electric motor noise are secret, and understandably so. But Sweden is a neutral country.

Key indicators: world commodity prices

Hides off peak

A better kill in Britain this week left hide prices at the London auction 20% below their peak of a month ago. Even so, with Argentina's ban on exports still in force, prices look like remaining at their highest levels since the Korean war for some time yet.

	Index 1963=100 Apr 12	Apr 19	Percentage change on one month	one year

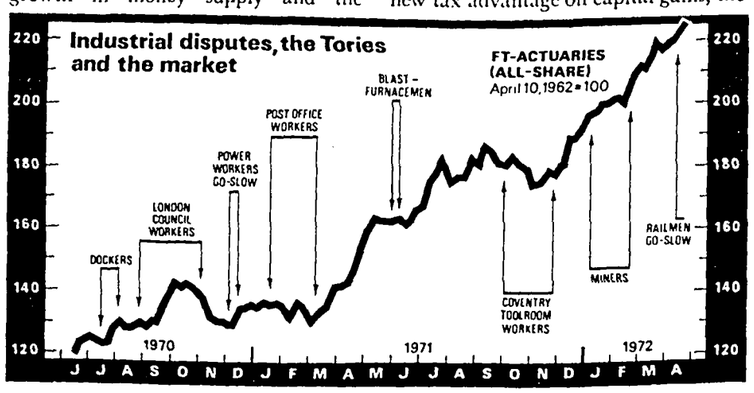
BUSINESS *Investment*

Striking it rich with the Tories



On the day that the Government derailed the railway unions, the London stock market hit record highs. On Wednesday the Financial Times index of industrial ordinary shares closed 4 points up, after having been 6½ points up at one stage. The buying fever abated somewhat on Thursday, but at the close the index was down only 0.5 points at 524.3. This was still in the new high ground, above the peak of 521.9 in September, 1968, and the more comprehensive indices have also reached new peaks this week.

No one can pin the day-to-day changes in market sentiment down to one thing or another. Taking the longer span, it would seem that the stock market has benefited greatly under Mr Heath's nearly 23 months in power. But the market is curiously apolitical, and chooses its bull periods without reference to the government of the day. Over shorter periods, it is pretty clear from the chart that the market is oblivious to even the most damaging of strikes. In most it has gone up—but it would be hard to make out an argument for cause and effect. What really matters to the market is the growth in money supply and the growth of corporate profits.

Most things have been going the way of the bulls lately. The telex from New York tells of record profits, trading levels and prices, and real growth in gross domestic product (even if not quite as fast as the Nixon Administration is hoping for). The economic news in Britain is clouded in the uncertainties of strikes and go-slows, but the bullish enthusiasm sweeps aside considerations of the inflationary impact of even the 12½% rejected by the railwaymen.

What counted this week was the pick-up of unit trust sales (and the decline in redemptions) and a string of good company results. Each of these seems to have touched off a rush, not just for the reporting company but also for the other shares in the sector. Engineering was boosted by **Guest, Keen and Nettlefolds**; food by **Associated Biscuit Manufacturers**; and building by **Associated Portland Cement.** Then on Thursday bid interest got a fillip when **Ocean Steam** went into the lead in the **Cory** stakes with results which pushed up its share price by 10p to 156p.

Perhaps surprisingly, in view of the new tax advantage on capital gains, the investment trust group was one sector not breaking new ground this week; but then its prices had been pushed to a peak on March 29th in post-budget enthusiasm. The recent sharp drop in the investment dollar premium, too, may have made some trusts look a little vulnerable; the drop however, was slightly reversed, this week, with the premium on Wednesday at 21%.

Engineering

Time to buy again

Engineering shares have been going up and down like yo-yos since the stock market boom got past its initial stage in the middle of last year. Recently some have dropped from their January highs, and this perhaps represents a good buying opportunity now that the Government is set on growth, come hell or high wages. One reason for the recent falls has been that the earlier buyers have got bored of waiting, wanting short-term rather than medium-term profit. Another is that we are in the middle of the results season for companies with calendar years. Attention is being drawn to the past, rather than to prospects.

Vickers' results on Thursday pleased the market. The earnings of 6.6p, up 70%, put the price up to 118p, where the p/e is 17.8; earnings could well reach 9p this year. But **Guest, Keen and Nettlefolds'** 1971 results were at the top end of the market's expectations. The second half-year more than made up for the first half drop caused by the Ford strike, and the full year's pre-tax profit was £45m, or £47½m allowing for extra depreciation and Rolls-Royce. Full consolidation of some foreign subsidiaries, in which a greater stake was taken, makes £43.3m the comparative figure with 1970's £43.1m. The second half growth was moderated because the motor industry met demand out of its stock, and commercial vehicle demand remained weak. Any improvement here will be offset in the first half of 1972 by the miner's strike, but the

IT'S ABOUT TIME WE GOT INTRODUCED!

Who are we? Cii is the French computer manufacturer. In the past five years, Cii, backed by major industrial groups such as Thomson, C.G.E. and Schneider, has devoted considerable R & D resources as well as large-scale industrial investments to the launching of new series.

PRODUCTS:
Cii offers a comprehensive range of general-purpose computers featuring advanced technology and software, as well as highly competitive costs (Iris 45, Iris 50, Iris 60 and Iris 80), thus Cii has an efficient solution for E.D.P. requirements of all firms, whatever their size. In automation and process-control applications, Cii's leading position has been confirmed by the commercial breakthrough of Mitra 15 mini-computer.

ORGANIZATION:
Cii has developed specialized teams providing an all-level efficient service and illustrating the fact that a good computer solves a lot more problems than it raises.

MARKETING:
Our rising sales in France have been accompanied by even greater progress abroad; thus, from '70 to '71, our exports have doubled, mainly with private users. These co-ordinated efforts have proved to be fruitful. They made possible co-operation agreements with other manufacturers and granted license agreements both in Europe and U.S.A.
Today, Cii ranks as a full partner in the world's computer industry, and its name, Compagnie Internationale pour l'Informatique, is well deserved.

Willingly...
that's how we carry your cargo

We at KLM give your cargo that little extra in personalized attention and care.

That's how we have become big as a freight carrier far beyond the borders of our country.

That's how we gained our reputation as experts in worldwide cargo handling.

Add KLM to your distribution system, and we'll become a reliable part of your product.

KLM CARGO

We're offering British industry a chance to take off.

The Scottish Highlands and Islands. The biggest development area in the whole of the British Isles. A place with bigger opportunities and perhaps a different philosophy from any other locations you could choose.

We're out to create. To build industry from scratch. To shape an environment which is as economically attractive as it is beautiful.

This means we need worthwhile ideas and projects which we can combine with our experience and the resources we have available. Together we can give British industry and the British economy, a much needed lift.

So we're looking for two types of people. Those who have a going concern which they wish to expand and those who have an idea which needs turning into reality.

We can offer quite a bit in the way of resources: manpower, space, water and power—not to mention get-off-the-ground financial support. And by plane we are only two hours from London and little more from other main centres in Britain.

But first take time off to read our new industrial brochure. It tells of the sort of conditions you can expect, the type of projects we've already worked on, the kind of assistance and backing you could receive.

There's a copy for anyone with the will to be a high flier.

Please send me your 64-page free colour brochure on industrial opportunities in the Highlands and Islands.

Closing a 12,000 mile gap.

There you are in the U.K.

And here we are, Australia's biggest company.

With 12,000 miles between us.

From that distance, can you really get a feeling about us?

We hope so.

For both our sakes, it's important that you do.

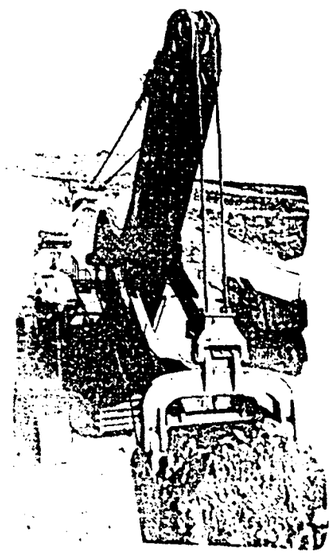
Because to deal confidently with any company, you have to know that they're big and stable enough to be effective.

Especially when they're 12,000 miles away.

For that reason, we've prepared some information that you will find reassuring and possibly surprising.

It will certainly let you sleep well at night when you deal with Australian industry.

Last year, BHP paid out £Stg. 117 million in wages.



That isn't a boast.

It is simply an indication of the magnitude of our operation.

At this moment, BHP employs 56,000 people.

And thousands more work in industries allied with ours.

So much for our size. This is what we do with it.

Mining.

This is where the company really started in 1885.

Last year, we produced 27 million tons of ironstone, coal, limestone, manganese and dolomite.

And a constant programme of geological exploration is increasing already vast proven reserves.

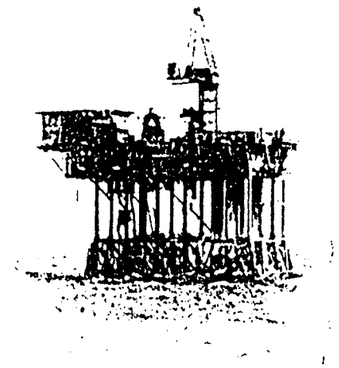
All this, you will no doubt agree, is very healthy indeed. In fact, it makes BHP one of the world's great mining companies.

Steelmaking.

Naturally, with the access we have to enormous supplies of high grade ore, our steelmaking activities are equally well developed.

Since 1915, BHP has been Australia's steelmaker.

Today, BHP operates four iron and steel works.



If you visited them you would be pleased to note how we utilize highly advanced technology and equipment.

Last year, in our four iron and steelworks, we produced just under 7 million tons of raw steel, which ranks BHP 13th among free world producers.

And in mid-1972, a £Stg.163 million expansion will come onstream at Port Kembla, Australia's largest steelworks, boosting total capacity to 9 million tons.

This output satisfies Australia's total steel needs with enough capacity to fulfil hefty export orders.

And each year, that capacity grows.

Oil and gas.

Until 1969, Australia imported 90% of its petroleum requirements.

Over the last 3 years, a dramatic change has taken place.

60% of this country's total petroleum requirements now comes from Australian fields.

BHP and Esso found oil and gas under the turbulent waters of Bass Strait.

1,600 million barrels of oil and 9.5 trillion cubic feet of natural gas.

It cost the partnership £Stg. 180 million to explore and develop, but the calculated risk paid off.

And the search continues..

Shipbuilding.

BHP's shipbuilding activities date back to only 1941.

Yet since that time, BHP has built 52 vessels — 12 for the company's own fleet, now totalling 18 ships.

This year we'll launch 53, 54 and 55, including a 78,000 dwt. ore carrier.

All built, naturally enough, with BHP steel.

Each year, the fleet transports some 12 million tons of raw materials to our works.

Our fleet may not worry Mr. Onassis.

But then, we make more steel than he does.

Research and exploration.

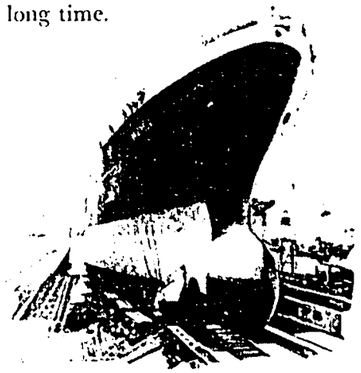
A company like BHP leans heavily on it.

Some 600 people, including 150 scientific staff, are engaged in research and development at our two major research laboratories and at the Works laboratories in each of the steelmaking plants.

BHP's mineral exploration team numbers over 70.

It is, in fact, one of Australia's largest group of geologists and geophysicists.

Investment.



Over the past ten years, BHP has ploughed back over £Stg.604 million in new plant and equipment.

Over that same period, the company has paid out £Stg.109 million to its 183,000 shareholders.

And perhaps most important of all, is our investment in brainpower.

At this moment, we have just under 6,000 of our people receiving specialised training and higher education.

We intend to be here for a long time.

When it looks like this,

The L-1011 is a far cry from other jetliners. Because it hardly even sounds like one.

In fact, it's the quietest big jet in the world.

Thanks to the Rolls-Royce RB. 211 engine.

It's a revolutionary design with fewer moving, noise-making parts.

What's more the irritating whine you probably associate with most jets is missing from the L-1011. That's because about 80% of the air that's sucked into the engine bypasses the hot engine core.

it sounds like this.

So when the L-1011 takes off, you'll hear less than half the annoying jet noise you're used to hearing. (According to acoustical annoyance studies published in U.S. Government reports.)

Air Canada, Air Jamaica, Delta, Eastern, and TWA will be flying the TriStar soon. And that's the best news people who live around airports have heard in years.

The world's quietest big jet.
The Lockheed L-1011 TriStar

BRITAIN into EUROPE

Britain no longer has to choose between the continent of Europe and the open sea. It needs both. And the continent of Europe needs Britain and the open seas it will bring into Europe with it.

The Economist has prepared a 52-page booklet on the detailed and broad implications of British entry. It does not hide the many doubts; it answers them. This booklet is based on updated versions of the dozen widely read briefs published in The Economist between 24 April and 10 July 1971.

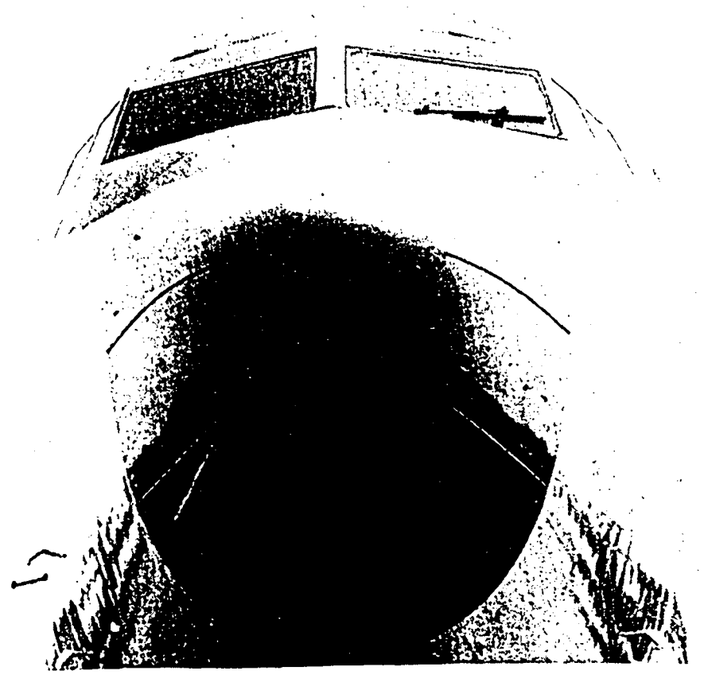
We aren't worried by the brain drain

Some of Japan's best brains in international finance have now been transferred to England to staff IBJ's London Branch. Internationally-oriented financial institutions and business organizations can now take advantage of IBJ's wide range of banking, consulting and coordinating services, especially in fields related to Japanese industry and business. Next time you have a brain-wave, give us a call.

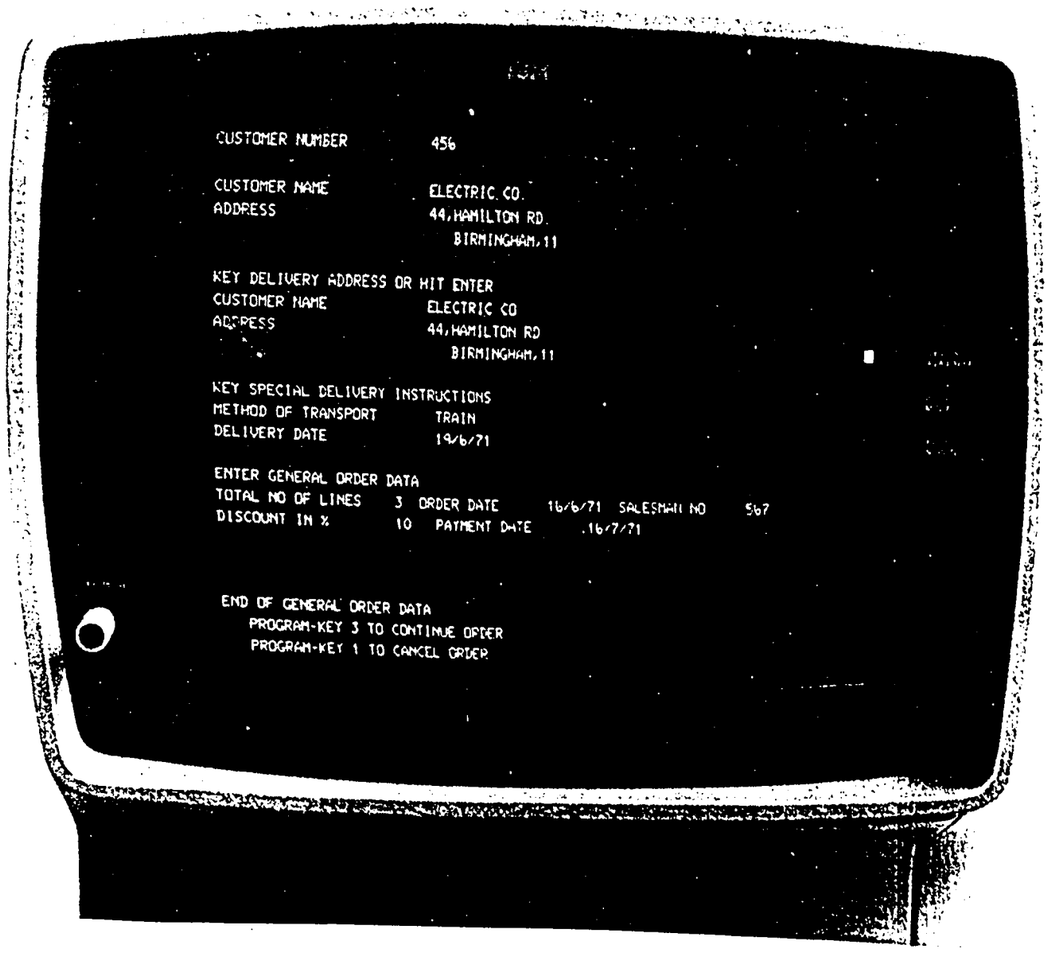
London Branch: 26 King Street, London EC2V 8HU
Tel: 01-606-7201 Telex: 885393

Japan's leading bank in industrial finance since 1902

THE INDUSTRIAL BANK OF JAPAN, LTD.



Head Office: 1-1, Yaesu 5-chome, Chuo-ku, Tokyo, Japan
Other Overseas Offices: New York, Frankfurt/M. and Sydney.



We've got a nose for business in Saudi Arabia and the Middle East

First we fly you there in one of our super Boeing 707's or if you prefer, you can stopover in Frankfurt, Geneva or Rome. But our service doesn't stop there because then we look after you from our specialized business advisory centre in Jeddah. We know Saudi Arabia best, and we know where the opportunities are. So we can help you with your business problems. Fast. Before putting you on to one of our jets that span Saudi Arabia. Or SDI can take you onwards to other cities in the Middle East or Gulf. We don't think you'll mind us keeping our nose in your business. All the way. For more information on our Business Advisory Service in Jeddah, please contact your travel agent or

You're looking at an exciting new programme from Scotland.

That, of course, is no ordinary screen.

It's the read-off screen on what is formally called the IBM 3270 Information Display System.

But the 3270 is a Scottish programme: IBM's manufacturing plant at Greenock has the responsibility for supplying it to over 100 countries throughout the world. (And if orders and interest are anything to go by that means a lot of exports!)

But the 3270 is just one programme keeping Greenock busy.

In addition to display units they also manufacture data entry equipment, terminals, computers and optical character readers. Giving employment to around 2000 people.

And, together with Havant (IBM's other major UK manufacturing plant) their delivered exports approached £50m. in 1971.

But all this activity means more than statistics. Projects like the IBM 3270 are putting British computer manufacturing personnel among the most advanced in the world.

And that's a long-term benefit that just can't be measured.

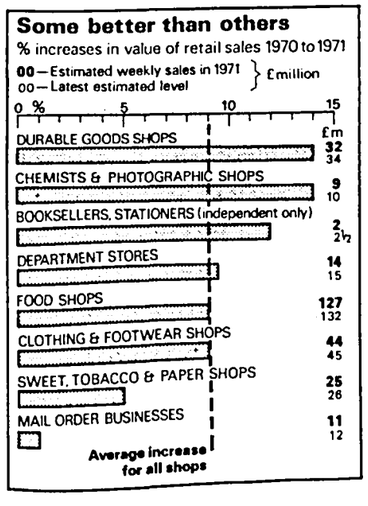
IBM

IBM United Kingdom Limited, 389 Chiswick High Road, London, W.4.

second half should be good for a 10% increase over 1971. Pre-tax profit for the year could therefore give earnings of 25p and a cheapish prospective p/e of 16 at 402p.

Tube Investments looks less of a buy at 437p on a historic p/e of 17. The engineering is heavier than GKN's as nearly half the turnover is in tubes and aluminium, and there is the machine tools division as well, so that the cyclical recovery will largely be in 1973. The chairman has forecast a drop in the first half profit of about 20%. As for **Plessey**, although the January to March results, showing a rise of £150,000 to £5½m despite the strike, are reasonable, the market should be waiting for more evidence to justify a prospective p/e of about 24 at 155p. But the benign sentiment of a bull market might start lifting the share price out of its recent downward drift.

Stores



Mixed luck

The stores sector, on an average p/e of 26 in anticipation of Mr Barber's spending boom, is vulnerable to disappointment as results which reflect last year's difficult and patchy retail climate come through. Retailers managed an average rise in their turnover of 9% over the year; but while durables went up 14%, clothing and food were left behind, and, what with power cuts and unseasonal weather, the early months of this year have not been much better for them. Even **Marks and Spencer** did not escape, although, as usual, it managed to outpace the average: this time with a 10% rise in clothing sales and a 15% rise on the food side. Even so, sales growth was down on last year's 15½%, and lower margins, though better than at the half-way mark, meant that Marks's 7.3% rise in pre-tax profits was half that expected. The shares, however, rose 15p to 300p, and are on a p/e of 28.

Clothing shops should have a fair amount of pent-up demand to come their way. This is a cheerful idea for **Debenhams**, which, while fighting for its independence, has had to report on an especially dreary year for its speciality, women's fashions (around 35% of its sales). Its creditable 25% growth in pre-tax profits in the second half was less than the optimists were expecting, while its 8% growth in sales for the year was an embarrassing few points below the average for department stores and much less than its bidder, **United Drapery Stores**, managed.

Men have been buying clothes a lot more enthusiastically than women, which was a help for UDS with its John Collier chain—and UDS also benefited, compared with Debenhams, from a larger stake in the flourishing hire purchase sales of durables. Well placed on both these scores, **House of Fraser** might produce a 30% profit rise to £10m or so in the figures due shortly, giving a prospective p/e of 26.

But even credit-boosted durables did not outpace chemists' and photographic goods. **Boots** can scarcely miss its £33m pre-tax forecast, and cheerful things can also be expected from **Dixons Photographic**, which has already turned in an 84% profit rise on a 73% inrease in sales for the first half to mid-November, justifying its p/e of 22, at 239p.

Wall Street

Sending the message

New York

Worries in Wall Street about the new Vietnam flare-up had not depressed the market much by mid-week. The Dow Jones average closed on Wednesday at 964.8, down 2 points in five trading days. But a dozen or so American brokers whose shares trade publicly are finding it difficult to put in a good word for themselves with investors. Brokerage shares have been lagging behind the market.

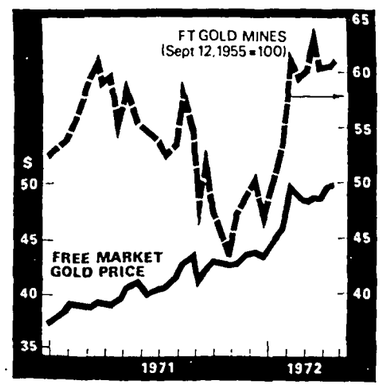
One reason has been the recent weakening of the bond markets, which has cut into profitability. Claiming this as the explanation, **Merrill Lynch, Pierce, Fenner and Smith** announced a dip in its first quarter net profits to $23.3m or 72 cents a share, from $26.3m or 90 cents a share the year before. Merrill Lynch stock dropped on the news by nearly $3 to $41.5 in trading on the New York Stock Exchange and is now on a p/e of 16. **Donaldson, Lufkin and Jenrette**, another prominent house listed on the Big Board, similarly lost a little to close at $11, on a p/e of 15, as the result of a generally soft earnings picture.

Actually, the past year has seen the return of better times to a number of houses that survived the industry's shake-out in 1970. **Bache and Company**, second largest after Merrill Lynch, has reported record earnings of $12.3m, or $2.31 a share, in the year ended January 31st, a sharp turnround from last year's loss of $2.4m, and is selling on a p/e of 7.

Some of the still unquoted share merchants are planning ambitious advertising programmes, though with expenditures well below the record outlays in 1969, in the wake of the 1968 bull market. Shearson, Hammill, a nationwide firm, is planning to spend some $700,000 this year, principally on a new television spot announcement in New York, Chicago and Los Angeles, as well as on large-space metropolitan newspaper advertisements. This will be up from the total advertising outlay of $200,000 in 1971, but well under the firm's peak $1.5m publicity budget in 1969. Walston and Co, another major retail-oriented house, expects to spend 25% more on advertisements this year than in 1971. Paine, Webber, Jackson and Curtis is budgeting outlays of $1.25m, compared with last year's total of under $1m.

The Shearson commercial was filmed on a recent Saturday on the otherwise vacant NYSE trading floor. In the spot, the camera focuses first on the firm's youthful president, Mr Alger B. Chapman, Jr, and then scans a crowd of over 500 employees arrayed directly behind him. To lure its workers back to the exchange in deserted lower Manhattan for the Saturday filming, Shearson awarded door prizes featuring a weekend trip for two to Bermuda, a television set and several clock radios. Mr Chapman's message: "When you invest, you need all the help you can get." If you are selling, it pays to sell hard. British brokers, their heads firmly in the sand on the advertising issue, should take heed.

Gold



Will the glitter go?

The free market price for gold is edging up to $50 an ounce, to the delight of the Goldfingers of the world and the annoyance of the sceptics (like *The Economist*) who reckon that the gradual demonetisation of the metal should unleash the 1.2 billion ounces that international institutions and central banks hold on to the free market ; or that the fear of this should hold in check any dramatic price rises. But free gold is now 30% up on the official price of $38 an ounce ; and has risen by 12% since the beginning of this year. Can it go up much further —and how should that affect the rating of gold mining shares?

The long-term argument for the bulls is that the supply of gold from South Africa—and that is nearly all of it—is falling and will continue to fall to the point where gold really is a scarce commodity. At present South Africa produces around 31m ounces a year ; unless new discoveries are made, the output of the mines at present in production will have faded to about a third of current levels by 1990. Commercial demand, which, it is claimed, is only just being met out of current production, will continue to rise, and so there is only one way for the price to respond.

The trouble is that no one is certain what the normal level of demand is. Only a small portion is used in industry : the rest goes into jewellery, watches, medals, coins and ingots, where the hoarding instinct certainly plays its part. The industry has, it is true, done an appalling job of marketing gold, and more money and ideas might stimulate commercial demand.

The acknowlegement of the sheer demand and supply statistics of gold

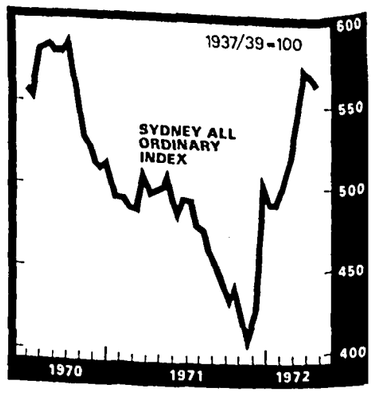
It's all the same to us

as a commodity have definitely been a significant factor behind the recent increase—perhaps the main one—though demand from trouble spots, like the Middle East and Cambodia, has apparently been strong. And the old currency fears have probably been as important a factor as ever. Having achieved a good rise, success might breed success, as the hoarders who had been tempted out of gold into income-producing assets return to their first love. And at such high prices certain central banks might be tempted to sell some of their reserves quietly on the free market. This might put a ceiling on the price at the $50 an ounce mark. But the price could come tumbling down. Large though it is (say $2 billion), the gold market is small in relation to the Eurodollars switched in and out of it.

But if the price marches on to, say, $55, then the index of gold shares will march in step. The Financial Times gold mines index is already up by 30% since the beginning of the year—more than any other sector except banks—but it is unlikely to outperform the rest of the market unless either the gold price goes up or the mines record better than expected profits. The quarterly results that came out last week were treated as something of a disappointment, but the index has not fallen much, implying that the gold price influence is in the ascendant.

For those who have faith in gold, the way to back it is to construct a portfolio of individual mine shares, rather than to buy the giant mining finance houses. But mines have to be carefully studied, and the private buyer should realise that the share-dealing mining finance houses, like **Consolidated Gold Fields, Charter Consolidated** and the others, are much better informed than he is. Moreover, on the other side of the coin and the Atlantic, there is a lot of unsophisticated buying of gold stocks which could upset the price of the rationally chosen share. Among those to be considered are **President Steyn** among the mature producers and **Elsburg** among the new mines, with **Buffelsfontein** as a speculation.

Australian market



On the rebound

Sydney

Australia's leading share price indicators obstinately refuse to break new ground. Most, in fact, are several percentage points from all-time peaks reached in January, 1970. But they include mining stocks which were booming just over two years ago and certainly are not now : it is industrials which are currently making the running. The Sydney index of all shares other than metals has become the one to watch. What it is showing is a rather undecided market in which special situations predominate.

But equity prices have found something of a plateau at levels some 40% above those of last November and within striking distance of a peak which has stood since May, 1968. Prices have moved in a narrow range for the past three weeks, although trading volume is consistently higher than for many moons, last week averaging more than 10m shares a day for the Melbourne and Sydney markets compared with 5m or 6m over much of the past year.

Yet this is not the typical Australian bull market in which individual investors (or punters) are a significant factor. Indeed, it has so far largely passed the general public by, being the creation of the institutions and professionals and, more particularly, so it has appeared, of London buyers after the removal of the voluntary restraint on British investment in overseas sterling

BARCLAYS BANK LIMITED

Annual General Meeting

The Annual General Meeting for 1972 of Barclays Bank Limited was held on Wednesday 12th April 1972 at the Head Office of the Bank, 54 Lombard Street, London E.C.3.

Sir John Thomson K.B.E. (the Chairman) presided.

The Secretary read the Notice convening the Meeting and the Report of the Auditors.

The Report of the Directors and the Accounts for the year 1971 were approved. The Chairman explained that the Board had paid on 30th March 1972 second interim dividends of 10½ per cent on the Ordinary stock and of 10 per cent on the Staff stock in lieu of final dividends in order that Stockholders would receive their dividends without undue delay notwithstanding the postponement of the Annual General Meeting caused by the miners' strike and consequent difficulties in the printing industry.

Ordinary Resolutions as set out in the Notice of Meeting were passed to increase the Capital of the Company to £230,000,000 by the creation of 120,000,000 new Ordinary Shares of £1 each, and to capitalise £96,498,865 of the reserves to be applied in paying up in full at par 96,498,865 Ordinary Shares of £1 each for distribution amongst the holders of Ordinary stock on the Register of Members at the close of business on 16th March 1972, in the proportion of one share for each £1 of Ordinary stock.

A Special Resolution was passed to alter the Articles of Association of the Company to take account of the increase in the Capital of the Company.

The retiring Directors were re-elected, with the exception of Sir David Martyn Evans Bevan Bt., who did not seek re-election.

A Vote of Thanks to the Staff, proposed by Mr. C. Fitzherbert and seconded by Mr. M. Conacher O.B.E., was carried. Mr. A. W. F. Paskins M.C., General Manager (Staff), responded.

The Right Hon. the Lord Remnant expressed the Stockholders' thanks to the Chairman for presiding at the Meeting.

Renounceable stock certificates in respect of the capitalization issue will be posted on 14th April 1972.

area countries. Australia's investment industry is being influenced more by the example of foreign markets than by genuine confidence in rising equity values and the whole paraphernalia of comparative yields and multiples which make Australian shares look cheap.

The question is, how cheap? At a technical level, differences in weighting procedures give the Australian market a too-modest average p/e of under 13. Inter-company comparisons do show lower Australian earnings multiples but, in general, the differential would seem insufficient to stir up wild excitement.

Australia could be set for good short-term growth in both the economy and corporate earnings. In the face of stubborn unemployment and an unpromising election ahead, the government is sparing no effort to increase the tempo of business. The latest move was an unscheduled mini-budget last week in which the federal treasurer gave some A$180m back to the taxpayers (over a full year). It followed a lowering of interest rates and conditions of abundant liquidity. But it is not clear how much of the benefits will flow to shareholders. Whatever happens, however, the chief carrot dangled before Australian investors will probably continue to be the buying interest of foreigners. And on that score Japan, and not Britain, is expected to be the most spectacular source of orders.

New companies

Catch 'em young

There was a time when newly quoted companies tended to fade quietly into obscurity after the little flurry around their launch. Not any more. Small companies and second-line stocks have featured prominently in the current bull market, and the professionals have started looking eagerly at the talents of the newcomers.

Two years of the best (and worst) new issues

**Relative to FT-Actuaries all-share index*

Some of the best and the worst achievements in new company shares relative to the market are shown in the table, and even the worst have not done too terribly in absolute terms. An index based on all companies launched in 1970 and 1971 rose 99.5% over the 27 months to the end of March, compared with 59.8% on the Financial Times-Actuaries all-share index.

The figures are produced by Singer and Friedlander in a discreet and useful advertisement to advance its new issue business—and some of its recent proteges feature creditably in the lists. As well as the sky-rocketing **Kwik Save Discount**, it also launched **Textured Jersey** (+ 45% against the index) and **Allied Carpet Stores** (+44%). Its latest effort on new issues, the **Young Companies Investment Trust**, launched during the week, will specialise in new boys—those companies which have been around on the market for five years—so it is a pity the figures do not extend farther back than two years. They might then tell a less buoyant tale, although the bank reckons that a more extended exercise would still prove the point.

The new trust is pretty well bang on cue. The idea of stringing along with Singer and Friedlander in backing a few bright sparks has its attraction; the trust could reasonably be expected, within the normal confines of the inherent conflict of interest, to get a spin-off from the bank's knowledge on the issuing side, first offers on placings and so on. The slight fear remains that the trust will end up as a holiday home for the bank's duds, but the regular publication of the detailed portfolio would help to quell that.

American accounting

Fed up with chaff

American accountants took up the notion of firm, codified accounting principles well before British accountants did. But many of the Americans' principles were poorly thought out, emerged after æons of agonised discussion, were open to the criticism that undue influence had been exerted by accountants' clients to make them less harsh, and were frequently overturned by government departments.

After growing criticism, which centred on the way conglomerates fabricated accounting profits, the profession brought in a task force headed by an ex-Securities and Exchange commissioner, Mr Francis Wheat, to examine what should be done about its accounting principles board. He recommended an independent rule-making body, whose full-time (and highly paid) staff would be appointed by nine trustees, four of them from outside the accounting firms, and which would have the benefit of a broadly-based advisory committee. With unexpected speed, the executive of the American Institute of Certified Public Accountants is recommending its members to act quickly on the proposal. The SEC has recently appointed a vociferous critic of the accountancy profession, Mr John Burton, to its staff, and will be watching developments carefully.

Key indicators: world bourses

London scores new all-time peak. Wall Street only moderately shaken by Vietnam news. Tokyo for once sees profit-taking in the ascendant.

	Stock price indices Apr 19	1972 high	1972 low	Percentage change on one week	one month	one year	record high

Sure there isn't a pony at the other end, Simpkins?

A car, Sir, awaits us at the airport, Sir. It's only an hour from Newcastle, Sir. We could have flown to Edinburgh, Sir, and then by car—or train to Berwick, Sir.

Mmm—always thought it took days to get *there, myself. It's a damn long way south* for delivery to our customers, Simpkins. Beastly costly, what?

Actually Sir, our home market is very much London, Midlands and North. Without having to contend with every-day city congestion, we ought to be able to speed up deliveries and make marginal reductions on cost-per-ton-mile.

Ah! But what about getting raw materials, Simpkins?

Our suppliers do have other customers in the north, Sir. And with a new, factory and a more efficient production process and fast delivery service, we should be more profitable, Sir.

Yes, yes. But what about—oh drink your coffee Simpkins and get me another gin and tonic, there's a good chap. Ask that pretty blonde thing.

Yes Sir.

(YOU SEE—IT'S EASY TO GET TO US IF YOU CAN'T WAIT UNTIL 6th MAY)

We can do a lot more for you than lend you money

At the Bank of Nova Scotia, we have a lot of things to give you as well. There's knowledge, expertise, and time.

Take knowledge first. Since 1832 we've grown into an organisation with over 900 branches spread right across the world.

This means that, when you're doing business abroad, we can help you with a full range of international banking services. Upon request on your company letterheading we can supply one of our latest 'Business Guides' by return of post. Our most recent guides which are available for Canada, Bermuda, the Bahamas and Jamaica, will help you on local taxes, legislation and other trading conditions. Guides on other countries are being prepared and these should be available shortly.

Then there's expertise. Over the years we have acquired a lot of insight in various specialised financial areas. For example shipping financing. But we also know about Trust Companies. Through our subsidiaries we can offer world wide Trust Company facilities. Why not approach our United Kingdom Trust Company Manager for further details by calling London at (01) 629 7071.

Last, but by no means least, we offer time, without charge. And that includes time to assess your business propositions and requests for loan facilities.

Now that credit restrictions have been eased in the UK you will also find that we can lend money at very competitive rates.

We think our job is to do more than lend you money. It's also to offer you help and assistance when you ask for it.

Contact our local branch manager or our business development officer at our European regional office, 19/23 Knightsbridge, London, SW1.

The telephone number is (01) 235 1105. And we are in the telephone directory not only in the City, but also in Edinburgh, Glasgow, Belfast and Dublin.

ANNUAL GENERAL MEETING—Wallsend Shipyard, Wallsend, Northumberland, 31st May, 1972, at 3 p.m.

EXTRACTS FROM THE STATEMENT TO THE SHAREHOLDERS BY THE CHAIRMAN, SIR JOHN HUNTER

1) Profit has been taken only on shipbuilding contracts completed during the year. Where losses were incurred these did not exceed in the aggregate the provisions made in previous years in respect of these contracts.

2) The directors believe that from the experience in 1971 the provisions in respect of fixed price contracts for vessels yet to be completed will prove adequate.

3) The principle shiprepairing establishments in the U.K. were not able to equal their exceptional 1970 results but have achieved above average profits in the past year.

4) The directors look forward with confidence to the trading results for 1972, which on present indications should show an improvement on 1971, irrespective of the effect of any government aid.

5) The Government's recent announcement of grants to the shipbuilding industry is welcomed and should be of considerable benefit to the company. The effect of these grants cannot be assessed until details become available of the legislation to implement the Government's proposals.

6) The company has agreed, subject to contract, to purchase from Vickers Limited the shiprepair yard at Hebburn on Tyne in exchange for its holding in Brown Brothers Ltd. (at present owned jointly with Vickers), and the sum of £1,250,000 in cash. Plans for the development of the yard are well advanced, and this acquisition will provide a significant addition to the company's shiprepairing services in the U.K.

Anglo-Ecuadorian Oilfields Ltd

Summary of Chairman's Statement for 1971

In the last quarter of 1971 the Ecuadorian sucre, which is pegged to the U.S. dollar, weakened by approximately 15% in terms of sterling, due first to the reintroduction of a free market in Ecuador and secondly to the realignment of major international trading currencies.

In order to present a more realistic statement of the Company's affairs within the general climate of international exchange fluctuations, the basis of translation of foreign currencies at year end rates has been extended to fixed assets and the Ecuadorian pensions provision. This adjustment, amounting to approximately £900,000, has been charged against reserves.

The Results for the year ended 31st December 1971 benefit from the sale of half of the Company's one third interest in the Ecuadorian Oriente Concessions, amounting to a net surplus of £381,481. While therefore the Consolidated Profit and Loss Account showed a loss for the year of £18,315 (1970 profit £293,497 after crediting £332,964 from Exchange Equalisation Reserve), the Group result, after charging this loss and a prior year's adjustment of £71,704, was a surplus of £291,462 (1970 surplus £533,231).

Group sales are higher by 13% in terms of sucres, but profit margins have been and are still being eroded by increasing costs of operation. Strong representations have been made to the Government of Ecuador concerning the adverse effect on the Company's finances of the artificially low level of controlled selling prices effectively unchanged since 1959. In the circumstances, and in view of the need to conserve funds for the continuing evaluation of the Oriente Concessions, the Directors are unable to recommend payment of a dividend.

APPOINTMENTS

Massey University
PALMERSTON NORTH, NEW ZEALAND

Economics Department

The Economics Department, one of the fastest growing departments in this fast growing university, plans to initiate a full graduate teaching programme in 1973, as well as expand its undergraduate teaching.

Applications are accordingly invited from suitably qualified persons in one or more of the following fields :

microeconomics
managerial economics
transport economics
regional and/or urban economics
economic history
money and finance
econometrics

Applications from especially well qualified persons in other fields will also be considered.

The department is in a position to appoint at any of the following levels, depending upon experience and qualifications :

Junior Lecturer	$NZ3699—$NZ4940
Lecturer	$NZ5589—$NZ7149
Senior Lecturer	$NZ7278—$NZ8579—$NZ9358
Reader in the range	$NZ9098—$NZ10,658

Academic salary scales are subect to periodic cost of living adjustments, one of which is expected shortly.

Further details of the positions, together with conditions of appointment may be obtained from the Secretary-General, Association of Commonwealth Universities (Apots), 36 Gordon Square, London WC1H 0PF (Tel : 01-387 8572), or from the Registrar of the University.

Applications close on *31 May 1972.*

APPOINTMENTS

Economists
to help in planning social policies

Central Planning Unit
The economist who joins this recently formed unit will help to define objectives and develop analytical techniques needed for the longer term planning and organisation of the health and personal social services and the social security system.

Studies of living standards
The Chief Economic Adviser, Mr. J. L. Nicholson, requires an Economist to help in examining the effects of taxes and social service benefits and possible changes in health and social security policies on living standards particularly of low income groups.

The work involves research on current problems of vital importance with access to a wide range of unpublished material. The problems, embracing several disciplines, require fundamental analysis. There are good opportunities to publish your findings and you are encouraged to keep in contact with universities.

QUALIFICATIONS. You will normally need to be at least 27 with a first or second class honours or higher degree in economics or a closely related subject. Substantial relevant experience is essential. Appointment can be on a permanent or contract basis.

SALARY. (Inner London). Starting salary can be above the minimum of the scale £3,653-£4,883 and promotion can lead to salaries of £6,475 and above.

There are also vacancies in the Department of Trade and Industry, Civil Service College, Foreign and Commonwealth Office, Ministry of Defence and the Ministry of Posts and Telecommunications.

Send for full details of all these appointments and for an application form (to be returned by 5th May 1972). A visit to the department of your choice can be arranged if you are short-listed. Write to the Civil Service Commission, Alencon Link, Basingstoke, Hants, or telephone Basingstoke 29222 ext. 500 or London 01-839 1696 (24 hour 'Ansafone' service), quoting reference A/622/13.

Department of Health & Social Security

A medium large firm of consulting engineers, operating internationally, invite applications for the post of

Company Secretary

Professionally qualified Accountants, Secretaries, Solicitors, Economists, Engineers and others are invited to send brief curriculum vitæ and request a copy of the Job Description for the post, which involves advising on the formulation of policy, liaison with outside advisers and directing and controlling accountancy systems for the several offices of the organisation.

The appointment which is based in Bristol carries an initial salary of up to £5,000 p.a. with other benefits and prospects.

Please reply in confidence to:
Keith Parsons,

Parsons Brown
consulting engineers
York House St James Bond Street
Bristol BS1 3LW

MILTON KEYNES DEVELOPMENT CORPORATION

MONITORING AND EVALUATION OFFICER
(PROGRAMME BUDGETING UNIT)
Grade VIII (£2,880-£3,402)

The new city of Milton Keynes to be built by the year 2000 is planned for a population of a quarter of a million, and implementation has started following the Secretary of State's acceptance of the Plan.

A Programme Budgeting Unit has been established in the General Manager's department to co-ordinate and review policy decisions established by the Corporation. This senior post in the Unit is concerned with application of monitoring and evaluation techniques to all the Corporation's activities.

Suitable applicants for this post would need to be appropriately qualified in the field of planning or in a numerate social science. Previous experience of corporate planning and a knowledge of basic quantitative skills (including computer applications) would be desirable.

A choice of contributory pension schemes is available, free life insurance, and generous resettlement expenses will be paid to include costs of house removal, settling-in allowance, legal costs and surveyor's fees for the sale and purchase of housing and a generous separation allowance for married persons for up to four months.

Applications quoting reference No. EC/17, should be addressed to the General Manager (Appointments), Milton Keynes Development Corporation, Wavendon Tower, Wavendon, Near Bletchley, Bucks., by not later than 5th May, 1972.

APPOINTMENTS

University of Khartoum
SUDAN

Applications are invited for the following posts in the DEPARTMENT OF ECONOMICS :

(a) LECTURER OR SENIOR LECTURER IN INTERNATIONAL TRADE
(b) LECTURER OR SENIOR LECTURER OR PROFESSOR OF MONEY & BANKING
(c) LECTURER OR SENIOR LECTURER IN ECONOMICS OF TRANSPORT
(d) LECTURER OR SENIOR LECTURER IN INSURANCE AND SOCIAL SECURITY
(e) LECTURER OR SENIOR LECTURER IN PLANNING
(f) LECTURER OR SENIOR LECTURER IN AGRICULTURAL ECONOMICS
(g) LECTURER OR SENIOR LECTURER IN MATHEMATICS AND ECONOMETRICS

Salary scales : Professor : £S3,600 p.a. ; Senior Lecturer : £S2,400-£S2,800 p.a. ; Lecturer : £S1,500-£S2,300 p.a. (£S1=£1.20 sterling). The British Government may supplement salaries and these supplements are currently under review. By the next academic session they would probably be in the range of £600-£850 p.a. (single) ; £1,200-£1,600 p.a. (sterling). There will also be provision for children's education allowances and holiday visit passages. Family passages, various allowances ; superannuation scheme ; annual overseas leave. Detailed applications (6 copies) naming 3 referees by 23 May 1972 to Inter-University Council, 90/91 Tottenham Court Road, London W1P 0DT, from whom particulars are available.

GREATER LONDON COUNCIL

Director-General and Clerk to the Council

Applications are invited for appointment as Director-General and Clerk to the Greater London Council to succeed the present Director-General, who has been appointed to be Permanent Under-Secretary of State at the Home Office. The Director-General and Clerk to the Council is the head of the Council's service and its Chief Executive: as leader of the team of Chief Officers he is the principal adviser on matters of general policy, and responsible for ensuring that the Council's business is carried on efficiently.

Candidates should have had wide experience in positions of responsibility. The salary of the post is £16,050; the successful candidate will be appointed as Director-General Designate from October 1972, and will take up his full duties at a date to be arranged.

Application forms (returnable by 15 May 1972) and further particulars of the duties of the post are obtainable from Mr A W Peterson, CB, MVO, Director-General and Clerk to the Council, Greater London Council, The County Hall, London SE1 7PB.

GLC GREATER LONDON COUNCIL

Wye College
(UNIVERSITY OF LONDON)

Lecturer in Rural Planning

Applications are invited for this post in the Countryside Planning Unit to work with Professor Gerald Wibberley. The appointment will be made according to qualifications and experience in the Lecturer grade for which the current salary is within the range £1,641 to £3,705 with superannuation under the F.S.S.U. Further particulars may be obtained from the Secretary, Wye College (E/22), near Ashford, Kent, to whom applications should be submitted by 15th May, 1972.

The University of Manchester

APPLICATIONS ARE INVITED FROM GRADUATES FOR

Research Studentships

in the Faculties of ARTS and ECONOMIC SOCIAL STUDIES. Values as for state studentships, renewable after first year. Particulars and application forms from the Registrar, The University, Manchester, M13 9PL. Quote ref : 54/2/E and name of Faculty in which award is to be held. Closing date June 1st, but later applications may be considered from those who have had to await degree results.

University of Birmingham

Faculty of Commerce and Social Science

DEPARTMENT OF ECONOMIC AND SOCIAL HISTORY

Applications are invited from suitably qualified candidates, including those due to graduate, for the post of RESEARCH ASSISTANT, from 1st August 1972 for one year in the first instance. Knowledge of French desirable but not essential.

Salary : £840 x £60—£1200

Applications (three copies) naming three referees by 12th May 19/2 to Assistant Registrar (C), University of Birmingham, Box 363, Birmingham B15 2TT, from whom further particulars and application forms should be obtained.

Please quote reference C/050/G.

University of Sussex

SCIENCE POLICY RESEARCH UNIT

Senior Research Fellowship on Forecasting in the Engineering Industry

Applications are invited for a 3-year Fellowship sponsored by the Engineering Industry Training Board for work on technological forecasting in the engineering industry. The successful applicant will join a team already working on a programme of social and technological forecasting research concerned with forecasting techniques and general problems of technology policy as well as with problems of specific industries and technologies.

The successful candidate will probably be an experienced technologist, economist or mathematician, preferably with both industrial and research experience and with intimate knowledge of the engineering industry. The Fellowship will commence in October, 1972, and the starting salary will be in the range £3852-£4734 p.a. plus F.S.S.U.

Application forms and further particulars from the Establishment Officer, Sussex House, University of Sussex, Brighton BN1 9RH, quoting ref 741/1 to whom 3 completed copies should be returned by 8th May, 1972.

APPOINTMENTS

University of Malaya

FACULTY OF ECONOMICS AND ADMINISTRATION

Chair in Analytical Economics

Applications are invited for the above-mentioned Chair.

There are no Departments in the Faculty and the programme of teaching is organised on an integrated basis among seven divisions: Accounting Division, Analytical Economics Division, Applied Economics Division, Business Administration Division, Public Administration Division, Rural Development Division and Statistics Division.

The Professor of Analytical Economics will be expected to organise courses in the field of Micro Economics at intermediate and advanced levels. Candidates should have high academic qualifications and wide experience in teaching and research. Candidates would be expected to have a grounding in mathematical bases of theoretical economics and be competent to do research in this field. Candidates would be expected to have at least ten years of teaching experience. Qualifications in mathematics would be an added advantage. Subject to academic suitability and experience, preference will be given to candidates competent in Bahasa Malaysia (Malay).

Emoluments : (approximate sterling equivalents at current exchange rates are :

(a) *Salary* : There is a range of basic salaries, to a point on which a Professor is appointed, depending on his qualifications and experience. These are: £2919, £3032, £3146, £3259, £3373, £3486, £3600, £3713 p.a.

(b) In addition a *Variable Allowance* is payable at present at the following rates : Minimum £243, maximum £649 p.a. calculated at 35% of basic salary.

(c) *Supplementary Housing Allowance* of £503 p.a.

Appointment may be made on a short-term contract at a salary higher than those indicated above.

Medical Benefits are provided under the Medical Services Scheme for the University.

Further particulars, details of superannuation and application forms are obtainable from the Association of Commonwealth Universities (Appts), 36 Gordon Square, London WC1H 0PF (Tel : 01-387 8572).

The closing date for the receipt of applications in Kuala Lumpur and London is *20 May 1972*.

ECONOMIST

A well-established foreign bank requires for the Economics Department of its London Head Office a graduate economist, preferably with experience of working in a financial institution.

The work of the Department covers the current and future development of the U.K. and other economies, the analysis and forecasting of currency and interest rate movements, and the study of specialised areas of international trade. The successful applicant would be given specific responsibility for certain areas of work in which he or she would be encouraged to develop an expert practical and theoretical knowledge. Regular contribution to the Bank's Review would be expected and for this purpose proven clarity of written expression is essential.

The salary paid will depend on qualifications and experience, but will be fully competitive with comparable posts. The bank offers generous holiday entitlement and provides cheap mortgages for established staff. No rigid age limits are stipulated but the ideal candidate would probably be under 30.

Applications, giving brief curriculum vitae should be sent, quoting reference CL 2525 on the envelope to :

Foster Turner & Benson Limited,
Recruitment Division,
St. Alphage House, Fore Street,
London, EC2Y 5DP

CONFIDENTIAL REPLY SERVICE

Should there be any company to whom you do not wish your application forwarded, please advise us in a covering letter omitting the reference number on the envelope.

Business Economist

Up to £3,300

A large international group with a multi-million turnover wishes to recruit a Business Economist for its central planning department located in the South East. As section head he will plan and also conduct research into the economic and commercial factors affecting the group's activities. He will analyse and investigate a variety of investment projects – working closely with the top management of the group on these exercises. Candidates, aged up to 30, will have worked for a minimum of two years as economists in industry, preferably in a planning or forecasting function. As graduates, probably in economics, they will have some statistical experience. Salary is negotiable up to £3,300.

(Ref: MV38/4458/EC)

The identity of candidates will not be revealed to our client without prior permission given during a confidential discussion. Please send brief career details, quoting reference number to the address below, or write for an application form, and advise us if you have recently made any other applications.

PA Management
Consultants Limited.
Personnel Services Division,
Hyde Park House, Knightsbridge,
London SW1X 7LE

DUNDEE COLLEGE OF TECHNOLOGY

Department of Management and Social Studies

Applications are invited for the following posts from candidates with appropriate academic, industrial/business or research experience :

(TWO) LECTURESHIPS IN ECONOMICS (GRADE I or II)

Applicants for one post should have a strong interest in Quantitative Aspects of the subject, and for the second post a specialism in Macro-Economics and Economic Policy is required. The persons appointed will be expected to teach to degree level in courses offered by the department and to contribute to courses conducted by other departments.

Salary scales (currently under review) :
Lecturer, Grade I £1,482-£3,309
Lecturer, Grade II £1,260-£2,952
with initial placing dependent upon approved prior experience.

Further particulars and application forms obtainable from the Principal, Dundee College of Technology, Bell Street, Dundee, DD1 1HG, to whom completed application forms should be returned not later than 5 May, 1972.

APPOINTMENTS

economist

English Calico Ltd is a major textile manufacturing and marketing group working on a world-wide basis. Other interests include departmental store trading, multiple retailing, printing, packaging and paper making.

The Group is now seeking the services of an economist to join a small Head Office team working on group forward strategy, with particular reference to marketing and commercial implications.

The duties are stimulating and largely non-repetitive requiring a high standard of analytical and interpretative skill and needing a large measure of initiative.

The successful candidate will probably have had several years' experience in this type of activity with minimal supervision. A degree in Economics or a related discipline is necessary for this appointment which will lead to wider opportunities within the Group.

Salary and related benefits will be commensurate with the importance of the post.

Applications with career history should be posted to :

Group Appointments Manager,
English Calico Ltd.,
56 Oxford Street,
Manchester M60 1HJ.

Statistician

The Commission on Industrial Relations, which became a statutory body on 1 November 1971 under the Industrial Relations Act 1971 after nearly three years as a Royal Commission, invites applications for the newly created post of Statistician. The Statistician will be expected to advise teams of industrial relations specialists on the design and conduct of surveys into various aspects of industrial relations which are necessary to the conduct of their work. Such surveys vary from simple enquiries by structured interview at single small establishments to major postal surveys covering whole industries.

Data from these surveys is processed by a small team of systems analysts/programmers who have access to computers on a customer-usage basis.

Applicants should hold a degree in mathematics or statistics and have had at least five years experience as a statistician, preferably in the field of social science. A knowledge of industrial relations is not essential; but a willingness to take a wider interest in the work of the Commission than that called for by the basic statistical content of the job will be expected.

The appointment in the first instance will be for two years in the salary range £3478 pa to £4708 pa plus £175 pa London Weighting. Starting salary will depend upon age, qualifications and experience. Posts at present are not pensionable but negotiations on this point are currently being pursued.

Further details of the post and application forms, which should be returned completed by 1 May 1972, may be obtained from the Establishments and Finance Officer, Commission on Industrial Relations, 140 Gower Street, London WC1E 6HT quoting reference "Statistician".

The Polytechnic of North London

DEPARTMENT OF SOCIOLOGY AND LAW

Leaturer (Grade II) in Politics

Whilst there will be some teaching of Government on an existing degree course the main requirement for the person appointed will be to contribute to the planning of a challenging CNAA degree course in CONTEMPORARY EUROPEAN STUDIES and appropriate interests and qualifications will be expected. The appointment is to take effect as soon as possible.

Lecturer (Grade II) in Law

The successful candidate will be required to teach one or more subjects on a full-time LL.B. degree course (University of London External) and to participate in the development of a CNAA degree in Law. Candidates should hold a Law degree awarded by a British university and should preferably have been called to the Bar or admitted as a solicitor, although those expected to proceed to a degree this year will be considered. They will be encouraged to engage in research.

Salary scale : Lecturer (Grade II) : £2195-£2975, plus London Allowance of £118.

Further details and application forms may be obtained from the Deputy Secretary The Polytechnic of North London Prince of Wales Road, London, N.W.5. Applications should be returned within 14 days of the appearance of this advertisement.

Assistant General Secretary

work may include union negotiation, research, tuition, editing and administration. Scale maximum exceeds £4,500 : starting pay negotiable. Non contrib. pension, 6 weeks' holiday. Applications in confidence to **General Secretary, APOE, 345 Upper Richmond Road West, London SW14 8QN** marked 'AGS', by 1 May 1972.

University College Cork

Department of Social Theory and Institutions

The Governing Body invites applications for a full-time post as Assistant Lecturer/Assistant in the Department of Social Theory Institutions. The appointment will be made at one of the levels mentioned according to the qualifications and experience of the successful candidate.

The salary scales are : Assistant Lecturer : £2,220 x £105—£2,745 p.a. Assistant : £1,860 x £105—£2,070 p.a.

Before submitting applications candidates should obtain from the undersigned particulars as to the requirements for the filling of the post.

Latest date for receipt of applications is 3 p.m. on Friday, 12 May, 1972.

JOHN P. TEEGAN
Acting Secretary.

ASCO

ECONOMIST/PLANNER

ZAMBIA

U.S. $1,400

2 years contract. Free passage to and from Lusaka extended to the family. Free housing and medical benefits. 35-45 years of age. English mother language. To work in collaboration with our Town Planning and Civil Engineering section on Regional and Town Planning and/or Transportation studies.

Recommendations of:

1. **January 1971** — Sell on near term advance. Weakness will follow.
2. **March-April 1971** — Broad downward trend. Buying opportunity around mid-year.
3. **July 1971** — Expect selling on approach to 4.5¢ spot.
4. **August-September 1971** — Only moderate further weakness followed by recovery to new highs. Add to purchases on weakness. Long term trend up. Maintain long positions.
5. **October-November 1971** — Long term trend up. Maintain long position.

For over a quarter of a century, our basic research has enabled us to anticipate well in advance a major reversal in the price trend. It is indicative of the commodity work performed by us for many large corporations in industrial and agricultural commodities.

Energy for Europe

Europe's energy demand could double by the mid-'80s. How are we helping to provide for this? Already we deliver up to 40,000 tons of crude oil a day via our trans-shipment terminal on Europe's doorstep at Bantry Bay.

Already we have refining capacity in seven European countries, and are increasing this with new refineries in Italy and Spain.

Already, 115 miles out into the North Sea, we are operating Denmark's first oil-producing field on behalf of Dansk Undergrunds Consortium.

But we're a total energy company, supplying the demand not just for petroleum and LPG, but uranium and nuclear power. Gulf General Atomic Europe, for example, can call on extensive operating experience of high-temperature gas-cooled reactors.

Whichever way you look at it, Gulf is energy.
Gulf Oil Corporation, Pittsburgh, Pa., U.S.A., and throughout the world.

Include him out

The Labour party split horrendously as Mr Jenkins and his closest colleagues decided they had had enough of Mr Wilson's flirtation with government by referendum and, indeed, with Mr Wilson's style of opposition. The Jenkins break helped to save the European cause, the system of parliamentary politics—and gave Labour the chance to think through its leadership problem properly, page 11. When, only yesterday, Mr Wilson was against referendums, page 12. The fight to follow Jenkins, page 22. Mr Heath did a bit of reshuffling, too, page 21.

In the front line

Mr Maurice Macmillan, the new boy in the cabinet, has to face the real opposition to Tory rule, the big left-wing union leaders. He should remember that they are not exactly friends of parliamentary democracy or the rule of law, page 14. The immediate test, though, is with the more cautious railwaymen, whose pay claim is over the odds: he should be firm, page 67. All the problems on the Macmillan plate, page 74.

In the balance

The North Vietnamese forces' southward drives were slowed down this week, but they showed they mean business this time, page 15. Their big Russian tanks and guns gave American bombers some targets, page 30. Washington faces the test, page 44.

Bhutto must move first

Pakistan cannot make peace with India until it has recognised Bangladesh, page 16. President Bhutto's gambits and limitations, page 33.

Counting down

Apollo 16 still looks set to go for the moon on Sunday evening. Where the astronauts are going, and why scientists are not over-excited about it, page 85.

The incomplete miracle

The problems, and hopes, that Italy is wrestling with today, after page 54.

Violence

SIR—You are right to draw attention to the dangers of intimidation (April 8th), but wrong, I feel, in your assessment of both the causes and the remedies. There is some force in the linking of CND marches and lunchcounter sit-ins with the murder of hostages and the hijacking of airliners, but this underlines the need to discriminate between them. I suggest that some of the causes are :

(1) The existence of an occasional issue of such overriding and urgent concern that the usual process of debate and discussion meets neither the transcendental importance nor the urgent need for a remedy. The arrival on the scene of the ultimate nuclear weapons was such an issue.

(2) The existence of violence so evil as to justify extreme violence against it. There are governments that exist solely to enrich a small group of people, and that maintain themselves in power by terrorising, murdering and torturing any of their citizens who object.

(3) A human need to dramatise issues. This may be done by relating the form of protest directly to the issue, as in a sit-in by blacks at a lunchcounter which refuses to serve blacks, or simply by showing the mass support for a cause. Such an event can be emotionally moving for the spectators, which is what is intended.

(4) The vastness and complexity of our society, which make it difficult for the ordinary member to feel that he can affect it or have any say in its administration.

(5) The fact that in the western democracies at this time, unlike in most times past, oppressed or ill-treated groups of people are likely to be a minority rather than the majority, and separate minorities at that: racial sub-groups, pensioners, pockets of victims of social change. The only action such people can take in direct defence of their interest is an appeal to the emotions, or else violence.

The law needs to have a certain amount of "give" in response to emotional and social pressures (it would not have been a good idea to try to arrest 10,000 illegal pickets during the recent coal strike), and a good deal of pragmatism of approach is needed. Appeasement is indeed being practised in Northern Ireland, as you say, but it is not appeasement of the IRA but of the Catholic community, to the evident anxiety of the IRA command.

And we must distinguish sharply between the occasions for demonstrations, whether violent or non-violent. Quebec is not Guatemala, and Mrs Thatcher's scheme for student union funds is not the nuclear peril. It is not only outsiders who need to make such distinctions but, more important, the potential demonstrators themselves. To react with the same vehemence and the same readiness to step beyond the normal channels of discussion to any event that offends is to blur distinctions between moral magnitudes and degrees of urgency, and to invite the kind of blanket appraisal contained in your article.—Yours faithfully,

London, W1 NORMAN MOSS

SIR—It is nice to note from the article "A term to violence" (April 8th) the admission that liberal opinion has "gone wrong" in not opposing violence and intimidation in demonstrations even when this is in a cause approved by such opinion. It is a relief to find support in your columns for a point of view of which up to now the Monday Club has been the only consistent enunciator, even though it took the murder of three innocent men in Turkey to produce this support.

But one of your remarks made me rub my eyes in disbelief. You say: "By the middle 1960s the non-communist and now ex-colonialist world had almost (though not quite—eg, South Africa, Londonderry) reached universal rule of all cohesive groups by the ballot box." Good heavens ! Ghana ? Pakistan ? Indonesia ? the Congo ? Zanzibar ? . . . one could go on. Londonderry, where a minority is trapped by the wielding of the ballot-box by an unsympathetic majority, and South Africa, undemocratically dominated by a white African tribe which does, however, at least use the ballot-box for its internal disagreements; your "exceptions," if anything, work the other way.

Even this basically sensible article shows by this one sentence that "liberal opinion," buttressed by the overwhelming and repetitive self-assurance of the entire polite press of the West, lives in a world of almost Byzantine fantasy.—Yours faithfully,

JONATHAN GUINNESS

London, EC2

Ireland

SIR—The letters on Ulster in your issue of April 1st surely ignore a number of vital points in their analysis of the situation after direct rule.

(1) With no Stormont, the people of Ulster are governed by representatives chosen almost exactly as in the rest of the United Kingdom, with an elective local government structure plus MPs elected to Westminster. There are a few significant differences, especially the gerrymandering in favour of Unionists and the cessation of all attempts to draw fair wards (eg, Londonderry, where the wards are farcical but the commission is being wound up). Talk of rule by decree is simply pedagogue's rhetoric. Ulster remains every bit as much an integral part of the United Kingdom as ever; how acknowledging this with direct rule can be termed "an attempt to appease those whose expressed intention is to drive the British out of Ireland" escapes me entirely. One suspects that the loyalists' primary allegiance is to the Orange order and the Stormont system.

(2) Ulster was formed in 1912 when a small but viable minority wished to secede from the majority state to the south. The views of Carson and his followers were quite properly respected, although accompanied by threats of treasonable armed rebellion. In the present precisely analagous situation there is no reason why the Catholic majority areas adjacent to Eire, which form a minority of Ulster as a whole, should not join the republic if they truly desire to do so.

(3) Security. Since the troops are drawn from the whole United Kingdom, it is right that control over them is exercised by the Government of the whole country. The forces' task has been quite appallingly difficult and their behaviour correspondingly imperfect—but the horrific actions of the terrorists do not give the forces carte blanche. As with all public order agencies, they deserve great praise whenever their conduct has attained the rigorous standards expected in this country, while we also seek to identify their errors and omissions so as to minimise the chance of the same mistakes recurring. That is surely more helpful than taking sides as to whether the troops are angels or the devil incarnate.

I hope the Government will no more give in to the threat of violence by Vanguard than to the fact of it by the IRA, and we may all forget the hysterics and see if direct rule is a solution to Ulster's plight and, if not, then what is.

In the forlorn hope that one (Jewish) Londoner's thoughts may be of some slight use.—Yours faithfully,

London, N3 STEWART MILLMAN

SIR—Mr D. W. Mountain suggests (April 8th) that Ulster should be partitioned again, with "the overwhelmingly Catholic counties of Fermanagh and Tyrone being ceded to the republic." But the Catholic majorities in these two large but sparsely inhabited counties, in the 1961 census, were only 53 per cent and 55 per cent respectively, which is scarcely "overwhelming"; and the voting majorities will have been a little less, since a rather higher proportion of the Catholic population comprises non-voting children.

There is indeed a clear Catholic majority of about 60 per cent in the city of Londonderry, which could easily be partitioned along the present "Free Derry" barricades, with the western districts, conveniently close to the border, being transferred to the republic to leave a substantial majority of Protestants in the central and eastern parts of the city. And the largely Catholic border towns

MANAGEMENT APPOINTMENTS £7000 PA AND OVER

Group Financial Controller

for the holding company of a British group of twelve main subsidiaries in the UK and overseas which manufacture specialised but related capital goods and industrial consumer products. Turnover due to steady profitable growth and planned acquisition now approaches £20m.

• RESPONSIBILITY is to the Group Managing Director for the overall control of the finances of the group and of the subsidiaries, on the boards of which he will be a member. He will also be Company Secretary of the holding company.

• A PROFESSIONAL accountant with substantial management experience in the finance and accounting functions in a manufacturing group – preferably in engineering – with Commonwealth and/or EEC subsidiaries and of computer techniques is required. Service in a US company would be an asset.

• AGE preferably in the 40's. Salary will be not less than £7,500 and could be substantially more. Location S.W. Greater London.

Write in confidence
to Sir Hilary Biggs as adviser to the group.

JOHN TYZACK & PARTNERS LTD

Industrial Development Executive

REGIONAL INDUSTRIAL DIRECTORS

to advise on the allocation of selective aid **£8000 plus**

The Industrial Development Executive has recently been set up to implement government measures aimed at stimulating industrial and regional development. A strong regional organisation, based on the regional offices of the Department of Trade and Industry, will be an essential part of the new Executive in the assisted areas. This organisation will have a new, positive role and an important degree of devolved authority.

There are three appointments to be made, based on:

Leeds : Manchester

Newcastle-upon-Tyne

In each case, the Regional Industrial Director will have a key role to play in assessing local needs and advising the Regional Industrial Development Board on the selective aid programme. In tandem with his co-Regional Director (a Civil Service Under Secretary), he will exercise considerable authority in the allocation of assistance to projects in the area.

Specifically, his main responsibilities will be to:

- seek out potential candidates for grants, and evaluate applications for selective assistance in the region
- provide an expert view on the obstacles to industrial growth in the region, and on the steps necessary for promoting industrial expansion and modernisation
- ensure that industrial factors are given full weight in the overall planning in the region
- promote the region's industrial interests.

Candidates must have held a senior managerial position in industry or finance (ideally both); the ability to work with others in a team is essential, as is the individual ability to influence the thinking and decision-making of high-level management in a wide variety of industries.

Salary negotiable, but not less than £8000; the appointments can be either on secondment or on a short-term contract basis (probably two years in the first instance). Gratuity on completion of term; benefits include use of car.

Please write, quoting S.584 and enclosing a brief curriculum vitae, to: **J. A. Battersby, Room 106, Department of Trade and Industry, 1 Victoria St., London, S.W.1.**

Department of Trade and Industry

of Newry and Strabane could be ceded with little loss to the Protestants, if that would bring peace.

But would it? It certainly wouldn't satisfy the Catholics left behind where they really are in a minority. Belfast, for example, had only 27 per cent of Catholics in 1961, which is little more than the proportion of Protestants in Dublin at the turn of the century, but they show few signs of being prepared to accept their minority position for the sake of peace, whether fully integrated with the rest of the United Kingdom, or otherwise.—Yours faithfully,

Cambridge C. B. GOODHART

Property developers

SIR—We would like to say how much we enjoyed your property survey (March 18th) and also the very excellent editorial content. However, we were somewhat surprised at the statements in one particular article, "Dealers and developers." This sought to make a comparison of firms and estate agents who are either entirely independent or are linked with property companies.

First, I am confident in stating that nearly all, if not all, the larger firms quoted (Edward Erdman, Jones Lang Wootton and Richard Ellis, etc) are directly concerned with property companies in one way or another: that is to say that some of their partners are directors of property companies or the like.

Secondly, it seemed strange to us that Knight Frank & Rutley were omitted altogether. We are, in fact, probably the only firm that is completely independent and no partner, under the partnership deed, is permitted to become a director of any property company.—Yours faithfully,

MICHAEL BARTON

London, W1 Knight Frank & Rutley

The Outward Urge: Japanese Investment World-Wide

QER Special No.11

Within ten years Japan will probably be the world's largest foreign investor after the USA.

Why is Japanese overseas investment so important?
Where does it go, and what are its motives?
What will its future shape be?
Should the rest of the world's businessmen be worried?

QER Special No.11 provides the answers

A single copy of QER Special No.11 is £5.50 (US$15) £4.50 (US$12) to QER Subscribers. Airmail postage extra outside Europe (£0.40—US$1.00). Payments with order please

Ecology

SIR—Mr F. N. Forman sets out (Letters, April 8th) the classic environmentalist case. He wants a "stable society," by which he appears to mean nil or at least minimal growth in population and economic activity. That is quite a fashionable call nowadays, even from those as eminent as Dr Sicco Mansholt of the EEC.

Now the leaders of various developing countries have made it abundantly clear that for them any such suggestion is a form of neo-colonialism which they vehemently reject. And there is little evidence that the industrial world—witness the trade unions—is unanimous in its readiness to forgo any further increase in living standards.

So the ecologists must tell us: are they suggesting that governments should impose "stable state" policies—with or without the consent of the governed? And should the countries which have—in their view—seen the light then attempt to impose their will on the recalcitrant in other lands?

If the answer to either of these questions is in the affirmative, we are starting down a very dangerous road. If, as one suspects, the answers are evasive or in the negative, the "ecological" movement stands exposed as only the latest in a long line of attempts on the morale of people in the western democracies. How many of its adherents realise this?—Yours faithfully, NEVILLE BEALE

London, SW3

American medicine

SIR—I have read with interest the reviews of two volumes concerning national health (March 4th) and the subsequent exchange of letters (March 18th and 25th).

The point at issue is whether there is a "health crisis" in America and whether or not America's health would be better provided for by a national health system.

While space limitations prevent my responding in detail, as I did before my colleagues on the House Ways and Means Committee, to the loose use of statistics in comparing American and world infant and adult mortality rates and other areas, let us look first at the alleged doctor shortage. This simply is not the case. In the United States today there are 318,000 medical doctors. With a national population of 205 million, that is an average of one doctor for every 640 persons. No other major nation in the world enjoys anything close to this ratio.

A second question relates to efficiency. Is medicine in Europe, under socialised medicine, more efficient in serving the needs of the patient? In Germany, for example, tonsilitis caused the average patient to be laid up for 21 days in 1927—and 1967. In those 40 years, therapy developed from aspirin to sulphonamides to penicillin and other antibiotics. Every medical progress shortened the process of tonsilitis, but cut not one day off the time the average patient was out of work. Discussing this point in the American medical journal, Private Practice, Dr Klaus Rentzsch, a German physician, notes that: "This may show what happens when all the risk of a sickness, including the income loss, is completely covered. The will of the patient to take up his work as soon as possible is paralysed." American patients stay in the hospital six to eight days on the average, while in Germany the average hospital stay is 24 days.

A third question relates to cost. During the period from 1956 to 1968 physician fees increased an average of 3.7 per cent, while average wages increased an average of 4.2 per cent. The differential increase of physician fees was minus .5 per cent. The current national health insurance proposals endorsed by Senator Edward Kennedy, according to its own supporters, would have disbursed the $9 billion now being spent by the federal government for all personal health programmes and would have required an additional $6 billion from general tax revenues. The fact is that under national health insurance, with the huge bureaucracy it would entail, health costs would increase and not decrease. The system in France, it should be remembered, ran a deficit of $165m in 1970 and, according to the Government Planning Commission, it will rise to $1.8 billion in 1975 if left unchecked.

In my opinion, the American system of private practice has served the public with better health care, at lower cost, than have the socialised systems of Europe. We no more have a "crisis" of health care than we have "crises" in the other areas for which they are claimed. It may be good politics for some to predict the world's end if their programmes are not enacted, but those politics often have little relationship to the facts.—Yours faithfully,

PHILIP M. CRANE

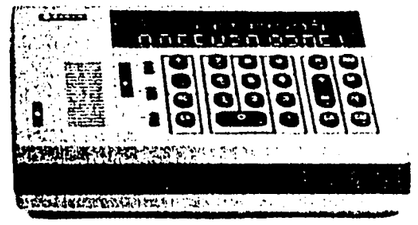
House of Representatives, Washington, DC

SIR—Since Dr Wyndham Davies impugns the integrity of your books section in saying that I could not have read his book (Letters, April 8th), may I assure your readers that I certainly did read it and much of it more than once.—Yours faithfully, YOUR REVIEWER

Brazil

SIR—In your otherwise excellent article (April 1st) on the Brazilian motor industry, it was erroneously stated that the gnp of Brazil was half that of Mexico, Chile and Jugoslavia.

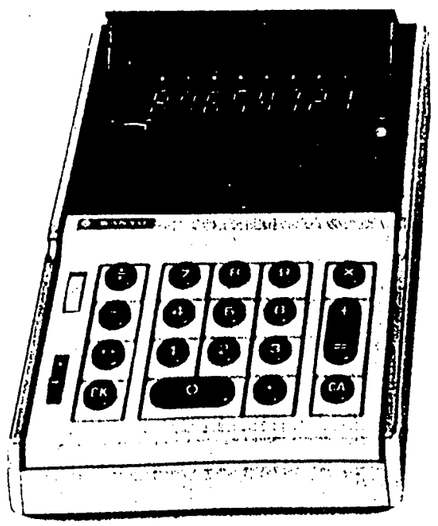
As a matter of fact, the Brazilian gnp at circa $40 billion is, by far, larger than any of the above-mentioned countries and has expanded at an average of over 9 per cent per annum since 1968, reaching a rate of growth of 11.3 per cent in 1971, which was the highest in the world for that year.—Yours faithfully, J. A. MEDICIS



London, W1 Brazilian Embassy

Sanyosmart

(or how to succeed in business without really trying)



Think of a number. Double it. Add – multiply – divide – take away the number you first thought of, and the answer's at your fingertips. In clear computer-style display. In seconds. At conferences, over the phone, on business trips – nothing could be handier. You can work out sales figures, percentages or even simple interest, literally at the push of a button. Sanyo electronic calculators come in a pocket-size portable and two desk-top models for one-man businesses and upwards. The coupon brings the colour catalogue by return.

ICC1415P Highly sophisticated desktop model that calculates at unbelievable speed – and provides you with a complete printed record, in two colours. Offers all the operational features of the 1122 including memory bank facility – plus indicator lamps to keep you in the picture and extra print-out capacity. 14 digit capacity, 18 digit print-out (3 digits for symbols and 1 for decimal point).

ICC1122 Mains operated 12 digit desk-top model – an all-rounder that makes flow arithmetic simple. One-memory bank for totals, subtotals, additions and subtractions of products and quotients and other complex calculations. Features zero suppression decimal point selector, rounding-off, sigma key, constant key, visual overflow indicator, automatic clearing and negative sign.

ICC82D Portable go-anywhere battery operated calculator. Paperback-size – wades through paperwork. Successive divisions and multiplications, mixed calculations, problems involving constants – and many more. Clever double display device gives you 16 digits to play with. Works off the mains, too, from its own rechargeable batteries.

the computer and the hospital

No computer could have aided Florence Nightingale. For the problems she faced were dirt, ignorance and neglect and could be solved by zeal, education and the limitless labour supply the Victorian Age provided.

The modern hospital desperately needs a computer. For its problems are the volume and complexity of its work, a chronic shortage of labour. The computer allows the hospital to husband its most valuable resource—skilled and dedicated human beings so much of whose time is otherwise spent on essential but vexatious chores. In storing and retrieving patient records that a computer could handle faster, more accurately . . . in combing lists, rather than allocating beds . . . in scheduling lab tests, rather than doing them . . . in deciphering, rather than dispensing prescriptions . . . in writing and consulting notes, rather than nursing . . . in form-filling, rather than constructive administration . . . in endless calculation, rather than creative research.

Univac has unrivalled experience in all aspects of hospital computing. More than half the computers now working successfully in the world's hospitals are Univac systems. A few are implementing the integrated real-time hospital information systems that are a foretaste of the future. Many more are handling separate applications ranging from the multitudinous administrative tasks involved in management to automated laboratory systems, research computing, multiphasic health screening—and many others. There is an acute world shortage of doctors, nurses and other medical staff; a growing population; increasing demands on health services. The Florence Nightingale of the 1970s will change the hospital world through computer technology. Univac computer technology. Because there is no substitute for successful experience.

The Economist

April 15, 1972

Include me out

The face of British politics was changed this week. That much is already clear from Mr Jenkins's resignation from the deputy leadership of the Labour party: whether it will be a change for the better or the worse is much less certain. Indeed, Mr Jenkins is too much of an historian to expect anyone to decide yet whether his resignation will mark an important turning point in Labour history or whether it will turn out to be just another departure of a decent man from high politics. He will be aware, too, that if his resignation proves meaningless he will provide the convenient scapegoat for whatever goes wrong with his party from now on, however little he could have prevented it had he stayed. But that is not how many outside or aloof from the party battle have seen this week's events. To them Mr Jenkins has given Labour a chance to check its drift towards unprincipled opportunism, and where his resignation has changed the face of politics is that for many of them he has given the Labour party its last chance.

That chance should not be written off too quickly. On Tuesday, in the immediate aftermath of his resignation, Mr Jenkins seemed to have made a disastrous mistake. The editorials were flattering but the friends were few. Only two shadow cabinet colleagues, Mr George Thomson and Mr Harold Lever, left with him, and in the first 24 hours only another two relatively junior frontbench spokesmen in the Commons had followed ; a few more without posts or offices to resign gave him unequivocal support. Most of the Jenkinsites remained in their jobs, or even accepted advancement, and it seemed that Mr Wilson's emergency patching and shoring-up operation on the Labour party's façade had been a brilliant success : the Jenkinsites had been reduced from last week's political force to this week's tiny band, and Mr Jenkins himself had been shunted off on to a path leading nowhere.

The central issue of principle over which Mr Jenkins and his colleagues resigned was the shadow cabinet's reversal of its previous policy and its decision to support the Tory anti-marketeers' amendment to the European Communities Bill calling for a referendum before Britain joins the market. Mr Wilson was, and probably still is, as opposed in principle to government by referendum as Mr Jenkins is, but because—as Mr Peter Shore spelled out to the parliamentary Labour party meeting on Wednesday—it seemed possible that the Government might be defeated, Mr Wilson could not resist the temptation of trying to gain some short-term political advantage by backing the amendment. Mr Jenkins, too, shared the belief—although with him it was the fear—that the amendment might be passed, and it was probably this factor which finally weighed most heavily in his decision to go.

A principle is at stake

This would be a more encouraging period in politics if Mr Heath and his real cabinet had shown equal concern and determination to fight their own colleagues who are shaky on the referendum issue. Of course, it is sensible for the Government not to give the Labour marketeers any public thanks for their help in getting the European issue through Parliament. That is the last thing the Labour marketeers want. But if the Labour party's problems are to be mentioned by ministers at all they deserve something worthier than the rather bitchy little remarks with which Mr Barber was persuaded to open his party political broadcast on television on Wednesday evening.

The charge of saving the Government is a constant and nagging worry for Labour's marketeers. But what concerned some of Mr Jenkins's friends most of all was that the referendum would not be seen by the country or, perhaps more important, their constituency parties, as a clear issue of principle. After all, they argued, it would only be "consultative" (as if that would make any difference to the way the result would be interpreted), and a majority of the country seemed to want one, even if most did not know what it meant. To be opposed to a referendum would mark them as elitist—the trendy dirty word among the Labour left. But Mr Jenkins was right to make the issue one of principle, for practically all pro-

gressive legislation is the result of elitist pressure. Granted a referendum on one major policy decision, the country could not be denied the instrument on others of similar interest, and any such basic change in the British system of government cannot possibly be brought about simply because it might give one party a short-term political advantage over its opponents.

Why Labour would lose

And as Mr Jenkins argued in his letter to Mr Wilson, and later more fully to Labour MPs, quite apart from the long-term damage that adoption of the principle of referendums might inflict on future progressive legislation, it would not even bring the Labour party any short-term advantage. If Mr Heath were defeated on the amendment to the European Communities Bill the Government would not resign, it would accept it ; the referendum would not need to be held before the bill became law—say, in the autumn—and the whole of the Government and Tory party machine would be geared up for the fight. Mr Jenkins had no doubt what the result for Labour would be. While the Tory party remained basically united, Labour MPs would be opposing one another and many Labour constituency parties would be split down the middle.

By resigning, Mr Jenkins and his companions have ensured the preservation of parliamentary democracy in this country and have saved the Labour party from that wounding battle. When the amendment comes before the Commons next Tuesday it will be defeated ; that now seems certain, for, chiefly as a result of Mr Jenkins's stand, the shadow cabinet's decision to support a referendum was opposed by 96 MPs at the parliamentary party's meeting on Wednesday. There were 129 votes in Mr Wilson's corner and over 50 abstentions. Prospective rebels against the party line find great comfort in such numbers, and on a two-line whip many will abstain. Had Mr Jenkins not given a lead, many of those opposing the referendum might not have bothered either.

Mr Jenkins can therefore feel that he has carried with him far more Labour MPs than were prepared to support him openly by resignation from party posts at the beginning of the week. Indeed, if people like Mrs Shirley Williams, who remained in the shadow cabinet, and Mr Roy Hattersley, who accepted promotion to defence spokesman, have shattered the concept of the Jenkinsites as

That referendum business

The Labour shadow cabinet changed its attitude towards a referendum on the common market issue not so much because President Pompidou decided to hold one in France (where it is enshrined in the constitution of the Fifth Republic) but because on March 24th Mr Heath included in his package on direct rule in Ulster a promise that a plebiscite would be held in Ulster on the border issue. That promise, according to Mr Wilson, changed the situation dramatically, and many politicians profess to see no distinction between a plebiscite and a referendum. On Monday, even Mr Jenkins fell back on the argument that he was not convinced that a plebiscite in Ulster was a good idea.

But there is a distinction between a plebiscite and a referendum. Dr Geoffrey Roberts, in his recent book, "A Dictionary of Political Analysis" (published by Longman), defines plebiscite as :

> A vote by an electorate on a proposed change of regime, or to ratify such a change if it has already occurred.

Referendum, on the other hand, is :

> A vote by an electorate of a state or other political unit on a specific policy proposal, or on the ratification or amendment of a constitution, as provided for in the constitution of the political organisation concerned.

A plebiscite on the border in Ulster would certainly be a vote on a proposed change of regime ; a referendum in Britain on the common market would be on a specific policy proposal.

The amendment to the European Communities Bill calling for a "consultative referendum" has been tabled by a group of Tory anti-marketeers. That is in keeping with Tory history in the first half of the century : five out of the last nine Tory prime ministers advocated, or voted for, one at various times. The best (and only) modern account of referendums is that by a Tory MP, Mr Philip Goodhart, "Referendum" (Stacey), published last year. The idea has invariably been a reactionary demand. Its heyday was in 1909-11, when it was a Tory manoeuvre to try to stop the Commons gaining supremacy over the Lords.

Dicey advocated it (he was its greatest supporter among the constitutionalists) because he was so horrified at the idea of a mere parliamentary majority granting home rule to Ireland.

Balfour was keen on a referendum on home rule, rather than have the Lords submit to the Commons. When counter-attacked by a Liberal argument that as a quid pro quo there should then be one on tariff reform, too, he was delighted : it would have been a convenient way of coping with internal party dissension on that issue. At the time, Clifford Sharp (the first editor of the New Statesman) wrote an attack on the referendum for the Fabian Society which was much quoted :

> certain propositions can never hope to be "popular" until after they have become accomplished facts.

Sharp cited, as examples, Catholic emancipation and compulsory education.

More recently, when Churchill suggested one in 1945, Attlee rejected "a device so alien to all our traditions . . . which has only too often been the instrument of nazism and fascism." And on the BBC's Election Forum television programme on May 28, 1970, Mr Wilson was asked why Gibraltar was allowed to hold a referendum but Britain was not. He replied :

> It was necessary to take the referendum in Gibraltar . . . this referendum was necessary to prove to the world that . . . the Gibraltarians wanted to remain with the British connection. As far as the common market's concerned that's a very different thing, we have a Parliament in the sense Gibraltar hasn't, we have MPs who are elected, as some are going to be elected next month, and I think it is right that it is the Parliament which should take that decision with a sense of full responsibility, with a sense that reflects national views and national interests.

Mr Wilson was, of course, prime minister at the time and hoping to lead the next Labour government into Europe.

a coherent, well-trained political force, they may well have done both the Labour party and Mr Jenkins some service, although Mr Jenkins might sadly feel that such an effect was sometimes wholly unintentional. As *The Economist* argued last week, the real showdown necessary in the coming months may not be between the Jenkinsites and the left, but between the majority of the parliamentary Labour party and Mr Wilson over his conduct of the leadership. That showdown will have been brought a little nearer this week if the sensible centre of the Labour party now feels it can express its misgivings about Mr Wilson's style of leadership without appearing to be simply advancing the prospects of the European group.

The coup that never was

For the irony of this week has been that although it was Mr Jenkins who resigned it is Mr Wilson who has been battered. On Tuesday, Mr Wilson seemed to have pulled off a great coup by detaching Mr Hattersley, one of the leading marketeers, away from Mr Jenkins. But he could have been nothing but deeply humiliated by the publication of Mr Hattersley's letter of acceptance ; the letter was couched in terms of such insolence, if not contempt, that it would have been intolerable to a leader with any confidence in his own leadership. Then, on Wednesday, Mr Wilson sat silently through the PLP meeting. The vote at the end is subject to various interpretations, but two facts cannot be disguised : on an issue which had led to the resignation of the deputy leader and two members of the shadow cabinet, Mr Wilson felt unable to speak to his party meeting—although pointedly pressed to do so—and he could not command a majority of his MPs in the vote.

After nine years Mr Wilson's leadership is wearing very thin. Many Labour MPs cannot, as Mr Jenkins put it in his resignation letter, "accept this constant shifting of the ground," and like him they do not believe that it is the way in which "an opposition, recently, and soon again I hope, the government of this country, should be run." Just how many share those strong feelings is impossible for anyone to say, but few Labour MPs would seriously argue that the number is not increasing. But to say simply that Wilson must go and then get rid of him —which would be the speedy response of the Tory party to any similar leadership crisis—is to beg the fundamental question of whether the present Labour party can really be led at all.

It is said of Mr Wilson that his first thought is always how to preserve his position, and the second how to avoid the most trouble. The same could be said of the general run of political leaders, and, indeed, it is true of most Labour MPs. Many of them have a yearning for the sort of transparent integrity in leadership which characterised Hugh Gaitskell's rule ; but so far few are prepared to face the constant conflict with the ambitious, left-wing trade union leaders who now dominate the party conference which such a style of political leadership would entail. In, of all places, this month's issue of Socialist Commentary—the voice of moderate and right-wing Labour opinion—a commentator argues that the Labour party can be held together only by a man "with the courage to be equivocal." If that is true, or even accepted as true, it does not matter what intentions a man starts out with on the hard task of being the leader of the Labour party. If he does not quit he is going to end up, like Mr Wilson, "constantly shifting his ground."

Labour's chance

It is not fashionable to be kind to Mr Wilson, and he has undoubtedly deserved much—but by no means all —of the calumny heaped on him. But until the parliamentary Labour party makes up its mind that it wants to be led again, and not merely held together, Mr Wilson will deserve rather more sympathy than he has received for some years. What Mr Jenkins has, in fact, now done is to give it the chance to make up its mind on that fundamental issue. He has, it is true, let it be widely known, perhaps not very sensibly, that he does not intend to seek an officer's job in the PLP in the autumn ; by doing so he has no doubt effectively discounted in advance any claims by some of his more frenetic supporters that he is prepared to lead a campaign or a putsch against Mr Wilson. But because he will be present on the backbenches, speaking his mind on the main issues of the day, the circumstances of his resignation ensure that Mr Jenkins will be a living rebuke to Mr Wilson every time that hapless man feels obliged to change his position, break his word or renege on what seemed his firmly held principles just to get through the day, or the week, or the conference, with the least possible trouble.

That, unfortunately, has happened too often now not to be widely regarded as being all there is to Mr Wilson's style of leadership. For many he has become simply a man who will say or do anything whenever it seems to be to his immediate personal advantage to do so. That is, of course, an oversimplification of a humane and highly complex man, but it is difficult to see how the damage he has so consistently inflicted on his own reputation since losing office can now be retrieved.

If the Labour party seizes the opportunity it now has to think seriously through the sort of leadership which it needs, and pulls itself out of its present sterile and defeatist mood in the process, Mr Jenkins's resignation will clearly be seen to have been for the good of British politics. If it does not—and no professional gambler would bet on the odds—but continues its present aimless charade, the consequences will be equally clear : the left wing will simply grind the faces of the marketeers further into the muck until even Mrs Williams and Mr Hattersley will cry enough. Mr Jenkins, quite unfairly, will then be blamed by many for not having had the guts to have stayed in the shadow cabinet and tried to keep the left in line. That will be particularly true if, as many marketeers fear, the inertia of the centre and the opportunist ambitions of the left and others, cause the Labour party to come out against the principle of joining Europe. In fact what Mr Jenkins has shown is that he has the guts to put his political future totally at risk not only for the sake of a credible, principled Labour party but for parliamentary politics. It is now up to the sensible, moderate Labour majority to decide whether that is what it, too, wants and has the courage to achieve.

The real opposition

Mr Maurice Macmillan, learning his job, has to face the trade unions, which are now much more important than Mr Wilson and his new shadow cabinet—and are not great believers in parliamentary democracy

The almighty setback to Labour's pretensions to an early return to office has confirmed Britain's left-wing trade unions in their belief that they are, and will remain, the only effective opposition to the Heath Government. For Mr Jack Jones of the transport workers and Mr Hugh Scanlon of the engineers the departure of Mr Jenkins from the lame-duck party leadership that they subsidise gives nearly as much satisfaction as their studied humiliation of Mrs Castle before and after the general election.

What is more, Mr Jenkins's exile followed just a couple of days after the promotion of Mr Carr out of the Department of Employment, the Mr Carr who actually passed the Tory Industrial Relations Act, and his replacement by the amiable and much less expert Mr Maurice Macmillan. It must have happened that some warring German tribe, hearing the Roman commander approach their village bearing gifts, also spotted a rival chieftain slinking voluntarily away from their bit of the forest, but Tacitus does not report it very often. Mr Jones and Mr Scanlon ought to feel at a highly propitious moment in their fortunes.

But they do not, not yet. Mr Jones, on his return from Rumania, faced court orders to stop the blacking of lorries by his Liverpool dock workers, a fine of £5,000 for contempt of court, and three weeks to pay before his union's assets may be seized. While Mr Jones has been running the transport workers' union he has never seemed to enjoy a long stay in the front line of a fight against the authorities ; in fact there was a day when he seemed to be getting ready for the moment when a climbdown on the registration issue might become popular in the TUC general council. But he likes lawyers having a say in industrial bargaining even less. It now seems that he means to go on having nothing to do with lawyers as long as he possibly can, and he may even be relying on a philanthropic TUC to pay his fine for him. What he will do when the bailiffs approach Transport House remains to be seen. What is certain is that Mr Jones, Mr Feather at Congress House, and their political and academic sympathisers will all push out the line that: (1) the Industrial Relations Act is a bad bit of law precisely because it does bring courts, lawyers and penalties into industrial relations ; (2) the union is only carrying out the wishes of its members in Liverpool, who have voted to go on blacking the lorries ; and (3) the Government is rather embarrassed by the business anyway.

Only the third excuse is a true one, and then only partially. First, the reason for having penalties is that there has been no redress, over the years, when unions black lorries, or engage in other bits of national and local bullying, or unilaterally reject agreements and understandings that are no longer convenient for them. The law was changed after lengthy public discussion and with general public approval because the modern history of British trade unionism is too littered with private, coercive action by union members for Mr Feather or anyone else with eyes to see to be proud of it. Union officials who may want to have justice done find themselves powerless. If the blacking or whatever goes on indefinitely firms, and especially small firms, have to sell up and go out of business. Most firms do not want to go to court, and even now the small transport company that hauled Mr Jones before the beak is bending over backwards to try to get a negotiated settlement. But what chance would it have had of that if the law had not been at its elbow ? Second, Mr Jones and his officials may believe they are doing what their members want, but their members are certainly doing what they believe to be what Mr Jones wants. The union official in Liverpool who counselled the men to accept the law of the land tried to excuse them afterwards by saying they did not think they were breaking any law because their union was opposed to the act. That is the charge that lies directly at Mr Jones's door.

It is true that some ministers are unhappy that the law should have its first test in this way and, even more, at this time. They are the optimists who hope that if the budget, with all that has preceded it, does get growth properly under way Mr Jones and others can be expected to be more reasonable about wages. One would have supposed the reverse, but politicians have to be optimistic, especially about their own powers of persuasion: after all, it was Mr Harold Macmillan who once talked about Passchendaele to the railway leaders inside No. 10. His son may, or may not, turn out to be of the soft school.

The railway challenge

The first test of the Government's intentions has come with the right-wing railway unions, who want Mr Macmillan to stump up the extra for their wage claim that British Rail's chairman, Mr Richard Marsh, has not got. But the railwaymen have no special claim at all (see page 67). Mr Macmillan has been under pressure to get the unions to go to arbitration (which they have refused) or to set up an inquiry himself, and since he is new to the job he may like the idea of a conciliatory start. But arbitrators and courts are not concerned with the economics of an industry, and it is a mistake of Mr Macmillan's to turn that way. If the railwaymen do start a work to rule that is designed to disrupt the railway system of the country, then even if Mr Marsh does not lock them out, Mr Macmillan should hesitate only so long as to have demonstrable proof that the unions are set on chaos before invoking the Industrial Relations Act to get a 60-day cooling-off period. This would not only give more time for what seems to be a narrow difference to be settled, it would finally deprive the unions of what has been their strongest card : the vulnerability of the coal stocks at the power stations after the miners' strike.

The railway unions have been cautious so far. This is partly because their leaders are moderate-minded men anyway, who sense that the Government will welcome the maximum public inconvenience from the start, who do not relish the violent picketing the miners used, who suspect their members do not have the miners' and dockers' sense of community, and who can see already that the press which had its emotional splurge over the miners is preparing to demonstrate its return to sense on wages by ordering the railwaymen to settle. But it is also because they know about the new law, and they would much prefer not to tangle with it. Ministers may feel it faintly disagreeable to clobber pleasant men like Sir Sidney Green and Mr Ray Buckton (or Mr Tom Jackson of the postmen last year) while Mr Lawrence Daly, say, is cock of the walk. But the best chance of a proper settlement now is to use all the power at the Government's disposal.

Mr Scanlon has his own problems. His men in Manchester have resorted to factory sit-ins, which the communists, trotskyites and others have made fashionable since the occupation of Upper Clyde Shipbuilders. So far these have not been particularly unpleasant, and have not even had much publicity. But, again, this is not the sort of situation that can be allowed to drift on indefinitely. If Mr Scanlon persists in encouraging this local coercion in Manchester now, and next in Sheffield, it may not bother a large nationalised concern like the British Steel Corporation unduly for a few weeks (just as it did not bother anyone at all with the bankrupt UCS), but smaller firms have a greater need to repossess their property, if only to ensure its maintenance ; after all, they are not going to get government money at the end. That is why the law must be upheld, because it is the law alone that can coerce the great and protect the weak.

How to swallow one's enemies

Mr Scanlon hopes to make his union greater yet by securing the addition of the electricians and plumbers. He has even offered to step down himself to make such a merger more palatable to the right-wing electricians. That would be self-sacrifice of a high order, and Mr Scanlon's friends will be pleased with him for suggesting it. It would also, of course, bring about one of the greatest left-wing coups of recent years. There are those who will never forgive the electricians' present leadership for its exposure of the communist racketeering in the union. If now, after the death of Les Cannon, the electricians were to be swallowed up in a union in which the communist influence and presence are very marked, it would be revenge indeed.

Yet these are the kind of people who are not only the chief paymasters of the Labour party, they control its policies according to their self-interest when Labour is in government and opposition alike, and they have pretensions now to follow Mr Jenkins's departure by having the real say in the choice of Labour's next leader. Mr Jones may be disappointed in Mr Wilson (for Mr Wilson has not forgotten what it was like dealing with Mr Jones in government), but he knows above all that the next Labour government needs a form of words on wages, agreed with the unions, to put in its manifesto. Mr Jones has good reason to believe that he can draw some other national figure his way. Mr Wedgwood Benn probably would not do ; but there are other, more credible, men who will offer.

They're not supermen yet

The communists are still attacking strongly on four fronts in South Vietnam, but they've been slowed down

The North Vietnamese are running what may well be the most efficient fighting machine in Asia and their leaders are just as determined as ever to win the war, but they are not supermen. Ideology, discipline and sheer imperviousness to moral outrage can carry you a long way, but they do not always add up to victory. So the outcome of the offensive that the communists launched in South Vietnam over Easter is not a foregone conclusion.

The South Vietnamese army (ARVN) has not cut and run. The initial spurt that carried the North Vietnamese tanks across the demilitarised zone and straight through a line of ARVN firebases last week seems to have dribbled away. The communists have not taken a single major town so far, and over the past week the South Vietnamese have stood their ground and thrown a few punches back. Some of their crack regiments have performed as well as anyone could have hoped ; the 20th Armoured Squadron, for example, brought the communist advance down Route I towards Dong Ha to a standstill and saved an important provincial town.

The Easter offensive now has four prongs. In the far north, the regular forces that have moved in from Laos and North Vietnam are still trying to break through the chain of firebases to the west of Hué. In the central highlands, the three North Vietnamese divisions threatening Kontum have only three weeks in which to start their advance before their equipment should get bogged down in the mud as the monsoon sets in. It looks as if the first big battles are going to be waged immediately to the north of Saigon, where the communists have moved in from their old Cambodian sanctuaries. There are now reported to be more than 40,000 North Vietnamese troops within 75 miles of the capital. And there is an unexpected threat even farther south, where the North Vietnamese have taken on the rather complacent garrisons of the delta region, which has been regarded for several years

as the most secure area in South Vietnam (see page 30).

The communists have thrown so many men and so much military hardware behind this offensive that there is reason to believe the American claim that this is an "all-out" assault designed to bring President Thieu's government to its knees. Of the 15 regular divisions that make up the North Vietnamese army, elements of at least 10 are reported to be in South Vietnam—a total of well over 100,000 men—and a further three regular divisions are across the borders in Laos and Cambodia. The communists have done well out of their Russian armourers: they are using 130mm quick-fire cannon and heavy tanks, and they are backed up by Sam missiles and sophisticated anti-aircraft batteries. On Thursday the communist gunners started to shell the Americans' biggest air base, at Da Nang.

All that firepower, of course, is in some ways a dubious asset for an army operating far away from its home territory. As General Giap, the pastmaster of the science of logistics, must be well aware, you can't exactly live off the land if you have to fuel T-54 tanks and carry a stock of spare parts. Although the distance from a place like An Loc up by the Cambodian border (which is currently under siege) to Saigon can be covered by car under normal circumstances in less time than it takes to get from London to Tunbridge Wells, the Hanoi strategists are probably worried about overstretching their supply lines. They must also be uneasy about how vulnerable those tanks and guns are proving in the face of American air power—at least whenever the clouds clear.

A risk of overreaction

It is too early to form a reliable assessment of the communist strategy, but there are two immediate dangers for the South Vietnamese forces. The first is that they will spread their resources too thinly in pursuit of an elusive enemy campaigning on several fronts. The North Vietnamese may even be hoping to lure Mr Thieu's generals on to unfavourable ground far from their base areas, as they enticed General Navarre to defeat at Dien Bien Phu at the end of the first Indochina war. One American military adviser was whooping for joy this week as the South Vietnamese moved north to relieve An Loc. But by Thursday North Vietnamese tanks were reported to have broken through the town's outer ring of defences. And Mr Thieu had thrown the paratroops of his own presidential guard, as well as two full divisions, into his counter-thrust. That suggests that he may be running down his reserves too fast, overreacting to the latest blows from an enemy who is set to strike simultaneously at several major targets. The communists may even be hoping to pin down enough of the government's forces to enable them to launch a showcase assault on Saigon. That would be hard to pull off, but it is a possibility that has to be considered, since it would have tremendous propaganda impact even if the attackers only held out in the suburbs for a few hours.

Meanwhile, the Americans continue to wage their war in the air. There are now more B-52 bombers flying missions against the North Vietnamese and more aircraft-carriers assigned to the Gulf of Tonkin than there ever were in President Johnson's day. The Americans have been bombing as far north as Vinh, the big supply depot 150 miles north of the South Vietnamese frontier. President Nixon's war, as his critics often point out, is being waged almost by remote control—which seems to minimise opposition, since what really used to bring demonstrators out into the streets was the American casualty figures. Mr Nixon seems determined not to use the few remaining American combat troops against the North Vietnamese, although he has just sent a diminutive force of 800 men up to Hué, where they promptly mutinied. But he has refused to say whether the withdrawals will continue after May 1st, when there will be only 69,000 American ground troops left.

The next few weeks will show whether the cost-benefit ratio for American bombing is any better than before. American bombing did not stop the Easter offensive or the massive pile-up of men and resources in the communist base areas north of the demilitarised zone, in eastern Cambodia, and in the tri-border enclave where the non-communist parts of Indochina meet. It has slowed the communists down now, but the battles at An Loc and elsewhere will be decided by the infantry. It will be a close-run thing.

It's Bhutto's move

Pakistan must recognise Bangladesh without more delay if a south Asian settlement is to be approached; then the onus will pass to India

The Indian subcontinent could now all too easily become another Middle East. The crises in both areas began in the same way with a limited war that inflicted a decisive defeat but left the winner without the power to impose a settlement. And some of the ingredients of a Middle East-style stalemate are already emerging in south Asia: a defeated belligerent which, rather than swallow its pride and cut its losses, takes the soft option of self-delusion; and a victor who, infected by arrogance and paranoia, hardens his terms rather than compromise. The longer India and Pakistan sidestep round the negotiating table, the more likely they are to slip into these ready-made roles. Only one thing can stop them: Pakistani recognition of Bangladesh.

There has always been a catch in India's claim that its offer of bilateral talks with Pakistan was "unconditional." This catch lay in the definition of the only issue that President Bhutto is in a real hurry to talk about

Don't write off Northern Ireland.

Progress is being made in a most important area.

Every day tens of thousands of Northern Ireland Protestants and Roman Catholics work together, and, as the record shows, work hard.

In the two years 1970 and 1971 manufacturing output rose 13% (1970: 7.2%-1971: 6.1%).

Productivity in 1971 was up 6.7%.

In 1971 the number of days lost per 1,000 workers because of manufacturing disputes was less than one third of the national average.

Last year (1971) 7,000 new manufacturing jobs were negotiated in Northern Ireland, largely through the expansion of established firms. This level of job creation, one of the highest ever recorded in Northern Ireland in the course of a single year, was achieved despite the 1971 investment trend in Europe.

These are sound reasons for expecting expansion to continue-so long as industrialists and businessmen continue to look behind the headlines and into Northern Ireland's industrial record.

MINISTRY OF COMMERCE FOR NORTHERN IRELAND

—the return of India's 93,000 Pakistani prisoners of war—as a matter that requires the participation of Bangladesh. Since Sheikh Mujib will not sit down at a conference table with Mr Bhutto until his new government has been formally recognised, this recognition is a precondition for any meaningful talks. The Indian foreign minister made this more explicit than ever on Monday, when he told a Congress committee in Delhi that Mr Bhutto must face the fact that he will have to deal not only with India but also with Bangladesh.

Mr Swaran Singh's remarks raised some doubts about the viability of an agreement which was reached last week—presumably on the urging of the Russians—for the first formal meeting between Indian and Pakistani officials since the December war. But these doubts were assuaged on Wednesday when Mrs Gandhi received a personal letter from Mr Bhutto accepting her proposals about talks between officials. The meeting, which is expected to take place in Pakistan this month, is meant to prepare an agenda for a summit conference. Any such agenda is bound to be unsatisfactory to Mr Bhutto, since it will omit the prisoners of war. But he is said to have an infinite faith in his own powers of persuasion once he gets face to face with Mrs Gandhi.

Mr Bhutto seems to be counting on convincing Mrs Gandhi that his political problems at home make an immediate recognition of Bangladesh impossible ; and that only the return of the prisoners of war can guarantee his political survival long enough for him to put a signature on a peace treaty. If this is so, he is underestimating the steely determination of the empress of India. Pakistan's recognition of Bangladesh is clearly her primary non-negotiable issue, and Mr Bhutto must gird himself to jump this hurdle if he is to avoid becoming a Sadat.

He's still India's best bet

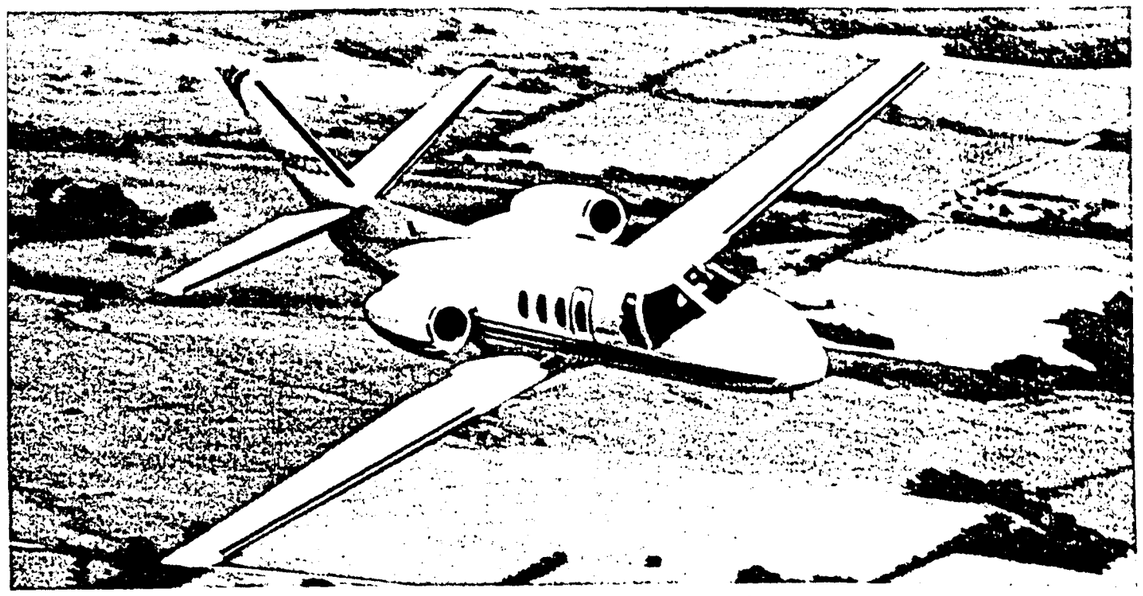
Once he has done so, it will be India's turn to make concessions. Indian officials speak of their readiness to see Mr Bhutto overthrown rather than submit to political blackmail. But it is unquestionably in India's interest that he should remain in power as the only civilian leader who has any chance of carrying Pakistan with him on a peace agreement. The way India can help him is by sending his soldiers back ; not necessarily all of them at once, but considerably more than the 62 wounded who have already been repatriated, should be put on the first train to Pakistan after Mr Bhutto has announced his recognition of Bangladesh. If India continues to insist on getting an overall settlement first, it is likely to find itself with nobody to settle with.

Once the prisoners are home, Mr Bhutto will be far better equipped to grant India's second major demand —the conversion of the current ceasefire line in Kashmir into an international boundary. The Indians are adamant that a final solution of the Kashmir conflict must be part of the final subcontinental peace settlement. This step will obviously have to be co-ordinated with a general disengagement of forces, and it might be promoted by a prior unilateral withdrawal by the Indians from the territory they now occupy in Mr Bhutto's home province of Sind. But because the Kashmir agreement involves no significant movement of population, it might well be kept for the final stages of the negotiation, allowing time to reinforce Mr Bhutto's ability to bring his own people to accept the painful necessities of their new position.

Time will work quite the other way on the key issues between Pakistan and Bangladesh. The most urgent one from the Bangladesh standpoint is the repatriation from Pakistan of 400,000 Bengalis who include 10,000 of the most experienced Bengali civil servants and 30,000 of the best trained Bengali troops. The Bangladesh foreign minister announced this week that Pakistan has agreed in principle to return the Bengalis through the International Red Cross. But the other major question of population transfer—the removal of the 1¼m-1½m Biharis from Bangladesh—does not even seem to have been raised.

The Biharis might be traded off

India is doing its best to softpedal the Bihari issue in order to avert pressure to shift at least some of these people back to their former homes in India. The official line is that they will have to learn to live with the Bengalis, though Mrs Gandhi's advisers on Bangladesh acknowledge that the Biharis will never be assimilated there. On the face of it there is no deal to be done over the Biharis ; Pakistan wants no part of them, since they would impose on its economy a burden of the same dimensions as last year's Bengali refugees imposed on India's. But a bargain might yet be struck if the Biharis were linked with another controversial question—the plan to hold Nuremberg-style war crime trials in Bangladesh. India has already agreed to extradite Pakistani prisoners for the trials ; Mr Bhutto has declared that any such trials would mark the point of no return.



The argument used to justify the idea of these trials is that they would provide a form of national catharsis, somehow purging Bangladesh of the hate and vengefulness that are the legacy of last year's bitter struggle. But a trading off of the Biharis against an agreement to cancel or curtail the trials might enable Bangladesh to bind up its wounds in a much more practical way, while at the same time helping Mr Bhutto to strengthen his flanks against his army, where resentment of the trials would burn hottest. Foreign friends of both Pakistan and Bangladesh might expedite this kind of agreement by offering aid for resettling the Biharis in Pakistan. Foreign help will also be essential if Pakistan and Bangladesh are to agree on a division of debts and assets.

Mr Bhutto has gained a certain amount of world sympathy during the past few months because of his position as the underdog and his obvious political troubles at home. And Mrs Gandhi has correspondingly been criticised for making his problems worse by disregarding the Geneva conventions and exploiting the prisoners of war as a bargaining counter. In fact, both bear a share of the blame for the delay in opening negotiations. But if Mr Bhutto should now make these negotiations possible by recognising Bangladesh, the onus will be on India, as the party dealing from maximum strength, to turn peace talks into peace.

Why manage a pension fund portfolio by yourself when National Westminster has a department that does nothing else? If you're running an office and a pension fund, one of them's going to suffer. And if the pension fund suffers, a lot of people suffer. So, if you'd like our experience working on your pension fund portfolio, call Michael Corlett, 01-606 6060, extension 3413. And listen to the voice of experience.

National Westminster Bank

If only all your decisions where as easy to explain to share holders as Cessna's sensible Citation

1. The Citation costs less to fly than any other business jet.

The Citation is the only certified business aircraft with Pratt & Whitney's new, second generation high-by-pass turbofan engines. They use fuel so efficiently that the *Citation's operating cost per mile is the lowest of any jet* and even lower than most of the turboprops flying today!

2. It costs less to maintain than any other jet.

The Citation is simplicity itself. Not only are its fan jets easier to service than ordinary jets engines, but they are also more accessible and even interchangeable. Most important, *the Citation is the only business jet to be standardized from nose to tail - including avionics!*
Result: servicing, repairs and replacements are accomplished in far less time and at significantly lower costs.

3. It's the most attractive jet on a price / performance basis.

A new Citation costs only $ 695 000 (F.A.F. Wichita U.S.A.) complete and ready to fly; Little more than some turboprops, *and substantially less than any other jet.*
In fact, if you do a cost comparison between the Citation and any other jet for your own operation, you'll find the Citation wins comfortably.

4. It can take your executives to many more European airports than any other jet.

The Citation is the first business plane to offer jet speed and performance plus the ability to utilize smaller airports. Its balanced field length is the *shortest of any jet*.
Thus the Citation can increase the effectiveness and mobility of you and your top management because it can fly you to hundreds of airports other jets can't use and at the convenience of your own schedule.

5. The Citation - a complete business aircraft "package".

The Citation comes as part of a comprehensive business aircraft programme.
For a fixed price, you get the aircraft, all avionics, a complete interior, a straightforward single - source guarantee and training of two pilots and two mechanics at the American Airlines Flight Academy, Ft. Worth, Texas. Plus Cessna's unique computerized maintenance system that helps your crew to plan service, and avoid unnecessary costs. Plus access to a *world-wide chain of Authorized Citation Service Centres and Stations* selected expressly to provide you with optimum service.

6. It will pay for itself quicker.

A corporate jet, like other capital equipment, can be fully depreciated while still keeping a substantial part of its value.
Actually, of course, the Citation can conceivably pay for itself the first time out - if it enables you to beat a competitor for a big piece of new business (Remember, only $ 695 000).

7. It will retain exceptionally high resale value.

ADSA Blue Book figures show that jets hold their value better than most turboprops and piston-engined aircraft.
Why? jets are tomorrow. Jets fly higher, smoother, faster and are quieter. They reflect a progressive company.
And the Citation, with its second generation turbofan engines and its FAR 25 certification, *is the most advanced jet available* in its price range.

8. The Citation is a quiet, good neighbour.

Latest figures compiled by the Federal Aviation Authority reveal the Citation to be the *quietest jet in the world.*
For comparison of its decibel levels, you have to resort to household sounds like electric razors, vacuum cleaners, or dishwashers...
What other jet can you say that about?
Let us show you how the Citation can benefit your company by providing you with - *at no cost or obligation* - a route analysis and cost of operation study.

Nearly one out of every three planes in America is a Cessna.

BRITAIN

That was the Government reshuffle that was

Carrington : new Tory chairman

Prior : but do they need two ?

It would be an exaggeration to say that the impact of Mr Heath's long-awaited Government changes, which he announced last Friday afternoon, was swamped by Mr Jenkins's resignation from the Labour shadow cabinet three days later. The truth is that the changes could barely sustain any journalist's interest on the Sunday. Mr Heath dropped five ministers—Messrs Corfield, Sharples, Bryan, Ridley and Price—and brought in (leaving aside the whips) 11 new faces. The consensus seemed to be that if the changes were not made with a pin they might just as well have been ; it even seemed to be accepted that the one new addition to the cabinet, that of Mr Maurice Macmillan as Secretary of State for Employment, was made because Mr Heath could think of no one else. In fact the changes deserve a little more consideration than that.

The consequences of Mr Macmillan's appointment are discussed on page 14. Mr Heath deliberately limited his cabinet shuffling to the extent made imperative by the appointment of Mr Whitelaw as the new Secretary of State for Northern Ireland. Mr Robert Carr takes over Mr Whitelaw's old job as Leader of the House of Commons. The move has been generally welcomed on all sides of the House, but Mr Carr will be aware that when that happens it is because it is generally believed that the new leader is a bit of a softy. A really effective Leader of the House has to have a way with him when dealing with backbench MPs ; but he is involved in so many cabinet committees outside the Commons that he has to be an extremely astute political animal to make a real success of the job.

It has been suggested that, the cabinet changes apart, the reshuffle in the lower ranks might well have been made last autumn if the massacre at the Department of Trade and Industry, which has now occurred, had not been leaked to the press. That again would not be completely true, for there is evidence that some of the changes were not decided until very recently. Mr Corfield, for example, had to be brought back from abroad to be fired. And there is the curious case of Mr Robert Chichester-Clark, the Ulster Unionist MP. On March 24th, when Mr Heath announced direct rule in Ulster, Mr Chichester-Clark agonised aloud in the Commons whether, now that Stormont was to be suspended, any Northern Ireland MP had "a mandate to remain in this Parliament." Mr Heath then assured his honourable friend that "everyone in the House will value what he has to contribute in the future. . . ." If Mr Heath himself contemplated at that moment that the contribution would be as minister of state at the Department of Employment it is hardly likely that he had communicated his intentions to Mr Chichester-Clark.

Governmentally, the most interesting of the changes are those at the Department of Trade and Industry. Three of Mr Davies's junior ministers were sacked entirely, and a fourth, Sir John Eden, was given the posts and telecommunications ministry. Six new men were moved into DTI, headed by Mr Christopher Chataway as Minister for Industrial Development. That department now has nine ministers, and although its political touch has been immensely strengthened by the arrival of Mr Chataway, the changes raise even more doubts whether Mr Heath is any nearer to getting the structure of government in that vital area of activity anything like right.

By keeping his cabinet changes to the strict minimum required, Mr Heath has left the impression that he intends to make rather more dramatic changes at the top later in the year—perhaps after the European Communities Bill has been passed. But what is to be made of the goings-on at the Conservative Central Office ? Mr Heath replaced one unknown cabinet minister, Mr Peter Thomas, as chairman of the party, with two well known members of the cabinet : Lord Carrington, as chairman, and Mr Jim Prior, as joint deputy chairman with the existing, and highly professional, Sir Michael Fraser. Everyone at Central Office professes to be delighted with the new arrangement ; as both Lord Carrington and Mr Prior are delightful company well

they might be. But the grass roots of the Tory party cannot be so withered as to require even the divided attentions of two cabinet ministers. The most likely explanation is that Mr Heath has reluctantly come round to the view that even his Government would be better for the occasional dose of politics, and that Mr Prior, who has been given an extra minister at agriculture, is to be communications supremo. It is an appointment which is well overdue.

Labour party

Polling time

The Labour party is very sensibly speeding up the procedure for electing a new deputy leader to replace Mr Jenkins, and a very interesting election it will prove. The resignation from the shadow cabinet of Mr Thomson and Mr Lever creates no electoral problems because the two leading losers in last December's elections automatically fill the vacancies. They are Mr Reg Prentice, who got 95 votes, and Mr John Silkin, who got 94. Their elevation now gives the shadow cabinet a strong anti-common market majority.

Last autumn, the three challengers for the deputy leadership were Mr Jenkins, Mr Michael Foot and Mr Wedgwood Benn. On the first ballot Mr Jenkins polled 140, Mr Foot 96 and Mr Benn 46. Mr Jenkins picked up no further votes in the run-off, but Mr Foot collected 30 of Mr Benn's votes. On those figures the left must fancy Mr Foot's chances this time. But he is going to be faced by at least two challengers, Mr Tony Crosland and Mr Ted Short. Mr Crosland lost so much ground last year that he seems to be sticking his neck out now. He will certainly share the moderate and right wing vote with Mr Short on the first ballot, but after that it should be a straight fight between Mr Foot and Mr Short. The knowledgeable money is on Mr Short to win. He is a pro-marketeer who abstained in the Commons vote in October, but voted for a referendum in the second vote in the shadow cabinet before Easter. He also topped the poll for the shadow cabinet last year.

It could hardly be claimed that the election of either Mr Foot or Mr Short would provide the Labour party with the best deputy leader it has got, even after the departure of Mr Jenkins. But among the more formidable figures, Mr Callaghan's friends say he will not stand (he never has had any truck with deputy leadership elections), and Mr Healey would have no chance.

Of course it is always open to a non-member of the shadow cabinet to stand, but it is unlikely that anyone will. But if, as seems most likely, the new deputy leader comes from within the shadow cabinet itself that would create another little problem. The vacancy he would leave could not be filled by last year's third runner-up because Mrs Castle and Mr Heffer tied for that position. One of the few bright spots for moderate and right-wing Labour MPs these days is the prospect of seeing the left agonising over which of those two it would choose if neither would give way to the other.

Ulster

Brian comes in from the cold

Mr Willie Whitelaw, Northern Ireland's secretary of state, got a nod—and a warning—from Mr Brian Faulkner when they met briefly on Wednesday for the first time since the imposition of direct rule. There does not seem much of a chance that the British Government will drop its intention to set up an advisory commission, which Mr Whitelaw will choose from the Ulster community, even though the idea has been scathingly criticised by Mr Faulkner and his old cabinet colleagues. But there is now a possibility that Mr Heath will suggest the formation of an all-party committee to keep an eye on Northern Ireland, which might include MPs from Stormont as well as Westminster. This might reassure Mr Faulkner, who has talked about Ulster being in a "constitutional limbo, under-represented at Westminster, with much of the democratic processes of legislation effectively suppressed and a semi-colonial structure of government."

All the same, Mr Faulkner has serious doubts about the conciliatory tactics of the security forces towards IRA urban terrorism and about Mr Whitelaw's declared intention to phase out internment without trial, which began with a flourish on April 7th with the unconditional release of 73 men—47 internees and 26 detainees. There are still a further 842 men held under the Special Powers Act ; 681 are internees and the rest are in detention. Mr Faulkner remains unrepentant, too, in denouncing Mr Heath's initiative, which he told the Bow Group in London on Monday, was regarded by everyone in Ulster as "a victory for terrorist tactics, and therefore for republicanism." He would regard a prolongation of Mr Whitelaw's administration beyond next April as "totally unacceptable." If he cannot have Stormont back, Mr Faulkner looks as though he will settle for nothing less than complete integration in the United Kingdom.

So far the transition of government has proved to be thankfully troublefree, at least up at Stormont. Certainly no police or civil servants have resigned in protest at what has happened. Mr Whitelaw and his three junior ministers do not intend to spend all their time in Northern Ireland, although there will always be at least one of them available on the spot. Mr Whitelaw has complete responsibility for the province

Belfast : the IRA is still in business

If it makes stockholding easier, why haven't we done it before?

It's always easy to be wise after the event—remember the invention of the wheel.

But the wisdom of metrication is obvious to thousands of companies making the change.

The metric system is simple. That's why so many companies, big and small, are making the change. Already much of Britain's engineering production is metric.

Which is good sense when you consider that 86% of world trade is between countries that have chosen the metric system.

Metric working has already simplified things like design, production, paperwork and storage for many British firms.

If you are responsible for the future of your company start thinking about metrication.

Many are already benefiting from the changeover.

Business is ten times simpler in metric.

GLYNWED

Profits before tax increase from £5,000,000 to £7,500,000

The following are extracts from the Chairman's Statement for the year ended 31st December, 1971.

Most of those units connected with the building industry had a remarkable impetus in the second half of 1971. Other units, not so connected whilst not able to produce equivalent profit performances, have nevertheless worked hard against the background of an otherwise subdued economy.

In 1971, we continued our policy of disposing of unwanted buildings and sites; since the acquisition of Allied, we have sold nine properties at a net realisation of over £750,000.

During 1971, we acquired seven companies, one of which was publicly quoted, Tower Manufacturing Company Ltd; the remainder were private companies.

DIVISIONAL REVIEW

Glynwed Tubes & Structures Limited. Although some sections of the market for copper and copper alloy tubes remained depressed throughout the year, there was a small improvement in the demand for the tube for domestic water services.

Glynwed Baths Limited. During 1971, an intensive publicity and advertising campaign was undertaken to improve still further the image of Vogue "The Good Bath" in the minds of both the merchant trade and the general public.

Glynwed Foundries Limited. Aga and Rayburn Cookers continued to be the leaders of this type of appliance with a high level of demand maintained during 1971.

Glynwed Plastics Limited. Development of plastic components for the motor and allied industries is now to be carried out in four factories in the UK. With increasing activity in the motor industry the outlook for 1972 is promising.

Glynwed Steel Pressings Limited. The policy of maintaining the highest standard of quality in products brought benefits during 1971 in the form of increased demand for our kitchen and bathroom equipment, in particular stainless steel sinks, shower cubicles and vanity basins.

Glynwed Steels Limited. Throughout the world, steel production was cut back in 1971 and was reflected in the output and profits of both our re-rolling and bright drawing activities. In the former, our ability for quick changes in production and speed of delivery has been a great asset in depressed periods.

Glynwed Screws and Fastenings Limited. Disruptions in the automotive industry and internal labour problems at the beginning of the year affected our 1971 profits considerably. The purchase of Walter Slingsby has increased our share of the steel and malleable pipe fitting market and rationalisation with Hipkiss should bring financial improvements.

Tower manufacturing is proving a valuable addition to our specialised fastener business.

Glynwed Distribution Limited. Value of sales fell in 1971 in common with the engineering industry, but through its comprehensive stocks and first class service the division increased its share of the market without resorting to the lowering of prices.

PROSPECTS

In 1971, the upturn in the building industry certainly helped us to achieve good results for the year and it seems likely that this trend in building will continue through 1972.

The other principal aspects of our business concern the motor industry, general engineering, re-rolling and drawing of steel, the manufacture of fastenings and general engineering castings.

The year 1971 proved a difficult year in many of these activities but we are hopeful that with the Government committed to achieving growth in all sectors of industry, these areas will show an improvement during 1972.

PRODUCTS

Copper Tubes and Fittings, Steel Tubes and Fittings, Brass Tubes, Lead Sheet and Pipes, Microbore Heating Components, Vogue Baths, Hand Basins, Aga and Rayburn Cookers, Aga Heat Central Heating Boilers, Engineering Castings, Catering Equipment, Cast Iron and Plastic Rainwater Pipes and Fittings, Plastic Extrusions, Plastic Chemical and Domestic Waste Drainage Systems, Laboratory and Hospital and Shower Fittings, Plastic Coated Fabrics, Leisure Kitchen Units and Sinks, Vanity Units, Shower Cubicles, Steel Baths, Radiators, Leisure Gas Cookers and Fires, Hot Rolled Steel Bars, Bright Drawn Steel Bars and Rods, High Tensile Bolts and Nuts, Bright and High Tensile Studs, Steel and Malleable Pipe Fittings.

SALIENT COMPARATIVE FIGURES	1970 £	1971 £
Turnover of the Group	73,387,000	85,787,000
Group Trading Profit	6,608,000	9,112,000
Debenture and Loan Stock Interest	1,562,000	1,555,000
Profit before Taxation	5,046,000	7,557,000
Profit after Taxation attributable to Ordinary Shareholders	2,945,000	4,557,000
Net assets employed	37,724,000	41,869,000
% Dividend on Ordinary Capital	28.5%	33.5%

Dudley Road West, Tividale, Warley, Worcestershire. Telephone: 021-557 6451/60.

and is answerable to the Westminster Parliament. But his chief local concern is security. He runs the old home affairs ministry and has taken over Mr Faulkner's job as chairman of the security committee, which is going to meet each week as in the past. He also intends to keep an eye on the ministry of agriculture. His colleagues have been given other departments. Mr David Howell has finance and commerce, Mr Paul Channon health, the social services and education, and Lord Windlesham development and community relations (he also deputises for Mr Whitelaw on security matters).

So far no more Whitehall civil servants have been drafted into Ulster to join Mr Howard Smith, the British representative, and his staff of half a dozen. Both Sir William Neild, permanent secretary in Mr Whitelaw's ministry, and Mr Neil Cairncross, his deputy, are so far commuting between London and Belfast to ensure there is a smooth continuity in the running of the province by Ulster's own widely-respected civil servants. The Northern Ireland Office has taken up residence in Great George Street, in the building of the now defunct department of economic affairs, and is made up almost entirely of civil servants recruited from the Home Office.

But if there have been no teething problems in the transfer of power, Mr Whitelaw cannot be happy with the indecisive Catholic response to his conciliatory efforts. Priests and politicians in the Social Democratic and Labour party have continued to voice their support for the initiative and urged the Official and Provisional wings of the IRA to call a truce for a few weeks at least. But the gunmen and bombers appear to be in no mood to listen. On Thursday, the IRA launched its biggest bombing offensive since direct rule, and it has not given up its readiness to go for civilian targets.

And the IRA has had no inhibitions in continuing to intimidate the Catholic working class. A brutal attack on a pregnant mother of three in Ballymurphy is just the latest episode in a constant story of violence, which the army and police are powerless to stop. Over in the Catholic working class districts of the Bogside, Brandywell and the Creggan, west of Londonderry's city walls, the IRA appears to be the only potent political force among the 35,000-strong population who live behind the steel and concrete barricades. Provisional Sinn Fein leaders in Dublin intend to hold an election for a community government in the embattled, lawless, unkempt area known as Free Derry within the next few weeks.

Mr John Hume of the SDLP has expressed his opposition to this, and local moderates have formed a residents' association, which intends to seek financial assistance from the Londonderry Development Commission for an improvement in the squalid conditions in which the city's Catholics now have to live. Mr Hume faces a major test of his claim to speak for his constituents. The outcome may do much to decide what happens to Mr Whitelaw, too.

Planning

Layfield's lesson

The inquiry into the Greater London Development Plan began its third and final stage on Wednesday, 18 months after it opened. The panel's report should be with Mr Peter Walker in the autumn. Unlike that other planning marathon, the Roskill inquiry into the third London airport, the result will be no single answer but a complex policy statement which will accept, reject, or modify the Greater London Council's aims concerning the future population of London and how it will live, work and travel. Only then will it be clear whether, as many people suspect, the whole inquiry has been a vast waste of time, money and talent, or whether at least enough has been learned about what is called strategic planning for it to be done rather differently next time—perhaps by a system of continual, informal, review.

There have been two main weaknesses all along. First, although the law demands a judicial inquiry, the charade of confrontation between the GLC and objectors to the plan in the formal legal manner has proved a poor way of improving policy. Second, there are very few targets within the plan which it is within the GLC's power to achieve—either they are really in the hands of the individual boroughs, or, as with the attempt to boost employment, there is not much local government can do about it anyway. The exception is, of course, the building of the controversial ringways through London, but the relevance of the inquiry even to this has been shaken by the GLC's insistence on treating the western section of the inner ring as a separate issue, which went before a separate inquiry last week.

Layfield : new style inquiry

Even so, the panel, under its chairman, Mr Frank Layfield, QC, has been able to play a more active and constructive role than was expected, stepping into some of the gaps left by objectors (who naturally enough were mostly concerned with their own personal interests). There has been concurrent help sought from experts with no axe to grind. On Wednesday, Mr Layfield said that stage three would be conducted in a new style, with witnesses being asked to explain rather than defend themselves.

The GLC has produced a much revised version of its strategy statement, the document under review. This takes account of some changes of the past two years and also meets some of the objections made, for instance by sounding keener on public transport. There are also a whole lot more figures about the additional industrial and office space to be provided in each borough during the next four years. But Mr Layfield has already shown himself unconvinced by the idea that floorspace breeds employment pro rata, a theory which now seems pretty soundly disproved. Anyway, there is clearly absolutely no hope of adding another 14.5m sq ft of industry to London in four years when all the trends are to the contrary.

But even if the problem never reaches American proportions, there is certainly something to worry about at the flight of jobs from London and the growing pool of unemployed, while the people who leave London most readily, are those who are still most wanted there—professional and clerical workers. But does it really make sense for Lambeth borough council, for example, to be buying land to let cheap to industry while, as the director of the Shelter Housing Aid Centre pointed out this week, finding a house in London is now quite impossible for the £30-a-week family with one child? Yet no proper machinery exists to bring London planning effectively into that of its region.

Criminal law

The overburden of proof

The plans for smoothing the prosecution's path that purport to have been leaked from the Criminal Law Revision Committee's deliberations have certainly been rolling round in law chiefs' minds for quite a while. The judges' rules surrounding the police caution have come under particular fire, and not only from policemen: the moment at which the caution must be given is so metaphysically defined as to provoke endless semantic courtroom debates on whether it was properly administered. There is a clear need for a bit of redrafting, at least. The civil libertarians' defence of this principle is in any case at least partly misdirected: the far more important safeguard (which is also far more often flouted) is that which lays down that no one shall be taken to a police station against his will unless he has been formally arrested.

Of the other proposals, the least defensible is that previous convictions should be admissible as evidence. They already are if the defendant attacks the character of the prosecution witnesses or seeks to show that he himself is of exemplary character; these, plus certain other small loopholes in the ban, are quite wide enough. It is a fair presumption that juries, hesitating between verdicts, will feel there is less harm in reconvicting someone with past crimes to his credit; the process is, of course, cumulative. But the proposal that the defendant should be required to reveal the outlines of his defence before trial is absolutely right. He already has to if his is an alibi defence, and there is no reason why this requirement should not be extended. Its absence is one of the greatest causes of delay in criminal trials, and does not always work to the benefit of the defendant.

Should the defendant be required to give evidence? Or rather, should the jury be entitled to draw conclusions from his refusal to do so? There is more argument here; an innocent man, slow-witted or with poor command of English, could find this a frightening Hobson's choice. But a change would not alter the requirement on the prosecution to prove that there is a case to answer before the defendant could be called to give his evidence; as now, it would be open to defendant's counsel to submit that there was no case at the end of the prosecution evidence. That is an important safeguard. That there would still be others is shown up by a comparison of civil and criminal procedure: the burden of proof would still rest on the prosecution, hearsay evidence is seldom admissible in criminal courts and legal aid—though patchy—is much, much easier to get.

Students

Union shambles

The National Union of Students persists in taking itself seriously although it is rapidly forfeiting all claims to credibility. Over 500 delegates turned up in Birmingham this week for its third conference in under six months. But less and less time is devoted at these gatherings to any sensible discussion on the problems of higher education. They have become no more than trials of strength between the different plumages of marxism which flower these days in the student world.

Mr Digby Jacks, the communist president of NUS, has only held office since last November but that has been quite long enough in the eyes of some militants to transform him into yet another stuffy establishment figure. So he and his left-wing friends on the union executive found themselves under challenge this week from a portentous sounding body called the Liaison Committee for the Defence of Student Unions. This offshoot of the trotskyite international marxists was set up following Mrs Thatcher's consultative document last autumn on the future financing of student unions. These militants are all for what they call a "concrete involvement of students in working class struggles." Vice-chancellors and principals are denounced as "the administrative agents of the state," and non co-operation is preached against either the Department of Education or the education authorities.

The liaison committee notched up a victory back at the NUS conference in January when it managed to push through a resolution which rejected the principle of public accountability for the spending of student union money, although it comes from the ratepayers and not individual students. But this week the committee's eight nominees for places on the NUS executive went down to defeat. Mr Jacks fended off his opponent for the presidency, Mr Jerry Fitzpatrick, a dismissed student from Aston university, by 412 votes to 139. None the less such a debacle was no victory for moderation. Far from it. Mr Jacks has no intention of losing out to the ultra-left. His own address to the conference was little more than a dreary recitation of fashionable left-wing slogans. Although he insisted that there was a "direct relationship" between Ulster, Rhodesia and student unions, it was not even clear to delegates what that was. Mr Jacks wants the NUS to be a "union with social and political relevance" and not just a "welfare shop organisation" or "a pseudo-political party." He claimed that the £5,000 spent on the NUS campaign against the Government's student union finance proposals might otherwise have been spent on NUS opposition to internment without trial in Ulster, a province which he called "virtually a mini-fascist state on British soil," and to the terms of the Rhodesia settlement.

David Ricardo

Two hundred years on

Next Tuesday marks the bicentenary of the birth of David Ricardo, the Portuguese Jew born in the City who started work at the Stock Exchange in 1786, aged 14, and died suddenly in 1823, the greatest political economist of his day with £700,000 and a parliamentary seat to boot. Ricardo's life and his lively correspondence with such contemporaries as Malthus, James Mill and the novelist Maria Edgeworth (with whom he carried on long arguments on the potato as the solution to the Irish problem) are documented in an exhibition now at the Drapers' Hall in Throgmorton Avenue. Although Ricardo was not associated with the Drapers' Company, the Royal Economic Society (publishers of 10 volumes of his letters) and Ricardo's own foundation, the Political Economy Club, who are jointly staging the exhibition, jumped at the chance of a site in the very shadow of the Stock Exchange.

For it was there that Ricardo made the fortune on which he could retire and write his books. His biggest business coups were made on Government stocks to finance the Napoleonic wars. The largest single loan—neatly timed four days before the victory at Waterloo—was for £36m. His most famous treatise, "The Principles of Political Economy and Taxation," was first published in 1817, soon after he had retired to the country, to a house whose academic tradition is carried on by its present owner, Lord Butler.

Frank Taylor: "I can't speak too highly of the Midland. Wonderful service, both at home and abroad."

Frank Taylor, Founder, Chairman and Managing Director of Taylor Woodrow built his first pair of houses some 50 years ago in Blackpool for £1,000 freehold each.

A few years later, he came South to develop a site in Hayes, Middlesex, "liked the look of the Midland branch," and has kept the account there ever since.

Over the years the Company, now operating in all 5 continents with the renowned 'teamwork' symbol, has been responsible for such famous projects as Calder Hall, the world's first, and Wylfa, currently the world's largest, nuclear power stations; the new Euston terminal; City Arcade, Perth, Western Australia; Ocean Terminal, Hong Kong, and—the site in the picture—£30 million World Trade Centre development of St. Katherine by the Tower, in the City of London. All this is contributing to an annual turnover of £100 million.

"We've asked a lot of the Midland Bank. How's it gone? We have a saying in the Taylor Woodrow Team—'That's not unsatisfactory.' But our Midland relationship—THAT IS SATISFACTORY!"

The Midland would like the chance to help you too.

Your nearest Midland manager will be delighted to talk over any problems *you* may have, without obligation of course.

Almost certainly, the Midland can help.

THE WORLD *International Report*

The Germans get set for the ratification dress rehearsal

FROM OUR SPECIAL CORRESPONDENT *Bonn*

West Germany seems farther than ever this week from the goal of a bipartisan foreign policy towards the communist world, despite Wednesday's much-publicised "summit" meeting between government and opposition leaders at the chancellor's residence in Bonn. Herr Brandt had arranged to meet the opposition Christian Democrats a few weeks ago, when defections from the ranks of his coalition in the Bundestag seemed to threaten the prospect of his obtaining the ratification of the treaties that he signed with Russia and Poland in 1970. "Willy panicked, and felt he needed to make a conciliatory gesture to placate us, and we could not refuse to reciprocate," was a leading Christian Democrat Bundestag deputy's version of the situation earlier this week. "But now he seems to have sorted his chaps out, so he did not really need the meeting after all. But he could not back out of it. Nor could we." No wonder the meeting has proved a damp squib.

The Christian Democrats' own contribution to making it no more than that was Monday's announcement, which must have been calculated to infuriate the government, that Herr Gerhard Schröder, the former foreign minister who is now the opposition's main spokesman on foreign affairs, would be visiting China in July. What particularly annoyed the ministers was that they first learnt about it from the newspapers. And then, on the eve of Wednesday's meeting, the Christian Democrat party executive formally stated that the reopening of negotiations with the Russians was the absolute precondition for a return to bipartisanship in foreign policy.

So the opposition's demand that the treaties should be put on the shelf for a while and then renegotiated still stands. But so does the government's contention that to do this would anger not only the Russians, but also west Germany's allies, who put so much effort into negotiating last September's four-power agreement on Berlin with the Russians. The Berlin agreement, although it is officially quite separate from any deals that west Germany may make with the communist states, could be endangered too, Herr Brandt's supporters argue. They can now cite the warning to that effect given by Mr Gromyko in a speech delivered in Moscow on Wednesday, when he also ruled out all idea of renegotiating the treaties.

Herr Rainer Barzel, the leader of the Christian Democrat opposition, and his colleagues resent such suggestions. They complain that a "war of nerves" is being conducted against them by a desperate government that is pulling out all the stops in order to secure the ratification of the treaties. They concede that a refusal by the Bundestag to ratify the treaties would probably be a nuisance from the western powers' point of view. But they are not impressed by the government's hints that west Germany could find itself isolated if the treaties are not ratified. They get particularly hot under the collar when they hear it said that they are really opposing the treaties only because this gives them an opportunity to harass and, possibly, defeat the government.

There is probably more than a grain of truth in that charge. It is widely rumoured that many leading Christian Democrats really have no objection to the treaties. Nevertheless Herr Barzel and his colleagues, and especially Herr Schröder, have been able to build up a certain amount of public support for their insistence that the goal of eventual German reunification should somewhere be officially reaffirmed. Similarly, they are gaining ground by concentrating on the need to make the

It's a war of nerves for Barzel

communists concede more of those real "human improvements" that Herr Brandt seemed so keen on back in 1970, when he first talked to the east German prime minister, Herr Stoph, in Erfurt. It may not be realistic politics so far as the east Germans are concerned, but it is helping the opposition to make debating points against the government.

The opposition's contention that Herr Brandt concluded an unsatisfactory treaty with the Russians in 1970 because he urgently needed a major foreign policy success to cover up for his government's lack of domestic achievement has, paradoxically, been strengthened by the recent actions of the communists themselves. The decision to let west Berliners visit east Germany over Easter and Whitsun; Mr Brezhnev's statement on March 20th that Russia recognised the "reality" of the European Economic Community (after Herr Barzel had made this one of his conditions for taking the Russians at all seriously as negotiating partners); last week's inclusion of west Berlin in the first trade agreement between west Germany and Russia since 1963; and Mr Gromyko's hint that some Germans will in due course be allowed to emigrate from Russia—all these recent concessions have been hailed by the Christian Democrats as evidence

that Russia could and should have been induced to pay a bigger price for its treaty. They have caused embarrassment to Herr Brandt's supporters, who privately admit that further Russian concessions at this stage could be extremely damaging.

At the moment, however, it still looks as if the treaties will be ratified —perhaps to the secret relief of Herr Barzel and his colleagues. Some of them, like Herr Franz-Josef Strauss on television on Monday, have already hinted that they would abide by the treaties once they are ratified. And although there is always a chance that somebody might seek a ruling on the treaties from the constitutional court in Karlsruhe—a *Land* government, for example, could do this—few observers in Bonn think that will happen if the treaties are ratified in May.

But there is still the big hurdle of the extremely important *Land* election on April 23rd in Baden-Württemberg to be got over. There the government's record on issues like the economy and law and order is hotly attacked by Herr Barzel and his men. If the Christian Democrats gain an overall majority in this south-western region (and most people expect that they will) and if the Free Democrats, who are now Herr Brandt's partners in Bonn, do very badly, then some Free Democrats in the Bundestag may begin to waver and look toward the opposition for their future jobs and party political propects. The first chance to judge the effectiveness of that threat to Herr Brandt and his coalition will be provided by the budget debate shortly after April 23rd, which Christian Democrats describe as a dress rehearsal for the final battle over the treaties. If the government does badly in the budget debate, then there could still be some rude shocks in store for Herr Brandt on May 4th.

Vietnam

It looks like a long haul

FROM OUR INDOCHINA CORRESPONDENT
Saigon

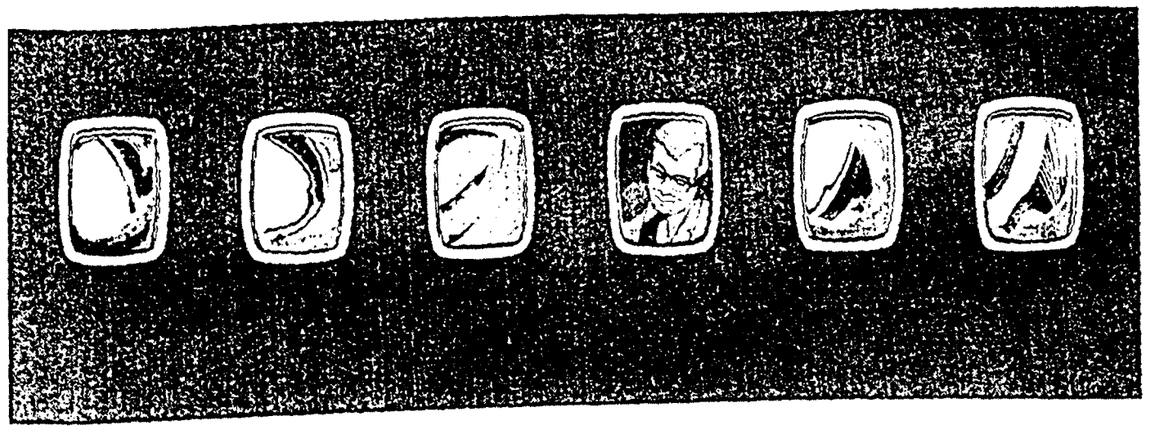
The present offensive in Vietnam is likely to be a long one. Having launched a campaign on several military fronts against South Vietnam, the communist leaders in Hanoi are still holding many of their options open. But it looks as though the pressure will be maintained south of the demilitarised zone and in Binh Long province,

70 miles north of Saigon, where the North Vietnamese have already established footholds. They are also likely to open a new major front very soon in the central highlands, directed against Kontum. This could be followed by extensive fighting in the central coastal province of Binh Dinh, bringing local communist units into play for the first time.

At some point it seems certain that the communists will issue a new peace formula designed to appeal to American voters and to the increasingly nervous South Vietnamese. Madame Binh's return to the Paris peace talks supports this expectation. Direct military attacks against Saigon and a widespread guerrilla offensive similar to that of Tet, 1968, are seen as longer-term communist options, rather than as immediate threats. The Vietcong are generally thought to be not ready for them. But Saigon can expect new rocket attacks.

It is still too early to make any firm judgment on the crucial question of how well the South Vietnamese army (ARVN) is performing—in other words, whether Vietnamisation will pass its first real test. Initial reports of a lamentable collapse by the ARVN Third Division in the face of the North Vietnamese invasion across the demilitarised zone were perhaps exaggerated. Most of the division has now regrouped after withdrawing some 10 miles, and the situation in Quang Tri this week was far more stable than anyone believed possible a week ago. Some observers say that time is now on the ARVN's side. Certainly the communists have suffered some big losses, especially from air strikes, and their Russian-built tanks have received a hammering.

It is regarded in Saigon as significant that North Vietnam has committed very nearly its entire army to the present campaign (although not all of it is yet engaged in combat), and that many of the first-wave troops sent across the demilitarised zone were raw teenagers with little training. North Vietnamese prisoners tell of having received their movement orders as early as March 20th, indicating that the offensive was already being cranked up before President Nixon's suspension of the Paris peace talks.



In the narrow strip of territory now occupied by North Vietnamese forces just south of the demilitarised zone, communist hamlet and village councils have been set up, each consisting of

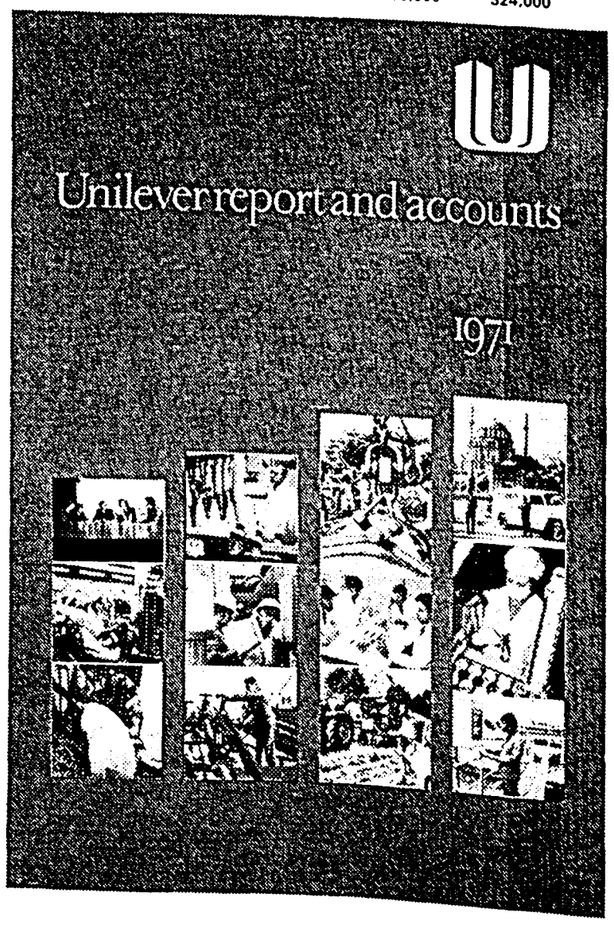
Unilever's Year

The Annual Report and Accounts of Unilever for 1971 are published today

Unilever's annual Report and Accounts for 1971 (published today) records a successful year, despite the slowing-down of economic expansion in Europe, and continuing inflation.

Sales to third parties are up 7% on 1970. Operating profit rose by 23%.



Working capital has been reduced, liquidity was improved, and interest charges were materially lower. Profit accruing to ordinary capital increased by £24.8 million or 33%.

Thanks to determined and successful efforts by management and staff to improve productivity and reduce costs, these higher returns were achieved in conditions which made it difficult to increase the volume of sales.

Final dividends recommended are 6.68p per 25p ordinary share of Unilever Limited, and Fl.3.69 per Fl.20 ordinary capital of Unilever N.V. Total dividends therefore will be 11.20p per 25p share, and Fl.6.20 per Fl.20. For 1970 total dividends were 9.415p and Fl.5.43, respectively.

Salient figures

	1970 £ million	1971 £ million
Sales to third parties	2,868	3,069
Operating profit	165	203
Interest on loan capital	12	13
Profit before taxation	156	196
Taxation on profit	76	91
Profit accruing to ordinary capital	75	99
Ordinary dividends	35	41
Profit retained	40	58
Capital employed	1,140	1,199
Net liquid funds	53	124
Capital expenditure	114	101
Depreciation	77	79
Ordinary dividends		
Limited—per 25p of capital	9.415p	11.20p
N.V.—per Fl.20 of capital	Fl.5.43	Fl.6.20
Number of employees	335,000	324,000

Unilever comprises Unilever Limited, Unilever N.V. and their respective subsidiaries which operate in more than seventy countries. The Report and Accounts of Limited as usual combine the results and operations of Limited and N.V. with the figures expressed in sterling.

The Report and Accounts of N.V. give the same information in the Dutch language with the figures expressed in guilders. English, French and German translations of the Dutch version, with the figures remaining in guilders, are also published.

Copies of all versions are available from Information Division, Unilever House, London E.C.4 and from Unilever N.V., Burg. s'Jacobplein 1, Rotterdam.

seven commissars. Communist news agency reports say similar councils have been formed in the Loc Ninh area north of Saigon. In Quang Tri the communists apparently did not try to prevent local inhabitants fleeing south if they wished, and the majority did so. Whether they headed south out of political preference or to avoid the inevitable fighting is debatable.

Air power is certain to play an increasingly pivotal role in the American and South Vietnamese counter-offensive. By adopting conventional military tactics including dependence on tanks, truck convoys and heavy artillery, the North Vietnamese have become more dependent on road communications and more vulnerable to aerial attack. Realising this, they have installed a formidable array of anti-aircraft sites in the vicinity of the demilitarised zone, some with Sam missiles. For the first time, an American B-52 bomber was hit and slightly damaged by a Sam this week, during a high-altitude raid.

The offensive has raised the usual speculation in Saigon about President Thieu's personal position. As yet he seems secure enough, but one may expect communist attempts to undermine his position by drawing away American and local political support in the weeks ahead.

Pakistan

Bhutto mounts the plank

FROM OUR SPECIAL CORRESPONDENT

The opening of peace negotiations with India is a little like mounting the gangplank for President Bhutto. He cannot afford to ignore the vocal anxiety of families throughout Pakistan for the release of the 93,000 prisoners of war or the pressure in the central Punjab and Sind for the evacuation of Indian forces from the land they occupied in the December war. On the other hand, many of his people still reject any concessions to India as an intolerable affront to Pakistani pride.

The Pakistani president, however, has now firmly placed his foot on the boards. His exchange of letters with Mrs Gandhi paves the way for a meeting between emissaries from both sides. The time and the place of the meeting has yet to be agreed though it seems likely that the participants will be Mr D. P. Dhar, Mrs Gandhi's chief foreign policy troubleshooter, and Mr Aziz Ahmed, a personal confidant of Mr Bhutto who was brought in to lead Pakistan's ministry of foreign affairs. Their discussions should at least mark the beginning of regular contacts. Apart from preparing the ground for a summit meeting they could also pave the way for a resumption of diplomatic relations, the reopening of the borders and trade exchanges, all of which would help reduce tension and make a settlement easier.

Mr Bhutto seems to be sincere in saying that he would like an end to the era of confrontation with India, both because he does not believe that Pakistan could win any future conflict and because he wants to remove the threat to civilian rule posed by the army and concentrate on development. He is probably as eager as Mrs Gandhi for mutual reductions in armed forces. It is also possible that he would privately agree to India's demand that Pakistan recognise the ceasefire line in Kashmir as an international frontier but only on the proviso that he was given a year or two to prepare his countrymen for a formal declaration to that effect.

But there is a real question whether Mr Bhutto has the political authority to make any commitments of lasting value. The army has been getting more cocky and officers talk as though the recent war was not necessarily the last. And on Wednesday Mr Bhutto's talks with the Pathan leader, Mr Wali Khan, were breaking down. How seriously, therefore, Mrs Gandhi is willing to negotiate must depend on her assessment of Mr Bhutto's political grip.

Cyprus

Makarios still on top

After weeks of rumour and speculation, it is now as certain as anything can be in Cyprus that President Makarios and General Grivas have met. Whether their secret confrontation (reportedly at a house on the outskirts of Nicosia, around the end of March) produced any kind of genuine accommodation is, however, another matter. Sources close to General Grivas say that he is still adamant that the archbishop must relinquish the presidency, and that enosis (the union of Cyprus with Greece), or possibly some subtle variant of it, is the only admissible formula for solving the perennial Cyprus problem. But, for the moment, the meeting of the two rivals is perhaps a sign that the crisis sparked off by President

I never lose face

Makarios's importation of a large consignment of Czech arms has been largely defused ; and it is significant that the Greek government, while not formally dropping its demand that the archbishop should reshuffle his cabinet to include pro-enosis representatives, is no longer harassing him publicly on the issue.

So, once again, the archbishop seems to have come out on top. It may be argued that by treating with General Grivas, who is still blatantly laying lines for a possible military coup, he has lost face ; the truth is rather the reverse. Merely by emerging from his lair (he has been in hiding since he arrived in Cyprus secretly last September), General Grivas has shed some of the mystical aura that fascinates many of his followers. His willingness to meet the president strengthens the theory that he and the Athens government are now at variance. While he may loathe President Makarios, he has no great admiration for the Greek prime minister ; and he is said to have been particularly angered by Mr Papadopoulos's dismissal of General Zoetakis, the Greek regent.

With the slight easing of tension, there is now a sporting chance that the expanded constitutional talks to work out a definitive solution will get under way. This might sweep the Cyprus question under the rug again—for perhaps a month or two. But the events of the past few weeks have generated so much bitterness that it is hard to see any definitive solution in sight. And to the Turks, the mere suggestion of a tactical (and no doubt temporary) Makarios-Grivas accommodation comes as the confirmation of their deepest suspicions. If and when it comes to bargaining around the conference table, the Turks will be tougher than they were a year ago.

Iraq and Russia

The tip of the boot

Kosygin descends on Iraq

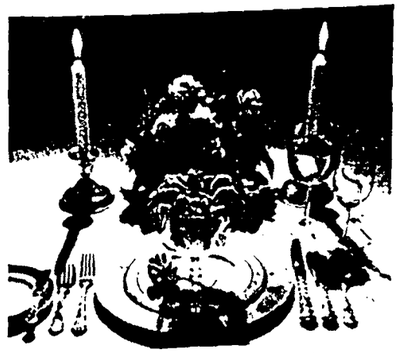
Mr Kosygin cut the ribbon and the oil flowed. A little oil, anyway. On April 7th production started at North Rumailah, one of the oilfields expropriated from the Iraq Petroleum Company and developed with Russian financial and technical assistance. According to Baghdad, the first ship load is already in a Soviet tanker on its way to destinations in Russia or eastern Europe. On April 9th Mr Kosygin and President Bakr signed a 15-year friendship treaty, similar to the Russian-Egyptian treaty signed nearly a year ago. On April 11th a Soviet naval squadron began a five-day goodwill visit to the Iraqi port of Umm Qasr. Friendship is, indeed, a lovely thing.

The initial yield from North Rumailah will be about 5m tons a year. This is only peanuts compared with the oil that the IPC, despite the bitterness of the open-ended quarrel over expropriation, continues to export from Iraq. It is, all the same, a turning point—though the direction of the turn depends, partly, on the measures that the IPC's shareholders, an international group of major oil companies, may take in retaliation. Mr Saddam Hussein, Iraq's Baath party boss, claimed that with Russian help Iraq had at last managed to break the oil companies' monopoly of production and marketing. In response, Mr Kosygin rejoiced over the forced retreat of colonialists, capitalists and all such bad men. What it adds up to is that Russia has made a start in establishing a Middle East oil source. This, if it leads to larger operations, could be useful in helping Russia to keep up with eastern Europe's growing demands and thus releasing its own supplies for other markets ; a project for transporting Siberian oil to Japan is, for instance, in the air.

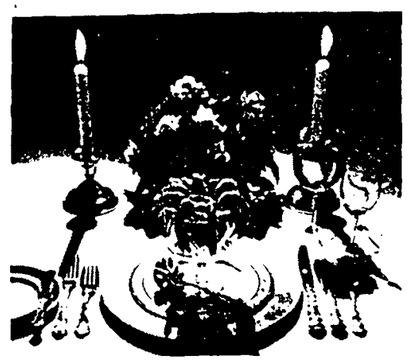
But this is only one aspect of Russian-Iraqi friendliness. Iraq's great value from Russia's point of view is its superb geographical position : it leads outward to the Gulf with its collection of rich, western-oriented states and kingdoms ; it also outflanks the Nato and Cento positions in Turkey and Iran. True, Iraq is no alternative to Egypt ; despite its repeated efforts to join some Arab club or other, it is too bottled up by its own power groups to have much influence on the Arab world to its west, let alone on the Arab-Israeli conflict. The importance of the Iraqi alliance is that it provides a foothold in precisely the position where it is useful, strategically and economically, for Russia to balance the tip of its boot.

Iraq's neighbours are playing the new development coolly, though the Kuwaitis have privately allowed their nerves to show. The Shah of Iran, who might have been the first to over-react, has been markedly restrained. Before Mr Kosygin descended on Iraq, the Iranians made discreet inquiries from the Russians, which produced an informal assurance that nothing was intended that might damage Russian-Iranian relations. The Shah, one presumes, is less than assured. But he may, uncharacteristically, be taking the advice of those advisers who believe that his recent boast that Iran would be the strongest military power in the Middle East within five years, and his preparations to this effect, are partly responsible for Iraq's turn to the Soviet Union.

The western powers have banked their money, and their arms, on Iran ; Russia may now be deciding to put considerably more effort than before into building up Iraq. While the Iraqi regime is treated dismissively by many other Arab governments, it could well have a better chance of survival than most. The regimes now in danger of losing out are the ones that could be caught between a western-directed push from Iran and an eastern-directed push from Iraq. At the least, a new factor has been added to the edginess of politics in the Gulf—and beyond.



Earthquake



FROM OUR SPECIAL CORRESPONDENT

Before the earthquake in southern Iran on Monday Qir was a township of 7,000 people, 100 miles south of Shiraz. Few could tell by mid-week what Qir's future population will be. At that stage the estimates ranged up to 7,000 dead in the town and the surrounding area, although this is one of the more sparsely inhabited parts of Iran, peopled largely by Qashkai, tribes who live in tents. Getting to Qir this week was a question of building the road and carrying the car part of the way as you went. Your correspondent, who got there with the first journalists on Tuesday, took six hours to cover the distance from Shiraz. Only trucks and helicopters could be sure of making it.

A dust cloud hangs over the huge valley, whose lushness this spring, after the first real rains in four years, mocks what came after them. Bodies lie by the stream, most of them in shrouds. Some are tiny. Fortunately the vaccinators came through this valley two months ago. The town of Qir is razed to the ground ; there are no half-standing houses left as there were at Agadir in 1960 or at Skopje in 1963. The houses were made of heavy baked mud and brick, weak when they stood and lethal when they fell. Only the street lighting poles remain. All round the outskirts sit the surviving women and children, wailing and chanting in rotation. The men were luckier, most of them being out in the fields by 6.30 in the morning when the earthquake struck. But two days later they were still too numb to do much. Soldiers dug in the rubble while townsmen dug their own families' graves. One oldish man who had four crumpled heaps, his whole family, to dig back into the ground, pleaded : "Please help me dig, I am alone."

How to tell a good hotel waiter from a bad hotel waiter.

The way we see it, a waiter is a lot more than the chap who fetches the peppermill and brings the check.

We think he should welcome you, suggest a few specialties, keep the champagne flowing, and do everything in his power to make sure everything is perfect for you. Right down to the order of your forks.

A glorious pipe dream? With us, it always comes true.

You see, when we opened our very first Inter-Continental Hotel 26 years ago, we were determined to be our own worst critics.

If anything could turn out less than perfect, we wanted to know what and where and why. Way before it happened to you.

That's why our Quality Control Manual contains no less than 800 questions on every hotel service you could name. Light bulbs, laundries, wine lists, the works. It's probably the most effective Quality Control System in the industry.

And believe us, it shows.

Not just in our service, but in the people we hire, too. And you'll sense that the minute you walk into any of our 63 hotels.

A difference in the way you're greeted, the sizzle of a steak, the pop of a champagne bottle, the care you receive.

All very gracious and very elegant. And very Inter-Continental.

And if that sounds like a rather appetizing description of 63 of the world's most exciting hotels, well...

We've got 21,500 rooms (and 7,000 waiters) that say you're right.

For reservations, call Inter-Continental Hotels or your travel agent.

Palestinians

Demagoguery

FROM OUR LEVANT CORRESPONDENT

The windy resolutions of the meeting of the Palestine National Congress, which ended on Tuesday in Cairo, showed that in the endless political outbidding that has always plagued the Palestinian national movement the demagogues are again making the running. After King Hussein's federal proposals for a Jordanian-Palestinian kingdom, the Jordanian regime has once more replaced Israel as the main enemy of the Palestinian commandos. But the punitive actions against Jordan recommended by the congress are to be taken not by the Palestinians but by Arab governments. Few governments are expected to oblige.

President Sadat made militant verbal propaganda against Jordan in his speech at the opening of the congress on April 6th, and Egypt has joined its federal partners, Syria and Libya, in breaking its formal diplomatic links with Jordan. This by itself is of small consequence. The more serious threat, being aired in Cairo, that Egypt should close its airspace to Jordanian planes remains, so far, no more than a threat. The congress called for a blockade on Jordanian goods but Syria last week actually relaxed the blockade it had imposed in 1970 by allowing Jordan to resume 40 per cent of its phosphate exports that pass through Syria on their way to European markets.

If the commandos try to infiltrate into Jordan for sabotage or assassination they are likely to have as little success as they have had in Israeli-occupied territory. The Jordanian security forces are united, efficient and vengeful. And Jordan, unlike Israel, retains the death penalty. Moreover such activity would alienate the many East Bankers, Palestinian as well as Jordanian, who are weary of violence, still further from the commando movement.

Sadat won't take them seriously

The Egyptians, revealing the cynicism of their attitude towards the resistance movement, have recently brought back into public life Mr Ahmed Shukeiry, the Palestinian leader who was rightly deposed and discredited after the June, 1967, war. Mr Shukeiry spoke to the congress and was listened to. That the Palestinians should have allowed this is proof either of their forbearance or of their inability to refuse the wishes of an Arab government, particularly Egypt. It emphasises their urgent need to make a clean sweep of their leaders, past and present.

Lebanon

With the UN seal

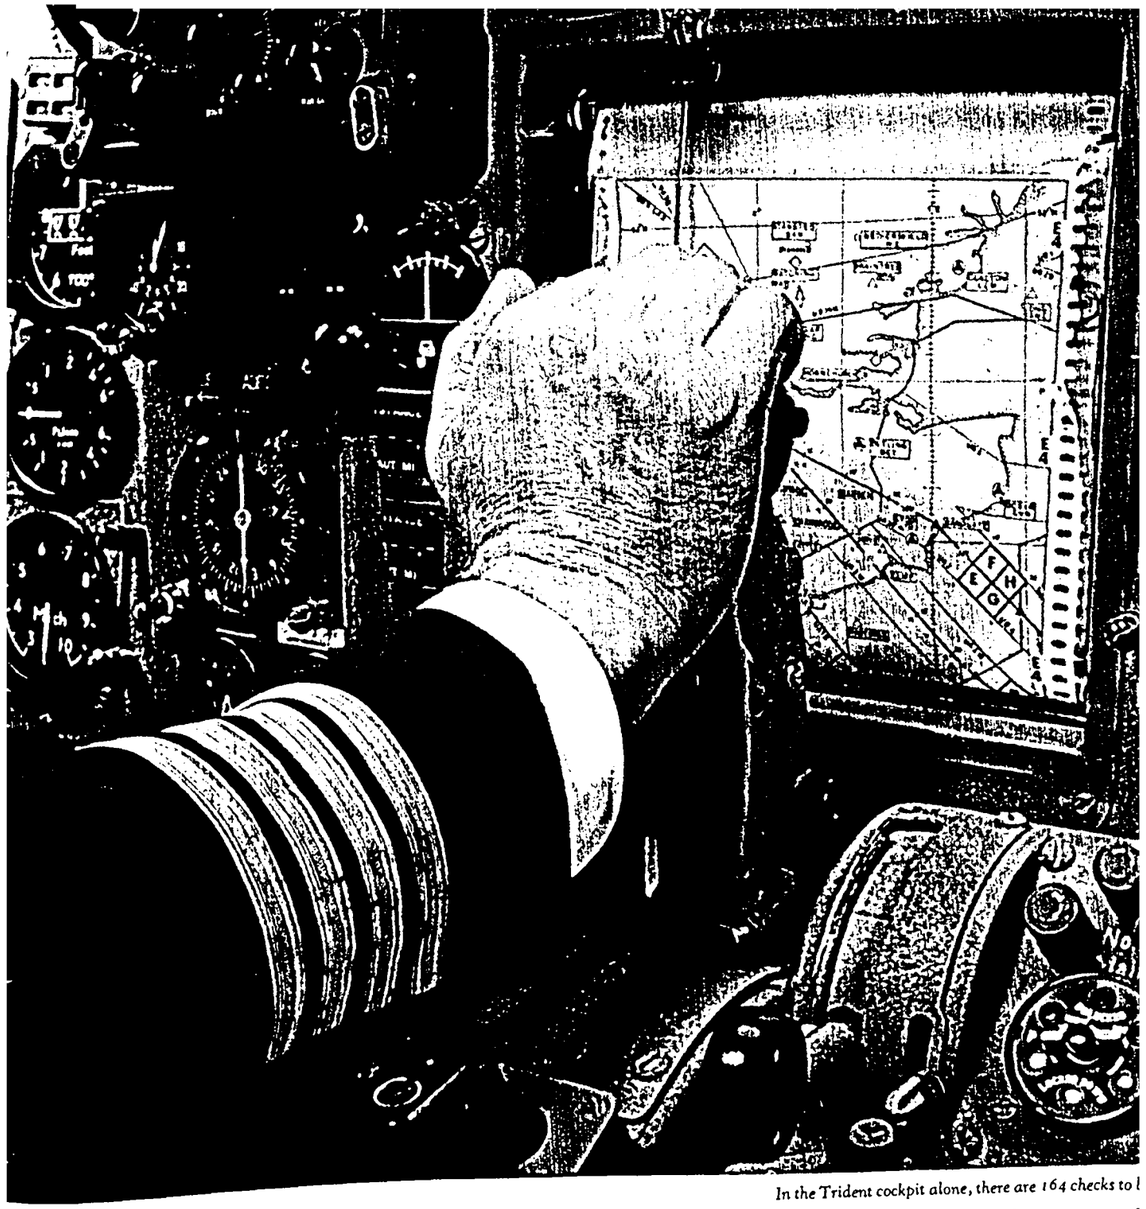
FROM OUR LEVANT CORRESPONDENT

Lebanon has asked for, and the United Nations may agree to provide, 15-20 more observers to augment the seven-man force that at present patrols the Lebanese-Israeli frontier. These observers cannot be expected to preserve peace across the frontier but their presence can help the Lebanese army to do so—and is a means of affirming the international character of that threatened border. In the Middle East, as in Kashmir, the presence of a UN observer force has never been anything but a face-saving arrangement which enables the host countries to do what they want, or are obliged, to do, that is to behave peaceably.

After the disproportionately heavy reprisal raids on villages in southern Lebanon last month, following a brief spasm of Palestinian commando activity across the border, the Lebanese army moved on the heels of the withdrawing Israelis into the Arkoub area, hitherto known as Fatahland. If it were not for this reasserted Lebanese military presence, and the control of the frontier that it implies, the request for more observers could have been a dangerous move for Lebanon because its reports confirming commando sniping across the frontier would have given international sanction to Israeli reprisal raids or even occupation. As it is the Lebanese army can point out to the commandos that additional international witnesses make their activities doubly dangerous for Lebanon. This, in turn, entitles Lebanon to take doubly secure counter measures. In effect this means that the commandos have lost their last "open" sector for operations against Israel.

Logically Israel might have welcomed this move ; in fact, like the Palestinians, it has objected to it. Israel's argument is that the observers cannot police the 75-mile-long frontier effectively : small groups of infiltrating commandos would be able to slip past them undetected though not, of course, the counter attacks of Israel's regular armed forces. But this, the Lebanese believe, is not Israel's real objection.

In June, 1967, Israel unilaterally denounced all the armistice agreements that covered its frontiers with its four Arab neighbours, including Lebanon, even though Lebanon took no part in the June war. According to Israel all its frontiers are now provisional cease-fire lines. This, so far as Lebanon is concerned, is a much more fragile and dangerous arrangement than an armistice line based on an established international frontier. Lebanon is acutely aware that ever since the first world war many zionists have argued that the Jewish state's "ideal" northern frontier should include what is now southern Lebanon and its water resources.



Israel maintains that the present UN observer groups are not a continuation of the old UN truce supervision organisation but a new ad hoc set-up. This has been accepted for Syria, Jordan and Egypt where the frontiers are new ones, but Lebanon rightly claims that its southern frontier is on the international line, as it was before 1967, and that it is being policed by the UNTSO as before. Hence an increase in UN strength along this line helps to solidify the unchanged character of the line itself.

This remains true only if the line is not violated from the Lebanese side. Lebanon has now assumed the responsibility, with the UN providing an additional and respectable reason for doing so. Yet the UN observers in southern Lebanon may have the dubious distinction of facing the possibility of being shot at not from the usual two sides but from three.

Zanzibar

Jambo, Jumbe

Sheikh Abeid Karume, the dictator of the beautiful coralline island of Zanzibar, died in a hail of bullets in the headquarters of his Afro-Shirazi party last Friday night. Radio Zanzibar later reported that three of his four murderers had been killed, and that the fourth had committed suicide. Probably not since the death of Verwoerd in 1966 has an assassination in Africa been

In the Trident cockpit alone, there are 164 checks to l

'All checks completed; commencing take-of

Taking off. Landing. And, in between, keeping the plane on an even course. That, you might think, more or less sums up a captain's job.

Not by a long way.

Even before boarding, the Captain is responsible for some 40 exterior checks. Once in the cockpit, another 164.

Meanwhile, each member of the cabin crew has been going through a checklist. When they've all finished – they report to the Captain.

The Engineer presents his report. Everything that's been done to the plane since touch-down, in full technical detail.

Only now, when every single aspect of the plane has had the Captain's personal approval, can he commence take-off.

Our Captains are perfectionists. We wouldn't have them any other way. Nor, we believe, would our passengers.

BEA

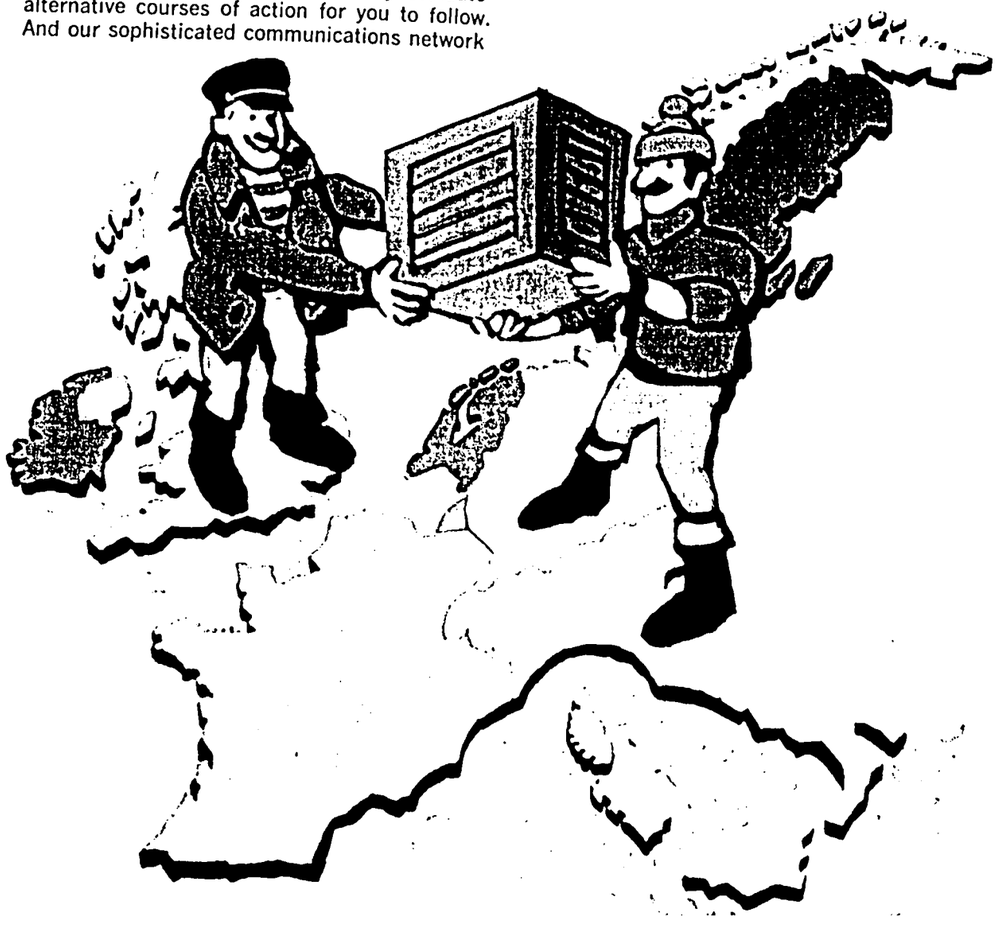
Your Captain wishes you a pleasant flight.

What can your banker tell you about Britain and the Common Market?

Can he tell you what advantages and disadvantages Britain can anticipate? Can he tell you what long-term gains all Europe can expect? Can he tell you the immediate effects on the pound sterling and the U.S. dollar conditions?

A Chaseman can.

Can your banker explain the significance of British accession to the Treaties of Rome by the mid-1970's? Can he tell you what acceptance of the common agricultural policy (CAP) will mean to international trade? Can he anticipate the reaction in the United States? In the U.S.S.R.?



A Chaseman can.

Chase Manhattan's huge worldwide network of branches, associated banks and representative offices reacts quickly to unexpected political and economic events. Our special analysts often anticipate these changes. They understand what consequences these events can have on your international business. They carefully evaluate alternative courses of action for you to follow. And our sophisticated communications network loses little time executing your decisions.

greeted with such wide approval.

Sheikh Karume presided over a brutal and despotic regime. Since the revolution in 1964—itself a pretty bloody affair—when the Sultan of Zanzibar was overthrown, he had eliminated political enemies, forced a number of girls of Persian extraction to marry members of his revolutionary council, and reduced the island's inhabitants to a state of nervous terror. He had enemies amongst those of Arab, Indian and Persian descent who formed the privileged class against which the 1964 revolution was aimed; he had enemies amongst the indigenous islanders whom he oppressed; and he had enemies amongst his fellow revolutionaries who disapproved of his methods and sometimes suffered at his hand. It is not yet known who killed him, but there was no shortage of potential assassins.

Yet the sheikh was not a wholly evil man. Having himself received a mere 18 months formal schooling, he was anxious that others should have more, and made education, as well as health services, free on Zanzibar. He also went some way towards improving the incomes of the peasants. More remarkably, he gave handsomely on behalf of the island to the victims of disasters, such as the 1970 cyclone in Pakistan and the 1971 drought in Kenya.

But if charity began abroad it ended there too: there were—and are—serious shortages in Zanzibar's shops, caused by Sheikh Karume's decision to allow almost no imports to the island. Although Zanzibar's near monopoly of the world's clove supply made the island rich in foreign exchange, it merely accumulated—much of it in the coffers of the Moscow Narodny Bank in London—until recently when, it is reported, the sheikh transferred the assets of £25m to his own account.

This was interpreted more as an act of spite against Tanganyika, off whose shores Zanzibar lies, than as an attempt to enrich Sheikh Karume. Since 1964 Tanganyika and Zanzibar have been joined under an interim constitution to form the united republic of Tanzania, whose president, Julius Nyerere, must sometimes have felt Zanzibar's reserves to be the only fruit of the union for the mainland. Mr Nyerere's high moral asceticism has always been highlighted by the erratic despotism of his island counterpart. His inability to intervene in Zanzibar's affairs has usually been accepted, even by his critics, but his decision not to break the union, presumably in the hope that his influence might prevent even greater excesses in Zanzibar, has caused him much embarrassment.

He will now be able to justify his wish to maintain the bond between the two countries if he can help bring about a more enlightened regime. On Wednesday he appointed Mr Aboud Jumbe, a former schoolteacher who became the minister of state in Sheikh Karume's office, to succeed the sheikh. This has raised hopes of better relations with the mainland. But it is still too soon to judge what shape events will take on Zanzibar. Those who rejoice at Karume's death might do well to look at South Africa since the assassination of Verwoerd in 1966.

Lesotho

A change of tune

FROM OUR SOUTH AFRICA CORRESPONDENT

Changes are coming to the tiny enclave kingdom of Lesotho which could seriously disrupt the South African government's vision of a future commonwealth of tribal states, docile under its own economic overlordship. Since it gained independence from Britain six years ago, Lesotho has in effect been the archetypal bantustan. Entirely surrounded by South Africa and dependent on it for the employment of half its population, the little country's conservative prime minister, Chief Leabua Jonathan, has traditionally taken the view that it would be fatal to do other than sing Pretoria's tune.

When this cautious line was threatened by an electoral victory of the less subservient Congress party at Lesotho's first elections in 1970, Chief Jonathan pre-empted the result by declaring an emergency, cancelling the elections and imprisoning the opposition leaders. There followed a period of savage political repression during which the monarch, King Moshoeshoe II, went into exile in Holland.

But, just when everything seemed securely battened down, Chief Jonathan himself began six months ago quietly to introduce a phase of change. First came a speech last October denouncing apartheid as abhorrent to all Africans. And although this stung the South African prime minister, Mr John Vorster, into a menacing warning that "You must not tempt me too far," Chief Jonathan repeated the speech last month. Simultaneously he staged an even more pointed snub to Pretoria by inviting South Africa's most strongly anti-apartheid MP, Mrs Helen Suzman, to be guest of honour at Lesotho's inaugural Moshoeshoe Day celebrations.

Jonathan clears the way

The most dramatic development came on April 1st, however, with the sudden dismissal of Lesotho's British chief of police, Mr Fred Roach, the strongman responsible for keeping Chief Jonathan in power. With him went Mr John McFall, commander of the police mobile unit, which was responsible for most of the bloody repression of Congress party cells in the mountains.

What these firings indicate is that Chief Jonathan is clearing the way for a coalition with his erstwhile Congress party enemies, to whom the sacked policemen are anathema. The Congress party leader, Mr Ntsu Mokhehle, is out of jail and in regular consultation with the prime minister. The king is back from exile. So the stage seems set for a national reconciliation—and a coalition government much less inclined to sing Pretoria's tune. For Mr Vorster, this has some awkward implications: the sight of an impudent Lesotho could cause his own followers to have second thoughts about bantustans generally. But although Lesotho is technically at his mercy, he dare not be seen taking action against it.

Chile

No Pompidou he

It is not just the French who go in for plebiscites, although Chile's President Salvador Allende must be feeling considerably more uneasy than President Pompidou about the referendum he has just threatened to hold. Dr Allende's problem is that back in February the opposition parties (who hold a majority in congress) passed the Hamilton bill, which is designed to curb the power of the executive to take over private companies. Until the end of last week Dr Allende was hoping for a backroom compromise with the Christian Democrats. But the Christian Democrats refused to play, and finally the leaders

of the non-marxist Radical Left party (Pir) who had been negotiating with them resigned from Dr Allende's Popular Unity coalition on April 6th on the grounds that his attempts to veto the Hamilton bill were unconstitutional.

Now there are only seven parties represented in the government. But the loss of the Pir means more than the loss of eight senators and two competent and moderate ministers. It means the collapse of Dr Allende's so-called "middle strategy" designed to restore the confidence of small businessmen and professional men by building up the non-marxist elements in the governing alliance.

As the Unctad conference opens in Santiago (see page 78) Dr Allende is facing the most acute political crisis he has so far had to contend with. His threats to dissolve congress and hold a referendum on the constitution ring a little hollow when one remembers that he got only about 36 per cent of the votes in the 1970 presidential election, and that there is widespread discontent at food shortages and inflation.

Having banned a housewives' protest march a few weeks ago, Dr Allende then felt he must decree that the "march for democracy" that the opposition parties staged on Wednesday should be rerouted a mile away from the Unctad buildings so as not to offend the eyes of foreign delegates. There has also been a wave of arrests of retired army officers and of right-wing Patria y Libertad organisers on the charge that they were plotting to stage a putsch at the end of last month. With a Chilean congressional committee beavering away at the papers Mr Jack Anderson charitably dredged out of ITT's files, Dr Allende may calculate that he can raise a right-wing bogy to scare more than half the voters into backing him in a pebiscite. If he succeeded, he would set up a one-chamber parliament that would be much more submissive to presidential initiatives. But all that will probably have to wait until he has finished playing host to Unctad.

Argentina

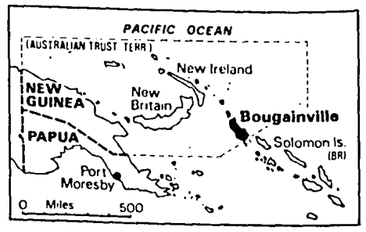
Two killings

Two men were murdered in Argentina this week. The first, Sr Oberdan Sallustro, was the Fiat executive who had been held hostage by the trotskyite People's Revolutionary Army (ERP) for three weeks. His captors finally shot him during a gun battle in the south-eastern suburbs of Buenos Aires as the police were closing in on their hiding place. His death may lead Fiat's directors to rethink their decision to pump $90m of new investment into Argentina over the next four years, although it would be wrong to assume that an isolated act of brigandage is a sign that the country is on the skids.

The other killing probably poses bigger immediate problems for President Alejandro Lanusse. General Julio Carlos Sánchez, the tough commander of the third army corps in Rosario, was ambushed on his way to his office on Monday. He had waged a successful campaign against the ERP and other terrorist groups in the town that has become their headquarters, and his death means that General Lanusse will have to think hard about how to juggle the commands of the four army corps so as to guard his flank against a barracks revolution.

General Sánchez was killed by a combined group of ERP guerrillas and members of the peronist Revolutionary Armed Forces (FAR). They say they have seven other soldiers and policemen on their black list. The ERP has already murdered a prefect of police and attacked army patrols and police posts in Rosario and Córdoba. Linked to the trotskyite Fourth International through the Workers' Revolutionary party (PRT), which provides a political commissar for each commando group, the ERP has emerged as one of the most active urban guerrilla movements in Latin America.

Papua New Guinea



As Bougainville blossoms

FROM A SPECIAL CORRESPONDENT

Port Moresby

Katanga in the south-west Pacific? Well, not quite, but the opening of one of the world's largest open-cast copper mines, which started commercial production in Papua New Guinea's Bougainville island on April 1st, has already turned some eyes toward the former Belgian Congo. For the territory of Papua New Guinea, administered by Australia and now on the verge of self-government, Bougainville island's copper is a bonanza. The mine, two-thirds owned by Conzinc Riotinto of Australia and one-third by North Broken Hill, represents a £183m investment, and sales—mostly to Japan—have been guaranteed for the first 15 years of production.

The copper deposits are the fledgling

nation's only hope of building something more than a beggar economy: Bougainville's copper is expected to double Papua New Guinea's export income and give the government £137m in company tax, royalties and dividends over the next decade, depending, of course, on the world price of copper. There are, however, two flies in Bougainville Copper's ointment. The first is that following the revaluation of the yen and recent legislation in Japan to control pollution caused by copper smelting, Japanese buyers are pressing for a renegotiation of their contract. But more important, perhaps, is the political situation in Bougainville itself.

Bougainville, 600 miles from Papua New Guinea's capital Port Moresby, is geographically and ethnically a part of the British Solomon Islands Protectorate and, but for a piece of territorial horse trading in 1899 by which the British ceded it to German New Guinea in return for trading concessions in Samoa and west Africa, it would still be with the Solomon Islands. Over the past four years a Bougainville nationalism has arisen whose aim is either a return to the British Solomon Islands Protectorate or alternatively plain secession. The politically conscious among Bougainville's own people nurse a grievance against Australia for alleged neglect of the island until the discovery of copper. As for the brown-skinned Melanesians of the New Guinea mainland, the coal-black Bougainvilleans regard them as another race.

The Australian government has so far refused to consider Bougainville's requests for a referendum on the question of secession, but it remains one of the imponderables of Papua New Guinea's future. Meanwhile Bougainville Copper is anxious to be in the clear whichever way the ball bounces. Before the recent general election it donated £1,370 to each of Papua New Guinea's three political parties, and it has set up a commercial trust on the island with £3.6m in credit facilities to involve the Bougainvilleans in the new business which it is hoped the copper will bring.

Together, we chose a Rover 3½ litre.

"The governor thinks I like to get my head under a bonnet that means business.

But the truth is, I never even have to think about her.

Power-assisted steering so I can park in the city with one finger on the wheel.

Thick leather armchair, which makes long waits something to look forward to.

And she's so quiet I can hear him snore at top speed.

He doesn't know it, but we got it to prove that a chauffeur's lot is an easy one."

"Forbes, interested as ever in my image, must have thought she'd be a suitable symbol of my promotion.

Well, it is the finest bit of four-wheeled prestige I've sat in what with its wood-panelled interior and noiseless grace.

But he doesn't know about my weekend secret.

Just let me get at that wheel and a 184 bhp engine with servo assisted brakes to show that this company can impress all sorts of company.

Besides, it must be pretty good value for money, for the firm to let me have a chauffeur."

Rover

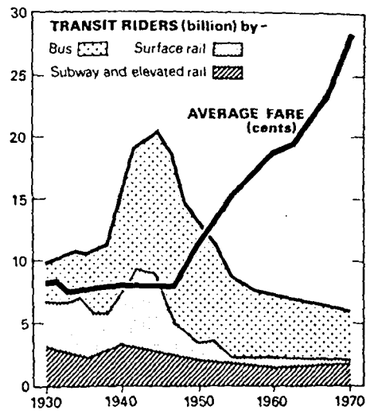
Public transport misses the bus



FROM OUR SPECIAL CORRESPONDENT

The prevailing current of opinion in the United States is in favour of systems of public transport—by bus, rail and tube—and against the motor car. This could produce a lot of promises in an election year. A first indication came recently when the Senate passed a bill to authorise the federal government to spend $800m over two years on subsidies for running bus and underground services. This measure, which has yet to get through the House of Representatives, would be a new departure ; so far the federal government has not given operating subsidies to mass transit undertakings, fearing that these would swell into a suffocating burden on the taxpayer and regarding operation as a local matter in any case. Help has been confined so far to subsidies for capital development and research and these seem likely to be increased this year, even if Congress does not allow the Department of Transportation to open up the huge and ever-growing highway trust fund. Until now this has been reserved for the building of roads but the department would like it to be used to finance the capital costs of all types of urban transport.

With the cities short of cash, the poor and the old definitely short of transport and mass transit systems losing $600m a year, there is great political appeal in something that spreads part of the financial and social burden of the ghettoes to the suburbs and at the same time relieves the agony of the middle-class commuter. But uncritical support for the motor car has given way to uncritical support for public transport, especially for underground systems, and a lot of money may be spent with meagre results. Of the $3.1 billion that the Department of Transportation is already spending on mass transit between 1971 and 1975 nearly three-quarters is going to suburban rail and subway projects. With the bulk of the cost being paid by Uncle Sam any mayor who can pull off a scheme for an underground has made political capital for himself. But improved bus services would be a better means of giving people mobility and at a fraction of the expense.

The cost of the Metro now being built for the capital of the United States has just escalated by $500m and will probably rise by another $500m to a total cost of $4 billion before it is finished. This is nearly $1,500 for every person in the whole Washington region. For the same price a minibus could be bought for every seven people. Congress has just had to be asked to approve a guarantee by the federal government for loans to cover the building costs of the Metro ; this reflects the lack of confidence by the financial community in the forecasts of the Metro's backers. The cost of interest payments on capital for the Washington Metro would alone be enough to allow free travel on the buses, hand out 50 cents to every passenger and double the bus services.

Emotion about the urban crisis is so great that any criticism of current plans for expanding public transport is regarded in many quarters as a sell-out to the General Motors Corporation (though GM is one of the big beneficiaries of mass transit subsidies, since it provides much of the equipment). Supporters of transport by rail argue that only thus can a density of 60,000 passengers an hour along the same route be achieved. But there are only about three corridors in the entire United States requiring such density of movement. Rightly or wrongly, the motor car has spread people out over a wider area and at

present only a bus or minibus has the flexibility to match this scattering of demand for transport on a remotely economic basis, although a number of other ideas are being studied.

Even in San Franciso the celebrated Bay Area Rapid Transit system will meet only about 7 per cent of the transport needs of the area when it opens eventually. Property is already being developed along Bart's route and there is every danger that San Francisco will repeat the experience of Toronto and Montreal, where the building of tubes led quite quickly to more rather than less traffic congestion on the roads, because more trips by bus, car, taxi and lorry were generated on the surface by property development than were generated underground by the subways. The other thing that has to be taken into account is the effect of tubes on local bus services. To the extent that subways win passengers from buses, and this is where a large part of their market comes from, the economics of bus systems deteriorate and services have to be withdrawn. This means that many people will be served less well because of the new subways.

At the same time there is a lot that can be done to improve the buses, whose present plight is due as much to the extraordinary sleepiness of their managements as to the automobile. Three things stand out which have

led to the financial downfall of mass transit in the United States and each alone is a recipe for bankruptcy. One is the flat fare system, which is responsible for the vicious circle between increases in fares and declines in the number of riders. Flat rates create a pattern of revenue that is excessively dependent on those travelling short journeys. Then, when inflation brings increases in fares, those suffering the biggest rises in relation to the distance that they travel are those who can most easily walk instead.

The second problem is that trade union contracts say that every man must be employed for an eight-hour day. Labour is by far the biggest cost in all forms of public transport but the bulk of this cost is needed to sustain services for only two hours a day. The number of men needed at the peak—and the peak is becoming more and more pronounced—is often five times the number needed during the rest of the day. If bus companies could employ part-time labour their financial problems would be relieved.

The third factor in the downfall of the bus is lack of marketing. Managers of mass transit systems think that publishing a timetable is marketing enough. But almost every other industry undertakes detailed research and tries to match its supply of services to the demand for them. In a motor car era with people's patterns of travel undergoing a revolution, bus companies have done practically nothing to alter their services, except to cut routes, although recent experiments show that, where companies devise means of providing a more rapid and convenient service of buses, they attract a lot of extra passengers.

At present there is no easy solution to the transport problems of the cities. People are not yet ready to invest the huge sums that would be needed to replace existing systems of transport with fancy technology that would combine the advantages of the motor car while eradicating its disadvantages, nor is the technology sufficiently refined to do this. Meanwhile controls on the motor car are inevitable, if the subsidies for mass transit are to get people out of their cars. It is only fair that a bus with 40 passengers should have preference over a car with only one. Sometimes this can best be achieved by giving buses precedence through traffic lights, sometimes by segregating them from other traffic for all or part of the day and sometimes by taxes on the motorist, such as higher tolls or parking charges. There may be more promise in approaches of this kind than in operating subsidies, which can only reinforce the complacent attitudes of both management and labour that have led to the present decline in the services offered by bus companies.

Test in Vietnam

Washington, DC

Manifestly, President Nixon's policy for a "Vietnamising" of the war in Indochina had to be exposed to a test sooner or later and nobody is surprised that it happened just now. The commentators and the spokesmen follow their habits, some explaining the timing with political arguments turning on the American election process or with diplomatic ones concerned with the President's foreign travels past and future; while just a few attribute the armed actions of the communists to military purposes.

At all events, the Administration did expect a flare-up in the communist attacks about this time and it did try to prepare the public for something of the kind, but in a muted way, since the last thing that Mr Nixon wants is for the war to become a dominant issue in the public mind again, to his disadvantage this year—as it was, to his profit, in 1968. What the Administration was not prepared for was the scale and violence of the North Vietnamese attacks across the demilitarised zone and from Cambodia into the Saigon region. Thus the North Vietnamese achieved surprise, after all. The Administration is uncertain how things will turn out and the tension is great.

When he made his choice in the spring of 1969, soon after his inauguration, Mr Nixon expected a shorter run of public tolerance for the continuation of the war than he has, in fact, encountered. The choice was to sue for peace on terms which he considered degrading or to transfer the burden of fighting on to the South Vietnamese while placating American opinion with successive withdrawals of American fighting men. Mr Nixon chose the second course. Withdrawing the American soldiers while continuing the war did, however, imply a period of reliance on air power and naval power as a stand-by support for the South Vietnamese in case of need. Aircraft carriers, air force squadrons and warships are now being brought to bear on a huge scale to save the land battle: whether the battle can in fact be saved in this way nobody quite knows.

Laird warns Hanoi

Mr Nixon is understandably not saying much. He did take the occasion of the ceremonial signing on Monday of the treaty on biological warfare to reprimand a great power (the Soviet Union, that is) which encouraged another "to use force or armed aggression against one or other of its neighbours"—but in sufficiently general terms for the Soviet Ambassador to see no need to take offence. Apart from that rather theoretical sally, the President has been leaving it to others to comment on the new, violent turn that the war has taken. His staff in the White House has been as taciturn as he. For once, the glory of spreading reassurance and uttering cheerful prophesy is being generously left to the State Department, the Defence Department and the military commanders.

These stout men are not backward in their duty. Plenty of assurances are to be obtained that the newly Americanised South Vietnamese army is turning out well and that North Vietnam (having, by these accounts, gone inexplicably crazy) has desperately thrown its last reserves into a forlorn hope. The press and the television reporters treat these assurances with open disbelief but they, too, have formed their habits and they are by now conditioned to expect the worst.

The truth is that nobody knows how it will come out. Military theories are being tested in the fire and different members of the military establishment plainly have their different views of who will be proved right. Some will rise, and some will fall, when all is over. The public, rightly bewildered, has shown no sign yet of being greatly aroused. After all, the conflict no longer threatens the lives of young American conscripts.

These Debentures have been sold outside the United States of America. This announcement appears as a matter of record only.

It's Mafia, but is it art?

The murder last week of Mr Joseph (Crazy Joe) Gallo in Umberto's Clam House in the Little Italy section of Manhattan came just as the national craze for the Mafia seemed to be at its height. Mr Gallo was one of the best-known members of the international crime syndicate which, even in modern America, has retained its ties of blood and affection with Sicily, the Mafia's home. No one, least of all the police, could say exactly why Mr Gallo was gunned down while celebrating his 43rd birthday with his family and bodyguard. Nor do they know why six other underworld figures with presumed Mafia connections have been slain during the past fortnight.

There are several theories: One is that Mr Gallo and his brother and colleagues from Brooklyn's Mafia family (as local organisations are called) ordered the shooting of one of the Mafia's patriarchs, Mr Joseph Colombo, at a public rally last June. Mr Colombo, who is said to have been paralysed since, had fallen out with the Gallo brothers because of his sponsorship of the Italian-American Civil Rights League. Recently Gallo had worked for another organisation, Americans of Italian Descent, and the rival groups were contesting for the support of Italo-Americans in the same Brooklyn districts. Joe Gallo always denied any responsibility for the Colombo shooting and many believed him ; yet he has been a marked man since. But another theory holds that he was killed by his own faction. A recent nine-year stint in prison seems to have changed him. He made friends with blacks (something many Mafiosi disapprove of), insisted that he was going straight and held a contract to write his memoirs.

If Mafia men watched the bestseller charts, they might drop their aversion to authorship. The novel, "The Godfather," based on their organisation, has sold 10m copies in paperback editions alone and it has been turned into a film which looks like becoming the box-office leader of the year. In just a few weeks, the film has made millions, restored Mr Marlon Brando to stardom and drawn unbelievably long queues of filmgoers all around the country. "Honour Thy Father," a non-fictional account of some Mafia leaders at home, revealed how the members themselves enjoyed reading "The Godfather." (However, Time magazine reports that the late Mr Gallo found the film's death scenes too flashy.)

But the Mafia is no comic book crime syndicate. It was powerful enough to have the words "Mafia" and "Cosa Nostra" (another of its names) excised from the script of "The Godfather." It could also have been the reason why Mr Dino de Laurentiis, the Italian film producer, suspended the New York production of "The Valachi Papers" ; his announcement referred ambiguously to "pressures." The film, based on the testimony to Congress of a Mafia flunky, may yet be made in Rome.

Meanwhile, with other Mafia films in train, there is public concern about what the current fad means. Is it a nostalgia for simpler days when in crime, as in war, the lines between bad and good were easy to see ? Or is it a symptom of a new cynicism about the integrity of American business and government ? This view, ignoring the brutality of the Mafia, holds that the organisation has only given people what they wanted—gambling, prostitution, money-lending—and has done so according to a code of honour and discipline for which there is grudging admiration.

St Peter will decide who did it

ELECTION '72

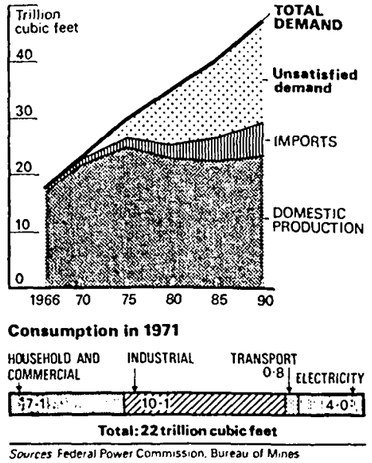
After Wisconsin

Last week's Democratic primary election in Wisconsin may have narrowed the field of contenders for the party's presidential nomination but it has not clarified the likely result, except to increase the possibility that a complete outsider may come out ahead at Miami Beach in July. Senators Humphrey, Muskie and McGovern are now bunched together in the lead with Governor Wallace of Alabama nipping at their heels whenever it suits him. Mr Humphrey's main concern now is to win a major election, something that he has never done except in his own state of Minnesota, to show that he is not a dedicated loser. His opportunity is coming in the next primary, on April 25th, in Pennsylvania where his trade union and Negro supporters are both strong. On the same day the primary in Massachusetts, full of students and liberal intellectuals, offers Mr McGovern what he needs most—another victory to keep his challenge rolling and the money coming in. He could also prove there that he really is broadening his base, to include blue-collar workers and suburban voters, not just in Wisconsin but nationally.

Between them these two candidates could squeeze Mr Muskie right out of the race, a danger that always threatens a centrist candidate, especially one who has been chary of taking a public stand on individual issues for fear of alienating potential backers. A change in Mr Muskie's strategy is obviously necessary, although his staff seem to have had some difficulty in convincing him of this. It appears, however, that he has now decided to let Mr McGovern have the popularity contest in Massachusetts and to concentrate for the next two weeks on beating Mr Humphrey in Pennsylvania. This is tactically wise since Mr Humphrey is competing with Mr Muskie for the support of party organisations and state officials—the support on which Mr Muskie's original lead was founded. Together Mr Muskie and Mr Humphrey represent the Democratic establishment which will never back Mr McGovern unless it is forced to recognise that his new populism offers the party its only chance of beating President Nixon in November.

So far none of the candidates is within sight of collecting the clear majority, 1,509 votes, that is needed to win the party's presidential nomination at the convention. Even Mr Muskie, in the lead here with 96 delegates pledged to him, is only just ahead of Mr McGovern; but this is where the backing of local party officials becomes important. For instance, even if he does not campaign in Massachusetts, Mr Muskie expects to pick up a number of delegates there in districts where he can count on the help of his friends—Mayor White of Boston, for example. Instead of dissipating his energies in all, or nearly all, of the 20 Democratic primary elections that are yet to come (most of them in May), Mr Muskie is now said to be planning to devote himself to the populous states which send large delegations to the convention, starting with Pennsylvania and going on to Ohio, California and New York ; after all, he did well, collecting 60 delegates, in Illinois, the only really important state which has had a primary election so far. And over half the states do not choose delegates in primaries at all, but at party meetings ; these need attention also.

Gas gap



Natural gas now supplies a third of America's energy and the share would be higher if more gas were available. For some time gas companies in certain parts of the country have been refusing to take on new customers and cutting back supplies to industrial consumers. This non-sulfurous fuel does not conflict with the increasingly severe restrictions against air pollution, as do most other fuels, so potential demand for it is expected to double in the next 20 years. But, according to the official forecasts, production from domestic wells will reach a peak of just under 25 trillion cubic feet in 1974, only slightly more than last year, and will then fall off. Imports from Canada are expected to double, to nearly 2 trillion cubic feet a year, by 1990, with the development of new fields in the north-west, and rather more than that should be coming by then from the American reserves in Alaska.

This gas will come by pipeline but a more substantial contribution—2 trillion cubic feet a year by 1980, 4 trillion by 1990—is supposed to be coming by tanker, in the form of liquefied natural gas. Most of this is to come from North Africa, although the possibility of obtaining supplies from Siberia is being looked into. Small quantities to meet emergency situations have already been allowed in but in March the Federal Power Commission approved a long-term contract for LNG for the first time. Distrigas Corporation of Boston may bring in 14 tanker loads of LNG—15 billion cubic feet—a year for the next 20 years to serve customers in the fuel-short north-east of America. This is only a beginning, both in the development of the commission's policy towards such imports and in the issuance of permits for them. Other important applications are pending.

So are applications for permission to bring in petroleum products, such as naphtha, outside the quotas which regulate oil imports, for conversion into synthetic natural gas. Some firms, the Brooklyn Union Gas Company, for instance, are proposing to use domestically-produced oil for this purpose. Plants of this kind could be in operation by 1975 but it will take much longer for any gas to come from the numerous pilot projects which are now under way, with government backing, for making synthetic gas from coal.

Even then, however, a dangerously large deficiency will still remain to be filled (by other fuels, presumably) even if additional domestic sources of natural gas are developed. The FPC's staff report, on which these estimates are based, recognises that exploration for new supplies is likely to be stepped up as the result of the higher prices for natural gas which were permitted last year by the commission with this purpose in mind. Annual consumption of natural gas is now regularly exceeding the discovery of fresh reserves.

Forecast for natural gas

Sources Federal Power Commission, Bureau of Mines

Last week the FPC proposed a further relaxation of its controls over the prices that may be paid to producers for new gas which has not already been contracted for by interstate pipeline companies. Under this proposal gas would apparently be allowed to double, or even treble, in price, to approach the much higher levels at which imported LNG and synthetic gas will be sold. Moreover, the FPC would promise not to roll back the new prices once they had been agreed. If the plan actually goes through, it will please, although it will hardly satisfy, the producers who insist that the shortage of gas is largely due to the commission's controls on prices. The impact of the increase on consumers will only be gradual since the more expensive gas, whether domestic, imported or synthetic, will be mixed in with that being sold under existing contracts. And the growth in demand will presumably be held down, even if only marginally, by the higher prices. Nevertheless protests are certain.

Post blacked

It is a bit hard on the Washington Post that it should become the first newspaper to be the subject of a complaint to the Equal Employment Opportunity Commission. The complaint comes from seven of the Post's 21 black writers and photographers ; they say that the paper employs too few blacks and refuses to promote those it does employ to the plum jobs on the national and financial staffs or to positions of editorial and managerial responsibility. Yet by comparison with other newspapers the Post, a liberal journal and a great battler for racial justice, is not doing badly.

The comparison, however, is hardly an exacting one : in 1970 there were 121 Negroes among the 7,152 members of the editorial staffs on all of America's daily newspapers ; only five of these blacks were in executive positions and able to influence the handling and interpretation of the news. The liberal New York Times does less well than the Post, with only 22 members of all minority groups among its much larger number of writers and photographers.

Even today's token number of blacks on metropolitan dailies would hardly be there if riots in the 1960s had not made it a matter of urgency to find men who could enter the ghettoes and report at first hand on what blacks were thinking.

The Post has already announced the appointment of a black (Mr Austin Scott, formerly of the Associated Press) to its prestigious national staff, the appointment of a second black assistant editor to its metropolitan desk and the acceptance of two black apprentice journalists. Mr Benjamin Bradlee, the executive editor, could dismiss as absurd the proposal that within a year 35-45 per cent of the editorial jobs on the Post should be held by blacks. But the Post will have to move faster than it has, partly to satisfy its own conscience, partly because its market lies in a city which is 71 per cent black and a metropolitan area which is 26 per cent black.

The Post also exists under the eye of the 12-member Black Caucus in the House of Representatives which, after holding hearings, decided to set up a task force to monitor progress in the press and in radio and television, where the record is almost as bad. One demand made by the caucus was for a black commissioner on the seven-man Federal Communications Commission and this demand is likely to be met.

The main excuse given by the newspapers and broadcasters for not employing more blacks is that so few of them are qualified and it is true that up to now few educated blacks have shown much interest in this field. But this is changing and nowhere more rapidly than in Washington, where Howard University, by opening a new school of communications this year, has almost doubled the number of black students of journalism; last year there were under 400 in the whole country. For the next few years, however, it looks as though editors will have to take some chances on untrained, but lively, black intelligences if they wish to be certain of not being challenged in court.

Fong outfaces VD

Plagues of Venus

FROM A CORRESPONDENT IN SAN FRANCISCO

The Department of Health, Education and Welfare estimates that 2.5m Americans, more than 10 per cent of the population, will develop gonorrhoea this year—it is now the most commonly reported infectious disease in the United States—and that 100,000 will catch syphilis, now the fourth most common disease. This epidemic has burst upon Americans after a period when it seemed that venereal disease was declining under the impact of antibiotics. It appears to coincide with increased use of the birth control pill and most of its victims are young.

"Clearly new tools are needed," said Dr Bruce Webster, president of the American Social Health Association and the head of the National Commission on Venereal Disease which submitted its report to HEW last week. It noted a "deplorable inadequacy" in education about health in most American schools and said that explicit instruction about venereal disease should be offered by specially trained teachers to all children as they approached puberty, whether they were in private, church or tax-supported schools. The report recommended that such teaching should take place in mixed classes and should include specific references to human anatomy and physiology. The commission called for a five-fold increase in federal spending to control VD over the next five years, from $12.9m a year to $68m.

California has already embarked on this kind of educational effort, in the fear that by 1980, if the epidemic goes unchecked, one out of every two teenagers will contract VD before they leave school. In California there were cuts in the budget for health education just as the young were adopting freer life styles and doctors say that VD is "out of control" and spreading like wildfire in the state. Yet for years conservative forces all over the country have restricted or eliminated entirely classroom instruction about the health problems associated with sex, arguing that sex education is a parental prerogative.

In California a law was actually passed in 1969 automatically revoking the licence of any teacher who as much as mentioned sexual behaviour without giving parents advance notice and the chance to find out what was to be taught. This threat virtually ended any discussion of venereal disease in all schools—except for a few special courses in the biggest cities—at the very time when the diseases were increasing explosively. California's health officials found gonorrhoea and syphilis to be the infections most likely to be contracted by the young; yet there was not one word about them in the school textbooks, which were filled, instead, with details about rare diseases such as yellow fever and typhoid.

In January California's officials, who had finally awakened the public to the danger, began to plan for a totally new educational effort. On March 1st venereal disease was given a bureau of its own in the public health department, a symbol of the new seriousness with which it was being taken. An opinion was obtained from the state attorney general blunting the 1969 law and California, which previously had spent less than $80,000 a year on all public health pamphlets and other warnings about VD, suddenly found $250,000 just to train teachers in the field. The training starts this month and will lead, it is hoped, to greatly expanded instruction for young people by next September. Nearly $1m will be added to school and health budgets to pay for new teaching materials and for the enlarged teaching staffs.

None of this could have happened—at least not fast enough to make California a pioneer—but for the belated conversion of the Governor, Mr Ronald Reagan. Last year the legislature passed overwhelmingly legislation introduced by a pretty young Democrat, Mrs March Fong, which would have repealed the ban on sex instruction and would have authorised more money to combat VD. Governor Reagan vetoed the bill, on the old grounds that parents, not teachers, should provide sex education.

By then the legislators were convinced that a crisis really existed and they came within eight votes of overturning the veto; this is the closest that Mr Reagan has ever come to being over-ruled. There was also a public uproar which led the Governor to look more closely at the facts and, in the end, to switch sides. He is now a champion of education about venereal disease and a supporter of Mrs Fong's bill. And he found the emergency funds to get the programme rolling.

All of these securities having been sold, this announcement appears as a matter of record only.

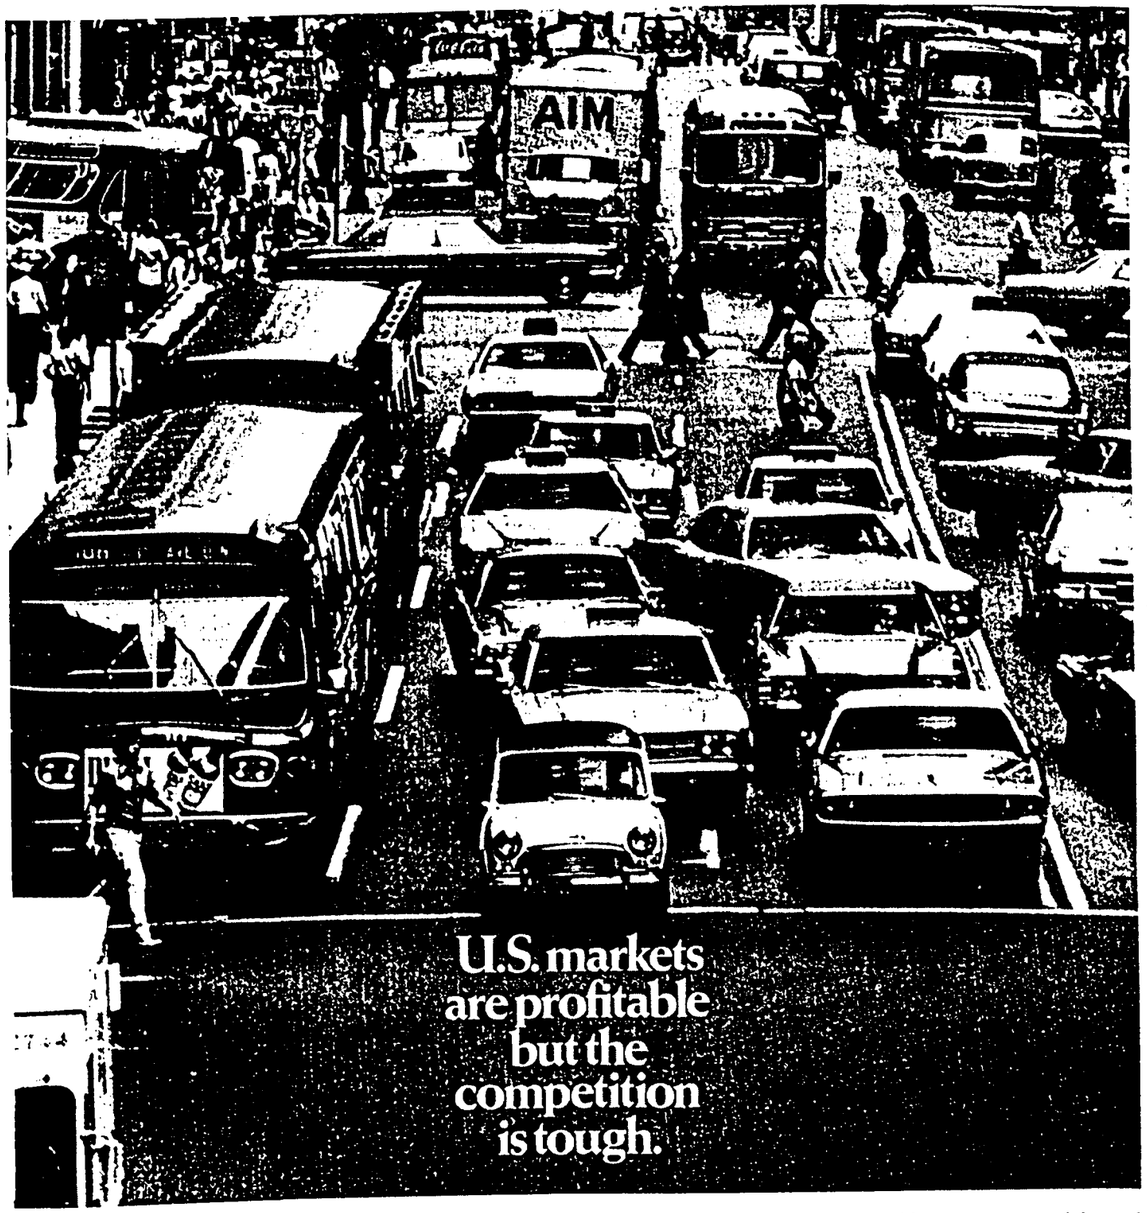
Why should a U.S. manufacturer turn to Bank of Montreal for help in building a plant in Argentina?

Or why should a German businessman seek help from the same source to build hotels on the Costa Blanca? Or sell machine tools in the Far East?

The answer is: People. Bank of Montreal people, who understand that the financial and political realities of doing business multi-nationally are constantly shifting. People who have the sensitivity and grace to react to these shifts with imagination—for the benefit of multinational companies.

People like Al Horton, in New York. John Kelderman, our worldly-wise representative in Germany. People like talented Alfonso Racedo in Buenos Aires. Hal Hartmann in Hong Kong. And 19,000 other Bank of Montreal people in more than 1,100 offices in major cities all around the world.

These innovative bankers, plus more than $10,000,000,000 in assets and a sympathetic comprehension of the multi-national corporation, can help your company carve out its place in the new international economy.



The time to call them in is now.

Bank of Montreal

The First Canadian Bank

The bank that gets it done–internationally

London, Paris, Düsseldorf, Amsterdam, Milan, New York, Chicago, Houston, San Francisco, Los Angeles, Sacramento, San Diego, Mexico City, Buenos Aires, Melbourne, Tokyo, Hong Kong, Nassau, Freeport, Kingston.

British companies are expanding into the USA.

Because the returns can be high. But selling into the mecca of marketing isn't for the faint-hearted; the competition is tough and they are fighting in their own backyard.

Irving can help.

Through our London Branch you get direct access to all the commercial banking facilities of our Wall Street headquarters. Complete financial services covering the whole of the USA. Data on your particular US market; its history, present activity and forecast. Location and introduction to agents, distributors, lawyers and consultants. Credit information. Help with planning and execution of mergers or acquisitions. In fact, the whole range.

We are big enough ($1 billion in deposits in London) to give you full international services yet small enough to give you personal attention.

Let Irving be your *personal* guide to international banking.

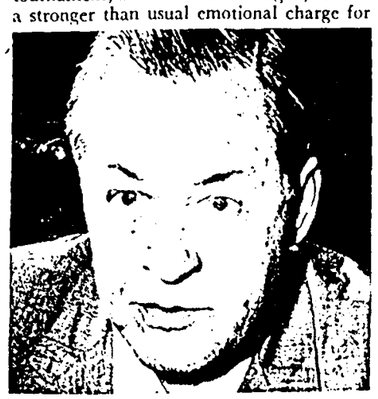
Golf Brief



Nicklaus sets off on the grand slam

Augusta, Ga

This year, as most years, the Masters, which finished on Sunday, was the first of the world's major golf championships to be played. Started in 1934 by the great Bobby Jones, and won this year for the fourth time by Jack Nicklaus in a walk-away, the Masters is also probably the golf tournament most heavily laden with nostalgia.

Golf fans everywhere remember crucial shots or incidents from previous Masters, and their memories are aided by the fact that the tournament is held in the same place every April, the Augusta national golf club in Augusta, Georgia, whereas the other three major tournaments—the American Open, the British Open and the American Professional Golfers' Association championship—switch their locations yearly. For instance, there was the sad finish to the 1968 tournament which impressed itself in the minds of most golf fans. That year the popular and colourful Argentinian, Roberto de Vicenzo, had actually tied the American Bob Goalby at the end of the 72 holes of the tournament. But de Vicenzo, in his excitement, signed a score-card that falsely recorded a score one stroke higher than he had actually shot on one hole. According to the strict rules of competitive golf, de Vicenzo was required to keep the score he had signed for, and the score he had made before millions of television viewers as well as thousands of spectators on the course itself was nullified.

This year's Masters perhaps carried a double load of nostalgia because Bobby Jones died just a few months ago. It is now hoped that the Masters will serve as a permanent memorial to him. This year's tournament, at least before it began, carried a stronger than usual emotional charge for still another reason. This is the year that Jack Nicklaus, usually regarded as the best of the current generation of golfers, has set his sights on winning all four major championships, a feat accomplished only by Bobby Jones himself.

Bobby Jones : his memorial

The temerity of Nicklaus's ambition may have frightened his fellow professionals. At any rate, they made it easy for him to win. Nicklaus led the tournament at the end of each of the four rounds, and while there were brief bursts of low scoring from several members of the field all the challengers fell away as soon as they really began to press Nicklaus. As a result, on the last two days of the tournament, the question was not so much who would win but would Nicklaus throw victory away—as he has been known to do in some tournaments in the past.

The possibility of a Nicklaus collapse grew stronger at the end of the third round when, six strokes under par and leading his nearest rival by three strokes, he went one over par at each of the two finishing holes, leaving him with a mere one-stroke advantage. However, the man nearest Nicklaus was Jim Jamieson, playing in his first Masters, and he, perhaps frightened by the prospect of success, destroyed his chances early in the fourth round the next day, just as Paul Harney, a veteran but relatively unknown professional, had quickly blown up in the third round after getting to within one stroke of Nicklaus at the end of the second. No one else was ever close to the great man and he finally finished the tournament three strokes clear of the three players who tied for second place. Jamieson finished one stroke further back than this, tied with four other players for third. The unfortunate Harney kept blowing up, shot an atrocious 81 on the final day and wound up far down the field.

Thanks to Jamieson's disappearance from contention, Nicklaus was in the happy position of being able to play the course defensively for most of the final round. Blond, leonine in his movements and with his cold blue eyes glaring fiercely, Nicklaus brought his full concentration to bear on every shot. While the conditions were such to bother every golfer, they suited his game more than anyone else's and his being able to play defensively gave him a further edge over his opponents, who were obliged to take chances on the number of fine holes on the Augusta course where only a gambler's shot will produce a low score. The Augusta fairways are wide and enable a long hitter like Nicklaus to open up.

Jack opens up

The course's difficulties come on the approaches to the greens and on the greens themselves. The greens were extremely hard and fast and would only hold shots hit softly to them. Water and sand hazards exist in profusion to punish any errors. The speed of the greens and the difficulty of many of the pin placements made putting from any distance a problem, and many normally excellent putters such as Lee Trevino, the irrepressible Mexican-American, who finished 12 over par for the tournament, never did find their touch.

All of today's big stars were present—Nicklaus, Trevino, Arnold Palmer, Gary Player, Britain's Tony Jacklin—as well as the defending champion Charles Coody and the smooth-swinging Sam Snead, winner of the Masters three times and of 130 other professional golf titles around the world. Snead will be 60 next month but he shot a three-under par 69 on the first day of play, only one stroke more than Nicklaus. However, Georgia's warm spring weather turned cold and windy on the second day and Snead stiffened up.

Palmer : getting irritable

Arnold Palmer, this era's most popular golfer and perhaps the most popular golfer ever, also gave his ever present Annie's army something to cheer about on the first day as he went round in two under par. Palmer, now a millionaire many times over, has some quality about him of the ordinary working-class American. He might be the fellow down the road who repairs your car. Hundreds of fans crowd around him whatever he does, and this is probably truer at Augusta than any other place since he has won four previous Masters titles. However, there is a barely-concealed irritability about Palmer now that must make it difficult for him to compete in tournaments, and especially in major ones. Competitive golf is so demanding of cool nerves that the quickest way to loose is to let something upset you.

Yet, in the week before the Masters, Palmer stormed off the course in an ordinary tour event at Greensboro, North Carolina, after he inexplicably threw away a two-stroke lead with three holes left to play. His annoyance was easy to understand. He had hit his tee shot into a creek far to the left of the sixteenth hole (par three). He decided to play out of the shallow water but the ball stopped short of the green behind a bunker. Then, cracking under the pressure, he dumped the little pitch shot straight into the bunker, much as any Sunday golfer might do. He wound up with a six for the hole—and two other golfers set out to play off for the $40,000 first prize. There was no special significance in Palmer having fouled up two straight shots : this happens to the best from time to time. But veteran Palmer-watchers noted that Palmer, when he had finished the round, stormed past officials, shrugged off newsmen and left the course immediately, speaking to no one. The pilot of his private plane had to run to keep up with him.

Palmer appeared to bring some of this irritation with him to Augusta. In his second round, playing with Jacklin, Palmer hit his ball over the ninth green into the crowd. When he came up to the ball, he discovered it was resting in a depression made by the leg of a spectator's chair. He asked an official if he could move the ball without penalty to a new spot. When this was refused, he played the ball where it lay, taking a one over par for the hole, then dropped another ball and played this one out for a par. At the same time, he appealed against the official's decision to the rules committee. Perhaps sensing that the committee would decide against him (which it did), Palmer did not seem himself from that moment on. It was no surprise a few minutes later, on the short, treacherous, twelfth hole, that he blew up, much as he had at Greensboro.

The twelfth is only 155 yards long but the green is narrow from front to back and it is guarded in the front by a wide creek. Club selection is difficult because the wind, bouncing off the tall pine trees that guard much of the Augusta course, swirls in unpredictable currents above the hole. Palmer's shot made it over the water but landed in a sand trap in front, the common fate of many shots at that hole. He played out of the bunker over the green on to the bank behind it. His chip ran back across the green and wound up in the same bunker he had just got out of. Finally, he pitched on the green and after two putts sank the ball for a six, three over par. A short time later Palmer's name was taken off the boards placed strategically around the course to keep spectators informed of progress, and was never put up again.

Coody : up the creek this time

Palmer is 42, and some sports writers have been saying for a long time that, although he may yet win a lot of money playing golf, he is unlikely to win another major championship. His latest performances and, what is more, his reactions to his performances, at Greensboro and Augusta, now add weight to these prophecies of doom.

Palmer's fate at the twelfth, while bad, was hardly as embarrassing as that suffered by Britain's Brian Barnes on the first day of play. Barnes, generally reckoned to be a good golfer, dumped his tee shot into the water, then chipped two more balls there before finally getting one on the green. He took a nine for the hole and was so flustered he shot an eight on the next and an horrendous 85 for the round.

Trevino : heavy going

Jacklin and Player : not much to laugh about

Espresso by BEA.

Every week, this summer, BEA flies to 7 Italian destinations from London Heathrow, with up to 61 flights, all of them non-stop. We take you by Trident, with our first-class Sovereign Service on most flights.

Rome.
3 daily flights (including Trident Three) departing London Heathrow 1035, 1345 and 1735.

Venice.
4 flights every week increasing to 5 from June 1st. Departing from London Heathrow at 1025.

Cagliari.
Weekly flight from May 1st, the only non-stop service.

Milan.
Trident Three flights twice daily departing London Heathrow at 1015 and 1415. Also 3 night services every week.

Pisa/Florence.
2 flights every week increasing to 3 from June 1st.

Naples.
Daily flights departing London Heathrow 0930 – the only non-stop service. Also weekly night service.

Turin.
3 flights every week departing London Heathrow 1050 on Mondays, Fridays and Sundays.

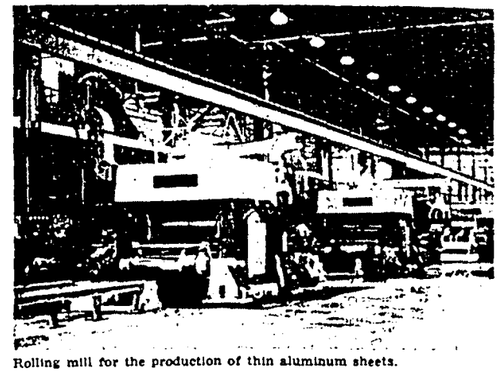
TECMO: A COMPANY KNOWN AND RESPECTED ALL OVER THE WORLD

Tecmo's success in international markets knows no end. The unconditional approval of Tecmo in all markets is significant enough in itself and provides confirmation of the quality and efficiency that the company has always claimed.
The secret of this undisputed record lies in Tecmo's many years of experience, during which highly trained engineers have worked designing and building technologically more and more advanced machinery capable of solving all problems connected with paper converting.
Tecmo's activities can be split into two sectors : production of converting machinery and machines for the production of aluminium strip, its lamination and auxiliary processes.

TECMO for the paper converting industry

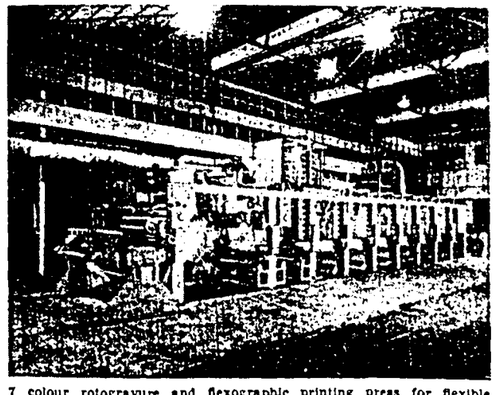
For the converting industry, Tecmo designs and manufactures complete systems and single machines for the conversion of paper, cardboard, plastic and cellulose film and aluminium and their combinations, printing them to form flexible and semi-rigid material for packs, covers, containers for fluids, etc. Machines typical of this sector, designed and built in the Tecmo factory are :
— rotary presses for reel to reel rotogravure ;
— combined rotary presses for rotogravure and flexographic printing ;
— dry and wet laminating machines, varnishing and lacquering machines ;
— extrusion laminating machines ;
— waxing machines ;
— slitting machines for fine and thick aluminium ;
— embossing and punching machines ;
— proof-pulling and rotogravure roller testing machines ;
— extrusion and co-extrusion machines.
These achievements are the outcome of forty years' experience in the paper converting field, with designs and machines which have always been at the forefront. Their exceptional constructional engineering enables working methods and technologies to be used which achieve output that is both qualitatively and quantitatively high.
The basic qualities consist of factors which are very important in the modern converting industry. For example, the almost total elimination of idle times ; extreme simplicity of operation ; interchangeability of groups between machines, even when these are of different type, more than one process possible on the same machine.

TECMO for the aluminium industry



For the aluminium industry, Tecmo designs and manufacturers :
a) machines and complete plants for the production of continuous casting aluminium strip starting from molten metal, ingots or scrap on the basis of a unique and revolutionary principle patented by Hunter ;
b) aluminium lamination plants ;
c) continuous process colouring plants for aluminium or other metal strip for bending or drawing after painting (paint-line system) ;
d) subsidiary process machines for the production of flats or corrugated plates for the building industry ;
e) machines for making plastic and aluminium panels.

Services offered by TECMO



Information on new production and cost reduction procedures, not to mention operating know-how, training for machine staff and technical assistance, form part of those services which Tecmo offers its clientèle. Here are some examples:
— Studies and designs for plants and whole factories ;
— Design and production of machinery ;
— Supervision by engineers during machine erection ;
— Assistance of highly skilled operators in starting up machines ;
— Training programme for the staffs of Tecmo customers ;
— Information on new procedures and on cost reduction improvements;
— Information on production procedure details ;
— Technological and operating know-how ;
— Technical consultancy and assistance on various production problems.
Whether the problem is a new line or a whole factory, Tecmo's staff of engineers, technologists and technicians is in a position to assist any customer in any part of the world right from the design stage by taking over the problem and solving as rationally and efficiently as possible any requirement connected with aluminium processing and converting machinery production.
Evidence of this is to be found in the supplies made over the past few years to companies operating at international level in the principal western and eastern markets.

Most recent export sales

Some significant examples of the co-operation relationship existing between Tecmo and its customers are offered by the most recent sales made to Australia (1 plant), Canada (7 plants), Czechoslovakia (7 plants and 1 factory), Korea (1 plant), Finland (1 plant), Germany (3 plants), Japan (3 plants), Great Britain (2 plants), India (2 plants), Italy (14 plants and 1 factory), Jugoslavia (1 plant and 1 factory), Mexico (2 plants), Norway (1 plant), Poland (5 plants and 1 factory), Romania (4 plants and 2 factories), U.S.S.R. (12 plants), Sweden (4 plants), Switzerland (2 plants), Turkey (1 factory), and the U.S.A. (168 plants and 5 factories).
This intense activity on behalf of international companies underlines the importance that Tecmo is assuming all over the world thanks to the advanced techniques and operating integrity which have always distinguished the company.

Rolling mill for the production of thin aluminum sheets.

7 colour rotogravure and flexographic printing press for flexible packaging material.

The Expansion of the LIQUIGAS GROUP OF MILAN in the petrochemical and biochemical sectors through

LIQUICHIMICA

1971 has been a particularly important year for LIQUIGAS, especially as regards its dynamic expansion in the petrochemical sector.

LIQUIGAS was founded in 1936 and it affirmed its position in Italy and abroad in the field of fuel oils (LPG, kerosene, gas oil, etc.).
During the last ten years the company has diversified its activities and vast and interesting programmes are now in course both in the petrochemical and biochemical sectors.

LIQUIGAS has thus attained the position of Head of the Group of several companies throughout Italy and abroad with a turnover of over 82 billion lire in 1971.

In order to be able to realise such important programmes in these fields, LIQUIGAS has made clear-cut decisions and developed a rational structure as regards the various productive sectors, each of which has its own precise functions and capabilities. It has also in this way established the correct dimensions of the plants, their location and inter-connections, the operational running-in periods and the technology to be adopted. The Company has also had to assure the necessary and adequate investments for such programmes.

During these last years LIQUICHIMICA AUGUSTA, LIQUICHIMICA SUD, LIQUICHIMICA BIOSINTESI, UNILIQ and LIQUICHIMICA DO BRASIL (the latter Company recently established with Head Office in Sao Paulo, Brazil) have all become allied with LIQUICHIMICA, the leading petrochemical Company in the Group.

LIQUICHIMICA, whose registered office is at Via Roncaglia 12-Milano (and plant at Robassomero near Turin), co-ordinates and guides production and relations and commercial agreements with the leading companies in the world and also directs sales promotion, research and technical assistance.
The programmes adopted by LIQUICHIMICA and now in course of realisation include high quality productions of growing importance for all markets ; amongst these are **Normal-Paraffins**, which represent the basic product for the chemical industries of the Seventies, and **synthetic proteins** from oil intended to replace the serious lack of natural proteins in both human and animal foodstuffs.

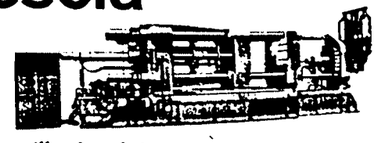
Normal-Paraffins :
LIQUICHIMICA has thus prepared a vast programme based on the two following points :
— a large quantity production of N-Paraffins (650,000 tons per year) ;
— downstream transformation of N-Paraffins into highly specialised products of high technological content.
This project necessitated an extension of the large Augusta plant which is located next to the Rasiom-Esso Refinery. This extension is now being carried out and, when complete in 1974, the productive capacity will be increased to 650,000 tons/year of N-Paraffins representing 45% of the estimated world production for 1974 of approximately 1,400,000 tons.
When extended to its full size the LIQUICHIMICA plant will be able, as well as ensuring the supply of raw materials to the associated company LIQUICHIMICA BIOSINTESI, also to reap the economic advantages of scale and establish a keenly competitive position on all overseas markets. Starting from the above basic product, LIQUICHIMICA is also active in the fields of its derivatives and especially :
— detergent products
— intermediate products for the electro-mechanical and textile industries
— additives for lube-oils
as well as, as previously indicated, synthetic proteins.

Detergents Sector :
The LIQUIGAS Group has already acquired a well established position in the detergents field which it intends to maintain and extend with products that enable it to remain amongst the leading Companies.
The production of citric acid derivatives of LIQUICHIMICA BIOSINTESI will be added to the production of the Robassomero and Augusta Plants (N-Paraffins, linear dodecylbenzene, N-Olefins and higher alcohols).
The most complete range of intermediates for "third-generation" detergents—that is fully biodegradable and physiologically safe—will thus be offered to the home and international market. LIQUICHIMICA will manufacture these intermediates using the latest modern technology thus enabling her to offer extremely interesting prices and to encourage all detergent manufacturers to employ them in steadily increasing quantities.

Lube-oil additives :
The consumption of these products shows a continued and remarkable expansion : Europe's production is insufficient to meet her need and she must therefore import these additives from the United States for an amount of over 80 billion lire per year.
LIQUICHIMICA, conscious of this lack, has studied a programme according to which—with the Robassomero (Turin) Plant—she will by the end of the current year attain the highest productive capacity in Europe and thus greatly help to reduce the gap between production and consumption.
The Robassomero Plant, which also produces raw materials for surfactants, auxiliaries and intermediates for the textile and electro-mechanical industries, special plasticizers for rubber and plastics materials, solvents for inks and paints, has extended its activities during 1971 to sound-proofing materials, adhesives, mastics and sealing agents.

Synthetic Proteins :
With regard to LIQUICHIMICA BIOSINTESI, the yearly productive capacity of the Plant under erection in Calabria at Saline di Montebello, planned to go on stream in 1974, will reach 100,000 tons of synthetic proteins, 50,000 tons of citric acid and its derivatives, 100,000 tons of fatty acids and 10,000 tons of amino-acids.
The LIQUIGAS Group has also planned this enterprise with a wide vision projected on to an international scale in the future. It has already obtained from a large Japanese concern the know-how and technology for the production of synthetic proteins that can be considered among the most technically advanced.
At the same time the LIQUIGAS Group is making agreements for collaboration with large international distributors of raw materials for zoo-technical feeds.

Ethylene, Propylene and derivatives :
LIQUICHIMICA SUD recently obtained from CIPE—within the scope of the National Chemical Plan—authority to obtain its supplies of ethylene and propylene from MONTEDISON and to erect in Sicily a new steam-cracking combine plant together with MONTEDISON, ANIC and SARP. This will enable LIQUICHIMICA SUD to put on stream the production of the derived products—such as special resins and resins for engineering—at least on a European scale and at economical and competitive costs.
The petrochemical programme of the LIQUIGAS Group will then be complete with the production of the associated company UNILIQ of Reggio Calabria of selective adsorbents and catalysts for the chemical and petrochemical industries. This production will also be widely employed by the LIQUICHIMICA AUGUSTA Plant.



Financial Investments for over 400 Billion lire
The investments of the LIQUIGAS Group for the period 1971-1974 for petrochemicals amount to over 400 billion lire, made up as follows : 16.5 billion lire for the expansion of the LIQUICHIMICA Robassomero Plant, 127 billion lire for the LIQUICHIMICA AUGUSTA Plant, 55 billion lire for LIQUICHIMICA BIOSINTESI, approximately 200 billion lire for LIQUICHIMICA SUD and 21 billion lire for UNILIQ.

LIQUICHIMICA DO BRASIL :
The LIQUIGAS Group has been represented on the Brazilian market since 1954 by its associated LIQUIGAS DO BRASIL which operates in the LPG sector. This nation—which is in the process of a rapid expansion—is destined to become the second development aim of the LIQUIGAS Group. It intends to carry out this development through the diversification of its activities and this will include petro-chemicals in accordance with the programmes already adopted in Italy. LIQUICHIMICA DO BRASIL, with registered office in Sao Paulo, was founded for the above purpose. This Company has already taken up commercial activities in co-operation with its Italian associate LIQUICHIMICA. They already have two shore-tanking facilities at Rio de Janeiro and at Santos. Interesting agreements are in course that will lead to an industrial activity in collaboration with other Brazilian enterprises.
First the plants for the production of intermediates for detergents will be erected and put into operation using raw materials imported from the Italian associates and, later on, they will be produced locally.
A second project covers the construction of plants for the N-Paraffin lines following the policy adopted by LIQUICHIMICA AUGUSTA.

Research Sector :
LIQUICHIMICA will give great importance to scientific and technological research, using its well and fully-equipped laboratories for this purpose. All research activities will be expanded with the co-operation of other interested parties. This applies to the biochemical field and in particular to nutritional matters.
This programme too will help to reduce the technological gap from which Italy is suffering and will make a most valid contribution to the Italian chemical industry in general, in a climate of sound competition.
(Published by **LIQUIGAS ITALIANA** s.p.a. 12 via Roncaglia, 20146-Milan, Italy.)
